Ponte, Giovanni da (jōvän'nē da pōn'tä), 1512–97, Italian architect He was appointed in 1558 chief architect of Venice He is remembered for his design of the celebrated Bridge of the Rialto (1589) and his restorations to the doge's palace after the fire of 1577

Ponte, Jacopo da · see BASSANO, JACOPO

Pontefract (pŏn'tĭfrăkt, pŭm'frĭt), municipal borough (1931 pop 19,057, 1943 estimated pop 21,560), West Riding of Yorkshire, England, SE of Leeds Pontefract grew around a great castle built in the 11th cent on the site of a Saxon fort It was the scene of the death of Richard II in 1400, was taken in the Pilgrimage of Grace in 1536, was besieged four times in the civil war, and was dismantled after being taken by John Lambert in 1649 Subterranean caverns and other vestiges of the castle remain West of the town is a racecourse

Pontevedra (pōntāvā'dhrä), city (pop 14,432), capital of Pontevedra prov, NW Spain, in Galicia It is a fishing port on a beautiful bay of the Atlantic Ocean and the center of an agricultural district Among its many ancient structures are the Gothic Church of Santa María, the picturesque ruins of a 13th-century convent, and a Roman bridge

Ponthierville (pōtyĕvēl'), town, NE Belgian Congo It is connected to Stanleyville by a railroad which rounds the Stanley Falls Palm-oil products are exported

Pontiac (pŏn'tēăk"), d 1769, Ottawa Indian chief He may have been the chief met by Robert ROGERS in 1760 when Rogers was on his way to take possession of the Western forts for the English Although the Indian uprising against the English colonists just after the FRENCH AND INDIAN WARS is known as Pontiac's Rebellion or Pontiac's Conspiracy, Pontiac was probably present only at the siege of Detroit How much the movement owed to his influence and organization is unknown He certainly planned the Detroit attack, and the whole campaign was motivated by his sentiments When the rebellion had failed and a treaty had been concluded in 1766, Pontiac is supposed to have gone to the Mississippi and to have been murdered by Illinois Indians at Cahokia, but this story is only a legend.

Pontiac 1 City (pop 9,585), co seat of Livingston co, NE central Ill, on the Vermilion river and NE of Bloomington, settled 1833, platted 1837, inc 1857 It is a trade, rail, and industrial center in a fertile farm area A branch of the state penitentiary is here **2** Industrial city (pop 66,626), co seat of Oakland co, SE Mich, on the Clinton river and NW of Detroit, founded 1818 by promoters from Detroit, inc as a village 1837, as a city 1861 The region has farms, lakes, and resorts Industries developed early and expanded after the railroad came Carriage making, important in the 1880s, gave way to the automobile industry There are many allied plants The Saginaw Trail of the Indians crossed here Not far away is a state mental hospital

Pontiac's Rebellion or **Pontiac's Conspiracy,** 1763–66, Indian uprising against the British just after the close of the French and Indian Wars, so called after one of its leaders, Pontiac The French attitude toward the Indians had always been more conciliatory than that of the English French Jesuit priests and French traders had maintained friendly and generous dealings with their Indian neighbors While the Treaty of Paris (1763) allotted the Ohio valley and adjacent regions to the Indians, the resentment of the Western tribes was aroused at the English assumption of ownership in the West In the early spring of 1763 a council was held near Detroit, on the banks of the Ecorse river, here the attack on Fort Detroit was planned Pontiac's scheme was to gain admission to the garrison, with some of his chiefs, by asking for a council with the commandant, but the Indians were to carry weapons and open a surprise attack Major Henry Gladwyn, the commandant, was warned of the plot and foiled it. However, Pontiac and his Ottawa, reinforced by Wyandot, Potawatami, and Ojibwa, stormed the fort on May 10 The garrison was relieved by reinforcements and supplies from Niagara in the summer, but Pontiac continued to besiege it until November, when, disappointed at finding he could expect no help from the French, he retired to the Maumee Fort Pitt in Pennsylvania had been warned by a messenger from Gladwyn and withstood attack until relieved by Col. Henry BOUQUET. Bouquet and his forces on their

way to Fort Pitt in Aug , 1763, had been victorious in a severe engagement at Bushy Run. Many other outposts, however, were destroyed with much slaughter, among them Sandusky, Michilimackinac (MACKINAC), and Presque Isle In an attempt by Capt James Dalzel to surprise Pontiac's camp, the battle of Bloody Run was fought on July 31, 1763, with great loss to the British The borders of Pennsylvania, Maryland, and Virginia were kept in a state of terror In the spring of 1764 an offensive campaign was planned by the English, and two armies were sent out, one into Ohio under Colonel Bouquet, and the other to the Great Lakes under Col John Bradstreet Bradstreet's attempts at treaties were condemned by Gen Thomas Gage, who had succeeded Sir Jeffrey Amherst as commander in chief, and he returned home with little achievement Bouquet, by his campaign in Pennsylvania, brought the Delaware and the Shawnee to sue for peace, and a treaty was concluded with them by Sir William JOHNSON After failing to win some of the tribes farther west and south to join him in rebellion, Pontiac finally completed in 1766 a treaty with Johnson and was pardoned by the English See Francis Parkman, *History of the Conspiracy of Pontiac* (1851, 10th rev ed , 1913), G M Wrong, *The Rise and Fall of New France* (2 vols , 1928), Calvin Goodrich, *The First Michigan Frontier* (1940), H H Peckham, *Pontiac and the Indian Uprising* (1947)

Pontianak (pŏntēä'nak), town (pop 45,196), on W Borneo, Indonesia, at the mouth of a small stream in the Kapuas delta near the west coast It exports timber, copra, and rubber

Ponticus, Aquila see AQUILA PONTICUS

pontifex maximus (pŏn'tĭfĕks măk'sĭmus) [Latin,= supreme pontiff], official head of Roman religion, president of the college of pontifices, who regulated the conduct of all religious affairs His powers were great in politics because of his influence on the auguries He also controlled the calendar, and it was as pontifex maximus that Julius Caesar revised the calendar He was elected by the people After the supremacy of Christianity, the popes took the title of pontifex maximus, and it was as successor of the Roman pontiff that they have revised the calendar (see GREGORY XIII)

Pontine Marshes (pŏn'tĭn, -tīn), low-lying region, S Latium, central Italy, between the Tyrrhenian Sea and the Apennine foothills In pre-Roman and early Roman times it was populated and fertile, but it was later abandoned because of the malaria in its unhealthful marshlands Trajan, Theodoric, and several popes started reclamation works, but a drainage system was completed only under Mussolini The large estates in the area were broken into lots and farmers from N Italy settled permanently The first rural town, Littoria (now LATINA), was inaugurated in 1932 Sabaudia, Pontinia, Aprilia, and Pomezia were inaugurated in the following years Wheat and cotton are now produced

Pontius Pilate (pŏn'shus pī'lut), fl A D 26, Roman procurator of Judaea (A D c 26–A D 36 or 37) He was removed at the complaint of Samaritans According to tradition he committed suicide His attempt to evade responsibility in the trial of Jesus was caused by his difficult responsibility for the peace of Palestine See Mat 27, John 18 28 19 42 The **Acts of Pilate**, one of the PSEUDEPIGRAPHA, are part of the Gospel of Nicodemus Many legends were told of him later, notably those connecting him with Mt PILATUS

pontoon (pŏn'tun, pŏntōōn'), flat-bottomed boat or other floating unit used for building bridges, raising sunken ships, and the like Barrels or casks, open boats, and completely enclosed watertight compartments of wood, metal, concrete, canvas, or rubber have been used in the construction of pontoon bridges The floating foundation units are joined and anchored in the stream, and a roadway laid across them While occasionally built for civilian emergency or temporary use, pontoon bridges are most frequently used in warfare, when the transportability of parts and speed of construction are essential to military operations The Persian king Darius I built pontoon bridges across the Bosporus and the Danube in his war against the Scythians, his son Xerxes I built the famous bridge of boats across the Hellespont when he began his war against Greece The U S army experimented with rubber pontoons from 1846 on, and in 1941 collapsible floats of rubber fabric were adopted, while steel treadways were used instead of planks for the roadway At the same time the navy introduced box pontoons of light welded steel for constructing bridges from ship to shore during landing operations These box pontoons could be assembled into bridges, docks, causeways, and, by adding a motor, into self-propelling barges Pontoons used for raising a sunken ship have the form of watertight cylinders They are filled with water, made fast to the vessel, then emptied by compressed air, thus giving the ship buoyancy The landing floats of a hydroplane are a form of pontoon. Pontoon lifeboats consist of a deck carried by a watertight structure

Pontoppidan, Henrik (hän'rĕk pŏntô'pĭdän), 1857–1943, Danish novelist He shared the 1917 Nobel Prize in Literature with his compatriot Gjellerup. He studied engineering, worked as a journalist, and traveled in Italy and Germany before the appearance of his first major work, *The Promised Land* (Eng tr , 1896), which was originally published as a trilogy—*Soil* (1891), *The Promised Land* (1892), *Judgment Day* (1895) *Lucky Peter* (1898–1904) describes Copenhagen life at the end of the century His final books, *The Kingdom of the Dead* (1912–16) and *Man's Heaven* (1927), bitterly upbraided the Danish people for their materialistic way of life.

Pontormo, Jacopo da (yä'kōpō da pŏntôr'mō), 1494–1557?, Florentine painter, whose real name was Jacopo Carucci or Carrucci His earlier and best efforts were highly praised by Raphael and Michelangelo, but he later imitated Durer and Michelangelo to the deterioration of his own style His works include *Visitation* (Sant' Annunziata, Florence), his earliest extant work, three small paintings depicting *Joseph and His Kindred in Egypt*, executed for the Villa Borgherini, Florence (one in the National Gall , London), his masterpiece, the decorative mythological fresco (Villa del Poggio a Caiano), *Descent from the Cross* (Church of Santa Felicita, Florence), and *The Holy Family* and two portraits (National Gall of Arts, Washington, D C) Pontormo was an excellent portraitist See study by F M Clapp (1916)

Pontotoc (pŏntŭtŏk'), city (pop 1,832), co seat of Pontotoc co , NE Miss , W of Tupelo, in a farm area, inc 1837

Pontresina (pŏntrāzē'nä), summer and winter resort (resident pop 757), Grisons canton, Switzerland, at the foot of the Bernina Alps

Pont Rouge (pō rōōzh'), village (pop 1,865), S Que , on the Jacques Cartier river near the St Lawrence and W of Quebec It is in a dairy area, and pigs and poultry are raised

Pontus (pŏn'tus), in Greek religion, sea-god, son of GAEA By her he was the father of Ceto, Nereus, Thaumus, Phorcus, and Eurybia

Pontus [Gr ,=sea], ancient country, NE Asia Minor, on the Black Sea coast On its inland side were Cappadocia and W Armenia It was not significantly penetrated by Persian or Hellenic civilization In the 4th cent B C , Pontus was taken over by a Persian family, profiting by the breakup of Alexander's empire, and by 281 B C the ruler (Mithridates II), was calling himself king A century later Pharnaces I was able to annex Sinope, and his successors made a profitable alliance with Rome Mithridates V (d 120 B C) gained Phrygia thereby The only great Pontic ruler was the next, MITHRIDATES VI, who conquered Asia Minor, had control of the Crimea, and threatened Rome in Greece But the Pontic "empire" had neither economic nor political stability, and Mithridates prospered only because Rome was preoccupied elsewhere Pompey defeated him (65 B C), and when PHARNACES II tried to take advantage of the Roman civil war, Julius Caesar easily removed the threat (at Zela, 47 B C) The Romans joined Pontus to the province of Galatia-Cappadocia The principal Pontic cities were Amasia, Neocaesarea, and Zela Pontus is mentioned three times in the New Testament (Acts 2 9, 18 2, 1 Peter 1 1).

Pontus Euxinus. see BLACK SEA

Pontypool (pŏntĕpōōl'), urban district (1931 pop 6,790, 1947 estimated pop 42,420), Monmouthshire, England, NW of Newport It is in a coalmining and ironworking region and has tin-plate manufacturing The iron industry was introduced in 1588 Pontypool absorbed Abersychan in 1935

Pontypridd (pŏntuprĕdh'), urban district (1931 pop 42,717, 1947 estimated pop 39,240), Glamorganshire, Wales, NW of Cardiff At the junction of the coal-producing valleys of the Rhondda and the Taff, it ships coal down the Taff to Cardiff There are chain works here The famous single-arched bridge over the Taff was built in 1755

pony see HORSE

pony express In 1860 and 1861 letters were carried regularly from St Joseph, Mo , the western end of a telegraph line, to Sacramento, Calif , by pony express The distance of nearly 2,000 mi , chiefly through wilderness infested by hostile Indians, could be covered in eight days Before the pony express, letters to and from California had been carried by ships, wagon trains, and stagecoaches and had required much more time for the journey. Communication by telegraph was hastened by the Civil War The service began in April, 1860 The first telegram through to California was transmitted Oct 24, 1861, and the pony express was then gradually discontinued. The record was brief but picturesque, and the pony express lives in legend as well as history Stations, where the rider changed ponies, were roughly 10 mi apart The manager of the pony express was Alexander Majors, of Kentucky See L R. Hafen, *The Overland Mail* (1926); Arthur Chapman, *The Pony Express* (1933).

poodle, small and medium-sized dog of superior intelligence. Although it has long been known in France and Germany, some believe that it may have originated in Spain from an early form of water spaniel Depending upon their size, poodles are classed as standard, miniature, or toy poodles The larger poodles are sometimes used as retrievers and watchdogs as well as pets. Poodles were long trained as performing dogs for circuses and theaters. The standard poodle measures 15 in. or more in shoulder height, its coat is a solid color, often black or silver, but also appears in white, blue, cream, apricot, and red The curly coat grows profusely and has a woolly undercoat If the coat grows too long and is not well brushed and oiled, it forms long twisted cords and the dog is called a corded poodle This growth of hair hampers the dog and is generally not favored Poodles' coats are usually clipped in several rather fantastic styles, a lionlike mane is left on the forequarts and cuffs on the legs In the Continental style the hind quarters are closely clipped and tufts remain on the hips and hocks, while in the English Saddle style a short clipped covering of hair is left in the hip region Miniature poodles are very similar to the standards except that they are considerably smaller, having a shoulder height less than 15 in Toy poodles are similar small dogs weighing, according to standard requirements, under 12 lb.

pool, game see BILLIARDS

Poole, Ernest (pōōl), 1880–1950, American writer, b Chicago, grad Princeton, 1902 He was a magazine correspondent in Russia, France, and Germany before and during the First World War His novels include *The Harbor* (1915), a story of the Brooklyn water front, *His Family* (1917), awarded a Pulitzer Prize, and *Blind* (1920) Among other works are *The Little Dark Moon and Other Russian Sketches* (1925), *Giants Gone* (1943), Chicago biographies, and *Great White Hills of New Hampshire* (1946) See his autobiography, *The Bridge* (1940)

Poole, Reginald Lane: see LANE POOLE, REGINALD.

Poole, Stanley Edward Lane—: see LANE-POOLE, STANLEY EDWARD

Poole, William Frederick, 1821–94, American librarian and bibliographer, b Essex co , Mass , grad Yale, 1849 He was librarian of the Boston Athenaeum (1856–69), of the public libraries of Cincinnati (1871–73) and Chicago (1874–87), and of the Newberry Library (1887–94) He assisted in organizing many libraries, including the Chicago Public Library, the Newberry Library, and the library of the U S Naval Academy. A founder of the American Library Association (1876), he was its president from 1885 to 1887 He compiled the first general index to periodicals in the United States, *Poole's Index to Periodical Literature* (1848), and edited two other editions (1853, 1882) Later editions were compiled cooperatively by librarians and edited by W J Fletcher, the last edition appeared in 1907 This index was replaced by the *Readers' Guide to Periodical Literature* In addition to his writings on library work, Poole wrote several monographs on American history, including *Cotton Mather and Salem Witchcraft* (1869) and *Anti-Slavery Opinions before 1800* (1873)

Poole, municipal borough (1931 pop 57,211, 1947 estimated pop 79,870), Dorsetshire, England It is on the north side of Poole Harbour, an inlet of the English Channel NE of the Isle of Purbeck The harbor is irregular in shape, c 7 mi long and 4 mi wide, with a narrow entrance within which is Brankesea or Brownsea island with an old castle Fishing, yachting, and shipping of clay and pottery are carried on from Poole It is a naval supply station and a seaplane base and has a considerable coastal trade

Poona (pōō'nu), city (pop 258,197), central Bombay state, India There are several palaces and temples of the 17th and 18th cent , when it was the Mahratta capital It has a pleasant climate (its elevation is c 1,850 ft) and serves as the provincial summer capital There is metalwork, jewelry making, and weaving

Poopó (pō"pō'), salt lake, area 965 sq mi , on the high plateau of E Bolivia It is more than 11,000 ft above sea level and only 10 ft deep Fed by the DESAGUADERO, it has no outlet except in time of flood, when it drains E to the Salar de Coipasa

Poor, Charles Lane, 1886–, American astronomer and educator, b Hackensack, N J , grad College of the City of New York, 1886, Ph D Johns Hopkins, 1892 From 1891 to 1899 he was associated with Johns Hopkins, and from 1903 he taught at Columbia, becoming professor emeritus in 1944 From 1901 to 1906 he edited the *Annals* of the New York Academy of Sciences His works include *Simplified Navigation* (1918), *Gravitation versus Relativity* (1922), *What Einstein Really Did* (1930), and *Men against the Rule* (1937)

Poor, Henry Varnum, 1888–, American painter, b Chapman, Kansas, son of a banker He studied art at Stanford Univ , the Slade School of Art, London, and Julien's, Paris On his return he taught for some years in California, during the First World War he served in the army For 10 years after the war he made ceramics at his home near Nyack, N Y The success of this industry enabled him to revisit France, and after 1928 he devoted himself to painting. His still lifes, portraits, and landscapes have freshness and sincerity and are simply and beautifully painted His color is subtle and his form expressive Poor is repre-

sented in many American galleries. His frescoes in the Post Office and Dept of Justice buildings, Washington, D C , are well known *Autumn Fruit* (Whitney Mus , New York) is a characteristic oil.

Poor Clares: see CLARE, SAINT.

Poore, Benjamin Perley, 1820–87, American journalist, b near Newburyport, Mass He ran away from an academy where he was preparing for West Point and learned printing at Worcester, Mass His father bought for him a Georgia newspaper which he edited (1838–41) He served in the U S legation in Brussels until 1848 and collected historical manuscripts in France for the state of Massachusetts. Back in the United States, he returned to newspaper editing, and after 1854 he was a Washington correspondent, known to his readers as "Perley" for some 30 years He wrote many biographies, including works on Zachary Taylor (1848), Napoleon Bonaparte (1851), and John Sherman (1880) See his autobiography, *Perley's Reminiscences of Sixty Years in the National Metropolis* (1886)

Poore, Henry Rankin, 1859–1940, American figure and animal painter and writer, b Newark, N J , studied at the Pennsylvania Academy of the Fine Arts and the Art Students League and in Paris He began as a landscape painter and later painted animals in effective settings and hunting scenes Among his pictures are *A Meet in Old Virginia* and *Old Burgundy* His writings include *Art Principles in Practice* (1929), *Modern Art* (1931), and *Art's Place in Education* (1937)

poor law, legislation relating to public assistance for the poor Early measures were usually designed to suppress vagrancy and begging In 1601 England passed the Elizabethan poor relief act, which recognized the state's obligation to the needy, it provided for compulsory local levies to be administered by the parish, and it emphasized work relief for the able-bodied Local reluctance to support the poor from other areas led to settlement laws limiting migration Institutional relief was provided by poorhouses, where the aged, sick, or insane were grouped together From c 1700 workhouses were established where inmates were expected to support themselves by work, even able-bodied men and their families were placed in them However, because of widespread unemployment and low wages, it became customary in the late 18th cent to give home relief Poor-law amendments of 1834 sought to establish uniform assistance by placing relief under national supervision, it curtailed home relief and modified the settlement laws A liberalized poor law was passed in 1927 In many European countries the churches retained control of poor relief until the 19th cent , when measures to provide public relief became common A system geared to individual needs was developed in Elberfeld, Germany, and became the pattern for many communities In the United States most states have retained poor-relief statutes based on the English poor law introduced by the colonists, there is little uniformity in the different states or even in communities within a state The 20th cent has brought recognition of an obligation for uniform relief on a national scale In the United States special categories of relief, notably to children, the blind, veterans, and Indians, have been placed under national supervision Palliative measures have been supplemented by preventive measures, such as unemployment compensation and old-age pensions See also SOCIAL SECURITY See Sidney Webb and Beatrice Webb, *English Poor Law History* (1927–29)

poor-man's-orchid, see BUTTERFLY FLOWER

Popayán (pōpīyän'), city (pop 18,292), SW Colombia Founded in 1536 by Sebastián de BENALCÁZAR, on a volcanic terrace 1,000 ft above the Cauca river, Popayán (alt 5,500 ft) became a rich, aristocratic center of colonial trade It changed sides several times during the revolution against Spain Later it lost its prestige and commercial preeminence Coffee is the chief product

popcorn, variety of Indian corn (*Zea mays everta*), characterized by small ears, small pointed or rounded kernels, usually white, and a larger proportion of hard food material stored about the germ Steam is formed when heat is applied, and the grain, enlarging six to eight times in bulk, explodes and exposes the pure white pulp The freshly popped corn, seasoned with salt and butter or made into balls with molasses taffy, is a wholesome delicacy, already well known in pioneer American communities

Pope, Alexander, 1688–1744, English poet, b London, son of a prosperous Roman Catholic linen draper About 1700 he moved with his parents to a home near Binfield and Windsor Forest For the next dozen years Pope devoted himself to independent study of literature, aided and encouraged by Wycherley, Congreve, Granville, and other friends whom he met at Binfield and in London, where he spent an increasing amount of time In 1709 he published in Jacob Tonson's miscellany a set of pastorals, which led to a quarrel with Ambrose PHILIPS, and in 1711 appeared anonymously his *Essay on Criticism*, a poem outlining the critical tastes and standards of his time Pope wrote for both the *Spectator* and the *Guardian* and was friendly with Addison and his group until the quarrel with Philips and probably others excluded him from that Whig company In 1714 Pope brought out a revised version of *The Rape of the Lock* (an earlier, two-canto version had appeared in 1712), a delicate and ingenious satire based on an incident in contemporary high society The poem *Windsor Forest* (1713), meanwhile, had revealed his Tory sympathies and brought him the friendship of Swift, who aided in getting subscriptions for Pope's translation of the *Iliad*, the first volume of which came out in 1715 Completed in 1720, the *Iliad*, although not an accurate rendition of Homer, was a tremendous literary and financial success In 1725–26 Pope, assisted by William Broome and Elijah Fenton, issued a translation of the *Odyssey* A collection of Pope's poetry, including the elegiac "Elegy to the Memory of an Unfortunate Lady" and "Eloisa to Abelard," was published in 1717 He moved in 1718 to his famous estate at Twickenham, and there edited Shakspere (1725) Pope's edition was censured by Lewis THEOBALD in *Shakespeare Restored* (1726), an exposé of Pope's errors In revenge, Pope chose Theobald as hero of *The Dunciad*, a scathing satire on dunces and literary hacks which originated in deliberations of the SCRIBLERUS CLUB The first version of 1728 was many times revised and appeared in its final form in 1743, with Colley Cibber instead of Theobald as hero Between 1732 and 1734 Pope composed *An Essay on Man*, a popular poetical summary of current philosophical speculation He also wrote a series of epistles in verse, entitled *Moral Essays* (1731–35), and several ethical satires (1733–38) The prologue to the satires, which included "imitations" of Horace and Donne, is the celebrated "Epistle to Dr Arbuthnot," a "bill of complaint" against the vulgarity and "dullness" of the times Pope's important poetry was written in the heroic couplet, and only Dryden rivals him in the use of it An early illness left Pope so crippled and deformed that he never recovered his health In the view of some critics this condition fostered spitefulness and treachery, but his ill nature has been overemphasized and is counterbalanced by his devotion to his family and his loyalty to his many friends, among whom were Arbuthnot, Gay, Parnell, Swift, and Lord Bolingbroke The edition of Pope's works by Whitwell Elwin and W J Courthope (10 vols , 1871–89) will be superseded by the Twickenham edition of the poems (1939–), John Butt, editor, and the prose works edited by Norman Ault (1936–) The biography by Samuel Johnson in *The Lives of the Poets* remains a classic See also George Sherburn, *The Early Career of Alexander Pope* (1934) and *The Best of Pope* (rev ed , 1945), R K Root, *The Poetical Career of Alexander Pope* (1938), critical studies by Austin Warren (1929) and Geoffrey Tillotson (1938)

Pope, John, 1822–92, Union general in the Civil War, b Louisville, Ky , grad West Point, 1842 He served with distinction at Monterrey and Buena Vista in the Mexican War and later did topographical engineering in the West In the Civil War, Pope, made a brigadier general of volunteers (May, 1861), served in Missouri under J C Frémont and then under H W Halleck He was promoted major general in March, 1862 As commander of the Army of the Mississippi, Pope captured New Madrid and ISLAND NO 10 and took part in Halleck's move on Corinth These successes brought him the command of the newly organized Army of Virginia (June, 1862) and a brigadier generalcy in the regular army He attributed his bad defeat at the second battle of BULL RUN to alleged disobedience on the part of Fitz-John PORTER Pope, removed from command, later campaigned against the Sioux Indians He commanded (1870–73) the Dept of the Missouri See J C Ropes, *The Army under Pope* (1881)

Pope, John Russell, 1874–1937, American architect, b New York city, studied at the College of the City of New York and the School of Mines, Columbia (Ph B , 1894) He won a fellowship (1895) to the American Academy in Rome His office, established in New York in 1900, consistently produced dignified architecture of classic inspiration and fine taste Pope's numerous designs include a long list of town and country residences His public works at Washington, D C , include the Scottish Rite Temple, the National Archives Building, Constitution Hall for the Daughters of the American Revolution, and the National Gallery of Art He designed also the Lincoln Memorial, Hodgenville, Ky , the Baltimore Museum of Art, and a war memorial at Montfaucon, France Designs by Pope were selected for two memorials to Theodore Roosevelt, one to be in Washington, D C , and another in New York

Pope, Sir William Jackson, 1870–1939, English chemist He was professor at Cambridge from 1908. His work in stereochemistry included studies on asymmetric atoms of nitrogen, sulphur, selenium, and tin In the First World War he worked on mustard gas He was knighted in 1919

Poplar (pŏp'lur), city (pop 1,442), NE Mont , on the Missouri river at the junction of the Poplar, inc 1916 It is the center of an irrigated area and has the agency of the Fort Peck Indian Reservation Chief GALL surrendered here

poplar (pŏp'lur), name for any species of the genus *Populus*, deciduous fast-growing trees easily propagated by cuttings and usually short lived Some of the numerous species are commonly known as ASPEN, cottonwood, and BALM OF GILEAD A common ornamental tree is the Lombardy poplar, which, like the silver poplar, has been introduced in America Several species of poplar, especially those characterized by a cottony seed covering, are called cottonwood The common cottonwood or whitewood (*P deltoides*) is called also Carolina poplar Cottonwoods were a welcome sight to pioneers pushing westward, for they marked the streams in the otherwise treeless Great Plains Poplar bark is used in tanning, and the light, soft wood is used chiefly as pulpwood and for woodenware The TULIP TREE is also called yellow poplar

Poplar Bluff, city (pop 11,163), co seat of Butler co , SE Mo , in the Ozark foothills, on the low bluffs of the Black River near the Ark line, founded 1850 It is a trade and shipping center in a farm and resort area and has railroad shops, lumber and flour mills, and shoe and wood-products industries Clark National Forest is near, Wappapello Dam in the St Francis river is northeast

Poplarville, town (pop 1,664), co seat of Pearl River co , S Miss , SSW of Hattiesburg, in an area yielding tung nuts, pecans, and farm produce, inc 1883 A district junior college and a state agricultural experiment station are here

Popocatepetl (pōpŭkä'tupĕtul, pōpō"kätä'putûl) [Aztec, =smoking mountain], volcano, 17,887 ft high, central Mexico, on the border between Puebla and Mexico state In height, it is second only to Orizaba among the peaks of Mexico and is near IXTACIHUATL The perpetually snow-capped cone is symmetrical, and the large crater has practically pure sulphur deposits only partially exploited The ascent, which is fairly easy, was probably first made in 1519 by one of Cortés's men Active during the first two centuries of Spanish colonial times, the volcano has been dormant since 1702 Occasionally it emits vast clouds of smoke

Popol Vuh (pōpōl' vōō') [Quiché, =collection of the council], sacred book of the QUICHÉ Indians The most important document of the cosmogony, religion, mythology, migratory traditions, and history of the Quiché, the original Popol Vuh was destroyed by Pedro de Alvarado, but it was rewritten in Spanish by a converted Quiché shortly after the Spanish Conquest The language and literary style, the philosophy, and the life it reveals show the Quiché had reached a high degree of learning A similar document, more historical in content and treating of the neighboring Cakchiquel, is the *Annals of the Cakchiquel* See the English version of the Popol Vuh by Delia Goetz and Sylvanus G Morley from the translation by Adrian Recinos (1950)

Poppaea Sabina (pŏpē'u subī'nŭ), d A D. 65, Roman empress consort, wife of NERO She was the mistress of Nero for years before he became (A D 62) her third husband She is usually said to have had a baleful influence, instigating Nero to have his mother (Agrippina), his former wife (Octavia), and the philosopher SENECA killed One story (probably false) has it that in a fit of anger Nero kicked her to death

poppy, any plant of the genus *Papaver*, annual, biennial, or perennial herbs mostly native to the Old World, cultivated in gardens for the short-lived, brilliantly and variously colored blossoms. Of the

many species, those best known are the corn, Iceland, Oriental, and opium poppies The corn poppy, commonly red, grows abundantly in Europe and Asia and has become naturalized in parts of North America The poppy of "Flanders Fields" is celebrated in a poem by John McCrae and is the Memorial Day emblem of World War veterans The Shirley poppy is a garden variety of the corn poppy. The Iceland poppy, from arctic regions, is sweet scented with a leafless flower stem A favorite perennial is the Oriental poppy, commonly red flowered OPIUM is obtained from the milky juice of the seed pod of the opium poppy, native to the Orient and Greece and with double garden forms called peony flowered and carnation flowered The opium poppy is also the chief source of poppy seed, called also maw seed, not narcotic and used on rolls as a flavoring and for birdseed Poppy oil, derived from the seeds, is used for culinary and illumination purposes and in oil paints and soaps A poppy blossom has long been the symbol of the dead and of sleep. Other plants, particularly of the same family, share the name poppy, e g, CALIFORNIA POPPY and celandine poppy

population. The population of the world, measured by the census in most Western countries and estimated for others, comprises c 2,000,000,000 people Of these, roughly over half are in Asia, a quarter in Europe, and an eighth in the Americas General population increase in all parts of the world was negligible until with the Industrial Revolution there was a great surge in the growth of the peoples of Europe, especially in the British Isles In this period the advancements in sanitation, technology, and the means of food distribution made possible a drop in mortality so significant that between 1650 and 1900 the population of Europe was nearly quadrupled (c 100,000,000 to c 400,000,000) in spite of considerable emigration. This phenomenal increase in numbers led MALTHUS to predict that the population would eventually outrun the food supply A similar period of growth occurred in the United States during the 19th cent , partly as a result of IMMIGRATION By the beginning of the 20th cent., however, it became apparent that the birth rate, which had never risen during the time of expansion, had begun to decline in many areas The trend was first evidenced in France, which, before the Second World War, had an almost stable population, it is estimated that before the year 2000 most of the Western countries will have reached the same level of growth This development is attributed to social and economic factors, chiefly the spread of BIRTH CONTROL and urbanization (which is accompanied by family limitation) In less industrialized countries of Europe, notably the USSR, and in Asia (excepting Japan) birth rates are increasing rapidly There has been speculation as to an "optimum population" (ideal ratio of people to available resources), but determination of such a number is virtually impossible in complex and changing societies Restrictive policies (other than the "natural" checks of war, famine, and disease) for limitation of number and for control of quality have been put into effect by many societies Infanticide was practiced in ancient Greece, India, and other countries, and this measure, together with abortion and abandonment of the aged and unfit, has been accepted by some primitive tribes MIGRATION, which may be temporarily effective for a given area, and immigration are subject to government control Differential birth rates (see VITAL STATISTICS) in the 20th cent have exercised on Westernized populations a selective effect which has been considered undesirable, and EUGENICS programs have been proposed though not generally accepted National policies to raise the birth rate are more feasible, the most notable today is that of Sweden See Frank Lorimer and Frederick Osburn, *Dynamics of Population* (1934), Alva Myrdal, *Family and Nation* (1941), W S Thompson, *Population Problems* (3d ed , 1942), Frank W Notestein and others, *The Future Population of Europe and the Soviet Union* (1944)

Populist party. During the Panic of 1873 in the United States, prices fell so low that farmers who had contracted debts when prices were high found that the money they had to repay was worth more than the money they had borrowed The price of agricultural products slumped into decline While farmers of the Middle West and the South were growing poorer, bankers and capitalists of the East were growing rich, while farmers were burning their crops because of the high cost of fuel and prohibitive transportation rates, mine owners and railroads were prospering Farmers felt that the management of currency was at fault The Resumption Act, which was to redeem paper money issued during the Civil War by the resumption of specie payment, led to the formation (1875) of the GREENBACK PARTY, which accomplished little Believing that bankers were hoarding gold and that the circulation of more money would help the situation, delegates from farm and labor organizations met in 1891 and formed the Populist party. They advocated government ownership of railways and the free coinage of silver. In 1873 the government had ceased coining silver dollars. In the meantime a great deal of silver had accumulated, and the Westerners believed that this could be coined in the ratio of 16 parts of silver to one part of gold However, silver had become so plentiful that the old ratio no longer represented sound money. A convention held at Omaha in 1892 adopted a platform calling for free coinage of silver, abolition of national banks, a subtreasury scheme or some similar system, a graduated income tax, plenty of paper money, government ownership of railroads, election of Senators by direct vote of the people, nonownership of land by foreigners, civil service reform, limitation of state and national income to strict expense level, a working day of eight hours, postal banks, pensions, revision of the law of contracts, and reform of immigration regulations James B. WEAVER was the Populist candidate for President that year and polled over 1,041,000 votes The Populist votes in the 1894 congressional elections increased to 1,471,000 as the party gained momentum In 1896, while the Republican party adhered to the "sound money" platform, the Populists kept intact their platform of 1892, the Democratic party, however, adopted the plank of free coinage of silver and nominated William Jennings BRYAN for President Though the Populists tried to retain their independence by repudiating the Democratic vice presidential candidate, the Democratic party, helped by the eloquence of Bryan, captured the bulk of the Populist votes in 1896 Nevertheless, William McKinley, the Republican presidential nominee, won the election by 600,000 votes The 1896 election undermined agrarian insurgency, and a period of rapidly rising farm prices brought about the dissolution of the Populist party. See F L McVey, *The Populist Movement* (1931).

Poratha (pō'ruthu), one of the 10 sons of Haman Esther 9 8

porcelain [Ital *porcellana*], hard, permanent kind of pottery having translucence It differs from earthenware and chinaware in the method of firing After the first firing, the body and glaze are fired together at a very high temperature in the glost fire Porcelain is produced from hard, soft, or artificial paste consisting variously of kaolin, feldspar, and bone phosphate of lime It probably originated in 14th-century China The oldest existing specimens are attributed to the 15th cent Chinese porcelains include those of many brilliant enamels (such as celadon, peachblow, oxblood, and Mohammedan blue) and the rice-grain decoration and hawthorn and lace patterns Canton ware is one of the best-known kinds Many of these porcelains were early introduced into Japan and copied with fair success despite less pure clay and less skillful artistry in the early work, but eventually Japanese potters rivaled their masters Potters in Italy and France began to reproduce Chinese porcelain in the late 15th cent , and the work spread over Europe, native hard-paste porcelain (Dresden china) was being produced at Meissen in 1715 Fine European porcelains include Venetian, Florentine, Sèvres, the Buen-Retiro of Madrid, Dresden, Copenhagen, Chelsea, Derby, Worcester, Bristol, Bow, and Lowestoft.

porch, usually a projecting, protective roofed entrance attached to buildings and having sides either open or partly or wholly enclosed It may be of one or more stories or the lower story of a tower The term is used also for a veranda, piazza, or sleeping balcony When it is enlarged and elaborated in design, it is called portico or colonnade It gained its chief prominence in ecclesiastical architecture of the 12th to 16th cent. Many fine examples exist in France, and in England there are still a few fine old church porches of wood The colonial domestic architecture of America produced fine examples It apparently was known in Egyptian architecture and in Pompeii, while in Greece it became the PROPYLAEA and STOA In Athens in the 4th cent B C there was a structure called the Painted Porch where Zeno of Citium spoke to his disciples It had frescoes of the battle of Marathon

Porcius Festus see FESTUS, PORCIUS

Porcupine, gold-mining district see TIMMINS, Ont

Porcupine (pôr'kyupĭn, -kyōō-), river, 525 mi long, a main tributary of the Yukon It rises in W Yukon territory in mountainous country N of Dawson and flows in a great arc NE then W across the Alaska boundary to enter the Yukon river at Fort Yukon, in NE Alaska It was discovered (1842) by John Bell, a chief trader for the Hudson's Bay Company.

porcupine (pôr'kyupĭn, -kyōō-), heavy, short-legged, slow-moving rodent, protected from head to the end of the tail by erectile quills The tapering outer end of each quill is covered with overlapping barbs Animals become impregnated with quills from the body or from the lashing tail when they attack the porcupine The quills are difficult to extract and cause painful swelling. Lost or molted quills are replaced Porcupines eat the inner bark and leaves of trees, succulent parts of herbaceous plants, and fruits They are fond of salt. The Old World porcupines are largely terrestrial and nocturnal. They are found in S Europe and in parts of Asia and Africa. Porcupines of the New World belong to another family. Their feet are adapted for climbing, and they are at least partially arboreal Two species inhabit North America. The Canadian porcupine (*Erethizon dorsatum*), which is dark brown or blackish and densely furred, is found in forests of E North America. The western species (*E. epixanthum*) has a brown undercoat, and the long guard hairs are yellowish at the tips. Among the South American forms is the tree porcupine (*Coendou*), which has a long prehensile tail. The porcupine is often incorrectly called hedgehog.

Porcupine Mountains, extreme W Upper Peninsula, N Mich , near the shore of Lake Superior, having the highest point (2,023 ft) in the state.

Pordenone, Giovanni Antonio de (jōvän'nē äntō'nyō dā pôrdānō'nā), c 1484–1539, Venetian painter His real name was Giovanni Antonio de Sacchis, and he was also known as Corticellis or Curticello, Regillo, and (erroneously) Licinio. He executed frescoes in the churches of Friuli and worked also in Treviso, Mantua, Cremona, and Genoa. In Venice his services were in great demand for the decorating of Venetian palaces Most of his Venetian frescoes have perished Among his extant works are frescoes in the cathedral at Cremona, *St Catherine Disputing with the Doctors at Alexandria* (Madonna di Campagna, Piacenza), and *The Glory of San Lorenzo Giustiniani*, one of Pordenone's greatest works (Academy, Venice), *An Apostle* (National Gall , London), *St Christopher* (National Gall of Art, Washington, D C)

porgy (pôr'gē), name for several fishes of the family Sparidae found in warm and tropical coastal seas of the Americas and Europe. The red porgy (*Pagrus*), a red fish with blue spots, occurs in the Mediterranean and in the warmer Atlantic waters of Europe and the Americas Species of the genus *Calamus*, e g , the saucer-eye and jolthead porgies, are good food fish Also called porgy is the scup or fair maid (*Stenotomus*) of the same family, an excellent food fish found commonly from Cape Cod to South Carolina

Pori (pō'rē), Swed *Björneborg* (byōr'nubōr"yū), city (pop 22,661), SW Finland, a Baltic port near the mouth of the Kokemenjoki Its ice-free harbor makes it an important shipping center There are manufactures of machinery, textiles, and lumber products Founded (1365) as Ulvila, Pori was moved nearer the sea in 1558

Porjus (pôr'yŭs), cataract, c 170 ft high, in the Stora Lule river, N Sweden, in Norrbotten co , S of Gallivare By a 100,000-horsepower underground hydroelectric plant, the power from the falls operates the iron mines at Kiruna and Gallivare, iron smelters, electrochemical plants, and the Lapland RR from Narvik to Lulea A large auxiliary dam insures a steady flow of water Next to Trollhattan it is the largest power plant in Sweden

pork, flesh of swine prepared as food, one of the principal commodities of the meat-packing industry It is sold either as fresh meat or as HAM, BACON, SAUSAGE, LARD, or a variety of other products The fresh pork and the choicest cured products are taken from good smooth carcasses weighing from 240 to 400 lb The fresh pork is sold either chilled or frozen. The skin and fat should be white, the flesh clear, pink, and fine grained The principal fresh cuts are hams, loins, spareribs, shoulders, butts, and feet The brains, snout, ears, jowls, tail, and tongue are used in a variety of ways

Porkkala (pôrk'kälä), peninsula, area c 150 sq mi , in the Gulf of Finland, near Helsinki According to the Treaty of Paris of 1947, Finland leased this area to the USSR for 50 years, for use as a naval base

Poros (pō'rus), anc *Calauria*, island (7 sq mi , pop 5,629), off S Greece, in the Aegean Sea just off the Argolis peninsula There are remains of the temple of Poseidon, where Demosthenes took poison and died in 322 B C The town of Poros, on the south shore, has a fortified naval station

Porphyry (pôr'fĭrē) (Gr , =purple, imperial; alluding to his original name *Malchas*, Syriac, =king), 233–c 304, Greek scholar and Neoplatonic philosopher. He studied rhetoric under Longinus and philosophy under PLOTINUS He later lectured in Rome on the philosophy of Plotinus and was the teacher of the Neoplatonist, Iamblichus He wrote lives of Pythagoras and of Plotinus and edited the *Enneads* of Plotinus He wrote also on rhetorical and literary themes His most influential work is the *Eisagoge*, an introduction to the logic of Aristotle, in which he reduced the 10 categories of Aristotle to the five predicables still recognized in logic—genus, species, difference, property, and accident

porphyry (pôr'fĭrē), igneous rock composed of large, conspicuous crystals (phenocrysts) and a groundmass or matrix in which the phenocrysts are embedded. Some authorities consider the expression "porphyritic rock" better usage than porphyry, since the name describes the texture of the rock—not its chemical, physical, or mineralogical composition or color. The texture is important in the determination of the circumstances under which the rock formed. The phenocrysts vary in size from specimen to specimen; the groundmass may

be either glassy or made up of coarse or fine granules or crystals. The varieties of porphyry are many, the specimens being named by the character of the phenocrysts in the groundmass. They are found in main classes of igneous rocks, e g , in granite, syenite, diorite, gabbro, and peridotite Porphyritic felsites and porphyritic basalts are widely distributed The porphyritic texture indicates two separate stages of solidification. In the first phase the phenocrysts form in the molten mass In the second phase the molten mass itself crystallizes into a solid It is commonly believed that the first stage occurs after the ejection of the molten lava Porphyritic texture is especially common in extrusions (e.g , in lava)

porpoise (pôr'pus), sea mammal (genus *Phocaena*) of the order Cetacea, allied to the WHALE It is found chiefly in the N Atlantic and the N Pacific About 4 to 6 ft long, it is black above and white below and, unlike the dolphin, its nose is blunt Traveling in schools, porpoises prey on fish, often pursuing them up rivers The fat of the porpoise yields a lubricating oil, and the flesh is sometimes eaten Much of the tanned skin sold as porpoise hide is obtained from the white whale or beluga

Porpora, Niccolò Antonio (nēk-kôlō' äntō'nyō pôr'-pōrä), b 1686, d 1766 or 1767, Italian composer and one of the greatest singing teachers His more than 50 operas are not very important, his best compositions being his cantatas for voice and harpsichord, it is for his vocal pedagogy that he is remembered Haydn was among his pupils, as were all the greatest singers of the 18th cent , including Farinelli

Porrentruy (pôrätrüē'), Ger *Pruntrut* (prōōn'trōōt), town (pop 6,121), Bernese Jura, Bern canton, Switzerland It has an old watch industry and also manufactures knit goods and shoes From 1528 to 1792 it was the residence of the prince-bishops of Basel, whose territories passed to Bern in 1815 Most of the people are French-speaking

Porres, Martin de (pō'räs), 1579–1639, South American man of religion, b Lima, Peru His father was a Spanish soldier, his mother a Negro of Panama He was apprenticed to a barber surgeon Later he became a Dominican tertiary and devoted himself wholly to the sick and the forlorn He built an orphanage and hospitals and lived an extraordinarily ascetic life Miracles were attributed to him in his lifetime He was beatified in 1836 Feast Nov 5

porridge, dish made of the meal or flour of wheat, oats, or other grain or of peas or beans, stirred into milk or water and cooked until thick The early porridge seems to have been a thick stew of vegetables or a combination of foods Nettle porridge, for example, was a dish of greens

Porsena, Lars see LARS PORSENA

Porsgrunn or **Porsgrund** (both pôrs'grōōn"), town (pop 9,003), Telemark co , S Norway, a port on an inlet of the Skagerrak It is noted for its fine porcelain manufacture, and it has iron mills, shipyards, and lumber mills

Porson, Richard, 1759–1808, English classical scholar, b Norfolk A poor boy, he showed such astonishing powers of memory that patrons sent him through Eton and Trinity College, Cambridge He created something of a sensation by supporting Edward Gibbon in declaring that John 1 7 was spurious He was appointed (1792) regius professor of Greek at Cambridge but lived in London, there editing several plays of Euripides He was a textual critic of the highest order and was remarkable for his perceptive grasp of metrical principles of Greek poetry His treatises and criticism were edited by Thomas Kidd (1815), and his correspondence by H R Luard (1851) See biography by M L Clarke (1937)

port, a harbor and its terminal facilities for the transfer of goods and passengers Many early cities as well as most of the great cities of today are ports, with access to hinterlands providing a large volume of commerce The importance of a port depends on its hinterland, on accessible transportation facilities, and on its terminal facilities, such as wharfs, storage space, and machinery Municipal, state, and national governments spend huge sums for the improvement and maintenance of ports for commercial and military uses See also FREE PORT See R S MacElwee, *Port Development* (2d ed , 1926) and *Ports and Terminal Facilities* (2d ed , 1926)

port [from Oporto], fortified wine made in Portugal from grapes grown in the Douro valley Various grapes are blended by the growers, and brandy is added to the must before fermentation is complete In the spring the casks are brought to the shippers' "lodges" in Oporto and Villa Nova, where the wines are blended and stored Vintage port is wine of an exceptional year, kept in cask for two or three years, then matured in bottle—much of it for 25 years Ruby port, generally a blend of wines of different vintages, is stored in wood and bottled before it loses its clear red color Tawny port remains longer in cask, losing some color and alcohol Crusted port is vintage or ruby port kept in bottle until it has thrown a crustlike sediment. So-called white port, made in the upper Douro region, is a sweet, amber-colored port matured in wood Port is frequently artificially colored with caramelized wine or berry juice See André L Simon, *Port* (1934)

Porta, Giacomo della (jä'kōmō dĕl'lä pôr'tä), c 1540–1602, Italian architect and sculptor After working with Vignola and Michelangelo, he completed certain works designed or begun by them, such as the cupola of St Peter's and the Farnese Palace, Rome His other works include the Villa Aldobrandini (damaged in the Second World War) in Frascati and some fountains in Rome

Porta, Giambattista della (jämbät-tä'stä), c 1541–1615, Italian physicist He performed many optical experiments and is usually credited with the invention of the camera obscura, described in his most noted work, *Magiae naturalis* (1558), which he revised and enlarged in 1589 His other works include *De humana physiognomonia* (1586), *Phytognomonica* (1588), and *De coelestia physiognomoniae* (1603) He also wrote many comedies

Porta, Guglielmo della (gōōlyĕl'mō), d 1577, Italian sculptor His early works are in Genoa In 1537 he went to Rome, where he was employed by Pope Paul III in restoring certain antique statues His principal work, the tomb of Paul III, shows the influence of Michelangelo

Port Adelaide, city (pop 33,404), South Australia, NW of Adelaide and on an inlet of Gulf St Vincent It is the principal port and wool-trading center of the state There is an iron smelter The chief exports are wheat, flour, and wool

Portadown (pôrtudoun'), urban district (pop 12,440), Co Armagh, Northern Ireland, on the Bann and WSW of Belfast It is a railroad and industrial center with linen mills and canneries and manufactures of lace, clothing, carpets, rope, and fish nets

Portage (pôr'tĭj). **1** Industrial borough (pop 4,123), SW Pa , between Altoona and Johnstown It is on the Allegheny watershed between a stream flowing E to the Susquehanna and one flowing W to the Allegheny and thus connecting with the Ohio **2** City (pop 7,016), co seat of Columbia co , central Wis , inc 1854 It is on the Wisconsin at the point where that river is close enough to the Fox to make canoe portage feasible In 1673 Louis Jolhet and Father Marquette were the first white men to use this important portage link of the water route from the Great Lakes to the Mississippi The path is now a ship canal, and the present town is a farm trade center with several industries The site of Fort Winnebago (1828) and the restored Indian Agency house (1832) are here Zona Gale and Frederick Jackson Turner were born in Portage

portage. In the American wilderness, a portage was a trail over which canoes and goods were carried from one waterway to another The portages were important to Indians, white explorers learned of them from the Indians, and pioneers used them In some instances, settlements were made at portages and later grew into cities Chicago is on the site of a portage by which canoes could be carried from the Great Lakes system of waterways to a waterway by which canoes could reach the Mississippi and its tributaries The Great Lakes were connected with tributaries of the Mississippi by a number of other portages, and many other waterways were similarly connected with one another

Portage Des Sioux (pôr'tĭj dĕ sōō'), town (pop. 254), E Mo , on the west bank of the Mississippi WNW of Alton, Ill , settled c 1799 around a Spanish fort At one end of a portage between the Mississippi and the Missouri, it was the scene in 1815 of treaty negotiations between U S commissioners and certain Indian tribes

Portage Lake, inlet of Keweenaw Bay, c 20 mi long and 2 mi wide, extreme N Mich , indenting the southeast shore of Keweenaw peninsula An old portage route connected it with Lake Superior, and now a short ship canal from the northwest end of Portage Lake to Lake Superior has created an important waterway across the peninsula

Portage la Prairie (pôr'tĭj la prā'rē), city (pop 7,620), S Man , near the Assiniboine river W of Winnipeg It is the commercial center of a wheat-growing region and has grain mills It is near the site of Fort La Reine, an important fur-trading post built (1738) by Vérendrye as a carrying point between the Assiniboine and Lake Manitoba Another post was established much later, was long run by the Hudson's Bay Company, and was moved (1870) to the site of the present city

Portageville (pôr'tĭjvĭl), city (pop 2,107), SE Mo , near the Mississippi SW of Cairo, Ill , in a cotton and farm area, inc 1903

portal, entrance to a city or to a bridge, church, or other building It is often enhanced with an elaborate decorative treatment, such as is seen in the portals of the Jain and other temples of India, Spanish Renaissance churches, the Gothic cathedrals of France and elsewhere, and Elizabethan and Jacobean structures in England Portals of the gateways of Rome and of medieval cities were formidable instead of ornamental, modern ones are sometimes merely arches. Commercial buildings are frequently designed with imposing portals of bronze or ironwork, perhaps with sculptural features above, as in Radio City, New York

Port Alberni (älbûr'nē), city (pop 4,584), on S central Vancouver Island, SW British Columbia, at the head of Alberni Canal (see ALBERNI) and NW of Victoria It is a port of entry, a fishing center, and an inland lumber-shipping port and has paper mills There are mines in the region

Portales, Diego (dyä'gō pôrtä'lās), 1793–1837, Chilean statesman Founder of constitutional order and the Conservative regime in Chile, he was general minister (1830–31) and minister of war and marine (1831–32, 1835–37) He was largely responsible for the constitution adopted in 1833 Refusing the presidency, but ruling in fact, he reorganized the army, the treasury, the internal administration, commerce, and industry His one aim was to bring order out of the bloody chaos that followed independence, but the parliamentarian became the autocrat, his strict measures caused discontent and he was killed in a mutiny of soldiers

Portales (pôrtä'lēs), city (pop 5,104), co seat of Roosevelt co , E N Mex , near the Texas line, founded 1898, inc 1909 It is the trade center of an irrigated truck-farm and grazing area Eastern New Mexico College is here

Port Alfred, town (pop 3,243), S Que , on Ha Ha Bay of the Saguenay river and SE of Chicoutimi It is a pulp and paper center and a resort

Portalis, Jean Étienne Marie (zhä' ātvĕn' marē' pôrtalēs'), 1746–1807, French statesman and lawyer He opposed the French Revolution, but was made a commissioner of government councilor of state, and director of ecclesiastic affairs by Napoleon Bonaparte Portalis had a share in making the Concordat of 1801 and in drawing up the Code Napoléon

Portalis, Joseph Marie (zhōzĕf'), 1778–1858, French statesman, son of Jean Étienne Marie Portalis He was minister of foreign affairs under Louis XVIII and vice president of the chamber of peers under Louis Philippe

Port Allegany (ăl"ugā'nē), borough (pop 2,356), NW Pa , on the Allegheny river and E of Smethport, settled c 1816, inc 1882 Its manufactures include bark extracts, glass, silk, and toys.

Port Allen, town (pop 1,898), parish seat of West Baton Rouge parish, SE La , on the Mississippi, laid out 1854, inc 1923 A ferry connects it with Baton Rouge, directly across the river

Port Angeles (ăn'julus), city (pop 9,409), co seat of Clallam co , NW Wash , on Juan de Fuca Strait opposite Victoria, British Columbia, settled in the 1860s It is a port of entry and a shipping, lumbering, paper-milling, dairying, and resort center A U S coast guard air base is here

Port Apra, Guam see APRA HARBOR

Port Arthur, city (pop 24,426), W Ont , on the northwest shore of Lake Superior, 200 mi NE of Duluth, Minn It is just north of its twin city, FORT WILLIAM, the two together are the westernmost Canadian Great Lakes port and have become an important shipping center, especially for wheat, wood products, and iron Port Arthur has grain elevators shipyards, a dry dock, and paper, pulp, and lumber mills It is a tourist center for a large hunting and fishing area

Port Arthur, Mandarin *Lüshun,* city (pop 142,184), SW Liaoning prov , China It is a naval base at the tip of Liaotung peninsula and a southern terminus of the South Manchurian RR The city was the administrative center of the Kwantung leased territory from 1898 to 1945, when it became the headquarters of the Port Arthur Naval Base District (see LIAONING)

Port Arthur, city (1940 pop 46,140, 1947 estimated pop 60,000), SE Texas, on Sabine Lake and SE of Beaumont The Sabine region had been early visited, settlements had been made, and livestock and rice were grown before Arthur E Stilwell decided (1895) to found here a railroad terminus on the Gulf John Warne GATES (Bet-a-Million Gates) also figured in the early growth of the city It boomed particularly after the discovery (1901) of oil at Spindletop near Beaumont A ship channel was begun in 1897, and Port Arthur on the Sabine-Neches Canal and the Intracoastal Waterway, is a port of entry and a giant oil port, with large refineries and industries dependent upon oil Points of interest are the pleasure pier on reclaimed land in Sabine Lake, Port Arthur College, a business school run on a nonprofit basis, and the tall bridge (completed 1938) over the Neches on the road to Orange

Port Augusta, town (pop 4,350), South Australia, a port at the head of Spencer Gulf It exports wool and wheat and is the south terminus of the Central Australian RR

Port-au-Prince (pôrt-ō-prĭns', Fr pôrtōprĕs'), city (pop 170,000), S Haiti, capital of the republic, at the head of the Gulf of Gonaïves It was founded in 1749 after the movement of French sugar planters southward from N Haiti to the fertile Cul de Sac, a structural depression E of Port-au-Prince, where through irrigation more intense cultivation can be practiced In 1770 it replaced CAP-HAÏTIEN as capital of the French colony Saint-Domingue Like an amphitheater, with business and commercial houses along the water front and residences on the hills above, the city has suffered frequently

from earthquakes (especially in 1842), fires, and turbulent civil warfare The average annual temperature is slightly over 80°F From its excellent harbor (the dockside depth is 30 ft) are shipped between 40 and 50 percent of Haiti's exports, chiefly coffee and sugar

Port aux Basques (pôrt' ō bäsk'), town (1945 pop. 879), SW N F , a port on Cabot Strait at the tip of the island It is connected by mail ships with North Sydney, N S , and by rail with St John's It is a center for cod and halibut fishing, with cold-storage plants and a government bait depot An ice-free port, in winter months it ships newsprint from the Corner Brook mills In 1945 it was incorporated with near-by CHANNEL as a single municipality

Port Blair, town, capital of the Andaman and Nicobar Islands, India It exports copra

Port Carbon, residential borough (pop 3,279), E Pa , near Pottsville, laid out 1828, inc 1852

Port Chester (pôrt' chĕs'tŭr), industrial and residential village (pop 23,073), SE N Y , in Westchester co , at the Conn line and on Long Island Sound, inc 1868 Electric razors, confectionery, and hardware are made

Port Clinton, village (pop 4,505), co seat of Ottawa co , N Ohio, on Lake Erie W of Sandusky and at the mouth of the Portage river, in a fruitgrowing and fishing region, founded c.1828 Automobile parts and gypsum products are made Near by is Camp Perry

Port Colborne (kōl'burn), town (pop 6,993), S Ont , on Lake Erie, at the south end of Welland Ship Canal and S of St Catharines It has a nickel refinery, flour mills, grain elevators, and iron smelters Power is supplied from Niagara Falls

Port Coquitlam (kōkwit'lum), city (pop 1,539), SW British Columbia, in the lower Fraser valley, on the Coquitlam and E of Vancouver It is a trade center for a truck-gardening and fruitgrowing region and has meat-packing plants

Port Credit, village (pop 2,160), S Ont , SW of Toronto, in a fruitgrowing and fishing region

portcullis (pôrtkŭ'lĭs), grating or framework of strong bars of wood or iron, sharp-pointed at their lower ends, sliding vertically in the grooved jambs of a fortified portal as a protection in case of assault Although first used in Roman times, the portcullis reached its highest development in the 12th cent as a characteristic feature of the defensive system of a castle or fortified town It could be dropped suddenly in a surprise attack Through its grating the defenders could keep up a fire of arrows and other missiles

Port Dalhousie (dăl"hōō'zē, -hōō'zē), village (pop 1,723), S Ont , on the south shore of Lake Ontario and E of Hamilton Once the northern terminus of the Welland Ship Canal, it is still an active port, with a coal dock, fruit canning, and rubber manufacturing

Port Darwin see DARWIN, Australia

Port-de-Paix (pôr-du-pā'), city (pop c 5,000), NW Haiti, a port opposite Tortuga island It exports sisal, coffee, and cacao

Port Deposit, town (pop 883), NE Md , on the Susquehanna near its entrance into Chesapeake Bay Founded in 1812, it was an important port in the 18th cent Granite quarrying is now the chief industry Jacob Tome founded here in 1889 an educational institute

Port Dickinson, village (pop 2,436), S N Y., on the Chenango and near Binghamton, inc 1876.

Port Dover, town (pop 1,968), S Ont , on Lake Erie and SW of Hamilton It is a shipping point for a farm and industrial area

Port Edwards, village (pop 1,192), central Wis , on the Wisconsin below Wisconsin Rapids, inc 1902 Paper is made

Port Elgin (ĕl'gĭn), village (pop 1,395), S Ont , on the east shore of Lake Huron and WSW of Owen Sound, in a fishing and dairying region There are tree nurseries here

Port Elizabeth, city (pop 133,064), S Cape Prov , Union of South Africa, on Algoa Bay, midway between Cape Town and Durban It was founded in 1820 by British settlers and developed rapidly after 1873, when a railroad to Kimberley was begun It exports diamonds, wool, mohair, and fruit The population includes 58,904 Europeans

Porteous, John (pôr'tēus), d 1736, British soldier, chief figure in the Porteous riot in Edinburgh, Sept 7, 1736 He was captain of the Edinburgh town guard at the execution of Andrew Wilson, a smuggler The guard unnecessarily fired into the crowd, which was sympathetic to Wilson, and eight or nine persons were killed Porteous was tried, convicted and sentenced to death, but reprieved An indignant mob took him from prison and hanged him, a crime for which no one was brought to justice despite the efforts of the government Incidents of the Porteous riot are used by Sir Walter Scott in *The Heart of Mullothian*

Porter, Anna Maria. see PORTER, JANE.

Porter, Cole, 1893–, American composer and lyricist, b Peru, Ind , grad Yale, 1913, and studied music at Harvard and with D'Indy at the Schola Cantorum His first musical-comedy score was *See America First* (1916), a failure, but most of those which followed were highly successful. They include *Hitchy Koo* (1919), *Greenwich Village Follies* (1924), *Fifty Million Frenchmen* (1929), *The Gay Divorce* (1932), containing *Night and Day*, his most famous song, *Anything Goes* (1934), containing *You're the Top*, often parodied, *Leave It to Me* (1938), containing *My Heart Belongs to Daddy*, *DuBarry Was a Lady* (1939), *Something for the Boys* (1943), and *Kiss Me, Kate* (1949) Among his approximately 400 songs, for which he writes the words himself, are many of enduring popularity, such as *Begin the Beguine* (from *Jubilee*, 1935), *What Is This Thing Called Love?* and *In the Still of the Night*.

Porter, David, 1780–1843, American naval officer, b Boston Appointed a midshipman in 1798, he served in the West Indies and in the war with Tripoli In 1803 his ship, the *Philadelphia*, was captured off the coast of Tripoli, and Porter was a prisoner until peace was declared in 1805 He achieved his greatest success as commander of the famous *Essex* in the War of 1812 In that year he captured several British ships carrying troops to Halifax and the British war vessel *Alert* Then, accompanied by young David FARRAGUT, he sailed the *Essex* around the Horn and cruised in the Pacific, warring on British whalers He took formal possession of the MARQUESAS ISLANDS in Nov , 1813, but this act was not recognized by the U S government In 1814 the *Essex* was blockaded by British ships in the harbor of Valparaiso Porter escaped to sea, but a squall disabled his ship, forcing him back to the coast He was attacked by two British warships and after a hard-fought battle was forced to surrender While in the West Indies in 1824 on an expedition for suppressing piracy, Porter forced the officials of the town of Foxardo (Fajardo), Puerto Rico, to apologize for jailing a searching party from his fleet, the men had entered the town on hunt for a bandit The government did not sanction Porter's act, and he was court-martialed and suspended for six months Porter resigned and in 1826 entered the Mexican navy as rear admiral Disgusted with the jealous intrigues of the Mexican officers, he resigned in 1829 Upon his return to the United States he was appointed chargé d'affaires at Constantinople and held this post till his death See biographies by his son, David Dixon Porter (1875), and A D Turnbull (1929)

Porter, David Dixon, 1813–91, American admiral, b Chester, Pa , son of David Porter He served under his father in the Mexican navy before he was appointed (1829) midshipman in the U S navy He held his first command, the *Spitfire*, in the Mexican War From 1850 to 1854, Porter, on leave, commanded passenger and mail ships In the Civil War he led the mortar flotilla of the fleet commanded by D G FARRAGUT in the successful assault on New Orleans (1862) and in 1863 contributed to U S Grant's success in the VICKSBURG CAMPAIGN For these services on the Mississippi he was made rear admiral He cooperated (1864) with Gen N P Banks in the Red River expedition and later was given command of the North Atlantic Blockading Squadron In the joint land-sea expedition against Fort FISHER (1864–65), the naval forces were under Porter's direction Next to Farragut, he was the outstanding Union naval commander As superintendent (1865–69) of the U S Naval Academy he proved himself an able organizer and administrator Porter was promoted vice admiral in 1866, in 1870, on Farragut's death, he became full admiral See biography by R S West, Jr (1937)

Porter, Fitz-John, 1822–1901, Union general in the Civil War, b Portsmouth, N H , grad West Point, 1845, nephew of David Porter He was twice brevetted for his service in the Mexican War and was an instructor at West Point (1849–55) In the Civil War, Porter, made a brigadier general of volunteers (May, 1861), distinguished himself in 1862 as a corps commander in the SEVEN DAYS BATTLES of McClellan's PENINSULAR CAMPAIGN Later that year John Pope alleged that Porter's disobedience lost the second battle of BULL RUN, and Porter was court-martialed He declared that it was impossible to carry out Pope's orders, but he was, nevertheless, cashiered A review of the case in 1879 vindicated Porter In 1886 he was reappointed colonel of infantry and retired See Otto Eisenschiml, *The Celebrated Case of Fitz-John Porter* (1950)

Porter, Horace, 1837–1921, American soldier and diplomat, b Huntingdon, Pa , grad West Point, 1860 In the Civil War he saw varied service, mostly as an ordnance officer, before becoming (1864) aide-de-camp to Gen U S Grant When Grant was Secretary of War (1867–68), Porter was Assistant Secretary, and during Grant's presidency he served as one of his military secretaries until 1872 He was ambassador to France (1897–1905), where, at his own personal expense, he recovered the Hague Conference of 1907, he amended the DRAGO DOCTRINE with his Porter Proposition, which provided that strong nations whose nationals had contract-debt claims against weaker nations should submit the claims to arbitration before trying to collect them by force He wrote *West Point Life* (1866; verse) and *Campaigning with Grant* (1897) See biography by his daughter, E P Mende, and H G Pearson (1927).

Porter, Jane, 1776–1850, Scottish novelist. Her most successful works were *Thaddeus of Warsaw* (1803) and *The Scottish Chiefs* (1810) Her sister, **Anna Maria Porter,** 1780–1832, wrote *The Hungarian Brothers* (1807) and other novels.

Porter, Katherine Anne, 1894–, American author, b Indian Creek, Texas She worked on several newspapers before publishing her first book of stories, *Flowering Judas* (1930) This work won her a Guggenheim fellowship and high praise from literary critics, who compared her to Virginia Woolf and Katherine Mansfield Subsequent works include *Hacienda* (1934), *Noon Wine* (1937), *Pale Horse, Pale Rider* (1939), and *The Leaning Tower* (1944). In 1949 she became writer in residence at Stanford Univ Her works are distinguished by the purity of her literary style, one of the finest of the 20th cent

Porter, Noah, 1811–92, American educator and philosopher, b Farmington, Conn , grad Yale, 1831 He entered the ministry in 1836 In 1846 he became professor of moral philosophy and metaphysics at Yale and from 1871 to 1886 was president of the university He edited (1864, 1890) revised editions of Noah Webster's dictionary and wrote a number of educational and philosophical works, including *The Human Intellect* (1868) and *The Elements of Moral Science* (1885). See biography by Timothy Dwight (1892)

Porter, William Sydney see HENRY, O.

Porter, town (pop 1,190), NW Ind , on Lake Michigan E of Gary Bricks are made here

porter. see BEER

Porterdale, town (pop 3,116), N central Ga , ESE of Atlanta It grew up around cordage and fabric mills established here in 1868

Porterville, city (pop 6,270), S central Calif , SE of Fresno, founded 1859 on an old Los Angeles–San Francisco stage route, inc 1902 It is principally a fruit-packing center and has the headquarters for Sequoia National Forest A junior college (coeducational) is here

Portes Gil, Emilio (ämā'lyō pôr'tās hēl'), 1891–, Mexican statesman, provisional president (Dec , 1928–Feb , 1930) He was chosen to fill the office left vacant by the assassination of Álvaro OBREGÓN Portes Gil continued the policies of CALLES but emphasized agrarian rather than labor reform He formed the National Revolutionary party, which consolidated the political power of Mexico Peace between Church and state was temporarily restored in 1929 He was succeeded by ORTIZ RUBIO

Port Gentil (pôr zhätē'), town, French Equatorial Africa, a port on the Atlantic Ocean Hardwoods are exported

Port Gibson, town (pop 2,748), co seat of Claiborne co , SW Miss , near the Mississippi S of Vicksburg, in a cotton area, founded in the late 18th cent A Civil War battle was fought here (see VICKSBURG CAMPAIGN) Near by is Alcorn Agricultural and Mechanical College (Negro, land grant, coeducational, 1871)

Port Glasgow, burgh (pop 19,581), Renfrewshire, Scotland, on the south shore of the Firth of Clyde and near Greenock It was founded in 1668 as a port for Glasgow, before that city had been made accessible to large ships, it became a burgh in 1775 For a time it held a leading place in Clyde traffic It has a large graving dock (one of the first of its kind in Scotland), shipbuilding plants, iron and brass foundries, engineering works, and other industries The ruins of 16th-century Newark Castle are near the burgh

Port Harcourt (här'kurt, -kôrt), town (pop 15,201), SE Nigeria, a port on the Niger river delta Founded c 1919, it is named in memory of Sir William Harcourt It is the terminus of a railroad from tin- and coal-mining fields There is trade in palm oil

Port Hawkesbury, town (pop 1,041), on S Cape Breton Island, N S , just north of the terminal of the train ferry across the Strait of Canso to Point Tupper It is a fishing port, with cold-storage plants

Port Henry, village (pop 1,935), NE N Y , on Lake Champlain N of Crown Point, inc 1869. Pig-iron foundries and iron mines are here

Port Hope, town (pop 5,055), S Ont , on Lake Ontario E of Toronto, settled 1778 It has a radium-refining plant and some manufacturing and processes food It is a summer resort Trinity College, a boys' school, is here

Port Hudson, village, SE La , on the east bank of the Mississippi, 20 mi N of Baton Rouge In the Civil War a high bluff here was strongly fortified by the Confederates in 1862 While Grant pressed his VICKSBURG CAMPAIGN, N P. BANKS moved against Port Hudson and opened siege in May, 1863 After hearing of Vicksburg's fall, the large Confederate garrison surrendered, July 8, 1863

Port Huron (hyōō'run), city (pop 32,759), co. seat of St Clair co , S Mich , at the confluence of the St Clair with the Black River and at the foot of Lake Huron It was incorporated as a village in 1849, as a city in 1857. A port of entry, it connects with Sarnia (tunnel) and Point Edward (bridge), Ont

Settlement at Port Huron began (1686) with the French fort, St Joseph. The town grew after the building (1826) of Fort Gratiot Turnpike (between Port Huron and Detroit), ushering in an era of lumbering. After this industry declined (in the 1880s), local deposits of salt, oil and gas were developed, and sawmilling, boatbuilding, and papermaking became important. Port Huron is a center of shipping by rail and water. It has railroad shops, and products include automobile parts, cement, paper, and metal goods. Thomas A. Edison lived here for many years. A museum in the county library here contains historical material and art works. The vicinity has many Indian mounds.

Portici (pôr'tēchē), town (pop. 26,049), Campania, S Italy, on the Bay of Naples and at the foot of Mt. Vesuvius. The royal palace (18th cent.) now houses an institute of agriculture.

portico (pôr'tĭkō), roofed space using columns or posts, generally included between two rows of columns or between a wall and a row of columns. Roman public squares used the first type for sheltered walks or passages. In Greek temples porticoes of the second type terminated the front and rear ends of the naos—called pronaos and opisthodome respectively—and were included in the colonnade surrounding the building. Roman temples, rarely peripteral (surrounded by columns), had a portico at the front end only, the main doorway being in the portico's rear wall. Such temples were called prostyle temples, while those having porticoes at both front and rear were termed amphiprostyle. The projection of Roman porticoes was generally three columns deep. In porticoes of recessed type the front colonnade is flanked by the extended side walls of the building, as in most Greek examples. Columnar porticoes were freely used in the classic styles of the 18th and early 19th cent. in Europe and in the United States, for both monumental and domestic buildings.

Portinari, Cândido (kän'dēdō pôrtēnä'rē), 1903–, Brazilian painter, son of Italian immigrants. He studied at the National School of Fine Arts in Rio de Janeiro. In 1928 a European fellowship enabled him to visit France, Italy, Spain, and England. Upon his return he broke with his earlier somewhat academic style to paint scenes of Brazilian life, characteristically soft brown in tonality with small figures schematically represented by flecks of color and play of light. In 1935 his painting *Coffee* (National Museum of Fine Arts, Rio de Janeiro) won honorable mention at the Carnegie International show, Pittsburgh. This work already revealed an interest in the expression of plastic form which became a dominant factor in his subsequent works. In 1938 he was commissioned to execute a series of frescoes in the ministry of education in Rio de Janeiro and to paint three panels for the Brazilian pavilion at the New York World's Fair. Portinari c.1940 turned to a more fluid and expressionistic phase exemplified in a series of frescoes in the Hispanic Foundation, Library of Congress, and in such paintings as the *Scarecrow* (Museum of Modern Art, New York), which suggest the influence of surrealism.

Port Isabel (ĭ'zubĕl), city (pop. 1,440), extreme S Texas, on the Gulf of Mexico near the mouth of the Rio Grande and ENE of Brownsville, inc. 1928. Formerly called Point Isabel, it was a supply base for Gen. Zachary Taylor in the Mexican War, was and still is a fishing resort, and has rich oil deposits near by. It is on the Intracoastal Waterway, and the channel to Brownsville goes through the pass of Brazos Santiago near Port Isabel.

Port Jackson, inlet, Australia: see JACKSON, PORT.

Port Jefferson, unincorporated village (pop. 2,196), on N Long Island, SE N.Y., on Long Island Sound opposite Bridgeport, Conn. It is a resort and residential community. Lace is made, and sand and gravel are produced.

Port Jervis (jûr'vĭs), resort city (pop. 9,749), SE N.Y., on the Delaware and near the point where New York, New Jersey, and Pennsylvania meet, settled before 1700, inc. 1907. Textiles, concrete blocks, and plated silverware are made. The city, named for J. B. Jervis, grew after the opening of the Delaware and Hudson Canal.

Port Kembla, Australia: see WOLLONGONG.

Portland, William Bentinck, 1st **earl of,** 1649–1709, Dutch statesman in England. He was William III's most trusted personal adviser. In 1677 he engaged in negotiating the marriage of William (then prince of Orange) and Mary, daughter of James, duke of York (later James II). With the Glorious Revolution (1688) he went to England with William, was made earl of Portland, and was given extensive estates and honors. Portland fought for William at the battle of the Boyne (1690) and at Landen (1693) and Namur (1695) in the War of the Grand Alliance. He negotiated the Peace of Ryswick with France (1697). For negotiating and signing the unpopular Partition Treaties (see SPANISH SUCCESSION, WAR OF THE), he was impeached, although the proceedings were soon dropped. See M. E. Grew, *William Bentinck and William III* (1924).

Portland, William Henry Cavendish Bentinck, 3d **duke of,** 1738–1809, English statesman; great-grandson of the 1st earl of Portland. He was lord lieutenant of Ireland (1782–83) and briefly prime minister (1783) in a coalition dominated by Charles James Fox and Lord North. The French Revolution shocked the British into passing severe laws against agitators, and Portland, as home secretary (1794–1801) under William Pitt, administered them with prudence, mercy, and wisdom. He promoted the union (1800) of Ireland with England and was again—and uneventfully—prime minister (1807–9).

Portland, urban district (pop. 12,019), Dorsetshire, England, S of Weymouth. It is on the Isle of Portland (4½ mi. long and 1½ mi. wide), a rocky peninsula which is connected to the mainland by the shingle Chesil Bank and which slopes to Portland Bill, an extremity with a lighthouse. Portland Race flows between the bill and a reef 3 mi. offshore called the Shambles. Breakwaters have been constructed to protect the harbor of Portland, which has long been fortified. Henry VIII built Portland Castle in 1520. The convict prison here was converted into a Borstal institution in 1921. The isle is composed of limestone, which for centuries has been quarried and used for building. It is the scene of some of Hardy's works.

Portland. **1** Town (pop. 4,321), central Conn., on the Connecticut, settled c.1690, inc. 1841. Sandstone is quarried here, there is a shipyard, and machinery and other products are manufactured. The brownstone quarries furnished material for New York's brownstone fronts. **2** City (pop. 6,362), co. seat of Jay co., E Ind., on the Salamonie and NE of Muncie, settled 1837. Its manufactures include automobile, bus, and truck parts. Elwood Haynes was born here. **3** City (pop. 73,043), co. seat of Cumberland co., SW Maine, largest city of the state, situated on a small peninsula and adjacent land, with a good harbor in Casco Bay. It is a port of entry, the commercial center of the state, and the rail, highway, and shipping center for a large region engaged in farming, lumber and paper milling, fishing, and resort activities. George Cleve or Cleeve settled here to trade in 1632. His post grew in importance, and the settlement called Falmouth developed, which, in spite of Indian raids in the 17th and early 18th cent., became a commercial center. It was all but destroyed by the British in 1775, after the citizens had been warned to leave, but was rebuilt. In 1786 Portland was set off from Falmouth town and incorporated as Portland town. It served as state capital from 1820 to 1831 and in 1832 was incorporated as a city. In 1923 the council-manager plan was adopted. Maine's first newspaper, the Falmouth *Gazette*, was issued here in 1785. In 1866 a great fire destroyed much of the city. Longfellow was born here, and Robert E. Peary lived here. The brick Longfellow home, built by Peleg Wadsworth in 1785–87, is a memorial. The Sweat Memorial Art Museum and the Portland Society of Natural History have interesting collections. In Eastern Cemetery are the graves of the commanders of the *Enterprise* and the *Boxer*, killed in 1813 off Monhegan. Among Portland's schools are St. Joseph's College (Catholic, for women), Westbrook Junior College for girls, state schools for the deaf and the blind, and an art school. In the Second World War, Portland was an important U.S. naval base and shipping point. **4** Industrial village (pop. 2,247), S Mich., at the confluence of the Grand and Looking Glass rivers NW of Lansing, settled 1833, inc. 1869. It is a farm shipping center and manufactures automobile parts, dog food, and flour. There are Indian mounds. **5** [named for Portland, Maine] City (pop. 305,394), co. seat of Multnomah co., NW Oregon, largest city in the state, at the junction of the Willamette with the Columbia, laid out 1845, inc. 1851. Growth was rapid after 1850, when the city served as a supply point for the California gold fields, and continued with the coming of the railroad (1884), the Alaska gold rush (1897–1900), and the Lewis and Clark Centennial Exposition (1905). It is an important fresh-water port (with shipyards) and port of entry. Ocean vessels unload varied cargoes and carry out the city's products—lumber, furniture, wheat, flour, canned and fresh fruits, packed meat, paper and paper pulp, chemicals, and wool. In May, 1948, floodwaters of the Columbia inundated low-lying areas of the city, causing much property damage and forcing temporary evacuation of several thousand residents. Important annual events are the rose festival and the Pacific International Livestock Exposition. Portland is the seat of the Univ. of Portland (Catholic, for men, 1901), REED COLLEGE, Lewis and Clark College, and the Univ. of Oregon medical and dental schools. Portland has a municipal airport, an art museum, and a symphony orchestra. The beautiful Columbia River Highway follows the river E of Portland. The *Oregon Journal*, once owned by C. S. JACKSON, has influenced the adoption of many political reform measures, is published here. **6** Town (pop. 1,212), N Tenn., NNE of Nashville and near the Ky. line. It is a strawberry-shipping point.

Portland cement, high-grade CEMENT patented in England by Joseph Aspdin in 1824. It was given its name because of its resemblance, when set, to a kind of rock found at Portland, England. It is essentially a powdery mixture (of aluminates and silicates of calcium with lime, gypsum, and other materials) which is produced when substances such as clay, shale, or slag are mixed, ground, and heated with limestone, chalk, or marl. In manufacturing, the raw mixture is first ground and then introduced into a rotary furnace where it is heated to a temperature of from 1,400°C. to 1,600°C. and partly fused to form clinker. When this is cool, gypsum is mixed with it and the whole mass is powdered. When water is added and the mass allowed to stand, it hardens. The action involved in this hardening or setting is not understood. Portland cement sets in water and is consequently much used in building bridges and in other construction involving underwater operations. Mixed with sand and gravel it forms concrete.

Portland vase, a funerary urn, known also as the Barberini vase. Probably of the 1st cent. B.C., it is said to have been found in an ancient tomb near Rome in the pontificate of Urban VIII (1623–44), it was placed in the library of the Barberini Palace at Rome. It is about 10 in. high and 22 in. in circumference and is made of a deep violet-blue glass overlaid with opaque white glass in which are cut, in cameo relief, a series of figures presumably depicting some mythological legend or Eleusinian mystery. The vase was sold by the Barberini family c.1782 to a Scottish antiquary, James Byres, from whom it was purchased by Sir William Hamilton, who sold it to the duchess of Portland. At the sale of her effects (1786) it was bought by the then duke of Portland, and in 1810 it was loaned to the British Museum. Here it was shattered in 1845 by a stone from a madman's hand. So skillfully was it reconstructed that little trace remains of the disaster. It was bought by the British Museum in 1945. The vase has been reproduced in pottery, glass, and plaster of Paris, the most famous replica was made in jasper ware by Josiah Wedgwood c.1789. See reprint (1845) of Wedgwood's *Account of the Barberini, Now Portland, Vase* (1788?).

Port Laoighise (lā'ĭsh) or **Maryborough,** town (pop. 3,166), co. seat of Co. Laoighis, Ireland, WSW of Dublin. It is a malting center, with woolen milling and the manufacture of farm implements.

Port Lavaca (luvă'kŭ), city (pop. 2,069), co. seat of Calhoun co., S Texas, on Lavaca Bay and SE of San Antonio, inc. as a city 1909. La Vaca, founded here in 1815, was succeeded by Lynnville, which was destroyed by the Comanche in 1840, and by the present city. A deepwater port of some prominence until late in the 19th cent., it declined but later revived when oil was discovered. It is a fishing port connected with the Intracoastal Waterway and has oil refining and a plant for quick-freezing of truck.

Port Louis, city (pop. 66,564), capital of Mauritius, a port on the Indian Ocean. It was founded in 1735 by La Bourdonnais. It is the terminus of a railroad and it exports sugar.

Port Lyautey (lēōtā', Fr. pôr lyōtā'), city (pop. 56,604), French Morocco, a port on the Sebou river, c.8 mi. from the Atlantic Ocean. It was rebuilt by the French under Lyautey to serve as a port for the fertile Sebou valley. It was formerly called Kenitra.

Port Macquarie (mukwä'rē), town (pop. 2,906), New South Wales, Australia, a port on the east coast NE of Newcastle. It exports dairy products.

Port Mahon, Spain: see MAHON, PORT.

Port Moody, city (pop. 1,512), SW British Columbia, at the west end of Burrard Inlet of the Strait of Georgia and E of Vancouver. It is in a lumbering and farm area and has an oil refinery.

Port Moresby (môrz'bē), town (pop. 1,300), on SE New Guinea, capital of the Territory of Papua, a port on landlocked Fairfax Harbor. Near by is the Astrolabe copper field. In the Second World War the chief Allied base on New Guinea was here. Port Moresby was also then the acting capital of the Territory of New Guinea and in 1946 was officially made the temporary capital instead of Rabaul.

Port Mulgrave, N.S.: see MULGRAVE.

Port Neches (nĕ'chĭz), city (1940 pop. 2,487, 1943 special census pop. 5,721), SE Texas, on the Neches below Beaumont, inc. 1927. On the deepwater Sabine-Neches Canal, it has oil refineries and a synthetic-rubber industry developed in the Second World War.

Port Nelson, village, N Man., at the mouth of the Nelson river and just W of York Factory. The site was first visited by Sir Thomas Button, who wintered there (1612–13) on an expedition in search of the Northwest Passage. Since 1670 it has been a post of the Hudson's Bay Company. Proposed as the terminal of the Hudson Bay RR., Port Nelson was abandoned (1927) in favor of Churchill.

Portneuf (pôrtnûf') or **Notre-Dame-de-Portneuf** (nôtrŭ-däm'-dù-), town (pop. 1,015), S Que., on the north shore of the St. Lawrence and SW of Quebec. It has lumber and paper mills.

Port Nolloth (nŏ'lŭth), town (pop. 1,470), NW Cape Prov, Union of South Africa, a port on the Atlantic Ocean. Copper is exported.

Porto, Portugal see OPORTO.

Pôrto Alegre (pôr'tō ŭlā'grŭ), city (pop 259,246), capital of Rio Grande do Sul state, SE Brazil, a port at the north end of the Lagoa dos Patos It has cold-storage warehouses and meat-processing plants and is an important shipping center for the agricultural and pastoral hinterland The chief exports are preserved meat, hides, wool, grain, and fruit Pôrto Alegre was founded (1742) by immigrants from the Azores, and since the 19th cent its development has been aided by numerous German and Italian settlers The modern city is well laid out with handsome business and government buildings It is the seat of two universities

Porto Bello, Panama see PORTOBELO

Portobello (pôr"tōbĕ'lō), seaside resort, Midlothian, Scotland, a suburb of Edinburgh It has marine gardens, a pier with an esplanade, beaches, and manufactures of pottery and glassware

Portobelo, Porto Bello (both pôr"tōbĕ'lō), or **Puerto Bello** (pwĕr"tō bĕ'yō), town (pop 573), Panama, a port on the Caribbean coast 50 mi E of Colón It is on an excellent harbor, visited by Columbus, and it was founded in 1597 A thriving colonial port, it was connected by a stone highway with Panama city; both ports were the points of transshipment for riches from the Spanish Pacific domains Believed impregnable—Sir Francis Drake, before he could capture it, died of fever and was secretly buried in the bay—Portobelo was, nevertheless, sacked by English buccaneers (William Parker in 1601, Sir Henry Morgan in 1668, and Edward Vernon in 1739). With the building of the Panama RR (1848–55) and finally the digging of the Panama Canal, Portobelo declined.

Portocarrero, Luis Manuel Fernández de (lwēs' mänwĕl' fĕrnän'dāth dā pôr'tōkärä'rō), 1635–1709, Spanish statesman, cardinal of the Roman Church (1669). He was councilor of state in 1677 and became archbishop of Toledo soon after The next year he was made viceroy of Sicily He was instrumental in persuading Charles II to name Louis XIV's grandson (later Philip V) as his successor—a move which led to the War of the Spanish Succession Later Portocarrero supported the Austrian party, but when an attempt to place a Hapsburg on the throne failed, he renewed his allegiance to Philip

Portoferraio (pôr'tōfĕr-rä'yō), town (pop 7,682), on Elba island, Italy A port, with important ironworks, it ships out most of the iron mined in the island. The place was strongly fortified by the Médici (16th–18th cent) While sovereign of Elba, Napoleon I resided (1814–15) here in a small villa.

Port of New York Authority, self-sustaining public corporation, est 1921 by the states of New York and New Jersey to administer the activities of the New York city port area which has a 771-mile water front lying in both states Under the Port Authority several projects have been undertaken, among them the construction of the George Washington Bridge and the Lincoln Tunnel and the refinancing of the Holland Tunnel The municipal airports of New York city and the Newark airport are administered by the agency.

Port of Spain, town (pop 92,793), on Trinidad, capital of Trinidad and Tobago On a fine harbor of the Gulf of Paria opposite Venezuela, Port of Spain exports agricultural produce Here are transferred from coastal and river steamers for overseas shipment the bauxite from British and Dutch Guiana and the iron ore from the lower Guiana region of Venezuela A railroad and highways connect it with other parts of the island The city has attractive government buildings, churches, residences, and botanical gardens

Portolá, Gaspar de (gäspär' dā pôrtōlä'), fl. 1734–84, Spanish explorer in the Far West After serving in Italy and Portugal, he was sent (1767) to America as governor of the Californias to expel the Jesuits and to save Franciscan missions In 1769 Portolá commanded an expedition sent out from Mexico to extend Spain's control up the Pacific coast The party, composed of two ships and two land parties, left Velicatá and met at San Diego Bay, from where Portolá continued with a small land party to Monterey Bay, which he failed to recognize as his destination After exploring the region, he returned to San Diego in 1770 Convinced by Capt Vicente Vila that Monterey was the correct spot, Portolá again marched north, reaching at last the bay described by the earlier explorers and the site for occupation of Upper California. Here he established the mission and presidio of San Carlos and, leaving an officer in charge, sailed for San Blas He became governor of Puebla in 1776 and in 1784 received expenses for his return to Spain. See H H Bancroft, *History of California* (1890), Francisco Palóu, *Life and Apostolic Labors of the Venerable Father Junípero Serra* (ed by G W. James, 1913), Z S. Eldredge, *The March of Portolá* (1909), I. B. Richman, *California under Spain and Mexico* (1911); H. E. Bolton, *Fray Juan Crespi* (1927), and his edition of Francisco Palóu's *Historical Memoirs of New California* (1926).

Porto Novo (pôr'tō nō'vō), town (pop 23,500), capital of Dahomey, a port on a lagoon off the Gulf of Guinea It is the terminus of a railroad to the interior Palm oil is exported.

Port Orchard, town (pop 1,566), co seat of Kitsap co, NW Wash, on an arm of Puget Sound opposite Bremerton and economically semidependent on it, settled 1854

Porto-Riche, Georges de (shôrsh' du pôrtō-rēsh'), 1849–1930, French dramatist of Jewish extraction His plays dealt with problems arising in love and marriage which he treated from a penetrating psychological point of view Representative are *Le Passé* [the past] (1897) and *Le Vieil Homme* [the old man] (1911)

Porto Rico see PUERTO RICO

Pôrto Velho (pôr'tō vā'lyō), city (pop 3,148), capital of Guaporé territory, W Brazil, on the upper Madeira river It is the northern terminus of the Madeira-Mamoré RR and a shipping center (by river steamer) for rubber and lumber.

Portpatrick, parish (pop 1,101), Wigtownshire, Scotland, SW of Stranraer and directly across the North Channel from Belfast Lough Being the nearest port to Ireland, for some time it had a promising trade, and construction of harbor improvements was begun in 1843, but storms and other difficulties caused the port to decline

Port Perry, village (pop 1,245), S Ont, on the south shore of Lake Scugog and NE of Toronto It is a distributing center for an agricultural, fishing, and summer resort region

Port Phillip Bay, large inlet of Bass Strait, 30 mi long and 25 mi wide, S Victoria, Australia Its north arm, Hobson's Bay, is the site of Port Melbourne and Williamstown, Geelong is on Corio Bay, its west arm

Port Pirie (pĭ'rē), city (pop 12,030), South Australia, a port at the base of Yorke Peninsula, on an inlet of Spencer Gulf and NNW of Adelaide Here are the smelting works for the silver-lead mines at Broken Hill Port Pirie exports silver and lead concentrates and wheat

Port Radium, Canada see ELDORADO MINES

portrait. The likeness of a person either in painting or sculpture has been a favorite art subject at all times There exists evidence that the Egyptians included in their tombs small portrait statuettes of the bodies enclosed there, many Greek and Roman sculptures are portraits, and there are descriptions in ancient literature of portrait paintings, sources attest to Chinese portraits as long ago as the 14th cent B C In the Western world portraits became common at the beginning of the Renaissance and were at their zenith in the 18th cent Paintings are far more prevalent than carvings in portraiture, the latter being used now almost exclusively for public statues There are full-length portraits, facial portraits, group portraits, and self-portraits In the 13th cent Giotto was the first to use friends as models for his biblical characters Later Renaissance painters included likenesses of their patrons or rulers in their group pictures Filippino Lippi, Ghirlandaio, Benozzo Gozzoli, and others included their own likenesses inconspicuously in groups Single portraits and self-portraits also were popular at this time Piero della Francesca's picture of Federigo da Montefeltro and Raphael's likeness of himself are outstanding Later artists, such as Titian, usually painted half-length portraits Giovanni Battista Moroni was the first painter to dedicate himself almost exclusively to portraiture, but except for the 18th-century period, such specialization has been rare among first-rate artists Rembrandt, El Greco, Velázquez, Van Dyck, Frans Hals, and Rubens all produced outstanding portraits, antedating them were Holbein, Dürer, and Lucas Cranach, the elder The English 18th-century group, Sir Joshua Reynolds, Gainsborough, Romney, Thomas Lawrence, and Raeburn, concentrated on portraying the aristocracy and celebrities of their day In the same century the Americans Copley, Benjamin West, Charles Willson Peale, and Gilbert Stuart learned from the English but gave individual talent to their portraits In the early 19th cent John Trumbull and Thomas Sully devoted themselves to portrait painting, sculptured portrait busts were popular, and such sculptors as Horatio Greenough, Thomas Crawford, and Hiram Powers made their fortunes Thomas Eakin, Frank Duveneck, and John Singer Sargent were the chief American portrait painters of the later 19th cent, they were followed by William M Chase and Robert Henri English contemporary portraitists include Augustus John and William Rothenstein Conspicuous among 20th-century portraits are Picasso's painting of Gertrude Stein, Eugene Speicher's portrait of Katharine Cornell, and the sculptured portrait busts by Jacob Epstein. Portraits have also been executed in engravings, etchings, relief plaques, medals, and drawings. See E. M Hurll, *Portraits and Portrait Painting* (1907); H E A. Furst, *Portrait Painting. Its Nature and Function* (1927); E. M Benson, *Problems of Portraiture* (1937); D. M. Campana, *Course of Instructions on Portrait . . . Painting* (4th ed., 1944).

Portree (pôrt-rē'), parish (pop. 2,007), only town on Skye, Inner Hebrides, Scotland. It is a resort.

Port Republic, village, NW Va., at the junction of the North and South rivers, which form the South Fork of the Shenandoah river. Near it was fought the last battle of the Shenandoah Valley campaign conducted by T J (Stonewall) JACKSON in the spring of 1862 While his lieutenant, R S. EWELL, was engaged with J. C Frémont at Cross Keys, 4 mi to the northwest, Jackson beat off a surprise attack on Port Republic by the cavalry of James Shields's van which had crossed the South River Leaving part of his force to guard the bridge over the North River, Jackson sent the rest to Ewell, who repulsed Frémont on June 8, 1862 The next day Jackson crossed the North and South rivers and attacked Gen. Erastus B Tyler of Shields's force. He planned to dispose of Tyler quickly and then return to finish off Frémont, who in the meanwhile was to be held off by two brigades However, Tyler's men were not defeated until after much hard fighting, and so the two brigades joined the main force, burning the bridge behind them With Frémont isolated and Tyler in retreat, Jackson successfully ended his campaign.

Port Royal, N S. see ANNAPOLIS ROYAL

Port-Royal (Fr pôr'-rwayäl'), former abbey of women, c.17 mi. W of Paris, founded in 1204 It was at first Benedictine, later Cistercian. In 1608 the abbess, Angélique Arnauld (see ARNAULD, family), undertook a reform with the counsel of St Francis of Sales The nuns became renowned for piety, and their help was sought all over France for the reform of conventual discipline In 1626 the abbey was moved to Paris because of the unhealthfulness of the climate, the old buildings were now called Port-Royal-des-Champs [in the country], the new foundation Port-Royal-de-Paris Under the influence of Jean Duvergier de Hauranne the abbey soon became the prime center of JANSENISM Port-Royal-des-Champs became a retreat for men, some of whom opened classes there for boys (1638) These, "the little schools," were successful from the start, and many celebrated Frenchmen were educated there The pedagogy was novel in emphasizing knowledge as a means rather than an end, in using "natural" methods, and in distrusting corporal punishment The textbooks became famous The religious tone of the teaching did much to create the Jansenist and antipapal tendencies of 18th-century Catholicism in France Port-Royal fared as Jansenism did, and persecution became severe toward the end of the 17th cent Port-Royal-des-Champs was suppressed by papal bull in 1704, and the buildings were razed in 1710 The nuns were expelled from Port-Royal-de-Paris.

Port Royal Island, c 13 mi long and 7 mi wide, S S C, at the head of Port Royal Sound, one of the SEA ISLANDS It is a truck-farming and resort area with a good harbor at Beaufort

Port Royal Sound, arm of the Atlantic, S S C, between St Helena Island and Parris Island on the north and Hilton Head Island on the south. It receives the Broad River The sound was named by Jean Ribaut, who founded (1562) a short-lived Huguenot settlement called Charlesfort on Parris Island. In the Civil War, Commander S F Du Pont reduced (1861) Forts Beauregard and Walker, guarding the sound, and the Union held the area for the rest of the war

Portrush (pôrtrŭsh'), urban district (pop 3,386), Co Antrim, Northern Ireland, on Ramore Head, a peninsula near the Giant's Causeway A salmon-fishing center and resort, it is the seaport for Coleraine

Port Said (sĭd, sād, saēd'), city and commune (pop. 178,432), NE Egypt, on the Mediterranean Sea at the entrance to the Suez Canal The city, on a narrow peninsula between Lake Mengaleh and the sea, was founded in 1859 by the builders of the Suez Canal, and it was named for Said Pasha, then khedive of Egypt It manufactures salt by the evaporation of sea water, and it is a coaling station for ships using the canal Cotton is exported.

Port Saint Joe, town (pop 2,393), NW Fla, a port of entry on St Joseph Bay SW of Tallahassee, settled c 1830, inc 1913 It is a resort and a fishing and lumbering center with large manufactures of fish oil, fertilizer, and paper. A monument (1922) commemorates Florida's first constitutional convention, held here in 1838

Portsea (pôrt'sē), island, c.4 mi long and 3 mi. wide, off Hampshire, England, between Portsmouth and Langston harbors It is separated from the mainland by a narrow channel PORTSMOUTH is on Portsea, a district of Portsmouth is called Portsea also

Portslade-by-Sea, urban district (1931 pop 9,527; 1943 estimated pop 12,070), Sussex East, England, near Brighton. It has docks and various manufactures and a race track. There are Saxon and Roman remains in the vicinity.

Portsmouth, Louise Renée de Kéroualle, duchess of (lwēz' rŭnā' dŭ kārōōal', pôrts'muth), 1649–1734, French mistress of Charles II of England. She exerted a powerful influence over the king in favor of France—and to her own advantage—from 1671 until his death in 1685. She was made duchess of Portsmouth in 1673 and was the mother by the

king of Charles Lennox, duke of Richmond, and of other children Hated by the English people, she lived mostly in France after 1685

Portsmouth (pôrts'muth), village (pop. 3,135), S Ont., on Lake Ontario and just W of Kingston The provincial penitentiary and a mental hospital are here.

Portsmouth, county borough (1931 pop 249,283; 1947 estimated pop. 216,030) and city, on PORTSEA island, Hampshire, England, at the entrance to Portsmouth Harbour, which is protected by a line of forts It is the chief naval base of Great Britain It includes Portsea (the chief naval station, with more than 300 acres of dockyards), Southsea (residential district and resort), Landport, and Portsmouth proper (the smallest section and the garrison town). The Cathedral of St. Thomas à Becket dates partly from the 12th cent ; in the chancel is a cenotaph of the duke of Buckingham, who was assassinated in 1628 in a house formerly known as the Inn of the Spotted Dog The house in which Charles Dickens was born has been converted into a museum, as has H M S *Victory*, Nelson's flagship at Trafalgar in 1805, now in dry dock Charles II and Catherine of Braganza were married at Portsmouth George Meredith and Walter Besant were born here In the Second World War the city and harbor were damaged in air raids (1940–41)

Portsmouth. 1 City (pop 14,821), SE N H , a port of entry with a good harbor at the mouth of the Piscataqua, made a city 1849 The site, in the grant of Gorges and Mason, had a colony and fishing base in 1623 The town exported lumber and fish and was called Strawberry Bank before its incorporation by Massachusetts as Portsmouth in 1653 It was provincial capital until the Revolution Shipbuilding began early Men-of-war and privateers were made in the Revolution and in the War of 1812 John Paul Jones's ship *Ranger* was built (1777) by Portsmouth shipwrights in Kittery, Maine The Portsmouth naval base (officially the U S Naval Base, Portsmouth, N H) located on islands (now joined together) was established in 1800 These islands, on the Maine side of the Piscataqua in the town of Kittery, were ceded to the Federal government The base, linked to Kittery by two bridges, is an important submarine-building and repair yard The Treaty of Portsmouth was signed at the base in 1905 The height of Portsmouth's commerce was in the 18th and early 19th cent Many of the fine old houses are preserved by historical societies, the oldest, the Richard Jackson House (1664), has been restored The Athenaeum (1803) has a library and historical relics The first newspaper in the state, the *New Hampshire Gazette*, was published here Among Portsmouth's residents were Sam Walter Foss, Daniel Webster, and Jeremiah Mason Thomas Bailey Aldrich, James T Fields, and Celia Thaxter were born here The Memorial Bridge (1923) and the Interstate Highway Bridge (1940) cross the Piscataqua to Kittery Portsmouth's manufactures include gypsum products **2** City (pop 40,466), co seat of Scioto co , S Ohio, on the Ohio river at the mouth of the Scioto and S of Columbus, laid out 1803, inc 1814 It is an industrial and railroad center Steel and iron products, coke and coke by-products, paper boxes, firebrick, and shoes are produced Near by are Shawnee State Forest and the Roosevelt Game Preserve **3** Town (pop 3,683), on N Rhode Island, SE R I , connected with Bristol by Mt Hope Bridge It includes also Prudence Island The Indians called this area Pocasset The second white settlement in the state, it was founded by William Coddington, John Clarke, Anne Hutchinson, and their associates in 1638 The first general assembly of the new colony met at Portsmouth in 1647 The village of Portsmouth became a fishing, shipping, and shipbuilding center Farming and coal mining were important in the 19th cent Recently there has been resort and residential development In the town the British general Richard Prescott was captured (1777) by a patriot officer, William Barton, and the battle of Rhode Island was fought (1778) The 1938 hurricane caused much damage. **4** City (pop 50,745), SE Va., on the Elizabeth river opposite Norfolk, laid out 1750 on the site of an Indian village, chartered as a city 1858 The courthouse of Norfolk co is here One of the ports of HAMPTON ROADS, Portsmouth is the seat of a U S naval shipyard, formerly known as the Gosport Navy Yard and since the Civil War as the Norfolk Navy Yard The city is an important railroad and steamship center and is the shipping point for large quantities of farm produce and oysters. It is also an industrial center with railroad repair shops and various manufactures Portsmouth was a landing base for the British in the Revolutionary War. In the Civil War the navy yard was burned and evacuated by the Federals (1861) and was occupied by Confederates, Portsmouth was retaken by Federal forces the next year Places of interest include Trinity Church (1762), the U S. naval hospital (1827–30), and many late-18th-century houses

Portsmouth, Treaty of, 1905, treaty marking the end of the Russo-Japanese War, signed at Portsmouth Naval Base. It was brought about through the good offices of Theodore ROOSEVELT, which were not, however, completely unbiased since he had sent Taft on a mission to Japan After long negotiations the treaty was signed Aug 25, 1905 There was no war indemnity, much to the disappointment of the Japanese public Japan did, however, get Russian evacuation of S Manchuria, the cession of the southern section of the Manchurian RR, with mining and other rights, "paramount political, military, and economic" interests in Korea; the Russian lease of the Liaotung peninsula, the southern half of the island of Sakhalin; and favorable provisions concerning the Manchurian RR. Although they secured much, the Japanese people were much disgruntled at having to pay the cost of the war, and serious riots occurred in Tokyo as a result The treaty met with some reverberations in the United States, where public opinion became aroused against the Japanese Japan turned its attention to Korea, which it eventually (1910) annexed. See Tyler Dennett, *Roosevelt and the Russo-Japanese War* (1925)

Port Stanley, village (pop 1,177), S Ont., on Lake Erie and S of London, with which it is connected by electric railway It is a fishing resort and the chief Canadian harbor on the lake

Port Sudan (sōōdän'), city (pop c 52,000), NE Anglo-Egyptian Sudan, a port on the Red Sea A modern harbor and a rail head to serve the rich cotton-growing valley of the Nile were built here in 1906 Cotton and grain are exported

Port Talbot (tôl'but), municipal borough (1931 pop 40,678, 1947 estimated pop 41,450), Glamorganshire, Wales Aberavon (äbur'ă'vun), making iron, steel, and tin plate, is part of the borough Port Talbot is an export point for the coal and mineral industries of the Avon valley

Port Tampa City, city (pop 1,124), W Fla , on Tampa Bay SSW of Tampa

Port Tobacco, unincorporated village, SW Md , on Port Tobacco Creek at the Potomac Until its harbor was silted up, it was an important port It was the county seat of Charles co from 1658 to 1895 Manor houses of the 18th cent are near by Jesuit missionaries visited the Indian village Potopaco in 1641 and in 1649 acquired land on which they still maintain a residence

Port Townsend, city (pop 4,683), co seat of Jefferson co , NW Wash., at the entrance to Puget Sound, settled 1851, inc 1860 It is a port of entry and has a fine harbor, overlooked by Fort Worden, a near-by park, and a paper mill

Portugal (pôr'chùgùl), corporative republic (35,404 sq mi , pop 7,722,152), W Europe, including continental Portugal (34,207, sq mi , pop 7,185,143) on the western side of the Iberian Peninsula and the MADEIRA ISLANDS and the AZORES The capital and largest city is LISBON Other notable cities in peninsula Portugal are OPORTO, COIMBRA, SETÚBAL, BRAGA, ÉVORA, and FARO; on Madeira is FUNCHAL, and in the Azores is PONTA DELGADA The Portuguese Empire is spread across the world, including, in Africa, ANGOLA, MOZAMBIQUE, the CAPE VERDE ISLANDS, PORTUGUESE GUINEA, and SÃO TOMÉ AND PRINCIPE, in Asia, PORTUGUESE INDIA (Goa) and MACAO, in Oceania, part of TIMOR Spain, which occupies most of the Iberian Peninsula, bounds continental Portugal on the east and the north, in the west and the south (where the country ends in Cape St Vincent), Portugal faces the Atlantic The mountain scenery, notably in the Serra da Estrêla, is very beautiful, and the forests of cork oaks, tended on mountain slopes, yield one of Portugal's distinctive products, but much of the land is useless for agriculture The little country is crossed by rivers rising in Spain and flowing to the Atlantic. The MINHO is the northern border with Spain The DOURO has Oporto and its ocean port LEIXÕES at its mouth Inland on the Mondego is COIMBRA The TAGUS, an important dividing line in Portugal, reaches the sea just past Lisbon The smaller Sado empties into the Bay of Setúbal, and the southward-flowing Guadiana for a large part of its course marks the eastern border with Spain The river valleys support agriculture, and in the Douro and Tagus valleys there are wide vineyards, wine, especially port, is one of the major export items of the country. Many of the lower hill slopes are covered with olive groves, and the flatter uplands as well as the plains near the coast are devoted to the growing of grains—wheat, maize, barley, rye, and, in the warmer regions, rice. Grain and the wide pasture lands are used to support stock growing Sheep and hogs are the chief animals grown, although some sections are noted for their horses and their cattle (including bulls grown for the bull ring). The mountains have a wealth of minerals that are largely not exploited Coal is mined for fuel to power the industries, and plans have been made to utilize some of the abundant hydroelectric power. Although the little country is in one climatic zone, which includes all the Mediterranean countries, the climate varies with the altitude; cool highlands are usually not far from warm plains and valleys. The traditional province of Trás-os-Montes in the extreme northeast has a more or less rigorous mountain climate, quite cold in winter, and is one of the least-developed regions Parts of the old Entre-Minho-e-Douro (always also called simply Minho and now officially so designated) are also rigorous, and the climate is credited with the traditional solid simplicity attributed to the Minho peasants Beira, between the Douro and the Tagus, has the highest mountains of the country, the Serra da Estrêla, once the haunt of the fierce Lusitanians and now dotted with summer and health resorts Estremadura has broad alluvial plains, but these too rise to cool and rocky uplands coming to the sea about the ports of Lisbon and Setúbal Along the coast is a celebrated resort region, reaching its climax in Cintra The southeastern and major portion of Alentejo has a continental climate, very hot in summer, quite cold in winter Though much of its soil is poor and thin, it has earned a name as the granary of Portugal. The southernmost of the old provinces and last to be conquered from the Moors, Algarve (conquest completed in 1249), is a world apart from the rest of Portugal and is more like the northern shores of Africa Mountains curve across the north of the region and curve down to Cape St Vincent, the southwest tip of Europe Here in the mild climate fruit trees thrive, and visitors come in February to see the acres of blossoming almond trees The fishing fleets of little Olhão, Portimão, and Vila Real are tourist attractions as well as a vital business, with their cargoes of sardine and tuna There are also fishing ports—notably Setúbal and Matozinhos—on the western shores of Portugal from Cape St Vincent north to the mouth of the Minho. Fish canning is one of the major industries of Portugal, which is not highly industrialized There are important textile mills, not only for cotton but also for wool and silk. Other produce of the land (fruits, cork, wood, and the like) is processed, and there are varied industries in all the larger cities The country is moderately well supplied with transport, having altogether more than 2,000 mi of railroads (some state owned) and a road net that is good, considering the difficulties of terrain Lisbon is one of the world's major airports One of the avowed objects of the corporative state, the *Novo Estado* [new state], under the constitution of 1933 is the advancement of industry, and vigorous efforts have been made to coordinate and advance the economy. The hold of the administration over the government is strong A corporative chamber, organized for representation and direction of industries and professions, operates alongside the national assembly, elected by direct suffrage The president, elected for seven years, is assisted by a privy council Though the government in 1950 was strongly unitary and dictatorial under Premier Antonio de Oliveira Salazar, the constitution did not provide for one-party government The corporative structure drew somewhat from the Italian state under Mussolini, but it is by no means imitative, and is more of a "businessman's government," intended primarily for efficiency (at the expense of democratic rights) The old provinces are now divided into 11—Algarve, Baixo Alentejo, Alto Alentejo, Estremadura, Ribatejo, Beira Litoral, Beira Baixa, Beira Alta, Douro Litoral, Minho, and Trás-os-Montes-e-Alto-Douro The republic, including the island groups, is divided into administrative districts named after their capital cities The Portuguese are remarkably homogeneous in speech and customs in view of their diverse history, and the national spirit is strong Most of the people profess the Roman Catholic religion, and that Church has held much power Though the *Novo Estado* includes as part of its program the extension of education, illiteracy is still high It is generally recognized that there is little direct filiation between Portugal of today and the early tribes in this region of the Iberian Peninsula, but there is a deeper relation that the Portuguese long thought of themselves as descendants of the Lusitanians, that belief is celebrated in the great Portuguese epic, *The Lusiads*, and Portuguese in elevated moments refer to themselves as *lusos* today The Lusitanians had the core of their territory between the Douro and the Tagus and were in Spain as well as modern Portugal, but their stronghold was in the Serra da Estrêla, and from their mountain fastness they swept down in raids on the rich plains Their place in history was won by their stout resistance to the Romans under VIRIATUS in the 2d cent. B C and under the Roman general Sertorius in the 1st cent B C. It took all the power of Rome to subdue them, though other tribes such as the Conii in Algarve submitted more readily. Julius Caesar and Augustus finally reduced the territory firmly to order, and most of Portugal, ultimately combined with part of Spain in the province of Lusitania, throve The towns of Olisipo (Lisbon) and Cale (Oporto) were of some note in the province, where Roman ways were adopted. The most important heritage of Rome was the Romance language, which persisted, ultimately to become Portuguese. The whole Iberian Peninsula was overrun by Germanic invaders; the Visigoths established their rule over most of it, but in present N Portugal the little-known Suebi established (c.411) a kingdom

that lasted until late in the 6th cent. It is believed (though not with surety) that at this time the name Portucale was fixed on the region about the mouth of the Douro because there was a land port (place of toll) at the old city of Cale The Visigoths absorbed the area, while the Byzantine Empire held the present Algarve in the 6th and 7th cent. After the disastrous defeat (711) of the Visigoths, the whole peninsula fell to the Moors except for little Asturias and the Basque country The Algarve throve under the Moors as under the Byzantines, and despite disorder and raids of the Norsemen on the ports, the more northerly region was also somewhat fruitful From the beginning of the long period of Christian conquest, Portugal was involved in it, because the kings of Asturias raided the Moors across Galicia and to the west It was out of the confusion of the reconquest—of campaigns, countercampaigns, alliances, and counteralliances—that Portugal was born Ferdinand I of Castile entered Beira and after earlier attacks finally secured possession of the fortress of Viseu and the city of Coimbra by 1064 Alfonso VI of Castile in his vigorous wars with the Moors asked for French aid One of the nobles who responded was HENRY OF BURGUNDY, who married an illegitimate daughter of Alfonso VI and was made (1095?) count of Coimbra, a title later exchanged for count of Portucalense Thus Portugal was born The struggle of Henry and later of his widow and her lover (or second husband) to gain power in Castile failed, and the very existence of the country was threatened, but Henry's young son, Alfonso Henriques, grew up to be an able leader He took power (1128) from his mother and fought ceaselessly against the Moors and the Castilians After a victory over the Moors in the battle of Ourique (not fought at modern Ourique but at some undetermined place) in 1139, he began to style himself king as ALFONSO I The year 1140 is generally taken as the beginning of Portuguese history Alfonso took Santarém in 1147, and in that same year, with the help of English, Flemish, and German crusaders, took Lisbon When he died in 1185 he left Portugal established as an independent state His successors were faced with the hard tasks of redeeming Alentejo and Algarve from the Moslems and repeopling the areas devastated by long wars Relations with the kingdoms of Spain were complicated by dynastic successions, for ambitious marriages were constantly made and the interrelationships of blood and dynastic claims brought recurrent feudal wars There were troubles with other Portuguese claimants and between the kings and the mighty nobles, and there was continual struggle between the crown and the Church over land and power Sancho I (reigned 1185–1211) carried the war against the Moors clear into the rich Algarve and took their capital of Silves, but he could not hold it Alfonso II (reigned 1211–23) undertook to repopulate districts already gained, Sancho II (reigned 1223–48) campaigned incessantly until he was, through the connivance of high churchmen, deposed and replaced by Alfonso III (reigned 1248–79) It was Sancho who had taken the border fortress of Elvas, which was to prove of value in the later wars, but it was Alfonso who finally took (1249) Algarve and thus consolidated Portugal The patient workers on the land continued to supply the basis for these great events in which they had little part, and Alfonso's son Diniz (reigned 1279–1325) set out to improve land conditions and is called the Farmer (*o Lavrador*) because he encouraged the nobles to turn to the land He also established a brilliant court that saw the beginnings of Portuguese literature, and he set up the university that was to be the Univ of Coimbra The reign of his son, Alfonso IV, is remembered chiefly because of the tragic romance of Inés de CASTRO; for her fate Peter I (reigned 1357–67) wrought a bloody vengeance in having two of her murderers executed The dynastic Iberian wars had continued despite the efforts of the wife of King Diniz, the noble St Elizabeth of Portugal Ferdinand I (reigned 1367–83) indulged in long Castilian wars, in which JOHN OF GAUNT of England lent him assistance Ferdinand's marriage with Leonor Teles had unfortunate consequences, especially after the heiress to the throne was married to a Castilian prince After the death of Ferdinand the Portuguese, notably the able Nun'Álvares Pereira, were unwilling to accept Castilian rule and by the battle of Aljubarrota (1385) established John I, the grand master of the Order of Aviz, firmly on the Portuguese throne Thus commenced a most glorious period of Portuguese history, a reign fittingly commemorated by the magnificent buildings of Batalha The towns—which had already advanced to being represented in the Cortes of Leiria (1254) under Alfonso III—flourished The little country between the mountains and the sea began to look to the commerce of the waters and beyond Of the illustrious sons of John I the most illustrious was Prince Henry the Navigator He began the "miracle" of Portugal, the process by which the small country became for a time the greatest empire of the West. Under his aegis Portuguese navigators went out along the coast of Africa The Madeira Islands and the Azores were colonized. The Portuguese brought back wealth from their voyages, not the least item being slaves, and a Negro strain was introduced Ceuta was taken gloriously in 1415 and set the pattern for later Portuguese ambitions in Africa These were to end in disaster finally, but only after the power of Portugal had grown under Duarte (reigned 1433–38) and Alfonso V (reigned 1438–81) The unlucky attempt of Alfonso to get the Castilian throne ended in defeat, but his son John II (reigned 1481–95) turned to empire instead Bartholomew Dias rounded (1488) the Cape of Good Hope, and the reign was the preparation for the glory of the reign of Manuel I (reigned 1495–1521) Vasco da Gama found the route to India, and the wealth of the Indies poured back to Portugal Pedro Alvares Cabral announced the discovery of Brazil The empire was flung across the world—Asia, Africa, and America Such captains as Francisco de Almeida and the celebrated Alfonso de Albuquerque helped to make Portugal the leading commercial nation, eclipsing the glories of Venice His reign and that of John III (reigned 1521–57) marked the climax, for already the depletion of man power, the neglect of agriculture, and the measures against the Jews were taking away the base from the empire The descent was even more rapid than the ascent, for while the reign of Sebastian (reigned 1557–78) saw the singing burst of Renaissance literature continue and had the appearance of prosperity, the force was spent Sebastian, religious, military, and more than a little mad, led his country to catastrophe in a rash attempt to gain fame in an African campaign His army was cut to bits, and the king himself was killed, though the lack of news on his death led to the vain hope that he would return Sebastianism became a sort of messianic faith with some in the troubles to come The house of AVIZ disappeared with the death of Henry, the cardinal-king, in 1580 Philip II of Spain, nephew of John III, made good his claims to the Portuguese throne (as Philip I) by force of arms The years of the long "Spanish captivity" began Portugal was neglected, commerce dwindled, and the Dutch, almost unhindered, took over the empire in the East and the most prosperous part of Brazil Financial ruin was deepened by the drain to pay for wars against the United Provs of the Netherlands and the Thirty Years War Finally in 1640 the Portuguese took advantage of the embroilment of Philip IV with France to revolt and throw off the Spanish yoke John of Braganza was made king as John IV. Spain, however, continued to threaten the smaller country, and Portugal, no longer one of the great powers of the world, bound itself as an ally to England in the treaty of 1654, supported by the marriage of Catherine of Braganza to Charles II of England Alfonso VI, weak in mind and body, was deposed and his brother Peter II (reigned 1669–99) was first regent and then king Before his death Portugal had signed the Treaty of Methuen (1703) and entered the War of the Spanish Succession, which sapped the resources of the country Absolutism reached its height under John V (reigned 1706–50) and under Joseph (reigned 1750–77), when the marquês de Pombal was the real ruler of the land He was vigorous in his mercantile policies, sought to make the colony of Brazil productive, and took strong measures to revitalize agriculture and commerce The wine trade with England was built up, and the dictator (who was widely detested) put down the Oporto "tippler's rebellion" harshly He also won a long contest with the Jesuits, expelling them from the land Lisbon was rebuilt after the violent earthquake of 1755 Nevertheless, Portuguese decline continued gently after the fall of Pombal in the reign of Maria I and her husband Peter III It was after the queen had become insane and her son (later John VI) was regent that trouble with the French led to a humiliating treaty (1801) and to the taking over of Portugal by Napoleon The royal family fled (1807) to Brazil, landing there in 1808 and establishing Rio de Janeiro as the center of the empire. Portugal was rent by the PENINSULAR WAR, memories of the patriotism and the hardships of those days were to haunt the country long Napoleon's downfall meant the restoration of Portuguese independence, but John VI (king after 1816) did not return until after a liberal revolution against the regency in 1820 He accepted a liberal constitution in 1822, and forces supporting him put down an absolutist movement under his son, Dom Miguel. Brazil, unwilling to accept a subordinate part, declared its independence under Pedro I (John's elder son) as emperor On John's death the succession was doubtful Ultimately Pedro, who was recognized as king, abdicated in favor of his daughter, Maria II (Maria da Gloria), on condition that the constitutional charter of 1826 be accepted and Dom Miguel marry Maria Miguel instead seized the throne, and Pedro, after having been forced to abdicate in Brazil, came (1832) to Portugal and led the liberals in the Miguelist Wars. Maria was restored to the throne, but her reign was one of political chaos, dictatorships, and coups. Matters did not improve in the brief rule of Peter V (under the regency of Maria's husband, Ferdinand II) or that of Louis I (reigned 1861–89) Republicanism was growing, and under Charles I (reigned 1889–1908) it reached new heights In 1890 the strong statement (called the Ultimatum in Portugal) from Great Britain forbidding plans of Portugal to expand the empire in Africa (Mozambique and Angola) caused intense anti-British feeling and hurt the waning popularity of Charles, who created unrest by trying to establish the dictatorship of João Franco. In 1908 the first regicide in Portuguese history occurred, when Charles and the heir apparent were assassinated Manuel II succeeded to the throne, but only briefly, for in 1910 a revolution forced his abdication. A republic was established, and the distinguished man of letters, Teófilo Braga, became president The change of rule did not cure the economic ills besetting the country Financial chaos was reflected in political chaos Anticlerical measures caused the hostility of the Roman Catholic Church Royalists and conservatives revolted The troubles continued through the First World War in which Portugal, though one of the Allies, took little part Insurrections of both right and left made conditions only worse In 1926 Gen (later Marshal) Oscar de Fragoso Carmona by a coup d'état took over the government In 1928 he was elected president, and he was thereafter reelected Antonio Oliveira de Salazar was brought to power chiefly because of his financial ability He was the guiding genius in establishing the corporative state He maintained his control. Though opposition candidates were permitted in 1945 (for the first time), such stringent methods of control were adopted that the opposition boycotted the election Some opposition was offered in the 1949 assembly elections, but only from small rightist groups In the Second World War, Portugal maintained a policy of strict neutrality, and the anti-Axis powers felt that close Portuguese friendship with the Spain of Francisco Franco made Portugal at first list slightly to the Axis side Lisbon developed tremendously as the great neutral communications center (particularly for air transport) and was, incidentally, also a spy center In 1943 naval and air bases were given to the Allies After the war Portugal's application for membership in the United Nations was refused An excellent short history of Portugal is H V Livermore, *A History of Portugal* (1947) Older short histories in English are H M Stephens, *Portugal* (4th ed , 1908), and Sir George Young, *Portugal Old and Young* (1917).

Portuguese East Africa see MOZAMBIQUE

Portuguese Guinea (gĭ'nē), colony, including the Bissagos Islands (13,948 sq mi , pop 351,089), W Africa, on the Atlantic Ocean. The capital is Bissau. The colony is bounded by Senegal on the west and French Guinea on the east There are savannas in the north, a rain forest in the south, and mangrove swamps on the coast (c 150 mi long) The chief products are rice, palm oil, and hides Portuguese Guinea was discovered by Europeans in the mid-15th cent It became a separate colony in 1879 It is ruled by an appointed governor

Portuguese India, the Portuguese possessions (1,575 sq mi , pop 624,177) on the Indian subcontinent. It comprises the colonies of DAMAN, DIU, and GOA.

Portuguese language, Romance language, of the Italic subfamily of Indo-European languages See LANGUAGE (table)

Portuguese literature. Writing in the Portuguese language fittingly first emerged in lyric poetry, the songs collected in *Cancioneiros* [song books] These were like the Provençal songs, but had the individual flavor and meter of Portuguese and Galician (a dialect then of Portuguese, not Spanish) The popularity of Galician for writing lyrics is shown in the Galician poems of Alfonso X of Castile, and it is said that Galician was used over the whole Iberian Peninsula in 13th-century lyrics King DINIZ of Portugal (grandson of Alfonso X) was apparently a prolific poet, and it was his father, Alfonso III, who followed the Provençal habit of encouraging song The great *Cancioneiros* are three—the *Cancioneiro de Ajuda*, the *Cancioneiro de Vaticana*, and the *Cancioneiro Colocci-Brancuti*; the first two named for the place of preservation, the third after the owners These collections were allowed to sink into complete obscurity, and recovery of them first began in the 19th cent. The scholarly work of Carolina Micaëlis de Vasconcelos on the *Cancioneiro de Ajuda* in the 20th cent. opened large new vistas into the past of Portuguese literature But of that literature after the early *Cancioneiros* there is no trace for over a century, when Garcia de Resende gathered the anthology called the *Cancioneiro geral* (1516) This is a collection of "court" poetry lacking the spirit and the freshness of the earlier poetry but having a charm and mannered beauty of its own The first of the chroniclers in Portuguese (rather than Latin) were also beginning the development of Portuguese prose (notable among them Fernão Lopes and Gomes Eanes de Azurara), while the *Leal conselheiro* [loyal counselor] of King Duarte is a notable prose work of much earlier date. When the great period of Portuguese

literature began with the Renaissance, which came slowly to conservative Portugal, poetry and the drama were the leaders. Gil Vicente was not only great as a Portuguese writer but as a Spanish writer also. He was one of the great dramatists and a lyric poet as well, eclipsing minor writers such as Antonio Ferreira, author of *Inês de Castro* The Italian forms were the molds for SÁ DE MIRANDA, the bucolic writer DIOGO BERNARDES, and Bernardim RIBEIRO, but Luís de CAMÕES, though he borrowed from many writers, was indebted to none He was the author not only of the best-known single work of Portuguese literature, the epic called *The Lusiads*, but also of lyric poems that would of themselves give him world stature. The Renaissance also saw the development of such full-flavored chronicles as those of João de BARROS and the unique travel narrative of the later Fernão Mendes Pinto After the fury had spent itself, there was a decline in poetry, and the importance of Camões was perhaps unfortunately responsible for a spate of third-rate epics and correct but lifeless classical poems The hand of classicism was heavy on Portugal even if it did produce the sonorous and rather elaborate prose of Antonio Vieira, who may be considered as a figure of Brazilian literature as well The fresh *Letters of a Portuguese Nun*, completely outside the classical mold, though written by the Portuguese Mariana Alcoforado were known in Portugal only in translation from the French The book had neither predecessor nor successor, while the parade of dreary classic works reached a climax in the simpering and totally artificial Arcadian "pastorals" and the monotonous but not sonorous classical sermons and works of learning Against this dead weight arose the French-inspired romantic movement, introduced to Portugal by ALMEIDA GARRETT Romanticism became the literary fashion not only among poets but among all prose writers extending to the historical works of Herculano de Carvalho Araujo as well as the somewhat lurid novels of Camilo CASTELO BRANCO As elsewhere in Europe, romanticism yielded to the falsities of ultraromanticism, then to the imposed purities of the symbolists The group of Coimbra dissidents, headed by Antero de QUENTAL and Teófilo BRAGA, invigorated their work with strong political convictions Quental is, however, remembered for the perfection of form in his sonnets, and Braga, who served as president of the republic created in 1910, is known today primarily for the color of his writings on literature and history and for his collections of Portuguese folklore The poet GUERRA JUNQUEIRO also belonged to the rebellious group, which yielded place to French-inspired realism The later João de Deus RAMOS was of no school Realism emerged with a major novelist, José Maria EÇA DE QUEIROZ, whose ironic, elegant, and deeply human works still marked the general pattern for Portuguese novelists in 1950 His friend Ramalho ORTIGÃO carried the satiric and purging force of realism to great lengths but had little effect on succeeding writers The impressionistic, profuse, and rather superficial biographies and histories of Joaquim OLIVEIRA MARTINS are still read The many schools of modern literature found adherents in Portugal in the 20th cent., with no single clear line of development discernible, while the able literary critic Fidelino de Figueiredo was pointing out the various strains of the past See also BRAZILIAN LITERATURE See Aubrey F. G. Bell, *Portuguese Literature* (1922)

Portuguese West Africa see ANGOLA

portulaca (pôr"tŭlăk'ŭ), **rose moss,** or **garden purslane,** small annual plant (*Portulaca grandiflora*) native to Brazil, cultivated for its showy flowers of various bright colors Succeeding in dry, sunny places, the plant produces numbers of successive blossoms, single or double, that open only in sunlight The leaves are linear and fleshy Other plants of the genus, which includes the common PURSLANE, are sometimes called portulaca

Portville, village (pop 1,018), W N Y, on the Allegheny near the Pa line, inc 1895 Dairy products and wood specialties are made

Port Vue (pôrt' vū'), borough (pop 3,601), Allegheny co, SW Pa, near Pittsburgh, inc 1892

Port Washington. **1** Unincorporated village (pop 10,509) on the north shore of Long Island, SE N Y, on Manhasset Bay It is a resort and residential suburb of New York city It has sand and gravel industries and clamming and lobster fishing Two coeducational private schools are here **2** City (pop 4,046), co seat of Ozaukee co, E Wis, on Lake Michigan N of Milwaukee, settled before 1835, inc 1882 It is a fishing and industrial center

Porvoo (pôr'vô), Swed *Borgå* (bôr'gô), city (pop 6,821), S Finland, E of Helsinki, at the mouth of the Porvoo river and on the Gulf of Finland It has plywood and cellulose mills and is a timber-exporting center Its Gothic cathedral, built in the 15th cent, is located in the old section, which has kept its narrow, winding streets, small, low houses, and picturesque shore cottages An important trade center since c 1300, Porvoo is also a cultural center and was the home of the Finnish national poet, Runeberg Here in 1809 the Finnish diet took the oath of allegiance to Alexander I of Russia.

Posada, José Guadalupe (hōsä' gwä"dhälōō'pā pōsä'dhä), 1852–1913, Mexican artist Of peasant stock, he became one of the greatest popular artists of the Americas and influenced the generation of Orozco and Rivera An imagery of violence was characteristic of him, and he used distortion, caricature, and vigorous lines and contrasts Working mainly in lithography, woodcuts and metalcuts, and relief etching, he produced thousands of prints which were sold cheaply to the masses, prints are often called Posadas after him He attacked the Porfirio Díaz dictatorship and was sympathetic to the workers and peasants who became revolutionaries in 1910 Posada also illustrated popular ballads and festivals and did a series of the dance of death and of crimes and executions

Posadas (pōsä'dhäs), city (estimated pop 38,516), NE Argentina, a port on the upper Paraná river It is a center of the mate industry, tobacco, grain, and fruit are also grown

Poseidon (pōsī'dŭn), in Greek religion, sea-god, protector of all waters He bore the TRIDENT, and when he shook it he caused storms and earthquakes The horse was his gift to man, but dolphins and bulls were also sacred to him He was the patron of the ISTHMIAN GAMES A brother of Zeus, he was the husband of Amphitrite and son of the Titans CRONUS and RHEA His children were Triton, Orion, Pegasus, Polyphemus, and other giants and monsters The Romans identified Poseidon with Neptune

Posen, Poland see POZNAN

Posen (pō'zun), village (pop 1,386), NE Ill, S of Chicago, settled 1893 by Polish immigrants

Posillipo (pōzēl'lēpō), picturesque suburb of Naples, S Italy, on the north shore of the Bay of Naples. There are remains of Roman villas

positive, in photography see NEGATIVE

positivism (pŏ'zĭtĭvĭzĭm), philosophical system of thought which denies any validity to speculation or metaphysics It maintains that knowledge is founded exclusively on experience and the positive sciences The term is applied specifically to the system of Auguste COMTE, who developed the coherent doctrine and named it, but it includes in general all views of like nature Positivistic tendencies appeared in Epicurus and other ancients, they influenced medieval thought and were certainly strong in the early exponents of the scientific method Hume gave the basic ideas of positivism status in modern philosophy, influencing the general trend of recent pragmatic and instrumentalist thinking

positron (pō'zĭtrŏn"), positive particle having the same mass and magnitude of charge as the electron It was discovered in 1932 by Carl D Anderson Positrons can be produced by the bombardment of beryllium, magnesium, or aluminum with alpha particles The positron is very short-lived

Post, Emily (Price), 1873–, American authority on etiquette b Baltimore She began her literary work as a novelist, basing many of her themes on the contrasting social ideas of Europe and America Her best-known book is *Etiquette* (1922), which has run through several editions and owes its popularity to its lively style and to the author's discrimination between essentials and nonessentials in social intercourse Mrs Post has broadcast on the radio since 1931 and has written since 1932 a syndicated column on good taste She has become an authority also on interior decoration *The Personality of a House*, published in 1930, has been several times revised

Post, George Browne, 1837–1913, American architect, b New York city, grad New York Univ, 1858, in civil engineering, and studied architecture with R M Hunt He was one of the leaders in a notable group which helped regenerate American architecture in the period from 1875 to 1890 A member of the National Commission of Fine Arts, he was a medalist and president (1896–99) of the American Institute of Architects He designed, among other buildings, the Produce Exchange, the Stock Exchange, the buildings of the College of the City of New York, and the *World* building, all in New York, and the Wisconsin state capitol

Post, Wiley, 1900–1935, American aviator, b Van Zandt co, Texas He was successively test pilot for a commercial company, private pilot, and airmail pilot before, in 1931, he won fame by flying with Harold Gatty around the northern part of the earth (15,474 mi) in 8 days, 15 hr, 51 min In 1933 Post made somewhat the same trip alone, traveling 15,596 mi in a few minutes less than 7 days, 19 hr, and flying nonstop from Brooklyn to Berlin He was killed in an airplane crash near Point Barrow, Alaska, while on a flight with Will Rogers

Post, Wright, 1766–1828, American surgeon, b North Hempstead, L I, N Y He studied privately in New York and London In 1792 he joined the medical faculty of Columbia College, and remained on the faculty after it was transferred (1814) to the College of Physicians and Surgeons, of which he was president from 1821 to 1826 He introduced many successful surgical techniques and gathered a valuable anatomical collection which he gave to Columbia.

Post, city (pop 2,046), co seat of Garza co, NW Texas, SE of Lubbock, inc 1916 Founded in 1907 to be a balanced industry-farming community, it has a cotton-textile mill and ships cattle

postage stamp, government stamp affixed to mail to indicate payment of postage The term includes stamps printed or embossed on post cards and envelopes as well as the more usual adhesive labels The use of adhesive postage stamps was advocated by Sir Rowland Hill, it was adopted in England in 1839 and established in 1840 Zurich (Switzerland) and Brazil issued stamps in 1843, and by 1850 the custom had spread throughout the world Although the postmasters of several cities had previously issued provisional stamps, the first U S official issue was in 1847 Stamps are usually printed from engraved steel plates or cylinders or by typographic or lithographic means Special stamps include air-mail and commemorative issues, special-delivery and postage-due stamps Although postage stamps are sometimes used for revenue purposes, most governments issue special fiscal stamps The popularity of PHILATELY has led some governments to make unnecessary issues. See M A Hallgren, *All about Stamps* (1940)

postal savings bank, government savings bank operated through local post offices First established in England in 1861, the institution has been adopted by most nations, including the United States (1910) In some countries additional functions include the operation of annuity and life insurance systems and the sale of government securities

postal service, term originally covering arrangements for the exchange of letters, but later used to include the transmission of packages, periodicals, and newspapers and for other services Early courier systems for government use were organized in the Persian Empire under Cyrus, in the Roman Empire, and in medieval Europe Private systems operated sporadically, but were gradually abandoned or incorporated into government services as these were opened for public use The English postal service, an outgrowth of royal courier routes, was established in 1657 Reforms proposed by Sir Rowland Hill were adopted by a postal act of 1839, which provided for universal penny postage prepaid by an adhesive POSTAGE STAMP or an official envelope The U S system was derived from the service established in the colonies by England Postage stamps were first used in the United States in 1847, other developments were the registering of mail (1855), city delivery (1863), money orders (1864, in response to a need for sending money to soldiers in the Civil War), and penny post cards (1873) Special-delivery service started in 1885, rural delivery in 1896, postal savings in 1911, and parcel post in 1913 A picturesque feature of the transmission of mail to the West Coast was the PONY EXPRESS of 1860–61 Mail service by railroad was instituted in 1862, and AIR MAIL in 1918 Postal service in the United States is under the direction of the POSTMASTER GENERAL The Universal Postal Union was established after the International Postal Convention of 1874, for which Heinrich von STEPHAN was largely responsible See George Walker, *Haste, Post, Haste!* (1939)

poster, placard designed to be posted in some public place for purposes of commercial announcement or propaganda Advertising makes wide use of posters, as do charitable or political organizations Remains of ancient civilizations such as Egypt, Babylonia, Greece, and Rome, furnish evidence that a form of poster was already in use Some of the Pompeian wall paintings are clearly in the nature of announcements, and there is reason to believe that the Greeks posted notices in the market place and the forum The invention of printing broadened the field The invention c 1796 of the lithographic process widened the technical possibilities of poster art In the 1870s the poster as we know it today originated, being clearly in the form of advertisement The elements of poster design are based on the idea that it must be visible at a distance and comprehended in one glance, so that lines are generally simple and colors few and bold Lettering is kept at a minimum The subjects selected for illustration are striking and of general appeal Posters were already being designed by known artists in the 17th and 18th cent In the 19th cent Daumier, for example, contributed poster designs, as subsequent artists—such as Manet, Picasso, Ben Shahn, and Norman Rockwell—have also done, although their field was not specifically that of poster design Other artists have made their name with poster design Jules Cheret, Alexandre Steinlen, and Henri de Toulouse-Lautrec in the 1870s set the modern style by their posters advertising entertainments and restaurants Other leading poster designers have been Fred Walker, Aubrey Beardsley, William Nicholson and James Pryde (collaborating under the name "the Beggarstaff Brothers"), Will Owen, and Dudley Hardy in England, Ludwig Hohlwein and Paul Scheurich in Germany; the Belgian Hendrik Cassiers, Lev Bakst in Russia, Toyokuni in Japan, carrying on an Eastern poster tradition, and Ramón Casas in Spain The American poster can be said to have originated with Matt Morgan's circus ad-

vertisements (c 1890) and was developed by Edward Penfield, Will H. Bradley, Maxfield Parrish, Howard Chandler Christie, James Montgomery Flagg, Charles Dana Gibson, and Harrison Fisher. Outstanding modern poster designers in the United States are E McKnight Kauffer, Paul Rand, Austin Cooper, and Pat Keely, in France, A M Cassandre, Jean Carlu, and Charles Loupot See C M. Price, *Posters· a Critical Study for the Development of Poster Design* (1931), E McKnight Kauffer, *The Art of the Poster* (1925), S R Jones, *Posters and Publicity* (1926), Austin Cooper, *Making a Poster* (1938), J I Biegeleisen, *Poster Design* (1945).

postimpressionism, term applied to the work of various French painters at the end of the 19th cent who, for differing reasons, were dissatisfied with the objective and improvisatory character of IMPRESSIONISM and attempted to apply some of its lessons to a more structurally organized, or more subjective, art Cézanne, Van Gogh, Gauguin, Seurat, Signac, and Renoir in his late manner are often termed postimpressionists Postimpressionism was followed by FAUVISM in 1905

post-mortem examination (pōst″-môr′tŭm) or **autopsy** (ô′tŏp″sē) [Latin *post mortem*=after death, *autopsy* from Gr ,=seeing by one's self], systematic examination of bodies for determining the cause of death or for study The pathologist often removes organs from the body and dissects them, in order to make microscopic studies of the tissue Chemical tests are frequently made of the contents of organs Post-mortems are generally made at the instance of the authorities in cases of unexplained and suspicious deaths or deaths unattended by a physician In other circumstances a doctor may have an autopsy performed to ascertain more precisely the reasons for death only if the family consents or if permission was granted by the person before death

Postojna (pô′stoinä), Ger *Adelsberg* (a′dŭlsbĕrk), Ital *Postumia* (pōstōō′myä), town (pop 3,651), Slovenia, Yugoslavia, in the KARST, c 30 mi SW of Ljubljana It is a summer resort and is famous for its stalactite caves (the largest in Europe) traversed by a subterranean river It belonged to Austria until 1919 and then to Italy until 1947

Poston, Charles Debrill (pō′stŭn), 1825–1902, American explorer and author, b Hardin co, Ky After practicing law in Tennessee, he moved to California in 1850 and from there led a party to explore the east coast of the Gulf of California for harbors and S Arizona for minerals A subsequent mining enterprise in Arizona was abandoned because of Apache wars An advocate of territorial organization for Arizona, he was appointed (1863) superintendent of Indian affairs and served (1864–65) as the first delegate to Congress from the new territory In 1868 he received a commission to study irrigation and immigration in Asia Later he served in the Southwest in various government posts In 1925 a monument was erected to his memory on Poston's Butte near Florence, Ariz. Among his writings are *The Sun Worshipers of Asia* (1877) and *Apache Land* (1878)

Postumia, Yugoslavia see POSTOJNA

Postumus (pŏs′tūmŭs), d 269?, Roman commander Governor of Gaul under Gallienus, he revolted (259) and established an independent empire there Though defeated (263) by Gallienus, he escaped and maintained his state until murdered by his own men His measures helped to shore up the tottering Roman civilization, thus in a sense saving the West

posture (pŏs′chur), position of the movable parts of the body in a variety of activities, e g , standing, walking, sitting, and lying Acceptable posture largely depends on the anatomical structure of the individual In a general sense, good posture is the alignment of segments of the body, and that which permits work to be done most easily and effectively. Any abnormal deviations may produce conditions such as drooping shoulders, depressed chest, and sagging stomach, all of which may eventually interfere with a normal functioning of various organs Posture training in childhood will produce an awareness of its importance Exercise suitable for each individual is helpful in maintaining the tone of muscles See W. R Morrison and L B Chenoweth, *Normal and Elementary Physical Diagnosis* (4th ed , 1947), publications of the U S Dept. of Labor

Postville, town (pop 1,194), NE Iowa, c 25 mi W of the Mississippi and NW of McGregor, in a fine grazing area, settled 1841, inc. 1873 Dairying is the chief industry

Potaro (pōtä′rō), river of British Guiana, rising E of Mt. Roraima and flowing E to the Essequibo In its course are the KAIETEUR FALLS

potash, name for certain potassium compounds, particularly for potassium carbonate, originally obtained from wood ashes or from the residue left in pots after plants (e g , kelp) had been burned in them When pure, it is a white, crystalline substance, melting at 891°C , but it commonly appears in commerce as a white, anhydrous powder. It is known also as pearl ash Potassium carbonate is very soluble in water and exhibits alkaline properties It is commonly prepared from potassium chloride It is used in making other potassium compounds and in the manufacture of certain kinds of hard glass and soap Potash is extremely valuable in some cases as a FERTILIZER Caustic potash is a common name for potassium hydroxide, a very strong alkali It closely resembles sodium hydroxide (called also caustic soda), which is used much more commonly because of its lower cost Potassium hydroxide is used in making soft soaps Chlorate of potash is used in making explosives, it is the chlorate of potassium

potassium (pŭtă′sēŭm), extremely active, silver-white, soft metallic element (symbol=K [for *Kalium*, used in Germany], for physical constants, see ELEMENT, table) It is so active and combines so vigorously with OXYGEN that it must be kept submerged in kerosene or some oil, out of contact with the air With water, it reacts with great violence to form potassium hydroxide It combines directly with chlorine, sulphur, and many other nonmetallic elements The metal has no commercial value, but its compounds are widely used These include the alum, the bromide, the carbonate or potash, the chlorate, the chromate, the cyanide, the hydroxide or caustic potash, and the nitrate or saltpeter Others are the acid fluoride, from which fluorine was first prepared, the chloride, used as a source of many potassium compounds and in fertilizers, the silicate, which can be used in making water glass, the sodium tartrate or Rochelle salt, and the acid tartrate, used in making baking powder Potassium permanganate, a compound of potassium, manganese, and oxygen, is a strong oxidizing agent, it is used in the preparation of chlorine, as a catalyst, as an indicator, and, in medicine, as an antiseptic, a disinfectant, and an antidote for certain poisons such as opium Tartar emetic is another important compound Potassium is not found uncombined in nature, but occurs widely dispersed in its compounds, as in carnallite, feldspar, mica, and the mineral sylvite, in mineral waters and salt deposits, and in plant and animal tissues The metal is obtained commonly by the electrolysis of potassium chloride It was discovered by Sir Humphry Davy in 1807

potato, perennial plant of the nightshade family and its swollen underground stem, a tuber, which is one of the most widely used staple foods in temperate climates The plant (*Solanum tuberosum*), closely related to the tomato, the eggplant, and the red pepper, is probably native to the Andes, where it was cultivated by the Inca In pre-Columbian times its culture spread widely among Indians It is difficult to trace the history of the potato, in part because the name was applied by early writers also to the sweet potato and to other plants The Spanish are believed to have introduced it into Spain from Peru in the 16th cent It was probably cultivated in Italy, Belgium, England, and France by c 1600 and reached even remote parts of Europe by the mid-18th cent Authorities are uncertain as to whether it reached the British Isles from Europe or was introduced from the Western Hemisphere by Elizabethan navigators There is evidence that the potato was shipped in 1621 to Virginia from the Bermudas, where it had probably been introduced from England c 1613 It was probably introduced into other American colonies directly from England Although the potential value of the potato as a staple crop was early recognized by authorities, general acceptance of it as a major food was very slow, as evidenced by A R J Turgot's introduction of the potato as a large-scale crop at Limoges, France, as late as the 1760s However, in Ireland it was widely accepted in the 17th cent and during the 18th cent became the major food (hence the potato is often called Irish potato to distinguish it from the sweet potato) Ireland became so dependent on the potato that the failure (resulting from blight) of the 1846 crop caused a famine resulting in widespread death, disease, and emigration Major producers today include Germany, Russia, and the United States (especially in Maine and Idaho) Great quantities are grown for stock feed and for the production of alcohol and of starch and dextrins used in the manufacture of adhesives, thickeners, and sizing Potatoes are composed of about 78 percent water, about 18 percent carbohydrates (chiefly starch and a little sugar), and about 2 percent protein They are a good source of iron and of vitamins, especially vitamin C The relatively rare incidence of scurvy among groups using potatoes as a major food has been attributed to vitamin C However, since this vitamin is water soluble, much of it may be destroyed by prolonged boiling of peeled potatoes The potato plant thrives best on loamy soil rich in humus and potash. A coarse-foliaged plant bearing clusters of white, bluish, or purplish flowers, it usually develops about five tubers with whitish or pale yellow flesh Although it sometimes produces globular yellow-green fruits enclosing several seeds, the plant is chiefly propagated by planting pieces of tubers bearing two or three "eyes" or buds The plant is sensitive to frost; it is subject to certain fungus and virus diseases and has several insect pests, chief of which is the Colorado potato beetle. See W. G. Burton, *The Potato* (1948); E. V. Hardenburg, *Potato Production* (1949).

potato bug: see COLORADO POTATO BEETLE.

