Smith, Sir Harry George Wakelyn, 1787–1860, British general and administrator He entered the army in 1805, served in the Peninsular War and in the War of 1812 and was a brigade major at Waterloo He commanded a division in the Kafir War (1834–36), in which he made his famous ride of 700 mi from Capetown to Grahamstown in less than six days His policies as governor (1835 37) of Queen Adelaide prov , although hailed by both the Kafirs and the Dutch, were repudiated by the British government, and Smith was transferred to India as deputy adjutant general He distinguished himself in the Sikh Wars and was created baronet for the victory at Aliwal (1846) Returned as governor of the Cape Colony (1847–52), he resumed his policy of expansion and carried on war with the Boers, accelerating their movement northward His association with South Africa is commemorated in a number of place names—Ladysmith, Harrismith, Aliwal North, and Whittlesey (his English birthplace) See his autobiography (ed by G C Moore Smith, 1901)

Smith, Henry John Stephen, 1826–83, British mathematician He was a lecturer in mathematics (1850–73) and, from 1860 to 1883, Savilian professor of geometry at Oxford Univ He is especially noted for his work on the theory of numbers and on elliptic functions His scientific papers were collected and edited by J W L Glaisher (1894)

Smith, Hoke, 1855–1931, American political leader, b Newton, N C He moved to Georgia, became a successful lawyer in Atlanta, and in 1887 acquired the Atlanta *Journal* He served (1893–96) in Grover Cleveland's cabinet as Secretary of the Interior, but resigned to support William J Bryan for President He later was governor of Georgia (1907–9, 1911) and advocated railroad regulation and other reforms He served (1911–21) as U S Senator, but was defeated (1920) for reelection by Thomas E Watson and returned to law practice

Smith, Holland McTyeire, 1882–, general of the U S marines, b Seale, Russell co , Ala , grad Alabama Polytechnic Institute, 1901, and Univ of Alabama law school, 1903 He was commissioned in the marines in 1905 and saw much action in France in the First World War In the Second World War he pioneered in developing amphibious tactics He commanded troops in actions in the Gilbert, Marshall, and Marianas Islands and at Iwo Jima He commanded the Fleet Marine Force in the Pacific (1944–45) and retired (1946) from the marines as a general He is the author of *Coral and Brass* (1949)

Smith, Horatio or **Horace,** 1779–1849, and **James Smith,** 1775–1839, English parodists, brothers They wrote the famous *Rejected Addresses* (1812) Suggested by a contest celebrating the reopening of the Drury Lane Theatre, the collection was supposedly made up of those verses rejected by the theater It burlesqued such contemporary poets as Wordsworth, Scott, Coleridge, and Byron James Smith, who produced the better pieces, never wrote anything of value afterwards *Horace in London* (1813) was a collection of their earlier work Horatio Smith was the author of several novels, including *Brambletye House* (1826), an imitation of Scott See A H Beavan, *James and Horace Smith* (1899)

Smith, James, c 1719–1806, American Revolutionary patriot, signer of the Declaration of Independence, b Ireland He settled in Pennsylvania in his youth and practiced law at York He served in provincial assemblies and conventions and advocated independence early He was (1776–78) a member of the Continental Congress

Smith, James, 1775–1839 see SMITH, HORATIO

Smith, Jedediah Strong, 1799–1831, American explorer, one of the greatest of the mountain men, b not far from Binghamton, N Y He seems to have arrived in St Louis in 1822 and to have joined the expedition of William H ASHLEY, but little is known of his part on that first expedition On the 1823 expedition he was prominent. A young man more than 6 ft. tall and devoted to Bible reading, he was a superb rifleman and dauntless in trouble When the expedition was stopped by attack of the Arikara Indians, he headed the party sent to notify Andrew Henry and to ask his help After returning he went down to St Louis and back up the river to join the expedition Early in 1824 he and Thomas Fitzpatrick took a party through South Pass and thus started regular use of that route, which had been used by Robert STUART and his party from ASTORIA in 1812 Smith and a few men then went north, aided (and took the furs from) a group of Iroquois in the employ of the Hudson's Bay Company and with Alexander Ross went to the country of the Flathead Indians in present Montana He went as far north as the present Canadian line, then came back to Great Salt Lake In 1825 he set out on his most famous venture From the Great Salt Lake he set out to the southwest and with a small band of men pushed across the Colorado river and the Mojave Desert to arrive in San Diego, Calif , the Spanish of the western settlements were startled and not too pleased to see them They were relieved when Smith and two of his men went east, the first white men, as far as is known, to cross the Sierra Nevada and the fearsome Great Salt Desert They arrived at the rendezvous in the summer of 1827 Smith and a party went again on the southwest route to California They were set upon by the Mohave Indians, but the survivors reached California and the men who had been left there After some troubles with the Mexican authorities, Smith and his men went north toward the Columbia Only he and three of his men escaped an Indian attack and arrived at the Hudson's Bay Company post, Fort Vancouver, where John McLoughlin befriended them The Hudson's Bay Company recovered Smith's furs from the Indians and bought them In 1829 he rejoined his partners in the company of Smith, Jackson, and Sublette, which had succeeded the Ashley firm when Ashley retired from the fur trade This was broken up in 1830, and the Rocky Mountain Fur Company was formed Smith returned to St Louis In 1831 he set out with a company, including two of his brothers, on the Santa Fe Trail On the Cimarron river he was killed by Comanche Indians His extraordinarily wide travels revealed not only the rich fur trapping and trading country he sought but also trails and territory that were soon frequented by westward-going American pioneers He more than any other was the breaker of trails to California and the Pacific Northwest His journal was edited by Maurice Sullivan (1934) See H C Dale, *The Ashley-Smith Explorations* (1918), biography by Maurice Sullivan (1936)

Smith, Jessie Willcox, d 1935, American illustrator, portraitist of children, and poster artist, b Philadelphia She studied at the Pennsylvania Academy of the Fine Arts and the Drexel Institute of Technology Her work included drawings for *Mother Goose Rhymes*, Kingsley's *Water Babies*, Stevenson's *Child's Garden of Verses*, and several series, of which the *Seven Ages of Childhood* appeared in 1909 She received the silver medal at the Panama-Pacific Exposition, San Francisco, 1915, and many other awards

Smith, John, d 1612, English nonconformist see SMYTH, JOHN

Smith, John, 1580 1631, English colonist in America, b Willoughby, Lincolnshire, England A merchant's apprentice until his father's death in 1596, he then lived a roving and adventurous life, traveling, fighting in wars against the Turks in Transylvania and Hungary, and surviving a period of slavery in Turkey His own account of these adventure has been denied by some investigators but has been substantiated in a number of particulars Returning to England, he invested in the new Virginia Company (see LONDON COMPANY) and in 1606 sailed from London for America On arrival Smith was named a member of the governing council of the Jamestown settlement, though not permitted to serve immediately, and began his explorations of the surrounding territory He established trade relations with the Indians, drew up a map of Virginia, and finally fell into the hands of the Indian chief POWHATAN The famous incident of Smith's being saved from death by Powhatan's daughter POCAHONTAS, though controversial and lacking definite proof, is held to be quite probable and perfectly possible After his return to Jamestown, Smith became president of the council and energetically rebuked the peremptory demands of the home company to find gold or the South Sea Maintaining his leadership in spite of John Ratcliffe, a former president, Smith carried the colony through periods of intense suffering, hunger, and want (the "starving time"), remaining firm, tactful, and resourceful Injured in an explosion, he returned to England in 1609 In 1614 he was sent to NEW ENGLAND by a group of London merchants, returning with a valuable cargo of fish and furs He emphasized the importance of fishing and upheld the prospects for settlement in New England On another voyage he was captured by pirates and then by the French, but eventually returned to England He wrote *A True Relation of Virginia* (1608), *A Map of Virginia* (1612), *A Description of New England* (1616), *New England's Trials* (1620, 2d ed , 1622), *The Generall Historie of Virginia, New-England, and the Summer Isles* (1624), *An Accidence, or, The Path-Way to Experience* (1626, enlarged and republished as *A Sea Grammar*, 1627), *The True Travels, Adventures, and Observations of Captaine John Smith* (1630), and *Advertisements for the Unexperienced Planters of New England, or Anywhere* (1631) See Wilberforce Eames, *A Bibliography of Captain John Smith* (1927), edition of his works by Edward Arber (1884, reprinted and ed by A G Bradley, 2 vols , 1910), biographies by A G Bradley (1905), E Keble Chatterton (1927), and J G Fletcher (1928)

Smith, John Raphael, 1752–1812, English engraver and portraitist He is best known for his reproductions in mezzotint of paintings by famous contemporaries, including some 40 plates after Reynolds His original portraits in chalk, crayon, and oil are also prized The Victoria and Albert Museum contains six examples

Smith, Joseph, 1805–44, American religious leader, founder of the Church of Jesus Christ of the Latter-Day Saints b Sharon, Vt While he was a boy his family moved to Palmyra, N Y , where he experienced the poverty and hardships of life on a rough frontier He had visions when he was still young and later recorded that he was first told in a vision in 1823 of the existence of secret records, but it was not until 1827 that the hiding place of the records was revealed to him According to his account, he in 1827 unearthed the golden tablets inscribed with sacred writings that he translated Oliver Cowdery, Martin Harris, and others transcribed these records from his dictation, and the *Book of Mormon* was published in 1829 Further revelations led him to found a new religion after priesthood had been conferred upon him and Oliver Cowdery As prophet and seer he founded (1830) his church in Forsyth, N Y (see LATTER-DAY SAINTS, CHURCH OF JESUS CHRIST, OF, and MORMONS) Hostility of his neighbors led him to move his headquarters to Kirtland, Ohio, where with the help of Sidney Rigdon and others he embarked on extensive business affairs The Panic of 1837 was one of the reasons for removal farther west to Missouri Here the industrious and self-contained members of his faith again ran into difficulties with their neighbors Smith and others were arrested but escaped, and his faithful followers were driven from Missouri Having obtained a favorable charter from Illinois, Smith founded the settlement of NAUVOO, which, thanks to the concerted efforts of the members of his Church, was soon flourishing Disaffection grew, and some of the dissident members of the Church founded a newspaper, the *Expositor*, in which they bitterly criticized him He put down the opposition, thereby giving the hostile non-Mormons a pretext for attacking him When in 1844 he announced himself as candidate for the presidency of the United States, his enemies set upon him He and his brother Hyrum were arrested on charges of treason and conspiracy They were lodged in the jail at Carthage, Ill , and there on June 27, 1844, they were murdered by a mob The revelations made by Smith—including one enjoining plural marriage, which he obeyed by taking many wives and which later caused the Mormons much trouble—were the foundation stones of a faith that grew after his death to be one of the great religions of America Because he was a highly controversial figure, the literature on him is also controversial See H M Beardsley, *Joseph Smith and His Mormon Empire* (1931), J H Evans, *Joseph Smith, an American Prophet* (1933), Fawn Brodie, *No Man Knows My History* (1945)

Smith, Joseph Russell, 1874–, American geographer, b near Lincoln, Loudoun co , Va , grad Univ of Pennsylvania (B S , 1898, Ph D , 1903) He taught at the Univ of Pennsylvania (1903–19) and was professor of economic geography at Columbia Univ (1919–44) and president of the Association of American Geographers (1941–42) His works include *Tree Crops* (1929, revised 1937, condensed 1945) and many geography textbooks, including *Our Neighbor* geographies, *Human Use Geography* (9th ed , 1945), *North America* (1925, rev ed with M O Phillips, 1940), and *Industrial and Commercial Geography* (1913, 3d ed with M O Phillips, 1946)

Smith, Kirby see SMITH, EDMUND KIRBY

Smith, Logan Pearsall, 1865–1946, Anglo-American author, b Millville, N J After 1888 he lived in England, studied at Oxford, and became a man of letters His brief and exquisite essays beginning with *Trivia* (1902) were collected as *All Trivia* (1933) Other works include writings on the English language, a biography of Sir Henry Wotton (1907), *On Reading Shakespeare* (1933), *Reperusals and Re-collections* (1936), and *Milton and His Modern Critics* (1940) See his autobiography, *Unforgotten Years* (1939), Robert Gathorne-Hardy, *Recollections of Logan Pearsall Smith* (1949)

Smith, Nathan, 1762–1829, American physician, b Rehoboth, Mass , M B, Harvard, 1790, M D Dartmouth, 1801. He practiced in Cornish, N H

He was a founder of the medical schools of Dartmouth, Bowdoin, the Univ. of Vermont, and Yale (where he taught from 1813) In 1821 he accomplished an excision of the ovary, the operation had earlier been performed by Ephraim McDowell although Smith did not know of McDowell's work See biography by E A Smith (1914)

Smith, Preserved, 1880–1941, American historian, b Cincinnati, Ohio, grad Amherst, 1901, and Columbia (M A , 1902, Ph D , 1907) He taught history at Williams, Amherst, and Harvard before becoming (1922) professor of history at Cornell, where he remained until his death He was an editor of the *Journal of Modern History* (1929 32) and of the *American Historical Review* (1936–41) Among his books are *The Life and Letters of Martin Luther* (1911, 2d ed , 1914), *The Age of the Reformation* (1920) *Erasmus* (1923), and *A History of Modern Culture* (2 vols , 1930–34)

Smith, Richmond Mayo- see MAYO-SMITH

Smith, Samuel Francis, 1808–95, American Baptist clergyman and poet b Boston, grad Harvard, 1829, and Andover Theological Seminary, 1832 He is remembered as the author of the national hymn AMERICA, written while he was at Andover Among his many other hymns is *The Morning Light Is Breaking*

Smith, Seba, 1792–1868, American editor and humorist, b Buckfield, Maine, grad Bowdoin, 1818 He founded the Portland *Courier* in 1829 and in it began in 1830 humorous letters on politics signed "Major Jack Downing" The shrewd comments were so popular and so widely imitated that he collected them in *The Life and Writings of Major Jack Downing of Downingville* (1833), *My Thirty Years Out of the Senate* (1859), and other volumes After 1840 he was a writer and editor in New York, and his *'Way Down East, or, Portraitures of Yankee Life* (1854) was best known of his works Elizabeth Oakes Smith was his wife

Smith, Sydney, 1771–1845, English clergyman, writer, and wit, ordained in the Church of England in 1794 In 1798 he went as a tutor to Edinburgh, where he occasionally preached, studied medicine, and with Jeffrey and others founded (1802) the *Edinburgh Review* His brilliant contributions were a strong factor in the periodical's success Moving to London in 1803, Smith lectured with great success upon moral philosophy at the Royal Institution and made a host of friends His well-known "Peter Plymley" letters (published anonymously in 1807–8) in defense of Catholic Emancipation were the first of his many services to the cause of religious toleration In 1809 he moved to Yorkshire, where he had been given a living of £500 a year There he also acted as magistrate and village doctor He went to a parish in Somerset in 1829 in 1831 he was given a residentiary canonry at St Paul's Smith's religion, though strong, was of a practical nature A lover of justice and truth, he was a lifelong defender of the oppressed His failure to rise higher in the Church is attributed to his wide reputation as a master of wit and satire Smith has been compared to Swift and to Voltaire See his works (4 vols , 1839–40), memoir by his daughter, Lady Holland (2d ed , 1855), biographies by G W E Russell (1905) and Hesketh Pearson (1934).

Smith, Theobald, 1859–1934, American pathologist, b Albany, N Y , M D Albany Medical College, 1883. He was professor of bacteriology at Columbian (now George Washington) Univ (1886–95) and of pathology at Harvard (1896–1915) and served as pathologist with the Dept of Agriculture (1884–95), the Massachusetts state board of health (1895–1915), and Rockefeller Institute (1915–29) He discovered the parasite causing Texas cattle fever and its transmission by the cattle tick, differentiated between human and bovine tuberculosis, and contributed greatly to preventive medicine He wrote *Studies in Vaccinal Immunity* (with R B Little, 1923) and *Parasitism and Disease* (1934).

Smith, Walter Bedell, 1895–, American general, b Indianapolis He enlisted (1910) in the Indiana National Guard, won a commission in the U S army (1918) and advanced to the rank of lieutenant general (1943) Secretary (1940–41) to the general staff, he became (1942) the U S secretary to the combined chiefs of staff, and as Dwight Eisenhower's chief of staff (1942–45), he signed (1945) the surrender terms with Germany Smith served (1946–49) as ambassador to the USSR and assumed command of the U S 1st Army in March, 1949 He wrote *My Three Years in Moscow* (1950)

Smith, William, 1769–1839, English geologist He made a systematic study of the geological strata of England and identified the fossils peculiar to each layer, thereby introducing the method of estimating, from the fossils present, the age of geological formations. His *Geological Map of England* (1815), one of the first of its kind, was followed by similar maps of English counties Smith was known as a founder of English stratigraphic geology.

Smith, Sir William, 1813–93, English editor and lexicographer, grad University College, London He was editor of the *Quarterly Review* from 1867 until his death and also edited reference works esteemed for their accuracy and comprehensiveness These included dictionaries of Greek and Roman antiquities (1842), biography and mythology (1844–49), and geography (1854–57) and a dictionary of the Bible (1860–63)

Smith, William Farrar, 1824–1903, Union general in the Civil War, b St Albans, Vt , grad West Point, 1845 Before the Civil War he saw much service with the corps of topographical engineers Smith, made a brigadier general of volunteers in Aug , 1861, commanded a division of the Army of the Potomac in the Peninsular and Antietam campaigns and a corps in the battle of Fredericksburg (Dec , 1862) He led a division of militia in the Gettysburg campaign As chief engineer of the Army of the Cumberland he directed operations at Brown's Ferry (Oct , 1863), which restored the connection of the army in Chattanooga with its base of supplies This work, essential to the Union victory in the CHATTANOOGA CAMPAIGN, brought him (1864) a major generalcy (his appointment as major general in 1862 had not been confirmed) In 1864 Smith had a subordinate command in Virginia and fought at Cold Harbor and Petersburg He was relieved of command in June, 1864, while on leave He resigned from the army in 1867

Smith, William Robertson, 1846–94, Scottish biblical scholar and encyclopedist, grad Univ of Aberdeen, and studied for the ministry of the Free Church of Scotland From 1870 he was professor of Oriental languages and Old Testament exegesis in the Free Church college, Aberdeen Certain articles on biblical subjects which he wrote for *The Encyclopaedia Britannica* (9th ed) roused a storm in his church In 1881 he was removed from his professorship This *cause célèbre* is said to have been an important factor in the modernizing of Scottish theology, it certainly made Professor Smith very popular He was soon made an editor of *The Encyclopaedia Britannica* and in 1887 became editor in chief He was professor of Arabic at Cambridge (from 1883) and chief librarian there (1886) Among his best works are *The Old Testament in the Jewish Church* (1881), *The Prophets o Israel* (1882), and *The Religion of the Semites* (1889) His study *Kinship and Marriage in Early Arabia* (1885) is authoritative

Smith, Sir William Sidney, 1764–1840, English admiral A distinguished commander throughout the French Revolutionary and Napoleonic Wars, he is especially remembered for his relief of St Jean d'Acre against Napoleon in 1799 He had earlier been knighted after serving the Swedish king against Russia (1790–92) See biography by John Barrow (2 vols , 1848)

Smith Center, city (pop 1,686), co seat of Smith co , N central Kansas, near the Nebr line, in a corn and dairying area, founded 1871, inc 1886

Smith College, at Northampton, Mass , nonsectarian, for women, chartered 1871, opened 1875 through the bequest of Sophia Smith The first president, Laurenus Clark SEELYE, was influential in establishing high ideals of scholarship Among later presidents was William Allan Neilson (1917–39) Smith has graduate courses in education, a school for social work, and a school of architecture and landscape architecture (at Cambridge) It had pioneer music courses Honors work is emphasized The buildings include Sessions House (1700) and an art museum (Tryon and Hillyer galleries) A training school for women naval officers was held here in the Second World War

Smithers, city (pop 2,232), S W Va , SE of Charleston and on the Kanawha, in a farming and stock-raising area, inc 1938

Smithfield, district of central London, England From the 12th cent it was in use for fairs, markets, jousts, and executions In 1381 Wat Tyler was killed here The Central Meat Market is at Smithfield

Smithfield 1 Town (pop 3,678), co seat of Johnston co , E central N C , SE of Raleigh and on the Neuse, settled before 1746, inc 1861 It has textile mills and a tobacco market **2** Village (pop 1,169), E Ohio, SW of Steubenville **3** Town (pop 4,611), N R I , NW of Providence, set off from Providence and inc 1731 It was settled early in the 18th cent , mainly by Friends Georgiaville (administrative center) and Esmond are among its villages **4** City (pop 2,461), extreme N Utah, in Cache Valley N of Logan, settled 1859 A pea cannery and other processing plants serve the farm and dairying area At near-by Newton is Newton Dam, commenced in 1871 by the Mormons as Utah's first irrigation storage dam and replaced by the Bureau of Reclamation with a dam completed in 1946 **5** Town (pop 1,178), SE Va , NW of Portsmouth, settled c 1633, inc 1752 It is noted for its hams St. Luke's Church near by was built in either 1632 or 1682 and is one of the oldest Protestant churches in America Also near by is Bacon's Castle (1655), a house seized and fortified by the followers of Nathaniel Bacon in Bacon's Rebellion

smithing, see FORGING

Smiths Falls, town (pop 7,159), SE Ont , SW of Ottawa and on the Rideau river and canal. It is a railroad and industrial center, manufacturing electrical appliances, agricultural implements, clothing, and wood products.

Smithson, James, 1765?–1829, English founder of the Smithsonian Institution, b France He was the illegitimate son of Sir Hugh Smithson and Elisabeth Macie and the half brother of Hugh Percy, 2d duke of Northumberland. He was graduated in 1876 from Oxford, where he made a brilliant record in chemistry and mineralogy He wrote valuable scientific papers for the Royal Society publications and the *Annals of Philosophy* His fortune was willed to the United States for the establishment of the SMITHSONIAN INSTITUTION for the "increase and diffusion of knowledge among men " See studies by W J Rhees in Smithsonian Institution, *Miscellaneous Collections*, Vol. XXI (1879), biographical sketch by S P Langley in *The Smithsonian Institution, 1846–96* (1897), P H Oehser, *Sons of Science the Story of the Smithsonian Institution and Its Leaders* (1949)

Smithsonian Institution (smĭthsō'nēun), established (1846) at Washington, D C , by congressional act The question of acceptance of the endowment by James Smithson had been debated 10 years, John Quincy Adams was instrumental in securing the favorable vote The governing board of regents consists of the Vice President of the United States, the Chief Justice, three Senators, three Representatives, and six citizens, two to live in the District of Columbia The secretary of the board is the executive officer of the Smithsonian and the keeper of the U S National Museum The first secretary was Joseph HENRY, who organized the activities, which include all branches of science in their relation to the United States, with special emphasis on scientific research He inaugurated (1867) the international exchange of foreign scientific publications The publications include *Contributions to Knowledge, Miscellaneous Collections, and Annual Reports* The Bureau of American Ethnology from 1879 has been under the auspices of the Smithsonian, other bureaus are the U S National Museum, the National Zoological Park (1890), the Astrophysical Observatory (1891), the Canal Zone Biological Area (est 1940), and the National Air Museum (1946) The Smithsonian Institution is also the repository for the material collected by the American Historical Association (1889) and the National Society of the Daughters of the American Revolution The National Collection of Fine Arts (1906) is connected with the National Museum The Freer Gallery of Art, though separate, forms a part of this collection as a gift from Charles L Freer In 1937 the NATIONAL GALLERY OF ART was established, housed in a new building opened in 1941 This name had formerly been given to the National Collection of Fine Arts See W P True, *The First Hundred Years of the Smithsonian Institution* (1946)

Smithtown, unincorporated village, middle Long Island, SE N Y , in a truck-gardening area

Smithville, city (pop 3,100), S central Texas, on the Colorado and SE of Austin, settled 1827, inc 1895 It has railroad workshops and sawmills

Smohalla (smōhă'lu), d 1907, American Indian prophet, chief of a small tribe (the Wanapun) of the Columbia river valley He preached a religion based on a vision (a "dream") of Indian supremacy, and his followers, called the Dreamers, though they did not advocate force, were influential in causing much difficulty to the government in its policy of settling Indians on reservations

smoke, visible gaseous product of incomplete combustion Smoke varies with its source, but usually consists mainly of particles of carbon and tarry substances, or soot. To reduce the amount of smoke entering the atmosphere, anthracite coal, charcoal, coke, gas, fuel oil, and electricity may be used in place of fuels producing heavy smoke, such as bituminous or soft coal Proper firing techniques and equipment can eliminate or greatly reduce the smoke production of any fuel Wood gives little smoke if burned when dry and if given a good supply of air Where it is necessary to use soft coal because of its lower cost or because other fuel is not available, the grate and flue must be built correctly, the coal must be fed in right quantities and manner, and adequate air must be supplied to the fire When smoke is produced, there are various means of reducing the amount escaping into the air. Some methods utilize electricity or sound waves for precipitation, others employ chemicals, the Cottrell method (see COTTRELL, FREDERICK GARDNER) is perhaps best known The soot may be collected and utilized, and trapped gases sometimes yield valuable by-products Among the evils of smoke are its interference with sunlight (it shuts out the most healthful rays of the sun and also necessitates the use of artificial light), the disfiguring effect of its deposits upon buildings, the destructive chemical effect of the acids of its deposits on stone and metal work; the increased labor and cost of cleaning, its ill effect upon plant life, both through shutting off sunlight and through clogging the stomata of the leaves with its oily deposits; and the damaging effect of its tars and acids to the respiratory systems of humans and livestock. In addition to the cost of its damages, smoke also represents a

waste, for imperfect combustion dissipates potential heat into the atmosphere Moisture condenses about smoke particles (see DUST), and therefore a smoky city often is wrapped in a damp, dark cloud (often called smog) impenetrable by sunlight and almost completely resistant to dissipation by the sun, the cloud usually remains until there is a change of wind. English cities, particularly London and the industrial and mining centers of the Midlands, long suffered from the nuisance, London early tried to lessen it, in part by passing laws against the production of unnecessary smoke Paris has passed stringent laws in an effort to preserve her architectural and sculptural monuments Most American cities have smoke-nuisance laws, designed especially to prevent industrial establishments from interfering with the town's health, beauty, and economic welfare Trains are often, as in New York city, required to use only electric engines in urban areas The laws are often difficult to administer and usually are not applicable to smoke from residential heating units, although these are important contributors to the nuisance Smoke-abatement societies now seek further education of industry in the savings accruing from complete combustion and smoke control, and they sponsor building codes which require in all new buildings the use of heating units designed for efficient combustion Skywriting and smoke screens employ specially produced smoke

smokeball. see PUFFBALL

smokeless powder. see POWDER

Smoky, river of W Alberta, rising in Jasper National Park and flowing 245 mi generally NNE to the Peace, just S of the town of Peace River It receives the Wapiti and Little Smoky rivers It was discovered (1792) by Sir Alexander Mackenzie

Smoky Hill River, rising in E Colorado and flowing c 500 mi E across Kansas to join the Republican and form the Kansas at Junction City The Smoky Hill basin is included in the MISSOURI RIVER BASIN PROJECT U S army engineers in 1948 completed Kanopolis Dam, c 15,400 ft long, and 131 ft high, for flood control on the Smoky Hill, and the Bureau of Reclamation planned Cedar Bluff Dam (and also Kirwin Dam on a tributary, the North Fork of the Solomon) for irrigation

Smoky Mountains see GREAT SMOKY MOUNTAINS

Smolensk (smōlĕnsk', smō-, Rus smŭlyĕnsk'), city (1926 pop 78,520, 1939 pop 156,677), capital of Smolensk oblast, W European RSFSR, on the Dniepr It is an important rail junction and an industrial center with linen mills, manufactures of textile and other machinery, flour mills, sawmills, distilleries, and breweries It was founded in 882 and early developed into a great commercial center, connected with the Black Sea by the Dniepr and with the Hanseatic cities of the Baltic Sea and with Moscow and Nizhni Novgorod by some of the most important medieval trade routes It was the capital of a Russian principality which fell (14th cent) to Lithuania The westward expansion of the grand duchy of Moscow made Smolensk a prize in the long struggles between Moscow and Poland-Lithuania The city was definitely ceded to Russia by the Treaty of Andrusov (1667) Smolensk was captured (Aug, 1812) by Napoleon I after a brief but heroic resistance After the burning of Moscow, Napoleon retreated (Nov, 1812) to Smolensk with the remains of the Grande Armée, but was soon obliged by the Russians under Kutuzov to continue his retreat In the Second World War, Smolensk was captured (Aug, 1941) by the Germans after three weeks of heavy fighting It was recaptured (Sept, 1943) by the Russians after another heavy battle, which left the city virtually razed The ancient and famous kremlin of Smolensk and its cathedral were largely destroyed

Smollett, Tobias George (smŏl'ĭt), 1721-71, Scottish novelist As a youth he went to London, failing to get his tragedy, *The Regicide*, accepted, he shipped as a surgeon's mate in the British navy (1740) He returned to London (c 1743) and set up as a surgeon, but later turned to fiction, writing *The Adventures of Roderick Random* (1748), the first English novel of the sea, *The Adventures of Peregrine Pickle* (1751), and *The Adventures of Ferdinand Count Fathom* (1753) Having given up medicine, Smollett began an active publishing career, editing periodicals, translating, and compiling. His next novel, *The Adventures of Sir Launcelot Greaves*, appeared serially in the *British Magazine* (1760–61) In 1763–65 he made a continental tour, recorded in his entertaining but splenetic *Travels through France and Italy* (1766) Overwork compelled his retirement near Leghorn (1769), where he died. His most vitriolic satire, *The History and Adventures of an Atom* (1769), was followed by his most pleasant novel, *The Expedition of Humphry Clinker* (1771) Written in the formless style of picaresque fiction, rich in incident and in realistic detail, Smollett's novels were drawn from his own wide experience. He had a vigorous and fluent style and an inexhaustible taste for farce and horseplay. See Lewis Melville, *The Life and Letters of Tobias Smollett* (1926), studies by H S Buck (1925, 1927) and G. M. Kahrl (1945), biography by L. M Knapp (1949).

Smoot, Reed (smōōt), 1862-1941, U S Senator (1903–33), b. Salt Lake City, Utah, grad Brigham Young Univ., 1879 He became successful as a banker and was prominent in the affairs of the Church of the Latter-Day Saints He was the first Mormon to be elected (1902) to the U S Senate Efforts were made to bar him from his seat because he was a Mormon, but he was seated after a Senate investigation Smoot, a conservative Republican, joined the "irreconcilables" in opposing the League of Nations and was one of the group which worked for Warren G Harding's nomination (1920) In his later years in the Senate he was chairman of the finance committee, he helped write the HAWLEY-SMOOT TARIFF ACT (1930)

smuggling, illegal import or export of goods or persons liable to an impost or to prohibition Smuggling has been carried on in nearly all nations and has occasionally been adopted as an instrument of national policy, as by Great Britain against Spain and France in the 18th to 19th cent and by the Western powers and later Japan against China The restrictive economic policies of mercantilism in the 17th to 18th cent gave rise to the practice in France following the attempted reforms of Colbert, in the Spanish colonies, and in North America British attempts to halt the practice by stringent enforcement of the NAVIGATION ACTS were a contributory cause of the American Revolution Napoleon's decrees attempting to seal off the European continent from British commerce gave rise to widespread smuggling in the early 19th cent Smuggling in England shifted from export, especially of wool, to the importation of luxury articles, such as silks and brandy, during the recurrent wars with France from 1689 to 1815 Britain, source of free-trade philosophy, has been more liberal in her anti-smuggling laws than others, and the practice was condoned in a famous passage by Adam Smith Smuggling into the United States revived on a large scale in the prohibition era and was carried on practically with impunity by boat from overseas and overland from Canada Illegal entry of immigrants also presented a problem after the drastic curtailment of immigration at the end of the First World War Luxury articles and specifically prohibited goods such as narcotics are also smuggled The U S coast guard has the suppression of smuggling as one of its chief activities U S law declares the article smuggled to be forfeit and the smuggler, on conviction, liable to a fine of $5,000, or imprisonment, or both Examples of the smuggling of persons contrary to law are the slave trade to the United States and Latin America following its outlawry by the powers in the early 19th cent, the more recent slave trade in countries bordering the Red Sea, and the traffic in women for immoral purposes, contrary to international convention See J J Farjeon, *The Compleat Smuggler* (1938)

smut, name for various diseases of cereal plants caused by parasitic fungi which produce soothlike masses of spores on the host The smuts lower the vitality of the host plant and often cause deformities Among those which cause severe annual losses to crops are corn smut, oat smut, bunt or stinking smut, and loose smut of wheat Bunt is probably the most serious disease which attacks wheat at the young or seedling stage and spoils the grain It has the odor of sour herring and is caused by either of two smut fungi The fungus may be present on the wheat seed or in the soil in which the seed is sown, or it may be blown into a field by the wind Methods of control include treating the seeds (to which the spores of some smuts adhere) with poisons or with hot water, rotating crops, and removing and burning infected parts before the spores form

Smuts, Jan Christiaan (yän' krĭs'tyän smŭts'), 1870–, South African statesman and soldier, b Cape Prov He was of Dutch stock and a British subject by birth He was educated at Victoria College (at Stellenbosch) and at Cambridge Univ, where he won highest honors in law In 1895 he was admitted to the Cape Colony bar The Jameson raid (see JAMESON, SIR LEANDER STARR) persuaded him that Great Britain intended to conquer the South African Republic (TRANSVAAL), and he renounced his British citizenship and moved to the republic, where he became (1898) state attorney In the South African War, Smuts commanded (1901-2) Boer guerrilla forces in the Cape Colony By 1904 he concluded that the cooperation of the Boer and British elements was essential to the greatness of South Africa, and he joined with Louis BOTHA to carry out this policy Smuts was instrumental in the creation (1910) of the Union of South Africa In the first elections, Botha's United South African, or Unionist, party won Smuts continuously held office in Botha's cabinet, serving as minister of defense (1910–19), of interior and mines (1910–12), and of finance (1912–13) His use of military force and of admittedly illegal deportations in breaking (1914) a miners' strike on the Witwatersrand lost him the support of labor Early in the First World War, Smuts smashed a Boer uprising, and in 1916 he served successfully as a general against German East Africa. He was a member (1917–18) of the imperial war cabinet in London, and he signed the Treaty of Versailles although he protested that its terms would outrage Germany and prevent the harmonious world order which he believed could best be served by the League of Nations With Botha's death (1919), Smuts headed the Unionists, and from 1919 to 1924 he was prime minister and minister for native affairs His party lost the election of 1924 and Smuts in retirement wrote *Holism and Evolution* (1926, 3d ed, 1936), in which he developed the view that evolution is a sequence of ever more comprehensive integrations, in the political sphere the British Empire and the developing world community provided the highest examples Smuts was (1933–39) minister of justice in a coalition cabinet, but when J B M Hertzog, the prime minister, opposed entering the Second World War, Parliament revolted and made Smuts prime minister In 1941 he was created field marshal He spent most of the war in London, where he had a high place in the British war councils, and he was very active in organizing the United Nations The esteem he enjoyed was shown by his appointment (1948) as chancellor of Cambridge Univ In South Africa, however, Smuts's party lost the election of 1948 and he was himself defeated, a constituency was then vacated for him and he ran successfully Smuts wrote *Africa and Some World Problems* (1930) His speeches are collected in *Plans for a Better World* (1942) See biographies by Sarah Millin (1936), F S Crafford (1943), and René Kraus (1944), Basil Williams, *Botha, Smuts, and South Africa* (1946)

Smybert, John see SMIBERT, JOHN

Smyrna (smûr'nə), Turkish *Izmir* (ĭzmēr', ĭz'mĭr), city (pop 198,396), W Turkey, a port on the Bay of Smyrna of the Aegean Sea It is a manufacturing center for soap, dyes, hides, and tobacco Smyrna province is rich in mineral resources, including antimony, copper, silver, emery, iron, manganese, mercury, and zinc An early Ionian colony, Smyrna was destroyed in 627 B C by the Lydians, it was rebuilt, on a different site, three centuries later, by Antigonus I, was enlarged and beautified by Lysimachus, and became one of the largest and most prosperous cities of Asia Minor Its wealth and splendor increased under Roman rule Smyrna was an early center of Christianity, one of the Seven Churches in Asia (Rev 2–8) It fell to the Seljuks in the 11th cent, was recaptured by Byzantium by Emperor Alexius I during the First Crusade, and formed part of the empire of Nicaea from 1204 to 1261, when the Byzantine Empire was restored In 1261 also the Genoese obtained trading privileges at Smyrna, which they retained until it fell (c 1300) to the Seljuks The Byzantines regained it in 1344 and the Genoese privileges were restored In 1402 Tamerlane took Smyrna, which had been defended by the Knights Hospitalers, and sacked the city The Mongols were succeeded in 1424 by the Ottoman Turks, who kept it until 1919 A Greek Orthodox archiepiscopal see, Smyrna remained a center of Greek culture and the chief Mediterranean port of Asia Minor, and it retained its large Greek population After the collapse of the Ottoman Empire in the First World War, the city was occupied (1919) by Greek forces The Treaty of Sèvres (1920) assigned Smyrna and its hinterland to Greek administration and provided for a plebiscite to be held in 1925 to determine the permanent status of the area Six weeks after the signing of the treaty Greek forces, with the consent of the Allies, undertook (July, 1920) their campaign against the Turkish nationalists under Kemal Ataturk, who had refused to recognize the treaty The Greeks were generally successful until Aug, 1922, when the Turks crushed them in a swift counteroffensive Smyrna fell to the Turks in Sept, 1922, and a few days later was nearly destroyed by fire The plight of the thousands of Greek civilian refugees was pathetic The Treaty of Lausanne (1923) restored Smyrna to Turkey A separate convention between Greece and Turkey provided for the exchange of their minorities, which was carried out under League of Nations supervision The population of Smyrna thus became predominantly Turkish With the loss of most of its Greek inhabitants, Smyrna declined considerably as a trade center It suffered further from severe earthquakes in 1928 and 1939 Among the cities that claim to have given birth to Homer, Smyrna has the likeliest claim

Smyrna. **1** Town (pop 1,870), N central Del, NNW of Dover, in a farming area, inc 1859 It has canning and packing industries **2** Town (pop 1,440), NW Ga, just NW of Atlanta

Smyth, Dame Ethel Mary (smith), 1858-1944, English composer, studied at the Leipzig Conservatory. Besides her many songs and chamber music she wrote operas, including *The Wreckers* (Leipzig, 1906) and *The Boatswain's Mate* (London, 1916), and a Mass in D (London, 1893) In 1922 she was made Dame of the British Empire Her autobiographical writings include *Impressions That Remain* (1919), *Streaks of Life* (1921), and *As Time Went On* (1936)

Smyth or Smith, John, d 1612, English nonconformist clergyman, often called the founder of the General Baptists Influenced by the Brownists, he

left the Church of England and became minister of an independent congregation at Gainsborough in 1606 Soon thereafter, Smyth and his followers went to Holland to escape persecution There, under Mennonite influence, he became convinced that the Scriptures did not authorize infant baptism, he baptized himself (for which he is called se-baptist or self-baptizer), then some of his followers In 1611 certain members of his congregation returned to London and established a church See biography in Smyth's works (ed by W T Whitley, 1915), W H. Burgess, *John Smith the Se-Baptist* (1911)

Smythe, Francis Sydney, 1901–49, English mountaineer, b Maidstone, England He climbed Kamet (25,447 ft) in the Garhwal Himalayas in 1931 and took part in the Everest expeditions of 1933, 1936, and 1938, on one occasion reaching a point 1,100 feet short of the summit His books include *The Kangchenjunga Adventure* (1931), *Kamet Conquered* (1932), a biography of Edward Whymper (1940), *The Rocky Mountains* (1949), and *The Valley of Flowers* (1949)

Sn, chemical symbol of the element TIN

snail, name commonly used for a gastropod mollusk with a spiral shell Included in the thousands of species are terrestrial, fresh-water, and marine forms Some eat both plant and animal matter, the diet of others is limited to one type of food Breathing is carried on by gills or by a pulmonary sac or lung in the mantle cavity Eyes are borne on the tips of tentacles Both sexes are represented in each individual The snail secretes a slimy path over which it progresses slowly by contractions of the broad foot Snails are used for food especially in Europe. They were eaten by primitive man and were raised by the early Romans Some species can be successfully used as scavengers in aquariums Although some destroy vegetation, more harm is done to gardens by the slug

Snake, river, c 1,000 mi long, NW United States, the chief tributary of the Columbia, formerly called the Lewis river or the Lewis Fork of the Columbia It rises in NW Wyoming, in Yellowstone National Park S of Yellowstone Lake, is early joined by the small Lewis river (from Shoshone Lake), flows through Jackson Lake, then S and W into Idaho and northwest to its junction with the Henrys Fork river The combined stream runs southwest, then northwest, crossing Idaho through the Snake river plain and having several notable falls in the east It makes a bend into Oregon and turns north to form the Idaho-Oregon and Idaho-Washington boundaries (receiving several tributaries, including the Boise and the Salmon), then turns at Lewiston, Idaho (at the mouth of the Clearwater), and flows generally west to join the Columbia near Pasco, Wash The Snake was discovered by the Lewis and Clark expedition and was of major importance in U S expansion into the Pacific Northwest Most of the cities of Idaho are in the Snake river valley The Snake in its upper and middle courses and its tributaries are much used for irrigation by private projects (one of the most notable being at TWIN FALLS) and by the Bureau of Reclamation, which has many dams, reservoirs, and projects, including the MINIDOKA PROJECT, the King Hill irrigation project, and the BOISE PROJECT

snake, REPTILE with an elongated scaly body, limbless or with traces of hind limbs, with a forked retractile tongue and recurved teeth, and with clear scales instead of movable eyelids The skin is shed, usually several times a year There are often enlarged scales or shields on the head No ears are present Only one lung is developed A snake moves by means of the body muscles aided by the ventral plates (elongated scales on the abdomen) and the ends of the ribs Most snakes live on or under the ground, but some are arboreal, and others aquatic Many hibernate in winter Small snakes feed on insects and larger ones on proportionately larger animals The construction of the jaws and ribs and the expansible skin enable a snake to swallow large prey The majority lay eggs, others produce live young Most snakes are protectively colored There are about 2,500 species, of which about four fifths are nonvenomous Among the harmless snakes of North America are the GARTER SNAKE, KING SNAKE, ribbon snake, green or grass snake, pilot black snake, BLACK SNAKE, De Kay snake, and the milk, bull, water, hog-nosed, worm, rat, coachwhip, and pine snakes The boa family includes the largest snakes, the ANACONDA and the reticulated PYTHON, the smaller BOA CONSTRICTOR, and the tree and sand boas. Poisonous snakes of North America are the coral snake and the pit vipers, e.g., the COPPERHEAD, WATER MOCCASIN, RATTLESNAKE, and *massasauga*. Other pit vipers are the deadly FER-DE-LANCE and the BUSHMASTER Also highly venomous are the Old World vipers, the COBRA, the African mamba, and the sea snakes of tropical oceans Only by familiarity with their appearance or by examination of their fangs can the venomous kinds be distinguished from the harmless ones Venom is produced by modified salivary glands, from which it passes through either a groove or a hollow bore in the snake's fangs into the victim Venom is removed from snakes for use in treating certain diseases and to make antivenin for snake bites See C H. Curran and Carl Kauffeld, *Snakes and Their Ways* (1937), C H Pope, *Snakes Alive and How They Live* (1937), R L Ditmars, *Snakes of the World* (1937 ed) and *Field Book of North American Snakes* (1939)

snake bite. Poisonous snakes of the United States are the rattlesnake, the copperhead, the water moccasin, and the coral snake Other poisonous snakes are the cobra and the South American rattlesnake The venom of the coral snake, cobra, and South American rattlesnake causes injury chiefly to the nerves, but also damages blood cells and blood vessels That of the copperhead, rattlesnake, and water moccasin causes hemorrhage When in snake country it is advisable to wear heavy clothing not easily penetrated by the snake's fangs and to protect the ankles and legs with boots or leggings After a bite a TOURNIQUET should be instantly applied to the limb between the wound and the heart An antitoxin effective against all types of snakes (polyvalent antitoxin) should be given by INJECTION into a vein and then beneath the skin around the bite The wound should be cut to encourage bleeding ARTIFICIAL RESPIRATION may be required

snake charming, art of fascinating, capturing, and controlling serpents It was known and practiced in the East from ancient times either as amusement or as a means of luring dangerous reptiles from the vicinity of men and cattle The cobra, usually displayed by Indian jugglers, is controlled by monotonous music, and the asp is fascinated by the rhythmic movements of a bright object Sometimes the jugglers extract the fangs, but more often they rely, for their safety, on their power to charm, which is reputedly hereditary

Snake Indians, name given to certain North American Indian tribes in S Idaho, N Nevada, and N Utah These Indians are now classified as the SHOSHONE INDIANS, the BANNOCK INDIANS, and the PAIUTE INDIANS

snakeroot, name for several plants, among them SENEGA SNAKEROOT, button snakeroot or BLAZING STAR, WHITE SNAKEROOT, and BLACK SNAKEROOT

snapdragon, Old World perennial (*Antirrhinum majus*), cultivated, usually as an annual, in greenhouses and gardens for cut flowers The showy blossoms, likened to a dragon's snout, are of various colors There are dwarf snapdragons suitable for rockeries Other species of the genus, many of which grow wild in the W United States, are also called snapdragon and are sometimes cultivated The related butter-and-eggs is often called snapdragon

snapper, member of a family of food fishes of warm and tropical seas Best known of the group is the red snapper, found along the Atlantic coast from Long Island to Brazil and most abundant in the Gulf of Mexico It is shipped in quantities to many parts of the United States The body and fins are deep red and it reaches a length of from 2 to 3 ft Game fish of the family include the gray or mangrove snapper, muttonfish, and dog snapper of Atlantic waters Some species are common in tropical Pacific regions

snapweed see TOUCH-ME-NOT

snare drum, small drum having a drumhead at either end One head is struck with wooden drumsticks, and on the other are stretched several strings, called snares, which cause a rattling against the head The snare drum was used only in military bands until the 19th cent, when it became an orchestral instrument

Snead, Sam (Samuel Jackson Snead) (snēd), 1912–, American golfer, b Hot Springs, Va He worked on his father's farm, began golfing as a caddie when he was 15, and excelled at athletics while in high school In 1935 he moved to White Sulphur Springs, W Va., and began playing professional golf From the start Snead was a large money winner, and after three times (1938, 1940–41) winning the Canadian Open tournament, Snead won (1942) the Professional Golfers Association crown After service (1942–44) in the U S navy in the Second World War, he returned to the game and won (1946) the British Open title In 1949 Snead—noted for his perfect golf form—again won the P G A crown and was the biggest tournament money winner He wrote *How to Play Golf* (1946)

sneezing, sudden violent expiration of air through the nose and mouth without the person's control, resulting from a stimulus from the nervous system which causes contraction of the muscles of expiration Any irritation in the nose may produce the stimulus—inflammation due to infection (as in colds) and to irritants (as in HAY FEVER or in using snuff) and the presence of foreign bodies It was considered of some significance as an omen by the ancients There is no benefit in preventing a sneeze under ordinary conditions, but the nose and mouth should be covered to prevent exposing others to possible infection.

Sneffels, Mount, peak, 14,143 ft. high, SW Colo., in the San Juan Mts of the Rockies and W of Ouray

Snefru (snĕ'frōō), d c.2900 B C , king of ancient Egypt (c.2930–c 2900 B.C.), of the III dynasty; predecessor of Khufu Snefru began commerce across the open sea with Phoenicia, for the cedar logs of Lebanon, and built ships nearly 170 ft long for use on the Nile He was successful against Nubia in the south and permanently established Egypt's power in the copper-producing Sinai peninsula His tomb was the largest up to that time

Snell or **Snellius, Willebrord** (vĭl'lŭbrôrt snĕl', snĕl'ĭŭs), 1591–1626, Dutch mathematician He is generally credited with the discovery (1621) of the law of the refraction of light In 1613 he became professor of mathematics at the Univ of Leiden His two chief works are *Eratosthenes Batavus* (1617) and *Cyclometricus* (1621)

Snelling, Fort, established in 1819 on a bluff above the Mississippi at the confluence of the Minnesota It served not only as protection against Indians but as a nucleus of settlement A sawmill was built at the Falls of St Anthony here in 1821, and later MINNEAPOLIS grew on the fort reservation

Snellius, Willebrord see SNELL, WILLEBRORD

snipe, small or medium-sized wading bird related to the woodcock and native to the Old and New Worlds The plumage is generally variegated brown, chestnut, and buff Like the woodcock it probes in soft earth for food—insects, chiefly harmful ones, and worms The Wilson's snipe, also called common snipe, English snipe, or jacksnipe, a game bird of marshes and wet meadows, is about 11¼ in long It breeds in the N United States and Canada and migrates as far as Brazil In its unusual breeding-season performance it circles and dives in the air The eastern dowitcher or red-breasted snipe is an easy prey to hunters The long-billed dowitcher of W North America and South America is rare on the Atlantic coast Very similar to the Wilson's snipe is the common snipe of Europe, Asia, and Africa

Snohetta, Norway see DOVREFJELL

Snohomish (snōhō'mĭsh), farm trading city (pop 2,794), NW Wash., on the Snohomish river and NE of Seattle, settled in the 1850s

snoring, rough, vibratory sounds accompanying breathing during sleep or coma The noisy breathing is associated with the relaxation of the palate and an open mouth In some individuals, snoring is avoided by sleeping on the side Any obstruction interfering with normal breathing through the nose may produce such sounds during sleep Sometimes snoring indicates the need for removal of adenoids

Snorri Sturluson (snô'rē sturt'lŭsŏn) or **Snorri Sturleson** (-lāsŏn) 1179–1241, Icelandic chieftain and historian He was the author of the invaluable prose EDDA, which is at once a treatise on the art of poetry and a compendium of Norse mythology, and of the *Heimskringla*, biographies of Norse kings, a source for medieval Norwegian history Snorri loved intrigue, money, and power, he held high office in the Icelandic commonwealth, but lost favor when he seconded the plan of Haakon IV for the annexation of Iceland to Norway He was killed on his own land by a relative and rival

Snow, Francis Huntington, 1840-1908, American educator and entomologist, b Fitchburg, Mass., grad Williams, 1862 He was associated with the Univ of Kansas from its inception—as professor of mathematics and natural science (1866–70), of natural history (1870–89) and of organic evolution, meteorology, and entomology (1901-8) and as chancellor (1890–1901) His insect collection, gathered on 26 expeditions and housed in Snow Hall, is one of the largest in the country

Snow, Lorenzo, 1814–1901, Mormon church leader, b Mantua, Ohio He studied at Oberlin College Entering the Mormon church (1836), Snow became an apostle in 1849 Upon his return from missionary work abroad, he settled in Utah, where, at Brigham, he established a cooperative plan (1864) He was for 30 years in the legislature In 1889 he was made president of the Twelve Apostles and in 1898 president of the Mormon church His works include an Italian translation of the *Book of Mormon* and *The Only Way to Be Saved* (1851)

snow, precipitation formed by the condensation of vapor in temperatures below freezing Condensation resulting in the formation of snow (as in the formation of raindrops) takes place about a dust particle, and snowflakes form symmetrical (hexagonal) crystals, sometimes matted together if they descend through an warmer than that of the cloud in which they originated Snowfall, reduced to its liquid equivalent, is usually included in statistics on rainfall, the factors determining snowfall are similar to those affecting rainfall On an average, 10 in of snow is equivalent to 1 in of rain The functions of snow are varied It is the source of the AVALANCHE and the GLACIER It serves as an insulating blanket, lessening to some extent the extremes of temperature fluctuation to which the soil is subjected Snow lessens loss of water by dormant plants The sudden melting of snow is a primary cause of floods Snow necessitates the building of snowsheds over rail lines and highways in certain mountain localities where the heavy fall is likely to impede travel, the use of snowplows to clear sidewalks, streets, and roads; the use of snow fences to prevent drifting over roads; and the use of skis, snowshoes, toboggans, and sleds for travel. It

is a primary factor in the location of winter sports centers and so has great economic value to certain areas Snowfall also affects architecture, e g , in countries where the snowfall is heavy, roofs are built with a steep pitch so that the snow will slide off See W A Bentley and W. J Humphreys, *Snow Crystals* (1931).

snowball see HIGH-BUSH CRANBERRY

snowberry, any of the white-fruited species of *Symphoricarpos*, a genus of ornamental shrubs, chiefly American The common snowberry (*Symphoricarpos racemosus* or *albus*) is cultivated for the many compact clusters of waxy berries which are persistent into the winter, they were eaten by some of the western Indians The pinkish flowers are small and bell shaped A pink-fruited species is called coralberry and Indian currant Other plants are sometimes called snowberry

snowbird see JUNCO

snow blindness, impaired vision or temporary blindness caused by a burn of the cornea of the eye resulting from prolonged exposure to sunlight reflected from water or snow. Healing occurs within 48 hr Treatment includes use of a local anesthetic to reduce the intense pain and application of a dressing until healing is completed

Snowden, Philip Snowden, 1st **Viscount** (snō'dun), 1864–1937, British statesman Born to poverty and crippled for life by a bicycle accident, Snowden became, at the age of 27, interested in the socialist movement and joined the Independent Labour party in 1893, the year of its organization He was twice chairman of the party (1903–6, 1917–20), but resigned in 1927 in favor of the Labour party proper as a protest against what he considered the revolutionary tendencies of the parent organization He served in the House of Commons from 1906 to 1918 and from 1922 until 1931, when he was elevated to the peerage as Viscount Snowden of Ickornshaw He belonged to the pacifist minority of the socialist group in the First World War As an acknowledged specialist in finance, he became chancellor of the exchequer in the ministries formed by Ramsay MacDONALD in 1924 and 1929 He attempted to relieve poverty and unemployment, advocated free trade, and at the Hague Convention of 1929 demanded increased German war reparations He entered the National government of 1931 with MacDonald, but retired the following year when free trade was abandoned See his autobiography (2 vols , 1934)

Snowdon, Welsh *Eryri* (ĕrŭ'rē), mountain, 3,560 ft high, Caernarvonshire, Wales, SE of Caernarvon, highest in Wales It has five peaks, separated by Llanberis, Aberglaslyn, and other passes There is a rack and pinion railway from Llanberis to the summit Other towns in the vicinity are Beddgelert and Capel Curig The Snowdon district, or Snowdonia, is noted for the beauty of its scenery

snowdrop, any species of the genus *Galanthus*, hardy, low bulbous plants of the Old World, with a single, small, nodding, bell-shaped white blossom appearing in the early spring, sometimes while there is still snow The flower is emblematic of consolation and of promise The plants are popular for naturalizing *Galanthus nivalis* is the common snowdrop, there are also giant and double kinds

Snow Hill, town (pop 1,926), co seat of Worcester co , Eastern Shore, Md , on the Pocomoke river and SE of Salisbury, founded 1686 It has several small industries At All Hallows Church (1756) is a Bible, a gift of Queen Anne, dated "London, 1701"

snow line, altitude above which or latitude beyond which there is perpetual snow In arctic and antarctic regions it is at sea level, near the equator, at an altitude of c 3 mi Other factors affecting the location of the snow line are the quantity of snowfall, the steepness of the slope and exposure with reference to the sun and prevailing winds, the type and velocity of the winds, and the presence or absence of large bodies of water In the Alps the snow line is at c 9,000 ft above sea level, in the Andes it is at c 16,000 ft.

snow-on-the-mountain see SPURGE

snowshoes, footgear enabling the wearer to walk on soft snow without sinking A snowshoe consists of a light frame of tough wood, roughly the shape of a large tennis racket, which is strung with caribou skin or other material and is attached to the shoe back of a central crossbar in the frame A primitive form of snowshoe is that used by the Eskimo and North American Indians, but the designs differ considerably The Eskimo uses one shape which is triangular, about 18 in in length, and another which is nearly circular The Cree Indians, farther south, use a long narrow hunting shoe, about 6 ft in length, in open country and for speed this type is the best The toes are slightly turned up to prevent catching if there is a crust on the snow The shoes worn by lumbermen are about 3½ ft long and proportionately broad, while a tracker's shoe is at least 5 ft long and very narrow Manufactured snowshoes are often made with the moccasin attached. The correct method of walking on snowshoes is to raise them slightly with each step and slip the edge of one over the other Snowshoe races are now one of the popular sports at winter carnivals, and the sport is governed in the United States and Canada by the International Snow-Shoe Congress. See D. S Davidson, *Snowshoes* (1937)

snowy heron. see EGRET.

snuff. In pre-Columbian time, snuff taking was practiced in the West Indies, in Mexico, and in parts of South America The adoption of the practice in Europe was encouraged by belief in its medicinal virtue From Europe the practice was carried to the Orient The highest status of snuff taking was attained in the 18th cent , when it was practiced by both men and women The richly ornamented snuffboxes of the time are now esteemed by collectors A ritual of taking snuff developed, with prescribed ways of tapping and opening the box and offering it to others In preparing snuff, blended tobacco is aged, often for two or three years, undergoes a number of fermentations, and is ground , usually flavoring and scenting materials are added More recently the practice of dipping snuff into the mouth with a stick or brush or of inserting it between the cheek and gums largely replaced sniffing it into the nostrils See M M Curtis, *The Story of Snuff and Snuff Boxes* (1935)

Snyder, John Wesley, 1896–, U S Secretary of the Treasury (1946), b Jonesboro, Ark After study at Vanderbilt Univ (1914–15) and fighting in the First World War, he was an executive in various Arkansas and Missouri banks and became national bank receiver in the Office of the Comptroller of the Currency (1930–37) Later serving in the RFC (1937–45), he followed Fred M VINSON as Federal loan administrator (1945), as Office of War Mobilization and Reconversion administrator (1945–46), and as Secretary of the Treasury

Snyder, 1 Town (pop 1,278), SW Okla , SW of the Wichita Mts , in a farming and granite-mining section, inc 1903 A wildlife refuge is near by 2 Town (pop 3,815), co seat of Scurry co , NW Texas, NW of Sweetwater, inc 1907 It grew as a cow town about a trading post established in 1876 Cattle ranches, oil fields, and dairy, chicken, and cotton farms in the region support the small industries of the town

Snyders, Frans (frans' snī'durs), 1579–1657, most celebrated Flemish still-life and animal painter, b Antwerp He studied with "Hell" Bruegel and Hendrik van Balen but was principally influenced by Rubens After traveling in Italy he settled in Antwerp, where he enjoyed a flourishing practice He often collaborated with Rubens and Jordaens, in whose pictures he sometimes painted the animals while they in turn did figures for some of his paintings of the hunt The early work of Snyders was largely still life, but he is best known for his spirited animal compositions, often depicting hunting scenes or struggles between wild animals, a field in which he has never been excelled He enjoyed the patronage of Archduke Albert, governor of the Low Countries, and of Philip III of Spain Many of his finest works are still in the Prado His paintings are fresh and luminous in color and admirable in composition Among his noted works are *Stag Hunt* (The Hague), *Hippopotamus Hunt* (Rijks Mus), *Lioness Attacking a Boar, Dogs in the Kitchen* (Louvre), *Lions Chasing a Deer* (Metropolitan Mus), and *Boar Hunt* (Mus of Fine Arts, Boston)

So, king of Egypt to whom Hoshea of Israel sent messengers (c 726 B C) He is mentioned only in 2 Kings 17 4 Identification of So is difficult in the confused state of the time in Egypt

Soane, Sir John (sōn), 1753–1837, English architect He won a fellowship to Rome and after his Italian travels returned in 1780 to begin his practice in England In 1788 he was chosen to succeed Sir Robert Taylor as architect for the Bank of England, his largest and most important work Among Soane's other works are the Dulwich Picture Gallery, Pitzhanger Manor at Ealing, and his own residence at Lincoln's Inn Fields, which he bequeathed as a museum for his collections, now known as the Soane Museum He devoted his later years to teaching architecture and delivering lectures Though one of the leaders of the classic revival in England, he went beyond the mere imitativeness of classic models generally prevalent and evolved a highly individual style through an imaginative and flexible use of Greek and Roman motives He became a member of the Royal Academy of Arts in 1802 and was knighted in 1831

soap. Ancient peoples are believed to have employed wood ashes and water for washing and to have relieved the resulting irritation with grease or oil In the 1st cent. A D , Pliny described a soap of tallow and wood ashes used by Germanic tribes to brighten their hair A soap factory and bars of scented soap were excavated at Pompeii Soap fell into disuse after the fall of Rome but was revived in Italy probably in the 8th cent and reached France c 1200, Marseilles became noted as a soap-making center Although soap was known in England in the 14th cent., the first English patent to a soapmaker was issued in the 17th cent The industry was handicapped in England from 1712 to 1853 by a heavy tax on soap In the American colonies soap factories appeared at an early date, and many housewives made soap from waste fats and lye (obtained by leaching wood ashes). The manufacture of soap was stimulated by Chevreul's discovery of oleic and stearic acids in the early 19th cent and by Leblanc's method (1791) of preparing soda from salt Chemically, soaps are metallic salts of fatty acids, i e , compound substances composed of a metal such as sodium or potassium and of carbon, hydrogen, and oxygen combined as in the fat from which the soap was derived The manufacture of soap is based on a chemical reaction (saponification) in which an alkali acts upon a fat to form a metallic acid (soap) and an alcohol (glycerin) A number of methods may be employed to make soap, but all are based on the same principle of operation Fats and oils (often blended) are heated in a large vessel, then enough alkali to react with all the fat is stirred in When salt is added, the soap forms a light curd which floats to the surface Glycerin, a valuable by-product, can be distilled from the liquid residue To produce a purer soap, the curds are washed with salt solution, water is later added, and the solution is allowed to settle, the upper of the two layers thus formed is the pure soap, called settled soap It is thoroughly churned, poured into huge frames, cut with wires, shaped, and stamped Hard-milled soap is run over chilled rollers and is scraped off as chips which are rolled into ribbons, cut, and shaped Soap is marketed also as chips, flakes, and beads and in powdered form Soap powders, as distinguished from powdered soap, contain builders which assist in rough cleaning Soaps differ according to the lathering properties of the fat or oils and according to the alkali employed When sodium hydroxide is used as the alkali, hard soaps are formed, potassium hydroxide yields soft soaps Aluminum, calcium, magnesium, lead, or other metals are used in place of sodium or potassium for soaps used in industry as paint driers, ointments, and lubricating greases and in waterproofing Fillers are added to many soaps to increase lathering, cleansing, and water-softening properties, rosin is commonly used in yellow laundry soap to increase lathering Soap substitutes include saponin-containing plants such as soapwort and shagbark and the modern soapless detergents (usually sulfonated alcohols), which may be used in hard water and even in salt water without forming curds Soap cleanses by lowering the surface tension of water, by emulsifying grease, and by adsorbing dirt into the foam See E A B McGowan, *A Comparative Study of Detergents* (1930), W A Poucher, *Perfumes, Cosmetics, and Soaps*, Vol I (5th ed , 1941), Vols II–III (6th ed , 1942)

soap plant, any of various plants containing cleansing properties A few are of commercial importance, but most soap plants are used locally, as in early times, for toilet and laundry purposes The soapbark (now often included in hair tonics) and the soapberry have been particularly valued for shampooing, and the California soap plant, the soapbark, and the soapwort for washing delicate fabrics Soap plants contain no alkali and are considered mild and beneficial for cleansing purposes, with the exception of the soapberry, which is thought to deteriorate some materials The lather-producing substance is saponin, often poisonous if taken internally This poisonous quality was utilized by the Indians, who caught fish by first stupefying them with bits of the plants thrown into pools There are many plants that are saponaceous, but only a few are known to contain appreciable amounts, as in the rootstock of species of YUCCA (e g , *Yucca baccata*), the bulb of the California soap plant (*Chlorogalum pomeridianum*), the roots and fruit of the red BUCKEYE (*Aesculus pavia*), the roots, stems, and leaves of the SOAPWORT, the dried inner bark of the soapbark tree (*Quillaja saponaria*), the fruit of the soapberry (*Sapindus*), the pods of an ACACIA (*Acacia concinna*), and the roots of the California pigweed (*Chenopodium californicum*) Other plants with lather-producing parts are species of *Zygadenus*, *Veratrum*, and AGAVE, the SENEGA SNAKEROOT, and the cowherb (*Saponaria vaccaria*) The name *amole* (ämō'lā) is sometimes given soap plants, particularly those of the Southwest, where they are still in common use

soapstone or **steatite** (stē'ŭtīt), massive rock of which the characteristic, and usually the chief, mineral is TALC, but which also contains varying parts of chlorite, mica, tremolite, quartz, magnetite, and iron compounds It is gray to green in color, with a soapy feel, and is notable for its high degree of resistance to acids and heat It is so soft as to be easily cut with a knife or other sharp tool The chief deposits of commercial importance are in the United States, Norway, and Canada It is used in the manufacture of laboratory equipment, kitchen sinks, laundry tubs, furnace linings, and electrical apparatus

soapwort or **bouncing Bet,** perennial plant (*Saponaria officinalis*), cultivated in gardens in colonial America and now naturalized and common along roads and railroads It has opposite leaves and pink or white clusters of flowers that may be single or double The roots, stem, and leaves yield a lather which cleanses and is considered particularly

fine for delicate fabrics and laces, although the bark of the root is apt to give white materials a reddish tinge The soapwort is the most widely known American SOAP PLANT; it has been used medicinally as an alterative Other species of the genus *Saponaria* are also called soapworts

Sobat (sō'bät'), river, c 460 mi long, rising in SW Ethiopia and flowing generally NW through the Anglo-Egyptian Sudan to the White Nile It is navigable most of the year In its upper course it is called the Baro

Sobieski, John: see JOHN III, king of Poland

socage: see TENURE

soccer (sŏ'kŭr), game played on a grassy field preferably measuring 120 yd by 75 yd It is also called association football A line parallel to the goal lines divides the field in half, and in the direct center of the field is a circle with a radius of 10 yd Centered on each goal line is a goal, 8 yd wide and 8 ft high, backed with netting In front of each goal is the goal area (20 by 6 yd), which is enclosed by a penalty area (44 by 18 yd) A soccer team comprises 11 men—a goalkeeper, two fullbacks, three halfbacks, and five forwards—and limited substitution is allowed At the beginning of each 45-minute half, after a goal has been scored, and at the beginning of the overtime period in case of a tie, there is a kickoff from the center circle Play is directed toward advancing the round inflated leather ball (about 28 in in circumference) to the goal guarded by the opposing team The ball is kicked (often dribbled with short kicks) or may be advanced by other parts of the body such as the head and chest, but only the goalkeeper may use his hands Each goal counts one point Penalties meted out by a referee, who is assisted by linesmen, are awarded the offended team, e g , free kicks from various parts of the field In England soccer for many centuries was undifferentiated in name and character from football After the advent (1823) of rugby football, a passing and kicking game, the London Soccer Association was formed (1863) to further that type of football which emphasized only the kicking of the ball The name soccer was derived by usage from an abbreviation of the word *association* The game gained tremendous popularity in Great Britain and was rapidly adopted by the continental countries, where it still generally goes under the name football Although soccer is a secondary sport in the United States (largely because of the tremendous popularity of the American brand of football), it is doubtless the most popular sport played internationally See F N S Creek, *Association Football* (1937); A E Witcher, *Soccer Calling* (5th ed , 1945), G J S King, *Popular History of Association Football* (1949), R T Hesford, *Association Football* (1950)

Sochi (sô'chĭ), city (1939 estimated pop 50,000), S Krasnodar Territory, SE European RSFSR It is a port and subtropical resort on the Black Sea Beautifully situated at the foot of the Greater Caucasus, it has many hotels, sanatoriums, and rest homes and receives c 100,000 visitors yearly

Socho or Sochoh (both sô'chō), variants of SOCOH

Social Circle, city (pop 1,735), N central Ga , ESE of Atlanta, inc 1831

social contract, agreement or covenant by which men are said to have abandoned the "state of nature" to form the society in which they now live The theory of such a contract, first formulated by the English philosophers Thomas Hobbes and John Locke, assumes that men at first lived in a state of anarchy where there was no society, no government, and no organized coercion of the individual by the group Hobbes maintained that by the social contract men had surrendered their natural liberties in order to enjoy the order and safety of the organized state Locke made the social contract the basis of his advocacy of popular sovereignty, the idea that the monarch or government must reflect the will of the people Like Locke, the French philosopher Rousseau, in *Le Contrat social* (1762), found the general will or will of the majority a means of establishing reciprocal rights and duties, privileges, and responsibilities as a basis of the state, These ideas were used as a justification of both the American and the French revolutions in the 18th cent Thomas Jefferson held that the preservation of certain natural rights was an essential part of the social contract and that "consent of the governed" was fundamental to any exercise of governmental power Though historically important, the theory as a basis of society and the state has been discarded by social and political scientists

Social Credit, economic plan, based on the theories of Clifford Hugh Douglas The central idea is that the difficulties fundamental to economic depression are those of distribution due to lack of purchasing power. To solve them he proposed a system of issuing dividends to every citizen in order to redistribute purchasing power This became a matter of great political importance when the scheme was adopted by a political party in Alberta, and the party, led by William ABERHART, won a resounding victory in provincial elections of 1935 The program included distribution of a social dividend of $25 a month, but it proved impossible to put this scheme into actual practice Attempts to tax banks and to enter on currency schemes were disallowed by the confederation government and declared unconstitutional in the courts Nevertheless, the party continued to win elections after Aberhart's death and after the Second World War entered upon much social welfare legislation, while the province prospered

social hygiene In its broadest sense this term refers to any problem of sex behavior that in any way concerns health, including social health It is, however, often used in a narrower sense to mean the control of the genito-infectious diseases (see VENEREAL DISEASE) Until recent years attention was given more to moral issues than to disease control Emphasis has now shifted from social control to public health control as a specialized field of communicable disease work The more comprehensive view of social hygiene stresses the relationship between the genito-infectious diseases and poor sexual adjustment according to current standards of social behavior Case finding and treatment must recognize the need for concurrent adjustment in sexual habits Social hygienists also recognize that there are other important problems of poor social hygiene, e g , the unmarried mother, the prostitute, sex crimes, and poor sexual relationships within the family The social hygiene program aims not only to correct the social ills which give rise to such problems but also to promote better sex education to prevent their occurrence The increasing attention in schools, colleges, youth groups, church groups, and premarital clinics to education for family living is considered an important foundation for good social hygiene See W B Long and J A Goldberg, *Handbook on Social Hygiene* (1938), John Levy and R L Munroe, *The Happy Family* (1938), F B Strain, *Sex Guidance in Family Life Education* (1942)

socialism, general term for any economic doctrine that challenges belief in the sanctity of private property and favors use of property for the public welfare In this broad sense it embraces a great variety of economic theories from those holding that only certain public utilities and natural resources should be owned by the community or the state with remaining property still private to thoroughgoing Marxian socialism and, farther, to the edges of ANARCHISM The term is sometimes used to describe all the various types of belief in communal property stretching back to the Greeks and beyond, but this usage is somewhat anachronistic, and those utopian schemes may be properly called communistic (for a brief review, see COMMUNISM) The Industrial Revolution profoundly changed the basic economic patterns of Western Europe, first in the British Isles in the 18th cent and later on the Continent This, in its totally unregulated beginnings, brought rapid wealth to the owners of the new factories but created sordid and brutal living conditions for the workers Forward-looking intellectuals turned their thoughts toward working out new plans for social reorganization The French Revolution had cleared the air by violence, and though the extreme theories of Babeuf were rejected, some of his ideas and his movement (Babouvism) persisted in secret societies, where radical social reforms were discussed and plotted It was in this ferment that *socialism* and *communism* emerged as terms They were used more or less interchangeably at that time The leading intellectual spokesmen of the reform in France generally took up the strain of idealistic and utopian communism that had motivated the comte de Saint-Simon Thus Étienne CABET and Charles FOURIER planned COMMUNISTIC SETTLEMENTS Others who were not of socialistic stripe also aided in advancement of schemes for a new society, among these Pierre Joseph Proudhon was outstanding The movement was international from the start, and the French thinkers were much influenced by the Englishman Robert OWEN, who was in turn an intellectual successor to Thomas SPENCE In the young United States, where hopeful communistic colonies were planted by these European dreamers, leading intellectuals such as the transcendentalists were also scheming for social reform Albert BRISBANE, a Fourierist, and Bronson ALCOTT were particularly vocal There was an atmosphere of unreality about most of this high-minded reform, but more practical and more political-minded reformers were not lacking Louis BLANC in his *Organisation du travail* (1840) put forward a scheme for workshops that would be under the state and would revolutionize working conditions, the scheme was allegedly tried and definitely betrayed after the Revolution of 1848 It was Louis Blanc who set forth the socialist principle, "From each according to his abilities, to each according to his needs" More radical was Louis BLANQUI, who founded a revolutionary society in 1847 and influenced the Revolution of 1848 Before that revolution, which was a nodal point in socialism, the man who was to revolutionize socialism had gained prominence This was Karl MARX. He attacked the utopians as futile and foolish and with Friedrich ENGELS issued *The Communist Manifesto* (1848), setting forth the principles of a practical socialism based on a scientific philosophical method Marxian ideas prevailed, and socialism came to be dominated by his arguments and methods (see MARXISM). To be sure, other varieties of socialism persisted and appeared, such as the CHRISTIAN SOCIALISM of F. D. MAURICE and Charles KINGSLEY and the later Catholic socialist parties. The notable Ferdinand LASSALLE, who founded (1863) the first workingmen's party in Germany, stressed the role of the state and nationalism as opposed to the Marxian emphasis on the community (with the state to "wither away") and internationalism But through the efforts of Wilhelm LIEBKNECHT and August BEBEL, founders of the Social Democratic party in Germany in 1869, the Lassallian group was brought into the main stream of Marxian socialism, later the combined party discarded all of Lassalle's theories by the Erfurt Program of 1891 Socialism was flowing strong by the 1870s Under the guidance of the INTERNATIONAL, Social Democratic parties sprang up over Europe and flourished in some spots The movement was generally known as socialism in this period, although the term *communism* by no means disappeared The bourgeois-dominated society did not receive the Socialists (with a capital S for members of the Social Democratic parties) with open arms, and there were sharp contests between the state and the party in several countries The struggle with the government of Bismarck in Germany was bitter, and the chancellor put the party down but himself instituted social insurance and social welfare laws Later, after PLEKHANOV had founded a Social Democratic party in Russia, the Socialist revolutionaries were hunted down with fervor by the tsarist police In some instances, however, the Socialists fought more fiercely among themselves than they did against their conservative enemies The International covered a multitude of opinions, including even anarchism and SYNDICALISM, and various small groups fought for their ideas against the majority Schisms abounded The first really important split was the defection of Eduard BERNSTEIN, who in 1898 denied some of Marx's doctrines—notably the increasing intensification of the class struggle and the inevitability of world revolution—and argued for revision of Marxian theories In 1901 he headed the "revisionist" group in a direct split with the majority His chief opponent was Karl KAUTSKY, who was later to be the opponent of the Russian or Leninist form of socialism The fateful division between the Russian group and the remainder of the socialists had its origin in the struggle between BOLSHEVISM AND MENSHEVISM within the Russian party The chief issue was "gradualism," the achievement of the socialist state through intermediate democratic reforms rather than by revolution and the immediate establishment of the dictatorship of the proletariat The opponents of "gradualism," the Bolsheviki, won out and ultimately became the Communist party, under the leadership of Lenin and later of Stalin Thus came the chasm between Communism (with a capital C) and Socialism In some cases the enmity between the two has reached extremes of bitterness greater than the feeling of either against the proponents of capitalism Communism was crystallized as a result of the First World War That war had placed heavy strain on the Social Democratic parties of the nations at war, for their avowed aim was internationalism There were severe struggles between those Socialists who refused to cooperate with the war measures of their governments and those who favored cooperation The noncooperators were assailed violently by patriots with a hatred most glaringly displayed in the murder of a leading French Socialist, Jean JAURÈS Most of the Socialists in the various countries ended by supporting their governments After the war the Social Democrats established the new government in Germany, putting down Communist revolution and the reactionary Kapp putsch They were to remain an important force throughout the Weimar Republic and remained powerful until suppressed by Adolf Hitler After the Second World War the party reemerged in the western part of Germany in the British, American, and French zones, in the eastern part under Russian occupation it was merged with other parties into a single Communist-dominated group Socialist governments also functioned ably in other countries, notably in Scandinavia In France (where there are several parties, notably the Radical Socialist party, with the word Socialist in the name but no socialism in the program), the Socialists were the dominant group in the Popular Front government under Léon BLUM, who instituted some vigorous reform measures In Great Britain the course of socialism diverged sharply from that on the Continent in method if not in theory The reform movement of CHARTISM had contributed something to radical thought, as had the later writings of John Stuart MILL In the late 19th cent the FABIAN SOCIETY was founded, its able leaders, including George Bernard SHAW and Beatrice WEBB and Sidney Webb, did much to spread the socialist doctrine Out of it was to grow the LABOUR PARTY, the organ of British socialism. Other forms of socialism also appeared to flank the old Christian socialism. The principles of William

MORRIS dictated by aesthetic and ethical aims and the small but able group who forwarded GUILD SOCIALISM also had influence on British thought The Labour party, however, with its policy of "gradualism" has represented the chief strain of socialism It triumphed in the elections of 1924 and again in 1929, but in 1931 the Labour government of Ramsay MACDONALD was transformed into a coalition government, and it was not until after the Second World War that the Labour party emerged into full power with the elections of 1945 and the formation of a government with Clement ATTLEE as prime minister and Ernest BEVIN as foreign secretary In the United States, after the group of idealists in the mid-19th cent. there were other men who put forward reform ideas of socialist stamp, notable among them Edward BELLAMY The organized socialist movement, however, came into the country with German refugees and immigrants after the Revolution of 1848, and the German tone long persisted The SOCIALIST PARTY was founded in 1900 Outstanding figures in American Socialism have been Daniel DE LEON, Eugene V DEBS, Morris HILLQUIT, and Norman THOMAS Socialism has been strong in Australia and New Zealand and has exerted some influence in all the countries of Western culture, including Latin America (notably in Mexico and Chile) See George Bernard Shaw, *The Intelligent Woman's Guide to Socialism and Capitalism* (1928), Sally Graves, *A History of Socialism* (1939), H W Laidler, *Social-Economic Movements* (1944), Harold J Laski, *Faith, Reason, and Civilization* (1944), Paul M Sweezy, *Socialism* (1949), J A Schumpeter, *Capitalism, Socialism, and Democracy* (3d ed , 1950)

Socialist Labor party, in U S. history In 1874 a workingmen's party was formed by New York city socialists, and by the end of that decade, having established a national organization, it was named the Socialist Labor party In 1880 the Socialist Labor party temporarily allied itself with the Greenback party Under the leadership of Daniel DE LEON in the 1890s the party—which called for a syndicalist type of socialism—gained strength After many members who were opposed to the leadership of De Leon withdrew (1899) and joined the less militant Social Democratic party (see SOCIALIST PARTY), the Socialist Labor party met with a sharp decline

Socialist party, in U S history In 1898 the Social Democratic party was formed by a group led by Eugene V DEBS and Victor BERGER That same year Social Democratic party candidates were elected to local offices, notably in Massachusetts In 1900 Debs ran for President and polled over 95,000 votes After dissident members (led by Morris HILLQUIT) of the SOCIALIST LABOR PARTY joined the Social Democrats, the party was redesignated (1901) the Socialist party Debs ran as the Socialist party candidate for President at each election until 1912, Morris Hillquit, however, remained the dominant figure of the party During the First World War, the Socialist party pronounced against participation, and Debs, convicted (1918) of speaking in violation of the Espionage Act, ran for President on the Socialist ticket while still in prison The withdrawal (1919) of the revolutionary element, which later formed the Communist party of America, left the Socialist party with reformist objectives, calling for evolutionary socialism in America After 1928 Norman THOMAS led the party and repeatedly ran for President on the Socialist party ticket By 1936 the Socialist party lost much of its right-wing support, which had come to back the New Deal In municipal elections, however, the Socialist party continued to win victories, notably under Daniel W Hoan of Milwaukee and under Jasper McLevy of Bridgeport, Conn.

socialization of medicine · see HEALTH INSURANCE

social psychology, study of the relationships between one individual and another, between the individual and the group, and between one group and another As such it is sometimes said to be the scientific common ground on which experimental psychology, sociology, anthropology, and psychiatry meet In its concern with individual behavior and social institutions it uses the studies of sociology and anthropology. But the field is extended by its concern, also, with the problems of the economist, the political scientist, the jurist, and the educator—since these, too, deal with the adjustment of the individual to social institution and group Typical research subjects in social psychology include the influence of family, school, church, economic status, and political background on the development of the individual and on his adaptation to his milieu, the study of patterns of behavior such as aggression, sympathy, competition, and cooperation, the nature of attitudes, their development, and ways of measuring and changing them, the study of imitation and suggestion and their effect upon such phenomena as fashions and fads, and interracial and international relations as they affect the individual in his society. Historically, social psychology developed out of the work of Moritz Lazarus, Heymann Steinthal, and Wilhelm Wundt (folk psychology), of Gabriel de Tarde (imitation), of Gustave Le Bon (crowd behavior), and the general work of Sigmund FREUD and William MCDOUGALL In the 1920s there was increasing use of the behaviorism of John B Watson as method and precept In more recent times much research has been done in attempts to perfect scientific methods of measuring quantitatively and of describing qualitatively the social behavior of men While the technics of the physical and biological laboratory are not always easy to apply to human relationships, some progress in adapting them has been made in the work of Kurt Lewin and his students Attempts are made to find the underlying dynamics of a particular situation, these may then be generalized into scientific law which can be applied to other relationships that show similar tensions

social science, term for any or all of the branches of study that deal with man in his social relations More commonly these studies are referred to in the plural as the social sciences No single categorical list of them can be made, for any portion of any discipline that deals with the nature of man's group life must be counted among the social sciences Thus, ecology would necessarily be included, though biology as a whole would not The more all embracing of the group are sociology and anthropology, which might be considered "central," though properly all the disciplines should overlap and do The oldest established—coming from the time of the Greeks—are political science (or government), economics, and history Linguistics, as distinguished from the earlier study of philology, is to be counted among the social sciences More practical is the study of social work and penology Jurisprudence (notably developed by the Romans) is fundamentally a science of society Psychology has played an increasingly prominent role and has been a source of materials for all the social sciences in the 20th cent Social psychology is young but very active Though physical geography is a natural science, human geography is a basic social science Philosophy, ethics, education, and all other studies concerned with analyzing the past and present social behavior of man and endeavoring to discover the principles of that behavior are social sciences

social security, program of social insurance, brought about or reinforced by government legislation, to protect wage earners and their dependents against major economic hazards A social-security program was adopted first in Germany in the 1880s, when Chancellor Otto von Bismarck advocated social legislation not only for the benefit of the workingmen, but also to forestall the program of the Socialists and to attach the workers to his own party Compulsory sickness insurance, of which the worker contributed two thirds and the employer one third of the funds, was passed in Germany in 1883, compulsory old-age insurance (see PENSION), of which the worker, employer, and government shared the payment, was adopted there in 1889 Germany, however, did not accept unemployment insurance until 1927 As economic insecurity among workers spread within the highly industrialized countries, social-security programs began to be embraced more and more In 1911 the National Insurance Act, fathered by David Lloyd George, was passed in England, and a compulsory unemployment insurance program as well as old-age insurance and sickness insurance programs were established The British unemployment insurance system excludes many categories of workers, notably government employees, nurses, casual workers, those who earn over £250 per annum Great Britain also adopted (1925) a survivors' insurance program, and in 1942 Parliament was given a blueprint for a thoroughgoing social-security program by Sir William H Beveridge France adopted in 1905 a program of voluntary unemployment insurance and established compulsory old-age insurance and compulsory sickness insurance plans in 1928 Meanwhile social-security programs spread throughout Europe in a patchwork pattern, differing from country to country as to the kinds of social insurance accepted, the categories of workers eligible, the proportions paid by the workers, employers, and governments, the conditions of receipt of benefits, the amounts of the benefits, and the effects of the programs In 1922 the USSR adopted comprehensive social-insurance plans as part of the controlled economy Chile became (1924) the first Latin American country with a social-security program Social security did not reach the United States until 1935, when the Social Security Act was passed as part of President F D Roosevelt's New Deal program It set up a system of compulsory old-age insurance, paying benefits proportionate to prior earnings to persons over 65 A reserve fund is accumulated through payroll taxes on employers and employees By congressional action the tax rate was frozen at one percent, although the act called for a gradual increase in the rate Approved state unemployment-insurance systems receive Federal subsidies paid from the proceeds of a payroll tax on employers. The act also provides Federal grants matching state aid to the needy aged (old-age assistance), dependent children, and the blind Amendments extended old-age benefits to workers' families, bank employees, seamen, and door-to-door salesmen The U S House of Representatives passed (1949) a measure to extend social security to 11,000,000 more persons, including self-employed persons and employees of state and local governments, thus would bring the total number of persons covered in the United States to approximately 46,000 000 Many proposals have been made to increase benefits in the United States to farm workers, domestic servants, Federal government employees, and those working in nonprofit organizations and to add new features such as HEALTH INSURANCE See M S Stewart, *Social Security* (1939), William Haber and W J Cohen, eds , *Readings in Social Security* (1948), E M Burns, *The American Social Security System* (1949)

social settlement, institution in a poor and overcrowded area in a large city where resident workers help to improve social conditions, particularly by promoting community services and the increase of neighborly cooperation The idea was developed in the mid-19th cent when such men as Thomas Hill Green, John Ruskin, and Arnold Toynbee urged university men to live in poor neighborhoods where, as bona fide residents, they could study and work for improvement of conditions Toynbee Hall, founded in 1884 in London under the leadership of Samuel Augustus BARNETT, was the first organization for this purpose Similar settlements were established in many cities of Great Britain, the United States, and Europe Examples of long-established settlement houses in the United States are Hull House and Chicago Commons, Chicago, South End House, Boston, and the University Settlement, Henry Street Settlement, and Greenwich House, New York city Settlements serve as community education and recreation centers and provide medical and other services Their specific programs vary with the needs of their neighborhoods In the United States they have rendered important services in work with immigrants and racial minority groups and in civic affairs See works of Jane Addams, Lillian Wald, and Graham Taylor, R A Woods and A J Kennedy, *The Settlement Horizon* (1922), A J Kennedy and others, *Social Settlements in New York City* (1935)

Social War or **Marsic War,** 90 B C –88 B C , struggle brought on by demands of the Italian allies (Latin *socii*) for the privileges of Roman citizenship The allies had fought on the side of Rome and by money and blood had helped establish Roman hegemony but did not have the rights of the Romans and were subject to the autocratic decisions of Roman magistrates The senate was greatly averse to sharing the rule, but M Livius Drusus in 91 B C proposed laws granting the allies citizenship He was murdered, and a coalition of the allies, chief among them the people called the Marsians, arose in desperation, waged war against Rome, and planned an Italian federation Led by Q Pompaedius Silo and C Papius Mutilus, they gained some success but could not overcome the power of Rome The Roman armies, on the other hand, even under MARIUS and SULLA, were unable to crush the revolt, which died down only after L Julius Caesar secured passage of a law granting citizenship to allies who had not joined the revolt and to those who laid down their arms immediately The allies were divided, and the revolt ceased Citizenship was soon given not only to all of them but also to the people of Cisalpine Gaul

social work, term used to describe the organized effort to help unadjusted persons and families to adjust themselves to the community, as well as to adapt the community to the needs of such persons and families Social work has grown by gradual steps out of the early efforts of churches and philanthropic groups to relieve the effects of poverty, to bring the comforts of religion to the poor, to promote temperance and encourage thrift, to care for children, the sick, and the aged, and to correct the delinquent Orphanages and old people's homes were typical results of these activities Worthiness was the principal criterion in determining aid to families, while the emphasis in modern social work is on restoring individuals to normal life both for their own sake and for the sake of the community The word *charity* best describes the early activities, which were aimed at piecemeal alleviation of special maladjustments The first attempt to deal with the problem in a scientific way was made by P G F Le Play, who in the 1850s made a detailed study of the budgets of hundreds of French workingmen's families Forty years later Charles Booth made an investigation of wages and prices, working conditions, housing and health, standards of living, and leisure activities among the poor of London that revealed the extreme poverty of a third of the population The social survey introduced by Booth became a method for determining the extent of social maladjustment, and through surveys in other cities in Europe and America a vast number of facts was accumulated, and methods were developed that pointed the way to modern social work In 1874 the National Conference of Charities and Correction (a name changed later to

National Conference of Social Work) was organized in the United States; but public relief and private philanthropic effort remained largely matters of local and state concern until after 1930, when the Federal government entered the field of social work on a large scale to cope with the effects of the economic depression Large resources became available, the number of social workers was greatly increased, and it became necessary to coordinate public and private activities Modern social work may be divided into case work, group work, and administration work Case work is concerned with assisting individual persons and families The needy or unadjusted person may be physically handicapped (blind, crippled, sick), mentally handicapped (defective, unbalanced, neurasthenic), or socially handicapped (member of a broken family, homeless, alcoholic, a neglected or a problem child) To determine the cause of maladjustment, the social worker must understand individual psychology as well as the sociology of the community Physicians, psychiatrists, and other specialists may be required to help diagnose the difficulty Social group work is exemplified by the social settlement, the supervised playground and gymnasium, and the classroom where handicrafts may be learned The community may be called upon to provide the buildings and grounds for such activities An important part of social work administration is to direct the welfare work of single agencies as well as whole communities, to secure cooperation between public and private agencies, and to raise and administer welfare funds The funds required by private agencies are often pooled in a COMMUNITY CHEST, from which each agency receives a share Community welfare councils are organized to map programs of rehabilitation, to eliminate duplication of services, and to discover and meet overlooked needs Social work has been steadily professionalized, and special schools as well as departments in universities have been established to train the needed workers See the annual *Proceedings of the National Conference of Social Work*, Gordon Hamilton, *The Theory and Practice of Social Case Work* (1940), Francis Merrill, *Social Problems of the Home Front* (1948), B Y Landis, *Rural Welfare Services* (1949)

societies, learned and literary, associations of individuals with a common professional interest, intended to promote learning Many societies publish the proceedings of their meetings, journals, reports, and outstanding investigations by their members, award prizes, encourage or subsidize research, and maintain libraries A forerunner of the modern society was the Museum, founded c 300 B C in Alexandria by Ptolemy I The earliest outstanding medieval society was established by Charlemagne under the guidance of Alcuin Learned societies of the modern type originated in Italy, during the revival of classical learning, as literary academies The short-lived Accademia Platonica, founded in the 15th cent by Cosimo de' Medici, served as a model The most widely known extant society of the early period is the Accademia della Crusca, founded (1582) in Florence and several times reorganized It published an authoritative Italian dictionary in 1612 The Accademia Secretorum Naturae (Naples, c 1560) is believed to have been the earliest scientific society Outstanding among European societies are the FRENCH ACADEMY (1635), now a section of the INSTITUT DE FRANCE, the ROYAL SOCIETY (1662), the Prussian Academy of Sciences founded by Frederick I in 1700 as the Societas Regia Scientarum, and the Academy of Sciences founded at St Petersburg in 1725 Many countries have national academies, and local and regional societies have flourished Although many societies, e g , the British Association for the Advancement of Science (1831), the American ASSOCIATION for the Advancement of Science (1847), the National Academy of Sciences established in 1863 by the U S Congress, the AMERICAN PHILOSOPHICAL SOCIETY (incorporated under its present name in 1769), and the American Academy of Arts and Sciences (chartered in 1780 in Boston), cover a broad field, the specialization of knowledge has resulted in the establishment of literary, historical, archaeological, and scientific societies covering very restricted fields The specialization of fields and the geographical distribution of societies has necessitated methods of coordination including informal cooperation and formal affiliations, as in the American Medical Association (1847), in which local medical organizations are represented An important coordinating agency in the United States is the National Research Council (1916) See R S Bates, *Scientific Societies in the United States* (1945)

Society for the Prevention of Cruelty to Animals (S P C A) The English organization, the Royal Society for the Prevention of Cruelty to Animals, was founded in 1824, through the efforts of Richard Martin (1754–1834), an Irish member of Parliament The American society was founded (1866) by Henry BERGH It cares for homeless animals, assists farmers in caring for the health of their stock, and cooperates with state governments in enforcing game laws.

Society Islands (c 650 sq mi ; pop. 42,129), S Pacific, part of the FRENCH ESTABLISHMENTS IN OCEANIA They comprise the Windward Islands and the Leeward Islands, two clusters of volcanic and coral islands lying in a 450-mile chain The Windward Islands include TAHITI (seat of Papeete, the capital of the colony, and largest and most important island of French Oceania), Moorea, Mehetia, and Tetiaroa, the Leeward Islands include RAIATEA (largest island of the Leeward group), Huahine, Bora-Bora, Maupiti, Tahaa, Maupo, Mopihan, Motu-iti, Scilly Island, and Bellingshausen Island The islands are mountainous, the highest peak (Mt Orohena) is on Tahiti There are breadfruit, pandanus, and coconut trees, the limited fauna includes wild pigs, rats, and small lizards The islands produce copra, sugar, rum, mother-of-pearl, vanilla, and phosphate Tahiti was discovered in 1767 by the British and was visited (1769) by Captain James Cook and members of the Royal Society, in whose honor the group was named English missionaries arrived in 1797 and were soon followed by the French, who set up a protectorate in 1844 In 1880 the group became a French colony The natives are Polynesians

Socinianism (sōsĭn'ēănĭzəm), anti-Trinitarian religious system initiated in the 16th cent by Laelius Socinus and developed by Faustus Socinus Socinianism contains elements of both humanist rationalism and the Reformation It combined faith in the goodness and rationality of man with an acceptance of the literal authority of the Scriptures The doctrine of the Holy Trinity was rejected, Christ was accepted as a Messiah but his essential deity was denied, and the sacraments were viewed as spiritual symbols Although Socinianism held many doctrinal differences with other reform churches, it sometimes lightened the rigidity of dogma and gained strength with the growth of rationalism Under Faustus, Socinianism achieved its greatest success in Poland, centering at Rakow There the groundwork of anti-Trinitarianism had already been laid Faustus welded the unitarians into a sect known as the Polish Brethren, which promoted educational and social institutions until banned by the Catholics in 1638 Its members were forced into exile in Transylvania and Holland Socinian ideas are best expressed in the correspondence of Faustus and in the Racovian Catechism of 1605 Socinianism is sometimes called Old Unitarianism

Socinus, Faustus (fô'stŭs sō'sĭnŭs), originally **Fausto Sozzini** (fou'stō sôt-tsĕ'nē), 1539–1604, Italian religious reformer Faustus left Italy for Basel in 1575, and in 1579 he went to Poland, where he spent the remainder of his life He gradually organized the **anti-Trinitarian** groups into the sect of Polish **Brethren** and through his writings developed the doctrinal bases of Socinianism

Socinus, Laelius (lē'lēŭs sō'sĭnŭs), originally **Lelio Sozzini** (lā'lyō sôt-tsĕ'nē), 1525–62, Italian religious reformer In 1544 Socinus left Italy for the Swiss cantons to escape the newly established Inquisition He had been attracted by the writings of Luther and during his wide travels met many leaders of the Reformation In Switzerland, Heinrich Bullinger became his good friend Calvin, however, suspected Socinus of doctrinal differences, and to allay these suspicions Socinus signed a confession of faith in 1555 At no time did Socinus actually deny or affirm the doctrine of the Trinity although there seems reason to believe that the burning of the anti-Trinitarian SERVETUS in 1553 and Socinus's friendship with Ochino had stimulated his thinking in this direction The writings of Socinus, left to his nephew Faustus, were used in the development of Socinianism

sociology (sōsēŏ'lŭjē), the science of human groups or societies As such it is a study of man in his collective aspect, of groups of men engaged in a more or less cooperative pursuit of certain major interests, primarily those of self-maintenance and self-perpetuation The phenomena arising from this life of men together are the subject matter of sociology Because sociology is concerned with all group activities—economic, political, religious—and because it tries to determine the laws governing human behavior in groups, it is distinguished as a general social science from the special social sciences, such as economics and jurisprudence, which confine themselves to a special class of social facts Thought about the relations of man to his fellows is as old as human knowledge Confucius discerned five fundamental social relationships and considered reciprocity and benevolence as the essence of sociality Aristotle spoke of man as a "political" (i e , social) animal, and his *Politics*, like Plato's *Republic* and *Laws* before him, is in large part a treatise on sociology The so-called Laws of Manu and certain maxims about domestic and public economy, social justice, and statecraft current among ancient peoples embody much sound sociology. The writings of Thomas Aquinas, Machiavelli, Montaigne, Spinoza, Vico, David Hume, John Locke, J. J Rousseau, and Hegel contain many of the elements of what later came to be called the social sciences The Arabian philosopher Ibn Khaldun in the 14th cent gave an account of the societies of his time that entitles him to be considered one of the founders of modern sociology The term *sociology* was coined (1838) by Auguste Comte, the philosopher of positivism, and Comte was the first to treat the subject in a systematic way Next to him stands Herbert Spencer, who in his *Principles of Sociology* (1876–80) applied the principles of evolution to the development of human society and gave an impetus to social studies that has never abated Early American sociologists were Lester F Ward, Franklin P Giddings, William G Sumner, and Edward A Ross Departments of sociology have been established in all universities, and courses in the subject rank near the top in the number of enrolled students See P A Sorokin, *Contemporary Sociological Theories* (1928), C A Ellwood, *A History of Social Philosophy* (1938), H E Barnes and Howard Becker, *Social Thought from Lore to Science* (1938), E A Ross, *Principles of Sociology* (1938); L L Bernard and J S Bernard, *Origins of American Sociology* (1943), R H Lowie, *Social Organization* (1948)

Socoh (sō'kō) [Heb , =branches], town, SW Palestine It has been identified with a ruin c 15 mi W of Bethlehem It was an outpost against passage from Philistia to Judah Joshua 15 35 Shochoh 1 Sam 17 1 Sochoh 1 Kings 4 10 Shoco 2 Chron 11 7 Shocho 2 Chron. 28 18 The Socoh of Joshua 15 48 is probably another place, between Hebron and Beersheba The Socho of 1 Chron 4 18 may refer to either one

Socorro (sōkô'rō), city (pop 3,712), co seat of Socorro co , W central N Mex , on the Rio Grande and S of Albuquerque, in a livestock, farm, and mine area It is on the site of Piro pueblo, an Indian village visited (1598) by Oñate A portion of the Church of San Miguel dates from this early period The New Mexico School of Mines is in Socorro Gran Quivira National Monument and Gran Quivira State Monument lie to the northeast

Socotra (sŭkō'trŭ, sō), island (c 1,400 sq mi , pop c 5,000), in the Arabian Sea near the Gulf of Aden It is a part of the British protectorate of Aden It was (8th–16th cent) a flourishing shipping center, and the population at times may have reached 50,000 Today its inhabitants raise livestock and farm Dragon's blood, aloes, and ghee are exported

Socrates (sŏ'krătēz), 469–399 B C , Greek philosopher of Athens He wrote nothing himself His life and teachings have been recorded in certain of the dialogues of his disciple PLATO and in the *Memorabilia* of XENOPHON In spite of some conflicting interpretations, the accounts of these two writers are largely supplementary Socrates was the son of Sophroniscus, a sculptor, and Phaenarete, a midwife It is said that in early life he practiced his father's art The stories about the shrewishness of his wife, XANTHIPPE, are doubtless largely apocryphal It is not certain who were Socrates' teachers in philosophy, but he seems to have been acquainted with the doctrines of Parmenides, Heraclitus, Anaxagoras, and the atomists At about 30 he became convinced that he had a religious mission to devote himself to the intellectual and moral improvement of the Athenians The oracle at Delphi pronounced him the wisest man in Greece This he said he could not understand until he discovered that, while others professed knowledge without realizing their ignorance, he alone knew nothing and knew that he knew nothing Neglecting, therefore, his own affairs, he spent his time in the arcades, in the market place, in the gymnasiums, wherever men congregated, talking about virtue, justice, piety, and the like The effect of his extraordinary eloquence is described in Plato's *Symposium* In strange contrast to his intellectual and spiritual dignity was his somewhat ludicrous personal appearance He never sought office, but he performed public duties willingly when required He served twice in military campaigns Although Socrates baited the sophists (professional teachers of rhetoric) continually, he was apparently considered by most Athenians a sort of super-sophist An excellent (and execrable) display of the attitude of the conservatives toward him is the *Clouds* of Aristophanes Socrates' constant association with young men and their devotion to him earned him great enmity and hatred from many Athenians, who probably considered him a shining example of the sophists—it was claimed that they demoralized the city's youth Alcibiades' behavior seemed to give proof of this, for the intimate relationship of Alcibiades and Socrates was widely known The ruin of the city by the Peloponnesian War probably contributed to the feeling that the new ideas were responsible for the collapse of the Athenian virtues, and Socrates was sacrificed to the bigotry and chagrin of the fallen city In 399 B C he was brought to trial for corrupting the youth and introducing strange divinities, he was convicted and condemned to drink the poison hemlock The latter part of the charge derived some color from the fact that Socrates believed in a demon, or genius, whose voice warned him whenever he was about to make a wrong decision In point of fact he never attacked belief in the gods, though he was himself essentially a monotheist The trial and death of Socrates are

described in the *Apology*, the *Crito*, and the *Phaedo* of Plato with a dramatic truth and power second to none in the world's literature The sublimity of Socrates in his martyrdom remains among the spiritual triumphs of the human race The aim of Socrates was to combat the skepticism of the sophists by arousing a love of truth and virtue and by demonstrating a right method of attaining truth The Socratic method was by skillful cross-examination to expose the inadequacy of the supposed knowledge of his interlocutor and then by masterly guidance to show the way to sounder knowledge In his own modest disclaimer of final knowledge lay the famed Socratic irony Technically, the Socratic method was an inductive process resulting in a definition It was a contribution of Socrates to philosophy to establish the conceptual basis of scientific knowledge He was not greatly interested in the speculations of the natural philosophers but regarded ethical questions as the highest concern of man He taught that knowledge is virtue and held that no man intentionally does wrong Socrates did not, like some of his successors, carry his rationalism to the extreme of asceticism Great as is the importance of Socrates' technical contribution to philosophy, he will always be remembered as one of the greatest of those spiritual leaders to whom philosophy has been a way of life See Eduard Zeller, *Socrates and the Socratic Schools* (Eng tr , 1885), W E Leonard, *Socrates, Master of Life* (1915), A E Taylor, *Socrates* (1932), A D Winspear and Tom Silverberg, *Who Was Socrates?* (1939), René Kraus, *The Private and Public Life of Socrates* (Eng tr , 1940)

Socrates Scholasticus (skŏlăˈstĭkŭs), fl 439, Byzantine historian His *Ecclesiastical History*, (7 vols in Greek) continues the work of Eusebius for the years 305–439 The work is unusual for objectivity, careful dependence on original primary sources (e g , acts of councils, the chronicle of Constantinople, letters of kings and bishops), and impartial descriptions of heresies

soda, chemically, sodium carbonate, a compound of sodium and the carbonate radical (CO_3) Occurring in the ash of seaweeds, it was named originally soda ash It appears also in large crystals as the decahydrate (washing soda), in which each molecule contains 10 molecules of water in addition to the sodium carbonate molecule Upon hydrolysis, soda forms an alkaline solution Although found native in large deposits called soda lakes, as in Africa and the W United States, much the greater part employed in industry is obtained by the Leblanc process and the Solvay process Soda is used in the manufacture of glass, soap, and caustic soda, for cleaning purposes, for softening water, and as a constituent of enamel Baking soda (bicarbonate of soda or saleratus) is, chemically, sodium bicarbonate or sodium acid carbonate, a compound of sodium, hydrogen, carbon, and oxygen It is a constituent of BAKING POWDER It is used commonly in medicine and in the laboratory for neutralizing acids The pure compound appears as a white, crystalline substance Caustic soda, or sodium hydroxide, a compound of sodium and the hydroxyl radical, is a crystalline solid commonly sold in the form of white sticks, pellets, and flakes It also appears commercially in the form of LYE and is known as soda lye Soda water is a solution of carbon dioxide in water Baking soda was used originally in its preparation, hence its name

Soda Springs, village (pop 1,087, alt 5,779 ft), co seat of Caribou co , SE Idaho, near the Bear river The mineral springs here, particularly Steamboat Spring, were well known to travelers on the Oregon Trail, they continue to attract interest, though some are now lost in a reservoir The village was founded in 1863 by a dissenting Mormon sect, abandoned, and refounded in 1870 by the Mormons The area, which has farming and grazing lands, also has large phosphate deposits

Soddy, Frederick (sŏˈdē), 1877–, English chemist He worked under Lord Rutherford at McGill Univ and with Sir William Ramsay at the Univ of London After serving (1910–14) as lecturer in physical chemistry and radioactivity at the Univ of Glasgow, he was professor of chemistry at the Univ of Aberdeen (1914–19) and at Oxford (1919–36) He is especially noted for his research in radioactivity. With others he discovered a relationship between radioactive elements and the parent compound, which led to his theory of isotopes, for this work he won the 1921 Nobel Prize in Chemistry His scientific books have become classics and include *The Interpretation of Radium* (1909, rev ed , 1922), *Matter and Energy* (1912), *The Chemistry of the Radio-Elements* (2 parts, 1911–14), and *The Interpretation of the Atom* (1932) His originality and independence of mind are also shown in his political and economic views as set forth in *Cartesian Economics* (1922), *Wealth, Virtual Wealth, and Debt* (1926, rev ed , 1933), and *Money versus Man* (1931, rev ed , 1933)

Soderberg, Hjalmar, Swed *Söderberg* (välˈmär sōˈdərbĕrʺyu), 1869–1941, Swedish dramatist and novelist. He won recognition with his first novel, *Martin Birck's Youth* (1901, Eng tr., 1930). His novels of Stockholm life at the turn of the century, such as *Doctor Glas* (1905) and *The Serious Game* (1912), are classics of their kind As a short story writer he was unsurpassed A selection of his short stories was translated into English by C W Stork (1936).

Soderblom, Nathan, Swed *Söderblom* (nāˈtän sōˈdərblōomʺ), 1866–1931, primate of the Lutheran Church of Sweden, archbishop of Uppsala He was professor of the history of religion and from 1914 to 1931 vice chancellor at the Univ of Uppsala Soderblom was a leader in the movement for the unification of churches For his labors for international peace he was awarded the 1930 Nobel Peace Prize Among English translations of his works are *Christian Fellowship* (1923), *The Living God* (1933), and *The Nature of Revelation* (1934)

Soderhamn, Swed *Söderhamn* (sōdərhäˈmən), seaport (pop 10,306), Gavleborg co , E central Sweden, on the Gulf of Bothnia Incorporated in 1620 and burned by the Russians in 1721, the city has become an important coastwise trade center, exporting fish, timber, wood pulp, and ore

Sodermanland, Swed *Södermanland* (sōˈdərmänlandʺ), historic province of E central Sweden, on the Baltic coast Administratively, it is divided, roughly, between Stockholm co , of which it forms the southern section, and **Sodermanland,** Swed *Södermanlands län* (-s lĕnʺ), county (2,634 sq mi , pop 201,051) The chief occupation in the county is truck farming and dairying Nyköping is the county seat Wood pulp is manufactured at Mariefred, furniture at Katrineholm, and iron and steel at Eskilstuna

Sodertalje, Swed *Södertälje* (sōdərtĕlʹyə), town (pop 22 080), E Sweden It is a suburb of Stockholm, important for its distilleries and the manufacture of textiles, machines, and matches The **Sodertalje Canal,** connecting Malaren lake with an arm of the Baltic, was built in the years 1807–19 and enlarged in 1917–24

sod house, structure with walls made from layers of strips of sod turned by the plow This form of construction was commonly used by pioneers in the Great Plains of the W United States where stone and wood were scarce The sods, held together by roots, were lifted in long strips, usually cut into 3-foot lengths, and laid in courses like bricks The walls were hewed smooth with a spade and often plastered with clay and ashes Although frame roofs were sometimes used, roofs were more commonly thatched or covered with sods which had to be replaced after heavy rains Sod walls were good insulators and were proof against fire and wind, but they permitted only small window openings were seldom entirely rainproof, and made the house dirty Fences also were built of sods but after rainstorms they became unsightly lines of mud and tangled roots, they probably suggested the expression "homely as a mud fence" For other earth houses, see ADOBE and RAMMED EARTH See Everett Dick, *The Sod-House Frontier* (1937)

Sodi (sōˈdī) [Heb ,=a confidant], father of Gaddiel, a spy sent into Canaan Num 13 10

sodium (sōˈdēŭm), soft, silver-white, lustrous metallic element (symbol=Na [New Latin *natrium*, ultimately from Hebrew], for physical constants, see ELEMENT, table) Chemically, it is an extremely active metal and is included in the group of ALKALI METALS Like potassium, which it closely resembles, it oxidizes rapidly in the air and must, therefore, be kept under an oil, such as kerosene It combines violently with water, displacing the hydrogen and forming the hydroxide, and combines directly with the halogens, forming the fluoride, the chloride, the bromide, and the iodide With oxygen it forms two oxides, sodium oxide and sodium peroxide Sodium peroxide reacts with water, yielding oxygen and sodium hydroxide, and with acids it gives hydrogen peroxide Metallic sodium is of little commercial value, but compounds of the element are extremely important They are numerous, are widely and abundantly distributed in nature, and find extensive use in industry in various chemical processes and in the commercial preparation of other important substances Among these compounds are borax, sodium bromide, sodium carbonate or washing soda and the bicarbonate or baking soda, both of which are produced in the Solvay process, sodium chlorate, sodium chloride or common salt, sodium cyanide, sodium aluminum fluoride, which appears in nature as cryolite, sodium nitrate or Chile saltpeter, sodium phosphate, sodium silicate, which is a component of glass, sodium sulphate, known in medicine as Glauber's salt, and sodium sulphide Sodium hydroxide, called commonly caustic soda or lye, is employed extensively instead of potassium hydroxide whenever a cheap alkali is needed. It is used, for example, in making soap, it reacts with a fat such as palmitin or stearin to form glycerin and the soap Sodium vapor lamps are used for lighting highways Because of its activity sodium is not found free, i e , uncombined, in nature It occurs abundantly, however, in its compounds These substances are present in rocks and soil Salt is found in the ocean and in deposits in various parts of the world Sodium compounds occur also in animal and plant tissue in the protoplasm of the cells The metal is usually prepared by electrolysis of the fused chloride (the Downs process), formerly its preparation by electrolysis of the fused hydroxide (the Castner process) was the important one used It was first prepared from sodium hydroxide in 1807 by Sir Humphry Davy, to whom its discovery is credited

sodium benzoate (bĕnʹzōāt) or **benzoate of soda,** colorless salt of BENZOIC ACID It is a compound of sodium, carbon, hydrogen, and oxygen Its use as a preservative in foods is dangerous except in small quantities

Sodom (sŏˈdŭm) or **Sodoma** (sōˈdōmŭ), in the Bible, the principal of the Cities of the Plain (the others being Gomorrah, Admah, Zeboim, and Zoar, which was spared) destroyed by fire from heaven because of their unnatural carnal wickedness Gen 10 19, 13, 14, 18, 19, Deut 29 23, Hosea 11 8, Amos 4 11, Mat 10 15, Mark 6 11, Rom 9 29, 2 Peter 2 6, Jude 7 These cities lay probably in the Jordan valley near the Dead Sea or, less likely, in the depression of the Dead Sea now submerged

Sodoma, Il (ēl sōˈdōmä), c 1477–1549, Sienese painter, whose real name was Giovanni Antonio Bazzi A Lombard by birth, he retained in his work the traits of the Lombard school and they show the influence of Leonardo da Vinci, whose most gifted follower he was For a time, c 1508, he worked in Rome, where under commission from Pope Julius II, he painted frescoes in the Camera della Segnatura in the Vatican Raphael's frescoes afterward replaced almost all of his work there For Agostino Chigi, in the Farnesina villa, Sodoma executed two notable frescoes, the *Marriage of Alexander with Roxana* and *Alexander in the Tent of Darius* In Siena and its vicinity he executed many frescoes, among them the *Flagellation of Christ* (Church of San Francisco) and two scenes from the life of St Catherine of Siena, the *Ecstasy* and the *Swooning* (San Domenico) These show the painter's tenderness in the representation of uplifted, spiritual suffering In the convent of Monte Oliveto are his scenes from the life of St Benedict Examples of his work aside from frescoes are the *Ascension* (Naples), *St Sebastian* (Uffizi), *Leda and the Swan*, *Madonna and Child with the Infant St John*, and *Three Saints* (National Gall of Art, Washington, D C), *Mars and Venus Trapped by Vulcan* (Metropolitan Mus) See R H H Cust, *Giovanni Antonio Bazzi* (1906)

Sodus (sōˈdŭs), village (pop 1,513), W central N Y , near Sodus Bay of Lake Ontario and NE of Rochester, in a fruit region, inc 1918 Gears, baskets, and cement products are made The lotuses in the bay are famous Sodus Point on the bay is a port of entry

Soekarno see SUKARNO

Soemba, Indonesia see SUMBA

Soembawa, Indonesia see SUMBAWA.

Soerabaja, Indonesia see SURABAYA

Soerakarta, Indonesia see SURAKARTA.

Soest (zōst), town (pop 25,454), Westphalia, W Germany, E of Dortmund It is an agricultural market center and has several manufactures First mentioned in the 7th cent , it is one of the oldest places in Westphalia, of which it was the leading town in the later Middle Ages It also was a flourishing member of the Hanseatic League Soest was comprised in the archbishopric of Cologne and later in the county of Mark (under the dukes of Cleves), but it enjoyed virtual independence under its charter It passed to Brandenburg in 1613 In the Second World War, Soest suffered heavy destruction, and many of the buildings that had made it one of the most interesting architecturally of German towns were damaged Among them are the Romanesque cathedral (the Patroklikirche, 10th cent), several Gothic churches, the 18th-century town hall, and many medieval and Renaissance houses

Soffici, Ardengo (ärdĕngʹ gō sôfʹ fēchē), 1879–, Italian artist, novelist, and critic He lived in Paris from 1900 to 1907 On his return to Italy he contributed to the Florentine weekly, *Voce* He fought in the First World War and described his experiences in *Kobilek* (1918) His literary work is colored by a philosophical pessimism and a love of nature, his painting is based on the technical principles of the old Italian masters Three sketches are translated in F M Guercio, *Anthology of Contemporary Italian Prose* (1931).

Sofia (sōfēʹə, sōʹfēə), Bulgarian *Sofiya* (sōʹfēä), city (pop 434,888), capital of Bulgaria, in W central Bulgaria, on a high plain at the foot of the Balkans It is an important railroad center and has varied industries, notably machinery, chemical, rubber, textile, and tobacco manufactures Sofia is the seat of a university (founded 1889), of a polytechnic school, and of other educational institutions and is the see of an Orthodox metropolitan bishop and of a Roman Catholic bishop The ancient Sardica, it was destroyed (447) by the Huns and restored (6th cent) by Emperor Justinian I Sofia formed part of the first Bulgarian empire (9th–11th cent), reverted to the Byzantines, and was again included in the second Bulgarian empire (13th–14th cent). It passed to the Ottoman Empire in 1386 and became the residence of Turkish

governors of RUMELIA In 1878 it became the capital of Bulgaria Although Sofia has undergone considerable modernization since then, it has retained many old churches, mosques, and synagogues Among the outstanding buildings are the parliament building, the state opera house, the former royal palace, the Orthodox cathedral, and the chief mosque In the Second World War, Sofia suffered some damage

softball · see BASEBALL

Sogdiana (sŏgdēā'nu) part of the ancient Persian Empire in central Asia between the Oxus and Jaxartes rivers, corresponding to the later emirate of Bukhara and region of Samarkand

Sogne Fjord (sông'nufyōr"), inlet of the Norwegian Sea, on the western coast of Norway, in Sogne og Fjordane co Extending 112 mi inland and reaching a depth of c 4,000 ft, it is the longest and deepest fjord of SW Norway It has several branches, cutting into the mountains and ice fields, notably into the JOTUNHEIM and the JOSTEDALSBREEN In some places the mountains drop a sheer 3,000 ft to the water on both sides of the fjord. The region is rich in viking tradition and is celebrated for its wild beauty

Sogn og Fjordane (sông'nu ô fyô'rānû), county (7,142 sq mi, pop 96,849), W Norway Floro (Nor *Florø*) is the county seat Comprising the Sogne Fjord, the Nord Fjord, and the JOSTEDALSBREEN, the county is a region of mountains, glaciers, and lakes which attract many tourists Agriculture and fishing are the main occupations

Soho (sōhō', sū-), district of W London, England, known for its French and Italian restaurants Earlier a fashionable quarter, it was in the 19th cent popular with writers and artists Among its residents have been Dryden, Hazlitt, William Blake, De Quincey, and Ernest Dowson

soil, substance in which most of the plants on the surface of the earth grow It is made up of disintegrated rock, in the form of sand or clay, and HUMUS, the disintegrated remains of past vegetation On the basis of physical characteristics, the chief kinds of soil are sandy, clayey, and loamy On the basis of chemical reaction, soils are either acid or alkali Fertility depends on various factors including the texture of the soil, its chemical composition, its supply of water, its warmth, and the nature of the subsoil The fertility of a given soil can be fairly accurately determined by testing samples with chemicals Often soils can be made more productive by the correct use of FERTILIZER, without the addition of organic matter the soil will not be capable of producing good crops indefinitely The frequency and the kind of cultivation also affect fertility The quality of vegetation, as well as its quantity, varies with the soil in which it grows For advice and information on soils, consult state agricultural experiment stations and their publications See T L Lyon and H O Buckman, *Nature and Properties of Soils* (1937), W W Weir, *Productive Soils* (5th ed , 1946)

soiling, agricultural practice of feeding green fodder to livestock in the barn or dry lot It is followed in the United States mostly in the dairy industry in seasons when pastures are short, but in Europe more generally For best results, the fodder must be cut daily Among the crops used for soiling are clovers, alfalfa, cowpeas, soybeans, corn, and rye

soilless gardening, growing of plants without soil in a medium (e g , water, sand, gravel, and sawdust) to which nutrients have been added Soilless gardening has been known to scientists for over a century as an aid in the study of plant life processes, but not until 1929 were experiments conducted solely to determine its feasibility for the growing of commercial crops There are now chemical garden installations scattered throughout the United States and on some Pacific islands Under soilless gardening, plants can be grown closer together than in the field, thereby increasing yields, and multiple cropping (the growing of several crops in the same tank) can be practiced The cost of equipment is high, and the personnel must be specially trained Soilless gardening is still in the experimental stage The technique used depends on the crop to be grown, the length of its growing period, and for what purpose it is being grown The nutrient solutions must supply, in optimum concentrations and in correct balance, the elements such as nitrogen, phosphorus, potassium and other essentials to plant growth normally found in soil Sunshine is necessary, artificial light alone does not produce satisfactory growth Commercially, crops are generally grown in tanks or basins through which the nutrient solutions are circulated The plants are held upright by wire supports The most successful crop has been tomatoes, but good results have been obtained with squash, potatoes, carrots, beets, lettuce, and cabbage and such ornamentals as carnations, roses, gardenias, and dahlias. Other names for soilless gardening are soilless culture, chemiculture, and water gardening (hydroponics). See W F. Gericke, *Complete Guide to Soilless Gardening* (1940), Carleton Ellis and M W Swaney, *Soilless Growth of Plants* (2d ed , revised by Tom Eastman, 1947), bulletins of New Jersey and California state agriculture experiment stations

Soissons (swäsôN'), city (pop 17,136), Aisne dept., N France, on the Aisne river. An important town of the Roman province of Belgica and an early episcopal see, Soissons was the scene of the decisive victory (486) of CLOVIS I over Syagrius and became the capital of several Merovingian kings Here Pepin the Short dethroned Childeric III (751), here Robert I lost his life in battle (923) in defeating Charles III (Charles the Simple) Throughout its history Soissons has been often besieged and has changed hands many times In the First World War it suffered considerable destruction The cathedral (13th cent) and the Abbey of Saint-Jean-des-Vignes, where Thomas à Becket lived for several years, were damaged in both world wars In the suburb of Saint-Vaast there are ruins of the Abbey of St Médard, a burial place of Merovingian kings

Sokoloff, Nicolai Aleksandrovich (nyĭkŭlī' ŭlyĭksän'druvĭch sô'kulôf"), 1886–, American conductor and violinist, b near Kiev, Russia He studied at Yale Univ under Charles Martin Loeffler and later toured France and England as a violinist He was the first conductor of the Cleveland Symphony Orchestra, 1918–32, and has served as guest conductor of major orchestras throughout the country He directed the Federal Music Project, 1935–39

Sokolow, Nahum (nä'um sô'kŭlō), 1859–1936, Jewish scholar and Zionist, b Poland After serving (1906–9) as general secretary of the Zionist Organization, editing its various publications, he became (1911) a member of its executive committee and was chairman from 1921 to 1931 With Chaim Weizmann he participated in the London meetings during the First World War which led to the Balfour Declaration and the Palestinian mandate He succeeded Weizmann as president (1931–35) of the World Zionist Organization Sokolow was an accomplished linguist From 1873 he contributed articles to various Hebrew newspapers, and he wrote *History of Zionism, 1600–1918* (1919)

Sokoto (sōkō'tō, sō'kutō), town (pop 20,084), NW Nigeria, founded 1809 In the early 19th cent it was the capital of the native state of Sokoto and had a population of c 50,000 Cotton, hides, and skins are exported

solan goose · see GANNET

Solari or **Solario, Cristoforo** (krĭstô'fôrō sôlä'rē, sôlä'rēō), b before c 1460, d c 1527, Italian sculptor and architect, called Il Gobbo [the hunchback] About 1498 he made the tomb of Beatrice d'Este and her husband, Ludovico Sforza of Milan, the effigies of Beatrice and Ludovico were saved and are now in the Certosa, Pavia They were finely executed in the manner of the early Renaissance Solari was engaged from time to time on decorative sculptures for the Certosa His brother **Andrea Solari** (andrā'a), c 1460–c 1520, Italian painter of the Milanese school, was influenced by Cristoforo and by Leonardo da Vinci In some respects Andrea approached more nearly to the workmanship of Leonardo than did any other of the disciples of the great Florentine He spent (c 1507) some time on fresco decoration in the castle of the Cardinal Georges d'Amboise at Gaillon, France Examples of his vigorous portraits are those of a Venetian senator and of Cristoforo Longoni (both National Gall , London) and of Charles d'Amboise (Louvre) Many of his works, including an *Ecce Homo* and *Flight into Egypt*, are in the Poldi-Pezzoli Collection, Milan, some are in the Brera Gallery, Milan Other noted paintings are the *Madonna of the Green Cushion* and *Crucifixion* (Louvre), *Christ at the Column* and *Procession to Calvary* (Borghese Gall , Rome), *Salome with the Head of St John the Baptist* and *Christ Blessing* (Metropolitan Mus)

solar system, the SUN and its family of celestial bodies which are held in their orbits by its power of gravitation The group of attendants revolving around the sun include, besides the earth, the planets, Mercury, Venus, Mars, Jupiter, Saturn, Uranus, Neptune, and Pluto, some 1,000 or more minor planets (see ASTEROID), the satellites of the planets, and a number of comets and meteors The mass of the sun is about 700 times greater than that of all its attendant bodies together Among the attempts to account for the origin of the solar system are the NEBULAR HYPOTHESIS, the PLANETESIMAL HYPOTHESIS, the TIDAL THEORY, the theory of its origin from a double star, the theory based on the growth of the planets and sun by condensation of cosmic dust or gas, and that based on the formation of planets by shrinkage and condensation of small whirlpools of gas and dust which developed within a large rotating sphere of such material See H N Russell, *The Solar System and Its Origin* (1935), W T Skilling and R S Richardson, *Astronomy* (rev ed., 1947), W L. Kennon, *Astronomy* (1948)

Solbad Hall in Tirol (sôl'bät häl' ĭn tērōl'), formerly **Hall,** mineral spa (pop 10,535), Tyrol, W Austria, on the Inn and near Innsbruck. The large salt mines near by have been worked from antiquity.

solder (sŏ'dûr), metal alloy used as a metallic cement. The type of solder to be used is determined by the metals to be united Soft solders are basically lead and tin and have low melting points. Hard solders have high melting points and are of metal compounds which are suited for amalgamation with the metals to be joined Areas to be soldered are cleaned and coated with a flux such as hydrochloric acid or borax to prevent oxides from separating the solder and the surface When brass is used in the solder or when brass surfaces are to be joined, the process is known as brazing, though the name is sometimes applied also to other hard soldering See H R Lewis, *Notes on Soldering* (1948).

sole, name applied to several food fish of the flatfish order It is most correctly used to refer to the European sole (*Solea vulgaris*), a choice food fish which inhabits waters from the Mediterranean to the North Sea By day it usually hides in the sand and at night it hunts worms, shellfish, and other food It grows to a length of 2 ft In the United States fillets of flounder, haddock, cod, and other fish are frequently marketed and served in restaurants as sole The American soles, e g , the hogchoker (*Achirus*) and the tonguefish (*Symphurus*), are small and bony and have no market value

Sole Bay, battle of see SOUTHWOLD, England

Solemn League and Covenant: see COVENANTERS

Solent, the (sō'lŭnt), western part of the channel between the Isle of Wight and Hampshire, England, extending from the Needles northeastward to the mouth of Southampton Water and the Spithead It is 15 mi long and ¾ to 5 mi wide, being narrowest where the mainland promontory occupied by Hurst Castle (built in the reign of Henry VIII) juts into the channel

Solesmes (sôlĕm'), famous Benedictine abbey, in Solesmes village, Sarthe dept , W France, on the Sarthe and SSW of Le Mans Founded in 1010 and enlarged in the 19th cent , the abbey led in the revival of pure Gregorian chant (see PLAIN SONG) The abbatial church (15th–16th cent) contains fine sculptures The abbey and village should not be confused with another Solesmes, a manufacturing town (pop 4,884) in Nord dept , N France, near Cambrai

Soleure, Switzerland see SOLOTHURN

solfège (sôlfĕzh') [Fr] or **solfeggio** (sôlfĕd'jō) [Ital], in music, systems of vocal exercises employing the solmisation syllables of Guido d'Arezzo Thus solfège has the dual purpose of vocalization and practice in sight reading The term has often been used loosely to cover training in the various fundamentals of music

Solferino (sôlfārē'nō), village (pop 936), Lombardy N Italy, NW of Mantua Here in the Italian War of 1859 the French and Sardinians fought (June 24) a bloody battle with the Austrians The combined casualties amounted to more than 30,000 dead and wounded Although the battle brought no clear decision, the Austrians withdrew to their strategic fortresses Napoleon III, shocked by the huge losses and aware of the difficulties of continuing the war, soon afterward met Emperor Francis Joseph of Austria at VILLAFRANCA DI VERONA, where a preliminary peace was arranged By a coincidence, J Henry DUNANT was present at the battle, which he described eloquently in *Un Souvenir de Solfé rino*, it was this experience that inspired him in promoting the Red Cross

Soli (sō'lī), ancient city of Cilicia, SW of Tarsus, now in Turkey At least some of the colonists were from Rhodes The port was important at the time of Alexander the Great, was destroyed by Tigranes, and was rebuilt by Pompey, who called it Pompeiopolis The word *solecism* is derived from the poor opinion that other Greeks had of the way of speaking in Soli

solicitor, in English law, a person duly admitted to practice before the supreme court of judicature He is the agent of the person whose suit he handles and is distinguished from a barrister, who argues the case before the judge (see BAR, THE), the solicitor, however, has the right of audience in the minor courts Before the Judicature Act of 1873, solicitors were officers of the courts of CHANCERY only An attorney could practice in cases at common law, while a proctor had similar practice in the admiralty courts The act of 1873 generally abolished this distinction, all such agents are now solicitors They are officers of the court, they have a monopoly of certain legal business and are subject to court regulation The training required of a solicitor, set by the Law Society (earlier called the Incorporated Law Society) includes several years of clerkship under a practicing solicitor and attendance at a law school See ATTORNEY

solid, one of the three states in which matter occurs, i e , that state, as distinguished from liquid and gas, in which a substance has a definite shape and a definite volume Solids resemble liquids in that they have a definite volume, but differ from both liquids and gases in that they maintain their shape under constant pressure without respect to the shape of containing vessels According to the kinetic molecular theory of matter, the molecules of a substance in the solid state are relatively closer together than in either the gas or liquid state; the force of cohesion between them is relatively greater; and they are moving more slowly (i.e , they

possess less kinetic energy or heat energy). A solid changes to a liquid when its temperature is raised to its melting point, a definite quantity of heat (called the heat of fusion) being needed in liquefaction to change each gram of the substance from solid to liquid Some substances change directly from solid to gas without passing through the liquid state (see SUBLIMATION), but in general they change from solid to liquid before becoming gaseous Solids are of various kinds Metals, their alloys, some nonmetals, and many chemical compounds are crystalline in form Solids which are not crystalline but cellular in structure include wood, cotton, silk, ivory, and many others of plant and animal origin Some, e g , chalk and clay, have no regular structure and are called amorphous Substances such as pitch and resin are called semisolids, these are truly very viscid liquids, but their flow or change of shape is so slow at ordinary temperatures as to be scarcely discernible by the human eye Properties in which solids differ from one another include density, hardness, malleability, ductility, elasticity, brittleness, and tensile strength

soliloquy (sŭlĭ'lŭkwē), the speech by a character in a literary composition, usually a play, delivered while the speaker is alone In its most effective use it not only reveals to the audience or reader what is passing through the mind of the speaker, but also enhances the effectiveness of the work by presenting the drama of internal conflict Good examples are the soliloquies of *Hamlet* The soliloquy may also act simply as an economical expository device to give the audience information about other characters or about events which have occurred previously or elsewhere One of Ibsen's innovations for greater realism was the abandonment of the soliloquy and the aside, and contemporary dramatists have tended to follow him Some experiments in modern drama such as expressionism, however, are reintroducing the soliloquy along with other devices In the hands of a good dramatist such a convention as the soliloquy is still effective because its value depends upon its expressiveness rather than upon its realism

Soliman. For Ottoman sultans thus named, see SULEIMAN

Solimões: see AMAZON

Solingen (zō'lĭng-un), city (pop 133,001), in the former Rhine Prov of Prussia, W Germany, on the Wupper and E of Düsseldorf, adjoining Wuppertal and Remscheid It is the center of the German cutlery industry Solingen steel, used for knives, scissors, razors, and surgical instruments, is world famous for its excellence Chartered in 1374, Solingen has been known for its fine blades since the Middle Ages It shared the history of the duchy of Berg

Solís, Juan Díaz de (hwän' dē'ăth dä sōlēs'), d 1516, Spanish navigator, discoverer of the Río de la Plata He first became prominent in the service of Portugal Returning to Spain, he joined Vicente Yáñez PINZÓN in a voyage of exploration to the coasts of Yucatán, Honduras, and Venezuela (1508–9) In 1512, upon the death of Amerigo Vespucci, he was named pilot major An expedition to the new continent was projected the same year but was postponed, and most authorities agree this voyage was never carried out Discovery of the South Sea (Pacific Ocean) by Balboa (1513) greatly stimulated interest in a western route to Asia Solís, in 1514, was commissioned to explore the coast of South America and seek a passage between the two seas He sailed from Sanlúcar de Barrameda Oct 8, 1515, and in Feb , 1516, entered the estuary of the Río de la Plata, which he called the Mar Dulce [fresh sea] Landing on the coast of the present Uruguay, he and several companions were killed by Indians

Solís y Rivadeneyra, Antonio de (äntō'nyō dā sōlēs' ē rē"vädhānā'rä), 1610–86, Spanish historian and dramatic poet His most famous book is the popular *Historia de la conquista de México* (1684), divided into five books, written with passionate admiration of Cortés Solís's best poetry is found in his sonnets Among his comedies the two best known are *El amor al uso* and *La gitanilla en Madrid*, based on Cervantes' novel *La gitanilla*

solitaire or **patience,** card game for one player, in which one or two decks of cards are used Essential elements in the various forms of solitaire include the tableau (a distinctive pattern of cards laid out on the table), the foundation (on which cards are built by arrangement of rank or suit), the stock (from which cards are drawn), and the talon (cards which are turned up from stock and which are to be used in building foundations) The layout in some forms of solitaire comprises not only the tableau and the foundation but also the stock and talon. Various solitaire games are popular, probably the best-known forms are Canfield, named for Richard A CANFIELD, and Klondike Other popular forms are named accordion, clock, golf, pyramid, and spider For complete details of solitaire play, see R L. Frey, ed , *The New Complete Hoyle* (1947).

Solikhat, RSFSR: see STARY KRYM.

Solna (sōl'nä"), city (pop. 33,373), Stockholm co , E Sweden, NNW of Stockholm. Incorporated in 1944, it has mechanical and electrical works, paper mills, and chocolate manufactures and is the seat of the Swedish moving-picture industry There is a large institute for the blind.

Solnhofen (sō'lunhō"fŭn), village (pop 1,514), Middle Franconia, W central Bavaria It is known for the large quarries of lithographic stone near by, where fossils of the ARCHAEOPTERIX have been found

Sologub, Feodor (fyô'dŭr sŭlugōp'), pseud of **Feodor Kuzmich Teternikov** (kōōzmēch' tyĭtyĕr'nēkŭf), 1863–1927, Russian poet and prose writer By profession a schoolteacher and as a poet one of the older symbolists, he began his literary career in 1896 with a volume of verse and a novel, *Bad Dreams*, based in part on his teaching experiences He is known chiefly for the novel *The Little Demon* (1907, Eng tr , 1916), in which the perverted schoolteacher Peredonov is an expression of human inclination toward evil His novel *The Created Legend* (1908–12, Eng tr , 1916) and the drama *The Triumph of Death* (Eng tr , 1916) are available in English For translations of his poems, see Paul Selver, *Modern Russian Poetry* (1917), and Babette Deutsch, *Modern Russian Poetry* (1921)

Solo man: see MAN, PRIMITIVE

Solomon [Heb , =peaceful], d c 932 B C , king of the ancient Hebrews (c 972–c 932 B C), son and successor of David His mother was Bath-sheba His accession probably took place c 970 B C , when he was still quite young The reign of Solomon was eminently peaceful, marked by foreign alliances, notably with Egypt and with Phoenicia (he was on especially good terms with Hiram of Tyre), he maintained a large harem As he grew old his despotism became worse His exactions caused the alienation of N Israel and led to the revolt of Jeroboam I Solomon's wisdom is proverbial, and in the East he has been a popular subject of legend He built the first Hebrew temple at Jerusalem The biblical account of Solomon is preserved, according to the critics, comparatively intact Proverbs and Ecclesiastes were ascribed to him, and the SONG OF SOLOMON bears his name WISDOM was also anciently ascribed to him In the PSEUDEPIGRAPHA are the Psalms of Solomon Solomon's name was at first Jedidiah 2 Sam 12 24 , 1 Kings 1–11, 2 Chron 1–9

Solomon, city (pop 872), E central Kansas, at the confluence of the Solomon with the Smoky Hill ENE of Salina, laid out 1865, inc 1871 It is a wheat-shipping point on the railroad

Solomon Islands, volcanic group (11,500 sq mi , 1947 estimated pop 94,965), S Pacific, 1,500 mi N of Sydney, Australia The 900-mile chain includes BOUGAINVILLE, GUADALCANAL, NEW GEORGIA, SANTA CRUZ ISLANDS, Buka, Choiseul, Santa Isabel, Malaita, San Cristobal, and the Shortland Islands The natives are Melanesians and Polynesians Copra and ivory nuts are produced The islands were discovered in 1567 by a Spanish explorer, Álvaro de Mendaña de Neira In 1893 the South Solomons were placed under a British protectorate, to which was added the eastern islands in 1898 The North Solomons (Santa Isabel, Choiseul, and Ontong Java) were transferred by treaty from Germany to Great Britain in 1900 The Solomon Islands are governed by the high commissioner of the Western Pacific at Suva, Fiji, the capital of the group is Honiara on Guadalcanal Buka and Bougainville are governed separately by Australia as part of the former mandated Territory of New Guinea In the Second World War, Choiseul, New Georgia, Santa Isabel, and Guadalcanal were occupied in 1942 by the Japanese and taken by U S forces in 1943 The battle of Savo Island was the only naval action lost by the United States The capture of the Solomons completed the encirclement and neutralization of the key Japanese base of Rabaul, on New Britain

Solomons, town (pop 266) on Solomons Island, Calvert co , S Md , in the Patuxent river near Chesapeake Bay The town has a fine harbor and is a fishing and yachting center The Chesapeake Biological Laboratory is here

Solomon's-seal, any plant of the genus *Polygonatum*, perennial herbs of the North Temperate Zone The hairy Solomon's-seal and the smooth Solomon's-seal are well-known wild flowers in most of North America They have small, tubular greenish flowers and dark blue berries (often in pairs) which droop under the usually arching stalk from the axils of the leaves The name has been attributed to leaf scars on the rhizome which resemble seals Species of Solomon's-seal were formerly used in applications for the skin, and the roots and young shoots have been used for food They are often grown in wild-flower gardens False Solomon's-seal (*Smilacina*) is a similar plant with small white flowers and red berries in a terminal cluster

Solon (sō'lŭn), c 639–c 559 B C , Athenian statesman, the first Greek clearly known to history He was a poet, and some of his patriotic verse in the Ionic dialect is extant. He also at some time (perhaps before 600 B C) led the Athenians in the recapture of Salamis from the Megarians He is, however, known as a giver of laws and a reformer Elected ARCHON in 594 B C , he found social conditions critical with nobles all-powerful in Athens, new capitalists holding mortgages on all small farms in Attica, and the peasants losing their lands and even their personal freedom Solon acted. He annulled all mortgages and debts, limited the amount of land anyone might add to his holdings, outlawed contracts in which a person's liberty might be pledged, and regulated the expenses for funerals and other functions He then reformed the constitution The assembly was thrown open to all freemen, the AREOPAGUS was continued with some new powers, and the Council of Four Hundred was created to represent the propertied classes and to prepare the business for the popular assembly In general his reforms were a move toward moderate democracy The law code that bears his name and reforms the code of DRACO shows the same tendency to democratization

Solon (sō'lun), village (pop 1,508), NE Ohio, SE of Cleveland, inc 1927

Solothurn (zō'lōtōōrn), Fr *Soleure* (sôlûr'), canton (306 sq mi , pop 154,944), Switzerland. Very irregular in shape, it lies mostly in the Jura and has fertile land The population is mainly German-speaking and Catholic Its history is that of the capital, **Solothurn** (pop 15,414), the Roman Salodurum, situated on the Aar river A free imperial city since 1218, it was admitted into the Swiss Confederation in 1481 It was, until the French Revolution, the residence of the French ambassadors to the Swiss diet Solothurn has some medieval architecture Its cathedral is the see of the bishop of Basel and Lugano The city produces electrical apparatus and watches and processes metals

Solovetski Islands (sŭluvyĕt'skē), archipelago area c 150 sq mi , N European RSFSR, in the White Sea at the entrance of Onega Bay On the largest island is a monastery, built in the 15th cent , which was used as a military fortress against Sweden in the 16th and 17th cent The island later became a dreaded place of exile for political prisoners under both the tsarist and the Communist regimes

Soloviev, Sergei Mikhailovich (sĭrgā' mēkhī'lŭvĭch sŭlŭvyôf'), 1820–79, Russian historian, father of Vladimir S Soloviev He taught at the Univ of Moscow and wrote the monumental *History of Russia* (29 vols , 1851–79, in Russian), still considered the greatest work of Russian historiography In his outlook Soloviev was oriented toward the West, and he hailed the movement of Westernization by Peter I

Soloviev, Vladimir Sergeyevich (vlŭdyē'mĭr sĭrgā'ŭvĭch sŭluvyôf'), 1853–1900, Russian religious philosopher and poet, son of Sergei Mikhailovich Soloviev His philosophical writings urge the synthesis of the Eastern and Western churches into a Church of the Universe His best-known work is *War, Progress, and the End of History* (1899, Eng. tr , 1915) As a poet his influence was great, especially on the younger symbolist poets, Bely, Blok, and others See biography by Michel d'Herbigny (1918)

solstice (sōl'stĭs) [Latin, =sun's stance], astronomical term applied to each of two points in the ecliptic at which the sun reaches its position farthest from the equator, in other words, its greatest declination, north or south Each solstice is 90° from the equinoxes, lying halfway between them In this position the sun seems to 'stand still" for several days, i e , its noontime elevation appears not to change in that time From this is derived the name which is also used to indicate the time when the sun attains either of these positions In the Northern Hemisphere the summer and winter solstices are about June 22 and about Dec 22 respectively

soluble glass see WATER GLASS

solution. A true solution is a homogeneous mixture of the substance doing the dissolving, the SOLVENT, and the substance being dissolved, or solute In solutions of substances miscible in all proportions, as alcohol and water, it is customary to call that substance the solvent which is present in larger quantity at the time In addition to solutions of solids and liquids in liquids, there are also those of gases in liquids, gases in gases, gases and liquids in solids, and solids in solids The particles into which substances separate in forming a true solution are held to be of molecular fineness (i e , are of the size of a molecule), and those of the solute are evenly dispersed throughout the solvent These particles in a true solution are smaller than those in a COLLOID or a SUSPENSION They are invisible even under the ultramicroscope, and those of the solute do not collect to cause "settling out " Solvent and solute in a true solution cannot be separated by filtration Although a solution is homogeneous (chemical tests of samples taken from any part of a true solution show the presence of the components in constant proportions), its composition is not, however, definite (like that of a COMPOUND) and can be varied within certain limits For example, water will dissolve various amounts of sugar at a given temperature, but there is a definite limit as to the total amount it will dissolve at any given temperature Substances differ widely in solubility with respect to the specific solvents in which they

are soluble, in degree of solubility in those solvents, and in the amount of increase or decrease of solubility with an increase in temperature of the solvent In general, however, in solutions of solids in liquids an increase in temperature (in some cases a decrease) will permit a greater amount of solute to be dissolved. When a solvent has dissolved all of a solute that it can at a given temperature, the mixture is called a saturated solution (see SATURATION) In a dilute solution there is a relatively small amount of the solute, in a concentrated solution, a relatively large amount Certain of the physical properties of the solvent are affected by the presence in it of the solute In general, its boiling point is raised and its melting point lowered, its VAPOR PRESSURE is affected also A number of substances (acids, bases, and salts) exhibit characteristic behavior in aqueous solution (see ELECTROLYTE) Their molecules are held to undergo DISSOCIATION, forming negative and positive ions Aqueous solutions of these substances are classed for convenience as molar solutions or normal solutions depending upon the concentration of the solute in the solution A molar solution is one in which the gram-molecular weight or mol of the solute in grams is present in 1,000 c c of solution For example, since the molecular weight of sulphuric acid is 98, a molar solution consists of 98 grams of the acid in 1,000 c c of solution A normal solution (a 1N solution) contains one gram of replaceable hydrogen or its equivalent in 1,000 c c of solution. For example, a normal solution of nitric acid contains 63 g of the acid, the quantity necessary to furnish one gram of replaceable hydrogen A normal solution of a base contains 17 g of the hydroxyl (OH) radical, which is the equivalent for the one gram of replaceable hydrogen. Normal solutions are used in determining the concentration of other solutions of acids and bases (see NEUTRALIZATION)

Solutré (sôlütrā'), village, E central France, near Mâcon It is the site of a rock shelter, camp, and burial place of prehistoric man (discovered in 1867) and gives its name to the Solutrean period (see PALEOLITHIC PERIOD) A human skeleton of the Aurignacian age was discovered here in 1923

Solvay, Ernest (sôl'vā, Fr ĕrnĕst' sôlvā'), 1838–1922, Belgian industrial chemist and philanthropist He originated the SOLVAY PROCESS and established (1863) near Charleroi, Belgium, the first plant for making soda by this process, later plants were set up in many countries He founded at Brussels the Solvay institutes of physiology (1893) and sociology (1901) and made large gifts to European universities

Solvay (sŏl'vā), village (pop 8,201), central N Y, near Syracuse, inc 1894 The Solvay Process Company (from which the town is named) manufactures soda ash

Solvay process (sŏl'vā) [for Ernest Solvay], commercial process for the preparation of washing soda (sodium carbonate) Chemically, it involves three steps carried out in large towers A saturated salt solution is treated with ammonia and then with carbon dioxide, these react to form ammonium bicarbonate The ammonium bicarbonate reacts with the salt (sodium chloride), sodium bicarbonate and ammonium chloride are formed The sodium carbonate is obtained by heating the bicarbonate

solvent (sŏl'vunt), any substance in the liquid state in which another substance is dissolved Water is the commonest substance used to dissolve, or take into SOLUTION, other substances There are a number of other compounds valuable as solvents, because they will dissolve many materials which are insoluble, or nearly so, in water Some solvents are ACETONE, ALCOHOL, BENZENE (or benzol), BENZINE, carbon disulphide, carbon tetrachloride, CHLOROFORM, ETHER, ethyl acetate, FURFURAL, GASOLINE, TOLUENE, TURPENTINE, and XYLENE (or xylol)

Solway Firth (sŏl'wā), inlet of the Irish Sea at the estuary of the Esk river, separating NW England (Cumberland) from SW Scotland (Wigtown, Kirkcudbright, and Dumfries counties) It is c 40 mi long and receives the Esk, Annan, Dee, Nith, Urr, Eden, and Derwent rivers Near Annan the firth is crossed by a railway bridge The tide rises rapidly and forms a bore Hadrian's Wall terminated at Bowness, on the south shore The firth figures in Scott's *Guy Mannering* and *Redgauntlet*

Solway Moss, district, Cumberland, England, near the border of Scotland NW of the Esk river Formerly a bogland, it has been drained and brought under cultivation In 1542 it was the scene of the defeat by the English of the Scots under Oliver Sinclair, in one of the border struggles

Solyman. For Ottoman sultans thus named, see SULEIMAN

Somaliland (sōmä'lēländ"), **Somalia** (sōmä'lēə), or **Somali Coast**, coastal region of the most easterly section of Africa, that lying directly S of Arabia. It comprises the entire African coast of the Gulf of Aden and a longer stretch on the Indian Ocean The name is derived from the Somali, the dominant native people They are Moslems and speak a Hamitic language They subsist by farming (in the uplands), by sedentary or nomadic herding, and by pearl fishing or other maritime activities. Somaliland, with a hot, dry climate, is relatively unproductive as a whole In most areas a barren coastal lowland (widest in the south) is abruptly succeeded by a rise to the great interior plateau Exports include salt, hides, cotton, pearls, and mother-of-pearl. Politically the area is divided into four parts, of which one is the easternmost section of Ethiopia, the others are British Somaliland, French Somaliland, and Italian Somaliland, all bordered by Ethiopia In the Second World War, Somaliland was the scene of much action Italy which entered the conflict on June 10, 1940, conquered all British Somaliland by August Early in 1941 the British in E Africa rallied and began an attack on the Italian holdings Troops from Kenya completed the conquest of Italian Somaliland by the end of February, and in March sea-borne forces landed and retook British Somaliland French Somaliland maintained loyalty to the Vichy government until the Allied invasion of French North Africa in Dec, 1942, forced it to join the Free French

British Somaliland, also called Somaliland protectorate (c 68,000 sq mi, pop c 700,000), is on the Gulf of Aden Berbera is the capital Most of the area was occupied by Egyptian forces in the 1870s When they withdrew in 1884 to fight the MAHDI, British troops took their place and established the protectorate Another self-proclaimed messiah, the "Mad Mullah," harassed the British forces from 1901 to 1920 **French Somaliland,** is an overseas territory (9,073 sq mi, pop 44,195) on the Gulf of Aden, the northernmost part of Somaliland The capital is Jibuti It is important for its strategic location opposite Aden protectorate and on the Bab el Mandeb (the strait connecting the Gulf of Aden and the Red Sea) There is considerable transit trade through Jibuti, the terminus of the only railroad in Ethiopia France first obtained a foothold in 1862, its power was consolidated in 1884, and substantially the present area was organized as a colony in 1896 **Italian Somaliland** is a former colony (c 194,000 sq mi, pop c 1,020,000), comprising the section of Somaliland on the Indian Ocean The capital is Mogadishu Italy first asserted its authority here in 1889 by creating a small protectorate in the central region Later other protectorates were established in the north, and much territory was ceded in the south by Zanzibar In 1925 Jubaland or the Trans-Juba (E of the Juba river) was detached from Kenya to become the westernmost part of the colony In 1936 Italian Somaliland was combined with Somali-speaking districts of Ethiopia into a province of the newly formed Italian East Africa The British, following their conquest (1941), governed by military rule In 1950, pursuant to a decision of the United Nations General Assembly, Italy assumed control of the former colony until 1959, the provisional date for giving it independence Ethiopia, which claims the territory, protested bitterly

Sombart, Werner (vĕr'nur zôm'burt), 1863–1941, German economist In 1917 he became professor of economics at the Univ of Berlin Influenced by Marx's historical approach to economics, he produced several analyses of capitalism, including *Der moderne Kapitalismus* (Vols I and II, 1902, Vol III, 1928) and *Der Bourgeois* (1913, Eng tr, *The Quintessence of Capitalism*, 1915) He later turned toward German romanticism, becoming eventually, in *Deutscher Sozialismus* (1934, Eng tr, *A New Social Philosophy*, 1937), an exponent of the authoritarian state, accepting German National Socialism See study by M J Plotnik (1937)

Sombor (sôm'bôr), Hung *Zombor* (zôm'bôr), city (pop 34,321), Serbia, Yugoslavia, on the Danube-Theiss canal and c 90 mi NW of Belgrade. It is a trading center of the fertile Vojvodina

Somerdale (sŭ'murdāl), borough (pop 1,170), SW N J, southeastern suburb of Camden, inc 1929

Somers, John Somers or **Sommers, Baron** (sŭ'murz), 1651–1716, English jurist and statesman He presided at the framing of the Declaration of Rights (1688) and was knighted and appointed solicitor general for his services in establishing the legality of the accession of William and Mary He advanced to the office of attorney general (1692), lord keeper (1693), and lord chancellor (1697) and was created (1697) Baron Somers of Evesham He was politically influential throughout the reign of William, but was forced to resign as lord chancellor in 1700 after repeated attacks directed against him, in part for his support of Capt William Kidd's ventures He was a leader of the Whig Junto under Queen Anne, supported the Act of Union with Scotland, and was made (1708) president of the council, but lost office (1710) when the Tories came to power A friend of such writers as John Locke, Isaac Newton, and Jonathan Swift, Somers himself wrote political tracts His collection of papers and manuscripts was edited by Sir Walter Scott as the *Somers Tracts* (13 vols, 1809–15).

Somers, town (pop 2,114), N Conn, at the Mass. line NE of Hartford It was organized as a Massachusetts town in 1734 and transferred to Connecticut in 1749 Woolen goods are produced.

Somersby (sŭ'mursbē), village, in the Parts of Lindsey, Lincolnshire, England, S of Louth. The rectory here was the birthplace of Tennyson.

Somerset, Charles Seymour, 6th duke of (sŭ'mûrsĕt", -sĭt), 1662-1748, English nobleman He succeeded to the dukedom while studying at Cambridge and married (1682) an enormously wealthy heiress, Elizabeth Percy, countess of Ogle He supported William of Orange in 1688, became a favorite of Princess Anne, and received several honorary posts after her coronation (1702) as queen His wife was an intimate of the queen, despite Tory attempts to have her removed from the court Known as "the proud duke," Somerset used his influence in favor of the succession of George I

Somerset, Edmund Beaufort, 2d duke of, d 1455, English statesman and general He fought in France in the Hundred Years War, receiving his first command in 1431, recapturing Harfleur in 1440, and relieving Calais in 1442 For this last feat he was made (1442) earl of Dorset In 1444 he succeeded his brother John as earl of Somerset In 1447 he replaced Richard, duke of YORK, as lieutenant of France and in 1448 was created duke of Somerset The truce of 1444 between France and England was repeatedly violated, and war was resumed in 1449 Somerset's army was consistently defeated and by 1453 all of England's French possessions except Calais had been lost Since the duke of Suffolk's murder (1450), Somerset had been the head of the Lancastrian faction and was protected by HENRY VI against popular resentment and the attacks of the Yorkists Upon Henry's insanity (1453), Somerset was imprisoned and York became protector When the king recovered (1454), Somerset was returned to power York failed to get Somerset tried for treason and raised an army in the Yorkist cause Somerset was killed at St Albans in the first battle of the Wars of the Roses

Somerset, Edward Seymour, duke of, 1506?–1552, protector of England He may have studied at Oxford and Cambridge, and he did serve in the army and in diplomatic affairs He steadily rose in the favor of Henry VIII and, after the marriage of his sister Jane Seymour to the king, was created Viscount Beauchamp and earl of Hertford in 1536 In 1545 he led the army in a brilliant victory against the French at Boulogne On the death of Henry VIII he gained possession of the king's will and of the young heir, EDWARD VI (who was Seymour's nephew), and was named by the council protector of the realm, shortly thereafter taking the posts of lord treasurer and earl marshal and the title duke of Somerset He managed to free himself from the restrictions of the council and wielded almost royal authority in major Protestant reforms in the Church and in relaxing such measures as the heresy and treason laws He was ably seconded by Archbishop Thomas Cranmer, and their efforts resulted in the use of the Book of Common Prayer, required by an Act of Uniformity in 1549 Meanwhile Somerset tried to enforce a marriage treaty arranged by Henry VIII between the young Edward VI and Mary Queen of Scots He invaded Scotland, crushed his opponents at Pinkie (1547), and completely alienated the Scots when he laid SE Scotland waste Mary was hastily sent to France, and hope of the union of the two countries was lost The fall and execution (1549) of his brother Thomas Seymour, lord high admiral, was a strong blow to the protector's authority and power, which was further undermined by his religious innovations, his unsuccessful attempts to prevent the enclosure of land, and the poor condition of the exchequer John Dudley, earl of Warwick (later duke of NORTHUMBERLAND) took advantage of these misfortunes and, joining Thomas Wriothesley, earl of Southampton and others he ousted Somerset, placed him in the Tower (1549), and deprived him of the protectorate Somerset was released in 1550, but a revival of his influence led Warwick to cause his arrest (1551) He was convicted (1552) on a charge of felony and beheaded Though personally ambitious, Somerset was a man of firm beliefs and excellent military ability His name is among the foremost of the practical leaders of the English Reformation See A F Pollard, *England under Protector Somerset* (1900)

Somerset, Fitzroy James Henry see RAGLAN, FITZROY JAMES HENRY SOMERSET, 1st BARON

Somerset, Robert Carr, earl of, c 1589–1645, lord chamberlain of England His family name also appears as Ker and Kerr Born in Scotland, Carr spent some time in France before he attended the court of James I in England. He soon became the favorite of James, was knighted (1607), and in 1609 he was granted lands which had been forfeited by Sir Walter Ralegh He was created Viscount Rochester in 1611, served James as personal secretary, and became earl of Somerset in 1613 In the same year he married the countess of Essex (who had her marriage to Essex annulled in a highly sensational trial) and was probably implicated with her in the murder of his former friend, Sir Thomas OVERBURY Somerset became an important counselor to the king, but his jealous and arrogant nature alienated James's affections On the discovery of Overbury's murder, Somerset and his wife were tried and found guilty (1616) of perpetrating it, although the husband's guilt was not definitely established. They were both pardoned but not re-

leased until 1622, after which they lived in comparative obscurity See Philip Gibbs, *The King's Favourite* (1929)

Somerset, William Seymour, 2d duke of: see HERTFORD, WILLIAM SEYMOUR, 1ST MARQUESS AND 2D EARL OF

Somerset, county (1,616 sq mi , 1931 pop 475,142, 1948 estimated pop 541,600), SW England, bordering, on the north, the Bristol Channel The county town is Taunton The terrain is level in the center, with the Mendip Hills to the east and the Exmoor and Quantock Hills to the west The principal rivers are the Bristol Avon, the Exe, and the Parrett, whose fertile valleys are devoted to agriculture Dairy farming (Cheddar cheese) and fruit-growing are important, and much of the land is devoted to pasturage of cattle There is some manufacture of woolens At Bath, which reached its greatest importance as a fashionable watering place in the 18th cent , are found some of the most important Roman remains in Britain As a resort town modern Bath is rivaled by Weston-super-Mare In the Middle Ages the region became a part of the Anglo-Saxon kingdom of Wessex The county has associations with King Alfred and the legend of King Arthur, and Glastonbury is important in England's religious legend and history The churches of the county are famous, notably the Cathedral of Bath and Wells See *Victoria History of Somerset* (2 vols , 1906–11)

Somerset 1 City (pop 6,154), co seat of Pulaski co , S Ky , S of Lexington and in the Cumberland foothills It is a railroad and industrial city in a farm, coal, and timber area A national cemetery and Zollicoffer Memorial Park are near by **2** Town (pop 5,873), SE Mass , on the Taunton above Fall River, settled 1677, set off from Swansea 1790 **3** Village (pop 1,352), S central Ohio, SW of Zanesville, laid out 1810 It was the boyhood home of Gen Philip H Sheridan **4** Borough (pop 5,430), co seat of Somerset co , SW Pa , ESE of Pittsburgh, settled 1771, laid out 1795, inc 1804 Its products include maple sugar, lumber, limestone, and coal

Somers Point (sŭ'murz), city (pop 1,992), SE N J , on Great Egg Bay NW of Ocean City, settled c 1695, inc 1886

Somersworth (sŭ'murzwûrth), textile city (pop 6,136), SE N H , on the Salmon Falls River opposite Berwick, Maine, set off from Dover as a separate parish 1729, inc as a town 1754, as a city 1893 Stuart Chase was born here There are many fine old houses

Somerton, city (pop 1,247), extreme SW Ariz , on the Colorado and near Yuma

Somervile or **Somerville, William** (both sŭ'murvĭl), 1675–1742, English poet His best-known work, *The Chase* (1734), is a description of the art of hunting with hounds and reflects his life as a country squire

Somerville, Mary Fairfax (sŭ'murvĭl), 1780–1872, Scottish mathematician In 1804 she was married to a cousin, Samuel Grieg, an officer in the Russian navy and Russian consul in London, after his death she married (1812) another cousin, William Somerville, a physician In 1826 she presented a paper before the Royal Society, *Magnetic Properties of the Violet Rays of the Solar Spectrum* This created such a sensation that she was deputed by Lord Brougham to translate and popularize for English readers Laplace's *Mécanique céleste*, which she presented to the Royal Society in 1831 Others of her works are *The Connection of the Physical Sciences* (1834), *Physical Geography* (1848), and *On Molecular and Microscopic Science* (1869) A bust of her was placed in the great hall of the Royal Society, Somerville Hall (later Somerville College), Oxford, and the Mary Somerville scholarship in mathematics for women at Oxford were given in her memory See *Personal Recollections*, by her daughter, Martha Somerville (1873)

Somerville, William see SOMERVILE, WILLIAM

Somerville 1 City (pop 102,177), E Mass , residential and industrial suburb of Boston, settled 1630, set off from Charlestown 1842, inc as a city 1871 In the Revolution it had an important colonial magazine and fortress Food products and paper boxes are among its manufactures, automobile assembling is an industry **2** Borough (pop 8,720), co seat of Somerset co , N central N J , on the Raritan and SW of Plainfield, settled 1683, inc as a town 1864, as a borough 1909 Somerville is a residential town and a farm trade center The Wallace House was a residence of the Washingtons, 1778–79 Of interest also is the old Dutch parsonage (1751, now a D A R museum) The Duke estate (over 2,000 acres) is near by **3** Town (pop 1,570), co seat of Fayette co , SW Tenn , E of Memphis, in a cotton and timber area, founded 1825 **4** City (pop 1,621), S central Texas, ESE of Austin It has railroad shops and some lumber industry.

Somerville College see OXFORD UNIVERSITY.

Somme (sôm), department (2,424 sq mi , pop. 441,368), N France, in PICARDY It is traversed by the Somme river Amiens (the departmental capital) and Abbeville are the principal centers

Somme, river, 152 mi. long, N France, in Picardy It flows past Saint-Quentin, Péronne, Amiens, and Abbeville into the English Channel A battle line for centuries, it was throughout the First World War the scene of heavy fighting between the British and the Germans, especially in the so-called battles of the Somme (1916, 1917)

somnambulism see SLEEPWALKING

Somov, Konstantin Andreyevich (kŭnstuntyēn' ŭndrā'uvĭch sô'môf), 1869–, Russian painter His work, concerned with psychological principles of interpretation, is delicate and sensitive Among his paintings are *The Woman in the Blue Dress*, *Women Bathing*, and *The Harlequin and the Lady*

Somoza, Anastasio (ănästä' syō sōmō'sä), 1896–, president of Nicaragua After the withdrawal of the U S forces from Nicaragua, he rose to power as head of the national guard Though himself a member of the Liberal party, he by a coup in 1936 overthrew the incumbent Liberal party regime He thereby became the virtual ruler of Nicaragua, and in 1937 he formally became president He withdrew from that office in 1947, but his successor was in office less than a month before Somoza overthrew him His uncle, Víctor Manuel Román y Reyes, was made president in Aug , 1947, but Somoza was still head of the army and held the actual power In 1949 he announced his candidacy for the presidential elections of May, 1950 His chief opponent in Nicaragua has been the head of the Conservative party, Emiliano CHAMORRO Somoza has been very bitterly criticized as a dictator by liberals the world over The international Caribbean League had as one of its objects the overthrow of Somoza The accusation (Dec , 1948) by Costa Ricans that Somoza had fostered a group of Costa Rican rebels led to a formal investigation by the Council of the Organization of American States

sonar (sō'när), naval device employing sound waves for navigation and ranging It was first used in the Second World War principally for detecting enemy submarines, torpedoes, and mines In detecting these, sonar may listen for the sounds they generate, but usually emits its own sound waves which, when they strike something are reflected back as in an echo The heart of sonar equipment is an electroacoustic transducer, mounted in a watertight housing and suspended in the water from the hull of a ship The transducer converts electric energy into acoustic energy (thus acting as a projector) much as does a loudspeaker and converts acoustic energy into electric energy (serving as a hydrophone) as does a microphone A pulse of electric energy vibrates the diaphragm of the projector, sending sound waves through the water These waves are concentrated into a sound beam which scans the water when the projector is rotated After the sound wave is emitted the projector is converted into a hydrophone and listens for an echo The cycle is repeated periodically A returning echo is converted into an electric current by the transducer and may be interpreted (for range, speed, bearing, and nature of the target) aurally or by a cathode-ray tube, as is done with RADAR signals

sonata (sunä'tu), in music, form of instrumental composition which arose in the baroque period in Italy The two prevailing types in the 17th cent were *sonata da chiesa*, or church sonata, and *sonata da camera*, or chamber sonata The four movements of the former were derived from the four sections of the *canzone* and were largely of contrapuntal texture The *sonata da camera* was in the form of a dance suite, whose first movement was similar to the *canzone* In the late 17th cent these two types merged into what became the outstanding baroque chamber music form, the trio sonata, for two instruments plus *basso continuo* The form was brought to perfection in the works of Arcangelo Corelli and Evaristo dall' Abaco (1675–1742) and adopted in the sonatas of Bach and Handel Overlapping this development was the keyboard sonata of the rococo Italian composers, such as Galuppi, G B Sammartini (1700?–1755), and P D Paradies (1710–92) While the baroque trio sonata was a polyphonic form, having three melodically equal parts, the rococo sonata was homophonic, having one outstanding melodic line with accompanying harmonic background A popular type of accompaniment was the Alberti bass The sonatas of the sons of Bach, particularly those of Karl Philipp Emmanuel Bach, contribute an expressive quality and a pianistic style to the classical sonata, perfected by Haydn and Mozart While the movements of the baroque sonata alternated slow-fast-slow-fast, the classical sonata's movements are fast-slow-minuet or scherzo-fast, one or other of the middle movements might be left out, however The first movement—and possibly one or more of the others—was in what is called **sonata form.** This is essentially a binary form, the first part being an exposition, in which two contrasting themes are presented The second part consists of a development of these themes and a recapitulation. Sonata form is employed in the string quartet, in the symphony, and to some extent in the concerto, as well as in the solo sonata It reached its consummation in Beethoven's works, after which it may be said to have declined.

Sonderborg, Dan *Sønderborg* (sō'nûrbôr), Ger. *Sonderburg* (zōn'dûrbôrk), town (pop 14,125) SE Jutland, Denmark, a Baltic port on both sides of the Als Sound The older section of the town is on Als island There are textile mills, machine shops, and other manufactures The town grew around a 13th-century castle, now a museum Sonderborg (generally known historically in English as Sonderburg) was a city of the duchy of SCHLESWIG Christian III of Denmark created (16th cent) the duchy of Sonderburg for his younger son John, from whom the branch of Schleswig-Holstein-Sonderburg-Glücksburg (which has occupied the Danish throne since 1863) is descended With Schleswig, the city was annexed to Prussia in 1866, but it was restored (1920) to Denmark after a plebiscite

Sonderbund (zōn'dûrbōnt) [Ger , = separate league], 1845–47, league of seven Catholic cantons of Switzerland The rise of the Radical party in the majority of cantons had resulted in anti-Catholic measures such as the closing (1841) of all convents in Aargau When Lucerne retaliated (1844) by recalling the Jesuits armed bands of Radicals invaded this canton Under this provocation and in defense against the added threat of the Radicals' program of a more unified federalization (which imperiled the position of the predominantly rural, reactionary, and sparsely populated Catholic cantons), the cantons of Lucerne, Fribourg, Valais, Uri, Schwyz, Unterwalden and Zug formed what they considered a legitimate defensive alliance (1845) The Radical majority in the federal diet declared the Sonderbund dissolved (1847) and shortly afterward sent an army, under Gen Guillaume Henri Dufour, against the separatist forces In an almost bloodless campaign the Sonderbund was defeated at Gisikon (Nov 1847) Federal victory led to the adoption (1848) of a federal constitution and ended the almost complete sovereignty of the individual cantons The Society of Jesus, held responsible for the war by the Radicals, was (and still is) banned from Switzerland, and the establishment of new religious houses was forbidden

Sondershausen (zōn"dürs-hou'zun), town (pop 13,118), Thuringia, central Germany, near the foot of the KYFFHÄUSER and c 30 mi NNW of Erfurt It is a potash-mining center and has various manufactures Until 1918 it was the capital of the principality of SCHWARZBURG-SONDERSHAUSEN Among the notable buildings are the palace (16th cent) and the house where Brahms lived for some time

song The song literature of Western music embodies two broad classifications—FOLK SONG and art song The outstanding examples of art song before the baroque period are those of the TROUBADOUR, TROUVÈRE MINNESINGER, and MEISTERSINGER The refined lyrical *air de cour* of late 16th-century France, in two-part form and accompanied by the lute provided the inspiration for the *ayre* of the early 17th-century English lutanists, among whom were John Dowland, Thomas Campion, and Thomas Morley Italy has contributed little to the art-song literature, having centered her attention upon opera and the aria The principle of accompanied monody however, which is inseparable from the early development of opera, also marked the beginning of modern accompanied song A direct influence is shown in the German lied of the 17th cent , a monodic song with a *basso continuo* accompaniment Outstanding among earlier examples are the *Arien* (1638–50) of Heinrich Albert (1604–51), while the *Arien* (1656–67) of Adam Krieger (1634–66), which contain five-voice instrumental ritornellos, brought the style to perfection Perhaps the greatest of all art songs in the German romantic lied of the 19th cent , in which the vocal line and the piano accompaniment are of equal musical significance The style was brought to flower by Schubert, and after him the most distinguished composers were Schumann Brahms, and Hugo Wolf Among the poets whose lyrics they used were Goethe Chamisso, Eichendorff, Rückert, Wilhelm Müller, Heine, and Mörike Outstanding among modern German songs are those of Hindemith and of Schonberg, which require the technique of *Sprechstimme*, a sort of musical speech In France a renewed interest in song composition began in the 19th cent with Berlioz and was continued in the works of Franck, Fauré, Debussy Ravel, and Poulenc In Russia the realistic songs of Moussorgsky are most significant In the United States the songs of Stephen Foster had such a national appeal as to become thought of by many as folk songs Striking originality was brought to the American art song by Charles Ives See also BALLAD, CAROL, CHANTEY, HYMN, PLAIN SONG, SPIRITUAL See H T Finck, *Songs and Song-Writers* (1900), Peter Warlock, *The English Ayre* (1926), H C Colles, *Voice and Verse* (1928), W T Upton, *The Art-Song in America* (1930), Elisabeth Schumann, *German Song* (1948), Sergius Kagen, *Music for the Voice* (1949).

song, bird. Songs, call notes, and certain mechanical sounds are means of communication among birds Song is usually confined to the male and is at its height during the breeding season It serves as a means of announcing his selection of a territory in

which the nest is to be built, of warning away other males of his species, and of helping to attract females Song is produced in the syrinx at the base of the windpipe and is modified by the larynx and the tongue The syrinx contains membranes similar to vocal cords and controlled by muscles which are most numerous in the Oscines or singing birds Among the Oscines are such superior singers as the southern mockingbird, the hermit thrush, the wood thrush, the canyon wren the purple and house finches, and the European nightingale and skylark The crows, jays, and house sparrow have little singing ability but belong to the Oscines because of the structure of the syrinx Some birds deliver their songs from tree tops, some from bushes or fence posts, some on the wing, others sing while on the ground Mimics among birds include the mockingbird, brown thrasher, catbird starling, and blue jay The song of each species is recognizable by humans and by birds, although there are individual and seasonal variations There is evidence that songs are learned and that certain calls are inherited Easily identifiable are the hunger cry of the young, calls to brood, notes of alarm, and sounds which help to keep migrating flocks together Familiar mechanical sounds are the drumming of the sage grouse and the tattooing of the woodpecker See F Schuyler Mathews, *Field Book of Wild Birds and Their Music* (1921), A R Brand, *Songs of Wild Birds* (1934) and *More Songs of Wild Birds* (1936), both with phonograph records

Songdo, Korea see KAESONG

Song of Solomon, Song of Songs, or **Canticles,** book of the Old Testament, 22d in the order of AV It is in form a love poem or epithalamium and has been ascribed since ancient times to Solomon Many critics date it as late as the 3d cent B C Its preservation in the Jewish and Christian canon is due not to its universally admitted poetic beauty but to the acceptance of it as an allegory or parable of God's love for Israel, or for the Church, or for the soul that loves Him Famous among such interpretations are St Bernard's 86 sermons on the book (Eng tr , 1920) and St Francis of Sales's explanation (Eng tr , 1908) See Morris Jastrow, *The Song of Songs* (1921)

Sonneberg (sŏn'nurbĕrk), town (pop 21,534), Thuringia, central Germany It is the center of the Thuringian toy industry

Sonneck, Oscar George Theodore (sŭ'nĕk), 1873–1928, American musicologist, b Jersey City, N J , educated in Germany As chief (1902–17) of the music division of the Library of Congress, he developed one of the outstanding music libraries of the world He edited the *Musical Quarterly* from the time it was founded in 1915 until his death In 1917 he became director of publications, and in 1921 vice president, of G Schirmer, Inc His writings rank him as one of the foremost as well as one of the first, American musicologists, particularly in the field of early American music They include *A Bibliography of Early Secular American Music* (1905, revised and enlarged by W T Upton, 1945), *Early Concert-Life in America* (1907), *Report on "The Star-spangled Banner," "Hail Columbia," "America," and "Yankee Doodle"* (1909), *Early Opera in America* (1915), and *The Riddle of the Immortal Beloved a Supplement to Thayer's "Life of Beethoven"* (1927)

sonnet, poem of 14 lines, usually in iambic pentameter, restricted to a definite rhyme scheme There are two prominent types the Italian or Petrarchan sonnet is composed of an octave and a sestet, rhyming *abbaabba cdecde*, and the Elizabethan or Shakspearian sonnet has three quatrains and a couplet, rhyming *abab cded efef gg* Variations of these schemes occur The essence of the sonnet is unity of thought or idea Its origin is obscure, but it is generally believed to have developed from medieval songs and in Italy, where it was cultivated during the Renaissance and achieved its greatest examples in the work of PETRARCH, DANTE, TASSO, MICHELANGELO, and others The vogue of the sonnet spread from Italy throughout Europe In Spain it was introduced by Juan Boscán Almogáver, in Portugal by Luís de Camões, in France by Mellin de Saint-Gelays and Marot, and in England by Wyatt and Surrey, who established the form there by the publication of their sonnets in Richard Tottel's miscellany (1557) In France the chief cultivators of this form were the Pléiade, in Germany the sonnet first gained prominence in the romantic period in the hands of Goethe, Schlegel, Heyse, and others Sidney, Spenser, and Shakspere were early masters of the form in England, and they revised and simplified it Innumerable sonnets and sonnet sequences appeared in Elizabethan England, fewer around the time of Milton's great sonnets, and not many in the 18th cent The sonnet was revived in the romantic period, and some of the best examples were written by Wordsworth, Keats, and later by Mrs Browning, the Rossettis, and others. Lesser poets, too, have sometimes achieved a single excellent sonnet The form continues to be popular with 20th-century poets, as innumerable anthologies testify See A T Quiller-Couch, *English Sonnets* (1897); L C John, *Elizabethan Sonnet Sequences* (1938); general histories of English, French, Italian, and other literatures

Sonnino, Sidney, Baron (bärō'nä sōn-nē'nō), 1847–1922, Italian statesman A member of the diplomatic corps (1867–73), he later became interested in social and economic problems, particularly in the conditions of the peasantry, and founded an economic review, later converted into a political daily After entering parliament in 1880, Sonnino specialized in financial questions, and as minister of finance under Crispi (1893–96) he took drastic measures and succeeded in balancing the budget He was twice briefly prime minister (1906, 1909–10) As foreign minister during the First World War, he negotiated (1915) the secret Treaty of London, by which Italy entered the war on the Allied side in exchange for promises of vast territorial gains The opposition of President Wilson to the fulfillment of the secret treaty caused major difficulties at the Paris Peace Conference of 1919, where Sonnino represented Italy with V E ORLANDO Sonnino retired from politics in 1919

Sonoma (sunō'mŭ), city (pop 1,158), W Calif , N of San Francisco, founded 1835, inc 1850 The Bear Flag of the California republic under J C FRÉMONT was raised here in 1846 San Francisco de Solano Mission (1823) and the home of Gen Mariano G Vallejo (1852) here are now state historic monuments, and another landmark is the first hotel (early 1840s) operated N of San Francisco Wine is bottled in Sonoma

Sonora (sŏnō'rä), state (70,484 sq mi , 1946 estimated pop 449,026), NW MEXICO The capital is Hermosillo Sonora is on the Gulf of California, S of Arizona The general aspect of the state except for the low, broad coastlands along the gulf, is similar to Arizona—mountainous with vast desert stretches Reclamation projects on the Yaqui, Sonora, Mayo, and other rivers have opened large areas to agriculture, quantities of tomatoes, rice, wheat, flax, sesame corn, alfalfa, and beans are produced Cattle raising is also important, but the principal wealth of the state lies in its mines of gold, silver, copper, and other metals The modern development of Sonora in agriculture and in textile manufacture and the appearance of power and food-processing plants at HERMOSILLO and GUAYMAS have recently increased both population and wealth NOGALES is the chief point of entry from the United States Systematic Spanish exploration of Sonora, principally by Cristóbal de Oñate, began after Coronado's expedition in 1540 Active in colonizing the territory during the 17th cent and in establishing some control over savage Indian tribes were the Spanish missionaries, notably Eusebio Francisco KINO However, even as late as the 20th cent punitive expeditions had to be sent against the YAQUI Originally part of Nueva Viscaya, which included Chihuahua and Durango, Sonora was later united with Sinaloa in one province in the 17th and 18th cent and one intendancy after the viceregal reforms of 1786 In 1830 they were made separate states In the revolution that began in 1910 Sonora took a leading part in the activities of Venustiano CARRANZA, Francisco VILLA, Álvaro OBREGÓN, and Plutarco E CALLES

Sonora (sunō'ru) **1** City (pop 2,257), co seat of Tuolumne co , central Calif , E of Stockton, founded 1848, inc 1851 It is in the famous Mother Lode mining country, where lumbering, quarrying, and farming are also carried on **2** Town (pop 2,528), co seat of Sutton co , W Texas, SSW of San Angelo and on an intermittent stream called the Dry Fork of Devils river, settled 1888, inc 1917 Ranches here support sheep, goats, and cattle, and quarter horses are bred A ranch experiment station is some 30 mi away

Sons of Liberty. In protest against the Stamp Act (1765), secret organizations sprang up in the American colonies, they called themselves Sons of Liberty after a phrase used by Isaac Barré in a speech in the Parliament in 1765 Leaders were John LAMB and Alexander McDOUGALL in New York and Samuel ADAMS and Paul REVERE in New England The societies kept in touch with each other through committees of correspondence, fomented the spirit of freedom, supported the nonimportation agreement, and participated in calling the Continental Congress of 1774 In the Civil War, the KNIGHTS OF THE GOLDEN CIRCLE adopted the name Sons of Liberty in 1864

Sons of the American Revolution, national patriotic organization, founded in New York in 1889 by a union of the Sons of Revolutionary Sires and certain members of the Society of the Sons of the Revolution Membership is open to those whose ancestors saw active service in the Revolutionary forces In 1906 it was incorporated nationally by congressional act. A similar but unconnected organization is the Sons of the Revolution

Sonsonate (sŏnsōnā'tā), town (1946 estimated pop 18,184), SW Salvador Sonsonate was founded by Pedro de Alvarado in 1524 On the railroad between San Salvador and ACAJUTLA, it is a commercial center for coffee, sugar, corn, tobacco, rice, dairy products, and Peruvian balsam. Still surviving is an ancient and dilapidated mule-drawn trolley connecting Sonsonate with Isalco.

Sontag, Henriette, Contessa Rossi (hĕnrĕt'tŭ sōn'tăk kōntĕs'sä rō'sē), 1806–54, German operatic soprano, studied at the Prague Conservatory. In Vienna in 1823 she created the leading role in Weber's *Euryanthe* and in 1824 was soprano soloist in the premières of Beethoven's Ninth Symphony and *Missa Solemnis*. She made triumphant debuts in Berlin (1825), Paris (1826), and London (1828), but having married Conte Rossi, who was in the diplomatic service of Sardinia, and having been ennobled by the king of Prussia, she left the stage in 1830 at the height of her success In 1849 she resumed her career and in 1852 sang in the United States She died of cholera in 1854 after appearances in Mexico city.

Soochow (sōō'chou', sōō'jō'), Mandarin *Su-chou*, now officially **Wuhsien** (wōō'shĕn'), city and county (pop 1,099,717), SE Kiangsu prov , China The city, on the Grand Canal near Tai lake, was founded about the beginning of the 5th cent Arched bridges cross its many canals and contribute much to Soochow's proverbial beauty. A nine-storied pagoda, c 250 ft high, may be the tallest in China Soochow is a major rail center and is very important for its silk and cotton weaving It was almost destroyed during the Taiping Rebellion but was later rebuilt Until the abolition of exterritoriality it was a treaty port After a bitter two-month struggle Soochow was captured by the Japanese on May 20, 1938, in their drive up the Yangtze valley and was held till the end of the Second World War Soochow fell to the Communists in 1949

Soong (sōōng), Mandarin *Sung*, Chinese family, prominent in public affairs **Soong Yao-ju** (you'jō', -rō') or **Charles Jones Soong,** d 1924, was graduated from Vanderbilt Univ and after returning to China was a Methodist missionary in Shanghai He made his fortune as a merchant **Soong Tse-vung** (tsŭ'-wŭn'), better known as **T. V Soong,** 1894–, Chinese statesman, his most distinguished son, was educated at Harvard Univ and later (1916–24) engaged in private business in China He raised funds for the Kuomintang in 1925 and occupied several official positions, including the vice presidency of the Executive Yuan (1928–31, 1932–33) and the chairmanship of the National Bank of China (1935–44) In 1945 he was simultaneously president of the Executive Yuan, foreign minister, and premier Soong resigned all his positions early in 1949 and came to the United States, apparently to escape the Communists The three daughters of Soong Yao-ju are well known **Soong Ai-ling** (ī'-lĭng'), 1888–, was graduated from Wesleyan College in Macon, Ga She was married to H H KUNG and engaged in child welfare work **Soong Ching-ling** (chĭng'-lĭng'), 1890–, was also graduated from Wesleyan College She early became prominent in revolutionary politics, and in 1915 she married SUN YAT-SEN in Japan After Sun's death (1925) she was a member of the central executive committee of the Kuomintang, but after the party's expulsion (1927) of the Communists she resigned in protest and went abroad Later she was reconciled, became (1939) a state councilor of the national government, and rejoined (1945) the central executive committee Mme Sun left the government when civil war broke out between the Kuomintang and the Communists In 1949, in Peiping, she became a non-Communist member of the central executive committee of the People's Republic of China **Soong Mei-ling** (mā'-lĭng'), 1896–, was graduated from Wellesley College She married CHIANG KAI-SHEK in 1927 She was a member of the Executive Yuan (1929–32) and commander of the Chinese air force in the Second Chino-Japanese War In 1945 she became a member of the central executive committee of the Kuomintang In 1943 she addressed the U S Congress Mme Chiang again visited the United States in 1948 in a fruitless quest for aid to the central government against the Communist advance Early in 1950 she flew to Formosa to rejoin her embattled husband See Emily Hahn, *The Soong Sisters* (1941)

soot, black or dull brown deposit resulting from imperfect combustion of fuel of high carbon content, e g , coal, wood, and oil. It consists chiefly of amorphous carbon and of tarry substances which cause it to adhere to surfaces Soot obtained from coal contains also sulphur and ammonia The fine soot known as lampblack is commonly obtained by burning oils and resins especially to produce it. It is an excellent pigment and is used, for example, in making printer's ink and India ink

Sopater (sŏ'pŭtûr), companion of St Paul Acts 20 4 He is possibly the same as SOSIPATER.

Soperton (sō'pûrtŭn), city (pop 1,339), co seat of Treutlen co , central Ga., WNW of Savannah, in the coastal plain It has a fertilizer-mixing plant

Sopherеth (sō'fē-) [Heb ,=scribe], family returned from exile Ezra 2 55; Neh 7 57

Sophia (sōfī'ŭ, Ger sōfē'ä), 1630–1714, electress of Hanover, consort of Elector Ernest Augustus, She was the daughter of FREDERICK THE WINTER KING and ELIZABETH of Bohemia and a granddaughter (through her mother) of James I of England. In 1701 Parliament settled on her and her issue the

succession to the English throne (see SETTLEMENT, ACT OF), and in 1714 her son, GEORGE I, became king of England

Sophia (sŭfī'ŭ), town (pop 1,160), S W Va , SW of Beckley, in a coal-mining area, inc 1912

Sophia, Santa: see HAGIA, SOPHIA

Sophia Alekseyevna (sō'fyŭ ŭlyĭksyā'lyvnŭ), 1657–1704, regent of Russia (1682–89), daughter of Tsar Alexis by his first wife Supported by the Moscow garrison, the Streltsi, and by her lover, Vasily V Galitsin, she ruled autocratically during the minority of her feeble-minded brother, Ivan V, and of her half brother, PETER I Sophia fostered peaceful relations with Poland By the Treaty of Nerchinsk (1689) with China, Russia retreated from the Amur region However, Galitzin's two unsuccessful campaigns against the khan of Crimea helped to undermine her power She lacked the support of the clergy and nobility in her ambition to be crowned tsaritsa When it was rumored that she intended to kill Peter, he summoned the boyars and his loyal guards, overthrew the regency, deposed Ivan, exiled Galitzin, and had Sophia confined in a convent After an attempted revolt of the Streltsi, Peter forced her (1698) to take the veil

Sophia Charlotte (zōfē'ŭ shärlō'tŭ), 1668–1705, queen of Prussia, wife of Frederick I, daughter of Electress Sophia of Hanover, and sister of George I of England She was noted for her literary and philosophical tastes and for her friendship with Leibniz

Sophia Dorothea (sōfī'ŭ dŏruthē'ŭ), 1666–1726, electress of Hanover, wife of Elector George Louis (later GEORGE I of England), sometimes called Sophia Dorothea of Celle Her alleged lover, Count KÖNIGSMARK, was probably murdered, and she herself was divorced in 1694 and thereafter imprisoned at Ahlden Her harsh fate was one major cause of the unpopularity of George I in England Her children were George II of England and Sophia Dorothea, wife of Frederick William I of Prussia

sophist (sŏ'fĭst) The word *sophist*, taken over from Greek into English, has come to refer to an individual who willingly employs fallacious arguments in order to deceive In ancient Greece the term originally meant a wise and skillful man, but it soon lost its respectability owing to the teachings of those who called themselves Sophists They denied the possibility of objective and universal truth, thus truth, for them, became subjective and relative This notion implied that all moral codes were conventional formulations and could be disregarded with impunity The Sophists were, for the most part the paid teachers of the rich and the powerful, their function was to instruct their pupils in the methods of achieving wordly success Socrates, Plato, and Aristotle judged them especially harshly for accepting payment for instruction Among the more distinguished Sophists were Gorgias and PROTAGORAS

Sophocles (sŏ'fŭklēz), c 496 B C –c 406 B C , Greek tragic poet, younger contemporary of AESCHYLUS and older contemporary of EURIPIDES, b Colonus, near Athens A man of wealth, charm, and genius, Sophocles was given posts of responsibility in peace and in war by the Athenians He was a general and a priest, after his death he was worshiped as a hero At the age of 16 he led the chorus in a paean on the victory of Salamis He gained his first dramatic triumph in 468 B C , over Aeschylus, and thenceforth wrote copiously (he composed about 123 dramas), winning first place about 20 times and never falling lower than second A definitive innovator in the drama, he added a third actor—thereby tremendously increasing the dramatic possibilities of the medium—increased the size of the chorus, abandoned the trilogy of plays for the self-contained tragedy, and introduced scene painting Seven complete tragedies (difficult to date), part of a satyr play, and over 1,000 fragments survive *The Ajax* is perhaps the earliest tragedy, three actors are used but the form is handled imperfectly Thenceforth, whether with two or three actors, the dialogue is polished and easy *Antigone* (c 441 B C), with extraordinarily fine characterization, has often been called Sophocles' most interesting play The most famous of his tragedies (cited by Aristotle as a perfect example of tragedy) is *Oedipus Rex* or *Oedipus Tyrannus* (c 429? B C), in which the strength of Greek dramatic irony reaches an apex The dialogues are stately, the lyrics beautiful, the technique and construction masterly The plot is based on the OEDIPUS legend *Electra* (c 411? B C), the *Trachiniae* (on the death of Hercules by the blood of Nessus), and *Philoctetes* (409 B C) followed *Oedipus at Colonus* was written shortly before Sophocles' death and was produced by his son in 401 B C Sequel to *Oedipus Rex*, it tells of the last days and death of Oedipus, it is a quiet, simple play, with choral odes extraordinary for their depth of thought and detachment from the action There is also extant about half of a satyr play by Sophocles (*Ichneutae* or *The Trackers*, written perhaps c 460 B.C), on the story of Hermes' theft of Apollo's cattle The characters in Sophocles—on a more human level than those in Aeschylus—are governed in their fate more by their own faults than by the actions of the Aeschylean gods. Of the relation of his art to that of his great contemporaries, Sophocles said that Aeschylus composed correctly without knowing it, Euripides portrayed men as they were, and he painted men as they ought to be There are many English translations See T B L Webster, *An Introduction to Sophocles* (1936), W N Bates, *Sophocles, Poet and Dramatist* (1940), C M Bowra, *Sophoclean Tragedy* (1945)

Sophonias (sŏfŭnī'ŭs), Greek form of ZEPHANIAH

Sophonisba (sōfunĭz'bŭ, sŏ–), 3d cent B C , daughter of HASDRUBAL, brother of Hannibal She was the Carthaginian wife of Syphax of Numidia, who after the marriage fought for Carthage When he was defeated (203 B C) by Masinissa and the Romans, Sophonisba took poison The old story—which is probably at least partially true—says that she was betrothed to Masinissa before her father married her to Syphax out of policy When Syphax was slain, Masinissa married her, and to thwart the demand of the Romans to have her grace a triumph he sent her a bowl of poison to drink This tragedy was the subject of plays by Alfieri, Trissino, Corneille, Voltaire, and others The play by James Thomson contains the line "O, Sophonisba! Sophonisba, O!"—much ridiculed by Henry Fielding

Sopot, Poland see ZOPPOT

soprano (suprä'nō, sūprä'nō) [Ital , =above], female voice of highest pitch The three basic types of solo soprano are coloratura, lyric, and dramatic The voices of boys who have not reached puberty generally have the range of a soprano and replace women's voices in some church choirs In the *castrato* of the 18th cent (see EUNUCH) the quality of a boy's voice combined with the lung power of a man made for vocal powers of great brilliance The highest-pitched member of various families of instruments is designated soprano, e g , soprano saxophone

Sopron (shō'prōn), Ger *Ödenburg* (ū'dunbŏŏrk), city (pop 42,255), W Hungary, SSE of Vienna One of the oldest cultural centers in Hungary, it has three 13th-century churches, a 15th-century palace, and a university Part of the BURGENLAND, it was transferred to Austria after the First World War but was returned to Hungary after a plebiscite (1921) Franz Liszt was born at near-by Doborjan

Sopwith, Thomas Octave Murdoch, 1888–, English aviator and aircraft manufacturer In 1910 he won the Baron de Forest Prize for flying from England to the Continent He founded the Sopwith Aviation Company

Sorabji, Cornelia (sōrab'jē), c 1870–, Indian lawyer and author, grad Somerville College, Oxford She took a law degree at Oxford in 1893 She served as legal adviser to the Court of Wards at Bengal, in Bihar and Orissa, and at Assam, later (1904–23) she was consulting adviser—an office created through her efforts—and acted in the interests of women property holders who lived in purdah In 1923 she was called to the English bar, but continued to practice in India Her writings include *Love and Life behind the Purdah* (1902), *Sun Babies* (1904, 2d series, 1909), *Indian Tales of the Great Ones* (1916), *Purdahnashin* (1917), *Therefore* (1924), and *India Recalled* (1936)

Soracte (sōrăk'tē), isolated mountain, 2,267 ft high central Italy, 25 mi N of Rome It was celebrated in the poetry of Vergil and Horace In ancient times it was crowned with a temple of Apollo, there is now a convent near the summit

Soranus (surā'nŭs), fl 1st–2d cent , Greek physician, probably b Ephesus He is believed to have practiced in Alexandria and in Rome and was an authority on obstetrics, gynecology, and pediatrics His treatise *On Midwifery and the Diseases of Women* (Eng tr , 1882) remained an influential work until the 16th cent

Sorata, peak, Bolivia see ILLAMPÚ

Sorbonne (sôrbŏn'), first endowed college in the Univ of Paris, founded by Robert de Sorbon (1201–74), chaplain of Louis IX, and opened c 1257 for the purpose of providing quarters for theology students who were not friars Gaining academic and theological distinction in the late Middle Ages and early modern times, the Sorbonne took preponderance over its early mendicant college rivals, and Sorbonne doctors were frequently called upon to render opinions on important ecclesiastical and theological issues In the 16th cent , because it became the place for the deliberations of the faculty of theology, this faculty came to be called the Sorbonne, although all its members did not belong to this college After the suppression (1792) in the French Revolution the Univ of Paris took over (1808) the Sorbonne grounds, so that for the years 1808–85 the Sorbonne existed as the seat of the three faculties of theology and of the Académie de Paris In 1885 a general council of faculties, presided over by the rector of the university, was created Sorbonne is frequently used as a name for the Univ of Paris The Univ of Paris was again closed in 1940 by the Germans and was not reopened until 1945

Sorbs: see WENDS

sorcery: see MAGIC, SPELL; WITCHCRAFT.

Sordello (sôrdĕl'lō), 13th cent , Italian troubadour, b Provence Some critics believe him to be the same as Sordello da Goito, podesta of Mantua Which Sordello is meant (if they are not identical) by the reference of Dante (*Purgatorio*, VI, 73) is not known Sordello wrote Provencal verse, his most famous poem being a lament on the death of his patron, Blacas Sordello is the title and subject of a long poem by Browning

Sorek (sō'rĕk), valley, SW Palestine, the home of Delilah It is often identified with the Wadi es-Surar, which enters the sea NW of Jamnia Judges 16 4

Sorel, Agnès (ănyĕs' sôrĕl'), c 1422–1450, mistress (1444–50) of Charles VII of France, the first mistress of a French king to be officially recognized as such Noted for her beauty and wit, she had considerable influence over the king and his policies The rumor that she died of poison was invented by the enemies of Jacques COEUR

Sorel, Albert (ălbĕr'), 1842–1906, French historian He held posts in the foreign ministry and in the diplomatic service and later taught at the École libre des Sciences politiques at Paris One of the greatest authorities on diplomatic history, Sorel wrote the monumental study, *L'Europe et la Révolution française* (8 vols , 1895–1904), in which he analyzed international relations in the French Revolution and the Napoleonic era The introductory section was translated as *Europe under the Old Regime* (1947) Other translated works include *The Eastern Question in the Eighteenth Century* (Eng tr , 1898) and biographies of Montesquieu (Eng tr , 1888) and Mme de Staël (Eng tr , 1891)

Sorel, Georges (zhôrzh'), 1847–1922, French social philosopher He was an engineer by profession but, becoming interested in social problems, he eventually resigned his position and devoted himself to study and writing He found in the political and social life of democracy the triumph of mediocrity and espoused various forms of socialism, chiefly SYNDICALISM Concerned like Proudhon, with the moral and cultural development of the people, he looked further to the creation of a revolutionary elite His views had some influence on Mussolini and the Fascists *Reflections on Violence* (1908, Eng tr , 1914) is his best-known book

Sorel (sôrĕl'), city (pop 12,251), S Que , on the St Lawrence at the mouth of the Richelieu, between Montreal and Trois Rivières It is a grain-shipping center, with shipbuilding, iron and steel foundries, and tanneries, and is a market for fruit and butter from the surrounding area The site of the city was visited (1609) by Champlain Fort Richelieu was built here in 1665 and in 1670 a French mission was established The growth of the city began after the arrival (1783) of United Empire Loyalists It is headquarters of the St Lawrence dredging fleet

sore throat. Inflammation of the structures in the upper part of the respiratory tract or throat, including the tonsils, is usually caused by local infection, as in colds, it also occurs at the onset of diseases such as SCARLET FEVER There is irritation and difficulty in swallowing, and there may be fever The treatment of an acute attack consists of rest in bed, hot irrigations of the throat, and application of ice bags to the outside QUINSY sore throat is caused by abscess and requires surgical treatment Some sore throats, caused by irritants such as smoke and gases, cause a chronic cough

Sorge, Reinhard Johannes (rīn'härt yōhä'nŭs sôr'gŭ), 1892–1916, German dramatist, b Switzerland He was killed in the First World War His play *Der Bettler* [the beggar] (1912) was the first example of expressionism After his conversion to Roman Catholicism he wrote several mysteries His verse was posthumously published

sorghum, tall, coarse annual grass (*Sorghum vulgare, Andropogon sorghum,* or *Holcus sorghum*), widely cultivated in many varieties and resembling corn, though the grain is in a panicle rather than in an ear as in corn Sorghum is native to tropical regions of the Old World, where it has been cultivated since early times As a warm-climate plant with drought-resistant qualities, sorghum is well adapted for cultivation in parts of the W United States It will grow on a variety of soils Most sorghums are classed either as sweet or saccharine sorghum or sorgo or as nonsaccharine or grain sorghum The sweet sorghums contain a juice extracted for use as a MOLASSES and called sorghum, they are also used for forage The grain sorghum varieties include milo (called also milo maize), kaffir (called also kaffir corn), durra, feterita, and hegari, they are cultivated for forage and fodder and for the grain for livestock feed Other sorghums are the Sudan grass, used for hay and forage and as a soil binder, and the broomcorn, with grains borne in long-stalked panicles which are made into brooms Some of the sorghums under certain conditions may cause poisoning of stock by HYDROCYANIC ACID JOHNSON GRASS belongs to the genus *Sorghum* See publications of the U S Dept of Agriculture

Soria (sōr'yä), city (pop 12,470), capital of Soria prov , E central Spain, in Old Castile, on the Duero river The Church of San Pedro and the palace of the counts of Gómara are the chief landmarks Near by are the ruins of NUMANTIA

Sorin, Savely (sä'vē'lē sō'rĭn), 1883–, Russian portrait painter, living in England He won the Prix de Rome He is represented in the Luxembourg Museum, Paris, by his *Pavlova* His sitters include the duchess of York, Chaliapin, and Barbara Hutton

Sorocaba (sōrōōkh'bù), city (pop 48,111), SE São Paulo state, Brazil, 50 mi W of São Paulo city It is a textile-milling center and has important trade in cattle, cotton, citrus fruit, and coffee

Sorokin, Pitirim Alexandrovitch (sō'rō'kĭn), 1889–, Russian-American historian and sociologist He studied (1910–14) at the Univ of St Petersburg and taught sociology in Russia after 1914 A Socialist, he was imprisoned three times Sorokin was a member of the Kerensky government, serving (1917) as secretary to the prime minister He was later (1922) condemned to death by the Bolshevik government and then banished He emigrated (1923) to the United States and was naturalized in 1930 Sorokin was professor of sociology at the Univ of Minnesota (1924–30) and at Harvard (after 1930) He wrote several books expounding new theories of social process Among his works are *Sociology of Revolution* (1925), *Social and Cultural Dynamics* (4 vols, 1937–41), *Crisis of Our Age* (1941), *Man and Society in Calamity* (1942), and *Russia and the United States* (1944) See his autobiography, *Leaves from a Russian Diary—and Thirty Years After* (enl ed, 1950)

Sorolla y Bastida, Joaquín (hwäkēn' sōrō'lya ē bästä'dha), 1863–1923, Spanish painter, b Valencia He is noted for his large figure compositions in full, glowing sunlight, painted directly in strong color and in a bold, fluent style He achieved early recognition in Madrid and won the Grand Prix at the Paris Salon in 1900 Subsequently he exhibited in Paris, London, and New York He painted portraits of the Spanish royal family, but is best known for such works as *Beaching the Boat* and *After the Bath* (both Hispanic Society, New York) and *The Summers* (Metropolitan Mus) He is represented in many important museums, the City Art Museum of St Louis being the first in this country to acquire (1892) one of his paintings See Hispanic Society of America, *Eight Essays on Sorolla y Bastida* (1909)

sorority see FRATERNITY

sorrel, name for several plants, particularly species of DOCK and OXALIS

Sorrento (surĕn'tō, Ital sōr-rĕn'tō), town (pop 7,031), Campania, S Italy It stands on high cliffs on the south shore of the Bay of Naples A popular resort, it is also celebrated for its wine Tasso was born here

Sor-Trondelag, Nor *Sør-Trøndelag* (sûr'-trûn'du-lg), county (7,267 sq mi, pop 193,912), central Norway. TRONDHEIM is the county seat There are important copper mines at Roros

S O S, international distress code signal Expressed in the dot and dash code, the signal is ··· − − − ··· (three dots, three dashes, three dots) This combination of letters was selected by the International Radiotelegraphic Convention at London in 1912 The letters (S O S) do not refer to any words, but were selected because they are easy to transmit For airplanes the distress code, by radio telephony, is MAY DAY, which corresponds to the French "m'aider" The signal P A N, not followed by a message, also has the same meaning

Sosen (sōsän'), 1747–1821, Japanese painter He is noted for his rendering of the fur and characteristic movements of monkeys, and the name given him—Sosen—literally means "monkey saint" Deriving his knowledge directly from nature, he painted the cat, dog, fox, deer, rat, birds, and fowl and sometimes figures and landscapes He is represented in many museum and private collections, including the Freer Gallery of Art, Washington, D C, and the Museum of Fine Arts, Boston He is also called Mori, Morikata, and Shikuga

Sosigenes (sōsĭ'junēz), fl 1st cent B C, Greek astronomer and mathematician, probably of Alexandria He is noted as the adviser of Julius Caesar in the reform of the CALENDAR He wrote treatises on astronomy, including a work on revolving spheres

Sosipater (sōsĭ'putur), Christian at Corinth Rom 16 21 He is possibly the same as SOPATER

Sosnowiec (sôsnô'vyĕts), Ger *Sosnowitz* (sôsnô'-vĭts), city (pop 77,853), Silesia prov, SW Poland It is a center of the KATOWICE mining and industrial region Sosnowiec passed to Prussia (1795) and the Russian Empire (1815) It reverted to Poland in 1919

Sosthenes (sŏs'thunēz) [Gr, =preserver of strength] **1** Prominent Jew at Corinth, beaten by the crowd when Gallio refused to try Paul for heresy Acts 18 17 **2** Early Christian 1 Cor 1 1.

Sotai (sō'tāī, sōtā'ī) [Heb, =one who turns aside], family returned from exile Ezra 2 55, Neh 7 57.