Potawatami Indians (pŏ″tŭwŏ′tŭmē), tribe of North American Indians of the Algonquian linguistic stock. They are closely related to the Ojibwa and Ottawa; their traditions state that all three were originally one people. In the early 17th cent , when first encountered by the whites, the Potawatami lived near the mouth of Green Bay in Wisconsin By the end of the century, however, they had been driven (probably by the Sioux) S along Lake Michigan and were settled on both sides of the southern end of the lake After the Illinois were conquered (c.1765), they advanced into NE Illinois, S Michigan, and, later, NW Indiana The Potawatami then numbered some 2,000 They were friendly to the French and aided them against the English The Potawatami supported the rising under Pontiac, fought against the United States in the battles headed by Little Turtle, took part in the battle of Fallen Timbers, and signed the Treaty of Greenville (1795). They sided with the British in the War of 1812 With the advancing frontier, the Potawatami retreated westward to Iowa and Kansas, although a portion went to Walpole Island in Canada From the reservation in Kansas where they had gathered, a large group moved (1868) to Oklahoma, this group, which held lands in severalty, became known as Citizen Potawatami. Today living on reservations in Kansas, Michigan, Oklahoma, and Wisconsin, they number some 4,500, there are 3,000 on the Oklahoma reservation The Potawatami were of the Eastern Woodlands area They sometimes ate dog meat at a feast in honor of the sun The name of the tribe is also spelled Potawatomi, Pottawatami, and Pottawatomi. See Otho Winger, *Potawatomi Indians* (1938)

Potchefstroom (pŏ′chufstrŏm, -strōōm), town (pop 27,153), SW Transvaal, Union of South Africa The earliest town in the Transvaal, it was founded in 1838 It was the capital of the Transvaal until 1860, when it was moved to Pretoria Potchefstroom is on a railroad to Durban It has a college belonging to the Univ of South Africa

Poteau (pō′tō), city (pop 4,020), co seat of Le Flore co , E Okla , near the Ark line, the Ouachita Mts , and the Poteau river, in a farm and resort area, inc 1898 The area also produces lumber, cotton, and coal, and the city has a glass factory

Poteet (putēt′), city (pop 2,315), SW Texas, S of San Antonio, inc. 1925 It ships strawberries and vegetables, and the region produces oil

Potemkin, Grigori Aleksandrovich (pōtĕm′kĭn, Rus grĭgô′rē ŭlyĭksən′drōvĭch pŭtyôm′kĭn), 1739–91, Russian field marshal and favorite of CATHERINE II He studied at the Univ of Moscow and then entered the army His part in the conspiracy (1762) which made Catherine empress brought him to her notice Having distinguished himself in the first war with Turkey, he was created a count (1774) About the same time he became Catherine's lover Even after others had taken his place, he remained one of Catherine's chief advisers, particularly with regard to her foreign policy, and he retained great influence at her court Some believe that he was secretly married to the empress Catherine probably intended to break up the Ottoman Empire and to make Potemkin ruler over a vast part of its remnants, including Moldavia, Walachia, and Bessarabia, which were to be joined as the kingdom of Dacia Potemkin played an important part in the annexation (1783) of the Crimea, for which he was created a prince As governor of the new province, he organized Catherine's fabulous Crimean tour of 1787 The allegation that he had sham villages built along her route is, at best, an extreme exaggeration, for Potemkin was in fact a very able administrator, and new towns and cities did actually spring up with astonishing speed Personally, Potemkin was one of the most eccentric figures of an age which abounded in eccentrics See biography by George Soloveytchik (1947)

Potenza (pōtĕn′tsä), city (pop 18,872), capital of Potenza prov and of BASILICATA, S Italy, in the Apennines There are a cathedral, rebuilt in the 18th cent , and a museum of antiquities

Potgieter, Everhardus Johannes (ăvĭrhär′dŭs yōhä′nŭs pôt′gētur), 1808–75, Dutch critic and poet He was the first editor (1837–65) of the *Gids*, a literary monthly which became influential in Dutch letters Potgieter's great design was to awaken a Dutch literary revival, an example of his efforts thereto is the brilliant prose work *Het Rijksmuseum te Amsterdam* (1844), which set up for emulation the 17th-century Golden Age of Dutch literature *Florence* (1868) was a poetic masterpiece on medieval Italy Potgieter was a humanitarian and a liberal.

pothole, deep round hole in the earth's surface, formed by the erosive action of water in circular motion and of its contained rock debris Potholes are most commonly found at the bottoms of eddies in rivers and of whirlpools formed by cataracts, sometimes potholes in a river bed indicate the former site of a rapid or cataract. Potholes are also found in regions formerly glaciated where a whirling column of water was formed by a superglacial stream sinking a well-like hole (moulin) through the ice.

Poti (pô'tyĕ), city (pop 13,137), W Georgian SSR, in Mingrelia, a port on the Black Sea at the mouth of the Rion It exports manganese from Chiatura, corn, lumber, and wine The region around Poti is the swampy, unhealthful Colchis lowland.

Potidaea (pŏtĭdē'ə), ancient city, NE Greece, at the narrowest point of the Pallene peninsula, Chalcidice. It was a Corinthian colony (c 600 B C.) but joined the Delian League. It revolted against Athens with Corinthian help (432 B C), providing one of the incitements to the PELOPONNESIAN WAR Athens recaptured it (430 or 429 B C), but lost it with the empire Philip of Macedon took Potidaea (356 B C) and may have destroyed it in the ensuing war. Cassander rebuilt it and named it Cassandreia The modern Pinaka is near by

Potiphar (pŏ'tĭfär) [connected with POTI-PHERAH], chief official of Pharaoh who bought Joseph and gave him a high position in his house Later when his wife falsely accused Joseph he put Joseph into prison Gen 39

Poti-pherah (pŏtĭ'fərə, pŏ'tĭfē'rə) [Heb. from Egyptian, =belonging to the sun], priest of On and father of Joseph's wife Asenath Gen 41 45,50; 46 20.

potlatch (pŏt'lăch'), winter ceremony among the Indians of the Pacific Northwest Coast area The potlatch ceremony is characterized by the giving of gifts, usually copper plates and goat's hair blankets In a society based on the public disposal of wealth, the giver of gifts reaped an abundant harvest in the respect his neighbors showed him Since custom demands that an offered gift be accepted and that a larger gift be given in return, the potlatch was sometimes used to impoverish a disliked person The ceremony was accompanied with dancing, feasting, and boasting See Ruth Benedict, *Patterns of Culture* (1934)

pot liquor, liquid remaining in a kettle after meat has been cooked in it unthickened gravy The "pot-licker" of the S United States is commonly the liquid remaining after boiling hog's jowl and greens, but it may mean any liquid in which meat or (more usually) vegetables have been boiled It is served like a soup or stew and should be accompanied by the old-fashioned corn bread, pone

pot marigold *see* CALENDULA

Potomac (pətō'mək), river formed SE of Cumberland, Md , by the confluence of its North and South branches and flowing generally southeast 285 mi to Chesapeake Bay It forms part of the boundary between Maryland and West Virginia and then separates Virginia from both Maryland and the District of Columbia The river passes over the Great Falls above Washington, D C , at Washington is crossed by ARLINGTON MEMORIAL BRIDGE and others, and enters a tidal estuary below the city It is navigable for large ships to Washington, and formerly many smaller boats went to Cumberland, Md , via the CHESAPEAKE AND OHIO CANAL Its principal tributary is the Shenandoah, which it receives at Harpers Ferry, W Va The river is noted for both its beauty and its historical associations Mt Vernon is on the Virginia shore below Washington See F A Gutheim, *The Potomac* (1949)

Potosí (pōtōsē'), city (1948 estimated pop 47,000), S Bolivia Potosí was founded c 1545 at the foot of one of the world's richest ore mountains In the cold, bleak high Andes at an altitude of 13,780 ft , it is one of the highest cities in the world and has a rigorous, exacting climate There is no agriculture, scarcely any fuel During its first 50 years Potosí was the most fabulous source of silver the world had ever known, but because of isolation, living discomfort, and especially disasters such as the flood of 1626 when one of the water-power reservoirs broke, it could not compete with the mines of Peru and Mexico Its estimated population of 160,000 declined almost to nothing Recent technological advances and rail connections to La Paz and agricultural Sucre have, however, made possible exploitation of other ores besides silver—tin, wolfram, and copper—and a revival of commerce

Potosi (pətō'sī), city (pop 2,017), co. seat of Washington co , E Mo , 8W of St Louis, in a mineral, farm, and lumber area Lead was discovered at Potosi in the 1770s, and the mines were later developed by Moses Austin, who came here in 1797 Zinc, iron, and limestone deposits are also found, and Potosi is the center of a very large barite industry

Potsdam (pōts'dăm, Ger pôts'däm), city (pop 113,568), capital of Brandenburg, E Germany, on the Havel and WSW of Berlin It is primarily a residential city, pleasantly situated among the lakes and woods of the Havel region, but it also has important industries, notably textiles, locomotives, and precision instruments The suburb of Babelsberg is the center of the German moving-picture industry. The observatory of the Univ of Berlin and the astrophysical observatory (the Einstein Tower) are at Potsdam. Chartered in the 14th cent , Potsdam was insignificant until Elector Frederick William of Brandenburg made it a residence It experienced its greatest development under FREDERICK II of Prussia, who made Potsdam his chief residence and who built the palace and park of SANS SOUCI and the New Palace. The Town Palace was rebuilt (1745–51) during his reign. The royal family of Prussia (later also the imperial family of Germany) continued to favor Potsdam as a residence, and numerous palaces were added by them Ever since the reign (1713–40) of Frederick William I, Potsdam stood as the symbol of Prussian *militarism* Its immense parade grounds and the somewhat ponderous architecture of some of its palaces contribute to this impression, but the graceful palace and park of Sans Souci are notable exceptions. They evoke the memory of Frederick II the philosopher-king and of his cultured circle rather than that of his military achievements Both Frederick William I and Frederick II were buried in the Garrison Church (built 1731–35) until 1945, when their remains were moved to Marburg In the Second World War, Potsdam was severely damaged, but its main historic monuments suffered little harm The city became (1945) the headquarters of the Russian occupation forces in Germany and was the scene of the POTSDAM CONFERENCE

Potsdam, village (pop 4,821), N N Y , on the Raquette and E of Ogdensburg, in a dairy and farm region, inc 1831 Paper and cheese are made A state teachers college and Clarkson College of Technology (*for men*, 1896) are here

Potsdam Conference, important meeting (July 17–Aug 2, 1945) of the principal Allies in the Second World War (the United States, the USSR, and Great Britain) to supplement, clarify, and implement agreements previously reached at the YALTA CONFERENCE The meeting is also known as the Berlin Conference The chief representatives were President Harry S Truman, Premier Joseph V Stalin, Prime Minister Winston L S Churchill, and, after Churchill's defeat in the British elections, Prime Minister C R Attlee The foreign ministers of the three nations were also present The so-called Potsdam Agreement, signed by the three powers at the end of the meeting, transferred the chief authority in Germany to the American, Russian, British, and French military commanders in their respective zones of occupation (see GERMANY) and to a four-power Allied Control Council for matters regarding the whole of Germany In order to insure the complete disarmament and demilitarization of Germany and the elimination or control of all potential German war industries, the Allies undertook to abolish all German armed forces and all organizations of the National Socialist party, to abolish Nazi legislation, to punish all German war criminals (see WAR CRIMES), to remove all former Nazis from public or semipublic office, to control education in order to eliminate Nazi ideology and to foster democratic ideals, to restore local self-government throughout Germany, to allow and encourage all "democratic political parties", to introduce representative and elective principles of government into regional, provincial, and state administration, to establish no central German government "for the time being," but to establish certain German central administrative departments under Allied supervision, to prohibit German production of armaments, airplanes, and seagoing ships, to control the production of metals, chemicals, machinery, and other items directly necessary to a war economy, to remove industrial equipment not needed for permitted production, to decentralize German economy and to break up cartels, syndicates, trusts, and other monopolies, to emphasize the development of agriculture in reorganizing German economy, and to treat Germany as a single economic unit during the period of occupation The agreement on Germany contained numerous other technical details The Allies further agreed to transfer all former German territory E of the Oder and Neisse rivers to Polish and Russian administration, pending a final peace treaty The USSR thus obtained the northern part of East Prussia, including Königsberg; Poland obtained the rest of East Prussia, E Brandenburg, Upper and Lower Silesia, and most of Pomerania The German population in these territories and in Czechoslovakia were permitted to be transferred to Germany "in an orderly and humane manner", as a result millions of Germans were driven from their homes within a few months and were left to subsist on whatever charity they received in Germany A mode for REPARATIONS payments by Germany was outlined Recognition was withdrawn from the Polish government in exile, and the Polish coalition government, created after the Yalta Conference, was declared the sole authority in Poland A meeting of the Council of Foreign Ministers was scheduled at London to consider peace settlements During the Potsdam Conference Truman and Churchill drew up an ultimatum to Japan, offering that nation the choice between unconditional surrender and total destruction (The atom bomb, of which this so-called Potsdam Declaration contained a hint, was not actually mentioned) Rarely was any agreement honored so consistently in the breach as was the Potsdam Agreement The work of the Allied Control Council for Germany was at first blocked by France, which did not feel bound by an agreement to which it had not been a party The council thus had not even begun to function when the rift between the USSR and the Western democracies broke it up. The blame for the failure to put the agreement into operation has been placed chiefly on the United States by the USSR and on the USSR by the United States, England, and France The vague wording and tentative provisions of the agreement allowed a wide range of interpretation

Pott, Percivall, 1714–88, English surgeon at St Bartholomew's Hospital He wrote classic descriptions of the fracture of the ankle known by his name and of Pott's disease of the spine (a deformity caused by tuberculosis), as well as masterly treatises on hernia and other conditions

Pottawatami Indians or **Pottawatomi Indians:** see POTTAWATAMI INDIANS

Potter, Alonzo, 1800–1865, American Episcopal bishop, b near Poughkeepsie, N Y , grad Union College, Schenectady, N Y , 1818 Ordained a priest in 1824, he served as rector (1826–31) of St Paul's Church, Boston In 1831 he became professor of philosophy and political economy at Union College, he was its vice president from 1838 to 1845 As bishop of Pennsylvania (1845–65), he founded in Philadelphia an Episcopal hospital (1860) and a divinity school (1863) His notable Lowell Lectures, delivered in Boston, appeared posthumously as *Religious Philosophy* (1872) See biography by M A De Wolfe Howe (1871)

Potter, Edward Clark, 1857–1923, American sculptor of animals, b New London, Conn , studied at the School of the Museum of Fine Arts, Boston He became (1883) assistant to Daniel Chester French He was first known through the groups for the World's Columbian Exposition, Chicago, in 1893, made in collaboration with French Together they produced also such equestrian statuary as General Grant Fairmount Park, Philadelphia, Washington, in Paris and Chicago, and General Hooker, in Boston In striking contrast is Potter's little *Sleeping Faun* (Art Institute, Chicago, replica in the Metropolitan Mus) Other independent works are his statues of Robert Fulton (Library of Congress) and Gov Austin Blair (Lansing, Mich), statues of equestrian General Slocum (Gettysburg, Pa), Gen Phil Kearny (Washington, D C), and General Custer (Monroe, Mich), and the lions before the Public Library and animal groups in the Morgan Library, both in New York He became a member of the National Academy in 1906

Potter, Henry Codman, 1835–1908, American Episcopal bishop, b Schenectady, N Y , grad Protestant Episcopal Theological Seminary, Alexandria, Va , 1857, son of Alonzo Potter He was ordained priest in 1858 and served in churches in Troy, N Y , and Boston before he became rector (1868) of Grace Church, New York city In 1883 he was consecrated bishop coadjutor of New York, assisting his uncle, Bishop Horatio Potter, whom he succeeded in 1887 The first stages in the building of the Cathedral of St John the Divine, New York city, were initiated by Bishop Potter He was actively interested in social improvement and civic reform, among his writings are *The Citizen in Relation to the Industrial Situation* (1902) and *The Drink Problem in Modern Life* (1905) See H H Keyser, *Bishop Potter, the People's Friend* (1910)

Potter, Paul or **Paulus,** 1625–54, Dutch animal painter and etcher At 15 he painted his fine *Boar Hunt* In 1646 he was admitted to the painters' guild of Delft He settled in 1649 at The Hague, where he enjoyed the patronage of the nobility, including the prince of Nassau, for whom he painted the celebrated life-size *Young Bull* He moved to Amsterdam a year before his death In his brief life Potter painted over 175 pictures, considered the finest animal paintings of the Dutch school In faithful representation he has never been surpassed His works are to be seen in many important European collections Famous examples are *Bear Hunt* and *Shepherds with Their Flocks* (Rijks Mus), *Landscape with Cattle* (National Gall , London), and *Meadow with Oxen* (Louvre) His etchings of animals are characterized by the same simplicity and naturalism as his paintings

Potteries, the, district, c 9 mi long and 3 mi wide, Staffordshire, England, extending northwest-southeast in the upper Trent valley It includes Hanley, Burslem, Tunstall, Fenton, and Longton, which were joined to Stoke-upon-Trent in 1910 to form the borough, later the city, of STOKE-ON-TRENT. Newcastle-under-Lyme is also in the region The Potteries is very densely populated and has been a center of china and earthenware making since the 16th cent , Wedgwood, Spode, and Minton are among the famous men who worked here Most of the raw materials are now brought in from other districts, the clay largely from Cornwall and Dorsetshire This region is the "Five Towns" of Arnold Bennett's novels

potter's field : see ACELDAMA.

pottery embraces the baked-clay wares of the whole ceramics field This ranges from the coarse, dark, unglazed, crudely decorated earthenware through the use of glaze in faience and STONEWARE to the crowning achievement in chinaware (PORCELAIN) and LUSTERWARE with their whiteness, delicate translucence, and rich metallic iridescence. TERRA COTTA is a form of pottery The process for all these remains essentially the same: shaping the plastic

clay by building (piece by piece) or by throwing the clay upon a potter's wheel (used in Egypt prior to 4000 B C), which spins the ball, then the object, as the hands give it form; incising or modeling ornament when such decoration is desired, drying to leather hardness for turning upon a lathe or careful finishing by hand, then slowly drying completely; and finally firing in a kiln, which brings it to the biscuit state Contrasting colors of clay, used in slip ware and graffito decoration, are added to pottery before firing, while glaze is applied to biscuit ware and a second firing fuses it with the clay and brings out its color Pottery is one of the most enduring materials known to man It is, in most places, the oldest art, also the most widespread, as primitive peoples the world over have fashioned for their daily use pots and bowls of baked clay Prehistoric (sometimes Neolithic) remains of pottery, e g , in Scandinavia, England, France, Italy, and Greece and in North and South America, have proved of great importance archaeologically; and archaic and later examples are of value as historical and literary records, ancient Assyrian and Babylonian writings having been inscribed upon clay tablets and cylinders and perpetuated as pottery Prehistoric forms include cinerary urns, drinking and food vessels, bowls, and so-called incense cups and reveal incised decorations of zigzags and dots and occasionally pierced bands Early Egyptian examples of pottery from the tombs cover a variety of specimens, from coarse hand-built to fine wheel-turned ones, and their enamels and glazes are of a wide range of colors The greens and blues, especially the brilliant turquoise, are the most distinctive and characteristic Simple painted designs ornament chalice, cup, and bowl of this green blue, in which also many small figures were made There are various other types, and in the pottery of the Ptolemies a Greek influence appears In Assyria painted and glazed bricks were in common use Many of them show reliefs of figure and animal subjects Fragments of heroic subjects in the round disclose gorgeous colors. Assyrian vases, biscuit, glazed, or enameled, are modeled or painted Other archaic wares include Phoenician, Rhodian, and Etruscan. The Greek vases (800–300 B C), famous for symmetry of form and beauty of decoration, include red, black, and varicolored examples The last were for the tombs only, as the colors were non-vitreous and easily marred The red ware is decorated with black figures, or the ground is black-enameled and the figures show in red Water, oil, and wine jars were numerous. Of the Greco-Roman wares the Arretine or Samian, also a red ware, was molded after first being turned on the wheel to the size of the mold, which carried the decoration in intaglio Roman pottery (100 B C –A D 400), made throughout the empire, included the Arretine, black, and glazed types Painted pottery of the Neolithic period has been found in China It was the Early Han period (202 B C –A D c 9) that produced the incomparable porcelain which became the envy of Renaissance Europe, it included large tea jars and delicate scent and snuff bottles Korea and Japan acquired (about the 7th cent A D) the art of pottery from China and have created exceptionally fine wares, notably the Satsuma of Japan Of other Oriental potteries, Persian is the most significant for its beauty. The earliest type (7th cent) is known as Gabri, of red body, white slip coating, and yellow glaze, supposedly made by the pre-Mohammedan fire worshipers It continued to the 12th cent , which ushered in the classic period of Persian ceramics that extended to the 14th cent The products of this period reveal mat-finish enamels of blue, green, turquoise, purple, red, and white in graceful and harmonious designs The Persians also developed copper and silver lusterware and decoration Their work came under Chinese influence and often shows pure Chinese motifs Damascus ware and Rhodian pottery are among their products which included ewers, plates, lamps, and juglike pitchers The Rakka ware of Syria of the 10th to 11th cent has the characteristic blue-green Persian glaze, and Turkish pottery of the best period (16th–17th cent) shows Persian influence but is unmistakably Ottoman in its mood and its distinctive red color Fine examples of Hispano-Moorish pottery date from the 14th cent The Renaissance potteries of Europe were very active and achieved remarkable success Italian Gubbio, faïence, majolica, and graffito became celebrated wares, Spanish MAJOLICA was also widely known, and French tiles, Nevers and Rouen pottery, Sèvres and Limoges china, were of high merit Cologne and Dresden ware in Germany, delftware in Holland, and Scandinavian blue and white—all developed markets English potteries of note grew and flourished in Staffordshire, Lambeth (Doulton ware), Bow, Chelsea, Lowestoft, Worcester, and Derby, and wares such as Wedgwood, Minton, and Spode won just fame. Prehistoric pottery found in Peru and in Mexico and the SW United States evidences a high degree of skill in color, form, and decorative motifs. Baked-clay work by colonists in North America began in 1612 with the making of bricks and tiles in Virginia and Pennsylvania. In these states and among the Dutch settlers of New York potteries were soon established. The first whiteware was made in 1684. A stoneware factory was opened in New York in 1735, and c 1750 the Jugtown pottery of North Carolina was first produced. After the middle of the 18th cent terra-cotta works were operating in Massachusetts and Pennsylvania. Palatinate refugees produced slip-decorated and graffito earthenware, their product forming the foundation of Shenandoah pottery In Philadelphia fine china was made (1769) for the first time in America The potteries of Bennington, Vt , opened in 1798, were known especially for their jugs East Liverpool, Ohio, one of the foremost centers of the industry, dating from 1839, produced the first American Rockingham ware Another center, begun in 1852 at Trenton, N J , made fine Belleek or eggshell china In 1854 the New England pottery was started. The Centennial Exposition of 1876 in Philadelphia and the World's Columbian Exposition of 1893 in Chicago did much to awaken native consciousness of pottery as a form of art The Rookwood Pottery at Cincinnati, established in 1880, reached international celebrity. For artistic products molds have given way to handwork, and the character of native clays has led to new decorative effects (For the varying nature of the material, see CLAY) Beautiful results have been achieved in the Dedham pottery of Massachusetts, the Scarabronze ware of New Milford, Conn , the Teco pottery made in Chicago, the work done at Newcomb College, New Orleans, the Weller pottery, Zanesville, Ohio, and the Robineau products of Syracuse, N Y The school of pottery developed by Charles F Binns at Alfred Univ , Alfred, N Y , is widely known See E A Barber, *The Pottery and Porcelain of the United States* (3d ed , 1909), C F Binns, *The Potter's Craft* (1922), Rudolf Hainbach, *Pottery Decorating* (Eng tr , 1907), A B Searle, *Encyclopedia of the Ceramic Industries* (1929), E De F. Curtis, *Pottery Its Craftmanship and Its Appreciation* (1940), B H. Leach, *A Potter's Book* (1940)

Pottstown, industrial borough (pop 20,194), SE Pa , on the Schuylkill river and NW of Philadelphia , settled 1775, inc 1815 It manufactures metal and steel products and also has textile mills In 1716 the first ironworks in the state were established here by Thomas Rutter when he worked the mines at Manatawny Creek The Hill School for boys (est 1851) is in Pottstown

Pottsville, industrial city (pop 24,530), co seat of Schuylkill co , E Pa , on the Schuylkill and NW of Reading, settled c 1780, laid out 1816, inc as a borough 1828, as a city 1847 The city grew with the advent of extensive anthracite mining (1824–29), and anthracite is the key industry here It was a rallying place for the Molly Maguires, who were tried here in 1877 Schuylkill Undergraduate Center of Pennsylvania State College is in the city

Poughkeepsie (puklp'sē), city (pop 40,478), co seat of Dutchess co , E N Y , on the east bank of the Hudson, settled 1687 by Dutch, inc 1854 The Mid-Hudson Bridge crosses the river here Poughkeepsie is a trade center, and its varied manufactures include ball bearings, cream separators, and machines It is the seat of VASSAR COLLEGE and of the Oakwood School (coeducational) The Intercollegiate Rowing Association regatta, which was held annually in June on the river here since 1895, was transferred to the Ohio river at Marietta in 1950 The Van Kleeck Homestead (1702) and other historic buildings remain There is a state hospital for the insane In 1788 the Federal Constitution was ratified here Margaret Lewis Norrie and Ogden Mills memorial state parks are near by

Poulenc, Francis (frāsēs' pōōlāk'), 1899–, French composer and pianist, one of *Les Six* (see SATIE, ERIK) The freshness, refinement, and delicacy of his style is best adapted to small forms—piano pieces such as *Mouvements perpetuels* (1918) and songs Also outstanding are his *Rapsodie nègre* (1917), for voice and chamber orchestra, the ballet *Les Biches* (Paris, 1924), *Concert champêtre* (1929), for harpsichord and orchestra, *Litanies à la Vierge noire* (1938), for women's choir and organ, and a Mass (1939) for unaccompanied chorus His recitals with the baritone Pierre Bernac are celebrated

Poulsen, Elisabeth Bergstrand: see BERGSTRAND-POULSEN, ELISABETH

Poulsen, Valdemar (vāl'dumar poul'sun), 1869–1942, Danish electrical engineer He invented the telegraphone (an apparatus for recording telephone conversations electromagnetically) and the high-frequency Poulsen arc used in wireless telegraphy and radio

poultice (pōl'tĭs), soft paste, usually heated, spread between layers of cloth, and applied to the skin to produce a counterirritant, emollient, or antiseptic effect. It is especially useful for relieving pain or congestion of the chest or of deep tissues and for causing a boil or an abscess to mature. Poultice materials include flaxseed, a mixture of cottonseed meal, flaxseed meal, and bran; bread and milk; mustard and flour; kaolin, and certain herbs.

Poultney (pōlt'nē), town (pop. 2,781), W Vt., SW of Rutland; settled 1771. It is a center of slate quarrying. Many inhabitants are descendants of the original Welsh quarry workers Horace Greeley worked on a weekly paper in East Poultney Green Mountain Junior College (Methodist, for girls) developed from a 19-century academy

poultry, domestic birds raised for food (eggs or meat) The group comprises three main divisions: Gallinacea or comb bearers, e g , the chicken, TURKEY, GUINEA FOWL, and PHEASANT, differing from other birds in that the flesh on breast and wings is lighter than that of the rest of the body, Natatores or swimmers, e g., the DUCK and GOOSE, and Columbidae or doves, represented by the PIGEON. The peafowl and the swan are usually classed as poultry, although they are raised today almost wholly as ornamental birds Several poultry birds, including the chicken and the goose, were domesticated over 3,000 years ago The chief poultry bird is the chicken, which probably originated as a jungle fowl in SW Asia There are today well over 100 varieties, these include egg, meat, and dual-purpose breeds, and they are classed according to their place of origin. Popular breeds of the American class include Plymouth Rocks, Wyandottes, Rhode Island Reds, and New Hampshires—all dual-purpose birds Outstanding among European breeds raised in the United States is the Leghorn (Mediterranean class), believed to have been introduced from Italy c 1835. The Leghorn is useful chiefly as a producer of eggs and is a favorite in the day-old-chick trade because of the high percentage of fertile eggs Other popular birds of European origin, all of them dual-purpose breeds, are Orpingtons and Dorkings (both English class) and Faverolles (French class) Brahmas, Cochins, and Langshans are large birds of the Asiatic class, raised primarily for the production of meat The Light Brahma was probably the first poultry bird popularized in the United States, the breed was later greatly improved by American fanciers A few breeds of chickens are raised chiefly for their ornamental appearance or as pets These include the Polish varieties, the Game, formerly raised for fighting and still bred for this purpose where cockfighting is permitted, and the Bantam, noted for its small size and bred to imitate standard size breeds. Scientific breeding has improved the size, resistance to disease, quality of flesh, and productivity of poultry Commercial poultry raising is increasingly a large-scale enterprise A modern phase of the industry is the raising of chickens in highly mechanized indoor batteries where each bird is kept in a separate compartment and temperature, humidity, and diet are carefully controlled Baby chicks for starting flocks are usually purchased from commercial hatcheries where eggs are artificially hatched in an INCUBATOR Among diseases common in poultry are roup, colds, bronchitis, coccidiosis, chicken pox, and pullorum (white diarrhea) Many diseases can be prevented by selecting healthy breeding stock, by keeping chicks separate from adult stock, by keeping chicken houses clean, well ventilated, and at proper temperature, by good brooding practice, i e , care of chicks during the first weeks of life, and by providing an adequate diet Immunity to chicken pox may be established by vaccination of chicks See H A Roberts and C S Platt, *Commercial Poultry Raising* (rev ed , 1947), publications of the U S Dept of Agriculture

Pound, Arthur, 1884–, American author, b Pontiac, Mich , grad, Univ of Michigan, 1907 He did newspaper editing in the midwest and in New York city He was (1936–40) associate editor of the *Atlantic Monthly* and was later state historian of New York Among his many volumes of regional history are *Johnson of the Mohawks* (1930), *The Penns of Pennsylvania and England* (1932), *Detroit, Dynamic City* (1940), and *Lake Ontario* (1945)

Pound, Ezra Loomis, 1885–, American poet, b Hailey, Idaho, grad Hamilton College, 1905, M A Univ of Pennsylvania, 1906 In 1907 he left the United States to travel through Spain, Provence, and Italy, eventually settling in England There *Personae* (1909) and *Exultations* (1909) appeared, followed by *Canzons* (1911) and *Ripostes* (1912), brilliant displays of erudition and talent He led the poetic movement of the IMAGISTS and later abandoned it for vorticism Some of his most influential poetry is in his translations from the Chinese (based on Ernest Fenollosa's notes), in *Cathay* (1915) and other volumes, and in his work based on Latin sources, *Quia Pauper Amavi* (1919) and *Umbra* (1920) His *Cantos* (1925–48), still unfinished, represent the greatest body of his work and his attempt to weave such diversified threads as legend, Oriental poetry, troubadour ballads, and modern jargon into a pattern of significance As Pound's political theories evolved, his *Cantos* became more obscure A resident of Italy since 1924, he broadcast Fascist propaganda to the United States at the time of the Second World War and was indicted for treason When brought to the United States in 1945, he was adjudged insane and unfit for trial and was committed to a Federal hospital. *Pisan Cantos* (part of his *Cantos*), published separately in 1948, won the 1949 Bollingen Prize. A controversial figure in literature, Pound always showed astute critical judgment, and he

anticipated and directed many trends in modern literature. See study by A S. Amdur (1936).

Pound, Roscoe, 1870–, American jurist, b Lincoln, Nebr , grad Univ of Nebraska (B A , 1888, Ph D., 1897) He studied (1889–90) at Harvard Law School. Pound was (1910–17) professor of law at Harvard and dean (1916–36) of the law school His books on jurisprudence include *The Spirit of the Common Law* (1921), *Introduction to the Philosophy of Law* (1922), *Contemporary Juristic Theory* (1940), *Social Control through Law* (1942), and *The Task of Law* (1944) On botany he wrote *The Phytogeography of Nebraska* (with F E Clements, rev ed , 1900)

Pourbus (pōōr'bŭs, -bōōs), family of Flemish painters **Pieter Pourbus** (pē'tur), 1510–84, was a religious painter who worked in Bruges His *Last Judgment* is in the Bruges Museum His son, **Frans Pourbus** (frans), 1545–81, was a pupil and follower of Frans Floris In Ghent there is an altarpiece executed by him He is also known for his fine portraits His son, **Frans Pourbus,** c 1569–1622, was a favorite portrait painter in various courts including that of Marie de' Medici His portrait of her (Louvre) is one of his best-known works The Metropolitan Museum has his *Portrait of a Lady*

Pourri, Mont (mō pōōrē'), Alpine peak, 12,428 ft high, Savoie dept , E France, near the Italian border

Pourtalès, Louis François de (lwē' frāswā' du pōōrtalĕs'), 1823–80, American naturalist, b Switzerland He was a friend and pupil of Louis Agassiz, with whom he came to the United States in 1846 He served (1848–73) the U S. Coast Survey and did valuable work in deep-sea dredging An authority on marine zoology, he was custodian (from 1873) of the Museum of Comparative Zoology at Harvard, where he was associated with Alexander Agassiz

Poussin, Gaspard (gaspar' pōōsĕ'), 1613–75, French landscape painter, b Rome The son of a Frenchman named Dughet, he adopted the name of his brother-in-law, Nicolas Poussin, in whose studio he worked and whose influence is visible in his interpretations of the Italian countryside Gaspard is particularly noted for his storm effects He is best represented in the Colonna Palace and the Doria Palace, both in Rome, but his work is also to be seen in the Louvre, in the National Gallery, London, and in the Metropolitan Museum

Poussin, Nicolas (nēkôlä'), 1594–1665, French painter, b Normandy, of humble parents During his youth he suffered great hardships and was twice prevented by illness from realizing his desire to go to Italy In 1624 he went to Rome, where he remained 16 years and at length acquired an enviable reputation During this period he painted the *Triumphs of Flora* for Cardinal Barberini (his first patron) and a bacchanal for Richelieu (both Louvre) and his first series of the *Seven Sacraments* for Commander Cassiano del Pozo In 1640, summoned to Paris by Louis XIII, he was given quarters in the Louvre and worked for the king and for Richelieu His stay in Paris was embittered by the envy and intrigues of Vouet, the favorite court painter, and the exigencies of the court accorded ill with his calm and deliberate manner of working His last painting done in Paris was *Truth Which Time Reaves and Saves from Envy and Calumny* (Louvre) In 1643 he returned to Rome, where he spent the remainder of his life, enjoying an ever-increasing fame and painting a large number of celebrated pictures for a distinguished clientele Poussin was preeminently a classical painter Although he was a student and admirer of antiquity and of the Italian Renaissance, his art is highly individual and intrinsically French His influence, profound and lasting, has been acknowledged by French painters from his contemporary Claude Lorrain down to Cézanne His carefully organized and highly disciplined compositions have been compared with those of Corneille in the world of letters His figures, in their posture and juxtaposition, have a sculpturesque quality, and his compositions are unique for their serene intellectuality The large number of authenticated works includes *The Vision of St Paul, Woman Taken in Adultery, The Holy Family, Diogenes,* and *The Deluge* (all Louvre) He is well represented in most of the important galleries of Europe Five of his paintings are in the Metropolitan Museum, one in the New York Historical Society, and others in the museums of Cleveland, Detroit, and Kansas City, Mo

Powder, river rising in N Wyoming and flowing 486 3 mi generally NE into Montana to join the Yellowstone river near Terry See Struthers Burt, *Powder River Let 'er Buck* (1938)

powder, substance composed of finely granulated particles. In a special sense, the word is applied to powdered propellent explosives, e g , GUNPOWDER, and to powdered substances that produce a bright light when ignited. Until the 19th cent gunpowder was widely used in most types of firearms The invention of various smokeless powders led to the ultimate replacement of gunpowder as a propellant in rifles and guns Probably the first successful smokeless powder was made by Edward Schultze, a Prussian artillery captain, in 1864 After 1870 it was known as Schultze powder Its rate of burning was less than that of GUNCOTTON, because of the partial gelatinization of the powder by a mixture of ether and alcohol, however, it still burned too rapidly for use in rifles Schultze powder is used in shotguns, blank cartridges, and hand grenades and in igniting the dense, propellent powder used in artillery The main constituent of Schultze powder is nitrocellulose About 1885 a smokeless powder suitable for rifled guns appeared Invented by Paul Vieille, it was called *poudre* B and was made from nitrocotton and ether-alcohol Some years after, Alfred Nobel added to the growing list of smokeless powders a substance called Ballistite It is made from nitrocotton (with a low nitrogen content) gelatinized by nitroglycerine In Ballistite two of the most powerful explosives known at the time were united Another smokeless powder, cordite, was invented by Sir Frederick Augustus Abel and Sir James Dewar in 1889, it contained a highly nitrated guncotton and nitroglycerine which were blended by means of acetone Mineral jelly (vaseline) was added to act as a lubricant Indurite, invented by Charles E Monroe in 1891, is made from guncotton and is colloided with nitrobenzine, washing with methyl alcohol frees the lower nitrates from the guncotton See T C Davis, *The Chemistry of Powder and Explosives* (2 vols , 1941–43), John Read, *Explosives* (1942)

Powderly, Terence Vincent, 1849–1924, American labor leader, b Carbondale, Pa Apprenticed in a machine shop, he joined (1871) the Machinists and Blacksmiths National Union, becoming its president in 1872 He joined the Knights of Labor in 1874 and served as grand master workman from 1879 to 1893, when he resigned because of disagreement with the officers on policy He was elected mayor of Scranton, Pa , three times (1878, 1880, 1882) In 1894 he was admitted to the bar in Lackawanna co , Pa , and in 1901 was granted the right to practice before the U S Supreme Court He served (1897–1902) as U S commissioner general of immigration and was (1907–21) chief of the division of information in the U S Bureau of Immigration See his *Thirty Years of Labor, 1859 to 1889* (1889) and his autobiography, *The Path I Trod* (1940)

Powell, Frederick York (pō'ŭl), 1850–1904, English historian and scholar, educated at Oxford He was called to the bar in 1874 He became a lecturer and tutor and succeeded (1894) J A Froude as regius professor of modern history at Oxford His scholarly medieval studies, which, though superseded by later research, were models of method, include *Early England up to the Norman Conquest* (1876, 11th ed , 1895) With the Scandinavian scholar, Gudbrand Vigfusson, he edited and translated works from the Icelandic, including *An Icelandic Prose Reader* (1879), *Corpus Poeticum Boreale* (2 vols , 1883), and *Origines Islandicæ* (2 vols , 1905) He was also an authority on Japanese art See biography by Oliver Elton (1906)

Powell, John (pou'ŭl), 1882–, American pianist and composer, b Richmond, Va , grad Univ of Virginia, 1901 In Vienna he studied piano and composition and in 1907 made his debut as a pianist in Berlin He achieved a reputation as a pianist in appearances in Europe and the United States His compositions employ much material drawn from folk song His outstanding works are his *Rapsodie nègre* (1919), the Virginia country dances *Natchez on the Hill* (1932), a folk carol, *The Babe of Bethlehem* (1934), for mixed chorus, his Symphony in A (1937), a symphony on Virginian folk themes and in the folk modes (1945 Detroit, 1947), and concertos, songs, and chamber music See J T Howard, *Our American Music* (rev ed , 1946)

Powell, John Wesley, 1834–1902, American geologist and ethnologist, b Mt Morris (now part of New York city) The family moved to Illinois, where Powell joined the Natural History Society, making collections and serving as secretary of the society After the Civil War, in which he lost an arm at Shiloh, he was appointed professor of geology at the Illinois Wesleyan College, Bloomington He led geological expeditions into Colorado and Utah in 1867 and 1868 and in May, 1869, began, under the direction of the Smithsonian Institution, a geographical and geological survey of the Colorado river In the course of this expedition, his party passed by boat through the Grand Canyon, a hazardous feat, first described in his *Explorations of the Colorado River of the West* (1875) and later in his *Canyons of the Colorado* (1895) He was later engaged in geological and ethnological explorations in Arizona and Utah His efforts toward the reorganization of rival surveys in the West were a factor in bringing about the establishment (1879) of the U S. Geological Survey, of which he served as director from 1881 to 1894 In 1879 he became director of the Bureau of American Ethnology, and many of his contributions to ethnology appeared in its *Reports*.

Powell (pou'ŭl), town (pop 1,948), NW Wyo , near the Shoshone river, settled 1908, inc 1910 The principal town on the SHOSHONE PROJECT, it is a trade center for a farm and oil area Seed cleaning is the chief industry Fossil beds are near by

Power, Tyrone (Frederic Tyrone Power), 1869–1931, American actor, b England He was a member (1890–98), of Augustin Daly's company, and later became leading man for Mrs Fiske, Mrs Leslie Carter, and Julia Marlowe He was popular in heroic roles He belonged to a distinguished family of actors His grandfather, Tyrone Power (William Grattan Tyrone Power, 1797–1841), was a well-known Irish comedian, and his son, Tyrone Power (1914–) became a popular moving-picture star

power, energy made capable of doing work In mechanics this capacity is measured not by the amount of work done but by units of accomplishment correlated with time A commonly used unit of power is HORSEPOWER, so named by James Watt, a horse was considered able to do 550 foot-pounds of work each second, a foot-pound being the ability to lift a pound one foot In engineering, power is energy of all kinds taking the form of mechanical or electrical energy Wind power can turn windmills and propel sailboats The force of water, tumbling over a fall or flowing swiftly in a stream is a source of power The simple water wheel has given way to the modern TURBINE linked to electric generators, for the production of hydroelectric power In the United States several enormous hydroelectric plants are contributing substantially to the nation's power supply, among such plants are those at BOULDER DAM, GRAND COULEE DAM, and HOOVER DAM and in the CENTRAL VALLEY PROJECT The energy of fuel is transformed into mechanical energy when gasoline and oil are fed into an INTERNAL-COMBUSTION ENGINE and when coal fires a STEAM ENGINE or turbine These machines become the prime movers which actuate other machines to do useful work The transmission of power is performed by means of belt, rope, and chain drives, by a system of gears or shafts, or, in the case of steam and compressed air, by pipes, electrical currents pass through wires A potential source of useful power is atomic, or nuclear, power See Eric Hodgins and F A Magown, *Behemoth, the Story of Power* (1932), M M Samuels, *Power Unleashed : the Story of Electricity and Power* (1943), S C Rothmann, ed , *Constructive Uses of Atomic Energy* (1949)

power, in mathematics see ROOT

Powers, Hiram, 1805–73, American sculptor, b Woodstock, Vt Transplanted to Ohio, he practiced his hand in making wax models for a Cincinnati museum In 1835 he began his career as a sculptor, spending some time in Washington, D C , where he modeled several portrait busts, including one of President Jackson In 1837 he went to Florence and experienced the influence of classic art There he flourished to the end of his life His *Greek Slave* (1843) became the most popular statue of the period in Europe and America The second of several copies is in the Corcoran Gallery His statues of Franklin and Jefferson are in the Capitol, Washington, D C In the Metropolitan Museum are *Fisher Boy, California,* and a bust of Andrew Jackson A bust of Daniel Webster is in Chicago Powers gained wealth and fame from his portrait busts, but his renown did not long survive him

Powhatan (pou"ŭtăn'), d 1618, American Indian chief of the Powhatan tribe in Virginia, whose personal name was Wahunsonacock He greatly extended the dominion of the POWHATAN CONFEDERACY and after the marriage (1614) of his daughter POCAHONTAS to John Rolfe kept peace with the English

Powhatan Confederacy, group of North American Indian tribes, belonging to the Algonquian linguistic stock and extending along the coast and up the rivers of tidewater Virginia Wahunsonacock, or Powhatan, as the English called him, was the leader of the confederacy when Jamestown was settled in 1607 The Powhatan tribe is said to have been driven N to Virginia by the Spanish, and its chief, Powhatan's father, subjugated five other Virginia tribes With Powhatan's own conquests, the empire included, among some 30 tribes, the Pamunkey, Mattapony, Chickahominy, and others likewise commemorated in the names of the streams and rivers of E Virginia They were sedentary Indians, with some 200 settlements, many of them protected by palisades when the English arrived They cultivated maize, fished, and hunted Of his many capitals, Powhatan favored Werowocomoco, on the left bank of the York river, where Capt John Smith first met him in 1608. The English soon seized the best lands, and Powhatan quickly retaliated, so that no colonist was safe beyond the fort at Jamestown To appease him, he was given a crown, and a coronation ceremony was formally performed by Christopher Newport in 1609 However, he was not really pacified until the marriage (1614) of his daughter Pocahontas to John Rolfe. After Powhatan's death in 1618, Opechancanough, chief of the Pamunkey, became the chief power in the confederacy, and he organized the general attack (1622) in which some 350 settlers were killed English reprisals for the "great massacre" were equally bloody, and there was no further fighting on a large scale until 1644, when Opechancanough

led the last uprising, in which he was captured and murdered at Jamestown. In 1646 the confederacy yielded much of its territory, and beginning in 1665 its chiefs were appointed by the governor of Virginia. After the Iroquois, traditional enemies of the confederacy, agreed to cease their attacks in the Treaty of Albany (1722), the tribes scattered, mixed with Negroes and whites, and all semblance of the confederacy disappeared. See F. G. Speck, *Chapters on the Ethnology of the Powhatan Tribes of Virginia* (1928).

Powhatan Point (pouhă'tun), village (pop. 2,054), E Ohio, on the Ohio river below Wheeling, W. Va., in a coal area, settled 1819, inc. 1895.

Pownal (pou'nŭl), town (pop. 1,402), extreme SW Vt., James A. Garfield and Chester A. Arthur taught at Oak Grove Seminary. James Fisk was born here. Dutch squatters came to this area in the 1720s, but there was no permanent settlement until after 1760. Pownal was the scene of strife between holders of New York and New Hampshire grants to the same land.

Pownall, Thomas (pou'nŭl), 1722–1805, English statesman and colonial governor, b. Lincolnshire, England, grad. Cambridge Univ., 1743. In 1753 he went to New York as secretary to Sir Danvers Osborn, newly appointed governor. Following Osborn's suicide, shortly after arrival, Pownall aided the English attempt to expel the French from North America and entered into a study of colonial administration and defense. He was appointed (1757) governor of Massachusetts, where he vigorously prosecuted the last of the French and Indian Wars, but was transferred (1759) to the governorship of South Carolina. Upon return to England in 1760, however, he resigned that post before assuming office and became director of supply for the English forces in Germany (1761–63). He published in 1764 his famous work, *The Administration of the Colonies*, urging a stronger union of the colonies with the mother country. From 1767 to 1780 he was a member of Parliament, first as a Whig and then as a supporter of Lord North's administration after the outbreak of the American Revolution. He opposed Edmund Burke's bill for conciliation but, protesting the hopelessness of the English cause, introduced a peace bill in 1780. He spent the latter part of his life in travel and in writing, being the author of a number of pamphlets and treatises on scholarly as well as political subjects. An attempt was also made to identify him as the author of the Junius letters. See biography by C. A. W. Pownall (1908).

Powys, John Cowper (pō'ĭs), 1872–, English author and lecturer. His novels include *Wolf Solent* (1929), *A Glastonbury Romance* (1932), and *Owen Glendower* (1940). He has written poetry and lectured on literature. Among his essays and criticisms are *The Meaning of Culture* (1929), *A Philosophy of Solitude* (1933), and *The Enjoyment of Literature* (1938). See his autobiography (1934). His brother, **Theodore Francis Powys**, 1875–, is a novelist and short-story writer. His original, realistic novels are concerned with the Dorsetshire village where he lives; they include *Black Bryony* (1923) and *Mr Weston's Good Wine* (1927). His short stories are in *The Left Leg* (1923), *The House with the Echo* (1928), and other volumes. Another brother, **Llewelyn Powys**, 1884–1939, was a novelist and essayist. His novels include *Apples Be Ripe* (1930) and *Love and Death* (1939), some of his essays and sketches are in *Black Laughter* (1924), *Impassioned Clay* (1931), and *Earth Memories* (1938). See his autobiographical *Confessions of Two Brothers* (with J. C. Powys, 1916), *Skin for Skin* (1925), *The Verdict of Bridlegoose* (1926), and *Love and Death an Imaginary Autobiography* (1939).

Poyang or **P'o-yang** (pō'yäng'), lake, N Kiangsi prov., China. It is about 90 mi. long and 20 mi. wide. It is regularly fed by the Kan and other rivers of Kiangsi, and during the summer it receives the overflow of the Yangtze.

Poynings, Sir Edward, 1459–1521, English statesman. After taking part in an insurrection against Richard III, he fled to the Continent, where he joined the followers of the earl of Richmond, who in 1485 ascended the English throne as Henry VII. Poynings served in the wars on the Continent and served (1494–96) as lord deputy of Ireland. He put down the last supporters of the pretender Perkin Warbeck and set about subjugating Ireland completely. He summoned to Drogheda a Parliament which enacted statutes for the further Anglicization of the Irish government. After his return to England, he had military and diplomatic posts and was warden of the Cinque Ports. **Poynings's Law** is the name given to the Drogheda statutes which provided that the English privy council must give previous assent to the summoning of an Irish Parliament and to the introduction of any specific legislation in the Irish Parliament. Its effect was to render a free Irish Parliament impossible. The patriot Henry Grattan, procured its repeal (1782).

Poynter, Sir Edward John, 1836–1919, English painter and writer on art. He studied in Paris under Gleyre. As a decorative artist Poynter made designs for fresco, mosaic, tiles, and pottery. *Israel in Egypt* (Guildhall, London) and *Visit to Aesculapius* (Tate Gall., London) are among his well-known paintings. He was director (1894–1905) of the National Gallery, London, and edited the *Illustrated Catalogue* with reproductions of every picture in the gallery. Poynter was also the author of *Ten Lectures on Art* (1879). He became president of the Royal Academy in 1896 and was knighted the same year.

Pozarevac, Serbo-Croatian *Požarevac* (pōzhä'rĕvăts), Ger. *Passarowitz*, town (pop. 16,108), Serbia, Yugoslavia, SE of Belgrade. It is the center of a wine-producing region. For the treaty signed here in 1718, see Passarowitz, Treaty of.

Pozharski, Dmitri Mikhailovich, Prince (dĭmē'trē mĭkhī'lŭvĭch, pŭzhär'skē), 1578–1642, Russian hero. During the Time of Troubles (see Russia) he fought against the Polish invaders, and in 1611 he took command of a national militia formed on the initiative of the merchant Minin of Nizhni Novgorod. With his improvised army he marched on Moscow, drove out the Poles (1612), and ended the scheme of King Sigismund III of Poland to subjugate Russia. In the following year Michael Romanov was elected tsar, and order was restored. Pozharski held commands in later campaigns and was ambassador to Sweden.

Poznan (pōz'nän, pōz'–), Pol. *Poznań* (pōz'nanyu), Ger. *Posen* (pō'zun), city (pop. 267,978), W Poland, on the Warta river. Founded before the advent of Christianity to Poland, it became (10th cent.) the first Polish episcopal see and a nucleus of the Polish state. It remained in Poland until the second partition (1793), when it passed to Prussia. Poznan was included in the grand duchy of Warsaw in 1807, again passed to Prussia in 1815, and reverted to Poland in 1919. In the Second World War it was annexed to Germany, and thousands of Poles were expelled. One of the farthest targets of British-based aircraft, the city suffered heavy damage, its cathedral was substantially destroyed. The city is the see (created 1821) of the archbishop of Poznan and Gniezno and has a university (founded 1919). Since 1922 it has been the site of an annual international spring fair. Chiefly a trade center, it also has several industries. Poznan province (10,850 sq. mi., pop. 2,149,099) is a largely agricultural lowland. Cities are Poznan, Kalisz, Ostrow Wielkopolski, Gniezno, and Leszno. Sections of Brandenburg, Pomerania, and Lower Silesia, totaling 4,285 sq. mi. (pop. 273,014), have been under the administration of the province since 1945.

Pozsony, Czechoslovakia: see Bratislava.

Pozzo di Borgo, Carlo Andrea (kär'lō ändrā'a pôt'tsō dē bōr'gō), 1764–1842, Russian diplomat, b. Corsica. A partisan of Paoli in Corsica, he supported the British occupation of the island in 1794. His appointment as chief of the Corsican council of state was a disappointment to Paoli. After the French reconquest (1796), Pozzo di Borgo lived as a refugee in Italy, England, and Austria. He entered the Russian service in 1804. An irreconcilable enemy of Napoleon I (largely on account of the part played by the Bonaparte family in Corsican events), he was influential in promoting the Russo-Austrian alliance of 1805. The Treaty of Tilsit (1807) forced him out of Russian service, but after Napoleon's first abdication (1814) he was made Russian ambassador to France and a delegate to the Congress of Vienna. As ambassador he showed himself as sympathetic to the France of the Bourbons as he had been hostile to Napoleon. His pro-French attitude caused his transfer to London, again as Russian ambassador. He retired in 1839.

Pozzuoli (pôt-tswō'lē), Latin *Puteoli*, town (pop. 24,594), Campania, S Italy, on the Bay of Naples. It was founded by Greek colonists. Among the Roman remains (now partly under water) are an amphitheater and the so-called temple of Serapis (a market place). Near by is the Solfatara, a crater emitting sulphurous waters and thermal mud.

Pr, chemical symbol of the element praseodymium.

Pradier, James (prädyā'), 1792–1852, French sculptor, whose real name was Jean Jacques Pradier, b. Geneva. His statues are found in many cities of France. Among his best monumental works in Paris are the figures on the Fontaine Molière, the four Victories in the spandrels of the Arc de l'Étoile, the figures of Lille and Strasbourg in the Place de la Concorde, and figures about the tomb of Napoleon in the Invalides.

Pradilla, Francisco (fränthĕ'skō prädhē'lyä), 1847?–1921, Spanish historical and genre painter. He was director of the Madrid Museum of Modern Art and the Academy of San Fernando. He is best known for his large historical paintings, such as *Joanna the Mad* (Madrid Mus. of Modern Art).

Prado, Mariano Ignacio (märya'nō ēgnä'syō prä'dō), 1826–1901, president of Peru (1865–67, 1878–79). He aided Ramón Castilla in the revolution of 1854. Indignant at the treaty which compensated Spain for losses during the revolution—a treaty which he considered humiliating to Peru—Prado led a revolution. He became dictator and severed diplomatic relations with Spain. The war that followed was limited to small naval engagements, but before its conclusion Prado was deposed. Forced to leave the country, he returned and was reelected. The war with Chile (see Pacific, War of the) broke out in 1879. After some months of dismal failure and defeat, Prado left for Europe and did not return for many years.

Prado (prä'dō, Span. prä'dhō), national Spanish museum of painting and sculpture, Madrid, one of the finest in Europe. Situated on the Paseo del Prado, it was begun by Juan Villanueva under Charles III and finished under Ferdinand VII in 1830. It contains over 2,000 paintings of the highest order, many of them from the Spanish royal collections. The Spanish, Flemish, and Venetian schools are particularly well represented. It possesses outstanding masterpieces of Titian, Tintoretto, Veronese, Rubens, Van Dyke, Dürer, Brueghel, and Hieronymus Bosch. Velásquez, El Greco, Ribera, and Goya can nowhere be seen to such advantage. Subjected to aerial bombardment in the Spanish civil war (1936–39), the building suffered only slight damages and its priceless collection was safeguarded, the most valuable pictures being sent to Geneva.

Praed, Winthrop Mackworth (prād), 1802–39, English poet and essayist. A lawyer, member of Parliament, and accomplished political satirist, he is best remembered for his graceful light verse—"Letter of Advice," "Molly Mog,"—and his serious poems, such as "Arminius" and "Time's Song." See Derek Hudson, *A Poet in Parliament* (1939).

praefect: see prefect.

Praeneste: see Palestrina, Italy.

Praenestine Way: see Roman roads.

praetor or **pretor** (both prē'tŭr) [Latin, =one before], in ancient Rome, originally a title of a consul and later the title of a magistrate (from c. 366 B.C.). In 242 B.C. two praetors were appointed, the urban praetor (*praetor urbanus*), deciding cases to which citizens were parties, and the peregrine praetor (*praetor peregrinus*) for cases between foreigners. The urban praetor exercised the functions of the consuls in their absence and of the peregrine praetor when he was holding a military command. Additional praetors were appointed (227 B.C.) to administer Sicily and Sardinia, and two more (197 B.C.) to administer Spain. A principal duty of praetors was the production of the public games. Under the empire the functions of the praetor were gradually taken over by other magistrates.

Praetorians (prētô'rēănz), bodyguard of the ancient Roman emperors. They grew out of an early troop that served as bodyguard to the general commanding in Rome and were formally organized in the time of Augustus. The number of cohorts forming the guard varied, but in the days of the later empire it was 10. The Praetorians under a prefect—or in the early empire two or three prefects—attended the emperor wherever he went. They had special privileges and, in the period when the empire declined, almost unchallenged authority. They made and unmade emperors at will. Constantine I disbanded them in 312.

Praetorius, Michael (prētô'rēus), 1571–1621, German composer and musicographer, whose name originally was Schultheiss. He was a prolific composer, his *Musae Sionae* (9 vols., 1605–11) alone containing 1,244 choral works, but today he is celebrated chiefly for his *Syntagma musicum* (3 vols., 1615–19), which minutely describes the musical practices and the instruments of his day.

pragmatic sanction (prăgmă'tĭk), decision of state dealing with a matter of great importance to a community or a whole state and having the force of fundamental law. The term originated in Roman law and was used on the continent of Europe until modern times. The **Pragmatic Sanction of Bourges**, issued by Charles VII of France in 1438, sharply limited the papal authority over the Church in France and established the liberty of the Gallican Church (see Gallicanism). It was revoked in 1461 by Louis XI, who sought to improve relations with the Holy See, but relations between Church and state remained dubious until Francis I concluded the Concordat of 1516 (see concordat). There have been many other pragmatic sanctions, but the term, if unqualified, always refers to the famous **Pragmatic Sanction** of 1713, issued by Emperor Charles VI to alter the law of succession of the Hapsburg family. In the absence of a male heir, the succession to all Hapsburg dominions (but not to the imperial dignity, which was elective) was reserved to Charles's eldest daughter (the later Empress Maria Theresa). The principal aim of the law was to guarantee the continued integrity of the Hapsburg territories and to prevent a struggle for the succession. Charles labored throughout his reign to obtain the adherence to the Pragmatic Sanction of the European sovereigns and of the diets and estates of the various Hapsburg lands. France gave it its support in 1738, and at the time of Charles's death (1740) most other powers and all the diets and estates of the Hapsburg domains (including those of the Austrian Netherlands, Bohemia, and Hungary) had endorsed it, the diet of the Holy Roman Empire had guaranteed it in 1732. A notable exception was that of Elector Charles Albert of Bavaria (later Emperor Charles VII). The Pragmatic Sanction excluded from the succession the two daughters of the late emperor, Joseph

I, elder brother of Charles VI. One of these, Maria Josepha, had been married to Elector Frederick Augustus II of Saxony (Augustus III of Poland), who had ratified the Pragmatic Sanction in 1733 in exchange for Austrian support in his struggle for the Polish throne. The other, Maria Amelia, was married to the elector of Bavaria, who withdrew his guarantee shortly after giving it. When Maria Theresa acceded to the Hapsburg succession in 1740, she had to defend her right in a long and bitter struggle, the War of the AUSTRIAN SUCCESSION (1740–48), in spite of all guarantees her father had obtained. The Treaty of Aix-la-Chapelle of 1748 confirmed the Pragmatic Sanction.

pragmatism (prăg'mətĭzm), method of philosophy in which the truth of a proposition is measured by its correspondence with experimental results and by its practical outcome. Thought is considered as simply an instrument for supporting the life aims of the human organism and has no more metaphysical significance than the opposition of thumb and forefinger. Pragmatism stands opposed to doctrines which hold that truth can be reached through deductive reasoning from a priori grounds and insists on the need for inductive investigation and constant empirical verification of hypotheses. It normally holds that ideas, to be considered true, must be verifiable by an impartial observer. There is constant protest against speculation concerning questions which have no application and no verifiable answers. Pragmatism holds that truth is modified as discoveries are made. Truth evolves and is relative to the time and place and purpose of inquiry. In its ethical aspect pragmatism holds that knowledge which contributes to human values is real and that values inhere in the means as vitally as they do in the end itself. The principles of pragmatic theory are generally considered to have been first developed as formal doctrine by C. S. Peirce (1878). He was followed by William JAMES, who introduced the term (1898). James held that in vital matters of faith the criterion for acceptance was the will to believe, a theory reminiscent of the Kantian ethic. John DEWEY in his works developed the instrumentalist aspects of the doctrine. In England, F. C. S. Schiller formulated his theory of humanism (human values are the test of truth). On the Continent, Vaihinger, Bergson, and others took up the theory. See William James, *The Will to Believe* (1896), John Dewey, *Reconstruction in Philosophy* (1920) and *Experience and Nature* (1925), Philip P. Wiener, *Evolution and the Founders of Pragmatism* (1949).

Prague (prăg, präg), Czech *Praha* (prä'hä), Ger. *Prag* (präk), city (pop. 922,284), capital of Czechoslovakia and of Bohemia, in central Bohemia, on the Moldau (Czech *Vltava*) river. The largest city of Czechoslovakia, it is a major European commercial and cultural center and is rich in history. It is the see of a Roman Catholic archbishop, primate of Czechoslovakia, of an Orthodox Eastern archbishop, and of the archbishop of the Czechoslovak Church. Its university (see PRAGUE, UNIVERSITY OF) is one of the most famous in Europe. A focal communications point, Prague is also the largest industrial center of Czechoslovakia, producing heavy machinery, automobiles, rolling stock, leather goods (notably gloves), foodstuffs (smoked meats), and beer. Czech book publishing is largely concentrated here. The castle of Prague dates from the 9th cent., but the city began only in 1232, when a German settlement was established here by King Wenceslaus I. It grew rapidly in size and prosperity as the capital of Bohemia, and under Emperor CHARLES IV (14th cent.) became one of the most splendid cities of Europe. From the 14th to the early 17th cent. the emperors resided here as well as in Vienna. The rivalry between the Czech and the German elements in Prague was a major factor in the reform preached here by John HUSS, it was with the first Defenestration of Prague (1419, see WENCESLAUS, emperor) that the Hussite Wars began. The city sought a moderate course in the wars, but an army led by ZIZKA forced it in 1424 to accept Zizka's policy. In the late 16th and early 17th cent., under Emperor RUDOLPH II, Prague shone as a center of science where Tycho Brahe and Kepler worked. When in 1618 the Protestant Czech nobles felt the liberties of Bohemia threatened by Emperor Matthias, they vented their dissatisfaction by throwing two royal councilors—Martinic and Slavata—and the secretary of the royal council of Bohemia out of the windows of Hradcany Castle (May 23, 1618). By miracle, none of the victims of this second Defenestration of Prague were hurt, but the event opened the THIRTY YEARS WAR. The battle of the WHITE MOUNTAIN (1620), fought near Prague, resulted in the total subjugation of Bohemia to Austrian rule. Until 1860 German was the only official language in Prague. The Peace of Prague (1635) failed to end the Thirty Years War, in the last year of which (1648) a section of the city was occupied by the Swedes. In the War of the Austrian Succession, Prague was occupied (1742) by the French and again (1744) by the Prussians, and in the Seven Years War it was (1757) the scene of a major victory of Frederick II of Prussia. Frederick had the city bombarded for two weeks, but the Austrian victory at Kolin forced him to abandon the siege. Though it had lost much of its former importance, Prague in the 18th cent. remained a brilliant cultural center. The building activities of Maria Theresa and the great Bohemian nobles gave Prague a predominantly baroque and rococo character. The center of the Czech national revival in the 19th cent., Prague played an important part in the Revolution of 1848 until its bombardment and recapture by WINDISCHGRÄTZ. It became the capital of the newly created Czechoslovak republic in 1918. Occupied (1939–45) by the Germans, the city suffered great hardship and was damaged in the Second World War, but most of its historic buildings remain unharmed. The liberation of Prague was completed in May, 1945, by Russian troops after the Czech population had risen (May 5) against the Germans. Until the Second World War, Prague was characterized by the generally peaceful coexistence of a Czech and of a German and German-Jewish culture. It was the city of Rilke and Kafka as well as of Smetana, Dvorak, and Capek. Its literary, artistic, and musical life, which has a long and distinguished tradition, was very active between the two world wars. The old section of Prague, which occupies the center of the city, is an architectural treasure enhanced by the beauty of its situation on the hilly banks of the Moldau. W of the Moldau stands Hradcany (Czech *Hradčany*) Castle, dominating the entire city. The former royal residence and since 1918 the seat of the presidents of Czechoslovakia, it is an imposing and many-winged structure, dating mostly from the reign of Charles IV, with important additions made by Maria Theresa. Next to it stands the largely Gothic Cathedral of St. Vitus, first built in the 10th cent., rebuilt under Charles IV, and completed only in 1929. It contains the tombs of St. Wenceslaus, St. John of Nepomuk, and many kings and emperors. Contiguous to the castle is the elegant 18th-century archiepiscopal palace. The Hradcany quarter also contains a number of other fine churches and palaces, notably the baroque churches of Our Lady of Victory (with the miraculous statuette of the Infant Jesus of Holy Child of Prague), of St. Nicholas, and of Loretto, the magnificent Waldstein Palace, built for the generalissimo Wallenstein, and the Czernin Palace (now the foreign office). On the slope extending from the castle to the Moldau is the quaint Mala Strana [lesser town] quarter, the best-preserved part of old Prague. The Alchemists' or Golden Lane (Czech *Zlata ulička*), with its small picturesque houses, is particularly famous. Mala Strana is connected with the Old Town (Czech *Staré Město*), on the eastern bank of the Moldau, by the 14th-century Charles Bridge, the most beautiful of the 12 bridges of Prague. Two towers guard its ends, and above each of its pillars stands the statue of a saint. The Old Town contains the Carolinum (the oldest part of the university), the adjacent Stavovske Theater (where Mozart's *Don Giovanni* had its first performance), the vast Clementinum Library, the Gothic Old Town Hall (13th cent., burned in May, 1945), the Gothic Tyn Cathedral (14th cent., formerly the main Hussite church, with the tomb of Tycho Brahe), and the Powder Tower (15th cent., last of the city gates). In the adjacent former Jewish quarter is the Old Synagogue (13th cent.). To the east and southeast of the Old Town extends the New Town (Czech *Nové Město*), the business district, traversed by Wenceslaus Square, the main thoroughfare of Prague. Farther south, also on the east bank of the Moldau, lies the old Visehrad (Czech *Višehrad*), quarter, where according to legend stood the original castle of the Premyslide kings of Bohemia. Aside from the buildings mentioned above, Prague abounds in theaters, museums, libraries, and higher educational institutions. Many of the residential sections are planned along entirely modern lines.

Prague (prăg), city (pop. 1,422), central Okla., E of Oklahoma City, in an agricultural area, settled by Czechs and inc. 1902.

Prague, Peace of, 1635 see THIRTY YEARS WAR.

Prague, Treaty of, 1866 see AUSTRO-PRUSSIAN WAR.

Prague, University of, or **Charles University.** The oldest and one of the most important universities of Central Europe, the Univ. of Prague, Czechoslovakia, was founded in 1348 by Emperor Charles IV, for whom it is named. The faculty was organized in four "nations," the Czech, Saxon, Bavarian, and Polish. The struggle between the German and Czech nationalities in Bohemia was reflected in the Univ. of Prague when, in 1403, the Czech "nation," including John Huss, was outvoted by the three other "nations" in a controversy regarding Wyclif's doctrines. When in 1409 the three "foreign" nations opposed the request of Emperor WENCESLAUS to take a neutral attitude between the two rival popes in the Great Schism, Wenceslaus changed the statutes of the university. By the Decree of Kutna Hora he gave the Czech "nation" three votes and one vote to the other three "nations." Shortly after that Czech victory, Huss himself became rector of the university. As a result of the Decree of Kutna Hora the Germans left the university and founded the Univ. of Leipzig. In the Hussite Wars, Charles Univ. was a stronghold of the Utraquists, led by Master Jan Rokycana, who became archbishop of Prague after the signing of the Compactata. The Germanization of the university which began after the battle of the White Mt. (1620) reached its peak in 1774, when German was made the language of instruction. In 1882 the university was divided into two branches—Charles Univ., which was Czech, and Ferdinand Univ., which was German. After the creation of independent Czechoslovakia in 1918 this division was maintained, although the Czech university received the greater facilities. The Czech university was suppressed during the German occupation of Bohemia (1939–45), and the German university was abolished in 1945 when Czechoslovakia was restored. Charles Univ. is governed by a senate of 30 members, headed by the rector and including representatives of the student body.

Praguerie (prägurē'), 1440, revolt against Charles VII of France, so called by allusion to the recent Hussite uprising in Prague. It was led by several great feudal lords who resented the diminution of their influence over the royal government. They were joined by the dauphin, the future Louis XI, and received the support of Philip the Good of Burgundy. The revolt was quickly suppressed, the rebels being treated by the king with extraordinary leniency.

Praha, Czechoslovakia. see PRAGUE.

Praia see SÃO TIAGO.

Prairial see FRENCH REVOLUTIONARY CALENDAR.

prairie chicken, American game bird of the GROUSE family. The greater prairie chicken occurs in diminished numbers in parts of Canada and in the United States on the prairies W of Indiana. Its plumage of yellowish brown above and white below is marked with dark stripes and blotches. The orange neck sacs of the male are inflated during their spring courtship matches. In summer prairie chickens eat harmful insects. They travel in small flocks except in winter, when 100 or more may band together. Attwater's prairie chicken is found in Texas and Louisiana, and the lesser prairie chicken on the Great Plains.

prairie dog, rodent of the squirrel family, native to North America. Prairie dogs have plump bodies, 12 to 15 in. long including the tail. The short, rather coarse fur is brownish or buff above and whitish below. Black-tailed prairie dogs live on the dry plains from S Saskatchewan to N Mexico. White-tailed prairie dogs inhabit the Rocky Mt. region from S Montana to NE New Mexico and N Arizona. They can exist for long periods without drinking water. Vegetation forms the bulk of their diet and insects a small part of it. Because they eat forage, ranchers have exterminated them in many areas. Prairie dogs live in elaborate burrows grouped in colonies or "towns." Those which live on flat land make a crater-shaped mound at the entrance. This keeps the rain from inundating the burrow and serves as a lookout post from which the animal may sight enemies. Rattlesnakes and burrowing owls are sometimes seen in prairie dog towns but are not welcome.

Prairie du Chien (prä'rē du shēn'), city (pop. 4,622), co. seat of Crawford co., SW Wis., on the Mississippi just above the mouth of the Wisconsin and NW of Dubuque, Iowa, settled 1781, inc. 1872. The Fox-Wisconsin water route from the Great Lakes reached the Mississippi here, and at this point Nicolas Perrot in 1686 built Fort St. Nicolas. In the War of 1812 Fort Shelby was built (1814) by the Americans, captured by the British and renamed Fort McKay, and finally burned. In 1816 Fort Crawford was built, here Dr. William BEAUMONT carried on some of his experiments. The lucrative fur trade of the early 19th cent. fell into the hands of the American Fur Company, and Hercules Dousman was a prominent trader. Later a flourishing river port, Prairie du Chien is now a farm trade center with small industries. Points of interest include the Church of St. Gabriel (1839–40), designed by Father Mazzuchelli, Villa Louis, the restored home of Dousman in Dousman Park, and a museum on the site of Fort Crawford.

Prairie du Sac (prä'rē dŭ săk'), village (pop. 1,001), central Wis., on the Wisconsin adjoining Sauk City and NW of Madison, settled 1839, inc. 1885.

Prairie Grove, town (pop. 887), NW Ark., SW of Fayetteville. It is a trade center in a fruit-growing region. The Civil War battle fought here on Dec. 7, 1862, resulted in the retreat of the Confederates under Gen. T. C. Hindman, after he had failed to prevent the joining of Gen. J. G. Blunt's Union forces with those of Gen. F. J. Herron. The Federal hold on NW Arkansas was thereby strengthened.

Prairie Provinces: see MANITOBA, SASKATCHEWAN; ALBERTA.

prairies, the generally level, originally grass-covered and treeless plains of the United States, stretching from W. Ohio through Indiana, Illinois, and Iowa to the Great Plains region. The prairie belt also extends into N. Missouri, S. Michigan, Wisconsin,

and Minnesota, E North and South Dakota, and S Canada. The prairies correspond to the pampas of Argentina Because of the richness of the soil, the prairie area in the United States has become one of the most productive agricultural regions of the country

prairie schooner, a wagon covered with white canvas, made famous by its almost universal use in the migration across the Western prairies and plains, and so called in memory of the white-topped schooners of the sea A canvas-covered wagon had long been in general use for the carriage of freight in E America and had reached its highest development in the CONESTOGA WAGON Whereas the latter usually required a six horse team even on good roads, the prairie schooner was much lighter and rarely needed more than four horses, and sometimes only two, even on virgin prairie trails Oxen were frequently used instead of horses The average prairie schooner was but a farm wagon fitted with a top, drawn in at both ends, with only an oval opening to admit air and light to the interior, where women and children usually slept and rode In crossing the Great Plains groups of prairie schooners customarily traveled together for protection (see WAGON TRAIN)

prairie smoke, name for two plants, the PASQUEFLOWER and *Sieversa ciliata* (or *Geum ciliatum*), which in fruit resembles the pasqueflower

Prairie View Agricultural and Mechanical College of Texas, at Prairie View, near Hempstead, Negro, with land-grant support, coeducational, chartered and opened as a normal school 1876 In 1899 it was named Prairie View State Normal and Industrial College and was renamed in 1947 It has divisions of agriculture, arts and sciences, home economics, mechanic arts, and nursing education

prairie wolf. see COYOTE

Prajadhipok (prucha'tpôk), 1893–1941, king of Siam (1925–35) Despite his liberal tendencies, he ruled as an absolute monarch until 1932, when a coup d'état forced him to grant the constitution he had earlier promised Differences over the limits subsequently placed on the royal prerogative led to his abdication in 1935

Prakrit (prä'krĭt) [Sanskrit, =common], any of several languages of the Indic group of the Indo-Iranian subfamily of Indo-European languages. See LANGUAGE (table)

Prakrit literature. The great mass of literature written in Prakrit is devoted to JAINISM, but there is also much secular literature and artificial lyric poetry The sacred texts (*Siddhanta* or *Agama*) of the two main sects of the Jains employed three types of Prakrit The oldest sutras of the Svetambara sect are written in Ardha-Magadhi, while later books are in Maharastri The Svetambara canon, written in verse and prose, received its final form in A D 454 The sacred books of the Digambara sect are written in Savrasemi An important source of knowledge of Prakrit is the Sanskrit drama Kalidasa is included among those many dramatists, who, in order to obtain a realistic effect, had the common people speak in Prakrit See Moriz Winternitz, *A History of Indian Literature* (1927–33), Herbert H Gowen, *A History of Indian Literature* (1931)

Prantl, Karl (karl pran'tŭl), 1849–93, German botanist, professor at the Univ of Breslau He wrote *An Elementary Text-Book of Botany* (1874, Engtr, 5th ed, 1891) He collaborated with Adolf Engler on the first volumes of *Die natürlichen Pflanzenfamilien*, begun in 1887

Prasad, Rajendra (rujĕn'dru prŭsäd'), 1884–, first president of India (1950–), educated at the Univ of Allahabad He was admitted to the bar in 1911 and for a time practiced and taught law He abandoned his practice in 1920 to join Gandhi's movement Prasad was four times (1932, 1934, 1939, 1947) president of the Indian National Congress and was frequently imprisoned Together with most leaders of the Congress he was jailed from 1942 to 1945 for refusing to participate in the British war effort while India was still not free He was minister of food and agriculture in the interim Indian government of 1946 Prasad presided over the constituent assembly which drafted the constitution for the Union of India He wrote *India Divided* (1946)

praseodymium (prā"zēōdĭ'mēŭm, prā"sēō–), rare metallic element (symbol=Pr, for physical constants, see ELEMENT, table) It is classed as a metal of the rare earths It was discovered by K A von Welsbach in 1885 when he separated an earth called didymia into two substances, neodymia (containing neodymium) and praseodymia (containing praseodymium) Praseodymium is pale yellow in color Its salts, which are of a greenish hue, are used to impart color to glass

Prati, Giovanni (jōvän'nē prä'tē), 1815–84, Italian poet He was made prisoner in two wars and was banished by the Austrians in 1848 He was a friend of Charles Albert and became minister of public instruction His works include ardent patriotic verse and lyric poems of elegance and facility, as well as an epic in blank verse, *Edmenegarda* (1841) For translations, see Lorna de' Lucchi, *An Anthology of Italian Poems* (1924).

Pratinas (prā'tĭnŭs), fl c.496 B.C., Greek dithyrambic poet of Phlius, said to have introduced the satyr-play into Athens.

Prato (prä'tō) or **Prato in Toscana** (ēn tōskä'nä), city (pop 28,646), Tuscany, central Italy, 11 mi NW of Florence It has been a center of the woolen industry since the 13th cent, and in the 14th cent it became subject to Florence The cathedral has frescoes by Filippo LIPPI and works by Donatello, Giovanni Pisano, and Andrea della Robbia The Church of Santa Maria delle Carceri was built (1485–92) by Giuliano da Sangallo There are several other fine churches and palaces and a town hall and a fort both built in the 13th cent

Pratt, Bela Lyon, 1867–1917, American sculptor, b. Norwich, Conn, studied under J H Niemeyer at the Yale School of Fine Arts and with Augustus Saint-Gaudens For the World's Columbian Exposition, Chicago, 1893, and for the Pan-American Exposition, Buffalo, 1901, he furnished a number of figures and groups For the Library of Congress, he made a figure *Philosophy* and other decorative sculptures, including medallions of the *Four Seasons*, in Boston he made the figures *Science* and *Art* in front of the library, decorative panels for the opera house, and the General Stevenson statue for the statehouse Other works include *Peace Restraining War* (Butler Memorial, Lowell, Mass), the recumbent figure of Dr Coit and *Soldier of the Spanish War* (St Paul's School, Concord, N H), monument to Andersonville prisoners (Hartford, Conn), a statue of Nathan Hale (Yale Univ), soldiers' and sailors' monument (Malden, Mass), the bust of Phillips Brooks (Harvard Univ), a statue of Hawthorne (Salem, Mass), a statue of Alexander Hamilton (Chicago), and *Water Nymph* (Metropolitan Mus)

Pratt, Charles, 1st Earl Camden, 1714–94, English jurist, lord chancellor (1766–70) In 1762 as chief justice of the Court of Common Pleas he pronounced against the legality of the general warrant under which John Wilkes had been prosecuted In the House of Lords he denounced the government's policy toward the American colonies and opposed the taxes imposed on the colonists His attitude toward Wilkes and toward the American colonies resulted in his loss of the lord chancellorship He served as president of the council in the ministries of Rockingham and William Pitt from 1782 until his death In 1786 he was created Earl Camden

Pratt, Daniel, 1799–1873, American industrialist, b Temple, N H He moved to Georgia at the age of 20, and after he had become a partner in a cotton gin he moved (1833) to Alabama, where he founded Prattville, 12 mi NW of Montgomery Here he built up numerous industries, promoted business, and became one of the first important industrialists of Alabama Through his son-in-law, Henry F DE BARDELEBEN, he became interested in coal and iron industries of Birmingham As a representative in the Alabama legislature in the Civil War, he at first opposed secession but ardently supported the Confederacy See biography by S F H Tarrant (1904)

Pratt, Edwin John, 1883–, Canadian poet, b Western Bay, N F He has been for many years professor of English at the Univ of Toronto and editor of *Canadian Poetry Magazine* With the publication of *Titans* (1926) he broke away from the old romantic tradition of Canadian poetry, it contains imaginative narratives such as "The Cachalot," which employs his favorite setting, the sea Other popular works are *The Roosevelt and the Antinoe* (1930), *Verses of the Sea* (1930), and *The Titanic* (1935) His most ambitious poem, *Brébeuf and His Brethren* (1940), records the heroism of martyred Jesuit missionaries *Dunkirk* (1941) is considered one of the best poems of the Second World War See Stephen Vincent Benet's introduction to his *Collected Poems* (1944) and biography by H W Wells and C F Klinck (1947)

Pratt, Matthew, 1734–1805, American portrait painter, b Philadelphia After he was (1749–55) an apprentice to his uncle, a painter in Philadelphia, he practiced portrait painting and then (1764–66) studied under Benjamin West in London His most famous paintings are *The American School* (1765) and portraits of Benjamin Franklin (c 1760), Benjamin West (c 1765) and Cadwallader Colden (1772) See William Sawitzky, *Matthew Pratt, 1734–1805* (1942)

Pratt, Orson, 1811–81, Mormon apostle, b Hartford, N Y, brother of Parley Parker Pratt He entered (1830) the Mormon church and became (1835) an apostle An eloquent speaker, he was a successful missionary in England and elsewhere, in Utah, where he was one of the first immigrants (1847), he was long an influential member of the assembly. Pratt also taught at the Univ of Deseret (now the Univ. of Utah) He wrote books on mathematics as well as on the Mormon church

Pratt, Parley Parker, 1807–57, Mormon apostle, b. Otsego co, N Y., brother of Orson Pratt He joined (1830) the Mormon church and was made an apostle in 1835 In 1838 Pratt was thrown into prison in Missouri during the persecution of the Mormons there. On the first of his missionary visits to England, he founded (1840) the *Millennial Star* in Manchester. In Utah, to which he went in 1847, he aided in framing the constitution of the state of Deseret and devised a Mormon alphabet. See his autobiography (ed. by his son, 1874, 3d ed., 1938), biography by Reva Stanley (1937).

Pratt, Richard Henry, 1840–1924, American soldier and educator, b. Allegany co, N.Y. He worked at odd jobs until 1861, when he enlisted in the Union army After the Civil War he remained in the army and came into close contact with Indians while serving at various posts in the West He experimented successfully in educating Indians, and in 1879 he founded at Carlisle, Pa., a non-reservation school of higher education for Indians. He supervised the Carlisle Indian School—maintained by the U S government and housed in an army barracks—until 1904, when he retired as a brigadier general from the U S army as a result of disagreement with President Theodore Roosevelt In 1918 the Carlisle Indian School was closed. See E G Eastman, *The Red Man's Moses* (1935).

Pratt, Silas Gamaliel, 1846–1916, American musician, b Addison co, Vt., studied piano and composition in Chicago and Berlin He taught and gave concerts in Chicago from 1872 until 1875, when he returned to Germany, met Wagner and Liszt at Bayreuth, and gave concerts in Berlin. In 1885, after another period in Chicago, he gave concerts of his own works in London He taught in New York from 1888 until 1906, when he founded the Pratt Institute of Music and Art, Pittsburgh, of which he was director until his death He composed operas, orchestral works, piano pieces, and songs

Pratt, city (pop 6,591), co seat of Pratt co, S Kansas, W of Wichita, inc 1884 It is a shipping and trading point for a wheat and cattle area A state fish hatchery is east, on the Ninnescah, tributary of the Arkansas

Pratt Institute, at Brooklyn, N Y, nonsectarian, coeducational, chartered and opened 1887 It has schools of architecture, art, engineering, home economics, and library science It was founded and endowed by Charles Pratt for the practical training of young men and women Its library was the first general public library in Brooklyn, but now serves only the school

Prattville, city (pop 2,664), co seat of Autauga co, central Ala, NW of Montgomery, founded c 1835 by Daniel PRATT It has a large cotton-gin manufacturing plant

Pravdinsk, RSFSR see FRIEDLAND

prawn, crustacean closely allied to the shrimp and sometimes also called shrimp It is widely distributed in temperate and tropical regions in salt and fresh water Those found in most parts of America and Europe are from 1 to 6 in long Some tropical forms are as large as lobsters The appendages include 10 slender jointed legs, swimmerets, and long antennae Pincers in some are on the first two, in others on the first three, pairs of legs The carapace extends forward over the stalked eyes to form a rostrum or beak Many species are eaten

Praxiteles (präksĭ'tulēz), fl c 370–c 330 B C, most famous of the Attic sculptors His *Hermes with the Infant Dionysus*, found in the Heraeum, Olympia, in 1877, is the only example of an undisputed extant original by any of the greatest masters of antiquity From it the workmanship of the sculptor can be judged directly—the delicacy and perfection of the modeling, as well as the strength and grace of conception, characteristic of his figures His most renowned statues are lost entirely or known only through Roman imitations Out of some 50 works mentioned as his in ancient writings, the one chosen as finest of all was the *Aphrodite of Cnidus* There is a copy in the Vatican Of the *Eros of Thespiae*, only the fame remains Praxiteles made several statues of young satyrs, one of which, the *Satyr of the Capitol* (Rome), is celebrated in Hawthorne's *Marble Faun* Other copies of the sculptor's works are *Apollo Sauroctonus* (Vatican), *Apollino* (Florence), and *Silenus and Dionysus* (Louvre) All of these illustrate his choice of youthful gods and other beings in which joy of life finds expression Praxiteles' modeling of face and hair shows the touch of supreme skill In the treatment of the surface of the marble he was unsurpassed

Prayer, Book of Common: see BOOK OF COMMON PRAYER

praying Indians, name for North American Indians who accepted Christianity. Although many different groups are called by this name, e g, the Catholic Iroquois of St Regis, it is more commonly applied to those Indians of E Massachusetts who were organized into villages by John ELIOT In 1674 there were seven principal praying towns—Hassanamesit, Magunkaquog, Nashobah, Natick, Okommakamesit, Punkapog, and Wamesit Natick, founded in 1651, was the oldest praying town. In King Philip's War (1675) the praying Indians were practically destroyed by the other Indians, who viewed them as traitors, and the English, who thought they were secret allies of King Philip. From a population of 1,100 in 1674, they were reduced to 300 by 1680.

praying mantis see MANTIS

Preachers, Order of see DOMINICANS.

Preble, Edward (prē'bul), 1761–1807, American naval officer, b Falmouth (now Portland), Maine In the American Revolution he ran away from home to ship on a privateer, entered (1779) the Massachusetts state marine as a midshipman, and saw service aboard the *Protector*, which was captured in 1781 After his release he joined the *Winthrop* and when the Revolution was over was engaged in the merchant service In 1798 he was commissioned lieutenant in the U S navy and was promoted (1799) captain and given command of the *Essex*, which sailed to China and convoyed 14 merchant vessels to New York In 1803 Preble was transferred to the *Constitution* and set out in command of a squadron for the Mediterranean, where he took a leading part in the war against the Barbary States (see TRIPOLITAN WAR) After the *Philadelphia* of his squadron had been captured and held in the harbor of Tripoli, Preble blockaded that port and made a number of attacks, inflicting extensive damage, but failed to capture the strongly fortified town He was relieved of his command on the arrival of Commodore Samuel Barron Many of those who served under Preble, e g , David Porter and Stephen Decatur, rendered distinguished service in the War of 1812 See G W. Allen, *Our Navy and the Barbary Corsairs* (1905).

Pre-Cambrian. see ARCHEOZOIC ERA and PROTEROZOIC ERA

precentor (prēsĕn'tur) [Latin,=one who sings first], the director of the music of a cathedral or a monastic church and also a CANTOR

precession of the equinoxes (prēsĕ'shun), clockwise progression of the equinoctial points (the points at which the sun crosses the celestial equator) This motion, whereby the earth's axis describes a cone in somewhat the same fashion as does the axis of a spinning top, was first noted by Hipparchus, c 120 B C The completion of the cone figure requires about 25,800 years The name precession was given because each of the equinoctial points, after having arrived at the meridian of any place on a given day at the same time as a certain fixed star, will arrive progressively sooner than the star thereafter As the celestial equator shifts its position, the position of the ecliptic along which it moves remains fixed in relation to the stars However, there is a change in the location of the vernal equinox among the constellations along the zodiac At the time these constellations were named, the March equinox took place when the sun was in the direction towards Aries Precession has caused it to move westward in the direction of Pisces Sir Isaac Newton in 1687 first explained the phenomena, attributing it to the attraction of the sun and moon on the equatorial bulge of the earth The precession results in a continual increase in the longitudes of heavenly bodies, but their latitudes are unchanged See E A Fath, *The Elements of Astronomy* (rev ed , 1934), W T Skilling and R S Richardson, *Astronomy* (rev ed , 1947), W L. Kennon, *Astronomy* (1948)

precious stone see GEM

precipitation, in chemistry, commonly indicates a reaction in which an insoluble substance is formed when some specific reagent is added to a solution, the insoluble substance so formed seeming to be "thrown out" or "down" from the solution For example, when a solution of silver nitrate is added to a solution containing some soluble chloride, the chloride solution immediately becomes cloudy owing to the formation of silver chloride, which is insoluble and is said to be precipitated Certain substances (called colloids can be precipitated by the addition of a strong electrolyte This occurs in soapmaking when caustic soda (sodium hydroxide) is added to a fat The precipitation is believed to result from the neutralizing effect of ions having a charge opposite to that of the suspended particles The coagulating effects on negative colloids are greater with doubly charged ions (e g , those of calcium and magnesium) and with triply charged ions (e g , aluminum) than with singly charged ions (e g , those of sodium)

precipitation, in meteorology see HAIL, RAIN, SLEET, SNOW

predestination, Christian theological doctrine, resembling determinism in its attitude toward the question of free will The fundamental dilemma has been known to philosophers since long before Christianity whether man is sometimes free to make a choice and undertake responsibility for his actions, or whether his choice is always controlled and his apparent freedom to choose only an illusion Those who believe in freedom of choice or freedom of the will choose the first alternative, determinists choose the second There are all shades and gradations between the two Determinism was evident in the Greek mythological creation of the Fates and of Nemesis and in the Stoic concept of Providence, such pagan beliefs are often called fatalism Christian predestination is based on two assumptions—that God's plan is absolute and unchanging and that God elects or condemns men to salvation or damnation. Origen took an early predestinarian position, and PELAGIANISM by an extreme free-will stand opposed St Augustine (who did not, however, deny man's responsibility) The most systematic and complete development of the doctrine of predestination was made by John CALVIN His teaching on the subject, as expressed later and completely in the Westminster Confession and in the Westminster Larger Catechism, begins with the fall of man and his resultant total depravity God, out of His free grace, decides to save some men, and the act of choosing is called absolute election Those who are elect have in this life an inner assurance of salvation, which they display outwardly in righteous conduct, those whom God rejects are subject to predestined damnation Less extreme forms of predestination are found in many Christian theological systems, the teachings of Luther, for example, are predestinarian Roman Catholic teaching and practice has tended to be strongly against predestination, JANSENISM began as a predestinarian movement within the Church Islam is generally fatalistic See ADAM, ATONEMENT, GRACE, SIN See Loraine Boetnner, *Reformed Doctrine of Predestination* (1932), Réginald Garregou-Lagrange, *Predestination* (Eng tr , 1939)

Predis, Ambrogio de see DE PREDIS, AMBROGIO

Preemption Act, passed (1841) by the U S Congress in response to the demands of the Western states that squatters be allowed to preempt lands Pioneers often settled on public lands before they could be surveyed and auctioned by the U S government At first these claims were not recognized, but in the 1830s temporary preemption laws were passed by Congress The act of 1841 permitted settlers to locate a claim of 160 acres and after six months of residence to purchase it from the government for as low as $1 25 an acre After the passage (1862) of the HOMESTEAD ACT, the value of preemption for bona fide settlers declined, and the practice more and more became a tool for speculators Congress repealed the Preemption Act in 1891

prefect or **praefect** (both prē'fĕkt) [Latin,=set over], in ancient Rome, title of military and civil officers Under the empire some of these were very important The Praetorian prefects (first appointed 2 B C) numbered usually two, they commanded the powerful PRAETORIANS From the 2d cent they had important juridical functions, and important legists (e g , Papinian and Ulpian) held the post An ancient office was that of prefect of the city, at first a deputy for absent consuls, it fell out of use and was revived by Caesar Under the empire this became the summary court for the region within 100 mi of Rome The prefect of the watch had charge of the fire brigade set up by Augustus Augustus also established a prefect of the grain supply All these offices were lucrative and highly honorable There were other officers called prefects, as the Roman viceroy of Egypt and many officials of Italian cities

Pregl, Fritz (frĭts' prā'gul), 1869-1930, Austrian physiologist and chemist From 1913 he was professor at the Univ of Graz For his methods of quantitative organic microanalysis he received the 1923 Nobel Prize in Chemistry

pregnancy or **gestation** (jĕstā'shun), period between fertilization of the ovum and birth The duration of pregnancy in humans is about 280 days, equal to 9 calendar or 10 lunar months Symptoms of pregnancy include cessation of menstruation, early morning nausea (morning sickness), enlargement of the breasts, pigmentation of the nipples, and progressive enlargement of the abdomen Pregnancy may be determined before any of these symptoms become evident by the Aschem-Zondek test This is based on physiological changes which occur in female mice, rabbits, and frogs when they are injected with urine from a pregnant woman Toward the end of the fifth month the mother usually feels fetal movements, and sounds of the fetal heart may be heard Excessive vomiting is usually a sign of serious disturbance and may threaten the patient's life Disorders of pregnancy are abortion and toxemia (e g , eclampsia and kidney disease) Proper diet, including minerals and vitamins, is important in order that the mother may receive adequate nourishment and the fetus may not become too large Vitamins A, B, C, D, and E are essential Adequate calcium and phosphorus are necessary for successful lactation and to prevent the development of rickets in the child Proteins are required not only for the maternal organism but also for the fetus Carbohydrates are a source of energy, and they tend to lessen the nausea of pregnancy Excessive intake of fats should be avoided

prehistoric man: see MAN, PRIMITIVE

Preller, Friedrich (frē'drĭkh prĕ'lur), 1804–78, German painter and etcher, professor at the Weimar Academy. He is best known for his *Odyssey* landscapes, a series of 16 encaustic paintings Also notable are his Thuringian landscapes in tempera and Norwegian landscapes. His son and pupil **Friedrich Preller,** 1838–1901, was also a landscape and mural painter.

premier see PRIME MINISTER.

Premont (prēmŏnt'), town (pop. 1,080), S Texas, SW of Corpus Christi, in a farm area; settled c 1908, inc 1938

Premysl, Czech *Přemysl* (pshĕ'mĭsŭl), earliest dynasty of BOHEMIA Its semilegendary founder was the peasant Premysl, whom the Bohemian Princess (also called Queen) Libussa chose as husband at some time in the 8th cent Their successors united Bohemia into a single duchy and completed its Christianization Outstanding among the early Premyslide dukes were St WENCESLAUS ("Good King Wenceslaus"), Bretislav I (reigned 1037–55), who acquired Moravia and temporarily occupied Poland and Silesia, and Vratislav II (reigned 1061–92), who in 1085 received from Emperor Henry IV the nonhereditary title of king of Bohemia The royal title became permanent and hereditary only with OTTOCAR I in 1198 He was succeeded by WENCESLAUS I, OTTOCAR II, WENCESLAUS II (who was also king of Poland and Hungary), and WENCESLAUS III, with whom the dynasty died out in 1306 Wenceslaus III's sister married John of Luxemburg, who was elected king of Bohemia in 1310

prenatal care (prē"nā'tul), special medical attention given an expectant mother in the period before birth of the baby This care should be directed by an individual doctor or a maternity clinic After it has been established that PREGNANCY exists, urine and blood tests are made The results of these and the data obtained through a detailed physical examination of the woman determine the regimen she must follow Anemia and vitamin deficiencies may have to be counteracted through intake of certain foods and extracts to provide needed elements in larger amounts than are present in the customary pregnancy diet (usually rich in protein, calcium, and iron) A doctor studies the condition of the mother and the growth of the embryo at intervals, the intervals should be closer as the term of pregnancy approaches its end Medical opinion generally favors the leading of normal active lives throughout the gestation period by those in whom pregnancy is uncomplicated Avoidance of violent exertion and intense emotional experience reduces the possibility of miscarriage or premature birth See *Prenatal Care* (U S Children's Bureau, Publication No 4)

Prence or **Prince, Thomas,** 1600–1673, American colonial governor, b Gloucestershire, England His nonconformist family immigrated to Leiden in Thomas's youth In 1621 he went to Plymouth Colony, where he gained prominence and held various offices, including the governorship (1634–35, 1638, 1657–73) In 1637 he raised a body of troops to serve against the Pequot Indians Prence supervised (1641) the building of the first bark constructed in the colony and established (1650) the Cape Cod fisheries As governor (when William Bradford refused the office and after Bradford's death), he served with credit through a period of Indian wars and internal religious troubles, being noted for his successful effort to secure public revenues in support of the schools

Prendergast, Maurice Brazil, 1859–1924, American painter, b St John's, Newfoundland, educated in Boston In 1884 he worked his way to Europe on a cattle boat and studied in Paris at Julien's and at the Colarossi Academy In 1889 he assisted his brother Charles Prendergast (1868–1948) in carving picture frames in Winchester, Mass From the early 1890s he gravitated between New York and Europe, visiting various countries In New York he joined the independent group of artists called The EIGHT Always an impressionist, Prendergast evolved a manner closely resembling pointillism which gave to his landscapes and figure compositions a quality of gay tapestry He is represented in leading galleries throughout the United States His *Promenade, Gloucester* (Whitney Mus , New York) is characteristic

preparatory school see SCHOOL

preposition, in English, PART OF SPEECH, embracing certain words used before nouns and pronouns to connect them to the preceding material Prepositions are a class that is typical of the structure of Indo-European languages, but similar classes are found in some other languages

Preradovic, Petar, Croatian *Pradovic* (pĕ'tar prĕra'dŏvĭch), 1818–72, Croatian soldier, poet, and Slavophile His early works, including translations from the Czech poet Macha, were in German Later lyrics, written in Croatian and under the inspiration of Kollar's *Daughter of Slava*, were filled with Slavonic symbolism In his *Dream of Vila, or, Past and Future* (1851) the Slavic nymph plays a prophetic role

Pre-Raphaelites (prē"-rā'fēulīts"), brotherhood of English painters and poets formed in 1848 in protest against the low standards of British art The principal founders were D G ROSSETTI, W Holman HUNT, and John MILLAIS They found inspiration in the work of Italian painters prior to Raphael and tried to imitate their probity rather than their technique They were also influenced by Ford Madox BROWN, an older painter, and by a similar group of German painters, the Nazarenes, founded in Rome in 1810 The Pre-Raphaelites were defended by Ruskin and attracted numerous

followers, among whom were BURNE-JONES, G. F. WATTS, and William MORRIS, but the movement died out before the end of the century Originally the painting of the Pre-Raphaelites was characterized by extreme clarity, brilliant, glazed color, and meticulous detail See John Ruskin, *Pre-Raphaelitism* (1851), W H Hunt, *Pre-Raphaelitism and the Pre-Raphaelite Brotherhood* (2d ed , 1914), William Gaunt, *The Pre-Raphaelite Tragedy* (1942)

Prerov, Czech *Přerov* (pshĕ'rôf), Ger *Prerau* (prā'rou), city (pop 21,041), Moravia, Czechoslovakia, NE of Brno. It is a railroad center and has iron and machinery works and a large electrical plant The Zerotin (Czech *Zerotín*) Castle (16th cent) is now a museum

Presbyterianism, system of church organization based upon administration by a series of representative courts composed of clerical and lay presbyters It holds a middle ground between episcopacy and CONGREGATIONALISM, the other principal types of polity in Protestant Christian churches The one spiritual order of the church is composed of the presbyters (or elders), all of equal status, divided according to function into ministers and ruling elders The minister's duties are to preach, to teach, and to administer the sacraments The elders, elected by the congregation from among its numbers, are associated with the minister in the conduct of the church, deacons and trustees manage the temporal affairs The court of the congregation is the session, composed of the minister, who presides, and the ruling elders Appeal from the session may be made to the presbytery, which includes all the ministers and at least one elder from each of the congregations in a given area The presbytery holds jurisdiction over the ministers of the area, it ordains them and confirms their call to a church The synod, the next higher court, consists of ministers and elders from a stated number of presbyteries, it exercises supervisory authority over both presbyteries and congregations Finally, there is the general assembly, composed of a given number of ministers, elders, and delegates, with supervisory power over the interests of the whole denomination Its presiding officer, the moderator, is elected at its annual meeting and is the official head of the church Scotland is the only country where Presbyterianism is established by law (see SCOTLAND, CHURCH OF) Presbyterian churches are the direct heirs of CALVINISM in doctrine and polity They believe in the Bible as the sole rule of faith and conduct and in the sacraments of baptism and the Lord's Supper They are rigorously opposed to state interference in ecclesiastical affairs and believe in a thorough education of their ministry Presbyterianism which originated in the British Isles has for its standards of doctrine and liturgy the Westminster Confession of Faith and the Larger and Shorter Catechisms, composed by the Westminster Assembly convened (1643–49) by Parliament The Protestant churches first influenced by Calvin were those of Geneva and of the HUGUENOTS In the Netherlands the Protestant church was Presbyterian in government but not independent of the state until the middle of the 19th cent By the mid-16th cent Presbyterian sentiment was strong in England and Scotland The English Presbyterians were never numerous after Cromwell's time, in 1876 various branches among them united to form the Presbyterian Church of England From the Church of Scotland (Kirk of Scotland), founded in 1557 under the leadership of John KNOX, seceded a group led by Richard CAMERON, called at first the Cameronians or Covenanters After long persecution they at length achieved (1743) the status of Reformed Presbyterians, most of whom later joined (1876) the Free Church of Scotland The Associate Synod or Secession Church of Scotland was formed in 1733 by Ebenezer ERSKINE and his adherents after trouble over patronage DIVISION in the Associate Synod itself was caused by disagreement over a burgess oath "BURGHERS" and "Anti-Burghers" resulted, and out of these, by DIVISION in each party, grew "New Lights," who held modern ideas on limiting the duties of civil magistrates, and "Old Lights," the conservative minorities In 1820 they came together in the United Secession Church, which, in 1847 joined with the Relief Church to form the United Presbyterian Church The Relief Church had resulted from another secessionist movement in the Church of Scotland, aimed to relieve "Christians oppressed in their Christian privileges " Out of the Great Disruption of 1843 emerged the Free Church of Scotland, under the leadership of Dr Thomas CHALMERS In 1900 this Free Church and the United Presbyterians joined together as the United Free Church of Scotland, which rejoined (1929) the Church of Scotland, except for a few congregations Irish Presbyterianism began early in the 17th cent. It has always centered in Northern Ireland The Presbyterian Church of Ireland (organized finally in 1840) is the principal body The largest Protestant church of Wales, the CALVINISTIC METHODIST CHURCH, is a branch of Presbyterianism The Presbyterian Church of Canada (formed in 1870) joined in 1925 with the Methodist and Congregational churches to form the United Church of Canada Within most of the English colonies of North America, Presbyterians were found Francis Makemie, a Presbyterian missionary from Ireland to America (1683), started organization among them Through his efforts, the first presbytery in America was formed at Philadelphia in 1706, a synod was constituted in 1716 New England had its own synod from 1775 to 1782 In the 18th cent , American Presbyterians divided temporarily over the question of revivals and evangelism, the "Old Side" rejecting them, the "New Side" encouraging them Before the Revolution the Presbyterians established the College of New Jersey, now Princeton Univ The General Assembly of 1789 in Philadelphia represented a united Presbyterian Church A Plan of Union with the Congregational associations of New England which existed from 1792 until 1837 was disrupted when the "Old School" party of the Presbyterians, favoring separate denominational agencies for missionary and evangelistic work, prevailed The Presbyterian Board of Foreign Missions was then established The main body of Presbyterianism in North America today is the Presbyterian Church in the United States of America, descending from the Philadelphia presbytery of 1706 Next largest in membership is the Presbyterian Church in the United States, which originated shortly before the Civil War in a separation over the issue of slavery Sometimes called the "Southern" Presbyterian Church, it took its present name in 1865 The United Presbyterian Church of North America, with the third largest membership, was constituted (1858) by a union of most of the congregations of two much older branches, the Associate Presbyterian Church and the Associate Reformed Presbyterian Church In 1810 the CUMBERLAND PRESBYTERIAN CHURCH was established by secession of revivalist groups in Kentucky, many of its congregations were reunited in 1906 with the main body The Negro members of this church were legally set apart in 1869 as the Colored Cumberland Presbyterian Church The Associate Reformed Presbyterian Church (General Synod), formed in 1822, continued to maintain its own identity when the main body of that church merged in 1858 with the United Presbyterians Other branches of Presbyterianism in the United States include the Orthodox Presbyterian Church (arising when in 1936 a group of believers in fundamentalism followed the Rev J G MACHEN out of the main body), the Reformed Presbyterian Church of North America (Old School), and the Reformed Presbyterian Church of North America (General Synod) A cordial relationship exists among all these bodies and there is a constant tendency towards reunion The Alliance of the Reformed Churches throughout the World Holding the Presbyterian System (organized in 1876 and often called the Pan-Presbyterian Alliance) meets quadrennially See J N. Ogilvie, *The Presbyterian Churches of Christendom* (1925), James Moffatt, *The Presbyterian Churches* (1928), L A Loetscher, *A Brief History of the Presbyterians* (1938); W L Lingle, *Presbyterians Their History and Beliefs* (2d ed , 1944)

presbytery ((prĕz'bĭtĕ"rē, prĕs'-), in architecture, the space in the eastern end of a church reserved for the higher clergy It was also known in the early Christian Church as APSE, tribune, or exedra, and these terms as well as presbytery arise from its original semicircular form The priests of the early church sat in a half circle centered on the bishop's throne, and this primary arrangement is still preserved in the cathedral at Torcello near Venice In the English medieval cathedrals the presbytery usually occupies a large space between the high altar and the choir stalls The term is used in Presbyterian churches for the court composed of the ministers and representative elders (one from each congregation) of a district

preschool education: see KINDERGARTEN AND NURSERY SCHOOL

Prescot (prĕ'skŭt), manufacturing urban district (1931 pop 9,399, 1943 estimated pop 11,500), Lancashire, England, E of Liverpool Its watchmaking industry dates from the 18th cent., other products are electric cables.

Prescott, Samuel (prĕ'skŭt), 1751–c 1777, American patriot, b Concord, Mass On the night of April 18, 1775, he, Paul REVERE, and William DAWES set out to warn the countryside of the British advance toward Concord Revere was captured on the way, but Prescott or Dawes or both got through with the news Prescott was captured at Ticonderoga (1776) and died in prison

Prescott, William, 1726–95, American Revolutionary officer, b Groton, Mass He saw service in King George's War and the French and Indian War In the American Revolution, he fortified (1775) Breed's Hill for the patriots and was prominent in the subsequent battle of Bunker Hill Later he served around New York (1776) and in the Saratoga campaign (1777) See S. A Green, *Colonel William Prescott and Groton Soldiers in the Battle of Bunker Hill* (1909)

Prescott, William Hickling, 1796–1859, American historian, b Salem, Mass., grad. Harvard (B.A., 1814, M.A., 1817). He entered his father's law office, but was compelled by a serious eye injury to abandon law. He received medical attention on a European trip and finally, resolving to devote himself to historical writing, began a thorough preparation for the task. His first important historical work, *The History of the Reign of Ferdinand and Isabella* (1837), achieved an immediate success. He wrote critical and historical essays while engaged in writing a *History of the Conquest of Mexico* (1843), a subject relinquished to him by Washington Irving *The Conquest of Peru* (1847), his next major effort, enjoyed a success comparable to his earlier efforts, and though his sight was practically gone he started a monumental work, *The History of Philip II* (unfinished, Vols I and II, 1855, Vol. III, 1858). Though his work is now superseded in research, it lives as literature. Prescott is one of the greatest of American historians His strength lay not in philosophical insight or deep analysis but in the excellent style and presentation of material which made his facts and his narrative alive, colorful, and vivid His *Biographical and Critical Miscellanies* appeared in 1859, and his correspondence was edited by Roger Wolcott (1925) A volume of *Representative Selections* (ed by William Charvot and Michael Kraus) appeared in 1943

Prescott (prĕ'skŭt), town (pop 3,223), SE Ont , on the St Lawrence, 8 of Ottawa and opposite Ogdensburg, N Y Fort Wellington here, built in the War of 1812, is now a museum in a national park At near-by Windmill Point the British in 1814 repulsed the attack by a large force under James Wilkinson of the Lacolle mill (now a lighthouse) Prescott has silk mills, distilleries, grain elevators, and plants manufacturing wood products, hats, and tools

Prescott. 1 City (pop 6,018, alt 5,347 ft), co seat of Yavapai co , central Ariz , in the mountains NNW of Phoenix Gold was discovered in the county in 1863, and Prescott was built near the new location of Fort Whipple in 1864 It was twice territorial capital (1864–67, 1877–89) Today it is a center for mining (copper and other minerals) and ranching as well as a health and summer resort. There is an annual Frontier Days rodeo, and a group of whites perform annual "Smoki" Indian ceremonials and have a Smoki museum The Arizona Pioneers' Home is here Outside the city is Granite Dells, with eroded rocks Prescott was the boyhood home of Fiorello LaGuardia 2 City (pop 3,177), co seat of Nevada co , SW Ark , in a peach-growing area, settled 1873.

presentment: see INDICTMENT.

preserving see CANNING.

president, in modern republics, the chief executive and therefore the highest officer in a government The powers vary greatly from country to country In the United States, the President has been delegated substantial power by the Constitution, amplified by statutes In some other lands (e g , France) the office is largely honorific, while in still others the chief officer may retain the title president while exercising dictatorial authority (as sporadically occurs in many Latin American countries) In many lands there is no sharp division between the executive and the legislative functions, and the presidency may be only an adjunct to the legislature The Presidents of the United States after Washington's first term took office on the March 4 following the election until the Twentieth Amendment changed the date to Jan 20 After George Washington refused a third term as President, it became traditional for the President to serve only two terms at most There were movements to disregard this custom through the course of U S history, and it was finally broken by F. D Roosevelt in 1940. The President serves a four-year term and must be 35 years old See ELECTORAL COLLEGE For a list of U S Presidents, see UNITED STATES

Presidential Range, group of the White Mts , N N H , so called from the names of its peaks. Mt WASHINGTON (6,288 ft) is the highest in the state, other peaks include Mt Adams (5,798 ft), Mt Jefferson (5,715 ft), Mt Clay (5,532 ft), Mt. Monroe (5,385 ft), and Mt Madison (5,363 ft).

Presidio (prusl'dēō, -sē'dēō), unincorporated town (pop c 1,500), W Texas, a port of entry on the Rio Grande opposite Ojinaga, Mexico This region about the mouth of the Conchos (in Mexico) was well peopled by Indians, and Spanish missions were founded, one on Alamito Creek here in 1684 Today there are ranches and some irrigated farms

Prespa, Lake (prĕ'spä), area 112 sq mi , SW Yugoslavia, NW Greece, and E Albania, in Macedonia It is connected with Lake Ochrida by underground channels. The smaller Lake Mala Prespa or Mikri Prespa lies near by, in Greece and Albania.

Presque Isle (prĕskĭl') [Fr ,=peninsula], city (pop 7,939), NE Maine, trade and shipping center of the Aroostook valley, settled c.1820, inc as a town 1859, as a city 1939. It is the seat of a state normal school and a farm experiment station. In 1941 it became the site of an army air base. Potatoes are grown here.

press, freedom of the. Pervasive censorship was established by Church and state not long after the

introduction of the printing press into various European countries After the Reformation in England, CENSORSHIP there—in the form of granting monopolies to a limited number of printers—passed almost entirely into the hands of the English monarch, and the appearance of unauthorized publications brought about (1534) a royal proclamation providing for the licensing of all publications before they were printed In the Tudor and Stuart reigns statutes were passed making criticisms of the government a felony, but the licensing laws—strongly attacked by John Milton in his pamphlet *Areopagitica* (1644)—remained in force in England until 1695 In the 18th cent the printing of parliamentary debates was so restricted that to avoid suits for LIBEL publishers resorted to subterfuges, reporting debates as taking place in Lilliput (*Gentleman's Magazine*) or as those of Marc Antony and other classical orators The vindication of John WILKES, after he had been convicted (1763) of seditious libel for printing in his periodical, the *North Briton*, a criticism of the king's speech, did much to win public support for greater freedom of the press Prosecutions for publishing parliamentary debates stopped in the 1770s, and Charles James Fox's Libel Act of 1792 established that juries in cases of seditious libel should be judges of law as well as of the fact By 1855 the compulsory stamp duty on British newspapers was rescinded, and in 1868 truth became admissible as a defense in England in cases of libel. In America the licensing system was continued in the colonies for a generation after it was abandoned in England The case (1734) in which John Peter ZENGER was exonerated on charges of seditious libel advanced the struggle for a free press in the colonies The Stamp Act of 1765, which included stamp taxes on newspapers, antagonized several groups of colonists and did much to intensify the desire for an unlicensed press which would be free of discriminatory taxes Thus, the Virginia Bill of Rights (1776) declared "that the freedom of the press is one of the great bulwarks of liberty, and can never be restrained but by despotic governments." After the American Revolution several states provided for freedom of the press in their constitutions, and the First Amendment (1791) to the U S Constitution guaranteed that Congress should make no law abridging freedom of the press The First Amendment was later made binding on the states by judicial interpretation of the Fourteenth Amendment (1868) The first serious threat to this guarantee was found in the ALIEN AND SEDITION ACTS of 1798 Freedom of the press became a fixed national tradition in the United States long before the Civil War, but during the war regulations were imposed sporadically by civil and military authorities In the First World War the passage (1917) of the Espionage Acts and their strict enforcement went far toward limiting freedom of the press in this country, and government censorship was for the first time instituted on a wide level After 1919, however, the "clear and present danger" test—to determine whether the words will bring about the substantive evils that Congress has a right to prevent—was frequently used in Supreme Court cases, and in 1931 the Minnesota "gag laws" were ruled unconstitutional by the Supreme Court The court also ruled (1936) against the Louisiana license tax of 2 percent on all newspapers with circulations over 20,000 In 1940 Congress enacted the Alien Registration Act, the first Federal peacetime sedition law since 1798 During the Second World War the most comprehensive censorship in U S history was supervised (1941–45) by the U S Office of Censorship, but in no way did it approach that of the totalitarian nations In general, freedom of the press developed much more slowly in countries of the European continent and in Latin American countries Periods of nation-wide anxiety produced greater strictures Under a dictatorship, whether of the proletariat or of an oligarchy, the press is never free to print adverse comment against the government In Germany, Italy, and Japan the press was completely controlled by the dictators at the time of the Second World War. In the USSR also the press became an organ of the government In countries with free-enterprise systems, on the other hand, eclipse of freedom of the press may arise from consolidation and monopolization of the press by limited private interests See Commission on Freedom of the Press, *Peoples Speaking to Peoples* (1946), *A Free and Responsible Press* (1947), *Freedom of the Press* (1947), and *Government and Mass Communications* (1947); M L Ernst, *The First Freedom* (1946), Francis Williams, *Press, Parliament, and People* (1946)

Pressburg, Czechoslovakia see BRATISLAVA

Pressburg, Treaty of, 1805, peace treaty between Napoleon I and Emperor Francis II, signed at Pressburg (now Bratislava, Czechoslovakia) Defeated at Austerlitz, Austria ceded Venetia to Italy, recognized Napoleon as king of Italy, acknowledged the elevation of the electors of Bavaria and Württemberg to be kings, ceded Tyrol and Vorarlberg to Bavaria, and yielded the Hapsburg lands in Swabia to Württemberg and Baden. Austria was allowed to annex Salsburg.

pressure, in mechanics, that FORCE which acts upon a unit area of the surface of a body, as distinguished from the total force applied to the body For example, atmospheric pressure at sea level (standard pressure) under ordinary conditions is taken to be about 15 lb per square inch, i e , of the total force exerted on a body by the atmosphere, each unit of surface (here the square inch) is subjected to about 15 lb If, therefore, the body has an area of 10 sq in , the total force of atmospheric pressure on it would be about 150 lb Conversely, if the area of a surface is given together with the total force (or total pressure) upon it, the pressure can be calculated by dividing the total force by the number of units in the area, as in the example, 150 by 10 Pressure is commonly defined, therefore, as the force per unit area The instrument for measuring atmospheric pressure is a BAROMETER The term "pressure gauge" is commonly applied to the other instruments used for measuring pressure They are manufactured in a great variety of sizes and types and are employed for recording pressures exerted by substances other than air—water, oil, various gases—registering pressures as low as 2 lb per square inch or as high as 10 tons per square inch and over (as in hydraulic presses) Some pressure gauges are made to carry out special operations, such as the one used on a portable air compressor In this case, the gauge acts automatically to stop further operation when the pressure has reached a certain point and to start it up again when compression has fallen off to a certain limit In general, a gauge consists of a metal tube or diaphragm which becomes distorted when pressure is applied and, by an arrangement of multiplying levers and gears, causes an indicator to register the pressure upon a graduated dial The Bourdon gauge used to measure steam pressure and vacuum consists essentially of a hollow metal tube closed at one end and bent into a curve, generally elliptic in section The open end is connected to the boiler As the pressure inside the tube (from the boiler) increases, the tube tends to straighten out The closed end is attached to an indicating needle, which registers the extent to which the tube straightens out Pressures up to several million pounds per square inch have been produced in experiments to determine the effect of high pressure on various substances Rubber, for example, under high pressure becomes horny, losing its elasticity Even slight variations in pressure make observable changes in the BOILING POINT and the MELTING POINT of materials For this reason, a standard pressure of 14 7 lb per square inch, i e , the normal pressure of the atmosphere at sea level, is assumed in scientific observations unless a statement of some other specific pressure is made

Prestatyn (prĕstă'tĭn), urban district (1931 pop 4,512, 1943 estimated pop 7,250), Flintshire, Wales, E of Rhyl It is a summer resort Excavations disclosed that it was a center of manufacture of glass and pottery during the Roman occupation

Prester John (prĕ'stûr) [Mid Eng *prester* = priest], legendary Christian monarch of a vast, wealthy empire in Asia or in Africa The legend may have been based on stories of some Nestorian monarch in central Asia It first appeared in the latter part of the 12th cent and persisted for several centuries At first the ideal realm of this Christian king, who so valued humility that he signed his name only Prester John, was supposed to be in Asia but later it was more generally placed in Africa Letters supposed to have been written by him and about him were widely circulated in Western Europe Marco Polo identified him with a war lord who ruled over Tatar tribes and who was conquered by Jenghiz Khan The legend is sometimes supposed to have found its origin in vague rumors of the Christian kingdom of Ethiopia, which in ancient and medieval times was often confused with India For a fictionalized account of the legend, see John Buchan, *Prester John* (1910) See Elaine Sanceau, *Land of Prester John* (1944)

Prestes, Luis Carlos (lōō'ĭsh' kär'lōōsh prĕ'stĭsh), 1898–, Brazilian leader As an idealistic young army officer he marched 1,500 men through backwoods Brazil (1924–26) in protest against the government Exiled, Prestes joined the Communist party and visited Russia Returning to Brazil, he was imprisoned (1936–45) by Getulio VARGAS When released, Prestes was elected senator from São Paulo and Rio de Janeiro, but was ousted (1947) by anti-Communist legislation

Preston, John Smith, 1809–81, Confederate general, b near Abingdon, Va , educated at Hampden-Sydney College, the Univ. of Virginia, and Harvard Law School He practiced law at Abingdon and Columbia, S C , but made his fortune operating a Louisiana sugar plantation Preston, an excellent orator, was an ardent advocate of states' rights in the South Carolina senate (1848–56) and strongly supported secession In the Civil War he first served as an aide to Gen P G T Beauregard and later (1863–65) headed the bureau of conscription at Richmond, being promoted brigadier general in 1864 He went to England after the war and though he returned in 1868, he remained unreconstructed till the end See A. B. Moore, *Conscription and Conflict in the Confederacy* (1924).

Preston, town (pop. 6,704), S Ont , at the junction of the Speed and Grand rivers ESE of Kitchener There are flour and woolen mills and medicinal springs.

Preston, county borough (1931 pop 119,001; 1947 estimated pop 118,050), Lancashire, England, at the head of the Ribble estuary and NE of Liverpool The harbor has been improved and there are extensive docks The borough is a center of cotton manufacture and also produces leather goods, engines, machinery, and electric equipment A great guild-merchant festival has been held here every 20 years for more than three centuries Preston was the scene of a Cromwellian victory in 1648 and of the surrender of the rebels of 1715 (see JACOBITES) It has taken leading parts in political and social movements The Gothic town hall was completed in 1867, after designs of Sir George Gilbert Scott St Walburge's Church (Roman Catholic) has a lofty spire The Harris art galleries, museum, and library are noted Preston is the birthplace of Arkwright and of Francis Thompson

Preston 1 Town (pop 4 206), SE Conn , settled c 1650, inc 1687 It is the seat of Norwich State Hospital for mental defectives 2 City (pop 4,236), co seat of Franklin co , SE Idaho, on Worm Creek, a tributary of the Bear river, settled 1866 by Mormons, inc as a city 1913 It is the center of an irrigated farming district, with minor industries 3 Village (pop 1,447), co seat of Fillmore co , SE Minn , on the South Branch of the Root and SE of Rochester near the Iowa line, in a farm region The courthouse was built in 1864

Prestonpans (prĕs'tŭnpănz'), burgh (pop 2,426), East Lothian, Scotland, E of Edinburgh and on the Firth of Forth Formerly important in the salt industry, it now manufactures soap and is a resort In Sept , 1745, it was the scene of a famous rout of forces under Sir John Cope by the JACOBITES

Prestonsburg, town (pop 2,328), co seat of Floyd co , E Ky , on the Levisa Fork and S of Ashland, in a coal-mining area, settled 1791 Near by, on Jan. 10, 1862, was fought the Civil War battle of Middle Creek Col James A Garfield, leading the Federals, claimed the victory

Prestwich, Sir Joseph, 1812–96, English geologist He made special studies of stratigraphy and was an authority on water supply After investigations in the Somme valley, France, he advanced the theory that man was coexistent with other Pleistocene mammals From 1874 to 1888 he was professor of geology at Oxford Univ His work in classifying English Tertiary deposits was noteworthy. His chief work is *Geology* (1886–88)

Prestwich, urban district (1931 pop 23,881; 1943 estimated pop 32,860), Lancashire, England, just NW of Manchester It is a residential suburb and a cotton-manufacturing center

Prestwick, burgh (pop 8,538), Ayrshire, Scotland, N of Ayr A coast resort, it has noted golf links A large airport, built in the Second World War, is now a civil airport

Preti, Mattia see CALABRESE, IL

pretor see PRAETOR

Pretoria (prĭtō'rēə), city (pop 167,649), S central Transvaal, administrative capital of the Union of South Africa It was founded in 1855 and named in memory of Andries Pretorius In the South African War, Winston Churchill was imprisoned here, but he escaped in 1899 to Mozambique Pretoria is on a railroad to Durban It is the seat of the Univ of Pretoria, and there are ironworks and steelworks

Pretorius, Andries Wilhelmus Jacobus (prĭtō'rēŭs, Dutch ăn'drēs vĭlhĕl'mŭs yăkō'bŭs prätō'rēŭs), 1799–1853, Boer leader He left Cape Colony in 1835 for Natal, where he defeated (1838) a large force of Zulus In 1848 Pretorius headed a party of Boers who crossed the Drakensberg into the Transvaal and created the nucleus of the South African Republic (the Transvaal), which Great Britain recognized by the Sand River Convention of 1852 The city of Pretoria was named in his honor

Pretorius, Martinus Wessels (märtē'nŭs wĕ'sŭls) 1819?–1901, Boer statesman, son of Andries Pretorius In 1857 he was elected the first president of the South African Republic (the Transvaal), and in 1859, while holding this position, he became the president of the adjoining Orange Free State Republic He resigned the presidency of the Orange Free State in 1863 to concentrate on his duties in the Transvaal Problems connected with the gold rush and disagreement with the British over Bechuanaland forced him to resign in 1871 The annexation of the Transvaal by Great Britain in 1878 recalled Pretorius from retirement, and he served (1880–83) with Kruger and Joubert as a joint administrator

Preussisch Eylau see EYLAU.

Prevost, Sir George (prĕ'vō), 1767–1816, English general and governor in chief of Canada In the West Indies he saw active service (1794–96) at St Vincent He was in charge of St Lucia as military governor (1798) and civil governor (1801) Appointed governor (1802) of Dominica, he was created a baronet in 1805 for his defense of the island against attack by the French Later he was lieutenant governor of Nova Scotia As governor in chief (1811–15) of the Canadas, he was conspicuous

for his conciliation of the French Canadians, but as commander in chief of the British forces in Canada in the War of 1812, he was blamed for the retreat at Sackets Harbor (1813) and the defeat at Plattsburg (1814) Summoned to England in 1815 to appear before a court-martial, Prevost died before the trial could take place

Prévost, Marcel (märsĕl′ prāvō′), 1862–1941, French novelist His novels turn chiefly on feminine psychology, treating severely what the author regarded as the moral frailty of modern women, an early novel was *Les Demi-Vierges* (1894, Eng tr , *The Demi-Virgins*, 1895) His *Lettres à Françoise*, begun in 1902 and appearing at intervals, are discerning letters to a woman from her girlhood up A new, classical style appeared in *Sa Maîtresse et moi* (1925, Eng tr , *His Mistress and I*, 1927).

Prévost, Pierre (pyĕr′ prāvō′), 1751–1839, Swiss philosopher and physicist He was professor of philosophy (from 1784) and of physics (from 1810) at Geneva He formulated the theory of exchanges, i e , that radiation of energy is a reciprocal process involving an exchange of energy between bodies

Prévost d'Exiles, Antoine François (ätwan′ frāswä′ prāvō′ dăgzēl′), known as **Abbé Prévost** (abā′ prāvō′), 1697–1763, French novelist, journalist, and cleric After a dissolute youth he entered (1720) the Benedictine abbey of Saint-Maur He later had himself transferred to the abbey of Saint-Germain-des-Prés, in Paris, but in 1727 he grew weary of discipline and fled to England Even before leaving the order, he had begun to write the first of a long series of novels, *Mémoires et aventures d'un homme de qualité* (7 vols , 1728–32) He led an adventurous life in England, Holland, and Germany, but he later returned to France, was received back into the order, and was made head (1754) of a priory by the pope Only one of Prévost's innumerable writings is still read by the general public, but that one book is one of the masterpieces of world literature The *Histoire du chevalier des Grieux et de Manon Lescaut*, popularly known as *Manon Lescaut* (Vol VII of the *Mémoires*) is the simple and moving account of the passion of a likable but weak young man for a woman whose frivolity leads him to crime and her to death as a deportee in America It is equaled by few novels for the lucidity of its style and for its psychological insight into the world of half-morality Two well-known operas, *Manon*, by Massenet (1884), and *Manon Lescaut*, by Puccini (1893), are based on the novel Other works by Prévost include *Histoire de Monsieur Cleveland* (4 vols , 1731–32) and a literary journal, published at London and later at Paris, *Le Pour et le Contre*, which popularized English literature in France See Paul Hazard and others, *Études critiques sur Manon Lescaut* (1929)

Priam (prī′um), in Greek legend, Trojan king, son of Laomedon His wife was Hecuba, and he had many children, including Hector, Paris, Polydorus, Polyxena, Troilus, Cassandra, Creusa, Deiphobus, and Helenus He suffered many misfortunes during the Trojan War, and at last he was killed by Neoptolemus

Priapus (prīā′pus), in Greek religion, god of the countryside, associated with phallicism He was represented as extremely ugly His parents were Dionysus and Aphrodite Priapic rites were orgiastic, and he was often identified with gods of enthusiastic cults, e g , Orpheus and Dionysus

Pribilof Islands (prĭ′bĭlŏf″), group of four islands, off SW Alaska, in the Bering Sea, N of the Aleutian Islands They were visited and named in 1786 by Gerasim Pribilof, a Russian navigator The inhabitants are Aleuts and a few U S government representatives The larger islands, St Paul and St George, are famous as the breeding place of the seal Prior to 1911, competition and ruthless methods of sealing threatened extinction of this valuable animal At that time, the United States, Great Britain, Japan, and Russia entered into the North Pacific Sealing Convention, giving the United States the right to enforce the provisions of the convention (see Bering Sea Fur-Seal Controversy). Japan withdrew (1941) from the convention Under protection, the seal herd has greatly increased Blue and white foxes are native to the islands The Aleuts make a living by processing the seal and fox furs

Pribram, Czech *Příbram* (pshĭ′brăm), town (pop 9,062), central Bohemia, Czechoslovakia In its gold and silver mines, some of the shafts are more than 3,000 ft. deep

Price, Byron, 1891–, American journalist, director of censorship (1941–45), b Topeka, Ind , grad Wabash College, 1912 He left the United Press Association (1912) to join the Washington bureau of the Associated Press, of which he was later executive news editor (1937–41) As U S director of censorship in the Second World War, he supervised the coverage of war news He was sent (1945) to Germany to study the food situation, and in 1947 he became an administrator in the United Nations

Price, Richard, 1723–91, English theologian and political philosopher His philosophical importance rests on an ethical discussion, *Review of the Principal Questions and Difficulties in Morals* (1757), in which Price stresses the power of reason in making moral judgments, a position closely allied to that of Kant He achieved fame with his sponsorship of the American cause in a pamphlet called *Observations on the Nature of Civil Liberty, the Principles of Government, and the Justice and Policy of the War with America* (1776) He also defended the French Revolution and was subsequently criticized by Edmund Burke in his *Reflections on the Revolution in France* Price's writings on governmental finance were also well known In 1816 his works were published in 10 volumes

Price, Sterling, 1809–67, Confederate general, b Prince Edward co , Va After attending Hampden-Sydney College and reading for the bar, he moved to Missouri, where he practiced law and entered politics He served in Congress (1844–46), resigning to lead a Missouri regiment in the Mexican War Made military governor of New Mexico by Gen S W Kearny, he put down a rising of Indians and Mexicans Price was governor of Missouri (1853–57) and president of the state convention of March, 1861, which opposed secession His displeasure at the activities of the extreme Unionists led him to accept the command of the Missouri militia in May, 1861 At Wilson Creek (Aug , 1861) Ben McCulloch and he defeated the Union forces Price then took Lexington but was soon obliged to retreat into Arkansas before Gen S R Curtis After the Union victory at Pea Ridge (March 1862), where he fought under Van Dorn, Price accepted a Confederate commission His campaign around Iuka and Corinth, Miss (Oct , 1862) was unsuccessful He opposed Gen Frederick Steele in Arkansas (1863–64) Price's raid through Missouri (Sept.–Oct , 1864), after initial successes, was finally turned back at Westport and was the last Confederate threat in the Far West

Price or **Priceville,** village (pop 2 321), E Que , on the Metis river near its mouth on the St Lawrence and SW of Matane It has a large lumber mill and a hydroelectric station

Price, city (pop 5,214), co seat of Carbon co , E central Utah, on the Price river, a tributary of the Green The principal source of wealth is coal, but some lands are irrigated by the Scofield Reservoir above Helper An annual rodeo commemorates the days of outlaws at Robbers Roost near by Carbon College (junior) is in Price

price, amount of money for which a unit of goods or services may be exchanged Price is equivalent to market value and may or may not measure the intrinsic value of the goods or services to the buyer or seller Most economists hold that in the long run price in a competitive market will equal the cost of production This is called normal price In the short run, however, the market price will be determined by supply and demand without reference to cost The price of an individual piece of goods changes in time as well as in relation to the prices of other goods In general, prices are closely related to the amount of currency in circulation If money is plentiful compared with the supply of goods, prices are high and money is said to be "cheap", when the opposite condition prevails goods are cheap and money is "dear" The general price level may therefore be influenced by the action of government agencies (such as the Federal Reserve Board) which regulate the supply of currency or adjust the interest rate so as to stimulate or discourage borrowing and investment Because of the relation of the general price level to the business cycle, government action is usually designed to steer a middle course between the inflationary effects of a too plentiful currency and the deflationary effects of a glut of goods Stabilization of prices, if practicable, would insure that the dollar used in repaying a loan would have the same value as the dollar borrowed, an advantage to both creditors and debtors The price level is an average of prices calculated by index numbers based on the prices of a number of commodities which are important in the economy By comparing indexes at different dates, it is possible to ascertain the course that the economy is taking Historically, prices have tended upward for centuries, they are estimated to be 5 to 10 times as high as they were a thousand years ago For the history of prices, classic works are J E T Rogers, *A History of Agriculture and Prices in England* (7 vols , 1866–1902), and Thomas Tooke, *A History of Prices from 1793 to 1856* (6 vols , new ed , 1928) See also A W Marget, *The Theory of Prices* (1938), J A. Todd, *The Science of Prices* (1939), J S Bain, *Pricing, Distribution, and Employment* (1948).

Priceville, Que see Price.

Prichard (prĭ′churd), industrial city (pop 6,084), SW Ala , a northern suburb of Mobile, settled 1900, inc 1925

prickly ash, name for a deciduous shrub or small tree (*Zanthoxylum americanum*), native to the eastern half of the United States and adjacent Canada. It has prickly twigs, foliage similar to that of the ash, small greenish or whitish flower clusters, and red pods with shining black seeds A pungent aromatic principle in the bark has been used as a home remedy for various ailments including toothache It is often called toothache tree The prickly ash is occasionally called hercules club, a name for a closely related species which is used similarly and also called toothache tree

prickly heat, inflammation of the sweat glands of the skin caused by extreme heat and moisture. It is common in the tropics and elsewhere in summer Folds in the skin are usually affected A sudden redness with burning and itching and the appearance of small lumps or blisters occurs Cleansing and the use of drying powders to prevent moisture are useful

prickly pear, any of the jointed flat-stemmed species of cactus belonging to the genus *Opuntia*, with succulent joints resembling pads and usually spiny The colorful pear-shaped fruits may be dry or fleshy and are often edible though frequently spiny Prickly pears are cultivated as a hedge or food plant (as they were before Columbus's arrival) in their native Mexico and SW United States and as a pot plant farther north Introduced into the Old World, the plants spread rapidly and have become a serious pest in many places, particularly in Australia In some of the Mediterranean islands they are an important food—notably in Sicily After the dangerous spines have been removed or singed (sometimes by blow torch), the stems have been used for forage Burbank experimented with the production of spineless forms Common prickly pears include the Indian fig and the tuna, both particularly important in Mexico for their fruits, which are eaten raw or cooked and are used in making a syrup, a beverage, and other food products, the stems are cooked as a vegetable and the seeds sometimes ground into meal

Pride, Thomas, d 1658, English soldier A colonel in the parliamentary army in the civil war (see Puritan Revolution), he won notice and commanded a brigade in Scotland In 1648, acting on the orders of a joint army and parliamentary committee, he carried out **Pride's Purge,** excluding from Parliament over 100 members (mostly Presbyterians) on the ground that they were royalist sympathizers The remaining Rump Parliament, completely under army control, then arranged the trial of Charles I Pride, as a member of the court which condemned him, signed the king's death warrant

Priene (prīē′nē), ruined Ionian city of W Asia Minor, near the mouth of the Maeander It was the birthplace of Bias Rebuilt in the 4th cent B C , it was a carefully planned city, with a handsome temple of Athena Polias

priest see orders, holy

Priestley, John Boynton, 1894–, English author Having written much literary criticism, including *The English Novel* (1927), he wrote a popular picaresque novel *The Good Companions* (1929) *Angel Pavement* (1930) was more realistic, and of his later works only *Bright Day* (1946) was in his earlier vein His early plays, *Dangerous Corner* (1932) and *Laburnum Grove* (1933), criticized the middle class, and *They Came to a City* (1942) dramatized his hopes for the future of society Among his expressionist plays concerned with his theories about time were *Time and the Conways* (1937) and *I Have Been Here Before* (1938) His studies of the unconscious, *Johnson over Jordan* (1939) and *Music at Night* (produced 1938) were well-made plays, but not popular Other plays include *The Linden Tree* (1946) and *Jenny Villiers* (1947) Priestley has also written mystery stories and what he calls personal history plus social criticism—*English Journey* (1934), *Midnight on the Desert* (1937), and *Rain upon Godshill* (1939)

Priestley, Joseph, 1733–1804, English theologian and scientist He prepared for the Presbyterian ministry and served several churches in England as pastor, but gradually rejected orthodox Calvinism and adopted Unitarian views In his *History of Electricity* (1767), he explained the rings (known as Priestley's rings) formed by a discharge upon a metallic surface His *Essay on Government* (1768) suggested the idea of "the greatest happiness of the greatest number" to Jeremy Bentham In 1769 he founded the *Theological Repository* for critical discussion His chemical experiments led, in 1774, to the production of "dephlogisticated" air, the gas which Lavoisier named oxygen and made the base of experiments which were the foundation of modern chemistry Priestley himself failed to realize the importance of his discovery His *Examination of Scottish Philosophy* appeared in 1774, his *History of the Corruptions of Christianity*, published in 1782, was officially burned in 1785, *History of Early Opinions concerning Jesus Christ* appeared in 1786 In 1790 he wrote two volumes of a *General History of the Christian Church to the Fall of the Western Empire*, and four volumes of the later history of the Church appeared between 1802 and 1803 In the meantime he pursued his scientific and philosophical studies, opposed orthodox doctrines, the government's colonial policy, and slave trade, advocated the repeal of the Test Act and Corporation Act, and carried on a seven-year controversy (1783–90) with the Rev Samuel Horsley His sympathy with the aims of the French Revolution aroused popular prejudice against him, which led in 1791 to the wrecking of his house and the destruction of his library and scientific apparatus. Priestley emigrated to America in 1794 and resided at Northum-

berland, Pa., for the remainder of his life. He continued his chemical experimentation and engaged in a controversy on the phlogiston theory with leading American chemists His *Theological and Miscellaneous Works*, in 25 volumes, edited by J T Rutt, were published between 1817 and 1832 See biography by Anne Holt (1931), bibliography of his works by J. F Fulton and C H Peters (1937).

Priest River, village (pop 1,056), N Idaho It is near the confluence of Priest river (which flows from large Priest Lake to the north) and Pend Oreille river Settled in 1889, it was moved from its early site to avoid floods. The area has farming and lumbering

Prilep (prē'lĕp), city (pop 25,996), Macedonia, S Yugoslavia, S of Skoplje It was a residence of Stephen Dushan of Serbia and was the birthplace of the 14th-century Serbian hero Marko Kraljevich, parts of whose castle still stand There are several medieval churches and monasteries. Prilep was known as Perlepe under the Turks

Prim, Juan (hwän' prēm'), 1814–70, Spanish general and statesman A Catalan officer, he fought for Maria Christina and Isabella II against the Carlists and became one of the chief factional leaders in the fierce political rivalry of Isabella's reign ESPARTERO exiled him in 1841, but on Espartero's fall he returned (1843), held high offices, and was a leader in the Cortes For plotting against Gen Ramón M Narváez he was imprisoned and again exiled Later as governor general of Puerto Rico and as a commander (1859–60) in the warfare in Morocco he proved a capable general and a harsh administrator For his victory at Los Castillejos in Morocco he was made a grandee He commanded the Spanish contingent in the international force sent against Mexico in 1861–62, but withdrew his troops when he realized that the French had ambitions to conquer Mexico A political opponent of General O'Donnell, he was again exiled from Spain (1864–66) but returned to take a large part in the overthrow of Isabella Prim was a key figure in the choice of a new monarch When the offer of the throne to a Hohenzollern prince fell through (indirectly bringing on the Franco-Prussian War), he secured the choice for Amadeus, but before that prince could arrive in Spain, Prim was assassinated by his political enemies

primary, in the United States, a preliminary election in which the candidate of a party is nominated directly by the voters The establishment of the primary system resulted from the demand to eliminate the evils of nomination by party conventions, which were often open to machine manipulation and to venality The primary was first used in local elections—as early as 1868 in Crawford co , Pa — but it was not until 1903 that Gov Robert M La Follette had a direct-primary law for the nomination of state-wide candidates enacted by the Wisconsin legislature The movement spread so rapidly that by 1917 all but four states had enacted primary laws—which varied widely from state to state in scope and in details of administration In some states, notably in the "solid South" the primary is more important for state offices than the regular election Some states extend the primary principle to national party conventions by providing for direct election of state delegates to reflect the popular preference for presidential candidates Congressional power to regulate primaries for Federal candidates was upheld in 1941 by the U S Supreme Court See E M Sait, *American Politics and Elections* (1927), Benjamin Gassman and Samuel Hurst, *The A-B-C of the Direct Primary Law* (1930)

primate (prī'māt,–mĭt), animal belonging to the highest order of mammals, the Primates (prīmā'tēz) Included in the order are the APE, LEMUR, MONKEY, and man There is considerable disagreement among authorities concerning the subdivisions and relationships of the groups comprising the Primates

Primaticcio, Francesco (frän-hä'skō prēmätē't'chō), 1504–70, Italian painter, called Le Primatice by the French He was influenced by Giulio Romano, whom he assisted in the Palazzo del Tè in Mantua, and by Correggio In 1532 Francis I invited him to France to assist in the decoration of the château at Fontainebleau, and later he became director of public works Of his frescoes and stucco work at Fontainebleau only a few survive, the most important, a series of decorations from the *Odyssey* in the Gallery of Ulysses, having been destroyed He remained in the royal service under four successive monarchs, painting decorations for royal châteaux and other buildings, designing the tombs of Francis I and Henry II and other architectural works, collecting antiques and works of art, and painting in oil His graceful style and facile drawing did much to extend the influence of Italian art in France *The Continence of Scipio* (Louvre) and *Return of Ulysses* (Castle Howard, England) are two of his best-known paintings

Prime, Samuel Irenaeus (prīm), 1812–85, American Presbyterian clergyman and editor, b. Ballston Spa, N Y , grad. Williams College, 1829, and studied at Princeton Theological Seminary. After pastorates at Ballston Spa and Matteawan, N Y , he became assistant editor of the *New-York Observer* (1840–49) and editor (1851–85). In this religious periodical, which he helped to place among the best of its kind, his "Irenaeus" articles (later published in two series as *Irenaeus Letters*, 1882, 1885) were a noted feature From 1853 Prime conducted the "Editor's Drawer" in *Harper's Magazine* Among his many books are *The Power of Prayer* (1859) and *The Alhambra and the Kremlin* (1873).

prime minister or **premier** (prē'mĭsŭr, prumēr', prēm'yēr), the chief member of a responsible cabinet, as in the government of England The prime minister must have the support of the legislative body that his cabinet represents, failing which his resignation and that of his cabinet customarily follow An individual cabinet minister unable to support the prime minister is expected to resign office The prime minister in effect is leader of his party, he appoints the ministry, makes the policy of the government, dispenses the patronage of state and Church, and links crown, cabinet, and Parliament Though in England the king may still be said to be theoretically head of the cabinet, the prime minister was actually established in power by the withdrawal of the early Hanoverian kings from cabinet affairs, the body became an instrument of Parliament and raised the effective leader of the cabinet to the status of chief minister Robert Walpole was the first prime minister generally recognized as such It has become constitutional convention for the prime minister to be a member of the House of Commons France has both president and prime minister

Primghar, town (pop 1,081), co seat of O'Brien co , NW Iowa, settled by Germans

primitive man: see MAN, PRIMITIVE

Primitive Methodist Church, branch of METHODISM formed by a group seceding from the WESLEYAN METHODIST CHURCH in England under the leadership of Hugh Bourne and William Clowes, who had been expelled in 1810 for conducting camp meetings This denomination had a separate existence until 1932, when it was merged with the Wesleyan and the United Methodists An offshoot was introduced into the United States by immigrants c 1830 and has its own General Conference

Primo de Rivera, Miguel (mēgĕl' prē'mō dā rēvä'rä), 1870–1930, Spanish general and dictator After a rapid and brilliant military career in Cuba, the Philippines, and Morocco, he became governor of Cádiz (1915), then in turn captain general of Valencia, Madrid, and Catalonia From Catalonia he by a coup d'état in Sept , 1923, dissolved the Cortes and then established, with the full approval of KING Alfonso XIII, a military directory The constitution of 1876 and civil liberties were suspended The military dictatorship was replaced by a civil one (1925), but Primo de Rivera continued as the sole ruler and dictator of Spain He launched an ambitious program of public works, but his rule aroused the opposition of Socialists, Catalan separatists, and all liberals After an unsuccessful rising in 1929, the intellectuals, the working class, and part of the army united to force his resignation (Jan , 1930) He died in exile in Paris His son José Antonio, the founder of the fascist FALANGE, was executed (Nov , 1936) by the Loyalists after the outbreak of the Spanish civil war

primogeniture (prī"mōjĕn'ĭchur), in law, the rule of inheritance whereby land descends to the oldest son Under the feudal system of medieval Europe, primogeniture generally governed the inheritance of land held in military tenure (see KNIGHT) The effect of this rule was to keep the father's land for the support of that son best able to render the required military service When feudalism declined and the payment of a tax was substituted for military service, the need for primogeniture disappeared In England, consequently, there was enacted the Statute of Wills (1540) which permitted the oldest son to be entirely cut off from inheriting, and in the 17th cent military tenure was abolished, primogeniture is, nevertheless, still customary in England In the United States primogeniture never became widely established For other types of inheritance, see GAVELKIND and BOROUGH-ENGLISH

Primorski Krai, R8FSR see MARITIME TERRITORY

Primrose, William, 1904–, Scottish-American violist He studied violin (1919–25) at the Guildhall School of Music in London, where he made his debut in 1923 Next he studied with Eugène Ysaye, who encouraged him in his desire to play the viola He toured (1930–35) as violist of the London String Quartet and in 1937 was engaged as first violist of the NBC Symphony Orchestra then being formed In 1938 he formed his own quartet As a soloist he ranks as the world's outstanding violist, and several composers have written concertos for him

primrose, any plant of the genus *Primula*, mostly low herbaceous perennials of the North Temperate Zone, thriving best in cool situations In the United States, where some are native, primroses are usually cultivated as rock-garden (see ALPINE PLANTS), border, or pot plants Typical plants have a basal cluster of leaves and leafless flower stems topped with clustered flowers of various colors, largely spring blooming when outdoors A common yellow species (*Primula veris*) is called cowslip in England, *Primula obconica*, a pot plant, causes dermatitis in some individuals The EVENING PRIMROSE is not related to the true primroses The primrose has been favored in England, both in climate and in tradition, it is celebrated in poetry, e g , in Shakspere's "primrose path of dalliance" and Wordsworth's "a primrose by a river's brim a yellow primrose was to him " Benjamin Disraeli's preference for the primrose gave its name to the **Primrose League,** an English political organization of men and women of the Conservative party

Prince, Morton, 1854–1929, American physician, b Boston, M D Harvard, 1879 He specialized in neurology and abnormal psychology —as physician in Boston and as teacher at Tufts Medical School (1902–12) and at Harvard (1926–28) Founder (1906) and editor until his death of the *Journal of Abnormal Psychology*, he was a leading investigator of the pathology of mental disorders His most famous book is *The Dissociation of a Personality* (1906) See study by W S Taylor (1928)

Prince, Thomas, 1600–1673 see PRENCE, THOMAS

Prince, Thomas, 1687–1758, American clergyman, scholar, and historian, b Sandwich, Mass , grad Harvard, 1709 From 1709 to 1717 he was abroad, he studied in London and preached at a Congregationalist chapel in Suffolk Returning (1717) to Massachusetts, he became copastor (1718) of Old South Church, Boston, a charge which he held until his death He bequeathed to his church his large and excellent library, during the British occupation of Boston, some of the volumes were destroyed, but the many books and manuscripts that were preserved are now in the Boston Public Library Prince published a number of sermons, *A Vade Mecum for America a Companion for Traders and Travelers* (1732), and *Psalms, Hymns & Spiritual Songs the New England Psalm-Book Revised and Improved* (1758), but he is best remembered for his informative *Chronological History of New England* (Vol I, 1736, Vol II entitled *Annals of New England*, 1755) Designed by its author to cover the years from 1602 to 1730, the annals are carried only to Aug 5, 1633 An edition of the history published in 1852 has a memoir of Prince by S G Drake

Prince Albert, city (pop 14,532), central Sask , on the North Saskatchewan and NNE of Saskatoon, founded 1866 as a Presbyterian mission to the Cree Indians It is a commercial and distributing center for a fur-trapping, lumbering, and ranch area, with grain elevators, stockyards, and tanneries It is the gateway to Prince Albert National Park, to the northwest A provincial penitentiary is here, and the city is the seat of Anglican and Roman Catholic cathedrals and of St Albans Ladies' College and headquarters of the Royal Canadian Mounted Police for central and N Saskatchewan

Prince Albert National Park, 1,496 sq mi , central Sask , NW of Prince Albert, in a forested area, est 1927 The numerous streams and lakes, the largest among them the Waskesiu, Crean, and Kingsmere, afford excellent fishing and canoeing The park is a sanctuary for moose, elk, deer, caribou and bear Administration and tourist headquarters are at Waskesiu, on Lake Waskesiu

Prince Charles Foreland, see SPITSBERGEN

Prince Edward Island, island (2,184 sq mi , 1941 pop 95,047, 1948 estimated pop 93,000), off New Brunswick and Nova Scotia, comprising a province of E Canada The capital is CHARLOTTETOWN, the only other city is Summerside One of the Maritime Provs , Prince Edward Island is a crescent of land lying in the southern part of the Gulf of St Lawrence, separated on the south from Nova Scotia and New Brunswick by the Northumberland Strait The generally low, level land has a length of c 110 mi and a width that varies from 5 to 35 mi White sandy beaches line the deeply indented north shore, and much of this favorite resort spot is now Prince Edward Island National Park (est 1936) Low, red sandstone cliffs run the south shores, and here Charlottetown is located where three rivers converge at the tip of a deep bay. The tide reaches back into the headwaters of the island's short rivers With fertile soil and an affable climate, the island has become the Garden of the Gulf More than 50 percent of the income is derived from the production of staple foods and stock raising Since earliest settlement fishing has been an important industry, yielding an abundance of lobsters, oysters, smelts, herring, cod, and mackerel An interesting occupation was originated when islanders began the breeding of silver foxes in 1887, in which they held a monopoly until 1912 Since that time most of the breeding stock for all fox-fur farms is supplied by Prince Edward Island Manufacturing is largely limited to such food processing as the making of butter and cheese and the canning of pork and lobsters Life in rural Prince Edward Island is pleasant and prosperous, though seldom exciting Cartier wrote enthusiastically about the island after discovering it in 1534 Champlain described it as the Isle St John, and so it was known until 1798, when it was renamed for the father of Queen Victoria It was settled by Acadians, and although many of them were deported after the British gained control, some remained and their descendants still live on the island After being annexed in 1763 to Nova Scotia, Prince Edward

Island became a separate colony in 1769 and did not accept confederation with Canada until 1873 In 1767 the land was divided into lots or townships and assigned to Englishmen who held claims against the government This unfortunate system was changed under the Land Purchase Act of 1875, when proprietors were required to sell and the British government advanced money to tenants for purchase In 1803 Lord Selkirk's first colony of impoverished Scots settled here, and their descendants constitute approximately 40 percent of the present inhabitants Representative government was set up in 1851, and the first conference to consider federation was held in the old Colonial Building in Charlottetown, which has been the capital since 1765 The population reached a high of 109,078 in 1891 Since that time it has declined, but Prince Edward Island still remains the most densely populated province in Canada See W R Livingston, *Responsible Government in Prince Edward Island* (1931), Benjamin Bremner, *Island Scrap Book* (1932) and *Tales of Abegweit* (1936); H J Champion, *Over on the Island* (1939)

Prince George, city (pop 2,027), central British Columbia, on the Fraser at the mouth of the Nechako and c 350 mi N of Vancouver It is a railroad division point and a distributing center for a lumber, mining, stock-raising, and fur-trading area In 1807 Simon Fraser, of the North West Company, established here the fur-trading post of Fort George which was taken over (1821) by the Hudson's Bay Company Settlement began in 1910 with the building of a railroad via Fort George to Prince Rupert, and in 1915 the city was incorporated and the name changed See F E Runnals, *The History of Prince George* (1946)

Prince of Wales, Cape, westernmost point of North America, NW Alaska, on Bering Strait, opposite East Cape (Cape Dezhnev) in Siberia

Prince of Wales Island, area 2,231 sq mi , off SE Alaska The largest island of the Alexander Archipelago, it is 135 mi long and 45 mi wide It is thickly forested, and on its east coast is Old Kasaan National Monument

Prince of Wales Island, area 13,736 sq mi , off Boothia Peninsula, in the Arctic Ocean, belonging to Franklin dist of the Northwest Territories In 1948 the magnetic pole was located in the northern part of the island

Prince Rupert, city (pop 6,714), on Kaien Island, W British Columbia, on Chatham Sound near the mouth of the Skeena and S of the Alaska border A railroad and highway terminus and an ice-free port, it serves the mining, lumber, and agricultural areas of central and W British Columbia Grain and fish are shipped, fish is processed, and there is a dry dock The city was incorporated in 1910, but its growth dates from the arrival (1914) of the railroad During the Second World War the city was a major supply base for U S forces in Alaska It has steamship connections with Vancouver, Victoria, and Alaska

Princes Islands, Turkish *Adalar* (ädälär'), group of nine small islands, Turkey, in the Sea of Marmara, near Istanbul (Constantinople) They long were places of exile There are several old monasteries and churches

Princess Anne, town (pop 942), co seat of Somerset co , Eastern Shore, Md , SW of Salisbury, in an agricultural area, founded in the 17th cent It has many old buildings Maryland State College, formerly Princess Anne College (coeducational, for Negroes), opened in 1886 by Methodists, has been a part of the state university since 1935

Princeton. **1** City (pop 5,224), co seat of Bureau co , N Ill , near the Illinois river W of La Salle, in a nursery and farm area, laid out 1833, inc 1849 Its manufactures include vinegar, sealing wax, bricks, and tiles It was the home of Owen Lovejoy, abolitionist **2** City (pop 7,786), co seat of Gibson co , SW Ind , N of Evansville, settled c 1812, laid out 1814 It is a trading and railroad center with a large residential section Paint brushes are made here **3** City (pop 5,389), co seat of Caldwell co , W Ky , between the Cumberland and Tradewater rivers E of Paducah A railroad point, with railroad shops, the city ships tobacco, livestock, farm produce, hosiery, and fluor spar **4** Town (pop 1,009), SE Maine, in a lake area near the St Croix, settled 1815, inc 1832 **5** Village (pop 1,865), E Minn , on the Rum river and E of St Cloud, platted 1856, inc 1877 It is a shipping center for a dairy region **6** City (pop 1,584), co seat of Mercer co , N Mo , on the Weldon and NW of Kirksville near the Iowa line, in a farm area, settled c 1840, inc 1853 Calamity Jane was born here **7** Borough (pop 7,719), W N J , NE of Trenton, settled 1696 by Friends, called Stony Brook until 1724, inc 1813 It is the seat of PRINCETON UNIVERSITY, the INSTITUTE FOR ADVANCED STUDY, Princeton Theological Seminary (Presbyterian, for men, founded 1812), St Joseph's College (Catholic, for men, founded 1914), Westminster Choir College (founded 1926 by John Finley Williamson), and other cultural institutions Nassau Hall (of Princeton Univ) was occupied as barracks first by British and later by colonial troops Princeton was (Jan 3, 1777) the scene of a battle in the American Revolution when Washington defeated a large British force shortly after the battle of Trenton Gen Hugh MERCER was mortally wounded in the attack A monument with sculptures by MacMonnies commemorates the battle "Morven" (1701), home of Richard Stockton, was Cornwallis's headquarters The Continental Congress met in Nassau Hall, June–Nov , 1783 William Bainbridge's birthplace was converted into a public library Palmer Square, a civic center on Nassau St , has buildings designed in Colonial style by Thomas Stapleton. Paul Robeson was born in Princeton **8** City (pop. 7,420), co seat of Mercer co , S W Va , NE of Bluefield, in a farm area, settled 1826 It is a railroad center with shops **9** City (pop 1,247), central Wis , on the Fox and WNW of Fond du Lac, in a dairy area, settled 1830, inc as a village 1860, as a city 1920

Princeton University, at Princeton, N J , nonsectarian, for men, chartered 1746 and 1748 as the College of New Jersey, name changed 1896 The college opened in Elizabethtown (now Elizabeth) in 1747 (see DICKINSON, JONATHAN), was transferred the same year to Newark, and later (1756) to Princeton It was the fourth colonial college The founders were Presbyterians, and Presbyterians have always been represented on the board of trustees Besides liberal arts and sciences, it has schools of public and international affairs (1930), architecture (1919), and engineering (1873) A distinctive feature of its administration, and one which led a trend toward more individualized instruction in colleges, was the preceptorial system introduced by Woodrow Wilson when he was president Other distinguished presidents have been Jonathan Edwards, John Witherspoon, James McCosh, and John Grier Hibben A curriculum designed to integrate the different fields of learning has been adopted Notable buildings are Nassau Hall (1756, used as a barracks and hospital by both sides in the Revolution and as a meeting place of the Continental Congress, June–Nov , 1783), the chapel, the first U S residential hall for graduate students (1913), Cleveland Tower, Fine Hall, Frick Laboratory, and Harvey S Firestone Memorial Library (opened 1948) Most of the buildings are Gothic in style The university has museums of historic art, geology, and zoology, the Observatory of Instruction (1877) and the New Observatory (1934, replacing Halsted), financial, government, and urban research bureaus, and a university press (1905), which has its own printing plant The university shares the resources of the INSTITUTE FOR ADVANCED STUDY See T J Wertenbaker, *Princeton, 1746–1896* (1946)

Princetown, small town, Devonshire, England It is in the middle of Dartmoor and is the site of DARTMOOR PRISON

Prince William Sound, large, irregular, islanded inlet of the Gulf of Alaska, S Alaska The Chugach Mts lie to the north There are good harbors, and access to the interior is by highway and railroad Fishing is extensively carried on in the area, and there is some mining Valdez and Cordova are the largest towns on the sound

Princip, Gavrilo (gäv'rēlō prēn'tsēp), 1895–1918, Serbian political agitator, b Bosnia A high school student, he was a member of a Serbian nationalist secret society and was the assassin (1914) of Archduke FRANCIS FERDINAND and his wife on their visit to Sarajevo His act precipitated the First World War Princip died of tuberculosis in an Austrian prison

Principe see SÃO TOMÉ AND PRINCIPE

Principia, The (prinsi'pēu), coeducational, for the children of Christian Scientists, opened as a kindergarten 1898, chartered 1912 It has preparatory schools at St Louis and, at Elsah, near Alton, Ill , a college of liberal arts with junior and senior branches, a school of government, and a school of nations

Prineville, city (pop 2,358), co seat of Crook co , central Oregon, NE of Bend at the junction of the Crooked River and Ochoco Creek, settled 1868, laid out 1870, inc 1880 Lumbering and stock-raising are carried on in the area

Pringle, borough (pop 2,000), Luzerne co , NE Pa , near Wilkes-Barre, inc 1914

Pringle-Pattison, Andrew Seth: see SETH, ANDREW

Pringsheim, Nathanael (nätä'näēl prings'hīm), 1823–94, German botanist, one of the founders of the scientific study of algae He made important discoveries in the morphology and physiology of plants, especially in the fields of reproduction and evolution He founded the German Botanical Society and the *Jahrbücher für wissenschaftliche Botanik* His treatises are collected in *Gesammelte Abhandlungen* (4 vols , 1895–96)

printing. The story of the invention of printing and of its early days on the continent of Europe is told in the article TYPE The art in the 15th cent. spread, directly and indirectly from Mainz, to many parts of Europe It was brought to England in 1476 by William CAXTON, to the New World in 1539 by Juan PABLOS, who set up his press in Mexico City, and in the region that is now the United States it first appeared at Cambridge, Mass. (see DAYE, MATTHEW; DAYE, STEPHEN; GLOVER, JOSE). In 1814 *The Times* (London) announced its adoption of "the greatest improvement connected with printing since the discovery of the art itself." This improvement, the invention in 1810 of Friedrich König (1774–1833), a German, was the successful application of steam power to the printing press The invention did not improve the quality of the product but greatly increased the output of the machine In König's press, the type bed remained flat as in the hand presses, but the paper was pressed on the type by a cylinder The Adams power press was invented by an American, Isaac Adams, in 1827 In 1846 and 1847 Richard March Hoe (1812–86), an American, designed a rotary press in which the types were for the first time arranged in a true cylinder In 1866 a press known later as the Walter press was patented in England by J C MacDonald and J Calverley, in this press the printing surfaces were not types but stereotype plates curved to form parts of cylinders The leading newspapers now regularly use stereotype plates on their cylinder presses The invention of ways of making paper in sheets of any desired length, so that paper may be fed to cylinder presses from rolls, assisted in increasing the speed of printing Machines for folding newspapers were incorporated with the power cylinder presses Not until the late 19th cent were typesetting machines invented (see LINOTYPE, MONOTYPE, INTERTYPE). Printing surfaces were originally in relief, as in type, the STEREOTYPE, and the ELECTROTYPE Two additional kinds of printing surfaces have been developed by many inventions In intaglio printing, such as the ETCHING and the steel ENGRAVING, the design to be printed is lower than the surface of the plate, which is wiped clean before each impression, leaving the incised design filled with ink, which the paper receives In gravure intaglio printing, tone is produced by varying the thickness of the ink of the printing surface through depressions of varying depth, minute points constitute the clean surface that keeps the paper from being pressed into the depressions In photogravure the gravure plate is made by a photographic process Rotogravure is photogravure adapted for printing by a rotary or cylinder press The third kind of printing, known as planographic, is from a flat surface, as in LITHOGRAPHY, the original planographic process, devised by Aloys SENEFELDER Flat stones were the first lithographic plates and are still used, though metal plates also are used A drawing is made on the plate with greasy ink or crayon, and water is then applied to the plate When the plate is inked for printing, the greasy parts accept the ink and the wet parts do not Preparing a printing surface so that ink will adhere only to parts of it is basic in all planographic printing In collotype printing, a gelatin surface is varied by exposure to light In the pantone process, mercury instead of water is used to coat the parts of the printing surface that are not to accept ink In offset printing, a sheet of rubber is printed and the paper is printed from the rubber In all three kinds of printing—relief, intaglio, and planographic—illustrations are often produced by the half-tone process, in which a plate is made by photographing through glass marked with a network of fine lines (see also PHOTOENGRAVING) A usual form of color printing is by the Ben Day process (see DAY, BENJAMIN) Printing in colors is sometimes done, as excellently in Japan, by applying inks of different colors by hand to the printing surface, but usually a separate printing surface is used for each ink In the three-color process, red, yellow, and blue inks are used, and other colors are produced by printing one color over another, as green by printing blue on yellow The three-color process is often improved by adding a fourth printing in gray or black In recent years the use of photographic processes has expanded greatly, and development of typewriting with the spacing justified has encouraged production of "typewritten" books These particularly meet the demands for cheaper production of books issued in small quantities and for special types of printing The application of electronics to printing was in 1950 still in the experimental stage, but promised to introduce a new era in the evolution of printing For some account of type design and for bibliography see TYPE and TYPOGRAPHY An excellent selected bibliography is Hellmut Lehmann-Haupt, *One Hundred Books about Bookmaking* (1949)

printing, calico. see CALICO PRINTING

Printz, Johan Bjornsson, Swed *Johan Björnsson Printz* (yō'hän byürn'sōn prints'), 1592–1663, Swedish governor of New Sweden Appointed by the New Sweden Company, Printz, an experienced soldier, arrived in NEW SWEDEN in 1643 An energetic administrator, he established numerous works and maintained trade relations with the Indians, the English, and the Dutch But continued Swedish disinterest in the colony and the alleged harshness of his rule brought Printz's resignation and return to Sweden (1653).

Prior, Matthew, 1664–1721, English poet and diplomat, b. Westminster, grad. St John's College, Cambridge, 1687. With Charles Montagu, Prior

parodied Dryden's *Hind and the Panther* in a much-discussed poem, *The City Mouse and the Country Mouse* (1687) Prior was secretary to the embassy at The Hague during negotiations leading to the Treaty of Ryswick (1697), and during Anne's reign he helped, as special envoy, to conclude the Peace of Utrecht, popularly known as "Matt's Peace." Although later discredited and imprisoned by the Whigs, he was buried in Westminster Abbey. Noted during his life as a wit, as a poet he is remembered for his "society verse" and for two long satiric poems, *Alma, or, The Progress of the Mind* and *Solomon* (both 1718) See biography by C K Eves (1939).

Pripet (prĭ'pĕt), Pol *Prypeć* (prĭ'pĕch), Rus *Pripyat* (prē'pyŭtyŭ), river, c 500 mi long, rising NW of Kovel and flowing E through Belorussia into the Dnieper Navigable below Pinsk, it is connected by canals with the Vistula, the Niemen, and the Western Bug The **Pripet Marshes** are a forested, swampy area (c 33,500 sq mi.) extending along the Pripet and its affluents from Brest in the west to Mogilev in the east and to Kiev in the south They form a dense network of rivers, lakes, and canals. Drainage of the swamps was begun c 1870 A natural defense barrier, the marshes were a battlefield in the First World War, but were by-passed by the Germans when they invaded Russia in 1941

Pripyat, river, Belorussia see PRIPET

Prisca [Latin,=ancient], wife of AQUILA.

Priscian (Priscianus Caesariensis) (prĭ'shŭn), fl 500, Latin grammarian, b Caesarea in Mauretania He taught grammar at Constantinople His grammar, *Commentarii grammatici*, in 18 books, was long a standard grammar, and it was the basis of the work of Rabanus Maurus in the Middle Ages Other extant writings of Priscian are a textbook on 12 lines of the *Aeneid*, a treatise on accents, a study of the meters of Terence, a treatise on symbols of weights and measures, and a work on the declensions of nouns

Priscilla (prĭsĭ'lŭ) [diminutive of Latin *Prisca*= ancient], wife of AQUILA

Priscillian (prĭsĭ'lyun), d 385?, Spanish churchman, bishop of Ávila His appointment to the bishopric was protested by orthodox leaders, who had condemned his former activities as a lay preacher in N Spain, at the Synod of Saragossa (380) Although Priscillian's ideas were repeatedly denounced, it is not clear that they were heretical He was suspected of Manichaean and Gnostic leanings because he stressed puristic ideals, sought perfection in asceticism, and dabbled in astrology The Church had been attacking his views for some time, when Emperor Maximus ordered that Priscillian be put to death for practicing "magic" His execution was strongly protested by his former opponents in the Church, St Ambrose, St Martin, and the pope After a council held at Braga (563?) finally condemned it, Priscillianism disappeared from Spain

Prishtina, Yugoslavia see PRISTINA

prism: see SPECTRUM

prison, place of detention for the punishment and reform of criminals By the end of the 18th cent, imprisonment had been widely adopted as the chief mode of punishment At that time, largely as a result of the writings of BECCARIA in Italy and John HOWARD and others in England, there was a wave of penal reform, and improvement in the unspeakable conditions of detention places was begun The earliest American reform centered in Philadelphia (1790) and in Auburn, N Y, where systems of solitary confinement and congregate labor were introduced Reform efforts continued through the 19th cent, with two notable women (Elizabeth Fry and Dorothea L Dix) among the reformers British (especially Irish) influences led to the practice of PAROLE In the 20th cent, much has been accomplished in the United States to do away with unsanitary and demoralizing prison conditions, some advances have been made in individualization of treatment, inmate self-government, and constructive labor and vocational training (see CONVICT LABOR) There has been a growing tendency to regard the basic aim of imprisonment as regeneration of the criminal rather than as retributive punishment or protection of society by isolating the criminal In many places, corporal punishment is still used as a disciplinary measure, and such institutions as the chain gang are notorious for their brutality The chief types of modern American prisons (with similar institutions in other countries) are the local jail for pre-trial detention and short sentences and the state and Federal penitentiaries for convicts with long sentences Special institutions are provided for sick and insane criminals. Juvenile delinquents are usually sent to reformatories or other corrective institutions In England, the BORSTAL SYSTEM takes care of young offenders Among famous prisons are the Bastille, in Paris, the Tower of London, and in the United States, Sing Sing and Alcatraz See Blake McKelvey, *American Prisons* (1936), L. N. Robinson, *Jails* (1944); N. K. Teeters, *World Penal Systems* (1945)

prisoners of war. In ancient times the captors of prisoners of war held the right of life or death over them. The practice of keeping prisoners of war as slaves generally replaced that of killing them; this practice continued until relatively modern times among some Asiatic nations In the Ottoman Empire and in the Barbary states prisoners were also long considered as war booty, but the practice of offering them for ransom became general at least with regard to Christian captives In feudal times the custom of ransoming prisoners of war was general throughout Europe, as was that of releasing distinguished captives in exchange for hostages The fate of prisoners of the lower classes was usually unenviable, nobles were often, but by no means always, treated with consideration There were no commonly accepted standards of treatment Modern thought on the treatment of prisoners of war was succinctly stated by Montesquieu in *De l'esprit des lois* and by J J Rousseau in his *Social Contract*, both held that the right of the captor over the prisoner was limited to preventing him from taking up arms again and ceased altogether with the end of hostilities Their view was elaborated by Emerich de VATTEL Although no general international convention was reached before 1899 regarding prisoners of war, the humane view found wide acceptance, though it was not always practiced During the American Civil War Francis LIEBER drew up General Order No 100, which was a basis for subsequent conventions The first international convention on prisoners of war was signed at the Hague Peace Conference of 1899 It was widened by the Hague Convention of 1907 After the First World War, in which the Hague rules proved insufficient, the International RED CROSS proposed a more complete code At the invitation of the Swiss government, 47 governments meeting at Geneva in 1929 signed the Geneva Convention Relative to the Treatment of Prisoners of War, which remains the international law on the subject Chief among the nations which did not adhere to the Geneva Convention of 1929 were Japan and the USSR Japan, however, gave qualified promise (1942) to abide by the Geneva rules, the USSR announced (1941) that it would observe the terms of the Hague Convention of 1907, which did not provide (as does the Geneva Convention) for neutral inspection of prison camps, for the exchange of prisoners' names, and for correspondence with prisoners According to the Geneva Convention no prisoner of war can be forced to disclose to his captor any information other than his identity (i e, his name and rank, but not his military unit, home town, or address of relatives) Every prisoner of war is entitled to adequate food and medical care and has the right to exchange correspondence and receive parcels He is required to observe ordinary military discipline and courtesy, but he may attempt to escape at his own risk Once recaptured, he cannot be punished for his attempt Officers receive pay either according to the pay scale of their own country or to that of their captor, whichever is less, they cannot be required to work Enlisted men may be required to work for pay, but the nature and location of their work should not expose them to danger, and in no case can they be required to perform work directly related to military operations Camps should be open to inspection by authorized representatives of a neutral power In the Second World War, Switzerland and Sweden acted as protecting powers The International Red Cross at Geneva acted as clearing house for the exchange of all information regarding prisoners of war and had charge of transmitting correspondence and parcels It accomplished its truly gigantic task with remarkable efficiency With minor and inevitable exceptions on the lower levels, the United States and Great Britain fully honored the Geneva Convention throughout the conflict Japan at first committed such atrocities as the "death march of Bataan," but generally abided by the rules after a sufficient number of Japanese prisoners had fallen into Allied hands to make reprisals possible Germany did not treat all its prisoners alike. Americans and British subjects received the best treatment, Polish prisoners the worst At the end of the war the repatriation of prisoners of war was a major problem, which was part of the general problem of displaced persons At the beginning of 1950 all prisoners of war, except those accused or convicted of war crimes, had supposedly been repatriated or otherwise accounted for (many German prisoners, for instance, elected to remain in France) However, the government of Western Germany charged that the USSR had failed to account for a substantial number of prisoners and demanded an investigation The USSR, asserting that the charges were unfounded, refused to comply Despite the many and serious breaches of the Geneva Convention in the Second World War, the treatment accorded by the military authorities of any power to prisoners of war was far superior to that suffered by the civilian population of occupied or devastated areas See W. E. S. Flory, *Prisoners of War a Study in the Development of International Law* (1942).

Pristina or **Prishtina**, Serbo-Croatian *Priština* (prē'shtĭnä), city (pop. 19,822), S Serbia, Yugoslavia, N of Skoplje. It was a capital of the medieval Serbian empire Near by is the famous 14th-century monastery of Gracanica (Serbo-Croatian *Gračanica*), with notable frescoes.

Pritchard, Charles (prĭ'chûrd), 1808–93, English astronomer, b Shropshire, grad St John's College, Cambridge. He was Savilian professor of astronomy at Oxford from 1870, where he planned and developed a new observatory In 1885 appeared his *Uranometria Nova Oxoniensis*, a catalogue of stars with their relative brightness, which he had measured by means of a "wedge photometer" of his own invention In determining the parallax of stars he made use of photography, an application he was one of the first to develop In addition to scientific articles, he wrote *Occasional Thoughts of an Astronomer on Nature and Revelation* (1889)

Pritchett, Henry Smith (prĭ'chĭt), 1857–1939, American astronomer and educator, b Fayette, Mo, grad Pritchett College, Glasgow, Mo, 1875, Ph D Univ of Munich, 1894 From 1878 to 1906 he was successively assistant astronomer, U S naval observatory, professor of astronomy, Washington Univ, St Louis, superintendent of the U S Coast and Geodetic Survey, and president of the Massachusetts Institute of Technology After 1906 he was internationally known as the president of the Carnegie Foundation for the Advancement of Teaching, retiring as president emeritus in 1930

Privas (prēvä'), town (pop 4,000), capital of Ardèche dept, S France, at the foot of the Cévennes It has silk and wool manufactures

privateering, former usage of war permitting privately owned and operated war vessels (privateers) under commission of a belligerent government to capture enemy shipping Private ownership distinguished the privateer from an ordinary warship, letters of marque and reprisal (commission issued by a government), distinguished it from pirate craft The primary object of privateering was to harass the enemy, but it was often practiced as a retaliatory measure The great era of privateering was the period from 1692 to 1814, when privateers became adjuncts of national navies and when weaker naval powers used privateers as an effective method of injuring a more powerful maritime rival Privateersmen, who kept all or a part of their booty, often gained great wealth After the defeat of the French fleet by the Dutch and English (1692), France commissioned privateers, who preyed upon English commerce In the American Revolution and in the War of 1812 American privateersmen (including Joshua Barney, Thomas Boyle, Otway Burns, and Stephen Decatur) captured hundreds of prizes The Confederate States issued letters of marque, but the Federal blockade was effective In attempting to curb the abuses of privateering, nations required that captures be condemned in admiralty courts and that commissions (in restricted number) be granted only in the name of the sovereign Privateersmen were free of naval discipline, and their desire for PRIZE led them often to make no distinction between friendly and enemy shipping, to violate the rules of war, and to indulge in lawlessness after the conclusion of peace These abuses and new theories of naval warfare led to the abolition of privateering by the Declaration of Paris (1856) The declaration does not prohibit the creation of voluntary navies consisting of private vessels under the control of a state, such as that used in the Second World War in the evacuation from Dunkirk See E S Maclay, *History of American Privateers* (1902), E P Statham, *Privateers and Privateering* (1910), W C Kendall, *Private Men of War* (1931), J P Cranwell and W P Case, *Men of Marque* (1940)

private international law see CONFLICT OF LAWS

privet (prĭv'ĭt), any plant of the genus *Ligustrum*, Old World shrubs or small trees some of which are common as hedge plants Privet hedges (chiefly of the common and California privets) are popular because of their dark green leaves and their ease of cultivation even against adverse city conditions Some are fairly hardy in the north, but may be killed back to the ground by severe winters The various species are evergreen, nearly evergreen, or deciduous, some producing small white flowers in profusion They are usually propagated by cuttings The common privet (*Ligustrum vulgare*) has become naturalized in the United States

Prix de Rome, Grand (grä' prē' du rōm'), prize awarded by the French government, through competitive examination, to students of the fine arts It entitles them to four years' study at the Académie de France à Rome, an adequate annual income for expenses, and exemption from military service The prize is open to all French painters, sculptors, architects, engravers, and musicians between the ages of 15 and 30 who have completed required work at the École des Beaux-Arts or elsewhere It was instituted by Louis XIV in 1666 for the purpose of enabling talented student painters and sculptors to complete their education by study of classical art in Rome In 1720 the competition was opened also to architects, and in 1803 to engravers and musicians. The Académie des Beaux-Arts has charge of the competition, and the prize is awarded annually in all departments except en-

graving, the engraving award being made every two years For the final competition 10 students are selected and are given three months for the preparation of their work For the competition in music the entrant is required to compose a cantata A successful student must send to the French Salon annually during his residence in Rome specimens of his work (if a musician, to the Académie des Beaux-Arts).

prize, in maritime law, the private property of an enemy which a belligerent captures at sea For the capture of the vessel or cargo to be lawful it must be made outside neutral waters and by authority of the belligerent A prize court, in the territory of the belligerent or in that of an allied power, must adjudicate that the property belonged to an enemy national After the prize is captured, it is ordinarily placed in charge of a prize master and sent into port for judicial proceedings, however, if the enemy character of the ship is readily apparent, it may be destroyed at sea (after passengers, crew, and ship's papers have been removed), with the captor's government being liable for the losses of neutrals If the prize is sold before being adjudicated, the proceeds must be delivered to the court for distribution In case of condemnation the entire proceeds go to the belligerent government In the United States, since 1899, the crew of the vessel effecting capture has had no right to share in the profits of the sale A prize court renders a decision on the basis of the ship's papers, the testimony of those on board, and other relevant factors If the ship is not condemned, it is released and damages are awarded where no justifiable reason for its capture has been shown Prize law initially developed from the desire of governments to share in the profits made by ships engaged in PRIVATEERING The governments also wished to minimize diplomatic claims for damages by establishing regular procedures for disposing of captures Although they nominally apply international law, prize courts (in the United States, the Federal courts) in awarding judgment have been influenced, or even bound, by the national law To avoid this, prize cases are sometimes referred to international tribunals Efforts to establish an international prize court with appellate jurisdiction, however, have not succeeded See J W Garner, *Prize Law during the World War* (1927), C J Colombos, *Treatise on the Law of Prize* (1940)

prize fighting see BOXING

Prizren (prĕz'rĕn), city (pop 19,839), S Serbia, NW of Skoplje It was an important medieval trade center and reached its height as capital (14th cent) of the Serbian empire under Stephen Dushan, who is buried in a near-by monastery There are numerous ancient churches and monasteries, some of them in ruins

probability, in mathematics, a precisely defined value which indicates the chance of (or odds for) a given event occurring It is sometimes defined as the ratio of the number of ways in which the event can happen to the total number of ways in which it can either happen or not happen Thus the probability of an event is always a value between 0 and 1, 0 meaning that the event will not happen and 1 that it is certain to occur For example, if a penny is tossed, the probability of its landing heads up is 1/2, for this can happen only in one way (heads up) while there are two possible results of the toss (heads up or tails up) In cases in which it is not possible to determine the two figures used in computing the ratio (so that the above definition cannot be applied), the probability of the event is taken to be the limiting value of a sequence of ratios of the number of successes (occurrences of the event) to the total number of trials, as the number of trials is increased indefinitely Probability computed in this way is the basis of all insurance calculations If, out of a certain group of 1,000 people who were 25 years old in 1880, a certain number, e g , 120, lived to be 65, then the ratio 12/100 is approximately the probability of a 25-year-old person's living to be 65 Since the number of trials (1,000) is so large that this ratio, which may be considered as one of a sequence of ratios based upon numbers of trials varying up to 1,000, is very near the limiting value of the sequence Such a probability statement is of course true only for a group of people very similar to the original group However, by basing such life-expectation figures on very large groups of people and by constantly revising the figures as new data are obtained, values can be found that will be valid for most large groups of people and under most conditions of life The theory of probability was first developed by Blaise Pascal c 1654, and its history since that time involves the contributions of many of the world's great mathematicians. See Isaac Todhunter, *A History of the Mathematical Theory of Probability* (1865), J M Keynes, *A Treatise on Probability* (1921), J V Uspensky, *Introduction to Mathematical Probability* (1937)

probate (prō'bāt), in law, the certification by a court that a WILL was duly executed Probate, which is governed by various statutes in the jurisdictions of the United States, is required before the will can take effect The procedure requires that notification of a hearing be given to all persons who may possibly inherit the testator's property Lost wills and oral wills may also be probated if proof of due execution is furnished If the will is certified, the court will issue letters testamentary authorizing executors to carry out its provisions The judge sitting on a probate court is ordinarily called a surrogate

probation: see PAROLE

Probus (Marcus Aurelius Probus) (prō'bŭs), d 282, Roman emperor (276–82), b Pannonia He fought under VALERIAN and became governor of the East under M Claudius TACITUS, whom he succeeded as emperor He defeated the barbarians in Gaul and Illyricum and suppressed rebellions He reformed the administration and embellished Rome with fine buildings His troops mutinied and killed him His successor was CARUS

Procaccini (prōkät-chē'nē), Italian family of painters **Ercole Procaccini** (ĕr'kōlā), 1515?–c 1590, was head of a Bolognese school of painting His son and pupil, **Camillo Procaccini** (kämĕl'lō), c 1550–1629, was a historical painter His works are characterized by facile though somewhat careless execution, devotional feeling, and fine coloring Among his works are *Adoration of the Magi* (Brera, Milan), *Madonna and Child* (Santa Maria del Carmine, Milan), *Calling of St Peter* (Liechtenstein Gall , Vienna), and *Adoration of the Shepherds* (San Francesco, Bologna) His brother, **Giulio Cesare Procaccini** (jōō'lyō chā'zärā), c 1570–1625, became a highly successful imitator of Correggio His works are to be seen chiefly in the churches of Milan, especially the cathedral, and in the palaces of Genoa Others are a *Last Supper* (Church of the Annunziata, Genoa), the *Circumcision* (Modena), *Martyrdom of St Agatha* (the Ambrosiana, Milan), and *Marriage of the Virgin* (Parma)

procedure, in law, the rules which govern the obtaining of legal redress This article deals only with civil procedure (for criminal prosecution, see CRIMINAL LAW) Except for EVIDENCE, procedure conventionally embraces all matters concerning legal actions, thus, it is the means for enforcing the rights guaranteed by the substantive law A legal action, in its simplest form, is a proceeding of a plaintiff against a defendant from whom he seeks redress The plaintiff by his service upon the defendant of process (e g , a summons) gives a court jurisdiction over the case, i e , empowers it to render an enforceable judgment If the defendant does not respond to the process, the plaintiff is ordinarily entitled to a judgment by default When (as in most instances) the defendant contests the suit, the issue between the parties must be formulated by the pleadings These are written statements of the plaintiff's claim (the complaint) and the defendant's rejoinder (the answer) and of any additional responsive allegations which may be needed to join issue (determine the point in contention) The issue is one of law if the defendant denies that the acts with which the plaintiff charges him constitute a cause of action (i e , a violation of the substantive law entitling the plaintiff to relief) If the judge upholds the defendant's contention, the plaintiff's suit is dismissed, if he upholds the plaintiff, the parties proceed to formulate the issue of fact (e g , whether the defendant did or did not strike the plaintiff) and to present their evidence to the JURY After the jury has delivered a verdict on the factual issue, the judge renders his judgment, which in most (but by no means all) instances upholds the verdict At this point the case is closed (unless the losing party prosecutes an APPEAL), and if the plaintiff has won, he proceeds to execution of the JUDGMENT Current procedural law has had a long historical evolution The early COMMON LAW allowed an action to be brought only if it closely conformed to a WRIT Rigorous enforcement of the rule, "no writ, no right," and the small number of available writs acted to deny relief in meritorious cases and stimulated the growth of EQUITY, which, in its early days, gave redress generously By the 19th cent , however, the technical intricacy of equity and law procedure and the tendency to make cases hinge on procedural details rather than substantive rights made reform imperative The way was led by the New York code of civil procedure of 1848 (largely the work of David Dudley FIELD) which abolished the distinction of law and equity (thereby effecting great simplification) and established the cause of action as the procedural cornerstone A similar reform was accomplished in Great Britain by the Judicature Acts of 1875 Today the procedure of most American states is based on codes (like that of New York) rather than on common law and equity See Jerome Michael, *The Elements of Legal Controversy* (1948).

process, in law, see PROCEDURE

Prochorus (prŏ'kûrus), [Gr ,=leader of a chorus], one of the seven deacons According to tradition he became bishop of Nicomedia Acts 6 5.

Procida, John of, see JOHN OF PROCIDA

Procida (prō'chĕdä), small volcanic island, S Italy, in the Bay of Naples, between Cape Miseno and Ischia John of Procida was lord of this island, from which he took his name

Proclus (prō'klŭs), 410?–485, Neoplatonic philosopher, b. Constantinople. He studied at Alexandria and at Athens, where he was a pupil of the Platonist, Syrianus, whom he succeeded as a teacher. As a partisan of paganism he was forced to leave Athens, but he returned at the end of a year A synthesizer of Neoplatonic doctrines, Proclus gave the philosophy its most complete form He kept the elements of Plotinus, but introduced a principle of triadic development in the series of emanations, the three stages being an original, an emergence from the original, and a return in a lower form to the original Proclus differed from Plotinus in regard to the origin of matter, which he held to emerge from the first emanation rather than from the plastic forces Among his writings are commentaries on several Platonic dialogues and two treatises, *On Plato's Theology* and *Institutes of Theology* See NEOPLATONISM See Thomas Whittaker, *The Neo-Platonists* (1928)

Procne see PHILOMELA.

Proconnesus, see MARMARA

proconsul (prō"kŏn'sul), governor of a Roman province The post was usually conferred on a retiring consul or praetor but in exceptional cases others were appointed A proconsul held office for 12 months after reaching his post, or until his successor arrived He was in sole charge of the army, of justice, and of administration in his province and could not be prosecuted for maladministration until expiry of his office

Procopius (prōkō'pēus), d 562?, Byzantine historian He accompanied BELISARIUS on his campaigns as secretary and later commanded the imperial navy and served as prefect of Constantinople His education, high connections, and public offices give his histories great value as firsthand accounts He excelled in describing events which he himself witnessed, but he was careless in the use of sources His chief works are generally known as *Procopius' History of His Own Time*, dealing mainly with the wars against the Goths, Vandals, and Persians, and as the *Secret History of Procopius*, which is largely a scandalous and often scurrilous court chronicle His authorship of the *Secret History* has been questioned In his polished style Procopius imitated the historians of the Greek classical period His description of social and religious customs among the barbarians are very valuable, but his histories are marred by his violent prejudices, e g , in favor of Belisarius and against Empress Theodora

Procopius the Great, d 1434, Czech Hussite leader, called Prokop A married priest, he distinguished himself as a captain under John Zizka in the HUSSITE WARS He became (c 1425) the chief of the radical TABORITES and commanded in the great Hussite victory (1426) over the Saxons at Ustí-nad-Labem In the subsequent four years Procopius led Hussite forces to victory in Hungary, Silesia, Saxony, and Thuringia and was chosen commander in chief of the Czech forces against a new anti-Hussite campaign in 1431 The crushing defeat which he inflicted (Aug , 1431) on the crusaders at Domažlice led to peace negotiations (1432) at Eger (Cheb) between the Hussites and representatives of the Council of Basel Procopius, however, continued to campaign in Lusatia, Silesia, and Brandenburg even after Hussite delegates had arrived (1433) at Basel to negotiate a religious compromise He rejected the Compactata to which the moderate wing of the Hussites, the UTRAQUISTS, had agreed The Utraquists and Catholics of Bohemia now united their forces against the Taborites, whom they crushed at Lipany (1434), Procopius died in the battle As a general, Procopius was a worthy successor of Zizka His ally, **Procopius the Little,** called Prokupek, d 1434, was the leader of the Orphans, a radical group close to the Taborites He commanded at the unsuccessful siege (1432-34) of Pilsen, a Catholic stronghold, and perished in the battle of Lipany

Procrustes (prōkrŭ'stēz) [Gr ,=stretcher], in Greek legend, celebrated robber When guests accepted his hospitality he made them lie on one of two beds, one very long, the other very short If the guest was too long for the short bed, Procrustes cut off his legs until he was short enough, if he lay on the long bed, Procrustes stretched him until he fitted it. THESEUS killed the robber

Procter, Adelaide Anne, 1825–64, English poet, daughter of B W. Procter (Barry Cornwall) She wrote *Legends and Lyrics* (1858–61), which contained "The Lost Chord," and *A Chaplet of Verses* (1862) Her poetry, including many hymns, was very popular.

Procter, Bryan Waller. see CORNWALL, BARRY.

Proctor, Alexander Phimister, 1862–, American sculptor and painter, b Ontario In childhood he learned the wild life of the Rocky Mts in Colorado. His decorative work for the World's Columbian Exposition, Chicago, 1893, began a career distinguished for animal sculptures of power and individuality, often combined with human figures Examples are *Quadriga* for the U S. pavilion, Paris exposition, 1900, *Panthers* (Prospect Park, Brooklyn, N.Y.); *Princeton Tiger* (Princeton Univ.),

Broncho Buster and *On the Warpath* (Civic Center, Denver); *Wild Mustangs* (Univ of Texas); *R E. Lee Inspiring Youth of the South* (Dallas, Texas); and the equestrian *Roosevelt as a Rough Rider* (Portland, Oregon). His bronzes are in the Corcoran Gallery and the Metropolitan Museum

Proctor, Redfield, 1831–1908, American industrialist and political leader, b. Windsor co., Vt., grad Dartmouth, 1851. He studied law, practiced in Boston, and fought in the Civil War After he returned to Vermont he became president of the Vermont Marble Company at Sutherland Falls (now Proctor) and made the company one of the largest of its kind in the country He served in both houses of the state legislature and was lieutenant governor (1876–78) and governor (1878–80) before he became (1889) U S Secretary of War He resigned (1891) this post to enter the U S Senate, where he served until his death He visited Cuba in 1898, and his speech depicting conditions there was one of the immediate factors in bringing the United States into the Spanish-American War

Proctor, Richard Anthony, 1837–88, English astronomer and popular writer on scientific subjects In 1865 he published *Saturn and Its System* He founded in 1881 a popular scientific magazine, *Knowledge* Beginning in 1873, he made lecture tours in the United States and Australia, and from 1881 he lived in the United States—in Missouri and later in Florida Among his many books are *Half-Hours with the Telescope* (1868), *Half-Hours with the Stars* (1869), *Other Worlds than Ours* (1870), *The Orbs around Us* (1872), *The Borderland of Science* (1873), *Transits of Venus* (1874), *Mysteries of Time and Space* (1883), and *Old and New Astronomy* (completed by A C Ranyard, 1892)

Proctor 1 Village (pop 2,468), NE Minn, just SW of Duluth, settled 1893, inc 1894, called Proctorknott until 1939 It is a shipping point for iron ore 2 Town (pop 2,292), W Vt, NW of Rutland, on Otter Creek It includes Proctor village (pop 2,184) The village site was known as Sutherland Falls until Redfield Proctor developed the great Vermont Marble Company here Much of the construction in the village is of marble

Proctorsville, village (pop 643) in Cavendish town, SE Vt, in the Green Mts It grew as a lumber-milling and woolen-milling center. It is the birthplace of Redfield Proctor

prodigal son, parable of Jesus on heaven and the sinner who repents A young man leaves home and becomes a wastrel, repentant, he returns to be received with joyful welcome Luke 15 11–32

producer gas, fuel gas consisting chiefly of carbon monoxide and nitrogen It is prepared in a furnace or generator in which air is forced upward through a burning mass of coal or coke Although the fuel is introduced through the top, no air is admitted there The carbon of the fuel is oxidized by the oxygen of the air from below to form the carbon monoxide The nitrogen of the air, being inert, passes through the fire without change When steam is introduced with the air, the final gaseous product contains hydrogen also Producer gas has a low heating value because it is about 60 percent inert nitrogen It is widely used in industry because it can be made with cheap fuel

production, in economics, a term applied to all those activities of mankind which have to do with the creation of wealth, i e, with imparting to the raw materials of nature utility for satisfying human wants The farmer who manipulates the forces of nature to grow wheat, the miller who grinds the wheat into flour, and the baker who transforms flour into bread are examples of producers who, each in his own way, impart form utility to a natural material Another class of producers, those engaged in transportation, add place utility to goods or commodities, and a third class, including those engaged in canning, storage, and refrigeration activities, add time utility The creation of time and place utilities, thought of by businessmen as MARKETING, is regarded by economists as a part of production, for until goods are made available at the right time and place, it is obvious that they cannot satisfy human wants For any kind of production in modern society, large amounts of capital in the form of machinery are required Equally essential are land or nature, from which the raw materials are obtained, and labor, which with the aid of capital extracts and transforms the raw materials To these three primary factors of production is sometimes added a fourth, the entrepreneur or enterpriser, who organizes the forces of production and assumes the risks Since under capitalism production is for a market, an important function of the entrepreneur is to anticipate as accurately as he can the economic demand for goods and to produce the kind and quantity of goods that can be disposed of With the development of power and automatic machinery and with the many other practical applications of science, the production of goods to satisfy human wants has ceased to be a major economic problem Goods can readily be produced in excess of financial ability to buy them. Distribution has become a more difficult problem than production. Overproduction is production in excess of effective economic demand, i e., of ability to buy, not of ability or desire to consume A surplus is what cannot be sold profitably, not what could not be used The tendency is more and more to standardize goods and so produce them at low cost by a process characterized by extensive use of automatic machinery and minute division of labor, as exemplified by the so-called assembly-line methods of motor-car plants Such mass production is necessarily accompanied by large-scale purchase of raw materials and mass distribution of the manufactured goods See R G Tugwell and H C. Hill, *Our Economic Society* (1934)

professional, in athletics see AMATEUR

profit, in economics, the share of the entrepreneur in the product of industry As the capitalist receives interest, the landlord rent, and the workingman wages, so the entrepreneur receives profit, which is interpreted as remuneration for the labor of management In a business enterprise profit is thought of as the amount by which returns exceed expenditures When the entrepreneur provides his own capital, he often regards profit as the sole return of his investment of capital The owner of common stock in a corporation likewise usually thinks of dividends solely as profits, although they contain an element of interest It is profit in this loose sense which is spoken of as the incentive to production under capitalism In a cooperative, socialistic, or communistic society it is assumed that other motives than profit would become effective as incentives to production

profit sharing, arrangement by which employees, in addition to their wages, receive a share of the net profits of a business The purpose is to give them an incentive to increase their output through enhanced morale, less wasteful use of materials, better care of tools, and the like Profit sharing does not imply participation by the workers in management The employer determines the rate at which they share, a rate fixed beforehand, in which respect it differs from a bonus system Profit-sharing plans have been in operation in France since 1842 but have not been widely adopted in the United States The plan has been most successful in businesses where employees must work without direct supervision and where it is limited to supervisory employees or lesser executives, e g, branch managers and department managers in department stores

program music is so called because a program is needed to explain its external associations It endeavors to arouse in the thoughts of the hearer some association with external objects or ideas—to tell a story, depict a scene, or impel a mood Berlioz's *Symphonie fantastique*, intended by the composer as program music, might be contrasted with a symphony of Brahms, considering the latter as ABSOLUTE MUSIC

progressive education, movement in modern education It was developed in Europe by Froebel, Pestalozzi, and Montessori and in the United States by Francis Wayland Parker and John Dewey Postulates of the movement are that the child learns best in those experiences which have vital self-interest, and modes of behavior are most easily learned by actual performance Therefore, education must be a continuous reconstruction of living experience based on activity directed by the child The recognition of individual differences is crucial Progressive education opposes the formalized authoritarian procedure and fosters reorganization (see SCHOOL) of class-room practice, curriculum, and attitudes toward the individual student An early reorganization of subject matter was the project method devised by John Dewey and practiced (1896–1904) at his Laboratory School in Chicago Here the group's work is centered about some central project related to the interests of the students The division of more advanced work into the unit method is an attempt to adapt the theory to more rigid curriculums The Dalton plan, at Dalton, Mass (1919), subdivides the work of the traditional curriculum into contract units which the student undertakes to accomplish in a certain time The Winnetka plan, established at Winnetka, Ill., in 1919, separates the curriculum into the essential subjects handled by the Dalton technique and uses the cooperative method of creative and socialized activities in which the students work together Prominent experimental schools were that established by Parker at the Cook County Normal School (1883), the Horace Mann School (1887), the Speyer School (1899) and the Lincoln School (1917) at Teachers College, Columbia Univ., and the experimental school (1915) at the State Univ of Iowa The activities program, designed to supply the values of progressive education where more drastic adjustments are not possible, includes such devices as club programs, student self-government, and school publications The influence of progressive education's idea of learning by doing can be observed in modern vocational training and in the training techniques used by the army in the Second World War See KINDERGARTEN, NURSERY SCHOOL; ADULT EDUCATION; GUIDANCE. See W. H. Kilpatrick and others, *The Educational Frontier* (1933); J. W. Wrightstone, *Appraisal of Newer Practices in Selected Public Schools* (1938); A. E. Meyer, *The Development of Education in the Twentieth Century* (1939), W. M. Aikin, *The Story of the Eight Year Study* (1942)

Progressive party, in U S history, the name of three political organizations, active, respectively, in the presidential elections of 1912, 1924, and 1948 Republican insurgents dissatisfied with the conservative administration of President William Howard TAFT formed (Jan., 1911) the National Progressive Republican League Sen Robert M LA FOLLETTE was their choice for the Republican presidential nomination in 1912 until ex-President Theodore ROOSEVELT, at odds with his old friend Taft for various personal and political reasons, threw his "hat into the ring" (Feb 24, 1912) The regular Republicans, however, controlled the national convention at Chicago (June) and renominated Taft, whereupon the Roosevelt supporters organized the new Progressive party (the Bull Moose party) and nominated, also at Chicago (August), Roosevelt for President and Hiram W JOHNSON for Vice President The Progressive platform called for the direct election of U S Senators, the initiative, referendum, and recall, woman suffrage, downward revision of the tariff, and many social reforms After an exciting campaign, the Democratic candidate, Woodrow Wilson, won, but Roosevelt, who received 88 electoral votes and over 4,000,000 popular votes, fared better than Taft The party maintained its organization until 1916, when, after Roosevelt declined another nomination, most Progressives supported the Republican presidential candidate, Charles Evans Hughes Some years later, the success of the Conference for Progressive Political Action, sponsored by the railroad brotherhoods, in the Congressional elections of 1922 led to the nomination at Cleveland in 1924 of another Progressive party ticket, with La Follette for President and Burton K. WHEELER for Vice President La Follette's program, supported by the American Federation of Labor, the Socialist and Farmer-Labor parties, and most other non-Communist left-wing groups, called for the uprooting of monopoly, public control and conservation of natural resources, abolition of child labor, and recognition of the right of labor to organize and bargain collectively In the Coolidge landslide which followed, La Follette won only the 13 electoral votes of Wisconsin, but polled nearly 5,000,000 popular votes Under La Follette's sons, Robert M., Jr., and Philip F., the Progressives continued strong in Wisconsin until 1938, when they were defeated by the Republicans In 1946 the Wisconsin party dissolved itself and joined the Republicans The third Progressive party appeared at Philadelphia in July, 1948, when a new third party, organized as a challenge to the Democratic party, adopted the name and nominated Henry A WALLACE for President and Senator Glen H. TAYLOR for Vice President Endorsed to some degree by the COMMUNIST PARTY, which was said by many to control the organization, and by the AMERICAN LABOR PARTY of New York state, this Progressive party advocated repeal of the Taft-Hartley Act and the re-establishment of wartime price controls It denounced the Truman administration for failing to cooperate with Soviet Russia to end the cold war Its candidates won no electoral votes and only slightly more than 1,000,000 popular votes See B P De Witt, *The Progressive Movement* (1915), G E Mowry, *Theodore Roosevelt and the Progressive Movement* (1940), K C MacKay, *The Progressive Movement of 1924* (1947)

progressive school. see PROGRESSIVE EDUCATION and SCHOOL

prohibition, legal method of controlling the manufacture and sale of alcoholic beverages, the extreme of the regulatory LIQUOR LAWS The modern movement for prohibition had its main growth in the United States and developed largely as a result of the agitation of 19th-century TEMPERANCE MOVEMENTS A number of states passed prohibitory laws in the early part of the century, but most of them were soon repealed A new wave of state "dry" legislation followed the creation (1846–51) of a model law in Maine After this time emphasis shifted from advocacy of temperance to outright demand for government prohibition Chief of the forces in this new and effective approach was the ANTI-SALOON LEAGUE Prohibition had now become a political issue, with a growing PROHIBITION PARTY and support from a number of rural, religious, and business groups The drive was given impetus in the First World War, when conservation policies necessitated limitation of liquor output. After the war national prohibition became the law, the Eighteenth Amendment to the Constitution forbidding the manufacture, sale, and import or export of liquor. In spite of the strict VOLSTEAD ACT, law enforcement proved to be almost impossible Smuggling on a large scale (see BOOTLEGGING) could not be prevented, and the illicit manufacture of liquor, mostly strong spirits, sprang up with such rapidity that authorities were unable to suppress it. There followed a period of unparalleled drinking (often of inferior and dangerous bever-

ages) and lawbreaking. In 1933 the Twenty-first Amendment, repealing prohibition, was ratified. A number of states, counties and other divisions have maintained full or partial prohibition under the right of local option Prohibition laws were passed in Finland, the Scandinavian countries, and most of Canada after the First World War These were repealed, partly because of serious consequences to the countries' commerce with wine-exporting nations See *Report on the Enforcement of the Prohibition Laws* (1931) by the National Commission on Law Observance and Enforcement (Wickersham Commission), Charles Merz, *The Dry Decade* (1941), J H Wuorinen, *The Prohibition Experiment in Finland* (1931), Clark Warburton, *The Economic Results of Prohibition* (1932)

Prohibition party, in U S history, minor political party formed (1869) primarily for the legislative prohibition of the manufacture, transportation, and sale of alcoholic beverages Temperance leaders failed to gain active support from the major political parties in the early and middle 19th cent, and the movement which developed in 1867 for a separate party to campaign for prohibition culminated in the organization (Sept, 1869) of the Prohibition party at a convention in Chicago by delegates from 20 states After gaining several local victories, the Prohibition party offered a presidential candidate in 1872, and since that time it has offered candidates in every presidential election Though the central issue pressed by the party was that of prohibition, other reform planks—e g, woman suffrage, income-tax legislation, railroad regulation, the creation of a tariff commission—were also adopted over a period of years Its earlier presidential candidates—James Black (1872), Green C Smith (1876), and Neal Dow (1880)—each polled a very small number of votes A vigorous presidential campaign by John P St. John in 1884 resulted in the party's first sizable popular vote (150,626), which was topped by almost 100,000 votes four years later by Clinton B Fisk The peak of popular support was reached in 1892, when John Bidwell won close to 271,000 votes. After the split in the Prohibition party in 1896 over the currency issue, in which Joshua Levering represented the regular party and Charles E Bentley was the presidential candidate of those dissenting groups which advocated the free coinage of silver, the party lost momentum The later Prohibition party presidential candidates —John G Woolley (1900), Silas C Swallow (1904), Eugene W Chafin (1908, 1912), J Frank Hanly (1916), Aaron S Watkins (1920), Herman P Faris (1924), William F Varney (1928), William D Upshaw (1932), D Leigh Colvin (1936), Roger W Babson (1940), and Claude A Watson (1944, 1948)—failed to build their party's strength The institution of PROHIBITION by the Eighteenth Amendment and its repeal by the Twenty-first Amendment had a decidedly weakening effect on the party

projectile, missile generally elongated for projection to a target Its history begins with the throwing of stones and clubs. The boomerang is an ingeniously shaped club which describes remarkable curves, one type returns to the thrower Spears have been hurled at enemies, and the arrow is in effect a small spear launched by a bow or by a blowgun. Until the introduction of gunpowder, the arrow was the usual projectile in hunting and in war Engines such as the crossbow, the ballista, and the catapult were devised to project arrows and stones Incendiary projectiles consisting of balls of cordage impregnated with Greek fire, a chemical mixture, were sometimes hurled at enemy ships and embattlements The role of projectiles in hunting and in war grew greatly with the introduction of gunpowder Balls of metal replaced stones as cannon ammunition The Royal Arsenal at Rouen in 1338 had a *pot de fer*, which sent crossbow darts into the ranks of the enemy The mortar came into existence by 1354, and since iron balls were used in 1350, a marriage of the two could not have been far removed from the middle of the 14th cent Rifling of bores permitted the use of cylindrical projectiles which proved much more effective than spherical ones. The projectile most widely used is the bullet, essentially a mass of metal When these metallic masses carry their own explosive charges they are explosive bullets, or in larger sizes, shells Among their great variety are armour-piercing shells, high-explosive shells, incendiary, shrapnel, tracers, star shells, each with its special purpose The science of the motion and effects of projectiles is called ballistics See W H Tschappat, *Text-Book of Ordnance and Gunnery* (1917), Willey Ley, *Shells and Shooting* (1942)

projection or **map projection**. Only a globe can represent the earth's surface features correctly with reference to area, shape, scale, and directions A projection from a globe to a flat map causes distortion with regard to some of these characteristics It involves the construction on a plane surface of a grid or net formed by two intersecting systems of lines which correspond to the parallels of latitude and the meridians of longitude on the globe. Some projections aim to preserve correct distances in all directions from the center of the map (equidistant projection), others show areas (equal-area projection) or shapes (conformal projection) equal to those on a globe of the same scale. Projections are usually classified as cylindrical, conical, or azimuthal, according to their geometric origin One of the best known is Mercator's projection, first published in 1569 and widely used for maps of the world In it all parallels and meridians are represented as straight lines, intersecting at right angles, and all the parallels have the same length as the equator, thus causing considerable distortions in high latitudes (compare the size of Greenland and South America on Mercator's projection), polar regions can never be shown The projection's great advantage lies in the fact that the rhumb line (i e, the line of constant compass which crosses every meridian at the same angle) is here shown as a straight line, thus making the projection of great value for navigation. Of considerable strategic interest in the present air age is the azimuthal equidistant projection used for the mapping of areas adjacent to the poles.

Prokofiev, Sergei Sergeyevich (syĭrgā' syĭrgā'uvĭch prōkôf'ĕĕf), 1891–, Russian composer, pianist, and conductor, pupil of Ghère and of Rimsky-Korsakov at the St Petersburg Conservatory His First Piano Concerto was composed while he was still a student at the conservatory, and at his graduation (1914) his performance of it won him first prize in piano The cacophony of his Second Piano Concerto (1913) aroused the indignation of the critics and the public His first mature orchestral work, *Scythian Suite*, was begun as a ballet on Scythian mythology, at the suggestion of Diaghilev, who also commissioned *Chout* (*The Buffoon*, 1921), a ballet based on Russian folk music Diaghilev later produced *Le Pas d'acier* (1927), Prokofiev's first Soviet composition, and *L'Enfant prodigue* (1929) Prokofiev's only experiment with polytonality and atonality, the cantata *Seven, They Are Seven* (1917), was written simultaneously with his popular Classical Symphony. He came to the United States in 1918, his opera *The Love for the Three Oranges* (1921) was produced in Chicago In 1922 he moved to Paris, where, in addition to the ballets for Diaghilev, he composed his Second, Third, and Fourth symphonies, the 50th anniversary (1930) of the Boston Symphony being the occasion for the Fourth, his Fourth and Fifth piano concertos, and his *Symphonic Song*, for orchestra His works of this period are harsh, energetic, and full of innovations After his return (1932) to Russia, his output became more prolific, and he employed more native Russian materials and greater lyricism Among his works in the years before the Second World War are an orchestral suite, *Lieutenant Kije* (1934, from music for a film, 1933), an orchestral fairy tale, *Peter and the Wolf* (1936), in which each character is indicated by a different instrument, incidental music for Pushkin's *Queen of Spades*, *Boris Godunov*, and *Eugene Onegin* (all 1936), a ballet, *Romeo and Juliet* (1935), a cantata for the 20th anniversary (1937) of the November Revolution, based on speeches of Lenin, Stalin, and Marx, *Alexander Nevsky* (1937), a cantata based on Prokofiev's music for the film directed by Sergei Eisenstein, operas, *Semyon Kotko* (Moscow, 1940) and *Betrothal in a Convent* (1940), based on Sheridan's *Duenna* During the war he completed his opera *War and Peace* (1941–42), after Tolstoy's novel, his Seventh (1939–42) and Eighth (1939–44) piano sonatas, the former winning him the Stalin Prize (1943), music for *Ivan the Terrible*, a film directed by Eisenstein, and his Fifth Symphony (Moscow, 1945) He has also composed two violin concertos, a cello concerto, and many piano pieces and songs He has toured the United States and Europe several times, both as a pianist and as a conductor See biography by Israel V. Nestyev (Eng tr, 1946)

Prokopovich, Feofan (fāufăn' prukupô'vĭch), 1681–1736, Russian churchman He was archbishop of Novgorod and was chosen by Peter I to carry out his ecclesiastical reforms. A highly cultured man, he was a foe of ignorance in the clergy His most famous work regulated church discipline He also wrote a play, *Vladimir*, a catechism, and numerous tracts He founded a literary academy

Prokopyevsk (prŭkôp'yĭfsk), city (1926 pop 10,717, 1939 pop 107,227), RSFSR, in S central Siberia It is a growing coal-mining center of the Kuznetsk Basin

proletariat (prōlətâ'rēut), in socialist theory, the class of exploited workers and wage earners who depend on their labor power for means of existence In ancient Rome, a proletarian (*proletarius*) was a citizen without property or assured income who was held to be useful to the state only as a producer of offspring (*proles*). According to Karl Marx, the breakup of feudalism created a new, propertyless class from the dispossessed peasants and retainers, who were forced to sell their labor for wages in the new industrial centers. The Marxist theory, later elaborated by Lenin, is that the proletariat must take power from the capitalist class and, after a period of proletarian dictatorship, establish a classless society. See H. J. Laski, *Communism* (1927).

Prome (prōm), city (pop. 28,295), S Burma, on the Irrawaddy river It is connected by rail with Rangoon Old Prome was the capital of the Indianized Pyus, who were conquered and absorbed by the Burmese, probably in the 9th cent. The ruins of the old city are near its modern namesake.

Prometheus (prōmē'thēus) [Gr, =forethought], in Greek religion, a Titan He helped the Olympian gods to overcome the Titans, but later his sympathy with mankind, to whom he brought fire and the arts, roused the anger of ZEUS. Another account makes him the creator of mankind out of earth and water. Zeus punished him by chaining him to a Caucasian mountain where a vulture devoured his liver There he remained until Hercules set him free Prometheus' father was IAPETUS, his mother CLYMENE or THEMIS His brother EPIMETHEUS shared his interest in mankind, and his son DEUCALION saved the human race from extinction in a great flood. The story of Prometheus is the theme of *Prometheus Bound* by Aeschylus Shelley, moved by the French Revolution, wrote *Prometheus Unbound* on the theme of the deliverance of mankind

promethium (prōmē'thēŭm), rare metallic element (symbol=Pm), a member of the group known as rare-earth elements Its existence (as element 61 in the periodic table) was predicted at the beginning of the 20th cent, and its discovery was reported (1926) by B S Hopkins and his co-workers J. A Harris and L F Yntema; identification was made by means of the X-ray spectroscope, and the name illinium (after Illinois) was proposed In Italy, Luigi Rolla and his associates reported at about the same time that they believed they had discovered element 61 and gave it the name florentium However, in 1945, definite identification of a radioactive form of the element was made during the course of experiments on plutonium by J A Marinsky, L E Glendenin, and C D Coryell These investigators made the first chemical identification of radioactive isotopes of element 61 Since observable quantities of the natural element had not been previously found, this identification of the synthetic form was considered by the discoverers to represent possibly the first actual discovery of the element They suggested the name promethium, which was adopted (1949) by the International Union of Chemistry.

prominences see CHROMOSPHERE

promissory note (prŏmĭsô'rē), written promise to pay a certain sum of money on demand or at a definite time to bearer or to a specified person or his order The holder of a note made payable to bearer may transfer his rights to another by delivery of the note If the note is payable to order, it may be transferred by indorsement and delivery

pronghorn or **prongbuck**, native North American hoofed mammal, found in the SW United States and Mexico Although it is often called pronghorned or American antelope it does not belong to the true antelope family of Africa and Asia, but is the only living member of the family Antilocapridae Like the antelope, it has horns consisting of a core of bone with a horny covering, but unlike the antelope the covering is shed annually The horns have a single fork, those of the antelope are unbranched The back is usually reddish brown with under parts and neck bands of white, the muzzle is dark A prominent white rump patch can be elevated to warn other pronghorns of danger Secretions of scent glands also serve as signals Once numerous in the W United States, the pronghorn was saved from probable extinction through protection in national forests and parks

pronoun, in English, PART OF SPEECH, comprising certain words used as substitutes for nouns In English the pronouns are a group of tiny nonproductive form classes overlapping with the function class of nouns (see NOUN) Such substitution is perhaps universal in languages, but languages differ greatly in their use of pronounlike words.

prontosil: see SULFA DRUGS.

pronunciation: see PHONETICS

proof, in law see EVIDENCE

proof. In printing, a proof is a trial impression for inspection **Proofreading** is inspection of proof and marking it for correction of errors and imperfections. Proofreaders' marks are given in dictionaries. Directions for proofreading are given in *A Manual of Style*, published by the Univ of Chicago Press

propaganda (prŏpăgăn'dù) [from Latin *de propaganda fide*=for the propagation of the faith, in the official title of the Congregation of the Propaganda, a Roman congregation, for this, see MISSIONS and VATICAN], method of creating or maintaining a favorable (or, conversely, a hostile) attitude toward some person, organization, or ideal by a positive or negative influencing of opinion Propaganda is as old as history, for it was employed by leaders of primitive society to manipulate tribal conduct. All religions have had some propagandists as prophets Every social system depends upon propaganda for its dissemination The alteration of private or of public conduct has usually been a result of propaganda. The forms of propa-

ganda are as diverse as its aims; the propagandist may be religious, social, cultural, or political The Congregation of the Propaganda and the Protestant missionary boards are disseminators of religious propaganda. The Carnegie Foundation for International Peace has, as its object, the spreading of anti-war information The dissemination of propaganda is one of the chief activities of COMMUNISM Other organizations, equally diverse, have propagandizing as a chief, or a subsidiary, purpose; e g , the U S Chamber of Commerce, the Civil Liberties Union, the National Association of Manufacturers, the American Federation of Labor, and the Congress of Industrial Organizations Propaganda may be spread by direct or indirect means, free propaganda often being more effective than that for which money is paid The agent of dissemination may be open and acknowledged, or its identity may be purposely obscured The press, the radio, the theater, and the platform are used in the presentation of propaganda, and even the arts are media. The field of organized publicity is the stronghold of the propagandist Because governments have long realized the power of propaganda, they have sought to control its distribution, state supervision of radio broadcasting stations and the control of official newspapers help to maintain or create favorable public opinion within the nation, while subsidizing foreign publications tends to create a like attitude abroad Good-will missions of all kinds are less obvious forms of propaganda promoted by governments The presence of numerous and highly organized lobbies in every state and national capital (see LOBBYING) gives further indication of the power of propaganda Some argue that such propagandists are of invaluable assistance in supplying necessary information, others believe all propaganda to be evil, and a third group maintains that conflicting propaganda campaigns neutralize one another Because modern war involves the entire civilian population in addition to the military, governmental propaganda in such periods becomes of immense importance Even before the beginning of the Second World War, Nazi Germany had a highly organized propaganda department, headed by Paul Joseph Goebbels, moreover, Hitler himself was a master propagandist All the warring countries found it necessary to establish departments of propaganda, often called information services The U S agency was the OFFICE OF WAR INFORMATION See Peter Odegard, *The American Public Mind* (1930), L. W Doob, *Propaganda Its Psychology and Technique* (1935), Harold Lavino and James Wechsler, *War Propaganda and the United States* (1940), C R Miller, *The Process of Persuasion* (1946).

propagation of plants is effected by seeds and spores, which are nature's most common method of increasing and perpetuating higher plants, and by such vegetative means as CUTTING, LAYERING, root or tuber division, and GRAFTING. Most farm and garden crops are increased by seed, but the potato is propagated by planting a piece of the tuber containing an eye Some plants will not reproduce their own kind or breed true from seed, and it is necessary to propagate them by cuttings or root division or other vegetative means Propagating methods must be adapted to each kind of plant See M G Kains and L M McQuesten, *Propagation of Plants* (1943)

propeller, device consisting of a hub with one or more blades By rotating, it is capable of propelling a craft The screw propeller was patented by John Ericsson, a Swedish engineer, in 1836 It has since entirely superseded paddle wheels and a variety of other means of propulsion for waterborne vessels In a single-screw ship the propeller mounted on the end of a shaft is immediately in front of the rudder and operates in a special frame through which the shaft passes to the source of rotational power, the engine Twin-screw vessels were first introduced about 1860 in England Located on either side of the rudder and actuated by separate engines, they may be used to assist in steering If one breaks down, the other can propel the vessel. Screw propellers are of cast iron, cast steel, or manganese bronze, the last being the best material because of its resistance to corrosion The introduction of steam turbines has brought about the use of four propellers for large ships Propellers on airplanes may have a single blade with a counterweight but generally have from two to six blades These are made of wood, aluminum, or steel. All were of fixed pitch at first (i e , the angle of the blades was not variable once the propeller was machined). The advantages in speed and power shown by variable pitch propellers caused them to be much used, the blades are set into sockets in the hub with gear arrangements capable of altering the pitch in flight The next development was automatic equipment to alter the pitch as needed for maintaining a predetermined speed. These are constant-speed propellers. In increasing the number of blades from two to three, then from three to SIX, for achieving greater thrust or propulsion or keeping the blade size down, new stress problems arose. These were met by the development of counterrotating propellers, in which the six blades were arranged as two separate three-bladed units rotating in opposite directions. Variable pitch propellers generally take the name of the pitch-controlling device, and the principal ones are, internal-cylinder, hydromatic, external-cylinder and electric With modifications they can also act as air brakes The fast-developing jet-propelled aircraft does not employ propellers, and many propeller-driven planes augment their power with jet equipment See P J Cowan, *A Short History of Naval and Marine Engineering* (1938), J A Kyd, *Variable-Pitch Propellers* (1945), F T Meacock, *The Elements of Aircraft Propeller Design* (1947)

Propertius, Sextus (sĕk'stus prōpûr'shus), c 50 B C –c 16 B C , Roman elegiac poet, b Umbria He was a member of the circle of MAECENAS and was well known in Rome as a man about town His poems are mostly love lyrics to his mistress, called Cynthia A master of the Latin elegy, he wrote with vigor, passion, and sincerity, but his poems suffer from a stiffness due to misplaced erudition and artificiality See E H W Meyerstein, *The Elegies of Propertius* (1935)

property. Property is an all-pervasive social concept which cannot be precisely defined so as to cover all cases Fundamentally it comprises rights to the enjoyment of things of economic value, irrespective of whether the enjoyment is exclusive or shared, present or prospective, to such rights the term *ownership* may be applied Ownership necessarily is supported by correlative rights to exclude others from enjoyment Protection and content are given to ownership by custom or law By extension of usage the things in which one has property rights are called one's property, thus the person who holds title to a house, even though there is a MORTGAGE outstanding, calls it his "property" The type of property law in a society may be taken as index of its social and economic system For example, a primitive pastoral tribe which must be highly united to resist its many enemies may hold pasture lands in common or rotate ownership, thereby avoiding disruptive quarrels By contrast, in societies which possess an economic surplus and relative security the institution of private property may be highly developed with marked division of ownership and a competitive struggle for control On the other hand the institution may be swept away in certain societies—an avowed aim of Marxism Modern Anglo-American property law provides at least potentially for the ownership of nearly all things which have or may have value The requirement of free intercourse between nations, of course, prohibits the assertion of ownership in the high seas, and special rules apply to territorial waters (see WATERS, TERRITORIAL) and to domestic NAVIGABLE WATER In a sense all land presently or ultimately belongs to the state, for whatever is not actually owned by the public authority may be transferred to it by condemnation proceedings under the power of eminent domain (see PUBLIC OWNERSHIP) In fact, most land is in private hands, although ownership of subsoil mineral wealth or of buried objects (see TREASURE-TROVE) in some instances may be public The terminology and much of the content of modern property law stem from its origins in FEUDALISM The fundamental division is into realty (or real estate or real property) and personalty (or personal property) Realty is chiefly land and improvements built thereon Sometimes it is comprehensively, but loosely, described as lands, tenements (holdings by another's authority), and hereditaments (that which is capable of being inherited) Formerly its chief characteristics in a legal sense were that it went by descent to the heir of the owner (who had no control over its disposition) and that ownership might be recovered by a lawsuit (by a so-called real action) Also possessing these characteristics, and hence classified as real property, were titles of honor, heirlooms, and advowsons, i.e , the right to sell an ecclesiastical benefice The manner in which realty is owned is said to be an estate, specifically ownership is a fee of some sort, e g , an estate in fee simple (see TENURE) Personal property is chiefly movables, i e , portable objects Typically (but by no means invariably) the owner could by WILL, GIFT, or sale determine its distribution (note the contrast with the term *descent*), and if it was wrongly taken a lawsuit (a so-called personal action) would give damages only but would not restore the object Certain types of interests in land with these characteristics were also deemed personalty, examples are leases for a period of years, mortgages, and liens The distinction of realty and personalty served the purposes of early feudal society Land, the basis of most wealth and the keystone of the social structure, was controlled in many ways to protect society, while the ownership of personalty, being of minor importance, was almost unfettered As the economic system was altered during the Renaissance and trade expanded, personalty lost its subordinate position and grew to be the economic mainstay of a large class. The freedom with which personalty might be bought and sold made more evident and irksome restraints on the disposal of land and stimulated the capacity of lawyers to devise methods of evading them Gradually the law of realty tended in all important respects to be assimilated to that of personalty In time land could be sold with almost perfect freedom and distributed by will; fundamentally it joined the list of other commodities Differences of detail in the law of realty and personalty still persist, especially in the transfer of realty, which is attended with great formality There are also many distinctions of detail and some of substance in the property laws of the American states For rules affecting marital property, see HUSBAND AND WIFE For certain special types of property, see COPYRIGHT and PATENT

prophet [Gr , =foreteller], in the Bible, religious leader of Israel, especially in the period of the kingdoms and the Captivity The Major Prophets are Isaiah, Jeremiah, Ezekiel, and Daniel The Minor Prophets are Hoseа, Joel, Amos, Obadiah, Jonah, Micah, Nahum, Habbakuk, Zephaniah, Haggai, Zechariah, and Malachi In the Hebrew names of Old Testament books, the Prophets are classified as Former (Joshua through 2 Kings, excluding Ruth) and Latter (the Major Prophets and the Twelve, i e , the Minor, Prophets taken as one) The title is accorded to other men of varying importance, e g , Moses, Elijah, Elisha, Nathan, and Jehu (see JEHU 2) In the earlier accounts prophets are encountered who resemble medicine men rather than those great men who did much to mold Israel The behavior of Baal's prophets (1 Kings 18) is an instance But in this very narrative the dominating figure is of a different sort from Baal's prophets, for Elijah was an enemy, not only of foreign religions, but also of what they represented —evil and sin in every form The biblical account views him as being given the divine mission to root up the house of Ahab The later prophets, also sure of their divine mission to purify Israel's religion, attacked the whole life of the people and came forward as the advocates of the poor and oppressed and as the leaders in social reform According to them Israel could be reconciled with God only by complete purification in religion and in the state In the writings of the Prophets are many of the most beautiful portions of the Old Testament, monotheism receives its most eloquent support, and Judaism makes its convincing universal appeal From earliest times the Prophets were studied for revelations of the future, especially of the glories of Israel and the MESSIAH to come, they were imitated by prophetic PSEUDEPIGRAPHA The Gospels give many examples of the interpretation of Old Testament passages as predictive, and it is part of traditional Christian belief that the Holy Ghost "spoke through the prophets" (Nicene Creed), who foretold the life and passion of Christ Exegesis of the Prophets before the 19th cent hardly touched any aspect but this In the New Testament the term *prophecy* is used of enthusiastic, presumably inspired, utterance, and this was the principle of Montanism, an early Christian deviation This sort of prophecy has had a dubious existence in Christianity (e g , in Joachim of Floris and Joanna Southcott), but there have always been millennialists and miracle-working preachers among the unassailably orthodox (e g , St Vincent Ferrer) Among Christian woman mystics a number have spoken and acted like prophets (e g , Hildegard of Bingen, St Bridget of Sweden, and St Catherine of Siena, see also MYSTICISM) Some varieties of Protestantism have emphasized "inspired" utterance or behavior, the most spectacular were the Anabaptists (e g , Thomas Münzer and John of Leiden) Prophecy is essential also in Quakerism Emanuel Swedenborg and Joseph Smith are examples of different types of prophets of Protestant background Outside Christianity, Islam knows Mohammed as the last and greatest of prophets In ancient Greece the priests attached to an ORACLE were prophets, as were also the official Roman readers of omens through divination. The American Indian prophets resembled the great prophets of Israel in preaching a definite message; the ordinary medicine man (see SHAMAN) had no such role The Indian prophet in the late 18th and the 19th cent normally foretold the regeneration of the red man and the recapture of the lands from the white man, provided all Indians accepted the idea of Indian brotherhood and followed prescribed religious practices Frequently they were connected with Indian military leaders, more or less closely, as the DELAWARE PROPHET with Pontiac and the SHAWNEE PROPHET with his brother, Tecumseh Two later prophets of renown were SMOHALLA and Wovoka (of the GHOST DANCE) The holy man (or woman) who interprets for a divine power is a commonplace in religion (e g , in VOODOO), and the function he has varies according to the culture The terms therefore can be defined only with respect to a given religion, usually *prophet* connotes inspired utterance of an informal (even frenzied) nature, while *priest* suggests established ritual duties See Edith Hamilton, *The Prophets of Israel* (1936, modernist)

Prophetstown, village (pop 1,469), NW Ill , on the Rock River and NE of Rock Island, inc. 1859. The village of Waubeshiek, Indian prophet, was here.

prophylaxis (prō"flăk'sĭs), term for measures designed to prevent the occurrence or spreading of disease A fundamental principle of hygiene and public health, it usually includes restrictions in occupation, diet, and exercise Such restrictions are necessary, e g., in cases of diabetes, and in cardiac and other circulatory malfunctions Health regulations concerned with the reporting and QUARANTINE of cases of highly communicable disease (e g , typhoid, diphtheria, and smallpox) are, in effect, prophylactic measures In dentistry, prophylaxis refers to prevention of caries (tooth decay) by removal of tartar from tooth surfaces

Propontis: see MARMARA, SEA OF

proportion, in mathematics, the equality of two ratios. Two pairs of quantities a,b and c,d are in proportion if their ratios a/b and c/d are equal, i e., if the equation a/b=c/d is true For example, the lengths of two sides of any triangle and the lengths of the corresponding two sides of any similar (i e , same-shaped) triangle are in proportion, for the ratio of the two sides of the first can be proved to be the same as the ratio of the two sides of the second The proportion

$$\frac{a}{b} = \frac{c}{d}$$

was formerly written as a b c d and is read as "a is to b as c is to d " In this form it is customary to call b and c "the means" and a and d "the extremes " These terms are used in the statement of the rule, "The product of the means equals the product of the extremes " When the proportion is written in the equation form, however, this rule is seen to be simply the result of a familiar algebraic operation Similarly all the other rules stated for proportions become obvious when the proportion is written as an equation and the usual rules of algebra are applied

proportional representation: see REPRESENTATION

propylaeum (prŏplē'ŭm), in Greek architecture, a monumental entrance to a sacred enclosure, group of buildings, or citadel A roofed passage terminated by a row of columns at each end formed the usual type Known examples include those at Athens, Olympia, Eleusis, and Priene The most splendid example is the **Propylaea** at Athens upon the west end of the Acropolis, its restored remains still stand Of Pentelic marble, it was built (437–432 B C) at the command of Pericles by the architect Mnesicles

prose [Latin *prosa oratio*=straightforward, or direct, speech], meaningful and grammatical written or spoken language which does not utilize the metrical structure, word transposition, or rhyme common to poetry or verse and which is raised above the level of lifeless composition or commonplace conversation by the use of balance, rhythm, repetition, and antitheses In literature, prose is the usual mode of expression in such forms as the novel, short story, essay, letter (epistle), history, biography, sermon, and oration The earliest European prose still extant is the work of HERODOTUS (5th cent B C)

Proserpina or **Proserpine:** see PERSEPHONE

Proskurov (prŭskōō'rŭf), city (1926 pop 31,989), capital of Kamenets-Podolski oblast, W Ukraine, in Podolia, on the Southern Bug Its large Jewish population (40 percent before the Second World War) suffered in 1919 the worst pogrom of the Russian civil war at the hands of the Ukrainian nationalists, during the German occupation (1941–43) the Jews who had remained behind were wiped out

prospecting, the search for mineral deposits suitable for MINING. Modern prospecting has replaced the earlier methods based on chance or superstition (e g , the use of the DIVINING ROD) with others grounded in the scientific knowledge of modern geology and mineralogy Surface indications of deposits are tested by extensive sampling of the area, i e , by examination and analysis of material taken from holes drilled at regular intervals (see ASSAYING) Modern geophysical methods of prospecting make use of instruments which measure variations in the earth's magnetic attraction (the dipping needle), in gravitational pull (the torsion balance), and in the direction, nature, and velocity of waves set up in the ground by explosions (the seismograph). Electrical methods employ instruments which indicate relative electrical conductivity (as a galvanometer or potentiometer) between points in the earth's surface Airplanes have proved useful in locating promising outcrops in unexplored country.

prostate gland (prŏs'tāt), organ in the male situated at the neck of the bladder and the beginning of the urethra. It is about the size of a chestnut and consists of glandular and muscular tissue contained within a fibrous capsule. Its tubules connect with the urethra. The gland secretes an alkaline fluid which, passing into the urethra at the time of the emission of semen, aids in the motility of the spermatozoa The prostate is subject to various diseases, including infections (e.g., abscess and gonorrhea), hypertrophy, and cancer. It often enlarges in men past middle age, making urination difficult, and prostatectomy, or removal of the gland, is sometimes necessary.

Prostejov, Czech *Prostějov* (prŏ'styĕyŏf), Ger *Prossnitz* (prŏs'nĭts), city (pop 31,718), Moravia, Czechoslovakia, NE of Brno It has breweries and machinery and clothing manufactures There are a town hall, a castle, and a church dating from the 16th cent

prostitution, act of offering oneself for sexual intercourse for mercenary purpose In ancient times and in some primitive societies, prostitution had religious connotations—intercourse with temple maidens was an act of worship of the temple deity The Greek *hetaerae* [Gr ,=companions or associates] were often women of intelligence and standing, but in Rome prostitutes (*meretrices*) were on a low social level and were forced to wear wigs and special garments signifying their trade In the Middle Ages prostitution flourished, and brothels were a source of revenue to municipalities As a result of the epidemic of venereal disease in Europe in the 16th cent , serious efforts began to be made to control prostitution Brothels were closed throughout Western and Central Europe from 1530 to 1565, and stricter punishment was meted out to those engaged in the trade When these measures proved unsuccessful, and venereal disease continued to claim thousands of victims, many cities began to institute control Berlin required fortnightly medical inspection in 1700, Paris began to register its prostitutes in 1785 In England legislation to control the spread of venereal disease was embodied in the Contagious Diseases Prevention Act in 1864, requiring periodic medical examination of all prostitutes in military and naval districts and the detention of all those found affected by the disease The act was not effective in controlling the disease, and a movement for its repeal was organized by Josephine Butler and other prominent women, leading finally to its abolition in 1886 In 1898 the Vagrancy Act prohibited all males from living on the earnings of prostitutes Towards the end of the 19th cent , efforts were made to control the international traffic in women for the purpose of prostitution Cooperation on an international scale to stamp out the white-slave traffic began in 1899 with an unofficial congress in London This was followed by another conference in Amsterdam in 1901, a third in 1902 in London, and a fourth in Paris in 1904, which resulted in an international agreement providing for a central authority in each nation to cooperate in the regulation of the white-slave trade and to make available information on those engaged in the procuration of women for immoral purposes In 1919 the League of Nations appointed an official body to gather all facts pertaining to the white-slave trade, and in 1921 a conference held at Geneva and attended by 34 states established the Committee on the Traffic in Women and Children (the work of this committee was assumed by the United Nations in 1946) By 1930 there were 30 countries which had no system of licensing houses of prostitution Among these were the United States, Great Britain and its dominions, the Scandinavian countries, most of the Balkans, Germany, some South American states (e g , Uruguay, Bolivia), Switzerland, and Poland Until 1945 France required that all prostitutes be at least 21 years of age, that they be registered, and that they be periodically examined In 1945 the Paris municipal council passed an ordinance closing all houses of prostitution, but the order was rescinded in March, 1946 In April of that year the national assembly passed a bill suppressing prostitution and white slavery It abolished the old system of licensing prostitutes and set up stiff penalties to deal with them All registers of prostitutes were destroyed, and special establishments for the reeducation of the women were ordered set up In the United States "red-light districts" existed in almost every town and were closely connected with many other phases of crime and vice No really major effort to stamp out prostitution appeared until about the end of the 19th cent , and then only in a half-hearted manner In 1910 the Mann Act or White Slave Traffic Act was passed through the efforts of James Robert Mann, it forbade under high penalty the interstate transportation of girls or women for immoral purposes. By 1915 nearly all the states had passed laws regarding the keeping of brothels or profiting in other ways from the earnings of prostitutes The First World War saw a great increase in prostitution, accompanied by a rise in the number of venereal-disease cases. In July, 1941, Congress, spurred by reports of widespread prostitution near army bases and a resultant rise in venereal disease, passed the May Act; this made it a Federal offense to practice prostitution in areas designated by the Secretaries of the Army and the Navy. On a local basis all states except Arizona and Nevada have legislation which makes it a crime for any person to keep, set up, maintain, or operate a house of prostitution Some 21 states have adequate laws against all forms of prostitution, although they exempt from prosecution the customers of prostitution Among the many agencies that have crusaded for better moral conditions are the Society for the Prevention of Crime (of which Charles Parkhurst was long a leader), organized in 1877, the Committee of Fourteen (1905), the National Vigilance Association, and the American Social Hygiene Association See Abraham Flexner, *Prostitution in Europe* (1914), H B Woolston, *Prostitution in the United States* (1921), Paul Lacroix, *History of Prostitution among All the Peoples of the World* (Eng tr , 1931), Geoffrey May, *Social Control of Sex Expression* (1931), B. L Reitman, *The Second Oldest Profession* (1931), Caroline Slade, *Sterile Sun* (1936, fictionalized case histories)

protactinium (prō"tăktĭ'nēŭm), rare radioactive element (symbol=Pa, for physical constants, see ELEMENT table), the precursor of actinium Little is known of its physical and chemical properties Protactinium was discovered (1917) by Otto Hahn and Lise Meitner and independently by Frederick Soddy and John A Cranston Aristid V Grosse prepared (1927) the pentoxide and isolated (1934) metallic protactinium from a purer sample of the pentoxide which he and his associate had prepared Protactinium has a half-life period (time required for half of its original atoms to disintegrate) of about 20,000 years Formerly the name was spelled protoactinium in the United States

Protagoras (prŏtăg'ŭrŭs), c 480–c 410 B C , Greek Sophist of Abdera He taught at Athens for a time but was forced to flee because of his professed agnosticism Protagoras was the author of the famous saying, "Man is the measure of all things " He held that each man is the standard of what is true to himself, that all truth is relative to the individual who holds it and can have no validity beyond him Thus he denied the possibility of objective knowledge and refused to differentiate between sense and reason One of Plato's most famous dialogues bears his name

Protase, Saint see GERVASE AND PROTASE, SAINTS

protection, practice of regulating imports and exports with a view to shielding the industries of a country from foreign competition To accomplish this certain imports may be excluded entirely, or import quotas may be established, or bounties may be paid on certain exports The usual method is to impose duties on imports (see CUSTOMS) Such duties were first levied as a tax to obtain revenue, but mercantilist statesmen in the 16th and 17th cent found them indirectly effective in developing manufactures and thus making the nation self-sufficient in time of war, an end devoutly desired by them In more recent times statesmen in new or industrially backward countries have had the same experience Protective duties tend to increase the price of the imported article, making it unattractive to the consumer, thus the domestic producer, whose costs at first are usually high, is given an opportunity to exploit the home market About 1860, after attaining industrial and commercial preeminence, England abandoned protection for free trade, but returned to it in the period between the First and Second World Wars as a means of coping with the depression as well as of gaining the advantages of "imperial preference" as a member of the British Commonwealth of Nations The United States, however, followed the policy of protecting "infant industries" from the very beginning of its national history Since bounties on exports are forbidden in the Constitution, the protective tariff has been the chief instrument of this policy A brief attempt was made in 1913 to lower duties, but after the First World War tariff rates were raised to the highest point in history Many rates were not merely protective, some were prohibitive and discriminated against the products of certain countries Though American industries had grown from infants to giants, it was still held that they needed protection from the cheaper labor and lower costs of production of many foreign countries To facilitate freer trade in the depression period, the President in 1934 was authorized to negotiate reciprocal trade agreements by which rates could be reduced within certain limits and the treaty countries given the lower rates accorded "most favored nations " See F W Taussig, *Tariff History of the United States* (7th ed , 1923), F D. Graham, *Protective Tariffs* (1942).

protective coloration, phenomenon of coloration or pattern of color of an animal that affords it some measure of protection. Concealment from predators is accomplished generally by the deceptive resemblance of creatures to features of their habitat. This resemblance is achieved by various effects which supplement the similarity of color between animal and surroundings The contrast of light and shadow which betray all but flat bodies are counteracted, in some forms, by a pattern of deepened and softened shades. In certain patterns such variations may produce upon a rounded surface the illusion of flatness. Disruptive coloration, or ir-

regular patches of contrasting colors, much used in CAMOUFLAGE, serve to distract the eye of the observer from the shape of the mass below the patches Frogs, lizards, and snakes are characterized by disruptive patterns Many other creatures are dappled, barred, speckled, mottled, or otherwise distinctively colored so that they blend with sand, weeds, leaves, tree trunks, water, or flowers, depending upon their natural habitat The chameleon and several of the flatfishes have the ability to change color to suit a new environment. Some animals exhibit a seasonal variation in color The stoat and caribou turn from brown in summer to white in winter (when the stoat is known as ermine) Protective coloration includes both resemblance and mimicry. The object of resemblance is to appear to be an object of no interest to the enemy, while mimicry, in this connection, is the exhibition of characteristics of an object known and avoided by the enemy Mimicry sometimes seems to have an aggressive purpose, a fish may resemble and act like a leaf in order to ambush its prey, or a spider may take on the appearance of bird's excrement on a leaf so that an unwary insect will come within its grasp Coloration may thus be categorized as concealing, revealing, or deceiving The most widely accepted explanation of the phenomena is Darwin's theory of natural selection See W P Pycraft, *Camouflage in Nature* (1927), G D H Carpenter and E B Ford, *Mimicry* (1933), H B Catt, *Adaptive Coloration in Animals* (1940)

Protectorate (prutĕk'tŭrĭt, prō-), in English history, the name given to the English government from 1653 to 1659 During the civil war (see PURITAN REVOLUTION) which began in 1642, the army of Parliament was reorganized in 1645 by the New Model Ordinance, which regularized the soldiers' pay and made the army more closely knit, and by the Self-denying Ordinance, which declared members of Parliament no longer able to hold army commissions Oliver CROMWELL, who inspired these changes, became lieutenant general, and Sir Thomas Fairfax general in chief As religious cleavage appeared among the Puritans, the Independents in the army opposed the more moderate Presbyterians in Parliament, who were allied to the Scots Cromwell stood with the army, and when Parliament fearfully began to look toward alliances with the Scots and the king, the soldiers seized and held CHARLES I prisoner Cromwell crushed a Scottish and English Presbyterian rising in 1648, and later that year the Presbyterian members of Parliament were driven out, in Pride's Purge, leaving only the remnant of Charles's 1640 Long Parliament This Rump Parliament, after the trial and execution of Charles, went on to set up a Commonwealth, or republic, with a House of Commons only and with the executive a council of 41 Cromwell and the army backed up the government against democratic agitation by Levelers and other religious sects Cromwell also subdued Ireland (1649–50) and conquered (1650–51) royalist uprisings in Scotland on behalf of Prince Charles, later CHARLES II Cromwell at last turned out (April, 1653) the Rump Parliament when it tried to perpetuate itself His Nominated Parliament or Barebone's Parliament proved ineffectual, and he accepted the Instrument of Government, a constitutional document drawn up by some of the army officers, which made him lord protector of the Commonwealth of England, Ireland, and Scotland, to rule with a Parliament of one house He became a virtual dictator, though Parliament did meet He enforced the laws, which were rigidly puritanical, and collected taxes through 10 major generals and their soldiers Under Cromwell, the state church was Puritan and the measure of toleration he introduced embraced Jews, but he opposed all Roman Catholics and Anglicans, as completely in error In foreign affairs he made peace in the first of the DUTCH WARS and used English sea power against Spain The Parliament in 1657 by its Humble Petition and Advice offered Cromwell the crown (which he refused), made him hereditary lord protector, and set up an upper house to be chosen by him, but this attempt at revision of the Instrument of Government had no genuine effect on the government Richard CROMWELL succeeded as lord protector on his father's death in 1658, but was unable to rule the army and resigned in May, 1659 The Rump was recalled, the form of the Commonwealth without the Protectorate resumed, and after a period of chaos, General Monck recalled the Long Parliament and brought about the restoration of Charles II See S R Gardiner, *History of the Commonwealth and Protectorate* (4 vols , 1903), Charles Firth, *The Last Years of the Protectorate* (2 vols , 1909), Godfrey Davies, *The Early Stuarts* (1937).

protectorate, in international law, a relationship in which one state surrenders part of its sovereignty to another The subordinate state is called a protectorate The term covers a great variety of relations, but typically the protected state gives up all or part of its control over foreign affairs while retaining a large measure of independence in internal matters. The relation may originate when the dominant power threatens or uses force or when the subordinate sees advantages (usually military protection) in the arrangement A protectorate is distinguishable from the relation of home country and colony, for the protected state retains its sovereignty (though often only nominally), its territory remains distinct from that of the protector, and its citizens do not become nationals of the protecting state Initially, in most cases, the extent to which the dominant state may interfere in local affairs is governed by treaty, but since a protected state usually has no access to diplomatic channels, it is in a poor position to resist attempts at increased control Protectorates in connection with large empires probably have existed from earliest times, and there are known instances in Greek and Roman history Many of the colonial empires erected by European powers after the 16th cent were largely comprised of protected states (e g , India) Before the abrogation (1934) of the Platt Amendment, Cuba was a protectorate of the United States Today many British possessions, including portions of Nigeria, Zanzibar, and Aden, are classed as protectorates In Overseas France, Tunisia and Morocco are termed associated states (*états associés*) and have the status of protectorates Trust territories of the United Nations (see TRUSTEESHIP, TERRITORIAL) are distinguishable from protectorates in that they are being prepared for ultimate independence See Charles Fenwick, *Wardship in International Law* (1919)

proteins (prō'tēĭnz, -tēnz), class of extremely complex substances forming an essential part of the protoplasm of all plants and animals Their presence in cells and tissue and, as a result, in food materials is essential to the continuance of life They serve as the source of nitrogen, in many cases as the only source, and are necessary to living things for the building of new tissue for growth and to take the place of that which has been destroyed Like the carbohydrates and fats, they serve also as a source of energy A number of proteins have been isolated in crystalline form, but because of their complexity it is difficult to be sure that the substances are chemically pure proteins In general, they occur in forms insoluble in water, but some simple proteins are soluble Their solutions are colloidal Not enough is known as yet of the exact nature and activity of these compounds to allow for satisfactory definition, but some information has been gathered by much research and has been established Chemically, proteins are extremely complex compounds The elements carbon, hydrogen, oxygen, and nitrogen are always present, and sulphur is often present Other elements sometimes occur, e g , phosphorus, iron, and copper Chemical analysis is difficult Protein molecules are extremely large, containing great numbers of atoms of the various constituents The molecules are made up from amino acids, which are organic substances containing the amino group of atoms—one nitrogen atom and two hydrogen atoms Only some 20 amino acids are known, but the number of possible combinations of them to form proteins is very large The nature of the proteins resulting from these combinations depends upon the number and nature of those acids which go to make them up Upon hydrolysis they all yield amino acids and also various other substances They are grouped commonly according to the nature of the substances so produced The simple proteins yield amino acids only or their derivatives Examples of simple proteins include the albumins (soluble in water), e g , egg albumen, serum albumin (from blood), lactalbumin (from milk), and leucosin (from wheat), the glutelins (soluble in dilute acids and alkalies), e g , glutenin (from wheat) and oryzenin (from rice), the globulins (insoluble in water, coagulated by heat, and soluble in dilute solutions of neutral salts), e g , serum globulin (from blood), fibrinogen (from blood plasma), and legumin (from seeds of pea and other legumes), albuminoids or scleroproteins (probably insoluble in all ordinary solvents), e g , keratin (from hoofs, horns, and fingernails) and elastin (from ligaments), histones (soluble in water), e g , globin (from hemoglobin), the prolamins (insoluble in water), e g , gliadin (from wheat and rye), zein (from corn), and hordein (from barley), and the protamins (soluble in water and not coagulated by heating), e g , salmine (from salmon) and sturine (from sturgeon) Conjugated proteins are those that are composed of proteins combined with one or more other compounds Among the conjugated proteins are nucleoproteins (combinations of nucleic acid and proteins) which make up much of the chromatin material in the nucleus of a cell and which are found also in glandular tissue, yeast cells, and wheat endosperm, glycoproteins (combinations of proteins with a carbohydrate), found in mucin (from saliva and egg white), jellyfish, and other mucoid materials, chromo-proteins (combinations of protein with heme (or hematin), of which hemoglobin of the blood is an example, and lecithoproteins (combinations of proteins with lecithin or another phosphoiipide), which are found in blood, egg yolk, milk, and the nuclei of cells. Proteins are decomposed by the action of various substances, e g , by acids and enzymes, into amino acids, but between the proteins and amino acids are formed certain protein substances (peptones, proteoses, and peptides) which are grouped together as derived proteins There are a number of tests for the presence of proteins, devised either for the group as a whole or for certain classes specifically For example, the Biuret reaction gives positive indication when a violet or blue color appears upon the addition of a dilute copper sulphate solution to a solution of certain proteins in an alkali (e g , sodium hydroxide) In the Xanthoprotein reaction, the addition of nitric acid to a solution causes a yellowish precipitate, which, upon heating with a hydroxide, turns orange Millon's reaction involves the use of Millon's reagent upon solid protein material, if a red color is produced on heating, protein is present The chemical processes and the way in which protein material is utilized by plants and animals is not clearly understood Plants are able to synthesize, from carbohydrates (as a base) and nitrogen, certain compounds from which proteins can be derived On the other hand, animals apparently can not perform this synthesis, but are able to build up their protein material only from the amino acids which they have obtained through the decomposition of those proteins taken into their bodies as food In the digestive processes the proteins of foods are acted upon by enzymes and broken down (hydrolyzed) into their amino acids These pass from the digestive tract into the blood, are carried to the different parts of the body, and are there brought together in new combinations to form the proteins specifically needed for tissue production

Proterozoic era (prō"turuzō'ĭk, prŏ"-) [Gr ,=belonging to earlier life], second grand division of geologic time It is now generally considered as the second era of Pre-Cambrian time (the Archeozoic era being the first) In the formation of the Proterozoic rocks sedimentation played a comparatively greater part than in the formation of the strata of the Archeozoic era, and igneous or volcanic activity comparatively less, warping and metamorphism, however, continued to be important The Proterozoic is best studied in the Lake Superior district of North America The Archeozoic was followed by a long erosion interval, perhaps the greatest in geologic history, in this the Laurentian Mts were reduced to an almost level plain The first system deposited in the Proterozoic was apparently the sedimentary Huronian, which many geologists now divide into the Bruce, Cobalt, and Animikean series The Bruce is made up of conglomerate quartzite, sandstone, and slate, the Cobalt also contains conglomerate, quartzite, and slate, but is especially remarkable for the presence of tillite which is presumably consolidated drift and therefore an indication of a glacial period at this early stage of the earth's development Following these earlier Huronian times, the Great Lakes were perhaps submerged, as the Animikean system is largely composed of schists, slates, and quartzites, which many geologists believe of marine origin Vast carbonaceous deposits, as well as the iron-ore deposits of the Mesabi district in Minnesota, are of Animikean age After the Animikean period came a time of great volcanic activity, the Keweenawan of which the strata are mingled lava and sediments The Keweenawan period was followed by some upthrusting of mountains, and that in turn by a long erosion interval which separates the Proterozoic from the Paleozoic era Outside the Lake Superior region, Proterozoic formations occur in the mountains of Montana and in the Grand Canyon of the Colorado and also in Scotland, Scandinavia, and Brazil The life of the Proterozoic is poorly represented by fossils, but a few invertebrates have been discovered, as well as the dubious EOZOON The best evidence that there probably were numerous forms of life is the variety and complexity which suddenly appears in Cambrian fauna The Proterozoic, like the Archeozoic, has been estimated to have occupied about 500 million years

Protesilaus (prō"tĕsĭlā'ŭs), in Greek legend, hero of the TROJAN WAR, son of a king of Phylace and husband of LAODAMIA A prophecy foretold that the first man who touched Trojan soil would be the first to die When the Greek ships arrived at Troy he leaped ashore and was killed by HECTOR

Protestant Episcopal Church see EPISCOPAL CHURCH, PROTESTANT

Protestantism, name applied to the religious movement which began with the REFORMATION and also to the principles on which it was based The name Protestant was first applied to the princes of the empire who issued a formal *Protestatio* against the recess (1529) of the Diet of Speyer, which had forbidden further religious innovations Since that time the term has been used in many different senses, but not as the official title of any church until it was assumed (1783) by the Protestant Episcopal Church in the United States, the American branch of the Anglican communion The reformers in Germany called themselves "evangelicals," while those in other countries spoke of their churches as "reformed " In England many Anglicans, especially since the OXFORD MOVEMENT, have

refused to consider themselves Protestants because they tend to agree with Roman Catholicism on most doctrinal points, rejecting only the primacy of jurisdiction of the pope (see ENGLAND, CHURCH OF, EPISCOPAL CHURCH, PROTESTANT, IRELAND, CHURCH OF) For many in all countries Protestantism embodies the conception of liberty in secular as well as religious matters, of private judgment and religious toleration, as against tradition and authority, and enjoys the adherence of many who are not professing Christians Within the churches it has come to denote "liberal" theological and ecclesiastical tendencies as well as opposition to elaborate ritual and ceremonialism In the broadest sense the name Protestant is applied to all Christians who do not belong to the Roman Catholic Church or to one of the churches of the East Protestantism in this sense has largely been adopted by the peoples of NW Europe and their descendants, excepting the South Germans and the Irish, important minorities of Protestants have existed in France, Bohemia, Hungary, and Poland According to many authorities, the essence of Protestantism lies in its acceptance of the responsibility of the individual Christian to God alone and not to the Church The characteristic Protestant views on interpretation of the Bible and on the nature and functions of the Church, of the ministry, and of the sacraments proceed from this fact, and the apparently irreconcilable differences between Protestantism and Roman Catholicism depend as much on that one concept as they do on any of the details proceeding therefrom In Protestant countries there has been much multiplication of denominations, most of them calling themselves Protestant, but certain movements have claimed new revelations of such a nature that they may hardly be said to be Protestant (see AGAPEMONE, MORMON, NEW JERUSALEM, CHURCH OF THE) Of a fundamentally distinct nature is CHRISTIAN SCIENCE There have been several groups commonly called Protestant but historically preceding the rise of Protestantism (see HUSSITES, LOLLARDRY, WALDENSES) The historical bodies of Protestantism divided into several great groups in the Reformation, and these have divided again many times until they have become very numerous For some of the great tendencies of Protestantism, see ADVENTISTS, ANABAPTISTS, BAPTISTS, CALVINISM, CONGREGATIONALISM, FUNDAMENTALISM, LUTHERANISM, METHODISM, MODERNISM, PRESBYTERIANISM, PURITANISM, SPIRITISM; UNITARIANISM For individual organizations, see BRETHREN, CATHOLIC APOSTOLIC CHURCH IN ZION; CHRISTIAN CATHOLIC APOSTOLIC CHURCH, CHRISTIAN REFORMED CHURCH, CHRISTIANS, CHURCHES OF CHRIST, CHURCHES OF GOD IN NORTH AMERICA, DISCIPLES OF CHRIST, DUNKARDS, EPISCOPAL CHURCH, PROTESTANT, EVANGELICAL AND REFORMED CHURCH, EVANGELICAL UNITED BRETHREN CHURCH, FRIENDS, SOCIETY OF, HUGUENOTS, IRELAND, CHURCH OF, MENNONITES, MORAVIAN CHURCH, RANTERS, REFORMED CHURCH IN AMERICA, REFORMED EPISCOPAL CHURCH, SALVATION ARMY, SCOTLAND, CHURCH OF, SCOTLAND, FREE CHURCH OF, SEVENTH-DAY BAPTISTS, SHAKERS, UNITED CHURCH OF CANADA, UNIVERSALIST CHURCH OF AMERICA See F S Mead, *See These Banners Go* (1936), K S Latourette, *A History of the Expansion of Christianity* (7 vols, 1937-45), W W Sweet, *The American Churches* (1947)

Protestant Union, in German history, an alliance of German Protestant states, founded in 1608 by Elector Palatine Frederick IV for the avowed purpose of defending the lands, person, and rights of each individual member Also known as the Evangelical League, it came into being after Archduke Ferdinand (later Emperor Ferdinand II) proposed that renewal of the religious peace of 1555 (see AUGSBURG, PEACE OF) should be conditional on the exact fulfillment of its terms, which provided for the restoration of all church lands appropriated by the Protestant princes after 1552 A Catholic League, headed by Duke Maximilian I of Bavaria, was formed shortly afterward The Protestant Union was weakened from the start by the absence of such powerful Protestant princes as the elector of Saxony, and it never really became operative In 1621, three years after the outbreak of the THIRTY YEARS WAR (which was not a religious conflict) the union went out of existence In French history, the alliance (1573-74) of Huguenot cities, districts, and nobles in the Wars of Religion is also known as the Protestant Union

Proteus (prō'tēŭs, prō'tūs), in Greek legend, prophetic old man of the sea who tended the seals of Poseidon He could change himself into any shape he pleased, but if he was nevertheless seized and held, he would foretell the future

Protevangelium of James. see PSEUDEPIGRAPHA

Prothero, Rowland Edmund see ERNLE, ROWLAND EDMUND PROTHERO, 1ST BARON

Protich, Stojan (stō'yăn prō'tĭch), 1857–1923, Serbian statesman As minister of the interior at the outbreak (1914) of the First WORLD WAR he worded the Serbian reply to the Austro-Hungarian ultimatum He played an important part in the making of the Pact of Corfu (1917) which resulted (1918) in the creation of the kingdom of the Serbs, Croats, and Slovenes (later called Yugoslavia). As first premier (1918–19) of the new state, Protich sought to meet Croatian and Slovene aspirations by a conciliatory attitude

protactinium: see PROTACTINIUM.

protocol (prō'tŭkŏl), diplomatic term referring usually to a more or less informal written document Examples are authenticated minutes of international conferences, preliminary agreements, or statements of principle, which eventuate in a formal TREATY, and agreements which do not require ratification The diplomatic protocol is the code of international courtesy governing the conduct of those in the DIPLOMATIC SERVICE or otherwise engaged in international relations, usually each office of foreign affairs (or equivalent body) has an official in charge of protocol (called the *chef de protocol*) Sometimes the term *protocol* is applied to an agreement which in all essentials of form or content is similar to a treaty, an example of this is the Geneva Protocol approved by the Assembly of the League of Nations in 1924 The Geneva Protocol branded aggressive war an international crime. It provided that no signatory would engage in war with other signatories who observed their international obligations Differences which might lead to war were to be referred in appropriate cases to the Council of the League of Nations, to the World Court, or to arbitration committees Signatories were not to mobilize while awaiting settlement of disputes Nations which refused arbitration or which rejected arbitral awards and went to war were to be branded aggressors The Council might subject them to economic sanctions, and they should be made to bear the costs of the attacked country but not made to cede any of their territory Finally, signatories were to participate in an international disarmament conference The protocol was supported by most nations, but British refusal to adhere prevented it from coming into force The LOCARNO PACT and the KELLOGG-BRIAND PACT were later agreements having the general tenor of the Geneva Protocol See J T Shotwell, *Plans and Protocols to End War* (1925), D H Miller, *The Geneva Protocol* (1925)

Protogenes (prōtŏj'ənēz), fl c 300 B C, one of the most celebrated of Greek painters of Rhodes and Athens Apelles is said to have been the first to recognize the talents of Protogenes, then in his 50th year and known only as a painter of decorations for ships For 20 years he enjoyed a reputation second only to that of Apelles Ancient writers, notably Pliny the Elder, record that his works were held in high esteem by the Rhodesians Famous works by him were *The Satyr in Repose*, the *Ialysus*, upon which he worked for years and which was removed by Vespasian to Rome, where it perished in the burning of the Temple of Peace, a *Cydippe*, *Paralus and Hammonias*, in the Propylaea at Athens, *Thesmothetae* in the senate chamber at Athens, and portraits of Philiscus, King Antigonus, and the mother of Aristotle

proton, term used for the single positive unit charge of electricity (as distinguished from the unit negative charge, or electron) which is held to constitute the nucleus of the atom of ordinary hydrogen The hydrogen atom is believed to be composed of one (+) proton which is in the nucleus and one (−) electron outside the nucleus, the presence of the two making the atom as a whole electrically neutral (since the two charges balance each other) The hydrogen ion, or proton, is believed to be the fundamental positively charged unit of the ATOM

protoplasm (prō'tuplăzm), fundamental material of which all living things are composed It was studied by a number of early scientists, especially by Félix Dujardin, J E Purkinje, M. J. S Schultze, and Hugo von Mohl, who is generally credited with the introduction of the name J H Huxley described protoplasm as "the physical basis of life" Protoplasm exists in all plants and animals in the small units called cells (see CELL), and it is always enclosed by a thin surface called a plasma membrane, actually a part of the protoplasm, that controls passage of materials into and out of the cell Under the microscope protoplasm has a granular appearance, the granules exhibit the irregular motion known as Brownian movement Protoplasm is considered to be a complex mixture of these visible granules and globules and of submicroscopic particles forming colloidal solutions The chief component of protoplasm is water, which comprises from 70 to 90 percent of its substance by weight Inorganic salts (forming about 1 percent by weight of protoplasm) are dissolved in the water The organic constituents of protoplasm include proteins (forming about 15 percent of its weight), carbohydrates (forming probably less than 1 percent by weight), and fatty substances (about 3 percent by weight). The four elements oxygen, hydrogen, carbon, and nitrogen make up about 99 percent of protoplasm, following these in importance as constituents of living material are the elements sulphur, phosphorus, potassium, iron, and magnesium Although the proportions of the chemical elements in protoplasm is essentially the same in all forms of life, there are differences in the qualities and chemical characteristics of the protoplasm of different species and even of different cells in the same multicellular animal or plant The protoplasm in both plant and animal cells is distinguishable as a more dense portion forming the rounded or ovoid nucleus of the cell and a less dense portion, the cytoplasm. (A distinct nucleus is lacking in bacteria and some other minute cells and also in mature red blood corpuscles in humans.) In most plant cells the cytoplasm forms a relatively thin layer between the vacuoles (saclike structures containing cell sap) and the cell wall, the cytoplasm also surrounds the nucleus and often extends through the cell in strands radiating from the region of the nucleus In animal cells, in which vacuoles are much less commonly found, the cytoplasm forms the bulk of the cell Since protoplasm is living matter, it exhibits the general properties associated with life, i e, it possesses irritability (the capacity to respond to influences in its environment) and the ability to perform the essential physiological functions. In some forms of life, e g, the protozoa, or one-celled microscopic animals, the protoplasm of the single cell is adapted to perform all the life functions, e g, locomotion, ingestion of food, digestion, absorption, circulation, excretion, and reproduction In multicellular animals and plants, where specialized cells are united to form tissues adapted to special functions, the protoplasm is particularly fitted for those functions, e g, nerve-cell protoplasm for receiving stimuli and conveying messages and muscle cells for contractility During reproduction the nucleus of a cell undergoes complex changes Under the microscope it is possible to observe the streaming movement, known as cyclosis, of the protoplasm in certain plant cells, e g, those of the leaf of the aquatic plant *Elodea* See W. E Seifriz, *Protoplasm* (1936)

Protopopov, Aleksandr Dmitreyevich (ŭlyĭksan'dur dumē'trēuvĭch prŏtupō'puf), 1866–1918, Russian landowner and statesman A trusted friend of Nicholas II, the empress, and Rasputin, he was one of the most extreme reactionaries in the third and the fourth Duma As minister of the interior from 1916, Protopopov is said to have secretly provoked the disturbances at St Petersburg in Feb (N S March), 1917, so as to have a pretext for putting down the revolutionary movement by force Whatever his plans, the February Revolution overthrew the emperor and his government Protopopov was arrested and was later executed.

protozoa (prōtuzō'u), phylum of invertebrates composed of microscopic one-celled animals most of which are solitary and a few colonial The majority are aquatic species, found in salt and fresh water, both on the surface and at great depths, at sea level and at high altitudes Some can live in damp sand and moss Many are parasitic in the bodies of humans and other animals The phylum is usually divided into four classes the Sarcodina (Rhizopoda), forms which have pseudopods, including the amoeba and shelled forms such as the foraminifera and radiolarians, the Mastigophora, e g, euglena, which move by means of whiplike flagella, the Infusoria, ciliated forms such as paramecium, the Sporozoa, parasitic forms, many of which are pathogenic Protozoa carry on all the life functions REPRODUCTION is by fission, conjugation, budding, and spore formation Protozoans parasitizing man include *Endamoeba histolytica*, which causes amoebic dysentery, the sporozoan parasites of the genus *Plasmodium*, which cause malaria, and the flagellates of the genus *Trypanosoma*, of which *T gambiense* and *T rhodesiense* cause African sleeping sickness and *T cruzi* causes Chagas disease in Central and South America Sporozoan animal parasites include *Babesia bigemina*, the cause of Texas cattle fever, and *Nosema bombycis*, discovered by Pasteur to be the cause of pebrine in silkworms Drinking water sometimes becomes infested with certain nonpathogenic flagellates which cause a fishy taste and odor *Noctiluca* imparts phosphorescence to sea water Protozoa provide food for many aquatic animals See also AMOEBA and FORAMINIFERA

Proudhon, Pierre Joseph (pyĕr' zhōzĕf' prōdō'), 1809–65, French social theorist Of a poor family, Proudhon won an education through scholarships Much of his later life was spent in poverty He achieved prominence through his pamphlet, *What Is Property?* (1840, Eng tr, 1876), in which he condemned the abuses of private property He also edited radical journals After the Revolution of 1848, he was elected a member of the constituent assembly, at that time he tried unsuccessfully to establish a national bank for reorganization of credit in the interest of workers As a compromise between state sovereignty and anarchism he developed a theory of small, loosely federated groups in which government was restrained by a system of checks and balances He hoped that man's ethical progress would eventually make government unnecessary He believed in the moral responsibility of the individual rather than any system authoritatively imposed. Proudhon left a great mass of literature which influenced the French syndicalist movement. Among the most important of his books are *System of Economical Contradictions; or, The Philosophy of Poverty* (1846; Eng. tr. of Vol. I,

1888) and *De la justice dans la révolution et dans l'église* [of justice in the revolution and in the church] (3 vols., 1858). See S Y Lu, *The Political Theories of P J Proudhon* (1922), biography by D W Brogan (1934)

Proust, Joseph Louis (shōzĕf' lwē' prōōst'), 1754–1826, French chemist He was professor of chemistry at the artillery school in Segovia, Spain, and director of the laboratory of Charles IV at Madrid from 1789 He returned to France c 1806 He discovered grape sugar and established the law of definite proportions (sometimes known as Proust's law), which states that in any compound the elements are present in a fixed proportion by weight

Proust, Marcel (marsĕl' prōōst'), 1871–1922, French novelist, b Paris As a youth he sought the company of fashionable and intellectual society, and in the salon of one of its members he met Anatole France He persuaded France to write an introduction to his first published, and unpromising, work, *Les Plaisirs et les jours* (1896, Eng tr , *Pleasures and Regrets*, 1948) In 1904 Proust translated two volumes of Ruskin, and after the death of his parents (in 1904 and 1905) he withdrew almost completely from society and began to work on his cyclic novel, *A la recherche du temps perdu* (1913–27, Eng tr , *Remembrance of Things Past*, 1922–32), which grew into a major work of 16 volumes The first, and perhaps the best-written, book of the series, *Du côté de chez Swann* (1913, Eng tr , *Swann's Way*, 1928), went unnoticed, but the second, *A l'ombre des jeunes filles en fleurs* (1919, Eng tr , *Within a Budding Grove*, 1919), was awarded the Goncourt Prize The author's reputation continued to soar with subsequent volumes —*Le Côté de Guermantes* (1920, Eng tr , *The Guermantes Way*, 1920), *Sodome et Gomorrhe* (1921–23, Eng tr , *Cities of the Plain*, 1927), *La Prisonnière* (1924, Eng tr , *The Captive*, 1929), *Albertine disparue* (1925, Eng tr , *The Sweet Cheat Gone*, 1930), and *Le Temps retrouvé* (1927, Eng tr , *The Past Recaptured*, 1932) Semi-autobiographical, the work illustrates Proust's theory of involuntary memory whereby a new encounter with an already experienced sense impression permits the past to be recalled His discursive style is sometimes difficult to follow, but his psychoanalysis of the generation he knew is penetrating He wrote a group of essays, *Pastiches et mélanges* (1919), and a large correspondence (6 vols , 1930–36), much is still being analyzed and organized for publication See biography by Leon Pierre-Quint (Eng tr , 1927), Harold March, *The Two Worlds of Marcel Proust* (1948), François Maurac, *Proust's Way* (Eng tr , 1950), André Maurois, *Proust Portrait of a Genius* (Eng tr , 1950)

Prout, Father see MAHONY, FRANCIS SYLVESTER

Prout, Wilham, 1785–1850, English chemist and physician He demonstrated (1824) the presence of free hydrochloric acid in the gastric juice of the stomach Prout's hypothesis, advanced in 1815–16, suggested that atomic weights of elements are multiples of that of hydrogen and that elements are formed by a condensation or grouping of hydrogen atoms Later work on the determination of atomic weights showed that part of the hypothesis does, in general, apply The discoveries of isotopes of a number of elements revealed that certain elements whose atomic weights could not be represented by simple integers are actually mixtures of isotopes having different weights and that the atomic weight in such cases represents an average of the atomic weight of the isotopes

Prouts Neck, Maine see SCARBORO

Provençal (prôvĕsal'), Romance LANGUAGE of SE France In the Middle Ages the troubadours of Provence developed a standard local Romance language (see TROUBADOUR) This was called *langue d'oc* (hence the province of Languedoc), in distinction to the contemporary Middle French *langue d'oil*, *oc* and *oil* were words for "yes" in the southern and northern dialects, respectively Provençal was wholly replaced by French as the standard language In the mid-19th cent Joseph Roumanille and a group of six other poets, of whom Frédéri MISTRAL is best known) outside of Provence, formed the Felibrige to introduce a standard Provençal based on the language of the people and the medieval languages Members of the Felibrige included Théodore AUBANEL and Félix GRAS French remains the only language permitted in the public schools

Provence (prôvāns', Fr prôvās'), region and former province, SE France, enclosed by the Mediterranean on the south, the Rhone on the west, Dauphiné on the north, and Italy on the east It is now divided into five departments, Var, Bouches-du-Rhône, Vaucluse, Basses-Alpes, and Alpes Maritimes The fertile valley of the Rhone (a commercial highway since antiquity) and the slopes of the Maritime Alps, along the beautiful French RIVIERA, produce wine, mulberry trees (for silk worms), fruits, olive oil, flowers, and vegetables. In the CAMARGUE cattle are raised Much of the mountainous interior, however, is hopelessly eroded; many towns and villages stand abandoned and in ruins. MARSEILLES, Toulon, Cannes, and Nice are the chief coastal cities; AVIGNON, ARLES, and AIX-EN-PROVENCE (the historic capital), the chief cities of the interior The coastal strip was settled c 600 B.C by Greeks from Asia Minor, Phoenician merchants also settled here, and in the 2d cent B C. the Romans established colonies Provence was the oldest of the Roman possessions beyond the Alps, the Roman *Provincia* par excellence (hence its name) A part of Narbonensis (see GAUL) under the empire, Provence was invaded by the Visigoths (5th cent), the Franks (6th cent) and the Arabs (8th cent); Charles Martel recovered it for the Franks Roman institutions, however, persisted and have left a profound impression to the present day The Provençal language was the standard literary idiom throughout S France in the Middle Ages and is still used by some Provençal writers in the literature of today (see LANGUE D'OC AND LANGUE D'OIL, PROVENÇAL) In 879 Boso, count of Arles, established the kingdom of Cisjurane Burgundy or Provence, which in 933 was united with Transjurane Burgundy to form the Kingdom of Arles (see ARLES, KINGDOM OF) It passed under the Holy Roman Empire in 1033, but in the several fiefs forming Provence itself imperial authority was minimal The major part, held by the house of ARAGON, passed to the ANGEVIN dynasty of Naples through the marriage (1246) of Charles I with Beatrice, heiress of Provence Under the Angevins the towns became virtually independent republics King RENÉ left Provence to his nephew, Charles of Maine, who left it to the French crown (1486) ORANGE was added in 1672, Avignon and the Comtat VENAISSIN in 1791, Nice and Menton in 1860 In recent times large-scale immigration from Italy has taken place

proverb, short statement of wisdom or advice which has passed into general use Less literary than aphorisms, proverbs generally refer to common experience and are frequently expressed in metaphor, alliteration, or rhyme, e g , "A bird in the hand is worth two in the bush," "When the cat's away, the mice will play " Nearly every nation has its own body of proverbs, and many are common to several nations Almost as old as language itself, proverbs can be found in the Old Testament, in early Greek and Roman literature, and in the gnomic verse of the Anglo-Saxons In medieval literature proverbs can be found in the homilies and *exempla* to drive home the moral lessons and, with a more humorous intent, in the works of Chaucer To the traditional folk sayings the Renaissance writers added the more literary proverbs from the classics, the most famous collection was *Adagia* by Erasmus (1500) Recommended by the rhetoricians, proverbs were extremely popular among the Elizabethans The most famous collections were those of John Heywood (1549?) and Florio (1578) Their popularity declined in the 18th cent , and they have become a subject for research and classification in more modern times There is a famous collection by William Carew Hazlitt (1869), and there are many 20th-century collections See Henry Davidoff, ed , *World Treasury of Proverbs* (1946), W G Smith, ed , *The Oxford Dictionary of English Proverbs* (2d ed , revised by Paul Harvey, 1948)

Proverbs, book of the Old Testament, in the 20th place in AV It is a collection of sayings, many of them moral maxims, in no special order There are eight divisions, some having traditional ascriptions first, to Solomon, 1–9, second, also to Solomon, 10–22 16, third, 22 17–24 22, fourth, 24 23–34, *fifth*, to Solomon, copied by the men of King Hezekiah, 25–29, sixth, to Agur, unknown, 30, seventh to King Lemuel, unknown, 31 1–9, eighth, 31 10–31, an acrostic in praise of a virtuous woman The book is an early example of a type of literature popular among the Jews of postexilic times, wisdom literature (see WISDOM), the praise of abstract wisdom (1 20–33, 8) is typical of such writing The dating of Proverbs is difficult, and some critics place it as late as 150 B C For bibliography, see OLD TESTAMENT

Providence. **1** City (pop 4,397), W Ky , NE of Paducah and SSW of Henderson, in a coal, farm, and timber region **2** City (pop 253,504), state capital, and co seat of Providence co , NE R I , chief city of the state, at the head of Providence Bay The bay receives the Seekonk and other rivers, opens into Narragansett Bay, and forms a good harbor Roger WILLIAMS chose this site in 1636 after he was exiled from Massachusetts. He secured title to the land from Narragansett chiefs and named the place in gratitude for "God's merciful providence " The settlement grew slowly in the 17th cent , and many of its buildings were burned in King Philip's War (1675–76) Prosperity came with foreign commerce in the 18th cent , and after the Revolution industrial development was rapid The Brown brothers, John, Joseph, Nicholas, and Moses, played leading roles in the growth of the town, prospering in the foreign trade and fostering the textile and other industries The city was incorporated in 1831 It is widely known as a silverware and jewelry manufacturing center Some of the work of the noted Rhode Island School of Design (1877) is related to this industry Textiles, machine tools, hardware, watches, and oil products are also made. Providence is a port of entry. The leading educational establishment in the city and in the state is BROWN UNIVERSITY, other institutions are Providence College (Catholic, Dominican, for men, 1919) and the Rhode Island College of Education There are several fine libraries, including the John Carter Brown Library. The city became sole capital of Rhode Island in 1900 (Newport had been the joint capital) In 1901 the legislature began to meet in the impressive new marble-domed capitol designed by McKim, Mead, and White Much rebuilding followed the disastrous hurricane which inundated the center of the city in 1938 Among the city's historic structures are the old colony house or old statehouse (1762), the old market house (1773), Stephen Hopkins House (1755), John Brown House (1786), Sarah Helen Whitman's home, and the First Baptist Meetinghouse (1775) The capitol has monuments to Oliver Hazard Perry (1928) and Nathanael Greene (1931), and on Prospect Terrace is Leo Friedlander's heroic statue of Roger Williams (1939) Another memorial to the founder is in Roger Williams Park (over 450 acres), containing a museum of natural history, the Benedict Memorial for music, and the Betsey Williams Cottage (1773) See G S Kimball, *Providence in Colonial Times* (1912). **3** City (pop 1,110), N Utah, in Cache Valley just S of Logan, settled 1859 by Mormons The area produces wheat and other grains Limestone is quarried

Provincetown, town (pop 3,668), SE Mass , on N Cape Cod, a port of entry with a good harbor on Cape Cod Bay, inc 1727 The Pilgrims landed here in 1620—the 250-foot granite Pilgrim Memorial, erected in 1910, is conspicuous in the village Permanent settlement was not made until c 1700 Fishing was always its staple industry, but whaling, saltmaking, rumrunning, and smuggling were also practiced In the 20th cent the town gained fame as a resort favored particularly by artists The Provincetown Players, of whom George Cram Cook became director in 1915, pioneered in the Little Theater movement. See M M H Vorse, *Time and the Town* (1942)

Province Wellesley, NW Malaya see PENANG

Provins (prôvĕ'), town (pop 7,963), Seine-et-Marne dept , N central France It is an agricultural market Built by the Romans on a rocky height, it was (11th–13th cent) a prosperous trade center and the site of one of the great fairs of CHAMPAGNE The picturesque upper town has preserved its 13th-century ramparts, a 12th-century keep (*tour de César*), and the fine Church of St Quiriace.

Provisions of Oxford, 1258, a scheme of governmental reform forced upon King Henry III of England by his barons The Mad Parliament of 1258, angered by Henry's expenditures and the foreign influence at his court, forced him to accept the appointment of a committee of 24 nobles, half of whom were to be chosen by the king, for the purpose of drafting a scheme of constitutional reform Under the leadership of Simon de MONTFORT, the plan was drawn up at Oxford in June, 1258, and accepted by the king in October It provided for a council of 15 members to advise the king and to meet three times a year to consult with representatives of the realm Committees were chosen by an involved electoral system to keep check upon the various branches of the government Local administrative reforms were instituted and an effort made to limit the taxing power of the king The committee of 24 completed their work the following year by drawing up an enlarged version of the Provisions of Oxford known as the Provisions of Westminster The new document provided for additional inheritance and taxation reforms These attempts to limit monarchical authority were repudiated, with papal sanction, by Henry in 1261. There followed a period of strife known as the BARONS' WAR (1263–67), which terminated in an ostensible victory by the king, but with a reaffirmation of the principles of the earlier documents in the form of a law known as the Statute of Marlborough (1267) These efforts to limit the power of the king achieved little, but they prepared the way for later constitutional reform

Provo (prō'vō) [for Étienne Provot], city (pop 18,071), co seat of Utah co , N central Utah, on the Provo river near Utah Lake, at the foot of the Wasatch Mts and SSE of Salt Lake City, inc 1851 Settled by Mormons in 1849, it was defended against the Indians and grew to be the center of the rich irrigated region of Utah Valley After railroads were completed from Salt Lake City (1873) and Scofield (1878), Provo also became a shipping point for a mining district Recently the water supply has been aided by the Provo river project, and mineral wealth has been used by the construction (begun 1941) with U S government funds of a large steel plant at near-by Geneva; the plant was sold in 1946 to the U S Steel Corp Provo is the seat of BRIGHAM YOUNG UNIVERSITY The state mental hospital is in Provo Near the city are peaks of the Wasatch Range, including Provo Peak (11,054 ft.) and Mt. Timpanogos (12,008 ft.).

Provo, river rising in NE Utah in the Uinta Mts. and flowing SW past Provo to Utah Lake It was early used for irrigation, but after Utah Lake was badly depleted in the 1930s, the Bureau of Reclamation undertook a plan to rehabilitate old irrigation installations and build new ones centering on Provo river The project also gets water from the Weber river by a canal (built 1930) and from the Duchesne river, a tributary of Green River, by a tunnel across the mountain divide (partially constructed 1940–42) The water is used to irrigate the valley of Utah Lake and to supply domestic needs in the towns there and also in Salt Lake City, the 41-mile Salt Lake Aqueduct was two thirds completed in 1948 Deer Creek Dam in the Provo was completed in 1941

Provoost, Samuel (prō'vōst), 1742–1815, first Episcopal bishop of New York, grad King's College (now Columbia Univ), 1758 He studied at Cambridge Univ and in 1766 was ordained He was appointed assistant minister of Trinity parish, New York Provoost sympathized with the colonial cause and retired from Trinity for a time, but returned as rector in 1784 Created bishop of New York (1786), he was consecrated (1787) in England He served as chaplain to the Continental Congress (1785) and to the U S Senate (1789).

proximity fuse: see RADAR

Prudden, Theophil Mitchell (prŏd'dun), 1849–1924, American pathologist, b Middlebury, Conn, M D Yale, 1875 He was professor at Columbia (1892–1909) and director of the Rockefeller Institute for Medical Research from 1901 He wrote on bacteria and sanitation and, with Francis Delafield, a standard textbook of pathology (1885, 16th ed, 1936) See his *Biographical Sketches and Letters* (1927)

Prudentius (Aurelius Clemens Prudentius) (prōō-dĕn'shus), b 348, Christian Latin poet, b Spain He wrote a number of hymns, occasional Christian lyrics, and poems on saints He held a high place at the Roman court but retired to devote himself to religion

Prud'hon, Pierre Paul (pyĕr' pôl' prudô'), 1758–1823, French painter, 13th child of a stone mason of Cluny He was educated by the monks and later studied in Dijon and Paris In 1784 he won a scholarship to Rome, where he remained six years On his return he passed some years of hardship and struggle but gained recognition in 1808 with his *Crime Pursued by Truth and Divine Justice* (Louvre). A favorite of the empress, he received many commissions for the decoration of public and private buildings, including the Gallery of Laocoon of the Louvre He was elected to the Académie des Beaux-Arts in 1816. Prud'hon's private life was tragic An unfortunate marriage embittered his earlier years, and his long and happy relationship with his devoted pupil Mlle Mayer ended disastrously with her suicide in 1821 He survived her only two years Prud'hon is noted for his subtle use of strong light and shade An admirer of Correggio, he has a tender and poetic quality, beautifully exemplified in such works as his portrait of Empress Josephine and *Psyche Carried Away by Zephyrs* (both Louvre) He is represented in many galleries, including the Wallace Collection, London, the Metropolitan Museum, and the New York Historical Society

prune, popular name for any dried PLUM Fruits of the many varieties of *Prunus domestica*, which are firm fleshed and dry easily without removal of the stone, are gathered after falling from the tree, dipped in lye solution to prevent fermentation, and dried in the sun or in kilns Most of the commercial product comes from the Pacific coast states A sort of prune was used by the American Indians as a staple article of diet

pruning, practice of removing superfluous parts of plants, especially trees, hedges, shrubs, and woody vines, to increase the chances for survival Proper pruning of plants will result in better growth, greater strength, and maximum production of flowers and fruits In nature, pruning is largely done by strong winds which blow away the decayed and withering branches Man uses pruning as a device to control the dimensions of a plant Through judicious cutting the gardener can influence growth both laterally and vertically Cutting at the top induces lateral growth and is known as top pruning or topping This method is often applied to fruit trees Two methods of top pruning are called disbudding (removal of bud that has not grown more than one inch) and pinching off (pinching out a limb's terminal growing point) Both practices strengthen a plant immeasurably by diverting growth vigor to other parts, thus increasing the formation of buds and fruit rather than of wood The vigor of transplanted trees and shrubs is maintained by careful root pruning and by reducing the aerial part of the plant in proportion to the root destruction This action gives the root a chance to develop and take firm hold in the soil There is no set rule for the best time of the year to prune plants Authoritative horticulturists themselves are not in complete agreement In general practice, it largely depends on the convenience of the pruner See G L Wittrock *The Pruning Book* (1948), N. Catchpole, *Simple Pruning* (3d ed, 1949).

Prussia (prŭ'shù), Ger *Preussen* (proi'sùn), former state (113,041 sq mi, 1933 pop 39,934,011), the largest and most important of the German states Berlin was the capital Stretching from the borders of the Netherlands, Belgium, and Luxembourg in the west to those of Lithuania and Poland in the east, and from the Baltic Sea, Denmark, and the North Sea in the north to the Main river, the Thuringian Forest, and the Sudetes in the south, Prussia occupied more than half of all Germany and the major part of N Germany, and it surrounded several smaller German states, namely, Oldenburg, Brunswick, Lippe, Schaumburg-Lippe, Anhalt, Mecklenburg, and the free cities of Bremen and Hamburg Except along its southern edges, Prussia is mainly a low-lying country, drained by the Rhine, the Weser, the Elbe, the Oder, and many smaller rivers The central section and the historical core of the Prussian state is the former province of BRANDENBURG (after 1945 a separate state), including BERLIN, and with its capital at POTSDAM To the west of the ELBE, which approximately bisects the country from south to north, are the larger part of the former province of Saxony (after 1945 part of SAXONY-ANHALT), the former province of HANOVER (after 1945 part of LOWER SAXONY), the former province of Hesse-Nassau (after 1945 part of HESSE), the former province of WESTPHALIA (after 1945 part of North Rhine-Westphalia, which includes the gigantic industrial RUHR district), and the former RHINE PROVINCE (after 1945 divided between North Rhine-Westphalia and Rhineland-Palatinate) To the east of the Elbe are, in the southeast, the former provinces of Lower and Upper SILESIA and, in the northeast, the former provinces of POMERANIA and EAST PRUSSIA After 1919 the POLISH CORRIDOR cut East Prussia off from the rest of Prussia and Germany The northernmost province of Prussia was SCHLESWIG-HOLSTEIN The district of HOHENZOLLERN, in SW Germany, was a Prussian enclave between Wurttemberg and Baden After Berlin, the largest Prussian cities were COLOGNE, BRESLAU, ESSEN, FRANKFURT, DÜSSELDORF, HANOVER, DORTMUND, MAGDEBURG, and KÖNIGSBERG Industrially as well as politically, Prussia was the most important member of the German Reich It was partitioned after the Second World War among the American, Russian, British, and French occupation zones and into the four occupation sectors of Berlin In 1947 the Allied Control Council for Germany formally declared Prussia out of existence This action not only confirmed an accomplished fact, it also was intended as a blow against the spirit of German militarism, aggression, and imperialism, of which Prussia, rightly or wrongly, has been held the chief instigator for the past two centuries Prussia in its modern meaning came into existence only in 1701, when the elector of Brandenburg assumed the title king of Prussia Before that date the name Prussia applied only to the region later known as East Prussia (excluding the bishopric of ERMELAND), it was derived from the original Baltic population, conquered and largely exterminated by the TEUTONIC KNIGHTS in the 13th cent Through the secularization (1525) of the domain of the Teutonic Order by the grand master ALBERT OF BRANDENBURG, the domain became a hereditary duchy under Polish suzerainty, ruled by a branch of the Hohenzollern dynasty of Brandenburg In 1618 the duchy of Prussia passed, through inheritance, to the elector of Brandenburg, and in 1660, by the Peace of OLIVA, full independence from Polish suzerainty was confirmed to FREDERICK WILLIAM (the Great Elector) In the course of the 17th cent the electors of Brandenburg had also acquired the duchy of CLEVES, together with the counties of Mark and Ravensberg (1613), the bishoprics of Minden, Magdeburg, and Halberstadt (1648), and Farther (i e, eastern) Pomerania (1648) Though still small in comparison with later Prussia, the electorate of Brandenburg with its dependencies had become one of the major German states, a gain which it owed largely to the Reformation (the major part of its new acquisitions had been ecclesiastic territory) and to its successful diplomacy at the Peace of Westphalia (1648), which terminated the Thirty Years War In 1701 Elector Frederick III had himself crowned king of Prussia at Konigsberg, the capital of the former duchy of Prussia, and styled himself King FREDERICK I He remained a prince of the Holy Roman Empire in his quality of margrave and elector of Brandenburg and for his other possessions within the empire, but not as king of Prussia, which lay outside the imperial boundaries This technicality gave the kings of Prussia a still larger measure of independence from the emperors than the other princes of the empire had gained at the Peace of Westphalia Among the German princes, only the electors of Saxony (from 1697 to 1763 also kings of Poland) rivaled them in power, and only the Hapsburg emperors surpassed them. For the following century and a half German history was largely dominated by the successful struggle of Prussia for hegemony over Germany. As a result of the NORTHERN WAR Prussia gained (1720) the eastern part of Swedish Pomerania In the following 20 years, however, King FREDERICK WILLIAM I, the true creator of the Prussian state, avoided military ventures and took advantage of the general European peace in order to create a unified state and to build up the most efficient army in Europe It was left for his successor, FREDERICK II (Frederick the Great), to test the instrument his father had made; with him, Prussia entered on its career of ruthless conquest On a slim pretext (see SILESIA) and without a declaration of war, Frederick invaded (1740) Austrian territory, thus gaining the initiative in the War of the AUSTRIAN SUCCESSION (1740–48) Acting with utter disregard for its allies, Prussia got out of the war in 1742 by the Treaty of Berlin, reentered it in 1744, and quit again in 1745 at the Treaty of Dresden In both treaties Maria Theresa of Austria was forced to cede nearly all Silesia to Prussia Though it gained no additional territory in the SEVEN YEARS WAR (1756–63), Prussia emerged from it as the chief military power of the Continent By the Polish partition of 1772 (see POLAND, PARTITIONS OF) Prussia gained Pomerelia (except Danzig) and Ermeland Pomerelia was organized as the province of WEST PRUSSIA, and the original Prussia became known as East Prussia Frederick was succeeded (1786) by FREDERICK WILLIAM II, who further added to Prussia by the Polish partitions of 1793 and 1795 However, under his rule and that of his successor, FREDERICK WILLIAM III (1797–1840), Prussia underwent a period of eclipse due to the FRENCH REVOLUTIONARY WARS and the wars of NAPOLEON I Defeated by the French, Prussia withdrew from the antirevolutionary coalition by the Treaty of Basel (1795) and remained neutral until 1806 Its armies were crushed by Napoleon in the twin battles of Jena and Auerstedt, and in 1807 Prussia had to accept the harsh Treaty of Tilsit, by which it lost all lands W of the Elbe and most of its share of Poland and became a virtual dependency of France Yet Prussia was fortunate to possess, at the lowest ebb of its history, such able and energetic reformers as Karl vom und zum STEIN, Karl August von HARDENBERG, and Karl Wilhelm von HUMBOLDT These men transformed Prussia into a modern and progressive state by abolishing serfdom and nobiliar privileges, introducing agrarian and other social and economic reforms, and laying the groundwork for an exemplary system of universal education At the same time SCHARNHORST and GNEISENAU put the Prussian army on a modern basis Prussia was forced to send auxiliary troops for Napoleon's 1812 campaign in Russia, but late in the year YORK VON WARTENBURG concluded a separate truce with Russia, and in 1813 Prussia joined the coalition against France Field Marshal Blucher played a major role in defeating Napoleon at Leipzig (1813) and at Waterloo (1815) At the Congress of Vienna Prussia gained, in addition to its recovered territories, the entire Rhine Prov and Westphalia, the northern half of Saxony, the remainder of Swedish Pomerania, and a large part of W Poland, including Danzig, Posnan, and Gniezno However, Prussia disappointed the hopes of German liberals by following the lead of the Austrian chancellor, Metternich, in the HOLY ALLIANCE The promised constitution failed to materialize under the increasingly reactionary government of Frederick William III, and the half-hearted constitutional schemes of FREDERICK WILLIAM IV were impracticable Prussia did, however, take the lead in the economic unification of Germany (see ZOLLVEREIN), which was prerequisite to political union The March Revolution of 1848 was put down by force, and in 1849 Frederick William refused the imperial crown of Germany offered by the FRANKFURT PARLIAMENT His scheme for a North German Confederation under Prussian leadership was punctured by Austria in the Convention of OLMÜTZ (1850), and Prussia returned to the restored GERMAN CONFEDERATION In 1861 WILLIAM I (regent since 1858) became king, and in 1862 he appointed as chancellor Otto von BISMARCK, who was to direct the destiny of Prussia and (after 1871) of Germany until 1890 Bismarck effected the elimination of Austria from German affairs and the union of Germany under Prussian hegemony by means of three deliberately planned wars The first war (1864) was fought in alliance with Austria against Denmark over SCHLESWIG-HOLSTEIN Its settlement furnished a pretext for the AUSTRO-PRUSSIAN WAR of 1866, in which Prussia quickly and thoroughly defeated Austria and its allies and gained additional territory by the annexation of Hanover, Hesse-Nassau, Schleswig-Holstein, and the free city of Frankfurt The German Confederation was dissolved, and the Prussian-led NORTH GERMAN CONFEDERATION took its place Finally, in the FRANCO-PRUSSIAN WAR (1870–71) the North German Confederation overwhelmed France, and in 1871 William I of Prussia was proclaimed emperor of Germany. In its main features the subsequent history of Prussia was that of GERMANY. However, Bismarck's KULTURKAMPF against the Catholic

Church was largely confined to the kingdom of Prussia, which, like the other German states, continued as an individual member of the empire The Prussian constitution, drafted in 1848 and amended in the following years, was far less liberal than the federal constitution of the empire The government was not responsible to the Prussian Landtag (lower chamber), whose powers were small and whose members were elected by a suffrage system based on tax-paying ability The house of lords was largely controlled by the conservative Junker class The *Junkers* held immense tracts of generally poor land E of the Elbe (particularly in East Prussia) under semifeudal conditions. Endowed with little money and much pride, they formed the backbone of the army The rising industrialists, notably the great Rhenish and Westphalian mine owners and steel magnates, though their interests were often opposed to those of the *Junkers*, exerted an equally reactionary influence on politics The Prussian constitution was liberalized after Prussia became a republic in 1918, the *Junkers* lost many of their estates through the cession of Prussian territory to Poland However, both the *Junkers* and the Rhenish industrialists continued to exert much power behind the scenes, and when Franz von Papen became (1932) German chancellor, they came into their own In July, 1932, Papen suspended the Prussian parliament and ousted the Social Democrat Otto Braun, who had been premier of Prussia (with brief interruptions) from 1920 Early in 1933 Hitler seized power and made Goering premier of Prussia Strong rumors at the time purported that large *Osthilfe* funds, intended for relief to East Prussian farmers, had been diverted by the German government into the pockets of the East Prussian *Junkers*, the attempt to hush up the threatening scandal was, supposedly, a major factor in bringing Hitler to power Without question, Hitler's rise was helped by the Rhenish industrialists However, Hitler had no less popular support in the rest of Germany than he had in Prussia By 1933 German unity had progressed to a point where it was no longer possible to differentiate clearly between Prussia and the rest of Germany The proverbial qualities of the Prussian aristocracy—domineering arrogance combined with unquestioning devotion to duty, cold brutality juxtaposed with a refined and sensitive culture—are not distinct enough from similar traits in the ruling classes of countries with democratic traditions to account for the fact that Prussia always tended toward authoritarianism The classic histories of Prussia are those of Ranke, Treitschke, and Droysen See also Ernest Lavisse, *Études sur l'histoire de Prusse* (1879), Herbert Tuttle, *History of Prussia* (4 vols, 1884-96), Sir John A R Marriott and C G Robertson, *The Evolution of Prussia* (1915), G S Ford, *Stein and the Era of Reform in Prussia* (1922), S B Fay, *The Rise of Brandenburg-Prussia* (1937)

Prussian blue, pigment widely used for laundry bluing, in dyeing compounds, and in the manufacture of inks and paints Several varieties are made, generally by the action of potassium chlorate and sulphuric acid on a mixture of potassium ferrocyanide and ferrous sulphate in a heated solution

prussic acid see hydrocyanic acid

Pruth or **Prut** (both prōōt), river, 530 mi long, USSR and Rumania Rising in the Carpathians of the W Ukraine, it flows generally southeast, forming the border between the Rumanian province of Moldavia and the Moldavian SSR of the USSR, and joins the Danube E of Galati It is navigable in part By the Peace of the Pruth (1711) Peter I of Russia restored Azov to the Turks (see Russo-Turkish Wars)

Pryde, James (prid), 1869–1941, English painter and wood engraver He collaborated with Sir William Nicholson on many posters

Prynne, William (prin), 1600–1669, English political figure and writer, grad Oxford, 1621 He was admitted to the bar in 1628 A Puritan, he made pamphlet attacks on Arminian doctrine and earned the enmity of Archbishop William Laud When Prynne's structures on the stage in his book, *Histrio-mastix* (1633), were interpreted as aspersions on the king and queen, he was (1634) imprisoned, pilloried, and shorn of his ears He continued his Puritan pamphleteering in jail and in 1637 was again fined, sentenced to imprisonment for life, and branded with the letters S L (for seditious libeler) He was released by the Long Parliament in 1640 and was voted money reparation Prynne strongly supported the parliamentary cause in his writings and took a vindictive part in prosecuting his old enemy, Laud In defending his moderate position in theology he found himself opposing both Scottish Presbyterians and Independents He also came into conflict with John Milton over Milton's advocacy of divorce Prynne entered Parliament in 1648 and, opposing the army (see Puritan Revolution) and the execution of Charles I, he was expelled in Pride's Purge (see Pride, Thomas). He opposed the Commonwealth in frequent and violent pamphlets, for which he was imprisoned (1650–53), he wrote against the Protectorate and worked for the Stuart cause. After the Restoration he was keeper of the Tower records See biography by E W Kirby (1931), William Haller, *The Rise of Puritanism* (1938)

Pryor, Roger Atkinson, 1828–1919, American journalist, soldier, and jurist, b Dinwiddie co, Va, grad Hampden-Sydney College, 1845, and the Univ of Virginia law school, 1848 He was admitted to the bar in 1849 but soon entered journalism He founded (1849) and for a time edited the *South Side Democrat* at Petersburg, Va, edited, in association with others, the Washington *Union* and the Richmond *Enquirer*, and founded (1857) *The South*, a newspaper of extreme Southern views, published in Washington Pryor was (1859–61) a Democrat in Congress His acrimonious utterances in editorials and in Congress involved him in several duels Although reelected in 1861, Pryor did not resume his seat He served in the Confederate Congress until he became a colonel in the Southern army (1862) Pryor was made a brigadier general for gallantry at Fair Oaks in the Peninsular campaign In 1863 he resigned his commission after a disagreement with Jefferson Davis, but reentered the army as a private in Fitzhugh Lee's cavalry and served until his capture in Nov, 1864 After the war he practiced law in New York for many years See Mrs Roger A Pryor, *Reminiscences of Peace and War* (1904)

Pryor, city (pop 2,501), co seat of Mayes co, NE Okla, ENE of Tulsa, settled 1872 A U S agricultural experiment station and a state home for children are here

Przemysl, Pol *Przemyśl* (pshĕ'mĭshul), city (pop. 36,841), SE Poland, in the foothills of the Carpathians and near the Soviet border It is chiefly a trade center The city was allegedly founded in the 8th cent Between 981 and 1340 Przemysl was alternately ruled by Poland and Kiev, it became a diocese of the Orthodox Eastern (1271) and Roman Catholic (1375) churches Included in Austrian Poland (1772–1919), it was twice besieged (1914, 1915) and once occupied (1915) by the Russians.