Sothern, Edward Askew (sŭ'dhûrn), 1826–81, English actor He came to the United States in 1852 and, under the name Douglas Stewart, made a debut at Boston in *The Heir at Law* by Colman the younger In 1854, using his own name, he joined the company of James W. Wallack and in 1857 played Armand Duval in *Camille* to enthusiastic audiences In 1858 at the Laura Keene's Theater, New York, he rose to fame as Lord Dundreary in Tom Taylor's *Our American Cousin*, making the part the central figure in the play, he repeated its American success in London in 1861 Other notable roles were in *David Garrick* (1864) and as Sam Slingsby in Oxenford's *Brother Sam* (1865)

Sothern, Edward Hugh, 1859–1933, American actor, b New Orleans The son of Edward A Sothern, he appeared first in his father's company in New York in 1879 He worked with John McCullough in London and in 1886 joined Daniel Frohman's Lyceum company, remaining for 13 years During this time he appeared in *Lord Chumley* and *The Prisoner of Zenda* and in 1901 appeared in another of his famous roles, *If I Were King* In 1900 he played in *Hamlet*, thereafter he was seen almost exclusively in Shakspere, co-starring with Julia Marlowe in 1904 in the first of a long series of Shaksperian revivals They were married in 1911 Sothern and Marlowe, through the following years, were the greatest exponents of Shaksperian drama in the United States

Soto, Hernando de see DE SOTO, HERNANDO

Soubise, Benjamin de Rohan, seigneur de (bäzhä-mē' du rōä' sānyûr' du sōōbēz'), 1583–1642, French Protestant general He fought under Maurice of Nassau in the Netherlands and subsequently shared the leadership of the Huguenots with his brother Henri de ROHAN He directed the defense of La Rochelle (1627–28) and after the city's fall retired to England

Soubise, Charles de Rohan, prince de (sharl' dù rōä' prĕs' du sōōbēz'), 1715–87, marshal of France Having obtained a command through the favor of Mme de Pompadour, he was defeated (1757) at ROSSBACH in the Seven Years War His Paris house, the Hôtel de Soubise, houses part of the French national archives

Soudan see SUDAN, FRENCH

Souderton (sou'durtun), industrial borough (pop 4,036), SE Pa, N of Philadelphia settled 1860, inc 1887 Textiles, furniture, and shoes are manufactured here

Soufflot, Jacques Germain (zhäk' zhĕrmĕ' sōōflō'), 1713–80, French architect, chiefly noted as the designer of the Panthéon in Paris He won the commission in an open competition Begun in 1764, the building contains a remarkable masonry dome, and because of its classical features it is considered the forerunner of the eclecticism which prevailed in the architecture of the 19th cent The dome was uncompleted at Soufflot's death and the work was continued by others and completed by his pupil J P Rondelet Soufflot's other works include the theater and the Hôtel-Dieu, Lyons, and the École de Droit, Paris

Soufrière (sōōfrĭĕr'), dormant volcano, 4,869 ft high, on Guadeloupe, French West Indies Called also La Grande Soufrière, it is the highest mountain of the West Indies

Soufrière, volcano, 3,145 ft high, on St Lucia, British West Indies, highest point on the island

Soufrière, volcano, 4,048 ft high, on St Vincent, British West Indies On May 7, 1902, just before the great eruption of Pelée on Martinique, Soufrière erupted, laying waste a third of St Vincent, killing more than 1,000 people, and scattering a heavy fall of ash on Barbados, c 75 mi to the east

soul, the vital principle of a body, conceived as existing with it The origin and end of the soul have been as much disputed as its nature The religions and philosophies of all time have been occupied with the soul, because they have always for one of their first problems the nature of existence and of living Some religions, specifically types of animatism and spiritism, are chiefly concerned with the soul Pantheism denies the individuation of human souls, and materialism declares the soul nonexistent One of the most widely accepted concepts in the world is IMMORTALITY, and this almost always postulates the existence of a soul to live apart from the body after death In Christianity the soul is all important Christian definitions vary greatly, but one widely adopted concept deems the soul to be the thinking life of man The soul often comes, then, to be set over against the body, in a kind of hostility, this idea of body vs soul is conventional in language and in thought Scholasticism (specifically St Thomas Aquinas) studied the soul in great elaboration, and the scholastic definition of the soul as "substantial form of the body" obviates many philosophical difficulties The nature of man is involved in the whole consideration of the soul, hence the term rational soul for the distinctive soul of man The soul of beasts is called the animal soul, and that of plants the vegetative soul The scholastics considered the rational soul alone as immortal and capable of union with God The origin of the soul was a burning question at several points in Christian history. Two points of view may be distinguished creationism, that God creates each individual soul in a special act of creation (at the time of conception according to some or of birth according to others), and traducianism, that the parents in begetting the child beget the soul too The creationist principle has been generally triumphant in Christianity. No distinction between the rational soul and others is made in many systems, such a distinction is quite impossible in most forms of REINCARNATION and of TRANSMIGRATION OF SOULS The soul of humanity when conceived as being one is called the world soul or anima mundi Psychology receives its name from being the "science of the soul"

Soulé, Pierre (pyĕr' sōōlā'), 1801–70, American political leader and diplomat, b Castillon, France A lawyer, he was arrested and imprisoned for republican activities, but escaped and came to the United States in 1825 He ultimately became a prominent citizen of New Orleans and a power in the Democratic party in Louisiana Soulé served in the U S Senate in 1847 and from 1849 to 1853, when he resigned to become minister to Spain Instructed to try to secure Cuba from Spain, he overreached himself, especially in drawing up, with James Buchanan and John Y Mason, the notorious OSTEND MANIFESTO After its repudiation by the United States, he resigned (Dec, 1854) In the Civil War, after New Orleans fell (April, 1862) to the Union, Soulé was captured and imprisoned briefly Released on parole, he escaped to Havana, ran the blockade to New Orleans and served in the Confederate government at Richmond in 1863–64 See A A Ettinger, *The Mission to Spain of Pierre Soulé, 1853–55* (1932)

Soule (sōōl), small historic region, SW France, in the Basque country and in the Pyrenees, bordering on Spain Wedged between French Navarre and Béarn, it is comprised in Basses-Pyrénées dept

Souli, Greece see SULI

Soulouque, Faustin Élie (fōstĕ' ālē' sōōlōōk'), c 1785–1867, Negro emperor of Haiti (1849–59) An illiterate ex-slave, he became president in 1847 and then declared himself emperor as Faustin I His reign was corrupt, sanguinary, and terror-ridden, his court was a caricature of Napoleon's Although he failed in his attempt to conquer Santo Domingo, he held Haiti under stern control until overthrown by a revolution led by GEFFRARD

Soult, Nicolas Jean de Dieu (nēkôlä' zhäⁿ' du dyu' sōōlt'), 1769–1851, marshal of France Having played a conspicuous part in the Napoleonic War of the Second Coalition (1804–7), he was created duke of Dalmatia (1808), and from 1808 to 1813 held command in the PENINSULAR WAR Louis XVIII made him minister of war in 1814, but he joined Napoleon in the Hundred Days (1815) Soult returned from exile in Russia in 1820, was restored to his rank, and was later made a peer by Charles X Under Louis Philippe he served as minister of war (1830–34) and nominally headed (1840–44) the conservative government in which Guizot was the chief figure In 1848 he changed color once more and became a republican

Sound, the see ORESUND

sound When a body vibrates, i e, moves to and fro within a limited distance, in air or in some other medium, it sets up a form of vibratory motion (see VIBRATION) which radiates outward from it in straight lines through the molecules of the medium The effect these waves of vibration produce upon the ear covers the common definition of sound From the point of view of physics, sound is considered to be the waves of vibratory motion themselves, whether or not they are heard by the human ear When a violin string vibrates upon being bowed or plucked, its movement in one direction pushes the molecules of the air before it, crowding them together in its path When it moves back again past its original position and on to the other side, it leaves behind it a nearly empty space, i e, a space with relatively few molecules in it In the meantime, however, the molecules which were at first crowded together have transmitted some of their energy of motion to other molecules still farther on and are returning to fill again the space originally occupied and now left empty by the retreating violin string In other words, the vibratory motion set up by the violin string causes alternately in a given space a crowding together of the molecules of air, i e, a condensation, and a thinning out of the molecules, i e, a rarefaction Taken together a condensation and a rarefaction make up a sound WAVE, such a wave of vibratory motion being called longitudinal (as distinguished from the transverse wave of light) because the vibratory motion is forward and backward along the direction that the wave is following A sound wave is usually represented graphically by a wavy, horizontal line, the upper part of the wave (the crest) indicating a condensation and the lower part (the trough) indicating a rarefaction This graph, however, is merely a representation and is not an actual picture of a wave The length of a sound wave, or the wave length, is measured as the distance from one point of greatest condensation to the next following it or from any point on one wave to the corresponding point on the next in a train of waves The wave length depends upon the velocity of sound in a given medium at a given temperature and upon the frequency of vibration, i e., the number of vibrations per second of the body causing the sound. Sounds

are generally considered audible to the human ear if their frequency lies between 20 vibrations and 20,000 vibrations per second, but the range varies considerably with the individual The wave length of a sound can be determined by dividing the numerical value for the velocity of sound in the given medium at the given temperature by the frequency of vibration For example, if the velocity of sound in air is 1,130 ft per second and the frequency of vibration is 256, then the wave length is approximately 4 4 ft The velocity of sound is not constant, however, for it varies in different media and in the same medium at different temperatures For example, in air at 0°C it is approximately 1,089 ft per second, but at 20°C it is increased to about 1,130 ft per second, or an increase of about 2 ft per second for every centigrade degree rise in temperature Sound travels more slowly in gases than in liquids, and more slowly in liquids than in solids Since the ability to conduct sound is dependent on the density of the medium, solids are better conductors than liquids, liquids are better conductors than gases Sound will not pass through a vacuum at all Sound waves can be reflected, refracted (or bent), and absorbed as light waves can be The reflection of sound waves can result in an ECHO—an important factor in the ACOUSTICS of theaters and auditoriums A sound wave can be reinforced with waves from a body having the same frequency of vibration, but the combination of waves of different frequencies of vibration may produce so-called "beats" or pulsations or may result in other forms of INTERFERENCE Musical sounds are distinguished from noises in that they are composed of regular, uniform vibrations, while noises are irregular and disordered vibrations One musical tone is distinguished from another on the basis of pitch, intensity or loudness, and quality or timbre Pitch describes how high or low a tone is and depends upon the rapidity with which a sounding body vibrates, i e , upon the frequency of vibration The higher the frequency of vibration, the higher is the tone, the pitch of a siren gets higher and higher as the frequency of vibration increases The difference in the pitch of a sound as a source approaches or moves away from an observer is described as the DOPPLER EFFECT The intensity or loudness of a sound depends upon the extent to which the sounding body vibrates, i e , the amplitude of vibration A sound is louder as the amplitude of vibration is greater, and the intensity decreases as the distance from the source increases The sound waves given off by different vibrating bodies differ in quality or timbre A note from a saxophone, for instance, differs from a note of the same pitch and intensity produced by a violin or a xylophone, similarly vibrating reeds, columns of air, and strings all differ Quality is dependent on the number of overtones produced by the vibrating body (see HARMONIC), and this number and their relative intensity depend upon the nature of the vibrating body

sounding, determination of water depth as practiced in navigation and piloting A device employed for this purpose since earliest times and still much used is the lead A block of the metal is hollowed at one end and is "armed" by placing wax in the cavity When the lead is lowered to the water's bottom by a line, particles of whatever exists there adhere to the wax Hand leads of 7 to 14 lb suffice for shallow waters, and their lines are generally marked to 25 fathoms (150 ft), while deep-sea leads weigh from 40 to 100 lb and use lines marked to 1,000 fathoms or less The line winds about a mechanically operated reel, and its length registers on a meter connected to the line More modern methods are employed to avoid slowing or halting the vessel One of them employs a pressure-recording device attached to the lead The highest pressure corresponds to the greatest depth, and the line need not be perpendicular or nearly perpendicular as it must be in lead sounding The sonic depth recorder is an electronic device which operates on the measurement of the velocity of sound through water A signal is sent down from an instrument attached to the ship's keel, another records the moment of arrival of its echo after the sound has traveled to the bottom and been reflected back The interval of time is the means of depth determination A fathometer is a completely automatic device located in the pilot house to give continuous depth readings on a dial

sound recording, process of converting the acoustic energy of sound waves into electromechanical energy for inscription on various substances In 1876 Thomas A Edison made the first mechanical system capable of recording and reproducing sound, but the greatest advances were made after the adoption in 1925 of electromechanical systems utilizing vacuum-tube amplifiers In recording, a microphone converts sound-wave frequencies into alternating electrical voltages which are then amplified and sent on to actuate the recording mechanism In disk recording the voltages cause disturbances in a magnetic field, vibrating a stylus mounted in that field The stylus cuts into a soft disk revolving beneath it, the cuts (groovings) varying with the amplitude and frequency of the actuating voltage The soft disk serves as the model or mold for making a metal stamp with which more durable disks are impressed In reproduction the disk vibrates a needle which in turn vibrates a diaphragm, the vibrations of this diaphragm produce a voltage which is, in turn, passed on to a loudspeaker In magnetic wire and tape systems disturbances in a magnetic field cause varying realignments of magnetic particles in the recording medium passing through the field In reproduction the tape or wire is played back through the field, the realignments redisturbing it and producing a voltage Sound recordings for use with moving pictures are commonly made on film The process utilizes a photosensitive strip of moving film (usually at the edge of the standard photographic film) which is exposed to a beam of light focused on it through a narrow slit Here microphone voltages interpret the acoustic characteristics of sound into photo characteristics by controlling either the intensity of the light beam or (by actuating a shutter mechanism) the time and area of film exposure In reproduction a beam of constant intensity is focused on a photoelectric cell (or phototube) When the developed film is passed between the beam and the cell the variations of film exposure vary the amount of light passed through to the cell, causing a fluctuation in its current output which activates a loudspeaker

soup, liquid food, made usually by boiling meat or vegetables or both in water, with seasoning Many soups are peculiar to certain localities, as the *pot-au-feu* of France, the borsch of Russia, the mutton broth of Scotland, and the chowders of various seacoast places Broth is a thin soup of meat or shellfish liquor, sometimes with cereals added, as barley broth Clear soups, made from a rich meat stock, include consommé (beef, veal, or fowl) and bouillon (beef) A clear soup with strips of vegetables added is a julienne soup Thick soups include vegetable soups made with stock and vegetables (as in *pot-au-feu*) or with milk and flour (cream soups) or by cooking fish and vegetables in water as for a CHOWDER A purée differs from a cream soup by being thickened with pulp, usually of a vegetable, sometimes, particularly when made of fish, it is called a bisque Gumbo is either vegetable or meat soup thickened with okra Stock, the basis of a great many soups is made by placing lean meat, bones, fowl, fish, or vegetables in cold water, simmering in a covered pot, skimming, straining, and removing the fat Any meat except pork may be used Many low-priced cuts are rich in juices and extractives Bones supply marrow and gelatin The flesh of old animals is much richer in marrow and gelatin than that of young ones Stock is either white or brown, for white, chickens, turkeys, and veal are used, for brown, beef and beef bones or beef combined with veal Jellied soups, served as appetizers in hot weather, may be made from stock or from strained vegetable juices with the addition of gelatin Soups vary widely as to dietary value The clear, delicately seasoned ones are important as appetizers and stimulants, while the more substantial ones, like chowders, form, with the addition of bread, a one-dish meal

sour gum see BLACK GUM

Souris, 1 (sōō'rĭs) Town (pop 1,517), SW Man , on the Souris river and SW of Brandon It has railroad shops, foundries, grain elevators, and dairying **2** (sōō'ĭ-rĭs) Town (pop 1,114), on NE Prince Edward Island, on the Gulf of St Lawrence and ENE of Charlottetown, settled 1748 by Acadians It is a fishing port

Souris (sōō'rĭs), river, c 435 mi long, rising in S Saskatchewan, making a long loop into North Dakota (passing Minot), and entering the Assiniboine in SW Manitoba

Sour Lake, city (pop 1,504), E Texas, NW of Beaumont, in an oil area, settled 1836, inc 1939

Sousa, John Philip (sōō'zu,-sə), 1854–1932, American bandmaster and composer, b Washington, D C He studied violin and harmony in his native city and learned band instruments as an apprentice to the U S Marine Band, of which his father was a member He began early to conduct theater orchestras, and he played in Offenbach's orchestra in its American tour (1876–77) He was leader of the U S Marine Band from 1880 until 1892, when he formed his own band With great success he toured the United States, Canada, and, beginning in 1900, Europe In the season 1910–11 he and his band toured the world He composed about 100 marches, including *Semper fidelis* (1882), *The Washington Post March* (1889), *The Stars and Stripes Forever* (1897), and *Hands across the Sea* (1899), comic operas, such as *El capitan* (1896), *The Bride Elect* (1898), and *The Free Lance* (1906), and some orchestral music In the development of the concert band he was the successor of Gilmore and did much to improve the instrumentation and quality of band music See his autobiography, *Marching Along* (1928)

Sousa, Martim Afonso de (märtēn' afō'zō du sō'zu), 1500?–1571?, Portuguese colonial administrator An admiral, he was commissioned in 1530 to drive the French corsairs from the Brazilian coasts and to establish colonies He succeeded in clearing the coasts, founded the colony of São Vicente, established sugar-cane growing and introduced other crops and cattle He was the true founder of Brazil, for only with settlement did the colony properly begin His work was continued by Tomé de Sousa, the Jesuit Manuel de Nobrega, and Mem de Sá

Sousse (sōōs') or **Susa** (sōō'sə) city (pop 36,566), E Tunisia, a port on the Mediterranean Sea It exports cereals, olive oil, and phosphates, and it is a fishing port Founded (about the 9th cent B C) by Phoenicians, it became subject to Carthage Under Rome it was a busy port of NW Africa It was destroyed (434) by Vandals and rebuilt by Justinian Ancient remains include extensive early Christian catacombs

South, Sir James, 1785–1867, English astronomer His interest in astronomy led him to erect (1816) an observatory in London, which he later moved to Kensington, and finally (1835) to Passy, near Paris With Sir John F W Herschel he made observations and measurements of hundreds of double stars and discovered many new ones South was the founder (1829) and the first president of the Astronomical Society and was knighted in 1830

South, Robert, 1634–1716, English clergyman and preacher of great distinction He was ordained in 1658 After the Restoration he was appointed public orator (1660) at Oxford Univ , a prebendary (1663) of Westminster, a canon (1670) of Christ Church, Oxford, and rector (1678) of Islip In his vigorous defense of the Church of England, he firmly opposed both dissenters and Roman Catholics In 1693 he entered into a controversy with William Sherlock, publishing *Animadversions upon Dr Sherlock's Book Entitled a Vindication of the Holy and Ever-Blessed Trinity* (1693) The king put an end to the disputation that followed South is chiefly remembered for his pithy, vigorous sermons, his *Sermons Preached upon Several Occasions* (1679) has passed through a number of editions

South, the, region of the United States embracing all of the southeast and part of the southwest It includes, at the most, 14 states—Maryland, Virginia North Carolina, South Carolina, Georgia Florida, Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Oklahoma, and Texas Traditionally, all states S of the MASON-DIXON LINE and the Ohio river (except West Virginia) make up the South, but to many the region is restricted to the 11 states below the Potomac which comprised the short-lived CONFEDERACY—those named above minus Maryland and Kentucky, border slave states which were held for the Union in the CIVIL WAR, and Oklahoma, which did not become a state until much later Missouri and Delaware were two other border slave states in which the Southern tradition was strong The South has long been a section apart, even though it is not isolated by any formidable natural barriers and is itself divided into many distinctive regions the coastal plains along the Atlantic and the Gulf of Mexico, the piedmont, the ridges, valleys, and high mountains bordering the piedmont, especially the Great Smoky Mts in North Carolina and Tennessee, areas of bluegrass, black-soiled prairies, and clay hills west of the mountains, bluffs, flood plains, bayous, and delta lands along the Mississippi, and beyond that great river, more plains, the Ozark Mts , and large stretches of arid lands The climate, however, is one unifying factor Over the year the region has greater humidity, more sunshine, and less wind than other sections Winters are neither long nor very cold, and the rainfall is heavy at certain periods The long, hot growing season (nine months at its peak along the Gulf) and the fertile soil (much of it overworked or ruined by erosion) make the South a predominantly agricultural region where such staples as tobacco, cotton, corn, and, to a lesser extent, rice and sugar cane have long flourished The basic agricultural economy determined by the climate and the soil led to the introduction of the NEGRO as a source of cheap labor under the twin institutions of the plantation and of SLAVERY Slavery might well have expired had not the invention of the cotton gin (1793) given it a firmer hold, but even so there would have remained, as there still does, the problem of the Negro The "central theme" in the history of the South- and as Rupert B Vance says, "history, not geography, made the solid South"—is, the historian Ulrich B Phillips concluded "white supremacy," which, until the defeat of the Civil War, was almost completely identified with the perpetuation of slavery Although Southerners had taken care to have their "peculiar institution" protected by the Constitution of the United States, it was not until the period beginning with the MISSOURI COMPROMISE that the South definitely became "a conscious minority" in the nation That event marked the rise of Southern sectionalism, rooted in the political doctrine of STATES' RIGHTS, with John C CALHOUN as its greatest advocate When differences with the North, especially over the issue of the extension of slavery into the federal territories, ultimately appeared insoluble, it was a short step for the South from states' rights to SECESSION (or independence) and to war The Old South died in the war and was buried in the RECONSTRUCTION period that followed Since then the

South has been forced to adjust its standards to those of the victorious North Out of these adjustments, often painful, came the increased industrialization, the almost complete acceptance of Northern ideas of business success, and the conversion to the New England ideal of universal education that distinguish the New South Even the character of local government was changed when the "Bourbons" (conservative Democrats) were turned out in the agrarian revolt of the late 19th cent, somewhat reminiscent of the earlier struggles of the frontier against the aristocratic TIDEWATER The "Bourbons" had long remained in power because they had at least restored "white supremacy" at the end of the hated Reconstruction rule of the Republicans (which made the Democratic solid South of national politics) Under their successors "white supremacy" was even further entrenched through the suffrage provisions of new state constitutions and Jim Crow laws Once he resigned himself to the two essential facts of "white supremacy" —political impotence and social inequality—the Negro was, however, permitted to improve his lot Since the agrarian revolt political and economic life in the South has often been reflected in the activities of various demagogues, at least one of whom, Huey LONG, achieved national stature, as had the latter-day KU KLUX KLAN A happier measure of the South's reintegration with the nation, however, was the wholehearted support the region gave to three national wars From William Byrd (1674–1744) to William Faulkner the South has always had a strong regional literature Its principal subject has been the Civil War, reflected in song from Paul Hamilton Hayne to Allen Tate and novels from Thomas Nelson Page to Margaret Mitchell See *The South in the Building of the Nation* (13 vols , 1909–13), W E Dodd, *The Cotton Kingdom* ("Chronicles of America" series, Vol XXVII, 1919) and *The Old South Struggles for Democracy* (1937), V W Crane, *The Southern Frontier, 1670–1732* (1928), U B Phillips, *Life and Labor in the Old South* (1929), J T Carpenter, *The South as a Conscious Minority, 1789–1861* (1930), Broadus Mitchell and G S Mitchell, *The Industrial Revolution in the South* (1930), W T Couch, *Culture in the South* (1934), R S Cotterill, *The Old South* (1936), H W Odum, *Southern Regions of the United States* (1936), D S Freeman, *The South to Posterity* (1939), Allison Davis, B B Gardner, and M. R. Gardner, *Deep South a Social Anthropological Study of Caste and Class* (1941), Virginius Dabney, *Below the Potomac a Book about the New South* (1942), T J Wertenbaker, *The Old South the Founding of American Civilization* (1942), W B Hesseltine, *The South in American History* (1943, first published as *A History of the South, 1607–1936*, 1936), R B Vance and Nadia Danilevsky, *All These People the Nation's Human Resources in the South* (1945), F M Coulter, *The South during Reconstruction, 1865–1877* (Vol VIII, 1947) and *The Confederate States of America, 1861–1865* (Vol VII, 1950), both in the "History of the South" series, Everett Dick, *The Dixie Frontier* (1948), F B Simkins, *The South, Old and New a History, 1820–1947* (1948), C S Sydnor, *The Development of Southern Sectionalism, 1819–1848* ("History of the South" series, Vol V, 1948), W F Craven, *The Southern Colonies in the Seventeenth Century, 1607–1689* ("History of the South" series, Vol I, 1949), C. South, University of the, called **Sewanee,** at Sewanee, Tenn , on the Cumberland Plateau and E of Winchester, Episcopal, for men, chartered 1858 by Bishop Polk, opened 1868 It has a college of arts and sciences, a theological school, and a military academy The university publishes the *Sewanee Review*, an influential literary magazine

South Africa, Union of, Afrikaans *Unie van Suid Afrika*, country (472,494 sq mi , pop 11,418,349), dominion of the British Commonwealth of Nations The capital is Pretoria The country is on the Atlantic Ocean and the Indian Ocean, it is otherwise bounded by South-West Africa, Bechuanaland, and Southern Rhodesia on the north and by Swaziland and Mozambique on the east Basutoland is an enclave The Union comprises four provinces, Cape of Good Hope (usually called Cape Prov), Natal, Orange Free State, and Transvaal, and it administers SOUTH-WEST AFRICA Parliament meets at Capetown, members (several representing the nonwhite population) must be white persons. Most of the union is a plateau (2,000–5,000 ft high), but there are some mountain ranges, notably the Drakensberg in the east, and the land along the coast (c 1,800 mi long) is low. The climate is mild and dry, and rainfall often must be supplemented by irrigation (largely using the Orange and the Vaal rivers) Maize and sorghum are the main crops, and fruits, sugar, potatoes, peanuts, and tobacco are important Where crops cannot be grown, livestock (especially cattle and sheep) is raised Most of the population farms, but the yield is low, and food must be imported with the foreign exchange gained from the sale of the country's minerals The gold produced (mostly in the WITWATERSRAND) has about four times the value of the remaining mineral production Diamonds (at Kimberley), coal, copper, asbestos, chromium, and manganese are important South Africa's commerce, largely developed by C J RHODES, centers on Johannesburg The country is integrated by an extensive railroad system (c 14,500 mi long). Most of the foreign trade is handled by the ports (all with artificial harbors) of Capetown, Port Elizabeth, East London, and Durban The first European to visit South Africa was the Portuguese Bartholomew Diaz who rounded the Cape of Good Hope in 1488 The cape, about midway on the shipping route to India, was an ideal supply station, and in 1652, at Capetown, the Dutch East India Company established the first permanent white settlement and expelled the native Hottentot and Bushman inhabitants After several earlier invasions, the prosperous colony became British in 1841 To escape foreign rule and the pressure of migration, much of the Boer (Dutch) population migrated from the cape in the 1830s (see TREK) to found the republics of Transvaal, the Orange Free State, and Natal The Boers defeated the Bantu inhabitants (including the ZULU) who were forced into relatively small reservations and forbidden to acquire land outside Great Britain annexed Natal in 1843, but the other republics were allowed independence until diamonds were discovered (1867) in the Orange Free State and gold was discovered (1886) in Transvaal The influx of prospectors, mainly British, alarmed the Boer governments, which undertook steps to repress the *Uitlanders* [foreigners] The hostility exploded (1899) in the SOUTH AFRICAN WAR British victory was followed in 1910 by the establishment of the Union of South Africa The position of the Boer population was recognized by continuing the Roman-Dutch law (common law of Holland) and by making Afrikaans an official language along with English The antipathy of the Boer and British elements was reflected in South Africa's politics Two main parties developed, the Unionist or United South African party (headed by J C SMUTS, an outstanding advocate of cooperation between the two national strains) and the Nationalists, who espoused Boer supremacy and at times advocated secession from the British Commonwealth The Nationalists vainly opposed South Africa's entry into the Second World War, with Smuts as premier the country contributed its full resources to the war After the war race relations became a major issue, and in 1946 India ended diplomatic relations because of the treatment of the Indian minority (c 280,000) In the elections of 1948, the Nationalists, headed by Daniel Malan, and allied groups, won a parliamentary majority (while losing the popular vote), apparently because they promised further to restrict the liberty of the nonwhite population (9,045,659) which includes 7,831,915 Negroes and 928,484 "colored" (i e , part-white) persons There were indications, however, that the nonwhite peoples, kept in poverty and ignorance and subject to continual police surveillance, were becoming increasingly restive See Sir George Cory, *Rise of South Africa* (5 vols., 1910–30), A W Wells, *South Africa* (1940), Sarah Millin, *South Africa* (1941), E A Walker, *History of South Africa* (2d ed , 1949)

South African literature. Until the late 1940s there was little encouragement to English-speaking South Africans to write and publish Afrikaans, a Dutch dialect, had been officially recognized only in 1925 and was for the next 20 years the prevailing literary language of an acutely nationalistic country The availability, through representatives of English publishers in South Africa, of the entire body of English-language literature retarded not only the development of English language writing but caused a great deal of the Afrikaans literary energy to be expended in translations of English classics The lack of South African publishing houses for English books caused young writers to emigrate and publish either in England or America The establishment, in 1948, of a local publishing firm devoted entirely to books in English began a new literary era The agreement discussed in 1950 on reciprocal royalties between the United States and South Africa is another step in the encouragement of African literature in English Several South African authors have, however, already made their names famous by publishing abroad Best-known local novelists are Olive Schreiner, author of *The Story of an African Farm* (1883), Sarah G. Millin, whose major work is *God's Stepchildren* (1924), Alan Paton, whose novel *Cry, the Beloved Country* (1948) was widely acclaimed in America, and Elizabeth Webster, who won an English prize for *Ceremony of Innocence* (1949). Although English by birth, the novelist Rider Haggard is chiefly remembered for his works set in South Africa. Roy Campbell is known as a South African poet, though he lived in England after 1926 Letters by Lady Anne Barnard (1750–1825) and Lady Duff Gordon (1821–69) are an excellent commentary on South African life A family chronicle which at the same time chronicles the history of the country is *In God's Good Time* (1949) by Herbert Watkins-Pitchford In *Face to Face* (1949), by Nadine Gordimer, the South African short story is represented

South African Republic see TRANSVAAL

South African War or **Boer War,** 1899–1902, war of the South African Republic (Transvaal) and the Orange Free State against Great Britain Beginning with the acquisition in 1814 of the Dutch colony at the Cape of Good Hope, Great Britain gradually increased its territorial holdings in South Africa and by 1894 held, in addition, Natal, Basutoland, Swaziland, and Rhodesia The Boers (Dutch), who resented British advance into these territories, had long felt strong hostility to Great Britain This was especially marked in the Transvaal (headed by the strongly anti-British S. J P Kruger) which had actually been annexed (1879–84) to Great Britain The antipathy was inflamed after the discovery (1886) of gold in the Witwatersrand brought a great influx of prospectors (mainly British) into the Transvaal The Boer government denied these *Uitlanders* [foreigners] citizenship and taxed them heavily, despite British objections. In 1895 the Jameson raid (see JAMESON, SIR LEANDER STARR), which Kruger interpreted as an officially sponsored plot to seize his country, aggravated the situation, and in 1896 the Transvaal and the Orange Free State formed a military alliance to protect their independence The British, after the appointment (1897) of Sir Alfred Milner as governor of the South African territories, determined upon a showdown in defense of what they considered their commercial rights Troops were dispatched from England, and when their withdrawal was refused, the Transvaal and the Orange Free State declared war (Oct 12, 1899) The well-equipped Boer forces were larger than those immediately available to the British, and they scored impressive victories in the areas adjacent to the Boer territories In the Cape Colony, Mafeking was captured and Kimberley besieged, and in Natal, Ladysmith was placed under siege Additional troops were sent by the British, and Sir Redvers Buller was placed in command His failure to dislodge the Boers led to the appointment of F S Roberts as commander in chief, with Lord Kitchener as chief of staff They landed in 1900 with heavy reinforcements and soon won victories Kimberley and Ladysmith were relieved, and Gen P A Cronje was forced to surrender Roberts advanced into the Orange Free State, capturing the capital, Bloemfontein, in March and investing all its territory by May In May, Mafeking was relieved and the Transvaal invaded Johannesburg fell in May and Pretoria in June The Boer states were formally annexed, and Kruger, a fugitive, appealed in vain for help in Europe Roberts, believing the war to be over, left South Africa and delegated the mopping-up to Kitchener The Boers, however, continued resistance by extensive and coordinated guerrilla warfare Under their leaders in the field, including Botha, De Wet, and Smuts, they disrupted communications and attacked outlying detachments, and they used their superior knowledge of the country to elude capture Kitchener soon realized that the country had to be swept systematically bare of the enemy The Boer women and children were herded into concentration camps (where many died of disease) and chains of blockhouses were erected, so disposed as to cut off large areas Dragnets of troops went through the guerrilla country section by section, and by 1902 the British force (c 350,000) had reduced to submission the Boer force (c 60,000) The Treaty of Vereeniging (May 31, 1902) ended hostilities The Boers accepted British sovereignty in exchange for a promise of responsible government in the near future Great Britain agreed to grant £3,000,000 to compensate for destruction of farms and promised not to assess taxes to meet the expenses of the war Amnesty was granted to all who had not violated the rules of war and repatriation to those who accepted the British king The British loss in life was over 5,000, the Dutch c 3,700, and the war left much bitterness, which has continued to affect the political life of the Union of South Africa (organized 1910). See Leopold Amery, ed , *The Times History of the War in South Africa* (7 vols , 1900–1909), F H E Cunliffe, *History of the Boer War* (1904), Sir John Maurice and Maurice Grant, ed , *History of the War in South Africa* (8 vols , 1906–10), Deneys Reitz, *Commando a Boer Journal of the Boer War* (new ed , 1945)

South Amboy (ăm'boi), city (pop 7,802), E N J , with a harbor at the mouth of the Raritan opposite Perth Amboy, settled 1651, inc. as a borough 1888, as a city 1908 It was the terminal (1832) of the Camden and Amboy, the state's first railroad, and became an important coal port

South America, continent (c.6,850,000 sq. mi , pop c.95,000,000), the southern of the two continents of the Western Hemisphere. It is divided politically into 10 republics—ARGENTINA, BOLIVIA, BRAZIL, CHILE, COLOMBIA, ECUADOR, PARAGUAY,

PERU, URUGUAY, and VENEZUELA—and the three colonies of GUIANA Broad in the north where the equator crosses it, the continent narrows to a point in the south at TIERRA DEL FUEGO and embraces every climatic zone between tropical and subantarctic The mighty cordillera of the ANDES, like a continental backbone, parallels the Pacific shore. The great river systems from north to south are the MAGDALENA, the ORINOCO with its LLANOS, the AMAZON with its SELVAS, and the basin of the Río de la PLATA with its PAMPA Between the Orinoco and the Amazon is the little-known GUIANA HIGHLANDS region and S of the Amazon are the tablelands of MATO GROSSO and the uplands of central and S Brazil Again to the south, below the Río de la Plata, lie the Argentina Pampa and windy, semiarid PATAGONIA On the Pacific coast the land between Andes and sea widens northward from the islands of S Chile N of the garden spot of central Chile is the great desert of ATACAMA Most of Peru, Bolivia, and Ecuador are largely dominated by the Andes and high intermontane valleys and plateaus The western coastal plain varies in width Excluding Lake MARACAIBO, which is connected to the Caribbean, high Lake TITICACA is the largest of the continent's lakes While sometimes considered part of South America, the isthmus of Panama is properly a separate geographical unit See C F Jones, *South America* (1930), J L Rich, *The Face of South America* (1942), Preston E James, *Latin America* (1942)

Southampton, Henry Wriothesley, 3d **earl of** (rŏt'slē, sou"thămp'tun), 1573–1624, English nobleman and patron of letters He succeeded to his title in 1581, was educated at Cambridge, and gained favor at the court of Queen Elizabeth A generous patron of such writers as Barnabe Barnes, Thomas Nash, and John Florio, he is best known as the patron of William Shakspere, who dedicated *Venus and Adonis* (1593) and *The Rape of Lucrece* (1594) to him Many scholars hold that Southampton is the patron and friend described in Shakspere's *Sonnets* A friend of Robert Devereux, earl of ESSEX, Southampton accompanied him on military and naval expeditions in 1596 and 1597 His secret marriage in 1598 to Elizabeth Vernon, one of Elizabeth's ladies in waiting, angered the queen greatly, and she never forgave him Southampton accompanied Essex to Ireland in 1599 as general of the horse, but Elizabeth revoked his appointment He was deeply involved in Essex's rebellion (1601) and was sentenced to death, but this sentence was changed to life imprisonment Upon the accession of James I (1603), he was released and restored to favor He became interested in colonial explorations and supported the Virginia Company, the British East India Company, and Henry Hudson Although his impetuosity involved him in a number of court brawls, Southampton became a privy councilor (1619), joined the opposition to the duke of Buckingham, and pressed the charges against Francis Bacon In 1624 he volunteered, with his son James, to lead a troop of English volunteers to fight for the Netherlands against Spain Shortly after arriving in the Netherlands, both Southampton and his son died of fever See the memoirs in the Edmund Malone edition of Shakspere ed by James Boswell (1821), Sidney Lee, *Life of Shakspere* (new ed, 1916), Charlotte Stopes, *Henry, Third Earl of Southampton Shakespeare's Patron* (1922)

Southampton, Thomas Wriothesley, 1st **earl of,** 1505–50, lord chancellor of England He was educated at Cambridge, found employment at the court of Henry VIII, and was admitted a student of Gray's Inn, London He grew in favor with Thomas Cromwell and with the king, who granted him many of the lands of confiscated monasteries He entered Parliament and was knighted in 1540 For his efforts in negotiating an alliance with Emperor Charles V, he was created (1544) Baron Wriothesley and made lord chancellor—an office in which he became notorious for his severity He was appointed one of the executors of the will of Henry VIII and was created earl of Southampton (1547) He delegated four civilians to care for a large part of his legal duties, and this action gave a sound reason for his dismissal from office by Edward Seymour, duke of Somerset, the protector His consequent grievance against Somerset led him to support John Dudley, earl of Warwick (later duke of Northumberland), in overthrowing the protector in 1549

Southampton, Thomas Wriothesley (rŏt'slē), 4th **earl of,** 1607–67, English nobleman, a moderating influence upon both CHARLES I and CHARLES II, son and successor of the 3d earl He was educated at Oxford After early declaring against the court party in the events leading up to the PURITAN REVOLUTION, he later joined the royalists, served as the king's intimate adviser, and opposed the extreme policies of STRAFFORD He negotiated for Charles with Parliament in 1643 and 1645 After the king's death (1649), he retired At the Restoration (1660) Southampton was lord high treasurer, he counseled leniency toward the REGICIDES He disapproved of the immorality and ostentation of Charles II and his court and retired from politics.

Southampton, administrative county of England: see HAMPSHIRE

Southampton, town (pop. 1,600), S Ont., on Lake Huron at the mouth of the Saugeen and N of Goderich It has lumbering and furniture making

Southampton, county borough (1931 pop 176,007, 1947 estimated pop 170,360), Hampshire, England, at the head of Southampton Water and on a peninsula between the Itchen and Test rivers SW of London There are extensive dockyards with graving and floating docks, and the city is a port for transatlantic and European passenger and merchant ships The site was early occupied, the Roman station Clausentum was near, and the town is the site of the Saxon Hamtunscir Suth-Hamtun Remains of the ancient town walls, Norman towers, and gates (Bar Gate has a guild chamber) remain King John's Palace dates from the 12th cent, and there are a number of ancient domestic buildings St Michael's Church (Norman), Holy Rood (14th cent), St Mary's, the chapel once part of God's House (a hospital since the 12th cent) and now used for French Protestant services, Watts Memorial Hall, and University College are noteworthy The Crusaders under Richard I, Henry V in 1415 for his expedition to France, and the Pilgrim Fathers (commemorated by a monument) embarked at Southampton Sir J E Millais was born here It was one of the chief British military transport stations in both world wars Besides its great trade, the city carries on shipbuilding (especially yachts, it is headquarters of several yacht clubs) and manufactures marine engines, boilers, paints, chemicals, and asbestos It has an airport Southampton was subjected to heavy and concentrated air attacks in Nov, 1940, the center of the city, consisting of business and residential buildings, was almost completely destroyed, about 20 percent of the population was rendered homeless, and there were many casualties The administrative county of Southampton is the mainland part of HAMPSHIRE

Southampton (south"hămp'tun, sou"thămp'tun), village (pop 3,818), on SE Long Island, SE N Y, settled 1640, inc 1894 It is a summer resort with many fine estates The Parrish Memorial Art Museum is here, and the Shinnecock Indian Reservation is near by Several old houses remain See Abigail F Halsey, *In Old Southampton* (1940)

Southampton Insurrection, 1831, slave uprising in Virginia, led by Nat TURNER

Southampton Island, 210 mi long and 20 to 200 mi wide, E Keewatin dist, Northwest Territories, at the entrance to Hudson Bay It is separated from the mainland on the west by Roes Welcome Sound and from the Melville Peninsula on the north by Frozen Strait and Repulse Bay Foxe Channel lies to the northeast Coral Harbour, a trading post, with a near-by air base, is at the head of South Bay, on the south shore of the island

South Australia, state (380,070 sq mi, pop 646,216), S Australia Adelaide is the capital, its port (Port Adelaide) is on Gulf St Vincent The Northern Territory is on the north, Queensland on the northeast, New South Wales and Victoria on the east, the Indian Ocean on the south, and Western Australia on the west Kangaroo Island and many smaller islands off the south coast are included in the state The coastal area was visited by the Dutch in 1627 In 1836 South Australia became a British crown colony, and in 1901 it was federated as a state of the commonwealth The Northern Territory, which had been included in the state in 1863, was transferred in 1911 to the commonwealth government Much of South Australia is wasteland—desert, mountain, large areas covered with salt lakes, and swamplands The heavily populated southeastern area has a mild and healthful climate and produces a large amount of wheat, wine, and wool There is an opal field in the Stuarts Range, and various mineral pigments (barite, ocher, malachite, and azurite) are obtained in the other small ranges Granite, marble, and soapstone are quarried Exports consist principally of pig lead, silver, wheat, wool, wine, and meat

South Bass Island see PUT-IN-BAY

South Beloit (bĕloit'), industrial city (pop 2,825), N Ill, across the state line from Beloit, Wis, inc 1917

South Bend. 1 City (pop 101,268), co seat of St Joseph co, N Ind, on the great bend of the St Joseph river and ESE of Chicago, settled 1820, laid out 1831 In a farming and dairying area, it manufactures lathes, automobiles, farm equipment, airplanes, asphalt insulation, and beer The Univ of Notre Dame (see NOTRE DAME, UNIVERSITY OF) and SAINT MARY'S COLLEGE are near by The city has a monument to La Salle, and a marker commemorates his first portage in the district There is a historical museum in the old courthouse South Bend was the site of a Miami Indian village, then of a French mission and trading post An American Fur Company post was here in 1820 **2** City (pop 1,771), co seat of Pacific co, SW Wash, on Willapa Bay, settled before 1860 It is a port of entry and a lumber and oyster-canning center

South Berwick (bûr'wĭk), town (pop 2,546), SW Maine, on the Salmon Falls River and N of Kittery; settled 1623, inc 1814 Woolens and shoes are made Sarah Orne Jewett's birthplace and home (pre-1780) is preserved Berwick Academy was founded in 1791

Southboro (south'burŭ), town (pop 2,231), E Mass, E of Worcester, settled 1660, set off from Marlboro 1727 Meat processing is important St Mark's School for boys is here

South Boston, tobacco town (pop 5,252), S Va, on the Dan river and ENE of Danville, chartered 1796, inc 1884 A state park is near by

South Bound Brook, industrial borough (pop 1,928), N central N J, on the Raritan opposite Bound Brook, inc 1907 Asbestos products are made Von Steuben had headquarters here, 1778–79

Southbridge, industrial town (pop 16,825), S Mass, on the Quinebaug and SW of Worcester, settled 1730, inc 1816 Textiles were its first products the optical-goods industry began later

South Bristol, town (pop 582), S Maine, S of Damariscotta It includes the resort villages of South Bristol, on an island, Walpole, with a church built in 1772, and Christmas Cove, which has a harbor used by coastal steamers

South Burlington, town (pop 1,736), NW Vt, adjacent to Burlington

Southbury, town (pop 1,532), SW Conn, settled 1673, set off from Woodbury 1787 The town has many country and summer homes

South Canon (kăn'yun), suburban town (pop 1,729), S central Colo, on the Arkansas and near Canon City, inc 1891

South Carolina, state (31 055 sq mi, including 461 sq mi of water surface, 910 pop 1,899,804, 1949 estimated pop 2,001,000), SE United States, one of the Thirteen Colonies COLUMBIA is the capital CHARLESTON is the largest city and port GREENVILLE and SPARTANBURG are other large cities South Carolina is bounded on the north and west by North Carolina, on the west and south by Georgia (the SAVANNAH river and its extensions form the line), and on the east by the Atlantic Ocean The fall line sets off the coastal plain of the low country from the rolling piedmont plateau of the upcountry There is a third topographical region, mountainous, but the Blue Ridge occupies only c 500 sq mi in the extreme northwest, Sassafras Mt (3,560 ft) here is the highest elevation in the state The PEE DEE, SANTEE, EDISTO, and Savannah river systems drain the state and provide it with plentiful hydroelectric power, which is being increasingly developed Rainfall is abundant and well distributed, and the climate is of the humid, subtropical type, with long, hot summers and short, mild winters Cotton, corn, tobacco, wheat and other grains, Irish potatoes, sweet potatoes, peaches, pecans, peanuts, and truck are the most important of some 30 commercial crops Clays (especially kaolin), granite, gravel, and limestone are the principal mineral resources The manufacture of cotton textiles is by far the chief industry, with lumbering (forests, especially of longleaf and loblolly pine, still cover large areas) next in importance From the commercial fisheries along the coast come oysters, shrimps, clams, shad, and sturgeon At some unknown coastal site the first (and impermanent) white settlement was made (1526) under Lucas Vásquez de AYLLÓN Later Hernando De Soto penetrated (1540) the Savannah river region The Frenchman Jean RIBAUT established (1562) a short-lived Huguenot settlement on one of the SEA ISLANDS, but Pedro Menendez de Aviles thoroughly thwarted French colonizing ambitions Missions in Guale, as the Spanish called the area, soon extended N from Florida almost to the site of Charleston and flourished handsomely until the English came In 1663 eight courtier-promoters pried from Charles II the grant his father had originally made to Sir Robert Heath in 1629, and a second charter (1665) extended the bounds of the grant The northern and southern sections of Carolina (named for Charles I) had separate developments In 1670 the first settlement in South Carolina was made at Albermarle Point on the Ashley river, just above the site of Charleston, to which the settlers removed in 1680 The first English settlers were from the mother country and Barbados Most active of the proprietors was Sir Anthony Ashley Cooper (later 1st earl of Shaftesbury) His philosopher friend, John Locke, is credited with having written the Fundamental Constitutions (1669), which the proprietors hoped to make the law of the land Though it provided for a local lawmaking assembly elected by ballot, this constitution was essentially aristocratic At the top of the hierarchy came the proprietors, the landgraves, and the caciques, followed by the commoners The extent of a man's land holdings depended on his rank, a freeholder had to own at least 50 acres in order to cast a ballot As the system evolved the assembly sat as two houses, one consisting of the proprietor's deputies (one for each proprietor), the landgraves, and the caciques, the other of representatives of the commoners The supreme authority, however, was in England, where the eight proprietors formed the palatine court, presided over by the eldest proprietor, who

was called the lord palatine Much to the annoyance of the proprietors, the assembly never adopted the Fundamental Constitutions (abolished in 1693) as a whole On their plantations, worked by Negro and Indian slaves and indentured servants, the colonists raised dairy products, corn, and livestock, and the surrounding forests yielded timber and naval stores Rice, introduced c 1680, proved ideal for the low, marshy tidewater area, and slaves were imported in increasing numbers to cultivate it After the 1740s indigo was the colony's second staple until the British bounty for its cultivation was cut off with independence The fur trade prospered from the beginning but brought more difficulties for the already exposed frontier colony, almost "in the very chops of the Spaniards," as one leader described its situation As the fur traders pushed west they encountered the French from Louisiana Resenting the conduct of the Carolina traders, the hitherto friendly Yamassee fell upon (1715) the colonists The uprising, finally quelled after the loss of much life and property, revealed the weakness of proprietary rule and, combined with other grievances, led the colonists to rebel in 1719 The crown sent over Francis NICHOLSON as governor in 1720, but South Carolina did not formally become a royal colony until 1729, when the proprietors finally accepted terms Affairs now became much improved Pirates such as BLACKBEARD who had infested the coast had been hanged or dispersed, and the founding of Georgia to the south considerably eased the Spanish danger The population, still centered in the low country, was predominantly English but divided in religion French Huguenots, who first arrived c 1680, intermarried with the Anglicans (the Church of England was the state church, but other Christian faiths, except the Roman Catholic, were tolerated) and generally supported them in their political differences with the dissenters Ready for expansion, the colony encouraged the immigration of white Protestants from Europe, providing land according to the size of a newcomer's family By 1740, German Swiss, Scotch-Irish, and Welshmen from Delaware had arrived As the Indians were constantly pushed back, the upcountry, with its small, self-sufficient farms and dissenting churches, was increasingly developed There was constant friction between the two sections, and in the late 1760s upcountrymen took the law into their own hands On the eve of the American Revolution, its estimated population was 140,000, with four Negroes (mostly in the tidewater) to every three whites South Carolinians—Christopher GADSDEN, Henry LAURENS, William H DRAYTON, and Arthur MIDDLETON—were among the leaders in the movement for independence In March, 1776, a government was set up under a temporary constitution, with John RUTLEDGE as president The British failed to take Charleston in June, 1776 (see MOULTRIE, FORT), but Sir Henry CLINTON successfully besieged the town in March–May, 1780 In the ensuing CAROLINA CAMPAIGN, Nathanael GREENE replaced Horatio GATES and, greatly aided by the partisan leaders Francis MARION, Thomas SUMTER, and Andrew PICKENS, ultimately forced the British to retreat The British, however, held on to Charleston until Dec, 1782 In 1786 the site of Columbia was chosen for a more centrally located capital, a choice which mollified the men of the upcountry South Carolina ratified the Federal Constitution in May, 1788, and adopted a new state charter in 1790 Eli Whitney's cotton gin (1793) spurred cotton growing, but in the early 19th cent there was a brief economic decline resulting from overproduction and the migration of many planters to more fertile lands farther west Successive raises in the tariff were violently denounced, and in 1832 South Carolina passed its NULLIFICATION act President Andrew Jackson, whom the state claims as a native son, acted firmly for the Union in this crisis A less objectionable tariff was accepted in 1833, but the possibility of SECESSION had been made less remote John C CALHOUN, supported by Robert Y HAYNES, became the acknowledged leader of the whole South in his defense of the STATES' RIGHTS doctrine, and some of the state's apologists for slavery, notably Robert B RHETT, equaled the most radical abolitionists in their fanaticism After Lincoln's election South Carolina was (Dec 20, 1860) the first Southern state to secede Gov Francis W PICKENS immediately demanded all Federal property within the state (see SUMTER, FORT), and the firing on Sumter four months later opened the Civil War In Nov, 1861, a Union naval force under Samuel F DU PONT took the forts of Port Royal Sound and Charleston's forts withstood heavy bombardments in the spring and summer of 1863, but the state was little touched by the war until early in 1865 Then, Gen William T SHERMAN, commanding the army which had marched through Georgia and was, as he said, "burning with an insatiable desire to wreak vengeance upon South Carolina," crossed the Savannah The resulting destruction, culminating in the burning of Columbia, was appalling The RECONSTRUCTION period that followed was no less disastrous President Andrew Johnson's moderate program had only a brief trial before the radical Republicans took over The charter, produced by a constitutional convention in which Negroes outnumbered whites almost two to one, was ratified in April, 1868, and, since it fulfilled congressional requirements, South Carolina was readmitted to the Union in June The period 1868–74 is known as the "rule of the robbers" The last Republican governor in the state's history, Daniel H Chamberlain (1874–76), corrected many of the abuses, but he was a carpetbagger, and in 1876 he was defeated by the state's great war hero, Wade HAMPTON (1818–1902) Chamberlain, however, refused to yield office and there existed two state governments until in April, 1877, President Rutherford B Hayes (who had received South Carolina's disputed electoral votes) withdrew all Federal troops in the South, thus leaving Chamberlain without support The physical destruction of war and the abolition of slavery had nearly wrecked the state's basic agricultural economy The rice plantations, which had begun to decline after 1850, when it was found that the staple could be produced more cheaply in the Gulf states, were hardest hit, though they lingered on for years, by 1914 rice growing had practically ceased Farm tenancy, replacing the old plantation institution, held most of the state's farmers, white and black, in another, economic, kind of bondage, as it still does Agrarian unrest infected the upcountry especially, and there in 1886 the farmers organized a movement to improve their lot In Benjamin TILLMAN, elected governor in 1890, they had a colorful, able leader The Tillmanites wrested control of the Democratic party from the conservative "Bourbon" element and adopted many agricultural and educational reforms Agriculture received another jolt in 1920 when the boll weevil ended forever the growing of Sea Island cotton in South Carolina and the continued overcultivation of the one-crop system increased the area of wasted, eroded land These repeated setbacks have led South Carolina, with the support of the Federal government, to encourage agricultural diversification and the use of new farming methods Greenville, the first of the many cotton-mill villages which now dot the piedmont, was established by William GREGG in 1846, and the textile industry has grown steadily since the 1870s, with the help of Northern capital Although the paternalistic character of the mill villages may have helped the workers through the depression, the textile industry is now generally unionized and there were serious strikes, with some violence, in 1935–36 The 1920s saw a large migration of Negroes to the North (repeated in the Second World War) and the 1930 census showed that for the first time since 1810, whites outnumbered Negroes Because this exodus included many of the most intelligent Negroes, the state's illiteracy rate, one of the highest in the nation, increased, but has since been whittled down by application of the state's excellent education law of 1924 There were many military training camps in the state during the Second World War In July, 1947, Federal Judge J Waties Waring, a native Charlestonian, remarking that "it was time for South Carolina to rejoin the Union," held that Negroes were entitled to vote in the Democratic primary (originally set up by the constitution of 1895) and later nullified the special rules for Negro enrollment by which the party attempted to maintain its "lily white" status The U S Supreme Court, by refusing to review his decision, sustained him, and an estimated 30,000 Negroes voted in the Senatorial primary of 1948 without incident The upholders of "white supremacy" were, however, still strong, and South Carolina's governor, J Strom THURMOND, ran for President in 1948 in opposition to the civil-rights program James F BYRNES, the state's most prominent national figure in recent years, broke with the national Democratic administration, probably on the same issue Prohibition, first enacted in 1915, repealed in 1934, and favored by the voters again in 1941 was not approved by the legislature, which, however, sanctioned (March, 1949) the amendment ratified in 1948 permitting divorce, formerly forbidden The Univ of South Carolina at Columbia is the state's leading educational institution See Edward McCrady, *The History of South Carolina under the Proprietary Government, 1670–1719* (1897), *The History of South Carolina under the Royal Government, 1719–1776* (1899), and *The History of South Carolina in the Revolution* (2 vols, 1901–2), Yates Snowden, ed, *History of South Carolina* (5 vols, 1920), A H Hirsch, *The Huguenots of Colonial South Carolina* (1928), J G Van Deusen, *Economic Bases of South Carolina, University of, at Columbia, state supported, coeducational, chartered 1801, opened as a college 1805, became a university 1906 It includes a college of arts and sciences and schools of business administration, education, engineering, journalism, law, pharmacy, and social work A new library was opened in 1941, the old building (1840) being dedicated to collections of South Carolinana

South Carolina State Agricultural and Mechanical College, at Orangeburg, Negro, with land-grant support, coeducational, chartered and opened 1896 It has divisions of agriculture, arts and sciences, home economics, and mechanical industries A law school was added in 1947

South Charleston. **1** Rural village (pop 1,198), W central Ohio, SE of Springfield **2** Town (pop 10,377), W W Va, on the Kanawha river and near Charleston, settled c 1900 It is an important chemical-manufacturing center and has a U S naval ordnance plant There is an Indian burial mound here

South Chicago Heights, residential village (pop 1,837), NE Ill, S of Chicago, inc 1907

South China Sea, western arm of the Pacific Ocean It is bounded by China (including Formosa), Indo-China, the Malay Archipelago, Indonesia, and the Philippine Islands Its chief extensions are the Gulf of Siam and the Gulf of Tonkin The sea, a region of violent storms, in places is almost 18,000 ft deep

South Coatesville, borough (pop 1,601), Chester Co, SE Pa, W of Philadelphia, inc 1921

South Connellsville, borough (pop 2,628), SW Pa, c 35 mi SE of Pittsburgh

Southcott, Joanna (south'kut), 1750–1814, English religious visionary Uneducated, even illiterate, she spent her earlier years in domestic service She began c 1792 to claim the gift of prophecy, her "revelations" attracted many followers Later she announced that, as the woman in Revelation 12, she would be the mother of the coming Messiah Soon after the time she had set for the birth of the "second Shiloh," she died of brain disease, at the age of 64 Her followers continued to study the 60 or more tracts and books of her writing, the sect has not yet completely died out A locked box which she left with instructions that it should be opened in the presence of all the bishops at some time of national crisis revealed nothing of interest when, in 1928, one bishop agreed to be present at its opening Among Joanna's books is *The Strange Effects of Faith* (2 vols, 1801 2)

South Dakota (dukō'tu) (77,047 sq mi, 1940 pop 642,961, 1949 estimated pop 649,000), N central United States, admitted 1889 as the 40th state PIERRE is the capital South Dakota is bounded on the north by North Dakota, on the east by Minnesota and Iowa, on the south by Nebraska, and on the west by Wyoming and Montana The state, young in settlement, shows some of the geologic history of the continent in the rock formations of the ancient BLACK HILLS, and the BADLANDS, at their extreme between White River and the south fork of the Cheyenne, display in their deeply eroded clay gullies not only colorful, fantastic shapes but also a wealth of easily accessible land and marine fossils (the Badlands National Monument preserves the area for startling scenery and archaeological interest) The whole of South Dakota has a continental climate, in the summer it has sunshine with cloudless days, and in the winter there are blizzards with deep snows filling the coulees and sweeping across bare hillsides The average annual rainfall is low (c 25 in), and in years of drought summer winds blow away acres of top soil in "black blizzards" From east to west the state rises some 6,000 ft to Harney Peak (7,242 ft) in the Black Hills, highest point E of the Rockies Through the center of the state, the rolling Missouri river cuts southward The section E of the Missouri has grazing country that supports sheep and cattle as well as farming country in the watered sections the chief rivers are the James and the Big Sioux) Harvest season finds the northern country bronze with ripened wheat, while great fields of tasseled corn cover much of the central and southern areas A broad agricultural program, promoted by the state agricultural college, the Grange, the Farmers' Union, and the Farm Bureau, has brought diversified crops, supported by poultry raising and the breeding of sheep and cattle Droughts have created a major problem and have pointed up the need for water conservation In the region social life is centered in small towns, with a few large towns serving as retail centers—Sioux Falls, Mitchell, Huron, Watertown, and Aberdeen In these cities there are industries processing grain, dairy products, and meat The only sizeable settlement W of the Missouri is Rapid City The countryside is generally desolate, with deserted sod shanties and shacks to show the failure of farmers who settled in this semiarid, rough country Ranches pasture large herds, and cattle occupy the country except for a semicircle of irrigated farming land around the Black Hills The Black Hills themselves—upheavals of bare rocks in sharp contrast to

stretches of ponderosa pine, now attract many tourists Mt Rushmore, with its gigantic carvings of American heroes is a sort of national shrine The gold mining at LEAD recalls the earlier period of the gold rush at neighboring DEADWOOD in 1876, when Wild Bill Hickock and Calamity Jane created frontier myths The region did not achieve real importance until the mining days though it was explored by the sons of the sieur de la VÉRENDRYE in the middle of the 18th cent Explorers on the Missouri went through South Dakota and became well acquainted with the warlike SIOUX INDIANS (the Dakota Indians), who continued to dominate the region during the period of the fur trade down to the middle of the 19th cent. Individual traders from the time of Pierre Dorion in the late 18th cent made the region their home, and the posts founded by Pierre Chouteau and the American Fur Company were the first bases for settlement In the 1850s land speculators and farmers moved westward from Minnesota and Iowa Two land companies settled at Sioux Falls in 1856, and in 1859 Yankton, Bon Homme, and Vermillion were laid out A treaty with the Sioux opened the land between the Big Sioux and the Missouri, and in 1861 Dakota Territory was set up, embracing not only North Dakota and South Dakota but also E Wyoming and E Montana Settlers were, however, few, and they were discouraged by droughts, Indian raids, and plagues of insects A railroad pushed to Yankton in 1872 Already the region had received the first of the European immigrants, who were to come later in great numbers and contribute important German, Scandinavian, and Russian elements to the Dakotas Yet national interest was first excited over rumors of gold in the Black Hills and when the military expedition led by George A Custer in 1874 seemed to confirm the news, settlers began to rush out, though the territory belonged to the Sioux Thus South Dakota helped contribute to the warfare with the Sioux, marked so terribly by the massacre of Custer's men in the battle of the Little Bighorn Despite disturbances, the gold fever mounted, and Deadwood had its day of gaudy glory while Lead began its long productive career Gold did not make the fortune of South Dakota It did, however, stimulate cattle ranching Partly to supply food for the gold miners, large companies brought cattle to the grasslands of W South Dakota The gold boom also stimulated settlement in the east that was a prelude to the great Dakota land boom from 1878 to 1886 The population increased threefold then, and prairie sod was broken by the plow The university was opened in 1882, the agricultural college in 1884, and the school of mines in 1887 Movements for statehood developed, in 1888 the Republican party adopted it as a campaign issue, and in 1889 an enabling act was passed South Dakota became a state, with Pierre as capital Disasters, however, rocked its security The unusually severe winter of 1886-87 brought hardship to the farmers and destroyed huge herds of cattle in the west, thus beginning the trend—since dominant—among the ranches to have smaller herds with provisions for winter shelter and feeding Recurrent droughts added to the difficulties of the farmers, who sought relief in the cooperative ventures of the Farmers' Alliance and political action in the POPULIST PARTY, which won a resounding victory in 1896 The initiative and referendum were adopted and other progressive measures of the day enacted, but prosperity returned South Dakota to political conservatism and the Republican party The extension of railroads (particularly the Milwaukee, which is the only transcontinental line passing through South Dakota) caused further expansion of agriculture, and new droughts (particularly that of 1910–11) brought a retraction, with many new farmsteads abandoned and a new turn to the leftward in politics. The Progressive party, led by Peter Norbeck and operating as a branch of the Republicans, entered on experiments in state ownership of business, but these proved unsuccessful and new prosperity-and-depression cycles occurred after the boom of the First World War The combination of droughts and national depression brought widespread calamities in the late 1920s and early 1930s, and by 1935 agricultural production and the population had sunk far below the 1929 level Vigorous measures of relief were instituted under the New Deal, and the Second World War and prosperous years after it brought a new era of hopefulness Irrigation projects, extension of hydroelectric power, and protective measures against wind and water erosion have been forwarded to avoid the threat of new disasters The MISSOURI RIVER BASIN PROJECT, if carried through, would greatly affect South Dakota See George Kingsbury, *The History of Dakota Territory* (1915), Loren G Atherton and Nora M Atherton, *South Dakota Geography* (1928), R C Hunkins and J C Lindsey, *South Dakota Its Past, Present, and Future* (1932), Federal Writers' Project, *A South Dakota Guide* (1938), Harold E Briggs, *Frontiers of the Northwest* (1940), Herbert S Schell, *South Dakota* (1942)

South Dakota, University of, at Vermillion, state supported, coeducational, chartered 1862, opened 1882 as the Univ. of Dakota, renamed 1891 It includes colleges of arts and sciences and fine arts and also schools of business administration, education, law, and medicine (two years) There are state chemical and health laboratories, a state geological survey, business and government research bureaus, and science collections The university heads the state school system

South Dakota School of Mines and Technology, at Rapid City, state supported, mainly for men, chartered 1885, opened 1887, a college of engineering It has a prehistoric fossil collection from the Badlands

South Dakota State College of Agriculture and Mechanic Arts, at Brookings, with land-grant support, coeducational, chartered 1881, opened 1884, called an agricultural college until 1907 It has divisions of agriculture, engineering, home economics, pharmacy, and general science

South Downs, England see DOWNS, THE, chalk hills

Southdown sheep (south'doun), breed of sheep originated on the South Downs of Sussex, England, and now raised in almost every country in the world The Southdown is a small sheep, with compact body bearing medium long, fine grade wool, with brownish or grayish face and legs, and with flesh of excellent quality It has been extensively used in improving other breeds of sheep Its balance of mutton and wool qualities makes it well adapted for raising in small flocks on general farms The first importation of Southdown sheep to America is said to have occurred in 1803

Southend-on-Sea, county borough (1931 pop 120,-115, 1947 estimated pop 147,410), Essex, England, at the mouth of the Thames It is a popular seaside resort for Londoners, and it manufactures aluminum foil, paint, storage batteries, and pharmaceuticals Yachting events are held here annually Westcliff is a residential suburb

Southern Alps, mountain range, on South Island, New Zealand, paralleling the west coast and containing Mt Cook (12,349 ft), highest peak of the dominion There are gorges and glaciers

Southern California, University of, at Los Angeles, nonsectarian, private, coeducational, chartered and opened 1880 by Methodists It has colleges of architecture, commerce and business administration (with merchandising), engineering, letters, arts, and sciences (with journalism, philosophy, music, and speech), and pharmacy It also has schools of education, law, library science, medicine, nursing, public administration, religion, research, and social work, an institute of the arts, and the laboratories of the Allan Hancock Foundation for *Scientific Research* Los Angeles Univ of International Relations and a dental college are affiliated

Southern College see FLORIDA SOUTHERN COLLEGE

Southern Cross, popular name of Crux, a constellation of the Southern Hemisphere It consists of four bright stars that appear to form a rough Latin cross

Southerne, Thomas (sŭdh'ûrn), 1660–1746, English dramatist, b Ireland A friend and collaborator of Dryden, he is remembered chiefly for two tragedies, *The Fatal Marriage* (1694) and *Oroonoko* (1696), the latter taken from a novel by Aphra Behn See J W Dodds, *Thomas Southerne, Dramatist* (1933)

Southern Methodist University, at University Park, Texas, a suburb of Dallas, coeducational, chartered 1911, opened 1915 It has a college of arts and sciences and schools of business administration, engineering, law, music, and theology There are theater (McCord) and history (A V Lane) museums

Southern Morocco (murŏ'kō), Spanish protectorate (c 3,800 sq mi, pop c 12,000), NW Africa, on the Atlantic Ocean Cabo Juby (or Cabo Yubi) is the capital Southern Morocco is bordered by French Morocco on the north, by Algeria on the east, and by Spanish Sahara on the south It is also called the Southern Protectorate of Morocco, but despite its name it is not considered part of the domain of the sultan of Morocco The protectorate is in a gravelly section (*hamada*) of the Sahara There is nomadic livestock raising

Southern Pacific Company, transportation system chartered (1865) in California and later reincorporated in Kentucky (1884) and Delaware (1947) Small railroads—known collectively as the Southern Pacific—were built and merged after 1865 in S California to provide feeder lines to the Central Pacific RR and eventually to provide connections between San Francisco and New Orleans The Southern Pacific RR survived the Panic of 1873 and inadequate financing, and in 1883, after the company had purchased several Texas railroads, Houston, Galveston, and New Orleans were reached In 1884 the Southern Pacific and Central Pacific railroads—which were conceived and constructed as parts of one system—were combined under the leadership of Leland STANFORD and Collis P HUNTINGTON as a unit of interdependent systems Edward H HARRIMAN gained control of Huntington's holdings and expanded the railroads, and the Southern Pacific Company added several smaller railroads in the 20th cent In 1923, after the U S Supreme Court had directed (1922) the company to separate the control of the Southern Pacific and Central Pacific railroads, the Interstate Commerce Commission approved the Southern Pacific RR's leasing of the Central Pacific RR's facilities The Southern Pacific soon gained control of several bus lines in the Far West and in 1938 took over the trucking service previously provided by the Pacific Motor Transport Company. At the end of the Second World War the company failed to resume operation of its steamship services from New York city and Baltimore to Galveston, thus abandoning a service which it had operated for over a half a century At the end of 1948 the Southern Pacific Company operated over 13,400 mi of track in the United States, controlled an additional 1,100 mi of track, and operated trucks on 13,350 mi of highway See Stuart Daggett, *Chapters on the History of the Southern Pacific* (1922), E L King, *Main Lane* (1948)

Southern Pines, winter resort town (pop 3,225), central N C, SW of Raleigh, settled 1885, inc 1887 It is noted for its mild climate and is a center for golf, riding, and other sports Fruit (especially peaches) and truck are grown in the region

Southern Rhodesia (rōdē'zhu), British colony (150,-333 sq mi, pop 1,764,000) SE Africa The capital is Salisbury The colony is bordered on the north by Northern Rhodesia, on the northeast and east by Mozambique, and on the southwest and west by Bechuanaland It is mainly a plateau, crossed from the southwest to the northeast by the high veld (4,000 to 6,000 ft high), which contains valuable mineral resources, including gold, chrome, iron, coal, and asbestos On either side of the high veld lies the middle veld (2,000 to 4,000 ft high), which offers excellent ranching country The southeast contains tropical forests, where hardwoods are felled Cotton, tobacco, peanuts, tea, and fruits are cultivated in Southern Rhodesia Manufactures include agricultural implements and textiles A fairly adequate railroad system serves the principal cities, including Bulawayo and Umtali, and the mining areas and has connections with the neighboring countries Little is known of the history of Southern Rhodesia before the early 19th cent, when the MASHONA tribe were the main inhabitants They were supplanted by the MATABELE, who invaded from the south The British occupied Southern Rhodesia in 1888 In 1923, on the partition of RHODESIA, Southern Rhodesia was constituted a self-governing colony It is ruled by an appointed governor with the aid of an executive council and of a legislative council, which is elected by white British subjects

Southern University and Agricultural and Mechanical College see BATON ROUGE, La

South Euclid (ū'klĭd), city (pop 6,146), NE Ohio It is a suburb of Cleveland Notre Dame College (Catholic, for women, 1922) is here

Southey, Robert (sou'dhē, sŭ'dhē), 1774–1843, English poet and historian During his schooling at Oxford (1792–94) he celebrated the French Revolution with an epic, *Joan of Arc* (1793, pub 1796), but his ardor soon cooled In 1794 Coleridge interested him in the pantisocracy scheme, which involved marriage and emigration to the Susquehanna river Immediately after his wedding to Edith Fricker (1795), however, he went alone to Portugal, but by 1803 he and his wife were settled near Keswick in the Lake District There he supported his family and, for a time, the Coleridges, by his voluminous writings There also he met Wordsworth and himself became one of the Lake poets He was made poet laureate in 1813 His ambitious epics, *Thalaba the Destroyer* (1801), *The Curse of Kehama* (1810), *Madoc* (1805), *Roderick, the Last of the Goths* (1814), and *A Vision of Judgment* (1821), are little read, and he is remembered for his shorter poems—"The Battle of Blenheim," "Inchcape Rock," "The Cataract at Lodore," and "The Holly Tree," among others Probably his best work was in prose—his histories of Brazil (1810–19) and of the Peninsular War (1823–32), his masterly life of Nelson (1813), biographies of Wesley (1820) and others, and *The Book of the Church* (1824) He also made translations from the French and Spanish See his letters (selected and ed by M H Fitzgerald, 1912), biographies by Edward Dowden (1906), William Haller (1917), and Jack Simmons (1948)

South Fork, borough (pop 3,023), SW Pa, on the Conemaugh and near Johnstown

South Fort Mitchell, residential town (pop 2,393), N Ky, near Covington, inc 1927

South Fulton, city (pop 2,050), W Tenn, at the Ky line, contiguous to FULTON, Ky. Dairy products are made here

Southgate, urban district (1931 pop 55 570, 1947 estimated pop 74,690), Middlesex, England, in the London metropolitan area

South Gate (south' gāt"), city (1940 pop 26,945, 1947 special census pop 45,820), in San Antonio township, S Calif, near Los Angeles, inc 1923 It has many manufactures

Southgate, town (pop 1,841), N Ky, near Newport

South Georgia, island, area c 1,450 sq mi, S Atlantic, c 1,200 mi E of Cape Horn Capt James Cook took possession in 1775, and it is included as a dependency in the British colony of the FALKLAND ISLANDS, but is also claimed by Argentina It is a

center for whalers. The population fluctuates seasonally, never exceeding 700. Here Sir Ernest Shackleton was buried

South Glens Falls, village (pop 3,081), E N Y , on the Hudson opposite Glens Falls, inc 1895

South Greensburg, borough (pop 2,616), Westmoreland co , SW Pa., ESE of Pittsburgh, inc 1891 Metal products are made here

South Hadley, town (pop 6,856), W Mass., on the Connecticut above Springfield, near the Holyoke Range, settled c 1660, set off from Hadley 1753 Its paper industry began early in the 19th cent MOUNT HOLYOKE COLLEGE is here

South Haven, resort city (pop 4,745), SW Mich , on Lake Michigan at the mouth of the Black River and N of Benton Harbor, settled before 1840, inc as a village 1869, as a city 1902 It is a port of entry and a supply center for a resort and fruitgrowing area Pianos and organs are among the city's manufactures Michigan State College has a horticultural experiment station here Indian mounds are found near by

South Hill, town (pop 1,739), S Va , near the N C line SW of Petersburg, inc 1901. It is an important tobacco and cotton market

South Holland, Dutch *Zuidholland* (zoit"hô'länt), province (1,085 sq mi , pop 2,256,186), W Netherlands, bounded by the North Sea in the north The Hague is the capital, and Rotterdam, Dordrecht, Leiden, Schiedam, and Gouda are its other chief cities A fertile lowland, protected by dunes and dikes along the coast, it is similar in character to NORTH HOLLAND, with which it was united until 1840 as HOLLAND

South Holland, village (pop 2,272), NE Ill , just S of Chicago, settled 1840 by Dutch, inc 1894 It is a trade and shipping center for a truck area

Southington (sŭ'dhĭngtun), borough (pop 5,088) in Southington town (pop 9,649), central Conn , SW of Hartford, settled 1696, town inc 1779, borough 1889 Aircraft parts and machine tools are among its products.

South International Falls, village (pop 1,299), extreme N Minn , near International Falls, in deforested country

South Island (58,093 sq mi , pop 556,006), New Zealand, larger of the two principal islands of the dominion It is separated from North Island by Cook Strait and from Stewart Island by Foveaux Strait. The SOUTHERN ALPS extend almost the entire length of the island The Otira Tunnel cuts through the mountains to connect the railroads of the east and west coasts The Fiordland National Park includes a major portion of the southwest area There are beautiful lakes and glaciers in the Arthur Pass and Tasman national parks in the Southern Alps Grain, timber, and sheep are the principal products, some coal and gold are mined The centers are Christchurch, Dunedin, and Invercargill

South Jacksonville, Fla see JACKSONVILLE

South Kensington, London see KENSINGTON.

South Kensington Museum see VICTORIA AND ALBERT MUSEUM

South Kingstown (kĭng'stun, kĭngs'toun"), town (pop 7,282), co seat of Washington co , S R I , between Narragansett and Charlestown, settled 1641, inc 1674 as Kingstown, divided into North Kingstown and South Kingstown 1723 Kingston, West Kingston, Peace Dale, Wakefield, and the resort Matunuck are South Kingstown villages The Narragansett Indians made their final stand in 1675 at the Great Swamp W of Kingston Near Kingston village is the campus of RHODE ISLAND STATE COLLEGE Oliver Hazard Perry's birthplace, at Wakefield, was made a museum

South Lyon, city (pop 1,017), SE Mich , N of Ypsilanti, inc as a village 1873, as a city 1930 Steel tubing is made here

South Manchurian Railroad, Japanese-developed enterprise with a total trackage of 691 mi The line from Changchun to Port Arthur, originally belonging to the Russian-built CHINESE EASTERN RR, was part of Japan's indemnity in the Russo-Japanese War (1904–5) Japan later constructed a line to connect Mukden and Antung Other cities served by the railroad are Talien (Dairen), Anshan, and Fushun The prosperity of Manchuria is in large part attributable to the linking by the railroad of the coastal ports and the hinterland The **South Manchurian Railroad Company,** the largest economic enterprise of Manchuria and the main agency of Japanese penetration, was organized shortly after the Russo-Japanese War It undertook construction of towns, harbor improvements, coal and iron mining, utility development, and agricultural experimentation Manchukuo (1932–45) gave the company control of all state railroads At the end of the Second World War, China expropriated the company's property.

South Miami (mĭă'mē), city (pop 2,408), SE Fla , contiguous to Miami, settled 1899 and called Larkins, inc 1926 as South Miami Garden truck and fruit are packed here

South Milwaukee (mĭlwô'kē), industrial city (pop 11,134), SE Wis , on Lake Michigan near Milwaukee, settled 1835, platted 1891, inc 1897 Electrical equipment and heavy machinery are made.

Southmont, borough (pop 2,146), SW Pa., in the Alleghenies, adjoining SW Johnstown.

South Norfolk (nôr'fuk), suburban city (pop. 8,038), SE Va , near Norfolk on the Elizabeth river; inc 1921 Limestone deposits are near by.

South Norwalk, Conn see NORWALK .

South Nyack (nī'ăk), village (pop 2,093), SE N Y , on the west bank of the Hudson and near Nyack, inc 1878

South Ogden, town(pop 1,407), N Utah, near Ogden, settled 1848 by Mormons, inc. 1936

Southold (south'hōld, sou'thōld), town (pop 12,046), on NE Long Island, SE N Y , on Long Island Sound, settled 1640 It includes near-by islands and Southold and other villages See Epher Whitaker, *Southold* (1931)

South Orange, village (pop 13,742), NE N J , western suburb of Newark and New York, inc 1869 Seton Hall College (Catholic, for men, 1856) is here

South Orkney Islands, group, S Atlantic, c.850 mi ESE of Cape Horn They were claimed by the British in 1821 and are included as dependencies of the colony of the FALKLAND ISLANDS The Argentine government, which claims them, maintains a meteorological and a wireless station on Laurie Island

South Ossetia, Georgian SSR see OSSETIA.

South Paris, Maine see PARIS

South Pasadena (pă"sudē'nŭ), residential city (pop 14,356), S Calif , between Pasadena and Los Angeles, inc 1888 It has varied manufactures

South Pass, broad level valley (alt c 7,550 ft), SW Wyo , cutting across the Rocky Mts It long served as a gateway for immigration to the Far West. See OREGON TRAIL

South Pekin (pē'kĭn), village (pop. 1,044), central Ill , S of Pekin and Peoria, inc 1917

South Pittsburg, industrial town (pop 2,285), S Tenn , on the Tennessee and W of Chattanooga

South Plainfield, residential borough (pop 5,379), NE N J , near Plainfield, inc 1926

South Platte (plăt), river, c 450 mi long, rising in the Rocky Mts in many branches, which join in central Colorado It flows in a narrow canyon E and NE to Denver, where it is joined by Cherry Creek, it then flows generally NE across Colorado to join the North Platte in S central Nebraska and form the Platte The basin has many private irrigation dams The Bureau of Reclamation has undertaken the COLORADO-BIG THOMPSON PROJECT and planned a similar Blue–South Platte project, and the Corps of Engineers began constructing Cherry Creek Dam for flood control in 1947

South Pole, southern end of the earth's axis, lat 90° S and long 0° It is distinguished from the south magnetic pole The South Pole was reached (1911) by Roald AMUNDSEN See also ANTARCTICA

Southport, county borough (1931 pop 78,925, 1947 estimated pop 84,820), Lancashire, England, N of Liverpool A seaside resort, it has a good beach, a promenade, a long pier, Hesketh Park (with an observatory), the Atkinson Art Galleries, several art and technical schools, and one of the finest boulevards in Lancashire—Lord St Flower shows and sports events (golf) are held annually. There is a motor racecourse

Southport, city (pop 1,760), co seat of Brunswick co , SE N C , on the coast S of Wilmington and at the mouth of the Cape Fear River, founded 1792 Fort Johnston here was completed in 1764, destroyed in 1776, and rebuilt after 1794 Fishing and fish products are the town's chief industries

South Portland, city (pop 15,781), SW Maine, across the Fore river from Portland The town was set off from Cape Elizabeth in 1895; the city charter was adopted in 1898 Fort Preble was built here before the War of 1812 and enlarged in the Civil War The U S 5th Infantry Regiment is stationed at Fort Williams, south of the city Portland Head Light, near the fort, is the oldest lighthouse (1791) on the Maine coast. The city has large shipyards

South Renovo (rĭnō'vŭ), borough (pop 1,018), Clinton co , N central Pa , near Renovo, inc 1888

South River, industrial borough (pop 10,714), E N J , SE of New Brunswick, settled 1720, inc 1897 It has a municipal power plant

South Ronaldsay (rŏ'nŭld-sā), island (pop. 1,312), off N Scotland, one of the Orkney Islands

South Saint Paul, city (pop 11,844), SE Minn , near St Paul on the Mississippi It has stockyards, packing plants, tanneries, and foundries

South Salt Lake, town (pop 5,701), N central Utah, near Salt Lake City, inc 1938.

South San Francisco (săn frŭnsĭ'skō), city (1940 pop. 6,629, 1947 special census pop 15,862), W Calif , S of San Francisco, inc. 1908 It has metal-working plants, meat-packing plants, and other industries The municipal airport here is the headquarters for the Pacific-Alaska division of the Pan-American clipper ships.

South Saskatchewan: see SASKATCHEWAN, river.

Southsea see PORTSMOUTH, Hampshire, England.

South Sea Bubble, popular name in England for the speculation in the South Sea Company, which was formed in 1711 by Robert Harley and failed disastrously in 1720. The company assumed the national debt of over £9,000,000 in return for an annual payment by the government equal to 6 percent interest on the stock plus a monopoly of British trade with the islands of the South Seas and South America. In 1717 and again in 1719 its capital was increased when creditors of the government were permitted to exchange their annuities and other claims for its stock. The price of the stock rose out of all proportion to its earnings in trade—from 128½ to 1,000— and many dishonest and imprudent speculative ventures sprang up in imitation The company's attempt to stop these fraudulent schemes burst the bubble, banks failed when they could not collect loans on inflated stock, prices of stock fell, thousands were ruined, and fraud in the South Sea Company was exposed Robert WALPOLE was made chancellor of the exchequer and immediately started a series of measures to restore the credit of the company and reorganize it It continued until 1853 See N A. Brisco, *The Economic Policy of Robert Walpole* (1907)

South Seas, name given in early days to the whole of the Pacific Ocean by the first explorers In recent times it has been used to mean only the central Pacific, the S Pacific, and the SW Pacific. It is more particularly applied to the South Sea Islands and the waters about them These include the islands of OCEANIA, they are in three main divisions, MELANESIA, MICRONESIA, and POLYNESIA

South Shetland Islands, archipelago of Antarctica, off N Palmer Peninsula, in the S Atlantic The barren, snow-covered islands, which include Deception, Greenwich, King George, Elephant, and other islands, saw whaling activity early in the 19th cent and have figured in antarctic exploration Discovered (1819) by William Smith, an English mariner, they are claimed by Great Britain, which includes them as a dependency of the Falkland Islands Argentina and Chile have challenged this claim

South Shields, county borough (1931 pop 113,455, 1947 estimated pop 103,130), Durham, England, at the mouth of the Tyne E of Newcastle North Shields, part of TYNEMOUTH, lies opposite The name is derived from the sheds or shields of the fishermen There are Roman remains and a park on Lawe Hill, above the Tyne, where the Romans had a fort The docks cover an area of 50 acres Glass, chemicals, and paints are made, and fishing is carried on There are two long piers, with a promenade, two marine parks, and a marine school The first lifeboat was launched at South Shields in 1790

South Sioux City (sōō), city (pop 4,556), NE Nebr , on the Missouri opposite Sioux City, Iowa, in a rich agricultural area, founded 1887

South Victoria Land, Antarctica see VICTORIA LAND.

Southwark (sŭdh'ŭrk, south'wurk) metropolitan borough (1931 pop 171,695, 1948 estimated pop 94,630) of S London, England, at the south end of London Bridge It was annexed to London partly or wholly in 1327 and is still known as "the Borough " The Cathedral of St Saviour was part of the 11th-century Augustinian priory of St Mary Overy, it contains the tomb of the poet Gower and a chapel commemorating John Harvard The Pilgrim Fathers Memorial Church (1864) is successor to the oldest Congregational church in London (1616) Situated at the convergence of roads to London, Southwark had a number of famous inns, among them the TABARD INN, the George Inn (17th cent), now owned by the National Trust, is still operated as an inn Southwark was the site of several hospitals, churches, and theaters, including the Globe Theatre of Shakspere fame In Nov , 1940, in air raids, 20 of Southwark's churches were destroyed

South Waverly, borough (pop 1,212), NE Pa , near the Susquehanna S of Waverly, N Y , inc 1878

Southwell, Robert, 1561?–1595, English Jesuit poet, venerated by Roman Catholics as a martyr, b Norfolk He was brought up a Roman Catholic and educated abroad, mainly at Douai While still too young he begged to be admitted to the Society of Jesus, on being refused he composed a passionate lament In 1580 he made his simple vows as a Jesuit, and in 1586 at his own request, desiring martyrdom as he said, he was sent to England with Father Garnett to minister to the oppressed Catholics. For six years he was active in the south of England as their pastor, but in 1592 he was arrested by treachery and imprisoned After terrible tortures he was tried for treason, and on admitting his priesthood he was *ipso facto* convicted He was hanged, drawn, and quartered His poetry was avowedly animated by a desire to show that poetry might well be used for religious purposes His verse is deeply religious but not sentimental, it is passionate but restrained His best-known poems are *St Peter's Complaint* and *The Burning Babe*, much admired by Ben Jonson See study by Pierre Janelle (1935).

Southwell (sŭdh'l, south'l), town and parish (pop 2,991) and, since 1884, cathedral town of Nottinghamshire, England The present cathedral is on the site of a church founded in the 7th cent. by Paulinus. The ruined palace of the archbishops of York (14th cent.) and Burgage Manor House,

occupied by Byron's mother, are noteworthy. Charles I surrendered to the Scottish commissioners at the Saracen's Head (an inn) in 1646

South-West Africa, territory (318,099 sq mi ; pop. 306,927), SW Africa, on the Atlantic Ocean. The capital is Windhoek. It is bordered on the north by Angola, on the east by Bechuanaland, and on the south and southeast by the Union of South Africa It is mainly an arid plateau 3,000 to 4,000 ft high On the coast, there is a desert strip (extending c 60 to c 100 mi inland), which has valuable mineral resources, including diamonds, vanadium, tin, copper, and lead. Near the eastern border are the Kalahari, with large areas of shrub land that support pastoral nomads The chief export is karakul felt Butter and cheese are manufactured There are rail connections to the Union of South Africa and roads running to Angola and Bechuanaland Bartholomew Diaz visited South-West Africa in 1486 Germany annexed the country in 1885, and it was occupied in the First World War by South African forces It is administered (under a mandate from the League of Nations) by the Union of South Africa which refused to sign an agreement making it a trust territory of the United Nations, but expressed the intention of incorporating the territory

South Williamsport, borough (pop 6,033), N central Pa , on the West Branch of the Susquehanna opposite Williamsport, inc 1886 Its manufactures include furniture, hardware, and textiles

South Windsor (wĭn'zur), town (pop 2,863), N Conn , set off from Windsor 1845 Oliver Wolcott (1726–97) and Jonathan Edwards were born here

Southwold (south'wōld), municipal borough (pop 2,753), Suffolk East, England It is a resort and has a fine 15th-century church The battle of Southwold Bay or Sole Bay between the Dutch under De Ruyter and the English under the duke of York (later James II), aided by the French, took place on May 28, 1672, the result, though not decisive, was in favor of the Dutch

Southworth, Emma Dorothy Eliza Nevitte, 1819–99, American novelist, b Washington, D C Typical of her many romantic and melodramatic novels was *The Hidden Hand* (1859), very popular in its day

South Zanesville, village (pop 1,338), SE central Ohio, near Zanesville

Souvestre, Émile (āmēl' sōōvĕ'stru), 1806–54, French novelist and dramatist He is known for his romances of his native Brittany, including *Les derniers Bretons* (1835) and *Le Foyer breton* (1844) Translated works include *Un philosophe sous les toits* (1853, Eng tr , *The Attic Philosopher*, 1854) and the one-act play, *Mrs Wilbs's Will* (1893)

sovereignty A sovereign state is a free and independent STATE In its external relations it can send and receive ambassadors, make treaties and other international agreements, and declare war and conclude peace Sovereign states are sometimes said to be the only subjects of international law A PROTECTORATE or other subordinate state lacks full international status and in its relations with other governments normally acts through the sovereign protecting state Within the boundaries of a sovereign state, sovereign power may be exercised by an individual (monarchy), by a class (oligarchy), or by all the people, either directly, as in a democracy (e g , a Greek city-state), or through representatives, as in a republic (see LEGISLATURE) Often the form of a government does not accord with the facts. A man may have formal recognition as a monarch, a sovereign, and yet have no authority but that which accrues to him as a symbol of the state, this is the case in Great Britain The form of an aristocracy, a kind of oligarchy, may be retained through sentiment or inertia after the aristocracy has ceased to function politically The form of a democracy or a republic may be retained when the actual sovereignty is in the hands of a few or of one, e g , in Rome just before creation of the empire In its internal relations the sovereign power is that which makes and enforces the supreme law of the land It controls the money and the military power of the state For the special protection of sovereignty the crime of TREASON is established The facts of sovereignty do not agree with the theory as conventionally formulated The absolute freedom of a sovereign state may be abridged by treaties or other obligations In current international practice states are not deemed free to wage war or take other hostile action at will. The chief purpose of the United Nations, like its predecessor the League of Nations, is to restrain such exercises of sovereignty. See Charles E Merriam, *History of the Theory of Sovereignty since Rousseau* (1909); Harold J Laski, *Studies in the Problem of Sovereignty* (1917); Johannes Mattern, *Concepts of State, Sovereignty, and International Law* (1928).

Sovetsk, RSFSR see TILSIT

soviet (sōvĕt', sō'vĕĕt, Rus sŭvyĕt'), primary unit in the political organization of the USSR The term in itself has no political implication, being simply the Russian word for council, and there have been soviets of various kinds in Russia long before the Russian Revolution In the modern political meaning of the word the first soviets were revolutionary committees organized by the Russian Socialists in the Revolution of 1905 among striking factory workers When the RUSSIAN REVOLUTION broke out in March (O S February), 1917, workers', peasants', and soldiers' soviets sprang up all over Russia more or less spontaneously They were led by a central executive committee which was Socialist in composition, but which included—contrary to widespread opinion—not only Bolsheviks, but also Mensheviks (see BOLSHEVISM AND MENSHEVISM) and members of the Socialist Revolutionary party At the first all-Russian soviet congress (June, 1917), the Socialist Revolutionaries had 285 deputies, the Mensheviks 248, and the Bolsheviks only 105 The soviets rather than the provisional government represented the real power in Russia, and when the Bolsheviks under Lenin succeeded in capturing the most important soviets in Petrograd (Leningrad), in Moscow, and in the armed forces, their success was assured The example was imitated by the extreme leftist revolutionists in other countries, notably in Germany and Hungary in 1918–20, where workers', peasants', and soldiers' councils were also formed, but with less success A soviet republic (Ger *Räterepublik*) in BAVARIA was shortlived, and the regime of Bela KUN in Hungary was put down by a counterrevolutionary army and by Rumanian intervention The soviets in the Baltic republics met a similar fate In Russia the soviets remained the basic political units, forming a hierarchy from rural councils to the congress of soviets of the Soviet Union Under the first Soviet constitution only the local soviets were elected by direct suffrage The constitution of 1936 abolished the division of the electorate into occupational classes and instituted elections of all soviets by direct universal suffrage (see *Government, Nationalities, and History* under UNION OF SOVIET SOCIALIST REPUBLICS)

Sovietsk, RSFSR see TILSIT

Sower or **Sauer, Christopher** (both sō'ûr, sou'ur), 1693–1758, American printer, b Germany He came to America in 1724 In 1738 he founded a printing shop in Germantown, Pa , using types imported from Germany A book printed by him in 1739 was the first German book printed in America In the same year he established the first German periodical in America, at first a quarterly, later a monthly In 1743 he printed a German Bible, the second Bible printed in America, the first having been the Bible translated into "the Indian Language" (1663) by John Eliot The second Christopher Sower, son of the first, in 1772 established in Germantown the first type foundry in America The second Sower German Bible was printed by him in 1776 His descendants in Philadelphia continued his work as a publisher See Felix Reichman, *Christopher Sower, Sr , 1694–1758 an Annotated Bibliography* (1943)

Sowerby, Leo (sō'urbē), 1895–, American composer and organist, b Grand Rapids, Mich , grad American Conservatory, Chicago, 1918, and studied composition with Percy Grainger In 1925 he became teacher of composition at the American Conservatory, and in 1927 organist and choirmaster of St James Episcopal Church, Chicago He is a prolific composer whose style is highly individual Important compositions are *A Set of Four* (1917), *From the Northland* (1923), his Second Symphony (1927), and his Third Symphony (1940), for orchestra, his *Medieval Poem* (1926) and a concerto (1938), for organ and orchestra, the oratorios *The Vision of Sir Launfal* (1925), *Forsaken of Man* (1942), and *The Canticle of the Sun* (1944), *Comes Autumn Time* (1916) and his Symphony in G (1932), for organ, anthems and services for the Episcopal church, piano music, and songs

soya bean: see SOYBEAN

Soya Strait see LA PÉROUSE STRAIT

soybean, soya bean, soja bean, or **soy pea,** leguminous plant (*Glycine max, G soja,* or *Soja max*) native to the Orient, where it has been cultivated as a principal crop for probably 5,000 years There are hundreds of varieties in cultivation, producing beans of many sizes, shapes, and colors As a crop, soybeans are high in yield and easy to harvest and grow well wherever corn is cultivated In the Orient they are used in a multitude of forms, e g , as meal, vegetable oil, vegetable cheese and milk, curds or cake, and as a coffee substitute The cake is used as stock feed and as fertilizer, and the green crop for forage and hay In the Occident these and many other products are produced from soybeans Soybean oil is used commercially in the manufacture of glycerin, paints, soaps, linoleum, rubber substitutes, printing ink, and other products. Cultivation of the soybean, long confined chiefly to China and Manchuria, gradually spread to other countries During the Second World War soybeans became important in both North America and Europe chiefly as substitutes for other protein foods and as a source of oil Production in the United States reached its peak during the war See M M Lager, *The Useful Soybean* (1945)

Soyer, Alexis Benoît (ălĕksēs' bunwȧ' swȧyȧ'), 1809–58, French chef and writer on gastronomy and dietary reform After the Revolution of 1830 he went to London and was notable as chef (1837–50) of the Reform Club In 1847 he was commissioned by the government to open kitchens in Dublin for the benefit of Irish famine sufferers In 1855 he went to the Crimea as volunteer cooking adviser to the British army, which was suffering from poor diet After successfully reforming the dietary and cooking arrangements of the army and the military hospitals, he returned to England in 1857, broken in health Soyer invented relishes and sauces, innumerable kitchen utensils, and several stoves of which one, designed (1854) for camps and hospitals, is still used Soyer's publications include *The Pantrophicon, or, History of Food* (1853), *A Shilling Cookery* (1854), and *The Culinary Campaign,* reminiscences of the Crimean War (1857) See Helen Morris, *Portrait of a Chef* (1938).

soy pea see SOYBEAN

Sozomen (sōzō'mĕn), 5th cent , Byzantine church historian, b Gaza A fuller form of his name is Salaminius Hermias Sozomenus His *Ecclesiastical History* was written in 439–50 The nine extant books, covering the years 324–425, are primarily drawn from the history of SOCRATES SCHOLASTICUS, to which Sozomen added some new material His Greek style is elegant

Sozzini, Lelio, and **Fausto Sozzini:** see SOCINUS

Spa (spȧ), town (pop 9,004), Liége prov , SE Belgium, in the Ardennes and near the German border The mineral springs and baths, frequented from the 16th cent , made it one of the most fashionable watering places in the world and made its name so popular that the word *spa* now designates all similar health resorts Spa had its greatest vogue in the 18th and 19th cent , it still is an important resort It was the headquarters of the German army in 1918 In 1920, at the Spa Conference, Germany presented a scheme for reparations payments to the Allies, and the Allies apportioned the payments among themselves

Spaak, Paul Henri (pōl' ărē' spak'), 1899–, Belgian statesman A Socialist, he was elected (1932) a deputy for Brussels and held various cabinet posts after 1935 He served almost continually as foreign minister from 1938 to 1949, sharing in the exile of the Belgian government during the German occupation (1940–44), and he was twice premier (1938–39, 1947–49) His resignation in 1949 was caused chiefly by his intransigent opposition to the return of King Leopold III of the Belgians Spaak acquired international stature as president of the first assembly of the United Nations (1946), as chairman of the Council for European Recovery (1948–49), and as first president of the consultative assembly of the Council of Europe (1949)

Spaatz, Carl Andrew (spôts), 1891–, American general, chief of staff of the U S Air Force (1947–48), b Boyertown, Pa , grad West Point, 1914 An infantry officer, he applied for air training and after 1916 was in aviation He became (1941) chief of the air staff under Henry H Arnold and helped direct American air-force strategy Spaatz served as commander in chief of the U S bombing forces against Germany (1944) and in the Pacific (1945) In 1945 he was promoted general, in 1946 he was made commanding general of the Army Air Forces and in 1947 he began to serve as chief of staff of the U S Air Force

space time, concept in physics holding that time and space are indissolubly united It denies the Newtonian theory that time and space are absolute and independent realities The interdependence of space and time was suggested by H A Lorentz Partly on this concept Albert Einstein based the special theory of relativity describing the universe as a four-dimensional continuum in which events are located by three space (position) coordinates and a time coordinate (the fourth dimension) On this theory Hermann Minkowski based his formulation of a symbolic four-dimensional geometry of space time

Spada, Lionello (lyōnĕl'lō spa'da), 1576 1622, Italian painter His signature was an L placed across a sword [Ital *spada*=sword] Among his works are a number of Holy Family groups, *Aeneas and Anchises, The Concert,* and others (Louvre), *St Dominic Burning the Forbidden Books* (San Domenico, Bologna), the *Miracle of St Benedict* (San Michele in Bosco, Bologna), and the *Vision of St Francis* (Modena) The fresco decorations in the cathedral of Reggio are representative of his style

spade. Before agriculture was practiced, man gathered such foods as the roots of plants and animal foods such as clams In securing these and for other purposes, he assisted his hands with a stick

Men without tools often pry with such a stick, using it as a LEVER and so introducing a mechanical power The spade is a development of the digging stick, which has developed also into such closely related implements as the crowbar, the dibble, the spud, the chisel, and the shovel Since early digging sticks and spades were of wood and have not been preserved, the development of the spade is more conjectural than the development of implements such as the hoe, in which stone and metals were used earlier and more generally Stones were used to weight the digging stick A crossbar was lashed to it, or a forked stick was used, so that a man's foot might apply the weight of his body The point was flattened to a blade After man came to use metals, this blade was sometimes shod with metal and later the blade was made wholly of metal For the development of the digging stick, see H J Peake, *Early Steps in Human Progress* (1933)

Spaeth, Sigmund (spāth), 1885–, American music critic and writer on music, b Philadelphia, grad Haverford College (B A , 1905, M A , 1906), Ph D Princeton, 1910 He was music editor (1914–18) of the New York *Evening Mail* and in 1919 was on the editorial staff of the New York *Times* He was educational director (1920–27) for the American Piano Company and was with Community Concert Service from 1928 to 1931, afterward serving as music critic for several periodicals In 1937 he was appointed dean of the Wurlitzer School of Music He is the compiler of *Read 'em and Weep* (1926) and other anthologies of sentimental songs and is an active popularizer of music, through his radio talks and his books, which include *The Common Sense of Music* (1924), *The Art of Enjoying Music* (1933), *Music for Everybody* (1934), *Fun with Music* (1941), and *A History of Popular Music in America* (1948)

spaghetti, see MACARONI

Spagna, Lo (lō spä'nyä), c 1450–c 1528, Italian painter, b Spain, whence his nickname His real name was Giovanni di Pietro His art belongs to the Umbrian school and reveals his indebtedness to Perugino and Pinturicchio and to Raphael in the Umbrian period The resemblance in manner to these artists is sometimes so close as to have caused confusion regarding the origin of certain works *Marriage of the Virgin* at Caen, now believed to be Lo Spagna's imitation of Raphael's *Sposalizio* in Milan, was long attributed to Perugino and was supposed to have inspired Raphael's picture Of the artist's work good examples are the frescoes *Nine Muses with Apollo* (Capitol, Rome), frescoes and altarpieces (Assisi), *Madonna* (Louvre), *Nativity* (Vatican), and *Pietà* (National Gall of Art, Washington, D C)

Spagnoletto, Lo see RIBERA, JUSEPE

Spahis (spə'hēz), mounted army corps under the Ottoman Empire Unlike the early Janizaries, the Spahis were drawn from the Moslem population They were organized on a basis of personal loyalty, and their officers held feudal fiefs The corps was disbanded (early 19th) by Mahmud II In the French army certain Algerian and Senegalese cavalry units, famous for their flashy dress uniforms, are also known as Spahis

Spain, Span *España* (äspä'nyä), state (194,232 sq mi , pop 25,877,971, including the Canary Islands), SW Europe It consists of the Spanish mainland, which occupies the major part of the Iberian Peninsula, of the BALEARIC ISLANDS in the Mediterranean, and of the CANARY ISLANDS in the Atlantic Ocean Madrid is the capital The Spanish colonies in Africa are Spanish Sahara, Spanish Guinea, and the territory of Ifni, N MOROCCO is a Spanish protectorate Continental Spain extends from the PYRENEES, which separate it from France, and from the Bay of Biscay, an arm of the Atlantic Ocean, southward to the Strait of Gibraltar, which separates it from Africa (Gibraltar itself is a British possession) The eastern and southeastern coast of Spain, from the French border to the Strait of Gibraltar, is washed by the Mediterranean In the west, Spain borders on the Atlantic Ocean both north and south of its frontier with Portugal The small republic of Andorra is wedged between France and Spain in the Pyrenees Administratively, Spain is divided into 50 provinces However, the division into geographic and historic regions, generally corresponding to the old Christian and Moorish kingdoms of Spain, has been maintained for most practical purposes The center of Spain forms a vast plateau (Span *Meseta Central*) extending from the CANTABRIAN MOUNTAINS in the north to the SIERRA MORENA in the south and from the Portuguese border in the west to the low ranges that separate the plateau from the Mediterranean coast in the east It is traversed from west to east by mountain chains—notably the Sierra de GUADARRAMA—and the valleys of the DOURO, the TAGUS, and the GUADIANA rivers Except for some fertile valleys and irrigated lands, the central plateau is an arid and thinly populated region, wheat growing and sheep raising are the principal resources It comprises Old CASTILE and New CASTILE, the heart of Spain, and in the west, LEON and ESTREMADURA The chief cities are MADRID, BURGOS, and TOLEDO in Castile; VALLADOLID, LEON, ZAMORA, and SALAMANCA in Leon, and BADAJOZ in Estremadura To the northeast of the central plateau is the broad valley of the EBRO, which traverses ARAGON and flows into the Mediterranean Aragon extends north to the French border and has SARAGOSSA as chief city, it is historically and geographically connected with CATALONIA, which occupies the Mediterranean coast from the French border to the mouth of the Ebro BARCELONA, the chief Catalan city, is the largest port and the second largest city of Spain The W Pyrenees and the northern coast, paralleled by the Cantabrian Mts , are occupied by NAVARRE, with PAMPLONA, the BASQUE PROVINCES, with the ports of BILBAO, SANTANDER, and SAN SEBASTIÁN, and ASTURIAS, with OVIEDO and the port of GIJÓN The extreme northwestern section, occupied by GALICIA, has a deeply indented coast and the excellent ports of La CORUÑA, El FERROL, and VIGO Galicia, the Basque Provs , Catalonia, and the Madrid region are the most densely populated parts of Spain Along the eastern coast, S of Catalonia, extend the regions of VALENCIA and MURCIA, named after their chief cities The Balearic Islands, with PALMA as capital, are off the coast of Valencia The southernmost part of Spain, S of the Sierra Morena, is ANDALUSIA, it is crossed by the fertile GUADALQUIVIR valley A subtropical region, Andalusia produces abundant crops of olives, fruit, and wheat, horses and cattle are raised extensively The chief cities of Andalusia are SEVILLE, CORDOBA, and GRANADA, the Mediterranean port of MALAGA, and the Atlantic port of CADIZ The SIERRA NEVADA, rising from the Mediterranean coast, has the highest peak (11,411 ft) entirely within Spain Primarily an agricultural country, Spain produces large crops of citrus fruit, olives, grapes, vegetables, and cork, besides cereals Oranges, olive oil, and wines are among its chief export articles The best-known wine regions are those of RIOJA, in the upper Ebro valley, and of Málaga and JÉREZ DE LA FRONIERA, in Andalusia Agriculture is handicapped in many regions by quasi-feudal conditions, insufficient irrigation, soil exhaustion, and erosion Extensive sheep grazing, though it has helped the Spanish textile industry in past ages, has contributed to the soil exhaustion Despite the wealth of the great noble and ecclesiastic landowners, Spain is essentially a poor country, and its population is frugal and hard-working Industries are chiefly concentrated in the Madrid region, in Catalonia, which has large textile manufactures, and in Asturias and the Basque Provs , where the rich mineral resources of the Cantabrian Mts (iron, coal, and zinc) are exploited Copper is mined extensively at RIO TINTO, other mineral resources include lead, silver, tin, and mercury Metals are a major item in Spanish exports Fishing is an important source of livelihood for the coastal population, and fish canning is a major industry Overland communications are generally poor Spanish railroads, unlike those of the rest of Europe outside Russia, use broad-gauge tracks, a fact which hinders trade with France The Spanish people, despite the strongly centralized government and the great religious unity (nearly all Spaniards are Roman Catholics) displays great regional diversity Separatist tendencies remain particularly strong among the Catalans and the Basques The Castilian dialect has become the standard Spanish language, but Catalan (akin to Provençal), Galician (akin to Portuguese), and Basque, totally unrelated to any other language, are still extensively spoken and written in their respective districts The Roman Catholic Church is the established church in Spain, although private worship is permitted to all faiths There are nine archiepiscopal sees, the archbishop of Toledo holding the rank of primate Illiteracy is high among the lower classes despite laws compelling elementary education Among the 12 universities those of Salamanca, Madrid, and Barcelona are the most important For the constitution of Spain, see the end of this article

Spain before the Moslem Conquest Civilization in Spain dates back to the Stone Age The BASQUES may be descended from the prehistoric men whose art has been preserved in the ALTAMIRA caves They antedated the IBERIANS, who mixed with Celtic invaders at an early period Because of its mineral wealth and its position guarding the Strait of Gibraltar (the Pillars of Hercules of the ancients), Spain has been known to the Mediterranean peoples from very early times The Phoenicians passed the strait and established (11th cent B C) colonies in Andalusia, notably at Cádiz and Tartessus (possibly the biblical TARSHISH) Later the Carthaginians settled on the east coast and the Balearic Islands, where Greek colonies also sprang up In the 3d cent B C , the Carthaginians under HAMILCAR BARCA began to conquer most of the Iberian Peninsula and the Balearics and established CARTAGENA as capital However, the Roman victory over Hannibal in the second of the PUNIC WARS (218–201 B C) resulted in the expulsion of the Carthaginians The Romans conquered E and S Spain, but met strong resistance elsewhere, notably in the north The fall (133 B C.) of NUMANTIA marked the end of organized resistance, and by the 1st cent A D Roman control was virtually complete Except for the Basques, the Iberian population became thoroughly Romanized The Iberian Peninsula at the time of Augustus was made up of the provinces of Tarraconensis, Lusitania (including present Portugal and part of Spain), and Baetica (roughly, present Andalusia) Roman rule brought political unity, law, and economic prosperity. Christianity was introduced early, St Paul is supposed to have visited Spain, and St James the Greater is its apostolic patron Natives of Spain contributed increasingly to both pagan and Christian literature in Latin Among them were Seneca, Martial, and Quintilian In A D 409 Spain was overrun by the first wave of Germanic invaders, the Suevi and the VANDALS They were followed by the VISIGOTHS, who forced the Vandals to emigrate into Africa and established (419) their kingdom in Spain and S Gaul, with Toulouse as capital The victory (507) of the Franks under Clovis over ALARIC II at Vouillé resulted in the loss of most of Gaul, in the Iberian Peninsula, Belisarius temporarily reconquered (554) S Spain for the Byzantine Empire, however, the Visigoths soon regained S Spain and in 585 also conquered the kingdom of the Suevi in Galicia The Visigothic capital after the loss of Toulouse was at Toledo The Germanic Visigoths, who adhered to the Arian heresy until the late 6th cent , and the Catholic and Romanized native population lived side by side under two separate codes of law (see GERMANIC LAWS), fusion of the two elements was very slow King RECESWINTH imposed (c 654) a common law on all his subjects His code remained the basis of medieval Spanish law Learning was cultivated almost exclusively by the Roman Catholic clergy, among whom OROSIUS and St ISIDORE OF SEVILLE were outstanding Byzantine cultural influence remained strong, but was probably less important than that of the JEWS, who had settled in Spain in large numbers after their dispersal Politically, the Visigothic kings were weak and dependent on the powerful clergy and nobles When, in 711, a Moslem army under TARIK crossed the Strait of Gibraltar into Spain, the last Visigothic king, RODERICK, was defeated and his kingdom collapsed

Moslem Spain and the Christian Reconquest The Moors, as the Berber conquerors were called, soon conquered the entire peninsula save for Asturias and the Basque country Córdoba became the capital of the emir, who governed in the name of the caliph In 756, however, ABDU-R-RAHMAN I, scion of the OMAYYAD dynasty, overthrew the emirate and set up the Western caliphate, or caliphate of Córdoba This Moslem state, which reached its greatest splendor under ABDU-R-RAHMAN III, included all but northernmost Spain In the northeast, CHARLEMAGNE created (778) the Spanish March, out of which grew the county of Barcelona (i e , Catalonia) In the W Pyrenees, the Basques held out against both Frankish and Moorish attacks and eventually united in the kingdom of Navarre Asturias, the only remnant of Visigothic Spain, became the focus of the Christian reconquest The rulers of Asturias, descended from the semilegendary PELAYO, conquered vast territories in NW Spain and consolidated them with Asturias as the kingdom of Leon Navarre, under a branch of the Asturian line, reached its greatest prominence under SANCHO III (1000–1035), who also controlled Aragon and Castile His state split up at his death into three kingdoms Navarre, which soon lost its importance, Aragon, which united (1137) with Barcelona (see ARAGON, HOUSE OF), and Castile, which eventually was united with Leon (1230) under Ferdinand III and with Aragon (1479) under Isabella I and Ferdinand V This long process of unification was accomplished by marriage and inheritance as well as by warfare among the Christian kings, it was accompanied by the steady expansion of the Christian kingdoms at the expense of the Moors The Omayyad empire had broken up early in the 11th cent into a number of petty kingdoms or emirates The ALMORAVIDES of Córdoba were the most important of these dynasties They called in the ALMORAVIDES from Africa to aid them against Alfonso VI of Castile As a result, the Almoravides took over Moorish Spain, but they in turn were replaced (1176) by the ALMOHADES, another Berber dynasty In the battle of Navas de Tolosa (1212), a turning point in Spanish history, the Almohades were defeated by Alfonso VIII of Castile, who expelled them from Spain Little more than the kingdom of Granada remained in Moorish hands, it held out until its conquest by Ferdinand and Isabella in 1492. Disunity among the Moors probably facilitated the Christian reconquest It must be remembered, however, that the states of Christian Spain also were frequently engaged in bloody rivalry and that the Christian kings were in almost continuous conflict with the powerful nobles Alliances between Moslem and Christian princes were not rare, and the Christian reconquest was a spasmodic, not a continuous, process. A major cause of the Chris-

tian victory was that Christian Spain was in a stage of dynamic expansion and religious enthusiasm while Moorish Spain, having attained a high degree of civilisation and material prosperity, had lost its military vigor and religious zeal The successors of the warlike and fanatic Almoravides and Almohades, a thin ruling class, were unpopular with the rest of the inhabitants of Moorish Spain In the Moorish cities Moslems, Jews, and Christians (see MOZARABS) lived side by side in relative harmony and mutual tolerance Their excellent craftsmen and industries were famous throughout Europe, and their commerce prospered Agriculture, helped by extensive irrigation systems, was more productive under the Moors than it has been ever since To the Christian nobles of N Spain, particularly of Castile and Leon, the flowering cities and countryside to the south were a constant temptation The united state of Aragon and Catalonia, more prosperous than the other Christian kingdoms, was less active in the reconquest and was more concerned with its Mediterranean empire—the Balearics, which for a time formed the separate kingdom of MAJORCA, Sardinia, Sicily, and Greece Portugal also, after winning its independence in the 12th cent , developed as an Atlantic sea power and took part only in local campaigns against the Moors It was thus under Castilian leadership that the reconquest was completed, and it was the Castilian nobility that formed the nucleus of the class of feudal magnates—the grandees—who were the ruling class of Spain for centuries after the reconquest The fall of Granada (1492) made FERDINAND V and ISABELLA I rulers of all Spain, but it did not in itself make Spain a purely Christian state In their zeal to achieve religious unity, the Catholic rulers expelled, in the same year, the Jews from Spain Until 1492 the Jews and the Moslems had been allowed to live in reconquered territory, attempts at conversion were made, but force was generally not used The expulsion of the Jews deprived Spain of a large part of its most useful and active population Many went to the Levant and to the Netherlands, where their skills, capital, and commercial connections benefited their hosts The Mudejares, as the Moslems in reconquered Spain were called, were not immediately expelled, but after an uprising they were forcibly converted (1502) to Christianity Many of the MORISCOS [Christian Moors] secretly adhered to Islam After many persecutions, they were finally expelled in 1609 The Jewish-Moorish legacy to Spain and to Western Europe is immense Moorish architecture (see MOSLEM ART AND ARCHITECTURE) has left a deep imprint on Spain, its most famous example is the ALHAMBRA of Granada Arabic scholars such as AVERROËS and Jewish scholars such as MAIMONIDES had a major share in the development of Christian scholasticism Material legacies of Moorish Spain included the great steel industry of Toledo, the leather industry of Córdoba, and the intensive plantations of olive and fruit trees By fostering the exploitation of central Spain for sheep grazing, Ferdinand and Isabella unwittingly prepared the ruin of much land that had been fruitful under the Moors The major economic revolution that occurred during their reign was, however, the discovery (1492) of America by Columbus By the Treaty of TORDESILLAS (1494) Spain and Portugal divided the world into two spheres of influence Almost all of South America, Central America, S North America, and the Philippines were added to the Spanish world empire in the 16th cent Gold, the primary objective of the conquistadores, flowed into Spain in fabulous quantities The influx of gold contributed to the decline of Spanish industry and trade, and much of the gold soon found its way into other countries These consequences, however, were not foreseen, and Spain, in the 16th cent , was the first power of the world, with an empire "on which the sun never set," with fleets on every sea, and with a brilliant cultural, artistic, and intellectual life In the ITALIAN WARS (1494–1559) Spain triumphed over its chief rival, France, and added Naples (see NAPLES, KINGDOM OF) and the duchy of MILAN to its dependencies The accession in 1516 of Charles I (elected emperor in 1519 as CHARLES V) brought the Spanish monarchy to the height of its glory and completed the unification of Spain

Golden Age and Decline When Charles I, first of the HAPSBURG kings (who ruled Spain from 1516 to 1700), succeeded Ferdinand V, Spain was still divided into separate kingdoms and principalities, united chiefly in the person of a common ruler Each had its separate CORTES and its own customary law The cities, which had retained their individuality since Roman times, enjoyed great privileges and independence Charles had to be acknowledged by each individual cortes at his accession. Castile was nominally ruled jointly by Charles and his mother, JOANNA, until Joanna's death The centralizing policies of Charles's predecessors had curtailed some of the local powers, particularly in Castile, but Charles's efforts to continue the centralising process and his fiscal policies resulted in an uprising of the cities—the war of the *comunidades*—in 1520–21. The rising was suppressed and its leader, PADILLA, was executed. By the time Charles abdicated (1556) in Spain in favor of his son PHILIP II, Spain was on its way to becoming a centralized and absolute monarchy Under Philip II the process was completed, although Catalonia and the Basque Provs continued to manifest their hostility to the central government by frequent uprisings During Philip's reign also the Church acquired its predominant position in all aspects of Spanish life The Spanish INQUISITION was organized by TORQUEMADA in the late 15th cent but reached its greatest power under Philip At the same time the Catholic Reform was forwarded in Spain by St IGNATIUS OF LOYOLA, St THERESA of Ávila, and St JOHN OF THE CROSS With Spain, Philip had also inherited Sicily, Naples, Sardinia, Milan, Franche-Comté, the Netherlands, and all the Spanish colonies His attempt to impose the Inquisition on the NETHERLANDS precipitated the Dutch struggle for independence The northern provinces of the Netherlands shook off the Spanish yoke while the southern provinces (see NETHERLANDS, AUSTRIAN AND SPANISH) were subjugated after years of bloody warfare As the champion of Catholicism in Europe, Spain also unsuccessfully intervened in the French Wars of Religion by sending an army to support the LEAGUE against Henry IV Spanish military power, which had achieved its greatest successes in the Treaty of CATEAU-CAMBRÉSIS (1559) and in the naval victory at LEPANTO over the Turks (1571), was on the decline The rivalry on the seas between Spain and England culminated in the attempted conquest of England by the Spanish ARMADA (1588), its dismal failure was a blow from which Spain never recovered Under Philip II's successors, PHILIP III and PHILIP IV, Spain was drawn into the THIRTY YEARS WAR (1618–48), prolonged by war with France until 1659 The peace treaties (see WESTPHALIA, PEACE OF, PYRENEES, PEACE OF THE) made France the leading continental power of Europe The wars of Louis XIV of France (see DUTCH WARS, DEVOLUTION, WAR OF, GRAND ALLIANCE, WAR OF THE) cost Spain further territories and military prestige PORTUGAL, united with Spain by Philip II in 1580, had regained its independence in 1640 The political weakness of Spain was complicated by the absence of a direct heir to CHARLES II, who succeeded Philip IV in 1665 The chief claimants to the succession were Louis XIV of France and Archduke Charles of Austria (later Emperor CHARLES VI) The pro-French party at the Spanish court ultimately won out when Charles II designated Louis XIV's grandson, Philip (later PHILIP V of Spain) as successor Protracted negotiations among the European powers, regarding a partition of the Spanish empire, preceded the outbreak, on Charles's death, of the War of the SPANISH SUCCESSION (1701–14) The Peace of Utrecht (see UTRECHT, PEACE OF) confirmed Philip V on the Spanish throne, but it transferred the Spanish Netherlands, Milan, Naples, and Sardinia to Austria and Sicily to Savoy Attempts to recover these losses and to revive Spanish prestige were fostered by Philip's ambitious queen, ELIZABETH FARNESE, and his chief minister, ALBERONI, they merely led (1718) to the formation of the QUADRUPLE ALLIANCE, which in 1720 imposed upon Spain a but slightly more favorable settlement in Italy Spain under its BOURBON kings came increasingly under French influence after the FAMILY COMPACT of 1733 and its successors With the aid of France, Spain regained (1735) Naples and Sicily in the War of the POLISH SUCCESSION These two kingdoms, however, no longer were administered by Spanish viceroys but were ruled independently by a cadet branch of the Spanish Bourbons In the Treaty of Paris of 1763 (see PARIS, TREATY OF), Spain lost FLORIDA to England but was compensated with LOUISIANA by France In the American Revolution, Spain sided with the United States and France and recovered Florida in the Treaty of Paris of 1783 These, however, were short-lived successes Of greater benefit to Spain were the internal reforms carried out by ENSENADA and later by FLORIDABLANCA under Philip V's successors, FERDINAND VI and CHARLES III The economy of Spain had steadily deteriorated since the reign of Philip II The large influx of gold had long ceased, though only little of the gold had stayed in Spain, its ill effects remained The colonization of the vast Spanish empire and the many costly wars had depleted the population The peasants lived in misery on the inefficiently run estates of the grandees The court and government had decayed in an atmosphere of bigotry, incompetence, and corruption The Church, exhausted by the struggle between the popes and the kings, had largely ceased its political role as a constructive force and was using its influence for the perpetuation of the existing order The towering artistic, literary, and scholarly achievements of the 16th-cent (the Golden Century) had given place, by the mid-18th cent , to meaningless convention The attempts at reform in the second half of the 18th cent , though sincere, intelligent, and moderately successful, could not restore the nation's economic and political health overnight The expulsion of the Jesuits in 1767, hailed as a liberal measure, had little effect in Spain and generally unfortunate effects in Spanish America CHARLES IV, who succeeded Charles III, was an incompetent monarch, dominated by his wife, MARÍA LUISA, and her favorite, the able but unscrupulous GODOY Drawn into the FRENCH REVOLUTIONARY WARS and the Wars of NAPOLEON I, Spain underwent its greatest humiliation in 1808 with the successive abdications of Charles and his son, FERDINAND VII, the installation of Joseph BONAPARTE on the Spanish throne, and the occupation of Spain by French troops However, the rigor and heroism displayed by the common people of Spain in their struggle against the conqueror (see PENINSULAR WAR) proved that Spain had lost nothing of its basic vitality By 1814 the Spanish resistance forces and the British under Wellington had expelled the French, and Ferdinand VII was restored under a constitution drawn up in 1812 at Cádiz by the first national Cortes of Spain

Monarchists and Republicans The nationalist and liberal upsurge that swept over Spain and its overseas empire during the Peninsular War was focused, somewhat incomprehensibly, on the person of Ferdinand VII After his restoration Ferdinand, through his reactionary measures, channeled the forces that had placed him on the throne into the opposition At home, the liberal and radical forces were to attack the very institution of the monarchy, overseas, they brought about the independence of the Latin American nations By 1825 all Latin America except several territories in the West Indies had gained independence Through the SPANISH-AMERICAN WAR (1898) Cuba, Puerto Rico, and the Philippines were lost In Spain itself, Ferdinand's refusal to honor the constitution resulted in the revolution of 1820, put down in 1823 by French troops acting for the Holy Alliance Shortly before his death (1833), Ferdinand altered the law of succession in favor of his daughter, ISABELLA II, and to the detriment of his brother, Don CARLOS Isabella succeeded under the regency of her mother, MARIA CHRISTINA, but her succession was contested by the CARLISTS in a bitter war that raged until 1839 Her turbulent reign (1833–68), which ended in abdication, was a series of uprisings, military coups d'état, new constitutions, and dictatorships Politics were largely a matter of personalities—among these ESPARTERO, NARVÁEZ, PRIM, and O'DONNELL were outstanding—but factions generally fell into three groups the extreme reactionaries, who included the Carlists, the moderates and progressives, who theoretically favored a constitutional monarchy, but who tended to rule dictatorially when they came into power, and the republicans The Catalan and Basque separatists favored whichever party happened to oppose the central government After the abdication (1868) of Isabella, the Cortes set up a constitutional monarchy and chose AMADEUS, duke of Aosta, as king New disorders broke out, and Amadeus abdicated in 1873 The short-lived Spanish republic (1873–74) was torn by another Carlist War, which continued until 1876 ALFONSO XII, son of Isabella, was placed on the throne by a coalition of moderate parties, and in 1876 a new constitution was adopted By the end of the 19th cent the Socialist and Anarcho-Syndicalist parties began to gain a wide following among the working classes, particularly in industrial Catalonia and in the mining districts of Asturias Strikes and uprisings, usually suppressed with great brutality, became characteristic features of 20th-century Spain Anticlerical- rather than anti-Catholic—feeling was violent among the revolutionary, and even among liberal, elements Spain under ALFONSO XIII (reigned 1885–1931) remained neutral in the First World War In 1923 a new outbreak in Catalonia was repressed and resulted in the establishment of a military dictatorship under PRIMO DE RIVERA Widespread opposition forced Primo de Rivera's resignation in 1930, in 1931, after a great republican victory in municipal elections, Alfonso XIII was deposed and a republic established The first president, ALCALÁ ZAMORA, soon resigned in protest against the extreme anticlerical legislation of the Cortes and was succeeded by AZAÑA There were serious separatist and Anarcho-Syndicalist uprisings in Catalonia The government was shifted to the right, and in 1934 a miners' uprising in the Asturias was drowned in blood However, the Popular Front (republicans, Socialists, Communists, and syndicalists) won an overwhelming victory in the national elections in 1936 Before the new government under Azaña had time to carry out its program, a military rebellion precipitated the great civil war of 1936–39 The Insurgents, who soon came under the leadership of Gen Francisco FRANCO, embraced most conservative groups, notably the monarchists, Carlists, most of the army officers, the clericalists, the landowners and industrialists, and the fascist FALANGE Their forces received the immediate military aid of Germany and Italy The Loyalists were supported by the Popular Front parties and

by the nationalists in Catalonia and the Basque Provs , which had at last been granted autonomy Thanks to the "non-intervention" policy of England and France, the Loyalists received virtually no outside support except for an International Brigade and for some meager aid from the USSR Originating in Spanish Morocco, the rebellion soon spread over all Spain Despite their military inferiority and their internal divisions, the Loyalists made a remarkably determined stand, particularly in central Spain and Catalonia Madrid, defended by General MIAJA, held out until the end of the war Celebrated incidents of the civil war were the resistance of the alcazar of TOLEDO against the siege by the Loyalists (1936), the Loyalist victory (1937) over Italian forces near Guadalajara, and the bombing (1937) of GUERNICA and other undefended cities by German planes By the beginning of 1938 the territories held by the Loyalists had shrunk drastically, and with the fall (Jan , 1939) of Barcelona the war was almost over Madrid surrendered in March, 1939 The Loyalist government and many thousands of refugees fled into France, and the government of Franco was soon recognized by all major powers save the USSR A corporative state was set up under Franco's dictatorship The Church was restored its property and its favored position, though there was much friction between Church and state The Falange was the sole legal party, and the leftist opposition was energetically suppressed Catalan and Basque autonomy was abolished Despite its membership in the AXIS, Spain remained more or less neutral (though friendly to the AXIS powers) throughout the Second World War The dismissal (1942) of SERRANO SUÑER curbed the power of the Falange and inaugurated a more cautious policy toward the Allies After the war the Franco regime succeeded in retaining its power despite internal opposition from leftist and liberal groups as well as from the disappointed monarchists, and despite the hostility of the Allies. The United Nations, refusing to recognise the constitutionality of the Franco regime, excluded Spain from membership In 1947 Franco declared Spain a monarchy, with a regency council and himself as the head of the state, the eventual succession to Franco by a king or a regent was to be determined by the regency council This law of succession was approved in a referendum The Cortes was reestablished, along fascist lines, in 1942, and in 1945 The major problems of Spain remained the explosive political situation and the healing of the deep scars left by the civil war Among recent descriptive works on Spain is S F A Cole, *Spain Everlasting* (1945) The authoritative historian of Spain is Rafaél ALTAMIRA Y CREVEA See also Eduardo Pérez Pujol, *Historia de las instituciones sociales de la España Goda* (4 vols , 1896), M A S Hume, *Spain Its Greatness and Decay* (1898), H B Clarke, *Modern Spain, 1815–1898* (1906), Stanley Lane-Poole and Arthur Gilman, *The Moors in Spain* (new ed , 1911), R B Merriman, *The Rise of the Spanish Empire* (4 vols , 1918–36), Antonio Ballesteros y Beretta, *Sintesis de historia de España* (1920), H D Sedgwick, *Spain* (1925), Sir George Young, *The New Spain* (1933), Louis Bertrand and Sir Charles Alexander, *The History of Spain* (1934), Eladio García and Modesto Medina, *Historia de España* (1934), E Allison Peers, *The Spanish Tragedy, 1930–36* (1936), Frank Jellinek, *The Civil War in Spain* (1938), Robert Sencourt, *Spain's Ordeal* (1940), Salvador de Madariaga, *Spain* (new ed , 1943), Luis Quintanilla, *Franco's Black Spain* (1946)

Spalatin, George (shpä'lätēn), 1484–1545, prominent German reformer His original name was Georg Burckhardt, and he was called Spalatin after his birthplace, Spalt, near Nuremberg Spalatin was devoted to the Lutheran cause, and as secretary and court preacher to Frederick III, elector of Saxony, he served as intermediary between Martin Luther and Frederick Since Luther was frequently dependent upon the sympathy of Frederick, the presence of an ally at court was a factor important to the success of the Reformation After Frederick's death in 1525 Spalatin became canon at Altenburg, although he retained his influence at court as counselor to the two succeeding electors, John the Constant and John Frederick He wrote *Annales reformationis*, a record of events and rulers of the Reformation period

Spalato, Yugoslavia see SPLIT.

Spalding, Albert (spôl'dĭng), 1888–, American violinist, b Chicago, studied in Italy and France He made his debuts in Paris in 1906 and in New York in 1908 and won wide popularity on his extensive tours See his autobiography, *Rise to Follow* (1943)

Spalding, Lyman, 1775–1821, American physician, b Cornish, N H , M B Harvard, 1797 He lectured at Dartmouth medical school and taught anatomy at the College of Physicians and Surgeons, Fairfield, N Y He introduced vaccination for smallpox in Portsmouth (1801) and studied yellow fever and hydrophobia In 1820 he founded the U S Pharmacopoeia

Spalding (spôl'dĭng), urban district (1931 pop. 12,595; 1943 estimated pop. 13,700), in the Parts of Holland, Lincolnshire, England, on the Welland and SW of Boston, in a productive farm region The town has a Dutch aspect, with numerous market and nursery gardens. The parish church dates from 1284 Ascough Fee, or Ascoughfee, Hall (15th cent.), in the vicinity, is now a museum.

Spallanzani, Lazzaro (läd'dzärō spal-läntsä'nē), 1729–99, Italian naturalist He was professor at the universities of Modena (1763–69) and Pavia (from 1769) His important researches included studies of the digestive action of saliva, regeneration of tissue, circulation in embryos, and respiratory changes in cold-blooded and warm-blooded animals He performed experiments disproving J T Needham's theory of spontaneous generation.

Spandau (shpän'dou), former town, since 1920 a western district (pop 159,599) of Berlin, Germany, on the Havel river at its confluence with the Spree. It is an inland port and an industrial center with steel mills and large manufactures of electrical equipment Chartered in 1232, Spandau became one of the main fortress towns in Brandenburg. Its fortress was occupied in the Thirty Years War by the Swedes (1631–34) and in the Napoleonic Wars by the French (1806–13), later it became a dread political prison After 1945 Spandau was included in the British occupation sector of Berlin

Spangenberg, August Gottlieb (ou'gŏst gôt'lēp shpäng'ünbĕrk), 1704–92, a bishop of the MORAVIAN CHURCH and a founder of that church in America, b Prussia At the Univ of Jena, he met Graf von Zinzendorf, in 1730 he paid a visit to the Moravian colony, Herrnhut In 1732 he joined the theological faculty of the Univ of Halle, but disagreement with the views of his superiors led to his dismissal He became assistant to Zinzendorf and was sent by him on a mission to America in 1735 There, for a large portion of his life, Spangenberg was active in establishing settlements, churches, and schools in Georgia, Pennsylvania, and North Carolina In 1744 he was made bishop Zinzendorf died in 1760 and two years later Spangenberg returned to Herrnhut, where he held a place of leadership among the Brethren His *Idea Fidei Fratrum* (1779, Eng tr , 1784) was adopted as the declaration of faith of the Moravian Church Among his other writings is a life of Zinzendorf

Spangler, borough (pop 3,201), Cambria co , SW Pa , NW of Ebensburg, inc 1893

spaniel (spă'nyul), name of a large group of dogs probably the earliest type of sporting dog Spaniels are believed to have originated in Spain, and records of the existence of the spaniel date from the 14th cent In general the spaniels have silky coats, sometimes wavy or curled, relatively short legs, and long ears Spaniels were early differentiated into two main groups, the land spaniels and the water spaniels There are a number of breeds of land spaniels One of the oldest is the *Brittany spaniel*, the only spaniel that points game in hunting It does not very closely resemble the other land spaniels Its shoulder height is from 17 to 19¾ in , although the standards accept males slightly taller The coat is short and either orange and white or liver and white, both combinations preferably speckled with roan The *Clumber spaniel* is rather heavily built, with a long, low-set body It was early developed in England and proved to be an excellent retriever It has a silky, straight coat, of lemon and white or orange and white, with few markings preferred The *cocker spaniel* is the smallest of the sporting spaniels Although it was bred for flushing and retrieving game, it has won wide popularity as a pet The American type cocker spaniel is a compact, muscular dog with a silky coat (other flat or slightly waved), lobular low-set leathery ears covered with long hair, and feathered legs In color it may be solid black or red, liver or cream colored, or parti-colored The American cocker is similar to the original cocker, the English type, which averages a little heavier than the American The *field spaniel* was developed in England from crosses between the cocker and the Sussex spaniels It is larger than the cocker, weighing from 35 to 50 lb , and is commonly solid black in color, although liver, roan, and mahogany red are also acceptable The *springer spaniel* is known in the English and Welsh breeds The English springer spaniel originated in England and was trained in hunting to spring up and flush birds It has become popular as a pet in the United States The coat is glossy and flat or wavy and is usually black and white, liver and white, black and tan, or black, white, and tan The Welsh springer spaniel is smaller than the English and is always red and white (a color combination not acceptable in the standards for the English type). A coat of a rich golden liver color marks the *Sussex spaniel*, favored in England for hunting in rough country It is larger and heavier than the cocker spaniel. Among ancient breeds of the *toy spaniel* are the Japanese spaniel and the Maltese dog. There are two breeds of the *water spaniel*, the American and the Irish The American breed is a sturdy, muscular dog, the males weighing from about 28 to 45 lb., a good swimmer, and useful as a retriever on land and in the water Its tightly curled coat is dark chocolate or liver in color; the ears are long and wide and covered with thick curls. Tallest of the spaniels is the Irish water spaniel; males stand from 22 to 24 in at the shoulder Its tightly curled, water-repellent coat is solid liver in color. It has a curly topknot, and the ears are covered with curls. The tail, beyond its root, has such short hair that it appears bare

Spanish, river of S Ontario, issuing from Spanish Lake, NW of Sudbury, and flowing 153 mi. generally S and SW through Baskotasi and Agnew lakes to Lake Huron opposite Manitoulin island.

Spanish Africa, name for the Spanish possessions in Africa, i e , the Canary Islands, Ifni, Spanish Guinea, Spanish Morocco, and Spanish Sahara

Spanish America, Spanish-speaking countries of LATIN AMERICA Spanish America includes Mexico, Central America (except British Honduras) with Panama, South America (except Brazil and Guiana), Cuba, the Dominican Republic, and Puerto Rico These lands are also collectively called Hispanic America

Spanish American literature. The story of Spanish American literature, in one sense, begins with the letters of Christopher Columbus and the reports of the later Spanish conquistadors, for, though the writing was purely Spanish and by aliens, its subject matter was American Some of the early reports and chronicles had considerable literary merit The conqueror of Mexico, Hernán Cortés, wrote with vigorous narrative style, and the chronicle by his companion, Bernal DÍAZ DEL CASTILLO, is still read today for the crisp prose in which he described the stirring events of the warfare and the wonders of a new land Admiration of things American early gave a less Spanish tone even to writings that were in the strict Spanish mode, as in the notable epic, *La Araucana*, in which Alonso de ERCILLA Y ZÚÑIGA after he had returned to Spain praised the valor of the Araucanian Indians against whom he had fought in Chile Other captains and many missionary priests wrote of the new land, and even before *La Araucana* had appeared late in the 16th cent , the first of the gifted literary sons of the New World, GARCILASO DE LA VEGA (the Inca), who was the son of a Spanish captain and an Inca princess, had written histories of the glory of the Inca empire and of its downfall before the swords of the Spanish He was, however, writing in Spain, not in America Yet with the growth of Spanish colonial society in the New World, small literary circles appeared, notably in the viceregal capitals of Mexico city and Lima, and much writing was done. Most of it was of poor quality and was strictly imitative of the fashions of Spanish literature, making due allowance for the time of transportation across the Atlantic Poetry was written in the overblown and obscure style known as Gongorism (after Luis de Góngora y Argote), and the more accomplished priests contrived sermons suited to the best baroque taste but with little content Yet great artists did appear Juan Ruiz de Alarcón, although he must be counted as a Spanish writer (and one of the greatest in the greatest period of Spain's literature), was Mexican by birth That remarkable nun, Sor JUANA INÉS DE LA CRUZ, was able by her genius to soar above the mannerisms of the late 17th cent , she was a woman of learning, a feminist, and an able writer in prose, though she is best remembered for her poetry, witty and satirical as well as touching and exquisite She was unquestionably the greatest figure of the colonial period When that period was brought to an end by the revolutions of the early 19th cent , it was accompanied by bursts of able patriotic writing The Liberator himself, Simón Bolívar, showed some of the qualities that made him a leader in his clear and well-proportioned prose His victory at Junín was also celebrated in a long poem by one of the three great poets of the period, the Ecuadorean José Joaquín OLMEDO He, with the Cuban José María HEREDIA and the Venezuelan Andrés BELLO, showed a burning interest in the events of the day and demonstrated the linkage of literature with political and social action that has been so much more prominent in Latin America than in the United States Poet-statesman and president-novelists have been common in Spanish American history Antonio NARIÑO and other revolutionists helped to introduce French literary forms as well as ideas on liberty The "Mexican Thinker," José Joaquín FERNÁNDEZ DE LIZARDI, was an ardent revolutionist as well as recorder of Mexican customs in his picaresque novel, *El Periquillo Sarniento* [the Itching Parrot] Olmedo, Bello, and Heredia all wrote poetry in neoclassic form, although it has been pointed out by Arturo Torres-Rioseco that Heredia's "En el teocalli de Cholula" [in the temple-pyramid of Cholula] (1820) is actually the first romantic poem in the Spanish language, and there is strong romantic emotion in his classic ode on Niagara Bello, however, who had stressed the New World scene in his poems on the tropics, was a stern opponent of romanticism, which swept across Latin America like a strong wind from France. In Buenos Aires, where the young intellectuals contended against the dictatorship of Juan Manuel de Rosas in secret

political activity, they expressed themselves in Byronic poetry, such as that of Esteban ECHEVERRÍA, and in romantic novels, such as the celebrated *Amalia* of José MÁRMOL Two of the great leaders against Rosas, both of them later presidents of Argentina, were towering literary figures as well Bartolomé MITRE was an able historian and poet Domingo F. SARMIENTO was the leading champion of romanticism in the struggle against Bello's neoclassicism. He was one of the chief educators of Latin America as well, and a prolific writer of essays and sketches of travels His study of personalism in politics (*caudillismo*) in *Facundo* (1845) is still widely read as a penetrating analysis not only of politics but also of the Latin American temperament The romantic movement with its interest in landscape and local color intensified the urge toward American subjects, and the second half of the 19th cent saw the mastery of the Spanish American subject matter by Spanish American authors The most remarkable achievement, one of the masterpieces of Latin American literature, was outside all schools and fashions, seeming to spring from the very soil of the Argentine Pampa, where the picturesque cowboy, the gaucho, had developed his own mode of life, this was the epic *Martín Fierro* by José HERNÁNDEZ The gaucho, who was soon to disappear before the diligent immigrant farmers on the Pampa, inspired many another Argentine before and after Hernández (such as Echeverría and the later Ricardo GÜIRALDES, with his magnificent *Don Segundo Sombra* in 1926) Much more self-conscious than Hernández but no less original was the Peruvian Ricardo PALMA, who developed from the Spanish *costumbrista* style a new form of historical local-color sketch, which he called the *tradición*, suave and multicolored, these *tradiciones* were Peruvian, individual, and delightful In Colombia, Jorge ISAACS found the material for a romantic idyl, *María* (1867), and the Mexican Indian Ignacio Manuel ALTAMIRANO pictured native life in Mexico. It is, perhaps, remarkable that the first great literary movement arising out of Latin America to take Spain by storm was in the beginning not concerned with the American scene, for MODERNISMO, affected by French literary currents in the late 19th cent, turned to the exotic, to landscapes with swans and peacocks, to words chosen with the most discriminating taste, to rhythms like chords of music and images like the flow of light The movement was heralded by the great Cuban patriot, José MARTÍ, his compatriot Julián del CASAL, the tragic Colombian José Asunción SILVA, and the Mexicans Manuel GUTIÉRREZ NÁJERA and Salvador DÍAZ MIRÓN It reached its zenith in the vaulting genius of Rubén DARÍO, perhaps the best-known figure of Spanish American literature His **Azul** [blue] (1888) marked an epoch, the true coming of age of Spanish American literature Little magazines and literary circles sprang up, and the movement produced a host of highly gifted poets—Guillermo VALENCIA in Colombia, Amado NERVO in Mexico, José Santos CHOCANO in Peru, Leopoldo LUGONES in Argentina, Julio HERRERA Y REISSIG in Uruguay—and prose writers, notably José Enrique RODÓ *Modernismo* demonstrated with force the international character of Spanish American literature and its continuing tie with the literature of Spain The connection with Spain was lessened by the revolt against *modernismo* announced dramatically by Enrique GONZÁLEZ MARTÍNEZ in Mexico, for Spanish American writers turned more and more to dealing with the problems of Latin American peoples The Indian had always been a primary concern in Spanish American literature, reflected according to the mode, with curiosity by the first comers, with sympathetic condescension by the neoclassicists, with sentimental admiration by the romantics Many of the writers of the 20th cent turned with fierce practicality to picturing the life of the Indians and the poor as it was enacted, too often in squalor, misery, and oppression The works of Alcides ARGUEDAS offered a cheerless sociological study of Bolivia, foreshadowing the political activities of Víctor Raúl HAYA DE LA TORRE and his Apristas, centered in Peru The outstanding historical event in Mexico, the revolution that began in 1910, produced a renaissance of Mexican letters The novels of Mariano AZUELA and Gregorio LÓPEZ Y FUENTES presented powerfully the oppression of the Indians and the motive forces of the revolution The highly gifted Alfonso REYES (who also became an authority on Spanish literature of the Renaissance) presented in poetic prose his *Visión de Anahuac* Social problems and realistic studies of Latin American landscape and color brought other notable novels, such as the poetic *Vorágine* [the vortex] of José Eustasio RIVERA, *Doña Bárbara* and the other works of Rómulo GALLEGOS, *Huasipungo* by Jorge ICAZA, and the novels of Manuel GÁLVEZ and Ciro ALEGRÍA. Angry protests against the international activities of the United States (*yanqui* imperialism) in the earlier years of the 20th cent, as in the works of the Venezuelan Rufino BLANCO-FOMBONA and the Argentinian Manuel UGARTE, had only a few lingering echoes in the 1930s and 1940s No single strain was to dominate Spanish American literature after *modernismo*, and there was rich variety in the maturity of literature The poets Gabriela MISTRAL and Pablo NERUDA developed deep-going individual styles, while individuality ran riot in some of the more extreme cultists (such as Vicente HUIDOBRO and Jorge Luis BORGES) Jorge CARRERA ANDRADE with his Indian themes in Ecuador and Nicolás GUILLÉN with his Negro themes in Cuba both turned in later years to more Spanish forms, but the Puerto Rican Luis PALÉS MATOS continued to utilize Negro rhythms and expertly assembled meaningless sounds Nor were all novels of the brutally realistic type Enrique Rodrigues LARRETA and Carlos REYLES, for instance, turned to writing of Spain for escape from the problems and conflicts of their own lands The tapestry has many colors It should be noted that educators have perhaps had more influence in Spanish American literature than in various other world literatures Such figures as Sarmiento, Gabriela Mistral, Eugenio María de HOSTOS, Justo SIERRA, and José VASCONCELOS have been of the utmost importance See Alfred Coester, *The Literary History of Spanish America* (1916), E Herman Hespelt and others, *An Outline of Spanish American Literature* (1941), Pedro Henríquez-Ureña, *Literary Currents in Hispanic America* (1945); Arturo Torres-Rioseco, *The Epic of Latin American Literature* (rev ed , 1946)

Spanish-American War, 1898, struggle of the United States and Cuban revolutionists against Spain with the chief object of liberating CUBA from Spanish control Many U S citizens and statesmen had been interested in the fate of Cuba since the time of the expedition of Narciso López, and plans for annexing the island to the United States had appeared since before the OSTEND MANIFESTO Discontent of many Cubans with Spanish rule grew steadily more intense and led to the TEN YEARS WAR (1868–78) The United States was involved in the warfare by many U S volunteers to the rebel side, and U S feelings were shocked by the VIRGINIUS affair After the war, the Spanish promises of reform were not kept, and feeling grew worse between the royalist upholders of Spanish rule (mostly the wealthy and influential) and the liberal and republican-minded advocates of *Cuba libre* [free Cuba] One of the greatest of all Spanish American poets and patriots, José MARTÍ, lifted his voice clear above all others In 1895 a new revolution broke out Two of the leaders of the Ten Years War, Máximo Gómez y Báez and Calixto García y Iñigez, were back to lead the guerrilla warfare, which succeeded in tying up industry and commerce on the island In retaliation Spanish officials ordered all the rural population herded into the garrisoned towns, where, without adequate food and shelter, many died This shocked many in the United States to deeper sympathy for the rebellious seekers of freedom The U S government was also moved by the heavy losses of American investments in Cuba, an appreciation of the strategic importance of Cuba to Central America and a projected canal there, and a growing sense of U S power in affairs of the Western Hemisphere, there was an unspoken threat of intervention This grew sharper after the insurgents, refusing a Spanish offer of autonomy, determined to fight for full freedom Two incidents occurred to inflame U S feelings against the Spanish authorities William Randolph Hearst published a letter written by the Spanish minister at Washington to a friend in Cuba expressing contempt for U S President McKinley More serious was the sinking of the U S battleship *Maine* in Havana harbor (see MAINE) War sentiment rose McKinley's suggestion of an armistice received no satisfactory reply, and he was won to the war cause Though on April 10, 1898, he was informed that the queen of Spain had ordered hostilities suspended, he barely referred to that fact when he addressed Congress on April 11 He asked authority to intervene in Cuba Congress responded by passing resolutions to demand Spanish withdrawal from Cuba and set terms for U S intervention (including a pledge to withdraw from the island when independence was assured), these were capped on April 22 by an act authorizing enlistment of volunteer troops On April 24 Spain declared war on the United States The next day Congress retorted by declaring that a state of war had existed since April 21, when W T SAMPSON had been ordered to take the main squadron of the Atlantic fleet to Cuban waters The warfare thus commenced was short and very one-sided The first dramatic incident occurred on the other side of the world from Cuba On May 1 a U S squadron under George DEWEY sailed into the harbor of Manila, Philippine Islands, and in a few hours thoroughly defeated the Spanish fleet there Dewey's name was greeted across the United States with almost hysterical praise. On May 19 Admiral Pascual Cervera y Topete took the Spanish fleet into the harbor of Santiago de Cuba Commodore W S SCHLEY established (May 28) a blockade of the harbor, in which Rear Admiral Sampson joined, taking command of the blockading fleet on June 1 When the Spanish fleet attempted to escape on July 3, it was destroyed Meanwhile 17,000 more or less trained, poorly equipped, but enthusiastic U S troops under W S SHAFTER (whose appointment had been much criticized) landed and undertook a campaign to capture Santiago The Spanish forces were weak, but there was some heavy fighting at Siboney, El Caney (July 1), and San Juan Hill (where on foot the Rough Riders, under Leonard WOOD and Theodore ROOSEVELT won a popular reputation) After a week's bombardment Santiago surrendered The war was, in effect, over Troops sent under Nelson A Miles to Puerto Rico were busily investing that island when they received word that an armistice had been signed on Aug 12 Dewey and Wesley Merritt led a successful land and sea attack on Manila on Aug 13, actually after the armistice was signed Peace was arranged by the Treaty of Paris signed Dec 10, 1898 (ratified by the U S Senate Feb 6, 1899). The Spanish Empire was practically dissolved Cuba was freed (but under U S tutelage by the Platt Amendment) Puerto Rico and Guam were ceded to the United States as indemnity, and the Philippines were surrendered to the United States for a payment of $20,000,000 The United States emerged from the war as a power of consequence The United States was entangled in Latin American affairs in a new fashion, while the actions in the Philippines introduced an era characterized by U S liberals as imperialistic, it also tied the United States more closely to the course of events in the Far East See A T Mahan, *Lessons of the War with Spain* (1900), French E Chadwick, *Relations of the United States and Spain Diplomacy* (1909) and *Relations of the United States and Spain The Spanish-American War* (1911), Walter Millis, *The Martial Spirit* (1931), M M Wilkerson, *Public Opinion and the Spanish-American War* (1932), J W Pratt, *Expansionists of 1898* (1936), Gregory Mason, *Remember the Maine* (1939)

Spanish art and architecture. In Spain ethnographic and geographic factors encouraged susceptibility to foreign influences which variously affected different regions Because of the heterogeneity of cultural components, it is necessary to consider a variety of parallel and overlapping lines of artistic development Aside from important prehistoric remains uncovered at Altamira and the cave paintings at Cogul (near Lérida), the earliest monuments date from the Roman occupation (3d cent B C.–5th cent A D) Mérida survives as example of a Roman provincial town with remains of an amphitheater, triumphal arch, temples, and reservoirs. The aqueduct at Segovia and the bridge of Alcántara are outstanding examples of Roman engineering genius Roman art does not appear to have significantly influenced works of the Visigothic period (6th–7th cent), although crude classical motifs were used, especially in the decorative sculpture Such monuments as the Church of San Juan de Baños in the province of Palencia (A D 661) suggest a possible Syrian influence in the use of a flattened horseshoe arch which predates the full horseshoe arch introduced by the Moors (8th cent) and extensively employed in the famous mosque at Córdoba (8th–10th cent) and the Alhambra at Granada (13th–14th cent) Moorish architectural features, such as multifoil and intersecting arches, became intrinsic to the Christian buildings of medieval Spain, and the Moorish feeling for repetition and multiplicity of small motifs in luxuriant ornament deeply influenced later taste By 850 the Moors had conquered all Spain except the Asturias region Asturian art (9th cent) continued the Visigothic tradition, but in both minor arts and architecture there is revealed strong Carolingian influence Characteristic of Asturian churches is a basilican plan with square apses, rounded arches, and balustered windows The art of the Mozarabs (9th–11th cent) combined Visigothic, Asturian, and Moorish features During the Romanesque period (11th–12th cent) Christian art in general exhibited characteristics common to the Romanesque style of Europe, but different influences prevailed in the western and eastern regions Catalan art reveals marked Lombard influence Castilian art was under French influence The cathedral at Santiago de Compostela (11th–12th cent), both in its architecture and its sculpture, reveals striking analogies to Burgundian works Outstanding is the sculpture of the main portal, which recalls that of Chartres The unification of Spain and the final expulsion (1492) of the Moors made for increased prosperity and artistic activity during the Gothic period (13th–mid-16th cent) Castilian architecture was basically inspired by French, although a distinctive native taste may be felt in the proportions and decorative feeling Outstanding examples include the cathedrals of Burgos, Toledo, and Leon, that at Leon being remarkable also for its stained glass Catalan Gothic architecture, exemplified in the cathedrals at Barcelona and Palma (Majorca), made distinctive use of wide aisleless naves with heavy interior buttresses and lateral chapels Early Gothic sculpture was predominantly influenced by French models In the 15th and early 16th cent. there were

strong Flemish and German trends Retables and choir stalls were elaborately sculptured and polychromed and were sometimes made of alabaster Remarkable examples are those in the cathedrals of Tarragona, Seville, and Toledo At the end of the 16th cent Gil de Siloé executed the magnificent retable and royal monuments in the church of Miraflores (near Burgos), representative of a late Gothic realism In painting, French influence (c 1250–1350) encouraged tendencies toward naturalism and softening of the stylization which had prevailed during the Romanesque period Typical of this early phase is the *Scenes from the Life of Christ and the Virgin* which was in the Chapel of López de Ayala (now in the Art Inst , Chicago) Between 1350 and 1450 Spanish painting displayed characteristics common to all of Europe At the same time there was strong Italian influence, and extensive trade with the Netherlands in the 15th cent encouraged the emergence of a Hispano-Flemish style exemplified in the paintings of Jaume Huguet Throughout the Gothic period MUDEJAR art carried on the Moorish tradition, and its pervasive effect on the national taste was a factor that conditioned the assimilation of other influences The Renaissance (16th cent) came late and did not take deep root in Spain Italian sculptors working in Spain, such as Pietro Torrigiano, did much to popularize Renaissance motifs, which were combined with Gothic and Mudejar in works of the plateresque style Typical of the plateresque phase in architecture is the façade of the Univ of Salamanca and the Convent of San Marcos (Leon) Fully developed Renaissance form appears late in the century in such works as the unfinished palace of Charles V (Granada) and the Escorial, largely by the principal architect of the period, Juan de Herrera Outstanding native sculptors, such as Alonso Berruguete and Gaspar Becerra, were strongly influenced by Michelangelo Italianate painters, such as Luis de Vargas and Luis de Morales, were eclectic and manneristic It was only toward the end of the century that El Greco translated aspects of Italian form in terms of an entirely personal and distinctly Spanish idiom The baroque period (17th–mid-18th cent) was marked by decisive affirmation of native taste and individual genius in all the arts Polychrome religious sculptures by Juan Martínez Montañés exemplify characteristic effects of extreme realism and emotionalism, expressive of the fervid Catholicism of the time Naturalism was also the keynote of painting Sobriety of color and insistent realism were typical of such masters as Ribalta, Ribera, and Zurbarán, who are sometimes linked with the Italian *tenebrosi* and M A da Caravaggio Velázquez stands with Rubens and Rembrandt as an outstanding genius In Murillo's works naturalism was tempered by a strong tendency to lyricism and decorative effects, and his art exerted considerable influence over 18th-century French and English painting In architecture an extreme reaction against the severity and restraint of Renaissance forms manifested itself in the architecture of José Churriguera and his followers which was characterized by animation of surface, play of light and shade effects, and an exaggeration and sumptuosity of ornament Spanish examples of Churrigueresque architecture include the sacristy of the Cartuja (Granada) and the Palace of the Marques de Dos Aguas (Valencia) The style was imported to the American colonies (see SPANISH COLONIAL ARCHITECTURE) Under the Bourbons there was strong reaction against the individualism and exhuberance of late baroque art In 1752 in the reign of Ferdinand VI, the Academy of San Fernando was founded, within a short time dependent academies were established throughout the country The resulting wave of sterile academism appeared to discourage creativity in all the arts for nearly two centuries Goya stands out as the great exception He emerged at a time when great official commissions were awarded to foreign painters such as Tiepolo and Mengs Goya died when French art was already the dominant influence in Europe Among 19th-century painters José de Madrazo y Agudo belonged with the school of Jacques Louis David, Mariano Fortuny belongs with French romantic and historical painters Painters of the 20th cent include Ignacio Zuloaga, distinguished as a portraitist, and Sorolla y Bastida, whose works fall into the tradition of French impressionism The outstanding modern painter, Pablo Picasso, though born a Spaniard, is linked with the cosmopolitan school of Paris, as are also the cubist painter Juan Gris and the surrealist Joan Miró In general Spanish minor arts exhibited characteristics analogous to those of the major arts in similar periods Rich mineral resources in Spain and later in the colonies made for extensive development of wrought metalwork Characteristically Spanish are luxuriantly decorated iron church screens or *reyerta* Moorish influence encouraged development of filigree and enamel as well as of tooled leather Flemish influence encouraged establishment of tapestry works In the 18th cent Buen Retiro porcelains (named for the palace at Madrid) were among the best produced in Europe. The 19th-century decline in general artistic production is reflected also in the decline of quality in minor and decorative arts See M A Dieulafoy, *Art in Spain and Portugal* (1913), H D Sedgwick, *Spain a Short History of Its Politics, Literature, and Art* (1925), A K Porter, *Spanish Romanesque Sculpture* (2 vols 1929), C R Post, *History of Spanish Painting* (Vols I-IX, 1930–47), Bernard Bevan, *History of Spanish Architecture* (1938)

Spanish bayonet and **Spanish dagger** see YUCCA

Spanish colonial architecture flourished from the 16th to the beginning of the 19th cent It followed the historical development of styles previously established in Spain, but developed original features in different regions, the main centers being Peru and Mexico, where there were skilled native craftsmen and stronger political organization The earliest buildings, of impermanent materials, have disappeared, but by the end of the 16th cent durable monumental architecture had been achieved This was a period of transition from Spanish Gothic to Spanish Renaissance, with many buildings reminiscent of the PLATERESQUE style, contrasting bare walls and ornamental doorways, and others of the austerity of the ESCORIAL Although elaborate, intricate ornament was often employed, particularly in later times, a strong strain of simple, solid construction ran through the colonial period, as exemplified in the Spanish missions of California and the 18th-century Jesuit missions of Paraguay The earliest cathedral in America, in Santo Domingo (1521–41), has a plateresque portal on the west façade In 16th-century Mexico the great builders were the Augustinian, Franciscan, and Dominican orders They invented the open chapel for the Indians, as in the monastery of San Francisco Tlalmanalco, which was built with only three walls in order to speed construction and to accommodate more people The cathedrals of Puebla, Mérida, and Guadalajara were also begun in this period During most of the 17th and 18th cent the baroque style held sway, and in the 18th cent the sumptuous CHURRIGUERESQUE ornament of Spain was exported to the colonies In addition to the big forms and curving lines of the traditional European baroque, Spanish colonial buildings maintained the contrast between decorated and plain surfaces of the earlier period A more conservative trend was manifested in Colombia, where churches and public buildings were simple and severe Baroque features, combined with the inventiveness of native craftsmen, reached a climax in the cathedral in Mexico city It has been called ultra-baroque in view of the strong light-and-shade patterns, richly carved columns and entablatures, and violent alternations of curves and angles In the Puebla region glazed tiles were sometimes placed on the whole façade of a building, as in the Church of San Francisco Acatepec Central American buildings were generally provincial versions of the Mexican, but in Guatemala façades were divided into rectangular compartments In Peru as in Mexico there was richness, inventiveness, scale, and quantity, but Peruvian architecture appeared heavier and more massive Huge curving members projected over doors and windows in many buildings of Lima Columns in Mexico were freely carved with great fantasy, in Peru they were heavy and often spiral Peruvian wall surfaces were divided into a series of large compartments rather than covered with shallow carving as in Mexico The Church of San Agustin (c 1730), with a statue in the central niche dominating the whole façade, illustrates a distinctive type developed in Lima In S Peru and in Bolivia, Indian influence in ornament, in both technique and representation, pervaded the basic European architectural forms On the façade of the Church of San Lorenzo (1728–44) in Potosí richly decorated Indian figures function as caryatids or spiral columns In the last quarter of the 18th cent a current of neoclassicism invaded Latin America, and the great days of Spanish colonial architecture were over

Spanish Fork, city (pop 4,167), N central Utah, S of Provo near Spanish Fork river and Utah Lake The area, long irrigated, is now served by the STRAWBERRY VALLEY PROJECT, and the city has beet-sugar refineries and canning plants

Spanish Guinea (gĭ'nē), colony (10,800 sq mi , pop 170,582), W Africa, on the Gulf of Guinea The capital is Santa Isabel The colony is bordered by French Cameroons on the north and by French Equatorial Africa on the south It comprises besides a great number of small islands, the island of Fernando Po or Fernando Póo and Continental Guinea or Río Muni Spanish Guinea is a densely forested region It exports cacao, palm oil, bananas, and coffee Fernando Po was discovered in the 15th cent by the Portuguese They settled it briefly in the 17th and 18th cent , but it was ceded to Spain in 1778 With the consent of the Spanish, the British assumed administration in 1827 and established a naval station for the ships engaged in the suppression of the slave trade. In 1844 Spain reclaimed the island. Continental Guinea was awarded to Spain by the Treaty of Berlin (1885) The colony is ruled by an appointed governor

Spanish language, language of the Romance group of the Italic subfamily of Indo-European languages See LANGUAGE (table)

Spanish literature. The famous early example of Spanish literature, the epic poem *Cantar de Mío Cid*, dates back to the 12th cent and deals with the life and deeds of the national hero, Rodrigo Díaz de Vivar, called the Cid Campeador During the 13th cent many other epic poems and the oldest popular lyrics appeared in the different provinces of the Iberian Peninsula and were transmitted orally from generation to generation The first Spanish poet whose name is known is the priest Gonzalo de Berceo, author of religious poems in the 13th cent King Alfonso X (1221–84), called the Wise, was a poet and prose writer Under his patronage the flow of Oriental culture into Western Europe was greatly accelerated In the 14th cent the most important writers were López de Ayala, author of *Rimado de palacio*, a satirical poem of the customs of his age, Fernán Pérez de Guzmán, author of the historical *Semblanzas*, the prince Don Juan Manuel, nephew of King Alfonso X, famous for *El libro de los enxemplos del conde Lucanor et de Patronio*, the first book of short stories in the Spanish language, and Juan Ruiz, the archpriest of the town of Hita, author of *El libro de buen amor* [the book of good love], one of the masterpieces of Spanish letters During the reign of John II of Aragon in the first half of the 15th cent , two important poets were Juan de Mena, author of a long poem showing Italian influence, called *El laberinto de fortuna* or sometimes *Las trescientas*, and the marqués de Santillana, known for his short lyric poems in the traditional Spanish manner and for his sonnets and other longer poems written under Italian influence At the end of the 15th cent the unification of Spain was achieved by Ferdinand and Isabella, America was discovered, and the Renaissance spirit, represented by the outstanding prose work of the period, the novel *La Celestina* (1499), invaded Spanish letters The first-known novel of chivalry, *Amadís of Gaul*, was printed in Saragossa in 1508 and served as model for the following novels of chivalry which became in the 16th cent the most popular genre in Spain, together with the anonymous ballads (romances) that were sung and recited everywhere In the reign of Emperor Charles V in the 16th cent the first of a type of fiction which became very popular in Spain, the picaresque novel *Lazarillo de Tormes* (1554), was published, also in this period under Italian influence the traditional meter and essence of Spanish poetry was revolutionized This was achieved by Juan Boscán and the "prince of the lyric poets" of the period Garcilaso de la Vega, author of *Églogas* The latter part of the 16th cent and most of the 17th was the great era of Spanish literature, known as the Golden Age Its chief monument was the novel *Don Quixote de la Mancha* by Miguel de Cervantes Saavedra, of which the first part appeared in 1605 and the second part in 1615 Besides being a classic thrust at the novels of chivalry, *Don Quixote* stands out as one of the world's masterpieces, portraying the forces of idealism and realism in man The picaresque novel flourished in the Golden Age, two of the best examples being *Guzmán de Alfarache* by Mateo Alemán and *El Buscón* by Francisco de Quevedo Poetry and drama flourished Lope de Vega was the great national dramatist, author of about 1,800 plays Other important playwrights were Tirso de Molina, Guillén de Castro, Juan Ruiz de Alarcon, and Calderón de la Barca Calderón was the last of the outstanding dramatists of the Golden Age, and he owes his fame to his *Autos sacramentales* and *La vida es sueño* In the poetry of the period the names of Fray Luis de León, San Juan de la Cruz, Fernando de Herrera, and Luis de Góngora are the most famous St Teresa of Ávila was a mystic, author of a spiritual autobiography and many other books widely translated A cultivated and baroque tendency represented by Góngora's poetry and the prose writings of Baltasar Gracián and Francisco de Quevedo dominated Spanish letters in the latter years of the 17th cent During the 18th cent , French influence was evident in Spanish literature The *Poética*, by Ignacio de Luzán, represents the academic principles of this century, in which literature suffered a decline in Spain Leandro Fernández de Moratín, author of two plays, *El sí de las niñas* and *La comedia nueva*, assimilated the neoclassical French standards, while Ramón de la Cruz remained loyal to the traditions of Spanish culture by picturing the colorful life of Madrid in his *Sainetes* The 19th cent brought two important literary movements, romanticism and realism The outstanding literary figures of the first half of the century were the duque de Rivas, poet and dramatist, whose play *Don Álvaro; o, La fuerza del sino* was the first victory of the romantics in the theater; the poet José de Espronceda, author of *El estudiante de Salamanca* and *El diablo mundo*, José Zorrilla, poet and dramatist, best known for his play *Don Juan Tenorio*, the post-romantic poets Gustavo Adolfo Bécquer, author of *Rimas y leyendas*, and Rosalía de Castro, a Galician. Mariano José de Larra is better known for his satirical articles published

under the pen name of Fígaro than for his romantic drama *Macías* and his novel *El doncel de don Enrique el doliente* Benito Pérez Galdós was the dominant figure in the realistic novel of the 19th cent., above all for his series of historical novels called *Episodios nacionales* In the first quarter of the 20th cent the important novelists were Juan Valera, José María de Pereda, Armando Palacio Valdés, Pedro Antonio de Alarcón, the Condesa Emilia Pardo Bazán, Vicente Blasco Ibáñez, Ramón Pérez de Ayala, and Pío Baroja The drama in the late 19th and early 20th cent is represented by José Echegaray, who won the 1904 Nobel Prize in Literature and in the 20th cent by Jacinto Benavente, winner of the 1922 Nobel Prize in Literature From the end of the 19th cent through the first decade of the 20th cent, a period of reconstruction was started in Spanish literature by the so-called writers of the Generation of 1898, most of whom were essayists, such as Miguel de Unamuno and Azorín Parallel to the Generation of 1898 arose the poetic movement known as modernism, headed by the Spanish American poet Rubén Darío, author of *Azul* (1888) and *Prosas profanas* (1905) Modernism was followed by post-modernism and ultramodernism The best examples of Spanish literature during the 20th cent are found in the field of the essay and in poetry The outstanding poets are Juan Ramón Jiménez, Antonio Machado, Pedro Salinas, Jorge Guillén, Federico García Lorca and Rafael Alberti The best-known essayists are Unamuno, Ortego y Gasset, Azorín, and the creator of the "greguería," Ramón Gómez de la Serna See also CATALAN LITERATURE See George Ticknor, *History of Spanish Literature* (3 vols , 1849, rev ed , 1910), G T Northup, *An Introduction to Spanish Literature* (1925), James Fitzmaurice-Kelly, *New History of Spanish Literature* (1926), A F G Bell, *Contemporary Spanish Literature* (1933) and *Castilian Literature* (1938)

Spanish Main, mainland of Spanish America, particularly the coast of South America from the isthmus of Panama to the mouth of the Orinoco Spanish treasure fleets, sailing home from the New World, passed through the Caribbean N of the Main and were attacked by English buccaneers, raiding from the islands and coast Until the 19th cent pirates congregated here, and the words "Spanish Main" have become the symbol of piratic romance Today the term refers to the coast, the Caribbean, and the West Indies—all places familiar in the pirate legends of the Caribbean area

Spanish marriages see ISABELLA II

Spanish Morocco see MOROCCO

Spanish moss, fibrous gray air plant (*Tillandsia,* or *Dendropogon, usneoides*) that hangs on trees of tropical America and the Southern states, called also Florida, southern, or long moss It is not a true moss but belongs to the pineapple family and has inconspicuous flowers It is used for stuffing furniture and as a packing material

Spanish needles see BUR MARIGOLD

Spanish Sahara, colony (102,000 sq mi , pop 37,000), W Africa, on the Atlantic Ocean The capital is Villa Cisneros The colony is bordered on the north by Southern Morocco, on the south by Mauritania, and on the east by Mauritania and Algeria It comprises two territories, Río de Oro (70,000 sq mi , pop 24,000) and Sekia el Hamra (32,000 sq mi , pop 13 000) Spanish Sahara is arid and is mostly inhabited by pastoral nomads There are large fisheries on the coast

Spanish Succession, War of the, 1701–14, last of the general European wars caused by the efforts of LOUIS XIV to extend French power The precarious health of the childless CHARLES II of Spain left the succession open to the claims of three principal pretenders—Louis XIV, in behalf of his eldest son, a grandson of Philip IV of Spain through MARIE THÉRÈSE OF AUSTRIA, the electoral prince of Bavaria, Joseph Ferdinand, a great-grandson of Philip IV, and Emperor Leopold I, who had married a younger daughter of Philip IV, but claimed the succession in behalf of his son by a second marriage, the future Emperor CHARLES VI Of these, the claim of Joseph Ferdinand was legally the soundest England and Holland were opposed to the union of French and Spanish dominions, which would have made France the leading world power and diverted Spanish trade from England and Holland to France On the other hand, England, Holland, and France were all opposed to a reunion of the Spanish and Austrian branches of the Hapsburg Louis XIV, exhausted by the War of the Grand Alliance, sought a peaceful solution and reached an agreement (1698) with WILLIAM III of England This First Partition Treaty designated Joseph Ferdinand as the principal heir, the French dauphin was to receive territory including Naples, Sicily, and Tuscany, Milan was to fall to Archduke Charles (Charles VI) The treaty aroused Spanish nationalism, and Charles II answered by naming Joseph Ferdinand as sole heir to the whole Spanish empire The unexpected death of Joseph Ferdinand (1699) rendered the Anglo-French treaty inoperative and led to the Second Partition Treaty, under the terms of which France was to receive a considerable enlargement of her territory, while the rest of the Spanish dominions were to fall to Archduke Charles. The treaty was accepted by the Dutch (1700) and submitted to the emperor, who rejected it in the hope of gaining the entire inheritance for his son While the diplomats were still seeking a peaceful solution, the pro-French party in Spain gained hold of the dying Charles II and persuaded him to designate as his sole heir the grandson of Louis XIV, Philip, duke of Anjou, who became PHILIP V of Spain Louis XIV now decided to abide by Charles's will and broke the treaty War did not begin immediately, but the reservation of Philip's right of succession to the French crown (Dec , 1700) and French occupation of fortresses on the border between the Dutch and the Spanish Netherlands (Feb , 1701) led to an anti-French alliance among England, the emperor, and the Dutch Hostilities between the French and the imperial forces began in Italy, where the imperial generalissimo, Prince EUGENE OF SAVOY, defeated CATINAT and VILLEROI The general war began in 1702, with England, Holland, and most of the German states opposing France, Spain, Bavaria, Portugal, and Savoy MARLBOROUGH, though ill-supported by the Dutch, captured a number of places in the Low Countries (1702–3), while Eugene held his own against Villeroi and his successor, Louis Joseph, duc de VENDÔME VILLARS, however, defeated Louis of Baden at Friedlingen (1702). The successes of the French in Alsace enabled them to menace Vienna (1703), but the opportunity was lost by dissension among their chiefs In 1704 Marlborough succeeded in moving his troops from the Netherlands into Bavaria, where he joined Eugene and won the great victory of Blenheim over the French under TALLARD, and the French lost Bavaria Meanwhile, Portugal and Savoy had changed sides (1703), and in 1704 the English captured Gibraltar In 1705 Marlborough in the Netherlands and Eugene in Italy won moderate successes, though Vendôme defeated Eugene at Cassano The year 1706 was marked by Eugene's victory at Turin, which resulted in French evacuation of N Italy, and by Marlborough's triumph at Ramillies, which compelled the French to retreat in the Low Countries In the same year, Louis XIV proposed peace to the Dutch, but English interference forced the continuance of the war In 1707 Marlborough made little progress in the north and Eugene's expedition into Provence resulted only in the loss of 10,000 men, but in the following year Marlborough and Eugene won another great victory at Oudenarde, took Lille, and drove the French within their borders Peace negotiations failed, and the allies won (1709) another success, though a costly one, at Malplaquet Meanwhile the indecisive allied campaigns in Spain (1708–10) did little to weaken Philip V The death of Emperor JOSEPH I (1711) and the accession of Charles VI led to the withdrawal of the English, who were as much opposed to the union of Spain and Austria as to that of Spain and France Preliminary negotiations between England and France were pressed forward and a peace conference was opened (Jan , 1712), followed shortly afterward by an Anglo-French armistice In April, 1713, France, England, and Holland signed the Peace of Utrecht Charles VI continued the war, although Eugene had been defeated (1712) at Denain and had been forced to retreat in the Spanish Netherlands Seriously weakened by the defection of his allies, the emperor finally consented in 1714 to the treaties of Rastatt and of Baden, which complemented the general settlement (see UTRECHT, PEACE OF) The conflict in America corresponding to the period of the War of the Spanish Succession was known as Queen Anne's War (see FRENCH AND INDIAN WARS) See Arthur Parnall, *The War of the Succession in Spain* (1905), Frank Taylor, *The War of Marlborough* (1921)

Spanish Town, city (pop 12,030), on S Jamaica, British West Indies Formerly Villa de la Vega, it was the leading city of Jamaica from the destruction of Port Royal by earthquake in 1692 until KINGSTON rose to prominence It is the main rail and highway communications center for traffic to and from the capital and other parts of Jamaica

spar. For dogtooth spar, see CALCITE, for fluor spar, see FLUORITE, for heavy spar, see BARITE, for satin spar, see CALCITE and GYPSUM See also ICELAND SPAR and FELDSPAR

Spargo, John (spär'gō), 1876–, American reformer and author, b England An early socialist, he was active in the Socialist party, but resigned in 1917 because of its anti-war policy With Samuel Gompers he organized (1917) the American Alliance for Labor and Democracy He also founded a social settlement in Yonkers, N Y His many books include *The Bitter Cry of the Children* (1906), a biography of Karl Marx (1909), *Applied Socialism* (1912), *The Psychology of Bolshevism* (1920), and studies in Vermont history.

spark plug see IGNITION

Sparks, Jared (spärkd), 1789–1866, American historian, editor, and educator, b Willington, Conn , grad Harvard, 1815 He taught in a private school (1815–17), studied theology, tutored in mathematics and natural philosophy at Harvard (1817–19), and edited the *North American Review* (1817–18) He was pastor of a Unitarian church in Baltimore (1819–23), founded and edited (1821–22) the *Unitarian Miscellany,* and was chaplain of the U S House of Representatives (1821–23). Returning to Boston, he bought and edited the *North American Review* (1824-30) and founded and edited (1830) *The American Almanac and Repository of Useful Knowledge* From 1838 to 1849 he was McLean professor of history at Harvard and then was president of Harvard (1849–53) Among the many works he wrote or edited are *The Diplomatic Correspondence of the American Revolution* (12 vols , 1829–30), *The Life of Gouverneur Morris* (3 vols , 1832), *The Writings of George Washington* (12 vols , 1834–37), *The Library of American Biography* (25 vols , 1834–48), *The Works of Benjamin Franklin* (10 vols , 1836–40), and *Correspondence of the American Revolution* (4 vols , 1853) See biographies by G E Ellis (1869) and H B Adams (2 vols , 1893)

Sparks, city (pop 5,318), W Nev , on the Truckee river just E of Reno, in an irrigated area, inc 1905 It is a railroad division point

sparrow, name of various small birds of the Old and New Worlds, usually with streaked brown and gray plumage The English or house sparrow, a native of Europe, is not a true sparrow, but belongs to the WEAVER BIRD or weaver finch family Introduced into America c 1850, it spread over most of the continent and in many places drove out more desirable birds Its song is a constant chirp. Among native sparrows of the *finch* family are several birds with a delightful song—the song sparrow of fields and roadsides, identified by its heavily streaked breast, the white-throated sparrow or peabody bird, the white-crowned sparrow, the vesper sparrow, and the less musical but friendly little chipping sparrow Sparrows are of enormous value to farmers in destroying weed seeds The sparrow appears in Greek mythology and in the Scriptures Originally "sparrow" meant any small bird

Spars [from the motto "Semper Paratus"], the Women's Reserve of the U S Coast Guard Reserve, created Nov , 1942 In the Second World War the Spars took over shore duty—clerical work, photography, radio and telephone operations, and the like—in the United States, Hawaii, and Alaska to release men for sea duty Enlistment reached a peak of 10,000 Recruiting was stopped in Aug , 1945, and by June, 1946, demobilization was completed

Sparta (spär'tu), city of ancient Greece, capital of Laconia, on the Eurotas river in the Peloponnesus The narrow, mountain-walled valley attracted invaders by its fertility, and the city-state of Sparta was created by invading Dorian Greeks, who conquered the countryside of Laconia and Messenia The city was difficult to attack, and the Spartans for long had no city walls but trusted to the strength of their army for defense against all comers and against their own Laconian and Messenian subjects Sparta became the strongest city in Greece and in the 7th cent enjoyed a heyday of wealth and culture, the period of the poets Tyrtaeus and Alcman This flowering was commemorated later by the tradition of writing lyrics to be sung by choruses (e g , in Athenian tragedy and in Pindar) in a Doric dialect After 600 B C , Sparta cultivated none but military arts, and the city was an armed camp, founded according to the official legend, by LYCURGUS, in reaction to a revolt of MESSENIA (the city's granary) At any rate by the 5th cent the ruling class, the Spartiates, gave themselves wholly to war At birth a boy was inspected by the elders, and if he promised to be unfit for military service, he was taken into the mountains and abandoned If he was fit, he was taken from his mother at seven to begin his rigorous military training He became a soldier at 20, a citizen at 30, and continued as a soldier until 60, after that time he could hold office Thus his entire life was spent under rigorous discipline Spartiate women, under less severe discipline, were part of the soldierly society and not secluded The Spartiates were the only citizens and the only sharers in the allotment of lands and of the helots, serfs who were bound to the land The helots farmed the land and paid part of the produce to their masters, the Spartiates They could not be sold, but they had no legal or civil rights and they were constantly watched by a sort of Spartiate secret police for fear of insurrection A helot who showed ability alarming to his masters usually disappeared mysteriously. In somewhat less stringent subjection were the perioeci, freemen who were permitted to carry on commerce and handicrafts, by which some of them prospered The perioeci were entirely subordinate to the Spartiates The government was headed by two hereditary kings, titular leaders in battle and in religion Two families furnished the kings, probably a relic of the origin of Sparta from a union of diverse political units Some kings were able (e g., Cleomenes I, Leonidas, and Agis I), but they were held in check There was a council of 30 elders and a general assembly of citizens, but the real rulers were the board of five ephors, annually elected The business of the state was conducted with secrecy

(unlike the open-forum methods of Athens), and it was a matter of religion to keep the institutions unchanged The sole purpose of the state was military power, and Sparta was by 500 B.C. strong enough to weigh in any Greek situation In the PERSIAN WARS, Sparta fought beside Athens, first at THERMOPYLAE (490), where the hero was Leonidas, and later at Salamis (480) and Plataea (won by PAUSANIAS, 479) There were no Spartans at Marathon. Before 500 B C , Sparta formed a confederacy (the Peloponnesian League), this Sparta dominated but never converted into an overt empire, as Athens did the Delian League Through the league and by direct methods Sparta was master of most of the Peloponnesus After the Persian Wars the old rivalries sharpened, and Athens grew stronger An earthquake at Sparta (464 B C), followed by a stubborn Messenian revolt, weakened Sparta badly In the end a contest with Athens came indirectly, provoked by Cornthian fears of Athenian imperialism This was the great PELOPONNESIAN WAR (431–404 B C), which wrecked the Athenian empire Soon afterward the dominant Spartans led by AGESILAUS II were at war with Persia; then the Spartan envoy ANTALCIDAS concluded with Artaxerxes II a treaty by which Sparta surrendered the Greek cities of Asia in return for withdrawal of Persian support to the rebellious Athenians and Thebans. Thebes fought on and by the victory at Leuctra (371 B C) took the ascendancy in Greece Sparta fell an easy prey to Philip II of Macedon and declined In the 3d cent B.C there were determined but futile attempts by Kings AGIS III and CLEOMENES III and by Nabis (d. 192 B C) to restore glory to Sparta by vigorous reforms Under the Romans, Greek centers of art and letters were highly favored, Sparta, with no such distinction, simply disappeared The modern city of Sparta (pop 9,700) dates from the 19th cent only The ruins of old Sparta are near by For bibliography, see *Ancient Greece* under GREECE

Sparta. **1** City (pop 1,872), co seat of Hancock co , N central Ga , NE of Macon, inc 1805 It is a trade, processing, and shipping center for a farm and lumber area There are several fine old houses of classic revival design **2** City (pop 3,664), S Ill , SE of St Louis, in a farm, timber, and coal area, inc. 1873 It has railroad shops, plow works, and a rayon-garment factory **3** Village (pop 1,945), S Mich , N of Grand Rapids, platted 1869, inc 1883 Pasteurizing castings and evaporated milk are made here **4** Town (pop 2,506), co seat of White co , central Tenn , in the Cumberland Plateau NNW of Chattanooga, in a coal, limestone, and timber area, founded 1809 Great Falls Dam in Caney Fork of the Cumberland river is near by **5** City (pop 5,820), co seat of Monroe co , W central Wis , NE of La Crosse and on the La Crosse river, in a farm and dairy area, settled c 1850, inc 1883 There are tobacco warehouses here A state school for dependent and neglected children is in the city Near by is Camp McCoy

Spartacus (spär'tukus), d 71 B C , leader in an ancient Italian slave revolt, b Thrace He broke out of a gladiators' school at Capua (73 B C) and fled to Mt Vesuvius, where many runaways joined him Their army defeated several Roman forces and moved north, devastating S Italy and Campania, Spartacus' aim was a general escape from Italy, but his followers preferred plunder, and in 72 B C they were back in S Italy They took Thuru and got through a cordon M Licinius Crassus stretched across the "toe" of Italy. Spartacus was killed in a battle with Crassus in Lucania Pompey, back from Spain, helped mop up the survivors Of the captured slaves 6,000 were crucified along the Capua-Rome highway In Spartacus' camp after his death 3,000 Roman prisoners were found unharmed The revolt of Spartacus is also called the Third Servile War or the Gladiators' War

Spartacus party or Spartacists, radical group of German Socialists, founded c 1916 and led by Karl LIEBKNECHT and Rosa LUXEMBURG. The name was derived from the pseudonym Spartacus used by Liebknecht in his pamphlets against the First World War, the government, and the majority section of the Social Democratic party, the name was used to typify the modern wage slave in revolt like the Roman gladiator The Spartacists, demanding the establishment of a dictatorship of the proletariat by armed force, gathered many followers among the workingmen The Russian type of socialism was not to the taste of either the Majority Socialists or the Independent Socialists, and after the fall of the empire (Nov., 1918), Friedrich EBERT made no concessions at all to the great strength of the Spartacists, who consequently began a campaign of verbal attack in the press and physical attack by sporadic terrorism. In December, the Spartacists officially transformed themselves into the German Communist party, and on Jan , 5, 1919, a determined drive was begun to gain Berlin and the other large cities In Berlin a huge crowd of laborers gathered (Jan 6, 1920), but the demonstration was incompetently led, and Gustav NOSKE had no trouble in putting down outbreaks of violence Liebknecht and Rosa Luxemburg were arrested and brutally murdered a few days later.

Spartanburg, city (pop. 32,249), co. seat of Spartanburg co , NW S.C., NW of Columbia, in the piedmont near the N C. line. The city, the metropolis of a large area of mill villages, is a noted textile center and an important commercial, transportation, and trade focus in an extensive cotton and diversified farming area There are fertilizer plants and other industries The site was selected as the county seat in 1785, and the city was incorporated in 1831 City and county were named for the "Spartan" regiment of Revolutionary troops recruited in the area In the Civil War it was a busy supply-manufacturing point It is the seat of Wofford College (Methodist, for men, opened 1854) and of Converse College (nonsectarian, mainly for women, 1889), which cooperates with the city in an annual music festival Spartanburg is headquarters of a U S soil conservation project Just outside the city are the state school for the deaf and the blind and Textile Institute (an industrial junior college)

Spartivento, Cape (spärtēvĕn'tō) **1** Southeastern point of the "toe" of Italy **2** Cape on the south coast of the island of Sardinia, Italy

spasm, sudden involuntary rigid contraction caused by muscular action It is sometimes accompanied by pain When the contraction recurs or is confined to a small group of muscles of the face, e.g , in the eyelid or lip, it is called a tic

Spassk-Ryazanski (späsk"-ryĭzän'skē), city (pop 6,324), central European RSFSR, on the left bank of the Oka and c 30 mi SE of RYAZAN Across the river are the well-preserved ruins of Old Ryazan (Rus *Staraya Ryazan*), founded in 1095, the original capital of the Ryazan principality Old Ryazan was destroyed by the Mongols in 1237 Spassk-Ryazanski was chartered in 1778

spastic paralysis (spă'stĭk), condition characterized by rigidity of muscles and exaggerated reflexes, generally resulting from an injury to the motor center of the brain. A stiff gait or shuffling walk, stumbling, stuttering, trembling, grimacing, and writhing are characteristic manifestations of spastic paralysis There is faulty selectivity of muscles for making desired motions, with the result that muscles other than those concerned with the desired action often respond There may also be clonic spasms, i e , involuntary alternation of muscle contraction and relaxation Some spastic conditions occur in multiple sclerosis, a chronic progressive deterioration of the central nervous system. Spastic paralysis sometimes is caused by injury to the brain of an infant at birth.

spatterdock · see POND LILY

spavin (spă'vĭn), permanent deformity due to bony enlargement on the bones of the hock joint in the horse It is believed to be caused by some deformity in the structure of the bones of this joint, encouraged by overweight and various injuries There is lameness and stiffness In early cases the inflammation is treated by several weeks of rest and by blistering

Spe, Friedrich · see SPEE, FRIEDRICH.

Speaker, Tristram E. (Tris Speaker), 1883–, American baseball player, b. Hubbard, Texas. He started (1906) in organized baseball as a left-handed pitcher for the Cleburne team of the North Texas League He then became (1907) an outfielder with the Houston club and in 1909 was purchased by the Boston Red Sox of the American League Traded to the Cleveland Indians of the American League in 1916, Tris was (1919–26) player-manager of the club, leading the Indians to their first pennant and world championship in 1920 He played with the Washington Senators (1927) and the Philadelphia Athletics (1928) One of the outstanding batters in American League history (his major-league lifetime batting average was 344), he was also regarded as one of the best defensive outfielders in the league He managed (1929–30) the Newark Bears of the International League before devoting himself to business interests In 1937 he was elected to the National Baseball Hall of Fame

spear, primitive weapon consisting of a wooden shaft tipped with a sharp point The point was first of flint, later of bronze, and ultimately of steel It has been in use from prehistoric times, originally as a hand weapon or missile and later as a pike or lance Longer by 2 or 3 ft than the 8 or 9-foot spears of early times, lances were standard equipment for the cavalrymen of many European armies as recently as the first quarter of the 20th cent They are still borne in ceremonial military formations in a very few countries, sometimes with a small pennant near the head. Tribal peoples in remote areas still hunt and fight with spears, sometimes putting poison on the tips. The spear is used in modern times in boar hunting.

Spearfish, city (pop. 2,139), W S Dak., on Spearfish Creek in the Black Hills, near the Wyo. line NW of Lead It is a trade center in a mining, timber, lake, and farm area The Black Hills Teachers College and a Federal fish hatchery are here.

Spearman (spēr'mun), town (pop. 1,105), co. seat of Hansford co , extreme N Texas, NNE of Amarillo, in a wheat-growing section of the Panhandle plains; inc. 1921.

spearmint, aromatic perennial mint (*Mentha spicata*) native to the Old World but widely naturalized in the United States and commonly cultivated in gardens for use as a flavoring. Spearmint, although milder, resembles PEPPERMINT (for differentiation, see MINT) but is not as important commercially. Spearmint is a flavoring for chewing gum, medicine, and beverages (as mint julep)

species, in biology, a unit or category of classification lower than a genus and higher than a subspecies or variety In the system of nomenclature (based largely on the system of Linnaeus) by which plants and animals are identified, the species name is the second of the scientific names For example, the scientific name of the white oak is *Quercus alba* The genus name is *Quercus* (oak) and the species is *alba* (white) Species names are sometimes descriptive of some characteristic of the plant or animal, and sometimes they are derived from the name of the discoverer, from geologic periods, or from geographic areas The initial letter of the genus name is capitalized Some authorities capitalize the species name if it is derived from a proper noun This, however, sometimes leads to confusion, and the more usual practice is to use a small initial letter for all species names. Although a species is usually recognized as a basic biological unit, there is no general agreement among biologists as to exactly what constitutes a species The term was early used in the same sense as the word *kind* for the known plants and animals. Until the time of Darwin's promulgation of the theory of evolution, species were regarded as distinct and separately created entities With the general recognition that species were not immutable and static but had undergone and were probably still undergoing evolution and thus were capable of change, many interpretations of the criteria for determining a species arose Nearly all proposed criteria are subject to exception A plant or animal species is, in general, a group possessing in common certain characters that distinguish the members as a group from other similar groups, the members are generally capable of interbreeding with one another but do not commonly interbreed with other species and do not have intermediate forms linking them with another species Some authorities include a geographical criterion, maintaining that the geographical area inhabited by a species is generally distinct from that of the most closely related species Groups distinguished from each other by lesser differences are variously known as sub-species (the term preferred by many), varieties, geographical races, forms, and phases The exact meanings of the terms are not well defined In scientific nomenclature the subspecies name follows as a third name after that of the species

specific gravity, a pure number representing the ratio between the mass or standard weight of a given volume of a substance and the weight of an equal volume of another substance taken as unity Although in the metric system it is identical numerically with DENSITY (if water is taken as the standard), it should be distinguished in that, unlike density, it is an abstract number For example, while the density of copper is 8 93 g per cubic centimeter, its specific gravity is simply 8 93, a number showing that a given volume of copper is 8 93 times "heavier" than an equal volume of water In other words, copper's specific gravity and density are numerically identical in the metric system (in which the gram is the unit of weight), because one cubic centimeter of water weighs one gram and therefore copper, one cubic centimeter of which weighs 8 93 g, is 8 93 times heavier In the English system, however, density and specific gravity are not numerically the same, for the density of water is 62 4 lb per cubic foot For example, although the specific gravity of copper in the English system still remains 8.93, its density becomes approximately 557 2 lb per cubic foot, i.e., 8 93 × 62 4 Methods for determining the specific gravity of a solid differ as the solid is more or less dense than water. If a solid is heavier than water, it is weighed first in air and then immersed in water, if it is less dense than water and therefore floats, a sinker is attached to hold it submerged in the water The specific gravity is calculated by dividing its weight in air by its loss of weight in water, this loss representing the weight of an equal volume of water (see ARCHIMEDES' PRINCIPLE) Two methods are in common use for specific-gravity determination of liquids, the hydrometer method and the bottle method The HYDROMETER is an instrument which gives the specific-gravity reading directly In the bottle method, a "specific-gravity bottle," a flask made to hold a definite quantity of pure water at a specified temperature, is used The bottle is filled with the liquid the specific gravity of which is to be found and is weighed. The weight of the bottle is deducted, and the remaining weight is divided by the weight of the equal volume of water. The specific gravity of a GAS is determined by comparing the weight of one liter (1,000 c.c.) of the gas with the weight of an equal volume of air or of hydrogen as unity. Since the volume of a gas varies with pressure and temperature, the volume is measured at 0°C. and a pressure of 760 mm of mercury.

spectacles for protecting the eyes and improving vision are believed to have been worn in ancient times both in China and in the civilizations about the Mediterranean In the 13th cent Roger Bacon suggested the usefulness of convex lenses in reading, the ancient use of spectacles seems to have been forgotten before his time. Concave lenses, as well as convex, were used in the 14th cent The number of readers increased greatly after the invention of printing in the 15th cent., and the number of wearers of spectacles increased in consequence. Bifocal spectacles, with an upper part for viewing distant objects and a lower part for objects near at hand (as in reading), are one of the many inventions of Benjamin Franklin Spectacles with cylindrical lenses for the correction of astigmatism were devised by the English astronomer Sir George B Airy and were first used by him in 1827 Lenses of prismatic form are now also sometimes used in spectacles All of these forms of lenses are used either singly or in combination Contact lenses, made of glass or plastic or a combination of these, are shaped to fit the eye and are worn under the eyelids in contact with the eyeball Suggested in 1827 by Sir John F W Herschel, English astronomer, for protecting the eyeball from a diseased lid, they were first made for this purpose in 1887 by F. E Müller, German lens maker Contact lenses were first used to correct faulty vision in experiments in 1887 by Dr A E Fick, of Zurich, who gave them their name Contact lenses were from that time made and used to some extent, but difficulties of fitting and grinding and discomfort from wearing them prevented them from being widely used Since the middle 1930s, however, the development of better grinding and fitting techniques, of molded plastic lens, and of efficient buffer solutions for use between the cornea of the eye and the contact lens has increased the length of time they can be worn without discomfort, and their popularity is increasing Many kinds of defective vision may be corrected by the right spectacles, the wrong spectacles may do harm The symptoms of faulty vision may not be limited to inability to see as well as others, often symptoms apparently unrelated to vision disappear if the right spectacles are used Spectacles to protect the eyes from glare or from foreign bodies are made of tinted or polarized glass and of wire mesh The Eskimo make and use wooden spectacles, blackened on the back, with only narrow slits for eyepieces, to protect themselves from glare reflected by ice and snow

Spectator, English daily periodical conducted jointly by Joseph ADDISON and Richard STEELE with occasional contributions from others, from March 1, 1711, to Dec 6, 1712, in London It succeeded the *Tatler*, a periodical begun by Steele on April 12, 1709, under the pseudonym Isaac Bickerstaff, a name borrowed from the attack by SWIFT (1708) upon John Partridge, the astrologer The *Tatler* appeared thrice weekly until it ended Jan 2, 1711 For the most part it consisted of essays dated from various London coffeehouses on such subjects as foreign and theatrical news, current events, and literary questions and discussions Gradually it took on a moral tone, inveighing against current follies and affectations, gambling, and dueling, in the words of Steele "the general purpose is to expose the false arts of life, to pull off the disguises of cunning, vanity, and affectations, and to recommend a general simplicity in our dress, our discourse, and our behaviour" Addison joined Steele in writing the *Tatler* and collaborated with him also in the *Spectator* It supposedly was written by the members of a club, whose roster included the famous Sir Roger de Coverley, Captain Sentry, Sir Andrew Freeport, Will Honeycomb, and Mr Spectator himself, the development of the characters, especially that of Sir Roger by Addison, is of importance in the history of the novel Both periodicals, which included a few contributions from other writers, had a tremendous influence on public opinion and gave great impetus to the growth of journalism and periodical writing The *Spectator*, which was succeeded by the *Guardian*, was revived for a time by Addison in 1714 See edition of the *Spectator* by G A Aitken (1898), G S Streatfeild, *The Mind of the Spectator* (1923)

spectroheliograph. see HELIOGRAPH

spectroscope (spĕk'truskōp), instrument used to produce spectra in SPECTRUM analysis It commonly consists of three hollow tubes mounted horizontally on a disk that is supported by a vertical shaft. One of the hollow tubes has a slit at the outer end and a lens at the inner end, which transforms the light entering through the slit into parallel rays Another tube is a telescope to give the observer a clear view of the spectrum formed The third tube contains a scale and is so constructed that this scale is transposed upon the image of the spectrum produced, direct measurement thus being made possible At the center of the disk and between the three tubes is a prism by means of which the light entering the tube with the slit is dispersed and bent into the telescope for observation.

spectrum. When a narrow beam of white light is passed through a prism, the rays of various colors of which it is composed are bent (see REFRACTION) at different angles, each at a definite angle according to its wave length, and they emerge in the form of a narrow band of color shading from red at one end to violet at the other Such a band is called a spectrum (in this case a prismatic spectrum because it is produced by a prism), and the process of breaking up the white light is DISPERSION A spectrum is also produced by means of reflection from a plate (called a grating) upon which fine lines have been ruled, this kind of spectrum is known as a diffraction spectrum When the band of light extends throughout its length without being broken (as by dark lines), it is called a continuous spectrum Continuous spectra are produced by all incandescent solids Spectra can be produced by light from various sources, and the characteristics which they display depend upon the nature of the source This fact is utilized in chemistry in analysis, for the presence of an element in a substance can be detected by examining, with the aid of the SPECTROSCOPE, the spectrum produced by its incandescent vapor When, for example, sodium chloride (a compound of sodium and chlorine) is heated in a Bunsen flame and its spectrum examined, a brilliant yellow line in a definite position indicates the presence of the sodium Other elements have spectra with lines in other positions and of different colors, but the position and color of these lines is the same for no two elements As a result, the presence of certain elements in a compound can be definitely determined even though a number are present together A spectrum of this kind is known as a line spectrum, since it is not continuous but consists of one or more bright lines placed in various characteristic positions An absorption spectrum is produced when light from one source passes through an incandescent gaseous substance It is characterized by a number of dark lines corresponding in position to the bright lines which appear in the spectrum of the light source The solar spectrum, i e , the spectrum produced by sunlight, is not continuous, but is crossed by a number of dark lines, the so-called Fraunhofer lines The presence of these lines was explained by Kirchhoff as being caused by the presence in the sun's atmosphere of various incandescent elements which absorb from the sunlight passing through them those rays of light producing their characteristic spectra He concluded that, since the dark lines of the solar spectrum corresponded exactly in position to the bright lines characteristic of the spectra of certain elements, these elements were therefore present in the sun's atmosphere Analysis of substances by means of their spectra is known as spectrum analysis See also X RAY

speculation, act of engaging in business with a view to gaining quick profits from price fluctuations, as distinguished from the method of investing in a productive enterprise in order to share in the earnings of its management The term is sometimes applied to investment in a venture involving unusual risks along with the chance to earn unusually large profits, but most speculation consists in the buying and selling of commodities and stocks and bonds with the object of taking advantage of rapid changes in price Speculation of this kind is often compared to gambling, but the speculator differs from the gambler in that he attempts to calculate the risk undertaken The practice is defended as tending to stabilize prices and guide investment, on the other hand, it is criticized as tending to produce financial crisis when prices begin a rapid decline See BULLS AND BEARS, MARGIN, PANIC See R H Mottram, *A History of Financial Speculation* (1932), J. A Ross, *Speculation, Stock Prices, and Industrial Fluctuations* (1938)

Spee or **Spe, Friedrich** (Friedrich Spee von Langenfels) (both frē'drĭkh shpā', fun lang'unfĕls"), 1591–1635, German poet and moral theologian, a Jesuit His religious poetry, especially in the collection *Trutz-Nachtigall* (1639), ardent in expression of mystical yearning for union with God, contributed to the growth of poetry in the vernacular As a preacher of the Catholic Reform, he was successful and earned the bitter hatred of his opponents, and in 1629 he was almost killed in a murderous attack He was confessor to many of the accused in witchcraft trials and turned his attention to attacking the whole furor of the persecution in his *Cautio criminalis* (1631) He died of a fever contracted when caring for the wounded on a battlefield. See H I. D Ryder, *Essays* (1911).

Spee, Maximilian, Graf von (mäk"sēmē'lyän graf' fun shpā'), 1861–1914, German admiral At the outbreak of the First World War he commanded a squadron in the Far East, and while leading it around Cape Horn he met and defeated the English commander Admiral Cradock off CORONEL (Nov. 1, 1914), however, he was defeated by Sir Frederick Sturdee near the Falkland Islands (Dec 8, 1914) and went down with his vessel.

speech see LANGUAGE

speech, freedom of, the right of citizens to voice their opinions on economic, political, religious, and other matters without interference or restraint on the part of government or other persons, subject only to the penalty of laws against slander, profanity, obscenity, and incitement to unlawful acts. In democratic countries this right is usually guaranteed by custom as well as by constitutional and statute law Historically and in most countries the right has been denied or restricted in many ways In the Roman Empire, Christians were persecuted for preaching a faith displeasing to most Romans The INQUISITION was an effort to destroy the expression of beliefs not acceptable to the Church Opinions considered subversive of established government, formerly punishable by death, are now usually punishable by imprisonment Although modern democracies permit greater freedom of expression than was ever known before, such emergencies as war always bring in their train severe curtailment of the right In the United States after the First World War many aliens were deported for expressing radical views, Communists and Socialists were imprisoned, and persons whose opinions were distasteful to their neighbors often suffered mob violence Freedom of speech is explicitly guaranteed in the First Amendment (part of the Bill of Rights) in the Constitution of the United States, and most of the state constitutions contain similar guarantees The Supreme Court by its interpretation of the Fourteenth Amendment has moreover made the right binding upon the states, protecting as well by its decisions the related freedoms of assembly, press (see PRESS, FREEDOM OF THE), and religion In the exercise of its war powers Congress has passed laws that trench upon freedom of speech in wartime The sabotage, espionage, and sedition laws of 1917, 1918, and 1940 forbade the expression of opinions likely to interfere with war production or to stir up disloyalty or disobedience in the armed forces as well as the use of abusive or critical language about American government and institutions and established censorship of news and of private mail addressed to foreign countries In the period after the First World War nearly half of the states, in the exercise of their police powers, outlawed so-called criminal syndicalism, defined as the advocacy of violent overthrow of the government In passing upon such laws the U S Supreme Court has found restriction justifiable at the point where the spoken word creates a "clear and present danger" to peace and safety and has sometimes overruled the state laws The Civil Liberties Union undertakes to defend individuals whose rights of free speech have been curtailed See J B Bury, *History of Freedom of Thought* (1913), Zechariah Chafee, *Free Speech in the United States* (1941)

speech defect, condition of faulty speech which may be the result of improper training or of physical, psychological, or neurological factors Defects of speech include STUTTERING, lisping, nasal speech, monopitch voice, mumbling, and excessive sibilance Such defects may result from faulty structure or function of one of the organs involved in speaking, or the cause may be emotional The mouth may be affected by a harelip, the nose may be obstructed, or a cleft palate or missing teeth may interfere with articulation The larynx, the lungs, and the pharynx are other organs involved in the production of speech When they are congenitally abnormal, diseased, or injured, the speaking voice may be adversely affected Methods for the elimination or reduction of speech defects include surgical correction of malformations, orthodontia, rhythmical and relaxing exercises, psychological aid, and clinical instruction in breathing, phrasing, and enunciation

Speed, James, 1812-87, U S Attorney General (1864–66), b Jefferson co , Ky , grad St Joseph's College, Bardstown, Ky , 1828 He studied law at Transylvania Univ and began to practice at Louisville in 1833 He was elected to the Kentucky house of representatives (1847) and senate (1861). Speed effectively opposed Kentucky's secession and became Lincoln's chief adviser on Kentucky affairs In the cabinet he supported Lincoln's moderate program of Reconstruction, but later favored the radical Republicans opposed to President Andrew Johnson and resigned as Attorney General in July, 1866 He was professor of law at the Univ. of Louisville (1856-58, 1872-79) See biography by his grandson, James Speed (1914)

Speed, John, 1552?–1629, English historian and cartographer He abandoned his trade as a tailor to engage in map making Many of his maps of parts of England and Wales were published in *The Theatre of the Empire of Great Britain* (1611) His major work, *The History of Great Britain*, and his *Genealogies Recorded in Sacred Scripture* were published c 1611. Several of his maps are preserved in the British Museum

speedometer The automobile speedometer is actuated by a flexible cable attached to and driven by the drive gear of the car This cable rotates a permanent magnet which induces magnetic drag on a drum held back by a hairspring, the greater the speed, the greater the magnetic force and the greater the movement of the drum The speed is indicated by numbers on the rim of the drum. Other speedometers use centrifugal force and operate in a manner similar to the flyball GOVERNOR of a steam engine To inform the pilot of the speed

of his craft through the air, an airplane is equipped with an air-speed indicator A dial registers the speed in miles per hour, it is actuated by the wind pressure in a tube so located that it is not affected by the air stream from the propeller

Speedway, town (pop 2,325), central Ind , near Indianapolis; laid out 1912, inc 1926 It is the site of the Indianapolis motor speedway Storage batteries and electrical goods are made here

speedwell or veronica, any species of the genus *Veronica,* herbs and woody plants of wide distribution Some of the herbaceous kinds are popular for gardens, cultivation of the shrubby kinds (native to New Zealand) is limited to warm regions Speedwells have small, commonly blue flowers—the garden kinds usually in showy spikes or elongated clusters Among the species found wild in North America is the common speedwell (*Veronica officinalis*), which is naturalized Veronica has been associated with the legend of the VERONICA, supposedly through a resemblance of the flower to the relic Culver's root (*Veronica,* or *Leptandra, virginica*) has been used as a cathartic but in quantity is poisonous

Speer, Albert (al'bĕrt shpār'), 1905– German architect and National Socialist leader He joined the Nazi party in 1931 and became its official architect after Hitler came into power His grandiose but coldly eclectic designs include the stadium at Nuremberg (1934) A highly efficient organizer, Speer became (1942) minister for armaments, succeeding the engineer Fritz Todt (1891–1942), and in 1943 he also took over part of Goering's responsibilities as planner of the German war economy From Todt, Speer inherited the *Organisation Todt* (OT), an organization built up along military lines from conscripted labor for the construction of the German strategic roads and defenses After the outbreak of the Second World War the OT was extended to all German-occupied Europe and became one of the main features of the German war machine Largely because of its wide use of slave labor, Speer was indicted as a major war criminal at the Nuremberg trial and was sentenced (1946) to imprisonment for 20 years

Speicher, Eugene Edward, (spī'kur), 1883–, American portrait and landscape painter, b Buffalo, N Y He studied at the Albright Art School, Buffalo, and the Art Students League, New York, and with William M Chase and Robert Henri He is known especially for the accuracy, vigor, and effective color of his portraits Many of his landscapes picture the mountains and valleys of the Catskills near his Woodstock, N Y , summer home He is represented in most of the leading galleries of the United States Well known among his portraits are *The Blue Necklace, Pigtails, Jean Bellows, The White Fuchu, The Mountaineer,* and *Red Moore, Hunter*

Speier, Germany see SPEYER

Speiser, Ephraim Avigdor (spī'zur), 1902–, American archaeologist, b Galicia, grad College of Lwow, Galicia, 1918, M A Univ of Pennsylvania, 1923, Ph D Dropsie College, Philadelphia, 1924 He held (1926–28) a Guggenheim fellowship for study in Mesopotamia On the staff of the Univ of Pennsylvania from 1928 (professor of Semitics, 1931) and resident director of the American School of Oriental Research at Baghdad from 1932, he has done field work in Mesopotamia under the joint auspices of both institutions He is noted as the first excavator of Tepe Gawra He wrote *Mesopotamian Origins* (1930) and *Excavations at Tepe Gawra* (Vol I, 1935)

Speke, John Hanning (spēk), 1827–64, English explorer in Africa He joined Sir Richard Burton in his expeditions to Somaliland (1854) and to E central Africa (1857–59) Together they discovered (1858) Lake Tanganyika, then Speke continued alone and discovered Victoria Nyanza, which he believed to be a source of the Nile In 1862 he returned to the lake and proved that the Victoria Nile issues from the north end over Ripon Falls He wrote *Journal of the Discovery of the Source of the Nile* (1863)

spell, word, formula, or INCANTATION believed to produce a magical effect Belief in the spell is based on the idea that by "naming" a vague power one can focus the power on a desired end, consequently there is an intimate connection between the word and the thing denoted by it It is similar to the belief that the name of a man is identical with his self The spell could be used for evil or good ends, if evil, it was a technique of sorcery Many authorities believe that the "word" was the precursor of prayer The spell was a Teutonic form of exercising occult power and was sometimes used to summon the spirits of departed heroes to give prophetic utterances Once cast, the spell was supposed to remain in force until broken by a counter-spell or exorcism

Spellman, Francis Joseph, 1889–, American Roman Catholic prelate, cardinal of the Roman Church, b Whitman, Mass Educated at Fordham Univ and the American College at Rome, he was ordained May 14, 1916 He was a parish priest in Roxbury, Mass , held various offices in the Boston archdiocese, and was the first American assistant to the papal secretariat of state in 1925 He was named (1932) auxiliary bishop of Boston and succeeded (1939) after the death of Cardinal Hayes to the archdiocese of New York In the Second World War he made four tours through the war areas as U S military vicar He was elevated to be a cardinal by Pope Pius XII in 1946 He interested himself particularly in education and in charities His firm advocacy of some state aid to parochial schools involved him in difficulties with distinguished opponents, particularly Eleanor Roosevelt His understanding of the ordinary American has made his writings, in verse and in magazine articles, widely popular with Catholics and non-Catholics alike

Spemann, Hans (hāns' shpā'mān), 1869–1941, German embryologist As professor of zoology at Freiburg im Breisgau (1919–35), he was noted for his researches in embryonic development Using the methods of transplantation and isolation, he sought to discover the agency which governs the growth and differentiation of cells For this work he received the 1935 Nobel Prize in Physiology and Medicine, he described this research in his *Embryonic Development and Induction* (1938)

Spence, Thomas (spĕns), 1750–1814, English agrarian socialist A forerunner of the single taxers, he devised a scheme of land tenure by parish, in which rent, paid to the parish corporation, would be the sole tax He devoted much of his life to agitating for these principles and succeeded in founding a society of Spenceans His ideas appeared in *The Real Rights of Man* (1775) and other pamphlets See study by Olive Rudkin (1927)

Spencer, Anna Garlin, 1851–1931, American educator, feminist, and Unitarian minister, b Attleboro, Mass She married the Rev William H Spencer in 1878 She was a leader in the woman-suffrage and peace movements Ordained in 1891, she held a pastorate in Providence, R I She was associated with the New York Society for Ethical Culture (1903–9) and the New York School of Philanthropy (1903–13) Over a long period she was a popular lecturer and wrote on social problems, especially concerning women and family relations Her writings include *Woman's Share in Social Culture* (1913) and *The Family and Its Members* (1922)

Spencer, George John Spencer, 2d Earl, 1758–1834, English public official In 1780 he entered the House of Commons in the Whig interest and succeeded to the earldom in 1783 He supported the reform policies of Burke and Pitt and was appointed (1794) first lord of the admiralty In his term of office the navy achieved the victories of St Vincent and Camperdown, and Spencer was responsible for the selection of Horatio Nelson to command the fleet which won the famous battle of the Nile He went out of office in 1801 but served as home secretary (1806 7) Afterward he devoted himself to literary and scientific pursuits

Spencer, Herbert, 1820–1903, English philosopher He was trained as an engineer, but his keen interest in social problems led him to reject that field and become a writer In this new work he was self-educated, studying widely in the natural sciences and psychology He contributed a series of letters to the *Nonconformist* in 1842 and from 1848 until 1853 was subeditor of the *Economist,* where he associated with such intellectual leaders as John Stuart Mill, George Henry Lewes, and George Eliot After that time, frequently handicapped by poor health and financial insecurity, he devoted himself to study and writing According to Spencer, philosophy is knowledge unified and organized through a single principle He found this principle in the doctrine of evolution and proceeded to apply it to all phenomena, earning for himself the title of the philosopher of evolution Evolution consists in the harmonious interaction of the processes of differentiation and integration Every structure in nature divides and determines itself by entering into different relationships, but the individual phenomenon, so separated, integrates itself to form a new unity that is more complex and more efficient than the original form This development occurs in history as "alternate eras of evolution and dissolution " Basic to this theory is the principle of the persistence of energy, and in so far as Spencer analyzes the ultimate nature of being, it would be characterized by energy and force The theory of evolution as a unifying philosophical principle was presented in *First Principles* (1862), the beginning of a 10-volume work, *Synthetic Philosophy* The only limit which Spencer placed on the application of the theory of evolution was in the area which he called the unknowable, the ultimate nature of reality The content of the unknowable was not only theological but also included such scientific ideas as matter, space, time, motion, and force He proposed a principle of limitation of knowledge in which human thought was confined to that which could be compared with and related to other things Since the absolute cannot be related to anything else, it cannot be known With the field of philosophy limited to the investigation of phenomena and its relationships, Spencer proceeded to apply the evolutionary principle to all phases of life in the universe. *The Principles of Biology* (2 vols , 1864–67) and *The Principles of Psychology* (1855; rev ed , 2 vols , 1870–72) were devoted to a mechanistic explanation of how life has progressed through a continual adaptation of inner relations to outer ones *The Principles of Sociology* (8 parts in 3 vols , 1876–96) is primarily concerned with the problems of government and economics As society evolves the individual is differentiated from the group and gains increasing freedom It is the function of the state to maintain freedom and justice, justice being defined as "the right of each man to do as he pleases as long as he does not trespass upon the equal freedom of every other man " *The Data of Ethics* (1879) and *Justice* (1891) became, with new material added, *The Principles of Ethics* (2 vols , 1892–93) It develops the evolution of morality and establishes the ideal of the reconciliation of the rights of the individual and of society Spencer's remarkable facility for coordinating facts and his devotion to evolution as a unifying principle for philosophy resulted in an important synthesis of scientific knowledge His writings gave impetus to the studies of biology and sociology He is rated as one of the leading philosophers of the 19th cent Among his other important writings are *Social Statics* (1850), *The Classification of the Sciences* (1864), and *The Factors of Organic Evolution* (1887) See his autobiography (2 vols , 1904), David Duncan, *Life and Letters of Herbert Spencer* (1908), E Asirvatham, *Herbert Spencer's Theory of Social Justice* (1936)

Spencer, John Canfield, 1788–1855, American jurist and statesman, b Hudson, N Y , grad Union College, 1806 He practiced law and then served (1817–19) in Congress, where he was on a committee investigating the United States Bank He was in the state legislature (1820–21), serving as speaker in 1820, and then was (1824–28) in the state senate, where he helped revise the state statutes He again was in the state legislature and later, as a Whig, was secretary of state of New York Under President Tyler he was (1841 43) Secretary of War and then became (1844) Secretary of the Treasury, but resigned because he opposed the annexation of Texas

Spencer, Platt Rogers, 1800–1864, American penman, b East Fishkill, N Y He originated and popularized the style of handwriting known as Spencerian, teaching it in a log house on his farm at Geneva, Ohio, and lecturing to various academies and business colleges Eventually a series of textbooks were issued by Spencer and his associates promoting his system

Spencer, Robert, 1879–1931, American genre and landscape painter, b Harvard, Nebr , studied at the National Academy of Design Among his paintings are *Repairing the Bridge* (Metropolitan Mus), *White Tenement* (Brooklyn, N Y , Mus), *Red Boat* (Corcoran Gal), and *The Tower* (Carnegie Inst , Pittsburgh) He was associated with the art colony in New Hope, Pa

Spencer, Stanley, 1891–, English painter, studied at the Slade School of Art, London He served in the First World War, and two paintings of the wounded first made him known His paintings are delicately realistic, sometimes humorous, and always original A series of murals of war scenes are in the Oratory of All Souls', Burghclere, Hampshire Among his paintings are *Daphne, Terry's Lane, Cookham,* and *Resurrection* (Tate Gall , London), *Self-portrait* (Amsterdam), *Jubilee Tree, Cookham* (Art Gall of Toronto), and *The Nursery* (Mus of Modern Art, New York) He became (1932) an associate of the Royal Academy of Arts but resigned in 1935

Spencer, 1 Town (pop 2 375), co seat of Owen co , SW Ind , on the White River and ESE of Terre Haute, settled c 1815 Coal mining is done here William Vaughn Moody was born in Spencer 2 City (pop 6,599), co seat of Clay co , NW Iowa, on the Little Sioux river and S of Spirit Lake, in a rich farm area, founded 1859, inc 1880 It has a fine airport A Fourth of July fire in 1931 destroyed most of the business section The annual county fair is famous 3 Town (pop 6,641), central Mass , W of Worcester, settled 1721, inc 1775 Its footwear industry was begun early in the 19th cent 4 City (pop 3,072), central N C , just E of Salisbury in the Yadkin valley It is a railroad division point, with shops and roundhouses 5 City (pop 2,497), co seat of Roane co , W central W Va , NE of Charleston, in a stock-raising and gas region, inc 1858 A state hospital for the insane is here

Spencer Gulf, inlet of the Indian Ocean, 200 mi long and 80 mi wide, cutting deeply into South Australia, between Eyre and Yorke peninsulas On its shores are Port Pirie and Port Augusta

Spencerport, village (pop 1,340), W N Y., on the Barge Canal and NW of Rochester, inc 1867 John T Trowbridge's boyhood home is here

Spencerville, village (pop 1,623), NW Ohio, SW of Lima, laid out 1844–45.

Spender, Stephen, 1909–, English poet and critic, educated at Oxford His early poetry, like that of W H. Auden and C. Day Lewis, was inspired by social protest *Twenty Poems* appeared in 1930, followed by *Poems* (1933), *Vienna* (1934), *The Still*

Centre (1939), *Ruine and Visions* (1942), and *The Edge of Being* (1949). His fiction includes the short stories *Burning Cactus* (1936) and a novel, *The Backward Son* (1940). Literary and social criticism appear in *The Destructive Element* (1935), *Forward from Liberalism* (1937), and *Life and the Poet* (1942). *European Witness* (1946) contains his observations on Germany. He collaborated in translating the works of Federico García Lorca, Ernst Toller, and Rainer Maria Rilke.

Spener, Philipp Jakob (fē'lĭp yä'kôp shpā'nur), 1635–1705, German theologian, founder of PIETISM. He was pastor of the Lutheran Church at Frankfurt in 1666, when he began to use new methods for infusing deeper spirituality into the life of the Church. He instituted in 1670 his meetings for fellowship and Bible study, and these *Collegia Pietatis* led to a religious revival in many German states. His book, *Pia desiderea* (1675), contained proposals for the reconstruction of the Church. Spener became court chaplain at Dresden in 1686, but he aroused the opposition of the clergy and the elector and in 1691 accepted the rectorship at St. Nicholas, Berlin. Spener aided in the founding of the Univ. of Halle in 1694, and later, through the activities of his disciple August Hermann Francke, the city of Halle became a center of Pietism. The orthodox Lutheran clergy had continuously resented Spener's criticism and influence, and in 1695 the theological faculty at Wittenberg made formal charges against him. In spite of this opposition Spener's ideas spread to many congregations throughout Germany and in other parts of Europe.

Spengler, Oswald (spĕng'glur, Ger ôs'vält shpĕng'glûr), 1880–1936, German philosopher. His studies covered many fields, including mathematics, science, philosophy, history, and art. His major work, *The Decline of the West* (1918, revised for Eng. tr., 1926–28), brought him world-wide fame. Spengler maintained that every culture passes a life cycle from youth through maturity and old age to death. Our own Western culture, he believed, had proceeded through this same cycle and was now in a period of decline, to be conquered in time by the yellow race. His popularity in Germany ceased when he refused to support Nazi theories of racial superiority.

Spenser, Edmund, *c* 1552–1599, English poet, b. London, educated at Merchant Taylors' School and Cambridge. His early poems, especially *The Shepheardes Calender* (1579), won him recognition as first among the English poets of the time, a time most responsive to poetry. He was the friend of men eminent in literature and at court such as Gabriel Harvey, Sir Philip Sidney, Sir Walter Ralegh, and Robert Sidney, earl of Leicester. Appointed in 1580 secretary to Lord Grey, lord deputy of Ireland, Spenser thereafter made his home in Ireland, holding minor civil offices and receiving the confiscated lands and castle of Kilcolman, Co. Cork. In 1589 Spenser went to London, where he arranged for the publication of *The Faerie Queene* (Books I-III, 1590) and sought court preferment. Disappointed with his reward, he returned to Ireland. His disgust was voiced in *Complaints* (1591), and his London journey is allegorically described in *Colin Clouts Come Home Againe* (1595). *Daphnaida* appeared in 1591, and *Astrophel*, an elegy on Sir Philip Sidney, was published with *Colin Clout*. In 1595 *Amoretti and Epithalamion* also appeared, in *Amoretti*, a SONNET sequence. Spenser commemorates his courtship of Elizabeth Boyle, and in *Epithalamion*, probably the finest wedding poem in English, his marriage to her in 1594. In 1595–96 he was again in London. The year 1596 saw the publication of *The Faerie Queene* (Books I-VI), *Foure Hymnes*, and *Prothalamion*. About 1596 he circulated in manuscript a prose treatise on Ireland, defending Lord Grey's harsh policy and urging the vigorous suppression of the Irish; the tract was published as *A View of the Present State of Ireland* (1633). In the Tyrone rebellion of 1598 Kilcolman Castle was burned, Spenser returned to London, died soon afterward, and was buried in Westminster Abbey. In the six books of the unfinished *Faerie Queene* (1590–96), his masterpiece and one of the greatest poems in English, Spenser gave allegorical expression to his moral, political, and religious opinions in a story of the kingdom of Gloriana, or Elizabeth. He was a consummate artist in words and verse technique, and his most distinctive quality is found in his language and its melody. The Spenserian stanza of *The Faerie Queene* (nine lines, eight of iambic PENTAMETER followed by one of iambic hexameter—an ALEXANDRINE—rhyming *ababbcbcc*) is Spenser's chief contribution to English verse form. He is known as the poet's poet because such men as James Thomson, Shelley, Keats, and Byron and, in our own day, T. S. Eliot acknowledge him as their master, but his poetry has always pleased readers in search of descriptive beauties rather than action. See ONOMATOPOEIA. See Variorum edition of his works (ed. by E. A. Greenlaw, C. G. Osgood, and F. M. Padelford, 1932–) and the good one-volume edition of the poetical works (ed. by J. C. Smith and Ernest de Selincourt, 1912), H. S. V. Jones, *A Spenser Handbook* (1930); Leicester Bradner, *Edmund Spenser and the Faerie Queene* (1948), biography by A. C. Judson (1945).

Speranski, Mikhail Mikhailovich (mĕkhōō'ĭl' mĕkhī'lŏvĭch spyĭrän'skē), 1772–1839, Russian statesman. The son of a village priest, he rose as a civil servant and in 1809 became vice minister of justice and drafted a program of liberal reform, providing for the emancipation of the serfs and for a limited constitution. His influence on Alexander I was paramount in the years 1808–11, and he played an important role in the formation of the Russian alliance with Napoleon I. When in 1812 Napoleon invaded Russia, Speranski was disgraced and exiled. In 1819, however, he was made governor of Siberia, and in 1821 he returned to St. Petersburg, but he never regained his former influence. In the reign of Nicholas I, Speranski accomplished the codification of Russian law.

sperm or **spermatozoon** (spûr"mutuzō'ŭn, -zō'ŏn), in biology, the male gamete or male sexual cell, corresponding to the ovum of the female. It is produced in the testis (testicle or generative gland) of the male in the higher animals, and it is the agent of FERTILIZATION of the ovum. The sperm is much smaller than the ovum and is provided with an elongated process like a whip (the flagellum) by which it is enabled to move through a fluid. It has, like the ovum, a nucleus and contains chromosomes which undergo a reduction to half their number, before fertilization. The POLLEN takes the place of the sperm cells in the process of REPRODUCTION in many flowering plants.

spermaceti (spûrmusē'tē, -sē'tē), white, odorless, tasteless wax obtained from the sperm whale or cachalot and related animals. It is secured with SPERM OIL from a large cavity in the whale's head and from the blubber. Spermaceti is insoluble in water and does not putrefy. It is used in ointments and cosmetics, in waterproofing cloth and paper, and in fine candles.

spermatozoon see SPERM.

sperm oil, chemically a liquid wax and not a true oil, obtained from the sperm whale or cachalot and related animals. It flows readily, is clear, and varies in color from pale yellow to brownish yellow. It is secured from the blubber and from a huge cavity in the whale's head. The oil cavity helps the whale to keep part of his head above water for breathing. A solid WAX, spermaceti, is extracted from the oil by filtration and treatment with potash-lye. The oil is an excellent lubricant (e.g., for watches and other delicate instruments) and is used as a dressing for leather, in tempering steel, in making soap, and to protect plants from insects. Chief ports of whaling ships and markets for sperm oil have included New Bedford and San Francisco and ports in New South Wales and Norway.

Sperry, Elmer Ambrose, 1860–1930, American inventor, b. Cortland, N.Y. Although he is probably best known for his work on the gyroscope, he also invented an automatic steersman for ships (the gyrocompass (which eliminated variations caused by the earth's magnetism), a new system of street lighting, and numerous electrical devices. He founded the American Institute of Electrical Engineers and the American Electrochemical Society.

Speusippus (spūsī'pus), fl. 347–339 B.C., Greek philosopher, disciple and nephew of Plato, whom he succeeded as head of the ACADEMY. Speusippus shows clearly the tendency to elaborate and subdivide his master's work which led to the extremes of the Academics. One of his most significant ideas is that exact definition of something is impossible until all the features by which it is differentiated from everything else are known. A portion of his writings, *On Pythagorean Numbers*, has survived.

Spey (spā), river of Scotland. It rises in the Inverness-shire highlands and flows 110 mi. generally NE into Morayshire, sometimes forming the border with Banffshire on its course to Moray Firth. It is rapid and unnavigable, but the salmon fisheries of its lower course are valuable.

Speyer, John of see JOHN OF SPEYER.

Speyer (shpī'ûr), city (pop. 28,047), Rhenish Palatinate, W Germany, on the left bank of the Rhine. It is sometimes called Spires in English, the spelling Speier also occurs in German. Speyer is a river port and it has some manufactures, but its chief importance is historical. Originally a Celtic settlement, it was known under the Romans as Noviomagus and as Augusta Nemetum, a town of the province of Belgica. It was destroyed (*c* 450) by the Huns, was rebuilt, and became (7th cent.) an episcopal see. Speyer was made a free imperial city in 1111, but its bishops ruled substantial territories on both sides of the Rhine as princes of the Holy Roman Empire until 1801, when the bishopric was secularized. In 1146 the Second Crusade was preached at Speyer by St. Bernard of Clairvaux. Several imperial diets were held at Speyer, notably the diet of 1529, which gave complete toleration to Catholics in Lutheran states, denied toleration to Lutherans in Catholic states, and refused toleration to Zwinglians and Anabaptists altogether. Obtained largely under the pressure of Emperor Charles V, the decision was formally protested by the delegates favoring the Reformation, who from that day were called Protestants. The chief signers of the Protest of Speyer were Elector John of Saxony and Landgrave Philip of Hesse. The imperial chamber of justice (Ger. *Reichskammergericht*) was established at Speyer in 1513, when the city was devastated (1689) by the French in the War of the Grand Alliance, the chamber was moved to Wetzlar. Speyer and the territory of the bishops of Speyer W of the Rhine were occupied by the French in the French Revolutionary Wars and formally ceded to France by the Treaty of Campo Formio (1797). The secularized bishopric E of the Rhine passed (1803) to Baden, with which it has since remained. Speyer and the episcopal lands W of the Rhine were given to Bavaria at the Congress of Vienna (1815), they were incorporated with the Rhenish Palatinate, of which Speyer was the capital until 1945, when Neustadt an der Haardt replaced it. Speyer has retained parts of its medieval walls and gates. Its Romanesque cathedral (10th cent., several times restored), one of the finest in Germany, contains the tombs of eight emperors. The Palatine historical museum at Speyer has a large collection of pre-Roman and Roman antiquities. An early printing center, Speyer was the home of John of Speyer and his brother Wendelin.