Przhevalsky, Nikolai Mikhailovich (nyĭkulĭ' mĕkhĭ'luvĭch purzhĭvul'skĕ), 1839–88, Russian explorer in Asia His first important work was an exploration (1867–69) of the Ussuri river region From 1871 to 1884 he made five extensive trips, principally covering the mountainous region (including the Tien Shan and the Kunlun) of W China and E Tibet, which previously had not been systematically explored by any Westerner Przhevalsky is credited with the discovery of Lob Nor and of the Altyn Tagh range He wrote *Mongolia, the Tangut Country, and the Solitudes of Northern Tibet* (Eng tr, 1876) and *From Kulja across the Tian-Shan to Lop-Nor* (Eng tr, 1879).

Przhevalsky's horse see Tarpan

Przybyszewski, Stanislaus, Pol *Stanisław Przybyszewski* (stänēs'wăf pshĭbĭshĕf'skĕ), 1868–1927, Polish novelist, essayist, and dramatist He studied in Berlin, where his friendship for a socialist led him to prison He traveled in Scandinavia, married a Norwegian woman, and under Scandinavian influence developed his philosophy of medievalism, which repudiates reason and exalts intuition He was opposed to positivism and encouraged neoromanticism Among his works, written in Polish and in German, the dramas *For Happiness* (1912, Eng tr, 1912) and *Snow* (1903, Eng tr, 1920) and the novel *Homo Sapiens* (1898, Eng tr, 1915) have been translated into English

Psalmanazar, George (săl'munā'zur), 1679?–1763, English literary impostor His real name is not known Born and educated in France, he developed a marked ability in learning languages He traveled through Europe posing as a Japanese convert to Christianity In Holland (1702) he was examined by William Innes, an English army chaplain who, though he penetrated Psalmanazar's pose, sent him to England as a Formosan convert in order to gain credit for the conversion Psalmanazar was able without detection to publish *An Historical and Geographical Description of Formosa* (1704), to invent a complete "Formosan" language, and to instruct Oxford students in the use of it However, suspicions arose, and after 1706 he was disgraced He scraped a meager living by literary hack work, became intensely religious, and wrote of his life and impostures, *Memoirs of ——— Commonly Known by the Name George Psalmanazar* (1764)

Psalms (sämz) or **Psalter** (sôl'tŭr), book of the Old Testament, in the 19th place in AV, a collection of 150 poetic pieces This has been since several centuries B C the hymnal par excellence of the Jews and subsequently of Christendom The poems are of varying date and authorship, but many are ascribed to David, cf Eccles 47 8 The versions vary extensively in dividing individual psalms, and therefore citation of number and verse is confusing The Hebrew and AV and RV use one numbering, other versions, including earlier English ones (e g, Douay), have another, as follows: AV Pss 1–8= Douay Pss 1–8, AV 9–10=Douay 9, AV 11–113= Douay 10–112; AV 114–115=Douay 113, AV 116= Douay 114–115, AV 117–146=Douay 116–145, AV 147=Douay 146–147, AV 148–150=Douay 148–150 According to the text the Psalms are divided into five books (citations are in AV numbers): Pss. 1–41, 42–72, 73–89, 90–106, 107–150 The poems vary in tone and subject Thus, some express contrition, e g, 6, 32, 38, 51 (called, from the opening word in Latin, Miserere), 102, 130 (De profundis), 143, called the penitential psalms, some are imprecatory, e g, 32, 52, 54–59, 64, 68, 109, 137, some emphasize the history of Israel, e g, 78, 104–107, 114–115 (In exitu Israel), 135, 136, some are didactic, e g, 37, 49, 50, 73, some seem to have been especially adapted to public worship, e g, 47, 95 (Venite), 105, 134–136, 148 150, some have been regarded as Messianic, e g, 2, 8, 16, 22, 45, 89, 110 (Dixit Dominus), 132, cf Luke 20 40–44, John 19 36,37 Eight are acrostics 10, 25, 34, 37, 111, 112, 119, 145 There are psalms elsewhere in the Old Testament, e g, 1 Sam 2 1–10, 2 Sam 22 (cf Ps 18), 1 Chron 16, Isa 38 10–20, Hab 3 Many psalms have "titles" or musical and other directions Most of these are obscure The history of translations of the Psalms is more extensive than that of any other part of the Old Testament Earlier English versions include those of St Aldhelm and of Richard Rolle, the Psalms have been done into English verse a number of times, e g, the Bay Psalm Book and versions by Nahum Tate and Nicholas Brady and by Isaac Watts In the Book of Common Prayer the Psalms are in the version of the Great Bible of 1539 (by Coverdale from the Vulgate), the use of this version instead of AV was continued because of its popularity, just as St Jerome had incorporated a corrected Old Latin version (called the Gallican Psalter) into the Vulgate, not using his own (superior) translation from Hebrew See (besides books listed under Old Testament) W A Wright, ed, *The Hexaplar Psalter, or, The Psalms in Six English Versions* (1911), Patrick Boylan, *The Psalms* (1921), C G Cumming, *The Assyrian and Hebrew Hymns of Praise* (1934), C C Martindale, S J, *Towards Loving the Psalms* (1940), O E W Oesterley, *The Psalms* (1939), Ronald Knox, *The Psalms a New Translation* (1947)

Psalms of Solomon see Pseudepigrapha

Psalter. see Psalms

psaltery (sôl'turē, sôl'trē), stringed musical instrument It has a flat soundboard over which a variable number of strings are stretched Its origin was in the Near East, and it is referred to in the Bible It appeared in Europe in the 12th cent and flourished until the late Middle Ages The term *psaltery* is sometimes used as a generic term for all plucked zithers having flat bodies

Psamtik (săm'tĭk, sām'tĭk), Latin *Psammetichus*, d 609 B C, king of ancient Egypt (663–609 B C), founder of the XXVI dynasty When his father, Necho, lord of Sais under the Assyrians, was defeated and slain by the Nubian Tanutamon (663), Psamtik fled to his overlord, Assur-bani-pal, who reinstated him at Sais as viceroy of Lower Egypt While Assur-bani-pal was busy in Babylonia and elsewhere, Psamtik shook off his Assyrian allegiance and became master of all Egypt During his long and eminently prosperous reign, he encouraged the settlement of Greek soldiers and traders, who for the first time became important in Egypt His incursion into Palestine was stopped by the Scythians His son was the Pharaoh Necho

pseudepigrapha (sōō"dĭpĭ'grufu) [Gr, =things falsely ascribed], uncanonical writings of a biblical type, usually of spurious date and authorship Three of the best-known pseudepigrapha are placed in the Apocrypha in AV 3 and 4 Esdras and the Prayer of Manasses (see Manasseh 5), the rest of the books of the Apocrypha are not pseudepigraphic, but deuterocanonical The pseudepigrapha are Jewish, composed 200 B C–A D 200, and Christian, A D 50–A D 400, sometimes their Jewish or Christian nature is obscured by importations from foreign religions The greater number are apocalyptic, see Apocalypse Jewish apocalyptic pseudepigrapha include the Ethiopic Book of Enoch (150 B C –100 B C), of composite authorship, accepting the Resurrection and judgment, the Secrets of Enoch (A D c 50), by a Hellenistic Jew under strong non-Jewish influence, the Testaments of the Twelve Patriarchs (c 100 B C), by an idealistic Pharisee, probably popular with early Christians, the Assumption of Moses (A D c 1), by a Pharisee opposed to the politicians of his sect, the Sibylline Oracles, an accumulation (200 B C –A D 200) of Messianic prophecies, the Apocalypse of Baruch (1st cent), similar in hope to 2 Esdras Biblical stories romantically elaborated include the Books of Adam and Eve, Joseph and Asenath (see Gen 41 45), and Jannes and Jambres The Psalms of Solomon (c 50 B C), by Pharisees, denounce the later Maccabees Two histories of the world, the Book of Jubilees or Little Genesis (c 100 B C), ending with the giving of the Law on Sinai, and the Book of Biblical Antiquities (A D c 100), ascribed to Philo, ending with the accession of David, are intended to bear the same relation to the canonical books covering their material as Chronicles do to 2 Samuel and Kings Supposedly historical, 3 Maccabees tells how the Egyptian Jews escaped a massacre in the 3d cent B C, 4 Maccabees is an essay on the Law with Greek philosophical elaborations,

5 Maccabees is an imitation of 1 Maccabees and the material of Josephus on that family From Christian authors there are apocalypses attributed to most apostles and Jewish heroes, often simply revisions of Jewish works They include the Apocalypse of Peter (c 150), the Shepherd of HERMAS, and the Ascension of Isaiah, which is composed of Jewish legends on his death and an apocalypse offering information on Christian trends The canonical Gospels, Acts, and Epistles became models for many pseudepigrapha, the majority of which were written to give an odor of sanctity to beliefs challenged as heretical The fragmentary Gospel according to the Hebrews (c 100) was apparently similar to Matthew The Gospel of Nicodemus (300–500) was influential in the Middle Ages; it contains the Acts of Pilate (Pilate's report on the Crucifixion) and the HARROWING OF HELL GNOSTICISM is apparent in many gospels, e g , the Protevangelium of James and the Gospel of Thomas (both probably 2d cent), these are full of legends on Mary and Jesus Elaborations of these gospels were popular, e g , the Arabic Gospel of the Infancy of Jesus Fragmentary heretical gospels include the Gospels of the Twelve and of the Egyptians There are books of Acts named for most apostles, mainly heretical The Acts of Thomas or Judas Thomas is informative on Christianity in Mesopotamia The DIDACHE and the Apostolic CONSTITUTIONS are ancient, probably genuine, compilations Undoubtedly genuine are certain epistles, one of St CLEMENT I, seven of ST IGNATIUS OF ANTIOCH, one of St POLYCARP, and one of the church of Smyrna on Polycarp's martyrdom An epistle of the 1st cent denouncing the reaction toward Judaism in Christian circles is ascribed traditionally to St Barnabas The Epistles of Abgar (c 200) were popular for their pretended authorship by Jesus and a sick king of Edessa The spurious epistles of Paul, Clement, Ignatius, and others throw light on the Christian tendencies of the first four centuries See AGRAPHA OF JESUS See R H Charles, *The Apocrypha and Pseudepigrapha of the Old Testament* (1913); C C Torrey, *The Apocryphal Literature* (1945)

Pseudo-Dionysius: see DIONYSIUS THE AREOPAGITE, SAINT

pseudonym (sōō'dŭnĭm, sū–) [Gr ,=false name], name assumed by writers and others to conceal identity Famous examples in literature are Boz (Charles Dickens), Fiona Macleod (William Sharp), George Eliot (Mary Ann Evans), Mark Twain (Samuel Clemens), O Henry (William Sydney Porter), Stendhal (Marie Henri Beyle), and George Sand (Mme Dudevant) See the standard dictionary of anonyms and pseudonyms in French and Latin by A A BARBIER, Samuel Halkett and John Laing, *Dictionary of Anonymous and Pseudonymous English Literature* (rev ed , 7 vols , 1926–32), A. V. Morris, *Anonyms and Pseudonyms* (1934).

Psiloriti, Crete see IDA, MOUNT

psittacosis (sĭtŭkō'sĭs) or **parrot fever,** disease of certain birds, e g , the parrot, parrakeet, lovebird, and canary, believed to be caused by a virus A highly contagious disease, it is readily transmitted to man Patients with the disease should be strictly isolated to prevent its spread Apparently healthy birds have been found to be carriers of it Symptoms of parrot fever are very similar to those of influenza, pneumonia, and typhoid fever, and therefore many cases of it were mistakenly diagnosed Treatment by penicillin has often been successful Children seem to have more immunity to it than adults

Pskov (puskôf'), city (pop. 59,898), capital of Pskov oblast, W European RSFSR, near the southern end of Lake Peipus and the Estonian border It is one of the oldest Russian cities, dating from the early 10th cent Originally an outpost of Novgorod, it became (14th cent) an independent, democratic city-state and a flourishing commercial center. The Hanseatic League possessed trading privileges here. With the annexation (1510) of Pskov by Moscow its ancient democratic institutions disappeared. Its importance, except as a strategic fortress, soon declined The railroad station of Pskov was the scene (1917) of Nicholas II's abdication In the Second World War the city was occupied by the Germans and suffered much destruction. The historic core of Pskov is the inner walled city, containing a famous kremlin (12th–16th cent), with towers in the Byzantine style, a cathedral, and numerous medieval churches and monasteries. Modern Pskov is an important rail junction and a manufacturing center, producing linen and agricultural machinery

Psyche (sī'kē) [Gr.,=breath, soul, spirit], in Greek literature, personification of the human soul In later Greek literature a legend was developed Cupid (or Eros), the god of love, loved Psyche and secreted her in a beautiful palace Since he was a god, he forbade her to look at him when he visited her She disobeyed, and he left her. Thenceforth she suffered many hardships, but at last she was made immortal and was united with Eros forever

psychiatry (sŭkī'ŭtrē, sī–), branch of medicine which deals with the diagnosis and treatment of mental disorders. Until the time of Philippe PINEL there was no organized attempt to study or treat mental abnormalities or to improve institutional conditions for the insane. Throughout the 19th cent. reformers, such as Dorothea L. DIX, whose efforts were primarily humanitarian, fought for legislation and improved conditions. The start of the 20th cent. saw the organization of the MENTAL HYGIENE movement, dedicated to the prevention of mental disease through guidance clinics and education. During this period scientists were seeking the underlying causes of mental and nervous disorders. Emil Kraepelin, on the basis of prognostic considerations, was the first to delineate PSYCHOSIS, making the two general classifications of MANIC-DEPRESSIVE PSYCHOSIS and of dementia praecox (see SCHIZOPHRENIA) Gradually, some psychiatrists, led by Sigmund FREUD, turned from the study of organic structural traits to those of the behavior and emotional history of the patient as a clue to the nature of neurosis and psychosis Since the 1930s new methods of psychosurgery and the development of SHOCK THERAPY have resulted in improvement and remissions in certain types of psychoses PSYCHOTHERAPY and PSYCHOANALYSIS are now in general use and are even being applied with some success to disorders whose symptoms appear to be essentially physical (see PSYCHOSOMATIC MEDICINE) See W. A White, *Outlines of Psychiatry* (1932), Eugen Bleuler, *Textbook of Psychiatry* (Eng tr , reissue, 1934), Oscar Diethelm, *Treatment in Psychiatry* (1936), Gregory Zilboorg, *History of Medical Psychiatry* (1941)

psychical research (sī'kĭkul) or **parapsychology** (pă"rusīkŏ'lujē), study of mental phenomena not explainable by accepted principles of science. The use of scientific discipline in the investigation of paranormal and supernormal phenomena is comparatively modern, having its inception with the foundation (1882) in London of the Society for Psychical Research The early efforts were to dissociate psychical phenomena from spiritualism and superstition and particularly involved investigation of mediums and their claims of evoking spirits or apparitions They also studied automatic writing, levitation, and ectoplasm and poltergeist activities One of its principal founders, F W. H Meyers, summed up the society's early efforts in *Human Personality and Its Survival of Bodily Death* (1903) An American Society for Psychical Research was also founded, J H Hyslop was a major figure in it. Considerable experimentation has been carried on over the years, perhaps the best known being that of J B Rhine at Duke Univ Most study has been given to the area of extrasensory perception, a term originated by Rhine, to include telepathy, clairvoyance, and foreknowledge The Duke Univ laboratory has also investigated psychokinesis, the exercise of direct mental influence by matter In England the work of Whately Carington and S G Soal has paralleled that of Rhine The most common technique used has been card guessing and picture guessing Although positive conclusions have been claimed by scientists of repute, the methods and results are highly criticized by many There has been increasing interest in psychical research with fellowships established at Cambridge and Harvard universities, and a full scale laboratory in operation at the Univ of Groningen See Whately Carington, *Thought Transference* (1946), J B. Rhine, *Reach of the Mind* (1947)

psychoanalysis (sī"kōună'lusĭs), name given by Sigmund FREUD both to a system of psychopathology and to a therapeutic procedure designed primarily for the treatment of NEUROSIS Psychoanalysis began after Freud studied (1885–86) with Charcot in Paris and became convinced that hysteria was caused not by organic changes in the nervous system but by emotional disorders Later, in collaboration with, and influenced by, Josef Breuer, he wrote two papers on hysteria (1893, 1895) that were to be the precursors of the vast body of psychoanalytic theory The basic postulate of psychoanalysis, the concept of a dynamic UNCONSCIOUS, grew out of Freud's observation that the physical symptoms of hysterical patients tended to disappear after apparently forgotten material was made conscious He saw the unconscious as an area of great psychic activity, which influenced every action but operated with material not subject to recall by normal processes The mechanism inducing this so-called forgetfulness he called *repression*, and the one preventing repressed material from being brought to the surface he called *resistance* Observing the relationship between neurosis and repressed memories, Freud made conscious recognition of these forgotten scenes the keystone of psychoanalytic therapy Hypnosis was the earliest method used to probe the unconscious, but due to its limited effectiveness it was soon discarded in favor of free ASSOCIATION. Dreams, which Freud interpreted as symbolic wish fulfillments, were another key to the unconscious. A further factor in the analytic situation was what Freud called transference, the heightened emotional reaction of the patient to the analyst, which was believed to be a reactivation of the patient's infantile feelings for important figures of his early life, such as parents and siblings. To clarify the operation of the human psyche Freud and his followers introduced a vast body of theory. On the basis of observation and speculation, Freud conceived of the presence of two oppositional instincts or, more precisely, drives toward a particular type of behavior One of these, the death instinct, impels the individual toward aggressive, hostile, and destructive behavior; the other, the sexual instinct, moves in the direction of erotic, constructive, and affectionate behavior Freud believed that under ideal circumstances of adjustment the two drives would interact in such a way as to neutralize the overt primitive expressions of each other. It is basic psychoanalytic theory that damming up the energy of instinctual drives is crucial in producing neurosis Freud's theory of psychosexuality developed from the theory of infantile sexuality, in which he saw the libido, or sexual energy, of the infant progressively seeking outlet through different body zones (oral, anal, urethral, phallic, and genital) during the first five years of life Besides the changes in bodily localization, the libido is also believed to undergo development with respect to the object toward which it is directed The first object is the child's own body, the stage of NARCISSISM, later it is directed toward the parents, at which time the OEDIPUS COMPLEX develops, finally, if mature, it transfers to objects in the outer world, the so-called genital stage These impulses, however, may be arrested, or fixated, at some point in the process of libidinal development, or the libido of the adult, because of prolonged frustration, can be diverted from its normal genital outlet by means of regression, a return to objects or satisfactions associated with infantile life Diversion of libidinal energy from its proper channel is thought to prevent a mature response to the complexities of adulthood However, Freud believed that in the emotionally mature person a good part of the libidinal energy could be deflected by the process of sublimation from its unconscious sexual aim to nonsexual, socially useful goals In considering the human personality as a whole Freud divided it into three functional parts, id, ego, and superego He saw the id as the reservoir of the instinctual drives, imbedded in the deepest level of the unconscious and dominated by the pleasure principle, an automatic aspect of mental activity, with its object immediate gratification of drives The superego, originating in the child through identification with parents and others and in response to social pressures, functions as an internal censor, embracing both a conscious and an unconscious conscience Freud considered the ego that part of the id modified by contact with the external world Although only partly conscious, it makes up the bulk of what is commonly referred to as consciousness It is seen as the mental agent mediating between three contending forces, the outside demands of social pressure or reality, the libidinal demands for immediate satisfaction arising from the id, and the claims of the superego In reconciling these forces which converge upon it, the mature ego conforms to the reality principle, the acceptance of temporary denial of immediate pleasure in order to avoid painful consequences or to make gratification possible at a later date Further, psychoanalysts believe that the ego has available, besides repression and sublimation, several other means (see DEFENSE MECHANISM) which it utilizes in protecting itself against demands of the id Psychoanalysis, from its inception until 1906, was for all intents and purposes the private preserve of Freud After that date he was joined by an increasing number of students and physicians, among whom were C G JUNG and Alfred ADLER Both made significant contributions, but by 1913 ceased to be identified with the main body of psychoanalysis because of theoretical disagreements in relation to Freud's strong emphasis on sexual motivation Orthodox Freudian psychoanalysis was challenged in the 1920s by Otto RANK, Sandor Ferenczi, and Wilhelm Reich, later, in the 1930s, by Karen HORNEY, Erich Fromm, and Harry Stack SULLIVAN This latter group emphasizes social and cultural factors in neurosis and, in therapy, stresses the interpersonal aspect of the analyst-patient relationship Psychoanalysis is no longer confined to the analyst's office It has made significant contributions in the fields of child rearing and education, in the cultural and social sciences, and in the arts. See the works of Freud, K A Menninger, *Man against Himself* (1938), Ives Hendrick, *Facts and Theories of Psychoanalysis* (1939), Karen Horney, *New Ways in Psychoanalysis* (1939), Erich Fromm, *Escape from Freedom* (1941); Abram Kardiner, *Psychological Frontiers of Society* (1945), Franz Alexander, *Fundamentals of Psychoanalysis* (1948)

psychology (sīkŏ'lujē) is often described as the science or study of mind. Such a definition, however, without an accompanying adequate description of what is meant exactly by mind is without meaning, and as yet there is no agreement among psychologists upon any single definition of mind. By some, for example, mind is considered a definite thing apart from the body and as such

virtually synonymous with soul. Others, although they set up the mind as distinct from body, bind it to body by the interaction held to take place between the two. Still others, in an attempt to do away with this separation, tie mind closely to the brain, making the one a function of the other. Others, however, deny existence of mind altogether, basing their conclusion on the belief that human behavior can be adequately described without the use of any such vague and indefinable term. Though these matters are of concern to modern schools, they have shown less inclination than did their predecessors to involve themselves in broad, theoretical controversies. Contemporary psychology, in general, is interested in the total organism in all its aspects—its behavior as well as its mental activities. In its widest sense modern psychology can be defined as the science that studies interactions between living organisms and the environment. This view is designed to enable psychology to avoid the mechanistic approach of strict behaviorism, as well as the extreme of idealism which is part of its philosophical heritage. The subject matter of psychology is difficult to limit. It is closely allied to biological science in that it treats of living things and, in the search for causative factors governing their behavior, turns often for assistance to the study of anatomy and physiology—in the human being, for example, to the study of the nervous system. With anthropology, psychology has a common bond in being concerned with man as a particular kind of animal. It overlaps, in some degree, the subject matter of physics, as in its treatment of certain senses—vision, hearing, and touch—and of chemistry, as in its explanation of taste and smell. In spite of these varied and close connections, however, it still retains its identity as a specific branch of science in that no complete and wholly adequate explanation of an individual's behavior can be obtained entirely in terms of any one of the other sciences. Such of its important concepts as those of the emotions, the instincts, intelligence, and even consciousness are therefore described in terms of their relationship to the behavior of the individual as a whole. In its earliest speculative period psychological study was chiefly embodied in philosophical and theological discussions of the soul. The *De anima* of Aristotle is considered the first monument of psychology as such, while the foundations of modern psychology were laid by Hobbes in the 17th cent. The three body-mind theories which dominated later psychological thought were outlined in the 17th cent.—interactionism by Descartes, monism by Spinoza, and parallelism by Leibniz. The Leibniz theory of monads contributed also to the founding of faculty psychology by Christian von Wolff. The school was so called because it attributed separate faculties to the soul or mind. In England empirical psychology originated in the work of Locke, Berkeley, Reid, and Hume. It was followed by the associational psychology of David Hartley, James Mill, John Stuart Mill, and Alexander Bain, who stressed the relation of physiology to psychology, thus giving rise to physiological psychology. There were important contributions made in this field by Condillac, F. J. Gall, the founder of phrenology, and Paul Broca, who localized speech centers in the brain. Two factors dominating the beginnings of scientific psychology in the 19th cent. were the experimental method and the principle of evolution. The former was represented by the great laboratory work of the Germans E. H. Weber, G. T. Fechner, Wilhelm Wundt, and H. L. F. von Helmholtz and the Englishman, E. B. Titchener. The principle of evolution, stemming from Charles Darwin, gave rise to what was later called dynamic psychology. This approach was ably presented by William James in his *Principles of Psychology* (1890). Out of the new orientation in psychology grew the clinical experiments in hysteria and hypnotism carried on by J. M. Charcot and Pierre Janet in France. Sigmund Freud, in his elaborate theory of the unconscious, gave a new direction to psychology and laid the groundwork for PSYCHOANALYSIS. Freudian theory took psychology into such fields as education, anthropology, and medicine. The BEHAVIORISM of J. B. Watson played a highly influential part in American thought in the 1920s and '30s. Educational psychology derives from Froebel and Pestalozzi and their follower Herbart, and in later times it was developed by G. Stanley Hall and by E. L. Thorndike, who also worked in the field of genetic psychology, as did Galton. Social psychology was developed by such men as William McDougall and Havelock Ellis. Other branches of the field include child psychology, individual psychology, and religious psychology. Animal psychology, or the study of animal behavior, has become especially prominent in the 20th cent., and much research has been done on the sense perceptions of animals (vision and hearing) and their learning ability and intelligence. Great impetus was given by the work of Wolfgang Köhler on the chimpanzee. With Koffka he developed the school of GESTALT PSYCHOLOGY. In so-called applied psychology, psychological principles are adapted to industry and commerce. See E. F. Heidbreder, *Seven Psychologies* (1933), E. G. Boring and others, *Foundations of Psychology* (1948), R. S. Woodworth, *Contemporary Schools of Psychology* (rev. ed., 1948), Gardner Murphy, *Historical Introduction to Modern Psychology* (rev. ed., 1949).

psychoneurosis, see NEUROSIS.

psychosis (sīkō'sĭs), in PSYCHIATRY, mental disease, either functional or organic, involving emotional disturbances which render the individual incapable of adjusting realistically to his environment. The symptoms may include, either separately or in combination, disturbance of reality appreciation (hallucinations and delusions), severe deviation of mood (depression and mania), lack of, or inappropriateness of, apparent emotional response, and severe distortion of judgment. In legal usage the term INSANITY, not used in psychiatry, is applied to those psychoses in which the moral judgment of the individual is considered impaired. Among the more common of the organic psychoses, so called because of the structural damage of the brain, are general paresis, senile dementia, and certain late and neglected stages of genuine epilepsy. All psychoses, such as SCHIZOPHRENIA, PARANOIA, and MANIC-DEPRESSIVE PSYCHOSIS, which display no observable organic damage, are termed functional. Some psychiatrists, however, hold that the functional psychosis, like the organic, is the result of structural damage, as yet unknown. Psychoanalysis, on the other hand, has tended to emphasize the role of emotional conflicts. New techniques in psychosurgery and the administration of SHOCK THERAPY have proved valuable in the treatment of certain of the psychoses.

psychosomatic medicine (sī"kōsōmă'tĭk) treats emotional disturbances, usually unconscious, which manifest themselves in the form of physical disorders. The term *psychosomatic* emphasizes essential unity of the psyche and the soma, a combination rooted in ancient Greek medicine. The treatment ordinarily involves a medical regimen as well as some form of PSYCHOTHERAPY for the patient. Sigmund Freud, at the end of the 19th cent., laid the scientific groundwork for the psychosomatic study with his theoretical formulations based upon new methods of treating HYSTERIA. It was further reinforced by the psychobiology of Adolf Meyer and the research of W. B. Cannon on the physiological effects of acute emotion. Helen Flanders Dunbar's *Emotions and Bodily Changes* (1935), along with the founding (1939), under her editorship, of the publication *Psychosomatic Medicine*, helped establish psychosomatics as a separate field of research. Especially successful in the treatment of stomach ulcer, psychosomatic medicine has begun to treat such disorders as heart disease, rheumatics, asthma, and endocrine disturbances. See Franz Alexander and others, *Studies in Psychosomatic Medicine* (1948), Edward Weiss and O. S. English, *Psychosomatic Medicine* (2d ed., 1949).

psychotherapy (sī"kōthĕ'rupē), treatment of mental disorders by psychological methods. Although this type of treatment has been used in one form or another through the ages, it was not until the late 19th cent. that it received scientific impetus, primarily under the leadership of Sigmund Freud. His use of hypnosis in the treatment of hysteria led to the development of PSYCHOANALYSIS, now a specialized field. In cases where this form of therapy is deemed inadvisable or unwarranted, direction, support, and suggestion are used in an attempt to help the patient function on a higher level without becoming aware of the deeper, or unconscious, motives of his behavior. Such treatment is often supplemented by occupational therapy.

psyllium seed, see PLANTAIN.

Pt, chemical symbol of the element PLATINUM.

Ptah, see EGYPTIAN RELIGION.

ptarmigan (tär'mĭgŭn), game bird of the GROUSE family, characterized by the almost complete feathering of the legs and by seasonal changes of plumage. The willow and the rock ptarmigans range over arctic and subarctic regions and migrate southward in winter, occasionally to the United States. The white-tailed ptarmigan nests in the Rocky Mts. above the timber line. Protectively colored at all seasons, the birds molt three times a year. During the winter they match the snow. In the spring the males develop the chiefly brown, black-barred nuptial plumage, the females a more somber covering. White feathers gradually replace some of the dark summer feathers, resulting in the mixed fall coloring which is again replaced by the white winter dress. People of the Far North depend upon ptarmigans for much of their food.

pterodactyl (tĕrŭdăk'tĭl), extinct winged reptile of the order Pterosauria or Pterodactyla, abundant in the Mesozoic era of geologic time. The flying apparatus of the pterodactyls consisted of a membranous wing stretched between the fourth finger of the hand and the sides of the body. The fifth finger was degenerate, and the first three were free of the wing. The earlier varieties had fully toothed jaws and long tails, while in the later forms (e.g., *Pteranodon* of the Kansas chalk), the tail was a stump, and teeth were lacking, the jaws being modified into a beak. Sizes varied from that of a small perching bird to that of a dragon with a wingspread of more than 20 ft. The pterodactyl, unlike the ARCHAEOPTERYX, was not ancestral to the birds, but represented a wholly separate line of development.

Ptolemais (tŏlumā'ĭs), ancient name given to several cities to honor members of the dynasty of the Ptolemies. One of these was ACRE. Another was one of the great Hellenistic cities of Upper Egypt, on the Nile and S of Abydos. A third, in Cyrenaica, was one of the cities of the Libyan Pentapolis. A fourth was a small town, sometimes called Ptolemais Theron, on the Red Sea.

Ptolemy I (Ptolemy Soter) (tŏ'lumē sō'tur), d. 283 B.C., first king of the Macedonian dynasty (XXI or Lagid dynasty) of ancient Egypt, son of a Macedonian named Lagus. He was one of the leading generals of Alexander the Great, and after Alexander's death (323 B.C.) he joined the other DIADOCHI in dividing and quarreling over the empire. Ptolemy got Egypt and managed to keep control of it in the midst of incessant warfare. To strengthen his position he married Eurydice, daughter of ANTIPATER (though he soon shifted his affection to her cousin and his own half sister, Berenice). He defeated (321) PERDICCAS, and in the confused struggle for imperial power he at first supported ANTIGONUS I against EUMENES, then fearing Antigonus' efforts to remake the empire, allied himself with CASSANDER and LYSIMACHUS. Ptolemy defeated the troops of Antigonus in 312, but was himself defeated at Salamis in 306. The ultimate defeat and death of Antigonus at Ipsus in 301 clarified the situation somewhat. Ptolemy had already (304) declared himself king. He did much to make Alexandria a fountainhead of art and culture and founded the great library there. See J. P. Mahaffy, *The Empire of the Ptolemies* (1895), E. R. Bevan, *A History of Egypt under the Ptolemaic Dynasty* (1927).

Ptolemy II (Ptolemy Philadelphus) (flŭdĕl'fus), c.308–246? B.C., king of ancient Egypt (283?–246? B.C.), of the Macedonian dynasty, son of Ptolemy I and BERENICE. He did much to increase the power of his kingdom and the beauty of its cities. Finances were reformed, the administration was made efficient, and a canal from the Nile to the Red Sea was but one of his economic plans. It was Ptolemy II who completed the Pharos. He warred against Syria with wavering success until he married his daughter Berenice to Antiochus II. Support to Rome in the First Punic War helped to increase his prestige. Ptolemy repudiated his wife Arsinoe to marry his sister, also named Arsinoe. He was a patron of art and literature, and Manetho compiled his history for the king.

Ptolemy III (Ptolemy Euergetes) (yōō'ûr'jĭtēz), d. 222? B.C., king of ancient Egypt (246?–222? B.C.), of the Macedonian dynasty, son of Ptolemy II and the first Arsinoë. He plunged immediately into a war with Syria, where his sister, Berenice, was trying to secure the throne for her son. Berenice and her son seem to have been murdered before Ptolemy could arrive and Seleucus II held the throne, though the Egyptian king won a brilliant if impermanent victory. Egyptian fleets controlled most of the coasts of Asia Minor and E Greece, and the kingdom was enlarged by Ptolemy's marriage to Berenice, daughter and heiress of the king of Cyrene.

Ptolemy IV (Ptolemy Philopator) (flĭŏ'putur), d. 204? B.C., king of ancient Egypt (222?–204? B.C.), of the Macedonian dynasty, son of Ptolemy III and Berenice of Cyrene. He had his mother, his brother, his uncle, and possibly also his wife (who was his sister Arsinoe) killed. ANTIOCHUS III invaded the Egyptian lands in Palestine, and Ptolemy managed to defeat him at Raphia in 217, but administration disintegrated in Egypt.

Ptolemy V (Ptolemy Epiphanes) (ĭpĭ'funēz), d. 181? B.C., king of ancient Egypt (204?–181? B.C.), of the Macedonian dynasty, son of Ptolemy IV. He succeeded to the throne as a small boy, and his reign began with disastrous civil wars. Invasions by Antiochus III of Syria and Philip V of Macedon cost Egypt all of Palestine and the Egyptian possessions in Asia Minor. Peace was confirmed by the marriage of Ptolemy to Cleopatra, daughter of Antiochus. Egypt was much weakened when his reign ended.

Ptolemy VI (Ptolemy Philometor) (flŭmĕ'tur), d. 145 B.C., king of ancient Egypt (181?–145 B.C.), of the Macedonian dynasty, son of Ptolemy V. He became king when an infant, and his mother, Cleopatra, was regent. After her death, Antiochus IV of Syria invaded Egypt, and Ptolemy was captured (170 B.C.) at Pelusium. He was forced to share the rule with his wife (also his sister), Cleopatra, and his brother, Ptolemy Physcon (later PTOLEMY VII). Trouble between the brothers ultimately caused the intervention of Rome, Ptolemy Physcon ruled over Cyrene, Ptolemy Philometor over Egypt. Ptolemy VI aided Demetrius II to gain the throne of Syria and was killed in battle with the rival claimant, Alexander Balas. His young son in theory succeeded to the throne and is sometimes

called Ptolemy VII, but he was put to death as soon as Ptolemy Physcon (who is Ptolemy VIII by the other count) could reach Egypt

Ptolemy VII (Ptolemy Physcon) (fĭ'skun), d 117? B C, king of ancient Egypt (145–117? B C), brother of Ptolemy VI He is also called Ptolemy Euergetes II He was coruler with his brother and his brother's wife after 170 B C Trouble resulted in a settlement by which Ptolemy Physcon ruled Cyrene. On his brother's death he returned to Egypt, had his nephew put to death, and married Cleopatra, his brother's widow He soon repudiated her and married her daughter, also named Cleopatra The elder Cleopatra led a revolt and drove him (130) out of Egypt He returned in 127 B C and later ruled peacefully though despotically Both queens survived him

Ptolemy VIII (Ptolemy Lathyrus) (luthĭ'rus), d 81 B C, king of ancient Egypt (117?–107 B C, 89–81 B C) of the Macedonian dynasty, son of Ptolemy VII and the younger Cleopatra He is also called Ptolemy Soter II His mother ruled jointly with him and held the actual power She forced him to accept (110 B C) as coruler his brother, Ptolemy Alexander (Ptolemy IX), who drove him from the throne in 107 Ptolemy VIII went to Cyprus and then to Syria He returned to conquer Cyprus, and in 89 he reconquered Egypt

Ptolemy IX (Ptolemy Alexander), d 89? B C, king of ancient Egypt (107–89 B C), brother of Ptolemy VIII He was governor in Cyprus when called (110 B C) by his mother to be coruler with his brother He became sole king in 107 B C He was ousted by a revolt in Alexandria and died when trying to recover the kingdom

Ptolemy X (Ptolemy Alexander), d 80 B C, king of ancient Egypt (80 B C), of the Macedonian dynasty, son of Ptolemy IX His stepmother, Cleopatra Berenice, was joint ruler with her father, Ptolemy VIII, and sole ruler after his death until the Romans under Sulla brought about her marriage to Ptolemy X, who became joint ruler A few days later he murdered her, and the Alexandrians arose and killed him

Ptolemy XI (Ptolemy Auletes) (ôlē'tēz), d 51 B.C, king of ancient Egypt (80–58 B C, 55–51 B C), of the Macedonian dynasty, illegitimate son of Ptolemy VIII He is also called Ptolemy Neos Dionysus He succeeded Ptolemy X to the throne, but his violent misrule and reprehensible life caused the Alexandrians finally to rebel and unseat him in 58 B C He sought Roman aid and through Pompey got Aulus Gabinius, proconsul of Syria, to put him back on the throne The huge sum he had to pay Gabinius beggared Egypt He made the Roman senate executor of his will and Pompey the guardian of his son Ptolemy XII

Ptolemy XII, 61?–47 B C, king of ancient Egypt (51–47 B C), of the Macedonian dynasty On the death of his father, Ptolemy XI, he was under the guardianship of Pompey He was completely overshadowed from the start by his brilliant and celebrated sister, CLEOPATRA She became his wife and ruled with him She disagreed with his advisers, notably the eunuch Pothinus, and fled to Syria She came back (48 B C) with an invading army At this juncture the defeated Pompey arrived seeking refuge and was put to death by Pothinus Julius CAESAR followed immediately He fell under the influence of Cleopatra, forced Ptolemy XII to share the throne with her again, and put down a rebellion raised by Pothinus Ptolemy was thus defeated He drowned in the Nile by accident

Ptolemy XIII, d 44 B C, king of ancient Egypt (47–44 B C), the last of the Macedonian dynasty, but for his sister, CLEOPATRA He was a mere boy when Julius Caesar married him to Cleopatra in 47 B.C and made him joint ruler with her She had him murdered

Ptolemy XIV (Ptolemy Caesarion), 47–30 B C, son of CLEOPATRA and (almost certainly) Julius Caesar He became joint ruler with his mother, but was a mere cipher in the great and tragic events that brought Egypt and Cleopatra to their doom Fearing that he might gain popular support, Octavian (later Emperor Augustus) had him put to death

Ptolemy (Claudius Ptolemaeus), fl from 127 to 141 or 151, celebrated Greco-Egyptian mathematician, astronomer, and geographer He made his observations in Alexandria and was the last great astronomer of ancient times Although he discovered the irregularity in the moon's motion, known as evection, and made original observations regarding the motions of the planets, his place in the history of science is that of collator and expounder He systematized and recorded the data and doctrines that were known to Alexandrian men of science. His works on astronomy and geography were the standard textbooks until the teachings of COPERNICUS were accepted The mathematical and astronomical systems developed by the Greeks are contained in his ALMAGEST With credit to HIPPARCHUS as his chief authority, he presented problems and explanations dealing with the known heavenly bodies and their relations to the earth The Ptolemaic system thus evolved represented the earth (a globe in form) as stationary in the center of the universe, with sun, moon, and stars revolving about it in circular orbits and at a uniform rate From the center outward the elements were earth, water, air, fire, and ether Beyond lay zones, or heavens, each an immense sphere The planets were assumed to revolve in small circles (called epicycles) whose centers revolved around the earth in the vast circles (deferents) of the spheres To account for the precession of the equinoxes and other phenomena, later astronomers found it necessary to add more epicycles and to make both epicycles and deferents eccentric Ptolemy's system of geography is founded upon the works of Marinus of Tyre; many errors stem from his underestimate of the earth's circumference His mathematical theories, most valuable in the field of trigonometry, are preserved in his *Analemma*. His writings, circulated in the original Greek and in Arabic and Latin translations, include also the *Tetrabiblos* and the *Planisphaerium*

ptomaine poisoning: see FOOD POISONING.

Pua (pū'u), variant of PHUVAH

Puah (pū'u) [Heb, =month] **1** Midwife ordered by Pharaoh to kill Jewish boys at birth (Ex 1 15 **2** Father of the judge Tola Judges 10 1 **3** See PHUVAH

puberty (pū'burtē), onset of sexual maturity This occurs in the female usually between the 12th and the 14th year and in the male a little later, from about the 12th to the 16th year At this time the generative organs become capable of exercising the function of reproduction In the female, menstruation begins and the breasts develop In the male, semen is produced and discharged, the voice changes, and the beard begins to grow

publican (pŭ'blĭkăn) [Latin, =state employee], in ancient Rome, a man who was granted a state monopoly in return for annual rent The state monopolies were principally involved with public works and tax collecting, and the most lucrative were the tax concessions The publicans mentioned in the Gospels were tax farmers The Gospels also show the general detestation in which the publicans were held, the local publicans were the employees of the wealthy Romans who took the concessions The publicans were usually all *equites* (knights), the capitalists The exactions of the publicans especially in Asia Minor, Syria, and Palestine were a perpetual cause of provincial unrest As the backbone of the capitalistic power, tax farming was protected by the senate when it was in alliance with the knights, notably in the strife between Pompey and Caesar Money from taxes was the knights' weapon against reform

public defender, official whose office is to serve as the counsel of indigent persons accused of crime His position complements that of public prosecutor (often the district attorney), who represents the government in a criminal action The institution of public defender is not usual in the United States, and it has been argued that having the office would provide better protection to the indigent than the prevalent system of having the judge assign a lawyer from the local bar to represent an accused person See M C Goldman, *The Public Defender* (2d ed, 1919)

public domain: see PUBLIC LAND

public health, the field of medicine and hygiene dealing with the prevention of disease and the promotion of health It is primarily a community, rather than an individual, responsibility Such activities are commonly carried on by official departments of public health and of education and by private health-promotion agencies Some of the areas of public health work are the regulation of community sanitation, the control of communicable diseases, including SOCIAL HYGIENE, the collection of VITAL STATISTICS, the promotion of community health education, the promotion of school and industrial hygiene, and the promotion of maternal and child health Modern concepts of public health are based on an awareness of the importance of working with the family as a unit and encompass social factors such as better housing, improved nutrition, and more equitable distribution of medical care Recent studies have emphasized the need for the coordination of the work of governmental and private agencies and for more careful local and national planning to avoid duplication of efforts Federal public health activities are carried on principally by the U S Public Health Service, which aims to assist states in the development of their own health services The main function of state health departments is to advise and aid the local health departments, which in turn render direct service to the public Most states have a board of health, appointed by the governor, which establishes regulations known as the Sanitary Code and having the effect and force of law Counties or municipalities may enact local sanitary regulations if these are not inconsistent with those of the state Local departments of public health are generally under the direction of a board of health and a health officer, appointed by the mayor, and they utilize the services of such additional personnel as physicians, public health nurses, health educators, sanitary inspectors, laboratory technicians, and statisticians Private agencies carry on both national and local public health programs supported by voluntary contributions. Their work is often related to a particular disease, such as poliomyelitis, or to a particular need, e g, visiting-nurse services See M J Roseneau, *Preventive Medicine and Hygiene* (6th ed, 1935), I V. Hiscock, ed, *Community Health Organization* (3d ed, 1939), H S Mustard, *Introduction to Public Health* (2d ed, 1945), W G Smillie, *Public Health Administration in the United States* (3d ed, 1947), J S Simmons, ed, *Public Health in the World Today* (1949)

public land, in U S history, land owned by the Federal government but not reserved for any special purpose, e g, for a park or a military reservation Except in Texas, which made retention of its public lands one of the conditions for joining the union, there are no state public lands Public land is also called land in the public domain The government may charge fees for the use of such land for grazing, lumbering, mining, harnessing water power, and other purposes Usually the policy of the Federal government was to encourage settlement of the public domain by selling tracts of 160 acres or more (see HOMESTEAD ACT), this practice at present is followed in Alaska only Vast tracts of lands also were given to railroads as part of the right of way and to the land-grant colleges These owners obtained revenue by selling the land Gradually nearly all the public domain which had utility passed into private hands It was charged that large companies frequently acquired extensive holdings by dishonest means A reaction to this easy policy set in towards the end of the 19th cent, and steps were taken to insure the CONSERVATION OF NATURAL RESOURCES by withdrawing public lands from sale In the administration of President F D Roosevelt there were additions made to the public domain by the purchase of large tracts of land which had become barren The term "public domain" is also applied to products or operations of a type which ordinarily may enjoy copyright or patent protection but on which the protection has lapsed or has never been taken out Thus, a literary work is said to be in the public domain after expiration of the copyright term See Roy M Robbins, *Our Landed Heritage the Public Domain, 1776–1936* (1942)

public ownership, government ownership of lands, streets, public buildings, utilities, and other business enterprises The theory that all land and its resources belong ultimately to the people and therefore to the king or government is very ancient From it comes the doctrine of eminent domain, asserting the paramount control of the state over lands and buildings within its borders Until the policy of laissez faire in the 18th cent emphasized capitalistic activity, public ownership was unquestioned In ancient times governments owned and conducted many enterprises, such as water systems, theaters, and baths In the United States, governmental units own and manage the postal service, the public school system, public highways and bridges, dams for the reclamation of land and for power (and the management and sale of power), and many other enterprises The Panama Canal is an outstanding example of public ownership The importance of public utilities to the life of the community has frequently led to municipal ownership of water, sewerage, electric light, power, gas, and transportation systems In Europe, where public ownership is more extensive and of longer standing than in the United States, it has been extended to include railroads, telephone and telegraph lines, radio, coal mining, and banking Public ownership has been practiced most extensively in Soviet Russia, where the government owns almost all the land, and all the natural resources and where utilities, banking, transportation, and nearly all industries are carried on by state corporations or trusts Public ownership is to be sharply distinguished from government control of private enterprises in utilities, business, and agriculture, in the United States such control has been increased not only by laws imposing regulation but also through loans, direct financing, and the creation of corporations involving a greater or lesser measure of government regulation of the activities in question Atomic-energy development is a recent conspicuous example of public ownership enterprise See A Z Berman, *Municipal Enterprise* (1940), S E Chase, *Government in Business* (1935)

public school, in the United States, a tax-supported elementary or high school open to all In England the term was originally applied to grammar schools endowed for the use of the lay public, it has come to be used for the great endowed preparatory schools, which, however, charge tuition The English public schools include Charterhouse, Cheltenham, Clifton, Eton, Harrow, Rugby, Westminster, and Winchester.

public utility. see UTILITY, PUBLIC

Public Works Administration (PWA), government organ established (1933) by the U S Congress as the Federal Administration of Public Works, pursuant to the National Industrial Recovery Act In the hope of stabilizing employment and purchasing power, President F. D. Roosevelt brought about

the creation of this agency to administer the construction of various works—e g , public buildings, bridges, dams, and housing developments—and to make loans to states and municipalities for similar projects Subsequent legislation continued its operation, under the administration (1933–39) of Harold L Ickes, the PWA completed a great many public projects President Roosevelt's reorganization plan of 1939 made the PWA only a division of the Federal Works Agency By Jan. 1, 1947, the PWA was virtually liquidated

publishing, in the broadest sense, making something publicly known Usually in the modern world, the term refers to the issuing of printed materials, the "making public" of books, magazines, periodicals, and the like There is great latitude of meaning, partly because publishing has never emerged, and cannot emerge as a profession completely separate from printing on the one hand and retailing of printed matter on the other A book or pamphlet may be printed but not published, i e , it may be issued only for the private use of the author or some other person or group, when it is commonly said to be privately printed On the other hand, an author may publish his own work, print it himself or have it printed, then make arrangements to have it publicly distributed on his own behalf Public distribution is essential to make the process publishing In newspapers and periodicals, the owners and policy makers are sometimes called the publishers, while the editorial staff and the printing staff are considered separately In publication of books and magazines, on the other hand, those who merely own stock in a publishing firm are not always included in the class of publishers, while the publishers are the active managers of the firms Loosely, editors, and those in charge of production and primary (or wholesale) distribution are never excluded The publisher stands normally between the author and the printer and between the author and the public, while between the publisher and the public are the bookstores and other means of distribution The profession is primarily one of service, with the aim of preparing the work of an author in the most suitable form and presenting it in the most efficient manner to the widest audience for that particular work This is an ideal that is perhaps more often nobly expressed than it is adequately performed, but the contribution that the publisher has made to the spread of information and the development of literary art in the modern world is undeniable and great The making of extra copies of manuscripts for sale or distribution was known in the ancient world There is some evidence of such handling of manuscripts in Athens in the 5th cent B C , and the great libraries of the Hellenistic world encourage the making of copies of manuscripts In Rome there were booksellers - Horace mentions the Sosii, who were apparently brothers—and the copying of books by trained slaves reached considerable proportions In imperial times there seems to have been an organized business of making and selling books With the decline of Rome, the Church was left as the sole preserver of learning, and the copying of manuscripts was limited to the monastic *scriptoria* Manuscript publication thus ceased It was revived somewhat with the humanists of the early Renaissance, but the immense labor required always kept reproduction at a minimum With the introduction of printing to Europe in the middle of the 15th cent , (see TYPE), publishing at once sprang into lively existence, though it was at first only a function of the printer The author, the printer, and the publisher of a work were sometimes all the same man, as in the case of members of the Estienne family The differentiation of printer, publisher, and bookseller began to appear astonishingly early, however, as patrons of literature had books printed for distribution and booksellers had works made by others to meet their demands The first important publishing house was that of the Elzevir family (see ELZEVIR LOUIS) which first issued a book in 1583 The Elzevirs were businessmen rather than scholars like the Estiennes, and the business of bookselling grew as literacy spread The converse is also true printing, publishing, and bookselling spread learning across the West Religious controversy bred polemics, and arguments committed to broadsides, pamphlets, and books were handed out zealously and bought eagerly by partisans Not long after the appearance of printing came censorship, one of the bugaboos of publishing ever since The opponents of censorship today are taking a short view when they say that increasing censorship is increasing, it was not so long ago, in the days of the Puritan Revolution in England, that a man could have his ears cropped for injudiciously publishing works critical of the authorities Not only religious and political controversies but abiding interest in knowing the future tended to swell the amount of literature issued by bookseller-publishers, and almanacs and the like were issued for the wider public. With the steadily broadening mass of readers, slowly great publishing houses came into being; many were well established by the late 18th cent Leipzig had become a printing center in the 15th cent. and retained its eminence, along with Munich, most of the large German cities by the end of the 19th cent had flourishing publishing concerns Modern cities with long traditions of publishing are Vienna, Florence and Milan, Zurich, Paris, and London and Edinburgh The rate of literacy is very high in the Scandinavian countries, and publishing occupies a relatively larger place in the economy than in most Western countries Small Iceland has been particularly noted for its book trade In the United States, Boston, Philadelphia, and New York early took the lead in publishing, with the weight ultimately swinging to New York; in the 20th cent this lead has been challenged somewhat by Western cities By the beginning of the 19th cent specialization had become noticeable among publishers, and it continued to become more and more marked Music publishing is almost a completely separate business, and map publishing is almost as much so Somewhat less rigidly divorced from "general" publishing are the houses specializing in religious books, in textbooks, in art books, in technical books, and in reprints Frequently the matter is one of emphasis only, and a house issuing works for the general trade may have a strong textbook department, a strong juvenile department, or a good list of sports books Some houses founded for more or less special purposes may broaden their scope, as is sometimes the case with the UNIVERSITY PRESS Specialization also has grown in the late 19th and 20th cent within many of the houses themselves, with the separation not only according to the type of book but also according to the function of the workers Thus, editorial departments become distinct from production, and both may be quite separate from sales, promotion, and distribution The multiplication of technical specialties often, indeed, goes much farther The copy editor who prepares a book for printing may have nothing to do with the policy-setting editor who chooses or helps to choose books for publication, the designer of a book may be an artist employed to design one book or may be a staff designer who does not deal with the mechanics of ordering printing, an advertising copy writer may have nothing to do with actual handling of sales This splintering of functions, however, varies from one publishing firm to another and no generalization can do more than vaguely indicate trends that appear among some of the more prominent publishers The necessity for numerous skills and specialties, however, creates a problem, particularly in the United States, where the extent of the country and the generally high standard of living tend to have a bearing on publishing and restrict much of the book trade to a large mass market This is the more particularly true because books are a luxury item with which the usual purchaser can dispense when hard times cut down his spending money One proposal for meeting the problem in the United States has been the issuance of paper-backed books, which have long been a standard form of book publication in Continental countries The paper-backed, pocket-sized book rose meteorically in popularity in the English-speaking countries in the 1930s and 1940s but most —indeed almost all —of the works thus published have been reprints, and thus have not shown any answer to the problem The great problems of an earlier time were, however, successfully met, as publishers drew together and aided in having COPYRIGHT laws passed to halt the "pirating" of books and succeeded, after a long struggle, in establishing considerable regulation of book sales to enforce fixed prices There are today active associations among publishers, the most notable in the United States being the American Book Publishers Council (successor to the National ASSOCIATION of Book Publishers) For material on magazine and newspaper publishing, see JOURNALISM, NEWSPAPER, PERIODICAL See R L Duffus, *Books Their Place in a Democracy* (1930), O H Cheney and others, *Economic Survey of the Book Industry, 1930–1931* (1932), Sir Stanley Unwin, *The Truth about Publishing* (new ed , 1946), F L Mott, *Golden Multitudes the Story of Best Sellers in the United States* (1947), William Miller, *The Book Industry* (1949)

Publius, Paul's host at Malta Acts 28 7–10

Puccini, Giacomo (jä'kōmō pōōt-chē'nē), 1858–1924, Italian operatic composer, pupil of Ponchielli at the Milan Conservatory His outstanding operas are *Manon Lescaut* (1893), *La Bohème* (1896), *La Tosca* (1900), *Madame Butterfly* (1904), a failure when first produced, two one-act operas, *Il tabarro* and *Gianni Schicchi* (both 1918), and *Turandot* (completed by Franco Alfano and produced posthumously, 1926) *The Girl of the Golden West* (New York, 1910), based on David Belasco's play, was popular for a time Elements of verism and exoticism, an overflow of sensuous melodic material, and a genuine sense for the theater characterize his music, which is essentially romantic and often strikingly original, despite its debt to Wagner, Verdi, and Debussy See his letters (ed by Giuseppe Adami, Eng tr , 1931), biographies by Richard Specht (1933) and Vincent Seligman (1938)

Puck (pŭk), in Germanic folklore, the generic name for a minor order of devils, sprites, goblins, or demons. In *Piers Ploughman* the name (spelled *pouke*) signifies the devil In Spenser's *Epithalamion* Puck is classed as an "evil spright" Shakspere, who adopted the present spelling of the name, was the first to identify Puck with ROBIN GOODFELLOW

pudding. Early writers on cookery class puddings and dumplings together The earliest puddings were boiled in a bag or cloth Later they were placed in a buttered bowl or dish, covered with a cloth and steamed The baked or chilled puddings are still a later form Puddings are classed as those which are served with meat, such as Yorkshire pudding (batter baked with the meat or in the drippings), or which form the meat course, such as Sussex pudding (a large dumpling filled with meat instead of fruit), and those which are served as a sweet or dessert, such as almond, cabinet, and suet puddings, plum or Christmas pudding, and Indian pudding, as well as puddings made with milk, eggs, rice, sago, tapioca, arrowroot, cornstarch, bread crumbs, and fruit Custards are included by some writers, and jellied fruits by others An early use of the word, as in black pudding or white pudding, referred to forms of sausage

Pudens (pū'dĕnz) [Latin,=modest], Christian of Rome 2 Tim 4 21

Pudovkin, Vsevolod Ilarionovich (fsyĕ'vulŭt ĕlŭryôn'uvĭch pōōdôf'kĭn), 1893–, Russian moving-picture director Among the films which show his innovations in technique are *The Mechanism of the Brain, Chess Fever, Mother, Storm over Asia, Deserter*, and *General Suvorov* He wrote *Film Technique* (Eng tr , enl ed , 1933) and *Film Acting* (Eng tr , 1935), important works in which he demonstrates the distinct characteristics of the film medium

Puebla (pwā'blä), state (13,126 sq mi , 1946 pop. 1,440,000), E central Mexico Except for large valleys between ranges, the state is almost entirely mountainous The northern part is dominated by the Sierra Madre Oriental, and across the center stretches the volcanic belt, which includes on Puebla's borders the three highest peaks of Mexico —ORIZABA in the east, POPOCATEPETL and IXTACCIHUATL in the west The extreme northeastern section is on the humid coastal plain of the Gulf of Mexico, the southern part in drier upland valleys Differences in climate and elevation bring a variety of agricultural produce—sugar cane, cotton, tobacco, rice, and grains Stock raising is important, and minerals —gold, silver, copper, and lead—are mined **Puebla**, the capital (pop 138,491), is officially named Puebla de Zaragoza in honor of Gen Ignacio Zaragoza, who defeated the French here in 1862 Located in a highland valley, it is an important agricultural, commercial, and manufacturing center noted for cotton mills, onyx quarries, pottery, and the fine, colored tiles which decorate its buildings and 60-odd churches as well as those of near-by CHOLULA The cathedral, constructed between 1552 and 1649, is one of the finest in Mexico, and it is claimed that the theater, built in 1790, is the oldest on the continent Founded c 1535 as Puebla de los Ángeles, it was a link between the coast and Mexico City The city was taken (1847) by Winfield Scott in the Mexican War The French after their defeat captured (1863) it, and Porfirio Díaz recaptured (1867) it at the close of the French intervention

Pueblo (pwĕ'blō, pŭĕ'blō), city (pop 52,162), co seat of Pueblo co , S central Colo , on the Arkansas river at the mouth of Fountain Creek and SSE of Denver, in the foothills of the Rockies Zebulon M PIKE visited the region (1806) A trading post (formed 1842 and named Pueblo) was the scene of a temporary Mormon settlement (1846–47) Pueblo City was laid out in 1860, it was incorporated as a town in 1870, as a city in 1885 It produces iron, steel, railroad equipment, and electrical products and is the shipping, trade, and industrial center for a large livestock and irrigated farm area After a severe flood in 1921, levees were constructed and the Arkansas river controlled A junior college, the state fairgrounds, and a state hospital for the insane are here Pueblo is the headquarters of San Isabel National Forest

Pueblo Indians, name given by the Spanish to the North American Indians who lived in stone or adobe community houses in the Southwestern area. Their villages extended from S Utah and S Colorado southward into Arizona, New Mexico, and adjacent territory in Mexico In c 1500 B C the Indians here, called the BASKET MAKERS began to develop a culture that was marked by the growth of agriculture, in the late period there was intensive cultivation of corn, squash, and beans They also made true pottery and adopted the bow and arrow. They lived in slab houses, simple pit dwellings which were partly underground and lined with stone slabs set on edge New tribes began (c 500 B C) to migrate to this area, they were to become the cultural successors of the Basket Makers and the ancestors of the present Pueblo Indians The new peoples flattened their heads artificially, wore hard-soled sandals, domesticated the turkey for its feathers, and manufactured painted pottery They lived in pueblos, large, terraced, community houses

which were entered through the upper story by means of a ladder. Later, for protection from predatory nomadic tribes, they built their homes in cliffs or canyons. The Indians used a KIVA, which was probably evolved from the storage pits or slab houses of the pit dwellers. This period of CLIFF DWELLERS ended A.D. c.1300 following a severe drought (1275–99) and the invasion of the Navaho and the Apache from the north. After this period many of the Pueblo villages seen by the Spanish came into being. The seven Zuni towns, the fabulous Seven Cities of Cibola, were the first to be historically noted—by the Franciscan Marcos de Niza in 1539. A Spanish exploration party under Francisco Vásquez de Coronado, searching for the "wealthy" Cibola and Quivira, followed in 1540. The Pueblo Indians were hostile, and a number of bloody engagements were fought. Missionary work among the Pueblo Indians began in 1580, and in 1598 Juan de Oñate, the founder of Santa Fe, colonized the country. By 1630 most of the Pueblo villages had churches and missionaries. A feeling of resentment towards their Spanish conquerors motivated the Indians in the revolt of 1680. The Indians, led by Popé, killed over 400 colonists and missionaries and destroyed the missions. The Spanish were forced to retreat from their capital of Santa Fe to the region of El Paso. In fear of Spanish retribution, many of the Pueblo villages were abandoned for stronger sites, but in 1692 the Spanish, under Diego de Vargas, reconquered the territory, destroying a number of Pueblo towns. Except for a few minor revolts the Pueblo Indians have since maintained a peaceful existence. The Pueblo Indians, of all North American Indians, reached the highest point of civilization N of Mexico—probably because they were so close to the advanced civilizations of the Aztec and the Toltec Indians of Mexico. The Pueblo Indians not only have "apartment houses," but their basketry is good and their rich polychrome pottery, in form, variety, and decoration, is second to none N of Mexico. The hunting of large game and rabbits provided meat, but fishing was taboo because water was a sacred element. They domesticated turkeys and eagles and cattle (after Spanish introduction). The Indians practiced irrigation and raised corn, beans, and squash and also cotton. This cotton was woven into textiles (especially among the Hopi), and after the Spanish introduced the sheep, wool weaving became important. The men wore leggings, sandals, tunics and trousers, feather-decorated skin caps, and, in later times, blankets. The women wore knitted leggings, boot-moccasins, woven dresses and skirts, and blankets. Men made the textiles and cultivated the fields while the women made pottery and constructed the pueblos. The position of women was and is high; monogamy is universal and descent is matrilineal. The coming of the Spanish seems to have changed their government by the hereditary priests to an elective system—but the priests continue to exercise authority in all phases of Pueblo life. Pueblo religion and ceremony, e.g., the kachina, or fertility, ceremony and the snake dance, are the province of the men and are enormously elaborate and complicated. Fetish bundles, feather offerings, sand and meal paintings, are used in their rich and colorful ritual. There is a considerable body of mythology expressed in tales of early origin and tribal wanderings. Various secret societies have duties connected with healing, war, agriculture, and magic, each of which has its own rites, symbols, and ceremonies. Today the Pueblo Indians living on reservations in Arizona and New Mexico number some 19,000. There is no linguistic unity among these Indians, they speak languages of four different families. Languages of the Tanoan family (probably related to the Uto-Aztecan) are spoken at 11 pueblos, including Taos, Isleta, Jemez, San Juan, San Ildefonso, and the Hopi pueblo of Hano (see also LANGUAGE, table). Keresan languages also are limited to Pueblo people—Western Keresan, spoken at Acoma and Laguna, and Eastern Keresan, at San Felipe, Santa Ana, Sia, Cochiti, and Santo Domingo. The Hopi language (Uto-Aztecan) is spoken at all the Hopi pueblos except Hano. At Zuni the language is an isolated one. See Pliny Goddard, *Indians of the Southwest* (1921), A. V. Kidder, *Introduction to the Study of Southwestern Archaeology* (1924), Charles Lummis, *Mesa, Cañon, and Pueblo* (1925), Mary Coolidge, *The Rain-Makers* (1929), R. L. Bunzel, *The Pueblo Potter* (1929), E. L. Hewett, *Ancient Life in the American Southwest* (1930); H. B. Alexander, *Pueblo Indian Painting* (1932); Elsie Parsons, *Pueblo Indian Religion* (1939).

Puelche (pwĕl'chā), name given various bands of nomadic Indians who roamed the Argentine Pampa. Accomplished horsemen fighting with lance and bolo, they were not very numerous and were absorbed in the 18th cent. by the ARAUCANIAN INDIANS.

puerperal fever (pūûr'purŭl), acute disease of the genital tract caused by septic infection (frequently by *Streptococcus pyogenes*) contracted during childbirth. Puerperal fever has usually been caused by failure to observe sterile technique during delivery. The disease develops about two days after delivery and is characterized by chills and fever. There is danger that the germs may enter the bloodstream and cause septicemia. The formerly high death rate has been reduced by adherence to aseptic methods preceding and during childbirth and by the use of sulfa drugs. Early works advocating cleanliness as a means of preventing the disease include treatises by two Scottish surgeons, Charles White (1773) and Alexander Gordon (1795), a paper by Oliver Wendell Holmes (1843), and the treatise by I. P. Semmelweis (1861).

Puerto Barrios (pwĕr'tō bär'yōs), city (pop. 15,784), E Guatemala, a Caribbean port on the Gulf of Amatique. It is named for Justo Rufino BARRIOS. The port handles more trade than any other in Guatemala. Its preeminence largely resulted from expansion of United Fruit Company holdings, but as a terminus of the International Railways of Central America, it also provides an eastern seaport for Salvador. The chief exporting point for bananas, coffee, and other products, it has diverted much of the commerce of the Pacific ports to the Caribbean and seriously curtailed the trade of LIVINGSTON.

Puerto Bello, Panama: see PORTOBELO.

Puerto Cabello (pwĕr'tō kabā'vō), city (pop. 22,087), N Venezuela, a port on the Caribbean. With shipyards and an excellent harbor, Puerto Cabello also derives commercial importance from the railroad and highway connecting it with VALENCIA and the surrounding region. There are large meat-packing plants, also exported are coffee, cacao, dyewoods, and copper ores. Strategically located, it was subject to attacks by buccaneers in the colonial era. In the war against Spain it was lost (1812) to royalist forces by Simón BOLÍVAR, momentarily the cause of independence under Francisco de MIRANDA collapsed. This last northern Spanish stronghold was recaptured (1823) by José Antonio PÁEZ.

Puerto Cortés (kôrtās'), town (pop. 7,955), NW Honduras, a port on the Caribbean. Founded early in the 16th cent., it today surpasses TRUJILLO and is, with SAN PEDRO SULA, the principal seaport of the country. Chief exports are bananas, hardwoods, hides, abacá, and silver. It is the headquarters of the Cuyamel Fruit Company.

Puerto de Santa María (dā sän'tä marē'ä), city (pop. 28,262), Cádiz prov., SW Spain, in Andalusia, an Atlantic port on the Bay of Cádiz. It is a commercial center, exporting mainly wine.

Puerto México, Mexico: see COATZACOALCOS.

Puerto Montt (pwĕr'tō mônt'), city (pop. 21,360), S central Chile, a port on the Pacific. Founded in 1853 and named for President Manuel MONTT, it is the southern terminus of Chile's mainland railways and the starting point for navigation through the inland waterways and among the islands S to Chiloé, Aysen, and Punta Arenas. The scenery—forested hills, lakes, narrow fjords, and snow-capped peaks—helps make Puerto Montt a popular resort. Settled largely by Germans, the city is attractive and modern. Sheep farming and fishing are the major commercial activities, and there are dry docks and machine works.

Puerto Plata (plä'ta), city (pop. 15,366), N Dominican Republic. It is the *major* northern port, serving SANTIAGO DE LOS CABALLEROS and other inland towns, to which it is connected by rail and highway.

Puerto Príncipe, Cuba: see CAMAGÜEY.

Puerto Rico (pwĕr'tō rē'kō), formerly **Porto Rico** (pôr'tō rē'kō), island (3,425 sq. mi., 1940 pop. 1,869,255, 1948 estimated pop. 2,185,000), in the West Indies. It is the U.S. Territory of Puerto Rico, including the offshore islands of Mona, Vieques, and Culebra. SAN JUAN is the capital and largest city and port; other notable cities and ports are PONCE and MAYAGÜEZ. Smallest and most easterly of the Greater Antilles (which screen the Atlantic proper from the Caribbean), Puerto Rico is separated from the Dominican Republic on Hispaniola by Mona Passage (75 mi. wide), the Virgin Islands lie to the east. It is roughly rectangular and is crossed by mountain ranges, the most prominent being the Cordillera Central, rising to c.4,400 ft. in the Cerro de Punta, and the Sierra de Luquillo (in the northeast). There are some 50 rivers, all short and unnavigable, but some of them useful for irrigation in the more arid regions of the south and some used for hydroelectric power. The mildly tropical climate is moderated by the surrounding sea; there is little seasonal change. Rainfall is more than adequate, though the southern and western slopes of the mountains have less rain than the rest of the island. Gold was mined in the colonial era, but the other mineral deposits (iron, manganese, galena, gypsum, kaolin, and coal) are not very extensive and are little exploited. It is the fertile soil that supports one of the densest populations of a purely agricultural area in the world. Sugar is the most important product, employing the major part of the agricultural workers. Though this dependence on sugar has been recently somewhat broken down, the one-crop economy and the heavy population are still the centers of Puerto Rico's economic problems. The program of diversification has broadened production of coffee, tobacco, tropical fruits, coconuts, vanilla, winter vegetables, cotton, manioc, and subsistence crops. Reforestation is also being undertaken to restore the tropical woods in the interior, where the Caribbean National Forest is set apart. A program of encouraging cattle raising was promoted in 1945, but the low income levels prevent much native consumption, and the program is not as yet of major importance. Processing of sugar is the main industry, not only in sugar mills (*centrales*) and refineries but in distilleries making the well-known Puerto Rican rum. Tobacco, foodstuffs, and cotton are also processed. Puerto Rican needlework is distinctive and is very popular in the United States. The people are descended from Spanish colonists, with an admixture of Indian and African strains. The language is Spanish, the religion prevailingly Roman Catholic. There is an extensive railroad and highway system along the coast and into the interior, this is being improved to meet demands of the increasing number of winter tourists from the United States. The island was inhabited before the coming of the Spanish by Indians of Arawak stock, who called the island Boriquén or Borinquén. They were in the 15th cent. being slowly exterminated in warfare with the fierce Carib tribes. Columbus visited the island on his second voyage in 1493. Though Vicente Yáñez Pinzón was given a patent to settle the island, it was Juan Ponce de León who actually began the conquest in 1508, landing at San Juan harbor, which he called Rich Port [Span. *puerto rico*]. The first settlement was at Caparra, which was abandoned in 1521 for the site of the present San Juan 4 mi. away. Diego de Columbus sent a lieutenant from Cuba to contest the island with Ponce de León (who had been appointed governor in 1509), but was unsuccessful. The Indians, who had been put at forced labor and mistreated, revolted in 1511 and were put down. Hardships, disease, and the reprisals of the Spanish for the rebellion soon wiped out the Indians altogether. They were replaced on the plantations of the conquerors by imported Negro slaves, first introduced in 1513. San Juan soon became a leading outpost of the Spanish Empire in the New World. Here Spanish galleons bearing treasure anchored on their long trip to Spain, and therefore British buccaneers swooped down on the harbor. Sir Francis Drake was unsuccessful in his attack of 1595, but George Clifford, earl of Cumberland, took the island and held it for five months in 1598. The Dutch besieged San Juan in 1625. The colony then settled to quiet plantation existence. After the troubles in Spain had caused revolutions in most of Spanish America, there were movements of unrest and some uprisings in the island beginning in the 1820s, but they were abortive. The most important of them was the so-called Lares rebellion of 1868, which was quelled easily. Slavery was finally abolished in 1873. In Feb., 1898, Spain granted Puerto Rico autonomy. The new form of government, however, had little chance to operate, for a few months later the Spanish-American War broke out. On Oct. 18, 1898, U.S. troops under Gen. Nelson A. Miles landed. With little difficulty military occupation was completed. The Treaty of Paris of Dec. 10, 1898, ended the war, and by it Puerto Rico (along with other territories) was ceded outright to the United States. It remained under direct military rule until 1900, when an act of the U.S. Congress set up an administration with a U.S. governor, an executive council appointed by the U.S. President, and an elected house of delegates. There was a strong move for independence that showed increasing strength. In 1917 in the administration of Woodrow Wilson greater self-government was established by the Jones Act, which granted U.S. citizenship to Puerto Ricans, created an elected senate, and gave the governor power to make most appointments, subject to confirmation by that senate. In the U.S. Congress, Puerto Rico has an elected commissioner, and in U.S. presidential elections it has territorial status. The period of the First World War saw a considerable increase in U.S. holdings in Puerto Rico and the completion of the turn toward complete sugar economy. Absentee ownership and one-crop culture were thus added to the ills of over-population. U.S. occupation had greatly improved the health and sanitary service on the island, having an ironic effect in strengthening the over-population somewhat. Communications were also vastly improved. There was, too, an upsurge in education. Secondary schools were much increased in number, and the attempts to reduce illiteracy were so far successful that from 1898 to 1940 the percentage of illiteracy sank from 77.3 to 31.5. Lack of facilities, however, still in 1950 prevented a great number of children from attending school. The rural vocational schools set up are models of their kind. Of institutions of higher education, there are three—the Univ. of Puerto Rico, with its main branch at Río Piedras, a school of agriculture and mechanical arts at Mayagüez, and other schools, including the school of tropical medicine, at San Juan, a polytechnic institute at San Germán; and a Catholic college for girls at San Juan. Puerto Rico's contribution to learning was, however, established long since, and

Eugenio María de Hostos was an outstanding figure. The historian Salvador Brau was also a man of note. The critics of the American regime have pointed out that the development of the island was not a gift but had been brought to completion by the efforts of Puerto Ricans Criticism grew sharper when the sugar market dropped, and many of the Puerto Rican workers, who always lived close to the edge of starvation, were thrown over it Conditions grew desperate In the administration of President Franklin D Roosevelt measures for recovery were undertaken Reconstruction was pushed further in the governorship (1941–46) of Rexford G Tugwell The great military activities which made Puerto Rico a bastion and an armed camp in the Second World War, also aided Puerto Rican economy Organizations were created for the purpose of pushing industrial and agricultural development These advances were greatly forwarded by Luis MÚÑOZ MARÍN, head of the Popular Democratic party, which was formed in 1940 and had a program based on the expansion of the Puerto Rican economy rather than on primary concern with relations with the United States Those relations were a primary concern with other parties the conservative Republicans and the socialists favor statehood, the Independentists, headed by Gilberto Concepción, and the Nationalists, headed by Pedro Albizú Campos (who was imprisoned for anti-United States activities), favor independence In 1946 President Harry S Truman appointed Jesús T Piñero governor, the first Puerto Rican to hold that office An act of the U S Congress the next year amended the Jones Act to have the governor of Puerto Rico elected by the people of the island In the first such election Muñoz Marin was triumphant (1948) The new administration immediately undertook to increase agricultural reform by diversification, irrigation, and scientific methods Even more it sought to industrialize the island The dedication in 1949 of the Guanillas Dam in N central Puerto Rico seemed to symbolize the vigorous efforts of the new regime The immediate and pressing problem of overpopulation could not, however, be solved by short-term measures, and there was heavy immigration from Puerto Rico to the continental United States in the years of the Second World War and afterward A standard history of Puerto Rico in Spanish is that by Salvador Brau, *Puerto Rico y su historia* (revised, 1894) See Leo S Rowe, *The United States and Porto Rico* (1904), Victor S Clark, ed, *Porto Rico and Its Problems* (1930), Federal Writers' Project, *Puerto Rico a Guide to the Island of Borinquén* (1940), *Puerto Rico Handbook* (1947), Rexford G Tugwell *The Stricken Land* (1947), H S Perloff, *Puerto Rico's Economic Future* (1950)

Puerto Rico, University of, mainly at Río Piedras, near San Juan, land grant and territorial, coeducational, founded 1903 as successor to a normal school It has colleges of agriculture and mechanic arts (at Mayagüez), humanities, natural sciences, social sciences, commerce, education, law, and pharmacy and a school of tropical medicine (at San Juan), which was until 1949 also affiliated with Columbia Univ

Pueyrredón, Juan Martín de (hwän' märtēn' dā pwārādōn'), 1776–1850, Argentine general, supreme director of the United Provs of La Plata (1816–19) In 1806, when British troops under William Carr BERESFORD invaded the Río de la Plata, he organized a volunteer force, which, after a defeat outside Buenos Aires, united with the army of LINIERS to recapture the city (Aug 12) Taking an important part in the revolutionary government, he was governor of Córdoba (1810) and of Charcas (1810–11), commander of the patriot Army of the North (1811–12), and a member of the triumvirate at Buenos Aires (1812) As supreme director, he assisted SAN MARTÍN in the Chilean campaign of 1817-18 In 1819 congress promulgated a unitarian constitution, which was rejected by the people The demand for federalism brought Pueyrredón's resignation His success in preventing anarchy was transient, the civil war of 1820 followed

Pufendorf, Samuel, Freiherr von (zä'mōōĕl frī'hĕr fŭn pōō'fŭndôrf), 1632–94, German jurist and historian He is especially noted as an early theorist of international law Pufendorf maintained that the law of nations is a part of NATURAL RIGHTS and that to treat it as positive law (i e, law decreed by men) is erroneous The natural relations of nations (as of men) are peaceable, and war is justified only to punish an infraction of international law after attempts at pacific redress have failed These views are developed in his *Elementa jurisprudentiae universalis* [elements of universal jurisprudence] (1661) and in *De jure naturae et gentium* [on the law of nature and of nations] (1672) His chief historical work was *De statu imperii Germanici* [on the condition of the German Empire] (1667), in which he described Germany as a monstrous aggregate in the absence of a strong imperial power Pufendorf taught jurisprudence at the universities of Lund and Heidelberg, and in his later years he was royal historiographer at Stockholm and Berlin.

puffball or **smokeball,** fungus with a globular spore-bearing body usually lacking a stipe or stalk, common in meadows and woods. None are poisonous, and most forms are edible when young They are similar in flavor to mushrooms When young they are usually white, gray, or cream, later they often turn brown and contain a dustlike mass of spores which issue from them like puffs of smoke The giant puffball sometimes grows to a diameter of over one foot The larger specimens are usually the best flavored Threads of dried puffballs were formerly used as tinder for flint and steel fire making, and they were also used to stop the flow of blood from wounds

puffin, swimming and diving bird of the N Atlantic, N Pacific, and arctic regions, related to the auk Puffins are expert swimmers but have a clumsy gait on land because of their short legs set far back on dumpy bodies Very short, rapidly beating wings make their flight appear labored The large, laterally flattened, parti-colored bill is adapted to hold several fish caught in successive dives Puffins are seldom found on land except during the breeding season They lay their eggs in burrows or in rock cavities The Atlantic puffin sometimes migrates as far south as New Jersey Forms native to the Pacific regions include the horned puffin and the tufted puffin, both of which occasionally winter as far south as the Kurile Islands and S California

Pugachev, Yemelyan Ivanovich (yĭmĭlyän' ēvä'nuvĭch pōōgŭchôf'), d 1775, Russian impostor, leader of the peasant rebellion of 1773–75 An illiterate Don Cossack, he exploited the widespread belief that PETER III had not actually been murdered and claimed (1773) to be the rightful tsar He soon found himself at the head of an army and of a formidable revolutionary movement, of which he was actually a mere figurehead His followers—Cossacks, peasants, runaway serfs, and Tatar bands—all belonged to the lower classes whose rights and liberties had been increasingly curtailed in the past two centuries. Pugachev announced the abolition of serfdom His army overran the middle and lower Volga districts and the Ural region and took Kazan and several fortresses, committing barbarous excesses and threatening the throne of Catherine II, who at the same time was waging war on Turkey However, the rebels lacked experienced leadership and were ultimately defeated Pugachev was betrayed, brought to Moscow, and beheaded The direct result of the rebellion was the administrative reform of 1775 by CATHERINE II, a reform which increased the privileges of the landowners and of the cities and entrenched more firmly the institution of serfdom

pug dog, small pet dog with a fine, smooth, short coat, a large head, short, blunt muzzle, and wrinkled face The tail is tightly curled. In color the dog is silver, apricot fawn, or black The body is compact and muscular It has often been called the Dutch pug, although most authorities believe that it did not originate in Holland but is native to China and reached England through traders of the Dutch East India Company

Puget, Pierre (pyĕr' pūzhā'), 1622–94, French painter and sculptor In his youth he worked as a wood carver of nautical decorations At 17 he went on foot to Rome, where he worked for Pietro da Cortona on the ceilings of the Barberini and Pitti palaces Most of his life was spent in S France and in Italy, and much of his work is still there His famous statue of St Sebastian is in Genoa He painted many pictures for the churches of Aix-en-Provence and Toulon, but gradually came to devote himself wholly to sculpture From 1655 to 1658 he carved the caryatids for the town hall of Toulon Puget also executed commissions for Fouquet and Colbert He is splendidly represented in the Louvre by his *Milo of Crotona*, *Hercules*, and *Perseus and Andromeda* and by a bas-relief, *Alexander and Diogenes*

Puget Sound (pū'jĭt), arm of the Pacific Ocean, NW Wash, connected with the Pacific by Juan de Fuca Strait, extending more than 100 mi S to Olympia, with many branches, and receiving many streams from the Cascade Range It is navigable, and its shores are studded with important ports and commercial cities, centers of a rich industrial region Seattle, Tacoma, and Everett are on the east shore, and Port Townsend is at the entrance It was named by George VANCOUVER for his lieutenant, Peter Puget

Puget Sound, College of see TACOMA, Wash

pugilism see BOXING

Pugin, Augustus Charles (pū'jĭn), 1762–1832, English writer on medieval architecture, b France His writings furnished a mass of working material for the architects of the Gothic revival Among them is *Specimens of Gothic Architecture, Selected from Various Ancient Edifices in England* (1821) In some of his publications he was assisted by his son,

Augustus Welby Northmore Pugin, 1812–52, English architect and writer, noted for his prominent role in the Gothic revival Though he erected numerous buildings, including churches, monasteries, and convents, his published writings exerted greater influence than his architecture, and his work *The True Principles of Pointed or Christian Architecture* (1841) might be termed the textbook of the Gothic revival. Among other publications are *Gothic Furniture in the Style of the 15th Century* (1835) and *Glossary of Ecclesiastical Ornament and Costume* (1844) He worked under Sir Charles Barry on the Houses of Parliament, chiefly in directing the execution of fittings and ornamental details The cathedral in St George's Fields, London, is an example of his executed work, which included over 65 churches See Michael Trappes-Lomax, *Pugin, a Mediaeval Victorian* (1932)

Puhites (pōō'hīts), family of Kirjath-jearim. 1 Chron 2 53

Pul (pŭl) **1** Assyrian king, invader of Israel, apparently Tiglath-pileser III 2 Kings 15 19, 1 Chron 5 26 **2** African country Isa 66.19. Probably the same as PHUT

Pula, Yugoslavia see POLA

Pulaski, Casimir (kā'zĭmēr pulă'skē), Pol *Kazimierz Pulaski* (kă'zhēmĭrsh' pōōwă'skē), c 1748–1779, Polish military commander in the American Revolution Born in Podolia of a noble family, he worked with his father in forming (1768) the Confederation of Bar and in unsuccessful rebellion against Stanislaus II He escaped to Turkey and was in Paris when he decided to join the colonial cause in the American Revolution Coming to George Washington with a letter from Benjamin Franklin, he was commissioned (1777) brigadier general and served at Brandywine and Germantown In 1778 he resigned a cavalry command rather than continue in service under Gen Anthony Wayne and organized his own cavalry unit, the Pulaski Legion, which saw a great deal of service before Pulaski was mortally wounded when leading a cavalry charge in the attack on Savannah

Pulaski 1 (pūlă'skī, pu-, pulă'skē) Village (pop 1,895), a co seat of Oswego co, N N Y, on the Salmon river and N of Syracuse, inc 1832 Boilers, paper products, and milk products are made A state park is near by **2** (pulă'skē) Town (pop 5,314), co seat of Giles co, S Tenn, 88W of Nashville, settled 1807, inc 1819 It is a trade, processing, and shipping center for a farm and timber area The first KU KLUX KLAN was organized here in 1865 Pulaski is the seat of Martin College (junior, coeducational) **3** (pulă'skē) Town (pop 8,792), SW Va, SW of Roanoke, inc 1886 It is the trade, industrial, and rail center for a region yielding zinc, iron, coal, lumber, and farm produce The courthouse of Pulaski co is here.

Pulaski, Fort (pulă'skē), fortification on Cockspur Island, SE Ga, at the mouth of the Savannah river It was constructed (1829–47) by the Federal government and named for Casimir Pulaski It was seized by Georgia troops in Jan, 1861, but when the Civil War was well advanced fell to a Union force under Q A Gillmore, April 11, 1862, after a two-day bombardment in which the Federals used rifled cannon for the first time Fort Pulaski National Monument (est 1924) now includes all Cockspur Island (5,427 49 acres)

Pulcheria (pŭlkēr'ēə), 399–453, Roman empress of the East (414–53), daughter of Arcadius and Eudoxia She became coempress with her brother, THEODOSIUS II, and regent in 414 Theodosius remained under her influence all his life Pulcheria took a vow of chastity and brought an almost monastic atmosphere to the Byzantine court At her brother's death (150) she chose MARCIAN as emperor and nominally married him See Charles Diehl, *Byzantine Portraits* (1927)

Pulci, Luigi (lwē'jē pōōl'chē), 1432–84, Italian poet He was a protégé of Lorenzo de' Medici and friend of Politian and Aretino, but little else is known of him His most noted work is the *Morgante maggiore* (composed 1460–70, pub 1482) written for Lucrezia Tornabuoni, Lorenzo's mother It is a burlesque heroic poem, in a fine poetic style In spite of its aim it contains several lofty and noble passages The first canto was translated (1822) by Byron See Leigh Hunt, *Stories from the Italian Poets* (4 vols, 1846–54)

Pulitzer, Joseph (pōō'lĭtsŭr, pū'-), 1847–1911, American newspaper proprietor, b Hungary He came to the United States in 1864, served a year in the Union army in the Civil War, and became a journalist under Carl Schurz in St Louis As owner and publisher after 1878, he made the St Louis *Post-Dispatch* a successful paper, and in 1883 he bought the New York *World* from Jay Gould His aggressive methods of building up this paper, its Sunday edition, and the *Evening World* (started 1887) included the use of illustrations, news stunts, crusades against corruption, and cartoons, as well as good news coverage Hearst established his New York *Journal* in 1895 to vie with Pulitzer's papers in sensationalism and in circulation The resulting contest, with its banner headlines, lavish pictures, emotional exploitation of news—in short, "yellow journalism"—reached notorious heights in the treatment of the Spanish-American War Soon the *Journal* outstripped the *World*, which now became more conservative and the outstanding Democratic organ in the country, though sometimes opposed to party policies After 1890 partial blindness kept Pulitzer from the editorial offices, but he directed his papers no less closely than before. He left funds to found the School

(now Graduate School) of Journalism at Columbia Univ In 1931 Pulitzer's sons sold the New York papers to the Scripps-Howard chain, and the *Evening World* was merged with the New York *Telegram*. See biographies by Alleyne Ireland (1914, new ed , 1937), Don C Seitz (1924), and J. W Barrett (1941)

Pulitzer Prizes, annual awards for achievements in American journalism and letters The prizes are paid from the income of a fund left by Joseph Pulitzer to the trustees of Columbia Univ They are awarded each May since 1917 on the recommendation of an advisory board composed of newspapermen, of which the dean of the Graduate School of Journalism is secretary. The five original awards in journalism have become seven—$500 each for editorial writing, for local, national, and international reporting, for the best cartoon, and for the best news photograph and a gold medal to a newspaper for the most disinterested and meritorious public service The prizes in letters, of $500 each, are for fiction, drama, history, biography, and poetry, musical composition was added in 1943 Of the four traveling scholarships (of $1,500 each), three are to graduates of the School of Journalism, one is to an art student

Pulkovo (pōōl'kuvŭ), village (1939 pop over 2,000), RSFSR, S of Leningrad, near Pushkin, on a hill In its ancient park is the Pulkovo Observatory, founded in 1839 and made famous by F G W von Struve It was severely damaged by shelling in the Second World War

pulley, simple machine made up of two parts—the sheave, a wheel with a grooved rim in which a rope or cord can run, and the block, a frame in which the wheel is set and within which it is free to turn on an axle In the so-called fixed pulley, the frame is fastened to some rigid support, in the movable pulley, it is free to move Several wheels are often set in one block The combination of one or more pulleys and the rope or ropes used in operation is known as a block and tackle The pulley is widely used for hoisting It makes possible a change in direction of the effort applied For example, when a single fixed pulley is attached to a support above a load to be lifted, the "pull" to lift this load can be applied in a downward, instead of upward, direction No mechanical advantage is obtained by a single fixed pulley, but the single movable pulley has a mechanical advantage of 2, i e , it makes possible the balancing of a given weight (or resistance) by a force (effort) of one half that amount By using various combinations of fixed and movable pulleys, a great mechanical advantage can be obtained a very small effort can be used to overcome a large resistance The mechanical advantage of such a pulley system can usually be calculated quickly and easily by counting the number of parts of the rope (passing between the pulleys) which are supporting the load For example, a combination of two fixed and two movable pulleys can be so arranged that an effort of 5 lb can be applied to balance a resistance (load) of 20 lb If such a system is set up with one end of the rope fastened to the bottom of the fixed block of pulleys, the number of strands of rope between the two sets of pulleys is found to be 5 However, one of these (the last turn of rope) does not affect the mechanical advantage, since it merely changes the direction of the force, and therefore the number of ropes supporting the load is only 4 The same system can be given a mechanical advantage of 5 (e g , an effort of 5 lb can be used to balance a resistance of 25 lb) by fastening one end of the rope to the top of the movable block of pulleys instead of to the bottom of the fixed block Although there is a mechanical advantage in the use of pulley systems, the amount of work done is no less than the amount gotten out of the machine, the distance through which the effort is required to move is greater than that through which the load is moved, in the same ratio as the load is to the effort For example, when the mechanical advantage of a system is 4 (i e , an effort of 1 can balance a resistance of 4), the effort moves 4 times the distance that the resistance is moved The work put into a system of pulleys is however, always more than the output, for some work is done against friction A differential pulley consists of two pulleys of different radii connected and rotating as one on a common axle The pulleys have their circumferences grooved and spiked so that a chain will run in them without slipping Over the pulleys an endless chain is run, forming two hanging loops In one loop is placed a movable block, the pulley of which is shaped to take the chain The load is attached to the movable block and is raised by pulling on the other loop of the chain In power transmission, belt and rope drives commonly utilize pulleys, of another type This type consists of a hub suitably bored for mounting on a shaft, with a rim attached to the hub by spokes A pulley running free on a shaft is held in position by collars (protrusions on the shaft), and when required to be fixed on the shaft, a steel key is fitted into suitable keyways in the hub and shaft It may also be secured by set screws For use with belts, pulleys have a nearly flat face a little wider than the width of the belt used Except when the belt is of the shifting type, the face of the pulley is crowned (or raised in the center of the rim). This has the effect of keeping the belt central Pulleys with belt drives are made of paper, wood, cast iron, or steel and have diameters varying from a few inches up to 12 ft The larger sizes are of the split type In this case they are made in two halves, which facilitates mounting and unmounting For rope drives the face of the pulley has grooves of a number and size to suit the ropes used Cone pulleys consist of a number of pulleys of varying diameters massed in the shape of a cone They are used with belt drives for machines (e g , lathes) requiring a variety of speeds See L S Marks, ed , *Mechanical Engineers' Handbook* (latest ed)

Pullman, George Mortimer (pōōl'mun), 1831–97, American industrialist, b Brocton, N Y Early in life he became a cabinetmaker, and after he moved (1858) to Chicago he began converting (1859) old railroad coaches in order to facilitate long-distance traveling Some five years later he built the *Pioneer*, the first modern sleeping car Gaining great wealth from his invention, he founded (1867) the Pullman Palace Car Company The town of Pullman, now part of Chicago, was built (1880) for the company and its workers One of the most famous of all U S strikes was that at Pullman in 1894

Pullman. 1 Former city, part (since 1889) of Chicago, Ill It was founded in 1880 by G M Pullman as a model community for workers of his sleeping-car company, all property was company owned, and administration policies were paternalistic The residents voted for incorporation with Chicago, and Illinois courts later required the company to sell all property not used for industrial purposes Here in 1894 took place one of the most memorable strikes in U S history A protest against wage cuts led (May, 1894) to the strike, to a boycott by the American Railway Union (and ultimately to the imprisonment of its president, Eugene V Debs), and to a sharp contest between Gov John P Altgeld and President Grover Cleveland over the sending of Federal troops to the area The strike was broken in July **2** City (pop 4,417), SE Wash., near the Idaho border, in a farm area, founded 1884, inc 1888 The state college (see Washington, State College of) is here

pulmonary consumption see tuberculosis

pulmotor (pŭl'mō"tur, pōōl'-), mechanical device to restore breathing by artificial respiration It is also commonly referred to as a "blow and suck" machine, which succinctly describes the method of operation Resuscitation is accomplished by forcing air mixed with oxygen into the lungs and then sucking it out, rhythmically Although a division of opinion once existed as to the merits of devices of this kind, a device called the resuscitator is now an important piece of equipment in most fire houses For other means of restoring respiration, see artificial lung

pulp see paper

pulpit, in churches, elevated platform with low enclosing sides, used for preaching the sermon In the earliest churches the episcopal throne served this purpose The boxlike elevated ambo of early medieval times, the apparent forerunner of the pulpit, was situated in the choir and served for reading and singing In basilical churches there was usually an ambo at both north and south sides of the choir At an unknown date the north-side ambo came to be used for sermons, its location being a matter of favorable acoustics rather than one of ritual The modern pulpit is ordinarily in the nave against the first pier outside the chancel and at the epistle side Pulpits early became objects of fine craftsmanship They were generally polygonal, supported by a single pillar or a group of columns or by brackets extending from a wall In Italy there are many handsome examples, enriched with sculpture and mosaics The hexagonal carved marble pulpit (c 1260) in the baptistery at Pisa, by the sculptor Nicola Pisano, displayed the first intimations of the Renaissance The cathedral at Prato has the celebrated outdoor pulpit sculptured by Donatello With the Reformation the pulpit became the most conspicuous and important accessory in the Protestant church Modern pulpits are, as a rule, of simple design See J C Cox, *Pulpits, Lecterns, and Organs in English Churches* (1915) and *English Church Fittings, Furniture, and Accessories* (1923)

pulque (pōōl'kā), Mexican spirituous liquor, made from the sap of maguey (see agave) The bud of the flower stalk is removed before it is well developed, and a bowl is scooped in the heart of the plant, in this the sweet sap, *aguamiel*, collects Fermentation of *aguamiel* produces pulque, a muddy, ill-smelling liquid, highly alcoholic Habitual drinking leads to physical and mental degeneration In use in pre-Columbian times, pulque became the ordinary drink among the lower classes of Mexico, creating a grave economic and social problem against which stringent measures have been taken by the federal government and by some states

pulse, alternate expansion and contraction of artery walls as heart action varies the blood volume within the artery. The pulse rate is equivalent to the rate of heart beat. In the systolic movement, or contraction of the heart, the arteries become distended with increased blood, and in the diastolic movement, or relaxation of the heart, the tension is reduced. The pulse rate is usually determined by counting the pulsations of the radial artery at the wrist The normal rate at rest is from about 70 to 80 pulsations a minute in adults and from 80 to 140 in children Various diseases may be indicated by changes in the rate, rhythm, and force of the pulse The circulatory movement of blood through the veins and arteries was first explained by William Harvey in the early 17th cent

pulse, in botany see legume

puma (pū'mu), New World cat ranging from S Canada to Patagonia It is known in various regions as cougar, mountain lion, catamount, and panther In its northerly range the puma is reddish or grayish brown on the upper parts with lighter under parts An adult male measures from 7 to 8 ft in total length Tropical races are usually smaller and more reddish It is extinct or nearly so in the E United States and in the West is confined chiefly to the less settled parts It preys on deer, horses, cattle, and other animals See S P. Young and E A Goldman, *The Puma* (1946)

Pumacagua, Mateo García (mätä'ō gärsē'ä pōōmäkä'gwä, -kä'wä), 1738–1815, Peruvian Indian leader He aided in suppressing the insurrection of Tupac Amaru (1780–81) and later the first rebellion in the war against Spain but in 1814 he led an uprising Beginning in Cuzco, the movement spread, gaining force from Pumacagua's great influence over the Indians, but after a little success the Indians were defeated and Pumacagua was put to death

pumice (pŭ'mĭs), volcanic glass formed by the solidification of lava permeated with gas bubbles Usually found at the surface of a lava flow, it is colorless or light gray and has the general appearance of a rock froth The viscosity of the lava, the quantity of water vapor and gas, and the rate of cooling together determine the fineness of the vesicular substance Large amounts of gas result in a finer-grained variety known as pumicite The chemical composition is that of silicic lava Coarse-grained rock, with fewer and larger air spaces, is called scoria Pumice is used chiefly as an abrasive and is included in many scouring preparations. Ground pumice is also used in finishing furniture Deposits are found in volcanic areas throughout the United States and elsewhere, but the Lipari Islands off Italy are the chief source of commercial quantities

pump, device used for lifting a fluid or varying its pressure One of the earliest types, still a common form, is the suction or lift pump It consists of a cylinder from which an attached pipe extends down into a water source An inlet valve, which opens upward but not downward, is situated at the junction of the cylinder with the pipe An outlet valve in the cylinder itself opens outward but not inward When the pump handle is pushed down, a piston (a sliding piece fitted within the cylinder) displaces the air in the cylinder, and it escapes through the outlet valve An upward movement of the handle rarefies the air in the cylinder, this causes the outlet valve to close and the inlet valve to open, permitting water to flow up the pipe Atmospheric pressure causes these movements The next downward movement of the pump handle finds the piston displacing water, which flows through the outlet valve The distance a suction pump will lift water is determined by the atmospheric pressure and seldom exceeds 34 ft Other types, some of which utilize the principles involved in suction lift, are the reciprocating types of pumps, the centrifugal and force pumps, and the air lift The rotary pump employs the Archimedes screw principle Air pumps include vacuum pumps, for removing air from a closed structure, and air compressors, for pumping air into a closed container A pump for removing air was invented (1650) by Otto von Guericke Modern air pumps can create high vacuums Air compressors range from hand pumps to the large compressors driven by steam engines and electric motors which furnish compressed air for operating pneumatic machinery and for various other purposes

Pumpelly, Raphael (pŭmpĕ'lē), 1837–1923, American geologist, b Owego, N Y , studied abroad He made official surveys in Japan (1861–63) of Yezo (later Hokkaido) and in the coal fields of China (1864) and made the first extensive geological survey (1865) of the Gobi His scientific account of these studies appeared in 1866, and a popular account appeared in 1870 Pumpelly was professor of mining at Harvard (1866–75) He was state geologist of Michigan and of Missouri, served on the U S Geological Survey, exploring especially the iron-ore ranges of Michigan, and was in charge of the mineral industries survey for the 10th census He led the northern transcontinental survey (1881–84) and conducted (1903–4) explorations in Turkistan for the Carnegie Institution. He wrote a number of works on his findings. See his *Reminiscences* (1918).

pumpernickel: see BREAD.

pumpkin, name for a tender, usually vinelike annual herb and for its large yellow edible fruit Pumpkin and squash are terms sometimes used interchangeably and without botanical distinction Variations of the field or common pie pumpkin, *Cucurbita pepo,* include the summer squashes (e g , acorn, scallop, pattypan, and summer crookneck squashes), VEGETABLE MARROW, and some kinds of GOURD In Europe various kinds of *Cucurbita maxima* are called pumpkin but in America these are usually called SQUASH or winter squash Whether the pumpkin (*Cucurbita pepo*) is native to America or Asia is a matter of dispute, but if it is Asiatic in origin it was probably introduced into America in some prehistoric time, for it was cultivated by pre-Columbian Indians It was among the fruits of the first Thanksgiving celebration of the Pilgrims, as it has been a favorite pie filling of autumn festivities ever since Its shell is the jack-o'-lantern of Halloween

puna (pōō'nä) [South American], high plateau region between ridges of the Andes in Peru and Bolivia Arid, cold, and, for the most part, barren, the *puna* has, nevertheless, supported an Indian population since prehistoric times The icy wind sweeping the plateaus is also called *puna*

Punaka (pōōnŭ'ku), town (pop c 3,000), capital of Bhutan Founded in 1577, it is a fortress town, suited for strong defense

Punch and Judy, famous English puppet play, very popular with children and given widely by strolling puppet players It came to England in the 17th cent by way of France from Italy, where it probably had its origin in the *commedia dell' arte* Punch is the hook-nosed, squeaky-voiced, cruel, and boastful husband of a faithless, obstreperous wife, Judy The language of the play is usually coarse and often satirical See J P Collier, *Punch and Judy* (illustrated by George Cruikshank, 1870)

Punchbowl, hill, 498 ft high, in Honolulu, T H In the bowllike extinct crater at the summit is a national memorial cemetery for men who died in the Second World War There is a scenic drive to the top

puncheon (pŭn'chun) [O Fr], plank or board made by hewing instead of sawing American pioneers who could not procure the products of sawmills made much use of puncheons in their log buildings The puncheons used for floors were split logs hewn smooth on the split side only

punctuation, device of WRITING supplementing the use of letters In every LANGUAGE besides the sounds that go in succession there are other features, e g , tone, accent, and pauses, that are equally significant (see GRAMMAR and PHONETICS) In English these are stress pausing, and tonal changes, interlocking in a set of patterns often called intonations Of the two parts of English writing, punctuation represents the intonation features better than the letters represent the other phonemes The punctuation is done by signs placed among the letters, often at the end of the feature they mark The intonations of declaration are classified in three types, symbolized by the comma (,), the semicolon (;), and the full stop or period ( ) Other intonations are shown by the exclamation point (!), the interrogation point or question mark (?), the parenthesis ( ), and the colon ( ) The typical use of the colon is the introduction of material that elaborates what has already been said Quotation marks (' ") indicate direct quotation or some borrowing and usually demand special intonation Punctuation of material not intended to be read aloud—the far more usual case today—has introduced refinements designed to help the reader, hence brackets ([ ]), a secondary parenthesis, hence also capital letters, paragraphing, and indention The whole scheme of punctuation shifts when the material is to be read silently The long dash (—) is especially used in handwriting for incomplete intonation patterns Two other frequent signs are the apostrophe ('), marking an omission or a possessive case, and the hyphen (-), a line division or an intimate joining These two are practically extra letters, and their use, belonging with spelling rather than with punctuation, is highly arbitrary and has to be memorized from books Each written language has its tradition of punctuation, often very different from English, thus, in German initials of nouns are capitalized, and in Spanish the beginnings of exclamations and of questions are marked with inverted signs See T F and M F Husband, *Punctuation Its Principles and Practice* (London, 1905), for American usage, Univ of Chicago Press, *A Manual of Style* (latest ed)

Punic language, the language of Carthage, belonging to the Canaanite group of Semitic languages See LANGUAGE (table)

Punic Wars, between CARTHAGE and ROME When they began, Rome had nearly completed the conquest of Italy, while Carthage controlled NW Africa and the islands and the commerce of the W Mediterranean When they ended, Carthage was not even a ruin and Rome was the greatest power W of China The first war saw Rome fighting to break the tight hold Carthage was getting on the W Mediterranean. The last one was the final, desperate attempt to preserve Punic liberty. But it was the second war which was the most spectacular, the most brilliant, and the most interesting The initial area of conflict was Sicily, where the ambitions of the two commercial powers were directly opposed The **First Punic War,** 264–241 B C , grew immediately out of a quarrel between Messana (now Messina) and Syracuse, in which the Messanians called on Rome and Carthage for help The Punic army arrived first and arranged a peace between Messana and Syracuse The Roman army, however, ejected the Carthaginians, and the war was on Roman legions occupied E Sicily without difficulty, and the newly created Roman fleet, after victories at Mylae (260) and off Cape Ecnomus (256), landed a force in Africa This excursion was a failure, and its commander REGULUS was captured (255) by the Greek mercenary general, Xantippus In Sicily the Romans took Palermo (254) but were effectively blocked farther west by the brilliant guerrilla warfare of HAMILCAR BARCA and failed to take Lilybaeum, the chief Punic base The Romans equipped a new fleet which destroyed (241) the Punic fleet off the Aegates (now Aegadian Isles), and Carthage sued for peace The terms were the payment of an indemnity and the cession of Punic Sicily to Rome The chief events of the next 20 years were the Roman entry into Sardinia and Corsica—a gross breach of treaty —and the conquests in Spain by Hamilcar When Hamilcar's son Hannibal besieged (219) and took the Spanish city of Saguntum (modern Sagunto), a Roman ally, Rome declared war This **Second Punic War,** or Hannibalic War, 218–201 B C , was one of the titanic struggles of history Rome owed its success to various factors its stubborn will and splendid military organization, its superior economic resources, its generals, Fabius and, above all, Scipio, the failure of supply from Carthage to Hannibal's Italian army, and the mountainous character of central Italy, which rendered the Punic superiority in cavalry nearly useless For the course of the war, see HANNIBAL and SCIPIO AFRICANUS MAJOR At the war's close, Carthage surrendered to Rome its Spanish province and its war fleet, Carthaginian commercial greatness never returned The **Third Punic War,** 149–146 B C , originated, like the others, in a deliberate Roman aggression, the fruit of years of agitation by CATO THE ELDER Charging Carthage with a technical breach of treaty in resisting the encroachment of the Numidian MASINISSA, Rome declared war and blockaded the city Carthage never surrendered The younger SCIPIO (SCIPIO AFRICANUS MINOR) conquered it, house by house, and sold the surviving inhabitants into slavery The city was razed and its site plowed up The Latin accounts are biased, and there are no Punic ones, the best source is the work of POLYBIUS See also bibliography under ROME

punishment see CAPITAL PUNISHMENT, CORPORAL PUNISHMENT, CRIMINAL LAW, PRISON

Punites (pū'nīts), descendants of PHUVAH

Punjab (pŭn"jab') [Sanskrit, = five rivers], region (148,610 sq mi , pop 35,013,017), India and Pakistan The Indus river bounds it in part on the west and the Jumna river in part on the east The five rivers which give Punjab its name, the Jhelum, the Chenab, the Ravi, the Sutlej, and the Beas, merge to form the Panjnad, which flows into the Indus Except in the north, where there are mountains yielding salt and coal, Punjab is a level alluvial plain The rainfall is either undependable or deficient, but an extensive system of irrigation which uses the waters of the great rivers has made possible enormous agricultural productivity Wheat is the principal crop, millet, barley, fruits, and cotton are important Large-scale industry is limited to flour and cotton milling and textile weaving Communications (by road, by rail, and, in the rainy season, on the rivers) are good The Punjab was probably the seat of the earliest Aryan settlements in India The region was occupied by Alexander the Great and then by the Maurya empire Moslems occupied W Punjab by the 8th cent and firmly implanted Islam Not until the late 12th cent did they conquer E Punjab, which even afterward remained predominantly Hindu Under the Mogul empire the Punjab perhaps reached its cultural height When the empire declined in the late 18th cent , the Sikhs rose to dominance By the early 19th cent their territorial aggrandizement brought conflict with the British, who emerged victorious in the two Sikh Wars (1846, 1849) and in 1849 annexed most of the Punjab and made it a province, though some of the princely states were retained With the creation of Pakistan in Aug , 1947, the Punjab was partitioned approximately along the line marking the main concentrations of the Moslem and the Hindu population There were created the Pakistan province of West Punjab or Punjab (c 58,000 sq mi , pop c 20,000,000), with its capital at Lahore, the Indian state of East Punjab (c 41,000 sq mi , pop c 8,000,000) with its capital at Jullundur, and the Indian PATIALA AND EAST PUNJAB STATES UNION. In 1950 West Punjab was renamed Punjab

Puno (pōō'nō), city (pop. 15,999), SE Peru, on the northwestern shore of Lake TITICACA. Puno (alt. 12,648 ft) is the commercial and rail, highway, and steamship communications hub of SE Peru, connected with La Paz, Bolivia, to the southeast, Arequipa and the Peruvian coast to the southwest, and Cuzco, Peru, to the northwest

Punon (pū'nŏn), unlocated desert resting place, E of Mt Seir Num 33 42,43

Punta Arenas (pōōn'tä ärā'näs) [Span ,=sandy point], city (pop 29,883), capital of MAGALLANES prov , S Chile The only city on the Strait of Magellan and southernmost of the world's cities, Punta Arenas was founded in 1847 to maintain Chile's claim to the strait It is attractive and progressive, but there are few trees, and the adjacent country is cold, bleak, and barren Until the building of the Panama Canal, Punta Arenas was a busy coaling station and has since been an important center for export of Patagonian wool and mutton Reached by highway from Argentina and by boat from S Chile, it is becoming increasingly popular with tourists, in spite of a long rainy season It was for some time called Magallanes, but the older name was restored in 1938

Punta Gorda (pŭn'tu gôr'du), city (pop 1,889), co. seat of Charlotte co , SW Fla , on Charlotte Harbor It is a yachting and fishing center and exports fish and farm produce

Puntarenas (pōōntärā'nas) city (1944 estimated pop 8,547), W Costa Rica, a port on the Gulf of NICOYA Connected by rail and highway with the capital, San José, Puntarenas was a major port until the founding of LIMÓN It is a picturesque tropical resort and handles coastwise trade in cattle, sugar, and coffee Fish canneries and plants processing the skin and oil of sharks are local industries

punto in aria see LACE

Punxsutawney (pŭngksutô'nē), industrial borough (pop 9,482), W Pa , NE of Pittsburgh, settled 1772, laid out c 1818, inc 1850 It produces coal and coke and is a farm trade center The site was occupied by Shawnee villages

pupa (pū'pu), name for the third stage in the life of an insect which undergoes a complete metamorphosis—from the egg, through the larva and the pupa stages, to the adult A complete metamorphosis is characteristic of members of the orders Coleoptera (beetles), Diptera (flies, mosquitoes, gnats, etc), and Lepidoptera (moths and butterflies) Some pupae, e g , the mosquito, are active, but as a rule the pupa stage is outwardly quiescent and covered by a hard integument Pupae of moths usually have an outer covering called a cocoon, often made of silk secreted by the larva, but the pupae of bees, beetles, flies, and butterflies have no additional covering Some cocoons are formed on or under the ground, some under tree bark or boards, others are suspended The promethea moth uses a leaf in constructing its cocoon and winds silk around the leaf petiole and the twig to which it has attached itself The pupa case of a butterfly is called a chrysalis (krĭ'sulĭs) The chrysalis is usually suspended from a branch, stem, or leaf to which the posterior end is attached by a button of silk secreted by the larva In some species the chrysalis is also supported by a girdle of silk threads Some chrysalises are brightly colored, but the majority are inconspicuous That of the monarch or milkweed butterfly is pendent and of soft green studded with gold spots While the insect is in the pupa case the changes in structure take place which result in the development of the adult In some the larval tissues liquefy and new organs form The transformation to the imago or adult form takes several weeks in some Lepidoptera Others pass the winter in the pupa stage, and the imago emerges in the spring

Pupin, Michael Idvorsky (pūpĕn'), 1858–1935, American physicist and inventor, b Idvor, Hungary (now in Yugoslavia), grad Columbia (B A , 1883) He came to the United States in 1874 and from 1889 was associated with Columbia (as professor of electromechanics, 1901–31) He is known for his researches in X ray and for his invention of numerous electrical devices used in telegraphy and telephony Besides the Pulitzer Prize-winning autobiography, *From Immigrant to Inventor* (1923), he wrote *The New Reformation* (1927) and *The Romance of the Machine* (1930)

puppet, small figure of a man or animal performing on a miniature stage, manipulated by an unseen operator who also speaks the dialogue A distinction is sometimes made between marionettes, moved by strings or wires from above, and puppets, in which the hand of the operator is concealed in the costume of the doll The English Punch-and-Judy shows are an ancient and familiar form of the puppet show, and the Guignol puppet theaters are popular in France Puppet theaters for adults exist in Latin countries and have been established in the United States by Italian immigrants, old epic dramas, often based on the *Chanson de Roland,* and other medieval and modern pieces draw crowded houses In the hands of Tony Sarg and other artists and dramatists, puppet or marionette shows have attained a high degree of excellence and popularity The puppet show itself is so ancient that it is impossible to tell with accuracy

where it first appeared The Greeks of the 5th cent B C were familiar with it, in Java, China, and Japan it is almost immemorial; and in the Europe of the Middle Ages it was the most popular form of entertainment for the masses From the end of the 16th cent. to the end of the 18th, puppet or marionette shows reached the summit of their vogue on the Continent and in England These shows, sometimes called motions, were mentioned by Chaucer, Shakspere, Johnson, Pope, and Addison. During Puritan times in England they flourished after the theaters were interdicted On the Continent great writers, even Goethe, and such great composers as Mozart and Haydn wrote and composed for them In 18th-century Japan the most celebrated dramatists wrote plays for the puppet theater See W H Mills and L M Dunn, *Marionettes, Masks, and Shadows* (1928), Max von Boehn, *Dolls and Puppets* (1932), M H Batchelder, *Puppet Theatre Handbook* (1947), Paul McPharlin, *The Puppet Theatre in America* (1949)

Pur (pûr) [Heb ,=lot], lot cast by Haman to determine the time for the murder of the Jews. Esther 3.7, 9 15–32 See PURIM

Puranas see SANSKRIT LITERATURE

Purbeck, Isle of, peninsular district, c 12 mi long and 8 mi wide, Dorsetshire, England, between Poole Harbour and the English Channel The shores are rocky, St Albans Head being the most southerly point Ranges of chalk hills cross the area from east to west The region is noted for the production of Purbeck marble and china clay Swanage and Corfe Castle are the leading towns

Purcell, Henry (pûr'sĭl), 1659–95, English composer and organist He sang in the choir of the Chapel Royal until 1673 and became one of its organists in 1682 He became composer for the King's Violins in 1677 and was organist at Westminster Abbey from 1679 until his death Notable among his many works for the stage are *The Fairy Queen* (1692), based on Shakspere's *Midsummer Night's Dream*, and his music for Dryden's *King Arthur* (1691), but *Dido and Aeneas* (1689) is his only true opera in the modern sense His anthems are supreme among those of his period He also wrote services, instrumental music, and secular songs See biographies by A K Holland (1932) and J A Westrup (1937), E H Fellowes, *English Cathedral Music* (1941)

Purcell (pûrsĕl'), city (pop 3,116), co seat of McClain co, central Okla, on the Canadian river, here crossed by a bridge, settled 1887 The city is in a peach-growing area and has several cotton gins

Purchas, Samuel (pûr'chus, pûr'kus), 1577–1626, English clergyman and compiler of travel literature, b Essex, grad St John's College, Cambridge Chaplain to the archbishop of Canterbury, he later was rector of St Martin's Church, London His *Purchas His Pilgrimage* (1613), an eccentric survey of peoples and religions of the world, was well liked and later enlarged He is most famous for his compilation of travel literature, *Hakluytus Posthumus, or, Purchas His Pilgrims* (4 folios, 1625, 20 vols in Glasgow edition, 1905–7) For it he used the papers of Richard Hakluyt, East India Company records, and many manuscripts which he had collected and which have since been lost See selections by H G Rawlinson (1931) and Cyril Wild (1939)

Purdue University (pûrdû', -dōō', pûr–), at Lafayette, Ind, with state and land-grant support, coeducational, chartered 1865, opened 1874 It is especially known for its large engineering schools and has as well schools of agriculture, home economics, pharmacy, science, and aeronautics and a division of education and applied psychology At Purdue are also a public safety institute, an industrial research foundation, agricultural and locomotive history museums, and a radio station

pure-food laws see FOOD ADULTERATION

purgatory (pûr'g'–) [Latin,=place of purging], in the teaching of the Roman Catholic Church, the state after death in which the soul destined for heaven is purified of taint Since only the perfect can enjoy the vision of God (inferred from Mat 12 36, Rev 21 17), and some die in grace who have still unpunished or unrepented minor sins on their conscience, they must be purged of such sins Those who have suffered already (especially the martyrs) may have undergone much or all of their punishment Souls in purgatory are members of the Church along with the living and the blessed in heaven and may be helped, as in life, by the prayers and works of their fellow members This unity is the communion of saints Prayers for the dead are therefore a commonplace of Roman Catholic life, one form is the REQUIEM Mass (see also INDULGENCE) The nature and length of the state of purgatory are not defined, the suffering is different in kind from that of HELL, for the soul in purgatory knows that his punishment is temporary. The ancient Jews prayed for the dead (2 Mac. 12 43–46), and the Christians continued to, holding the concomitant belief in a middle state between life and heaven The Orthodox maintain this position without adopting the Western terms, which were developed in the Middle Ages. Protestants have abandoned it.

Puri (pōō'rē), town (pop. 41,055), Orissa state, India, on the Bay of Bengal Its life centers around the cult of Juggernaut (or Jagannath), a form of the Krishna avatar (incarnation) of Vishnu. The celebration of his cult, perhaps uniquely in HINDUISM, has never been attended with CASTE distinctions. The images of Juggernaut and of his brother and sister repose in a large temple within a vast temple compound Every summer each image is mounted on an enormous, unwieldy cart and dragged by thousands of pilgrims to a summer home a mile distant Although pilgrims have hurled themselves to death beneath the wheels of the cart, this act, contrary to common belief, is not part of the festival rite

purification, in a religion, the ceremonial removal of what the religion deems uncleanness Water and fire are usual agents in purification The origin of purification rites is a matter of dispute, but frequently need of purification may result from violation of taboo Sinful intent is not essential in causing uncleanness which may affect a thing or a place as well as a person or a community Highly developed religions retain rites of purification The ancient Hebrew rites are described in the Bible, as in Num 19 CANDLEMAS commemorates the purification of Mary after the birth of Jesus, Luke 2 22

Purim (pyōō'rĭm, pōō'–) [Heb ,=lots], Jewish festival celebrated on the 14th and 15th of Adar, the sixth month in the Jewish calendar According to the book of Esther (Esther 3 7, 9 24,26) it commemorated the deliverance of the Persian Jews from a general massacre, however, the festival may have arisen in the pagan celebration of the advent of spring Although preceded by a day of fasting, Purim is almost completely lacking in religious features and is a day of joy, marked by merrymaking and feasting The liturgy which is recited on this day is secular in tone Other features of the festival which developed in medieval times are the exchange of gifts the obligatory giving of alms to the poor, and often the presentation of Purim plays It is also characterized by playing pranks and the beating or burning of the effigy of Haman.

Puritanism, a composite of social, political, ethical, and theological ideas in middle-class English and American Protestantism Historically it began early in the reign of Queen Elizabeth as a movement for religious reform The early Puritans felt that the Elizabethan ecclesiastical establishment was too compromising, too broad and liberal, and too Catholic in its liturgy, vestments, and episcopal hierarchy They believed that the Scriptures did not sanction the setting up of bishops and churches by the state They had no quarrel with church doctrine, at the beginning it was their aim to purify the Church, not to separate from it However, by 1567 a small group of key rigorists were discovered meeting secretly in London to worship after the pattern of the service of the Church in Geneva Though Puritans believed that if they searched the Scriptures long enough they would eventually agree, they early differed on the nature of the church polity advised in the Bible The parish was the unit of the Puritan church, the parochial group of church members elected ministers PRESBYTERIANISM favored a central church government, whereas the Independents advocated CONGREGATIONALISM, defined the church as an autonomous congregation of believers, opposed a national, comprehensive, coercive church, and emphasized the point that a man could arrive at his own conclusion in religion There were many Puritans who were neither decided Presbyterians nor Independents, after the Restoration (1660), when the Puritans weakened as a political party, this distinction lessened in importance Though disappointed by James I at the Hampton Court Conference (1604) in the hope of imposing their program upon the state church, in the PURITAN REVOLUTION the Puritans enjoyed their greatest power after the political party that developed out of the movement came to power under Oliver Cromwell Its greatest apologist was John Milton In the Restoration they were oppressed under the Clarendon Code (1661–65), which sought to secure the supremacy of the Established Church By the end of the 17th cent the use of the word *Puritan* as a party designation had died out In New England, in the Puritan "Holy Commonwealth," some 25 churches had been formed by 1640 Puritans, strongly Calvinistic and accepting PREDESTINATION, carried the distinction between the elect and the damned into their theory of the church, membership in which consisted only of the regenerate minority who publicly confessed their experience of conversion Ministers had great political influence, and civil authorities exercised a large measure of control over church affairs. The Cambridge Platform (1648) expressed the Puritan position on matters of church government and discipline. In 1662 it was made easier for the unregenerate majority to become church members in Massachusetts by the adoption of the Half-Way Covenant. With the expansion of New England and the opening of frontier settlements filled with colonists who were resourceful, secular, and engaged in a struggle to adapt to a difficult environment, clerical control was undermined. In 1692 in Massachusetts a new charter expressed the change from a theocratic to a political, secular state, the suffrage was stripped of religious qualifications After the 17th cent Puritanism as a party largely disappeared, but Puritan attitudes and ethics continued to exert an influence on society To the Puritans the world was under an divine curse, sin was real and pervasive Their sexual code was rigid The family was a fortress of piety, Bible reading and prayers in the family group were customary. The world's physical realities must be used for purposes pleasing to God. The Puritans regarded the world as but a testing place before entering the future life They made a virtue of the qualities which social and urban isolation bred in them—austerity, impassiveness, self-reliance, frugality, industry, and energy —and through them influenced modern social and economic life Lengthy, emotion-rousing sermons were preached by a semi-prophetic, well-educated ministry, but the idea of congregational democratic church government was carried into the political life of the state as a source of modern democracy. See V. L Parrington, *The Colonial Mind* (1927, Vol I of *Main Currents in American Thought*), H W. Schneider, *The Puritan Mind* (1930), William Haller, *The Rise of Puritanism* (1938), M M Knappen, *Tudor Puritanism* (1939), Perry Miller, *The New England Mind* (1939), R B Perry, *Puritanism and Democracy* (1945), T F Wertenbaker, *The Puritan Oligarchy* (1947)

Puritan Revolution, name usually given to the conflict between the king of England and a large body of his subjects in the reigns of JAMES I (1603–25) and CHARLES I (1625 49) It culminated in civil war, the defeat of the king, and the establishment of a kingless Commonwealth, which became the Protectorate The name has been applied because the complexion of the king's opponents was prevailingly Puritan, while the king and his followers were believers in episcopacy and formal religion, it is somewhat of a misnomer because it overemphasizes the religious element at the expense of other issues, economic and constitutional The constitutional issue was one between a king who claimed the privileges of a divine-right monarch and a Parliament that stood for a constitutional monarchy with the real sovereignty residing in the electorate The electorate at the time was not, of course, made up of the full body of the English people, it was composed of the nobility and middle class, with the middle class in the majority and therefore dominant It was this middle class—the country gentry and the commercial classes of merchants and artisans which had been growing apace since the Commercial Revolution and the tremendous expansion of markets and trade in Tudor times—that made up the bulk of the parliamentarian party, the opponents of the king They were anxious to do away with financial and commercial restrictions and they desired to have the guiding hand in the government This ambition had been severely held in check by Tudor absolutism, but on the accession of a Scottish king to the English throne the popular party gathered its forces James was not long in gaining a personal unpopularity that helped to strengthen Parliament's hand The Hampton Court Conference (1604) was an unsuccessful effort to compromise religious questions The Parliament that met in 1604 was soon at outs with the king on what was to prove to be one aspect of the fundamental issue- the privileges of Parliament, claimed by that body as a legal right and regarded by James as a special grant from the crown James was forced to temporize with Parliament because of his great need of money, but the dissolution of 1611 found them further apart in spirit than ever The new Parliament met in 1614 and Commons engaged in quarrels not only with the king, but also with the Lords Because it passed not a single statute, this was called the Addled Parliament James, however, had little understanding of the popular unrest and continued on his way, arousing deeper opposition by his dependence on favorites and by the scheme of a Spanish marriage for the English crown prince In the search for constitutional precedents, Sir Francis BACON had zealously upheld the royal prerogative and Sir Edward COKE the common law and parliamentary rights The king dismissed Coke in 1616, and the Parliament of 1621 impeached Bacon The last Parliament (1624) of James's reign accompanied its grant of money with directions for its use to assist the enemies of Spain, to secure Ireland, and to equip the navy Charles I, married to the French Catholic princess, Henrietta Maria, was to prove more intractable and even less to the Puritan taste than his father, and Parliament was to become even more uncompromising in Charles's reign The leaders of the popular party—Coke, Dudley Digges, John Selden, Sir John Eliot, and John Pym—realizing the inevitability of the issue, sought by all means in their power to limit the powers of the king He was granted by the Parliament of 1625 the right to collect tonnage and poundage—but only for a year, not for his reign The Parliament of 1626 went farther and directly attacked the king's minister, George Villiers, 1st duke of Buckingham, and sought to impeach him. Charles dis-

solved Parliament in anger He sought by every means to obtain money, but was forced again to have recourse to Parliament. The calling of a new body, however, resulted only in much greater estrangement between king and legislature Parliament drew up (1628) the PETITION OF RIGHT, and so great was Charles's need that he was forced to accept it. The king levied tonnage and poundage—an act which the parliamentarians declared illegal (on arguments today generally considered invalid) Parliament in 1629 protested vigorously against Charles's conduct of affairs, the collection of tonnage and poundage, and the prosecution of the king's opponents in the Star Chamber The religious issue also came up, and the Parliament was dissolved, Charles took measures against the parliamentary leaders Ill-feeling had grown to hostility, which did not lessen in the succeeding 11 years when Charles attempted personal rule, without Parliament's aid The prosecution of William PRYNNE and of John HAMPDEN aroused popular indignation Charles's chief advisers, Archbishop LAUD and Thomas Wentworth, earl of STRAFFORD, a former Parliament man, were cordially detested All of the popular group felt that no rights of a citizen were safe Ominous peace reigned It was broken by trouble in Scotland, where efforts to enforce Anglican episcopal policy led to the violent opposition of the COVENANTERS and to the Scottish war (the Bishops' War) of 1639 and compelled Charles to seek the financial aid of Parliament The Parliament that convened in 1640 once more met the question of supplying the king by a demand for redress of grievances The king offered to abandon ship-money exactions, but delay and a tendency of Parliament to parley with the king's Scottish enemies caused him to dissolve this Short Parliament in just three weeks The disasters of the second Scottish war and other troubles compelled a virtual surrender by the king The Long Parliament was called (1640), and it reduced the king to purely nominal authority The men imprisoned by the Star Chamber were freed A Triennial Act provided that no more than three years should elapse without sessions of Parliament Strafford was impeached and despite efforts of the king to save him, was executed Parliament undertook church reform on Puritan lines, but there was considerable disagreement, especially between Commons and Lords Church courts were abolished Thirteen bishops were impeached The distrust of the king was expressed in measures that included the disbanding of armies and the placing of guardians over the king's children In the hope of regaining some power in Scotland, Charles went there in Aug , 1641 At the same time there was a considerable movement in England in favor of the king, and his position was strengthened, although he gained nothing in Scotland A rebellion against English rule in Ireland, however, aroused great anti-Catholic passion and led Parliament to adopt the Grand Remonstrance, which recited the evils of Charles's reign and called for further reforms, its object was the strengthening and protection of the state Commons also sought to gather an army by a militia bill Charles, compliant to the will of Parliament up to this point, refused to accept the Grand Remonstrance Contrary to Parliament's orders he began to organize an army Believing with some justice that impeachment proceedings were to be begun against Queen Henrietta Maria, Charles attempted to have five members of Commons (Hampden, Pym, Denzil Holles, Sir Arthur Heselrige or Hazelrig, and William Strode) seized and went in person unsuccessfully to the House This action made civil war inevitable In the lull that followed these stirring events both Parliament and king sought to secure the fortresses, arsenals, and popular support In June, 1642, Parliament sent to the king a group of 19 demands, embodying the conditions on which they could agree with the king These included the reform of governmental administration and of church practice according to the will of Parliament, the extirpation of Roman Catholicism in England, parliamentary control of the army, parliamentary control of the administration and of the appointment of privy councilors, ministers, all the great officers of the crown, and the judges, and even parliamentary control of the education of the king's children Obviously acceptance would have meant abject surrender by the king, this he refused Armed forces gathered about him in the north, Parliament organized an army and appointed Robert Devereux, 3d earl of Essex, to head it The king moved south with his royalist forces and on Aug 22, 1642, raised his standard at Nottingham The followers of king and of Parliament did not represent two absolutely distinct social groups as the popular conception of the royalist Cavaliers and the parliamentary Roundheads would indicate However, it is true that the parliamentary or Puritan group drew its strength largely from the trading classes and artisans of London, Norwich, Hull, Plymouth, and Gloucester, it centered in the southeast and had control of the fleet The majority of the great nobles followed the king, who had the support of the Anglicans and the Catholics, geographically the royalist strength centered in the north and the west. The king and his forces moved from Nottingham to the west, then, turning back to advance on London, met the parliamentary force under Essex in a fierce but indecisive engagement at Edgehill (Oct 23, 1642) The king then established himself at Oxford and Essex went to London The royalist forces gained ground in the north and the west, and, though another attempt by the king to advance on London was abortive, his fortunes were in the ascendant In 1643 the plan of a concerted royalist drive on London went awry The royalist general in the east, William Cavendish, duke of Newcastle, came to grief in a cavalry engagement, and had to turn back That engagement (July 25, 1643) was chiefly remarkable because in it Oliver CROMWELL, who had been an obscure member of the Long Parliament, first gained real military prominence with the troop of "godly" men that he had organized and trained, the regiment that was to become famous as the Ironsides The parliamentary forces continued to hold all the important ports Though Essex, after capturing Reading, failed to take Oxford, his lack of success was paralleled by the king's failure to take Gloucester after a long siege, which was raised by the approach of a parliamentary force that met the king in an indecisive battle at Newbury (Sept , 1643) Futile negotiations for peace had been conducted at Oxford early in 1643, and in the autumn Parliament took a decisive step by securing the alliance of the Presbyterian Scots in accepting the Solemn League and Covenant (Sept 25, 1643) The Scottish aid was obtained only by promise to submit England to Presbyterian rule, arrangements for that submission were made in the Westminster Assembly The war now entered a new phase A Scottish army advanced into York early in 1644 and gave aid to the Fairfaxes, who had been valiantly upholding the parliamentary standard in the north The brilliant and dashing Prince Rupert did something to stem royalist losses by retaking Newark and Lincoln, but these gains were temporary His campaign to relieve the besieged York led to the battle of Marston Moor (July 2, 1644), in which Cromwell and his men inflicted on the royalists a crushing defeat Charles pursued Essex and literally drove him into the sea in Devon, but he shortly afterward met parliamentary troops from the north, and, though the second battle of Newbury was really indecisive, Cromwell gained glory Dissension among the parliamentary leaders led Cromwell to sponsor the Self-Denying Ordinance, by which all members of Parliament were compelled to resign their commands and the army was reorganized into the New Model Army by parliamentary action In it Thomas Fairfax was commander in chief, and Cromwell, reappointed to command, was the leading spirit Another futile attempt to secure an arrangement with the king by a proposal usually called the Treaty of Uxbridge ended early in 1645 The New Model swung into action Charles, hoping to join with forces under James Graham, marquis of Montrose, and with Rupert, went north, then took Leicester A decisive engagement was fought with Cromwell at Naseby (June 14, 1645) This battle lost the Midlands to the royalists, and Charles's cause was lost Unable to join Montrose (whose fortunes declined to a decisive defeat in 1645), thwarted in his attempts to secure aid from Ireland or the Continent, the king was unable to halt the steady losses of his party and finally was compelled to surrender himself to the Scots, who made him reassuring promises The first civil war was at an end when Oxford was surrendered in June, 1645 The king was delivered by the Scots into the hands of Parliament, but the Presbyterian rule in that body had thoroughly alienated the army, and the army captured the king from the parliamentary party (May 31, 1647) Army discontent gradually became more radical, the desire to dispose of the king altogether grew, and the king, refusing to accept the Heads of the Proposals, the army council's proposals for peace, escaped Nov 11, 1647, and went to the Isle of Wight There he raised the standard of the second civil war, but this failed quickly A Welsh uprising, a Kentish uprising, and a Scottish invasion (which occurred because the Scots felt that the Solemn League and Covenant had been broken) all were suppressed, the only really serious fighting was with the Scots Cromwell took Colchester and defeated the Scots at Preston (Aug 17, 1648), Wigan, and Warrington Charles's forlorn hope of Irish aid failed Parliament again tried to reach some agreement with the king, the army, which was now completely under Cromwell's control, disposed of its enemies in Parliament by Pride's Purge, which reduced the Long Parliament to the Rump Parliament by expelling all members opposing the army This legislative remnant erected a high court of justice which tried the king for treason and found him guilty Charles was beheaded on Jan 30, 1649 A quasi-democratic Commonwealth was set up, governed by the reduced Parliament without king or House of Lords. The council of state of 41 members chosen for one year acted as the executive The disagreement of the various types of Puritan thought and the multiplication of radical sects caused religious trouble now that Presbyterian domination was overthrown, but the Puritan Revolution was accomplished Cromwell, its leading spirit, came to dominate, and the years of the interregnum under the Commonwealth to 1653 and of the PROTECTORATE after that are the story of his personal rule After his death and that of Richard Cromwell there was the short period of a renewed Commonwealth and of chaos ended in 1660 by the RESTORATION of the Stuart family It seemed then that the gains of the revolution might disappear Some of the changes did, Anglicanism was restored as the state church. Yet the Puritan rising was, somewhat ironically, a major factor in bringing about religious toleration in England The real results of the Puritan Revolution were, however, the emergence of the middle class and the settlement of the contest between king and Parliament, for by the GLORIOUS REVOLUTION OF 1688 those results were permanently assured for England The standard works on the period of the Puritan Revolution are books by S R GARDINER See also G M Trevelyan, *England Under the Stuarts* (1922), F C Montague, *The History of England from the Accession of James I to the Restoration* (1907, Vol. VII of *The Political History of England*, ed by William Hunt and R L Poole), Godfrey Davies, *The Early Stuarts of 1603–1660* (1937)

Purkinje, Johannes Evangelista (yōhn'nus ā"vänggā'lēs'tä pōōr'kĭnyĕ), 1787–1869, Czech physiologist While professor (1823–50) at the Univ of Breslau he pioneered in establishing laboratory training in German universities From 1850 he was professor at Charles Univ , Prague, and was active in the Czech nationalist movement He improved microscope technique and in the fields of histology and embryology made numerous contributions He discovered the apertures of the sweat glands and the large ramified nerve cells of the cerebellum now called by his name In his research in ophthalmology he worked on the functions of the eye and studied subjective visual figures and recurrent images He is known also as a poet, he translated poems of Schiller and Goethe into Czech

Pursh, Frederick, 1774–1820, American botanist, b Germany He made valuable contributions to the knowledge of North American flora Among his discoveries was the hart's-tongue, a rare fern He gave the name *Lewisia* (for Meriwether Lewis) to the genus which includes the bitterroot He wrote *Flora Americae septentrionalis* (1814) and *Journal of a Botanical Excursion in Pennsylvania and New York during the Year 1807*, which was published in 1869 and later reprinted (1923)

purslane or **pussley**, trailing annual plant (*Portulaca oleracea*) with fleshy radiating stems, succulent leaves, and small yellow flowers In the Old World it has been cultivated (in an upright form) for the leaves and young shoots, used for pickling and salads and as a potherb In America it is regarded as a weed The garden purslane is the closely related PORTULACA A number of other plants are called purslane

Purus (pōōrōōsh'), river, c 2,100 mi long, rising in E Peru It flows into Brazil and generally NE across Acre territory and Amazon state into the Amazon well above Manaus For most of its course it is navigable It receives the Acre river from the right

Purvey, John, c 1354–c 1421, English scholar, who in support of LOLLARDRY completed the first thorough translation of the Bible into English Becoming attached to John WYCLIF at Oxford, he accompanied the Lollard leader to Lutterworth in 1382 and there perhaps finished a faulty translation of the Bible previously begun by others under Wyclif's inspiration He completed c 1395 a careful and scholarly translation entirely his own. These two versions were erroneously attributed to Wyclif himself until recently The second shows a prose style better than that of Wyclif's writings, portions of it were later used by the translators of the King James Version Purvey continued active as a Lollard until his arrest in 1401 The following year he recanted under pressure and accepted a living from Archbishop Arundel In 1403, however, he resigned and resumed Lollard activities until his arrest again in 1421, after which time nothing certain is known of his fate

Purvis, town (pop 1,000), co seat of Lamar co., SE Miss , near Hattiesburg, in a farm area

Purvits, Vilhelms (vil'hĕlms pōōr'vĭts), 1872–, Latvian landscape painter One of the first to introduce modern Western art into Eastern Europe, he was director of the Latvian Academy of Art at Riga from 1919 and was director of the city museums and professor at the Univ of Latvia A follower of the school of French impressionism, he developed an international style of his own His work can be seen in museums of Riga, Tallinn, Stockholm, Leningrad, and Moscow

pus, thick fluid which contains decomposed tissue, bacteria, and certain white blood cells (chiefly polymorphonuclear leucocytes or pus cells) These white blood cells form one of the defense mechanisms of the body, known as phagocytes, they engulf invading bacteria in a process called **phagocytosis** During the process many white corpuscles are killed, and these form one of the constituents of

pus In any acute inflammation, pus may accumulate and an ABSCESS may form

Pusan (pōō'sän), Jap *Fusan*, city (1949 pop 473,619), S Korea, on the Korea Strait It is the largest port of Korea and has extensive overseas trade Industries include ironworks and shipyards Pusan was opened to general foreign trade in 1883

Pusey, Edward Bouverie (pū'zĭ), 1800–1882, English clergyman, leader in the OXFORD MOVEMENT, known also as Puseyism Having studied at Christ Church College, Oxford, Pusey was elected a fellow of Oriel College (1824) and thus became associated with John Keble, J H Newman, and their group After two years of study in Germany, he wrote a history (1828) of German theology from the Reformation and was made regius professor of Hebrew at Oxford, with the canonry of Christ Church The tract on baptism (1835) in the series *Tracts for the Times* was Pusey's He was editor in chief of the *Library of the Fathers* (from 1836) His influence in the High Church party was widened when he was suspended from preaching for two years because of the ideas on the Real Presence expressed in his sermon "The Holy Eucharist, a Comfort to the Penitent" (1843) Other sermons helped in the revival of such practices as auricular confession and in formulating High Church doctrines His sermon "The Rule of Faith" (1851) is credited with checking the secessions to Roman Catholicism which had been accelerated by his suspension and more recently by the controversy over the right of the privy council to adjudicate on matters of church doctrine Pusey's eucharistical writings culminated in his *Doctrine of the Real Presence* (1855) and *The Real Presence* (1857) *The Minor Prophets* (1860) and *Daniel the Prophet* (1864) were his answer to the rationalist methods of contemporary scholarship His *Eirenicon* (3 parts, 1865–70) was an endeavor to find some ground for reuniting Christendom His name is perpetuated in Pusey House at Oxford, where his library is kept together See biographies by Canon Liddon (completed by others, 1893–99) and Maria French (1906), C C Grafton, *Pusey and the Church Revival* (1914)

Pushkin, Aleksandr Sergeyevich (pōōsh'kĭn, Rus ŭlyĭksän'dur sirgā'uvĭch pōōsh'kĭn), 1799–1837, Russian poet and prose writer He is the greatest of Russian poets He was born in Moscow of an old family, a great-grandfather was Hannibal, the Negro general of Peter the Great Pushkin showed promise as a poet even as a student in the *lycée* of Tsarskoye Selo In 1820 he was exiled to S Russia because he wrote *An Ode to Liberty* and other revolutionary verses In the same year appeared the fairy romance *Russlan and Ludmilla*, which shows strong traces of French influence, Glinka later adapted it as an opera In S Russia he came under the influence of Byron and, like Lermontov, was strongly moved by the exotic natural beauty of the Crimea and the Caucasus The effect is seen in his next poems, *The Prisoner of the Caucasus* (1821), *The Robber Brothers* (1822), *The Fountain of Bakchiseras* (1822), and *The Gypsies* (1823–24), in which the author's frustrated yearning for freedom finds expression Pushkin often found his material in Russian history, as in *Poltava* (1828) and *The Bronze Horseman* (1833), in which he laid the foundations for a cult of Peter the Great, in *Boris Godunov* (1831), a tragic drama on which Moussorgsky based an opera, and in two works based on the great peasant uprising under Y I Pugachev in 1773–75, *The Captain's Daughter* (a short novel, 1837) and *The History of the Pugachev Rebellion* (1834) His masterpiece is *Eugene Onegin* (1831), a novel of manners in verse In this occurs one of the finest love poems in the Russian language, Tatiana's love letter to Onegin Pushkin expressed himself in many forms—in the drama, e g , the much-translated *Mozart and Salieri* and *The Stone Guest* (both 1830), in folk tales, e g , *The Golden Cockerel* (1833), on which Rimsky-Korsakov based an opera, and in short stories and novelettes as *Tales by Belkin* (pub anonymously, 1831), *Dubrovsky* (1841), and *The Queen of Spades* (1834) Tchaikovsky based operas on both *Eugene Onegin* and *The Queen of Spades* Pushkin died as the result of a duel which he fought in defense of his wife's honor His fame, great at the time of his death, has steadily mounted Most of his writings are available in English See his works (ed by Avrahm Yarmolinsky, 1936), biographies by E J Simmons (1937) and Henri Troyat (Eng tr , 1950)

Pushkin (pōōsh'kĭn, Rus pōōsh'kĭn), city (1948 pop over 50,000), RSFSR, S of Leningrad Founded under Peter I as Tsarskoye Selo [tsar's village], it was renamed Detskoye Selo [children's village] after the Russian Revolution and Pushkin in 1937 The huge summer palace of Catherine II, in baroque style, was begun under Empress Elizabeth The summer palace of Alexander I (built 1792–96) is in the classic mode The vast park has innumerable grottoes, pavilions, canals, lakes, and bridges in the rococo manner The *lycée* where the poet Pushkin studied is now a museum In the Second World War the Germans held (1941–44) Pushkin during the siege of Leningrad The palaces, park, and museum were looted and partially destroyed, but restoration was begun after the war. Near Pushkin is the observatory of PULKOVO.

Pushtu (pŭsh'tōō), language spoken in Afghanistan, called also Afghan It belongs to the Iranian group of the Indo-Iranian subfamily of Indo-European languages See LANGUAGE (table).

pussley see PURSLANE

pussy willow see WILLOW

Puszta (pōō'stä), grazing lands which once covered a large part of the Hungarian plain They were used for extensive cattle raising With the progress of irrigation and drainage, the Puszta has disappeared except in the small Hortobagy region (104 sq mi), near Debrecen, E Hungary Here large herds of cattle are still rounded up by the Hungarian equivalent of cowboys, and all other characteristic features of the Puszta have been preserved

Put (pŭt), variant of PHUT

Puteoli (pūtē'ŭlī), ancient city of Campania, Italy Founded by Greeks from Cumae c 520 B C , it came under Roman control by the end of the 3d cent and was made a citizen colony in 194 B C Its greatness as a port waxed, and it handled much of the Italian importing as well as large exports, notably of mosaics, pottery, and perfumes The shops were rich, and the city was surrounded by handsome villas When St Paul visited the city there was already a large Christian community Acts 29 13 The wealthy port attracted raiders, and Puteoli was destroyed by Germanic invasions in the 5th cent A D Modern Pozzuoli is near

Putiel (pūtĭ'ul, pū'tĭĕl), grandfather of Phinehas Ex 6 25

Put in Bay, harbor of South Bass Island, N Ohio, in Lake Erie NW of Sandusky There are state and Federal fish hatcheries, and some commercial fishing is done At Put in Bay village, a summer resort on the bay, is Perry's Victory and International Peace Memorial National Monument

Putnam, Amelia Earhart see EARHART, AMELIA

Putnam, Arthur (pŭt'num), 1873–1930, American sculptor noted for his animal bronzes, b Wavaland, Miss He studied and worked in San Francisco In association with Willis Polk he assisted in the rebuilding of San Francisco after the earthquake (1906) Among his works are *Snarling Tiger* (Metropolitan Mus), *The Death* (Mus of Fine Arts, Boston), and the Sloat monument (Monterey, Calif)

Putnam, Frederic Ward, 1839–1915, American anthropologist, b Salem, Mass , studied at Harvard He introduced the custom of scientific expeditions under museum auspices From 1874 to 1909 he was curator at the Peabody Museum and from 1886 to 1909 Peabody professor of archaeology and ethnology at Harvard He secured many valuable collections of North American and Central American archaeological and ethnological specimens While curator of anthropology (1894–1903) at the American Museum of Natural History, New York, and as permanent secretary (1873–98) of the American Association for the Advancement of Science, he was a vitalizing influence in extending and developing American scientific research From 1903 to 1909 he was professor and director of anthropology at the Univ of California

Putnam, George Haven, 1844–1930, American publisher, b England, educated at the Sorbonne and the Univ of Gottingen, son of George P Putnam He served in the Civil War until captured by the Confederates in 1864, he retired with the rank of major On his father's death he became head of G P Putnam's Sons Major Putnam was active in many civic and social causes and was especially successful in his fight for an international copyright law Among his many books are *Authors and Publishers* (1883), *Books and Their Makers during the Middle Ages* (1897), *Memories of My Youth* (1914), *Memories of a Publisher* (1915), and *Some Memories of the Civil War* (1924) In 1899 he married as his second wife Emily James Smith (1865–1944), b Canandaigua, N Y , dean of Barnard from 1894 to 1900 Mrs Putnam wrote *The Lady* (1910), a history of the upper-class women from ancient times, and *Candaules' Wife* (1926)

Putnam, George Palmer, 1814–72, American publisher, b Brunswick, Maine, grandnephew of Israel Putnam After establishing in London a branch of the publishing house in which he was partner, he returned to New York to found (1848) G P Putnam's Sons He was proprietor of *Putnam's Magazine* (1853–57), which was revived for brief periods in 1868–71 and 1906–10 One of the founders of the Metropolitan Museum of Art, he was its honorary superintendent George Haven Putnam and Herbert Putnam were his sons, and Mary Putnam JACOBI was his daughter See the memoir by his son G H Putnam (1912)

Putnam, George Palmer, 1887–1950, American publisher, author, and explorer, b Rye, N Y , grandson of G P Putnam, founder of the publishing firm After editing (1910–13) a newspaper in Bend, Oregon, and serving in the First World War, he was treasurer of G P Putnam's Sons until 1930 He led two expeditions to the Arctic—one in 1926 under the sponsorship of the American Museum of Natural History up the west coast of Greenland and the other in 1927 to Baffin Island to collect specimens of wildlife He married Amelia Earhart in 1931, and after she was lost at sea in 1937 he wrote her biography in *Soaring Wings* (1939) His autobiography, *Wide Margins*, appeared in 1942.

Putnam, Herbert, 1861–, American librarian, b New York city, grad Harvard, 1883, and studied law at Columbia, son of George P Putnam He served as librarian at the Minneapolis Athenaeum (1884–87) and of the Minneapolis Public Library (1887–91) After practicing law in Boston, he turned definitely to librarianship, being librarian of the Boston Public Library from 1895 to 1899, when he began his long and valuable service as librarian of Congress He retired in 1938 as librarian emeritus to Congress, a post created for him. See *Essays Offered to Herbert Putnam by His Colleagues and Friends* (1929)

Putnam, Israel, 1718–90, American Revolutionary general, b Salem (now Danvers), Mass A farmer at Pomfret, Conn , he fought in the French and Indian War, seeing action at Montreal (1760) and at Havana (1762) In 1764, he was commander of the Connecticut force sent to relieve Pontiac's siege of Detroit When he heard the news of the battle of Lexington and knew the American Revolution was begun, he left his plow in the furrow and took horse to Cambridge to join the patriot forces He was prominent in the battle of Bunker Hill Putnam was in command at the unhappy battle of Long Island (1776) and in 1777 lost Forts Montgomery and Clinton in the Hudson Highlands A paralytic stroke (1779) ended his military career See biography by W F Livingston (1901)

Putnam, Mary see JACOBI, MARY PUTNAM

Putnam, Rufus, 1738–1824, American Revolutionary general, one of the founders of the OHIO COMPANY OF ASSOCIATES, b Sutton, Mass In the French and Indian War he joined (1757) the army and saw action around Lake Champlain In the American Revolution he was an engineering officer at Boston, New York, and West Point, then a field officer under Horatio Gates in the Saratoga campaign (1777) and under Anthony Wayne at Stony Point (1779) He was made a brigadier general in 1783, after the war's end In 1786 he, with other veterans, formed the Ohio Company of Associates Putnam helped the passage of the Ordinance of 1787, and in 1788 he and Manasseh Cutler supervised the building of Marietta Putnam was later (1796–1803) U S surveyor general See biography by Sidney Crawford (1899)

Putnam, textile city (pop 7,775) in Putnam town (pop 8,692), NE Conn , a co seat of Windham co , at the falls of the Quinebaug, settled 1694, inc 1895, town set off from Killingly 1855

Putney, (pŭt'nĭ), district of Wandsworth metropolitan borough, SW London, England, on the south side of the Thames, here crossed by a granite bridge to Fulham It is the starting point of the Oxford-Cambridge boat races Thomas Cromwell and Edward Gibbon were born in Putney, and Leigh Hunt, Swinburne, and William Pitt lived here Putney Heath was the scene of a duel between Pitt and George Tierney in 1798 and of one in 1809 between Castlereagh and George Canning

Putney, town (pop 904), SE Vt , N of Brattleboro in the Connecticut river valley, settled in the mid-18th cent Near the village of Putney, on a remodeled farm, is Putney School (1935), a private, coeducational, progressive school In 1839 John Humphrey NOYES formed at Putney a society of Perfectionists, which was the first of three.

Puto see CHUSAN ARCHIPELAGO

putrefaction (pūtrĭfăk'shun), decomposition of nitrogenous organic matter produced by microorganisms Among the compounds formed are ptomaines Disagreeable odors associated with putrefaction are caused by the production of aromatic bodies and gases, e g , ammonia and hydrogen sulphide Gangrene, following infection, is a putrefactive fermentation of dead tissue The products of putrefaction of organic matter in the soil are valuable as fertilizing material for plants

Putrid Sea, RSFSR see SIVASH

Puttenham, George (pŭt'unum), d 1590, reputed author of *The Arte of English Poesie* (1589), a treatise on the theory of English versification The book has also been ascribed to his brother **Richard Puttenham**, 1520?–1601 See edition by G D Willcock and Alice Walker (1936)

putty, commonly a mixture of whiting (calcium carbonate) and boiled linseed oil Other substances may be combined with the oil to make putties suitable for some specific purpose For example, the red and white oxides of lead mixed with linseed oil yield a putty used by plumbers in sealing pipe joints Putty hardens gradually when put in place, as along the edges of window panes to fasten them, in cracks in plaster walls, and in crevices in wood and other substances The linseed oil absorbs oxygen from the air and, holding fast the calcium carbonate or metallic oxides, causes the mixture to harden A powder composed of a mixture of lead and tin oxides, known as putty powder, is extensively used in polishing

Putumayo (pōōtōōmä'yō), river, c 800 mi long, formed by tributaries rising in the Colombian Andes, flowing SE to the Amazon in Brazil Most-

ly navigable, it marks part of Colombia's boundary with Ecuador and most of Colombia's frontier with Peru, the short Brazilian section is called the Içá The river valley is at present of little economic importance, but some rubber and balata are shipped to Manaus, Brazil In the early 20th cent , during the heyday of the wild-rubber bonanza, Roger CASEMENT was appointed to head a group to investigate the treatment of Indian laborers and made a report for the Peruvian government on the brutal exploitation of native labor, the report shocked the world

Puunene (pōōnĕ'nĕ), town (pop 4,456), on N Maui, T H , near Kahului Bay, in the sugar-cane area

Puvis de Chavannes, Pierre (pyĕr' puvĕs' du shăvan'), 1824-98, French mural painter, b Lyons In 1844 he went to Paris, where he studied under Scheffer, Delacroix, and Couture He also traveled in Italy His painting *War* (Amiens), purchased by the state in 1861, established his reputation From that time on he lived in Paris and painted the mural decorations in Lyons, Marseilles, Amiens, Poitiers, Rouen, Paris, and Boston which have made him famous Late in life he married his lifelong friend, Princess Marie Cantacuzène They both died the following year Although Puvis studied with the romanticists, his work is classical in inspiration His chaste murals with their subdued color and statuesque figures sometimes suggest the frescoes of Giotto However, he painted chiefly on canvas Puvis is usually considered the best of the French muralists since Delacroix Excellent examples of his work are in the Hôtel de Ville, the Sorbonne, and the Panthéon, Paris, and in the Boston Public Library His easel paintings are to be seen in many American and European galleries

Puy, Le (lu püē'), city (pop 18,347), capital of Haute-Loire dept , S central France, in VELAY, of which it was the capital The modern section lies below a bare rock, which, towering almost 500 ft above it, is capped by a bronze statue of the Virgin (50 ft high), erected in 1860 Immediately at the foot of the rock lies the old city, with a cathedral (12th cent) of extraordinarily daring construction, an 11th-century baptistery, and numerous Gothic buildings Atop a lesser, needle-shaped rock is the Romanesque Church of St Michel d'Aiguilhe, and at its foot is an 11th-century chapel Le Puy began to grow when it was made (6th cent) an episcopal see, after the 10th cent its shrine to the Virgin became a major place of pilgrimage It is the center of an old lace industry The Château of Chavaniac, c 25 mi to the northwest, was the birthplace of Lafayette

Puyallup (pyŭ'lup), city (pop 7,889), W Wash , on the Puyallup river and E of Tacoma, settled 1877, inc 1890 It has canneries and daffodil fields and is the seat of an agricultural experiment station An annual fair is held

Puyallup Indians, tribe of North American Indians of the Salishan linguistic stock Puyallup culture was of the Pacific Northwest Coast area In the early 19th cent they occupied the region around the mouth of the Puyallup river in W Washington, near the site of Tacoma By the Treaty of Medicine Creek (1854) they ceded their lands to the United States and moved to a small reservation on Puget Sound They now number some 450 See M W Smith, *Puyallup-Nisqually* (1940)

Puy-de-Dôme (püē'-dŭ-dōm'), department (3,095 sq mi , pop 478,732), S central France, in AUVERGNE Clermont-Ferrand is the capital

Puy de Dôme, extinct volcano, 4,806 ft high, S central France, the second highest peak of the AUVERGNE mts , 6 mi W of Clermont-Ferrand Here Florence PÉRIER conducted (1648), upon instructions of his brother-in-law, Blaise Pascal, the famous experiment which confirmed Torricelli's theory on air pressure

Puy de Sancy, France see MONT-DORE

Pu Yi, Henry (pōō' yē', pōō' ē'), Manchurian *Pu Hao-yen,* 1905–, last emperor (1908–12) of China, under the reign name Hsuan T'ung After his abdication he was granted a large government pension and permitted to live in the imperial summer palace near Peiping In 1934, under the reign name Kang Teh, he became the sole emperor of the Japanese puppet state of MANCHUKUO He was captured by the Russians in 1945 and kept as their prisoner In 1946 Pu Yi testified at the Tokyo war-crimes trial that he had been the unwilling tool of the Japanese militarists and not, as they claimed, the instrument of Manchurian self-determination

Pyarnu, Estonia see PARNU

Pyatigorsk (pyĭtyĭgôrsk'), city (pop 62,875), S Stavropol Territory, RSFSR, in the N Caucasus A health resort, it has sanatoriums, hot sulphur springs, and mud baths Lermontov was killed here in a duel in 1841, and there is a museum devoted to his memory Pyatigorsk was held (1942–43) by the Germans in the Second World War

Pydna (pĭd'nu), ancient town of Pieria, S Macedonia, near the Gulf of Salonica Near here the Romans under Aemilius PAULLUS defeated (168 B C) the Macedonians under Perseus and thus ended the kingdom of Macedon

Pye, John, 1782–1874, English engraver, founder of modern landscape engraving As an illustrator for popular art annuals, he developed his technique and became in time J M W Turner's favorite engraver He also executed plates for landscapes by Claude Lorrain and Gaspard Poussin The British Museum has his impressions for the gift annuals from 1813 to 1858, as well as those for Turner's *Liber Studiorum* His treatment of light and shadow is unsurpassed He founded the Artist's Benevolent Fund and wrote *Patronage of British Art* (1845)

Pyeshkov, Aleksey Maximovich see GORKI, MAXIM.

Pygmalion (pĭgmāl'yun) **1** In Greek mythology, king of Cyprus He made a marble statue of a woman, Galatea, so beautiful that he fell in love with it He prayed to Aphrodite for a wife like the statue, and Aphrodite heard him, the statue became a woman, and Pygmalion married her **2** In Vergil's *Aeneid,* king of Tyre He was the brother of Dido, and he murdered Dido's husband

Pygmy or **Pigmy** (both pĭg'mē), any one of various geographic populations scattered from Africa to New Guinea, Regarded by most writers as genetically related to the Negroids, the Pygmies nevertheless differ from them and from each other in many respects The African Pygmies, often called Negrillos, average less than 5 ft in height (the lowest average stature found in any population) and are lighter in color than the Negroids among whom they live, with whom they have interbred extensively, and whose languages they speak Before agriculture was developed they were probably the sole inhabitants of the Congo valley, today they number fewer than 100,000 and are subject to Negro chieftains, who employ them as specialists in hunting (e g , of elephants) and in various crafts Among the larger groups are the Batwas in the great bend of the Congo The Akkas of the upper Nile are probably the Pygmies known to the ancient Egyptians and to Homer and Herodotus The Far Eastern Pygmies, sometimes called Negritos, include the Aetas of the Philippines, the Semangs of the Malay Peninsula, and several other small groups from the Andaman Islands eastward There is abundant evidence of Pygmy admixture in the populations of Malaya and Melanesia The Pygmies in this area average about 5 ft tall have thick lips, very dark skin, and scant body hair, while the head hair is woolly They are settled mostly on poor land in isolated locales, where they live by primitive methods of food gathering, hunting, and fishing The theory that all Pygmies are of common stock, migrants from S Asia in prehistoric times, is unproved, as is the theory that they are the living survivors of the ancestral type of man

Pylades (pĭ'ludēz), in Greek legend, the dear friend of ORESTES He married ELECTRA

Pyle, Howard, 1853-1911, American illustrator and writer, b Wilmington, Del , studied at the Art Students League For many years he illustrated stories for *Harper's Magazine* and *Harper's Young People* He both wrote and illustrated many books for young people tales of chivalry and adventure, which both in their writing and in their drawing stirred the imagination Some of these were *The Merry Adventures of Robin Hood of Great Renown* (1883), *Within the Capes* (1885), *Pepper and Salt* (1886), *The Wonder Clock* (1888) *Otto of the Silver Hand* (1888), *Men of Iron* (1891), *The Story of Jack Ballister's Fortunes* (1895), *The Garden behind the Moon* (1895), *The Story of the Champions of the Round Table* (1905), and *Stolen Treasure* (1907) From 1879 Pyle lived in Wilmington He taught at Drexel Institute, Philadelphia, where his pupils included Maxfield Parrish and N C Wyeth He died in Italy

Pylos (pī'lŏs), ancient harbor, Messenia, SW Greece, on a bay of the Ionian Sea Tradition made it the home of NESTOR It was not inhabited in historic times, but excavation has revealed a great Mycenaean palace of the 13th cent B C The modern town of Pylos (pop 3,315), formerly known as Navarino, grew up on the south shore of the bay The Bay of Pylos was the scene of an Athenian naval victory over Sparta in 425 B C and of the battle of NAVARINO in 1827

Pym, John (pĭm), 1583?-1643, English Parliament leader He sat in the House of Commons of every Parliament from 1614 to his death and was a Puritan leader opposed equally to Roman Catholicism and to Arminianism in the Anglican church Pym was a leader in the impeachment of George Villiers, 1st duke of Buckingham (1626), and in the passing of the Petition of Right (1628) Little is known of his activities in the 11-year interval between Parliaments (1629–40), but in both the Short Parliament and the Long Parliament he was the unquestioned leader of the House of Commons, and he and John HAMPDEN were largely responsible for forcing CHARLES I to convene (1640) the Long Parliament Although several attempts were made to detach him from the popular cause by offers of the chancellorship of the exchequer, he only increased the firmness of his attack He sharply opposed the royal party in the prosecution of Thomas Wentworth, earl of Strafford, and of Archbishop Laud, in urging the abolition of the courts of high commission and the Star Chamber, in seeking to eradicate episcopacy, and in the presentation of the Grand Remonstrance to Charles In 1642 Charles came to Parliament to remove five members from Commons by military arrest, but the members had already fled Pym was one of the five His last important act was the arranging of an alliance with the Scots, after he had reluctantly signed (1642) the Covenant (see COVENANTERS) as a military necessity He had stood always for legal, constitutional change (see PURITAN REVOLUTION) and was a great party leader See biographies by S R Brett (1940) and J H Hexter (1941)

Pynchon, John (pĭn'chun), c 1626-1703, American colonist and merchant, b Springfield, England, son of William Pynchon In 1630 he went to Massachusetts Bay colony with his father When his father returned to England in 1652, young Pynchon acquired a profitable business and an influential position in the Springfield settlement of the colony He established trading posts at Westfield, Northampton, Hadley, Hatfield, and Deerfield and held a number of public offices His brick house at Springfield, known as the Old Fort, was a point of refuge when the settlement was practically destroyed during King Philip's War See J C Pynchon, *Record of the Pynchon Family in England and America* (1885, revised by W F Adams, 1898); H M Burt, *The First Century of the History of Springfield* (2 vols , 1898-99)

Pynchon, William, c 1590–1662, American colonist and theologian, b Springfield, England An original patentee and assistant in the Massachusetts Bay Company, he migrated to America in 1630, where he helped found Roxbury and served as treasurer of the colony (1632–34) In 1636 he settled, and was commissioned to govern, a plantation at the confluence of the Connecticut and Agawam rivers, which he called Agawam, but which was renamed Springfield in 1641 Through a flourishing fur trade he increased an already considerable fortune While visiting England (1650), he published *The Meritorious Price of Our Redemption,* which expressed his liberal views of the atonement The book was denounced as heretical and ordered burned in Massachusetts Relenting somewhat but refusing to retract all of his opinions, Pynchon left his property to his son John and other children and returned permanently (1652) to England See J C Pynchon, *Record of the Pynchon Family in England and America* (1885, revised by W F Adams, 1898), H M Burt, *The First Century of the History of Springfield* (2 vols , 1898–99), S E Morrison, "William Pynchon," in Massachusetts Historical Society, *Proceedings,* Vol LXIV (1932)

Pynson, Richard (pĭn'sun), d 1530, English printer, b Normandy He moved to England in 1482 and in 1491 or 1492 began printing books in London He became king's printer in 1508 In craftsmanship he surpassed William CAXTON WYNKYN DE WORDE, and all other English printers of his time He was the first English printer to use roman type

Pyongyang (pyŭng'yäng'), Jap *Heijo,* city (1944 pop 342,551), capital of the Democratic People's Republic of Korea It was founded, according to legend, in 1122 B C Six gates remain of the wall which once surrounded the city There are old Buddhist temples and a museum with historical relics Near Pyongyang are three tombs (1st cent B C) with remarkable murals Pyongyang was ravaged by Japanese invaders in 1592 and during the First Chino-Japanese War (1894) and the Russo-Japanese War (1904) Today it is an important industrial center in a coal-mining district There are sugar refineries, rayon and cotton mills, and chemical plants After the Second World War it was the headquarters of the zone of Korea occupied by the USSR

pyorrhea (pīurē'u) or **Riggs's disease,** disease of the bony supporting structure of the teeth, described by the American dentist John M Riggs There is infection with the discharge of pus, the gum tissues recede, the teeth loosen, and a progressive degeneration of the bony tissue takes place The formation of tartar (calcareous deposits) at the necks of the teeth, faulty occlusion, and other irritations, are thought to be causative factors Proper care of the teeth and gums and modern carefully fitted dental restorations are reducing the incidence of pyorrhea

pyramid. The true pyramid exists only in Egypt, though the term has been also applied to similar structures in other countries The Egyptian pyramids, usually of stone, are solid piles, square in plan Their triangular sides, directly facing the points of the compass, slope at an angle with the ground of about 50° and meet at an apex The earliest tombs in Egypt were probably excavated pits over which protective mounds were piled, but the oldest remaining tombs are the mastabas (see MASTABA) of the Old Kingdom, containing chambers and a mummy compartment From these the true pyramid was evolved about the IV dynasty, it remained the customary royal tomb until the New Empire Each monarch built his own pyramid, in which the mummified body might be preserved for eternity from human view and sacrilege and into whose construction went years of time and measureless amounts of material and labor. Entrance

into a pyramid is through an opening in the northern wall A small passage, traversing lesser chambers, leads to the sepulchral chamber deep beneath the immense pile, excavated from the rock upon which the monument is built Stone blocks forming a gable transfer the weight of the great masonry masses over these chambers The Great Pyramid of Khufu or Cheops (reigned c 2900 B C) at Gizeh near Cairo, one of the Seven Wonders of the World, is the largest pyramid ever built, a solid mass of limestone blocks covering 13 acres, it was originally 768 ft square and 482 ft high It has several passages, two large chambers in addition to one beneath the ground level, and two small air chambers for ventilation Though the pyramids were usually built of rough stone blocks laid up in horizontal courses, many were of mud bricks with a stone casing They are situated along the western hillside between the Nile and the western desert The group at Gizeh, composed of the Great Pyramid, the Second, and the Third, are all of the IV dynasty—to which early period belong all of the largest and finest, in contrast to the smaller and carelessly built examples of later times, such as those at Sakkara of the V dynasty Adjacent to each pyramid was a small funerary chapel for the performance of rites, as well as the mastabas of the nobles who had lived under that particular monarch Such a group at Gizeh formed the center of an impressive cemetery Pyramidal structures, though not true pyramids, were also built by the Assyrians and by the Maya of Central America and Mexico The Assyrian ziggurat was square in plan and built up in receding terraces formed by a sloping ramp winding around the four sides from base to summit Upon the summit a temple chamber served both as a shrine and as an astrological observatory The Maya pyramids, built in steep, receding blocks, also were topped by ritual chambers The Romans built small pyramid tombs The Pyramid of Cestius (62 B C –12 B C) at Rome, of concrete faced with marble, has an interior tomb vault and is 116 ft high The **battle of the Pyramids** was a notable victory won by Napoleon over the Mamelukes in Egypt in July, 1798 It gave him brief control over Egypt until Nelson destroyed his fleet at Aboukir in Aug , 1798

Pyramid Lake, c 30 mi long and c 10 mi wide, W Nev , NNE of Reno in the Pyramid Lake Indian Reservation It is a remnant of ancient Lake Lahontan and was discovered in 1844 by J C Frémont and named for a large pyramidal island In the Federal bird sanctuary on Anaho Island the white pelican breeds The Truckee river flows into the lake.

Pyramids, battle of the see PYRAMID

Pyramus and Thisbe (pĭr'rumŭs, thĭz'bē), in classic legend, youth and maiden of Babylon, whose parents opposed their marriage Their homes adjoined, and they conversed through a crevice in the dividing wall On a night when they had arranged to meet at the tomb of Ninus, Thisbe, who was the first at the trysting place, was frightened by a lion with jaws bloody from its prey As she fled, she dropped her mantle, which was seized by the lion When Pyramus came, the torn and bloody mantle convinced him that she had been slain He killed himself, and Thisbe, returning, took her own life with his sword The white fruit of a mulberry tree which stood at the trysting place was dyed red with Pyramus' blood, and the fruit was ever after blood-color The story is told by Ovid

Pyrenees (pĭr'rŭnēz), mountain chain of SW Europe, between France and Spain, separating the Iberian Peninsula from the European mainland It extends c 280 mi from the Bay of Biscay on the west to the Mediterranean on the east and is highest in its central section The Pico de Aneto (11,168 ft), in the Maladetta Mts (Spain), is the tallest peak, other peaks include the Pic de Vignemale and the Pic du Midi d'Ossau (France) and Monte Perdido (Spain) Characteristic of the French Pyrenees, which are much steeper than the southern slopes, are the torrents called *gaves*, often falling in cascades, and the natural amphitheaters known as *cirques*, notably the famous Cirque de Gavarnie On the French side also are the best-known resorts, such as Pau, Tarbes, Luchon, and Cauterets, famed both for the beauty of their scenery and for their mineral waters Here also is Lourdes, one of the world's chief places of pilgrimage. On the Atlantic shore, below the W Pyrenees, are the fashionable resorts of Biarritz and Saint-Jean-de-Luz (France) and San Sebastián (Spain) The Franco-Spanish border, unchanged since the Peace of the Pyrenees (1659), follows mostly the watershed The more important rivers —the Garonne, the Aude, and the Adour—run north, among the Spanish rivers rising in the Pyrenees are the Bidasoa, the Aragon, the Cinca, and the Segre. The Pyrenees are crossed by a railroad from Toulouse to Barcelona, via Puigcerdá, but the two chief rail lines connecting Spain with France skirt the Pyrenees in the west and east The mountain passes are high and difficult, but they were often crossed by invading armies and by innumerable medieval pilgrims on their way to Santiago de Compostela The Col de Perthus, used by the Romans, and Roncesvalles, famous for the Roland legend, are the best known The Pyrenees are rich in timber and in pastures, and the many streams are utilized by hydroelectric power stations The population, partly of Basque and Bearnese stock, engages mostly in stock raising and agriculture The high stage of civilization reached here by prehistoric man is evidenced by the cave drawings at Altamira and Aurignac The chief administrative divisions of the Pyrenees on the French side are, from east to west, the departments of Pyrénées-Orientales (comprising the old county of Roussillon, with Perpignan), of Hautes-Pyrénées (comprising part of the old county of Foix), and of Basses-Pyrénées (comprising Béarn, French Navarre, the Basque regions of Soule and Labourd, and the cities of Bayonne, Pau, and Orthez) On the Spanish side extend, from east to west, the northern sections of Catalonia (with Gerona), of Aragon (with Huesca), and of Navarre (with Pamplona) and the Basque Prov (with San Sebastián and Irún) Here the Pyrenees are prolonged to the west by the Cantabrian Mts Wedged between France and Spain, in the E Pyrenees, is the small republic of Andorra

Pyrénées, Hautes, France see Hautes-Pyrénées

Pyrenees, Peace of the, 1659, the treaty ending the warfare between France and Spain, which, continuing after the Peace of Westphalia, had been complicated by Spanish intervention in the Fronde. Together with the Treaty of Westphalia, it marked the rise of France as the dominant European power France received Roussillon and extensive territories in Flanders, while its Spanish border was set at the Pyrenees A marriage contract between Louis XIV and Marie Thérèse, daughter of Philip IV of Spain, was included in the terms The infanta renounced her claims to the Spanish throne in consideration of a large payment The nonpayment of this dowry was the occasion for the War of Devolution and, indirectly, the War of the Spanish Succession

Pyrénées-Orientales (pĕrānā'zôryätal'), department (1,600 sq mi , pop 228,776), S France, on the Mediterranean, separated from Spain by the Pyrenees It is virtually identical with Roussillon Perpignan is the capital

pyrethrum (pīrē'thrŭm), formerly a generic name for plants now included in the genus *Chrysanthemum*, but still retained as a common name for some of these, particularly the plant called also painted daisy This (*Chrysanthemum coccineum*) has small lacy carrotlike leaves and, in spring or early summer, large heads of daisylike flowers of red, pink, white, or lilac, sometimes double The feverfew is another pyrethrum An insecticide called pyrethrum is made from the dried flowers of *Chrysanthemum cinerariaefolium* and *coccineum* The root of a pellitory (*Anacyclus pyrethrum*) has been used medicinally under the name of pyrethrum

Pyrgos or **Pirgos** (both pĭr'gŏs), town (pop 18,943), SW Greece, in Elis, W Peloponnesus, near the mouth of the Alpheus river It is a commercial center and manufactures cigarettes and alcoholic beverages Pyrgos was sacked (1825) by the Turks in the Greek War of Independence It now forms the major part of the municipality of Letrinoi

pyridine (pĭ'rĭdēn,–dĭn), colorless liquid with a pungent, putrid odor Chemically it is a very stable compound, somewhat similar in structure to benzene Its aqueous solution is slightly alkaline It is obtained from coal tar, bone oil, and other similar substances and is formed when certain alkaloids, e g , nicotine, are decomposed It is present, for example, in tobacco smoke Pyridine is used as a solvent, as a denaturant in alcohol, and, in medicine, in treating asthma and as an antiseptic Among the pyridine alkaloids are conine and piperine (the alkaloid in pepper)

pyrite (pī'rīt) or **iron pyrites** (pīrī'tēz, pu–, pī'rĭts), pale brass-yellow mineral, the bisulphide of iron It occurs most commonly in crystals (belonging to the isometric system and usually in the form of cubes and pyritohedrons), but is also found in massive, granular, and stalactite form In spite of its nickname, "fool's gold," it often does contain gold, of which auriferous pyrite is a commercially important source Other metals which sometimes replace a part of the iron are cobalt, nickel, arsenic, and copper The most common sulphide mineral, pyrite is widely distributed in rocks of all ages and types Important localities for its occurrence are Spain, Portugal, Norway, Sweden, Italy, France, Bohemia, Hungary, and the United States (especially California, Colorado, Montana, New York, Tennessee, Virginia, and Wisconsin) Its chief use is as a source of sulphur in the manufacture of sulphuric acid The term *pyrites* is applied to any of a number of metallic sulphides which strike fire with steel Some minerals resembling pyrite in appearance or composition are arsenopyrite, chalcopyrite or copper pyrites, cobaltite, marcasite or white iron pyrites or spear pyrites, and pyrrhotite or magnetic pyrites

Pyrmont (pĭrmŏnt') or **Bad Pyrmont** (bät'), town (pop 16,534), Hanover, W Germany It is a noted spa with mineral springs and mud baths, known for many centuries The former small principality of Pyrmont was united with that of Waldeck In 1922 Pyrmont was incorporated into Hanover

pyrogallol (pī"rōgă'lŏl, –lōl, –lŏl) or **pyrogallic acid** (pī"rōgălĭk), colorless, crystalline substance with a biting taste, soluble in water, melting at 133°C and boiling at 309°C Chemically, it is a phenol, a complex organic compound of carbon, hydrogen, and three hydroxyl (OH) radicals, is weakly acidic, and in alkaline solution is an active reducing agent absorbing oxygen rapidly. It is commonly and widely used as a developing agent in photography and also in the manufacture of some dyes It is prepared from gallic acid

pyroligneous acid (pī"rōlĭg'nēŭs), dark liquid, essentially a mixture of acetic acid and wood (methyl) alcohol, obtained in the destructive distillation of wood It serves as a commercial source of acetic acid

pyromania (pī"rōmā'nēŭ) [Gr ,=craze for fire], symptom of an emotional disorder, characterized by a compulsion to set fires The behavior of the person so afflicted may be otherwise normal The cause of the compulsion is not generally known but is believed to date from childhood disorders Legally, the pyromaniac is considered an arsonist

pyrotechnics (pī"rōtĕk'nĭks, pī"ru–), the science and art of making and using fireworks Gunpowder was used in fireworks by the Chinese as early as the 9th cent , and it was they who brought the art to a high stage of development, the displays at their festivals are still notable, and many firecrackers for American Fourth of July celebrations were imported from China Many combustibles and explosives and ingenious combinations of the two were devised to produce impressive sounds and lights of many colors and to drive wheels and rockets The use of fireworks for display has spread throughout the world In the Orient, Italy, and Spain pyrotechnical display is an important element of festivals, and the peoples of these lands emigrating to the New World brought the custom with them Fireworks are also widely used as signal devices —red flares to stop railroad trains, star shells in combat for illumination of enemy positions, various colored flares by aircraft to denote distress or to locate targets for air bombardment Ships, artillery, and infantry make use of signal flares where other means of communication are absent or inexpedient

pyroxene (pī'rŏksēn), name given to members of a group of widely distributed rock minerals, metasilicates of magnesium, iron, and calcium often with aluminum, sodium, lithium, manganese, or zinc The pyroxene minerals crystallize in three different systems—orthorhombic, monoclinic, and triclinic—but all have a fundamental prism with angles of 87° and 93° and cleavages parallel to the prism angles They are commonly white, gray white, green white, greenish black, black, or brown, but yellow, reddish, pink, purple, and blue varieties occur The pyroxene minerals are found chiefly in igneous and contact metamorphic rocks Varieties include enstatite, bronzite, hypersthene, diopside, diallage, wollastonite, augite, pectolite, spodumene, and rhodonite

pyroxylin (pīrŏk'sĭlĭn), cottonlike substance produced by treating cellulose with nitric acid Chemically, it is a mixture of the lower cellulose nitrates and in this respect is distinguished from guncotton, a mixture of higher nitrates (chiefly the hexanitrate) It is soluble in an ether-alcohol solution, in methyl alcohol, in amyl acetate, and in some other organic solvents and is therefore sometimes called soluble guncotton It is highly inflammable Pyroxylin is used in the preparation of celluloid, collodion, and certain paints (pyroxylin enamels and lacquers) It was formerly used in making photographic film but has been largely replaced by cellulose acetate, which is less inflammable

Pyrrha see Deucalion

Pyrrho (pĭr'rō), c 360–270 B C , Greek skeptic philosopher, a native of Elis, said to have been originally a painter After accompanying Alexander's expedition to the Orient, where he is thought to have studied Indian and Persian philosophy, he enjoyed great respect at Elis and Athens His doctrines were preserved by his disciple, Timon of Phlius, in satires Pyrrho taught that nothing can be known, because the contradictory of every statement can be maintained with equal plausibility Hence the philosophic attitude is one of suspended judgment and imperturbability He is regarded as the father of skepticism

pyrrhotite (pĭ'rŭtīt) or **magnetic pyrites,** bronze-yellow to bronze-red mineral, a sulphide of iron sometimes containing nickel It tarnishes easily and is somewhat magnetic It crystallizes in the hexagonal system, but appears usually in massive form, and occurs chiefly in basic igneous rocks In some areas, e g , at Sudbury, Ont , it serves as an important ore of nickel It is found also in the United States, Europe, and South America

Pyrrhus, in Greek legend see Neoptolemus

Pyrrhus (pĭ'rus), c 318–272 B.C , king of Epirus He fought at Ipsus, in Phrygia, against Seleucus I and Lysimachus and, by the aid of Ptolemy I

(whose stepdaughter, Antigone, he married), became king of Epirus (295 B C). After a victory at Aetolia, he invaded Macedonia, from which he was driven by Lysimachus (283 B C). He went to Italy to aid the Tarentines with a large force and some elephants, and for the first time in history the Greeks met the Romans in battle, at Heraclea (280 B C). He completely defeated the Romans and repeated the success the following year at Asculum. His heavy losses caused him to declare that "one more such victory and I am lost." Asculum was the original Pyrrhic victory. At Beneventum he was defeated by the Romans (275 B C), but reestablished his prestige by a victory over King Antigonus II in Macedonia (273 B C). Failing to take Sparta by siege, he went on to Argos, where he was killed by a falling roof tile.

Pythagoras (pĭthăg'ŭrus), c 582–c 507 B C. Greek philosopher, native of Samos. Pythagoras settled in Crotona, where his influence became widespread owing to the activities of a religious brotherhood which he founded. There is little information concerning Pythagoras himself, and many of the later philosophers, especially Aristotle, tend to refer to the Pythagoreans rather than to the founder of the group. The Pythagoreans were influenced by Orphism and took from it belief in transmigration of souls. Besides purification rites that were intended to bring release from endless reincarnations, the followers of Pythagoras indulged in philosophic inquiry as part of their religious practice. The basic tenet of Pythagoras was that the essence of all things was number, in the same sense that his predecessors saw the single ultimate reality in water, the boundless, and air. He believed that numbers were not merely symbolic constructions but that all matter was essentially numerical, that all relationships in the universe could be expressed numerically. Pythagoras postulated a whole from which all matter was separated off. This matter he identified as the limited, and the space between he saw as a void and called it the unlimited. The limited was represented as fire, and the unlimited as air. The Pythagoreans were the first to reject the hypothesis of geocentricism and to reduce the earth to the status of a planet that revolved about a fixed point. This point they saw as the central fire, "the hearth of the universe," but not as the sun, which they believed also to revolve. In music the Pythagoreans discovered that tones have numerical interrelations (see GREEK MUSIC). Their interest in numbers extended to practical mathematics, and they are credited with inspiring the first part of Euclidean geometry and the theorem that bears their name. Their authority came to an abrupt end in Magna Graecia when the people, enraged at their interference with accepted religious practices, either killed or forced them to flee. At the beginning of the Christian era there was a short revival in NEO-PYTHAGOREANISM of Pythagorean ideas, with emphasis on the mystical element. Its leader was Apollonius of Tyana. See John Burnet, *Early Greek Philosophy* (1892).

Pythagoras of Rhegium (rē'jum), 5th cent. B C., Greek sculptor. In a signature on a pedestal at Olympia he declares himself a Samian, but the period of his training and work belongs to Rhegium, Italy. As no works are known that can with certainty be identified as his, his fame depends upon the statements of those who saw his statues and named them. They were mainly of athletes and mark a step in the transition between the archaic style and that of the masters. He is said to have been the first to represent hair, veins, and muscles naturally and the first to aim at rhythm and symmetry in sculpture. Among his statues were a portrait of the boxer Euthymus, a figure of a man singing to a lyre, and one of Apollo shooting the Python with his arrows.

Pythia (pĭth'ēă), in Greek religion, priestess of the oracle at DELPHI. The Pythian games, held every four years (the third of each Olympiad) to honor Apollo Pythius at Delphi included musical, literary, and athletic contests. Twelve of Pindar's odes honoring winners of the laurel wreath at the games are called the Pythian odes.

Pythias see DAMON AND PYTHIAS.

Python (pī'thŏn), in Greek legend, serpent, guardian of the oracle at DELPHI. Apollo killed him and took the oracle.

python (pī'thŏn", pī'thun), a constrictor, nonvenomous snake found chiefly in the tropical regions of Africa, Asia, the East Indies, and Australia. It climbs and swims expertly. Birds and mammals on which it preys are killed by the constrictor force of its body muscles. Most pythons are egg layers. The female coils her body around the eggs during the six to eight weeks' incubation period. The reticulated or royal python of SE Asia and the Malay Archipelago may reach a length of 30 ft or more. Snake charmers often use the Indian rock python.

pyxie, low, creeping woody plant (*Pyxidanthera barbulata*) of pine barrens from New Jersey to North Carolina. It forms cushionlike mats with small evergreen leaves, sprinkled in the spring with white or pink flowers. It is also called flowering moss and pine-barren beauty.

Q

Q, 17th letter of the ALPHABET corresponding to the koppa of western Greek alphabets. U must follow the letter in English, and the combination properly represents a sound much like the true voiceless labiovelar stop (also represented by the combination kw).

"Q" see QUILLER-COUCH, SIR ARTHUR THOMAS.

Qatar or **Katar** (both kä'tär), sheikdom (c 2,000 sq mi, pop c 25,000), Arabia, coextensive with the Qatar peninsula, which projects into the Persian Gulf. The capital is Doha or Bida (pop c 12,000). Qatar is largely barren. Fishing and work in the oil fields and refineries support most of the population. The sheikdom is in close treaty relations with Great Britain.

Qena, Egypt see KENEH.

Qom, Iran see KUM.

Quabbin Reservoir (kwŏ'bĭn), covering 39.4 sq mi in the Swift River valley, central Mass., near Belchertown NE of Springfield, completed 1937. Windsor Dam is 170 ft high. The water flows to the WACHUSETT RESERVOIR through Quabbin Aqueduct (24.6 mi long) and supplies Boston.

quack grass or **couch grass**, Old World perennial grass (*Agropyron repens*), now widely distributed and in the United States a troublesome weed. It somewhat resembles a beardless wheat and has creeping, yellowish rootstalks, the joints of which even though detached are capable of producing new plants, thus making it a good soil binder but also extremely difficult to eradicate. The dried sweetish rootstalks have been used medicinally, and the foliage is useful for forage.

quadrant (kwŏ'drunt). **1** An instrument used for measuring angular altitudes and made in several forms. In general, it consists of a graduated arc of 90° or a little more, to which is affixed an index arm. Some form of sighting arrangement is attached, with a plumb line or spirit level for fixing it in a horizontal or vertical position. In principle and application it is similar to the SEXTANT, by which it has been superseded. **2** The heavy casting keyed to the head of a ship's rudder, by which the rudder is turned and to which the steering chains are attached. **3** The fourth part of a circle, i e, the area bounded by an arc and two radii drawn at right angles to each other.

quadrille (kwudrĭl'), French dance, popular at the court of Napoleon I and imported into England and the United States in the 19th cent. Alternately in 6-8 and 2-4 meter, it was composed of five figures which four or eight couples danced in a square. The quadrille had a great vogue in France, England, and Germany in the 19th cent.

quadrivium: see LIBERAL ARTS.

Quadruple Alliance, name of several European alliances. The Quadruple Alliance of **1718** was formed by England, France, the emperor, and the Netherlands when Philip V of Spain, guided by Cardinal ALBERONI, sought by force to nullify the peace settlements reached after the War of the Spanish Succession (see UTRECHT, PEACE OF). A British fleet landed Austrian troops in Sicily, which Spain had seized, while French and British forces entered Spain. Early in 1720 Spain yielded to the allies, but the peace terms thoroughly revised those signed at Utrecht. The Treaty of The Hague restored Naples to the house of Austria, Austria in turn promised that Philip's son Charles (later Charles IV of Spain) would succeed to Parma, Piacenza, and Tuscany. Savoy, in exchange for yielding Sicily to the house of Austria, received the island of Sardinia and became the kingdom of Sardinia. Spain joined the alliance. A progressive rapprochement between Spain and France led to the FAMILY COMPACT (1733) and a further redistribution of territories after the War of the POLISH SUCCESSION (1733–35). The Quadruple Alliance of March, **1814**, was concluded among Great Britain, Austria, Prussia, and Russia at Chaumont, France, in order to strengthen their coalition against Napoleon I. After Napoleon's first abdication the four powers made peace with France (see PARIS, TREATY OF, 1814), after Napoleon's return from Elba, they defeated him in the Waterloo campaign and imposed on France the more severe Treaty of Paris of 1815. On the same day that treaty was signed (Nov. 20), the Quadruple Alliance was renewed in order to insure its execution. The so-called HOLY ALLIANCE, signed a few days earlier by Russia, Austria, and Prussia, became confused with the Quadruple Alliance, especially since the international congresses at Aachen (1818), Troppau (1820), Laibach (1821), and Verona (1822)—which were held according to provisions of the Quadruple Alliance—increasingly shaped the policy of the Holy Alliance, while England retired into "splendid isolation." The Quadruple Alliance was transformed into the Quintuple Alliance by the accession (1818) of France. The Quadruple Alliance of **1834** was formed by Great Britain, France, Spain, and Portugal for the purpose of strengthening the constitutional government of Spain and the throne of Isabella II against the CARLISTS. The Spanish marriages (1846, see ISABELLA II) ended Franco-British cooperation in Spanish affairs.

quaestor or **questor** (both kwĕ'stur), Roman magistrate, with criminal jurisdiction and with responsibility for the treasury. At first there were two, then four (421 B C.), Sulla named 20, and Caesar set 40 as the number (45 B C.). Augustus reduced them to 20. Quaestors were in theory deputies (for consuls, praetors, or proconsuls). A quaestorship was the first magistracy sought by an ambitious young man.

quagga (kwă'gŭ) [Hottentot], extinct African animal of the genus *Equus*, to which the horse, the ass, and the zebra belong. Hunted for its skin, it was exterminated in the 19th cent. The last quagga died in 1872 in the gardens of the Zoological Society of London. In form and size the quagga resembled the zebra. It was of a brownish color, and from the face to the middle of the body it was striped. Like other wild animals of the horse genus, it lived in herds. Some tamed quaggas drew light vehicles.

Quai d'Orsay (kā dôrsā'), quay on the left bank of the Seine in Paris, extending from the Eiffel Tower to the Palais Bourbon (housing the national assembly, formerly the chamber of deputies). Next to the Palais Bourbon stands the French ministry of foreign affairs, a vast palatial building, which is often referred to as simply the Quai d'Orsay.

quail, name for various small game birds of the Old and New Worlds. Originally the term referred to the common quail of the Old World which has not been successfully introduced into America. Many of these are netted during migration in the Mediterranean region for sale in European markets. Among the New World birds which are called quail are one eastern bird, the BOBWHITE, and a number of western ones, including the handsome mountain or plumed quail, also called mountain partridge, the largest of the group and native to the Pacific coast states, Gambel's quail of the southwestern deserts and Mexico, and the California and valley quails. Quails are useful birds, feeding mainly on insects and weed seeds.

Quaker City see PHILADELPHIA.

quaker-ladies see BLUET.

Quakers see FRIENDS, SOCIETY OF.

Quakertown, industrial borough (pop. 5,150), SE Pa., N of Philadelphia, settled c 1700, inc. 1855. Its manufactures include iron products, clothing, and luggage. A Quaker meetinghouse, built in 1802, is here.

quaking grass, any plant of the genus *Briza*, annual or perennial grasses cultivated for the graceful panicles of seeds which hang in flattened, pendulous clusters and vibrate in a breeze. It may be used as an EVERLASTING.

Quanah (kwā'nu, kwä'nu), city (pop. 3,767), co. seat of Hardeman co., N Texas, WNW of Wichita Falls, settled 1886, inc. 1887. Named for the half-white Comanche war chief, Quanah Parker, the city is in an area S of the Red River once frequented by the Comanche and now given over to irrigated wheat farms. Native gypsum is made into plaster and wallboard in Quanah and near by. Some miles away the Texas-Oklahoma Wolf Hunt is held each September.

Quantico (kwŏn'tĭkō), town (pop. 1,139), N Va., on the Potomac below Washington, D C., inc. 1927, rptd. 1934. It is an important U S Marine Corps base.

Quantrill, William Clarke (kwŏn'trĭl), 1837–65, Confederate guerrilla leader, b. Canal Dover (now Dover), Ohio. In the Civil War his band of guerrillas was active in Missouri and Kansas. On Aug. 21, 1863, Quantrill, with about 450 men, pillaged Lawrence, Kansas, and wantonly killed some 150 citizens. He was mortally wounded by Federal troops in May, 1865. Jesse JAMES and his brother Frank were Quantrill guerrillas. See W. C. Connelley, *Quantrill and the Border Wars* (1910).

quantum theory, a theory in physics dealing with emission and absorption by atoms and by subatomic particles of light and energy that are associated with radiation. The transfer of energy was held to be a continuous flow until Max Planck, in 1900, advanced the hypothesis that the transfer is discontinuous and involves a unit amount, or packet, of energy (the quantum). The quantum is a function of a constant derived by Planck (Planck's constant) represented by the symbol *h* and having

a probable value of about 6.6×10^{-27} erg-second) and of the frequency of radiation of the particle (represented by the symbol ν), the quantum formula is therefore $q=h\nu$ Albert Einstein in 1905 postulated light quanta (photons), comparable with energy quanta, by which he explained the photoelectric effect Thus he revived the corpuscular view of the nature of light which had been superseded by the wave theory However, since interference and diffraction phenomena were not explained by the quantum theory of light, the wave theory held its place and light was generally recognized to have dual aspects The general quantum theory as extended (1908) to atomic structure by Niels Bohr and as further developed by several scientists resolved many problems in physics (e g , the relation between the structure and the spectrum of an atom) but was recognized to have many inconsistencies The first step in the reorganization of the theory and in the formulation of a specialized quantum mechanics was a hypothesis, first suggested c 1923 by Louis de Broglie, that duality extended to matter and that electrons should be regarded not only as individual particles but as being associated with systems of waves Erwin Schrodinger developed a mathematical formulation (wave mechanics) of the theory, which was confirmed in 1927 by C J Davisson and L A Germer In the meantime another theory of the particle and the wave aspects of matter was evolved by Werner Heisenberg and elaborated mathematically by him in collaboration with a German physicist, Max Born In 1927 the essential elements of both theories were amalgamated by P A M Dirac into a new mathematical form which is the basis of modern quantum mechanics, of which wave mechanics is an integral part Quantum mechanics has not only revolutionized methods of dealing with atomic phenomena, but has undermined the concept of causality in physics because the quantum theory cannot predict the behavior of any individual particle It deals in terms of the relative probability of the future position and velocity of a particle, its predictions are accurate because it treats statistically very large numbers of particles In 1927 Heisenberg enunciated his principle of indeterminancy, which asserts that limitations inherent in nature prohibit the determination of both the position and the velocity of a particle, e g , even if an ultramicroscope sufficiently powerful for viewing a subatomic particle were constructed, the impact of the minimum quantity of light required for viewing the particle would change its direction and velocity The future course of a particle cannot be predicted unless both velocity and position at a given moment are known Most theoretical physicists agree that causality is therefore indeterminable and must be abandoned as a scientific concept However, a few scientists, including Einstein, regard the statistical nature of the present quantum theory as a transitional stage and hope that a unified theory of nature may be developed that will resolve certain contradictory aspects of the quantum and relativity theories Such a theory was enunciated by Einstein in 1950 but its value has not as yet been assessed See Banesh Hoffmann, *The Strange Story of the Quantum* (1947), a nontechnical work, P A M Dirac, *Principles of Quantum Mechanics* (3d ed , 1947), L E Schiff, *Quantum Mechanics* (1949)

Quantz, Johann Joachim (yō'hän yō'ākhĭm kvänts), 1697–1773, German flutist and composer for the flute He played several instruments and was in his early life a wandering bandsman and composer In 1741 he became chamber musician and teacher of the flute to Frederick the Great, for whom Quantz wrote more than 500 pieces, many of which were published He wrote also a famous textbook for the flute (1752), which was translated into French, English, and Dutch, and invented several improvements on the instrument

Quapaw (kwō'pô), town (pop 1,054), extreme NE Okla , near the Kansas boundary, in the region of lead and zinc mining

Quapaw Indians, North American Indian tribe, also called the Arkansas, of the Siouan linguistic stock According to their traditions, they once dwelt with the Omaha, the Kansa, the Ponca, and the Osage in the Ohio valley, but when the tribes separated the Quapaw went down the Mississippi In 1540, when visited by Hernando De Soto, the Quapaw lived on the west bank of the Mississippi, N of the Arkansas river, in present E Arkansas They then numbered perhaps some 5,000 Jacques Marquette arrived at this village in 1673 and was the first of many French explorers to visit the Quapaw They made a large land cession to the United States in 1818 and some years later moved to Oklahoma, where they later became reservation Indians Today they number some 600 The Quapaw were essentially "village" Indians of the Plains area, but they had certain distinctive traits, they built temple and burial mounds and lived in "long houses"

Qu'Appelle (kăpĕl'), river rising in S Saskatchewan NW of Moose Jaw and flowing 270 mi generally E through Buffalo Pound Lake and Fishing Lakes, past Fort Qu'Appelle to the Assiniboine, just over the Manitoba border and NE of Moosomin, Sask. The river is noted for whitefish

quarantine (kwŏ'runtēn), limitation of movement imposed upon humans and animals for a time just beyond the incubation period of a disease to which they may have been exposed. Originating in the 12th cent in Venice, where an offshore wait of 40 days was required of ships, the practice has been materially changed by developments in medical science Quarantine, or isolation, of cases of communicable diseases is an important principle of preventive medicine In 1937 New York harbor relaxed a regulation in force nearly 200 years requiring inspection of incoming vessels by the port's medical officers The word of the ship's physician is now accepted as to the freedom from disease of those aboard Public health regulations have the force of law, and physicians are required to report cases of certain communicable diseases to the authorities Posting of warning notices and related requirements of disinfection of the contaminated area are known as quarantine regulations In some countries passengers on ships and planes arriving from sites of epidemics are permitted to debark only if they produce medical certificates testifying that they have been inoculated against the disease The restriction by some countries on importation of plants to guard against entrance of plant diseases is also known as quarantine

Quarles, Francis, 1592–1644, English poet His best-known work is *Emblems* (1635), an ingenious volume of moral and religious verse *Enchiridion* (1640) is a collection of prose aphorisms

Quarnero, Gulf of (kwärnä'rō), arm of the Adriatic Sea between the eastern coast of Istria and the Dalmatian coast Fiume lies at its head, and the islands of Krk and Cherso are in it

quarrying (kwŏ'rĭĭng), the removal of rock from a large natural deposit The methods employed vary with the use to which the stone is to be put and with the nature and location of the deposit If building stone is required, the rock is cut in large and regular shapes, for the "aggregate" used in concrete it is shattered. Harder rocks which do not tend to shatter are separated by blasting, softer ones are channeled Channeling is done by a battery of rock drills actuated by steam or gasoline engines and by pneumatic machines For less dense building stone, quarrying is effected by drilling a line of holes perpendicular to the joint or cleavage plane of a formation, inserting wedges, and hammering them until the increasing pressure splits off the stone This method was probably used by the ancients, whose quarrying feats were remarkable Most of the present quarrying is done with channeling apparatus of various kinds When these have made their vertical cuts in the rock, gadding machines, working horizontally on the same principle as the channelers do vertically, make their cuts Wedges are then used to split off the long blocks These are subdivided and removed Wire saws are also used, these consist of two pulleys over which an endless steel wire passes Holes are drilled in the rock (perpendicular to the plane of separation) large enough to accommodate pulley and shaft, as the cut deepens the pulleys are lowered into the holes so that the wire is kept in constant contact with the rock Crushed stone is obtained by detonating high explosives in a series of holes arranged for the greatest fracturing effect This produces relatively small sized stones, which are then sent through crushing machinery to reduce them to the desired dimensions Multiple revolving screens separate them for uniformity See Oliver Bowles, *The Stone Industries* (1934)

Quarryville, borough (pop 1,120), SE Pa , SE of Lancaster, settled 1791, inc 1892

Quartus (kwôr'tŭs) [Latin, =fourth], follower of Paul at Corinth Rom 16 23

quartz (kwôrts), one of the commonest of all rock-forming minerals and one of the most important constituents of the earth's surface Chemically, it is silicon dioxide It occurs in crystals of the hexagonal system, commonly having the form of a six-sided prism terminating in a six-sided pyramid, the crystals are often distorted and twins are common Quartz may be transparent, translucent, or opaque, it may be colorless or colored Varieties are classified as crystalline, cryptocrystalline, and clastic Crystalline varieties include ordinary colorless crystallized quartz or rock crystal, rose quartz, yellow quartz, sometimes used as imitation TOPAZ, smoky quartz or cairngorm stone, milk-white milky quartz, aventurine quartz, which contains scales of hematite or mica, AMETHYST, and CAT'S-EYE Varieties of cryptocrystalline quartz, the crystal structure of which can be seen, if at all, only under the microscope, are CHALCEDONY, FLINT, hornstone, and chert Colored varieties of chalcedony known by special names are CARNELIAN, SARD, CHRYSOPRASE, AGATE, ONYX, SARDONYX, and JASPER Clastic quartzes are SAND and SANDSTONE

quartzite, consolidated rock composed of firmly cemented quartz grains Usually it is white, light gray, yellowish, or light brown, but is sometimes colored blue, green, purple, or black by included minerals. It results from the alteration of sandstone either by the deposition of quarts between the grains of sand in the sandstone or else by metamorphism It is most easily distinguished from sandstone by the fact that it fractures across its constituent grains of sand, while sandstone fractures along the line of the cementing material, between the grains of sand Sandstones containing impurities are frequently metamorphosed into gneiss and mica schist, and impure quartzites accordingly grade into gneisses and mica schists

Quaternary period (kwutûr'nurē), second period of the CENOZOIC ERA of geologic time During the early Quaternary, Europe and North America lay under the ice sheets of the PLEISTOCENE EPOCH In the Quaternary, the climate and present features of the earth have been developed The period has been characterized by erosion, which has been the chief agent in shaping mountains and valleys to their present form, and by extensive disturbances of the earth's surface, such as earthquakes, eruption of volcanoes, and frequent occurrences of folds and faults The continents, though comparatively stable, have been continually changing their elevation relative to the sea, as has been demonstrated within historic times, e g , by the submergence and emergence of the temple of Jupiter Serapis, near Naples, and by the rising of the shores of the Baltic The life of the Quaternary has been marked by the rise and dominance of man Some authorities maintain that although the terms *Quaternary* and *Tertiary* persist in common usage the division of the Cenozoic into these two periods is based on a misconception and is therefore unjustified

quaternion (kwŭtûr'nēun), in mathematics, a type of higher complex number first suggested by Sir William R Hamilton in 1843 A complex number is a number of the form $a+bi$ when a and b are real numbers and i is the so-called imaginary unit defined by the equation $i^2=-1$ The rules for operating with complex numbers are simply those of operating with the polynomial $a+bx$ except that x^2 is replaced by -1 whenever it occurs A quaternion, an extension of this concept, is a number of the form $a+bi+cj+dk$ when a, b, c, and d are real numbers and i, j, and k are imaginary units defined by the equations $i^2=j^2=k^2=ijk=-1$ Quaternions and vectors and tensors (later outgrowths of the concept of quaternions) have many important applications in mechanics

Quatre Bras (kätru brä'), village, Brabant prov , Belgium, on the road from Charleroi to Brussels Here on June 16, 1815, the French under Marshal Ney were defeated by the British under Wellington in an important battle of the WATERLOO CAMPAIGN

Quauhtémoc or **Quauhtemotzín** see CUAUHTÉMOC

Quay, Matthew Stanley (kwā), 1833–1904, American political leader, b York co , Pa , grad Jefferson College, Canonsburg, Pa , 1850 He studied law in Pittsburgh and was admitted (1854) to the bar He fought in the Civil War, and after the war he rose steadily in Pennsylvania politics until he became boss of the state Republican machine His skill in organization and manipulation of patronage kept Pennsylvania thoroughly Republican, as chairman (1888) of the Republican National Committee, Quay secured large campaign contributions and played a leading role in Benjamin Harrison's presidential election Closely associated with James Donald CAMERON, he served (1887–99) in the U S Senate, but serious charges of venality prevented his reelection in 1898 Quay was, however, able to block the election of anyone else When the governor appointed him Senator ad interim there was a great public protest, and the Senate refused to seat him, but in 1901 he was reelected

Quebec (kwēbĕk'), Fr *Québec* (kābĕk'), province (523,860 sq mi., with water surface 594,860 sq mi , 1941 pop 2,221,882, 1948 estimated pop 3,792,000), E Canada The city of Quebec is the capital, other important cities are Montreal, Verdun, Trois Rivières (Three Rivers), Sherbrooke, and Hull Quebec is bounded on the north by Hudson Strait and Ungava Bay, on the east by Labrador, on the south by New Brunswick, Maine, New Hampshire, Vermont, and New York, and on the west by Ontario and James Bay and Hudson Bay The province includes ANTICOSTI island It gained the Ungava peninsula from Northwest Territories in 1912 and lost part of the eastern section to Labrador in 1927 The northern nine tenths of this largest province is the ancient granite core of the Laurentian Plateau, planed by glacial action into a pattern of rounded hills, swiftly flowing rivers, and numerous lakes and bogs Dense forests cover much of the surface, and the mineral-rich rock yields gold, copper, zinc, and silver The aluminum plant at Arvida is the world's largest single producer of aluminum The relatively unexplored and uninhabited north country has been a source of luxury furs for many years, and trappers still travel by canoe along the watercourses Recent discovery of iron deposits running into Labrador have increased the development of this part of the province. Lumbering, particularly in S Quebec, has been widely developed and contributes to a thriving industry in the manufacturing of pulpwood and paper. The region is unsuitable for agriculture, except for dairying

and general farming in the valley of the Saguenay. To the south of the Laurentian Plateau the St Lawrence cuts its way out of the heartland of the continent Lowlands, the center of agriculture, commerce, and industry, extend on both sides of the river S and E of Quebec city That city itself, with its Old World atmosphere, and busy, industrial Trois Rivières are on the north bank, while Montreal, the leading manufacturing, transport, and commercial city of Canada, lies on an island at the confluence of the Ottawa and St Lawrence rivers The famous GASPÉ PENINSULA stretches E of the lowlands and S of the St. Lawrence The small farming and fishing villages that dot the coast charm tourists with their simplicity and self-sufficiency In the Gaspé, as in all of Quebec but the lowlands, the climate is extreme The rivers are closed to navigation five months of the year, and heavy land traffic moves across the ice Sportsmen and tourists are attracted to the winter sports in the Laurentians and to varied summer pleasures throughout the province Although the tourist trade is a valuable source of income, it is far surpassed by other developments Quebec's resources have been utilized to place it first in Canada in available water power and second in total value of production Since many continental explorations radiated from this area, Quebec has been called the cradle of Canada In 1534 Jacques Cartier planted a cross on the Gaspé, and the following year he sailed up the St Lawrence In 1608 Samuel de Champlain, founder of New France, built a trading post at the site of Quebec and from this and other early settlements missionaries, explorers, and fur traders penetrated the American continent westward to the Rockies and southward to the Gulf of Mexico The chartered fur trade ended in 1663 with the establishment of royal government of New France French military strength was long exerted to protect the colony and expand New France in the FRENCH AND INDIAN WARS The struggle ended with the dramatic and tragic battle on the Plains of Abraham (see ABRAHAM, PLAINS OF), and New France's 60,000 colonists came under British rule as a province in 1763 Pressed by the incipient American Revolution, the BRITISH wrote the QUEBEC ACT of 1774, under which the province was allowed to continue its semifeudal system of land tenure and to retain its language, religion, and institutions Representative government was introduced with the Constitutional Act of 1791, and Quebec became known as Lower Canada Growing resentment against the arbitrary rule of governors resulted in a revolt in 1837 led by Louis PAPINEAU Under threat of arrest Papineau escaped from the province but was later granted amnesty In 1840 Quebec (Lower Canada) was joined with Ontario (Upper Canada) under the Act of Union, and in 1846 it became Canada East, responsible government was instituted by 1849 after much struggle With Canadian federation in 1867 Quebec again became a province Quebec has taken its place in Canadian federation with its traditional institutions well protected A dual school system was set up to meet the needs of a population three fourths French Canadian and predominantly Catholic The major centers of higher learning are McGill Univ, the Univ of Montreal, Laval Univ, and the Univ of Bishop's College The problem of establishing national unity has been made difficult by the coexistence of two cultures as different as the French and the British The Quebec legislature is the one predominantly French lawmaking body in North America, and it is always strongly insistent on the widest interpretation of the provincial powers as set forth in the British North America Act The desire for independence flares up from time to time and was particularly vocal in the First World War and the Second World War The majority of the people, however, gave vigorous support to the war effort Quebec has undergone many changes in the 20th cent Its semifeudal land system, modified in the Act of 1854, has been completely eliminated, and today 95 percent of the 155,000 farmers own their land Agriculture has lost its dominance in the economy to commerce and industry, and two thirds of the population live in the cities While this transition has brought Quebec closer to the modes of 20th-century America, many communities retain the customs and charm of the Old World See Gordon Brinley, *Away to Quebec* (1937), Hazel Boswell, *French Canada* (1938), J M Donald, *Quebec Patchwork* (1940), E C Hughes, *French Canada in Transition* (1943), Stanley B Ryerson, *French Canada* (1944), E C Woodley, *The Province of Quebec through Four Centuries* (1944) and *Old Quebec* (1947), Mason Wade, *The French-Canadian Outlook* (1946), A E. Oakley and Thornton Oakley, *Kaleidoscopic Quebec* (1947).

Quebec, city (pop. 150,757), provincial capital, S Que, on the St Lawrence at the mouth of the St Charles and NE of Montreal Part of the city is built on the water front and is called Lower Town, and part, called Upper Town, is on Cape Diamond, a bluff rising to over 300 ft above the river. Winding and often narrow streets link the two sections of the city and add much to its picturesqueness Dufferin Terrace, a promenade, extends 1,400 ft along the top of the bluff, affording extensive views The city has an excellent harbor, with modern docks and wharves, grain elevators, paper mills, and varied industries It is the cultural and tourist center of French Canada, as well as the seat of government, but its chief interest lies in its historical associations Cartier visited the site, then the Indian village of Stadacona, in 1535, and in 1608 Champlain established a French colony in the present Lower Town. This was fortified but was taken (1629) by the English, who held it until 1632 In 1663 Quebec was made the capital of the royal province of New France and became the center of the developing fur trade and the starting point for expeditions to the north and west In the struggle between France and England for control of the country, the city was attacked in 1690 and again in 1711 by the English, who failed to take it In 1759, MONTCALM, the French general defended it against the English under WOLFE until forced into open battle and defeat on the Plains of Abraham (see ABRAHAM, PLAINS OF) above the city The peace treaty of 1763 ceded Canada to England, Quebec becoming the seat of government American forces under Richard MONTGOMERY and Benedict ARNOLD tried unsuccessfully (1775) to capture the city After the union (1841) of Upper and Lower Canada, Quebec was twice the capital (1851–55, 1859–65) It was the scene of Canadian confederation (1867) The population has always been largely French-speaking The city's history is manifest in numerous buildings, institutions, and monuments, including the Ursuline Convent (1639), the Hôtel-Dieu du Précieux-Sang (1639), the Basilica of Notre Dame (1647), Quebec seminary (founded 1663 by Bishop Laval), the Church of Notre-Dame-des-Victoires (1688), the General Hospital (1692, on the site of a Recollet monastery founded 1621), Kent House (1636, occupied 1791–94 by the duke of Kent), Talon brewery (1668), the Citadel (1823–32), parts of the enclosing wall (2 mi of fortifications around Old Quebec, with three out of the five earlier gates remaining, and Martello Towers, outside the wall, but part of the defense system), the Parliament buildings, city hall, the Anglican cathedral, LAVAL UNIVERSITY, the Provincial Museum, and monuments to Cartier, Champlain, Laval, Wolfe, and Montcalm The city is the point of departure for trips to many interesting places in the area, notably Montmorency Falls, Ste Anne de Beaupré, Île d'Orléans, and the Saguenay river, and has boat connections with Montreal, the Maritime Provs, and U S and European ports See Sir Gilbert Parker, *A History of Old Quebec* (1903), Blodwen Davies, *Romantic Quebec* (1931), T M Longstreth, *Quebec, Montreal, and Ottawa* (1933), J M Donald, *Quebec Patchwork* (1941), W P Percival, *The Lure of Quebec* (1941), Mazo de la Roche, *Quebec, Historic Seaport* (1944), J E Morgan, *Castle of Quebec* (1949)

Quebec Act, 1774, passed by the British Parliament to institute a permanent administration in Canada replacing the temporary government created at the time of the Proclamation of 1763 It gave the French Canadians complete religious freedom and allowed a restitution of the peculiar legal and political institutions enjoyed under French rule The Americans considered this law one of the INTOLERABLE ACTS, for it nullified many of the Western claims of the coast colonies by giving all the land N of the Ohio river to the province of Quebec The concessions in favor of Roman Catholicism also roused much resentment among Puritans and Anglicans in the Thirteen Colonies Though it thus helped to bring on the American Revolution, the act, for which Sir Guy CARLETON was largely responsible, was very influential in keeping Canada loyal to the crown in the Revolution It was replaced by the Constitutional Act of 1791 See studies by Reginald Coupland (1925) and C H Metzger (1936)

Quebec campaign, 1775–76, of the American Revolution The Continental Congress decided to send an expedition to Canada to protect the frontier from Indian attack and to persuade Canada to join the revolt against England Late in Aug, 1775, Gen Richard MONTGOMERY led troops up Lake Champlain, and after capturing St Johns, he entered Montreal on Nov 12 In Sept, 1775, Washington sent Benedict ARNOLD to lead an expedition against Quebec by way of the Kennebec and Chaudière rivers in Maine When this force arrived, it was so weakened by the incredibly hard march, illness, desertion, and lack of supplies that Arnold was forced to wait for Montgomery before attacking The unsuccessful assault was launched on the night of Dec 31, 1775 The Continentals withdrew after Montgomery was killed, Arnold wounded, and Daniel MORGAN captured Arnold and Montgomery's successor, David Wooster, continued the siege until spring, when Hessian reinforcements allowed Sir Guy CARLETON to push the Americans back to Crown Point

Quebec Conference, name of two meetings held in Quebec, Canada, in the Second World War The first meeting (Aug, 1943) was attended by President F D. Roosevelt of the United States, Prime Minister Winston Churchill of Great Britain, Prime Minister W L Mackenzie King of Canada, and Foreign Minister T. V Soong of China An important step toward unified Allied command was taken when the China-Burma-India theater of operations was created under the command of Lord Louis Mountbatten. The United States extended limited recognition to Charles de Gaulle's French Committee of National Liberation The chief decision reached was the approval of the Allied military plans for a landing in France These plans were communicated to Marshal Stalin later in the year at the Teheran Conference The second conference (Sept, 1944), attended by Roosevelt, Churchill, and their chief military advisers, was concerned with the broad strategy of the war

Quebec West, town (pop 3,619), S Que, northwest residential suburb of Quebec

quebracho (kăbrä'chō), name for several South American hardwood trees and for their wood and bark The cherry-red wood of the red quebracho or quebracho colorado, a deciduous tree of the genus *Schinopsis*, is one of the most durable woods known It is used in paving, in bridge and railway construction, for telephone poles, and for fuel The extraction of tannin, of which the heartwood contains a high percentage, is an important industry of Argentina and Paraguay The bark is used in dyeing and tanning White quebracho is an evergreen of the genus *Aspidosperma* The wood is lighter in color than that of the red quebracho, hard to season, and not durable in damp places It is used for heavy construction, tanning, and fuel and in vehicle manufacture White quebracho and several other trees of South America called quebrachos are sources of medicinal substances

Quechua see QUICHUA

Quedlinburg (kvād'lēnbo͝ork), city (pop 35,142), in the former Saxony prov of Prussia, E central Germany, after 1945 in Saxony-Anhalt, at the foot of the lower Harz and SW of Magdeburg It is the center of an agricultural and gardening region and is one of the oldest German cities Quedlinburg was walled in 922 by Henry I (Henry the Fowler) He and his wife, St Mathilda (who with her son, Emperor Otto I founded in 936 the celebrated convent of Quedlinburg), are buried in the castle church The beautiful castle, church, and convent (secularized 1803) dominate the quaint old town from a hill, the age of the structures varies from the 10th to the 14th cent Quedlinburg also has retained a Gothic city hall, several early Gothic churches, and a medieval market place Klopstock was born here

Queen Alexandra Range, mountains of Antarctica, at the head of Ross Shelf Ice, Ross Sea The range, which was discovered (1908) by Sir Ernest Shackleton, rises to c 14,600 ft in Mt Kirkpatrick

Queen Anne's lace see WILD CARROT

Queen Anne's War see FRENCH AND INDIAN WARS

Queen Charlotte Islands, archipelago of several large and many small islands, off the coast of W British Columbia Most of the inhabitants are Haida Indians The main islands are Graham and Moresby There are valuable timber and fishing resources and several good harbors The archipelago was visited in 1774 by Juan Pérez, in 1778 by Capt James Cook, in 1787 it was surveyed by Capt George Dixon Hecate Strait separates it from the mainland, Dixon Entrance lies between it and Alaska, to the north, and Queen Charlotte Sound lies south, between it and Vancouver Island

Queen Mary Coast or **Queen Mary Land,** part of Antarctica, on the Indian Ocean, W of Wilkes Land Discovered by Sir Douglas Mawson's expedition of 1911–14, it was named Queen Mary Land but is now usually called Queen Mary Coast

Queens, borough (land area 108 sq mi, pop 1,297,634) of New York city, at the west end of Long Island, SE N Y, between the East River and Jamaica Bay, coextensive with Queens co It is connected with Manhattan by the Queensboro Bridge, by the Queens-Midtown Vehicular Tunnel, and by railroad and subway tunnels, the Triborough Bridge joins it with the Bronx and Manhattan, and the Hell Gate railroad bridge and the Bronx-Whitestone Bridge link it with the Bronx The borough is heavily industrialized in LONG ISLAND CITY, ASTORIA and JAMAICA also are commercial and industrial centers Among the many residential communities are FLUSHING (QUEENS COLLEGE is here), FOREST HILLS, and Kew Gardens The first settlements were made by the Dutch in 1635, Queens co was established in 1683 (several buildings of the 17th and 18th cent still stand) The period of greatest growth began in the 20th cent, with the opening of the Queensboro Bridge in 1909 and the railroad tunnel in the following year Largest of the boroughs in area, it is the site of two municipal airports, of such resorts as the Rockaway beaches on Jamaica Bay, and of the Jamaica and Aqueduct race courses The main building of the Queens Borough Public Library (with many branches and subbranches) is at Jamaica.

Queensberry, James Douglas, 2d **duke of,** 1662–1711, Scottish statesman. One of the first in Scot-

land to favor William III, he held offices under him and Queen Anne, rising to become royal commissioner for Scotland in 1700 and secretary of state for Scotland in 1702 Duped by an intrigue of Simon Fraser, Lord Lovat, he falsely accused the duke of Atholl of Jacobite activities and for that mistake was dismissed in 1703 Restored to favor, he worked hard for the union with England as commissioner to the Scottish Parliament In 1708 he was created duke of Dover and marquess of Beverley, and in 1709 he was made third secretary of state

Queensberry, John Sholto Douglas, 8th marquess of, 1844–1900, English nobleman, originator of the code of rules which governs modern BOXING He served in the British army and navy and later sat (1872–80) in the House of Lords as representative peer from Scotland He is famous for drafting (1865) with the aid of Arthur Chambers the Queensberry rules for the sport of boxing This code of rules, superseding the London prize-ring rules that had been introduced (1743) by Jack Broughton, contained the basic provisions which govern boxing today The rules were more and more adopted in England and in the United States after 1875, and by 1889 they were standardized In 1895, objecting to the friendship of his son, Lord Alfred Douglas, with Oscar WILDE, Queensberry left an insulting letter to Wilde in a public place and was sued for libel by the writer In this libel suit, which Wilde dropped, information was brought to light that led to the conviction of Wilde for immoral conduct

Queensberry, William Douglas, 4th **duke of,** 1724–1810, English nobleman Also 3d earl of March, he was known in his later days as Old Q He was always famous for his escapades and generally regarded as one of the most dissolute men in London A great horse fancier, he did much to develop racing in England In 1760 he was made lord of the bedchamber, an honor he held until 1789, when his promotion of a regency for the prince of Wales (later GEORGE IV), his boon companion, brought him the royal disfavor

Queenston Heights, S Ont , on the Niagara peninsula, just N of Niagara Falls Here was fought the battle of Queenston Heights in the War of 1812, at which Gen Sir Isaac BROCK was killed

Queenstown, Co. Cork, Ireland see COBH

Queenstown, town (pop 23,538), E Cape Prov , Union of South Africa It was founded in 1853 by Sir George Cathcart, governor of the Cape Colony It is on a railroad to East London, and it exports wheat and wool

Queen's University see KINGSTON, Ont.

Queiros, Pedro Fernandes de (pā'drō fĕrnän'dĭsh dŭ kârōsh'), c 1560–1614, Portuguese navigator. In Spanish service, he sailed (1595) as second in command of the expedition of Álvaro de Mendaña de Neira to the Pacific The expedition discovered the Marquesas Islands and Solomon Islands, and after the death of Mendaña, Queiros continued in command On a later expedition he in 1606 discovered the Tuamotu Islands and the New Hebrides, but almost certainly not the Society Islands (as sometimes claimed)

Quelimane (kĕlĭmä'nē), town (pop, c 8,200), central Mozambique, a port in the Zambezi river delta The port was visited by Vasco da Gama in 1498 The present town was founded by the Portuguese in the 16th cent. In the 18th and 19th cent it was a notorious slave market Quelimane, the terminus of a railroad to the interior, has trade in sisal and copra The name is also spelled Quilimane, Kilimane, and Kilimani

Quellinus or **Quellin, Artus** (är'tŭs kvĕlē'nŭs, kvĕ'lĭn), 1609–68, Flemish sculptor His allegorical figures decorating the royal palace of Amsterdam are famous Quellinus was the outstanding follower of the Rubens tradition in sculpture In addition to his baroque architectural decorations, he made numerous fine busts and figurines His teacher, **Erasmus Quellinus** (ā'rä'smōōs), 1607–78, was a Flemish painter and a pupil and follower of Rubens His paintings of religious subjects are best seen in the churches of N France and Belgium Characteristic is his *St Roch* (Church of St Jacques, Antwerp) His son **Jan Erasmus Quellinus** (yän), 1634–1715, was court painter to Emperor Leopold I His *Coronation of Charles V* (Vienna) is a well-known work

Quelpart, Korea see CHEJU.

Quental, Antero de (äntĕ'rō dŭ kĕntal'), 1842–91, Portuguese poet He showed great brilliance and leadership when a student at the Univ of Coimbra and became the head of the Coimbra dissidents, who opposed romanticism and the monarchy. He spent some time in Paris, visited the United States, then worked for a time in the socialist cause in Lisbon His morbid introspection drove him to desperation and finally to suicide His tortured emotions were, however, the source of his carefully restrained *Odas modernas* (1865) and his exquisitely fashioned *Sonetos* (1881) He is one of the principal modern Portuguese poets His first name was formerly written Anthero

Quercia, Jacopo della (yä'kōpō dĕl'lä kwĕr'chä), c 1374–1438, Italian sculptor He marks the transition from medieval to Renaissance art in Italy and is especially noted for his Gaia Fountain in the Palazzo Publico, Siena (however his appellation Jacopo della Fonte), and the central doorway of San Petronio, Bologna, his masterpiece

Quercy (kĕrsē'), region and former county, S central France, traversed by the Lot river, now divided between Lot and Tarn-et-Garonne depts CAHORS is the chief city It consists of arid limestone plateaus (causses), cut by fertile river valleys Sheep raising is the chief activity in the causses, the famous Roquefort cheese is made from sheep's milk A county enfeoffed to the counts of Toulouse, Quercy (also known as Cahorsin) was ceded to England by the Treaty of Brétigny (1360), reconquered by France c 1370, and included in GUIENNE prov

Querétaro (kārā'tärō), state (4,432 sq mi , 1946 estimated pop 281,187), central Mexico, on the central plateau Mountainous in the north but with valleys and plains in the south, Querétaro raises a variety of agricultural products, including sugar cane, cotton, tobacco, and grains The principal river, forming most of the eastern boundary with Hidalgo, is the Moctezuma, a tributary of the Pánuco Famous for its opals, the state also produces silver, iron, copper, and mercury This territory of the Chichimec Indians was conquered in 1531 but not colonized until 1550, when it was established as a buffer against the Indians of the north, it was later included in the intendancy of Guanajuato It became a state in 1824 **Querétaro,** the capital (pop 33,629), is a distributing center, and its cotton mills are among the most important in Mexico An Aztec city, Querétaro was conquered by the Spanish in 1531 Here was planned (1810) the conspiracy under HIDALGO Y COSTILLA and ALLENDE that led to the revolution against Spain Part of the negotiations for peace following the Mexican War were conducted in Querétaro In 1867 Emperor MAXIMILIAN and his generals, Miguel Miramón and Tomás Mejía, were besieged and forced to surrender here They were shot on a hill outside the city

Querido, Israël (ĭs'räĕl kvä'rēdō), 1874–1932, Dutch novelist He was the author of naturalistic proletarian novels, including *Menschenwee* (1903, Eng tr , *Tool of Men*, 1909)

Quesada, Gonzalo Jiménez de: see JIMÉNEZ DE QUESADA, GONZALO

Quesnay, François (frāswä' kĕnā'), 1694–1774, French economist, founder of the physiocratic school A physician to Louis XV, he did not begin his economic studies until 1750, when he wrote the articles "Fermiers" [farmers] and "Grains" for the *Encyclopédie* His chief work was the *Tableau économique* [economic table] (1758), said to have been printed by the king's own hands. Quesnay and his followers believed that the *Tableau* summed up the natural law of economy (see PHYSIOCRATS) They greatly influenced the thought of Adam Smith. Quesnay's works have been collected in *Œuvres économiques et philosophiques* (with biographical studies and introduction, 1888).

Quesnel, Pasquier (päskyā' kĕnĕl'), 1634–1719, French Jansenist writer. He entered the Congregation of the Oratory in 1657 and was made director of the seminary at Paris in 1662 His edition of the works of Leo I was placed on the Index (1676) for its Gallicanism, and Quesnel left his congregation In 1685 he refused to subscribe to the formulas condemning JANSENISM and escaped to Brussels. There he completed his *Réflexions morales*, a French New Testament with Jansenist commentary He was imprisoned in 1703 by order of the king of Spain and escaped to Amsterdam. Quesnel's teachings were condemned by Clement XI in 1708 and in 1713 (in the bull *Unigenitus*)

Questa, unincorporated village (pop 1,341, alt 7,469 ft), N N Mex , on the Red River and N of Taos, in a farm and sheep area, settled 1829 as San Antonio del Rio Colorado, named Questa 1884.

question mark: see PUNCTUATION

questor see QUAESTOR

Quetelet, Adolphe (ädôlf' kĕtŭlā'), 1796–1874, Belgian statistician and astronomer He was the first director (1828) of the Royal Observatory at Brussels As supervisor of statistics for Belgium (from 1830), he developed many of the rules governing modern census taking and stimulated statistical activity in other countries One of the first to apply mathematical statistics to social problems, he formulated the theory of the "average man" *A Treatise on Man* (1835, Eng tr , 1842) is his best-known work See F H Hankins, *Adolphe Quetelet as Statistician* (1908)

Quetta (kwĕ'tŭ), town (pop 64,476), capital of Baluchistan prov , Pakistan It is in a valley (alt c 5,500 ft) surrounded by mountains For centuries it has been a strategic point on the trade route (via the Bolan Pass) from Afghanistan to the Indus river valley It was acquired (1840) by Great Britain by the Second Afghan War There is a military staff college (established in 1907) Much of the present city was built after a disastrous earthquake in 1935 Quetta manufactures woolen cloth and flour

quetzal (kĕtsäl') or **quezal** (kāsäl'), bird native to the high-altitude rain forests of Central America and Mexico With iridescent green plumage above and crimson on the under parts, streamerlike tail coverts, and crested head, it is the most striking of the trogon family As the national emblem of Guatemala it appears on the country's coat of arms, stamps, and money Associated with the god Quetzalcoatl, the bird was revered by the Maya and the Aztec A monetary unit of Guatemala is called a quetzal after the bird Other trogons are found in Africa, India, and South America One travels northward to S Arizona A fossil trogon was found in France

Quetzalcoatl (kĕt"sälkōä'tŭl) [Nahuatl,=feathered serpent], ancient god and legendary ruler of the TOLTEC in Mexico Quetzalcoatl, god of civilization, of the planet Venus, and of the wind, represented the forces of good and light pitted against evil and darkness The same qualities are attributed to the culture hero and ruler, Quetzalcoatl, who is credited with the discovery of maize, the arts, science, and the calendar It is unclear whether the ruler took his name from the god or as a great ruler was revered and later deified Quetzalcoatl, the hero, was defeated by hostile (and therefore evil) tribes, some time before A D 1000, he returned to his homeland, the east coast of Mexico, where he is supposed to have been consumed by divine fire The two great pyramids in honor of the deity are at TEOTIHUACAN and CHOLULA Adopting the name, the Aztec applied it to some of their ranking priests Quetzalcoatl left behind the promise of his return Some of the Aztec viewed the Spanish invaders as the returning hosts of Quetzalcoatl It is possible to say with some certainty that Quetzalcoatl is reflected in his Mayan counterpart, Kukulcán [Mayan,=feathered serpent], whose ancestors possibly came from the Toltec capital, Tollán Kulkulcán, definitely a historical figure, and other leaders whose forebears had lived in SW Campeche for two and a half centuries, moved northeastward in the 10th cent , occupying CHICHÉN ITZA and founding the cities of UXMAL and Mayapán Although using Mayan speech by this time, the invaders still employed Mexican architectural motifs (especially the feathered serpent) extensively In all probability Kulkulcán was deified after his death, for he became the patron deity of Chichén Itzá, and most of the temples were dedicated to him The symbol of both Quetzalcoatl and Kulkulcán, the serpent with quetzal feathers, would seem to have an obvious connection with serpent worship In a poetic sense the plumed serpent is a symbol of Mexico.

Quevedo y Villegas, Francisco Gómez de (fränthĕ'skō gō'mäth dä kävā'dhō ē vēlyā'gäs), 1580–1645, Spanish satirist, novelist, and wit He had to flee to Italy after a duel and spent much time in Naples. For a supposed satire on Philip IV he was imprisoned by his enemy the conde de Olivares, favorite of the monarch. Quevedo is one of the greatest writers of the Golden Age. Among his works

are *Los sueños* [visions] (1627), descriptions of the nether regions, amusing but bitterly satiric, the philosophical treatise *Providencia de Dios* (1641), the political essay *Política de Dios y gobierno de Cristo* (1626–55), and his best work, the picaresque novel *La vida del Buscón* (1626), also called *El Gran Tacaño* [the great sharper] He was also an outstanding poet and wrote many ballads and other verse, collected in *El Parnaso español* (1648), but he is better known for his *Epistola satírica y censoria* (1639), a satirical poem against Olivares

quezal: see QUETZAL

Quezaltenango (kāsältänäng'gō), city (pop 33,538), SW Guatemala. The metropolis of the western highlands, it is the second city of Guatemala The people of the surrounding country and suburbs are predominantly QUICHÉ, but those of the administrative and residential sections of the city are ladino The native market offers excellent textiles and handicraft, and the business center has foreign imports as well as local manufactures (textiles, shoes, cigarettes, and flour), which have been increased by the development of hydroelectric power, making Quezaltenango a leading industrial city of Central America The soil of the region is fertile, coffee, sugar cane, cacao, cereals, and tropical fruits are grown in neighboring valleys and along the adjacent Pacific littoral Quezaltenango was rebuilt after being severely damaged in 1902 by an eruption of near-by Santa María volcano (12,362 ft high) Improved transportation and centralization of federal government have curtailed much of the formerly independent character of the city

Quezon, Manuel Luis (mänwĕl' lwēs' kā'sōn), 1878–1944, Filipino statesman, b Tabayas prov, Luzon, grad College of San Juan de Letrán, Manila, 1893 Quezon joined (1898) the Philippine army, fought with Emilio Aguinaldo's insurrectionary forces against the Spanish government, and then led native troops against American forces He returned to the study of law at the Univ of San Tomás, Manila, was admitted (1903) to the bar, and was (1903–4) prosecuting attorney for the provinces of Mindoro and Tabayas before he became (1905) governor of Tabayas As a member (1907–8) of the Philippine assembly, he became floor leader of the nationalist party He served (1909–16) as resident commissioner to the United States and effectively lobbied in the U S Congress for the passage of measures to give the Filipinos real powers of self-government He returned to the Philippines, was elected (1916) to the Philippine senate, promptly became president of that body, and until he resigned in 1935 ardently crusaded there for Philippine independence Not only did he violently oppose the highhanded administration (1921–27) of Leonard Wood, but he helped bring about the passage (1934) of the McDuffie-Tydings Bill, which promised complete independence for the Philippines in 1946 Quezon became (1935) first president of the Commonwealth of the Philippines, remained a loyal friend to the United States, widely increased his power, and pushed many defense measures Reelected in 1941, he escaped after the Japanese invasion in the Second World War and carried on a government in exile in the United States until his death He was succeeded by Sergio OSMEÑA See his autobiography, *The Good Fight* (1946)

Quezon City (kā'sōn), city (1948 pop 107,977), on central Luzon, Philippine Islands, near Manila In July, 1948, it officially replaced Manila as the capital of the republic The government buildings are in the process of construction

Quezzan, French Morocco see WAZZAN

Quiberon (kēbrō'), peninsula, Morbihan dept, NW France, in Brittany, projecting into the Bay of Biscay The village of Quiberon is at its tip Here in 1795 a force of c 3,000 French counterrevolutionists was landed by British ships in the hope of reviving the VENDÉE movement The local population failed to rally, and the British ships were prevented by bad weather from giving assistance The invaders capitulated Contrary to the agreement of capitulation, the Convention ordered all the prisoners to be shot About 800 of them were massacred near Auray, the rest were allowed to escape **Quiberon Bay** was the scene (1759) of a victory by the British under Lord HAWKE over a French fleet in the Seven Years War

Quiché (kēchā'), Indians of Mayan linguistic stock, in the western highlands of Guatemala The largest of the Indian groups of Guatemala, they live principally in the region between QUEZALTENANGO and CHICHICASTENANGO. From their origins, as told in the POPOL VUH, the Quiché have retained many ancient traditions, blending them with Western customs to create a distinct and colorful mode of life Although they built no cities comparable to those of the Maya of N Guatemala and Yucatan, they were the most important of the southern Maya Pedro de ALVARADO with the help of the Cakchiquel or Kakchiquel, a neighboring but rival group similar in language and stock, conquered them in 1524.

Quichua (kēch'wä), **Kechua,** or **Quechua** (both: kĕ'chōōä, kēch'wä), linguistic family of W South America. Languages of the stock are spoken in the plateaus of Peru, Ecuador, much of Bolivia, and NW Argentina There is a modern standard language, spoken by about half the people of Peru The name Quichua may have been given to a powerful tribe allied to the Inca after its defeat by the Chanca, the official language of the Inca empire was of this family

Quick, Herbert, 1861–1925, American author and editor, b near Grundy Center, Iowa He taught school, practiced law, and in 1904 became associate editor of *La Follette's Weekly* From 1909 to 1916 he edited *Farm and Fireside* Iowa from its pioneer days to the '90s is the background of his trilogy of novels, *Vandemark's Folly* (1922), *The Hawkeye* (1923), and *The Invisible Woman* (1924) With Edward Quick he collaborated in writing *Mississippi Steamboatin'* (1926) See his autobiographical *One Man's Life* (1925).

quicklime. see LIME

quicksilver see MERCURY

Quidde, Ludwig (lōōt'vĭkh kvĭ'du), 1858–1941, German pacifist and historian. He was elected (1907) to the Bavarian diet, was a member of the national assembly at Weimar (1919), and later served as a member of the Reichstag Indefatigable in his attacks on German imperialism, he was sentenced to imprisonment for three months for his brochure, *Caligula eine Studie über römischen Cäsarenwahnsinn* [Caligula a study in Roman Caesarean madness] (1894), in which it was easy to recognize that Caligula stood for Emperor William II Quidde was a leading supporter of the League of Nations in Germany after the First World War, and he shared the 1927 Nobel Peace Prize with Ferdinand Buisson He died in exile in Switzerland

Quidor, John (kĭdôr'), 1801–81, b Tappan, N Y, studied with J W Jarvis Little appreciated in his own time, he was subsequently accorded a place among the best early American artists He is represented in the Brooklyn Museum by three paintings, *Dorothea, Money Diggers,* and *Wolfert's Will* He is probably best known for his illustrations for Irving's *History of New York*

quietism, extreme form of MYSTICISM proposed by Miguel de MOLINOS and more moderately by FÉNELON and Madame GUYON Another quietist was Antoinette BOURIGNON Quietistic ideas are especially common in Oriental religion, notably in BUDDHISM and HINDUISM, wherein annihilation of self or absorption of self into the world-soul is the *summum bonum* The essence of quietism and of similar mystical systems in the West lies in the passivity of the soul before God Since the supreme desire of the mystical life is to achieve the unity of the soul with God, the entrance of God into the soul, according to quietists, will be facilitated if the soul is completely inert Molinos proceeds from this fundamental idea The abandonment of all conscious effort, of reason, of emotion, of sacraments, and even of prayer is essential The Quakers, with their belief in the inner light, show tendencies toward quietism, but their interest in good works has always kept them from extremes See William Backhouse and James Janson, comp, *Guide to True Peace . Composed Chiefly of Writings of Fénelon, Guyon, and Molinos* (1946)

Quill, Michael Joseph, 1905–, American labor leader, b Co Kerry, Ireland Quill fought (1919–23) in the movement for Irish independence before emigrating (1926) to the United States to work as a laborer and then as gateman in New York city subways He helped organize (1934) the Transport Workers Union of America, and in 1935 he quit his subway work to become president of the union and to devote himself to labor organization. In 1937 the union became affiliated with the CIO, and Quill succeeded, with the help of John L Lewis, in getting closed-shop contracts with transit lines of New York city He then led in expanding the activities of the union to other big cities in the United States As a member (1937–39, 1943–45) of the New York city council, Quill—a colorful and fiery speaker—fought for numerous municipal reforms Quill was one of the leaders of the American Labor party, but he refused to support the party when it backed (1940) President F D Roosevelt's foreign policy He broke with the party in 1948 when its leaders came out against increased subway fare. Later he staunchly opposed Communist elements in labor unions

quill: see PEN

Quiller-Couch, Sir Arthur Thomas (kwĭl'ûr-kōōch"), pseud **Q,** 1863–1944, English man of letters He became professor of English literature at Cambridge in 1912. Among the novels of his native Cornwall are *Dead Man's Rock* (1887), *Troy Town* (1888), *The Splendid Spur* (1889), and *Hetty Wesley* (1903) Quiller-Couch finished Stevenson's novel *St Ives* (1898) *On the Art of Writing* (1916), *Studies in Literature* (1918–29), *On the Art of Reading* (1920), and *The Poet as Citizen* (1934) contain his essays and lectures He was editor of many anthologies, including the *Oxford Book of English Verse* (1900) and the *Oxford Book of English Prose* (1923). He was knighted in 1910 See his unfinished autobiography, *Memories and Opinions* (1945), biography by Fred Brittain (1947)

Quilmes (kēl'mās), city (pop 105,250), E Argentina, 11 mi SE of Buenos Aires and on the Río de la Plata A popular summer resort, it is also an industrial city, manufacturing textiles, rayon, and glass Quilmes has one of the largest of Argentine breweries.

quilting, antique form of needlework in which two layers of fabric over an interlining are sewn together, usually in a pattern of back or running (quilting) stitches. This method of securing warmth in coverings and clothing has been practiced in N Asia and Europe for centuries Quilting has been a feature of embroidery in the form of raised work It was a distinctive type of needlework in pioneer American homes, at first utilitarian, later ornamental Quilts were usually of the pieced, or patchwork, type until c 1750, when the appliquéd, or laid-on, quilt and the monotone quilt decorated by padding or cording became popular The art of quilting is still practiced by Southern mountaineers and in other rural districts and has been revived generally as ornamental needlework Machine-quilted materials are used for wearing apparel and in interior decoration The collecting of quilts and quilt designs has become a popular hobby See C A Hall and R G Kretsinger, *The Romance of the Patchwork Quilt in America* (1936), W R Dunton, *Old Quilts* (1947)

Quimby, Phineas Parkhurst, 1802–66, American mental healer, b Lebanon, N H He became interested in mesmerism and gave exhibitions of that art in New England and New Brunswick He passed from mesmerism to mental healing and gained a large and important following "Doctor" Quimby is, however, best known through the controversy which later arose as to the influence of his thought and his doctrines on Mary Baker EDDY and on Christian Science The problem is unsolved Quimby's *Questions and Answers* appeared in 1862 His name and teaching were potent long after his death

Quimper (kĕpĕr'), town (pop 17,722), capital of Finistère dept, NW France It was once the capital of the Breton county of CORNOUAILLE A port on an inlet of the Atlantic, it has important sardine fisheries and is known for its pottery (Quimper or Brittany ware) There is a museum of antiquities and art of Lower Brittany

Quin, James, 1693–1766, English actor of Irish descent He made his London debut as Bajazet in Rowe's *Tamerlane* in 1714 and was a star at Drury Lane and Covent Garden The last of the declamatory school which gave way to Garrick, he was unexcelled in the role of Falstaff Quin appears in Smollett's *Humphrey Clinker*

Quinault, Philippe (fēlēp' kēnō'), 1635–88, French dramatist His tragedies, comedies, and tragicomedies are affected and inferior, but he found the outlet for his genius in the 14 operas on which he worked as librettist but in real collaboration with Lully The charm and delicacy of his style is never so apparent as in *Armide* (1686), considered his masterpiece This libretto was used again by Gluck

quince, shrub or small tree of the rose family, native to Asia The common quince (*Cydonia oblonga*) is a spreading tree with crooked branches and long, ovate leaves, solitary white or pink flowers are borne at the ends of the twigs The stemless, fuzzy fruit, yellow or greenish, is globular or pear shaped; fragrant, but very astringent, it is used chiefly for preserves MARMALADE is said to have first been made from the quince The fruit, although hard, is easily bruised The quince has been cultivated from ancient times and was early naturalized in the Mediterranean region Most of the commercial crop in North America is produced in California, New York, Ohio, Pennsylvania, and Ontario The quince is often used as the rootstock for dwarf fruit trees, especially the pear Ornamental quinces (genus *Chaenomeles*) are profusely branching shrubs with showy scarlet, pink, or white flowers and small inedible fruits, best known is the Japanese quince

Quincy, Josiah (kwĭn'zē), 1744–75, American Revolutionary patriot, b Boston, grad Harvard, 1763 He was an outstanding lawyer Interest in politics in the pre-Revolutionary period led to his writing a series of anonymous articles for the Boston *Gazette* in which he opposed the Stamp Act and British colonial policies Even though an ardent patriot, he and John Adams defended the British soldiers in the trial after the BOSTON MASSACRE In 1773 he went to South Carolina for his health and on his journey established connections with other patriot leaders His *Observations on the Act of Parliament Commonly Called the Boston Port Bill* (1774) was an important patriot tract He was sent (1774) as an agent to argue the colonial cause in England and died on the way home His son, also named Josiah Quincy, wrote a memoir of him (1825)

Quincy, Josiah, 1772–1864, American political leader and college president, b Braintree (now Quincy), Mass, grad Harvard, 1790, son of Josiah Quincy, Jr (1744–75) He studied law, entered politics, and sat in the state senate (1804–5) before serving (1805–13) as a U S Congressman In Congress, where he became the Federalist minority leader,

Quincy opposed Thomas Jefferson, James Madison, and the proslavery forces In a speech in 1811 against admission of the state of Louisiana, he put forth an extreme view of the rights of individual states Though for political reasons he first urged preparedness, Quincy later violently opposed the War of 1812, resigned from Congress, and returned to Boston, where he became interested in scientific agriculture Again he served in the state legislature, and then from 1823 to 1828 he was mayor of Boston, accomplishing many needed reforms As president of Harvard (1829–45) he made a number of advances in its educational procedure, gave impetus to the law school, and wrote *The History of Harvard University* (2 vols , 1840) to silence critics. Among his writings are *The History of the Boston Athenaeum* (1851), *A Municipal History of the Town and City of Boston* (1852), and *Memoir of the Life of John Quincy Adams* (1858) His son, Edmund Quincy, edited his *Speeches Delivered in the Congress of the United States* (1874) and also wrote a biography (1867, 6th ed , 1874)

Quincy. **1** (kwĭn'sē) City (pop 3,888), co. seat of Gadsden co , NW Fla , near the Ga line, NW of Tallahassee and E of the Apalachicola river, founded c 1825 It is the market center for an important tobacco area and is in a region producing the bulk of the country's supply of fuller's earth **2** (kwĭn'sē) City (pop 40,469), co seat of Adams co , W Ill , on a bluff above the Mississippi and W of Springfield, in a farm and livestock area, settled 1822 on the site of an Indian village, inc 1839 It has a good harbor and was an important river port in the mid-19th cent It is an industrial and distributing center, manufacturing many kinds of metal products, dyes, clothing, and wallboard In early days the town was the scene of several proslavery-abolitionist struggles A Lincoln-Douglas debate was held here, Oct 13, 1858 Quincy College (coeducational) and the state soldiers' and sailors' home are here **3** (kwĭn'sē) City (pop 75,810), E Mass , on Boston Bay SE of Boston, set off from Braintree 1792, inc as a city 1888 The Plymouth Colony broke up (1627) a trading post established (1625) in the area by Thomas MORTON but a new settlement began in 1634 Granite quarrying, begun in 1750, became a great industry The first railroad tracks in the United States were laid here in 1826 Quincy's shipyards were of great importance in both world wars Soap and glycerin are produced John Adams and John Quincy Adams are buried in the Old Stone Temple (built 1828) Their home was made a national historic site in 1946 For the Quincy movement in education, see PARKER, FRANCIS WAYLAND See Daniel M Wilson, *Three Hundred Years of Quincy* (1926) **4** (kwĭn'sē) Village (pop 1,333), S Mich , SE of Battle Creek, settled 1833, inc 1858 It has a long-established flour mill and a cement plant Near-by lakes make the town a resort center The old Sac Trail crossed here

Quinet, Edgar (ĕdgär' kēnā'), 1803–75, French historian Like Michelet, whose colleague and friend he was, Quinet had a romantic belief in France's providential destiny to lead the nations in achieving freedom and democracy When he was (1842–46) professor at the Collège de France, his lectures and writings contributed to the "humanitarian republicanism" of 1848 For his opposition to Napoleon III, he was exiled to Belgium and Switzerland from 1851 to 1870, when he returned as deputy of the national assembly. A liberal Protestant and anticlerical, believing that religion was a profoundly important influence in molding a culture, Quinet was convinced that no real political reform could be effected without breaking the domination of the Catholic Church in France He held the Revolution did its most significant work in freeing the people from the grip of the Church but that it did not go far enough in breaking the Church's power For his attacks upon the Church and the Jesuits he lost his chair at the Collège de France Quinet's writings, published in a collected edition (26 vols , 1857–81), show imagination and feeling but neither careful reasoning nor graceful writing He was one of the first French students of German thought, His *Marnix de Sainte-Aldegonde* (1854) has been called his most important historical work See R H. Soltau, *French Political Thought in the Nineteenth Century* (1931).

quinine (kwī'nĭn", kwĭn'ēn'), white, crystalline alkaloid with a bitter taste Almost insoluble in water, it dissolves readily in alcohol and other organic solvents It is derived chiefly from the bark of several species of CINCHONA and is usually employed in the form of a salt, especially the sulphate Quinine was isolated (1820) by J B Caventou and P J Pelletier, the chemical synthesis was accomplished (1944) by the American chemists, R B. Woodward and W E Doering Quinine is known chiefly as a specific drug for the treatment of MALARIA It is used in medicine also to allay fever and pain, to induce uterine contractions during labor, as a sclerosing agent in the treatment of varicose veins, and as a bitter in tonics to increase the appetite. Although it may be injected intravenously, it is usually administered orally Excessive dosage or continuous use may bring about cinchonism, a serious poisoning (for symptoms and treatment, see quinine under POISONING, table) Native populations in malarial regions are commonly treated with the less expensive totaquine, a crude extract of cinchona bark which is a mixture of quinine and other alkaloids

Quinn, Edmond Thomas, 1868–1929, American sculptor and painter, b Philadelphia, studied at the Pennsylvania Academy of the Fine Arts He won distinction by his portrait sculpture and monumental work Of his statues the best known is *Edwin Booth as Hamlet*, Gramercy Park, New York He made a number of figures for memorials, among them a *Victory* for the First World War Memorial at New Rochelle, N Y One of the most impressive of his many portrait busts is that of Edgar Allan Poe, Fordham, Bronx borough, New York In the Metropolitan Museum he is represented by *Nymph*, a statuette

quinsy (kwĭn'zē), peritonsillar abscess, commonly known as quinsy sore throat It is an intense inflammation of the tissue around the tonsils (the mucous membrane of the tonsils, fauces, and uvula) Some relief may be afforded by hot or cold applications, but treatment by a physician is essential Fluctuation of the abscess is an indication of the need for incision

Quintana, Manuel José (mänwĕl' hōsā' kēntä'na), 1772–1857, Spanish patriot and poet He held high positions in the government and was tutor of Queen Isabella II He was a fervent patriot, and his favorite themes were liberty and progress Among his best-known poems are his odes *A la invención de la imprenta* [to the invention of printing] (1800), *El Panteón del Escorial* (1805), and *A la batalla de Trafalgar* (1805) He also wrote *Vidas de hombres célebres* [lives of famous men] (1807–35)

Quintana Roo (kēntä'na rō'ō), territory (19,630 sq mi , 1946 estimated pop 21,554), SE Mexico, on the Caribbean Occupying most of the eastern half of the YUCATAN peninsula, it is wild, sparsely settled, and populated almost entirely by independent Maya Indians With a hot climate and excessive rainfall, it has been little explored, the flat plain, with its almost impenetrable undergrowth, and the resistance of the Maya forced Francisco de MONTEJO to abandon his attempt (1527–28) to conquer Yucatan from the east There are no important industries, some coconuts and chicle are exported, and there is sponge and turtle fishing along the coast Until 1902, when it became a territory, Quintana Roo was part of the state of Yucatan Chetumal (pop 4,672), on the border of British Honduras, is the capital

Quintanilla, Luis (lwēs' kēntanē'lyä), 1900–, Spanish painter He was active as a muralist under the Spanish republican government and executed frescoes in the Casa del Pueblo and Ciudad Universitario in Madrid In 1939 he was sent to the United States by the Spanish government to paint the monumental fresco, in five panels, *Love Peace and Hate War* for the Spanish pavilion at the New York World's Fair Because of the change of governments in Spain these works were not exhibited at the fair In 1942 he settled in the United States, where his paintings and etchings, chiefly scenes of popular life in a gently satirical vein, have been widely exhibited and where he has been active as a teacher Characteristic of his style is the use of a sharp outline and delicate modeling effects that contrast with the monumentality of his figures

Quinte, Bay of (kwĭn'tē), arm of Lake Ontario, S Ont , between the mainland and the peninsula of Prince Edward co With its approach, Adolphus Reach, it is 60 mi long Belleville and Trenton are on its north shore

Quintero, Serafín Álvarez, and **Joaquín Álvarez Quintero**, see ÁLVAREZ QUINTERO

Quintilian (Marcus Fabius Quintilianus) (kwĭntĭl'yun), A D c 35–A D. c 95, Roman rhetorician, b Calagurris (now Calahorra), Spain He taught rhetoric at Rome (Pliny the Younger and possibly Tacitus were among his pupils) and, as a public teacher, was endowed with a salary by Vespasian, who also made him consul His *Institutio oratoria*, a complete survey of rhetoric in 12 books, begins with a discussion of the education of the young and proceeds with the various principles of rhetoric The last book deals with the life of the orator outside his profession, e g , his morality and his deportment The 10th book contains a list of great writers with brief but acute criticisms of their important works Quintilian's Latin is one of the most beautiful of his period, he succeeds in demonstrating what he sets out to inculcate—the necessity of good taste and moderation in rhetoric He had great influence in antiquity and in the Renaissance A number of declamations formerly assigned to him are falsely attributed

Quinton, town (pop 1,245), SE Okla., NE of McAlester, in a coal-mining region

quipu (kē'pōō) The Inca did not have writing; for the keeping of records and for the sending of messages, they made use of knotted cords called quipus, which served as memory aids The quipu might be a single cord but rarely was so, since the messages sent were complex Small cords with knots in them were attached to a main cord or a top band, the color of the cord, its place, its size, and the knots in it were all of significance to the record or the message The quipus had to be made up and deciphered by special, trained officials The method of deciphering is not known today, although Andean shepherds still use a sort of quipu See L L Locke, *The Ancient Quipu* (1923)

Quiraing (kwĕrăng'), mountain, on Skye, Inner Hebrides, Scotland. Its summit is a plateau 1,779 ft high, bordered by fantastic basalt formations.

Quiriguá (kērēgwē', kērēwā'), city of the Old Empire of the MAYA, E Guatemala Its stone steles have fine hieroglyphs Near the ruins the United Fruit Company has plantations and a hospital

Quirinal (kwĭr'ĭnul), one of the seven hills of Rome, NE of Capitoline Hill It was the site of several ancient shrines and the quarter of the *quirites*, probably the aristocracy in the first centuries of Roman history In the 16th cent a papal palace was built here, this palace was the residence of the kings of Italy from 1870 to 1946 and is now the home of the president of the Italian republic

Quirinius see CYRENIUS

Quirino, Elpidio (ĕlpē'dhyō kērē'nō), 1890–, Filipino statesman, b Ilocos Sur prov , Luzon, grad Univ of the Philippines (LL B , 1915) He worked his way through school and after he was admitted (1915) to the bar became a law clerk in the Philippine senate Here he met Manuel QUEZON, became his secretary, and for many years thereafter was his political aide He was elected (1919) to the Philippine house of representatives, and as senator (1925–41) he devoted himself to problems of finance After the Japanese invasion in the Second World War he became a leader of the underground and was captured and imprisoned, his wife and three of his five children were killed by the conquerors After the liberation (1945) of the Philippines, Quirino became president pro tempore of the senate and was elected (1946) first vice president of the independent Philippine republic When President Manuel Roxas died (1948), he succeeded to office and was elected president in 1949

Quirinus (kwĭr'ĭnus), in Roman religion, name of ROMULUS as a god In his honor the Quirinalia were celebrated

Quiroga, Juan Facundo (hwän' fakōōn'dhō kērō'gä), 1790–1835, Argentine *caudillo*, called *el tigre de los llanos* [the tiger of the plains] He was a zealous advocate of federalism (national organization based on provincial autonomy) With other provincial chieftains, he rejected the unitarian constitution of 1826, thus helping to bring about the resignation of the unitarian president, Bernardino RIVADAVIA (1827), and the installation of Manuel DORREGO as governor of Buenos Aires (Aug 1827) After the military uprising of Juan LAVALLE had overthrown Dorrego's government (Dec , 1828), Quiroga joined Estanislao López and Juan Manuel de Rosas in putting down the insurrectionists and in destroying, temporarily but with sanguinary thoroughness, the unitarian cause Quiroga was assassinated when returning from a conciliatory mission to the northern provinces A well-known study of him and his era is Domingo F Sarmiento's *Facundo*

Quisling, Vidkun (kwĭz'lĭng, Nor vĭd'kōōn kvĭs'lĭng), 1887–1945, Norwegian fascist leader An army officer, he served as military attaché in Petrograd and Helsinki and as assistant to Fridtjof Nansen in relief work in Russia From 1927 to 1929 he had charge, in the Norwegian legation, of British interests in Moscow He was Norwegian minister of defense from 1931 to 1933 He then left the Agrarian party to found the fascist Nasjonal Samling [national unity] party In 1940 he helped Germany prepare the conquest of Norway On April 9 he proclaimed himself premier, but was asked to resign by the German military on April 15 Remaining at the head of the sole party permitted by the Germans, he was made premier in 1942 Despite difficulties with his German masters and within his own party, he remained in power until May, 1945, when, after the Germans in Norway surrendered, he was arrested He was convicted of high treason and shot From his name came the word *quisling*, meaning traitor

quitclaim see DEED

Quitman, John Anthony, 1798–1858, American general and statesman, b Rhinebeck, N Y He studied law in Ohio and then moved to Natchez, Miss , where he practiced law and held a series of political offices, serving as state representative, state senator, and acting governor (1835–36) In 1836 he took part in the Texas Revolution, though without active service. As a brigadier general (promoted major general in 1847) he served under Gen Zachary Taylor in the Mexican War, distinguishing himself at Monterrey Under Gen Winfield Scott he fought at Veracruz, at Puebla, and at the storming of Chapultepec Scott appointed him governor of Mexico city in the occupation by Americans (1847–48). On his return to Mississippi he became governor (1850–51), but resigned after indictment by the Federal government for aiding a filibustering expedition to Cuba planned by Narciso LÓPEZ. From his election in 1855 until his death, he served in the U.S. House of Representatives, where he

defended the doctrine of states' rights and worked for the Southern cause

Quitman. 1 City (pop 4,450), co seat of Brooks co, extreme S Ga, just W of Valdosta, inc 1859 It is a trade and shipping center for a farm and livestock area 2 Town (pop 1,471), co seat of Clarke co, SE Miss, S of Meridian and on the Chickasawhay, in a farm and timber area

Quito (kē'tō) or **Panzaleo** (pänsälā'ō), Indians of Pichincha, Cotopaxi, and Tungurahua provs, Ecuador After the conquest of the Quito by the Inca under Tupac Yupanqui in the 15th cent, the Quitoan language apparently disappeared, and the Indians are today of the Quechua linguistic stock

Quito (kē'tō), city (pop 165,924), capital of Ecuador and of Pichincha prov It is the second largest city of Ecuador A settlement of the Quito Indians, it was captured by the Inca and became the center of the division of the Inca empire sometimes called the Kingdom of Quito a few years before Sebastián de Benalcazar entered (1533) and formally took possession (1534) for Spain Quito lies at the foot of Pichincha volcano in the hollow of a gently sloping, fertile valley Only a few miles below the equator but at an elevation of 9,350 ft, it has an average annual temperature of 54.6° F Monthly variations are generally less than one degree, but the nights are cool, the days warm, and there is usually a shower each day It is subject to earthquakes and was severely damaged in 1868 Quito has a Spanish colonial air with many examples of fine early architecture The Indians, the major element of the population, add color to the daily life The center of education and the political and cultural heart of Ecuador, it has little economic importance, though there are textile mills, and handicrafts and prepared foods are produced In 1563 it became the seat of an *audiencia*, and the boundaries of its power then foreshadowed present Ecuador The presidency of Quito was shifted back and forth between the viceroyalty of Peru and that of New Granada After an abortive uprising (1809), Quito remained under Spain until freed (1822) by Antonio José de Sucre Its republican history has been one of frequent revolutions led by aspiring *caudillos*, sometimes in efforts to escape control of economically preeminent Guayaquil

Quivira (kēvē'rä), land sought and reached by Francisco Vásquez de Coronado in 1541. The records do not make it entirely clear exactly where Quivira lay It is generally identified with villages of the Wichita Indians somewhere in Kansas, probably around Grand Junction, but other sites have been discussed, including one in N Texas The name was finally (and quite erroneously) settled upon Gran Quivira, a national monument

Quixote, Don see Don Quixote de la Mancha

Qum, Iran see Kum

Quoddy Head see West Quoddy Head

quoits, game played by two or more persons on a court in which metal pegs or pins 1 in high are placed 20 to 30 ft from each other These pegs are in the center of an end, i.e., a circle with a diameter of 3 ft The metal, circular quoits may be of any weight exceeding 3 lb and in the United States quoits are generally 9 in in diameter with a concentric bore 4 in in diameter They should have one rounded and one flat surface Standing within 4½ ft of the center of his end and to one side of it, the player throws his quoit with the rounded side uppermost His object is to deliver the quoit so that it rings the peg or settles as close as possible to it Players have two throws in succession and alternate in pitching first A ringer (i.e., circling the peg with the quoit) counts 3 points, a double ringer, 6 points, a hobber (i.e., quoit leaning against the peg), 2 points, a double hobber, 4 points, and each quoit nearer the peg than that of the opponent, 1 point A player who throws a double ringer or a double hobber gains any points already made by his opponent's throwing ringers in that set of throws This holds true in team play also A match may be for any number of points, although 21 points usually means game At sea, deck quoits are played, the quoits being made of rings of rope Horseshoe pitching is played on the same principle as quoits However, the pegs are 1 ft high and stand 30 or 40 ft apart The horseshoes should not weigh more than 40 oz or measure more than 7½ in in length and 7 in in width The ends are square boxes, elevated 6 in above ground or floor level Points in horseshoe pitching are scored on a basis similar to that of quoits, though hobbers are not accounted for and the second pitcher never gains the points of the first pitcher Points earned by the players offset each other in horseshoe pitching, and 50 points constitute a game The games (quoits and horseshoe pitching) developed concurrently, and though their origins are obscure, they were both played in Greece and Rome Both games were brought to England, where quoits attained great popularity In America quoits was played in colonial times, but horseshoe pitching rapidly eclipsed that game In the 20th cent several clubs were organized to further horseshoe pitching and several annual tournaments were organized.

Quonset Point (kwŏn'sĕt), in North Kingstown, S R I, on Narragansett Bay, site of the huge Northeastern Naval Air Station, completed in 1941

quotation marks see Punctuation

R

R, 18th letter of the alphabet, corresponding to Greek rho When in Latin alphabets the letters for P and R became similar in appearance the form was restricted to P and an extra line added for R In Greek, where no confusion developed, the rho continued to look like Latin P A modification of R is the symbol ℞, used medically for *recipe* [Latin, =take], liturgically for *responsum* [Latin, =response].

Ra see Egyptian religion

Ra, chemical symbol of the element radium

Raab (rap), Hung *Rába* (rä'bô), river, c 150 mi long, rising in E Styria, Austria It flows SE into Hungary, then NE into the Danube at Gyor

Raabe, Wilhelm (vĭl'hĕlm rä'bu), pseud **Jakob Corvinus** (yä'kôp kôrvē'nōōs), 1831–1910, German novelist At first a bookseller, at 23 he began to write novels and tales of village life, the first being *Die Chronik des Sperlingsgasse* (1857) An outstanding German humorist, he later turned to the historical past and wrote such tales as the tragic "Des Reiches Krone" [the imperial crown] (1870) His novels include *Der Hungerpastor* (1864, Eng tr, 1885), *Abu Telfan* (1867, Eng tr, *Abu Telfan, or, The Return from the Mountains of the Moon*, 1881), *Der Schuddertump* (1870), and *Stopfkuchen* (1891)

Raamah (rā'umu) [Heb, =trembling], founder of a tribe on the Persian Gulf Gen 10 7, 1 Chron 1 9

Raamiah (rā"umī'u), chief who returned with Zerubbabel Neh 7 7 Reelaiah Ezra 2 2

Raamses (rāăm'sēz), in the Bible, city of the eastern delta of Egypt, built by the children of Israel Ex 1 11 The Rameses of Gen 47 11 and Num 33 3,5 is the region of the central eastern delta This district was especially developed by Ramses II

Raasay (rä'sā), island, off NW Scotland, in Inverness-shire, one of the Inner Hebrides Between Skye and the mainland of Scotland, it is c 14 mi long and 3 mi wide, is generally rocky and barren, and produces some iron ore The Sound of Raasay separates Raasay from Skye

Rab (rab), Ital *Arbe* (ar'bā), island, area 40 sq mi, off Croatia, Yugoslavia, in the Adriatic Sea and c 40 mi S of Fiume One of the Dalmatian islands, it was under Venetian rule from the 10th cent until 1797, and it retains its ancient walls, the ruins of the palace of the Venetian governors, a 12th-century cathedral, and the medieval palace of the former archbishops. Rab is a popular seaside resort

Raba, river of Austria and Hungary see Raab

Rabanus Maurus Magnentius (rubā'nus mô'rus măgnĕn'shus), c 780–856, German scholar and theologian His name also appears as Hrabanus and Rhabanus A student under Alcuin, he was later abbot of Fulda (822–42), his zeal for learning and his excellent administration made the school and library at Fulda an outstanding source of intellectual light He is sometimes called the preceptor of Germany He retired from Fulda but in 847 was made bishop of Mainz Rabanus had an immense stock of knowledge, and his works, notably biblical exegesis, were encyclopedic rather than original *De universo* is a sort of encyclopedic dictionary, and *De institutione clericorum* is a course of study for clerics His poetry and writings on various subjects are today chiefly of linguistic interest, but his place in spreading the Carolingian revival of learning was eminent Walafrid Strabo was one of his students

Rabat (rəbät'), city (pop 161,416), French Morocco, a port on the Atlantic Ocean, on the southern bank of the Bou Regreg estuary, opposite Salé It is the seat of the French resident general and a residence of the sultan Conspicuous features are the old walls and the ruins of a large uncompleted mosque with adjoining tower (similar to the Giralda), these were built by Yakub I (reign 1184–99) Rabat, a stronghold of corsairs in the 17th and 18th cent, now exports agricultural products and produces textiles

Rabaul (rä'boul), town (1939 pop c 2,000), on NE New Britain, Bismarck Archipelago Formerly the capital of the Territory of New Guinea, it was supplanted in 1941 by Port Moresby It is surrounded by extremely active volcanoes, eruptions in 1937 nearly destroyed the town In the Second World War, Rabaul, a key Japanese stronghold, was bombed heavily by the Allies

Rabbah or **Rabbath** see Amman

rabbi [Heb, =my master or my teacher], in the United States, the title of a Jewish minister He is called *rav* [great] among certain Jews in Eastern Europe, where the word *rabbi* is used only for a scholar or teacher Jesus was frequently addressed as rabbi, but the word at that time had not the official connotation it acquired later The title originated among the Palestinian Jews The rabbi received no salary until about the 13th cent The duties of the modern orthodox rabbi include deciding all matters pertaining to marriage and divorce and all disputes concerning kashruth (the kosher laws), while the reform rabbi serves to expound Judaism and act as a leader of Israel

Rabbi Ben Ezra see Ibn Ezra, Abraham ben Meir

rabbit, herbivorous mammal of the same family (*Leporidae*) as the hare Some species are mature at six months and bear four litters a year Species of the genus *Sylvilagus*, which includes the cottontail, marsh, and swamp rabbits, are found from the United States to N South America Domesticated breeds are varieties of the European rabbit (*Oryctolagus cuniculus*), native to the W Mediterranean region This species was introduced into Australia, where it became a pest Rabbits are raised as pets, for food, and for fur, which is widely used in the trade Cony or coney is rabbit fur, as are many dyed imitation furs Rabbit fur is used in making felt The rabbit is often used as a laboratory animal See *Rabbit Production* (U S Dept of Agriculture, Farmers' Bul 1730)

rabbit fever see Tularemia.

Rabbith (rā'bĭth) [Heb, =multitude], town, E central Palestine. Joshua 19 20 It may have been located c 10 mi SW of Beth-shan

Rabboni (răbō'nī) [Heb, =my great master], title of respect addressed to Jesus John 20 16

Rabelais, François (rä'bŭlā', Fr. frăswä' räblā'), c 1490–1553, French writer and physician, b near Chinon His father was probably an advocate (though he has sometimes been called an apothecary and sometimes an innkeeper) who inherited a property, "La Devinière," near Chinon Rabelais early became a novice in a Franciscan monastery He later (c 1524) petitioned Pope Clement VII for permission to leave the Franciscan order and enter the Benedictine monastery of Maillezais, the bishop of Maillezais was a scholar and was Rabelais's friend The facts concerning Rabelais's study of medicine are obscure, but it is probable that he studied in Paris before receiving (1530) his degree of bachelor of medicine at the Univ of Montpellier. In 1532 he went to Lyons, at that time an intellectual center, and there besides practicing medicine, he edited various Latin works for the printer Sebastian Gryphius For another publisher at Lyons he composed burlesque almanacs At Lyons in 1532 appeared the first edition of *Gargantua— Les grandes et inestimables cronicques du grand et énorme geant Gargantua*, a crude chapbook, which Rabelais may simply have edited for the Lyons publisher, legends about the giant Gargantua are known to have already existed Rabelais was apparently inspired by the popularity of the *Gargantua* to write an original work on the history of Pantagruel, the son of Gargantua, this work, *Pantagruel*, appeared also in 1532 *Pantagruel* became the second book of the romance after Rabelais had published (in 1534 or possibly 1535) *Gargantua la vie inestimable du grand Gargantua, père de Pantagruel* The third book of the romance was published in 1546, an incomplete edition of the fourth book appeared in 1548 and a complete one in 1552 In 1562, some time after Rabelais's death, a fifth book appeared, the question of its authorship has never been settled The story of Gargantua and Pantagruel is one of the world's masterpieces, a work as gigantic in scope as the physical size of its heroes Under its broad humor, often ribald, are serious discussions of education, politics, and philosophy The breadth of Rabelais's learning and his zest for living are evident Rabelais left Lyons in 1534 to go with his friend Jean du Bellay to Rome Again in 1535 he went to Rome, where Du Bellay received his cardinal's hat There is some suspicion that Rabelais was for a time in hiding because persecutions for heresy were at this time rife Under the protection of Du Bellay he received permission to practice medicine without fees and to have ecclesiastical office He taught at Montpellier from 1537 to 1539 After 1547, when Francis I, who had been his patron, died, he wrote no more and became curate at Meudin, there he spent the last years of his life The classic translation of Rabelais is that of Sir Thomas Urquhart (Books I-II, 1653, Book III, 1693), Books IV and V were translated by Pierre Motteux, and all five appeared in 1708. A translation of the five books, with other writings, was made by W F. Smith (1893). Selections appear in Sir Walter Besant, *Readings in Rabelais* (1883), F. G Stokes, *Hours with Rabelais* (1905); C. H C. Wright, *Selections from Rabelais's Gar-*

gentua (1904) See Arthur Tillev, *François Rabelais* (1907), A F Chappell, *The Enigma of Rabelais* (1924), A J Nock and C R Wilson, *François Rabelais. the Man and His Work* (1929), Jean Plattard, *The Life of François Rabelais* (1931), Huntington Brown, *Rabelais in English Literature* (1934)

Rabi, Isidor Isaac (rō'bē), 1898–, American physicist, b. Austria, grad Cornell Univ, 1919, Ph.D Columbia, 1927 He began to teach at Columbia in 1929 (professor of physics from 1937) He is known for his work in magnetism, molecular beams, and quantum mechanics He discovered radiations emitted by atoms and found a method of measuring them, these radiations lie within the range of radio waves but are not detectable by ordinary radio devices He was awarded the 1944 Nobel Prize in Physics

rabies · see HYDROPHOBIA

Rabinowitz, Solomon or **Shalom:** see ALEICHEM, SHOLOM

Rab-mag: see NERGAL-SHAREZER

Rab-saris (rābsā'rĭs), title of a high official at the Assyrian and Babylonian court, used of the times of Sennacherib and of Nebuchadnezzar 2 Kings 18 17, Jer 39 3,13

Rab-shakeh (rāb-shā'kē), Assyrian official sent by Sennacherib against Jerusalem 2 Kings 18 17–19 8, Isa 36 2–37 8

Raca (rā'kŭ), current contemptuous word appearing only in Mat 5 22.

Racan, Honorat de Bueil, seigneur de (ōnōrä' dŭ bû'yu, sānyûr' dŭ rākā'), 1589–1670, French poet He wrote a pastoral drama, *Arthénice* (performed in 1619), published as *Les Bergeries* (1625), it has charming descriptions of nature The original title is an anagram of "Catherine"

raccoon (rākōōn'), New World mammal (*Procyon*), related to the kinkajou and panda It is from 2½ to 3 ft in total length, with mixed gray, brown, and black hair, the pointed face has a black mask, and the bushy tail is ringed with black It often nests in a hollow tree or climbs aloft for refuge When water is available it washes its food—crayfish and other water life, seeds, and fruits It sleeps through some of the northern winter The durable fur is used for coats and trimmings The crab-eating raccoon is a South American species

race, obsolete division of humanity based on criteria of hair texture and color, of skin color, of head shape, and other conspicuous physical features There was thus supposed to be a "Caucasian" or "white" race having divisions into longheaded and roundheaded strains The classification never worked at all, but it had great prestige in the 19th and the early 20th cent It was variously used politically, e g , to explain British colonial success or to justify the status quo in the S United States At its most destructive it lent a wholly false intellectual air to anti-Semitism A basic error concerning race is the notion that there have been a certain number of pure breeds or strains of men, like breeds in dogs, that have become mixed over long periods of time Anthropologists dismiss such an idea for several reasons First, it is now generally held that all men are descended from the same single couple Second, there is the fact that in any physical trait in which men vary there are infinite gradations between extremes, not sharp lines Third, scientists generally conclude that recorded history covers only a very small part (at the most about 6,000 years) of the time elapsed since the first men, so small a part that it is chimerical to hope to see anything like evolution in human history or to argue "primitive" conditions in man from anything found today or known from history One element which helps racial fallacies to keep alive is the popular view of heredity, long abandoned by scientists, that biological inheritance is analogous to a family tree, i e , that one inherits physically half from each parent, a quarter from each grandparent, and so on back It is known since Mendel's work that a child may have more or less of the genes of either parent, that it is unlikely (except for identical twins) that any brothers and sisters have identical inheritances, and that it is possible to have no genes at all in common with a grandparent, i e , to inherit literally nothing from him (or her) physically Hence expressions like "a Saxon strain" or "Norman blood" are futile The blood has, of course, no especial close relation with heredity, any more than the heart has with tender emotion Some kind of long isolation has combined with other factors to produce a large number of "stocks," such as west African Negroes, Japanese, Eskimo, or Tasman aborigines, where sizable communities have many (but never exclusive) traits in common It is probable that members of any human community isolated for some generations would begin to show increasing physical features in common. No known "stock" can be given an exact, identifying definition; so that it may be impossible to find many typical members of the stock The Jews are not a stock and have no hereditary unity, physical traits attributed to them are the common property of many people of the Eastern Mediterranean basin. The fashionable racial terms of the 19th cent , such as Aryan, Anglo-Saxon, Celtic, Nordic, Alpine, and Mediterranean, are scientifically meaningless (when applied to races), but some of them have strong emotional connotations. See Ralph Linton, ed., *The Science of Man in the World Crisis* (1945), Clyde Kluckhohn, *Mirror for Man* (1949), C S Coon and others, *Races: a Study of the Problems of Race Formation in Man* (1950).

Race, Cape, southeast tip of the Avalon Peninsula, SE N F , SSW of St. John's It has a lighthouse and a radio direction-finding station

Raceland, city (pop. 1,046), E Ky , on the Ohio near Ashland, inc 1920 as Chinnville city, renamed 1930 It has a noted race track

Rachab (rā'kăb), variant of RAHAB 1.

Rachal (rā'kăl) [Heb ,=traffic], unlocated town, S Palestine. 1 Sam 30 29

Rachel (rā'chŭl) [Heb ,=ewe], wife of Jacob and mother of Joseph and Benjamin Gen 29–33, 35, Mat 2 18 Rahel Jer 31 15

Rachel (rashĕl'), 1821–58, stage name of Elisa or Elisabeth Félix, French actress, b Switzerland, of Jewish parents In early childhood she sang in the streets with her sister Sarah and attracted the attention of Alexandre Étienne Choron, who gave her singing lessons until 1833 In 1835 she entered the Gymnase and in 1838 made her debut with great success at the Comédie Française in Corneille's *Horace* In tragic roles she was acknowledged queen of the French stage and in 1841–42, after a sensational success in London, was acclaimed throughout Europe Her genius was seen in all the major works of Racine and Corneille, but she reached the height of her powers in Racine's *Phèdre* in 1843 She appeared in the United States with fair success in 1855 (she knew little English) and on this visit contracted the tuberculosis which led to her death three years later Her death is the theme of a poem by Matthew Arnold See J E Agate, *Rachel* (1928), Bernard Falk, *Rachel the Immortal* (1936)

rachitis · see RICKETS

Rachmaninov, Sergei Vasilyevich (svĭrgā' vŭsē'lyĭvĭch rakhma'nĭnôf) 1873–1943, Russian pianist, composer, and conductor In Moscow he was conductor of the Imperial Opera, 1905–6, and of the Philharmonic concerts, 1911–13 He twice refused the permanent conductorship of the Boston Symphony Orchestra In the romanticism and lyricism of his compositions he owes much to his friend Tchaikovsky Outstanding works are the second of his four piano concertos (1901), Rhapsody on a Theme of Paganini (1934), for piano and orchestra, an orchestral tone poem, *The Isle of the Dead* (1907), inspired by Arnold Boecklin's painting, *The Bells* (1913), for chorus and orchestra, on Poe's poem, and many piano pieces and songs He also composed three symphonies and three operas He is best known, however, as one of the greatest pianists of his age See his *Recollections* (1934), biography by V I Seroff (1950)

Raciborz, Upper Silesia · see RATIBOR

Racine, Jean (zhā' räsēn'), 1639–99, French dramatist He was educated at PORT-ROYAL but broke with his Jansenist masters over his love for the theater His first dramatic attempts, *La Thébaïde* (1664) and *Alexandre le Grand* (1665), were imitations of CORNEILLE In 1667 *Andromaque*, a tragedy on ANDROMACHE after Euripides, gave to Racine Corneille's place as leading tragic dramatist. Corneille's friends, including Racine's former friend Molière, tried to ruin the young playwright, but the backing of Boileau and Louis XIV saved him Racine's next play, *Les Plaideurs* (1668), wittily satirizes the law courts The subsequent tragedies are all masterpieces *Britannicus* (1669), *Bérénice* (1670), *Bajazet* (1672) on a plot in the Seraglio of Sultan Murad IV, *Mithridate* (1673, Eng tr , *Mithridates*), *Iphigénie en Aulide* (1674, Eng tr , *Iphigenia at Aulis*), *Phèdre* (1677, Eng tr , *Phaedra*) Disgusted with his irregular life and with a concerted attack on *Phèdre*, Racine gave up the theater, married, and retired from court He remained in the royal favor and was appointed official historiographer Mme de Maintenon persuaded him to write *Esther* (1689) and *Athalie* (1691, see ATHALIAH 1) for performance at Saint-Cyr These have choruses, and *Esther* has three acts instead of the usual five All Racine's plays, except the first two, are presented today He occupies a unique position as the exemplar of French CLASSICISM par excellence The faultless nobility of his ALEXANDRINE verse, the simplicity of his diction, the psychological realism of his characters, and the skill of his dramatic construction contribute to this repute It is a truism of literary history that Racine is the most French of French writers, and this is often given as the reason for the failure of English-speaking people to appreciate him That they do fail is attributable rather to the difference of dramatic conception between the classical TRAGEDY and the English drama There are many translations of Racine into English, e g , John Masefield, *Berenice* (1922), H D Sporel, *Mithridates* (1926), Lacy Lockert, *The Best Plays of Racine* (*Andromaque, Britannicus, Phèdre, Athalie* 1936) See also Lytton Strachey, *Landmarks in French Literature* (1912) and *Books and Characters* (1922), Arthur Tilley, *Three French Dramatists* (1933), biography by A. M. F. Robinson (1925).

Racine (rusēn'), industrial city (pop. 67,195), co seat of Racine co , SE Wis., a port of entry on Lake Michigan at the mouth of the Root and S of Milwaukee, settled 1834, inc. 1848 The site was known to French explorers and fur traders Improvement of Racine's harbor (c 1844) and later the railroad brought industrial growth The city's chief products include farm machinery, floor wax, and malted milk The Sporer House was designed by Frank Lloyd Wright The courthouse contains historical exhibits, and the public library has the Hoy bird collection.

racing. The foot race was a popular sport in ancient civilizations The earliest OLYMPIC GAMES consisted of foot races only, the Greeks numbered the years from the first of these foot races Wherever the horse was introduced, riders and drivers of horses promptly developed the sport of racing, and in the Roman era, watching the chariot race was a favorite pastime Down through the ages competition for speed remained a favorite recreation and means of wagering, but few forms of racing became as popular as horse racing After the HORSE was domesticated by man, horseback riding was developed, and when highly bred strains of horses were developed, horse racing came to the fore Organized horse racing under saddle dates from the 12th cent in England, where royalty fostered the sport. The thoroughbred first appeared in England In 17th-century England the sweepstakes was originated for the first time, several important racing events—e g , the DERBY—were established, and harness-horse racing was probably instituted Steeplechase racing (the riding of horses over a course with hurdles to approximate natural conditions) was officially organized in the 19th cent and became popular in England and Ireland Hurdle racing (riding of horses over a dirt tract with hurdles) was organized about the same time Horse racing was introduced into France in the reign of Louis XIV There in the 19th cent Pierre Oller invented and introduced the "parimutuel" system as a means of reforming GAMBLING at the race track Before the American Revolution horse racing was common among members of the leisured classes in the American colonies and was very popular in New York and Virginia before the 19th cent After 1830 the introduction of the sulky brought about a vehicle-pulling event Racing and trotting horses were carefully bred in the 19th cent (see JUSTIN MORGAN and HAMBLETONIAN), and harness horse racing reached a new height of popularity in the United States in the 1870s In 1891 the present-day low-wheel sulky appeared, and the high-wheeler soon disappeared Churchill Downs at Louisville, Ky , was opened in 1875, and flat racing tracks began to appear all over the country in the 1880s Gambling on horse races, which was the subject of constant attack by the reform groups and religious leaders, grew by leaps and bounds, too often falling into the hands of criminal and unscrupulous elements Steps were taken to reform gambling, and in England much of the responsibility of organization and supervision was placed in the hands of the Jockey Club, founded in 1750 In the United States individual states set up racing commissions, and in 1893 horse owners and trainers set up a national Jockey Club (New York) to govern the sport Its functions include the supervision of horses, jockeys, and race tracks, handicapping, control of betting at tracks, the setting of race schedules, and examination of thoroughbreds In the United States the three traditionally most important racing events (all for three-year-olds) are the Kentucky Derby at Churchill Downs, the Preakness at the Pimlico track near Baltimore, and the Belmont at Belmont Park, N Y Other forms of racing that have gained popularity in the United States include boat racing (see BOATING), AUTOMOBILE RACING, bicycle racing, dog racing, airplane racing, and foot racing (see TRACK AND FIELD EVENTS) See John Hervey, *Racing in America, 1665–1865* (1944) and *American Trotter* (1947), S. E Wilkinson, *What You Should Really Know about Racing* (4th ed , 1946), M C Self, *The Horseman's Encyclopedia* (1946), T R Underwood, *Thoroughbred Racing & Breeding* (4th ed , 1948), M W Meek, *Racing Cyclopedia and Record Book* (1948).

Rackham, Arthur (rā'kŭm), 1867–1939, English illustrator and water-colorist. He is known for imaginative, delicately colored, and decorative pen drawings, especially for children's books Among these are *Peter Pan* (1906), *Alice in Wonderland* (1907), and *A Christmas Carol* (1915). Other works which have his illustrations are *Midsummer Night's Dream* (1905), *The Tempest* (1926), *The Vicar of Wakefield* (1929), and *The Compleat Angler* (1931)

Racovian Catechism. see SOCINIANISM.

racquets (rā'kĭts), game played by two or four persons on a court 60 by 30 ft which is surrounded by three walls 30 ft high and a backwall 15 ft. high The ball, 1 in, in diameter, is made of tightly wound cloth which is covered by leather. The gut-strung racquet is 30 in long, has a circular head 7 to 8 in in diameter, and weighs 8 to 10 oz. A service line is painted horizontally across the front wall a little over 9½ ft. from the ground, and a short-line is

painted 36 ft. from, and parallel to, the front wall. A line also extends from the center point of the short-line into two service courts The rules of the game are similar to those of squash. The hardness and speed of the ball makes racquets one of the fastest and most dangerous games It originated in 18th-century England, probably in debtors' prison, but was soon adopted by the wealthier classes Expensive racquets courts were built in England, and racquets was introduced into the United States in the 19th cent by way of Canada. See Allison Danzig, *The Racquet Game* (1930)

radar (rā'där), the radio detecting and ranging device which made possible in the Second World War the location of enemy planes and ships and the precision bombing of enemy targets First put into operational use by the British in 1935, Allied technicians improved it steadily throughout the war A radar instrument consists of a transmitter which sends out short radio waves (microwaves traveling at the speed of light), an antenna which concentrates the waves into a directed beam as the signal is sent out and receives the echo when the beam strikes an object and is reflected, a receiver; and an indicator The indicator usually consists of one or more cathode-ray tubes which act as a radar screen Pulses of light flash across the screen, the period of pulsation equaling the frequency of the radar waves and appearing to the human eye as a single beam of light Echoes from radar "strikes" appear as V-shaped depressions (pips) on the light beam, their location on the beam giving the range of the target The direction of the target may be found by revolving the antenna to find the point at which the echo is strongest or by synchronizing the cathode beam so that it revolves on the screen in conjunction with the antenna (thus pips or images are indicated at the degree bearing of the target) Calibration of the reception time lag of two antennae of different heights gives its altitude After its successful use for the detection of German planes, a vital factor in the Battle of Britain in 1940 radar played an increasingly important role throughout the war Bombing through overcast (BTO) was made possible by a form of radar which gave the bombardier a televised "map" of the terrain below Long-range bombing missions were guided to targets by radar beams Radar detectors adapted as fire-control mechanisms directed naval and anti-aircraft fire which destroyed enemy ships and planes, unseen in fog or darkness Small sets built into Allied fighter planes permitted them to find, track, and destroy enemy aircraft at night A miniature radar set, small enough to fit into the head of an artillery shell and called a VT or proximity fuse, was developed The pulses from this fuse exploded the shell when it came within a specified distance of any solid object It replaced the time fuse and proved a natural adjunct to radar-directed gunnery To overcome radar's inability to discriminate between enemy and friendly objects, IFF (identification, friend or foe) was developed. This consisted of a transmitter placed aboard Allied surface vessels and aircraft which was "triggered" into action when hit by a radar beam, causing it to emit a prearranged coded signal Perhaps more than any other military development, radar has been and is being adapted for peacetime use Commercial air liners are now equipped with radar devices which give warning of obstacles in their path and accurate altitude readings Planes can land in fog at airports equipped with radar-assisted ground-controlled approach (GCA) systems, in which the plane's flight is observed on radar screens and skilled operators radio landing directions to the pilot Radar is also used to measure distances and map geographical areas (Shoran), in navigation and position fixing at sea (Loran), and meteorological studies While the value of radar in astronomy has not been determined, the moon was first reached in 1946 by radar beam.

Radauti (rŭdŭôts'), Ger *Radautz* (rä'douts), town (pop 14,530), N Rumania, in Bukovina It is a trading and woodworking center An old Moldavian town, Radauti has a 14th-century church containing the tombs of early Moldavian princes and frescoes dating from the 15th cent

Radburn (răd'bûrn), planned community in Fair Lawn borough, NE N J , begun in 1928. See R B Hudson, *Radburn* (1934)

Radcliffe, Ann (Ward), 1764–1823, English novelist Her popular tales of mystery and intrigue have an element of the apparently supernatural, later explained by natural causes. Her best works are *The Romance of the Forest* (1791), *The Mysteries of Udolpho* (1794), and *The Italian* (1797) Students agree that these novels had a marked influence on Scott in his development of narrative method and on Byron in his conception of the "Byronic hero" See C F MacIntyre, *Ann Radcliffe in Relation to Her Time* (1920).

Radcliffe, John, 1650–1714, English physician, known also as a wit He practiced at Oxford and London and was physician to the royal family until he lost favor The Radcliffe Library, Observatory, and Infirmary at Oxford were established with funds he left. See biography by J. B. Nias (1918).