Spezia, La (lä spā'tsyä), city (pop. 80,399), capital of La Spezia prov., Liguria, NW Italy, a Mediterranean port on the Gulf of Spezia. The chief Italian naval station and arsenal and the seat of a navigation school, it also has a commercial port, shipyards, steel mills, oil refineries, and other industries. The city was heavily bombed in the Second World War. Near La Spezia are remains of the important Roman town of Luna, which was destroyed in the Middle Ages. Along the gulf are several picturesque villages celebrated for their beauty, notably Portovenere, Lerici, and San Terenzo.

sphagnum (sfăg'nŭm) or **peat moss,** any species of the large and widely distributed genus *Sphagnum*, economically the most valuable of any MOSS. The sphagnums are usually pale green, sometimes reddish, soft, weak-stemmed mosses of wet places, most commonly found in bogs (see BOG). Capable of growing free in water, they have an "indefinite" growth, often attaining several feet in length. They are the principal constituent of PEAT, which can be formed from sphagnum in 24 years, although most of the natural peat bogs are ages old. In horticulture sphagnum is used as a packing material, as a seed bed for such plants as orchids, as a bulb-growing medium, and as a mulch. Because its structural peculiarities enable it to absorb and hold water better than cotton, it is employed as an absorbent dressing, particularly in surgery, but not all species are used.

sphalerite (sfā'lurīt, sfă'-), mineral composed of zinc sulphide, usually containing iron, manganese, cadmium, and mercury. It occurs in crystals of the isometric system, but also and more generally in cleavable, compact masses. It is transparent to translucent and varies greatly in color, pure specimens being white and those with slight impurities yellow, brown, red, black, or green. Sphalerite is a widely distributed mineral, the most important source of ZINC and commonly occurs in association with galena. It is found in Bohemia, Saxony, Cornwall, Japan, and various parts of the United States.

sphere, in geometry, the three-dimensional analogue of a CIRCLE. The term is applied to the spherical surface, every point of which is the same distance (measured by the radius) from a certain fixed point (the center), and also to the volume enclosed by such a surface. Thus rubber balls and oranges are examples of approximate spheres. Any plane cutting a sphere does so in a curve which will be a circle. If the plane goes through the center of the sphere, the circle is said to be a great circle of the sphere. It is the largest circle that can be drawn upon the sphere, and all great circles of one sphere are the same size. The diameter of a sphere is the diameter of one of its great circles. A segment of a sphere is the volume enclosed by a plane cutting the sphere, as well as the portion of the surface of the sphere so cut off. Thus each plane cutting a sphere divides it into two segments. When the circle is a great circle, the two segments are equal and are called hemispheres. A sector of a sphere is the volume enclosed by a cone with its vertex at the center of the sphere and also the portion of the surface of the sphere which lies within this cone.

sphere of influence, term applied to an area preempted by a power with the intention of subsequently acquiring more definite control if circumstances permit. The sphere of influence may be in an undeveloped "backward" area or in part of a civilized though weak nation. The expression came into common use while the partition of Africa was in progress in the 19th cent., and it was also applied to undeveloped Asiatic regions which were parceled among world powers and to China (see OPEN DOOR) and Iran. Nations which had not occupied or established a PROTECTORATE over territory adjoining their existing settlements but which desired to gain control over as large an area as possible entered into agreements defining their spheres of influence. Such conventions bound only the signatories and did not prejudice the rights of other

states which might wish to gain a foothold. Theoretically, the SOVEREIGNTY of a nation was not impaired by the establishment of a sphere of influence within its borders, in actuality, the interested power was able to exercise great authority in the territory it dominated, and if disorders occurred it was in a position to seize control Thus creation of spheres of influence was frequently the prelude to the establishment of a protectorate or to annexation Modern international practice frowns on the creation of spheres of influence as on actual or potential interference with the freedom and territorial integrity of states

Sphinx (sfĭngks), in Greek mythology, a monster borrowed from Egyptian religion She was a winged lion with the head of a woman, said to be the daughter of Typhon and Echidna She lived on a high rock near Thebes in Greece and asked the following riddle of all who came near "What walks on four feet in the morning, on two at noon, and on three in the evening?" She killed all who failed to answer her until OEDIPUS solved the riddle by saying, "Man crawls on all fours as a baby, walks upright in the prime of life, and uses a staff in old age " The Sphinx then leaped from her rock and died, and Oedipus became king of Thebes There were many sphinxes represented in Greek art Later legend made the sphinx simply a messenger of the gods The more important sphinx of Egypt had in most cases a man's head, although some were made with rams' heads and some with hawks' heads The position of the figure is recumbent Sphinxes in Assyria and Phoenicia, evidently adapted from the Egyptian type, had wings added The most widely famed of all is the Great Sphinx of Gizeh, Egypt, a colossal figure sculptured out of a mass of natural rock, near the pyramid of Khafre The paws are of masonry Between them was a shrine to the sun-god Harmachis, represented by the Sphinx The entire length is 189 ft This massive creature is the guardian of the valley of the Nile. Many Egyptian sphinxes bore portrait heads of the rulers Others, in long rows, formed avenues of approach to the temples

spice, aromatic vegetable product used as a flavoring or condiment. The term was formerly applied also to pungent or aromatic foods (e g , gingerbread and currants) and to ingredients of incense or perfume (e g , myrrh). Modern usage tends to limit the term to flavorings used in food or drinks, although many spices have additional commercial uses, e g , as ingredients of medicines, perfumes, incense, and soaps Spices include stimulating condiments, e g , pepper, mustard, and horse-radish, aromatic spices, e.g., cloves, cinnamon, nutmeg, anise, and mace, and sweet herbs, e g , thyme, marjoram, sage, and mint Spices are taken from the part of the plant richest in flavor—bark, stem, flower bud, fruit, seed, or leaf Although spices are very commonly used in the form of a powder, some are used as tinctures obtained by extracting essential oils, and many are used whole Garlic, chives, caraway, mustard, and many herbs grow in temperate regions, and vanilla, allspice, and red pepper are indigenous either in the West Indies or in South America, most of the major spices, however, are produced in the East Indies, in tropical Asia, and in the Malay Archipelago Spices from the Far East were in demand from ancient times, they were carried by caravan across China and India to ports of the Mediterranean Sea or the Persian Gulf and thence to the market places of Athens, Rome, and other cities, where they were sold at exorbitant prices Certain spices were used as medium of exchange, Alaric I is said to have demanded pepper as part of the ransom for raising the siege of Rome in 408 In the early Middle Ages few spices reached the markets of Europe, but trade was slowly resumed in the 9th cent and was later greatly stimulated by the Crusaders In Western Europe the desire for spices arose in part from the monotony of the diet and from poor facilities for the preservation of food, especially of meat When overland trade routes from the Far East were cut off by the Mongols and Turks, the European demand for spices was a major factor in inciting a search for new trade routes around Africa and across the Atlantic and Pacific oceans The high price obtainable for spices was responsible in part for the bitter rivalry of European powers for the control of spice-producing areas and of trade routes Even after adequate supplies of spice were found and means of transportation made available, the cost long remained very high in Europe and in America largely because of the expenses incident to attempts to retain monopoly of markets and because of deliberate limitations of crops in order to secure high prices Although spices today are still important in trade, their per capita use for flavoring food has declined in Western civilizations, and certain spices must compete with synthetic flavorings The demand for spices has remained large in the Orient, where spices have a wider social and ceremonial significance than they ever obtained in the West

spicebush, name for ornamental and spicily fragrant shrubs or trees of the genus *Benzoin*, native to E North America and to Asia The common American spicebush (*Benzoin aestivale*) has small densely clustered yellow flowers appearing early in the spring before the leaves and followed by bright red berries. All parts of the shrub are fragrant The dried and powdered berries have been used as a substitute for allspice, and the leaves for brewing a tea This spicebush, which belongs to the same family as the sassafras, is called also Benjamin bush, wild allspice, and feverbush

Spice Islands, Indonesia see MOLUCCAS

spider, air-breathing arachnid, with the body divided into two parts, with four pairs of legs and usually four pairs of eyes, and without true jaws The spinnerets on the under side of the abdomen produce a liquid which hardens on exposure to the air, forming silk This silk is used by various spiders for encasing egg masses, for lining their retreats, for making webs or snares in which to catch insects, for lines on which to descend and ascend, and for "ballooning" through the air for long distances Man uses the silk for cross hairs in certain optical instruments Spiders eat no plants, and they destroy many harmful insects They are often cannibalistic The venom produced by the spider's poison glands is used to paralyze its prey and seldom causes real harm to humans, though the venom of the female black-widow spider causes pain and is sometimes fatal This spider has a rounded, shiny black abdomen with a red mark shaped like an hourglass on the underside The body of the female is about ½ in long, and that of the male about ¼ in Among the interesting spiders are the TARANTULA, the trap-door spider, the orb weaver, the crab spider, the jumping spider, and the wolf spider See J H Comstock, *The Spider Book* (rev ed , 1948), W J Gertsch, *American Spiders* (1949)

Spieghel, Hendrick Laurenszoon (hĕn'drŭk lou'runszōn" spē'khul), 1549–1612, Dutch poet, author of a long philosophical poem and of shorter pieces adapted from French and Latin He was a leader of the Amsterdam circle that foreran the Golden Age of Dutch literature

Spielberg, Czechoslovakia see BRNO

Spielhagen, Friedrich (frē'drĭkh shpēl'hägun), 1829–1911, German novelist His works, chiefly on social and political themes, include the widely read *Problematic Characters* (1861, Eng tr , 1869), *The Hohensteins* (1864, Eng tr , 1870), *Hammer and Anvil* (1869, Eng tr , 1870), and *The Breaking of the Storm* (1876; Eng tr , 1877)

spikenard (spīk'närd), name for several plants The spikenard mentioned in the Bible was a costly aromatic ointment, preserved in boxes of alabaster, the chief ingredient of which is believed to have been *Nardostachys jatamansi*, a plant of the valerian family Such was the precious box of ointment that Mary Magdalen broke over Jesus' feet The American spikenard, or Indian root, is *Aralia racemosa*, related to the Hercules'-club or spikenard tree and to the wild SARSAPARILLA or small spikenard It has aromatic roots which have been used as a domestic remedy similar to the wild sarsaparilla The false Solomon's-seal is sometimes called wild spikenard

Spillville, town (pop 329), NE Iowa, on Turkey river and SW of Decorah In this Czech community Anton Dvorak spent the summer of 1893 and composed part of his symphony *From the New World* He played the organ in beautiful St Wenceslaus Church here Dvorak's house became a museum of famous clocks

spinach, annual plant (*Spinacia oleracea*) of the same family as the beet, probably of Persian origin and long cultivated as a potherb. It was introduced into Europe in the 15th cent It is valuable for its vitamins and iron content, as well as for roughage The principal varieties are the broad leaved, savoy, crumpled, and prickly (so named from the seeds)

spinal column, backbone, spine, or **vertebral column,** fundamental portion of the SKELETON of humans and other vertebrates, consisting of segments known as vertebrae which are fastened together by disks of cartilage and by ligaments In human beings the spinal column of the child contains 34 vertebrae, in the adult a number of these are fused, forming a total of only 26 separate bony segments The movable vertebrae number 7 in the neck region (cervical vertebrae) and 12 in the region of the chest (thoracic vertebrae), and below these are 5 lumbar vertebrae The fixed or immovable vertebrae form the sacrum (consisting of five fused sacral vertebrae) and the coccyx, the lowest portion of the spinal column (usually composed of four small fused bones) Each vertebra has a somewhat cylindrical bony portion (the body or centrum), a number of spinous processes, and a bony arch The bodies of the vertebrae form the strong, flexible supporting column of the body, and the space enclosed by the arches is the neural canal in which the spinal cord lies Ligaments and muscles are attached to various processes of the vertebrae; in the thoracic region the 12 pairs of ribs are linked to the thoracic vertebrae Disorders of the spinal column include curvature of the spine, tuberculosis, tumor, and arthritis

spinal cord, the part of the nervous system incased in the SPINAL COLUMN It is a whitish cord about 18 in. long, reaching to the first lumbar vertebra and continuous with the medulla oblongata, a part of the brain, at the base of the skull. It consists of a central canal, around which is the gray matter, and outside of this, the white matter. The spinal cord is enclosed in the three membranes continuous with those of the brain. There are 31 pairs of nerves along the spinal cord, which serves as a pathway for impulses to and from the brain (the tracts being located in the white matter) and as a system of reflex centers controlling the activities of glands and organs as well as of muscles.

spinal meningitis: see MENINGITIS

Spinario (spĭnä'rēō), celebrated statue, probably of the 1st cent B C It represents a boy seated on a rock and pulling a thorn from his left foot, which rests upon his right knee There is a bronze statuette of this figure in Rome and a statuette in marble in the British Museum These are possibly copies of a statue made by BOETHUS

Spindale, textile-mill town (pop 3,952), W N C., SE of Asheville, in a farm area, inc 1923.

Spinden, Herbert Joseph, 1879–, American anthropologist, b Huron, S.Dak , grad Harvard (B A , 1906, Ph D , 1909). He became (1929) curator of ethnology and industrial art, and later of American Indian art and primitive cultures, at the Brooklyn Museum One of his many contributions to the knowledge of ancient America is the explanation of the Mayan calendar and chronology. His books include *Ancient Civilizations of Mexico and Central America* (1917, rev ed , 1928), *The Reduction of Mayan Dates* (1924), and *Sun Worship* (1940).

spindle see SPINNING

spindle tree: see EUONYMUS

spine, see SPINAL COLUMN

Spinello di Luca Spinelli (spēnĕl'lō dē lōō'kä spēnĕl'lē), c 1333–1410, Italian fresco painter, usually called Spinello Aretino He was a leading exponent of the late Giotto school Only two of his many frescoes are extant in good condition, scenes from the life of St Benedict (Church of San Miniato, Florence), restored by a later painter, and the history of Pope Alexander III (Palazzo Pubblico, Siena) Other works are *Madonna with Saints* (Florence Acad), *Three Saints, Crucifixion,* and two fragments (National Gall , London), and *St Mary Magdalen* (Metropolitan Mus)

spinet (spĭ'nĭt), musical instrument of the HARPSICHORD family. Although the terms *virginal* and *spinet,* interchangeable until the end of the 17th cent , were sometimes used indiscriminately to designate any harpsichord, they usually designated small instruments having one keyboard, one string to each note, and the keys more or less perpendicular to the strings, similar to the clavichord In fact the first spinet, made in the 15th cent , may have been a clavichord to which a quill mechanism was added In England in the 18th cent the virginal was the instrument with rectangular case, while the spinet had a triangular or wing-shaped case Until the middle of the 18th cent neither had attached legs The earliest extant composition for virginal is by Hugh Aston The Elizabethan virginalists, among them William Byrd, Thomas Morley, and Orlando Gibbons, were the composers of an important body of music, the outstanding collection of which is the *Fitzwilliam Virginal Book* (early 17th cent)

Spingarn, Joel Elias (spĭn'garn), 1875–1939, American educator and literary critic, b New York city, grad Columbia (B A , 1895, Ph D , 1899) He was professor (1899–1911) of comparative literature at Columbia, an officer in the First World War, and a member (1919–32) of the publishing firm of Harcourt, Brace and Company His literary work includes *A History of Literary Criticism in the Renaissance* (1899), *The New Criticism* (1911), *Creative Criticism* (1917, rev ed , 1931), and various books of poems, as well as the editing of many works A prominent officer of the National Association for the Advancement of Colored People from 1913 to his death, he established in 1913 the Spingarn medal, awarded annually to a Negro of outstanding achievement

spinning, the drawing out, twisting, and winding of fibers into a continuous thread or yarn. From remote antiquity until the era of mechanical invention, spinning was a household industry The roughly carded fiber was at first held in the left hand and drawn out and twisted by the right The earliest tools were the distaff, a stick from 1 to 3 ft long on which the fiber was wrapped, and the spindle, a shorter tapering stick notched at one end and weighted by the wharve or whorl (a disk of stone or clay). The spindle was twirled to twist the thread, which was then wound on it With these simple tools were spun yarns of a fineness unsurpassed by modern machines In India the delicate threads for the famed Dacca muslin were produced by revolving needle-thin pieces of bamboo in a coconut shell. The primitive Gurkha wheel was used to spin coarse yarns In Europe during the 14th to the 16th cent. the distaff and spindle were gradually superseded by the spinning wheel. It consisted of a spindle set in a frame and revolved by a driving belt passing over a wheel. The great, or wool, wheel, revolving the spindle directly, then by a pulley, twisted the thread, then was stopped and revolved in the opposite direction to back off

the spun yarn which was then wound on the spindle. The flax, or Saxony, wheel—a more elaborate mechanism operated by a treadle—drew, twisted, and wound the yarn with a continuous motion suited to the strong flax fiber and to long-staple wool or cotton In England improvements of the loom in the 18th cent, increasing the demand for yarn, stimulated inventions which revolutionised spinning John Wyatt suggested the use of rollers to attenuate the yarn, a process patented in 1738 by his partner, Lewis Paul James Hargreaves invented c 1765 the spinning jenny, a frame capable of spinning with an intermittent motion from 8 to 11 threads at once The softly twisted yarns were not suitable for use as warp threads, but in 1769 Richard Arkwright brought out his frame, which by means of successive pairs of rollers, each revolving faster than the preceding pair, attenuated the yarn and twisted and wound it on bobbins in a continuous action Operated at first by horse or mule power, later by water power, and in 1790 by steam, it soon forced spinning into the factory In 1779 Samuel Crompton, combining the best features of the jenny and of Arkwright's frame, invented the mule spinning frame, the forerunner of the modern self-acting mule Because of its intermittent action, the mule is used for fine or delicate yarns For the mass production of coarser yarns, the ring frame, an elaboration of Arkwright's machine, draws, twists, and winds the thread in one rapid, continuous operation See W E Morton, *An Introduction to the Study of Spinning* (1937)

spinning jenny and **spinning wheel** see SPINNING

Spinola, Ambrogio (ämbrō'jō spē'nōlä), Span *Ambrosio, marqués de Espínola* (ämbrō'syō märkās' dā āspē'nōlä), 1569–1630, Spanish general, b Italy, of a noble Genoese family He fought in the NETHERLANDS, taking (1604) Ostend from Maurice of Nassau after a long siege Named commander in chief in the Netherlands by Philip III, he carried the war into the northern provinces (1605) He negotiated the 12-year truce of 1609 and after its expiration resumed the war His most famous accomplishment was the capture of BREDA (1625) Early in the Thirty Years War, Spinola led (1620) an army into the Palatinate against the Protestant Union His conciliatory policy in the Netherlands lost him the favor of Philip IV, who appointed him (1628) governor of Milan Spinola died while trying to take Casale in the war for the succession to Montferrat

Spinoza, Baruch or **Benedict** (spĭnō'zu), 1632–77, Dutch philosopher He belonged to the community of Jews from Spain and Portugal who had fled the Inquisition Educated in the orthodox Jewish manner, he also studied Latin and the works of Descartes and other writers of the period His independence of thought led to his excommunication from the Jewish group in 1656 Until c 1660 he lived in or near Amsterdam, his birthplace, and afterward in Rijnsburg, Voorburg, and The Hague By trade a lens grinder of great skill, he lived modestly, devoting much of his time to the development of his philosophy His learning became known in spite of his retiring mode of life, and he had wide correspondence, was visited by other philosophers, and was offered (1673) a professorship at Heidelberg This he declined, preferring to retain his peaceful life He died of tuberculosis, which was apparently aggravated by the glass dust from his lens grinding His major works, virtually all of which are available in translation, include a rewording (1663) of part of Descartes's work, a *Treatise on Religious and Political Philosophy* (1670), and his important *Ethics*, probably finished in 1665 but published posthumously (1677) His *Opera Posthuma* (1677) also include his *Political Treatise*, *Treatise on the Improvement of Understanding*, *Letters*, and his *Hebrew Grammar* His system of philosophy, developed in his *Ethics*, differed from that of Descartes in being based on a monistic theory in which all existence is embraced in one substance—God Nothing finite is self-sufficient, only the infinite can be truly substantial, and the separate things of existence and life are but aspects of infinite divinity This divinity, sometimes called Nature, includes all existence within its being, mind and matter, time, everything that occurs or appears, all is but manifestation of God—is God Spinoza thus denied absolutely the possibility of immortality of a personal sort He was led to a complete pantheism wherein there can be no free will and no chance The apparent evil of the world exists only from the viewpoint of finite creatures, it does not exist when seen as part of the whole In order to fulfill one's destiny it is necessary to seek understanding of the workings of the universe, to accommodate one's self as best one can to the infinite plan, and to participate in it All persons are naturally self-seeking, since self-preservation is a fundamental motive Where the passions operate in egoistic blindness men are not free; but when, through understanding, men perceive God's order they are free in acknowledgement of it. The "intellectual love of God" is the result of understanding that all things are necessary and of realising the self as part of the unlimited The wise man sees events under the aspect of eternity (*sub specie aeternatatis*), time means nothing, and life is lived with dignity Spinoza was an exponent of democratic government and urged the subordination of the Church to the state He made a ringing defense of freedom of opinion and sought above all to liberate men from fear. His pantheism seemed blasphemous to his time, and some of his works were not allowed to be published during his life Later thinkers thought differently of his work Goethe, Lessing, and Herder found it admirable, and through Fichte, Schelling, and Hegel it became influential in German philosophy Many recent philosophers accord him the highest of praise See his correspondence (tr and ed by Abraham Wolf, 1928), biographies by J A Gunn (1925) and Leon Roth (1929), Lewis Browne, *Blessèd Spinoza* (1932), H A Wolfson, *The Philosophy of Spinoza* (1934)

spiraea (spīrē'u), any plant of the genus *Spiraea*, Northern Hemisphere deciduous shrubs of many species, among the most popular of cultivated shrubs The single or double small white or rose flowers are generally in rounded or spirelike clusters The most common are the Asiatic bridal wreath (*Spiraea prunifolia*), with small rounded clusters of white usually double flowers massed in April or May on arching branches, and the hybrid *Spiraea vanhouttei*, somewhat similar Native North American species include the eastern pink- or white-flowered *Spiraea latifolia* (this and other species are often called MEADOWSWEET) and the HARDHACK

spire, high, tapering structure crowning a tower and having a general pyramidal outline The simplest spires were the steeply pitched timber roofs capping Romanesque towers and campaniles Those of the latter were often conical and always roofed with tiles In later Romanesque this type of spire was commonly octagonal, topping a square tower Transition between the two shapes was effected by a triangular filler or broach at each corner of the tower and later by filling each corner with a decorative PINNACLE or a small turret Such was the common spire of English and continental churches With Gothic development the spire became more elaborate Generally the tower proper was capped by a parapet, behind which rose the stone spire, its edges finished with a molding and adorned with crockets The corner pinnacles, with their niches, gables, and crockets, were often joined to the spire roof by flying arches In France spires sometimes were placed over the two western towers of the cathedrals, at Chartres they are of two different periods, Romanesque and Gothic In England the central tower of a cathedral often had a spire, at Lichfield one crowns each western tower as well The ultimate elaboration in Gothic spires was attained with the addition of openwork tracery, as in the flamboyant examples of Rouen (Tour de Beurre) and Chartres The Germans, particularly, favored intricate openwork compositions, as at the cathedrals of Strasbourg (1015–1439) and Vienna (15th cent) England in the late 17th cent gave the spire new form in the numerous churches which Sir Christopher Wren built for London after the great fire These were either the roof type, with richly curved baroque outlines, or cupola compositions with classical columns, pediments, etc St Martin's-in-the-Fields (1722–26), built by James Gibbs, illustrates the Georgian spire or steeple with its receding stages of classic architecture terminated by a steep pyramidal roof It was an influential prototype for the slender, classical spires of American colonial churches

Spires, Germany see SPEYER

spiritism, belief that human personality survives death The spirit may communicate with the living through the agency of a medium or psychic Communication from the spirit world manifests itself in psychical (or mental) phenomena (e g, clairvoyance, telepathy, trance speaking, and visions or apparitions) and in physical phenomena (e g, levitation, table tipping, automatic writing, musical sounds, and poltergeist and ectoplasmic activities) In various forms the belief is a survival of ancient societies and is closely related to ideas of ghosts, necromancy, demonology, and occultism In its modern development it dates from the activities of the Fox sisters in America in 1848 General interest in hypnotism, then popularly regarded as a supernatural condition, contributed much to the growth of the spiritistic movement In England and America séances became popular, there were many mediums, and the names of Andrew Jackson Davis, William Stainton Moses, Daniel Douglas Home, Mrs Leonora Piper, Helena Petrovona Blavatsky, and many others became familiar to magazine and newspaper readers Much fraud, both conscious and unconscious, has been practiced by mediums HOUDINI proved that he could reproduce séance phenomena However, the committees of the Society of Psychical Research have carried on investigations with some phenomena, mainly in connection with telepathy and apparitions, which may find explanation in the activity in the unconscious mind (see PSYCHICAL RESEARCH) Critical investigations of psychic phenomena were made by many well-known men In some cases infrared moving pictures have been taken at séances. Adherents of spiritism plead for an enlarged psychology, physiology, and even physics to account for the various psychic manifestations The First World War intensified interest in the belief and practices of spiritism See A F Schrenck von Notzing, *Phenomena of Materialization* (1920); Sir Arthur Conan Doyle, *History of Spiritualism* (1926), Sir Oliver Lodge, *Phantom Walls* (1930)

Spirit Lake. 1 City (pop 1,006), N Idaho, near the Wash boundary, N of Coeur d'Alene and on Spirit Lake, settled 1884, inc 1921 It is a resort town, with a lumber mill near by 2 Town (pop 2,161), co seat of Dickinson co, NW Iowa, near the Minn line, settled 1856, inc 1879 The town, a farm trade and tourist center, lies between West Okoboji Lake and Spirit Lake, largest glaciated lake in Iowa In 1857 a near-by white settlement was massacred by Sioux Indians Several state parks are in the vicinity

spirit level, tool or instrument for determining the direction of gravity The position of a bubble within a tube nearly full of alcohol, ether, or a mixture of both indicates whether the instrument is horizontal The spirit level used by carpenters and masons has two tubes at right angles to each other, so that the tool registers a vertical as well as a horizontal position In ancient times the plumb was used, and gravity continued to be determined by this method until the 19th cent, when the spirit level, invented in France in the 17th cent, came into general use

spiritual, in music, religious folk song Beginning in the late 19th cent, wide attention was given to the spirituals of the American Negro, largely owing to the efforts of singers from the various Negro universities This body of song was long thought to be the spontaneous creation of the Negro, and many considered it to be the only real folk music of the United States Research into its origin centered mainly on the question of the nature and extent of its African ancestry After the discovery by Cecil Sharp early in the 20th cent of the extent of the American folk-song literature, much of which he demonstrated to be of British ancestry, it remained for G P Jackson to uncover the extensive body of spiritual folk song of white Americans, the folk-song nature of which Sharp had failed to recognise These were the songs which came out of the camp meetings and revivals of the S United States throughout the 19th cent Many of the songs preserved in collections, such as *The Southern Harmony* (1835), *The Union Harmony* (1837), and *The Sacred Harp* (1844, many subsequent editions), made for the use of the groups some of which still gather today in various parts of the South for singing conventions, are also held by Jackson to be folk songs He presents convincing examples to show that many Negro spirituals are simply the Negro's adaptations of these white spirituals to suit his own temperament and feeling Others represent the Negro's own creations inspired by the same source The distinctive quality and great beauty of the Negro spiritual remains undiminished, however Collections and arrangements have been made by H T Burleigh Rosamond Johnson and J W Johnson, R N Dett, Clarence Cameron White, Roland Hayes, and others See G P Jackson, *White Spirituals in the Southern Uplands* (1933), *Spiritual Folk-Songs of Early America* (1937), and *White and Negro Spirituals* (1943), H W Odum and G B Johnson, *The Negro and His Songs* (1925)

Spiro (spī'rō), town (pop 1,041), extreme E Okla, near the Arkansas river, in an area producing cotton and potatoes, founded c 1895 near the site of Fort Coffee, an old U S military post (1834) Some famous Indian mounds are near by

Spitalfields (spĭt'ulfēldz), manufacturing district of Stepney metropolitan borough, London, England, named for the priory and hospital of St Mary (St Mary Spital) founded here in 1197 Spitalfields was formerly noted for silk manufacture, introduced by Huguenot weavers in the 17th cent

Spithead (spĭt'hĕd), eastern part of the channel between Hampshire, England, and the Isle of Wight In 1545 the English defeated the French in battle here In 1797 one of the most celebrated mutinies of history occurred in the fleet stationed at Spithead, the crews sent the officers ashore, ran the ships by committee, and won their demands

Spitsbergen (spĭts'bûrgun), archipelago, in the Arctic Ocean, c 400 mi N of the Norwegian mainland, between lat 76° and 81° N Spitsbergen and Bear Island, farther south, constitute the Norwegian possession of Svalbard (svăl'bär) (23,979 sq mi, pop 1,539, including 505 citizens of the USSR) The chief island is West Spitsbergen (c 15,000 sq mi), other islands include NORTH EAST LAND, Edge Island, Barents Island, Prince Charles Foreland, King Charles Land, Hope Island, and Giles Land The islands form plateaus intersected by deep fjords The largest of these is the Ice Fjord, in West Spitsbergen, which also has the highest mountain in the group (Mt Newton, c 5,500 ft) The principal settlements (New Ålesund and Longyear City) are on West Spitsbergen. The North Atlantic Drift washes the west coasts and makes navigation possible for more than half

the year Some 130 species of arctic vegetation flourish near the coast and on patches of interior tundra Water fowl, especially the eider duck, abound, but land game (reindeer, blue and white fox, polar bear, and arctic hare) has been rendered nearly extinct by hunting expeditions and is now protected Sealing, whaling, and fishing are important occupations, but the chief wealth of the islands is coal. There also are asbestos, copper, gypsum, iron, marble, mica, zinc, and phosphate deposits Discovered by the vikings in the 12th cent and named Svalbard by them, the islands were again forgotten until their rediscovery by Willem Barentz in 1596 For a decade after Henry Hudson reported (1607) good whaling at Spitsbergen, English and Dutch whalers quarreled over the territory; in 1618 they compromised, the Dutch limiting their operations to N Spitsbergen, leaving the rest to the English, the French, and the Hanseatic League The Danes at the same time claimed Spitsbergen as part of Greenland After the decline of whaling, Spitsbergen became (18th cent) a hunting ground for Russian, and later also Scandinavian, fur traders In the late 19th cent the islands were mapped by many notable explorers and scientists, and important coal deposits were discovered Spitsbergen also served as a base for expeditions by N. A E Nordenskjold, S A Andree, Roald Amundsen, R E Byrd, Sir George H Wilkins, and others For half a century after the discovery of coal, Norway, Russia, and Sweden negotiated for Spitsbergen By a treaty signed at Paris in 1920 and subsequently ratified by the other claimants, Spitsbergen was awarded to Norway The treaty prohibited military installations on the islands and insured recognition of claims of other countries to parts of the coal fields In the Second World War, Spitsbergen was raided (1941) by an Allied party which evacuated the civilian population to England and set fires to the mines A German garrison was expelled in 1942 by a small Norwegian force A German raid (1943) completed the devastation of the mines and mining installations Beginning in 1944, the USSR—which had not signed the 1920 treaty but which had later adhered to it—requested a share with Norway in the administration and defense of Spitsbergen Norway rejected the demand, which was opposed also by other signatories of the 1920 treaty, notably England and the United States

Spitteler, Carl Friedrich Georg (kärl' frē'drĭkh gā'ôrk shpĭt'tulûr), 1845–1924, Swiss poet He won the 1919 Nobel Prize in Literature His chief works, which appeared at long intervals, are the epics *Prometheus und Epimetheus* (1881, Eng tr, 1931) and the tremendous *Olympischer Frühling* [Olympian spring] (1900–1910), the appearance of which in a nonepic age has perhaps interfered with its acceptance Spitteler also wrote a third epic, *Prometheus der Dulder* [suffering Prometheus] (1924) Other works are novels, including *Imago* (1906), and the essays *Lachende Wahrheiten* (1892, Eng tr, *Laughing Truths*, 1927) *Selected Poems* appeared in English translation in 1928

spitz dog: see Pomeranian dog

Spitzka, Edward Charles (spĭts'kŭ), 1852–1914, American physician and psychiatrist, b New York city, studied at the College of the City of New York, M D New York Univ, 1873 He practiced in New York and taught at New York Post-Graduate Hospital (1885–87) A pioneer in anatomical studies of the brain and in the classification of mental disorders, he wrote *Insanity Its Classification, Diagnosis, and Treatment* (1883) His son **Edward Anthony Spitzka**, 1876–1922, b New York city, studied at the College of the City of New York and received his M D from Columbia in 1902 He taught anatomy (1906–14) at Jefferson Medical College, Philadelphia His contributions include important studies of the human brain, especially those of criminals He edited the 18th American edition (1910) of *Gray's Anatomy*

Spitzweg, Karl (kärl' shpĭts'vāk), 1808–85, German genre painter and draughtsman Self-taught, he depicted the daily life of his native Munich in charming little pictures in which realism, fancy, and humor are happily combined Characteristic are *The Poor Poet*, *Two Hermits*, and *Scholar in the Attic* Spitzweg contributed many delightful drawings to the humorous periodical *Fliegende Blätter*

spleen, soft, purplish-red organ which lies in the upper portion of the abdominal cavity to the left of the stomach and close to the diaphragm Its functions are not fully understood. It is active in the destruction of worn-out red blood corpuscles liberating hemoglobin to be used by the liver It holds a reserve supply of blood, which enters the circulation when the need arises Certain white blood cells, the lymphocytes, are formed in the spleen. Sometimes removal of the organ is necessary

splicing, joining two ropes without a knot A splice should be as strong as the rope and but little larger in diameter The rope ends are unraveled or unlaid, the strands are usually divided or halved to prevent bulkiness, and the strands of one rope end are intertwined in any of various fashions with those of the other.

splint, an appliance, either rigid or flexible, for the fixation of displaced or fractured parts. Most commonly used in treating fractures of bones, a splint may be employed both as a first-aid measure to immobilize the parts temporarily and as a means of maintaining fixation of the parts until union of the injured bones occurs Any material which offers the degree of resistance required for immobilization may be used, e g., cloth, gauze, plaster, wood, or metal

Split (splēt), Ital *Spalato* (spä'lätō), city (pop 49,885), S Croatia, Yugoslavia, a major Adriatic seaport The largest city of Dalmatia, it has two fine harbors, extensive shipyards, and varied manufactures Its beautiful situation and its historic monuments make it an important tourist and seaside resort Among the Roman remains in Split the most remarkable is the palace of Diocletian (who died here), begun in A D 295 In the 7th cent the inhabitants of near-by Salona took refuge from the Avars in the palace, which became the nucleus of the city Split soon was made an episcopal, later an archiepiscopal, see of the Roman Catholic Church and became a flourishing port of medieval Dalmatia Long contested (13th–15th cent) between Hungary and Venice, it ultimately passed to Venice in 1420 The Treaty of Campo Formio (1797) transferred it to the house of Austria, to which it was restored (1815) after the Napoleonic Wars at the Congress of Vienna and which kept it until 1918 The archdiocese was reduced to a diocese in 1820 Besides the palace of Diocletian, the ancient monuments of Split include the cathedral and the baptistery, both originally Roman buildings, parts of its old walls and gates, and the city hall in Venetian Gothic style There are an archaeological museum and an oceanographic institute The ruins of Salona are at near-by Solin

Spluegen (shplu'gun), Ital *Spluga* (splōō'gä), Alpine pass, 6,945 ft high, on the Swiss-Italian border, N of Lake Como

Spode, Josiah (spōd), 1754–1827, English potter at Stoke-on-Trent There he first produced (1799) the porcelain known as spode ware, a fine bone china similar to the French soft Sèvres ware, which he sought to equal His formula was subsequently employed in all the Staffordshire potteries, representing the majority of English china manufactories, including those of Derby and Worcester

Spofford, Ainsworth Rand (spô'furd), 1825–1908, librarian of Congress of the United States, b Belknap co, N H In 1861 he became chief assistant librarian of Congress and was appointed librarian by President Lincoln in 1864 He held the office until 1897, when he again became chief assistant librarian He wrote many periodical articles on books and libraries and published or edited a number of books, including *A Book for All Readers* (3d ed, 1909), *The Library of Choice Literature* (1893), and *The Annual American Almanac* (1879–89)

Spofford, Harriet Prescott, 1835–1921, American novelist, b Calais, Maine Her romantic short stories, novels, and poems were popular in magazines and in book form between 1860 and 1910

Spohr, Ludwig or **Louis** (lōōt'vĭkh, lōō'ĭ shpōr'), 1784–1859, German composer, conductor, and violinist, the leading exponent of the German violin school of his day Among his numerous works are operas, including *Jessonda* (1823), symphonies, many of them programmatic, violin concertos, much chamber music, and violin exercises His oratorios, of which *The Last Judgment* (1826) is best known, had great influence in Victorian England A rather mannered chromaticism, imitative of Mozart, is found in his music See his autobiography (Eng tr, 1865, 1878)

spoils system, in U S history, the practice of giving appointive offices to loyal members of the party in power It was first adopted on a large scale by Andrew Jackson, who declared (1829) that the Federal government would be bettered by having civil servants rotate in office, he promptly replaced incumbent officeholders with members of his own party The name supposedly was derived from a speech by William Learned Marcy The dispensation of offices by strict party allegiance was followed in succeeding years and gradually critical opposition grew The corruption and inefficiency that were bred in the system reached a staggering height in the administration of U S Grant The reaction helped bring about civil service reform, which was inaugurated by creation of the Civil Service Commission in 1871 The system has, however, continued for many Federal offices Its apologists argue that the political appointments are essentially democratic rather than bureaucratic and are essentially efficient in assuring that Federal servants will be in accord with the aims of each administration

Spokane (spōkăn'), city (pop 122,001), co seat of Spokane co., E Wash, at the falls of the Spokane river, founded c.1872, inc. as a town 1881, as a city 1890 A great fire in 1889 destroyed most of the town, but regrowth was rapid It is a port of entry and the commercial and railroad center for a rich lumber, mining, wheat, stock, and fruit-growing region known as the "Inland Empire", its diversified industries include flour mills, meat-packing plants, creameries, lumber industries, and machine and railroad shops. Spokane is also the focus of cultural and educational activities in the region An art center, a museum, Roman Catholic and Episcopal cathedrals, and several fine parks are here It is the seat of Gonzaga Univ. (Jesuit, mainly for men, 1887) and Whitworth College Excellent recreational facilities are near by

Spokane, river rising in Coeur d'Alene Lake, N Idaho, and flowing c 100 mi W and NW through Washington to the Columbia.

Spokan Indians (spōkăn'), small tribe of North American Indians of the Salishan linguistic stock In the early 19th cent, according to Lewis and Clark, they lived in the vicinity of the Spokane river in NE Washington They then numbered some 600 Today the Spokan live on a reservation in Washington, where they number some 1,000

Spoleto (spōlā'tō), city (pop 10,579), Umbria, central Italy It is interesting to archaeologists, historians, and lovers of art An Umbrian and later an Etruscan town, it flourished under the Romans It became (A D c 570) the seat of an important autonomous Lombard duchy extending over much of Umbria, the Marches, and the Abruzzi The city was destroyed by Emperor Frederick I (1155) and was later rebuilt Although Spoleto was included in Charlemagne's donation to the Church (8th cent), the dukes were named by the emperors until in 1201 Otto IV renounced the imperial rights, soon afterward the duchy came under direct papal rule In the 14th and 15th cent Spoleto was the seat of a local school of painting, well represented in its art gallery There are Roman remains and several medieval churches with early mosaics and paintings, the most important is the cathedral, which has a fresco by Filippo Lippi

sponge, animal of the phylum Porifera, of which there are about 2,500 species, world-wide in distribution All except one family are marine forms Sponges live at all depths, usually in colonies attached to rocks, shells, or other surfaces They are usually classified according to the kind of skeleton which the simple, jellylike body secretes Some have a framework containing calcium carbonate crystals or glassy spicules Those of commercial value for use as bath sponges and for washing cars, windows, and other articles have a skeleton of spongin, a substance chemically allied to silk, with no hard crystals embedded in it Those with the finest texture come from the Mediterranean region, but sponges of good quality are harvested in the West Indies and the Bahamas, on the Gulf coast of Florida, and on the coast of Central America Farther north they are too hard to be useful Sponges are secured with long-handled curved hooks operated from small boats, by dragnets and dredges, and by divers The living tissue is removed and the skeletons are dried, bleached, and trimmed Remnants are used as packing material and as fertilizer Sponges can be propagated by depositing, in suitable waters, cuttings attached to hard objects The boring sponge damages bivalves

spontaneous combustion see combustion

spoon, implement with which to stir, serve, or eat, consisting of a shallow bowl with a rodlike, curved, or spatulate handle Prehistoric peoples probably first used shells and later fashioned spoons of horn, wood, or flint Wood, slate, and ivory examples from ancient Egypt have been preserved Greek and Roman spoons of bronze and precious metals often had spike handles, Pompeian examples show decorative terminations in baluster and hind's-foot patterns Spoons, often ornately decorated, have been used in religious rites since ancient times The spoon used in England to anoint the monarch at his coronation dates from the 12th cent Early medieval spoons were usually of horn, wood, or tin with knobs at the tip of the handles Later spoons commonly terminated in effigies of the Madonna, saints, or apostles Apostle spoons, relics of Tudor England, were commonly presented at christenings During the Renaissance fig-shaped bowls were usual, pewter and brass were in common use, and silver was employed only for fine ware The modern spoon with a spatulate handle dates from the 18th cent Special sizes and styles of spoons are designed for soup, dessert, coffee, and tea, for serving, and for various other purposes

spoonbill, large wading bird related to the ibis With its long bill, broad at the end like a flattened spoon, it captures small aquatic animals for food The roseate spoonbill, its plumage rosy pink accentuated by the carmine of the lesser wing coverts, is found from S North America southward to Argentina and Chile. In the United States it was almost exterminated for its feathers The common spoonbill of Europe, Asia, and Africa is white and crested. Species are found in Australia, Japan, and tropical Africa The shoveler duck is sometimes called spoonbill, and there is a spoon-billed sandpiper.

Spooner, John Coit, 1843–1919, American political leader, b Lawrenceburg, Ind., grad Univ. of Wisconsin, 1864. He served (1864–65) in the Civil War and became a corporation lawyer, achieving

notice by defending railroad companies. After he was (1872–73) in the Wisconsin legislature and became a power in the state Republican party, he served (1885–91, 1897–1907) in the U S Senate Increasing disapproval of Spooner's political tactics in Wisconsin helped bring about his resignation from the Senate, and he thereafter practiced law in New York city

Spooner, Shearjashub (shĕr"jā'shub), 1809–59, American art historian, b Orwell, Vt He is known for his *Biographical and Critical Dictionary of Painters, Engravers, Sculptors, and Architects* (1853)

Spooner, city (pop 2,639), NW Wis , S of Superior and on the Yellow River, in a lake and woods region, settled 1883, inc 1909 A state fish hatchery and a Univ of Wisconsin branch agricultural experiment station are near

Sporades (spō'rudēz, spō'–), scattered islands in the Aegean Sea, belonging to Greece They have been grouped variously at different periods The Northern Sporades are generally understood to include Skyros and some lesser islands off the coast of Magnesia and Euboea and sometimes also Lemnos and Lesbos, off the coast of NW Asia Minor The Southern Sporades are generally understood to include Icaria, Samos, the Dodecanese, and sometimes Chios

spore, term applied to a reproductive cell of certain plants and protozoa (unicellular animals) and to certain organisms (especially bacteria) in a resting stage A reproductive spore consists usually of a nucleated mass of protoplasm and some reserve food (e g , starch or oil), commonly enclosed by a cell wall Some spores develop independently into new organisms, others (called gametes) first unite with similar or dissimilar (male or female) cells Spores of terrestrial forms are usually disseminated by air currents The spores of many aquatic organisms develop threadlike structures (cilia), such motile spores are called *zoospores* Organisms in a resistant, or spore, stage and reproductive spores that have a resting period develop tough, investing walls that permit them to survive unfavorable conditions, e g , extremes of temperature and of moisture Many organisms (notably fungi) produce both thin-walled spores that germinate in a short time and thick-walled spores Organisms that reproduce by spore formation often reproduce also by other means, e g , by fission or by budding Yeasts, for instance, in most stages reproduce by budding, but older organisms may form spores

sport, in biology see MUTATION

sporting gun, firearm used for hunting animals or birds It includes the SHOTGUN and the sporting or hunting rifle The bullets used in small-game rifles are lighter than those used in military rifles Recoil from a light bullet is comparatively slight, therefore, a large powder charge may be used to obtain high muzzle velocity These high-speed bullets travel in a flat trajectory, permitting great accuracy at the comparatively short ranges for which the rifles are designed In sporting guns soft-nosed or deformed (dumdum) bullets are sometimes used to bring down large or particularly dangerous beasts or for the destruction of vermin If the hunter wants to save the flesh or avoid great injury to the skin of the animal, he uses a steel-jacketed bullet which goes through the body without tearing a jagged hole In hunting big game exploding bullets which usually cause instantly fatal wounds may be used

sports In its most general sense, the term *sports* may be used to mean participation in various pastimes and thus would include such activities as hobbies and card games In its more accepted sense, however, sports specifically connotes those activities which require certain patterns of athletic executions which must be performed with some skill and which often must conform to prescribed rules As such, sports have been one of man's most important modes of recreation and have also served to develop strength and give expression to his emotions Often the different sports are classified according to type, e g , ball games, but actually it is extremely difficult to categorize Thus, although BOATING may be said to be a racing sport (in which space and time are to be conquered), HOCKEY a sport of competition (in which an opposing team is to be defeated), and HUNTING a sport of individual performance (in which a hunter seeks to better his own performance), most sports contain each of these elements in varying proportions Hunting and FISHING go back to prehistoric man's eternal search for food, but the origins of most sports remain obscure It is definitely known that BASKETBALL was invented in the United States in 1891 by James A Naismith, but this is an exception The origins of some sports, notably baseball, are still the subject of much controversy In the ancient world the outstanding organized sports activities were the OLYMPIC GAMES Several sports which developed in medieval Europe were organized by and for the royalty and nobility (e g , COURT TENNIS), while other sports took root among the masses (see FOOTBALL) The disintegration of the feudal structure and the coming of the industrial Revolution brought about profound changes in sports. While court tennis, ARCHERY, FALCONRY, and other pastimes of the nobility went into decline, CROQUET, BOXING, and SHOOTING increased in popularity BULL BAITING and COCKFIGHTING, considered barbarous by many, gradually were banned by legislation as the general desire to do away with crude brutalities in sports became more widespread Equipment was standardized, local and national ruling bodies were set up to govern the sports, and distinctions were made between amateur and professional In the late 19th cent — when the ancient Olympic games were revived— TENNIS, VOLLEY BALL, HANDBALL, BOWLING, RACQUETS, SQUASH RACQUETS, and SQUASH TENNIS came to the fore, while POLO was introduced from Asia to Europe Sports which were traditionally played in various countries became, by legislative act or general acceptance, national sports, BASEBALL in the United States, BULL FIGHTING in Spain, CRICKET in England, LACROSSE in Canada Moves were made to minimize the effects of GAMBLING on sports, particularly in RACING In the 20th cent , colleges led the way in emphasizing sports as an essential portion of man's education ROWING, FENCING, TRACK AND FIELD ATHLETICS, and GYMNASTICS became popular participation sports on the campus as well as in the athletic club College authorities, however, soon were subjected to severe criticism for commercializing spectator sports, especially football, and for the questionable amateur status of some of their athletes Sports, participation and spectator, grew by leaps and bounds in the 20th cent in those sections of the world where a good percentage of the population had leisure time They also took on an international flavor annual events were conducted and trophies given to individuals and teams of competing nations, and winter Olympic games were established Several of the most popular spectator sports are today big businesses There are, in addition to the major sports mentioned here, articles on many of the minor sports For bibliography, see the individual articles See John A Krout, *Annals of American Sport* ("Pageant of America" series, Vol XV, 1929), Frank G Menke, *The New Encyclopedia of Sports* (1947), Parke Cummings, ed , *The Dictionary of Sports* (1949)

spots and stains see STAIN REMOVAL

Spotswood, Alexander, 1676–1740, colonial governor of Virginia (1710–22), b Tangier, Morocco Officially he was lieutenant governor under the nominal governorship of George Hamilton, 1st earl of Orkney One of the ablest of the royal governors, Spotswood encouraged settlement of the frontier by exempting the settlers from taxes and quitrents However, his measure requiring that tobacco to be exported or used as legal tender be inspected was unpopular, and he got into difficulties in maintaining his right to appoint Anglican clergymen After his act fostering a wise Indian policy was repealed, he negotiated a treaty with the Iroquois by which they agreed to keep beyond the Potomac and the Blue Ridge At the end of his governorship, he remained in Virginia, having acquired a vast amount of land in Spotsylvania co , where he also had extensive iron interests In 1730 he was made deputy postmaster general of the American colonies See his *Official Letters* (ed by R A Brock, 1882–85), biography by Leonidas Dodson (1932)

Spotswood, borough (pop 1,201), central N J , SE of New Brunswick, inc 1908 It was the site of ironworks in the Revolution

Spotsylvania (spŏt"sĭlvā'nyu), rural county, NE Va , between the Rappahannock and North Anna rivers, formerly part of the estate of Alexander SPOTSWOOD It was the scene of several major engagements of the Civil War, including the battles of FREDRICKSBURG and CHANCELLORSVILLE and the battles of the Wilderness and Spotsylvania Courthouse in the WILDERNESS CAMPAIGN

Spottiswoode, John (spŏ'tĭswōōd), 1565–1639, Scottish prelate and church historian Under James and Andrew Melville he studied for the ministry but later veered from Presbyterianism to Erastianism James I named him archbishop of Glasgow in 1603, member of the privy council of Scotland in 1605, and archbishop of St Andrews in 1615 As moderator of the General Assembly (1618) of the Church at Perth, Spottiswoode obtained its sanction of the king's plans for introducing episcopacy into Scotland, as embodied in the Articles of Perth Charles I made him (1635) chancellor of Scotland, but Spottiswoode gradually lost his favor by trying to modify the monarch's plan of imposing the Anglican liturgy on the Scottish Church In 1638 he was deprived of his office, excommunicated, and deposed by the general assembly He died in London His *History of the Church of Scotland* (1655) has passed through several editions Spottiswoode's name is also spelled Spottiswood and Spotswood

Spottiswoode, William, 1825–83, English mathematician and physicist Among his contributions to mathematics was an elementary treatise on determinants (1851), probably the first to be published In 1874 he wrote on his studies of polarization of light From 1878 he was president of the Royal Society

Sprague, Frank Julian (sprāg), 1857–1934, American electrical engineer, b Milford, Conn , grad Annapolis, 1878 He contributed greatly to the development of electric railways by inventing the multiple-unit system of automatic control and numerous other devices Sprague also developed the electric elevator

Sprague, Oliver Mitchell Wentworth, 1873–, American economist, b Somerville, Mass , Ph D Harvard, 1897 He taught (1904–5) at the Imperial Univ of Tokyo and from 1908 to 1941 was assistant professor and later professor of banking and finance at Harvard. He served (1930–33) as economic adviser to the Bank of England and for a short time was one of the Brain Trust in the early New Deal His books include *Banking Reform in the United States* (1911) and *Recovery and Common Sense* (1934)

Sprague, town (pop 2,285), E Conn , N of Norwich, crossed by the Shetucket, inc 1861 It includes Baltic, Versailles, and Hanover villages There are textile mills

sprain, severe stretching or wrenching of the ligaments of a joint, causing injury sometimes with partial rupture but without dislocation Sprains occur most commonly in the ankle, knee, and wrist joints Sacroiliac sprain causes severe backache Symptoms of sprain are pain, swelling, and difficulty in moving the joint Treatment consists of soaking the injured part in hot water containing Epsom salts, elevation of the injured limb, and strapping or bandaging to give support Novocaine injected hypodermically into the injured joint has been found in some cases to relieve the pain and other symptoms of sprain and to restore normal function in a short time

sprat, European fish of the herring family In Norway great numbers are canned as sardines or anchovies Some species of herring native to American waters are called sprats in the market The young sprat or herring is the whitebait

spraying, horticultural practice of applying chemical fungicides and insecticides in solution to the exposed parts of growing plants It may be accomplished by means of the watering can, spray gun, power spraying machine, or airplane Sprays are used especially as disease preventatives and insect repellents In many conditions it is important to spray the under as well as the upper sides of the leaves In all cases the spray must be adapted to the plant and the need Incorrectly applied sprays may injure the plant without destroying the pest See J A McClintock and W B Fisher, *Spray Chemicals and Application Equipment* (1945), bulletins of the U S Dept of Agriculture

Spree (shprā), river, c 250 mi long, rising in the Lusatian Mts , Saxony, E Germany, near the Czech border It flows generally N past Bautzen into Brandenburg and continues N, then NW, past Kottbus through the Spree Forest and through Berlin to join the Havel at Spandau Navigable for 110 mi , it is connected with the Oder by the Oder-Spree Canal and with the Havel by the Teltow Canal, which by-passes Berlin The Spree traverses both Upper and Lower Lusatia The **Spree Forest** (Ger *Spreewald*), in Lower Lusatia, is a marshy region crisscrossed by innumerable small waterways which are the only traffic lanes connecting its villages Its population consists almost entirely of Slavic-speaking WENDS, whose isolation has enabled them to keep through the centuries their colorful traditions and local costumes Eel fishing and vegetable gardening are among their main sources of livelihood Because of its picturesque character, the Spree Forest is a favorite excursion ground for the nearby Berliners

Sprengel, Christian Konrad (krĭs'tyan kōn'rat shprĕng'ul), 1750–1816 German botanist Although director of a school at Spandau and tutor in Berlin, he devoted himself chiefly to the study of flowering plants He pointed out the role of insects and of the wind in the cross-pollination of plants, but his observations were neglected until they were brought to public attention by Charles Darwin

Sprengel, Hermann Johann Philipp (hĕr'man yō'han fē'lĭp shprĕng'ul) 1834–1906, German chemist and physicist, later a naturalized British subject He is known for his invention of the Sprengel pump, and he also devised a U tube to determine the specific gravity and the thermal coefficient of expansion of liquids He was a pioneer in the field of high explosives

Sprengel pump [for H J P Sprengel], device in which a partial vacuum is produced by the fall through tubes of a suitable liquid (usually mercury) The pump was important in early experiments requiring the production of a vacuum and especially in the development of X-ray tubes and other vacuum tubes

spring, natural flow of water from the ground or from rocks representing an outlet for the water which has accumulated in permeable rock strata underground When the water, because of the geological structure of the strata, issues under pressure, the spring is called artesian (see ARTESIAN WELL). Another type of spring is the GEYSER Hot springs occur when the water issues from great depths or is heated by vulcanism Mineral springs are those

which have a high chemical content of one kind or another, gathered from the rocks through which the water has passed (see MINERAL WATER) Frequently an ancient city-state (e g , Troy) had its site determined by a spring Pioneer farmhouses often were located in the same way

spring. In mechanics, springs are in general of three types The spring that stores energy in a watch or clock is spiral, wound around a center and continually receding from it The springs used under some railroad cars for reducing concussion are helical or coil springs, wound around a cylinder and advancing like the thread of a screw The springs used for the same purpose in automobiles are laminated or leaf springs, built up of flat bars Springs less frequently used than these three are exemplified by the spring which drives the hammer of a gun—a flat or bar spring, with a single leaf In the material used to make a spring, the essential quality is elasticity

Spring City **1** Borough (pop 3,022), SE Pa., on the Schuylkill between Norristown and Pottstown, inc 1867 **2** Town (pop 1,569), E Tenn , in the Tennessee valley NNE of Chattanooga

Springdale. 1 City (1940 pop 3,319, 1948 special census pop 5,246), NW Ark , in the Ozarks, settled c 1850, inc 1878 It ships quantities of grapes, apples, and other farm products and is a center of the grape-juice and wine industries **2** Residential borough (pop 4,989), Allegheny co , SW Pa , on the Allegheny river and NE of Pittsburgh, inc 1906

Springer, village (pop 1,314), NE N Mex , S of Raton, inc 1910 It is the trade center for a livestock, farm, and lumber area. The state industrial school for boys is here

springer spaniel see SPANIEL

Springfield. 1 Town (pop 1,082), co seat of Baca co., SE Colo , in a gram, stock, and dairy area, inc 1889 **2** Town (pop 1,188), Bay co , NW Fla , near the Gulf, inc 1935 **3** City (pop 75,503), state capital (since 1839), and co seat of Sangamon co , central Ill , on the Sangamon river and SW of Chicago, settled 1818, laid out 1822, inc as a town 1832, as a city 1840 It is in a rich agricultural and coal region, among its manufactures are metal and grain products Abraham Lincoln, who was instrumental in having Springfield made the capital, lived and had his law office here from 1837 to 1861 He is buried here, with his wife and three of their children, in a tomb and monument designed by L G Mead and dedicated in 1874 The Centennial Building contains the state museum and the offices and libraries of the state historical society, with valuable Lincoln collections Lincoln's home is preserved as a shrine Other places of interest include the capitol (1867–87), of Renaissance architecture, the county courthouse (1837), which served as the capitol for many years, the governor's mansion (1853–57), and the state fairgrounds Concordia Theological Seminary, Lincoln College of Law, a junior college, and several preparatory schools are here Vachel Lindsay was born in Springfield Near by are NEW SALEM (now a state park), Camp Butler National Cemetery, and artificial Lake Springfield See Paul M Angle, *"Here I Have Lived" a History of Lincoln's Springfield* (1935) **4** Town (pop 1,767), co seat of Washington co , central Ky , SE of Louisville, in a dairy and tobacco region, founded 1793 Among the records in its courthouse is the marriage certificate of Thomas Lincoln and Nancy Hanks Near by is Lincoln Homestead Park **5** City (pop 149,554), co. seat of Hampden co , SW Mass , on the Connecticut, settled 1636 by Puritans under William PYNCHON, inc as a town 1641, as a city 1852 It was a scene in Shays's Rebellion (1786–87) and a station on the Underground Railroad A port of entry, it is an industrial city, producing chiefly electrical and other machinery, motorcycles, firearms, and plastics The U S armory here was founded by Washington The first American-made planetarium was designed and built (1937) by Frank Korkosz for the city's museum of natural history. Saint-Gaudens's *Puritan* is in Merrick Park Also in the city are art museums, Springfield College (Y M.C.A , 1885), and American International College The Springfield *Republican* has been an influential newspaper The annual Eastern States Fair is held at Storrowton, site of a reconstructed colonial village. For the Springfield plan in education, see J W Wise, *The Springfield Plan* (1945) **6** City (pop. 2,361), SW Minn , W of New Ulm and on the Cottonwood, settled 1857, resettled after the Sioux war of 1862, platted 1877, inc as a village 1881, as a city 1923 It is a farm trade center in a region settled mainly by Germans **7** City (pop 61,238), co seat of Greene co , SW Mo , in a resort area of the Ozarks, laid out c 1835, inc. 1855 It is the industrial, trade, and shipping center of a rich area producing dairy products, poultry, grains, fruits, and minerals The city has railroad shops, its manufactures include processed foods, clothing, lime and cement, and trucks and trailers. Drury College (Congregationalist, coeducational, 1873) and Southwest Missouri State College are here Near by are a U. S. hospital for the criminal insane, a national cemetery, a state fish hatchery, and the battlefield (1861) at WILSON CREEK. **8** Unincorporated village (pop. 8,087), NE N J , W of Newark, settled c 1717 The British, marching on Morristown, burned its church and other buildings, June 23, 1780, Chaplain James Caldwell's aid to the defenders is commemorated in Bret Harte's poem "Caldwell of Springfield" The present church was built in 1791. **9** Industrial city (pop 70,662), co seat of Clark co , W central Ohio, on the Mad River and NE of Dayton, settled 1799, laid out 1801, inc 1850 Farm machinery and electric motors are made here, and there are greenhouses, a fluid-milk plant, and a publishing house The city grew after the building of the National Road (1838), the arrival of the railroads (mid-century), and the establishment of farm-machinery plants (latter half of the 19th cent) Wittenberg College (Lutheran, coeducational, 1844) is here Near by is the George Rogers Clark Memorial State Park **10** City (pop 3,805), W central Oregon, on the Willamette just E of Eugene, in a lumber and grain area, inc 1893 **11** City (pop 6,668), co seat of Robertson co , N Tenn , N of Nashville, founded c 1798 It is an important tobacco market Blankets are made here **12** Industrial town (pop 7,720), SE Vt , on hills near falls of the Black River It includes the industrial Springfield village (pop 5,182) The Crown Point military road crossed this area, where the Abnakis had lived White settlement began before the Revolution Before 1900 its important machinery and machine-tool factories were flourishing James Hartness, inventor, manufacturer, governor of Vermont (1921–23), helped to establish a well-equipped community center, made the village a mecca for amateur astronomers, and gave the town the state's first airport

Spring Grove, borough (pop 1,259), SE Pa , near York, laid out 1747, inc. 1882 It has a pulp and paper mill

Springhill, town (pop. 7,170), N N S , SE of Amherst It is an important coal-mining center, in a region of mixed farming and lumbering

Springhill, town (pop 2,822), NW La , at the Ark line, inc 1922 It has a paper mill

Spring Hill College. see MOBILE, Ala

Spring Hope, town (pop 1,222), E N C , W of Rocky Mount, in a farm area, settled 1886, inc. 1889

Spring Lake. 1 Resort Mivillage (pop 1,329), S ch NE of Grand Haven, inc 1869 It is at the mouth of the Grand River where it enters Spring Lake Several Indian mounds are near by **2** Borough (pop 1,650), E N J , a resort near the Atlantic S of Asbury Park, inc 1892

Spring Lake Heights, borough (pop 1,076), E N J , near Spring Lake, inc 1927.

Spring-Rice, Sir Cecil Arthur, 1859-1918, British diplomat He entered the foreign service in 1882 and held European and Asiatic posts, serving as minister to Persia (1906–8) and to Sweden (1908–12) He succeeded Lord Bryce as ambassador to the United States (1913) and held the position until Jan , 1918 See *The Letters and Friendships of Sir Cecil Spring Rice* (ed by Stephen Gwynn, 1929)

Springs, city (pop 111,155), Transvaal, Union of South Africa After Johannesburg, it is the largest city in the Witwatersrand It is connected by rail to Durban and Johannesburg Springs is in a rich gold-producing area

Spring Valley. 1 Industrial city (pop 5,010), N Ill , on the Illinois river and NNE of Peoria, inc 1886 The area produces coal, commercial sand, and gravel Manufactures include work clothes and cigars **2** Village (pop 2,133), SE Minn , S of Rochester near the Iowa line, settled 1855, inc 1856 It is a farm trade center **3** Residential village (pop 4,308), SE N Y , W of Nyack near the N.J line, inc 1902 It is a summer resort There are stone quarries, and the town's products include rubber stamps, hospital uniforms, and cutlery

Springville. 1 Village (pop 2,849), W N Y , SE of Buffalo, settled 1807, inc 1834 Dental anesthetics are made here **2** City (pop 4,796), N central Utah, S of Provo, settled 1850 by Mormons The irrigated land is served by the STRAWBERRY VALLEY PROJECT A well-known art collection is now housed in an art gallery (1937) The sculptor C E Dallin was born here Near by are fish hatcheries.

Spruance, Raymond Ames (sprōō'ŭns), 1886–, American admiral, b Baltimore, Md , grad. Annapolis, 1906 In the Second World War he distinguished himself at the battle of Midway (1942) and became chief of staff to Admiral Chester W Nimitz As head of the fleet in the central Pacific (later the 5th Fleet), he commanded (1943–44) the forces which invaded the Gilbert and Marshall Islands and was made a full admiral. He was (1945–46) commander in chief of the Pacific fleet and retired from the navy in 1948.

spruce, any plant of the genus *Picea*, evergreen trees or shrubs of the pine family widely distributed in the Northern Hemisphere North American species, except for two West Coast kinds, have four-sided needles commonly radiating in all directions from the plane of the branch (contrast to the flat appearance of hemlock). Many species are cultivated as ornamentals though they become scraggly in age. The Norway spruce (*Picea abies* or *P. excelsa*), an important timber tree of Europe, is one of the most commonly cultivated evergreens. Of North American spruces the more valued for cultivation are the white spruces (*P canadensis* and *P engelmanni*), the Sitka spruce (*P. sitchensis*), and the Colorado spruce (*P pungens*) and its variety the Colorado blue spruce Wood of the various species is usually light, soft, and straight-grained and has been used for interior and exterior construction work, boats, airplanes, pulpwood, and woodenware The bark is sometimes used for tanning, and some species yield a gum resin Spruce beer has been made from the young shoots of the red spruce (*P rubra*) and the black spruce (*P marana*) The Indians in the West have used spruce gum for calking, the inner bark for food, and strips of spruce for weaving watertight mats and baskets The DOUGLAS FIR or Douglas spruce is not a spruce

Spruce Knob, mountain of the Alleghenies, 4,860 ft high, W Va , in the neck of the Eastern Panhandle, highest point in the state

Spruce Pine, town (pop 1,968), W N C , in the Blue Ridge NE of Asheville, settled c 1908 Kaolin and feldspar are mined and processed here, and ceramics are made

Spur, city (pop 2,136), NW Texas, ESE of Lubbock and on a rolling plain below the Cap Rock escarpment, settled 1909, inc 1911 Spur, named for the Spur Ranch, which once included this site, is a processing and market center for cattle ranches and dairy, cotton, and grain farms An agricultural experiment station is here

spurge (spûrj), name for any plant of the large and widely distributed genus *Euphorbia* and for some of the similar and related genera Many spurges are cactuslike and succulent plants, they commonly have a milky juice which is often poisonous and irritating A number of spurges have been used medicinally, some yield dyes, gums, and oils, and experiments to determine the rubber content of others have been made, primitive peoples utilized spurges for arrow and fish poisons A number of spurges, because of their poisonous and weedy nature, are classed as pests by some Other spurges are cultivated in gardens for their attractive foliage, such are the green and white snow-on-the-mountain and the cypress spurge (with groups of small yellowish flowers and narrow inch-long leaves set closely on branching stems) The scarlet plume and crown of thorns are greenhouse spurges with small red-bracted flowers The poinsettia is sometimes included in the genus

Spurgeon, Charles Haddon, 1834–92, noted English Baptist preacher He joined the Baptist communion in 1851 In 1852 he took charge of a small congregation at Waterbeach, Cambridgeshire, and at 20 went to London as pastor of the New Park St Chapel His immediate popularity made necessary larger and larger buildings for his audiences, until the huge Metropolitan Tabernacle, erected for his use, was opened in 1861 Around this developed a pastors' college, an orphanage, and missions Spurgeon's sermons, published weekly from 1854, were collected in 50 volumes His opposition to the doctrine of baptismal regeneration caused his withdrawal in 1864 from the Evangelical Alliance A firm Calvinist, he separated (1887) from the Baptist Union because he considered that modern biblical criticism was threatening orthodoxy Among his numerous publications are *John Ploughman's Talks* (1869) and *The Treasury of David* (7 vols , 1870–85) His autobiography (4 vols , 1897–1900), compiled by his wife from his diary and letters, was edited and condensed (1940) by D O Fuller

Spurn Head, promontory, c 4 mi long, Yorkshire, England, at the mouth of the Humber It has two lighthouses, and near it is a lightship

spurry, annual weedy herb of the genus *Spergula*, native to Europe and naturalized in the United States in the East and on the Pacific coast It has narrow leaves in whorled clusters along the stems and tiny white flowers The seeds are sometimes used as a coffee substitute and made into flour and mixed with wheat, their oil has been used for light A cultivated species is used in Europe as a pasture, hay, and soil-renovating crop In Holland it is sown to hold sands in place, it is sometimes called the clover of sandy soils.

Spurs, Battle of the: see BATTLE OF THE SPURS

Spuyten Duyvil Creek (spī'tŭn dī'vĭl), tidal channel, now a ship canal, c 1 mi. long, SE N Y., within the confines of New York city, separating the northern tip of Manhattan island from the mainland and connecting the Hudson and the Harlem River It is crossed by Henry Hudson Bridge.

spying: see ESPIONAGE.

Spyri, Johanna (yōhä'nä shpē'rē), 1827–1901, Swiss author of many stories of child life in Switzerland These have been among the most popular of all children's books and include the classic *Heidi* (1880; Eng. tr., 1884).

Squanto or Tisquantum, d. 1622, North American Indian of the Pawtuxet tribe. He is sometimes thought to be the Indian taken to England from

the Maine coast by George Waymouth (1605) and returned by John Smith in 1615, but it is certain that he was kidnaped by Capt. Thomas Hunt in 1615, lived in England, and returned (1619) to America with Capt Thomas Dermer In 1621 he acted as interpreter in concluding a treaty between the Pilgrim settlers and Massasoit Squanto became friendly with the Plymouth colonists, aiding them particularly in their planting and fishing While acting as guide and interpreter on William Bradford's expedition around Cape Cod, he became ill and died

Squarcione, Francesco (fränchā'skō skwärchō'nā), 1397–1468, Italian painter, teacher of Mantegna Traditionally he was a tailor and embroiderer who turned to painting c 1429 and established a school of painting in Padua Only two signed works of his exist, *Madonna with Child* (Berlin Mus collection) and an altarpiece in five sections (Padua)

square, in geometry, a figure bounded by four equal straight lines, the sides, which meet at four points, the vertices, to form four right angles The opposite sides are parallel A diagonal of a square is a straight line drawn between two opposite vertices There are two diagonals in a square, and these bisect each other, dividing the square into four equal triangles The perimeter of a square is the sum of its sides The area of a square is the product of one side multiplied by another or, since all the sides are equal, of one side multiplied by itself Hence, in arithmetic, when a number is multiplied by itself the product is called the square of that number For example, the square of 6 is 6 times 6, or 36 The square root of 36 is 6 In algebra, when a quantity is multiplied by itself the product is called the square of that quantity, the process is indicated by an EXPONENT For example, the square of x is x times x and is written x^2 In religion and art, the square symbolizes the earth or life

square, magic see MAGIC SQUARE

square, steel or **carpenter's,** tool consisting of a flat strip of steel cut to form a right angle The standard steel square is composed of the blade (24 in long by 2 in wide) and, forming a right angle to it, the tongue (18 in long by 1½ in wide) On one side of the square, the outer edges are indexed to $^1/_{12}$ in , the inner edges, to $^1/_{32}$ in On the other side, the outer edges are indexed to $^1/_{16}$ in , the inner, to $^1/_{8}$ in The steel square is used to calculate accurately many problems in carpentry, e g , cutting an octagon, laying in beams, finding the radius of an arch, and cutting rafters Steel squares are made in several sizes and with special indexes for special calculations or trades Squares were used in ancient times, as in Egypt, Crete, Greece, and Rome, but the steel square with incised numbers is a 19th-century invention As a symbol, the square is used especially by Freemasons See H C Mercer, *Ancient Carpenters' Tools* (1929), N D Green, *The Steel Square* (1942), D L Stoddard, *Steel Square Pocket Book* (7th ed , 1946)

square root see ROOT, in mathematics

squaring the circle see CIRCLE

squash, edible fruit of a vine of the same genus, *Cucurbita*, as the PUMPKIN The names squash and pumpkin are often used interchangeably There are three main groups The light-colored summer squashes are of either the pattypan or long type, they belong to the same species as the field or pie pumpkins They are used when young, before the rind hardens The winter squashes—chiefly varieties of *Cucurbita maxima*, including the Hubbard and turban, which in Europe are called pumpkins —are hard-shelled and can be kept over the winter in a warm, dry room Their colors range from yellow to deep blue green Their flesh has more flavor than that of summer squashes The third group contains varieties of *C moschata*, e g , the Canada crookneck pumpkin (or winter crookneck pumpkin) and the cheese pumpkin The place of origin of squashes has been a matter of dispute, but they are often considered to be native to America Squashes are much grown as a home-garden and local-market vegetable, frozen squash is marketed as are smaller quantities of the canned product The plant is attacked by the striped cucumber beetle, for which Paris green and slaked lime dust may be applied, the squash bug, which should be picked by hand or sprayed with nicotine sulphate, and the squash-vine borer, best destroyed by deep plowing and crop rotation Squashes, maize, and lima beans were the chief crops cultivated by the North American Indians, even in the pre-Columbian period

squash racquets, game played on a four-walled court, 16 ft high by 18½ ft wide by 32 ft deep The back wall, shorter than the front wall, usually measures 9 ft Horizontal service lines 6½ ft. high are painted on both the front and back walls, while a floor service line is marked off 10 ft. from, and parallel to, the back wall. The court is divided into two service zones by a line running midway between, and parallel to, the side walls The inflated, black, hard rubber ball (1⅝ in in diameter) has a relatively "dead" bounce, and hard running and agility are required of the squash racquets player. From a back corner of the court he serves the ball with a racquet that is 27 in. long, round headed, and gut-strung. The ball must hit the front wall above the service line (with caroms off the side walls permitted) without bouncing on the floor and must hit on the opposite service floor Volleying is permitted (even on the service return), and a point is scored when either player fails to return the ball before it touches the floor twice As in tennis, two services are allowed a player The game may be played by partners In match play, usually 15 points win a game and two out of three games win a match Squash racquets probably originated in the late 19th cent from the older game of RACQUETS and in the 20th cent met with increasing popularity—especially in American colleges and universities See Allison Danzig, *The Racquet Game* (1930), H L Cowles, *The Art of Squash Rackets* (1935), John Skillman, *Squash Racquets* (1937), J T Hankinson, *Squash Rackets* (1949)

squash tennis, game played on a four-walled court, similar in dimensions to the court on which SQUASH RACQUETS is played The two games, however, differ in equipment, rules, and play The squash tennis ball, equal in measurement to the tennis ball, is larger and much livelier than the squash racquets ball, and the squash tennis racquet is shaped like a tennis racquet, though it is a little smaller The rules differ especially concerning the service, e g , in squash tennis a ball may not carom off the side walls before hitting the front wall on the service, the service must bounce in front of the floor service line, volleying is forbidden in returning the service, and only the server may score a point These differences in rules grew out of the basic features of the equipment of both games The livelier ball and heavier racquet in squash tennis put emphasis upon hitting the ball on the carom rather than upon speed of the runner See Allison Danzig, *The Racquet Game* (1930)

squatter sovereignty, in U S history, the doctrine under which slavery was permitted in the territories, the final question of its legal status being left to the territorial settlers themselves when they applied for statehood First proposed in 1847, it was incorporated in the COMPROMISE OF 1850 and four years later was an important feature of the KANSAS-NEBRASKA BILL Sen Stephen A DOUGLAS, chief exponent of the doctrine called it "popular sovereignty," but antislavery men, who wanted slavery totally excluded from the territories, contemptuously called it "squatter sovereignty"

squid, carnivorous marine mollusk with 10 arms or tentacles which bear suction disks The thickened mantle forms a protective covering and the shell is reduced to an internal horny plate shaped like a quill pen The squid has highly developed eyes By ejecting water through the funnel it can move backward rapidly and more slowly in other directions When in danger it emits an inky fluid Squids are used for bait and in some countries, chiefly in the Orient, for food Luminescent forms are found especially in the deep sea The giant squid reaches a total length of about 50 ft

Squier, Ephraim George (skwī'ur), 1821–88, American archaeologist and journalist, b Bethlehem, Albany co , N Y He worked on newspapers in New York and Ohio His lifelong interest in archaeology and his many contributions to the field began with his study of prehistoric remains in the Ohio and Mississippi valleys He was U S chargé d'affaires to the republics of Central America (1849) and subsequently was American commissioner to Peru His works include *Aboriginal Monuments of the State of New York* (1851) and *The States of Central America* (1858)

Squier, George Owen, 1865–1934, American electrical engineer, b Dryden, Mich , grad West Point, 1887 From 1916 to 1919 he was in command of the army air service, and in 1917 he became major general He invented the monophone for broadcasting over telephone wires and conducted researches in telephony and telegraphy, electromagnetism, and photochronography

squill, common name for two genera of Old World bulbous plants of the lily family The horticulturists' squill is any plant of the genus *Scilla*, mostly spring-blooming low herbs with commonly deep blue but also white, rose, or purplish flowers borne along a leafless stem, the leaves are usually narrow Species of *Scilla* are used for naturalizing, rock gardens, and borders. Of these, the Siberian squill is an early rock-garden favorite, the wood or wild hyacinth, called also bluebell or harebell (*Scilla nonscripta*), is the common squill The pharmacists' squill or sea onion (*Urginea scilla* or *maritima*) produces whitish or rose flowers in the autumn before the leaves, the bulbs, collected chiefly from the Mediterranean region, are sold as white or red squill, the white an official drug used as a diuretic, stimulant, and expectorant, the red used mostly as a rat poison.

squinch, in architecture, a piece of construction used for filling in the upper angles of a square room so as to form a proper base to receive an octagonal or spherical dome It was the primitive solution of this problem, the perfected one being eventually provided by the pendentive. Squinches may be formed by masonry built out from the angle in corbeled courses, by filling the corner with a vise placed diagonally, or by building an arch or a number of corbeled arches diagonally across the corner In Moslem architecture the squinch took the form of a succession of corbeled stalactites Some early examples of the squinch can be seen in Roman domical buildings of the 3d cent It was also commonly used in the early churches of Europe and the East

squirrel, small rodent of North and South America, Europe, Asia, and Africa It has soft, thick fur and a bushy tail, is usually diurnal, and is active throughout the year, spending much of its time in trees Many squirrels conceal nuts and other food for winter in the ground or in stumps, locating the buried stores chiefly by smell Gray squirrels, common in the United States, are introduced in Europe Red squirrels are common in Europe and North America Tufted-eared Abert and Kaibab squirrels live in regions of the yellow pine in the W and SW United States Hunters have seriously reduced the population of the fox squirrel of the E United States Black squirrels occur in litters of various species Fur used in the trade is derived chiefly from Russian and Siberian squirrels See also FLYING SQUIRREL and GROUND SQUIRREL

Stachys (stā'kĭs) [Gr ,=ear of corn], Christian at Rome Rom 16 9

stadium (stā'dēum), race course in Greek cities, where foot races and other athletic contests took place The name is the Latin form of the Greek word for a standard of length and originally referred merely to the measured length of the course Usually the stadia were U shaped, the curve being opposite the starting point Occasionally the curve pointed into a hill slope where seats could be cut in terraces, as at Thebes, Olympia, and Epidaurus The courses were generally 606 ft 9 in (600 Greek feet) long, though the length varied according to the local variations of the measuring unit The stadium at Athens, which was completely restored to serve for the first modern Olympic games in 1896, dates from 330 B C In modern times the great interest in athletic games has caused the evolution of structures suitable to the various sports and seating many thousands of spectators Though many are called stadia, they are only derivative from those of the Greeks and in most features resemble rather the Roman circuses and amphitheaters In America stadia have greatly increased in number and perfection since 1914 Their form varies, being rectangular with curved corners, elliptical, or U shaped In some cases the playing field is beneath the ground level, with the spectator stands partly or wholly submerged in the excavation, as at the Yale Bowl The modern stadium generally is designed for such sports as football, baseball, and track racing But in those of some universities, as at Yale, only football is accommodated The stadia erected in European cities for Olympic games have usually been retained as permanent structures Among American stadia with large seating capacities are the following Chicago, Soldier Field, in Grant Park, 125,000, Philadelphia, Municipal Stadium (built for the Sesquicentennial Exposition), 125,000, New York, Yankee Stadium, 82,000, New Haven, Yale Bowl, 80,000, Philadelphia, Univ of Pennsylvania, Franklin Field, 76,000, New York, Polo Grounds, 55,000

Staël, Germaine de (zhĕrmĕn' dŭ stal'), 1766–1817, French-Swiss woman of letters, whose full name was Anne Louise Germaine Necker, baronne de Staël-Holstein Born in Paris, the daughter of Jacques and Suzanne Necker, she early breathed the intellectual and political air of her mother's salon In 1786 she married Baron Staël-Holstein a Swedish diplomat Though moderately sympathizing with the French Revolution, she left France in 1792 Back in Paris under the Directory, she made her salon a powerful political and intellectual center She separated, amicably, from her husband—then the Swedish ambassador—and became intimately associated with Benjamin CONSTANT Her love life remained, to the end both complicated and unconventional In 1803 her spirited opposition to Bonaparte caused her exile from Paris Mme de Staël retired to her estate at Coppet, on the Lake of Geneva, where she attracted a brilliant circle Already the author of a successful novel, *Delphine* (1802), and of a study of the influence of social conditions on literature (*De la littérature*, 1800), she was inspired by a trip to Italy to write the novel *Corinne* (1807) Her principal work, *De l'Allemagne*, was the result of a tour through Germany Napoleon, who resented the book as an invidious comparison between German and French culture and mores, ordered the destruction of the entire first edition (1811) on the ground that it was 'un-French" Threatened by Napoleon's police, Mme de Staël fled to Russia and England, in 1815 she returned to Coppet Republished, *De l'Allemagne* tremendously influenced European thought and letters, which became imbued with Mme de Staël's enthusiasm for German romanticism Among her other works are *Considérations sur la Révolution française* (1818) and the autobiographical *Dix Années d'exile* (1821) There are English translations of most of her works See Abel Stevens, *Mme de Staël* (2 vols , 1881)

staff, in musical notation, a group of horizontal lines upon and between which notes are written so as to determine their pitch In early attempts at the notation of plain song, a single line was drawn, with neumes placed above and below it, giving a rough idea of the relative pitches of the tones Guido d'Arezzo, in the 11th cent , used several lines and put letters on certain of them to indicate their pitch, thus foreshadowing the use of the CLEF Four-line staves proved adequate for plain-song notation and are still employed for that purpose In 16th-century keyboard music , staves of six or seven lines were often employed, but later the five-line staff, with ledger lines for pitches outside the range provided for by the staff, became conventional

Staffa (stă'fu) [Norse, =pillar], small uninhabited island, off W Scotland, in Argyllshire, one of the Inner Hebrides It is 6 mi NNE of Iona and is noted for FINGAL'S CAVE There are other caves, lofty cliffs, and vestiges of an old chapel

Stafford, Edward, 3d duke of Buckingham (stă'furd), 1478–1521, English nobleman, son of Henry Stafford, 2d duke of Buckingham The attainder of his father (1483) was reversed on the accession of Henry VII (1485) He took a minor place at court until the accession of Henry VIII, when he was made lord high constable, lord high steward, and a privy councilor (1509) He served in the army in France, served on a number of commissions, and attended the king at the Field of the Cloth of Gold Though Buckingham was supposed to be high in the favor of Henry VIII, the king was both jealous and suspicious of him because of his wealth, his lands, and his descent, on the paternal side he was a descendant of Thomas of Woodstock, son of Edward III, and his mother was a sister of Edward IV's queen Buckingham married a daughter of Henry Percy, earl of Northumberland, and through the marriage of his children he was allied to a number of the greatest noble houses of England He came to represent those nobles who resented the power of Cardinal Wolsey and their own exclusion from high offices In 1521 Buckingham was called to London, placed in the Tower, and then brought to trial Witnesses testified that he had countenanced prophecies of his own succession to the throne and had expressed the intention to murder the king He was not allowed to examine the witnesses, and the jury of peers upheld the king's obvious intention to do away with Buckingham He was executed, and in 1523 an act of attainder was passed by Parliament

Stafford, Henry, 2d duke of Buckingham, 1454?–1483, English nobleman He was the grandson of Humphrey Stafford, 1st duke of Buckingham, whom he succeeded in 1460 Although he presided at the trial of the duke of Clarence in 1478, it was not until the death of Edward IV that Buckingham came into political prominence as a supporter of Richard of Gloucester He joined Richard in arresting Lord Rivers and Lord Grey and in taking custody of the young Edward V While Gloucester as protector showered offices upon him, Buckingham figured largely in the political plot which resulted in the coronation of Gloucester as Richard III. Second in power only to the king, he was appointed lord high constable, but soon, for reasons not quite clear, he revolted against Richard and urged a union of the houses of Lancaster and York by the marriage of the earl of Richmond and Elizabeth of York Buckingham gathered an army in Wales and the west but was prevented from advancing by floods in the Wye and Severn rivers, and his army soon dispersed He went into hiding, was betrayed by one of his retainers, tried as a traitor, and beheaded His estates were confiscated

Stafford, Humphrey, 1st duke of Buckingham, 1402–60, English nobleman He succeeded his father as early of Stafford in 1403, as grandson of Thomas of Woodstock, earl of GLOUCESTER, he inherited the title of earl of Buckingham through his mother Anne, countess of Buckingham He served Henry VI in France in the Hundred Years War, as soldier and administrator, much of the time under John of Lancaster Made duke in 1444, he was later granted some of the estates of Humphrey, duke of Gloucester, whose policies he had opposed In the Wars of the Roses he supported Queen Margaret and the Lancastrians at the first battle of St Albans and was killed at the battle of Northampton

Stafford, William Howard, 1st Viscount, 1614–80, English nobleman He was created viscount by Charles I in 1640 He took little part in the Puritan Revolution, and because he felt neglected in the Restoration, he often opposed the court party and gave his support to Shaftesbury At the time of the Popish Plot he was one of the five Catholic lords arrested and the first to be tried Through the false testimony of Titus OATES and others he was declared guilty of an attempt to foster a Catholic revolt He was beheaded and attainted His attainder was reversed in 1824

Stafford, county, England see STAFFORDSHIRE

Stafford, municipal borough (1931 pop 29,485, 1947 estimated pop 36,050), co seat of Staffordshire, England, on the Sow above its junction with the Trent The fortress built by Princess Æthelflæd, on a hill near the town, has been replaced by a great unfinished castle The town has several half-timbered houses and St Chad's Church (Norman) and St Mary's Church, restored by Sir George Gilbert Scott Izaak Walton was born in Stafford, and his cottage at Shallowford near by is now a museum Sheridan, the dramatist, represented the city in Parliament from 1780 to 1806 The chief industry is the manufacture of shoes

Stafford 1 Textile town (pop 5,835), NE Conn , at the Mass line, settled and inc 1719 It includes Stafford Springs borough (pop 3,401, inc 1873), site of mineral springs and a health resort 2 City (pop 2,011), S central Kansas, W of Hutchinson, settled as Sodtown, named Stafford 1879, inc 1885 Oil was struck near by in 1938

Staffordshire (stă'furdshĭr) or **Stafford,** inland county (1,154 sq mi , 1931 pop 1,431,359, 1948 estimated pop 1,585,780), central England The county town is Stafford The terrain is gently undulating except for a district of rugged moorlands in the north The principal river is the Trent, with its various tributaries Much of the land is devoted to cattle pasturage, but the county is primarily industrial In the north the POTTERIES district, centered at Stoke-on-Trent (formerly known as the Five Towns and pictured in novels of Arnold Bennett), is known for its manufacture of fine china (Wedgwood and Spode), glass, bricks, and clay pottery In the south is the BLACK COUNTRY, with its extensive coal fields, foundries, and iron and steel mills Burton-on-Trent is famous for its breweries, and Lichfield for its magnificent cathedral The region was a part of the Anglo-Saxon kingdom of Mercia and was organized as a shire in the 10th cent It played a generally unimportant role in English history until the beginning of its great industrial expansion in the 18th cent The name is abbreviated as Staffs See Arthur Mee, *Staffordshire* (1937)

Staffordshire ware, various products of the POTTERIES district, including earthenware before the 18th cent and later stoneware and porcelain. Among famous Staffordshire potters were Josiah WEDGWOOD, Thomas Minton, and Josiah SPODE

Stafford Springs, Conn see STAFFORD

stage see THEATER

stagecoach. Throughout the Middle Ages and until about the end of the 18th cent , the condition of roads in Europe discouraged the use of wheeled vehicles, and travel by land was regularly on horseback In America until the end of the 18th cent , the traveler often had to make his way on horseback or on foot over an Indian trail Slow and clumsy stagecoaches were operated irregularly in England and America from the early 18th cent Stagecoaches first made their 400-mile journey between London and Edinburgh in 1785, the time required being 10 days in summer and 12 days in winter In the same year stagecoach connection was established between New York and Albany Improved roads had made the stagecoach possible, and in turn the stagecoach encouraged the improvement of roads Stagecoaches varied in design Typically they were drawn by four or six horses, which were changed at the stages or stations along the route, the coach traveling about 12 to 18 hr a day and covering c.40 mi a day in summer and 25 mi in winter Breeds of coach horses, e g , the Cleveland bay and the German coach horse, were developed for strength and speed. The coach had room for eight to fourteen passengers, besides baggage, mail, and the driver Two of the passengers rode in the seat with the driver, each of the other seats had room for three passengers To diminish jolting, the body of the coach was supported by two leather straps (the "thorough braces") lengthwise of the coach Building stagecoaches became an important industry, coachmakers were among the most skilled and highly paid mechanics In America the coachbuilders of Albany and Troy, N Y , and Concord, N H , were famous The fare varied with time and place, averaging in America about five cents a mile Competition from mail coaches, established in England in 1784, brought improvements in the comfort, speed, and schedules of stagecoaches, whose great period was the first half of the 19th cent Stagecoaches were gradually superseded by railroads

stage design. In the Greek open-air theater actors were taken on and off the stage by means of a derrick, a wooden building with a colonnade might form the background. Painted scenery was used as early as 461 B C , in the production of Aeschylus' *Oresteia* The Roman theater, either of the republic or of the empire, required no scenery The medieval mystery play often had a single setting, but mechanical equipment was used for hoisting clouds, heavenly bodies, and sometimes angels The semicircular stage was used through Elizabethan times with the audience on three sides of it The court masques of the time of James I had settings designed by the great architect Inigo Jones The actors of the COMMEDIA DELL' ARTE played at court with an elaborate list of stage properties, but in their itinerant performances they provided their own scenery, which was often only a painted backdrop This introduction of a backdrop moved the spectators to one side only, facing the stage Until the beginning of the 20th cent no drastic improvements were attempted, however, backdrops became more elaborate, meticulously painted, and clear in perspective The large size of theaters permitted flats (flat, movable pieces of scenery) to be raised and lowered on demand, and all acting took place in front of the scenery This proved inadequate for the drama of realism that developed during the late 19th cent What had been an adjunct to a drama of manners was not integrated enough for the attempt at re-creating an actual situation in the realistic or, later, expressionistic theater The modern scenic movement originated in Germany and spread to England, where Gordon Craig agitated for scenic changes that would help to interpret the action, not merely to frame it The Moscow Art Theatre, specializing in highly symbolized acting, also experimented with new stage forms One great change was the introduction of interpretive lighting The use of spotlights to high-light certain parts of the stage, leaving others shadowed, added to the meaning of the drama by emphasizing certain actions above others In addition, lighting could impart to the entire stage, including the background, an illusion of three-dimensionality It was found effective, in some highly symbolic plays, to eliminate scenery entirely and create a setting merely by the play of various lights on gray curtains The introduction of changeable scenery, in box forms, improved the versatility of settings Instead of using flats, the scenery was produced on sides of open boxes which could be shifted on casters to present different facets to the audience for different scenes A great advance in stage versatility was the revolving stage, used notably by Kenneth Macgowan, which could be turned so that one side faced the audience while the other half, hidden behind the backdrop, could be fitted up for the next scene Ingenuity in stage setting led also to the two-level stage Elaborating on the older convention of using a series of raised platforms to impart levels to the stage, scene designers began to build stages on which one part was far higher than the other The use of gauzes was introduced to create the effect of a fade-in A thin, painted curtain could be made to appear absolutely opaque at one moment, transparent and all but nonexistent the next, by judicious lighting This method has proved very effective for smooth and sudden scene changes within one action A revolutionary reform in theater design was introduced in this country by Norman Bel Geddes with the theater-in-the-round A return to the Elizabethan conventions, the arena-style staging allows its audience to surround the actors almost completely, thus eliminating backdrops altogether and bringing the utmost realism to the acting by doing away with the "imaginary fourth wall" against which actors were placed. In the round theater lighting plays an enormous part in creating a set This stage, first operated successfully in Dallas, Texas, was adopted by several experimental New York theaters See Gordon Craig, *On the Art of the Theatre* (new ed , 1926); Kenneth Macgowan, *The Theatre of Tomorrow* (1921), Sam-

uel Selden, *Stage Scenery and Lighting* (1930); H. C Heffner and others, *Modern Theater Practice* (1935), Donald Oenslager, *Scenery Then and Now* (1936), Lee Simonson, *The Art of Scenic Design* (1950).

Stagg, Amos Alonzo, 1862–, American football coach, b West Orange, N J , grad Yale, 1888 He played end on the Yale football team and began his career as a coach (1889–91) at Springfield (Mass) College In 1892 he became athletic director at the Univ of Chicago, coaching football there until 1933 In these 41 years he five times (1899, 1905, 1908, 1913, and 1924) coached undefeated teams An authority on football, Stagg served (1904–32) on the football rules committee Owing to his age, he was compelled to resign his post at the Univ of Chicago, but the "grand old man of football" later coached (1933–46) at the College of the Pacific and became (1947) a coach at Susquehanna Univ He collaborated in writing several books on football. His *Touchdown* (1927), written with W W Stout, is autobiographical.

Stagira (stŭjī'rŭ) or **Stagirus** (stŭjī'rŭs), ancient city, Macedonia, on the peninsula of Chalcidice It was colonized (7th cent B C) by Greeks from Andros and is noted as the birthplace of Aristotle (sometimes called the Stagirite)

Stahl, Georg Ernst (gā'ôrk ĕrnst' shtäl'), 1660–1734, German physician and chemist He taught (1694–1716) at the Univ of Halle, then went to Berlin as court physician He is known for his promotion of the PHLOGISTON THEORY and for his theory—developed in his *Theoria medica vera* (1707)—that the soul controls the function and structure of the body

Stahlberg, Kaarlo Juho (kär'lō yō'hō stal'bĕrg), 1865–, Finnish statesman At the outbreak of the First World War he was professor of law at the Univ of Helsinki and, as president of the Finnish diet, an opponent of Russian oppression He was president of independent Finland (1919–25), but in 1931 was defeated as a Progressive candidate

stained glass, in general, windows made of colored glass To a large extent, the name is a misnomer, for staining is only one of the methods of coloring employed, and the best medieval glass made little use of it Colored glass as window decoration is of great antiquity in the Far East Moslem designers fitted small pieces of it into intricate window traceries of stone, wood, or plaster, and this type of window mosaic still is in use Colored glass was used in windows of Christian churches as early as the 5th cent , and pictorial glass as early as the 10th cent However, no existing church windows are known which date prior to the 12th cent , except for some clerestory figures at Augsburg and windows at Hildesheim and Tegernsee which are ascribed to the 11th cent In Gothic church architecture the small wall spaces offered little opportunity for effective color decoration, while the large window openings, usually subdivided by TRACERY, gave ideal accommodation for glass used as polychromatic adornment for the interiors Small pieces of glass held together with lead strips not only admitted the light but transformed it into a medium of beauty In these transparent mosaics biblical history and church dogmas could be portrayed for the populace with great effectiveness The material employed by the Gothic glaziers was colored pot metal, i e , glass colored with metallic oxides while in the melting pot, resulting in colors of clear transparency Other materials were clear white glass and flashed glass, namely, glass to which a thin film of colored glass had been fused For forming outlines and defining details, a brownish paint grisaille, formed of powdered glass and iron oxide, was applied and then fired so as to fuse with the glass surface In the 14th cent yellow stain, based on a compound of silver and sometimes called silver stain, was widely used On clear glass this produced yellow and orange tones, and on blue glass it formed a brilliant green In the 15th cent a process of abrasion was introduced by which, in flashed glass, the surface layer could be ground off in places, thus making it possible to produce several colors and shades on a single piece of glass The early glaziers, following a sketched cartoon for their window design, used a red-hot iron for cutting the glass to the required pieces, afterwards firing in the kiln those which had received painted lines and shadings The pieces were then fitted into the channeled lead strips, the leads soldered together at junction points, and the whole installed in a bracing framework of iron The leads were adjusted to the articulation of the design and formed an integral part of it In the 13th and 14th cent the art of stained glass was at its height, aided, moreover, by the prevailing technical limitations of the medium The metallic ores, though crude and limited, produced admirable color variations, the glass, though available only in small pieces, gave thereby a jewellike quality to the colors, the pieces, by their uneven surface and varying thickness, gave the advantage of irregular and scintillating refractions of light. With improved glassmaking many of these assets vanished By the 16th cent, the material was smoother and in larger pieces, towards the middle of this century the use of enamel paints permitted the designs to be entirely painted on the glass and then fired This technique thenceforward replaced that of the medieval mosaic windows, and the true art of stained glass had become extinct Glass of the 12th cent , of which relatively little remains, is seen in the windows at Chartres, Le Mans, and elsewhere in France, as well as at Canterbury cathedral and York Minster in England The windows of this period were characterized by rich, dark colors, single figures, and scrollwork A recurrent design, that of the Jesse tree, continued in use up to the 16th cent By the beginning of the 13th cent figures were abundantly used and grouped together in pictorial subjects, the scenes being enclosed in geometrical medallions, such as circles, lozenges, or quatrefoils A window was composed of many of these medallions Color became more detailed and varied, and the prevailing scheme of red, blue, green, and purple, with small amounts of white, created tense and vibrant harmonies In France the cathedral at Chartres is an unrivaled treasury of 13th-century glass, in England fine examples are in York, Lincoln, and Salisbury In the 14th cent medallion compositions were replaced by a single figure framed in canopied shrines Many windows showed clear areas designed in grisaille In the 15th cent glass artists achieved a fine silvery tone by the use of large proportions of white glass, and their figures of saints and apostles were surmounted by canopies of elaborate and often extravagant design The leads and mullions began to be ignored, and the picture no longer limited itself to a single light but extended its composition over an entire large window The simple architectural discipline of the 13th and 14th cent disappeared, and with the 16th cent the designers emulated the purely pictorial effects of Renaissance oil painting, with perspectives, large scale, and elaborate realism Nineteenth-century romanticism and the Gothic revival brought fresh study and emulation of glass as well as of other medieval arts The arts and crafts movement under William Morris was especially productive He and Burne-Jones designed windows of true medieval technique and spirit, as in their fine work at Birmingham Cathedral and at Christ Church, Oxford A great contribution to American stained glass was made by John LA FARGE, whose many windows include those in the Church of the Paulists, in New York See Alfred Werck, *Stained Glass* (1922), C J Connick, *Adventures in Light and Color* (1937)

Stainer, Sir John (stā'nur), 1840–1901, English composer and organist, grad Oxford (B Mus , 1859, D Mus , 1865) Having earlier held several organ positions, he became organist in 1872 at St Paul's Cathedral, London, where as a boy he had been a chorister In 1876 he joined the faculty of the National Training School for Musicians, he was made its principal in 1881 and was a professor there when the school became (1883) the Royal College of Musicians He was knighted in 1888, the year he left St Paul's He wrote much church music in the form of services, canticles, anthems, and songs, his cantatas *The Daughter of Jairus* (1878) and *The Crucifixion* (1887) are outstanding He also wrote theoretical treatises and *A Dictionary of Musical Terms* (with W A Barrett, 1876)

Staines, urban district (pop 21 213), Middlesex, England, on the Thames above London It manufactures automobiles The river is crossed by a granite bridge built by George Rennie in 1831

stainless steel see STEEL

stain removal, from fabrics Prompt treatment may often prevent stains from penetrating fibers and may make the use of strong chemicals unnecessary Certain fresh stains especially grease spots, can be removed by applying an absorbent, e g , chalk, whiting, or corn meal Many spots can be removed from fabrics which water does not injure by placing the fabric on a blotter or absorbent cloth, then sponging it with a damp cloth Certain stains are removed only by the application of chemicals, which should be first tested on an inconspicuous part of the fabric (*Caution* Chemical cleaning fluids should not be used in a room where there is any open flame) In rubbing spots, use a clean cloth and work toward the center of the spot using a circular motion Solvents used for removing spots include alcohol, benzene, carbon tetrachloride, gasoline, naphtha, and turpentine Bleaches include hydrogen peroxide (a mild agent that may be used on many colored fabrics), commercial chlorine bleaches (not advisable for silk or wool), Javelle water, oxalic acid, and potassium permanganate (this sometimes leaves a brownish spot removable with lemon juice, oxalic acid, or hydrogen peroxide, it is not safe for use on rayon) Bleaches are often applied with a medicine dropper to fabric stretched over a bowl of steaming water

Note Common causes of stains and methods of removing them from washable fabrics are listed below, certain of the methods suggested may be applied with care to non-washable fabrics

Blood. Rinse in cold water, for stubborn stains add soap or ammonia to water and soak

Chocolate and *cocoa.* Wash with soap or with borax and cold water

Coffee (clear) Launder with soap or borax, remove remaining stain with potassium permanganate

Coffee with cream Wash with soap and cold water, then treat as for clear coffee

Cream and *milk* Rinse in cold water, adding a little ammonia if needed, then launder in hot, soapy water

Egg Scrape off excess, then use cold water, followed by hot soapy water

Fruit juice Pour boiling water over stain immediately, then use lemon juice and expose to sunlight

Grass and *green foliage* If not removed by laundering, use alcohol or a bleach, then rinse

Gravy Rinse in cold water, for stubborn stains add soap or ammonia to water and soak If oily, follow with method for grease

Grease, oil, and *wax* Scrape off excess, then use one or more of the following methods cover spot with chalk or other adsorbent, place blotting paper on both sides and apply hot iron, rinse in a grease solvent, e g , gasoline or carbon tetrachloride, wash in hot, soapy water

Gum Remove excess with dull knife, soak in gasoline, kerosene, or carbon tetrachloride, then launder

Ice Cream Rinse in cool water, then follow with methods for removing chocolate, coffee, grease, fruit, or other stains

Ink Use commercial ink remover (consult directions on label), certain inks can be removed by soaking in cold water or milk, then laundering, bleaches are often effective

Iodine Soak in cold water or in very dilute ammonia solution, then launder

Iron rust See rust

Lipstick Rub lard into stain, scrape off excess, launder, then use bleach on remaining stain, or pour carbon tetrachloride on stain and blot

Mildew Launder, expose to sunlight, soak stubborn stains in milk or use bleach

Milk See cream

Nail polish Sponge with banana oil, then launder

Oil See grease

Paint and *varnish* Scrape off excess, many paint and varnish spots can be softened with turpentine or with lard, then laundered, alcohol is effective for certain paints

Perspiration Launder, then bleach and rinse or expose to sunlight

Pitch, soot, and *tar* Rub with lard, then launder, use gasoline, turpentine, or other solvent, if necessary

Rust Sprinkle with salt and lemon juice, expose to sunlight, or apply oxalic acid or very dilute hydrochloric acid with a dropper, rinse in hot water, using ammonia or borax to neutralize acid, or use commercial iron rust soap

Scorch Dampen and expose to sunlight

Shoe polish If polish contains turpentine, soak spot in turpentine, then launder, certain black liquid polishes can be removed with a bleach

Soot See pitch

Stove polish Rinse in gasoline or other solvent, launder

Tar See pitch

Tea (clear) Rinse in boiling water, if stain remains, soak in borax, or apply potassium permanganate or oxalic acid, or use lemon juice and expose to sunlight

Tea with milk Wash with soap and cold water, then treat as for clear tea

Varnish See paint

Vaseline Remove with turpentine, then launder

Water spots Moisten evenly, then press while damp, or steam

Wax See grease

Wine Rinse in boiling water, then use bleach

Stair, James Dalrymple, 1st Viscount (dălrĭm'pul, dăl'rĭmpul), 1619–95, Scottish jurist A student and then a regent of the Univ of Glasgow, he was admitted to the bar in 1648 He favored the exiled Charles II and refused to swear allegiance to the Commonwealth, but he was nevertheless appointed (1657) a judge After the Restoration he was prominent until his sympathy with the Covenanters at the time of the Scottish Test Act caused him to lose (1681) his appointment as judge He then finished his *Institutions of the Law of Scotland* (1681), a great treatise on Scottish law An exile in the Netherlands ended when he came (1688) to Great Britain with William III, who made him lord advocate and Viscount Stair

Stair, John Dalrymple, 1st earl of, 1648–1707, Scottish statesman, son of Viscount Stair He served under James II, but sponsored the accession of William III and became (1691) that monarch's joint secretary of state His political skill and eloquence enabled him to dominate the Scottish Parliament, and he conciliated the Presbyterian faction in Scotland He was, however, implicated in the massacre committed at GLENCOE (1692) by soldiers under the orders of John CAMPBELL, earl of Breadalbane, and was forced to resign (1695) He reentered Parliament in 1700 and became a privy councilor (1702) and earl of Stair (1703) Stair actively promoted the union of Scotland and England.

Stair, John Dalrymple, 2d earl of, 1673–1747, Scottish general and diplomat, son of the 1st earl of Stair. As a boy he killed his elder brother by accident and was exiled to the Netherlands by his parents. He fought under WILLIAM III at Steenkerke (1792), was prominent in the War of the Spanish Succession as friend and lieutenant of Marlborough, and was made a general in 1712. He was in 1709 sent as envoy to the court of Augustus II of Poland at Dresden, and he served George I as British ambassador in Paris (1715–20). After retiring he became the foremost agriculturist of Scotland. He reentered politics, secured the overthrow of Walpole (1741), was created field marshal and governor of Minorca, and later served in various military campaigns. See J. M. Graham, *Annals of the Viscount and the First and Second Earls of Stair* (1873).

stair or **stairway,** succession of steps giving access from one level to another. The simplest arrangement is a straight, unbroken flight. However, the available space in the building, the height of its ceilings, and its appearance usually require more complicated layouts with landings and turns and arrangements that involve varying geometrical shapes. The known examples of stairs prior to Roman architecture are mostly confined to the monumental exterior flights, such as led up to the Acropolis at Athens and up to the great platform at Persepolis (5th cent. B.C.). In the rare cases where buildings were more than one story high, interior stairs no doubt existed, as in the example found at Cnossus. The interior stairs of the Middle Ages, seldom emphasized, were chiefly of the spiral type, in stone or wood, built within a small space around a central supporting post. Not until the Renaissance did the interior stair achieve its full architectural effect, chiefly in palaces, civic buildings, and mansions. In the French châteaux it was sometimes enclosed within a special tower marked with special emphasis on the exterior, e.g., at Chambord with its celebrated double stairs built in two separate spirals one above another. While the monumental stairways of Italy and France were of stone or marble, with marble balusters or railings of bronze or wrought iron, the English Renaissance manor house of Elisabethan and Jacobean periods used oak for all parts of its broad staircase, built around a rectangular well, it had easy flights, broad landings, and carved newels and balusters. Graceful curved stairs, circular or elliptical, were a special development of English Georgian and American Colonial architecture. The Renaissance period also produced superb exterior stairs, notably at Versailles and in the Piazza di Spagna at Rome. Among commonly used stair terms, a tread or run is the horizontal surface of each step, and a rise is the height from one tread to the next. Ordinarily a tread of 10 in. to 10½ in. and a rise of 7 in. to 7½ in. has been found comfortable in interior flights. Such dimensions, as well as minimum stairway widths, are regulated by most city building codes. The handrail is supported by balusters or by various types of ornamental railing and is strengthened at landings and floor levels by more substantial vertical supports, termed newels. A stair well is the open space around which the stair either curves or makes a succession of turns at landings. At its top a skylight sometimes is placed. In a dog-legged stair there is no well at all, one flight connects directly with another at a platform or landing, and space is thus saved. The usual form of fireproof stair for utilitarian use is made with a supporting framework of steel (assembled by bolting together the various stock members), upon which are fitted the finish surfaces of risers and treads in whatever material they may be (e.g., marble or concrete). A construction entirely of reinforced concrete is also common. See Gilbert Townsend, *Stair Building: Design and Construction* (1940).

Staked Plain: see LLANO ESTACADO.

Stakhanovism (stäkh'nuvĭzm, stu-), movement begun in the USSR in 1935 and aimed at speeding up industrial production by the use of more rational working techniques. It was named for Alekscy Stakhanov (ülyĭksyā' stükhä'nuf), a coal miner in the Donets Basin, whose team succeeded in increasing its daily output sevenfold. The Soviet government, anxious to speed up the fulfillment of the Five-Year Plan, encouraged the Stakhanov movement, and Stakhanovite workers received higher pay and other privileges. Whether it was spontaneous or not, the Stakhanov movement gained wide following and undoubtedly contributed much to the success of the government's industrial program. It has been widely criticized outside the USSR as another form of the speed-up system, fought by labor unions throughout the world, but apologists pointed out that the aim of Stakhanovism was not to increase the physical effort of the worker but to encourage him to use his ingenuity and technical knowledge to best advantage. It must be pointed out in fairness to the latter theory that the Stakhanovite technical methods, hailed as innovations in the USSR, had been largely used as a matter of course in Western industrial countries and that the output achieved by them still often falls short of the average output of the American worker. The stated aim of Stakhanovism is not more work, but greater efficiency.

Stakhr, Iran. see ISTAKR.

stalactite (stulăk'tīt) and **stalagmite** (stŭlăg'mīt). A stalactite is an icicle-shaped mass of calcium carbonate pendent from the roof of a limestone cavern. Ground water trickling through cracks in the roofs of such caverns contains calcium bicarbonate in solution, but when a drop of water comes in contact with the air of the cavern, the escape of carbon dioxide causes the replacement of the calcium bicarbonate by the less soluble calcium carbonate, which is precipitated out of solution and forms a ring of calcite on the roof of the cavern. By repetition of this process the length and thickness of the stalactite is increased; by alteration of the volume and path of the trickle of water, fluting is produced. A stalagmite is a cone of calcium carbonate rising from the floor of a cavern. Stalagmites and stalactites are often found in pairs, the stalagmite being formed as a result of further evaporation and precipitation from solution after the trickle of water falls from the stalactite. Stalactites and stalagmites often meet each other to form solid pillars. The many colors often seen in these formations are caused by the presence of impurities. Celebrated caverns that owe much of their beauty to their stalactites and stalagmites are Mammoth Cave, Ky., the Luray Caverns, Va., and the Carlsbad Caverns, N.Mex. Onyx marble (Mexican onyx, Egyptian alabaster, or Oriental alabaster), used as a decorative stone, is derived from stalagmites and stalactites, as well as from similar deposits.

stalactite ornament, type of ornament characteristic of Moslem architecture. Generally executed in wood or in plaster over a wood or brick base, it consists of little vertical polygonal or curved niches rising and projecting in rows above one another in such a way as to create a general prismatic, corbeled form. An infinite number of ingenious and intricate compositions of these elements is possible, and such purely geometric decoration was particularly acceptable to the Moslems in view of the Koran's prohibition of the use of natural forms. The primary use of stalactites was to form pendentives in the corners of a square room to receive the base of a circular dome, though this use was relatively infrequent in Spanish Moslem. Absent from the earlier Moslem buildings, they came everywhere into general use early in the 12th cent., forming cornices and the caps of posts and columns, decorating the heads of niches, and supporting the projecting balconies of minarets. In the interior of the Alhambra at Granada, Spain (13th–14th cent.), stalactites appear in particularly beautiful arrangements, especially in the decoration of arches and in the fantastic honeycombed ceiling vaults.

stalagmite: see STALACTITE AND STALAGMITE.

Stalin, Joseph Vissarionovich (stä'lĭn, Rus vĭsŭryô'nuvĭch stä'lyĭn), 1879–, Russian statesman and Communist leader, b. Gori, Georgian SSR. His real name was Dzhugashvili (also spelled Dzugashvili or Djugashvili), he adopted the name Stalin ("made of steel") after joining the revolutionary movement. The son of a shoemaker, Stalin studied (1894–99) for the priesthood at the theological seminary at Tiflis, from which he was expelled for political activities. While still a divinity student, he became a convert to Marxism and began organizing the Social Democratic party in Caucasian Russia. He embraced the Bolshevik cause after the split (1903) in the Social Democratic party of BOLSHEVISM AND MENSHEVISM. Between 1902 and 1913 Stalin was five times arrested by the tsarist police and escaped five times. He allegedly took part (1906) in a bank robbery at Tiflis in order to replenish the funds of the revolutionists. Although Stalin attended party congresses abroad (at Stockholm in 1906 and at London in 1907), he did not, like Lenin, Trotsky, and other revolutionists, choose prolonged exile abroad, but waged battle with the Russian secret police under a number of aliases. His later enemies, notably Leon TROTSKY, represented Stalin as an obscure nonentity until his rise to power after the Revolution of 1917. While Stalin's importance in the years before 1922 has been exaggerated by official biographies, it nevertheless is obvious that Stalin had to operate in the most self-effacing secrecy in order to avoid arrest. The facts are that he did found (1911) *Pravda* [truth], later the official daily of the Communist party of the USSR, and that from 1911 to 1913 he played an important secret role in guiding the Bolshevik deputies in the Duma and in directing the party press. In 1913 he was arrested and exiled for life to N Siberia, where he remained till an amnesty after the February Revolution of 1917. Back in Petrograd (Leningrad), he edited *Pravda* jointly with LENIN, and after the October Revolution of 1917 he entered the Soviet cabinet as people's commissar for nationalities. His part in the civil war of 1918–20 has been described as vital by his admirers and as negligible by his enemies. A close collaborator of Lenin, Stalin was elected (1922) general secretary of the Communist party of the USSR, and on Lenin's death (1924) he assumed Lenin's succession jointly with KAMENEV and ZINOVIEV. According to Trotsky's later claims, Lenin in his testament had expressed unfavorable views of Stalin (as well as of Trotsky), but Stalinists vigorously denied this. Stalin's program, as expressed at a party conference in 1925, was to conciliate the peasantry with the Soviet regime and to continue and extend Lenin's NEW ECONOMIC POLICY (NEP). This program was attacked as counterrevolutionary by an opposition group led by Trotsky and soon joined by Kamenev and Zinoviev. However, Stalin was sustained by a majority of his party. The expulsion (1927) of Trotsky and Zinoviev from the party assured Stalin sole leadership. Although he held no formal government office before 1941, he dictated Soviet policy as head of the Politburo of the Communist party, which had become the actual government of the USSR. In 1928, after the NEP had achieved considerable success, the party, on Stalin's initiative, reversed its position toward the agrarian problem and inaugurated the collectivization of the farms. Ruthless measures were taken against the kulak class—the farmers who had risen to prosperity under the NEP and who represented a "reactionary element." At the same time the first FIVE-YEAR PLAN was adopted. Although nearly all Communist leaders had—on the surface, at least—rallied to Stalin by that time, Trotsky, who was deported from the USSR in 1929, continued his bitter opposition, accusing Stalin of sacrificing socialism and the world revolution to his personal dictatorial ambitions. Stalin, on the other hand, said that he was repudiating, for the time being, the role of Russia as the torchbearer of world revolution and emphasized the need for consolidating "socialism in one country" (i.e., Russia), he maintained that the success of the Russian experiment, which demanded immense sacrifice and unreserved discipline, would achieve the double effect of rendering the USSR immune to possible attacks by capitalist nations and of demonstrating the superiority of the Communist system over capitalism. The world economic crisis that shook the capitalist nations after 1929 and the simultaneous and spectacular development of Soviet economy won many converts to Communism and appeared to justify Stalin's view. In the field of economy, Stalin's successive Five-Year Plans represented, on the whole, a shift to the left from Lenin's policy. In the political and cultural fields, the USSR under Stalin moved definitely to the right. The ultimate aim of MARXISM—the "withering away" of the state—was indefinitely postponed, though not officially abandoned. Instead, Stalin made his dictatorship absolute by liquidating all opposition within the party in the celebrated "purge" trials of the 1930s. The "purge" was touched off by the murder (1934) of Stalin's lieutenant, S. M. KIROV, which led to the prosecutions for an alleged plot—vast, Trotsky-inspired, and aided by Nazi Germany—to overthrow Stalin's government. Among those accused and sentenced (all of whom pleaded guilty) were many old Bolsheviks, including Kamenev, Zinoviev, Rykov, and Bukharin. The purge extended even to the head of the SECRET POLICE, G. G. Yagoda, and to some of the highest army officers, notably Marshal Tukhachevsky. Thousands of lesser officials were removed. At that price "monolithic unity" was obtained by the time the purge was officially ended in 1938. For the old revolutionists, who despite their ideologies had been formed in the school of 19th-century individualism, a new class of Communist-trained and docile bureaucrats was substituted. The shift to the right (or toward stability, depending on the viewpoint) was equally manifest in the reorganization of the armed forces along disciplinarian lines reminiscent of the reign of Nicholas I, in the official return to conservative divorce and birth-control laws, in the gradual replacement of the intransigent measures against the Russian Orthodox Church by a policy which made the Church an instrument of the state, in the official hostility toward experimentation in the arts, and most important of all, in the rebirth of nationalism and in the mounting distrust of the West and of internationalism. Though Stalin's followers never ceased to take a stand as champions of the working class of all countries, they were led to identify the interests of the international proletariat with the national interests of Russia, Russia being the sole country where the proletariat had seized power. While logical in theory, the argument had to be strained to the utmost in its practical application, notably after Stalin's conclusion of a nonaggression pact with Nazi Germany in Aug., 1939. In his internal policy, Stalin created the framework for a potentially more democratic government through the new constitution of the USSR, promulgated in 1936 (see UNION OF SOVIET SOCIALIST REPUBLICS). An admirable draft, the constitution actually changed little in the totalitarian structure of the state, for it left the ultimate power to the Communist party. With regard to Soviet policy towards the non-Russian nationalities, Stalin, himself a non-Russian, showed keen understanding. The constitution of 1936 reaffirmed and broadened the

Soviet principle of autonomy for the various nationalities, at the same time taking into consideration the great variety of cultural levels. Paradoxically, the encouragement Stalin gave to the full development of local cultures probably did more for the general acceptance of Russian culture and speech among the minorities than the Russification policy of the tsars With some notable exceptions (e.g , in the cases of the Volga Germans, the Tatars of CRIMEA, and the CHECHEN in the Caucasus), the Soviet government followed the spirit of the 1936 constitution in its nationality policy It is doubtful that, before 1939, Stalin had a definite program of foreign policy other than a general aim to keep the USSR at peace Under the guidance of LITVINOV, Russian foreign policy strove for international cooperation. The decision to enter on a pact with Germany was probably largely that of Stalin (who, however, never ceased to act in consultation with the other members of the Politburo) When Germany broke the pact and attacked Russia in June, 1941, Stalin—who in the preceding month had taken over the premiership from Molotov—also assumed military leadership. If Stalin was the chief planner of Russian strategy in the Second WORLD WAR, he must be reckoned among the great generals of all time He was voted the rank of marshal of the Soviet Union (1943) and of generalissimo (1945) At the TEHERAN CONFERENCE (1943) and YALTA CONFERENCE (1945) with President Roosevelt and Churchill and at the POTSDAM CONFERENCE (1945) Stalin proved himself a consummate diplomat After the war Stalin's public appearances, which had always been rare, became ever less frequent While Molotov and Vishinsky, as foreign ministers, were in the limelight as the rift between Russia and the Western powers was widening, Stalin affected an attitude of conciliatory aloofness and after 1949 refrained from public comment altogether, thus giving rise to rumors of illness and even of death In fact, Stalin, unlike contemporary dictators such as Hitler and Mussolini, had always been retiring and was seldom seen outside the Kremlin His remoteness only stimulated the public worship bestowed on him His portraits had replaced, or were hung beside, the old icons in every Russian home, and the fulsomeness of the praise and adulation reached its climax in 1949 on his 70th birthday, which came near to being an apotheosis Almost nothing authoritative is known of Stalin's private life except that he married twice, that both his wives died (the second, Nadezhda Sergeyevna Alleluyeva, in 1932), and that he had one son by each wife His younger son, Vasily, was, as of 1950, a general in the Soviet air force Stalin has given his name to the largest present branch of Marxist communism The term *Stalinism* is used chiefly to distinguish the majority Communists, who look to the USSR for guidance, from Trotskyites and other splinter groups Both Trotskyism and Stalinism are interpretations of the Leninist version of Marxism, while each group claims to represent in its purity Unlike Trotskyism, however, Stalinism can be judged not only by the light of written theory, but also by its concrete accomplishments, as outlined earlier in this article Stalin himself is the author of many volumes, which are being published as his collected works in Russian Among his writings translated into English are *Leninism* (Eng tr , 2 vols , 1928 33), *Problems of Leninism* (Eng tr , 1934), *The Great Patriotic War of the Soviet Union* (1945), and other collections of speeches, articles, and reports There are numerous biographies of Stalin, some adulatory, such as that of Henri Barbusse (Eng tr , 1935), some clearly prejudiced, such as that by Leon Trotsky (1946) See Boris Souvarine, *Stalin a Political Survey of Bolshevism* (1939), Isaac Deutscher, *Stalin a Political Biography* (1949)

Stalin, Bulgaria see VARNA

Stalinabad (stä"lyĭnŭbät'), city (1926 pop. 5,607, 1939 pop 82,540, 1948 estimated pop 110,000), capital of Stalinabad oblast and of Tadzhik SSR It is the center of an agricultural region and has cotton and silk mills, tanneries, machinery plants, distilleries, and tobacco manufactures An important transportation center, it is the hub of a narrow-gauge railroad net Stalinabad developed after 1929 on the site of the old Tadzhik village of Dyushambe, it is a modern city with broad, tree-lined thoroughfares and is the seat of the Tadzhik state university

Stalingrad (stälyĭngrät'), city (1926 pop. 151,490, 1939 pop 445,476), capital of Stalingrad oblast, SE European RSFSR, a port on the lower Volga, at the mouth of the small Tsaritsa river. Until 1925 it was named Tsaritsyn Here the Volga makes a westward bend, only 40 mi distant from eastern bend of the Don, a canal is projected to link Stalingrad still more closely with the Don and thus with the Donets Basin. Stalingrad is a leading commercial and industrial center of the Volga region and is connected by major railroads with Moscow, the Ukraine, and the Caucasus. Its port, which handles petroleum, fish, lumber, and coal, is an important transfer point. The industries, which developed chiefly under the Soviet regime, produce quality steels, tractors, oil-drilling machinery, machine tools, ball bearings, and canned goods, there also are oil refineries (for oil from Baku), lumber mills, and shipyards Stalingrad has several medical, agricultural, and technical schools. The city, which is served by a circular railroad belt, is an amalgamation of separate industrial settlements and extends for c 30 mi along the right (western) bank of the Volga Founded in 1589 on the site of a Tatar settlement as a Russian stronghold, it fell to the rebels under Stenka Razin (1670) and under Pugachev (1774) In the 19th cent Tsaritsyn became an important commercial center During the Russian civil war it was defended (1918) by Soviet troops under Stalin and Voroshilov, but in 1919–20 it was held by the Whites under Denikin Stalingrad was virtually destroyed in one of the decisive battles of the Second World War In Sept , 1942, a German army (consisting of 22 divisions, including Italian, Hungarian, and Rumanian forces), commanded by Gen Friedrich von Paulus, began the all-out attack on Stalingrad, which was defended by 16 divisions under Gen Vasily I Chuikov Stalin ordered the city held at all costs After two months of house-to-house fighting the Germans had conquered most of the city, yet the defenders, joined by the remaining civilian population, continued their desperate stand, thus giving Grigori Zhukov time to prepare a counteroffensive In Nov , 1942, two Russian columns, advancing from the north and from the south, joined between the Volga and Don bends and cut off the Germans A German relief force was routed (Dec , 1942) On Feb 2, 1943, Paulus surrendered with the remnants of his army In the battle of Stalingrad, the Axis forces lost some 330,000 men The Russians followed up their victory with a mighty westward drive and generally remained on the offensive for the remainder of the war Rebuilding of Stalingrad was begun immediately after its liberation, and by 1950 its pre-war population figure had again been reached There are numerous accounts of the battle of Stalingrad See Alexander Werth, *The Year of Stalingrad* (1947), and the novel by Theodor Plievier, *Stalingrad* (Eng tr , 1948)

Stalinir (stälyĭnyĭr'), city (1939 pop 15,000), capital of South Ossetian Autonomous Oblast, Georgian SSR It is in an orchard region It was named Tskhinvali until 1936

Stalino (stä'lyĭnŏ), city (1926 pop 174,230, 1939 pop 462,395), capital of Stalino oblast, SE Ukraine It is a major center of the industrial DONETS BASIN There are iron and steel mills, machinery works, a nitrate plant, and clothing and food industries It was founded in the 1870s by a Scottish industrialist named Hughes and called Yuzovka for him The name was later changed to Stalin and (c 1935) to Stalino

Stalinogorsk (stŭ"lyĭnŭgôrsk'), city (pop 76,207), central European RSFSR, S of Moscow It is a lignite-mining center and an industrial city, with machine-building and chemical plants Founded in 1930, it was briefly held (1941) by the Germans during their drive to capture Moscow in the Second World War

Stalin Peak, Czechoslovakia see TATRA

Stalin Peak, 24,590 ft high, Tadzhik SSR, in the Pamir, highest point in the USSR Its former name was Garmo Peak

Stalinsk (stä'lyĭnsk), city (1926 pop 3,894, 1939 pop 169,538, 1945 estimated pop 223,000), RSFSR, in S central Siberia, on the Tom river, which becomes navigable here It is an industrial center of the Kuznetsk Basin, with metallurgical, chemical, and machinery plants The city consists of the old town of Kuznetsk (founded in 1618 as a Russian fortress) and of a new industrial section, joined with Kuznetsk in 1932 to form Stalinsk

stall, small division of a larger space, sometimes partly partitioned The term is used for a booth for display and selling at an exhibition, for a compartment in a stable or kennel, or, in England, for the forward seats in a theater orchestra In a church or cathedral the stalls are the fixed seats built in rows along the sides of the CHANCEL and used by the clergy and choir They formed part of the church furniture at an early period when the officiating clergy had increased in number At first movable seats, they later became an architectural feature. The choir stalls may be arranged in a single tier or in several tiers, one behind another The prayer rest for each stall is formed by the back of the one preceding it Each seat folds back to give space for kneeling or standing, and the miserere or projecting corbel upon its under surface then furnishes a rest for the priest in the long periods of standing In the medieval stalls the miserere was carved with scenes from everyday life or with fabulous animal forms. From the 14th cent onward the stalls became objects of the wood carver's limitless skill, with high traceried backs and sculptured arms. The uppermost tier was often crowned by high gables or by canopies of richest tabernacle work, supported on colonnettes and terminating in spires Such are the magnificent stalls (c.1530) in St George's Chapel, Windsor, assigned to the use of the Knights of the Garter In Italy are the handsomest of the Renaissance stalls, many 16th-century examples having both carved and intarsia adornment, as at Siena cathedral.

Stallings, Laurence (stô'lĭngz), 1894–, American dramatist, b. Macon, Ga , grad Wake Forest College (B A , 1915) and Georgetown Univ (M S , 1922) After some journalistic experience he became assistant dramatic critic, and later literary editor, of the New York *World* His experiences as a captain of Marines in the First World War, in which he lost a leg, contributed to the realism of *What Price Glory* (produced 1924), a sensationally successful war play written with MAXWELL ANDERSON, and *Plumes* (1924), a popular novel Stallings has also written many moving-picture scenarios

Stambaugh (stăm'bô), city (pop 2,081), W Upper Peninsula, N Mich , on the Menominee iron range near Iron River, settled c 1878, inc as a village 1895, as a city 1923.

Stamboliski, Aleksandr. see STAMBULISKI, ALEXANDER.

Stambul, Turkey see ISTANBUL

Stambulski, Alexander, Bulgarian *Aleksandr Stambolĭski* (ălĕksän'dur stambōlē'skē), 1879–1923, Bulgarian statesman He founded (1908) the radical Peasant party By 1911 he had become the leader of the opposition to Tsar Ferdinand, and from 1915 to 1918 he was jailed for opposing the entry of Bulgaria into the First World War on the side of the Central Powers After Ferdinand's deposition and the accession of Boris III, Stambulski became premier (1919) and virtual dictator (1920) Supported by his peasant Orange Guard, he used his powers to carry out agrarian reforms and founded the Green Peasant International He sought to conciliate the neighbors of Bulgaria and to carry out the provisions of the Treaty of Neuilly, which he had helped to negotiate in 1919 In 1923 a coup d'état, supported by army officers and by Macedonian nationalists and led by TSANKOV, overthrew his government Stambulski fled but was shot dead by his pursuers

Stambulov, Stefan (stĕ'fan stambōō'lŏf), 1854–95, Bulgarian statesman He led the unsuccessful revolt of 1875, which was ruthlessly suppressed by the Turks in the "Bulgarian atrocities" Stambulov fought (1877–78) on the side of the Russians in the Russo-Turkish War and after the creation of the Bulgarian state became parliamentary leader of the National Liberal party He opposed the pro-Russian faction that deposed Prince Alexander in 1886 and organized a counterrevolution that placed Ferdinand of Saxe-Coburg-Gotha on the throne in 1887 Ferdinand made him premier, and Stambulov wielded dictatorial power He consolidated Bulgarian independence but did not secure Ferdinand's recognition by the European powers After having resigned in 1894, he was fatally wounded (1895) by an assassin

Stamford, municipal borough (pop. 9,947), in the Parts of Kesteven, Lincolnshire, England, on the Welland It is the supposed site of a defeat of the Picts and Scots by the Saxons in 449 and was one of the Five Boroughs of the Danes Many of its historic buildings have been destroyed (some of them when the town was sacked by the Lancastrians in 1461), but remaining are several old churches (including St Mary's, All Saints, St John's, and St George's), part of an ancient Benedictine priory of St Leonard, a gate of Brasenose College (founded by a group from Oxford in 1333, when Stamford vied with Oxford as a seat of learning), and several almshouses (called "callises," since they were founded by Calais merchants), including Browne's Hospital East of town, in Northamptonshire, is Burghley House (16th cent), containing collections of pictures and tapestry and built by Lord Burghley who is buried in St Martin's, near by

Stamford. 1 City, now coextensive with Stamford town (pop 61,215), SW Conn , on Long Island Sound, settled 1641, chartered as a city 1893 A referendum in Nov , 1947, brought long-delayed consolidation of town and city governments City of manufactures (locks, hardware, machinery, chemicals, plastics, and clothing), it is also a city of commuters to New York and has fine residential sections at Shippan Point and in the hills to the north The large Cummings Park (for Homer S Cummings) is on the Sound A five-month strike (1945–1946) at the Yale & Towne factory had notable repercussions See H F Sherwood, *The Story of Stamford* (1930) **2** Resort village (pop 1,088), E central N Y , in the Catskills, on the West Branch of the Delaware and SW of Albany, inc 1870 **3** City (1940 pop 4,810; 1947 estimated pop 6,200), W central Texas, NNW of Abilene, founded 1900, inc 1901 Though it still has large ranches about it and has an annual Texas Cowboy Reunion, it is mostly a settled farm market with cotton gins and a compress, mattress factories, and other processing plants

Stamford Bridge, village, East Riding of Yorkshire, England, on the Derwent and NE of York King Harold here defeated Harold Hardrada (Harold III) and Tostig in 1066

stammering: see STUTTERING

Stamp, Josiah Charles, 1st Baron Stamp of Shortlands, 1880–1941, English economist and financier

Active in many national and international economic commissions, he played an important part in the framing of the Dawes and Young plans for German reparations and was economic adviser to the British government after 1939 He was raised to the peerage in 1938 He died in an air raid on London His books include *Fundamental Principles of Taxation in the Light of Modern Developments* (1921, rev ed, 1936), *Financial Aftermath of the War* (1930), and *Christianity and Economics* (1939)

stamp. see POSTAGE STAMP and SEAL

Stampa, Gaspara (gä'spärä stämˈpä), c 1523–1554, Italian poet She was a student of the classics, ancient and Italian Her verse celebrates her unhappy romance and is characterized by depth of feeling and a passionate tenderness See Lorna de' Lucchi, *An Anthology of Italian Poems* (1922)

Stamp Act, 1765, revenue law passed by the English Parliament (upon the insistence of George GRENVILLE) which extended the British stamp tax to America by requiring all publications and legal documents issued in the colonies to bear a stamp This law continued the policy of obtaining part of the cost of colonial defense and administration from the colonials begun in 1673 The Stamp Act was vehemently attacked in the colonial press and denounced by Samuel Adams and other colonial spokesmen, such as Christopher Gadsden, Patrick Henry, John Dickinson, John Lamb, Joseph Warren, and Paul Revere Organizations known as the SONS OF LIBERTY were formed to protect colonial freedom, merchants boycotted English goods, and the Massachusetts legislature, following the suggestion of James OTIS, issued a call for a general congress to find means of resisting the law At the *Stamp Act Congress*, which met Oct 7, 1765, in New York city, delegates from New York, New Jersey, Rhode Island, Massachusetts, Pennsylvania, Delaware, South Carolina, Maryland, and Connecticut listened to Christopher GADSDEN plead for colonial cooperation The delegates then adopted a Declaration of Rights, a Petition to the King, and a Memorial to Both Houses of Parliament These documents declared that freeborn Englishmen could not be taxed without their consent and since the colonists were not represented in Parliament any tax imposed on them without the consent of their colonial legislatures was unconstitutional Fearing a loss of trade, Parliament repealed the Stamp Act in 1766

Stamps, city (pop 2,405), SW Ark, near the Red River, in a cotton and lumber area Oil has become the most important product

stamp tax, method of collecting duties on certain transactions by means of a validating stamp attached to the taxable instrument, which may be a judicial act, a commercial document, a transfer of property, or law proceedings This stamp is to be distinguished from a postage stamp, which is not a duty, but a simple method of paying the government for a service rendered Stamp taxes, apparently originating in the Netherlands, were introduced into England in 1694 and extended to the American colonies in 1765 The English stamp tax was levied on the writing material upon which the instrument was written until 1797, when Pitt changed the tax so that it would apply to the value of the transaction rather than to the number of words used In the United States, stamp taxes, applying not only to legal and commercial acts but also to goods, were used to finance the Civil War and the Spanish-American War

Stanberry, city (pop 1,893), NW Mo, NE of St. Joseph, in a stock, poultry, and grain area

standard of living, the average status of a nation or a group measured in terms of the food, clothing, shelter, and the like used by the individuals of the group The determination of a standard of living is relative, depending upon the individual judgment of the observer as to what constitutes a high or a low scale A relative index to the standard of living of a certain economic group can be gathered from a comparison of the cost of living and the wage scale or personal income The items which make up a standard of living include not only the material articles of consumption, but also the number of dependents in a family, the geographical location of their abode (environment), the educational facilities, and the financial amount spent for health, recreation, and social services The standard of living in different countries varies, depending upon what items, services, and other factors are taken into consideration What is a necessity for one nation might be considered a luxury for another, and vice versa In general the term is used for comparisons involving the amount of goods that can be enjoyed by a particular economic class Unemployment, low wages, crowded living conditions, and physical calamities, such as drought, flood, or war, may bring a drop in the standard of living, and conversely an increase in social benefits and higher wages may bring about a rise Nations enjoying a high standard of living are the United States, England, Australia, New Zealand, Sweden, Denmark, and Switzerland Discontent with the standard of living has often caused political upheavals which have resulted in the overthrow of the existing regime, as in the French Revolution of 1789 and the Russian revolutions of 1905 and 1917 In the United States the standard of living as determined by the amount of savings and the purchasing power of goods and services has steadily increased The lower economic classes have reached, and in many cases have surpassed, the standard attained by the lower middle class in the 19th cent With the introduction of mass standardization, the cost of production of such items as telephones, radios, and automobiles has been considerably lowered, so that the prices of these articles have fallen within the reach of those economic classes to whom earlier they were unobtainable luxuries See G R Tugwell, *Our Economic Society and Its Problems* (1934), J S Bain, *Pricing, Distribution, and Employment* (1948)

Standards, National Bureau of, bureau of the U S Dept of Commerce, established in 1901 for research in physics, mathematics, chemistry, and engineering It determines the national standards of weights and measures and carries on research toward the improvement of such standards and methods of measurement One of its responsibilities is the development of improved methods for testing materials and equipment It acts as an advisory service for government agencies on scientific and technical matters and develops specifications for the purchase of government supplies It cooperates with state governments and with industries and national organizations in specifications and in safety codes The bureau has research associates whose salaries are paid by certain technical groups It publishes the *Journal of Research*

standing stones, monoliths or great stones, unhewn, set up as primitive monuments in isolated positions or in groups, commemorating events public or personal or serving as boundary marks or as memorials of prehistoric burials Such a MEGALITHIC MONUMENT standing alone is called a MENHIR When several are grouped together in a circle, the formation is in some regions known as a CROMLECH In France, the British Isles, and other parts of Europe, in South America, and in other widely scattered regions they are found in large numbers

Standish, Miles or **Myles,** c 1584–1656, American colonist, b Lancashire, England After serving as a soldier for a number of years, Standish accompanied the PILGRIMS to America on the *Mayflower* (1620) and was recognized at once as the military leader of Plymouth Colony He was probably not a Puritan or an Independent Several times he saved the colony from the Indians, and in 1623 he saved the settlement at Weymouth In 1625 he was sent to England as a colonial agent, particularly concerned with the money advanced to the colonists by the merchants adventurers of London In 1628 he arrested Thomas MORTON of Merry Mount Standish was treasurer of the colony (1644–49), held other posts, and was a founder of Duxbury, Mass, where there is a monument to him Henry W Longfellow, in *The Courtship of Miles Standish*, and James R Lowell, in his *Interview with Miles Standish*, drew wholly from fiction See biographies by J S C Abbott (1872), Tudor Jenks (1905), and T C Porteus (1920)

Standish, town (pop 1,472), SW Maine, near Sebago Lake, settled 1754, inc 1785

Standley, William Harrison, 1872–, American admiral and diplomat, b Ukiah, Calif, grad Annapolis, 1895 Commissioned (1899) ensign in the U S navy, he rose through the grades to become rear admiral in 1927 After serving (1933–37) as chief of naval operations, he retired (1937) He served on many diplomatic missions before he was (1942–43) U S ambassador to the USSR

standpatters, in U S history, term which was widely used early in the 20th cent to designate the conservatives in the Republican party as against the INSURGENTS or progressive Republicans The term is said to have originated in Mark Hanna's remark concerning an election—all that was necessary for Republican success was, in poker parlance, to "stand pat"

standpipe, tank or pipe placed in an elevated position to furnish a required pressure head It may serve to lead water into a boiler despite steam pressure, or it may be used on the eduction pipes of steam pumps to absorb concussions resulting from uneven flow In hydraulic engineering a standpipe finds use as a part of the water main to supply elevated points or to equalize the force against which an engine has to act

Stanfield, Clarkson, 1793–1867, English marine painter He was first a sailor, then a scene painter From 1827 he became known for his easel pictures, for the most part dramatic marines His *Entrance to Zuyder Zee* and *Lake Como* (National Gall, London) and *Sands near Boulogne* and *A Rocky Bay* (Victoria and Albert Mus) are good examples

Stanford, Sir Charles Villiers, 1852–1924, English composer and teacher, b. Dublin, studied at Queens' College, Cambridge, and with Reinecke in Leipsig He was organist (1873–93) at Trinity College, Cambridge. In 1883 he became professor of music at the Royal College of Music, and in 1887 at Cambridge, he held both positions until his death. He conducted (1885–1902) the Bach Choir of London and (from 1897) the Leeds Philharmonic Society He was knighted in 1902. His compositions include seven operas, of which the comic opera *Shamus O'Brien* (1896) was most popular, seven symphonies, choral works, and chamber music. He edited and arranged collections of Irish songs and wrote a textbook of composition and several autobiographical works See J A. Fuller-Maitland, *The Music of Parry and Stanford* (1934), biography by H P Greene (1935)

Stanford, Leland (lē'lund stăn'furd), 1824–93, American railroad builder, politician, and philanthropist, b Watervliet, N Y After a stay in Wisconsin practicing law, he went to California, where he became a successful merchant As Republican governor (1861–63), he helped hold California in the Union He was one of the four founders of the Central Pacific RR, of which he was president until his death, and he personally superintended part of its construction. He was also president (1885–90) of the Southern Pacific Company. From 1885 to his death he was a U S Senator. He founded and endowed STANFORD UNIVERSITY as a memorial to his son, Leland Stanford, Jr His wife, **Jane Lathrop Stanford,** 1825–1905, b Albany, N Y, shared in founding the university and continued to aid it after his death See biography by G T. Clark (1931), Oscar Lewis, *The Big Four* (1938), Bertha Berner, *Mrs Leland Stanford* (1935)

Stanford, city (pop 1,940), co seat of Lincoln co, central Ky, SSW of Lexington, founded 1786 In 1775 Benjamin LOGAN built a fort here

Stanford University, mainly at Palo Alto, Calif, nonsectarian, coeducational, chartered 1885, opened 1891 as the Leland Stanford Junior University, still the legal name (see STANFORD, LELAND, and STANFORD, JANE L) It has schools of business (graduate), education, engineering, humanities and sciences (with journalism), law, medicine (in San Francisco), and mineral sciences There are important art, history, and natural history museums, a food research institute, the Ryan high-voltage laboratory, the Dudley herbarium, an aeronautic laboratory, a university press, and the Hopkins marine station (at Pacific Grove) The library collections include the Hoover Library on War, Revolution, and Peace Stanford is noted for research and graduate work and for leadership in the curriculum plans for major subjects and for independent study David Starr JORDAN was the first president

Stanhope, Charles Stanhope, 3d **Earl** (stă'nup), 1753–1816, English scientist and political figure He was a friend of the younger William Pitt, married Pitt's sister, Hester, and, upon entering Parliament in 1780, opposed the war with the American colonies and supported parliamentary reform and other measures advocated by Pitt Stanhope opposed Pitt's sinking fund, however, and became estranged from him after the outbreak of the French Revolution, declaring against the policy of repression at home and intervention abroad A vigorous supporter of the French republican ideal, he became known as "Citizen" Stanhope and absented himself from the House of Lords (1795–1800) His indefatigable scientific experiments produced a fireproof stucco, calculating machines, lenses, and, most important, machines for printing and stereotyping Others, less successful, included experiments on steam navigation The Stanhope lens and the Stanhope press are named for him Lady Hester STANHOPE, famous eccentric, was his daughter See biography by G P Gooch (1914)

Stanhope, Lady Hester Lucy, 1776–1839, English traveler She was private secretary and hostess for her uncle, William Pitt Leaving England in 1810, she traveled in the Levant, adopting Eastern male dress and a religion which was a composite of Christianity and Mohammedanism She finally settled among the Druses of the Lebanon mts in an abandoned convent that she rebuilt and fortified The half-civilized tribes regarded her as a prophetess, as, in time, she came to regard herself, she incited them to resist an Egyptian invasion (1831) of Syria European travelers, including Lamartine and Kinglake, wrote accounts of their visits to her Her personal physician, C L Meryon, recorded her life in *Memoirs of the Lady Hester Stanhope* (1845) and in *Travels of Lady Hester Stanhope* (1846) See biography by Joan Haslip (1934)

Stanhope, James Stanhope, 1st **Earl,** 1673–1721, English general and statesman, studied at Eton and Oxford He served in the army in the War of the Spanish Succession, becoming one of Marlborough's trusted lieutenants. Stanhope was appointed (1706) minister to Spain, and in 1708 he was made commander in chief of the British forces there He soon captured Minorca, taking Port Mahon and making it a winter base for the fleet, later he used as his second title Viscount Stanhope of Mahon He won the battle of Almenara (1710), but lost his army to the French at Brihuega (1710) and was himself imprisoned for a year in Spain. As a secretary of state (1714–17, 1718–21), he ably conducted the complicated British foreign affairs which followed the war, and he continued to hold high office under George I As chancellor of the exchequer (1717–18), he carried through the plans originated by Robert Walpole to fund the national

debt, but was never implicated in the SOUTH SEA BUBBLE He was elevated to the earldom in 1718. See Basil Williams, *Stanhope* (1932)

Stanhope, Philip Dormer: see CHESTERFIELD, PHILIP DORMER STANHOPE, 4TH EARL OF

Stanhope, Philip Henry Stanhope, 5th **Earl,** 1805–75, English historian He achieved some political importance as undersecretary for foreign affairs (1834–35) under the duke of Wellington in Robert Peel's first ministry and secretary of the Indian board of control (1845–46) in Peel's second ministry In Parliament he favored repeal of the corn laws and secured passage of the Copyright Act of 1842 Stanhope founded the National Portrait Gallery (1859) and was prime mover in organizing (1869) the Historical Manuscripts Commission He wrote standard histories of the reign of Queen Anne (1870) and of the period from 1713 to 1783 (7 vols , 1836–54) He also wrote *History of the War of Succession in Spain* (1832) and an authoritative biography of William Pitt (1861–62)

Stanhope (stăn'hōp", stā'nup), borough (pop 1,100), NW N J , on the old Morris Canal near Lake Hopatcong, settled 1714, inc 1904 It produced iron in the Revolution

Stanislaus I (Stanislaus Leszczynski) (lĕshchĭn'yūskē), 1677–1766, king of Poland and duke of Lorraine Early in the NORTHERN WAR (1700–1721) Charles XII of Sweden overran Poland and expelled King AUGUSTUS II In 1704 Charles secured the election of Leszczynski, a Polish nobleman Entirely dependent on the success of Swedish arms, Stanislaus had to go into exile when Charles was routed (1709) by Peter I of Russia at Poltava He settled in France, where he emerged from oblivion when his daughter, MARIE LESZCZYNSKA, became the wife of Louis XV On the death (1733) of Augustus II, Stanislaus returned to Poland and was once more elected king A minority of the Polish diet, however, chose AUGUSTUS III and thus precipitated the War of the POLISH SUCCESSION Stanislaus, besieged at Danzig, received only moral support from France, while his rival had full military aid from Russia He was obliged to flee from Danzig in 1734, and in 1736 he accepted the terms of the preliminary Treaty of Vienna He retained the royal title but renounced his actual rights in favor of Augustus III In exchange, he received Lorraine and Bar, with the provision that they were to pass directly to the French crown upon his death The former duke of Lorraine (later Emperor Francis I) was compensated with the promise of Tuscany Stanislaus, with an enlightened, humane, and cultured disposition, held a small but distinguished court at Lunéville He was partly responsible for the embellishment of NANCY, where the celebrated Place Stanislas remains a monument to his generosity and good taste While he displayed continued interest in Polish affairs, he proved an able administrator in Lorraine He corresponded with the men of the best minds of his time, notably with J J Rousseau, who on his request drew up a draft for a new constitution of Poland

Stanislaus II (Stanislaus Augustus Poniatowski) (pônyatôf'skē), 1732–98, last king of Poland (1764–95) His father, of a relatively undistinguished family, married into the powerful CZARTORYSKI family, which furthered Stanislaus's career He was (1757–59) Polish ambassador to St Petersburg, where he became a lover of Empress Catherine II Catherine, together with Frederick II of Prussia, secured his election to the Polish throne after the death of Augustus III Russian influence in Poland thus became paramount, and the Russian ambassador at Warsaw virtually ruled the country In 1768 the anti-Russian members of the Polish nobility formed the Confederation of BAR, which in 1770 declared Stanislaus deposed The rebellion was crushed by the Russians, and in 1772 Russia, Prussia, and Austria took vast territories from Poland in the first of the Polish partitions (see POLAND, PARTITIONS OF) Though Stanislaus largely owed his throne to foreign powers, he sincerely sought to strengthen the decaying Polish state by constitutional and educational reforms In 1791 the diet accepted his new constitution, which abolished the *liberum veto* (see POLAND), strengthened the central administration, and opened public offices to the burgher class Serfdom, however, was not abolished The throne, after the death of Stanislaus, was to be hereditary in the electoral branch of the house of Saxony Russia, seeing its hold on Poland threatened, fostered the creation (1792) of the Confederation of Targovica, which sought the restoration of the old constitution Russian—and soon afterward also Prussian—troops again invaded Poland Stanislaus halted military resistance and, seeking a reconciliation with Russia, himself joined the Confederation of Targovica The second partition (1793) was the result It left Stanislaus a truncated kingdom and made him a vassal of Russia The national uprising of 1794, led by KOSCIUSKO, was defeated by Russian and Prussian troops, and in 1795 the third Polish partition ended the existence of Poland Stanislaus, who had taken no firm stand in the events of 1794, abdicated at Grodno and went to live in Russia. A weak character in politics, he redeemed himself by his generous patronage of the arts, sciences, and—especially—literature See A N Bain, *The Last King of Poland and His Contemporaries* (1909)

Stanislav (stŭnyĭslăf'), Pol *Stanislawów* (stänēswa'vōōf), city (1931 pop 61,256), capital of Stanislav oblast, W Ukraine A Polish town repeatedly subjected to Tatar and Turkish attacks, it passed to Austria in 1772 Poland, to which it reverted in 1919, ceded it to the USSR in 1945 The population is largely Ukrainian Stanislav has railroad shops, oil refineries, and carpet manufactures

Stanislavsky, Constantin (kŏnstuntyēn' stŭnyĭslăf'skē), 1863–1938, stage name of Constantin Sergeyevich Alekseyev (sĭrgā'uvĭch ŭlyĭksyā'uf), Russian actor, director, and theatrical producer He was cofounder (1898) with Vladimir Ivanovich Nemirovich-Danchenko of the Moscow ART THEATRE As director of this theater, he not only eliminated stale and mechanical theatrical techniques but trained actors to strive for inner interpretation of their roles and to analyze and use their emotions in a natural and simple manner Among his productions which had a great effect on the theater in Europe, England, and the United States were A K Tolstoy's *Tsar Fyodor Ivanovich*, Dostoyevsky's *Brothers Karamazov*, Chekhov's *Sea Gull* (and his other important works), and Gorki's *Lower Depths* See his autobiographical *My Life in Art* (Eng tr , 1924) and *An Actor Prepares* (Eng tr , 1936)

Stanislawow, Ukraine see STANISLAV

Stanley, Albert Augustus, 1851–1932, American music teacher and composer, b Manville, R I , studied music in Leipzig He was organist (1876–88) at Grace Church, Providence, R I , and was professor of music (1888–1921) at the Univ of Michigan He was one of the founders of the American Guild of Organists, and his compositions include a symphony, a symphonic poem, incidental music for several dramas, songs, and choral music

Stanley, Arthur Penrhyn, 1815–81, English clergyman and author In 1838 he was elected a fellow of University College, Oxford He became tutor and select preacher at Oxford and a recognized leader of Broad Church theology He was strongly opposed to the agitation in the university against R D Hampden, although he urged leniency toward the Tractarians who were attacking Hampden Stanley was made canon of Canterbury (1851), regius professor of ecclesiastical history at Oxford (1856), and canon of Christ Church (1858) Installed as dean of Westminster in 1864, he strove for the adoption of Broad Church policies His inclusion of Christian ministers of all faiths among speakers from his pulpit and especially an invitation to some nonconformists to partake in the Holy Communion brought him into disfavor in circles of strict conformity His voluminous writings include several volumes of ecclesiastical history, *The Life and Correspondence of Thomas Arnold* (1844), *Historical Memorials of Canterbury* (1855), and *Historical Memorials of Westminster Abbey* (1868) See R E Prothero and G G Bradley, *The Life and Correspondence of Arthur Penrhyn Stanley* (1893), A V Baillie and Hector Bolitho, *A Victorian Dean* (1930)

Stanley, Edward George Geoffrey Smith. see DERBY, EDWARD GEORGE GEOFFREY SMITH, 14TH EARL OF

Stanley, Sir Henry Morton, 1841–1904, British explorer in Africa and journalist, b Denbigh, Wales He was originally named John Rowlands, but as a youth he went to New Orleans and assumed the name of his adoptive father, an American merchant In the Civil War he was first with the Confederate army He was captured (April, 1862) at the battle of Shiloh and later served briefly in the Union army Stanley early won journalistic fame for his descriptions of naval fighting in the war, of campaigns against Indians in the West, and of a tour in Asia Minor The New York *Herald*, under James Gordon Bennett, Jr , sent Stanley on his first great expedition to Africa, primarily to find David LIVINGSTONE Stanley reached the sick explorer at Ujiji on Lake Tanganyika on Nov 10, 1871, and casually greeted him, "Dr Livingstone, I presume " Together they explored the north shore of the lake Stanley wrote his account in *How I Found Livingstone* (1872) On his second major African expedition (described in *Through the Dark Continent*, 1878) Stanley explored (1874–77) equatorial Africa, discovering some sources of the Nile and tracing the course of the Congo His revelation that the Congo afforded a waterway through most of central Africa and made its riches accessible much impressed King Leopold II of Belgium, who sponsored another exploration On this expedition (1879–84) Stanley further clarified the geography of Africa, and he obtained territorial concessions which led to the international recognition of the Congo Free State under Leopold's rule Stanley's last great African journey (reported in his *In Darkest Africa*, 1890) was undertaken (1887–88) to rescue Emin Pasha (the German governor of an Egyptian province in the Sudan) from the Mahdists The pasha was rescued, and Stanley, besides, explored the Ruwenzori mts and obtained land concessions in favor of Great Britain from native tribes Stanley was elected (1895) to Parliament See his autobiography (ed by Dorothy Stanley, 1909); biography by A J Brice (1930)

Stanley, Wendell Meredith, 1904–, American biochemist, b Ridgeville, Ind , grad Earlham College, Richmond, Ind (B S , 1926), Ph D Univ of Illinois, 1929 He was with the Rockefeller Institute for Medical Research, Princeton, N J , from 1931 (member from 1940) to 1948, when he went to the Univ of California to organize and direct a laboratory for virus research He shared the 1946 Nobel Prize in Chemistry with J B Northrop and J B Sumner for his isolation of crystalline forms of viruses

Stanley, William, 1858–1916, American electrical engineer and inventor, b Brooklyn For a short time he studied at Yale, but his knowledge of electrical engineering was self-acquired He worked for electric lighting concerns, assisted H S Maxim and Edward Weston, and invented numerous electric devices, but his great contribution was the invention of a multiple system of alternating-current transmission This he set up at Great Barrington, Mass , in 1886, out of it grew the modern system of light and power transmission

Stanley, town (pop 1,252), on East Falkland It is the capital of the FALKLAND ISLANDS The name sometimes appears as Port Stanley

Stanley Pool, lakelike expanse, area 320 sq mi , of the Congo river, c 350 mi from its mouth It lies between Belgian Congo and French Equatorial Africa It was discovered by Henry Stanley in 1877 Leopoldville is on its southern shore, and Brazzaville on its northern shore

Stanleyville, town (pop c 25,000), N Belgian Congo, a port on the Congo It is on a short railline which skirts the STANLEY FALLS Cotton and peanuts are exported

Stanovoi Range (stănŭvoi'), mountain chain, RSFSR, in SE Siberia It extends E from the Olekma river for c 450 mi and rises to 8,143 ft The Stanovoi Range is continued by the Dzhugdzhur Range, which swings north parallel to the coast of the Sea of Okhotsk and links up with the Kolyma and Anadyr ranges It forms the watershed between the Lena and Amur river basins

Stans (stans), town (pop 3,446), capital of Nidwalden half-canton, Unterwalden, Switzerland

Stanton, Edwin McMasters (stăn'tun), 1814–69, American cabinet officer, b Steubenville, Ohio He attended Kenyon College, studied law, was admitted to the Ohio bar in 1836, and began practice in Cadiz As his reputation grew, he moved to more fertile fields, to Steubenville (1839), Pittsburgh (1847), and Washington, D C (1856), becoming ever more prominent in his profession In Dec , 1860, Stanton, a Democrat but a strong Unionist, succeeded Jeremiah S Black as U S Attorney General Although he publicly favored most of Buchanan's policies, he privately denounced them to radical Republicans with whom he was in secret contact Then, when he became legal adviser to Lincoln's Secretary of War, Simon CAMERON, he just as readily arraigned the new administration in personal letters to the now retired Buchanan Recommended by several men of opposing political views (none of whom were aware of what the others were doing), he took Cameron's place in Jan , 1862 He proved to be an extremely forceful and able Secretary of War The contracts of the department ceased being opportunities for graft, the railroads were placed under military control, and Union generals in the field were now supplied with necessary men and matériel At the same time Secretary of the Treasury Salmon P CHASE and Stanton were the leading radicals in the Lincoln administration and generally conspired with the President's enemies in Congress It has been claimed that Stanton could have prevented Lincoln's assassination because he had intelligence of the plot, but recent intimations that he was involved in the conspiracy are without foundation He did, however, suppress much of the evidence presented at the military tribunal which convicted the conspirators, one of whom, Mrs Mary E SURRATT, hanged, was probably innocent Other members of Lincoln's cabinet, which was retained by President Andrew JOHNSON, resigned when they came to disagree with Johnson's Reconstruction policy, but not Stanton Although he well knew and approved of the fact that the radicals had passed the TENURE OF OFFICE ACT mainly to assure his hold on the War Dept , he supported and even made suggestions for the President's message vetoing that measure When Johnson finally did seek to force

him out he stubbornly held on until the President was acquitted of the impeachment charges in May, 1868, when he resigned. He died shortly after President Ulysses S GRANT appointed him to the U S Supreme Court See biographies by G. C. Gorham (1899) and F A Flower (1905); W D Kelley, *Lincoln and Stanton* (1885), Ben Ames Williams, Jr , "*Mr Secretary*" (1940); B J Hendrick, *Lincoln's War Cabinet* (1946)

Stanton, Elizabeth Cady, 1815–1902, American reformer, a leader of the woman-suffrage movement, b Johnstown, N Y , daughter of Judge Daniel Cady. She was educated at the Troy Female Seminary (now Emma Willard School) in Troy, N Y In 1840 she married Henry Brewster Stanton, a journalist and abolitionist, and attended with him the international slavery convention in London The women delegates were excluded from the floor of the convention, the indignation this aroused in Mrs Stanton and Lucretia Mott was an important factor in their efforts to organize women to win greater equality With several others they called the first woman's rights convention in the United States, at Seneca Falls, N Y , in 1848 Mrs Stanton insisted that a suffrage clause be included in the bill of rights for women that was drawn up at the convention From 1852 Mrs Stanton was intimately associated with Susan B ANTHONY in leading the woman's movement She was president of the National Woman Suffrage Association (1869–90) and of the National American Woman Suffrage Association (1890–92) With Miss Anthony and Parker Pillsbury she edited (1868–70) the *Revolution*, a militant feminist magazine. Mrs Stanton was a brilliant orator and able journalist, and as writer and lecturer she strove for legal, political, and industrial equality of women, for liberal divorce laws, and for religious tolerance She compiled with Susan B Anthony and Matilda Joslyn Gage the first three volumes of *History of Woman Suffrage* (1881–86) and wrote *Eighty Years and More* (1898) See biography by Theodore Stanton and Harriot Stanton Blatch (1922)

Stanton. 1 City (pop 1,526), co seat of Stanton co , NE Nebr , on the Elkhorn and NW of Omaha; settled 1869, inc. 1871 It is a farm center 2 City (pop 1,245), co seat of Martin co , W Texas, SW of Sweetwater, inc 1925 In a region producing small grains and cattle, Stanton is not far from oil fields and manufactures glycerin

Stanwix, Fort, colonial outpost in New York, near the site of the present city of Rome Here a short portage led from the Mohawk to Lake Oneida, which through the Oswego river connects with Lake Ontario The point thus controls a principal route from the Hudson to Lake Ontario It was a trading center, and the French had a fortified post here This had fallen into disuse when it fell to the English and was rebuilt by Gen John Stanwix in 1758 Here Sir William Johnson signed (1768) an important treaty with the Iroquois The fort was allowed to sink into disrepair, but early in the American Revolution it was rebuilt by the patriots and for a time was called Fort Schuyler In 1777 (see SARATOGA CAMPAIGN) it was held by Peter Gansevoort and Marinus Willett against the siege of British and Loyalist forces under Barry ST LEGER Nicholas Herkimer was ambushed and killed when trying to bring reinforcements to the fort but when new reinforcements under Benedict Arnold approached St Leger lifted the siege The treaty of the United States with the Iroquois was signed here in 1784

Staples, city (pop 2,952), central Minn , W of Brainerd, in a dairy and farm area; settled 1881, platted 1885, inc 1906

Staples, the: see FARNE ISLANDS

Stapleton, locality, on E Staten Island, SE N Y. It is the site of the first U S FREE PORT.

Stappen, Charles van der (vän' dĕr stä'pün), 1843–1910, Belgian sculptor He studied in Paris, where he was influenced by the realism of Rude and Carpeaux He won early recognition with his *Faun's Toilet* (1869) and later executed many public statues and groups in Brussels, including one of William the Silent, *Teaching of Art*, and *Chimera Fountain* In 1898 he was made director of the Brussels Academy His vigorous work contributed to the revival of sculpture in Belgium

star, in astronomy, a luminous globular mass of intensely hot gases Man has made observations of the stars from the time of his first presence on the earth Astrology was an early outgrowth of study of the stars. Man distinguished, in early times, between the "fixed" stars and the planets (or "wanderers"), and he identified groups of stars with the figures of mythological creatures (see CONSTELLATION) All of the stars visible to the naked eye and the millions of faint stars visible only through optical instruments are contained in the MILKY WAY SYSTEM The star nearest the earth is the SUN, and compared with others it is a medium-sized star Although all stars are probably quite similar in chemical composition, they differ in appearance (i.e , their luminosity and surface brightness), temperature, volume, and density Ptolemy followed the system of Hipparchus and divided the visible stars into six classes according to their brightness or magnitude, the brightest were designated as first magnitude, and those barely visible to the unaided eye were assigned to sixth magnitude In the 19th cent. the scale of magnitudes was adjusted so that the designation first-magnitude star now indicates that the star is 100 times brighter than a sixth-magnitude star The scale has been extended to include stars brighter than first magnitude (the brightest being indicated by negative numbers) and also many stars fainter than sixth magnitude which have been recorded in photographs taken through telescopes Classifications of stars have been made on the basis of their color, the classes include bluish-white stars, white stars, yellowish-white stars, yellow stars, and red stars The bluish-white stars are generally divided into those having temperatures near 20,000°C and those with temperatures up to 50,000°C Temperature and color bear a close relationship. Our sun is an example of a yellow star, and its surface temperature is believed to be about 6,000°C The temperature of stars is determined with the aid of an extremely sensitive instrument called a thermocouple The photoelectric cell is one of the most reliable methods of determining the luminosity or brightness of stars Stars vary greatly in size, they range from those about the size of the earth to those with diameters hundreds of times that of the sun The interferometer, an instrument that increases the resolving power of the telescope, is an aid in determining the size of stars The size can be roughly computed when the surface temperature and luminosity of a star are known Stars vary greatly in density Certain huge red stars are known as supergiants Antares is one of these, and although its volume is many millions of times greater than that of the sun, its density is estimated to average less than a millionth that of the sun On the other hand, certain dwarf white stars have a density of more than a ton per cubic inch The distances of stars from the earth are so great that they are indicated in terms of light-years (the distance light, traveling at the rate of 186,000 mi per second can travel in one year) Other than the sun, the nearest stars (about 4 3 light years away) are in the constellation CENTAURUS. Many stars that appear to be single have been discovered to consist actually of double, triple, quadruple, and other multiple star systems There are many thousands that are revealed through the telescope to be double stars, if they revolve about the same center of gravity the pair is called a binary star or binary system Some, called optical doubles, merely appear from the observer's point of view to be close to each other and therefore are not true binary stars. Spectroscopic binaries are those whose binary nature is detectable only through the use of the spectroscope. An eclipsing binary is a double star of which the two components are usually of unequal brightness and each masks or eclipses the other once during every revolution, thereby causing a difference in the appearance of the star as observed from the earth A well-known eclipsing binary is Algol in the constellation Perseus Star clusters are groups of many stars having certain common characteristics, e g , the members are about equally distant from the earth and their rate and direction of motion are the same Some are open clusters with the components rather scattered, they lie chiefly in the Milky Way and are also called galactic clusters Globular clusters are more compact symmetrical clusters The Pleiades, Hyades, Coma Berenices, and a cluster in Orion are visible to the naked eye A large globular cluster in Hercules can be seen only with a telescope Because the stars, in contrast to the planets, appear to the naked eye to keep their relative positions unchanged, they are sometimes called "fixed stars" Actually they are in rapid motion, but the motion in the course of a human lifetime is detectable only through exacting observations The relative position of the stars forming the constellations remains almost unchanged for thousands of years See also VARIABLE STAR. See H. M. Neely, *Star Finder* (1943) and *Primer for Star-Gazers* (1946), Louis Sutherland, *Book of the Stars* (1944), W. H. Barton, Jr., and J. M. Joseph, *Starcraft* (2d ed , 1946), J. S. Pickering, *The Stars are Yours* (1948).

Staraya Russa (stä'rĭŭ rōō'sŭ), city (1926 pop 22,487), W European RSFSR, near Lake Ilmen. It is one of the oldest Russian settlements Held (1941–44) by the Germans in the Second World War, it was severely damaged Several salt springs and mud baths make Staraya Russa a health resort

Stara Zagora (stä'rä zä'gôrä), city (pop 37,057), central Bulgaria. It is an agricultural and railway center, with textile, machinery, and tobacco manufactures It dates from Roman times, and there are ancient remains. Here the Goths defeated and killed (A.D. 251) Emperor Decius, Emperor John II of Byzantium defeated (1122) the Petchenegs, and the Turks defeated (1877) the Russians.

Starbuck, Edwin Diller, 1866–1947, American psychologist, b Bridgeport, Ind., grad Indiana Univ., 1890, Ph.D. Clark Univ., 1897.. Professor of philosophy (1906–30) at the State Univ. of Iowa, he founded there the Institute of Character Research and continued (1930–39) its work at the Univ. of Southern California. His writings include *Psychology of Religion* (1899), *Moral Education in the Public Schools* (1904). and *Guide to Literature for Character Training* (2 vols., 1927–29).

starch, white, odorless, tasteless powder. It is a CARBOHYDRATE which plays a vital role in the functions of both plants and animals and is a source of important commercial products In green plants starch is produced in the process of PHOTOSYNTHESIS, and it is one of the chief forms in which plants store food It is stored most abundantly in tubers (e g , the white potato), roots (e g , the sweet potato), seeds, and fruits, the starch appears in the form of grains which differ in size, shape, and markings in various plants The source of the grains can usually be identified by microscopic examination—e g , those of the potato and bean are rounded and are among the largest known, those of corn are generally hexagonal and smaller, and those of rice are extremely small and angular Animals obtain their starch from plants, in the animal body starch is stored in the form of GLYCOGEN. Digestive processes in both plants and animals convert starch to glucose, a source of energy Starch is one of the major nutrients in the human diet Its presence in foods and other substances can be detected by the blue-black color produced when iodine solution is added to a sample of the material to be tested. By treatment with hot water, starch granules have been shown to consist of at least two components known as amylopectin and amylose Commercially starch is prepared chiefly from corn and potatoes (both sweet and white) Starch is widely used for sizing paper, for stiffening laundered fabrics, for sizing textiles, in the manufacture of food products, and in making DEXTRIN In addition to its other uses, CORNSTARCH is a source of corn syrup, large quantities of which are used in making table syrup, preserves, ice cream, and other confections Corn sugar (or glucose) is also derived from cornstarch See also ARROWROOT

Star Chamber, ancient meeting place of the king's councilors in the palace of Westminster in London, so called from stars painted on the ceiling The court of the Star Chamber developed from the judicial proceedings carried out by the king and his council, plus royal judges, in the 14th and 15th cent Under the Tudors the council was more and more regarded as a criminal court Arbitrary in its powers, the tribunal was useful originally to curb nobles too powerful for ordinary law It functioned publicly, without a jury, and countenanced torture to obtain evidence Abuses of its power under James I and Charles I, when the court met in secret and meted out severe punishments—even mutilation—to the opponents of the king, led to its abolition by the Long Parliament in 1641 "Star Chamber proceedings" has come, by implication, to signify the acts of an arbitrary and oppressive tribunal See C L Scofield, *Court of Star Chamber* (1900), *Select Cases before the Court of Star Chamber* (ed by I S Leadam, 2 vols , 1903–11)

Star City. 1 Town (pop 1,090), co seat of Lincoln co , SE Ark , near the Arkansas river 2 Industrial town (pop. 1,175), N W Va , on the Monongahela and near Morgantown, inc 1907 Glass is manufactured here

starfish, common marine echinoderm typically shaped like a star, with five or more arms or rays radiating from a central disk. The surface is spiny, and calcareous plates are embedded in the skin Locomotion is accomplished by tube feet which are controlled by a water vascular system The mouth and stomach are in the center of the under surface About 1,000 species are found in the world, usually in shallow water and tide pools Starfish can regenerate new rays and sometimes disks when parts have been torn away They eat aquatic animals, especially mollusks and crabs, and are very destructive to oyster beds They cling to the shells of mollusks with their tube feet and exert suction until the shells open Then the starfish extrudes its stomach and envelops the soft body of the mollusk

Stargard (shtär'gärt), city (1939 pop. 39,760, 1946 pop. 9,733), Pomerania, SE of Stettin It was transferred to Polish administration at the Potsdam Conference of 1945. A trade center, Stargard also has metal, chemical, and food industries. Mentioned as a fortress since the 12th cent , it was a member of the Hanseatic League In 1648, as the capital of Farther Pomerania, it passed to Brandenburg. There are many remains of medieval architecture.

Starhemberg, Ernst Rüdiger, Graf von (ĕrnst' rü'dĭgur gräf' fän shtä'rümbĕrk"), 1638–1701, Austrian field marshal He served against the Turks in Hungary under Montecuculi and was made (1680) military commander of Vienna From July to Sept., 1683, he held Vienna with a small garrison against a large Turkish army under the grand vizier Kara MUSTAFA. Vienna was about to succumb to the siege, which had reduced it to starvation, when it was relieved by an army under John III of Poland. As a reward for his heroic role Starhemberg was made a field marshal, minister of state, and president of the war council. His

cousin Guidobald, Graf von Starhemberg (gwē'dōbält"), 1657–1737, also took part in the defense of Vienna. He was appointed field marshal and served with distinction in the War of the Spanish Succession.

Starhemberg, Ernst Rüdiger von (ĕrnst' rü'dĭgûr fŭn shtä'rümbĕrk), 1899–, Austrian political leader, a descendant of the defender of Vienna. Originally a National Socialist, he took part in Hitler's Munich putsch of 1923, but he later opposed Hitler and, in 1930, became leader of the Heimwehr, an Austrian fascistic militia, and was briefly minister of the interior. He supported DOLLFUSS in 1932, his aim being an Austrian system of fascism after the Italian pattern. After participating in the stern suppression of the Social Democrats in Feb., 1934, he became vice chancellor and later also minister of security in the Schuschnigg cabinet. He was forced to resign in 1936 after publicly congratulating Mussolini on his victory in Ethiopia. During the Second World War, Starhemberg served for a time in the British and the Free French air forces. See his memoirs, *Between Hitler and Mussolini* (1942).

Starhemberg, Guidobald, Graf von see STARHEMBERG, ERNST RÜDIGER, GRAF VON (1638–1701).

Stari Krim, RSFSR see STARY KRYM.

Stark, Freya Madeline (frä'u), English writer and traveler. She studied Arabic and after 1927 made several journeys into remote parts of the Middle East. From 1939 to 1945 she was in the British government service, chiefly in Aden, Cairo, and Baghdad, and in 1947 married S. H. Perowne. Her works, many of them accounts of her travels, include *The Valleys of the Assassins* (1934), *The Southern Gates of Arabia* (1936), *A Winter in Arabia* (1940), *The Arab Island* (1945), and *Perseus in the Wind* (1948).

Stark, Harold Raynsford, 1880–, American admiral, b. Wilkes-Barre, Pa., grad. Annapolis, 1903. He was commissioned (1905) an ensign in the U.S. navy and was promoted through the grades. After service in the First World War, he filled several important naval administrative posts. In 1939 he was appointed chief of naval operations and was made admiral. He commanded (1942–45) U.S. naval forces in Europe in the Second World War and retired from active duty in 1946.

Stark, James, 1794–1859, English landscape painter of the Norwich school, pupil and follower of John Crome. His fine *Valley of the Yare* is in the National Gallery, London. He is also represented in the National Gallery, Edinburgh, and in the Victoria and Albert Museum.

Stark, Johannes (shtärk, Ger. yōhä'nŭs shtärk'), 1874–, German physicist. He was professor at the polytechnic school at Aachen (1909–17) and at the universities of Greifswald (1917–20) and Würzburg (1920–22). A noted experimentalist, he discovered (1905) the DOPPLER EFFECT in canal rays (positive particles produced in a vacuum tube which pass through perforations in the cathode) and the broadening or splitting of spectrum lines in an electric field (Stark effect, 1913) which confirmed the new quantum theory. For this work he received the 1919 Nobel Prize in Physics.

Stark, John, 1728–1822, American Revolutionary commander, b. Londonderry, N.H. He fought in the French and Indian Wars. In the Revolution he led at Bunker Hill a regiment he had raised himself, and he served in the Quebec campaign and with Washington in New Jersey. He also fought at Princeton and Trenton (1776–77). He went home in 1777, disgruntled over some promotions, but later in the year took the field as major general of New Hampshire militia. In the QUEBEC CAMPAIGN, when General Burgoyne sent a detachment to take the colonial stores at Bennington (now in Vermont), General Stark met and repulsed it. This failure (the battle of Bennington) was a contributing factor in Burgoyne's discomfiture at Saratoga. For this service General Stark received appointment as brigadier general from the Congress.

Starke (stärk), town (pop. 1,480), co. seat of Bradford co., N. Fla., SW of Jacksonville, in a farm, timber, and naval-stores area. Camp Blanding, an infantry training station, was built here in 1941.

Starkville, city (pop. 4,900), co. seat of Oktibbeha co., E. Miss., W of Columbus, in a livestock, dairy, and farm area, founded c. 1834, inc. 1884. MISSISSIPPI STATE COLLEGE is near by.

Starling, Ernest Henry, 1866–1927, English physiologist, b. India. He was professor (1899–1923) at University College, London. He was an authority on the nervous regulation of heart action and circulation. With Sir William M. BAYLISS, he evolved the concept of hormones and studied the movements of the intestines, describing (1899) peristalsis as a ganglionic reflex. His works include *Principles of Human Physiology* (1912, rev. ed., 1936).

starling, European bird introduced into the United States in 1890 and now very common in some parts of the East. It has iridescent blackish plumage and a long bill which is yellow in spring and summer. It is useful in destroying insects but tends to drive away smaller birds and often congregates in such numbers as to become a nuisance. It mimics bird songs and other sounds.

Star of Bethlehem, name for the star in the east which, as related in the Gospel, led the Wise Men to Bethlehem (Mat. 2:1–10). According to astronomers the appearance of the star may have been caused by the conjunction of the planets Jupiter, Saturn, and Mars or by a nova, a comet, or a meteor.

star-of-Bethlehem, low, spring-blooming bulbous plant (*Ornithogalum umbellatum*) of the lily family, native to the Mediterranean region but naturalized in North America and cultivated in gardens. The plant has rather stiff grasslike leaves and a cluster of white star-shaped flowers marked on the back with green. It spreads easily and tends to become weedy. Although the plant is poisonous, the bulbs have been prepared and used as food in the Old World. The flower has been associated with the star that guided the Wise Men to the manger. Other plants are sometimes called star-of-Bethlehem.

Starr, Belle, 1848–89, American outlaw, consort of notorious bandits of the SW United States, b. near Carthage, Mo. Her original name was Myra Belle Shirley, and her father was a farmer and then operated a tavern in Carthage, where she spent her childhood. The Shirleys later (1864) moved to Dallas, Texas. Soon Belle met Cole Younger and had a child by him. Subsequently she met the gang headed by Jesse James and the rest of the Younger gang. She later married (1880) Sam Starr, an Indian, and went to live in the Indian Territory (in Oklahoma). Her home there became a retreat for outlaws, for whom she operated mainly as a "fixer." Belle Starr's reputation as a notorious horse thief and murderess was greatly magnified in the book *Bella Starr, the Bandit Queen, or, the Female Jesse James* (1889) by Richard K. Fox. It was written after she was shot to death by an unknown person. See biography by Burton Rascoe (1941).

Starrett, Paul (stä'rĭt), 1866–, American builder, b. Lawrence, Kansas. After serving (1903–22) as president of the George A. Fuller Company in Chicago, he opened and headed the construction firm of Starrett Brothers, Inc., in New York. Starrett was responsible for the erection of the Flatiron Building, the Empire State Building, the Pennsylvania RR. station, and the Plaza, Biltmore, and Commodore hotels, all in New York. The Bellevue-Stratford Hotel in Philadelphia and the Lincoln Memorial in Washington were erected by the Fuller Company. See his autobiography, *Changing the Skyline* (1938).

star route, in the U.S. postal service, a surface route to post offices not accessible by railroad or steamboat. The U.S. Postal Guide and maps formerly designated such an office by an asterisk, hence the name. Private contracts to carry the mail over these routes are made with bonded bidders, and in the days before rural free delivery, when star routes (by stage or rider) were important, particularly in the West, the law permitted easy readjustment of the contracts because of shifting population. In April, 1881, President James A. Garfield dismissed Second Assistant Postmaster General Thomas W. Brady, who was suspected of having fraudulently increased the compensation of numerous star-route contractors, among them a former Senator, Stephen W. Dorsey of Arkansas. Both narrowly escaped conviction in President Chester A. Arthur's administration. The frauds, amounting to nearly half a million dollars, hastened civil service reform.

Star-spangled Banner, The, American national anthem, beginning, "Oh, say, can you see, by the dawn's early light." The words were written by Francis Scott Key, a young Washington attorney sent to the British fleet to obtain the release of Dr. Beanes of Upper Marlborough, Md., who had recently been taken captive. Key was detained by the British and was forced to witness from his ship the bombardment of Fort McHenry during the night of Sept. 13–14, 1814. Defended under the command of George Armistead, it withstood the attack, and the sight of the American flag still floating at dawn inspired Key's verses, which were written on the way ashore in the morning. The tune, composed by John Stafford Smith (1750–1836), was taken from the popular English song *To Anacreon in Heaven*. Although the army and the navy had for some years regarded *The Star-spangled Banner* as the national anthem, its designation became official by an executive order of President Wilson in 1916. This order was confirmed by act of Congress in 1931. See O. G. Sonneck, *The Star-spangled Banner* (1914), Victor Weybright, *The Star-spangled Banner* (1935).

starvation. When an individual is deprived of food over a long period of time, the body uses up its carbohydrate and fat reserves and the body protein is utilized for energy. The resulting loss of weight is unevenly distributed. In the early stages subcutaneous tissues and fat depots, as well as large quantities of water, are lost. The glands, e.g., the liver and spleen, and also muscle tissue later suffer the greatest loss in weight, whereas the heart and brain show very little loss proportionately. Incomplete combustion of fat results in *acidosis*. Basal metabolism, body temperature, pulse rate, and blood pressure continue to fall throughout the starvation period.

Starved Rock, cliff, 140 ft. high, overlooking the Illinois river between La Salle and Ottawa, Ill. It was visited by Louis Jolliet and Father Marquette (1673) and by La Salle and his lieutenant, Henri de Tonti (1679). Tonti began building (1680) a fort completed (1682–83) by him and La Salle. Legend says that in the 18th cent. the Ottawa Indians drove a band of Illinois on the cliff, where they died of thirst and starvation. In the early 19th cent. brigands and outlaws found refuge hereabout in canyons and caves that have been since 1912 included in Starved Rock State Park.

Stary Krym (stä'rē krĭm') [Rus. =Old Crimea], city (pop. 4,790), E. Crimea, RSFSR, W of Feodosiya. Named Solkhat in the 13th and 14th cent., it was a major caravan center on the route to India and the original capital of the khans of Crimea. It declined after the capital was removed (15th cent.) to Bakhchisarai and is today a health resort. The city was formerly named Eski Krym or Eski Krim (yĭskē" krĭm'). The spelling Starii Krim also occurs.

Stas, Jean Servais (zhäⁿ' sĕrvā' stas'), 1813–91, Belgian chemist. He was assistant to J. B. A. Dumas and professor (1840–65) at the École royale militaire, Brussels. He is noted for his accurate determinations of atomic weights.

Stassen, Harold Edward (stă'sun), 1907–, American statesman and university president, b. Dakota co., Minn., grad. Univ. of Minnesota (B.A., 1927; LL.B., 1929). He was, at the age of 31, elected governor of Minnesota in 1938 and was twice (1940, 1942) reelected. In the Second World War, Stassen resigned (1943) as governor to enter the navy and saw active duty in the Pacific before he was discharged (1945) as captain. He was a delegate (1945) to the San Francisco Conference called to create the United Nations, and in 1948 he was an unsuccessful candidate for the Republican presidential nomination. In July, 1948, Stassen was named president of the Univ. of Pennsylvania. He wrote *Where I Stand* (1947).

Stassfurt (shtäs'fōrt), city (pop. 29,762), in the former Saxony prov. of Prussia, after 1945 in Saxony-Anhalt, E. central Germany, S. of Magdeburg. It is the center of one of the world's chief potash-mining areas and has chemical and machine-building plants.

state, political association having SOVEREIGNTY over the political, economic, and social relations of the members of a particular society. Its sovereignty, considered by most modern political theorists as based on the common will of its members, is vested in a GOVERNMENT and is exercised by means of LAW; the principal limitation placed upon it is a territorial one. No matter what its aim, power is of the essence of the state, the possession of sovereign power distinguishes the state from other associations. In the United States, sovereignty would appear to be divided between the several states and the Federal government, since it has been steadily held that all rights not specifically given the Federal government are reserved to the states. It is notable, however, that the claim of the states to the right or power to withdraw from the Union was ended by the Civil War. Although the authority for the power of the state resides in the common will of its CITIZENS, it must be noted that not all those subject to the state's sovereignty are always reckoned as citizens. The common will of the citizens is made common by community of purpose, and the reasons for the citizens' willingness to grant sovereignty to the state may arise out of tradition, religion, or belief that the common good is best served by surrendering power to the state. The beginning of a historical study of the state is the CITY-STATE of ancient Greece. Both the actuality of the Spartan state and common beliefs about it influenced the political philosophies of Plato and Aristotle. Both held that the function of the state was to promote the good life, and both advocated a class society condoning slavery. Plato, however, believed that the good life was best achieved by surrendering everything—family, property, and education—to the state, while Aristotle sharply criticized these views, accepting the family as the natural unit of society and arguing that private property made possible the virtues of benevolence and generosity, in which the people should be trained. The modern state, excluding those which have been created in the 20th cent., has been in theory and in actuality the result of evolutionary processes going on since the Renaissance. Italy in the Renaissance, with the emergence of princely states and the resultant contest for power, provided the background for Machiavelli's high regard for power. Political thought has generally regarded the state as primarily a welfare association, however, rather than a power association. An important basic theory of the state is the SOCIAL CONTRACT theory. Hobbes held that the state resulted from a contract among men whose natural condition was war, they by the contract surrendered their individual liberties to a sovereign, who was no party to the contract and thus not limited in his powers. John LOCKE regarded the sovereign as a party to the contract and possessing power limited by the terms of the contract. J. J. ROUSSEAU

further developed the idea of the social contract, maintaining that the original stateless condition of man was naturally good and that the growth of the state had created evil For this reason he thought that the social contract necessarily underlying any state should recognize the inalienable sovereignty of the people—an argument much used by later proponents of democracy In general the dominant theory in 19th-century Europe was that of Hegel, who viewed the state as the divine idea in process on earth and regarded the highest duty of the individual as that to his state The fact that there are many states, each of which is sovereign in its own territory, leads to the question of relations between states Hegel rejected the idea of a world state, preferring to regard each state as an individual in a state of nature in its relation to other states, war being the only solution to the conflict between states and a thing of positive value to the citizens in upholding the independence and sovereignty of their own state The political doctrine of Hegel, brilliantly refuted by Ernst Cassirer in *The Myth of the State* (1946), has retained tremendous influence Hegel's dialectic provided the method for Karl MARX, whose political doctrine has been the most influential since Hegel Marx saw the principal source of conflict not as between states but as between classes The state to him was but an instrument of class struggle, and he prophesied a classless society in which the state would ultimately become obsolete As of 1950, however, the largest Marxist state is the one in which the concentration and centralization of power is greatest, the "withering away" of the state having been delayed In fact, the tendency since the age of the benevolent despots has been toward ever-greater regulatory functions, as evidenced by the high degree of government planning in modern states See ANARCHISM, COMMUNISM, DEMOCRACY, SOCIALISM, MARXISM See J K Bluntschli, *Theory of the State* (3d ed , 1892), Paul Carus, *The Nature of the State* (1894), Bernard Bosanquet, *Philosophical Theory of the State* (3d ed , 1920), R M MacIver, *The Modern State* (1926), H H Lowie, *Origin of the State* (1927), H J Laski, *Authority in the Modern State* (1919) and *The State in Theory and Practice* (1935), Lionel Curtis, *Civitas Dei* (3 vols , 1934–1937), Hans Kelsen, *General Theory of the State* (Eng tr , 1945), R H Murray, *The Individual and the State* (1946)

State, United States Department of, executive department of the federal government responsible for the determination and execution, under the President's direction, of American foreign policy The first governmental body in America to deal with foreign affairs was the Committee of Secret Correspondence—a committee of five instituted (1775) by the Continental Congress and headed by Benjamin Franklin In 1777 it was redesignated the Committee of Foreign Affairs, but this body after a time became so ineffective that it ceased to have jurisdiction This committee was superseded in 1781 by the Dept of Foreign Affairs, which, operating under the Articles of Confederation, also became ineffective After the new government was organized under the Constitution of the United States, an act was passed (July, 1789) creating a new Dept of Foreign Affairs The organization of this department proved wholly inadequate, and in Sept , 1789, the Dept of State was established with added functions Besides being charged with foreign negotiations and correspondence, the department was given sundry duties such as keeping the Great Seal of the United States and receiving the bills and resolutions of Congress The Dept of State is the oldest of the federal departments, and thus the Secretary of State, at the head of the department, became the first ranking cabinet officer Thomas Jefferson, the first Secretary of State (1790–93), quickly brought prestige to the department, which was soon given added functions—supervision of the U S Mint, the issuing of patents and to some extent copyrights, and the printing of the U S census The responsibilities of the mint were soon transferred (1795) to the U S Treasury Dept Some of the other miscellaneous functions were taken away in the middle of the 19th cent The affairs of the territories were supervised by the department until 1873, when they were given to the Dept of the Interior In the field of foreign affairs, the department did not expand much in the 18th cent but thereafter grew in ever-widening circles Under the direction of Secretary John Quincy Adams (1817–25) the organization of the department was clarified and improved, but the first major reorganization was effected by Secretary Louis McLane (1833–34) and Secretary John Forsyth (1834–41) Later, salaries were generally increased, more personnel was added to meet the growing needs, and in 1853 the position of First Assistant Secretary of State was created Three additional assistant secretaryships were later created in the department, and in 1919 the office of Undersecretary of State was established. After 1849 many of the domestic responsibilities of the Dept of State were transferred to the U S Dept of the Interior In 1855 Congress passed a law formulating grades, posts, and salaries in both the diplomatic and the consular service attached to the department, and 50 years later diplomatic and consular positions, except for the posts of ambassador and minister, were put on a civil service basis Largely through the efforts of Secretary Hamilton Fish (1808–93), a sweeping reorganization of the Dept of State was effected in 1870 To meet the demands of an economy-minded Congress, Fish made 31 officials the nucleus of the department and divided its activities among nine bureaus and two agencies The First Diplomatic Bureau was set up to supervise correspondence with European and Far Eastern countries, and the Second Diplomatic Bureau was given jurisdiction over American diplomacy in Latin America, the Near East, and Africa The consular activities were similarly organized in 1870 Very few changes occurred in the department's organization in the later years of the 19th cent , but when the United States became a world power after the end of the Spanish-American War, there was a distinct need to adjust the department's facilities Several important steps were taken during the secretaryships of John Hay (1898–1905) and Elihu Root (1905–9), but it was not until 1909, in the administration of Philander C Knox, that the department was reorganized with the essentials of its present-day structure Several new posts, notably those of counselor and resident diplomatic officer, were set up, the duties assigned to the Assistant Secretaries of State were altered, and foreign policy and relations were reorganized along new geographical divisions—Western European, Near Eastern, Far Eastern, and Latin American Before and during the First World War several new responsibilities were assumed, but, largely because of increasing friction between President Woodrow Wilson and Secretary Robert Lansing, the Dept of State suffered temporary decline In the early 1920s the department under the leadership (1921–25) of Charles Evans Hughes was widely criticized for ignoring the League of Nations The Rogers Act of 1924 abolished the separate diplomatic and consular bureaus in favor of the Division of Foreign Service Information, and under the administrations of Frank B Kellogg (1925–29) and Henry L Stimson (1929–33), several new agencies were created In 1931 the office of the solicitor—given charge through the years of such matters as extradition, naturalization, expatriation, passport problems, neutrality, and extraterritoriality—was superseded by the office of legal adviser During the long administration (1933–44) of Cordell Hull a variety of changes were effected, at first to meet the needs of recovery from economic depression, but later to face the rising tide of the Second World War In 1938 the Division of Cultural Relations—soon to undergo several changes—was begun to stimulate cooperation with other nations through the various media of mass communication, the same year the Division of International Communication was started to meet problems concerned with world-wide telecommunications Two reorganizations within the Dept of State occurred in 1943 and 1944, and with the close of the Second World War the department's machinery was geared to dispense information to foreign nations (e g , the radio program "The Voice of America"), to establish strict secrecy concerning its operations, to integrate foreign policy with the economic-aid programs, and to bring about effective liaison between the United States and the United Nations Today the Secretary of State, aided by an Undersecretary and four Assistant Secretaries, is charged not only with determining foreign policy and executing the manifold functions within the Dept of State, but also with supervising and coordinating the activities of some 45 U S embassies and 15 legations on foreign soil See G H Stuart, *The Department of State* (1949)

State Center, town (pop 1,033), central Iowa, W of Marshalltown, laid out 1865, inc 1867

State College, borough (pop 6,226), central Pa , NW of Harrisburg and near Bellefonte, settled 1859, inc 1896 Between Bald Eagle Ridge northwest and the Seven Mts southeast, it lies near the geographical center of the state The borough is the seat of PENNSYLVANIA STATE COLLEGE

state flowers. Each state of the United States has designated, usually by legislative action, some one flower as its floral emblem. Occasionally changes have been made There has been no flower chosen as emblematic of the United States (for those of some other nations, see FLOWER) The floral emblem of the District of Columbia is the American Beauty rose, the state flowers are (see the various flower articles for the exact species if this has been specified) Alabama, goldenrod, Arizona, saguaro, Arkansas, apple blossom, California, California poppy, Colorado, blue-and-white columbine, Connecticut, mountain laurel; Delaware, peach blossom, Florida, orange blossom, Georgia, Cherokee rose, Idaho, mock orange, Illinois, violet, Indiana, zinnia, Iowa, wild rose, Kansas, sunflower, Kentucky, goldenrod, Louisiana, magnolia; Maine, pine cone and tassel, Maryland, black-eyed Susan; Massachusetts, trailing arbutus; Michigan, apple blossom, Minnesota, lady's-slipper; Mississippi, magnolia, Missouri, hawthorn; Montana, bitterroot; Nebraska, goldenrod; Nevada, sagebrush; New Hampshire, lilac, New Jersey, violet; New Mexico, yucca; New York, rose, North Carolina, daisy, North Dakota, wild rose, Ohio, red carnation, Oklahoma, mistletoe, Oregon, Oregon grape, Pennsylvania, mountain laurel, Rhode Island, violet, South Carolina, Carolina jasmine, South Dakota, pasqueflower, Tennessee, iris, Texas, bluebonnet, Utah, sego lily; Vermont, red clover, Virginia, dogwood, Washington, rhododendron, West Virginia, rhododendron, Wisconsin, violet, Wyoming, Indian paintbrush

Staten Island (stă'tun), c 40 mi long, separated from SE Tierra del Fuego, Argentina, by Le Maire Strait It is rocky and uninhabited

Staten Island (57 sq mi , pop 174,441), SE N Y , in New York Bay SW of Manhattan, forming Richmond borough of NEW YORK city and Richmond co of New York state It is separated from New Jersey by KILL VAN KULL and Arthur Kill, which are crossed by large bridges Ferries connect the island with Manhattan and Brooklyn Although an area of residential communities and in part semirural, Staten Island has an industrial section along its northern shores Shipbuilding and shipping were accelerated during the Second World War There are beaches on the southeast coast of the island Centers of trade include St George (with the borough hall), STAPLETON, and Port Richmond Staten Island, which was consolidated with New York city in 1898, is the site of marine and army hospitals, Sailors' Snug Harbor (for retired sailors), and Wagner Memorial Lutheran College Visited by Henry Hudson in 1609, it was called Staaten Eylandt by the Dutch Indians wiped out the first settlement, but there was a permanent community by 1661 Among the extant buildings of the 17th and 18th cent is the Billopp, or Conference, House (built before 1688), where an unsuccessful peace conference was held (1776) by Richard and William Howe and Continental patriots Other points of interest include the church of St Andrew (founded 1708), a Moravian church and cemetery, a Huguenot church, and Garibaldi House, where the Italian liberator lived for several years in the 1850s.

Statesboro, city (pop 5,028), co seat of Bulloch co , E Ga , NW of Savannah, laid out 1803 Farm products of the area are processed here It is in a good hunting region Georgia Teachers College is near by

States-General or **Estates-General,** diet or national assembly in which the chief estates (see ESTATE) of the nation —usually clergy, nobles, and cities or commons—were represented as separate bodies The name has survived only in the Netherlands, where the two houses of parliament are known as States-General, actually, however, only the name and not the institution itself has been preserved there, for the lower house represents, and is directly elected by, the entire nation, and the upper house represents the provincial estates, which are also elected on a modern democratic basis The only large nation where there exists a separate representation of a privileged class is in England, but the House of Lords, which represents the privileged class, has lost virtually its entire authority to the House of Commons Like the English PARLIAMENT, the States-General of France and other European assemblies had their origin in the king's council, or Curia Regis The CORTES of the Spanish kingdoms, the DIET of the Holy Roman Empire, and the diets of Bohemia, Hungary, Poland, and the Scandinavian countries all originated as royal councils and all represented, in varying degrees, the principal estates of the realm They are generally said to have grown out of the earlier Germanic assemblies Whatever their origin, they developed along entirely different lines in the various countries, and by the 16th cent there was little or no resemblance among the English Parliament, the States-General of France, and the States-General of the United Provs of the NETHERLANDS The French States-General, to which the remainder of this article is devoted, owes its fame less to its importance than to the manner in which it was created and in which it went out of existence The first French assembly known by that name was summoned in 1302 at Paris, by PHILIP IV, in order to obtain national approval for his anticlerical policy Philip may be said to have created the body only in the sense that he assembled a larger and more regular council than had before been assembled Its constitution from 1302 to 1797 retained the same division into the first, second, and third estates, i e , the clergy, nobles, and commons, respectively. Its powers were never clearly defined, and they varied in inverse ratio to those of the royal authority. The States-General of 1302 and 1308 approved Philip's measures against Pope BONIFACE VIII and the KNIGHTS TEMPLARS, which was all they were expected to do, that of 1314 granted the king subsidies, but even in this case the grant was more or less nominal, with the king dictating his orders. The French States-General never obtained the financial control which made the English Parliament the powerful institution it became It did not even always meet as a single body, but

often sat separately as the States-General of Langue d'Oïl (N France), which was the more important, and the States-General of Langue d'Oc (S France, see LANGUE D'OC AND LANGUE D'OÏL) The States-General of Langue d'Oïl made a strong bid for power in 1355–57, during the captivity of King John II in England Under the leadership of Étienne MARCEL it forced the dauphin (later Charles V) to promulgate the *Grande Ordonnance*, which would have made it the virtual legislature of France However, the dauphin revoked his concessions almost as soon as he had made them and called a rival assembly at Compiègne Although later States-General often opposed the king and even won temporary concessions, the continuous process of consolidation of the royal power prevented the emergence of a truly parliamentary body The States-General regained some importance in the chaotic period of the Wars of Religion (16th cent) However, the opposing factions used it merely as an instrument for their own aims At the States-General of Blois (1588) the Catholic League was in complete control, and King Henry III, in self-defense, resorted to the murder of Henri and Louis de Guise The States-General of Paris of 1614 was a thorough failure, the three estates indulging in mutual recriminations and accomplishing nothing Cardinal Richelieu, Cardinal Mazarin, and Louis XIV made the French monarchy absolute in the 17th cent , and the States-General was no longer convoked until 1789 The only serious check to the royal power was the Parlement of Paris (see PARLEMENT), which was a judicial and not a representative body Provincial estates, however, continued in the so-called *pays d'états*, i e , the provinces of Brittany, Flanders, Artois, Lorraine, Alsace, Burgundy, Franche-Comté, Burgundy, Dauphiné, Provence, Languedoc, Béarn and Navarre, and several others These, constituted like the States-General, voted the subsidies necessary for the administration of the respective provinces The remaining (and major) part of France consisted of *pays d'élections*, which were more directly subject to the central administration When in 1788 the Assembly of Notables (a meeting of the chief nobles, clerics, and magistrates) failed to solve the financial crisis of the French government, elections for the States-General were ordered as a last resort by Louis XVI Although no official pronouncement indicated that the assembly was to act as a truly deliberative body, its convocation was thus interpreted by the third estate and by the liberals among the nobles and clergy, who hoped to introduce English parliamentary government into France At the same time, the government ordered the compilation of lists of grievances (*cahiers de doléances*) in the various provinces, these were to serve as a basis for discussing the necessary reforms The preparation of the *cahiers* contributed to the impression that a general reform was impending and that the States-General was to act as a national assembly representing the sovereign will of the people and not merely as a forum for petitions and debates On May 5, 1789, the States-General assembled at Versailles Almost immediately the crucial issue of voting procedure was under debate If, as had been customary, the three estates voted as separate bodies, the third estate was bound to be continually outvoted If voting was by head, the third estate (whose deputies equaled in number the deputies of the combined clergy and nobility) was bound to win on most points, for many clerics and nobles sympathized with its aspirations In June, 1789, the third estate and a number of deputies from the clergy forced the issue and declared themselves the National Assembly With this act of defiance the FRENCH REVOLUTION may be said to have begun, and with Louis XVI's acceptance of the *fait accompli* the States-General ceased to exist

States of the Church see PAPAL STATES

states' rights, in U S history, an issue which has existed since the beginnings of national government In the American Revolution the Thirteen Colonies formed a loose union (see CONFEDERATION, ARTICLES OF), which proved unsatisfactory, and in 1789 the CONSTITUTION OF THE UNITED STATES was adopted and the new Federal government inaugurated The Tenth Amendment, which went into effect on Nov 3, 1791, says "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people " Immediately there arose the controversy as to how to interpret the enumerated powers granted the Federal government, which are not at all specific Alexander HAMILTON and the FEDERALIST PARTY favored a broad interpretation, which meant a strong central government deriving its authority from implied as well as express powers contained in the Constitution Thomas JEFFERSON and his followers, "strict constructionists," insisted that all powers not specifically granted the Federal government be reserved to the states. The KENTUCKY AND VIRGINIA RESOLUTIONS, written by Jefferson and James Madison, represent the first formulation of the doctrine of the states' rights school The second important manifestation of states' rights occurred in New England among the Federalists in opposition, curiously enough, to Jefferson His party, now in power, accomplished the LOUISIANA PURCHASE, passed the EMBARGO ACT OF 1807, and, later, declared war against England, all in defiance of the wishes of New England, which officially expressed its resentment in the resolutions of the HARTFORD CONVENTION of 1814 The fight over the constitutionality of the Bank of the United States made the central states, Pennsylvania, Maryland, and Ohio in particular, the next defenders of the doctrine The point at issue here was settled in McCULLOCH VS MARYLAND by decision of the U S Supreme Court, dominated by John MARSHALL, who more than any other man was responsible for placing the blessings of the Constitution on a strong central government The doctrine was again involved in the conflict between the Federal government and Georgia as to which had jurisdiction over Indian tribes within Georgia's boundaries, and Georgia for a time defied the Federal administration Even more acute was the situation which developed in South Carolina in opposition to the tariff acts of 1828 and 1832, when, under the leadership of John C CALHOUN, South Carolina passed its ordinance of NULLIFICATION Calhoun's doctrine of absolute state sovereignty was the most extreme of states' rights theories Proslavery forces soon afterward were expounding a strong states' rights doctrine, ultimately backed by SECESSION Eleven Southern states seceded in 1860–61 and formed the CONFEDERACY, in which, fittingly, the doctrine of states' rights was carried to its logical extreme by such governors as Joseph E BROWN and Zebulon B VANCE This undoubtedly contributed to the Confederate defeat in the Civil War, just as the disposition of some of the Thirteen Colonies to act in complete independence of the Continental Congress hampered the patriot cause in the American Revolution Although the Union victory in the Civil War definitively ended the possibility of nullification and secession, the states' rights doctrine did not die Most recently it has been vigorously revived by Southern opponents of the Federal civil rights program, the States Rights Democrats In the presidential election of 1948 their candidate for President, J Strom THURMOND, carried four Southern states Although states' rights doctrine is usually associated with the Southern wing of the Democratic party, actually the doctrine is not exclusive with any particular section or political party All sections of the country and both Democrats and Republicans (traditionally upholders of a strong central government) have at different times and for different reasons espoused it That the powers of the Federal government have increased greatly at the expense of the states is not denied But, as President Herbert Hoover's Committee on Recent Social Trends reported in 1933, this process has resulted from the incapacity of the states to deal with the complex problems of the nation's modern industrial civilization States' rights is fundamentally a defense doctrine of the minority, and the issue will continue to arise so long as the proper representation and expression of minority opinion is a concern of our government See C E Merriam, *A History of American Political Theories* (1903), Charles Warren, *The Supreme Court and Sovereign States* (1924), F L Owsley, *State Rights in the Confederacy* (1925), E S Corwin, *Commerce Power Versus States' Rights* (1936)

Statesville, city (pop 11,440), co seat of Iredell co , W central N C , SW of Winston-Salem, in the piedmont, founded 1789 A commercial and industrial center, it produces textiles, flour, and furniture A junior college is here, and an agricultural experiment station is near by

static, noises in radio reception, resulting usually from electric discharges unrelated to the desired signal It is caused by atmospheric disturbances and by many electrical appliances, such as neon signs, fluorescent lamps, dial telephones, automotive ignition systems, and a wide variety of motor-driven devices Interferences from these sources may be reduced by inexpensive power-line filters and by improved antenna schemes See also FREQUENCY MODULATION

statics see MECHANICS

statistics, the science of determining certain values which represent the tendencies indicated in a large collection of observations or measurements The most familiar statistical measure is the arithmetic MEAN, which is an average value for a group of observations A second important statistic or statistical measure is the standard deviation, which is a measure of how much the individual observations are scattered about the mean Other statistics indicate other characteristics of the group of observations In addition to the problem of computing certain statistics for a particular group of observations, there is the problem of sampling This is an attempt to determine for what larger group (called the population) of individuals or characteristics the statistics for this particular group (called the sample) would be a representative figure and how representative a figure it would be for a given larger group This second problem of sampling can be solved only by resorting to the theory of probability and higher mathematics In most applications of statistics to scientific and social research, insurance, and finance, the statistician is interested not only in the characteristics of the sample but also in those of some much larger population Consequently, the theory of sampling is the most important part of statistical theory See Rudolf Modley, *How to Use Pictorial Statistics* (1937), F E Croxton and D J Cowden, *Applied General Statistics* (1939), P R Rider, *An Introduction to Modern Statistical Methods* (1939), Harald Cramer, *Mathematical Methods of Statistics* (1946), T E Kelley, *Fundamentals of Statistics* (1947), J R Stockton, *Introduction to Business Statistics* (2d ed , 1947), R G Allen, *Statistics for Economists* (1949), A L Boddington, *Statistics and Their Application to Commerce* (9th ed , 1949), Quinn McNemar, *Psychological Statistics* (1949), Kenneth Mather, *Statistical Analysis in Biology* (1949)

Statius, Publius Papinius (pŭ'blĭŭs pup'ĭnē'ŭs stā'shus), A D c 40–A D c 96, Latin poet, b Naples He had the favor of Emperor Domitian, and he won the poetry prize at an annual festival under Domitian's auspices but was an unsuccessful competitor at the Capitoline contest in Rome His last years were spent in Naples Surviving works are two epics in the manner of Vergil—the *Thebaid*, on the SEVEN AGAINST THEBES, and the *Achilleid* (incomplete), on the early life of Achilles—and the *Silvae*, a collection of hasty but pleasing poems, mostly occasional Statius was much esteemed in his own time and through the Middle Ages

Statuary Hall, National, in the Capitol, Washington, D C , the chamber of U S Representatives from 1807 to 1857 In 1864 it was made a gallery for statues of distinguished Americans, each state being invited to present two Many of the statues have since been removed, those remaining are Gen Joe Wheeler (Alabama), Gen John C Greenway (Arizona), Uriah M Rose (Arkansas), Junipero Serra (California), Roger Sherman (Connecticut), Caesar Rodney (Delaware), John W Gorrie (Florida), Alexander H Stephens (Georgia), George L Shoup (Idaho), Frances E Willard (Illinois), Lew Wallace (Indiana), Samuel J Kirkwood (Iowa), John J Ingalls (Kansas), Henry Clay (Kentucky), Hannibal Hamlin (Maine), Charles Carroll (Maryland), Samuel Adams (Massachusetts), Lewis Cass (Michigan), Henry Mower Rice (Minnesota), Jefferson Davis (Mississippi), Thomas H Benton (Missouri), Daniel Webster (New Hampshire), Richard Stockton (New Jersey), Robert R Livingston (New York), Zebulon B Vance (North Carolina), William Allen (Ohio), Sequoyah (Oklahoma), Robert Fulton (Pennsylvania), Roger Williams (Rhode Island), J C Calhoun (South Carolina), John Sevier (Tennessee), Sam Houston (Texas), Ethan Allen (Vermont), Robert E Lee (Virginia), F H Pierpont (West Virginia), and Robert M La Follette (Wisconsin)

Statue of Liberty National Monument see LIBERTY, STATUE OF

statute (stă'chōōt), in law, a formal, written enactment by the authorized powers of a state The term usually is not applied to a written CONSTITUTION, but is restricted to the enactments of a legislature Statute law is chiefly to be distinguished from COMMON LAW, which may be defined as the body of legal rules derived from judicial decisions and from custom On most of the European continent all (or nearly all) the law is statutory and each field is subsumed by a CODE In England and the United States, however, common law retains great importance but with the expansion of government regulation there has been an immense growth in the statute law of those countries In order to guide the courts many important statutes contain (usually in a preamble) a statement of the abuses which the legislation is intended to cure or of the general legislative intent Great care must be taken in drafting statutes, since the usual (but not invariable) practice of the courts is to read the provisions in an extremely literal sense Statutes are classified in various ways Public statutes (e g , those establishing crimes) are universal in application, while private statutes (e g , one compensating a named person for injury) are limited Public statutes may be local, i e affecting only part of the area over which the legislature has authority, or general Statutes which explain or clarify previous enactments or which adopt rules of common law are sometimes called declaratory statutes

Statute of Frauds see CONTRACT

Staubbach, Switzerland see LAUTERBRUNNEN

Staunton. 1 (stŏn'tun, stŏn'–) City (pop 4,212), SW Ill , NE of St Louis, settled 1817, laid out 1835, inc 1859 It is a trade center for a coal and farm area **2** (stăn'tŭn) City (pop 13,337), western Va , in the Shenandoah Valley WNW of Charlottesville, settled c 1738, inc as a town 1801, as a city 1871 Staunton was the first city to adopt (1908) city-manager government Trade and industrial center for a rich farm area, it manufactures clothing and dairy products The courthouse of Augusta co is here Woodrow Wilson's birthplace was dedicated as a national shrine in 1941 Staunton Military Academy, Mary Baldwin College (for

women; 1842), the state school for the deaf and the blind, Western State Hospital, and many fine old houses are here Staunton was the capital of the Northwest Territory from 1738 to 1770

Stavanger (stävăng'ûr), city (pop 50,320), co seat of Rogaland co., SW Norway, on Stavanger Fjord, a southern branch of Bokn Fjord It is an important seaport and has large shipbuilding and fish-canning industries Dating from the 8th cent, Stavanger became an episcopal see in the 11th cent The Cathedral of St Swithin, in English Gothic style, dates from the 11th cent Much of the city was destroyed by fire in 1684 Stavanger was seized by the Germans on the first day (April 9, 1940) of their invasion of Norway in the Second World War There is a museum with notable ethnological and archaeological collections

Stavelot (stavlō'), town (pop 4,755), Liége prov, SE Belgium, in the Ardennes It grew around an abbey, founded in 651 The abbots later were princes of the Holy Roman Empire until their land was secularized in the French Revolutionary Wars In the Second World War the Germans captured (Dec, 1944) Stavelot early in the BATTLE OF THE BULGE and massacred a number of American prisoners near by

Stavisky Affair (stavēskē'), financial and political scandal that shook France in 1934 Serge Alexandre Stavisky was a swindler who operated the municipal pawnshop of Bayonne and sold huge amounts of worthless bonds Despite his shady past he was regarded as a respectable financier with excellent political connections until Dec, 1933, when, faced with exposition, he fled Discovered by the police at Chamonix (Jan, 1934), he either committed suicide or was murdered by the police Extremists of the right and left seized the occasion to accuse the Radical Socialist government of Camille CHAUTEMPS of corrupt deals with Stavisky and forced its resignation The new premier, DALADIER, used force to repress the riots staged (Feb 6-7, 1934) in Paris by extremists—chiefly royalists—but he had to resign and was replaced by Doumergue and a national unity cabinet The case was further complicated by the death of Councilor Albert Prince, who knew much of the affair Whether his death was murder or suicide has never been clearly determined After a long trial (1935-36) of 20 defendants, none of them of political importance, 11 of the defendants, including Stavisky's widow, were acquitted Some of the names of the politicians wildly accused of corruption—notably that of Chautemps—have been cleared The Stavisky Affair was important as a symptom rather than as a cause of the decay of the Third Republic It had the unfortunate effect of discrediting not only the Radical Socialist party, which never had been regarded as a banner bearer of political morality, but of parliamentary democracy in general.

stavkirke (stäf'kēr"kē) [Nor], medieval wooden church building of Scandinavian countries Of hundreds erected in the 11th, 12th, and 13th cent, only a score survive, and these are all in Norway Their architecture is unique, upturned dragon heads terminate gables, elaborate wood carvings illustrate saga myths as well as biblical stories, pagodalike shingled roofs, small surrounding cloisters, and leper windows (small openings through a chancel arch or wall) are other features Architectural inspiration was probably drawn from the pagan temples which were being demolished at the time the *stavkirker* were being erected Examples are Hitterdal in Telemark, Fantoft near Bergen, and Borgund near Sogne Fjord

Stavropol (sta'vrupul), city (pop 85,100), capital of Stavropol Territory, SE European RSFSR, on the Stavropol Plateau It is a major agricultural center Founded in 1777 as a Russian fortress, it was an important base for the subsequent Russian conquest of the Caucasus In the Second World War it was held (1941-43) by the Germans

Stavropol Territory, administrative division (2,950 sq. mi; 1946 estimated pop 1,500,000), S European RSFSR, extending northward from the main Caucasus range. It includes the CHERKESS AUTONOMOUS OBLAST. Stavropol is the capital The central part of the territory occupies the Stavropol Plateau, a hilly region (rising to 2,713 ft), drained by the Kuma and Kuban rivers In the north is the MANYCH DEPRESSION. The once drought-ridden territory is watered, since c 1945, by an irrigation system. It produces winter wheat, corn, sunflowers, and cotton, along the Kuma river wine, fruit, and vegetables are grown Sheep raising is an important occupation The PYATIGORSK region has numerous mineral spas and is a major resort area Except for some seminomadic Turkmen and Nogai Tatar herdsmen, the population is Russian and Ukrainian.

Stavros, Greece see STAGIRA.

Stayner, town (pop. 1,085), S Ont., near Georgian Bay and SE of Collingwood It has cider mills and a stockyard

Stayton, town (pop. 1,085), NW Oregon, SE of Salem, platted 1872, inc. 1891. It has wool and flour mills and sawmills

Stead, William Thomas (stĕd), 1849-1912, English journalist. He was editor (1883-89) of the *Pall Mall Gazette* and in 1890 founded the *Review of Reviews*, establishing similar publications in the United States (1891) and Australia (1892). He pioneered in modern journalistic methods in England, was an advocate of reform in the British navy, and championed child welfare and social legislation He was briefly imprisoned in 1885 for his attacks on government policy toward white slavery In later years he was deeply interested in psychical research He lost his life on the *Titanic* Among his numerous works are *If Christ Came to Chicago* (1892), *The Americanization of the World* (1902), and *Peers or People* (1907)

steamboat: see STEAMSHIP

Steamboat Springs, resort town (pop 1,613, alt c 6,700 ft), co seat of Routt co, NW Colo, NW of Denver and on the Yampa river, founded 1875, inc 1907 It has mineral springs and is the headquarters of the Routt National Forest.

steam engine, machine to convert heat energy into mechanical energy Steam requires about 1,600 times the amount of space as the water from which it is formed The force of this expansion is the basis of all steam engines The expanding steam issuing out of the boiler moves a piston within a cylinder in one direction A reciprocal action occurs when the expansive force ceases within the cylinder and commences pressing the piston back from without A crank and flywheel convert the back and forth action of the piston into rotational motion capable of doing of work From a simple device of Heron of Alexandria to the 18th-century engine of Thomas Savery, many minds contributed to the task of harnessing steam Not until 1769, however, when James Watt patented his engine, was there a practical solution Earlier engines depended upon atmospheric pressure to push the piston into the cylinder, where a vacuum was created by sudden cooling of its steam content Watt's use of a separate condenser resulted in a 75 percent saving in fuel It also made possible the use of steam pressure to force back the piston once steam pressure had sent it forward, thus achieving reciprocal action His continuing efforts produced a governor, a mercury steam gauge, and a crank-flywheel mechanism, all of which substantially prepared the steam engine for its role as catalyst of the Industrial Revolution The use of a connecting rod from the piston to a crank made possible changing the reciprocal action into rotational motion The flywheel made the rotation smooth and steady. Sailing vessels gave way to steamboats and stagecoaches yielded to railroad trains as the steam engines were perfected Transmitted by belts, ropes, shafts, pulleys, and gears, the energy from steam engines enabled machines in factories and mills to perform useful work. Until the advent of large-scale electric generation, steam engines bore the industrial burden The STEAM TURBINE now provides most of the electrical power used See H W Dickinson, *A Short History of the Steam Engine* (1939), R H Thurston, *A History of the Growth of the Steam-Engine* (1939)

steamship, watercraft propelled by a steam engine or a steam turbine In 1787 a steamboat built by James Rumsey of Maryland was demonstrated on the Potomac Propelled by a stream of water forced out of the stern by steam pressure, the vessel attained a speed of 4 mi per hour Rumsey received a grant to navigate the waters of New York, Maryland, and Virginia, and his scheme was taken up by an organization known as the Rumsey Society, of which Benjamin Franklin was a member In 1790 John Fitch, who had previously built several successful steamboats, one of which operated in 1787, built a vessel capable of 8 mi per hour It carried passengers between Philadelphia and Burlington William Symington in 1788 also built and ran a steam-propelled vessel, though only experimentally in a pond Other inventors and craftsmen who made steamboats were the Americans Samuel Morey, Nathan Read, and John Stevens Stevens built a vessel 68 ft long, fitted with a tubular boiler and driven by a screw propeller, and ran several successful steamboats on the Hudson river In 1803 Robert Fulton built an unsuccessful steamboat in France, and in 1807 he launched the boat that became famous as the *Clermont*, 150 ft long, 13 ft wide, and 9 ft in depth. The *Clermont* ran from New York to Albany (150 mi) in 32 hr. and made the return trip in 30 hr Pine wood was used as fuel. In 1803 the *Charlotte Dundas* was launched on the Forth and Clyde Canal. She was fitted with a stern paddlewheel and was used for towing Henry Bell was chief builder of the *Comet* put into service in 1812, it had paddlewheels on each side, traveled at 5 mi. per hour, and was used for passenger service on the Clyde By 1814 the *Marjory* was one of five steamships operating on the Thames. The *Savannah* in 1819 voyaged from Savannah to Liverpool in 29 days 11 hr. She was a full-rigged sailing ship fitted with engines and side paddlewheels. During the trip the engines were utilized for from 80 to 90 hr. The next crossing of note was that of the Quebec-built *Royal William* in 1833, accomplished in 19 days. Under I K Brunel's supervision the *Great Western* was built, and in 1838 she made the trip to New York from England in 15 days, arriving a few hours later than her rival the *Sirius*, which had left England 4 days before the *Great Western* The first seagoing vessel to be fitted with a screw propeller was the *Archimedes* (1840), while the *Great Britain* (1845) was the first large iron steamship driven by a screw propeller to cross the Atlantic In 1858 the *Great Eastern* was launched, designed by Brunel. Thereafter the screw propeller was conceded to be superior to paddlewheels, and the steamship began finally to supplant the sailing ship In 1881 the *Servia*, a merchant steamer capable of crossing the Atlantic in 7 days, was the first vessel to be constructed of steel. Seven years later the same builders in Glasgow turned out the first twin-screw steamship, the *Philadelphia* By the end of the 19th cent great liners were plying the Atlantic on regular schedules propelled by machinery which produced 28,000 or more horsepower Sir Charles A. Parsons and C G P de Laval developed the steam turbine during the next to the last decade of the 19th cent The *Turbinia*, the first vessel to be driven by a turbine, was first seen in 1897, and within 10 years several turbine-driven liners were in the Atlantic service The modern leviathans of the sea such as the *Queen Elizabeth* and the *Queen Mary* are turbine-powered steamships, as are most of the larger passenger vessels and many of the heavier cargo craft See also SHIP See F C Bowen, *A Century of Atlantic Travel* (1935), P J Cowan, *A Short History of Naval and Marine Engineering* (1938), D B Tyler, *Steam Conquers the Atlantic* (1939), J T. Flexner, *Steamboats Come True* (1944)

stearin (stē'ûrĭn, stēr'ĭn), white, crystalline fat It is a complex compound of carbon, hydrogen, and oxygen, insoluble in water, very slightly soluble in alcohol. It is an ester of stearic acid Upon hydrolysis, it yields stearic acid and glycerin (glycerol) It is found in many hard fats and oils, e.g., in tallow, suet, butter fat, cottonseed oil, and olive oil It is used in soapmaking and candlemaking, in the tanning trade, and in making polishes With palmitin, another fat, it gives hardness to those substances in which it occurs

Stearns, unincorporated town (pop 1,548), S Ky., W of Middlesboro near the Tenn line It is a shipping point for the area's lumber and coal

steatite see SOAPSTONE

Stecchetti, Lorenzo see GUERRINI, OLINDO

Stedman, Edmund Clarence, 1833-1908, American banker, poet, and critic, b Hartford, Conn., attended Yale A successful Wall St broker, he was also one of the leading poets of his time, although his somewhat derivative poetry is little read today As critic he wrote *Victorian Poets* (1876) and *The Poets of America* (1885) and compiled the excellent collections *A Victorian Anthology* (1895) and *An American Anthology* (1900) See his *Poems* (1908), biography by Laura Stedman and G M Gould (1910)

steel, compound of iron and carbon, with varying small proportions of other minerals It was first made by cementation, a process of heating two bars of iron with charcoal in a closed furnace for a considerable period so that the surface of the iron acquired a high carbon content The iron bars were then fused together to yield a metal harder and stronger than either of the pieces of iron, but not uniformly so throughout The famous blades of Damascus and steels of Toledo, Spain, were made by the cementation and crucible techniques Originally developed to remove the slag or impurities from cementation steel, the crucible method consists of charging with iron and charcoal a fireclay or graphite receptacle and firing it By the addition of other components in small quantities, various grades of fine steel are obtained through the crucible process, however, it is one of the more costly steel-manufacturing processes The BESSEMER PROCESS and the open-hearth process are more widely used in steelmaking The open-hearth uses a type of reverberatory furnace called a regenerative furnace, instead of having firebox at one end and flue at the other, each end is fitted for the intake and outlet of both gas and air The fuel used is gaseous, and both fuel and air are preheated by a system of reversal of currents of air and gas through the ports in order to attain very high temperatures This process, developed by Sir William Siemens c 1866, uses pig iron and fresh ore In a variation of the process developed by Pierre Martin with Siemens, scrap steel replaces the ore and accomplishes the refinement The difficulty of procuring ore free from sulphur and phosphorus, a requirement in the Siemens open-hearth method, resulted in greater use of the Siemens-Martin process The electric furnace provided a means of making large quantities of high-grade steel, with the advantages of providing positive temperature control, freedom from contamination of the product by the fuel, and simultaneous deoxidation and desulphurization action. Most high-grade alloy steels are manufactured in the electric furnace Steel is shaped for commercial use in rolling mills, where successive passages of the red-hot ingot between variously shaped rollers cause it to take a desired form Pittsburgh, one of the world's great steel centers, built its first rolling mill in 1811; Bessemer

steel rails were rolled in Chicago as early as 1865.
Steel is sometimes classified by its carbon content; a high-carbon steel is serviceable for cutting tools and dies by reason of its great hardness, brittleness, and inability to be easily machined; low- or medium-carbon steel is used for sheeting and structural forms because of its susceptibility to welding and tooling. Alloy steels, now most widely used, contain one or more other minerals to give them special qualities Aluminum steel is smooth and close-grained and has a high tensile strength Chromium steel finds wide use in automobile and plane parts by reason of its hardness, strength, and elasticity, as does the chromium-vanadium variety. Nickel steel is the most widely used of the alloys; it is nonmagnetic and has the tensile properties of high-carbon steel without the brittleness Nickel-chromium steel possesses a shock resistant quality which suits it for armor plate. Wolfram (tungsten), molybdenum, and high-manganese steel are other alloys. Stainless steel, which was developed in England, has a high tensile strength and resists abrasion and corrosion through its high chromium content. The United States, the USSR, and Great Britain are leading producers of steel
See J M Camp and C B Francis, *The Making, Shaping, and Treating of Steel* (5th ed , 1940)

Steele, Joel Dorman (stēl), 1836–86, American educator and textbook writer, b Lima, N Y , grad Genesee College (now Syracuse Univ), 1858 After teaching in Mexico, N Y , for three years, he served in the Civil War He later taught in Newark, N Y , and was principal of the Elmira (N Y) Free Academy from 1866 until 1872, when he resigned to devote his time to writing In 1867 he wrote *Fourteen Weeks in Chemistry*, the first of a series of science texts which did much to popularize the subject In collaboration with his wife he also wrote a number of unusually successful history texts, including *Barnes' Brief History of the United States* (1871)
See biography by A C Palmer (1900)

Steele, Sir Richard, 1672–1729, English essayist and playwright, b Dublin, Ireland He studied at Charterhouse and Oxford, entered the army (1694), and by the time he had risen to a captaincy (1700) had begun to write for publication *The Christian Hero*, a moral tract, appeared in 1701, followed by his first play, *The Funeral* (1702), an early example of sentimental comedy Other plays of Steele's were *The Lying Lover* (1703), *The Tender Husband* (1705), and the most popular of all, *The Conscious Lovers* (1722) Steele secured several minor government positions before he began the famous periodical the *Tatler* (1709–11), in the writing of which he was soon joined by Joseph Addison This was followed by the Spectator (1711–12), the *Guardian* (1713), and later periodicals of lesser importance Steele, a Whig partisan, carried on a celebrated controversy with Swift in 1713, in the course of which Steele wrote his pamphlet *The Crisis* In 1714 he became patentee and manager of Drury Lane Theatre and entered Parliament, from which he was expelled by political enemies, however, he returned in 1715 and was knighted His opposition to the Peerage Bill in his weekly, the *Plebeian* (1719), involved him in a quarrel with Addison just before the latter's death Steele began his last periodical, the *Theatre*, in 1720 Not long after *The Conscious Lovers* was performed, he became involved in financial difficulties and retired to Wales (1724), where he spent his remaining years in obscurity Although impulsive and improvident, Steele was a man of engaging personality and charm, these qualities are reflected in his prose, which, if it lacks some of the polished grace of Addison's prose, yet has the virtues of spontaneity, keen wit, and fertile invention, as may be seen especially in his periodical writing See his plays (ed by G A Aitken, 1894) and letters (ed by R B Johnson, 1927), biographies by Austin Dobson (1886), G A Aitken (1889), and Willard Connely (1934)

Steele, Wilbur Daniel, 1886–, American author, b Greensboro, N C , grad Univ of Denver, 1907, and studied art in Boston, Paris, and New York Collections of his distinguished short stories include *Urkey Island* (1926), *The Man Who Saw through Heaven* (1927), and *Best Stories* (1946) He has also written novels, including *Taboo* (1925) and *That Girl from Memphis* (1945), and collaborated in two plays, *Post Road* (1934) and *How Beautiful with Shoes* (1935),

Steele, city (pop 1,585), extreme SE Mo., near the Mississippi, in a farm area, inc. 1901. It has railroad shops and cotton gins.

steel engraving. see ENGRAVING.

Steeleville, village (pop 1,212), S Ill , SE of St Louis, in a farm and coal area, inc. 1851. Shoes and flour are made here.

steel square see SQUARE, STEEL.

Steelton, industrial borough (pop. 13,115), SE Pa , on the Susquehanna below Harrisburg, settled 1865. It produces steel, pig iron, and limestone The first practical production of Bessemer steel in America was begun here (1867).

Steelville, city (pop. 1,013), co. seat of Crawford co., S central Mo , near the Meramec E of Rolla, in a farm and resort area, founded 1835

steel wool, abrasive material composed of sharp steel shavings of varying degrees of fineness, whose ends curl up and mat together like excelsior or wool. It is used to polish wood or metal work in various manufacturing processes, such as plating or japanning metals, and in finishing furniture It is much used in kitchens for cleaning and polishing metals, especially aluminum utensils

steelyard. see BALANCE.

Steelyard, Merchants of the, German hanse or guild merchants (see Hanseatic League) residing at the Steelyard or German House on the Thames near the present Ironbridge Wharf at London, England. The first Hanseatic merchants in London were licensed (1157) by Henry II, who granted them extensive privileges which were widened (1194) by Richard I These merchants, who belonged to the hanse of Cologne, were granted freedom from all tolls and customs in the city of London and the right to trade at fairs throughout England The Steelyard Merchants of Lübeck and Hamburg were chartered in 1266 by Henry III and became the most powerful Hanseatic colony in London, with affiliated houses at many other English ports Their privileges drew them wide unpopularity, and after riots in 1492, during which the populace attacked the Steelyard, their privileges were temporarily curtailed However, it was only in 1597 that Queen Elizabeth expelled the German merchants from England and closed the Steelyard The Steelyard was a separate walled community, with its own warehouses, weighhouse, church, offices, and residential quarters

Steen, Jan (yän' stān'), 1626–79, Dutch genre painter, b Leiden, son of a brewer He studied in Utrecht and in Haarlem under Van Ostade and Van Goyen, whose daughter he married in 1649 He was admitted to the painters' guild of Haarlem in 1648 Steen appears to have alternated painting with brewing and in 1672 opened a tavern in Delft His huge production of paintings (over 400) would indicate that most of his life was devoted to his true calling and would seem to contradict the legend of drunkenness and dissipation His painting offers a composite picture of the social life of his day, almost every phase of which he penetrated Much of it is humorous or moralistic His favorite themes were scenes of revelry, whether in the tavern or in the home He was a superb draughtsman, and despite his love of the incidental, he handled his large groups of figures effectively and spontaneously His work is uneven, but there is life in it all Among his many notable works are *The Feast of St Nicolas*, *The Happy Family*, and *The Prince's Birthday* (Rijks Mus), *The Menagerie* and *The Painter's Family* (The Hague), and *Skittle Players* (National Gall , London). The Metropolitan and Brooklyn museums and the Art Institute of Chicago have fine examples

Steenkerke (stān'kĕr"kŭ), Fr *Steenkerque* (stān-kĕrk'), village (pop 432), Hainaut prov , Belgium, NE of Mons Here in 1692 the French under Marshal Luxembourg defeated William III of England in the War of the Grand Alliance

steeplebush. see HARDHACK

Steer, Philip Wilson, 1860–1942, English landscape painter, studied with Cabanel in Paris He exerted a strong influence on English art Examples of his paintings are *Richmond Castle, Yorkshire* (Metropolitan Mus), *Chepstow Castle, Music Room* (Tate Gall , London), self-portrait (Uffizi) See biography by D S MacColl (1945)

Steevens, George, 1736–1800, English scholar The Samuel Johnson-Steevens edition (1773) of Shakspere's plays is largely Steevens's work A later edition by Steevens, reissued with his additional notes by Isaac Reed in 1821, is the so-called first variorum Shakspere

Stefansson, Vilhjalmur (vĭl'hyoulmŭr stĕ'fŭnsŭn), 1879–, arctic explorer, b Canada, of Icelandic parents, educated at the Univ of North Dakota, the State Univ of Iowa, and Harvard He has led several expeditions of exploration and of ethnological and archaeological investigation in the arctic regions For supplies he relied much on local resources, and he adopted the Eskimo way of living, thus successfully demonstrating his theory that the rigors of existence in the arctic are much reduced by the use of such techniques He made two expeditions (1906–7, 1908–12) to the delta of the Mackenzie river and later (1913–18) widely explored the Canadian and Alaskan sectors of the arctic regions, making valuable contributions to knowledge of them His many books include *My Life with the Eskimo* (1913), *The Friendly Arctic* (1915, new enl ed , 1943), *Iceland* (1939), and *Greenland* (1942) He edited *Great Adventures and Explorations* (1947)

Steffe, William, American composer, reputedly the author of the tune to which the poem *Battle Hymn of the Republic*, by Julia Ward Howe, is sung

Steffens, Lincoln (Joseph Lincoln Steffens), (stĕ'fŭnz), 1866–1936, American editor and author, b San Francisco, grad Univ of California, 1889, and studied three years in Europe While he held (1902–11) successive editorial positions on *McClure's*, the *American*, and *Everybody's* magazines, he became a leading muckraker, writing sensational articles exposing municipal corruption; these were later collected in *The Shame of the Cities* (1904), *The Struggle for Self-Government* (1906), *Upbuilders* (1909), and other volumes His autobiography (1931) is an interesting account of his place in the American radical movement and of its leading personalities and events It is supplemented by his selected articles in *Lincoln Steffens Speaking* (1936) and by his letters (ed by Ella Winters and Granville Hicks, 2 vols , 1938)

Steger (stē'gur), village (pop 3,369), NE Ill , S of Chicago, inc 1896

Stegosaurus (stĕgŭsô'rŭs) [Gr , =roof lizard], quadruped vegetarian DINOSAUR It was about 20 ft long and weighed about 10 tons and had short fore-legs, two rows of upright bony plates on the back and spines on the tail The brain weighed about 2½ oz Complete skeletons were found in the Jurassic of Colorado and Wyoming

Steichen, Edward (stī'kun), 1879–, American photographer and painter, b Luxembourg, resident in the United States since 1882 His early paintings are in various museums, including the Metropolitan His pioneering work in photography has been widely acclaimed He was head photographer (1923–38) for the Condé Nast Publications, during the Second World War he served as captain and commanded the U S navy photographic department

Steilacoom (stī'lukŭm"), town (pop 832), W Wash , on Puget Sound S of Tacoma, founded c 1850, inc. 1854 It is the oldest incorporated settlement in the state and retains many historic landmarks A state hospital is here

Stein, Sir Aurel (Sir Mark Aurel Stein) (stīn), 1862–1943, English archaeologist and Orientalist, b Budapest. He went (1888) to India as principal of the Oriental College, Lahore In 1899 he entered the Indian Educational Service and from 1910 to 1929 was special officer of the Indian Archaeological Survey After 1899 he conducted scientific expeditions in Persia, central Asia, and W China and on India's northwest frontier He was knighted in 1912 His writings include *Innermost Asia* (1928), *On Alexander's Track to the Indus* (1929), *On Asian Central-Asian Tracks* (1933), and *Old Routes of Western Iran* (1940)

Stein, Charlotte von (sharlô'tu fŭn shtīn'), 1742–1827, German noblewoman, maid of honor to the duchess Anna Amalia of Saxe-Weimar She is noted for her friendship with Goethe After a separation from him, she wrote a tragedy, *Dido* (1794)

Stein, Gertrude (stīn), 1874–1946, American author, b Allegheny (now part of Pittsburgh), studied at Radcliffe (1893–97) and studied medicine at Johns Hopkins After 1903 she lived chiefly in Paris, and her influence through her salon and her criticisms on the development of subjective realism in the arts, especially in American letters, was probably as important as her own writing She attempted to use words to express the immediate present in a revitalized style, the result, in her own work, is a repetitious, colloquial impressionism—"a rose is a rose is a rose"—denounced by her critics as obscure Her works include *Three Lives* (1909), short stories, *Tender Buttons* (1914), poems, *The Making of Americans* (1925), a novel, *Portraits and Prayers* (1934), art criticism, and *Four Saints in Three Acts* (1934) and *The Mother of Us All* (1947), operas, both with music by Virgil Thomson Her books of memories are *The Autobiography of Alice B Toklas* (1933), written as if by her secretary-companion, *Everybody's Autobiography* (1937), *Paris France* (1940), and *Wars I Have Seen* (1945)
See W G. Rogers, *When This You See Remember Me* (1948)

Stein, Karl, Freiherr vom und zum (karl' frī'hĕr fŭm" ōnt tsōm" shtīn'), 1757–1831, Prussian statesman and reformer He was minister of commerce (1804–7), was dismissed by King Frederick William III for his attempts to increase the power of the cabinet, and was recalled (1807) as prime minister only to be dismissed again (1808) on pressure by Napoleon I An exile in Russia, Stein helped to bring about the Russo-Prussian alliance of 1813 and returned to prominence as chief administrator of the reconquered and newly conquered Prussian provinces His hopes for a united Germany were disappointed at the Congress of Vienna, and his role after 1815, when Prussia turned to reaction, was not prominent Few men have achieved as many radical and successful reforms in as peaceful a manner and in as difficult circumstances as did Baron Stein His chief reforms were carried out in 1807–8, when Prussia was a defeated nation and a virtual dependency of France They were continued by K A von Hardenberg after Stein's exile, and they were forwarded by such men as Scharnhorst in the military field and Karl Wilhelm von Humboldt in the educational system Before Stein's reforms Prussia was still a semifeudal state Stein caused the king to abolish serfdom (1807) and the class system His agrarian reform ended the restrictions against the sale to burghers of land owned by nobles, these restrictions had had disastrous effects on Prussian economy, for the nobles lacked the capital to till their land properly The Edict of Emancipation of 1807

not only freed the serfs, but also opened all trades and professions to all classes The emancipation of the Jews was begun in 1808 and carried further in 1812 Stein furthermore abolished internal customs barriers and instituted local self-government in towns, cities, and provinces His administration transformed Prussia into a modern state and enabled it to play its leading role in the eventual unification of Germany See biographies by Sir John A Seeley (2 vols, 1879), Max Lehmann (3 vols, 1902-5, in German), and Constantin de Grunwald (Eng tr, 1936), G S Ford, *Stein and the Era of Reform in Prussia* (1922)

Stein, Lorenz von (lō'rĕnts fŭn shtīn'), 1815–90, German economist and sociologist He studied jurisprudence at the Univ of Kiel and at Paris and taught (1846–51) at the Univ of Kiel, but his advocacy of independence for his native Schleswig caused his dismissal From 1855 until his death he taught at the Univ of Vienna He influenced the practice of public finance but is perhaps best known for his history of the social movement in France (3 vols, 1850), which in its first edition (1842) was a study of French socialism and communism

Steinach, Eugen (oigān' shtī'nakh), 1861–1944, Austrian physiologist He was professor (1907–18) at the Univ of Prague, then director of the biological institute of the Academy of Sciences, Vienna, until 1938 He studied the influence of sex glands in vertebrates and experimented in retarding senility by several methods including transplantation of, or operations upon, the sex glands and injections of sex hormones He wrote *Sex and Life* (1940)

Steinamanger, Hungary see SZOMBATHELY

Steinbeck, John Ernst (stīn'bĕk), 1902–, American author, b Salinas, Calif, studied at Stanford His first three novels, *Cup of Gold a Life of Henry Morgan, Buccaneer* (1929), *Pastures of Heaven* (related short stories, 1932), and *To a God Unknown* (1933), attracted little attention, but after *Tortilla Flat* (1935) and *In Dubious Battle* (1936) his work—largely about the tragicomedy of the proletariat—was widely read *Of Mice and Men* (1937) was successfully dramatized It was followed by short stories collected in *The Long Valley* (1938) His best-known novel is *The Grapes of Wrath* (1939), a sympathetic story of American migrant workers, victims of the Dust Bowl, which was awarded the 1940 Pulitzer Prize and was later made into a successful moving picture *The Forgotten Village* (1941) is the text for a film of Mexican life, and *Sea of Cortez* (with E F Ricketts, 1941) is a journal of a trip His wartime novel *The Moon Is Down* (1942) was also made into a play and a film Later works have been *Cannery Row* (1944), *The Wayward Bus* (1947), *The Pearl* (1947), and *Russian Journal* (with photographs by Robert Capa, 1948)

Steiner, Edward Alfred (stī'nur), 1866–, American educator, clergyman, and writer, grad Univ of Heidelberg, 1885, B D Oberlin, 1891 After holding several pastorates he became professor of applied Christianity at Iowa College (now Grinnell College), Grinnell, Iowa His writings, chiefly on the social problems of the immigrant, include *The Immigrant Tide* (1909) and the autobiographical *From Alien to Citizen* (1914)

Steiner, Jakob (yä'kôp shtī'nŭr), 1796–1863, Swiss mathematician He was professor of geometry at the Univ of Berlin from 1834 and a pioneer in the development of synthetic geometry

Steiner, Rudolf (rōō'dôlf shtī'nur), 1861–1925, German philosopher and occultist When the German Theosophic Association was founded in 1902, he was one of its leaders In time he abandoned theosophy and developed a "spiritual science" of his own, which he called anthroposophy His works are concerned with an explanation of the world in terms of the nature of man Translations include *Investigations in Occultism* (1920) and *Philosophy of Spiritual Activity* (1922) He also wrote many works on Goethe See his *Story of My Life* (1928)

Steinitz, Wilhelm (vĭl'hĕlm shtī'nĭts), 1836–1900, German chess player In 1886 he won a match from Andersson, the leading player after Morphy's retirement, and became world champion, although the title did not officially exist Until 1892, when he lost to Harry Nelson Pillsbury, he defeated all the leading players In 1894 he lost the world championship to Emanuel Lasker The closed position, characterized by fixed pawns on both sides and the establishment of lasting positional values, was his forte He edited (1885–91) the *International Chess Magazine* in New York city and wrote *The Modern Chess Instructor* (1889)

Steinmetz, Charles Proteus (stīn'mĕts), 1865–1923, American electrical engineer, b Breslau, Germany, studied at the Univ of Breslau Forced to flee Germany because of his socialist activities, he came to the United States in 1889 Rudolf Eickemeyer, who had just begun to build electrical apparatus in his factory in Yonkers, N Y, gave him his start in electrical engineering research When the General Electric Company bought out Eickemeyer in 1892, Steinmetz went with the new owners He discovered the law of hysteresis, which made it possible to reduce the loss of efficiency in electrical apparatus resulting from alternating magnetism; developed a practical method of making calculations of alternating current, and did valuable research on transient electrical phenomena (lightning) He built a generator which produced artificial lightning Professor (1902–23) at Union College, Schenectady, Steinmetz wrote numerous technical works He remained a socialist and was president of the Schenectady board of education (1912–23) and of the common council (1910–23) See biographies by J W Hammond (1924) and J. N. Leonard (1929)

stele (stē'lē), slab, usually oblong, not forming part of a structure but set up in a vertical position, for votive purposes or as a memorial of some person or event Upon the slabs were carved inscriptions accompanied by ornamental designs or reliefs of particular significance In ancient Egypt frequent use was made of this form of commemorative stone, and some examples of early Chaldean workmanship are in museums The marble funerary steles of Greece, especially of Athens, are among the most beautiful monuments of classic art Upon them, as a rule, were likenesses of the departed, sculptured in relief and painted Other notable steles of great age are found in China and among the cultural remains of the Maya in Mexico and Central America

Stella, poetical name used by several writers for the loved ones they celebrated Most famous in English literature are the Stella of the sonnets of Sir Philip SIDNEY, who was Penelope Devereux, daughter of the 1st earl of Essex, and the Stella of Jonathan SWIFT, who was Esther Johnson, perhaps the natural daughter of Sir William Temple

Stellarton (stē'lŭrtun), town (pop 5,351), N N S, just S of New Glasgow It is a coal-mining center and has railroad repair shops and steel-products plants Originally named Albion Mines, it was renamed and incorporated in 1889

Stellenbosch (stē'lunbŏsh, -bōs), town (pop 15,392), W Cape Prov, Union of South Africa, founded 1679 It is on a railroad to Capetown Here are Stellenbosch Univ and other institutions of higher learning

Steller, Georg Wilhelm (gā'ôrk vĭl'hĕlm shtē'lŭr), 1709–46, German naturalist, whose name was originally Stöhler An adjunct of the St Petersburg Academy of Sciences, he was assigned to the scientific staff of Vitus Bering's second expedition He made extensive observations and collections on his journey through Siberia (1738–40) and in Kamchatka (1740–41, 1742–44) He discovered several species, especially of fish and of plants Accompanying Bering as surgeon on the *St Peter* (1741–42), he was the first naturalist in Alaska, where he was the first white man to visit Kayak Island, while wintering on Bering Island he made the first exhaustive descriptions of the N Pacific sea cow, sea lion, and fur seal His journal (Eng tr, 1925) is a valuable source on Bering's second voyage See biography by Leonhard Stejneger (1936)

stellite, steel alloy consisting of cobalt, chromium, wolfram (tungsten), and small quantities of carbon and iron Its outstanding property is high retention of hardness and strength when hot Stellite is highly resistant to corrosion and is fitted for use in instruments where the reflecting power of polished surfaces must be good Developed c 1913 by Elwood Haynes, it finds wide use in machine parts, cutlery, and high-speed tools

Stelvio Pass (stĕl'vyō), Ger *Stilfser Joch* (shtĭlf' sur yŏkh'), 9,050 ft high, Italy, in the central Alps near the Swiss border It is crossed by the highest road in the Alps, connecting the Valtellina with the upper Adige valley Near the pass a road branches off, leading northwest into the lower Engadine, Switzerland

stem, that part of a plant to which all the other parts are attached, i e, leaves, roots, and floral parts The region at which a leaf is attached to the stem is called a node, and the segment between adjacent nodes is termed an internode Corn and bamboo stems have very prominent nodes whereas others, such as trees, show nodes only on the young branch tips The stem transports food downward from the leaves to the roots and carries water and minerals upward to the branches and leaves In woody plants it also serves to store food and water Some plants, e g, most cacti, bear no leaves—the stems being modified into enlarged, fleshy green structures well adapted for retaining moisture in desert conditions Some plants have underground stems that are differentiated as bulbs, corms, tubers, or rhizomes These enable the plant to survive the winter season, since herbaceous plant stems die back each year Woody plant stems remain alive from year to year and increase in girth It is by the stems (trunks) of trees that their age is reckoned, each ring in a cross section of the wood usually representing a year's growth In many plants the growing tip weaves in a circle as it grows forward because of the rotation of the region of elongation around the stem It is this phenomenon which enables many climbing plants to twine around a support In some plants the stem may be prostrate.

Stenbock, Count Magnus (māng'nŭs stän'bŏk), 1665–1717, Swedish field marshal. One of the ablest lieutenants of Charles XII in the Northern War, he helped to defeat Peter I of Russia at Narva (1700), crushed a Danish expedition at Halsingborg (1710), and invaded Holstein (1713) Outnumbered, he was forced to surrender in the same year and died in Danish captivity

stencil, cut-out device of oiled or shellacked tough and resistant paper, thin metal, or other material used in applying paint, dye, or ink to reproduce its design or lettering upon a surface Designing an art stencil differs from ordinary drawing, since the design itself must be cut away, and ties must be arranged to hold the background together for workability and to give definition to the pattern, somewhat in the manner of lines in mosaic or leaded glass In a border or design having a repeat, registers are cut to coincide with some small detail or dot to enable the user to place the stencil accurately for each repetition It is held securely upon the surface, while the stencil brush (with square-cut stiff bristles) is manipulated to work the medium over it (in a circular movement for fabrics) until every detail is evenly colored The technique has been employed since ancient times for the decoration of walls and ceilings, pottery, furniture, textiles, leather, and small objects It is used also in mimeographing, addressing, and lettering cases or cartons for shipping The Chinese and Japanese are adept at designing, making, and using the stencil, employing a tough mulberry paper and, for ties in fine patterns, human hair that will not show in the finished work So intricate and exquisite are many of their stencils that they are collected for their beauty of design and drawing Silk-screen printing is a stencil process used in the 20th cent for posters, wallpapers, and textiles Silk fabric stretched on a frame is coated with glue or other impervious material, a stencil paste, rubbed on with a squeegee, passes through the uncoated portions The method has been adapted by artists to make prints known as serigraphs See F N Vanderwalker, *New Stencils and Their Use* (1948)

Stendal (shtĕn'dal), town (pop 40,325), in the former Saxony prov of Prussia, after 1945 in Saxony-Anhalt, N central Germany, NNE of Magdeburg and near the Elbe It is a food-processing and sugar-refining center Founded in 1151 by Albert the Bear, it was (1258–1309) the seat of the elder line of the Ascanian margraves of Brandenburg and joined the Hanseatic League c 1350 Among the numerous ancient buildings of Stendal are the basilica (founded 1188), the city gates (13th-15th cent), and the city hall (15th cent) Winckelmann was born here and Beyle took his pen name Stendhal from the city

Stendhal (städal'), pseud of **Marie Henri Beyle** (märē' ārē' bāl'), 1783–1842, French novelist and miscellaneous writer, b Grenoble He grew up hating his father and went to Paris at his earliest opportunity There influential relatives obtained a place for him at the ministry of war In 1800 he became a dragoon in Napoleon's army, and the invasion of Italy took him to Milan, a city which he continued always to love A courageous soldier, he went through the Prussian campaign In 1802 he was back in Paris, where he pursued the amorous adventures which continued all his life to interest him He read widely at this time and kept notes and journals which have been published He was again with Napoleon's army in the disastrous Russian campaign (1812) One curious result of his army career was his use of military terms to describe his pursuit of love With Napoleon's fall in 1814, Stendhal lost his official status He went to Milan, remaining there until 1820 There he began his literary career In *Haydn, Mozart, et Métastase* (1814) and *Rome, Naples, et Florence* (1817), he borrowed facts freely from other writers, but the point of view and wit were his own. His books were better known in England than in France, and from c 1817 he wrote for British journals In this period, when he was suffering from his most genuine and most unhappy love affair (the object of his suit was the Countess Metilda Dembowski), he wrote his searching study of love, *De l'amour* (1822), a psychological analysis that predates Freud Stendhal's first novel, *Armance* (1827), was scorned by the critics In 1830 appeared the first of his two greatest novels, *Le Rouge et le noir* (Eng tr *The Red and the Black*) It is, baldly, the story of a youth, Julien Sorel, guillotined for shooting his mistress, but its sympathetic and acute character analysis and its picture of the period make it one of the world's great novels After the accession of Louis Philippe in 1830, Stendhal was appointed consul at Trieste, Metternich, however, objected to his appointment both because of his books and because of his liberal ideas, he was therefore shifted to Civitavecchia in 1831 He wrote constantly here, but did not publish, among these works are *Souvenirs d'egotisme* and *La Vie d'Henri Brulard*, both autobiographical, and *Lucien Leuwen*, a novel In 1836 he obtained a three-year leave of absence, which he spent in Paris or in traveling about France In this period he wrote what many consider his greatest novel, *La Chartreuse de Parme* (1839), translated as *The Charterhouse of Parma*, with a plot from the Renaissance but laid in Italy

of the 1830s He went back to Civitavecchia in 1839, there to write part of another novel, *Samel*. He returned to Paris a few months before his death. In the late 1880s, nearly 50 years after his death, his unprinted works were discovered and published. With the revival of interest in him, his reputation was established as one of the great French novelists His major works have appeared in various English translations See translations of his autobiographies, *The Life of Henri Brulard* (1939) and *Memoirs of Egotism* (1949), biographies by A. A Paton (1874), Paul Hazard (Eng tr, 1929), F C Green (1939), and Matthew Josephson (1946)

Stenness (stĕnĕs'), locality on Pomona, Orkney Islands, Scotland, near Kirkwall. Here are the megalithic Standing Stones of Stenness, comprising two circles One was originally of 12 stones, of which 4 remain, the larger (the Ring of Brogar) probably had 60 stones originally, of which 36 remain

Steno, Nicolaus (nĭkōlā'ŭs stē'nō), Latinized form of **Niels Stensen** (nēls' stăn'sun), 1638–86, Danish scientist and Roman Catholic prelate He lived principally in Copenhagen, Paris, and Florence He investigated the muscular and glandular systems and discovered (1661) the excretory duct (duct of Steno) of the parotid gland (one of the pairs of salivary glands) In *The Prodromus* (1669, Eng tr, 1916) he recorded his studies of crystallization and his theories on the origin of geological strata and of fossils Converted from Lutheranism to Roman Catholicism (1667), he became a priest (1675) and virtually abandoned scientific work As vicar apostolic (from 1677) in N Europe, he devoted himself to missionary work

stenography see SHORTHAND

Stensen, Niels. see STENO, NICOLAUS

Stentor (stĕn'tôr), Greek herald in the Trojan War His voice was as loud as the voices of 50 men.

Stepanakert (styĕ'punŭkyĕrt'), city (1944 pop over 10,000), capital of Mountain-Karabakh Autonomous Oblast, Azerbaijan SSR Silk, wine, and food are processed here The city developed in the 1930s and replaced the older Shusha, which is near by

Stephan, Heinrich von (hīn'rĭkh fŭn stē'făn), 1831–97, German statesman He entered postal service at 16 and became the first postmaster general of the German Empire His innovations included post cards, parcel post, and money orders He was the chief founder of the Universal Postal Union

Stephanas (stē'funus), Corinthian Christian, companion of Paul 1 Cor 1 16, 16 15–17

Stephanus, family of printers see ESTIENNE

Stephen, Saint (stē'vŭn) [Gr, =garland], d A D 36?, first Christian martyr, stoned at Jerusalem He was one of the seven deacons Acts 6, 7 The Vatican contains frescoes on St Stephen by Fra Angelico Feasts Martyrdom on Dec 26, probably chosen to honor the first martyr the day after Christmas, Finding of St Stephen's Body (4th cent) on Aug 3

Stephen, Saint, or **Stephen I,** 969-1038, duke (997–1001) and first king (1001–38) of Hungary, called the Apostle of Hungary The Hungarian state may be said to date from his reign He continued the Christianization policy of his father, Duke Geza, and put down revolts by pagan nobles, who also opposed his pro-German policy Married to a German princess, Stephen favored German immigration and modeled his administration on that of the German kings He divided Hungary into counties, governed by royal officials, to prevent abuses by the nobles He was named by the pope apostolic king, a title his successors bore His crown, sent to him by Pope Sylvester II, remained through the centuries the sacred symbol of Hungarian national existence Although in the Roman calendar his feast is Sept 2, it is Aug 20, anniversary of the removal of his remains to a shrine, that is celebrated in Hungary as a great national holiday

Stephen, 1097?–1154, king of England (1135–54) The son of Stephen Henry, count of Blois and Chartres, and of Adela, daughter of William the Conqueror, Stephen was brought up by his uncle, HENRY I of England, who knighted him, presented him with estates in England and France, and arranged his marriage to Matilda of Boulogne In 1126 Stephen headed the group of English barons who swore fealty to Henry's daughter, also named MATILDA, as Henry's successor to the throne This oath was renewed in 1131 and 1133, but on Henry's death (1135) Stephen hastened to London, secured support, and was proclaimed king He was able to secure papal ratification and announced generous terms, but his reign was a long and constant struggle to maintain his throne He was continually forced to lead in the suppression of revolts in the west and the south In the Battle of the Standard (1138) a royal army defeated the invading force of David I of Scotland, but the ensuing treaty (1139) was entirely favorable to Scotland Stephen's acquiescence in the excessive demands of the high clergy and the great barons and his desire to create a royalist party led him to confiscate lands of unfriendly barons in order to bestow them on other and friendlier lords When the powerful bishops of Salisbury, Ely, and Lincoln refused to surrender their castles, he arrested them and offered them personal violence He further alienated the clergy by threatening them The leader of Matilda's party was her half brother Robert, earl of GLOUCESTER, the greatest of the barons In 1139 Matilda and Robert landed in England, and an era of internal strife began, it was to last until 1153 While besieging Lincoln Castle in 1141 Stephen was captured and Matilda reigned for a short time as "Lady of the English" Matilda's arrogance soon lost her support, and after Earl Robert's capture she was forced to exchange Stephen for him Stephen regained his throne and drove Matilda back into the western shires (1142) Virtual anarchy followed for five years, W and central England was devastated, while in France Matilda's husband, GEOFFREY IV (Geoffrey Plantagenet), conquered Normandy In 1147, however, Earl Robert died and Matilda soon left England (1148) In 1149 Henry of Anjou (later HENRY II), Matilda's son, crossed to England and attempted unsuccessfully to further his mother's (and his own) cause Stephen had again offended the clergy by quarreling with Archbishop Theobald, and the clerics refused to confirm his son Eustace as successor to the throne When Eustace died, Stephen bowed to the inevitable and concluded a treaty (1153) by which Henry was named as his heir Stephen exhibited great courage in battle but little tactical skill His diplomatic efforts generally ended in failure, and his policy of concessions to gain supporters proved to be ruinous His personal character was generous, open, and frank, but he lacked the strength to face successfully the turmoil of his reign See Kate Norgate, *England under the Angevin Kings* (1887), G B Adams, *History of England, 1066–1216* (1905), H W C DAVIS, *England under the Normans and Angevins* (1930)

Stephen, I, king of Hungary see STEPHEN, SAINT (969–1038)

Stephen V, 1239–72, king of Hungary (1270–72), son and successor of Bela IV He ruled part of the duchy of Styria, contested between Bela and Ottocar II of Bohemia, from 1254 to 1259 After the Hungarian defeat (1260) on the Marchfeld, where Stephen was wounded, all of Styria passed to Ottocar Stephen rebelled against his father and in 1262 forced him to share the kingdom After an invasion (1268) of Bulgaria, Stephen took the title king of Bulgaria He secured alliances by marrying his children into the ruling families of Naples, Byzantium, and other powers, and in 1271 he repulsed an invasion by Ottocar He was succeeded by his son, Ladislaus IV

Stephen, George see MOUNT STEPHEN, GEORGE STEPHEN, 1ST BARON

Stephen, Sir James Fitzjames, 1829–94, English jurist and journalist, brother of Sir Leslie Stephen He was educated at Eton and Cambridge and was admitted to the bar in 1854 After 1855 he wrote many articles on ethics, literature, and current topics for periodicals, and he was (1865–70) an important contributor to the *Pall Mall Gazette* The study of jurisprudence, however, was his chief interest He wrote *A General View of the Criminal Law* (1863) to expose certain legal anomalies He served (1869–72) as the legal member of the viceroy's council in India, preparing codifications (which were adopted) of the law relating to contracts, crimes, and evidence Parliament, however, never enacted his proposed codifications of English criminal law Stephen contrasted what he considered the efficient British rule of India with the inept government at home, and in *Liberty, Equality, Fraternity* (2d ed, 1874) he deplored the expansion of democracy in place of autocratic government Stephen was (1879–91) a criminal judge His greatest work is his *History of the Criminal Law of England* (1883) See biography by Leslie Stephen (1895)

Stephen, Sir Leslie, 1832–1904, English man of letters and philosopher He was educated at Eton, King's College (London), and Cambridge and took holy orders His interest in mountain climbing is shown by his many ascents and his numerous writings on the subject, many of which were collected in *The Playground of Europe* (1871) As a tutor at Cambridge his philosophical readings led him to skepticism In 1864 he moved from Cambridge to London and in 1867 married Harriet Marian, younger daughter of Thackeray Some of the essays and sketches Stephen wrote for the *Saturday Review, Pall Mall Gazette, Fraser's Magazine, Fortnightly Review,* and *Cornhill Magazine* were collected in *Hours in a Library* (1874–79) From 1871 to 1882 he edited the *Cornhill* Stephen was editor of the great *Dictionary of National Biography* from its beginning in 1882 until 1891, when he was succeeded by Sidney LEE His major works include *History of English Thought in the Eighteenth Century* (1876), biographies of Johnson (1878), Pope (1880), Swift (1882), George Eliot (1902), and Hobbes (1904), all written for the "English Men of Letters" series, *Studies of a Biographer* (1898–1902), and *The English Utilitarians* (1900) Stephen's friends included Hardy, Henley, Stevenson, Henry James, James Russell Lowell, Oliver Wendell Holmes, and many others His youngest daughter by his second wife was Virginia Woolf. See biography by F. W. Maitland (1906).

Stephen Bathory (bā'tôrĭ), Hung *Báthory István* (ĭst'vän), Pol *Stefan Batory* (stĕ'făn bā-tôrĭ), 1533–86, king of Poland (1575–86), prince of Transylvania (1571–75), son of Stephen BATHORY (1477–1534) He was elected to succeed John II (John Sigismund Zapolya) as prince of Transylvania In Poland, he was elected by a majority to succeed Henry of Valois (Henry III of France), who had left Poland in 1574 A minority voted for Emperor Maximilian II, who died before he could make good his claim As had been stipulated by the Polish diet, Stephen married Anna, daughter of Sigismund II, the last Jagello king of Poland Transylvania he made over to his brother Christopher Bathory With his chancellor, Jan ZAMOJSKI, Stephen fought several successful campaigns against Ivan IV of Russia in the long-drawn war for the succession to LIVONIA. Peace was made in 1582 through papal mediation, and Poland retained Polotsk and its part of Livonia Toward the end of his reign Stephen Bathory planned a Christian alliance against the Turks He also schemed to make Russia a vassal state of Poland—a project which he considered a necessary step for his anti-Turkish crusade He introduced the Society of Jesus into Poland in order to foster the Catholic Reform, and he effected useful judiciary reforms After his death Sigismund III, a Swede, was elected king

Stephen Dushan, Serbo-Croatian *Stefan Dušan* (stĕ'făn dōō'shan), c 1308–1355, king (1331–46) and tsar (1346–55) of Serbia, son of Stephen UROS III He is also known as Stephen Uros IV He was proclaimed king after rebelling against his father, whom he had imprisoned and strangled He reduced Bulgaria to dependency, gained the support of the prince of Walachia, and, taking advantage of the war between the rival Byzantine emperors, JOHN V and JOHN VI, conquered Macedonia (except Salonica), Thessaly, and Epirus After raising the archbishop of Serbia to the rank of patriarch, with his seat at Pec, he had himself crowned (1346), at Skoplje, "tsar and autocrat of the Serbs, Greeks, Bulgarians, and Albanians" by the patriarch of Ipek and by the Bulgarian patriarch of Trnovo He introduced Byzantine titles and ceremony into his court and published (1349) a law code for his empire He later was involved in indecisive warfare against Bosnia and Louis I of Hungary, but in 1355, on the news of the fall of Emperor John VI, he decided to march on Constantinople He died of fever on the march Stephen Dushan was one of the great conquerors in European history His ambitions had no limits, his methods were ruthless, and his appearance is said to have been imposing and terrible Under his rule Serbia attained its greatest extent and glory However, his empire lacked unity and fell apart soon after his death

Stephen Harding, Saint, d 1134, English monastic reformer He entered the abbey at Sherborne in his youth, later (c 1077) he went to the Molesme abbey (near Chatillon-sur-Seine) in Burgundy In 1098 he joined his abbot, St Robert (d 1111), in founding at Cîteaux a new abbey, where the Rule of St Benedict might be observed in primitive rigor Stephen was abbot there from c 1109 and from his abbacy date the CISTERCIANS, the spirit and organization of that order reflect St Stephen's ideas These are embodied in the Chart of Charity (c 1119), this, the main Cistercian constitutional paper, is a landmark in the course of Western monasticism He supported with paternal affection the work of St BERNARD OF CLAIRVAUX Feast April 17, among Cistercians, July 16 See Father Raymond, *Saga of Cîteaux First Epoch* (3d ed, 1945)

Stephens, Alexander Hamilton (stē'vunz), 1812–83, American statesman, vice president of the Confederacy (1861–65), b Taliaferro co, Ga (then part of Wilkes co), grad Univ of Georgia, 1832 He was admitted to the bar in 1834, served six terms in the Georgia legislature, and was in Congress from 1843 to 1859 Stephens, a Whig, favored the annexation of Texas but, unlike most Southerners, opposed the Mexican War Howell COBB, Robert TOOMBS, and Stephens were influential in having Georgia accept the Compromise of 1850, and with them he organized in Georgia the short-lived Constitutional Union party After the disappearance of the Whigs as a party he became a Democrat He voted against secession in the Georgia convention of 1861, but accepted his state's decision and was a delegate to the convention in Montgomery, where the Confederacy was born As vice president, Stephens consistently opposed the policies of Jefferson DAVIS, objecting, among other things, to conscription and the suspension of the writ of habeas corpus An early advocate of peace, he was one of three Confederate commissioners to the HAMPTON ROADS PEACE CONFERENCE After the Civil War he was arrested and interned in Fort Warren, Boston Released early in 1866, he was elected to the U S Senate but was not allowed to take his seat He then applied himself to the writing of his *Constitutional View of the War between the States* (2 vols; 1868–70), considered the ablest defense of the right of secession He was in Congress again from 1873 to 1882, when he was

elected governor of Georgia. See biographies by Louis Pendleton (1908) and Rudolph Von Abele (1946), B J Hendrick, *Statesmen of the Lost Cause* (1939)

Stephens, James, 1882–, Irish poet and novelist. Stephens was discovered and brought forward by G W Russell (A. E.) into a leading place in the Irish renaissance Stephens's fanciful poetry includes *Insurrections* (1909), *Songs from the Clay* (1915), and *Kings and the Moon* (1938) His best-known novels, which combine fairy lore or Irish legend and everyday life, are *The Crock of Gold* (1912), *The Demi-Gods* (1914), *Deirdre* (1923), and *In the Land of Youth* (1924) His *Irish Fairy Tales* (1920) are charming stories told ostensibly for children

Stephens, John Lloyd, 1805–52, American author and traveler, b Shrewsbury, N J , grad. Columbia, 1822 From 1825 to 1834 he practiced law in New York city He traveled (1834–36) in Europe and the Near East, writing a series of descriptive letters which appeared in the *American Monthly Magazine* He later wrote his popular *Incidents of Travel in Egypt, Arabia, Petraea, and the Holy Land* (1837) and *Incidents of Travel in Greece, Turkey, Russia, and Poland* (1838) His two important amateur archaeological trips to Central America are reported in *Incidents of Travel in Central America, Chiapas, and Yucatan* (1841) and *Incidents of Travel in Yucatan* (1843) The last seven years of his life he devoted to organising and laying out the Panama RR, and he chose the Chagres river as the best route for a transisthmian canal See V W von Hagen, *Maya Explorer* (1947).

Stephens, William, 1671–1753, president of Georgia (1743–50), b Bowcombe, Isle of Wight He was educated at Cambridge and served in Parliament (1720–22) The Georgia trustees appointed him secretary of the colony in 1737, and on Oglethorpe's recall to England he became president See his *Journal of the Proceedings of Georgia* (1906)

Stephens College, at Columbia, Mo , Baptist, for women, chartered and opened 1833 as Columbia Female Academy, called Stephens Female College 1870–1917 It became a junior college in 1911 and added two secondary years in 1927 Its curriculum, experimental and individualised, is organised around required survey courses The college has an institute for consumer research and a noted drama department.

Stephenson, George (stē'vənsŭn), 1781–1848, English engineer, noted as a locomotive builder He learned to read and write in night school at the age of 18, while working in a colliery He constructed (1814) a traveling engine or locomotive to haul coal from mines and in 1815 built the first locomotive to use the steam blast He also devised (c 1815) a miner's safety lamp at about the same time as did Sir Humphry Davy, whose lamp was adopted in 1816, it embodied some features of the Davy lamp and is considered by some to have antedated Davy's invention His locomotive the *Rocket* bested the others in a contest in 1829 and was used on the Liverpool-Manchester Railway He became engineer for several of the railroads that rapidly grew up and was consulted in the building of railroads and bridges in England and in other countries His son *Robert Stephenson*, 1803–59, and a nephew, *George Robert Stephenson*, 1819–1905, were also railroad engineers

Stephen the Great, d 1504, prince of Moldavia (1457–1504) Although he had been helped to his throne by Vlad the Impaler, prince of Walachia, he attacked and defeated Vlad in 1462, while Vlad was fighting the Turks, and made Walachia a dependency of Moldavia He later waged war on the Turks, whom he routed (1475) at Racova by the device of confusing the enemy with a dummy army, made of wood His victory won him wide acclaim throughout Christendom, but at the end of his reign Stephen realized that Moldavia could not resist Turkish pressure indefinitely It was probably on Stephen's deathbed advice that his son and successor, Bogdan, purchased (1513) the continued existence of his principality by paying tribute to the sultan. Despite the ephemeral glory of his reign, Stephen, through his rivalry with Walachia, helped to bring about the subjugation of the two sister principalities by the Turks

Stephenville, city (1940 pop 4,768, 1947 estimated pop 6,500), co seat of Erath co , N central Texas, on the Bosque and SW of Fort Worth, founded 1856, inc 1888 It processes the produce of the region's farms, orchards, dairies, and pecan groves John Tarleton Agricultural College, a junior branch of the Agricultural and Mechanical College of Texas, is here

Stepney (stĕp'nē), metropolitan borough (1931 pop 225,238, 1948 estimated pop. 99,470) of E London, England. It is mainly an industrial district and suffered much air-raid damage in 1940–41 The borough includes Whitechapel, the Jewish section, Limehouse, Wapping, the Tower of London; Toynbee Hall, the first university settlement in London, London Hospital (founded 1740); the People's Palace (1887); and Queen Mary College (Univ. of London). At Mile End, Richard II parleyed with Wat Tyler.

Stepniak, S. (styĭpnyäk'), 1852–95, Russian revolutionist and writer, whose real name was Sergei Mikhailovich Kravchinski (sĭrgā' mĭkhī'lŭvĭch krŭfchĭn'skē). He fled Russia after taking part in the assassination of the tsarist chief of police and spent most of his life abroad. He wrote a great many propaganda stories in the guise of fairy tales, but is best known for his *Underground Russia* (written in Italian) and *The Career of a Nihilist, or, Andrei Kozhukhov* (1889), which he wrote in English He was killed in London by a locomotive

steppe (stĕp), level, treeless plain of the S and SE European USSR and of the SW Asiatic USSR Though it was originally grassland used almost exclusively for grazing, it is now almost entirely under cultivation The climate is dry and continental, although parts of the Russian steppe—e.g., the S Ukraine—have very fertile soil, crops are often destroyed by drought The former Puszta of Hungary is similar to the Russian steppe, as are the prairies in the United States, the Pampa in Argentina, and other regions in middle latitudes Some of the world's most productive agricultural districts, such as the Ukraine and the U S wheat belt, are situated in steppe country.

stereopticon (stĕrēŏp'tĭkun), improved form of the magic lantern, for throwing upon a wall or screen a magnified image of an object, e g , a drawing, a microscopic slide, a photograph, or a page of a book Moving pictures utilize principles applied in the stereopticon

stereoscope (stĕ'rēuskōp"), optical instrument that unites two similar but suitably differing pictures so as to give one using the instrument the impression of the third dimension, depth One looking directly at objects is given the impression of depth because the mental image is a composite of what the two eyes see separately, from slightly different positions A photograph shows no more than what one eye sees In the familiar stereoscopic view, two photographs, taken from positions related approximately as the positions of a person's two eyes, are placed side by side The stereoscope combines these two photographs into a composite that has depth Scientists, among them Sir Charles Wheatstone, in 1838, and James Eliot, in 1839, constructed stereoscopes for use with drawings, but suitable views were not generally available until the development of photography In 1849 Sir David Brewster improved the stereoscope and invented the double camera for taking stereoscopic views Dr Oliver Wendell Holmes invented the kind of stereoscope that became popular in America From that time until the phonograph and the radio offered successful competition in home entertainment, a stereoscope with a collection of stereoscopic views was a usual part of the equipment of a home The principle of the stereoscope is applied in binocular field glasses and microscopes

stereotype (stĕ'rēutīp", stĕr'ĕ-) [Gr *stereo*=solid], plate from which printing is done, made by casting metal in a mold, usually of paper pulp The process was patented in 1725 by the Scottish inventor William Ged Firmin Didot improved the process, named it, and extended its use Cylinder presses, by which newspapers are printed, use curved stereotype plates that fit the cylinders

sterility, inability to reproduce In the male, sterility may be caused by impotence, gonorrhea, defective sperm, or endocrine imbalance In the female, it may result from defective Fallopian tubes (often caused by gonorrhea), defective ova, failure of the ova to remain implanted on the uterine wall, or glandular imbalance

sterilization, term applied to the destruction of bacteria and other germs by heat and other methods In hospitals and in bacteriological and other laboratories where instruments and other equipment must be made sterile, the process is of particular importance A device called an autoclave, which employs steam at high pressure, is commonly used in such places to accomplish sterilization The term *sterilization* is applied also to an operation that prevents the production of offspring A few states in the United States have laws providing for the sterilization of persons having certain mental defects and criminal tendencies.

Sterling, John, 1806–44, British author and critic. Educated at Trinity College, Cambridge, he was greatly influenced by Coleridge's writing Sterling and J F D. Maurice purchased the *Athenaeum* in 1828 and conducted it unsuccessfully for six months Sterling then wrote a novel, *Arthur Coningsby*, published in 1833 He spent some time (1830–31) in the West Indies because of ill-health and later studied German philosophy on the Continent. Ordained in 1834, he served as curate to his former tutor, Julius Hare, until 1835 In spite of failing health, he published his volume of miscellaneous poems (1839), wrote sketches, tales, and reviews for *Blackwood's Magazine* and other periodicals, and finished his tragedy *Strafford* (1843) Sterling is best known through Carlyle's famous biography of him (1851) See his works (ed. by Julius Hare, 1848); A. K. Tuell, *John Sterling, a Representative Victorian* (1941).

Sterling, 1 City (pop. 7,411), co. seat of Logan co., NE Colo., on the South Platte river; platted 1881, inc. 1884. It is the trade, shipping, and processing center of a sugar-beet, grain, dairy, and livestock area. 2 Town (pop 1,251), E Conn., at the R.I line; set off from Voluntown 1794. Its quarries yielded widely used pink granite 3 Industrial city (pop. 11,363), NW Ill., on the Rock River opposite Rock Falls, in a farm and dairy area, inc. 1841 Steel is made and oil is refined 4 City (pop. 2,215), S central Kansas, on the Arkansas and NW of Hutchinson; founded 1872, inc 1876. Sterling College (coeducational) is here 5 Town (pop. 1,713), central Mass., N of Worcester; settled 1720, set off from Lancaster 1781

Sterlitamak (styĭrlyĭtŭmäk'), city (1946 estimated pop 55,000), Bashkir ASSR, E European RSFSR, a port on the Belaya river, c 80 mi S of Ufa It has machine-building and agricultural-processing industries There are phosphorite deposits near by.

Stern, Daniel see Agoult, comtesse d'

Stern, Gladys Bronwyn, 1890–, English novelist. She is well known for her novels of a Jewish family, the trilogy collected as *The Rakonitz Chronicles* (1932), plus *Shining and Free* (1935), were published as *The Matriarch Chronicles* (1936) with a preface by the author. *The Young Matriarch* (1942) is another part of the series She has written other novels, short stories, plays, and discursive autobiography in *Monogram* (1936), *Another Part of the Forest* (1941), *Trumpet Voluntary* (1944), and *Benefits Forgot* (1949). With Sheila Kaye-Smith she wrote *Talking of Jane Austen* (1943, American title, *Speaking of Jane Austen*, 1944) and *More about Jane Austen* (1949)

Stern, Otto (stûrn, Ger ō'tō shtĕrn'), 1888–, American physicist, b Germany, Ph D. Univ. of Breslau, 1912. After resigning from his post at the Univ. of Hamburg in 1933, he became research professor of physics at the Carnegie Institute of Technology The 1943 Nobel Prize in Physics was awarded him for his contributions to the atomic-ray method and his discovery of the magnetic moment (force) of the proton

Sternberg, Constantin Ivanovich von (kŭnstuntyĕn' ēvä'nuvĭch fŭn shtĕrn'bĕrk), 1852–1924, Russian-American pianist and conductor, b St Petersburg, studied in Leipzig and Berlin After appearances both as pianist and as conductor in Germany, he toured in the United States from 1880 to 1885 He was director (1885–89) of the College of Music, Atlanta, and in 1890 founded the Sternberg School of Music in Philadelphia He composed many piano pieces and wrote *Modern Russian Piano Music* (1915) and *The Ethics and Esthetics of Piano-Playing* (1917)

Sternberg, George Miller (stûrn'bûrg), 1838–1915, American bacteriologist, b Hartwick Seminary, N Y , M D College of Physicians and Surgeons, 1860 He was assistant surgeon in the U S army during the Civil War and became surgeon general in 1893 His studies were concerned with bacteriology, his demonstration of the diplococcus of pneumonia coinciding with that of Pasteur He also contributed valuable work in the control of infectious disease His published works include *Textbook of Bacteriology* (1895) and *Infection and Immunity* (1903)

Sterne, Laurence (stûrn), 1713–68, British author, b Clonmel, Ireland, educated at Cambridge His father was an English army officer, and his mother was Irish Sterne entered the Anglican church and held livings near York He led a half-dissolute life, the latter part of it a brave and losing battle with tuberculosis Although he wrote seven published volumes of sermons, Sterne is famous for his curious and discursive novel, *The Life and Opinions of Tristram Shandy* (9 vols., 1759–67), which combines sentiment, humor, whimsy, indecency, and novelty with comic effect Designed to be continued through even more volumes, it is unfinished, as is *A Sentimental Journey through France and Italy* (1768) by "Yorick"—Sterne's name for himself in *Tristram Shandy*—written after two tours in Europe His work, popular at the time, also greatly influenced later novelists See his letters (ed. by L. P Curtis, 1935) and the Shakespeare Head Press edition of his works (7 vols , 1926–27), biographies by W L. Cross (new ed , 1925) and L. C Hartley (1943)

Sterne, Maurice, 1877–, American painter and sculptor, b. Libau, Russia (Liepaja, Latvia) He came to New York at the age of 12 There he studied with Eakins at the National Academy of Design In 1904 he won a traveling scholarship and after that time visited many parts of the world Cézanne and Piero della Francesca are said to have been the formative influences on his painting, which has a consistent purity and an almost sculpturesque insistence on structure He painted in Italy, Bali, and the SW United States, receiving numerous awards on his still lifes, landscapes, and figure compositions His best-known sculpture is the monumental Rogers-Kennedy Memorial at Worcester, Mass. His bronze *Bomb-Thrower* is in the Metropolitan Museum. Twenty murals for the library of the Dept. of Justice Building, Washington, D.C., were exhibited in 1939. As a painter he is better known than as a sculptor and is represented in most of the leading American galleries.

Sterner, Albert Edward (stûr'nûr), 1883–1946, American painter, etcher, lithographer, and writer on art topics, b London, of American parents He painted portraits of Anne Lindbergh, A A Berle, Jr., Thomas W. Lamont, and many others His *Blue Stocking* is in the Metropolitan Museum. He founded the Painters and Gravers of America and was its president in 1918.

Sternheim, Carl (kärl' shtĕrn' hĭm), 1878–1943, German dramatist His first success was the comedy *Die Hose* [a pair of drawers] (1911), which, like his later works, satirized the complacence and Philistinism of the wealthy middle class His other works include the plays *Bürger Schippel* (1913) and *Die Marquise von Arcos* (1920, Eng tr, *The Mask of Virtue*, 1935), the novel *Fairfax* (1921, Eng tr, 1923), which satirized American life, stories, and critical essays Long an irritant to the *Junkers*, he returned to Germany after a long absence, but in the Nazi era went to Switzerland, where he died

Stesichorus (stĕsĭk'kurus) [Gr, =founder of the chorus], fl c 600 B C, Greek lyric poet He lived at Himera and seems to have been originally named Tisias or Teisias Legend says he invented the choral "heroic hymn" and the triad structure—strophe, antistrophe, epode—thenceforth much used (e g, by the tragedians and by PINDAR and IBYCUS) Fragments of his verse remain

stethoscope (stĕ'thuskōp") [Gr, =chest viewer], medical instrument composed of a hollow metal or hard rubber cone connected by tubing to one or two earpieces It enables physicians to hear the sounds made by the heart and lungs. The earliest form of this simple device, invented by R T H Laennec, was a slender wooden tube about a foot long, one end of which had a broad flange or bell-shaped opening When the opening is placed against the chest of the patient, the doctor, by placing his ear against the slightly flanged opposite end of the tube, can hear the sounds of breathing and heart action The stethoscope changed little during the 19th cent, but by the early 20th cent the binaural instrument had begun to make obsolete the rigid tube type which is now rarely used G P Cammann a New York physician, developed the binaural stethoscope by using two earpieces with flexible rubber tubing leading to them from a two-branched opening of the cone or bell Thus the sound was made to pass from the cone through both lengths of tube and into both earpieces simultaneously. Without changing his position the doctor is able to auscultate (listen to) all areas of the upper torso Auscultation performed alone or together with percussion (light tapping) is a primary diagnostic measure in medical practice The qualities of sound emitted by the functioning heart and lungs denote the soundness or malignancy of those organs. Many descriptive expressions are used to fit the sounds arising from various conditions of disease within the thorax They make up the language of stethoscopy and are universally recognized by medical practitioners Bronchitis, pleurisy, pneumonia, and empyema are frequently first determined by skillful use of the stethoscope A difficult but rewarding technique, stethoscopy continues to be an important element in medical diagnosis

Stetson, John Batterson, 1830–1906, American hat manufacturer, b Orange, N J. Stetson, who had learned hatmaking, traveled to the West in the 1860s to improve his health He returned to Philadelphia and began manufacturing hats suited to the needs of the Western cowboy These hats soon became the popular headgear of the West The John B Stetson Company, formed in 1885, became, under his direction, one of the largest hat firms in the world He generously donated to De Land Univ which was renamed (1889) John B Stetson Univ (at De Land, Fla.)

Stettin (shtĕtēn') or **Szczecin** (shchō'tsĕn), city (1939 pop 382,984, 1946 pop 72,948), capital of the former Prussian province of POMERANIA, on the Oder near its influx into the Stettiner Haff It was transferred to Polish administration after the Potsdam Conference of 1945 One of the chief Baltic ports, Stettin is also an industrial center with shipyards and iron and coke works A fortress and the largest Pomeranian town as early as the 12th cent, it was until 1637 the residence of the dukes of Pomerania and was an important member (from the 13th cent) of the Hanseatic League. At the Peace of Westphalia (1648), Stettin passed, with Hither Pomerania, to Sweden, but at the end of the Northern War, Sweden ceded it (1720) to Prussia Stettin had a French garrison (1806–13) during the Napoleonic Wars The construction (1914) of the Berlin-Stettin Canal greatly enhanced Stettin as a commercial port, and its present harbor installations are very extensive. During the Second World War the city suffered heavy damage from repeated bombings. Although four fifths of Stettin, including the old section, are on the left (western) bank of the Oder, the Potsdam agreement of 1945 transferring Pomerania E of the Oder to Polish administration was interpreted to include Stettin in the transfer. The German population was expelled and replaced by Poles. It became the capital of Szczecin prov. (c.11,700 sq. mi.; pop. 892,567), created by the Polish administration from a part of Pomerania The Stettiner Haff (shtĕtē'nûr häf"), Pol. *Zatoka Szczecińska*, is a body of water separated from the Baltic Sea by the islands of Usedom and Wollin. It receives the Oder and connects with the Baltic through the SWINE

Stettinius, Edward Reilly, Jr. (stĭtĭ'nēŭs), 1900–1949, American industrialist and statesman, b Chicago He held (1926–34) several executive posts in the General Motors Corp, and in 1928 he became chairman of the board of the U S Steel Corp He resigned (1940) as business executive to serve on the National Defense Advisory Commission He was priorities director in the Office of Production Management and lend-lease administrator (1941–43) before he served (1943–44) as Undersecretary of State He succeeded (Dec 1944) Cordell Hull as U S Secretary of State and took part in numerous international conferences He was chairman of the U S delegation to the San Francisco Conference before he resigned (June, 1945) his cabinet post and served (1945–46) as U S representative to the United Nations He wrote *Roosevelt and the Russians* (1949)

Stettler, town (pop 1,499), S central Alta, E of Red Deer, in wheat-growing country. It has grain elevators, flour mills, gristmills, dairies, and plants manufacturing cereals and chemicals. There are coal mines near by

Steuart, alternate form of the name STUART

Steuben, Friedrich Wilhelm, Baron von (stū'bun, Ger frē'dĭkh vĭl'hĕlm barōn' fŭn shtoi'bun), 1730–94, Prussian officer, general in the American Revolution, b Magdeburg He served in the Seven Years War and in 1762 became an aide to Frederick the Great Steuben was important in reforms and training in the Prussian army before he lost royal favor In 1777 in Paris he was persuaded to undertake instructing the Continental army in America Congress accepted his services and made him inspector general At Valley Forge in the winter of 1777–78 he shared the sufferings of the ill-fed and ill-tended men as he organized and disciplined them into a powerful striking force The effect was seen at the battle of Monmouth (1778), when he rallied his men after the retreat was begun by Charles Lee He commanded in the trenches at Yorktown He spent his fortune in the service of the young United States and was finally repaid by a pension voted by Congress and large tracts of land granted by various states See biography by J M Palmer (1937)

Steubenville (stōō'bunvĭl, stū'–), city (pop 37,651), co seat of Jefferson co, E Ohio, on the Ohio river and near Wheeling, W Va, laid out c 1797, inc 1805 Situated in a coal and clay region, it is an industrial and steel center with numerous factories The canalization of the Ohio river (completed 1929) spurred the city's industrial growth Edwin M Stanton was born here

Stevens, Abel (stē'vunz), 1815–97, American clergyman, noted as the historian of Methodism, b Philadelphia, studied at Wesleyan Univ He became (1834) a member of the New England Methodist Conference and filled pastorates in Boston, Providence, and New York His works include *The History of the Religious Movement of the Eighteenth Century Called Methodism* (3 vols, 1858–61), *The History of the Methodist Episcopal Church in the United States* (4 vols, 1864–67), and *A Compendious History of American Methodism* (1867)

Stevens, Alfred, 1818–75, British sculptor, influenced by nine years of study in Italy His works are few, but in breadth and freedom of conception and in composition he surpassed his contemporaries The mausoleum of the duke of Wellington, in St Paul's Cathedral, and caryatids for a mantelpiece in Dorchester House, London, are examples of his art In 1850 he became head artist of a Sheffield firm working in bronze and metal

Stevens, Alfred, 1828–1906, Belgian genre painter. He lived in Paris after 1849 His chief subjects, painted with admirable technique and color, were society women and fashionable interiors Among them are *The Japanese Robe* and *Preparing for the Ball* (Metropolitan Mus) He is represented in museums in Brussels, Marseilles, and other cities

Stevens, Edwin Augustus, see STEVENS, JOHN

Stevens, Henry, 1819–86, American bookdealer and bibliographer, b Barnet, Vt, brother of Benjamin Franklin Stevens After studying at Middlebury College, at Yale, and at the Harvard Law School, he went to Europe as agent for several important libraries of the United States and remained in England to collect Americana for the British Museum. While there he made catalogues of the museum's collections on the United States, Mexico, and Canada and lists of its famous Bibles

Stevens, Isaac Ingalls, 1818–62, American army engineer, territorial governor, and Union general in the Civil War, b. North Andover (then a part of Andover), Mass, grad West Point, 1839 He won two brevets as adjutant of engineers on Scott's staff in the Mexican War and was later in the U S Coast Survey In 1853 Stevens resigned from the army to become governor of the newly established Washington Territory. At the same time he was placed in charge of the survey for a northern railroad to the Pacific. His report of the survey was published by the government Stevens, as superintendent of Indian affairs for the Territory, negotiated treaties with the various tribes, securing their lands and setting aside reservations for them However, in 1855 hostilities broke out Steven's conduct of the war was severely criticized in some quarters A Democrat, he was territorial delegate in Congress (1857–61) In the Civil War he rose to be a major general of volunteers He died in action at Chantilly in Sept, 1862 See biography by his son, Hazard Stevens (1901)

Stevens, John, 1749–1838, American inventor, b New York city, grad King's College (now Columbia Univ), 1768 He studied law (1768–71) and soon joined his father, a wealthy landowner and merchant, in New Jersey politics During the American Revolution he served as treasurer of New Jersey and later (1782–83) was surveyor general of the state In 1784 he bought an extensive tract of land in what is now Hoboken, N J., and in 1792 he inherited a large estate when his father died In the late 1780s, however, he had turned his attention to steamboat transportation, and having played a major role in the establishment of the first U S patent laws, he procured patents for various steam boilers and auxiliary devices With the aid of Nicholas J Roosevelt, Stevens built (1806–8) the *Phoenix*, a seagoing steamboat, which, however, after 1809 shuttled between Philadelphia and Trenton. Stevens operated (1811) the first steam ferry between New York and Hoboken, but because of the monopoly of Robert FULTON, he soon desisted After 1810 he devoted himself to railroad activities In 1815 he received from New Jersey the first railroad charter in the United States, and a decade later he built a pioneer locomotive See biography by A D Turnbull (1928) Stevens's shipbuilding and railroad interests were carried forward by his sons The elder son, **Robert Livingston Stevens**, 1787–1856, b Hoboken, N J, was a mechanical engineer and inventor He made numerous improvements in the design and construction of steamboats and designed a spring piling generally used in ferry-slip construction He was chief engineer of the Camden and Amboy RR and imported from England the famous locomotive *John Bull*, now exhibited in the Smithsonian Institution He also designed a rail (the American or Stevens rail) which came into wide use in railroad track construction His brother, **Edwin Augustus Stevens**, 1795–1868, b Hoboken, N J, was closely associated with his brother and father in all these enterprises He was also noted for initiating the construction of a railroad from New York to Philadelphia, as the inventor of the Stevens plow, and as a pioneer builder of ironclad warships He founded the STEVENS INSTITUTE OF TECHNOLOGY

Stevens, Phineas, 1707–56, American colonial soldier, b Sudbury, Mass He moved with his family to Rutland (now Rutland, Vt) and in 1723 was captured and imprisoned by the St Francis Indians Upon his release he settled in Township No 4 (now Charlestown, N H) and defended it (1746–47) against French and Indian attacks in King George's War Gov William Shirley sent him twice (1749, 1753) to Canada to arrange exchanges of prisoners He left journals of both trips

Stevens, Robert Livingston see STEVENS, JOHN

Stevens, Thaddeus, 1792–1868, U S Representative from Pennsylvania (1849–53, 1859–68), b Danville, Vt, grad Dartmouth, 1814 He became a teacher in an academy at York, Pa, studied law, and was admitted to the bar in Maryland He practiced his profession with great success, first in Gettysburg (1816–42) and then in Lancaster, Pa He also entered the iron business Stevens first achieved political prominence as an Anti-Mason and from 1833 to 1841 served in the Pennsylvania legislature An aggressive, uncompromising man possessing a formidable, sardonic wit, he made a brilliant speech (1835) which led to the defeat of a bill abolishing the state's common school system In his first two terms in Congress, Stevens was a Whig but also a forthright abolitionist, and he quit in disgust at his party's moderate stand on the slavery issue A leading organizer of the Republican party in Pennsylvania, he returned to Congress in 1859 As chairman of the House Committee on Ways and Means, he was a powerful figure throughout the Civil War Stevens secured huge appropriations for the Union forces and succeeded in having paper money authorized as legal tender His hatred of the South has been attributed by some to the destruction of his ironworks near Chambersburg in the Confederate invasion of 1863, but it seems also to have rested on principle After Henry W DAVIS was defeated for reelection in 1864, Stevens in the House and Charles SUMNER in the Senate were the leaders of the radical Republicans in Congress opposed to Lincoln's moderate plan of RECONSTRUCTION In Stevens's view, the Southern states defeated in the Civil War were "conquered provinces" and as chairman of the joint committee on Reconstruction he intended that they be treated as such Victorious in the Congressional elections of 1866, the radicals nullified the lenient Reconstruction program of Presi-

dent Andrew JOHNSON, placed the South under military occupation, proscribed most ex-Confederates, and enfranchised the Negro Stevens himself proposed the FOURTEENTH AMENDMENT. Sincere in his devotion to Negro betterment, Stevens nevertheless frankly admitted that the legislation guaranteeing Negro suffrage was designed to keep the Republican party in power He dominated the committee that drew up the impeachment charges against Johnson and was one of the House managers in the subsequent trial before the Senate Until his death a believer in racial equality, Stevens requested that he be interred in a private cemetery, rather than in a burying ground closed to Negroes See biographies by S W McCall (1899), J A Woodburn (1913), T F Woodley (1934, rev ed, 1937), A B Miller (1939), and R N Current (1942), T H Williams, *Lincoln and the Radicals* (1941), Elsie Singmaster, *I Speak for Thaddeus Stevens* (1947)

Stevens, Wallace, 1879–, American poet, b Reading, Pa, educated at Harvard and at New York Law School After 1916 he was associated with the Hartford Accident and Indemnity Company and in 1934 became its vice president His poems first appeared in 1914 in Harriet Monroe's magazine *Poetry*, but his first book of poetry, *Harmonium* (3d ed, 1947), was not published until 1923 Witty, elegant, and philosophical, Stevens's impressionistic verse reflects strong French influence He has attracted an increasing number of appreciative readers as successive volumes of poetry have appeared—*Ideas of Order* (1935), *Owl's Clover* (1936), *The Man with the Blue Guitar and Other Poems* (1937), *Parts of a World* (1942), *Notes toward a Supreme Fiction* (1942), *Esthétique du Mal* (1945), *Transport to Summer* (1947), and *Three Academic Pieces* (1947)

Stevens Institute of Technology, at Hoboken, N J, nonsectarian, mainly for men, chartered 1870, opened 1871, an engineering college founded with a bequest from Edwin Augustus Stevens Henry Morton was its first president It gave the first U S mechanical engineering degrees and still gives no others, although it has general engineering training of university grade It has ship model and theater laboratories, an automotive and power museum, and an engineering camp

Stevenson, Adlai Ewing (stē'vənsun), 1835–1914, Vice President of the United States (1893–97), b Christian co, Ky He practiced law at Bloomington, Ill, and was twice (1874, 1878) elected to the U S Congress as a Democrat He was First Assistant Postmaster General during Grover Cleveland's first term (1885–89) and Vice President during his second He was defeated for Vice President in 1900 and for governor of Illinois in 1908

Stevenson, Burton Egbert, 1872–, American author and compiler, b Chillicothe, Ohio, studied (1890–93) at Princeton He became head of the Chillicothe Public Library in 1899 and was founder (1918) of the American Library in Paris and director (1918–20, 1925–30) Besides his well-known compilations, which include *The Home Book of Verse* (1912, many later editions) and *The Home Book of Quotations* (1934, rev ed, 1946), he has written travel books, children's books, novels, and mystery stories, among them the popular *Mystery of the Boule Cabinet* (1912), which was both dramatized and filmed as *In the Next Room*

Stevenson, Robert, 1772–1850, Scottish engineer A noted builder of lighthouses, he made many improvements in the lighthouse system of Scotland His most widely known construction is the Bell Rock lighthouse (1807–12), off the east coast of Scotland His son, **Thomas Stevenson,** 1818–87, was also an engineer He served as joint engineer (1853–85) to the board of northern lighthouses, he extended his father's experiments on methods of illumination for lighthouses and also made contributions to meteorology Robert Louis Stevenson was his son

Stevenson, Robert Louis, 1850–94, British novelist, poet, and essayist, b Edinburgh He was handicapped from youth by delicate health and struggled all his life against tuberculosis He studied engineering at Edinburgh Univ, changed to the law, and was called to the bar in 1875, but never practiced At an early age he had begun to write, and gradually he devoted himself to literature, at first as a contributor to magazines The essays which later were published as *Virginibus Puerisque* (1881) and *Familiar Studies of Men and Books* (1882) began to appear in the *Cornhill Magazine* in 1876, soon he was contributing to periodicals such famous stories as "A Lodging for the Night" and "The Sire de Malétroit's Door" and the tales later published as *New Arabian Nights* (1882) *An Inland Voyage* (1878), an account of a canoe trip in Belgium and France, was his first published book In 1879 he went to California (he later described the trip in *The Amateur Emigrant*, 1895), where he married Mrs Osbourne, whom he had met in France, as soon as her divorce made it possible They returned to Europe in 1880 in search of a healthful climate With W E Henley he wrote four plays, only moderately successful, though some of Stevenson's stories were to be 20th-century stage and screen triumphs. His first popular books were *Treasure Island* (1883) and the fantasy *Prince Otto* (1885) *A Child's Garden of Verses* appeared in 1885, and in 1886 came two of his best-known works, *Kidnapped* and *The Strange Case of Dr Jekyll and Mr Hyde* Still in search of health, he went in 1887 to Saranac Lake in New York, where he began *The Master of Ballantrae* (1889) In 1889 Stevenson and his family set out for the South Seas on an excursion financed by letters he was to write for an American publisher After an extensive tour he settled down in Samoa, where he gained influence over the natives, who knew him as Tusitala (teller of tales) At his estate there ("Vailima") he finished (with Lloyd Osbourne) his novel *The Wrecker* (1892), laboriously fulfilled his contract for the letters, and wrote or planned numerous tales and essays He died in Samoa and, by his own request, was buried high on Mt Vaea "under the wide and starry sky" he described in his famous "Requiem" Among his other published works are *Travels with a Donkey in the Cévennes* (1879), *The Merry Men* (1887), *The Black Arrow* (1888), *A Footnote to History* (1893), a defense of Father DAMIEN, an uncompleted novel, *The Weir of Hermiston* (1896), and *St Ives* (completed by A Quiller-Couch, 1897) The best collected editions of his works include his letters See biographies by Walter Raleigh (1895), Graham Balfour (1901), Lloyd Osbourne, his stepson and collaborator (1924), J A Steuart (1924), and Stephen Gwynne (1939), study by David Daiches (1947)

Stevenson, William see GAMMER GURTON'S NEEDLE

Stevens Point, city (pop 15,777), co seat of Portage co, central Wis, on the Wisconsin and W of Green Bay, founded 1839, inc 1858 Paper, fishing equipment, and furniture are made A state teachers college is here

Stewart, alternate form of the name STUART

Stewart, Alexander Turney, 1803–76, American merchant, b Lisburn, Co Antrim, Ireland Arriving in New York c 1820, he started in business in 1823 by selling Irish laces In 1846 he established a wholesale and retail dry-goods business which, by 1850, was the largest in the city, his new store (later sold to John Wanamaker), opened in 1862, was the largest retail store in the world Owner of hotels and other enterprises in New York city, he maintained a controlling interest in mills in New England, New York, and New Jersey and built the planned community of Garden City, Long Island He was appointed U S Secretary of the Treasury by President Ulysses S Grant in 1869, but was prevented by law from taking office because of his business connections His mansion on Fifth Ave was regarded as one of the finest in America

Stewart, Charles, 1778–1869, American naval officer, b Philadelphia He was commissioned a lieutenant in 1798 after having served in the merchant marine and was a brilliant commander of the CONSTITUTION in the War of 1812 After a long and varied career Stewart was promoted rear admiral on the retired list in 1862 He was the grandfather of Charles Stewart PARNELL

Stewart, Dugald, 1753–1828, Scottish philosopher He studied at the Univ of Edinburgh, later becoming professor of mathematics (1775–85) and of moral philosophy (1785–1810) After retiring he devoted himself to writing A student of Thomas Reid and strongly influenced by him, Stewart is credited with aiding in the forming of the Scottish school of philosophy His work was largely an exposition of Reid's philosophy, accepting the existence of the external world and applying the principle of common sense to the problems of philosophy An eloquent lecturer and a brilliant writer, he is noted for these abilities rather than any original philosophical development Among his works are *Outlines of Moral Philosophy* (1793), *Elements of the Philosophy of the Human Mind* (3 vols, 1792–1827), and *Philosophical Essays* (1810) See his collected works (ed by Sir William Hamilton, 1854–58, with a biography by John Vietch)

Stewart, William Morris, 1827–1909, American lawyer and politician, b Wayne co, N Y In 1852 he moved with his family to a farm in Ohio and attended local schools Returning to the East, he attended Yale College in 1849 and 1850, also teaching school and reading law In May, 1850, he went to California to mine gold near Nevada City, where he began the practice of law upon being admitted to the bar in 1852 Later he was district attorney, then attorney general of California In 1860 he moved to Nevada, practicing law both in Virginia City and in Carson City He was influential in making Carson City the state capital Upon Nevada's admission to the union (1864) he became one of its first two Senators, serving until 1875 (Mark Twain was, briefly, his secretary) and again from 1887 until 1905, when he retired His reelections in 1893 and 1899 were as the candidate of the Silver party, and in 1896 he supported the candidacy of William Jennings Bryan, he was also editor and publisher (1892–98) of a Washington newspaper, the *Silver Knight*, later the *Silver Knight-Watchman* The discovery of new sources of gold convinced him that the silver question was settled, however, and he returned to the Republican party, supporting McKinley in 1900. He wrote the Fifteenth Amendment to the Constitution in the form which was finally passed and was one of the first legislators to urge reclamation of land by irrigation See G R Brown, ed, *Reminiscences of William Morris Stewart* (1908)

Stewart, river of central Yukon, rising in the Mackenzie Mts and flowing 320 mi generally W to the Yukon S of Dawson, at the village of Stewart River It is navigable for most of its length and is a transportation route for lead ore from its upper reaches It was discovered (1850) by Robert Campbell, of the Hudson's Bay Company

Stewart Island, volcanic island (c 660 sq mi, pop 343), New Zealand, 20 mi S of South Island across Foveaux Strait, Mountainous and scenic, it is a summer resort It was discovered in 1808 by the British, who bought it in 1864 from the Maori natives Frozen fish and granite are exported The Maori name for the island is Rakiura

Stewart Manor, village (pop 1,625), on W Long Island, SE N Y, laid out 1926, inc 1927

Stewartstown, rural town (pop 1,203), NW N H, near the Connecticut and near the Canadian line, granted 1770, inc 1795, reinc 1799

Stewartville, village (pop 1,025), SE Minn, S of Rochester and on the North Branch of the Root, in a dairy and farm area, settled 1858

Steyn, Martinus Theunis (martē'nus tû'nis stīn'), 1857–1916, last president (1896–1900) of the Orange Free State, educated in the Netherlands and in England He was admitted to the bar in 1882 and served as a judge As president he made an alliance with the Transvaal He led troops against British forces in the South African War, and he participated in the peace conference

Steyr (shtīr'ur), city (pop 38,091), Upper Austria, on the Enns and Steyr rivers An industrial center, it is the seat of the Daimler-Puch and Steyr automobile factories It has a 10th-century castle and a 15th-century church

stibnite (stīb'nīt), antimony trisulfide, gray in color, with a metallic luster It crystallizes in the orthorhombic system Found in China, Japan, Europe, Mexico, and the United States, it is the most important source of antimony It is associated with quartz, calcite, sulphides of the base metals, arsenic, gold, and silver Known in ancient times, stibnite was used in powdered form by women to darken their eyebrows and eyelashes

stick insect see WALKING STICK

stickleback, fresh-water and marine fish of the temperate and subarctic waters of the Northern Hemisphere It is seldom more than 3 in long, and the body is without true scales but often has plates along the side In front of the dorsal fin are spines, the number varying with the species, and each ventral fin bears a spine These weapons are used offensively and defensively It eats small animal food, often the fry and eggs of fish In all species the male constructs a nest of vegetation cemented with a sticky material secreted by glandular cells near the kidneys He persuades a number of females to lay eggs in the nest, and these he fertilizes He fiercely guards both eggs and newly hatched young

Stickney, village (pop 2,446), NE Ill, west suburb of Chicago, inc 1913

sticktight see BUR MARIGOLD

Stiegel, Henry William (stē'gul), 1729–85, American iron and glass manufacturer, b Germany He emigrated to America, arriving (1750) in Philadelphia In 1758 he purchased his father-in-law's ironworks near Brickerville, Lancaster co, Pa, renaming it Elizabeth Furnace, and manufactured iron stoves, developing the type known as the tenplate, which served as a standard for many generations About 1760 Stiegel bought a half interest in the ironworks of Charming Forge, near Womelsdorf, Berks co, Pa, and in 1762 formed a partnership with Charles and Alexander Stedman for the purchase and development of land in Lancaster co, Pa Here he laid out a town which he named Manheim, and here he erected an elaborate home in which was incorporated a chapel, where he preached In the years from 1765 to 1767 he made trips to Europe, bringing back trained glassworkers, and built a plant at Manheim which in 1768 was operating as probably the first manufactory of flint glass in America Stiegel is best known today for the famous Stiegel glass which has become a collector's item It is in varied colors, light green to deep emerald, wine, amethyst, and blue, and in the form of bottles, decanters, drinking glasses, and other wares Stiegel met with financial reverses and in 1774 sold his property, earning a meager living after that as caretaker and later schoolmaster

Stieglitz, Alfred (stēg'lits), 1864–1946, American photographer, editor, and art exhibitor, b Hoboken, N J, son of a prosperous wool merchant In 1881 he went to Berlin to study engineering at the Polytechnic, but soon abandoned engineering for photography In 1890 he returned to America and for three years helped to direct the Heliochrome Engraving Company Then he edited a series of photography magazines, the *American Amateur Photographer* (1892–96), *Camera Notes* (1897–1902),

and *Camera Work* (1902–17), the organ of the photo-secessionists In 1905 he established the famous gallery "291" at 291 Fifth Ave , New York, for the exhibition of photography as a fine art Soon the gallery broadened its scope to include the works of the modern French art movement and introduced to America the work of Cézanne, Picasso, Braque, Brancusi, and many other masters It also made known the work of such American artists as John Marin, Charles Demuth, Max Weber, and Georgia O'Keeffe Stieglitz married Miss O'Keeffe in 1924 From 1917 to 1925 he concentrated on photography and then opened the Intimate Gallery (1925–30) and An American Place (1930–46), which continued the work of "291." More than any other man Stieglitz has compelled the recognition of photography as a fine art. Through his own inspired work and generous championship of others, he has promoted the symbolic and spiritually significant in American art, as opposed to the merely technically proficient See *America and Alfred Stieglitz* (ed by W D Frank and others, 1934)

Stieler, Adolf (a'dōlf shtē'lur), 1775–1836, German cartographer He worked most of his life in the Justus Perthes Geographical Institution, Gotha, which published his general atlas (1817–23, Eng tr , 10th ed , 1936)

Stifter, Adalbert (ä'dalbĕrt shtĭf'tur), 1805–68, Austrian author, b Bohemia Widely read in his time, his novels and poetic tales of the Bohemian Forest, with their power in describing nature, entitle him in the opinion of later critics to a high place Nietzsche considered him one of the great German stylists Most of his tales were collected in *Studien* (6 vols , 1840–45), of which six were retitled and published in *Bunte Steine* [colored stones] (1853) One of the stories in this collection was translated as *Rock Crystal* (1945) Stifter's novels include *Nachsommer* (1857) and *Witiko* (1867)

Stigand (stĭ'gund), d 1072, English prelate He held simultaneously the sees of Winchester and Canterbury (from 1052), although of contemporary popes only Benedict X recognized him He was an opportunist, useful to Harold and Edward the Confessor He welcomed William I and continued in his offices until a papal commission replaced him with Lanfranc

Stigler (stĭg'lur), city (pop 1,861), co seat of Haskell co , E Okla , near the Canadian river It is in a region producing farm products, fruit trees, livestock, and coal

stigmaria (stĭgmā'rēu), fossil rhizomes or rootstocks of *Lepidodendron* and *Sigillaria*, trees of the Carboniferous period related to the present-day club mosses The rhizomes were named stigmaria because their true nature was not understood and they were thought to be distinct plants The stigmaria served to support the trees and to produce new ones

stigmata (stĭg'mutu, stĭgma'tu) [plural of *stigma*, from Gr , =brand] St Francis of Assisi, according to contemporary biographers, had in his later life wounds in his hands, his feet, and his sides, which bled profusely and were intensely painful They had no mechanical or apparent cause, but were thought to be reproductions of the wounds of Jesus in his passion Since then some 300 Roman Catholics (all but 40 being women) have allegedly received similar wounds or stigmata, the existence of most of them being fully attested Some of the 29 cases of the stigmata in the 19th cent were carefully investigated by physicians, who were convinced of their objective reality and of the honesty of the stigmatized This is also true of Theresa Neumann (of Konnersreuth, Upper Palatinate, Germany), first stigmatized in 1926 The phenomena of stigmatization have been studied but not adequately explained by non-Catholic scientists, they generally incline to believe the stigmata to be connected with nervous or cataleptic hysteria The Roman Catholic Church takes no position on the nature or cause of the stigmata. See J J von Görres, *The Stigmata* (1883)

Stikine (stĭkēn'), river rising in NW British Columbia in the Stikine Mts and flowing 335 mi in a wide arc W and SW, crossing SE Alaska, to the Pacific N of Wrangell Island The river is navigable for 130 mi above its mouth It is the chief route to the Cassiar mining region of N British Columbia and is a noted salmon stream

Stikine Mountains, range of the Rocky Mts , NW British Columbia, extending 250 mi northwest-southeast and rising to 8,200 ft in Mt Witt The Stikine, Skeena, and Finlay rivers rise here

Stiklestad (stĭ'klŭsta"), site of a battle (1030), on Trondheim Fjord, W Norway Here OLAF II (St Olaf) was slain in an attempt to regain the crown

Stiles, Charles Wardell (stīlz), 1867–1941, American medical zoologist, b Spring Valley, N Y , educated at Wesleyan Univ and in various European universities. He was zoologist with the U S government (1891–1904), professor at Georgetown Univ. (1892–1906), and lecturer at the Army Medical School (1894–1902), at Johns Hopkins (1897–1937), and at the Navy Medical School (from 1902) His contributions to the knowledge of parasitic diseases in the United States include a study of hookworm in the South; he identified and named the American species of the parasite and was active in the campaign to eradicate the disease

Stiles, Ezra, 1727–95, American theologian and educator, b North Haven, Conn , grad Yale, 1746 He studied theology, was ordained in 1749, and tutored (1749–55) at Yale Resigning from the ministry, he studied law and practiced in New Haven from 1753 to 1755, when he returned to the ministry for 22 years He was pastor at Newport, R I , and Portsmouth, N H , and from 1778 until his death was president of Yale While holding his pastorates, he studied sciences and European and Oriental languages and literature and corresponded with many scholars At Yale he also was professor of ecclesiastical history and divinity and lectured on philosophy and astronomy His more important writings are *History of Three of the Judges of King Charles I* (1794), *Literary Diary* (ed by F B Dexter, 1901), *Extracts from the Itineraries and Other Miscellanies, 1755–1794* (ed by F B Dexter, 1916), and his *Letters and Papers* (ed by I M Calder, 1933) See biography by his son-in-law, Abiel Holmes (1798), Francis Parsons, *Six Men of Yale* (1939)

Stilicho, Flavius (flā'vēŭs stĭ'lĭkō), d 408, Roman general, a Vandal He was the chief general of Theodosius I, whose niece he married, and he was selected by Theodosius to act after Theodosius' death (395) as the guardian of HONORIUS and regent of the West In 395 he was summoned from Italy to defend the Eastern Empire against the raids of the Visigoths under ALARIC I, after his arrival in Greece, however, he withdrew without fighting, under orders from ARCADIUS, who was influenced by RUFINUS The next year (396) he returned and drove Alaric into the mountains, but permitted him to escape into Illyricum, and retired to Italy He subsequently campaigned in Rhaetia against the barbarians (401–2), fought Alaric at Pollentia (402) and Verona (403?), and crushed Radagaisus near Fiesole (405) In 408 Honorius, acting on false and malicious accusations, had Stilicho suddenly arrested and executed for high treason Stilicho made no attempt to resist, although it was in his power to do so He has been accused of procuring the assassination of Rufinus, of plotting to make his son emperor, of maintaining a secret understanding with Alaric which accounted for the indecisiveness of their battles, and of inviting the barbarians into Gaul (406), but his integrity in all these matters has been defended, and he is generally regarded as one of the greatest statesmen and generals of the late empire

Still, Andrew Taylor, 1828–1917, founder of OSTEOPATHY, b Jonesboro, Va A boyhood interest in science led him to the study of anatomy During the Civil War he served as a surgeon He evolved a theory of the cause of disease and its treatment without drugs, and in 1874 he began to practice and to make known his system, which was called osteopathy He founded a school of osteopathy in Kirksville, Mo , in 1892 and wrote a number of works on osteopathy See his autobiography (1897, rev ed , 1908), Emmons R Booth, *History of Osteopathy and Twentieth-Century Medical Practice* (1924)

Still, John · see GAMMER GURTON'S NEEDLE

still see DISTILLATION

Stillingfleet, Edward, 1635–99, English prelate and author A fellow of St John's College, Cambridge, he became (1657) rector of Sutton, Bedfordshire In 1661 he published *Irenicum*, a treatise on church government which sought to establish a compromise between Episcopacy and the Presbyterian polity In 1663 he issued *Origines Sacrae* and in 1664 *A Rational Account of the Grounds of the Protestant Religion* In 1677 he became archdean of London, and in 1678 dean of St Paul's He was consecrated (1689) bishop of Worcester Among his later works are *Origines Britannicae, or, Antiquities of the British Church* (1685) and *The Bishop of Worcester's Answer to Mr Locke's Letter* (1697) An edition of his works, with a life by Richard Bentley, was published in six volumes in 1710

still life, picture of inanimate things, such as flowers, fruit, or familiar objects The term is not usually applied to pictures representing an entire room, which are called interiors, or to landscapes But still life clearly may border on either of these other categories Long a favorite subject for Chinese painting, pure still life was hardly recognized as a separate category in the West until the works of the 17th-century Dutch and Flemish masters gave it prestige. Since then it has been a favorite subject of countless artists Sometimes the term is applied to fragments of other types of painting in which inanimate objects are represented See J B Charles, *Flowers and Still-Life* (1938), Wolfgang Born, *Still-Life Painting in America* (1947)

Stillwater. **1** City (pop 7,013), co seat of Washington co , E Minn , on the St Croix and NE of St Paul, settled 1840, inc 1854 In 1848 a convention here drew up a petition to Congress for Minnesota's territorial organization. Stillwater, long a lumber center is now a manufacturing city In 1889 the state's first electric railroad was built here **2** City (pop. 10,097), co seat of Payne co , N central Okla , N of the Cimarron river and W of Tulsa; settled 1889, inc 1899 It is the industrial center of an area producing grains, cotton, livestock, and poultry and is the seat of the OKLAHOMA AGRICULTURAL AND MECHANICAL COLLEGE Several lakes are in the vicinity

Stilton cheese, semihard, unpressed rennet cheese, veined, when well matured, by a blue-green penicillium mold It is made in the region around Stilton, Huntingdonshire, England, which was formerly noted for its cheese market

Stilwell, Joseph Warren, 1883–1946, American general b Palatka, Fla , grad West Point, 1904 Stilwell fought in the First World War and later served for 13 years in China In Feb , 1942, he went back to China, where he led elements of Chiang Kai-shek's army, became (1942) Chiang's chief of staff, and was made commander of U S troops in the China-Burma-India area Forced out (1942) of Burma by Japanese troops, he retreated through the jungles to India, where he built up forces for the successful counterattack (1943–44) in Burma In Oct , 1944, Stilwell was recalled to the United States because of friction with Chiang His experiences in the Far East are recorded in the *Stilwell Papers* (ed by T H White, 1948) He later headed (1945) the Army Ground Forces and took command of the 10th Army on Okinawa See Fred Eldridge, *Wrath in Burma* (1946)

Stilwell, town (pop 1,717), co seat of Adair co , E Okla , near the Ark boundary, in a hilly farming, fruitgrowing, and lumbering region

Stimson, Frederic Jesup, pseud **J S. of Dale,** 1855–1943, American lawyer and author, b Dedham, Mass , grad Harvard, 1876, and Harvard Law School, 1878 A professor of law at Harvard, he was the first U S ambassador to Argentina (1914–21) and special envoy to Brazil (1919) Besides a number of law books, he wrote novels and essays, including *The Crime of Henry Vane* (1884) and *Mrs Knollys and Other Stories* (1894)

Stimson, Henry Lewis, 1867–, American statesman, b New York city, grad Yale, 1888, and Harvard (M A , 1889, LL B , 1890) He became associated with Elihu Root in law practice in New York city Stimson was (1906–9) U S attorney for the southern district of New York, and in 1910 he ran unsuccessfully on the Republican ticket for governor of New York He was (1911–13) Secretary of War under President W H Taft and in the First World War served as colonel of the 31st Field Artillery His success as President Coolidge's representative in bringing about a peaceful and constitutional solution of the problems in Nicaragua (then occupied by U S marines), although it was not complete, led to his appointment (1927) as governor general of the Philippine Islands, where he continued the policy of Gen Leonard WOOD As Secretary of State (1929–33) in the Hoover administration, Stimson was chairman of the American delegation to the London Naval Conference (1930–31) and of the delegation to the disarmament conference of 1932 American nonrecognition of territories and agreements achieved by aggression came to be called the Stimson Doctrine after he led in repudiating the Japanese invasion of Manchuria In 1933 Stimson resumed law practice, but retained his interest in the international scene After the Second World War began in Europe, he advocated a firm attitude toward Hitler and Mussolini, aid to Great Britain, and compulsory military training When President Franklin D Roosevelt appointed him Secretary of War in 1940, Stimson was read out of the Republican party In 1944 he urged the unification of the U S armed forces He resigned in 1945 and was succeeded by Undersecretary Robert P Patterson He wrote *American Policy in Nicaragua* (1927) and *The Far Eastern Crisis* (1936) See his autobiography, *On Active Service in Peace and War* (1948)

Stimson, Lewis Atterbury, 1844–1917, American surgeon, b Paterson, N J , grad Yale (B A , 1863), M D Bellevue Hospital Medical College, 1874, father of Henry L Stimson He served (1864–65) as an officer in the Union army A professor at Cornell Univ medical school from 1883 to 1898, he taught physiology, anatomy, and surgery

stimulant, agent which temporarily increases general vital activity or the vital activity of some part of the body Stimulants make possible the use of energy that the body already has, they do not add to the supply of energy, as does food For this reason, depression follows stimulation, to a greater or less extent, and the more marked the stimulation and consequent use of energy, the greater the subsequent depression, unless the supply of energy is somehow increased before depression begins Among the stimulants used are electric current, heat and cold (especially sudden change from heat to cold, and vice versa), fresh air, and exercise, many drugs are internal stimulants, e g , strychnine, ammonia, caffeine, adrenalin, and alcohol. Some stimulants, such as condiments, act upon the parts of the body involved in digestion. Coffee, tea, and cocoa, all of which contain caffeine, act as general nerve stimulants, especially if taken hot.

sting, organ found in insects of the order Hymenoptera (bees, many wasps, and some ants) and in

scorpions and used chiefly to kill or paralyze prey and as a defense. In the hymenopterous insects the sting is a slender, piercing structure, a modification of the ovipositor. It is therefore found only in the females and, among social insects, in the workers Venom is secreted by glands and injected into the victim. The venom produces the pain of the sting, and in small prey it causes paralysis or death Members of the jellyfish group have nettle cells or nematocysts which discharge, through hollow threads, poison capable of paralysing prey and of stinging humans See also BEE, SCORPION, WASP

Stinnes, Hugo (hōō'gō shtī'nəs), 1870–1924, German industrialist The son of a Westphalian mine owner, he founded his own company in 1892 and rapidly expanded his interests to build a huge "vertical trust" controlling mines, foundries, shipping, paper mills, and other industries He owned vast tracts of land in South America, including the largest oil concession in Argentina, controlled part of the press, and exercised financial power through his banks. The first World War helped to expand his enterprises, after the war, Stinnes took advantage of the German currency inflation to buy up businesses with worthless money At the time of his death he reputedly had an interest in some 1,300 firms

Stip, Serbo-Croatian *Štip* (shtēp), town (pop 11,519), Macedonia, S Yugoslavia, SE of Skoplje It is a processing center for opium poppies and has mineral waters Stip was an important center of the medieval Bulgarian and Serbian empires, and it has preserved a 14th-century monastery and the ruins of its old castle

Stirbey, Barbu see BIBESCU, BARBU

Stirling, James Hutchison, 1820–1909, Scottish philosopher. His most influential works are *The Secret of Hegel* (1865) and *Text Book to Kant* (1881), in which Stirling attempts to connect closely the theories of Kant and Hegel See biography by A H. Stirling (1912)

Stirling, Lord. see ALEXANDER, WILLIAM

Stirling, William Alexander, earl of, 1567?–1640, British poet, b. Scotland He was tutor to Prince Henry of Scotland and came to England on the accession of James I Alexander held various offices, was granted (1621) tracts of Canadian land, which were, however, later ceded to France, and was made Viscount Stirling in 1630 and earl of Stirling in 1633. Alexander's work includes *Aurora* (1604), love poems; *Doomsday* (1614), an 11,000-line epic, *An Encouragement to Colonies* (1624), and *Four Monarchicke Tragedies* (1664–67), on Croesus, Darius, Alexander, and Julius Caesar See his poetical works (ed by L E Kastner and H B Charlton, 1921–29), biography by T H McGrail (1940).

Stirling, county, Scotland see STIRLINGSHIRE.

Stirling, burgh (1931 pop 22,593, 1948 estimated pop. 28,501), county town of Stirlingshire, Scotland, on the south shore of the Forth river and NW of Edinburgh. Its castle, on the summit of a basaltic hill above the burgh, long rivaled Edinburgh as a royal residence It was the birthplace of James II and other rulers, and the infants Mary Stuart and James VI were crowned at Stirling The castle was taken by Edward I in 1304, after a three-month siege, but was retaken by the Scots after the battle of Bannockburn (1314) 2 mi to the south There are many ancient buildings and monuments in Stirling—the stone bridge, the scene of a battle in 1297 when the English were defeated by Sir William Wallace, the parish church, dating partly from the 13th cent., Cowane's Hospital (1639), Mar's Work (16th cent.), and Argyll's Lodging, a military hospital since 1799 The Stirling of today has varied industries, including the production of bacon and ham, feed cakes, chemicals, carpets, and farm machinery.

Stirlingshire (stûr'lĭngshĭr) or **Stirling,** inland county (451 sq mi; 1931 pop 166,447, 1948 estimated pop 187,242), central Scotland The county town is Stirling. The region has a varied terrain of farm lands, peat bogs, pasture, and moorland, embracing parts of both the Highlands (in the west) and the Lowlands (in the east) The chief river is the Forth, which forms most of the northern boundary Loch Lomond is on the western border. Falkirk is the industrial center of the county, producing iron and steel, textiles, and coal Grangemouth is the chief port. Its central position has made Stirlingshire important in Scottish history, and many important battles have been fought within its territory—Stirling Bridge (1297), the first battle of Falkirk (1298), Bannockburn (1314), Kilsyth (1645), and the second battle of Falkirk (1746). The Roman Wall of Antoninus crossed the county

Stirner, Max (maks' shtĭr'nûr), pseud. of **Kaspar Schmidt** (käs'pär shmĭt'), 1806–56, German anarchist philosopher. His philosophy of complete individualism, influential only after his death, is embodied in *Der Einzige und sein Eigenthum* [the ego and his own] (1845)

stirrup. There is some evidence that stirrups were used in Assyria c.850 B C. and in China as early as the Han dynasty, 202 B.C.–A.D. 220. They are not known to have been used in Europe before the raids of the Huns under Attila from A.D. 441 to 453. Probably they had their origin in central Asia. Medieval European riders regularly used saddles with stirrups To avoid the danger of having a foot caught in a stirrup if the rider is thrown, large stirrups are often used, one of the uses of the stirrup cover or stirrup hood is to prevent the foot from getting caught in the stirrup The same purpose is served by the high heels of the cowboy's boots In times when travel was commonly on horseback, a health drunk on the departure of a guest was called a "stirrup cup" See also RIDING and SADDLE See Rudolf P. Hommel, *China at Work* (1937)

stoa (stō'ə), plural **stoae** (stō'ē), in ancient Greek architecture, an extended, roofed colonnade on a street or square, with its floor raised above the level of the roadway Stoae surrounded the agora, or public meeting place, and gave sheltered access between its various public edifices A wall, sometimes decorated with paintings, enclosed the back of a stoa, while the front, facing the agora, was formed by a single or a double row of columns Sometimes the stoae had colonnades on both faces, the wider ones having an additional row of columns down the center Noted examples included the Stoa Poecile at Olympia, the two-storied stoa of King Attalus II at Athens, and those at Epidaurus which sheltered the ailing pilgrims at the shrine of Asclepius The Stoa Poecile on the north side of the agora of Athens was the favorite spot of the philosopher ZENO OF CITIUM, hence his followers are called STOICS and his system STOICISM

stoat, European weasel (*Mustela erminea*) The male is about 16 in long including the 5-inch tail In its summer coat it is brown above with white under parts In winter in the northerly parts of its range it turns white except for the black tip of the tail It is then known as ERMINE

Stobaeus, Joannes (jō'ə'nēs stōbē'ŭs), 5th cent A D, Greek anthologist He made a large collection of excerpts from poets and prose writers on a variety of subjects, originally for the education of his son It is valuable because it preserves fragments from many lost works of early Greek authors It came to be divided into two parts, called *Eclogues* and *Anthology*

Stock, Frederick (Friedrich Wilhelm August Stock) (stŏk), 1872–1942, German-American conductor and composer He came to the United States in 1895 as a violist in the Chicago Orchestra and was later assistant conductor. He became permanent conductor at the death of Theodore Thomas in 1905, the orchestra was then called the Theodore Thomas Orchestra In 1912 it became the Chicago Symphony Orchestra Stock's term as conductor, which lasted until his death, was notable for the number of new works given their premières under his direction His compositions include two symphonies, three overtures, a cello concerto (1929) and a violin concerto (1915)

stock, in horticulture, any species of the genus *Matthiola*, Old World plants widely cultivated, both in greenhouses and gardens, for the fragrant single or double blossoms of various colors, often in shades of purple The only species commonly cultivated are the evening stock (night blooming) and the Brompton stock or gillyflower, the latter is usually grown as a biennial, but an early-blooming variety, known as ten-weeks stock or cut-and-come-again, is cultivated as an annual, sometimes as a house plant Virginia stock belongs to another genus See also WALLFLOWER

stock, in finance, an instrument certifying to shares of the ownership of a corporation Bonds are similar evidences of shares in a loan to a corporation Stock yields no dividends until claims of bondholders have been met Preferred stock is entitled to dividends of a specified percent per annum before common stock is entitled to any dividends, the common stock is then usually entitled to all the rest of the profits, though preferred stock is sometimes participating, i.e., entitled to share with common stock after fixed dividends have been paid on the common stock Holders of common stock usually have voting rights in the management of the corporation, bondholders and, usually, holders of preferred stock have no voting rights Since the value of common stock depends largely on its earnings, it is often issued as of "no par value" The term *stock* is used in England as well as in the United States, but in England the term *share* also is used See Hiram Jome, *Corporation Finance* (1948)

Stockbridge, resort town (pop 1,815), SW Mass., on the Housatonic, in the Berkshires S of Pittsfield, inc. 1739 John Sergeant founded the place as a model village for Mahican Indians in 1736, the Mission House, restored as a museum, was built in 1739. Jonathan Edwards taught here (1750-57) David Dudley Field, a minister, settled in Stockbridge in 1818, and here his son Cyrus W Field was born. Mark Hopkins was also born in Stockbridge The town is the site of the Berkshire Playhouse, a leading summer theater, and there is a large art colony Monument Mt. Reservation is near by. Tanglewood estate is largely in Stockbridge town though near the center of LENOX See S. C. Sedgwick and C. S. Marquand, *Stockbridge, 1739–1939* (1939).

Stockbridge Indians, tribe of North American Indians of the Algonquian linguistic stock. In the early 17th cent. they were known as the Housatonic Indians and were part of the Mahican confederacy. They then occupied part of the valley of the Housatonic river in SW Massachusetts Their principal village, Westenhuck, was for a long time the Mahican capital after the removal of the council fire from Schodac. In 1734 John Sergeant began missionary work among them, and two years later the Indians were collected on a tract reserved for them by the colonial government After the village of Stockbridge was established, they became known as the Stockbridge Indians They suffered terribly in the French and Indian War, at the close of which they numbered 200. Accepting an invitation from the Oneida, the remnants of the Stockbridge moved to New York, where they established New Stockbridge In 1833 they moved to a reservation at Green Bay, Wis., where they were incorporated with the Munsee Today the two tribes number some 500

stock exchange, organized market for stocks and bonds (see BOND and STOCK) Such markets were originally open to all, but now only members of the owning association may buy and sell directly The members buy and sell for themselves or for others, charging commissions A security may be bought or sold on an exchange only if it is listed, and it may not be listed unless it meets certain requirements There are stock exchanges in all financially important centers of the world, the largest being that in New York On the continent of Europe a stock exchange is called a BOURSE Stock exchanges are an important cog in the machinery of corporate capitalism. By providing a centralized, ready market for securities, they greatly facilitate the financing of business through flotation of stocks and bonds But the speculative and gambling aspects of stock exchanges also accentuate the instability of the modern economy The interstate sale of securities and certain practices of stock exchanges in the United States are now regulated by federal laws administered by the SECURITIES AND EXCHANGE COMMISSION See CURB MARKET, BROKER, BULLS AND BEARS, MARGIN See J. E. Meeker, *The Work of the Stock Exchange* (1930), C. A Dice and W. J Eiteman, *Stock Market* (2d ed., 1941), Raymond Vernon, *Regulation of Stock Exchange Members* (1941)

Stockholm (stŏk'hōlm, -hōm, Swed stōk'hōlm'), county (2,851 sq mi, pop 321,989), central Sweden It extends along the Baltic Sea north and south of the city of Stockholm, which is the county seat although it is not included in the county Comprising parts of the historic provinces of Södermanland and Uppland, it is a fertile lowland, dotted by many lakes SÖDERTÄLJE and SOLNA are the chief industrial centers

Stockholm, city (1945 pop 657,904, 1949 estimated pop 725,714), capital of Sweden, in central Sweden, beautifully situated on the eastern shore of a lake (Mälaren) and on its outlet to the near-by Baltic Sea It is a large port and shipbuilding center Among industrial products are machinery, textiles, chemicals, and rubber The cultural as well as the political capital of Sweden, Stockholm is the seat of a university (*Stockholms Högskola*, founded 1877) and of royal academies of music, science, art, and medicine It has a noted opera house and an active musical, theatrical, and literary life. Founded in 1255, the city was an important medieval trade center under the domination of the Hanseatic League In 1520 King CHRISTIAN II of Denmark and Norway proclaimed himself also king of Sweden at Stockholm, a large number of Swedish nobles having gathered to attend the coronation, Christian instigated a general massacre of the anti-Danish nobility This Stockholm massacre led to the successful uprising of Swedes under Gustavus Vasa, who became king of Sweden as Gustavus I Gustavus ended the privileges of the Hanseatic merchants In the 17th cent Stockholm became a European intellectual center under Queen Christina, who attracted such men as Descartes to her court, and a period of great building activity began Modern Stockholm is, architecturally, one of the finest cities in the world. Often called the Venice of the North, it is built on several peninsulas and islands, and the vast bodies of water contribute to the feeling of its spaciousness Its most celebrated landmark is probably the new city hall (1923), facing Mälaren; built by the Swedish architect Ragnor Ostberg, it is an impressive modern interpretation of the characteristic Scandinavian Renaissance style Hardly less famous are the cooperative residential housing districts, which have made Stockholm a slumless city Except for the old historic section on Staden island, the city is a model of modern urban planning, with wide avenues, spacious squares, and fine parks On Staden, which has retained much of its medieval character, are the Church of St. Nicholas or Storkyrka [great church], dating from the 13th cent., the Ridderhuset [assembly hall of the nobility], a 17th-century structure in Dutch Renaissance style, several old Hanseatic houses; the market square, where the Stockholm massacre

began; and the royal palace, built (1754) in Italian Renaissance style. Other important buildings in Stockholm include the Riksdag (parliament) building, the Nobel Institute; the Riddarkyrka, originally a 13th-century Franciscan church, restored by Gustavus II, containing tombs of Swedish kings and of great men of Sweden; and several museums. Stockholm city has a separate county administration but is also the seat of Stockholm co.

stocking: see HOSE

Stockmar, Christian Friedrich, Baron (Kris'tyän frē'drĭkh bärōn' shtōk'mar), 1787–1863, Anglo-Belgian diplomat and courtier, b Coburg, Germany, of Swedish parents A physician, Stockmar became (1816) adviser of Prince Leopold of Saxe-Coburg, who in 1831 became King Leopold I of the Belgians At Leopold's request Stockmar, created baron in 1831, became (1837) an unofficial adviser to Leopold's niece, Queen Victoria of England Stockmar, whose chief aim was to improve the moral tone of the English court and to restore the popularity of the royal family, succeeded evidently in at least the first point of his program. Wielding an increasing influence over the young queen, he helped to wean her away from Lord Melbourne and was instrumental in bringing about the marriage (1840) of Victoria with Prince Albert, another nephew of Leopold I. His influence continued after Albert's arrival, and he was regarded as something of a mystery man In 1848 Stockmar represented Saxe-Coburg-Gotha at the Frankfurt Parliament, but he subsequently returned to England and continued his role as unofficial adviser to Victoria and Albert See Pierre Crabitès, *Victoria's Guardian Angel* (1937)

Stockport, county borough (1931 pop 125,490, 1943 estimated pop 134,800), partly in Cheshire, partly in Lancashire, England, SE of Manchester It is on the slopes of a narrow valley at the head of the Mersey The London and Northwestern RR crosses the ravine by a high viaduct, built in the early part of the 19th cent Stockport was the site of Roman and Norman stations It has developed into an important cotton-manufacturing center, and there are also manufactures of woolen goods, chocolate, metal products, and paper The Church of St Mary dates from the 14th cent Vernon Park has a museum and gallery There is a statue of Richard Cobden, who was a member of Parliament for Stockport

Stockton, Francis Richard (Frank R Stockton), 1834–1902, American humorist and story writer, b Philadelphia He was a wood engraver until writing became his career He wrote several children's books, including *Ting-a-Ling* (1870) and *The Floating Prince and Other Fairy Tales* (1881), and was assistant editor (1873–81) of *St Nicholas* Most notable of his many humorous books for adults were *Rudder Grange* (1879) and its sequels *The Rudder Grangers Abroad* (1891) and *Pomona's Travels* (1894), the famous title story of *The Lady or the Tiger?* (1884), and *The Casting Away of Mrs Lecks and Mrs Aleshine* (1886) His novels and stories were collected in 23 volumes (1899–1904) See biography by M I J Griffin (1939)

Stockton, Richard, 1730–81, American Revolutionary patriot, signer of the Declaration of Independence, b near Princeton, N J , grad College of New Jersey (now Princeton Univ), 1748 He was admitted to the bar (1754) and practiced law in New Jersey. At first he tried to find means of reconciliation with England, but after his election (1776) to the Continental Congress he sought independence Stockton was captured (1777) by the British while on an inspection tour, and the effects of harsh treatment as a prisoner caused his death.

Stockton, Robert Field, 1795–1866, American naval officer, b Princeton, N J He left the College of New Jersey (now Princeton Univ) to enter the U S navy at 16 and served in the War of 1812 and the campaigns against the Barbary pirates He negotiated (1821), for the American Colonization Society, a territorial concession on the west coast of Africa, which later became Liberia While on leave (1826–38) he became interested in the Delaware and Raritan Canal In the Mexican War he commanded the Pacific squadron, took Los Angeles and San Diego, and installed John C Frémont as governor of the newly organized civil government of California He left the navy in 1850 As U S Senator (1851–53) he introduced a bill to stop flogging in the navy. Stockton resigned in 1853 and became president of the Delaware and Raritan Canal Company,

Stockton, 1 City (1940 pop. 54,714; 1948 special census pop 65,924), co seat of San Joaquin co., central Calif., E of San Francisco and on the San Joaquin river, founded 1847, inc. 1852 It was an outfitting center in the gold-rush days and is now an inland seaport (its harbor has been developed to accommodate ocean-going vessels), a port of entry (since 1935), a railroad center, and a distributing point for the San Joaquin Valley's farm products Its manufactures include lumber products, farm machinery, flour and feeds, canned goods, fertiliser, and boats. It has a historical museum, an art gallery, and an impressive civic auditorium. The College of the Pacific (coeducational; 1851), a junior college (coeducational), and a state hospital for the insane are here. 2 Village (pop. 1,440), NW Ill., W of Freeport; inc 1890 It is a farm trade center. 3 City (pop. 1,418), co seat of Rooks co., N Kansas, on the South Fork of the Solomon and NW of Salina, in a cattle region, settled 1872, inc 1880 An annual Kansas-Nebraska fair is held here in August

Stockton-on-Tees (-tēs), municipal borough (1931 pop 67,722; 1947 estimated pop 72,610), Durham, England, near the head of the Tees estuary It developed after the opening of the Stockton-Darlington Railway (the first important railroad in the United Kingdom) in 1825, and now has a considerable shipbuilding industry and trade in machinery and construction materials There are no remains of the castle built in the 13th cent and taken by the parliamentarians in 1652 Races are held on a course near Stockton

Stoddard, Charles Warren, 1843–1909, American author and traveler, b Rochester, N Y. His travels are reflected in *South-Sea Idyls* (1873), *The Lepers of Molokai* (1885), and many other books He was once secretary to Mark Twain and later was professor of English at Notre Dame (1885–86) and at the Catholic Univ of America (1889–1902) His poems, first edited (1867) by Bret Harte, were collected in 1917 by Ina Coolbrith

Stoddard, Richard Henry, 1825–1903, American poet, editor, and critic, b Hingham, Mass Brought up in poverty, he educated himself in New York and made friendships with men of letters He was literary editor of the New York *World* (1860–80) and of the *Mail and Express* (1880–96) More important than his once-popular poetry was his influence through his literary friends and his criticism See his *Recollections, Personal and Literary* (1903)

Stoessel, Albert (stō'sul), 1894–1943, American violinist, conductor, and composer, b St Louis, studied there and in Berlin He made his debut (1913) as a violinist in Berlin and in 1921 became conductor of the Oratorio Society of New York He was head of the music department of New York Univ from 1923 until 1930, when he became director of the orchestra and opera departments at the Juilliard Graduate School Beginning in 1925 he was active as conductor of various music festivals His compositions include an opera, *Garrick* (1937), *Concerto Grosso* for strings (1936), and other orchestral works

stogie: see CIGAR AND CIGARETTE

Stoicism (stō'ĭsĭzm), school of philosophy founded by ZENO OF CITIUM (in Cyprus) about the beginning of the 3d cent B C The first Stoics were so called because they met in the Stoa Poecile [Gr ,= painted porch], at Athens, a colonnade near the Agora, to hear their master Zeno lecture He had studied with Crates the Cynic, and his own teaching included the Cynic adaptation of the Socratic ideals of virtue, endurance and self-sufficiency He added to them the explanation of the physical universe given by Heraclitus and something of the logic of Aristotle The development and organization of Zeno's doctrines into a great system of metaphysics was the work of Chrysippus (280–207 B C), successor to Cleanthes Among the acknowledged leaders of the Stoics in the following period was Panaetius of Rhodes, who in the 2d cent B C introduced Stoicism into Rome He and his pupil Posidonius sought to lessen the attacks of critics by mingling with the Stoic doctrines some of Plato's psychological views Cicero, a pupil of Posidonius, was indebted to a work of Panaetius for the basis of his own treatise *De officiis* The Romans, who received Stoicism more cordially than they did any other Greek philosophy, can claim the third period as their own To it belong the philosophers SENECA and EPICTETUS of Phrygia and MARCUS AURELIUS, the emperor Stoicism, with its roots in earlier doctrines and theories of man and the universe, built up an ideal virtuous, wise man. Regarding philosophy as divided into physics, logic, and ethics, Zeno in his plan made of the physics and logic a foundation to serve as the best support he could contrive for the ethical portion of his system His logic was based upon Aristotle's *Organon*; but he held that all knowledge is ultimately founded on sense perception The physical theory underlying Stoicism is materialistic. All that has reality is material Force, which is the shaping principle, is joined with matter This universal working force, God, pervades all and becomes the reason and soul in the animate creation The ethical creed of the Stoics accepted virtue as the highest good in life "To live consistently with nature" was a familiar maxim among them Human conduct should be brought into agreement with the law of nature Only by putting aside passion, unjust thoughts, and indulgence and performing duty with the right disposition can man attain true freedom and rule as lord over his own life The writings of Epictetus best set forth the ethical truths of Stoicism See R D Hicks, *Stoics and Epicureans* (1910), R M Wenley, *Stoicism and Its Influence* (1927), *Stoic and Epicurean Philosophers* (ed. by W J Oates, 1940)

Stoke, East, village, Nottinghamshire, England, SW of Newark. It was the scene of a victory of Henry VII in 1487 over forces supporting Lambert Simnel as claimant to the throne.

Stoke-on-Trent, county borough (1931 pop 276,639; 1947 estimated pop. 273,510) and city, Staffordshire, England. The borough was formed in 1910 of Hanley, Burslem, Tunstall, Longton, Fenton, and Stoke-upon-Trent and made a city in 1925 It is the center of the Staffordshire pottery-making industry The Trent to Mersey canal passes through the region. There are several museums and collections of pottery, Minton Memorial (museum and library) and the Wedgwood Institute are noteworthy Josiah Wedgwood, Josiah Spode, William Copeland, and Herbert Minton are among noted men of this district The town with the surrounding area of the upper Trent valley is known as the Potteries or the "Five Towns."

Stoke Poges (pōj'ĭz), village, Buckinghamshire, England, near Slough The churchyard of St Giles is generally held to be the scene of **Gray's** "Elegy"

Stoker, Bram (Abraham Stoker), 1847–1912, British author, b Ireland *Dracula* (1897), the most sensational of his many novels, was dramatized by John Balderston and Hamilton Deane and produced in 1927 Stoker's *Personal Reminiscences of Henry Irving* (1906) records his association with Irving in managing the Lyceum Theatre

Stokes, Adrian (stōks), 1887–1927, Irish physician and bacteriologist, b Lausanne, M D Univ of Dublin, 1911 He performed invaluable medical services in the First World War He organized a mobile laboratory to help prevent typhoid and other epidemic diseases among the soldiers His studies of the bacteriology of infectious jaundice (or Weil's disease) were significant In 1922 he became professor of pathology at the Univ. of London He secured a leave of absence to study yellow fever in W Africa, where he worked with Hideyo Noguchi and William Young While carrying on the experiments he contracted the disease and died

Stokes, Sir Frederick Wilfrid Scott, 1860–1927, British inventor An engineer who worked on important bridges and dams (including the Aswan and Sennar dams), he patented new machines of various sorts, but he is best known for the Stokes gun (1915), a simple muzzle-loading trench mortar much used in the First World War

Stokes, Sir George Gabriel, 1819–1903, British mathematician and physicist, b Ireland, studied at Cambridge From 1849 he was a professor of mathematics at Cambridge, he served as secretary (1854–85) and as president (1885–92) of the Royal Society His researches, done in many fields, developed the modern theory of viscous fluids, revealed the nature of fluorescence, and shed light on the composition of chlorophyll The important work he did on the undulatory theory of light led to publication of his *Dynamical Theory of Diffraction* (1849)

Stokes, Isaac Newton Phelps, 1867–1944, American architect, housing expert, and historian, b New York city, grad Harvard, 1891, studied architecture at Columbia Univ and the École des Beaux-Arts His special achievement was the compilation of *The Iconography of Manhattan Island* (6 vols , 1915–28), with pictures and reproductions of old maps As a member (1897–1917) of the firm of Howells & Stokes he designed St Paul's Chapel at Columbia Univ , the Baltimore Stock Exchange, Woodbridge Hall at Yale, and other buildings He was most interested in housing and designed a number of model tenements and apartments He was appointed (1900) a member of the New York state tenement housing commission, which passed (1901) a law for better housing He was also secretary (1911–39) of the Phelps-Stokes Fund for housing and education

Stokes, Whitley, 1830–1909, Irish Celtic scholar, grad Trinity College, Dublin, 1851 Going to India in 1862, he became a member of the viceroy's council (1877–82) and drafted the Anglo-Indian civil and criminal codes A prominent scholar in the field of Irish literature, he is known for his translations and glossaries of Irish, Celtic, Cornish, and Breton works

Stokesay Castle, Shropshire, England, near Ludlow It is the oldest and best example in England of a fortified, moated manor house The stone tower and the banqueting hall date from the 13th cent , the gatehouse from the 17th

Stokowski, Leopold (stukŏf'skē), 1882–, American conductor, b London, of Polish-Irish parentage, studied at Oxford, the Paris Conservatoire, and the Royal College of Music, London He was organist and choirmaster (1905–8) at St Bartholomew's Church, New York, and was conductor (1909–12) of the Cincinnati Symphony Orchestra As conductor (1912–36) of the Philadelphia Orchestra he introduced much unfamiliar music and with his own transcriptions popularized many of the compositions of Bach, he continued to conduct for part of each season until 1941 In 1940 he organized the All-American Youth Orchestra, which toured South America that year He was co-conductor (1941–44), with Toscanini, of the NBC Symphony Orchestra He conducted in Walt Disney's moving picture *Fantasia* (1940) and is the

author of *Music for All of Us* (1943) In Dec., 1948, he was appointed co-conductor, with Dimitri Mitropoulos, of the New York Philharmonic. In 1911 he married Olga Samaroff, they were divorced in 1923 He became a U S citizen in 1915.

stola · see TUNIC

Stolberg (shtōl'bĕrk), town (pop 27,921), in the former Rhine Prov of Prussia, W Germany, E of Aachen It is a center of the German brass industry, introduced in the 16th cent by Protestant settlers from Aachen

stolen goods. The chief legal problem connected with stolen goods is that of title A thief cannot acquire title to goods which he has stolen, and therefore he cannot transfer title even by sale to an innocent purchaser Hence the rightful owner of the goods may take them without compensation from anyone who has their possession The innocent purchaser, however, may sue the seller of the goods (even if he is the thief) for breach of his implied warranty of good title These rules invariably apply to goods procured by LARCENY, in certain jurisdictions they obtain also when goods are acquired by EMBEZZLEMENT The law respecting the sale of a stolen NEGOTIABLE INSTRUMENT differs somewhat Here, if the owner is a bona fide purchaser for value he takes an absolute title. To be such a purchaser he must pay for the instrument with some thing of value (usually money) and must not be aware of anything suspicious in the ownership The person from whom the instrument was stolen may recover it (without payment) from a holder who is not a bona fide purchaser for value Such holder—e g , one who received the instrument as a gift—may sue the prior indorsers of the instrument for breaching their implied warranty of good title unless they had protected themselves by writing the words "without recourse" The person who knowingly receives stolen goods to make a profit—the *fence*—is guilty of a felony in most jurisdictions At common law, however, the fence was an accessory after the fact and hence committed merely a misdemeanor That the accused knew the goods were stolen usually must be proved from circumstances and his previous conduct Thus, if he is in possession of recently stolen goods brought to him at dead of night there is a strong probability of his guilty knowledge. This probability is enhanced if he had previously been convicted of the crime of receiving stolen goods

Stolp (shtōlp) or **Slupsk,** Pol *Słupsk* (swôōpsk), city (pop 33,948), NE Pomerania, on the Stolpe river, transferred to Polish administration in 1945 (see POMERANIA) Chiefly a commercial and administrative center, it has metal and electrical industries, and there are several resorts in the vicinity

Stolpmünde (shtōlp'mun"dŭ) or **Ustka** (ōōst'kŭ), a commercial seaport (pop 2,807), lies on the Baltic coast, 10 mi NW of Stolp

Stolypin, Piotr Arkadevich (pyô'tŭr ŭrkä'dyĭvĭch stŭl'ĭpĭn), 1863–1911, Russian statesman As premier and minister of the interior (1906–11) he sought to fight the revolutionary movement both by negative and positive measures He instituted a regime of courts-martial to suppress revolutionary terrorism, and thousands were exiled and executed between 1906 and 1911 On the other hand, Stolypin's keen intelligence had recognized that no negative measures were sufficient without the creation of a class of peasant landowners who would form a large conservative popular element The Edict of Emancipation of 1861 (see EMANCIPATION, EDICT OF) had created not a landowning peasant class but communal peasant holdings, and its provisions for the redemption of communal land had tied down the peasants to their villages without giving them the means to subsist on their land Stolypin's agrarian legislation of 1906 gave the peasant communes the right to dissolve themselves, entitled each peasant to his share of the former common land in full ownership, and gave financial aid to peasants who wished to buy crown land This reform was designed to transform the peasants into landowners by a gradual process without hurting the interests of the large landowners At the same time it enabled peasants who wished to leave the land and seek industrial employment in the cities—a feature favorable to the industrialists, whose labor supply was hampered by the legislation of 1861 It was opposed by the leftist majority in the first DUMA, which favored extensive expropriation of the large landowners Stolypin, whose methods were highhanded, dissolved both the first and second Dumas and made sure of a conservative majority in the third Duma by altering (1907) the election laws His policies often cut across party lines, and his moderate constitutionalism was opposed by the extreme reactionaries. His agrarian reform came too late to conciliate the peasantry as a body. When the Revolution of 1917 broke out, the number of small holdings had increased, but not at a sufficient rate to have created a conservative peasant class His attempt to extend the government's policy of Russification to Finland, where he restricted (1910) the authority of the diet, met wide opposition. While his courts-martial and secret police continued their sinister work, the government took no action against the anti-Jewish pogroms organized by extreme reactionary societies. Stolypin's attempt to put down terrorism by terrorism was a failure demonstrated by his own assassination by a revolutionist

stomach, organ of the digestive system, serving primarily as a temporary storage place for food, found in humans and in many of the lower as well as the higher animals In humans it is a somewhat pear-shaped organ lying in the abdominal cavity just below the diaphragm and continuous in its cardiac or upper portion with the esophagus and in its pyloric or lower region with the small intestine The size and shape of the stomach depend upon the degree of distention produced by the food within it It is between 10 and 12 in long and 6 to 8 in wide Food enters the stomach from the esophagus by passing through the cardiac orifice, where a ring of muscles, the cardiac sphincter, normally prevents the return of the food into the esophagus, at the pyloric end is a pyloric sphincter, which remains closed until the food is in condition to enter the small intestine The walls of the stomach consist of four layers—an outer fibrous or serous coat, a muscular coat, a submucous coat, and, forming the lining of the stomach, a mucous layer the surface of which is honeycombed with glands Food is held in the stomach until the mechanical action of the movements of the muscular walls and the chemical action of the digestive fluid (see GASTRIC JUICE) have converted the food into a semiliquid known as chyme, this is gradually sent by muscular action into the small intestine

Stone, Barton Warren, 1772–1844, American clergyman of Kentucky With four other ministers he withdrew from the Presbyterian Church and in 1804 began to form new churches that called themselves simply CHRISTIANS Similar groups, whose members were also known as Christians, separated from the Methodist and Baptist churches See C C Ware, *Barton Warren Stone, Pathfinder of Christian Union* (1932)

Stone, Harlan Fiske, 1872–1946, American jurist, Chief Justice of the Supreme Court (1942–46), b Chesterfield, N H , grad Amherst, 1894, and Columbia School of Law, 1898 He was admitted (1899) to the bar, practiced law in New York city, and lectured at the Columbia School of Law, where he became professor (1902) and dean (1910) In the First World War he helped the Wilson administration deal with conscientious objectors He resigned his deanship in 1923, and as U S Attorney General (1924–25) under President Calvin Coolidge, Stone led in restoring faith in the Dept of Justice after the Teapot Dome scandals Appointed (1925) Associate Justice of the Supreme Court, he established a reputation for his vigorous minority opinions, after 1933 he generally supported New Deal legislation. He succeeded Charles E Hughes as Chief Justice of the Supreme Court *Public Control of Business* (1940) is a selection of Stone's opinions as Associate Justice See biography by S J Konefsky (1946)

Stone, Lucy, 1818–93, American reformer, b near West Brookfield, Mass , grad Oberlin, 1847 In 1847 she gave her first lecture on woman's rights, a movement in which she was a leader until her death The following year she was engaged by the Anti-Slavery Society as one of their regular lecturers As a speaker she had great eloquence and was often able to sway an unruly and antagonistic audience She married Henry Brown BLACKWELL in 1855, but continued, as a matter of principle, to use her own name and was known as Mrs Stone In 1870 she founded the *Woman's Journal*, which was for nearly 50 years the official organ of the National American Woman Suffrage Association After her death it was edited by her daughter, Alice Stone Blackwell See biography by her daughter (1930).

Stone, Melville Elijah, 1848–1929, American journalist, b Hudson, Ill , brother of Ormond Stone With others he founded (1876) the first Chicago penny paper, the *Daily News*, and in 1881 the *Morning News* (later the *Record*) Stone became general manager of the reorganized Associated Press in 1893, and under his direction it became one of the great news agencies He retired in 1921 See his *Fifty Years a Journalist* (1921)

Stone, Nicholas, 1586–1647, English sculptor and architect. He rose to a position of highest importance as a decorative sculptor, working in association with Inigo Jones His independent productions include *Virgin and Child* (St Mary's, Oxford) and numerous tombs, the best of which are in Westminster Abbey and Charterhouse Chapel, London Stone executed various works (e g., York Gate) after the designs of Jones.

Stone, Ormond, 1847–1933, American astronomer, b. Pekin, Ill , grad. Univ of Chicago, 1870; brother of M E. Stone. He was an assistant (1870–75) in the U S. Naval Observatory and director (1875–82) of the Cincinnati Observatory. While professor of astronomy (1882–1912) at the Univ. of Virginia, he was also director of the Leander McCormick Observatory. He founded (1884) the *Annals of Mathematics* and edited it for many years Stone observed the 1869 solar eclipse in Iowa and headed eclipse expeditions in 1878 and 1900. Numerous papers for astronomical and mathematical journals resulted from his observations of variable and double stars and of nebulae and from his distinguished work on problems of celestial mechanics

Stone, Thomas, 1743–87, American Revolutionary patriot, signer of the Declaration of Independence, b Charles co , Md Stone, a lawyer, was a delegate (1775–78, 1783–84) to the Continental Congress and urged adoption of the Articles of Confederation

stonecrop see SEDUM

Stoneham (stō'nŭm), town (pop. 10,765), NE Mass , N of Boston, settled 1645, set off from Charlestown 1725.

Stonehenge (stōn'hĕnj"), group of standing stones on SALISBURY PLAIN, Wiltshire, England, preeminent among MEGALITHIC MONUMENTS in the British Isles In 1918 Stonehenge was presented by Sir Cecil Chubb, of Salisbury, to the nation. The great prehistoric structure is enclosed within a circular ditch 300 ft in diameter, with a bank on the inner side, and is approached from the northeast by a broad roadway, called the Avenue, slightly embanked and flanked by ditches Within the circular trench the stones are arranged in four series, the two outermost series forming circles, the third following the shape of a horseshoe, and the innermost proved by recent excavations to have been of an ovoid form The outer circle, in diameter slightly more than 100 ft , is of sarsen stones found near by. Of the original 30 uprights, in height about 13½ ft above the ground, 16 are now in place Connecting these was a continuous line of dovetailed lintels, held by mortise-and-tenon fastening to two uprights The second circle, 76½ ft in diameter, consists of MENHIRS, of diabase bluestone for the most part Of these comparatively small stones it is claimed there were originally over 40, 9 are still upright and 11 lie overturned The horseshoe-shaped group was made up of five huge sarsen trilithons; the one in the middle of the curve, holding a place on the southwest, opposite the opening of the horseshoe, has uprights each 22 ft high The capstone is 15 ft long Two of the trilithons still stand The number of menhirs originally composing the inner ovoid is not known Only 12 remain in sight Within the ovoid lies the so-called Altar Stone, over 16 ft long, now in two parts The Friar's Heel is a great sarsen standing upright in the Avenue, northeast of the circle Another sarsen slab, the Slaughter Stone, lies near the edge of the causeway over the ditch, northeast of the circle The purpose of the structure has not yet been definitely established From the time of Henry of Huntingdon (d. 1155) various explanations have been given It has been described as a monument to the slain in the strife with Hengist, as the tomb of Boadicea, and as a druid or a Roman temple At the beginning of the 20th cent Sir J Norman Lockyer advanced the theory that when the present structure was erected the axis through the Altar Stone and Friar's Heel pointed directly to the rising of the sun on midsummer day (June 24), as it approximately does now This would date the monument at c 1680 B C and imply sun worship Excavations carried on since 1920 seem to indicate that the purpose was sepulchral and that the present structure dates from the Bronze Age, superseding a less elaborate one of the late Neolithic period, although some authorities believe that the existing groups are of different periods Excavations in the surrounding district have disclosed relics of premetallic civilization and burial mounds of the Bronze Age There is a similar larger and older stone monument at AVEBURY. See studies by Sir W F Petrie (1880), Sir J N. Lockyer (1906), Frank Stevens (1938 ed), E H Stone (1924), and R H. Cunnington (1935)

Stoneman, George, 1822–94, Union general in the Civil War, b Lakewood, N.Y., grad West Point, 1846 Commander of Fort Brown, Texas, in Feb., 1861, he refused to obey the order of Gen. D E Twiggs to surrender to Texas authorities, but evacuated the fort and with part of his command sailed for the North He was made a brigadier general of volunteers in Aug., 1861, was chief of cavalry in McClellan's Peninsular campaign (1862), and commanded an infantry corps at Fredericksburg As commander of the cavalry corps under Hooker, Stoneman made (1863) a spectacular but unsuccessful raid to Lee's rear just before the battle of Chancellorsville In the Atlanta campaign (1864) he commanded the cavalry of the Army of the Ohio. While making a raid on Andersonville, Ga., he was captured After a three-month imprisonment he resumed cavalry operations in E Tennessee, W Virginia, and W North Carolina He retired from the army in 1871 and was governor of California from 1883 to 1887.

Stone Mountain, city (pop. 1,408), NW Ga , near Atlanta Near it is an exposed large granite dome, over 650 ft high. The **Stone Mountain Memorial** to the Confederacy and its heroes is to be cut into

the mountain It was conceived (1916) and partly executed by Gutzon BORGLUM, and in 1924 the head of Robert E. Lee was unveiled. Shortly thereafter occurred a disagreement between Borglum and the association financing the project The work was turned over to Henry Augustus LUKEMAN, who abandoned the first design He completed another head of Lee, and the earlier one was destroyed Procedure has been suspended until further funds become available See Gerald W Johnson, *The Undefeated* (1927).

Stones River National Military Park: see MURFREESBORO, Tenn.

Stonewall, town (pop 1,071), SE Man , NNW of Winnipeg, in a dairying and grain-farming region. Dolomitic limestone is quarried near by

stoneware, hard POTTERY made from siliceous paste, fired at high temperature to vitrify the body It is impervious even to acids Stoneware differs from porcelain in being heavier and opaque and from terra cotta in being nonporous and nonabsorbent It has been produced in China since the early years of the Ming dynasty (1368–1644), when a porcelainlike stoneware was created at Shekwan, near Canton, and remarkable red and celadon green glazes were employed In the 16th cent it was extensively manufactured in Yi-hsing, in Kiangsu prov , notable for its unusual teapots of red, buff, or gray and glazed or enameled stoneware Dutch, Flemish, and German potteries of the late 14th cent were making a distinctive gray stoneware, known as Cologne ware or *grès de Flandres*, with stamped or profusely modeled decoration, most of the examples exhibiting lead glaze, though a cream-colored variety was usually left unglazed Korean potters (17th-19th cent) produced crackled stoneware closely related to porcelain and also a blue underglaze painted variety and a kind with buff glaze John Dwight started to make stoneware jugs and mugs in 1671 and climaxed his work with remarkable figurines and portrait busts of porcelaneous stoneware In the American colonies containers were commonly made of gray salt-glazed stoneware, often decorated with blue floral motifs and incised patterns

stonework. The term applies to various types of work—that of the lapidary who shapes, cuts, and polishes gem stones or engraves them for seals and ornaments, of the jeweler or craftsman who mounts or encrusts them in gold, silver, or other metal, of the stonemason who executes the plan of architect or engineer for wall, pier, vault, bridge, or dam, of the carver who chisels bas-relief, intaglio, or free-standing figure, using a pointing machine for accuracy, and of the printer at his imposing stone The most important stonework is masonry, as old as civilization and still widely used Of Roman masonry buildings, some aqueducts, arches, basilicas, and baths still remain Masonry is classified according to finish, rubble being of rough-quarried or field stone and ashlar of dressed stone It may be laid without mortar and is then called dry or Cyclopean or with mortar to bind the stones closely together, the outside finish of such joints being called pointing A thin joint has greater strength, that in first-class work is up to ¼ in in thickness, while in second-class work it may be ½ in Stone-masonry may be of hard materials, such as granite, bluestone, or marble, requiring full finish before laying, or of softer varieties, such as brownstone, laid with rough exterior, the decoration being carved afterward The pyramids (see PYRAMID) and the SPHINX of Egypt are the world's greatest stonework.

Stoney Creek, village (pop 1,007), S Ont , just ESE of Hamilton, in a fruitgrowing region It has canneries and wineries It is the site of a battle (1813) in which American forces, attempting to invade Upper Canada, were defeated

Stonington (stō'nĭngtun) **1** Borough (pop 1,826) in Stonington town (pop 11,002), extreme SE Conn , on a peninsula jutting into Long Island Sound, settled 1649 from Plymouth, town inc. 1662, borough 1801 The town includes also Mystic and part of Old Mystic and several shore resorts Machinery, tools, and airplane parts are made here, but the town was early important for fishing and shipping Many fine old houses survive It was the home of Whistler and the birthplace of Edmund Fanning **2** Village (pop 1,103), central Ill , SW of Decatur; inc 1885 **3** Town (pop 1,493), on S Deer Island, S Maine, inc 1897 It has a small port. Quarries of pink granite are in the town.

Stony Brook, unincorporated village (pop 768), on the north shore of Long Island, SE N Y , near Port Jefferson It is a resort and residential community. In 1941 it was restored to resemble an 18th-century village. William Mount lived and painted here.

Stony Point, unincorporated village (pop. 2,001), SE N Y , on the west bank of the Hudson and N of Nyack It is the seat of a state orthopedic hospital for children. Near by is the Stony Point Museum (1936) memorializing the storming of Stony Point by Anthony Wayne's forces during the Revolution.

stop: see PUNCTUATION.

Stopes, Marie Carmichael (stōps), 1880–, English paleobotanist and eugenist, b Edinburgh, D Sc, Univ of London, Ph D Univ of Munich She lectured in the universities of London and Manchester In 1921, with her second husband, Humphrey Verdon Roe, she founded the first birth-control clinic in the British Empire Her activities in this field gave impetus to similar movements elsewhere. Her works include a number of books on eugenics, birth control, and paleobotany See biography by Aylmer Maude (1933)

storage battery see BATTERY, ELECTRIC

store, commonly a shop or stall for the retail sale of commodities, but also a place where supplies for wholesale are kept, exhibited, or sold Retailing—the sale of merchandise to the consumer—is the oldest business in the world It was practiced by the ancients, even in prehistoric times, and it has been the custom of all primitive peoples The earliest form of retail merchandising was probably the exchange of food and weapons, later came traders and peddlers, and by 3000 B C shops had become common In these barter and sharp practice were the rule Developing through the Greek and Roman period, gay stores—many of them specialty shops—in the form of open booths attracted large crowds, among them strangers from distant lands After the decline of the Roman Empire, the older practice of barter in the market places was resorted to, but by the 14th cent retail trade again assumed importance Merchants, who in early times were rated with thieves and pirates, rose in the social scale Small stores, each carrying its special line of goods, reached their peak in the 18th cent The wholesale business developed, and traveling salesmen and standard prices came into being In America the general store preceded the single-line store and is still common in rural communities, these are effectively supplemented by mail-order houses In the late 19th cent the department store came into being—a large-scale general store or a combination of single-line stores in which each line is operated as a separate department These stores usually carry goods of high standard and provide many conveniences for the shopper, such as accessibility, quick free delivery, rest rooms, restaurants, and various shopping aids Retail concerns which do business principally through the mails are called mail-order houses In the United States the two oldest and largest of these organizations are Montgomery Ward (founded 1872) and Sears, Roebuck, and Company (founded 1886), these have showrooms and retail stores in many parts of the country, but rural residents continue to purchase by means of their huge catalogues While chain stores, like every other form of merchandising, had their origin in antiquity, they were first developed in their modern form in 1859, by the Great Atlantic and Pacific Tea Company Through central management, quantity purchasing, the elimination of the middleman, standardization of business methods, and the limited service extended, the chains are able to sell goods below the prices charged by the independent stores, most common among chain stores are five-and-ten-cent stores, bakeries, tobacco stores, drugstores, and groceries Since the independent retailer finds it impossible to meet the prices of the chain stores, considerable antagonism has been engendered Some independent grocers have combined to form a voluntary chain, purchasing their supplies from one wholesaler The Robinson-Patman price discrimination act of 1936 was designed to prevent price differences on goods of the same quality. Several states have imposed special taxes on chain stores, which have been upheld by the Supreme Court Consumers' cooperative stores (see COOPERATION) have been established in Europe and America, these are profit-sharing organizations, benefiting the consumer by eliminating the cost of the middleman See Benjamin Werne, ed , *Business and the Robinson-Patman Law* (1938).

Storey, Moorfield, 1845–1929, American lawyer, b Roxbury, Mass , grad Harvard, 1866 He attended Harvard Law School and was admitted (1869) to the bar He was (1867–69) secretary to Charles Sumner and thereafter practiced law in Boston Noted for his reform leanings, he fought political corruption, opposed American colonial expansion, and sought the advancement of Negroes and Indians in the United States He was president of the National Association for the Advancement of Colored People from 1910 until his death His writings include a biography of Charles Sumner (1900) and *Problems of Today* (1920) See biography by M A De Wolfe Howe (1932)

Stor Fjord (stôr' fyôr"), inlet of the Norwegian Sea, on the coast of SW Norway It extends c 70 mi. inland from its mouth, where Alesund is located Of wild and imposing aspect, it branches into several fjords, most famous of which is the Geiranger Fjord. Some of the farms on its sheer cliffs are accessible only by ladder Rockslides are frequent and destructive.

stork, large migratory bird related to the HERON. The only species found in the United States is the wood ibis, a white bird with a black tail and a bare, black head and neck. In Europe the white stork, common in the Netherlands and Germany, a useful bird which eats insects, is considered to bring good luck and is encouraged to nest on roofs It is over 3 ft tall, white and black of plumage, and has a bright red bill and long, red legs The smaller black stork is found in swamps in parts of Europe and Asia and in Africa Largest of the family are the adjutant and the MARABOU of Africa and India and the saddle-billed stork of Africa

Storm, Theodor (tā'ōdōr shtôrm'), 1817-88, German poet and novelist He practiced law in his native Husum, served the Prussian government, and retired to his country place in Holstein, which became a literary mecca, here much of his work was written Both as a poet and as a writer of *Novellen*, he holds a distinguished place in German literature Beginning with the popular story *Immensee* (1851, Eng tr , 1858) he wrote numerous novels and tales, many historical, imbued with melancholy and poetic realism Among his works are *Gedichte* [poems] (1852), the stories *Im Schloss* [in the castle] (1861), *Aquis Submersus* (1876, Eng. tr , 1910), perhaps his best work, a children's story, *Pole Poppenspäler* [Paul the puppet player] (1874), and the novels *Hans und Heinz Kirch* (1883) and *Der Schimmelreiter* (1888, Eng tr , *The Rider of the White Horse*, 1915)

storm, disturbance of the ordinary conditions of the atmosphere attended by wind, rain, snow, sleet, hail, or thunder and lightning Types of storms include the extratropical CYCLONE, the common, large-scale storm of temperate latitudes, the tropical cyclone or HURRICANE, somewhat smaller in area than the former and accompanied by high winds and heavy rains, the TORNADO or "twister," a small but intense storm with very high winds, usually of limited existence, and the THUNDERSTORM, local in nature and accompanied by brief but heavy rain showers and often by hail In popular usage the term *storm* also includes disturbances such as the blizzard, sandstorm, and dust storm, in which high wind is the dominant meteorological element

Storm and Stress see STURM UND DRANG

Storm King, mountain, 1,355 ft high, SE N Y , on the west shore of the Hudson near West Point The highway around the mountain presents fine views The area is included in the Palisades Interstate Park

Storm Lake, city (pop 5,274), co seat of Buena Vista co , NW Iowa, on Storm Lake W of Fort Dodge, inc 1873 It has a meat-packing plant Buena Vista College (coeducational) and a state park are here

Stornoway (stôr'nuwā), burgh (1931 pop 3,770; 1948 estimated pop 5,323), on the east coast of Lewis with Harris island, Ross and Cromarty co , Scotland It is a seaport and a fishing station and the site of an old castle

Storrowton, Mass see SPRINGFIELD

Storrs, Richard Salter, 1821–1900, American Congregational minister, b Braintree, Mass From 1846 he was pastor of the Church of the Pilgrims, Brooklyn, N Y From 1848 to 1861 he was an editor of the *Independent*, of which he was a founder Storrs was noted for his eloquence in the pulpit and on the lecture platform

Storrs (stôrz), village in Mansfield town, NE Conn. It is the seat of the Univ of Connecticut (see CONNECTICUT, UNIVERSITY OF)

Storting (stōr'tĭng), national parliament of Norway Dating from the constitution of 1814, it is an assembly of representatives elected by direct universal suffrage for a four-year term It elects one fourth of its members to form the Lagting or upper house, the remainder constituting the lower, or Odelsting, in which all bills must originate

Story, Joseph, 1779–1845, American jurist, b Marblehead, Mass , grad Harvard, 1798 He was admitted to the bar of Massachusetts in 1801 and practiced law in Salem Politically Story was a Federalist He was several times Salem's representative in the Massachusetts General Court, and in 1808 he was elected to Congress Story's legal scholarship quickly earned him great prominence, and in 1811 (at the age of 32) he was appointed an Associate Justice of the U S Supreme Court, the youngest person ever to hold that position In the early period of his judicial tenure he was also a circuit justice in New England, and in deciding cases which arose out of the War of 1812 he helped to frame American prize law Story's judicial views nearly always agreed with those of John MARSHALL, and Story was distressed by the appointment (1836) of Roger B Taney, a Democrat, as Chief Justice One of the most important opinions Story wrote for the Supreme Court—and one which aided the Federalist position—was in *Martin vs Hunter's Lessee* (1816), this established the power of the court to review issues of constitutional law raised in state cases Story expressed his strong antislavery sentiments in several judgments which ordered the repatriation to Africa of Negroes brought into American ports by slavers. In 1829 Story became first Dane Professor of Law at Harvard For the remainder of his life he sat on the Supreme Court, taught at Harvard, and, in connection with his teaching, wrote many legal textbooks. These were systematic summaries of

bodies of case law (mostly British), so treated as to elucidate the legal and philosophical bases Story's texts must be ranked with James Kent's *Commentaries on the American Law* as formative influences on American jurisprudence and legal education They include commentaries on bailments (1832), the U S Constitution (3 vols , 1833), conflict of laws (1834), equity jurisprudence (1836), equity pleading (1838), agency (1839), partnership (1841), bills of exchange (1843), and promissory notes (1845) All his books appeared in several editions, that on equity jurisprudence (14th ed , 1918) perhaps retained its utility longest. See William Wetmore Story, ed , *Life and Letters of Joseph Story* (1851)

Story, William Wetmore, 1819–95, American sculptor and writer, b Salem, Mass , grad Harvard, 1838, and Harvard Law School, 1840, son of Supreme Court Justice Joseph Story In 1847 he published a volume of poetry Chosen in that year to make a statue of his father (Mt Auburn Chapel, Cambridge, Mass), he went to Italy to study sculpture In Rome, from 1856, Story devoted his time to sculpture His brilliant personal gifts made his studio a social and artistic center and enhanced the fame of his works—formal draped classic figures of women and portrait statues of eminent contemporaries, also stiffly draped They were the most admired sculptures of his time *Cleopatra* had sensational success in London in 1862 His works include also *Semiramis*, *Medea*, *Salome*, and others (Metropolitan Mus), *Jerusalem in Her Desolation* (Pa Acad of the Fine Arts), George Peabody (London, replica, Baltimore), Edward Everett (Boston), and Chief Justice Marshall and Professor Henry (Washington, D C)

Story City, town (pop 1,479), central Iowa, N of Ames, on the Skunk river, inc 1881. A pioneer schoolhouse is preserved

Stoss, Veit (fit' shtŏs'), c 1445–1533, German sculptor and the foremost wood carver of his country His active career was spent in Cracow (1477–86, 1488–96) and in Nuremberg, his native place. His genius found dramatic and realistic expression in works for the churches of these two cities Characteristic examples are *Death of the Virgin* and *Assumption of the Virgin* which he executed for the high altar of the Marienkirche, Cracow, and his best-known wood carving, the *Annunciation*, set in a great wreath of carved roses, for the Church of St. Lorens, Nuremberg Occasionally he worked in stone, as in the case of the tomb of King Casimir IV in Cracow

Stothard, Thomas (stŏ'dhurd), 1755–1834, English genre painter, illustrator of the works of Goldsmith, Pope, Defoe, Richardson, and others The National Gallery, London, has 16 of his small paintings, including the popular *Canterbury Pilgrims* He also painted many decorations, including those for the Advocates' Library, Parliament House, Edinburgh See study by A C Coxhead (1906)

Stotsenburg, Fort (stŏt'sŭnbûrg), central Luzon, Philippine Islands It is the principal U S military establishment in the Philippines Clark Field is near by

Stouffville (stō'vĭl), village (pop. 1,253), S Ont., NNE of Toronto, in a farm area.

Stoughton, William (stō'tŭn), 1631–1701, American colonial statesman He was probably born in England but studied at Harvard, (grad 1650) before attending New College, Oxford (M A , 1653) With the Restoration (1660) he was ejected from his fellowship at Oxford In 1662 he returned to Massachusetts Bay colony, where he became active in public life, serving as colonial assistant (1671–86). Between 1676 and 1679 he represented the colony in England in regard to the claims of John Mason. Stoughton was a member of the council of Gov. Edmund Andros, but eventually joined the opposition From 1692 to his death he was lieutenant governor of the colony, for about five years of that time being acting governor. He presided with great severity at the Salem witchcraft trials Stoughton was one of the principal early benefactors of Harvard College, Stoughton Hall being named for him.

Stoughton (stō'tun). **1** Town (pop 8,632), E Mass , S of Boston, settled c 1713, inc 1743 Its shoe industry began early in the 19th cent **2** City (pop 4,743), S Wis , SE of Madison and on the Yahara, in a farm and dairy area, settled 1847, inc 1882 Trailers and automobile bodies are made

Stourbridge (stŏŏr'brĭj, stour'–), municipal borough (1931 pop 19,904, 1947 estimated pop 36,530), Worcestershire, England, at the Staffordshire border and on the Stour river, a tributary of the Severn. Glassmaking began here in the 16th cent. Production of steel, bricks, leather, and machinery is also carried on. The Church of St. Mary has a 14th-century tower.

stout, alcoholic beverage see BEER.

Stout Institute: see MENOMONIE, Wis.

stove [Old Eng., =heated room, hence, by synecdoche, =heater] Stoves made of clay, tile, or earthenware have been used in central and N Europe since Roman times. In the second half of the 15th cent. iron stoves began to be cast in N Europe. They were made of iron plates, grooved to fit together into a box There is a probability that the very first iron stoves were earthen ones enclosed in iron plates These early rectangular castings were highly decorated with Bible scenes and armorial and arabesque designs, and they often bore inscriptions in Norse, German, Dutch, French, and sometimes Latin, some were dated Many were highly artistic specimens of handicraft. A typical early iron stove is the wall-jamb or five-plate stove, which was fueled from an adjoining room Probably the oldest iron stove standing in its original position is in the castle at Coburg, Germany Records indicate that it was set up c 1485. Some tile stoves, dating from the 16th and 17th cent , exquisitely colored and glazed, show traces of Moorish influence Early Swiss stoves of clay or brick without chimneys were built against the outer house wall, with an opening to the outside through which they were fueled and through which the smoke might escape Scarcity of fuel made necessary an economical heat-retaining device, and these primitive stoves, built of clay, brick, tiles, or plastered masonry, were common in the Scandinavian countries, Holland, Germany, and N France In Russia large brick stoves were often built to form a partition between two rooms Because of the very long flue which wound back and forth inside the structure, these could be heated for some hours with a small amount of light fuel The Dutch, Swedish, and German settlers of the American colonies, especially those of Delaware, Pennsylvania, and New Jersey, brought with them the five-plate stoves, or the original molds for casting them In 1720–28 iron founding began in America, and old forges or foundries made records of five-plate stoves sold in 1728 and called Dutch stoves or, less commonly, carved stoves These continued to be made till Revolutionary times, when they were superseded by the English or 10-plate stove which stood free of the wall and had a draft or fuel door These 10-plate inventions could cook and warm at the same time and soon came to replace, at least partially, the large masonry bread oven, usually built out of doors The stove was regarded as a cooking device supplementary to the fireplace, near which it stood with its stovepipe let into the fireplace chimney Not until the coalburning range with removable lids came into general use about the middle of the 19th cent was the fireplace finally supplanted as the chief cooking agency For heating, the Franklin stove, invented in 1743, was the lineal descendant of the fireplace, being at first only a portable down-draft iron fireplace which could be set into, or before, the chimney It was soon elaborated into what was known as the Pennsylvania fireplace, with a grate and sliding doors This was in common use for a period after the Revolution and was then followed by a miscellaneous variety of heaters burning wood and coal The base burner, or magazine coal heater, was widely used before the general adoption of central heating Since gas and electricity have become generally available, the range burning wood or coal has been largely superseded by a wide variety of cooking apparatus, using as fuel natural or manufactured gas, oil, acetylene, gasoline, or electricity

Stow, John, 1525?–1605, English chronicler and antiquarian He followed the tailor's trade in his early years, but after 1560 devoted himself, under the patronage of Archbishop Matthew Parker whose Society of Antiquaries he joined, to the collection of historical documents and manuscripts His edition of Chaucer appeared in 1561, and in 1565 he produced a *Summarie of Englyshe Chronicles*. His work was periodically examined by the government, since Stow was suspected of Roman Catholic inclinations His *Chronicles of England* (1580) was first called *Annales of England* (its best-known title) in the edition of 1592 He produced editions of the work of Raphael Holinshed and other English chroniclers In 1598 there appeared his *Survay of London*, an immensely valuable account of the city in Elisabethan times Stow is one of the most trustworthy of 16th-century chroniclers.

Stow (stō), town (pop 1,243), E Mass , WNW of Boston, settled 1681, inc 1683

Stowe, Calvin Ellis (stō), 1802–86, American educator, b. Natick, Mass , grad Bowdoin, 1824, and Andover Theological Seminary, 1828, husband of Harriet Beecher Stowe He was professor of Greek (1831–33) at Dartmouth and of sacred literature (1833–50) at Lane Theological Seminary, of which Lyman Beecher was president. He married Harriet Beecher in 1836. He was also professor of religion (1850–52) at Bowdoin and of sacred literature (1852–64) at Andover Theological Seminary His works include *Introduction to the Criticism and Interpretation of the Bible* (1835), *Report on Elementary Instruction in Europe* (1837, reprinted by E R Knight, 1930), and *The Origin and History of the Books of the Bible* (1867).

Stowe, Harriet Beecher, 1811–96, American novelist, author of *Uncle Tom's Cabin*, b Litchfield, Conn. Her father, Lyman Beecher, was pastor of the Congregational Church in Litchfield, and, like all the Beechers, Harriet early developed an interest in religious problems and in schemes for improving humanity. In 1824 she went to Hartford to study and teach in her sister Catherine's school When in 1832 her father became head of Lane Theological Seminary in Cincinnati, Harriet began teaching in Catherine's Cincinnati school. In 1836 she married Professor Calvin Ellis Stowe Her husband became a professor at Bowdoin College in 1850, and it was in Brunswick, Maine, that *Uncle Tom's Cabin* was written She had seen slavery in Kentucky and helped fugitive slaves in Ohio, her brother Charles had told her of New Orleans slaveowners and overseers, and her brother Edward had fanned her hatred of slavery to a white heat. Encouraged by her husband, she wrote *Uncle Tom's Cabin; or, Life among the Lowly* to be published serially in an abolitionist paper, the *National Era* It ran from June 5, 1851, to April 1, 1852, and was published as a two-volume book by John P Jewett of Boston in 1852 Although abolitionists criticized her for presenting some of the favorable aspects of slavery and the slaveholders condemned her book as unfair, the effect of *Uncle Tom's Cabin* was an incalculable factor in preparing for the American Civil War In one year over 300,000 copies were sold, and the dramatization by G L AIKEN held the stage over a long period The book was translated into many foreign languages, and when its author visited Europe in 1853, she was overwhelmed with honors In 1856 Mrs Stowe's second novel of slavery, *Dred*, was published Her writing was accomplished under stress of manifold domestic cares, she was the mother of six children (one son died in Cincinnati) She was always harassed by financial worries, for in spite of the great popularity of her books, her earnings from them were never great, and both she and her husband were unbusinesslike and generous Later novels, all set in New England, were *The Minister's Wooing* (1859), *The Pearl of Orr's Island* (1862), and *Old Town Folks* (1869) *Religious Poems* (1867) contains her famous hymn, *Still, Still with Thee* In 1869 the *Atlantic Monthly* published her *Lady Byron Vindicated*, which by its accusations against Lord Byron aroused much criticism both of Mrs Stowe and of the *Atlantic* Mrs Stowe was interested in such reform movements as temperance and woman suffrage in addition to the antislavery cause, she never allied herself with the abolitionists, whom she considered extremists Her life was saddened by the drowning of one son and by the wounding at Gettysburg and later disappearance of another See her *Life and Letters* (ed by Annie Fields, 1897), biography by her son and her grandson (1911), Forrest Wilson, *Crusader in Crinoline* (1941)

Stowe (stō), town (pop 1,741), N central Vt , in a valley between Mt Mansfield and Hogback, chartered 1763, first settled 1794 It includes Stowe village (pop 540), resort and winter sports center In heavily timbered country, the village has a woodenware industry

strabismus see CROSS-EYE

Strabo (strā'bō), b c 63 B C., d after A D 21, Greek geographer and historian, b Amasia, Pontus He studied in Asia Minor, Greece, Rome, and Alexandria and traveled in Europe, North Africa, and W Asia Primarily a historian, he wrote a group of historical sketches (47 books) quoted by later authors but almost entirely lost His geography, written subsequently, is based on his own observations and on the works of his predecessors, including Homer, Eratosthenes, Polybius, and Posidonius, it contains historical material as well as descriptions of places and peoples and is a rich source of ancient knowledge of the world Its value is uneven, in great part because Strabo attributed to Homer an accurate knowledge of places and peoples mentioned in his epics and because he virtually disregarded Herodotus' information, which was often firsthand The geography (extant except for part of the seventh book) is divided into 17 books, two introductory, eight on Europe, six on Asia, and one on Africa, mainly Egypt. Although a Latin translation appeared in 1472, the first printed edition in the original Greek was the Aldine (1516) There are numerous modern editions and translations into several languages See the Loeb Classical Library edition, *The Geography of Strabo* (ed by H L Jones, 8 vols , 1917–32), consisting of the Greek text with an English translation and an introduction on Strabo's life and works

Strachan, John (strŏn), 1778–1867, Canadian prelate, first Anglican bishop (1839–67) of Toronto. Emigrating (1799) from Scotland, he opened a boys' school at Kingston, Ont , and later opened one at Cornwall which became widely known. In 1803 he took orders in the Church of England and was made rector of Cornwall and later (1812) of York (Toronto). As a member of the executive council of Upper Canada (1815–36) and of the legislative council (1820–41), he was an influential leader on the Conservative side. A man of tremendous energy and will, Strachan worked earnestly in the cause of education, but always firmly advocated control by the Anglican church of all institutions of learning. He was influential in obtaining (1827) a charter for King's College (of which he was appointed first president); to be es-

tablished under full church direction. Before the college was finally founded (1843), under a somewhat modified charter, Strachan had become archdean of York (1825) and bishop of Toronto (1839) In the long struggle to settle the matter of the Clergy Reserves, he unequivocally maintained that the Anglican church had the sole claim to their enjoyment. Before King's College was reorganized (1850) as the nonsectarian Univ. of Toronto, he had resigned (1848) in protest over the impending change and had undertaken the establishment of Trinity College (now part of the Univ of Toronto), which was opened in 1852 under church control, although soon secularized See C. H Mockridge, *The Bishops of the Church of England in Canada* (1896), W B Heeney, ed , *Leaders of the Canadian Church* (1918), T B Roberton, *The Fighting Bishop* (1926)

Strachey, John (Evelyn John St Loe Strachey) (strā'chē, ēv'lĭn, sānt lōō'), 1901–, English statesman and writer Son of the journalist John St Loe Strachey, he attended Oxford, where he was interested in socialism He became editor of the *Miner*, the organ of the British Miners' Federation, and served as a Labour member of Parliament from 1929 to 1931, but withdrew from the party with Oswald Mosley in 1931 He soon became alienated from Mosley, however, and moved in the direction of Marxism *The Coming Struggle for Power* (1932), his best-known work, was followed by other books on political and economic theory— *The Nature of Capitalist Crisis* (1935), *The Theory and Practice of Socialism* (1936), and *A Programme for Progress* (1939) Strachey served in the Royal Air Force in the Second World War In 1945 he rejoined the Labour party, and on his election to Commons in 1945 he was made undersecretary of state for air in Clement Attlee's cabinet From 1946 to 1950 he served as food minister, after his reelection in 1950 he was appointed war minister

Strachey, John St. Loe (sānt lōō'), 1860–1927, English journalist He was editor of *Cornhill Magazine* and later publisher and editor of the London *Spectator* Among his works are *The Manufacture of Paupers* (1907), *The Adventure of Living* (1922), and *American Soundings* (1926) See biography by his wife (1931)

Strachey, Lytton (Giles Lytton Strachey) 1880–1932, English biographer Educated at Cambridge, he began his literary career with *Landmarks in French Literature* (1912) *Eminent Victorians* (1918), a volume of short biographies which marked a departure in the genre, had wit, insight, and a brilliant style Thus series of miniatures was followed by *Queen Victoria* (1921), *Books and Characters* (1922), *Pope* (1925), *Elizabeth and Essex* (1928), and *Portraits in Miniature* (1931) See Max Beerbohm, *Lytton Strachey* (1943)

Strachey, William, fl 1606–18, English colonial historian In 1609 he sailed for Virginia in the expedition commanded by Sir George Somers, but was wrecked in the Bermudas with Sir Thomas Gates On his arrival at Virginia (1610) he was made secretary of the colony He returned to England in 1611 His writings, which are prime sources of American history, include an account of the shipwreck (which is reflected in Shakspere's *Tempest*) and of Virginia (in Samuel Purchas's *Hakluytus Posthumus; or, Purchas His Pilgrims*, 1625, reprinted 1906) and *The Historie of Travaile into Virginia Britannia* (first pub. from the manuscript by the Hakluyt Society, R H Major, ed , 1849) He also drafted a code of laws for the colony (1612)

Stradella, Alessandro (älĕs-sän'drō strädĕl'lä), c 1645–1682, Italian composer of the baroque period Outstanding are his six extant oratorios, including *San Giovanni Battista*, said to have been regarded by him as his masterpiece He also composed operas, cantatas, and other vocal works and *concerti grossi* Handel borrowed certain of his musical ideas Few facts but many legends exist concerning his life, he is said to have been assassinated at the behest of a Venetian nobleman with whose mistress Stradella had eloped His life is the subject of an opera by Flotow

Stradivari, Antonio (äntō'nyō strädēva'rē) or **Antonius Stradivarius** (äntō'nēŭs strädĭvā'rēŭs), 1644–1737, Italian violinmaker of Cremona, pupil of Niccolò Amati He was apprenticed to Amati c.1658 and may have remained with him until Amati's death in 1684 Stradivari's earliest extant label is dated 1666, and his last 1737. His finest instruments were made after 1700 Careful research by the Hills (W H , A F , and A E) of London revealed that he produced at least 1,116 instruments, of which 540 violins, 12 violas, and 50 cellos were known to them He also made viols, guitars, and mandolins His workmanship brought the violin to perfection, and later craftsmen have tried to imitate his instruments He was recognized in his time, and his commissions included those from James II of England and Charles III of Spain Two of his sons, Francesco Stradivari (1671–1743) and Omobono Stradivari (1679–1742), worked with him and continued the craft after his death, producing a number of fine instruments. See W H Hill, A. F. Hill, and A. E. Hill, *Antonio Stradivari. His Life and Work* (1902); E. N. Doring, *How Many Stradst* (1945).

Strafford, Thomas Wentworth, 1st earl of, 1593–1641, English statesman, studied at Cambridge and the Inner Temple Entering Parliament in 1614, he took little active part until 1625, when he opposed possible war with Spain Thereupon he was excluded from Parliament by being made sheriff of Yorkshire In 1627 he refused to pay a forced loan to the king, and when in 1628 he supported a moderate form of the Petition of Right he was leader of Parliament against Charles I When Sir John Eliot and Sir Edward Coke succeeded in carrying their more severe form of the petition, he lost that leadership. Created baron and viscount in 1628 and made president of the council of the north, he aligned himself in favor of the king's prerogative on condition of proper curbs He was lord deputy of Ireland (1632–39), and there his hated policy of "Thorough" was his method of enforcing autocratically the king's rule and the king's peace He cleared the sea of pirates and bolstered trade and industry, always with an eye to England's profit He had counseled severe measures against the Scots, and his extension of the plantation of Ulster (see Ireland) and enforcement of adherence to the Thirty-nine Articles of episcopacy were designed to aid the king in the Bishops' Wars in Scotland In England in 1639 he was, with Archbishop Laud, Charles's chief adviser In 1640 he raised an army in Ireland to use against Scotland, but was forced to leave it in Ireland When the Long Parliament assembled (1640), it was declared that he meant to use the Irish soldiers against English subjects, and mainly for that reason impeachment proceedings against him began Treason not being proved, a bill of attainder was finally passed, which Charles after long hesitation signed, and Strafford was beheaded See biographies by W A H C Burghclere (1931), C V Wedgwood (1935), and F W F S Birkenhead (1938)

strain, in engineering: see STRENGTH OF MATERIALS

Straits: see Dardanelles and Bosporus

Straits Settlements, former British crown colony in Malaya A joint administration for Penang, Malacca, and Singapore was established by the British East India Company in 1826 After the dissolution of the company (1858), the Straits Settlements were for nine years under the control of the India Office The crown colony was established in 1867 and dissolved in 1946 Christmas Island, the Cocos or Keeling Islands, and Labuan (in Borneo) were at various times parts of the colony

Stralsund (shtral'zōōnt"), city (pop 50,389), Pomerania, NE Germany, after 1945 included in Mecklenburg It is a seaport on an inlet of the Baltic Sea opposite the island of Rügen, and it has shipyards, machine-building plants, sugar refineries, and a food-processing industry Founded in 1209, Stralsund became a leading member of the Hanseatic League By the Treaty of Stralsund (1370) the league imposed on Waldemar IV of Denmark a humiliating peace which made the league supreme in the Baltic Stralsund was virtually independent of the dukes of Pomerania, and in the Thirty Years War the city withstood (1628) a siege by Wallenstein It was aided by Danish, then by Swedish, troops, and at the Peace of Westphalia (1648) it passed to Sweden It was taken by the French in 1807 and passed to Denmark by the Treaty of Kiel (1814) and to Prussia at the Congress of Vienna (1815) In the Second World War, Stralsund, which was rich in medieval architecture, suffered heavy damage Its city hall and several churches date from the 13th and 14th cent

stramonium: see Jimson weed

Strand, street in London, running roughly parallel with the Thames from the Temple to Trafalgar Square It is a street of hotels, theaters, and office buildings, the main artery between the City and the West End

Strang, James Jesse (străng), 1813–56, American Mormon leader, b Cayuga co , N Y A successful lawyer and teacher, he migrated in 1843 to Wisconsin, was converted to Mormonism, and at the death of Joseph Smith (1844) claimed the succession, saying that he had had a vision in which God had proclaimed him prophet Excommunicated, Strang organized a colony in Walworth co , Wis , calling it Voree Many Mormons unwilling to accept the leadership of Brigham Young were attracted to Strang's colony In 1846 a conference of the church in Michigan proclaimed Strang prophet and first president Aware of the difficulty of founding his ideal community in a Gentile neighborhood, he sought a more suitable site In 1847 he selected Beaver Island in Lake Michigan, then sparsely peopled by trappers and fishermen There he established a colony, driving out other settlers and setting up a despotic rule. The inhabitants of the mainland were violently opposed to the Mormon colony, and public opinion finally forced the Federal government to bring numerous charges against Strang, but he successfully defended himself His power over the Mormons increased, in 1850 he was crowned King James, and he was later elected to the Michigan house of representatives His harsh rule had made him bitter enemies, however, and in 1856 he was assassinated The colony was soon dispersed and the land and property seized by inhabitants of the mainland See M M Quaife, *Kingdom of St James* (1930), O W Riegel, *Crown of Glory* (1935)

Strang, William, 1859-1921, British engraver and painter, studied under Alphonse Legros at the Slade School of Art, London He later became instructor there He produced over 700 plates, including etchings, burin and wood engravings, mezzotints, and lithographs. He is best known, perhaps, for his portrait etchings, including those of Stevenson, Hardy, and Kipling His self-portrait in oil is in the Tate Gallery, London

Strange, Sir Robert, 1721–92, British engraver The outstanding line engraver of his day, he became a member of the academies of Rome, Florence, Bologna, and France and is the only English engraver whose portrait was painted on the ceiling of the Vatican print room A Jacobite who had fought for the Stuarts, he was out of favor at court through his early career His most distinguished works were Van Dyck's *Charles I with His Horse* and *Charles I in His Robes* For his engraving of West's *Apotheosis of the Royal Children* he was knighted in 1787

Strangford Lough (străng'furd lŏkh'), inlet of the Irish Sea, 17 mi long and 4 mi wide, Co Down, Northern Ireland, entered through a 5-mile strait

Stranraer (strunrar', strän-), burgh (1931 pop 6,527, 1948 estimated pop 8,394), Wigtownshire, Scotland, at the head of Loch Ryan It is a seaport, the run to Larne, in Northern Ireland, is but a short one Stranraer's 16th-century castle was occupied in 1682 by Bonnie Dundee The chief industry is fishing

Straparola, Giovanni Francesco (jōvän'nē franchä'skō sträpärō'lä), b near end of 15th cent , d c 1557, Italian novelist and poet He wrote lyric verse and a collection of tales, *Le piacevoli notti* (1550–54, Eng tr , *The Nights of Straparola*, 1894), notable for their inclusion in artistic form of stories from folklore

Strasbourg (sträs'bûrg, Fr strasbōōr'), Ger *Strassburg* (shträs'bōōrk), city (pop 167,149), capital of Bas-Rhin dept , E France, on the Ill near its junction with the Rhine The intellectual and commercial capital of Alsace, it also has various manufactures, notably tanneries and breweries, and a river port on the Rhine Strasbourg goose-liver *pâté* is justly famous The ancient Argentoratum, an important Roman city in the province of Upper Germany, it became an episcopal see in the 4th cent Destroyed (455) by the Huns, it rose again as Strateburgum After it became part (870) of Germany, Strasbourg, with a considerable rural area around it, came under the temporal rule of its bishops However, in the Middle Ages, the burghers secured, after some struggles, the status of a free imperial city for the city proper (13th cent) A revolution in the 14th cent established a corporative government, in which the guilds played an important part Here medieval German literature reached its flower in Gottfried von Strassburg, and here Gutenberg may have invented the printing press Strasbourg accepted the Reformation, played an important part in the efforts to reconcile the doctrines of Zwingli with those of Luther (see Bucer, Martin), and in 1608 joined the Protestant Union Calvin came here in 1538 after his first sojourn in Geneva, a Protestant university was founded in 1538 In 1681 Louis XIV, on a slight pretext, seized the free city, which was confirmed in French possession by the Treaty of Ryswick (1697) The persecutions of French Protestants after 1685 were not carried into Strasbourg, which raised little objection to the annexation Strasbourg enthusiastically embraced the French Revolution and from that time increasingly adopted French customs and French speech It was severely bombarded by the Prussians in 1870 and passed to Germany by the Treaty of Frankfurt (1871) It was recovered by France in 1919 Occupied by Germans from 1940 to 1944, the city suffered considerable destruction in the Second World War Most historical monuments, however, were saved Chief among these is the Roman Catholic cathedral, begun in 1015 and completed in 1439, a masterpiece of Rhenish architecture, with a single spire 466 ft high and with a famous astronomic clock installed in 1574

Strasbourg, Oath of, 842, oath sworn by Charles the Bald (later Emperor Charles II) and Louis the German in solemnizing their alliance against their brother, Emperor Lothair I The chief political result of this alliance was the Treaty of Verdun (843, see Verdun, Treaty of) The oath was spoken by each brother in the language of the other's followers, so that they could understand it The version used by Louis is the oldest known specimen of French.

Strasburg. **1** (sträs'bûrg, sträs'-) Village (pop 1,297), E Ohio, SW of Canton, settled 1810, laid out 1827, inc 1893 Firebrick is made here Beach City Dam is 2 mi north **2** (sträs'bûrg) Residential borough (pop. 1,048), SE Pa., SE of Lancaster, settled c.1733, inc 1816 **3** (sträs'bûrg) Town (pop. 1,968), N Va., in the Shenandoah Valley

Strassburg, France see STRASBOURG.

strategy and tactics, in warfare, the general scheme for the attainment of an objective and the elements of action which the scheme coordinates To Pliny the Elder military strategy was generalship, and 19 centuries later it is still defined by some as the science (by others, as the art) of generalship One of the foremost military theoreticians, Karl von Clausewitz, described strategy as the planning of a whole campaign and tactics as the planning of a single battle A contradiction developed when he also introduced the idea that war is merely a continuation of political intercourse Clearly, if military action is an adjunct to politics, the strategy of the general is not the dominant scheme, it is only part of a larger pattern Clausewitz's theory of "total warfare" subordinated all of a nation's resources to the task of attaining an objective (notably, winning the war) To this he gave the name "grand strategy," making military strategy, in effect, tactics A H Jomini, a staff officer of Napoleon and a contemporary of Clausewitz, regarded strategy as the art of getting forces on the field of battle and tactics as the conduct of the forces on the battlefield This view was developed by the Prussian general C F von der Goltz, who associated strategy with the large-scale measures which serve to bring forces into play at the decisive point under the most favorable conditions possible, while assigning to tactics all that is done in the engagement itself Another approach looks upon strategy as a means of bringing the enemy to battle, with tactics as the means of defeating him in battle Despite the dearth of source material concerning the conduct of his campaigns, Cyrus the Great has come to occupy in military history a place as the first accomplished strategist It was, however, the destroyer of the Persian Empire that Cyrus built who was the towering figure in early military science—Alexander the Great He converted into principles of warfare the ideas of reserves, pursuit of the enemy, building up supplies (stockpiling), and elaborate scouting (intelligence) In the Punic Wars (between Rome and Carthage) Hannibal emerged as a superlative commander His victory at Cannae, in which he defeated (216 B C) the Roman armies of Aemilius Paullus and Terentius Varro, became the classic of encirclement Hannibal's reputation is more that of a tactician, since faulty strategy was subsequently his undoing SCIPIO AFRICANUS MAJOR, though victorious, was rated lower than defeated Hannibal The study of military theory captured the imagination of the later Byzantine emperors, who hoped to restore the glory of the Roman Empire at its height They analyzed the operations of the Roman legions and reduced the studies to what may be called the foundations of military science *Strategicon* (c 578) compiled by the later Emperor Maurice and *Tactics* (c 900) issued by Emperor Leo VI (Leo the Wise) are exhaustive treatises on the subject In the Middle Ages in the West military science declined, though siegecraft was deeply studied The Crusaders conducted themselves either in total ignorance or in conspicuous violation of the most elementary principles of military functioning Scientific warfare in the West began with Jan Zizka, the leader of the Czech Hussites, in the first quarter of the 15th cent He adopted the wagon-fort as the unit of tactics, made artillery a maneuverable arm, and was the first commander to handle cavalry, infantry, and artillery in efficient tactical combination. The belief that mobility is a better protection than armor (a lesson that brings to mind the Maginot, Siegfried, and Mannerheim lines) was evolved by Zizka. The strategists and tacticians who developed further the practice of warfare include the duke of Marlborough, Prince Eugene of Savoy, Frederick II of Prussia, Napoleon, the duke of Wellington, H K B von Moltke, and Alfred von Schlieffen Among outstanding American generals who developed the science were W T Sherman and T J (Stonewall) Jackson Some of the classic works of theoretical military science are those of Niccolò Machiavelli, A H Jomini, and Karl von Clausewitz Machiavelli in his *Dell' arte della guerra* [on the art of war] (1521) advocated a marriage of weapons of gunpowder with the ancient tactics of the Roman legion or Greek phalanx Jomini, of Swiss origin but a general in Napoleon's army, wrote *Précis de l'art de la guerre* [summary of the art of war] (1836), setting forth a system of warfare that largely governed the strategy and tactics of 19th-century wars The introduction of new weapons swiftly outmoded his concepts Clausewitz's *On War* (1832) is a philosophy of war, and it rooted itself in the thinking of the German general staffs Clausewitz strongly influenced Erich Ludendorff, the German chief of staff in the First World War who in turn put his ideas in a book entitled *Der totale Krieg* [the total war] (1921) The volume *Lectures on F S R III* (1932) by the British authority on military science, J. F. C. Fuller, was intended for the British army, but the contents exerted greater influence on other European armies The Czech forces were organized on the lines suggested by Fuller, and Heinz Guderian, Germany's foremost tank expert during Hitler's rule, was also indoctrinated with Fuller's theories S K Timoshenko, a marshal of the USSR, insisted that his officers use three books for constant reference Clausewitz's *On War*, Giulio Douhet's *Command of the Air* (1942), and J F C Fuller's *Lectures on F S R III*. It is known that the lessons in strategy taught by the general staff and command school of the U S army were strongly influenced by the thinking of Marshal Foch of France The American experts reduced their lessons in strategy to eight principles—offensive action, combat power concentration, economy of force, mobility, surprise, security, cooperation, and maintenance of the objective They stressed at every turn the maxim, "Be strongest at the decisive point" The Second World War saw revolutionary changes in strategic doctrine Both the conviction that the subjugation of an enemy power was best accomplished by defeating its armed forces in battle and its corollary that the concentration of all available weapons should be directed against them yielded to new concepts The new view held that by means of concentrated attacks on centers of production, on key communication areas, and on centers of population the enemy could be deprived of weapons and other needs, that the economic and physical life of his country would be so dislocated as to induce him to sue for peace Also present in the thinking was the expectation that a sufficiently terrorized population would lose the will to continue the war Military aircraft were the chief basis for this departure The proponents of the idea that the war could be won through air power alone proved to be wrong in their underestimation of the other arms (e g infantry, artillery, and naval vessels), but they did succeed in establishing the importance of aircraft The strategic considerations that developed with air power led to the division of air strength into two groups—strategic bombing and tactical support This duality represented a violation of a cardinal rule of total war, exclusive concentration of every part of all arms against the enemy's battle array The wisdom or lack of wisdom in departing from this traditional strategic concept is still uncertain The problem is being debated by military theoreticians and practitioners The availability of the detailed results of the large-scale bombardment of the enemy homelands and industrial concentrations, practiced by day, by night, and to the degree of saturation, have not settled the questions In fact, they have intensified the partisanship The same data is used to support opposing sides in the dispute between various service arms In the course of the Second World War responsibilities were placed on three general levels, and the division epitomized the changes in strategic concepts The supreme strategy (or, as it is called, war planning) was done at the highest level—by F D Roosevelt, Joseph Stalin, Winston Churchill, and others) They determined policy, consulted the military advisers, and generally charted the larger pattern for the conduct of the war Their decisions then became the subject of strategic planning on the military level (combined chiefs of staff with a supreme commander) The third level, the field commanders, took responsibility for the tactical action Naval strategy and tactics, like military strategy and tactics, reflect the continuing changes in weapons, mobility, and speed Strategy determines the disposition of the naval resources, the manner in which the naval forces should be dispersed is conditioned by the strategic role which the war policy gives to the navy It is determined that certain parts of certain waters shall be kept clear of the enemy Several elements of the fleet may be sent to destroy, harass, or pin down enemy craft in other waters Convoy duties for the protection of merchant or troop ships are another function to which units of the navy are assigned In modern times the naval forces play strategic roles in ground action, as carriers in amphibious operations, as suppliers of aid to land forces through shelling, and as mobile bases for naval aircraft acting in support of ground troops either by supplying aerial cover or by aiding in tactical air operations In the earliest naval battles—the Athenian wars of the 5th cent B C—the vessels were used to ram the enemy vessels, and the crews attacked each other with oars These methods were supported by boarding enemy craft, either to complete the destruction of ship and crew or to capture them as booty and prisoners Most of the engines of war developed for ground warfare ultimately came into use on ships Catapults for stones, blowers of Greek fire, and flaming arrows are a few of the early shipboard weapons Hand-to-hand fighting when ships were boarded yielded to gunfire of vessel against vessel The Spanish Armada in 1588 was vanquished when its pike-armed marines were annihilated by fire from the English naval guns Ramming remained a naval war measure for many centuries. In the early 20th cent. British warships were still supplied with special equipment for ramming. Jomini's dictum that new weapons alter the practice but not the principles of warfare was tested five times, first with the steam warship, with the iron-hulled warship, with armorclad ships having heavy ordnance, with the submarine, and lastly with naval aircraft Changing concepts of strategy and tactics accompanied the new weapons. The advent of the steam warship brought changes in the strategy of maritime war These changes were occasioned by the increased speeds, freedom from reliance on the wind, the introduction of the fuel problem, and the modification of maritime geography in terms of days of voyage A host of differences in tactics ensued Despite recurrent upheavals in strategic and tactical conceptions, the fundamental purpose of sea power, which is to retain sea-borne communications and to deny communications to the enemy, is still the objective. The development of new weapons of sea warfare made ships more rather than less dependent upon bases Fuel and ammunition needs point up this dependence In the last decade of the 19th cent Alfred T MAHAN wrote on the importance of SEA POWER and naval strategy His thinking has had and still has an important bearing on the development of navies A theme to which he referred again and again was that a navy justifies its existence to the extent that it is capable of protecting merchant shipping Thus it is apparent that his concepts of strategy for the naval establishment fitted into a framework of grand strategy or war planning Economic-political considerations were paramount in his conception of naval function. Wireless communication in naval combat operations began with the Russo-Japanese War of 1904–5 The one great naval engagement of the First World War, that of the battle of Jutland (1916), ended indecisively. The SUBMARINE altered many naval patterns after the beginning of the First World War The development of air power also led to a host of changes, including the emergence of aircraft carriers, naval air fleets, and new protective measures for all other sea-borne craft The first aircraft carrier designed as such was the British *Argus* built in 1918 In 1925 the U S navy converted the battle cruisers *Saratoga* and *Lexington* into carriers In the Second World War the activities of dive-bombers, torpedo-carrying planes, and suicide fighters (KAMIKAZE) in assaulting large surface craft brought into focus many problems concerning the relative values of air and sea power These matters are far from resolved, and proponents of air superiority on the one hand are still vehemently opposing the partisans of naval superiority on the other In the Second World War the battle of the Coral Sea (1942) was in one sense more an engagement of aircraft than of capital ships In the battle of Midway shortly thereafter the opposing warships did not exchange a single salvo However, the problems of strategy and tactics, military and naval, in this connection and in connection with all other rivalry between the arms of service have all been transcended by the development of the atomic weapon The role of each arm in relation to atomic warfare is not yet clearly determined Undoubtedly there have been no considerable authorizations for aircraft or naval vessels by any of the major powers since 1945 without due regard for their potential role in atomic defense or attack The strategy and tactics of armed forces once again respond to changes imposed by new weapons, just as do the war plans in reacting to new ideological and international alignments See J F C Fuller, *The Foundations of the Science of War* (1926) and *Armored Warfare* (1943), Max Werner, *Military Strength of the Powers* (1939), Hermann Foertsch, *The Art of Modern Warfare* (1940), A P de Seversky, *Victory through Air Power* (1942), Tom Wintringham, *The Story of Weapons and Tactics* (1943), Bernard Brodie, *Sea Power in the Machine Age* (1943), *A Layman's Guide to Naval Strategy* (1944), A H Burne, *Strategy as Exemplified in the Second World War* (1946), B H Liddell Hart, *The Revolution in Warfare* (1947), Gerald Dickens, *Bombing and Strategy* (1949); S T Possony, *Strategic Air Power* (1949), E. J. Kingston-McCloughry, *War in Three Dimensions* (1950)

Stratford, city (pop. 17,038), S Ont., on the Avon, a tributary of the Thames, and WSW of Toronto It is an industrial center, with locomotive repair shops, woolen and knitting mills, and plants manufacturing cigars, leather and rubber products, furniture, clothing, felt shoes, and agricultural machinery. Food products from the surrounding farm area are processed here.

Stratford, 1 Town (pop 22,580), SW Conn., at the mouth of the Housatonic, near Bridgeport, settled 1639 Asbestos products are made here. It was the home of David Wooster 2 Town (pop. 1,049), NW N.H., on the Connecticut above Lancaster, granted and inc as Woodbury 1762, settled 1772, regranted 1773, inc as Stratford 1779 It was an outpost against the St. Francis Indians

Stratford, home of the Lees, Westmoreland co., E Va., overlooking the Potomac ESE of Fredericksburg. A national shrine (dedicated 1935), it was

purchased (1716) by Thomas Lee, who built the mansion, Stratford Hall, in 1729–30. It was the birthplace of Richard Henry Lee and Francis L. Lee, the home of Light-Horse Harry Lee, and the birthplace of his son, Robert E Lee The activities of an ante-bellum plantation are carried on—spinning, weaving, curing hams, grinding meal

Stratford de Redcliffe, Stratford Canning, Viscount, 1786–1880, British diplomat He entered the foreign office (1807) under the aegis of his cousin, George Canning, the secretary for foreign affairs In 1808 he was sent to Turkey, and he became chargé d'affaires at Constantinople in 1810 In 1812 he helped negotiate the Russo-Turkish Treaty of Bucharest His career in Turkey was interrupted by diplomatic service in Switzerland (1814–18), at the Congress of Vienna, and in Washington (1819–23), where he negotiated concerning disputes arising from the War of 1812 He returned to Turkey in 1825 (staying until 1829) and again in 1831 He gained the favor of Sultan Mahmud II, but Lord Palmerston refused to follow Canning's advice to make an alliance between Great Britain and Turkey After a period of service in Parliament, Canning returned to Constantinople (1842), where he remained, with interruptions, until 1858 He remarkably influenced Turkish internal reform through Sultan Abdu-l-Mejid, and he greatly helped to bring on the CRIMEAN WAR by encouraging the sultan (probably with Lord Palmerston's knowledge) to resist (1853) the demands of Prince Menshikov for Russian protection of Greek Orthodox Christians in Turkey. Canning was raised to the peerage in 1852 Some of his political essays were collected in *Eastern Question* (1881) See biography by Stanley Lane-Poole (1888)

Stratford le Bow, London, England see Bow

Stratford-on-Avon or **Stratford-upon-Avon,** municipal borough (pop 11,605), Warwickshire, England, on the west bank of the Upper Avon and NW of London. The Avon is here crossed by an arched 16th-century bridge A market town in pleasant farm and woodland country, Stratford owes its great fame to its connection with Shakspere A room in a gabled building on Henley St is shown as the poet's birthplace The site of his home he purchased in 1597 is marked (the building having been torn down by a local vicar in 1759), to this "New Place" Shakspere retired in 1610, and here he died six years later His grave is beside that of his wife, Anne Hathaway (whose home was in SHOTTERY, near Stratford), in the fine old Church of the Holy Trinity This church, built partly in the 14th cent, is said to be on the site of a 7th-century monastery, probably Stratford's earliest building, it has also a bust and memorial to the poet and a stained-glass window (given by Americans) depicting Shakspere's "seven ages of man" The town's principal memorial was a theater, built in the late 19th cent and thereafter the scene of annual Shakspere festivals In 1926 fire destroyed the theater, but the attached gallery, library, and museum were saved, and in 1932 a new theater was dedicated Most of the various structures and places connected with the life of Shakspere were acquired by the nation in the 19th cent The grammar school of Edward VI, which Shakspere may have attended, is also now national property See J H Bloom, *Medieval Stratford* (1915), H E Forrest, *Old Houses of Stratford-upon-Avon* (1925), E I Fripp, *Shakespeare Studies* (1930), Muriel C Day and J C Trewin, *The Shakespeare Memorial Theatre* (1932)

Strathclyde, (sträth"klīd') [Gaelic,=Clyde valley] and **Cumbria** (kŭm'brēŭ) [cognate with Welsh *Cymry*=Welsh], early medieval British kingdom of Great Britain in the territory now in S Scotland and N England There were, of course, no definite boundaries, except in the southern portion, where the Grampians separated the kingdom from Northumbria Strathclyde and Cumbria made up one of the four great British units after the Anglo-Saxon invasion, the others being Wales, Cornwall, and Brittany. Little is known of the history of these Britons, except that they remained independent into the 9th cent, and that their country became a bone of contention between Scots and English later Eventually the Solway was taken as dividing the country into two parts The causes for the vanishing of the British language and culture in Strathclyde and Cumbria are not known, but there was probably increasing settlement from their neighbors, the Danes and English of Northumbria, the mixed Gaels and Picts of Galloway, and the Gaels of the Western Isles and the western highlands. The principal towns of Strathclyde and Cumbria were Dumbarton and Carlisle See John Rhys, *Celtic Britain* (1882), F. M. Stenton, *Anglo-Saxon England* (1947).

Strathcona and Mount Royal, Donald Alexander Smith, 1st **Baron** (sträthkō'nu), 1820–1914, Canadian fur trader, financier, railroad builder, and high commissioner for Canada in England, b Scotland. Coming to Canada in 1838, he entered the employ of the Hudson's Bay Company, with which he was associated for 76 years—for some 20 years as fur trader on the Labrador coast, for 25 years (1889–1914) as governor of the company Smith's skill in finance was early apparent; he had begun to invest money for fellow employees and to acquire shares in the Hudson's Bay Company and the Bank of Montreal before he was transferred from Labrador and appointed head of the company's Montreal department in 1869 It was not until that year, however, that he came into public notice, he was sent by the government to treat with Louis RIEL, leader of the Red River Rebellion In 1871 Smith was elected to the dominion Parliament His stand on the PACIFIC SCANDAL (1873) was in part responsible for the downfall of Macdonald's administration Turning his attention to railroads, he acquired control (with his cousin, George Stephen, James J Hill, and others) of the Great Northern lines in 1878 and later was a leading member of the company that completed (1885) the Canadian Pacific Railway In 1886 he was knighted, and while serving (1896–1914) as Canadian high commissioner in England he was created baron (1897) Out of the great fortune which he amassed, he gave large sums to charitable and educational enterprises, and at his own expense raised a cavalry regiment for service in the South African War A highly controversial figure, Strathcona was much vituperated by his enemies as a conniving self-seeker, much praised by his admirers as a vigorous empire builder See biography by John Macnaughton (1926)

Strathcona Provincial Park, 828 sq mi, on central Vancouver Island, SW British Columbia It is a game sanctuary in a forested, mountainous region, rising to 7,219 ft in Golden Hinde Mt Its streams and lakes afford excellent fishing, and it is a popular recreation area

Strathmore (sträthmōr'), the "great valley" of Scotland, a plain c 100 mi long and 5 to 10 mi wide, largely in Perthshire and Angus, S of the Grampians and N of the Lennox, Ochil, and Sidlaw hills

Strathroy (sträth"roi'), town (pop 3,016), S Ont, on the Sydenham river and W of London It produces wool, flour, canned fruit, and furniture

Strathspey (sträthspā'), valley of the Spey, Inverness, Moray, and Banff counties, Scotland It is supposed to be the place of origin of the strathspey

strathspey (sträthspā', sträth'spā"), Scottish national dance which originated in the 18th cent and derived its name from the strath or valley of the Spey In duple rhythm and characterized by the Scotch snap (a succession of sixteenth notes alternating with dotted eighths), it is slower but asks more exertion than the REEL

stratification (strā"tĭfĭkā'shun) [Latin,=made in layers], division into parallel layers—a structure characteristic of sedimentary rocks Just as in still water the heavier sediments tend to settle to the bottom more rapidly than the lighter ones, so in running water, when its velocity is checked, coarser sediments are deposited before the finer The sediments are thus graded horizontally Alteration in the character of the sediments, in the velocity of the water, or in the relative levels of land and sea causes the new layer of sediments to differ in fineness from that vertically beneath it Each layer is a stratum or bed, and the plane of separation is a bedding plane Strata are frequently divided into finer layers, or laminae, which perhaps represent minor changes in conditions The length of the period of deposition of a single stratum is in general proportional to its thickness Strata are classified vertically into assemblages, such as series, laid down during epochs of geologic time, and systems, laid down during periods of geologic time These assemblages are frequently separated by unconformities, areas where the contiguous strata show a lack of continuity indicating an interruption in the rock-forming process, such as an intervening period of erosion or of non-deposition A nonconformity or angular unconformity occurs when the strata of the lower assemblage are inclined to those of the upper assemblage, it is generally taken by geologists to indicate that the erosion of the lower assemblage was preceded by continent-making or mountain-making movement A nonconformity also occurs between igneous rocks and sedimentary rocks A disconformity occurs when the strata of the two assemblages are parallel, but the surface of the topmost stratum of the lower assemblage is dissected by erosion, or the fossils of the upper assemblage differ markedly from those of the lower assemblage, it probably indicates erosion unaccompanied by major earth movements The time represented by an unconformity is often very great See W. H Twenhofel, *Treatise on Sedimentation* (2d ed, 1932)

stratosphere (strā'tŭsfēr), outer layer of the earth's ATMOSPHERE The level at which it begins varies with latitude, it extends upward from a height of c 5½ mi at the poles, from c 6 or 7 mi in the middle latitudes, and c 10 mi. at the equator Balloon flights into the stratosphere have been made by scientists since the ascent of Auguste PICCARD in 1931 A world's record was established on Nov 11, 1935, when A W. Stevens and O A Anderson reached an official height of 72,395 ft over South Dakota in their instrument-laden balloon Analysis of samples of stratospheric air and spectrographic studies of the aurora borealis indicate that the composition of the air at high altitudes is very similar to that of the troposphere

Stratton, Cornwall, England see BUDE-STRATTON.

stratus: see CLOUD

Straubing (shtrou'bĭng), city (pop 34,271), Lower Bavaria, on the Danube and SE of Regensburg It manufactures machinery, precision instruments, and textiles, and it is an agricultural market center An ancient place, Straubing was (1353–1425) the capital of the duchy of Bavaria-Straubing under a branch of the Wittelsbach dynasty It has kept Romanesque and Gothic churches, a Gothic city hall, and a 14th-century tower Agnes Bernauer, the barber's daughter who married Albert III of Bavaria, lived in the castle here for a time

Straus (strous), family of American merchants, public officials, and philanthropists **Isidor Straus,** 1845–1912, b Rhenish Bavaria, emigrated with his brothers to the United States and joined (1854) his father in Talbotton, Ga Isidor went (1863) to England to purchase supplies for the Confederacy The family moved (1865) to New York city, and there Isidor took a large part (1866) in forming and directing the importing firm of L Straus & Sons Isidor, with his brother Nathan, became associated with R H Macy & Company in 1888 and by 1896 had acquired ownership of the firm As a Representative (1894–95) in the U S Congress, Isidor aided in drafting tariff legislation He declined to serve as Postmaster General in Grover Cleveland's cabinet He later devoted his attention to philanthropy and reform He and his wife were lost when the *Titanic* sank His brother, **Nathan Straus,** 1848–1931, b Rhenish Bavaria, joined his brother in business and was also outstanding for his philanthropy He established pasteurization stations to supply sanitary milk to the poor, made his milk stations relief depots in the Panic of 1893, and continued them until 1920 He was a prominent Zionist leader and contributed generously to the general improvement of conditions in Palestine Another brother, **Oscar Solomon Straus,** 1850–1926, b Rhenish Bavaria, grad Columbia (B A, 1871, LL B, 1873), was a diplomat and author He practiced law in New York city until 1881 and then went in business with his brothers He was minister to Turkey (1887–89) under Grover Cleveland and again (1898–1900) under William McKinley and was ambassador to Turkey (1909–10) under William H Taft He was appointed (1902) to the Permanent Court of Arbitration (the Hague Tribunal) and was (1906–9) Secretary of Commerce and Labor under Theodore Roosevelt He was candidate for governor of New York on the Progressive party ticket in 1912 He wrote several books, including *Roger Williams* (1894), *The American Spirit* (1913), and *Under Four Administrations* (1922) A son of Isidor Straus, **Jesse Isidor Straus,** 1872–1936, b New York city, grad Harvard, 1893, became president of R H Macy & Company in 1919 and served (1933–36) as ambassador to France **Nathan Straus,** 1889–, b New York city, son of Nathan Straus (1848–1931), engaged in journalism and served in the First World War He was (1921–26) in the New York state legislature and headed (1937–42) the U S Housing Authority He wrote *Seven Myths of Housing* (1944)

Straus, Oscar (strous, Ger ōs'kär shtrous'), 1870–, Austrian composer, studied in Vienna and with Max Bruch in Berlin After a brief career conducting in theaters he devoted himself entirely to composition Although a few operas and some instrumental works are among his compositions, his outstanding works are his operettas, particularly *A Waltz Dream* (1907) and *The Chocolate Soldier* (1908, based on G B Shaw's *Arms and the Man*) These have been performed in Vienna, Berlin, Paris, London, and New York In the early 1930s Straus was in Hollywood, writing scores for moving pictures In 1939 he became a French citizen and in 1940 moved to the United States

Strauss (strous, Ger shtrous), family of Viennese musicians **Johann Strauss** (yō'hän), 1804–49, learned to play the violin against his parents' wishes In 1823 he joined the quartet of Josef Lanner (1801–43), who later became his rival In 1826 Strauss organized his own orchestra, with which he played in various places of entertainment His waltzes won him fame, which was extended over all Europe when he toured Austria (1833) and played in Berlin (1834) and in Paris and London (1837–38) His son, **Johann Strauss,** 1825–99, followed a musical career opposed by his father In 1844 he formed an orchestra which was immediately successful and became the rival of his father's After the elder Johann's death, the son combined the two orchestras He composed more than 400 waltzes, on which his fame largely rests and which include *The Blue Danube* (1866) and *Tales from the Vienna Woods* (1868) He also composed a number of operettas, of which *Die Fledermaus* [the bat] (1873) is outstanding Of the others, hampered by inadequate librettos, *Der Zigeunerbaron* (1885) may be mentioned Two of his brothers, **Josef Strauss** (yō'zĕf), 1827–70, and **Eduard Strauss** (ā'dōōärt), 1835–1916, were also successful composers and conductors See H E Jacob, *Johann Strauss, Father and Son* (Eng. tr., 1940).

Strauss, David Friedrich (dä'vēt frē'drĭkh shtrous), 1808–74, German theologian and philosopher In Berlin he studied (1831–32) Hegelian philosophy. As tutor at Tübingen he lectured on Hegelianism, modern philosophy, and Plato His *Das Leben Jesu* (2 vols , 1835–36), which showed fine theological scholarship, aroused much interest because it treated the Gospel narrative like any other historical work and applied a "mythical" theory to Bible history It was translated into English in 1846 by George Eliot When in 1839 Strauss was appointed to a post in the Univ of Zurich, clerical opposition prevented his entering upon his duties His other theological writings include *Die Christliche Glaubenslehre* (2 vols , 1840–41) and *Der alte und der neue Glaube* (1872) His writings mark a turning point in the critical study of the life of Jesus Strauss was also the author of a number of critical biographies

Strauss, Eduard · see STRAUSS, family

Strauss, Emil (ā'mĭl shtrous'), 1866–, German novelist His first success was the psychological novel of childhood and adolescence *Freund Hein* (1902), later a short-story volume similar in theme was *Hans und Grete* (1909). The title story of the collection *Der Schleier* [the veil] (1930) is notable, as are the historical drama *Vaterland* [the fatherland] (1923) and the novel *Das Riesenspielzeug* [the giant toy] (1934), which is about an experimental farm

Strauss, Johann: see STRAUSS, family

Strauss, Josef see STRAUSS, family

Strauss, Joseph Baermann (strous), 1870–1938, American engineer, grad Univ of Cincinnati, 1892 Specializing in building long-span bridges, he became (1904) president and chief engineer of the Strauss Engineering Corp , which designed the Golden Gate Bridge in San Francisco Others among the nearly 500 bridges for which he served as engineer are the George Washington Bridge in New York city and a bridge over the Columbia river at Longview, Wash He invented the Strauss trunnion bascule for bridges and the bascule-door hanger

Strauss, Richard Georg (rĭkh'ärt gā'ôrk shtrous), 1864–1949, German composer He succeeded Hans von Bülow as conductor at Meiningen and as conductor of the Berlin Philharmonic concerts, 1894–95 In 1894 he conducted the first BAYREUTH Festival performance of *Tannhäuser* His early works are written in classical forms, but he later took Wagner and Liszt as his models and produced the operas and orchestral tone poems by which he is known today Of his tone poems, frequently heard are *Don Juan* (1888), *Tod und Verklärung* (1889), *Till Eulenspiegel* (1894), *Also sprach Zarathustra* (1895), *Don Quixote* (1897), and *Ein Heldenleben*, in which the composer himself is the hero (1898). *Salomé* (Dresden, 1905), *Elektra* (Dresden, 1909), and *Der Rosenkavalier* (1910) have been widely acclaimed. Of his songs, about a dozen have established their place in the lieder repertoire His correspondence with his librettist, Hofmannsthal, has been published (1927) See biography by Ernest Newman (1908), David Ewen, *The Book of Modern Composers* (1942)

Stravinsky, Igor Feodorovich (ē'gur fyô'durŭ"vĭch strŭvĭn'skē), 1882–, Russian composer, pupil of Rimsky-Korsakov. At the première, in Paris, of his ballet *Le Sacre du printemps* (1913), in which Nijinsky danced, its dissonances aroused the audience to violent demonstration, although the music later found its place in the orchestral repertoire Other ballets—*L'Oiseau de feu* (*The Fire Bird*, Paris, 1910; reorchestrated as a suite for medium orchestra, 1919), *Petrouchka* (Paris, 1911), *Les Noces* (1917, instrumentation finished, 1923, produced, Paris, 1923), *Histoire du soldat*, to be read, played, and danced (Lausanne, 1918)—and the symphonic poem, *Le Chant du rossignol* (Geneva, 1919, from the unsuccessful opera, *Le Rossignol*, 1909–14, after Hans Christian Andersen) are representative of his earlier, romantic style, wherein Scriabin's influence is felt The ballet *Le Baiser de la fée* (1928), which he acknowledges to have been "inspired by the muse of Tchaikovsky," shows also influences of Chopin and Liszt With *Pulcinella* (1919–20), a ballet after Pergolesi, begins his later, neoclassical style, which is exemplified in the ballets *Apollon musagète* (1927), *Perséphone* (Paris, 1934), with spoken text by André Gide, and *Jeu de cartes* (1937), the opera-oratorio, *Oedipus Rex* (1926–27), text by Jean Cocteau, after Sophocles, the capriccio (1929) for piano and orchestra, and the *Symphonie de psaumes* (1930), for chorus and orchestra without violins or violas. As a conductor, Stravinsky is objective, opposing overexpressive interpretations Lectures delivered (1939) at Harvard were published as *Poétique musicale* (1942) In 1934 he became a French citizen, in 1945 a U S citizen. See his autobiography (Eng. tr., 1936), E W. White, *Stravinsky's Sacrifice to Apollo* (1930), *Igor Stravinsky*, a collection of studies (ed. by Merle Armitage, 1936).

straw, dried stalks of threshed grains, especially wheat, barley, oats, and rye. It has been used from antiquity for bedding, covering floors, and thatching roofs, as fodder and litter for animals, and in weaving such articles as mats, baskets, ornaments, hats, and armor. It is widely used in the Far East for mats, screens, hangings, fans, and hats. Straw hats and hat braids are exported chiefly by China, Japan, Italy, and England Hats are woven in one piece or made from braids sewn together. Braids have been made in Europe from medieval times and probably originated in Tuscany. They are usually made from straw selected for color, length, and lightness and grown under special conditions of soil and climate Fine braids, such as Leghorn, are commonly of wheat stalks, often cut before they are fully ripe. Hats made of other fibers, such as the leaf fiber of the screw pine used for Panama hats, are also known as straw hats Straw is widely used today as a packing material and in the manufacture of strawboard (a cheap cardboard) and, in combination with less brittle materials, of paper

strawberry, *low*, herbaceous perennial of the genus *Fragaria*, having trifoliate leaves, white blossoms, and a fleshy, red fruit, globular or somewhat cone shaped, in which are partially imbedded many green seeds The strawberry was first cultivated in the 14th cent and since has been much improved in size and bearing qualities, modern varieties are derived chiefly from *Fragaria chiloensis*, native to the West Coast of the Americas Various species of wild strawberries are found throughout the North Temperate Zone See S W. Fletcher, *Strawberry-Growing* (1917) and *The Strawberry in North America* (1917)

strawberry geranium: see SAXIFRAGE

Strawberry Hill, western suburb of London, England, near Twickenham, named for Horace Walpole's estate, where he built a small "Gothic" castle (1747) Literary works printed on his private printing press here are now much valued

Strawberry Point, town (pop. 1,223), NE Iowa, WNW of Dubuque, inc 1887 It has a large creamery Near by is Backbone State Park, largest in the state, with an extensive trout hatchery.

Strawberry valley project, N central Utah, developed by the Bureau of Reclamation for irrigating lands S of Utah Lake, constructed 1906–13 The water of Strawberry river (a tributary of the Duchesne in the Green River system) and its tributaries is carried by a tunnel through the Wasatch Range to a tributary of the Spanish Fork and is used for lands about Spanish Fork, Springville, Payson, and Santaquin

strawflower, garden annual (*Helichrysum bracteatum*), a favorite as an EVERLASTING, but also grown for the fresh flowers The flower heads are made up of papery petallike parts and are of various colors For drying, the stems should be cut when the heads are half open or less Other everlastings and the bellwort (*Uvularia*) are often called strawflower.

Strawn, city (pop 1,107), N Texas, WSW of Fort Worth, settled 1880, inc. 1915. The region has coal deposits and natural-gas fields as well as ranches and farms

streamline, in the planning of bodies of airplanes, boats, automobiles, and railroad cars, a design which will result in uninterrupted flow of the air or water about the body, instead of an eddying or turbulent motion A streamlined body offers the least possible resistance to air or water, or other fluid and permits the current which it breaks simply to reunite in its wake, without the retarding or dragging eddies and turbulence created by partial vacuum in the wake of a nonstreamlined body. The streamline design is typically a long ellipse, tapering to a point; it is illustrated in the cross section of an airplane wing, and in a bird's and a fish's body.

Streator (strē'tur), city (pop 14,930), N central Ill , on the Vermilion river and NE of Peoria, laid out 1868, inc 1882 An industrial and railroad center with railroad shops, it manufactures glass, bricks, tiles, and milk and farm machinery

Street, George Edmund, 1824–81, English architect One of the foremost champions of the Gothic revival, he did much church work, including St Mary Magdalene, Paddington, London, St James the Less, Westminster, and restorations to the Bristol Cathedral and to Christchurch, Dublin His most notable work, the Royal Courts of Justice (1874–81) in London, was the last great attempt to apply the Gothic revival to a public building. Street was professor of architecture at the Royal Academy of Arts and was president (1881) of the Royal Institute of British Architects. The results of his study of medieval Gothic buildings in England and on the Continent were published in *The Brick and Marble Architecture in the Middle Ages* (1855) and *Some Account of Gothic Architecture of Spain* (1865). He was buried in Westminster Abbey

street cleaning, removal of litter of all kinds and of snow from the areas between sidewalks. Most of the matter to be removed from streets consists of paper, cigarette ends, fruit skins, loose soil, debris from construction operations, and occasional dead animals. Where there is heavy traffic, small handcarts are used, manned by men with brooms and shovels Rotary sweeping machines are used in some communities to loosen the dirt and push it to the edges of the street near the curb, where broom and shovel squads gather it in heaps and transfer it to dump trucks for disposal. One of the most widely used methods of cleaning is street flushing. It may be done by opening a hydrant or by the more effective means of flushing machines. These are essentially tanks mounted on motor trucks, with the water sprayed through specially shaped nozzles The pressure required to expel the water with sufficient force is generally obtained from the truck motor. Streets are sprinkled to reduce dust or to prepare them for sweeping Three factors influence greatly the effectiveness of street-cleaning operations the condition of the pavement (asphalt in smooth condition is preferable to cobbled streets); freedom from parked cars during cleaning (parked vehicles prevent the most advantageous use of motorized equipment such as sweepers and flush trucks), and the community spirit, which in response to enforced sanitary regulations, posted reminders, and widely distributed trash receptacles may reduce the cleaning problem considerably. Removal of snow is accomplished by large emergency crews and the regular street-cleaning personnel working with shovels, picks, scrapers, and machine equipment Snowplows, attached to the front end of rubbish removal and flushing trucks, push the snow toward the sides of the street, where either mechanical loaders or shoveling squads load it on trucks. Where a single system of SEWAGE is used for rain water and waste, the snow may be dumped into the manholes Small, powerful tractors equipped with snow-pushing blades are also used Their maneuverability makes them well suited for snow-removal tasks Where the temperature is high enough, water from the hydrants may be used to melt the snow. See American Public Works Association, *Street Cleaning Practice* (1938).

street cries. The imaginative, musical cries of ragpickers, scissors grinders, menders, and vendors of various sorts form a distinctive type of folk song The earliest literary record of them is the poem *London Lackpenny* by John Lydgate Remarkably little variation is to be found usually in the music or tune of a given cry, and one English cry of 1393 was used until the end of the 18th cent The London cry "Who'll buy my sweet lavender?" provided a theme for Vaughan Williams's *London Symphony*, while Charpentier made effective use of Parisian cries in his opera *Louise* Few cries survive in such cities as London and New York, a notable survival being the ragpicker's "I cash clo'," but many picturesque cries exist among Negroes in the S United States, e g , those of fish vendors and flower sellers, Gershwin introduced the cry of the strawberry vendor into his opera *Porgy and Bess* See Sir Frederick Bridge, *The Old Cryes of London* (1921), Raphael Nelson, *Cries and Criers of Old London* (1942)

Strehlenau, Nikolaus Niembsch von: see LENAU, NIKOLAUS

Streicher, Julius (yōō'lyōōs shtrī'khur), 1885–1946, German National Socialist leader An early party member, originally a schoolteacher, he aired his sadistic and anti-Semitic mania and his diseased and pornographic imagination in his periodical, the *Stürmer* Streicher also was the founder of the yearly Nazi party congresses at Nuremberg and, after 1933, was gauleiter of Franconia Captured (1945) by U S troops, he was convicted of crimes against humanity at the Nuremberg war-crimes trial and was hanged

Strelitz, Germany see NEUSTRELITZ

strength of materials, measurement in engineering of the capacity of steel, wood, concrete, and other materials to withstand stress and strain Stress is the internal force exerted by one part of a body upon the adjoining part, while strain is the deformation or change in dimension occasioned by stress. When a body is subjected to pull, it is said to be under tension, and when it is being pushed, i e , is supporting a weight, it is under compressive stress. Shearing stress results from a force tending to make part of the body or one side of a plane slide past the other Torsional stress occurs when external forces tend to twist a body around an axis. Materials are considered elastic in relation to applied stress if the strain disappears after the force is removed. The elastic limit is the stretch point beyond which the material will not return to its original form In calculating the dimensions of materials required for given functions, the engineer uses working stresses that are ultimate strengths, or elastic limits, divided by a quantity called factor of safety In laboratories materials are frequently "tested to destruction" They are deliberately overloaded with the particular force that acts against the property or strength to be measured Changes in form are measured to the millionth of an inch. Static tests are run to determine a material's elastic limit, ductility, hardness, reaction to temperature change, and other qualities Dynamic tests are those in which the material is exposed to a combination of expected operating circumstances including impact (e.g , a shell against a steel tank), vibration, fluctuating loads, and fatigue. Polarised light, X rays, and microscopic examination are some of the means of testing materials. See A. P. Poorman, *Strength of Materials* (4th ed., 1945); J. P. Den Hartog, *Strength of Materials* (1949);

Stephen Timoshenko, and G. H. MacCullough, *Elements of Strength of Materials* (3d ed , 1949).

streptococcus (strĕp"tŭkŏ'kŭs), genus of bacteria (of the family Coccaceae), spherical in shape, which grow in beadlike chains as a result of dividing by fission and remaining connected. The streptococci have been classified according to their ability to produce fermentation and to their action on blood media. Two of the most important types are the green-colony or viridans streptococci and the hemolytic streptococci. Those of the viridans type often cause tooth abscesses and infections of the ear, sinus, appendix, gall bladder, and valves of the heart. Virulent hemolytic streptococci usually produce hemolysin, a substance which dissolves red blood corpuscles. Other toxic substances formed by these streptococci destroy white blood cells and dissolve fibrin clots of normal human blood. Hemolytic streptococci cause scarlet fever, erysipelas, and puerperal fever and frequently are responsible for acute sore throat, tonsilitis, septic sore throat, inflammation of the middle ear, mastoiditis, bronchopneumonia, wound infections, and osteomyelitis. Sulfa drugs are effective in treating many streptococcal infections

streptomycin: see ANTIBIOTIC SUBSTANCES

Stresa (strä'zä), village, Piedmont, N Italy, on the western shore of Lake Maggiore. Its beautiful scenery makes it one of the most popular pleasure resorts in the Italian lake country. In 1935 a conference was held here by Great Britain, France, and Italy as a result of Germany's decision to rearm in violation of the Treaty of Versailles. The agreement reached was never put to practice.