Radcliffe, urban district (1931 pop 24,675; 1947 estimated pop 27,670), Lancashire, England, on the Irwell and NW of Manchester. The parish church, founded in Norman times, has been restored. There are cotton and rayon mills, chemical, engineering, and paper plants, and coal mines

Radcliffe College, at Cambridge, Mass , nonsectarian, for women, associated but not corporately connected with Harvard Univ Instruction of women by Harvard professors, led by Arthur Gilman and his wife, began in 1879, and in 1882 the Society for the Collegiate Instruction of Women (known as the Harvard Annex) was chartered In 1894 it was rechartered and named for the first woman donor to Harvard Elizabeth C Agassiz was president from 1879 to 1903, she was succeeded by Dean Le Baron Russell Briggs of Harvard (1903–23), and Ada Louise Comstock (1923–43) Instruction for both undergraduates and graduates is given by members of the Harvard faculty, and the methods, including the tutorial system and general examinations, are the same

Raddai (rä'dāī, rădā'ī), brother of David 1 Chron 2 14

Radek, Karl (kärl' ra'dyĭk), 1885–, Russian Communist politician and journalist, b Lvov (then in Austrian Poland) He began his revolutionary activities at the age of 14 During the First World War he carried on pacifist propaganda in Switzerland He returned to Russia with Lenin in 1917 After the armistice of 1918 he went to Germany, where he unsuccessfully sought to organize a Communist revolution Back in Russia, he was expelled (1927) from the Communist party as an adherent of Trotsky, he was readmitted (1930) after acknowledging in a letter the error of his views Radek was a brilliant editorial writer for the newspaper *Izvestia*, but his career ended when he was implicated in testimony at the public treason trial of Aug , 1936 Arrested, he confessed, at the public trial of Jan , 1937, to a part in a Trotskyist plot against the Soviet government He was sentenced to imprisonment for 10 years

Radetzky or **Radetzki, Joseph, Graf Radetzky de Radetz** (yō'zĕf rädĕt'skē graf rädĕt'skē dŭ ra'dĕts), 1766–1858, Austrian field marshal In the war of 1848–49 against Sardinia (see RISORGIMENTO) he won the brilliant victories of Custozza (1848) and Novara (1849) He was governor of Upper Italy (1849–57) Johann Strauss (the elder) composed the famous Radetzky March in his honor

Radford, city (1940 pop 6,990, 1947 estimated pop 11,300), SW Va , WSW of Roanoke and on the New River, inc 1885 It has railroad shops, foundries, and textile and lumber mills In 1940–41 a large powder plant was established near here Radford College, woman's division of VIRGINIA POLYTECHNIC INSTITUTE, is here Near by is Claytor Lake, over 100 mi in circumference, formed by a hydroelectric dam (1939) in New River

radiation (rā"dēā'shun), emission of energy by substances or bodies of matter and its transfer through space The sun is a familiar source of radiant energy, and sunlight the best-known form When a beam of sunlight is passed through a prism, it is broken up into parts and is seen to be composed of rays of all colors These colors differ from one another in wave length, the shortest being violet (0 4 microns or 0 0004 mm) and the longest red (0 8 microns or 0 0008 mm), with the other colors ranging between these limits In addition to visible light, other radiation occurs which, although invisible, is similar in nature Ultraviolet radiation includes wave lengths ranging roughly from 0 01 microns or 0 00001 mm to the shortest of visible light Shorter still are X rays The wave lengths of the gamma rays of RADIOACTIVITY are shorter than those of the X rays, but their ranges overlap somewhat Longer in wave length than visible light is the infrared, and longer still are the radio waves, some of which are as much as 10 mi long All these waves of different lengths travel through space at approximately 186,000 mi per second Radiant energy is reflected and absorbed in the same way as visible light ¶ However, a body with a good reflecting surface is not a good radiator, while one which has a dark, rough surface (a poor reflecting surface, such as that of carbon black) and which is a good absorber is a good radiator The RADIOMETER is a means of detecting radiant energy

radiator (rā'dēā"tur) The familiar radiators of steam and hot-water HEATING systems in buildings are made of cast iron or of steel, brass, or copper They are usually constructed in sections so that several can be joined together to give a required number of square feet of radiating surface Heating efficiency is reduced (sometimes as much as 10 percent) if screens or shelves or even certain kinds of paint cover them When steam is the heating agent, the radiator acts as a condenser, heat is given off at the rate of about 5 calories per gram of steam for each degree centigrade decrease in temperature and 540 calories for each gram of steam that changes to water (see VAPORIZATION). The condensate is returned to the boiler. In hot-water systems, there is a continuous circulation of hot water. The heat is given off by the hot water or steam to the inner wall of the radiator, from which it is transmitted to the outer wall by CONDUCTION, there it passes off by RADIATION or by convection currents (see CONVECTION) set up by raising the temperature of the air that is in contact with the heated surfaces Coil radiators consist essentially of long steam pipes, they are used widely in factories, gymnasiums, auditoriums, and halls, being set on the walls or ceilings to conserve floor space Gas radiators use a gas flame to heat air or water or to generate steam Electric radiators have an electric resistance unit set in a reflector, heat is generated when an electric current flows through the unit The automobile radiator is a part of the COOLING SYSTEM of the engine

radical Certain chemical elements are often found grouped together in the same definite proportion (by weight) in each molecule of a number of different compounds Such a group of elements, called in chemistry a radical, acts as a unit or single element in many of the chemical reactions in which the compounds are involved One common group, for example, is the hydroxyl radical, which is composed of one atom of oxygen and one of hydrogen and which is present in the molecules of the class of compounds known as hydroxide or base, in chemical notation, it is written OH (O=oxygen, H=hydrogen) Sulphuric acid contains the so-called SULPHATE radical, and other common radicals are the ammonium radical (see AMMONIA), the CARBONATE, the CHLORATE, the NITRATE, and the PHOSPHATE A radical consisting of one carbon atom, two oxygen atoms, and one hydrogen atom is known as the carboxyl group, is written COOH, and is characteristic of organic acids such as acetic, uric, formic, and lactic acid See also ION

Radich or **Raditch, Stefan** (both stĕ'fan ra'dĭch), Croatian *Radić*, 1871–1928, Croatian politician Himself of peasant stock, he organized (c 1903) the Croatian Peasant party He fought for the economic emancipation of the Croatian peasants and for self-government of Croatia against Hungarian and (after 1918) Serbian centralism He opposed the union (1918) of Croatia with Serbia and led the Croatian separatists in the newly created Yugoslav state By joining (1924) the Peasant International at Moscow he exposed himself to charges of Communism Radich was Yugoslav minister of education (1925–27) He died of wounds inflicted on him by an assassin in the Yugoslav parliament

radio. Wireless telegraphy and telephony are based on studies of electromagnetic waves by James Clark Maxwell and by Heinrich Hertz The possibility of communication by means of such waves was realized, and in 1895 Guglielmo Marconi gave a demonstration of radiotelegraphy Radiotelephony, the transmission of speech and music and not merely of uniform signals, began its development with the invention of the diode rectifier tube by Sir John A Fleming (1904) and the triode amplifier tube by Lee de Forest (1906) Some practical use was made of radio before the First World War, especially in ship-to-shore communication During the war there were notable developments in radiotelephony between aircraft and ground stations and in determining the position of enemy transmitters by direction finding Broadcasting of speech and music in regularly scheduled programs for the public was introduced in the United States in 1920 by station KDKA at Pittsburgh, Pa During the next years, with the rapid growth of broadcast service, the manufacture of parts and of complete equipment mushroomed in response to public demand Particularly in the United States, the broadcast receiver became a standard household fixture Research and experimentation, zealously conducted both by industry and by radio amateurs, resulted in countless technical improvements and in such applications as FACSIMILE, TELEVISION, and RADAR The basic function of a radio transmitter is to emit from its antenna a magnetic field capable of inducing a voltage in any receiving antenna within its area of radiation This is accomplished in several stages, beginning with an oscillator circuit which generates a voltage of radio frequency (called the carrier wave, carrier current, or carrier frequency) Ensuing stages amplify the oscillator output and combine with it the amplified audio-frequency signal produced initially at the MICROPHONE Amplitude modulation and FREQUENCY MODULATION are the two practical methods of effecting this combination The final amplifier delivers the modulated carrier to the antenna, where this energy is radiated as a magnetic field Reception takes place in four steps—selection and amplification of the desired carrier (see SUPERHETERODYNE), detection or demodulation, and amplification of the resulting audio signal and its transformation into sound by a LOUDSPEAKER See O E. Dunlap, *Radio's 100 Men of Science* (1944), A R. Frey, *Fundamentals of Radio Communication* (1944), K S. Tyler, *Modern Radio* (1944), Erik Barnouw, *Handbook of Radio Production* (1949); R. W Hallows, *Wireless Simply Explained* (1949), Morris Slurzberg and William Osterheld, *Essentials of Radio* (2d ed., 1950).

radioactivity, property exhibited by a number of chemical elements—e g , actinium, polonium, radium, thorium, and uranium—that involves the giving off of radiations unlike ordinary radiation Becquerel (1896) discovered that salts of uranium when brought into the vicinity of an unexposed photographic plate which was carefully protected from light caused this plate to become exposed in spite of its wrapping These same salts when placed near a charged electroscope cause it to discharge Furthermore, they are able to produce fluorescence and also glow in the dark Since these effects are produced whether salts of a radioactive element are used or the pure element is used alone, radioactivity is a property of the ATOM of the element and not dependent upon the nature of the salt Marie and Pierre Curie extended the work on radioactivity, they demonstrated the radioactive properties of thorium and discovered the highly radioactive element RADIUM It is known that the radiation is of three distinct kinds, differing in velocity, in the way in which they are affected by a magnetic field, and in their ability to penetrate or pass through other substances Rays given off by radioactive substances consist of the so-called alpha, beta, and gamma rays The alpha rays, according to the important research of Rutherford, consist of positively charged particles, helium nuclei, which are hurled off from the atom They have a much lower velocity and smaller penetrative power than the other radiations, and their direction is changed slightly by a magnetic field The beta rays consist of electrons (or negative charges of electricity), they have a higher velocity than the alpha rays, and their direction is changed markedly by a magnetic field The gamma rays have the greatest penetrative powers of all three, being able to pass through thick layers of metals Their velocity is nearly that of light, and their direction is not changed by a magnetic field The atoms of the elements exhibiting radioactivity are not stable and are found to be undergoing disintegration (i e , breaking down) continually The disintegration proceeds at a definite rate (each of the radioactive elements has a definite "life"), and there is no known means by which this rate and process of change can be affected in any degree For example, it has been found constant for all temperatures to which it has been possible to subject the elements or their salts From the elements of higher atomic weights those of lower atomic weight are produced For example, from the disintegration of uranium (at wt =238 07), the element ionium (at wt =230) is produced From the disintegration of ionium, radium (at wt =226 05) is produced, the change being brought about by the ejection of a positively charged helium nucleus from the atom of the heavier element In turn, radium disintegrates Such a progression of changes from one element to another of lower atomic weight results finally in an element which is without radioactive properties and does not disintegrate The progression of changes is known as a disintegration series Because of the definite rate of disintegration the age of rocks can be determined by measuring the ratios between the disintegration products in them Lead is the end product in the uranium disintegration series and is also the end product in the disintegration series of other radioactive elements Thorium undergoes disintegration to produce mesothorium 1 Following this are mesothorium 2, radiothorium, thorium X, thoron, thorium A, B, etc , and finally thorium lead, which has an atomic weight of 208 016 Actinium results from the disintegration of protactinium and following it in order are radioactinium, actinium X, actinon, actinium A, B, etc , and finally actinium lead, which has an atomic weight of 207 016 For radioactive isotopes, see ISOTOPE

radio beacon, radio transmitting station to aid ships and aircraft in determining position and direction The simplest form of radio beacon is a radio signal tuned in through a loop antenna By rotating the antenna, the direction of strongest reception and, therefore, the bearing of the beacon can be determined If bearings are taken on two beacons of known location the position of the craft can be fixed by triangulation The radio-range beacon of an airport transmits at a set frequency signals known as A (—) and N (—) signals in alternate quadrants The overlapping of these signal quadrants creates the equisignal zones or beams, in which only a steady hum can be received The four equisignal zones are arranged to coincide with the standard flight approaches to the airfield A pilot flying a course approximating one of these standard approaches will upon entering the range hear either the N or A signal in his earphones By swinging to the right or left, as is indicated by the signal, he can pick up the beam and follow it to the airfield In overcasts he will know he is over the airport when he loses the signal entirely, for a zone of silence extends directly above the beacon A more recently developed radio-range beacon is the very high frequency (VHF) omnidirectional type Within range its signal can be picked up by a plane at any bearing from the beacon. Distance-measuring equipment (DME) tuned to the signal tells the pilot how far he is from the beacon Fan marker beacons and Z marker beacons emit characteristic signal fields of controlled height and broadness and indicate course position in respect to a near-by landing field or an airway

Radio City see ROCKEFELLER CENTER

radio frequency Electromagnetic waves with a period or cycle suitable to utilization in wireless communication are said to have a radio frequency They serve as carriers of the lower frequency audio waves generated in a microphone by sound Short waves have relatively high frequencies, long waves have relatively low frequencies Waves are identified by their kilocycles (thousands of cycles) or megacycles (millions of cycles) per second, i e , by their frequencies The waves regularly used in broadcasting have frequencies ranging from 550 to 1,600 kilocycles Waves with frequencies above 1,600 kilocycles are called short waves, those with frequencies of less than 550 kilocycles are called long waves A range or band of radio frequencies is regularly assigned to a broadcasting station by the nation in which it operates By international agreements, some of the frequencies are reserved for specific purposes, as for aircraft and ship communication and for amateur and experimental work

radiometer (rā″dēō′mutur), instrument by means of which radiant energy can be detected and its intensity measured It consists essentially of two parts—a glass bulb from which air has been removed to create a nearly complete vacuum and, within the bulb, a pair of very light, horizontal bars crossed and resting upon a vertical support at their intersection (so that they can rotate freely) and having a brightly polished metal vane placed vertically at each of the four free ends One side of each vane is blackened, the other is left polished When radiant energy strikes the blackened surfaces, it is absorbed, raising the temperature of that surface and causing the molecules of air still left within the bulb to become more active around that surface As a result of the more violent activity of these molecules on the blackened surface, the whole set of vanes is set in motion The velocity of the rotating vanes is an indication of the intensity of the radiant energy The radiometer was invented by Sir William Crookes

radiotherapy (rā″dēōthĕ′rupē), treatment of disease by means of radiation, using X rays, radium, and certain other rays Radium salts emit three kinds of radiation, known as alpha, beta, and gamma rays, and radium emanation, a gas which is the element of radon The very penetrating gamma rays are employed in the treatment of carcinoma, sarcoma, and other growths, and the beta rays are used in certain superficial conditions Radon, which also emits gamma rays, is sometimes collected in small containers which are embedded right in the tissue to be treated See also X RAY

radish, annual or biennial herb (*Raphanus sativus*) of the mustard family, with whitish or pinkish flowers and an edible, thickened root of little nutritive value but good as a relish It is a cool-weather plant that grows quickly and can sometimes be eaten three weeks after sowing of seed There are many shapes, colors, and sizes, the red and the white being most used Some kinds reach a very large size and these are generally cooked The long, curved fruit pods of the rat-tailed radish are eaten either raw or pickled

Radishchev, Aleksandr Nikolayevich (ŭlyĭksän′dur nyĭkul′yuvĭch rŭdyĭsh′chĭf), 1749–1802, Russian writer and reformer His fame rests on one work, *A Journey from St Petersburg to Moscow*, which he issued from his own press in 1790 Although in form it is modeled on Sterne's *Sentimental Journey*, in content it is an outspoken attack on serfdom and a plea for peasant emancipation and ownership of the land It was published in London in 1858, but was not reissued in Russia until 1888 Exiled to Siberia by Catherine II, Radishchev was pardoned (1801) by Alexander I He committed suicide

Radisson, Pierre Esprit (pyĕr′ ĕsprē′ rădĕsŏ′), c 1632-1710, French explorer and fur trader in North America He arrived in Canada in 1651 His four journals, first published as the *Voyages of Pierre Esprit Radisson* (1885), are confusing documents, often leaving great doubt as to the location of places and the time of events The first journal tells of his capture (1652 53) by the Iroquois It also asserts that he made a trip to the West with his brother-in-law, Médard Chouart, sieur des Groseilliers, his companion on the later three trips, it is probable, however, that only Groseilliers undertook this journey mentioned in the journal On the second trip (1659–60) the two men entered Lake Superior and went as far west as the Sioux villages near Isanti Lake, the first white men to enter the region that is now Minnesota They returned with an immense cargo of furs, which were confiscated at Montreal because they had traded without a license This episode led Radisson and Groseilliers to transfer their allegiance to the English and, backed by Prince Rupert, they set sail in 1668 for Hudson Bay. Radisson's ship was turned back but Groseilliers's continued to establish Fort Charles at the mouth of Rupert river in James Bay. He returned to England with furs, and in 1670 both men were back at Hudson Bay, Radisson establishing Port Nelson on the Nelson river It was thus largely because of their efforts and Radisson's stories of the wealth of the north in furs that the HUDSON'S BAY COMPANY was formed Later Radisson returned to the French and led a plundering expedition against the English forts on Hudson Bay He finally, in 1684, joined the English again and after a long lawsuit was pensioned by the Hudson's Bay Company in his old age See G L. Nute, *Caesars of the Wilderness* (1943)

Raditch, Stefan. see RADICH, STEFAN

radium, lustrous white, metallic, radioactive chemical element (symbol=Ra, for physical constants, see ELEMENT, table) Upon exposure to air it corrodes rapidly It reacts with and decomposes water In chemical activity it resembles closely the elements calcium, strontium, and barium, with which it appears in the periodic table With chlorine and bromine it is combined respectively in a chloride and a bromide Radium bromide is the usual form in which it appears commercially Radium is important for its great RADIOACTIVITY, which is equally high both for its salts and for the pure metal The element is derived from the disintegration of URANIUM, but not directly, for another radioactive element, ionium, is formed first and from it radium Radium undergoes disintegration also, yielding the gaseous element RADON, which in turn disintegrates as does each resulting product, thus are produced in order radium A, B, C, D, E, F (polonium), and G This last, radium G, has an atomic weight of 206, almost that of ordinary lead (207 22), and since it is the final product in this disintegration series which started with uranium, it is known as uranium lead In addition to the three kinds of radiation (the alpha, beta, and gamma rays) given off by radium and its decomposition products, energy in the form of heat is liberated continually at the rate of about 118 to 120 calories per hour for each gram of radium present either free or combined in the radium salt The element is found combined in nature, occurring in extremely minute quantities in uranium ores (in the ratio of one part of radium to about 3,000,000 parts of uranium), such as carnotite (United States) and pitchblende (Europe, the Belgian Congo, and Canada) Following the discovery of radioactivity by Becquerel (1896) as exhibited by uranium salts Marie and Pierre Curie found that other elements were present in pitchblende which were responsible also for this phenomenon In pitchblende from which the uranium had been removed, they discovered the presence of the radioactive element polonium (1898), and later (1910) Mme Curie isolated metallic radium The small amount of the element present in any ore and the difficulty of extraction make its cost very high and as a result limits its application Radium is probably best known for its use in the treatment of cancer The radium emanation (radon) given off from the bromide or sulphate is pumped off and confined in small tubes which can be conveniently applied to the diseased areas This treatment has produced some results in checking cancerous growth Much of the radium obtained is used in the manufacture of luminous paints and varnishes

radium emanation see RADON

radium therapy see RADIOTHERAPY

Radnorshire (răd′nur-shĭr) or **Radnor,** border county (471 sq mi , 1931 pop 21,323, 1948 estimated pop 20,288), E central Wales The county town is New Radnor The terrain is mostly hilly, rising to more than 2,000 ft in the Forest of Radnor, an extensive moorland area The region is, and has always been, one of the most sparsely populated of Wales (45 per square mile) The raising of sheep and cattle is the chief occupation The soil is not very fertile Radnorshire was taken from the control of its English marcher overlord and organized as a county in 1536 There are no large towns and no manufacturing

Radom (ra′dŏm), city (pop 69,455), central Poland, S of Warsaw One of the oldest Polish towns, it probably originated as an assembly place for local diets, its first church was built in 1187 It was the seat of Polish diets (14th-16th cent), of a tribunal (1613–1766), and of the Confederation of Radom (1767), which requested Catherine II of Russia to guarantee the old Polish constitution Radom passed to Austria (1795) and to the Russian Empire (1815) It reverted to Poland in 1919 Today it manufactures clothes, metal products, and leather

radon (rā′dŏn), **radium emanation,** or **niton** (nī′tŏn), gaseous, radioactive chemical element (symbol=Rn, for physical constants, see ELEMENT, table), derived from the disintegration of RADIUM In the periodic classification of the elements, it falls into the group of inert gases It exhibits RADIOACTIVITY and constitutes the emanation produced by radium and its salts which is used in the treatment of cancer. It undergoes disintegration, yielding radium A.

Rae, John (rā), 1813–93, Scottish arctic explorer. A physician in the employ of the Hudson's Bay Company in N Canada, Rae made (1846–47) a journey of exploration from Fort Churchill to the Gulf of Boothia, which he described in his *Narrative of Expedition to the Shores of the Arctic Sea* (1850) In 1847 he joined Sir John Richardson's expedition in search of the lost party of Sir John FRANKLIN, later (1851) he himself commanded a search party which crossed the barren grounds and explored part of Victoria Island It was not until his expedition of 1853–54, however, that he found evidence of Franklin's fate, for which he received the award offered by the British government

Raeburn, Sir Henry (rā'bûrn), 1756–1823, Scottish portrait painter. Son of a miller near Edinburgh, he was apprenticed to a goldsmith at 15 He early showed talent and after an advantageous marriage in 1778 devoted himself to portraiture In 1785 he went to Italy, where he spent two years When he returned to Edinburgh (1787) he was already in possession of his mature style, establishing himself in that city, he devoted himself to portraying the celebrities of his native Scotland His work was in constant demand and he enjoyed every honor, including knighthood (1822) His fine portraits number over 700 Raeburn's work is distinguished by a frank and direct approach, forcefulness, and sincerity His telling likenesses, for the most part painted in all detail direct from life, have a much more intimate character than the formal portraits of his famous contemporary Reynolds Raeburn is best represented in the National Gallery of Scotland, Edinburgh, which contains, among many others, his self-portrait and portraits of Mrs Campbell, Dr Wardrop, Adam Rolland, Dr Adam, and Mrs Scott Moncrieff, all justly famous His work is also in many other British galleries The Metropolitan Museum, the New York Public Library, and the Worcester (Mass) Art Museum all have splendid examples of his work See biographies by W R Andrew (1894), Sir Walter Armstrong (1901), and R S Clouston (1907)

Raeder, Erich (ā'rĭkh rā'dur), 1876–, German admiral As chief of staff to Admiral Hipper he took part in the battles of Dogger Bank (1915) and Jutland (1916) Appointed (1935) commander of the German navy by Hitler, Raeder secretly rebuilt the navy in violation of the Treaty of Versailles In 1943 Admiral Doenitz succeeded him in command Captured (1945) by Allied troops, Raeder was sentenced to life imprisonment as a war criminal for planning aggression and for violating the laws of naval warfare

Raeford (rā'furd), town (pop 1,628), co seat of Hoke co, S N C, SW of Fayetteville, in a cotton, tobacco, fruit, and truck area, with cotton mills.

Raemaekers, Louis (ra'mākurs), 1869–, Dutch cartoonist He contributed to the Amsterdam *Telegraaf* for over 30 years In the First World War, Raemaekers gained world renown for his anti-German cartoons These were published in the United States in three volumes (1916–18) In 1940 Raemaekers came to the United States to live

Rafa or **Rafah** (both ra'fa), village, on the border of Egypt and Palestine The ancient name was Raphia (ruff'u) It was brought entirely under Egyptian control in May, 1948 Here in 217 B.C, Ptolemy IV defeated Antiochus III

Raff, Joseph Joachim (yō'zĕf yō'ākhĭm ruf'), 1822–82, German composer and pianist, largely self-taught He was a friend and follower of Liszt, who produced his opera *King Alfred* at Weimar in 1851 A prolific composer, Raff achieved a position of eminence in Germany during his late years, but is remembered only for a few salon pieces

Raffaelli, Jean François (zhäⁿ' frāⁿswä' rafaĕl'ē), 1850–1924, French painter, sculptor, and etcher He is best known for his directly painted pictures of the streets of Paris and for his portraits His portrait of Clemenceau and *The Old Convalescent* (both Luxembourg Mus, Paris) and *Place Saint-Germain-des-Prés* (Metropolitan Mus) are good examples of his work

Raffaello Santi see RAPHAEL SANTI

Raffet, Denis Auguste Marie (dünē' ōgüst' marē' rafā'), 1804–60, French lithographer and illustrator, student and follower of Charlet He attained an individual style in his series depicting Napoleon I and his soldiers His most notable work was a series of lithographs (1850) of the siege of Rome An excellent draughtsman, Raffet illustrated numerous works, among them the *Histoire de la Révolution française* of Adolphe Thiers

raffia (rāf'ēə) or **raphia** (rā'fēə), fiber obtained from the raffia palm of Madagascar, exported for various uses, such as tying up plants that require support, binding together vegetables to be marketed, and weaving baskets, hats, and mats It is also made into a native cloth that is exported as rabanna The raffia palm (*Raphia ruffia*) is crowned with enormous leaves that may be as much as 65 ft long and composed of 80 to 100 leaflets The fiber, which is soft, pliable, strong, and nonshrinking when wet, is torn in thin strips from these leaves. After being dried in the sun, raffia takes on a yellowish-tan hue, but it is often dyed other colors.

Raffles, Sir Thomas Stamford Bingley, 1781–1826, English East Indian administrator He was born at sea Starting (1795) as a clerk in the East India House, he was sent to Penang in 1805 as assistant secretary His knowledge of the Malay language and customs brought him a large part in planning the capture of Java from the Dutch He ruled Java as lieutenant governor (1811–15) and reduced the power of native princes Raffles also reorganized the administration and launched reforms in taxation and land tenure Recalled (1815) on the eve of Java's restoration to Holland, he returned to England, where his *History of Java* (1817) was published While lieutenant governor of Bencoolen in Sumatra (1818–23), he secured the transfer (1819) of SINGAPORE to the East India Company and initiated policies that contributed greatly to Singapore's subsequent wealth Raffles was conspicuous for his liberal attitude toward peoples under colonial rule, his rigorous suppression of the slave trade, and his zeal in collecting historical and scientific information He played the chief role in founding the Zoological Society of London and was its first president See biographies by Lady Raffles (1830), D C Boulger (1897), and Emily Hahn (1940)

Rafinesque, Constantine Samuel (rafēnĕsk'), 1783–1840, American naturalist, b near Constantinople, of French and German parentage After a first visit (1802–5) to the United States, spent in making field trips near Philadelphia, he settled in America in 1815 Rafinesque taught botany and modern languages at Transylvania Univ in Kentucky He wrote, not always with scientific accuracy, on banking, history, shells, and fishes, as well as on botany His works include *Ancient History, or, Annals of Kentucky* (1824), *Medical Flora of the United States* (1828–30), *A Life of Travels and Researches in North America and South Europe* (1836), and *New Flora and Botany of North America* (1836) See studies by R E Call (1895) and H B Weiss (1936)

raft, floating platform of wood, cork, or air-inflated rubber for conveying goods or sustaining people Rafts followed tree trunks as a means of floating a person downstream Bound together by vines, strips of animal skin, and later rope, several logs yielded a flat surface upon which material, people, and beasts of burden could move across bodies of water From prehistoric times to the 19th cent rafting was an important means of transportation, and there still are several waterways upon which rafts continue to serve Lumber is still moved cheaply atop rafts Rafts have in recent times come to replace lifeboats on many vessels They are more easily handled and cannot capsize or crash in launching, as boats were wont to do in emergency situations Life rafts need merely be thrown over the side of a ship or permitted to slide down into the water from the simple runways on which they are suspended They are often fitted with lights which flash on immediately upon contact with water Watertight cases fixed to the rafts frequently contain flares for distress signals, emergency food rations, and other paraphernalia calculated to help sustain life while rescue is awaited

Ragau (rä'gô), variant of REU

Ragaz, Bad (bat' ra'gats), town (pop 2,337), St. Gall canton, Switzerland, on the Rhine The mineral waters of Pfafers-Bad, c 2 mi to the south, on the Tamina river, attract many patients The village of Pfäfers-Dorf had a Benedictine abbey, founded c 740 and secularized in 1838

Rages (rā'jēz) or **Rhagae** (rā'jē), ancient and medieval city of Persia, mentioned in the Avesta and in the Behistun inscriptions Seleucus I built a new city near by named Europos after his native town, and other cities were built or rebuilt by the Parthians and Arabs at or near this site Harun-al-Rashid was born at Rages Controlling the great northeastern Persian trade route, it flourished most in the next period, under various rulers, especially under the Seljuks, whose last Persian ruler was defeated and killed near Rages (1194) Fierce religious dissensions caused the destruction of much of the city in 1186, further damage was done by the Mongols (1220), and by 1400 the place was deserted The city is the scene of some of the principal events in the book of Tobit. The name also appears as Ray, Rai, and Rey

ragged robin, slender perennial herb (*Lychnis flos-cuculi*) native to Europe and Asia, but naturalized in E North America, where it has long been a favorite for old-fashioned gardens The plant blooms profusely over a long season, the clusters of flowers having deeply cleft petals of pink or red, with double-flowered and white varieties The ragged robin has also been called cuckooflower and was once known as crowflower, probably being the crowflower used by Ophelia in her garland (Shakspere's *Hamlet* IV 7) The CORNFLOWER is sometimes called ragged robin

Raglan, Fitzroy James Henry Somerset, 1st **Baron** (rā'glun), 1788–1855, English general He entered the army in 1804 and was made (1814) a lieutenant colonel for his services on Wellington's staff in the Peninsular War. He was secretary of the embassy in Paris when Napoleon reentered Paris (1815), and he lost an arm at the battle of Waterloo. Raglan became secretary to Wellington in 1822, conducted a special mission for him to Spain in 1823, was made major general in 1825 and lieutenant general in 1838, and was raised to the peerage in 1852 In the Crimean War, as before, Raglan showed himself a brave officer and was made field marshal after the battle of Inkerman Handicapped by his joint command with the French commander, Marshal Saint-Arnaud, by weather conditions, and by the inefficiency of government departments, he became the object of bitter criticism because of slow military progress and the sufferings of the troops The failure of the attack on Sevastopol hastened his death from disease before the end of the war The raglan, an overcoat in which the sleeves go directly to the neck and without shoulder seams, was named for Lord Raglan.

Ragland, town (pop 1,070), NE Ala, ENE of Birmingham

Ragnarok (rag'narûk") [Norse,=history of the gods], in the *Elder Edda*, a conception of the end of heaven, earth, and hell The gods of ASGARD and the giants fall in combat with each other, and fire destroys everything BALDER is to reappear thereafter and a new world is to be created Wagner's term *Gotterdammerung* is a mistranslation See also GERMANIC RELIGION

ragtime, style in American popular music which originated in the latter part of the 19th cent and was introduced to New York city in 1897 by the pianist Ben Harney Publishers all over the country were publishing pieces in ragtime during the first decade of the 20th cent The peak of its development and popularity came c 1910 and was followed by decadence of the style and a merger with JAZZ Ragtime was an instrumental style, in which the piano was the essential instrument It employed syncopation and polyrhythm to such a degree that all the rhythmic elaborations of jazz are to be found earlier in ragtime

Raguel (rāgū'ul) [Heb,=friend of God] **1** Same as JETHRO **2** Father-in-law of Tobias in the book of Tobit

Ragusa (ragōō'za), city (pop 40,480), capital of Ragusa prov, SE Sicily, Italy, near the site of ancient Hybla Herea It has asphalt plants and a cheese industry The lower part of the city has kept its medieval aspect

Ragusa, Yugoslavia see DUBROVNIK

ragweed, any plant of the genus *Ambrosia*, herbs, most of which are native to America They have inconspicuous flowers and soft leaves The two most common species, *Ambrosia elatior* or *artemisiaefolia* and *Ambrosia trifida*, are coarse annuals called common ragweed and giant ragweed, respectively They are regarded as troublesome weeds because their pollen is acknowledged as the most common cause of hay fever The leaves of *Ambrosia elatior* were formerly used as an astringent and hemostatic, they sometimes impart a bitter taste to milk if eaten by cattle

ragwort see GROUNDSEL

Rahab (rā'hăb), in the Bible, **1** [Heb,=wide] Harlot of Jericho whose protection of Joshua's two spies saved both herself and family from destruction She may be the same as the woman mentioned in the Gospel genealogy as Rachab Joshua 2, Mat 1 5 **2** [Heb,=proud] Monster, something like a dragon Isa 51 9 The name is sometimes translated Isa 30 6, Job 26 13

Raham (rā'hăm), Judahite 1 Chron 2 44.

Rahel (rā'hĕl), variant of RACHEL

Rahway (rô'wā), industrial city (pop 17,498), NE N J, SW of Newark and on the Rahway river, settled c 1720 from Elizabeth, inc 1858 Abraham Clark is buried in the city The British were routed in skirmishes here in 1777 Drug manufacture is one of Rahway's oldest industries

Raiatea (rī"yätā'a), volcanic island (92 sq mi, pop 4,505), S Pacific, largest and most important of the Leeward group of the SOCIETY ISLANDS, French Establishments in Oceania It is W of Tahiti The island is mountainous, the highest peak being Mt Temehani (3,388 ft) Uturoa is the chief port and seat of government of the Leeward Islands, it has a fruit cannery, a government hospital, and a wireless station The chief products are copra, tobacco, kapok, oranges, and vanilla The island was the ancient seat of learning of Polynesia. It was formerly called Uheta

Raiboloni, Francesco · see FRANCIA

Raiffeisen, Friedrich Wilhelm (frē'drĭkh vĭl'hĕlm rĭf'ī"zun), 1818–88, German economist, founder of the Raiffeisen bank After the agricultural crisis in Germany (1846–47), Raiffeisen, realizing that the chief need of the peasant was for credit, started a system of rural credit cooperatives and banks, which he later (1877) unified in the Raiffeisen bank, a form of CREDIT UNION

Raikes, Robert (rāks), 1735–1811, English philanthropist In 1780 he organized a Sunday school, primarily for poor children, who were taught to read and to spell in order that they might read the Bible. The Raikes system spread rapidly through England, and he became known as the founder of

Sunday schools, although others had been concerned with similar undertakings Raikes gave his project publicity in the Gloucester *Journal*, which he had inherited from his father See biography by J H Harris (1899)

railroad or railway. The first railroads were built in England in the 17th and 18th cent for hauling coal and other minerals in wagons drawn by horses Wooden rails were used at first and soon strips of iron were fastened on them Cast iron, however, began to replace the wooden rail in the late 18th cent , when scattered experimentation was conducted by various inventors in England, France, and the United States on the steam-powered LOCOMOTIVE Several "steam wagons" were patented in these centuries—e g , one by Oliver EVANS of Philadelphia in 1782 and another by James WATT of England in 1784—but it was not until 1801 that Richard Trevithick perfected a steam locomotive that was capable of drawing a heavy haulage Locomotives were constantly improved in early 19th-century England, in 1829 George STEPHENSON invented his famous locomotive, the *Rocket* Four years previously an even greater departure had occurred in the development of the railway, in 1825 the Stockton and Darlington Railway (a link in the road from Manchester to Liverpool) was opened for passenger as well as freight service, thus making the railway more than a mining device In the United States, as in England, the first railroads, employing horse and wagon, were used to haul minerals The earliest such railroad, built from Quincy, Mass , to the Neponset river, dates from 1826, and in the next year another such railroad was built in Pennsylvania from coal mines in Carbon co to the Lehigh river The DELAWARE AND HUDSON CANAL Company opened a railroad from Honesdale to Carbondale in 1829, in the same year the company imported two locomotives from England One of these, the *Stourbridge Lion*, was the first locomotive to run on any American railroad On Aug 8, 1829, Horatio ALLEN, drove it the length of the railroad and back again Although this trip was successful, the English locomotives were found too heavy for the tracks Locomotives suited to the American railway were from that time produced domestically, and Matthias BALDWIN of Philadelphia was soon to lead in that field Meanwhile the BALTIMORE & OHIO RAILROAD had been begun in 1828 with horse-drawn cars However, after the successful run (Aug , 1830) of the *Tom Thumb*, built by Peter COOPER, locomotive power was used Later the same year (Nov , 1830) another small engine, built by the West Point Foundry Company, made its first trip on the Charleston and Hamburg RR While the stagecoach type of railroad car was giving way to the square type in the 1830s the map of the United States was lined with many short railroads The big cities on the Atlantic Coast became the nerve centers, while inland points were readily connected with one another Only the ERIE RAILROAD was projected on a grand scale Despite many improvements in railroad technology—e g , in signaling devices and track laying—railroad travel was by no means safe or convenient according to present standards Soon, however the railroad in America served to undermine the commercial value of the TURNPIKE and the CANAL and with the settlement of the Midwest, where railroad building was begun in the 1840s and reached a peak in the 1850s, the railroad reigned supreme as the American medium of inland transportation Because of the heavy capital outlay involved, railroads more and more affected the economic well-being of the country, overspeculation, overbuilding, and disastrous competition affected the consumer as well as the railroad financier Growing sectionalism and the conflict between North and South before the Civil War tended to block large-scale railroad projects (e g , that of Asa WHITNEY), but the war itself gave tremendous impetus to railroads, which aided in the transportation of supplies and troops, as in the case of the PENNSYLVANIA RAILROAD Furthermore, Congress by acts of 1862 and 1864 initiated the building of the first transcontinental railway, the UNION PACIFIC RAILROAD, which was completed in 1869. The Union Pacific and the other transcontinental railroads completed later (see NORTHERN PACIFIC RAILWAY, SANTA FE RAILROAD, and SOUTHERN PACIFIC COMPANY) were given vast domains from public lands The railroads in the West as well as the Canadian transcontinental lines were generally built to develop new territory Frequently promoters were hired to induce farmers to settle the uncultivated lands With the mass production of steel, improvements in railway engineering and construction grew apace, but after the Civil War they were totally eclipsed by the great battles of the railway financiers Cornelius VANDERBILT consolidated the NEW YORK CENTRAL RAILROAD system, but he like others—e g , Jay GOULD, Daniel DREW, James FISK—was accused of acting with complete disregard for the American public Political chicanery, financial holocausts, and ruinous panics resulted. The process of consolidations continued by way of corporate mergers and operating agreements, and soon the farmer and small shipper began to bear the brunt of such unfair practices as the REBATE Public indignation welled up The GRANGER MOVEMENT directed much of its protest at the railroads in the 1870s, and states began to take measures against railway abuses. In 1887 Congress created the INTERSTATE COMMERCE COMMISSION, which over a period of years sought to fix adequate controls upon railroads The 1880s saw numerous other developments, including the adoption of the standard gauge (4 ft 8½ in between rails), the revival of Southern railway construction, and the last period of feverish expansion,—which was attributable in part to such men as James J HILL and Henry VILLARD Thereafter railway construction drastically declined, and disastrous rate wars followed One of the greatest financial battles over American railways was fought by Hill and Edward H HARRIMAN Labor became a potent force in the railroad world in the late 19th cent when the four big independent brotherhoods were organized Other unions sprang up, and their incessant struggle for better working conditions resulted in the Adamson Act of 1916 In the First World War, President Woodrow Wilson, by act of Congress, took over the country's railway system in 1917 After the railroads were returned (1920) to private ownership they failed to regain their prosperity largely because of added competition from the automobile, the bus, and the airplane Nevertheless, railroad management met this problem in part by improving safety and comfort Diesel locomotives were increasingly used in congested areas, and streamlined trains appeared in the 1930s In the Second World War many railroads previously on an insecure footing regained their stability In England, meanwhile, a well-integrated railway system was built mostly with private capital, and the Railways Act of 1921 amalgamated most of the railways into four systems Railroads in France date from 1827, and after the 1840s France had one of the largest railroad systems in Europe The first German railroad was opened from Nuremburg to Furth in 1835 Soon Germany had a well-developed system, and by the turn of the 20th cent a majority of the railroads were owned by the state In most other European countries, railroads date from the middle of the 19th cent and have increasingly come under government control and ownership British capital laid the basis for many of the railroads of South America American engineering skill contributed greatly there The greatest railroad systems in Asia exist in India and Japan Railroads of world importance include the BAGHDAD RAILWAY, the TRANS-CASPIAN RAILROAD, the CHINESE EASTERN RAILWAY, the TRANSANDINE RAILWAY, and the TRANS-SIBERIAN RAILROAD See W M W Splawn, *Consolidation of Railroads* (1925), C E R Skerrington, *A Hundred Years of Inland Transportation, 1830–1933* (1934), Matthew Josephson *Robber Barons* (1934), O D Boyle, *History of Railroad Strikes* (1935), Jocelyn Oliver, ed , *Railroads round the World* (1936), R D Tiwari, *Railways in Modern India* (1937), T W Van Metre, *Trains, Tracks and Travel* (5th ed , 1939), K T Healy, *Economics of Transportation in America* (1940), E P Morse, *Cavalcade of the Rails* (1940), C E Lee, *The Evolution of Railways* (2d ed , 1943), A C Kalmbach, *Railroad Panorama* (1944), K A Douglas, *French Railroads and the State* (1945), Barrington Tatford, *The Story of British Railways* (1946), and Stewart Holbrook, *The Story of American Railroads* (1947)

Raimar, Freimund see RÜCKERT, FRIEDRICH

Raimondi, Marcantonio (märkäntō'nyō rēmōn'dē), b c 1480, d before c 1534, Italian copperplate engraver He studied niello and line engraving in the workshop of the goldsmith-painter, Francia His earlier engravings show the influence of Francia and of the great German engravers In 1506, in Venice, Raimondi attracted wide attention by his copperplate counterfeits of Dürer's *Life of the Virgin* and *Little Passion*, to which he appended the counterfeited signature of Dürer—the result was a complaint by the German to the Venetian senate But his close study and imitation of Dürer's works had a marked and salutary effect upon Raimondi's technique He worked mainly in Bologna and Venice prior to 1510 At that time he moved to Rome by way of Florence, where he engraved *The Climbers*, after Michelangelo's cartoon of *The Battle of Anghiari*, with a landscape background in imitation of Lucas van Leyden Selected by Raphael to engrave his works, Raimondi thenceforth devoted himself almost exclusively to reproducing the designs of Raphael and his pupils, becoming, under the guidance of the Umbrian, the most eminent engraver of his works He copied not only the finished paintings, but also the tentative designs and rough sketches of the composition, thus preserving these valuable records of Raphael's methods After Raphael's death Raimondi was commissioned by Giulio Romano to engrave a series of licentious designs from Romano's illustrations of Aretino's *Sonnetti lussuriosi*, which were destroyed by Pope Clement VII Raimondi was temporarily imprisoned. In 1527 he lost his property in the sack of Rome and returned to Bologna, passing his remaining years in obscurity Among the best of his engravings are *Lucretia*, *Massacre of the Innocents*, *Poetry*, *The Death of Dido*, *Adam and Eve*, *Mary with the Dead Christ*, and *The Judgment of Paris*, after Raphael, *Martyrdom of St Lawrence*, after Bandinelli, and *Hercules and Antaeus*, after Romano He had many pupils See A. M Hind, *History of Engraving and Etching* (rev ed , 1923)

Raimu (rāmü'), 1883–1946, French moving-picture actor, whose full name was Jules Raimu. He was the principal comedian of the Théâtre de Paris when he began (1929) his career in moving pictures Raimu gained fame in Europe in Marcel Pagnol's productions of *Marius* and *Caesar* and first won acclaim in the United States in 1940 for his superlative performance in *The Baker's Wife*

Raimund, Ferdinand (fĕr'dēnänt rī'mōönt), 1790–1836, Austrian actor and dramatist From 1817 he was a popular comedian in Vienna In 1828 he began to produce his plays of Vienna life, such as *Der Bauer als Millionär* [the peasant millionaire] (1826), *Der Verschwender* [the spendthrift] (1833), and *Der Alpenkönig und der Menschenfeind* (1828, Eng tr , *The King of the Alps*, 1850), which raised the folk comedy to a literary level At the height of his fame he was attacked by melancholia and shot himself The Raimund Theater Association, formed in Vienna in 1890, dramatized episodes from his career

rain, precipitation formed by the further condensation of the moisture in a cloud. The raindrops formed are enlarged by coalescing with others on impact and by condensation, on their colder surface, of the moisture in the air through which they pass From the time they leave the bottom of the cloud, evaporation takes place, and if the cloud is high, the air warm and dry, and the raindrops small so that they fall slowly, they may evaporate completely before they reach the earth Rainfall, one of the primary elements in CLIMATE and a factor of tremendous importance in the distribution of plant and animal life, varies from less than an inch annually in an arid DESERT to more than 400 in where the monsoons strike the Khasi hills in Assam, India, and on the windward slopes of Hawaiian mountains In the United States the range is from less than 2 in in Death Valley, Calif , to more than 100 in on the coast of Washington state, in most of the country the average rainfall is between 15 and 45 in annually Factors controlling the distribution of rainfall over the earth's surface are the belts of converging-ascending air flow (see DOLDRUMS and POLAR FRONT), air temperature, moisture-bearing winds, ocean currents, distance inland from the coast, and mountain ranges Ascending air is cooled by expansion, which results in the formation of clouds and the production of rain Conversely, in the broad belts of descending air (see HORSE LATITUDES) are found the great desert regions of the earth, descending air being warmed by compression and therefore absorbing instead of releasing moisture If the temperature is low, the air has a small moisture capacity and, consequently, is able to produce little precipitation When winds blow over the ocean, especially over areas of warm water (where evaporation of moisture into the air is active), toward a given coastal area, that area receives more rainfall than a similar area where the winds blow from the interior toward the oceans Areas near the sea receive more rain than inland regions, since the winds constantly lose moisture and may be quite dry by the time they reach the interior of a continent Windward slopes of mountain ranges generally receive heavy rainfall, while the leeward slopes receive practically none The southwest coast of Chile, the west coast of Canada, and the northwest coast of the United States receive much rain because they are struck by the moisture-bearing westerlies from the Pacific and are backed by mountains which force the winds to rise and drop their moisture The territories immediately east of the regions mentioned are notably dry There are thousands of stations throughout the world where rainfall observations and records are made Included in such records is the fall of SNOW, reduced to its equivalent in rain Rainfall is measured, in terms of inches of depth, by means of a simple receptacle-and-gauge apparatus or by more complex electrical or weighing devices, placed where eddies of air will not interfere with the normal fall of the raindrops In addition to the annual, monthly, and daily totals, the depth of individual rainfalls and their intensity (amount of rain falling during a specific period of hours or minutes) and other pertinent facts are recorded Knowledge of the amount of rain that can be expected to fall annually and of its distribution throughout the year is of importance in many fields in agriculture, in problems of the choice of crops, the time of planting, irrigation and drainage systems, and soil erosion, in cities, in the construction of reservoirs and sewerage systems and, in certain areas, the construction of levees or other protection against flood, in aviation and in transportation by river, and in the building of bridges, dams, and hydroelectric plants. The total annual rainfall is often of less importance than the distribution of the precipitation throughout the year. Twelve inches may be ade-

quate for agriculture if the rain comes at the right time (during the growing season) and if the ground is able to retain all that falls during each rainstorm On the other hand, even 50 in may be insufficient if most of the rain occurs outside of the growing season or if the rain falls in short downpours and runoff is rapid The need for rain at a particular time and the dangers attendant upon drought brought rain prominently into the religion of most agricultural peoples Rain-gods and thunder-gods are more prominent in many mythologies than sun-gods, and they have been propitiated in various ways in different cultures The rain dances of the American Indians may, however, be said to be generally typical of all in the elaborate symbolic gestures and patterns and in much use of drums and rattles (presumably sympathetic magic by imitation of the sounds of thunder and showering rain) Because the purpose is to make the fields bear crops, the connection with fertility rites is obvious Sporadic experiments have been made in an attempt to cause rain by scientific methods, although some success has been reported as a result of scattering, from airplanes, pellets of dry ice through certain formations of supercooled clouds, the results are not conclusive Precipitation maps are published by the U S Weather Bureau, Washington, D C

Rainalducci or **Rainallucci, Pietro** (pyā'trō rīnäl-dōōt'chē, rīnäl-lōōt'chē), d 1333, Italian churchman (b Corvaro, near Rieti), antipope (1328–30) with the name Nicholas V He is sometimes called Peter of Corbara Having separated from his wife, he became (1310) a Franciscan and was made a penitentiary in Rome In 1328 Emperor Louis IV in his struggle with Pope John XXII (at Avignon) invaded Italy and took Rome, he declared the pope deposed for heresy and set up Pietro instead With in a year Pietro found his position untenable, and in 1330 he made submission to the pope, who pardoned him and kept him an honorable captive in the papal palace at Avignon thereafter

rainbow, arc showing the colors of the SPECTRUM, violet inside and red outside, which appears when the sun shines through water droplets It often appears after quick-passing thundershowers in the late afternoon The sun, the observer's eye, and the center of the arc must be on a line —the bow appears in the part of the sky opposite the sun The bow is an arc of 180° if the sun is at the horizon and cannot appear if the sun is high in the sky The bow is caused by REFRACTION and REFLECTION of rays from the sun, the rays refracted as it enters the sphere of the raindrop, is reflected from the drop's opposite side, and is again refracted as it leaves the drop and passes to the observer's eye When conditions are suitable two bows are seen, the larger, paler, secondary rainbow, with colors reversed (red inside), outside the primary bow is caused by the two refractions and two reflections The "rainbows" of mist, a lawn spray, or spray from a waterfall are similarly caused Descartes made an explanation of the rainbow, but the correct explanation was impossible until light and its reflection and refraction were understood—until the spectrum was explained In religion and art, the rainbow symbolizes God's promise of mercy to mankind after the flood (Gen 9 13) The Greeks and Romans called the rainbow the sign of Iris, messenger of the gods The Inca and other Indians regarded the rainbow as a gift from the sun-god There are fairy tales of the search for the pot of gold at the foot of the rainbow

Rainbow Bridge National Monument: see NATIONAL PARKS AND MONUMENTS (table)

Rainbow Division, nickname of the 42d Division of the U S army in the First World War The Rainbow Division, the first American combat division to arrive in France, participated in the second battle of the Marne, fought in the counteroffensive at Château-Thierry, and spearheaded attacks at Saint-Mihiel and in the Meuse-Argonne sector Throughout the campaigns, the division suffered heavy losses See Henry J Reilly, *Americans All—The Rainbow at War* (1936)

rainbow fish see GUPPY

Raines, John (rānz), 1840–1909, American legislator, b Canandaigua, N Y He practiced law in New York state, served in the state assembly (1881–82, 1885) and senate (1886–89) before he was elected (1888) to the U S Congress He was in the state senate again after 1895 and drafted the unique **Raines Law** of 1896, providing for liquor sales on Sundays in New York state only in hotels paying a high license fee and having at least 10 bedrooms

Rainey, Henry Thomas, 1860–1934, American legislator, speaker of the House of Representatives (1933–34), b Carrollton, Ill, grad Amherst (B A, 1883, M A 1886) and Union College of Law, Chicago (LL B, 1885) He practiced (1885–1902) law at Carrollton and served in the U S Congress from 1903 to 1921 and from 1923 to his death A strong advocate of free silver and low tariffs, he was Democratic floor leader (1931–33) and succeeded John N. Garner as speaker in 1933

Rainier (rūnēr', rā-, rā'nēr), city (pop. 1,183), NW Oregon, on the Columbia and NW of Portland; settled 1851, inc. 1885. It has fisheries

Rainier Mount: see MOUNT RAINIER NATIONAL PARK.

Rain-in-the-Face, d. 1905, North American Indian chief, leader of the Sioux He was one of the commanders, with Sitting Bull, of the Indian forces at the battle on the Little Bighorn river in Montana on June 25, 1876, when George A. Custer and his entire force were annihilated

Rainolds or **Reynolds, John** (both rē'nŭldz), 1549–1607, English clergyman He was a fellow (1568–86) of Corpus Christi College, Oxford, and later president (1598–1607) of the college He was a leading Puritan representative at the Hampton Court Conference (1604) He suggested to King James that a new translation of the Bible be undertaken, and he assisted in translating the Prophets for the Authorized Version

rainproof fabric: see WATERPROOF AND WATER-REPELLENT FABRICS

Rainy Lake, c 60 mi long, W Ont, lying partly on the Minn -Ont boundary, irregular in shape and dotted with islands, in rough woodlands Its outlet, **Rainy River**, flows westerly 85 mi along the international line to Lake of the Woods, passing International Falls and Baudette, Minn

Rainy River, town (pop 1,205), W Ont, on Rainy River at the Minn border, S of Lake of the Woods and W of Fort Frances It is a railroad division point in a lumber and dairy-farming area

Rainy River, on the Minn -Ont line see RAINY LAKE

Rais, Gilles de Laval, seigneur de see RETZ, GILLES DE LAVAL, SEIGNEUR DE.

Raisin, river, c 115 mi long, rising in S Michigan and flowing generally E to Lake Erie, at Monroe After Detroit's surrender in the War of 1812, American troops under Gen James Winchester sent to retake Frenchtown (the present Monroe), were crushed there by the British and their Indian allies The Indians, after promising protection, massacred (Jan 22, 1813) the remaining Americans, and Remember the River Raisin" became the American rallying cry to the war's end

raisin, dried fruit of certain varieties of grapevines bearing grapes with a high content of sugar and solid flesh Although the fruit is sometimes artificially dehydrated, it is usually sun-dried The culture of grapes for the production of raisins is limited to regions with a long, hot growing season because the grape must remain on the vine until fully mature in order to attain a high percentage of sugar and because enough time must elapse between harvesting and fall rains to permit sun-drying Raisins are produced from grapes of the European type (*Vitis vinifera*) Most seedless raisins, especially in California, are produced from the Sultanina or Thompson seedless grape, known in international trade as the Sultana A different variety, produced in California, is known there as the Sultana The Muscat, a very ancient variety, is noted for its flavor and meatiness, but it has seeds and is somewhat sticky, it is commonly marketed in clusters for table use Raisins of sharp flavor and firm texture are often called currants and are preferred for certain bakery products The best known of these is the Black Corinth, or Zante, currant of Greece, the variety is grown also in California Grapes have been dried for out-of-season consumption from ancient times and were early important in Mediterranean trade Spain, Asia Minor, and Greece were long the centers of cultivation, but in the 20th cent Australia also became an important producer and the United States (California) became the leading producer Raisin production was introduced in California by Spanish missionaries in the late 18th cent and began to assume importance after 1875, although grapes are cultivated over a large area, the region around Fresno is outstanding in the production of grapes for raisins Clusters of fully ripened grapes are usually picked by hand, placed in trays between the rows of vines to dry in the sun for several days, then shipped to packing houses, where they are cleaned and stemmed by machinery Today most seed grapes are seeded, and many grapes are bleached and dipped in oil to improve their appearance About 3½ lb of grapes yield a pound of raisins Raisins are valuable nutritionally because of their sugar, mineral (especially iron), and vitamin (B and A) content See *Grapes, Raisins, and Wines* (U S Tariff Commission, Report 134, Second Series)

Raisuli, Ahmed ben Mohammed (a'mĕd bĕn mōhä'mĭd rīsōō'lē), 1875–1925, Berber bandit, tribal leader in NW Morocco His kidnapings of foreigners for ransom created international incidents embarrassing to the Moroccan government Defeated by the Spanish in 1919, he joined them later against Abd-el-Krim, who captured him

Rajagopalachari, Chakravarti (chŭkrŭvär'tē rə"jugōpä"lŭchä'rē), 1879–, Indian nationalist, educated in India He was admitted to the bar in 1900 In 1919 he joined the Indian National Congress, in which he rose to prominence. He was (1937–39) prime minister of Madras During the Second World War he broke with the Congress when he favored active support of the British war effort and the establishment of Pakistan After the war, however, he rejoined Gandhi He was (1948–50) the last governor general of India before that office was abolished. His name also appears Rajagopalachariar and Rajagopalacharya

Rajamundry or **Rajahmundry** (both rajəmŭn'drē), town (pop. 74,564), NE Madras state, India, on the Godavari river It is near the main dam of the irrigation system that uses the river

Rajasthan (rä'jŭstän), state (c 121,000 sq mi, pop c 650,000), India, comprising former princely states It includes all the territories (except Ajmer) which constituted RAJPUTANA

Rajasthani (rä'justa'nē), one of the languages of the Indic group of the Indo-Iranian subfamily of Indo-European languages See LANGUAGE (table)

Rajputana (raj"pōōtä'nŭ) [Rajput land], region (135,959 sq mi, pop 14,253,901), India It is bounded on the west by Pakistan The western section, a part of the Indian Desert, is inhabited by a scanty population of pastoral nomads The east, especially the southeast, is more fertile, and it has some rivers which supply water for agriculture Grains and cottons are the principal crops There are excellent handicrafts in Rajputana but little large-scale industry The rail and road systems are poorly developed Little is known of its history before the coming (7th cent) of the Rajputs Moslem invasions and attacks from the 11th to the 16th cent could not dislodge the Rajputs from their strongholds in the hilliest parts of the country Relative peace was enjoyed under the Moguls, but the Marathas (18th cent) brought new harassments Great Britain drove out the Marathas in the 19th cent and set up the province of Ajmer-Merwara (now Ajmer), but guaranteed the independence of nearly all the princely states By 1949 these states, of which Bikaner, Jaipur, Jaisalmer, Jodhpur, and Udaipur were the largest, had all joined Rajasthan

Rajputs (raj'pōōts), a people, numbering c 650,000, mostly in Rajputana, India They are of the warrior CASTE and are reputed to put great value on etiquette and the military virtues The Rajputs claim divine origin, and they are divided into three groups (Solar, Lunar, and Fire) and 32 exogamous clans Their present standing as the aristocracy of Rajputana reflects a history of rule since the 7th cent Until driven back (18th–19th cent) by the Sikhs and the Marathas, the Rajputs occupied much territory in the plains of central India

rake, harvesting tool or machine, consisting of a row of straight or curved teeth of metal or wood, attached to a hand or power-drawn bar It is used for collecting hay or grain into piles, for cleaning fields, lawns, and yards, and for smoothing soil Horse-drawn rakes first appeared early in the 19th cent, but were not generally used until later Several types of hay rakes are used on farms—the sulky or dump, which gathers hay into bunches convenient for loading, the side-delivery type, gathering the hay into continuous windrows, and sweep or push rakes, which haul a heavy load direct to the stack.

Rakem (rā'kĕm) [Heb, =flower garden], descendant of Manasseh 1 Chron 7 16

Rakka (ra'ka) town N Syria, on the Euphrates and E of Alep The ancient Nicephorium, it was prominent in early Moslem days and was a favorite residence of Harun-al-Rashid

Rakkath [Heb, =shore], unidentified city, on the western shore of the Sea of Galilee Joshua 19 35

Rakkon, obscure geographic name, in a textually difficult passage Joshua 19 46

Rakoczy, Hung *Rákoczy* (rä'kôtsĭ), noble Hungarian family that played an important role in the history of TRANSYLVANIA and Hungary in the 17th and 18th cent **Sigismund Rakoczy**, 1544–1608, was elected (1607) prince of Transylvania to succeed Stephen Bocskay His son, **George I Rakoczy**, 1591–1648, was elected prince of Transylvania in 1630 He continued the anti-Hapsburg policy of his predecessors, Gabriel Bathory and Gabriel Bethlen, and like them he relied on alliances with the Protestant powers In 1644 he declared war on Emperor Ferdinand III and overran Hungary Peace was made (1645) at Linz, and the emperor granted religious freedom to the Hungarians and ceded territory to Rakoczy George I's son, **George II Rakoczy**, 1621–60, succeeded his father on the throne of Transylvania but was deposed (1657) as a result of his unsuccessful invasion of Poland He was mortally wounded when the Turks invaded Transylvania He married Sophia, a niece of Gabriel Bathory Their son, **Francis I Rakoczy**, 1645–76, was designated George's successor by the diet of Transylvania in 1652 However, he was never recognized Having married a daughter of Peter Zrinyi, ban of Croatia, he entered with Zrinyi into an unsuccessful conspiracy against Emperor Leopold I **Francis II Rakoczy**, 1676–1735, the son of Francis I and Helen Zrinyi, became the leader of the rebellion of the Hungarians against Hapsburg oppression The outbreak (1701) of the War of the Spanish Succession was followed by an uprising (1703) of the Hungarian peasants, particularly of the Calvinists, against the emperor Rakoczy, at the head of the movement, soon controlled most of Hungary and in 1704 was elected "ruling prince" by the diet He secured the support of King Louis XIV of France, who supplied him with subsidies and troops At the

Diet of Onod (1707) the Hungarian nobles proclaimed the Hapsburg dynasty deposed in Hungary and set up an aristocratic republic Rakoczy, however, suffered severe defeats in 1708 and 1710, and in 1711 the Hungarians and Austrians negotiated peace at Szatmar The emperor promised an amnesty and the restoration of religious and constitutional freedom in Hungary Rakoczy, who refused to accept the treaty, fled to Poland, then to France, and eventually to Turkey He died in exile in Turkey, but his remains were brought back to Hungary in 1906 He left an autobiography Francis II Rakoczy is a major national hero of Hungary The stirring Rakoczy March, named in his honor, was composed (1809) by John Bihari It is possibly based on an older tune, sung by Rakoczy's army and was used by Berlioz in his *Damnation de Faust* and by Liszt in the Hungarian Rhapsody No 15 The playing of the Rakoczy March was long forbidden in Hungary, where the tune was used as a national air by the independence movement See Ladislaus Hengelmuller, *Hungary's Fight for National Existence* (Eng tr , 1913)

Rakovsky, Christian Georgyevich (khrĭstyan' gĕ-yôr'gyĭvĭch rŭkô'skĭ), 1873–, Russian Communist politician, b Bulgaria His early revolutionary activities extended through Bulgaria, Switzerland, Germany, France, and Rumania In 1919 he became a member of the central committee of the Communist party and briefly headed the Ukrainian Soviet government He was Russian chargé d'affaires at London (1924) and ambassador to France (1926–27) His opposition to Stalin's leadership caused his expulsion from the party (1927) and his subsequent exile to Siberia, but he was allowed to return in 1934 One of the defendants in the public treason trial of March, 1938, Rakovsky was sentenced to imprisonment for 20 years

Rakow, Pol *Raków* (ra'kōōf), small town, S central Poland, SE of Kielce It was founded in 1569 as the seat of Polish SOCINIANISM and became a noted intellectual center When the sect was suppressed (17th cent), Rakow lost importance

Rale, Sébastien see RASLE, SÉBASTIEN

Ralegh or **Raleigh, Sir Walter** (both rô'lĭ, rä'–), 1552?–1618, English statesman and man of letters Ralegh entered Oxford at about 14, but did not study there for more than three years Although listed as an undergraduate in 1572, he had served in the interim as a volunteer in the Huguenot army in France in 1569 Little is known of his activities after he returned to London, although the verses which he prefixed to George Gascoigne's *Steele Glas* (1576) indicate some literary connections In 1578, Ralegh, his brother Carew, and his half brother, Sir Humphrey GILBERT, outfitted a heavily armed fleet, ostensibly for a "voyage of discovery," but whatever their purpose, storms and desertions soon ended the project In 1579 Ralegh served in Ireland and there met the poet Edmund SPENSER, a member of Lord Grey de Wilton's staff When Ralegh returned to England in 1582 he immediately went to court and soon became a favorite of Queen Elizabeth Whether or not he placed his cloak in the mud for her, it seems fairly certain that his personal charm had much to do with his friendship with the queen As an important courtier he was granted wine monopolies in 1583, was knighted, and was given valuable estates Made warden of the Stanneries in 1585, Ralegh exhibited a genuine talent for administration but had already alienated many important people He was appointed captain of the queen's guard in 1587, an office devoid of policy-making responsibility but significant because it required constant attendance on Elizabeth Ralegh conceived and organized the colonizing expeditions to America which ended tragically with the "lost colony" on ROANOKE ISLAND, Virginia For these projects and for the introduction to England of potatoes and tobacco, Ralegh is popularly remembered He was later named a member of the commission for defense against Spain, but it is doubtful whether he participated in the naval operations of 1588 Probably because of his conflict with Robert Devereux, earl of Essex, Elizabeth's new favorite, Ralegh left court in 1589 At Kilkolman Castle, Ireland, he became fast friends with Spenser, whose *Faerie Queene*, begun under the aegis of Sir Philip Sidney, was continued under Ralegh's patronage Returned to influence in 1592 because of Elizabeth's quarrel with Essex over the earl's marriage, Ralegh was granted an estate at Sherborne However, because of an affair with Elizabeth Throckmorton, a maid of honor at court who later became his wife, he was recalled from a privateering expedition and imprisoned in the Tower Late in 1592 when the expedition returned, rioting broke out over the spoils of a carrack Ralegh was sent to Dartmouth, where he quelled the disturbance and thereby won his freedom Barred from the court, he was in Parliament during the next three years, but received far greater notoriety for his connection with the poetic group known as the "school of night" Led by Thomas Harriot and including Marlowe and Chapman, the group's skeptical attitude and free interpretation of Scripture won them a reputation for atheism. By 1595 Ralegh had determined to find the fabled El Dorado, and he embarked with the adventurer-scholar, Laurence Keinys Although the expedition penetrated only a short way up the Orinoco, Ralegh returned with specimens containing gold and with the manuscript of his *Discovery of Guiana* (1596) In 1596 Ralegh's personal bravery and tactical brilliance helped save an English expedition against Cádiz from disaster, and in the next year his capture of Fayal without waiting for Essex precipitated a violent quarrel between the two Ralegh was made governor of Jersey in 1600, but his fortunes ebbed when he drifted apart from Robert Cecil in the political tempest over Essex's treason and death They fell completely with the accession of James I, who had been convinced by Ralegh's enemies that Ralegh was opposed to his succession Many of Ralegh's monopolies and offices were taken away, and he was convicted of treason, on somewhat insufficient evidence, by the lords of the council—being found guilty of participating in a plot to kill the king and enthrone Arabella Stuart and of intrigues with Spain against England Saved from the block by a reprieve, Ralegh settled down in the Tower and devoted himself to literature and science There he began his incomplete *History of the World* He was released in 1616 to make another voyage to the Orinoco in search of gold, but was warned not to molest Spanish possessions or ships on pain of his life Ralegh gathered all his resources to outfit the expedition, and after abandoning the idea of diverting it to aid the cause of Savoy against Spain, he set out for South America in 1617, encountering many mishaps on the way The expedition failed to arrive at the reputed mine but captured a Spanish town Ralegh returned by way of Newfoundland to England When he was examined, his testimony was vague and perjured He was executed, at the demand of the Spanish ambassador, under the original sentence for treason passed many years before Ralegh was the author of a number of political essays and philosophical treatises and a body of poetry which was highly praised by his contemporaries Much of his verse is now lost, and a number of his prose works also appear to be missing His works, together with lives by William Oldys and Thomas Birch, were collected and published in 1829 There are biographies by Edmund Gosse (1886), I W Anthony (1934), and Edward Thompson (1935) See also M C Bradbrook, *The School of Night* (1935)

Raleigh (rô'lĭ, rô'), city (pop 46,897), state capital, and co seat of Wake co , central N C Known early as Bloomsbury, the site was selected for the state capital in 1788, and the city was laid out in 1792 In the Civil War, Sherman occupied the city on April 14, 1865 It is principally a cultural center, with numerous schools and state institutions, but there are also cotton and furniture industries, printing and publishing houses, and tobacco marts Andrew Johnson was born in Raleigh The city is the seat of Meredith College (Baptist, for women, 1891), NORTH CAROLINA STATE COLLEGE OF AGRICULTURE AND ENGINEERING, Shaw Univ (Negro, Baptist, coeducational, 1865), St Augustine's College (Negro, Episcopal, coeducational, 1867), several junior colleges, and state schools for the blind and the deaf The state capitol was built in 1833–40, several old buildings remain

Raleigh, Fort. see ROANOKE ISLAND

Ralik Chain see MARSHALL ISLANDS

Ralls (rôlz), town (pop 1,512), NW Texas, ENE of Lubbock, in a farming region on the Llano Estacado, founded 1911, inc 1921

Ralph, Julian, 1853–1903, American journalist, b New York city He became famous as a brilliant reporter (1875–95) on the New York *Sun* Later he wrote for the New York *Journal* in London, was a war correspondent with the Turkish armies in 1897, and was a reporter in South Africa for the London *Daily Mail* during the Boer War

Ralph de Diceto (dĭsē'tō), d c 1202, English chronicler He was dean of St Paul's after 1180 His major work, the *Imagines historiarum* [outlines of history]—the first part (1148–72) based on Robert de Torigni, the second part (1172–1202) original—is especially valuable for the material after 1188 and for the original documents included He also compiled the *Abbreviationes chronicorum*, small lists of kings and bishops and brief historical compilations

Ralph Roister Doister. see UDALL, NICHOLAS

Ralston, James Layton (rôl'stŭn), 1881–1948, Canadian statesman, b. Amherst, N S , studied law at Dalhousie Univ. In 1911 he was elected as a Liberal to the Nova Scotia legislature, and in 1926 he was elected to the Canadian House of Commons In the first Mackenzie King administration, Ralston was minister of national defense (1926–30), in the second King government, he was made minister of finance (1939) but was transferred in 1940 to the post of minister of national defense When his demand that the cabinet invoke military conscription was rejected, Ralston resigned in Nov , 1944; the policy was shortly put in force by his successor, A G L McNaughton

Ram [Heb ,=high] **1** Ancestor of David. 1 Chron 2 9,10, Ruth 4 19. Aram Mat 1 3,4, Luke 3.33. **2** Son of Jerahmeel 1 Chron. 2.25,27. **3** Ancestor of Elihu. Job 32 2

Ram, sign of the Zodiac. see ARIES.

Rama, hero see RAMAYANA

Rama (rä'mŭ), variant of RAMAH

Ramadan (rämädän', rä"mudän'), in ISLAM, the ninth month of the year, during which all Moslems must fast in the daylight hours All indulgence of whatever sort is forbidden in the fast There are only a few who are exempt, e g , soldiers and the sick Because of the purely lunar calendar, Ramadan falls in different seasons The first revelation of the Koran is commemorated in this month

Ramadi (ramu'dē), town, central Iraq, on the Euphrates river There is a picturesque bridge of boats across the river Here, in Sept , 1917, British forces won a great victory over the Turks The name also appears Ramadie

Ramah (rā'mŭ) [Heb ,=high] **1** Town, NE Palestine, allotted to Naphtali Joshua 19 36 **2** Town, S Syria, near Tyre, allotted to Asher Joshua 19 29 **3** Unidentified town of Simeon, called Ramah of the south Joshua 19 8 It is apparently intended by the Ramoth of 1 Sam 30 27, by the Baal of 1 Chron 4 33, and by Baalath-beer in Joshua 19 8 **4** Traditional burial place of Rachel This was an important outpost of Jerusalem, c 5 mi north of the city Joshua 18 25, Judges 4 5, 19 13, 1 Sam 22 6, 1 Kings 15 17, 2 Chron 16 1, Ezra 2 26, Neh 7 30, 11 33, Isa 10 29, Jer 31 15, 40 1, Hosea 5 8 Rama Mat 2 18 This is possibly the Ramah of Samuel see RAMATHAIM-ZOPHIM **5** Same as RAMOTH-GILEAD The term *Ramathite* may refer to any of the above 1 Chron 27 27

Ramakrishna (rä"mukrĭsh'nu), 1836–86, Hindu mystic He studied for the Hindu priesthood, and c 1855 he became a devotee of Kali (see HINDUISM) in her aspect of the loving mother of mankind He studied Christianity in 1874, and he soon concluded that all religions are equally valid forms which most men need to approach the Eternal, but which are unnecessary to those adept in mystical union He repudiated quietism, however, and required active benevolence of his disciples Ramakrishna had little formal learning, but the saintly example of his life and the effective parables and proverbs in which he habitually spoke attracted a large following An order of monks, dedicated to chastity, poverty, and charity, practice his teachings, and even in Europe and America his creed is actively studied His sayings are contained in *The Gospel of Sri Ramakrishna* (Eng tr by Swami Nikhilananda, 1942) See biographies by Max Muller (1899) and Romain Rolland (Eng tr , 2d ed , 1931)

Ramallah (ramu'lä), town (pop 4,286), Palestine, c 3 mi SW of Bethel and on the ridge running north and south from Jerusalem It is chiefly inhabited by Christian Arabs See RAMATHAIM-ZOPHIM

Raman, Sir Chandrasekhara Venkata (chŭn'drusĕka'ru vĕng'kutu ru"mun), 1888–, Indian physicist He was professor of physics at Calcutta Univ. from 1917 to 1933 In Bangalore he directed the Indian Institute of Science and, from 1946, the Raman Institute For his research on the diffusion of light and for his discovery of the RAMAN EFFECT, he received the 1930 Nobel Prize in Physics He is noted also for his studies of diamonds In 1929 he was knighted

Raman effect [for C V. Raman], produced when some of a beam of monochromatic light is scattered in passing through a transparent medium (gas, liquid, or solid) The light so scattered undergoes a change (mainly an increase) in wave length and a change (mainly a decrease) in frequency The spectrum resulting is characteristic for the substance through which it passes See L E Howlett, *Raman-Effect and Chemical Bonds in Certain Organic Liquids* (1931), E A Crigler, *Raman Effect in Liquids and in Liquid Mixtures* (1932), J H Hibben, *The Raman Effect and Its Chemical Applications* (1939), S Bhagavantam, *Scattering of Light and the Raman Effect* (1940)

Ramapo (rä'mupō), river rising in SE New York and flowing S to the Pequannock S of Pompton Lakes, N J , forming the Pompton river which empties into the Passaic in NE New Jersey

Ramapo Mountains, beautiful forested range, NE N J and SE N Y , with many trails for walkers

Rama's Bridge see ADAM'S BRIDGE

Ramat Gan (rä'mät gän'), town (pop c 20,000), central Israel, 3 mi NE of Tel-Aviv, founded 1921 It is an industrial center and a health resort

Ramathaim-zophim (rā"muthā'ĭm-zō'fĭm) [Heb ,=two high places of Zophim], birthplace of Samuel, usually called Ramah for short 1 Sam 1 1,19, 7 17, 28 3 This has been variously identified with RAMAH **4**, with ARIMATHAEA, and with the modern RAMALLAH and RAMLEH The land of ZUPH is connected with the name

Ramathite (rā'muthīt), pertaining to RAMAH

Ramath-lehi (rā'măth-lē'hī), name given by Samson to the place in S Palestine where he wielded the jawbone of an ass Judges 15 17

Ramath-mizpeh (-mĭz'pē) [Heb ,=height of the lookout], unidentified place, E of the Jordan. Joshua 13 26

Ramayana (rama'yunu) [story of Rama], great Sanskrit epic of India, perhaps composed in the 2d

cent B C. It is traditionally the work of Valmiki, one of the minor characters. The *Ramayana* is more unified and far shorter than the *Mahabharata*, the other great epic of India. In some 43,000 couplets of 16-syllable lines, it relates the adventures of Rama, who, together with his half brothers, collectively made up the avatar (incarnation) of the god Vishnu. Rama was wrongly deprived of the succession to the kingdom of Ajodhya and forced into exile without his wife Sita. To attain the throne he allied himself with Humavun, king of the monkeys, and fought a mighty war in Ceylon. When he was restored to his kingdom, he subjected Sita to various ordeals to test her virtue, finally her mother (the earth mother) rose from a great chasm to proclaim her daughter innocent. For bibliography, see MAHABHARATA.

Rambam: see MAIMONIDES

Rambaud, Alfred Nicolas (alfrĕd' nēkôlä' räbō'), 1842–1905, French historian and politician. He served in the administration of Jules Ferry, was elected senator (1835), and was minister of public instruction (1896–98). Rambaud taught at the universities of Caen, Nancy, and Paris. The range of his interests and writings was wide, but all his works are characterized by the same honest scholarship, lucid style, insight, and clear presentation. His studies in Byzantine history, notably *L'Empire grec au dixième siècle* [the Greek empire in the 10th cent.] (1870) and *Études sur l'histoire Byzantine* (1912) are among the chief modern contributions to the subject. His *Histoire de la civilisation française* (2 vols., 1885–87) and his *Histoire de la civilisation contemporaine en France* (1888) are the best short general works on French civilization, both appeared in numerous later editions. Rambaud also was an authority on Russian history. His *Histoire de la Russie* (1877, Eng. tr., new ed., 2 vols., 1904) was long a standard work outside Russia, he also edited a collection of instructions to the French ambassadors in Russia for the period 1648–1789. Some of Rambaud's most important writings, particularly on Byzantine history, are contained in his contributions to the monumental *Histoire générale*, which he edited with LAVISSE.

rambler, popular name for a climbing rose used as pillar or trellis cover. The flowers are small and many-petaled and grow in large clusters. They are commonly red or pink.

Rambouillet, Catherine de Vivonne, marquise de (katrēn' du vēvôn' märkēz' du räbōōyā'), 1588–1665, famous Frenchwoman, whose salon exercised a profound influence on French literature. She retired from court life in 1608 and began to receive at her house the best minds of Paris. Her literary salon was the first of the kind, and her example was soon imitated throughout France and spread to the rest of the world. The height of her influence was between 1620 and 1645. Her circle included Mme de Sévigné, Mme de la Fayette, Mlle de Scudéry, the duchesse de Longueville, the duchesse de Montpensier, Corneille, Balzac, Richelieu, Malherbe, Racan, Voiture, Bossuet, Chapelain, Scarron, Vaugelas, and La Rochefoucauld. The conversation and literary criticism of the Hôtel de Rambouillet aimed solely at refinement and good taste, although the marquise liked to indulge in practical jokes on her guests which would have seemed questionable a century later. The name *précieux* (fem. *précieuse*) adopted by the members of her circle still lacked at that time its derogatory connotation, but the preciosity made fashionable by her salon soon deteriorated into extravagance and was much ridiculed by Molière. The oldest daughter of the marquise de Rambouillet was Julie d'Angennes (later duchesse de Montausier), to whom the members of the circle addressed the cycle of verses *Guirlande à Julie*, a younger daughter, Angélique, was the first wife of the marquis de Grignan, who after her death married the daughter of Mme de Sévigné. See Frank Hamel, *Famous French Salons* (1909).

Rambouillet (räbōōyā'), town (pop. 6,531), Seine-et-Oise dept., N France, S of Paris. The château (14th–18th cent.) is the official summer residence of the presidents of the French republic, and the vast Forest of Rambouillet is used for official hunting parties.

Rameau, Jean Philippe (zhä' fēlēp' ramō'), 1683–1764, French composer and theorist. He played the violin and the organ and was organist at the cathedral in Clermont and at Notre Dame de Dijon. His earlier works include harpsichord suites and two treatises on harmony in which he introduced the doctrine of inversions of chords. His first opera, *Hippolyte et Aricie* (1733), was produced when he was 50, and over 30 others followed, *Castor et Pollux* (1737) and *Les Fêtes d'Hébé* (1739) being notable. The operas of his older contemporary Lully were more popular in their time, but Rameau is now considered the greatest French musician of his day. See H. J. Foss, *The Heritage of Music*, Vol. II (1934).

Ramée, Joseph Jacques (zhōzĕf' zhäk ramā'), 1764–1842, French architect. He left France in 1792 and was active in Germany (where he built the Hamburg Exchange) and in Denmark. He lived in the United States from 1811 to 1816 and drew the plan for Union College, Schenectady, N.Y.

Ramée, Pierre de la: see RAMUS, PETRUS

Ramenghi, Bartolomeo: see BAGNACAVALLO.

Rameses or **Ramesses:** see RAAMSES. For Rameses in the Bible, see RAAMSES.

Ramiah (rūmī'ù), husband of a foreigner. Ezra 10 25.

ramie (răm'ē) or **China grass,** tall perennial plant (*Boehmeria nivea*) of the NETTLE family, native to the Orient where it has been cultivated since ancient times for its fiber. Ramie fiber is obtained from the bast and is extremely strong, durable, and lustrous, limited in use, however, because of the difficulty of separating the fiber—usually a hand process in the Far East—and freeing it from the adhering gum. Products made from the fiber include underwear, paper, cordage, gas mantles, and, in the Orient, grass cloth and other fabrics. Ramie plants have been cultivated experimentally in the United States and elsewhere, several crops may be cut in a season.

Ramillies, battle of (rä'mēlēz', Fr. rämēyē'), fought May 23, 1706, near the village of Ramillies-Offus, Brabant prov., Belgium, NNE of Namur, in the War of the Spanish Succession. Here Marlborough, commanding British, Dutch, and Danish troops, defeated the French under Villeroi in one of his most brilliant victories. The allies vigorously pursued the French and within a few days captured Antwerp, Ghent, and Bruges.

Ramiro I (rämē'rō), d. 1063, first king of Aragon (1035–63), natural son of Sancho III of Navarre, from whom he inherited Aragon. After the death of his brother Gonzalo he annexed Sobrarbe and Ribagorza and fought against the Moorish king of Saragossa. He died at the siege of Graus and was succeeded by his son Sancho Ramírez.

Ramleh (ram'lĕ) [Arabic,=sand], town (1931 pop. 6,880, 1946 estimated pop. 12,000), central Israel, SE of Tel-Aviv, on the road to Jerusalem at a crossing with an important road from the south. Ramleh is a very old town, and it was fought over constantly in the Crusades. The name also appears as Ramle, El Ramle, and Er Ramle. See RAMATHAIM-ZOPHIM.

rammed earth, material consisting chiefly of soil of sufficiently stiff consistency which has been placed in forms and pounded down. It has been used for buildings and walls since ancient times. Pliny the Elder records the survival of a rammed-earth fort built by Hannibal 250 years earlier. The material has been recommended especially for subsistence homesteads and for farm buildings, it has been widely used in the Rhone valley. It is known in England by the French term *pisé de terre*. It is formed either into monolithic walls or into blocks, and in both forms it makes strong durable walls with good insulating and fireproofing properties. Its resistance to water may be increased by stabilizing it with cement and by surfacing. Earth walls should rest on a foundation with a waterproof top and must be roofed immediately. The material usually costs nothing and does not require skilled labor. Adobe, unlike rammed earth, is sun-dried and is made without packing the earth down between forms. See R. L. Patty and L. M. Mimum, *Rammed Earth Walls for Farm Buildings* (1938), Clough Williams-Ellis and John and Elizabeth Eastwick-Field, *Building in Cob, Pisé, and Stabilized Earth* (1947).

Ramón y Cajal, Santiago (sänt'yä'gō ramōn' ē kahal'), 1852–1934, Spanish histologist. He was a university professor at Valencia (1881–86), at Barcelona (1886–92), and at Madrid (1892–1922), where he founded the Cajal Institute. He described the terminal branchings of nerve processes, devised a method of staining nerve tissues, and made numerous discoveries in the structure of the nervous system. For this work he shared with GOLGI the 1906 Nobel Prize in Physiology and Medicine. His writings include *Studies of the Degeneration and Regeneration of the Nervous System* (Eng. tr., 1928) and *Histology* (Eng. tr., 1933). See his autobiography (Eng. tr., 1937), biography by D. F. Cannon (1949).

Ramos, João de Deus (zhwă'ō du dă'ōōsh rä'mōōsh), 1830–96, Portuguese poet. His full name was João de Deus Nogueira Ramos, but he was, and is, known only as João de Deus. He was graduated from the Univ. of Coimbra in law and was later a journalist and a deputy, but his life was important only for his poetry. He composed his lyrics easily and disposed of them carelessly, it was Teófilo Braga who gathered them together from provincial newspapers and from casual friends as well as earlier volumes to make the complete collection, *Campo de flores* [flowering field] (1893). Simple in form and in metaphor, the lyrics are written in everyday language and are in one sense the most Portuguese of all Portuguese poems.

Ramoth (rā'mŏth), one who had married a foreigner. Ezra 10 29. For places named Ramoth, see RAMAH 3, RAMOTH-GILEAD; REMETH.

Ramoth-gilead or **Ramoth in Gilead** (-gi'lēăd) [Heb.,=high places in Gilead], important ancient center, E of the Jordan. It is named in the Bible as a city of refuge and as Ahab's last battlefield. Deut. 4 43; Joshua 20 8, 21 38; 1 Kings 4 13, 22, 2 Kings 8 28, 9 1, 1 Chron. 6 80, 2 Chron. 18, 22 5. Ramah: 2 Kings 8.29, 2 Chron. 22 6. Ramoth-gilead has been variously identified with es-Salt, c. 20 mi. northeast of the northern end of the Dead Sea, with GERASA, and with Ajlun, c. 10 mi. W. of Gerasa.

Rampolla del Tindaro, Mariano (märyä'nō rämpôl'lä dĕl tēn'därō), 1843–1913, Italian churchman, cardinal of the Roman Church. He was a nobleman. He was papal nuncio at Madrid (1882–87) and in his term was made cardinal. On his return to Rome he was LEO XIII's secretary of state, a key office he filled with distinction. On Leo's death the election of Cardinal Rampolla as pope was, it is said, prevented by Austria. He resigned his secretaryship but continued in the papal administration.

Rampur (rämpōōr'), former princely state (893 sq. mi., pop. 477,042), India, now part of United Provs. **Rampur,** town (pop. 89,322), formerly its capital, manufactures pottery, damask, and cutlery. The library here has an important collection of Oriental manuscripts.

Ramsay, Allan (răm'zē), 1686–1758, Scottish poet, a bookseller of Edinburgh. Of his poems the most famous is the pastoral comedy *The Gentle Shepherd* (1725). Ramsay is the first great figure in the revival of Scottish vernacular poetry which culminated in the work of Burns. He also compiled several collections of old Scottish poems and songs. His son, **Allan Ramsay,** 1713–84, was a noted portrait painter. After a successful career in Edinburgh he moved to London in 1767 and became principal painter to George III. Besides his portraits of George III (one of them in Independence Hall, Philadelphia), good examples of his work are those of Lord Chesterfield and Dr. Mead (both National Portrait Gall., London).

Ramsay, Sir Andrew Crombie, 1814–91, British geologist, b. Glasgow. He served from 1841 to 1881 on the Geological Survey, as director for England and Wales (1862–71) and as director general from 1871. He was knighted in 1881. His books include a geology of North Wales, papers on glacial action in lake formation and denudation of land, and a great *Physical Geology and Geography of Great Britain* (1863).

Ramsay, Sir Bertram Home, 1883–1945, British admiral. A career naval officer, Ramsay came out of retirement in the Second World War to command British and Allied naval units in some of the most spectacular operations of the war. He directed the evacuation of Dunkirk (1940) led the Allied fleets in the invasions of Africa (1942), Sicily, and Italy, and commanded, under General Eisenhower, the naval operations in the invasion of France in 1944. He was killed in a plane crash in 1945.

Ramsay, Sir William, 1852–1916, Scottish chemist. He was professor of chemistry at University College, Bristol (1880–87), and at University College, London (1887–1912). Investigating the inert gases of the atmosphere, he discovered helium, with Rayleigh he discovered argon, and with M. W. Travers, krypton, neon, and xenon. He also carried on research on radium emanation. In 1902 he was knighted. For his work on gases he received the 1904 Nobel Prize in Chemistry. His writings include *System of Inorganic Chemistry* (1891), *Experimental Proofs of Chemical Theory for Beginners* (1884), and *Essays Biographical and Chemical* (1908). See biographies by W. A. Tilden (1918) and C. L. F. Moureu (1921).

Ramsbottom, urban district (1931 pop. 14,929, 1943 estimated pop. 15,030), Lancashire, England, on the Irwell and N of Bury. The printing works of the Grants, reputed originals of the Cheerybles brothers in Dickens's *Nicholas Nickleby*, were here. There are cotton and wool mills and manufactures of paper and chemicals.

Ramsden, Jesse, 1735–1800, English optician and mechanician. In 1762 he started his own business as a maker of mathematical instruments and before long became well known for the fine quality of his work. He invented a machine for graduating instruments and made improvements in many of those then in use. His special attention was given to divided circles, in 1789 he completed the 5-foot vertical circle which PIAZZI used while constructing his star catalogue.

Rameses (răm'ŭsēz), **Rameses** (răm'ŭsēz", rūmē'sēz), or **Ramesses** (răm'ŭ-sēz"), name of several kings of ancient EGYPT of the XIX and XX dynasties. The kings of the XX dynasty, all but the first named Ramses, are often, on that account, called Ramessides or Ramessids. **Ramses I,** d. 1314 B.C., succeeded Harmhab, true founder of the XIX dynasty, c. 1315 B.C. He began the hypostyle at KARNAK. His son was SETI I, whose son in turn was **Ramses II,** d. 1225 B.C. Ramses was not the heir to the throne but usurper of the place of his brother. He reigned 67 years (1292–1225 B.C.). Under him Egypt acquired an unprecedented splendor. His empire extended from S. Syria to near the fourth cataract of the Nile. The most notable incident of his reign was his Pyrrhic victory over the Hittites near Kadesh on the Orontes, war with them continued for about 15 years until Ramses concluded a treaty of friendship with the Hittite king. All over Egypt Ramses left monuments. The principal are probably the Karnak temple he completed, the Rameseum, his mortuary temple, at Thebes; and the great rock temple at

Abu-Simbel. The social life of the period was characterized by great luxury, this with the increasing numbers of slaves, as well as the growth of a mercenary army, are said to foretell the imminent, final decline of Egypt Ramses' mummy is at Cairo He was succeeded by MERNEPTAH. The period of anarchy which followed Merneptah was ended by **Ramses III**, d. 1167 B C., the last important **Ramses** (reign, c 1198–1167 B C), and second king of the XX dynasty He fought vigorously and successfully in Libya and Syria The favors to the temples attributed to him are only official confirmations of earlier gifts By the time of his reign the temples had slaves numbering perhaps two percent of the entire population, and their riches were stupendous This fact and the evident riches of the nobility are causes of the decay in the Egyptian social structure from which the country would never recover The last year of Ramses III was darkened by the conspiracy of TIY After him the XX dynasty moves drearily to its end with Ramses XII, king in name alone

Ramseur (răm'sōōr", răm'swûr), cotton-mill town (pop 1,220), central N C, SSE of Greensboro; settled c 1850, inc 1895

Ramsey (răm'zē) **1** Market town (1931 pop. 5,180, 1943 estimated pop 5,135), Huntingdonshire, England Here Byrhtnoth's men were refused lodging the night before the battle of Maldon Ramsey Abbey was founded in the 10th cent under a charter from King Edgar Later the property passed to the Cromwell family, who held the lands until after 1670 Part of the Church of St. Thomas à Becket at Ramsey was constructed of the abbey stone **2** Seaport (pop 4,198), on the Isle of Man, Great Britain, at the mouth of the Sulby river The town is a tourist resort with a fine harbor and beach and attractive scenery Cattle and horses are exported

Ramsey (răm'zē), residential borough (pop 3,566), NE N J, N of Paterson, settled 1846, inc 1908

Ramsgate (rămz'gĭt), municipal borough (1931 pop 33,603, 1947 estimated pop 34,410), on the Isle of Thanet, Kent, England, ESE of London and near the famous roadstead of the Downs It is a resort and a seaport with a good harbor, used mainly by yachts and fishing boats The sea entrance is narrow, and there are two long stone piers, one with a promenade Ramsgate has associations with George Eliot and with the Pugins, who built the Roman Catholic church and who lived here for a time Victoria lived in Ramsgate as a young princess Ebbsfleet, near by, was the landing place of St. Augustine in the 6th cent and, traditionally, of Hengist and Horsa in the 5th cent, there is a Saxon cemetery in the neighborhood The borough has a Jewish college founded by Montefiore, who lived in Ramsgate The town suffered severe air raids in 1940, but caves in the cliffs provided bombproof shelters

Ramus, Petrus (pē'trŭs rā'mus), or **Pierre de la Ramée** (pyĕr' du lä rämā'), 1515–72, French humanist and philosopher In the process of trying to break through Aristotelian and scholastic traditions Ramus had a difficult time to maintain a teaching position In 1551, through the efforts of Cardinal de Lorraine, Ramus was established in a chair of rhetoric and philosophy at the Collège de France His work there was interrupted by the events of the religious wars, in the course of which Ramus, having attached himself to the reformers, fled to Germany His endeavors to form a system of logic to supersede Aristotle's are viewed as inadequate, but he must be credited with encouraging critical and skeptical thought. He was killed in the massacre of St Bartholomew's Day in Paris See N. E Nelson, *Peter Ramus and the Confusion of Logic, Rhetoric, and Poetry* (1947)

Ramusio, Giambattista (jäm"bät-tē'stä rämōō'zyō), 1485–1557, Italian editor and compiler, b. Treviso He served the Venetian state in diplomatic posts and eventually in the Council of Ten. He is remembered for his monumental *Delle navigationi e viaggi*, a collection of geographical accounts of explorations To this work we owe many of the explorers' accounts we have, it includes a fine edition of Marco Polo's account and an early description of Magellan's circumnavigation

Ramuz, Charles Ferdinand (shärl' fĕrdēnä' rämüz'), 1878–1947, Swiss novelist, who wrote in French Dealing with a simple people faced by the catastrophes and phenomena of nature, his novels probe to the elemental conflicts of existence His best works include *Le Règne de l'esprit malin* (1917, Eng tr, *The Reign of the Evil One*, 1922), *Presence de la mort* (1922, Eng. tr, *The End of All Men*, 1944), *La Grande Peur dans la montagne* (1926), *La Beauté sur la terre* (1927, Eng tr, *Beauty on Earth*, 1929), and *Derborence* (1935, Eng tr, *When the Mountain Fell*, 1947).

Rancagua (rängkä'gwä, -kə'wə), city (pop 31,018), central Chile, S of Santiago The city was founded in 1743 in a fertile valley among the Andean foothills Though one of Chile's largest copper mines (El Teniente) is near by, Rancagua has developed primarily as an agricultural center for cereals, beans, fruits, and vegetables Here on Oct 1 and 2, 1814, Bernardo O'HIGGINS commanded a magnificent defense of the plaza against a superior Spanish royalist force Failing to receive help from near-by patriot troops under José Miguel CARRERA, O'Higgins and the remnant of his men cut their way out of the trap. The engagement closed the first phase (1810–14) of the Chilean War against Spain.

Rancé, Armand Jean le Bouthillier de (ärmä' shă' lu bōōtēyā' du räsā'), 1626–1700, French religious reformer, b. Paris. He was of good family, received a good education, and lived at court as a worldly priest In 1664 he was converted and retired to an abbey of the Cistercians He then went to the Cistercian abbey at LaTrappe, where he was already abbot *in commendam*. There he established a discipline stricter than the primitive Benedictine rule, In a few years LaTrappe was famous, and its reform spread, out of the movement emerged the order of the TRAPPISTS

ranch. The cattle ranch came to the Great Plains from Latin America by way of Texas. At first the ranchman owned cattle, ponies, and camp equipment but no land, grazing his stock on the free public RANGE When fences became compulsory, the ranges were broken up into smaller ranches for the most part Sheep ranches have competed with cattle ranches for the grazing The term *ranch* has come to be applied in the W United States also to grain and fruit farms Cattle and sheep from ranches are often shipped to feed lots in the corn belt for fattening The dude ranch, which has attained great popularity in recent years, is a guest ranch devoted to supplying horseback riding and other Western recreation to vacationers Some are also "working" cattle ranches, but some depend solely on payment from guests.

Rand, the. see WITWATERSRAND

Randall, Alexander Williams (răn'dûl), 1819–72, governor of Wisconsin (1858–62), b Ames, Montgomery Co, N Y He moved to Wisconsin in 1840, practiced law, was postmaster at Prairieville (now Waukesha), and served in the state legislature As governor on the outbreak of the Civil War, Randall, a Republican, energetically supported the Union cause He was minister to the Papal States (1862–64), first assistant postmaster general (1863–65), and postmaster general (1865–69) under President Andrew Johnson

Randall, James Garfield, 1881–, American historian, b Indianapolis, Ind, grad Butler College, 1903, Ph D Univ of Chicago, 1911 He taught history and political science at various colleges before joining (1920) the faculty of the Univ of Illinois A leading authority on Lincoln and the Civil War, Randall wrote *Confiscation of Property during the Civil War* (1913), *Constitutional Problems under Lincoln* (1926), *The Civil War and Reconstruction* (1937), *Lincoln the President Springfield to Gettysburg* (2 vols, 1945), *Lincoln and the South* (1946), and *Lincoln the Liberal Statesman* (1947) He also edited, with T C Pease, *The Diary of Orville H Browning* (2 vols, 1927–33) and, with Mrs Jeannette Nichols, *Democracy in the Middle West, 1840–1940* (1941)

Randall, Samuel Jackson, 1828–90, U S Representative from Pennsylvania (1863–90), b Philadelphia He controlled the Democratic party in his state from 1875 to 1888 and was long a powerful figure in the House of Representatives, where, as speaker (1876–81), he presided over the sessions dealing with the disputed election of 1876 Because of Pennsylvania's industrial interests, Randall always opposed his party's traditional stand for a low tariff See H B. Fuller, *The Speakers of the House* (1909)

Randers (ra'nurs), city (pop 36,434), E Jutland, Denmark, a port on the Randers Fjord (an inlet of the Kattegat) and at the mouth of the Guden river. It has railroad and machine shops, iron foundries, distilleries, and dairy plants Randers dates from the 11th cent and was an important trade center in the Middle Ages Among the remaining medieval buildings is the three-towered Church of St Martin (c 1550)

Randfontein (rănt'fŏntān), town (pop 32,323), W Transvaal, Union of South Africa. It is the westernmost town in the major gold-mining fields of the Witwatersrand

Randleman, textile-mill town (pop 2,032), central N C, S of Greensboro.

Randolph, Edmund (răn'dŏlf), 1753–1813, American statesman, b "Tazewell Hall," Williamsburg, Va After attending William and Mary College, he studied law under his father, John Randolph, a Loyalist who went to England on the outbreak of the American Revolution. Edmund then lived with his uncle, Peyton RANDOLPH, before serving briefly in the Continental army as aide-de-camp to George Washington He was a member of the Virginia constitutional convention of 1776, state attorney general (1776–86), a delegate to the Continental Congress (1779–82) under the Confederation, and governor of Virginia (1786–88). He had a prominent role at the FEDERAL CONSTITUTIONAL CONVENTION in 1787, presenting the Virginia or Randolph Plan, which favored the large states. He at first vigorously opposed the Constitution as finally drafted, although his plan, more than any other, closely resembled it; later he urged its adoption in the Virginia ratifying convention (June, 1788). He was the first Attorney General of the United States (1789–94), leaving that post to succeed Thomas Jefferson as Secretary of State. Like Jefferson, he had difficulties because of Hamilton's constant pressure to secure a favorable treaty with England rather than one with France. In 1795 the British captured dispatches of Fauchet, French minister to the United States, which implied (falsely) that Randolph would welcome French money, whereupon Washington forced his resignation. He wrote *A Vindication of Mr. Randolph's Resignation* (1795), but many years passed before his name was entirely cleared Randolph returned to the practice of law in Virginia and in 1807 was chief counsel for Aaron Burr in his trial for treason See M D Conway, *Omitted Chapters of History Disclosed in the Life and Papers of Edmund Randolph* (1888), D R Anderson, "Edmund Randolph," in S. F. Bemis, ed., *The American Secretaries of State and Their Diplomacy*, Vol II (1927).

Randolph, Edward, c 1632–1703, British colonial agent In 1676 he carried royal instructions to Massachusetts Bay requiring the colony to send representatives to England to satisfy complaints of the heirs of John Mason and Sir Ferdinando Gorges, and he also had orders to make a complete report on the colony. Rebuffed by the Massachusetts authorities, he made a personal investigation in New Hampshire, Maine, and Plymouth and upon his return to England wrote a denunciatory report based on facts, but colored by his dislike for the Puritans His paper attacking the legality of Massachusetts Bay's charter helped bring about the withdrawal of Maine and New Hampshire from the colony's administration and the order that the colony repeal all laws unfavorable to England and enforce the Navigation Acts. In 1679 he established the new government in New Hampshire and then settled in Boston as collector of customs for New England His relations with the colonials was extremely bitter After the annulment (1684) of the Massachusetts charter, an act to which he had devoted much energy, he became secretary and register for the Dominion of New England and also acted as a councilor under Joseph Dudley and Sir Edmund ANDROS With the collapse of the Andros regime, Randolph was imprisoned for a time In 1691 he became surveyor general of customs for North America, continuing to condemn and denounce the colonists See R N Toppan, *Edward Randolph, Including His Letters and Official Papers from the New England, Middle, and Southern Colonies in America* (7 vols., 1898–1909)

Randolph, John, 1773–1833, American statesman, known as John Randolph of Roanoke, b Prince George Co, Va After studying for short periods at the College of New Jersey (now Princeton Univ) and at Columbia College, he began the study of law under Edmund Randolph, but soon abandoned it He served in the U S House of Representatives (1799–1813, 1815–17, 1819–25, 1827–29), where he became a powerful figure, and in the U S Senate (1825–27) In 1804 he was one of the managers appointed to conduct the impeachment proceedings against Federal Judge John Pickering and Supreme Court Justice Samuel Chase Having broken with Thomas Jefferson on the acquisition of Florida, Randolph soon lost his leadership in the House Known for his sharp, biting tongue, he strongly opposed James Madison and the Northern Democrats, the War of 1812, the second Bank of the United States, and the tariff measures During his vigorous fight against the Missouri Compromise he again exerted a strong influence His fiery denunciations of Henry Clay and John Quincy Adams led (1826) to a bloodless duel with Clay Appointed by Andrew Jackson minister to Russia (1830), he resigned shortly after his arrival there because of ill-health. Following his return he denounced Jackson's nullification proclamation In his later years he became very eccentric and at times suffered from dementia Randolph-Macon College was named for him and Nathaniel Macon See biographies by Henry Adams (1882), W C Bruce (2 vols, 1922, 2d ed, revised, 1939), and G W. Johnson (1929), H. S Eckenrode, *The Randolphs* (1946)

Randolph, Peyton, c.1721–1775, American statesman, first president of the Continental Congress, b Williamsburg, Va. After a general education at the College of William and Mary, he studied law in England He was prominent in Virginia after his return there, was king's attorney for Virginia (1744–66), and was long a member of the house of burgesses (1748–49, 1752–75) and its speaker of the house in 1766 He wrote the protest for the house against the proposed Stamp Act in 1764, but he opposed Patrick Henry's radical resolutions against it in 1765 A moderate and a personal friend of George Washington, Randolph worked for the patriot cause, headed the Virginia conventions of 1774 and 1775, and was elected to the First Continental Congress, of which he was briefly (Sept–Oct., 1774) president. It was chiefly this service that has made his name well remembered. He was elected (1775) to the Second Continental Congress but resigned because of illness.

Randolph, Thomas, 1523–90, English diplomat. He was graduated from Oxford (1545) and served as principal of Broadgates Hall (later Pembroke College), Oxford, until forced because of his Protestant sympathies to flee to France (1553) upon the accession of Queen Mary He returned (1559) after the accession of Elizabeth and served her in diplomatic missions to Scotland, where he acquired the friendship of Mary Queen of Scots He was directed to block the marriage of Mary to Darnley, and his promises were mainly responsible for the opposition to the marriage by James Stuart, earl of Murray, Mary's half brother Randolph's letters during his service in Scotland are a valuable source for the history of the period In 1568 he headed a special trade embassy to Russia. Subsequently he was sent on missions to France In 1580 he was in Scotland intriguing on behalf of the imprisoned former regent, James Douglas, 4th earl of Morton. His plot to abduct the young King James was discovered, and Randolph narrowly escaped death The last years of his life were spent as chancellor of the exchequer in England

Randolph, Thomas, 1605–35, English poet and dramatist He was a friend and protégé of Ben Jonson. Of Randolph's facile poems, the best known are "A Gratulatory to Mr Ben Jonson" and "On the Death of a Nightingale", *Amyntas* (1638), *The Muses' Looking Glass* (1638), and *The Jealous Lovers* (1632) are the best of his plays

Randolph. 1 Town (pop 1,612), SW Maine, on the Kennebec opposite Gardiner, inc 1887 **2** Town (pop 7,634), E Mass , S of Boston, settled c 1710, set off from Braintree 1793 **3** City (pop 1,094), NE Nebr , W of Sioux City, Iowa, settled 1886, inc. 1887 It has a dairy industry **4** Village (pop 1,321), W N Y , NE of Jamestown, inc 1867 Dairy products are made here **5** Town (pop 3,278), central Vt , inc 1783 Randolph Center is the seat of Vermont State School of Agriculture The Morgan horse was first bred at Randolph **6** Village (pop 1,146), central Wis , E of Portage and near Beaverdam Lake, settled 1844, platted 1857, inc. 1870

Randolph-Macon College, at Ashland, Va , Methodist, for men, chartered 1830, opened 1832 at Boydton, Va , moved 1868, named for John Randolph and Nathaniel Macon The same board controls an academy at Front Royal and **Randolph-Macon Woman's College** (opened 1893) at Lynchburg

Rand School of Social Science, in New York city, opened 1906 A socialist institution, it has no official connection with the Socialist party It offers courses in socialism, economics, the labor movement, social science, cultural subjects such as literature, drama, and music, and courses for social workers and teachers The schedule of classes is designed to suit the needs of working men and women

Randwick, municipality (pop 100,972), New South Wales, Australia, SE of Sydney, in the metropolitan area. A large race track is here

Ranelagh (răˈnĭlô), former amusement resort in Chelsea, London, England It was founded in 1742 on the estate of the earl of Ranelagh and closed in 1803 or 1804, when the grounds were acquired by the adjacent Chelsea Hospital

Ranelagh, North, and **South Ranelagh** (răˈnĭlô), suburbs of Dublin, Co Dublin, Ireland

Rangabe (rängäbäˈ) or **Rhangavis, Alexandros Rizos** (älĕkˈsändhrōs rēˈzōs rängˈgävēs'), 1810–92, Greek scholar, author, and diplomat, b Constantinople After 1831 he held government posts at Athens, notably in the ministry of education, and served as a diplomat in various capitals, among them Washington, D C As professor of archaeology at the Univ of Athens he was prominent in the Greek classicist revival The leading representative of the classical trend in modern Greek literature, he was particularly successful as a dramatist Among his works (written in classic Greek) are the comedy *Tou Koutroula o gamos* [the marriage of Koutroula] (1845) and the tragedy *Trakoniar tyrant* [the Thirty Tyrants] (1866)

range, grazing land of large area and low carrying capacity Formerly the ranges of the W United States and Canada were unfenced public land, ranges later often have been privately owned and fenced with barbed wire. In the national forests of the West are large unfenced ranges, rights to the grazing are purchased by ranchmen Ranges are known as summer ranges and winter ranges, according to the time of year when the grazing is at its best. See RANCH

Rangeley (rānjˈlē), town (pop 1,464), W Maine, NNW of Rumford on Rangeley Lake, inc 1855 In hilly (alt. c.1,500 ft.) and heavily wooded country, it is the headquarters of a famous fishing and hunting region. Small steamers ply on Rangeley Lake (7 mi long). Others of the Rangeley Lakes are Mooselookmeguntic, Cupsuptic, the Richardson lakes, Kennebago, and Umbagog. An Englishman, James Rangeley, settled here c.1825.

Rangely (rānjˈlē), unincorporated town (1946 estimated pop, 5,000), NW Colo., on the White River near the Utah line. Founded in 1880 as a supply post, it remained a tiny hamlet until the oil boom of the 1940s.

Ranger, Henry Ward (rānˈjûr), 1858–1916, American landscape painter, b. Syracuse, N Y , self-taught in art He worked much in France and Holland, and many of his canvases show the influence in feeling and color of Corot and of the Dutch school. He delighted in portraying the effects of sunlight through delicate foliage and the richer autumnal tones He left in his studio a collection of 129 canvases which were sold at auction after his death, providing a trust fund, to be administered by the National Academy of Design, for the purchase of paintings by American-born artists Among Ranger's paintings are *Spring Woods* and *Highbridge, New York* (Metropolitan Mus), others are in the National Gallery of Art, Washington, D.C., and the Syracuse Museum of Fine Arts He became a member of the National Academy of Design in 1906

Ranger (rānˈjur), city (1940 pop. 4,553, 1947 estimated pop 5,500), N central Texas, WSW of Fort Worth, founded 1881, inc 1919. It flashed to booming life and had nearly 50,000 inhabitants after oil was discovered in 1917 It still has some oil as well as produce of farms, ranches, and small factories It has a municipal junior college

Rangoon (răngˈgōonˈ), city (pop 500,800), capital of Burma, on the Rangoon river near its entrance into the Gulf of Martaban Until the 18th cent , the site was occupied by a small fishing village, dominated like the modern city by the gilded spire of the Shwe Dagon Pagoda, the most celebrated temple in Burma After a Burmese victory here in 1755, Rangoon was given its present name and built up as the chief port of Burma It was held briefly by the British in 1824–26, after it came under British rule in 1852, it was transformed into a modern city Rangoon is connected with all parts of Burma by roads, railroads, and waterways, it handles most of the country's foreign trade and is the commercial and industrial center The major exports are rice, petroleum, and teak, there are rice mills, sawmills, oil refineries, and other industrial plants The university at Rangoon was founded in 1920 In the Second World War, Rangoon was occupied by the Japanese from 1942 to 1945, much of the city was destroyed by bombing

Ranjit Singh (rŭnˈjĭt sĭngˈ), 1780–1839, Sikh ruler He built up a large army with the help of European officers and rapidly conquered Kashmir and the Punjab Although he had great military strength, he wished to avoid a contest with the British, and in 1809 a treaty was made establishing the Sutlej river as the southern boundary of his domain At the end (1849) of the Second Sikh War most of his kingdom fell to Great Britain

Ranjitsinhji Vibhaji, Sir (rŭnˈjĭtsĭnˈjē vĭˈbŭjē), 1872–1933, Indian maharaja and cricket player, b. Kathiawar state, India He was educated at Rajkumar College in India and at Cambridge After 1895 he established an illustrious reputation at cricket and twice (1896, 1900) won the English cricket batting crown "Ranji", as he was called by his fans, went (1897) to Australia with an all-star English cricket team and took one to America in 1899 In 1907, after a long fight for succession, he became the maharaja of Navanagar, and he was credited with abolishing many abuses during his 25-year reign He wrote *The Jubilee Book of Cricket* (1897) and *How to Play Cricket* (1906)

Rank, Otto (ôˈtō rangkˈ), 1884–1939, Austrian psychoanalyst, one of Sigmund Freud's first and most valued pupils He early employed Freudian techniques to clarify the underlying significance of myths, producing the classic paper *Der Mythus von der Geburt des Helden* (1909, Eng tr , *Myth of the Birth of the Hero*, 1914). Rank, in collaboration with Hanns Sachs, founded the psychoanalytic journal *Imago* in 1912 Rank's theoretical views, diverging from those of Freud, gave the birth trauma, rather than the Oedipus complex, the central position in the causation of neurosis, claiming all neurotic anxiety to be a repetition of the physiological phenomena of birth On the therapeutic side he attempted to reduce the time required for a successful psychoanalysis to a few months Rank came to the United States a few years before his death. Among his writings are *The Trauma of Birth* (Eng. tr , 1929), *Art and Artist* (Eng tr 1932), *Modern Education* (Eng tr , 1932), and *Will Therapy* (Eng. tr , 1936)

Ranke, Leopold von (läˈōpōlt fŭn rängˈkŭ), 1795–1886, German historian He applied and elaborated Barthold Niebuhr's scientific method of historical investigation, and he is generally recognized as the father of the modern objective historical school. His aim was to reconstruct events and institutions of the past "as they actually were" and to avoid foregone conclusions with the same conscientiousness as the physicist or biologist would Although impartiality is one of the oldest aims in history writing, Ranke was the first major historian to apply all the resources of modern research technique to its pursuit. He wrote and taught, moreover, at a period when scientific detachment was far less fashionable in history writing than the philosophical school of Hegel and the nationalist enthusiasm of Droysen and Treitschke, all of whom sought to fit history into preconceived patterns It is difficult to say whether Ranke was more influential through his writings or through his teaching As professor at the Univ of Berlin (1825–71), Ranke formed an entire generation of historians, who in turn spread his methods to all countries of the world In his seminars originated the collection and publication of the *Jahrbucher* [year books], which grew into a tremendous repository of information on medieval Germany The accumulation of facts and details—which served the double purpose of preparatory research and of practical training—was a prominent feature of Ranke's method One of Ranke's earliest works was *Zur Kritik neuerer Geschichtschreiber* [critique of modern historical writing] (1824), which set forth his method, the culmination of his old age was his *Weltgeschichte* [universal history] (9 vols , 1881–88) Ranke sought to apply his method to the history of all European nations, and his investigations ranged over a wide field. Among translations of his works are *Ecclesiastical and Political History of the Popes during the Sixteenth and Seventeenth Centuries* (Eng tr , 3 vols , 1840), *History of the Reformation in Germany* (Eng tr , 3 vols., 1845–47), *History of Servia* (Eng tr , 1847), *Memoirs of the House of Brandenburg and History of Prussia during the Seventeenth and Eighteenth Centuries* (Eng tr , 3 vols , 1847–48), *Civil Wars and Monarchy in France in the Sixteenth and Seventeenth Centuries* (Eng tr , 2 vols , 1852), and *History of England* (Eng tr , 6 vols , 1875) Important among his untranslated writings are *Geschichte Wallensteins* (1869), *Zwölf Bücher preussischer Geschichte* [12 books of Prussian history] (5 vols , 1874), and *Hardenberg und die Geschichte des preussischen Staates* [Hardenberg and the history of the Prussian state] (3 vols , 1879–81) Ranke was a conservative in politics, and he did not share in the liberalism and nationalism of his Prussian contemporaries He had no explicitly stated philosophy of history (which would have been irreconcilable with his objective and open-minded method), but it is implicit in his work that he regarded history as the expression of the divine will His complete works have been published in German (54 vols , 1867–90) See G P Gooch *History and Historians in the Nineteenth Century* (1913).

Rankin, Jeannette, 1880–, American Congresswoman, b Missoula, Mont , grad Univ. of Montana, 1902 She was active in social work and campaigned for woman suffrage A Republican, she was the first woman in the United States to serve (1917–19) in Congress and also was (1941–43) a member of the 77th Congress. She voted against the declaration of war against Germany in 1917 and cast the only vote in the House of Representatives against war in 1941

Rankin, industrial borough (pop 7,470), SW Pa , ESE of, and near, Pittsburgh, inc 1892 Steel is made here

Rankine, William John Macquorn (răngˈkĭn), 1820–72, Scottish engineer and physicist Serving as professor of engineering at the Univ of Glasgow from 1855, he made valuable contributions to civil and mechanical engineering as well as to thermodynamics His manuals of applied mechanics and of civil engineering and one on the steam engine and like engines went into many editions.

Rannoch, Loch (lŏkh răˈnukh), lake, c 9½ mi long and 1 mi wide, Perthshire, Scotland It is fed by the Ericht and drains to the Tay river by the Tummel Schiehallion mt to the southeast overlooks the lake, and desolate Rannoch Moor, c.30 mi long and 12 mi wide, surrounds it

Ransom, John Crowe (ränˈsŭm), 1888–, American poet and critic, b Pulaski, Tenn , grad Vanderbilt Univ and studied at Oxford as a Rhodes scholar. His poetry, concerned with the breakdown in the modern world of traditional order and stability, includes *Poems about God* (1919) and *Selected Poems* (1945) Ransom's Southern agrarian views were expressed in the magazine the *Fugitive* (1922–25) and in the symposia *I'll Take My Stand* (1930) and *Who Owns America?* (1936) His literary criticism includes *The World's Body* (1938) and *The New Criticism* (1941) He is editor of the *Kenyon Review* and since 1937 has been professor of poetry at Kenyon College

ransom, price of redemption paid to the captor of a person, vessel, or city The custom of ransoming was formerly sanctioned by law, and one of the rights of a feudal lord was to call upon his tenants to ransom him Soldiers, given the right to kill or enslave their prisoners, frequently preferred to free their captives after receiving money payment This operated to mitigate bloodshed, for it was more profitable to capture the enemy and hold him for ransom than to massacre him. The amount of ransom varied with the rank of the captive, and, while common prisoners might be killed, or freed upon payment of a small sum, the ransoming of a king or a noted warrior involved great sums For the payment of the ransom of Richard I a special tax was levied in England; the French sovereign paid heavy ransom for Bertrand du Guesclin; and Scotland was impoverished in paying for James I. In

ancient times, cities frequently paid ransom to prevent their plundering by captors, and merchant vessels captured by privateers were sometimes thus redeemed by the owners After receiving the ransom, the privateer sometimes furnished a ransom bill, which allowed safe conduct for the ship to one of her native ports At one time it was the custom for the captain of a captured ship to give bond for his vessel and leave one of his crew on board the privateer as hostage With the abolition of privateering, this form of ransom was no longer demanded Its present usage generally refers to the sum paid to a brigand or kidnaper for the release of an individual

Ranson, industrial town (pop. 1,171), W Va , in the Eastern Panhandle contiguous to Charles Town; inc 1910 It has a brass and iron foundry and apple-processing plants

Ranters, name given to the adherents of an antinomian movement in England about the time of the Commonwealth Its principal teaching was pantheistic, that God is present in all nature Individuals were allowed wide freedom of thought and action They were accused of fostering immorality and were legislated against by Parliament and vigorously suppressed Many of them became Quakers In the 19th cent the Primitive Methodists were sometimes called Ranters See Rufus M Jones, *Studies of Mystical Religion* (3d ed , 1909)

Rantoul (răn″tōōl′), village (pop 2,367), E Ill , N of Champaign, in a farm area, inc 1869 Chanute Field, U S military air technical school, is here

ranz des vaches (răz″ dā vash′), type of Alpine folk melody of irregular melodic and rhythmic form, played on the alphorn by Swiss herdsmen There are about 50 or more regional variations on the basic melodic pattern Beethoven, in the Pastoral Symphony, and Rossini, in *William Tell*, are among the composers who have used the *ranz des vaches* in compositions

Raoul (răōōl′), d 936, duke of Burgundy, king of France (923–36) Elected king to succeed his father-in-law, ROBERT I, he fought against the Normans and the Hungarians, who repeatedly invaded France, and defended his crown against those nobles who supported the claims of CHARLES III (Charles the Simple) Though successful in establishing his authority, he did not live to enjoy it long His successor was LOUIS IV.

Raoult, François Marie (frăswȧ′ mărē′ raōōl′), 1830–1901, French chemist He was professor (from 1870) and dean (from 1889) of the faculty of sciences at the Univ of Grenoble He is known especially for his work on solutions which led to his formulation of the law which bears his name

Raoult's law (răōōlz′) [for F M Raoult] states that the lowering of the vapor pressure of a solvent is proportional to the concentration (molar) of the substance dissolved

Rapallo (rŭpa'lō, Ital răpal'-lō), town (pop 6,766), Liguria, NW Italy A resort on the Italian RIVIERA, it is beautifully situated on the Gulf of Rapallo

Rapallo, Treaty of, 1920 see FIUME

Rapallo, Treaty of, 1922, agreement signed by Germany and the USSR at Rapallo, Italy It was reached by Walter Rathenau and G V Chicherin independently of the Conference of Genoa (see GENOA, CONFERENCE OF), which was then in session Germany accorded the USSR *de jure* recognition (the first such recognition extended to the Soviet government), and the two signatories mutually canceled all pre-war debts and renounced war claims Russia, however, agreed to indemnify Germany if payment were made to other states on pre-war debts Particularly advantageous to Germany was the inclusion of a most-favored-nation clause and of extensive trade agreements The treaty was viewed with suspicion in Allied countries as the beginning of a German attempt to overthrow the Treaty of Versailles

rape, name applied to the six territorial divisions into which Sussex, England, is divided

rape, annual or biennial herb (*Brassica napus*), belonging to the same genus as the cabbage and resembling the turnip in form It is grown for forage for hogs and sheep and sometimes for cattle, although it may cause bloating with stock other than swine, as a cover crop, sometimes in orchards, for the seed, from which is expressed an oil used for illuminating, lubricating, and food purposes The oil has been utilized in Europe since the 17th cent A cake, made of the seed residue, is a valuable stock feed and also a good nitrogenous fertilizer. The seed is also used in birdseed mixtures See *Rape as a Forage Crop* (U S Dept of Agriculture, Farmers' Bul 164)

rape, in law, the crime of sexual intercourse with a woman (other than one's wife) without her consent A woman is deemed legally incapable of consenting if she is insane, idiotic, or below the AGE OF CONSENT In other cases, failure to resist physically (unless it plainly would be useless) implies consent and exonerates the accused

Rapha (rā'fu), variant of REPHAIAH.

Raphael (rā'fēul, rā'-) [Heb ,=God heals], archangel He is prominent in the book of Tobit, as the companion of Tobias, as the healer of Tobit, and as the rescuer of Sara from Asmodeus Feast: Oct. 24. Milton made him a prominent character of *Paradise Lost*

Raphael Santi or **Raphael Sanzio,** Ital *Raffaello Santi* or *Raffaello Sanzio* (raf″fāēl'lō sän'tē,[sän'-tsyō), 1483–1520, Italian Renaissance painter, b. Urbino, considered one of the greatest artists of the period His father, Giovanni Santi, court painter and poet to the city lord Federigo Montefeltro, first taught him the elements of art After the death (1494) of Giovanni, Raphael was probably apprenticed to Timoteo Viti, he entered (c 1500) the workshop of Perugino, where he first produced independent works Raphael worked in Florence from 1504 to 1508, when he moved to Rome, summoned by Bramante to participate in the decoration of the Vatican There he remained until his untimely death of a fever His early, Perugian works show the influence of Perugino in their composition and coloring, *The Crucifixion* and *The Knight's Dream* (both National Gall , London), *Coronation of the Virgin* (Vatican), *The Three Graces* (Chantilly), the *Connestabile Madonna* (Hermitage, Leningrad), and the *Sposalizio* (Brera, Milan), painted for the Franciscans at Città di Castello, are examples of this period and show much technical and artistic progress compared with *St Michael, St George and the Dragon,* and *Apollo and Marsyas* (all Louvre), painted under Viti The Colonna altarpiece, representing the *Madonna and Saints* (Metropolitan Mus), marks a turning point, having been begun at Perugia and finished at Florence, the five predella scenes, *Agony in the Garden* (Metropolitan Mus), *St Anthony of Padua* and *St Francis* (both Dulwich), *Procession to Calvary* (National Gall , London), and *Pietà* (Gardner Mus , Boston), give evidence of the new influences of Leonardo, Masaccio, and, more especially, Fra Bartolomeo Studying the intricacies of anatomy, perspective, and coloring, he achieved in Florence a freer, more able, and deeper interpretation At Florence he produced those Madonnas which gained him popularity with all ages by their sweet and deep expression The *Madonna del Gran Duca* (Pitti Palace), *Madonna del Giardino* (Vienna), *Madonna Ansidei* (National Gall , London, named for the Ansidei Chapel in San Fiorenzi, Florence, for which it was commissioned), *Madonna del Cardinello* (Uffizi), *Cowper Madonna* (National Gall of Art, Washington, D C), and *La Belle Jardinière* (Louvre) all belong to this period, the *Madonna del Baldacchino* (Pitti Palace) was begun by Raphael at this time but finished by Ghirlandaio The landscape backgrounds for the Madonnas became at this time much expanded in the manner of Leonardo Other works of the Florentine period are *St Catherine* (National Gall , London), the fresco *Adoration of the Trinity* (San Severo, Perugia), *The Entombment* (Rome), self-portrait (Uffizi), and portraits of Angelo and Maddalena Doni (Pitti Palace) At Rome his style matured, benefiting from Michelangelo's influence In the Vatican, Raphael was wholly responsible for the Stanza della Segnatura (finished 1511), the two largest walls representing, respectively, the *School of Athens,* portraying the Greek philosophers, and *The Triumph of Religion,* also called *Disputa,* the side walls show *The Slaying of Marsyas* and *The Temptation of Eve* The ceiling is devoted to the allegorical figures *Law, Philosophy, Poetry,* and *Theology* Two large lunettes over the windows represent *Parnassus* and *Jurisprudence* In the Stanza d'Eliodoro he painted (1511–14) *The Expulsion of Heliodorus from the Temple, The Miracle of Bolsena, The Repulse of Attila from Rome by Leo I,* and *The Deliverance of St Peter* He also partly painted and wholly designed the *Incendio del Borgo* in the Stanza dell' Incendio, other designs for the Vatican include *The Battle of Ostia, The Oath of Leo III before Charlemagne,* and *The Victory of Constantine over Maxentius,* the 52 religious subjects covering one ceiling and known as "Raphael's Bible" were also executed by his pupils after his design. Among the easel paintings of his Roman period are the *Garvagh Madonna* (National Gall , London), *Madonna with the Fish* (Prado), *Madonna di Foligno* (Vatican), *Madonna of the Chair* (Pitti Palace), the *Sistine Madonna,* his best-known work, named after the Church of San Sisto, Piacenza, for which it was commissioned, *Galatea* (Farnesina), *St Cecelia* (Bologna), *Christ Bearing His Cross* (Prado), *Isaia* (Sant' Agostino, Rome), a fresco, the *Alba Madonna* (National Gall. of Art, Washington D C), and the unfinished *Transfiguration* (Vatican), completed by Giulio Romano Portraits of that period include Julius II, long his patron, Baldassare Castiglione (Louvre), Tommaso Inghirami (Gardner Mus , Boston), Cardinal Bibbiena (Prado), and *Pope Leo X with Two Cardinals* and the *Donna Velata* (Pitti Palace), the last portraying a lovely woman about whose identity there has been much romantic speculation Having been named (1514) successor to Bramante as chief architect, Raphael designed a number of churches, palaces, and mansions. For his patron, Leo X, he undertook (1518) a survey of ancient Rome showing the chief monuments He also designed 10 tapestries with themes from the Acts of the Apostles for the Sistine Chapel, seven of the designs being in the Victoria and Albert Museum. See *Raphael* (paintings and drawings, with introduction by W. E Suida, 1942), C. C. Perkins, *Raphael and Michelangelo* (1878); Estelle Hurl, *Raphael* (1899).

Raphia see RAFA, Egypt.

raphia. see RAFFIA.

Raphu (rā'fū) [Heb ,=healed], father of Palti the spy Num 13 9.

Rapidan (răpĭdăn′), small river rising in N Virginia in the Blue Ridge and flowing SE and then NE to the RAPPAHANNOCK.

Rapid City, city (pop 13,844), co seat of Pennington co , SW S Dak , on Rapid Creek near the Black Hills and SE of Lead, inc 1882. Founded in 1876 after gold was discovered near by, the city is a center of gold and silver mining and the seat of the SOUTH DAKOTA SCHOOL OF MINES AND TECHNOLOGY It is also a center of farming and dairying Near by the Bureau of Reclamation built Deerfield Dam (est 1947) in the Rapid valley project. Dinosaur Park contains life-size cement figures of five dinosaurs

Rapido (rä'pēdō), river, 20 mi long, rising in the Apennines, S central Italy It joins the Liri below Cassino In the Second World War an Allied attempt (Jan , 1944) to outflank CASSINO in the drive on Rome resulted in extremely heavy casualties, particularly for the U S 36th Infantry Division The Allies eventually crossed the Rapido successfully, but Cassino continued to hold out until May

Rapp, George, 1757–1847, German religious leader, known as Father Rapp, b Württemberg In 1803 he came to the United States, where he and his followers formed the HARMONY SOCIETY

Rapp, Jean (zhȧ′ răp′), 1772–1821, French general He held Danzig against the Russians in 1813–14 and commanded the Army of the Rhine during the Hundred Days Created a count by Napoleon, he was later raised to the peerage by Louis XVIII

Rappahannock (răpŭhă'nuk), river rising in N Virginia on the eastern slope of the Blue Ridge E of Front Royal It flows generally southeast 212 mi to Chesapeake Bay, c 20 mi below the Potomac, and is navigable to Fredericksburg In the Civil War much fighting took place in the vicinity of the Rappahannock and the Rapidan, the largest of its several tributaries (see BULL RUN, SECOND BATTLE OF, FREDERICKSBURG, BATTLE OF, CHANCELLORSVILLE, BATTLE OF, BRANDY STATION, KELLY'S FORD, WILDERNESS CAMPAIGN)

Rappahannock Station, small trading center, N Va , E of Culpeper It is now called Remington Here was fought, Nov 7, 1863, a battle of the Civil War Union forces under Gen John Sedgwick scored a minor victory

Rapperswil (ra'pursvēl), town (pop 5,070), St Gall canton, Switzerland, on the Lake of Zurich Allied with several Swiss cantons after the 15th cent , it was included in St Gall canton in 1803 The 14th-century castle housed (1875–1927) the Polish National Museum, established by Polish refugees There is a small diversified industry

rare earths, group of rare, vari-colored, earthy, mineral substances (the oxides of a number of metals) found in the United States, Greenland, South America (Brazil), Europe (Norway and Sweden), and India The more important are cerite, euxenite, gadolinite, monazite, orthite, and samarskite. Origin ally they were thought to be elementary substances themselves, but later from them a number of metals were obtained These metals, known as the **metals of the rare earths,** are similar in properties and are grouped together in the periodic table They all exhibit a valence of 3, and they range in atomic number from 57 to 71. In order of atomic number they are lanthanum, cerium, praseodymium, neodymium, promethium (formerly illinium), samarium, europium, gadolinium, terbium, dysprosium, holmium, erbium, thulium, ytterbium, and lutecium Some other metals, as yttrium, thorium, and zirconium, are sometimes included The rare-earth metals are commonly arranged for convenience in three groups the first beginning with lanthanum and including the others in succession through samarium, the second, europium, gadolinium, and terbium, and the third, from dysprosium through lutecium The rare-earth metals are obtained from the rare earths only in small quantities

Raritan (rā'rĭtun), town (pop 4,839), N central N J , on the Raritan river near Somerville, inc. 1868

Raritan, river rising in N central New Jersey in a north and a south branch which meet W of Raritan It flows E and SE past Somerville, Bound Brook, and New Brunswick to Raritan Bay (an arm of Lower New York Bay) at Perth Amboy The Delaware and Raritan Canal connects the Raritan with the Delaware at Trenton and Bordentown The Thomas Alva Edison Memorial Bridge near Perth Amboy was built in 1938–40 See H E Wildes, *Twin Rivers: the Raritan and the Passaic* (1943).

Rarotonga (rărōtŏng'gă, rărūtŏng'gū), formerly **Goodenough's Island,** volcanic island (16,500 acres; pop. 5,775), S Pacific, the largest (c.6 mi. long and 4 mi. wide), most important, and most

southwesterly of the COOK ISLANDS. It is the capital of the group Rarotonga was discovered in 1823 by John WILLIAMS The highest of the forested hills reaches an altitude of 2,110 ft Avarua is the port and seat of government

ras (rŭs), Ethiopian title, usually translated "prince" It is used by the hereditary rulers of the major Ethiopian states, which were formerly independent kingdoms Thus, the present emperor, HAILE SELASSIE, was called Ras Tafari when his rule was limited to Shoa The most noted literary use of the title is in the name of the hero of Samuel Johnson's tale, *Rasselas*. Johnson may have erroneously believed that ras was part of the personal name and not merely a title

Rashi (rä'shē), 1040–1105, Jewish scholar and commentator, b Troyes, France The name he is known by is an abbreviation of Rabbi Solomon bar Isaac He studied in Worms, returning to Troyes c 1065 There, supported by the family vineyards, he taught and wrote his famous commentaries Those on the Old Testament (on all but a few books) and the Talmud rank as the greatest in Jewish exegesis and are still important in Jewish life Rashi's commentary on the Pentateuch (printed 1475) was the first dated Hebrew book printed His commentary on the Talmud covers the Mishna with the Gemara His work influenced Christian thinking, being known to Luther It is distinguished by great clarity

Rasis see RHAZES

Rask, Rasmus Christian (räs'mōōs krĭs'tyan rask), 1787–1832, Danish philologist, one of the great linguistic pioneers He published perhaps the first usable Anglo-Saxon and Icelandic grammars (translated into English) His work on the relationship of the Indo-European languages was extremely valuable and useful to his immediate successors

Rasles, Sébastien (sābästyĕ' rälĕ'), 1657?–1724, Jesuit missionary in North America, b France Arriving in present Maine in 1689, he spent two years with the Abnaki Indians in Acadia He then became a missionary among the Illinois tribes In 1696 he was recalled to take charge of the mission of the Abnaki, now at Norridgewock, Maine, which was disputed territory of the French and English When in 1721 the British invaded the camp, Father Rasles escaped, but his dictionary of the Abnaki language, which he had been carefully compiling, was carried off This book was published in 1833 He was killed in 1724 when the British raided the settlement His name also appears as Rale

Rasmussen, Knud Johan Victor (kunōōt' yō'hän vĭk'tôr räs'mōōsun), 1879–1933, Danish arctic explorer and ethnologist, an authority on the Greenland Eskimo Born in Greenland of Eskimo ancestry on his mother's side, he began in 1902 his 30 years of exploration and of study of the Eskimo, in which he sought confirmation of his theory that they are derived from the same stock as the North American Indians, having originally migrated from Asia In 1910 he established at Cape York, Greenland, his noted Thule station, the base for seven expeditions, five of which Rasmussen himself led He explored (1921–24) some 29,000 mi of arctic North America, being the first to traverse the Northwest Passage by dog sled when he crossed the ice of Viscount Melville Sound In 1932 he went on his last expedition, from Thule to SE Greenland for ethnological and archaeological data His translated works include *Greenland by the Polar Sea* (1921) and *Across Arctic America* (1927) in addition to several studies of the Eskimo

raspberry, name for several perennial shrubs of the genus *Rubus*, which include the blackberry and dewberry—all sometimes called brambles Several species of raspberry grow wild in North America, including *Rubus occidentalis*, the black raspberry or blackcap, and *Rubus strigosus* (or *Rubus idaeus* variety *strigosus*), the red raspberry The common European raspberry is *Rubus idaeus*, also cultivated in America In the United States raspberries are cultivated chiefly in the North The red, purple, black, yellow, or white fruits, tender and quickly perishable, are delicately flavored and are used fresh, dried, or canned and for jam A raspberry when picked differs from the blackberry in having a deep concave pit where it was separated from its stalk The plant is attacked by several diseases, such as orange rust, crown gall, and cane blight See also LOGANBERRY

Raspe, Rudolf Erich (rōō'dôlf ā'rĭkh räs'pu), 1737–94, friend and compatriot of Baron MUNCHAUSEN Raspe made a collection of the remarkable and quite incredible stories centering about the baron, which was published in London in 1785 under the title *Baron Munchausen's Narrative of His Marvellous Travels and Campaigns in Russia*

Rasputin, Grigori Yefimovich (räspōō'tĭn, Rus grĭgô'rĕ yĭfĕ'muvĭch räspōō'tyĭn), 1872–1916, Russian monk, a notorious figure at the court of Nicholas II He was an illiterate peasant and a debauchee, affiliated with a mystic sect akin to revivalism Because of his magnetism and because of his apparent miraculous cure of the young tsarevich, who suffered from hemophilia, Rasputin gained complete hold over Empress ALEXANDRA FEODOROVNA and, through her, over the emperor The statesmen and ministers who tried to oppose him were removed from their posts, those who remained were his tools The court was plunged into a nearly insane atmosphere of mysticism and the imperial family obeyed the slightest whims of the "holy man" while Russia suffered crushing defeats in the First World War It was suspected that the empress, who was German by birth, and Rasputin made their own use of the secret information which Nicholas was too weak to withhold from them The liberal section of the Duma also feared that Rasputin was working with the ultrareactionary clique for a separate peace with Germany In Dec, 1916, a group of conspirators, all belonging to the highest nobility, killed Rasputin at the palace of Prince Yussupov Rasputin's constitution was tough a generous dose of poison failed to produce any visible effect, and the terrified conspirators riddled him with bullets and drowned him in the frozen Neva for good measure During the February Revolution of 1917 Rasputin's corpse was exhumed and burned by the mob See M V Rodzianko, *The Reign of Rasputin* (1927), Prince F F Yussupov, *Rasputin* (1934)

Rassam, Hormuzd (hôrmōōzd' räsäm'), 1826–1910, Turkish archaeologist He assisted Layard in Mesopotamia in 1845–47 and 1849–51, studying at Oxford in the years between While in charge (1852–54) of excavations for the British Museum, he discovered at Kuyunjik (a mound on the site of Nineveh) the palace of Assur-bani-pal While doing field work (1872–82) in Assyria and Babylonia he identified and partially excavated the site of Sippar He wrote *Asshur and the Land of Nimrod* (1897) and *Narrative of the British Mission to Theodore, King of Abyssinia* (1869)

Ras Shamra, Syria see UGARIT

Ras Tafari see HAILE SELASSIE

Rastatt (räʹshtat, raʹstat), town (pop 13,526), S Baden, SW Germany, near the Rhine and SW of Karlsruhe It manufactures railroad cars, fine machinery, precision instruments, textiles, and paper First mentioned in 1207, it was completely destroyed (1689) by the French in the War of the Grand Alliance The Treaty of Rastatt (1714) complemented the treaties signed at Utrecht in 1713 (see UTRECHT, PEACE OF) As a result of the Treaty of CAMPO FORMIO (1797), a congress of the various states of the Holy Roman Empire, attended by France, was held here (1797–99), it was broken up by the resumption of hostilities against France Rastatt suffered considerable damage in the Second World War It is sometimes spelled Rastadt

Rastrelli, Bartolomeo Francesco, Conte (bärtôlōmāʹô franchāʹskō kônʹtā rästrĕlʹlē), 1700–1771, Italian architect He went with his father to Russia, where he became the outstanding architect of the imported Italian baroque style As court architect he was important in the development of St Petersburg His numerous great buildings include the Winter Palace and the Stroganov Palace at St Petersburg and the palace at Tsarskoye Selo

rat, rodent of world-wide distribution The brown house rat (*Rattus norvegicus*) and the black house rat (*R rattus*), both native to Asia, belong, like the house mouse, to the family Muridae They breed throughout most of the year The black rat probably migrated to Europe in the 12th cent Infesting ships, it was carried to America where, by 1700 it had become common on the Atlantic coast The brown rat reached Europe probably c 1727 and America c 1775 It drove the smaller and less pugnacious black rat from much of the territory Rats cause huge losses to stored foods, crops, and property Epidemics of typhus and bubonic plague spread by rats greatly influenced history in medieval Europe Other diseases transmitted by rats include rat-bite fever, tularemia, and rabies Albino rats are used in scientific experiments Various rodents of other families are also called rats, e g, kangaroo rat, wood or pack rat, cotton rat, rice rat, and bamboo rat

Rat Chain. see MARSHALL ISLANDS

ratchet and pawl, mechanical contrivance whose usual function is to permit motion in one direction only The ratchet is usually a wheel with angular teeth against which the pawl abuts The pawl is a lever arranged with a catch of such form that when drawn in one direction around the ratchet it catches the teeth, but when drawn in the opposite direction it merely slides over the teeth

Ratdolt, Erhard (ĕrʹhärt rätʹdōlt), 1442–1528, printer in Venice from 1476 to 1486 and in Augsburg from 1487 to 1522 A sheet showing specimens of his sizes and designs of type, dated 1486, is the earliest known specimen sheet His ornamental initials and borders, replacing the work of the illuminator, are still admired. His printing influenced that of William Morris

rath (rä, rath), hill fort protected by earthworks, used by the ancient Irish in the pre-Christian era as a retreat in time of danger Some of the larger raths, such as that at TARA, were famous in early Irish history and were used by chieftains or kings Many examples remain throughout Ireland

Rathenau, Walter (välʹtur räʹtŭnou), 1867–1922, German industrialist, social theorist, and statesman Son of Emil Rathenau (1838–1915), founder of the German public-utilities company *Allgemeine Elektrizitätsgesellschaft* (AEG), Rathenau succeeded to the presidency of this corporation on his father's death He directed the distribution of raw materials in the First World War under the so-called Hindenburg Program and became minister of reconstruction (1921) and later foreign minister (1922) He represented Germany at the Cannes and Genoa reparations conferences and negotiated the Treaty of Rapallo (see RAPALLO, TREATY OF) with Russia He was assassinated by nationalist and anti-Semitic fanatics (Rathenau was a Jew), who opposed his sincere attempts to fulfill reparations obligations Rathenau's social philosophy was idealistic He clearly realized the dangers of industrialization and feared that civilization was moving towards a stage of extreme mechanization, in which the human soul would be lost Opposed to socialism, Rathenau believed in the aristocracy of the mind He advocated a democratic social order, in which the means of production and distribution would be administered by consumer-producer guilds and private property would be restricted to consumer's goods His translated works include *In Days to Come* (1921) and *The New Society* (1921).

Rathgar, Ireland see RATHMINES AND RATHGAR.

Rathlin (räthʹlĭn), island (3,564 acres, pop 245), off Northern Ireland, in Co Antrim It is N of Benmore Head Rathlin is the Rikina or Ricinia of ancient times and is sometimes called Raghery Island Its cliffs, of limestone and basalt, rise at Sheveacarn to 449 ft The island's products include grain, fish, and kelp St Columba founded a church here in the 6th cent, and there are ruins of a castle in which Robert the Bruce is reputed to have hidden.

Rathmines and Rathgar (räthminzʹ, räthgarʹ), former urban district, now part of Dublin, Ireland.

Ratibor (raʹtēbôr) or **Raciborz,** Pol *Racibórz* (ratsēʹ-bōōsh), city (1939 pop 50,004, 1946 pop 19,605), Upper Silesia, on the Oder It has manufactures of precision instruments, textiles, and chemicals The capital of a principality founded in the 13th cent, it passed with Silesia to the house of Austria in 1526 and to Prussia in 1745 The princely title was revived in 1822 in favor of a member of the house of Hesse In 1840 Ratibor was raised to a titular duchy and the title was given to Chlodwig zu Hohenlohe-Schillingsfürst, with whose family it remained Ratibor was transferred (1945) to Polish administration at the Potsdam Conference

ratio The ratio of two quantities expressed in terms of the same unit is the fraction which has the first quantity as numerator and the second as denominator For example, if in a group of 100 people 5 die, the ratio of deaths to the total number in the group is 5/100=1/20=.05 Ratios are also indicated by writing the two values with a colon between them, e g, the ratio of 4 to 8 can be expressed by 4 8 as well as by 4/8

rationalism (räʹshunulĭzm) [Latin,=belonging to reason], theory which assigns first place to reason in the development and validation of human knowledge It stands opposed to empiricism on the one hand and to the justification of knowledge by faith on the other It is further to be differentiated from instrumentalism, which does not ascribe exclusive priority to any mode of investigation but asserts that the techniques of rational inquiry are a supporting tool in any inquiring activity of the mind Rationalism has been active in attacking the claims of religion In the Middle Ages the struggle appeared in the arguments of the scholastic theologians, and again in the 18th-century attack of the deists on the Roman Catholic Church The 19th-century controversy between partisans of the doctrine of evolution and those who denied it on religious grounds was essentially the dispute between rationalism and revealed religion By that time, however, rationalism was taking a decidedly empirical and even positivistic turn Religious modernism, an increasingly popular doctrine, has many features which it owes to rationalism When rationalism is opposed to empiricism, the argument is concerned with the source of knowledge and the techniques for verification of knowledge Rationalism tends to hold that truth can be achieved by a process of logical deductive reasoning from certain "self-evident" premises Empiricism and its allied theories hold that the only source of knowledge is sense perception and that the only test of knowledge is experience Locke represents the empirical position, Leibniz the rationalistic Kant attempted to harmonize the two positions by separating the areas which can be dealt with by reason and experience from those which are the province of faith The outcome was agnosticism, a result which appeared also in the ancient rationalistic system, Stoicism The pragmatic or instrumentalist position, which avoids the question by redefining truth according to the purposes of the investigator, is best exemplified by John Dewey See W E H. Lecky, *History of the Rise and Influence of the Spirit of Rationalism in Europe* (1904), E G Spalding, *The New Rationalism* (1918), John Dewey, *The Quest for Certainty* (1929), A E Murphy, *The Uses of Reason* (1943).

rationing, the allotment of scarce supplies to provide equitable distribution It may be employed also to conserve economic resources and to reinforce price and production controls Although early used in community emergencies and in distributing supplies to sailors, rationing was first organized on a national scale during the First World War, and during the Second World War it spread to most of the world The methods used have varied according to the degree of rationing needed and to the products These include specific rationing, allotment in terms of physical units, point rationing, the allotment of points to be apportioned by the user among commodities of a given group, and value rationing, allotment in terms of expenditure Rations may be allotted to individuals, institutions, and industrial users or to communities, as in rural areas of undeveloped countries In universal rationing, ration currency is issued to everyone in equal amounts, in differential rationing, the allocation is based on need and may vary according to occupation, age, sex, or health Ration currency, usually distributed by the government to the consumer, moves upward from the consumer level to the manufacturer or processor as the product moves down (this is the so-called flow-back system) To prevent direct exchange of cumbersome ration currency, especially at the higher levels, many nations instituted ration banking through regular bank channels In many countries rationing was continued for some years after the war The German system (widely used on the Continent) entailed almost total rationing on a differential basis The English system, designed largely to conserve resources, has allowed greater freedom of choice, differentiation among categories of consumers has been limited to specific items In the United States a flexible point system was used for most rationed foods, the unit system applied to sugar, coffee fuel oil, and other items Priorities and differential rationing were limited to a few commodities including tires and gasoline Rationing was administered by the OFFICE OF PRICE ADMINISTRATION See W A Nielander, *Wartime Food Rationing in the United States* (1947)

Ratisbon, Bavaria see REGENSBURG

Rat Islands see ALEUTIAN ISLANDS

Raton (rătŏn'), city (pop 7,607, alt 6,400 ft), co seat of Colfax co, NE N Mex, near the Colo line NE of Santa Fe, settled in the 1870s on the Santa Fe Trail, laid out 1880, inc 1891 It is a coal-mining town and rail and trade center for a live-stock region A state hospital and home for miners is here To the east are Capulin Mountain National Monument and Folsom (see FOLSOM CULTURE) Raton Pass (7,800 ft high) is just N of Raton

rattan (rătăn'), name for a number of plants of the genera *Calamus* and *Daemonorops*, climbing palms of tropical Asia Rattan leaves are of the feather-palm type, but are not clustered into a crown, they have prolonged, whiplike barbed tips by which the plant climbs to the tops of trees From the stem, noted for its extraordinary length, often several hundred feet, is obtained the rattan cane of commerce, a slender, flexible, tough cane of uniform diameter, usually split for wickerwork, baskets, and chair seats and left entire for walking sticks, e g, the Malacca cane A resin that exudes from the fruit is known commercially as DRAGON'S BLOOD

Rattazzi, Urbano (ōorbä'nō rät-tät'tsē), 1808–73, Italian statesman A leader of the left in the Sardinian parliament, he was briefly (1849) minister of the interior and later held cabinet posts as a strong supporter of Cavour until the two fell out (1857) Rattazzi was again minister of the interior (1859–60) and twice premier (1862, 1867), both his resignations as premier arose from trouble with Garibaldi, who attempted to take Rome during Rattazzi's premiership

Rattigan, Terence Mervyn, 1911–, British dramatist His best-known plays are *O Mistress Mine* (produced in New York, 1943) and *The Winslow Boy* (pub, 1946; produced in New York, 1947, filmed 1950). He also contributed to the British film *Bond Street* (1948) and other films

rattlesnake, poisonous snake of the Americas of the pit VIPER family. The head is widened at the base At the end of the tail is the "rattle," a series of dried, hollow segments which, when shaken, make a whirring sound While the snake is young three or four segments are usually added each year, one at each molt After maturity fewer develop Sometimes segments break off and a new one does not always form when the snake molts The timber rattlesnake is found from S Maine to NE Florida and W to Iowa and Texas It is about 3½ to 5 ft long and is yellow or tan with wide, dark crossbands The largest (5 to 8 ft in length) and most deadly species is the diamondback rattlesnake of the S and SE United States The western diamondback is shorter and stouter In the W United States the prairie rattlesnake sometimes lives in deserted prairie-dog holes, but despite popular lore, not with the prairie dogs and owls

Rattvik, Swed. *Rättvik* (rĕt'vēk), village, Kopparberg co, central Sweden, on Siljan lake. It has preserved ancient customs, traditions, and architecture, and its quaintness has made it a popular resort. Here Gustavus Vasa (later Gustavus I) made his appeal for support in the war for liberation from Danish rule in 1521

Ratzel, Friedrich (frē'drĭkh rät'sŭl), 1844–1904, German geographer He traveled as a journalist in Europe (1869) and in Cuba, Mexico, and the United States (1872–75) Thereafter he devoted himself to geographical studies and taught geography at the polytechnic school at Munich (1876–86) and at the Univ of Leipzig (from 1886) He was a pioneer in developing the science of anthropogeography and emphasized the importance of physical environment as a factor determining human activity His many works include *Anthropogeographie* (2 vols, 1881–92), *Völkerkunde* (3 vols, 1885–88, Eng. tr, *The History of Mankind*, 1896–98), and *Politische Geographie* (1891)

Ratzenhofer, Gustav (gōōs'täf rä'tsənhō"fûr), 1842–1904, Austrian sociologist and general, b. Vienna He had a distinguished military career, but is remembered chiefly for his contributions to social theory. His *Wesen und Zweck der Politik* [essence and purpose of politics] (3 vols, 1893) and other books in which he analyzed self and group interests and conflict had much influence on American sociologists

Rauch, Christian Daniel (krĭs'tyän dä'nyĕl roukh'), 1777–1857, German sculptor After some years of study in Rome (1804–11 and again later), where he felt the influence of Thorvaldsen, he achieved a high reputation as a sculptor of tombs, monuments, and portraits His outstanding works include portrait statues of five generals who fought against Napoleon, of Blücher, of King Maximilian II of Bavaria, and of Albrecht Dürer, and monuments to Queen Louise and Frederick the Great The last, Rauch's masterpiece, was a colossal bronze equestrian statue of Frederick on a pedestal with groups of generals and soldiers and with bas-reliefs depicting scenes from his life

Rauma (rou'mä), city (pop 9,459), W Finland, a seaport on the Gulf of Bothnia In the late 19th cent its sailing fleet, used for exporting timber, was the largest in Finland Incorporated in 1442, Rauma has narrow winding streets and a medieval Franciscan church, it has been noted for lacemaking since the Middle Ages

Rauschenbusch, Walter (rou'shunbōōsh), 1861–1918, American Baptist clergyman, b Rochester, N Y, grad Univ of Rochester (B A, 1884, D D, 1902) and Rochester Theological Seminary, 1886 In 1886 he was ordained and began religious work among German immigrants in New York city In 1902 he became professor of church history at the Rochester Theological Seminary An influential leader in the social interpretation of Christianity, he wrote *Christianity and the Social Crisis* (1907), *Christianizing the Social Order* (1912), *The Social Principles of Jesus* (1916), and *A Theology for the Social Gospel* (1917) His writings have been widely translated

Ravaillac, François (frāswä' rävāyak'), 1578–1610, assassin of Henry IV of France. A religious fanatic, he had convinced himself that Henry's policy was dangerous to the Church

Ravel, Maurice (mōrĕs' ravĕl'), 1875–1937, French composer, b in the Pyrenees, pupil of Fauré at the Paris Conservatoire Ravel and Debussy were the leaders of the anti-Wagnerian, impressionist movement His music is subtle, restrained, and well ordered He was a master of the piano and excelled at orchestration as well, sometimes orchestrating his own piano music Among his works are the piano suites *Miroirs* (1905), *Gaspard de la nuit* (1908), *Le Tombeau de Couperin* (1917), also for piano, *Pavane pour une infante défunte* (1899), *Jeux d'eau* (1901), *Ma Mère l'Oye* (1908, four hands, orchestrated), *Valse nobles et sentimentales* (1911), concerto for left hand (1931), for orchestra, *Daphnis et Chloé* (1909–12), *La Valse* (1919–20), the popular *Bolero* (1928), and a comic opera, *L'Heure espagnole* (1907) See Madeleine Goss, *Bolero. the Life of Maurice Ravel* (1940)

raven, large glossy black bird of the crow family, native to N Eurasia and North America The northern raven, a gloomy, dismal-voiced bird of N and E North America, is about 24 in long Ravens can be tamed and taught to imitate words They are primarily scavengers but will attack young or injured animals. A pair of ravens often use the same nest, usually on a cliff or in a tall tree, year after year Related western birds similar to the northern raven are the slightly smaller American raven and the white-necked raven of the desert regions of the SW United States and Mexico, which is about 20 in long. The raven is the subject of superstitions and legends, its most famous literary treatment is in Poe's poem, *The Raven*.