Stresemann, Gustav (gōōs'tŭf shträ'zŭman), 1878–1929, German statesman. A founder (1902) and director (till 1918) of the Association of Saxon Industrialists, Stresemann entered the Reichstag in 1907 as a deputy of the National Liberal party and represented the interests of big business. In the revolution of 1918 he founded the conservative German People's party. Though originally he sympathized with nationalism, big business, and the monarchist cause, he soon became concerned for the welfare of his nation as a whole and with the preservation of world peace. As chancellor (1923) and as foreign minister from 1923 till his death, he made it his task to reconcile the former enemy nations to Germany, to remove the harsh clauses of the Treaty of Versailles by a policy of conscientious fulfillment rather than by threats and protestations, and to regain for Germany a respected place in the world. His policy, though it alienated from him the nationalist and monarchist elements in Germany, was remarkably successful. He ended (1923) the passive resistance in the RUHR district against French and Belgian occupation and obtained the evacuation of the Ruhr in 1924, he accepted the DAWES PLAN (1924) and the YOUNG PLAN (1929) for reparations, he raised the hope for peace by his part in the LOCARNO PACT (1925), he renewed the Rapallo treaty with the USSR (1926), and he had Germany admitted (1926) into the League of Nations with the rank of a great power. His harmonious relation with Aristide BRIAND became one of personal friendship. In 1928 Stresemann signed the KELLOGG-BRIAND PACT. Soon after obtaining his last success, the evacuation of the Rhineland, Stresemann died of the consequences of overwork. His death was, prophetically, considered a calamity by all but the extremist elements in Germany. Stresemann shared the 1926 Nobel Peace Prize with Briand. See his *Essays and Speeches* (Eng tr , 1930), Eric Sutton, ed , *Gustav Stresemann. His Diaries, Letters, and Papers* (3 vols , 1935–40)

stress and strain: see STRENGTH OF MATERIALS.

Stretford, municipal borough (1931 pop 56,791, 1947 estimated pop 61,440), Lancashire, England, in the industrial region

Streuvels, Stijn (stĭn strû'vŭls), pseud. of **Frank Lateur** (frängk' lätûr'), 1871–, Flemish novelist and short-story writer, one of the chief artists in his language, nephew of Guido Gezelle. His works are realistic, moving portrayals of everyday life. Some of his work appears in English translation in the short-story collection *The Path of Life* (1899, Eng tr , 1915) and in the novel *Old Jan* (1902, Eng tr., 1936).

Streymoy, Faeroe Islands: see STROMO

Stribling, Thomas Sigismund, 1881–, American novelist, b Clifton, Tenn , grad Univ. of Alabama (LL B , 1904). After writing for Sunday-school and pulp magazines, he produced successful realistic novels of the South, which include *Birthright* (1921), *Teeftallow* (1926, dramatized as *Rope*, 1928), and a trilogy of three generations, *The Forge* (1931), *The Store* (1932, awarded a Pulitzer Prize, 1933), and *Unfinished Cathedral* (1934). *The Sound Wagon* (1935) and *These Bars of Flesh* (1938) are social satires.

Strickland, Agnes, 1796–1874, English historian. Collaborating with her sister Elizabeth (1794–1875), she wrote *The Lives of the Queens of England* (12 vols., 1840–48), *Letters of Mary, Queen of Scots* (1843), and *Lives of the Queens of Scotland* (1850–59).

Strickland, William, 1787–1854, American architect of the classic revival, b. Philadelphia, studied under B. H. Latrobe. He worked mostly in Philadelphia, where he superintended the construction (1819–24) of Latrobe's Bank of the United States (later the customhouse, now a historical site), bringing it to completion after Latrobe's death. Strickland also built the Naval Asylum and the Mint (1829–33, since demolished). His most distinctive work is the Merchants' Exchange (1834), an unusual and monumental classical work. In 1828 he restored Independence Hall. His last work was the state capitol at Nashville, Tenn. Strickland was a founder (1836) and first president of the American Institute of Architects. His book *Reports on Canals, Railways, Roads, and Other Subjects* (1826) shows his engraving and engineering capacities.

strike, concerted stoppage of work by a group of employees, the chief weapon of labor in industrial disputes. A suspension of work on the employer's part is called a LOCKOUT. Organized strikes, i e , not just a work stoppage by a few employees, date from c 1880, when labor unions began to gain some power. To be successful a strike must have the support of a powerful labor union. A strike results from conflict of interests between the employer, who seeks as much profit as possible, and the employees, who seek higher wages (or in times of depression try to stop wage decreases), shorter hours, better working conditions, and union recognition. Both sides in such a conflict seek to win public support. Employers usually attempt to continue operations without the striking employees, and in such cases violence is likely to occur. Violence may result from the use of armed guards hired by the employer or the calling out of police or state militia against pickets (see PICKETING) or to protect strike-breakers. A notorious example of the importation of strikebreakers was in 1892 in the strike at HOMESTEAD, Pa. The first example of the use of the INJUNCTION against strikers was at PULLMAN, Ill , in 1894. The technique of the sit-down strike (used successfully by rubber workers in Akron in 1936 and by automobile workers in 1937) was designed to prevent strikebreaking because the workers remained on the job while ceasing to work. Some of the most important strikes in the United States have been waged by coal miners, industrially organized as the UNITED MINE WORKERS, who have in general bettered their condition through strikes in 1897, 1919–20, 1939, 1941, 1945, 1946–47, 1948, and 1950. Steelworkers, chiefly unskilled labor and badly organized, lost a strike in 1919, but after the formation of the Steel Workers' Organizing Committee in 1936, they won concessions by strikes in 1937, 1941, and 1946. A strike of maritime workers in 1936–37 crippled ports on both coasts. Automobile workers struck in large numbers in 1937 and 1946. At the beginning of the depression of the 1930s strikes were few since labor's position was weak, but with the passage of the National Labor Relations Act (1935), the gradual recovery of business, and especially the foundation of the C I O (see CONGRESS OF INDUSTRIAL ORGANIZATIONS) to organize mass-production workers, union activities expanded rapidly and many strikes were called to win union recognition. Jurisdictional strikes, to determine which organization should be the bargaining agent, were numerous. Strikes rose to a peak in defense industries in 1940–41. With the entry of the United States into the Second World War (Dec , 1941), a "no-strike, no-lockout" pledge was given by management and labor, and the National War Labor Board was created to mediate disputes. With the end of the war and with postwar inflation, strikes rose sharply, delaying the supply to consumers of articles, e g , automobiles, which had been unavailable in the war years. The TAFT-HARTLEY LABOR ACT, passed in 1947 over the President's veto, forbids jurisdictional and some other strikes. Strikes have been frequent in all industrialized countries. In England crippling strikes of coal miners occurred in 1898 and again in 1926. The GENERAL STRIKE, more successful in highly centralized countries such as France than in the United States, has nevertheless been occasionally tried in cities here. Strikes against foreign owners of mines and oil fields have occurred in Mexico, Bolivia, and Chile. The right of government employees to strike has in general not been conceded, examples of such strikes in the United States are the policemen's strike in Boston in 1919, the strike of WPA workers in New York city in 1939, and a teachers' strike in Buffalo in 1947. See E T Hiller, *The Strike* (1928), Florence Peterson, *Strikes in the United States, 1880–1936* (1937), Edward Levinson, *Labor on the March* (1938), J J Senturia, *Strikes* (2d ed., 1940), David Ziskind, *One Thousand Strikes of Government Employees* (1940), H A. Millis and R. E Montgomery, *Organized Labor* (1945)

Strindberg, Johan August (strĭnd'bûrg, Swed yōō'hän ou'gŭst strĭnd'bĕr"yŭ), 1849–1912, Swedish dramatist and novelist. He was a master of the Swedish language and an innovator in literary styles. The fourth child of a snobbish father and a mother who had been a barmaid, he grew up in a poor, crowded, and unhappy home in Stockholm. At the Stockholm lyceum he was intensively interested in natural science, an interest he always retained. He was a teacher and then a doctor's assistant before his naturalistic novel, *The Red Room* (1879; Eng tr., 1913), won him a grant of money from the crown. His historical drama *Master Olof* (1881; Eng tr., 1915) had been written in 1871–72. Strindberg married three times and was thrice divorced. The tortured misery of his marriages—in large part the fault of his own highly charged temperament, which led him several times into actual madness—is the subject of many of his plays and novels. His chief autobiographical fiction includes the short stories in *Married* (2 vols., 1884–85, Eng. tr in one volume, 1913), *The Son of a Servant* (Vols I-III, 1886-87, Vol IV, 1909, Eng tr of Vol I, 1913), *The Inferno* (1897, Eng tr , 1913), and *Legends* (1898, Eng tr., 1912), of the last two Strindberg made the dramatic trilogy *To Damascus* (1898–1904, Eng tr , 1933–35). Of some 70 dramas, perhaps the best known to English-speaking readers are *The Father* (1887, Eng tr , 1907), which has several times been presented on the American stage, but its bleak horror is hard for American audiences to endure, *Comrades* (1888, Eng tr , 1912), *Julie* (1888, Eng tr , 1911, also tr as *Miss Julia* and *Countess Julia*); *The Link* (1893, Eng tr , 1912), *The Dance of Death* (1901, Eng tr , 1912), *The Dream Play* (1902, Eng. tr., 1912), and *After the Fire* (1907, Eng tr , 1913). Strindberg cannot be classified in any one school; he was by turns a naturalist, an iconoclast, and a mystic, but his work—and his total output was enormous—bears always the stamp of his individuality. His influence continues to be a living force, particularly in the theater. Translations of his plays have been collected as *Plays* (tr by Edith and Warner Oland, 3 vols , 1912–14), *Plays* (4 series, tr. by Edwin Bjorkman, 1912–16), *Easter and Other Plays* (tr by C D Locock and others, 1929), *Lucky Peter's Travels and Other Plays* (tr by C. D Locock and others, 1930), and *Master Olof and Other Plays* (tr by C D Locock and Joan Bulman, 1931). See biographies by Elizabeth Sprigge (1949) and Brita Mortensen and B W Downes (1949), C E W L Dahlstrom, *Strindberg's Dramatic Expressionism* (1930), Joan Bulman, *Strindberg and Shakespeare* (1933), Frida Uhle Strindberg (his second wife), *Marriage with Genius* (1937)

stringed instrument, any musical instrument whose tone is produced by vibrating strings. Those whose strings are plucked with the finger or a plectrum include the BALALAIKA, BANJO, GUITAR, HARP, LUTE, MANDOLIN, and ZITHER. Those played with the bow are principally of the VIOL and VIOLIN families. Instruments whose strings are struck include the DULCIMER and several key board instruments, among them the PIANO, HARPSICHORD, and CLAVICHORD.

Stritch, Samuel Alphonsus, 1887–, American Roman Catholic prelate, cardinal of the Roman Church, b Nashville, Tenn. After study at the American College at Rome, he was ordained a priest in 1910. He was successively secretary and chancellor in the diocese of Nashville (1915–21), bishop of Toledo (1921–30), archbishop of Milwaukee (1930–40), and, in succession to Cardinal Mundelein, archbishop of Chicago (1940–). He was made cardinal in 1946.

Strode, Ralph, fl. 1350–1400, English schoolman. He taught logic and philosophy at Oxford and wrote books on these subjects. Chaucer's *Troilus and Criseyde* was dedicated to Gower and to "the philosophical Strode."

Stroheim, Erich von (ā'rĭkh fŭn shtrō'hīm), 1885–, German moving-picture actor and director. He had numerous occupations before he came to the United States in 1914 and entered moving pictures as an actor and assistant. Of his many films, *Greed*, which he directed in 1923, is a landmark for its realism and attention to minute detail. He acted in many French films, but his greatest role was in *La Grande Illusion*.

stroke: see APOPLEXY.

Stromberg, Gustaf Benjamin (strŏm'bûrg), 1882–, American astronomer, b Sweden, Ph D Univ. of Lund, Sweden, 1916. He came to the United States in 1917 and was astronomer (1917–46) at Mt Wilson Observatory. Working especially in the field of stellar motions and stellar luminosities, he wrote many technical papers as well as *The Soul of the Universe* (1940, 2d ed , 1948) and *The Searchers* (1948)

Stromboli, island, Italy: see LIPARI ISLANDS

Stromness (strŏm'nĕs'), burgh (pop 1,592), on SW Pomona, Orkneys, Scotland. It is a seaport.

Stromo, Dan *Strømø* (strûm'ū"), Faeroese *Streymoy* (străm'oi"), largest island (144 sq. mi , pop 7,865) of the FAEROE ISLANDS. On the southeast coast is Thorshavn, capital of the Faeroes.

Stromsburg, city (pop 1,127), E Nebr , NW of Lincoln, in a prairie region S of the Platte, settled 1872 by Swedes, inc 1883. It is a farm trade center.

Strong, Eugénie Sellers, d. 1943, English classical scholar. She was educated at Girton College, Cambridge, of which she became fellow in 1910. She lectured on Greek art and archaeology at the British Museum and the Victoria and Albert Museum and in Rome and was librarian (1904–9) to the duke of Devonshire and assistant director (1909–

25) of the British School of Archaeology, Rome. In 1913 she was Norton lecturer at the Archaeological Institute of America She wrote *Roman Sculpture* (1907), *Art in Rome* (1912), and *Art in Ancient Rome* (1928) In 1927 she was made Commander of the Order of the British Empire

Strong, Sir Samuel Henry, 1825–1909, Canadian jurist, b England In 1836 he went to Canada with his parents. Called (1849) to the bar of Upper Canada, he served (1856) on a committee to consolidate the statutes of Canada and Upper Canada and in 1875 was appointed puisne judge of the Supreme Court of Canada, he was chief justice from 1892 to 1902

Strong, Theodore, 1790–1869, American mathematician, b South Hadley, Mass, grad Yale, 1812 He was tutor in mathematics at Hamilton College (1812–16) and professor there (1816–27) and at Rutgers (1827–61), where he was also vice president for many years He was famous among mathematicians for solving Cardan's irreducible case of the cubic equation His works include treatises on algebra (1859) and calculus (1869)

Strong, town (pop 1,007), W Maine, N of Farmington, settled 1784, inc 1801 The Republican party of Maine was organized here in 1854

Strongbow, Richard see PEMBROKE, RICHARD DE CLARE, 2D EARL OF

Strongsville, village (pop 2,216), NE Ohio, SW of Cleveland, inc 1927

Stronsay (strŏn'sā), island (8,736 acres, pop. 975), off N Scotland, one of the Orkney Islands

strontium (strŏn'shum, -shēum), soft, white metallic element (symbol=Sr, for physical constants, see ELEMENT, table) It is grouped with calcium and barium in the periodic system and resembles these elements in its properties, being a metal of the ALKALINE EARTHS With other elements it forms various compounds, e g , with oxygen, two oxides, the monoxide being the mineral strontia, with oxygen and hydrogen, a hydroxide, with oxygen and nitrogen, a nitrate, with chlorine, a chloride, with carbon and oxygen, a carbonate which occurs in nature and is known as strontianite, and with sulphur and oxygen, a sulphate also occurring in nature and known as CELESTITE or celestine Both the carbonate and the sulphate serve as sources of the element Strontium metal is prepared by electrolysis of the fused chloride Its compounds (usually the nitrate) are used in making fireworks and signal flares because they add a bright red or crimson coloration to a flame The hydroxide is used in the purification of beet sugar In the laboratory, the hydroxide serves as a strong base Although it was recognized first in its carbonate, strontianite, by Crawford of Edinburgh in 1790 and later by T C Hope, M H Klaproth, and others, strontium was not isolated until 1808 by Sir Humphry Davy

Strother, David Hunter (strŏ'dhur), 1816–88, American author and illustrator, b Martinsburg, Va (now W Va), grad Jefferson College, Canonsburg, Pa, 1839 He studied art in Philadelphia, France, and Italy Under the name Porte Crayon he contributed short sketches of life in the South with illustrations to *Harper's New Monthly Magazine* Some of them were collected in *Virginia Illustrated* (1857) After his service in the topographical corps of the Union army, his valuable "Personal Recollections of the War" by "A Virginian" appeared (1866–68) in *Harper's* He was consul general of the United States in Mexico from 1879 to 1885

Stroud, urban district (1931 pop 8,364, 1943 pop 14,100), Gloucestershire, England, in a valley of the Cotswolds It is a center of woolen cloth manufacture and has long been noted for its red dyes.

Stroud, city (pop 1,917), central Okla, between Oklahoma City and Tulsa, in a farm and oil region, settled and inc 1898.

Stroudsburg, borough (pop 6,186), co seat of Monroe co, E Pa, near the Delaware Water Gap N of Easton, settled 1738, laid out 1806, inc 1815 In the Pocono Mt region, it is a popular resort. A fort was located at Stroudsburg (c 1760).

Strozzi (strôt'tsē), noble Florentine family It took after the 13th cent an active part in the government of the city and later strongly opposed the Medici There were among the Strozzi several eminent soldiers, scholars, and men of letters The Strozzi early divided into several branches, some of them still existing **Palla Strozzi** (päl'lä), 1372–1462, a politician and ardent humanist, furthered Greek studies in Florence and Padua **Filippo Strozzi** (fēlēp'pō), 1426–91, was banished by the Medici, gained great wealth and influence in Naples, and after his return to Florence began to build the celebrated Strozzi Palace. His son **Filippo Strozzi**, 1488–1538, married a granddaughter of Lorenzo de' Medici, he was first friendly to the Medici, then became a staunch opponent He led Florentine exiles against Cosimo I, was captured, and died in prison His son **Leone Strozzi** (lāō'nā), 1515–54, first entered the Order of Malta and later became an admiral in the French service He distinguished himself in wars against Spain and England. Another son of Filippo, **Piero Strozzi** (pyā'rō), d. 1558, a violent enemy of the Medici, fought for the French in the Italian Wars and was made a marshal of France. He took part in the French capture of **Calais** (1558). **Filippo Strozzi**, 1541–82, also was in the French service He was captured and killed by the Spanish in a naval battle off the Azores

Strozzi, Bernardo (bĕrnär'dō), 1581–1644, Italian portraitist and fresco painter A Franciscan monk, he was called Il Cappucino or Il Prete Genovese He deserted the order and later became a secular priest His works in Genoa and Venice testify to the brilliance and vigor of his style, as do his pictures *Beggar* (Rome) and *Christ and the Pharisees* (Uffizi) A St Catherine is in the Avery Memorial Art Museum, Hartford, Conn

Struensee, Johann Friedrich (yō'hän frē'drĭkh shtrōō'unzā, strōō'-), 1737–72, Danish statesman, b Germany As physician to CHRISTIAN VII he gained complete mastery over the insane king and became the favorite of the young queen, Caroline Matilda With her support he became minister of state (1771), was created a count, and suppressed the privy council, which had limited the royal power A virtual dictator, he accomplished industrial, commercial, and educational reforms, he attempted to free Denmark from Russian influence and to improve the condition of the peasantry However, his ruthless methods provoked the enmity of the nobles, who terrorized the king into arresting him He was accused of adultery with the queen and executed

Struma (strōō'ma), Gr *Strymon* (strē'mŏn'), river, 216 mi long, rising S of Sofia, Bulgaria It flows S through Macedonia, out of Bulgaria, and through Greece to the Aegean Sea

Strumica (strōō'mĭtsa), town (pop 10,649), Macedonia, S Yugoslavia, SE of Skoplje It is an agricultural center An ancient place, Strumica has the ruins of a castle built by Emperor Tiberius There also are remains of the castle of the 14th-century Serbian hero Marko Kraljevich Strumica was ceded (1913) by Turkey to Bulgaria after the First Balkan War and was awarded to Yugoslavia by the Treaty of Neuilly (1919)

Struthers (strōō'dhurz), city (pop 11,739), NE Ohio, on the Mahoning river, inc as a city 1922 It is an industrial suburb of Youngstown, iron and steel are made here

Strutt, Jedediah, 1726–97, English inventor and manufacturer In 1759 he patented the Derby ribbing machine, a stocking frame that could knit ribbed fabric In 1768 he became a partner of Richard ARKWRIGHT, the inventor of the water frame, and with him established some of the first cotton mills in England, the one at Leeds being the first to use horse power In 1797 he established the great Derby knitting mills See Percy Walton, *The Story of Textiles* (2d ed , 1925)

Struve, Friedrich Georg Wilhelm von (frē'drĭkh gā'ôrk vĭl'hĕlm fŭn shtrōō'vu), 1793–1864, German-Russian astronomer, b Germany As director of Dorpat Observatory (1817–39), he discovered many double stars He was also engaged in notable geodetic operations, including the triangulation of Livonia and the measurement of an arc of the meridian Beginning (1822 27), with the portion in the Baltic provinces, this measurement was extended under his direction until, in 1855, it was completed from the North Cape to Ismail on the Danube In 1839 he became director of the new Pulkovo Observatory, the erection of which he had superintended One of the first three astronomers who almost simultaneously obtained a stellar parallax, he measured (1838) the parallax of Vega (Alpha Lyrae) Among his writings on his star research is *Études d'astronomie stellaire* (1847). His son, **Otto Wilhelm von Struve** (ō'tō), 1819–1905, succeeded him as director (1862–82) of the Pulkovo Observatory He discovered about 500 new double stars and a satellite of Uranus, estimated the sun's velocity, made micrometrical measurements of Saturn's ring system, and studied nebulae and comets **Otto Struve** (ō'tō strōō'vē), 1897–, son of Otto Wilhelm and also an astronomer, was born in Russia and came to the United States in 1921 (he was naturalized in 1927). He received a Ph D (1923) from the Univ of Chicago, in 1921 he had joined the staff of its Yerkes Observatory From 1932 to 1947 he was professor of astrophysics at the Univ of Chicago and director of Yerkes Observatory and of McDonald Observatory (of the universities of Texas and Chicago)

Stry (strē), Pol *Stryj* (strē), city (1931 pop 30,682), W Ukraine, in Galicia, on the Stry river, a tributary of the Dniester It is a center of the Drogobych oil district and has varied manufactures In 1664 it was the scene of a Russian victory over the Turks Stry passed to Austria in 1772, to Poland in 1919, and to the USSR in 1945

strychnine (strĭk'nĭn), alkaloid derived from the seeds of a tree native to India (*Strychnos nux vomica*) It has been used as a rat poison since the 16th cent; "rat biscuits" still remain a cause of accidental poisoning (for antidote, see strychnine under POISONING, table) Strychnine is a stimulant of the central nervous system, especially of the spinal cord It also acts as a respiratory stimulant It is used in medicine in small dosages

Strycker, Jacobus (strī'kŭr), 1619–87, early American painter, b. Holland. He had various trades besides portrait painting. Few facts about his life or work are known. That he painted a portrait of Peter Stuyvesant is only traditional.

Strymon, river see STRUMA.

Strymonic Gulf (strĭmŏ'nĭk), inlet of the Aegean Sea, SE Macedonia, Greece It receives the Struma (Gr. *Strymon*) river. An alternate name is Gulf of Rendina

Strype, John (strīp), 1643–1737, English ecclesiastical historian and biographer. A graduate of Cambridge, he took holy orders and received a number of church livings Much of his early life was spent in collecting old charters, letters, and miscellaneous documents, mostly of the Tudor period He used these in his cumbersome but valuable works These include the *Annals of the Reformation* (1709) and biographies of Thomas Cranmer (1694), John Aylmer (1701), Sir John Cheke (1705), Edmund Grindal (1710), Matthew Parker (1711), and John Whitgift (1718). He edited the works of Dr John Lightfoot (1684) and issued a new edition (1720) of Stow's *Survey of London*. See biography by A P. Wire (1902)

Stuart, Stewart, or **Steuart**, royal family which ruled Scotland and England The Stuart lineage began in a family of hereditary stewards of Scotland, the earliest of whom was Walter (fl c 1160), grandson of a Norman adventurer. Several early Stuarts were regents of Scotland, and after Robert, seventh in the hereditary line of stewards, became king as ROBERT II (1371), the royal power remained in the family thereafter The marriage of JAMES IV of Scotland to Margaret Tudor, daughter of Henry VII, king of England, made his granddaughter MARY QUEEN OF SCOTS a claimant of the English throne Her tragic death was partly the outcome of a dynastic struggle with her cousin, Queen Elizabeth of England, and Mary's claim was recognized when her son, James VI of Scotland, became JAMES I of England in 1603 At the time of the PURITAN REVOLUTION, Charles I, son of James I, was beheaded (1649), and after the interregnum of the Commonwealth and the Protectorate, his son CHARLES II was restored to the throne in 1660 With the deposition of Charles II's brother and successor, James II (1688), the crown passed to James's daughter MARY II and her husband, William III, and after them to Anne, also daughter of James II The Protestant succession to the English throne was determined in 1701 by the Act of Settlement (see SETTLEMENT, ACT OF) In the reign of Anne, the last of the Stuarts to rule England, the crowns of Scotland and England, united by the Stuarts, were permanently joined by the Act of Union (1707) After the death of Anne the crown passed to GEORGE I of the house of Hanover, son of the Electress SOPHIA Sophia was the granddaughter of James I of England, thus making the Hanoverian also a Stuart claim The parliamentary rule of succession was adopted because the claim to the throne of James II and his descendants, James Francis Edward (the Old Pretender), Charles Edward (the Young Pretender), and Henry Stuart (Cardinal York) was upheld by the JACOBITES After 1807 this claim passed to the descendants of Henrietta, daughter of Charles I, through her grandson, King Charles Emmanuel III of Sardinia, to the 20th-century Prince Rupert of Bavaria See studies of the house of Stuart by Samuel Cowan (1908) and T F Henderson (1914), various histories of England, particularly Godfrey Davies, *The Early Stuarts, 1603–1660* (1937) and G N. Clark, *The Later Stuarts, 1660–1714* (1934), and histories of Scotland. See also bibliography under JACOBITES

Stuart or **Stewart, Alexander, duke of Albany,** 1454?–1485, Scottish nobleman, son of JAMES II of Scotland He was captured at sea by the English (1463) while he was en route to Gelderland, in the Low Countries, but was released shortly and made high admiral of Scotland, warden of the marches, and lieutenant of the kingdom His brother, JAMES III, suspecting Albany of plotting against the throne, had him imprisoned at Edinburgh (1479), but Albany escaped, fled to France, and thence went to England, where he concluded a treaty at Fotheringay (1482) with EDWARD IV, agreeing to rule Scotland as England's vassal. Returning to Scotland, with an English army, he became reconciled with the nobles who had possession of James III. For his plots with England, Albany was in 1483 sentenced to death in Scotland while he was still in England Two years later he was accidentally killed at a tournament in France.

Stuart or **Stewart, Alexander, earl of Buchan,** (bū'khun, bŭ'kun), 1343?–1405?, Scottish noble, fourth son of Robert II He held various offices under the crown, and was made lord of Badenoch in 1371 and earl of Buchan in 1382 He was often in difficulties with the Church, especially after he repudiated his wife. In his rage against the bishops he burned the town of Forres and the cathedral at Elgin (1390). For this violence he was excommunicated and popularly called the Wolf of Badenoch

Stuart or **Stewart, Arabella,** 1575–1615, cousin of James I of England, daughter of Charles Stuart, earl of Lennox She was (by her descent from a sister of Henry VIII) next to James VI of Scotland in line of succession to the English throne. Many

argued that her title was preferable to that of James because she was born on English soil Her marriage was prevented during Elizabeth's reign, but after the accession of James as James I of England, Arabella secretly married William Seymour (later marquess of Hertford), heir to the throne by the will of Henry VIII They were arrested, imprisoned, and escaped, but Arabella was recaptured (1611) and died insane in the Tower. See biography by E T Bradley (1889).

Stuart or Stewart, Charles Edward, 1720–88, claimant to the English throne, b Rome The son of James Francis Edward STUART (the Old Pretender) and of the Princess Clementina, he was known as Bonnie Prince Charlie and as the Young Pretender When the failures and irregular life of the Old Pretender had alienated his followers, Charles Edward, a charming young man, magnanimous and brave, became the hope of the Jacobites He led them in the Rising of 1745, but all his enthusiasm could not avert the defeat at Culloden Moor in 1746 (see JACOBITES) Charles fled to a Highland refuge, then escaped abroad (see MACDONALD, FLORA), was expelled from France after the Treaty of Aix-la-Chapelle, and roamed about Europe, a broken and unregarded drunkard After his father's death (1766) he lived in Rome as the duke of Albany and in 1772 married Princess Louise of Stolberg-Gedern (see ALBANY, LOUISA, COUNTESS OF). They separated in 1780, and Charles Edward was attended in his later years by his natural daughter, Charlotte He died in Rome There is much English and Scottish poetry about Bonnie Prince Charlie, e g , the songs *Charlie Is My Darling* and *The Skye Boat Song* For bibliography, see JACOBITES See biographies by A C Ewald (1883), Andrew Lang (1900), and Clennell Wilkinson (1932)

Stuart or Stewart, David, duke of Rothesay (rō*th*'sē), c 1378–1402, Scottish prince, son and heir apparent of Robert III On his father's accession to the throne, David became earl of Carrick and in 1398 duke of Rothesay In 1399 he ousted his uncle, Robert Stuart, duke of Albany, from his virtual regency, and became the invalid king's lieutenant in Scotland His administration was irresponsible, and in 1402, at the recommendation of the council and the king's brother, he was arrested and imprisoned by his uncle, the duke of Albany, and by Archibald Douglas, 4th earl of Douglas, his brother-in-law He died under doubtful circumstances Rothesay appears in Sir Walter Scott's novel, *The Fair Maid of Perth*

Stuart or Stewart, Esmé, 1st **duke of Lennox** (ĕz'mē), 1542?–1583, Scottish nobleman, cousin of James VI of Scotland Born and reared in France, he succeeded his father as seigneur of Aubigny in 1567 In 1579 he was sent to Scotland to restore French influence and weaken Protestantism He quickly assumed an important position and was made lord chancellor and successively earl (1580) and duke (1581) of Lennox Although Lennox publicly proclaimed his conversion to Protestantism in 1580 and maintained this position even on his deathbed, he was suspected of complicity in a projected invasion of England by Philip II of Spain to release Mary Queen of Scots This, with Lennox's part in the arrest and execution of the earl of Morton, led to the Protestant nobles' seizure of James at the raid of Ruthven (1582) Against both his own and the king's wishes, Lennox was forced to leave Scotland and died shortly thereafter His son, Ludovick STUART, was recalled by James, and his descendants were prominent at court throughout the reign of the Stuarts

Stuart or Stewart, Frances Teresa, duchess of Richmond and Lennox, 1648–1702, mistress of Charles II of England The daughter of an exiled English physician, she was educated in France and in 1663 came to England as maid of honor to Catherine of Braganza Her beauty attracted the attention of Charles, and she became the king's mistress In 1667 she declined Charles's offer to make her a duchess and eloped with and married Charles Stuart, duke of Richmond and Lennox, much to the king's displeasure Charles II suspected that Clarendon had engineered the elopement to foil his plan to divorce the queen and marry Frances Stuart However, the duchess (known as La Belle Stuart) shortly returned to court and became a lady of the bedchamber to the queen Charles renewed his attentions and dispatched her husband to Scotland (1670) and to Denmark (1671), where he died

Stuart, Gilbert, 1755–1828, American portrait painter, b North Kingstown, R I., best known for his portraits of George Washington. He was the greatest American painter of his day. Having begun to draw at an early age, he became (c 1769) the pupil of Cosmo Alexander, a Scottish artist who was visiting in America. With him he went to Edinburgh but returned (c.1773) to America after Alexander's death Still poor and unsuccessful, he went in 1775 to London, where he supported himself as an organist and with an occasional portrait commission Having brought his plight to the attention of Benjamin West, he became (c.1777) a member of that painter's household as his pupil and remained there for five years. He exhibited at the Royal Academy of Arts in 1777, 1779, 1781–82, and 1785 It was his *Portrait of a Gentleman Skating* (1782) which won him renown and a large clientele Although he was then eminently successful, his extravagant mode of living kept him in constant debt This may have been the reason for his removal (1787) to Dublin, where he again became very popular Conceiving the idea that by painting the portrait of George Washington and making replicas of it he might at last become solvent, he returned (c 1792) to America and settled (1794) in Philadelphia, where he painted many of his portraits of women as well as two of Washington In 1805 he moved to Boston, where the rest of his life was spent He painted three portraits of Washington from life His first, the so-called Vaughan Type (1795), is a bust with the right side of the face shown, the original has disappeared, but at least 15 replicas are in existence The second, the Lawnsdowne Type (1796), painted for the marquess of Lansdowne, shows the President standing, full length, his left hand outstretched, the original is in the Pennsylvania Academy of the Fine Arts The third, unfinished, the Athenaeum Head, remained in the artist's possession until after his death, when it was acquired first by the Boston Athenaeum and later by the Museum of Fine Arts, Boston, of this there are 75 replicas. Stuart's other works are represented in Boston, Philadelphia, and New York for the greater part The Metropolitan Museum owns portraits of Matthew Clarkson, James Monroe, Albert Gallatin, Joseph de Jaudenes y Nebot and his wife, and two Washington replicas, among others Some of Stuart's well-known sitters were Jefferson, Madison, Monroe, William Branch Giles, William Ellery Channing, Judge Story, Jacob Astor, John Jay, Edward Everett, and Jerome Bonaparte He also painted portraits of his fellow artists John Singleton Copley, Benjamin West, Sir Joshua Reynolds, and Washington Allston See G C Mason, *The Life and Works of Gilbert Stuart* (1879), biography by W T Whitley (1932)

Stuart or Stewart, Henry see DARNLEY, HENRY STUART OR STEWART, LORD

Stuart or Stewart, Henry Benedict Maria Clement, known as **Cardinal York,** 1725–1807, Jacobite pretender to the British throne, b Rome Second son of James Edward Stuart (the Old Pretender), he was the Jacobite duke of York until his brother Charles Edward Stuart (the Young Pretender) died in 1788, when he became royal claimant as Henry IX He was the last of the direct male line of James II and the last pretender to press a claim to the throne (see STUART, family) He probably was in France in 1745, ready to help in the Scottish Jacobite rebellion, and on his return to Italy was made a cardinal of the Roman Church (1747) In 1761 he was also made bishop of Frascati, where he lived and worked for years Ruined by confiscations in the French Revolution, he fled to Padua, later to Venice George III of England granted him a pension, and in gratitude Cardinal York bequeathed to George IV (then prince of Wales) the crown jewels of the Stuarts See biographies by B W Kelly (1899), H M Vaughan (1906), and Alice Shield (1908), Charles Petrie, *The Jacobite Movement* (1932)

Stuart or Stewart, James, earl of Arran (ăr'un), d. 1596, Scottish nobleman He spent his early years as a soldier of fortune in the service of Holland against Spain, returned to Scotland in 1579, and ingratiated himself at the court of James VI. As a reward for his services in accusing the earl of Morton of the murder of Lord Darnley, Stuart was made a member of the council and granted the earldom of Arran, then in the possession of his insane cousin, James HAMILTON By reason of his descent Stuart claimed a rank second only to the king and became a rival of the powerful duke of Lennox The king's arrest by the Protestant lords in the Raid of Ruthven (1582) led to Arran's imprisonment He was released to rejoin the king, however, after the king's escape and was appointed lord chancellor to succeed the earl of Argyll He served on the jury that condemned the earl of Gowrie and gained control of Edinburgh Castle. He negotiated with Elizabeth of England and staved off for a time her support of the banished Protestant lords Arran set out to crush his opponents in Scotland and seized the properties of the banished lords, alienating by his reckless use of power the few supporters remaining to him His English agent treacherously undermined what influence he had with Elizabeth A plan to assassinate Arran was under way when Elizabeth rendered it unnecessary by claiming that Arran had been responsible for the murder of Lord Francis Russell in a border fray (1585) James was compelled to imprison Arran With the return of the banished lords, Arran himself was banished (1586). He returned to live in Scotland as Capt James Stuart and intrigued unsuccessfully to return to power He was slain in 1596 by Sir James Douglas, nephew of the earl of Morton, Douglas was determined to avenge the death of his uncle, in which Arran's actions had played a decisive part.

Stuart or Stewart, James: see MURRAY, JAMES STUART OR STEWART, 1st EARL OF.

Stuart, James, 1713–88, English architect, archaeologist, and painter About 1741 he was sent to Italy by the Society of Dilettanti of London to study ancient Greek architectural remains with Nicholas Revett In Athens (1751) they made accurate measurements of the ruins, particularly those of the Acropolis, and published their findings in *Classical Antiquities of Athens*, the first volume of which appeared in 1762 Its fine illustrations depicted for the first time the great achievements of Greek architecture Their work aroused wide attention and acted as a prime influence for the CLASSIC REVIVAL

Stuart, James Ewell Brown (Jeb Stuart), 1833–64, Confederate cavalry commander, b Patrick co , Va , grad West Point, 1854 Most of his U S army service was with the 1st Cavalry in Kansas He was aide to R E LEE when John Brown was captured at Harpers Ferry in Oct , 1859 On Virginia's secession, Stuart resigned (May, 1861) and became a captain of cavalry in the Confederate army He distinguished himself at the first battle of Bull Run (July, 1861) and in September was made a brigadier general In June, 1862, Jeb conducted the first of his celebrated cavalry raids, he made a complete circuit of G B McClellan's army on the Virginia peninsula, noting the Federal dispositions Lee used this information to advantage in the SEVEN DAYS BATTLES of the Peninsular campaign Stuart was promoted major general in July and given command of all the cavalry of the Army of Northern Virginia After another bold and successful raid, this time to John Pope's rear, he covered the last stage of Stonewall Jackson's flanking movement before the second battle of Bull Run (Aug , 1862) He was actively engaged in that battle and in the subsequent Antietam campaign Jeb rode completely around McClellan's army again in Oct , 1862, ranging as far as S Pennsylvania and capturing 2,000 horses He made effective use of his famous horse artillery in the battle of Fredericksburg (Dec , 1862) In the battle of CHANCELLORSVILLE, he moved with Stonewall Jackson in the brilliant flank attack When both Stonewall and A P Hill were wounded, Stuart took command and continued the blistering assault on Joseph Hooker In June, 1863, he fought his greatest cavalry battle at BRANDY STATION For knowledge of the enemy Lee depended on Stuart, who, he said, never brought him a piece of false information But in the GETTYSBURG CAMPAIGN Jeb was absent from the army on a raid and Lee was not apprised soon enough of the Federal concentration N of the Potomac By 1864 his corps had decreased in size and was deficient in equipment, while the Union cavalry, now under P H SHERIDAN, was vastly improved In the Wilderness campaign the forces met at YELLOW TAVERN (May 11, 1864), and Jeb Stuart was mortally wounded Not since the death of Stonewall Jackson had the South sustained so great a personal loss His rollicking, infectious gaiety, and hard fighting were sorely missed in the gloomy last days of Lee's army See J W Thomason, Jr , *Jeb Stuart* (1934), D S Freeman, *Lee's Lieutenants* (3 vols , 1942–44) W W. Blackford, *War Years with Jeb Stuart* (1945)

Stuart or Stewart, James Francis Edward, 1688–1766, claimant of the English throne, b London; son of JAMES II and MARY OF MODENA He is called the Old Pretender because he asserted his right to the throne against that of the house of Hanover At the time of his birth anti-Catholic feeling was so high that the prospect of another Catholic king was undesirable to many, and as a result it was rumored that the boy was not the son of the royal couple The Glorious Revolution of 1688 deposed his father in favor of William III and Mary, and the family fled to France Shortly before his father's death (1701) the English Act of Settlement excluded the male line of Stuarts from the succession, and in 1702 young James was attainted His restoration as James III was the object of numerous plots and rebellions by the JACOBITES between 1708 and 1745, and Louis XIV's recognition of him as king was a minor factor drawing England into war against France in the War of the Spanish Succession Louis fitted out an expedition for James (1708) to restore him in England, but it was turned back at the Firth of Forth As the chevalier de St George, James distinguished himself in the French army at Oudenarde and Malplaquet, but the Treaty of Utrecht forced him to leave France, and his hopes of succeeding Queen Anne were dashed by the peaceful succession of George I (1714) A rising in his favor (1715) under the earl of MAR brought him to Scotland, where he was hailed as James VIII of Scotland and James III of England by the Jacobites. On the failure of the movement, James retired to France, then Avignon, and finally Rome James's marriage (1719) to Maria Clementina Sobieski, a Polish princess commonly called Princess Clementina, was followed (1724) by her retirement to a convent for two years, a reconciliation, and her death in 1735 Various later attempts to restore James were unsuccessful, notably the Rising of

1745, led by his son, Charles Edward STUART, the Young Pretender. See biographies by Alice Shield and Andrew Lang (1907), Martin Haile (1907), and A N. Tayler and H. A. H. Tayler (1934)

Stuart or **Stewart, John,** 4th **duke of Albany** (ŏl'bŭnē), 1481–1536, regent of Scotland The son of Alexander, duke of Albany, and grandson of James II of Scotland, he was brought up on his estates in France by his mother, Anne de la Tour d'Auvergne, and always considered himself French The Scottish council, shortly after the death of James IV (1513), asked Albany to assume the government for the infant James V, but his own lack of enthusiasm and the influence of Henry VIII of England prevented his departure from France until 1516 Upon arrival in Scotland, he assumed the regency forfeited by MARGARET (the queen dowager and sister of Henry VIII) upon her marriage to the earl of Angus He gained possession of Margaret's children and crushed a rebellion led by Lord Home and the earls of Arran and Angus Margaret fled to England and accused Albany of poisoning her infant son, the earl of Ross Henry's request to the Scottish Parliament for his dismissal was emphatically refused, Albany being declared (1516) second in succession to the Scottish throne. Conditions in Scotland seeming comparatively stable, Albany returned temporarily to France (1517), where he negotiated the Treaty of Rouen (allying France and Scotland and providing for the marriage of James V to a French princess) and promoted the interests of Scottish merchants Margaret returned from England a week after his departure, and strife soon broke out between Arran and Angus By a secret agreement between France and England, Albany was prevented from returning to Scotland until 1521 Margaret, who had broken with Angus, enlisted Albany's aid in securing a divorce, and false rumors (possibly started by Cardinal Wolsey) were circulated of their intimacy and projected marriage These were used by Henry and the English party, led by Angus The English-Scottish truce expired in 1522, and English forces raided the Scottish border Albany led an army towards Carlisle, but the Scots refused to fight outside their own country and the force disbanded Albany returned to France, and Margaret in his absence used her influence in the interests of England Albany returned in 1523 with French troops and gold, but a subsequent lack of military success on the border destroyed his prestige While on a visit to France in 1524, Albany's regency was annulled, and he never returned to Scotland He later served in Francis I's campaign against Charles V (1524–25) and acted as French ambassador to Rome (1530–33)

Stuart, John. see BUTE, JOHN STUART, 3D EARL OF

Stuart or **Stewart, John,** 4th **earl of Atholl** (ăth'ul), d. 1579, Scottish nobleman He supported the regency of Mary of Guise, and in 1559 he voted in Parliament against the Protestant confession of faith and expressed his adherence to Catholicism He became a member of the young Queen Mary's council in 1561, supported her marriage to Lord Darnley, and became a chief counselor to the queen and the leader of the Catholic nobles in Scotland. He was not involved in the plots against David Rizzio and Darnley After Darnley's murder and the rise of James Hepburn, earl of Bothwell, to power, Atholl joined the Protestant lords against Mary They subsequently captured her at Carberry Hill (1567). He was a member of the council of regency for James VI, but his sympathies gradually switched back to the queen, he voted for her divorce from Bothwell and joined the opposition to the king's party He was unsuccessful in preventing the election of James Douglas, earl of Morton, to the regency in 1572 In 1574 proceedings were taken against Atholl as a Roman Catholic, and he probably recanted With Archibald Campbell, 5th earl of Argyll, he succeeded in ousting Morton as regent (1578) The three were uneasily reconciled the following year, shortly before Atholl's death, which was possibly from poisoning by Morton.

Stuart, John McDouall, 1815–66, Scottish explorer in Australia. He emigrated (1838) to S Australia, there, as a draughtsman, he joined Charles Sturt's expedition (1844–45) to central Australia. Between 1858 and 1862 he led six expeditions from Adelaide and proved that there was much habitable country in areas about which discouraging reports had come from Sturt and other explorers. He was the first (1860) to reach the center of Australia, he climbed and named Mt. Sturt (later renamed Stuart) From 1860 he tried to cross the continent, and he achieved his objective by reaching Van Diemen Gulf in 1862. He wrote *Explorations in Australia* (1864).

Stuart or **Stewart, Ludovick,** 2d **duke of Lennox** and **duke of Richmond** (lōd'dŭvĭk), 1574–1624, Scottish nobleman; cousin of James VI of Scotland. He became duke of Lennox in 1583 on the death of his father, Esmé STUART, was brought from Paris to Scotland, and received the favor of the king He was named president of the council during James's absence in 1588. Despite the king's opposition to Ludovick's marriage to Lady Jane Ruthven (1591), James appointed him lord high admiral. He accompanied the king to England to be crowned James I (1603) and was appointed to the English privy council. Lennox served as ambassador to Paris (1604–5) and was appointed high commissioner to the Scottish Parliament (1607). In 1623 he was created duke of Richmond He left no children and was succeeded as duke of Lennox by his brother, Esmé.

Stuart or Stewart, Mary: see MARY QUEEN OF SCOTS

Stuart or Stewart, Matthew. see LENNOX, MATTHEW STUART OR STEWART, 4TH EARL OF

Stuart or **Stewart, Robert,** 1st **duke of Albany** (ŏl'bŭnē), d 1420, regent of Scotland, son of Robert II. As earl of Fife and Monteith, he held commands under his father and more than once harried Cumberland Because of Robert II's old age Fife was given the power of government in 1388, he continued it during the reign of Robert III, his infirm brother In 1398 he was made duke of Albany and in 1399 was forced to give up the regency to his nephew, David Stewart, duke of Rothesay Rothesay proved incompetent, was arrested, and died (1402) in the custody of Albany and Archibald Douglas, 4th earl of Douglas both of whom were declared guiltless of his death Albany continued as governor or warden from 1402 until his own death because Robert III's successor, JAMES I, was a prisoner in England During Albany's rule the struggle with England went on The Scots were badly defeated at Homildon Hill in 1502 Albany continued the Scottish alliance with France At home he allowed the nobles much power, but did put down (1411) a rebellion of Donald Mac Donald, lord of the Isles Apparently Albany tried to make his sovereignty in all but name hereditary, but his son Murdoch proved a weak ruler and after the return of James I to Scotland (1424) Murdoch was executed

Stuart or **Stewart, Robert, seigneur d'Aubigny** see AUBIGNY, ROBERT STUART OF STEWART, SEIGNEUR D'.

Stuart, Robert, 1785–1848, American fur trader, b Scotland In 1807 he emigrated to Canada, where his uncle was a North West Company agent He became a clerk in that company, but in 1810 joined John Jacob Astor's Pacific Fur Company for the venture of founding ASTORIA He was one of the sea party on board the *Tonquin* and showed his boldness by forcing the captain at pistol's point to wait for a party that had gone ashore on the Falkland Islands They arrived at Astoria in 1811, and in 1812 Robert Stuart headed the party that was sent back overland to carry messages to Astor This journey was difficult and filled with hardship It was, however, notable because it included the first known passage by white men through South Pass, and in large part it followed the later Oregon Trail. He arrived in St. Louis in May, 1813, and went on to New York In 1817 he and Ramsay CROOKS became the partners of Astor in the AMERICAN FUR COMPANY. Stuart became the commander of the trade about the post at Mackinac, supervising all the affairs of the company in the north until 1834, when Astor withdrew from the trade He then retired and, living in Detroit, became interested in land development and in canal building He was also Federal superintendent of Indian affairs in Michigan from 1841 to 1845 and was in 1840 state treasurer See P A Rollins, ed., *The Discovery of the Oregon Trail* (1935)

Stuart, Ruth McEnery, 1849–1917, American author, b Marksville, La In 1879 she married A O Stuart, who died in 1883, and she spent the latter part of her life in New York city The collections of her amusing stories of the South present faithfully the habitual speech of the people of her native area Her works include *A Golden Wedding and Other Tales* (1893), *Sonny* (1896), and *In Simpkinsville Character Tales* (1897)

Stuart, Australia see ALICE SPRINGS.

Stuart. 1 City (pop 2,438), co seat of Martin co, SE Fla, on the St Lucie river and at the southern end of Indian River. Stuart is the eastern terminus of the St Lucie Canal to Lake Okeechobee. It ships the county's pineapple production and is a yachting resort and fishing center, especially for sharks **2** City (pop 1,611), S central Iowa, W of Des Moines, founded 1869, inc 1877. It holds a stock show annually in August.

Stuart Lake, area 138 sq mi, central British Columbia, NW of Prince George It was discovered and named (1806) by Simon Fraser It is drained SE by the Stuart river to the Nechako W of Prince George

Stubbs or **Stubbes, Philip,** fl. 1583, English Puritan pamphleteer, who wrote a number of moralistic broadsides and pamphlets. He gained wide popularity in Puritan circles, but is remembered solely for the *Anatomie of Abuse* (1583), valuable today as a source on social history of Tudor times. He died in, or just after, the first decade of the 17th cent

Stubbs, William, 1825–1901, English historian. Educated at Oxford, he became a fellow there in 1848 and was ordained in 1850. For his calendar of episcopal succession, *Registrum Sacrum Anglicanum* (1858), he received the position of librarian at Lambeth Palace. From 1866 to 1884, when he was appointed bishop of Chester, he served as professor of modern history at Oxford. His most famous work was his *Constitutional History of England* (3 vols, 1874–78). He edited (with A. W. Haddon) *Councils and Ecclesiastical Documents* (1869–73) and 19 volumes of early chronicles for the Rolls series. His lectures appear in several volumes, including *Seventeen Lectures on the Study of Mediaeval and Modern History* (1886). See W. H. Hutton, *Letters of William Stubbs* (1904)

stucco (stŭ'kō), in architecture, a term applied loosely to various kinds of plasterwork, both exterior and interior. It now commonly refers to a plaster or cement used for the external coating of buildings, most frequently employed in the Mediterranean countries It usually consists of a mixture of cement or lime and sand, applied in one or more coats over a rough masonry or frame structure, the finish is either troweled, floated, or rough textured The finish called roughcast or rock cast, formerly common in England and the United States, consists of small gravel or other pebbles mixed with a plaster and thrown or dashed forcibly against a freshly plastered wall. In Italy a form of decoration known as GRAFFITO is often applied to a stucco wall, a damp final coat of stucco is scratched away in ornamental patterns, exposing a different colored layer beneath In ancient Greece a form of stucco was often used over coarse stonework to give a fine surface suitable for receiving detail The Romans employed stucco similarly on external surfaces and, with notable success, as an interior finish, for indoor work they used a mixture of plaster of Paris or powdered marble, capable of receiving a high finish The term *stucco* is also applied indiscriminately to various forms of interior decoration in relief, which more properly should be considered as PLASTERING

Stuck, Franz von (frants' fŭn shtŏk'), 1863-1928, German painter and illustrator, a leader of the German secessionists He was for many years artist on the staff of *Fliegende Blätter* His unconventional allegorical paintings gained him international popularity Typical are *Wilde Jagd* (Carnegie Inst, Pittsburgh), *Sphinx* (Budapest), and *Sin, War, Crucifixion* Stuck was a professor at the Munich Academy

Stuck, Hudson (stŭk), 1863–1920, American missionary and explorer, b England He emigrated to the United States in 1885, graduated from the Univ of the South (1892), and was dean (1894–1904) of the Protestant Episcopal cathedral at Dallas, Texas In 1905 he became archdeacon of the Yukon and spent the remainder of his life in Alaska With three companions he accomplished the first ascent (1913) of Mt McKinley, and he traveled extensively in N Alaska Alaskan geography and Eskimo customs are accurately described in his books, some of which are *The Ascent of Denali (Mount McKinley)* (1914), *Ten Thousand Miles with a Dog Sled* (1914), *Voyages on the Yukon and Its Tributaries* (1917), and *A Winter Circuit of Our Arctic Coast* (1920)

Stucley or **Stukely, Thomas** (both stū'klē), 1525?–1578, English adventurer, possibly an illegitimate son of Henry VIII. He served under the duke of Somerset and fled to France after Somerset's arrest There he gained the favor of Henry II of France, who sent him (1552) on a mission to Edward VI Stucley betrayed the projected French invasion of Calais but was imprisoned for his pains Released in 1553, he fled England to escape prosecution for debt and joined the army of the duke of Savoy He returned to England with Savoy and married an heiress but in 1555 again fled the country to escape a counterfeiting charge About 1558 he took up piracy In 1559 his wife came into her fortune, and Stucley settled down for several years. In 1563 he organized a privateering expedition with Jean RIBAUT under the cover of helping to colonize Florida and with surreptitious aid from Queen Elizabeth This caused such a scandal that he was arrested in 1565, but was soon released Stucley then went to Ireland to serve Sir Henry Sidney, the lord deputy, and in 1566 purchased the title of marshal of Ireland Elizabeth, who distrusted him, refused to recognize this title, and in 1569 he was accused of treason but later released Stucley fled to Spain (1570), where he was received at court, knighted, and generally recognized as duke of Ireland He planned a Spanish invasion of Ireland but fell from favor at Madrid His conduct at the battle of Lepanto (1571), where he commanded three ships, brought Stucley back into favor with the Spanish, and he continued plotting against England In 1577 he received aid from Pope Gregory XIII for an invasion of Ireland. He set sail, but at Lisbon was persuaded to join the Portuguese expedition of King Sebastian against Morocco and was killed at the battle of Alcasarquivir. His adventures have been the subject of ballads and plays.

Stuhlweissenburg, Hungary: see SZEKESFEHERVAR

Stumpf, Carl (kärl' shtŏmpf'), 1848–1936, German psychologist, philosopher, and writer on the psychology of music. He was a professor at Berlin from 1894 to 1921. Interested in philosophy and music, Stumpf widened the areas of psychology by creating a psychology of sound (*Tonpsychologie*, 2

vols', 1883–90) and by founding an institute to advance the phonographic method for the comparative study of primitive music In 1901 he wrote a study of Siamese music. He founded the Berlin Association for Child Psychology, wrote on the evolution concept and on Spinoza, and developed original theories of space perception and sensation.

stupa (stōō'pŭ), monument, generally Buddhist, of tumulus form, named from the Sanskrit word for mound Tope is another term for stupa. Stupas exist in India, Japan, China, Tibet, and Ceylon. A temple and cells for pilgrims generally arose near by The earliest were mounds of earth, marking the remains of a chief or religious leader When they contained also a temple or a chamber for sacred relics they were called dagoba The oldest existing stupas are hemispherical masses raised upon a base, the whole faced with brick or stone over an earthen core A narrow processional path around the structure was enclosed within a stone railing. Most notable are the group known as the Bhilsa topes in N India, the great Sanchi tope (5th or 4th cent B C) of this group is about 105 ft in diameter and rises 42 ft above its platform Later stupas were built higher to form generally conical towers In India these stood upon molded bases and were ornamented with tiers of pilasters, decorative string courses, and niches containing images of the Buddha Stupas were also erected in places where Buddha supposedly halted

Sturbridge (stûr'-), town (pop 2,227), S Mass, SW of Worcester, settled c 1730, inc 1738

Sturdee, Sir Frederick Charles Doveton (stûr'dē), 1859–1925, English admiral He entered the navy in 1871 and rose to the command of the British forces in Samoa in 1899. He became a rear admiral in 1908, a vice admiral in 1913, and in the First World War he decisively defeated the German squadron under Admiral von Spee at the battle of the Falkland Islands (1914), for which he was made a baronet (1916) Sturdee commanded a squadron at the battle of Jutland (1916), became an admiral in 1918, and was made admiral of the fleet in 1921.

Sturdza, Demeter: see STURZA, DEMETER

Sture (stŭr'ru), noble Swedish family which played a leading role in the 15th and 16th cent **Sten Sture** (stān'), the elder, c 1440–1503, was chosen regent in 1470 In the battle of Brunkeberg (1471) he defeated a Danish force sent by King Christian I, who asserted his rights to Sweden under the Kalmar Union The Swedish victory gave hope for permanent Swedish independence, but in 1497 Sture was forced to recognize the union with Denmark He took an active part in founding the Univ of Uppsala His kinsman, **Svante Sture** (svän'tă"), d 1512, succeeded him as regent His rule was a period of continual warfare His son and successor as regent was **Sten Sture,** the younger, c 1492–1520 He vigorously asserted the principle of the superiority of the state over the Church, notably by securing (1517) from the Riksdag the deposition of Archbishop Gustaf Trolle, a member of a rival family He furthermore declared that he would not recognize Christian II of Denmark as king of Sweden Christian sent a force to relieve the archbishop, who was besieged in his castle, but Sture defeated the Danish army and imprisoned Trolle Warfare continued, and Sture was killed in battle shortly before Stockholm fell to Christian

sturgeon, large fish found in fresh and salt water in the northern regions of Europe, Asia, and North America It is a primitive fish with a cartilaginous internal skeleton, bony plates in the skin, an elongated snout, and a small mouth with toothless jaws and fleshy lips used to suck in food In front of the mouth are usually four barbels or feelers The common sturgeon is found in coastal waters and rivers of Europe and E North America Other American species are the Pacific or white sturgeon, said to reach 1,000 lb in weight, the green sturgeon, a smaller form of the Pacific coast, and the lake or rock sturgeon of the Great Lakes and Mississippi valley region The Russian sturgeon or beluga of the Caspian and Black seas and the Sea of Azov reaches a weight of 2,000 lb or more and is the largest species In England, according to an unrepealed law of Edward II, sturgeons are the property of the king The flesh, although rather coarse, is used as food in many regions and smoked sturgeon is highly regarded by many peoples The roe is the source of the better grades of CAVIAR, and isinglass is made from the lining of the air bladder

Sturgeon Bay, city (pop 5,439), co seat of Door co, NE Wis, at the head of Sturgeon Bay, inlet of Green Bay; inc 1883 A ship canal here cuts across DOOR PENINSULA to Lake Michigan The city is a summer resort, has cherry orchards, and engages in shipping, shipbuilding, and limestone quarrying A state fish hatchery, an agricultural experiment station, and a state park are near.

Sturgeon Falls, town (pop. 4,576), S Ont., on the Sturgeon river near its mouth on Lake Nipissing and W of North Bay. It has pulp, paper, lumber, and flour mills and a garnet-grinding industry

Sturgis, Russell (stûr'jĭs), 1836–1909, American architect and writer, b. Baltimore co, Md., grad. College of the City of New York, 1856 He practiced architecture until 1880, the buildings which he designed including the Flower Hospital in New York and a chapel and several dormitories at Yale Univ He was professor of architecture and design (1878–80) at the College of the City of New York A leading authority on the history of architecture and art, he published many articles and gave lectures at universities and museums He was first president (1895–97) of the Fine Arts Federation and president (1899–93) of the Architectural League of New York His writings include *European Architecture* (1896), *A Dictionary of Architecture and Building* (2 vols, 1901–2), *How to Judge Architecture* (1903), *A Study of the Artist's Way of Working in the Various Handicrafts and Arts of Design* (1905), and *History of Architecture* (4 vols, 1906–15, Vols III-IV completed after his death by A. L Frothingham, Jr)

Sturgis (stûr'jĭs) **1** City (pop 2,321), W Ky, near the confluence of the Tradewater with the Ohio NE of Paducah, in a coal, grain, and livestock area **2** City (pop 7,214), S Mich, SE of Kalamazoo, settled 1827, inc as a village 1855, as a city 1895 It is a trade and industrial center, manufactures include Venetian blinds, furniture, and paper products **3** City (pop 3,008), co seat of Meade co, W S Dak, NNW of Rapid City, near the Black Hills, laid out c 1878 near Fort Meade It is a trade and distributing center in an agricultural region

Stürgkh, Karl, Graf von (kärl' gräf' fŭn shtürk'), 1859–1916, premier of Austria (1911–16) During the First World War he governed without the unruly parliament and was strongly opposed by liberals and radicals He was assassinated by the Socialist Friedrich ADLER

Sturluson or **Sturleson, Snorri:** see SNORRI STURLUSON

Sturm, Jacques Charles François (zhäk' shärl' frăswä' stürm'), 1803–55, French mathematician, b Switzerland Serving as professor at the Collège Rollin (1830–40) and at the École polytechnique, Paris (from 1840), he wrote on optics, mechanics, differential equations, and mathematical analysis He originated a theorem (Sturm's theorem) for the determination of the number of real roots of an equation (algebraic or numerical) within given limits

Sturm, Johannes (yōhä'nŭs shtōōrm'), 1507–89, German scholar and educator He founded (1537) and directed for more than 40 years the Strasbourg Gymnasium His system of graded readings and classes shaped the course of studies of European secondary schools He wrote a number of Latin textbooks and works on education

Stürmer, Boris Vladimirovich (bŭrĕs' vlŭdyĕ'mĭrŭvĭch shtyōōr'mĭr), 1848–1917, Russian politician He became premier early in 1916 and shortly afterward also replaced Sazonov as foreign minister Linked with Rasputin and the Germanophile element in the court, he was violently attacked in the Duma and was obliged to resign in Nov, 1916 He was arrested after the February Revolution of 1917 and died in prison

Sturm und Drang (shtōōrm' ōōnt drang') or **Storm and Stress.** The term is applied to a period of German literature, though its characteristics—youthful genius in rebellion against accepted standards—were felt in other countries The influence of Rousseau and of Lessing gave inspiration to the movement The period takes its name from a play by F M von Klinger, *Die Wirrwarr, oder, Sturm und Drang* (1776), it falls roughly in the 20 years between Herder's *Fragmente uber die neuere deutsche Literatur* (1767) and J F von Schiller's *Don Carlos* (1787) Goethe and Schiller were leading figures in the movement, lesser names were Klopstock and J. M R Leng Within the period fall Goethe's *Götz von Berlichingen* and *The Sorrows of Werther* and Schiller's *Robbers* See Goethe's autobiography and histories of German literature.

Sturza, Jan, *Czech* Štursa (yän' shtōōr'sh), 1880–1925, Czech sculptor of the modern school In 1916 he became professor at the Prague Academy. Some of his works are *The Melancholy Girl; Primavera, Eve,* a monument to Hana Kvapilova, a Czech actress, and portrait busts and some decorative sculptures

Sturt, Charles (stûrt), 1795–1869, English explorer and administrator in Australia, b India He received (1813) a commission in the British army and became (1825) a captain In 1827 he arrived in Sydney with a detachment of his regiment While in command of an expedition (1828–29) to find the source of the Macquarie, he discovered (1828) the Darling river On a second journey (1829) he explored the Murrumbidgee and found its junction with the Murray, which he followed by boat to its mouth in Lake Alexandrina He resigned his commission (1833) because of impaired eyesight and settled in Australia (1834) In 1844 he continued his exploration of the river system of S Australia, traveling up the Murray and Darling rivers and penetrating (1845) almost to the center of the continent He was colonial treasurer (1845) and colonial secretary (1849–51) In 1853 he returned to England He wrote *Two Expeditions into the Interior of Southern Australia* (1833) and *Narrative of an Expedition into Central Australia* (1849).

Sturza or Sturdza, Demeter (both· dĕmĕ'tĕr stōōr'-dzŭ), 1833–1914, Rumanian statesman, of a prominent Moldavian family With John Bratianu and Rosetti he took a leading part in the revolution of 1866, which overthrew Prince John Alexander Cusa and established Carol I on the throne of Moldavia and Walachia After Bratianu's death (1891) Sturza was repeatedly premier of Rumania. He forwarded the economic and intellectual progress of his nation, and as secretary of the Rumanian Academy of Sciences he directed the publication of a great collection of sources for Rumanian history

stuttering or **stammering,** speech disorder marked by hesitation and inability to enunciate consonants without spasmodic repetition Known technically as dysphemia, it is generally attributed to an underlying personality disorder About half of all those who have speech and voice defects suffer from stuttering or stammering (the terms are used interchangeably) Many cases of stuttering begin in childhood A constitutional susceptibility or predisposition may be implied from the evidence that 65 percent of the cases of stuttering have a family history of the affliction In many instances the speech disturbance appears to be precipitated by some emotional shock (e g, a fright, a radical change of environment, the advent of a younger child in the family, or the accumulated impact of a neurotic environment) Stuttering or stammering sometimes engenders feelings of inadequacy and morbid anxiety which in turn intensify the condition A cycle of this nature may sometimes lead to neurosis In treatment a distinction is drawn between the primary phase of stuttering—before a child has become aware of it—and the secondary stage, where personality deviations are already manifest as a result of the stutterer's awareness In the earlier state elimination of environmental stress and a regimen of rest, relaxation, and counseling may suffice to correct the condition Intensive and prolonged psychiatric treatment is often needed for the developed condition of stuttering Group psychotherapy has been found to be helpful in a number of cases

Stuttgart (stŭt'gärt, Ger shtōōt'gärt), city (pop 413,528), capital of the American-occupied state of Wurttemberg-Baden, SW Germany, on the Neckar Until 1945 it was capital of all Wurttemberg It is an important communications point and one of the chief centers of German book publishing Its industries, concentrated mostly in the suburbs of Bad Canstatt, Feuerbach, Untertürckheim, and Zuffenhausen, produce vehicles, machinery, precision instruments, chemicals, and textiles Frequent industrial fairs are held here Stuttgart has a technological institute, an academy of fine arts, and a conservatory of music It is a Lutheran episcopal see Chartered in the 13th cent, Stuttgart became in 1320 a residence of the counts (later dukes, from 1806 kings) of Württemberg, who made it their capital in 1482 The city expanded rapidly in the 19th and 20th cent, and it became famous after the First World War for its many pioneering modern buildings Particularly remarkable are the housing developments in the outer residential districts, where contemporary theories of home building were applied on a large scale The center of the city, which formed its oldest part, was almost completely destroyed in the Second World War Among the destroyed or heavily damaged buildings were several medieval churches, the academy (until 1734 the Karlsschule, where Schiller studied medicine), the old and new royal palaces, several museums, and the famous modern city hall and railroad station Stuttgart was captured in 1945 by French troops

Stuttgart (stŭt'gart, -gurt), city (pop 5,628), a co seat of Arkansas co, E Ark, inc 1889 It is the trade center of a rich farm area especially noted for rice The state university has a rice experiment station near by

Stuyvesant, Peter (stī'vusănt), 1592–1672, director general of New Netherland Before coming to New Amsterdam he had served as governor of Curaçao and had lost a leg in the colonial warfare His artificial leg added to his fierce appearance Arriving in New Amsterdam (1647) to replace Willem KIEFT, he immediately informed the colonists of his autocratic intentions He set up a board of nine men to advise him but dissolved it (1651) when they asked for redress of their grievances in a remonstrance to the Dutch government. As a result of this petition, however, Holland granted (1653) municipal government to New Amsterdam Nevertheless, Stuyvesant continued his harsh rule and was intolerant of religious dissenters, especially Quakers While he lost territory to Connecticut (1650), he gained a good deal by conquering NEW SWEDEN (1655) Overwhelmed by a surprise English attack, he surrendered New Netherland to England in 1664 Spending the rest of his life on his Manhattan farm, he was buried there under his chapel, now the site of the Church St Mark's-in-the-Bouwerie See Ellis L Raesly, *Portrait of New Netherland* (1945).

sty, acute inflammation of the sebaceous glands on the free edge of the eyelids, usually caused by staphylococcus infection. Symptoms include red-

ness and swelling of the area, the discharge of tears, intolerance of light, and pain Treatment consists of the application of heat or the use of surgery When such inflammation recurs, the general body resistance to infection needs building up

style, in printing, is an arbitrary rule or a collection of arbitrary rules governing the practice of a printer or a publisher in doubtful or disputed matters to obtain consistency Correct spelling is a matter of literacy, but a rule prescribing the use of one of two correct spellings is a matter of style The stylebook of a printer or a publisher is a collection of rules governing office usage in matters of style It is not a substitute for grammars and reference works Examples of stylebooks are *A Manual of Style*, published by the Univ of Chicago Press, and the *Style Manual of the United States Government Printing Office*

stylites see SIMEON STYLITES.

stylus. see PEN

Stymphalian birds (stĭmfā'lēun), in Greek mythology, man-eating birds with brazen feathers Killing them was one of the 12 labors of HERCULES The name comes from their supposed dwelling place, Lake Stymphalus, in Arcadia

styptic (stĭp'tĭk), drug or other substance used to check bleeding by application to the wound or by injection near it Applications of cold or hot water serve as styptics, as do certain drugs (e g , adrenalin) and especially ASTRINGENT substances

Styria (stĭ'rēu), Ger *Steiermark* (shtī'ûrmärk), autonomous province or *Bundesland* (6,326 sq mi , pop 1,105,170), SE and central Austria, bordering on Yugoslavia Graz is the capital Predominantly mountainous, except for the plain in which Graz is located, Styria is the chief Austrian mining district (iron, lignite, and magnesite) and has a well-developed metal industry It is drained by the Enns, Mur, and Raab rivers There are numerous mountain resorts Styria was detached from the duchy of Carinthia and was made a duchy in 1180, in 1192 it passed to the Austrian house of Babenberg Ottocar II of Bohemia successfully contested it with Bela IV of Hungary, but in 1276 had to cede it to Rudolf I of Hapsburg along with the rest of Austria After 1919 Styria lost its southern portion to Yugoslavia

Styx (stĭks), in Greek religion, river in the underworld (see HELL), which the souls of the dead must cross on their journey from the earth It was the greatest of all rivers, so sacred that even the gods took their most binding oaths in its name The river was personified as a nymph, daughter of Oceanus and Tethys, and mother of Nike There is an actual Styx river in the N Peloponnesus (in ancient Arcadia)

Suah (sū'ä) [Heb ,=filth], Asherite 1 Chron 7.36

Suardi, Bartolomeo. see BRAMANTINO

Suárez, Francisco (sōōä'rĕz, Span franthē'skō swä'räth), 1548–1617, Spanish Jesuit theologian, b. Granada. He studied at Salamanca and was ordained in 1572 He taught successively at Ávila, Segovia, Valladolid, Rome, Alcalá, and Salamanca and in 1597 was appointed to the Univ of Coimbra, Portugal (then under Spanish dominion) He may be called the last of the old scholastic philosophers His system is mild and characteristic of the Jesuit theologians His "congruism" is a successful middle course between the teachings of MOLINA and the Dominican predestinarian teachings Suárez taught that one may hold the same doctrine by science and faith His teaching on the divine right of kings that earthly power is properly held by the body of men and that kingly power is derived from them so enraged James I of England that the king had Suárez's *De defensione fidei* burned by the hangman This political doctrine, based on the Catholic doctrine of the equality before God of all men, is a basis of subsequent Catholic teachings on democracy Suárez was highly esteemed by Grotius and his followers In his *Tractatus de legibus* he made an important distinction between natural law and international law, which he saw as based on custom. See Joseph H Fichter, *Man of Spain* (1940).

Subbi. see MANDAEANS

subconscious: see UNCONSCIOUS

Subiaco (sōōbyä'kō), village, Latium, central Italy, in the valley of the Aniene in the Apennines St Benedict of Nursia retired here c 497 and lived with his disciples until in 529 he moved to Monte Cassino The Benedictine abbey, which grew out of the monastic communities founded here by the saint, rose to great wealth and political power in the Middle Ages. Here, in 1464, were established the first printing presses in Italy St Scholastica, St. Benedict's sister, established in Subiaco the first monastic community for women.

subjectivism, in philosophy, the doctrine that the mind in knowing is aware only of what is presented to consciousness It is also called subjective idealism This type of subjectivism leads without difficulty to materialism and to the denial of the supernatural. In another sense, subjectivism is the doctrine that the individual self is all that exists and that truth is only the opinion of each individual The opposite point of view is called objectivism. The pragmatism of William James and the humanism of F. C. S. Schiller are apparently subjective in this sense. The classic philosopher of this type of subjectivism is Bishop Berkeley, but the origin of it may be traced rather to Kant.

subjunctive see MOOD.

sublimation (sŭblĭmā'shŭn), in chemistry, a process in which a solid substance changes directly to a vapor without first passing through the liquid state and then reverts directly to the solid again upon sudden cooling An example of sublimation is seen when iodine on being heated changes from a dark solid to a purplish vapor which condenses directly to a crystalline solid upon striking a cool surface In this way pure crystals of iodine are prepared Some other substances, e g , corrosive sublimate, can also be prepared by sublimation Solid carbon dioxide, commonly known as dry ice, sublimes at −78 5°C (or −109 3°F)

sublimation, in psychology see DEFENSE MECHANISM

submachine gun, light, portable, automatic weapon that can be fired from the shoulder, used in warfare and by police and other law-enforcement agencies The possession of a submachine gun by an individual is illegal in the United States Invented (1921) by John Taliaferro Thompson in cooperation with John N Blish, it was nicknamed tommy gun after its inventor Firing a 45 calibre cartridge at some 800 shots per minute, the Thompson gun was used extensively in the Second World War, as were more recently developed submachine weapons such as the British Sten gun and the U S army all-metal weapon, known as the grease gun because of its resemblance to the air-pressure devices used in automobile lubrication

submarine (sŭb"murēn') [from Latin,=undersea], naval craft capable of submerging and proceeding under water and of attacking ships, principally with torpedoes Experimented with and used across three centuries, undersea vessels have become an established part of modern navies The first practical submarine is generally conceded to have been that built (c 1620) by C J Drebbel, a Dutchman living in England It consisted of a rowboat completely covered with leather and propelled by 12 oarsmen, the oars protruding through flexible leather seals on both sides of the boat Drebbel's method of renewing the air in the submerged craft with oxygen enabled the vessel to remain underwater for as many as 15 hr A submarine was built in 1653 at Rotterdam designed for use against the British fleet, but was never in action The first submarine actually used in warfare was invented by the American David Bushnell in 1776 This vessel, the *Turtle*, was a small egg-shaped affair constructed of oak planks and was operated by one man, who turned a propeller Water was admitted to submerge the vessel, and it was surfaced by forcing out the water with a hand pump Lead ballast kept the vessel upright Its attempt to blow up a British warship in New York harbor by boring a hole in its hull and placing a charge to be ignited by clockwork failed because the boring tool, operated from inside the *Turtle*, could not penetrate the copper sheathing of the warship The *Nautilus*, Robert Fulton's submarine, successfully operated (1800–1801) on the Seine and at Le Havre On one occasion the inventor remained submerged for 6 hr , receiving air through a tube extending up through the water Later he devised and used a spherical tank of compressed air to replenish the air in the submarine This innovation and several other aspects of Fulton's submersible vessel made it a real forerunner of the modern submarine In the Civil War the Confederates used several submersible craft all named *David*, fitted with a mine protruding from the bow at the end of a spar In 1864 one of these vessels blew up a new Union vessel, the *Housatonic*, in Charleston harbor, but was herself lost with her crew The development of the modern submarine was advanced considerably by the work of two Americans, J P Holland and Simon Lake One of Holland's submarines was propelled on the surface by a gasoline engine and when submerged by electric motors powered by storage batteries She was 54 ft long, had a speed of 7 knots and a crew of six, and was completed for the U S government in 1900 Lake's *Argonaut*, built in 1897, was not accepted by the U S navy Not until several European governments had made use of his talents did the U S government engage him Early in the First World War the Germans used 200-ton submarines, and later they employed 21,000-ton craft armed with as many as 19 torpedoes To halt the heavy destruction of shipping by these U-boats (from the German *Unterseeboot*) the Allied powers developed depth charges, armed vessels disguised as merchantmen, and convoy shipping. With various improvements these means also served in the Second World War. A typical U S navy submarine in 1940 consisted of a 300-foot steel craft of 1,450 tons displacement A crew of 55 operated Diesel engines (while surfaced) for a speed of 17 knots, electric motors (while submerged) for a speed of 8 knots The submarine possessed one 3-inch dual-purpose gun, two anti-aircraft machine guns, and 10 21-inch torpedo tubes. Her cruising range was 18,000 mi. As protection against an adversary's submarines the United States had developed "sub chasers," vessels of 100 to 170 ft , armed with 3-inch guns, depth charges, and machine guns. In the Second World War, when the Allies and neutrals lost a total of 4,770 ships of more than 21,000,000 gross tons to underseas raiders, airplanes were used extensively against the undersea craft. Aided by the radar equipment on the submarines, the U S. navy sank some 550 Japanese ships by 1944. A periscope is an integral part of every submarine, it extends up through the water and by a mirror arrangement provides the observer below with a view of the surface of the sea. Similar in appearance but totally different in purpose is the *Schnörkel* apparatus first utilized by the Germans and now in general use It admits air but bars descent of water, and by supplying a flow of fresh air and a means of egress for foul air makes it possible for a submarine to stay submerged for as much as nine tenths of a voyage. With this device and engines using hydrogen peroxide as fuel, German submarines in the Second World War attained speeds of 18 knots under water and were enabled to remain submerged for several days Many experiments with midget submarines were launched during the 1939–45 hostilities, one of the best known being the so-called "human torpedo" of the Japanese. Only 41 ft. long, this carried two 18-inch torpedoes and a 300-pound charge of high explosives Operation often involved the self-sacrifice of the crew of two. See F T Cable, *The Birth and Development of the American Submarine* (1924), D. O. Woodbury, *What the Citizen Should Know about Submarine Warfare* (1942), L R. Newman, *The Tools of War* (1942), Bernard Brodie, *Sea Power in the Machine Age* (1943), R L. Casey, *Battle Below* (1945).

Subotica (sōō"bō'tĭtsa), Ger. *Maria Theresiopel* (marē"ä tārā"zēō'pul) or *Theresiopel*, Hung *Szabadka* (sō'bŏtkŏ), city (pop 112,551), N Serbia, Yugoslavia, near the Hungarian border It is the largest city of the Vojvodina and is an important rail junction The center of a rich agricultural lowland, it has meat-packing plants and flour mills and it exports fattened poultry It also has electrotechnical, chemical, and other industries, and it is the seat of a law school (founded 1920) Settled since prehistoric times, it was a city of Hungary until its transfer to Yugoslavia by the Treaty of Trianon (1920) In the Second World War it was again incorporated (1941–45) into Hungary

subpoena (supē'nu) [Latin,=under penalty], in law, an order to a witness to appear before a court A special type of subpoena is needed to compel the production of documents. Disobedience of a subpoena constitutes CONTEMPT OF COURT

subsidence (sŭb'sĭdŭns, subsī'dŭns), lowering of a portion of the earth's crust, usually resulting from readjustments in the interior of the earth The subsidence of land areas accessible to the ocean is followed by submergence by shallow seas One attempt to account for the origin of coral reefs is the subsidence theory (see CORAL)

subsidy (sŭb'sĭdē), financial assistance granted by a government to a private person or association for the purpose of promoting some enterprise considered to be for the good of the country or its people In England in the later Middle Ages, Parliament granted so-called subsidies to the king to augment or replace the customs and other taxes collected by royal prerogative, these became the means by which the power of taxation was taken from the king and lodged in Parliament The subsidy was a nation-wide levy, and when parliamentary supremacy was established, it was replaced (in the reign of Charles II) by a land tax levied annually without the intervention of a parliamentary vote This form of subsidy has been used in many other states, but was never so important as in England In France the king was able to retain his control and to acquire financial powers that made him independent of any subsidy granted by the States-General Subsidies have also been granted by one country to another country to aid it in prosecuting a war, and sometimes merely to gain its good will, a practice generally regarded as reprehensible England granted subsidies to Denmark in the Thirty Years War and to the enemies of Napoleon in the Napoleonic Wars In the present day subsidies are most important as grants to private corporations for performing some service to the public, such as shipping companies and air lines for carrying the mails Technically the subsidy is merely the amount paid the company over and above its legitimate charge for services and is granted only to provide revenue to enable it to remain in operation and to continue to give regular public service. The United States also grants subsidies to shipping lines in order to encourage and increase commerce on the seas in American vessels. As in other countries, this policy is dictated by the desire to have available a national merchant marine in case of war American cities have frequently subsidized transit companies to induce them to provide public transportation facilities for the community Very similar to a subsidy is a bounty, except that it usually takes the form of a premium or reward for a service already performed. In the North American Indian

wars bounties were paid by the English and French for the scalps of fallen enemies. In the 17th and 18th cent. several European governments paid a bounty on manufactured articles in order to encourage their production and build up a manufacturing industry. The same practice has been followed in more recent times to stimulate the growing of certain favored crops, such as sugar beets

subsistence homestead. The cottage holding, as it is called in England, or subsistence homestead, as it is called in the United States, is not intended as a source of money income, but as giving security to a household. Supplementing a money income from wages or some other source, a small piece of fertile land does much to meet the requirements of a household for wholesome food That it would do more if need came is seen in the experience of many American pioneers whose fuel and clothing also at times came from their subsistence homesteads A community of homes with a subsistence farm for each home has been the usual environment of man throughout historic time Before the brief period of centralization, Greek city-states were such communities The homes of such communities are occupied typically by married people with children Metropolitan populations have been recruited from these communities and would decline without them This condition, being of a biological nature, persists under various forms of national government Governments are encouraging communities of subsistence homesteads, which may become what their people make them, as in ancient Greece, in America, and also in places where life has been less rewarding Local building materials have been found advantageous to such communities Where wood, stone, and burned bricks have not been available, such materials as ADOBE and RAMMED EARTH have proved no less satisfactory

subsoil, material that immediately underlies a SOIL The soil above it may be only a few inches deep or several feet deep Subsoils are commonly of clay, sand, gravel, or rock Usually they contain little or no humus and are consequently lighter in color than the soil Often they are gray or yellow While many plants derive *nourishment from* the subsoil, its physical condition is more important than its fertility A hardpan near the surface cannot be penetrated by plant roots and prevents drainage and the rise of soil water A sandy subsoil permits the escape of water needed by roots Defects in a subsoil are hard to remedy They may usually be recognized by the nature and the lack of thriftiness of the vegetation on the land

substance, in philosophy, a term used to denote that permanent and unchangeable substratum presumed in some philosophies to be present in all being Less precise usage identifies substance with object or being The meaning of substance is always correlative with quality or attribute (accident) Every substance has attributes, every attribute belongs to a substance Some philosophers, seeking one generating, all-inclusive principle of the world, have established monisms Frequently the monist has identified substance with God, an absolute existing within itself and creating all other forms (Spinoza, Fichte) Monistic attributes are infinite, including all the manifestations of mind and matter The dualist generally considers both mind and matter as independent substances, not as attributes of a more fundamental substance (Plato, Kant, Bergson) The pluralist may believe that the world consists of many separate realities (Aristotle) or of a multiplicity of self-contained forces (Leibniz) Another aspect of Leibniz's philosophy indicated a dynamic substance or force within all being This may be compared with the flux of Heraclitus or the energy of Spencer Modern scientific speculation hypothesizes a basic energy, although it tends to reject the term *substance* Hume, representing a skeptical position, maintained that we have no evidence of an underlying substratum and need not assume it The theological development of substance is contained in the idea of transubstantiation

subtraction, one of the four fundamental operations of ARITHMETIC. The symbol for this operation is the minus sign (−) The result of subtracting one number from another is called the difference, the number subtracted is the subtrahend, and the minuend is the number from which the subtrahend is subtracted Subtraction is the inverse of ADDITION, i e , it is the process of finding what number must be added to the subtrahend to give as a sum the minuend. As in adding, only like quantities can be subtracted The operation does not have the properties of associativity and commutivity but it does have distributivity, i e , the result of multiplying the difference of two numbers by a third is the same as the result of multiplying each of the first two numbers by the third and then subtracting these products.

subtreasury. After President Andrew JACKSON vetoed the bill to recharter the Second BANK OF THE UNITED STATES (July 10, 1832), the deposits were removed and placed in banks which came to be called Jackson's "pets." This process the President accomplished only with great difficulty, there being grave doubt as to its constitutionality (see MCLANE, LOUIS; DUANE, WILLIAM JOHN; TANEY, ROGER BROOKE) The situation remained somewhat in suspension and debate until a subtreasury system, as such, was established July 4, 1840, a measure being passed to establish the INDEPENDENT TREASURY SYSTEM This act, never strictly carried out, was repealed by the Whigs Aug 13, 1841 In 1846 the Independent Treasury was finally and rigidly established and with it, of course, the subtreasury system Public funds were not to be deposited in any bank, but must be kept in coin in the Treasury or subtreasuries or retained by the public officers receiving them until paid out on proper authority, and no banknotes were to be received in payments to the government The subtreasuries were maintained, chiefly through political influence, until the passage of the General Appropriation Act, May 29, 1920, and the transfer of their functions to the Treasury, the mints and assay offices, and the Federal reserve banks, which was completed in 1921

Subutai (sŭbō'tī'), c 1195–c 1275, Mongol commander He led many armies for Jenghiz Khan and Ogadai Khan and was the chief commander for BATU KHAN His name also appears Sabutai or Subotai

subway, railway system partially or wholly underground, sections of which may pass through underwater tubes and tunnels In a broader sense the term may include any underground passage London's subway, opened in 1863, is the oldest Other cities with subway service include Boston (1895), Paris (1900), New York (1904), Madrid (1919), Tokyo (1927), Moscow (1935), and Chicago (1943) Some subways consist of only a single line, while others, such as the *métropolitain* in Paris and the Interborough Rapid Transit in New York city, are networks By far the largest underground transportation system in the world is that of New York city It comprises more than 240 mi of lines In 1940 New York city purchased the privately owned Interborough Rapid Transit (IRT) and the Brooklyn-Manhattan Transit (BMT) system combining them with the Independent Subway System which it built and operated More than 7,200 cars, connected in trains of from 3 to 10 units, operate day and night on headways from 1½ to 15 minutes The lines use 12 bridges and 11 underwater tunnels and carry as many as 100,000 people at hours of peak operation Moscow has an elaborate subway system with tunnels 15 to 20 ft high as compared with the usual 10 ft Marble was lavishly used in constructing the stations, and Russia's best-known artists participated in their decoration Subways in general are considered the best means of urban transportation, as well as the safest See Conklin Groff, *All about Subways* (1938)

succession, apostolic: see APOSTOLIC SUCCESSION

Succession Act see SETTLEMENT, ACT OF

succory see CHICORY

Succoth (sŭ'kŏth) [Heb , =booths] **1** Unidentified place, E of the Jordan by the Jabbok, where Jacob paused on his return to his native land It was included in Gad Through it Gideon passed in his pursuit of the Midianites Gen 33 17, Joshua 13 27, Judges 8 5, 1 Kings 7 46 **2** Place, Egypt, where the Israelites made their first camp at their exodus Ex 12 37, 13 20 A valley of Succoth is mentioned in Ps 60 6

Succoth-benoth (-bĕ'nŏth), deity worshipped by Babylonian captives in Samaria 2 Kings 17 30

succubus (sŭ'kyōōbŭs), in demonology, the feminine counterpart of the INCUBUS

succulents (sŭ'kyulunts), fleshy plants of a horticultural group to which belong plants of many diverse families, among them species of cactus, stonecrop, houseleek, agave, and yucca Many are grown for their interesting, often grotesque, forms, although a few have very ornamental flowers Their cultivation is a growing branch of horticulture See S E Haselton, ed , *Succulents for the Amateur* (1939)

Suchathites (sōō'kŭthīts), family of scribes 1 Chron. 2 55

Suchet, Louis Gabriel (lwē' gabrēĕl' sūshā'), 1770–1826, marshal of France He commanded an army in the Peninsular War and took Valencia in 1812 Napoleon made him duke of Albufera (1811)

sucker, sluggish fresh-water fish related to the carp It ranges from 6 in to 3 ft in length and has a fleshy, sucking mouth with toothless jaws and a row of teeth in the throat Chiefly a bottom feeder, it eats small aquatic animals and plants The common sucker occurs widely over North America Its flesh is bony but palatable.

Suckert, Curzio. see MALAPARTE

Suckling, Sir John, 1609–1642?, one of the CAVALIER POETS at the court of Charles I of England He was a model of the courtier and the gallant, handsome, rich, talented, well bred, given to all the pleasures of the court He was noted as a gamester and a card player and is credited with inventing the game of cribbage In 1631–32 he was apparently a gentleman soldier in the Thirty Years War Suckling raised a troop for the Scottish campaign of 1639, in which, according to John Aubrey, he was driven back in humiliating fashion The next year he was elected to Parliament. Strongly royalist in his sympathies, he took part in the first army plot. On its failure, Suckling fled to the Continent where, it is said, he was driven to suicide by want After his death appeared *Fragmenta Aurea* (1646), a collection of his fugitive and occasional poems, together with plays, letters, and the essay "An Account of Religion by Reason " He is best known for his "Ballad upon a Wedding" and for his lyrics, two of the most familiar being "Constancy" ("Out upon it, I have loved") and the song beginning, "Why so pale and wan, fond lover?" from the play *Aglaura* (presented 1637) Other dramas were *The Goblins* (presented 1638) and *The Discontented Colonell* (1640, expanded to become *Brennoralt*) Suckling's works were edited by A Hamilton Thompson (1910) See biographical sketch in edition by W. Carew Hazlitt (2d ed , 2 vols , 1892)

Sucre, Antonio José de (äntō'nyō hōsā' dā sōō'krā), 1795–1830, South American revolutionist, b Cumaná, Venezuela He joined (1811) the forces fighting for independence from Spain and rose to be the chief lieutenant of Simon BOLÍVAR After Colombia had been liberated from the Spanish, Bolívar sent Sucre to the Quito region (now Ecuador), where he won (1822) the brilliant victory of Pichincha Accompanying Bolívar to Peru, he fought well in the revolutionary victory of Junín (Aug , 1824) Bolívar was absent and Sucre was the chief commander when the battle of Ayacucho was fought (Dec , 1824) Sucre's military genius was splendidly displayed in this victory, which assured the independence of South America The terms he granted to the defeated were generous, and Sucre was known for his great heart as well as his honesty and self-effacing modesty It was against his own will that he became president of the newly created state of Bolivia, and he was not happy in the post Despite the conciliatory spirit of his rule, an attempt was made on his life In 1828 he resigned and returned to Quito A few months later he led the forces that repelled a Peruvian invasion He was elected president of the constitutional convention which met in 1830 in an effort to prevent Bolívar's large republic of Colombia from disintegrating Sucre's efforts to prevent Venezuela from seceding and becoming a separate state failed In June, 1830, when he was riding back from the congress to his home in Quito, he was waylaid by unknown men in a wild mountainous region and killed

Sucre (sōō'krā'), city (1948 estimated pop 35,000), S central Bolivia, legal capital of Bolivia and capital of Chuquisaca dept Founded as La Plata in 1538 but also in early days called Chuquisaca and sometimes CHARCAS, Sucre was given its present name in 1839 in honor of Antonio José de SUCRE. During the colonial era it was capital of the captaincy general of Charcas Today Sucre is designated the *de jure* capital and is the seat of the archbishopric, the national university (San Francisco Xavier, founded c 1624, and specializing in law), and imposing government buildings The *de facto* capital is, however, LA PAZ Sucre is in a mountain valley on the eastern slope of the Andes at an altitude of c 8,500 ft The climate is moderate, and the city is a major agricultural center, shipping grains and cattle to the mining communities of the barren altiplano The first revolt in the wars of independence in South America broke out in Sucre May 25, 1809

sucrose (sōō'krōs, sū'-), the commonest and commercially the most important of the sugars It is a white, crystalline solid, melting at 160°C. and when heated above this temperature yielding CARAMEL It is known commonly as cane sugar, beet sugar, or maple sugar, depending upon its natural source Chemically, it is a CARBOHYDRATE Its molecule is composed of 12 atoms of carbon, 22 of hydrogen, and 11 of oxygen, the atoms probably being arranged as one molecule of GLUCOSE and one of FRUCTOSE with the loss of a molecule of water Upon HYDROLYSIS, sucrose yields glucose and fructose In this case, the process is called inversion and the sugar mixture produced is known as invert sugar, because, although sucrose itself rotates the plane of polarized light to the right, the mixture "inverts" this procedure and rotates it to the left Sucrose is obtained from the "juice" of SUGAR CANE or the sugar BEET and sap of the sugar MAPLE The cane or beets are crushed and the juice, after treatment with lime to neutralize acids, is evaporated in so-called vacuum pans which permit much lower temperatures for carrying out the process than would be possible otherwise and cause a decrease in hydrolysis. The brownish liquid obtained is called MOLASSES The sugar, brownish in color, is dissolved in water, treated with animal charcoal to remove the color resulting from the presence of impurities, and recrystallized

Sudak (sōōdäk'), town (1932 estimated pop 2,140), E Crimea, RSFSR, SW of Feodosiya A port and resort on the Black Sea, it dates from ancient Greek times and was a major medieval trade center on the route from Europe to Asia It passed (1365) to Genoa and (1475) to the Crimean Tatars.

Sudan (sōōdän'), region, E Africa, S of the **Sahara** A geographical region of uncertain extent, it is generally considered to include NE French Equatorial Africa, N and central ANGLO-EGYPTIAN SUDAN

(ancient NUBIA), and Eritrea. It comprises mainly desert and grassy steppes and plains The economy is characteristically pastoral The Sudanese are for the most part Moslem Negroes The name Sudan is applied also to the entire semiarid belt stretching east-west across Africa. Within this larger area is FRENCH SUDAN

Sudan grass: see SORGHUM

Sudbury, city (pop 32,203), S Ont , E of Sault Ste Marie and 200 mi N of Toronto It is the center of a great nickel-mining region and has smelters and refineries Gold, silver, lead, zinc, copper, and platinum are also mined in the area, and there are lumber mills, machine shops, brickworks, and woodworking plants

Sudbury, municipal borough (pop 7,007), Suffolk West, England, on the Stour at the Essex boundary and S of Bury St Edmunds There are many old houses and three mainly Perpendicular churches—St Gregory's, St Peter's, and All Saints' The town hall dates from 1491 Flemish weavers were introduced in the 14th cent , but the making of woolen goods has now ceased, rayon and silk goods are manufactured Thomas Gainsborough was born here

Sudbury, town (pop 1,754), E Mass , W of Boston, settled 1638, inc 1639 The old Howe or Red Horse tavern (built 1686, restored) was the scene of Longfellow's *Tales of a Wayside Inn*

Sudermann, Hermann (hĕr'män zōō'dûrmän,) 1857–1928, German dramatist and novelist, b East Prussia His works show the influence of various schools and of Ibsen and Nietzsche The great success of his play *Die Ehre* (1889, Eng trs , *Honor*, 1906, 1915), produced in the same year as Gerhart Hauptmann's epoch-making *Before Dawn*, called public attention to his novel *Frau Sorge* (1887, Eng. tr , *Dame Care*, 1891) This became immensely popular, as did the play *Heimat* (1893, Eng tr , *Magda*, 1896). When his plays lost critical favor, Sudermann returned to novel writing and continued to write fiction until his death Among his numerous other works are the play *Sodoms Ende* (1891, Eng tr , *The Man and His Picture*, 1903); the novels *Regine* (1889, Eng tr , 1894), *Das hohe Lied* (1908, Eng tr , *The Song of Songs*, 1909), *Der tolle Professor* (1926; Eng tr , *The Mad Professor*, 1928), and *Purzelchen* (1928, Eng tr , *The Dance of Youth*, 1930), the autobiographical *Das Bilderbuch meiner Jugend* (1922, Eng tr , *Book of My Youth*, 1923); and the short-story volume *Der Rosenstock* (1917, Eng tr , *The Excursion to Tilsit*, 1930), perhaps his best work

Sudetes (sōōdē'tēz), Czech *Sudety* (sōō'dĕtyĭ), Ger *Sudeten* (zōōdā'tûn), mountain range, extending for c 180 mi along the northern border of Czechoslovakia, between the Elbe and the Oder rivers It is continued on the west by the Erzgebirge and on the east by the Carpathians The Sudetes are divided into several groups Farthest west, bordering on Saxony, are the Lusatian Mts , along the border with Silesia are, from west to east, the Isergebirge, the RIESENGEBIRGE, the Adlergebirge, and the Jesenìky mts The Riesengebirge rises to 5,258 ft in the Schneekoppe The mineral deposits of the Sudetes include coal, lignite, peat, iron, nickel, silver, graphite, kaolin, and pyrites There are numerous mineral springs and resorts Lumber products, glass and porcelain, and textiles are the chief industrial products Liberec and Jablonec nad Nisou are the chief manufacturing centers for, respectively, textiles and glass Home industries have long held an important place in the Sudetes The region was largely German-speaking until 1945 However, the term "Sudete Germans" was not limited to the Sudete Mts but designated all the German-speaking population in the regions of Czechoslovakia bordering on Germany These Germans had been settled in Bohemia for centuries, and their country, known as Sudetenland, has always been a part of Bohemia. The Sudete German party, founded by Konrad Henlein in 1934, was an offshoot of the German National Socialist party It protested that the government discriminated against the German minority, a charge which it vastly exaggerated but which contained some truth The party grew steadily in power, and in 1938 it was Hitler's chief instrument in the events leading to the MUNICH PACT and the annexation of the Sudetenland to Germany The districts were recovered by Czechoslovakia in 1945, and the major part of the German population (except those believed loyal to Czechoslovakia) was expelled

Sue, Eugène (ûzhĕn' sü'), 1804–57, French novelist, whose name was originally Marie Joseph Sue He served as a surgeon in the French navy, but when Napoleon III came into power he went into exile He is remembered for two books, widely translated—*Les Mystères de Paris* (pub. serially, 1842–43; 1st Eng tr , *The Mysteries of Paris*, 1844) and *Le Juif errant* (1844–45; 1st Eng. tr., *The Wandering Jew*, 1845).

Suebi see GERMANS

Suess, Eduard (ä'dōōärt süs'), 1831–1914, Austrian geologist, b. London He was professor (1857–1901) at the Univ. of Vienna and served for more than 20 years in the Austrian parliament. His great work, *Das Antlitz der Erde* (5 vols., 1883–1901), was translated as *The Face of the Earth* (1904–24).

Suetonius (Caius Suetonius Tranquillus), (swētō'nēŭs), fl. c 120, Roman biographer He was briefly the private secretary of Emperor Hadrian. His *De vita Caesarum* [concerning the lives of the Caesars] survives almost in full, and there are fragments of a much larger collection of biographies, *De viris illustribus* [concerning illustrious men] Like a magpie, he gathered together all sorts of items, and the resultant biographies are lively and informative Suetonius was taken as a model by many later biographers

Suetonius Paulinus see PAULINUS,

Suevi see GERMANS

Suez (sōōĕz'), city (pop 49,669), Egypt, near the southern terminus of the Suez Canal at the northern extremity of the Gulf of Suez In the near-by oasis, the Springs of Moses, is a spring which Moses is supposed to have miraculously made sweet. Ex 15 25

Suez Canal, waterway of Egypt extending from Port Said to Port Tewfik (near Suez) and connecting the Mediterranean Sea with the Gulf of Suez and thence with the Red Sea The canal is somewhat more than 100 mi long Proceeding S from Port Said, it runs in an almost undeviating straight line to the small Lake Timsah From there a cutting leads to the Bitter Lakes (now one body of water), and a final cutting then attains the Gulf of Suez The cuttings are a minimum of 196 ft wide at bottom and are over 42 ft deep The Suez Canal is without locks and can accommodate ships of any draft The desirability of a water connection between the Mediterranean and the Red Sea was long appreciated in antiquity A canal was built in the 20th or 19th cent B C to Lake Timsah (then the northern end of the Red Sea) When the Red Sea receded, Xerxes I had the canal extended It was restored several times (notably by Ptolemy II and Trajan) until the 8th cent A D , when it was closed and fell into disrepair The modern canal was planned by Ferdinand de Lesseps, who also supervised construction (1859–69) Great Britain soon acquired control by purchasing the interest of the Egyptian khedive in 1875 Management is in the hands of the Suez Canal Company, the stock of which is owned by various European governments Great Britain is the guarantor of the neutrality of the canal and of its accessibility to merchant and naval vessels in peace and war In fact Great Britain has excluded enemy shipping It is estimated that half the commerce between Europe and the Far East passes through the canal, in most years there are some 6,000 ships which make the transit See Charles Hallberg, *The Suez Canal* (1931), Sir Arnold T Wilson, *The Suez Canal Its Past, Present, and Future* (2d ed , 1939)

Suffern, village (pop 3,768), SE N Y , NW of New York city, in the Ramapos and at the N J line, inc 1896 A suburb and a trading center for summer residents, it has small industries

Suffield, town (pop 4,475), N Conn , on the Connecticut at the Mass line, in a tobacco-raising area, settled c 1670 Cigar making began in 1810 Suffield Academy for boys (preparatory) is here

suffocation see ASPHYXIA.

Suffolk, dukes and earls of see also POLE, family.

Suffolk, Charles Brandon, 1st **duke of** (sŭ'fuk), d. 1545, English nobleman He entered the service of Henry VIII and gained favor, receiving many preferments He was created Viscount Lisle (1513) on his betrothal to his ward, Elizabeth Gray, but the title was cancelled when Elizabeth, on coming of age, refused to marry him He was created duke of Suffolk in 1514, perhaps to aid him in his suit of Margaret of Austria, regent of the Netherlands In 1515, while on an embassy to the new king of France, Francis I, Suffolk married MARY OF ENGLAND, widow of LOUIS XII and sister of Henry VIII This ambitious marriage, complicated by the fact that one of Brandon's two former wives was still living, angered Henry considerably, and it was only by the payment of jewels and large sums of money that the couple regained favor Suffolk accompanied Henry to the Field of the Cloth of Gold (1520) and led an invading army into France (1523) By his firm support of all of Henry's policies, Suffolk achieved a position second only to that of the duke of Norfolk He supported the king's divorce from Katharine of Aragon, received confiscated monastery lands, led troops against the rebels in the Pilgrimage of Grace (1536), and led an invasion of France (1544).

Suffolk, Henry Grey, duke of, d. 1554, English nobleman. He became 3d marquess of Dorset upon his father's death (1530) and in 1534 married Frances Brandon, daughter of the duke of Suffolk and niece of Henry VIII During Henry's reign he was active at court. Upon the accession of Edward VI (1547), Grey at first supported the duke of Somerset but soon shifted to the rising earl of Warwick He received favors at court and was created duke of Suffolk (1551) through his wife's claim. Lady Jane GREY was his daughter, and upon the death of Edward (1553) Suffolk joined the plot to place her on the throne, but through fear of his life deserted her and proclaimed Mary I queen. Suffolk was released, largely because of his wife's friendship with Mary, but joined the rebellion of Sir Thomas WYATT (1554), was captured, convicted of treason, and executed.

Suffolk, Thomas Howard, 1st **earl of,** 1561–1626, English nobleman. The son of the 4th duke of Norfolk and member of the powerful HOWARD family, he was attainted at the time of his father's execution, but his rights were restored in 1584. He volunteered for naval duty against the Spanish Armada (1588), was knighted at sea, and rose quickly to high rank Howard commanded the squadron that attacked the Spanish treasure fleet off the AZORES in 1591 Recalled from naval duty in 1597 to enter Parliament, he was made Baron Howard de Walden In 1601 he was commander of the forces which besieged the earl of Essex in his house and was a member of the jury which tried him Upon the accession of James I (1603), he was created earl of Suffolk and later held a number of official posts In 1614 he became lord high treasurer His daughter, Frances Howard, and her husband, Robert Carr, earl of Somerset, were tried (1615) and convicted of the murder of Sir Thomas OVERBURY Suffolk was accused (1618) of embezzlement and fraud as treasurer, tried (1619), convicted, and heavily fined Although both he and his wife, who was thought to have influenced him, were soon released, he did not regain influence

Suffolk (sŭ'fuk), maritime county, E England, divided for administrative purposes into Suffolk East (871 sq mi ; 1931 pop 294,977, 1948 estimated pop 312,876) and Suffolk West (611 sq mi , 1931 pop 106,137, 1948 estimated pop 111,984). The terrain is low and undulating The coastline, broken by sandstone cliffs, has been encroached upon in places by the sea The chief streams as the Waveney, the Stour, the Deben, the Orwell, and the Alde It is mainly an agricultural region and is one of the chief grain-producing counties of England Breeds of horses, hogs, sheep, and cattle have been developed, and stock raising is a leading occupation Along the coast fishing is important There are numerous Roman remains in the county In Anglo-Saxon times Suffolk was a part of the kingdom of East Anglia, inhabited by the "south folk" of that kingdom, whence the name of the county The Danes ravaged Suffolk in the 9th cent It was organized as a shire about the time of the Norman Conquest Ipswich, in Suffolk East, and Bury St Edmunds, in Suffolk West, are the chief towns See *Victoria History of Suffolk* (2 vols , 1907–11)

Suffolk, city (pop 11,343), SE Va , on the Nansemond river and near the Dismal Swamp, settled 1720, inc as a town 1808, as a city 1910 It is the rail, commercial, and industrial center for a farm and lumber area, is a great peanut market and processing center, and has woodworking, chemical and machinery manufactures The courthouse of Nansemond co is here Suffolk was burned by the British in 1779, occupied by Union troops on May 12, 1862, and besieged by Longstreet in April, 1863

suffrage see BALLOT, ELECTION; FRANCHISE, VOTING, WOMAN SUFFRAGE

Suffren de Saint-Tropez, Pierre André de (pyĕr' ädrā' dŭ sufrĕn' du sĕ-trōpā'), 1726–88, French admiral He participated in naval warfare on the Atlantic in the War of the Austrian Succession and in an expedition (1756) to Minorca in the Seven Years War In 1779 he was sent with ESTAING to aid the American revolutionists, and two years later he began his famous cruise to the East Indies He attacked the English at the Cape Verde Islands, saved the Dutch colony at Capetown from English capture, and then began his campaign against the British in India under Sir Edward Hughes With the help of HYDER ALI he seriously crippled British operations, forcing Hughes to retire to Madras Suffren was recalled upon the conclusion of peace and was created vice admiral. An account of his life is found in A T. Mahan, *The Influence of Sea Power upon History, 1660–1783* (1890)

Sufi (sōō'fē), member of a Mohammedan mystic order. The Sufis included the greatest of the Persian poets—Abu Said ibn Abi-l-Khair, Ferid ed-Din Attar, Hafiz, Jami, Omar Khayyam, and Jalal ed-Din Rumi. The highly developed symbolism of the soul's union with God is expressed in exquisite lyric style The movement of **Sufism** (sōō'fĭzĭm), which emerged among the Shiites in the late 10th and early 11th cent , was, however, a broad philosophy, not simply a literary movement. It borrowed ideas from Neoplatonism, Buddhism, and Christianity. The semimonastic order arose, with variant ideas and practices. Some members stressed ascetic practices, some stressed quietism. All were united in emphasis on the immediate personal union of the soul with God. In some variations the beliefs of Sufism verge sharply toward pantheism, thus almost leaving Islam altogether. The movement was strongest in Persia, and its greatest purely philosophical exponent was AL-GAZEL. A great many of the modern dervish orders also profess Sufism.

sugar, compound of carbon, hydrogen, and oxygen belonging to a class of substances called carbo-

hydrates Sugars fall into three groups, the monosaccharides, disaccharides, and trisaccharides The monosaccharides are the simplest sugars, they include FRUCTOSE and GLUCOSE. The disaccharides are formed by the union of two monosaccharides with the loss of one molecule of water Disaccharides include LACTOSE, MALTOSE, and SUCROSE. Less well known are the trisaccharides, raffinose is a trisaccharide present in cottonseed and in sugar beets The letters d- and l- written before the name of a sugar do not stand for dextro and levo referring to its optical effect on the rotation of plane polarized light The letter indicates rather the position (to the right or left) of a certain hydroxyl group in the molecule and thus indicates that the sugar is a member of the d- or l- family of sugars, the d-sugars are related to d-glyceraldehyde (or d-glyceric aldehyde) and the l- sugars to l-glyceraldehyde. The letter is written in various ways, e g , as d-glucose, *d*-glucose, or D-glucose.

sugar, maple: see MAPLE.

sugar cane, tall perennial grass (*Saccharum officinarum*), probably cultivated in Asia from prehistoric times and now widely cultivated in tropical and subtropical regions Besides a warm climate the plant requires considerable moisture and a fertile soil, in the United States it is grown chiefly in Louisiana Sugar cane somewhat resembles corn and sorghum and has a large terminal panicle but does not often produce fertile seed It is ordinarily planted from cuttings and under the best conditions in the tropics may be harvested a number of times from the one planting The methods of cultivation in a large part of the world's fields are still very primitive The sugar (see SUCROSE) obtained from the plant was long a luxury and was a crude sugar compared with the highly refined, white, granulated sugar that has been a fairly recent development By-products obtained from sugar cane include MOLASSES, RUM, alcohol, fuel, paper, wallboard, and livestock food There are several kinds of sugar cane, sometimes called simply cane, in cultivation See F S. Earle, *Sugar Cane and Its Culture* (1928)

Sugar Creek, city (pop 1,638), W Mo , on the Missouri and near Kansas City, inc 1920 It refines oil, which is produced in the area, and makes cement

Sugar Land, unincorporated town (pop c 1,500), S TEXAS, SW of Houston An industrial town, originally built around a sugar refinery, it now has plants to process figs, vegetables, and oil and to make chemicals There are oil wells near by Several prison farms are in the neighborhood

sugar maple: see MAPLE

Sugar Notch, borough (pop 2,505), NE Pa , near Wilkes-Barre, inc 1867

sugar of lead, common name for lead acetate, a white, crystalline substance with a sweetish taste, soluble in water and, like other compounds of lead, very poisonous (for antidote, see lead under POISONING, table) Chemically it is a salt of acetic acid, composed of lead, carbon, hydrogen, and oxygen and prepared by treating litharge with acetic acid. In textile printing and dyeing it is used as a mordant, and in paints as a drier It is also a component of various medicated lotions and ointments.

Suger (sŭzhĕr'), 1081–1151, French cleric and statesman, abbot of Saint-Denis, and minister of Louis VI and Louis VII He was noted for his financial ability and his genius for conciliation At Louis VII's departure on crusade (1147), he appointed a council of regency, of which Suger was the most prominent member, during his administration (1147–49) Suger succeeded in maintaining peace at home and in raising funds to meet the king's expenses He liberated the abbey at Saint-Denis from the tribute formerly paid to robber barons, recovered alienated properties, rebuilt the church, and enriched it with works of art At the same time he introduced a more severe discipline. He was the author of a life of Louis VI and of fragments of a life of Louis VII and probably also of an account of his administration of Saint-Denis

Suhl (zōōl), town (pop 24,598), Thuringia, central Germany, S of Gotha It manufactures small arms, automobiles, precision instruments, chemicals, and toys It became a center of the German arms industry in the Thirty Years War

Sui (swē), dynasty of China, which ruled from A D. 581 to 618 From his capital at Changan, and later at Anyang, Yang Chien (541–604), the first Sui emperor (he had been a northern Chou official who usurped the throne), ruled an empire extending from the Great Wall to the Pescadores and as far south as Annam The Sui armies used barbarian cavalry tactics to conquer large areas, and they built canals to give their administrators mobility. They made the Grand Canal into a trunk system connecting the Wei, Fen, Yellow, Hwai, and Yangtse rivers. Yang Chien's son, following his father's example of usurpation, killed him, and then carried on his work He himself was murdered by the founder of the T'ang dynasty.

suicide [Latin, =self-killing] The attitude toward suicide in all societies is dependent upon the emphasis placed on individuality. Where there is little competition and desire to obtain personal recognition, suicide is rare But when rivalry between individuals is intense and personal ambition is exalted, suicide is more frequent While it was not approved in ancient Greece, there were no official sanctions against suicide, and it was sometimes offered as an alternative to execution, as in the case of Socrates The Romans considered suicide a proper way of saving one's honor, and when the Stoic doctrine of the unity of all the universe became popular, the attitude toward suicide as a release from an unwelcome individuality became even more favorable Buddhist and Hindu doctrine considers individuality an illusion Suicide is, therefore, considered most desirable and has been institutionalized (e g , SUTTEE and HARA-KIRI) The Moslems, on the other hand, consider suicide worse than homicide, while the Jews consider it a sin Christianity has always stressed the sacredness of all life and at least since the time of St. Augustine, the Church has regarded suicide as murder The first civil laws against suicide in England date from the 11th cent It was classified as a FELONY in English common law because the self-murderer illegally broke his bond of fealty, and his property was thereby forfeited to the king Suicides could not be buried in sacred ground, they were usually interred on public highways, with a stake driven through the heart Other European countries had similar policies toward suicide, and it is still considered a crime in England With the abolition of feudal concepts it became futile to regard suicide as felonious, and the crime no longer exists in the United States However, those who advise or abet suicide are subject to severe punishment Most life-insurance policies contain clauses that if the insured commits suicide within two years after the policy takes effect, the beneficiary will receive only the accrued premiums, not the face value of the policy In the West in modern times suicide is most common in cities and predominant at both ends of the social scale It is more frequent among men than women Suicide may be brought on by a sudden calamity, but for it to occur there must already be serious emotional conflict with feelings of fear, anxiety, or guilt Thus suicide may generally be described as a psychotic reaction Some schools of psychiatry regard suicide as a turning inward of destructive impulses or as self-murder in atonement for guilt feelings Suicides are often suggested by other suicides, so that epidemics of self-destruction develop See publications of the National Save-a-Life League, L I Dublin and Bessie Bunzel, *To Be or Not to Be* (1933), Karl A Menninger, *Man against Himself* (1938)

suicide plane see KAMIKAZE

Suidas (sōō'ĭdus), name of a Greek lexicon-encyclopedia, also applied to its compiler, who seems to have lived in the 10th cent A D The texts from classic Greek works and the commentaries, though mostly derived from late and corrupt sources, preserve much information about Greek literature that would otherwise be lost

Suifu, China see IPIN

Suir (shōōr), navigable river, 85 mi long, rising in Co Tipperary, Ireland, in the Devilsbit Mts It flows south, then runs east with Co Waterford on the south, Tipperary and Kilkenny on the north. With the Barrow it forms Waterford Harbour.

suit, in law see PROCEDURE

suite (swēt), in music, instrumental composition in cyclic form The germ was provided in the 16th-century practice of playing in sequence two dances of contrasting meter, e g , pavan and galliard The 16th-century lute composers and the French composers for the harpsichord in the early 17th cent composed suites of dances having no organic connection beyond the fact that they were all in the same key Froberger made an organic whole of the suite, his suites consisting of *allemande*, courante, saraband, and gigue To these were often added a minuet, *bourrée*, gavotte, *passepied*, or other dance, and in the keyboard suites of J S Bach the initial movement is often not in dance form and is called by various names, e g , prelude, sinfonia, overture Bach's orchestral suites, which consisted of a French overture followed by an air, a gavotte, a *bourrée*, and a gigue, were originally called overtures The Italian suite, which developed in the late 17th cent , was rather free and was called *sonata da camera* (see SONATA) Until the end of the baroque period all the movements of the suite were in simple binary form. In the classical period the instrumental SERENADE was a kind of suite. In the 19th cent the suite as a collection of pieces drawn from incidental music for plays or from the score of a ballet came into being, e g., Grieg's *Peer Gynt Suite* and Tchaikovsky's *Nutcracker Suite*

Suiyuan (swā'yōō'ăn', -yüăn'), Mandarin *Sui-yüan*, province (126,180 sq mi ; pop 1,718,089), N China, bordered on the north by the Mongolian People's Republic The capital is Kweisui Suiyuan, a part of Mongolia, is chiefly a high arid plateau; it comprises the ORDOS desert region in the southwest, grazing areas in the north, and a fertile belt along the Yellow River, which crosses the province from west to east Livestock raising and the growing of grains, chiefly millet, support most of the people The few cities are important only as stations on the caravan routes to Sinkiang and the Mongolian People's Republic Several finished roads and a railroad to Peiping provide communications with E China. In 1949 N Suiyuan was made part of the Inner Mongolian Autonomous Region

Suk, Josef (yō'zĕf shōōk'), 1874–1935, Czech composer and violinist, grad Prague Conservatory, 1891, pupil and son-in-law of Dvorak While still at the Prague Conservatory, Suk and three of his fellow students founded the Bohemian String Quartet, of which Suk was second violinist As a composer, he began as a disciple of the neoromanticism of Dvorak, but in his later works he developed a rich and chromatic polyphony which approached atonality A highly subjective composer, he nevertheless did not write literal program music His second symphony, *Asrael* (1907), reflects the profound inner grief which he felt after the death of Dvorak and the death soon after of his wife, Dvorak's daughter Suk joined the faculty of the Prague Conservatory in 1922 and later became its rector See Rosa Newmarch, *The Music of Czechoslovakia* (1942)

Sukarno or **Soekarno** (both sōōkär'nō), 1902–, Indonesian statesman, first president of the United States of Indonesia and of the republic of Indonesia One of the leaders of the radical nationalist movement in 1927, he was jailed and exiled by the Dutch at various times in the 1930s During the Second World War when Indonesia was occupied by the Japanese, Sukarno cooperated with them, while continuing his agitation for Indonesian independence After the war he played a crucial part in the establishment (Aug , 1945) of the republic of Indonesia, of which he became the first president Subsequently he was twice held by the Dutch during the intermittently violent period of warfare between the Dutch and the republican forces When the United States of Indonesia was created in Dec , 1949, Sukarno became its first president Like many other Indonesians, he has no first name

Sukhona (sōōkhô'nŭ), river, 350 mi long, N European RSFSR It issues from Kubeno lake, N of Vologda, and flows ENE into the Yug at Veliki Ustyug, the two rivers form the Northern Dvina

Sukhum (sōōkhōōm') **or Sukhumi** (sōōkhōō'mē), city (pop 44,350), capital of Abkhas ASSR, Georgian SSR, a port on the Black Sea An important subtropical resort, it has sulphur baths frequented since Roman times North of the city was the ancient Greek colony of Dioscurias, later the Roman and Byzantine Sebastopolis The Turkish fortress of Sukhum-Kale fell to Russia in 1810 Sukhum has a famous botanic garden and an agricultural experimental station The **Sukhum Military Road** crosses the Caucasus at the Khikhori Pass (9,235 ft high), where it is a trail, and continues SW to Sukhum It is c 120 mi long

Sukkertoppen (sōō'kurtô"pun), district (pop 1,831), SW Greenland The chief settlement, Sukkertoppen (pop 933), is a harbor N of Godthaab It is a fishing and hunting base and has a hospital and a radio station

Sukkims (sŭ'kĭms), nation, presumably African, which contributed to the army of Pharaoh Shoshonk in invading Palestine 2 Chron. 12 3

Sukkoth: see TABERNACLES, FEAST OF

Sulaimaniya (sōō"lämänē'ù), town (pop c 20,000), NE Iraq, near the Iranian border, founded c 1789 It manufactures rifles and is a military post.

Sulaiman Mountains (sōōlīmän'), range along the Baluchistan-Punjab border. It rises to Kaisargarh (11,295 ft) and Takht-i-Sulaiman (11,070 ft)

Suleiman I (sōō'lĭman", -lā-, sōō"lämän') **or Suleiman the Magnificent,** 1494–1566, Ottoman sultan (1520–66), son and successor of Selim I He is sometimes erroneously called Suleiman II With him the Ottoman Empire reached the height of its power and prestige He continued his father's conquests in the Balkans and the Mediterranean, conquering Belgrade in 1521, expelling the Knights Hospitalers from Rhodes in 1522, and inflicting a crushing defeat on the Hungarians at MOHACS in 1526 He unsuccessfully besieged Vienna in 1529 and supported John Zapolya (JOHN I of Hungary) against FERDINAND I. John's death and the accession of JOHN II were pretexts for the outright annexation of Hungary (except Transylvania and the section held by Ferdinand) to the Ottoman Empire In 1536 Suleiman entered a formal alliance with Francis I of France against the house of Hapsburg, this alliance remained the basis of Turkish foreign policy for more than three centuries Although Suleiman's vassal, BARBAROSSA, made the Turkish fleet the terror of the Mediterranean, Suleiman was, on the whole, unsuccessful in his naval warfare against Emperor Charles V and Venice, he lost (1535) Tunis to Charles V and failed to take Malta in 1565 Suleiman undertook several successful campaigns against Persia. A Turkish naval expedition to the Red Sea resulted in the conquest of the Arabian coast lands Having resumed (1566) warfare in Hungary, Suleiman died during the siege of Szigetvar From 1523 until 1536 Suleiman's grand vizier Ibrahim held powers almost equal to the

sultan's, and much of the credit for Ottoman greatness belonged to him Yet, without any previous sign of displeasure, Suleiman had Ibrahim strangled in 1536. A still blacker spot on Suleiman's career was the murder (1553) of his own son, Mustafa, instigated by his favorite wife, Roxelana, who thus secured the succession to her offspring Warfare resulted between Roxelana's two sons, Selim and Bajazet, and in 1559 Selim defeated Bajazet, who took refuge in Persia. Suleiman paid the shah of Persia a large sum as price for the execution of Bajazet and his four sons, and it was Selim who on Suleiman's death succeeded him as Selim II Thus the fatal influence the harem was to exert on later Turkish rulers made itself first manifested in Suleiman's reign In his government, however, Suleiman was generally distinguished for his mildness and justice His military, educational, and legal reforms earned him the name Suleiman the Lawgiver among Moslems Suleiman was fond of pomp and splendor He was a lavish patron of the arts and of literature, and Sinan, greatest Turkish architect, worked under his orders (see MOSLEM ART AND ARCHITECTURE) See R B Merriman, *Suleiman the Magnificent* (1944).

Suleiman II, 1642–91, Ottoman sultan (1687–91), brother and successor of Mohammed IV His grand vizier, Mustafa KUPRILI, was at first successful in taking the offensive against the Austrians, but was slain, shortly after Suleiman's death, in the battle of SLANKAMEN (1691) Suleiman was succeeded by his brother, Ahmed II

Suleiman the Magnificent see SULEIMAN I

sulfa drugs (sŭl'fu), synthetic drugs derived from sulfanilamide (or para-aminobenzenesulfonamide). Sulfanilamide itself was first synthesized in Germany by Gelmo in 1908 In 1932 Gerhard DOMAGK while testing certain dyes discovered the bactericidal properties of prontosil, clinical use of prontosil began c 1934 in Germany Experiments conducted in France revealed the active curative agent in prontosil to be sulfanilamide In the United States the therapeutic value of sulfanilamide was confirmed (1936) at Johns Hopkins Univ by P. H Long, E A Bliss, E K Marshall, and others. The sulfa drugs are used in treating a variety of bacterial infections, and they have been the means of saving countless lives Among the many compounds used medically are (in addition to sulfanilamide) sulfapyridine, sulfathiazole, sulfadiazine, and succinylsulfathiazole It is believed that the action of the sulfa drugs is bacteriostatic, i e , the drug checks the growth and reproduction of the bacteria, thereby making it possible for the natural body defenses to conquer the germs Various sulfa drugs are used effectively against infections caused by hemolytic streptococci (e g , abscesses, streptococcal meningitis, osteomyelitis, peritonitis, and septicemia), by meningococci (e g , meningococcal meningitis and septicemia), by pneumococci (e g , pneumonia, pneumococcal meningitis, and peritonitis), by gonococci (e g , arthritis and gonorrhea), and by staphylococci (e g , carbuncle and septicemia) and in treating infections of the urinary tract caused by various bacteria Sulfa drugs sometimes produce toxic effects, they should be administered only by a physician.

Sulgrave Manor, Tudor house in Sulgrave village, Northamptonshire, England, home of ancestors of George WASHINGTON from 1539 until 1610 In 1914 it was presented to the George Washington–Sulgrave Institution, it has been restored, refurnished, and made a Washington museum and is a shrine for American visitors to England.

Suli or **Souli** (both sōō'lē), small mountainous district, W Epirus, N Greece, NE of Parga Its inhabitants, the Suliotes, fought successfully (1790–1802) for their independence against Ali Pasha, the Turkish governor of Ioannina In 1803, however, Ali Pasha massacred many of them after concluding a false truce They were again decimated in a new rebellion in 1820, when many fled to the Ionian Islands

Sulitelma or **Sulitjelma** (both sōōlĭtyĕl'ma), mountain, 6,178 ft high, Nordland co , N Norway, on the Swedish border Its very rich copper mines are worked by a Swedish company, and the ore is exported at Bodo

Sulla, Lucius Cornelius (lōō'shŭs kôrnē'lyus sŭ'lŭ), 138 B C –78 B C , Roman general His name is also spelled Sylla At the height of his career he assumed the name Felix He served under MARIUS in Africa and became consul in 88 B C , when Mithridates VI of Pontus was overrunning Roman territory Sulla and Marius both wanted the command against him—Marius as a popular leader, Sulla as a senatorial favorite Sulla got the office by marching his soldiers on Rome (88 B C). By 85 B C he had driven Mithridates' armies back to Asia; Sulla's exploits had included a bloody sack of Athens (86 B C) Meanwhile Marius's party (led by CINNA) sent another army to Greece, designed to supplant Sulla's, but the other commander, Fimbria, fought independently Mithridates was defeated (84 B C), then Sulla defeated Fimbria Sulla came back to Italy (83 B C) with 40,000 men The ensuing civil war lasted about a year in Italy (Sertorius continued it in Spain); Sulla's chief opponent was Cn Papirius CARBO The war ended just after the battle of the Colline Gate, a last desperate foray by Marians from Samnium, Sulla captured and massacred 8,000 prisoners. Sulla had himself named dictator (82 B C) and began the systematic butchery of his enemies, this proscription (done with public lists) soon surpassed all Roman precedents As the murders were legalized, the property of the victims (naturally including many very rich men) easily went to Sulla's friends The dictator reorganized the government with measures, suggested by the METELLUS faction, which would remove any popular check on the senate Sulla also founded a number of colonies for his veterans In 79 B C he retired His "reforms" did not last No Roman before the most notorious emperors equaled Sulla in the union of cruelty with carelessness toward legality See A H Beesly, *The Gracchi, Marius, and Sulla* (1898)

Sullana (sōōyä'na), city (pop 22,344), NW Peru. In the coastal Peruvian desert, Sullana is the commercial center for an irrigated cotton-growing district Cinchona bark, source of quinine, is still gathered in the region

Sulligent (sŭ'lĭjĕnt), town (pop 1,287), NW Ala , near the Miss line WNW of Birmingham, in a farm area, settled 1887, inc. 1888 It processes cottonseed and lumber

Sullivan, Anne: see MACY, ANNE S

Sullivan, Sir Arthur Seymour, 1842–1900, English composer As a boy he sang in the choir of the Chapel Royal He was the first holder of the Mendelssohn scholarship at the Royal Academy of Music, entitling him to study at the Leipzig Conservatory He became organist at St Michael's, London, in 1861 and professor of composition at the Royal Academy of Music in 1866, the following year he accompanied Sir George Grove to Vienna, where they unearthed the manuscript of Schubert's *Rosamunde* Sullivan became known as a composer through his incidental music to Shakspere's *Tempest* (1862) His first comic opera, *Cox and Box*, was produced in 1867 In 1871 began his long and successful collaboration with W S GILBERT Despite the success of the Gilbert and Sullivan comic operas, Sullivan felt that his best work was his serious music, chiefly his oratorios—which include *Kenilworth* (1864), *The Prodigal Son* (1869), *The Light of the World* (1873), and *The Golden Legend* (1886)—and his serious opera *Ivanhoe* (1891) He composed many songs, among which *The Lost Chord* (1878) became tremendously popular, hymns, including *Onward, Christian Soldiers* (1871), anthems, ballets, and dramatic music He was also noted as a conductor In addition to performances of the operettas, he conducted the London Philharmonic Orchestra, 1885–87, and the Leeds Festivals, 1880–98 When the National Training School for Music was organized (1876), he became its principal, remaining in that position until 1881. Although he and Gilbert were a perfect collaboration, their widely diverse temperaments resulted in quarrels and eventual separation See biographies by H S Wyndham (1926) and Herbert Sullivan and W N Flower (1927), Isaac Goldberg, *The Story of Gilbert and Sullivan* (1928), Hesketh Pearson, *Gilbert and Sullivan* (1935)

Sullivan, Harry Stack, 1892–1949, American psychiatrist, b Norwich, N Y , M D Chicago College of Medicine and Surgery, 1917 He later taught at the Univ of Maryland and at Georgetown Univ. In the understanding of mental disorders Sullivan believed that psychoanalysis, although essentially valid, needed to be supplemented by a thoroughgoing study of the impact of cultural forces upon the personality In his dual role as head of the William Alanson White Foundation (1934–43) and of the Washington School of Psychiatry (1936–47), he had the collaboration of like-minded psychologists and sociologists in bringing this view to public and professional attention Sullivan also contributed to the understanding of schizophrenia and obsessional states A number of his papers published originally in the periodical *Psychiatry*, of which he was an editor, were gathered together to make up *Conceptions of Modern Psychiatry* (1940).

Sullivan, John, 1740–95, American Revolutionary general, b Somersworth, N H He was a lawyer and a delegate (1774–75, 1780–81) to the Continental Congress but is better remembered as a military leader He was at the patriot siege of Boston, and in 1776, when fighting under Washington at the battle of Long Island, he was captured by the British He was exchanged in time to fight at Trenton and Princeton and later at Brandywine and Germantown In 1778 he was sent to cooperate with the French fleet in an attack on Newport Sullivan was successful in the field, but the naval attack had to be given up. The next year he conducted his most famous campaign The Iroquois Indians had sided with the British and had raided the New York frontier The massacres that followed the attacks by Butler's Rangers (see BUTLER, JOHN, BUTLER, WALTER; BRANT, JOSEPH) in 1778 called forth a punitive expedition. Sullivan led the campaign, joined his forces with those of James CLINTON, fought in the Chemung valley, and in the battle of Newtown (near Elmira) soundly defeated the Butlers Much of the Iroquois country was laid waste In the same year Goose Van Schaick led a campaign against the Onondaga Indians and Daniel Brodhead subdued the Indians in Pennsylvania This fighting, with the victory of George Rogers Clark in the West, protected the frontier Sullivan was later chief executive (1786–88, 1789–90) of New Hampshire. He also helped to put down Shays's Rebellion and was influential in getting the Constitution ratified

Sullivan, John Lawrence, 1858–1918, American pugilist, b Boston After gaining a local reputation in amateur boxing, the Boston Strong Boy, as Sullivan came to be called, made a tour of New England cities and thereafter boxed professionally Sullivan, with a devastating right punch, was successful from the start and in 1882 won the bare-knuckles heavyweight championship by knocking out Paddy Ryan in nine rounds in Mississippi City, Miss The "Great John L " met all comers, having defeated Charlie Mitchell in New York in 1883, he fought him to a draw in Chantilly, France, five years later Sullivan's prowess in the ring and his swashbuckling personality won him many friends and made him the idol of American sports fans He fought and won his final bare-knuckles bout (1889) by subduing Jake Kilrain in 75 rounds at Richburg, Miss Fighting with gloves under the Queensberry rules for BOXING, Sullivan was defeated (1892) by James J Corbett in New Orleans He retired from the ring in 1896, still in possession of the bare-knuckles crown In 1905 Sullivan, dramatically renouncing his old way of life, became a temperance advocate and later, at the age of 52, settled down on a Massachusetts farm See D B Chidsey, *John the Great* (1942)

Sullivan, John Lawrence, 1899–, U S government official, b Manchester, N H , grad Dartmouth, 1921, and Harvard Law School, 1924 He was admitted (1923) to the bar and practiced in New Hampshire After he was (1940–44) Assistant Secretary of the Treasury, he was Assistant Secretary of the Navy (1945–46) and then, Undersecretary of the Navy (1946–47) He became (1947) Secretary of the Navy in the U S Dept of Defense, but resigned (1949) because of friction with Louis A Johnson, U S Secretary of Defense, over the production of navy aircraft carriers

Sullivan, Louis Henry, 1856–1924, American architect, b Boston, studied at the Massachusetts Institute of Technology and the École des Beaux-Arts He was of great importance in the evolution of modern architecture in the United States His principle, demonstrated in his writings and in his executed buildings, was that outward form should faithfully express the function beneath This doctrine, the accepted and guiding one of modern architecture throughout the world, gained for Sullivan, however, few contemporary adherents In the face of the powerful revival of traditional classicism led by C F McKim in the final years of the 19th cent , little interest was focused upon Sullivan's plea for the establishment of an architecture that should be functional and also truly American Sullivan was employed in the Chicago office of William Le Baron Jenney, author of the first steel-skeleton skyscraper, and later entered the office of Dankmar Adler, where he became chief draughtsman and in 1880 was made a member of the firm Adler and Sullivan rapidly became prominent In Sullivan's Wainwright Building in St. Louis (1890), a tall steel-frame building was for the first time so designed as not to belie the structural skeleton His Transportation Building at the World's Columbian Exposition, Chicago (1893), shared nothing of the traditional classicism dominating the rest of the fair and has become renowned for its originality and for heralding a new viewpoint. Sullivan's work all bore his stamp in the highly individual ornament which he had built up into a complete style, now identified with his name The *Autobiography of an Idea* (1924), which he wrote in his last years, contains the philosophy of his life and work His executed designs include the Auditorium Building, the Gage Building, and the Stock Exchange Building, all in Chicago, a series of small banks, and a number of memorials, including the Getty Tomb in Chicago Sullivan's pupils and followers include Claude Bragdon and Frank Lloyd Wright. See biography by Hugh Morrison (1935)

Sullivan, Robert Baldwin, 1802–53, Canadian politician and judge, b. Ireland. He went to Canada in 1819, was called to the bar of Upper Canada in 1828, and in 1836 was appointed to the executive council by Sir Francis Head In 1839 he was made a member of the legislative council. Sullivan played a prominent role in effecting the union of Upper Canada and Lower Canada. With the Act of Union (1841) he became a member and subsequently president of the legislative council of united Canada Although a Conservative, he sided with the Reform party in its struggle with Sir Charles Metcalfe over the issue of responsible government and resigned (1843) with others in protest over Metcalfe's policy In a newspaper controversy with Egerton Ryerson, Sullivan, under the signature "Legion" published a series of letters

(1844) in which he ably defended the cause of parliamentary government. In the second Baldwin-LaFontaine administration, he was made provincial secretary in 1848, but later that year he was appointed a puisne judge of the court of Queen's Bench.

Sullivan. 1 City (pop 3,101), co seat (since 1845) of Moultrie co, central Ill, SE of Decatur, in a farm area; inc. 1869 It manufactures shoes, dairy products, and concrete products 2 City (pop. 5,077), co seat of Sullivan co, SW Ind, near the Wabash S of Terre Haute, platted 1842 Coal is mined here William H Hays was born in the city 3 City (pop. 2,517), E Mo, SW of St Louis; laid out c 1860 It lies in a farm and resort area in the Ozarks, with numerous caves and caverns. Shoes are made here

Sullivans Island: see MOULTRIE, FORT

Sullivant, William Starling (sŭ'lĭvunt), 1803–73, American botanist, b Franklinton (now part of Columbus), Ohio, grad Yale, 1823 He was a pioneer in the study of American mosses His chief work was *Musci Boreali-Americani* (with Leo Lesquereux, 1856).

Sully, James, 1842–1923, English psychologist He was (1892–1903) Grote professor of mind and logic at University College, London An associationist, he studied psychology in the light of physiological facts and wrote *Outlines of Psychology* (1884) and *Studies of Childhood* (1895) In 1893 he founded the British Association for Child Study See his *My Life and Friends* (1918)

Sully, Maurice de (sŭ'lē, Fr mōrēs' dŭ sülē'), c 1100–1196, French bishop After studying theology in Paris he was named (1160) bishop of that city. While serving in this position he instigated the building of Notre Dame de Paris

Sully, Maximilien de Béthune, duc de (sŭ'lē, Fr mäksēmēlyĕ' dŭ bātun' dük' dŭ sülē'), 1560–1641, French statesman Born and reared a Protestant, he fought in the Netherlands under Francis of Alençon and subsequently served under Henry of Navarre (later Henry IV of France) Before 1606 he was known as baron de Rosny (barō' dŭ rōsnē') Appointed to the finance commission in 1596, he became sole superintendent of finances in 1598 To restore the finances, which Henry III's extravagance and the Wars of Religion had plunged into disorder, he canceled portions of the public debt, recovered alienated sources of revenue, granted proprietary rights in judicial offices, and strictly controlled all expenditures As a result, there was a large surplus in the treasury at the end of Henry's reign Sully restored French prosperity by encouraging agriculture and industry, given control of communications in 1599, he set about building a network of roads and canals He was Henry IV's closest adviser and had gained his personal friendship, after Henry's assassination (1610), he resigned his office (1611) Besides being an admirable administrator, Sully was a man of remarkable vision, as is shown in his Great Design, a plan for a federation of all Christian nations, which he attributed to Henry IV His extensive memoirs, written during his retirement, were first published in 1638 See E C. Lodge, *Sully, Colbert, and Turgot* (1931)

Sully, Thomas (sŭ'lē), 1783–1872, American portraitist, b England Having come (1792) to America with his actor parents, he became while still young the pupil of his brother Lawrence, a miniaturist, until Lawrence's death in 1803 After moving to New York in 1806 he met (1807) Gilbert Stuart, whose technique he was allowed to watch. During a year (1809–10) in London he met Benjamin West, who advised him to study anatomy, and Sir Thomas Lawrence, whose style he much admired and to some extent imitated During that time he painted Fanny Kemble (Pa Acad. of the Fine Arts) and achieved some popularity. Settling (1810) in Philadelphia, he became a sought-after portraitist Among works of that period are *Capture of Major André*, a portrait of Lafayette (1824, Independence Hall), and *George Cook as Richard III* (Pa Acad of the Fine Arts) He decided (1837) on a second trip to England and was commissioned by the Sons of St. George of Philadelphia to paint the young Queen Victoria The painting (1838) was made mostly from sketches, one study of the head is now in the Metropolitan Museum Among his other works are portraits of his wife, his daughter, and himself, Major and Mrs John Biddle, and John Finley (Metropolitan Mus), Commodore Stephen Decatur (city hall, New York), President Jefferson and President Monroe (U S Military Acad., West Point, N Y), President Madison and President Jackson (Corcoran Gall). See C. H Hart, ed., *Register of Portraits Painted by Thomas Sully* (1909); Edward Biddle and Mantle Fielding, *Life and Works of Thomas Sully* (1921)

Sully-Prudhomme, René François Armand (rünā' frāswä' ärmä' sülē'-prüdôm'), 1839–1907, French poet, member of the Parnassians. He was awarded the 1901 Nobel Prize in Literature. His poetic works include *Stances et poèmes* (1865), *Les Épreuves* [the tests] (1866), *Les Solitudes* (1869), and *Les Vaines Tendresses* (1875). Two long philosophical poems, *La Justice* (1878) and *Le Bonheur* [happiness] (1888), are considered his finest work His *Que sais-je?* [what do I know?] (1896), in prose, is also philosophical

Sulmona (sōōlmō'nä), city (pop. 16,854), Abruzzi e Molise, S central Italy It lies in a small fertile plain enclosed by Apennine peaks. It has several fine churches and palaces. Ovid was born here

sulphate, a salt or an ester of SULPHURIC ACID It is a compound consisting in general of a metal or a radical (such as the ammonium radical) united with the sulphate radical (which consists of one sulphur and four oxygen atoms) In addition to the normal sulphates (for which the term *sulphate* is commonly used) there are also acid sulphates or bisulphates, compounds containing the sulphate radical but having also in their molecule a hydrogen atom The metallic sulphates are soluble in water with a few exceptions (the sulphates of barium, lead, strontium, and monovalent mercury) The sulphates of calcium and divalent mercury are slightly soluble in water A test for the sulphate ion, in chemical analysis, involves the precipitation of the insoluble barium sulphate To a solution made acid by hydrochloric acid, a solution of barium chloride is added, the presence of the sulphate ion is shown by a white precipitate (barium sulphate), formed when the metal originally united with the sulphate is driven out by the more active barium Some important sulphates are ALUM, barium sulphate, which appears as BARITE, calcium sulphate, found as GYPSUM, anhydrite (the dehydrated form), ALABASTER, SELENITE, and plaster of Paris, magnesium sulphate or EPSOM SALTS, the vitriols, including copper sulphate called BLUE VITRIOL, ferrous (iron) sulphate known as green vitriol or COPPERAS, and zinc sulphate or WHITE VITRIOL, and strontium sulphate, which appears in nature as CELESTITE Lead sulphate is used in various pigments Potassium sulphate is present in potash alum and is employed in its preparation, it is used as a fertilizer and also in medicine Sodium sulphate, of which the decahydrate is GLAUBER'S SALT, is obtained chiefly as a by-product in the preparation of hydrochloric acid and is then known as salt cake It is employed sometimes in preparing sodium sulphide and in making window glass Sodium thiosulphate is a compound in which one of the oxygen atoms of the sulphate radical has been replaced by a sulphur atom Its hydrate is the "hypo" used commonly in photography in preparing negatives It is also a bleaching agent

sulphide, compound of sulphur with one other element or radical Sulphides are salts of hydrosulphuric acid, which is a water solution of hydrogen sulphide Hydrogen sulphide is a colorless gas with an unpleasant odor (that of rotten eggs), heavier than air, and somewhat soluble in water forming the acid It burns in air to form water and sulphur dioxide, but when insufficient oxygen is present yields water and sulphur Hydrogen sulphide is used extensively in the laboratory, since, when added to metallic solutions, it causes the formation of metallic sulphides which exhibit colors characteristic for the metal present Most metals combine with sulphur directly upon heating The tarnishing of silver is the result of the formation of silver sulphide A number of metals occur in nature combined with sulphur in sulphides, these compounds being important as ores of the metals When the ore is roasted, the metal usually combines with oxygen to form its oxide and the sulphur unites with oxygen to form sulphur dioxide The sulphides of COPPER, ZINC, MERCURY, LEAD, SILVER, ANTIMONY, and some other metals serve as important ores In general, the sulphides are practically insoluble in water, those of the alkali metals and ammonium are exceptions Carbon disulphide is an important organic solvent

Sulphur. 1 Town (pop 3,504), SW La, near Lake Charles It was named for a now-abandoned sulphur dome In 1924 oil was discovered near by. 2 Resort city (pop 4,970), co seat of Murray co, S Okla, near the Washita river and the Arbuckle Mts, settled 1895 Near by are Platt National Park and several quarries A state school for the deaf and a state veterans' hospital are in the city

sulphur, important nonmetallic element (symbol=S, for physical constants, see ELEMENT, table) The element exhibits ALLOTROPY, i e, it appears in a number of forms One of its forms is rhombic sulphur, a yellow, crystalline solid (its crystals belonging to the orthorhombic system), which is stable below 96°C and which includes the common roll sulphur or brimstone, flowers of sulphur, and much of the natural sulphur. Another form is monoclinic sulphur or prismatic sulphur, also a pale yellow, crystalline variety, its crystals being long, needlelike, and nearly transparent, it is stable between 96°C and 119°C, but reverts to the rhombic form when held under the lower temperature. A third form is amorphous sulphur, a dark, noncrystalline, gumlike substance (considered as a supercooled liquid), formed when molten sulphur is cooled suddenly by pouring it into cold water and allowing it to stand. The crystalline and amorphous forms can be distinguished in that the crystalline forms are soluble in carbon disulphide and the amorphous are not Sulphur is active chemically, forming many compounds Burning in the air with a blue flame, it combines with oxygen to form the dioxide A trioxide is known which reacts with water to form SULPHURIC ACID, the salts of which are SULPHATE compounds Sulphur, when heated, combines with most metals (except gold and platinum) to form sulphides It unites with hydrogen to form hydrogen sulphide, a gas, important in chemical analysis Sulphur is combined also with several nonmetallic elements, e g, with carbon in carbon disulphide, used extensively as a solvent and also as an insecticide, and with chlorine in sulphur chloride The element is widely and abundantly distributed in nature It is present in ores of many metals, e g, of iron (pyrite), lead (galena), mercury (cinnabar), and zinc (blende or sphalerite), and in various minerals, such as gypsum, a sulphate It is a constituent of organic matter, being one of the elements making up protoplasm. Most proteins contain sulphur. It is present in the sulfa drugs and in many other useful compounds The element occurs uncombined in volcanic regions in various parts of the world and in large deposits beneath the surface of the earth in Sicily and in the United States in Texas and Louisiana Because of the depth of these deposits in the United States and the difficulties of access, a method called the FRASCH PROCESS is widely employed for extraction of the sulphur Some is also obtained from sulphides The uses of sulphur are many, e g, in the preparation of black GUNPOWDER, sulphur dioxide (important as a bleaching agent and disinfectant), and sulphuric acid It is employed in insecticides and fungicides, in pulp paper manufacture, in the manufacture of rubber, in the vulcanization of rubber, and in making matches Sulphur, along with carbon, was known to the ancients, and to it were attributed many strange properties, it is the brimstone of the Bible.

sulphuric acid, colorless, heavy, oily substance, extremely corrosive It boils at 338°C. and has a density of about 1 83 A compound of hydrogen, sulphur, and oxygen, it is a very strong acid and ionizes readily The concentrated acid is sometimes called oil of vitriol It mixes easily with water in all proportions, and much heat is evolved in the process of mixing Concentrated sulphuric acid serves as a valuable dehydrating or drying agent When heated with metals, nonmetals, and other compounds, it acts as an oxidizing agent producing sulphur dioxide, hydrogen sulphide, or sulphur The dilute acid reacts with many hydroxides and oxides, with some carbonates and sulphides, with solutions of some salts, and with many metals (e g, with ZINC), forming the sulphate of the metal and liberating hydrogen It is a dibasic acid (i e, it has two replaceable hydrogen atoms), which forms acid salts and normal salts Since it is a stable acid, it is used in the preparation of such volatile acids as hydrochloric acid Commercial sulphuric acid is prepared chiefly by the contact process and the lead-chamber process In the contact process, sulphur is burned to form sulphur dioxide (a compound of one sulphur atom and two of oxygen), the gas is purified, washed and dried, and then oxidized to produce a trioxide (having one sulphur and three oxygen atoms) in the presence of a catalyst, commonly either vanadium pentoxide or platinum Finally, the trioxide is absorbed in concentrated sulphuric acid (since it is not readily absorbed by water) Part of the acid is returned to the absorbers and the rest is prepared and sold as fuming sulphuric acid (or oleum) or is diluted with water or weaker acid to form a solution of the desired strength Acid which is nearly 100 percent pure can be produced by the contact process The operation must be carried out at a temperature of about 450°C. for effective oxidation. The lead-chamber process was so named because some of the chemical reactions take place in large lead chambers and towers In this process sulphur or sulphur compounds are converted to sulphur dioxide, which is oxidized (with oxides of nitrogen employed as catalysts) to form sulphur trioxide Because of the value of the oxides they must be recovered and reused In the United States the sulphur dioxide used in the process is commonly obtained by burning sulphur The hot gases (containing sulphur dioxide) are led into the Glover tower (a rectangular sheet-lead box usually filled with quartz), where they meet the oxides of nitrogen The mixed gases are then guided into the lead-coated chambers, where steam is introduced and the sulphuric acid is formed Various modifications of the process have been developed by industrial companies. "Chamber sulphuric acid" is about 65 or 70 percent pure It can be used in this crude form for some purposes, but for others it is further concentrated Sometimes chamber and contact acids are mixed to obtain the desired strength Sulphuric acid is one of the most important chemicals to industry. It is used, for example, in making dyes, drugs, explosives, fertilizers, and lead storage batteries and in metallurgical processes and the refining of petroleum. The sulphates—the salts of sulphuric acid—have many uses (see SULPHATE).

Sulphur Island, Volcano Islands· see IWO JIMA.

Sulphur Springs, city (pop. 6,742), co seat of Hopkins co , E Texas, WSW of Texarkana, in a dairying region in the northeast corner of the state.

Sultanabad, Iran. see ARAK

Sultan Husein: see HUSEIN (d 1720)

Sulte, Benjamin (sült), 1841–1923, French Canadian writer, historian of the French in Canada, b Trois Rivieres, Que. A journalist from 1800 to 1867, he was in the Canadian civil service from 1867 to 1902 Of his many historical works, probably the best known is his *Histoire des Canadiens-Français* (8 vols., 1882–84), others include *Histoire de St François-du-Lac* (1886) and *Pages d'histoire du Canada* (1891) He also published two volumes of verse—*Les Laurentiennes* (1870) and *Les Chants nouveaux* (1876)—and wrote a vast number of historical articles for magazines and newspapers, some of which were collected as *Mélanges historiques* (21 vols , 1918–34)

Sulu Archipelago (sōō'lōō), island group (c 1,600 sq mi , pop c 295,000), SW of Mindanao, in the Philippine Islands Lying between the Celebes and Sulu seas, it includes several hundred volcanic islands and coral islets, of which BASILAN is the largest The chief industries of the group are pearl fishing and cattle raising The islands are inhabited largely by the Mohammedan Moros who came under Indonesian influence in the late 15th cent Formerly notorious as pirates, they violently resisted Spanish rule until the 19th cent The Moro sultanate was reduced to U S control in 1899 and continued to flourish until 1940, when jurisdiction over the area was transferred to the Commonwealth of the Philippines Sulu prov (1,086 sq mi., pop 247,117) is coextensive with the Sulu Archipelago except for the Basilan group Jolo, the provincial capital, is on the island of Jolo (344 sq. mi , pop. 130,870)

Sulzbach (zōōlts'bākh), city (pop 22,130), Saar Territory, NE of Saarbrücken. It is an industrial center of the Saar Basin

Sulzer, William (sŭl'zur), 1863–1941, American public official, b Elisabeth, N J After running away from home at the age of 11 and going to sea, Sulzer settled in New York city, read law, and was admitted (1884) to the bar He served (1890–94) in the New York state assembly, becoming speaker in 1893. As a member (1895–1913) of Congress, he worked for industrial and social reforms He was elected (1912) governor of New York, and after defying TAMMANY politicians, he was impeached and removed from office in 1913 on charges of having falsified his campaign expenses In 1914 he was elected to the state assembly as an independent, and in 1916 he declined the presidential nomination of the American party See J A Friedman, *The Impeachment of Governor Sulzer* (1939)

sumac or **sumach** (shōō'măk, sōō'–, sū'–) name for shrubs or trees of the large and widely distributed genus *Rhus*, closely related to poison ivy Sumacs have large pinnate leaves, which turn brilliant colors in the autumn, and conical fruit clusters usually of deep red From the Asiatic *Rhus verniciflua* is produced LACQUER. The poison sumac (*R. vernix*), found only in swampy places and identified by clusters of white berrylike fruits, is regarded as one of the most poisonous plants of North America. It has a juice that can be used as laoquer Most sumacs are rich in tannin, and some are used commercially for tanning certain leathers Fruits of several species yield a lemonadelike drink, and some kinds have been used medicinally and as a dye

Sumarokov, Aleksandr Petrovich (ŭlyĭksän'dur pĕtrô'vĭch sōōmŭrô'kŏf), 1718–77, Russian dramatist. He was a pioneer in several fields of Russian literature, especially the fable and classical tragedy His *Khorev* (1747) was the first in the latter genre in Russian From 1756 to 1761 he was director of the first imperial Russian theater One of his tragedies, *Dmitri the Impostor* (1771), is available in a curious English translation (1806)

Sumatra (sōōmä'trù), island (166,632 sq mi ; pop 7,430,723), Indonesia, in the Indian Ocean, S and W of the Malay Peninsula and NW of Java, across Sunda Strait Fringed with islands on the western and eastern coasts, Sumatra is 1,110 mi long and 270 mi wide (in Indonesia only Borneo is larger) The Barisan, a volcanic mountain range, traverses the length of the island, rising to 12,484 ft at Mt. Kerinchi (Korinchi) Rising in the Barisan Mts. are several large rivers, among which are the Hari, Indragiri, and Musi and in the north is Lake Toba, a great salt lake Because of the hot, moist climate and the heavy rainfall, the vegetation is luxuriant, and much of the interior is impenetrable forest The tropical flora generally resembles that of Java Among the animals are elephants, rhinoceroses, panthers, tapirs, tigers, and snakes The Malayan inhabitants include the Batak, who engage in agriculture, and the Menangkabau, known for their skill in handicraft The religion is predominantly Mohammedan, only the Batak are Christians. There are many Chinese, Arabs, and Hindus on the coast Although Sumatra was exposed to civilizing influences earlier than Java, its culture is not so highly developed as that of the smaller island. Sumatra's economy also is comparatively limited, although there are extensive oil and coal fields, the latter the most important in Indonesia. Other mineral resources are gold and silver, forest and agricultural products include camphor, ebony, rattan, tea, coffee, rubber, pepper, copra, and palm oil. The principal centers are MEDAN and PALEMBANG The Hindu-Sumatran kingdom of Sri Vijaya flourished in the 8th cent under the house of Sailendra, which extended its control over a large part of Indonesia and also over the Malay Peninsula By the 14th cent. Sumatran supremacy had waned and the island fell under Javanese rule The first European to visit Sumatra was Marco Polo, who was here for a brief period in 1292. Following the Portuguese who came in 1509, the Dutch arrived in 1596 and gradually gained control of all the native states including Achin in the north, which resisted the Dutch until 1904 The British had brief control over parts of the island in the late 18th and early 19th cent In 1945 parts of Sumatra were included in the republic of Indonesia.

Sumava. see BOHEMIAN FOREST

Sumay (sōōmī'), town (pop 1,388), on W Guam It includes Apra Harbor, with a U S naval base and a marine corps reservation The chief products of the region are rice and coconuts

Sumba or **Soemba** (both sōōm'bä), island (4,305 sq mi , pop 182,326), Indonesia, one of the Lesser Sundas It lies in the Indian Ocean, S of Flores and W of Timor. Horse breeding is important Sumba was formerly known as Sandalwood Island because of its large exports of sandalwood

Sumbawa or **Soembawa** (both sōōmbä'wä), island (5,964 sq mi , pop 314,843), Indonesia, one of the Lesser Sundas It is between the Flores Sea and the Indian Ocean, just E of Lombok Sumbawa is mountainous, with many volcanic peaks. Cattle raising is important, teak, rice, and cattle are exported. Bima is the port for Raba, the chief town

Sumer (sōō'mur) and **Sumerian civilization** (sōōmēr'ē-ăn) The term *Sumer* is used today to designate the southern part of ancient Mesopotamia From the earliest date of which there is any record, Mesopotamia was occupied by a non-Semitic speaking people known as Sumerians The questions concerning their origin cannot be answered with certainty Some evidence suggests that they may have come as conquerors from central Asia or India at a date long before recorded history According to their own legends, they had possessed the land since the creation. At any rate, as recent excavations have shown, a flourishing Sumerian civilization existed by 3500 B C., and its beginnings were much earlier, at least in the 5th millennium Sumerian civilization was predominately agricultural, and the Sumerians were adept at building canals and developing effective systems of irrigation Objects, such as pottery, jewelry, and weapons, found by excavation, show that the Sumerians were skilled in the use of such metals as copper, gold, and silver and had developed considerable artistry The Sumerians are credited with inventing the CUNEIFORM system of writing The kings of important Sumerian cities, such as Kish, Erech, and Ur, were able from time to time to extend their control over large areas, forming various Sumerian dynasties However, Mesopotamia was also the home of a group of people speaking Semitic languages and with a culture different from that of the Sumerians (see SEMITE) From the earliest times the Semites were in contact with Sumerian culture, and increasing Semitic strength, especially in the north, culminated in the conquests of Sargon of Agade (c 2600 B C), who brought Mesopotamia under Semitic rule This conquest gave impetus to the blending, already long in progress, of Sumerian and Semitic cultures From this period dates the use of the word AKKAD to denote N Mesopotamia Sumerian rule had a final revival under the third dynasty at Ur (c 2300 B C) This dynasty fell to ELAM, a country with which Sumer and Akkad had been engaged in intermittent warfare from an early date With the rise of HAMMURABI and the founding of BABYLONIA, the control of the country passed to the Semitic Babylonian dynasty and Sumerians, as a nation, disappeared See L W King, *A History of Sumer and Akkad* (1910), C L Woolley, *The Sumerians* (1928), C J Gadd, *History and Monuments of Ur* (1930); C L Woolley, *The Development of Sumerian Art* (1935)

Sumer Is Icumen In (sōō'mŭr ĭs ĭkōō'mŭn ĭn) [mid Eng ,=summer has (literally is) come in], an English rota or round It has four voices in canon, supported by a short two-voice ground bass. Its secular text is in Wessex dialect A sacred text in Latin exists, but is ill-adapted to the music The manuscript was discovered in 1709 in the same folio with a calendar which was made at Reading Abbey between 1239 and 1260. Assumption that the round was inscribed there at the same time led to the conclusion that the piece was composed c 1240 This assumption has been questioned by M F. Bukofzer in *Sumer Is Icumen In: a Revision* (1944), wherein he places the composition c 1310. Whether it was a work of the 13th cent or of the 14th, it is one of the earliest English attempts at six-part vocal writing.

Summerside, town (pop. 5,034), on SW Prince Edward Island, on Bedeque Bay of Northumberland Strait and WNW of Charlottetown. It is a tourist center, has an airport, and ships dairy products and seed potatoes. A dominion fox experimental station is here, and fox farms are in the region

Summerville. **1** Town (pop. 1,358), co. seat of Chattooga co., extreme NW Ga , on the Chattooga river and NNW of Rome, inc. 1839. Textiles are manufactured A state fish hatchery is near by. **2** Borough (pop 1,009), W Pa., SW of Brookville, settled c 1812, inc. 1887. Ceramics are made here **3** Winter resort town (pop 3,023), SE S C , NW of Charleston, settled c 1795, inc 1847

Summit. **1** Village (pop 7,043), NE Ill , near Chicago, inc 1890 It manufactures corn products Near by is a large limestone quarry. **2** Town (pop 1,254), SW Miss , just N of McComb, in a farm, cotton, and timber area, founded 1857 A district junior college is here **3** Residential city (pop 16,165), NE N J , western suburb of Newark and New York, inc 1899

Summit Hill, borough (pop 5,406), E Pa , SW of Mauch Chunk It is a resort center with a fine view of the surrounding mountains and the Burning Mine, smoldering since 1859.

summons· see PROCEDURE

Sumner, Charles, 1811–74, U S Senator from Massachusetts (1851–74), b Boston, grad. Harvard, 1830 He attended (1831–33) and was later a lecturer at Harvard Law School, was admitted (1834) to the bar, and practiced in Boston The years 1837–40 he spent in Europe Sumner was defeated as a Free-Soil candidate for Congress in 1848, but in 1851 a combination of Free-Soilers and Democrats sent him to the Senate An aggressive abolitionist, Sumner attacked the fugitive slave laws, denounced the Kansas-Nebraska Bill of 1854, and on May 19–20, 1856, delivered his notable antislavery speech called "The Crime against Kansas " A master of invective, he singled out as his special victim Senator Andrew Pickens Butler of South Carolina, who was not there to reply Two days later he was assaulted in the Senate chamber by Preston S BROOKS, Butler's nephew It took Sumner more than three years to recover from the attack, but Massachusetts reelected him anyway, and he resumed his seat in Dec , 1859 He had been important in organizing the new Republican party and in 1861 was made chairman of the foreign affairs committee In the TRENT AFFAIR he favored the release of the captured Confederate commissioners Sumner highly approved Lincoln's Emancipation Proclamation, indeed he had been exceedingly impatient that it was so long in coming However, to some his abolitionism seemed to carry more hatred for the slaveholder than humanitarian concern for the Negro Sumner and Thaddeus STEVENS in the House led the radical Republicans in their vindictive RECONSTRUCTION program for the South He held that the Southern states had "committed suicide" and thus had lost any rights under the Constitution Reconstruction he considered the function of Congress alone and he was most active in trying to secure the conviction of President Andrew Johnson on the impeachment charges Sumner hampered the negotiations concerning Civil War claims against Great Britain, but it was his violent denunciation of President Ulysses S Grant's scheme to annex Santo Domingo that led to his removal (March, 1871) from the chairmanship of the committee on foreign relations This was a great blow to his pride, and in 1872 he helped organize the short-lived LIBERAL REPUBLICAN PARTY, but subsequently returned to the party fold Sumner wrote and spoke widely, and there are two editions of his works (15 vols , 1870–83, 20 vols , 1900) See also E L. Pierce, *Memoir and Letters of Charles Sumner* (4 vols , 1877–93); biographies by Moorfield Storey (1900) and G H. Haynes (1909); T. H Williams, *Lincoln and the Radicals* (1941)

Sumner, Edwin Vose, 1797–1863, American general, b Boston. He was commissioned in the infantry in 1819 and later fought in the Black Hawk War In the Mexican War he distinguished himself as a cavalry commander under Winfield Scott, being twice brevetted He was made colonel of the 1st Cavalry in 1855, was commander of Fort Leavenworth in the Kansas disturbances of 1856, campaigned against the Cheyenne in Kansas in 1857, and was commander of the Dept of the West from 1858 to 1861 At the beginning of the Civil War he was promoted brigadier general in the regular army. Sumner ably led the 2d Corps of G B. McClellan's army in the PENINSULAR CAMPAIGN, particularly at Fair Oaks, and later in the ANTIETAM CAMPAIGN In the battle of FREDERICKSBURG his "grand division" of Ambrose Burnside's army bore the brunt of the futile assault on Marye's Heights Made commander of the Dept. of the Missouri early in 1863, Sumner died on his way there.

Sumner, James Batcheller, 1887–, American biochemist, b. Canton, Mass., grad. Harvard (B.A., 1910; Ph.D., 1914). A teacher at Cornell Univ medical school from 1914, he became professor in 1929. After years of research he isolated (1926) the

enzyme urease in microscopic crystalline form For his pioneer work in enzymes he shared with J. H Northrop and W. M. Stanley the 1946 Nobel Prize in Chemistry. His writings include *Textbook of Biological Chemistry* (1927) and, with G F. Somers, *Chemistry and Methods of Enzymes* (1943; rev ed , 1947).

Sumner, William Graham, 1840–1910, American sociologist and economist, b Paterson, N J , grad Yale, 1863, and studied in Germany and at Oxford He became an Episcopal minister, but from 1872 was professor of political and social science at Yale, where his brilliant lectures were renowned In economics he advocated an extreme laissez-faire policy, violently opposing any measures which he thought interfered with the normal, unchecked flow of business As a sociologist he did valuable work in charting the course of human customs—FOLKWAYS and mores—concluding that the power of these natural forces rendered useless attempts at social reform Important among his works are *What Social Classes Owe Each Other* (1883) and *Folkways* (1907) A G Keller, a student, edited many of Sumner's essays, among them *The Forgotten Man and Other Essays* (1918) The monumental *Science of Society* by Sumner and Keller was not completed and published until 1927 (4 vols , vol IV by Sumner, Keller, and M R Davie) See A G Keller, *Reminiscences (Mainly Personal) of William Graham Sumner* (1933)

Sumner. 1 City (pop 1,070), Lawrence co , SE Ill , W of Vincennes, Ind , inc 1887 2 Town (pop 1,752), NE Iowa, NNE of Waterloo, inc 1892 3 City (pop 2,140), W Wash , E of Tacoma, settled 1855, inc 1891 It is an industrial and a commercial center for the Puyallup valley

sumptuary laws (sŭmp'chōōĕ"rē), regulations directed against overindulgence in luxurious diet and drink and extravagance in dress and mode of living Such laws existed in Rome, and in Japan they were applied against the peasants and commercial classes until the mid-19th cent In the 14th and 15th cent. several statutes were passed in England which regulated ornateness of dress and limited the extremes on such articles of dress as long coats and short doublets Statutes were also enforced which regulated the diet of the people These regulations varied according to the rank of the persons, peasants being subject to rules different from those of the gentry The main purpose of the legislation was to mark class distinctions clearly and to prevent any person from assuming the appearance of his superiors Sumptuary laws are not to be confused with rationing of commodities in short supply during wartime or other periods of emergency See F E Baldwin, *Sumptuary Legislation and Personal Regulation in England* (1926)

Sumter, Thomas, 1734–1832, American partisan leader in the Revolution, b near Charlottesville, Va. He served with Edward Braddock (1755) and John Forbes (1758) in their expeditions against Fort Duquesne in the French and Indian War, and later he fought against the Cherokee He settled (1762) as a planter on the Santee river in South Carolina Like Andrew Pickens and Francis Marion, he formed a guerrilla patriot band in the Revolution and harassed the British (see CAROLINA CAMPAIGN) He and the British leader, Banastre Tarleton, struck at each other through 1780 The Gamecock, as Sumter was called, was successful at Hanging Rock, barely escaped with his life at Fishing Creek, raided the British post at Rocky Mount, and won again at Blackstock After the war, he was U S Congressman (1789–93, 1797–1801), Senator (1801–10), and ambassador to Brazil (1810–11) Fort Sumter in Charleston harbor is named for him. See biography by A K Gregorie (1931).

Sumter, city (pop 15,874), co seat of Sumter co , central S C , ESE of Columbia, laid out 1800, inc as a town 1845, as a city 1887 It is the trade, processing, and shipping center of an important lumber, livestock, and farm area and has furniture factories and other woodworking plants It was the first city to employ a city manager under a commission form of government (1912) A U S tree nursery and Morris College (Negro) are here

Sumter, Fort [named for Gen. Thomas Sumter], fortification on a sand bar at the mouth of the harbor of Charleston, S C , scene of the opening engagement of the Civil War (April 12–14, 1861) Upon passing the ordinance of secession (Dec. 20, 1860), SOUTH CAROLINA demanded all Federal property within the state, particularly the forts of Charleston harbor, namely, Fort Sumter, Fort MOULTRIE, and Castle Pinckney On Dec 26 Major Robert ANDERSON removed his U S army command of 128 men from Fort Moultrie to the stronger defensive site of Fort Sumter Gov. F. W. PICKENS of South Carolina seized the other two forts and the Charleston arsenal and, upon the refusal of President James BUCHANAN to order Anderson's evacuation, had guns trained on Fort Sumter. On Jan. 9, 1861, the unarmed merchant vessel, *Star of the West*, sent to reinforce the Fort Sumter garrison, was driven back by the fire of the South Carolina guns. Pickens's subsequent formal demand for the fort's surrender was declined. South Carolina prepared to reduce Anderson's stronghold. Pickens was anxious to secure the fort before Abraham Lincoln took office, but in February the newly organized Confederate government assumed the state's part in the controversy and, on March 3, Gen P G T. BEAUREGARD arrived in Charleston to take command On April 8 Pickens received Lincoln's notice that a naval expedition would be sent to provision the beleaguered garrison. Beauregard then demanded Anderson's surrender (April 11) It was again refused At 4 30 A M on April 12 the Confederates opened fire After a 34-hour bombardment, which was gallantly resisted by the defenders, Anderson accepted terms, and on April 14 the garrison marched out with the honors of war. Although no one was killed, the action realized the belligerent spirit in both the North and the South The Civil War had begun In 1863 Union naval attacks on the fort were thoroughly repulsed After Sherman forced the evacuation of Charleston, the U S flag was again raised over the fort by Anderson, April 14, 1865 Fort Sumter was made a national monument (2 40 acres) in 1948 See S W Crawford, *The History of the Fall of Fort Sumter* (1898)

Sun, river rising in NW Montana near the Continental Divide and flowing c 130 mi SE and E to the Missouri at Great Falls The Sun river project uses the Sun and its tributaries to water some 100,000 acres The largest dam of the project is the Gibson (est 1929) in the North Fork of the Sun Great Falls is the shipping center on the project

sun, intensely hot, self-luminous body of gases which is the center of our solar system The sun is actually a star of about medium size, it appears larger than the other stars because of its relative nearness to the earth Its gravitational attraction maintains the planets, comets, and other bodies of the solar system in their orbits Without the heat and light of the sun, life as we know it could not exist on the earth Sunlight is also the ultimate source of the energy stored in food and coal, since its energy is used by green plants in the process of photosynthesis It is the source of the energy of moving air through the setting up of convection currents by the sun's heat, and falling water owes its energy to the sun because of its relation to the water cycle The mean distance of the sun from the earth is 93,004,000 mi , this is taken as the astronomical unit of distance to which most celestial distances are compared In diameter the sun is 865,400 mi , and its volume is about 1,300,000 times that of the earth Its mass is almost 700 times the total mass of all the bodies in the solar system and 332,000 times that of the earth Its gravitational force on the surface is almost 28 times that of the earth, i e , a body on the sun would weigh about 28 times its weight on earth The density of the material composing the sun is about one fourth that of the earth, compared with water, the sun's density is 1 41 Observations of sunspots and studies of the solar spectrum indicate that the sun rotates on its axis from east to west, because of its gaseous nature its rate of rotation varies somewhat with latitude, the speed being greatest (a period of almost 25 days) in the equatorial region and least at the poles (a period of about 35 days) The axis of the sun is inclined at an angle of about 7° to the plane of the ecliptic The bright surface of the sun is called the PHOTOSPHERE Its temperature is about 6000°C Patches brighter than the photosphere are seen near the edges of the sun, these are called faculae Spectrohelıograms reveal irregular markings known as flocculi, some of these are believed to be composed of calcium vapor and others of hydrogen They float above the photosphere and often occur near sunspots During an eclipse of the sun the CHROMOSPHERE and the CORONA are observed By means of the spectroscope much has been learned about the composition of the sun In the solar SPECTRUM (the visible part of which is a band of colors from red to violet) as observed with the spectroscope are numerous dark lines of varying widths These were first intensively studied by Joseph Fraunhofer and are commonly known by his name From a study of the lines the chemical composition of the sun is determined on the basis of the discovery by Kirchhoff that the dark lines correspond in position to the bright lines characteristic of the spectra produced by elements in the laboratory The darkness of the lines in the sun's spectrum is attributed to the presence of a slightly cooler layer of gases above the photosphere known as the reversing layer, which absorbs selectively the light of the photosphere and thus causes dark lines instead of bright ones to be observed through the spectroscope By comparison of the sun's spectrum with laboratory spectra of incandescent elements, more than two thirds of the elements known on earth have been identified in the sun's atmosphere Beyond the visible red portion of the solar spectrum is the infrared spectrum, for the study of these heat rays S P. Langley invented the bolometer, a highly sensitive electrical device for measuring temperature Solar radiation is measured by an instrument called the pyrheliometer The source of the sun's energy has long been a subject of investigation The vast and continual production of solar energy cannot be attributed merely to combustion, to the gradual cooling of a hot body, to the fall of meteorites into the sun, or to gradual shrinkage with transformation of potential energy into heat (a theory proposed by Helmholtz). The theory of relativity with its enunciation of the equivalence of mass and energy led to the assumption that energy stored in the atoms comprising the sun's gases is constantly being released by disintegration of the atoms H A Bethe proposed a cycle known as the carbon cycle to account for the nuclear changes In this cycle hydrogen, acting somewhat in the role of a fuel, takes part in a series of reactions with carbon and nitrogen with the release of much energy, the hydrogen is finally transformed into helium and the carbon remains unchanged, its role apparently being that of a catalyst See also ECLIPSE and SUNSPOTS See C G Abbot, *The Sun* (2d ed , 1929), George Gamow *The Birth and Death of the Sun* (1940), D H Menzel, *Our Sun* (1949)

Sunapee (sŭ'nupē), town (pop 1,071), SW N H , NW of Concord, on the west shore of Lake Sunapee, granted 1768, inc as Wendell town, named Sunapee 1850 The lake, 9 mi long and 3 mi wide, with Mt Sunapee to the south and Mt Kearsarge to the east, is a boating and fishing resort

sunburn, a burn which varies in severity with the amount of exposure and the amount of protection to the skin Dark skins are better protected by pigment than are light skins Light skins usually deposit pigment as a reaction to the ultraviolet rays, which are the chief factor in sunburn However, if exposure lasts too long before the skin has opportunity to deposit the pigment, a burn results Sunburn can cause serious injury and is sometimes fatal See also BURNS AND SCALDS.

Sunbury, city (pop 15,462), co seat of Northumberland co , E Pa , near the confluence of the north and west branches of the Susquehanna N of Harrisburg, laid out 1772, inc as a borough 1797, as a city 1921 It is an important railroad center and manufactures various textile products Thomas A Edison worked in Sunbury At the junction of Indian trails, it was occupied by an Indian village early in the 18th cent In 1742 a mission was established here, and in 1756 Fort Augusta was built, remains of the fort still stand

Sunda Islands (sŭn'du), Indonesia, between the South China Sea and the Indian Ocean, comprising the western part of the Malay Archipelago The largest islands, sometimes called the Greater Sundas, are Borneo, Sumatra, Java, and Celebes The Lesser Sundas lie between Java (on the west) and Timor (on the east), of this group Sumbawa, Flores, and Sumba are the largest, whereas Bali and Lombok, though smaller, are the most important Sunda Strait, 20 to 65 mi wide, is between Java and Sumatra and connects the Java Sea with the Indian Ocean

Sundarbans see BENGAL

Sunday, William Ashley, 1863–1935, American evangelist, popularly called Billy Sunday, b. Ames Iowa He was a professional baseball player from 1883 to 1890 and was employed in Y M C A work in Chicago from 1891 to 1895 In 1896 he became an evangelist, drawing large crowds to his revivals Sunday was ordained in 1903 in the Presbyterian ministry

Sunday: see LORD'S DAY, SABBATH, WEEK

Sunday school, institution for instruction in religion and morals, usually conducted in churches as part of the church organization but sometimes maintained by other religious or philanthropic bodies In the 18th cent in England, occasional efforts were made by charitable individuals to give opportunity for some education in religious matters as well as secular instruction to children of the poor, whose development was deplorably neglected under the economic conditions of the times Probably the first to be called Sunday school was that started (1780) by Robert RAIKES for factory children in Gloucester Simple lessons in reading and spelling, in preparation for reading the Bible, and memorizing Scripture passages and hymns largely constituted the curriculum The plan was copied in other places, sometimes a Saturday meeting, when instruction in writing and arithmetic was given, was added to that on Sunday An important educational movement was thus started, by 1795 the Sunday School Society (1785) had helped found more than 1,000 schools In 1803 the Sunday School Union was founded in London to provide mutual help among teachers. This organization published simple lesson plans, catechisms, spellers, and other aids Unions were developed in Ireland and Scotland In 1862 a general Sunday-school convention was held in London, at which was begun propaganda for extending the movement on the Continent In the United States there is evidence that instruction in the Scriptures was given to children on Sunday at Plymouth in 1669 and at Roxbury, Mass., in 1674, but it was not until 1786 that a Sunday school patterned on Raikes's plan was founded in Hanover co , Va , by Francis Asbury The American Sunday-School Union, formed (1824) among various churches of the East, determined to establish Sunday schools as rapidly as possible in the pioneer communities of the Mis-

sissippi valley. This project met with wide support and considerable success. In 1832 a national convention of Sunday-school workers was held, at the convention of 1872 a plan of uniform lessons was adopted in cooperation with the British Sunday School Union From that time the movement has been definitely international The first World Sunday School Convention met (1889) in London; in 1907 its name was changed to the World's Sunday School Association, and in 1947 to the World Council of Christian Education It has units in 55 countries, the North American unit is the International Council of Religious Education. The arrangement of world Sunday-school conventions (of which 12 have been held since 1889) and aid in leadership training and curriculum are among the chief concerns of the council See M C Brown, *Sunday-School Movements in America* (1901), G H. Archibald, *The Modern Sunday-School* (1926), A M French and D J Fant, *All about the Sunday School* (2d ed , revised, 1947)

Sunderland, Charles Spencer, 3d **earl of** (sŭn'-durlund), 1674–1722, English statesman and bibliophile, son and successor of the 2d earl His marriage to a daughter of MARLBOROUGH brought him a secretaryship of state, and he was powerful in the Whig Junto which controlled affairs from 1708 to 1710. He fell with the Whigs in 1710, but went on to hold high offices under George I, being virtually prime minister from 1718 to 1721 He was so involved with the development of the SOUTH SEA BUBBLE that its collapse forced him out of office Sunderland was an important collector of books and manuscripts

Sunderland, Robert Spencer, 2d **earl of,** 1640–1702, English politician He succeeded to the earldom in 1643, studied at Oxford and abroad, and served in the reign of Charles II on missions to Madrid (1671), Paris (1672) and Cologne (1673) He was made a member of the privy council in 1674 and secretary of state for the northern department in 1679 His support of the bill to exclude the duke of York (later James II) from the succession resulted in his dismissal (1680), but he quickly regained his position through the influence of the king's mistress, the duchess of Portsmouth Under James II he gained favor by his support of the abolition of the religious tests, and he was made lord president of the council (1685), although he was secretly corresponding with William of Orange and was receiving a pension from the French government By intrigue he supplanted the earl of Rochester as chief minister, and in 1688 he declared himself a Roman Catholic He counseled a cautious religious policy, however, and was dismissed (1688) by James Sunderland fled to Holland, convinced William that he had supported his interests, and was allowed to return to England (1691) He renounced his Catholicism and became an influential adviser of William III It was Sunderland who persuaded the king to abandon a mixed cabinet and employ only Whigs—a significant step in English constitutional development He was appointed lord chamberlain in 1697, but was forced out of office by Parliament

Sunderland, county borough (1931 pop 185,824, 1947 estimated pop 180,130), Durham, England, at the mouth of the Wear It is a seaport, it includes Bishopwearmouth and Sunderland proper on the south bank and Monkwearmouth on the north bank. The north bank was the site of a great Benedictine monastery which was founded by Benedict Biscop in 674 and at which Bede studied The Church of St Peter incorporates some of the remnants of the ancient abbey, which was destroyed by the Danes A great bridge built in 1796 and widened by Robert Stephenson in 1858 crosses the Wear There is a harbor of more than 150 acres, protected by two piers The town became established as a shipbuilding center and coal-shipping port very early and developed as a rail center as well Coal is still the chief export. Engineering, fishing, coal mining, and the making of ship fittings, chemicals, paper, and pottery are industries There are technical and other colleges, art museums and galleries, and four libraries Roker to the north is a seaside suburb

Sunderland, agricultural town (pop 1,085), W Mass , on the Connecticut and N of Northampton, settled c 1673 but abandoned in King Philip's War, resettled c 1713, inc 1718.

sundial, an instrument that indicates the time of day by the shadow, cast on a surface marked to show hours or fractions of hours, of an object on which the sun's rays fall. Although any object whose shadow is used to determine time is called a gnomon, the term is usually applied to a style, pin, metal plate, or other shadow-casting object that is an integral part of a sundial Forerunners of the sundial include poles or upright stones used as gnomons by early man. Pyramids and obelisks were used in Egypt True sundials, both stationary and portable, were probably developed in Egypt or in Mesopotamia The earliest extant sundial, an Egyptian instrument of c 1500 B C , is a flat stone on which is fixed an L-shaped bar whose short vertical limb casts a shadow measured by markings on the longer horizontal limb. As knowledge of astronomy and mathematics increased, the markings on sundials were improved, and many varieties of such instruments were devised A Chaldean priest, Berosus, is credited with inventing the hemispherium (a concave hemisphere from which arises a perpendicular pin pointing to the zenith) and the hemicyclium (a concave hemisphere with the south portion cut away and with a horizontal gnomon fastened to the north side) The accuracy of sundials was greatly improved (about the 1st cent A D) by setting gnomons parallel to the earth's axis of rotation so that the apparent east-to-west motion of the sun governs the swing of the shadow The development of trigonometry permitted precise calculations for the marking of dials and stimulated the advance of gnomonics (dial marking) During the Renaissance sundials in a great number of forms and surfaces were devised Between 1500 and 1800 formulas were simplified so that laymen could lay out hour lines Although watches and clocks came into popular use in the 18th cent , sundials were long employed for setting and checking them An instrument of great accuracy, the heliochronometer, in which the shadow is cast by a fine wire, was used until c 1900 to set the watches of French railwaymen The difference between solar (or apparent) time indicated by sundials and clock (or mean) time must be correlated by the use of tables showing daily variations in sun time A correction must also be made for the difference in longitude between the position of a sundial and the standard time meridian of a given locality. Although sundials are still used in many areas, including Japan and China, they are regarded today chiefly as garden adornments The largest sundial in the world, constructed c 1724 in Jaipur, India, covers almost one acre and has a gnomon over 100 ft high surmounted by an observatory Notable collections of sundials are at the Adler Planetarium, Chicago, the Metropolitan Museum of Art, and the Harvard College Observatory See R. N. Mayall and M L Mayall, *Sundials* (1938)

Sundsvall (sŭnts'vəl'), city (pop 20,690), Vasternorrland co , E Sweden, a port on the Gulf of Bothnia and between the mouths of the Indal and Ljungan Logs are brought down the rivers, and Sundsvall is a world lumber center, exporting boards, cellulose, and wood pulp It is also a trade center for N Sweden It was incorporated in 1624

sunfish, member of a group of small perch-like fishes of the family Centrarchidae, abundant in the fresh waters of North America The body is deep and flattened from side to side and often brightly colored The bluegill and the pumpkinseed sunfish are common forms The salt-water sunfish belongs to the family Molidae, some members of which grow to a length of from 8 to 10 ft and weigh more than a ton The body is deep and oval and does not taper, so that it looks somewhat like a huge fish head with small fins

sunflower, any plant of the genus *Helianthus*, annual or perennial herbs native to the New World and common throughout the United States They have composite heads of flowers, commonly with yellow rays, that sometimes in cultivation reach a foot in diameter The common sunflower (*Helianthus annuus*) is an annual, native from Minnesota and Texas to California, perhaps also in Central and South America, often an escape from gardens The Indians cultivated this plant and found many uses for it the nutritious seeds were eaten raw, made into a meal, or used as a source of hair oil, a yellow dye was obtained from the flower heads and a fiber from the stalks, the roots of certain other species were eaten Today the common sunflower is widely cultivated It is particularly valued in Russia, where the seeds are made into bread, but the seeds are almost universally used as a poultry food and as the source of an oil utilized for such purposes as cooking and soapmaking, the oil cake is fed to stock The flowers are good honey producers and the leaves have been used for fodder The common sunflower is the state flower of Kansas, and a sunflower is regarded as the floral emblem of Peru, where it was revered by the ancient sun worshipers Several other species are in cultivation, some as garden flowers, the JERUSALEM ARTICHOKE as a food plant Other plants are often called sunflower

Sung (sŏŏng), dynasty of China, which ruled from A D 960 to 1279 The first emperor, Chao K'uang-yin, consolidated several warring states and established a domain that, at its maximum, extended from the Great Wall to Hainan Most of the early Sung emperors were ardent agricultural reformers. They established granaries to store surplus food, and farmers were given short-term loans Internal trade was facilitated by building canal systems There was much overseas commerce, especially with India and Persia, and voyages were made safer by advances in naval architecture and by the use of the magnetic compass In the early, relatively stable period of the dynasty many scholarly works were produced, including encyclopedic compilations, critical histories, and scientific treatises. The main literary forms were the drama (however, no plays have survived without later alterations) and the picaresque novel (most notably *All Men Are Brothers*). The fine arts (except sculpture) flourished, and connoisseurs consider Sung landscape the greatest achievement in Chinese painting The Sung were always hard pressed by northern barbarians, and in 1127 the Jurchen seized much territory. The dynasty maintained an enfeebled life until the Mongols conquered (1273–79) the entire country and established the Yuan dynasty.

Sungari (sŏŏng'gŭrē', sŏŏn'gä'rē'), Mandarin *Sunghwa*, river of NE China, rising in the Changpai Mts in Antung prov. and flowing c 700 mi to the Amur river on the China-USSR border The Sungari flows NW through Kirin prov. to the border with Sungkiang prov , where it is joined by the Nonni river Turning east, the Sungari forms part of the Kirin-Sungkiang border and crosses Sunkiang It then flows NE through Hokiang prov to join the Amur The Sungari, which passes Kirin city and Harbin, is navigable for most of its length, and it is an important trade artery in a rich agricultural region

Sungaris, China see DZUNGARIA

Sungkiang (sŏŏng'jĕäng', –kyäng'), Mandarin *Sungchiang*, province (32,648 sq. mi , pop 2,542,256), NE China Mutankiang is the capital It is bordered on the east by the USSR, and along part of the southern border run the Nonni river and the Sungari river (which flows E through Sungkiang) The province, a part of Manchuria, was included in Manchukuo It was created in 1945, largely out of the eastern section of the former province of Kirin The chief range of Sungkiang, which is predominantly hilly and mountainous, is the Changpai Soybeans and grains are grown, and there is extensive lumbering Sungkiang is served by the Chinese Eastern RR and by branch lines connecting with Korea

sun-god. The sun has been worshiped as a god in many times and in many places and still is worshiped among certain peoples The sun-god was found among the American Indians (e g , the Iroquois, the Plains Indians, the Aztec, and the Inca), the Babylonians, the Persians, the Egyptians, and the Greeks He is found among the Hindu, the aboriginal Australians, and some African tribes Generally the sun is regarded as the male generative principle in nature The two aspects, heat and light, have often been separately personified The Egyptians had several sun deities (Amon, Re, and Horus), as did the Greeks (Apollo and Helios) The sun-god, in keeping with his procreative powers, is often represented as a bull or horse

sunlight. The healing power of sunlight was known to the ancient Egyptians, its therapeutic value was neglected for centuries until in the late 19th cent it was recognized by N R Finsen in Copenhagen, Auguste Rollier in Switzerland, and others The beneficial effect of sunlight depends especially upon ULTRAVIOLET RAYS Sunlight kills bacteria, improves general health, prevents and cures RICKETS, and is beneficial in certain types of TUBERCULOSIS and in certain skin diseases See R C Macfie, *Sunshine and Health* (1928), C W Saleeby, *Sunlight and Health* (1929)

Sunnites (sŏŏ'nīts) [Arabic *Sunna*=tradition], in ISLAM, adherents of the branch of the Moslems called traditionalist or orthodox The Sunnites comprise more than half of all Moslems They differ from other Moslems in accepting as authoritative certain traditions (Sunna) of Mohammed. From the SHIITES, the branch second to the Sunnites in numerical importance, they differ in approving the historic order of succession of the first four successors of Mohammed, the Shiites maintaining that the fourth of them, Ali, should have been the first Claims to sovereign political rights in later times have been based on one side or the other of this dispute Most of the Moslems of Turkey, Arabia, and Africa are Sunnites, the Moslems of Persia and India being mostly Shiite Differences in ritual and law divide the Sunnites into the four orthodox rites, the Hanafites, the Malikites, the Shafites, and the Hanbalites

Sunny Brae, town (pop 1,368), SE N B , a north suburb of Moncton

Sunnyside, city (pop 2,368), S Wash , SE of Yakima, in an irrigated farm area, inc 1902

Sunnyvale, city (1940 pop 4,373, 1948 special census pop 9,369), W Calif , SE of San Francisco, inc 1912 It is a farm trading and processing point and residential city

Sun Prairie, village (pop 1,625), S Wis , NE of Madison, in a farm area, settled after 1837, inc. 1868 Georgia O'Keeffe was born here

Sunset Crater National Monument: see NATIONAL PARKS AND MONUMENTS (table)

sunspots appear to be dark spots on the sun's surface, but it is believed that they are actually solar storms similar to tornadoes on earth. Since the introduction of the telescope c 1610 they have been objects of study They are usually irregular in shape and are seen in groups rather than singly. All but the smallest show a darker portion, the umbra, in the center with a lighter outer area, the penumbra. The temperature of the spots is lower than that of the surrounding photosphere. Studies made at the Mt Wilson Observatory demonstrated the presence of a magnetic field in sunspots. Sun-

spots appear usually only between latitudes from 5° to 35° north and south of the solar equator Their duration usually averages about two weeks, but in 1840–41 they lasted for 18 months Since about the middle of the 19th cent, it has been recognized that periods of great sunspot activity come in cycles, a period of about 11 years has for some time been accepted, however, it is believed by some investigators that the 11-year period is only half of an actual 22-year cycle Sunspots were especially active in periods beginning in 1934 and 1945 During periods of sunspot activity various disturbances are produced on earth—these include magnetic storms, increased rainfall, interference with radio reception, and disturbances of the magnetic compass

sunstroke or heatstroke, illness caused by exposure to excessive heat The term *sunstroke* is often limited to illness resulting from exposure to the sun's rays It is believed that when the body is exposed to excessive heat, especially if dissipation of heat is inhibited by high environmental temperature, the heat-regulating mechanism of the body is disturbed, this disturbance is probably aggravated by loss of sodium chloride through perspiration The onset of heatstroke may be accompanied by headache, dizziness, nausea, and visual disturbances and is commonly followed by unconsciousness, hot, dry skin, red face, rapid pulse, and labored breathing, the body temperature may rise to over 109°F Delirium, convulsions, and coma sometimes occur Since the illness requires prompt treatment, a physician should be called immediately The patient should rest in a cool spot with head slightly elevated, and the body temperature should be brought down by application of ice or wet cloths to the head and by wrapping the body in wet sheets or immersing it in a cool bath The body should not be cooled too rapidly, the patient should be rubbed to stimulate circulation Excessive exposure to heat may cause milder disturbances, e g , heat exhaustion (or heat prostration) and heat cramps Symptoms of heat exhaustion are moist, cool skin, pallor, profuse perspiration, and, frequently, dizziness, nausea, and vomiting The patient should be made to lie down, be kept warm, and be given stimulants and sips of salt water Heat cramps of the muscles of the abdomen and limbs may be accompanied by symptoms of heat exhaustion and should receive the same treatment

Sun Valley, resort, S central Idaho, N of Hailey and SW of Mt Hyndman The resort, built in 1936 by the Union Pacific RR, is primarily for winter sports but also attracts summer visitors

sun worship see SUN-GOD

Sun Yat-sen (sŏn′ yät′-sĕn′), Mandarin *Sun Wen-shu*, 1866–1925, Chinese revolutionary He was born near Canton of a Christian family Sun attended an Anglican school in Honolulu, and in 1892 he received a medical diploma from a Hong Kong hospital Thereafter all his activities were devoted to overthrowing the Ch'ing dynasty and establishing a stable Chinese republic He fled China in 1895 and toured the world several times to enlist the aid of overseas Chinese in financing his activities In that period he studied omnivorously Chinese and Western literature, he also perfected his political conceptions (see KUOMINTANG) and organized a party through which he hoped to achieve them Sun was elected the first president of the Chinese republic on Dec 28, 1911, but four months later he resigned in favor of YUAN SHIH-KAI The remainder of his life was spent in a struggle for political and military supremacy, in which his chief aides were CHIANG KAI-SHEK and WANG CHING-WEI Sun's center of power was in the south, and in 1921 he was elected president of a self-proclaimed national government at Canton In 1924, to hasten the conquest of China, he began a policy of active cooperation with the Chinese Communists and he accepted the help of the USSR After his death, when the Communists and the Kuomintang split (1927), each group claimed to be his true heirs The official veneration of Sun's memory (especially in the Kuomintang) is a virtual cult which centers, normally, around his tomb in Nanking His widow, the former Soong Ching-ling (see SOONG, family), whom he married in 1915, commands great respect as his representative He wrote *San Min Chu I* (Eng tr , 1927) and *Fundamentals of National Reconstruction* (Eng tr , 1945) See biographies by H B Restarick (1931) and A B Sharman (1934), L S Hsü, *Sun Yat-sen, His Political and Social Ideals a Sourcebook* (1933)

Suomenlinna (sōō′ômĕnlĭn″nä), Swed *Sveaborg* (svā″äbôr′yŭ), fortress, S Finland, at the entrance to Helsinki harbor Built by the Swedes in 1749, it was later enlarged to cover seven small islands and was known as the Gibraltar of the North It was taken by the Russians in 1808, was bombarded (1855) by an Anglo-French fleet in the Crimean War, and was captured (1918) by the Finns, with German assistance, from the Finnish Bolsheviks.

superego: see PSYCHOANALYSIS.

superheterodyne (syōō″purhĕ′tûrûdīn), in radio receivers, the most efficient and most common circuit for radio-frequency selection and amplification In this system incoming signals are mixed with a voltage from a built-in oscillator to produce an intermediate voltage whose frequency is equal to the arithmetical difference of the mixed voltages The oscillator frequency is controlled usually by a variable condenser mounted on the same shaft as the station-selecting condenser This permits equal increase or decrease in the signal and oscillator frequencies and maintains the necessary constant intermediate frequency for all dial settings These frequencies are, of course, beyond the audio range and must undergo detection (separation and extraction of the audio from the carrier-radio frequency) before the broadcast can be heard Heterodyne oscillators generate audio voltages by combining (heterodyning) two radio voltages of slightly different frequencies, so that beats or pulsations occur at regular intervals, these are used for frequency measurement in research and test equipment

Superior. **1** City (pop 2,650), SE Nebr , on the Republican at the Kansas line, SE of Hastings, founded 1876 It is the trade center of an agricultural region Cement and dairy products are made here **2** City (pop 35,136), co seat of Douglas co , NW Wis , on Superior Bay of W Lake Superior, where the St Louis and Nemadji rivers enter, platted 1852, inc 1858 Radisson explored (1661) the region, and the sieur Duluth visited (1679) the site It grew after iron ore was discovered (1880s) in the Gogebic range The city is a port of entry, and from its extensive harbor, shared with Duluth, Minn , is shipped much iron ore and grain It manufactures coal briquettes and other products and is the seat of a state teachers college Superior's cooperative movement is long established **3** Coal-mining town (pop 1,240, alt c 7,100 ft), SW Wyo , NE of Rock Springs

Superior, Lake, 350 mi long and 160 mi at its greatest width, largest of the Great Lakes and largest fresh-water lake in the world Lying 602 21 ft above sea level, it has a maximum depth of 1,290 ft and an area of 31,820 sq mi It is bounded on the northwest by Minnesota, on the north and northeast by Ontario, and on the south by Wisconsin and Michigan It is connected with Lake Huron by the St Marys river The lake's basin is primarily rock, scooped out by glacial action, and the shore line is frequently high and rocky, the Pictured Rocks, of red sandstone which waves and wind have carved into caverns and fantastic shapes, near Munising Mich , are famous Lake Superior receives the waters of many rivers, including the Nipigon and the Kaministikwia from Canada, the Pigeon (part of the international boundary), and the St Louis river at the extreme western end of the lake Among the many islands are Isle Royale (a national park), Michipicoten, Caribou, Grand, and the Apostle group Great deposits of iron are in the Lake Superior region, copper, silver, and nickel are also found Iron ore is shipped from Marquette, Mich , from Ashland and Superior, Wis , and from Duluth and Two Harbors, Minn Fort William and Port Arthur, Ont , are grain-shipping ports The lake's fish are of economic value The first white man to see the lake was possibly Étienne Brulé, Pierre Radisson and his brother-in-law, the sieur des Groseilliers, traveled on Lake Superior in their expedition of 1659–60, Father Allouez established a mission (1665) near Ashland, Wis , and the sieur Duluth visited the lake (1678–79) See G L Nute, *Lake Superior* (1944)

superman, term used by NIETZSCHE to represent a supreme genius who towers above the mediocrity of the group He is freed from the ethical and social restraints and obligations of society This term, borrowed from Goethe (Ger *Übermensch*), was used by George Bernard Shaw in his play *Man and Superman*

supernova. see VARIABLE STAR

superphosphate of lime, fertilizer which provides soluble phosphate for plant use It is prepared by treating phosphate rock—ground bone was once commonly used—with sulphuric acid Chemically, the fertilizer is a mixture of calcium acid phosphate and calcium sulphate, it is made in various concentrations

superstition, false belief which survives among certain people from a time when it was thought to be true To a large extent modern superstition is the residue of ancient MAGIC and WITCHCRAFT Some survivals include the beliefs that the number 13, the breaking of a mirror, or walking under a ladder are unlucky, while finding a horseshoe or a four-leaf clover is lucky See T S Knowlson, *Origins of Popular Superstitions, Customs, and Ceremonies* (1929), E W Budge, *Amulets and Superstitions* (1930), Bergen Evans, *Natural History of Nonsense* (1947)

Supilo, Frano (frä′nō sōō′pē′lō), 1870–1917, Croat patriot He was engaged in journalism in Croatia before the First World War, fostering opposition to Hungarian rule. Supilo toured the Allied capitals during the war, developing his conception of the coming Yugoslavia. On the eve of his death he approved the Pact of Corfu, which was the basis of the new state of Yugoslavia

Suppé, Franz von (fränts′ fŭn sōō′pā), 1819–95, Austrian composer, b Split, Dalmatia His operettas, very popular in their time, were among the best of the Viennese adaptations of Offenbach's style He wrote numerous orchestral works, including overtures, of which *Poet and Peasant* has remained most popular

supply and demand, the factors that, in classical economics, are said to determine price and that, widely interpreted, may be thought of as the motive forces creating economic life Since there is only one price at which supply and demand would be equal, the familiar equation supply = demand under modern conditions is imperfect Growth of wealth, population increase, new inventions which increase production, upset the flow of goods which constitutes supply, and this in turn reacts upon demand Supply is generally figured in terms of one commodity, and schedules of supply and demand can be drawn for it at various prices See H D. Henderson, *Supply and Demand* (1922)

suprarenal gland see ADRENAL GLAND

Supreme Court, United States, highest court of the United States, established by Article 3 of the Constitution of the United States Section 1 of Article 3 provides for vesting the judicial power of the United States in one supreme court and in such inferior courts as Congress establishes Furthermore all Federal judges retain their office during "good behavior" (only in one instance—that of Justice Samuel Chase—were impeachment proceedings ever brought against a member of the Supreme Court) A judge's compensation may not be reduced during his term of office Section 2 defines the scope of U S judicial power and establishes the jurisdiction of the Supreme Court The judicial power extends to all cases arising under the Constitution, laws, and treaties of the United States, to cases concerning foreign diplomats and admiralty practice, and to diversity cases (those between citizens of different states) and cases in which the United States or a state is a party (however, the Eleventh Amendment, adopted in 1798, forbids Federal cognizance of cases brought against a state by a private party) The cases in which the Supreme Court has original jurisdiction—i e , where another court need not first consider the controversy—are those in which diplomats or a state is a party, even here, it has been held, inferior courts may enjoy concomitant jurisdiction. In all other Federal cases the Supreme Court exercises appellate jurisdiction, but subject to all limitations and regulations made by Congress Members of the court are appointed by the President with the advice and consent of the Senate The size of the Supreme Court is not prescribed by the Constitution and is set by statute It began in 1789 with 6 members and was increased to 7 in 1807, to 9 in 1837, and to 10 in 1863 In 1866 the membership was reduced to 8 to prevent President Andrew Johnson from filling any vacancies Since 1869 the court has comprised 9 members By May, 1950, a total of 87 men had sat on the bench Four served both as Associate Justice and Chief Justice, they were John Rutledge (appointed Chief Justice, but never confirmed by the Senate), Edward D White, Charles E Hughes, and Harlan F Stone The other Chief Justices have been John Jay, Oliver Ellsworth, John Marshall, Roger B Taney, Salmon P Chase, Morrison R Waite, Melville W. Fuller, William H Taft, and Fred M Vinson There are regularly two annual terms of court, the October and March terms Five justices constitute a quorum to hear a case, and decision is rendered by majority vote In the event of a tie the previous judgment is affirmed Under the Judiciary Law as amended in 1934 cases are usually brought to the court by appeal or by writ of certiorari The appeal procedure is used when the highest state court has declared that a U S statute is unconstitutional or that a state statute does not violate the U S Constitution, laws, or treaties If a lower Federal court rules that a U S statute is unconstitutional, the government may prosecute an immediate appeal Certiorari is granted at the court's discretion, with most applications refused It may be used to review constitutional decisions of state courts of last resort and Federal decisions on any important matter, especially when the inferior courts are in disagreement The Supreme Court has basically a dual function On the one hand it must interpret and expound all congressional enactments brought before it in proper cases, in this respect its role parallels that of the state courts of final resort in making the decisive interpretation of state law On the other hand the Supreme Court has power (superseding that of all other courts) to examine Federal and state statutes and executive actions to determine whether they conform to the U S Constitution When the court rules against the constitutionality of a statute or an executive action, its decision can be overcome only if the Constitution is amended or the court later overrules itself or modifies its previous opinion Thus, in the American governmental system, which now maintains the supremacy of the judicial branch over the executive and legislative branches, the Supreme Court potentially wields the highest power The decisions, of course, are not confined to the specific cases but also are intended to guide legislatures and the exec-

utive authority; thereby they mold the development of law. In no other country does the highest court possess such far-reaching power, for all other national legislatures may enact statutes without fear that the judiciary will refuse to enforce them on the grounds of unconstitutionality The Supreme Court, however, has found many constitutional limitations on its powers and has voluntarily adopted others so as not to interfere unduly with the other branches of government or with the states Thus, the court eschews "political questions," i.e., disputes over the form of government or the right of a particular person to enjoy governmental authority It also refuses to confine in any way the power of the President over foreign affairs or of the states over the usual subjects of criminal law Self-imposed restraints include consideration of a constitutional issue only if the case cannot be considered on other grounds and formulation of the constitutional decision in the narrowest terms The court prefers even a strained interpretation of a statute if it may thereby be found constitutional. The history of the Supreme Court reflects the development of the American economy, the alteration of political views, and the evolution of the Federal structure In its earliest years the court had little business to transact Much of the time of the justices was consumed in appearing on the Federal courts of appeal in the judicial circuits assigned to them This obligation of circuit riding was later to interfere seriously with the performance of the court's more important business For the most part the full bench—sitting first in New York city, then in Philadelphia, finally in Washington—was a court of last resort in admiralty cases and in cases arising out of diversity of citizenship The court somewhat later decided (in 1842 in *Swift* vs. *Tyson*) that in diversity suits it would follow not state law but a presumed Federal common law The status of the Supreme Court was somewhat uncertain until the tenure (1801–35) of John MARSHALL, the "great Chief Justice." Marshall, a strong Federalist, in MARBURY VS MADISON established the right of all courts to refuse enforcement to unconstitutional enactments of Congress. The same power in regard to state laws was asserted in the opinion of *Martin* vs. *Hunter's Lessee* (1816) delivered by Justice Joseph STORY In other opinions, Marshall further strengthened the Federalist position as against those who espoused STATES' RIGHTS This is seen notably in GIBBONS VS OGDEN, which interpreted the interstate commerce clause of the Constitution so as substantially to increase the power of Congress Marshall's successor as Chief Justice, Roger B TANEY, initiated a reaction. Taney helped to increase the strength of the states by advancing the concept of POLICE POWER as overriding apparent constitutional limitations on their right to make laws. In the DRED SCOTT CASE he made what many persons considered an unwarranted limitation of Federal authority in forbidding Congress to prohibit slavery in the U S territories Lincoln's opposition to Taney's views (see MERRYMAN, EX PARTE) was but one instance of hostility between the Supreme Court and various Presidents. After the adoption (1868) of the Fourteenth Amendment the character of litigation before the court was altered, and there were many cases alleging that state legislation took liberty or property without due process of law or denied equal protection of the laws (see FOURTEENTH AMENDMENT) In the late 19th cent the flood of litigation arising from all causes was delaying the disposition of cases up to three years. Relief was imperative, and finally, in 1891, Congress created the circuit courts of appeals to give a final hearing to most appeals and excused the justices from riding circuit However, each justice still heads one or more circuits) In the early 20th cent to many the court seemed highly conservative in its views It showed in general a rigid adherence to *stare decisis* (the rule that precedents are to be followed), a tendency to prevent the states from adopting laws which restricted business in its employment practices and other activities, and little disposition to restrain the states from restricting civil liberties Justices Louis D Brandeis and Oliver W. Holmes were commonly thought to stand out as exponents of a minority liberal view The court's conservatism apparently suited the country as a whole until President Franklin D Roosevelt came to office and Congress passed economic legislation of a far-reaching and novel character Soon the new laws were attacked on various constitutional grounds, e g , that they were unwarranted delegations of legislative power to the President and interfered in the exclusive power of the states over intrastate commerce. From 1935 to 1937 the court struck down such major pieces of NEW DEAL legislation as the National Industrial Recovery Act (in the famous Schechter Poultry Case), the Agricultural Adjustment Act, and the Bituminous Coal Act. Some of the laws were condemned by five-to-four decisions. Unalterably in the conservative camp were Pierce Butler, James McReynolds, George Sutherland, and Willis Van Devanter. The liberals (and supporters for the most part of New Deal legislation) were Benjamin N. Cardozo, Brandeis, and Harlan F. Stone. In the center were Chief Justice Hughes and Owen J. Roberts. Roosevelt, who had not had the appointment of a single justice, was determined to change the composition of the court and proposed (Feb , 1937) a measure designed to displace the "nine old men" and to infuse the bench with "new blood" of his choosing His plan—which even his opponents conceded was probably constitutional—was to provide retirement at full pay for all members of the court over 70, if a justice refused to retire, an "assistant" with full voting rights was to be appointed In no case might there be more than 15 justices The majority in Congress which characterized the scheme as "packing the court" prevented it from ever coming up for a vote, and it was abandoned in July In April, however, Hughes and Roberts joined the liberal group, thus giving the New Deal a precarious majority of one By five-to-four votes the National Labor Relations Act and the Social Security Act were upheld The majority justified these and other decisions by pointing out that the scope of Federal legislation had to expand because the growing interdependence of the country made local economic legislation of little value. The court also enunciated the novel view that in acting under the "general welfare" clause of the Preamble to the Constitution, Congress was not limited to carrying out its express powers as listed in Article 1 but might pursue any objective. Congress was thus given a vast new range of legislative power free of Supreme Court censure In 1938 the court took another drastic step in overruling *Swift* vs *Tyson* The doctrine of a Federal common law was repudiated, and in handling diversity suits the Federal courts were directed to use state law While in this case the Supreme Court limited the scope of Federal activity, it took certain steps in the opposite direction In the CONFLICT OF LAWS (juristic relations between the states) it announced many new principles, and it forbade even limited state taxation of Federal facilities but offered Congress fairly wide scope to tax various state-supported activities The court of the '40s, with seven appointments by Roosevelt, was not more unified than its predecessor of the '30s On the contrary, the percentage of dissents and of special opinions was greater than at any previous time There was less public concern, however, since the court did not invalidate major legislation, while the diverse views of its members on technical subjects—antitrust and patent law, conflict of laws, taxation—mainly concerned lawyers and business In the field of civil rights, as protected by the Fourteenth Amendment, the views of the court did continue to attract popular attention In May, 1950, the members of the court appointed by President Roosevelt were Hugo Black, Stanley Reed, Robert H. Jackson, Felix Frankfurter, and William O Douglas. Members appointed by President Truman were Harold Burton, Tom Clark, Sherman Minton, and the Chief Justice, Fred Vinson There is a very large literature on the Supreme Court, however, much which was written during the controversy of the late '30s is ephemeral Scholarly studies include Charles Warren, *The Supreme Court in United States History* (rev ed , 1926) and *Congress, the Constitution, and the Supreme Court* (enl. ed., 1935), Felix Frankfurter and James M Landis, *The Business of the Supreme Court* (1928), Charles G Haines, *The American Doctrine of Judicial Supremacy* (2d ed , 1932), Louis Boudin, *Government by Judiciary* (1932); Andrew C McLaughlin, *Constitutional History of the United States* (1935), Mitchell Wendell, *Relations between the Federal and State Courts* (1950) More popular works are Charles E Hughes, *The Supreme Court of the United States* (1928), Ernest S Bates, *The Story of the Supreme Court* (1936), K B. Umbreit, *Our Eleven Chief Justices* (1938), Wesley McCune, *The Nine Young Men* (1947).

Sur, Lebanon see TYRE

Sura (sōōrä'), river, 540 mi long, rising E of Penza, E central RSFSR It flows first W, then NE, then N to the Volga, which it joins W of Cheboksary. Except in winter, it is navigable for 400 mi

Surabaya or **Soerabaja** (both sōōrŭbī'u, Dutch sōōrăbā'yă), city (pop 341,675), on NE Java, Indonesia, on the Kali Mas river just above its mouth at the western end of Madura Strait North of the city proper is its port, Tanjungperak, which ships sugar, tobacco, coffee, teak, rubber, petroleum products, spices, and vegetable oils Indonesia's chief naval base is at Ujung, near Tanjungperak, it is retained by the Dutch but supervised by Indonesian officials Chief rival of Batavia in size and commercial importance, Surabaya has important industries, including shipbuilding, textile milling, metalworking, and the manufacture of machinery, chemicals, and rubber products. An oil refinery is near

Surakarta or **Soerakarta** (both: sōōrăkär'tă), town (pop. 165,484), on central Java, Indonesia, on the Solo river and WSW of Surabaya. Here is a vast walled palace, virtually a city in itself, belonging to the prince of Surakarta. The European section, with a Dutch fort built in 1779, resembles an old Dutch town. The town is the trade center for an area producing rice, rubber, and sugar and has textile mills, tanneries, and machine shops.

Surat (sōō'rŭt, sōōrät'), city (pop 171,443), NW Bombay state, India, a port on the Gulf of Cambay The Portuguese opened trade here in the 16th cent , and they were joined in the 17th cent. by the Dutch, French, and British. Here was one of the main trading centers of the British East India Company. Surat, today a railroad junction, has declined from its position during the 17th and 18th cent when it was one of India's most populous cities and its busiest port

Surbiton, urban district (1931 pop 29,401; 1947 estimated pop. 58,920), Surrey, England, SW of London It is a residential suburb of Kingston-on-Thames and is the scene of boating events

surface, in geometry, the boundary between two volumes Examples are the surface of a sphere, which is the boundary between the inside and the outside of the sphere, and a plane, which is the boundary between the two regions of space on the two sides of the plane A surface may be curved or flat It has no thickness and yet separates two regions in space. Thus it may be a closed surface of finite extent, like a sphere, or of infinite extent, like a plane.

surface tension, property exhibited by liquids in which the surface exposed tends to be reduced to the smallest possible area. A drop of water, for example, tends to assume the shape of a sphere The phenomenon is attributed to the attractive forces acting between the molecules of the liquid (cohesion) Those molecules at the surface are drawn with greater force toward the center by the other molecules within the liquid mass The surface then appears to act like an extremely thin membrane, and the small volume of water making up a drop assumes the shape of a sphere, held constant when an equilibrium between the internal pressure and that due to surface tension is reached Because of surface tension, various small insects are able to "skate" across the surface of a pond, objects of greater density than water can be made to float, and molten lead when dropped into a cool liquid forms suddenly into shot

surgery, branch of MEDICINE concerned with the diagnosis and treatment of injuries and pathological conditions requiring operations by manual or instrumental methods. Successful surgery demands all the skill and resources of the physician Through its long history surgery underwent several changes in status, emerging finally as one of the most respected of professions In prehistoric times sharpened flints and other sharp-edged devices were used to perform various surgical operations Such operations included trephining (removing circular pieces of the skull in cases of epilepsy and certain other disorders), letting blood, opening abscesses, and scarifying the flesh. Circumcision and other ritualistic operations were later performed with similar instruments There are indications that in Neolithic times saws of stone and bone were used to perform amputations Nearly all major operations were performed by the ancient Hindus Knowledge of the use of soporific potions to allay suffering can be traced to remote antiquity Surgery was skillfully practiced by the early Greeks and Romans Hippocrates was a competent surgeon as well as a keenly observant diagnostician Infection or sepsis accompanying surgical and other wounds was not common among the Greeks and Romans Undoubtedly this was to a large extent the result of the use, recommended by Hippocrates, of only pure or boiled water or wine for irrigating wounds and the avoidance of greasy dressings Clean materials were employed for bandaging, and cleanliness of the hands and fingernails of the surgeon were stressed ERASISTRATUS and HEROPHILUS were notable early surgeons of the famous medical school at Alexandria GALEN contributed largely to the founding of experimental physiology; his numerous works were widely disseminated and were long influential Among the Arabs, Jews, and Nestorian Christians much that was valuable in early surgery was preserved However, in Europe there followed a marked regression in surgical practice and knowledge. Asclepiades of Bithynia introduced the physician and the surgeon developed, and surgical practice fell into the hands of unskilled, untutored itinerants, many of them charlatans and ruffians The barber-surgeon who performed the usual functions of a barber as well as surgical operations became a common figure especially in England and France Guilds of barber-surgeons were organized in England, and gradually their status rose, not until the 18th cent , however, did surgery begin to be placed on a professional level There were, nevertheless, notable figures in early surgery, among them Guy of CHAULIAC Ambroise PARÉ, trained as a barber-surgeon, became a leading figure in medical history; he contributed notably to the use of more humane surgical methods. After the decline of Greek and Roman civilization the great scourge of surgery was the almost inevitable onset of infection. The lack of sanitary facilities and the crowded, dirty conditions of dwellings and hospitals that prevailed during and after the Middle Ages were obviously contributing factors. A few physicians championed

cleanliness in medical practice, but their advice was largely ignored, even though marked reduction in infection was evident in their own practice Until after about the mid-19th cent ,surgery was practiced only in desperate cases, so high was the mortality rate. Not until the introduction of antiseptic methods did surgery enter its modern phase. Louis Pasteur established the fact that microbes are responsible for infection and disease Sir Joseph Lister studied Pasteur's work and attributed surgical infection to the same cause, he introduced the use of carbolic acid as a cleansing and disinfecting agent in an attempt to avoid sepsis His results in reducing infection were dramatic It was found later that the carbolic acid spray which Lister used to cleanse the air about the patient was unnecessary, but the antiseptic treatment of instruments and other articles in contact with the patient continued until antisepsis was gradually replaced by the aseptic methods employed in modern hospitals Ernst von BERGMANN is credited with introducing steam sterilization under pressure for treating instruments and all other medical equipment used for a surgical patient In the late 19th cent rubber gloves that could, like the instruments, be sterilized came into use and thus prevented infection through the hands of the physician. Because some methods of sedation had been known from early times, the development of methods of ANESTHESIA was perhaps less revolutionary than the introduction of antisepsis However, the discovery of the value of ether and other anesthetics and of improved modern methods of administration has been of immeasurable value. Because of the knowledge and skill of modern anesthetists, surgical feats of great complexity and requiring either long or short periods of anesthesia are facilitated From the time of Ephraim McDOWELL, when the accomplishment of a successful abdominal operation made history, surgery has progressed to the point where operations are ably performed on the heart, brain, and delicate tissues of the eye, as well as on every other part of the body Among the many who contributed to the growth of modern surgery with its many fields of specialization are Harvey William CUSHING, William Stewart HALSTED, Sir Victor A HORSLEY, Emil Theodor KOCHER, Sir William MacEWEN, Charles Horace MAYO and William James Mayo, Valentine MOTT, John Benjamin MURPHY, Philip Syng PHYSICK, and James Marion SIMS Surgery in recent years has benefited by discoveries in many fields of science Surgical instruments have evolved from the crude earlier tools to meticulously designed devices With the development of X-ray techniques and of the fluoroscope, surgery gained probably its most valuable instruments of diagnosis Studies resulting in an understanding of the causes and treatment of shock, helped to reduce postsurgical mortality Knowledge of the techniques of blood transfusion and of the use of anticlotting agents also reduced mortality The sulfa drugs and penicillin and other antibiotic substances are among recent aids to the conquering of surgical and other infections PLASTIC SURGERY is a special field marked by great progress in recent times See I H Flack (pseud Harvey Graham), *The Story of Surgery* (1939), F G Slaughter, *The New Science of Surgery* (1946)

Surinam (sŏŏr'năm', -năm'), Dutch *Suriname* (sŭrĭ-nä'mŭ), much-used name for Dutch Guiana, also called Netherland Guiana and Netherlands Guiana See GUIANA

Surma (sûr'mŭ, sŏŏr'mä), river rising in Manipur state, India, and flowing c 265 mi to the Meghna river in East Bengal prov , Pakistan In India the Surma forms part of the border of Manipur and Assam states and flows E-W across Assam. The Surma valley is a rich agricultural zone.

Surratt, Mary Eugenia (sŭrăt'), 1820–65, alleged conspirator in the assassination of Abraham Lincoln, hanged on July 7, 1865 A widow (her maiden name was Jenkins) who had moved from Surrattsville (now Clinton), Md., to Washington, D C , she kept the boardinghouse where John Wilkes BOOTH hatched his original plot to abduct the President, which failed Booth had made (Dec , 1864) the acquaintance of her son, John Harrison Surratt (1844–1916), a secret dispatch rider for the Confederacy in the Civil War. After Lincoln's assassination eight alleged accomplices in Booth's crime were tried (May 10–June 29, 1865) before a special military tribunal Unquestionably guilty and also hanged were Lewis Thornton Powell (or Payne), a half-mad, Confederate ex-soldier, David E Herold, a feeble-minded youth of 19, who had fled with Booth but had surrendered, and George A Atzerodt, a middle-aged coachmaker Samuel Arnold and Michael O'Laughlin, Confederate ex-soldiers from Maryland who had taken part in the attempted abduction but not in the assassination, were sentenced to life imprisonment, as was Dr. Samuel A. MUDD, who had set Booth's broken leg. Edward Spangler, a sceneshifter at Ford's Theater, charged with abetting Booth's escape, was given six years. O'Laughlin died (1867) of yellow fever in the Dry Tortugas, but President Andrew Johnson pardoned the other three in 1869. After his capture, young Surratt, who had fled when the abduction plot failed, was tried (June 10–Aug 10, 1867) before a civil court Although the jury stood eight to four for acquittal, he was not released from prison until June, 1868 Later that year the government nol-prossed the indictment against him The hanging of his mother is generally considered to have been a gross miscarriage of justice Legally, the military tribunal doubtless lacked jurisdiction in the case, but this argument of defense counsel Reverdy Johnson and Gen Thomas Ewing was unsuccessful, as were most of their other pleas during the course of the highly irregular proceedings The prosecution, headed by Judge Advocate General Joseph HOLT, never did establish that Mrs Surratt even knew (although she might have known) of the abduction plot, and it now seems certain that she was not a party to the assassination plans Secretary of War Edwin M STANTON suppressed, among other evidence, Booth's captured diary, which completely refuted the charge in the indictment that the defendants had conspired with Jefferson Davis and other Confederate leaders in a general plot to kill Lincoln When, in the course of the impeachment proceedings against President Johnson, Stanton was forced to produce the hitherto unknown diary, even some radical Republicans condemned the prosecution for having perverted justice in the case of Mrs Surratt. Her son's subsequent release confirmed the impression of her innocence Bravely accepting her fate, she became an appealing character, the subject of several plays, e g , John Patrick's *Story of Mary Surratt* (1947). See D M. De Witt, *The Judicial Murder of Mary E. Surratt* (1895), H J Campbell, *The Case for Mrs Surratt* (1943)

surrealism (surĕ'ŭlĭzm), literary and art movement, influenced by Freudianism and dedicated to the expression of imagination as revealed in dreams, free of conscious control It was founded (1924) in Paris by André Breton, with his *Manifeste du surréalisme*, but its ancestry is traced to Baudelaire and Rimbaud, and many of its adherents had belonged to Dadaism In literature surrealism was confined almost exclusively to France, besides Breton a major exponents included Louis Aragon and Paul Eluard In art the movement became extremely dominant in the 1920s and 1930s and was internationally practiced with many and varied forms of expression. Salvador Dali and Yves Tanguy used symbolic dreamlike objects, such as melting watches and huge metronomes, meticulously painted and arranged in a recognizable composition, others, such as Marc Chagall and Giorgio de Chirico, set their figures in a composition of fantasy and free imagination to create a dreamlike atmosphere, another school, represented by such artists as Joan Miró and Marcel Duchamp, attempted to represent spontaneous thought, or psychic automatism, using abstract, or so-called automatic, form and composition to achieve this purpose In an artist such as Max Ernst these theories are found in combination Surrealism has also been employed in moving pictures by Man Ray, the poet Jean Cocteau, and others See David Gascoyne, *A Survey of Surrealism* (1935), H. E. Read, ed , *Surrealism* (1936), G E Lemaitre, *From Cubism to Surrealism in French Literature* (1941), A E Balakian, *Literary Origins of Surrealism* (1947)

Surrey, Henry Howard, earl of, c 1517–1547, English poet and soldier, son of the duke of Norfolk He was arrested by his enemies on a questionable charge of treason, convicted, and beheaded Strongly influenced by his friend Sir Thomas Wyatt, Surrey introduced into English poetry new verse forms, chief among them blank verse, which he used in his translation of Books II and IV of Vergil's *Aeneid* Forty of Surrey's poems appeared in Richard Tottel's miscellany (1557), and he was the only poet mentioned on the title page.

Surrey, inland county (722 sq mi , 1931 pop 1,180,878; 1948 estimated pop 1,571,900), S England. The county town is Guildford The terrain is marked by the North Downs, which cross the county from east to west To the north the land slopes gently downward to the Thames, into which flow the Wey and the Mole, Surrey's principal streams The southern slopes of the Downs, descending to the Weald, are more rugged It is one of the "Home Counties" around London, and the urbanization of the northern portions has been steadily increasing, but there are still attractive woodland areas to the south. Outside the residential areas it is primarily an agricultural county, its main occupations are dairy farming and sheep raising, with some manufacture of woolen goods and drugs. The city of Croydon is the site of one of the world's great airports, Wimbledon is famous as the locale of international tennis matches, Epsom is famous for its horse racing, and Kew for its botanical gardens At Runnymede, on the Thames, King John signed the Magna Carta in 1215. In Anglo-Saxon times Surrey was variously under the dominion of Mercia and Wessex and was overrun in the 9th cent. by the Danes The boundaries of the shire were established about the time of the Norman Conquest. See *Victoria History of Surrey* (4 vols., 1902–12).

Surtees, Robert Smith (sûr'tĭz), 1803–64, English novelist He created John Jorrocks, the sporting grocer, who appears in *Jorrocks' Jaunts and Jollities* (1838), a series of humorous sketches first published in the *New Sporting Magazine* which Surtees had helped to found in 1831 *Handley Cross* (1843) continued the career of Jorrocks Later works of Surtees, all published anonymously, include *Hawbuck Grange* (1847), *Hillingdon Hall* (1845), *Mr Sponge's Sporting Tour* (1853), "*Ask Mamma*" (1858), *Plain or Ringlets?* (1860), and *Mr Facey Romford's Hounds* (1865) Surtees knew English hunting life, his books have a tone of lusty humor and hearty satire The spirited illustrations of John LEECH increased the popularity of Jorrocks Surtees wrote *The Horseman's Manual* (1831), *The Analysis of the Hunting Field* (1846), and numerous fugitive papers on sport See E D Cuming, *Robert Smith Surtees* (1924), H S Gladstone, *Shooting with Surtees* (1928)

surveying, the science of finding the relative position of points on or near the earth's surface Boundaries, areas, elevations, construction lines, and geographical or artificial features are determined by the measurement of horizontal and vertical distances and angles and by computations based in part on the principles of geometry and trigonometry Field work consists in obtaining data for delineation on maps, charts, and profiles or in fixing points from predetermined data Hydrographic surveying deals with bodies of water and coast lines, is recorded on charts, and shows such features as bottom contours, channels, buoys, and shoals Land surveying includes both geodetic surveying, used for large areas and taking into account the curvature of the earth's surface (see GEODESY), and plane surveying, in which the earth is regarded as a horizontal plane. Plane surveying dates from ancient times and was highly developed in Egypt in order to reestablish boundaries obliterated by the overflow of the Nile It played an important role in American history in marking boundaries for settlements, surveying was a profession of distinction—both Washington and Jefferson worked for a time as surveyors Branches of surveying are named according to the purpose of surveys, e g , topographic surveying, used to determine relief (see CONTOUR), route surveying, mine surveying, construction surveying, or according to the method used, e g , transit surveying, plane-table surveying, photogrammetic surveying (securing data by photographs) Surveys based on photographs are especially useful in rugged or inaccessible country and for reconnaissance surveys for construction, mapping, or military purposes In air photographs, errors resulting from tilt of the airplane or arising from distortion of ground relief may be corrected in part by checking against control points fixed by ground surveys and by taking overlapping photographs and matching and assembling the relatively undistorted central portions into a mosaic. In surveying, measurements may be made directly, by the use of optical instruments, by computations from known lines and angles, or by combination methods Instruments used for direct linear measurements include the Gunter's chain (known also as the surveyor's chain), which is 66 ft long and divided into 100 links, the engineer's chain, 100 ft long and also consisting of 100 links, the tape, usually of steel, which has largely superseded chains, and the rod Tapes and rods made of Invar metal (an alloy of steel and nickel) are used for very precise work because of their low coefficient of thermal expansion The height of points in relation to a datum line (usually mean sea level) is measured with a leveling instrument consisting of a telescope fitted with a spirit level and usually mounted on a tripod It is used in conjunction with a leveling rod placed at the point to be measured and sighted through the telescope The transit is used to measure vertical and horizontal angles and may be used also for leveling It consists of over 400 parts, the chief elements are a telescope which can be rotated (transited) about a horizontal and about a vertical axis, spirit levels, and graduated circles supplemented by vernier scales Known also as a transit theodolite, it is a modification of the theodolite, an earlier instrument which, in its original form, could not be rotated in a vertical axis A plane table consists of a drawing board fixed on a tripod and equipped with an alidade (a rule combined with a telescope), used for direct plotting of data on a chart, it is suitable for rapid work not requiring a high degree of precision The stadia method, a rapid system useful in surveying inaccessible terrain and in checking more precise measurements, consists in observing through a telescope equipped with two horizontal cross hairs or wires (stadia hairs) the interval delimited by the hairs on a calibrated stadia rod, the interval depends on the distance between the rod and the telescope See R E Davis and F S Foote, *Surveying Theory and Practice* (3d ed , 1940), C. B. Breed and G L Hosmer, *Principles and Practice of Surveying* (Vol I, 8th ed , 1945, Vol II, 6th ed., 1947), J. C. Tracy, *Surveying* (rev. ed., 1947); E. F Church and A. O. Quinn, *Elements of Photogrammetry* (1948).

Susa (sōō'zŭ, sōō'sŭ), ancient city, capital of ELAM. The site is SW of Disful, Iran. The "city of lilies" is called Shushan in the Bible, Neh. 1 1, Esther 1 2, Dan 8 2. Its inhabitants were called Susanchites. Destroyed (7th cent B C) by Assur-banipal, Susa was revived in the empire of the Achaemenid rulers of PERSIA. Darius I and Artaxerxes I built magnificent winter palaces here. It was later thoroughly Hellenized and continued prominent in the Roman Empire. The ruins were excavated by M A. Dieulafoy and others. J J M de Morgan discovered a stele of the Code of Hammurabi, and Susa has yielded many inscriptions in the undeciphered Elamite language.

Susa, Tunisia: see SOUSSE.

Susak, Yugoslavia: see FIUME.

Susanchites (sōō'zăkīts), inhabitants of SUSA in Elam. Ezra 4 9.

Susanna (-zăn'-) [Gr from Heb, =lily] **1** Heroine of a story told in Dan 13, a chapter placed in the Apocrypha in AV (see DANIEL). Two elders attempt to seduce Susanna and are repulsed, they accuse her of soliciting them, but she is saved from punishment by the young Daniel, who traps the false accusers in discrepancies in their testimony. Susanna has been a favorite subject of Christian iconography. **2** Woman who ministered to Jesus. Luke 8 3.

Susanville, city (1940 pop 1,575, 1948 special census pop 5,358), co seat of Lassen co, NE Calif. It is in a well-populated timber, dairy, and grain area. Lassen Junior College (coeducational) is here. Lassen Volcanic National Park and Honey Lake are near by.

Susi (sōō'sī), father of Gaddi, a spy sent into Canaan by Moses. Num 13 11.

Susiana: see ELAM.

Suso, Heinrich (hīn'rĭkh zōō'zō), c.1295–1366, German mystic. He was a Dominican. In studying at Cologne he came under the influence of Meister ECKHART, whose writings he defended against charges of heresy. He became a popular preacher and was associated with Johannes TAULER. He was at first harshly ascetic, but gradually emphasized detachment rather than mortification as central in the Christian discipline. His mysticism was expressed characteristically in terms of the contemporary literary romantic cult of the minnesingers. This gave him the epithet Sweet Suso. His writings include *Das Büchlein der ewigen Weisheit* [the little book of eternal wisdom], an autobiography and a guide to beginners in the spirit life, *Das Minnebüchlein* [the little book of love], a scholarly defense of Eckhart and an attack on the BEGHARDS and Brethren of the Free Spirit, and miscellaneous sermons. He was beatified in 1831. His autobiography is not of sure authenticity, it purports to be made from notes taken from his oral accounts and then edited by him. See T F Knox, *The Life of Blessed Henrich Suso by Himself* (1913), James M Clark, *The Great German Mystics* (1949).

suspension, in chemistry, a mixture of a finely divided solid and a liquid or a gas in which the solid does not enter into solution but remains dispersed and suspended for some time before finally settling out. The size of the solid particles of suspensions are larger than those of a colloid. Fine sand or finely ground chalk shaken up in water forms a suspension. Muddy water is another example. In any case, the product resulting is not homogeneous as is the case in a true solution. Mixtures of liquids in which one is suspended in another and gradually collects in a layer either above or beneath are also known as emulsions. Fine soot, dust, or other finely divided solids can form suspensions in air.

suspension bridge, a bridge the footwalk or roadway of which is suspended on chains or cables fixed between towers, piers, or other anchors. This is the type of bridge most suited for constructions of large span. Primitive peoples often build suspension bridges in the form of vines woven together and fastened to posts or trees on each side of the crossing. From the vines a footwalk is suspended. Early suspension bridges were built in America by James Finley. J A Roebling improved suspension bridges through his development of wire cables and the adoption of stiffening trusses. He completed the first bridge over the Niagara in 1854. There are fewer suspension bridges than either truss or arch bridges, but the most famous are of this type. The Brooklyn Bridge across the East River (completed 1883) was the world's longest suspension bridge at the time of its construction, with its main span of 1,595.5 ft. Examples of modern suspension-bridge engineering are the GEORGE WASHINGTON BRIDGE, linking New York and New Jersey, the GOLDEN GATE BRIDGE, San Francisco, and the San Francisco–Oakland Bay Bridge. The San Francisco–Oakland Bay Bridge combines suspension with other forms of construction, the west bay crossing (from San Francisco to Yerba Buena Island) consisting of two equal suspension bridges, with a common anchorage between them, each with a main span of 2,310 ft.

Susquehanna (sŭskwĭhā'nə), river, 450 mi long, which rises in two branches. The northern branch (commonly referred to as the Susquehanna) has its source in Otsego Lake, SE N.Y., and flows southwest and southeast to a point near Pittston, Pa., where it is joined by the Lackawanna river. Then it turns SW to Sunbury, where it is joined by the West Branch, which rises in the Alleghenies and follows a circuitous course east and southeast. The united stream, joined by the Juniata a few miles above Harrisburg, flows S and SE into Maryland and finally enters the northern part of Chesapeake Bay at Havre de Grace, Md. As the river traverses the anthracite region, there are many mining and industrial cities on its banks—Binghamton and Owego, N.Y., Pittston, Wilkes-Barre, Nanticoke, and Harrisburg, Pa., among them. Much of the Susquehanna valley is very beautiful. The Federal government's plan for flood control (approved 1936) embraces the building of levees, flood walls, and reservoirs at points along the river and on certain of its tributaries.

Susquehanna Company or **Susquehannah Company,** a land company formed in Connecticut (1753) for the purpose of developing the WYOMING VALLEY in Pennsylvania. A tract of land was purchased from the Indians in 1754, and preparations were made for development. Aid was sought in England, where Elphalet DYER was sent in an unsuccessful attempt to secure confirmation of the land grant (1763–64). Colonization from Connecticut was first attempted in 1762–63, but it was 1769 before any definite settlement was made. Soon the settlers were embroiled in troubles with the rival settlers from Pennsylvania, leading to the PENNAMITE WARS, in which Zebulon BUTLER led the Connecticut forces. See J P Boyd, ed., *The Susquehannah Company Papers* (3 vols, 1930–31).

Susquehanna Depot, borough (pop 2,740), Susquehanna co, NE Pa., NE of Montrose, inc 1853.

Susquehannah Company: see SUSQUEHANNA COMPANY.

Susquehanna University: see SELINSGROVE, Pa.

Süss, Hans see KULMBACH, HANS VON.

Sussex, Thomas Radcliffe, 3d **earl of,** 1526?–1583, English nobleman. Styled Viscount Fitzwalter after his father became the 2d earl of Sussex (1542), he served in the army in France and on diplomatic missions abroad. In 1554 he was made Baron Fitzwalter, and in 1557 he succeeded his father as earl of Sussex. He served as lord deputy of Ireland under Mary I (1556–58) and again (1559–64) under Elizabeth, who gave him the title of lord lieutenant. Sussex was a vigorous general, although he never succeeded in subduing Shane O'Neill, and it was during his administration that English influence was first extended outside the Pale. Sussex's desire for Elizabeth to marry outside England brought him into sharp conflict with the earl of Leicester. His attempts to negotiate a marriage between the queen and Archduke Charles of Styria, brother of Emperor Maximilian II, collapsed in 1567. In 1568 Sussex became lord lieutenant of the north, and he aided in the suppression of the revolt (1569–70) of the earls of Northumberland and Westmorland. He became lord chamberlain in 1572.

Sussex, maritime county, S England, divided for administrative purposes into Sussex East (829 sq. mi; 1931 pop 546,864, 1948 estimated pop 608,800) and Sussex West (628 sq. mi, 1931 pop. 222,995, 1948 estimated pop 310,300). The county town is Lewes. The South Downs, low, rolling hills, which cross the county from east to west and terminate at Beachy Head on the coast, are Sussex's most notable geographical feature. The principal streams are the Arun, the Ouse, the Rother, and the Adur. The long coast line along the English Channel is famous for its resorts, such as Brighton and Eastbourne. It is almost exclusively an agricultural and pastoral region (dairy farming and sheep grazing). In Sussex were found remnants of the primitive "Piltdown man." There are remains of Celtic, Roman, Saxon, and Norman occupation. The old kingdom of the South Saxons (Sussex) was, traditionally, founded by King Ælla in 477. Later the region was incorporated into Wessex. William I (William the Conqueror) landed at Pevensey in 1066 and defeated Harold's Saxons at Hastings. At Arundel is the seat of the dukes of Norfolk. Chichester is famous for its cathedral. See Arthur Mee, *Sussex* (1937).

Sussex, town (pop 3,027), S N.B., on the Kennebecasis river and NE of St. John. It is a trade center for a dairy region and manufactures refrigerators, furniture, and agricultural implements. Gypsum and salt are mined near by.

Sussex, borough (pop 1,478), NW N.J.; settled 1734, inc 1902. It is a farm trade center.

Sussex, kingdom of, in ENGLAND. It was settled, according to tradition, in 477 by Saxons under Aelle, who defeated the Celts in several battles and established toward the close of the century a brief military supremacy. After this time Sussex existed only as a subkingdom of one of its more powerful neighbors or as a group of petty states. Little is known of its history for almost two centuries, but the region came to include the modern Sussex, E Hampshire, and the Isle of Wight. The South Saxons persisted in heathenism generally until St. Wilfrid of York led (681–86) the general conversion of the people. Conquered (685–88) by Caedwalla of Wessex, Sussex remained subject to his successor, Ine (688–725). By 771 Offa of Mercia had conquered all the petty kingdoms into which the South Saxons were divided, and they remained under Mercia until they joined other eastern states in submitting to Egbert of Wessex in 825. Sussex thereafter existed as an earldom.

Sutherland, George, 1862–1942, Associate Justice of the U.S. Supreme Court (1922–38), b Buckinghamshire, England. He was taken (1864) by his family to Springville, Utah. After studying law at the Univ of Michigan, he was admitted (1883) to the bar, practiced law in Utah, and was (1896–1900) a member of the state senate. Sutherland became important in Republican party politics and served in the House of Representatives (1901–2) and then in the Senate (1905–17). As Associate Justice of the Supreme Court, Sutherland was known through the years as a staunch conservative. He retired from the Supreme Court in 1938. He is the author of *Constitutional Power and World Affairs* (1919).

Sutherland, county, Scotland: see SUTHERLANDSHIRE.

Sutherland, town (pop 1,046), S central Sask., across the South Saskatchewan from Saskatoon, of which it is a suburb. Sutherland is a railroad division point and has a dominion forestry farm.

Sutherland Falls, waterfall, 1,904 ft high, SW South Island, New Zealand, near Milford Sound in Fiordland National Park.

Sutherlandshire (sŭ'dhurlăndshĭr) or **Sutherland,** maritime county (2,028 sq mi, 1931 pop 16,101, 1948 estimated pop 14,393), N Scotland. The county town is Dornoch. The Atlantic coast line is extremely irregular and deeply indented by sea lochs. Dornoch Firth forms part of the southern end of the North Sea. The area is almost entirely mountainous, largely covered with moors and forests. The poor soil, heavy rainfall, and low temperature make farming difficult. The chief occupation of the sparsely populated region is sheep grazing. The deer forests, grouse moors, and excellent fishing make the district a popular one with sportsmen. The 1st duke of Sutherland attempted, early in the 19th cent., to remove the poverty-stricken crofters from the interior to the coast and to America. The county was the "Southern Land" of the Norsemen, who occupied it in the 11th cent. and held it for about 100 years.

Sutlej (sŭt'lĕj), river rising in SW Tibet at an elevation of c 15,200 ft and flowing c 900 mi to the Indus river in Pakistan. In India the Sutlej flows W through Himachal Pradesh and Bilaspur state. Turning southwest, it receives the Beas river and forms part of the border of Punjab state, India, and West Punjab prov., Pakistan. In Pakistan (where its course marks the boundary of West Punjab and Bahawalpur) it receives the Chenab, which has already been joined by the Jhelum and Ravi rivers. The resultant stream, which collects the waters of all the five rivers of the PUNJAB, is often called the Panjnad [five rivers]. The Sutlej accommodates small vessels and furnishes water for irrigation.

sutra see SANSKRIT LITERATURE.

Sutro, Adolph Heinrich Joseph (sōō'trō), 1830–98, German-American engineer, b Aachen, Germany. In 1850 he emigrated to America, settling in California. His most important engineering achievement was the famous Sutro Tunnel, extending several miles into Mt. Davidson to the COMSTOCK LODE and providing ventilation, drainage, and transportation. Returning (1879) to San Francisco, he invested in real estate, laid out Sutro Heights, and was elected mayor for the years 1894–96 on the Populist ticket. He wrote *The Mineral Resources of the United States* (1868).

suttee (sŭ'tē', sŭ'tē') [Sanskrit *sati*=wife], funeral practice of Hindus, formerly found in India, according to which the widow sacrificed herself on her husband's pyre. The purpose was to help her soul and his in the world to come, but the practice was encouraged by the treatment accorded widows by Hindus. Practices similar to suttee are found in many parts of the world, and suttee may have been taken over by Hinduism from a more ancient source. At any rate, the Vedic texts used by Hindus to support the practice are probably properly to be read in no such sense. Suttee was abolished by law in British India in 1829.

Sutter, John Augustus, 1803–80, American frontiersman, b Kandern, Baden, of Swiss parents. His original name was Johann August Suter. He came to America in 1834, went to St. Louis, then to Santa Fe. Fired with a desire to go to the Pacific coast, he went to the Oregon country and entered the coastwise trade in the Northwest, going to the Hawaiian Islands, to Sitka, and finally (1839) to California. He settled in the Sacramento valley, became the proprietor of a large and rich colony, known as New Helvetia, and built Sutter's Fort (see SACRAMENTO). He was rich and powerful and helped newcomers to California, such as the survivors of the Donner Party. In 1848 his partner in a sawmill venture, James W. MARSHALL, found gold at Sutter's Mill (see COLOMA). The news

spread, and gold-mad crowds poured across the continent in the rush of '49 They killed Sutter's cattle and swarmed over his lands hunting for gold His struggle against them was vain, and General Sutter moved back to Pennsylvania, a ruined man, in 1873. He had a pension from California, and to the end he hoped vainly that the U S. Congress would reimburse him for his services and for the lands to which he had had a claim that was disallowed by the U S Supreme Court Original materials are to be found in Erwin G Gudde, *Sutter's Own Story* (1936), in *New Helvetia Diary* (1939), and in Sutter's *Statement regarding Early California Experiences* (ed by Allan R Ottley, 1943) See biographies by Julian Dana (1934), J. P. Zollinger (1939), and M K Wilbur (1949)

Sutter Creek, city (pop 1,134), central Calif , ESE of Sacramento, in a gold-mining region, inc. 1874 Leland Stanford made his fortune here

Suttner, Bertha (Kinsky), Baroness von (bĕr'tä, fŭn zŏōt'nur), 1843–1914, Austrian novelist, chiefly known as an ardent pacifist Through the medium of novels she struggled for the abolition of war and was awarded the 1905 Nobel Peace Prize Her best-known work is the novel *Lay Down Your Arms* (1889, Eng tr , 1906) Her memoirs (1909) appeared in English translation in 1910

Sutton. 1 Village (pop 1,051), S Ont , just S of Lake Simcoe, in a dairying and mixed farming area **2** Village (pop 1,118), S Que , on the Missisquoi river and SSE of Granby, in a lumbering and dairying region

Sutton 1 Town (pop 2,749), S Mass , S of Worcester, settled c 1715 Woolen goods are produced. A state park and forest are here **2** City (pop 1,403), SE Nebr , E of Hastings, in a prairie region, settled 1869 **3** Trading town (pop 1,083), co seat of Braxton co , central W Va , on the Elk river and SSW of Clarksburg, in a farm section, inc 1826

Sutton Coldfield, municipal borough (1931 pop 29,928, 1947 estimated pop 45,870), Warwickshire, England, NE of Birmingham, of which it is a residential suburb and vacation resort Sutton Park (over 2,000 acres) is a public recreation ground The moated New Hall dates from the 13th cent

Sutton-in-Ashfield, urban district (1931 pop 25,153, 1947 estimated pop 39,790), Nottinghamshire, England, SW of Mansfield It has coal mines, lime works, and lace and hosiery factories The Church of St Mary Magdalene dates partly from the 12th and 14th cent Stone Age burial grounds have been found here

Su Tung-po or **Su T'ung-po** (both sōō' tōōng'-pō'), 1036-1101, Chinese poet He was born in present-day Szechwan prov of a family which had made notable contributions to literature His outstanding performance on the imperial civil service examinations early aroused the emperor's interest in him Su occupied many official posts, rising to president of the board of rites (which regulated imperial ceremonies and worship) for a few months in 1091 Another of his achievements was designing the parks which surround Lake Si in Hangchow Often he lost his position and was subjected to terms of exile for his satiric verses and for his opposition to official policy Su is generally considered the greatest poet of the T'ang dynasty Through the strict forms of his work there frequently breathes a spirit of regret for the evanescence of beauty and the limited span of life Habitually, even in youth, he described himself as an old, disappointed man Yet counteracting this melancholy is a vivid intuition of identity with all being Su is also noted for his *fu*, satiric poems in a rough meter approaching free verse, and for letters, essays, and official reports See translations by Cyril D Le Gros Clark (1931, 1936), Lin Yutang, *Gay Genius the Life and Times of Su Tungpo* (1947)

Suva (sōō'vä), town (pop 11,398, Greater Suva pop 23,513), on Viti Levu, capital of the British colony of Fiji A port of call for British and American steamship lines on the south coast of the island, it also has plane service It has coconut-oil and soap factories and exports sugar, copra, gold, and tropical fruits The Central Medical School (1928) for training native doctors is here

Suvarov, Aleksandr Vasilyevich (ŭlyĭksän'dur vŭsē'lyuvĭch sōōvō'ruf), 1729–1800, Russian field marshal He entered the army as a boy and rose from the ranks He fought in the Russo-Turkish War of 1768–74, suppressed the rebellion of Pugachev in 1775, and was created count for his victories in the Russo-Turkish War of 1787–92, notably at Focsani, on the Rimnik, and at Izmail, which he captured in 1790 In 1794 Suvarov commanded the Russian army of intervention in Poland. In a swift campaign, culminating in the battle of Praga and the capture of Warsaw, he crushed the Polish resistance led by Kosciusko Suvarov's reputation reached its peak in the war of the second coalition (see FRENCH REVOLUTIONARY WARS) in 1798–99. Commanding the Austro-Russian forces in Italy, he defeated the French at Cassano, took Milan and Turin, and routed the French on the Trebbia and at Novi. Having driven the French out of N Italy, Suvarov crossed into Switzerland over the St Gotthard in order to join the forces of General Korsakov and Archduke Charles and to drive Masséna out of Switzerland The plan miscarried completely because of the interference—due to political motives —of the Austrian government with the allied strategy Before Suvarov could join Korsakov, Archduke Charles and his Austrian forces had been ordered to the Rhine Korsakov's Russians were outnumbered and were defeated by Masséna at Zurich (Sept , 1799) Suvarov was still struggling through the almost impassable terrain of central Switzerland when news of Korsakov's disaster reached him Harassed by the French, he succeeded in leading his half-starved and ragged troops into the Grisons and from there to Lindau He refused to participate in further action with the Austrians, and shortly afterward Russia withdrew from the war For his exploits in Italy he was created Prince Italiski Suvarov was idolized by his men, and he was able to mold them into a unified fighting body He demanded discipline and sacrifice, but his willingness to let his soldiers reap the fruit of victory gave Russian troops a bad reputation throughout Europe He was never defeated in battle, and he ascribed his success to the simple principle of "intuition, rapidity, impact" One of the great generals of modern times, Suvarov is particularly revered in Soviet Russia, where one of the highest military decorations was named after him

Suwalki Pol *Suwałki* (sōōvä'ōōkē), Rus *Suvalki* (sōōval'kē), Ger *Sudauen* (zōōdou'un), town (pop 13,670), NE Poland It originated (15th cent) as a Lithuanian settlement Situated where Poland, East Prussia, Lithuania, and Belorussia meet, Suwalki often changed hands It passed to Prussia in 1795 and to the Russian Empire in 1815 The town reverted to Poland in 1921 During the Second World War it was incorporated into the USSR (1939) and East Prussia (1941) An agreement granting Vilna to the Lithuanians was signed here (1920) by the Poles, but did not take effect Chiefly a trade center, Suwalki also has electrical and food industries

Suwannee (swŏ'nē, swä'–), river, c 250 mi long, rising in Okefenokee Swamp, SE Ga , and winding generally S through N Florida to the Gulf of Mexico Its name was used by chance in Stephen Foster's famous song *Old Folks at Home* or *Swanee River*

Suzdal (sōōz'dŭl), city (pop 6,904), central European RSFSR, ENE of Moscow and c 20 mi N of Vladimir Founded in 1028, it became (12th cent) an important city of the grand duchy of Vladimir-Suzdal (see VLADIMIR) and a religious center of NE Russia It was destroyed in 1328 by the Tatars and never recovered its importance In 1451 it passed to the grand duchy of Moscow Suzdal has an ancient kremlin containing a cathedral and a monastery, both from the 13th cent , and there are two walled monasteries north of the city There is a textile industry (flax production and clothing)

suzerainty (sōō'zurŭntē, sōō'zurān'tē), in international law, a relationship between states analogous to that between lord and vassal under FEUDALISM A vassal state arises when an area formerly under central authority is accorded a considerable degree of autonomy It is thus to be distinguished from a PROTECTORATE, which is a formerly independent state brought to some degree under the control of a more powerful state In their international position, however, vassal states and protectorates are nearly indistinguishable The creation of vassal states usually follows the partial disruption of a large country, e g , the Ottoman Empire If the disruption proceeds, however, as it did in the Ottoman Empire the vassal states eventually attain complete independence There are probably today no clear examples of international suzerainty

Suzuki, Bunji (bōōn' jē sōō'zōōkē), 1885–, Japanese labor leader. He founded the Yuaikai (Friendly Society) an early labor union, in 1912, and later he was president of the Japan federation of labor He was an adviser to the Social Mass party and served several terms in the diet

Suzuki, Kantaro, Baron (känthrō'), 1867–1948, Japanese admiral An opponent of any peace terms in the Second World War, he served briefly as prime minister after April, 1945, resigning on Aug 15, the day after announcement of Japan's surrender

Suzzallo, Henry (sōō'zulō), 1875–1933, American educator, b San Jose, Calif , grad Stanford, 1899, and Columbia (M A , 1902, Ph D , 1905) He taught at Stanford and at Teachers College, Columbia, where he was professor of the philosophy of education (1909–15) From 1915 to 1926 he was president of the Univ of Washington and after serving for three years as specialist in higher education of the Carnegie Foundation for the Advancement of Teaching was its president from 1930 until his death He wrote *Our Faith in Education* (1924), from 1909 he edited the "Riverside Educational Monographs"

Svalbard : see SPITSBERGEN.

Svanetia (svanē'shŭ), mountainous region, NW Georgian SSR, on the southern slopes of the Greater Caucasus It is very difficult of access, and its inhabitants, the Svans, have been little touched by modern civilization. They speak a South Caucasian language, like the Georgians. The Svanetian Range, a spur of the central Greater Caucasus, extends c 50 mi west from the main range near the Dykh-Tau and rises to 13,120 ft

Svea borg, Finland see SUOMENLINNA.

Sveal and or Svearike see SWEDEN

Svedberg, Theodor (tā'ōdôr svād'bĕryŭ), **1884–**, Swedish chemist He is known also as The Svedberg In 1912 he became professor at the Univ of Uppsala For his fundamental research on colloid chemistry he received the 1926 Nobel Prize in Chemistry He has studied especially the giant protein molecules, evolving for this work an ultracentrifuge He wrote *Colloid Chemistry* (1924; 2d ed , 1928) and is co-author of *The Ultracentrifuge* (1940)

Svein see SWEYN

Svendborg (svĕn'bôr), city (pop 21,356), S Fyn island, Denmark It is an important shipping center and has shipyards, breweries, machinery plants, and textile manufactures Svendborg grew around a 13th-century castle and has two churches dating from the 14th cent

Sverdlovsk (svyĭrdlôfsk'), city (1926 pop 136,421; 1939 pop 425,544, 1946 estimated pop 600,000), capital of Sverdlovsk oblast, RSFSR, in the eastern foothills of the central Urals Until 1924 it was named Ekaterinburg or Yekaterinburg Sverdlovsk is the leading industrial city of the Urals and a major machine-building center of the USSR. It also is the western terminus of the Trans-Siberian RR and the seat of a university and of numerous medical, technical, and scientific institutes and schools There are two cathedrals dating from the 18th cent , several museums and art galleries, and an opera house The city was founded in 1722 as a fortress and was originally named for Empress Catherine I Its earliest ironworks were built in 1725 Later in the 18th cent it developed as a gold-mining town and as a resettlement center for Siberia-bound colonists Its metallurgical industries grew in the 19th cent and gained importance after the construction of the Trans-Siberian RR Here in 1918 Emperor Nicholas II and his family were shot by the Bolsheviks Later in the Russian civil war the city was occupied by the Whites under Kolchak It was renamed in memory of the Bolshevik leader Yakov Sverdlov and grew in industrial importance under the Soviet regime The transfer of much Russian industry to the Urals during the Second World War resulted in further expansion Its largest plant is the Uralmash works, constructed in 1933, which produces heavy metallurgical and mining equipment

Sverdrup, Harald Ulrik (hä'ral ōōl'rĭk svĕr'drŏōp), 1888–, Norwegian oceanographer and meteorologist He was in charge of the scientific work on the *Maud* for Amundsen's arctic expeditions (1917–25) and on the *Nautilus* for the Wilkins-Ellsworth submarine arctic expedition (1931) He was professor in Bergen at the Geophysical Institute (1926–30) and at the Christian Michelsen Institute (1931–36) and was professor (1936–48) at the Univ of California and director of the Scripps Institution of Oceanography In 1948 he became professor of geophysics and director of the Norwegian Polar Institute, Oslo He wrote *Oceanography for Meteorologists* (1942) and is co-author of *The Oceans* (1942)

Sverdrup, Johan (yō'hän'), 1816–92, Norwegian statesman As member of the Storting (1851–84) and as prime minister (1884–89) he successfully advocated parliamentary government with ministerial responsibility, trial by jury, and the political and social advancement of the farmers His party, the Left, founded in 1869, united the various opposition groups into a single powerful majority In 1880, when Sverdrup's bill for seating the ministers in the Storting, though carried by an overwhelming majority, was vetoed by King Oscar II, Sverdrup submitted a resolution waiving the royal veto. The Storting approved the resolution The constitutional struggle over the veto question continued until 1884, when the opposition succeeded in having the Conservative cabinet impeached by a special tribunal Sverdrup became premier, and the cabinet was seated in the Storting Sverdrup failed to satisfy the extremist wing of his party and resigned in 1889

Sverdrup, Otto (ō'tō), 1855–1930, Norwegian arctic explorer A companion of Fridtjof Nansen on the voyage across Greenland in 1888 and on Nansen's later (1893–96) polar expedition, Sverdrup was leader of an arctic expedition (1898–1902) in the *Fram* Valuable topographical observations were made in N Greenland, the unknown western part of Ellesmere Island was explored and charted, and Axel Heiberg Island and other new land was discovered His *New Land* (Eng tr , 1904) described this expedition Later arctic expeditions included a voyage to the Kara Sea in 1920 and a searching trip for Umberto Nobile's *Italia* in 1928

Sverre (svĕ'rŭ), d 1202, king of Norway (1177–1202) He claimed to be the illegitimate son of King Sigurd; the question of his paternity is still hotly disputed He spent his childhood in the Faeroe Islands and came to Norway in 1176. The Birkebeiner party, who were opposing Erling

Skakke and the puppet king, Magnus, adopted the cause of Sverre. They took (1177) Trondheim, and a bitter civil war began Sverre secured control of Norway in 1178, but Magnus with foreign aid continued to attack Sverre until Magnus's death in battle (1184) Civil war went on, and from 1196 to 1201 the Baglar, an aristocratic and clerical party, fought vigorously with the Birkebeiner, but were defeated. The victory of the party of the common people led to the destruction of the power of the aristocracy and increased the power of the king Sverre prepared the way for an absolute monarchy Sverre was also involved in trouble with the Church in the time of Pope Innocent III

Svevo, Italo (ē'tälō svā'vō), 1864–1928, Italian novelist, whose real name was Ettore Schmitz A business man of Trieste, he wrote several works of fiction which remained practically unknown until James Joyce discovered him His fiction is psychological and introspective, his characters mainly narcissists, but convincing and human, and his style witty His best-known work is *La coscienza di Zeno* (1923, Eng tr., *The Confessions of Zeno*, 1930), also translated as *Una burla riuscita* (1928, Eng. tr , *The Hoax*, 1929)

Sviatoslav (svyä'tüslŭf), 920–72, duke of Kiev (964–72); son of Igor and of St Olga. His reign, spent in conquests, ushered in the most glorious period of Kievan Russia He overthrew the empire of the KHAZARS in S Russia and conquered the Bulgarians, thus creating an empire reaching from the Volga to the Danube Some of his conquests were lost before his death, however Defeated by Emperor John I of Byzantium he was forced to leave Bulgaria in 971 On his way back to Kiev he was attacked and slain by the Petchenegs His succession was contested by his sons until 980, when Vladimir I (St Vladimir) defeated his brothers

Svinhufvud, Pehr Evind (pär' ā'vĭnd svēn'hu"vūd, svĭn'hōvōd), 1861-1944, Finnish statesman A judge under the tsarist regime, he played a major part in the Finnish movement for national independence and was banished (1914–17) to Siberia On his return he became head of the provisional government and proclaimed the independence of Finland. In alliance with Germany, he directed the war against the Finnish Bolsheviks, who were aided by Russia, but he retired in 1918 A conservative and a "strong man," Svinhufvud became premier in 1930, and in 1931 he succeeded K J Ståhlberg as president of Finland He took strong measures against the Communists, but he also suppressed the fascistic Lapua movement, which had helped him to office In 1937 he was succeeded as president by Kyosti Kallio, of the Agrarian party Svinhufvud went into retirement

Svir (svēr), river, 140 mi long, NW European RSFSR It issues from Lake Onega and flows W into Lake Ladoga Entirely navigable, it is part of the MARIINSK SYSTEM of inland waterways There are hydroelectric stations at Svirstroi and Lodenoye Pole

Swabia (swā'bēə), Ger *Schwaben* (shvä'bŭn), region, SW Germany It is now understood to comprise SW BAVARIA, S WÜRTTEMBERG, HOHENZOLLERN, and S BADEN Its main physical features are the BLACK FOREST, the valley of the upper Danube, which rises here, the Swabian Jura, a range which extends parallel to and N of the Danube, and the valley of the upper Neckar The Rhine and the Lake of Constance (also called the Swabian Sea) form the western and southern borders The easternmost part of Swabia is part of the Danubian plateau of Bavaria and is a Bavarian province (3,818 sq mi , pop 1,196,274), with Augsburg as capital All Swabia is predominantly agricultural or forested country famous for the loveliness of its landscape Settled by the Germanic Suevi and ALEMANNI during the great migrations, the region was also known as Alamannia It became one of the stem duchies of Germany in the 9th cent , when it far exceeded its present boundaries, including also Alsace and Switzerland E of the Reuss river In 1079 the duchy was bestowed on the house of HOHENSTAUFEN, which in 1138 also obtained the imperial dignity. On the extinction (1268) of the dynasty, Swabia broke up into small temporal and ecclesiastic lordships and lost its political identity Territories in Alsace, S Baden, and Switzerland had already passed under the control of the house of Hapsburg The Swiss part became independent in 1291 and Alsace passed to France in 1648, but Breisgau and the other Hapsburg domains in S Baden remained Austrian until 1803–6, except in 1469–77, when they were seized by Charles the Bold of Burgundy. The rest of Swabia was held in large part by the counts (later dukes) of Württemberg, by the margraves of Baden-Durlach, by the landgraves of Fürstenberg, by the princes of Hohenzollern, by the bishops of Strasbourg, Constance, and Augsburg, by several powerful abbeys, and by a multitude of petty princes, counts, and knights. The numerous and prosperous towns of Swabia were not slow in taking advantage of the political divisions of the feudal lords Most of them had obtained the status of free imperial cities (i.e , virtually independent republics) by 1300. Among them were AUGSBURG, ULM, Schwäbisch Gmünd, Reutlingen, Ravensburg, and Rottweil. Their wealth, due mainly to commerce and industry, made them the most powerful element of the country, and they made their superior power felt by forming a series of leagues. The Swabian League of 1376–89 defeated Emperor Charles IV and the count of Württemberg. The most important Swabian League was that of 1488–1534 (see separate article). The chief Swabian cities accepted the Reformation in the 16th cent , but the countryside has remained divided between Catholics and Protestants to the present day With the commercial revolution of the 15th and 16th cent, the Swabian cities lost most of their importance When the Holy Roman Empire was organised in circles in the 16th cent., the Swabian Circle, corresponding to the present region, was created The elimination of the small ecclesiastic and feudal holdings in favor of Baden, Württemberg, and Bavaria was largely the work of Napoleon I and was effected at the diet of Regensburg of 1801–3 Swabia in its largest sense has remained a linguistic unit, the Alamannic or Swabian dialects of its various regions being closely related.

Swabian League, association of Swabian cities and other powers in SW Germany for the protection of trade and for regional peace Though associations were formed in Swabia as early as the 14th cent the Swabian League of 1488–1534 is the best known of the long series Strengthened by the end of 1488 through the association of over 26 cities with many abbots, prelates, nobles, and knights and supported by the emperor, the Swabian League had a court, a powerful army, and a formal constitution (renewed in 1496, 1500, 1512, and 1522) By its resistance to powerful territorial principalities, the league was aligned, in effect, with the cause of imperial reform The league's military power strengthened Emperor MAXIMILIAN I and his reforms, it backed the election (1519) of Charles V and used its power against Ulrich I of WÜRTTEMBERG, against Franz von SICKINGEN, and against the peasants in the PEASANTS WAR The dissolution of the league resulted from the opposition of interests between its feudal members and its cities and from the religious split caused by the Reformation The Protestant members in 1531 joined the SCHMALKALDIC LEAGUE

Swahili (swähē'lē) [Arabic, =coast people], generic name for the native population of the coast of Kenya, Tanganyika, and Zanzibar These people are descendants of Bantu Negroes and Arab traders and show great variety of racial type The **Swahili language** is a Bantu tongue, with large Arabic admixtures It is the lingua franca of much of E Africa and has had great commercial importance in the past

Swainsboro, city (pop 3,575), co seat of Emanuel co , E Ga , NW of Savannah, founded 1814, inc 1853 It processes the area's timber and cotton and ships livestock

Swains Island, islet (pop 147), American Samoa, c 200 mi N of Tutuila It is a ring of sand and coral, c 20 ft high, with luxuriant vegetation It was annexed to American Samoa in 1925.

swallow, small passerine bird of both hemispheres, of which there are about 100 species (including the MARTIN) Swallows are graceful in flight and have long, narrow wings, forked or notched tails, and weak feet They have short bills and wide mouths. Insects, which constitute their diet, are caught on the wing Their plumage is usually an iridescent black or blue Unlike most birds, swallows migrate by day The most common species in America is the barn swallow, which has a deeply forked tail The male has steel-blue plumage above, a chestnut-brown forehead and throat, and pinkish under parts Other American swallows, in all of which the tail is shallowly forked, are the tree, the bank, the cliff, the rough-winged, and the violet-green swallows The chimney swallow is a SWIFT

swallowing or **deglutition** (dē"glōōt'ĭshun), voluntary act by which food is passed from the oral cavity to the pharynx In swallowing, the bolus of food is forced against the palate by the action of the tongue The soft palate is elevated, closing off the nasopharynx as the food passes through the isthmus of the fauces (passage between the mouth and pharynx) The involuntary action of the muscles of the pharynx carries the food into the esophagus and thence to the stomach

Swammerdam, Jan (yän' svä'murdăm), 1637–80, Dutch naturalist. A pioneer in the use of the microscope, he made valuable observations on human anatomy and was probably the first to detect red blood corpuscles (1658) and the valves of the lymphatics (1664) He investigated the life histories of frogs and of insects, which he classified on the basis of their metamorphic development His study of the honeybee promoted scientific beekeeping His chief collection of descriptions and of accurate and finely executed drawings, based on expert dissection and microscopic observations, were first published in the original Dutch accompanied by a Latin translation (2 vols., 1737–38) and appeared in English as *The Book of Nature* (1758). He wrote a life history of the May fly (1675)

swamp, area where the soil, saturated with water, is spongy and in places inundated. Moisture accumulates where normal drainage is prevented by the flatness of the land, by impervious subsoil, or by luxuriant vegetation. Swamps are commonly formed in lake basins (especially of oxbow lakes), on coastal plains, flood plains, and deltas, and in glaciated areas; tidal swamps are found in estuaries and along low coasts. Soil-covered areas of arctic tundras become swamps when the snow melts, in arid regions, swamps exist as alkali flats or as saline marshes. In the United States swamplands are concentrated chiefly in the Great Lakes region, in S Louisiana, and on the Atlantic coastal plain (e.g., Dismal Swamp and the Everglades). Undrained swamps are suitable for rice culture; swamps reclaimed by drainage or by chemical treatment constitute rich agricultural lands because of the high humus content Swamp vegetation varies with the climate. Types of swamps include the BOG, the fen, inundated lowland typified by the Fens (see FENS, THE) in England, the marsh, covered with water and treeless, and moorland, overlaid with peat and in N Europe characterized by heather.

swamp mallow : see HIBISCUS.

Swampscott (swŏmp'skŭt), town (pop. 10,761), E Mass., a coast resort NE of Boston; settled 1629, set off from Lynn 1852 The Humphrey House dates from the 1630s.

Swan, John Macallan, 1847–1910, English sculptor and painter, best known for his spirited studies of animals He is represented in the British Museum and in the Tate Gallery, London, and in the Frick Collection, New York The lions at the Rhodes Memorial (Capetown, South Africa) are his work

Swan, Sir Joseph Wilson, 1828–1914, English electrician. He made the first practical incandescent lamp with a carbon filament and devised improvements in connection with photography, including the carbon process of printing. He was knighted in 1904.

swan, large aquatic bird of both hemispheres, related to the ducks and geese. It has a long, gracefully curved neck The extremely long, convoluted trachea makes possible the far-carrying calls The orange-billed white swan of ornamental ponds is the mute swan of Old World origin It breeds in the wild state in parts of Europe, Asia, and the United States. During the breeding season it has a trumpetlike note, softer in the tame birds The whistling swan migrates from the arctic to Mexico Conservation measures saved the almost extinct trumpeter swan of North America, the largest species Wild species in Europe include the whooper (or whooping) and the Bewick swans The black swan is native to Australia, and the black-necked swan to South America

Swann, William Francis Gray, 1884–, American physicist, b. England, grad Univ of London (B Sc , 1905, D Sc , 1910) He came to the United States in 1913, served (1913–18) at Carnegie Institution, and then taught successively at the universities of Minnesota and Chicago and at Yale In 1927 he became director of the Bartol Research Foundation of Franklin Institute His research includes studies of atmospheric electricity, cosmic rays, electrodynamics, and relativity His works include *Architecture of the Universe* (1934)

Swan River, town (pop 1,175), W Man , on the Swan river and NW of Dauphin It is a distributing center for a lumber, grain, and stock-raising region

Swansea (swŏn'sē, -zē), village (pop 6,988), S Ont , just W of Toronto. It is a residential and industrial suburb.

Swansea. 1 (swŏn'sē) Village (pop 1,156), SW Ill , near East St Louis, inc 1895 **2** (swŏn'zē) Town (pop 4,684), SE Mass , NW of Fall River, settled 1632, set off from Rehoboth 1668 Textile products are made here

Swansea (swŏn'zē, -sē) or **Abertawe** (ăburtou'ē), county borough (1931 pop 164,797, 1947 estimated pop. 154,220), Glamorganshire, Wales, at the mouth of the Tawe It is a metallurgical center, having long manufactured tin plate; there are sheet-metal mills and foundries for smelting many ores—copper, iron, zinc, nickel, silver, and gold Other industries are engineering, shipbuilding, oil refining (at the suburb Llandarcy), and the export of anthracite The Royal Institute of South Wales and the University College of Swansea are here A point of interest is the ruined Norman castle Heavy air raids in 1941 damaged the city Swansea ware, of rich blue coloring with decorative painting, was made at the Swansea potteries in the first half of the 19th cent.

Swanson, Claude Augustus, 1862–1939, U S government official, Secretary of the Navy (1933–39), b Pittsylvania co., Va , grad Randolph-Macon College, 1885, and Univ. of Virginia law school, 1886 He practiced law in Chatham, Va., and after serving (1893–1905) in the U.S. House of Representatives, he was (1906–10) governor of Virginia In the Senate (1910–33) Claude A Swanson became recognised as one of America's foremost authorities on naval and foreign affairs: he was a delegate to the London Naval Conference in 1931 and the Geneva Disarmament Conference in 1932. As U.S. Secretary of the Navy, Swanson directed a vast naval

expansion program On his death he was succeeded by Charles Edison

Swanton, John Reed, 1873–, American ethnologist, b Gardiner, Maine, grad Harvard (B A , 1896, Ph D , 1900) An authority on American Indians, he was (1900–1944) an ethnologist with the Bureau of American Ethnology His numerous works include studies of Chickasaw, Creek, Choctaw, Haida, Tlingit, and other Indian groups

Swanton. 1 Village (pop 1,594), NW Ohio, SW of Toledo Machinery and furniture are made here 2 Town (pop 3,543), NW Vt , on the Missisquoi and N of St. Albans The Jesuits established a mission among the St Francis Indians in the region c 1700; English settlement began in 1765 Iron was made at Swanton at intervals, 1800–1868, of local bog ore, the first marble mill was built in 1812. Smuggling brought considerable wealth to Swanton after the embargo of 1807 and in the War of 1812 Barracks built here in the War of 1812 were burned by the British Missisquoi Airport, near Swanton village, is a port of entry for airplanes

Swanzey (swān'zĭ), town (pop 2,262), SW N H , S of Keene, granted 1733, inc 1753 The first settlement was destroyed by Indians in 1747 Denman Thompson was born here, the "Old Homestead" of his play is preserved

Swarthmore (swôrth'môr, swŏth'–), residential borough (pop. 4,061), SE Pa , near Philadelphia It is the seat of **Swarthmore College** (nonsectarian, coeducational), a leading small college, chartered in 1864 and opened in 1869 by Friends There is an engineering division On the beautiful campus is the birthplace of Benjamin West Under Frank Aydelotte (1921–40), Swarthmore introduced a plan since copied by many colleges exceptional upperclassmen replace the usual schedule by reading for honors, with comprehensive examinations Creative activities and athletics are planned for all students See Swarthmore College Faculty, *An Adventure in Education* (1941)

Swasey, Ambrose, 1846–1937, American engineer and manufacturer, b Exeter, N H While an apprentice toolmaker in Exeter, he met Worcester Reed Warner, a fellow apprentice Later they worked in a machine shop in Hartford, Conn , and in 1880 went to Chicago, where they established a machine-tool factory The firm moved (c 1881) to Cleveland, Ohio, and was incorporated (1900) as the Warner and Swasey Company The firm produced an epicycloidal milling machine, an accurate dividing machine, a gear-cutting machine, and the Swasey range and position finder, adopted by the U S government However, it is known especially for the manufacture of telescope mountings, notably the mountings of the 40-inch refracting telescope at Yerkes Observatory and of the 36-inch refractor at Lick Observatory

Swat (swät), state, part of the transborder area of North-West Frontier Prov , Pakistan The ruler is called the wali

Swatow (swä'tou'), Mandarin *Shan-t'ou*, city (pop 214,990), Kwangtung prov , China, a port on the South China Sea, near the mouth of the Han river When it was opened to foreign trade in 1860, it was a minor fishing village Today sugar is its chief export

Swaziland (swä'zēländ), British protectorate (6,704 sq mi , pop 186,880), SE Africa The capital is Mbabane Swaziland is bordered on the south, west, and north by the Union of South Africa and on the east by Mozambique It is mainly a plateau (500–5,000 ft high) which offers much excellent farming and ranching country The chief export is live cattle Cotton and tobacco are grown, asbestos is mined, and there is lumbering Some gold is also mined, and there are large untapped coal deposits Roads connect with railheads in the neighboring countries Europeans first settled in Swaziland in the 1880s, and in 1888 the Swazi king allowed them self-government Since 1906 Swaziland has been a protectorate ruled by a commissioner

swearing, in law see OATH

sweat or **perspiration,** secretion of the sebaceous glands of the skin, containing water, urea, salts, and other substances Sweat performs the function of excretion, ridding the body of waste products, and it also aids in the control of body temperature Emotional stress and muscular exercise increase the rate and amount of the excretion

sweating system, method of exploiting labor by supplying materials to workers and paying by the piece for work done on these materials in the workers' homes or in small workshops The system has been applied especially to work that does not require expensive machinery, as in making garments and artificial flowers Employees are found among women with small children, children whom factories could not legally employ, and the aged and invalids who could not secure work in a factory. The evils associated with this system have been long hours (sometimes 15–18 hr a day), very low wages, and unsanitary conditions Reducing the rate of pay speeds up the work and prolongs the working day. The term has also been applied to the subcontracting of work to a middleman who has the work done in his home by persons hired by him The system is a minor manifestation in the process of centralising the profits of industry that has gone on since the Industrial Revolution In England it first appeared early in the 19th cent In the United States it began in the Civil War period, when the wives and children of soldiers were employed in making uniforms Before the Industrial Revolution, household industries had been customary, but were quite different in nature and effect The household had supplied its own materials, had marketed the finished product in the neighborhood, and had combined its industry with subsistence farming With the introduction of mass standardization in industry, the advantages of the low cost of production of the sweating system have been practically eliminated See Beatrice Webb, *How Best to Do Away with the Sweating System* (1892), J R Commons, *Trade Unionism and Labor Problems* (1905), publications of the Consumers' League

swede see TURNIP

Sweden, Swed *Sverige* (svĕr'yē), kingdom (173,423 sq mi , including 14,937 sq. mi covered by lakes, pop 6,763,685), N Europe, occupying the eastern and larger part of the Scandinavian Peninsula STOCKHOLM is the capital Sweden borders on Norway in the west, on Finland in the northeast, on the Baltic Sea (including the Gulf of Bothnia) in the east and south, and on the Sound, the Kattegat, and the Skagerrak in the southwest It includes several islands, notably GOTLAND and ÖLAND in the Baltic Reaching from lat 69° 4′ N to lat 55° 20′ N, Sweden extends for c 970 mi from north to south and averages only c 200 mi from west to east Its long western frontier is mountainous, reaching its highest peak (6,965 ft) in the Kebnekaise The terrain slopes down to the eastern and southern coasts, and the many rivers—notably the GÖTA, the DAL, the ANGERMAN, the UME, and the LULE—run generally southeast The country is divided into three large regions, the southern tip of the peninsula, called Gotaland or Götarike, includes the historic provinces of Skane, Blekinge, Halland, Smaland, Ostergotland, Vastergotland, Dalsland, and Bohuslan To the north of Gotaland, but still in the southern third of Sweden, is Svealand or Svearike, with the historic provinces of Sodermanland, Uppland, Vastmanland, Narke, Varmland, and Dalarne Norrland, occupying the northern two thirds of the country, consists of the historic provinces of Gastrikland, Halsingland, Harjedalen, Jamtland, Medelpad, Angermanland, Vasterbotten, Norrbotten and Lapland The largest cities of Sweden—STOCKHOLM, GOTEBORG, MALMO, NORRKOPING, and HALSINGBORG—are all in Svealand and Gotaland and are coastal cities In the south also are the largest lakes—VANERN, VATTERN, and MALAREN Agriculture is concentrated mainly in the south. Less than 10 percent of the total area of Sweden is under cultivation, but the yield is rich and farming methods are highly efficient Most farmers are small landowners, living in villages rather than on isolated farms Their prosperity has been greatly furthered by farmers' cooperatives, of which most are members Wheat and other cereals are the main crops, dairying is an essential part of Swedish economy The three great natural resources of Sweden are forests, which cover more than half the land, high-grade iron ore (especially at KIRUNA in Lapland), and hydroelectric power Its main industries are based on these Timber, floated down the rapid rivers, is utilized in sawmills and furniture, match, and paper factories, which are powered by the same rivers Swedish steel has long been famous for its excellence FALUN, in KOPPARBERG CO , central Sweden, has the oldest Swedish mining concern The development of electrometallurgy has greatly benefited Sweden, which lacks sufficient coal Other mineral resources include silver, lead, zinc, copper, and manganese Lumber and lumber products, iron ores, and machinery are the chief exports Swedish decorative art and folk art also enjoy world-wide reputation, as does its fine glassware, manufactured at ORREFORS Fishing, shipping, and shipbuilding also are important occupations Though not favored by its situation as a tourist country, Sweden attracts many visitors through the beauty and variety of its handsome old towns and its modern model cities The exemplary manner in which Sweden has solved its economic and social problems and its plentiful and cultured way of life greatly add to the attraction Administratively, Sweden is divided into counties, the boundaries of which only occasionally coincide with those of the historic provinces. The Swedish constitution vests executive power in the king, who acts on the advice of his cabinet The legislative power rests in the bicameral parliament (see RIKSDAG) and the king, whose consent is necessary to validate legislation. Suffrage is universal Though enjoying wide power under the constitution, the king in practice rarely makes use of his full prerogatives, and the government is one of parliamentary democracy The nobility possesses no political privileges The Lutheran Church is the established church of Sweden, and almost the entire population is Lutheran There are 13 dioceses UPPSALA is the metropolitan see and has the older of the two Swedish state universities, the other being at LUND Stockholm and Goteborg have private universities The educational and cultural level is very high, and the school system exemplary Social legislation is very advanced in social welfare, it provides for a universal old-age and disablement pension system, for maternity benefits, workmen's compensation insurance, and allowances for children, regardless of their parents' financial status Unemployment insurance is voluntary; health insurance was made compulsory by a law (1946) to take effect in 1951 Sweden pioneered in the field of liquor legislation with the Bratt system (see LIQUOR LAWS) Except for c 30,000 Finns and c 7,000 Lapps in N Sweden, the population is of Swedish stock, largely descended from Scandinavian tribes (see GERMANS) who probably were settled in Sweden by the Neolithic period In early historic times Svealand was inhabited by the Svear (mentioned as Suiones by Tacitus), from whom the Swedes derive their name They were engaged in wars with their southern neighbors, the Gotar (Swed *Gotar*) of Gotaland, who according to an unproved tradition were the ancestors of the Goths Later Swedish kings took the title *Rex Gothorum et Vandalorum*, and Sweden was known as the Gothic North By the 6th cent A D the Svear had conquered the Gotar, with whom they merged The early Swedes were combined and confused with other Scandinavians as the piratical VIKINGS and NORSEMEN The Swedes alone, known as VARANGIANS in Russia, extended (10th cent) their influence to the Black Sea The Swedish kings warred for centuries with their neighbors, the Danes and Norwegians St Ansgar introduced Christianity c 829, but paganism was fully stamped out only in the 12th cent by ERIC IX, who also conquered Finland The royal authority was weakened before the 13th cent by the rise of an independent feudal class The Swedish cities also began to acquire wide rights at that period, and were strongly influenced by German merchants of the HANSEATIC LEAGUE In 1319 Sweden and Norway were united under MAGNUS VII, and in 1397 Queen MARGARET effected the personal union of Sweden, Norway, and Denmark through the KALMAR UNION However, Margaret's successors were unable to control the Swedes, who would not submit to being governed from Copenhagen The actual power was held for long periods by regents (notably those of the STURE family), chosen by the Swedish diet CHRISTIAN II, who asserted his claim to Sweden by force of arms, ordered a massacre (1520) of Swedish nobles at Stockholm This "Stockholm Blood Bath" stirred the Swedes to new resistance, and in 1523 they made Gustavus Vasa their king as GUSTAVUS I He was the founder of the modern Swedish state The southern provinces of Bohuslan, Halland, Blekinge, and Skane and the islands of Gotland and Oland remained in Danish hands, but Gustavus prepared their eventual recovery by building up Swedish military and naval power He rid Sweden of the grip of the Hanseatic League, strengthened the central authority, made the kingship hereditary in his dynasty (see VASA), and made Lutheranism the state religion His successor, ERIC XIV, began the Swedish conquest of LIVONIA by taking (1561) its northern section (Estonia) Swedish interests in E Europe were further enhanced by the marriage of John III, Eric's successor, to the sister of Sigismund II of Poland Their son, SIGISMUND III of Poland, was a Catholic, and his accession (1592) to the Swedish throne was deeply resented He was deposed in 1599, and his uncle, CHARLES IX was regent, then king Charles's son, GUSTAVUS II (Gustavus Adolphus) made Sweden a great European power In war with Russia he acquired (1617) Ingermanland and Karelia, from Poland, with which he resumed hostilities in 1621, he obtained (1629) nearly all Livonia With his entry (1630) into the THIRTY YEARS WAR, Sweden became the dominant Protestant power of continental Europe After the death of Gustavus II, his chancellor, OXENSTIERNA, directed the destinies of Sweden during the reign of Queen CHRISTINA The Peace of Westphalia (see WESTPHALIA, PEACE OF) in 1648 gave POMERANIA and the archbishopric of BREMEN to Sweden, thus making the Swedish kings princes of the Holy Roman Empire CHARLES X, who became king on the abdication (1654) of Christina, successfully warred against Poland and Denmark The southern provinces of Sweden were definitively recovered from Denmark in 1660 Under CHARLES XI, Sweden became an absolute monarchy, and the great nobles lost their independence In the NORTHERN WAR (1700–1721), which broke out on the accession of CHARLES XII, Sweden was crushed after celebrating its greatest military triumphs The treaties of Stockholm (1720) and Nystad (1721) forced Sweden to cede the archbishopric of Bremen to Hanover, part of Pomerania to Prussia, and Livonia, Ingermanland, and Karelia to Russia, Sweden was reduced to a secondary power. Internally, Sweden was torn in the 18th cent by political intrigue and civil discord Ulrica Eleonora (d. 1741) succeeded her brother, Charles XII, in

1718 and ruled jointly with her husband, Frederick I (d 1751), a prince of Hesse-Cassel A new constitution gave increased powers to the Riksdag, but the political scene was dominated by the two factions of nobles, the Hats, who favored an aggressive anti-Russian policy in alliance with France, and the Caps, who sought peaceful relations with Russia In 1751 the house of Oldenburg-Holstein-Gottorp ascended the Swedish throne in the person of Adolphus Frederick His son, GUSTAVUS III, restored absolutism in 1772, but was assassinated (1792) by a conspiracy of nobles GUSTAVUS IV was a thoroughly despotic and reactionary ruler He involved (1803) Sweden in war against NAPOLEON I and in 1808 had to cede Finland to Russia A liberal revolution overthrew him and placed his uncle, CHARLES XIII, on the throne From 1810, however, Swedish policy was in the hands of Charles's adopted heir, Marshal Bernadotte (later CHARLES XIV) Sweden again joined the allies against Napoleon in 1813, the Congress of Vienna, though it did not restore Pomerania and Finland to Sweden, compensated Sweden (1814) with NORWAY, which remained a separate kingdom in personal union with Sweden This was the last war in which Sweden participated The history of 19th-century Sweden, under the reigns of Charles XIV, OSCAR I, CHARLES XV, and OSCAR II, was one of progressive liberalization in government and of industrial development The basis of the present constitution was laid in 1864 The industrial development of the late 19th cent was accompanied by the rise of the Social Democratic party, which was to play the major role in Swedish politics after 1920 Relations with Norway were strained throughout the 19th cent and in 1905 the union of Norway and Sweden was peacefully terminated Under GUSTAVUS V, who acceded in 1907, Sweden averted involvement in two world wars, making neutrality the basis of its foreign policy, and achieved economic prosperity and social progress Sweden entered (1946) the United Nations It joined the European Recovery Program but not the North Atlantic Treaty Sweden in the 17th cent had displayed some short-lived colonial aspirations in North America (see NEW SWEDEN), but its main contribution to the New World was the immigration of some 1,500,000 Swedes to the United States (mostly to the Middle West) between 1870 and 1914 See R N Bain, *Scandinavia* (1905), Carl Hallendorf and Adolf Schuck, *History of Sweden* (1929); Agnes Rothery, *Sweden The Land and the People* (1934), Ragnar Svanstrom and C F Palmstierna, *A Short History of Sweden* (1934), Margaret Cole and Charles Smith, *Democracy in Sweden* (1939); Marquis W Childs, *Sweden The Middle Way* (rev ed , 1947), Hudson Strode, *Sweden Model for the World* (1949), David Hinshaw, *Sweden Champion of Peace* (1949), F C. Nano, *Land and People of Sweden* (1949)

Swedenborg, Emanuel (swē'dənbôrg, Swed āmā'-nüĕl'' svā'dunbôry''), 1688–1772, Swedish scientist, philosopher, and theologian His surname was originally Swedberg After study at the Univ. of Uppsala ending in 1709, he went to London and then to Germany for further work in scientific subjects Swedenborg returned to Sweden in 1715 with numerous scientific treatises which he had written during his five years of research He gave most careful study to almost every scientific field and wrote copiously, often anticipating later discoveries In 1716 he was appointed assessor of the Royal College of Mines, a position he held until 1747 His family was ennobled in 1719 as a result of Swedenborg's invention of machines for transporting boats overland during the siege of Fredriksten He took a seat in the house of peers, where he showed himself an ardent reformer In the years immediately following he devoted himself to scientific research and writing Among his books of this period were *The Economy of the Animal Kingdom* (1740–41) and *The Animal Kingdom* (1744–45) In 1747 he resigned his post as assessor of mines, abandoned all material sciences, and devoted himself completely to spiritual matters By his own account he had been preoccupied with thoughts of God since early childhood Several experiences of what he considered divine revelation convinced him that he was the direct instrument of God Everything relating to the doctrines of the church he claimed to have received personally from the Lord Himself, and to him alone had the true sense of the Scriptures been opened by the immediate vision of God Swedenborg regarded his teachings as the basis of the New Church, the inauguration of which he believed to represent the second coming of the Lord It was not Swedenborg's intention to establish a new sect, in his mind the New Church might include members of any Christian churches. Some time after his death the followers of Swedenborg organized the Church of the New Jerusalem (see NEW JERUSALEM, CHURCH OF THE) and most of the established doctrines of this church are based on the insights of Swedenborg Among his writings are *Arcana Coelestia* (1749–56), *Heaven and Hell* (1758), and *Divine Love and Wisdom* (1763) See studies by Herbert Dingle (1938) and W. P Swainson (1940), biography by Signe Toksvig (1948).

Swedesboro, borough (pop 2,268), SW N J , on Raccoon Creek and SW of Camden, settled c 1670, inc 1902. It is a farm trade center Swedes bought this area from the Indians in 1641, built a fort, and planted settlements Swedesboro was partly burned by the British, 1778. Trinity Church was built in 1784

Swedish clover: see ALSIKE.

Swedish language, North Germanic language of the Indo-European family. See LANGUAGE (table)

Swedish literature. Modern Swedish literature begins with the translation (1540) of the Bible by Olaus Petri The first Swedish poet, Jorge Stiernhuelm (1598–1672), was followed by the poet Gunno Dahlstjerna and the historian and poet Olof von Dalin In the next generation appeared the greater poet Carl Michael Bellman and the poet and critic Johan Henrik Kellgren, who was the chief figure of the advance in Swedish letters stimulated by GUSTAVUS III, founder of the Swedish academy and author of numerous works Swedenborg published his works on science, philosophy, and religion and laid the foundation of the Swedenborgian sect in the middle of the 18th cent At the beginning of the 19th cent the leading writers were the poets Erik Johan Stagnelius (1793–1823), J. O Wallin (who wrote many hymns), F M Franzen, K F C Dahlgren (1791–1844), and Per Henrik Ling, the Finnish poet who wrote in Swedish, J L Runeberg, and the author of *Frithjof's Saga*, Esaias Tegner Fiction had a later flowering C J L Almquist published a famous collection of romances in *The Book of the Thorn Rose* (14 vols , 1832–51), A J Rydberg (1828–95), M J Crusenstolpe (1795–1865), Fredrika Bremer, Zakarias Topelius (a Finn), and Gustaf af Geijerstam were well-known novelists of the 19th cent A A Afzelius was a historian and folklorist The chief poet of the latter part of the century was Gustav Froding Selma Lagerlof is probably the most widely read Swedish writer, as her novels and stories have been translated into many languages The greatest Swedish dramatist (he was also a great novelist) is Strindberg In the early 20th cent Verner von Heidenstam, poet laureate, was a Nobel Prize winner Another poet of importance is the lyricist E A Karlfeldt Hjalmar Soderberg, Hjalmar Bergman (1883–1930), and Sigfrid Siwertz are novelists, and the first two are playwrights as well After 1910 Swedish authors were influenced by the social reform movement, and their books describe realistically working-class life in both town and country Among the most popular of these proletarian writers are Gustav Hellstrom (1882–), Elin Wagner, (1882–), Albert Engstrom (1869–1940), Karl Gustav Ossiannilsson (1875–), Dan Andersson (1888–1920), Eyvind Johnson (1900–), Ivar Lo-Johansson (1901–), Vilhelm Moberg (1898–), and Harry Martinson (1904–) See Frederika Blankner, ed. and tr , *History of the Scandinavian Literatures* (1938), Alrik Gustafson, *Six Scandinavian Novelists* (1940), *Scandinavian Plays of the Twentieth Century* (1st and 2d series, 1944), W G Allen, *Renaissance in the North* (1946), H G Leach, ed., *Pageant of Old Scandinavia* (1946)

Swedish turnip. see TURNIP

Sweelinck, Jan Pieterszoon (yan' pē'tûrsŏn swā'-lĭngk), 1562–1621, Dutch organist and composer, called the "maker of German organists" because the line of his pupils descended directly to J S Bach In his fugues he was the first to give an independent part to the pedals

sweepstakes, the total amount of money contributed by a number of persons on any contest, usually a horse race, from which prizes are awarded to the holder of winning tickets In the case of a horse race, the draw is made from the names of all the horses entered in the race and huge numbers of blanks. Thus most ticket holders draw blanks, while only a few draw the name of a horse In some sweepstakes, prizes are awarded to persons holding tickets bearing the name of horses that win, place, and show, while in others prizes are given also to those whose tickets bear the names of all the horses that started in the race In still another form of sweepstakes, the tickets sold bear numbers, some of which are to be assigned to the horses that will run in the race The Irish Hospitals Sweepstakes is probably the most popular in existence today. Although in the United States it is unlawful to import, to send through the mails, or to ship in interstate commerce any sweepstakes tickets, they nevertheless continue to be distributed

Sweet, Henry, 1845–1912, English philologist and phonetician An authority on Anglo-Saxon and the history of the English language, he was also a pioneer in modern scientific phonetics His *History of English Sounds* (1874, rev ed., 1888) was a landmark in that study In 1901 he was made a reader in phonetics at Oxford Among his other writings are *A Handbook of Phonetics* (1877), *A New English Grammar* (2 parts, 1892–95), *The History of Language* (1900), *The Sounds of English* (1908), and works on Anglo-Saxon, Middle English, and Icelandic.

sweet alyssum: see ALYSSUM.

sweet bay: see LAUREL and MAGNOLIA.

sweetbread. The thymus gland (known as thfoat sweetbread) and the pancreas (stomach sweetbread), especially of the calf and lamb, are considered delicacies and are believed to be rich in mineral elements and vitamins The pancreas is generally preferred to the thymus, which has more connective tissue. Sweetbreads are highly perishable and immediately after removal from refrigeration should be soaked and parboiled, then creamed, curried, braised, or otherwise prepared for serving

sweetbriar: see SWEETBRIER

Sweet Briar College (swēt' brī"ur), at Sweet Briar, Va , NNE of Lynchburg, nonsectarian, for women, chartered 1901, opened 1906 Individualized education and honors work are stressed, with interdepartmental majors In 1948 Sweet Briar began sponsoring the junior-year-in-France plan, open to students in other colleges

sweetbrier, sweetbriar, or **eglantine** (ĕg'lŭntĭn, -tēn) [O Fr. from Latin, =needle], wild rose of Europe (*Rosa eglanteria* or *rubiginosa*), cultivated and now naturalized in the United States The bush has fragrant foliage and, in the spring, pink, usually single blossoms, which are followed by rose hips sometimes used in preserves Eglantine has been a favorite of English poets, but this name is occasionally used for other roses and for a honeysuckle (*Lonicera periclymenum*)

sweet cicely (sĭs'ulē), name for the European plant *Myrrhis odorata* and for closely allied American and Asiatic plants of the genus *Osmorhiza* Both sweet cicelies are fragrant perennials having fernlike leaves, terminal clusters of small usually white flowers, and licorice-flavored roots, once considered medicinal They resemble the poison and water hemlocks but are usually distinguishable by their elongated, rather than rounded, seedlike fruits The European sweet cicely, sometimes called myrrh, was formerly used for salads and greens, and an oil to polish oak was extracted from the seeds

sweet clover or **melilot,** the sweet-smelling annual and biennial herbs of the genus *Melilotus* They are legumes, with pinnate leaves composed usually of three narrow leaflets and with white or yellow flowers in long, slender clusters Sweet clovers are used as forage, cover, and seeding crops They are attractive to bees, and the nectar is thus a source of honey Both white and yellow sweet clover are natives of the Old World, widely naturalized in America

sweet fern, small North American shrub (*Comptonia,* or *Myrica, asplenifolia*), in the United States it is found chiefly in the East, but is cultivated elsewhere in dry sandy places It is related to the bayberry and has fragrant, fernlike foliage that has been used medicinally and for tea. Sweet fern is also a name for a true fern

sweet flag or **calamus** (kăl'umus), perennial herb (*Acorus calamus*), widely distributed in moist places of the Northern Hemisphere and sometimes cultivated in herb gardens and by pools It has a fleshy rootstalk and long, narrow irislike leaves The club-shaped inflorescence, densely set with tiny yellowish blossoms, is produced at the side of what appears to be another leaf but is in reality the flower stalk and its spathe, not showy as in the related jack-in-the-pulpit The rootstalk is pungent and aromatic and has been used as a medicine (for which it was prized by American Indians) and to flavor beverages, it is candied as a confection and powdered for aromatic purposes An oil is sometimes distilled out for perfumery

sweet gum, deciduous tree (*Liquidambar styraciflua*), native to the E United States, Mexico, and Guatemala The leaves are palmately lobed, nearly star shaped, and their coloring in the fall ranges from deep yellow to rich crimson The fruits are round with hornlike projections, the twigs and bark are corky Its hard wood is commercially valuable for furniture (sometimes as a substitute for Circassian walnut and mahogany), interior finishing, dishes, and boxes. In the warmer parts of its range the sweet gum yields a fragrant balsam called American storax or copalm, used like liquid storax as an expectorant and in perfumes and sometimes as a chewing gum Liquid storax is obtained from *L. orsentalis*

Sweet Home, town (pop 1,090), W central Oregon, SE of Albany, in a timber area; settled in the 1840s, inc 1893

sweet marjoram (mär'jurum), Old World aromatic downy herb (*Majorana hortensis* or *Origanum majorana*), related to the mints and cultivated in gardens for flavoring The tops yield origanum oil, once used medicinally but more recently for perfuming soaps. The plant, although a perennial, is usually treated as an annual, since it is not hardy The closely related European pot or wild marjoram has similar uses

sweet pea, annual climbing plant (*Lathyrus odoratus*), a legume native to S Europe but, since its introduction to horticulture about 1700, widely cultivated for its fragrant flowers There are three main types dwarf, summer flowering (garden sweet peas), and winter flowering (florists' sweet peas) As cut flowers sweet peas are one of the more important of florists' plants and are available in a wide range of shades. They succeed best in cool weather and should be given an early start; if seed

are allowed to form, blossoming will cease The vines climb by tendrils and require a support

sweet potato, trailing vinelike herb (*Ipomoea batatas*) of the morning-glory family It is native to the tropics of the New World and is widely cultivated in warm and temperate regions for the edible tuberous roots The sweet potato was probably first cultivated by pre-Columbian Indians, the Virginia Indians are known to have grown two varieties Large crops are now grown annually in the United States—mostly in the South Sweet potatoes are eaten both fresh (baked, boiled, and prepared in various other ways) and canned They are a valuable source of vitamin A and relatively good sources of thiamine, riboflavin, and vitamin C Starch, syrup, and alcohol can be derived from sweet potatoes They have also been used in making breakfast foods, candy, and other products and for feeding stock The sweet potato is easily damaged by frost and bruised in handling It is propagated from sprouts The name YAM is often used, though incorrectly, for sweet potato in general For cultivation, see publications of the U S Dept of Agriculture and of state experiment stations

Sweet Springs, city (pop 1,413), W central Mo , on Blackwater river and NW of Sedalia, in a farm area, settled 1826

Sweetwater. 1 Town (pop 2,593), E Tenn , SW of Knoxville, on Sweetwater Creek between the Tennessee and Little Tennessee rivers, in an area of farms, timber, and barite mines, settled c 1850, inc 1875 Craighead Caverns are near by, as is Tennessee Military Institute **2** City (1940 pop 10,397, 1947 estimated pop 14,500), co seat of Nolan co , W Texas, W of Abilene Founded c 1876 and moved in 1881 to be on the railroad, it developed as a shipping center for cattle ranches of the rolling plains Today it ships wool and mohair, sheep and steers, and grain and feedstuffs, processes dairy products and cotton, and has an industrial tone, with a gypsum-products plant, an oil refinery, and railroad shops Near-by reservoirs, Lake Sweetwater on Bitter Creek and Lake Trammel on Sweetwater Creek, offer sports opportunities

sweet William, a species of PINK (*Dianthus barbatus*) native to the Old World and long popular as a garden flower It bears a densely set terminal cluster of fragrant flowers, commonly white and shades of red Although sweet Williams are usually cultivated as biennials, there are some, called annual sweet William, that bloom the first year from seed The wild sweet William is a PHLOX

Swellendam (swĕ'lundăm), town (pop 4,004), W Cape Prov , Union of South Africa One of the early settlements in Cape Colony, it was founded in 1746 It is on a railroad to Capetown, and it exports wool and grains

Swetchine, Anne Sophie Soymonoff (ăn' sŏft' soimônŏf' svuchĕn', svyĕchĕn'), 1782 1857, Russian author and mystic, who wrote in French She was the daughter of one of the founders of the Russian Academy Under the influence of Joseph de Maistre she became a Catholic in 1815 and a year later settled in Paris Her writings are available in English See B P Belloc, *Vignettes* (1866)

Sweyn (swān), c 960–1014, king of Denmark (986–1014), son of Harold Bluetooth Though baptized, he reverted to paganism and rebelled against his father, who was slain in battle Sweyn was expelled shortly after his accession by the Swedish king Eric the Victorious, but his subsequent marriage to Eric's widow led to his restoration to the Danish throne and to an alliance with Sweden At the battle of Svolder (1000) the Swedes and Danes defeated and slew King Olaf I of Norway and divided his kingdom Sweyn, who had already previously invaded England and exacted Danegeld from King ÆTHELRED, returned in 1003–4 and again in 1013, when the English submitted and accepted him as king He died before his coronation and was succeeded in Denmark and England by his son Canute The name also appears as Svein

Sweynheym, Conrad (kŏn'rät svīn'hīm), fl 15th cent , early printer Originally from near Mainz, Germany, Sweynheym with Arnold Pannartz c 1464 established in the monastery of Subiaco the first known printing press in Italy Greek type was used first in 1465 by Sweynheym and Pannartz at Subiaco They removed to Rome in 1467 Their type faces, though not truly roman, had capitals which were distinctly roman

Swidnica, Lower Silesia see SCHWEIDNITZ

Swift, Jonathan, 1667–1745, English author, b Dublin The posthumous and poor son of a Dublin steward of English origin, Swift was educated by his uncle at Kilkenny School and Trinity College, Dublin In 1689 he became secretary to Sir William Temple at "Moor Park," in Surrey, England Swift's poetry, largely Pindaric and largely bad, written there drew the scorn of his cousin, John Dryden He interrupted his service with Sir William in 1692 to become M A at Hart Hall, Oxford Disappointed of church preferment in England, Swift went to Ireland, where he was ordained an Anglican priest and in 1695 was made prebend of Kilroot In 1696 he returned to "Moor Park," and with *The Battle of the Books* (written 1697) he defended Temple's contention that the ancients were superior to the moderns in literature and learning It was published only in 1704, with *A Tale of a Tub*, Swift's satire on religious excesses Upon Temple's death in 1699, Swift became secretary and chaplain to the 2d earl of Berkeley in Ireland, here he wrote his delightfully absurd "Meditation upon a Broomstick," and in 1708–9 wrote the amusing series of papers signed Isaac Bickerstaff, in which he lampooned a quack astrologer, John Partridge After 1708 he was frequently in London, where he met Addison, Pope, Steele, and Arbuthnot Swift's early Whig sympathies were dashed in 1708 when that party demonstrated its unfriendliness to the Church of Ireland, and upon the defeat of the Whigs in 1710 he edited the Tory *Examiner* for a year His ironic *Argument* (1711) against abolishing Christianity continued his war on his ecclesiastical enemies He rapidly became important in politics, writing a spate of pamphlets which included *The Conduct of the Allies* (1711), *Remarks on the Barrier Treaty* (1712), and *The Public Spirit of the Whigs* (1714) and a number of satirical poems For diversion he and Arbuthnot founded the Scriblerus Club, among the members were Parnell, Gay, and Pope The letters which comprise Swift's *Journal to Stella* reveal his love for Esther Johnson (Stella), whom he had tutored at "Moor Park," and they also give a detailed account of his years in London Despite his love for Stella, Swift became involved with Esther Vanhomrigh (Vanessa), but he established his feelings as nothing more than friendly in the poem *Cadenus and Vanessa* (written c 1713) Swift was appointed dean of St Patrick's, Dublin, in 1713, and upon the downfall of the Tory ministry in 1714, he reluctantly returned to Ireland With his *Drapier Letters* (1724) Swift appeared as a champion of Irish rights, and *A Modest Proposal* (1729), a bitter exposé of the miserable condition of the poor in Ireland, made him a hero to the Irish His most famous work, the broad and often savage satire on human nature, GULLIVER'S TRAVELS, appeared in 1726 Swift had been partially deaf since early life from what is thought to have been labyrinthine vertigo In 1740 the disease became worse, and from 1742 until his death Swift was insane He was buried beside Stella in St Patrick's Cathedral, Dublin, and his fortune was left to build a hospital for the insane Swift remains today one of the great masters of English prose His range of interest was extreme, his touch at once light and powerful, and his insight keen and discerning—a proud and bitter genius See his *Prose Works* (ed by Herbert Davis, 14 vols , 1939–) and his *Poetical Works* (ed by Harold Williams, 3 vols , 1937), his *Journal to Stella* (ed by Harold Williams, 1948), biographies by Carl Van Doren (1930), Bertram Newman (1937), and R W Jackson (1939), Ricardo Quintana, *The Mind and Art of Jonathan Swift* (1936)

Swift, Lewis, 1820–1913, American astronomer, b Clarkson, N Y He discovered (1862) a comet of importance In 1882, when he was director of the Warner Observatory in Rochester, N Y , he received as a gift from the citizens of Rochester a 16-inch refractor, with the aid of which he made observations resulting in the discovery of more than 1,000 new nebulae and a number of comets This telescope was transferred to Lowe Observatory, California, when he went there as director For his discoveries he was awarded prizes and medals by astronomical societies in Europe and America

swift, bird related to the hummingbird and found in most parts of the world, especially in the tropics Superficially it resembles the swallow Swifts have long wings and small feet and can perch only on vertical surfaces They catch insects in their wide mouths while on the wing Among the swifts are the most rapid fliers known In the United States the commonest species is the chimney swift, incorrectly called chimney swallow It is sooty black above and lighter below Its spiny tail acts as a prop when it clings to the chimneys, in which it makes its nest of twigs cemented with saliva It winters in South America Some Oriental swifts make their entire nest of a salivary secretion These nests are used, especially in China, for food

Swift Current, city (pop 6,379), SW Sask , on Swift Current Creek and W of Moose Jaw It is a distributing center for SW Saskatchewan, with grain elevators, lumber- and coalyards, an oil refinery, tanneries, and dairies and is the site of a dominion experiment station

Swilly, Lough (lŏkh swĭl'ē), long, narrow, irregular, islanded inlet of the Atlantic, Co Donegal, Ireland Fanad Point, at the entrance, has a lighthouse There was a British naval base here in the First World War The fort was evacuated by the British in 1938, under an agreement with the Irish government

swimming, self-propulsion through water without artificial aid Swimming probably calls more muscles into play with exact coordination than most other sports Swimming strokes should be accomplished with the least possible resistance to water, there should be a minimum of splashing so that the forward motion is smooth and not jerky The stroke most commonly used today to attain speed in swimming is the crawl stroke, standardized in Australia (hence usually called the Australian crawl) and perfected in the United States In the crawl stroke the body is prone, alternating overarm strokes and the flutter kick are used, and the head alternates from side to side at water level The trudgen stroke (named for the man whose speed in using it gained fame), popular in Spain, Latin America, and then England, also involves alternate overarm strokes from a prone position, but a scissors kick is used and the head remains on one side The backstroke is done in supine position and in racing requires alternate over-the-head strokes and a flutter kick For endurance swimming, the backstroke involves alternation of the frog kick with simultaneous strokes of the arms, extended at shoulder level and moving in an arc toward the hips The sidestroke, a relaxing movement, entails a forward underwater stroke with the body on one side and a scissor kick The breaststroke is also a restful means of propulsion and is accomplished in a prone position, frog kicking alternates with a simultaneous movement of the arms from a point in front of the head to shoulder level The dog paddle, taking its name from the way a dog swims, is done by reaching forward with the arms under water and by a modified flutter kick In free-style swimming any desired stroke may be used, but the crawl, considered the speediest, is more generally used No matter what the stroke, however, the breathing should be easy and natural, since the specific gravity of the human body, although it varies with the individual, is almost always such that the body floats if the lungs are functioning normally In swimming races, facility in diving from a firm surface is essential Fancy diving from springboards of specified heights, however, also forms a separate event at most swimming meets Swimming, a universal practice which claims many participants in all sections of the world, became organized as an amateur sport in the late 19th cent in several countries Its popularity was increased with the development and improvement of the swimming pool, and at the first modern Olympic games (1896) swimming became part of the meet Olympic swimming meets for women were included in 1912 Today Olympic swimming events comprise 100-, 400-, and 1,500-meter free-style races, the 800-meter relay race, the 100-meter backstroke and 200-meter breaststroke races, springboard and high diving events, and WATER POLO For many decades swimming the English Channel has been highly publicized The first successful attempt was made (1875) by Matthew Webb, while Gertrude Ederle was the first woman to perform (1926) this feat See Matt Mann and C C Fries, *Swimming Fundamentals* (1940), S G Hedges, *Swimming and Diving* (rev ed , 1949); J A Torney, *Swimming* (1950)

Swinburne, Algernon Charles, 1837–1909, English poet Throughout his life, Swinburne retained the impressions and enthusiasms of his childhood and youth the scenery of the Northumbrian and Hampshire coasts, the Greek dramatists, Sappho, the Elizabethan and Jacobean playwrights, French and Italian literature, and the writings of Hugo and Landor His careers at Eton (1849–53) and Oxford (1856–60) were both cut short by his unfitness for academic discipline, and in 1860 he settled in London on an allowance from his father His two blank-verse plays *The Queen Mother and Rosamond* (1860) attracted little attention, but his reputation grew among the admirers of the Pre-Raphaelites *Atalanta in Calydon* (1865), a poetic drama classic in form but modern in temper, brought him general notice His *Poems and Ballads* (1866) were savagely attacked for their sensuality and pessimism, but almost as excessively praised in other quarters for their infusion of fresh vitality into Victorian poetry and for their technical facility Swinburne's enthusiasm for the republican dreams of Mazzini found expression in *A Song of Italy* (1867) and in *Songs before Sunrise* (1871) Dissipations and repeated epileptiform attacks brought him near death in 1878 and 1879, but he was restored to health under the supervision of Theodore WATTS-DUNTON, with whom he lived after 1879 To Watts-Dunton's influence have been attributed many of Swinburne's later opinions and the comparative inferiority of much of his later verse Over 25 volumes of Swinburne's poetry and poetic drama and at least half as many of his criticism were published in his lifetime and posthumously His three closet dramas on Mary Queen of Scots—*Chastelard* (1865), *Bothwell* (1874), and *Mary Stuart* (1881)—suffer from lack of compression and overfidelity to historical incident, but contain some striking scenes *Tristram of Lyonesse* (1882) bodies forth an intensely passionate version of the medieval legend in rich imagery and eloquent verse that sometimes approaches sublimity Many of Swinburne's lyrics are weakened by verbosity and by excessive use of stylistic tricks—alliteration, assonance, internal rhyme, intricate metrical patterns These weaknesses do not mar such successes as the choruses from *Atalanta* ("When the hounds of spring," "Before the beginning of years," and "We have seen thee, O Love"), "The Garden of

Proserpine," "The Triumph of Time," "A Forsaken Garden," "Ave atque Vale" (the elegy on Baudelaire), and "Hertha." His blank verse in *Atalanta, Erechtheus* (1876), and elsewhere is often of a restrained dignity. Swinburne's criticism is marred by exaggerated vituperation and praise, by digressiveness, and by an often flamboyant and involved style, but he performed useful services in stimulating juster appreciation of older English dramatists (Shakspere, Webster, Ford, Chapman, and others) and of William Blake. His complete works, incorporating the biography by his friend Sir Edmund Gosse (1917), were edited by Gosse and T. J. Wise (*20* vols., 1925–27). See also studies by G. E. Woodberry (1905), Harold Nicolson (1926), T. E. Welby (1926), S. C. Chew (1929), and Georges Lafourcade (1932).

Swindon, municipal borough (1931 pop. 62,401; 1947 estimated pop. 67,140), Wiltshire, England. The old part is on a hill, the new part grew up about extensive locomotive and car works. Furniture and aircraft are also made.

Swine (svē'nŭ), short channel, leading from the Stettiner Haff to the Baltic Sea. It passes between the islands of Wollin and Usedom. Swinemünde, on Usedom, lies at its mouth.

swine, cloven-hoofed mammal of the family Suidae. It has a rather long mobile snout, a heavy, relatively short-legged body, thick, bristly hide, and a small tail. The name swine is applied especially to the domestic breeds, which are also known as hogs. Sometimes these are called pigs, a term more correctly reserved for the young animals. There are no true swine of the genus *Sus* native to North America. The wild hogs found in the mountains of Tennessee, North Carolina, and a few other states are descendants of the European wild boar (*Sus scrofa*), introduced in recent years by sportsmen for hunting. This wild boar was formerly common in the forests of Europe and was a favorite game of sportsmen. It was domesticated early in N Europe, and it is believed that the modern domesticated pigs are descended chiefly from this European boar and a smaller Asiatic species domesticated in China. Hogs were introduced into America by Spanish explorers in the 16th cent. and were early shipped to the American colonies from England. Swine are valuable for their flesh, prepared as ham, bacon, and pork, and for their fat (lard), they provide also many other products, e.g., leather for gloves, footballs, and numerous other articles and bristles for brushes. When raising swine it is important that the animals have clean, well-ventilated barns and pens and that they are exposed to some sunlight and allowed to exercise by grazing in pastures. Hogs will eat almost any food. Considered especially good for fattening hogs is a diet of corn and alfalfa supplemented by a protein food in the form of shorts or middlings. Peanuts, soybeans, barley, and wheat also furnish good feed; milk is much used in dairying regions. Hogs are raised in nearly all parts of the United States, but the corn belt of the Middle West is the chief hog-raising area. Hogs are commonly grouped as lard-type hogs and bacon-type hogs. The lard-type is larger and more fleshy than the bacon type. Although the demand for lard has somewhat decreased, the lard-type is the most widely raised for meat. Lard-type breeds include the Chester white, Poland China, Hampshire, Hereford, Duroc-Jersey, Berkshire, and Large Black. Bacon-type swine are fed on little corn and chiefly on such foods as alfalfa, barley, and skim milk. They are the chief type raised in Canada. Breeds include the Tamworth, Yorkshire, and Landrace. See C. W. Towne and E. N. Wentworth, *Pigs from Cave to Corn Belt* (1950).

Swinemünde (svē"numün'dŭ) or **Świnoujście,** Pol. *Świnoujście* (shfēnŏōō'shchĕ), city (pop. 5,771), Pomerania, a Baltic port on the island of Usedom, transferred to Polish administration in 1945 (see Pomerania). A trade center, it was also a German naval base in the Second World War.

swing music, type of American popular music, an offshoot of jazz which developed in the 1930s. It eliminated much of the syncopation of jazz and sacrificed most of the improvisation characteristic of jazz in favor of large orchestras and highly stylized arrangements. The arranger, at least as important as the composer, came into being, and a swing band could be recognized by its arrangements. The jazz musician Benny Goodman is the outstanding name in connection with swing, among others are the brothers Jimmy and Tommy Dorsey. See bibliography under jazz.

Swinoujscie, Pomerania: see Świnemünde.

Swinton, urban district (1931 pop. 13,821, 1943 estimated pop. 11,500), West Riding of Yorkshire, England, NE of Sheffield, in a coal and iron region.

Swinton and Pendlebury (–bur'ē), urban district (1931 pop. 32,761, 1947 estimated pop. 40,580), Lancashire, England, NW of Manchester near Salford. It has cotton mills and other industries.

Swiss Confederation: see Switzerland.

Swiss Family Robinson, tale of a family shipwrecked on a desert island. Written by a Swiss author, J. D. Wyss, and based on *Robinson Crusoe,* it became a juvenile classic.

Swiss Guards. Swiss mercenaries fought in various European armies from the 15th cent. until the 19th cent. These mercenaries, who were not volunteers, were put at the disposal of the foreign powers by treaties (called capitulations) between the Swiss diet and the foreign power concerned, in return for money payments. As a result of the traditional alliance between Switzerland and France—dating from the Everlasting Peace of 1516—the Swiss played a more important part in French military history than in that of other nations. Francis I alone used some 120,000 Swiss levies in his wars, and in the battle of Pavia (1525) his entire personal guard, the Hundred Swiss, was slain before Francis was captured by the Spanish. As organized under Louis XIV, the Swiss troops fell into two categories: the king's military household—including the Hundred Swiss (a palace guard) and the regiment of the Swiss Guards—and a number of ordinary Swiss regiments. The most famous episode in the history of the Swiss Guards was their defense (Aug. 10, 1792) of the Tuileries palace in Paris in the French Revolution. Louis XVI, threatened by a mob, had taken refuge with his family in the Legislative Assembly, leaving the Swiss in charge of the palace. The mob invaded the palace and the Swiss resisted, but they obeyed the king when he sent word to cease fighting. Some 500 men of the regiment were massacred in the ensuing confusion. The heroic stand of the Swiss Guard is commemorated by the Lion of Lucerne, the impressive monument by Thorvaldsen at Lucerne, Switzerland. The French revolutionists abolished all Swiss troops, but in 1803 Napoleon I obtained several Swiss regiments, which were virtually annihilated in the Russian campaign of 1812. Swiss troops were again used under the Bourbon restoration, and many of them were massacred in the July Revolution of 1830, after which they were permanently abolished. The Swiss constitution of 1874 forbade all military capitulations and recruitment of Swiss by foreign powers. The only exception is the Swiss Guard of the Vatican, founded in 1505 by Pope Julius II, which is not a military body but the personal guard of the pope. Its members are recruited from the Catholic cantons of central Switzerland. The Swiss Guard at the Vatican is famous for its colorful costume, designed in the Renaissance.

Swiss literature. Of the four languages spoken and written in Switzerland (German, French, Italian, and Romansh), German is used by 71 percent of the population, it follows that the preponderance of Swiss literature is in German. Romansh, a language spoken since Roman times, has an extensive literature little known outside Switzerland. The Italian-speaking Swiss form only 5 percent of the population. An early book in German was a collection of fables written (c 1340) by a Swiss Ulrich Boner. Much of the early writing is religious (as in the case of Zwingli). In the 18th cent. Swiss-German writers included Zschokke, historian and writer of historical novels; the critics Johann Jakob Bodmer and Johann Jakob Breitinger, who founded the periodical the *Diskurse der Mahlern* [the painters' discourses], influential in its day; Salomon Gessner, popular both as poet and as painter, and the great educator, Pestalozzi. A Bern aristocrat, Béat Louis de Muralt (1665–1749), won a posthumous fame by the publication of his letters (in French). One of the most influential of all French writers, Jean Jacques Rousseau, was born in Switzerland. A 19th-century writer in French was H. F. Amiel, a critic, but best known for his *Journal intime.* Of the German writers of the 19th cent. the most famous are the novelist Gottfried Keller, author of *Der grüne Heinrich,* and Conrad Ferdinand Meyer, poet and novelist. *The Swiss Family Robinson,* of the *Robinson Crusoe* genre, was written by a Swiss, J. D. Wyss. Johanna Spyri was the author of the much-loved children's classic *Heidi.* Later writers in German include the poet C. F. G. Spitteler, a Nobel Prize winner, the novelists Heinrich Federer (1866–1928), a Catholic priest, and Jakob Schaffner (1875–1944), and Albert Steffen (1884–), novelist, poet, dramatist, and philosopher, who became the leader of the anthroposophical movement after Rudolph Steiner's death. The novels in French of C. F. Ramuz have as their background his native canton, Vaud.

Swissvale, industrial borough (pop. 15,919), SW Pa., near Pittsburgh, settled c 1760, inc. 1898. It has a switch and signal plant and a glass-products factory.

Swithin or **Swithun, Saint** (both swĭ'dhun), fl. 860, English bishop of Winchester. He was buried, according to his wishes, outside his church. His relics were removed to the new cathedral. According to a hardy tradition, this translation so enraged the saint that it rained for 40 days, and if it rains on the anniversary of the translation (July 15), it will rain daily thereafter for 40 days, if it is fair on St. Swithin's day, it will not rain for 40 days.

Switzerland (swĭ'tsurlŭnd), Fr. *Suisse* (süēs'), Ger. *Schweiz* (shvīts'), Ital. *Svizzera* (svēt'tsärä), more properly **Swiss Confederation,** republic (15,944 sq. mi., pop. 4,265,703), central Europe. The federal capital is Bern. Switzerland borders on France in the west and southwest, with the Jura mts. and the Lake of Geneva (traversed by the Rhone) forming the frontier, in the north, it is separated from Germany by the Rhine and the Lake of Constance, its eastern neighbors are Austria and Liechtenstein, in the southeast and south it is divided from Italy by the Alpine crests, the Lake of Lugano, and Lago Maggiore. Between the Jura and the Central Alps, which occupy the southern section (more than half) of the country, there is a long, narrow plateau, crossed by the Aar and containing the lakes of Neuchâtel and Zurich. Alpine communications are assured by numerous passes (see pass) and by railroad tunnels (the Simplon being the longest in the world). International transit freight is an important source of revenue. Though poor in natural resources except forests and water power, Switzerland has attained prosperity through export of its manufactures and through its technological achievements. The industries, which employ the larger part of the population, are concentrated mainly in the north, they produce textiles, machinery, instruments, watches and watch movements (in which Switzerland leads the world), foodstuffs (notably chocolate), and chemicals. Lack of coal is largely made good by the exploitation of an almost unlimited hydroelectric potential, the railroads, which are government-owned, use electric power on all main lines. The Alpine regions are used for dairying, with cheese as the principal export. The agricultural yield is supplemented by imports, other main imports are coal, raw materials, and automobiles. Imports exceed exports, but Switzerland is favored by the huge profits of its tourist industry, its natural beauty attracts hundreds of thousands of visitors yearly to its resorts, and their expenditures constitute "invisible" exports. The resorts, all through the Alpine regions (e.g., the Engadine), offer highly developed facilities for vacation, health, and sports (notably mountain climbing and winter sports). The stability of Swiss politics and Swiss currency (the Swiss franc is backed by a large gold reserve) has, moreover, made Switzerland a world banking center. Politically, Switzerland consists of 22 cantons, or rather of 25 federated states of which 19 are called cantons and 6 are called half-cantons. The cantons are Zurich, Bern, Lucerne, Uri, Schwyz, Glarus, Zug, Fribourg, Solothurn, Schaffhausen, Saint Gall, the Grisons, Aargau, Thurgau, Ticino, Vaud, Valais, Neuchâtel, and Geneva. The half-cantons Obwalden and Nidwalden together form Unterwalden, Basel-Land and Basel-Stadt form Basel, and Ausser-Rhoden and Inner-Rhoden form Appenzell. The federal constitution, dating from 1874, assigns specified functions, notably foreign relations and tariffs, to the confederation, leaving the cantons sovereign in other respects. A council of the states (two members from each canton, one from each half-canton), and a national council (one deputy per 22,000 inhabitants, elected by universal male suffrage and proportional representation) together form the federal assembly. The chief executive, or federal council (seven members elected for four years by the Federal assembly), includes the president of the confederation (elected annually). In practice, the importance of the legislative chambers is minimal, because Switzerland has adopted the popular initiative and referendum, thus achieving a measure of direct democracy. The constitution provides for religious equality, compulsory education, and universal military training, all able-bodied men being in the army reserve until aged 60. Cantonal constitutions differ widely. In Unterwalden, Glarus, and Appenzell the entire male electorate legislates directly in yearly outdoor meetings called *Landsgemeinden* (länts'gumĭn'dun), elsewhere there usually is a unicameral legislative and an elected executive council. Important cities are Zurich, Basel, Geneva, and Bern. German, French, and Italian are the official and national languages of Switzerland, Romansh, a Rhaeto-Romance dialect spoken in parts of the Grisons, was declared the fourth national language in 1938. German dialects (*Schwyzer-dütsch*) are spoken by c 72 percent of the inhabitants, French, spoken by c 20 percent, predominates in the southwest, Ticino is Italian-speaking. In religion, Protestantism prevails in 11½ cantons and is the faith of 57 percent of the population, 41 percent are Roman Catholic. The country was inhabited by the Helvetii (see Helvetia) when it was conquered (58 B.C.) by the Romans. Invaded (5th cent. A.D.) by the Alemanni and (in the west) by the Burgundii, it passed to the Franks in the 6th cent. Split again in the 9th cent. between Swabia and Transjurane Burgundy, the area was united (1033) under the Holy Roman Empire. The expanding feudal houses of Zähringen, Kyburg, and others, were supplanted (13th cent.) by the counts of Hapsburg and of Savoy. Hapsburg encroachments on the rights of Uri, Schwyz, and Unterwalden resulted (1291) in the conclusion of a defensive league among the three communities. The legendary hero of this event was William Tell. They defended their liberties in the victory of Morgarten (1315) and, joined by Lu-

cerne, Zurich, Zug, Glarus, and Bern, they again decisively defeated the Austrians at SEMPACH (1386) and Näfels (1388). In the 15th cent Switzerland rose to the first rank as a military power The conquest of Aargau, Thurgau, and the valleys of Ticino, which were ruled as subject territories until 1798, was followed by Swiss victories over CHARLES THE BOLD of Burgundy (1476–77) and over Emperor Maximilian I, who in 1499 granted Switzerland virtual independence By 1513, the admission of Fribourg, Solothurn, Basel, Schaffhausen, and Appenzell had raised the number of cantons to 13, maintained till 1798. The conquest by Bern of Vaud from Savoy (1536), and close alliances with the Grisons, Geneva, St Gall, and other towns and lands, further increased the Swiss orbit, but Switzerland's importance as a European power was broken in 1515 when the French defeated the Swiss at MARIGNANO (see also ITALIAN WARS) A "perpetual alliance" with France (1516) and neutrality henceforth became the basis of Swiss policy Tens of thousands of Swiss mercenaries, however, continued to serve abroad for three centuries (see Swiss GUARDS) The cantons, only loosely bound by a federal diet and by individual treaties and often rent by internal feuds, were seriously split by the REFORMATION, preached by ZWINGLI at Zurich and by CALVIN at Geneva The Catholics, led by the FOUR FOREST CANTONS, defeated the Protestants in battle, and the Treaty of Kappel (1531) arrested the spread of the Reformation in the seven Catholic cantons. Although national unity almost disappeared for more than two centuries, religious passion did not prevent the Swiss (except the GRISONS) from remaining neutral throughout the Thirty Years War; Switzerland was an island of prosperity when, in 1648, its formal independence was recognized in the Peace of Westphalia In the following century and a half, all Switzerland underwent a process of limiting citizenship rights to the wealthier classes, government became the exclusive business of a small oligarchy While Switzerland became insignificant politically in the 18th cent, its wealth steadily increased, and its scientists and writers made it an intellectual center The French Revolution, resulting in the creation of the HELVETIC REPUBLIC (1798–1803) and in invasions by French, Russian, and Austrian armies, was generally ill received Napoleon's Act of Mediation (1803) somewhat restored the old confederation, and the Pact of Restoration (1815) substantially reestablished the old regime, except that the confirmation of nine new cantons brought the total to its present number By the Treaty of Paris (1815) Swiss neutrality was guaranteed for all time The subsequent economic depression, which caused large-scale emigration to North and South America, and the generally reactionary rule contributed to the rise of the Radical party, which favored greater centralization Opposition to Radicalism centered in the Catholic rural cantons, which in 1845 formed a defensive alliance called the SONDERBUND After a brief and almost bloodless civil war (1847) the victorious Radicals transformed the former federation of states into one federal state, under the constitution of 1848 (recast in 1874) National unity and political conservatism grew along with the economic and industrial development of the country Armed neutrality was maintained throughout both the First and the Second World War Switzerland was a member of the League of Nations, the charter of the United Nations, however, makes Swiss membership in that body impossible without some modification of the strict Swiss interpretation of neutrality. See guidebooks to Switzerland, W MacCrackan, *The Rise of the Swiss Republic* (2d ed, 1901); Wilhelm Oechsli, *History of Switzerland, 1499–1914* (1922), W E Rappard, *The Government of Switzerland* (1937), Denis de Rougemont and Charlotte Muret, *The Heart of Europe* (1941), J C Herold, *The Swiss without Halos* (1948).

Swope, Herbert Bayard, 1882–, American journalist and public official, b St Louis, Mo He did newspaper work in St Louis and gained (1912) national notice for his reporting of crime in New York city As a foreign correspondent of the New York *Herald*, Swope received a Pulitzer Prize in 1917 for his war reporting in Germany After the U.S entry in the First World War, he was appointed to the War Industries Board, and after the war he was the first journalist to gain access to the secret League of Nations covenant As executive editor (1920–29) of the *World*, he directed exposés of the Ku Klux Klan and of working conditions in Florida. He was (1942–46) a consultant to the U S Secretary of War and was appointed (1946) alternate representative to the United Nations Atomic Energy Commission

sword, weapon of offense and defense in personal combat, consisting of a blade with a sharp point and one or two cutting edges, set in a hilt with a handle protected by a metal case or cross guard Swords were originally made of bronze, the Romans introduced the more durable iron sword, the *gladius*, 20 in long. Medieval knights used very heavy swords that had to be lifted with two hands; these had rounded ends and were used only for hacking at the enemy. During the Middle Ages the best blades were those made by the Arabs in Damascus and those made at Toledo. As a highly personal weapon the sword attained symbolic importance; surrendering one's sword became a token of submission, and the custom arose of taking an officer's sword away from him and breaking the blade when he was dismissed from service in disgrace. During the Crusades the sword, because of its shape, frequently was used to symbolise the Cross. The sword is now obsolete as a weapon and is carried in some military units only for decorative purposes in times of peace. Special types of swords are the rapier, with a long, narrow, finely pointed blade with cutting edges, the épée, like the rapier but without cutting edges and used only for thrusting, and the saber, slightly curved, pointed, with cutting edges along the front and the first third of the back of the blade, which was used primarily by cavalry. See FENCING

sword fern: see BOSTON FERN.

swordfish, fish of the warmer waters of the Atlantic and Pacific oceans, known in only one species (*Xiphias gladius*) It often weighs from 250 to 400 lb. Including the elongated upper jaw, which is shaped like a sword blade, it may be from 16 to 20 ft long It is one of the swiftest swimmers. It pursues even to northern waters schools of mackerel, herring, and others on which it feeds, slashing them with its sword Much used as a food fish, it is harpooned in large numbers There are fisheries in the Mediterranean as well as in American and European Atlantic waters Oil from the liver is rich in vitamins

Swoyersville (swoi'ursvĭl), industrial borough (pop 9,234), NE Pa, near Wilkes-Barre, inc 1888 Its manufactures include textiles and ornamental iron and steel products Anthracite mining is done here

Sybaris (sĭ'bŭrĭs), ancient city of Magna Graecia, in the present S Italy, in Bruttium on the Gulf of Tarentum (now Taranto) It was founded by Achaeans and people from Argolis (the Troezenians) in 720 B C It became a wealthy Greek city, and its inhabitants were reputed to live voluptuous lives (hence the word *sybarite*) The Troezenians, ejected by the Achaeans, got the help of neighboring Crotona and destroyed the city in 510 B C Thurii was later built on or near the site

Sybel, Heinrich von (hĭn'rĭkh fŭn zō'bŭl), 1817–95, German historian He was appointed professor of history at Bonn (1844), Marburg (1846), Munich (1856), and again at Bonn (1861) He also took an active part in politics and sought to promote the nationalist and Protestant cause in his speeches and writings After 1875 he was director of the Prussian state archives, of which he made extensive use for his chief work, *Founding of the German Empire by Wilhelm I* (Eng tr, 7 vols, 1890–98) He also wrote a celebrated history of the First Crusade (*Geschichte des ersten Kreuzzugs*, 1841) and a history of the revolutionary period 1789–1800, part of which was translated as *History of the French Revolution* (4 vols, 1867–79) Several of his lectures and his introduction to the history of the First Crusade were translated as *Historical Literature of the Crusades* (1861)

Sycamore, city (pop 4,702), co seat of De Kalb co, N Ill, W of Chicago, founded c 1840, inc 1859 It is a trade and industrial center in a farm area Copper wire is made here

sycamore see PLANE TREE

Sychar (sĭ'kŭr), unidentified city, central Samaria, near Jacob's well where Jesus talked with the Samaritan woman John 4

Sychem (sĭ'kŭm), variant of SHECHEM

Sydenham, Charles Edward Poulett Thomson, Baron (sĭ'dŭnŭm), 1799–1841, British statesman Entering Parliament with the aid of Jeremy Bentham (1826), he became a proponent of free trade and financial reform He was made president of the Board of Trade in 1834, and in 1839 he was appointed governor general of CANADA, where he followed with great success the policy of unification of the provinces recommended by his predecessor, the earl of Durham He was instrumental in securing the adoption of the constitution of 1841 See Adam Shortt, *Lord Sydenham* (1925)

Sydenham, Thomas, 1624–89, English physician He studied at Oxford and Montpellier and practiced in London. His studies of epidemics and his description of diseases—ague, smallpox, scarlatina, and gout—established him as a founder of modern clinical medicine and of epidemiology. See studies by J F. Payne (1900) and David Riesman (1926)

Sydney, Algernon. see SIDNEY, ALGERNON

Sydney, Sir Philip see SIDNEY, SIR PHILIP

Sydney, city (pop 95,952, metropolitan pop 1,484,434), capital of New South Wales, Australia, on the south shore of Port Jackson (see JACKSON, PORT) The cultural center of the commonwealth, it is the seat of the Univ of Sydney (1852), St Paul's College (1854), St John's College (1857), Wesley College (1910), and Women's College (1889) Roman Catholic and Anglican cathedrals are here The National Art Gallery was founded in 1904, and the Australian Museum in 1830 An important industrial center, Sydney has textile mills, automobile plants, brass foundries, and chemical plants Its port is equipped for bulk loading of grain, coal, and timber The city was founded in 1788 as the first penal settlement of Australia and became the capital of the colony of New South Wales Because Botany Bay (just S of Sydney) had been inspected a year earlier as a possible site for a colony, the Sydney settlement came to be erroneously called the Botany Bay colony In the Second World War, Sydney was the site of an Allied naval and army base

Sydney, city (pop 28,305), on Cape Breton Island, N S, on the northeast coast at the head of the South Arm of Sydney Harbour It is the commercial, trade, and industrial center of an important coal-mining and agricultural area It has steel mills, plants manufacturing wood and food products and chemicals, and shipbuilding The city was founded (1783) by United Empire Loyalists and was the capital (1784–1820) of Cape Breton prov St George's Church (1786) is one of the oldest Anglican churches in Canada

Sydney Harbour, Australia see JACKSON, PORT

Sydney Mines, town (pop 8,198), on Cape Breton Island, N S, on the northeast coast, on Sydney Harbour and NNW of Sydney It is a coal-mining center, coal having been mined here since 1766, and has steel mills, foundries, and machine shops. Coal is shipped from near-by NORTH SYDNEY

Syene, biblical name see ASWAN

syenite (sī'ənīt) [from ancient quarries at Aswan (Syene)], coarse-grained igneous rock, similar in appearance and composition to granite It differs from granite, however, in being without quartz. The chief minerals are the feldspars, with mica, hornblende, and pyroxene Varieties are distinguished (according to the ferromagnesian minerals contained) as augite syenite, hornblende syenite, mica syenite, and nepheline syenite. Syenites are comparatively rare rocks, being found chiefly in a few areas of the United States and of Germany They are occasionally substituted for granites as building stones

Sykesville, borough (pop 2,044), W Pa., NE of Indiana, Pa, settled 1861, inc 1907 It produces brick, textiles, and bituminous coal

Syktyrkar (sĭlktĭkar'), city (pop. 25,285), capital of Komi ASSR, NE European RSFSR, on the Vychegda river It is a lumbering center and has sawmills, paper and pulp mills, and wood processing Founded in 1780 as a center of Russian colonization, it was named Ust-Sysolsk until 1930

Sylacauga (sĭlukô'gu), city (pop 6,269), central Ala, SE of Birmingham, inc 1886 It processes cotton, cottonseed, and other products Near by are Talladega National Forest, Weogufka State Park, and marble quarries

Sylla, Lucius Cornelius see SULLA, LUCIUS CORNELIUS

syllogism (sĭl'ujĭzəm) [Gr.], mode of argumentation in LOGIC The syllogism is defined by Aristotle, who formulated the doctrine which has held in logic for over 2,000 years, as an argument in which certain things being laid down, something else follows from the being of these An example of the simple or categorical syllogism is All animals are bodies (major premise) All men are animals (minor premise) Therefore all men are bodies (conclusion) Every syllogism contains three terms the major term, which is the predicate of the conclusion, the minor term, which is the subject of the conclusion, the middle term, which appears twice in the premises but not in the conclusion. Syllogisms differ in figure and mode Figure refers simply to the relation of the three terms making up the syllogism A fourth figure, introduced by Galen, is really only an irregular case of the first figure The mode of the syllogism refers to the order of the premises with respect to quantity and quality, i e, whether they assert all or some of a given subject and whether they affirm or deny There are five rules governing valid modes, as follows The middle term must be distributed at least once (a term is distributed when reference is made to all the individuals denoted by it). No term may be distributed in the conclusion which is not distributed in the premises If both premises are negative, there is no conclusion. If one premise is negative, the conclusion must be negative If neither premise is negative, the conclusion must be affirmative After Aristotle the doctrine of the syllogism was complicated by the introduction of the hypothetical (expressing the conditional relation of "if, then" between propositions) and the disjunctive syllogism (which expresses the mutual exclusion of two propositions) But these can be reduced to the categorical form and to the principles of the categorical form, and the reason for introducing them as separate forms concerns the manner of expression of arguments rather than anything properly logical

Sylt (zĭlt), island (36 sq mi, pop 26,346), N Germany, in the North Sea off the coast of Schleswig-Holstein, with which it is connected by a dam. It is one of the North Frisian Islands Except in its cultivated western tip, the island is covered by dunes and heath land Fortified in the 1930s, Sylt was bombed in the Second World War. It is a popular seaside resort

Sylva, Carmen · see ELIZABETH, queen of Rumania

Sylva, town (pop 1,409), co seat of Jackson co, W N C., in the mountains WSW of Asheville. It has a tannery and saw- and gristmills A state teachers college is near by

Sylvania (sĭlvā'nēŭ). 1 City (pop 2,531), co seat of Screven co, E Ga, NNW of Savannah and near the Savannah river, founded 1847, inc. 1854 It is a processing center for a productive cotton and lumber area. 2 Village (pop 2,199), NW Ohio, NW of Toledo at the Mich line Cement and fertiliser are made here There are stone quarries

Sylvan Lake, village (pop 1,041), SE Mich., near Pontiac, inc 1921

Sylvester I, Saint (sĭlvĕ'stur), pope (314–35), a Roman, successor of St Miltiades (St Melchiades) and predecessor of St Marcus He was contemporary with Constantine I, who built for him the Lateran and other churches St Sylvester sent legates to the First Council of Nicæa and took strong interest in the controversy over ARIANISM The spurious Donation of Constantine was supposedly given to St Sylvester The name is also spelled Silvester Feast Dec 31

Sylvester II, d 1003, pope (999–1003), a Frenchman (b Auvergne) named Gerbert, successor of Gregory V and predecessor of John XVII He studied in Spain in youth and became learned in mathematics Later he was made a teacher in the bishop's school at Rheims In 991 Gerbert, now widely celebrated as a teacher, was elected archbishop of Rheims, but his predecessor had been deposed, and eventually (995) Gerbert's election was nullified He now joined Emperor OTTO III as his teacher and went with him to Italy, where Gregory V made him archbishop of Ravenna He was made pope by Otto Sylvester forced Robert II of France to retain his lawful wife He aided energetically in the Christianization of Poland and Hungary In the later Middle Ages, Sylvester's learning became legendary and was in popular belief transformed into skill at sorcery He wrote on theology, mathematics, and the natural sciences Sylvester was the first French pope, of the popes of the 10th cent he was the only one of distinction

Sylvester, James Joseph, 1814–97, English mathematician He studied at Cambridge for four years after 1831, but because degrees were limited to members of the Church of England and he was a Jew, he was not granted a degree until 1872 He was professor of mathematics at the Univ of Virginia (1841–45) and at the Royal Military Academy, Woolwich, England (1855–70) Returning to the United States in 1877, he became the first professor of mathematics at Johns Hopkins, where in the following year he founded the *American Journal of Mathematics* He was Savilian professor of geometry at Oxford (1883–94) He is known especially for his work on invariant algebra and on the theory of numbers

Sylvester, city (pop 2,191), co seat of Worth co, SW Ga, E of Albany, inc 1898.

symbiosis (sĭmbēō'sĭs), the habitual living together of organisms of different species The term is usually restricted to a relationship beneficial to at least one of the participants and harmful to none In parasitism, the PARASITE lives at the expense of its host In helotism, organisms of one species enslave organisms of another species In commensalism, dissimilar organisms living in close association share the same food A symbiotic relationship of great importance to man is that between leguminous plants and NITROGEN-FIXING BACTERIA Mycorhiza is a root-fungus association in which filaments of the mycelium of the fungus surround the fine roots, especially of certain forest trees, heaths, and orchids, and sometimes penetrate the outer root tissues. The fungus draws its food from the plant root and often aids the plant in absorbing water and nutrients from the soil

symbol (sĭm'bŭl), sign representing something having an independent existence The most important use of symbols is in LANGUAGE To say so, however, does not solve the perennial philosophical questions as to the nature of the linguistic sign We are left with the question whether the word *chair* stands for any chair, for a particular chair, or for the idea of a chair This is the problem of nominalism and realism A secondary linguistic symbolism is WRITING Another, still connected with language, appears in systems of LOGIC and MATHEMATICS (see also NUMBER) Modern science has in its development profited from the conciseness provided by many symbols In chemical symbols, for example, each ELEMENT is represented by one or two letters (e g, carbon, C, zinc, Zn) Some symbols are derived from non-English names, e g, Ag for silver [Latin *argentum*] A chemical FORMULA is written in chemical symbols In art a distinction of terms is introduced which modifies the term *symbol* Although the drawings at Altamira are symbolic in one sense (i e, a drawn reindeer is the symbol for a live reindeer), they are said not to be symbols in another more common sense, since the artist represented a reindeer by copying its appearance If he had drawn two horns and considered that to represent a reindeer adequately, the two horns might be said to be a symbol for a reindeer. Such symbolism is all-pervasive in every kind of art, especially because it lends itself to rapid, comprehensive, and compact use Religious symbolism is best known in its more ancient form from the discoveries of archaeologists; this is especially important in the study of EGYPTIAN RELIGION, in which the symbol of the god often appeared more frequently than the likeness of the god himself. GREEK RELIGION, on the contrary, seemed to eliminate symbols of gods in favor of actual images In Judaism and Christianity religious symbolism is important, notably in the prophetic passages in the Bible and in the uses of public worship (see, for example, CANDLE, INCENSE, LITURGY, SACRAMENT; see also ICONOGRAPHY) Modern patriotism, particularly in the United States, has found a revered symbol in the FLAG, which began, like all HERALDRY, as a means of recognition Trade symbols are sometimes quite widespread, though the wooden Indian signifying the tobacco shop has disappeared, barber poles are still very common, and the mortar and pestle and the show bowl still appear in many drug stores The investigations of Sir James FRAZER in comparative religion and those of Sigmund FREUD in psychology, extreme though they may be, have shown that human beings tend always to use a wide symbolism, even in thinking itself, to cover ideas they avoid out of fear, propriety, or some other motive

symbolists (sĭm'bŭlĭsts), in literature, a school originating in France toward the end of the 19th cent in reaction to the naturalism and realism of the preceding period Designed to convey impressions by suggestion rather than by direct statement, symbolism found its first expression in poetry but was later extended to the other arts The early symbolists experimented with form, revolting against the rigidity of the PARNASSIANS with a free verse (vers libre) which has outlived the movement itself The precursors of the school, all influenced by Baudelaire, included Verlaine, Mallarmé, and Rimbaud They were accused of writing with a decadent morbidity, partially as the result of their utilization of imagination as a reality The movement was continued in poetry by LAFORGUE, MORÉAS, and RÉGNIER, in drama by MAETERLINCK, in criticism by Remy de GOURMONT, and in music by Debussy Among the later symbolists are Claudel, Valéry, JAMMES, Paul Fort, and the critic Camille Mauclair The influence of the French symbolists not only gave rise to similar schools in England, Germany, and other countries, but also may be traced in the development of the IMAGISTS and DECADENTS, it is likewise evident in extreme form in the work of T S Eliot, Proust, James Joyce, and Gertrude Stein See Arthur Symons, *The Symbolist Movement in Literature* (1919), Holbrook Jackson, *The Eighteen Nineties* (1914), Edmund Wilson, *Axel's Castle* (1931), C M Bowra, *The Heritage of Symbolism* (1943)

Syme, James (sīm), 1799–1870, Scottish surgeon, studied at the Univ of Edinburgh He lectured (1823–33) on surgery at the Univ of Edinburgh, where he became professor of clinical surgery in 1833 In 1829 he started Minto House, a private surgical hospital, where he instituted a system of clinical instruction. He is noted especially for his work on amputations and excisions Syme advocated and accomplished important changes in medical education See study by Robert Paterson (1874)

Syme (sē'mē, sī'mē), island (22 sq mi, pop 4,083), off SW Asia Minor, in the Aegean Sea, between the coast and Rhodes but belonging to Greece It is one of the DODECANESE The chief town, Syme (pop 3,756), is on the northeastern shore

Symeon · see SIMEON

Symington, William (sī'mĭngtun), 1763–1831, Scottish engineer and inventor He built a marine steam engine in 1788 In 1801 he built a steam engine for the tugboat *Charlotte Dundas*, which was operated for towing on the Clyde Canal Robert Fulton visited him to make notes on the boat and its operation

Symington, William Stuart (sī'mĭngtŭn), 1901–, U S government official, b. Amherst, Mass He studied (1919–23) at Yale and for many years was a business executive W Stuart Symington served as surplus property administrator (1945–46) and Assistant Secretary of War (1946–47) before he was appointed (1948) by President Harry S Truman as the first Secretary of the AIR FORCE in the U S Dept of Defense In 1950 he became chairman of the National Security Resources Board

symmetry (sĭ'mĭtrē), pleasing balance of parts or their uniform arrangement It may consist either in exact repetition, in counterpart, or in having the same values as to mass and space in composition Good examples are the façade of St. Peter's, Rome, and the sculptured pediment of the Parthenon, Athens The simplest architectural symmetry begins with the orders of architecture and the arch. Most of the world's fauna and flora exhibit symmetry, and it prevails in the decorative arts, heraldic design, and the composition of wall panels and medallions, whether with natural or the so-called artificial motifs.

Symonds, John Addington (sĭm'ŭndz), 1840–93, English author He was educated at Harrow and Oxford After ill-health forced him to abandon the study of law, he lived in Italy and Switzerland His many publications include travel books, *Sketches in Italy and Greece* (1874) and *Italian Byways* (1883), literary essays, *Introduction to the Study of Dante* (1872) and *Studies of the Greek Poets* (1873–76), biographies of Shelley (1878), Sir Philip Sidney (1886), Ben Jonson (1886), and Michelangelo (1893), a study of Walt Whitman (1893), a masterly translation of the autobiography of Benvenuto Cellini (1888), and several volumes of verse, notably *Many Moods* (1878) and *Animi Figura* (1882) Symonds's major work, *The Renaissance in Italy* (7 vols, 1875–86), is a classic of cultural history. See study by Van Wyck Brooks (1914).

Symons, Arthur (sĭm'ŭnz), 1865–1945, English poet and critic A leader of the symbolists in England, Symons interpreted French decadent poets to the English through translations, criticism, and his own imitative poems He was on the staff of the *Athenaeum* and *Saturday Review* and editor of the *Savoy* (1896) until a period of insanity, 1908–10, described in his *Confessions* (1930) His chief critical work is *The Symbolist Movement in Literature* (1899), others are *The Romantic Movement in English Poetry* (1909), *Dramatis Personæ* (1923), and studies of Baudelaire, Blake, and Rossetti His poetry includes *Days and Nights* (1889), *Poems* (1902), and *Love's Cruelty* (1923). See study by T E Welby (1925)

Symons, Gardner (George Gardner Symonds) (sĭ'mŭnz), 1865–1930, American landscape painter, b Chicago, studied at the Art Institute there before completing his training in London, Munich, and Paris He is best known for his New England snow scenes Among characteristic works are *The Winter Sun* (Art Inst., Chicago), *The Opalescent River* (Metropolitan Mus.), and *Snow Clouds* (Corcoran Gall.)

sympathetic nervous system · see NERVOUS SYSTEM

symphonic poem, type of orchestral composition created by Liszt, also called tone poem Discarding classical principles of form, it begins with a poetic or other literary inspiration Although it is usually considered program music, no literal following of a program was intended by Liszt While the symphonic poem better expressed the spirit of romanticism than did the symphony, it did not supersede the symphony, many composers, e g, Tchaikovsky, Saint-Saens, Sibelius, Franck, and Dvorak, wrote in both forms In the symphonic poems of Smetana and Sibelius an element of nationalism is added Richard Strauss carried the programmatic possibilities to an extreme of realism, in contrast to the impressionistic tone poems of Debussy, which are closer to the Lisztian aim

symphony (sĭm'fŭnē), a SONATA for orchestra. The Italian operatic overture, called *sinfonia*, as its form was established by Alessandro Scarlatti at the end of the 17th cent was in three sections in fast-slow-fast alternation Its dissociation from the opera for concert performance was the first step in the development of the classical symphony Johann Stamitz (1717–57), who became concertmeister to the elector of Mannheim in 1745 and who was leader of the Mannheim group of composers, inserted the minuet as the third movement of the symphony and approached sonata form in his first movements C P E Bach, the founder of the keyboard sonata, wrote important symphonies, but it is with Haydn and Mozart that the form reached maturity Beethoven wrote fewer symphonies than his predecessors, intensifying the individual character of each and bringing the form to perfection After the symphonies of Beethoven and Schubert the form began to decline The symphony of the romantic period usually exhibited profusion of themes rather than the economy of material characteristic of the classical symphony and tended to substitute repetition for actual thematic development Berlioz attempted to adapt the form to program music in his *Symphonie fantastique* Brahms, however, attempted to revive the classical form Post-romantic decadence is represented in the huge dimensions of the symphonies of Gustav Mahler The freedom with which the term is applied in the 20th cent may be illustrated by Roy Harris's *Folksong Symphony* and *Symphony for Voices* and Stravinsky's *Symphony of Psalms*, while works of these same composers exhibit a return to classical principles of construction See D F Tovey, *Essays in Musical Analysis: Symphonies* (2 vols, 1935); B. H Haggin, *A Book of the Symphony* (1937)

Symplegades (sĭmplĕ'gădēz) [Gr, =dashing together], in Greek mythology, two floating cliffs They swung together and crushed anything going between them, until the ship ARGO passed them safely. They remained still forever after, forming the entrance to the Black Sea

synagogue (sĭ'nŭgŏg) [from Gr, =assembly], building where Jews gather for worship As early as the days of Moses, the term was used to denote any gathering of Jews, usually for religious purposes The institution of the synagogue as a place of worship, although it existed contemporaneously with the Temple, did not assume any great im-

portance until after the destruction of the first Temple and the Babylonian exile As the Jews became more dispersed, the synagogue became more important until it was, particularly in the Middle Ages, not only the religious, but the intellectual, and even social, center of Jewish life It was used both as a court of law and as a place for study. Services in the synagogue were conducted in a less grandiose manner than in the Temple There was no officially appointed priest, the services being conducted by a chazan (reader) The role the synagogue played in preserving Judaism intact through the centuries cannot be overestimated, nor can its influence as an intellectual and cultural force The subsequent partial assimilation of the Jews, the widening of their intellectual and cultural interests, and particularly the reform movement, have now restricted its use to almost purely religious purposes, although among the orthodox Jews of Eastern Europe and the Orient its scope has not diminished The oldest synagogue in the United States is at Newport, R I (1763) For the use of music in the synagogue, see JEWISH MUSIC

syncopation (sĭng"kupā'shun, sĭn"-) [New Gr , =cut off], in music, the accentuation of a beat which normally would be weak according to the rhythmic division of the measure Although the normally strong beat is not usually effaced by the process, there are occasions (e g , the second theme in the final movement of Schumann's Piano Concerto in A Minor) when the natural rhythmic structure is entirely altered, the syncopation being so elaborate and persistent that the actual metrical structure is obliterated aurally Occasional syncopation is present in music of all types and in all periods It is carried to its extreme in RAGTIME

syncope, see FAINTING

syndicalism (sĭn'dĭkulizm) includes both a plan for reorganizing society and a strategy of revolutionary action for the overthrow of the existing one Like anarchists, syndicalists believe that any form of state is an instrument of oppression and that the state should be abolished They stress the function of productive labor and regard the trade union as the essential unit of production and of government In motive, the work of the unions would be socialistic —for use, not for profit The GENERAL STRIKE SABOTAGE, slowdowns, and other means of disrupting ordinary production are advocated by some syndicalists as a prelude to assuming control of the manufacturing process, seen as essential to their aims The writings of P J Proudhon, with his attacks on property, and of Georges Sorel who espoused violence, and the mythical as well as practical efficacy of the general strike have influenced syndicalist doctrine Syndicalism, like ANARCHISM, has flourished largely in Latin countries, especially in France, where trade unionism was for years strongly influenced by syndicalist programs In the United States the chief syndicalist organization was the INDUSTRIAL WORKERS OF THE WORLD, which flourished early in the 20th cent but was virtually extinguished after the First World War by government suppression and internal rifts

Synesius (sĭnē'shus, -shēus), c 365- c 414, Christian Neoplatonic philosopher of Cyrene, educated by Hypatia in Alexandria In his manhood he lived in Cyrene, where he was an owner of much property He went on a mission to Constantinople (c 400) At some time in his career he became a Christian and married a Christian woman In 409 he was elected bishop of Ptolemais, against his will and in spite of his marriage His principal works are *De providentia* [on providence], a political treatise, *De regno* [on kingship], an oration before Emperor Arcadius, *Dio*, on the life of the philosopher versus that of the ascetic, *De insomniis* [on dreams], *Encomium calvitii* [in praise of baldness], a literary joke His chief philosophical efforts were towards synthesizing Christianity with Neoplatonism His letters are invaluable sources for his life and times See W S Crawford, *Synesius, the Hellene* (1901)

Synge, John Millington (sĭng), 1871–1909, Irish poet and dramatist, b near Dublin, of Protestant parents He received his degree from Trinity College, Dublin, and went to Germany to study music and later to Paris, where he lived for several years working at literary criticism Here he met his compatriot William Butler Yeats, who persuaded Synge to live for a while in the Aran Islands and then return to Dublin and devote himself to creative work *The Aran Islands* (1907) is the journal of Synge's retreat among these primitive people The plays of Irish peasant life on which his fame rests were written in the last six years of his life The first two one-act plays, *In the Shadow of the Glen* (1903), a comedy, and *Riders to the Sea* (1904), considered one of the finest tragedies ever written, were produced by the Irish National Theatre Society This group, with Synge, Yeats, and Lady Gregory as codirectors, organized, in 1904, the famous Abbey Theatre Two comedies, *The Well of the Saints* (1905) and *The Playboy of the Western World* (1907), were presented by the Abbey players The latter play created a furor of resentment among Irish patriots, stung by Synge's bitter humor. His later works were *The Tinker's Wedding*, published in 1908 but not produced for fear of further riots, and *Deirdre of the Sorrows*, a tragedy unfinished at the time of his death but presented by the Abbey players in 1910 See studies by W B Yeats (1911), Maurice Bourgeois (1913), Daniel Corkery (1931), and L A G Strong (1941).

synonym (sĭ'nunĭm) [Gr , =having the same name], word the meaning of which is the same as or very like the meaning of another Some are alike in some meanings only, as *live* and *dwell* Words taken into English from French and Latin have created many synonyms, e g , *wax* (taken from Old English), *increase* (taken from Old French), and *augment* (taken from Latin) The classic English collections are George Crabb's *Synonymes* and P M Roget's *Thesaurus*

Synoptic Gospels (sĭnŏp'tĭk) [Gr *synopsis*=view together], the first three GOSPELS (MATTHEW, MARK, and LUKE), considered together as being much more similar to each other than either is to JOHN, which differs also from them in purpose The question of the relations between the three is called the Synoptic problem In brief, most of the higher critics agree that Matthew and Luke were written later than Mark, which they followed closely Matthew then divided Mark into five portions and used them in order, separating them by other material Luke divided it only in two, nine chapters (9 51–18 14) being inserted between Mark can only account for half of the other two Gospels, especially since a central portion of Mark (6 45–8 26) is not reproduced in them About 100 verses each Matthew and Luke have in common, most of them sayings (notably the BEATITUDES), the critics assume to explain this agreement a primitive document which they call Q This consisted largely of sayings of Jesus and was circulated in forms varying from place to place Matthew and Luke are said to have used different versions of Q This leaves a good third each in Matthew and Luke that cannot be explained by a common origin, there is no one widely held explanation of these portions The versions of the Passion present separate problems Many critics and large bodies of Christians reject the solution of the higher critics, notable among these are fundamentalist Protestants and Roman Catholics Roman Catholics hold that Matthew (in an Aramaic version) preceded Mark and Luke, but that Matthew's Greek translation of his Aramaic Gospel may be posterior to Mark and Luke See E F Scott, *The Literature of the New Testament* (1932)

syntax see GRAMMAR

synthesis (sĭn'thusĭs) [Gr , =putting together], type of chemical reaction in which two or more substances combine to form a third In the synthesis of a compound definite quantities (by weight and often by volume) of each constituent are found to be required to form any given quantity of the compound For this reason synthesis often serves as a valuable check of the accuracy of an analysis of a compound Many valuable organic and inorganic substances can now be prepared synthetically because analysis has determined their constituents and their composition by weight, and the conditions under which the constituents will combine are known

Syntyche (sĭn'tĭkē) [Gr , =accident], Philippian Christian in disharmony with EUODIAS

syphilis (sĭ'fĭlĭs), contagious VENEREAL DISEASE caused by infection with a spirochete (*Treponema pallidum* or *Spirochaeta pallida*) described by F R Schaudinn and Eric Hoffmann in 1905 Some cases are the result of infection before birth (congenital), but it is most commonly the result of infection in sexual intercourse There is usually an initial sore or chancre on the genital organs, lips, or elsewhere Determination of the nature of this sore by microscopic examination makes possible early specific treatment and prevents the ravages of the dread later stages of the disease The first sore may not appear until three weeks after infection A second stage follows in which the spirochetes spread through the tissues, causing changes which lead in several years to degeneration In the second stage there may be headaches, fever, very infectious sore throat, and often a skin rash which gives warning A Wassermann test at this time gives proof of infection The flocculation tests of Kline and Kahn give accurate results in a large percentage of cases No organ of the body escapes infection, and although the disease is not fatal in its early stages, it leads to a third stage in which lesions known as gummata occur in the heart, brain, bones, eye, ear, and digestive system In the later stage those cases in which the nervous system is affected have *tabes dorsalis* (locomotor ataxia) or a type of insanity called paresis EHRLICH used arsenic derivatives in treatment Today arsenic, mercury, and bismuth derivatives and penicillin are used Inoculation of malaria parasites under control with quinine is sometimes used in nervous-system infection, the beneficial effects possibly being the result of the long high fever Early persistent treatment by a physician over a period of time with frequent tests to check progress is essential to prevent the later stages. Where syphilis originated is unknown, some authorities say that it appeared first in the Old World, and others maintain that it was carried to Europe (c 1493) by returning voyagers from the New World An epidemic of a disease generally identified as syphilis broke out in 1495 during the brief siege of Naples in the Italian Wars and spread rapidly through much of Europe, persisting well into the 16th cent It is uncertain whether the disease was known before that time

Syra see SYROS

Syracuse (sĭ'rukūs, -kūz), Ital *Siracusa* (sē'rakōō'za), city (pop 43,639), capital of Syracuse prov., SE Sicily, Italy, a port on the Ionian Sea The old town is on the small island of Ortygia, a bridge connects it with the mainland, where the modern districts are laid out Founded by Greek colonists in 743 B C , Syracuse grew rapidly and soon founded colonies of its own Its democratic government was suppressed by GELON, tyrant of Gela, who took possession of Syracuse in 485 B C Under his rule, marked by his great victory (480) over the Carthaginians at Himera, Syracuse took the lead among the Greek cities of Sicily His successor, HIERO I, made it one of the greatest centers of Greek culture PINDAR and AESCHYLUS lived at his court Soon after Hiero's death, a democracy was established (466–406) During that period Syracuse extended its power over E Sicily and defeated an Athenian expedition (begun in 415 by ALCIBIADES) in a great land and sea battle (413). In 406 B C DIONYSIUS THE ELDER became tyrant. Under his long rule Syracuse reached the limits of its power and extension After his death there followed a period of bitter internal struggle in which DIONYSIUS THE YOUNGER, DION OF SYRACUSE, and TIMOLEON were the chief protagonists, after several decades of democratic government, tyranny returned once more in the persons of AGATHOCLES (317–289) and HIERO II (270–c 215) Hiero's reign was relatively peaceful and prosperous, but after his death doom came to Syracuse for having abandoned its traditional ally, Rome, in favor of Carthage in the second of the PUNIC WARS After a long siege by the Roman consul Marcellus the city fell in 212 B C and was sacked, after that date Syracuse was reduced to the role of a provincial town The period from Dionysius the Elder to the fall of Syracuse was a brilliant one from the cultural point of view PLATO visited Syracuse several times, Theocritus probably lived at the court of Hiero II, ARCHIMEDES, who directed the defense against the Romans, was killed in the sack of Syracuse Numerous remains testify to the city's past greatness On Ortygia are the cathedral, built on remains of a Greek temple, with 12 Doric columns, the remarkable archaeological museum; the fountain of ARETHUSA, ruins of a temple of Apollo, and a castle built by Emperor Frederick II. Among the remains on the mainland are the celebrated Greek theater (5th cent B C), still used for classical performances, a Roman amphitheater, the castle of Euryelus (a Greek fortress), and extensive catacombs

Syracuse. **1** (sĭ'rukūz, -kūs) Town (pop 1,346), N Ind , on Wawasee Lake SE of South Bend It is a summer resort **2** (sĭ'rukūz, -kūs) City (pop. 1,226), co seat of Hamilton co , SW Kansas, on the Arkansas river near the Colo line, inc 1887 **3** (sĭ'rukūs, sē') City (pop 205,967), co seat of Onondaga co , central N Y , on Onondaga Lake and the Barge Canal and SE of Rochester, settled 1805, inc as a village 1825, as a city 1847, when the village of Salina was joined Salt making, the city's chief industry from its settlement until after the Civil War, declined under competition But favorable location on the Erie Canal (opened here 1819) and on railroads stimulated industrial development The city is today a port of entry and makes typewriters, farm machinery, iron products, candles, chinaware, and air-conditioning equipment An annual state fair has been held here since 1841 Syracuse has a state school for mental defectives and a state psychopathic hospital, near by are an Indian reservation and a state park Of interest are the Museum of Fine Arts, known especially for ceramic exhibits, the Mills Rose Garden, and Syracuse Univ In 1936 railroad tracks which coursed through its main street for nearly a century were removed to elevated lanes

Syracuse University, at Syracuse, N Y , coeducational, chartered as Genesee College, at Lima, N Y , 1849, moved to Syracuse 1869, rechartered as Syracuse University 1870 It includes colleges of applied science, business administration, fine arts (with music and architecture), home economics, law, liberal arts, and medicine (formerly Geneva Medical College, founded 1834) It also has schools of citizenship and public affairs (Maxwell), education, journalism, library science, public speech and dramatic art, and nursing There are branches at Endicott and Utica The New York State College of Forestry (1911, with the Ranger School at Wanakena and forest and wildlife experiment stations) is affiliated A natural science museum and the Goudy typographical laboratory are at Syracuse Notable buildings are the "Castle," designed by James Renwick, and the large chapel

Syr Darya (sĭr" dar'yə), anc. *Jaxartes* or *Yaxartes*, Persian *Sihun*, river, c 1,300 mi long, USSR One of the main rivers of central Asia, it is formed in the FERGANA VALLEY (Uzbek SSR) by the junction of the NARYN and Kara Darya rivers, which rise in the Tien Shan mts It flows generally W through the Uzbek SSR, Tadzhik SSR, and Kazakh SSR into the northern end of the Aral Sea Its shallowness makes it unfit for navigation, but its waters are used for irrigating the important cotton-growing areas along its course and for hydroelectric power The Syr Darya forms the northern and eastern limits of the Kizil Kum desert It is paralleled in its lower course by the Trans-Caspian RR Alexander the Great in his conquest of Persia reached the river c 329 B C and may have founded the chief city on its course—Leninabad (formerly Khodzhent)—on the site of an older city.

Syria (sĭr'ēə), Arabic *Esh Sham*, republic (66,046 sq mi, pop 3,006,028), SW Asia The capital is DAMASCUS Syria is bounded on the west by the Mediterranean Sea, Lebanon, and N Israel, on the north by Turkey, on the east and southeast by Iraq, and on the south by Jordan The country has a diversified topography, from the mountain ranges and valleys in the northwest to the arid wastelands of the Syrian Desert in the center and southeast. In the north and east is the comparatively fertile Euphrates river valley, in the south are the mountains of the Jebel Druse and the plain of HAURAN, which extends westward to the Sea of Galilee and the Jordan river valley; along the Lebanese border is the Anti-Lebanon range, rising to over 9,000 ft in Mt Hermon The Orontes river, in the west, flows N into S Turkey Syria lies partly in the Fertile Crescent, the relatively well-watered region which stretches northward along the E Mediterranean coast, then inland to the mountains of S Turkey and southeast to the Persian Gulf along the Tigris-Euphrates river basin The climate varies from the generally mild Mediterranean type on the coast to the prevailing desert conditions of the southeast, where there are fairly cold winters and very hot summers Although rainfall is adequate in the mountain areas in the west, the annual precipitation in most parts is extremely small Syria is primarily a pastoral and agricultural country Large numbers of sheep, goats, cattle, and camels are raised, while the main crops are wheat, barley, millet, maize, figs, olives, apricots, and vegetables Cotton is becoming an important cash crop, and in the northwest (notably near Latakia) tobacco is grown extensively Manufactures are on a small scale—chiefly cotton and silk textiles, leather goods, cement, and olive oil—and are mostly confined to the cities of ALEP and Damascus Other than bitumen and salt, there are few mineral resources, although oil drilling has been undertaken recently on an exploratory basis Railroads link the major cities (Alep, HAMA, HOMS, and Damascus), but because Syria has no deep-water harbor on the Mediterranean, the bulk of Syrian exports are shipped from the Lebanese ports of Beyrouth and Tripoli The population is largely of Arab origin, and Arabic is the chief language About three quarters of the people are Moslems (predominantly Sunnites), while the rest are Syrian Christians (Catholics and Orthodox) and Jews The DRUSES, of a separatist Moslem sect, dwell in the south, and the Syrian Desert is inhabited by several nomadic Bedouin tribes Literacy is on a low level. Historically, the name Syria has comprised those lands of the Levant, or eastern littoral of the Mediterranean, which correspond to modern Syria and Lebanon, most of Israel and Jordan, and parts of N Arabia Three geographic factors have played a major part in determining the history of Syria—its location on the trade and military routes between the Mediterranean and Mesopotamia, its varied topography, which has made political unity difficult; and the encroaching desert, from which many of its peoples and cultural movements have come From the dawn of history Syria was an object of conquest; it has through most of its long history been held by foreign powers From the 19th to 13th cent B C the area probably was part of the empire of the HITTITES, although it fell under Egyptian rule for many years during that time The first great indigenous culture was the PHOENICIAN CIVILIZATION, (mostly in present Lebanon), which flourished after 1250 B C in a group of trading cities along the coast, later, in PALESTINE, appeared the Hebrew kingdoms Syria suffered long invasions and intermittent control by the Assyrians Babylonian conquerors also came, and Egypt perpetually sought to reestablish power The people were subjected to massacres, plundering, and forced deportations Under the Persian Empire, with its efficient administrative system, Syria flourished, and the standard of living improved After the conquest (332–331 B C.) by Alexander the Great, his brief empire was followed by that of the Seleucidae, who are usually called kings of Syria, though they did not always have a secure grip on much of Syria and they had many other possessions Their control of Syria was constantly threatened from Egypt, where the Ptolemies then held sway. The Egyptians generally held the south until Antiochus III conquered the section (generally called Coele Syria, a name earlier vaguely applied to all W Syria). The Seleucidae founded colonies and strove successfully to introduce Hellenistic civilization Syria long showed the revivifying effects of this new culture Many of the cities were cultural centers, but the change did not reach the lower levels of the population, and when invasions began again with the Armenians under Tigranes and then the Parthians—both in the 1st cent B.C—the Hellenistic sheen was soon dulled. The Romans under Pompey conquered the region by 63 B C but continued to war against the Parthians there, and Syria did not advance There were many changes in administration, and Rome drew from Syria many soldiers and many slaves. The old pagan gods of Syria were also exported to Rome. More significant for the future, Christianity was born in Palestine and soon exerted some influence over all Syria, St. Paul was converted on the road to Damascus In central Syria PALMYRA was allowed to grow to considerable power as an autonomous state after the 1st cent A D but was cut down when it threatened the power of Rome After the division of the Roman Empire into the Western Empire and the Eastern, Syria was under Byzantine rule, but control grew somewhat lax long before the Arabs appeared (633–36). Syria was largely converted to Islam. Damascus became the usual capital of the OMAYYAD caliph (661–750) and had a period of great splendor Now the bonds between Moslem Syria and the predominantly Christian south (the later Lebanon) began to sever There were, however, groups of Christians who persisted in Syria They generally rendered aid to the Christian hosts of the CRUSADES, who came into Syria at the end of the 11th cent Already the Seljuk Turks had conquered most of the land, and the Christians warred against them, as well as against the conquering SALADIN, who was triumphant over both the Christians and his fellow Moslems By the end of the 12th cent he was dominant. His rule was followed by that of the Mamelukes, and Syria was visited again with furious invasions—this time by the Mongols—before the Ottoman Empire established its control by 1516 In that empire Syria suffered a little relief from the recurrent devastations of invasions, and the Syrians were allowed a fair amount of self-rule But lax central control did allow for trouble, and the fierce Druses grew very strong in their mountain fastnesses and threatened the Christian Maronites France early began to protest as the protector of the Christians The adventure of Napoleon I in Egypt took the French also into Syria in 1799, but the occupation was ephemeral The power of MOHAMMED ALI in Egypt in the early 19th cent threatened Turkish control, and IBRAHIM PASHA actually seized Syria from the Turks in a campaign in 1832–33 and held power there, reinforced by new campaigns in 1838–39, but the Egyptians were forced to withdraw under pressure from the European powers The intermittent massacres of the Christians took place principally in present Lebanon, but all Syria was thrown into an uproar. Arab nationalism also began to take shape, speeded somewhat by the rise of Zionism In the First World War, the British encouraged nationalist ambitions in the warfare against the Turks These ambitions were scarcely satisfied when in the peace settlement France was given a mandate over the Levant States (roughly present Syria and Lebanon). This rule went into effect in 1920 The region was parceled out into districts on the ground that political decentralization would safeguard the rights of minorities. The Arab nationalists angrily pointed out that it also was a means of perpetuating French control by a divide-and-rule policy Some concessions were made, particularly after serious disturbances in 1925, resulting in a rebellion by the Druses and a French siege and bombardment of Damascus Lebanon was made a separate state in 1926, and there were long and rather unfruitful negotiations that resulted in agreements to set up a Syrian state with some autonomy in 1930 and 1933 Latakia and the Jebel ed Druse were made separate territories Nationalist agitation for independence continued and grew more bitter Anti-French feeling ran particularly high after the troubles that resulted in the cession of the sanjak of Alexandretta (see ALEXANDRETTA, SANJAK OF) to Turkey, completed in 1939 In that year the French suspended the constitution, and, in the Second World War they garrisoned Syria with a large number of troops, most of whom, after the fall of France in June, 1940, declared loyalty to the Vichy government, while others left to join Free French forces Relations with Great Britain deteriorated, and when it was discovered that Syrian airfields had been used by German planes en route to Iraq, British and Free French forces invaded and occupied Syria in June, 1941 In accordance with previous promises, the French proclaimed the creation of an independent Syrian republic in Sept., 1941, and an independent Lebanese republic in Nov., 1941 In Jan., 1942, the territories of Latakia and Jebel ed Druse were incorporated into the new Syrian state, and on Jan., 1, 1944, complete independence was achieved. However, the continued presence of French troops in Syria caused increasing friction and bloodshed, as well as strained Anglo-French relations, not until April, 1946, were all foreign troops finally withdrawn from the country. Syria was still prey to internal disturbances A member of the Arab League, the republic joined the other Arab states in the unsuccessful war (1948) against Israel, an armistice was signed in July, 1949 Three coups d'état by different groups of army officers took place in 1949. Syria became a member of the United Nations. Plans for a federation of the Arab states in a Greater Syria are supported by many Syrians, but mutual suspicions among the Arab rulers have so far thwarted any steps in this direction See Gertrude Bell, *Syria. the Desert and the Town* (1907), George Antonius, *The Arab Awakening* (1939), H. C Gordon, *Syria as It Is* (1939), P. W Ireland, *The Near East Problems and Prospects* (1942), Freya Stark, *Letters from Syria* (1942), A. H. Sze, Alfred Sao-ke (sou'-kē' zĕ', sŏŏ'), Mandarin *Shih Chao-yi*, 1877–, Chinese diplomat, grad Cornell Univ He was (1914–21, 1929–32) Chinese minister to Great Britain and represented (1921–29, 1933–35) China in the United States He was the Chinese delegate to the Paris Peace Conference (1918–19) and to the council of the League of Nations (1931)

Szechenyi, Count Stephen (sā'chĕnyē), Hung *Széchenyi István* (ĭsh'tvän), 1791–1860, Hungarian statesman Influenced by his studies in England, he championed the modernization of Hungarian economic, social, and intellectual life and was the leader of the moderate liberal group in the Hungarian diet He was (1848) minister of transportation in the first revolutionary government of Hungary, but he resigned when an open break with Austria impended, and he opposed the nationalism of Louis Kossuth In 1859 Szechenyi wrote a satire against the absolute rule of the Austrian minister Bach, incurring serious difficulties with the authorities Szechenyi, who had suffered a mental breakdown once before, committed suicide.

Szechwan (sĕ'chwän', sū'-), Mandarin *Szu-ch'uan*, province (117,111 sq mi, pop. 47,515,876), SW China The capital is Chengtu Completely surrounded by mountains, Szechwan is accessible to the rest of China by the Yangtze river, which flows through the south and receives several large tributaries, notably the Min, the Lu, and the Kialing The spectacular gorges found along the eastern part of the Yangtze's course through Szechwan make it hard to navigate to Chungking, the chief provincial port. Transportation, mostly limited to the turbulent rivers, is poor. Central Szechwan is a generally rough plateau which is called the Red Basin because of its sandstone formation. The basin includes the Chengtu Plain, the only large level area in the province; however, extensive ter-

racing adds much cultivated land, and with a mild climate, adequate rainfall, and fertile soil, two harvests a year are usual Rice is the main staple, and wheat, kaoliang, corn, sugar cane, and tobacco are important A food surplus is raised, and Szechwan is the most densely populated of China's provinces Cloth is woven from locally raised silk and hemp Coal and iron, although widely distributed, are little utilized Salt is the most-exploited mineral resource, and a large surplus is exported to neighboring provinces In the Second Chino-Japanese War much of China's industry and government were moved to Szechwan

Szeged (sĕ'gĕd), formerly **Szegedin** (-ēn), city (pop 136,752), S Hungary, on the Tisza and Maros rivers. Partly destroyed (1879) by a flood and rebuilt in modern style, it has a university, two museums, and a library containing 150,000 volumes and an ethnographic collection The chief landmark of Szeged is a 13th-century Romanesque tower In 1919 the counterrevolutionary government of Admiral Horthy was formed here

Szekely, Hung *Székely* (sā'kā), ethnic group of TRANSYLVANIA and neighboring areas. They are Magyar-speaking, and about 80 percent of the Hungarian population of Transylvania, it is estimated, are of Szekely origin Except in a few isolated communities, however, where the ancient customs of the Szekely have survived, there is no longer any difference between Szekely and Magyars The Szekely (also known as Szeklers and as Siculi) came into Transylvania either with or before the MAGYARS Their organization was of the Turkic type, and they were probably of Turkic (possibly Avar) stock By the 11th cent , however, they had adopted Magyar speech They later formed one of the three privileged "nations" of Transylvania (the others were Magyars and Saxons) With their own military and civil organization, they enjoyed autonomy under the Hungarian crown and were, without exception, regarded as of noble birth, they were exempt from taxation In the 16th cent the Szekely accepted, for the most part, Unitarianism as their religion Their privileges declined in the 18th cent under the rule of Maria Theresa and Joseph II The Austrian attempt to impress the Szekely into service as a border militia met with widespread resistance In 1763 a large number of Szekely who sought to escape the Austrian recruiting agents were massacred at Madefalva. Many subsequently emigrated to Bukovina and Moldavia The last remnants of Szekely autonomy were suppressed by Austria after the Revolution of 1848

Szekesfehervar, Hung *Székesfehérvár* (sā'kĕshfĕ"-hârvar), Ger. *Stuhlweissenburg* (shtōōl"vī'sŭn-bōōrk), city (pop 47,968), W central Hungary It dates from the Roman period, and the museum contains Roman antiquities From 1027 to 1527 the Hungarian kings were crowned here

Szell, Koloman (kō'lōmän sāl'), Hung *Széll Kálmán* (kāl'män), 1845–1915, Hungarian statesman A close associate of DEAK, he was a deputy from 1867, minister of finance (1875–78), and premier (1899–1903) In 1878 he was able to procure a favorable tariff agreement between Austria and Hungary

Szentgotthard (sĕnt'gôt'hârd), town (pop 3,548), W Hungary, on the Raab and near the Austrian border. Here in 1664 Montecuculi defeated the Turks The place is known in English also as St Gotthard

Szent-Gyorgyi, Albert von, Hung *Szent-Györgyi* (al'bĕrt fŭn sĕnt"-dyûr'dyĭ), 1893–, Hungarian biochemist He served as professor at the universities of Szeged (1930–44) and Budapest (after 1946) and then came to the United States, where he became (1948) a research fellow at the National Institute of Health at Bethesda, Md He received the 1937 Nobel Prize in Physiology and Medicine for his studies of biological oxidation, for discovering ascorbic acid in adrenal glands and identifying it as vitamin C, and for extracting it in large quantities from Hungarian paprika (*Capsicum annuum*) His later researches are chiefly on muscle chemistry He wrote *On Oxidation, Fermentation, Vitamins, Health, and Disease* (1939), *Chemistry of Muscular Contraction* (1947), and *Nature of Life* (1948)

Szigeti, Joseph (sĭgĕ'tē, Hung sĭ'gĕtĭ), 1892–, Hungarian violinist, pupil of Hubay He made his first tour in 1912 in Europe, afterward becoming internationally known for his excellent musicianship He taught (1917 24) at the Geneva Conservatory and in 1925 made his American debut See his autobiography, *With Strings Attached* (1947)

Szigetvar, Hung *Szigetvár* (sĭ'gĕtvār), town (pop 6,270), SW Hungary, W of Pecs It was defended in 1566 by Nicholas Zrinyi against Sultan Suleiman I, who died during the siege Zrinyi was killed during a sortie, and the fortress eventually fell to the Turks Szigetvar is sometimes called Sziget or Szigeth, but it is not to be confused with the city of Szeged on the Tisza or with the Rumanian town of Sighetu (Hung *Maramarossziget* or *Sziget*) in the Carpathians

Szold, Henrietta (zōld), 1860 1945, American Jewish leader, b Baltimore After graduating from high school in 1877 she taught (1878–92) in private schools, organizing many Americanization classes for immigrants From 1892 to 1916 she was a member of the editorial staff of the Jewish Publication Society of America In 1909 she visited Palestine, and her concern over the inadequate medical service in that country led her to devote her life to the cause of ZIONISM In 1912 she founded the American women's organization HADASSAH, of which she was president from 1912 to 1926 After 1920 she lived in Palestine, directing the organization's medical service and relief work She translated works from French, German, and Hebrew, including *The Legends of the Jews* by Louis Ginzberg (Eng tr , 7 vols , 1909–38) and *The Ethics of Judaism* by Moritz Lazarus (Eng tr , 2 vols , 1900) See biography by Marvin Lowenthal (1942), E. E Levinger, *Fighting Angel* (1946)

Szolnok (sōl'nōk), city (pop 42,011), E central Hungary, on the Tisza and Zagyva rivers. It is a trading and manufacturing center. There is a large Franciscan convent

Szombathely (sōm'bōt-hā"), Ger. *Steinamanger* (shtīn'ŭm-ang'ur), city (pop 42,872), W Hungary It was founded in A D 48 by Emperor Claudius An episcopal see since the 17th cent it has an 18th-century cathedral and an episcopal palace with a museum of antiquities. Ruins of a triumphal arch, an amphitheater, and an aqueduct have been excavated near by

Szondi Test see MENTAL TESTS

Szymanowski, Karol (kä'rōl shĭmänôf'skē), 1883–1937, Polish nationalist composer German influence on his early works is exemplified in his opera *Hagith* (1912), his later works, however, are strongly nationalistic, especially his ballet *Harnasie* (1928), his best-known work, which deals with Polish mountain people Other works are three symphonies, the opera *King Roger* (1928), mazurkas and other Polish dances for piano, chamber music, and the violin piece *The Fountain of Arethusa*, one of a set called *Myths* (1915)

T

T, 20th letter of the ALPHABET It corresponds to the Greek tau It represents the unvoiced dental or, as in English, alveolar stop The digraph *th* represents the characteristic English interdental fricative, voiced in *this*, voiceless in *thing* For modern misapprehensions concerning older signs for the fricative, see Y

Ta, chemical symbol of the element TANTALUM.

Taaffe, Eduard, Graf von (ä'dōōärt grĭf' fŭn tä'fŭ), 1833–95, Austrian statesman of Irish descent A childhood friend of Emperor Francis Joseph, he was briefly premier in 1868–69 and again from 1879 to 1893. Taaffe sought by a series of compromises to "muddle through" the tempestuous crises brought about by the conflict of nationalities within the Austro-Hungarian Empire A conservative, he relied on an alliance of the Slav and German conservatives against a liberal and nationalist German opposition. In 1880 he sought to conciliate the Czechs by granting limited recognition to the Czech language as a national language in Bohemia and Moravia However, he antagonized the liberal "Young Czechs," who were rapidly gaining the upper hand in Bohemia. Taaffe was forced to resign by a coalition of widely opposed interests when he presented an electoral reform bill which provided for a general and equal franchise

Taal, Lake (tä'äl'), area 94 sq mi , on SW Luzon, Philippine Islands, S of Manila. It contains Volcano Island, with Mt. Taal, an active volcano, rising to 984 ft.

Taanach (tā'nāk, tā'năk), royal city of Canaan, where Sisera was defeated by Deborah and Barak It lay on the great road running along the side of the Vale of Esdraelon, c 5 mi. SE of Megiddo Joshua 12.21, 17 11, Judges 1 27, 5 19, 1 Kings 4.12, 1 Chron. 7.29. Tanach, Joshua 12 25.

Taanath-shiloh (tā'nāth"shī'lō), unlocated town, E central Palestine Joshua 16 6

Tabard Inn (tă'bûrd), in Southwark, London, in Borough High St It was the traditional starting place of the Canterbury pilgrims, as described by Chaucer in the Prologue of the *Canterbury Tales*.

Tabari (Abu Jafar Muhammad ibn Jarir at-Tabari) (tăbä'rē), c 839–c.923, Arab historian and commentator. His name Tabari was given him because he was born in Tabaristan, Persia. He traveled widely in Syria and Egypt, settling finally in Baghdad. He was admired for his erudition, his memory, and his industry. He wrote two great works, a commentary on the Koran and *Annals of the Apostles and the Kings* The commentary has one of the largest collections of the traditions of Mohammed The annals are an attempt at universal history from the creation to 915 It was condensed from an even longer work, it is not a continuous narrative but contains differing versions of the same story and is thus a prime collection of Arabic sources

Tabasco (tŭbă'skō, Span tabä'skō), state (9,783 sq mi., 1946 estimated pop 327,459), SE Mexico, on the Gulf of Campeche The capital is VILLAHERMOSA Lying N of Chiapas and E of Guatemala and of the states of Campeche and Veracruz, Tabasco is predominantly a jungle plain broken by rivers, swamps, and lagoons and is subject to heavy rainfall (c 10 ft yearly) The rivers, notably the GRIJALVA and the USUMACINTA, provide practically the only means of communication, there are few roads, and the railroad between Campeche and Veracruz is uncompleted Cortés crossed Tabasco on his historic march (1524–25) to Honduras, and Francisco de MONTEJO conquered (1530) the region Agriculture is the main livelihood, with cacao, sugar cane, coffee, vanilla, rice, rubber, corn, tropical fruits, and valuable woods exported

Tabb, John Banister, 1845–1909, American poet, b Amelia co., Va Va Serving as a Confederate blockade-runner in the Civil War, he was captured and imprisoned (1864) He was converted to Roman Catholicism (1872), entered the priesthood (1884), and thereafter taught in St Charles College, Ellicott City, Md His poems of nature and religion are simple and, at their best, reminiscent of the 17th-century English devotional poets Among the published volumes are *An Octave to Mary* (1893), *Poems* (1894), and *The Rosary in Rhyme* (1904). F A Litz wrote a biography (1924) and edited *The Poetry of Father Tabb* (1928). See study by Gordon Blair (1940)

Tabbaoth (tă'bāōth, tŭbā'ŏth), family returned from exile Ezra 2 43, Neh 7 46

Tabbath (tă'băth), unlocated place, NW Palestine. Judges 7.22.

Tabeal (tă'bēăl, tŭbē'ul) [Heb., =God is good], father of the proposed usurper of Ahaz's throne Isa 7 6

Tabeel (tă'bēēl, tubē'ĕl) [Heb , =God is good], Persian official in Samaria Ezra 4 7

Taber (tā'bûr), town (pop 1,760), S Alta , near the Oldman river and ENE of Lethbridge, in an irrigated ranch area. There are adjacent coal mines and oil and natural-gas fields

Taberah (tă'bĕ-ru) [Heb , =burning], unlocated camp in the wanderings. Num 11 3, Deut 9 22

Tabernacle (tă'bŭrnă"kul) [Latin, =tent, hut], in the Bible, the portable holy place of the Jews in their wanderings in the wilderness It was apparently a tent to house the Ark of the Covenant when that was set down It was considered, like the Holy of Holies in the Temple later, in a peculiar sense the dwelling of God Himself It was set up in the center of the camp at every halt. For the directions for the making of the Tabernacle and its appointments, see Ex 25–27, 30–31; 35–40. The Tabernacle was finally placed at Shiloh. Joshua 18. The term is applied also to the small receptacle, used in the Roman Catholic Church, in which the Host is reserved on the altar These tabernacles are often elaborately worked, especially as to the doors They are usually cubical in shape, and they are large enough to hold a large ciborium

Tabernacles, Feast of, one of the oldest and most joyous of Jewish holidays, called in the Bible the Feast of Ingathering and today often called by its Hebrew name, Sukkoth (sōōkōth') [Heb , =booth] The holiday begins on the 15th day of the Tishri, the seventh month in the Jewish calendar, and lasts for nine days, ending in another holiday, Simhath Torah [Heb , =rejoicing of the law] The Feast of Tabernacles, which marked the closing of the harvest season for the Jews of ancient Palestine, is today celebrated by the erection of lightly constructed booths covered with thatch in memory of the wanderings in the wilderness The palm branch (lulab) and fruit (ethrog) procession performed in conjunction with prayers of the Feast of Tabernacles possibly goes back to the harvest festival associated with the holiday Lev. 23.33-44, Num 29 12–40, Ezek. 45 25

tabes dorsalis see LOCOMOTOR ATAXIA.

Tabitha (tă'bĭthu), same as DORCAS.

tablature (tă'blŭchûr), in music, name for various systems of musical notation in use in the 15th, 16th, and 17th cent for keyboard and lute music German keyboard tablatures before 1550 used a mixed system employing letters for the lower parts and staff notation for the upper parts Later, letters were employed exclusively Above the letters were symbols indicating the duration of the tones. In Spanish keyboard tablatures there is a line to represent each voice of the music, with a number representing the scale degree of the tone. Lute tablatures have lines representing the strings of the

lute. Spanish and Italian lute tablatures used numbers to indicate the position for stopping the string The French system, which superseded all others in the 17th cent, used letters for this purpose A German system also existed, more complicated than these Tablatures are used today to notate music for guitar and ukulele These have vertical lines representing strings of the instrument, horizontal lines for the frets, and dots to show the position of the fingers See Willi Apel, *The Notation of Polyphonic Music, 900–1600* (2d ed , 1944)

table, article of furniture employed for household or ecclesiastical purposes Elaborately decorated tables of wood or metal were known in ancient Egypt and Assyria, and the Greeks used small tables of low construction to be set beside a couch The table became more common during the Roman Empire and included massive rectangular pieces made of marble and supported by carved end slabs and square or circular forms of bronze supported on a pedestal or on legs often representing wild beasts, sphinxes, or other figures Although small tables of various shapes, some covered with precious metals, were used during the Middle Ages, the commonest form was the long trestle table taken apart and removed after meals—hence the expression "festive board " Tables of the Italian and Spanish Renaissance were rectangular with end supports braced by stretchers, they often had an arcade of columns through the center Tables of the Elizabethan Age were supported on bulbous legs and included the draw table, forerunner of the extension dining table By the end of the 17th cent a variety of occasional tables, the console, and the gate-leg had come into use Tables vary in size with their purpose from the smallest candlestand to the great banquet table They are named according to the place for which they are intended (center, library, side, sofa, tavern), their use (tea, china, drawing, writing, sewing, billiard, dining), their form (folding, console, extension, trestle or sawhorse, piecrust, gate-leg, butterfly, drop-leaf, tilt-top, nest), period or style (Gothic, Queen Anne, Empire), or the names of designers who created distinctive types (Adam, Chippendale, Hepplewhite, Sheraton, or Phyfe)

Table Bay, inlet of the Atlantic, 6 mi wide, lying off W Cape Prov , Union of South Africa Table Mt overlooks the bay, which was discovered in the late 15th cent by Portuguese voyagers to India and used as an anchorage The shore of Table Bay was settled by the Dutch in 1652 with the founding of Capetown The open anchorage is protected by large breakwaters

Table Mountain, 3,549 ft high, W Cape Prov , Union of South Africa It overlooks Capetown and Table Bay The summit is flat, and the dense white mist which often covers it is called the "Tablecloth " A cable way (built 1929) carries visitors to the summit

table tennis, game played, usually indoors, by two or four players, more or less a miniature form of lawn TENNIS It is also called Ping-pong after the trade name for a kind of table tennis It is played on a table which should measure 9 ft by 5 ft, and which should stand 2½ ft above floor level A net 6 in high divides the surface, which is generally dark in color, edged with light stripes, and marked off longitudinally into halves by another light stripe The celluloid ball is hollow, seamless, about 1½ in in diameter, and it weighs $^1/_{10}$ oz , the racket is a wooden paddle with a handle 3 in long and a round blade about 6½ in long, often covered with rubber or sandpaper In the service (unlike tennis) the ball must bounce once before clearing the net and again bounce once on the far surface After the service (only one is allowed, not two as in tennis), the returns are to go over the net without the bounce on the near surface A point is scored when a service goes foul or when a player fails to return the ball properly Each player in turn serves consecutively five times until the winning score of 21 is reached In doubles matches partners rotate in units of five consecutive services, and the server must deliver the ball into the diagonally opposite box Table tennis probably originated in the 19th cent It first became popular in England and spread to several European countries and to the United States in the early 20th cent In 1926 the International Table Tennis Federation was founded to standardize the rules and the equipment of the game See Coleman Clark, *Table Tennis* (1938), Sol Schiff, *Table Tennis Comes of Age* (1939), P G S Montague, *Table Tennis* (2d ed , 1947)

taboo or **tabu** (both tăbo͞o′, tu–), prohibition of an act or of the use of an object or a word under pain of supernatural punishment The name originated in Polynesia, where systems of taboo are highly developed, but the use of taboos is found among primitive peoples everywhere Among the commonest taboos are those on incest and on eating one's totem animal Some taboos seem designed to prevent pollution, e g , the taboo on touching a corpse, but the reason for a taboo can seldom be determined It seems usually to be connected with belief in magic or with the operations of a spirit or mana, and the consequences of a violation are magical or supernatural, not natural. Thus, if a hunting party fails to bag game, the failure is ascribed to some hunter's neglect to observe the taboos governing hunting See Sigmund Freud, *Totem and Taboo* (1927), E E Burriss, *Taboo, Magic, Spirits a Study of Primitive Elements in Roman Religion* (1931), A R R Brown, *Taboo* (1939); Hutton Webster, *Taboo. a Sociological Study* (1942)

Tabor, Horace Austin Warner (tā′bur), 1830–99, American prospector, known as Silver Dollar Tabor, b Holland, Orleans co , Vt From the Matchless Mine at Leadville, Colo , he gained tremendous wealth by mining silver, and he spent money lavishly in Leadville and Denver He became (1878) the first mayor of Leadville, served as lieutenant governor of Colorado (1878–83), and sat in the U S Senate for about 30 days to complete an unexpired term (1883) He lost most of his fortune and at his death begged his second wife, **Elizabeth McCourt Tabor,** 1862–1935, to hold the Matchless Mine, which he believed would again yield wealth She was found frozen to death in a shack near the mine, where she had lived alone for many years See G F Willison, *Here They Dug the Gold* (1931, 3d ed , 1946), L C Gandy, *The Tabors* (1934)

Tabor, in the Bible **1** Mt TABOR **2** Levitical city 1 Chron 6 77. **3** Oak (AV mistranslates "plain") on Saul's way home after his anointing 1 Sam 10 3 **4** Unidentified place Judges 8 18

Tabor, Czech *Tábor* (tä′bôr), town (pop 17,596), S Bohemia, Czechoslovakia. It was founded (1420) by John ZIZKA on a hill near the castle where John Huss had retired in 1412 Named after Mt Tabor in Palestine, it became the stronghold of the Taborites, the extreme wing of the Hussites Tabor retains the round tower of a 13th-century castle, many old houses, and a 16th-century town hall with a large collection of Hussite relics Outside the town hall are stone tables where the Taborites received communion in both kinds

Tabor (tā′bur), town (pop 391), SE S Dak , near the Nebr line and between Yankton and Tyndall It was founded c 1870 by a colony of Czechs, who were followed in 1874 by Russian Mennonites and the HUTTERISCHE COMMUNITY The town, incorporated in 1901, is the trade center for a farm area in which Czechs predominate

Tabor, Mount, mountain, N Palestine, rising abruptly from the northeastern side of the plain of Esdraelon c 6 mi E of Nazareth Ruins of an ancient stronghold crown its summit, on its slopes Barak assembled the army which defeated Sisera Joshua 19 22, Judges 4, Jer 47 18

Tabora (tăbō′rə, tubō′ru), town (pop 6,565), central Tanganyika, founded c 1820 by Arab slave traders It is connected by rail with Dar-es-Salaam on the coast Cotton and peanuts are produced in the region

Tabor City, city (pop 1,552), SE N C , at the S C line WSW of Wilmington It is a shipping and trade center in a farm area

Taborites (tă′burīts), radical branch of the HUSSITES in 15th-century Bohemia They were named after their religious center and stronghold at Tabor, Bohemia The Taborites went further than the moderate Hussites (see UTRAQUISTS) in accepting the doctrines of Wyclif, they rejected belief in purgatory and did away with all sacraments except baptism and communion Like all Hussites, they took communion in both kinds, but they did not believe in the material presence of Christ in the Eucharist Puritanical and monoclastic, they abolished veneration of saints, holy images, and the religious rites of the Catholic Church, and their religious services consisted merely in communion, the singing of Czech hymns, prayer, and Bible readings Their priests wore lay garb Their bishops were elected by the priests The Taborites and several lesser radical sects were the most militant elements in the HUSSITE WARS, from among the radicals came such leaders as ZIZKA and PROCOPIUS THE GREAT Their incentive was nationalist as well as religious When the Taborites refused (1434) to accept the Compactata with the Roman Catholic Church, they were attacked and routed by the Utraquists and Catholics at Lipany It is likely that the churches of the Bohemian and Moravian Brethren (see MORAVIAN CHURCH) grew out of the suppressed Taborite movement

Tabrimon (tă′brĭmun) [Heb ,=Rimmon is good], father of King Benhadad 1 Kings 15 18

Tabriz (tăbrēz′), city (pop 213,542), NW Iran, in Azerbaijan Among Iranian cities it is second in size only to Teheran and has many Turkic-speaking inhabitants The climate, very cold in winter and cool in the summer, has made the city a summer resort Its importance has lain in its strategic position for trade to the north (now Russia) and to the west (now Turkey) The city has a number of manufactures and handicrafts—including rugmaking—and there are extensive bazaars The city is old and may possibly have been the ancient Gazaca It was a commercial center of some importance in the 9th cent , and later in the wars between Persia it was often the object of attack by the Turks, who held it continuously from 1585 to 1603 It later became an object of attack by the Russians, who took it in 1827 and again in 1909. The city has suffered greatly from earthquakes, the most severe being those of 1721 and 1780. Nevertheless some of the old mosques, notably the Blue Mosque, survive, as does the medieval citadel called the Ark. The city as a whole is modern and has a radio station and an incomplete university. In the Kajar or Qajar dynasty the crown prince lived here In the joint Anglo-Russian occupation (1941) in the Second World War, Tabriz was occupied by the Russians After the war there was in 1946 a revolution led by the leftist Tudeh party and a Tudeh regime, which had Russian sympathy, lasted a few months

Tacaná (täkänä′), volcano, 13,333 ft high, W Guatemala On the Mexico-Guatemala boundary, this inactive volcano is in Central America second in height only to Tajumulco

Taché, Alexandre Antonin (älĕksäⁿdrə ätônäⁿ′ tashā′), 1823–94, Canadian Catholic missionary and prelate, b Rivière du Loup, Que , nephew of Sir E P Taché In 1844 he became a novice in the Oblate order and the following year went as a missionary to the Red River district, he became bishop coadjutor of St Boniface in 1851, bishop in 1853, and archbishop in 1871 Absent in Rome at the outbreak (1869) of the Red River Rebellion, he hurried back to Canada and at the request of the government used his influence in restoring order and in paving the way for a settlement of the rebels' grievances His *Sketch of the North-West of America* (1869, Eng tr , 1870) and other books on the Manitoba area awakened interest in that then-little-known region

Taché, Sir Étienne Paschal (ātyĕn′ päshal′), 1795–1865, Canadian statesman, b Quebec prov He practiced medicine for many years In 1841 he was elected to the legislative assembly, in 1848 he became a member of the legislative council and commissioner of public works in the Baldwin-LaFontaine administration For eight years (1849–57) he was receiver general In 1856 he became premier with John A Macdonald, but retired in 1857 Knighted in 1858, he was summoned from retirement to become prime minister in 1864 in the second Taché-Macdonald administration A respected and experienced statesman, he presided over the Quebec conference (1864) on confederation but died before confederation had been achieved

Tachmonite (täk′mō–, täkmō′–) see HACHMONI

Tacitus (Marcus Claudius Tacitus) (tă′sĭtus), d 276, Roman emperor (275–76) An elderly senator with a reputation for honesty and vigor, he was chosen by the senate to succeed the murdered AURELIAN He failed to restore the glory of the senate and died after a few months when on campaign in Asia—almost certainly murdered PROBUS succeeded him

Tacitus (tă′sĭtus), A D c 55 A D c 117, Roman historian Little is certainly known of his life His family name was Cornelius, and his praenomen may have been Publius (i e , in full, Publius Cornelius Tacitus) He was a friend of Pliny the Younger, married the daughter of Cn Julius Agricola, and himself occupied public office, in A D 97 he was appointed substitute consul under Nerva, and later he was proconsul of Asia The first of his works was the *Dialogus* [dialogue], a discussion of oratory after Cicero, demonstrating to some degree the celebrity of Tacitus as an eloquent speaker, this work was long disputed, but his authorship is now generally accepted Tacitus then wrote a biography of Agricola, expressing his admiration for his father-in-law as a good and able man Perhaps most widely known of his works is the small treatise, *De origine et situ Germanorum* [concerning the origin and location of the Germans], commonly called the *Germania* or *Germany* It supplies (along with the earlier account of Julius Caesar) the principal written material on the Germanic tribes Archaeology bears out the accuracy of Tacitus, but the work is not objective, it is a picture of the rude and simple Germans glorified by an almost unstated comparison with the corruption, sloth, and luxurious immorality of the Romans This moral purpose and severe criticism of the Rome of his day—steeply fallen from the pristine and virtuous vigor of the old republic—also underlies his two long works, commonly called in English the *Histories* (of which four books and a part of a fifth survive) and the *Annals* (of which twelve books—Books I–VI, XI–XVI—survive) The extant books of the *Histories* cover only the reign of Galba (A D 68–69) and the beginning of the reign of Vespasian (to A D 70) but give a view of Roman life—persons, places and events—that is both wide and deep The surviving books of the *Annals* tell of the reign of Tiberius, of the last years of Claudius, and of the first years of Nero The account is studded with incisive character sketches, ironic passages, and eloquent moral conclusions The declamatory writing of the *Dialogus* gives place in the historical works to a polished and highly individual style, stripped clean of verbiage and marked by a wide range of vocabulary, intricate and startling syntax, and a consistent nobility of tone

Tacloban (täklō′bän), town (pop 19,048), on NE Leyte, Philippine Islands, on an inlet of Leyte Gulf.

It is a port, shipping rice and sugar In the Second World War, Tacloban was captured (1942) by the Japanese, U.S. forces regained it in Oct , 1944, and made it the temporary capital of the Philippines

Tacna-Arica Controversy (täk'nä-ärē'kä), 1883–1929, dispute between Chile and Peru. It arose from provisions of the Treaty of Ancón (1883), which ended the War of the Pacific (see PACIFIC, WAR OF THE). Victorious Chile was ceded the southern provinces of Peru, Tacna and Arica, but only for 10 years, a plebiscite was then to determine the ownership The plebiscite was not held because negotiations between the countries failed Chile in 1909 began colonizing the provinces—a course that led in 1911 to a diplomatic break between Peru and Chile The United States watched with concern while relations grew worse In 1922 representatives of Chile and Peru, meeting in Washington, agreed upon arbitration by the President of the United States Calvin Coolidge in 1925 sent as plebiscitary commissioner Gen John J Pershing, who was replaced (1926) by Gen William Lassiter Neither commissioner achieved anything of note, but at the suggestion of Frank B Kellogg diplomatic relations between Peru and Chile were resumed in 1928 The next year President Herbert Hoover made a proposal to settle the dispute This was accepted by both Peru and Chile It provided that Chile should retain Arica but return Tacna to Peru, construct a free port for Peru at Arica, with port and rail installations, transfer all state-owned real estate and buildings in Tacna to Peru, and pay an indemnity of $6,000,000 See William J Dennis, ed , *Documentary History of the Tacna-Arica Dispute* (Univ of Iowa Studies in Social Sciences, 1927), *Tacna and Arica an Account of the Chile-Peru Boundary Dispute and of the Arbitrations by the United States* (1931), Sarah Wambaugh, *Plebiscites since the World War* (1933)

Tacoma (tukō'mu), city (pop 109,408), co seat of Pierce co, W Wash , on Commencement Bay and Puget Sound, beautifully situated between bay and mountains, in sight of Mt Rainier, settled 1852, laid out 1868 In 1940 the narrow strait between Tacoma and the Olympic Peninsula was spanned by a bridge which collapsed the same year Tacoma is an important port and railroad terminus, a port of entry, and one of the chief industrial cities of the Northwest, with lumber and flour mills, electrochemical plants, food-processing plants, smelters, and foundries An army air base and Fort Lewis are near by Points of interest include historical and Chinese museums, Point Defiance Park—wherein Fort Nisqually, historic trading post, has been reconstructed—the College of Puget Sound (Methodist, coeducational, 1888), and an Indian sanatorium

Taconic Mountains (tukŏ'nĭk), range of the Appalachian Mts , extending c 150 mi southward from a point in Vermont NW of Rutland and W of the Green Mts and in the south lying E of the Hudson on New York's border with Massachusetts and Connecticut Mt Equinox (4,816 ft) near Manchester, Vt , is the highest point The range includes the BERKSHIRE HILLS Taconic State Park, comprising parts of New York, Massachusetts, and Connecticut, is a recreational area

Tadoussac (tă'dōōsăk, Fr tädōōsăk'), village (pop 766), S Que , at the mouth of the Saguenay on the St Lawrence and NNE of Quebec It is a summer resort in a dairying and lumbering region and has fish hatcheries The site was visited by Jacques Cartier in 1535 An unsuccessful attempt was made (1600–1601) to establish a French colony here It later became an important French furtrading post and the site of a Jesuit mission (1640).

tadpole, larval, aquatic form of any of the amphibian animals from the time of hatching from the egg to the development of the lungs, legs, and other organs of the adult and the loss of the tail

Tadzhik Soviet Socialist Republic (tŭjĭk', tŭjēk', Rus tŭjĭk') or **Tadzhikistan** (tŭjĭkĭstän", -stăn", tăjĭ-, Rus. tŭjĭkĭstän'), constituent republic (c 55,000 sq mi ; 1946 estimated pop 1,500,000) of the USSR, in central Asia STALINABAD, the capital, and LENINABAD, are the chief cities The Tadzhik SSR borders on China in the east, on Afghanistan in the south, on the Kirghiz SSR in the north, and on the Uzbek USSR in the west It contains part of the PAMIR mountain system and the highest peaks of the USSR (STALIN PEAK and LENIN PEAK) The southeast is occupied by an arid plateau 12,000 to 15,000 ft high The only extensive low districts are the Tadzhik section of the FERGANA VALLEY, in the north, and the hot and dry Gissar and Vakhsh valleys, in the southwest The Amu Darya (which forms part of the Afghan border), the Syr Darya, and the Zeravshan are the chief rivers and are used for irrigating the country The easternmost section of the country, MOUNTAIN-BADAKHSHAN, is an autonomous oblast. Most of the population (78 percent) are Tadzhiks (also spelled Tadjiks or Tajiks), an Iranian people of Sunni Moslem religion, the rest are Uzbeks (18 percent), Kirghiz, and Russians. Agriculture is carried on mostly under irrigation Cotton is the chief agricultural product, other crops include rice, wheat, barley, lucerne, and vegetables Stock raising (sheep, horses, and yaks), vineyards, and growing fruit and mulberry trees (for silkworms) are important occupations The traditional industries of Tadzhikistan are the processing of cotton and silk The country is rich in mineral resources (lead-zinc-silver ores, uranium, arsenic, antimony, bismuth, molybdenum, tungsten, petroleum, coal, salt, and gold), lead-zinc ores constitute the chief mineral export The Tadzhiks probably descend from the inhabitants of ancient SOGDIANA who migrated into their present mountainous abode under the pressure of conquerors Except for Mountain-Badakhshan (annexed by Russia in the late 19th cent), Tadzhikistan was ruled until the Russian Revolution by the emirs of Bukhara (see BUKHARA, EMIRATE OF) It became a constituent republic in 1929

Taegu (tī'gōō'), Jap *Taiku*, city (1949 pop 313,705), S Korea It is a railroad junction and commercial center There are silk-spinning and cotton-ginning mills The name also appears as Taeku Taiku, and Taikyu

Tafari, Ras see HAILE SELASSIE

Tafilelt (tăfē'lĭlt) or **Tafilet** (-lĕt), oasis region, area c 530 sq mi , SE French Morocco It comprises a number of date groves and small trading settlements For two centuries after c 760 it was an independent kingdom ruled from Sijilmassa (now in ruins) Since the Middle Ages it has been noted for its dates and leather It is the seat of the ruling dynasty of Morocco, which came to power in 1649

Taft, Lorado (lurā'dō), 1860–1936, American sculptor, lecturer, and writer on art, b Elmwood, Ill , grad Univ of Illinois, 1879, and studied at the École des Beaux-Arts In 1886 he became instructor in the Art Institute of Chicago, exerting a strong influence over the young sculptors of the West By his lectures and writings he spread a knowledge of art and aesthetics After decorative sculptures for the Horticultural Building of the World's Columbian Exposition, Chicago, 1893, he produced portrait work, military monuments, and groups such as *Solitude of the Soul* and *The Blind* (Art Inst , Chicago) Large memorials and fountains occupied his later years, among them the colossal *Black Hawk* overlooking Rock River, Ill , the Washington monument, Seattle, Wash , Columbus Memorial Fountain, Washington, D C , and *Fountain of the Great Lakes* and *Fountain of Time*, Chicago He presented to Elmwood, Ill , a memorial to the *Pioneers of the Prairies* and to the Univ of Illinois an *Alma Mater* His chief literary works are *The History of American Sculpture* (1903) and *Recent Tendencies in Sculpture* (1921)

Taft, Robert Alphonso, 1889–, U S Senator (1939–), b Cincinnati, grad Yale, 1910, and Harvard Law School, 1913, son of William Howard Taft He practiced law in Ohio and served (1921–26, 1931–32) in the state legislature Twice elected (1938, 1944) to the U S Senate, Robert A Taft became known as an expert in financial affairs A leading advocate of isolationism before the Second World War, Taft later backed U S participation in the United Nations In 1947 he helped write the TAFT-HARTLEY LABOR ACT As candidate (1936, 1940, 1948) for the Republican presidential nomination, Taft attacked the fiscal policy of the New Deal

Taft, William Howard, 1857–1930, 26th President of the United States (1909–13) and Chief Justice of the Supreme Court (1921–30), b Cincinnati, grad Yale, 1878, and Cincinnati Law School, 1880 He became a Cincinnati lawyer and soon had political posts as assistant prosecuting attorney for Hamilton co (1881–83), assistant county solicitor (1885–87), and judge of the superior court in Cincinnati (1887–90) He became nationally prominent as a figure in Republican politics in 1890, when President Benjamin Harrison chose him as U S Solicitor General After service as a circuit court judge (1892–1900) and as dean of the Cincinnati Law School (1898–1900), he was appointed (1900) head of the commission sent to organize civil government in the Philippines, and he was named first civil governor of the Philippine Islands, he did much to better relations between Filipinos and Americans In 1904 his friend Theodore ROOSEVELT appointed Taft the successor of Elihu ROOT as Secretary of War Taft was prominent in Latin American affairs, conducting the delicate negotiations attending U S intervention in Cuba in 1906 Roosevelt chose Taft as his successor, and the Republican party named him as presidential candidate in the election of 1908, in which he defeated William Jennings Bryan He was expected to continue the Roosevelt policies, and to a large extent he did Trusts were vigorously prosecuted under the Sherman ANTI-TRUST ACT, the INTERSTATE COMMERCE COMMISSION was strengthened by the Mann-Elkins Act (1910); and Taft's Latin American policy—the "dollar diplomacy" much criticised by U S and Latin American liberals as imperialistic—was to a large extent only an enlargement of Roosevelt's Panama policy and the Roosevelt Corollary to the Monroe Doctrine The emphasis in all these policies had, however, become more conservative In Latin America, for instance, the accent was on protection of property and interests of Americans abroad rather than on national interest Members of the Republican party who favored dynamic and progressive policies were increasingly restive, and the insurgent movement grew strong The administration saw positive achievements in the inauguration of the postal savings bank (1910) and the parcel-post system (1912), the creation of the Dept of Labor (1911), and the passage of the Sixteenth Amendment (1909) and the Seventeenth Amendment (1910) Yet the critics of the administration quarreled with what they regarded as undue favoritism toward individual enterprisers, and there was a serious struggle over granting privileges to the coal lands in Alaska (see BALLINGER, RICHARD ACHILLES, and PINCHOT, GIFFORD) There was also great dissatisfaction over the PAYNE-ALDRICH TARIFF ACT, and when Theodore Roosevelt returned from an African hunting trip, he joined the opposition In 1912 he fought vigorously for the Republican presidential nomination When he failed and Taft got the nomination, Roosevelt headed the PROGRESSIVE PARTY and ran in the election as the Progressive (popularly called the Bull Moose) candidate The Democratic candidate, Woodrow Wilson, won Taft retired from public life and taught law (1912–21) at Yale He was co-chairman (1918–19) of the War Labor Conference Board in the First World War In 1921 he accepted the appointment as Chief Justice His writings include *The United States and Peace* (1914) and *Our Chief Magistrate and His Powers* (1916) See *Taft and Roosevelt the Intimate Letters of Archie Butt* (1930), biographies by H S Duffy (1930) and H F Pringle (1939)

Taft. 1 City (pop 4,205), S central Calif , NW of Los Angeles and SW of Bakersfield, in an oil region, inc 1910 A junior college (coeducational) is here **2** City (1940 pop 2,686), S Texas, N of Corpus Christi, inc 1929 Named for the formerly huge Taft ranch, the city has grown as a center for cotton and other farm produce and has taken part in the development of the Corpus Christi region Oil fields are near by

Taft-Hartley Labor Act, 1947, passed by the U S Congress, also known as the Labor-Management Relations Act It was sponsored by Sen Robert A Taft and Representative Fred A Hartley Qualifying or amending much of the National Labor Relations Act of 1935 and nullifying parts of the Federal Anti-Injunction Act of 1932, the act established control of labor disputes on a new basis The NATIONAL LABOR RELATIONS BOARD was enlarged The act provided that the union or the employer must, before terminating a collective-bargaining agreement, serve notice on the other party and on a government mediation service The government was empowered to obtain an 80-day injunction against any strike that endangers national health or safety The act also prohibited jurisdictional strikes and secondary boycotts, declared that it did not extend protection to workers on "wildcat" strikes, outlawed the closed shop, limited the union-shop agreement to one year, and permitted the union dues checkoff" to continue only with the written consent of the employer Most of the collective-bargaining provisions were retained with the extra provision that a union before using the facilities of the National Labor Relations Board must file with the U S Dept of Labor financial reports and affidavits that union officers are not Communists The act also forbade unions to contribute to political campaigns President Harry S Truman vetoed the act but it was passed over his veto Attempts to repeal the act in 1949 were blocked by a coalition of Republican and Southern Democrats Federal courts upheld major provisions of the act, but not the clauses about political expenditures

Tagalog (tugä'lug, tägä'lŏg) or **Tagal** (tägäl'), dominant people of Luzon, Philippine Islands. They are second in population of the Philippine peoples They are Christians Tagalog is a Malayo-Polynesian language and had a written standard form before the coming of the Spanish An act of 1940 made Tagalog official as a language

Taganrog (tăgunrôk'), city (1926 pop 86,444, 1939 pop 188,808), S European RSFSR, a port on the Taganrog Gulf of the Sea of Azov It is a metallurgical and machine-building center and has important fish-processing plants Coal and grain are its major exports The imperial palace in which ALEXANDER I is supposed to have died is now a historical museum, there also is a memorial museum to Chekhov, who was born at Taganrog The city was founded (1698) as a fortress by Peter I on the site of a former Genoese colony The Turks destroyed and recaptured it twice, but ceded it definitively in the Treaty of Kuchuk Kainarji (1772) It was chartered in 1775, and its fortress was razed in 1788 It developed in the 19th cent as an industrial center and as a port for the Donets Basin It was briefly held (1918) by the Germans and was (1919) Denikin's headquarters in the civil war. In

the Second World War, Taganrog was the center of heavy fighting and was twice (1941, 1942–43) held by the Germans

Taggard, Genevieve (tă'gûrd), 1894–1948, American poet, b Waitsburg, Wash, grad. Univ. of California, 1919. Her early years were spent in Hawaii She taught English at Mt Holyoke (1929–31), at Bennington College (1932–35), and at Sarah Lawrence College (1935–46). Among her volumes of lyric poetry are *Hawaiian Hilltop* (1923), *Collected Poems, 1918–1938* (1938), *Long View* (1942), and *I Part of Vermont* (1945) She also compiled several anthologies

Taglioni, Filippo (fēlēp'pō tälyō'nē), 1777–1871, Italian ballet master and composer of ballets. He trained his daughter, **Maria Taglioni**, 1804–84, who had great success when she made her debut (1822) at Vienna in his ballet, *The Reception of a Young Nymph at the Court of Terpsichore* Another of his ballets, *La Sylphide*, which she first danced at the Paris Opéra in 1832, became a landmark of romantic ballet and made her the idol of Paris In the same year she married Gilbert, comte de Voisins After the death of her father and the loss of her fortune, she supported herself in London by teaching dancing and deportment She was not a great beauty, but her grace was incomparable, and she was considered the greatest dancer of her time Thackeray mentions her in *Pendennis*

Tagore, Sir Rabindranath (rubĭn'drunät tûgôr', täkôôr'), 1861–1941, Indian author, b Calcutta He came of a wealthy Bengali family noted for its effort to combine Western practicality with the idealism and aestheticism of India Tagore first went abroad in 1877 to study law in England, but he soon abandoned his course and returned to India For a time he managed his father's estates (with over 100,000 tenants) and threw himself into the Indian nationalist movement, writing many propaganda songs and poems Gradually he abandoned the perfervid work of his youth and adopted his characteristic later manner, in which delicate natural descriptions are combined with religious and philosophical speculations However, he always retained a strong interest in politics Tagore drew on all the classic literature of India, especially the ancient Sanskrit scriptures and the writings of Kalidasa He was extremely prolific and wrote approximately 50 dramas, 100 books of verse (he set many of the poems to music), 40 volumes of novels and shorter fiction, and books of essays and philosophy His appeal in India was nearly universal, for while his more abstruse speculations appealed to intellectuals, peasants and simple workmen were able to appreciate his stories, songs, and plays To the Indian mind Tagore in time seemed like one of the ancient teachers, an impression enhanced by his striking appearance. He dressed in voluminous white robes and was over six feet tall, with handsome, dignified features and flowing hair and beard Tagore wrote in Bengali but translated much of his work into English It attracted attention in the West, and he was awarded the 1913 Nobel Prize in Literature, especially for his poem *Gitanjali* (1912), he is the only Oriental to have received this honor. In 1915 he was knighted His travels and lectures took him to many parts of the world, including Europe, China, Japan, and the United States (which he first visited in 1916) He was impressed with the capacity of the West for accomplishing its practical goals, but he deprecated what he considered its spiritual emptiness and waste In line with his views he had earlier (1901) founded a school at Santiniketan [abode of peace] in Bengal In 1922 it was expanded into the internationally attended Visva-Bharati Univ Its branches include a school of Sino-Indian studies and one of fine arts and crafts and institutes of rural reconstruction The prevailing view of the university is that social reform takes precedence over political reform and that rural reconstruction is best accomplished by reviving the ancient cottage arts and crafts of India His novels and poetry include *The Gardener* (1913), *The Crescent Moon* (1913), *Songs of Kabir* (1915), *Cycle of Spring* (1917), *Fireflies* (1928), and *Sheaves* (1932) Among his plays are *The Post Office* (1914), *Chitra* (1917), and *Red Oleanders* (1924) Philosophical works include *Sadhana the Realization of Life* (1913), *Personality* (1917), *Nationalism* (1917), *The Home and the World* (1919), *The Religion of Man* (1931), and *Man* (1932) See studies by B K Roy (1916), Sarvepalli Radhakrishnan (1918), John E Thompson (1948), and B G. Ray (1949), biographies by Krishnalal Shridharani (1941) and Marjorie Sykes (1943)

tagua (tä'gwa), fruit of the ivory-nut palm (*Phytelephas macrocarpa*), which flourishes in tropical South America and in Central America. The regions of chief commercial production are Ecuador, Colombia, Panama, and N Peru The tagua is said to bear when six years old and to live for 100 years It is usually under 20 ft. high, and the male and female flowers are borne on separate trees. The fruit is a burr or pod containing from several to 40 or more nuts about 1½ to 2 in. in diameter. The very hard nuts are white or cream color, and the content is used as a substitute for ivory, being known in the trade as vegetable ivory. The use of tagua as a commercial product originated in the middle of the 19th cent, it has become an item of considerable importance, great quantities of the material being shipped to the United States and Europe for the manufacture of buttons and other small articles. The fruit is imported in its original state, broken open, dried, sawed into pieces, again dried, and turned by machinery to the required form Tagua may be distinguished from true ivory by testing the surface with a solution of concentrated sulphuric acid which turns tagua to a reddish color but leaves ivory unaffected Tagua is known also as corozo

Tagus (tā'gəs), Span *Tajo* (tä'hō), Port *Tejo* (tā'zhō), river rising in Teruel prov, E Spain It flows southwest through the mountains and then W through NW Castile and Estremadura, follows the border of Portugal for a time, and finally flows SW through Portugal to reach the Atlantic in one of the finest of European harbors, that of Lisbon It is navigable in much of the Portuguese section It is more than 550 and less than 630 mi long and is usually said to be the longest river of the Iberian Peninsula

Tahan (tä'hän) [Heb, =camp], descendant of Ephraim Num. 26 35, 1 Chron 7 25

Tahapanes (tăhā'punēz), **Tahpanhes** (tä'pünhēz), or **Tehaphnehes** (tēhāf'nĭhēz), ancient city, NE Egypt, on Lake Manzala The site is now on the Suez Canal Herodotus says that the city (called by the Greeks Daphnae) had a garrison of Psamtik I and, in the early 5th cent B C, a Persian garrison It was superseded as a port by Naucratis A colony of Jews settled here, and the city is mentioned in the Bible Jer 2 16, 43 7, 46 14, Ezek 30 18.

Taharka see TIRHAKAH

Tahath (tā'hăth) [Heb, =under] **1** Ancestor of Samuel 1 Chron 6 24 **2, 3** Two Ephraimites 1 Chron. 7 20 **4** Unlocated desert resting place of the Jews Num 33 26

Tahiti (tähē'tē), island and district (402 sq mi, pop 24,820), S Pacific, in the Windward group of the SOCIETY ISLANDS Its capital is Papeete, which is also the capital of the French Establishments in Oceania Tahiti, c 30 mi long, is the largest and most important island of French Oceania The peninsula of Taiarapu, which forms E Tahiti, is joined to the western part of the island by the isthmus of Taravao The island is mountainous, with four prominent peaks, of which the highest is Mt Orohena (7 618 ft) The chief products are fruits, copra, vanilla, sugar cane, and phosphates, there are pearl fisheries off the coast The inhabitants are Polynesians The island was discovered in 1767 by the English navigator Samuel Wallis and was visited (1788) by the *Bounty*, the Spanish unsuccessfully attempted (1774) to colonize Tahiti English and French missionaries arrived in the latter part of the 18th cent In 1843 Queen Pomare was forced to agree to the establishment of a French protectorate, Pomare V abdicated in 1880, and the island was ceded outright to France During the Second World War the Tahitians voted in a plebiscite (1940) to support the Free French The first printing press in the South Sea Islands was set up on Tahiti by William ELLIS Paul GAUGUIN did many of his paintings here Tahiti was formerly called Otaheite and King George III Island See Teuira Henry, *Ancient Tahiti* (1928), I D Andrews, *Latitude 18° South* (1940), J N Hall, *Under a Thatched Roof* (1942)

Tahlequah (tä'lukwō), city (pop 3,027), co seat of Cherokee co, NE Okla, SE of Tulsa It was settled by Cherokees in 1839 and made their capital. It is now the business center of an agricultural, fruitgrowing, and livestock-raising area A state teachers college and a historical museum containing many Indian relics are here

Tahmasp (tä'masp), 1514?–1576, shah of Persia (1524–76), son and successor of Ismail and thus second of the Safavid dynasty He waged war successfully against the Uzbeks, whose invasions of Persia were beaten back Suleiman I also invaded Persia, continuing the wars between Ottomans and Persians commenced by Selim I One stage of these wars ended with a peace treaty of 1555 In 1561 an Englishman, Anthony Jenkinson, attempted to open commercial relations with Persia across Russia Continual warfare helped to bring internal decline

Tahmasp Kuli Khan: see NADIR SHAH

Tahoe, Lake (tä'hō, tă'–), 21 6 mi long and 12 mi wide, on the Calif.-Nev line, beautifully situated among mountains at an elevation of 6,225 ft The lake was discovered in 1844 by J C. Frémont It is a widely known summer resort The official California name is Bigler Lake

Tahoka (tuhō'ku), city (1940 pop. 2,129, 1947 estimated pop 3,800), co seat of Lynn co, NW Texas, S of Lubbock on the Llano Estacado, settled 1903, inc. 1915. It ships cattle, cotton, black-eyed peas, dairy products, and eggs To the northeast is Tahoka Lake, well known to early travelers.

Tahpanhes, ancient city see TAHAPANES.

Tahpenes (tä'pēnēz), queen of a Pharaoh, 1 Kings 11.19,20

Tahquamenon (tukwä'munun, –munŏn), river rising in the E Upper Peninsula, N Mich., and flowing east and northeast through a forested countryside to Whitefish Bay of Lake Superior. It was once a well-known logging river It is noted for its waterfalls and is celebrated in Longfellow's *Hiawatha*

Tahrea (tŭrē'ŭ), descendant of Saul 1 Chron 9,41. Tarea. 1 Chron. 8,35

Tahtim-hodshi (tä'tĭm-hŏd'shī), region, E of the Jordan, mentioned in the textually difficult account of the census of David 2 Sam 2,6

Tai or T'ai (both. tī), peak, c 5,000 ft high, W central Shantung prov, China It is a sacred mountain with many temples and shrines The Chinese name is Tai-shan [great mountain]

Tai or T'ai, lake, area c 440 sq mi, China, between Kiangsu and Chekiang provs It is dotted with islands The Chinese name is Tai-hu [great lake]

Taif (tīf), town (pop c 5,000), Hejaz, Saudi Arabia, 75 mi E of Mecca At the edge of an oasis and on a plateau 5,000 ft high, it is the summer administrative center of the Hejaz The town is walled, it is surrounded by gardens and famed vineyards

taiga (tīgä'), coniferous-forest belt of the USSR, immediately south of the tundra region It has a continental climate, with long, severe winters Its sparse, mainly primitive population is occupied chiefly in lumbering and stock raising There is a similar but smaller area in the high middle latitudes of interior North America, in Canada and Alaska

Taihoku, China see TAIPEH

Taiku or **Taikyu,** Korea see TAEGU.

Taillefer: see TALLAGE

Taillefer (tŭfĕr'), fl 1066, Norman trouvère He led the Norman army at Hastings into battle, singing of ROLAND at Roncesvalles.

Taima, Saudi Arabia see TEMA

Taimyra or **Taymyra** (both tīmē'ru), river, 330 mi long, Krasnoyarsk Territory, RSFSR, in N Siberia Rising in the center of the Taimyr Peninsula, it flows NE through Lake Taimyr (2,700 sq mi) and into the Taimyr Gulf of the Kara Sea Near its mouth is Taimyr Island There are coal deposits near Lake Taimyr

Taimyr Peninsula or **Taymyr Peninsula** (both tīmĭr'), northernmost projection of Siberia, RSFSR, on the Kara and Laptev seas and between the mouths of the Yenisei and Khatanga rivers Its northern extremity is Cape Chelyuskin The peninsula, which is covered by tundra, occupies the larger part of the Taimyr National Okrug (316,700 sq mi, pop c 25,000), a division of Krasnoyarsk Territory, with Dudinka as its administrative center The Taimyr National Okrug is forested in the south Its population, mainly nomadic Nentsy (formerly called Samoyedes or Samoyeds) and Dolgans, subsists on reindeer raising, hunting, and fishing

Tainan, Tai-nan (tī'nan'), or **Dainan** (dī'–), city (pop 142,133), on Formosa, China, a port on the Formosa Strait There are remains of a 17th-century Dutch port Exports include tea and cotton goods

Taine, Hippolyte Adolphe (tān, Fr ēpôlēt' ädôlf' tĕn'), 1828–93, French critic and historian A brilliant student interested in philosophy, he became famous with the publication of his doctoral thesis, *Essai sur les fables de La Fontaine* (1853). His deterministic theories, which held that man was the product of his heredity and environment, formed the basis for the naturalistic schools of the late 19th and 20th cent His best-known works are *Histoire de la littérature anglaise* (1864, Eng tr, *History of English Literature*, 1871–72), begun in 1856 and containing descriptions which expressed his love of nature, *Vie et opinions de Graindorge* (1867), *De l'intelligence* (1870, Eng Tr, *On Intelligence*, 1871), and *Les Origines de la France contemporaine* (6 vols, 1876–93, Eng tr, *The Origins of Contemporary France*, 6 vols, 1876–94) By his studies of the *ancien régime*, the French Revolution, and contemporary France he spread the idea of history as concerned with the whole social life of nations Though he asserted the importance of significant facts in the lives of his literary subjects, he was reticent about his own life and discontinued an autobiographical novel, *Étienne Mayran* (1909) Written c 1861, it is important for the information it gives about his childhood In 1864 he began a 20-year career as professor of aesthetics and history of art at the École des Beaux-Arts He was elected to the French Academy in 1878 Unlike his contemporary Ernest Renan, Taine tried to reduce analyses immediately into formulas, which resulted sometimes in overgeneralizations, sometimes in outstanding evaluations

Tainter, Charles Sumner, 1854–1940, American electrician, b Watertown, Mass He is credited with inventing the dictaphone, was convenor of the radiophone, and with Alexander Graham Bell developed the graphophone and the hard-wax recording disk

Taipeh or **Taipei** (both· tī'pā), Jap *Taihoku*, city (pop. 326,407), on Formosa, capital of Formosa prov., China. It is mainly a modern city built by the Japanese It includes a botanical garden and a museum. Taipeh is a major communications and industrial city with manufactures of processed foods, rubber, and steel It was much bombed in the Second World War. In 1949, when the Communists

forced the government of Chiang Kai-shek to flee from the mainland of China, Taipeh became the headquarters of the Nationalists.

Taiping Rebellion (tī'pĭng'), 1850–65, revolt against the Ch'ing (Manchu) dynasty of China It was led by Hung Hsiu-ch'üan, a visionary scholar who evolved a political creed including derived elements of Protestantism His object was to found a new dynasty, the Taiping [great peace] Strong discontent with the Chinese government brought him many adherents, and the movement spread with great violence through the eastern valley of the Yangtze river The rebels captured Nanking in 1853 and made it their capital The Western powers quickly realized that the Ch'ing dynasty might collapse, and they offered it military help Charles George ("Chinese") GORDON, a British soldier, was the commander of the "ever-victorious army," which recovered Nanking in 1864 and crushed the revolt. The damage wrought by the rebels and the unrest they incited were large factors in the fall of the Ch'ing dynasty in 1912

Taisha (tī'shä), town, Shimane prefecture, SW Honshu, Japan, on the Sea of Japan It is the site of Izumo Taisha (the great shrine of Izumo), which legend holds to be the oldest shrine in Japan Twenty acres of pine-covered grounds enclose the great shrine and 68 smaller ones

Tai-shan: see TAI, peak

Tait, Archibald Campbell, 1811–82, Anglican prelate, b Edinburgh He grew up a Presbyterian, but while he was a student at the Univ of Glasgow decided to enter the ministry of the Church of England In 1834 he was elected a fellow of Balliol College, Oxford, in 1836 he was ordained priest The OXFORD MOVEMENT never won his favor, and when *Tract 90* appeared (1841), he was one of the "Four Tutors" who issued a formal protest Tait succeeded Dr Arnold as headmaster at Rugby in 1842 He became dean of Carlisle (1849), bishop of London (1856), and archbishop of Canterbury (1869) His sympathies were with Low Church views, and he attempted to solve questions of ritualism by the Public Worship Regulation Act (1874) His practical judgment made him valuable in framing parliamentary measures

Tait, Peter Guthrie, 1831–1901, Scottish physicist and mathematician He was professor of natural philosophy at Edinburgh from 1860 and conducted important investigations in thermodynamics and the kinetic theory of gases His writings include *A Treatise on the Dynamics of a Particle* (with W J Steele, 1856), *An Elementary Treatise on Quaternions* (1867, 3d ed , 1890), *Treatise on Natural Philosophy* (with Lord Kelvin, 1867), and *Heat* (1884)

Taiwan see FORMOSA

Taiyüan or **T'ai-yüan** (both tī'yüän'), formerly **Yangku**, city (pop 251,566), capital of Shansi prov , China It is on the Fen river and is connected by rail with Peiping Cotton cloth and finished steel are manufactured

Tajiks see TADZHIK SOVIET SOCIALIST REPUBLIC

Taj Mahal (täjh' mŭhäl', täj' muhŭl'), mausoleum, Agra, United Provs , India It is deemed one of the most beautiful buildings in the world and the greatest example of the late, highly ornamented style of Indian Moslem architecture The Mogul emperor, Shah Jehan, ordered the structure in 1630 for his wife Mumtaz Mahal (d 1629) and for himself The work seems to have been completed in 1648 The Taj Mahal is in a walled garden, which is adorned with fountains and marble pavements The building is reflected in an oblong pool, and dark cypresses surround it on three sides It rises from a platform (313 sq ft) which bears a minaret at each corner, and it encloses 186 sq ft , with deeply truncated corners and a high portal on each side The white marble exterior is inlaid with semiprecious stones arranged in Arabic inscriptions, floral designs, and arabesques, and the salient features of the interior are accented with agate, jasper, and colored marbles The roofing dome, on the inside, is 80 ft high and 50 ft in diameter, outside, it forms a bulb, which tapers to a spire topped by a crescent The tomb chamber, with its two sarcophagi, is an octagonal room in the center of the edifice (the royal couple, however, are buried in a vault beneath the floor) The chamber is softly illuminated by the light which passes through double screens of intricately carved marble set high in the walls

Tajo, river: see TAGUS

Tajumulco (tähōōmōōl'kō), inactive volcano, 13,816 ft high, W Guatemala It is the highest mountain in Central America. The name also appears as Tajamulco.