Ravena (ruvē'nŭ), village (pop. 1,810), E N.Y., near the Hudson S of Albany; inc. 1914. Ravena makes cider and vinegar and has stone quarries.

Ravenna (ruvĕ'nŭ, Ital rävĕn'nä), city (pop. 31,251), capital of Ravenna prov., Emilia-Romagna, N central Italy, in Romagna On a marshy plain near the Po delta, it is 6 mi. from the Adriatic. It rose to importance under the Romans, who made its port, Classis, the station for their fleet in the N Adriatic. Honorius made (402) Ravenna the capital of the Western Empire, and it was also the capital of Odoacer and Theodoric, who are responsible for some of the best buildings. Ravenna was the seat of the exarchs (governors of Byzantine Italy) from the late 6th cent until 751, when its capture by the Lombards broke Byzantine power in Italy Pope Stephen III claimed the exarchate and asked Pepin the Short to help wrest it from the Lombards Pepin donated the lands of the exarchate to the pope (754). This donation, confirmed by Charlemagne in 774, marked the beginning of the temporal power of the popes The Da Polenta family—known as Dante's hosts—were lords from the 13th to the 15th cent. After a period of Venetian domination, the city returned to the popes in 1509 The French won here a victory in 1512 over Spanish and papal forces, their commander, Gaston de Foix, died in the battle Ravenna is famous for its unique mosaics (see MOSAIC) of the 5th and 6th cent., showing strong Oriental connections, and for its Roman and Byzantine buildings Ornamented with mosaics are the mausoleum of Galla Placidia (5th cent), the octagonal baptistery (anciently a Roman bath), the 6th-century churches of Sant' Apollinare Nuovo and Sant' Apollinare in Classe, and, richest of all, the Byzantine Church of San Vitale There are the tombs of Theodoric and Dante Near the city along the sea are characteristic pinewoods celebrated since Roman times

Ravenna. 1 (ruvĕ'nŭ) Town (pop 1,098), central Ky., SE of Lexington and on the Kentucky near Irvine, inc 1921 **2** (rūvĕ'nŭ) City (pop 1,429), central Nebr, on the South Loup river and WNW of Grand Island, in a grazing area, inc. 1886 **3** (rĭvā'nŭ, rūvĕ'nŭ) City (pop 8,538), co seat of Portage co, NE Ohio, NE of Akron, in a lake and farm area, settled 1799, laid out 1808. Worsted cloth, derrick cranes, road sweepers, and iron castings are made here

Ravensberg (rä'vunsbĕrk), former county, NW Germany, in Westphalia, NW of Lippe It included Bielefeld. It passed (1346) to the counts of Berg With Berg, it passed to the duke of Jülich in 1348, and with Jülich it came (1524) to the duke of CLEVES In 1614 it went to Brandenburg

Ravensburg (rä'vunsbôrk), town (pop 23,912), S Württemberg, Germany, in Swabia, NNE of Friedrichshafen It has machinery, pharmaceutical, textile, and food-processing manufactures. A free imperial city from the 13th cent, it was a flourishing commercial center in the 15th and 16th cent It passed to Württemberg in 1810 Ravensburg has retained part of its medieval fortifications, a Gothic town hall, and several Gothic churches The ruins of the ancestral castle of the Guelphs are near by

Ravenstein, Ernest George (rā'vunstīn), 1834–1913, English cartographer and geographer, b Germany He studied and worked in Gotha, but did most of his cartographical and geographical work in England, where he was an employee of the government topographical department and a member of the Royal Statistical and the Royal Geographic societies Among his works were the *Map of Equatorial Africa* (1884) and *Atlas of the World* (1911).

Ravenswood, town (pop 1,061), W W Va, on the Ohio and SW of Parkersburg, chartered 1852.

Ravi (rä'vē), river, c 400 mi long, N India, flowing SW to the Chenab One of the five rivers of the Punjab, it first forms part of the border of West Punjab prov, Pakistan, and Punjab state, India, and it then enters West Punjab.

Rawalpindi (rəwulpĭn'dē), city (pop 185,042), West Punjab prov, Pakistan After the British occupation of the Punjab (1849), it grew to be one of their largest garrisons in India. There is much trade in agricultural produce. Manufactures include chemicals, ordnance, finished steel, furniture, and flour

Rawdon, village (pop 1,236), S Que, N of Montreal, in a lumbering, dairying, and potato-growing region

Rawdon-Hastings, Francis: see HASTINGS, FRANCIS RAWDON-HASTINGS, MARQUESS OF.

Rawlings, Marjorie Kinnan, 1896–, American author, b. Washington, D C, grad. Univ of Wisconsin, 1918. She did newspaper work until 1928. Her first novel, *South Moon Under* (1933), and two others were Book-of-the-Month Club selections, and one, *The Yearling* (1938), the story of a boy and his pet deer, was awarded the Pulitzer Prize for fiction in 1939. *Cross Creek* (1942) is an autobiographical account of her cracker neighbors. All her books deal with Florida's backwoods

Rawlins, John Aaron, 1831–69, Union general in the Civil War, b. Galena, Ill. Admitted to the bar in 1854, he served as city attorney in 1857. He joined the Union army in 1861 at the request of his fellow townsman Ulysses S. Grant and was appointed a captain and assistant adjutant general of volunteers on Grant's staff. Rawlins remained with Grant throughout the war and was his most influential adviser. He was promoted brigadier general of volunteers in 1863, was made chief of staff of the whole Union army in March, 1865, and became a major general in the regular army in April, 1865. On Grant's accession to the presidency in 1869, Rawlins became his Secretary of War, but died of tuberculosis before the year was out. He

was an ardent advocate of Cuban independence. See biography by J. H. Wilson (1916)

Rawlins, city (pop. 5,531; alt. 6,755 ft.), co. seat of Carbon co., S. Wyo., WNW of Laramie; founded c.1868. It is a rail, trade, and industrial center for a region of oil and gas, quarries, and sheep and cattle. The state penitentiary is here.

Rawlinson, George, 1812–1902, English Orientalist and historian, educated at Oxford. He taught history at Oxford and was made a canon of Canterbury. He is known for his long authoritative and still useful histories of the ancient world. His most famous history is that of *The Five Great Monarchies of the Ancient Eastern World* (4 vols., 1862–67). He and his brother, Sir Henry C. Rawlinson, edited Herodotus. He wrote a biography of his brother.

Rawlinson, Sir Henry Creswicke, 1810–95, English Orientalist and administrator, brother of George Rawlinson. In the course of his service with the Persian army and as consul at Baghdad, he became interested in deciphering the Persian CUNEIFORM of the inscription of Darius I at BEHISTUN. The results of his investigation were published in *Journal of the Royal Asiatic Society* and collected in *The Persian Cuneiform Inscription at Behistun* (completed 1851). He also helped prepare *The Cuneiform Inscriptions of Western Asia* (5 vols., 1861–84) for the British Museum. From 1865 to 1868 he sat in Parliament, and after 1868 he was a member of the India council. See biography by his brother, George Rawlinson (1898).

Rawlinson, Henry Seymour Rawlinson, 1st Baron, 1864–1925, English general. He accompanied Sir Frederick (later Lord) Roberts as his aide-de-camp in the Burmese expedition of 1886–87. He served under Kitchener in the Sudan campaign (1898) and in the South African War was a member of Lord Roberts's staff. He was made a brigadier general in 1903, and in the First World War he commanded the British 4th Army, which went through heavy fighting near the Somme. In 1918 he was a member of the Supreme War Council at Versailles, and later, returning to his previous command, he achieved notable success in piercing the Hindenburg line in a break-through between Saint-Quentin and Cambrai (Aug.–Nov., 1918). He was raised to the peerage in 1919 and commanded the British forces in India from 1920 until his death. See biography by Frederick Maurice (1928).

Rawmarsh, urban district (pop. 18,572), West Riding of Yorkshire, England, near Rotherham. It has ironworks, potteries, and coal mines.

Rawtenstall, municipal borough (1931 pop. 28,587, 1947 estimated pop. 24,870), Lancashire, England. N. of Bury. It has coal mines and manufactures of cotton, wool, and leather goods.

Ray or **Wray, John,** 1627–1705, English naturalist. With his pupil Francis Willughby, he planned a complete systematic classification of the vegetable and animal kingdoms and toured Europe collecting specimens. On Willughby's death, Ray organized and published the material left by his friend. Ray's own work—the botanical part of the project—includes the important *Historia plantarum* (3 vols., 1686–1704) and also *Catalogus plantarum Angliae* (1670) and *Methodus plantarum nova* (1682). The Ray Society for the publication of scientific works was founded in his honor in 1844.

ray, marine fish of the shark family, having a flat, diskike body with wide, fleshy, pectoral fins usually continuous with the sides of the head and body. Some are harmless, but the sting rays can inflict a severe and painful wound with the saw-toothed spine of the long tail. Some are destructive to oysters. A ray known as the devilfish or manta is found in warm Atlantic and Pacific waters. It reaches a weight of over 3,000 lb. and sometimes measures more than 20 ft. across the body from the tip of one fin to the other.

ray, in physics, a term commonly used to indicate an extremely narrow pencil of light or other form of radiation which proceeds through space in a straight line from the body serving as its source. It generally refers, therefore, to the line of propagation of waves, although it is also applied to streams of particles emitted by substances exhibiting RADIOACTIVITY. See also COSMIC RAYS, INFRARED RAYS, ULTRAVIOLET RAY, X RAY.

Rayburn, Sam (Samuel Taliaferro Rayburn), 1882–, U.S. Congressman (1913–), b. Roane co., Tenn., grad. East Texas Normal School. After his family removed (1887) to Fannin co., Texas, he worked at cotton picking. He worked his way through school, studied law at the Univ. of Texas, and practiced in Bonham, Texas. He was (1907–12) a member of the Texas legislature and was a prominent Democratic politician before entering Congress. He served as speaker of the House from 1940 to 1946 and returned to that post in 1949.

Rayleigh, John William Strutt, 3d Baron (rā'lē), 1842–1919, English physicist. He was professor of experimental physics at Cambridge (1879–84), professor of natural philosophy at the Royal Institution (1887–1905), and chancellor of Cambridge from 1908. He won the 1904 Nobel Prize in Physics. He is known for his extensive and important research in sound (resonance, vibration, absolute pitch) and light (radiation, polarization, and color vision), for his discovery (with Sir William Ramsay) of the inert gaseous element argon; for his determinations of electrical units, especially the ohm; and for his investigation of the application of Boyle's law to gases at low pressures. His works include *The Theory of Sound* (1877–78) and *Scientific Papers* (1899–1900). See biography by R. J. S. Rayleigh (1924), G. F. J. Temple and W. G. Bickley, *Rayleigh's Principle and Its Applications to Engineering* (1933).

Raymond IV (Raymond de Saint Gilles) (rāmōˊ du sĕ shēlˊ), d. 1105?, count of Toulouse (1093–1105?), leader in the First Crusade (see CRUSADES). The first great prince to take the Cross (and the only one to do so at the Council of Clermont), he led an army of Provençals to Constantinople. He refused to follow BOHEMOND and GODFREY OF BOUILLON in swearing fealty to ALEXIUS I, confining himself to a promise to do no injury to the emperor's life or honor. Raymond distinguished himself at the sieges of Nicaea, Antioch, and Jerusalem, but quarreled with Bohemond over the possession of Antioch. Having refused the title of king of Jerusalem, he fought at Ascalon (1099). Unable to protect his city of Laodicea against Bohemond, he went to Constantinople to seek the aid of Alexius. Subsequently he was held prisoner by TANCRED, who was acting as regent for Bohemond, and at the end of his life he laid siege to Tripoli, which was finally formed into a county by his descendants.

Raymond VI, d. 1222, count of Toulouse (c. 1194–1222). Repeatedly excommunicated for his tolerance toward the ALBIGENSES, he regularly submitted to the Church and made promises of a change in attitude. Attacked by Simon de MONTFORT (1211), he received the support of Peter II of Aragon, but in 1213 he and Peter were defeated at Muret, and Raymond went into exile in England. Though obliged to grant Toulouse and Montauban to Montfort and Provence to his own son, Raymond VI fought with his son against Montfort and Montfort's son till his death in 1222.

Raymond VII, 1197–1249, count of Toulouse, son of Raymond VI. He continued his father's war (see ALBIGENSES). In 1229 he signed a treaty which virtually transferred the major part of S France to the French crown, partly through immediate cession, partly through the marriage of his daughter to ALPHONSE of Poitiers, a brother of Louis IX of France. Raymond was several times excommunicated by the pope and in 1233 was compelled to permit the establishment of the Inquisition in his lands. After an unsuccessful revolt in 1241 he obtained peace by promising to destroy the Albigenses. He kept his promise in the year of his death he burned 80 Cathari.

Raymond, c. 1140–1187, count of Tripoli (1152–87), great-great-grandson of Raymond IV of Toulouse. He played a leading part in the last years of the Latin Kingdom of Jerusalem. Captured (1164) by the Moslems, he was released c. 1173 and became (1174) regent for King BALDWIN IV of Jerusalem. He relinquished this post in 1176, but in 1183 was appointed regent for Baldwin V. Raymond opposed GUY OF LUSIGNAN, who became king at the death (1186) of Baldwin, and he even entered into an alliance with SALADIN. However, in 1187 he became reconciled with Guy and valiantly led the Christians in the battle of Hattin. Saladin was victorious, and the Kingdom of Jerusalem soon fell entirely into the hands of the Moslems. Raymond died at Tyre soon after the battle. See M. W. Baldwin, *Raymond III of Tripolis and the Fall of Jerusalem* (1936).

Raymond, Antonin, 1889–, American architect, b. Czechoslovakia. He came to the United States in 1910, worked in Frank Lloyd Wright's office, and went with him to Japan in 1920. He practiced there from 1921 to 1938 and became a pioneer of modern building in the Orient. He edited *Architectural Details* (1939). See *Antonin Raymond: His Work in Japan* (ed. by Katsuya Nakamura, 1935).

Raymond, John T., 1836–87, American actor, whose real name was O'Brien. He had success as Asa Trenchard in Tom Taylor's *Our American Cousin* in 1858 and gained fame in 1874 as Col. Mulberry Sellers in a dramatization of Mark Twain's *Gilded Age*. A gifted character actor, he also appeared in tragedy.

Raymond, town (pop. 2,116), S Alta., SE of Lethbridge, in a sugar-beet area. A provincial agricultural college is here.

Raymond. 1 Town (pop. 1,340), SE N.H., between Portsmouth and Manchester, settled 1717. It was called Freetown and was part of Chester until its incorporation as Raymond in 1764. 2 Lumber city (pop. 4,045), SW Wash., a port on the Willapa river near Willapa Bay; homesteaded in 1861, incorporated 1907. It also has commercial fisheries and is a farm and dairying center.

Raymond Berengar IV (bĕˊrŭngär), d. 1162, count of Barcelona (1131–62). He married Petronella, daughter and only heir of King Ramiro II of Aragon, after whose abdication (1137) Raymond also ruled Aragon. Catalonia and Aragon remained united under Raymond's descendants. Raymond continued the fight against the Moors, took Tortosa (1148), Lérida (1149), and several other towns. He also took part in politics in S France. One of the greatest figures of the Catalan dynasty, Raymond was succeeded by his son Alfonso II.

Raymondville, city (1940 pop. 4,050, 1947 estimated pop. 6,500), co. seat of Willacy co., extreme S Texas, NNW of Brownsville; platted 1904, inc. as a city 1921. In the irrigated section of the Rio Grande valley, it handles citrus fruit and vegetables and some livestock and oil.

Raynal, Guillaume Thomas François, Abbé (gēvōm' tômäˊ frāswäˊ abāˊ rānälˊ), 1713–96, French historian and philosopher. A priest dismissed from his parish in Paris, he turned to writing and became an editor of the *Mercure de Paris*. His *Histoire philosophique et politique des établissements et du commerce des Européens dans les deux Indes* (6 vols., 1770) was condemned by the Parlement of Paris in 1781. He left France, returning later, he was elected to, and declined, membership in the States-General of 1789.

Rayne, town (pop. 4,974), SW La., SW of Baton Rouge. The town has rice mills and ships quantities of frogs.

Raynham (rāˊnum), town (pop. 2,141), SE Mass., set off from Taunton 1731. Ironworks were established here in 1652.

rayon (rāˊŏn"), synthetic fibers made from CELLULOSE or textiles woven from such fibers. The name was adopted (1924) in preference to "artificial silk" by the U.S. Dept. of Commerce and various commercial associations. As early as 1664 the English naturalist Robert Hooke had suggested the possibility of making artificial silk, but the first artificial textile fiber was produced in 1884 by a French scientist, Hilaire de Chardonnet, and was manufactured by him in 1889. Unpopular at first because it was too lustrous and laundered poorly, it has been steadily improved and of the textile fibers is second only to cotton in total consumption and cheapness. Cellulose from wood pulp or cotton linters, washed, bleached, and pressed into sheets, is dissolved by chemicals, then forced under pressure through minute holes in a metal cap (spinneret), emerging as filaments which unite to form one continuous strand solidified by passage through a suitable liquid or warm air. The spinning solution may be extruded through a larger orifice or slit to produce a monofilament, a ribbon, or a sheet. Filaments are doubled and twisted into smooth, silklike yarns or cut into staple lengths and spun. Spun rayon can be treated to simulate wool, linen, or cotton. Four methods of manufacturing rayon differ as to materials and processes used. In the nitrocellulose process developed by Chardonnet and no longer of commercial importance, cellulose is treated with nitric and sulphuric acids. In the VISCOSE PROCESS discovered in 1892 it is treated with carbon disulphide, then dissolved in caustic soda, forced through a spinneret, and hardened in sulphuric acid. For cuprammonium rayon the cellulose is dissolved in copper oxide and ammonia, forced through holes larger than the intended diameter, then, by a process known as stretch spinning, is elongated and twisted under tension to yield a very fine, strong yarn used for sheer fabrics and hosiery. Rayon produced by these three methods is classified as regenerated, since the final product, like the original material, is cellulose. The fourth type of rayon, originated in England in 1918, is an acetate derivative of cellulose made by steeping cellulose in acetic acid, then treating it with acetic anhydride. Acetate rayon is more resistant to stains and creasing, takes different dyes, and is plasticized by heat, permitting embossed effects such as *moiré* patterns. Yarns with new properties are constantly being developed, such as high-tenacity yarns used for tire fabrics and yarns with a permanent woollike crimp or with separate air pockets adapting it to use as sponge rubber and kapok substitutes. An acetate filler is used to make nonshatterable glass. Flexible greaseproof and moistureproof sheets such as CELLOPHANE are used for wrappings. See J. V. Sherman and S. L. Sherman, *The New Fibers* (1946), Zelma Bendure and G. B. Pfeiffer, *America's Fabrics* (1946).

Rayonnant style (rāˊŏnänt), the middle and culminating period (c. 1220–1350), of French Gothic architecture, so termed from the characteristic radiating tracery of the ROSE WINDOW. In this period most of the great cathedrals were under construction, the builders became bolder and more proficient, emphasizing in every way the vertical elements of the structure. Light and soaring structural skeletons became established, reducing the size of all supporting members, the enlargement of windows resulted in a drastic reduction of wall surfaces. Bar tracery, displaying elaborate geometrical patterns, supplanted plate tracery. Sculptural ornament turned to greater naturalism and was used more generously. Of this period are the cathedral at Amiens (1220–70), the Sainte-Chapelle at Paris (1240–48), and the earlier portions of St. Ouen at Rouen (commenced 1318).

Rayville, town (pop. 2,412), parish seat of Richland parish, NE La., near the Boeuf river E of Monroe. Cotton-ginning, hunting, and fishing are its main activities.

Razin, Stenka (stĕng'ká ra'zēn), d 1671, Cossack leader He was ataman [chief] of the *golytba* [property less Cossacks] of the Don After returning from a raid (1667–69) through the lower Volga valley and across the Caspian Sea—an expedition which brought him and his followers immense booty—Razin turned against the authority of the tsar in 1670 The rebel army led by him took Tsaritsyn (now Stalingrad), Astrakhan, Saratov, and Samara (now Kuibyshev) and was joined by the peasants and the non-Russian tribes of the middle and lower Volga region However, he was defeated by government troops at Simbarsk (now Ulyanovsk) and fled to the Don, where the propertied Cossacks delivered him to the government He was beheaded at Moscow His exploits have been celebrated in song and legend

Rb, chemical symbol of the element RUBIDIUM.

Re: see EGYPTIAN RELIGION

Ré (rā), island (33 sq mi ; pop c 9,000), off La Rochelle, W France, in the Bay of Biscay The name was formerly sometimes spelled Rhé It belongs to Charente-Maritime dept The citadel, built (1681) by Vauban at Saint-Martin-de-Ré, is now a penitentiary George Villiers, 1st duke of Buckingham, led (1627) an unsuccessful expedition to Ré in an attempt to raise the siege of the Huguenot stronghold of La Rochelle

Re, chemical symbol of the element RHENIUM

Rea, Samuel (rā), 1855–1929, American railroad engineer, b Hollidaysburg, Pa He entered (1871) the service of the Pennsylvania RR as rodman Rea was (1875–77) assistant engineer in the building of the Monongahela Bridge at Pittsburgh, was (1889–92) chief engineer of the Baltimore and Ohio RR, then returned to the Pennsylvania and was put in charge of the railroad's construction work The Pennsylvania Station in New York city, the Pennsylvania RR tunnels under the Hudson and East rivers and under Manhattan, and the Hell Gate Bridge were built under his direction He served as president of the Pennsylvania RR from 1913 to 1925

reaction, chemical: see CHEMICAL REACTION

Read, George, 1733–98, American jurist, signer of the Declaration of Independence b near Northeast, Cecil co , Md He was admitted to the bar in 1753 and later (1763–74) was attorney general of the Lower Counties (Delaware) and a member of the Continental Congress (1774–77) He was president of the Delaware constitutional convention in 1776 and briefly (1777–78) president of Delaware Read was a member of the Federal Constitutional Convention (1787) and helped to make Delaware the first state to ratify the Constitution (Dec 7, 1789) A U S Senator (1789–93), he resigned to become (1793) chief justice of Delaware See W T Read, *Life and Correspondence of George Read* (1870)

Read, Opie Percival, 1852–1939, American author, b Nashville, Tenn He had been a printer and small-town newspaper editor before he started (1883) the humorous *Arkansas Traveler*, which he edited at Little Rock, Ark , until 1891 His first novel, *Len Ganzett* (1888), was the first of a long series of robust, hastily written stories, humorous and human Very popular in their day, they included *A Kentucky Colonel* (1889), *A Tennessee Judge* (1893), and *My Young Master* (1896) Read was a successful Chautauqua lecturer. See his autobiography, *I Remember* (1930)

Read, Thomas Buchanan, 1822–72, American poet and artist, b Chester co , Pa He was a portrait painter and sculptor in Boston, then in Philadelphia and in Rome As a poet he is remembered only for his stirring "Sheridan's Ride," although his poetical works (1866) ran to three volumes

Reade, Charles, 1814–84, English novelist After being a fellow of Magdalen College, Oxford, he was called to the bar, but playwriting soon superseded law in his interests His first success was *Masks and Faces* (1852), written in collaboration with Tom Taylor, and the plot was used in his first novel, *Peg Woffington* (1853) A fiery defender of the causes he believed in, he began a long series of propagandist novels with *It's Never Too Late to Mend* (1856), describing the cruelties of prison discipline *Hard Cash* (1863) exposes the injustices in the care of the insane, and *Put Yourself in His Place* (1870), some of the abuses of trade unionism He clipped newspapers and government reports for the material of his novels and vigorously defended his facts against the attacks of critics His method of work is described in *A Terrible Temptation* (1871) Reade considered *Griffith Gaunt* (1866) his best novel, but he is remembered chiefly for his great medieval romance, *The Cloister and the Hearth* (1861), the hero of which is Gerard, the father of Erasmus This is little marred by the theatricality of much of Reade's work See biography by Malcolm Elwin (1931)

Reading, Rufus Daniel Isaacs, 1st marquess of (rĕ'dĭng), 1860–1935, British statesman He was called to the bar in 1887 and achieved great success in his profession. He entered Parliament as a Liberal in 1904, became attorney general in 1910, and in 1912 was given a seat in the cabinet. With Lloyd George he was involved in charges of buying stock in the American Marconi Corp while the government was contracting with the British branch of the firm He was, however, vindicated and in 1913 created lord chief justice He served the government in financial operations during the First World War, becoming (1915) president of an Anglo-French loan commission to the United States, where he subsequently served as special envoy (1917) and special ambassador (1918) In 1921 he was made viceroy of India at a time when the temper of the people, partly under the influence of Mahatma GANDHI and partly as a result of the Amritsar massacre (1919), was roused against English domination Faced with the passive resistance of the Gandhi adherents, Isaacs authorized the imprisonment of Gandhi and felt compelled to allow the hated salt tax. He returned to England in 1926 and was created a marquess, but he was much criticized for his administrative acts. See biographies by Stanley Jackson (1930) and his son, G R Isaacs, 2d marquess of Reading (2 vols , 1940–45)

Reading (rĕ'dĭng), county borough (1931 pop 97,149, 1947 estimated pop 114,260), county town of Berkshire, England, on the Kennet near its influx to the Thames and W of London Its history dates from 871 when it was occupied by the Danes, who burned it in 1006 A gateway and ruins of buildings, surrounded by a public park, remain of a Benedictine abbey founded in 1121 by Henry I, who is buried here The ancient castle was destroyed by Henry II In 1643 the town surrendered to the parliamentarians under the earl of Essex It was the seat of several parliaments There are a 15th-century grammar school, a museum, the Royal Berkshire Hospital, and the Univ of Reading (1926, formerly a college, founded 1892, of Oxford), with noted departments of agriculture and dairying Jane Austen attended school in Reading, and Oscar Wilde while in prison here wrote his *Ballad of Reading Gaol* Chaucer and Bunyan also commemorated the town, and it was the Aldbrickham of Thomas Hardy's *Jude the Obscure* Manufactures include biscuits, leather goods, aircraft, and farm implements

Reading 1 (rĕ'dĭng) Town (pop 10,866), NE Mass , N of Boston, settled 1639, set off from Lynn 1644 It has a 17th-century tavern **2** (rĕ'dĭng) City (pop 1,059), S Mich , SE of Battle Creek, in a farm and lake region, settled 1840, inc as a village 1873, as a city 1934 **3** (rĕ'dĭng) Village (pop 6,079), SW Ohio, N of Cincinnati, platted 1798 and called Vorheestown Varied manufactures include chemical products **4** (rĕ'dĭng) City (pop 110,568), co seat of Berks co , SE Pa , on the Schuylkill and NW of Philadelphia, laid out 1748, inc as a borough 1783, as a city 1847 In the Pennsylvania Dutch region and surrounded by a fertile agricultural area, it is one of the most important commercial and industrial centers in the state Chief among its diverse industries are large railroad shops and the manufacture of textiles, iron pipe, optical goods, hardware, and brick It has a symphony orchestra, the county historical society, a museum, and art galleries and is the seat of Albright College (Evangelical, coeducational, 1895) Mt Penn, Neversink Peak, and Crystal Cave are scenic attractions near by Reading was one of the first places in the country to manufacture iron products and supplied cannon in the Revolution Daniel Boone was born near the city

reading Facility in comprehension and interpretation of the printed page is an essential factor in educational progress, and instruction in this basic skill has always been a primary purpose of elementary education Research in the psychological and physical bases of reading has emphasized the importance of remedial work for students whose progress is impeded by impaired vision, faulty eye movements, or personal handicaps resulting from poor teaching The recognition of individual differences in reading speed and comprehension and in ability to learn by means of written rather than oral or manual instruction has resulted in the organization of special classes and courses of study in many schools See A I Gates, *The Improvement of Reading* (1935), M J Adler, *How to Read a Book* (1940), I A Richards, *How to Read a Book* (1943), E W Dolch, *Manual for Remedial Reading* (2d ed., 1945)

Readsboro, town (pop 913), S Vt , bordered on the south by the Mass line Davis Bridge Dam, 200 ft high, and power plant are on the Deerfield river near here This area was granted to Robert Rogers in 1764 and settled c 1780

Reagan, John Henninger (rē'gŭn), 1818–1905, American statesman, b Sevierville, Tenn. In 1839 he moved to Texas, joined the army of the republic, and fought in the Cherokee campaigns He was admitted to the bar in 1848, served in the state legislature (1847–49), and was judge of the district court at Palestine (1852–57) and U S Representative (1857–61) Reagan, a member of the Texas secession convention of 1861, was elected to the provisional congress of the Confederacy, and Jefferson Davis appointed him postmaster general in March, 1861 He ably administered that department throughout the Civil War and also served as secretary of the treasury in the last weeks of the Confederacy From May to Oct., 1865, he was imprisoned at Fort Warren, Boston, whence he wrote an open letter to Texans urging civil rights and qualified suffrage for the Negro, for this letter he was severely criticized He helped frame the state constitutions of 1866 and 1875, was returned to the House (1875–87), and served in the U S Senate (1887–91). Reagan's efforts to promote the much-needed regulation of railroads were particularly notable, and he was joint author of the act which established (1887) the Interstate Commerce Commission He was a member (1891–1903) and chairman (1897–1903) of the Texas railroad commission See his memoirs (ed by W F McCaleb, 1906), August Dietz, *The Postal Service of the Confederate States of America* (1929)

Reaia (rē"āī'u, rēā'yu) [Heb ,=whom God sees], son of Micah the Reubenite 1 Chron 5 5

Reaiah (rē"ā'u, rēā'yā) [Heb ,=whom God sees] **1** Grandson of Judah 1 Chron 4 2 **2** Family returned from exile Ezra 2 47; Neh 7 50

real estate: see PROPERTY

realgar (rēăl'gär) [ultimately from Arabic], mineral, arsenic monosulfide, with a red to yellow color It commonly occurs associated with other arsenic minerals, less often with ores of silver and lead It is monoclinic, showing short prismatic crystals, and on prolonged exposure to light it disintegrates and forms a powder Realgar is heat treated for the production of "yellow arsenic," a poisonous oxide, used in metallurgy Macedonia, Japan, Rumania and Switzerland are sources of the mineral, and in the United States it is found in Yellowstone National Park, in Utah, and in Nevada

realism, in literature, the attempt to describe characters and incidents as they actually are in life, without idealization Realism can be found in literature, especially in fiction, in all periods It became a conscious literary movement in late 19th-century France in opposition to romanticism Instead of idealizing their characters, novelists like Honoré de Balzac and Gustave Flaubert presented the sordid, trivial aspects of life as well as the nobler or more dramatic Flaubert, whose *Madame Bovary* is the most famous realistic novel, also insisted that the writer should keep his own feelings and attitudes out of the story, in order to give the reader an objective presentation of life Closely allied to realism was naturalism, whose chief exponent, Émile Zola, advocated a thorough, dispassionate inquiry into every aspect of society Realism, in this sense, can be found in the Russian novels of Dostoyevsky and Leo Tolstoy, the English novels of Thomas Hardy, George Moore, and Arnold Bennett, and the American novels of William Dean Howells, Frank Norris, and Theodore Dreiser In more recent times many novelists have reacted against a realism which, they believe, pays too much attention to facts for their own sake, and novelists such as Virginia Woolf, D H Lawrence James Joyce, and Marcel Proust have been less interested in merely presenting the objective facts They have tried to achieve realism, if the term can still be used for such novelists, by going below the surface to the underlying meaning of the facts Because so many different methods have been used by 20th-century novelists to present 'real" life, the term *realism* has lost much of its meaning However, the attempt to describe accurately and objectively the actions, speech, and surroundings of characters from all classes of society is still a major force in modern fiction In the drama, realism can best be seen in the early plays of Henrik Ibsen See W L Myers, *The Later Realism* (1927), J W Beach, *The Twentieth Century Novel* (1932), H J Muller, *Modern Fiction* (1937)

realism (rē'ălĭzm), in philosophy **1** A fundamental problem of medieval philosophy was the question of the UNIVERSAL, i e , what relation do general concepts have with individual things? For example, what connection does the notion of chair have with individual chairs? Early in medieval philosophy thinkers divided into two schools, those who held realism and those who held nominalism The realists claimed that general concepts have an existence independent of individuals they exist *ante rem* [Latin,=before the thing], nominalists held that they exist only *post rem* [Latin,=after the thing], i e , general concepts have no existence at all, they are but generalizations of individuals WILLIAM OF CHAMPEAUX is typical of the realists, ROSCELLIN of the nominalists Abelard urged a modified nominalism, which taught that the individual alone exists, but the mind is able to abstract what is common to different things. Moderate realism, the scholastic solution par excellence (taught by JOHN OF SALISBURY, St. THOMAS AQUINAS, St. BONAVENTURE, and DUNS SCOTUS), was not far removed from Abelard's nominalism, according to it the universal qua universal has existence only in the mind, but it has a real foundation existing in the individual, the foundation being the real essence of the individual. This was the key to the epistemology of scholasticism Exaggerated realism is most closely akin to the idealism of PLATO. **2** A modern expression of the problem of universals may be seen in the problem of subjectivism. The opposite of

subjectivism, i e , objectivism, is also called realism, because it teaches that there are real objects in existence outside the mind

Real Presence, the actual presence of Jesus Christ in the EUCHARIST The term is interpreted variously according to the various Eucharistic doctrines For Protestant interpretations, see LORD'S SUPPER.

real property: see PROPERTY

Ream, Vinnie. see HOXIE, VINNIE REAM

reaper, machine propelled by draft animals or a tractor and used for reaping grain Its predecessors were the SICKLE and the cradle, which have not everywhere gone out of use The earliest known reaper using animal power was described by Pliny the Elder as used in Gaul It was pushed by an ox and consisted of a box on two wheels with a comb projecting from the front of the box The heads of the grain were torn off by the comb and fell into the box Modern attempts to make reaping machines began in England, where the first patent was issued to Joseph Boyce in 1799 The first reaper to win general acceptance for practical field work was made and operated by Cyrus Hall MCCORMICK in 1831 The grain cut by this reaper fell on a platform, from which it was raked by a man who walked beside the machine An improvement permitted the raker to stand on the machine Devices were invented later by which the reaper itself did the raking A number of men followed the machine to bind the grain into sheaves The Marsh harvester, patented in the United States in 1858, carried, in addition to the driver, two men to bind the grain This was a heavy machine for the two horses to draw, and to bind the grain was more than work enough for two men, the machine was known as a "killer " The series of inventions that produced a practical self-binder put earlier reapers generally out of use The first self-binders used wire bands, which proved troublesome in many ways Cattle ate pieces of the wire with the straw, with fatal results Pieces of the wire found their way into the threshed grain and interfered with grinding The substitution of twine for wire was a great improvement A combine, which threshes the grain as it is reaped, has proved suited to large-scale operations The MOWER, or mowing machine, for cutting grasses and other plants for hay was developed from the reaper in the 19th cent See A A Stone, *Farm Machinery and Equipment* (3d ed , 1942), H P Smith, *Farm Machinery and Equipment* (3d ed , 1948)

Réaumur, René Antoine Ferchault de (rā′umyōr′, Fr runā′ ãtwan′ fĕrshō′ du rāōmür′), 1683–1757, French physicist and naturalist, one of the foremost scientists of the 18th cent He invented a thermometer (1731) and a temperature scale (still in use in Europe) in which the freezing point of water is zero and the boiling point 80° He added to knowledge of the expansion of gases and fluids and improved the methods of iron manufacture His work in physiology includes research on regeneration in crayfish and on digestion in birds (especially the role of gastric juice, which he isolated) He wrote monographs on many subjects and published in six volumes (1734–42) the results of his exhaustive study of insects, a seventh volume (part of the original manuscript) appeared in 1928

Reba (rē′ba) [Heb ,=a fourth], king of Midian killed by the Jews Num 31 8, Joshua 13 21

rebate (rē′bāt), a return to the purchaser of part of the price, in the United States, particularly the return on transportation charges formerly given by railroads to favored shippers In England deferred rebates are given in many branches of trade as a means of maintaining monopoly They consist of DISCOUNTS, on the price of articles sold, returned to the buyer every 6 or 12 months after purchase if the buyer has not in the meantime dealt with the competitor of the company giving the rebate In the United States, the Elkins Act of 1903, the Hepburn Act of 1906, and the INTERSTATE COMMERCE COMMISSION prohibit and penalize railroad rebates

Rebecca or **Rebekah** (both rĭbĕ′ka) [Heb ,=noose], wife of Isaac and mother of Jacob One day according to custom she drew water at the city well and was there chosen as wife for Isaac by Abraham's servant Eliezer, who had been sent by his master to select a suitable bride After years without children she bore the twins Jacob and Esau Jacob was his mother's favorite, and for him she devised their deception of the blind Isaac Gen 24–27, 49 31, Rom 9 10

Rebikov, Vladimir Ivanovich (vlŭdyĕ′mĭr ēvä′nuvĭch rā′byĭkŏf), 1866–1920, Russian composer, one of the first to use the whole-tone scale He studied at the Moscow Conservatory and in Vienna and Berlin He combined music and mining in pieces which he called *Mélommiques*, some for voice and some for piano His works include a number of piano pieces and several operas

Récamier, Juliette (shŭlyĕt′ rākämyā′), 1777–1849, celebrated French beauty and social figure, née Jeanne Françoise Julie Adelaïde Bernard At 15 she married Jacques Récamier, a middle-aged wealthy banker, their marriage was a mere formality. Her fashionable salon was, from the Consulate to the end of the July Monarchy, a gathering place for some of the most influential political and literary figures. Although innumerable men fell in love with her, Mme Récamier, whose nature was ineffably gentle and unpassionate, probably never had any but Platonic attachments The most celebrated of her liaisons was that with Châteaubriand, to whom she devoted the later part of her life Among her friends were Mme de Staël, Sainte-Beuve, and Benjamin Constant Though in reduced circumstances and ill-health during her later years, Mme Récamier never lost the charm and beauty to which she owed her influence The famous portrait of her by Louis David hangs in the Louvre Her memoirs and correspondence have been published See studies by Édouard Herriot (Eng tr , 1925), H Noel Williams (1926), and H D Sedgwick (1940)

recapitulation (rē″kupĭt′ŭlā′shun) This theory, stated as the biogenetic law by HAECKEL, maintains that the development of the individual repeats stages of the development of the race Studies of embryos show that at certain stages the embryos of fish, bird, and mammal are very similar In man the beginnings of gill clefts occur These disappear in the human embryo as it develops, whereas they are elaborated and eventually function in the fish The Eustachian tube of the human is a modified gill cleft The importance of recapitulation lies in the fact that it lends support to the theory of evolution

Recared (Recared I) (rē′kurĕd), d 601, Visigothic king in Spain (586–601), son and successor of LEOVIGILD Although he had before his accession greatly distinguished himself in warfare with the Franks he did not pursue his father's policy of conquest He did war on the Basques and repulsed Frankish invasion, but in general he was pacific He made peace with the Byzantine Empire, and he seems to have sought to conciliate his Roman subjects The most important event of his reign was his conversion to Catholicism This probably took place c 587, it was announced formally at the Council of Toledo in 589 His conversion meant the conversion of the Visigoths but only after the suppression of a number of Arian revolts and conspiracies Recared apparently took the conciliation of his German and his Roman subjects to heart, and there is very good reason for believing that he modified the Visigothic law even more than Euric or Leovigild His work is, however a matter of conjecture

Receswinth (rē′kuswĭnth), d 672, Visigothic king in Spain (653–72) He was the son of CHINDASWINTH, who in 649 admitted his son to joint rule Receswinth succeeded to the throne without election, but was promptly faced by a great insurrection of the nobles He conquered them, but nevertheless compromised with them by confirming at the Eighth Council of Toledo the old canon that enjoined election of the king, not hereditary succession Receswinth was one of the greatest of the Visigothic lawmakers It is generally thought that either he or Chindaswinth revoked the BREVIARY OF ALARIC, and it is certain that he did promulgate new laws It seems probable that Chindaswinth commenced the codification of law completed by Receswinth The code, generally called the *Forum Judicum*, contained both German and Roman law and was the basis of Spanish medieval law It was made as a handbook for the courts Many quotations from Isidore of Seville are included

Rechab (rē′kăb) [Heb ,=horseman] **1** Eponym of the Rechabites Jer 35 **2** Murderer of Ish-bosheth 2 Sam 4 2–12 **3** Father of a worker on the wall Neh 3 14

Rechabites (rē′kubīts), in the Bible, a family given to asceticism They drank no wine, built no houses, sowed no seed, planted no vines, and lived in tents Jer 35 They resembled in their practices the Nasarites The Rechabites were apparently related to the Kenites 1 Chron 2 55

Rechah (rē′kŭ), unidentified place 1 Chron 4 12

recidivism see CRIME

Recife (rusē′fu) [Port ,=reef], city (pop 323,177), capital of Pernambuco state, NE Brazil, a port on the Atlantic Ocean The city is also frequently called Pernambuco by foreigners It lies partly on the mainland and partly on an island and possesses a fine natural harbor, enclosed by a coral reef The harbor facilities have recently been modernized and can accommodate a large amount of coastwise and overseas shipping It exports great quantities of the hinterland's products, including sugar, rum, cotton, lumber, dyewood, fruit, and hides Sugar refining and cotton milling are the chief industries, and there is a large steam electric power plant The city is the terminus of two transatlantic cables Dissected by numerous waterways into several districts, Recife is often called the Brazilian Venice It was founded by the Portuguese in the 1530s as the port for near-by Olinda, and it was later occupied (1630–54) by the Dutch, when it prospered under the rule of Maurice of Nassau It is an interesting city, with a 17th-century cathedral, a basilica of Our Lady of Carmel, an old Dutch fort, and an elaborate government palace. The state university (founded 1945) is here

reciprocity (rĕsĭprŏ′sĭtē), commercial agreement whereby one nation grants another special privileges in return for equivalent advantages. It is based upon the assumption that such grants of privilege must be mutual, for if a single nation removes its import duties, it becomes tributary to any state retaining a tariff In European countries the term usually refers to an extension of most-favored-nation treatment (in which special advantages given one nation are extended to all nations having similar treaties), but in the United States it connotes a bargaining measure incorporated by that country into a treaty with another power without reference to a third state The English furnished an example of reciprocity when they signed a treaty with Portugal (1703) making special rates for Portuguese wines in return for similar rates on English cloth In the following century, England relaxed her Navigation Acts in return for a similar action by other nations In Germany the ZOLLVEREIN was based on reciprocity, and the system of reciprocity fostered by Napoleon III worked strongly in favor of FREE TRADE A reciprocity treaty was signed by Canada and the United States in 1854, and a similar agreement was concluded by the United States and Hawaii (1875) Beginning in 1880, reciprocity was advocated as a part of the U S tariff policy After the downfall of the French Empire (1870) most European countries raised tariffs in order to increase customs revenues In addition, increased nationalism discouraged international cooperation Besides the ordinary tariff, there developed one with maximum and minimum scales—a low tariff for most-favored nations and a higher one for all others Under such conditions, reciprocity tends to become mere retaliation The many reciprocal trade agreements concluded by the United States after 1934 applied the most-favored-nation principle to our trade with all areas save those with which the United States was especially intimate (such as Cuba) and those nations discriminating against us They were an important adjunct to American economic and political policy in the years preceding the Second World War See R A Hodgson, *An Introduction to International Trade and Tariffs* (1932), W S Culbertson, *Reciprocity a National Policy for Foreign Trade* (1937), H J Tosca, *Reciprocal Trade Policy of the United States* (1938)

recitative (rĕs″sĭtātēv′), musical declamation for solo voice, used in opera and oratorio for dialogue and for narration Its development at the close of the 16th cent made possible the rise of opera The Florentine composers Peri, Caccini, and Galilei, in revolting against vocal polyphony, sought a style in which the words could be clearly understood, the rhythms of natural speech would be followed, and the music would convey the feeling of a whole passage Toward the middle of the 17th cent arose *recitativo secco*, which employed a quick succession of notes having little melodic character and serving only to advance the action, punctuated by occasional chords in a figured bass accompaniment In 18th-century opera greater importance was assumed by the *recitativo accompagnato*, accompanied by the string section or the full orchestra, in which the music was more strictly measured and carried more emotional weight This type of recitative was used at the points of greatest dramatic interest and to introduce important arias Lully was the first to develop a style of recitative suited to the French language, Purcell and Mozart attacked similar problems in English and German Wagner, opposed to the Italian type of recitative, developed his *Sprechgesang*, in which the melody was completely molded to the text, upon which the accompaniment served as a sort of commentary

Recklinghausen (rĕk′lĭnghou″zŭn), city (pop 89,787), Westphalia, W Germany It is an industrial center of the RUHR district

Reclamation, United States Bureau of (rĕk′lumāshŭn), agency set up in the Dept of the Interior under the Reclamation Act of 1902 and at first called the Reclamation Service Its purpose is to encourage and promote irrigation of lands in the arid and semiarid regions of the West by examination, survey, and construction of irrigation works Irrigation in what is now the U S Southwest was practiced by the Indians before the coming of the Spanish, and the Catholic missionaries there and, more particularly in California, supervised agriculture on a large scale under irrigation Modern irrigation practices may, however, be said to have begun in 1847 with the Mormons in Utah, and in later years individuals and (more usually) groups undertook irrigation schemes in many arid spots of the entire West By 1865 nearly 150,000 acres were under irrigation In the closing years of the 19th cent there were strong moves to render governmental help to reclamation schemes The CAREY LAND ACT (1894) had this end for its purpose Attention focused sharply on conservation of natural resources in the time of Theodore Roosevelt, and reclamation was advocated for lands ruined by injudicious farming, grazing, and deforestation as well as for lands desert before the coming of the white man Representative (later Senator) Francis Griffith Newlands was the author of the Reclamation Act of 1902 (sometimes called the Newlands Act). It provided in general that the

Federal government should plan and construct irrigation projects and that the water users (usually organized in some type of cooperative) should liquidate the cost and purchase the irrigation works over a period of 10 years Under Secretary of the Interior Ethan Allen Hitchcock the program was immediately and vigorously pushed Among the many projects started then were the Truckee-Carson project (see NEWLANDS PROJECT) and the Salt river project (see SALT RIVER VALLEY) The 1902 act had an acreage-limitation provision, but it did not halt the process of speculation in lands to be irrigated, which made costs to the actual farmers prohibitive An investigation in 1913 uncovered bad conditions, and in 1914 the time for the water users to pay for the project was lengthened to 20 years (later raised to 40 years) A Fact Finders committee began investigating the situation in 1924 and made a report in 1926, which was the basis of an adjustment act in 1926. Interest in reclamation quickened after terrible droughts in the late '20s and early '30s, and in the public works program of the New Deal under Franklin D Roosevelt, the reclamation program was linked with projects for flood control and for the development of power The Bureau of Reclamation came to work alongside the U S Engineers Corps in building dams and forwarding many-purpose projects The Flood Control Act of 1944 broadened the powers of the Federal government in these matters The Bureau of Reclamation in many instances chooses the sites for dams to be used for power as well as irrigation, and it constructs them It cooperates with the Federal Power Commission and other government agencies in disposing of the power development Numerous ambitious projects were undertaken, and many were completed. Among them are the Bonneville Dam (with an enormous power project) and Grand Coulee Dam together with a host of related activities on the Columbia, the Snake, and their tributaries (see COLUMBIA, river), the CENTRAL VALLEY PROJECT in California; the COLORADO-BIG THOMPSON PROJECT, and the MISSOURI RIVER BASIN PROJECT (still in the planning stage in May, 1950)

reclamation of land, practice of making unproductive land productive The chief methods employed are IRRIGATION, DRAINAGE, flood control (see FLOOD), improvement of the texture and of the mineral and organic content of soil, and the checking of EROSION In the United States all these methods have been widely used, but the chief government effort has been directed toward reclamation by irrigation and by flood control Federal sponsorship of reclamation projects dates from the Reclamation Act of 1902 and is carried on chiefly by the Bureau of Reclamation (see separate article) See U S Dept of the Interior, *Reclamation Handbook* (1942)

Reclus, Jean Jacques Élisée (zhäʹ zhăk' ālēzāʹ rüklüʹ), 1830–1905, French geographer, b Gironde, educated mainly in Germany Several times he was forced to leave France because of his political views, and he traveled in the British Isles, the United States, and South America and for many years lived in Switzerland He was professor of comparative geography in the Univ of Brussels in the last decade of his life The great work of Reclus is his *Nouvelle Géographie universelle* (20 vols, 1876–94, Eng tr, *The Earth and Its Inhabitants*, 19 vols, 1876–94) *La Terre* (2 vols, 1868–69) was also translated into English (*The Earth*, 1872) Reclus was one of the outstanding geographers of the 19th cent, his geographical writings are many and valuable

recognition, acknowledgment of the admission of new states into the family of nations by political action of states which are already members Its derivation is found in the policy of the older European powers, which, after developing a system of binding diplomatic usage, refused to permit the admission of new states to the concert of nations unless the new power were properly qualified to assume its responsibilities under international law In the accepted doctrine of national sovereignty it is admitted that the independence of a people is exclusive of recognition, which is, therefore, simply a method of facilitating international relations Three kinds of recognition exist Recognition of independence occurs when a new state is created, usually by a successful rebellion, and is accepted by members of the family of nations, either by a formal statement or by entering into diplomatic relations with the new state Recognition of independence generally takes place after the new nation has demonstrated its ability to maintain itself; if a power recognizes an insurrectionary colony or dependency while the mother country is attempting to crush the rebellion, a grave offense is committed, for it is an act of intervention Recognition of a new form of government follows the establishment of a new political regime in a country. A republic may be recognized as the successor of a monarchy, or a new president may be acknowledged after the overthrow of the previous incumbent If the government appears to be well established and if it is apparently accepted by the people, then recognition is usually extended by other nations. Recognition of belligerency was introduced into international law when that form of acknowledgment was given to the Confederate States by Great Britain (1861). Such recognition grants the belligerents the rights and duties of a state as they concern war and commerce, but it does not grant the right to enter into official diplomatic relations with neutral nations In recognising belligerency, the nation offends the state against which the rebellion is directed Recognition, though it is sometimes granted upon condition that the recognized state fulfill certain obligations, if once extended, cannot be withdrawn Recognition is retroactive to the actual date of the establishment of the state or the formation of the new government, and all its acts from that time are valid The withholding of recognition may become a coercive agent, as illustrated by the nonrecognition of the Huerta (1913) and Obregón (1920) governments in Mexico by the United States Other examples of governments which were not recognized by the United States are Soviet Russia (until 1933), the puppet Japanese government in Manchukuo (1932), the Italian government in Ethiopia (1936), the Franco government in Spain (1936), and the Communist government in China (1949) See W. E Hall, *A Treatise on International Law* (1924), C C Hyde, *International Law Chiefly as Interpreted and Applied by the United States* (1922)

Reconstruction. At the end of the Civil War, the defeated South was a ruined land The physical destruction of towns, countryside, and transportation facilities wrought by the invading Union soldiers and, to a lesser extent, by the Confederates themselves was enormous The old social order founded on Negro slavery had collapsed completely, with nothing to replace it But before a beginning could be made on the tremendous task of economic and social rehabilitation, the political status of the Southern states had to be clarified, and there was wide disagreement in the North on this problem Some theorists maintained that since secession was unconstitutional the states had technically never been out of the Union, and they felt that the South should be dealt with gently At the other extreme, Thaddeus STEVENS, leader of the radical Republicans in Congress, held that the ex-Confederate states were conquered provinces, out of the Union, and should be punished for their rebellion Lincoln considered the question of whether the Southern states were in or out of the Union "a pernicious abstraction" Everyone agreed, he said, that they were "out of their proper practical relation with the Union" and that it was the duty of the Federal government, and specifically of the President, he thought, to restore that proper practical relationship Lincoln launched his program of restoration during the war in those areas of the Confederacy occupied by Union armies His proclamation of Dec. 8, 1863, offered pardon, with certain exceptions, to any Confederate who would swear to support the Constitution and the Union If a group in any conquered state equal in number to one tenth of that state's total vote in the presidential election of 1860, having taken the prescribed oath, organized a government which abolished slavery, he would grant that government executive recognition. Lincoln's plan aroused the sharp opposition of the radicals in Congress, which passed (July 2, 1864) the bill drawn up by Benjamin F WADE and Henry W DAVIS This measure limited organization of and participation in any new state government to the extremely small group which had remained absolutely loyal to the Union Although his pocket veto kept the Wade-Davis Bill from becoming law, Lincoln allowed each state to choose between the Wade-Davis Bill and his own plan Naturally, the states chose his more lenient plan, and at the end of the war it had been tried, not too successfully, in Louisiana, Arkansas, Tennessee, and Virginia Lincoln's assassination strengthened the radical cause, but his successor, Andrew JOHNSON, soon adopted a policy essentially like Lincoln's His amnesty proclamation (May 29, 1865) differed from Lincoln's mainly in excepting those who owned property worth $20,000 or more The obvious intent was to shift political control in the South from the old planter aristocracy to the small farmers and mechanics With Congress in adjournment from April to Dec, 1865, Johnson put his plan into operation Under provisional governors appointed by him, the Southern states held conventions which voided or repealed their ordinances of secession, abolished slavery, and repudiated Confederate debts Their newly elected legislatures ratified the Thirteenth Amendment guaranteeing Negro freedom, and by the end of 1865 every ex-Confederate state except Texas had fulfilled the President's requirements for restoration of civil government The control of white over Negro, however, seemed to be restored, and the Negroes were threatened with disillusion in their dreams of "forty acres and a mule," which had been definitely fixed if not inspired by the FREEDMAN'S BUREAU The Southern whites, unwisely ignoring the recommendations of Lincoln and Johnson that at least the most intelligent Negroes and Negro Union soldiers be given the vote, refused to enfranchise the blacks. They pointed out that there were Northern states which still denied the ballot to the Negro, and their claim that the freedmen were not capable of assuming the duties of citizenship immediately seemed to be borne out by later events But their black codes (laws which defined the new status of the emancipated Negro) were generally severe, most notably in Mississippi and Louisiana, in provisions covering apprenticeship, vagrancy, forced labor, and land-holding, and they led to an outcry in the North. Many radicals combined a genuinely sincere desire to make secure for the Negro the benefits won in the war with the admittedly selfish motive of assuring the continuance of the REPUBLICAN PARTY in power. Without Negro suffrage in the South, Republican ascendancy could not be assured, and Stevens in the House and Charles SUMNER in the Senate led the movement to make Reconstruction dependent on civil rights for the Negro The Civil Rights Act (April 9, 1866), designed to protect the Negro from legislation such as the black codes, and the Freedmen's Bureau Bill (July 16), extending the life of that organization, were both passed over Johnson's veto The newly created Joint Committee on Reconstruction reported (June 20) that the ex-Confederate states were not entitled to representation in Congress and also maintained that Reconstruction was a congressional, not an executive, function The radicals solidified their position by winning the elections of 1866, and on March 2, 1867, Congress enacted the Reconstruction Act, which, supplemented later by three related acts, divided the South (except TENNESSEE) into five military districts, in which the authority of the army commander was supreme The Supreme Court meekly accepted legislative restriction of its appellate jurisdiction, but Johnson, continuing the fight, insisted on the removal of the radical Secretary of War, Edwin M STANTON, in defiance of the TENURE OF OFFICE ACT, and the House impeached him (Feb, 1868) The radicals in the Senate fell one vote short of convicting him (May) and thus failed to establish a complete congressional dictatorship, but by this time Johnson's program had been effectively scuttled The South was now reduced to degradation Since ex-Confederates were disfranchised and the new Negro voters were too untutored to take control, the state governments fell into the hands of Northern CARPETBAGGERS and Southern SCALAWAGS These two groups, with the aid of the Freedmen's Bureau and the UNION LEAGUE CLUBS, dominated politics by shameless manipulation of the Negro votes and by terrorizing communities with Negro troops Doubts as to the constitutionality of the Civil Rights Act led the radicals to incorporate most of its provisions in the Fourteenth Amendment By late July, 1868, six states—Arkansas, North Carolina, South Carolina, Louisiana, Alabama, and Florida—having ratified the Fourteenth Amendment as required by the first Reconstruction Act, had been readmitted to the Union, in time to cast their electoral votes for U S GRANT With Grant, friend of Benjamin F BUTLER (1818-93) and other leading radicals, as President, the vindictives were securely in the saddle To doubly assure the Negro vote, they pushed through the Fifteenth Amendment (March 30, 1870) and made ratification of it a further condition for congressional recognition of the four remaining unreconstructed states—Virginia, Mississippi, Texas, and Georgia—which were finally readmitted in 1870 With continued Federal support (see FORCE BILL), the Republicans had in the South one of the most efficient and one of the most brutally corrupt political machines the United States has known Staggering tax assessments and outright robbery took away from many of the already-bankrupt white men the last vestiges of their property The legislators, carpetbaggers, Negroes (some of whom lacked the rapacity of their white colleagues), and scalawags spent most of their time passing bills for their own enrichment In some districts anarchy and crime ruled These conditions brought on the activities of such secret organizations as the KU KLUX KLAN, which, by successfully intimidating Negro voters, paved the way for gradual restoration of native white rule The real reason for the overthrow of the carpetbag administrations lay, however, in their own corruption Grant's administration was compelled to lessen its support because of growing criticism in the North of corruption in the Federal government itself Dissensions among the plundering carpetbaggers also helped tear down the rotten structure By 1876 only Florida, South Carolina, and Louisiana remained under Republican domination The Republican presidential candidate, Rutherford B. HAYES, promised to alleviate conditions in the South, but the feeling there had already led to the formation of the "solid South" in support of his Democratic opponent, Samuel J. TILDEN, whose pledge to work for complete cessation of Reconstruction evils was, understandably, more readily believed. In those three states the presidential contest was the occasion for a determined effort to throw off Republican misrule, and

on their electoral votes (and on one disputed electoral vote in Oregon) hung the fate of the famous disputed election of 1876 It is practically certain that actually all three gave a majority to Tilden, but two sets of returns were sent in from each of the three states A specially constituted electoral commission (supposedly impartial, but composed of eight Republicans and seven Democrats) accepted the Republican returns, and Hayes was given the presidency The whole nation, however had had enough of Reconstruction. All Federal troops were withdrawn from the South, and home rule was restored there. Reconstruction had utterly failed in its purpose The term itself is a patent misnomer for these bitter years, for decades were to pass before any real economic and social readjustment was begun The excesses of radical Republican rule made the South a region devoted to the Democratic party and to "white supremacy" No condemnation of continued Southern intransigency on the race question will dispel, the impression that with a wiser, more moderate national leadership after the Civil War a more successful beginning might have been made towards ultimately solving that vexing problem The literature on the period is extensive For studies of the various Southern states during Reconstruction, see the bibliographies in the articles on those states See also William A Dunning, *Essays on the Civil War and Reconstruction* (1898) and *Reconstruction, Political and Economic, 1865–1877* (1907), Walter L Fleming, *Documentary History of Reconstruction* (2 vols, 1906–7) and *The Sequel of Appomattox* (1919, Vol XXXII of *The Chronicles of America*), Allan Nevins, *The Emergence of Modern America, 1865–1878* (1927, Vol VIII of *A History of American Life*), C G Bowers, *The Tragic Era* (1929), H K Beale, *The Critical Year* (1930), G F Milton, *The Age of Hate* (1930), W E B Du Bois, *Black Reconstruction* (1935), P H Buck, *The Road to Reunion, 1865–1900* (1937), J G Randall, *The Civil War and Reconstruction* (1937), R S Henry, *The Story of Reconstruction* (1938), E M Coulter, *The South during Reconstruction* (1948, Vol VIII of *A History of the South*), J W De Forest, *A Union Officer in the Reconstruction* (1948)

Reconstruction Finance Corporation (RFC), U S government organ, created in 1932 by the administration of Herbert C Hoover Its purpose was to facilitate economic activity by lending money in the depression The life of the RFC was repeatedly extended while its scope of operations enormously widened At first it only lent money to financial, industrial, and agricultural institutions to help maintain economic stability, but later it also financed the construction and operation of war plants and made loans to foreign governments—notably to Britain in 1941 The agency provided protection against war and disaster damages and engaged in numerous other activities Congressional action (1945) following the appointment of Henry A Wallace as Secretary of Commerce to succeed Jesse H Jones, who had long headed the RFC, removed the agency from Dept of Commerce control In 1948 the life of the RFC was extended until 1954, but its lending powers were sharply curtailed

Record, George Lawrence, 1859–1933, American political reformer, b Auburn, Maine, grad Bates College, 1881 He studied law in New York city and after 1887 lived and practiced in Jersey City, N J For over 40 years he fought machine politics in New Jersey while carrying on numerous legal battles with public-utility interests He was an ardent advocate of Henry George's single tax and was an effective speaker He strongly influenced Woodrow Wilson, drafting many of the bills which Wilson, as governor, pushed through the New Jersey legislature Record ran for Congress, for the Senate, and for governor of New Jersey, but each time met defeat He wrote *How to Abolish Poverty* (1936) See James Kerney, *The Political Education of Woodrow Wilson* (1926)

recorder, musical wind instrument of the FLUTE family, made of wood, varying in length, and having a conical bore It was developed in the 16th cent and was particularly popular in the 17th and 18th cent The instrument has had a revival in the 20th cent. particularly among amateurs, and a number of contemporary composers have added to its literature

recreation, any activity engaged in voluntarily for the satisfaction it brings, whether through relaxation, fun, or the opportunity for self-expression Suitable recreation may be a factor in promoting mental and bodily health, in developing personality, skills, and social cooperation, and in preventing delinquency Although the universal human need for it has only recently been recognized, it has found expression since ancient times in games, festivals, dances, and music The expansion of recreational facilities has been stimulated by the growth of cities, by the need to relieve tension resulting from the speed of modern living and the specialization and mechanization of work, and by the increase of leisure time with the general reduction of working hours. Commercial interests provide such recreations as moving pictures, radio, music, travel, and professional sports. In the United States a noncommercial recreation movement was initiated in the 19th cent. by the establishment of gymnasiums in schools and universities and by the opening of parks and playgrounds The playground, fostered at first by social and philanthropic agencies in order to keep children off the streets, in the 20th cent received support also from schools and municipal agencies The Playground Association of America (organized in 1906 and renamed the National Recreation Association in 1930) has been a leader in promoting playgrounds and training recreation leaders and in widening recreation opportunities for adults The extension of community recreation facilities for adults was stimulated in the First World War by the organization of recreation for the armed forces In the 1930s the increased leisure caused by unemployment was an incentive to opening new recreation facilities to adults See F R Dulles, *America Learns to Play* (1940), G D Butler, *Introduction to Community Recreation* (revised 2d ed, 1949)

Rector, city (pop 1,736), extreme NE Ark, near the St Francis river

Red Bank, borough (pop 10,974), E N J, on the Navesink estuary, in a fertile farming area, inc. 1908 It is a resort and distributing and industrial center Albert Brisbane helped to establish a Fourierist community here in 1843 Military uniforms were an early product of Red Bank. The Revolutionary battle of Red Bank was not fought here but on the Delaware at the present NATIONAL PARK, N J

Red Bay, town (pop 1,560), NW Ala, at the Miss line on Bear Creek and SW of Florence, settled 1898, inc 1908

redbird. see CARDINAL.

Red Bluff, trade city (1940 pop 3,824, 1948 special census pop 4,735), co. seat of Tehama co., N Calif, on the Sacramento, in a farm and ranch area.

redbreast. see ROBIN

Red Bud, city (pop 1,302), SW Ill, S of East St Louis, in a farm area, inc 1867.

redbud or **Judas tree**, name for trees and shrubs of the genus *Cercis*, handsome leguminous plants covered in the early spring with deep rose or, rarely, white flowers resembling pea blossoms Three species are native to North America The common redbud is *Cercis canadensis* native to the E United States It blossoms about the same time as the dogwood, and when growing in proximity the two make a beautiful floral display According to tradition an Old World species was the tree on which Judas hanged himself

red bug, name for various red insects The apple red bug, a reddish-black hemipterous insect, feeds in the nymph stage on the juice of the leaves and fruit of the apple, pear, and other trees It causes the fruits to be pitted and dwarfed The cotton stainer, or red bug, *Dysdercus suturellus*, of the S United States pierces the seeds of the cotton plant, the yellow liquid which exudes discolors the fibers For the harvest mite called red bug, see CHIGGER

Redcar, municipal borough (1931 pop. 20,160, 1943 estimated pop 24,240), North Riding of Yorkshire, England NE of Middlesbrough and on the North Sea It is a steel center and a seaside resort and has a racecourse

red cedar see JUNIPER

Redcliff, town (pop 1,289), SE Alta, near the South Saskatchewan and just NW of Medicine Hat, in an area yielding clay, coal, and shale Natural gas is produced, and pottery is manufactured

Red Cloud, 1822–1909, North American Indian chief, leader of the Oglala Sioux Because of his opposition to the Bozeman Trail (see BOZEMAN, JOHN M) and the building of forts, Red Cloud led the Indians at the massacre of the party commanded by William J FETTERMAN (1866) and at the Wagon Box fight (1867) His continuous hostility led the government to abandon the forts and the trail in 1868 After signing a treaty he lived in peace with the whites, although he was later charged with duplicity in encouraging hostile Indians. He was deposed as chief in 1881 and thereafter lived in retirement on the Pine Ridge Reservation in South Dakota. See G E Hyde, *Red Cloud's Folk* (1937)

Red Cloud, city (pop 1,610), co seat of Webster co., S Nebr., on the Republican river, inc 1872. It was the childhood home of Willa Cather.

red corpuscle. see CORPUSCLES

Red Cross, international organization for the alleviation of human suffering and the promotion of public health. In 1862 Jean Henry Dunant, a Swiss, wrote *Un Souvenir de Solférino*, in which he described the suffering of the wounded on the battleground of Solferino and urged the formation of voluntary aid societies for relief of such war victims He also asked that service to military sick and wounded be neutral The Société genevoise d'Utilité publique, a Swiss Welfare agency, actively seconded Dunant's suggestion, the result being an international conference at Geneva attended by delegates from 16 countries At this conference the Geneva Convention of 1864 for the Amelioration of the Condition of the Wounded and Sick of Armies in the Field was adopted and signed by 12 of the nations represented It provided for the neutrality of the personnel of the medical services of the armed forces, the humane treatment of wounded, the neutrality of civilians who voluntarily assisted them, and an international emblem to mark personnel and supplies In honor of Dunant's nationality a red cross on a white background —the Swiss flag with colors reversed—was chosen as this symbol. Signatories to the original Geneva Convention, its subsequent revisions, and allied treaties such as the Hague Convention for naval forces and the Prisoner of War Convention include all civilized countries and their dependencies There are national Red Cross societies in 68 countries of the world, each a self-governing organization, and two international groups with headquarters in Geneva, the International Committee of the Red Cross (founded 1863) composed of 25 Swiss citizens and serving as a neutral intermediary in time of war, with special interest in the welfare of prisoners of war, and the League of Red Cross Societies (founded 1919), a federation of national societies for mutual help, cooperation, and program development, especially in times of peace The International Red Cross Conference, instituted in 1867, is the highest deliberative body of the organization Its membership consists of representatives of each national society, of the International Committee of the Red Cross, of the League of Red Cross Societies, and of the nations signatory to the Geneva conventions It is held every four years All societies are supported by membership fees and popular subscriptions, and a number receive government subsidies in addition The American National Red Cross was organized (1881) by Clara BARTON and received its first Federal charter in 1900 In 1905 it was brought into closer relationship to the government when a new congressional charter was granted The charter was revised in 1947 The organization, with headquarters in Washington, D C, is supported entirely by voluntary contributions The President of the United States is honorary chairman of the society and appoints its president and seven other members of a 50-man board of governors The organization accounts are audited by the War Dept The American Red Cross puts special emphasis on disaster relief, services to the armed forces and veterans, and public health and safety programs In 1947 a national blood program to make blood available without charge to all who need it was launched The world-recognized symbol of mercy and absolute neutrality is the Red Cross flag or brassard In Turkey, Egypt, Iraq, and four of the Soviet republics the red crescent and in Iran the red lion and sun replace the cross The International Red Cross was awarded the 1917 and 1944 Nobel Peace Prize See Clara Barton, *The Story of the Red Cross* (1904), F P Bicknell, *Pioneering with the Red Cross* (1935); J W Maloney, *Let There Be Mercy* (1941), George Korson, *At His Side* (1945), P B Kernodle, *The Red Cross Nurse in Action* (1949)

Red Deer, city (pop 4,042), S central Alta, on the Red Deer river and S of Edmonton It is the trade center for a dairying and mixed farming region, with grain elevators and oil refineries It has a provincial training school

Red Deer, river, 385 mi long, rising in the Rocky Mts in Banff National Park, SW Alta, and flowing NE past Red Deer city, then S, SE, and E across Alberta to the South Saskatchewan river just over the Sask border, NE of Medicine Hat, Alta

Redding. 1 City (pop 8,109), co seat of Shasta co, N Calif, on the Sacramento It is the agricultural, industrial, and tourist center for a mountain region There are gold and copper mines in the area Near by are Lassen Volcanic National Park and Shasta Dam 2 Town (pop 1,758), SW Conn, NW of Bridgeport, settled c 1711, inc 1767 Mark Twain's summer home was in Redding, and he gave the town a library. Joel Barlow was born here The Israel Putnam Memorial Campground N of Redding Ridge commemorates the winter of 1778–79

Redfield, Edward Willis, 1869–, American landscape painter, b Bridgeville, Del, studied at the Pennsylvania Academy of the Fine Arts and under Bougureau and Fleury in Paris His work is of the realistic school and has force and individuality, with warm coloring He is represented in various art galleries and museums in the United States His *Overlooking the Valley* is in the Metropolitan Museum He became a member of the National Academy of Design in 1904

Redfield, William C., 1789–1857, American scientist, b. Cromwell (then part of Middletown), Conn He studied the course of winds and developed a theory of the rotary motion of hurricanes, which became generally accepted He wrote many papers on meteorology, geology, and geography. Interested in railroads and in water transportation, he discovered a method of decreasing the hazards of travel on the Hudson river by means of safety barges for passengers and freight, towed by steamers at a distance sufficient to escape damage from the boiler explosions which were common at that

time. In 1848 he was active in organizing the American Association for the Advancement of Science, of which he was the first president

Redfield, William Cox, 1858–1932, American cabinet officer, b Albany, N Y. He was a businessman and manufacturer, served (1911–13) in the U S Congress, and was (1913–19) Secretary of Commerce under President Woodrow Wilson He wrote *The New Industrial Day* (1912), *With Congress and Cabinet* (1924), and *Dependent America* (1926)

Redfield, city (pop 2,428), co seat (since 1886) of Spink co, NE S Dak, S of Aberdeen It is a farm trade center and summer resort, noted for gamebird hunting The state school for the feebleminded is here

red gum: see EUCALYPTUS

red haw: see HAWTHORN

Red Hook, village (pop 1,056), SE N Y, near the Hudson N of Poughkeepsie, in a dairy and farm area, inc 1894

Redi, Francesco (frănchĭs'skō rā'dē), 1626?–1698?, Italian naturalist, poet, and court physician to the dukes of Tuscany. Through controlled experiments he demonstrated that certain living organisms, notably maggots in rotting meat, did not arise, as currently alleged, through spontaneous generation Redi is known not only as a pioneer in experimental entomology, but also as a philologist and poet His chief poetical work was a dithyrambic ode *Bacchus in Tuscany* (1685, Eng tr. by Leigh Hunt, 1825).

Red Jacket, c 1758–1830, chief of the Seneca Indians, b probably Seneca co, N Y His Indian name was Otetiani, changed to Sagoyewatha when he became a chief His English name came from the brilliant red jacket given him by a British officer when the Seneca supported the English in the American Revolution He had an excellent memory and an able tongue and was skillful in dealing with the whites, but he was accused of cowardice in active warfare At the meeting (1786) of Indian tribes at the mouth of the Detroit river, Red Jacket urged the continuance of hostilities against the whites, but in later years he aimed at making peace with the U S government He was one of the Indian chiefs who visited President George Washington in 1792, at which time the President presented him a large silver medal, which he thereafter prized highly In the War of 1812 he influenced his tribe to support the United States He was an ardent advocate of the Indian mode of life and often resisted the introduction of white customs Especially did he oppose Christianity and the work of the missionaries Late in his life the growth of Christian Indians and opposition to his policies resulted in his being deposed as chief, but he appealed to the government, defended himself before a tribal council, and was restored See biographies by W. L Stone (1841) and J N Hubbard (1886)

Red Jacket, Mich see CALUMET

Redkey, town (pop. 1,538), Jay co, E Ind, NE of Muncie

Red Lake Falls, city (pop 1,530), co seat of Red Lake co, NW Minn, on Red Lake River and NE of Crookston, inc as a village 1881, as a city 1898 A fur-trading post before 1800, it is now a dairy and farm trade center To the east, Red Lake Indian Reservation (est 1863) occupies large areas about Upper Red Lake and Lower Red Lake, N of Bemidji

Redlands, city (pop 14,324), S Calif, in the San Bernardino Valley E of Los Angeles, inc 1888 Oranges are packed and shipped The Univ of Redlands (Baptist, coeducational, 1907) is here

red lead or **minium** (mĭ'nēŭm), a bright red, scarlet, or orange-red powdery compound of lead and oxygen, the tetroxide of lead, prepared by heating litharge or lead monoxide It is used in the manufacture of storage batteries, glass, red pigments, and red paint employed as a protective paint in steel construction work

Red Lion, borough (pop 4,891), SE Pa, near York, inc. 1880 German customs are preserved here

Red Lodge, city (pop 2,950, alt 5,548 ft), co seat of Carbon co, S Mont., SW of Billings and NE of Yellowstone National Park, inc 1895. Coal is mined here

Redmond, John Edward, 1856–1918, Irish political leader He was elected to Parliament in 1881 at the height of Charles Stewart Parnell's Irish obstructionist program In 1890, when Parnell's political fortunes were destroyed by the O'Shea divorce case, Redmond was a leader in support of Parnell and in the subsequent Parnellite group, which was finally reunited with the majority in 1900, Redmond was chairman of the combined Irish party. He served on various commissions which led to the Wyndham Land Purchase Act of 1903 (see IRISH LAND QUESTION) and gradually gained the leadership as well as the chairmanship of the Irish party When the Liberals came into power in England in 1906 Redmond had no choice but to support them even though they held for "devolution," or merely administrative Home Rule He pressed the question of the veto power of the Lords, and the passage of the act crushing the power of the Lords in 1911 was hailed as a triumph for the Irish party. Redmond strongly supported the bill for Home Rule introduced in 1912 and opposed the exclusion of Ulster. In 1914 he supported the Irish Volunteer movement, a military organization raised to counter the threat of the newly formed Ulster Volunteers in Northern Ireland When the First World War broke out, Home Rule was approved, though suspended until after the war Redmond declined a cabinet post in the English coalition government of 1915 He had declared Ireland's loyalty to the common cause, and the Easter Rebellion of 1916 was a great blow to him He supported the plan to begin the operation of Home Rule with the temporary exclusion of Ulster, but his power and influence were declining, and at the end of his life he was opposed by the revolutionary SINN FEIN See Stephen Gwynn, *John Redmond's Last Years* (1919), biographies by W B Wells (1919) and Denis Gwynn (1932)

Redmond, city (pop 1,876), central Oregon, NNE of Bend, in an irrigated farming and cattle-grazing region, inc 1910

Red Oak, city (pop 5,763), co seat of Montgomery co, SW Iowa, on the East Nishnabotna and SE of Council Bluffs, in a farm area, inc 1869 An important industry is the printing of art calendars The city also processes farm products

Redon, Odilon (ōdēlôⁿ' rudôⁿ'), 1840–1916, French painter and lithographer, studied in Paris under Gérôme and Fantin-Latour His first volume of lithographs, *Dans le rêve*, appeared in 1879 Later in life he devoted himself to oil painting and pastel An admirable colorist, Redon excelled in depicting visionary and mystical subjects and in flower painting Beautiful examples of his work exist in many important galleries of Europe and America *Les Yeux clos* is in the Luxembourg Museum, Paris. See study by Walter Pach (1913)

Redonda, island, British West Indies see ANTIGUA

Redondo Beach (rĭdŏn'dō), resort and residential city (1940 pop 13,092, 1947 special census pop. 21,288), in Inglewood township, S Calif, SSW of Los Angeles, founded 1881, inc 1892

red polled cattle (pōld), breed of cattle originated in England in the early 19th cent The animals are typical of the "dual-purpose" breeds e g, those raised for both meat and milk They are medium sized and are a deep cherry red in color They are raised nearly everywhere in the United States, but in greatest numbers in the North Central states

Red River, Chinese *Yuan*, stream rising in Yünnan prov, China, and flowing SE through Tonkin, of which it is the chief river Its upper course is in a narrow valley between high mountains After receiving its chief tributaries, the Clear River and the Black River, it forms a delta, the heart of Tonkin Its waters enter the Gulf of Tonkin Hanoi is near the head of the delta, and Haiphong near one of the river mouths

Red River 1 River, 1,300 mi long, southernmost of the large tributaries of the Mississippi It rises in the Texas Panhandle, not far from Amarillo, flows ESE between Texas and Oklahoma and between Texas and Arkansas to Fulton, Ark, then turning southward enters Louisiana and crosses SE to the ATCHAFALAYA and the Mississippi In Texas it flows rapidly through a canyon in semiarid plains but later waters rich red-clay farm lands (whence the name Red) DENISON DAM impounds its waters, there is also a reclamation project on the North Fork near Altus, Okla Navigation was difficult in the log-choked lower course of the Red, but shipping was for a time important, and the river is now navigable for small ships to above Shreveport There are many lakes and bayous along the lower part of the river, and reservoirs—such as the Texarkana, the Wallace Lake, and the Bayou Bodcau reserves, all under construction in Feb, 1949—were planned on tributaries for flood control In the Civil War a military and naval expedition (1864) under Gen N P BANKS and Admiral Porter went up the Red River to open the way to Texas, but was defeated at SABINE CROSS-ROADS **2** River, often called the **Red River of the North,** c 530 mi long, formed N of Lake Traverse by the confluence of the Bois de Sioux and Otter Tail rivers and flowing N between Minnesota and North Dakota and through Manitoba to Lake Winnipeg It drains the principal spring-wheat area of the United States—the rich level Red River valley region, the bed of the old Lake Agassiz Its chief tributary is the Assiniboine river, which enters it at Winnipeg, Canada Severe floods in the spring of 1950 caused widespread losses.

Red River Rebellion see RIEL, LOUIS

Red River Settlement, agricultural colony in present Manitoba, North Dakota, and Minnesota It was the undertaking of Thomas Douglas, 5th earl of SELKIRK, who had already undertaken other colonizing schemes, notably one on Prince Edward Island His motive was philanthropic, he wished to relieve the distress of the dispossessed and impoverished in Scotland and N Ireland With that end in mind he began in 1808 to buy shares of the HUDSON'S BAY COMPANY, and by 1811 he and his close relatives had managed to obtain a large percentage of the stock The scheme of planting a colony in the middle of the fur country met opposition from the start, principally from the NORTH WEST COMPANY, but also from the actual fur traders in the Hudson's Bay Company The grant of land he acquired from the company was called Assiniboia and extended from Big Island in Lake Winnipeg south to the height of land separating the drainage basin of the Red River of the North from that of the Mississippi and from the Lake of the Woods west to the upper Assiniboine river This included a nodal point of travel and transport for North West Company men trading in the West and was also the prime region for the preparation of that staple food of northern fur traders, pemmican The area was much frequented by half-breeds, the *Bois-brûlés* or *métis* Opposition was strong, and efforts were made to discourage the colony from the beginning Nevertheless Miles Macdonnell, who had been one of Selkirk's recruiting agents, brought a small group to the colony at the end of Aug 1812, after wintering (1811–12) near York Factory These included some Irish as well as Scots, but the settlers sent out in the following years were all Scotsmen The struggle to get the colony started was severe despite the fertility of the land. The determined hostility of the North West Company mounted, especially after the company men had won the half-breeds entirely to their side By a mixture of cajolery and threat they persuaded settlers to desert and had Macdonnell arrested and sent to Upper Canada (Ontario) in June, 1815 A new group of settlers under Robert Semple came, however, and the colony was restored in 1816 North West Company men and half-breeds now resorted to violence on a large scale and defeated (June 19, 1816) a small force led by Semple to meet them, killing some 22, this was the massacre of Seven Oaks The colony was dispersed, but even then Selkirk was on his way to the settlement and he had finally received some approval, if not much help, from the government of Upper Canada, which had previously favored the North West Company On hearing the news of the massacre, he fell upon the North West Company post, Fort William, and seized it In the winter Macdonnell and an armed party went out to Red River and retook (Jan, 1817) the settlement at the junction of the Red and the Pembina and the main settlement (formerly Colony Gardens, later Kildonan) The result of these moves was a series of court charges and countercharges that beggared Selkirk and helped to bring about the union (1821) of the Hudson's Bay Company and the North West Company Agriculture had for the first time been firmly planted on the Western plains, and the Red River settlements were to grow and flourish See also RIEL, LOUIS See J P Pritchett, *The Red River Valley, 1811–1849* (1942)

Redruth, England see CAMBORNE-REDRUTH

Red Sea, an *Sinus Arabicus* or *Erythraean Sea* (ĕrĭthrē'ŭn), narrow sea, c 1,500 mi long, between Africa and Arabia, lying in the Great Rift Valley On the African side it washes Egypt, the Anglo-Egyptian Sudan, Eritrea, and French Somaliland It is connected on the south with the Gulf of Aden (and thence with the Arabian Sea) by the narrow Bab el Mandeb The northern arms, are the Gulf of Aqaba and the Gulf of Suez, between them is the Sinai peninsula The Bible in recounting the crossing of the Red Sea by the Israelites probably intended the Gulf of Suez Until the completion (1869) of the Suez Canal gave access to the Mediterranean Sea, the Red Sea had little importance as a commercial artery Today it lies on one of the chief shipping routes connecting Europe with the Far East and Australia The ports are all small and of relatively minor importance, they include Suez, Jidda, Hodeida, and Massawa The maximum depth of the Red Sea is over 7,000 ft, but since the slope to the central trough is gradual, the coasts are monotonously flat The sea is dotted with islands (notably the Dahlak Archipelago) and with dangerous coral reefs The climate of the area is exceedingly hot and humid.

red snapper: see SNAPPER

Red Springs, town (pop 1,559), S N C, SW of Fayetteville, settled c 1775. It has textile and lumber mills and a medicinal sulphur spring Flora Macdonald College (Presbyterian; for women, 1896) is here

redtop: see BENT GRASS

reduction: see OXIDATION AND REDUCTION.

reductions, Span *reducciones*, settlements of Indians in colonial Latin America, founded to teach the natives the ways of Spanish life Best known were the Jesuit missions in old Paraguay (many in present Argentina)—about 30 among the Guaraní Indians and 7 in the Chaco wilderness The first was founded in 1609 Each reduction was directed by two priests, a spiritual overseer and an administrator, the Indians were docile workmen in the fields and in the shops, with no share in the direction. The missions prospered in agriculture, trade, and manufactures. They also printed thousands of volumes and contributed greatly to geographic and scientific knowledge about South America. The Jesuits dominated Paraguayan commerce, aroused the jealousy of the merchants, and caused bitter governmental quarrels until the order was expelled (1767) by the Spanish crown.

Red Wing, city (pop 9,962), co. seat of Goodhue co., SE Minn , at the head of Lake Pepin; settled 1852, inc. 1857. The city is a commercial and manufacturing center in a farm area Brickmaking and pottery were early industries The Indians had a village here when early explorers came, from 1830 to 1840 there was a Swiss mission to the Indians, Red Wing is the seat of a state training school for boys (1890)

redwood: see SEQUOIA.

Redwood City, city (1940 pop 12,453; 1947 special census pop. 19,253), co seat of San Mateo co , W Calif , SSE of San Francisco, inc 1868 Once a lumbering town, it is now the center of chrysanthemum growing and shipping and has varied manufactures

Redwood Falls, city (pop 3,270), co seat of Redwood co , SW Minn , on the Redwood and NW of New Ulm, platted 1865, inc as a village 1875, as a city 1891 It is a shipping point for farm products and for granite from near-by quarries The site of the village of Little Crow, leader of the Sioux outbreak of 1862, is near Adjoining the city is the Alexander Ramsey State Park

Reed, James A, 1861–1944, American political leader, b near Mansfield, Ohio. He moved to Iowa and was admitted (1885) to the bar, practicing there and later in Missouri He was (1898–1900) prosecuting attorney of Jackson co , Mo , and then served (1900–1904) as mayor of Kansas City, Mo As Democratic Senator (1911–29) from Missouri, he adamantly opposed U S participation in the League of Nations In 1928 he lost the Democratic presidential nomination to Alfred E Smith but gave vigorous support to Smith in the presidential campaign. See Lee Meriwether, *Jim Reed, Senatorial Immortal* (1948)

Reed, John, 1887–1920, American journalist and radical leader, b Portland, Oregon, grad Harvard, 1910 He wrote articles in the United States for various publications and after 1913 was attached to the radical magazine the *Masses* The articles that he wrote from Mexico about the revolt of Pancho Villa established his reputation as a journalist and a radical He served as a reporter in Europe in the First World War and was in Petrograd (now Leningrad) when the Bolsheviks seized power in 1917, his book on that event, *Ten Days That Shook the World* (1919), is considered the best eyewitness account of the revolution The Paterson, N J , strike of 1913 and the Colorado coal strike of 1914 convinced him of the necessity of revolution In 1917 he helped organize the Communist Labor party, which was a splinter group of the Socialist party He was indicted for sedition in New York city in 1918, but the case was dropped Reed returned to the USSR, worked in the Soviet bureau of propaganda, and was appointed Soviet consul to New York Upon protest from the U S government, Reed was withdrawn from the consulship He died in Moscow in 1920 of typhus and was buried at the Kremlin See biography by Granville Hicks (1936)

Reed, Joseph, 1741-85, American Revolutionary statesman and officer, b Trenton, N J , grad College of New Jersey (now Princeton Univ), 1757 He studied law, was admitted (1763) to the bar, and then went to London to study at the Middle Temple After returning (1765) to practice law in Trenton, he took an active part in pre-Revolutionary affairs After a second trip to London (1770), he settled in Philadelphia and for a time corresponded with Lord Dartmouth, secretary of state for the colonies, though the information he offered on colonial discontent was disregarded Reed, an ardent patriot, became in 1774 a member of the committee of correspondence and in 1775 president of the Pennsylvania provincial congress and a member of the Continental Congress In the war he served as military secretary to Washington and as adjutant general and saw action at the battles of Long Island, Trenton, Princeton, Brandywine, Germantown, and Monmouth Reed served again in the Continental Congress (1777–78), and as president (1778–81) of the supreme executive council of Pennsylvania he abolished slavery in Pennsylvania and caused (1778) Benedict Arnold to be prosecuted on charges of corrupt practices He was a trustee and founder of the Univ of the State of Pennsylvania (later the Univ of Pennsylvania) See W B Reed, *Life and Correspondence of Joseph Reed* (1847); biography by George Bancroft (1867)

Reed, Stanley Forman, 1884–, Associate Justice of the U S Supreme Court (1938–), b Mason co , Ky. After receiving the B A degree from both Kentucky Wesleyan (1902) and Yale (1906), he studied law at the Univ of Virginia and Columbia Univ and then studied in France A lawyer of Maysville, Ky , he became general counsel of the Federal Farm Board (1929–32) and of the Reconstruction Finance Corporation (1932–35) He was (1935–38) Solicitor General and presented the government arguments in numerous New Deal cases. As Associate Justice of the U S. Supreme Court, Reed, generally considered a moderate, often held the balance between the liberal and the conservative members of the court in split decisions

Reed, Thomas Brackett, 1839–1902, American legislator, b. Portland, Maine, grad Bowdoin College, 1860 A lawyer, he served in the state assembly (1868–69) and state senate (1870) and was (1870–73) state attorney general before he was elected (1876) as a Republican to the U S Congress A brilliant parliamentarian with a mordant wit, a conservative by conviction, Reed quickly took his place among the top leaders of his party As speaker of the House (1889–91, 1895–99) he inaugurated the "Reed Rules"—by which the House quorum was determined by the count of members present rather than by the count of those voting "Tsar" Reed also arbitrarily used the speaker's power of recognition to prevent minority obstruction and to facilitate orthodox Republican legislation in the face of strong opposition In 1896 he was a candidate for the Republican presidential nomination, which Mark Hanna skillfully secured for William McKinley Reed was strongly opposed to war with Spain, to the annexation of Hawaii, and to the ensuing expansion program Though reelected in 1898, he retired from Congress in 1899 and then practiced law in New York city See biographies by S W McCall (1914) and W A Robinson (1930)

Reed, Walter, 1851–1902, American army surgeon, b Gloucester co , Va , M D Univ of Virginia, 1869, and Bellevue Hospital Medical College, 1870 He received his army appointment in 1875 Having studied bacteriology under W H Welch, in 1898 he investigated epidemic typhoid fever in army camps In 1900 Reed headed a commission (with James Carroll, Aristides Agramonte, and J W Lazear as members) which was sent to Havana to study yellow fever and which proved that the disease, as suggested earlier by C J Finlay, was carried by the mosquito then called *Stegomyia* (later designated as *Aedes aegypti*) Using measures suggested by this knowledge, W C Gorgas was able to rid Havana of the disease The army hospital in Washington, D C , is named for Reed See studies by H A Kelly (3d ed , 1923), A E Truby (1943), and L N Wood (1943).

reed, name used for several grasses The common reed is a tall, stout perennial grass (*Phragmites communis*), widely distributed in wet places It has stout creeping rootstalks and a large, plumelike panicle In the SW United States this grass is called carrizo and is used in building adobe huts, it has also been used for thatching and cordage, Indians collected an exudation from the plant for its sweetness and made arrows of the stalks The giant reed (*Arundo donax*), of similar appearance and habitat but more southern in range, is often cultivated for ornament and is sometimes used in a reed instrument or reed organ It was from a reed that Pan was fabled to have made his Panpipe. The reeds of wickerwork are often rattan

reed bird see BOBOLINK

Reed City, city (pop 1,845), co seat of Osceola co., N Mich , on a tributary of the Muskegon and S of Cadillac, in a farm and lake area, inc as a village 1875, as a city 1932 Wood products and wood-preserving chemicals are made

Reed College, at Portland, Oregon, nonsectarian, coeducational, opened 1911 with bequests from Mr and Mrs. Simeon G Reed The college pioneered in progressive and individualized education Student government is stressed and all students participate in athletics

reed instrument, in music, an instrument whose sound-producing agent is a thin strip of cane, wood, or metal which vibrates as air is forced over it There are single-reed instruments (see CLARINET) as well as double-reed instruments (see OBOE), in which two strips are arranged so that they strike against each other Free reeds, such as those used in the REED ORGAN, CONCERTINA, and HARMONICA, do not overlap the air passage, they are generally of metal Beating reeds, such as are used in ORGAN pipes, strike the edges of the aperture while vibrating

Reedley, city (pop 3,170), S central Calif , SE of Fresno and on the Kings river, in a fruit area of the San Joaquin Valley, founded 1889, inc 1913 A junior college (coeducational) is here

reed mace. see CATTAIL

reed organ, an ORGAN in which air is forced over free reeds by means of bellows, usually worked by pedals It is played by means of one or more keyboards. Variations in tone are produced by stops that control different sets of reeds or vary the manner in which the air acts upon them Couplers add the upper or lower octave of each tone played In the late 18th cent C G Kratzenstein built a small reed organ, inspired by the Chinese SHENG In 1810 G J Grenié of Paris invented the *orgue expressif*, also inspired by the sheng, and numerous similar instruments followed Most of these, including the harmonium, as invented in 1840 by Alexandre Debain of Paris, had bellows that blew the air over the reeds, but c 1835 a workman conceived the idea of employing suction bellows His idea was employed by Jacob Estey of Brattleboro, Vt , and Mason and Hamlin of Boston in the middle of the 19th cent American organ, melodeon, or melodium, and cabinet organ were the names generally applied to this type of instrument, although the terms harmonium and melodeon have sometimes been confused. Both types of instrument found wide use in churches and homes in the United States. Many larger modern reed organs are electrically powered and have pedal keyboards like those of the pipe organ

Reedsburg, city (pop 3,608), central Wis , NW of Madison and on the Baraboo, inc 1887

Reedsport, city (pop 1,421), W Oregon, N of Coos Bay and on the Umpqua river near its mouth on the Pacific, inc 1919 It has fisheries and lumber manufacturing

reef, shoal or submarine bar of sand, rocks, or coral, at or near the ocean surface and therefore dangerous to shipping The Great Barrier Reef off E Australia is the longest in the world Reefs may be formed by wave and tidal action, by CORAL growth, or by subsidence of the land

reefing, the shortening of the sail or the reducing of the area of the sail The operation is performed when the wind has grown so strong that the sails are in danger of being torn loose or damaged A reef is that part of a sail which can be rolled or folded up and which lies between the upper or the lower edge of the sail and a parallel row of eyelets or between two subsequent rows of eyelets, each row of eyelets is known as a reefing point On square-rigged ships, reefs are taken from the top, while on fore-and-aft-rigged ships they are taken from the bottom In modern sailing vessels (yachts) a mechanical reefing gear is used to roll up the sail like a window shade

reel, folk dance of the British Isles, probably of Celtic origin although often ascribed to the Scandinavians Danced by two or more couples standing in a circle, it is in quick duple meter with four or eight measures which are repeated The reel is found in Scotland, Ireland, and the United States, where it is known as the Virginia reel. The Scottish reel is slower than the Irish

Reelaiah (rē"ēlā'yū), same as RAAMIAH.

Reelfoot Lake, c 20 mi long, W Tenn , near the Mississippi river and the Ky line It was formed by earthquakes in the winter of 1811–12 The depression thus created was filled with river water. The lake is in a beautiful wooded area, the Reelfoot Lake State Fish and Game Preserve

Reese, Lizette Woodworth (rēs), 1856–1935, American poet, b near Baltimore She taught for many years in a Baltimore high school Her first volume of verse, *A Branch of May* (1887), was included in *A Handful of Dust* (1891) The well-known sonnet "Tears" appeared first (1899) in *Scribner's Magazine* Her lyric genius is shown also in *A Quiet Road* (1896), *A Wayside Lute* (1909), and the later collections *Spicewood* (1920), *Wild Cherry* (1923), and *Selected Poems* (1926) *A Victorian Village* (1929), in prose, is autobiographical

Reeve, Clara (rēv), 1729–1807, English novelist. In 1777 appeared her most famous work, *The Champion of Virtue a Gothic Story*, which after the first edition was entitled *The Old English Baron* It was the literary offspring of Walpole's *Castle of Otranto* Two other works—*The Progress of Romance* and *The History of Charoba, Queen of Aegypt*, issued together in 1785—were reprinted in 1930 by the Facsimile Text Society.

Reeve, Tapping, 1744–1823, American lawyer and jurist, b Brookhaven, N Y , grad College of New Jersey (now Princeton Univ), 1767 In 1784 he opened his famous law school in Litchfield, Conn., where Aaron Burr, John C Calhoun, and Horace Mann and many other future senators, governors, and judges studied

Reeves, John Sims, 1818–1900, English tenor He began his career as a church organist and in 1839 made his debut as a baritone, but it was as a tenor, in opera, oratorio, and concert, that he became one of England's most popular singers, retiring in 1896. See his autobiography (1888)

referendum. see INITIATIVE AND REFERENDUM

refining includes the finer processes of metallurgy, the separation of petroleum into its commercial products, and the purification of cane, beet, and maple sugar and many other substances The nature of the refining process differs with many factors, including the type of material involved, the value of the end product, and the degree of purity necessary The purification of a metal is accomplished usually by a continuation of a process used in separating the metal from its ore it is based upon differences between the metal and its accompanying impurities as to some physical or chemical property, e g , density, melting point, magnetic properties, or reaction to certain chemicals ELECTROLYSIS is much used in the refining of various metals, the BLAST FURNACE and the REVERBERATORY FURNACE are important especially in connection with the refining of copper and iron, the AMALGAMATION PROCESS and the CYANIDE PROCESS are chemical means of metal refining The addition of quicklime or lime in some form, filtration, evaporation, and crystallization are important in the refining of sugar

reflection. When a ray of light or other radiant energy or a sound wave strikes a surface and is thrown back into the medium through which it has come, it is said to be reflected. The general principles governing the reflection of light and sound

are similar, for both travel normally in straight lines and both are wave phenomena Objects are visible because of the light reflected from their surfaces, and their color depends upon their ability to reflect light of a certain wave length and to absorb that of other wave lengths The reflection of light follows certain definite laws A ray of light striking a reflecting surface at right angles is thrown back directly along the path it has followed in coming to the surface Its path can be represented by a line drawn perpendicular to the surface and erected at the point at which the incoming ray strikes the surface, a perpendicular line so erected is called the normal When, however, a ray strikes a reflecting surface at an angle, it is reflected at an angle and in an opposite direction The incoming ray is called the incident ray, and the angle that it makes with the normal is known as the angle of incidence The angle formed by the reflected ray and the normal is called the angle of reflection and is equal to the angle of incidence Furthermore, the reflected ray is always in the same plane as the incident ray and this plane is perpendicular to the surface Not all surfaces reflect light in the same way or in the same degree Smooth surfaces give regular reflection since the reflected rays are parallel, rough or uneven surfaces give diffuse reflection since the reflected rays are scattered and not parallel For example, the reflection by a MIRROR is regular, by a highly polished but uneven piece of metal, it is diffused Reflection of light is also brought about under certain conditions by the surfaces of transparent media through which light normally passes An example of this is seen in the blazing glare of sunlight on a window or an automobile windshield when the sun's rays strike them at a very oblique angle The phenomenon called total reflection is observed when light passing from one medium (e g , a glass prism or water) to a less dense medium (e g , air) reaches one of the surfaces and is thrown back into the denser medium again instead of passing outward as would be expected This occurs when the light strikes at an oblique angle, greater than a certain degree Up to that degree, refraction (not reflection) takes place, and the greatest angle at which refraction is possible is called the critical angle, if the angle of incidence exceeds this angle, total reflection occurs Internal reflection accounts in part for a number of natural phenomena. Rays of sunlight striking raindrops are refracted upon entering them and then undergo internal reflection, since the sunlight is broken up into its colors, a rainbow appears A mirage is also partially the result of internal reflection The reflection of sound waves from a surface is the cause of ECHO Sound waves striking a surface are partially reflected and partially absorbed (see ACOUSTICS) Heat and other forms of radiant energy are also reflected by smooth and highly polished surfaces

reflex action: see NERVOUS SYSTEM

Reform, Catholic, 16th-century reformation of the Roman Catholic Church The latter part is sometimes pejoratively called the Counter Reformation, to imply that it was only a response to the Protestant Reformation The Reformation and the Catholic Reform, however, differed basically, for the Protestant reformers set out to replace the organized Church and the sacraments with an altogether different sort of religious community Both Catholic and Protestant reformers were angered by widespread corruption in the clergy, in this fact lay their chief similarity Since the time of St Catherine of Siena (14th cent) many voices had cried out for extensive reforms—of the clergy, of Christian life, and of ecclesiastical administration Probably the Great Schism did more than anything else to prevent change, for in its duration ecclesiastical politics preoccupied those who might have been busy with reform In the 15th cent the PAPACY was too weak to lead any movement, much less a drastic reform A key factor in the corrupt stagnation in Christendom was the spirit of the prelates, powerful, worldly, and negligent bishops—with their kings and princes—really ran the Church Such was their power that in the only vigorous papal effort at reform of the century, the mission of Nicolas of Cusa in Germany (1451), the papal legate dared not touch the bishops At the time the most-publicized scandal was the immoral Renaissance papal court with its cultivation of pagan art, but of all the evils thus proved to be the easiest remedied, once it was attacked by PAUL IV This Paul (as Cardinal Carafa) was, with CAJETAN and others, a member of a tight little reform party at Rome The nucleus was a society of priests and laymen, the Oratory of Divine Love, founded (1497) at Genoa for charitable work and now extended as a spiritual movement in the Curia itself The reformers were helped from abroad by men of the prestige of St Thomas More, Erasmus, St John Fisher, and Cardinal Jiménes The first major reform efforts failed, these were the Fifth Lateran Council (1512-17) and the election of Adrian VI, who died too soon In the next pontificate (Clement VII, 1523-34) the reform party worked on quietly, forming the core of resistance to Lutheranism, they founded the Theatines (1524) and the Capuchins (1525), religious orders to evangelise the common people Meanwhile Protestantism expanded, and the sack of Rome (1527) convinced even the most complacent cardinals that political gambling was a danger to the Church The influence of Emperor CHARLES V weighed on the side of reform In 1534 PAUL III became pope, and St IGNATIUS OF LOYOLA and his friends took the vows that founded the Jesuits (see JESUS, SOCIETY OF) Thus simultaneously (but quite independently) the reformers finally won the papacy, and the pope was provided with a resolute band of helpers In 1545 after delay and miscarriage the Council of Trent (see TRENT, COUNCIL OF) was convened by Paul III This council (1545-47, 1551-52, 1562-63) was the central feature of the Catholic Reform The popes of the council were Paul III, JULIUS III, , and PIUS IV The reign of Pius's predecessor, Paul IV, an interlude in the council, was devoted to the purge of the papal court, from Paul's work dates the quasi-monastic air that has ever since characterized the Vatican The end of the council (1563) opened the second period of the reform, lasting until 1590, with the pontificates of St PIUS V, GREGORY XIII, and SIXTUS V The work of the council was given effect The chief evil in church life, simony (in many forms, including the preaching of some indulgences), was uprooted Worship was standardized, the law of the Church and the government of the Holy See were reorganized, new educational requirements for parish priests were introduced and provided for (by diocesan seminaries), religious orders were reformed, and the life of the clergy was scrutinized A new spirit began to breathe in the Church, this spirit is seen in the work of St CHARLES BORROMEO In the Papal States and in a few other lands the new INQUISITION was extended A far-reaching local movement in the reform was the Oratory (see ORATORY, CONGREGATION OF THE) of St PHILIP NERI Catholicism took the offensive in Europe, and the Jesuits and Capuchins won Austria, Poland, the S Netherlands, and parts of Germany, Hungary, and Bohemia back to the Church The Jesuits led in foreign missions, in America it was the spirit of the Catholic Reform that led the missionaries to work strenuously for the Indians often in opposition to the secular authorities Spanish religion was deepened by the Carmelite reforms of St THERESA of Avila and by St JOHN OF THE CROSS In France the Catholic Reform took root later, after the accession of Henry IV, the great French figures were St FRANCIS OF SALES and St VINCENT DE PAUL In England the Catholic Reform took effect less in the restoration of the Church under Mary (though Cardinal POLE was a reformer) than in the mission of the Jesuits (1580), led by Edmund CAMPION and Robert PARSONS Diverse figures showing effects of the Catholic Reform are Cardinal Baronius, Cardinal Bellarmine, Pedro Calderón de la Barca, Richard Crashaw, St Francis Borgia, St Rose of Lima, Robert Southwell, and Torquato Tasso There is no single book treating the Catholic Reform For bibliography, see PAPACY and ROMAN CATHOLIC CHURCH

Reformation, name generally given to the religious revolution in Western Europe in the 17th cent It arose from objections to doctrines and practices in the medieval church (see ROMAN CATHOLIC CHURCH) and ultimately led to the freedom of dissent (see PROTESTANTISM) The preparation for the movement was long Opponents of orthodox views had asserted themselves over centuries, and in the 14th cent John WYCLIF had led a dissident movement His ideas were repeated and amplified later by the able John HUSS in Bohemia, who was burned at the stake at the Council of Constance His followers in Bohemia upheld his cause after his death in the long and bitterly fought HUSSITE WARS These dwindled out into compromise, but Huss's challenge to the orthodox view of the Eucharist and the revolutionary effect of the wars did not melt away New forces came to fan discontent with the Church and the medieval order of society There had long been outcries against abuses in the Church, especially the shocking worldliness of some of the clergy, the emphasis on money, and the oppressiveness, not only intellectual but economic, of members of the hierarchy. The "conciliar theory" —that the ecumenical council is superior to pope— had reform as one aim, but it failed Nevertheless the number of those wishing reform grew steadily. It was increased by the appearance of HUMANISM and the spirit of the Renaissance Study of the ancient texts, Greek and Hebrew, concentrated attention on the Bible and evoked a new critical spirit, exemplified by such men as Lorenzo VALLA The Renaissance also tended to develop an emphasis on the individual and to encourage revolt against all authority The later humanists were outspoken in their attacks on the abuses in the Church; ERASMUS was, perhaps, the most prominent, but there were hosts of others, such as the humanists at Oxford The intimate connection between the new learning and the Reformation itself is shown in the pursuits of men who were to be prominent in the Reformation in central Europe; Ulrich von HUTTEN and Philip MELANCHTHON were outstanding figures in humanist study, and ZWINGLI arrived at opposition to the Church mainly through the study of Greek and Hebrew The very founding of the Univ. of Wittenberg, which was to be the center of revolt, was part of the urge to humanism The introduction of printing in West Europe made criticism more widespread Printing was to hasten the Reformation, and the Reformation in turn was to spread printing further In secular matters the opposition between Church and state was centuries old, but it had begun to take a new turn with the building of strong nations In Germany this opposition to the power of the Church was coupled in the minds of many princes with opposition to that other supranational body, the Holy Roman Empire, and the princes were to play a decisive part in the ecclesiastical rebellion. The great increase in the cities and in the power of merchants and the middle class generally not only upset the old medieval order of things but created much discontent with the scholastic views on finance and economic affairs, which fettered the enterprise of the men in search of wealth The economy of Europe was expanding and forcing cracks in the more or less rigid walls of the system Scholars of recent years have put a great deal of emphasis on this connection between the new modes of religious thought and economic change, between Protestantism and capitalism, as a major force in the Reformation There were, however, many influences at work, and the field was well prepared by 1517 Nevertheless, it was with suddenness and surprise that the Reformation began Martin LUTHER had been stirred to action by the campaign for dispensing indulgences (see INDULGENCE) being launched under Johann TETZEL in Germany He protested On Oct 31, 1517, he posted on the door of the castle church at Wittenberg his 95 theses, inviting debate on matters of practice and doctrine This was not as yet a revolt against the Church but a movement for reform within It was, however, much more than an objection to the money-grabbing and secular policies of the clergy Luther had already become convinced that in certain matters of doctrine the purity of the ancient church had been perverted by self-seeking popes and clergy His disagreement with the Church on matters of doctrine soon became apparent In 1519 Luther in a dispute with Johann Eck openly espoused doctrines that were implicit in his theses, and he denied the authority of the Church in religious matters The pope issued a bull of excommunication, and Emperor Charles V thundered against the rebel Luther defied them, publicly burned the bull of excommunication, and issued vigorous pamphlets assailing the papacy and the doctrine of the sacraments The breach was thus made in 1520, and the meeting of the Diet of Worms (see WORMS, DIET OF) not only did not produce a compromise but forced many doubters into the camp of the rebels Luther was declared an outlaw, but the threat was empty, under the protection of the powerful Frederick III, elector of Saxony, he was spirited off to the safety of the Wartburg The revolt was spreading with the speed of a grass fire over central and N Germany and almost immediately was burning beyond the German borders All the elements of discontent and rebellion coalesced The learned, such as Luther himself, Melanchthon, and Martin Bucer, saw the opportunity to express and expand their own views The nobles were enabled to cast off allegiance to the emperor and to enrich themselves by seizing the immense landed estates of the Church Too much can be—and has been— made out of this economic motive, however, for many of the princes belonged to the intellectual group that had been stirred to critical rejection of church doctrines, and they were perhaps better aware than common men of the venality and money-mindedness of many of the clergy Many of the pious, increased in number by a spontaneous religious revival in the late 15th cent , drank the doctrine of a new spirituality with pleasure, for Luther's doctrine of justification (i e , salvation) by faith alone and not by sacraments, good works, and the mediation of the Church placed man in naked and direct communication with God The new insistence upon reading the word of God in the Bible placed on the individual a greater responsibility Those who were feeling the first and welcome weight of nationalism were anxious to shake off the hand of Rome Absolutist rulers, particularly in Scandinavia, welcomed the opportunity to end the interference of the Church in state affairs; by creating national churches they were able to escape outside influence Merchants and capitalists found the air of individual freedom exhilarating The peasants, chafing under the old restrictions of feudalism, lifted up their heads in hope that the new dispensation would take away their burdens. Huldreich Zwingli had in Zurich developed his own brand of dissent In 1529 in the Colloquy of Marburg, Luther and Melanchthon on the one side and Zwingli and OECOLAMPADIUS on the other discussed the nature of the sacrament of the LORD'S SUPPER (the Protestant form of the Catholic EUCHARIST), but failed to come to an agreement The fundamental principle that every man could arrive at truth by study of the Scripture also led many to more radical conclusions than

those that Luther adopted. The preacher known as CARLSTADT (from the place of his birth) argued for a more thoroughgoing dismissal of old practices and doctrines in Wittenberg itself and caused Luther to emerge from his retirement to halt the progress of radicalism The PEASANTS' WAR (1524–25) showed plainly the rifts within the ranks of the rebels, and Luther, forced to choose between the revolutionary peasants *and their opponents*, the princes, chose the princes and orderly governance. The lower classes then in large measure followed more revolutionary social leaders, such as the communistic Thomas MÜNZER and JOHN OF LEIDEN. After their revolution had been put down with blood and brutality, many of them returned to Catholicism, and many continued to foster more radical sects, such as the ANABAPTISTS In general the princes were able to dictate what religion should prevail in their territories, and they opposed vigorously the attempt of the emperor to force them back into the old Church The Knights' War (1522–23), led by Franz von SICKINGEN, ended in failure, but the determination of Charles V to extirpate Lutheranism ultimately ended in even more abject failure The imperial Diet of Speyer in 1526 found no answer to the division of the empire, and when a new Diet of Speyer in 1529 ordered that the emperor's ruling against the heretics should be enforced, the Lutheran princes issued a defiant protest (from which the term *Protestant* is derived). The Diet of Augsburg in 1530 was equally fruitless in producing a compromise between Catholic and Lutheran princes, but it did produce the Confession of Augsburg (see CREED), which was drafted by Melanchthon and became the official statement of Lutheran faith The conflict in the empire led the Protestant princes to form a defensive union against the emperor in the Schmalkaldic League, in which the chief figures were PHILIP OF HESSE and JOHN FREDERICK I of SAXONY The league was put down in the Schmalkaldic War (1546–47) which did not, however, in the least solve the situation The confusion which political considerations brought to the religious issue is perhaps best seen in the career of MAURICE, duke of Saxony, who fought first on one side, then on the other A sort of peace of exhaustion and compromise was reached in the Peace of Augsburg (1555, see AUGSBURG, PEACE OF) The settlement was, however, at best uneasy and was not to endure except in principle The conflict was merged with many other issues in the later THIRTY YEARS WAR (1618–48) Meanwhile the fresh winds of the Reformation had been blowing all over Europe (except Russia) The Scandinavian countries became firmly Protestant under GUSTAVUS I (Gustavus Vasa) of Sweden and Frederick I of Denmark and Norway, later attempts to win them back to Catholicism failed Geneva had become in 1536 the headquarters of the French John CALVIN, who is considered by many the greatest theologian of Protestantism His *Institutes of the Christian Religion*, published at Basel in 1536, marked a new era in thought He differed from Luther principally in the doctrine of predestination (the foregone choosing by God of the elect to be saved), in the austerity of the life of the godly, and in the emphasis on theocratic government (see CALVINISM) His influence was immediate and enormous France, which had hardly been touched by Lutheranism, was fired by Calvinist doctrine, and the Protestant minority, called the HUGUENOTS, waged fierce battle against the Catholic majority in Wars of Religion until toleration was won when Henry of Navarre turned Catholic, became King Henry IV, and issued (1598) the Edict of Nantes Calvinism superseded Lutheranism in the Netherlands, where the religious revolt was coupled with revulsion from the policies of Charles V and his successor, PHILIP II of Spain Through bloody wars independence and Calvinism gained the upper hand in the N Low Countries Calvinism conquered Scotland, too, through the victory of John KNOX in his long duel with MARY QUEEN OF SCOTS. It spread also to Hungary and Poland and took root in parts of Germany It proved quite impossible to reconcile the finely wrought theology of Calvinism with Lutheran doctrines, for Lutheranism rejected predestination and clung to part of the sacramental system (see LORD'S SUPPER). Calvinist thought did greatly influence the course of the Reformation in the British Isles and the present United States There was also conflict of Lutheranism and Calvinism with the more radical and emotional religions (commonly called Evangelical, while Calvinist churches were called Reformed on the Continent and Presbyterian in the British Isles), but the enthusiasm of preachers who interpreted Scripture in their own way met with a cool reception among the Calvinists The divisions within Protestantism were from the beginning sharp, and attempts to reconcile Calvinist, Lutheran, and Evangelical doctrine had only partial success in some union of Lutheran and Evangelical practice. Moreover, in England the Reformation went its own course. It was there much more closely connected with the conflict of Church and state than was the Reformation on the Continent. The conflict of King HENRY VIII with the Church led to the Act of Supremacy (1534), which firmly rejected papal control and created a national church (see ENGLAND, CHURCH OF) Currents of Calvinistic and Evangelical thought were, however, strong in England The Reformation was begun with the creation of a state church and the dissolution of the monasteries It was given Calvinist touches under Edward VI, suffered a complete reversal under Mary I, and reached a sort of balance under Elizabeth, with persecution of both Catholics and Calvinists The process was to work itself out slowly later in the PURITAN REVOLUTION, just as the fierce hatreds between Protestant and Protestant as well as between Catholic and Protestant were to be worked out later on the Continent The burning of SERVETUS was a sample of the internal strife within Protestantism itself The divisions within the churches of the Reformation also served to forward the counterreformation within the Roman Catholic Church (see REFORM, CATHOLIC), which rewon Poland, Hungary, most of Bohemia, and part of Germany for the Catholics The end of the Thirty Years War in the Peace of Westphalia (see WESTPHALIA, PEACE OF) in 1648 brought some stabilization, but the force of the Reformation did not end then It has continued to exert influence to the present day, with its emphasis on personal responsibility and individual freedom, its refusal to take authority for granted, and its ultimate influence in breaking the hold of the Church upon life and consequent secularization of life and attitudes See Thomas M Lindsay, *History of the Reformation* (2 vols, 1906–7), E M Hulme, *The Renaissance, the Protestant Revolution, and the Catholic Reformation in Modern Europe* (rev ed, 1917), Preserved Smith, *The Age of the Reformation* (1920), Albert Hyma, *The Christian Renaissance* (1924), R H Tawney, *Religion and the Rise of Capitalism* (1926); G G Coulton, *Art and the Reformation* (1928), Max Weber, *The Protestant Ethic and the Spirit of Capitalism* (Eng tr, 1930), H S Lucas, *The Renaissance and the Reformation* (1935), Constantin Hopf, *Martin Bucer and the English Reformation* (1946)

Reform Bills, in English history, name given to five measures which liberalized representation in the House of Commons (The last two, in 1918 and 1928, are more usually called REPRESENTATION OF THE PEOPLE ACTS) Parliamentary representation had been given the shires, boroughs, and cities by the crown and was not materially altered from Elizabeth's reign to 1832 The system was very irregular and greatly restricted the franchise, worse, it failed to take into account the great shifts of population and the growth of new social classes which attended the Industrial Revolution "Pocket boroughs," controlled by the crown or large landholders, and "rotten boroughs," whose population had declined, returned two members, while large cities such as Manchester and Birmingham were unrepresented Out of a population of 24,000 000 in 1831, only about 400,000 voters were qualified in the British Isles Corruption and the sale of seats flourished Reform agitation, beginning to become strong in the 1760s, was supported by William Pitt and others, but the emergency period of the French Revolution interrupted it Revived c 1807, it became part of the program of utilitarianism and was the leading issue of the day by 1830. The **Reform Bill of 1832**, enacted under the Whig administration of Earl Grey, redistributed seats in the interest of larger communities it extended the franchise in the boroughs to those who occupied premises of annual value of £10 and in the counties to similar leaseholders—to the advantage of shopkeepers and other middle-class men—and it simplified registration and voting procedure It was passed in the House of Lords by the king's threat to create Whig peers Agitation by the advocates of CHARTISM and others for more reform produced no results until Benjamin Disraeli made a bid for the support of the working classes by the passage of the **Reform Bill of 1867** This act, which further redistributed seats and more than doubled the electorate, gave the vote to workingmen in the towns The **Reform Bill of 1884**, passed in the time of a Gladstone ministry, removed the distinction between county and borough franchises and by the reduction of rural qualifications added about 2,000,000 electors A redistribution act in 1885 rendered representation nearly proportional to population. The Representation of the People Acts completed the conversion of England to a democratic voting basis See Charles Seymour, *Electoral Reform in England and Wales 1832–1885* (1915), H L. Morris, *Parliamentary Franchise Reforms in England from 1885 to 1918* (1921), and E L Woodward, *The Age of Reform, 1815–1870* (1938)

Reformed churches, in a general sense, all Protestant churches which claim a beginning in the Reformation In more restricted and usual historical usage, Reformed churches are those Protestant churches which had their ecclesiastical origin in the doctrines of Calvin, in distinction from those that are Lutheran or Evangelical. The Swiss and Dutch churches and a number in Germany came to be denominated Reformed. The Reformed churches as a rule follow the polity of PRESBYTERIANISM. They tend toward a simple form of worship rather than elaborate ritual. In the United States, churches bearing the Reformed title include the REFORMED CHURCH IN AMERICA, generally known as the Dutch Reformed Church, the CHRISTIAN REFORMED CHURCH, the EVANGELICAL AND REFORMED CHURCH, and the Free Magyar Reformed Church in America. The first two trace their origin to Holland, the third, to Germany and Switzerland, and the fourth, to Hungary

Reformed Church in America, founded in colonial times by Protestant settlers from the Netherlands, more commonly known as the Dutch Reformed Church The Reformed Church in Holland grew up in the 16th cent, after the Calvinistic Reformation movement had taken root in the northern provinces of the Netherlands In 1571 a synod held at Emden laid the foundation for the Reformed Church A presbyterian form of organization was decided upon Liturgical worship was formulated The Belgic Confession of Faith (1561) and the Heidelberg Catechism (1563) were adopted, later were added the Canons of the Synod of Dort (1619) After 1581, when the northern provinces of the Netherlands declared their independence from Spain, the Reformed Church was more firmly established In America, Dutch settlers in New Netherlands held informal meetings for worship until the Rev Jonas Michaelius organized (1628) a congregation in New Amsterdam The organization still survives in the important Collegiate Reformed Dutch Church, the St Nicholas Collegiate Dutch Reformed Church in New York city, oldest of its churches in the Middle Atlantic states, was razed in 1949 Until the English conquest of New Netherlands in 1664, the Reformed Church was the established church of the colony After that time, still owing ecclesiastical allegiance to the Classis of Amsterdam in Holland, the church had to give civil allegiance to the English government Nevertheless, the Reformed Church grew, ministers, supplied from Holland, were too few for the need Finally permission was given (1747) to form an assembly in America, which in 1754 declared itself independent of the Classis of Amsterdam This American classis secured a charter (1766) for Queens College (now Rutgers Univ) in New Jersey The appointment (1784) of John Henry Livingston as professor of theology marked the beginning of the New Brunswick Theological Seminary In 1792 a formal constitution was adopted, in 1794 the Reformed Church held its first general convention, in 1867 the present name became the official title New York and New Jersey were long the denominational stronghold, but in the middle of the 19th cent began the development of the church in the Middle West Hope College and Western Theological Seminary were founded in Holland, Mich., and Central College at Pella, Iowa In 1857 a group of settlers from Holland in Michigan separated from the Reformed Church and organized the CHRISTIAN REFORMED CHURCH The Reformed Church in America has long been active in the foreign mission field particularly in India, China, Japan, and Arabia See M G Hansen, *The Reformed Church in the Netherlands, 1340–1840* (1884), C E. Corwin, *A Manual of the Reformed Church in America* (5th ed revised 1922)

Reformed Church in the United States: see EVANGELICAL AND REFORMED CHURCH

Reformed Episcopal Church, formed in 1873 by members of the Protestant Episcopal Church who withdrew because of ritualistic dissensions The denomination publishes the *Episcopal Recorder*

reformed Judaism: see JUDAISM

Reformed Presbyterianism: see PRESBYTERIANISM and CAMERON, RICHARD

refraction, in physics, the bending of a ray of light (or of a sound wave or a heat ray) away from its original direction when it passes obliquely from a medium of one density into another medium of different density, as from air into glass No bending occurs, however, if the ray enters the surface at right angles to it The explanation of refraction is commonly given in terms of the wave theory of light and is based upon the fact that light travels with greater velocity in some media than it does in others and that the front of a WAVE is flat and at right angles to the direction it is following When, for example, a ray of light traveling through the air strikes the surface of a piece of glass at an oblique angle (not so small that the ray can glance off and thus be reflected), the under part of the ray, entering the glass first, is slowed down first—light travels more slowly in glass than it does in air—and turns off from the direction in which it was originally traveling As the upper part of the ray enters the glass, it also is bent, following the same direction as that of the under part A ray thus entering a different medium is called the incident ray, the point at which it enters the new medium, the point of incidence, an imaginary line erected at this point and perpendicular to the surface of the new medium, the normal, and the ray after bending, the refracted ray The ray is bent in a direction towards the normal when passing from a less dense to a more dense medium. The angle which the incident or incoming ray makes with the nor-

mal, or perpendicular to the surface, is called the angle of incidence, the angle which the refracted or bent ray makes with the normal is called the angle of refraction The law of refraction states that a constant ratio exists between the sines of the angles of incidence and refraction for any two given media; the discovery of the law is usually credited to Willebrord Snell Commonly this law is expressed in the statement that a constant ratio exists between the velocities of light in the two given media This ratio is called the index of refraction or refractive index for the two media If one of the media is a vacuum the ratio is called the absolute index of refraction Light is refracted in passing through such optical instruments as the prism and the lens White light passing through a prism in a certain way is dispersed or broken up into its component parts and a SPECTRUM is formed In certain crystals, e g , calcite, an entering ray of light is refracted in two ways, the phenomenon being called double refraction (see POLARIZATION OF LIGHT) If, however, a ray of light strikes a transparent surface in such a way that its angle of incidence is greater than a certain degree (called the critical angle), it will be reflected and not refracted, a phenomenon known as total reflection (see REFLECTION)

refrigeration, the act of drawing heat away from solids or liquids to lower their temperatures, generally for purposes of preservation Perishable foods have long been kept in cool cellars and in buckets lowered into wells A spring of cold water often determined the site of an American pioneer's home A springhouse was built over the flowing water, and the cooling fluid was led through troughs in which were placed crocks of butter and cream In the winter farmers stored ice in icehouses for use in the summer Similarly natural ice from commercial icehouses served the needs of urban homes and food merchants until artificial methods of producing ice became practical, after their initiation in the middle of the 19th cent When a solid is liquefied or when compressed air is permitted to expand, it absorbs heat Thus the changing of one gram of ice to a gram of water requires 80 calories of heat Following the removal of the pressure used to produce dry ice (solidified carbon dioxide), it absorbs much heat in its reversion to gas These principles find application in virtually all refrigeration equipment Ammonia, carbon dioxide, and sulphur dioxide are most widely used as refrigerants These and other volatile chemicals by their susceptibility to continuous re-use in the alternating evaporation and condensation process become part of sealed systems kept in motion through electricity or gas apparatus An electric motor controlled by a thermostat is used to exert pressure on ammonia, for example, before it moves into the coils of the refrigeration compartment Heat is drawn to the coils from whatever is in the compartment as the ammonia changes to its gaseous form The motor then acts to compress the gas issuing from the coils, rendering it liquid for its passage back into the coils The compression is done as far away from the refrigerated area as possible by reason of the heat generated in the action Compression and expansion of air are also used in refrigeration equipment Wherever fresh or frozen food must be stored, processed, transported or sold, refrigeration is indispensable, with the result that appropriate refrigeration machinery was developed for trains, ships, factories, and cold-storage plants (used not only for foods but also for fur storage) An outgrowth of the preservation of foods by refrigeration was the development of processes of preparing FROZEN FOODS Although a number of experimenters contributed to the discovery of a workable process, the name of Clarence Birdseye is associated with the early successful introduction of the method, one of his chief contributions was his system of freezing perishable foods (packed in individual containers ready for sale) between refrigerated metal plates See also AIR CONDITIONING and COOLING SYSTEMS See R C Jordan and G B Priester, *Refrigeration and Air Conditioning* (1948), J F Wostrel and J G Praetz, *Household Electric Refrigeration* (2d ed , 1948)

refugee, one who leaves his native land either because he is expelled or because he is fleeing to escape persecution The legal problem of accepting refugees is discussed under ASYLUM, this article considers only mass dislocations Early examples of the movement of refugees in considerable number include the expulsion of the Jews and the Moors from Spain in the late 15th cent , the settlement of the Pilgrims and the Quakers in America, and the flight of émigrés in the French Revolution Before the 20th cent there was usually little or no systematic attempt to help refugees After the First World War international organizations were created to give assistance. Those most in need were refugees from Russia and from Armenia, later there were Turks, Greeks, and Bulgarians resettled after the war between Greece and Turkey in 1922 In 1921 the League of Nations appointed Fridtjof NANSEN its high commissioner for refugee work. The International Labor Organization and the Nansen International Office for Refugees later took charge Nansen effected repatriation where possible, in other cases he arranged "Nansen passports," which gave the right to move freely The refugee problem was revived after Hitler's accession to power (1933) and his annexation of Austria (1938) and of Czechoslovakia (1939) The Loyalist defeat in Spain (1939) and anti-Semitic legislation in Eastern Europe were additional factors. Jews were the largest group affected Private aid was small, and there was no League action Many governments attempted to return the refugees to their country of origin Often they were forbidden to work and sometimes were imprisoned The United States absorbed a comparatively large proportion of refugees, however, without relaxing its IMMIGRATION laws Some work was accomplished by a permanent committee for refugees established in London after a conference of 32 nations held at Evian, France, in July, 1938 During the Second World War, as reports accumulated of the massacre of Jews and other peoples, President Roosevelt sought to rescue as many as possible from Nazi extermination and created (Jan , 1944) the U S War Refugee Board The board saved thousands of Balkan Jews At the end of the war the UNITED NATIONS RELIEF AND REHABILITATION ADMINISTRATION (UNRRA) had the responsibility of caring for some 8,000,000 "displaced persons" (persons moved from their native countries as prisoners or slave laborers) The majority of "DP's" were speedily repatriated, but about 1,000,000 in Germany, Austria, and Italy refused to return to their homes and remained in special camps The number of Jewish "DP's" was in time greatly reduced by immigration to Israel, but uprooting the Arab population of that new state itself created some 700,000 refugees A large group of the remaining "DP's" were from the Baltic countries With the end of UNRRA the United Nations created the INTERNATIONAL REFUGEE ORGANIZATION to carry on its work After much debate the United States, in 1948, adopted the Displaced Persons Act, which permitted the entrance of 200,000 immigrants by 1950 With few exceptions, only those who had reached Allied territory by Dec 2, 1945, might be admitted At least 40 percent of the refugees were to come from territory recently placed under foreign control (in effect the Baltic states and the area of E Germany incorporated into Poland), and at least 20 percent were to be farmers Objections that the measure was covertly directed against Jews and Catholics led to amendments in June, 1949 The eligibility for reaching territory under Allied control was extended to Jan 1, 1949, the percentage restrictions were revoked, and the number to be admitted was set at 339,000 by June 30, 1951 See Maurice R Davie, *Refugees in America* (1947)

Refugio (rĭfyo͞o'rō, rĭf'yo͞o-rēō), town (pop 4,077), co. seat of Refugio co , S Texas, on the Mission river and NNE of Corpus Christi A Spanish mission, Nuestra Señora del Refugio [Our Lady of Refuge], established earlier near San Antonio Bay, was moved here in 1795 The town itself grew after settlement began in 1829 and was formally established in 1834 It was taken by the Mexicans in the Texas Revolution (1836) and was again occupied briefly by the Mexicans in the invasion of 1842 The bells in the present Catholic church are said to be those of the original mission, taken and later returned by the Mexicans Near-by oil wells give prosperity to the old farming and ranching area

refuse, in general, all the wastes that accumulate around homes and factories, except for the liquid SEWAGE discharged into the sewers Refuse includes ashes, rubbish, wastepaper, garbage, the offal from slaughterhouses, and dry factory waste It is in comparatively recent times that the problem of refuse disposal has become the concern of the municipality rather than of the householder or factory owner Sanitary engineers have pointed out that piles of refuse are not only unsightly and ill-smelling, but are disease-breeding, since germs are carried from them by the agency of flies and other vermin In most cities it is the practice to have garbage placed in containers separate from ashes and rubbish, to be collected daily or at regular intervals In some places in the United States (where much foodstuff is thrown away) this class of refuse is kept separate to be used for hog feed. Elsewhere it is reduced, or treated with heat and naphtha, to extract the grease, the residue being used in fertilizer Ashes from homes are usually dumped where they will aid in filling in low-lying land. Cinders from factories and large buildings are, when possible, screened and graded and sold for use in concrete or road work The remaining refuse is treated in various ways In some cities, after being sorted for salvageable material, it is dumped at sea, an undesirable method, since much floating matter finds its way back to shore and pollutes bathing beaches It is therefore becoming customary to dispose of it by means of incinerators See A P Folwell, *Municipal Engineering Practice* (1916), Rudolph Hering and S. A. Greely, *Collection and Disposal of Municipal Refuse* (1921), Karl Imhoff and G M Fair, *Sewage Treatment* (1940)

regatta (rĭgä'tu), series of ROWING or other boating races A rowing regatta may include sculling races, pair-oared, four-oared, or eight-oared boat races. Sailing regattas are for small craft. In England early in the 19th cent rowing, which had been popular there for several centuries, became an organized sport After the first Oxford-Cambridge intercollegiate regatta was held in 1829 on the Thames from Putney to Mortlake in Surrey, the Royal Henley Regatta—the most famous of its kind, in which eight-oared boats compete annually for the Grand Challenge Cup—was instituted in 1839 along the same course It became an annual event after 1856 Regattas in the British Isles have gained wide attention, and they are often made the basis of aquatic festivals, with various water sports in addition to the regular boat races In the United States boating races were common in the early 19th cent , but it was not until the 1840s that regattas became featured events In 1852 the first intercollegiate regatta took place at Lake Winnipesaukee, between Yale and Harvard, but their first official regatta dates from 1876 More and more American colleges entered into regatta competitions, and after 1895 the Poughkeepsie Regatta was conducted by the Intercollegiate Rowing Association and was held annually on a 4-mile Hudson river course as an eight-oared boat race for freshman, junior varsity, and varsity teams In 1950 the location of this regatta was moved to the Ohio river (at Marietta, Ohio)

Regem (rē'gĕm), name in an obscure genealogical passage 1 Chron 2 47

Regem-melech (-mē'lĕk) [Heb , =the king's friend], messenger sent to Zechariah Zech 7 2

Regence style (rā'jŭns), transitional style in architecture and decoration originated in France during the regency (1715–23) of Philippe II, duc d'Orléans While retaining from the Louis XIV style an underlying restraint and adherence to symmetry, it introduced curved lines and many motifs such as shells, masques, and sinuous foliated scrolls which were to be developed in ROCOCO design The legs of furniture took bulging outlines and the corners of panels were curved The use of gilt bronze was extended, and walnut, rosewood, and other woods largely replaced ebony in veneers Leaders in creating the style were the cabinetmakers Boulle and Cressent and such architects and artists as Cotte, J A Meissonier, Boucher, and Watteau Although essentially French, the style became current also in neighboring countries, notably in Germany

Regency, in British history, the period of the last nine years (1811–20) of the reign of GEORGE III, when the king's periodic insanity and other infirmities had rendered him unfit to rule and the government was conducted in the name of the prince of Wales (later GEORGE IV) The period witnessed the end of the Napoleonic Wars and the ascendancy of reactionary Tories, such as Lord Castlereagh, but was marked also by the beginnings of the reform agitation of such men as Henry Brougham, Jeremy Bentham, Robert Owen, and William Cobbett Socially, and to a large extent morally, the period took its distinctive coloration from the gay and dissolute group around the regent, as well as from the prince himself. It was a time of a notable flowering of arts, letters, and architecture In literature the period marks the culmination of the romantic movement in the work of such poets as Lord BYRON, John Keats, and Percy Bysshe Shelley and in the novels of Sir Walter Scott Regency architecture, culminated in the elegant simplicity of the Regency style (see separate article) Regency furniture shows a similar refinement of design and taste and a strong influence of the styles of the French Directoire. See Paul Emden, *Regency Parade* (1939)

Regency style, in English architecture, flourished during the regency and reign of George IV (1811–30) and was chiefly represented by the court architect, John Nash. The period is characterized by the preponderant use of stucco Buildings were simpler in appearance than during the previous century, partly because of the flat painted surfaces and partly through the use of refined Greek ornament, glazed casement doors, and flat, partitioned bay windows Eaves were strongly projecting, and the use of slate allowed for low-pitched and almost flat roofs Balconies were much in vogue for the first time in England, and in private dwellings these are usually supported on slender columns or by brackets The main achievement in this style is Regent's Park in London, laid out and designed by Nash as one of the first large-scale urban housing developments Characteristic also is Henry Holland's Carlton House (the terrace of which was added by Nash) See Paul Reilly, *An Introduction to Regency Architecture* (1948).

Regensburg (rā'gunsbo͝org, rā'gənsbo͝ork), city (pop. 108,604), capital of the Upper Palatinate, E Bavaria, on the Danube In English, it is also known as Ratisbon (rā'tĭzbŏn, -tĭs-). It is a river port and a commercial and industrial center, with machine-building plants, manufactures of precision instruments, printing plants, and breweries One of the oldest German cities, it has many monuments of historic and architectural interest. As Regina Castra it

was an important Roman frontier station. It became an episcopal see in 739 and was captured (788) by Charlemagne when he subjugated Bavaria One of the most prosperous commercial centers of medieval Germany, Regensburg was made (1245) a free imperial city Part of the surrounding countryside belonged to the city of Regensburg, other adjacent territories were ruled by the bishops The city itself accepted the Reformation in the 16th cent Its commerce declined somewhat in the 15th and 16th cent owing to the shifting of trade routes In the Thirty Years War, Regensburg, garrisoned by Bavarian troops, was bombarded and captured (1633) by Bernhard of Saxe-Weimar, but was recovered (1634) by the imperials under Ferdinand of Hungary and Bohemia (later Emperor Ferdinand III) Regensburg was frequently the meeting place of the imperial DIET from 1532, and in 1633 it became the permanent seat of the diet The diet which met here from 1801 to 1803 under the shadow of Bonaparte completely reorganized the moribund Holy Roman Empire The list of electors was revised, the ecclesiastic principalities were secularized, and the majority of the petty princes were "mediatized," i e , their territories were given to the larger states while they retained the mere titles The free imperial city and the bishopric of Regensburg were given, with Aschaffenburg, to K T von Dalberg, the archechancellor, as compensation for the secularized archbishopric of Mainz, in 1806, when the Holy Roman Empire was dissolved and the Confederation of the Rhine was created, Regensburg, Aschaffenburg, and Frankfurt were made into the principality of Aschaffenburg, again under Dalberg, finally, in 1810, Regensburg passed to Bavaria, while Frankfurt and Aschaffenburg were enlarged and constituted into the grand duchy of Frankfurt In the Second World War, Regensburg was one of the largest German airplane-manufacturing centers, as a result it was severely bombed Among the chief landmarks of Regensburg are the Cathedral of St Peter (13th-16th cent), the Church of St Jacob (12th cent), the episcopal residence (a former Benedictine convent with a 12th-century church), the early Gothic Dominican church, the city hall (built partly in the 13th cent , partly in the 17th and 18th cent), which was the meeting place of the diet, and the Porta Praetoria, a Roman gate built in A D 179 Part of the former Benedictine abbey of St Emeran (founded 7th cent) is incorporated with a huge 19th-century palace, now the residence of the princes of Thurn and Taxis The abbey church, with foundations dating from the 8th to the 12th cent , contains the tombs of Emperor Arnulf and of Louis the Child A 12th-century stone bridge was blown up in the Second World War Regensburg was a residence of Albrecht Altdorfer and of Kepler, both of whom died here

Reger, Max (mäks' rā'gûr), 1873–1916, German composer, pianist, and conductor As a pianist he was widely acclaimed, particularly in the playing of Mozart and Bach He taught composition (1907–16) at the Leipzig Conservatory and in 1911 became conductor of the court orchestra at Meiningen, a position which provided the incentive for much serious orchestral composition As a composer he was essentially a romantic but had a strong feeling for the forms of absolute music gained from intensive study of Bach and Brahms During his lifetime his works, particularly those for organ, were esteemed highly in Germany, but elsewhere he remains a controversial figure

Reggio di Calabria (rĕd'jō dē kälä'brēä), city (pop 60,342), capital of Calabria and of Reggio di Calabria prov , S Italy, a port on the Strait of Messina, at the tip of the "toe" of Italy The ancient REGIUM, it became (12th cent) a part of the kingdom of Sicily and later (13th cent) of Naples It suffered much from incursions by Turks and pirates The most devastating of the many earthquakes occurred in 1783 and 1908 Reggio is a modern city, with only parts of the medieval castle standing There is a ferry-boat service from Villa San Giovanni across the strait to Messina Grapes, olives, citrus fruit, and tobacco are produced in the vicinity

Reggio nell' Emilia (nĕl'lāmē'lyä), city (pop 49,069), capital of Reggio nell' Emilia prov , Emilia-Romagna, N central Italy, on the Aemilian Way. On a fertile plain, it handles wine, salami, and cheese A Roman town, later a free commune, it came (1289) under the Este, later dukes of Ferrara and Modena There are a 13th-century cathedral and the Renaissance Church of the Madonna della Ghiara Ariosto was born here.

regicides (rĕ'jĭsīdz) [Latin,=king-killers], name given to those judges and court officers responsible for the trial and execution of Charles I of England After the Restoration, in Oct , 1660, a court of commissioners condemned 10 regicides to death and 25 to life imprisonment Three others were arrested in Holland and executed in London in 1662 Some, however, escaped Among them, William GOFFE and Edward WHALLEY fled to New England and were never captured, and Edmund LUDLOW found safety in Switzerland.

Regillus, Lake (rĭjĭ'lŭs), in ancient Latium, SE of Rome, possibly near Frascati Traditionally it was the scene of a battle (499 or 496 B C) by which Rome gained supremacy in Latium

Regina (rĭjī'nŭ), city (pop 60,246), provincial capital, S Sask , on Wascana Creek and SE of Saskatoon, founded 1882 with the arrival of the railroad It was the capital of the Northwest Territories and headquarters of the Northwest Mounted Police from 1883 to 1905, when it became the capital of the newly created province The city is the principal wheat, dairy, and poultry market and railroad center for Saskatchewan and has stockyards and meat-packing, printing, bookbinding, oil-refining, and automobile-assembly plants In Regina are the Legislative Building (with the legislative library), a normal school, and theological and junior colleges affiliated with the universities of Saskatchewan, Ottawa, and Montreal

Reginald of Châtillon (shätēyô'), d. 1187, Crusader, lord of Krak and Montreal in the Latin Kingdom of Jerusalem He came to the Holy Land in the Second Crusade and married (1153) Constance, daughter of Bohemond II of Antioch He was energetic, impulsive, and high-spirited, and his quarrels with the Latin princes weakened the position of the Crusaders In 1159, after plotting with the Armenian prince, Thoros, against Emperor Manuel II of Byzantium, he was forced to make a humiliating submission to the emperor Captured (1160) by the Saracens, he remained a prisoner over 15 years After his release he took as his second wife the heiress of Krak and Montreal, and in 1177 he became procurator of Jerusalem for a brief period In 1182–83 he raided the African and Arabian coasts of the Red Sea with a naval squadron With GUY OF LUSIGNAN, whom he helped to install as king of Jerusalem in 1186, Reginald advocated a belligerent policy against SALADIN and opposed the conciliatory attitude of RAYMOND of Tripoli His attack (1187) on one of Saladin's caravans violated his truce with the sultan and helped to bring on Saladin's attack on the Christians Reginald was captured by Saladin at the battle of Hattin and was executed

Reglomontanus (rē"jōmŏn"tā'nŭs) [Latin,=belonging to the royal mountain i e , to Konigsberg], **1436–76**, German astronomer and mathematician, b. Königsberg His original name was Johannes Müller From 1458 to 1461 he lectured on mathematics at the Univ of Vienna In 1461 he went to Rome with Cardinal Bessarion and learned Greek in order to translate Greek writings In 1468 he was called to the court of the king of Hungary to make a collection of Greek manuscripts, and three years later he settled at Nuremberg, where, with his pupil and patron, Bernhard Walther, he established an observatory and a printing press Among other works they published the *Ephemerides* for the years 1474–1506, calculated by Regiomontanus, and Georg von Purbach's *Theoricae planetarum novae* Summoned by Pope Sixtus IV, Regiomontanus went to Rome in 1475 to assist in reforming the calendar and was made bishop of Regensburg He died in Rome He made improved instruments, both mathematical and astronomical, introduced algebra into Germany, and did much to further the study of trigonometry

regional planning. see CITY PLANNING

Regium or Regium Julium see RHEGIUM

Regla (rĕ'glä), port (pop 23,037), W Cuba, near Havana It has foundries, docks, and huge sugar and tobacco warehouses In the early 19th cent it was a smuggling center

Regnard, Jean François (zhäⁿ' frāswa' runyär'), 1655–1709, French comic dramatist He traveled widely throughout Europe and was captured by Barbary pirates and held in slavery (1678–79) until his ransom Perhaps his best-known comedies are *Le Joueur* [the gamester] (1696), a comedy of character, *Les Folies amoureuses* [the lover's madness] (1704), *Les Ménechmes* (1705), after Plautus' *Menaechmi*, and *Le Légataire universel* (1708, Eng tr , *The Sole Heir*, 1912) Regnard is outstanding for wittiness, verve, and mocking gaiety

Regnault, Alexandre Georges Henri (alĕksäⁿ'dru zhôrzh' ārō' rünyō'), 1843–71, French painter, son of Henri Victor Regnault He won the PRIX DE ROME in 1866 and traveled in Italy, Spain, and Morocco He was killed in the Franco-Prussian War Among his best paintings are *Salome* (Metropolitan Mus) and *Execution in Tangiers*

Regnault, Henri Victor (ärē' vĕktôr' runyō'), 1810–78, French physicist and chemist He was professor of chemistry at the École polytechnique, Paris, from 1840 and at the Collège de France from 1841, he became chief engineer of mines (1847) and director of the porcelain manufactory at Sèvres (1854) In chemistry he is known for his work on the halogen and other derivatives of the unsaturated hydrocarbons In physics he is noted for studies of specific heats and of the expansion of gases He formulated Regnault's law the specific heat of a gas at constant pressure does not vary

Régnier, Henri de (ärē' dù rānyā'), 1864–1936, French poet, leader of the young SYMBOLISTS of the circle of MALLARMÉ. His early work in *Poèmes anciens et romanesques* (1891) showed skill in free verse, but his style soon changed to follow classical models, chiefly through the influence of José Maria de Heredia father of Régnier's wife, Marie Louise de Heredia de Régnier (1875–), herself a poet The poetic volume *La Sandale ailée, 1903–1905* (1906, Eng tr , *Poems from the Winged Sandal*, 1933) is a high point of Régnier's classical style His well-wrought historical novels had great vogue See Amy Lowell, *Six French Poets* (rev ed , 1916)

Régnier, Mathurin (mätürē'), 1573–1613, French satirical poet He wrote 16 vigorous, realistic, and often licentious satires, first published as a whole in 1613

regrating see ENGROSSING

Regulator movement, organized (1768) by small farmers of W North Carolina to protest oppressive local government Unjust taxation and the extortion practiced by officials, who were appointed by the tidewater planter aristocracy, were the chief grievances The Regulators, strongest in Orange, Granville, Halifax, and Anson counties, first became active in 1764–65, and in 1768 they formed an association pledged to pay only legal taxes and fees and to abide by the will of the majority They won control of the provincial assembly in 1769, but with Gov William TRYON, the provincial council, and the courts against them were unable to secure relief The Regulators, orderly at first, resorted to acts of violence, especially at Hillsboro, after Edmund FANNING, convicted of extortion, was allowed to go unpunished On May 16, 1771, Tryon's militia completely routed a large body of unsuspecting and poorly armed Regulators in the battle of Alamance Creek Seven of the leaders were executed, and the movement collapsed One group of Regulators moved west (see WATAUGA ASSOCIATION), but most of them submitted They continued, however, to regard the eastern aristocracy as their principal enemy, and since many of that class supported independence in the American Revolution, many Regulators were Loyalists

Regulus (Marcus Atilius Regulus) (rĕ'gyōlŭs), d. c 250 B C , Roman general in the First Punic War. While consul (267 B C) he conquered the Sallentini and captured Brundusium He became consul a second time (256 B C), defeated the Carthaginians at sea, and prosecuted war against them in Africa, at first with success. Soon afterwards the Carthaginians won a complete victory and captured (255 B C) Regulus He is said to have accompanied envoys to solicit peace from the Romans but, instead, advised the senate against acceptance of the Punic terms or an exchange of prisoners Resisting persuasions to break his parole, he returned to Carthage, where he was tortured to death The story made Regulus famous as a Roman patriot-martyr See PUNIC WARS

Rehabiah (rē"hubī'u) [Heb ,=whom God enlarges], Moses' grandson 1 Chron 23 17, 24 21, 26 25

rehabilitation (rē"hubĭl"ĭtā'shŭn), in therapy, restoration of maximum physical, mental, and vocational capacities to handicapped persons Depending upon the handicaps involved, the services of physician, surgeon, psychologist, physiotherapist, and medical social worker may be required, or the coordinated work of several of these may be needed Rehabilitative measures may be taken where physical or mental incapacitation exists, whether it be of congenital origin or the result of accident or illness In all cases close attention is given to the mental attitudes of the subject, since the success of restorative treatment entails the active cooperation of the patient. With physical incapacitation there frequently develops a mental attitude which may, if not altered, frustrate any possible rehabilitation In other cases the mental outlook is the whole concern of the therapist A third category, possibly the most complex, is where a physical condition (e g , a facial disfigurement) is regarded by the patient as a handicap denying him the possibility of a normal existence when, in fact, it does not Where an irremediable physical condition does deny a person a place in a calling of his choice, it becomes the object of rehabilitation to change his orientation so that an alternate occupation satisfies him This is vocational guidance, and it is undertaken generally during physical restoration The rehabilitation worker may have to arrange a training or retraining program for those who must acquire skill at a new job or for those who must regain skills lost by reason of absence or through physical change in their capacities Physically incapacitated or mentally injured war veterans and those suffering from both conditions require rehabilitation Considerable success in restoring such persons to circumstances in which they may become gainfully employed was evident following the Second World War See H H Kessler *Rehabilitation of the Physically Handicapped* (1947), S W Bijou, ed , *The Psychological Program in AAF Convalescent Hospitals* (Army Air Forces, Research Report No 15, 1947), C H. Elledge, *The Rehabilitation of the Patient* (1948).