Takahashi, Korekiyo, Viscount (kōrā'kēō tä"käähä'shē), 1854–1936, Japanese statesman and financier. Long an official of the Yokohama Specie Bank, he became its president in 1906, and from 1911 to 1913 he was president of the Bank of Japan In 1921 he became prime minister and head of the Seiyukai party, but his cabinet fell in 1922. He resigned his title in 1924 to enter the diet He was one of Japan's greatest finance ministers, serving in that capacity in 1913–14, 1918–22, 1924–25, 1927, and 1931–36 An advocate of sound government finance, supported by the business interests, he opposed army demands for larger military appropriations and warned against overexpansion of the national debt. For this he was assassinated by the "barrack" uprising of army extremists on Feb 26, 1936.

Takamatsu (täkä'mä'tsōō), city (1947 pop. 101,403), capital of Kagawa prefecture, N Shikoku, Japan, a port on the Inland Sea A manufacturing center, it is also known for its landscape gardens, on the site of a 14th-century castle, and for its Buddhist temple. Kagawa prefecture yields agricultural products; there are forested mountains inland, fishing ports and salt-producing centers along its coast.

Takamine, Jokichi (jō'kächē täkä'mēnā"), 1854–1922, Japanese chemist. He served (1881–84) as chemist in the employ of the Japanese government and (1887) organized a fertilizer manufacturing company In 1890 he settled in the United States, where he did research in applied chemistry He isolated adrenaline (1901) and Takadiastase (an enzyme of rice malt) and devised methods of using the diastase as a starch digestant in manufacturing

Takasaki (täkä'sä'kē), city (1947 pop 88,483), Gumma prefecture, central Honshu, Japan It is a railroad junction and an industrial center, with flour mills and silk textile factories

Takht-i-Sulaiman (täkht'-ē-sōōlīmän') [Persian,=throne of Solomon], twin peaks, 10,085 and 11,290 ft high, North-West Frontier Prov , West Pakistan, at the northern end of the Sulaiman Mts Here is a Moslem shrine attracting many pilgrims

Taklamakan (täklämäkän'), Mandarin *Ta-k'e-lama*, sandy desert, c 125,000 sq mi , central Sinkiang prov , China There is a small population of pastoral nomads Khotan and Yarkand are the chief cities of the bordering oases

Takoma Park (täkō'mä), town (pop 8,938), W central Md , a northeastern suburb of Washington, D C

Takoradi, Gold Coast see SEKONDI-TAKORADI

Talass Ala-Tau see ALA-TAU

Talavera de la Reina (tälävā'rä dā lä rā'nä), city (pop 16,509), Toledo prov , central Spain, in New Castile, on the Tagus It is an agricultural center and has a large ceramics industry Here in 1809, in the Peninsular War, the English and Spanish under Wellington repulsed the French under Joseph Bonaparte, the battle had no decisive result Juan de Mariana was born here

Talbot, Richard: see TYRCONNEL, RICHARD TALBOT, DUKE AND EARL OF

Talbot, Silas, 1751–1813, American military and naval officer, b Dighton, Mass He joined the colonial army at the beginning of the American Revolution and took part in the siege of Boston (1775–76) In 1776 he tried to destroy the British fleet at New York with a fireship, and in 1778 in the attack on Newport (R I) he captured a British floating battery Talbot was transferred (1779) to the navy defended the coast of Long Island, and was captured and held prisoner (1780–81) After the war he supervised the construction of the *Constitution* and commanded her (1799) See biography by H G Tuckerman (1850)

Talbot, Thomas, 1771–1853, founder of the Talbot settlement in Upper Canada, b Ireland Entering the British army in 1782, he went (1790) to Canada with his regiment While secretary (1792–94) to J G Simcoe, lieutenant governor of Upper Canada, Talbot visited with him the western part of the province and determined to settle there He returned to England in 1794 and saw several years of active service on the Continent, but with the Peace of Amiens (1802) he sold his commission and went back to Upper Canada On the understanding that he would found a settlement, he obtained grants of many thousands of acres on the north shore of Lake Erie To this vast domain flocked thousands of land-hungry settlers whom the eccentric Talbot governed in dictatorial style for nearly 50 years Although for 10 years (1822–32) a member of the legislative council of Upper Canada, he never attended its meetings See C O Ermatinger, *The Talbot Regime* (1904)

Talbot, William Henry Fox, 1800–1877, English inventor of photographic processes (see PHOTOGRAPHY) He wrote *The Pencil of Nature* (1844), one of the first books illustrated with photographs Interested also in archaeology, Talbot was one of the first to decipher cuneiform inscriptions at Nineveh.

Talbotton (tôl'bŭtŭn), town (pop 1,060), co seat of Talbot co , W Ga , NE of Columbus, founded 1828 Franklin D Roosevelt (formerly Pine Mountain) State Park is near

talc, mineral ranging in color from white through various shades of gray and green to the red and brown of impure specimens, translucent to opaque, and having a greasy, soapy feel A test for talc is the white streak that it produces on dark material It is a hydrous silicate of magnesium and usually contains small quantities of nickel, iron, and aluminum as impurities It occurs commonly in folia (thin layers), but is also found in coarsely granular, finely granular, or cryptocrystalline masses. Soapstone or steatite is a massive, granular form of talc French chalk is a fine-grained variety Talc is usually associated with chlorite schists, serpentine, dolomite, and other metamorphic rocks, it is apparently a secondary mineral formed by the alteration of other magnesium silicates There are important deposits of talc in Austria, Italy, France, Germany, and Canada and in the United States in Vermont, New York, North Carolina, Virginia, Pennsylvania, New Jersey, Georgia, Maryland, and California Talc is used in making paper (as a filler), paints, cosmetics, soap, fireproof roofing, foundry facings, lubricants, linoleum and oilcloth, electrical insulation, and pottery

Talca (tal'kä), city (pop. 50,464), S central Chile Founded in 1692 at another site, it was prominent in colonial days and is now the most important city in the central valley of Chile between Santiago and Concepción Agricultural produce, particularly wheat, is raised in the region, and the zone is the greatest wine-producing area in the republic; industries include Chile's largest match factory, distilleries, foundries, a tannery, and plants making shoes, tobacco products, paper, and flour Leveled by earthquake in 1928, Talca was rebuilt and is today modern and progressive Here on Feb. 12, 1818, Bernardo O'Higgins formally proclaimed Chile's independence

Talcahuano (tälkäwä'nō), city (pop 35,774), S central Chile, a port just N of CONCEPCIÓN It became the port for Concepción after the earthquake of 1730 On the best harbor along the Chilean coast, Talcahuano is the republic's foremost naval base. It has a large fishing industry, and fish are canned and exported It also has extensive drydock facilities and metallurgical plants, and it handles the exporting of the agricultural products of the interior

Talien or **Ta-lien** (both dä'lĭĕn'), Rus. *Dalny* (dal'nyĭ), Jap *Dairen* (dī'rĕn'), city (pop 44,394), Liaoning prov , China, a port of the Liaotung peninsula on the Bay of Korea The city first became important when Russia occupied it as a part of the Kwantung territory (leased 1898) When Japan acquired the territory after the Russo-Japanese War (1904–5), Talien was enlarged and made a southern terminus of the South Manchurian RR The northernmost year-round port of China, Talien exports soybean products, flour, and coal and imports cloth and machinery There are food-processing plants and railroad maintenance Talien is a Chinese enclave in the Sino-Soviet Naval District (see LIAONING)

Taliesin or **Taliessin** (both tälĕĕ'sĭn), 6th cent ?, Welsh bard, whose *Book of Taliesin* is one of the greatest of the monuments of Welsh poetry The book exists only in a 13th-century form, but tradition unanimously puts Taliesin in the 6th cent , as contemporary of the battles his poems celebrate One thing is certain of his poems, that the book includes poems of different dates There are three well-founded and reputable opinions about Taliesin that he lived in the 6th cent , that he lived in the Middle Ages and celebrated contemporary events allusively by referring to ancient events, and that he is an ancient Celtic mythical character, about whose name have collected a series of traditional poems Many of these poems are highly allusive and difficult See W F Skene, *Four Ancient Books of Wales* (1868)

Talihina (tälŭhē'nŭ), town (pop 1,057), E Okla , in the Ouachita Mts , in a lumbering and resort area, founded 1888, inc 1905 A state tuberculosis sanatorium and an Indian hospital are near by

talipes see CLUBFOOT

talisman, see AMULET and CHARM

Talitha cumi (tă'lĭthu kū'mī) [Aramaic,=maiden, arise], in Mark 5 41, the words said by Jesus to the daughter of the ruler of the synagogue as He raised her from the dead The words are left, and a translation is given, in all the European versions of this Gospel.

Talladega (tăludē'gŭ), city (pop 9,298), co seat of Talladega co , NE central Ala , E of Birmingham, in the Blue Ridge foothills, settled in the 1830s It processes cotton, cottonseed, and metals In Nov , 1813, Andrew Jackson defeated the Creek Indians in a battle here There are Indian mounds in the region State schools for the blind, deaf, and mute are here Talladega College (Negro, coeducational) opened in 1867 as an industrial training school, became a college in 1890

tallage (tă'lĭj), a feudal impost in medieval England, collected from the demesne lands of a lord It is important chiefly because the king collected it from his demesne lands, with which the chartered towns were included. So far as it can be traced, the collection of an aid like tallage was instituted by Henry I to replace the Danegeld It was thereafter collected from time to time and grew to be a common source of revenue in the reigns of Richard I and John There is much argument about the nature of the tallage, but the principal historical problem concerning it arises out of the resistance of the towns, especially London, to payment The word does not appear in the MAGNA CARTA (1215), though the demands by the barons had contained a provision concerning the imposi-

tion of tallage on London. The question of legality in the tallage collection in that city involves the much-disputed question as to whether or not London was a commune In Henry III's reign, London protested against the collection of a tallage and in a suit maintained that the city was not tallageable; the suit was lost, but the exact meaning of the claims is in debate. In the midst of the Scottish wars of Edward I, the barons and burgesses sought to force the king to make new grants, and in 1297 a petition, known today as the *statutum de tallagio non concedendo*, prohibited tallage collection without assent of barons, knights, and burgesses, this was never a statute as it was once thought, and the king did not grant away his right to tallage at the time In 1312 more trouble with London occurred because of a tallage, in 1332 Parliament resisted imposition of a tallage, and in 1340 Edward III, in return for a subsidy, made an agreement that is usually interpreted as a promise not to collect tallage This interpretation does not seem to be accurate, the king apparently promised only that he would not violate old customs Formerly it was thought by many that the imposition of tallage by Edward II and Edward III was illegal and tyrannical, but this position seems now to be untenable The cities usually compounded for the tallage by a lump sum As other means of raising money grew common, tallage disappeared in the reign of Edward III The French *taille* was originally comparable to tallage and was the arbitrary due imposed by a lord on his tenants, though it was early fixed by custom The royal *taille* was collected until the French Revolution, it was partially a capitation, partly a land tax bearing little resemblance to English tallage See S K Mitchell, *Studies in Taxation under John and Henry III* (1914).

Tallahassee (tălŭhă'sē), city (pop 16,240), state capital, and co seat of Leon co, NW Fla In a hilly agricultural area, surrounded by lakes and springs, it is a shipping point for farm produce When De Soto arrived in 1539, there was a settlement of Apalachee Indians here The region was entered by Spanish missionaries and settled by the Spanish soon afterward The city was founded in 1824 as capital of the Florida Territory, the ordinance of secession was adopted here in 1861 The city successfully resisted Union attempts to capture it, a state monument near by marks the site of the battle of Natural Bridge (March, 1865), where Tallahassee cadets helped repel a Federal attack The FLORIDA STATE UNIVERSITY and the FLORIDA AGRICULTURAL AND MECHANICAL COLLEGE are here Notable places include the capitol, with the state library, the Walker Memorial Library, and the museum of the state geological survey Prince Achille Murat and his wife are buried here

Tallapoosa (tălupōō'sŭ), city (pop 2,338), NW Ga., near the Ala line and the Tallapoosa river W of Atlanta, in a farm, mine, and timber area, settled c.1856, inc 1860 It enjoyed a boom, 1884–91, when its gold, silver, and copper were exploited and the town flourished as a resort with mineral springs

Tallapoosa, river rising in two headstreams in Georgia and flowing south and west c 250 mi through Alabama to the Coosa, with which it forms the Alabama just above Montgomery In Tallapoosa co, Ala, NE of Montgomery, it is dammed, forming the irregular Martin Lake

Tallard, Camille, marquis de la Baume-d'Hostun, baron d'Arlanc, comte de (kamē'yŭ märkē' du lă bōm"-dôstŭ' barō' darlă' kōt' du talär'), 1652–1728, French diplomat, marshal of France He negotiated the partition treaties that preceded the War of the SPANISH SUCCESSION Though victorious at Speyer (1703), he was partly responsible for the defeat of Blenheim (1704)

Tallassee (tă'lŭsē), town (pop 1,011), E central Ala, ENE of Montgomery and on the Tallapoosa just below Thurlow Dam The territory belonged to the Creek Indians, there are many Indian mounds in the region, and to the south is the site of the once-proud Creek town of Tukabatchee

tallboy see CHEST

Tallemant des Réaux, Gédéon (shădăō tulumă' dā rāō'), 1619–92, French memoir writer He was in 1653 made seigneur des Réaux His one great work is a series of brief anecdotal portraits of persons prominent in the Paris of his day He worked on these *Historiettes* from 1657 to 1659, but they remained unpublished until 1833 They present a vivid, faithful, and acute picture of the manners of the period, which the author knew well, for he frequented the salons, especially those of Rambouillet and of Mlle de Scudéry The *Historiettes* have appeared in English as *Miniature Portraits* (1926)

Talleyrand or **Talleyrand-Périgord, Charles Maurice de** (tă'lĕrănd", Fr shärl' mōrēs' du talärā', -pārēgôr'), 1754–1838, French statesman. Born into the high nobility, he was early destined for the Church because of a childhood accident which left him partially lame Despite his notorious impiety, Louis XVI nominated him bishop of Autun (1788). A representative of the clergy in the States-General of 1789, he sided with the revolutionists. He officiated at the Fete of the Federation, endorsed the civil constitution of the clergy, and was excommunicated by the pope (1791). In 1792 he went on mission to London to secure England's neutrality, but the radical turn of the French Revolution nullified his success A lifelong advocate of constitutional monarchy and peace, Talleyrand fled to England after the fall of the monarchy (Sept, 1793) In 1794 he took refuge in the United States, where he lived in poverty until the establishment of the Directory in France (Nov, 1795). Made foreign minister (1797), he hitched his career to the rising fortune of Napoleon Bonaparte His part in the XYZ AFFAIR (1797) and his endorsement of Napoleon's plan for seizing Egypt (1798) had unfortunate consequences for France. In July, 1799, he resigned his post, only to resume it under the Consulate (Nov, 1799) He helped to bring about the Concordat of 1801 and the Peace of Amiens (1802), but failed in his opposition to the Louisiana Purchase Napoleon, who created him prince of Benevento in 1806, tended more and more to ignore his cautious advice Talleyrand resigned in 1807 and was assigned the distasteful duty of keeping the three princes of Spain captive in his château. Convinced of the necessity of a strong Austria to maintain European stability, Talleyrand, who accompanied Napoleon to the Congress of Erfurt (1808) secretly worked in Austria's rather than Napoleon's interest. He also had a hand in bringing about Napoleon's marriage to Marie Louise Napoleon's attack on Russia (1812) completed his alienation from the emperor When the allies entered Paris in 1814, Talleyrand persuaded them to restore the Bourbons For this Louis XVIII made him foreign minister He negotiated the Treaty of Paris of 1814, by which France, despite the defeat, was granted the French borders of 1792, and he represented France at the Congress of Vienna (see VIENNA, CONGRESS OF), where he scored his greatest diplomatic triumphs Winning the European powers to his principle of "legitimacy," namely, the restoration of Europe to its prerevolutionary status, and shrewdly exploiting the dissension among the allies, he succeeded in taking part in the negotiations on equal terms with the principal victorious powers He remained in Vienna during the Hundred Days, but resigned shortly after the second Bourbon restoration because of his opposition to the Treaty of Paris of 1815 In 1830 Louis Philippe, whom he helped to power, made him ambassador to London He resigned in 1834, after having achieved the recognition of Belgium (1831) and signed the QUADRUPLE ALLIANCE of 1834 Talleyrand had married (1803) his mistress, Mme Grand, from whom he separated in 1815 He was readmitted into the Church in 1802 The prototype of the witty, cynical diplomat, Talleyrand has been either exalted as the savior of Europe in 1815 or damned as an opportunist or even a traitor His corruption was undeniable, and his pliability enabled him to hold power under the *ancien régime*, the Revolution, Napoleon, the Restoration, and the July Monarchy Yet Talleyrand was a good European, and his policy was aimed consistently—and often courageously—at the peace and stability of Europe as a whole See his memoirs (1891–92, Eng tr, 5 vols, 1891–92) The standard biography is by Georges Lacour-Gayet (4 vols, 1928–30, in French) See also biographies by A B Dodd (1927), Alfred Duff Cooper (1932), Crane Brinton (1936), and Émile Dard (1935, Eng tr, 1937)

Tallien, Jean Lambert (zhă'läbĕr' tälyĕ'), 1767–1820, French revolutionist A lawyer's clerk and later a printer, Tallien became known through his Jacobin journal, *Ami des citoyens* One of the leaders in the attack on the Tuileries (Aug 10, 1792), he became secretary of the Commune of Paris As such, he sent circulars to the departments urging the spread of the September massacres As a deputy to the Convention and a member of the committee of general security, he aided in overthrowing the Girondists On his mission to Bordeaux (Sept, 1793), he won a reputation as an extremist in spreading the Terror He began the attack on Robespierre (9 Thermidor) which led to his fall (July 28, 1794) A leader of the Thermidorian reaction, Tallien suppressed the Revolutionary Tribunal and the Jacobin clubs His importance then decreased Accompanying Bonaparte to Egypt, he was captured by the English, and he lived in England until 1802

Tallien, Thérésa Cabarrus (tărāsa' kabarŭs' tälyĕ'), 1773–1835, French woman of fashion, of Spanish parentage The divorced wife of a marquis de Fontenay, she married the revolutionist Tallien, on whose policies she exerted a strong influence She was nicknamed Notre Dame de Septembre and Notre Dame de Thermidor in allusion to her husband's part in the September massacres of 1792 and in the coup d'état of the 9 Thermidor (1794) Mme Tallien's salon was famous, she originated the neo-Greek feminine fashions of the Directoire period Having divorced Tallien in 1805, she married the banker Caraman, later created prince de Chimay

Tallinn (tă'lĭn). Ger *Reval* (rā'väl), city (1934 pop 137,792, 1947 estimated pop 168,000), capital of Estonia, a major Baltic port on the southern coast of the Gulf of Finland. It has shipyards and manufactures of cotton textiles, machinery, plastics, paper, plywood, and furniture The port, which is frozen some 45 days a year, exports textiles, paper, and timber There are a polytechnical college, a conservatory of music, and other professional schools The city was founded in 1219 by Waldemar II of Denmark on the site of an Estonian settlement A member of the Hanseatic League from 1285, it was sold (1346) with the rest of Estonia by Waldemar IV to the Livonian Knights and passed (1561) to Sweden. Peter I of Russia captured it (1710) in the Northern War, and in 1721 Sweden formally ceded it to Russia Tallinn became the capital of independent Estonia in 1919 and of the Estonian SSR in 1940 It was occupied (1941–44) by the Germans in the Second World War and suffered considerable damage The historic center of Tallinn consists of an upper town, on a steep hill topped by a medieval cathedral, and of an adjoining lower town, dating from Hanseatic times The picturesque lower town is surrounded by a medieval wall with massive round towers It contains the Danish Toompea castle (13th cent, reconstructed in 1935 as a government building), the 13th-century Gothic Church of St Olai, with a steeple 456 ft high, the 14th-century city hall, and other medieval buildings

Tallis or **Tallys, Thomas,** c 1510–1585, English composer In 1575 a royal license for the exclusive printing of music and music paper was granted to William Byrd and Tallis, and in the same year they published their *Cantiones Sacrae*, containing 18 Latin motets by Byrd and 16 by Tallis The two men also shared the post of organist of the Chapel Royal. Though Tallis wrote a few madrigals and some instrumental music, he is remembered almost entirely for his hymn tunes, services, and anthems

Tallmadge, Benjamin (tăl'mĭj), 1754–1835, American Revolutionary soldier, b Brookhaven, N Y, grad Yale, 1773 Joining a Connecticut regiment, he served throughout the Revolution, fighting at Brandywine, Germantown, and Monmouth In 1780 he commanded in the successful attack against Fort St George and in the destruction of British supplies on Long Island A confidential agent (1778–83), he corresponded with George Washington and had the custody of Major John Andre until André's execution After the war Tallmadge retired to Litchfield, Conn, became a merchant, and sat (1801–17) in the U S Congress as a Federalist See *Memoir of Colonel Benjamin Tallmadge, Prepared by Himself* (1858, reprinted and ed by H P Johnston, 1904), biography by C S Hall (1943)

Tallmadge, village (pop 3,452), NE Ohio, NE of Akron, settled 1808, inc 1936

tallow, solid fat extracted from the tissues and fatty deposits of animals, especially from suet (the fat of beef and sheep) Pure tallow is white, odorless, and tasteless, it consists chiefly of the esters stearin, palmitin, and olein It is usually obtained commercially by heating suet under pressure in closed vessels Tallow is used to make soap, candles, and butter substitutes It was formerly in common use as a lubricant

tallow tree, popular name usually applied to trees of the spurge family that yield vegetable tallow or thick oil The Chinese tallow trees (*Sapium sebiferum*), native to China and Japan and cultivated in the S United States, grows to a height of about 40 ft The seed covering yields a white, greasy substance used for making candles and soap and for dressing cloth The candlenut tree (*Aleurites moluccana*) is a tropical tree widely distributed in the Pacific islands, Madagascar, and S Asia Its nuts are used by natives as candles and yield an oil (kekuna oil) valuable as a drying oil, a lamp oil, and a food

Talluiah (tulōō'lu), village (pop 5,712), parish seat of Madison parish, NE La, near the Mississippi river and W of Vicksburg, Miss It is in the heart of the delta cotton region, but also has commercial fishing and frog raising

Tallys, Thomas see TALLIS, THOMAS

Talma, François Joseph (frāswa' zhôzĕf' talma'), 1763–1826, French actor In 1787 he made his debut at the Comédie Française in Voltaire's *Mahomet* and in 1789 gained fame in Chenier's *Charles IX* The beginning of the Revolution brought sharp political disruption at the Comédie Française, and Talma left and set up his own theater, first known as the Théâtre de la République Here he excelled in such roles as Henry VIII, Othello, Macbeth, and Hamlet. Greatest tragedian of his time, he made important reforms in costuming and technique and was admired by Napoleon and Louis XVIII

Talmadge, Eugene, 1884–1946, governor of Georgia (1933–37, 1941–43), b Forsyth, Ga After receiving (1907) his law degree from the Univ of Georgia, he practiced at McRae, Ga. He was (1927–33) state commissioner of agriculture. In his second term as governor (1935–37), his staff was forbidden by Harry Hopkins to disburse Federal relief funds, and Talmadge became violently opposed to the New Deal. Twice defeated (1936, 1938) for the Democratic nomination for the U.S. Senate, he won the

governorship again in 1940 His interference with the state university system in 1941 (see GEORGIA) aroused much resentment, and in 1942 Ellis G ARNALL defeated him for the Democratic gubernatorial nomination. Talmadge, however, had strong support among the "wool-hat boys" of the rural counties and became governor-elect again in 1946. His death, before he took office, caused a crisis over the question of a successor. M E Thompson, the lieutenant governor-elect, who was legally declared chief executive in March, 1947, was subsequently defeated in a special primary by Talmadge's son Herman Talmadge (1913–), who immediately assumed office

Talmage, Thomas De Witt (tăl'mĭj), 1832–1902, American Presbyterian clergyman, b near Bound Brook, N J, grad New Brunswick Theological Seminary, 1856 His work in Brooklyn, N Y, began in 1869 in the Central Presbyterian Church The Tabernacle, built in 1870 to accommodate the great audiences attracted by his often somewhat melodramatic preaching, was burned in 1872, as were two other large buildings erected by his congregation during the next 20 years Between 1873 and 1902 Talmage edited in turn the *Christian at Work*, the *Advance*, *Frank Leslie's Sunday Magazine*, and the *Christian Herald* He made popular lecture tours in America and England

Talmai (tăl'mī) [Heb ,=furrowed] **1** King of Geshur and grandfather of **Absalom**, who took refuge with him 2 Sam 3 3, 13 37,38 **2** One of the three sons of ANAK

Talmon (tăl'mŏn) [Heb ,=oppressed], family of temple doorkeepers 1 Chron. 9 17, Ezra 2 42, Neh 7 45 The Talmon of Neh. 12 25 is probably the same as TELEM.

Talmud (tăl'mŭd) [Aramaic from Heb ,=learning], vast compilation of the Oral Law of the Jews, with rabbinical elucidations, elaborations, and commentaries, in contradistinction to the Scriptures or Written Laws The Talmud is the accepted authority for orthodox Jews everywhere Its two divisions are the Mishna or text of the Oral Law (in Hebrew) and the Gemara (in Aramaic), a sort of commentary upon the Mishna, which it supplements The Mishna is divided into six Orders (Sedarim) and comprises 63 tractates (Massektoth), only 36½ of which have a Gemara The compilation of the present Mishna is practically the work of Judah I (ha-Nassi), who collected and codified the legal material which had already accumulated through the exposition of the Law by the Soferim, particularly Hillel and Shammai, and its elaboration by the Tannaim Subsequently scholars and teachers busied themselves about the interpretation of the Mishna Out of their work developed the Gemara Although the mission of the Gemara was merely to expound and interpret the text of the Mishna, the scholars engaged in the work were led away by their zeal and their love of hair-splitting dialectical arguments into so many extraneous channels that the work became an amazing mass of unsystematized information and comment on a variety of subjects, such as astronomy, geography, historical gossip, domestic relations, and folklore The legal sections of the Gemara are known as the HALAKAH, the poetical digressions, illustrating the application of religious and ethical principles through parables, legends, allegories, tales, and anecdotes, constitute the haggada In the Middle Ages arose a vast literature of commentaries on the Gemara, commentaries on these commentaries, and responsas (questions and answers), among the commentators is Rashi Both the Palestinian school and the Babylonian produced Talmuds The first is known as the Talmud Yerushalmi (Jerusalem), the second as the Talmud Babli (Babylonian) The Palestinian Talmud was finished about the beginning of the 5th cent, the Babylonian at the beginning of the 6th cent The text of the first was not well preserved, and the second became the authoritative work, through its ramifications can be traced the changing social currents of the time In the Middle Ages the Talmud was several times censored or burned by Christians The term *Talmud* is sometimes used with reference to the Gemara alone See M L Rodkinson's English translation of the Babylonian Talmud (1896–1904), Moses Mielziner, *Introduction to the Talmud* (1902), M L Rodkinson, *History of the Talmud* (1903), Arsène Darmesteter, *The Talmud* (1897, in French, Eng tr, 1919)

Talon, Jean Baptiste (zhä bätĕst' talôN'), c 1625–1694, intendant of New France, b. Châlons-sur-Marne, France, educated by the Jesuits in Paris Entering (c 1653) the administrative service, he was appointed intendant of New France in 1665 In his short residence (1665–68, 1670–72) in the colony, his accomplishments were striking He encouraged agriculture, sent prospectors to hunt for minerals and to explore little-known territory, made energetic efforts to found brewing, lumbering, and shipbuilding industries, planned for trade with the West Indies and France, and so successfully fostered immigration that when he left New France in 1672 its population was almost doubled since his arrival. See Thomas Chapais, *The Great Intendant* (1914)

talus (tā'lus), fragmentary mantle rock detached from cliffs by WEATHERING (chiefly by the mechanical action of frost) and piled up at the bases of the cliffs or mountain slopes A talus is a common geologic feature in regions of high cliffs The angle of slope of the talus is commonly the angle of repose of the rock fragments of which it is composed, but the constant weathering to which it is subjected, which breaks the fragments into finer pieces, and the impact of new material being added from above give the base of the talus pile a tendency to creep and slide The structure of talus formations frequently causes erroneous conclusions as to the age of human bones found in talus

Tama (tă'mŭ), city (pop 2,832), central Iowa, on the Iowa river below Marshalltown, platted 1862, inc 1869. A paperboard mill is here The Sac and Fox Indians own a large area near by

Tamah (tā'mu), family returned from exile. Neh 7 55 Thamah Ezra 2 53

Tamale (tŭmä'lē), town (pop 17,372), capital of Northern Territories, Gold Coast It is a road center and a cotton and cattle mart

tamale (tumä'lē), Mexican dish of which the chief ingredients are corn meal or crushed maize, minced meat, chilies, and seasonings It is usually folded in a thick dough, wrapped in cornhusks, and steamed

Tamalpais, Mount (tă'mŭlpīs"), peak, 2,604 ft. high, W Calif, near San Francisco The mountain is a game preserve and a resort Mill Valley lies at its base.

Taman Peninsula (tŭmä'nyu), c 20 mi long, 8 mi wide, Krasnodar Territory, SE European RSFSR, projecting westward between the Sea of Azov and the Black Sea It is separated from the Crimea by the KERCH STRAIT There are small mud volcanoes and gas and petroleum deposits

Tamaqua (tumō'kwu), industrial borough (pop 12,486), E Pa, near Pottsville, settled 1799, laid out 1829, inc 1832 It is an anthracite-mining borough with a large residential section

Tamar (tā'mär) **1** Mother of Judah's twin sons Pharez and Zerah Gen 38, Ruth 4 12, 1 Chron 2 4 Thamar Mat 1 3 **2** Daughter of David and Maachah She was the victim of her half brother Amnon's passion 2 Sam 13 **3** Daughter of Absalom 2 Sam 14 27 **4** Unlocated boundary site, S Palestine Ezek 47 19, 48 28

tamarack see LARCH

tamarind (tă'murĭnd), tropical ornamental leguminous evergreen tree (*Tamarindus indica*), native to Africa and probably to Asia The fruit, a brown pod from 3 to 8 in long, has been an article of commerce since medieval times Within the pod is a juicy, acid pulp used as an ingredient in chutneys and curries and in medicines and for preserving fish A refreshing drink is made by adding sugar and water to the pulp A dye is obtained from the leaves The tamarind is grown in the West Indies and S Florida

tamarisk (tă'murĭsk), small ornamental tree or shrub of the genus *Tamarix*, native to S Europe and Asia It has wandlike branches covered with very fine, graceful leaves and bearing small white or pink flowers The reddish wood is hard and tough The bark and galls (produced on some Oriental species) are used in tanning and dyeing Tamarisks thrive in dry soils and on seacoasts, even in salt-water spray Of those cultivated in the United States only a few species are fairly hardy as far north as Massachusetts The tamarisk makes a good hedge plant Some species bloom in late summer One species (*Tamarix mannifera*) yields a manna when punctured by a certain insect

Tamatave (tamatăv'), city (pop 30,411), on Madagascar, a port on the Indian Ocean It is a terminus of the island's rail system Coffee, rice, hardwoods, and hides are exported

Tamaulipas (tamoulē'pas), state (30,734 sq mi, 1946 estimated pop 556,494), NE Mexico, on the Gulf of Mexico VICTORIA is the capital The central and western sections of the state are in the mountains of the Sierra Madre Oriental, but the southern and northern parts have arable plains, particularly in the long panhandle beginning at NUEVO LAREDO and following the RIO GRANDE opposite Texas to Matamoros The coast is low, sandy, fringed with lagoons, and (except for MATAMOROS and TAMPICO) virtually uninhabited The extreme southwestern portion, where there is some mining, borders on the vast semiarid basins of central Mexico Except in the elevated interior, the climate is hot and humid Sugar, cereals, cotton, tobacco, and corn are the chief agricultural products, and cattle raising is important Hides are exported from Tampico along with the important asphalt and petroleum products In the region around Victoria citrus fruits are a major crop First explored by the Spanish in 1519, the territory, inhabited by Tamaulipan Indians, was conquered by Gonzalo de Sandoval, then abandoned In 1747 colonization was begun by José de ESCANDÓN, who changed the name of the province from Pánuco to Nuevo Santander It was renamed Tamaulipas shortly after independence was won (1821) from Spain

Tamayo y Baus, Manuel (manwēl' tämä'yō ē bous'), 1829–98, Spanish dramatist He belonged to a family of actors and became one of the most popular of 19th-century Spanish playwrights In 1870 he abandoned the theater and became secretary of the Royal Academy and director of the National Library Among his many successful plays are *Locura de amor* [the madness of love] (1855) and *Un drama nuevo* (1867, Eng tr, *A New Drama*, 1915).

tambourine (tăm"burēn'), percussion musical instrument, having a circular frame and a single drumhead, with metal plates or jingles in the frame In the Middle Ages and the Renaissance it was used by traveling musicians and entertainers, in the 19th cent it became a military band instrument It is now used occasionally in the orchestra The timbrel of the Bible was probably similar to the tambourine

Tambov (tŭmbôf'), city (pop 121,285), capital of Tambov oblast, central European RSFSR In a rich agricultural district, it is a rail junction and a manufacturing center (notably of synthetic rubber, aircraft, and electric motors), and it has flour mills, distilleries, and tobacco plants Founded in the 17th cent, it early became an important grain and wool market

Tamerlane (tă'murlān) or **Timur** (tĭmōōr'), c 1336–1405, Mongol conqueror, b near Samarkand He is also called Timur Leng [Timur the lame] He was the son of a tribal leader, and he claimed (apparently for the first time in 1370) to be a descendant of Jenghiz Khan Tamerlane's early military career was spent in subduing his rivals in what is now Russian Turkistan, and by 1369 he firmly controlled the entire area from his capital at SAMARKAND Campaigns against Persia occupied him until 1387 By that time he had in his possession the lands stretching E from the Euphrates river He advanced (1392) across the Euphrates, conquered the territory between the Caspian and the Black Sea, and invaded several of the south Russian states Tamerlane abandoned some of his Russian conquests to return to Samarkand and invade (1398) India along the route of the Indus river He took Delhi and advanced to the Ganges river, but he withdrew with little addition to his domain In 1400 Tamerlane ravaged Georgia and proceeded to the Levant, where he took Aleppo and Baghdad His next war was fought in Asia Minor against the Ottoman Turks, and in 1402, at Angora, he captured their sultan, Bajazet I, who, contrary to popular belief, was well treated Tamerlane died while conducting an invasion of China His tomb at Samarkand was long known to archaeologists, but it is only recently that his skeleton, buried in a deep crypt, was found Tamerlane's reputation is that of a cruel conqueror After capturing certain cities he slaughtered thousands of the defenders (perhaps 80,000 at Delhi) and built pyramids of their skulls Although a Moslem, he was scarcely more merciful to his coreligionists than to infidels His positive achievements were encouragement of art, literature, and science and the construction of vast public works He had little hope that his vast conquests would remain intact, and before his death he arranged for them to be divided among his sons The TIMURIDS are the line of rulers descended from him Christopher Marlowe's play *Tamburlaine* luridly recounts his conquests See biography by Harold Lamb (1928), J H Sanders, tr, *Tamerlane* (Eng tr of late 14th-century Arabic work by Ahmed Ibn Arabshah, 1936)

Tamesis see THAMES, river of England.

Tamil (tă'mĭl), language of the Dravidian family It is grouped with Malayalam See LANGUAGE (table)

Tammany (tă'munē) After the American Revolution several patriotic societies sprang up in America to promote various political causes and economic interests It was in this period that Tammany societies were founded in New York, Philadelphia, and other cities The Tammany societies took the name of an Indian chief said to have welcomed William Penn and to have signed with him the Treaty of Shakamaxon The Tammany Society or Columbian Order of New York city, the only Tammany society to have a long life, was formed in 1786 and was incorporated in 1789 by William Mooney It was divided into 13 tribes, corresponding to the 13 states, and its motto was "Freedom Our Rock", its rites and ceremonials were based on pseudo-Indian forms, and the titles of its officials were also pseudo-Indian Although its activities were at first mostly social, ceremonial, and patriotic, the society gradually became the principal upholder of Jeffersonian politics in New York city After 1798 Tammany fell under the control of Aaron BURR. While Tammany was fighting the political forces of De Witt CLINTON, it consolidated its position in New York city Tammany backed Andrew Jackson for President and after his victories in 1828 and 1832 became a dominant force, fighting for democratic suffrage and the abolition of imprisonment for debt in New York state Though it thus stood for reforms in behalf of the common man, it was, nevertheless, increasingly controlled by men of the privileged classes The hostility of mechanics and workingmen to the "aristocratic" control promoted the splits within the Democratic party in

New York city and state which were marked by the revolt of the Locofocos and the contest between the BARNBURNERS and the HUNKERS. The society meanwhile triumphed over the KNOW-NOTHING MOVEMENT and the local Whig party alike and steadily gained strength by bringing the immigrant groups into its fold From the election (1854) of Fernando WOOD as mayor of New York dates Tammany's domination of New York city politics Flagrant abuses under the reign of William M TWEED led to reforms instituted (1872) by Samuel J TILDEN, Tammany returned to power under John KELLY, and the "boss" system was firmly entrenched in New York city Corruption under Richard CROKER brought forth new investigations (see PARKHURST, CHARLES), and when Seth Low became (1901) mayor, Tammany was eclipsed for a time Charles MURPHY succeeded Croker as boss His reign was interrupted by the brief administration of John P MITCHEL, who, like Gov. William SULZER, was a Democrat but an opponent of Tammany Alfred E SMITH became strong enough to create a so-called "new" Tammany, in which he was an important figure. City politics, however, continued corrupt, and investigations (1930–31) of the city magistrates' courts completely discredited Tammany Hall and ultimately brought about the resignation (1932) of Mayor James J. WALKER. Tammany suffered a telling defeat in the election of 1932 and did not regain its former strength in succeeding elections See Gustavus Myers, *The History of Tammany Hall* (2d ed, 1917), M R Werner, *Tammany Hall* (1928), Gene Fowler, *Beau James: The Life and Times of Jimmy Walker* (1949)

Tammerfors, Finland see TAMPERE

Tammuz (tă'mŭz), in Babylonian religion, young god loved by ISHTAR She killed him, but restored him to life His festival, symbolizing the yearly death and rebirth of vegetation, corresponds to the festivals of the Phoenician and Greek ADONIS and of the Phrygian ATTIS See Ezek 8 14.

Tampa (tăm'pŭ), city (pop 108,391), co seat of Hillsborough co, W Fla, a port of entry with a magnificent harbor on Tampa Bay, at the mouth of the Hillsboro river It is a popular resort, with fishing and boating activities, and a commercial and shipping center handling packed and processed fruit (especially grapefruit), lumber, naval stores, phosphate rock, and, notably, cigars The bay was probably visited by Narváez in 1528 and by De Soto in 1539 Fort Brooke was built in 1823 by an American force, and the town grew up around it. It was taken by Union forces in the Civil War Development of the city dates from the construction of railroads and the introduction of cigar making in the late 1880s. Ybor City is the headquarters of the cigar industry and the home of its Spanish and Cuban workers During the Spanish-American War, Tampa was a military base, troops were encamped, and Theodore Roosevelt trained his Rough Riders here In Plant Park are the Univ of Tampa (coeducational), the municipal museum, De Soto Oak, the municipal auditorium, and the state fairgrounds The Davis Islands are artificially made The city has a fine airport Gandy Bridge extends across Old Tampa Bay to the Pinellas peninsula

Tampa Bay, inlet of the Gulf of Mexico, W Fla It is a double-necked bay, forming a western peninsula (Pinellas), with St Petersburg at the tip, and an eastern peninsula, with Port Tampa City at the tip. The eastern neck has been dredged up to Tampa.

Tampere (tăm'pĕrā), Swed *Tammerfors* (tă'mûrfôrs'), city (pop 80,995), SW Finland, on the rapids which descend 60 ft between lakes Näsijärvi and Pyhäjärvi The use of water power instead of coal makes Tampere a smokeless, clean, manufacturing city Incorporated in 1779, it is the center of textile and footwear industries and has locomotive and ironworks and pulp mills. A decisive victory in the Finnish war of independence was won here (April, 1918) by General Mannerheim and the White forces over the Reds

Tampico (tămpē'kō, Span, tämpē'kō), city (pop. 82,475), Tamaulipas, NE MEXICO Rivaling Veracruz as Mexico's most important seaport, Tampico (founded c 1554) is a few miles inland from the Gulf of Mexico on a water-threaded alluvial plain on the north bank of the PÁNUCO river, which separates it from Veracruz state To avoid inundation, part of the land has been raised 8 ft above sea level The climate is hot and humid in summer—and also in winter except when cold winds sweep down the coast from Texas In 1823 SANTA ANNA decreed the creation of the town, and near it in 1829 he defeated a Spanish army under Isidro de Barras Tampico was occupied (1846) in the Mexican War by an American force under David Conner, and it was taken by the French in 1862 With the discovery of oil (c 1900) by English and American geologists, rapid expansion and development of petroleum industries began, before Mexico expropriated foreign-owned property, about one third of the landowners were American and a large element of the population was foreign There is considerable export trade in cattle and hides, chicle, rubber, sarsaparilla, vanilla, beeswax, honey, fruits (especially bananas), vegetables, cocoanuts, and coffee Railroads connect Tampico with the inland cities Monterrey and San Luis Potosí

Tampico hemp, fiber of various tropical American plants, among them the AGAVE

Tamworth (tăm'wûrth), municipal borough (1931 pop 7,509, 1943 estimated pop 11,171), Staffordshire, England, on the Warwickshire border at the confluence of the Tame and Anker rivers. It was burned by the Danes in the 9th cent and rebuilt by Æthelfled in the 10th. The castle which she built on an artificial mound now contains a museum. The Roman Watling Street passed near Tamworth The Church of St. Editha, built in the 8th cent. and rebuilt in 1345, has an unusual double spiral staircase Thomas Guy, the founder of Guy's Hospital in London, built an almshouse in 1678 and the town hall in 1701 There is a statue of Sir Robert Peel, member of Parliament for Tamworth The town gives its name to a widely known breed of hog originally raised in the vicinity.

Tamworth, town (pop 1,056), E central N.H., including Chocorua and Tamworth villages, in a region of lakes and mountains There is a summer theater

Tana (tä'nä) or **Tsana** (tsä'nä), lake, area c.1,400 sq. mi., NE Ethiopia. It is the largest lake in Ethiopia, and it receives some 60 affluents. The Blue Nile rises from Tana.

Tanach (tä'näk), variant of TAANACH

tanager (tă'nŭjûr), migratory perching bird of the New World. There are about 550 species and subspecies, chiefly tropical Only five migrate to North America Of these the scarlet tanager has the widest range in the United States As in most tanagers, only the male has brilliant plumage. It is scarlet with black wings, tail, and beak, the female is olive green and yellow. Its song is less melodious than that of the rosy-red summer tanager of the South The western or Louisiana tanager is yellow, black, and red.

Tanagra (tă'nŭgrŭ), ancient town, E Boeotia, Greece. Here the Athenians were defeated (457 B C) by the Spartans and their allies The city is best known for the **Tanagra figurines,** delicate little statuettes, mostly of women in the costumes and attitudes of daily life These were made in profusion in the Hellenistic period and were sold widely to other cities for use as household ornaments.

Tanais, see DON, river, and AZOV, city

Tanaka, Giichi, Baron (gē-ē'chē tä'näkä) 1863–1929, Japanese general He is most famous as the alleged author of the so-called Tanaka Memorial (1927), purporting to set forth Japan's plans for foreign conquest Its authenticity is open to question, though its contents in general agree with Tanaka's known views He was war minister (1918–21, 1923-24) and backed the Siberian expedition He became president of the Seiyukai party in 1925 As prime minister (1927–29) he pursued a "positive" policy in China, including military intervention in Shantung At home, his cabinet suppressed radicals and manipulated an election, but failed to win a majority Its downfall was hastened by accusations of Japanese connivance in the death of Chang Tso-Lin, Manchurian war lord, and by the charge that signing the KELLOGG-BRIAND PACT "in the name of the people" infringed the sovereignty of the emperor.

Tanana (tă'nuna), river, c 600 *mi long,* rising in W Yukon near the Alaskan border. It flows NW across Alaska, N of the Alaska Range, to Fairbanks, which is on Chena Slough, a northern branch of the river, and on to join the Yukon at the village of Tanana Discovered (c 1860) by Russian traders, it later became an important route to the Yukon gold fields Some agriculture has been developed in the valley.

Tananarive (tänänärēv'), city (pop 163,079), on central Madagascar, capital of Madagascar. It is a railroad junction Cotton cloth and cigarettes are manufactured, and there is meat canning

Tanaquil (tă'nukwĭl), wife of the legendary early king of Rome, Lucius Tarquinius Priscus (see TARQUIN). She was a prophetess, and it was at her bidding that he went to Rome

tanbark, any bark rich in tannin. In common usage the term is applied to spent bark from which most of the tannin has been extracted Spent tanbark is used as a cover for circus rings and riding tracks Although sometimes used as a manure in hotbeds, it is usually combined with other manures, since it decays slowly and gives little heat.

Tancred (Tancred of Lecce) (tăng'krĭd, lē'chā), d. 1194, king of Sicily (1190–94), illegitimate son of Roger of Apulia, grandson of Roger II of Sicily. Tancred's uncle, William II, had left the crown to his aunt, CONSTANCE, wife of Emperor Henry VI, but the Sicilian barons crowned the popular Tancred (1190) Henry made two unsuccessful expeditions against him (1190, 1191) and soon after Tancred's death deposed Tancred's infant son, William III (1194)

Tancred, d. 1112, Crusader. He took the cross with his relative BOHEMOND I (1096). After distinguishing himself at Nicaea, he struck out into Cilicia and besieged Tarsus, but was deprived of the city, after its fall, by Baldwin (BALDWIN I of Jerusalem) and was forced to rejoin the main army. He took part in the capture of Antioch (1098) and Jerusalem (1099) and was for a short time prince of Galilee, with his capital at Tiberias. While acting as regent of Antioch for Bohemond (1100–1103), he recaptured Laodicea and other towns and imprisoned RAYMOND IV of Toulouse. In 1104, after the capture of BALDWIN II of Jerusalem at Harran, he took over the government of Edessa and, after the departure of Bohemond for the West, that of Antioch. He subsequently made extensive conquests in Cilicia and N Syria Although Bohemond submitted (1108) to Emperor ALEXIUS I, Tancred refused to surrender his conquests to the emperor or to do him the least homage.

Tandil (tändēl'), city (pop. 39,084), E Argentina Founded in 1823 as Fuerte Independencia, it was a military outpost against raiding Indians Tandil is today an attractive resort city with handsome plazas and gardens In the surrounding hills some of Argentina's best granite is quarried

Tandy, James Napper, 1740–1803, Irish rebel He was a small tradesman in Dublin when he became interested in politics He gained notoriety by his attacks on municipal corruption and his proposal to boycott English goods as a reprisal for the restrictions placed on Irish commerce. He supported the Irish volunteer movement, but his influence waned with the decline of the movement He aided Wolfe TONE in founding (1791) the Dublin branch of the United Irish Society. He was arrested in 1792 for challenging Attorney General Toler, but was released When faced with a sedition charge in 1793, Tandy fled to America and then to France (1798), where he was given a corvette and the title of general He set out for Ireland, but when he discovered that the proposed French expedition had failed, he fled to Hamburg, where he was arrested. He was returned to Ireland (1800), sentenced to execution, but reprieved through French influence His fame is perpetuated in the Irish ballad *The Wearing of the Green.*

Tanega-shima (tänä'gä-shēmä), island, 35 mi long and 7 mi. wide, off S Kyushu, Japan. Several Portuguese voyagers to China landed here (c 1543) and introduced firearms to Japan.

Taneiev, Sergei Ivanovich (syĭrgā' ēvu'nûvĭch tŭnyā'uf), 1856–1915, Russian pianist and composer He studied at the Moscow Conservatory under Nicholas Rubinstein and Tchaikovsky, succeeding Rubinstein as professor of piano He later became professor of composition and was director of the conservatory, 1885–89 He composed an opera on Aeschylus' *Orestes* (1894), two cantatas, four symphonies, chamber music, and songs He was a severely intellectual, classically minded musician and wrote several theoretical works His uncle **Aleksandr Sergeyevich Taneiev** (ŭlyĭksaan'dur syĭrgā'ŭvĭch), 1850–1918, pupil of Rimsky-Korsakov, was also a composer. See M. D Calvocoressi and Gerald Abraham, *Masters of Russian Music* (1936).

Taney, Roger Brooke (tô'nē), 1777–1864, Chief Justice of the U S. Supreme Court (1836–64), b Calvert co, Md, grad. Dickinson College, 1795 Taney was born of a wealthy slave-owning family of tobacco farmers. He was admitted to the bar in 1799 and, a Federalist, served (1799) one term in the Maryland house of delegates. He temporarily broke with the Federalist leadership over the party's opposition to the War of 1812, but he gained control of the Federalists in Maryland and in 1816 was elected to a five-year term in the state senate. Having built up a large practice, he moved (1823) from Frederick to Baltimore In 1824 he permanently abandoned the Federalists to support Andrew Jackson and the Democrats President JACKSON appointed (1831) Taney to the post of Attorney General in his cabinet to assist in the struggle with the BANK OF THE UNITED STATES Taney wrote much of Jackson's message vetoing (1832) the act which rechartered the bank, and when Louis McLane and William J DUANE refused to withdraw Federal funds from the bank, Taney was appointed (1833) Secretary of the Treasury and effected the withdrawal The Senate was incensed and refused in 1835 to ratify Taney's nomination as an Associate Justice of the Supreme Court, but the following year, somewhat changed in membership, the Senate ratified his appointment as Chief Justice. Conservatives, fearing for the work of Taney's predecessor, John MARSHALL, were outraged by his opinion in the Charles River Bridge Case (1837), this limited Marshall's ruling in the DARTMOUTH COLLEGE CASE that charters issued by states were inviolable by holding that a state charter of a private business did not imply any privileges greater than those expressly granted. Taney felt that the POLICE POWER of a state entitled it to make reasonable regulatory laws even if they appeared to override provisions of the U S. Constitution; thus, he held that, although Congress alone had the power to regulate interstate commerce, a state might exclude a corporation organized elsewhere. In sustaining FUGITIVE SLAVE LAWS, however, Taney denied to free states the power of refusing obedience to Federal statutes

which required the surrender of escaped slaves. Taney's support of the slavery laws was most clearly expressed in the DRED SCOTT CASE (1857). Here he held that slaves (and even the free descendants of slaves) were not citizens and might not sue in the Federal courts and that Congress could not forbid slavery in the territories of the United States. Opposition to the second holding was furiously expressed by the Republicans, and when Lincoln became President he considered Taney an archfoe. In the Civil War, Taney, in vain ruled against Lincoln's suspension of the writ of habeas corpus (see MERRYMAN, EX PARTE). There was much antipathy to Taney at his death, but it has gradually been appreciated that his contribution to constitutional law makes him a great jurist. See biographies by B. C. Steiner (1922) and C. B. Swisher (1935), study by Charles W. Smith (1936).

Taneycomo, Lake (tā"nēkō'mō, -kŭm'ō'), c 25 mi. long, SW Mo., S of Springfield and near the Ark. line. It is formed by the impounding of the White River waters by Forsyth Dam. It is a resort in the Ozarks.

Taneytown (tā'nētoun), city (pop. 1,208), N Md., NW of Westminster, settled c 1740. It produces clothing and rubber shoes.

T'ang (täng), dynasty of China, which ruled from 618 to 906. It was founded by Li Yüan, who killed the last Sui emperor. The early strength of the T'ang was built directly on the excellent system of communications and administration established by the Sui. At first the neighboring peoples, barbarian and civilized, were held in check, and at its height (mid-7th cent.) the T'ang occupied or controlled Korea, Manchuria, Mongolia, and Turkistan. A tremendous cultural efflorescence (which powerfully influenced Japan and Annam) accompanied this territorial expansion. Sculpture flourished (T'ang horses are especially noted) and the painting (of which few examples have survived) was considered superior. In literature poetry was the most highly developed form, of more than 2,000 poets Po Chü-i and Li Po were perhaps the most distinguished. The classics of Confucianism were closely studied and provided the basis for reforming the system of civil service examinations, and Confucianism was made the state religion. Although religious toleration was usually practiced, foreign cults were sometimes proscribed, and on several occasions Buddhist monasteries were dissolved. The vigor of the early T'ang administration quickly declined, and by the mid-8th cent. control over border regions was lost, especially to the Uigurs, who became dominant in Mongolia. In the 9th cent. local maladministration became widespread, and revolts broke out in the south. Following the T'ang collapse there was great disorder until the establishment of the Sung dynasty. See Woodbridge Bingham, *The Founding of the T'ang Dynasty* (1941).

Tanga (täng'gŭ, täng'gä), town (pop. 34,658), NE Tanganyika, a port on the Indian Ocean. It is connected by rail with the agricultural interior. Sisal, cotton, and coffee are exported.

Tanganyika (täng"gunyē'ku, täng"gän-), United Nations trust territory (343,000 sq. mi., pop. c 7,000,000), E Africa, on the Indian Ocean. It is under British administration. The capital is Dar-es-Salaam. Tanganyika is bordered by Kenya and Uganda on the north, by Ruanda-Urundi on the west, and by Northern Rhodesia and Mozambique on the south. Victoria Nyanza, Lake Tanganyika, and Lake Nyasa lie on the northern, western, and southern borders respectively. Zanzibar is off the coast. Tanganyika comprises three natural regions —the coastal lowlands, the high plateau of the north, rising to Mt. Kilimanjaro (19,565 ft.), the greatest elevation in Africa, and the southern highlands, which are climatically suited for white settlement. Mineral resources are distributed throughout the country, especially in the area which is adjacent to Victoria Nyanza and extends to the southern border. Diamonds, gold, tin, and mica are economically most important. The chief crops (raised along the coast and in the south) are sisal, cotton, coffee, tobacco, and peanuts. A railroad (with a branch to Mwanza on Victoria Nyanza) follows the old caravan route from Dar-es-Salaam to Kigoma on Lake Tanganyika. Another railroad runs from Tanga to Kenya. The coast, which had been previously ruled from Zanzibar, was explored (c.1500) by the Portuguese. They held it loosely until the 17th cent., when they were supplanted by the Arab sultans of Muscat. Under Arab rule there was much trade in ivory and slaves. German influence became dominant in the late 19th cent., and in 1884 the colony of German East Africa was created. The Germans built railroads and introduced new crops, notably sisal. In the First World War there was almost continual military action in Tanganyika, and great economic disruption resulted. Tanganyika became a British mandate under the League of Nations in 1920, and in 1945 it was made a trust territory of the United Nations. It is ruled by an appointed governor with the aid of an executive and a legislative council. Most of the natives are Bantu, many of them Moslems in religion. The lingua franca, Swahili, is much used.

Tanganyika, Lake, area 12,700 sq. mi., E central Africa. It is c 450 mi. long and at its maximum only c 50 mi. wide. The lake forms the entire boundary of Belgian Congo and Tanganyika. It is otherwise bordered by Ruanda-Urundi on the east and Northern Rhodesia on the south. The lake lies in the Great Rift Valley at an altitude of c.2,500 ft. It is c 4,700 ft. deep, and it is believed to be the deepest fresh-water lake in the world except for Lake Baikal. Part of Lake Tanganyika's overflow eventually reaches the Nile. The lake was discovered in 1858 by John Speke and Sir Richard Burton. David Livingstone and Henry Stanley explored the region in 1871. Today there is steamer service on the lake, with the chief route between Albertville, Belgian Congo, and Kigoma, Tanganyika.

tangelo: see TANGERINE.

tangerine (tăn"jŭrēn') [from Tangier], small, thin-skinned variety of orange (*Citrus nobilis deliciosa*). Because the skin can be removed very easily, it is said to belong to the kid-glove group of oranges, of which it is the most important member. It has a sweet, dry pulp and is less hardy than the orange. The tangelo is a hybrid obtained by crossing the tangerine and the grapefruit. It is of good flavor, color, and size but is too tender to ship well.

Tangier (tănjēr'), international zone (147 sq. mi., pop. c 150,000), North Africa, on the Strait of Gibraltar. It is part of the domain of the sultan of Morocco. The zone is named for the city of Tangier, the ancient Tingis, where most of the population lives. The city is almost wholly without industry, and most activity is concentrated in the busy harbor districts. The walled Moorish town adjoins a modern European garden suburb. Tangier was probably founded by the Phoenicians. It was a free city under the Romans and the chief port and commercial center of Morocco until the founding (808) of Fez. It was captured by Portugal from the Arabs in 1471 and came under Spanish control with all of Portugal in 1580. It reverted to Portugal in 1640, but in 1662 it was transferred to England as part of the dowry which Catherine of Braganza brought to Charles II. Tangier was abandoned to the Moors in 1684 and became a base for Barbary pirates. In the mid-19th cent. it became the diplomatic center of Morocco. Later it was a focus of the dispute among the European powers over Morocco. Its status was not defined until 1925, when the international zone was created. During the Second World War the zone was incorporated into Spanish Morocco with the consent of the Allies, it was returned to international rule in Oct., 1945. It is governed by the consuls of the major European countries constituting the committee of control and by a legislative assembly headed by the sultan's representative. See G. H. Stuart, *The International City of Tangier* (1931).

Tangier (tănjēr'), town (pop. 1,020), on Tangier Island, E Va., in Chesapeake Bay near the Eastern Shore of Maryland, inc. 1915. The island was discovered by Capt. John Smith in 1608 and was settled in the latter part of the 17th cent. Fishing is the only industry. Isolated from the mainland, the people of Tangier developed a distinct culture. See S. W. Hall, *Tangier Island a Study of an Isolated Group* (1939).

Tangla (tang'lä, dang'lä), mountain range, c 20,000 ft. high, E central Tibet. It lies athwart the main route connecting China and Tibet and is crossed by a pass c 15,000 ft. high. The name also appears as Dangla.

Tanglewood: see LENOX, Mass.

tango (täng'gō), Argentine dance, introduced into the United States as an exhibition dance. It has had some vogue as a ballroom dance, but possibly because of the space required for its performance it has been in the United States considered impractical for general dancing. It is spirited and graceful and is marked by gliding and sweeping steps, turning within a gradually narrowing compass. The music is in 4–4 rhythm.

Tanhumeth (-hū'-) [Heb., =comfort], father of the captain Seraiah. 2 Kings 25:23, Jer. 40:8.

Tanimbar Islands (tănĭm'bär, tə-) or **Teninbar Islands** (tĕnĭm'bär, tə-), group of about 30 islands (2,172 sq. mi., pop. 31,847), East Indonesia, in the Banda Sea NE of Timor, in the Moluccas. The largest of the group is Yamdena (pop. 15,685), 70 mi. long and 28 mi. wide. Chief products are copra, tortoise shell, and sago. The group is also called Timorlaut (tē'mōrlout).

Tanis (tā'nĭs), ancient city, NE Egypt, capital of the XXI (Tanite) dynasty. It is possibly to be identified with the Hyksos capital, Avaris, and has remains from other dynasties. On the Asian frontier, Tanis was important in strategy and commerce until threatened inundation by Lake Mansala caused it to be abandoned after the 6th cent. A.D. for Tennis. The site, excavated since 1940, has yielded statues and inscriptions. Tanis is the biblical Zoan (zō'ăn). Num. 13:22, Ps. 78, Isa. 19, Ezek. 30:14.

Tanit (tā'nĭt), Semitic goddess of love. She is related to Astarte.

Tanjore (tănjôr'), town (pop. 68,702), S Madras state, India. The Brahadeswara Temple here, one of the greatest examples of Dravidian architecture, is the chief monument which survives from the 11th cent., when Tanjore was the capital of the Chola kingdom. Long a center of craftsmanship, the town is noted for silks, carpets, jewelry, and copperware.

tank, military, armored vehicle having caterpillar traction and armed with machine guns, cannon, or both. It was first used in warfare by the British at Flers, on the Somme, in Sept., 1916. The new weapon was not greatly understood, was used incorrectly, and seemed a failure. It was not until Nov., 1917, that tanks achieved a major success, in an attack near Cambrai. In the final months of the war they proved a valuable and efficient weapon in the hands of the Allies. In the Second World War the tank played a major role in land warfare. The tide of battle on the Eastern and Western fronts and especially in Africa often swung to the side with the best tanks. Tanks with heavier armor, with more accurate and bigger guns, were developed in a seesaw race between opposing sides. The Germans developed a 75-ton vehicle mounting a high-velocity 88-millimeter gun, the Americans a 45-ton tank mounting a 90-millimeter gun, and the Russians were successful with a tank armed with a 122-millimeter gun. As tank design progressed, better antitank weapons were developed. Tank destroyers, highly mobile, swift, wheeled vehicles carrying cannon up to 155 mm. were built in the United States, all combatants developed infantry rocket weapons and special armor-piercing shells and used planes armed with cannon and bombs to destroy enemy tanks.

Tannaim. see SEDER.

Tannenberg (tä'nənbĕrk"), Pol. *Sztynbark* (shtĭm'bärk), village, former East Prussia, SW of Allenstein, after 1945 in Polish-administered territory. Two important battles were fought here. In the first, fought in 1410 between Tannenberg and the near-by village of Grunwald, the Polish and Lithuanian forces under Ladislaus II (Ladislaus Jagiello) defeated the Teutonic Knights and halted their eastward expansion. The second and better-known battle was fought early in the First World War (Aug. 26–30, 1914). Two Russian armies, commanded by Samsonov and Rennenkampf, had invaded East Prussia from the south and the east, respectively. The German counterplan was devised by Hindenburg and his chief of staff Ludendorff. It consisted in concentrating against Samsonov's army, which was surrounded and overwhelmed. More than 100,000 Russian prisoners were taken, and Samsonov committed suicide. Rennenkampf, whose unwillingness to come to Samsonov's aid had greatly helped the German victory, was defeated shortly afterward in the battle of the MASURIAN LAKES. This double victory enabled Germany to increase its forces on the Western Front. However, the Russian advance into East Prussia, though it was ill-fated, had greatly helped in relieving German pressure against the West during the first critical weeks of the war. An impressive monument commemorating the victory of Tannenberg was destroyed (1945) in the Second World War by the advancing Russian forces. The body of Hindenburg, who was buried in the monument, had previously been moved by the Germans and is now at Marburg.

Tanner, Henry Ossawa, 1859–1937, American painter of religious subjects, b. Pittsburgh, son of a bishop of the African Methodist Episcopal Church. He studied with Eakins in Philadelphia and with J. P. Laurens and Benjamin Constant in Paris. Tanner made many trips to Palestine to obtain background for his religious paintings. His work is naturalistic, and the religious subjects especially are rendered with intense feeling. Among his paintings are *The Raising of Lazarus* (Luxembourg Mus., Paris), *Sodom and Gomorrah* (Metropolitan Mus.), *Christ and Nicodemus* (Pa. Acad. of the Fine Arts), *Christ at the House of Mary and Martha* (Carnegie Inst., Pittsburgh), and *The Two Disciples at the Tomb* (Art Inst., Chicago). He became a member of the National Academy in 1927.

Tannhäuser (tän'hoisur), 13th cent., German minnesinger at the court of Frederick II, duke of Austria. His fame rests not on his indifferent poetry, but on the legends clustered about his name. He escaped from the Venusberg, the place of fleshly temptation, with the help of Our Lady, but was refused the papal absolution until the miraculous budding of his staff indicated divine grace. The most celebrated use of the legend is Wagner's three-act opera *Tannhäuser*. Swinburne's *Laus Veneris* varies the story. See Sabine Baring-Gould, *Curious Myths of the Middle Ages* (1906).

tannin and tannic acid, amorphous, astringent compounds, soluble in water and found associated in many plants. The terms are commonly used as synonyms. Tannin transforms certain insoluble proteins of animal tissue into compounds that resist decomposition, it is therefore used to convert animal skins into leather. It reacts with ferric salts to produce blue-black or greenish compounds used in making inks and is employed also in medicine (e.g., as an astringent), as a mordant in dyeing, and as a means of clarifying solutions. It is a constitu-

ent of tea, coffee, and walnuts For commercial use, it is commonly extracted by immersing in hot water the crushed and dried tannin-bearing parts of certain plants Tannin was formerly extracted chiefly from oak and hemlock bark and from galls When these proved insufficient to supply the market in the United States, the supply was augmented by using chestnut bark However, this source was curtailed by a widespread chestnut blight, and more recently tannin has been derived principally from quebracho wood, mangrove bark, and myrobalan (a fruit native to India) Other sources include the bark of certain Australian acacias (known as wattles), pods of the divi-divi tree of tropical America, and leaves of certain sumacs Tannins have also been synthesized, these are known as syntans

tanning, process by which skins and hides are converted into LEATHER Vegetable tanning, a method requiring more than a month even with modern machinery and tanning liquors, employs tannic acid, or tannin; its use is shown in Egyptian tomb paintings dating from 3000 B C Mineral tanning includes tawing, or alum tanning, another ancient method, and chrome tanning, the process most common today, based on the use of chrome salts and requiring only a few hours Known as early as 1856, chrome tanning was made practical by Augustus Schultz in 1884 In oil tanning, or chamoising, the pelts are treated with fats and are often smoked, the leather is commonly napped on both sides and is very absorbent The most recently developed tanning process employs artificial agents (syntans) Most heavy leathers, such as sole leather, are vegetable tanned, many light leathers are chrome tanned The American Indians used the chamois method, employing the fat, livers, and brains of animals Indian-tanned white buckskin was highly esteemed, especially for clothing, both by Indians and by colonial pioneers In the tanyards of white settlements tanners used oak and hemlock bark, gallnuts, the wood, nuts, and leaves of the chestnut tree, and the leaves of sumac See M N Rawson, *Handwrought Ancestors* (1936), J A Wilson, *Modern Practice in Leather Manufacture* (1941)

Tannu-Tuva, RSFSR see TUVA AUTONOMOUS OBLAST

tansy (tăn'zē), perennial herb (*Tanacetum vulgare*) of the composite family, native to Europe and commonly naturalized in America It was long cultivated for its ornamental foliage and clusters of yellow, buttonlike flowers, it was much used in old-fashioned dishes, such as tansy cakes and puddings, which were eaten in the spring, especially at Easter time, either in memory of the bitter herbs of the Jewish Passover or as a sort of tonic after the Lenten season Tansy tea was formerly a household medicine and is still used as an anthelmintic and in the treatment of external bruises and inflammations

Tanta (tan'tä), city (pop 95,260), N Egypt, in the Nile delta It is a rail and highway center with extensive cotton ginning At Tanta is the tomb of the noted 13th-century saint, Ahmed el-Bedawi The three annual festivals at the tomb attract many visitors

tantalum (tăn'tulum), rare, lustrous, silvery-white metallic element (symbol=Ta, for physical constants, see ELEMENT, table) Because it has great ductility, i e , it can be drawn into very thin wires, and at high temperatures exhibits incandescence, it was used in the filaments of electric-light bulbs and in vacuum tubes until tungsten took its place Because of its high resistances to acids and to corrosion and its malleability, it is used for making laboratory utensils and apparatus, surgical instruments, and spinnerets employed in the manufacture of rayon It is sometimes alloyed with other metals Its hardness depends upon its metallurgical treatment, tempering by heating in air and the addition of silicon harden the metal Tantalum occurs in tantalite, samarskite, and some other rare minerals Important sources are Brazil, Russia, Australia, South Dakota, and New Mexico Discovery (1802) of the element is credited to A G Ekeberg

Tantalus (tăn'tulus), in Greek legend, a king, son of Zeus and father of Pelops and Niobe He was admitted to the table and council of the gods, but his insolent behavior aroused the ire of Zeus, who condemned the offender to Tartarus One legend says that he divulged divine secrets, another that he served his son's body to the gods In Tartarus, plagued with thirst and hunger, he was placed near water which receded and fruit which vanished at his approach

Tantum ergo, hymn see PANGE LINGUA.

Taoism (tou'ĭzm, dou'-, tä'ŏĭzm), philosophy and religion of China The philosophical system chiefly derives from the book *Tao-teh-king*, traditionally ascribed to LAO-TZE, but probably written in the mid-3d cent B C This brief work is cryptic and paradoxical, and its meaning is hard to elucidate, however, much of its doctrine is clarified by the later work of Chuang-tze The *Tao*, in the broadest sense, is the way the universe functions, the path [Chinese *tao*=path] which natural events take It is characterised by spontaneous creativity and by regular alternations of phenomena (e g , day following night) which proceed without effort Effortless action may be illustrated by the conduct of water, which unresistingly accepts the lowest level and yet wears away the hardest substance Man, following the *Tao*, must abjure all striving His ideal state of being, fully attainable by mystical contemplation alone, is freedom from desire and from sensory experience, which is illusion The political doctrines developed by the Taoists reflect their quietistic philosophy The duty of a ruler is to protect his people from experiencing material wants or strong passions and to impose a minimum of government The social virtues expounded by CONFUCIUS were condemned as symptoms of excessive government and disregard of effortless action Later Taoism emphasized the techniques [Chinese *teh*=power] for realizing the effects supposed to flow from the *Tao*, especially long life, or even immortality The search for the *elixir vitae* and the philosopher's stone led to much study of ALCHEMY By the 5th cent A D , Taoism was a fully developed religious system with many features adopted from Mahayana BUDDHISM It offered emotional religious satisfactions for those who found the largely ethical system of Confucianism inadequate Taoism developed a large pantheon (probably incorporating many local gods), monastic orders, and lay masters In the 8th cent there was founded a secular hierarchy, headed by the T'ien Shih [master of heaven], he claimed succession from Chang Tao-lin, an alchemist of the 2d cent who was reputed to have discovered the drug of immortality after receiving magical power from Lao-tze In modern China, Taoism is practiced to some degree by most of the population Heading the commonly worshiped deities is the Jade Emperor Directly under him, ruling from Mt Tai, is the Emperor of the Eastern Mountain, who weighs merits and faults and assigns reward and punishment in this and future existences See Richard Wilhelm, tr , *Secret of the Golden Flower* (1932), E S Bonsall, *Confucianism and Taoism* (1934), Arthur Waley, *The Way and Its Power* (1935), Lin Yutang, tr , *The Wisdom of Laotse* (1948)

Taormina (tăôrmē'nä), town (pop. 4,294), E Sicily, Italy, beautifully situated on a terrace 750 ft above the Ionian Sea, at the foot of Mt Etna It is a world-famous winter resort, celebrated for its climate, natural beauties, and ancient remains It flourished as a Greek colony, then under the Romans, and again under the Normans, but it declined after the 15th cent Its Greek theater, the second largest of Sicily, was rebuilt by the Romans Important remains are extant, as are those of a smaller theater, of Roman baths, and of water reservoirs There are also several churches and fine medieval palaces The Convent of San Domenico, with its cloister, is now a fashionable hotel

Taos (tous), village (pop 965, alt c 7,000 ft), co seat of Taos co , N N Mex , between the Rio Grande and the Sangre de Cristo Mts , inc 1934 It was founded in the early 17th cent by Spaniards, and its official name is Don Fernando de Taos For many years Taos was an important Indian and Spanish trade center It was the center of the Pueblo revolt (1680) and of an anti-American revolt (1847) Situated in a region of great beauty and variety, it developed as an art colony (principally after 1898) and attracted many painters and writers, notably D H Lawrence Today there are artists' organizations and galleries and the Harwood Foundation (gallery, studios, and school, owned by the Univ of New Mexico) Other places of interest are Kit Carson's house (where he lived, 1858–66) and the town plaza Taos is headquarters for Carson National Forest Just south is the adobe farming village of Ranchos de Taos (pop c 1,050), with the fine old St Francis of Assisi Mission (present building dating from 1772) Just N of Don Fernando de Taos is the noted Taos pueblo or San Gerónimo de Taos See Blanche C Grant, *When Old Trails Were New* (1934), Mabel Dodge Luhan, *Taos and Its Artists* (1947)

Taos (tous), North American Indian pueblo, N N Mex , on a branch of the Rio Grande and 55 mi NE of Santa Fe The 921 inhabitants are Pueblo Indians of the Tanoan linguistic family In the early 17th cent. it became the seat of the Spanish mission of San Gerónimo, but in the Pueblo revolt of 1680 the Indians destroyed the mission A second revolt occurred in 1847, when the Indians, incited by the Mexicans, killed Gov Charles Bent. Today the Indians farm grain and raise livestock Their ceremonies include the corn dance and the sundown dance

Tapachula (täpächōō'lä), town (pop. 15,187), Chiapas, S Mexico, just west of the Guatemalan border On a coastal plain at the foot of the Chiapas highlands, Tapachula is the commercial center of a coffeegrowing region and has a hot, sultry climate This frontier town is linked by rail and air to the northern cities and to the capitals of Central America. It is on one of the projected routes of the INTER-AMERICAN HIGHWAY.

tapa cloth: see BARK CLOTH.

Tapajós (täpäzhōsh'), river formed at the border of Mato Grosso, Pará, and Amazon states, N Brazil, by the confluence of two large headstreams which rise in central Mato Grosso. It flows c 500 mi. NNE across W Pará into the Amazon at Santarém. Navigation is possible in its lower course, where it passes several rubber plantations

tap dancing, exhibition dance, performed in light shoes with metal plates attached to the toes and heels It evolved from step and clog dancing, and its effect is similar to the sound of castanets Among the celebrated U S tap dancers Fred Astaire and Bill Robinson may be named as outstanding

tapestry, hand-woven fabric of plain weave made without shuttle or drawboy, the design of weft threads being threaded into the warp with fingers or a bobbin The name has been extended to cover a variety of heavy materials, such as imitation tapestries woven on Jacquard looms, tapestry carpets, and upholstery and drapery stuffs True tapestries include various primitive textiles woven on the rudest of early looms, as well as the famous pictorial hangings of the Middle Ages. Antique specimens include a few surviving from Egypt of 1500 B C. and Coptic tapestries made from the 4th to 8th cent A D. On the American continent Peru produced beautiful specimens, some of which date back to the pre-Columbian era Ancient Chinese tapestries, *k'o ssu*, were made of light, thin silks, often interwoven with gold thread Beautiful specimens of both early and late *k'o ssu* are preserved Allusions in early Greek poetry and paintings on Greek vases show that tapestry weaving was an important household industry The history of tapestry weaving is continuous In the 5th cent and the centuries immediately following, monasteries and convents were the centers Woolen tapestries appeared early in Europe A few fragments woven in this material in the 10th or 11th cent are still preserved, they formerly belonged to the Church of St Gereon, Cologne, and are now in Lyons, France, and in the Victoria and Albert Museum, London The design, large circular medallions enclosing a winged griffin attacking a human-faced bull, is Byzantine It was derived from Sassanian silks and translated with some crudities of drawing into a woolen tapestry, probably woven in Germany The cathedral at Halberstadt has some tapestries of the 12th cent The famous set (14th cent) of the Apocalypse was woven in Paris on the looms of Nicolas Bataille and is owned by the cathedral of Angers, Normandy At Arras, early in the 14th cent , the first great French weaving was done, in wool Soon Brussels rose to prominence and remained important through the 17th cent , until the rise of the GOBELINS works at Paris By the 15th cent tapestry weaving had reached a high degree of perfection, and from this century date many great Gothic sets rich with gold thread A fine specimen is the *Burgundian Sacraments* in the Metropolitan Museum of Art A late 15th-century example of a verdure background is the *Lady and the Unicorn* set of the Cluny Museum, Paris An example of the Renaissance period is the widely proclaimed set, the *Acts of the Apostles*, from the cartoons of Raphael The design has become pictorial and is framed by wide borders with arabesques, grotesques, and balcony and garden scenes Fine weaving was done at Beauvais in the mid-17th cent Weavers at Aubusson, France, began in the 16th cent to make an inferior textile which was gradually improved The baroque style dominated the 17th cent when, under the influence of Rubens, many tapestries portrayed figures of heroic size and had wide borders of heavy, twisted columns The rococo and classical styles appeared in the 18th cent Fine examples were woven from the cartoons of François Boucher, who worked both for the Beauvais and the Gobelins looms The *Flute Player*, signed and dated 1755 by Boucher, one of a series of six tapestries, hangs in the Cleveland Museum of Art In England much tapestry, known as Arras, was used before any was manufactured there In the 16th cent William Sheldon set up works in Warwickshire An establishment in imitation of the Gobelins was opened at Mortlake in 1619 and employed Flemish weavers In 1881 William Morris began weaving at Merton, Burne-Jones designed some of the series In 1893 tapestry looms were set up in New York city, but were soon moved to Williamsbridge (now in New York city) Another tapestry works is situated at Edgewater, N J Some interesting 20th-century tapestries are woven in France from cartoons by Rouault, Braque, and Picasso The most important public collections in the United States are those in the Metropolitan Museum and in the Museum of Fine Arts, Boston Both high- and low-warp work (*haute-lisse* and *basse-lisse*) were used in the 14th cent. In a high-warp loom the threads are stretched vertically in front of the weaver, and the *lisses* or loops which raise the alternate threads to make the shed are lifted by hand; in low-warp work, the warp threads are horizontal, and the *lisses* are moved by means of a foot treadle The strong warp threads of wool or linen may vary from 10 to 30 in an inch, but are ordinarily less than 20. The soft, full weft threads of

wool, silk, or metal entirely cover the warp, which remains apparent in the form of ribs In true tapestry, the front and back surfaces are alike, except that portions of the design of the same color are connected by a loose thread that is left hanging at the back The different colors of the design, being worked in separately in blocks or patches, leave little slits between, which are afterward sewn up All are woven with the back to the weaver, who sees nothing of his work until it is finished, unless he uses a mirror to reflect it A CARTOON or painting on linen or paper, often by a noted artist, is provided for the weaver to copy Themes for medieval hangings were drawn from ancient legends, mythology, history, religion, chivalry, and sport The so-called BAYEUX TAPESTRY was actually embroidered See G L Hunter, *Practical Book of Tapestry* (1925), W G Thomson, *A History of Tapestry* (2d ed , 1931), Phyllis Ackerman, *Tapestry, the Mirror of Civilization* (1933)

tapeworm, parasite belonging to a class (Cestoda) of flat worms A number of species live during one stage of their life cycle in the muscle tissue of various mammals and fish, and when such tissue is eaten without having been properly cooked, the parasites enter the human digestive tract There they develop into the adult form, consisting typically of a head region by which it becomes attached to the intestinal wall of the host and a body composed of a series of segments containing reproductive organs The tapeworm absorbs its nourishment from the host and often grows to a length of many feet Sometimes the parasite causes digestive disturbances, anemia, and malnutrition Among those that most commonly infest man are *Taenia solium*, found chiefly in the muscles of the pig, *T saginata*, which occurs in the muscles of cattle, and *Bothriocephalus latus*, a parasite of fresh-water fish (especially pike) which is most prevalent among humans in the Orient In addition to thorough cooking of the food, proper inspection of meats is essential to prevent the spread of tapeworms

Taphath (tā'făth), Solomon's daughter who married one of his officers 1 Kings 4 11

tapioca (tăpēō'kŭ), widely used starchy food, obtained by heating the root of the bitter CASSAVA Tapioca is sold in flake, pellet, or flour form and as the fine-grained pearl tapioca When cooked it becomes transparent and increases in size It is used to thicken puddings and soups

tapir (tā'pur), nocturnal, herbivorous ungulate animal of the jungles of Central and South America and SE Asia The South American tapir is dark brown, and the tapir of SE Asia is black and white, the animals have a thick skin and a long, flexible snout The adult is about 3 ft high and 6 or 8 ft long It seldom travels far from water and plunges in when pursued Its flesh is palatable

Tappahannock (tăpuhă'nuk), town (pop 783), E Va , on the Rappahannock and NE of Richmond, founded 1680, inc 1914 Among its interesting old buildings is the courthouse of Essex co

Tappan, Arthur (tă'pun), 1786–1865, American abolitionist, b Northampton, Mass He made a fortune in the dry-goods business in New York city and with his brother and partner Lewis Tappan gave generously of time and money to various causes, especially to the antislavery movement He contributed to the establishment of Kenyon and Oberlin colleges in Ohio, was elected (1833) the first president of the American Anti-Slavery Society, and, after splitting with William Lloyd Garrison, helped organize (1840) and became president of the American and Foreign Anti-Slavery Society See G H Barnes, *The Antislavery Impulse, 1830–1844* (1933)

Tappan, Lewis, 1788–1873, American abolitionist, b Northampton, Mass He became a partner in his brother Arthur's New York mercantile house in 1828 and in 1841 founded the first agency for rating commercial credit in the United States Lewis held important offices in several antislavery societies and was a delegate to the World Anti-Slavery Convention in London in 1843 He retired from business in 1849 to devote himself exclusively to humanitarian work, mostly for the Negro He wrote a biography of his brother (1870) See C W Bowen, *Arthur and Lewis Tappan* (1883), G H Barnes, *The Antislavery Impulse, 1830–1844* (1933)

Tappan (tăpăn', tă'păn), unincorporated residential village (pop, 1,249), SE N Y , near the N J line SW of Nyack The De Wint Mansion, Washington's headquarters in 1780 and 1783, is here John André, British spy, was tried and hanged at Tappan

Tappan Zee (tă'pŭn zē'), a widening of the Hudson, c 10 mi long, SE N Y , between Croton Point and Irvington It is from 2 to 3 mi wide between Nyack and Tarrytown. Early Dutch settlers gave it its name

Tappuah (tăpū'ŭ). **1** Son of Hebron and eponym of BETH-TAPPUAH. 1 Chron 2 43 **2** Border town of Manasseh, probably c 5 mi NW of Shiloh Joshua 16 8, 17.8. En-tappuah Joshua 17.7 **3** Unidentified town, perhaps the same as Beth-tappuah or as **2.** Joshua 12 17 See also TIPHSAH.

Taprobane: see CEYLON

Tar, river rising in N North Carolina and flowing 217 mi SE to Pamlico Sound. Below Washington, N C , it is called the Pamlico

tar see TAR AND PITCH

Tara (tă'rŭ), Irish *Teamhair Breagh*, agricultural village, Co Meath, Ireland, SE of Navan and NW of Dublin. The Hill of Tara (501 ft high) was from very ancient times until the 6th cent the seat of Irish kings, there are earthworks, and a statue of St Patrick, who preached here, is supposed to mark the location of the LIA FAIL, CORONATION STONE of the ancient high kings There are six raths, the largest of which is 850 ft in diameter. The hill was the scene of a defeat of the Danes in 980 and of the Irish insurgents in 1798, and in the 19th cent it was a rallying place of political factions See R A S Macalister, *Tara, a Pagan Sanctuary of Ancient Ireland* (1931)

Tarah (tā'rŭ), unlocated desert resting place Num. 33 27

Taralah (tă'rŭlu, tură'lu), unidentified town, N of Jerusalem Joshua 18 27

tar and pitch, viscous, black or near black substances obtained from the destructive distillation of coal, wood, petroleum, peat, and certain other materials The heating or partial burning of wood to make charcoal yields tar as a by-product, and is an ancient method for the production of both tar and pitch Coal tar is a residue in the manufacture of coal gas and coke Continued application of heat after tar has accumulated serves to separate it into several materials, one of which is pitch The terms *tar* and *pitch* are loosely applied to the many varieties of the two substances, sometimes interchangeably For example, asphalt, which is naturally occurring pitch, is called mineral tar and mineral pitch Tar is more or less fluid depending upon its origin and the temperature to which it is exposed Pitch tends to be more solid When ships were made of wood, tar had numerous uses, and an available supply of tar was an important factor in maritime growth It made vessels watertight and protected their rope from deterioration All but small quantities of the tar produced now is fractioned to give naphtha, creosote, carbolic oil, and other equally important crude products Among the substances produced by refining the various crude materials are benzol, toluol, carbolic acid, cresol, and phenol Tar from pine wood is used in making soap and medicinal preparations Pitch is used in the manufacture of roofing paper, as a lubricant, in varnishes, and as a binder for coal dust in the making of briquettes used as fuel

tarantella (tărunte'lu), Neapolitan folk dance which first appeared in Taranto, Italy, in the 17th cent It had rapid 6-8 meter with an increasing tempo and was thought to cure the bite of the tarantula, which supposedly caused the disease tarantism Chopin, Liszt, Weber, and others used the dance in the form of a *perpetuum mobile*

Taranto (turän'tō, Ital ta'rantō), Latin *Tarentum* city (pop 103,306), capital of Ionio prov , Apulia, S Italy, on the Gulf of Taranto, an arm of the Ionian Sea It is, after La Spezia, the chief military port of Italy and an important agricultural, commercial, and fishing center A town of MAGNA GRAECIA, it was powerful enough to resist the Romans until 272 B C Destroyed by the Arabs (A D 927), Taranto was rebuilt by the Byzantines As a part of the kingdom of Naples, it was strongly fortified and held as a principality by various lords There are a cathedral (11th cent , restored), a Byzantine castle restored in 1480, and a museum of antiquities

tarantula (turän'chŭlu, -tulu), a wolf spider, *Lycosa tarantula*, of Italy It is also a name for some Asiatic spiders and for various species of large, dark, hairy spiders of the family Aviculariidae found in the warm parts of the Americas Some of the largest, which are found in South America, have bodies from 2 to 3½ in long Tarantulas eat insects but occasionally the larger ones capture small birds Their venom paralyzes their prey but is seldom seriously harmful to man The closely related trapdoor spider makes a cylindrical burrow lined with silk and covered by a hinged lid *Tarantula* is the genus name of certain tailless whip scorpions

Tarascan (tură'skŭn, tŭrä'-, tärä'-), Indian people of Michoacán, Mexico Their language comprises its own linguistic stock Although little is known of their ancient history, they had developed a fairly high civilization by the time the Spanish arrived The Aztec were unable to conquer the Tarascan warriors, and the Spanish had difficulty in subjugating them. On the shore of Lake PÁTZCUARO was their capital and chief stronghold, Tzintzuntzan (tsĭntsōōntsän') [place of the hummingbirds] In the chapel of the present village of Tzintzuntzan is Titian's *Entombment*, presented to the Tarascan by the emperor of Spain in recognition of their loyalty Peculiar to their culture were T-shaped tombs, rising in terraces and faced with stone slabs without mortar When the Spanish arrived, the Tarascan were skilled in weaving and famous for their feathered mosaics made from hummingbird plumage The Tarascan still are noted for weaving, embroidery, and especially lacquer ware, and their music has had an important influence on folk song Agriculture and fishing are the chief means of livelihood

Tarascon (tăräskō'), town (pop 4,919), Bouches-du-Rhône dept , SE France, in Provence, on the Rhone Now chiefly an agricultural market, it was (15th cent) the residence of Good King RENÉ. It has preserved its medieval castle and the partly Romanesque, partly Gothic Church of St Martha (damaged in the Second World War). Tarascon has been immortalized by Alphonse DAUDET in his *Tartarin de Tarascon*

Tarawa (tŭrä'wŭ, tă'ruwă), atoll (7 7 sq mi , pop 3,582), central Pacific, one of the N Gilbert Islands, capital of the British colony of the Gilbert and Ellice Islands Tarawa is a port of entry and the commercial center of the group, exporting copra and pearl shell It is the site of a government hospital and a leper station. An air field is on the southwestern islet of Betio During the Second World War the colony headquarters were moved here from Ocean Island Tarawa was occupied (Dec , 1941) by the Japanese and fell (Nov , 1943) after hard and bloody fighting to U S marines who landed on Betio beach

Tarawera Mountain (ta"rawă'rŭ), volcanic peak, c.1,000 ft high, on N central North Island, New Zealand, in the Hot Springs District Its eruption in 1886 destroyed Lake Rotomahana, which contained unusual sinter terraces

Tarbagatai (tärbagatī'), mountain range, central Asia, on the border of the Kazakh SSR and Sinkiang prov , China It rises to 9,500 ft

Tarbell, Edmund Charles, 1862–1938, American figure and landscape painter, b West Groton, Mass , studied at the School of the Museum of Fine Arts, Boston, and with Boulanger and Lefebvre in Paris He taught (1889–1912) at the museum school in Boston and was principal (1918–26) of the Corcoran School of Art, Washington, D C He adopted an impressionist technique and acquired many subtleties in the handling of light and color and a facile rendering of textures His work includes *Girl Reading* and others (Mus of Fine Arts, Boston), *Josephine and Mercié* (Corcoran Gall), and *Golden Screen* (Pa Acad of the Fine Arts) He is also represented in the museums of Cincinnati, St Louis, Buffalo, N Y , and Worcester, Mass Tarbell became a member of the National Academy of Design in 1906

Tarbell, Ida Minerva, 1857–1944, American author, b Erie co , Pa , grad Allegheny College (B A , 1880, M A , 1883) She is remembered for her investigations of industry published in *McClure's*, some of which were collected in her *History of the Standard Oil Company* (2 vols , 1904) She also wrote *Life of Abraham Lincoln* (2 vols , 1900), other books on Lincoln, and biographies of Elbert H Gary (1925) and Owen D Young (1932) Her economic studies culminated in *The Nationalizing of Business, 1878–1898* (1936) See her autobiography, *All in the Day's Work* (1939)

Tarbert (tär'burt), isthmus at the north end of Kintyre peninsula, Argyllshire, Scotland, between the inlets West Loch Tarbert and East Loch Tarbert A fishing village called Tarbert is on the east inlet

Tarbes (tarb), city (pop 42,778), capital of Hautes-Pyrénées dept , SW France, on the Adour, the historic capital of the Gascon countship of Bigorre Of Gallo-Roman origin, Tarbes became an episcopal see in the 6th cent Its cathedral (11th–13th cent) is largely Romanesque It is now an important tourist center for voyages to the Pyrenees Théophile Gautier and Marshal Foch were born here

Tarboro (tär'buru), town (pop 7,148), co seat of Edgecombe co , E N C , E of Rocky Mount and on the Tar river, laid out 1760 It is the trade and processing center for an area producing cotton, tobacco, peanuts, and corn

Tarde, Gabriel de (gabrēĕl' du tard'), 1843–1904, French sociologist and criminologist During his years of public service as a magistrate, he became interested in the psychosocial bases of crime In *Penal Philosophy* (1890, Eng tr , 1912) and other early works he criticized Lombroso Later he formulated a general social theory, distinguishing between inventive and imitative persons *The Laws of Imitation* (1890, Eng tr , 1903) is his best-known book

Tardieu, André (ädrā' tardyû'), 1876–1945, French statesman and journalist He became (1905) chief political editor of the *Temps*, entered the chamber of deputies in 1914, was minister of the liberated regions (Alsace and Lorraine) in 1919–20, and as French plenipotentiary at the Paris Peace Conference (1919) took an important part in elaborating the Treaty of Versailles Between 1920 and 1934 he held several cabinet posts and was twice premier (1929–30, 1932), during his second term as premier he also was foreign minister A conservative and a nationalist, Tardieu championed the French demand for security from German aggression, thus helping to wreck the DISARMAMENT CONFERENCE of 1932 He resigned as deputy in 1936 and agitated for vigorous action against German aggression, for rearmament, and for a strong government Though Tardieu never was in office long, he was a great power behind the scenes and greatly influenced the policies of the rightist

parties He was ill from 1939 until his death. In his numerous political writings Tardieu displayed an acute intelligence, his conservatism was dynamic rather than complacent

tare (târ), name popularly applied to several species of VETCH, especially to common vetch, *Vicia sativa* The tare of the Scriptures, a weed of grainfields, is thought to have been darnel (see RYE GRASS).

Tarea (târē'ŭ), variant of TARNEA.

Tarentum, Italy, see TARANTO

Tarentum (târĕn'tŭm), industrial borough (pop 9,846), SW Pa , on the Allegheny river and NE of Pittsburgh; laid out 1829, inc 1842 Its manufactures include metal products, wood products, and wrapping paper Coal is mined here.

Targoviste (târ"gôvēsh'tĕ), town (pop 26,038), S central Rumania, in Walachia, NW of Bucharest It is a commercial center and has industries including oil refining, distilling, and flour milling. The capital of Walachia from 1383 to 1698, it has a remarkable 16th-century cathedral with nine towers, a 14th-century palace, and a 15th-century monastery (now a military school)

Targul-Mures (târ'gōōl-mōō'rĕsh) or **Targu-Mures** (târ'gōō-), Hung *Maros Vásárhely* (mō'rôsh vä'-shärhä"), city (pop 47,043), central Rumania, in Transylvania, on the Mures river. It is an agricultural-processing center and has an oil refinery Dating from the 12th cent , the city is an old cultural center Here in 1704 Francis II Rakoczy was proclaimed "ruling prince" of Hungary Most of Targul-Mures was rebuilt after a great fire in 1876 It has retained its 17th-century citadel, several old churches, and the baroque mansions formerly belonging to the Teleki and the Banffy families, magnates of Hungary. The Telekiana library, founded in the 13th cent , has valuable manuscripts, and the imposing modern "cultural palace" contains an art gallery, an ethnographic museum, a library, and a conservatory of music From 1940 to 1945 Targul-Mures was reunited to Hungary.

Targum (târ'gŭm) [Aramaic, =translation], Aramaic paraphrase of the Old Testament When Aramaic replaced the Hebrew tongue among the Jews of Palestine and Babylon, interpreters were called to translate and explain the scriptural passages which were read aloud during synagogue services These oral Aramaic paraphrases were, in the course of time, put down in writing under the name Targum One of the best-known Targums extant is the Targum Onkelos The Targum is printed in the margin of corresponding parts of the Bible

Targu-Mures, Rumania see TARGUL-MURES

Tarifa (tärē'fä), city (pop. 6,362), Cádiz prov , S Spain, in Andalusia, a fortified seaport on the Strait of Gibraltar It is the southernmost city of the European mainland It is named after the Berber leader Tarik, who took the place in 711

tariff, system of customs duties on exports or imports, but usually on imports The purpose of a tariff may be to provide revenue, or it may be levied for the protection of domestic industries against foreign competition Protective tariffs are opposed by advocates of free trade See also FREE TRADE and PROTECTION See F W Taussig, *Tariff History of the United States* (8th ed , 1931), R A Hodgson, *An Introduction to International Trade and Tariffs* (1932), A R Upgren *Reciprocal Trade Agreements* (1937)

Tariff Commission, United States, created (1916) by act of the U S Congress. The Fordney-McCumber Tariff Act of 1922 empowered the commission to suggest to the President such adjustments of tariff rates—within a range of 50 percent upward or downward—as its investigations might prove to be desirable. The Hawley-Smoot Tariff Act of 1930 provided for a reorganization of the U S Tariff Commission and reinvested it substantially with all its previous powers The U S Tariff Commission, consisting of six members appointed by the President and confirmed by the Senate for terms of six years, was given additional responsibilities by New Deal legislation and played a cardinal role in the advising on tariff legislation after the passage (1934) of the Trade Agreements Act An executive order of President Harry S Truman provided (1949) the commission with further functions in the administration of the program of reciprocal trade agreements

Tarija (tärē'ha), city (estimated pop 18,500), capital of Tarija dept , S Bolivia Founded in 1574, Tarija (altitude c 6,300 ft) is in a fertile valley in the eastern watershed of the Andes not far from the oil fields of the Chaco Lack of communication has retarded commercial growth, but the rich soil and moderate climate have made Tarija famous for vineyards and orchards (olives, pears, peaches, and apples).

Tarik (tä'rĭk), fl 711, Berber leader of the Moslem invaders of Spain When the heirs of the Visigothic king, Witiza, asked the African Moors for help against the usurper RODERICK, Tarik crossed (711) from Africa to Gibraltar (originally named for him, in Arabic, Jebel-al-Tarik, i.e., Tarik's mountain) Tarik defeated Roderick in the same year in the battle of Guadalete, but instead of restoring Witiza's heirs, he sent for reinforcements from Africa and conquered most of the Iberian Peninsula within a few years. Thus began the Moorish domination of Spain, which was not fully ended until 1492

Tarim (därēm'), *Mandarin Ta-yeu*, river, c.1,300 mi long, Sinkiang prov., China. The Tarim on its easterly course receives many streams which rise in the Tien Shan, principally the Kashgar. The Tarim is often intermittent, and it terminates in marshes near Lob Nor

Tarkington, Booth (Newton Booth Tarkington), 1869–1946, American novelist and dramatist, b. Indianapolis, educated at Philips Exeter Academy and at Purdue and Princeton universities His first successful novel, *The Gentleman from Indiana* (1899), is typical of his cheerful, realistic stories of Middle Western life Others are *The Conquest of Canaan* (1905), *Alice Adams* (1921; Pulitzer Prize, 1922), *The Plutocrat* (1927), and the trilogy *Growth* (1927), made up of *The Turmoil* (1915), *The Magnificent Ambersons* (1918, Pulitzer Prize, 1919), and *The Midlander* (1923) His amusing stories of boyhood and adolescence include *Penrod* (1914), *Penrod and Sam* (1916), *Seventeen* (1916), *Gentle Julia* (1922), and *Little Orvie* (1934) He dramatized many of his novels, among them *Monsieur Beaucaire* (novel, 1900, play, 1901), and wrote other plays, such as *The Man from Home* (with Harry Leon Wilson, 1908), and *Clarence* (1921) See his reminiscences, *The World Does Move* (1928), and *Your Amiable Uncle Letters to His Nephew* (1949), biography by A. D Dickinson (1926)

Tarkio (tär'kēō), city (pop. 2,114), extreme NW Mo., on the Tarkio river and NW of St Joseph, in the Corn Belt, laid out 1880. It is the seat of Tarkio College (United Presbyterian, coeducational, 1883).

Tarleton Sir Banastre (bă'nustur tärl'tun), 1754–1833, British army officer in the American Revolution, educated at Oxford. He arrived (1775) in America with Cornwallis and was a member of the patrol that captured Gen. Charles Lee at Basking Ridge, N.J. He served with William Howe at Brandywine, Germantown, and Philadelphia Tarleton went to Carolina, formed a mixed force of cavalry and infantry and distinguished himself at Charleston and in the CAROLINA CAMPAIGN before he was overwhelmed by Daniel Morgan at Cowpens After the battle of Guilford Courthouse, he retreated into Virginia and was active in the Yorktown campaign Tarleton returned (1782) to England and served (1790–1806, 1807-12) in Parliament He was the author of *A History of the Campaigns of 1780 and 1781 in the Southern Provinces of North America* (1787)

Tarlton, Richard, d 1588, English actor and wit One of Queen Elizabeth's players, he achieved an immense reputation for his jests, jigs, and doggerel *Tarlton's Jests* (pub 1592?–1611?) is a collection of anecdotes attributed to him He is believed to be the Yorick of *Hamlet*

Tarn (tarn), department (2,232 sq mi , pop. 298,117), S France, in LANGUEDOC, traversed by the Tarn river Albi is the capital

Tarn, river, 233 mi long, S France, in Languedoc. It flows SW from the Cévennes mts past Albi and Montauban and is joined by the Aveyron before emptying into the Garonne

Tarn-et-Garonne (tärn'-ā-gärôn'), department (1,440 sq mi , pop 167,664), SW France, in Guienne and Languedoc. MONTAUBAN is the capital

Tarnopol (tärnô'pôl), Rus *Ternopol* (tyĭrnô'pŭl), city (1931 pop 35,831), capital of Ternopol oblast, W Ukraine, on the Seret river Founded in 1540 and once fortified, it declined after it passed (1772) to Austria Here the Russians resisted the Austrian offensive of 1915. Tarnopol reverted to Poland in 1919 but was ceded to the USSR in 1945. The city is a farm trade center

Tarnow, Pol *Tarnów* (tärnōōf), city (pop. 33,108), S Poland, E of Cracow Dating from the 12th cent., Tarnow is noted for its partly medieval character and for its cathedral (built c 1400). From 1772 to 1919 Tarnow was under Austrian rule Chiefly a trade center, it also has chemical, clothing, and food industries

Tarnowskie Gory, Pol *Tarnowskie Góry* (tärnôf'-skyĕ gōō'rĭ), formerly Pol. *Tarnowice* (tärnôvē'tsĕ), Ger. *Tarnowitz* (tär'nôvĭts), town (pop 18,427), Silesia prov , SW Poland, 15 mi. N of Katowice It manufactures mainly metal products It passed from Germany to Poland in 1921.

taro (tä'rō, tă'rō), general name for several coarse, perennial herbs (genus *Colocasia*) of the arum family. Certain species are known also as cocoa, DASHEEN, eddo, and elephant's-ear. Taro is related to the caladium, and some forms, especially elephant's-ear, are mistaken for caladiums. The plant has heart-shaped or arrow-shaped leaves, often brilliantly colored, the flowers are borne on spadices almost enclosed by spathes. The plant is probably native to the Pacific islands, but is cultivated in many tropical and subtropical regions. It was introduced in the S United States as an ornamental and for its edible rootstocks and its sprouts, which are eaten like asparagus. The rootstocks are a major food on many Pacific islands and in parts of the Far East. The flesh, white or variously tinted, is suggestive of the potato and has an easily assimilated starch. The cooked tuber is served as a vegetable or a pudding or is made into flour. It is used in the preparation of POI, formerly a staple food of the Hawaiians.

tarpan (tär'pän) or **Przhevalsky's horse** (pŭrzhĕvăl'-skēĭ), wild horse of central Asia, the only extant wild horse that is not descended from tame horses. *Przhevalsky's horse* is a translation of the scientific name, given in honor of the Russian explorer The tarpan is found over a large steppe region in herds of five or more, each herd led by a stallion. It is smaller than most of the domestic horses and is dun in color, with brown mane and tail The mane is short and erect. The head is large, with a bulging forehead Many zoological gardens have tarpans They breed freely in captivity, and colts have been tamed The tarpan resembles horses in cave pictures of the Paleolithic period.

Tarpeia (tärpē'vŭ), in Roman legend, a Roman woman who betrayed her city to the Sabines for what they wore on their left arms (their gold bracelets). As they entered they crushed her under a mound of shields, which they also wore on their left arms. The **Tarpeian rock** at Rome, from which criminals were thrown to death, bears her name

Tarpelites (tar'pĕlīts), people of Samaria Ezra 4 9.

tarpon (tar'pŏn), large herringlike game fish most abundant in the Gulf of Mexico and the Caribbean Sea, but known to range from Long Island to Brazil and to the west coast of Africa It sometimes enters rivers The covering of large, silvery scales gives it the name silver king Swift and strong, it tirelessly pursues the shoals of fish on which it feeds It is usually from 6 to 8 ft. in length and averages about 60 lb but may reach 300 lb Its fighting power makes it a favorite with anglers. The scales are sometimes used in ornament.

Tarpon Springs, resort city (pop 3,402), W Fla , on the Gulf coast NW of Tampa, near the mouth of the Anclote, founded 1882. It is one of the largest sponge centers in the world Greek fishermen take out the sponging fleet, and colorful Greek religious festivals draw many visitors. George Inness, with his son, lived here for a time.

Tarquin (tär'kwĭn) [probably from Etruscan, =lord], in Roman tradition, an Etruscan family which ruled Rome Their story is mostly legendary, though there is a core of historic fact. It is said that Demaratus, a Corinthian merchant, settled at Tarquinii, Etruria, where he married an Etruscan woman. He had two sons, Lucumo and Aruns Lucumo, urged by his wife, Tanaquil, a prophetess, went to Rome, where he became a citizen, being called later **Lucius Tarquinius Priscus** (lū'shŭs tärkwĭn'ĕŭs prĭs'kŭs) His ability and patriotism were so signal that he was made king (616 B C) to succeed Ancus Marcius He made Rome the lord of Latium and subdued the Sabines He laid out the Circus Maximus, built the great sewers and the Forum, and held the first games Tarquin's eldest daughter married Servius Tullius, his second married Marcus Brutus After a splendid reign of 38 years Tarquin was murdered by Ancus Marcius' sons, and the throne passed through the influence of Tanaquil to Servius Tullius, whose daughters had married **Lucius Tarquinius Superbus** (Tarquin the Proud) (sūpûr'bŭs) and Aruns, sons of Tarquin Priscus After Servius Tullius had reigned 44 years, Tarquin the Proud murdered him and seized the throne He became a despot and tyrant and repealed all democratic legislation He was successful in war and made Rome the ruler of central Italy W of the Apennines In the vaults of the Capitol he placed the sacred books he had bought in Sicily Tarquin the Proud made his family generally hated by his cruelty, which extended to murdering his nephew, Marcus Brutus, son of the Marcus Brutus who had married Tarquin Priscus' daughter Tarquinia The elder Brutus had two more children, Lucius Brutus and LUCRECE Lucrece was married to **Tarquinius Collatinus** (kŏl'-ătī'nŭs), grandson of Aruns, brother of Tarquin Priscus. Collatinus and his wife lived quietly at Collatia, a town near Tibur, and were in close bonds of friendship with the Brutus family. When Tarquin the Proud's son **Sextus Tarquinius** outraged Lucrece and his victim stabbed herself, her husband and the Brutus family raised a rebellion, and Tarquin lost his throne (510 B C). Collatinus and Lucius Brutus became consuls, but Collatinus soon resigned and went to live at Lavinium in honorable retirement The rest of the Tarquins did not lose hope of regaining the throne, and two great attempts were made to replace them on it, that of LARS PORSENA of Clusium and the fatal expedition ending at Lake REGILLUS These details of the history of the Tarquins are very famous, but they are certainly unhistorical. The truth is probably that the Tarquins are a popular recollection of the Etruscan overlords whom Rome certainly had in the 8th, 7th, and 6th cent. B C., who made the villages of the seven hills into one city-state, the mistress of Latium, and who started Rome on the journey to greatness.

Tarquinii (tärkwĭ'nĭī), ancient Etruscan city, central Italy, NW of Rome. It was the head of the Etruscan League, was defeated in wars with Rome

in the 4th cent B.C., and later lost its independence. The town continued to exist far into the Christian era, was sacked by the Arabs, and was after the 9th cent replaced by near-by Corneto, which is now called Tarquinia and has a museum with Etruscan antiquities Much knowledge of Etruscan life has been gleaned from the paintings in the necropolis of Tarquinii

tarragon (tăr'ŭgŏn), perennial aromatic Old World herb (*Artemisia dracunculus*), related to wormwood and sagebrush. It has long been cultivated in Europe for the leaves, used for flavoring vinegar, salads, sauces, soups, and pickles An essential oil, sometimes called estragon, is occasionally used in perfume Tarragon rarely produces good seed and is usually propagated by division or cuttings.

Tarragona (tărăgō'nă), city (pop 33,708), capital of Tarragona prov., NE Spain, in Catalonia, a Mediterranean port It is an archiepiscopal see and a commercial center with a large wine export. An Iberian town, ancient Tarraco was captured (218 B.C.) by the Romans in the Second Punic War, and it was fortified by them against Carthage Augustus made it the capital of the vast Spanish province of Tarraconensis. It became a flourishing commercial center, among the important Roman remains are ruins of its ancient walls and a well-preserved aqueduct Having fallen to the Visigoths (5th cent) and to the Moors (8th cent), it was recovered (1089) for Christian Spain by the count of Barcelona, but it declined when its trade was captured by Barcelona and Valencia. Tarragona was sacked (1811) by the French in the Peninsular War The construction of a modern port gave it new importance Besides its Roman ruins, Tarragona has remnants of pre-Roman walls. The imposing Romanesque-Gothic cathedral has one of the finest cloisters (13th cent) in Spain Near the cathedral are the archiepiscopal palace and the archaeological museum The Carthusian monks expelled (1903) from the Grande Chartreuse in France settled here and continue to produce their famous liqueur

Tarrant (tă'runt) or **Tarrant City**, city (pop 6,833), N central Ala., near Birmingham

Tarrytown (tă'rētoun), residential village (pop 6,874), SE N Y., in Westchester co., on the east bank of the Hudson and N of New York city, settled in the 17th cent by Dutch, inc 1870 There is an automobile assembly plant here Marymount College (Catholic, for women, 1918) is in the village Washington Irving's home is at adjoining IRVINGTON, and Castle Philipse (see PHILIPSE MANOR) is at North Tarrytown

Tarshish (tar'shĭsh) 1 Eponym of a country distant from Palestine It is traditional to identify the country Tarshish with Spain, especially with the region and city of Tartessus, a Phoenician settlement of S Spain Gen 10 4, 1 Chron 1 7, Ps 48 7, Jonah 1 3 Tharshish 1 Kings 22 48 2 Counselor of Ahasuerus. Esther. 1 14

tarsia. see INTARSIA.

tarsier. see LEMUR

Tarsus (tär'sus), city (pop. 28,829), SE Turkey, in Cilicia, NE of Mersin, on the Tarsus (anc **Cydnus**) river and near the Mediterranean Ancient Tarsus was the capital of Cilicia and one of the most important cities in Asia Minor It was called "no mean city" by Saul, who later became the apostle Paul and who was born there It reached the height of its prosperity and culture under Roman rule Ruins remain of its ancient greatness Modern Tarsus is mainly an agricultural center. Copper, zinc, chromium, and coal are mined in the region

Tartaglia, Niccolò (nēk-kôlō'tärtalyä), c.1500–1577, Italian engineer and mathematician Although largely self-educated, he taught at Verona, Brescia, and Venice He studied fortifications, the raising of sunken ships, and the curves of projectiles. A pioneer in applying mathematics to artillery, he recorded his results in *Della nova scientia* (1537) He developed a solution for cubic equations which Geronimo Cardano (with his pupil Ludovico Ferrari) completed and published in his *Ars magna* (1545), thereby precipitating a bitter dispute. Tartaglia published his version as *Quesiti et inventioni diverse* (1546). He wrote also a treatise on pure and applied mathematics, *General trattato di numeri et misure* (6 parts, 1556–60) and made Italian translations of works of Euclid and Archimedes.

Tartak (tär'tăk), heathen god 2 *Kings* 17 31.

Tartan (tär'tăn), official title of two Assyrians sent to Hezekiah by Sennacherib and Sargon. 2 Kings 18.17, Isa. 20.1.

tartan: see PLAID.

tartar (tär'tŭr) or **argol** (är'gul), impure acid potassium tartrate deposited as a crust in vessels containing fermented wine When purified, it forms white crystals and is known as CREAM OF TARTAR. Tartar is the chief source of tartaric acid, from which ROCHELLE SALT is obtained

tartar emetic, white crystalline salt, soluble in water, chemically a compound of potassium, antimony, oxygen, carbon, and hydrogen. It is prepared by the interaction of an antimony oxide and a solution of cream of tartar (potassium bitartrate) It is used in medicine as an emetic, as an expectorant, and as a diaphoretic. It is widely used in dyeing and calico printing as a mordant.

Tartars: see TATARS

Tartarus: see HELL

Tartary: see TATARS.

Tartini, Giuseppe (jōōsĕp'pā tärtē'nē), 1692–1770, Italian violinist, the greatest violin master of his day In 1728 he founded at Padua a school of violin playing which became known throughout Europe. He altered the shape of the bow, revised bowing technique, and discovered the difference tone (see TONE) which became a means of securing just intonation He wrote a number of theoretical works and composed many violin concertos, trios, and sonatas, among which *The Devil's Trill*, supposedly played to him by the devil in a dream, is the most famous

Tartu (tär'tōō, Ger and Swed *Dorpat* (dôr'pät), city (1934 pop 58,876, 1947 estimated pop 71,000), E Estonia In Estonia it is second in size only to Tallinn and is the seat of a famous university founded in 1632 by Gustavus II of Sweden as well as the commercial and manufacturing center of an agricultural region. The city was founded (1030) as Yuryev by Yaroslav I of Kiev Named Dorpat after its capture (1224) by the Livonian Knights, it developed as a leading trade center and joined (14th cent) the Hanseatic League After the dissolution (1561) of the Livonian Order, the city was contested by Russia, Sweden, and Poland Gustavus II secured its formal cession (1629) at the end of his war with Poland In the Northern War it was captured (1704) by Peter I, and in 1721 Sweden formally ceded it to Russia Its original name, Yuryev, was revived in 1893 only to be changed (1918) to Tartu when Estonia became independent In the Second World War, Tartu was occupied (1941–44) by the Germans A handsome city, Tartu is built around a hill topped by an old fortified castle and a restored 13th-century cathedral (the site of the present university library) Most of the rest of Tartu dates from the 18th and 19th cent

Taschereau, Elzéar Alexandre (ĕlzĕär' ălĕksä'drŭ täshŭrō'), 1820–98, Canadian prelate, cardinal of the Roman Church, b Quebec prov He was educated at the Quebec seminary and ordained a priest in 1842. He served the Quebec seminary for nearly 30 years, first as professor, then as director, and finally as superior In 1871 he was made archbishop of Quebec, in 1886 he was created cardinal, the first Canadian to receive this honor

Taschereau, Sir Henri Elzéar (ärē'), 1836–1911, Canadian jurist, b Quebec prov, educated at the Quebec seminary, nephew of Elzéar Alexandre Cardinal Taschereau He was in the Canadian legislative assembly (1861–67) and later became a judge of the Quebec superior court (1871) and a judge of the Supreme Court of Canada (1878) He was chief justice (1902–6) He was created knight (1902) and made a member of the privy council (1904) He wrote several books on Canadian law His cousin, **Sir Henri Thomas Taschereau** (tōmä'), 1841–1909, was also a jurist He was a judge of the superior court of Quebec (1878–1907), and chief justice of King's Bench in Quebec (1907–9) He was created knight in 1908 Sir Henri Thomas Taschereau's brother, **Louis Alexandre Taschereau** (lwĕ'), 1867–, was minister of public works and labor in the province of Quebec (1907–19), attorney general (1919–20), and prime minister of the province (1920–36)

Tascosa (tăskō'sŭ), ghost town, extreme N Texas, on the Canadian river Founded as a sheep camp in the 1870s, it was in the '80s a "six-gun" town of cowboys, saloonkeepers, prostitutes, and desperadoes See John L McCarty, *Maverick Town* (1946)

Tashkent (tăshkĕnt', täsh-, Rus tŭshkyĕnt'), city (1926 pop. 323,613, 1939 pop 585,005), capital of Uzbek SSR and of Tashkent oblast, in the Tashkent oasis and on the Trans-Caspian RR. The largest and one of the oldest cities of central Asia, it has a large cotton textile industry, food-processing plants, and many light manufactures It is the seat of the Central Asian state university, of several professional and trade schools, and of the Uzbek Academy of Sciences, and it has libraries, museums, and theaters Founded in the 7th cent, Tashkent was under Arabic rule until the 12th cent., when it passed to the shahs of KHOREZM A flourishing commercial center on the historic trade route from Samarkand to Peking, it was conquered (13th cent) by Jenghiz Khan and (1361) by Tamerlane It passed to the khans of KOKAND after the breakup of the Timurid empire, fell (1865) to Russian troops under TCHERNAIEV, and became the capital of Russian Turkistan. It was (1918–24) the capital of the former Turkistan ASSR and replaced (1931) Samarkand as capital of the Uzbek SSR. Tashkent consists of the modern Russian section and of the tortuous old Oriental city Old Tashkent, though picturesque, has few buildings of historic or artistic interest and is in process of modernization Modern Tashkent covers a wide area and consists mostly of small houses with shady gardens that afford relief from the torrid daytime heat The Tashkent oasis produces fruit, vegetables, cotton, and silk Irrigation canals of the Chirchik river, on which Tashkent is located, supply power for several hydroelectric plants

Tashkurgan or **Tash-Kurgan** (täsh'kōōrgän"), town (pop c 20,000), N Afghanistan, E of Balkh and near ruined Khulm

Tasiussak (täsyōō'sak), settlement (pop 223), NW Greenland, N of Upernivik, on Tasiussak Island It is a sealing and whaling station

Tasman, Abel Janszoon (tăz'măn, Dutch a'bul yan'sōn tä'smän), 1603?–1659, Dutch navigator In the service of the Dutch East India Company from c 1632 to 1653, he made several trading and exploring voyages in the Pacific and Indian oceans On a voyage (1639–42) in the N Pacific he visited the Philippines and Formosa, followed the coast of Japan, and discovered several small islands In 1642 he sailed from Batavia in command of the *Heemskerck* and *Zeehaen*, he discovered Tasmania (which he named Van Diemen's Land) and New Zealand, touched the Tonga islands, and returned to Batavia (1643), having circumnavigated Australia and thus demonstrated that no connection exists between it and a polar continent In 1644 he was dispatched to discover the relationship between New Guinea, Tasmania, and the known ports of Australia, he established the continuity of land from the Gulf of Carpentaria to the northwest coast of Australia at the Tropic of Capricorn

Tasman Glacier, largest of New Zealand, 18 mi long and from 1 to 2 mi wide, on W South Island, in the Southern Alps Ski meets are held here

Tasmania (tăzmā'nēŭ), island, area c 24,450 sq. mi., S of SE Australia, between the Indian Ocean and the Tasman Sea and separated from Victoria by Bass Strait It is 190 mi. long and 180 mi. wide, geologically it is a continuation of the Australian continent Mountainous and partly forested, most of Tasmania is rich in natural resources. There are scattered mines producing copper, coal, zinc, tin, lead, gold, and silver The chief exports are canned fruit, metals, wool, grain, and dairy products. The climate is equable and the rainfall moderate Legge Tor (5,160 ft) is the highest peak of the island, Great Lake in the interior is the largest lake and the reservoir of an important hydroelectric plant There is much unexplored territory in the southwest area The Tasmanian tiger or wolf (*Thylacynus*) and the Tasmanian devil (*Sarcophilus*) are animals found only in Tasmania The island was discovered in 1642 by Tasman, who named it Van Diemen's Land Capt James Cook visited it in 1777, and in 1803 Great Britain took possession of the island with the establishment of a penal colony The island was given its present name in 1853, with the last shipment of convicts **Tasmania** state (26,215 sq mi, pop 257,117), with its capital at Hobart, is part of the Commonwealth of Australia The state includes many offshore islands, among which are Bruny, Hunter Islands, Furneaux Islands, and King Island Macquarie Island (850 mi SE of Tasmania) also belongs to the state The penal colony established in 1803 was dependent on the colony of New South Wales until 1825, when Tasmania became a separate British colony In 1901 it was federated with the other colonies to form the Commonwealth of Australia The chief ports are Launceston, Burnie, Devonport, and Franklin The Univ of Tasmania is at Hobart In 1936 underwater telephone lines, 268 mi from shore to shore, were laid between the Australian mainland and the island state

Tasman Sea, arm of the S Pacific, with SE Australia and Tasmania on the west and New Zealand on the east

Tassaert, Jan Pieter Anton (yän' pē'tûr än'tôn tä'särt), 1729–88, Belgian sculptor. Summoned by Frederick the Great, he went to Berlin to become court sculptor His decorative work was in the manner of the French rococo. The best known of his statues are those of the Prussian generals Seydlitz and Keith (both cadet school, Gross-Lichterfelde) Contrary to the custom of the time, they are represented in their own uniforms instead of in antique draperies

Tassie, James, 1735–99, Scottish gem engraver and modeler Abandoning his early trade of stonemason, he went to Dublin, where he became laboratory assistant to Dr Henry Quin and with him invented an especially hard and fine-textured white enamel, an exceptional medium for making replicas of gems In 1766 he went to London, where he executed numerous commissions to duplicate famous collections, notably many thousands of specimens for Catherine of Russia. He did much work for Wedgwood and made the first plaster cast of the Portland vase A collection of his portrait medallions of eminent contemporaries is now in the Scottish National Portrait Gallery, Edinburgh A catalogue of Tassie's work was edited by R. E Raspe in 1791

Tasso, Torquato (tôrkwä'tō täs'sō), 1544–95, great Italian epic poet, author of *Jerusalem Delivered;* son of Bernardo Tasso (1493–1569), a poet of merit Torquato was educated by the Jesuits at Naples, served Luigi and Alfonso d'Este, and was twice confined as insane Released, he wandered from court to court, dying a short time before he was to

have been crowned poet laureate He wrote lyrics, dialogues, prose miscellany, the pastoral drama *Aminta*, and his epic, *Rinaldo*, but his masterpiece is the epic *Jerusalem Delivered* (Ital. *Gerusalemme liberata*), which celebrates the First Crusade It is a majestic work filled with striking episodes and impressive characterizations Tasso's poetry was immediately hailed as greatest of his period, and its faultless elegance surely places him among the first of Italian poets, but many critics now hold Ariosto to be his superior The story used by Goethe in his *Torquato Tasso* is based on legend There are several good English translations of Tasso

Tassoni, Alessandro (älĕs-sän'drō täs-sō'nē), 1565–1635, Italian poet and critic He spent much of his life in the service of Charles Emmanuel I of Savoy and Francesco I of Modena He is best known for his mock-heroic poem, *Secchia rapita* [the rape of the bucket] (1622), which preceded Pope's *Rape of the Lock* and which ridiculed the Italian civil wars Among his other works are an attack on the Petrarchian sonneteers and the philippics against Spain

taste, one of the five senses of the body produced by the stimulation of taste buds which are most abundant on the tongue but are found also in some other portions of the mouth cavity Although the number of different "tastes" is large and is dependent in part on the association of other senses such as smell and touch, only four fundamental "tastes" are detected by the taste buds—bitter, sweet, salt, and acid or sour The buds consist of a mass of supporting cells surrounding the taste cells which bear hairs at their tips, substances in solution stimulate these hairs and the sensation is carried from the taste cells by nerve fibers to the brain

Tatar Autonomous Soviet Socialist Republic (tä'tûr, Rus tŭtär'), autonomous republic (26,100 sq mi; pop 2,919,423), E central European RSFSR, in the middle Volga and lower Kama valleys KAZAN is the capital A predominantly agricultural area, with black earth in the south and podsol in the north, it produces wheat and other cereals, vegetables, fruit, sunflowers, and flax Its industries are largely based on its agricultural produce and on its timber The population is mainly Turco-Tatar (49 percent) and Russian (43 percent), the rest being Chuvash, Udmurt, and Mordvinian Islam of the Sunnite branch is the chief religion The region was dominated (8th–13th cent) by the Eastern BULGARS and was conquered (1236) by the GOLDEN HORDE The khanate of Kazan was the most powerful of the Tatar states that emerged from the empire of the Golden Horde, it was conquered for Russia in 1552 by Ivan IV The Tatar ASSR was organized in 1920

Tatars (tä'turz) or **Tartars** (tär'turz), collective name applied to the peoples that overran parts of Asia and Europe under Mongol leadership in the 13th cent It is now the accepted theory that the name Tatar was first given them in Persia and that the spelling Tartar is due either to an erroneous association with the word *Tartarus* or to a pun (attributed to Pope Innocent IV) on the same word The original Tatars probably came from E central Asia or central Siberia, unlike the MONGOLS, they spoke a Turkic language and were possibly akin to their predecessors in S Russia and SE Europe, the CUMANS or Kipchaks and the PECHENEGS However, after the conquests of the Mongol JENGHIZ KHAN, the Mongol and Turkic elements of the invading hordes gradually merged and became known to the peoples of Europe collectively as Tatars The Mongol invasion, led by BATU KHAN, into Hungary and Germany in 1241 is also known as the Tatar invasion After the wave of invasion receded eastward, the Tatars continued to dominate nearly all of RUSSIA and Siberia They were originally nomads, moving across the vast Asiatic and Russian steppes with their families and their herds of cattle and sheep Extremely frugal, the Tatar warriors on their fast ponies carried out long and spectacular raids, in the course of which they gathered an enormous amount of loot The gorgeous tents of Batu Khan made his successors known as the GOLDEN HORDE The empire of the Golden Horde—also known as the Kipchak khanate—controlled most of Russia either directly or through exacting tribute from the Russian princes The Golden Horde adopted Islam as its religion in the 14th cent Internal divisions, the expansion of Moscow, the invasion by TAMERLANE, and the appearance of the Ottoman Turks contributed to the disintegration of the Tatar empire in the late 15th cent The independent khanates of KAZAN, ASTRAKHAN, SIBIR, and CRIMEA emerged Tsar Ivan IV conquered (16th cent) those of Kazan, Astrakhan, and Sibir (Siberia), and the khans of Crimea became (1478) vassals of the Ottoman Empire Nevertheless Siberia long continued to be known as Tartary and the Crimean domains as Little Tartary The Crimean Tatars continued to harass Russia and Poland and to exact tribute from the tsars They raided Moscow as late as 1572 The majority of the Tatars in Russia had by that time reached a relatively high degree of civilization. They were generally settled, were skillful in agriculture and crafts, and had great centers of Moslem learning Only minorities, such as the Nogais, who were subject to the Crimean khans, remained nomadic Tatar influence on the whole course of Russian history was very great Many Russian noble families were of partly Tatar origin The social and military organization of the Muscovite state was influenced by those of the Tatars, and many Russian customs are traceable to them Along the expanding borders of the Russian state, settled by COSSACKS (who imitated the Tatars in many ways), the Tatars played a role somewhat similar to that of the Indians on the American frontier In 1783 the last Tatar state, Crimea, was annexed to Russia The Nogais were gradually pushed eastward into the Caucasus by the Russian settlers The Crimean Tatars themselves—except for the large numbers that emigrated to Turkey—remained until the Second World War, when they were largely resettled elsewhere in the USSR because they were accused of collaborating with the German invaders In 1939 there were c 4,300,000 Tatars in the USSR They speak a Turkic language akin to Osmanli and are—except for a few Christians and shamanists—Sunnite Moslems They predominate in the Tatar ASSR (see separate article), but the majority live dispersed in the E European RSFSR and in W Siberia Under the tsarist regime the term Tatar had a broader official meaning, including the Azerbaijani Turks and several tribes of the Caucasus See René Grousset, *L'Empire des steppes* (1939), D. S Mirsky, *Russia a Social History* (1931)

Tatar Strait (tä'tûr), arm of the Pacific Ocean, between the island of Sakhalin and the Asiatic mainland It is c 350 mi long and 5 to 80 mi wide and connects the Sea of Japan in the south with the Sea of Okhotsk in the north It is sometimes also called the Gulf of Tatary.

Tate, Allen, 1899–, American poet and critic, b Winchester, Ky, grad Vanderbilt Univ, 1922 A member of the Southern agrarian group of writers, he helped found the magazine *Fugitive* and contributed to it Among his early works are biographies of Stonewall Jackson (1928) and Jefferson Davis (1929) His only novel is *The Fathers* (1938) He has taught English literature in several colleges, was the resident fellow of poetry at Princeton (1939–42), held the chair of poetry at the Library of Congress (1943–44), edited the *Sewanee Review* (1944–46), and in 1946 became an editor of books His poetry, highly intellectual, often obscure, has been published in many collections, a selection, *Poems, 1922-1947* appeared in 1948 A keen and sensitive critic, he has written, among other essays, *On the Limits of Poetry* (1948)

Tate, Sir Henry (tāt), 1819–99, English merchant and patron of art, founder of the TATE GALLERY His prosperity as a sugar merchant, first in Liverpool and later in London, was in part owing to his invention of a method of cutting sugar into small cubes He had the device patented, and Tate's Cube Sugar became a widely demanded commodity His wealth was distributed in benefactions to Liverpool's University College and hospitals and in the form of free libraries in London Having selected with discrimination a group of contemporary paintings for his private gallery, he offered them, with a building, to the nation if a site could be found by the government He was created baronet in 1898

Tate, Nahum (nā'hum), 1652–1715, British poet, b Dublin, grad Trinity College, Dublin, 1672 He made (1681) a popular adaptation of *King Lear*, in which Cordelia lives to marry Edgar, and with Dryden he wrote the second part of *Absalom and Achitophel* (1682) In 1692 he became poet laureate With Nicholas Brady he wrote a well-known metrical version (1696) of the Psalms

Tate Gallery, Millbank, London, originally the National Gallery of British Art The building, on the former site of Millbank Prison, and a collection of 65 modern British paintings was given by Sir Henry Tate and was opened in 1897 It was extended by another gift of Tate's in 1899, and in 1910 was completed the Turner wing, the gift of Sir Joseph Duveen A gallery of modern foreign art was added in 1916, and three new galleries for foreign art and one for the works of John Singer Sargent were opened in 1926 The museum was damaged in the Second World War. In 1946 an exhibition of American art was held

Tati (tä'tē), region, area 2,069 sq mi, NE Bechuanaland protectorate. It is a mining concession Here, in 1864, gold was discovered, and profitable mining operations were soon begun

Tatian (tā'shŭn), 2d cent, Christian apologist Probably born in Syria, he was a pupil of JUSTIN MARTYR After his master's death, he left Christianity, becoming an Encratitic Gnostic—i e, he regarded all matter as evil and denied the salvation of Adam While a Christian, he wrote *Oratio ad Graecos* [address to the Greeks] (152–55), a defense of Christianity bolstered by a bitter attack on Greek arts and institutions, and the *Diatessaron*, a harmony of the four Gospels which was long the only life of Christ available in Syria.

Tatius, Achilles: see ACHILLES TATIUS.

Tatler, periodical: see SPECTATOR

Tatnai (tāt'nāī), Persian satrap of the province W of the Euphrates at the time of Zerubbabel Ezra 5 3,6, 6 6,13

Tatra (tä'trŭ) or **Tatras** (tä'trŭz), Pol and Slovak *Tatry* (tä'trĭ), highest mountain group of the Carpathians, in E central Europe The High Tatra extends along the Polish-Czechoslovak frontier; its highest point, the Stalin Peak (8,737 ft), is in Slovakia and was formerly known as Franz Joseph Spitze and as Gerlachovka (Ger *Gerlsdorfer Spitze*) The Low Tatra lies entirely in Czechoslovakia, it rises to 6,708 ft in the Dumbier, W of Kosice The scenic beauty of the Tatras and their excellent ski slopes have made them a favorite mountaineering and winter sports area Several resorts in Slovakia were incorporated in 1949 into the single commune of Vysoke Tatry On the Polish side, Zakopane is the best-known resort

Tatti, Jacopo: see SANSOVINO, JACOPO.

Tattnall, Josiah 1795–1871, American naval officer, b near Savannah, Ga Appointed a midshipman in 1812, he served in the War of 1812, the war against Algiers, and the Mexican War and was promoted captain in 1850 As flag officer of the Asiatic squadron he aided (1850) the French and British fleets in their attack on Chinese forts He declared that "blood is thicker than water," and public opinion supported his breach of neutrality In 1861 Tattnall became a captain in the Confederate navy He commanded the *Virginia* after its fight with the *Monitor* (see MONITOR AND MERRIMAC) and destroyed the ship to avoid capture He commanded at Savannah, Ga, until Gen W T Sherman took the city in Dec, 1864 See biography by C C Jones (1878)

tattoo, custom of marking the skin, practiced in many parts of the world The three known methods are puncture, exemplified by needle tattoo, done in modern times with an electric needle, incision or scarring, and sewing, an exclusively Eskimo technique Saltpeter, ashes, resin, or herbs are sometimes rubbed into the broken skin to create a broad, swollen scar or cicatrix, such as those characteristic of Sudanese tattoos Pigment in tattooing allows finer and more precise patterns The Japanese perfected the use of color, among primitive peoples, certain Oceanic groups excel in dyed tattoos Although often skillfully developed and aesthetically elaborated, as among the Maoris, tattooing primarily serves utilitarian needs The practice may be associated in some areas with the sacrification required for mourning observances It may be fetishistic, as its use among the Mohammedans to ward off the evil eye, or it may provide socially distinguishing marks of caste, tribal, or status affiliation Tattooing has also been employed together with the less humane practice of branding, to identify criminals or political prisoners Tattoo was practiced by the Egyptians during the Middle Empire (c 2000 B C) The Old Testament enjoins the Israelites against the practice In modern Western cultures it has lost most of its significance and is commonly regarded as a somewhat vulgar practice See W D Hambly, *The History of Tattooing and Its Significance* (1927)

Tau (tou), island (14 sq mi, pop 754), Manua dist, American SAMOA, c 70 mi E of Tutuila Tau is cone shaped, with steep, forested slopes, its highest point is 3,056 ft

Tauber, Richard (tou'bur), 1892–1948, Austrian tenor He made his debut (1913) in Chemnitz, Germany, as Tamino in Mozart's *Magic Flute* Later he sang in opera and concert all over Europe and made his American debut in 1931 Although he was noted in opera and as a lieder singer, he was best known for his work in operettas, particularly those of Lehar, and in 1946 appeared in New York in *Yours Is My Heart*, an adaptation of Lehar's *Land of Smiles* In 1938 he fled Austria, sang at Covent Garden in 1939, and in 1940 became a British subject

Tauler, Johannes (yōhä'nus tou'lur), c 1300–1361, German mystic, b Strasbourg He was a Dominican He met Meister ECKHART, either at Strasbourg or in Cologne, where he went to study and was one of Eckhart's disciples He also knew SUSO When Strasbourg was put under interdict, Tauler went to Basel (1338–39), where he became closely associated with the leaders of the Friends of God, a popular mystical movement which spread Eckhart's teachings He was one of the greatest of medieval preachers, and his sermons were widely disseminated These are intellectual appeals to strengthen the spiritual life, and they abound in striking analogies and keen observations. In spite of their orthodox and scholastic Catholicism, they have been much admired by Protestants Collections of Tauler's work often include sermons falsely attributed to him See A W Hutton, ed, *The Inner Way* (1905), A G. Sseshols, *Friends of God* (1934), Rufus M Jones, *The Flowering of Mysticism* (1939)

Taunton (tôn'tun, tän'–), municipal borough (1931 pop 25,178; 1947 estimated pop 32,010), co seat of Somerset, England, on the Tone and SW of Bristol, in the valley of Taunton Deane It is a trade center. King Ine of Wessex built a castle

here, probably early in the 8th cent William Giffard, bishop of Winchester, founded a priory and built the castle, part of which is now a museum. Perkin Warbeck occupied the castle in 1497, and in the civil wars Admiral Blake held it (1644–45) for the parliamentarians, in 1685, after Monmouth's Rebellion, Lord JEFFREYS held in the castle the "Bloody Assizes" Richard Foxe, bishop of Winchester and benefactor of Taunton, founded Taunton School in 1522 St. James's Church dates from the 15th cent., and St. Mary Magdalene's from the 16th.

Taunton (tän'tən, tôn'–), city (pop 37,395), a co. seat of Bristol co, SE Mass, on the Taunton river and E of Providence, R I, inc as a town 1639, as a city 1864 This area, called Cohannet and frequented by the Indians for fish, was settled in 1638. Its industries include cotton mills, stove works, and britannia and silverware factories

Taunus (tou'nōōs), range, Hesse, W Germany, a part of the Rhenish Slate Mts It extends c 50 mi ENE from the Rhine and N of the Rhine and rises to 2,887 ft in the Grosser Feldberg The Taunus is covered by beautiful forests Its southern slopes, the Rheingau region, has famous vineyards, notably at Rüdesheim, Johannisberg, Biebrich, and Kastel Wiesbaden, Bad Nauheim, and Bad Homburg, the best known of the many mineral spas in the Taunus, are favored because of their idyllic surroundings as well as their curative waters

Taupo, Lake (tou'pō), largest lake of New Zealand, area 241 sq mi, 25 mi long and 17 mi wide, on central North Island More than 20 rivers feed the lake, the Waikato river is its outlet It is in a volcanic area known as the Hot Springs District The lake is known for rainbow trout

Taurage (tourägä'), Ger *Tauroggen* (tou'rôgün), city (pop 10,561), SW Lithuania Its industries include meat packing, wool, cotton and leather manufactures, and flour milling Taurage dates from the 13th cent The Convention of Tauroggen was concluded here in Dec, 1812, by the Prussian general YORK VON WARTENBURG with Russia Acting on his own authority, York, whose troops were a contingent of Napoleon I's defeated *Grande Armée*, declared his corps neutral and thus permitted the Russians to push their pursuit of the French This step prepared the alliance of Prussia with England and Russia against Napoleon

Taurida, RSFSR see CRIMEA

Tauriscus see FARNESE BULL

Tauroggen, Convention of see TAURAGE

Taurus (tô'rus), Turkish *Toros* (tôrôs'), mountain chain, S Turkey, extending roughly parallel to the Mediterranean coast of S Asia Minor Its northeastern extension across the Sevhan river is called the Anti-Taurus The highest peak of the Taurus proper is the Ala Dag (12,251 ft), at its eastern end However, Erciyas Dag (anc *Mount Argaeus*), reaching 12,848 ft, is sometimes considered part of the Taurus although it rises in central Anatolia, in an outlier of the Taurus proper The Amanos Mts, along the eastern shore of the Gulf of Iskenderun, are also considered an offshoot of the main Taurus The Taurus is crossed, N of Tarsus, by the CILICIAN GATES The range has important chromium deposits and other minerals (notably copper, silver, lignite, zinc, iron, and arsenic)

Taurus (tô'rus) [Latin,=the bull], in astronomy, a zodiacal constellation, represented pictorially as the fore part of a bull In Greek legend Zeus either assumed the form of the bull himself or sent the bull to carry Europa over the sea to Crete Aldebaran, a first-magnitude giant red star in the constellation, has long been used in navigation Two notable star clusters, the PLEIADES and the HYADES, are found in Taurus The constellation also includes a number of double stars (observable with small telescopes) and the Crab nebula Taurus is the second sign of the zodiac

Taussig, Frank William (tou'sig), 1859–1940, American economist, b St Louis, Ph D Harvard, 1883 At Harvard, where he taught from 1882 to 1935, he helped found the school of business administration An authority on international trade, he served (1917–19) as chairman of the U S Tariff Commission *Wages and Capital* (1896) and *International Trade* (1927) were among his important works, which also included the influential *Principles of Economics* (1911, 4th ed, 1939), written from the classical point of view

Tavares (tùvä'rĭs), town (pop 1,119), co seat of Lake co, central Fla, between Eustis and Dora lakes, in a citrus-fruit and resort area

Tavastehus, Finland see HAMEENLINNA.

tavern: see INN

Tavernier, Jean Baptiste (zhä' bätēst' tävĕrnyā'), 1605–89, French traveler in Asia He undertook six voyages, which took him as far as the East Indies and Java, and he acquired a fortune in the trade of precious stones Ennobled (1669) by Louis XIV, he took the title baron d'Aubonne after an estate he bought near Geneva. A Protestant, he left France after the Revocation of the Edict of Nantes and died on a seventh journey, which was to take him to the Orient by way of Russia His *Six Voyages en Turquie, en Perse et aux Indes* (1676–77) is a mine of information and has been frequently reprinted It has been translated into English by Valentine Ball as *Travels in India* (2 vols, 2d ed, 1925)

Tavistock (tă'vĭstŏk), village (pop 1,066), S Ont, ESE of Stratford It has flour mills

Tavistock urban district (1931 pop 4,471, 1943 estimated pop 6,056), Devonshire, England, in the valley of the Tavy and on the west border of Dartmoor. It is in a district formerly important for its mines There are ruins of a Benedictine abbey It was founded here in 901, destroyed by the Danes, rebuilt much later (the church in the 13th cent, most of the rest in the 15th cent), and disused after the Reformation Another church (1318) has an unusual tower supported by four arches There is a monument to Sir Francis Drake, who was born near Tavistock

Tawas City (tô'wus, tä'–), city (pop 1,075), co seat of Iosco co, N Mich, on Tawas Bay, an inlet of Saginaw Bay, settled c 1853, inc as a village 1885, as a city 1895 It is a resort and fishing center There are gypsum quarries here

Tawney, Richard Henry (tô'nē), 1880–, English economist, b Calcutta, educated at Rugby and at Oxford He is professor of economic history at the Univ of London Among his works are *The Acquisitive Society* (1920), *Religion and the Rise of Capitalism* (1926), *Equality* (1931, 3d ed, 1938), and *Land and Labour in China* (1932) He also edited, with A F Bland and P A Brown, *English Economic History Select Documents* (1914)

taxation, usual means of providing the revenue of a government An enforced levy to meet an emergency is distinguished from taxation, as not a part of a system, and fees for special services, as postage, are not taxes A government may secure its revenue without taxation, as from natural resources, manufactured products, or services Taxes are sometimes resisted when those who must pay them consider them too onerous, such resistance was one of the causes of the American Revolution Ease of collection is accounted a merit in a tax, and ability to pay is one test of the amount that an individual should contribute A general property tax formerly met requirements in the United States satisfactorily, but as property increasingly assumed forms that escape taxation, the burden on farms, once the usual form of property, became more than they could carry A POLL TAX, disregarding difference in ability to pay, was satisfactory when such differences were negligible A general sales tax likewise tends to disregard ability to pay, a poor man may require as much salt, for example, as a rich man A tax on luxuries is free in part from this objection, though the luxury of one may be necessary to another, an automobile and the gasoline it requires are not luxuries to a country doctor CUSTOMS duties have occasioned great debates on PROTECTION and FREE TRADE. Use has been made increasingly of graduated income and inheritance taxes (see INCOME TAX and INHERITANCE TAX) Internal revenue taxes, as on tobacco and alcoholic beverages, encounter little resistance, when too high, they encourage bootlegging A SINGLE TAX on economic rent is advocated by the followers of Henry George See E R A Seligman, *The Shifting and Incidence of Taxation* (5th ed, 1927), Carl Shoup, *Facing the Tax Problem* (1937), R F Magill, *Impact of Federal Taxes* (1943)

Taxco (tä'skō), city (pop 4,963), Guerrero, SW Mexico Founded in 1529 as a silver-mining community, Taxco was also an important stop between Mexico City and ACAPULCO in Spanish colonial trade with the Philippines It achieved real prominence as a mining center under José de la Borda, who after 1717 constructed roads and built the superb colonial church Clinging to the side of a mountain, Taxco is a good example of the Spanish colonial town, with steep cobbled streets, overhanging grilled balconies, red-tile roofs, and fine glazed tiles set in white or pastel adobe walls New building is restricted, and colonial monuments are protected by the Mexican government A famous center of silver smithing, Taxco attracts artists, writers, and tourists

taxidermy (tăk'sĭdûr"mē), process of skinning, preserving, and mounting vertebrate animals so they appear lifelike The fur or feathers are cleaned, and the skin is treated with a cleansing and preserving preparation and is mounted on a manmade skeleton At first, animals were literally stuffed, they were hung downward and filled with straw. Animals were later mounted on manikins of tow and excelsior, a further improvement was the manikin of wire netting and papier mâché. A method of mounting which preserved the true contours of a specimen was devised by Carl E Akeley. In this method animals are first modeled in clay, then a plaster mold is made, from which is produced a light, durable frame that holds the skin deftly in position The introduction into museums of groups of animals in their natural environment began in the latter part of the 19th cent Sir William Flower, director (1884–98) of the British Museum, made museums both attractive and instructive by placing stuffed animals in their natural habitat. Groups were introduced into the American Museum of Natural History largely through the efforts of William T Hornaday The use of habitats combined with the new methods in taxidermy gave a greater illusion of reality to the museum exhibits

Tay (tā), largest river of Scotland, 118 mi long It rises on Ben Lui (3,708 ft high), Argyllshire, and is called the Fillan for a few miles until it enters Loch Dochart, whence it is called the Dochart until it enters Loch Tay (14½ mi long and 1 mi wide) It enters the North Sea through the tidal Firth of Tay (25 mi long) Its drainage area includes most of Perthshire and parts of Angus and Argyllshire The chief economic value of the stream lies in its salmon fisheries Tay Bridge crosses the firth at Dundee Dunkeld and Perth are on the river

Taygetus (tăj'ĭtŭs), mountain range of the Peloponnesus, S Greece It extends 65 mi from NW Laconia S to Cape Matapan and rises to 7,895 ft at Mt Hagios Ilias, SW of Sparta

Taylor, Bayard, 1825–78, American journalist, traveler, and author, b Kennett Square, Pa His romantic verse in *Ximena and Other Poems* (1844) secured him a long-standing assignment as correspondent for the New York *Tribune* In *Views Afoot* (1846) are his European sketches, a trip to California and Mexico resulted in *Eldorado* (1850), a description of the gold rush in the West which helped stimulate Western migration His travels continued—to the Far East, to Japan with Commodore Perry, to Russia, to Africa as one of the first white men to penetrate the interior, to Egypt, and often to Europe His once famous lectures travel books, and novels have proved ephemeral, perhaps the best of his poetry is *Poems of the Orient* (1854) and in his verse drama *Prince Deukalion* (1878) His most ambitious work was his metrical translation into English (1870–71) of Goethe's *Faust*, which earned him the appointment as U S minister to Germany in 1878 He died in Berlin See his letters (ed by J R Schultz, 1937), biographies by Marie Hansen-Taylor and H E Scudder (1884) and R C Beatty (1936)

Taylor, Bert Leston, 1866–1921, American newspaper columnist, b Goshen, Mass He worked for a number of newspapers before establishing his column, "A Line o' Type or Two," signed B L T, in the Chicago *Tribune* in 1909 Until Taylor's death this was the most famous daily column in America It contained editorial comment, highly polished satiric verse, and humorous contributions sent in by readers Taylor was also the author of a novel, a libretto for a musical comedy, and numerous short stories

Taylor, Brook, 1685–1731 English mathematician He is known for Taylor's theorem, a complex mathematical formula concerning functions, first set forth in his *Methodus incrementorum directa et inversa* (1715), it forms the basis of differential calculus In his work *Linear Perspective* (1715) he first expounded the principle of vanishing points which has been of value to artists His solution of the problem of the center of oscillation led to a translation into mathematical terms of the physical principles governing the vibration of a string

Taylor, Deems (Joseph Deems Taylor), 1885–, American composer and music critic, b New York city, grad New York Univ, 1906 After other journalistic posts he was music critic (1921–25) of the New York *World* and editor (1927–29) of *Musical America* In 1933 he began appearing in sponsored radio programs and in the same year was appointed music consultant for CBS He was intermission commentator (1936–43) for the New York Philharmonic broadcasts His first widely recognized composition was the orchestral suite *Through the Looking Glass* (1919, revised 1922) Two of his operas were commissioned by the Metropolitan Opera Company—*The King's Henchman* (1927), with libretto by Edna St Vincent Millay, and *Peter Ibbetson* (1931), based on George Du Maurier's novel He has composed several other orchestral works and incidental music for a number of plays He appeared as commentator in Walt Disney's moving picture *Fantasia* (1940) His books include *Of Men and Music* (1937), *The Well-tempered Listener* (1940), and *Music to My Ears* (1949)

Taylor, Edward, c 1645–1729, American poet and clergyman, b England, grad Harvard, 1671 He became Congregational minister at Westfield, Mass, in 1671 and remained there the rest of his life, acting also as a physician. It was known that he wrote poetry, but by his request no volume was published by him or his family. *The Poetical Works of Edward Taylor* (ed by T H Johnson, 1939) contains most of his best work and reveals Taylor as a Puritan who wrote in the metaphysical tradition of George Herbert, Donne, and Crashaw Some of his best poems are the short "Sacramental Meditations" on biblical texts

Taylor, Edward Thompson, 1793–1871, American Methodist missionary preacher, known as Father Taylor, b Richmond, Va As an orphan of seven he began a life at sea, and in the War of 1812 he was captured and imprisoned in Nova Scotia. Returning to Boston, where he had earlier been converted in a Methodist meeting, Taylor was licensed (1814) to preach, and in 1819 he was ordained in

the Methodist ministry. In 1830 he became the missionary in charge of the Seamen's Bethel in Boston His knowledge of life at sea and his effective use of nautical language were factors in his successful work among sailors, he was widely known and much beloved Walt Whitman wrote an article about him, and the sermon of Father Mapple in Melville's *Moby Dick* reflects Taylor's language and manner He is mentioned in Dickens's *American Notes* and in Emerson's journals and by other writers of the period

Taylor, Francis Henry, 1903–, American museum director, b Philadelphia, grad Univ of Pennsylvania, 1924, studied in Paris, Florence, Rome, and Barcelona He began his museum career as assistant curator (1927–28) and then curator of medieval art (1928–31) of the Philadelphia Museum of Art. As director (1931–40) of the Worcester (Mass) Art Museum he did much to stimulate public interest in the museum He became director of the Metropolitan Museum in 1940 and has further developed his theory of the museum as an institution of active public service, not simply a repository of art His writings on this subject include *Babel's Tower* (1945), *The Taste of Angels* (1948) is a history of art collecting

Taylor, Frederick Winslow, 1856–1915, American industrial engineer, called the father of SCIENTIFIC MANAGEMENT, b Germantown, Pa , grad Stevens Institute of Technology, 1883 His management methods for shops, offices, and industrial plants were successfully introduced in many industries, notably in steel mills He was the author of *Principles of Scientific Management* (1911), *Shop Management* (1911), *Concrete Costs* (with S E Thompson, 1912), and *Scientific Management* (ed by C B Thompson, 1914) See biography by F B Copley (1923)

Taylor, George, 1716–81, American Revolutionary patriot, signer of the Declaration of Independence, b. Ireland He settled in Pennsylvania (1736) and engaged in iron manufacture Taylor was a member of the Pennsylvania assembly (1764–69, 1775), a county judge, an officer of the Pennsylvania militia, and a delegate to the Continental Congress (1776–77)

Taylor, Glen Hearst, 1904–, U S Senator (1945–), b Portland, Oregon He joined (1919) a dramatic stock company and after 1926 became a business manager in various entertainment enterprises He was elected (1944) U S Senator from Idaho on the Democratic ticket, and in 1948 he bolted the Democratic party to run as Vice President along with Henry A WALLACE for the Progressive party After his defeat he returned (1948) to the Democratic party

Taylor, Graham, 1851–1938, American social worker and clergyman, b Schenectady, N Y , grad Rutgers, 1870 Ordained as a minister in the Dutch Reformed Church, he served several pastorates before 1892, when he began teaching social economics at the Chicago Theological Seminary In 1894 he founded Chicago Commons, one of the first social settlements in the country, and was resident warden until his death He was president (1903–20) of the Chicago School of Civics and Philanthropy and was associate editor of the *Survey* See his two autobiographical volumes, *Pioneering on Social Frontiers* (1930) and *Chicago Commons through Forty Years* (1936)

Taylor, Henry Osborn, 1856–1941, American scholar and author, b New York city, grad Harvard, 1878 His lifework was the study of ancient and medieval civilization Among his books are *Ancient Ideals* (1896), his masterpiece, *The Medieval Mind* (1911), *Thought and Expression in the Sixteenth Century* (2d ed , 1930), and *A Historian's Creed* (1939)

Taylor, Isaac, 1829–1901, English clergyman, antiquarian, and author chiefly noted for researches in philology In 1885 he became canon of York His inclination towards controversy led to the writing of several theological pamphlets, among them *The Liturgy and the Dissenters* (1860) His study of Islam resulted in *Leaves from an Egyptian Notebook* (1888) Early philological investigations were incorporated in *Words and Places* (1864), *Etruscan Researches* (1874), in which he questions whether the language was Indo-European or Altaic, and *Greeks and Goths* (1879), dealing with the origin of the runes His most celebrated work, *The Alphabet*, was published in 1883 *The Origin of the Aryans* (1890) challenged the theory of Max Müller, generally accepted, that central Asia was the cradle of the Indo-European peoples

Taylor, Jeremy, 1613–67, English bishop and theological and devotional writer, b Cambridge He was distinguished as a preacher and as the author of some of the most noted religious works in English Soon after he had completed his studies at Cambridge Univ and had taken (1633) holy orders, he was appointed (1635) by Archbishop Laud to a fellowship at All Souls College, Oxford He became chaplain to Laud and rector (1638) of Uppingham, Rutlandshire, but as chaplain in ordinary to Charles I, Taylor left his country church to serve the king at the outbreak (1642) of the Puritan Revolution In a royalist defeat (1645) before Cardigan Castle, in Wales, he was briefly imprisoned In 1645 he became principal of a school in Caermarthenshire, Wales, and served as private chaplain to the 2d earl of Carbery, at whose home, Golden Grove, Taylor wrote some of his most distinguished works His period of greatest literary production lies between 1646 and 1660 *The Liberty of Prophesying* (1647) was a noteworthy call for toleration His *Great Exemplar the Life and Death of Jesus Christ* (1649) was followed by other books of devotion—*Holy Living* (1650), *Holy Dying* (1651), *The Golden Grove* (1655), and *The Worthy Communicant* (1660) His learned *Ductor Dubitantium, or, The Rule of Conscience* (1660) was dedicated to Charles II Upon the Restoration (1660) he was given the bishopric of Down and Connor, in Ireland, to which was shortly added the supervision of the see of Dromore At Dromore, Taylor built (1661) the church in which he lies buried His tenure (1660–67) as bishop was a period of turbulent dispute between him and the Presbyterian ministers who refused to acknowledge episcopal jurisdiction Taylor has been called the Shakspere and the Spenser of the pulpit A number of his sermons were published, many critics consider that in them his mastery of fine metaphor and his poetic imagination are best revealed Taylor's *Whole Works* (ed with an admirable biography by Reginald Heber, 15 vols , 1822) were edited and revised by C P Eden (10 vols , 1847–52) *The Golden Grove*, with selected passages from Jeremy Taylor's sermons and writings, was edited in 1930 by Logan Pearsall Smith and contains a bibliography of Taylor's works by Robert Gathorne-Hardy. See biographies by Edmund Gosse (1904) and George Worley (1904)

Taylor, John, 1578–1653, English writer He was a Thames waterman and hence is often called the Water Poet A traveler throughout England and the Continent, he recorded his observations in both poetry and prose The edition of his works in 1630 contained his writings to that date, but the only complete edition was published by the Spenserian Society in 1868–78

Taylor, John, 1753–1824, American political philosopher Known as "John Taylor of Caroline," he was born in Virginia, probably in Caroline co , where he later lived at "Hazlewood " Orphaned at 10, he was adopted by his maternal uncle, Edmund Pendleton, who sent him to the College of William and Mary and under whom he studied law Taylor fought in the American Revolution, rising to the rank of major and was a member of the Virginia house of delegates (1779–81, 1783–85, 1796–1800) and of the U S Senate (1792–94, 1803, 1822–24) The STATES' RIGHTS doctrine (see KENTUCKY AND VIRGINIA RESOLUTIONS) was introduced in the Virginia house by Taylor, who became the foremost publicist of Jeffersonian democracy *A Definition of Parties* (1794) and *An Enquiry into the Principles and Tendency of Certain Public Measures* (1794) attacked Federalist financial policies Although a strict constructionist, he defended the constitutionality of the Louisiana Purchase in *A Defense of the Measures of the Administration of Thomas Jefferson* (1804) In Jefferson's second term Taylor was a leader of the "Quids," who, disliking James Madison, supported James Monroe for President, but he became a peacemaker between the factions His greatest work, *An Inquiry into the Principles and Policy of the Government of the United States* (1814), has been called one of the few notable contributions to political science produced in the United States In *Construction Construed and Constitutions Vindicated* (1820), *Tyranny Unmasked* (1822), and *New Views of the Constitution* (1823), he opposed John Marshall and the growing power of the Federal government An agrarian liberal, he was naturally much concerned with the land, and his *Arator* (1813) was one of the first analytical treatises on American agriculture and its peculiar problems But he is best known as one of the first formulators of the states' rights doctrine See biography by Henry Simms (1932), C A Beard, *The Economic Origins of Jeffersonian Democracy* (1915)

Taylor, John, 1808–87, American leader of the Mormon church, b England He emigrated in 1832 to Canada and there was converted (1836) to the Mormon faith Moving to the United States, he became (1838) an apostle in the Mormon church and was active in missionary work He made many converts abroad and arranged for German and French translations of *The Book of Mormon* While a newspaper editor (1842–46) at Nauvoo, Ill , he was wounded by the mob which assassinated Joseph Smith in Carthage In the controversy over Smith's successor, Taylor supported Brigham Young and assisted in the Utah colonization. In New York he established (1854) a newspaper, the *Mormon* In Utah he served in the territorial legislature (1857–76) and as probate judge (1868–70) Upon the death of Young, he became acting president (1877) and official president (1880) of the Mormon church From 1884 until his death he directed the affairs of the church while in hiding to avoid arrest for his practice of polygamy.

Taylor, Myron Charles, 1874–, American industrialist and diplomat, b Lyons, N Y., grad. Cornell Univ (LL.B , 1894). He practiced law and then ran a group of textile mills in New England. In 1932 he succeeded J P Morgan, Jr., as chairman of the board of the U S. Steel Corp After meetings with John L. Lewis, then president of the Committee for Industrial Organization, Taylor brought (1937) his board to agree to collective bargaining with the Steel Workers Organizing Committee, thus averting a serious strike. He retired from business in 1938 and served on several diplomatic and charitable committees Taylor was (1939–50) the President's personal diplomatic representative to the Vatican

Taylor, Richard, 1826–79, Confederate general, b near Louisville, Ky , grad Yale, 1845, son of Zachary TAYLOR Dick Taylor became a Louisiana planter and attained some political prominence He was a member of the Louisiana secession convention In the Civil War he was made a brigadier general (Aug , 1861) and fought under T J (Stonewall) JACKSON in the Shenandoah Valley and in the SEVEN DAYS BATTLES of the Peninsular campaign. He was made commander in W Louisiana (July, 1862) His victory over Gen N P BANKS at SABINE CROSSROADS (April 8, 1864), although followed by a repulse at Pleasant Hill the next day, induced that general to abandon his Red River expedition. In Aug , 1864, Taylor was promoted lieutenant general and made commander in the Lower South The collapse of the armies of Lee and Johnston in the East led him to surrender to E R S CANBY, May 8, 1865 He wrote *Destruction and Reconstruction* (1879) See D S Freeman, *Lee's Lieutenants*, Vol I (1942)

Taylor, Sir Robert, 1714–88, English architect The son of a stonemason, he began his career as a sculptor's apprentice and was later employed to carve the pediment of Mansion House in London He then turned to architecture and built up a successful practice He designed the bridge at Maidenhead and many country houses and worked on various bank buildings in London, including the Bank of England, to which he added two wings Taylor was knighted in 1782 The greater part of his estate was left as a legacy for founding the Taylorian Institution at Oxford for the study of European languages

Taylor, Robert Love, 1850–1912, governor of Tennessee (1887–91, 1897–99), b Carter co , Tenn A lawyer, he was a Democrat in Congress (1879–81) and in 1886 defeated his brother Alfred Alexander Taylor (1848–1931), a Republican, for the governorship The brothers toured the state together in that campaign, called the "war of the roses " As governor Bob Taylor's greatest contribution was as a conciliator between the old-line states' rights Democrats, the rising industrialist class, and the forces of agrarian unrest which brought him to power The farmer's revolt in Tennessee was thus not so bitter as in other Southern states He was a U S Senator (1907–12) and, beloved by the common people, a popular lecturer His brother Alf finally got to be governor in 1921–23 See D M. Robison, *Bob Taylor and the Agrarian Revolt in Tennessee* (1935)

Taylor, Tom, 1817–80, English dramatist and editor His most famous play is *Our American Cousin* (1858), given at Ford's Theater in Washington when Lincoln was assassinated Of his more than 100 plays, others are *The Ticket of Leave Man* (1863) and, written with his friend Charles Reade, *Masks and Faces* (1852) He edited B R Haydon's autobiography (1853, new ed , 1926) and was editor of *Punch* from 1874 to 1880 See Winton Tolles, *Tom Taylor and the Victorian Drama* (1940)

Taylor, Zachary (zăk'kurē), 1784–1850, 12th President of the United States, b Orange co , Va He joined the army in 1808, became a captain in 1810, and was promoted to the rank of major for his defense of Fort Harrison (1812) in the War of 1812 Continuing his army career he became a colonel (1832) and served in the Black Hawk War and in the campaigns against the Seminole Indians in Florida, winning the nickname of "Old Rough and Ready " In 1845 Taylor was sent to command the army at the Texas border. He pushed into the disputed territory S of the Nueces river and, in the MEXICAN WAR, defeated the Mexicans at PALO ALTO and RESACA DE LA PALMA, drove them across the Rio Grande, and took Matamoros Later he forced the surrender of the Mexican stronghold at Monterey. In 1847 he won the decisive victory at BUENA VISTA in the face of great odds Because of the resultant enthusiasm of the public, Taylor was nominated for President on the Whig ticket, was elected, and assumed office in 1849. His nonpartisan tendencies were changed by the political astuteness of Senator William H Seward, and Taylor was soon a strong supporter of the Whig party. Taylor met opposition to his recommendation of California's admission as a state After charges of corruption were lodged against members of his cabinet, he determined on a reorganization, but he was stricken with cholera morbus and died on July 9, 1850. He was succeeded by Millard Fillmore. See biographies by O. O. Howard (1892), Holman Hamilton (1941), Brain-

erd Dyer (1946), and S. B. McKinley and Silas Bent (1946)

Taylor. 1 Industrial borough (pop. 9,002), NE Pa., on the Lackawanna river and near Scranton, settled c 1800. 2 City (pop 7,875), central Texas, NNE of Austin; platted 1876, inc 1877. The blackland prairie here was long famous for its vast cotton yield, and the prosperity of the city was increased by some oil production, by dairying, by poultry raising, and by processing plants and factories that include a well-known mattress factory and a meat-packing plant

Taylorsville, town (pop 1,122), co seat of Alexander co., W central N C. WSW of Winston-Salem, in a farm area, inc. 1887.

Taylorville, city (pop 8,313), co seat of Christian co., central Ill., SE of Springfield, founded c 1840, inc 1882. It is an industrial and trade center in a farm and coal area. Among its manufactures are paper, feed, and tools

Taymyra, river, RSFSR: see TAIMYRA

Taymyr Peninsula, RSFSR: see TAIMYR PENINSULA

Tazewell, Littleton Waller (tăz'wul), 1774–1860, American political leader, b Williamsburg, Va., grad. College of William and Mary, 1792. He was admitted (1796) to the bar, practiced law in Virginia, was in the state legislature, and served (1801–3) in Congress. In the Senate (1824–33) Tazewell headed the committee on foreign relations. He strongly opposed President Andrew Jackson's policies, especially his removal of government deposits from the Bank of the United States. He became (1834) governor of Virginia but retired from politics in 1836

Tazewell (tăz'wĕl), town (pop 1,374) extreme SW Va., SW of Bluefield, W Va., in a mountainous coal and farm region, settled 1769, inc 1866. The courthouse of Tazewell co. is here

Tb, chemical symbol of the element TERBIUM

Tbilisi, Georgian SSR: see TIFLIS

Tc, chemical symbol of the element TECHNETIUM

Tch-. For Russian names beginning thus and not listed here, see Ch-, e.g., for Tchekhoff, see CHEKHOV, for Tchicherin, see CHICHERIN

Tchaikovsky, Piotr Ilich (pyô'tur ĭlyĕch' chīkôf'skĭ), 1840–93, Russian composer, grad St Petersburg Conservatory, where he studied composition with Anton Rubinstein. He taught theory and composition at Nicholas Rubinstein's Moscow Conservatory from 1865 to 1878. An annuity from his wealthy patroness, Mme von Meck (whom he never met though he corresponded with her for 14 years), allowed him to resign his teaching for composition. His Fourth Symphony (Moscow, 1878) is dedicated to her. He was opposed to the aims of the nationalist composers and used Western European forms and idioms, but his best compositions are unmistakably Slavic in character. His orchestration is rich, often bombastic, and his music is melodious and intensely emotional. Most successful are his orchestral works, notably his last three symphonies, the fantasies *Romeo and Juliet* (1870) and *Francesca da Rimini* (1876), *Marche slave* (1876), the Manfred Symphony (1885), the ballets *Swan Lake* (1876), *The Sleeping Beauty* (1889), and *The Nutcracker* (1891, also arranged as a suite for orchestra), and the Piano Concerto in B Flat Minor (1875) and the Violin Concerto in D (1878). Of his 11 operas, notable are *Vakula, the Smith* (St Petersburg, 1876), *Eugene Onegin* (Moscow, 1879) and *Pique Dame* (*The Queen of Spades*, 1890), both from stories by Pushkin, and *The Maid of Orleans* (1879, also known as *Jeanne d'Arc*). None of the operas, however, has achieved the popularity of his symphonies and concertos. His music adapts itself well to the dance, and many of his works not originally written for that medium have been used as ballet music, such as the suite *Mozartiana* (1887) and the Fifth Symphony (1888). Tchaikovsky toured Europe as a conductor and was present to conduct his *Marche solennelle* at the opening concert in Carnegie Hall in 1891. His last appearance as a conductor, a few days before he died of cholera, was at the première of his Sixth Symphony, or *Symphonie pathétique* (St. Petersburg, 1893). He wrote a harmony textbook (1871) and translated Gevaert's *Traité général de l'instrumentation* into Russian. Tschaikowsky is another spelling of the name. See his diaries (tr. by Wladimir Lakond, 1945), biographies by Edwin Evans (rev. ed., 1935) and Herbert Weinstock (1943), C. D. Bowen and Barbara von Meck, *Beloved Friend* (1937), Gerald Abraham, ed., *The Music of Tchaikovsky* (1946)

Tchelitchew, Pavel (chĕl'ĭchĕf, Rus. pä'vĭl chĭlyĕ'chĭf), 1898–, Russian-American painter. His first commissions, ballet designs, were given him while he was living (1921–23) in Berlin, whence he had fled from the Russian Revolution. Moving (1923) to Paris, he became associated with Diaghilev; he exhibited (1925) for the first time and had his first one-man show in 1928. In 1926 he developed his technique of multiple image on a single canvas, which he later combined (1934) with triple perspective; his paintings in this manner juxtapose objects in such a way as to reveal another object formed by the juxtaposition of the evident forms; his best-known work in this manner is *Hide and Seek* (Mus. of Modern Art, New York). Most of his works are in private collections. He is also known as a portraitist, Edith Sitwell being among his sitters

Tchernaiev or **Chernyaiev, Mikhail Grigoryevich** (mĭkhŭvĕl' grĭgôr'yuvĭch chĭrnyĭ'ûf), 1828–98, Russian general. With only 2,000 soldiers he captured Tashkent in 1865 after a spectacular march across the steppes of Turkistan. He retired from the army in 1867 and, as the owner of a periodical, became an ardent exponent of Pan-Slavism. Tchernaiev commanded the Serbian forces in the Serbo-Turkish war of 1876, but was defeated. He was governor general of Russian Turkistan (1882–84) and afterward was a member of the Russian imperial war council.

Tczew (chĕf), Ger. *Dirschau* (dĭr'shou), town (pop 20,934), N Poland, S of Danzig. Founded in 1200, it was included in Poland (1466), transferred (1772) to Prussia, and returned (1919) to Poland. Tczew lies on the Vistula, which connects it with the Baltic, since 1928 it has been recognized as a seaport. Chiefly a trade center, it also has clothing, food, and metal industries

Te, chemical symbol of the element TELLURIUM

tea (tē, formerly tā) '[Chinese], a tree or bush, its leaves, and the beverage made from the leaves. The plant (*Thea sinensis* or *Camellia thea*) is an evergreen, related to the camellia, indigenous to E Asia and in its native state growing to a height of about 30 ft, but in cultivation pruned to a shrub of from 3 to 5 ft. The lanceolate leaves are dark green, the blossom is cream-colored and fragrant. Tea is mentioned in Chinese literature in the 3d cent. A.D. as a substitute for strong drink, and by the 8th cent. it was cultivated on a commercial scale. It was imported into Europe by the Dutch East India Company c 1600 and was used in England c 1660. The British East India Company held until 1834 the British import monopoly. Tea reached the American colonies c 1680 and was the leading beverage until it was superseded by coffee following the Boston Tea Party. Today tea is used by more people and in greater quantity than any beverage but water. The leading producers are India, China, Ceylon, Indonesia, Japan, and Formosa, the chief importers, Great Britain, the United States, Australia, Russia, Canada, and the Netherlands. The culture requires a rich, light soil, a warm climate, moist air, and plentiful rainfall. Higher elevations produce a delicately flavored leaf. The shrubs, propagated from seed, are ready for picking in about three years and may yield for 50 years. The leaves are picked by hand during flushes (periods of active growth), the most desirable being the tender leaves near the growing tip. The leaves are withered, rolled, and fired (or heated). For green tea, the leaves are fired soon after picking, for black, they are first fermented for about 24 hours, for oolong, intermediate in flavor and color, the leaves are partially fermented. Teas are classified according to size of leaf, beginning with the smallest, under two systems of nomenclature—the Chinese, as gunpowder, young hyson, hyson, and imperial, and the English (for teas from India, Ceylon, and Java), as flowery orange pekoe, orange pekoe, pekoe, and souchong. Many teas are named also for the district where they are grown, e.g., Darjeeling, Lapsang Keemun. China produces mainly green tea, Formosa, oolong, and Japan, formerly green only, now black also. The flavor of tea is due to volatile oils, the stimulating properties, to CAFFEINE, and the astringency, to the tannin content, reduced in black tea by fermentation. The dried blossoms of jasmine or other fragrant plants are added to certain fancy teas. The tea ceremony of Japan was introduced from China in the 15th cent. by Buddhists as a semireligious social custom. See Agnes Repplier, *To Think of Tea!* (1932), W. H. Ukers, *The Romance of Tea* (1936), Yasunosuke Fukakita, *The Tea Cult of Japan* (1937)

Teach, Edward: see BLACKBEARD

teachers colleges: see TEACHING

teaching, methods employed to accomplish the purposes of formal EDUCATION. In the colonial period in the United States requirements for teaching in the lower schools were a modicum of learning and willingness to work in an ill-paid, harassed occupation. Requirements for college-level work were then, as now, primarily scholarship, a requirement also of such higher secondary institutions as the Latin grammar schools. Specific training for teachers was originated in France (1685) by St. JOHN BAPTIST DE LA SALLE. Teacher training spread rapidly in Europe as a result of the work of August Hermann FRANCKE and PESTALOZZI and the MONITORIAL SYSTEM. In the United States by 1810 monitorial training had begun in the Lancasterian model schools, and in 1823 Samuel R. Hall opened a tuition school for teacher training. In the 1820s and 1830s teacher training became common in the academies, and in 1839 Massachusetts opened the first state normal school. Henry Barnard and Horace Mann were active in the development of normal schools, which increased rapidly in number after 1850. New concepts of child development focused attention on psychology, which became the basic science of the normal school. After 1880 trained women teachers steadily displaced men in all parts of the country, especially in elementary schools. Training for secondary school teaching was largely a function of liberal arts colleges which had introduced pedagogical courses into their curriculums, but the need for additional teachers led the normal schools to expand into four-year degree-granting teachers colleges. These teachers colleges, generally supported by the public, soon trained the bulk of all public school teachers. Graduate study in education was established at New York Univ. in 1887. In 1889 Nicholas Murray Butler was made president of a teacher-training school which became Teachers College, Columbia Univ. John DEWEY, who formulated basic concepts of teaching method, profoundly influenced the development of teacher training in the 20th cent. Certification requirements for teaching have advanced with educational opportunity, though they are still not uniformly high. The trend in certification has been steadily toward requiring more complete training, with practice teaching and extensive graduate work for specialized positions. In many states extension or summer graduate work is required of teachers or made a prerequisite for advancement. The professional requirements for teaching in the United States primarily stress method and psychology, but are still not so stringent as those in some European countries which emphasize scholarship. Successful developments through teacher training for elementary and secondary education have influenced some college administrations to consider requiring training for college teaching also. See A. V. Overn, *The Teacher and Modern Education* (1935), W. S. Elsbree, *The American Teacher* (1939), American Council on Education, *The Improvement of Teacher Education* (1946)

Teague (tēg), city (pop 3,157), NE central Texas, WSW of Palestine, founded 1906 with the coming of the railroad. It has railroad shops and industries centered around cotton

teak (tēk), tall deciduous tree (*Tectona grandis*) of the verbena family, native to India, Burma, and Siam. Its 10- to 20-inch leaves are rough enough to be used like sandpaper. The moderately hard, easily worked wood is yellow to brown when cut, darkening on exposure, and sometimes has dark streaks. It is one of the most durable of woods, beams said to be over 1,000 years old exist. Teakwood contains an essential oil which is resistant to the action of water and prevents the rusting of iron in contact with it. The heartwood is resistant to termites. It is superior to all other woods for shipbuilding and is also used for railway carriages, agricultural implements, and flooring. There are no extensive teak forests, and in India the cutting of the timber is under government supervision. Trees to be cut are girdled through the bark and sapwood and are allowed to stand for at least three years before being felled. It is said that fire protection has helped to deplete the supply of teak, as the tree naturally grows to maturity best when two or three fires have destroyed the undergrowth and the roots of the saplings have become strong enough to send up a sturdy shoot

teal: see DUCK

Teamhair Breagh, Co. Meath, Ireland: see TARA

Teaneck (tē'nĕk"), township (pop 25,275), NE N.J., residential suburb of New York, inc. 1895. Teaneck developed rapidly after the building of the George Washington Bridge

Teapot Dome, area near Casper, Wyo., set aside by President Woodrow Wilson in 1915 as an oil reserve for the U.S. navy. In 1921, by executive order of President Warren G. HARDING, control was transferred from the Navy Dept. to the Dept. of the Interior. In 1922 Albert B. FALL, U.S. Secretary of the Interior, leased, without competitive bidding, the Teapot Dome fields to Harry F. Sinclair and leased another government-owned oil field at Elk Hills, Calif., to Edward L. Doheny. These transactions became (1923) the subject of a Senate investigation conducted by Sen. Thomas J. WALSH. Fall resigned his cabinet post, and the investigation led to criminal prosecutions. Great notoriety attended the affair, which involved a number of prominent individuals. Fall was convicted (1929) of accepting bribes and was sentenced to a year in prison and fined $100,000. In another trial, Doheny and Sinclair were acquitted, though Sinclair was subsequently sentenced to prison for contempt of the Senate and for employing detectives to shadow members of the jury in his case. The oil fields were restored to the Government by a Supreme Court decision in 1927

tear gas, a gas which causes temporary blindness through the excessive flow of tears resulting from irritation to the eyes. It is used in CHEMICAL WARFARE and as a means for dispersing mobs. Bromoacetone, benzyl bromide, chloroacetophenone, ethyl iodoacetate, and chloropicrin (which also causes vomiting) cause watering of the eyes. In the First World War tear gas was usually dispersed by means of bombs or shells loaded with the liquid. When the vehicle exploded, the liquid was widely dispersed in the air.

Teasdale, Sara (tēs'dāl), 1884–1933, American poet, b St Louis She wrote several volumes of sensitive and musical lyrics, including *Helen of Troy and Other Poems* (1911), *Rivers to the Sea* (1915), *Flame and Shadow* (1920), and *Strange Victory* (1933), and compiled two anthologies of poetry She was married to Ernst B. Filsinger in 1914, they were divorced in 1929. See her *Collected Poems* (1937).

teasel (tē'z'l), any plant of the genus *Dipsacus*, Old World herbs some of which are naturalized in America The best known are the common and fuller's teasels (*Dipsacus sylvestris* and *fullonum*), which are biennials with cone-shaped or cylindric heads of small lilac flowers The heads bear sharp prongs —straight in the common teasel and hooked in the fuller's teasel Fuller's teasel has long been used for teasing or raising a nap on wool, for which purpose it has been cultivated in textile centers Only recently has machinery taken the place of teasel Teasels are often used in EVERLASTING bouquets

Tebah (tē'bu), son of Nahor, perhaps eponym of Tibhath Gen 22 24

Tebaliah (tĕ"bulī'u), doorkeeper 1 Chron 26 11

Tebessa (tūbĕ'su), Fr *Tébessa* (tābĕsä'), anc *Theveste*, town (pop 18,293), NE Algeria, in the Atlas Mts It is in an important phosphate- and iron-mining region The town is noted for its silk embroidery and carpets Extensive ancient remains include the Roman Arch of Caracalla, a Christian basilica (about the 4th cent A D), and restored Byzantine walls In the Second World War, Tebessa was an important American base in the battle for Tunisia

Tecchi, Bonaventura (bō"nävăntōō'ra tĕk'kē), 1896–, Italian novelist, short-story writer, and teacher Among his novels are *Il nome sulla sabbia* [name on the sand] (1924), *L'isola appassionata* [passionate island] (1945), and *Giovani amici* [young friends] (1940), some of his stories are collected in *Il vento tra le case* [wind between the houses] (1928) He has been professor of language in Brno.

Teche, Bayou (bī'ō tĕsh', bī'ōō), S La , flowing from E of Lafayette southeastward between the Atchafalaya basin and the Gulf of Mexico to the Atchafalaya above Morgan City It flows through a fertile sugar area and is navigable for over 100 mi It was the setting for Longfellow's *Evangeline*

technetium (tĕknē'shum), silvery metallic element (symbol = Tc), similar in its physical and chemical properties to manganese and rhenium. Its existence as an element (of atomic number 43) was reported in 1925, when the name *masurium* was proposed but the discovery of the naturally occurring element was not confirmed In 1937 radioactive isotopes of the element were artificially produced This was accomplished in Italy by Emilio Segrè and his co-workers with molybdenum which had earlier been subjected to bombardment with deuterons (in the cyclotron at the Univ of California) They reported that the element resembled rhenium in its properties more closely than it resembled manganese Some years later they suggested the name technetium for the element, and this name was accepted (1949) by the International Union of Chemistry

Technicolor, see MOVING PICTURES

Tecumseh (tĭkŭm'sĕ), 1768?–1813, chief of the SHAWNEE INDIANS, b probably in Clark co , Ohio In his tribe he became distinguished for his prowess in battle but opposed the tribal practice of torturing prisoners When the United States refused to recognize his principle that all the Indian land was the common possession of all the Indian tribes and that land could not rightly be ceded by, or purchased from, an individual tribe, Tecumseh set out to band together the tribes of the Old Northwest, the South, and the eastern Mississippi valley His plan failed with the defeat of his brother Tenskwatawa, the SHAWNEE PROPHET, at TIPPECANOE (1811) Though Tippecanoe was, properly speaking, a drawn battle, it marked the collapse of the Indian military movement In the War of 1812 Tecumseh allied himself with the British and was created by them a brigadier general He led a large force of Indians in the siege of Fort Meigs, covered Gen Henry A Proctor's retreat after Oliver H. Perry's victory on Lake Erie, and lost his life in the battle of the THAMES, in which Gen William H HARRISON overwhelmed Proctor and his Indian allies Col Richard M Johnson is usually given credit for killing him Tecumseh had great ability as an organizer and a leader and is considered one of the outstanding Indians in American history See biographies by E T Raymond (1915) and J M Oskison (1938)

Tecumseh, residential town (pop 2,412), S Ont , on Lake St Clair and E of Windsor

Tecumseh. **1** Village (pop 2,921), S Mich , on the Jackson Branch of the Raisin and S of Ann Arbor, settled 1824, inc 1837 Refrigeration equipment is made Tecumseh is a shipping point for sand, gravel, and celery. Several Indian village sites and earthworks are here **2** City (pop 2,104), co seat of Johnson co , SE Nebr , SE of Lincoln, in an orchard area, founded 1859 **3** City (pop 2,042), central Okla , SE of Oklahoma City A state school for girls is here.

Tedder, Arthur William Tedder, 1st Baron, 1890–, British air chief marshal A Cambridge graduate, he saw service in the infantry and the Royal Flying Corps in the First World War After 1919 he held important positions in the Royal Air Force and the air ministry Sent to the Middle East in 1940, Tedder, as air chief there (1941–43), helped sweep the Germans from Libya He was deputy to Eisenhower in the last of the campaigns in North Africa and deputy commander in Sicily and late in 1943 was made deputy supreme commander of the Allied invasion forces In Oct , 1944, he took on the additional post of chief of Allied air operations in Western Europe In 1946 he succeeded Lord Portal as air chief of staff and was created Baron Tedder of Glengum See his *Air Power in War* (1948)

Teddington, former urban district (1931 pop 23,369), since 1937 part of Twickenham, Middlesex, England, on the Thames and SW of London, of which it is a residential suburb The Port of London begins officially at Teddington lock The National Physical Laboratory, founded in 1902, is in Bushey Park Stephen Hales was perpetual curate at St Mary's for more than 50 years

Te Deum laudamus (tē dē'um lôdā'mus, tā dā'ōōm loudä'mōōs) [Latin, = we praise Thee, O God], ancient hymn of the Western Church beginning, "We praise Thee, O God, we acknowledge Thee to be the Lord" Legend ascribes it to an ecstatic outburst of St Ambrose when he baptized St Augustine It is now attributed to Bishop Nicetas of Dacia (c 335–414) or, by some scholars, is thought to be a composite of Greek sources from the 5th cent or earlier It is sung at morning prayer in Anglican churches and at matins in the Roman office, it is the chief hymn of rejoicing in the Roman Catholic Church

Tees, river rising on Cross Fell, Cumberland, England, and flowing c 70 mi generally E between Durham and York to the North Sea Its upper valley is picturesque, the falls of Caldron Snout and High Force are notable The lower reaches pass through the industrial area of Darlington, Stockton, and Middlesbrough

teeth, structures embedded in the bone of the jaws which perform the function of mastication In man a deciduous or temporary set of teeth, often called milk teeth, numbering 10 in each jaw, is shed and replaced by the permanent dentition, totaling 16 teeth in each jaw The deciduous dentition consists of two central incisors, two lateral incisors, two canines, and four premolars in each jaw The incisors and canines of the deciduous dentition are replaced by a similar number of permanent incisors and canines The four deciduous premolars are replaced by four permanent bicuspids In addition to the permanent successors of the deciduous teeth in each jaw, the permanent dentition includes also first, second, and third permanent molar teeth, six in each jaw The third are sometimes called wisdom teeth, these do not always develop The deciduous teeth usually begin to erupt after the age of six months, the permanent set after the age of six years Each tooth consists of a crown portion, visible in the mouth, and a root or roots fastened to the alveolus of the jaw by means of a membrane, the peridontal membrane The entire body of the tooth is composed of dentine, a bonelike substance, the crown is covered by enamel, the hardest substance in the body, and the root by cementum The body of the tooth surrounds a soft inner core, consisting of blood vessels and nerves, known as the dental pulp Proper diet, including sufficient calcium, phosphorus, and vitamin D, as well as vitamin C (for the health of the gums), is necessary for the formation and maintenance of sound teeth Regular cleaning of the teeth and semiannual examination by a dentist are important

teething. In the human being this process begins at about the sixth month of life (when the lower central incisors appear) and continues to about the end of the second year Although it usually occurs without difficulty, sometimes fever and digestive disturbances are associated with teething See also TEETH

Tegea (tē'jēu), ancient city of SE Arcadia, Peloponnesus, Greece From the middle of the 6th cent B C until the battle of Leuctra (371 B C) it was under the sway of Sparta Tegea allied itself with its great rival, Mantinea, against Sparta in 362 B C , but later opposed Mantinea again Remains of Tegea's great temple of Athena Alea (rebuilt by Scopas c 394 B C) have been discovered

Tegnér, Esaias, Swed *Tegnér* (tĕgn'ar tĕng-nâr'), 1782–1846, Swedish poet and bishop of Vaxjo He was a member of a literary society, the Gothic League His poetry was romantic and national, influenced by the German romanticists of the period *Svea* (1811) and *Axel* (1821, Eng. tr , 1870) preceded his masterpiece, *Frithjof's Saga* (1825), based on the Icelandic saga of Frithjof. His sermons and official speeches are classics of the Swedish language Selections of his poetry were translated by Longfellow

Tegucigalpa (tugōō"sēgäl'pu, Span. tägōō"sēgäl'pä), city (pop 86,462, including COMAYAGÜELA), capital and largest city of Honduras, in a small valley in the mountains of S central Honduras. Founded late in the 16th cent , Tegucigalpa was a colonial center of silver and gold mining With independence from Spain (1821), it became the stronghold of the liberals under MORAZÁN The city vied with COMAYAGUA as the republic's capital, not securing the title permanently until 1880 It has no railroad, but is reached by a road from the railhead near SAN PEDRO SULA and another from SAN LORENZO Air transport has recently improved commercial development Never destroyed by earthquake, Tegucigalpa retains many quaint, colonial aspects, with narrow streets and sidewalks, overhanging balconies, and stair-stepped streets It is connected by two bridges over the Choluteca river to its more modern counterpart, Comayagüela

Tehachapi (tuhä'chupē), town (pop 1,264), S central Calif , SE of Bakersfield, inc 1909 It is in an area producing clay, limestone, and fruit

Tehama or **Tihama** (both tĭhä'mu), lowland region, SW Arabia, including the Red Sea coast of Yemen

Tehaphnehes, ancient city see TAHAPANES

Teheran (tĕ"hŭrän', tē"uran') or **Tehran** (tĕrän'), city (1940 estimated pop 540,087, 1949 estimated pop 750,000), capital of Iran, in N Iran, within sight of Mt Demavend and c 70 mi S of the Caspian It is a commercial and intellectual center as well as the seat of government The Trans-Iranian RR connects it with Bandar Shahpur on the Persian Gulf and Bandar Shah on the Caspian Rail lines to Meshed and Tabriz are partly built, and there are highways connecting the capital with many of the chief cities of Iran Besides the university (founded 1934), there are various technical schools and some Moslem religious colleges Most of the ornamented gates of its 19th century walls were demolished in 1934, and, indeed, in the reign of Raza Shah Pahlavi the whole city was much modernized Narrow streets were broadened, and many new large buildings were erected The city is near the ancient Rages (Rhagae or Rey) and was itself a medieval town and featured somewhat in the long Persian wars Its importance, however dates from 1788, when Aga Mohammad Khan made it the capital Other settled areas (Karaj, Kolhak or Qolhak, and Tajrish) cluster about the city Its importance and its population have grown steadily in recent years In the Second World War, when the Allies occupied (1941) Iran, Soviet and British troops entered the suburbs One of the important war conferences was held here in 1943

Teheran Conference, Nov 28–Dec 1, 1943, meeting of President F D Roosevelt, Premier Stalin, and Prime Minister Winston Churchill at Teheran, Iran, held to strengthen the cooperation of the United States, Great Britain, and the USSR in the Second World War It was the first of the Roosevelt-Stalin meetings and followed the CAIRO CONFERENCE with Chiang Kai-shek Agreement was reached on the scope and timing of operations against Germany, and the plans for the Allied invasion of France were submitted to, and approved by, Stalin The final communiqué also stressed cooperation of the United Nations for the problems of peace In an impressive pageant, Churchill handed to Stalin a ceremonial sword presented by George VI to the defenders of Stalingrad A separate protocol pledged the United States, Great Britain, and Russia to maintain the independence, the sovereignty, and the territorial integrity of Iran

Tehinnah (tēhĭn'u) [Heb , = cry for mercy], founder of the city of Nahash 1 Chron 4 12

Tehran, Iran see TEHERAN

Tehuantepec (tuwōn'tupĕk, Span tāwantāpĕk') [Nahuatl, = jaguar hill], town (pop 6,731), Oaxaca, S Mexico, on a wide bend of the Tehuantepec river not far from the Gulf of Tehuantepec, an arm of the Pacific The town is on the Isthmus of Tehuantepec The climate is hot and tropical The population is largely Zapotec Tehuantepec, the commercial and social rival of JUCHITÁN, is celebrated for its beautiful, industrious, and strikingly clothed women (called *tehuanas*), who travel by train from Veracruz to Tapachula to sell or barter the products of the region The society is matriarchal

Tehuantepec, Isthmus of, c 125 mi wide at its narrowest, S Mexico, between the Gulf of Campeche and the Gulf of Tehuantepec It is mostly a rolling plain Building of an interoceanic canal here was long considered, but estimated costs proved prohibitive A transisthmian railroad between COATZACOALCOS and Salina Cruz was opened in 1907

Teignmouth (tĭn'muth), urban district (pop 10,017), Devonshire, England, at the mouth of the Teign (tĭn, tēn) on the English Channel It is a seaport and watering place The harbor, once important, is now used chiefly by yachtsmen and fishermen There is an old wooden bridge across the river The town was partly destroyed by the French early in the 14th cent and again in 1690

Teima, Saudi Arabia see TEMA

Teisserenc de Bort, Léon Philippe (lāō' fēlēp' tāsurĕ' dù bôr'), 1855–1913, French meteorologist He is known for his pioneer investigations of the stratosphere or isothermal layer, carried on by means of balloon ascensions from his observatory at Trappes

(near Versailles) and by observations in the Atlantic from his vessel, the *Otaria*

Teixeira, Pedro (pā'drō tā'shārù), d 1640, Portuguese explorer, one of the early voyagers on the Amazon He commanded the expedition sent by the governor of Maranhão up the Amazon in the autumn of 1637 He reached the upper Amazon early in 1638, discovering the Rio Negro, and in July he met an expedition under Pedro de Costa Favilla on the Napo Later he reached Quito, then returned down the Amazon He was accompanied on this return journey by the Jesuit priest Cristóbal de Acuña, who wrote an account of the voyage He claimed the Napo for Portugal (then united with Spain through the king Philip IV of Spain (Philip III of Portugal).

Tejend, river see HARI RUD

Tejo, river see TAGUS

Tekakwitha, Catherine see CATHERINE TEKAKWITHA

Tekamah (tŭkā'mu), city (pop 1,925), co seat of Burt co, E Nebr, NNW of Omaha, settled 1854, inc 1855 It is a farm trade center Reservoir Hill near by gives a broad view of the Missouri valley

Tekirdag (tĕkĕr'dă), town (pop 14,780), European Turkey, a port on the Sea of Marmara It is an agricultural and commercial center It was known in ancient times as Bisanthe and as Rhaedestus and later as Rodosto Founded by Greek colonists from Samos, it later was an important city of the Thracian kingdom In the Middle Ages it was long a Byzantine stronghold The town was briefly held (1913) by the Bulgarians in the Balkan Wars

Tekoa or **Tekoah** (both tĕkō'u), ancient ruined town, S Palestine, c 5 mi S of Bethlehem It was on the edge of a desolate country, to the east the land drops off precipitously to the Dead Sea This wilderness of Tekoa was the home of Amos 2 Sam 14 2, 23 26; 1 Chron 2 24, 4 5, 2 Chron 11 6, Neh 3 5,27, Jer 6 1, Amos 1 1

Tekoa, city (pop 1,383), E Wash near the Idaho border SE of Spokane

Tela (tā'la), town (pop 10,454), N Honduras, a Caribbean port A station of the United Fruit Company, Tela is a well-equipped banana port and is headquarters for a large plantation area

Tel-abib (tĕl'ă'bĭb) [Aramaic,=corn-hill], city of Mesopotamia, where Ezekiel preached Ezek 3 15

Telah (tē'lu), ancestor of Joshua 1 Chron 7 25

Telaim (tĕ'lā'ĭm, tĕlā'ĭm) [Heb,=lambs], unlocated place, S Palestine, where Saul's army gathered 1 Sam 15 4

Telamon (tĕ'lumŏn), in Greek mythology, son of AEACUS, brother of PELEUS, and father of Telamonian AJAX and of TEUCER He went on the CALYDONIAN HUNT, the ARGONAUT expedition, and that of HERCULES against the Amazon women He fought in the Trojan War

telamones see ATLANTES

Telassar (tĕlăs'ur), city, E Syria, probably in the hill country N of the Euphrates Isa 37 12 Thelasar 2 Kings 19 12

Telav (tyĭlăf') or **Telavi** (tyĭl'vĕ), city (pop 13,100), E Georgian SSR, NE of Tiflis It is the center of the Kakhetian wine district First mentioned in the 13th cent, it was the capital of Kakhetia until the 17th cent There are ruins of its medieval fortifications

Tel-Aviv (tĕl''uvēv') [Heb,=hill of spring], city (pop c 250,000), central Israel, on the Mediterranean Sea It is the largest city of Israel Since 1949 it has formed a joint municipality with adjoining JAFFA TEL-AVIV was founded in 1909 by Jews from Jaffa who wished to build a modern suburb At first it grew slowly, but there were tremendous spurts in population in the late '20s, after Hitler came to power in Germany, and after the Second World War In the disorders after the war there was much sporadic fighting between this all-Jewish city and Jaffa, then predominantly Arab On the day (May 14, 1948) that the mandate of Palestine ended, the state of Israel was proclaimed here, and Jaffa was subjugated In the fighting between Israel and the Arab states Tel-Aviv, in most of 1948 the temporary national capital, was several times lightly shelled and bombed The city is the financial center of Israel, and except for heavy industry, the bulk of the nation's manufacturing, especially of textiles, clothing, and processed foods, is concentrated here and in the environs Road and rail communications are excellent, but as there is no natural harbor Jaffa serves as the port Cultural institutions include Herzliah Hebrew College, the municipal art museum, and the world-famed Habima theatre Many tourists are attracted to Tel-Aviv by its wide, tree-shaded streets, its neat white stucco buildings, and its large, attractive beaches

Telegonus (tĭlĕ'gunŭs), in post-Homeric Greek legend, son of Odysseus by Circe He unwittingly killed his father

telegraph. The name is now regularly restricted to the electric telegraph, but earlier it was used for methods of signaling, by sound or by sight, beyond the range of the human voice Man's efforts to conquer distance through systems of rapid communication are thousands of years old (see SIGNALING). As knowledge of electricity progressed, various methods of signaling were suggested; some were demonstrated experimentally, and practical use was made of others The method that has come into general use throughout most of the world is based on the invention of S F B MORSE. In Morse telegraphy an electric circuit is set up generally by using only a single overhead wire and employing the earth as the other conductor to complete the circuit Signals are sent by making and breaking the current in this circuit The receiving instrument, actuated by an electromagnet, may respond to the current in various ways Reception by sound, in which the MORSE CODE signals are received as audible clicks, has proved the swiftest and most reliable method The first permanently successful telegraphic cable crossing the Atlantic Ocean was laid in 1866 In 1872 J B Stearns, of Massachusetts, succeeded in making "duplex" telegraphing practical, so that two messages might be sent over the same wire at the same time This system, improved by others was used (1878) on the Atlantic cable In 1874 Thomas A Edison invented the "quadruplex" method, by which four messages are sent over the same wire at the same time Telegraph instruments have been devised by which messages are received in printed form In the method usually employed, as the message is sent holes are punched in a strip of paper by an instrument which resembles a typewriter and is sometimes called a teletypewriter The punched strip fluctuates the electric current, causing the receiving instrument to punch out an identical strip Thus strip then guides the instrument which prints the message The telautograph transmits messages in the handwriting of the sender Photographs and other pictures are transmitted as lines that are properly assembled to form an image by the receiving instrument For wireless telegraphy, see RADIO See A F Harlow, *Old Wires and New Waves* (1936), R L Thompson, *Wiring a Continent* (1947)

Teleki, Count Paul (tĕ'lĕkĭ), Hung *Teleki Pál* (pal'), 1879–1941, Hungarian statesman, geographer, and political writer He studied law, political science, and geography at the Univ of Budapest, where he later held a chair A member of the Hungarian parliament from 1905, he was the official geographic expert in the Hungarian delegation at the Paris Peace Conference (1919–20) and was foreign minister in the counterrevolutionary government at Szeged Appointed (1920) premier by Admiral Horthy, he secured the ratification of the Treaty of Trianon by the Hungarian parliament He retired from politics in 1921 and was replaced as premier by Stephen Bethlen Called again to the premiership in 1939, he signed (1940) the Berlin Pact (see AXIS) and concluded a mutual-assistance treaty with Yugoslavia When, early in 1941, it became evident that Hungary would be forced by Germany to invade Yugoslavia, Teleki committed suicide Teleki's best-known work is *The Evolution of Hungary and Its Place in European History* (1923, in English)

Tel-el-Amarna or **Tell-el-Amarna** (tĕl''-el-ămär'na), locality, Egypt, near the Nile and c 60 mi N of Asyut Here were found (1887–88) tablets with inscriptions—letters to and from Amenophis III and Ikhnaton (1411–1358 B C), which shed much light on this period Ikhnaton had his capital, Akhetaton, here The tablets, about 400 in number, are mostly in the Berlin, British, and Cairo museums, the Metropolitan Museum, New York, has two All were translated into English by Samuel A B Mercer See J D S Pendlebury, *Tell el-Amarna* (1935)

Telem (tē'lĕm) [Heb,=oppression] **1** Gatekeeper who had married a foreigner Ezra 10 24 The Talmon of Neh 12 25 is probably the same **2** Unidentified place, S Palestine Joshua 15 24

Telemachus (tĭlĕ'mukus), in Greek legend, son of PENELOPE and ODYSSEUS He protected his mother and tried to find news of his absent father When Odysseus returned, Telemachus helped him to kill Penelope's unwelcome suitors He is the central figure of the first four books of the ODYSSEY

Telemark (tĕ'lumärk), county (5,875 sq mi, pop 131,879), S Norway, extending from the Hardanger plateau eastward to the shores of the Skagerrak Skien is the county seat Remarkable for its lake and mountain scenery, the county attracts many tourists Lumbering, lumber and paper milling, iron and copper mining, and agriculture are important occupations Among the industrial centers on the eastern seaboard are Porsgrunn and Rjukan The population has preserved its individual dialect, customs, and handicrafts, among which are wood carving, silversmith work, and weaving It was in Telemark that skiing as a sport first became popular in the late 19th cent

teleology (tĕ''lĕŏ'lujē, tē''-), in philosophy, the belief that the cosmos is dominated by purpose This may apply to a particular event or may refer to the design of the universe It is opposed to mechanism, the theory that the principles of mechanics explain all phenomena Aristotle argued that all nature reflects the purpose of an immanent Final Cause Some philosophers admit the partial validity of mechanism (Leibniz, Kant) In general, teleologists tend to identify purpose in the universe with God's will or with the experience of the Absolute Self or perhaps as the very essence of God The teleological argument for the existence of God submits that order in the world could not be accident and that since there is design there must be a designer (Voltaire) Others, e g, Hume, believe that order may be explained by natural causes The emergent evolutionist finds purpose operating on the higher levels of organic life but holds that it is not necessarily based in any transcendent being See E S Russell, *Directiveness of Organic Activities* (1945), Pierre Lecomte du Noüy, *Human Destiny* (1947)

telepathy (tŭlĕ'puthē), word invented in 1882 by F W H Myers to indicate the communication of impressions from one (living) mind to another without recourse to physical (sensory) channels The Society for Psychical Research, working over a long period of time, has studied such communication, which is sometimes known as thought or mind reading See also PSYCHICAL RESEARCH

telephone The telephones now in general use throughout the civilized world are developments of the device invented by Alexander Graham Bell and patented by him in 1876 and 1877 While Bell is rightly recognized as the inventor, his telephone was preceded by many attempts to produce such an instrument, and the true principles and effective instruments were finally developed by different men at so nearly the same time that there are disputes about priority Earlier telephones were based upon principles that precluded development to satisfactory transmission of speech The best that was or could be attained was the transmission of musical pitch, without variation in intensity or quality Bell's instrument employed an electric current of fluctuating intensity and frequency generated by mirroring the acoustic characteristics of sound waves A thin plate of soft iron, called the diaphragm, vibrated to sound waves just as does the tympanum, or eardrum, of the human ear The vibrations disturbed the magnetic field of a bar magnet placed near the diaphragm, and this disturbance induced an electric current in a thin copper wire wound about the magnet This current when transmitted to a distant instrument caused its diaphragm to vibrate in response to the fluctuations induced in the near-by magnetic field Bell's instrument, therefore, was both transmitter and receiver, one alternately spoke into and listened to it The first notable improvement of the Bell telephone differentiated the transmitting instrument from the receiving instrument The new transmitter abandoned the use of the bar magnet, derived its current from batteries, and was called a microphone Many other inventions have improved the telephone and microphone and have adapted them to new uses The problems attendant upon long-distance and intercity telephone service have been handled with increasing success The telephone lines used include the ordinary open wire lines, lead-sheathed cables consisting of many lines, and coaxial cables Coaxial cables are placed underground, but other cables may be either overhead or underground Wireless transmission of vocal and musical sounds over long distances and across bodies of water is accomplished by radio telephony See F L Rhodes, *Beginnings of Telephony* (1929), J H Roberts on *The Story of the Telephone* (1947)

telescope, optical instrument for the viewing of distant objects It functions chiefly by collecting light and by focusing and magnifying the image of the object observed The invention (1608) of the telescope is usually attributed to a Dutch optician Hans Lippershey, but it was developed as an astronomical instrument by Galileo, who made his first telescope in 1609 and achieved in 1610 a refracting instrument having a magnifying power of 33 diameters and consisting of a tube with a convex object glass and a concave eyepiece The two fundamental forms of telescope are the refracting and the reflecting In a refracting telescope light is collected by a lens set at the far end of a tube or other support and the image is magnified by a smaller lens, the ocular or eyepiece Improvements in lens combinations, in figuring the lens surface, and in the manufacture of optical glass have corrected the chief defects of early instruments—chromatic and spherical aberration (see LENS) In the reflecting telescope light is gathered by a mirror of paraboloidal surface and the image is magnified by the eyepiece, secondary mirrors may be inserted between the mirror and eyepiece to permit viewing from the side of the tube The use of a mirror to replace the objective of the refracting telescope was suggested by James Gregory and developed by Newton, William Herschel, and others Until after the mid-19th cent the telescope mirror (speculum) was made of metal, which tarnished rapidly and when polished lost its parabolic form and had to be reshaped The use of the glass mirror followed the discovery of chemical methods for depositing a silver coating on the reflecting surface, although this coating must be renewed when tarnished, the surface does not require refiguring. Many recent reflectors are coated

with aluminum, which is less tarnishable Successive improvements in refractors or reflectors resulted in waves of popularity for one type over the other, but today both are considered indispensable The refractor is considered superior for detailed observation of relatively close celestial bodies, the reflector, for observation of more distant bodies The size of refractors is limited by possible distortion of the objective by its own weight, it is thought that the practicable limit has been attained in the 40-inch aperture of the great refractor at Yerkes Observatory The largest reflector (200 in) is at the Mt Palomar Observatory Although larger reflectors are theoretically achievable, the possibility of constructing a new form of telescope, the photoelectric or electron telescope, is being studied Telescope mountings are usually of the alt-azimuth type (allowing movement in a vertical direction) for transit instruments or of the equatorial type (permitting horizontal motion also) for instruments used to follow the apparent motion of celestial bodies Clock-driven mechanisms assure uniform motion of the instrument. The development of photography has led to the adjusting of visual telescopes for photographic work and to the construction of exclusively photographic telescopes Spectrographic telescopes, used in astrophysics, combine in one instrument the telescope, camera, and spectroscope Astronomical telescopes are commonly designed to serve specific needs, a recent form is the coronagraph, a telescope for photographing the sun's corona when the sun is not eclipsed The telescope is used also in instruments for surveying A spyglass is a small telescope, and the opera glass and the field glass consist of two telescopes mounted together See A F Collins, *The Greatest Eye in the World* (1942), G Z Dimitroff and J G Baker, *Telescopes and Accessories* (1945), G F Pendray, *Men, Mirrors, and Stars* (rev ed , 1946), A J Thompson, *Making Your Own Telescope* (1947)

Telesio, Bernardino (bĕrnärdē'nō tälā'zyō), 1509–88, Italian philosopher, one of the leaders in the attack on that part of Aristotelian philosophy which furnished the foundation for scholasticism With Bruno and Campanella, he opened the way to a new naturalism, putting aside the theories of metaphysics and urging the importance of knowledge based upon experience and experiment, of science resting upon facts gained through the experience of the senses He was born into a noble family and studied first with a scholarly uncle in Milan Further study followed at Rome and in Padua At Naples he lectured and afterward established his Academia Cosentina in the interest of more scientific methods of thought, more experimental study of the natural sciences While he produced many works on science and philosophy, the outstanding achievement is his *De natura rerum juxta propria principia* (1565, new ed , 1910–13) In this he regarded matter as a positive reality that has no need to look outside itself for its sufficient explanation Out of two opposing fundamental forces (the dry-warm and the moist-cold) in conflict, he sought to produce the reason for all forms of life, great and small

teletypewriter see TYPEWRITER

television, the transmission of moving pictures by electrical impulses, either over wires or by the more usual method of radio waves The idea of "seeing by telegraph" engrossed the minds of many inventors after the discovery in 1873 that there was a variation in the electrical conductivity of selenium when exposed to light Selenium cells were used in early television devices, but the results were unsatisfactory chiefly because the response of selenium to variations in the intensity of light was not rapid enough, and until the development of the electron tubes known as phototubes, there was no way of amplifying the current sufficiently. These limitations precluded the success of a television method for which Paul Nipkow in Germany received (1884) a patent, his system employed selenium and a *scanning* disk and embodied the essential features of later successful devices A scanning disk has a single row of holes arranged so that they spiral inward toward the center from a point near the edge The disk revolves in front of a *light-sensitive* plate on which a lens forms an image; each hole passes across, or "scans," an area of the image slightly below the area covered by the hole above it. Thus in one revolution of the disk all of the holes sweep over the entire plate. When the light-sensitive cell is connected in an electric circuit, the variations in light cause corresponding fluctuations in the electric current By using a receiver having a luminous area scanned by a similar disk synchronized with the disk of the transmitter, an image can be reproduced Although selenium cells proved inadequate, the development of the phototube made the mechanical disk scanning method practicable. In 1926 J L Baird in England and C. F Jenkins in the United States successfully demonstrated television using mechanical *scanning* disks However, these were soon superseded by electronic scanning methods In 1928 V. K. Zworykin received a patent on a television system employing electronic *scanning* Historically, real progress toward television had not begun until Sir Joseph John Thomson demonstrated the nature of electrons in 1897 Experimentation was carried forward with the development of Albert Einstein's theory of the photoelectric effect (1905), Lee de Forest's three-element vacuum tube (1906), and E H Armstrong's regenerative circuit (1912) The decade of 1930–40 saw the laboratory perfection of television equipment which began to reach the market in 1945 at the end of the Second World War Scarcely five years later the annual production of television receivers throughout the world was estimated at 5,000,000 To give the effect of motion, it is necessary to transmit about 30 pictures every second V K Zworykin's Iconoscope is one of the successful camera tubes in wide use Its functioning involves many fundamental principles common to all television broadcasting The face of the iconoscope consists of a thin sheet of mica upon which thousands of microscopic globules of a silver-caesium compound have been deposited Backed with a metallic conductor, this expanse of mica, which is called the "mosaic," becomes a myriad of tiny photoelectric cells and condensers The differing light intensities of various points of a scene cause the cells of the mosaic to emit varying quantities of electrons The cells remain with positive charges in strengths proportionate to the electrons lost An electron gun or "scanner," operating behind the mosaic, passes its beam across the metal back As it passes across each cell, the charge is released and a current passes through the external circuit of the camera tube After amplification the stream of varying electrical impulses is sent out on carrier waves Further research produced other tubes, including the Orthicon and the image dissector tube (developed by P T Farnsworth) The scanning process, which is the essence of television accomplishment, operates as do the eyes when they read a page of printed matter, from left to right, down, again left to right, and so on A complex circuit of horizontal and vertical deflection coils controls this movement and causes the electronic beam to scan the back of the mosaic in a 525-line zigzag, 30 times each second The development of "interlinear scanning" results in every other line being scanned each $\frac{1}{60}$ of a second with the other 262½ lines being covered in the next $\frac{1}{60}$ of a second The waves carrying the succession of impulses are intercepted by antennae and are thus fed into television receivers Here the process is reversed, and the dissected images are reconstructed The electrical impulses by which they have been communicated are changed back into light values This process takes place in a cathode-ray tube, where a beam is made to scan the fluorescent face known as the "screen" The fluorescence is produced by a deposit, on the inside of the tube's face, of a substance having the property of glowing when exposed to radiation As the tiny particles of the sensitive material are brushed by the beam they glow, and their glowing describes the pattern of the image transmitted A complexity of auxiliary devices function in conjunction with the process, these establish the crucial synchronization, the modulation, and the filtering or other counteraction of undesirable visual and audio effects From 30 to 50 tubes of all kinds are required in a single receiving unit A much larger number are involved in the sending equipment Several systems of color television have been developed In one of these a motor-driven disk with segments in three primary colors, red, blue, and green, rotates behind the camera lens The disk filters the light from the subject so that the colors pass through in succession The receiving unit of this system forms monochrome (black and white) images through the usual cathode-ray tube, but a color wheel, identical with that affixed to the camera and synchronized with it, transforms the images back to their original appearance This method is said to be "field-sequential" because the monochrome image is "painted" first in one color, then another, and finally in the third, in succession Though the coloring is done in sequence, the retentive capacities of the eye synthesize the red, blue, and green so that in effect 30 multicolored images are seen each second Another color television system is called "field-simultaneous" because all three colors arrive at the same time as the image is formed In this method, red, blue, and green light from the subject pass into separate lenses through the work of a series of "dichroic" mirrors Individual scanning tubes then change the images on the three lenses into broadcast signals which are rotated by an electronic switching device When they arrive at the receiver, the signals are sorted by another switching device and relayed, in order, to red, green, and blue picture tubes The resulting single-color images are reflected by more dichroic mirrors onto the viewing screen to produce the final multicolor image. A third color system begins with the focusing of three camera lenses on a subject Behind the lenses are color filters which produce red, blue, and green images side by side as a single picture. The electrical impulses that result from the scanning are divided by the receiver unit into three kinds, according to the colors they represent. They then pass to three electron guns which spray the screen The screen in this case consists of tiny mounds which are three-sided in the sense that three phosphor compounds went into their formation, with the effect that a red glow is produced if one aspect is radiated, a blue glow and a green glow when the other sides are exposed The three beams coming as they do from positions corresponding to the three angles of an equilateral triangle strike the aspects of the mounds coated with the appropriate color producers All three of the described systems of color television leave unresolved certain problems connected with their adoption, in that they are not compatible one with the other It seems not to be feasible to construct a receiver for the reception of all three types of color telecasts The predominant objective in the standardization of color television broadcasting is to utilize the best developed methods and at the same time subject existing monochrome receivers to the least obsolescence See C J Hylander and Robert Harding, *Introducton to Television* (1941); Lee De Forest, *Television Today and Tomorrow* (1942); R W. Hubbell, *4000 Years of Television* (1942); W C Eddy, *Television* (1945), K S Tyler, *Telecasting and Color* (1946), O E Dunlap, *Understanding Television* (1948), Stanley Kempner, ed , *Television Encyclopedia* (1948), Jeanne Bendick and Robert Bendick, *Television Works Like This* (1949).

Telford, Thomas, 1757-1834, Scottish civil engineer He greatly improved road building in England and introduced the use of a base of large stones usually surfaced with compacted layers of small stones His engineering works include harbors and docks at Aberdeen, Dundee, and London, as well as many notable bridges (including bridges across the Tay and Menai Strait) and an aqueduct across the Dee, he was engineer in chief of the Caledonian Canal He is buried in Westminster Abbey

Telford, borough (pop 1,747), Bucks and Montgomery counties, SE Pa , W of Doylestown, settled 1860, inc 1897 West Telford was incorporated with Telford in 1935

Tel-haresha (tĕl'hurē'shŭ) or **Tel-harsa** (-här'sŭ), unlocated Babylonian town Ezra 2 59, Neh 7 61

Tell, William, legendary figure of Swiss patriotism Early versions of his story were reconciled by the chronicler, Aegidius Tschudi, whose account was adopted by Johannes von Müller and furnished the substance of Schiller's popular drama (1804) According to this version Tell, a native of Burglen in Uri, was a follower of Werner Stauffacher of Schwyz, Walter Fürst of Uri, and Arnold von Melchtal of Unterwalden, but was not a participant in the Rütli Oath, sworn by these three in preparation for an uprising against the Austrian bailiffs. The familiar story, relating how Tell refused obeisance to Gessler, the bailiff, was forced in punishment to shoot an apple off his son's head, and succeeded, has close parallels in the folklore of other nations After this feat, according to legend, Tell escaped from Gessler and shot him from an ambush at Küssnacht, thus setting off the revolt which ousted the bailiffs on Jan 1, 1308 While there is no valid proof of Tell's having ever existed, the legend represents a distorted account of the actual events which, in 1291, resulted in the formation of the Everlasting League between Schwyz, Uri, and Unterwalden Rossini's opera, *William Tell*, is based on Schiller's drama

Tell (tĕl), region, NE Algeria and N Tunisia. It rises, often abruptly, from the Mediterranean coastal plain and extends from c 50 to c.100 mi inland Plains and valleys run east and west through the Tell Atlas, which covers most of the region Because of its fertile grainfields the Tell has known the dominion of Rome, the Vandals, the Byzantine Empire, and Arabian and Turkish dynasties. It attained great productivity under French rule Exports include cereals, wine, olive oil, fruits, vegetables, tobacco, and cork. Tiaret and Sidi-bel-Abbès are important cities of the Tell.

Tell ad-Duweir (tĕl-dōōwār'), mound, S Palestine, midway between Gaza and Beersheba. Here in 1935 a British expedition under J L Starkey discovered evidence establishing it as the site of ancient Lachish Archives of the kingdom of Judah were found engraved on porcelain in ancient Hebrew script (the most important Hebrew inscriptions ever found), they are considered of the greatest linguistic as well as historic value.

Tell City, city (pop. 5,395), S Ind., on the Ohio and NW of Cannelton, settled 1857 by Swiss. Furniture is made here

Tell-el-Amarna, Egypt see Tel-el-Amarna.

Teller, Henry Moore, 1830-1914, American statesman, b. Allegany co., N.Y. He was admitted (1851) to the bar and in 1861 moved to Colorado. He commanded a militia district in the Civil War period. When Colorado became (1876) a state, Teller was elected U.S. Senator as a Republican He resigned in 1882 to become Secretary of the Interior under President Chester A. Arthur. Teller returned (1885) to the Senate, to which he was reelected in 1891. Teller supported William J. Bryan

for President in 1896 and was returned to the Senate as an independent silver Republican In 1902 he was reelected on the Democratic ticket. See biography by Elmer Ellis (1941).

Téllez, Gabriel: see TIRSO DE MOLINA

Telluride (tĕl'yəərīd), city (pop 1,337; alt c 8,500 ft), co seat of San Miguel co, SW Colo, SW of Ouray; inc 1887 In the late 19th cent it was one of the liveliest gold camps in Colorado; some mining is still carried on in the area, along with ranching and farming Bridal Veil Falls are near by

tellurium (tĕlōō'rēəm, tĕlyōō'-), element with some metallic properties, appearing in a white, crystalline form or as a dark gray, amorphous powder (symbol=Te, for physical constants, see ELEMENT, table) It resembles sulphur and selenium, with which it is classed in the periodic system With oxygen it forms two oxides, the dioxide being formed when the element is burned With metals it forms tellurides; with sulphur and oxygen, a sulphate, and with hydrogen and oxygen, two acids It is present in the mineral sylvanite (a compound of gold, silver, and tellurium) and is sometimes found uncombined in nature Discovered by Franz Müller von Reichenstein (1782), it was named by M H Klaproth in 1798 It has as yet little commercial value

Tellus (tĕ'lus), in Roman religion, earth-goddess, identified with GAEA Also called Terra Mater (tĕ'rə mā'tur), she was often worshiped with CERES

Tel-melah (tĕl-mē'lə) [Heb, =hill of salt], unlocated Babylonian town Ezra 2 59, Neh 7 61

Telpos-Iz (tyĭlpŏs'-ēz'), peak, 5,558 ft high, RSF SR, in the N Urals It was thought to be the highest in the Urals until the discovery of the NARODA peak.

Telugu (tĕ'lŭgōō), one of the divisions of the Dravidian family of languages See LANGUAGE (table)

Tema (tā'mu), **Taima**, or **Teima** (both tā'mə, tī'mu), large oasis (pop c 10,000), SW Saudi Arabia Inscriptions possibly dating from the 6th cent B C have been recovered The place is mentioned several times in the Bible Job 6 19, Isa. 21 14, Jer 25 23 The biblical eponym is apparently Tema, one of the sons of Ishmael Gen 25 15 1 Chron 1 30

Teman (tē'mun) or **Temani** (tĕ'munī, tēmā'-) [Heb, =on the right hand, south], grandson of Esau and eponym of a tribe living SE of the Dead Sea Gen 36 11,15,34,42, 1 Chron 1 36,53, Job 2 11, Jer 49 7,20, Ezek 25 13, Amos 1 12, Obad 9, Hab 3 3

Tembuland see TRANSKEIAN TERRITORIES

Temeni (tĕ'mənī, tēmē'nī, tĕ'mənī), son of Ashur and Naarah 1 Chron 4 6

Temesvar, Banat of see BANAT

Témiscamingue, Que see TIMISKAMING

Temora (tĭmō'rə), palace of the kings of Ulster in the Ossian poems It is used as the name of one of the epics

Tempe (tĕm'pē'), city (pop 2,906), S central Ariz, in the SALT RIVER VALLEY, on the river, founded 1872, inc 1894 Arizona State College at Tempe (coeducational) was established in 1885 Some Indian ruins are near, and across Salt river is Papago State Park

Tempe (tĕm'pē), valley, NE Thessaly, Greece, between Mt Olympus and Mt Ossa It is traversed by the Peneus river The Vale of Tempe was sacred to Apollo, and laurel for the wreaths of victors of the Pythian games was gathered here Its beauty was celebrated by ancient poets, as by Vergil in the *Georgics* Strategically important, the valley was fortified by the Romans and the Byzantines Among the ruins is a temple of Apollo

Tempelhof (tĕm'pulhōf), district (pop 110,882), S central Berlin, Germany, after 1945 in the American occupation sector A workers' residential quarter, it includes the chief airfield of Berlin During the Russian blockade (1948–49) of the Western occupation sectors of Berlin, the Tempelhof airfield was the main terminal of the American "air lift" and was considerably enlarged

tempera (tĕm'purə), painting method in which finely ground pigment is mixed with a solidifying base such as albumen, fig sap, or thin glue When used in mural painting it is also known as *fresco secco* (dry fresco) to distinguish it from the *buono fresco* (proper fresco) applied on damp walls The name distemper is given to it when a glue base is involved When used on wood panels, as it most frequently was for altarpieces and other easel pictures, it was applied on a gesso underpainting Its particular advantage is the clear, pure colors produced, which are not subject to oxidation as are oils Although not so durable as fresco when applied to walls, the tempera panel paintings have to this day retained their original coloring and have not appreciably flaked off Well known from antiquity (the Roman catacombs offer an early example), tempera was the exclusive panel medium in the Middle Ages and the early Renaissance, and in Italy it was not supplanted by oil until c.1500 In the north oil superseded tempera about a century earlier Tempera was also much used in combination with oils Some attempt was made also to use tempera on canvas, as in the case of Mantegna's work at Hampton Court Palace Michelangelo and Pinturicchio experimented with combining true fresco with tempera In modern times there has been a revival of tempera painting Boecklin and Hodler in the 19th cent experimented with it, and some contemporary American artists have renewed an interest in the old medium Pigment mixed with egg yolk applied to a sized panel is the common method. In industrial art, notably for posters, a simplified distemper is much in use An excellent account of the early Renaissance use of tempera is found in Cennino Cennini's *Treatise on Painting* (written 1437, Eng tr, 1899).

temperament, in music, the altering of certain intervals from their acoustically correct values to provide a system of tuning whereby any instrument may be played in all keys Pythagoras set down the frequency ratios of the pure or acoustically correct intervals (see INTERVAL), namely 2 1 for the octave, 3 2 for the pure fifth, and 5 4 for the pure third If a set of resonators is tuned to a cycle of pure fifths, e g, tuning C to 256 vibrations per second, G a pure fifth higher, and so on, it will be found upon reaching B sharp, which is the same note as C on the modern piano, that it is slightly higher than C A downward cycle from C, i e, tuning F a pure fifth below C, and so on, will yield a B flat, for example, which is lower than A sharp, although one note suffices for both on the piano By tuning to a fifth which is slightly flat, one arrives at EQUAL TEMPERAMENT

temperance movements, organized efforts to induce people to abstain—partially or completely—from drinking alcoholic beverages Such movements occurred in ancient times, but died out until the wide use of strong distilled liquors in the modern period resulted in increasing drunkenness The stirrings of temperance activity began in the 19th cent in America, Great Britain, and the countries of N Europe, where heavy drinking was most serious Relying at first upon personal appeal, such individuals as Father Theobald MATHEW in Great Britain and John Bartholomew GOUGH in America secured pledges by preaching that moral degradation, ill-health, poverty, and crime were the results of alcoholism In 1808 a temperance group was formed in Saratoga, N Y, and in the next few decades societies sprang up in other states and in the British Isles, Norway, and Sweden International cooperation was begun in the latter half of the century, one of the most effective groups being the WOMAN'S CHRISTIAN TEMPERANCE UNION (W C T U) founded in 1874 in the United States The W C T U and the strong ANTI-SALOON LEAGUE (1893) wielded real political power in the United States and, turning from moral appeals for moderation and abstinence, demanded government control of liquor Backed by church groups and some industrialists, they influenced the passage of many LIQUOR LAWS and eventually succeeded in securing Federal PROHIBITION (1919–33) Among the outstanding women temperance workers of the period were the W C T U leader, Frances Elizabeth WILLARD, the vigorous Susan B Anthony, and the flamboyant Carry NATION Among the effects of the temperance agitation were the stimulation of interest in the scientific study of ALCOHOLISM, general instruction in the schools on the effects of alcohol, and provision of reasonable government regulation See Joseph Rowntree and Arthur Sherwell, *The Temperance Problem and Social Reform* (9th ed, 1901), Arthur Shadwell, *Drink, Temperance, and Legislation* (3d ed, 1915), J A Krout, *The Origins of Prohibition* (1925)

temperature (tĕm'prəchōōr, -chur), measurement of the relative "hotness" or "coldness" of a body, but not, however, a measurement of the quantity of heat contained in that body For example, a piece of iron and a piece of lead each weighing 100 g may be heated to the same "hotness," or temperature, and yet the quantity of heat necessary to raise the temperature of the iron one point is about three times that needed to raise the temperature of the lead the same number of degrees A temperature is, therefore, merely a statement of comparative "hotness" or "coldness" The substance used as a basis for comparison is water The comparison is made by means of a scale which is so devised that temperature can be given in definite points or degrees There are several different temperature scales, e g, centigrade, Fahrenheit, Kelvin or absolute, and Reaumur, on each of these there are two fixed points, the melting point of ice and the boiling point of water under standard pressure A THERMOMETER is named for the scale with which it is marked or calibrated On the centigrade scale, the freezing point of water is marked as 0°C and the boiling point as 100°C Between these two points there are 100 equal spaces or degrees On the Fahrenheit scale, the freezing point of water is 32°F and the boiling point is 212°F, there being 180 equal spaces or degrees between these two points A Fahrenheit degree is therefore smaller than a centigrade degree, one Fahrenheit degree being $^5/_9$ of a centigrade degree On the Kelvin scale, known also as the absolute scale, the freezing point of water is 273°K and the boiling point 373°K. Since the distance between these two points is 100 degrees, as it is on the centigrade scale, the degree marking on Kelvin and centigrade is the same Absolute temperatures are used in the formulas derived from the gas laws The zero point on this scale is called absolute zero, and the point 273°K was chosen to correspond to 0°C because gases cooled below 0°C were thought by Kelvin to decrease $^1/_{273}$ of their volume for each degree their temperature fell below that point According to the kinetic molecular theory, however, absolute zero is held to be that point at which the molecules of substances have no kinetic energy, i e, no heat energy On the Reaumur scale, the freezing point of water is 0°R and the boiling point 80°R Because the fixed points on the several different scales are the same, i e, they indicate the freezing and boiling points of water under standard pressure, temperature readings can be translated from one to another without difficulty For changes between centigrade, Fahrenheit, and Reaumur, the values may be found by working out the formula $\frac{F-32}{9} = \frac{C}{5} = \frac{R}{4}$ The conversion formula for the absolute or Kelvin scale is K (or T_a or absolute temperature) =C+273°, or C=K−273° The phenomenon of critical temperature was discovered by Thomas Andrews in 1869 It is defined as that temperature below which a gas must be cooled before it can be liquefied by pressure Each gas has a definite critical temperature of its own, and it cannot be liquefied (no matter what pressure is exerted upon it) until first it has been cooled below that point For example, carbon dioxide must be cooled below 31 1°C, its critical temperature, and oxygen below −118 8°C, its critical temperature, before either will liquefy under pressure (see LIQUEFACTION) The kindling temperature of a substance is that temperature at which it bursts into flame or begins to undergo COMBUSTION.

temperature of the atmosphere see CLIMATE.

temperature of the body see ANIMAL HEAT and FEVER

tempering, process of heating and then cooling a metal after it has already been subjected to heat treatment at much higher temperatures followed by rapid cooling The physical properties of various metals, such as hardness and toughness, are controlled by processes of tempering Steel is notably responsive to such processes, and makers of tools, weapons, armor, and other articles of steel have long had great skill in tempering In some products, e g, razors and files, hardness is sought, and brittleness is not a serious disadvantage In other products, e g, swords and saws, toughness cannot be sacrificed The desired condition is secured by heating and cooling the steel In the handicraft process, the condition of the steel is judged by its color, caused by an oxide film A desired hardness can be secured by plunging the steel into a bath when it has cooled to the right shade of yellow or brown or blue More uniform results are obtained by controlling the temperature with special instruments than by using the color method To secure a bath of the right temperature, various liquids are used, e g, pure water, salt water, oil, and molten metal The process of softening steel that is harder than desired is called annealing Various steels require treatments in tempering, and other metals are tempered in other ways In modern mass production, the processes of tempering are guided by scientific tests in place of the craftsman's skill Comparable to tempering is the process of hastening the cooling of a surface of a casting, to increase the hardness of the part so "chilled"

Templars see KNIGHTS TEMPLARS

Temple, Frederick, 1821–1902, Anglican prelate, b Santa Maura, one of the Ionian Islands He was a fellow of Balliol College, Oxford, and was ordained priest in 1846 In 1858 he entered upon his duties as headmaster of Rugby An essay published in *Essays and Reviews* (1860) awakened suspicions that Temple leaned towards rationalism and caused a protest against his appointment as bishop of Exeter when Gladstone nominated him in 1869 His conduct of the bishopric soon quieted all opposition of this kind In 1885 he was made bishop of London His just and able leadership won him such esteem that in 1896 he was created archbishop of Canterbury In 1897 Temple promulgated the reply to the encyclical of the pope in which the validity of Anglican orders was denied. His published works include *The Relations between Religion and Science* (1884) See *Memoirs of Archbishop Temple by Seven Friends* (ed by E G Sandford, 2 vols, 1906)

Temple, Richard Grenville-Temple, Earl, 1711–79, English statesman The brother of George Grenville and the brother-in-law of William Pitt, earl of Chatham, he was elected to Parliament in 1734, but gained little distinction until he succeeded to the earldom in 1752 Appointed first lord of the admiralty in 1756, Temple was forced to resign the next year because of George II's dislike of him but was made lord privy seal in the duke of Newcastle's administration (1757–61) An opponent of his brother and a supporter of Pitt, Temple had considerable influence over the latter, supported his war policy in 1761, and caused him to decline

the ministry in 1765. When Pitt did form a government (1766), Temple quarreled with him and was reconciled to Grenville After his brother's death in 1770, Temple retired from politics He bore the expenses for the defense of John WILKES, assisted Pitt financially, and attacked Lord North's American policy Authorship of the Junius letters has been attributed to him

Temple, Sir William, 1628–99, English statesman and author He left Cambridge in 1648 and traveled abroad, where he met Dorothy OSBORNE, whom he married, despite parental objections, in 1655 They settled in Ireland, and in 1661 Temple entered the Irish Parliament He moved to England (1663), served on diplomatic missions to the prince-bishop of Münster (1665) and to Brussels (1666–68) and was made a baronet (1666) In 1668 he negotiated with great skill and speed a triple alliance with the Netherlands and Sweden to check the power of France, but this was counteracted by Charles II's secret Treaty of Dover (1670) Temple became ambassador to The Hague (1668), was secretly recalled (1670), and was reappointed at the conclusion of the unpopular English-Dutch war (1674) There he negotiated the marriage of William of Orange to Princess Mary of England (1677) Temple several times refused to become secretary of state and, after his reform of the privy council was a failure, retired to his estate, "Moor Park" (in Surrey), in 1681 and devoted his time to writing He produced a number of political works and essays Johnathan SWIFT, who was Temple's secretary for various periods in the 1690s, helped prepare his letters (1700–1703) and memoirs (1692, 1709) for publication (parts of both had earlier unauthorized publication) Temple's essay, *Of Ancient and Modern Learning* (1690), precipitated the famous ancients versus moderns controversy, which caused Swift to write *The Battle of the Books* (1697) Temple's style in his personal essays was long considered a model of balanced and polished prose See his life and works (4 vols, 1814), biographies by Clara Marburg (1932) and Homer Woodbridge (1940)

Temple, William, 1881–1944, archbishop of York (1929–42) and archbishop of Canterbury (1942–44), son of Frederick Temple He studied at Balliol College, Oxford, he became president of the Oxford Union in 1904 He was fellow and lecturer in philosophy (1904–10) at Queen's College, Oxford, and in 1909 was ordained priest Temple served as headmaster (1910–14) of Repton School, as rector (1914–18) of St James, Piccadilly, as canon (1919–21) of Westminster, and as bishop (1921–29) of Manchester He was made archbishop of York in 1929, and in 1942 he became archbishop of Canterbury He was editor of the *Challenge* (1915–18) and of the *Pilgrim* (1920–27) Keenly interested in social and economic reform, he was a friend of labor and the first president (1908–24) of the Workers' Educational Association His leadership in the movement to form a world council of churches was outstanding Among his numerous publications are *Essays in Christian Politics* (1927), *Christianity and the State* (1928), *Nature, Man, and God* (1934), and *The Church Looks Forward* (1944) See Sydney Dark, *The People's Archbishop* (1942), F A Iremonger, *William Temple, Archbishop of Canterbury* (1948)

Temple. **1** Farm trading town (pop 1,313), SW Okla, near the Red River, settled 1902 **2** Borough (pop 1,408), Berks co, SE Pa, near Reading Limestone quarrying is done here **3** City (1940 pop 15,344, 1947 estimated pop 23,000), central Texas, SSW of Waco, founded 1881 by the Santa Fe RR, inc 1882 In the rich blackland region, Temple has cotton processing, textile mills, a mattress factory, railroad shops, and plants making varied goods such as rock wool, tools, and granite products Notable as a medical center, it has private hospitals and a veterans' hospital There is a municipal junior college and an agricultural experiment station Near by is an old cooperative project for soil conservation

Temple, the, district of central London, England, between Fleet St and the Thames Here are the Inner Temple and the Middle Temple, belonging to the INNS OF COURT The name derives from the Knights Templars, who once owned these buildings Air raids in 1940–44 resulted in the destruction of the Temple Church (incorporating the Norman round church dedicated in 1185) and the Inner Temple library and hall The Temple Bar is the gate built by Wren c 1672 on the site of the bar or chain that marked one of the entrances to the City of London The Bar was removed in 1878 and is now in Theobalds Park near Waltham, there is a monument on the London site, at the junction of Fleet St and the Strand. Here the lord mayor officially receives personages from without the city In the 17th and 18th cent heads of traitors were displayed here See J B Williamson, *The History of the Temple, London* (1924)

temple, edifice or sometimes merely an enclosed area dedicated to the worship of a deity and the enshrinement of holy objects connected with such worship The word was employed in practically all religions except Christianity and Mohammedanism; modern Jews use it frequently to designate their synagogue Though remains of Egyptian temples of c 2000 B C show well-defined architectural forms, it seems likely that temples were hewn in living rock at a still earlier age the cave temples of Egypt, India, China, and the Mediterranean basin may be viewed as later developments of such primitive shrines In Egypt in the New Empire impressive rock temples were hewn from cliffsides, the finest being the great temple of ABU-SIMBEL constructed by Ramses II In the developed structural temples of Egypt a doorway, flanked by monumental towers or pylons, led to an unroofed open court, generally surrounded on three sides by a colonnaded passage Beyond the court lay the majestic hypostyle hall and a variety of chambers preceding and surrounding the holy of holies From the entrance to this innermost sanctuary the various units diminished progressively in size and height, while the direct outside light was also reduced The average temple later accumulated additional pylons, courts, and rooms, the entire group being enclosed by a massive wall Only monarch and priests had access to the chambers beyond the hypostyle hall The New Empire was the most active period of temple construction, although the grandest temple, that of Amon at Karnak, was commenced much earlier In the ancient Babylonian and Assyrian periods of W Asia the temple or ziggurat was a square pyramidal structure about 300 ft high built up in successive, inclined terraces, sometimes as many as seven, with accessory buildings it was enclosed by walls At its summit was a chamber which served both as shrine and for astronomical observations Glazed colored bricks faced the walls The Temple of Solomon at Jerusalem, the only monumental structure of the ancient Hebrews, consisted, according to biblical descriptions, of entrance pylons, courts, and a naos giving entrance to the holy of holies which housed the Ark of the Covenant Its several destructions and reconstructions (one by Herod in 20 B C) have rendered unrecognizable any remains of the original edifice The workmanship, characteristically Phoenician, was of stone, timber, and metal The Temple of Herod, to which Jesus went, was destroyed A D 70, its ruins have symbolized to the Jews their dispersion The Dorian immigration (before 1000 B C) was a prelude to the building of Greek temples, at first made of timber and sun-dried brick The superb stone and marble buildings on a defined floor plan were achieved in the middle of the 6th cent B C, although the most perfect examples, like the Parthenon (5th cent B C), came later The Greek temple customarily stood in a temenos, or sacred enclosure, along with accessory shrines, colonnades, and buildings housing the temple treasures It was built not as a place for assembled worship, but as the dwelling for the deity, his colossal sculptured representation being placed in a large rectangular chamber or naos and illuminated by the daylight entering through the tall entrance portal The absence of windows in the temples has led to theories of openings in the roof or of light filtering through transparent roof slabs of marble In larger temples, to support the roof lintels, two interior rows of columns divided the naos into nave and side aisles The chief terms descriptive of temple arrangement, applying also to Roman temples and to modern classic adaptations, are prostyle, simple shrine cell, with a portico in front, amphiprostyle, the same, with portico also at rear, peripteral, columns completely surrounding the naos, dipteral, same, with double row of columns, distyle, tetrastyle, hexastyle, octastyle, etc, according to the number of columns (2, 4, 6, or 8) forming the width of the colonnade The Roman temple, while based upon the Greek type, retained elements from Etruscan architecture, as in its deep front portico and its elevation upon a high base or podium whose wings extended forward to flank the broad entrance steps The usual type was the pseudoperipteral temple, in which the colonnade appeared only at the front, to form the portico, behind which the cella occupied the full width of the building with engaged columns or pilasters attached to its walls Of this type is the Maison Carrée at Nîmes, France (1st or 2d cent A D), the best preserved Roman temple Unlike the long narrow Greek naos, the Roman cella was nearly square in plan The interior had walls veneered with marble slabs and adorned with engaged orders and with niches containing sculptures, while the floor was of marble mosaic and the flat or vaulted ceiling was enriched with coffers Of the polygonal and circular temples the circular Pantheon at Rome (A D c 120) with its magnificent dome is the most remarkable Many temples, particularly those of the Eastern colonies, as at Baalbek (A D 131–61) in Syria, had magnificent settings of entrance courts enclosed by colonnades In India the most ancient remaining temples are the rock-hewn monuments of the Buddhist period (c 255 B C–A D c 300), important groups exist in W India, E of Bombay The typical interior is a vast cave divided by lavishly sculptured rock piers into nave and aisles, the sculptured façade, hewn from the cliff face, has a single huge opening to admit light. The typical Jain temple is an idol cell over which is a towering pyramidal superstructure A generally similar type has prevailed in the Hindu (or Brahmanical) architecture since A D. c 600, with pyramidal towers of inward curving outline, but with many local variations. The principal Indian temples are gradual accretions around a sacred site, forming a religious center comprising shrines, cells for priests, and accommodations for pilgrims The expression of symbolism is of paramount importance in both structure and ornaments In China the characteristic temple differs from the form of a dwelling only in its size and richness Besides the temple a Buddhist monastery includes a relic shrine, a pagoda, a library, and quarters for the monks In Japan the temple harmonizes with the picturesque landscape in which it is set, with architectural emphasis upon an unsymmetrical grouping of torii or sacred gateways, shrines, pagodas, and terraces

Templeton, town (pop 4,601), N central Mass, E of Athol, settled 1751, inc 1762

Temple University, in Philadelphia, nonsectarian, coeducational, opened 1884 by Russell H CONWELL, chartered 1888, became a university 1907 It includes a college of liberal arts and sciences, a teachers college, schools of business and public administration, chiropody, dentistry (formerly Philadelphia Dental College), fine arts (Tyler), law, medicine, music, nursing, oral hygiene, pharmacy, and theology, and lower schools

Templewood, Samuel John Gurney Hoare, 1st Viscount, 1880–, English public official He began his career in the colonial office in 1905 and entered Parliament in 1910 His interest in aviation led to his appointment as secretary of state for air (1922–29) He served as a member of the Indian Round Table Conferences, and in 1931 he was made secretary of state for India He piloted the India Bill (see INDIA) through Parliament In June, 1935, he replaced Sir John Simon as foreign secretary and was given the task, with Anthony EDEN, of forestalling the Italian conquest of ETHIOPIA In September, as Great Britain took the lead in advocating sanctions against Italy, Hoare made an able speech before the LEAGUE OF NATIONS in favor of collective security, but later Hoare and Pierre Laval of France arrived (Dec 8, 1935) at a proposed settlement, by its terms a large portion of Ethiopia would have been surrendered to Italian control Liberal and Labour elements in Great Britain raised a storm of protest, and Hoare resigned The plan was laid aside, but the British view of it was tempered later by the easy Italian conquest In June, 1936, Hoare reentered the cabinet as first lord of the admiralty After Neville Chamberlain became premier, Hoare was home secretary (1937–39) He was made secretary for air (1940) and served as special ambassador to Spain (1940–44) with the task of keeping that country neutral in the Second World War He was raised to the peerage in 1944 His writings include *A Flying Visit to the Middle East* (1925), *India by Air* (1927), *The Fourth Seal* (1930), and *Complacent Dictator* (1947)

tempo [Ital,=time], in music, the speed of a composition The composer's intentions as to tempo are conventionally indicated by a set of Italian terms, of which the principal ones are *presto* (very fast), *vivace* (lively), *allegro* (fast), *moderato* (moderate), *andante* (moderate, literally a "walking" tempo), *adagio* (slow), *lento* (slower than *adagio*), and *largo* (very slow), *accelerando* (increasing the speed) and *ritardando* (slowing down) are directions to alter the tempo momentarily and are canceled by *a tempo* Since Beethoven's time many composers have given metronomic indications, which, despite their seeming infallibility, are often misleading, and tempo remains a point of subjective interpretation Acoustical factors influence the choice of a tempo but account for less of the divergence between different performances than does the performer's idea as to the essential character of the work

Temuco (tāmōō'kō), city (pop 42,035), S central Chile Founded in 1881, Temuco is at the northern limit of the Chilean lake district It was a point from which colonization of S Chile was begun, chiefly by German immigrants On a near-by hill was signed (1881) the treaty ending the last serious uprising of the Araucanian Indians Indians still constitute an important and colorful element in the life of the city Commercial activity in Temuco is based on the agricultural produce of the region—wheat, barley, oats, timber, and apples

Ten, Council of, in the republic of VENICE, a board set up in 1310 after the Tiepolo conspiracy against the government Made up of the doge, 10 elected members, and the 6 members of the Lesser Council, it was at first only an extraordinary tribunal to deal with matters of public safety. Its competence gradually extended to foreign affairs and to financial matters, and it became the most powerful organ of the republic An attempt (1582) by the Grand Council to reduce its authority did not pre-

vent it from remaining the supreme power until the fall of the republic. It acted largely through an allied body, the Venetian Inquisition (which had nothing to do with the Catholic Inquisition and was opposed by the popes), consisting of three inquisitors of state These by means of an efficient secret police investigated all crimes (common, political, religious, and moral) and reported their findings to the Council of Ten, which judged the cases in secrecy and from which there was no appeal The mystery that surrounded the Ten and the inquisitors resulted in exaggerated accounts of their dread activities

Tenafly (tĕn'ŭflĭ), residential borough (pop 7,413), NE N J, near the Hudson and N of Englewood; settled 1640, inc 1894 Liqueurs are distilled here

tenancy (tĕ'nunsē) The legal relation of landlord and tenant comprises economic relationships differing in nature and effect The growth of a city creates site values and enables the owner of land to lease it for a long term to a tenant who will construct office buildings, dwellings, or other improvements The landlord who owns the site may function only as a receiver of ground rent except as he pays taxes Some economists, notably Henry GEORGE, believed that taxes should absorb the whole of the ground rent The tenant who builds on the site becomes in turn the landlord of those who rent from him Unlike the receiver of ground rent, he has obligations to meet, such as the costs of depreciation, insurance, upkeep, and services The division in ownership of the land and of the improvements is typical in the United States but by no means universal Farm tenancy in America is typically associated with business farming, not with subsistence farming. Subsistence farms are typically homesteads owned by those who use them The system of SHARE CROPPING prevalent in parts of the United States has certain distinctive features, it combines a cash crop which is the property of the landlord with subsistence crops belonging to the tenant.

Tenasserim (tĕnă'surĭm), region (c 37,000 sq. mi, pop 2,110,420), S Burma A narrow strip of coast between Thailand on the east and the Andaman Sea on the west, it extends south for 400 mi from the Gulf of Martaban to the Isthmus of Kra The rainfall is heavy (about 200 in a year), rice and garden vegetables are produced, and rubber is grown Tin and wolfram are extracted, and teak is cut The people speak a distinct dialect of Burmese, and their culture shows many Siamese and Malay influences Tenasserim was long subject in turn to Siam and Burma, but remained in Burmese hands when the long wars of the Thai and Burmese ended late in the 18th cent As a result of the first Anglo-Burmese war (1824–26), Tenasserim passed under British rule

Tenby (tĕn'bē), municipal borough (1931 pop 4,108, 1943 estimated pop 4,383), Pembrokeshire, Wales, on a promontory extending into Caermarthen Bay It is a seaside resort and fishing center Near the town is Caermarthen Hill, with ruins of a castle, and on either side are sandy beaches There are remains of the town walls, built before 1588 St Mary's Church dates partly from the 13th cent First a fishing station, the town developed as a resort because of its climate, coast scenery, and beaches It has also a woolen industry

Ten Commandments or **Decalogue** (dĕk'-) [Gr, = ten words], in the Bible, the cardinal summary of divine law, given by God to Moses on Mt Sinai They have a paramount place in the ethical system in Judaism, Christianity, and Islam Ex 20 2–17, Deut 5 6–21, Ex 31 18, 32 15–19, 34, Deut 9–10 There are two ancient traditions, both of Hebrew origin, concerning the division of the commandments, one survives in the Roman Catholic and Lutheran churches, the other in the Orthodox and in most Protestant churches For Protestants the command to worship no gods before God is the first, the prohibition of graven images, the second These two Roman Catholics combine as the first. Hence, the Protestant third to ninth answer to the Roman Catholic second to eighth, respectively For Roman Catholics the ninth forbids coveting one's neighbor's wife, the tenth his property Protestants combine these two as the tenth

Tenda or **Tende** · see BRIGUE AND TENDE

tendril, slender, sensitive structure of many climbing plants which by a response to contact supports the plant The most common kind (pea, grape) coils about a slender support, then contracts spirally, becoming springy and drawing the plant to the support The disk-tipped tendril (Virginia creeper, Boston ivy) adheres firmly to brick, stone, or wood, after which it too contracts Leaf petioles sometimes serve as tendrils (clematis, nasturtium) and curl about a slender support Most young tendrils revolve slowly, increasing the possibility of a contact, they will react to the weight of ⅛ of a grain. Tendrils—considered modified branches, leaves, flower stalks, or stipules—are not the only means of climbing (see CLIMBING PLANT)

Tenebrae (tĕ'nĕbrē) [Latin, = darkness], ceremony of the Roman office appointed for Wednesday and other evenings of HOLY WEEK. As the choir chants, a number of candles set on a hearse are put out one by one, except for the last, which is hidden and then replaced still alight The traditional plain song for the ceremony is much esteemed.

Tenedos (tĕ'nudŏs), island (15 sq mi, pop 1,765), off NW Asia Minor, in the Aegean Sea It belongs to Turkey, and its modern name is Bozca Tenedos was a station of the Greek fleet during the Trojan War Xerxes used it as a naval base for the Persian fleet in the 5th cent B C

tenement house: see APARTMENT HOUSE, HOUSING.

Tenerani, Pietro (pyĕ'trō tănărā'nē), c 1789–1869, Italian sculptor He studied with both Canova and Thorvaldsen Of his many works covering classical and Christian subjects, some of the best known are *Psyche with Pandora's Box*, *Cupid and Venus*, and *Deposition from the Cross*, a large relief in the Lateran, Rome He made the tomb of Pius VIII, in St Peter's, Rome, and a statue of Bolívar for Colombia

Teneriffe or **Tenerife** (tĕ'nurĭf, tĕnurē'fā, Span tănărē'fā), island (794 sq mi), in the Atlantic off NW Spain, the largest of the CANARY ISLANDS It is dominated by Mt Teide, a volcanic peak (c 12,200 ft) Santa Cruz, capital of Santa Cruz de Tenerife prov, Spain, is on the island.

Tengri Khan see TIEN SHAN

Tengri Nor (tĕng'grē nôr'), salt lake, area c 1,000 sq. mi, Tibet, N of Lhasa The largest lake in Tibet, it is at an altitude of c 15,200 ft

Teniers, David (tunērz', tĕn'vurz, Flemish tĕnērs'), the elder, 1582–1649, Flemish landscape and genre painter, pupil of Rubens Much of his life was spent in Rome He is best known for his little scenes of peasant life which are often confused with the early work of his famous son and pupil **David Teniers**, the younger, 1610–90, noted Flemish genre painter, worked with his father in Antwerp, where he was admitted to the painters' guild c 1632 In 1637 he married Velvet (Jan) Bruegel's daughter, by whom he had seven children A protégé of Rubens, Teniers became court painter to the governor of the Netherlands and also worked for Philip IV of Spain He was overwhelmed with commissions, painted a prodigious number of small but very finished pictures, and had a long and prosperous life His favorite subjects were rather quiet scenes from peasant life His early work was brown, but later he achieved a sparkling silvery tone His subtle color and brilliant technique are unexcelled among the genre painters of his period Among his hundreds of well-known pictures are several versions of *Flemish Kermess* in the museums of Brussels, Antwerp, and Vienna, a version of *The Alchemist* in The Hague, and versions of *The Temptation of St Anthony* in Brussels and in the Metropolitan Museum. The Prado has 52 of his paintings

Tenimber Islands, Indonesia see TANIMBAR ISLANDS.

Tenison, Thomas (tĕ'nĭsun), 1636–1715, English archbishop, educated at Cambridge He took holy orders and served in various parishes In 1680 he became rector of St Martin's-in-the-Fields, London, here he came into prominence as a preacher and as an author of theological pamphlets, and he founded a free library He was made bishop of Lincoln (1691) and archbishop of Canterbury (1694) He administered at their deathbeds to both William and Mary, but was not popular with Queen Anne He served (1706) on the commission for the union with Scotland, supported the Hanoverian succession, and was a founder of the Society for the Propagation of the Gospel

Tennant, Smithson (tĕ'nunt), 1761–1815, English chemist In 1796 he proved, by burning a diamond, that the diamond consists solely of carbon In 1804 he announced his discovery of osmium and iridium

Tennent, Gilbert (tĕ'nunt), 1703–64, American Presbyterian clergyman, a leading preacher of the GREAT AWAKENING, b Ireland, son of William Tennent. He went with his parents to Pennsylvania c 1718 Installed as pastor at New Brunswick, N J, in 1726, he soon became the leader of a revival movement among the Presbyterians in New Jersey, New York, and Pennsylvania A friend of George Whitefield, Tennent made (1740–41) an evangelistic tour in New England Opposition to the revival from conservatives in the Presbyterian Church led to a schism (1741–58), with Tennent leading the "New Side" but later using his influence to heal the breach He was interested in the College of New Jersey (now Princeton Univ), and in 1753 he went to Great Britain with Samuel DAVIES to secure funds for the college

Tennent, William, 1673–1745, American Presbyterian clergyman and educator, b Ireland, grad. Univ of Edinburgh, 1695 He was ordained in the Church of Ireland in 1706 He came to America c 1718, in 1726 he was called to a pastorate in Neshaminy, Pa, where he stayed the remainder of his life Here, in a log cabin on his premises, Tennent established a school which became famous as the **Log College.** He drilled his pupils in the languages and the Bible and so filled them with an evangelical zeal that a number became revivalist preachers in the GREAT AWAKENING The educational influence of the Log College was of importance since many of its graduates founded schools along the frontier which were modeled upon it Princeton Univ. is regarded as a successor to the Log College. See Thomas Murphy, *The Presbytery of the Log College* (1889)

Tennessee (tĕ'nusē', tĕ'nûsē', tĕ'nûsē") state (41,961 sq mi, 1940 pop 2,915,841; 1949 estimated pop 3,234,000), S central United States, admitted 1796 as the 16th state (a slaveholding state). NASHVILLE is the capital The state is bounded on the north by Kentucky and Virginia, on the east by NORTH CAROLINA, on the south by Georgia, Alabama, and Mississippi, and on the west by the MISSISSIPPI river, which separates it from Missouri and Arkansas Although industry has long since outdistanced agriculture in value of products, most Tennesseans still earn their livelihood from the land of the state's three sharply defined regions The GREAT SMOKY MOUNTAINS, CUMBERLAND PLATEAU, narrow river valleys, and heavily forested foothills of E Tennessee generally restrict farming to the subsistence level, but this section has the two most industrialized of the largest cities, CHATTANOOGA and KNOXVILLE The TENNESSEE river, in its circuitous route to the Ohio, hems in Middle Tennessee, a gently rolling, fertile, bluegrass country, ideal for livestock raising and dairy farming and, indeed, still noted for its fine horses and mules, e g, the Tennessee walking horse Here, on the CUMBERLAND river, is Nashville W Tennessee, with its rich river bottom lands on which most of the state's cotton (the chief money crop) is grown, lies between the Tennessee and Mississippi rivers and has the state's largest city, MEMPHIS The annual average rainfall ranges from 40 to 50 in, and the climate is generally mild, the rigors of a Northern winter usually affecting only the most mountainous parts of E Tennessee Other leading crops are corn (always the largest), hay and other forages, wheat, oats, tobacco, potatoes, and sweet potatoes. Coal, limestone, marble, zinc, clay, barite, and phosphate rock, all found mostly in E Tennessee, are the chief mineral resources Lumber products and textiles lead in industry, which has become increasingly diversified E Tennessee was the first part of the state to be visited by white men, De Soto's band, in 1540 However, it was in W Tennessee, which abounds in artifacts of the MOUND BUILDERS, that Europeans made their first mark—La Salle built (c. 1682) Fort Prudhomme, probably on the site of Memphis The French claimed the area as part of Louisiana, but even Bienville failed to bring into line the recalcitrant CHICKASAW INDIANS The steady penetration of fur traders and "long hunters" from the Carolinas and Virginia, who won over the CHEROKEE INDIANS in the east, made ineffectual the French claim, which was completely lost (1763) by the British victory in the French and Indian Wars In that fighting British regulars and South Carolina militiamen established (1756) Fort Loudoun on the Little Tennessee river, only to have it destroyed and the settlers it protected massacred by the Cherokee in 1760 The Cherokee were pacified by a royal proclamation (1763) guaranteeing them their lands W of the Appalachians, which was promptly ignored by land-hungry colonials The first settlement that took hold was made (1769) in the Watauga river valley of E Tennessee by Virginians, who were soon joined by refugees of the REGULATOR MOVEMENT in North Carolina In 1772 these hardy people, living beyond the frontier, formed the WATAUGA ASSOCIATION, first attempt at government in Tennessee, and in 1777, at their request, North Carolina created Washington co for the Watauga settlements, JONESBORO, the county seat and oldest town in the state, was founded two years later In 1777 also the Cherokee ceded a large area to Virginia and North Carolina and agreed to remain neutral in the American Revolution However, one element of the tribe (called the Chickamauga) refused to accede to the treaty and, joined by other Indians and renegade whites, warred upon the new settlements In the struggle for independence itself the frontiersmen, led by noted fighters such as John SEVIER, later first governor of the state, won an important victory over the British at KINGS MOUNTAIN (Oct, 1780) in the CAROLINA CAMPAIGN The year 1780 also saw the founding of Nashville by James ROBERTSON, agent of Richard HENDERSON and the TRANSYLVANIA COMPANY When, after the American Revolution, North Carolina ceded its western lands to the United States, the settlers in E Tennessee formed an independent government of brief duration (1784–88) under John Sevier (see FRANKLIN, STATE OF) Retracted almost immediately, the cession was reenacted in 1789, and in 1790 the Federal government created "The Territory of the United States South of the River Ohio" (the Southwest Territory), with William BLOUNT as governor This act brought to an end various schemes to place the area under the control of Spanish Louisiana, and in 1796 Tennessee, with substantially its present boundaries, was admitted to the Union, the first state to be carved out of national territory At Knoxville, the first capital, was adopted (1796) the constitution which Thomas Jefferson called "the least imperfect and most

republican" of any state Armed with land grants awarded for service in the American Revolution or bought from veterans and speculators (some of them frauds), settlers had swarmed in via the WILDERNESS ROAD and CUMBERLAND GAP and less famous overland routes from the Carolinas, Virginia, Pennsylvania, and even New England Others poled keelboats from the Ohio up the Cumberland and Tennessee rivers For the most part a rough and ready people, numbering over 100,000 by 1800, they were nevertheless strongly influenced by the Great Revival which swept the state in that year The virtues and vices of their strongly equalitarian society are best exemplified in the character of Andrew JACKSON, who completely dominated Tennessee's early history By the time he became (1829) President, Tennessee was prospering The first steamboat had reached Nashville in 1819, the year in which Memphis, soon to become the metropolis of the fast-growing cotton kingdom of the delta, was platted. Internal improvements —canals and then railroads—were pushed, and a new, smaller wave of immigrants, especially Irish and Germans, came after the Cherokee and Chickasaw were forced to move West in the late 1830s Insatiable land hunger, the spirit of adventure, and various personal considerations also carried many white Tennesseans beyond the state An unhappy marriage probably led Gov Samuel HOUSTON to resign and ultimately settle in TEXAS There too went David CROCKETT These two men were most conspicuous among the host of Tennesseans who fought for Texas independence, and a decade later the state's response to the call for volunteers in the MEXICAN WAR was so overwhelming that it has since been known as the "volunteer state" Tennessee's James K POLK, a Jackson protégé, was the able President of the United States during that war Although Negro slaves were thick in W Tennessee and somewhat less numerous in Middle Tennessee, the state of Andrew Jackson was pro-Union, and in the election of 1860 voted for its own John BELL, candidate of the moderate CONSTITUTIONAL UNION PARTY Secession was voted down in a popular referendum held on Feb 9, 1861, but after the firing on Fort Sumter and Lincoln's call for troops, the pro-Confederate element, led by Gov Isham G HARRIS, thoroughly canvassed the state, and on June 8, 1861, a second referendum approved secession by a two-thirds majority The other third mostly represented E Tennessee, where slavery was a negligible factor and where U S Senator Andrew JOHNSON and William G BROWNLOW strengthened the natural Union loyalties of the people Tennessee's excellent rivers were a curse in the CIVIL WAR since they made ideal invasion routes for Union forces. Nashville was occupied by Gen D C BUELL in Feb, 1862, after the victories of Gen U S. GRANT on the lower Tennessee and Cumberland rivers (see HENRY, FORT, and DONELSON, FORT) In April the Union won again, if not decisively, near the Mississippi state line (see SHILOH, BATTLE OF), and Memphis fell to a Union fleet in June Confederate Gen Braxton BRAGG, defeated at PERRYVILLE, Ky, (Oct, 1862), retreated further in Jan, 1863, after the battle of MURFREESBORO, and Grant, successful in the VICKSBURG CAMPAIGN, completely routed him (Nov, 1863) in the CHATTANOOGA CAMPAIGN The Confederates did manage to hold on to KNOXVILLE until Sept, 1863, and their cavalry, particularly the forces of Gen N B FORREST and Gen J. H MORGAN, remained active An Army under Gen J B HOOD made a last desperate attempt to regain the state late in 1864 but was defeated at FRANKLIN (Nov 30) and annihilated at Nashville (Dec 15-16) by Federals under Gen. G. H THOMAS Next to Virginia, Tennessee had been the biggest and bloodiest battleground of the war. The Union military regime which had been set up under Andrew Johnson in 1862 was succeeded in April, 1865, by a civil government headed by Brownlow An amendment (Feb, 1865) to the constitution of 1834 freed the slaves, and with ex-Confederates disfranchised and radical Republicans in control, the state was readmitted to the Union in March, 1866 Tennessee was thus spared the evils of Congressional RECONSTRUCTION, but the post-war years were no less bitter here That effective instrument for reestablishing "white supremacy" in the South, the KU KLUX KLAN, was founded (1865) in Tennessee, at Pulaski Affairs improved gradually, especially after Brownlow left (1869) the governorship for the U S Senate, to which the state also returned (1875) Andrew Johnson in well-deserved vindication of his record as President In 1886, after the Democrats had regained control, occurred the "war of the roses," a unique political contest in which the Democratic candidate for governor, Robert L TAYLOR, defeated his Republican brother, Alfred A. Taylor, who had to wait until 1921 before realizing his ambition. Bob Taylor, leader of the Tennessee forces in the nationwide agrarian revolt, served three terms (1887-91, 1897-99) before going to the U S Senate. Farmers had good reason to rebel. The farm-tenancy system fastened on the agricultural economy in place of the plantation was responsible for much of their misery, as it still is Industry, on the other hand, made advances in the years after the Civil War. The iron and steelworks of E Tennessee were not able to meet the competition of Birmingham, Ala, but coal mining held on and textile production increased The use of convict labor in the mines precipitated the state's first major labor disturbance (1891-92), but not until 1936 was the convict-leasing system abolished Malcolm R Patterson won the Democratic primary of 1908 His "bone dry" opponent, Edward W Carmack, was later killed by Patterson's friends, one of whom was convicted of murder but was promptly pardoned by the governor An aroused legislature then passed (1909) a prohibition bill (repealed in 1939) over Patterson's veto, and the affair so divided the Democratic party that in 1910 Ben W Hoover was elected governor, the first Republican to be chosen for that office since 1880 Adhering to its proud tradition, Tennessee sent thousands of volunteers to the U S army in the First World War, and in Sergeant Alvin C YORK, a mountain boy from E Tennessee, had one of the nation's most highly publicized heroes The state attracted international attention in 1925 with the famous SCOPES TRIAL at Dayton, and the fact that the law banning the teaching of evolution in the public schools has never been repealed indicates the strong hold that Protestant fundamentalism still has on the people. Most important event in Tennessee history since the Civil War was the establishment in 1933 of the TENNESSEE VALLEY AUTHORITY In providing abundant hydroelectric power cheaply for the whole state, it has brought the creature comforts of modern civilization to thousands who lacked them before and, more important, has been chiefly responsible for the rise of many and varied new industries, especially during the Second World War TVA became a bitter issue in state and national politics, opposed as it was by the private power companies and by "pork-barrel" politicians who were denied control of the wide Federal patronage it dispensed TVA is also associated with the mixed blessing of atomic energy, for it provides the power that runs OAK RIDGE, revealed to the world in July, 1945, as one of the places producing the ingredients of atomic bombs Wartime tensions broke out in racial troubles at COLUMBIA (Feb, 1946), and in Aug, 1946, the successful attempt of war veterans to assure honest balloting in ATHENS was marked by violence A more important political development occurred in 1948, when Tennesseans returned Gordon Browning to the governorship and sent Estes Kefauver to the U S Senate, giving Edward H CRUMP, long the boss of Shelby co (Memphis), his first thorough defeat Recently there has developed a strong movement for reform of the state's constitution of 1870, to which not a single amendment has been added The state supreme court's decision (1943) declaring repeal of the poll tax unconstitutional would seem to bear out the need for constitutional revision The state's leading institutions of higher education are the Univ of Tennessee, at Knoxville, Vanderbilt Univ, George Peabody College for Teachers, and Fisk Univ, all at Nashville, and the Univ of the South, at Sewanee See James Phelan, *History of Tennessee* (1888), Archibald Henderson, *The Conquest of the Old Southwest* (1920), J T Moore, ed., *Tennessee, the Volunteer State, 1769–1923* (4 vols, 1923), T P Abernethy, *From Frontier to Plantation in Tennessee* (1932), P M Hamer, ed, *Tennessee a History, 1673–1932* (4 vols, 1933), J. W. Patton, *Unionism and Reconstruction in Tennessee, 1860–1869* (1934), S C Williams, *Dawn of Tennessee Valley and Tennessee History* (1937) and *Tennessee during the Revolutionary War* (1944), Federal Writers Project, *Tennessee a Guide to the State* (1939), W H Combs, *Tennessee a Political Study* (1940), *Tennessee Old and New Sesquicentennial Edition, 1796–1946* (2 vols, 1946)

Tennessee, river, the principal tributary of the Ohio river, formed by the junction of the Holston and French Broad rivers near Knoxville, Tenn It flows 650 mi. SW, W, and N through E Tennessee, N Alabama, W Tennessee, and SW Kentucky to the Ohio at Paducah It receives the Clinch, the Little Tennessee, the Hiwassee, the Elk, and the Duck and has a total drainage basin of c 41,000 sq. mi Navigation in the past was impeded by variations in channel depth and by rapids, such as Muscle Shoals, but since the construction of dam projects by the TENNESSEE VALLEY AUTHORITY, the river runs through a chain of artificial lakes and is an open waterway During the Civil War the river was an excellent approach for a Federal invasion of the South, and several great battles leading to the ultimate defeat of the western Confederate armies were fought on or near its banks (see HENRY, FORT; SHILOH, BATTLE OF, CHATTANOOGA CAMPAIGN).

Tennessee, University of, mainly at Knoxville; land-grant and state supported, coeducational, chartered 1794, opened 1795 as Blount College (Presbyterian), closed 1807–20, called East Tennessee College 1807, eventually became Univ. of Tennessee 1879 Women were admitted to Blount, but were later barred until 1893. The university has colleges of agriculture, education, engineering, law, and liberal arts and schools of business administration and home economics. At Memphis are colleges of dentistry and medicine; schools of biological sciences (graduate), nursing, and pharmacy; and a public health division. There are also a junior college (at Martin) and a child center. The university heads state education.

Tennessee Valley Authority (TVA), independent corporate agency, created May 18, 1933, by act of Congress. The statute empowered the agency to take over and operate Wilson Dam and other installations, which had been built by the government during the First World War, at MUSCLE SHOALS, Ala., for purposes of national defense and fertilizer production It further provided for the integrated development of the whole Tennessee river basin—an area of c 41,000 sq mi with a population of 3,000,000. Specifically, TVA was authorized to build dams on the Tennessee and its tributaries for the improvement of navigation and flood control and the generation of hydroelectric power, to assist in soil and forest conservation, to promote agricultural and industrial expansion, and to conduct surveys on the economic and social conditions of the area. TVA is a government corporation, financed by congressional appropriations and governed by a three-man board of directors, whose first appointees were Arthur E MORGAN, chairman, David E LILIENTHAL, and Harcourt A MORGAN The fact that its main offices are located in the region, rather than in Washington, makes TVA unique among Federal agencies. The history of the project began in the early 1920s, when Sen George W. Norris sponsored a plan to have the government take over and utilize the properties at Muscle Shoals for fertilizer and power production However, legislation to this effect was vetoed in 1928 by President Coolidge and in 1931 by President Hoover The 1933 TVA act, redrafted by President Franklin D Roosevelt, went far beyond the earlier proposals and launched the Federal government into a vast scheme of regional planning and development—an undertaking which has since proved remarkably successful and has become a model for similar river projects in the United States and other countries In 1936 the Supreme Court found the building of Wilson Dam (completed 1925) by the government constitutional and validated TVA's contract for purchasing power transmission lines from a private company The most noteworthy feature of TVA is the system of multipurpose dams and reservoirs which dominate the economic life of the valley Chief among these are Wilson and Wheeler (completed 1936), which submerged the rapids of Muscle Shoals, Pickwick (completed 1938), Chickamauga (completed 1940), Watts Bar (completed 1942), Fort Loudon (completed 1943), and Kentucky (8,422 ft long and 206 ft high, completed 1944), all in the Tennessee river, Norris (completed 1936), in the Clinch river, Cherokee (completed 1942), in the Holston river, Douglas (completed 1943), in the French Broad River, and Fontana (2,365 ft. long and 480 ft high, completed 1945), in the Little Tennessee river. In all there are 27 dams in the TVA system, 17 built by the authority, 5 acquired from private companies, and 5 operated by contractors TVA hydroelectric plants in 1949 had an installed capacity of 2,000,000 kilowatts The power is sold to distributors to promote the widest possible use of electricity throughout the area TVA is also authorized to market power from three generating plants along the near-by CUMBERLAND river. A 630-mile navigation channel of 9-foot draft, which extends from the mouth of the Tennessee to Knoxville, has been responsible for an enormous increase in river traffic, chiefly in petroleum, grain, automobiles, and steel The chemical works at the town of Muscle Shoals produce phosphate fertilizers, which are supplied to demonstration farms for experimental purposes Other TVA activities, which are carried out in cooperation with local authorities, include land conservation, tree planting, malaria control, development of pisciculture, wildlife, and mineral resources, social and educational programs, and the establishment of recreational facilities along the banks of the reservoirs. The authority is directed to hold its properties available for national defense, and in the Second World War it produced nitrates, phosphorus, and calcium carbide, as well as supplying power to important aluminum plants and to the atomic-energy project at Oak Ridge, Tenn There was steadily much opposition to the authority as a "socialistic" and costly scheme, and the opposition of private power companies grew very bitter The activities of TVA were declared constitutional, but the glare of publicity and violent controversy among the directors themselves caused continual congressional questioning The administration was accused of extravagance, inefficiency, duplicity, and neglect of the interests of the people in the Tennessee valley itself. The authority rode through the storms, but even in 1950 acid criticism continued See C H. Pritchett, *The Tennessee Valley Authority* (1943), Julian S Huxley, *T V A. Adventure in Planning* (1943); David E. Lilienthal, *T V A: Democracy on*

Tenniel, Sir John (tĕn'yul), 1820–1914, English caricaturist and illustrator, well known for his original and good-humored political cartoons in *Punch*, with which he was associated from 1851 to 1901. Characteristic of these is *Dropping the Pilot*, which depicts Bismarck leaving the ship of state. Tenniel is also known for his illustrations of Thomas Moore's *Lalla Rookh*, *Aesop's Fables*, *The Ingoldsby Legends*, and, above all, Lewis Carroll's *Alice in Wonderland* and *Through the Looking-Glass*. See study by Cosmo Monkhouse (1901).

Tennille (tĕ'nĭl), city (pop. 1,758), E central Ga., ENE of Macon; inc. 1875.

Tennis, ruins of a medieval city, Egypt, SW of Port Said, on an island in Lake Manzala. Tennis, founded when TANIS was abandoned, was also called Tinnis. Supposedly *tennis* cloth made here was used to cover the balls in an earlier form of the game and supplied the name of tennis.

tennis, game played indoors or outdoors by two or four players on a level, hard court. Lawn tennis is played on grass or lawn courts and is the accepted game of big tennis matches. But since these courts are expensive to maintain (for the most part only private clubs have them), they are not so numerous as the outdoor courts of clay or asphalt which the general tennis-playing public uses. When a player is said to have won the national singles, it is the grass-court game that is understood. Clay-court tournaments are specifically designated as such. Play on one type of court naturally differs somewhat from that on another type, but the rules of the game are the same for all kinds of courts. In singles play the court measures 78 ft. by 27 ft. and in doubles play 78 ft. by 36 ft. The court is divided in half by a net 3 ft. high (roughly, the length plus the width of a racket) in the middle and $3\frac{1}{2}$ ft. high at the end posts. On either side of the net lie the forecourts, each of which comprises two adjacent service courts of equal size (21 by $13\frac{1}{2}$ ft.). Behind each forecourt lies a backcourt (27 by 18 ft.), each of which terminates in a base line parallel to net. The areas (78 ft. by $4\frac{1}{2}$ ft. each) of the alleys, which flank either side of the court perpendicular to the net, are used only in doubles play. Tennis play is directed toward hitting the inflated-rubber, felt-covered, unstitched ball (about $2\frac{1}{2}$ in. in diameter) with the tennis racket—oval headed, usually 27 in. long, and with a hitting surface strung with resilient fiber—into the opponent's court out of his reach or so that he returns the ball out of bounds, or into the net. One player serves an entire game and is given two service tries each time the ball is put in play. He serves the ball diagonally from behind the base line so that it bounces into the opposite serving court beyond the net. A let ball, which caroms off the top of the net into the proper service court, warrants another try (not counting as a faulty service). A foot fault (commonly, stepping on or over the base line on the serve) is penalized by forfeiture of the service try. Service is alternated from right- and left-hand courts. After the first game, the players change sides, thereafter, they change every two games. Once the serve is completed, the ball may be hit into the whole area of the opponent's court until a point is scored. A point may be won by either the server or the receiver, and points are scored in the progression of 15, 30, 40, and game. The term "love" in scoring tennis means 0. When the game goes to "deuce" (tied at 40–40) the first player to win two consecutive points takes the game. The first player to win six games takes the set, provided his opponent has won no more than four games. If the players are tied at four games all or five games all, the first to win two consecutive games wins the set. The best two out of three sets wins a match in women's play, while the best three out of five sets wins a match in men's play. The plays of the game are called by an umpire, and in important matches a net umpire, a referee, foot-fault judges, and linesmen often assist. The game is probably a descendant of COURT TENNIS, but was introduced as a new game in Wales in 1873 by Walter C. Wingfield. In 1874 several lawn-tennis courts were built in England, where its popularity mounted rapidly. In 1877 the first championship match was held at Wimbledon, England, still one of the great shrines of tennis, and singles matches for women have been held there since 1884. Soon the game was popular in many parts of the British Empire and became especially well known in Australia. Meanwhile tennis had taken root in the United States in the 1870s and rapidly gained ground in New England, New York city, and California. In 1881 the United States Lawn Tennis Association was formed, and the same year the first U. S. singles tournament was conducted. Six years later the first national women's championship was held in the United States. New techniques and added speed to the game—reflected in the play of Malcolm D. Whitman, Maurice C. McLoughlin, the Doherty brothers, William A. Larned, Richard D. Sears, William Renshaw, Blanche Bingley, and Norman E. Brookes—helped make it internationally famous, and in 1900 competition for the cup offered by Dwight F. Davis began. School, college, and private clubs were formed, and when public courts were opened, tennis added thousands of participants. Play for the Davis Cup was discontinued during the First World War, but in the "golden age of sports," in the 1920s, tennis reached new heights. The Forest Hills stadium in New York city became the American counterpart of Wimbledon, the Wightman Cup—offered (1923) by Mrs. Hazel Hotchkiss Wightman of the United States—gave women international trophy competition, and the United States Professional Lawn Tennis Association was organized in 1927. Star players, such as William T. Tilden, Jr. (regarded by many as the greatest tennis player), William Johnston, Henry Cochet, René Lacoste, Jean Borotra, Helen Wills, and Suzanne Lenglen did much to publicize the game. While "Big Bill" Tilden and Vincent Richards dominated professional tennis in the 1930s, H. Ellsworth Vines, Frederick J. Perry, John H. (Jack) Crawford, and Helen Jacobs won the laurels in amateur tennis. For outstanding tennis amateurs to turn professional became more and more an accepted practice. In 1938 J. Donald Budge won all four major championships in men's singles in lawn tennis England, United States, Australia, and France. Having completed this sweep, Budge joined Perry, the leading player of the preceding years, in the professional ranks. Alice Marble soon followed suit. Play for the Davis Cup—won by Australia in 1939 for the first time in 20 years largely through the performance of Jack Bromwich—was again discontinued during the Second World War. After 1945 a new set of tennis stars was seen in the headlines. Some of these new stars, notably Jack Kramer and Richard Alonzo ("Pancho") Gonzales, who had excelled at amateur tournament play, joined Bobby Riggs in the professional ranks and became great money-winning attractions. See E. B. Noel and J. O. M. Clark, *The History of Tennis* (1924), United States Lawn Tennis Association, *Fifty Years of Lawn Tennis in the United States* (1931) and *Official Tennis Guide and Yearbook* (latest ed.), J. H. Doeg and Allison Danzig, *Elements of Lawn Tennis* (1931), N. H. Patterson, *The Complete Lawn Tennis Player* (1948).

tennis court, oath of the: see FRENCH REVOLUTION.

Tennyson, Alfred Tennyson, 1st Baron (tĕ'nĭsun), 1809–92, English poet, son of the rector at Somersby. His early literary attempts included a play, *The Devil and the Lady* (ed. by Charles Tennyson, 1930), and poems written with his brothers Frederick and Charles but entitled *Poems by Two Brothers* (1827). In his three years at Cambridge Tennyson wrote a prize-winning poem, *Timbuctoo*, and *Poems, Chiefly Lyrical* (1830) and began his happy friendship with Arthur Henry HALLAM. Upon the death of his father in 1831 Tennyson became responsible for the family and its precarious finances. *Poems* (1832, copyright 1833), which included "A Dream of Fair Women," "Œnone," and "The Lady of Shalott," was scathingly attacked by critics. The sudden death abroad of his intimate friend Hallam in 1833 was an overwhelming grief. *Poems* (2 vols., 1842) changed some of the work published in 1830 and 1832 and presented new and powerful poems which expressed both his philosophic doubts in a materialistic, increasingly scientific age and his longing for a mystic faith. The new poems included "Locksley Hall," "Ulysses," "Morte d'Arthur," and "Break, Break, Break." With this book he was acclaimed a great poet, and in addition, in 1845, he was given a government pension of £200 yearly. *The Princess* (1847) was reissued in 1850 with the interspersed songs which are its chief beauty. *In Memoriam* (1850) is a series of elegies written in the years after Hallam's death, it is a record of agonizing doubt and despair and of a groping faith in immortality and contains some of Tennyson's best poetry. Immediately and immensely popular, the poem is said to have influenced his appointment as poet laureate in 1850. His new prosperity enabled him to marry Emily Sellwood, whom he had courted since 1830. Occasional poems, such as the *Ode on the Death of the Duke of Wellington* (1852) and *The Charge of the Light Brigade* (1855) were part of his duties as laureate. The "monodrama" *Maud* (1855) shows more command of poetic technique than of material. Tennyson's *Idylls of the King* appeared first in 1859 with only four of the poems—"Enid," "Vivien," "Elaine," and "Guinevere", another edition in 1869 added "The Holy Grail" and other poems, and in 1872 still others were added, including "The Last Tournament," making up the series of 12 beautifully wrought poems on traditional material but with contemporaneous morality. In an age much interested in King Arthur the *Idylls* were the epitome of the story in English. Among Tennyson's other poems, *Enoch Arden* (1864) was popular but censured in some quarters. Of several poetic dramas he wrote, *Becket* (1879) was the most successfully played, but could hardly be called great drama. *Ballads and Other Poems* appeared in 1880, and *Demeter and Other Poems*, which contained "Crossing the Bar," in 1889. Tennyson is a master of lyric perfection. His technique is flawless, sometimes boldly experimental, his descriptive powers unique. Strangely ignored early in this century, Tennyson has later again been recognized as a great poet. See his works (ed. by his son Hallam Tennyson, 9 vols., 1907–8, one-volume ed., 1913), *Unpublished Early Poems* (ed. by Charles Tennyson, 1931), and *A Selection* (introduction by W. H. Auden, 1944), biographies by Hallam Tennyson (1897), T. R. Lounsbury (ed. by W. L. Cross, 1915), Harold Nicolson (1923), and Charles Tennyson (1949), studies by Arthur Waugh (1892), H. I'A. Fausset (1923), and T. S. Eliot (in *Essays Ancient and Modern*, 1936).

Tenochtitlán (tānōchtētlän'), ancient city, central MEXICO, in the valley of Mexico. The capital of the AZTEC, it was founded (c. 1325) on a marshy island in Lake Texcoco, in the area now occupied by Mexico city. It was a flourishing city, protected against floods by well-built dikes and connected with the mainland by three causeways. Canals served traffic all over the city, which had some rich buildings and a great pyramid sacred to HUITZILOPOCHTLI. It was to Tenochtitlán and the court of MONTEZUMA that Hernán Cortés came, and it was from Tenochtitlán that the Spanish retreated under the Aztec attack on June 30, 1520—the *noche triste* of Spanish loss. Cortés returned in 1521, took the city after a three-month siege, razed it, and captured the ruler, CUAUHTÉMOC. He founded MEXICO city on the ruins.

tenor (tĕ'nur), highest natural male voice. In medieval polyphony, tenor was the name given to the voice which had the *cantus firmus*, a preexisting melody, often a fragment of plain song, to which other voices in counterpoint were added. The cantus was arranged in notes of long duration, hence the term *tenor*, from the Latin *tenere*, to hold. In about the 12th cent., when this practice arose, the various parts in polyphonic music were roughly equal in range, and it was some centuries later that tenor came to denote a voice of any certain range. In certain families of instruments the member whose register corresponds to that of the tenor voice is called tenor, e.g., tenor horn and tenor trombone.

Tenos or **Tinos** (both tē'nŏs), island (75 sq. mi., pop. 11,380), off S Greece, in the Aegean Sea, between Naxos and Andros. It is one of the CYCLADES. It produces wine, figs, wheat, and silk and has marble quarries. Tenos was a Venetian colony from 1390 until its fall to the Turks in 1715.

tenpins: see BOWLING.

tense [O.Fr., from Latin, = time], in the grammar of many languages, category of forms referring to the time of an action. In Latin INFLECTION the tenses are usually sets of personal verb forms and are themselves members of moods. English tenses are classified as simple (e.g., *look* and *looked*) or compound (e.g., *have looked*, *am looking*, and *will look*). A tenselike distinction found in many languages (e.g., Russian and Hebrew) is that of aspect, by which verbs refer not to the time but to the completeness of the action, thus, *he is dead* might be translated by a verb in a perfective aspect, and *he is dying* by the same verb in an imperfective aspect. Some terms borrowed from Greek grammar into English suggest aspectlike differences of meaning, these are imperfect (translating *I was reading when . .*), perfect (*I've read the book*), aorist (*I read it last year*), and pluperfect (*I had read it already*).

tent, portable shelter of canvas, skins, felt, matting, or other material usually supported by poles and used chiefly by nomads and hunters. Tents have been used by pastoral peoples since ancient times and are mentioned in the Old Testament and by Homer. Persian tents, usually circular, were early noted for rich hangings and rugs. Army tents developed by ancient peoples include the small, skin-covered tents of the Greeks and the Roman tents of canvas supported by two upright poles and a ridgepole. Medieval military tents were round or oval and were often lavishly hung with silks or furs. Army tents were widely used in Europe in the 17th and 18th cent. but are employed today chiefly for training purposes. Modern types include bell tents with a central pole, the A tents with sides sloping from a ridgepole, and the marquee type used for mess or hospital shelters. The vurt, a circular felt-covered structure of lattice work surmounted by curved poles fitted at the top into a ring forming a smoke hole, has long been used by nomads of the Asiatic steppes. Desert tribesmen of W. Asia and North Africa generally use a ridgepole tent. See also TEPEE.

tent caterpillar, destructive larva of a native American moth. The larvae of the apple-tree tent caterpillar live in broods of 150 or more in a tent of white silk woven in the fork of a tree, usually apple or wild cherry. Attempting to eliminate the insects by clearing away the wild cherry merely drives them to other trees. By day the larvae feed on leaves, spinning a silken path as they go, they return to the nest at night. Soaking the tent with kerosene kills the larvae. Destruction of the

smooth brown egg masses which band the twigs of trees over the winter reduces their numbers but kills useful parasites which may be inside The forest tent caterpillar found in most parts of the United States makes no real tent See *Eastern Tent Caterpillar* (U S Dept of Agriculture, Leaflet 161).

tenure (tĕ'nyûr, tĕ'nyo͝or), in law, manner in which property in land is held The term *tenure* may refer to landholding of any type, it usually implies, however, that the landholder does not have absolute possession but derives his right from some other person This meaning of the word originates from its sense in feudalism, so used, tenure is the antithesis of ALOD, absolute ownership without obligation to others The modern Anglo-American law of land developed out of the institutions of English feudalism established after the Norman Conquest (1066) Theoretically the king was the ultimate owner of all the land, in practice, however, certain land was held according to earlier custom Those who were feudal tenants always held land of another (the lord or landlord) to whom obligations were owed The tenant's type of tenure essentially established his social status, the term *estate* (deriving from status) thus came to be applied to the various tenures The early tenures were classified basically as free or unfree Unfree, or servile, tenure was generally that of the VILLEIN, who performed menial services and was a tenant at the will of the lord (see MANORIAL SYSTEM) The uncertain status of the villein disappeared when, in time, such tenures were recorded in the copy rolls (parchment records) of the manorial court, and the villein became a copyhold tenant The various types of free tenure are sometimes described as means for insuring performance of all the services required by the state Military needs were guaranteed by knight tenure (see KNIGHT, **2**) Spiritual welfare was assured by frankalmoign tenure, ie, granting lands in charity to religious bodies SERJEANTY tenure furnished the king with needed officials and with personal services Finally the vital cultivation of the land was accomplished by socage tenure wherever villeinage was not in use Socage tenure is especially important because it is the basis of all modern estates, while the other classes of tenure have all disappeared The socage tenant, or socager, held his land in return for performing duties to the lord These incidents of socage were essentially like the AIDS and SCUTAGE exacted of knights, like those, they were also eventually commuted to fixed money payments In the development of the law of land perhaps the most important incident was the fine for alienation This was the payment of a sum to the lord for permission to alien (or alienate) the estate, i e, to grant it (sell or make a gift of it) to another The right of free alienation, a cornerstone of modern property law, was partly guaranteed in 1290 by the statute *Quia emptores*, which abolished the fine However, freedom to dispose of land by will on the tenant's death was not established until passage of the Statute of Wills (1540) In inheritance of land PRIMOGENITURE was usually observed, different local customs, notably BOROUGH-ENGLISH and GAVELKIND, were, however, also observed If the tenant had no heir the estate went back to the lord, such reversion was called escheat Socage tenure eventually developed many varieties, commonly called fees (The word *fee* stems directly from *fief* and ultimately from *feud*, both terms of feudal law) Fees are divided into freehold and non-freehold The freehold fees are fee simple, fee tail, and life fee A fee simple is essentially absolute ownership of land, it includes, therefore, complete freedom of alienation and (since 1540) of devising (bestowing by will) At common law it was created by a grant of land to a tenant "and his heirs" Unless the words quoted—the so-called "words of inheritance"—were used in the grant, an estate in fee simple would not arise An estate in fee tail was one given to the donee and to his issue (children) or a class of his issue Thus there might be an estate in tail male or an estate in tail female Read literally, the terms of the grant prevented alienation of the land out of the prescribed line of succession A life fee or a life estate was one which would endure for the lifetime of the grantee and after his death would go to some other person The life tenant had no power of alienation Non-freehold estates include estates for years, periodic estates, estates at will, and estates at sufferance. An estate for years is one which will expire at the end of a fixed period, it may exceed a life fee in duration and the tenant may devise his remaining interest A periodic estate is one for a set term which is automatically renewed if neither party takes steps to terminate it. Most modern leases of real property and buildings establish periodic estates A tenancy at will is one established by agreement but which the landlord may terminate when he wishes An estate at sufferance arises out of the occupation of real property without the landlord's agreement, the tenancy subsists only so long as the landlord does not object. In the evolution of English land law two opposing tendencies were continually at work; the grantors of estates, wishing to establish the family position, sought to prevent alienation, while the grantees, chafing under restrictions which prevented realization of the value of land, wanted to convert more limited estates into fees simple In time the interests of the grantees won out; and by the 18th cent the alienation of land could not be restricted beyond a limited period Thus, the fee tail was made inefficacious after two generations The ultimate effect of this tendency was to assimilate the law of real property in most important respects to that governing personal property (see PROPERTY). At the time of the American colonization this development to free alienation was already well advanced, hence, few of the typically feudal features of land law were adopted in America Today some of the states provide that landownership shall be in free and common socage, and others that it shall be alodial In practice there is little difference See Frederick Pollock, *The Land Laws* (3d ed, 1896); William S Holdsworth, *An Historical Introduction to the Land Law* (1927)

Tenure of Office Act, in U S history, the measure passed on March 2, 1867, by Congress over the veto of President Andrew JOHNSON which forbade the President to remove any Federal officeholder "appointed by and with the advice and consent of the Senate" without the further approval of the Senate It also provided that members of the President's cabinet should hold office for the full term of the President who appointed them and one month thereafter, subject to removal by the Senate With this measure the radical Republicans in Congress hoped to assure the continuance in office of Secretary of War Edwin M. STANTON and thus prevent any interference with the military occupation of the South in their RECONSTRUCTION plan In order to bring about a court test of the constitutionality of the act, Johnson dismissed Stanton, but the U S Supreme Court, intimidated by the radicals, refused to pass on the case Gen Ulysses S GRANT, whom Johnson appointed Secretary ad interim, turned the office back to Stanton when the Senate refused to approve his dismissal, the President claimed that this action violated an agreement Grant made with him Johnson then appointed Gen Lorenzo Thomas Secretary of War, but Stanton, barricading himself in the department, refused to yield Johnson's alleged violation of the Tenure of Office Act was the principal charge in the impeachment proceedings against him When this move failed (May, 1867), Stanton finally gave up The act, considerably modified in Grant's administration, was in large part repealed in 1887, and in 1926 the Supreme Court declared it unconstitutional

Ten Years War, 1868-78, struggle for Cuban independence from Spain Discontent was caused in Cuba by excessive taxation, trade restrictions, and virtual exclusion of native Cubans from governmental posts It grew until 1868, when Carlos Manuel de CÉSPEDES and other patriots raised the standard of revolt On April 20, 1869, the revolutionary republic of Cuba was established, with BAYAMO as provisional capital The capital was burned later in the year, and the republican government was forced to change its seat frequently The warfare was purely guerrilla fighting without real battles, but it raged furiously in the eastern provinces Chief field commanders were Máximo GÓMEZ Y BÁEZ, Antonio Maceo, and Calixto García Iñeguez, late in the war the government was headed by Tomás ESTRADA PALMA Under orders of the Spanish commandant, Gen Valeriano WEYLER Y NICOLAU carried out reprisals against the patriots so bloody and ruthless that he was called the Butcher The Cubans retaliated by attacking all upholders of the Spanish cause U S sympathy for the rebels was intensified by the destruction of U S properties, while the activities of American mercenaries and soldiers of fortune made Spain indignant In 1873 the VIRGINIUS affair brought Spanish-American relations to a crisis It was resolved by Spain's undertaking to pay an indemnity, but bad feeling lingered The war dragged on without decisive incident When internal affairs in Spain settled somewhat, greater attention was given the war in Cuba General MARTÍNEZ DE CAMPOS managed to conclude the Treaty of Zanjón, which nominally granted reforms and gave the Cubans governmental representation, the promises were not kept, and conditions were no better The costly and bitter war was seemingly without result, but actually it foreshadowed the Cuban war of independence that broke out in 1895 and the subsequent Spanish-American War.

Teodoro, Rio. see ROOSEVELT, river.

Teos (tē'ŏs), ancient Greek city, a port on the west coast of Asia Minor, in the present Turkey, not far from Smyrna. It was an Ionian foundation, had a famous temple of Dionysus, and was the birthplace of Anacreon.

teosinte (tēōsĭn'tē), tall, broad-leaved, annual grass (*Euchlaena mexicana*), native to Central America and Mexico. It is related to Indian corn and differs from it chiefly in that the seeds are borne on jointed spikes and are not united into a cob The plant is grown for fodder and in the S United States also as a cover crop. The seed seldom matures N of the Gulf states

Teotihuacán (tāōtēwäkän'), ruins, central Mexico, c 30 mi NE of Mexico city Once the great religious center of the TOLTEC, Teotihuacán flourished from about the 6th cent to the 11th cent A D The valley was then paved with red stucco and graced with the great pyramids that still stand The greatest, the Pyramid of the Sun, is the tallest pyramid in Mexico, 216 ft high, it covers about 10½ acres at its base, and it is so built that the top cannot be seen from the base The Pyramid of the Moon is smaller, and there are also pyramids for the god of agriculture and for QUETZALCOATL The ground plan is symmetrical, and the massive structures supposedly were designed to suggest infinity The motif of the feathered serpent recurs on the sculptured stones The reason for the abandonment of Teotihuacán is not clear Suggested explanations are crop failures, revolts, and religious conflicts The village of Teotihuacán or San Juan Teotihuacán is near by

tepee or **tipi** (both tē'pē), typical dwelling of North American Indians living on the Great Plains It is usually made by arranging tent poles into a conical frame and spreading skins, usually buffalo hide tightly over it An aperture is generally left at the top for smoke The tepee is sometimes very elaborately decorated It is highly mobile and is a stout shelter against the weather, it was thus an ideal dwelling for the nomadic Plains area tribes such as the Sioux and the Blackfoot Because of the adaptability of the tepee to prairie life, Gen Henry Sibley used it as a model for the tent which bears his name

Tepe Gawra (tĕ'pā gourä') [Kurdish, =great mound], locality in Iraq, on the Tigris river and 15 mi N of Mosul In 1927 E A Speiser discovered it to be the site of ancient settlements The work of excavation was directed by Speiser and Charles Bache over a 12-year period In all 26 levels were unearthed, they are numbered from top to bottom The upper levels were not very distinctive, they showed a type of civilization inferior to that found in the lower levels At the sixth level (c 3000–2900 B C) temples and copper implements were found At the ninth level (c 3800 B C) there were tombs containing ornaments of gold and electrum A temple fortress and musical instruments were found between the 11th and the 12th levels The 12th level (c 4000 B C) disclosed a complex architectural layout of buildings with courtyards and interconnecting structures The architecture surpasses that of all the later levels The buildings are whitewashed, this is the earliest known use of lime Most of the implements are stone, hair combs, cosmetics, and beads were also found There are also evidences that the people spun An acropolis built of mud bricks was found at the 13th level (c 4300 B C) A figurine of a mother goddess was found at the 16th level See E A Speiser, *Excavations at Tepe Gawra* (1935)

Tepic (tāpēk'), city (pop 17,547), capital of Nayarit W Mexico, on the Tepic river A commercial center on the coastal line of the Mexican National Railways, the city is in a rich agricultural region that produces grains, coffee, rice, and sugar It retains much of its former colonial charm because of long isolation before the railroad was built Near by is Sanganguey volcano (7,716 ft)

Teplice-Sanov, Czech *Teplice-Šanov* (tĕ'plĭtsĕ-shä'nôf), Ger *Teplitz-Schönau* (tĕ'plĭts-shō'nou), city (pop 22,783), N Bohemia, Czechoslovakia, in the Erzgebirge It is a famous mineral spa known since before Roman times Its slightly radioactive springs are particularly effective against chronic rheumatic diseases Here in 1812 took place the famous encounter between Beethoven and Goethe

Teplitz-Schönau, Czechoslovakia see TEPLICE-SANOV.

Terah (tē'rŭ), father of Abraham. Gen 11.24, Joshua 24 2 Thara Luke 3 34

Teramo (tĕ'rämō), town (pop 16,229), capital of Teramo prov, Abruzzi e Molise, central Italy It is an agricultural center Of pre-Roman origin, Teramo was included in the medieval duchy of Spoleto and later in Naples The Romanesque cathedral was restored in the 14th cent

teraphim (tĕr'ŭfĭm) [Heb, =idols], ancient household idols of the Jews, probably similar to the LARES AND PENATES of Rome They were used for divination Concerning their form not much is known, except that they were sometimes of a man's size Judges 17 3-5, 18 17,18,20 See also Gen 31 30, 1 Sam 15 22, 19 13,16, 2 Kings 23 24.

terbium (tûr'bēum), rare metallic element (symbol =Tb, for physical constants, see ELEMENT, table) It is a member of the RARE EARTHS group of elements, being classed with europium and gadolinium. C. G. Mosander discovered it in 1843

Ter Borch or **Terburg, Gerard** (gä'rärt tur bôrkh', turbûrkh'), 1617–81, Dutch genre and portrait painter, one of the greatest of the Dutch Little Masters He studied with his father and in Haarlem. In his youth he traveled, visiting Germany, France, England, and Italy. In 1648 he attended

the congress at Münster and painted portraits of the delegates which he incorporated in his celebrated group *The Peace of Münster* (National Gall, London) Soon after this he was invited to Spain, where he worked for Philip IV He returned to Holland in 1650 and spent the rest of his life in Deventer Ter Borch portrayed the life and customs of the wealthy burgher class with rare distinction His tiny portraits and interiors are painted with atmosphere and with consummate craftsmanship Their exquisite color, quiet light, and fine reserve make them masterpieces in miniature A pensive serenity seems their characteristic mood The pictures of Ter Borch are rather rare and highly prized. Among the most famous are *Self-Portrait* and *The Toilet* (The Hague), *The Visit* (Rijks Mus), and *The Guitar Lesson* (National Gall, London) Ter Borch is represented in the National Gallery of Art, Washington, D C, the Metropolitan Museum, the Art Institute of Chicago, and the Frick Collection, New York

Terceira (tĕrsā'rŭ), island (c 230 sq mi), in the N Atlantic, one of the central group of the AZORES The chief town is Angra do Heroísmo, which gives its name to the district Cattle are exported A U S air base was established on Terceira in the Second World War

terebinth (tĕr'rubĭnth) or **turpentine tree,** small, deciduous tree (*Pistacia terebinthus*) of the sumac family, native to the Mediterranean region It yielded probably the earliest-known form of turpentine, it is said to have been used in medicine by the ancient Greeks It is now called Chian, Scio, or Cyprian, turpentine

teredo see SHIPWORM

Terek (tyĕ'rĭk), river, 360 mi long, USSR, rising in the N Caucasus on the Georgian side of the central Greater Caucasus in glaciers W of Mt Kazbek It flows NNW through the DARYAL gorge past Dzaudzhikau, then E and NE into the Caspian Sea, forming the northern limit of Dagestan Below Kizlyar it forms a swampy delta c 60 mi wide In its lower course the Terek is used for irrigation The upper valley is paralleled by the Georgian Military Road Under the tsarist regime the Cossacks of the Terek valley formed an autonomous community

Terence (Publius Terentius Afer) (tĕ'rŭns), b c 185 or c 195 B C, d c 159 B C, Roman writer of comedies, b Carthage As a boy he was a slave of Terentius Lucanus, a Roman senator, who brought him to Rome, educated him, and gave him his freedom Six comedies by him survive—*Andria, Heautontimorumenos, Eunuchus, Phormio, Adelphi,* and *Hecyra* All are adapted (with considerable liberty) from Greek plays by Menander and others The writing is skillful, the humor broad, the characters realistic

Teresa, Saint see THERESA, SAINT

Teresh (tĕ'rĕsh), conspirator with BIGTHAN

Teresina (tĕruzē'nu), city (pop 34,695), capital of Piauí state, NE Brazil, on the Parnaíba river It is linked by rail with São Luís (to the northwest) It has cotton and sugar mills and trades in cattle, hides, and rice The name was formerly spelled Therezina

Tereus see PHILOMELA

Terhune, Mary Virginia Hawes* see HARLAND, MARION

Terman, Lewis Madison (tûr'mun), 1877–, American psychologist, b Johnson co Ind, grad Indiana Univ, 1902, Ph D Clark Univ, 1905 He joined the faculty of Stanford Univ in 1910 and was head of the psychology department from 1922 to 1942, when he retired In the First World War he served as a major and helped to deal with psychological testing He is especially known for his application of intelligence tests to school children, and his chief work is the Stanford Revision of the Binet-Simon Intelligence Tests (1916, 2d revision, 1937) He wrote also *The Intelligence of School Children* (1919), *The Terman Group Test of Mental Ability* (1920), *Genetic Studies of Genius* (with others, 3 vols, 1925-30), and *Measuring Intelligence* (with M A Merrill, 1937)

Termez (tyĭrmyĕz'), city (1933 estimated pop 25,000), capital of Surkhan-Darya oblast, S Uzbek SSR, near the Amu Darya river and the Afghan border, on the Kagan-Stalinabad railroad It has textile manufactures (cotton ginning and rug weaving) Termez is one of the hottest cities in the USSR, the temperature rising to 132°F It flourished in antiquity and is the site of several ancient tombs, a 9th-century mausoleum, and a Buddhist monastery

Termini Imerese (tĕr'mēnē ēmārē'zā), city (pop 20,467), N Sicily, Italy A seaport, it has been also noted since ancient times for its warm mineral springs It became important after the destruction (c 408 B C) of the more ancient HIMERA near by. There are some Roman remains

Terminus (tûr'mĭnŭs) [Latin,=boundary], in Roman religion, aspect of JUPITER as god of boundaries The ceremonies of setting up boundary stones were elaborate, and none dared tamper with the boundary for fear of divine retribution The religious feast of boundaries, Terminalia, was on the seventh and sixth days of the kalends of March (Feb 23 and 24, with Feb 25 in leap years) It was the immobility of this feast that forced the peculiar system of counting the days in bissextile years in the CALENDAR

termite (tûr'mīt), social insect of the order Isoptera It is sometimes called white ant, although it is not an ant and is more closely related to the roaches It is not constricted at the waist as ants are A community is made up of dark bodied, winged reproductive individuals from which come the king and queen, the founders of each new colony, pale-bodied, short-winged, or wingless supplementary reproductive forms, and pale-bodied, wingless, sterile workers and soldiers of both sexes In some genera there are no workers and the nymphs do the work There is no pupal stage Termites are divided into soil dwellers and wood dwellers, some of which attack dry wood and others only damp, decaying wood Some termites have protozoa in the alimentary tract which probably digest the cellulose in wood Those which do the most damage in the United States are the subterranean type of earth dwellers They attack only wood which is in contact with the ground or close enough to be reached by making enclosed runways from their underground galleries To prevent the entrance of these termites concrete should be used in the foundation and basement and no wood should be near the soil Treated wood and metal shields are also used In the SW United States are found some species which eat decaying vegetation and do not destroy sound wood Some tropical, earth-dwelling species extend their nests or termitaria above ground, forming mounds which vary from a few feet to 15 to 30 ft in height See *Preventing Damage to Buildings by Subterranean Termites and Their Control* (U S Dept of Agriculture, Farmers' Bul 1911), *Effectiveness of Wood Preservatives in Preventing Attack by Termites* (U S Dept of Agriculture, Circular 683)

Termonde (tĕrmōd'), Flemish *Dendermonde* (dĕndurmōn'du), town (pop 9,306), East Flanders prov, Belgium, at the confluence of the Dender and Scheldt rivers It manufactures carpets and cotton textiles An old place, it has a 14th-century town hall and a 15th-century church, but it suffered considerable damage in the First World War

tern, bird of the Old and New Worlds, smaller than the related GULL Because of their graceful flight, their long pointed wings, and forked tails some terns are called sea swallows They feed on fish The arctic tern migrates from the arctic to the antarctic

Ternate (tĕrnā'tā), volcanic island (41 sq mi, pop 13,022), East Indonesia, in the Molucca Sea W of Halmahera Despite its relatively small size, Ternate has been for centuries one of the most important islands of the Moluccas Ruled by a powerful sultan, it became an important Moslem center in the 15th cent A fort was built here by the Portuguese in 1522, and another by the Dutch in 1607 The principal town is Ternate (pop 7,126), an important transit port for New Guinea and Halmahera Its exports are teak, ebony, rattan, copra, spices, and bird skins

Terni (tĕr'nē), city (pop 37,295), capital of Terni prov, Umbria, central Italy It has iron and steel plants and manufactures of arms, munitions, machinery, and chemicals The waterfalls (the famous Cascata delle Marmore) 4 mi away furnish industrial power The falls were first formed when the Romans connected (272 B C) the Velino with the Nera river Terni is an old Umbrian town, with Roman remains and medieval churches and palaces

Ternopol, Ukraine see TARNOPOL

Terpander (tûrpăn'dur), fl c 675 B C, musician of Lesbos, the earliest definite figure to appear in the history of Greek music He is ascribed as the one who completed the octave and in doing so added the sixth and seventh strings to the kithara Certain poems are also attributed to him

Terpsichore see MUSES

Terra, Gabriel (gbrĕĕl' tĕ'rä), 1873–1942, president of Uruguay (1931–38) In his early career a member of the Colorado party under the leadership of BATLLE Y ORDÓÑEZ, Terra served in several political and diplomatic posts In 1933 he suspended congress, disbanded the council of administration (a body created by the constitution of 1919 as a check on executive power), and abolished the constitution After a new constitution, promulgated in 1934, restored presidential authority, Terra was reelected and ruled largely by dictatorial decree He suppressed a serious revolt in 1935 During his administration, however, the socialization of the republic, begun by Batlle, was continued Terra was succeeded by an elected president, Alfredo Baldomir

Terra Alta, town (pop 1,471), N W Va, near the Md border E of Fairmont, inc 1890 Many cranberry bogs are near here

terra cotta (tĕ'rŭ kŏ'tŭ), form of hard-baked pottery, of wide use in the decorative arts, especially as an architectural material, either in its natural red-brown color, or painted, or with a baked glaze Its prevalence as a medium of artistic expression since the earliest periods of history is indicated by statuettes and vases from predynastic Egypt, polychrome tiles from Assyria and Persia, vases and figures from the Maya, and Chinese vases dating probably from 3000 B C As an architectural material terra cotta first found important use in classic Greece where, beginning about the 7th cent B C, temples and other structures were often enriched with roof tiles, metopes, and various other ornamental features of terra cotta, modeled and painted, similar roof tiles and ornaments are found in Roman and Pompeian work But the golden age of terra cotta was the Renaissance, even while Gothic forms were still predominating in the 14th cent, it was widely used in N Italy and in N Germany, both districts where there is a scarcity of good building stone The towns of Lombardy, Emilia, and Venetia are rich in brick buildings, such as the Certosa di Pavia (begun 1396), which are decorated with a profusion of molded terra-cotta detail—cornices, string courses, window frames, and other exterior ornament Similarly, the 14th- and 15th-century brick Gothic buildings of N Germany, especially of the district around Brandenburg had lavish displays of molded terra cotta the delicate tracery and other Gothic details of the Church of St Catherine at Brandenburg (1400) testify to the high technical skill of the terra-cotta worker of that period As the Renaissance progressed in Italy terra cotta was established not only as an architectural but as a sculptural material, used with consummate skill by the masters Della Quercia and Donatello In its decorative application, it reached high distinction in the 15th cent when the Della Robbia family uniting rare artistic ability with superb technical skill, developed their characteristic and celebrated polychrome enameled terra-cotta reliefs Besides unsurpassed doorway tympanums and decorative medallions, especially the series of Madonna compositions, they used terra cotta as a material for tombs, fountains, and altars From Italy the art spread to other countries, largely through the activities of migrant Italian artisans The Château Madrid, now destroyed, designed by Girolamo della Robbia and built for Francis I, was richly decorated with terra-cotta details It was introduced into Tudor England, probably by the Florentine sculptor Torrigiano, c 1510 In the districts of SE England, where good stone is lacking, important country mansions, such as Layer Marney and Sutton Place, had ornamental detail of molded terra cotta, on Hampton Court, Wolsey employed Italian workmen who produced portrait medallions and other decoration of great merit The use of terra cotta in England ceased, in general, when, after the death of Henry VIII, the Italian artists returned home In modern times terra cotta has been used to some extent in the Victorian Gothic revival, notably by Alfred Waterhouse, and has received widespread application in the United States as an exterior covering for the skeleton steel structure Although often molded into the forms of the classic and other styles, with textures closely simulating various kinds of stone, it has been most successfully used, not imitatively, but frankly on its merits as a lightweight, nonbearing material, perfectly adapted to the task of sheathing a steel frame Hollow blocks or tile of rough terra cotta are used extensively as a structural material for walls and partitions, for floor arches, and for fireproofing In modern practice terra cotta is manufactured from carefully selected clays, which, combined with water and vitrifying ingredients are put through a pugmill or other device to reduce the mass to homogeneity In cakes of convenient size the clay passes to the molding room Individual pieces are modeled by hand, in the case of repetitive pieces the clay is pressed into plaster molds to form a shell about an inch thick, interior webs being added where needed to give strength After partial drying, the molded pieces are finished by hand and then are ready for the most important process, the baking, which is done in a kiln or reverberatory furnace at temperatures which reach 2,300°F The heat is applied and increased gradually, to prevent undue warping, usually over a period of about a week, the time and the temperature depending, of course, upon the size and form of the pieces Allowance must be made for shrinkage in baking, which usually amounts to as much as 1 in in 12 See I C Hill, *Decorated Architectural Terracottas* (1929)

Terra Mater see TELLUS

Terranova di Sicilia, Italy see GELA

terrapin (tĕ'rupĭn), name applied to an edible freshwater TURTLE The diamondback terrapin found in the brackish waters of the S United States is the one most highly prized for food It is raised on farms

Terrebonne (tĕrbŭn'), town (pop 2,209), S Que, on the Mille Iles river and N of Montreal, inc 1860 It has tobacco processing and woodworking and manufactures shoes, fiber products, and agricultural implements

Terre Haute (tĕ'ru hōt', tĕ'rē hŭt'), city (pop 62,693), co seat of Vigo co, W Ind, on the Wabash and c 75 mi WSW of Indianapolis, settled c 1811, platted 1816, inc 1853 It is a commercial and banking center for a farming and mining area and

manufactures paint, coke by-products, iron castings, dairy products, and liquor. The city is the birthplace of Eugene V Debs and Theodore Dreiser, and Paul Dresser is commemorated in Dresser Memorial Park Terre Haute is the seat of Rose Polytechnic Institute (for men, 1874) and a state teachers college Near by are St Mary-of-the-Woods College (for women) and a Federal penitentiary The city has a large stadium, a memorial to soldiers of the First World War A general strike occurred here in 1935 Indian burial mounds have been found near by

Terrell (tĕ'rŭl), city (pop 10,481), N Texas, E of Dallas; settled *c* 1860, laid out 1872, inc 1881 A prosperous old cotton town on the rich blackland prairie, Terrell has small industries and plants processing cotton, lumber, and wheat, milk, and other foods Texas Military College is here Terrell has a state mental hospital

Terrell Hills, city (pop 1,236), S central Texas, a suburb of San Antonio, inc 1939

terrier, any of a number of rather small, alert, lively dogs originally bred chiefly for hunting but now raised mostly for pets One of the well-known terriers is the *Airedale*, a teachable, courageous dog Its wiry coat is marked with a black or dark grizzled saddle nearly covering the back, most of the rest of the body is tan The standard weight of the male is 40 to 45 lb Airedales have been successfully used as dispatch bearers in war, for police duty, and for hunting game The *Bedlington terrier* originated in Northumberland, where it has been known since the early 19th cent The short, thick, hard coat is dark blue, liver, or sandy or a combination of one of these colors with tan Its head somewhat resembles that of a sheep, the skull is narrow, deep, and rounded, and the jaw tapering The legs are moderately long The *Border terrier*, probably one of the oldest breeds of terriers in Great Britain, originated in the Border country It is a working terrier with a thick, coarse coat of red, wheaten, grizzle and tan, or blue and tan, it has a thick undercoat The head somewhat resembles that of an otter, and the males should weigh between 13 and 15½ lb. Breeding a bull dog to a white English terrier (a now extinct breed) is said to have established a dog known as the bull and terrier, which was later crossed with the Spanish terrier to produce the *bull terrier* Present standards demand an all white dog with a dense flat, glossy coat Males may weigh from 12 to 60 lb , the majority weigh more than 35 lb The *cairn terrier*, a hardy short-legged dog, originated in Scotland, where it was useful for routing game and vermin out of rocky hiding places To conform to the standard, males should weigh 14 lb Any color but white is acceptable, and the abundant outer coat should overlie a soft, furry undercoat Bred in the Cheviot Hills of the Border country, the *Dandie Dinmont terrier* is believed to have been first recorded as a distinct type *c* 1700 Immortalized in Sir Walter Scott's *Guy Mannering*, which was published in 1815, the breed became known by the name of Dandie Dinmont, the Scottish farmer in the novel The forelegs are shorter than the hind legs, the hair is about 2 in long, and the coat is either some shade of pepper or of mustard *Fox terriers* are of two kinds, the smooth and the wire-haired, both well known in most parts of the world The smooth-haired fox terrier appeared first, sometime in the 18th cent., and its ancestors are believed to be different from those of the wire-haired Breeding produced two very similar types, the chief contrast is between the smooth flat coat of the smooth breed and the hard, wiry texture of the wire-haired terrier The *Irish terrier* is one of the oldest breeds of terriers and is known as a spirited companion, a good hunter and retriever, and a dog that has served well in wartime The height at the shoulder should be about 18 in , and the weight of the male about 27 lb The thick, wiry coat is of a solid color, usually red, red wheaten, or golden red The *Kerry blue terrier* originated in Co Kerry It is a good sporting and working dog, possessing high intelligence, endurance, and tenacity The soft wavy coat is blue, the shade varying from light to dark in individual dogs Males weigh from about 33 to 38 lb Among the oldest of working terrier breeds is the *Lakeland terrier*, native to Cumberland co , England The dense, wiry coat is frequently black and tan, though it may be blue and tan, blue, red, mustard, wheaten, or grizzle and black The males should not exceed 17 lb. in weight Native to Tibet, where it has been known from about the 12th cent , is the *Lhasa terrier*, much used in its native land as a watchdog indoors Its coat is rather long, straight, dense, and hard, and the hair falls over the eyes Gold or lionlike colors are preferred, but many shades are permissible, from sandy to black, either solid or parti-colored The males stand about 10 in high at the shoulder The *Manchester terrier*, native to England, has been known also as the black-and-tan terrier It is an excellent house dog and a good hunter of small animals, it was originally bred to hunt rabbits and rats. Resembling the much larger Doberman pinscher, its black-and-tan coat is short and glossy. It weighs from about 14 to 22 lb. There are three distinct registered breeds of *schnauzers*, the miniature (averaging about 12 in. in shoulder height), the standard (about 18 in. at the shoulder), and the giant (about 24 in at the shoulder). All have wiry coats of pepper-and-salt mixtures or pure black or black and tan Originally bred in Germany, schnauzers are there considered working dogs. They are especially valued as guard dogs, and they make excellent house dogs The *Scottish terrier* originated in the Highlands of Scotland. The standards of the breed were established *c* 1880 Recognizable by its low-slung silhouette, it has short, strong legs, a broad, deep chest, a shoulder height of about 10 in , a rather broad muzzle, and erect ears. The tail, about 7 in long, is carried high and never cut. The standard weight is between 18 and 20 lb for both sexes In color the coat may be black, steel or iron gray, brindled or grizzled, sandy, or wheaten The wiry outer coat, about 2 in long, overlies a dense undercoat The *Sealyham terrier* was developed in Wales after the mid-19th cent for pursuing prey underground. It may be all white or white with lemon, tan, or badger markings on the head and ears A dense undercoat is overlaid with a wiry topcoat The body length from shoulder to the base of the tail should be about the same as the shoulder height (about 10½ in), and the weight about 20 or 21 lb The *Skye terrier* originated on the Isle of Skye NW of Scotland, where it was used to hunt animals in their rocky haunts It is said to have been a court pet by the mid-16th cent Its coat may be blue or gray or fawn with black-tipped hairs, the undercoat is dense, and the outer coat is about 5½ in long The shoulder height is about 9 in , and the total body length is about 40 in including the approximately 8½-inch head and 9-inch tail The legs are short and straight Males average about 18 lb in weight Sometimes said to be the oldest of the terrier breeds is the *Welsh terrier*, a sporting dog used in Wales especially for hunting the badger, fox, and otter and noted for its good disposition It is black and tan or black, grizzled, and tan, stands about 15 in high at the shoulder, and weighs about 20 lb In early times it was sometimes called the black-and-tan wire-haired terrier and the Old English terrier The *West Highland white terrier* resembles the Scottish terrier in form and size, but its rather long coat is always white It is a hardy dog with a good disposition The *Yorkshire terrier* is a toy breed developed in Lancashire and Yorkshire It is believed that it is most closely related to the Skye terrier but that it includes also among its ancestors the Dandie Dinmont and Manchester terriers and the Maltese spaniel The hair on the body is moderately long, straight, glossy, silky, and dark steel blue, and on the head and chest it is long and tan See also BOSTON TERRIER See American Kennel Club, *Terriers* (1935), A C Smith, ed , *Terriers* (1937), Dan Russell, *Working Terriers* (1948)

territorial waters · see WATERS, TERRITORIAL

territory, in U S history, a portion of the national domain which is given limited self-government, usually in preparation for statehood Territorial governments have been similar in form to those of the states, but have been subject to greater authority of the federal government The ORDINANCE OF 1787, adopted by the Congress of the Confederation of the United States to create the NORTHWEST TERRITORY, furnished the basis upon which territorial governments were later organized under the Constitution of the United States The LOUISIANA PURCHASE of 1803 brought forth the problem of relationship of the United States to newly acquired domains a topic vaguely stated in the Constitution of the United States. The Supreme Court, however, established the right of Congress to establish territorial governments and to admit territories to the Union With the rapid westward expansion of the United States in the 19th cent. and the acquisition of large portions of land through treaty and purchase, Congress shaped territorial boundaries and prescribed government Territorial governments usually have consisted of a governor, a bicameral legislature, a secretary to keep records, and a system of courts A territory may be admitted to the Union as a state after its officers petition Congress for an enabling act, establish a constitution, and meet certain requirements (often regarding population) as set forth by the U S Congress Congress itself may initiate such action A majority of the 48 states of the United States—excluding the Thirteen Colonies, California, Kentucky, Maine, Texas, Vermont, and West Virginia—underwent a territorial stage before they were admitted to the Union The affairs of territories were under the Dept of State until 1873, when their supervision was given to the Dept of the Interior Today, Hawaii, Puerto Rico, and Alaska remain as U S territories and each sends a delegate to Congress without the power to vote In Canada and Australia, a similarly organized portion of the country not yet formed as part of the dominion is known as a territory.

Terror, Reign of: see REIGN OF TERROR.

Terry, Alfred Howe, 1827–90, American general, b Hartford, Conn He studied law at Yale and was admitted to the Connecticut bar in 1849. In the Civil War he led a regiment of Connecticut volunteers at the first battle of Bull Run Terry was made a brigadier general of volunteers in 1862 and took part in various operations along the S Atlantic coast in 1862–63. In 1864 he fought in the Army of the James around Petersburg and Richmond. For his capture of Fort FISHER in Jan., 1865, he was promoted major general of volunteers and made a brigadier general in the regular army In 1876 he directed the campaign against the Sioux and personally led the column converging on the Indians from Dakota The cavalry under Gen George CUSTER, massacred at the Little Bighorn, comprised part of Terry's force He was promoted major general in 1886 and retired in 1888.

Terry, Dame Ellen Alicia, 1848–1928, English actress Of a prominent theatrical family, she made her debut at eight, under the management of Charles Kean, as Mamillius in *The Winter's Tale* and played juvenile roles until her marriage, at 16, to G F Watts, the painter In 1867 she made her first appearance with Sir Henry IRVING, acting Katherina to his Petruchio in *The Taming of the Shrew* After more than 10 years of triumphs in such roles as Portia in *The Merchant of Venice* and Olivia in W G. Wills's adaptation of Goldsmith's *Vicar of Wakefield*, she joined Irving at the Lyceum Theatre to form (1878) their historical partnership, which lasted more than 20 years She had great charm and a picturesque grace, and in the Shakesperian roles of Beatrice, Imogen, Viola, Lady Macbeth, and Juliet she was unrivaled Three times married, she bore two children, Edith Craig and Edward Gordon Craig Her jubilee was celebrated in 1906, and in 1925 she was made Dame of the British Empire See her autobiography, *The Story of My Life* (1908), correspondence with George Bernard Shaw (ed by Christopher St John, 1931), and memoirs (ed by Edith Craig and Christopher St John, 1932), E. G Craig, *Ellen Terry and Her Secret Self* (1931)

Terry, Sir Richard Runciman, 1865–1938, English organist and musicologist He was organist and choir director (1901–24) of Westminster Cathedral He studied and made collections of early English church music and edited the *Westminster Hymnal* (1912), the official hymnal for Roman Catholic use in England He is author of *Catholic Church Music* (1907) and *The Music of the Roman Rite* (1931)

Terry, town (pop 1,012), co seat of Prairie co , E Mont , on the Yellowstone river and NE of Miles City, settled 1884, inc 1912

Tersanctus see SANCTUS

Terschelling (tûrs'khĕl'lĭng), island (37 sq mi , pop 3,514, Friesland prov , NW Netherlands, in the North Sea, one of the West Frisian Islands Its chief resources are agriculture, fishing, and cattle raising

Terskei Ala-Tau see ALA-TAU

tertiary (tûr'shēărē), in the Roman Catholic Church, member of a third order The third orders are chiefly annexes of the FRIARS—Franciscans (the most numerous), Dominicans, and Carmelites They have rules reflecting the spirit of the corresponding order, but adapted to life in the world, hence, the offices to be read are short and the fasts are mild The promises made on joining are not vows, their purpose is the sanctification of the members Secular members of third orders may be priests or laymen, there are also regular tertiaries, e g , many communities of women The name tertiary recalls their origin among the Franciscans, for St Francis founded his order for laymen only after he had instituted his order for men (the friars) and after St Clare had founded the nuns (second order, the Poor Clares) See MONASTICISM

Tertiary period (tûr'shēĕ"rē), name for the major portion of the Cenozoic era, the most recent of the geologic eras The name Tertiary was first applied about the middle of the 18th cent to a layer of deposits, largely sedimentary and unconsolidated, geologically younger than, and overlying, certain other deposits then known as Primary and Secondary Later (*c* 1830) a fourth division, the Quaternary (of glacial, fluvial, and lacustrine deposits) was added Although the recognition of the several divisions of the earth's crust was justifiable for the region to which the designations were originally applied (parts of the Alps and plains of Italy), when the same system was later extended to other parts of Europe and to America it proved inadequate It was realized that the same scheme of classification could not be applied universally since all mountain ranges were not of the same age and did not have the same history The terms Primary and Secondary were generally abandoned, but Tertiary and Quaternary were firmly entrenched in geologic literature and are still used by many. Some authorities recommend that the use of Tertiary and Quaternary also be abandoned. The main divisions of the Tertiary are the Paleocene, Eocene, Oligocene, Miocene, and Pliocene. Sometimes the Paleocene is included in the Eocene At the beginning of the Tertiary, the outlines of the North American continent were very similar to its outlines in historic times; by the close of the period, Europe also had emerged substantially in its historic form. Marine submergences in Europe were moderately extensive, but in North America they

never went beyond the Atlantic, Gulf, and Pacific coasts and the lower Mississippi valley These floods took place chiefly in the Eocene, Oligocene, and Miocene epochs, the continents being generally emergent in the Pliocene epoch Deposits laid down as a result of erosion cover much territory. The Tertiary formations are either loose, earthy materials or quite soft rocks Throughout the Tertiary there was extensive mountain making in both continents, the previously existing mountain ranges of North America being reelevated and the Alps, Pyrenees, Carpathians, and other ranges being formed in Europe. In Asia the Himalayas arose Volcanic activity was almost continuous At the beginning of the period the mammals replaced the reptiles as the dominant animals, each epoch was marked by striking developments in mammalian life Modern types of birds, reptiles, amphibians, fishes, and invertebrates were either already numerous at the beginning of the period or appeared early in its history.

Tertius (tûr'shus) [Latin, =third], amanuensis of the epistle to the Romans Rom 16 22

Tertullian (Quintus Septimius Florens Tertullianus) (tûrtŭl'yun), c 150–c 230, Roman theologian, b Carthage. He was the son of a centurion, was a pagan in his youth, and was thoroughly educated His Latin is vigorous and effective Sentences of Tertullian that have become proverbial are "The blood of martyrs is the seed of the Church" and "It is certain because it is impossible" (often quoted incorrectly as "I believe it because it is impossible") Some of Tertullian's opinions departed from the main course of Christian thought A moderate branch of the ephemeral sect called Montanists (see MONTANISM) was known as Tertullianist Tertullian's writings (especially the *Apologeticus*, one of the chief patristic works) have been published in many editions.

Tertullus (turtŭl'ŭs), accuser of Paul before Felix Acts 24 1,2

Teruel (tĕrwĕl'), city (pop 14,377), capital of Teruel prov, E central Spain, in Aragon, on the Guadalaviar river The city is an agricultural trade center, the province has iron and coal mines and sulphur, zinc, and manganese deposits The center of bitter fighting in the Spanish civil war of 1936–39, Teruel early fell to the Insurgents, was retaken (Jan, 1938) by the Loyalists, and fell again to the Insurgents a few weeks later It was rebuilt after its almost complete destruction in the fighting There are a Renaissance cathedral, a Gothic church, and an imposing two-storied aqueduct (16th cent)

Teschen (tā'shĕn), Czech *Těšín* (tyĕ'shēn), Pol *Cieszyn* (chĕ'shĭn), city and former principality (c 850 sq mi), now divided between Czechoslovakia and Poland A part of Silesia, the principality passed to the house of Austria in 1526 and remained in Austrian hands until 1918 Its important coal mines (the Karvinna basin) and iron deposits and its strategic concentration of several major rail lines made it an object of dispute between Poland and Czechoslovakia, each of which claimed Teschen on ethnical grounds The Conference of Ambassadors divided (1920) the territory, giving the western section, including the Karvinna coal basin, to Czechoslovakia and the eastern agricultural section to Poland The city of Teschen also was divided into a Polish city, Cieszyn (pop 19,536), and a Czech city, Cesky Tesin (Czech *Český Těšín*) (pop 9,986) Poland, however, continued to claim the western section and seized it (Oct, 1938) after the Munich Pact During the Second World War the entire territory was annexed to Germany, but in 1945 the status quo as of 1920 was restored despite Polish claims

Tesla, Nikola (tĕs'lŭ), 1856–1943, American electrician and inventor, b Croatia (then in Austria-Hungary) He emigrated to the United States in 1884, worked for a short period for Edison, and became a naturalized American citizen A pioneer in the field of high-tension electricity, he made many discoveries and inventions of great value to the development of radio transmission and to the field of electricity. These include a system of arc lighting, the Tesla induction motor and system of alternating-current transmission, the Tesla coil, generators of high-frequency currents, a transformer to increase oscillating currents to high potentials, a system of wireless communication, and a system of transmitting electric power without wires He designed the great power system at Niagara He wrote *Experiments with Alternate Currents of High Potential and High Frequency* (1904)

Teslin Lake (tĕs'lĭn, tĕz'–), narrow lake, 80 mi. long, NW British Columbia and S Yukon, ESE of Whitehorse It receives the Nisutlin river near Teslin village, on the east shore. It is drained N by the Teslin river 120 mi. to the Lewes.

tessera: see MOSAIC.

Tessin, Switzerland. see TICINO.

Test Act, 1673, passed by the British Parliament to exclude from public office (both military and civil) all those who refused to take the oaths of allegiance and supremacy, to receive the communion according to the rites of the Church of England, or to renounce belief in transubstantiation. Although directed primarily against Catholics, it theoretically excluded all non-Anglicans In 1678 it was extended to members of Parliament It was modified in 1689 so that most non-Catholics were able to qualify, although some refused to conform and were disqualified until the repeal of the act at the time of CATHOLIC EMANCIPATION.

testament: see NEW TESTAMENT, OLD TESTAMENT, WILL.

testis (tĕ'stĭs) or **testicle** (tĕ'stĭkŭl), paired glandular organ belonging to the male reproductive system In early fetal life the two testes lie in the abdomen and normally descend through the inguinal canal to reach the sac called the scrotum before birth The spermatozoa are formed in the testes, and these organs also have an endocrine function, secreting the male hormone testosterone The secondary male characteristics, e g, growth of hair on the face and chest and the deepening of the voice, are dependent upon the normal secretion of testosterone.

Tesuque (tā-sōō'kā), North American Indian pueblo, central N Mex, in the Sangre de Cristo Mts, c 7 mi N of Santa Fe Its 162 inhabitants are Pueblo Indians of the Tanoan linguistic stock A village of this name was discovered in 1540 by Francisco Coronado, but the present village was settled in the early 18th cent The annual feast day in honor of San Diego is held on Nov 12

tetanus (tĕ'tŭnus) or **lockjaw,** infectious disease caused by the tetanus bacillus (*Clostridium tetani*) The disease is characterized by muscular spasms, hyperactive reflexes, and convulsions Symptoms include a feeling of tension in the jaws, difficulty in opening the mouth, and spasms of the jaw muscle (trismus or lockjaw) Fatalities result from the effect of the toxin on the heart and breathing muscles The germs exist in street dust, earth, and manure, cuts and wounds caused by injuries from gunpowder, firecrackers, rusted or dirty metal, or splinters may become infected by the bacillus or its spore Injection of tetanus antitoxin is an early preventive measure after a wound Immunity is generally produced by a series of injections of tetanus toxoid followed about a year later by a "booster" injection

Tete (tā'tā, tā'tā), town, N Mozambique, on the Zambezi river, founded 1531 by the Portuguese There is a cathedral built in 1563 Cotton, hides, and skins are exported

Teterboro (tē'tur–), borough (pop 40), NE N J, 5 mi E of Passaic, named Bendix 1937, renamed Teterboro 1943 It has large airplane works

Teternikov, Feodor Kuzmich: see SOLOGUB, FEODOR

Tethys (tē'thĭs), in Greek religion, TITANESS, daughter of GAEA and URANUS, wife of the sea-god OCEANUS, and mother of the Oceanids

Teton (tē'tŏn') **1** River rising in several branches in NW Montana about the Continental Divide and flowing 143 mi E to the Marias **2** River, 60 mi long, rising in W Wyoming, in forks which unite in SE Idaho The Teton flows N and W to Henrys Fork river, near Rexburg In its early course it runs through Teton Basin, formerly Pierre's Hole, famous haunt of trappers, here in 1832 was fought a battle with the Gros Ventres

Teton Indians: see SIOUX INDIANS

Teton Range, part of the Rocky Mts, NW Wyo and SE Idaho, just S of Yellowstone National Park and W of Jackson Lake and the Snake river The highest peaks are within GRAND TETON NATIONAL PARK Teton Pass (8,429 ft) and Phillips Pass (10,700 ft) are just south of the park The Teton Range includes part of Targhee National Forest The first white man to see the range is said to have been John Colter c 1807 In 1811 the Astorians, led by Wilson Price Hunt, crossed Teton Pass Fur trappers and traders (the mountain men) frequented the mountains in the first half of the 19th cent See Fritiof Fryxell, *The Tetons: Interpretations of a Mountain Landscape* (1938)

Tetrazzini, Luisa (tĕträtsē'nē, Ital lwē'zä täträttsē'nē), 1871–1940, Italian coloratura soprano She made her debut in Florence in 1895 After appearances in Spain, Portugal, Russia, and Latin America, she made her debut in the United States at San Francisco in 1904, and her London debut in 1907 She sang (1908–10) with the Manhattan Opera Company, afterward appearing with the Metropolitan Opera Company (1911–12) and the Chicago Opera Company. She continued her concert career until 1931 Her sensational success was due to her brilliant high tones and her agility in coloratura work. She wrote two books, *My Life of Song* (1922) and *How to Sing* (1923).

Tetschen, Czechoslovakia: see DECIN.

Tetuán (tätwän'), city (pop. 93,658), capital of Spanish Morocco, founded in the 14th cent. It is situated at the foot of a high hill a few miles from the Mediterranean Sea. Its port is Río Martín Tetuán has extensive light manufacturing and is the industrial center of Spanish Morocco. There is a large trade in livestock and food crops The city was an early corsair stronghold It was rebuilt in 1492 by Jewish refugees from Portugal and became an important commercial settlement It fell to a Spanish general, Leopoldo O'Donnell, in 1860 and was permanently occupied by Spain in 1915 Tetuán, overlooked by its ancient casbah and with many parks, mosques, and fountains, is a tourist center

Tetzel, Johann (yō'hän tĕt's[ĕ]l), 1465–1519, German preacher, b Pirna He joined the Dominicans, He became a well-known preacher and was made inquisitor general of Poland at the instance of CAJETAN In 1503 he preached an INDULGENCE mission for the Teutonic Knights and in 1506 another along the Rhine In 1516 his promotion of the indulgence for the erection of the Church of St. Peter's aroused the indignation of Martin LUTHER, whose theses were in part prompted by Tetzel's preaching In 1518 Tetzel replied to Luther's theses, and their dispute became famous throughout Germany He soon retired, in bad health, to his monastery at Leipzig, where he was overwhelmed with attacks of his enemies and the censures of the papal legate Tetzel has been greatly overrated in importance He had no thought of personal gain from his preaching of the indulgence His teaching on indulgences was not in accord with the doctrine of the Church, the *sine qua non* in gaining an indulgence is to feel contrition for all sins, but Tetzel did not require this for indulgences gained on behalf of the dead, only for those gained for oneself.

Teucer (tū'sur), in Greek mythology **1** Eponymous king of the Trojans, who are also called the Teucri Teucer was the father-in-law of Dardanus **2** Son of Telamon and Hesione and half brother of Telamonian Ajax He was the greatest archer in the Trojan War and a faithful comrade of Ajax He was absent when his brother committed suicide, but when he returned he took a leading part in the struggle to secure Ajax's body. When Teucer returned home he was banished by his father, who mistakenly thought that Teucer was the cause of Ajax's death Teucer went to Cyprus, where he founded the town of Salamis and ruled as king

Teutoburg Forest, Ger *Teutoburger Wald* (toi'tō-bōōr"gur vält'), hilly range, Westphalia, NW Germany, largely in the former state of Lippe It is forested, and it rises to 1,465 ft S of Detmold Near Detmold is a monument commemorating the victory (A D 9) of the Germans under ARMINIUS over the Roman legions under VARUS The three Roman legions were annihilated, Rome never again made a determined attempt to conquer Germany The exact location of the battlefield in the Teutoburg Forest has not been determined.

Teutones or **Teutons:** see GERMANS

Teutonic Knights (tōō-tŏ'nĭk, tū–) or **Teutonic Order,** German military religious order founded (1190–91) as a hospital order during the siege of Acre in the Third Crusade The order was one of nobles and was modeled on that of the Knights Templars and the Knights Hospitalers, with the knights taking the three monastic vows of poverty, chastity, and obedience Under Hermann von SALZA, its grand master early in the 13th cent, the order moved to E Europe and rose into prominence After a brief period (1221–24) in Transylvania, where it fought for Andrew II of Hungary against the Cumans, the order responded to a call (1226) of Duke Conrad of Masovia for a crusade against the heathen Prussians Emperor Frederick II granted it (1226) vast privileges, and Conrad invested it with the lands they conquered from the pagans However, Hermann von Salza placed (1234) his conquests under papal suzerainty and set about to organize them as a separate German state The Poles were long unsuccessful in asserting their claim to suzerainty over the order After some 50 years of successful campaigning the knights had subdued PRUSSIA (q v, the lands later known as EAST PRUSSIA and West Prussia) and founded numerous towns and fortresses Further east took place the expansion of the LIVONIAN KNIGHTS, with whom the Teutonic order was united from 1237 until 1525 The Prussians, who had risen in revolt, were virtually exterminated (13th cent) and replaced by German and Polish settlers The knights administered their lands from Marienburg, but they granted considerable freedom to the cities, many of which joined the HANSEATIC LEAGUE In 1263 the pope allowed the knights to engage in trading, a privilege which they increasingly abused Their seizure (1309) of Pomerelia (see POMERANIA) from Brandenburg brought on intermittent warfare with Poland, which claimed the province In 1410 the Poles and Lithuanians routed the order at TANNENBERG, and by the second Treaty of Torun (1466) the knights ceded West Prussia and Pomerelia to Poland, retaining only East Prussia as a Polish fief Their capital was transferred to Königsberg The fatal blow to the order was delivered in 1525 by its own grand master, ALBERT OF BRANDENBURG, who accepted the Reformation, declared Prussia a secular duchy, and was invested as duke by Sigismund I of Poland Stripped of all importance, the Teutonic Order continued in Catholic Germany until 1805 It was later revived in Austria, but merely as an honorary body The habit of the order was a white robe with a black cross embroidered in gold

Teutonic religion: see GERMANIC RELIGION.

Tevere: see TIBER.

Teviot (tē'vĕŭt, tĕ'-), river, principally in Roxburghshire, Scotland Flowing northeast for 40 mi , it enters the Tweed at Kelso Hawick is the leading town on the Teviot

Tewfik Pasha (Mohammed Tewfik) (tū'fĭk pä'shŭ, päshä'), 1852–92, khedive of Egypt (1879–92) He acceded to office when his father, Ismail Pasha, was deposed In 1880 Tewfik accepted joint French-British control over the nation's finances This act provoked a nationalist uprising, which forced Tewfik to appoint a cabinet hostile to the European powers The British and the French, however, quickly compelled the cabinet to resign Later, in 1882, Great Britain, alarmed by renewed agitation, bombarded Alexandria and landed troops France had refused to support this action and ended participation in Egyptian affairs, thus leaving Great Britain in sole control As further concession to British demands Tewfik abandoned Egypt's claim to sovereignty over the Sudan and agreed to a condominium there with Great Britain Tewfik, who was generally Western in his outlook, devoted much attention to educational and legal reforms He was succeeded as khedive by his son Abbas Hilmi

Tewkesbury (tūks'burē), municipal borough (1931 pop 4,352, 1943 estimated pop 4,667), Gloucestershire, England It is on the Upper Avon near its junction with the Severn, which is here crossed by an iron bridge built by Telford The site was occupied c 715 by a monastery, refounded in the 12th cent , it became one of the richest and most widely renowned Benedictine abbeys in England The church, built in 1123, is an impressive ruin, with a noteworthy west front Dramatic festivals are held here, a survival from the Tewkesbury festival plays which began in the 17th cent Tewkesbury has many old timbered houses It was once noted for mustard production and now has minor manufactures. At "Bloody Meadow," south of the town, Edward IV in 1471 defeated the Lancastrians in the Wars of the Roses

Tewksbury, town (pop 6,261), NE Mass , ESE of Lowell, settled 1637, set off from Billerica 1734. It was the site of an Indian colony.

Texarkana (tĕk"särkă'nu), city (pop in Texas, 17,019, in Ark , 11,821) on the Texas-Ark border The part in Arkansas is the county seat of Miller Co Texarkana was settled in 1873 A rail center, shipping cotton, livestock, and dairy stuff from the area, it also has cotton-oil mills, woodworking factories, and fertilizer, feed, and clay-products plants

Texas (tĕk'sus), state (267,339 sq mi , 1940 pop 6,414,824, 1949 estimated pop 7,532,000), SW United States, admitted 1845 as the 28th state (a slaveholding state) Austin is the capital The largest state in the Union, Texas is roughly spade-shaped The handle is the Panhandle of Texas, thrusting in the extreme north into Oklahoma, with New Mexico on the west The eastern shoulder is separated from Oklahoma on the north by the Red River. The western shoulder has New Mexico on the north From the western tip of Texas at El Paso, the Rio Grande runs SW to the Gulf of Mexico as the international boundary between Texas and Mexico, with El Paso, Del Rio, Laredo, and Brownsville as important Texas border towns From the mouth of the Rio Grande the Gulf Coast sweeps in a curve northeast to the mouth of the Sabine river, which forms much of the eastern boundary with Louisiana In the northeast, Texas has a short border with Arkansas and the two-state city of Texarkana What is generally called E Texas is the land between the Sabine and the Trinity river, a land of pine-covered hills and cypress swamps The remnants of great cotton plantations founded before the Civil War still have a faded glory, and the pines still supply a lumbering industry that formerly made Longview one of the big sawmill towns in the United States The wealth of E Texas, however, is drawn from the large and rich oil fields discovered in the 1920s and dramatically shown to the visitor by the wells that crowd the very houses in Kilgore Basically more important, perhaps, are the many truck farms in the red hills about Palestine and Tyler. The low plains of the Gulf Coast, perpetually wet with heavy rains in the east, grow drier to the south and become semiarid as they near the Rio Grande The greatest of the ports and the largest of Texas cities is Houston with its variegated industries, originally based largely on the oil from the seemingly inexhaustible coastal wells Galveston is the older port and not only has its share of industrial development but also is, with its lovely island setting, something of a winter playground, Beaumont grew rapidly after the first big oil strike in Texas, and Corpus Christi, long established, boomed in the Second World War as a naval base Huge sulphur deposits are only partially exploited, but sulphur (together with oil) was the first wealth of the area around Freeport that has in recent years been the scene of great industrial development. Great cotton farms in sections along the coast have been superseded somewhat by diversified agriculture, but rice growing, long established, has even expanded in recent years as vegetable and truck farms have also increased. The rest of the coast is, however, not equal in intensified farming to the irrigated section along the lower Rio Grande called the Rio Grande Valley, there winter vegetables as well as citrus fruits and other crops are grown in profusion. Between these developed areas on the coast are wide undeveloped areas largely given over to cattle ranching Though the farmlands first occupied fully when Americans came to Texas in the early 19th cent were the bottomlands of the lower Brazos and the Colorado, it was only when settlers moved into the rolling blackland prairies of central and N central Texas that the agricultural wealth of Texas was realized in one of the most fertile regions of the world It is by far the most heavily populated part of the state, the small town predominates, but there are thriving cities San Antonio is just beyond the western edge, smaller Waco is at its heart Fort Worth (still a stock-shipping and packing center as well as a farm trade center and industrial city) lies to the north, not far from the commercial, industrial and cultural metropolis on an area that stretches far beyond the limits of central Texas—Dallas Austin, long little more than the capital and an overgrown farm-market town, developed in the 1930s and 1940s into a sizable industrial city It lies almost on the Balcones Escarpment, a fault line that, curving NE from the Rio Grande near Del Rio to the Red River, more or less marks the western edge of the central plains, in central Texas the line is visible to the casual traveler in a series of waterfalls and rough, tree-covered hills To the west is the Edwards Plateau and the north central plains, which are essentially extensions of the Great Plains area but are sharply divided from the high, wind-swept, and canyon-cut Llano Estacado (Staked Plains) by the Cap Rock, which runs from northeast to southwest in the Panhandle There are here no traces of the subtropical lushness of the coastal plain, the climate is strictly continental with blizzards blowing strong across the flat land in winter Even the Red River area, which is not on the high prairies, has a climate like that of the central United States and the farming and oil center of Wichita Falls has some sharp cold in winter, though it does not know the severity that visits the flourishing metropolis of the Panhandle plains, Amarillo, or the center of dry-land farming, Lubbock Settlers were late in coming to the high plains Cattle ranching began in the late 1870s and huge ranches persisted after the wheat farmers began to cultivate sections of the treeless land and, though reduced, persist even today Grain and oil have, however, revolutionized the economy and have built industries The Panhandle is semiarid like all of W Texas (all of the state west of long 100°W) There the land, rising to the western mountains with high sweeping plains and rough uplands, offers the finest scenery of the state, the region beyond the Pecos river has the celebrated Davis Mts and the wilderness of the Big Bend of the Rio Grande as well as the highest point in Texas, in the Guadalupe Mts Fort Stockton and Fort Davis are yearly visited by thousands of vacationers The dry fields of W Texas are still given over to ranches and, except for small irrigated areas, yield principally beef and wool and mohair The newest of the big Texas oil fields is that of W Texas, and in the 1940s Odessa and Midland rocketed to wealth and size The cities of the area are few and generally small (San Angelo, Abilene, Sweetwater, and Big Spring), except, of course, for the booming industrial center of El Paso It was in the El Paso area that the first white settlement was made at Ysleta by settlers driven forth from the present New Mexico by the Pueblo revolt of 1680 There were also missions in that area connected with the New Mexican missions and some a little farther down the Rio Grande. The Comanche, the Apache, and the other Indians did not welcome the white newcomers, and the settlements within Texas did not flourish Already the region was long known to the Spanish That curious figure, whose life seems almost a fantasy—Álvar Núñez Cabeza de Vaca—had been shipwrecked on the coast in 1528 and had wandered across the present state The expedition of Francisco Vásquez de Coronado probably crossed extreme N Texas in 1541, and the survivors of the unhappy expedition of De Soto certainly visited the Red River country the next year. Still more unhappy was the expedition that brought the French to Texas La Salle, searching in vain for the mouth of the Mississippi along the sandy Gulf shore, disembarked with his colonists in 1685 and founded a melancholy little settlement, attempts to reach the Mississippi overland were futile, mutinous followers murdered their leader, and disease and the Indians wiped out the post so unintentionally founded. Fear of French rivalry, however, stirred the Spanish to make the first moves to hold the region, even though it yielded no precious metals. The first Spanish missions in E Texas were founded in 1690 on the Neches, the first of them being San Francisco de los Tejas (after the Tejas or Texas Indians). The Indians resisted the appeal of the gospel, and the missionaries were soon withdrawn (1693). New attempts were made later, again under the spur of the French threat from Louisiana, but Spanish occupation was desultory and by the beginning of the 19th cent. there was little settlement in Texas except about San Antonio (founded 1718), Nacogdoches (mission established temporarily 1716, permanently founded 1779), Goliad (presidio established 1749), Laredo, and some scattered colonists along the lower Rio Grande. Americans were already looking at Texas with covetous eyes, and the filibustering expedition of Philip Nolan (1800–1801) preceded the Louisiana Purchase, after the United States had become a neighbor, new filibusters appeared in the Gutiérrez and Magee expeditions (1812–13) and the adventure of James Long (1819) Untenanted Galveston Island had also attracted the pirate Jean Laffite as well as Mexican revolutionists bent on winning independence from Spain The Mexican revolution was already in process, and though the first grant to bring American settlers into Texas was made to Moses Austin by the Spanish government, his son, Stephen F Austin had to get the grant confirmed by the newly independent Mexican government in 1821 before he could bring his settlers into the region between the Brazos and the Colorado river It was this colony of farmers and plantation owners that began the history of Texas as a social unit, and the gentle Austin is justly called the father of Texas. The American settlements grew rapidly and other *empresarios* were allowed, like Austin, to bring in settlers, in a decade a considerable American colony was established with Brazoria, Washington (or Washington on the Brazos), San Felipe de Austin, Anahuac, Gonzales, and other towns as settlements. There was conflict between the Anglo-American and the Mexican officials, which grew worse Mexico itself was undergoing a period of confused politics attending the birth of a republic, and sporadically attempts were made to tighten control over Texas and guard against the Anglo-American seizure that the Mexicans understandably feared Such incidents as the Fredonian Rebellion served to heighten those fears. The settlers in Texas, drawn from all parts of the United States with a predominance of men from the slaveholding South, were forming a compact society and sturdily resisted any arbitrary action and all real Mexican control Tension mounted, and a complex series of rebellious moves (as viewed by the Mexicans) and unredressed grievances (as viewed by the Texans) led to open revolt in 1835 and a declaration of independence on March 2, 1836 The Texas Revolution was in full swing A large Mexican force was sent to subdue the rebels The heroic defense of the Alamo, and the Mexican massacre of Texans captured at Goliad stiffened Texans against surrender And though the war went badly for them for a brief time, as the commander in chief, Samuel Houston, retreated with his men and settlers abandoned their homes in haste, Houston proved his ability by his surprise attack and victory over Santa Anna in the battle of San Jacinto (April 21, 1836) With this stroke Texas was freed It became an independent republic and remained under its Lone Star flag for nearly 10 years Houston, the hero of the revolution, was the leading figure of the republic, serving twice as president (others were Provisional President David G Burnet, Mirabeau B Lamar, and Anson Jones) There was in Texas a strong movement from the beginning for annexation to the United States, and it was strengthened by the economic difficulties of the republic, but negotiations dragged on and the antislavery forces in the United States opposed annexation The intrigues of British and French diplomats in Texas aroused the United States, and the question was an important issue in the election of 1844 Texas was annexed in 1845, and the annexation was the principal cause of the Mexican War Texas was thus brought under the fifth of its six flags (Spanish, French, Mexican, Lone Star, United States, Confederate). It came under the sixth in 1861 when the state seceded from the Union and joined the Confederacy The planter class was strong and carried the state for the South despite the opposition of Sam Houston and his followers The chief contributions of Texas to the Confederacy in the Civil War were in many hard-fighting men and in provisions Reconstruction brought great lawlessness, aggravated by the appearance of roving desperadoes. The legacy of Reconstruction was, as in the rest of the South, the breakdown of the plantation system, the rise of tenant farming, the unsolved problem of white-Negro relations, and a solid hold of the Democratic party on state politics These results were, however, not so marked as elsewhere partly because much of the land was still unsettled, more perhaps because the Texas tradition is only partly Southern. The Western elements were strengthened greatly immediately after the Civil War, when stockraising became the dominant strain in Texas life From the open range and then from great fenced ranches Texas cowboys drove the cattle north over the long trails to the railheads in Kansas and even farther to the grasslands of Montana Even today the symbols of Texas are more the "ten-gallon" hat, the cattle brand, and spurs and saddles than any reminiscence of the Old South As the railroads pushed through, the farmlands

were rapidly settled from the 1870s on, and the small farmers (the "nesters") came into violent and even bloody conflict with the men of the great ranchers Many European immigrants—especially Germans and Bohemians (Czechs)—took part in the peopling of the plains and continued to come to Texas in the 20th cent , when many Mexicans also entered the rapidly industrializing state The transformation of Texas into a partly urban and industrial society was greatly hastened by the quick wealth of oil Though petroleum had been found around Nacogdoches by the time of the Civil War and commercial production began at Corsicana in the '90s, the first of the spectacular oil discoveries was Spindletop near Beaumont in 1901 Others came in more or less rapid succession over the years, on the Gulf Coast, in N Texas, in central Texas, in E Texas, and finally in W Texas Agriculture, cattle, oil, and varied chemical and manufacturing interests (greatly quickened in the Second World War) continued to feed the wealth and the growth of the state, which suffered less than most of the nation in the great depression of the 1930s Though the decline of cotton caused serious trouble, the shift to diversified agriculture and the introduction of many new crops (e g , peanuts and soybeans) prevented any wholesale suffering, and it is symptomatic that there has never been any sizable radical agricultural party in Texas Except for a small Republican stronghold in the Rio Grande Valley, all politics are conducted within the Democratic party, this fact does not prevent great variety Among the several distinguished governors, for example, John IRELAND was strictly conservative, and James S HOGG a liberal There has been more than a touch of flamboyance about many political careers, notably the flaming ups and downs of James E FERGUSON and his wife, Miriam A Ferguson, and the later campaigns of W Lee O'Daniel Chief institutions of higher learning are the Univ of Texas, Texas Agricultural and Mechanical College, Southern Methodist Univ , Baylor Univ , Texas Christian Univ , and the Rice Institute The state flower is the distinctive bluebonnet The early "classic" history of Texas is that by Henderson Yoakum (1856), and the old history by John Henry Brown (2 vols , 1892–93) as well as his *Indian Wars and Pioneers of Texas* (1896?) are still read See C W Ramsdell, *Reconstruction in Texas* (1910), J H Smith, *The Annexation of Texas* (1911), E C Barker, *Mexico and Texas* (1928), Federal Writers' Project, *Texas a Guide to the Lone Star State* (1940), George Sessions Perry, *Texas* (1942), L W Newton and H P Gambrell, *A Social and Political History of Texas* (latest ed), I M Steward and J L Clark, *The Constitution and Government of Texas* (latest ed), *Texas Almanac* (latest ed)

Texas, Agricultural and Mechanical College of, at College Station, land-grant and state supported, for men, chartered 1871, opened 1876 It has schools of agriculture, arts and sciences, engineering, and veterinary medicine It is organized on a military plan. The college has a firemen's training school, a museum, a radio station, and state research offices (entomology, fertilizer, forest, and wildlife)

Texas, University of, mainly at Austin, state supported, coeducational, chartered 1881, opened 1883 It has colleges of arts and sciences (with journalism), engineering (with architecture), fine arts (with music), and pharmacy, schools of commerce, dentistry (at Houston), education, law, and medicine (with a nursing college, at Galveston), and an institute of Latin American studies There are bureaus of research in anthropology, municipal government, radio education, social science, biochemistry, industrial chemistry, ceramics, brucellosis, zoology, economic geology, cotton, and Texas history, an industrial and commercial research council, museums of anthropology and geology, Texas Memorial Museum, and McDonald Observatory The library is especially rich in English literature and in Latin American and Texas history, there is a noted rare-books collection, including the Wrenn and Stark libraries The school owns valuable oil lands

Texas Christian University, at Fort Worth, coeducational, opened 1873, chartered 1874 by the Disciples of Christ, at Thorp Springs It moved to Waco in 1895 and to Fort Worth in 1910 Founded by Addison and Randolph Clark, it was called Add-Ran College or Add-Ran Christian Univ until 1902 It has a college of arts and sciences, schools of business, education, fine arts, and nursing, and Brite College of the Bible

Texas City, city (1940 pop 5,748, 1947 estimated pop 14,000), S Texas, on Galveston Bay and NW of Galveston, inc 1912 This industrial city and port expanded in the Second World War with a huge tin smelter (built 1941–42), chemical plants, and refineries Water-front buildings were leveled, about 500 lives were lost, and property worth millions was destroyed when the explosion of a nitrate-laden ship set off (April 16, 1947) a series of blasts and fires Rebuilding was rapid

Texas College of Mines and Metallurgy: see EL PASO

Texas Rangers, mounted fighting force organized (1835) in the midst of the Texas Revolution In the time of the republic they became established as the guardians of the Texas frontier, particularly against marauding Indians The Texas Rangers at first consisted of three companies of 25 men each Said to "ride like Mexicans, shoot like Tennesseans, and fight like the very devil," the rangers were unique as a picked police force in that they never drilled, were not required to salute officers, and had as their only standardized feature the six-shooter In their first decade of operation, the rangers effectively quelled lawlessness in Texas on frequent occasions, and in the Mexican War (1846–48) these ununiformed men served as scouts and guerrilla fighters, gaining a wide reputation for their valor and effectiveness In the late 1850s the rangers fought various battles with the Comanche, and in the Civil War, Terry's Texas Rangers gained renown In the Reconstruction era the Texas Rangers were continually engaged in controlling outlaws, feuding groups, and Mexican marauders and were responsible for keeping law and order along the Rio Grande In 1874 the Texas Rangers were organized for the first time on a permanent basis, six companies of 75 men each were constituted to defend the frontiers and act as peace officers The heyday of the great cattle business, with its feuds and shootings, its outlaws and "rustlers," was also the heyday of the The Texas Rangers In the 20th cent the police responsibilities of the rangers, around whom much lore had built up, decreased, and by 1935 their forces diminished considerably By act (1935) of the Texas legislature, the rangers were merged with the state highway patrol under the jurisdiction of the state department of public safety See W P Webb, *The Texas Rangers* (1935)

Texel (tĕk'sul, tĕ'sul), island (64 sq mi , pop 9,254) North Holland prov , NW Netherlands, in the North Sea The largest and southernmost of the West Frisian Islands, it is a breeding ground for sea birds and has grazing land for sheep raising

Texoma, Lake see DENISON DAM

textiles, all fabrics made by weaving, felting, knitting, braiding, or netting, from the various textile fibers (see FIBER) Yarns, fabrics, and tools for spinning and weaving have been found among the earliest relics of human habitations COTTON fiber has been spun and woven in India for some 30 centuries, and cotton fabrics of exquisite fineness were known there by the 5th cent B C American aborigines also wove both cotton and woolen cloth of fine texture from antiquity LINEN cloth has been used in the Nile valley since the 15th cent B C and silk in China for perhaps an equal span, DAMASK, SATIN, and other fine weaves developing early on primitive hand looms Early Greek graves have disclosed wool garments with borders woven and embroidered with colored threads India's ancient cashmere shawls are among the finest woolen textiles ever woven About the 4th cent , Constantinople began to weave the raw silk imported from China A century later silk culture spread to the Western countries, and textile making developed rapidly By the 14th cent splendid silks, wools, and linens were being woven on the hand looms of the Mediterranean countries in practically all the basic structures known to modern craftsmen, and there has been no change in fundamental processes since that time, although methods and equipment are radically altered Textiles are classified according to their component fibers into silk, wool, linen, and cotton, such synthetic fibers as rayon, nylon, and paper, and some inorganic substances, as CLOTH OF GOLD and glass and asbestos cloth They are also classified as to their structure or weave, according to the manner in which warp and weft cross each other in the loom (see WEAVING) Value or quality in textiles depends on several factors, such as the quality of the raw material used and the character of the yarn spun from the fibers, whether clean, smooth, fine, or coarse and whether hard, soft, or medium twisted Fineness of yarn is a most important factor, as in the ancient Indian shawls and muslins Density of weave and finishing processes are also important elements in determining the quality of fabrics TAPESTRY, sometimes classed as EMBROIDERY, is a modified form of plain cloth weaving The making of CARPET AND RUGS belongs to a special branch of textile industry Other specially prepared fabrics not woven are felt and bark (or tapa) cloth, which are beaten or matted together, and a few in which a single thread is looped or plaited, as in crochet and netting work and various laces. Modern textile manufacture is mostly carried on in factories, with highly specialized power looms, but many of the finest velvets, brocades, and table linens are still made by hand See Richard Glazier, *Historic Textile Fabrics* (1923), Perry Walton *The Story of Textiles* (new ed , 1936); Ethel Lewis, *The Romance of Textiles* (1937), M D Potter, *Fiber to Fabric* (1945). For books for the consumer, see G G Denny, *Fabrics* (5th ed , 1942), I B Wingate, *Textile Fabrics and Their Selection* (rev ed , 1942), Mary Woolman and E A McGowan, *Textiles* (3d ed , 1943), Lucy Rathbone and Elizabeth Tarpley, *Fabrics and Dress* (new ed , 1948)

Th, chemical symbol of the element THORIUM

Thackeray, William Makepeace (thă'kurē), 1811–63, English novelist He was born in Calcutta, India, where his father was in the service of the East India Company In 1817, after the death of his father, he was sent to relatives in England He attended Charterhouse from 1822 to 1828, but his school days there were very unhappy In 1829 he entered Trinity College, Cambridge, where he and Edward FitzGerald became intimate friends In 1830 Thackeray left Cambridge without a degree and traveled in France and Germany Upon his return to England, he entered the Middle Temple to study law, this venture provided him with little save experiences which he later used in *Pendennis* In 1833 he became editor of a periodical, the *National Standard*, but in the following year he settled in Paris to study art He had by this time lost all of his patrimony, partly through gambling and partly through the failure of a Calcutta bank In Paris he met Isabella Shawe, whom he married in 1836 He returned to England in 1837, supporting himself and his wife by literary hack work and by illustrating Four years later occurred the tragedy of his life his wife became hopelessly insane at the birth of their third daughter In 1837–38 in *Fraser's Magazine* had appeared his "Yellowplush Correspondence," satiric thrusts at the popular writer of fiction, Bulwer-Lytton Bulwer-Lytton was also ridiculed in *Catherine* (1839–40) and *Barry Lyndon* (1844) and, with Disraeli and others, in *Novels by Eminent Hands* (1847) Throughout the 1830s and '40s Thackeray's novels were appearing serially together with miscellaneous writings in several magazines, chief among them being *Fraser's* and *Punch* Between 1842 and 1846 Thackeray became involved in a relationship with the wife of his old friend, Rev William Brookfield, the affair was probably innocent, but it was terminated at the protest of the husband In 1848 Thackeray achieved real popularity with his satirical *Book of Snobs* and in the same year rose to major rank among English novelists with *Vanity Fair*, with its famous description of the battle of Waterloo His reputation was increased in 1850 with the completion of the partly autobiographical *Pendennis* In 1851 he delivered a series of lectures, *English Humorists of the Eighteenth Century*, which he repeated in a tour of the United States in 1852–53 In 1852 had appeared his novel of 18th-century life, *Henry Esmond* *The Newcomes*, in which some of the characters of *Pendennis* reappear, came out serially in 1853–55 In 1855–56 he delivered in the United States another series of lectures, entitled *The Four Georges* (pub 1860) His next novel, *The Virginians* (1857–59), is a continuation of the Esmond story and contains material based on his American tour In 1860 Thackeray became editor of the newly founded *Cornhill Magazine*, but he soon resigned His last novels, however, appeared in its pages—*Lovel the Widower* (1860), *The Adventures of Philip* (1861–62), and the unfinished historical romance, *Denis Duval* (1864) Thackeray's parodies of and satires against romantic sentiment probably represent the recognition and distrust of sentimentality in himself A man of satirical, if not cynical nature, he expressed the futility and vanity of human life He had been disillusioned by life, and this disillusionment is reflected in his work A man of genius, he wrote only under financial pressure and hated the necessity of making a living The most complete edition of his works includes introductions by his daughter Anne, Lady Ritchie (26 vols , 1910–11) His *Letters and Private Papers* (4 vols , 1945–46) were edited by G N Ray Some of the more recent biographies and studies are G E B Saintsbury, *A Consideration of Thackeray* (1931), H N Wethered, *On the Art of Thackeray* (1938), John W Dodds, *Thackeray a Critical Portrait* (1941), Lionel Stevenson, *The Showman of Vanity Fair* (1947), Laura Benét, *Thackeray of the Great Heart and Humorous Pen* (1947)

Thaddaeus (thădē'us), apostle see JUDE, SAINT

Thahash (thā'hăsh), son of Nahor Gen 22 24

Thailand (tī'lănd, –lund), kingdom (198,242 sq mi , pop 17,324,291, SE Asia, before 1939 and during 1945–49 known officially in English-speaking countries as Siam Bangkok is the capital Thailand lies between Burma and Indo-China, and a southward extension into the Malay Peninsula gives it a long coast line on the Gulf of Siam The heart of the country, the central plain, is given over almost entirely to rice culture and is watered by the Menam and lesser rivers In this thickly populated basin are Bangkok and the old capital, Ayuthia In the northwest, Thailand is mountainous, teak is cut in the extensive forests, hauled to the rivers by elephants, and floated to market The principal city is Chiang Mai The mountains stretch south along the boundary with Burma on the west Most of E Thailand is occupied by the Korat plateau, a region of pastures and forests where (as in the mountain areas) livestock raising is dominant in the

agricultural economy. Peninsular Thailand (which includes PHUKET and other offshore islands) is largely jungle, tin, tungsten, and rubber are produced and exported, but in far less quantity than from the states of Malaya to the south. Besides rice, of which a surplus is normally available for export, crops include tobacco, pepper, coconuts, betel nuts, and sesamum. Second in importance to Thailand's farms are its marine and fresh-water fisheries. Mineral resources other than tin (gold, lead, gems) are exploited on a small scale, salt is an important product of the Korat plateau, lac is cultivated in some sections. Apart from rice mills and sawmills, industrial plants are few and are clustered in and around Bangkok. Trade is chiefly in the hands of the large Chinese minority, and as a consequence there is tension between Thais and Chinese. Like other countries of SE Asia, Thailand was peopled through successive migrations from central Asia into territory inhabited by primitive Negrito tribes. Groups of low material culture still survive in the mountains and jungles, while in the more settled areas Malays, Annamese, Khmers or Cambodians, and Mons can still be distinguished from the dominant Thai or Siamese. Most of the people are Buddhists. When the migrants from central Asia reached the central plain of Siam, they came into contact with Indian culture, and Hinduized city-states were founded. These in turn had to struggle against new incursions from the north and from Burma, as well as against the rising power of the KHMER EMPIRE, which became dominant A.D. c 1000 in the Menam valley and on the Korat plateau. In the 13th cent. the Khmers were expelled by the Thai king of Sukhothai, on the upper Menam. The power of Sukhothai extended briefly over all of S Siam, Luang Prabang, and the Malay Peninsula. Its decline was hastened by the rise of a new line of Thai kings, they founded Ayuthia (c 1350), and the history of modern Siam was begun. After consolidating their power in S Siam and the Malay Peninsula, the lords of Ayuthia launched the long series of indecisive wars against the Lao state of Chiang Mai and against Cambodia which were to end only in the 19th cent. The 16th cent. saw the beginnings of warfare with the Burmese and the first contacts with Europeans. For nearly a century after 1511, Portuguese traders and missionaries dominated Siam's relations with the West. In the early 17th cent. the Dutch and British broke Portugal's monopoly. Later the French (aided by the Greek adventurer Constantine Phaulkon, who had risen to power at the Siamese court) launched a bid for dominance in Siam that called forth an antiforeign coup d'état (1688). Phaulkon was killed, and Siam was closed to most foreigners for over a century. The Burmese destroyed Ayuthia (1767), the Siamese rallied and restored their state, but the capital was shifted to Bangkok. In 1782 the Chakkri dynasty, thereafter the ruling house, came to the throne. In the 19th cent., the authority of Bangkok was at last established over N Siam, but the independence of the kingdom was threatened when Great Britain extended her sway to Malaya and Burma, while France carved out an empire in Indo-China. By opening their ports to European trade, by bringing in Western advisers, by strengthening the central administration as against the hereditary provincial chieftains, and by playing off British against French interests, the Siamese managed to stay free. Even so, the establishment of Siam's boundaries meant the surrender of its claims to Laos (1893) and parts of Cambodia (1907) and of its suzerainty over Kedah, Perlis, Kelantan, and Trengganu (1909). The modernization of Siam took place under an absolute monarchy and was chiefly the work of Mongkut (reigned 1851–68) and CHULALONGKORN (reigned 1868–1910). In 1932 a coup d'état forced PRAJADHIPOK (reigned 1925–35) to grant a constitution, but the movement towards democratization was checked in 1938 by the accession to power under Ananda (reigned 1935–46) of Luang Pibul Songgram, leader of the military party. Thailand took advantage (1940) of the French defeat in the Second World War to renew its claims in Cambodia and Laos. Japanese "mediation" resulted (1941) in concessions to Thailand. Thailand was occupied by Japanese troops in Dec., 1941, and in 1942 the government of Luang Pibul declared war against Great Britain and the United States. In 1943 Japan "granted" to Thailand territory in N Malaya and in the Shan States. In 1944 Luang Pibul was replaced. The existence of an anti-Japanese underground won Siam moderate treatment at the end of the war, though it was forced to return the territories acquired in 1941 and 1943 to French and British control. Inflation, corruption in government, and the mysterious death of King Ananda (1946) all contributed to the overthrow of the post-war ministerial government by a new coup (1947) under the leadership of the former dictator, now known as Phibun Songgram, who became premier again in 1948. After 1946 the limited royal power was exercised by a regency for King Phumiphon, who succeeded to the throne while at school in Switzerland; in March, 1950, Phumiphon returned to Thailand to prepare for his coronation. See W. A. Graham, *Siam* (2d ed., 1924); Virginia Thompson, *Thailand* (1941), Ralph Linton, ed., *Most of the World* (1949)

Thaïs (thā'ĭs), 4th cent. B.C., Athenian courtesan. At best semihistoric, she is said in romantic story to have been the mistress of Alexander the Great and later the mistress of the king of Egypt. Legend also says that she persuaded Alexander to burn Persepolis, this story is patently false.

Thaïs, fl. 4th cent. A.D., legendary Alexandrian courtesan. She was beautiful, wealthy, and licentious but was converted to a life of Christian piety and penitence by St. Paphnutius. Other stories make Bessarion her opponent. The story probably has no basis in fact. It supplied a framework for a novel by Anatole France, about which Massenet composed his opera *Thaïs*.

Thales (thā'lēz), c 636–c 546 B.C., Greek Milesian philosopher, one of the Seven Wise Men of Greece. He was said to have predicted the eclipse of May 28, 585 B.C. Thales, generally conceded to be the first Greek philosopher, substituted scientific for mythological interpretations in his study of the nature of the physical world. He believed that water was the origin of all things—the basic stuff of all matter out of which everything arose and into which everything resolved itself. This assumption implied the unified character of all things, carrying with it the idea that nature could be understood on rational grounds without reference to the supernatural. Thales was renowned in his day as an astronomer, a statesman, and a mathematician.

Thalia (thul'ĭə), name of one of the MUSES, also name of one of the GRACES.

thallium (thă'lēum), rare metallic element, soft and malleable (symbol=Tl, for physical constants, see ELEMENT, table). It tarnishes in air, forming an oxide, and it combines with various elements to form salts. All of these are poisonous. Some were formerly employed in depilatories, but their use is now prohibited. The element is present in pyrites and is found in the ores of a few metals. It is obtained from flue dust produced by certain ores. The metal is used in alloys, as with lead. Small quantities are used in making optical glass and some other products. Discovered spectroscopically in 1861 by Sir William Crookes, thallium was isolated independently by Crookes and by C. A. Lamy in 1862.

Thamah (thā'mu), variant of TAMAH.

Thamar (thā'mar), variant of TAMAR 1.

Thame (tām), river rising in Buckinghamshire, England, just N of Aylesbury and flowing 40 mi. SW across Oxfordshire to the Thames near Dorchester.

Thames (tĕmz), river in S Ontario, rising NNW of Woodstock and flowing 163 mi. SW past London and Chatham to Lake St. Clair WSW of Chatham. It is navigable to Chatham, near which was fought (1813) the battle of the Thames (see THAMES, BATTLE OF THE) in the War of 1812.

Thames (tĕmz), and *Tamesis*, principal river of England. It rises in Gloucestershire on the east slope of the Cotswold Hills in four headstreams: the Thames or Isis, rising near Cirencester, the Churn, rising SSE of Cheltenham, the Coln, rising ESE of Cheltenham, and the Leach, rising ENE of Cirencester. The stream bounds part of Gloucestershire, Oxfordshire, Buckinghamshire, Middlesex, Essex, Wiltshire, Berkshire, Surrey, and Kent and flows through London co. In its upper course—about and above Oxford—it is often called Isis. The tributaries include the Kennet, Loddon, Wey, Mole, Darent, Medway, Windrush, Cherwell, Thame, Lea, and Roding. It is joined by canals (including the Oxford, Thames and Severn, and Grand Junction) with a wide area and is navigable by barges to Lechlade, Gloucestershire, below which there are a number of locks, it is tidal to Teddington. The part of the stream near London Bridge is known as the Pool. The port of London stretches from London Bridge to Blackwall. The Thames Conservancy Board was established in 1857, the docks and tidal part of the river have been administered by the Port of London Authority since 1909. Part of the river is of great beauty, is much used for boating, and is still popular for fishing. The total length, Thames Head to the Nore, is 210 mi., the width at London Bridge is about 900 ft., at Gravesend 2,700 ft. The upper valley of the Thames is a broad, flat basin of alluvial clay soil, through which the river winds and turns in constantly different directions. At Goring Gap the valley narrows, dividing the Chiltern Hills from the Berkshire Downs. The lower valley forms a second broad basin. The land around the river was formerly marshy fen, and the ancient roads were far from the river banks. In the Middle Ages the valley was very prosperous, with many famous religious houses and several large towns, including Oxford, Reading, and Windsor. The absence of coal has militated against the growth of industrial towns, and, up to London, the valley is predominantly agricultural, with scattered villages. Among many interesting archaeological discoveries made in the valley are fossils of sea shells and a human skull of the Paleolithic period. In London the river is crossed by 15 bridges, including LONDON BRIDGE, Westminster Bridge (built 1739–50; rebuilt 1862), Waterloo Bridge (built 1811–17; rebuilt 1935–44), and Tower Bridge (built 1894). See F. V. Morley, *River Thames* (1926), H. M. Tomlinson, *Below London Bridge* (1934), E. Arnot Robertson, *Thames Portrait* (1937), Robert Gibbings, *Sweet Thames Run Softly* (1940).

Thames, battle of the, engagement fought on the Thames river near Chatham, Ont. (Oct. 5, 1813), in the War of 1812. Gen. William H. HARRISON led an American force of about 3,000 against a British army of about 800 regulars commanded by Gen. Henry A. Proctor, reinforced by 1,200 Indians under TECUMSEH. After driving the British from Detroit, Harrison followed their retreating army into Ontario and up the Thames river until General Proctor was forced to give battle. A cavalry charge, led by Col. Richard M. Johnson, broke the British ranks, and the Indians offered the only real resistance. Tecumseh was slain in battle, thus completely destroying the Indian confederacy he had raised against the United States. By the battle of the Thames, U.S. control in the Northwest was restored.

Thanet, Octave: see FRENCH, ALICE.

Thanet, Isle of (thă'nĭt), island forming the northeast portion of Kent, England, bounded by the sea and branches of the Stour river. It terminates in North Foreland, which has a lighthouse. The isle was occupied by the Romans, who had a fort guarding the Wantsume, the channel of which has long since dried up. The surface is generally low, but cliffs form part of the shores. Most of the towns, which include Ramsgate, Margate, and Broadstairs, are seaside resorts.

Thanksgiving Day, national holiday in the United States commemorating the harvest reaped by the Plymouth Colony in 1621, after a winter of great starvation and privation. In that year Gov. William Bradford proclaimed a day of thanksgiving, and the feast was shared by all the colonists and the neighboring Indians. Although similar observances were held locally, they were sporadic and at no set time. The first national Thanksgiving Day, proclaimed by Washington, was not until Nov. 26, 1789. Lincoln, urged by Mrs. Sarah J. Hale, revived the custom in 1863, appointing as the date the last Thursday of November, thus stabilizing the month. Until Franklin D. Roosevelt, who in 1939, 1940, and 1941 proclaimed Thanksgiving the third Thursday in November, succeeding presidents have set apart the same day. Because of contradiction between Roosevelt's proclamation and some of those of state governors, Congress passed a joint resolution in 1941 decreeing that Thanksgiving should fall on the fourth Thursday of November. The day is observed by church services and family reunions, the customary turkey is a reminder of the four wild turkeys served at the Pilgrims' first thanksgiving feast. See Ralph Linton and Adelin Linton, *We Gather Together* (1949)

Thapsacus (thăp'sukus), ancient city, N central Syria, on the Euphrates. It was at a ford, which was the chief river crossing for many hundreds of miles and was used by various conquerors, including Alexander the Great. It is the Tiphsah of 1 Kings 4:24.

Thapsus (thăp'sus), ancient town, on the coast of Tunisia, c 100 mi. SSE of Carthage. In 46 B.C., Julius Caesar was besieging the town, the last stronghold of Pompey's party, when Metellus Pius SCIPIO and the Numidians offered battle and were defeated, with a tremendous loss of men. This ended opposition to Caesar in Africa.

Thara (thā'ru), variant of TERAH.

Tharshish (thar'shĭsh) **1** Benjamite. 1 Chron. 7:10. **2** Variant of TARSHISH 1.

Thasos (thā'sŏs), island (170 sq. mi., pop. 13,829), off Macedonia, in the N Aegean Sea, belonging to Greece. Olive oil, wine, timber, and lead-zinc ores are its chief products; stock raising and fishing are important occupations. In legend its earliest colonists were led by Thasus, son of Poseidon. It was famous in ancient times for its gold mines, which were exploited by the Phoenicians. In 708 B.C., Thasos was colonized by Parians, among them the poet Archilochus. It was subdued by the Persians and later fell to Athens. A revolt was put down by Cimon in 463 B.C. In the 14th and 15th cent. Thasos was held by the Genoese, then by the Venetians.

Thatch, Edward: see BLACKBEARD.

Thatcher, town (pop. 1,106), SE Ariz., NE of Tucson, in an irrigated farming area in the Gila valley, founded 1881 by Mormons. It has a junior college.

Thaulow, Fritz (tou'lō), 1847–1906, Norwegian landscape painter, studied in Paris and was influenced by impressionism. He painted canals, riverbanks, and snow scenes in a style at once bold and true to nature. His *Winter in Normandie* (Luxembourg Mus., Paris) is characteristic. Thaulow is represented in various Swedish galleries and in the Walters Art Gallery, Baltimore.

Thaxter, Celia Laighton, 1835–94, American poet, b. Portsmouth, N H. Her successive homes on the Isles of Shoals off New Hampshire gave the background for her poems in *Drift-Weed* (1879) and other volumes and for the prose *Among the Isles of Shoals* (1873) See her letters (ed by Annie Fields and Rose Lamb, 1895).

Thaxter, Roland, 1858–1932, American botanist, b Newton, Mass , grad Harvard (B A , 1882, Ph D , 1888); son of Celia Thaxter He became assistant professor (1891), then professor (1901, professor emeritus from 1919) of cryptogamic botany at Harvard From 1888 to 1891 he was mycologist at the Connecticut Agricultural Experiment Station He wrote numerous scientific papers and monographs and after 1907 was the American editor of the English *Annals of Botany*

Thayer, Abbott Handerson (thâr), 1849–1921, American painter, b Boston, studied in Paris with Gérôme and at the École des Beaux-Arts Known first as a painter of animals and of landscapes, he became noted for his idealized figures of women, among these *The Virgin* (Freer Gall of Art, Washington, D C), *Caritas* (Mus of Fine Arts, Boston), and *Young Woman* (Metropolitan Mus) He also did some excellent work in portraiture—*The Artist's Son* and *The Artist's Daughter* (Freer Gall) and a portrait of Alice Freeman Palmer (Wellesley College) His landscape *Monadnock* is in the Metropolitan Museum, and a fine still life, *Roses*, is in the Worcester (Mass) Art Museum With his son Gerald Thayer, he wrote *Protective Coloration of the Animal Kingdom* (1909), which was used in camouflaging in the First World War Thayer became a member of the National Academy of Design in 1901

Thayer, Eli, 1819–99, American abolitionist, b Mendon, Mass , grad Brown, 1845 He was a Free-Soiler in the Massachusetts legislature (1853–54), organized the New England EMIGRANT AID COMPANY for sending antislavery settlers to Kansas, and was a Republican member of the House of Representatives (1857–61) He wrote *A History of the Kansas Crusade* (1889)

Thayer, Joseph Henry, 1828–1901, American clergyman and New Testament lexicographer, b Boston, grad Harvard, 1850, and Andover Theological Seminary, 1857 He was professor of sacred literature (1864–82) at Andover Theological Seminary and from 1884 was professor of New Testament criticism and interpretation at Harvard Divinity School He translated German grammars of the Greek New Testament—that of Winer in 1869 and that of Buttmann in 1873 In 1887 appeared the scholarly *Greek-English Lexicon of the New Testament* (a revised and enlarged translation by Thayer of Grimm's edition of Wilke's *Clavis Novi Testamenti*)

Thayer, Sylvanus, 1785–1872, American soldier and educator, b Braintree, Mass , grad Dartmouth, 1807, and West Point, 1808 During the War of 1812 he served as an engineer, and afterwards he was sent to Europe to study military schools and fortifications From 1817 to 1833 he served as superintendent at West Point, which he so thoroughly reorganized, placing it on a sound basis, that he is known as the "father of the Military Academy " He endowed an academy at Braintree and established and endowed (1867) the Thayer School of Civil Engineering at Dartmouth

Thayer, William Sydney, 1864–1932, American physician, b Milton, Mass., M D Harvard, 1889 Affiliated with Johns Hopkins from 1891, he was associate and later successor of Osler A noted diagnostician and an authority on internal medicine, he made special studies of malaria, typhoid fever, and endocarditis His works include books on medicine and a biography of Osler See biography by E G Reid (1936)

Thayer, city (pop. 1,692), S Mo , at the Ark line, in a timber and farm area, settled 1882, inc 1890.

theater, term which includes almost everything connected with dramatic art, e g , the drama itself, the building in which it is performed, the acting, and the scenery Although it takes various forms, the theater, as some form of dramatic expression, can be found in every historical period and in every part of the world In nearly all cultures drama can be traced to ceremonies connected with religious rites. There is a record of an Egyptian passion play, written before 2000 B C , which is based on the death and resurrection of the god Osiris Greek drama, to which all Western drama owes its character, originated in the ceremonial worship of the god Dionysus, in whose honor at certain times of the year the people put on masks and danced and sang Thespis is said to have stepped out from the group c 534 B C and recited certain passages alone When Aeschylus added a second actor, the theater as we know it was born The Greek theater, which reached its height in 5th-century Athens, made use of traditional stories, a chorus which commented on the action, and highly conventionalized acting. The theater was open air, and the performance took place in the bottom of a natural bowl (the orchestra or dancing place), with the seats in horizontal rows on the sides of the hills, as in a modern stadium The annual dramatic festival, in which dramatists competed for the prize, was an important part of the religious and communal life of ancient Greeks After Aeschylus the great writers of tragedies were Sophocles and Euripides; the best-known writer of comedies was Aristophanes Although the cultural traditions were similar, the theater in Rome never achieved the same importance that it did in Greece Neither the tragedies of Seneca nor the comedies of Plautus and Terence were on the same level as Greek drama at its best Under the Roman Empire the theater degenerated and later, in the face of the opposition of the Christian Church, virtually disappeared. Meanwhile in the Orient the theater, as in early Greece, was evolving from religious ritual into a secular drama The classic period of the Hindu theater was approximately from A D 300 to 800 Limited to the higher castes, Hindu drama was presented at royal courts without any stage or scenery It was governed by very complicated rules, and Hindu traditions did not allow violence, sharp conflicts, or strong emotions to be presented The most famous Hindu plays are *Sakuntala* by Kalidasa and *The Little Clay Cart*, both of which have been frequently translated into English In Burma, Cambodia, and Java the theater has always remained closely attached to religion, and the drama in those countries is dependent mainly on singing, dancing, and pantomime In Java the shadow play, first with puppets and later with human actors, was highly developed and has survived into modern times In China symbolic dances go back to earliest history, but the theater as it survives today was founded, according to tradition, by Emperor Ming Huang A D c 700 Unlike that of India, the Chinese theater is popular rather than aristocratic and literary The story is stereotyped and unimportant The drama depends on the music, the costumes, and the highly conventionalized gestures of the actors Every movement and pose of the actors represents a definite emotion In modern times the Chinese actor Mei Lan-fang has been acclaimed throughout the world In Japan there are two types of theater, the *no* play (see JAPANESE DRAMA) and the *kabuki*, the popular drama In medieval Europe, Greek and Roman dramas were almost forgotten, and another form of theater evolved out of the rituals of the Church. In the 10th cent HROSWITHA, a Benedictine nun, wrote six comedies somewhat in the style of Terence but on religious themes By the 13th cent the MIRACLE PLAY was popular throughout Western Europe The plays gradually became more secular, and farcical situations were introduced, as in the *Second Shepherds' Play* The first wholly secular play in English was *Ralph Roister Doister* (pub 1566) by Nicholas Udall In the Renaissance the Roman plays of Seneca and Plautus were revived, especially in Italy Also in Italy, sometime in the 16th cent , the COMMEDIA DELL' ARTE, a thoroughly professional theater, arose This type of comedy had no fixed script, but depended on stock situations, stock characters, and improvised dialogue It had an important influence on Shakspere and Molière The PUPPET plays, which go back to ancient times, were also popular in Western Europe throughout the Middle Ages and reached their best-known form in Italy in the 16th and 17th cent The Italian *Punchinello* became Punch in English, and Punch-and-Judy characters have continued to our own time In 17th-century Italy modern OPERA was born In Spain the great dramas of this period were written by Lope de Vega Carpio and Pedro Calderón de la Barca In England in the late 16th and early 17th cent the great Elizabethan dramatists were rising to fame Shakspere, Marlowe, Ben Jonson, John Webster, Thomas Dekker, Massinger, Thomas Middleton, and John Ford In London, theater buildings sprang up—the Theatre (1576), probably the first playhouse with which Shakspere was connected, the famous Globe (1599), the Rose (1587), and the Swan (1594)—and throughout England comedies and tragedies, plays in prose and verse, as well as masques, were extremely popular Chief among the actors of the period were Richard Burbage and Philip Henslowe In theater architecture and settings the great name was Inigo Jones During the Puritan ascendancy (1642–60) theaters were officially closed William D'Avenant, however, presented his opera *The Siege of Rhodes* before a small audience at Rutland House in 1656 This performance saw the introduction of women to the English stage in the person of Mrs Colman In Shakspere's time women's parts had been taken by boys The Restoration period was a time of great theatrical activity There were two licensed theaters, D'Avenant's and Thomas Killigrew's. Among the famous actors of the time were Thomas Betterton and his wife (Mary Saunderson), Mrs Bracegirdle, and Nell Gwyn. Dryden, Wycherley, Congreve, Otway, Farquhar, Etherege, Vanbrugh, and Aphra Behn were leading Restoration dramatists The 17th cent was the most important period of the French theater. Until 1629 the only theater in Paris was the Hôtel de Bourgogne, but in that year a rival theater, the Théâtre du Marais, was opened; its chief dramatist was Pierre Corneille, whose *Cid*, first played in 1637, was the first great French tragedy Molière, both writer and actor of comedies, played first in the provinces, in 1658 he was summoned to Paris to play before the king. The third great French dramatist, Jean Racine, made his debut in 1664. The interest of Louis XIV in the theater led to the founding of the state theater, the Comédie Française, in 1680, its influence was toward a strict classicism The chief figure of the French theater in the 18th cent was Voltaire, who strove to make acting an honored profession The greatest actor of the period was Talma Among the actresses were Adrienne Lecouvreur and Marguerite Montansier Italy produced two dramatists in this century, Goldoni and Gozzi In England it was a period of great actors—Colley Cibber, David Garrick, Peg Woffington, and the Kembles (including Mrs Siddons) John Gay's *Beggar's Opera* (the first English comic opera) opened in 1728 After 1737 only two theaters were licensed, Drury Lane and Covent Garden The latter was the scene of two great comedies, Oliver Goldsmith's *She Stoops to Conquer* (1773) and Richard Sheridan's *Rivals* (1775) The German theater was of comparatively late development Before the 18th cent the only important name in German drama was that of the Nuremberg meistersinger Hans Sachs, who in the 16th cent produced over 200 plays When Johann Christoph Gottsched undertook to reform the German stage in the early 18th cent , there were no great native dramas, and all theatrical performances were dominated by the buffoonery of the HANSWURST For some time Gottsched and the talented actress and producer Karoline Neuber worked together, but in 1739 they quarreled and Gottsched established his own company in Leipzig Until c 1775 most of the plays presented in Germany were translations from the French At that time Shakesperian drama began to be popular, and with the plays of Lessing, Goethe, and Schiller a great native drama was born Weimar became the literary and theatrical center. The romantic movement in the early 19th cent brought many changes into the European theater In France, Hugo, Dumas fils, and others wrote plays which violated the classic rules, and in England almost all the famous poets, including Shelley and Byron, attempted to restore poetic drama to the English theater But the 19th-century theater as a whole belonged to the actors rather than the playwrights The number of theaters increased tremendously, especially in London, Paris, and Berlin The most popular plays, however, were revivals The audiences went to see great actors, such as Edmund Kean, the Kembles, Macready, and Mme Vestris, and later Ellen Terry, Beerbohm Tree and Henry Irving, rather than to see a new, significant play On the Continent great actors such as Salvini, Coquelin, Rachel, and later Sarah Bernhardt and Eleonora Duse dominated the stage Toward the close of the century, however, important new plays appeared Under the influence of Henrik Ibsen, a realistic drama which dealt with social problems and was often close to the speech of ordinary people spread throughout Europe Its influence can be seen in the plays of George Bernard Shaw and, in a very different manner, in the plays of Tolstoy, Anton Chekhov, Johan Strindberg, Arthur Schnitzler, and Gerhart Hauptmann The tendency away from conventionality to realism can also be seen in the more realistic scenery and the more natural acting Technological advances made possible the illusion of greater reality on the stage Improvement in lighting, for example, enabled the actors to make use of facial expressions rather than having to depend on sweeping gestures In the United States the theater had been popular from colonial days But there were few American playwrights of any note in the 19th cent , and the theater depended on revivals and on great actors, the most famous of which was Edwin Booth Other famous actors included the much-loved Joseph Jefferson, Edwin Forrest, Modjeska, Ada Rehan, and, in the 20th cent , the Barrymores, Maude Adams, Richard Mansfield, and Mrs Fiske Augustin Daly and Steele MacKaye were important producers, and Bronson Howard and Clyde Fitch were realistic playwrights. In theater building itself, the 19th cent saw the disappearance of the forestage or apron which had extended into the orchestra, the removal from the stage of boxes for spectators, and the lengthening of the auditorium from a semicircular to its present ovoid form Many experiments in theater design were undertaken in the early 20th cent , especially in Germany Among notable stage designers of the modern theater are Max Reinhardt, Max Littman, and the Americans Robert Jones, Lee Simonson, and Norman Bel Geddes. The chief innovation in Western drama in the early 20th cent was the growth of the Little Theater movement Dissatisfied with the established commercial theater, André Antoine in the late 19th cent established a Théâtre Libre in Paris The idea of a theater free from tradition and the demands of immediate commercial success spread throughout Europe. The most famous were the Moscow ART THEATRE and the ABBEY THEATRE in Dublin, which produced

plays by W B Yeats and J. M. Synge In the United States three important Little Theaters were formed in 1915· the Provincetown Players, which produced the early plays of Eugene O'Neill; the Neighborhood Playhouse, and the Washington Square Players, which later developed into the Theatre Guild These new groups, stimulated by George Pierce Baker's 47 Workshop at Harvard, influenced the establishment of Little Theaters throughout the country Among the most notable are those in Pasadena, Cleveland, Detroit, and Dallas In recent years important theater groups have been organized by many colleges In 1935–39 the U S government sponsored the Federal Theatre Project, which brought the theater into many communities where it had been almost forgotten since the advent of MOVING PICTURES The project also provided jobs in the theater for thousands of actors, writers, designers, and directors In recent years many new experiments have taken place in both the American and European theater, and the years since 1920 have witnessed expressionist plays by Ernst Toller (in Germany), Luigi Pirandello (Italy), and Eugene O'Neill and poetic drama by T S Eliot and Maxwell Anderson, as well as prose dramas by Jean Giraudoux, Jean Cocteau, and André Gide in France and Sidney Howard, S N Behrman, Philip Barry, Clifford Odets, William Saroyan, Lillian Hellman, Tennessee Williams, and Arthur Miller in the United States Popular musical comedies have been written by Richard Rodgers and Oscar Hammerstein 2d and others, and music dramas by Gian-Carlo Menotti In these musical plays, dancing (especially ballet) has become prominent once again As a whole, however, the theater today, as distinct from the early forms in Greece, emphasizes the importance of the original play and naturalness and simplicity in acting, scenery, and costume See COMEDY, DANCE, MASQUE, MOVING PICTURES, PANTOMIME, STAGE DESIGN, TRAGEDY, articles on individual actors and dramatists See Glenn Hughes, *History of the Theatre* (1928), Sheldon Cheney, *The Theatre* (1929), Oscar Cargill, *Drama and Ritual* (1930), Allardyce Nicoll, *The Development of the Theatre* (new ed , 1937), Margarete Bieber, *The History of the Greek and Roman Theater* (1939), Edmund Fuller, *A Pageant of the Theater* (1941), Thomas Parrott and R H Ball, *A Short View of Elizabethan Drama* (1943), Barrett Clark and George Freedley, ed , *A History of Modern Drama* (1947), Barrett Clark, ed , *European Theories of the Drama* (rev ed , 1947), E M Gagey, *Revolution in American Drama* (1947)

Théâtre Français see COMÉDIE FRANÇAISE

Theatre Guild, organization formed in 1919 by members of the Washington Square Players, New York city, and financed at first by Otto H Kahn, later largely by subscription It had as its directors Philip Moeller, Lawrence Langner, Rollo Peters, Maurice Wertheim, Lee Simonson, Theresa Helburn, and Helen Westley The group rented the Garrick Theater and opened with Benavente's *Bonds of Interest* In 1925 the Guild opened the theater which it had built on 52d St Its success was continuous, and in 1927 it began to present plays outside New York city and in several New York theaters Among the Guild's productions have been *John Ferguson, R U R , Marco Millions, Strange Interlude, Heartbreak House, Saint Joan, The Adding Machine, Goat Song, Porgy, Mourning Becomes Electra, The Time of Your Life, Oklahoma!* and *The Iceman Cometh* The Guild dramatists include Shaw, Eugene O'Neill, Molnar, Sidney Howard, S N Behrman, Elmer Rice, Franz Werfel, Maxwell Anderson, and William Saroyan Among those who have appeared in Guild plays are Pauline Lord, Alice Brady, Ina Claire, Joseph Schildkraut, Alfred Lunt, Lynne Fontanne Helen Hayes, Philip Merivale, Otto Kruger, and George M Cohan See W P Eaton, *The Theatre Guild the First Ten Years* (1929), Harold Clurman, *Fervent Years* (1945); E M Gagey, *Revolution in American Drama* (1947).

Thebes (thēbz), city of ancient Egypt LUXOR and KARNAK now occupy parts of its site, which is famous for its magnificent ruins of temples, statues, obelisks, and tombs, including that of TUTANKH-AMEN. The city developed at a very early date from a number of small villages, particularly one around modern Luxor (then called Epet), but remained relatively obscure until the rise of a Theban family which established the XI Dynasty (c 2160 B C) The city rapidly became prominent as the royal residence and as a seat of the worship of the god AMON At Thebes, also, was the necropolis where the kings and nobles were entombed in great splendor in crypts cut into the cliffs on the west bank of the Nile The city's greatest period was that of the empire, during which it served as a reservoir for the immense wealth which poured in from the conquered countries The temples built to Amon at this time are still among the most impressive sights at Thebes As the empire began to decay and the locus of power to shift to the Nile delta, Thebes went into decline For a time in the 11th cent B C., it was a separate political entity under sacerdotal rule. Thebes was sacked by the Assyrians in 661 B.C., an event referred to in the Bible (Nah 3 8–10), where the city is called No [city]. The Romans sacked it in 29 B C , and by 20 B C. a Greek visitor to the site reported only a few scattered villages Though great damage has been done to the ruins at Thebes, they are still among the most splendid in the world, and the site of the ancient city has been the scene of much important archaeological work See J H. Breasted, *A History of Egypt* (1929), James Baikie, *A History of Egypt* (1929)

Thebes (thēbz), chief city of Boeotia, in ancient Greece. It was traditionally founded by CADMUS, for whom its strong fortress or acropolis (the Cadmeia) was named Thebes is rich in associations with Greek legend and religion, as such names as LAIUS, OEDIPUS, the SEVEN AGAINST THEBES, EPIGONI, and SPHINX, all involved with the city, attest In Greek history the city played an important part Sometime before 1000 B C , it was settled by Boeotians and rapidly became their leading city At the end of the 6th cent B C began its opposition to Athens and its struggle to maintain its position in Boeotia and in Greece In the Persian Wars, Thebes, motivated by hostility to Athens, sided with the Persians Upon the defeat of the Persians, Thebes was punished, and only the intervention of Sparta, which saw in the city a balance to the power of Athens, saved it from destruction Thebes supported Sparta against Athens in the Peloponnesian War but, fearing Spartan territorial ambitions, withdrew this support and joined the confederation against Sparta in 394 B C Sparta was able to place a garrison in Thebes in 382 B C , but the city was freed by one of its great generals, Pelopidas, three years later This freedom was insured by the Spartan defeat at Leuctra (371 B C) by Theban forces under Epaminondas, another famous military leader of the city Thebes joined Athens against Philip II of Macedon and shared in the defeat at Chaeronea (338 B C) A revolt at Thebes caused Alexander the Great to attack and destroy the city (336 B C) Cassander rebuilt Thebes in 315 B C , but it never regained its former greatness, though for a time in the Middle Ages it enjoyed some commercial prosperity The modern Thevai or Thivai (pop 12,428) occupies the site of the Theban acropolis, of which, as of the walls, there are some remains Thebes was the home of the poet Pindar and the painter Aristides See J B Bury, *A History of Greece* (rev. ed., 1913).

Thebez (thē'bĕz) [Heb , =brightness], fortified town where Abimelech was killed, probably NE of Shechem Judges 9 50, 2 Sam 11 21

The Dalles (dălz), city (pop 6,266), co seat of Wasco co , N Oregon, on the Columbia and E of Portland A mission, founded in 1838 and abandoned in 1847, was replaced by a fort around which a settlement grew up c 1852, it was incorporated in 1857 as Dalles City, but custom labeled it The Dalles A gorge and rapids, rendering the river nonnavigable at this point, were by-passed by a canal with several locks, built (1908–15) from The Dalles to Celilo, near the Deschutes The city is now an inland port, since ships pass through the locks (completed 1937) at Bonneville Dam and tie up at The Dalles It processes and ships grain, wool, livestock, salmon, and fruit The dam has fish ladders and an elevator for salmon Eastern Oregon State Tuberculosis Hospital is here

The Dells. see DELLS OF THE WISCONSIN

Thea (thē'ə, thī'ə), in Greek religion, TITANESS, daughter of URANUS and GAEA and sister and wife of HYPERION Regarded as a deity of light, she was the mother of Helios, Selene, and Eos

theine see CAFFEINE

theism (thē'ĭzm), in theology and philosophy, the belief in a personal God It is, of course, opposed to atheism and agnosticism and is to be distinguished from PANTHEISM and deism Theism is distinguished from pantheism in that, while it holds to the immanence of God, it refuses to identify God and the cosmos Theism differs from the deism of the 18th-century thinkers in that it rejects the deists' insistence on the purely transcendent nature of God, holding that God is at once immanent and transcendent Theism has been traditionally supported by a number of arguments For a summary of these, see GOD

Theiss (tīs), Hung *Tisza* (tē'sŏ), Serbo-Croatian *Tisa* (tē'sə), Rus *Tissa* (tĭ'sə), river, c 600 mi long, rising in the W Ukraine, in the Carpathians It flows S across Hungary and past Szeged into Yugoslavia, where it joins the Danube between Novi Sad and Belgrade It is navigable in part

Thelasar (thēlā'sər), variant of TELASSAR

Thematic Apperception Test see MENTAL TESTS

Themis (thē'mĭs) [Gr , =law and order], in Greek religion, TITANESS, daughter of URANUS and GAEA Her children by ZEUS were the HORAE and the *Moerae* (the FATES) PROMETHEUS has been called her son. She was a goddess of law, order, and justice, and according to one story she received the Delphian oracle from Gaea

Themistocles (thəmĭ'stəklēz), c 525 B C.–c 460 B C , Athenian statesman and naval commander As leader of the democratic party in Athens, he caused Aristides to be exiled (483 B.C.) and became the chief figure of Athenian politics He persuaded the Athenians to devote the revenue from the silver mines at Laurium to building a navy, foreseeing that the Persians, defeated at Marathon, would send another stronger force against Greece (see PERSIAN WARS) Xerxes invaded Greece in 480 B C., and military defense of Athens was impossible Before Athens was burned, Themistocles had removed the women and children to the island of Salamis and assigned the men to the ships, which were supported by ships from other Greek states The Greek fleet was entrusted to a Spartan, but Themistocles determined its strategy, which resulted in the decisive victory of Salamis (480 B C) and the retreat of Xerxes to Persia Thereafter he was dominant in Athens, devoting himself to strengthening the navy and the fortifications, especially those of Piraeus He was exiled c 471 B C. Ultimately he made his home in Persia, where King Artaxerxes received him royally and made generous provision for him

Thénard, Louis Jacques (lwē' shăk' tānar'), 1777–1857, French chemist He became professor at the Collège de France (1802), dean of the Faculty of Sciences, Paris (1821), and chancellor of the Univ of Paris (1832) He was made a baron in 1825 He collaborated with Gay-Lussac in studies of boron, chlorine, iodine, and potassium, worked on esters, and discovered (1799) hydrogen peroxide and Thénard's blue, an ultramarine coloring used for porcelain He wrote many scientific papers and a standard textbook, *Traité de chimie élémentaire* (4 vols , 1813–16)

Theobald, Lewis (tĭb'ld, thē'ōbôld), 1688–1744, English poet and critic He is remembered for his *Shakespeare Restored* (1726), an edition in which he pointed out errors in Pope's edition, Pope angrily lampooned Theobald in *The Dunciad* (1728) See biography by R F Jones (1919)

Theocritus (thēŏ'krĭtəs), fl c 270 B C , Alexandrian Greek poet, b Syracuse The history of the PASTORAL begins with him, and in him the form seems to have reached its height His poetic art is finished and masterly, but his bucolic characters are realistic and alive, his sensitivity to nature shows itself in his idyls Imitators have been many (e g , Vergil and Spenser)

theodolite see SURVEYING

Theodora (thēədō'rə), d 548, Byzantine empress Information about her early career comes from the *Secret History* of PROCOPIUS and is probably spitefully colored It appears that she was the daughter of an animal trainer in the circus and that she was an actress and dancing girl before her marriage (523) to JUSTINIAN I, who on his accession in 527 made her joint empress, sharing his authority with her A much stronger character than her husband, she saved the throne through her energetic action in the Nika sedition (532, see BLUES AND GREENS) In her youth Theodora came under the influence of the Monophysite sect, Justinian's efforts to reconcile the Monophysites to orthodoxy were probably inspired by her See Charles Diehl, *Byzantine Portraits* (1927)

Theodore I (Theodore Lascaris), d 1222, Byzantine emperor of Nicaea (1206–22), son-in-law of the Byzantine emperor, Alexius III He escaped from Constantinople after its capture (1204) by the host of the Fourth Crusade and founded a succession state at Nicaea (see NICAEA, EMPIRE OF) Uniting nearly all of W Asia Minor, he kept his state intact against the attacks of Henry of Flanders, Latin emperor of Constantinople, and against the Seljuk Turks His son-in-law, John III, succeeded him

Theodore II (Theodore Lascaris), d 1258, Byzantine emperor of Nicaea (1254–58), son and successor of John III He fought the Bulgarians and temporarily recovered Thrace He was succeeded by his son, John IV

Theodore II, 1818-68, emperor of Ethiopia (1855–68), originally named Kasa or Lij Kasa He was a commoner and a bold and clever warrior He seized control of his native province, Kawara (in NW Ethiopia), in 1842 and steadily fought his way to the throne At first he attempted to abolish slavery and to encourage trade In his last years he became unrestrainedly cruel After the rescue of the Englishmen whom he had imprisoned at MAGDALA, he committed suicide

Theodore For Russian rulers thus named, see FEODOR

Theodore of Mopsuestia (mŏp"sŭĕs'chu), c 350–428, Syrian theologian, bishop of Mopsuestia (from 392) Together with his lifelong friend, St JOHN CHRYSOSTOM, he studied at the school of Antioch, adopted its exegetical methods, and became a diligent writer and preacher. His commentaries on the various books of the Bible were historical and rationalistic, e g , he was one of the first Christians to consider the Song of Songs a marriage poem rather than an allegory, and he was opposed to a Messianic interpretation of the Psalms Many of his theological treatises are lost or fragmentary. He seems to have been influenced by dynamistic MONARCHIANISM to emphasize the manhood of Christ, he said that Christ progressively received the Logos and the Holy Ghost and that the union became com-

plete only at the Ascension and was never essential and hypostatic Much of his work was orthodox, and he was considered orthodox for many years, although his pupil, Nestorius, directly derived his heresy from Theodore, and the Pelagians drew from his works He was condemned in 544 in the *Three Chapters* of Justinian (see MONOPHYSITISM) Pope VIGILIUS, under pressure, reluctantly concurred

Theodore of Studium, Saint (stŭ'dēŭm), 759–826, Byzantine Greek monastic reformer, also called St Theodore the Studite As an abbot he was early exiled for opposing the marriage of Emperor Constantine VI In 799 he entered the Studium monastery, which he reformed and made the model monastery of the Byzantine rite He was exiled again (809–11) after long quarrels with Nicephorus I When Leo V began his iconoclastic campaign, St Theodore boldly opposed him and was exiled again (814) He never returned to his monastery His influence was critical in the history of the BASILIAN MONKS His writings deal with the monastic life and with iconoclasm St Theodore wrote many hymns, and his letters are extant Feast Nov 12

Theodore Roosevelt National Memorial Park: see NATIONAL PARKS AND MONUMENTS (table)

Theodoret (thēŏ'dŭrĕt), c 393–c 458, Syrian churchman and theologian He was a monk of Apamaea and a lifelong friend of Nestorius In 423 he went unwillingly to be bishop of Cyrus, Syria, where he furthered the work of the Church in a difficult see At the time of the Nestorian controversy, Theodoret felt that Nestorius was misunderstood He had a bitter controversy with St CYRIL of Alexandria concerning NESTORIANISM At the Council of Ephesus (431), Theodoret voted to depose Cyril In 449 the Robber Synod of Ephesus led by EUTYCHES declared Theodoret deposed, but Pope Leo I invalidated this decree At the Council of Chalcedon (451), Theodoret joined in the condemnation of Nestorianism, still holding that it misrepresented his friend His writings against St Cyril were condemned in Justinian's *Three Chapters* (see MONOPHYSITISM), but the Church has not condemned him A theologian of the Antiochene school, he was much less extreme than THEODORE OF MOPSUESTIA Some of his writings are translated in *A Select Library of Nicene and Post-Nicene Fathers*

Theodoric I (thēŏd'ərĭk) or **Thierry I** (tēr'ē', tĕr'ē'), d 534, Frankish king of Austrasia (511–34), son of CLOVIS I He divided his brother Clodomer's kingdom of Orléans with his brothers CHILDEBERT I and CLOTAIRE I With Clotaire he subjugated the Thuringians

Theodoric the Great, c 454–526, king of the OSTROGOTHS, b Pannonia He spent part of his youth as a hostage in Constantinople Elected to share in his father's kingship (c 471), he reigned alone after his father's death (c 474), and became involved in intrigues in which he was by turns the ally and the enemy of the Emperor ZENO In 483 he was appointed imperial master of soldiers, and in 484 was consul It was probably to be rid of him that Zeno commissioned him to lead a campaign against ODOACER in Italy Theodoric with his Gothic army entered Italy in 488 He won battles at the Isonzo (489), at Milan (489), and at the Adda (490), and besieged and took Ravenna (493) Shortly after Odoacer's surrender Theodoric murdered him Theodoric was now master in Italy and added the title "governor of the Romans" to that of "king of the Goths" His long rule in Italy was extremely beneficent He showed respect for Roman institutions, preserving the Roman laws and appointing Romans to the civil offices, at the same time keeping the army Gothic and settling Goths on the land He improved the harbors and repaired the roads and public buildings An Arian, he was impartial in religious matters He allied himself by marriage with Clovis the Frank and the kings of the Visigoths, Vandals, and Burgundians, and used his influence in favor of peace The end of his reign was clouded by a quarrel with his Roman subjects and Pope John I over the Emperor Justin I's edicts against Arianism, and by his hasty execution of BOETHIUS and Symmachus Theodoric appears in the *Nibelung-enlied* as Dietrich von Bern His tomb is one of the finest monuments of Ravenna He was succeeded by his grandson Athalaric, under the regency of Theodoric's daughter Amalasuntha See Thomas Hodgkin, *Theodoric the Goth* (1891), J B BURY, *The Invasion of Europe by the Barbarians* (1928)

Theodosia, RSFSR, see FEODOSIYA

Theodosian Code (thē"ədō'shun), Latin *Codex Theodosianus,* Roman legal code, issued in A D 438 by THEODOSIUS II, emperor of the East It was at once adopted by Valentinian III, emperor of the West The code was intended to reduce and systematize the complex mass of law which had been issued since the reign of Constantine I To a large extent it was based upon two private compilations, the Gregorian (*Codex Gregorianus*) and the Hermogenian (*Codex Hermogenianus*) The Theodosian Code was used in shaping the CORPUS JURIS CIVILIS.

Theodosiopolis: see ERZERUM, Turkey.

Theodosius I or **Theodosius the Great,** 346?–395, Roman emperor of the East (379–95) and of the West (392–95), son of THEODOSIUS, the general of Valentinian I He became (375) military governor of Moesia, but following the execution (376) of his father he retired to Spain, where he lived until chosen by Emperor GRATIAN to rule the East after the defeat and death (378) of Valens in the battle of Adrianople Theodosius, whom Gratian made co-Augustus in 379, took up arms against the victorious VISIGOTHS, who were plundering the Balkan Peninsula By military might and by diplomacy he achieved an advantageous peace, permitting the Visigoths to settle in certain designated areas of the empire, and in return securing their services as soldiers In 383 Gratian was murdered, Theodosius was forced to recognize the murderer, MAXIMUS, as emperor in the West outside Italy, where Gratian's brother and legal successor, VALENTINIAN II, held authority When Maximus seized Italy, Theodosius attacked him, put him to death (388), and restored Valentinian But Valentinian's tribulations were not ended His Frankish general, Arbogast, assumed the power in Gaul, and in 392 Valentinian, who had sought to unseat him, was strangled, presumably on the order of Arbogast, who installed the puppet emperor Eugenius Once more Theodosius went to Italy In 394 he met a large army, commanded by Arbogast and Eugenius and consisting mostly of pagan barbarians Defeated on the first day of battle, he refused to retreat, and on the following day, with the battle cry, "Where is the God of Theodosius," carried a resounding victory Eugenius and Arbogast were slain Having previously named his son Arcadius as his colleague in the East, he now proclaimed his younger son, Honorius, as his colleague in the West Theodosius died in the following year, exhausted by his campaigns, and the Roman Empire remained forever divided into West and East The reign of Theodosius is most notable for its prominence in the history of the Christian Church Baptized in 380, Theodosius soon afterward issued the edict *De fide catholica,* condemning ARIANISM and making communion with the Holy See the test of orthodoxy, subsequent edicts practically extinguished Arianism and paganism Under his direction the First Council of Constantinople (see CONSTANTINOPLE, FIRST COUNCIL OF) cast the Nicene Creed practically in its present form The most eminent church figure of his reign was Saint AMBROSE, bishop of Milan When Theodosius ordered a massacre in Salonica to punish the citizens for a rebellion against the garrison, Ambrose ordered (390) the emperor to make an act of contrition for his crime, Theodosius, whose repentance seems to have been sincere, had to humble himself in the cathedral of Milan before Ambrose lifted the excommunication

Theodosius II, 401–50, Roman emperor of the East (408–50), son and successor of Arcadius He preferred the study of theology and astronomy to public affairs, which he left to the guidance of his sister PULCHERIA—and, at times, of his wife EUDOCIA The chief political events of his reign were the establishment of VALENTINIAN III as emperor in the West (425), the raids into the empire by the Huns under ATTILA, and the conferences held with Attila in regard to the ever-increasing tribute which he demanded In 431 Theodosius summoned the Council of Ephesus, which condemned NESTORIANISM, and in 449 he convoked and upheld the Robber Synod, which declared Eutychianism (see EUTYCHES) orthodox Among his other activities were the establishment, or at least the reorganization, of the higher school of Constantinople (425) and the publication (438) of the THEODOSIAN CODE His brother-in-law Marcian succeeded him

Theodosius, d A D 376, Roman general under VALENTINIAN I He defeated the Picts and Scots when they invaded Britain (368–69) and suppressed a Moorish uprising in Africa in 372 He was executed at Carthage by order of Gratian, Valentinian's successor, on probably unjust charges His son became emperor as Theodosius I

Theodosius the Great see THEODOSIUS I

Theodotians, small heretical sect, formed c 190 by Theodotus, a Byzantine It lasted until the end of the 4th cent The Theodotians taught that Jesus was a man, who became the Christ only after his baptism (a concept basic to MONARCHIANISM and ADOPTIONISM)

Théodule, Switzerland see MATTERHORN

Theognis (thēŏg'nĭs), fl late 6th cent B C, Greek didactic poet of Megara An aristocrat with fierce partisan feelings, he wrote for his young friend Cyrnus a series of elegies, often passionate in hate and in love, counseling moderation, faithfulness, and duty Among the 1,400 surviving lines attributed to him are some known to be by other writers

theology (thēŏl'ŭjē) [Gr ,=discussion of God], systematic study of the intellectual aspects of a particular religion Christian theology has received, naturally, by far the greatest attention in the Western world, but JUDAISM and ISLAM have theologies similar to Christian theology The development of theology in Christendom arose from the need for educated Christians of the ancient world to express their ideas in terminology familiar in current thought Hence arose the close relation of Greek philosophy with Christian theology St AUGUSTINE, one of the greatest of theologians, introduced and standardized in his writings what became the official theology of the Church. The great theological problems of ancient times were the relation of Jesus with God and with man and the relation of God with man The struggle over ARIANISM (on the nature of Jesus) was probably the most serious theological quarrel Christianity has known, and the problem of GRACE has not ceased to arouse theologians The thought of NEOPLATONISM has some connection with Christian theology, especially in the early Middle Ages In reaction to it SCHOLASTICISM arose to vindicate reason and to criticize the whole theological system Scholasticism differentiated carefully between theology and philosophy by confining theology to the field of the systematization and investigation of revealed truths, in this distinction philosophy is to proceed always from reason and does not investigate the truths that transcend reason The distinction is maintained explicitly by the Roman Catholic thinkers and implicitly by conservative Protestants According to this differentiation CALVINISM and LUTHERANISM are theologies, not philosophies As a result of the 18th-century Enlightenment, especially of the work of Kant, a new rational theology arose in the 19th cent This must be carefully distinguished from the "rationalism" of scholasticism, because 19th-century rational theology assumes as axiomatic the ability of reason to criticize adequately every truth The theological school of Tubingen was the center for the extreme "rationalistic theologians," and there the "higher criticism" of the Bible which revolutionized much of Protestant thought was brought to its first fruition The most profound of 19th-century Protestant German theologians, and perhaps the most influential of the new rationalists, was SCHLEIERMACHER, he was not of Tubingen The new rationalistic theology developed very rapidly, and hardly any two theologians of it agree in detail, there are various systems of MODERNISM Those who distinguish between theology and philosophy call the 19th-century rationalistic theology philosophy rather than theology

Theophanes, Saint (thēŏf'ənēz), d 817?, Byzantine historian He was abbot of Mt Sigriana (near Cyzicus), which he founded His *Chronographia* (c 811–815), based on official records and on his observations, is a chief source for the history of ICONOCLASM to the reign of LEO V For opposing Leo's iconoclasm, he was imprisoned and was exiled to Samothrace, where he died Feast March 12

Theophilus (thēŏ'fĭlŭs) [Gr ,=beloved of God], person to whom St Luke's Gospel and the Acts of the Apostles are addressed Luke 1 3, Acts 1 1

Theophrastus (thē"ōfrā'stŭs) [Gr ,=divinely speaking], c 372–c 287 B C, Greek philosopher, Aristotle's successor as head of the PERIPATETICS The school flourished under his leadership He was befriended by Philip II of Macedon, Cassander, and Ptolemy I and was honored by a public funeral after his death He wrote on almost all subjects, but his works on plants were perhaps the most important of his technical writings His *Characters,* a series of sketches of various ethical types, is especially valuable as giving a picture of his time It is the forerunner of the descriptions of characters of such writers as Sir Thomas Overbury, John Earle, and La Bruyère

theorbo (thēŏr'bō), large LUTE of the baroque period It had an extra set of bass strings, not stopped as the regular set are, which made it more suitable for playing baroque music than was the lute Its origin was in the 16th cent, and in the 18th cent it was given double strings Its name was also spelled theorbe, theorboe, or torba

theosophy (thēŏ'sŭfē) [Gr ,=divine wisdom], philosophical system having affinities with MYSTICISM and claiming insight into the nature of God and the world either through direct knowledge, through philosophical speculation, or through some physical process Theosophy generally arises in connection with religious needs, as an expression of religious conviction This system of thought differs from many other philosophical positions in that it begins with an assumption of the essence of God, from which it deduces the essentially spiritual nature of the universe Other assumptions frequently found in theosophical doctrine are that God is the transcendent source of all being and all good, that evil exists in the world because of man's desire for finite goods and that evil may be overcome by complete absorption in the infinite, and that sacred writings and doctrines are interpreted through allegory This is the general position of much speculative mysticism However, mysticism generally confines itself to the soul's relation to God while the theosophist uses his theories to formulate a complete philosophy of man and nature The Neoplatonists, the Gnostics, and the Cabalists are generally considered types of theosophists Paracelsus is an example of the Renaissance philosopher who combined scientific ideas with theosophical speculation. More recent theos-

ophists include Jacob Boehme, Schelling, and Swedenborg Boehme is regarded as the father of modern theosophy, and he developed a complete theosophical system attempting to reconcile the existence of an all-powerful and all-good God with the presence of evil in the world The philosophy and theology of the Orient, especially of India, contain a vast body of theosophical doctrine Vedic, Buddhist, and Brahminist literature are all charged with a mystical idea of a universal, eternal principle, basic to all life (see HINDUISM and BUDDHISM). Unity of living may be achieved by man through proper attitudes and exercises Modern theosophy draws much of its vocabulary from Indian sources The universe is viewed as existing on seven different levels, and human action is graded according to those levels, ranging from gross physical life to the complete perfection of the Universal Self The latent spiritual power of man, realized in great spiritual leaders (as the mahatmas), is considered almost boundless To gain real spiritual knowledge and power the soul must pass through several existences (see TRANSMIGRATION OF SOULS) and gain much occult knowledge (stored in the soul, not the mind) The Theosophical Society of America was founded in 1875 by Mme Helena Petrovna BLAVATSKY, associated with her were Col H S Olcott and W Q Judge In 1895 Judge was the leader of a secession movement, and other divisions and schisms took place afterward The objects of the society are to form a nucleus of a universal brotherhood of humanity, to give encouragement to the study of comparative religions, philosophies, and sciences, and to carry on investigations of the laws of nature and of man's latent powers An active exponent of theosophy in Europe, America, and the East was Mrs Annie BESANT, who added many works to the literature of the subject Among other authoritative writings are those of Mme Blavatsky, including *Key to Theosophy* (1931) See also G N Drinkwater, *Theosophy and the Western Mysteries* (1944), C W Leadbeater, *Textbook of Theosophy* (6th ed, 1946)

Theotocopoulos, Domenicos. see GRECO, EL

The Pas (thŭ pās', pa'), town (pop 3,102), W Man, on the Saskatchewan and 420 mi NW of Winnipeg Founded as a fur-trading post, it grew after 1920 as the starting point and headquarters for the Hudson Bay Railway to Churchill and as an outfitting point for prospecting and mining expeditions into the northern mineral belt of Manitoba and Saskatchewan It has an airfield and branch lines of the Manitoba Northern Railway to Flin Flon and Sherridon

Thera (thēr'ŭ), volcanic island (31 sq mi, pop 9,704), off S Greece, in the Aegean Sea, S of Naxos It is one of the CYCLADES It is noted for its wine, and it exports pumice stone According to tradition it was first settled by Phoenicians and later by Laconian colonists In 631 B C colonists from Thera founded Cyrene in Libya From medieval times until recently Thera was known as Santorin Prehistoric remains and ruins from the classical period have been excavated.

Theramenes (thŭrăˈmŭnēz), d 404? B C, Athenian statesman, b Chios He helped to establish (411 B C) the oligarchical Four Hundred, but opposed them later He fought in the Peloponnesian War, notably in the battle of Cyzicus, at the siege of Chalcedon, and in the capture of Byzantium In the great battle of ARGINUSAE (406 B C) he failed to rescue the men in the wrecked ships, but was exonerated He was sent to negotiate peace with Sparta, and he was accused of treachery because of long delays while Athens was under siege He became one of the THIRTY TYRANTS Critias denounced him and caused him to be put to death There was great difference of opinion among the Greeks about Theramenes' motives in his frequent changes of side and his delay in negotiating

Therapeutae (thĕrupūˈtē), non-Christian recluses living on the shore of Lake Mareotis, Egypt, about the 1st cent A D They have been supposed by some to give a connection between the Essenes and Christian MONASTICISM They are mentioned in one ancient source only

Theresa or Teresa, Saint (Theresa of Jesus) (both trēˈsu, -zŭ), Span *Teresa de Ávila*, 1515–82, Spanish Carmelite nun, one of the principal saints of the Roman Catholic Church, one of the greatest mystics, and a leading figure in the Catholic REFORM Her original name was Teresa de Cepeda y Ahumada, and her name in religion was Theresa of Jesus She came of a well-to-do noble family She entered the Carmelite order (possibly in 1536), suffered a serious illness, went through an arid period, and underwent (c 1555) a "second conversion," after which she experienced inner visions and went far in the path of mysticism She had entertained a desire to found a house of reformed Carmelites (the Discalced, or Barefoot, Carmelites living in strict observance of the rule) long before in 1562 she had the opportunity to found the Convent of St. Joseph in Ávila Other foundations were made, and in the busy years that followed she traveled much to the various houses She also founded convents of friars, having as her collaborator that other toweringly great mystic, St. JOHN OF THE CROSS One of the most remarkable women of all time, St Theresa combined intense practicality with the most rarefied spirituality. Astute, shrewd, sometimes blunt, she yet kept the simplicity of water (water was one of her favorite metaphors) and had the same life-giving effect on those around her She was an excellent and tireless manager Her personal charm and tact helped her and the reform in the long years of persecution—mostly at the hands of the unreformed clergy—and she triumphed in the end The Discalced Carmelites were finally separated from the older order The reawakening of religious fervor that she brought about in Spain was astonishing Her abounding energy and her good nature communicated themselves to her associates, who worked as if inspired Soon after her death the movement spread beyond Spain and across Christendom, having a profound effect on the Catholic Reform She brought mysticism and its fruits to the common man, and her works have gained a steadily widening audience from the 16th cent to the present They are celebrated as literary masterpieces The Castilian in which they are written stems from common speech, and the imagery is rich and yet simple Candor and overflowing spiritual strength lend a greater beauty to the sometimes terse, sometimes discursive expressions Her works, like herself, were dominated by love of God and characterized by humor, intelligence, and common sense They are great literature but are far more important as founts of modern mysticism The *Life* (written 1562–65) is a spiritual autobiography written for her confessors and containing not only the record of her progress in mysticism but also short treatises on prayer and vision, usually in editions of it are included the supplementary *Relations*, short pieces written for the same purpose as the *Life* Her *Way of Perfection* was written after 1565 to supply her nuns worthy instruction on prayer, it is still found very useful by the religious and by laymen In *Interior Castle* (written in 1577) she gives a glowing and powerful picture of the contemplative life, it is considered by many even finer than the *Life* The *Foundations* (written 1573–82) is an account of the launching of her order. Her letters, brisk, vigorous, shot through with wisdom and humor, are much loved by many readers She also wrote shorter pieces—*Exclamations of the Soul to God* (1569), rhapsodic meditations, a commentary on the mystic significance of the Canticle of Canticles, the *Constitutions*, for the Discalced Carmelite nuns, and *Method for the Visitation of Convents of Discalced Nuns* She also wrote poems, many not rising above the level of serviceable verse There have been several translations of her writings, the most recent by E Allison Peers (3 vols, 1949) See H J Coleridge, *Life and Letters of St Teresa* (1872), H H Colvill *Saint Teresa of Spain* (1909), E Allison Peers, *Mother of Carmel a Portrait of St Teresa* (1946)

Theresa or Teresa, Saint (Theresa of the Child Jesus), Fr *Thérèse de Lisieux*, 1873–97, French Carmelite nun, one of the most widely loved saints of the Roman Catholic Church, b Alençon Her original name was Thérèse Martin and her name in religion was Theresa of the Child Jesus Her brief life was outwardly unremarkable She was born the daughter of a watchmaker At the age of 15 she insisted upon being admitted to the Carmelite convent at Lisieux There she spent the remaining nine years of her life and died of tuberculosis Many miracles are attributed to her, but perhaps the greatest miracle connected with her is the fact that she came to be known at all A simple nun in an obscure convent, she was remarkable only for her complete and shining goodness The sweet holiness of her life so impressed her superior that Theresa was asked to write her spiritual autobiography Thus has been one of the most widely read of all autobiographies It is filled, as are her letters, with her message of seeking good with the simplicity of a child St Theresa is known as the Little Flower of Jesus, a fitting name for the little saint with flowerlike appeal She taught the Little Way—how to achieve goodness in performing the humblest task and carrying out the most trivial action Thus she carried holiness to millions in the workaday world and won their veneration and devotion She was canonized in 1925, just 28 years after her death Lisieux has become a major place of pilgrimage There are churches dedicated in her honor across the whole of the Roman Catholic world, and meditations from her writings are read by many of the devout with the frequency of a manual of prayer She is frequently represented in art with an armful of roses because of her cryptic promise "After my death, I will let fall a shower of roses." Of the many biographies of her, one of the most recent is Frances Parkinson Keyes, *Written in Heaven* (1937).

Thermidor (thûrˈmĭdôr, Fr. tĕrmēdôrˈ), 11th month of the FRENCH REVOLUTIONARY CALENDAR. The coup d'état of 9 Thermidor (July 27, 1794) marked the downfall of ROBESPIERRE and the end of the Great Terror The Thermidorians who came into power, though no less antiroyalist and even more antireligious than their predecessors, initiated a period of economic reaction (notably by repealing the maximum-price laws), executed reprisals against the Terrorists, concluded a truce with the counterrevolutionists of the VENDÉE, and established some measure of freedom of worship The principal figures in the so-called Thermidorian reaction were BARRAS, CAMBACÉRÈS, SIEYÈS, and TALLIEN The period ended with the establishment of the DIRECTORY (1795). See Albert Mathiez, *The Thermidorian Reaction* (1929, Eng tr, 1930)

thermionic valve: see TUBE, VACUUM

thermite (thûrˈmīt) mixture of powdered aluminum and iron oxide, or some other metallic oxide, used in WELDING because of the great quantity of heat produced when the mixture is ignited In wartime thermite has been used in incendiary bombs Welding by means of thermite is called the thermite process (aluminothermic process or Goldschmidt process) The thermite in a crucible is ignited usually either by a strip of burning magnesium ribbon or by a mixture of burning magnesium and oxide of barium The use of a kindling mixture to ignite the thermite is also necessary because when thermite is heated to its kindling temperature directly, it ignites with explosive violence The aluminum reduces the metallic oxide, giving pure iron and aluminum oxide So much heat is generated in the reaction that the iron is melted and a temperature of about 3000°C is reached The molten metal is poured from the crucible upon the joint to be welded, melting the edges of the joint so that they may be united The slag of the thermite, which floats on the surface of the molten metal in the crucible and thus is poured off first on the joint, prevents the iron from adhering to the joint thus making it possible to remove the iron when it has hardened and the joint is fused In certain cases, the thermite is placed in a kind of crucible which permits the pure molten metal to be poured off from the bottom The thermite is ignited and the molten iron poured from the bottom of the crucible upon the part to be joined or mended After cooling, excess metal which has not entered the joint is finished off The process was invented by Johann Goldschmidt, who first discovered the method for igniting thermite without explosion Goldschmidt used this method in the preparation of various metals—e g, chromium, manganese, and uranium—from their oxides The process is used in the welding of broken castings or of shafts, pipes, and steel rails

thermometer, instrument for measuring TEMPERATURE Galileo and Santorius devised thermometers consisting essentially of a bulb with a tubular projection, the open end of which was immersed in a liquid Heating or cooling the bulb affected the height of the column of liquid in the tube, on which a scale was marked Over a century later appeared the three thermometers now most widely used—the Fahrenheit, the centigrade, and the Reaumur (used to some extent in parts of Europe) The first, invented by Fahrenheit c 1714 in Danzig, initiated the use of mercury as a heat-measuring medium, the thermometer of Réaumur, invented c 1730, used alcohol, the centigrade, invented by Anders Celsius at Uppsala probably in 1742, is now most used in laboratory work The clinical thermometer is a small tubular instrument of rather thick glass. It consists essentially of a small vacuum tube of uniform bore closed at one end and connected at the other with a mercury chamber (either a bulb or a short tube of larger bore) A centigrade or a Fahrenheit scale (or both) is etched on the front of the thermometer, opposite this the glass is milky or semiopaque, to facilitate reading the temperature When heat is applied, the mercury expands and rises from the chamber past a narrowed point and up the small tube This narrowed point prevents the mercury from sinking back until shaking forces it down Weather thermometers do not have this structure except in the case of special instruments Maximum and minimum thermometers are contrived to indicate respectively the highest and the lowest temperature attained during the period of exposure Alcohol, ether, and toluol are used in measuring low temperatures, since mercury solidifies at about −39°C For very high temperatures, there are various special measuring devices, these work on the principle of some measurable change varying with temperature, such as electrical resistance and expansion of a gas, a liquid, or a solid

Thermopolis (thûrmŏˈpŭlĭs), resort town (pop. 2,422), co. seat of Hot Springs co., N central Wyo., on the Bighorn river, founded 1897 It is a trade center for a livestock and oil area. Famous are its hot springs, which are included in Hot Springs State Park Beautiful Wind River Canyon is near.

Thermopylae (thûrmŏˈpĭlē) [Greek,=hot gates, from hot mineral springs near the pass], pass in Greece, 9 mi SSE of Lamia, between the cliffs of Mt. Oeta and the impassable morass on the shore of the Malic Gulf. In ancient times it was narrower than it is now and was the only gate for ingress into Greece from the north. Here (480 B.C.)

Leonidas with his Spartans and their allies gained immortality by their heroism (see PERSIAN WARS). Here in 279 B.C., the Greeks held back the Gauls under Brennus, who ultimately broke through. Here in 191 B.C., Antiochus III of Syria was defeated by the Romans

thermostat, device for automatically regulating the temperature. It is commonly connected to heating systems which it turns on or off, according to the need, in order to maintain a predetermined temperature. Its principle of operation is based on the expansion of metals, liquids, and gases when heated. The movement of the component substances as it takes an expanded or contracted position actuates a control on a furnace, cooling system, or a piece of machinery. The mechanism sometimes utilizes mercury, which expands when warm and rises in a glass tube until, at a predetermined point, it touches an electrical contact to complete a circuit, conversely, during lowering of temperature the mercury descends in the tube and breaks the circuit. Bimetallic combinations (employing metals with different coefficients of expansion) are often used in thermostats, on exposure to heat or cold the two metals respond to a different degree, thus temporarily changing the shape of the metal device and causing it to make or break a circuit

Thersander (thûrsăn'dûr), in Greek legend, one of the EPIGONI. He was the son of POLYNICES and was made king of Thebes

Thersites (thûrsī'tēz), in Greek legend, member of the Greek army in the Trojan War, famous for his ugliness, his unpleasant temper, and his love of argument. Achilles killed him.

Theseus (thē'sūs, thē'sēus), in Greek mythology, great hero of Athens. He was the son of AEGEUS, king of Athens, and Aethra of Troezen. When Aegeus left Troezen, he put his sandals and his sword under a huge rock and told Aethra that as soon as Theseus was strong enough to lift the rock he should come to Athens. At the age of 16 Theseus lifted the rock and started on his journey to Athens. On the way he participated in many adventures, including the slaying of PROCRUSTES. When he arrived, MEDEA, the wife of Aegeus, tried to poison him, but Aegeus recognized Theseus in the nick of time. Theseus, to help his father, killed the wild bull of Marathon and the MINOTAUR of Crete (with the help of ARIADNE). After Aegeus killed himself, thinking that Theseus was slain by the Minotaur, Theseus became king. He took part with Hercules in the expedition against the Amazons. In this adventure, one legend says he carried off ANTIOPE, another that it was her sister HIPPOLYTE whom he loved. Later, after he returned from the Calydonian hunt, he married PHAEDRA, who eventually caused the death of HIPPOLYTUS, her stepson. When Phaedra died, Theseus abducted Helen, and it is said that IPHIGENIA was their child. Theseus was treacherously slain by King Lycomedes of Scyros

Thespiae (thĕ'spĭē"), ancient city, S Boeotia, Greece, near Mt. Helicon and SW of Thebes. The Thespians fought against the Persians at Thermopylae and Platsea. They generally opposed Thebes and joined the Spartans against the Thebans. The famous statue of Eros by Praxiteles was a showpiece of Thespiae, it was ultimately taken to Rome

Thespis (thĕ'spĭs), fl. 534 B.C., in Greek tradition, the inventor of tragedy. He modified the dithyramb (which had been, in effect, exchanges between the leader and the chorus), putting set speeches in the mouth of one of the chorus. This second actor was called technically the *hypocrite* (or "responder"). Thus there developed a spoken dialogue. This innovation has been considered by critics definitive in dramatic history

Thessalon (thĕ'sŭlŏn), town (pop. 1,316), S Ont., on the North Channel of Lake Huron, ESE of Sault Ste. Marie and opposite Drummond Island, in a farming, fishing, and lumbering region

Thessalonians (thĕ"sulō'nēunz), epistles of the New Testament, occupying the 13th and the 14th place in the usual order. They were written by ST. PAUL from Corinth, A.D. c. 52, addressed to the newly founded church at Thessalonica. First Thessalonians opens with a reminiscence of the founding of the Christian Church there, all in a rather congratulatory tone. The second part (4–5) is taken up with advice on moral behavior and correction (4.13–5.5) of one doctrinal point on which apparently his converts had gone astray, the imminence and manner of the general resurrection. Second Thessalonians, a shorter letter, written soon after, is stronger in condemning false notions that the Second Coming is at hand, in an apocalyptic passage St. Paul gives signs that will precede the Judgment (2.1–12, 1.6–10). This epistle also contains an exhortation to work and condemnation of idleness (3.6–12). A few higher critics question the authenticity of the apocalyptic passage

Thessalonica, Thessalonike, or Thessaloniki, Greece: see SALONICA