Rehan, Ada (rē'un), 1860–1916, American actress, whose real name was Crehan, b. Ireland She came to the United States when she was five From 1879 to 1899 she was a member of Augustin Daly's company and for a large part of this time was co-

starred with John Drew Excelling in Daly's adaptations of German and French society comedies and in Shakspearian comedies, she won special acclaim in *The Taming of the Shrew* See William Winter, *The Wallet of Time* (1913)

Rehnskiold or **Rehnskjold, Karl Gustaf,** Swed *Rehnsköld* (kärl' gŭs'tăv rān'shûld″), 1651–1722, Swedish field marshal One of the ablest lieutenants of Charles XII in the Northern War, he played an important part in the Polish campaign of 1701–3 and defeated (1706) the combined Russian, Polish, and Saxon forces at Fraustadt, SW of Poznan He accompanied Charles on his Ukrainian campaign When Charles was incapacitated by a wound just before the battle of Poltava (1709), he appointed Rehnskiold commander in chief The battle was disastrous to the hopelessly outnumbered Swedes, Rehnskiold himself was captured by the Russians

Rehob (rē'hŏb) [Heb ,=street] **1** Hadadezer's father 2 Sam 8 3,12 **2** Scaler of the covenant Neh 10 11 **3** See BETH-REHOB **4** Two otherwise unidentified towns of Asher Joshua 19 28,30, 21 31, Judges 1 31, 1 Chron 6 75

Rehoboam (rē'ŭbō'ŭm) [Heb ,=enlarger of the people], d c 914 B C , king of Israel (c 932–c 914 B C), son of Solomon Under him the northern tribes broke away from the rule of Jerusalem and set up a separate kingdom (called Israel) with JEROBOAM I as their king Rehoboam's foolish insolence to the protesting tribesmen is celebrated In Rehoboam's reign Palestine was invaded by SHESHONK I of Egypt 1 Kings 11 43–12 24, 14 21–31, 2 Chron 9 31–12 16 Roboam Mat 1 7

Rehoboth (rĭhō'buth) [Heb ,=room, wide places] **1** Well dug for Isaac Gen 26 22 **2** City or possibly a part of Nineveh Gen 10 11 **3** Probably a place by the Euphrates But as the home of an Edomite, such a location is strange Gen 36 37

Rehoboth (rĭhō'buth, -bŏth), **Rehovoth,** or **Rehovot** (both rĭhō'vŏt), town (pop c 14,000), Israel, c 15 mi S of Tel-Aviv, founded 1890 It is the urban center for a large citrus-growing area, and there is an institute for research in plant and soil chemistry Rehoboth was the temporary capital of Israel from late 1948 to Dec , 1949

Rehoboth, town (pop 2,736), SE Mass , near the R I line, settled 1636, inc 1645

Rehoboth Beach, summer resort town (pop 1,247), SE Del , on the Atlantic Ocean SE of Lewes, settled c 1675

Rehovoth or **Rehovot,** Israel see REHOBOTH

Rehum (rē'hŭm) [Heb ,=compassionate] **1** One of the returning exiles Ezra 2 2 Nehum Neh 7 7 **2** Samaritan official who obstructed work on the Temple Ezra 4 8,9,17,23 **3** Scaler of the covenant Neh 10 25 **4** Levite who worked to rebuild Jerusalem Neh 3 17 **5** Same as HARIM 1

Rei (rē'ī) [Heb ,=friendly], loyal adherent of David 1 Kings 1 8

Reichenbach (rī'khunbākh), city (pop 34,708), Saxony, E Germany, SW of Zwickau, at the foot of the Erzgebirge It is a major manufacturing center of cotton, wool, silk, rayon, and linen textiles

Reichenbach (rī'khunbakh) or **Dzierzoniow,** Pol *Dzierzoniów* (jĕĕrzhô'nvôôf), town (pop 16,646), Lower Silesia, at the foot of the Eulengebirge, transferred to Polish administration in 1945 (see SILESIA) Chiefly a trade center, it also has several industries Reichenbach was the scene of a Prussian victory (1762) over the Austrians Two treaties were signed here By the first (1790) Austria agreed with Prussia to renounce Austrian acquisition of Turkish territory By the second (1813) Austria conditionally agreed to join the coalition against Napoleon I

Reichenbach Falls (rī'khunbakh), cataract, Bern canton, Switzerland, where the Reichenbach joins the Aar river, near Meiringen The magnificent cascades have now disappeared because of a hydroelectric project The name Reichenbach Falls is familiar to readers of A Conan Doyle

Reichenberg, Czechoslovakia see LIBEREC

Reichenhall, Bavaria see BAD REICHENHALL

Reicher, Emmanuel (ĕm'ănŭ'ĕl rīkh'ur), 1849–1924, German actor and stage director He gained fame (1888-1902) in Germany, where he acted in the Freie Bühne, came to the United States (1915), and organized the Modern Stage and the American People's Theater He learned English after his arrival and produced and acted in a fine production of *The Weavers,* by Hauptmann He also excelled in the plays of Ibsen, Bjornson, and Strindberg

Reichsregiment (rīkhs'rā″gēmĕnt') [Ger ,=government of the empire], council of regency which formed the executive branch of the government of the Holy Roman Empire after its creation at the Diet of Augsburg in 1500 It was headed by the emperor-elector or by his deputy, and it comprised 20 other members, selected by a complicated system and representing the ecclesiastic and secular princes, the various estates, and the free cities The creation of the Reichsregiment (as well as of the imperial court of justice, of an imperial taxation, and of an imperial army) represented a serious but unsuccessful effort toward transforming the Holy Roman Empire into a modern national state Emperor Maximilian I, on whom the institution had been forced by the diet, gave it little support. His successor, Emperor Charles V, was requested at the Diet of Worms (1521) to restore the Reichsregiment, but he merely consented to a compromise solution which gave the council full powers only in the emperor's absence and which reduced it to an advisory body at other times In 1524 the Reichsregiment for the last time met with the diet (at Nuremberg) Neither the emperor nor the princes nor the nobles nor the cities—though their interests were widely opposed—showed any interest in strengthening the body, which thus was left to die

Reichstadt, Napoleon, duke of: see NAPOLEON II.

Reichstag (rīkhs'tăk), German name for the DIET of the Holy Roman Empire, for the lower chamber of the federal parliament of the NORTH GERMAN CONFEDERATION, and for the lower chamber of the federal parliament of Germany after 1871 The republican Weimar Constitution of 1919 did not change any essential features of the Reichstag, but it introduced proportional representation in addition to direct universal suffrage As does the House of Representatives in the United States, the Reichstag represented the country at large, the interests of the member states were represented by an upper chamber, called Reichsrat The German constitution differed radically from that of the United States in most other respects, but it included features of the English and Swiss constitutions The federal cabinet, headed by the chancellor of the Reich, was responsible to the Reichstag and normally had to resign if it received a vote of no confidence However, the president of the republic could, on the advice of his cabinet, dissolve the Reichstag and order new elections before the normal term (four years) had ended The jurisdiction of the Reichstag was limited to matters affecting Germany as a whole, in other matters the member states were sovereign The Reichsrat was composed of deputies appointed and paid by the individual states, each state had at least one vote, and no state could have more than two fifths of the total vote (a provision designed to limit the preponderance of Prussia) The Reichsrat had only a power of suspensive veto over legislation approved by the Reichstag When, in Jan , 1933, Adolf HITLER became chancellor he lacked an absolute Reichstag majority, even with the support of the monarchist German National party As a result President Hindenburg dissolved the Reichstag and ordered new elections for March 5 The election campaign was marked by violence On Feb 27, 1933, a carefully planned fire broke out in various parts of the Reichstag building, which was partly destroyed and has since been unusable Hitler immediately accused the Communists of having set the fire and without further proof proceeded to take terrorist measures against the alleged culprits Despite the terror, the combined National Socialists and German Nationals again fell short of an absolute majority in the elections Hitler seized the pretext of the Reichstag fire for outlawing the Communist party and expelling the 81 Communist deputies from the Reichstag The truncated and intimidated Reichstag voted him dictatorial powers on March 23 The National Socialist party became (1933) the sole legal party, and the Reichstag, during the rest of Hitler's rule, was merely summoned from time to time to approve important government measures The Reichsrat was abolished altogether in 1934, along with the sovereignty of the German states After the Second World War, Germany was split into two major units—the East German Republic, under Russian influence, and the West German Federal Republic, composed of the American, British, and French occupation zones In East Germany, the Reichstag and Reichsrat were replaced, respectively, by a 'people's chamber" (Ger *Volkskammer*) and a "states' chamber" (Ger *Länderkammer*), in West Germany, a federal diet (Ger *Bundestag*) was set up under the provisional constitution of 1949 The sensational Reichstag fire trial of 1933 stirred world opinion The Nazi authorities had arrested Marinus van der Lubbe, a young Dutchman, three Bulgarian Communists (among them Georgi DIMITROV), and a German Communist, Ernst Torgler Van der Lubbe was charged with having set the fire, the others with complicity Van der Lubbe, who appeared either drugged or mentally inferior, confessed to having set the fire but insisted that he had had no accomplices Dimitrov, who was the most eloquent of the defendants, accused Hermann Goering, then president of the Reichstag, of having instigated the fire in order to pin the crime on the Communists, and he supported that charge by pointing out that a subterranean passage between Goering's residence and the Reichstag was the only way by which the person or persons who had set the fire could have reached the basements of the Reichstag (where the fire started) Although Goering violently threatened both the court and the defendants from the witness stand, Dimitrov remained unperturbed and the court reached a verdict of not guilty for all save Van der Lubbe, who was beheaded early in 1934

Reid, George Agnew, 1860–1947, Canadian genre, landscape, and mural painter, b near Wingham, Ont., studied at the Pennsylvania Academy of the Fine Arts and abroad His *Pioneers* is in the city hall, Toronto, and another of his mural decorations is at Queen's Univ , Kingston Among his paintings are *Dreaming, Mortgaging the Homestead,* and *Champlain's Arrival at Quebec* (National Gallery, Ottawa) Others are in Saskatoon and Regina, in the Art Gallery of Toronto, and in private collections Reid was principal (1912–29) of the Ontario College of Art, Toronto

Reid, Robert, 1862–1929, American figure and mural painter, b Stockbridge, Mass , studied at the School of the Museum of Fine Arts, Boston, and under Boulanger and Lefebvre in Paris He taught at the Art Students League and at Cooper Union, New York, and at Broadmoor Art Academy, Colorado Springs He decorated ceilings and walls in the Library of Congress, made two figures for the Appellate Courthouse, New York, and painted murals for the statehouse, Boston The stained glass windows of the Rogers Memorial Church, Fairhaven, Mass , were designed by Reid His *Fleur-de-lys* is in the Metropolitan Museum, and he is represented in the Corcoran Gallery, the Albright Gallery, Buffalo, and the Detroit Institute of Arts

Reid, Thomas, 1710–96, Scottish philosopher He taught at King's College, Aberdeen, and at the Univ of Glasgow He is known as a leader of the common-sense school of philosophy, a group which had considerable influence in England and the United States during the 19th cent Common sense is regarded as self-evident knowledge, the means by which we know the objects of the external world These objects are known by us in their true sense and not as copies or ideas This is the theory of natural realism, and it is the point of difference with the theories of Locke Reid based morality on conscience or moral sense, the ethical position of intuitionism He influenced Dugald Stewart and Sir William Hamilton to a considerable extent His writings include *An Inquiry into the Human Mind on the Principles of Common Sense* (1764), *Essays on the Intellectual Powers of Man* (1785), and *Essays on the Active Powers of Man* (1788) Sir William Hamilton edited (1846) the complete works of Reid with notes and letters See biography by A C Fraser (1898), O M Jones, *Empiricism and Intuitionism in Reid's Common Sense Philosophy* (1931)

Reid, Thomas Mayne (Mayne Reid), 1818-83, British novelist, b Ireland He came to the United States in 1840 and after various adventures in the West served as a captain in the Mexican War He returned to England and began writing adventure stories, especially popular with boys The first of these was *The Rifle Rangers* (1850) Others included *The Scalp Hunters* (1851) and *The White Chief* (1855) See memoir by his wife (1890)

Reid, Whitelaw, 1837–1912, American journalist and diplomat, b near Xenia, Ohio, grad Miami Univ , 1856 His distinguished correspondence during the Civil War for the Cincinnati *Gazette,* especially his reports of Gettysburg, Richmond after its fall, and the funeral of Lincoln, led Horace Greeley to make him managing editor of the New York *Tribune* in 1868 After Greeley's death, Reid gained financial as well as editorial control of the paper and continued it as one of the leading journals of the nation. Retaining control of the *Tribune,* he was minister to France (1889–92), was the Republican candidate for Vice President in 1892, and was ambassador to England from 1905 until his death in London Reid's many books reflect his journalistic and diplomatic activities *After the War* (1866) and *Ohio in the War* (1868) relate to the Civil War, typical of several on foreign affairs is *Problems of Expansion* (1900) See biography by Royal Cortissoz (2 vols , 1921) Whitelaw Reid's son, Ogden Mills Reid (1882–1947), was editor (1908–47) of the paper, which became the New York *Herald Tribune* in 1924 Whitelaw Reid (1913–), son of Ogden and Helen Rogers Reid was appointed editor in 1947

Reidsville, industrial city (pop 10,387), N N C , near the Va line NNE of Greensboro, settled c 1815, inc 1873 An important cigarette-manufacturing center, the city is a port of entry

Reigate (rī'gĭt), municipal borough (1931 pop 30,825, 1947 estimated pop 40,820), Surrey, England It is a residential suburb SSW of London, at the base of the North Downs There are vestiges of an ancient castle beneath which are caves or vaults Within the church, which dates partly from early Norman times, is the tomb of Baron Howard of Effingham

Reign of Terror, 1793–94, period of the FRENCH REVOLUTION when the internal policy of the Committee of Public Safety was in full force To preserve the reforms of the Revolution and the very existence of the republic, the first Committee of Public Safety was created on April 6, 1793, the second—the Great Committee—was formed on July 10 and included BARÈRE DE VIEUZAC, BILLAUD-VARENNE, Lazare CARNOT, COLLOT D'HERBOIS, COUTHON, HÉRAULT DE SÉCHELLES, ROBESPIERRE, and SAINT-JUST. Their aim was to liqui-

date all internal counter-revolutionary elements, to raise new armies, and to regulate national economy The Law of Suspects (Sept. 17, 1793), which declared liable to arrest every person of noble family and anyone who had held office before the Revolution or who had any connections with an émigré or who could not produce a signed certificate of citizenship, was enforced by the Committee of General Security and the Revolutionary Tribunal. About 2,500 persons were sentenced to death and guillotined during that period, not counting the NOYADES and mass reprisals in the provinces Military mobilization was largely the work of Carnot Universal conscription (Aug 10, 1793) was followed by a complete reorganization of the armed forces and paid dividends in the FRENCH REVOLUTIONARY WARS In the field of economics, the Law of Maximum (May, 1793) and other measures fixed maximum prices and wages in all fields. Food speculators as well as royalists were guillotined, public granaries and bakeries were established, and all wealth was placed under state control However, the revolutionists lacked a unified program, and the Terror was used not only to further the Revolution, but also as a political weapon in the struggle among themselves The JACOBINS emerged victorious over the GIRONDISTS and HÉBERT After the execution of DANTON, Robespierre became virtual dictator. By June, 1794, however, the need for such drastic government had largely disappeared. The French armies were victorious and internal dissent had been crushed Threatened by further purges, the National Convention revolted and overthrew Robespierre on 9 THERMIDOR (July 27, 1794) The Reign of Terror was followed by the Thermidorian reaction under a reconstituted Committee of Public Safety (1794) and by the White Terror (May–June, 1795) While the Reign of Terror may have saved France from military defeat, its effect upon public opinion, especially foreign opinion, was immeasurably harmful to the revolutionary cause. See W B Kerr, *The Reign of Terror, 1793–1794* (1927), R R Palmer, *Twelve Who Ruled* (1941)

Reims, France see RHEIMS

Reinach, Joseph (zhôzĕf' rēnäk'), 1856–1921, French publicist and lawyer An associate of Gambetta, he conducted (1889) a campaign against General Boulanger in the journal *République française*, of which he later became part owner He was elected in the same year to the chamber of deputies, but lost his seat in 1898 as a result of his pro-Dreyfus campaign (which was the more courageous because Reinach himself was a Jew) in the DREYFUS AFFAIR He was again a deputy from 1906 to 1914. During the First World War he wrote, under the pseudonym Polybe, a series of widely praised military articles for the *Figaro* Reinach wrote *Histoire de l'affaire Dreyfus* (4 vols, 1901–11)

Reinach, Salomon (sälômô'), 1858–1932, French archaeologist, one of the first to relate archaeology and anthropology He did field work in Greece and the Near East (1880–84) and became assistant keeper (1893) and keeper (1902) of the French national museums He is chiefly noted for his writings, which have opened to scholars valuable source material Especially notable are a history of religion, *Orpheus* (1909, rev Eng ed, 1933) and a history of art, *Apollo* (1904, rev Eng ed, 1935). He was a brother of Joseph Reinach

Reinbeck (rīn'bĕk), town (pop 1,429), NE Iowa, SW of Waterloo, inc 1877

reincarnation (rē"inkärnā'shun) [Latin,=taking on flesh again], occupation by the soul of a new body after the death of the former body Beliefs vary as to whether the soul assumes the new body immediately or only after an interval of disembodiment It is usually thought that the soul is reincarnated in the same species it formerly inhabited, some religions teach, however, that it may inhabit a higher or lower form of life See TRANSMIGRATION OF SOULS.

reindeer, mammal of the deer family, of the genus *Rangifer*, found in arctic and subarctic regions of Europe, Asia, and America Both sexes have antlers Centuries ago the reindeer was domesticated from the caribou in Lapland and N Siberia, where it provides the people with meat, milk, clothing, and transportation. Lichens, grasses, willow and birch shoots, and other vegetation form its diet Introduction (beginning in 1891) of the reindeer into Alaska from Siberia was successful They are now essential to the life and economy of the Eskimo Herds were later (c 1935) established for the Canadian Eskimo. Wild reindeer (called CARIBOU in America) have been much reduced in number by hunters Reindeer are gregarious and migratory In folklore the reindeer is the steed of Santa Claus

Reindeer Lake, area 2,444 sq. mi., NE Sask and NW Man, with many islands, in forested country Its outlet is the Reindeer river, flowing S to the Churchill.

reindeer moss, common species of LICHEN, *Cladonia rangiferina*, of the arctic regions It forms the chief food of the reindeer and is eaten also by the musk ox and caribou. It is a low, many-branched, erect plant.

Reinecke, Carl (kärl' rī'nŭku), 1824–1910, German composer, pianist, and conductor. After many concert tours and serving as court pianist (1846–48) in Denmark, he taught at the Cologne Conservatory and the Univ of Breslau, in 1860 he moved to Leipzig, where he conducted the Gewandhaus concerts until 1895 and taught composition at the conservatory until 1902 He was esteemed for his interpretations of Mozart His compositions, the best of which are for piano, were successful

reinforced concrete see CONCRETE

Reinhardt, Max (mäks' rīn'härt), 1873–1943, Austrian theatrical director and manager, whose real name was Max Goldmann He managed cabaret theaters (1902) and was director of the Deutsches Theater (1905) and of the Kammerspiele (1906). His notable productions in the next 20 years included Shakesperian dramas, the complete *Faust*, Hofmannsthal's version of *Oedipus Rex*, Wilde's *Salome*, Shaw's *Caesar and Cleopatra*, Gorki's *Lower Depths*, Wedekind's *Erdgeist*, and the miracle play *Everyman* His production in 1912 of *The Miracle* by Karl Gustav Vollmoeller was a sensational success in London and New York Under his direction after the First World War, the Grosses Schauspielhaus and the Salzburg Festivals became theatrical centers for Germany and the world He managed major theaters in Berlin and Vienna (1925–29), and in 1933, when he was managing the Deutsches Theater, he was forced by the Nazis to flee Germany. In the United States he directed a moving-picture version of Shakspere's *Midsummer Night's Dream* (1935) and a fine stage pageant, *The Eternal Road* (1937) He became a U S citizen in 1940 A great innovator of the modern theater, he was a master of spectacular settings and mob scenes See Huntley Carter, *The Theatre of Max Reinhardt* (1914), *Max Reinhardt and His Theatre* (ed by O M Saylor, 1924)

Reinmar von Hagenau (rīn'mar fŭn ha'gunou), c 1160–c 1210, Alsatian minnesinger A lyric poet of the Viennese court, he was probably the teacher of Walther von der Vogelweide

Reinmar von Zweter (tsvā'tur), c 1200–c 1260, Austrian minnesinger He was a successor of Walther von der Vogelweide His *Spruche* comment satirically on the life of his time

Réjane (rāzhan'), 1857–1920, stage name of Gabrielle Réju, French actress She had her first success in Meilhac's *Ma Camarade* in 1883 and later increased her reputation as a comedienne in Porto-Riche's *Amoureuse* and the Goncourts' *Germinie Lacerteux* As Catherine in Sardou's *Mme Sans-Gêne*, which she gave with great success in New York (1895), Réjane displayed her great versatility and vivacity She acted it for a moving picture in 1911 She opened the Théâtre Réjane in 1905 in Paris

rejería (rāhārē'ä), type of iron screen and grille developed in Spain from the Romanesque period through the Renaissance It employs chiseled and hammered metal as well as wrought iron The screen makers or *rejeros* were often architects, armorers, or silversmiths The individual screen (*reja*) securely enclosed the sacred treasures of the high altars although they remained visible to worshipers In the 16th cent the priests' choir was provided with a *reja* facing that of the high altar and equally monumental The *rejas* of the Romanesque period were built up of numerous C-shaped scrolls topped by a cresting By the early 15th cent they were supplanted by the Gothic *rejas* composed of rows of upright bars strengthened by horizontal bands of pierced or *repoussé* ornament Both bars and crestings became more ornamental In the early Renaissance, Corinthian-esque pilasters were introduced, and later (16th cent) the bars were replaced by rows of ornamental balusters The *rejas* now became massive and lofty architectural compositions in iron That enclosing the Royal Chapel in the cathedral at Granada has a cresting composed of 10 biblical scenes with about 30 superb life-size figures in the round, hammered from iron In the cathedral at Seville the 16th-century *rejas* of high altar and choir are gilded plateresque creations

Rekem (rē'kĕm) [Heb,=flower garden] **1** Midianite king killed by the Jews Num 31 8, Joshua 13 21. **2** Son of Hebron 1 Chron 2 43 **3** Unidentified town of Benjamin Joshua 18 27

relativity, a theory in physics, introduced by Albert Einstein, which discards the concept of time and of space as absolute entities and views them as relative to moving systems or frames of reference It is still viewed as a theory, rather than as natural law, although much evidence has been accumulated to support its validity Full comprehension of the mathematical formulation of the theory can be attained only through a study of certain branches of mathematics, e g, tensor calculus The modern theory is an extension of the simpler Galilean or Newtonian concept of relativity which holds that the laws of mechanics are the same in one moving system as in another system in uniform motion relative to it Thus it is impossible to detect the motion of a system by measurements made within the system, and such motion can be observed only in relation to other systems in uniform motion This older concept tacitly assumes that space and time are correctly measured separately and regards them as absolute and independent realities It seemed for a time that the ether would provide a system for the measurement of absolute motion, but certain experiments in the late 19th cent. gave results unexplained by, or contradicting, Newtonian physics. Notable among these were the attempts of A A. Michelson and E W Morley to measure the velocity of the earth through the ether as one might measure the speed of a ship through the sea Although the null result of this measurement indicated that the earth is stationary, this was known to be untrue The validity of the concepts of absolute and independent time and space was challenged by H A Lorentz and others. Since absolute motion cannot be confirmed by objective measurement, Einstein suggested it be discarded from physical reasoning, he explained the experimental results by the special relativity theory enunciated in 1905 This theory accepts the Michelson-Morley experiment as evidence that the hypothesis that the laws of nature are the same in different moving systems applies also to the propagation of light, so that the measured speed of light is constant for all observers regardless of the motion of the observer or of the source of the light Einstein deduced from these hypotheses the full logical consequences and reformulated the mathematical equations of physics, basing them in part on equations of H A Lorentz (Lorentz transformation) by which measurements made in one uniformly moving system can be correlated with measurements in another system if the velocity of one relative to the other is known In most phenomena of ordinary experience, the results obtained from the application of the special theory approximate those based on Newtonian dynamics but deviate greatly for phenomena occurring at velocities approaching the speed of light In unnumerable cases where the results predicted by these theories are incompatible, evidence supports the Einstein theory The theory is difficult to understand because it entails a long chain of mathematical reasoning and because it invalidates ideas that have long seemed self-evident, e g, the absolute character of time and space Included among its assertions and its consequences are the propositions that the maximum velocity attainable in the universe is that of light, that mass appears to increase with velocity; that mass and energy are equivalent and interchangeable properties (this is spectacularly confirmed by atomic fission on which the atomic bomb is based), that objects appear to contract in the direction of motion, that the rate of a moving clock seems to decrease as its velocity increases, that events which appear simultaneous to an observer in one system may not appear to be simultaneous to an observer in another system and that, since absolute time is excluded from physical reasoning because it cannot be measured, both results are equally correct Under classical physics, physical reality could be represented by mechanical models obeying Newton's laws, under modern relativity theory, the changes cannot be visualized, but reality may be represented mathematically in a four-dimensional geometry of space time in which the order of events can be located by space and time coordinates and material particles can be charted by one-dimensional lines (world lines) Einstein expanded the special theory of relativity into a general theory (completed c 1916) which applies to systems in nonuniform motion as well as to systems in uniform motion The theory recognizes the equivalence of gravitation and inertia and substitutes a field concept for the Newtonian concept of gravitation as a force acting at a distance It asserts that material bodies produce curvatures in space that form a gravitational field and that the path of a body in the field is determined by its curvature From the equation of the general theory can be predicted the geometry of a given field and the motion in the field Details of the motions of the planet Mercury had long puzzled astronomers, Einstein's computations explained them He stated that the path of a ray of light is deflected by a gravitational field, observations of light from the stars, made during eclipses of the sun, confirmed his statement His prediction that in a gravitational field spectrum lines of substances would be shifted toward the red end of the spectrum was verified Cosmological deductions from the general theory by Einstein and other scientists have resulted in theories, as yet not fully verified, that the universe is a finite but expanding system Although the Einstein relativity theory has been subjected to repeated attacks and different formulations of relativity have been proposed by several scientists, notably E A Milne, the theory has proved its value as a tool in physics Einstein sought for many years to incorporate the theory into a unified field theory valid also for subatomic and electromagnetic phenomena and in 1950 presented a unified theory that cannot as yet be evaluated In *Albert Einstein, Philosopher-Scientist* (ed by P. A Schilpp, 1949) is a collection of somewhat technical interpretations and criticisms of Einstein's work by contemporary scientists and a reply and autobiographical notes by Einstein. See also Bertrand Russell, *The ABC of*

Relativity (3d ed , 1931), Lincoln Barnett, *The Universe and Dr Einstein* (1948)

relics, part of the body of a saint or something closely connected with him in life In traditional Christian life they have had great importance, and miracles have often been associated with them Members of the Orthodox Eastern Church have generally followed St John of Damascus in teaching that the earthly body of the saint has a kind of permanent grace, but in the Roman Catholic Church the miracles are held to be performed by the intercession of the saint in heaven on the prayer of the living, relics therefore are only to be revered as memorials, and belief is not required in any particular relic as authentic or miraculous Roman Catholic altars (even portable ones) contain a relic, a rule coming from the time of persecution in Rome, when Mass was said over the martyrs' graves Protestants have abandoned relics Veneration of relics as miraculous is as old as the 3d cent Famous relics include the pieces of the True Cross (see CROSS), the VERONICA, the Holy Nails in the iron crown of Lombardy (Monza, Italy), the Holy Lance (St Peter's, Rome), the Holy Coat (Trier, Germany), and the Precious Blood of Bruges These are all called relics of the Passion Celebrated shrines are often depositories of relics, e g , of St Peter and St Paul at St Peter's, of St James at Compostela, Spain, of St. Thomas à Becket at Canterbury, of St. Edward the Confessor at Westminster Abbey Many relics are duplicated, i.e , there are rival claims of genuineness Since the Middle Ages close accounting of relics has been maintained in Western Christendom, hence relics of a saint who has been formally canonized are probably genuine

relief, in sculpture, three dimensional on its surface but attached to a flat background In alto-relievo or high relief the projection is marked, bas-relief or basso-relievo projects only minimally, and mezzo-relievo lies between the two. Ancient Egyptian and Etruscan art used also so-called sunken relief which reverses the procedure by graving the design deeper than the background Classic reliefs are commonly low, the best example is among the Elgin Marbles in the British Museum The higher relief came with virtuosity and neoclassicism, reaching its climax in the baroque period Bas-relief is also used on coins and medals

religion [Latin], a term which can hardly be defined precisely because it admits of the widest diversity of interpretation, because of the entirely personal nature of the experience which it names Religion has to do with what is most vital in the feeling, belief, and performance of every human being It involves impulses which control the attitude toward life in each individual, "primitive" as well as highly developed modern man Even in one man's lifetime his conception of what is religion may change from one period to another All the interrelations between the human and the superhuman or supernatural are included under things religious When a man becomes conscious of a power above and beyond the human, and recognizes a dependence of himself upon that power, religion has become a factor in his being His emotions, thoughts, and behavior will all usually be affected by the experience His ideas of what is true and real depend upon it, and his values of life adjust themselves in accordance with the new understanding Problems of religion and opinions about religious matters are so intimately related to the individual life and consciousness that they are very many Extraordinary difficulties therefore present themselves when classification of religions is undertaken, for no wholly satisfactory scientific method for the investigation of the history of religion has been devised, even though the problems of religious phenomena have been attacked from various points of view e g , history, psychology, philosophy, and sociology Scholars are not agreed that there has been a progressive development of religion in history, for each religion presents special features, and the course of many religions has been not only independent but unlike that of any other Some resemblance, however, may be seen in the history of diverse religions "Primitive" men of today give the only clue (if it is a clue) to the religious state of the "primitive" ancestors of "modern" men Thus from the very beginning, theories on the history of religion are based on assumptions rather than on known relations of cause and effect Some believe that the most "primitive" form of religion was fetishism (see FETISH), others that it was a belief in ghosts, others that it was polytheism, and still others PANTHEISM or henotheism or monotheism According to one system, depending on the principle of development from simple to complex, the first religion would be naturism, worship of the objects of nature The next step would be the distinction between natural forms and their spirits or souls (see ANIMISM) Spiritism carries further the veneration or worship of souls, attributing to them experiences and performance of the kinds that characterize human beings This stage would include the worship of ancestors In polytheism of the simplest form, which is still closely allied with nature worship, the world of natural phenomena is regarded as ruled over by deities resembling human beings, capable of being influenced or propitiated in much the same way as are one's fellow men Higher types of polytheism, or such developments of it as were reached by HINDUISM and NEOPLATONISM, achieve a greater unity by giving to the many gods the position of impersonating attributes of one supreme god The end point in most historical analyses of religion is monotheism The three great representatives of this are JUDAISM, CHRISTIANITY, and ISLAM Such accounts of the evolution of religion are, however, not based on science but on synthesis, and directly (or nearly directly) contrary views may be held Classifications of religions have been made by many The study of religion from many points of view is always in progress, and the incidental rewards of such study have been great, especially in historical and sociological aspects The psychology of religion has evoked great interest especially among the successors to William James In philosophy, religion is in effect a theory of reality, concerned as it is with ultimate being, with man's relation to it, and with the first cause of all and the end and aim of being The stories of the great religions and of prominent modern sects, movements, and leaders may be found in the individual articles, e g , EGYPTIAN RELIGION, BABYLONIAN RELIGION, GREEK RELIGION; ROMAN RELIGION; TAOISM, CONFUCIUS

Religion, Wars of, 1562–98, series of civil wars in France The immediate issue was the French Protestants' struggle for freedom of worship and the right of establishment (see HUGUENOTS) Of equal importance, however, was the struggle for power between the crown and the great nobles and the rivalry among the great nobles themselves for the control of the king The foremost Protestant leaders were, successively, Louis I de CONDÉ, Gaspard de COLIGNY, and Henry of Navarre (later HENRY IV), the Catholic party was dominated by the house of GUISE A third party, called the *politiques* and composed of moderate Catholics, sided with the Protestants, while CATHERINE DE' MEDICI and her sons, CHARLES IX, HENRY III, and FRANCIS of Alençon, vainly sought to maintain a balance of power by siding now with the Catholics, now with the Huguenots The Conspiracy of Amboise (1560), by which the Huguenots attempted to end the persecutions suffered at the hands of FRANCIS II, was a prelude to the first three civil wars (1562–63, 1567–68, 1568–70) The Peace of Saint-Germain (1570) gave the Protestants new liberties and the wardenship of four cities, including La Rochelle The fourth civil war (1572–73) began with the Massacre of SAINT BARTHOLOMEW'S DAY, a general slaughter of Protestants throughout France The fifth civil war (1574–76) ended with the Peace of Monsieur (named for Francis of Alençon, who then sided with the Huguenots), which, ratified by the Edict of Beaulieu, granted freedom of worship throughout France except Paris When the Catholics retorted by forming the LEAGUE (1576) and persuaded Henry III to repeal the edict of toleration (1577), the Huguenots revolted once more and sought the aid of foreign Protestant states This sixth civil war ended with the Peace of Bergerac (1577), which renewed most of the terms of the Peace of Monsieur, this Henry III never carried out A seventh war (1580) was inconsequential, but in 1584 the recognition by Henry III of the Protestant Henry of Navarre as his heir presumptive led to the renewal of the League by Henri de Guise and to the War of the Three Henrys (1585–89, see HENRY III) After the assassination of Henri de Guise (1588) and of Henry III (1589), the League, now headed by MAYENNE, invoked the aid of Spain against Henry's successor, Henry IV Henry, after his victories at Arques (1589) and Ivry (1590) and his conversion to Catholicism (1593), entered Paris in 1594 With the Edict of NANTES, which granted freedom of worship throughout France and established Protestantism in 200 towns, and with the Treaty of VERVINS with Spain (both in 1598), Henry IV brought the Wars of Religion to as successful a conclusion as the Protestants could desire This result, however, was completely reversed in the 17th cent, by Cardinal Richelieu, who broke the political power of the Protestants, and by Louis XIV, who destroyed their religious privileges by his revocation of the Edict of Nantes

relocation center, in U S history Under authority of an executive order, the military leaders in March, 1942, defined an area on the West Coast from which all persons of Japanese ancestry were to be excluded The same month the War Relocation Authority was created After voluntary evacuation was prohibited, the army moved approximately 110,000 evacuees to 10 relocation centers in Western states operated by the authority At the camps, food and shelter were provided and wages were paid to those who wished to work Separation of loyal and disloyal began in July, 1943. Loyal persons were released to live anywhere except in the proscribed area, while the disloyal (those who signed papers stating that they were not loyal to the United States or refused to renounce allegiance to another country and those who had not been cleared by the FBI) were sent to the Tule Lake segregation center Many young men left the centers to serve in the army In Dec , 1944, the mass exclusion orders were revoked The last of the centers, the Tule Lake center, was closed in Feb , 1946 The WRA, which also administered at Oswego, N Y , an Emergency Refugee Shelter for European refugees, was terminated in 1946

Remaliah (rĕmălī'ä) [Heb ,=God has adorned], father of Pekah 2 Kings 15 25, Isa 7 1–9, 8 6

Remarque, Erich Maria (ā'rĭkh mărĕ'ä rŭmärk'), 1897– German novelist He fought in the First World War and afterwards tried various occupations He was editor of a sports paper when he wrote his first novel, *Im Westen nichts Neues* (1929, Eng tr , *All Quiet on the Western Front*, 1929), an immediate success in Germany and widely translated This anti-war novel was followed by *Der Weg zurück* (1931, Eng tr , *The Way Back*, 1931), an account of post-war adjustment. His views led to the burning of his first book by the Nazis Remarque went to Switzerland in 1932 and in 1939 came to the United States, where he was naturalized in 1947 His later books are *Three Comrades* (Eng tr., 1937), *Flotsam* (Eng tr , 1946), a story of refugees from the Gestapo, and *Arch of Triumph* (Eng tr , 1946), an account of the lives of émigrés in Paris, which has been filmed

Rembrandt Harmenszoon van Rijn or Ryn (rĕm'brănt, Dutch rĕm'brānt här'mənsōn vän rīn'), 1606–69, Dutch painter and etcher, b Leiden, son of a well-to-do miller He was sent to a Latin school in preparation for the university, but early showed a determination to paint and was apprenticed for three years to a local artist After a short period in Amsterdam in the studio of Peter Lastman, who taught him to etch, Rembrandt returned to Leiden and busied himself in sketching the life about him and in painting members of his family and himself Of this period also are his *St Jerome* and *St Paul in Prison*, which bear witness to the precocity of his highly personal genius In 1631 he moved to Amsterdam, where he achieved immediate success as the most popular portrait painter of his day He established himself in a fine house in the Breedstraat with an excellent studio and for 10 years was besieged with commissions and pupils In 1632, at the age of 26, he painted his famous *Lesson in Anatomy* (The Hague), a study of his friend the anatomist Tulp performing a dissection While timidly painted in comparison with his later masterpieces, it marks a turning point in his development and shows him already in possession of great powers In 1634 he married Saskia van Uylenburgh, the daughter of a Friedland burgomaster of wide connections She brought him a handsome dowry and bore him four children, only one of whom, Titus, survived Their life together was one of affluence and happiness He painted many delightful portraits of her This period was one of great activity To it belong such canvases as *Portrait of an Old Woman* (National Gall , London), *Danaë* (Leningrad), *The Noble Slav* (Metropolitan Mus), *Presentation in the Temple* (The Hague), and *The Marriage of Samson* These works show a departure from the cooler and more painstaking early manner A golden tone pervades them and a growing boldness of brush stroke and conception is found The year 1642 marks a turn in the artist's fortunes. In this year Saskia died and he painted his unlucky masterpiece *The Night Watch* or, more properly, *Sortie of the Banning Cocq Company* (Rijks Mus) This picture was a bitter disappointment to the corporation which ordered it Instead of painting a conventional group portrait in which each member received due consideration, Rembrandt made of it a composition with strong light focused on a few central figures, leaving others almost lost in obscurity It was called *The Night Watch* in derision, and its subsequent darkening has made the misnomer stick But despite this, it remains a magnificent painting, in which the artist's genius for the suggestion of form and space by means of light and shade is fully realized From this time, however, his popularity declined He worked constantly but was obliged to borrow money on his house and his magnificent art collection During these years he lived with his housekeeper, Hendrickje Stoffles, who is thought to have posed for many of his nudes, including *Potiphar's Wife* In 1654 she bore him a child The Metropolitan Museum has portraits of Hendrickje and of Rembrandt's son Titus. To this period belong *John the Baptist*, *Jacob Blessing the Sons of Joseph*, a second *Lesson in Anatomy* (Rijks Mus), and his portrait of Jan Six (Six Coll , Amsterdam) Throughout his subsequent misfortunes this same Jan Six remained a constant friend and patron In 1657 Rembrandt was declared bankrupt, and his house and collection were sold. His son Titus and Hendrickje opened an art shop and maintained him, but his last years were spent in poverty and retirement. In these last days he painted many famous self-portraits, including one in the National Gallery of Art, Washington, D.C. The Frick Collection, New York,

contains a splendid example, painted in 1658, and also *The Polish Rider* of the same period *The Syndics* and *The Jewish Bride* (Rijks Mus.) are among his last great paintings In 1668 Titus died, and in the following year Rembrandt himself died and was buried in Westerkerk His work has been considered the greatest self-expression of the individual in painting Certainly the universal appeal of his art rests upon its profound humanity He remains unsurpassed in the ability to evoke with a few brush strokes light, form, character, and emotion In his characteristic work local color is subordinated and a warm, glowing tone prevails Some controversy exists as to the number of his true works, but his production was great In addition to some 700 paintings generally attributed to him, he produced throughout his life a vast number of etchings and is usually considered the greatest of all etchers Among his most famous plates are *Christ Healing the Sick, Descent from the Cross, Burgomaster Six, Three Trees, Christ Preaching, Crucifixion,* and *Barn and Cottage* Rembrandt's drawings are also highly prized Splendid collections of both drawings and prints are to be seen in the Louvre and in the museums of London, Vienna, and Amsterdam His works are to be found in most of the important galleries of Europe and America Both the National Gallery of Art, Washington, D C , and the Metropolitan Museum have good collections. See studies by Philip Hamerton (1894), Malcolm Bell (1901), Wilhelm Valentiner (1931), and W M Ivins (1942), biography by H W Van Loon (1935)

Remeth (rē'-), town of Issachar, near the Sea of Galilee Joshua 19 21. Jarmuth Joshua 21 29 Ramoth 1 Chron 6 73

Remi or **Remigius, Saint** (rē'mē, Fr rumē', rēmĭ'jŭs), d 533?, bishop of Rheims, called the Apostle of the Franks He baptized King Clovis

Remington, Elphalet (ĕl'fălĕt), 1793–1861, American inventor and gunsmith, b Suffield, Conn Trained in blacksmithing, he forged a rifle barrel for himself out of scrap iron, thus led to his making guns for others and eventually to establishing a firearms factory c 1828, at Ilion, N Y He supplied the U S army with rifles in the Mexican War In 1856 the business was expanded to include agricultural implements, Remington took his three sons into partnership **Philo Remington,** 1816–89, b Litchfield, N Y (E of Utica), directed the business after his father's death during the Civil War, when the firm held huge government contracts The firm later supplied the armies of several European countries with breech-loading guns In 1870 the factory began making sewing machines, and in 1873 Philo Remington became interested in the manufacture of typewriters The first Remington typewriter was exhibited in 1876 at the Centennial Exhibition in Philadelphia

Remington, Frederic, 1861–1909, American sculptor, painter, illustrator, and writer, b Canton, N Y , studied at the Yale School of Fine Arts and the Art Students League His subjects, drawn largely from his life on the Western plains, are chiefly horses, soldiers, Indians, and cowboys, each modeled or painted with sympathetic understanding and usually in spirited action His canvases have been extensively reproduced in color prints, and replicas of his 15 bronzes appear in many museums and private collections Remington was war correspondent for the Hearst papers in the Spanish-American War An indefatigable worker, he completed more than 2,700 paintings and drawings, including illustrations for *Century Magazine, Collier's Weekly,* Harper publications, and other periodicals He wrote *Pony Tracks* (1895), *Crooked Trails* (1898), *John Ermine of Yellowstone* (1902), and other books His bronze *Cavalry Charge on the Southern Plains* is in the Metropolitan Museum See biography by Harold McCracken (1947)

Remizov, Aleksey Mikhailovich (ălĭksyā' mĭkhī'lōvĭch rĕ'mēzŏf), 1877–, Russian novelist, short-story writer, playwright, and poet Associated with the symbolists, he developed a style based on colloquial speech which influenced many Soviet writers (e g , Pilnyak and Bulgakov) In 1921 he left Russia His translated works include *The Clock and Other Stories* (1924, Eng tr , 1924), *The Fifth Pestilence and Other Stories* (1912, Eng tr., 1927), *On a Field of Azure* (1922, Eng tr , 1946).

Remmon (rĕm'-) see EN-RIMMON

Remmon-methoar (rĕm'ŭ-mēthō'ur), same as RIMMON 5

Remonstrants (rĭmŏn'strunts), Dutch Protestants, adherents to the ideas of Jacobus ARMINIUS, whose doctrines after his death were called Arminianism They were Calvinists but were more liberal and less dogmatic than orthodox Calvinists and diverged from the teachings of the Dutch Reformed Church After the death of Arminius and under the leadership of Simon EPISCOPIUS, they set forth their articles of faith for Holland and West Friesland in the "Remonstrance." Their main variations from orthodox views, as set forth, were conditional, rather than absolute, predestination, universal atonement, the necessity of regeneration through the Holy Ghost, the possibility of resistance to divine grace, and the possibility of relapse from grace. A movement to suppress the Remonstrants was led by Prince MAURICE OF NASSAU, and finally, after a hearing at the Synod of Dort (1618–19), the orthodox position prevailed Remonstrants were denied church services, and their leaders were persecuted and exiled With the death of Prince Maurice in 1625 the ban was lifted and the religion was tolerated until 1795, when it was recognized as an independent church In general the Remonstrants had a liberalizing influence on church doctrine.

Remphan (rĕm'făn), same as CHIUN

Remscheid (rĕm'shīt), city (pop 92,928), in the former Rhine Prov of Prussia, W Germany, on the Wupper, adjoining Solingen and Wuppertal It is a center of the German tool and machine tool industry and also manufactures steel, machinery, and textiles Chartered in 1808, Remscheid was nearly destroyed in the Second World War

Remsen, Ira, 1846–1927, American chemist b New York city, M D Columbia, 1867 At Johns Hopkins he founded the department of chemistry and was first professor of chemistry (1876–1913) and president of the university (1901–13) He is known for his work in organic chemistry, especially on saccharin His textbooks have been widely used See biography by F. H Getman (1940)

Remsen, town (pop 1,196), NW Iowa, NE of Sioux City, in a grain, dairy, and lumber area, founded 1839 A fire in 1936 destroyed many buildings

Remus see ROMULUS

Rémusat, Charles, comte de (shärl' kōt' dŭ rāmüzä'), French philosophical writer and liberal politician He was a deputy (1830–48) and minister of the interior (1840) under Louis Philippe. In the Revolution of 1848 he was associated with Thiers, and he went into exile after the coup d'état of Louis Napoleon (NAPOLEON III) He became active again politically when the emperor had to make concessions to the Liberals toward the end of the Second Empire, and after Napoleon's fall he served under Thiers as minister of foreign affairs (1871–73) In his retirement he devoted himself to scientific and literary pursuits Among his works are *Essais de philosophie* (1842), *Histoire de la philosophie en Angleterre depuis Bacon jusqu'à Locke* (1875), and biographies of Abelard, Bacon, John Wesley, and Channing His mother, **Claire de Vergennes, comtesse de Rémusat** (klār dŭ vĕrzhĕn kōtĕs' dŭ rāmüzä'), 1730–1821, wife of the chamberlain of Napoleon I and a close friend of Empress Josephine, left an intimate account of the court of the First Empire in her memoirs She also wrote an essay on education for women

Renaissance (rĕnəsäns', -zäns') [Fr , =rebirth], term used to describe the period of transition from medieval to modern times Though the term may denote a chronological period (14th–16th cent), it more often designates cultural and intellectual currents that began in the 14th cent in Italy, where it reached its highest flower in the 15th and 16th cent (Ital *quattrocento* and *cinquecento*) From Italy the Renaissance spread—partly as a result of the Italian Wars—to France, Spain, Germany, the Low Countries, England, and the rest of Europe The Italian Renaissance (see also ITALIAN ART, ITALIAN ARCHITECTURE, ITALIAN LITERATURE) culminated under the patronage of the MEDICI at FLORENCE, of the SFORZA at MILAN, of the Renaissance popes at ROME, of the ESTE of FERRARA, and of the GONZAGA at MANTUA VENICE attained its greatest cultural splendor during the High Renaissance (late 16th cent) The towering figures of the Italian Renaissance were undoubtedly LEONARDO DA VINCI and MICHELANGELO, whose genius approached the Renaissance ideal of universality Like the related movement of HUMANISM, the Renaissance was a conscious return to classical ideals and forms. The idea that their time was one of "enlightenment" and "emancipation" from Gothic and medieval barbarousness, blessed by the restoration of the humanities, was present in the minds of many persons of the Renaissance Of late years critical study of the Renaissance has broken down the idea started by the humanists themselves of the Renaissance as a sudden dawn of freedom, beauty, and knowledge of man and the world after the night of the Middle Ages, an idea which prevailed until recently, largely through the influence of the 17th-century and 18th-century classicists and rationalists, such as Dryden and Gibbon in England, Boileau and Voltaire in France, and Winckelmann in Germany New interpretations of the Renaissance emphasize the economic changes which made possible the patronage of artists and humanists by territorial princes and a lay aristocracy of wealth and the persistence in the Renaissance of many medieval problems and concepts By making knowledge of classical literature the mark of an educated gentleman, the Renaissance established a kind of international culture of a lay character, outside of, independent of, and often hostile to, the Church. An ideal of the autonomous, versatile, creative individual was perhaps the Renaissance answer to the ancient self-sufficient Stoic Whatever individualism may have meant, the Renaissance apparently centered its interest in the experiences, nature, and culture of the individual man. Its scientific activity operated in philology, ethics, biography, pedagogy, psychology, government, and history Though there were exceptional cases, the Renaissance picture of the physical world was not usually mechanical or mathematical, but bookish and qualitative Contrary to the general pattern, many intellectuals of the Renaissance disliked slavish adulation of antiquity and its literature (e g , VALLA, and ERASMUS), many followed contemporary problems and had more sympathy for the common people than is generally thought (e g , BUDÉ, COMINES, RABELAIS, and MONTAIGNE) Optimism and belief in the goodness of man, often given as characteristics of the Renaissance, were absent in many, e g , GUICCIARDINI and MACHIAVELLI Though the influence of Renaissance thought upon the formation of the modern mind is probably been exaggerated, it is impossible to exaggerate its influence on art architecture, and music up to contemporary times Modern critical research and scholarship have tended at times to eliminate the Renaissance altogether as a period in history As one of the periods of artistic creation, however, the concept of the Renaissance retains its validity, even if its beginning and its end are blurred Outstanding among the "old-fashioned" interpretations of the Renaissance are the two classics—Jacob BURCKHARDT, *The Civilization of the Renaissance in Italy* (1860, in German, several English editions) and J A SYMONDS, *The Renaissance in Italy* (1875–86, many later editions) Though their point of view may be questionable, these two works have not been superseded by any work of the same scope Modern scholarship, having moved away from the concept of the Renaissance as a period, has produced no general work on the subject See F H Hyett, *Florence Her History and Art* (1903), G F Young, *The Medici* (2 vols , 1909); Arthur Tilley, *Dawn of the French Renaissance* (1918); E K Chambers, *The Elizabethan Stage* (4 vols , 1923), Rafael Altamira, *A History of Spanish Civilization* (Eng tr , 1930), J B Black, *The Reign of Elizabeth* (1936), Douglas Bush, *English Literature in the Earlier Seventeenth Century* (1945), Ferdinand Schevill, *The Medici* (1949) For the Renaissance period in Germany, see bibliography under REFORMATION

Renaissance architecture. The rebirth of classic architecture, which took place in Italy in the 15th cent and spread in the following century through Western Europe, terminated the supremacy of the Gothic style Since the Gothic had never taken real root in Italy, a return to the classic was only natural, manifested in a rediscovery and appropriation of the classic orders Rome's structural elements, its arches, vaults, and domes, as well as its decorative forms, served as an open treasury, from which the designers of the 15th cent unstintingly borrowed, adapting them to new needs in novel combinations While using Roman motives, the churches, town halls, palaces, and villas were new developments in plan and mass. The Italians, even when using Gothic forms, had shown little taste for structural expression In their new system, structure served merely as a necessity and was hidden behind the façades and interiors, which thus were left free for dispositions of the classical motives Of the Italian Renaissance, three general periods can be seen early (c 1420–c 1500), with its chief centers at Florence (its birthplace), Milan, and Venice, High, or classic (c 1500–c 1580), with Rome the important center, and late, or BAROQUE and ROCOCO (c 1580–c 1780), with Rome also as center Brunelleschi, the earliest great architect of the Renaissance, produced its first fruits (1420) in the Pazzi Chapel and the dome of the cathedral, Florence. Leone Battista Alberti and Bramante were other great designers of the first period A fondness for the free use of beautiful details led, particularly in Lombardy, to graceful designs, in which, however, the larger possibilities of the building were submerged, the façade of the CERTOSA DI PAVIA is a notable example of this spirit On the other hand, the rugged stone palaces of Florence, of which the Riccardi (1430) by Michelozzo is the earliest, capitalized only the building's simple constituents Bramante's later works (after his removal to Rome, 1499) mark the beginning of the second period and exhibit the special quality of its products—sound organization with emphasis on the significant elements of the building's composition, work on SAINT PETER'S CHURCH was begun by Bramante Deeper understanding of the monumental Roman works resulted in grand and unified designs with pure and well-integrated details The classical ORDERS OF ARCHITECTURE, often at monumental scale, now played the chief role in decoration, replacing the free and graceful motives of the arabesque pilasters, candelabra, and colonnettes Vignola, Palladio, and others reduced the orders to systems of proportioning and initiated a formal academicism Numerous palaces and churches erected in Rome gave it preeminence, and here worked Peruzzi, Vignola, Michelangelo, and also Antonio da Sangallo, the younger, whose Farnese Palace embodies the period's highest standards In the early years of the phase Palladio and Jacopo Sansovino worked in N Italy. To bigness of scale baroque ar-

chitects now added a bold and theatrical character, giving the classic details an unprecedented animation Its notable achievements include the two works which completed St Peter's—Carlo Maderna's façade and Bernini's great colonnaded piazza Borromini and Domenico Fontana were other representative talents The introduction of Renaissance taste into France was hastened by French wars on Italian soil in the late 15th and early 16th cent. A number of Italian artists and craftsmen were encouraged to settle in France, even though not responsible for the first Renaissance creations there, they communicated the essence of the classic manner The style made one of its first tentative appearances in the Louis XII wing of the château of Blois. It passed through three general phases early, or transitional (c 1490–c 1547), including the reigns of Louis XII and Francis I, classical (c 1547–c 1610), and the LOUIS PERIOD STYLES (c 1610–c 1793) In the first period Gothic traditions persisted in plan, structure, and exterior masses, in which fresh and graceful Renaissance details were grafted The movement was sponsored by Francis I, a prolific builder Handsome and livable châteaux replaced the grim feudal castles Fontainebleau, Chambord, and Azay-le-Rideau are famous examples For the opening of the classical period the commencement of the Louvre (1546) by Pierre Lescot serves as a mark. Classic proportions and methods of composition were assimilated, and the use of the orders became general Though Italian models were followed, a distinctively French brand of classicism took form The leading architects were Lescot, Philibert Delorme, and the Androuet du Cerceau family Jean Goujon and others contributed fine sculptural adornments. The final period was similar to the High Renaissance in Italy in that the main forms of the building were selected for emphasis and classic simplification Jacques Lemercier and François Mansart inaugurated these larger ideals and, along with Louis Le Vau and Claude Perrault, launched the Louis XIV style To their period belong the Church of Val-de-Grâce, the Institut de France, Versailles, and the completion of the Louvre J H Mansart's works, including the Place Vendôme and the Dôme des Invalides, displayed its monumental trend The reign of Louis XV (1715–74) produced the decorative rococo style for interiors, while exteriors offered complete sobriety The lurid quality of French 18th-century taste now became marked in the plans of houses, in large works, and in town planning J A. Gabriel designed the Place de la Concorde at Paris and the Petit Trianon at Versailles With the reign of Louis XVI preferences for classic purity extended, reclaiming interiors and furniture from the rococo Servandoni and Soufflot are notable, the Panthéon by the latter, however, ushers in the academic classic revival, marking the end of the Renaissance In the style as adopted in Germany, about the middle of the 16th cent., the medieval love for picturesque forms still dominated though transferred to classic motives These, freely interpreted and resembling the Elizabethan work in England, gave full play to originality and craftsmanship The style, however, lacking truly great architects, failed to achieve full development as in France and in England Nuremberg and Rothenburg are rich in works of the early period The native taste for the fanciful assured favorable reception for the baroque in the 17th cent. in Germany and Austria, where Fischer von Erlach was a notable exponent A rococo based upon that of France and largely owing to the works of Cuvilliés on German soil attained wide use in the 18th cent The Renaissance in Spain also developed through three phases the early, or PLATERESQUE, commencing early in the 16th cent, the classic, or so-called Greco-Roman, late 16th cent and early 17th, and the baroque and subsequent CHURRIGUERESQUE, in the 17th and 18th cent In the first period Gothic and Moorish forms (see MUDEJAR) intermingled with the new classic ones Under the leadership of Berruguete and Francisco de Herrera, the younger, who imported strictly classic principles from Italy, the second period was one of correctness and formality The palace of Charles V at Granada (1527) is its finest product. The dramatic and sometimes violent elaborations of the final period had a particularly close correspondence to the national taste The west façade of the Church of Santiago de Compostela is perhaps the finest example In England the Renaissance arrived late, appearing only in the middle of the 16th cent The ELIZABETHAN STYLE and the JACOBEAN STYLE applied classic motives while retaining medieval forms. The turn towards a pure and monumental classic was due to Inigo Jones, whose royal banqueting hall (1619), London, decisively established the Palladian ideals in English architecture Upon this basis Christopher Wren created his great public and domestic works, followed by the architects of the GEORGIAN STYLE, eminent among whom were Hawksmoor, James Gibbs, Vanbrugh, Sir William Chambers, and the Adam brothers See T G Jackson, *Renaissance of Roman Architecture* (3 vols, 1922), Talbot Hamlin, *Architecture through the Ages* (1940)

Renaissance art was the natural outgrowth of the new humanism which replaced medieval thought This art, based on classic forms, developed first and most fully in Italy Characteristic of the style is the preoccupation with visual realism and scientific accuracy The problem of perspective especially occupied the painters of the period, and it is the faithful study of this which distinguished Renaissance art from its predecessors and paved the way for subsequent schools The dichotomy of visual realism and scientific accuracy was solved in Renaissance painting by painstaking observation of nature, on which were superimposed such geometric arrangements as the golden section and pyramidal construction. Another startling innovation was the careful modeling of light and shadow from a presumed single source of light, replacing the medieval over-all brightness The renewed interest in Greece and Rome produced in classic shapes individual personalities The trend toward the revival of classic ideals in the plastic art of Italy was begun by the 13th-century Apulian school, an exponent of which, Nicola Pisano, executed (c 1260) work on the baptistery of Pisa closely following Roman conceptions, but Byzantine and Gothic precedents were slow to yield to the freedom and harmony of naturalism A century passed before the advent of Donatello and two centuries before Michelangelo, whose plastic conceptions contained the germ of the succeeding period Italian Renaissance, productive of many monumental works of art, developed three periods (see RENAISSANCE ARCHITECTURE) Florence was the great center of many Renaissance masters, including Cimabue, Giotto, Fra Angelico, Verrocchio, Botticelli, Ghirlandaio, Leonardo da Vinci, and others Siena, Venice, Milan, Rome, and other Italian cities developed schools of painting and artisans' workshops, Titian was the great Venetian painter of the Renaissance Progress was gradual from the work of Duccio di Buoninsegna to the full flower of Renaissance form, color, light, and perspective in Raphael and Correggio With Charles VIII's expedition to Naples, Renaissance influences penetrated into France Francis I imported Italian artists, among whom Andrea del Sarto and Leonardo da Vinci are reported to have visited France Henry II's marriage to Catherine de' Medici strengthened Italian prestige It was in the minor arts and in glass and miniature painting that Renaissance France was most active and always retained a distinctive national style, although it absorbed current trends from Italy and Flanders In sculpture Jean Cousin founded the French school, Jean Goujon and Germain Pilon adding luster to it Only with the passing of the Renaissance did France produce such painters as Nicolas Poussin and Claude Lorrain It was through drifting Italian sculptors of the late 15th cent that Renaissance influences found their way into Spain and met with enthusiastic adaptation The early 16th cent witnessed an active native Renaissance school of definitely Spanish character, and during the period three distinct trends developed—Moorish, classic, and baroque Of the minor arts none are more characteristic than the elaborate ironwork (church screens and embossed leathers The Escorial (1563–84) reveals the Italian influence under Philip II The Low Countries, in contact with Renaissance influences, experienced a golden age of native art, with such masters as the Van Eyck brothers, Roger van der Weyden, Lucas van Leyden, Rubens, and Van Dyck In Germany, preceding the Reformation, Schongauer, Dürer, Holbein, Lucas Cranach, the elder, and Joos van Cleef dominated the field of art without being greatly moved by the Renaissance spirit England produced only isolated Renaissance examples, the baroque element being pronounced in the minor arts in the late Renaissance See Élie Faure, *The Italian Renaissance* (1929), Bernhard Berenson, *The Italian Painters of the Renaissance* (rev ed, 1930), J Mather, *Western European Painting of the Renaissance* (1939), Anthony Blunt, *Artistic Theory in Italy, 1450–1600* (1940), Otto Benesch, *The Art of the Renaissance in Northern Europe* (1945)

Renaissance lace see LACE

Renan, Ernest (ûrnĕst' runā'), 1823–92, French historian and critic, b Brittany In 1845 he renounced the priesthood for which a devout mother and early training had intended him With the moral and financial support of his sister Henriette he remained in Paris to study and write His impressions on a first trip to Italy in 1849, described in letters and in a fragmentary novel *Patrice* (1908), influenced him but did not change most of his basic ideas formed by 1848 when he wrote *L'Avenir de la science* (1890, Eng tr, 1891) Relativistic, concerned with fundamental problems of human nature, he studied religion from a historical rather than a theological point of view He wrote *Histoire des origines du christianisme* (8 vols, 1863–83; Eng tr, *The History of the Origins of Christianity*, 5 vols., 1888–90), of which the first volume, *Vie de Jésus*, became his most widely known book, and the *Histoire du peuple d'Israël* (5 vols, 1887–93; Eng. tr., *History of the People of Israel*, 1888–96) In 1878 he was elected to the French Academy and in 1883 was made director of the Collège de France Though he never wrote a complete novel, Renan turned to creative writing in later years and, with irony and poetic style, composed *Dialogues et fragments philosophiques* (1876) and the much discussed *Drames philosophiques* (1888) His subtle irony and beautiful prose are blended, sometimes whimsically, in the *Souvenirs d'enfance et de jeunesse* (1883; Eng tr., *Recollections of My Youth*, 1883) His influence has been widespread, and practically all of his works have been translated into English. See Lewis Freeman Mott, *Ernest Renan* (1921)

Renart, Jean (zhäⁿ' runär'), fl. 1212, French poet. He was the author of two or three *romans courtois* and of a lai. See P H. Beekman, *Jean Renart and His Writings* (1935)

Renault, Louis (lwē' runō'), 1843–1918, French jurist, professor of international law at the Univ of Paris He sat on the Hague Tribunal (the Permanent Court of Arbitration) and did much to advance arbitration. He shared with E T Moneta the 1907 Nobel Peace Prize.

Rendina, Gulf of, Greece see STRYMONIC GULF.

Rendsburg (rĕnts'bo͝ork), city (pop 35,502), Schleswig-Holstein, N Germany, W of Kiel It is a rail junction and a port on the Kiel and Eider canals, and it has shipyards, machinery plants, and various manufactures Rendsburg was chartered in 1253 When Schleswig-Holstein rose (1848–51) against Denmark, Rendsburg was its provisional capital The Danes regained control and razed (1852–56) its fortress In 1866 the city was annexed to Prussia

René (runā'), 1409–80, king of Naples (1435–80, rival claimant to ALFONSO V of Aragon and FERDINAND I of Naples), duke of Anjou, Bar, and Lorraine, count of Provence, also called René of Anjou and Good King René. The second son of King Louis II of Naples, he was count of Guise when he married (1419) Isabella, heiress of Lorraine and Bar He inherited Bar in 1430 and Lorraine in 1431, but the latter title was contested by a rival supported by Philip the Good of Burgundy René was captured (1431) and held a prisoner despite Emperor Sigismund's award of Lorraine in his favor At the death (1434) of his brother, Louis III of Naples, he inherited Anjou, Provence, and the claim to the succession of JOANNA II of Naples (d 1435), who adopted him as heir René was set free only in 1437 and in 1438 landed in Italy to take possession of his kingdom Alfonso V defeated him, and René returned to France, establishing a brilliant court at Angers In 1445 he married his daughter, MARGARET OF ANJOU, to Henry VI of England René about that time delegated his government in Lorraine and his interests in Naples to his son John, whom he made duke of Lorraine and Bar in 1452 John's expedition to Naples ended with his defeat at Troja (1462) René was obliged by Louis XI of France to promise to will Anjou to the French crown at his death He retired to Tarascon in Provence late in his life and there devoted himself almost entirely to poetry, painting, and pastoral games, in which he acquired a certain reputation His titles to Provence and Naples passed to his nephew, Charles, duke of Maine, on whose death (1486) the ANGEVIN dynasty was extinct, and they reverted to the French crown Lorraine and Bar continued under his descendants Though his historical importance rests chiefly on his dynastic connections, René was also remarkable as one of the last representatives of medieval chivalry and culture

Renewed Church of the Brethren see MORAVIAN CHURCH

Renfrew, county, Scotland see RENFREWSHIRE

Renfrew (rĕn'frōō), town (pop 5,511), S Ont., on the Bonnechère near its junction with the Ottawa river and W of Ottawa. Renfrew has flour and woolen mills and manufactures motors, stoves, and electrical equipment Iron, mica, and graphite are mined near by.

Renfrew (rĕn'frō), burgh (pop 14,986), county town of Renfrewshire, Scotland, on the south bank of the Clyde and near Glasgow A small part of the burgh is in Lanarkshire Renfrew is one of the oldest of Clyde ports, dating from the early 12th cent., it was made a burgh by Robert III in 1397 The prince of Wales has held the title baron of Renfrew since 1404 The airport for Glasgow is at Renfrew, the town's products include boilers, soap, and paint

Renfrewshire or **Renfrew,** county (227 sq mi, 1931 pop. 288,586, 1948 estimated pop. 333,095), SW Scotland, on the Clyde estuary The region is largely hilly, particularly on the southern (Ayrshire) border Besides the Clyde, the principal rivers are the Gryfe, the Black Cart, and the White Cart. It is one of the smallest but most populous counties of Scotland Because of its rich mineral deposits and its proximity to the Clyde, it has developed into an important industrial region, with manufactures of sugar, chemicals, textiles, and whisky, quarrying of shale, coal mining, and shipbuilding. Chief towns include Greenock, Paisley, Gourock, Barrhead, Port Glasgow, and Johnstone. Renfrewshire was not separated from Lanarkshire until 1404

Reni, Guido: see GUIDO RENI.

Rennell, James, 1742–1830, English geographer and oceanographer He was surveyor general (1764–77) of Bengal and published *A Bengal Atlas* (1779) He constructed the first approximately correct map of India (1783). A specialist on the geography of W Asia and of North Africa, he wrote on the geographical knowledge of Herodotus (1800), on the topography of the plain of Troy (1814), and on Xenophon's retreat (1816) He was a pioneer in the scientific study of winds and of ocean currents. He is buried in Westminster Abbey

Rennenkampf, Pavel Karlovich (pä'vĭl kär'lôvĭch rĕ"nyĭnkämpf'), 1854–1918, Russian general. He fought in the Russo-Japanese War (1904–5), and in the First World War he led (Aug., 1914) an army into East Prussia He failed to come to the aid of General SAMSONOV, thus facilitating Hindenburg's victory at Tannenberg In 1916 Rennenkampf was made commander of the northern front He was executed by the Bolsheviks

Renner, Karl (kärl' rĕ'nûr), 1870–, Austrian Socialist statesman A deputy after 1907, Renner became, after the abdication (Nov., 1918) of Emperor Charles I, the head of the provisional Austrian government and, after elections were held, the first chancellor of the Austrian republic (1918) As leader of the Austrian delegation at the Paris Peace Conference, Renner signed the Treaty of Saint-Germain In Oct., 1919, he again became chancellor and secretary of foreign affairs He resigned (1920) after refusing to extradite Hungarian revolutionaries to the reactionary government in Hungary As the Second World War was ending in April, 1945, Renner accepted the premiership and the ministry of foreign affairs in the provisional Austrian government, and in Dec., 1945, he was elected president of the liberated Austrian republic

Rennes (rĕn), city (pop 102,617), capital of Ille-et-Vilaine dept, NW France, on the Ille and Vilaine rivers An important Gallo-Roman town, it became (10th cent) the capital of the Breton county of Rennes and (1196) of the Angevin dukes of Brittany Under the *ancien regime* it was the seat of the provincial Breton estates, the powerful PARLEMENT of Rennes, and several courts of justice Ravaged by the Normans and in the Hundred Years War, it was swept by a fire in 1720 The palace of justice (1670), which housed the parlement, survived the fire An archiepiscopal see, Rennes has a cathedral (18th–19th cent) and a university founded in 1735 The city, a communications and manufacturing center suffered some damage in the Second World War It was liberated (Aug., 1944) from German occupation by U S troops

rennet (rĕ'nĭt), substance containing rennin, a ferment or enzyme having the property of curdling milk It is obtained from the stomachs of young mammals living on milk, especially from the inner lining of the fourth, or digestive, stomach of young calves The preparation of rennet was formerly a part of the domestic duty of making cheese, the inner membrane was kept in salt, dried, and, when needed, soaked in water Now extract of rennet is made and sold commercially It is usually prepared by soaking the tissues in warm, slightly salted water and straining and preserving the resulting liquid Heat interferes with the action of rennet Among the ancients, the acrid, milky sap of the fig tree was known as rennet The lady's bedstraw, or *Galium verum*, a small plant with yellow flowers, has long been known and used for the same purpose by English housewives

Rennie, John, 1761–1821, British civil engineer In London he designed the Waterloo (1811–17) and Southwark (1815–19) bridges London Bridge, also designed by him, was built (1824–31) by his son, **Sir John Rennie,** 1794–1874, who was knighted on its completion

Reno, Jesse Lee (rē'nō), 1823–62, Union general in the Civil War, b Wheeling, Va (now W Va), grad West Point, 1846 He was twice brevetted for his service in the Mexican War In the Civil War, Reno was made a brigadier general of volunteers (Nov., 1861) and commanded a brigade in Ambrose Burnside's expedition to North Carolina (1861–62) Promoted major general (July, 1862), he led the 9th Corps at the second battle of Bull Run, at Chantilly, and at South Mt, where he was killed, Sept 14, 1862 Reno, Nev, was named for him

Reno (rē'nō), city (pop 21,317), co seat of Washoe co, W Nev, on the Truckee river between Lake Tahoe and Pyramid Lake, inc 1903 Here was a popular camp site beside a ford on the Donner Pass route to California, and in 1860 a bridge was built The name of Lake's Crossing was changed to Reno when the Central Pacific RR came in 1868 and the town was laid out. Today the largest city in the state, it is a shipping and distributing center for a cattle and mining region Irrigation is aided by the Truckee storage project. The crisp climate and the extensive resort facilities in a state which permits quick and easy divorce have promoted Reno's prosperity. The annual rodeo is much attended. It is the seat of the state university (see NEVADA, UNIVERSITY OF) and of the museum and library of the state historical society. The state hospital for the insane is here See Max Miller, *Reno* (1941)

Reno (rā'nō), river, 131 mi long, rising in the Apennines, N central Italy It flows NE past Bologna, then SE into the Adriatic

Renoir, Pierre Auguste (pyĕr' ōgüst' rənwär'), 1841–1919, French painter, one of the greatest masters of the French school, son of a tailor of Limoges. The family early moved to Paris, and Renoir went to work at the age of 13 as a decorator of porcelain in a factory In 1862 he entered Gleyre's art school, where he met Cézanne, Monet, and Sisley Up to 1870 he lived in extreme poverty In the '70s he began to paint portraits for a living One of these, *Mme Charpentier and Her Children*, is now in the Metropolitan Museum From 1880 to 1882 Renoir traveled in Italy and Algeria In 1883 he held a successful exhibit at the Durand-Ruel galleries and henceforward never lacked funds In 1890, plagued by gout, he established himself in Provence, where he spent the rest of his life In his last years he was obliged to paint with a brush strapped to his paralyzed hand Throughout a long life Renoir developed consistently. At 30 he had the rudiments of his style and never ceased to perfect it Always concerned with the play of light, he did not, like certain impressionists, sacrifice it to form or composition In his essentially lyrical painting exquisite color combines with rhythmic line to delight the eye Although he painted many fine landscapes, he is perhaps best known for his pictures of women and children and for his nude figure compositions Renoir is represented in most of the important galleries of the world The Art Institute of Chicago, the Barnes Collection, Philadelphia, and the Louvre contain large and excellent collections Among his many famous works are *The Canoeists' Breakfast, Circus Children, Lady Sewing* (Art Inst, Chicago), *Girl Doing Her Hair* (Barnes Coll, Philadelphia), *Le Bal à Bougival* (Mus of Fine Arts, Boston), *La Balançoire* and *La Toilette* (Louvre) See A C Barnes and Violette de Mazia, *Art of Renoir* (1935)

Renouf, Sir Peter Le Page (rənōōf'), 1822–97, English Egyptologist, b Germany Educated at Oxford, he was influenced by John Henry Newman and became a Roman Catholic in 1842 From 1885 to 1891 he was keeper of Egyptian and Assyrian antiquities in the British Museum His chief work in a fine translation of the Egyptian BOOK OF THE DEAD, left unfinished at his death See G C Maspero, W H Rylands, and Edward Nairlie, ed, *The Life-Work of Sir Peter Le Page Renouf* (4 vols, 1902–7), containing a biography

Renouvier, Charles Bernard (sharl' bĕrnär' rənōōvyā'), 1815–1903, French philosopher He led a life of retirement, devoted to writing and study Renouvier sought a synthesis of the ideas of Kant and Comte, contributing articles to the *Année philosophique*, a magazine devoted to bringing together the ideas of these two philosophers He formulated an extensive system of idealism, modifying Kant by accepting his principal doctrines but rejecting the unknowable and the infinite His chief works are *Manuel républicain de l'homme et du citoyen* (1848), *Science de la morale* (1869), *Le Philosophe* (1900), and *Les Dilemmes de la métaphysique pure* (1901)

Renovo (rĭnō'vō), borough (pop 3,784), N central Pa, on the West Branch of the Susquehanna and NW of Lock Haven, laid out 1862, inc 1866

Rense, Germany see RHENSE

Rensselaer **1** (rĕn'sulur, -lâr) Residential city (pop 3,214), co seat of Jasper co, NW Ind, on the Iroquois river and NW of Logansport, settled c.1836, inc 1897 It is a farm trading center **2** (rĕnsulēr', rĕn'sulur) Industrial and commercial city (pop 10,768), E N Y, on the east bank of the Hudson opposite Albany, settled in the 17th cent by Dutch, inc 1897 It was formed by the union of several villages within the tract granted to Kiliaen Van Rensselaer by the Dutch West India Company Shirts, wool products, and chemicals are made. At the 17th-century Fort Crailo, now a museum, the British surgeon Richard Shuckburg is said to have written YANKEE DOODLE

Rensselaer Polytechnic Institute, at Troy, N Y, nonsectarian, for men, founded 1824, opened 1825, chartered 1826 to give degrees, though called a school until 1833, named Rensselaer Institute 1833–51. It has university courses in architecture, business administration, engineering, and science. Founded by Stephen VAN RENSSELAER for the application of science to common purposes, it was a pioneer technical school and a model for many others Amos Eaton, the first director, organized chemistry and physics laboratories for use of students The first U S engineering degrees were given here in 1835 See history by P C. Ricketts (3d ed, 1934)

rent, in law, whatever a tenant is required to pay for the use of another's property. Rent, in this sense, may be merely a token in recognition of the renter's ownership Its meaning in economics is more complex, but since the word *rent* means any income or yield from an object capable of producing wealth, its limitation to a more special sense is somewhat arbitrary and justified only by a general consensus of opinion and usage The term *rent* is now ordinarily used in the broad sense and, besides the return from land, includes the return from such things as tools, machinery, and houses Objects are rented for a limited period of time and must be returned in the original condition The early English writers on economics (16th–18th cent) used the word to mean interest on a loan, but its economic meaning gradually narrowed to the sense of the return on land Modern rent doctrine begins in the 18th cent The PHYSIOCRATS centered their economic system on land They believed that rent was measured by the net product, i.e., the surplus over the costs of production Because they identified wealth with fixed material objects, the physiocrats considered rent not as the variable yield from the land but as a fixed value, which they called "current price of leases" and "disposable revenue" Adam Smith attempted to formulate a "natural rate" of rent based on the laws of supply and demand This rate would insure the subsistence of landlord and farmer without upsetting the price system Too high a rate would force the farmer to overproduce and thus prices would be depressed, while too low a rate would have the contrary results The later theory developed by RICARDO (also by MALTHUS) was formulated in a period of great food scarcity Ricardo held that the demand determined the amount of marginal land under cultivation and that rent was determined by this margin, which, since it was the poorest land, had the highest costs of production Ricardo attacked Smith for putting rent on the same footing with wages and profits as one of the costs of production Ricardo thought that high or low wages and profits were the cause of high or low prices, while high or low rents were the effect of these prices He tended to underemphasize the importance of demand and overemphasize costs of production The subsequent history of rent doctrine consists largely of hostile criticisms of the Ricardian theory Henry GEORGE, for example, thought that monopolistic control of rent was the cause of poverty, which could only be cured by converting private rights into public by the medium of a single tax on land earning alone Much of the literature about economic rent was written when the farmer was not separated from the consumer by a middleman

Renton, city (1940 pop 4,488, 1947 special census pop 15,309), W Wash, near Lake Washington SE of Seattle, inc 1901 Renton produces coal, aircraft, and farm, dairy, and clay products

Renville, city (pop 1,256), SW Minn, E of Granite Falls, in a farm area, settled c 1863

Renwick, James, 1818–95, American architect, b New York city, grad Columbia, 1836 His design for Grace Church (1843–46) in New York city was followed by that for St Patrick's Cathedral, he was chosen architect in 1853, and the cathedral was dedicated in 1879, the most ambitious essay in Gothic which the period of the Gothic revival produced In Washington he built the original Corcoran Gallery and the Smithsonian Institution Other works were the first building of Vassar College and the distributing reservoir for the Croton Aqueduct in New York

reparations, term applied since the First World War to payments sought by victorious nations as compensation for material losses caused by the war By signing (1919) the Treaty of Versailles, which was not ratified by the United States, Germany accepted—though under protest—responsibility as an aggressor nation for "the loss and damage to which the Allied and Associated Governments and their nationals have been subjected as a consequence of the War" (Article 231) The treaty established a commission to administer the collection and distribution of reparations payments After several conferences, reparations were ultimately assessed on the basis of German capacity to pay rather than on the total loss or damage suffered The sum announced in 1921 by the reparation commission was 132,000,000,000 gold marks Subsequent agreements provided for partial payments in kind Early in 1924 the commission declared Germany in arrears on coal shipments, and French and Belgian troops occupied the RUHR district Great Britain refused to sanction French and Belgian action, and the split between British and French policies on reparations widened steadily In the meantime the reparations problem had become involved with the question of Allied WAR DEBTS to the United States. The U.S government, which had waived all claims on reparations, refused to accept the view of its debtors, who declared themselves unable to fulfill their obligations to the United States unless Germany fulfilled its obligations toward them In 1924 Germany and the Allies accepted the DAWES PLAN, by which, in exchange of a foreign loan, Germany undertook to pay 1,000,000,000 gold marks annually in reparations The unsuccessful occupation of the Ruhr was ended in the same year The Dawes Plan was replaced in 1929 by the YOUNG PLAN This established the Bank for International Settlements at Basel, it somewhat eased the annuities, to be paid by Germany until 1988, and sought to secure their payment by mortgaging the German

state railways However, the growing economic world crisis resulted (1931) in a one-year moratorium on all intergovernmental debts, proposed by U S President Herbert Hoover. Finally, in 1932, the Lausanne Pact set aside the German reparation debt and substituted a proposed issue of 5 percent bonds for 3,000,000,000 marks Though the agreement was never ratified, German payments were not resumed In the Second World War the principle of reparation payments by Germany was agreed upon at the YALTA CONFERENCE (Feb , 1945) At the Potsdam Conference (July-Aug , 1945) half of the German reparations payments was awarded to the USSR, which undertook to satisfy Polish claims with 15 percent of that half The remainder was to be distributed by Great Britain and the United States to the other claimants among the United Nations Reparation payments to the USSR were to be effected through removal of assets and industrial equipment from the Russian-occupied zone of Germany and of a small part of the industrial equipment seized in the three other zones The other countries were likewise to be satisfied out of German assets in Allied or neutral countries, removal of industrial equipment, and seizure of German ships Disagreement over the settlement of reparations were an intrinsic part of the disagreement between Russia and the Western Powers over GERMANY in general No final agreement had been reached by the end of 1949 Reliable reports indicated that dismantling of German industries took place on a large scale in Russian-held Germany Reparations other than to the USSR and Poland were apportioned in an agreement signed by 18 nations in Jan , 1946, at Paris, and a 10-nation reparations agency was established at Brussels Dismantling of German plants by American, French, and British occupation forces proceeded at an irregular rhythm The Paris Peace Conference of 1946 imposed reparations payments on Bulgaria ($125,000,000), Finland ($300,000,000), Hungary ($300,000,000), Italy ($360,000,000), and Rumania ($300,000,000) The United States, Great Britain and France claimed no reparations from these five countries, and the amounts due to Russia were subject to adjustment by treaties with the USSR For the payment of reparations by Japan, see JAPAN See J M Keynes, *The Economic Consequences of the Peace* (1919), G D H Cole, *War Debts and Reparations* (1932), J W Wheeler-Bennett, *The Wreck of Reparations* (1933), C G Dawes, *A Journal of Reparations* (1939)

repartimiento (rāpärtēmyĕn'tō), in Spanish colonial practice, in a broad sense any official distribution of goods, houses, mines, services, and the like From the very beginning of the Spanish Conquest in the Americas, the conquering soldiers and commanders and also officials and missions were allotted pieces of land together with the Indians living on them This process was the *repartimiento*, and it commenced as early as 1499 The lands and Indians were held as encomiendas (see ENCOMIENDA), and the early system is usually called by that name The encomienda disappeared soon, however, and was replaced by a system of forced labor and other assessments exacted from the Indians, called the *repartimiento de indios* The word was thus used in the sense of "assessment," and that is what is normally meant by *repartimiento* The system continued long and was the core of PEONAGE in New Spain In Peru the very similar assessment of forced labor was called the *mita*

Rephael (rē'fāĕl) [Heb ,=whom God heals], gatekeeper of the Temple 1 Chron 26 7

Rephah (rē'fu) [Heb ,=riches], ancestor of Joshua 1 Chron 7 25

Rephaiah (rē"fāī'ū, rēfā'yu) [Heb ,=healed by God] **1** Descendant of Judah 1 Chron 3 21 **2** Chief whose followers defeated the Amalekites 1 Chron 4 42 **3** Son of Tola 1 Chron 7 2 **4** Repairer of the wall Neh 3 9 **5** Descendant of Saul 1 Chron 9 43 Raphu 1 Chron 8 37

Rephaim (rēfā'ĭm), valley, SW of Jerusalem 2 Sam 5 18,22, 23 13, 1 Chron 11 15, 14 9, Isa 17.5

Rephaims (rĭfā'ĭmz), little-known race of giants mentioned in the Bible Gen 14 5, 15 20 They were also referred to simply as "giants" Deut 2 11,20, 3 11,13, Joshua 12 4, 13 12, 17 15

Rephidim (rē'fĭdĭm, rēfī'dĭm), unlocated place in Sinai where Moses smote the rock and brought forth water Ex 17, 19 2; Num 33 14

Repin, Ilya Yefimovich (ēlyà' yĭfē'mŭvĭch ryĕ'pĭn), 1844–1918, Russian historical and genre painter and sculptor He studied in St Petersburg and abroad and became the foremost representative of the realistic style in Russia In his *Volga Haulers*, *The Arrest of a Political Offender*, and *The Terrorists* he expressed the liberal views of his day His large historical paintings, such as *Ivan the Terrible* and *The Cossacks Drafting a Letter to the Sultan*, are his best-known works Most of his pictures are in the museums of Moscow and Leningrad

replacement series see METAL

repoussé (rŭpōōsā'), the process or the product of ornamenting metallic surfaces with designs in relief hammered out from the back by hand Gold and silver, being materials of both intrinsic value and great malleability, are most commonly used today for fine work, but other metals, such as copper and tin, are suitable for the purpose, and bronze was extensively used in past times. The method employed involves the use of a substance with firm but elastic properties, usually of a pitch composition, though linoleum, wood, or soft metal may be used, upon which the face of the object is placed and against which the raised portions of ornamentation are beaten out from the back with shaped hammers and punches For articles of special form and for rough blocking out, a snarling iron is used This is so formed that its point, or head, can be applied to interior portions of vessels to function as a hammer by reflex action resulting from a blow upon its opposite end The process is of ancient origin, having been used by most early civilizations. In succeeding ages the periods of highest artistic achievement have contributed work of great excellence and importance, from the famous bronze armor of Greece, of the 4th cent B C , through Byzantine religious works, and including some of the finest products of Benvenuto Cellini *Repoussé* work is often finished with chasing on the face of the metal The term is to be differentiated from embossing, in which the relief ornament is formed by dies

Repplier, Agnes (rĕ'plēr), 1855–, American essayist, b Philadelphia, of French parents Her essays, first published in the *Atlantic Monthly* and other magazines, are esteemed for their scholarly background, wit, and sometimes rapier-sharp social criticism Among her collections of essays are *Books and Men* (1888), *Essays in Miniature* (1892), *Points of Friction* (1920), and *To Think of Tea!* (1932) *In Pursuit of Laughter* (1936) is a historical study She has also written biographies of Père Marquette (1929), Mère Marie of the Ursulines (1931), and Junípero Serra (1933) Partly autobiographical works are *In Our Convent Days* (1905), *A Happy Half-Century* (1908), and *Eight Decades* (1937) See biography by G S Stokes (1949)

representation. In government the sovereign power is nearly always understood to be representative of the people as a whole Such a function derives either from the choice of the sovereign by the people, as in modern democracies, or from the sovereign's possession of a mixed civil and religious status similar to that of the Roman emperors, the divine-right monarchs, and, in recent times, Japanese rulers, symbolizing the union of the people in the person of the ruler Representation involving a degree of choice in the selection of the sovereign was known in ancient times and in early German popular assemblies The English Parliament had a notable part in developing representative government as it is understood today Early Western representation was based on the three estates, nobility, clergy, and burghers Modern representation is based usually on numbers and territorial groupings of the population and is predicated in democracies upon the elective principle Election districts in Great Britain and the United States customarily return only a single member to the legislative body, thus in effect nullifying the votes of the minority To remedy this situation 19th-century political theorists devised schemes of proportional representation or preferential voting to give minorities representation according to their numerical strength and to reflect the political complexion of the community with exactitude Systems of proportional representation have been tried in many countries and are used in many American municipalities Representatives in democratic governing bodies are theoretically subject to the wishes of their constituents, but must be guided in part by the policies and discipline of the political party to which they belong See REPUBLIC

Representation of the People Acts, enacted by the British Parliament to continue the extension of the franchise begun by the REFORM BILLS As a result of the government's dependence on the unified efforts of the whole people in the First World War, the **Representation of the People Act of 1918** qualified as voters with a few exceptions all men of 21 years or over who could establish a short residence and women over 30 years A few plural votes were allowed The basis of representation was fixed at 1 to 70,000 The **Representation of the People Act of 1928** qualified all women for the suffrage on the same terms as men

Representatives, House of see CONGRESS OF THE UNITED STATES.

reprieve (rĭprēv'), in law, the temporary suspension of a sentence for committing crime In the United States the power to reprieve rests in the executive (President or governor), who may also grant a PARDON A court may reprieve a convicted criminal pending his appeal, in most cases by releasing him in bail

reprisal (rĭprī'zŭl), in international law, the taking by one nation of the property or territory of another nation to compel redress for injury. A reprisal, technically, is not an act of war, because it is solely in response to conduct which violated international law When, however, reprisals are taken against a power of equal strength, they may provoke war. The Covenant of the League of Nations and the Charter of the United Nations probably may be interpreted as classing reprisals with acts endangering peace Modern international law no longer recognizes private reprisal This was the right of a private person to satisfy a legal claim against an alien by seizing property belonging to a person of the alien's nationality The authority was contained in a letter of reprisal issued by the sovereign

reproduction, one of the fundamental functions of all living things, the production of new individuals by other individuals The performance of the function varies widely in method and complexity, from the relatively simple division or pulling apart into two of some of the lowest forms of animals and plants to the complicated processes of the higher vertebrates Nevertheless, in spite of these differences in detail of performance, the process as a whole is capable of division into two main types that in which new individuals are produced by a single individual is called asexual reproduction, and that in which two individuals are involved is sexual reproduction Asexual reproduction is common among plants, but is not generally observed in animals except in the lower forms In it, germ cells or their equivalents are not produced The simplest form of such reproduction is the division into two (fission) of a single cell It is a simple pulling apart of the cell, followed by a reorganization of the cell material It occurs in one-celled animals, such as the amoeba, paramecium, stylonychia, and other protozoans Some of the simplest forms of green plants reproduce exclusively by fission, others partly by sexual means Desmids and diatoms separate thus into two equal and distinct parts, each of which can grow and develop, by a reorganization of the material in each part, into new individuals Some forms, e g , the Pleurococcus, divide, but the parts remain in contact for some time after division In some filamentous forms fragmentation occurs, i e , parts that have broken off from the parent develop into new individuals Another form of separation into parts is multiple fission or sporulation, in which the parent divides into a number of new cells or spores, each of which develops subsequently into new organisms The offspring of some of these remain attached, forming a colony in which all cells do not perform the same functions, but become specialized In other cases (e g , the malaria parasite), the cells separate to form new organisms In budding, the parent cells do not form equal parts but give off smaller portions from themselves called buds This form of asexual reproduction occurs also in lower forms of many-celled animals, as in the fresh-water hydra. Internal buds are formed in the sponges and are known as gemmules Many living things (a great many plants) reproduce by means of asexual spores, bodies which give rise directly to new individuals In addition to the nonmotile forms, some spores are free-swimming, being equipped with cilia (hairlike processes) or flagella (processes similar to cilia but larger and longer) Spores are found in the life cycles of many algae and fungi, e g , yeast, bread mold, the common tree lichen, wheat rust, and corn smut In the alternation of generations in mosses and ferns, in one part of the life cycle asexual spores are produced which give rise to new plants bearing sexual organs Vegetative reproduction involves the production of new individuals by various parts which are not specialized for reproduction Processes are formed on the leaves of some plants, thus giving rise to young plantlets Rootstocks, bulbs, the potato (tuber), the stolons of the strawberry, and the stems of some plants produce new individuals Regeneration commonly indicates the growing again of lost parts, but in some cases, as in certain flatworms, a small piece of an individual will become a new individual Fragmentation is not confined to the lower plants, but occurs also among the higher plants A twig of willow, for example, can give rise to a new plant Sexual reproduction is essentially cellular in nature, i e , involves the union of two cells to produce a third cell which can grow and develop into a new organism When it involves the union of two cells of like nature, it is called conjugation An exchange of material between two like cells is also called conjugation On the other hand, when the two cells are unlike in nature, the union is FERTILIZATION Sexual cells are called gametes and are distinguished as OVUM and SPERM They are produced in animals in ovary and testis In the flowering plants, the sperm appears in the pollen grain produced in the anther, and the ovum is found in the ovary at the base of the pistil

reptile (rĕp'tĭl, -tīl) [Latin,=creeping], member of the class of cold-blooded, lung-breathing vertebrate animals called Reptilia. They are classed above the amphibians and below the birds and mammals Scales, bony plates, or horny shells form the body covering. The young resemble the parents when hatched and do not undergo a metamorphosis The majority of reptiles lay their eggs in sand or earth or decaying vegetation In some snakes and lizards the young develop within the body of the female Included in the reptile group are the SNAKE, LIZARD, CHAMELEON, TURTLE, CROCODILE, and ALLIGATOR

and the extinct DINOSAUR, PTERODACTYL, and ichthyosaur Reptiles are believed to have first appeared in the Carboniferous era See R L Ditmars, *Reptiles of North America* (rev ed , 1936) and *Reptiles of the World* (1933), Thomas Barbour, *Reptiles and Amphibians* (1934), Arthur Loveridge, *Reptiles of the Pacific World* (1945)

Repton, town and parish (pop 1,518), Derby shire, England, SW of Derby A monastery stood here in the 7th cent but was later destroyed by the Danes There are remains of a priory founded in 1172, and the Church of St Wystan has a fine Saxon crypt Repton is known chiefly as the site of a public school for boys, Repton School (1557)

republic, now understood to be a sovereign state ruled by representatives of a widely inclusive electorate The size and population of modern republics have led to indirect government by chosen representatives of the people, and instances and functions of direct government by the electorate are rare, though the ancient Greek city-states and the Swiss cantons furnish examples of direct government Republics have repudiated the hereditary principle in the tenure of any office Republics today tend to include in the franchise all classes and both sexes The United States is an example of a federal republic, in which the powers of the central government are limited and component parts of the nation exercise a considerable measure of home rule Switzerland is similarly organized France is an example of a centralized republic, in which component parts have limited functions The USSR, in theory a group of federate and even autonomous regions, is actually highly centralized

Republican, river, 422 mi long formed in S Nebraska by the junction of the North Fork and the Arikaree It is joined by the South Fork at Benkelman and flows E across Nebraska and SE across Kansas to join the Smoky Hill and form the Kansas at Junction City The river is included in the MISSOURI RIVER BASIN PROJECT Many dams and reservoirs are planned for flood control, irrigation and power, among them the Bonny Dam on the South Fork in Colorado begun in 1948 by the Bureau of Reclamation the Harlan County Reservoir in Nebraska, begun in 1948 by the Corps of Engineers, and two dams of the Bureau of Reclamation's Frenchman-Cambridge unit—the Enders, begun in 1947, and the Medicine Creek, begun in 1948

Republican party, in U S history, the name first used by Thomas Jefferson's party, later called the Democratic Republican party (or, simply, the DEMOCRATIC PARTY) The name reappeared in the 1850s, when the present-day Republican party was founded At that time the crucial issue of the extension of slavery into the territories split the Democratic party and the WHIG PARTY, and opponents of the KANSAS-NEBRASKA BILL of 1854 organized the new Republican party Jackson, Mich , is called the birthplace of the party (July 6, 1854) and Joseph Medill is credited with having suggested its name, but these distinctions are also claimed for other places and other men By 1855 the new party was well launched in the North Antislavery Whigs such as William H SEWARD and Thurlow WEED were dominant in the new grouping, but the FREE-SOIL PARTY, the KNOW-NOTHING PARTY, and the political ABOLITIONISTS also supplied strength The party's national organization was perfected at Pittsburgh in Feb , 1856, and its first presidential candidate, John C FRÉMONT, made a creditable showing against victorious James Buchanan The party opposed the repeal of the Missouri Compromise and the extension of slavery, denounced the Supreme Court's decision in the DRED SCOTT CASE, and favored the admission of Kansas as a free state Generally belligerent towards the South, the "black Republicans" were regarded by Southerners with mingled hatred and fear as sectional tension increased They were successful in the elections of 1858 and passed over their better-known leaders to nominate Abraham LINCOLN in 1860 His victory over Stephen A Douglas John C Breckinridge, and John Bell was the signal for SECESSION of the Southern states, and the CIVIL WAR followed Union military failures early in the war and conservative opposition to such measures as the EMANCIPATION PROCLAMATION caused the party to lose ground in the Congressional elections of 1862 But despite mutterings against his leadership, Lincoln, renominated on the Union (Republican) ticket in 1864, defeated Gen George B McClellan Although a separate ticket headed by the radical Frémont withdrew before the election in 1864, the cleavage within the party between radicals and moderates widened as the war progressed more successfully Radicals such as Benjamin F WADE, Henry W DAVIS, Thaddeus STEVENS, Charles SUMNER, and Edwin M STANTON, advocated a punitive policy for the South, while Lincoln and the moderates were inclined to leniency The division was made complete, when, after Lincoln's assassination, his successor, Andrew JOHNSON, adopted a moderate program of RECONSTRUCTION Johnson's attempt to build up a strong moderate following failed when the radicals won the Congressional elections of 1866 and went on their vindictive way, finally impeaching (1868) the President The nomination of the war hero Ulysses S GRANT assured Republican success over the Democrats led by Horatio Seymour in the presidential election of 1868 The radicals were supreme under Grant, but their excesses and the open scandals of the administration created a new schism, leading to the formation of the LIBERAL REPUBLICAN PARTY, Its candidate, Horace GREELEY, although supported by the Democrats, was not popular enough to defeat Grant in 1872, and corruption became even more widespread The election of 1876 indicated that the nation had had its fill of Republicanism The Democratic candidate, Samuel J TILDEN, doubtless would have won in a fair count, but the disputed electoral votes of Florida, South Carolina, and Louisiana, the only Southern states still subjugated to Republican control, were awarded to Rutherford B HAYES, and the Republican was declared President-elect With the election, however, Republican domination of the South and radical rule of the party were definitely ended In the period that followed the two parties differed little in their programs Each party had numerous almost irreconcilable factions and, rather than alienate votes, each avoided taking any real stand on controversial issues, which were generally left to lesser political groups such as the GRANGER MOVEMENT and the GREENBACK PARTY The Republicans favored a protective tariff and the Democrats a tariff for revenue only, but even this traditional distinction was not rigidly kept However, the Republican tariff policy was the work of leaders of the new industrial capitalism, whose influence in party councils began definitely under Grant For the most part, then, the Republican party represented the wealthier and more conservative classes The Republican "old guard," led by Roscoe CONKLING, failing to secure a third nomination for Grant in 1880, nevertheless temporarily blocked the presidential aspirations of James G BLAINE Another ex-Union general, James A GARFIELD, was nominated and was elected over a Democratic general, Winfield S Hancock Assassinated shortly after taking office, Garfield was succeeded by Vice President Chester A ARTHUR In these post-war elections the party, always supported by the GRAND ARMY OF THE REPUBLIC, denounced all Democrats as former COPPERHEADS and claimed to have alone saved the Union But "waving the bloody shirt," as this type of propaganda was styled, was not enough to elect Blaine in 1884 The reform wing of the party, led by Carl SCHURZ, deserted Blaine for the conservative Democrat Grover CLEVELAND, who was elected This MUGWUMP movement illustrated the lack of real issues between the two parties, it was the man and not the party that counted Benjamin HARRISON defeated Cleveland in 1888 but lost to him in 1892 The growing POPULIST PARTY, with its radical program, had a peculiar position in those elections, receiving in each section of the country the support of the party not in power When, in 1896, the Democratic party was captured by the radicals under William Jennings BRYAN, its presidential candidate in 1896, 1900, and 1908, the Republican party became openly the champion of the gold standard and conservative economic doctrines The conservatives, skillfully guided by national chairman Marcus A HANNA, won with William MCKINLEY in 1896 and 1900, and under such leaders as Nelson W ALDRICH, Thomas B REED, Joseph G CANNON, Thomas C PLATT, and Matthew S QUAY, the party prospered Theodore ROOSEVELT, successor to the assassinated McKinley, easily defeated the conservative Democrat Alton B Parker in 1904, and the vigorous foreign policy of his administration fostered the belief that the Republicans stood for the imperialism represented by the recent Spanish-American War Under Roosevelt's Republican successor and friend, William Howard TAFT, "dollar diplomacy" flourished, but a new rift appeared in the party INSURGENTS led by Senator Robert M LA FOLLETTE balked at the party's conservatism and when the regulars renominated Taft in 1912, most of the dissidents withdrew and in the Bull Moose convention chose Roosevelt to lead the new PROGRESSIVE PARTY ticket With this division, the Democratic candidate, Woodrow WILSON, was elected President, and, narrowly reelected in 1916 over Charles Evans HUGHES, he served through the First World War The party, however, won the Congressional elections of 1918, and Republican opposition was a large factor in defeating Wilson's peace program Campaigning against the League of Nations and for a return to "normalcy," the party elected Warren G HARDING in 1920 His administration rivaled Grant's for corruption, but after Harding died in office, his successor, Calvin COOLIDGE, was easily returned over John W Davis and La Follette The Republican victory with Herbert C HOOVER in 1928 marked the only time since the end of Reconstruction that the party carried states of the old Confederacy, chiefly because the Democratic candidate, Alfred E SMITH, was a Catholic and a wet Hoover and the Republicans were blamed for the disastrous economic depression which soon hit the country, and the Democrats, under Franklin D ROOSEVELT, were swept into office in 1932 The frustrated Republicans were never able to break the remarkable hold of Roosevelt and the NEW DEAL on the electorate and regularly went down to defeat every four years, with Alfred M LANDON (1936), Wendell WILLKIE (1940), and Thomas E DEWEY (1944) Isolationists held the upper hand in the party before the Second World War, and in 1940 two Republicans, Henry L STIMSON and Frank KNOX, were virtually read out of the party for accepting posts in Roosevelt's cabinet But the party supported the nation's war effort and after the war, led by Senator Arthur H VANDENBERG, joined the Democratic administration in a bipartisan foreign policy In 1948 the Republican party, having bounded back in 1946 to win control of the 80th Congress and most of the state governorships, was supremely confident of defeating Roosevelt's successor, Harry S TRUMAN However, Dewey, the party's first unsuccessful candidate ever to be renominated, was defeated by a close margin This fifth successive defeat for the Presidency caused much soul searching, especially among forward-looking leaders of the type formerly represented by La Follette, William E BORAH, George W NORRIS, and others The conservatives under Senator Robert A TAFT, denounced President Truman's Fair Deal as socialistic (also calling it "statism") Another element in the party has publicly advocated abandoning the name Republican and uniting with anti-administration Southern Democrats, with whom Republicans in Congress are often allied, to form a new party See H R Bruce, *American Parties and Politics* (3d ed , 1946), W E Binkley, *American Political Parties* (1943), C E Merriam and H F Gosnell, *The American Party System* (1946)

Requesens, Luis de (Luis de Zúñiga y Requesens) (lwēs' dā thōō'nyēga ē), 1525–76, Spanish general Born into the highest nobility of Spain, he held high governmental and diplomatic posts and was chief adviser to John of Austria, with whom he took part in the battle of Lepanto (1571) In 1573 Philip II sent Requesens to the Netherlands to replace Alba as governor Alba's terrorism had failed to subdue the rebellious Netherlanders, and Requesens at first tried to restore peace by negotiation His overtures having been rejected by WILLIAM THE SILENT, warfare continued Requesens laid a long and unsuccessful siege to Leiden (1574) He was beset by financial difficulties which led his unpaid troops to mutiny, and in 1575 he once more made peace overtures to William, who again rejected them Despite his difficulties, Requesens began an energetic and victorious campaign in Zeeland He was succeeded as governor by John of Austria

requiem (rĕ'kwēum, rē'-, rā'-) [Latin, = rest], proper Mass for the souls of the dead, performed on ALL SOULS' DAY, at funerals, and at request Its peculiarities include omission of the Psalm *Judica me, Deus*, the Gloria, the creed, blessing of water, the kiss of peace, blessing of the people, and many doxologies The variable parts are appropriate, the sequence is the famous DIES IRAE The opening words of the introit, "Eternal rest grant unto them, O Lord, and let perpetual light shine upon them," echo through all the prayers for the dead, indeed through all Roman Catholic private prayers The Gregorian musical setting of the requiem is beautiful, other requiem music has been written (e g , by Mozart and Verdi), but it is not often heard in churches Brahms's *Deutsches Requiem* has nothing to do with a requiem The Mass is said in black, and flowers are not permitted in the church during the ceremony

reredos (rēr'dŏs), ornamented wall or screen which rises behind the high altar of a church, forming a background for it It may be built against the apse wall at the extreme end or directly behind the altar as in some English churches, where it served to separate the choir and the retrochoir In its earliest form called dossal or dorsal, it was a tapestry or a richly embroidered fabric suspended behind the altar In the 11th and 12th cent it was generally a screen of gold, silver, or ivory adorned with sculptures in relief It became a permanent architectural feature in the late Gothic in England and the Renaissance in Spain, where it consisted of a lofty decorative structure filling the entire width of the choir Relief sculptures of the Passion and figures of angels and saints were enclosed by a rich framework of pilasters and pinnacles Especially ornate were the marble and alabaster examples in Spain and those of polychromed and gilded wood in the baroque churches of Mexico In Italy and Germany they were mostly religious paintings within an architectural framework

Resaca de la Palma (rāsa'kä dā lä päl'ma), valley, an abandoned bed of the Rio Grande, N of Brownsville, Texas, where the second battle of the Mexican War was fought, MAY 9, 1846 Mexican troops under Gen Mariano Arista, retreating south after the battle of Palo Alto, were defeated by American forces led by Gen Zachary TAYLOR

Resen (rĕ'sĕn), unlocated city built by Nimrod between Nineveh and Calah Gen 10 12

Resende, Garcia de (garsē'u dŭ ruzĕn'du), d. 1536,

Portuguese poet and chronicler He was secretary to King John II and later was secretary to King Manuel I and held high court posts He was the compiler of the *Cancioneiro geral* (1516), a collection of court poetry of the day His own poems are among the best in it His lament for the death of Ines de Castro is generally regarded as his best lyric His chronicles are composed of all sorts of stories and anecdotes, serious and trivial, and descriptions of dress, manners, and court customs —a mine of information for the social historian

reservoir (rĕ'zûrvôr, -vwar), storage tank for water or a wholly or partly artificial lake for WATER SUPPLY The idea of building an embankment or DAM to preserve a supply of water for IRRIGATION is of ancient origin, India and Egypt have many old and large reservoirs In the United States great reservoirs have been built to irrigate the Western plains by damming rivers In building artificial lakes for municipal water supply, important factors to be considered are all the aspects of the CATCHMENT AREA (time and normal and extreme amount of rainfall, average runoff from average amount of rainfall, evaporation, soil or rock conditions and elevation (for its effect upon precipitation and upon the pressure in the conducting pipes) The ground of the reservoir may be naturally impervious enough to prevent excessive seepage, or a clay or other lining may have to be built The embankments or retaining walls may be of earth, loose rock, or masonry Earth forms a good embankment but must be sealed by a core of clay, and the face must be covered with masonry or similar substance to prevent erosion Distributing reservoirs in towns are sometimes built of masonry or of reinforced concrete They serve to take care of fluctuations of demand and in case of an interruption of supply from the source In reservoirs with earth embankments, overflow is provided for by a waste weir to carry off surplus water When the reservoir is formed by a masonry dam across a river, the surplus water may be allowed simply to flow over the top, or spillways are provided Reservoirs are also built on the headstreams of or along the courses of rivers to aid in flood control, on canals to maintain water level for navigation, and to insure water supply for hydroelectric plants

Resheph (rē'shĕf), Ephraim's son 1 Chron 7 25

Resht (rĕsht, rĕsht), city (pop 121,625), capital of the Second Prov, N Iran, and formerly capital of Gilan prov It ships silk through Pahlevi and sends fish and poultry to Teheran There is no rail connection, but there are usable highways The city was reached by English trading expeditions from Russia in the late 16th cent It was sacked by Stenka Razin in 1669 The name also appears as Rasht

residence. *see* DOMICILE

resin (rĕ'zĭn), any of a class of amorphous solids, light yellow to dark brown in color, tasteless and odorless or slightly aromatic, translucent and sometimes transparent, brittle and of glasslike cleavage when hard, and inflammable, burning with a smoky flame Resin is insoluble in water but soluble in alcohol, ether, and volatile oils When heated, it softens and finally melts The chemical composition varies, but all resins contain carbon, hydrogen, and oxygen, besides certain esters, resin acids, and resenes There are many kinds of resin, they are generally classified according to source or according to qualities, such as hardness or solubility (as oil-soluble resins and spirit-soluble resins) Natural resins are found as exudations, often globules or tears on the bark of various trees, mostly pines and firs; in other living plants, as fossils where such vegetable life formerly existed, or as exudations from the bodies of certain scale insects (see LAC) Some of these natural resins, especially those containing essential oils (oleo-resins), such as copaiba, turpentine (the source of ROSIN, the most common natural resin), and Burgundy pitch, are viscid, sticky, gummy, or plastic, others, such as the fossil amber, copal, and kauri resin (found as yellow to brown lumps in New Zealand and used in varnishes and as a substitute for amber), are exceedingly hard, are resistant to most solvents, and soften only at high temperatures Other natural resins include BENZOIN, CANADA BALSAM, DRAGON'S BLOOD, FRANKINCENSE, MASTIC, dammar, a hard resin sometimes found on living trees, sometimes fossil, guaiacum, an exudation of two evergreens (*Guaiacum officinale* and *G sanctum*) of the West Indies and South America, used in remedies for rheumatism, gout, and skin ailments and also in tests for blood stains, jalap, produced in Mexico and used in purgatives, sandarac, found in Morocco and Australia as brittle, aromatic, yellowish, translucent globules and used in incense and varnishes, and storax, used in perfumes and incense and as an expectorant The primary uses for most resins are in VARNISH, SHELLAC, and LACQUER, in medicines, in material for molded articles (e g., pipe mouthpieces and decorative objects), in electric insulators, in phonograph records, and in various parts for radios Synthetic resins (see PLASTICS) are used in varnishes and especially for a great variety of molded articles, ranging from tableware to automobile parts A common synthetic resin is BAKELITE, made by the condensation of an aldehyde, e.g., formaldehyde, with phenol or carbolic acid, furfural, with acetone and phenol, also forms a resin Coal-tar products and glycerin are much used in making artificial resin Some resins are made by polymerization of certain substances (e g, coumarone, by treatment with sulphuric acid) The resin compound is mixed with some medium, such as paper or cloth, in order to form a molding substance, some of the mixtures take beautiful clear colors and can be treated for high resistance to heat, to most chemicals, and to electricity and for various other special qualities Much experimentation is in progress in synthetic resin making.

Resina (rĕsē'nä), city (pop 26,580), Campania, S Italy, on the Bay of Naples, the site of ancient HERCULANEUM It has fine villas and gardens Near here is the starting point of the railway ascending Mt Vesuvius

Resolution Island, 45 mi long and 10 to 40 mi wide, off N Canada, in SE Franklin dist, Northwest Territories, at the east entrance of Hudson Strait and off SE Baffin Island It has a government radio direction-finding and meteorological station.

resorcinol (rĭzôr'sĭnôl, -ōl, -ōl) or **resorcin** (rĭzôr'sĭn), colorless crystalline substance, sweetish to the taste It turns pink on exposure to the air and is soluble in water, alcohol, ether, and benzene A method of manufacture is treating benzene with sulphuric acid and subsequently with caustic soda Resorcinol is used in the preparation of dyes, in medicines, especially for skin diseases, in dandruff remedies, and in antiseptics

Respighi, Ottorino (räspē'gē ōt"tōrē'nō), 1879–1936, Italian composer, studied at the Bologna Conservatory and with Rimsky-Korsakov and Max Bruch He was director (1924–25) of the Conservatory of St Cecilia, Rome, afterward teaching advanced composition there until his death His outstanding works are the romantic symphonic poems *The Fountains of Rome* (1917), *The Pines of Rome* (1924), and *Roman Festivals* (1929), which show him a master of orchestration, and four operas—*Belfagor* (1923, a comic opera), *La campana sommersa* (1927, based on Hauptmann's *The Sunken Bell*), *La fiamma* (1934), and the posthumously produced *Lucrezia* (1937), which was finished by his wife

respiration, process by which air enters the body of an animal or plant, oxygen is absorbed by the body cells for use in the process of oxidation, and carbon dioxide and water are expelled In fish, the gills carry on the exchange of gases, in many other vertebrates, including man, the lungs perform this function Breathing is the process by which air reaches the lungs, and it includes the acts of inspiration and expiration During inspiration, the diaphragm is lowered and the ribs are raised by muscular action In expiration, a reverse process occurs and the air is expelled This combined rhythmic action occurs about 18 times per minute when the body is at rest Some air always remains in the lungs (residual air), but with each breath a certain additional quantity of fresh air (tidal air) enters the lungs The blood absorbs oxygen in the lungs and distributes it throughout the body Sometimes distinguished as internal respiration is the passage of oxygen from the blood to the tissue cells, where oxidation (union of oxygen with cell constituents) occurs, and the passage of carbon dioxide and other wastes from the cells into the blood Oxygen of the air is utilized by plant cells in the same way that it is by animals For failure of respiration, see ARTIFICIAL RESPIRATION and PULMOTOR

respiratory tract, consisting of the nasal passages (see NOSE), the pharynx, the larynx, the WINDPIPE, and the two bronchi with their terminal branches, the bronchioles, in the lungs The bronchioles connect with air sacs in the tissue of the lungs The blood flowing through the tiny capillaries which surround the air sacs carries to the lungs the waste products (carbon dioxide and water) to be excreted and absorbs the oxygen to be supplied to the body tissues This exchange takes place through the thin walls of the capillaries and air sacs.

rest, in music *see* NOTE

restaurant, house of entertainment serving food to the public In the 16th cent English inns and taverns began to serve one meal a day at a fixed time and price, at a common table, and usually distinguished by a special dish The meal was called the ordinary, and inn dining rooms and eating places generally began to be called ordinaries Famous among these in London were the Castle, much frequented by famous men—Fielding, Defoe, Swift, Pope, and Gainsborough—and LLOYD'S, a meeting place for merchants and men interested in shipping In the 17th cent, the ordinaries became fashionable clubs, gambling resorts, and such centers of political activity that they were closed by Charles II in 1675 The name restaurant was first used c 1765 for a Paris establishment serving light ("restoring") dishes After the French Revolution many former chefs of aristocratic houses opened restaurants. Early American taverns and inns resembled those of England. FRAUNCES TAVERN in New York was a famous meeting place After the Revolution, Philadelphia had its Blue Anchor and City Tavern, and Boston, the Bunch of Grapes About 1834 Lorenzo DELMONICO opened the first modern restaurant in New York city Others followed, such as Sherry's and Martin's Celebrated eating houses in other cities were Bégué's in New Orleans and the El Dorado of San Francisco, known for its Spanish dishes The first restaurant in Chicago (1856) is supposed to have been kept by H S Thompson Peculiar to the United States is the self-service restaurant, usually called a cafeteria, which was originated by philanthropic organizations to help working girls secure cheaper meals The idea was rapidly adopted by commercial restaurants, business organizations, and schools See J. O Dahl, *Restaurant Management* (4th ed, 1944)

Restif de la Bretonne, Nicolas Edme (nēkôlä' rĕ'mu rĕstĕf' dù lä brətôn'), 1734–1806, French novelist A printer by trade, he wrote and published over 250 novels, mostly based on incidents in his own rather libertine life, his detailed realism earned him the epithets "the Rousseau of the gutter" and "the Voltaire of the chambermaids" He was the author of many tracts on social reform Outstanding among his novels are *Le Pied de Fanchette* (1769), *Le Paysan perverti* (1775), *Les Parisiennes* (1787), and *Monsieur Nicolas* (16 vols, 1794–97, Eng tr, 6 vols, 1930–31)

Restigouche (rĕstĭgo͞osh'), river, 130 mi. long, rising in NW New Brunswick, E of Edmunston, and flowing generally NE to the Matapedia, W of Campbellton, thence ENE past Campbellton to Chaleur Bay at Dalhousie Its lower course forms part of the boundary between Quebec and New Brunswick The river is noted for salmon fishing

Restoration, in English history, the reestablishment of monarchical government on the accession (1660) of CHARLES II after the collapse of the COMMONWEALTH and the PROTECTORATE The term is often used to refer to the entire period from 1660 to the fall of JAMES II in 1688, and in English literature the Restoration period (often called the age of Dryden) is commonly viewed as extending from 1660 to the death of John Dryden in 1700 After the death of Oliver Cromwell in Sept, 1658, the English republican experiment was doomed to failure Cromwell's son and successor, Richard, was a well-liked but ineffectual person, and power quickly fell into the hands of the generals, chief among whom was George MONCK, leader of the army of occupation in Scotland In England a strong reaction had set in against Puritan supremacy and military control When Monck marched on London with his army, opinion had already crystallized in favor of recalling the exiled king Monck recalled the Rump Parliament and the members who had been excluded in 1648 The reconvened body voted its own dissolution The newly elected Convention Parliament, which met in the spring of 1660, was overtly royalist in sympathy An emissary was sent to the Netherlands, and Charles was easily persuaded to issue the document known as the Declaration of Breda, promising an amnesty to the former enemies of the house of Stuart and guaranteeing religious toleration and payment of arrears in salary to the army Charles accepted the subsequent invitation to return to England and landed at Dover May 25, 1660, entering *London* amid rejoicing four days later The real power went to Charles's inner circle of old Cavalier supporters, notably to Edward Hyde, earl of CLARENDON, whose control was eventually superseded by the group known as the CABAL The last remnants of military republicanism, as exemplified in the FIFTH MONARCHY MEN, were violently suppressed, and persecution spread to include the Quakers The Cavalier Parliament, which assembled in 1661, restored a militant Anglicanism, and Charles attempted, though cautiously, to reassert the old absolutist position of the earlier Stuarts The crown, however, continued to be dependent upon Parliament for its finances The unwillingness of Charles and his successor, JAMES II, to accept the implications of this dependency had some part in bringing about the deposition (1688) of James II, who was hated as a Catholic as well as a suspected absolutist The Glorious Revolution gave the throne to William III and Mary II The Restoration period was marked by an advance in colonization and overseas trade, by the Dutch Wars, by the Great Plague (1665) and the Great Fire (1666), by the birth of the Whig and Tory parties, and by the Popish Plot and popular resentment against James II's attempts to extend toleration to Catholics. In literature perhaps the most outstanding result of the Restoration was the reopening of the theaters, which had been closed since 1642, and a consequent great revival of the drama (see ENGLISH LITERATURE). The drama of the period was marked by brilliance and wit and by a moral laxity, which reflected the looseness of court manners The last and greatest works of John Milton fall within the period but are not typical of it. Similarly John Bunyan's *Pilgrim's Progress* (1678) is in the period but not of it. The age is vividly brought to life in the diaries of John Pepys and John Evelyn, and in poetry the Restoration is distinguished by the work

of Dryden and a number of lesser poets such as Andrew Marvell. See Osmund Airy, *The English Restoration and Louis XIV* (1895); Richard Garnett, *The Age of Dryden* (1901); Allardyce Nicoll, *A History of Restoration Drama* (1928); G. M. Trevelyan, *England under the Stuarts* (rev ed, 1930), G. N. Clark, *The Later Stuarts* (1934)

Restoration, in French history, the period from 1814 to 1830. It began with the first abdication of Napoleon I and the return of the Bourbon king, Louis XVIII, but was interrupted (1815) by Napoleon's return (the HUNDRED DAYS). After Napoleon's defeat at Waterloo, Louis XVIII returned once more. The period, which ended with the dethronement (1830) of Louis XVIII's successor, Charles X, was one of increasing government reaction against the changes produced by the French Revolution. See LOUIS XVIII, CHARLES X, JULY REVOLUTION. See Pierre de la Gorce, *La Restauration* (1926); Jean Lucas-Dubreton, *The Restoration and the July Monarchy* (1929); F. B. Arts, *France under Bourbon Restoration* (1931), N. E. Hudson, *Ultra-Royalism and the French Restoration* (1937)

resurrection (rĕz″ŭrĕk′shŭn) [Latin, =rising again], arising again from death to life. The emergence of Jesus from the tomb to live on earth again for 40 days as told in the Gospels has been from the beginning the central fact of Christian experience and a cardinal feature of Christian doctrine. Mat. 28, Mark 16; Luke 24, John 20, Acts 4:2, Romans 6. It was the guarantee not only of Christ's mission and the seal of redemption, but also the guarantee of the resurrection of all men. The general resurrection or resurrection of the body has been understood in diverse ways, always in the light of St. Paul's teaching on the risen or glorified body. In the conventional theology the glorified body is identified with the material body (since the soul is the substantial form of each), but is in some way spiritualized so that it is made incorruptible and immortal. This relation is regarded as a mystery, theologians attempt no explanation but only definition. At the last things (see JUDGMENT DAY) the souls of all men will, in the usual eschatological scheme, be reunited with their risen bodies and shall be judged in the Last Judgment, the evil will be permanently cut off from God, and the good will see Him face to face. The Christian doctrine of resurrection of the body, except when interpreted without reference to the risen body, is thus fundamentally different from the resurrection beliefs of the ancient EGYPTIAN RELIGION and other ancient religions (see FERTILITY RITES).

resurrectionists see BODY SNATCHING

resurrection plant, name for several plants, usually of arid regions, that may apparently be brought back to life after they are dead. In reality they have hygroscopic qualities which cause them to curl up when dry and to unfold when moist. They are frequently sold in the dried condition as a novelty. The most common are the ROSE OF JERICHO and the bird's-nest moss, a CLUB MOSS (*Selaginella lepidophylla*), native to Mexico and Texas, which has a rosette of flattened branches and is capable of growing if it has not been dry too long.

resuscitation (rĭsŭ″sĭtā′shŭn), act of reviving persons who are victims of asphyxia as a result of drowning, shock, gas poisoning, hemorrhage, fainting, sunstroke, poisons, or other accidents causing inability to breathe. It is important to determine the nature of the mishap, since certain measures are beneficial while others can be injurious. In cases of DROWNING the Schafer or prone-pressure technique (see ARTIFICIAL RESPIRATION) is the commonly accepted method for restoring breathing. In cases of asphyxia by gas, the PULMOTOR or a similar device is used. After an operation a patient in shock is sometimes given carbon dioxide to stimulate breathing. These and other techniques of resuscitation have saved many a person on the border of death. The search for new and better lifesaving techniques continues. Russian experiments on resuscitation have evolved a pumping apparatus that simulates a heart and lung, called the autojector. In tests of the device on dogs apparently dead for 15 min., the autojector was successful in numerous cases.

Reszke, Jean de (jăn dŭ rĕ′skĕ), 1850–1925, Polish singer. He began his career as a baritone, making his debut in Venice in 1874. In 1876, after many successful appearances, he accepted the advice that he was actually a tenor and began to retrain his voice. In Madrid in 1879 he first appeared as a tenor, but it was after his debut (1885) at the Paris Opéra, where he created the leading roles in several of Massenet's operas, that he began to receive his greatest acclaim. He sang (1888–1900) at Covent Garden, London, and from 1891 to 1901 he was leading tenor of the Metropolitan Opera Company. He added Wagnerian roles to his repertory in 1895. From 1902 until his death he was in great demand as a teacher. See biography by Clara Leiser (1934). His brother, **Edouard de Reszke** (ā′dwŭrd), 1855–1917, a bass, made his debut in Paris in 1876 as the king in *Aida*, sang (1880–84) in London, and from 1891 to 1903 was a leading bass of the Metropolitan Opera Company. He retired in 1906.

Rethel, Alfred (äl′frāt rā′tul), 1816–59, German historical painter and draughtsman. He early gained a reputation in Frankfurt, where he painted *Daniel in the Lions' Den* and *Guardian Angel of Emperor Maximilian*. Best known was the cycle of frescoes depicting the life of Charlemagne in the town hall of Aachen, half of which were painted by Josef Kehren. Rethel also made a series of remarkable drawings for woodcuts illustrating *The Dance of Death*.

Rethel (rŭtĕl′), town (pop. 4,482), Ardennes dept., N France, on the Aisne and NE of Rheims. It is an agricultural trade center. In the Middle Ages, Rethel was the seat of a county held by the counts of Champagne. The county was acquired (1384) by the house of Burgundy, and after the death (1477) of Charles the Bold in the battle of Nancy it passed to the cadet branch of Burgundy-Nevers. Raised to a duchy (1581), it was acquired, by marriage, by the house of Gonzaga. In 1663 Charles de Gonzague sold the title to the Mazarin family, which held it until the French Revolution. A strategic place, Rethel was the scene of much fighting in both world wars and suffered heavy damage.

reticella lace see LACE

retriever (rutrē′vur), sporting dog bred for fetching game that has been shot by a hunter. The retriever must have a keen sense of smell for locating the game and a soft mouth for carrying the game without damaging it. Five breeds are known in the United States, none of them very common. The Labrador retriever actually originated in Newfoundland, it is a hardy dog with a short, straight coat (commonly black, although other solid colors are also found) and webbed feet. The Chesapeake Bay retriever was developed in America in the early 19th cent., but its ancestry is not definitely known. In color it varies from dark brown to a faded tan, it is desirable that its coat color blend with the dead grasses and other vegetation, since it is much used in duck hunting. The hair is short, sheds water easily, and consists of an outer rough coat and woolly undercoat. The golden retriever was developed originally in England (c. 1860) from a group of dogs from the Caucasus known as Russian trackers, a later cross with a bloodhound reduced the size. It has a relatively long golden coat, and it is used as a retriever both on land and in the water. The curly-coated retriever is liver or black in color, with tightly curled hair on the body and tail. It was one of the first retrievers developed in England. Also of English origin is the flat-coated retriever which has a rather dense slightly wavy or straight coat.

Retz or **Rais, Gilles de Laval, seigneur de** (zhĕl′ dŭ lăvăl′ sănyûr′ dŭ rĕts′, rĕs′), 1404–40, marshal of France, a lord of the Breton marches. He was a noted soldier, and he was at Orléans with Joan of Arc. Charles VII made him marshal of France. He was a liberal patron of music, literature, and the arts. After his retirement rumors spread about the countryside of satanic and vicious doings in his castle. He was tried in an ecclesiastical court, and he confessed to kidnaping more than 100 children, mostly boys, and to murdering them after maltreating them. He was handed over by the Church to the secular arm and executed. There is no good reason to doubt his confession. Gilles de Retz was notorious among the peasantry, among whom he is still a byword. He has been supposed, probably without good cause, to be the original of BLUEBEARD. See Emile Gabory, *Alias Bluebeard* (Eng. tr., 1930), Tennille Dix, *Black Baron* (1930)

Retz, Jean François Paul de Gondi, Cardinal de (zhäʹ frăswä′ pôl′ dŭ gôdē″, du rĕtsʹ), 1613–79, French prelate and politician. He was made coadjutor of his uncle, the archbishop of Paris, in 1643. An enemy of Mazarin (whose position as prime minister he coveted), Retz took a prominent part in the FRONDE. His liberality had gained him great popularity, and Mazarin, in an attempt to win his support, nominated him to be made cardinal (1651). Retz received the red hat in 1652. At the close of the Fronde, Mazarin imprisoned him (1652). On the death of his uncle (1654), Retz became archbishop of Paris but was not allowed to take office. He escaped, fled to Rome, and appealed to the pope, but without much success. After Mazarin's death he resigned his see in return for several rich abbeys. He retired from Paris and occasionally represented the court at Rome. His memoirs (1717, Eng. tr., 4 vols., 1723) are among the classics of French literature.

Reu (rē′ŭ), son of Peleg. Gen. 11:18, Ragau. Luke 3:35.

Reuben (rōō′bŭn) [Heb., =behold a son!], Jacob's eldest son and ancestor of one of the 12 tribes. His intercession for Joseph's life and his guaranteeing the safe return of Benjamin indicate a kindly nature. At the occupation of Palestine his tribe, with that of Gad, was allotted the pasture lands E. of the Jordan. To Reuben was given the region adjoining the Dead Sea and S. of Gad. After this the Reubenites are unreported until, with Gad, they are carried captive by Tiglath-pileser into Assyria. Gen. 29:32, 35:22, 37, 42:22,37, 46:8, 49:3,4, Num. 1:20,21, 2:10, 26:5–10, 32:37, Joshua 22, 1 Chron. 5:26.

Reuchlin, Johann (yō′hän roikh′lĭn), 1455–1522, German humanist, a scholar of Greek and Hebrew, b. Pforsheim, Baden, M.A. Univ. of Basel, 1477. He taught jurisprudence at Tübingen. In 1492 he began the study of Hebrew, and his *Rudimenta Hebraica* (1506) was the first Hebrew grammar written by a Christian. His reputation as a scholar had already been made by the translations from the Greek which he made at Heidelberg. When a converted Jew, Johann Pfefferkorn, advocated destruction of all Hebrew books, Emperor Maximilian requested Reuchlin's opinion in the matter. Reuchlin suggested that only those Hebrew books which calumniated Christianity should be suppressed and that the Jews should be required to furnish books for the universities, with two chairs of Hebrew learning to be set up in every university in Germany. His decision brought forth a storm of opposition from bigots and obscurantists, which Reuchlin met by his *Augenspiegel* (1511). The attack made upon him by the Univ. of Cologne he met with his *Defensio Reuchlini contra calumniatores suos Colonienses* (1513). In the struggle that developed between the humanists supporting Reuchlin and the clericals supporting Pfefferkorn, Reuchlin was victorious. From the struggle emerged the famous *Epistolae obscurorum virorum* of Crotus Rubianus and Ulrich von Hutten.

Reuel (rē′ŭl) [Heb., =friend of God] **1** See JETHRO. **2** Son of Esau and Bashemath. Gen. 36:4,10, 1 Chron. 1:35. **3** See DEUEL. **4** Descendant of Benjamin. 1 Chron. 9:8.

Reumah (rōō′mu), concubine of Nahor. Gen. 22:24.

Réunion (rāunyō), overseas department of France (965 sq. mi., pop. 242,007), an island in the Indian Ocean off the coast of Africa, more than 400 mi. E. of Madagascar. The capital is Saint-Denis. Réunion, formerly called Bourbon, is one of the Mascarene Islands. It was settled (c. 1646) by the French and held briefly (1810–14) by the British in the Napoleonic Wars. Réunion is mostly composed of active and extinct volcanoes, its greatest elevation is c. 10,000 ft. More than one third of its area is cultivated, crops include sugar, coffee, vanilla, and cloves. Sugar and rum are the chief exports. A railroad, which nearly encircles the island, connects Saint-Denis on the north coast and Port-des-Galets, the main port of the northwest. Abd-el-Krim, who was exiled here in 1926, escaped to Egypt in 1947. Leconte de Lisle was born on Réunion.

Reus (rĕ′ōōs), city (pop. 29,480), Tarragona prov., NE Spain, in Catalonia. Since the introduction (18th cent.) by English manufacturers of a cotton-spinning industry, Reus has grown into an important commercial and industrial center.

Reuss (roiss), two former principalities in E Thuringia, central Germany. The house of Reuss dates from the 12th cent., and its genealogical history is as complicated as its territories were small, the fact that it was customary in the family to name all sons indiscriminately Henry does little to clarify family history. After numerous territorial subdivisions, two branches emerged in 1848—Reuss Older Line, which held princely rank from 1778 and which had Greiz as its capital, and Reuss Younger Line, which held princely rank from 1806 and whose capital was Gera. The last prince of Reuss-Greiz, Henry XXIV, was insane, and his principality was administered by Henry XXVII of Reuss-Gera, who abdicated in 1918. Both territories were incorporated (1920) into Thuringia.

Reuss (roiss), river, c. 98 5 mi. long, central Switzerland. It flows N from the St. Gotthard Pass, through the Lake of Lucerne, and joins the Aar river near the town of Brugg.

Reuter, Fritz (Heinrich Ludwig Christian Friedrich Reuter) (frĭts′ roi′tur), 1810–74, German novelist and poet. His political tendencies brought him a sentence of death (1833), later commuted to life imprisonment. Released in 1840, he spent an unsettled life until, in 1850, he began his rise to fame through novels, tales, and verse in Low German dialect, or Plattdeutsch. The best of these are *Ut de Franzosentid* (1860, Eng. tr., *In the Year '13*, 1867) and *Ut mine Stromtid* (1862–64, Eng. tr., *Seedtime and Harvest*, 1871), both laid in his native Mecklenburg, and *Ut mine Festungstid* [from my prison days] (1863).

Reuter, Gabriele (gubrēā′lu), 1859–1941, German novelist and critic, b. Egypt. Her feministic novel *Aus guter Familie* [of good family] (1895) was followed by many other stories and novels on similar themes, among them *Tochter* (1927, Eng. tr., *Daughters*, 1930). Her contributions to the New York *Times Book Review* (1931–39) are well known to American readers. She was blind in the last years of her life.

Reuter, Ludwig von (lōōt′vĭkh fŭn), 1869–1943, German admiral. In the First World War he took part in the battles of Dogger Bank and Skaggerak. After the war, on June 21, 1919, he scuttled the German fleet at Scapa Flow to prevent its surrender to the Allies. Reuter retired in 1920.

Reuter, Paul Julius (poul′ yōō′lyōōs), 1816–99, founder of Reuter's Telegraph Company, b. Cassel, Germany. He became (1829) a clerk in his uncle's bank in Gottingen. In 1849 he bridged a gap in the telegraph line between Aachen, Germany, and

Verviers, Belgium When he tried to start a news agency in Paris, the French government's restrictions made it impossible He went (1851) to England and was naturalized Reuter soon opened a news office in London, and in 1858 he persuaded English newspapers to publish his foreign telegrams He then extended his influence all over the world and was granted concessions for the cables between England and Germany, between England and France, and between France and the United States He became a baron in 1871

Reuterdahl, Henry (rōō'tûrdal), 1871–1925, American naval artist and writer, b Sweden Coming to the United States in 1893 to do some work for the World's Columbian Exposition, he settled here and illustrated magazine articles on naval subjects, of which he was often the author "Needs of the Navy," an article published in 1908, spurred government investigation Reuterdahl was a correspondent in the Spanish-American War and again in 1914 at the opening of the First World War In the latter part of the war (1917–18) he became an officer in the U S naval reserve, retiring in 1921 Ten paintings in the U S Naval Academy are his record of the cruise of the U S fleet around South America in 1907 He painted a naval scene for the state capitol of Missouri and decorations for several steam yachts Other works of his are in the Naval War College, Newport, R I and in the National Gallery of Art, Washington, D C

Reuther, Walter Philip (rōō'thur), 1907 , American labor leader, b Wheeling, W Va A tool- and die-maker, he became shop foreman in a Detroit automobile plant, meanwhile completing his high school work and attending college Discharged because of his union activities, he spent some years (1932–35) in Europe, (including Russia) and the Far East Active in the organization drives (1935–37) of the United Automobile Workers of America (C I O) and in the sit-down strikes, he became director of the union's General Motors department (1939) and union vice president (1942) In the Second World War he favored active support of the war by labor and evolved a plan for airplane mass production in automobile plants He was elected president of the United Automobile Workers in 1946 and in that year became vice president of the C I O After 1945 he led the auto workers in several major contests for wage increases and social welfare programs, while gaining undisputed control of the U A W His importance as an anti-Communist liberal spokesman grew He was severely wounded by an unidentified assailant in April, 1948, as was his brother Victor some 13 months later, in Dec , 1949, an unsuccessful attempt was made to dynamite the office building of the United Automobile Workers See biography by Irving Howe and B J Widick (1949)

Reutlingen (roit'lĭng-un), city (pop 36,785, with suburbs 62,869), S Wurttemberg, Germany, S of Stuttgart It has machinery and textile manufactures A free imperial city from 1240 until its transfer (1802–3) to Wurttemberg, Reutlingen was the first Swabian city to accept the Reformation Here in 1377 the Swabian League defeated Ulrich of Württemberg The Church of St Mary is an outstanding example of German late Gothic architecture

Reval, Estonia see TALLINN

Revelation or **Apocalypse** (upō'kulĭps), last book of the New Testament It was written A D c 95, on Patmos island by one John Universal tradition has made of him the disciple St John, but many scholars deny such authorship Critics disagree also as to whether this book has common authorship with the Gospel or with 2 and 3 John The book is a mysterious prophetic work, mainly visions dealing with the overcoming of evil and persecution and the triumph of God and the martyrs The plan is careful and depends heavily on arrangement in seven s prologue (1 1–8), letters to seven churches in Asia Minor, counseling and warning (1 9–3 22), opening of the seven seals on the scroll in the hand of God, including the Four Horsemen (4 1–8 1) blowing of seven trumpets by angels standing before the throne of God (8 2–11 19), seven signs, including St Michael and the Dragon and the beast with the number 666 (12 1–15 4), seven vials "full of the wrath of God" (15 5–16 21), the great harlot, named Babylon, i e , Rome (17 1–19 10), visions of heaven, including the defeat of Satan, the judgment, and the New Jerusalem (19 11–22 5), epilogue (22 6–21) The style is majestic Throughout there is constant reminiscence of Old Testament prophecies, especially Ezekiel, Daniel, and Isaiah One immediate goal of Revelation was to encourage Christians faced with martyrdom, but assurance of interpretation stops there it is not even agreed as to whether the author expected an early fulfillment of his prophecies or intended a more spiritual interpretation Every period of Christian history has produced new (often bizarre) explanations of the mysteries of the book See APOCALYPSE See L F Scott, *The Book of Revelation* (1939)

Revelstoke (rĕ'vulstōk), city (pop 2,106), SE British Columbia, on the Columbia river at the mouth of the Illecillewaet and E of Kamloops The city is at the foot of the Selkirk Mts. and is the gateway to Mt Revelstoke National Park It is also a railroad division point, a distributing center for a mining and lumbering area, and an outfitting center for tourists and hunting and fishing parties

Reventazón (rĕvĕntäsōn'), river rising in E Costa Rica and flowing northeast to empty into the Caribbean N of Limón The Reventazón is navigable for a short distance only, but through the mountains it has cut a deep valley, which offers the best access for the railway from San José, the capital, to Limón, the principal port of the country

revenue, see FINANCE

reverberatory furnace, type of furnace used in the separation of metals from their ores and in the refining of some metals It differs from the blast furnace chiefly in that the fuel is burned in one compartment while the ore or other material to be heated is in another compartment The ore is affected only by the flames and gases from the burning fuel, these flames and gases are thrown back from the low ceiling of the fuel compartment and pass over the shallow layer of ore in the neighboring compartment, at the farther end of which is a flue In the reverberatory furnace wrought iron is thus produced from pig iron, lead is prepared from its sulphide ores, and copper is refined and copper matte produced

Revere, Paul, 1735–1818, American Revolutionary patriot, b Boston In his father's smithy he learned to work gold and silver, and he became a leading silversmith of New England He also turned his hand to various other skills—designing, engraving, printing, bell founding, and dentistry In the French and Indian War he was a soldier, and in the period of growing colonial discontent with British measures after the Stamp Act (1765), he was a fervent propagandist and a maker of caustic caricatures He early joined the Sons of Liberty, took part in the BOSTON TEA PARTY, and was a courier for the Massachusetts committee of correspondence Revere became a figure of popular history and legend, however, because of his ride on the night of April 18, 1775, to warn the people of the Massachusetts countryside that British soldiers were being sent out in the expedition which, as it turned out, started the American Revolution (see LEXINGTON AND CONCORD, BATTLES OF) William Dawes and Samuel Prescott also rode forth with the news Revere did not reach his destination at Concord but was captured by the British, nevertheless, it is Revere who is remembered as the midnight rider, chiefly because of the poem by H W Longfellow He promptly escaped from the British officers and later rendered service to the Revolutionary cause He designed the first seal for the united colonies, designed and printed the first Continental bond issue, and established a powder mill at Canton, Mass His military career was not distinguished he was a lieutenant colonel of artillery on garrison duty at Fort William in Boston harbor and later took part in the ill-fated expedition against Penobscot On the expedition he was arrested for disobeying orders (though a court-martial later acquitted him of the charges), and in 1780 he returned to silversmithing His shrewdness in other enterprises—shipping ice to the West Indies and establishing a copper-rolling and brass-casting foundry at Canton—helped to make his later years very prosperous See C F Gettemy, *The True Story of Paul Revere* (1905), biography by E G Taylor (1930), Esther Forbes, *Paul Revere and the World He Lived In* (1942)

Revere, city (pop 34,405), E Mass , on the coast NE of Boston, settled c 1630, set off from Chelsea 1871, inc as a city 1914 It was named for Paul Revere It is a residential suburb and produces optical goods Revere Beach is a popular resort

reversion, see ATAVISM

Revilla Gigedo, Juan Francisco de Güemes y Horcasitas, conde de (hwän' fränthĕ'skō dā gwā'mās ē ōrkäsē'täs kōn'dā dā rĕvē'lyä hēhā'dhō), 1682?–1766, Spanish colonial administrator, viceroy of New Spain (1746–55) As captain general of Cuba he amassed, chiefly by illicit trade in tobacco, a fortune, which he increased in Mexico His businesslike rule brought new revenues to the Spanish treasury He encouraged the conquest and settlement of N Mexico, particularly under José de ESCANDÓN His son, **Juan Vicente Güemes Pacheco de Padilla, conde de Revilla Gigedo** (vĕthän'tā, pächā'kō dā padhē'lyä), 1740–99, b Havana, was viceroy of New Spain (1789–94) He gave to the viceroyalty one of the finest administrations of the colonial era He put the new administrative system of intendancies into working order, improved Mexico city, sent out an expedition that carried the Spanish territorial claims N of the California coast, and brought the revenues of the viceroyalty to their highest point

Revillagigedo Island (ruvē'lùgugē'dō, -gūgē'dō), area 1,120 sq mi , off SE Alaska, in the Alexander Archipelago, lying E of Prince of Wales Island It was visited by Russian, English, and Spanish explorers and named (1793) for the conde de Revilla Gigedo, viceroy of Mexico Ketchikan is its chief town

revival, religious, renewal of attention to religious faith and service in a church, a community, or a district of any extent It usually follows a period of comparative inactivity and lagging interest and is frequently marked by intense fervor in spiritual expression, which rapidly is communicated Those believers who have been lax or have lost interest are aroused to fresh devotion, while the unregenerate, sometimes in great numbers, are awakened to their need and helped to a better way of thinking and living under religious conviction and guidance As applied to the Christian religion, the phrase belongs to modern times, dating from the 18th cent , but the experience had its place in the earliest history of the Church, as is attested by scriptural accounts The course of Christianity's progress through the Middle Ages and into the modern era is marked by waves and variations resulting from changing influences and conditions From time to time great outbursts of enthusiasm occurred. The development of the Protestant movements in the 14th, 15th, and 16th cent was in the nature of a series of revivals under the strong impelling force of such leaders as WYCLIF, HUSS, LUTHER, CALVIN, and others But revivals, so called, in Europe began with the evangelical awakening in England c 1737 under John and Charles WESLEY and George WHITEFIELD Under their direction an army of itinerant and local workers and of missionaries spread the spirit of Methodist evangelism with amazing rapidity over Great Britain, into Ireland and Wales, and across the seas Almost simultaneously with this European movement, the GREAT AWAKENING in America occurred Just before the 19th cent opened and during its early years the newer settlements in the South and the West were visited by a wave of religious animation attended by emotional excitement and physical manifestations The movement began in Kentucky c 1797 under the preaching of James McGready From these meetings held in the open developed the CAMP MEETING The first of the professional revivalists was Asahel Nettleton, he and Charles Grandison Finney worked, chiefly in the E United States, before 1850 The preeminent figure in modern revivalistic history in the United States and Great Britain is Dwight L MOODY, who, with the singing evangelist Ira D SANKEY, moved vast audiences for more than 25 years In later years campaigns have been conducted by George F Pentecost, B Fay Mills, Sam Jones, Sam Small, J Wilbur Chapman, R A Torrey, William A Sunday, and Gipsy Smith Modern psychologists devote particular attention to the states of mind represented in the conversions which result from revivalistic methods See C G Finney, *Autobiography* (1876), J H Overton, *Evangelical Revival in the Eighteenth Century* (1886), E D Starbuck, *Psychology of Religion* (1899), William James, *Varieties of Religious Experience* (1902), J W Chapman, *Present Day Evangelism* (1903), F G Beardsley, *History of American Revivals* (1904), F M Davenport, *Primitive Traits in Religious Revivals* (1905), C C Cleveland, *The Great Revival in the West, 1797–1805* (1916), W W Sweet, *Revivalism in America Its Origin, Growth, and Decline* (1944)

revolver, a PISTOL with a revolving cylinder capable of firing several shots without reloading The earliest example dates from the last half of the 16th cent , but a usable multifiring weapon did not appear until the Collier revolving system was introduced in the first quarter of the 19th cent The first revolver to win a place as a standard weapon was invented by Samuel Colt, an American, and was patented by him in England in 1835 and in the United States in 1836 Colt's revolvers were used by the Texas Rangers in the Mexican War In taming the American wilderness, the revolver became an essential in the light equipment of the frontiersman west of the woodland region On the prairies and the Great Plains, the frontiersmen were mounted and the long muzzle-loading rifle was not a horseman's weapon, it was outclassed by the mounted Indian's bow and arrows The revolver restored to the white man the advantage that the accuracy and the long range of the rifle had given him in the woodland The revolver (the six-shooter or six gun) is said to have civilized the West The automatic pistol, though widely used, has not completely displaced the revolver Revolvers are the small arms of most law-enforcement officers See H B C Pollard, *History of Firearms* (1926), W B Webb, *The Great Plains* (1931), C T Haven and F A Belden, *A History of the Colt Revolver* (1940)

revue (rĭvū'), a stage presentation which originated as a light, satirical commentary on current events It was rapidly developed, particularly in England and the United States, into an amorphous musical entertainment, retaining a small amount of satire and partaking more and more of the elements of vaudeville and the pageant In the United States the revue became in the second decade of the 20th cent a vehicle notable for its extravagant staging and costumes, for its display of feminine beauty, and for its short comedy sketches and popular songs The best known of this type was the annual *Follies* produced by Florenz ZIEGFELD, which had

as its chief rivals Earl Carroll's *Vanities* and George White's *Scandals* Continental revues such as the *Chauve-Souris* retained more of a satirical tone, and others felt the influence of the elaborate staging developed by MAX REINHARDT In the late '20s the revue reverted to its original form as the so-called intimate revue in the hands of such men as Noel Coward In the late '30s the labor revue *Pins and Needles* had a great success See E M. Gagey, *Revolution in American Drama* (1947)

Rexburg, city (pop 3,437), co seat of Madison co , E Idaho, on the small Teton river in the Snake valley and NNE of Idaho Falls Founded in 1883 by Mormons and named for one of the founders, Thomas Ricks, it is a busy center of ranches irrigated farms, and dry farms Ricks College (junior, Latter-Day Saints, 1888) is here The site of the fur-trading post founded by Andrew Henry in 1810 is between Rexburg and St Anthony

Reyer, Ernest (ĕrnĕst' rāvĕr'), 1823–1909, French composer and critic, whose name originally was Louis Étienne Ernest Rey Largely self-taught, he was strongly influenced by Berlioz, whom he succeeded as critic of the *Journal des débats* He composed little besides operas, the most successful of which was *Sigurd* (Paris, 1884) His last opera, *Salammbô* (1890), was based on Flaubert's novel

Reyes, Alfonso (älfōn'sō rā'ĕs), 1889 , Mexican writer A man of wide culture, he was a diplomat who spent some years in Spain and became an authority on Spanish classical literature He was also the director of the Colegio de México and editor of the publishing organization Cuadernos Americanos He is known, however, as a literary critic, as a poet, and as the author of brilliant essays His prose style is generally recognized as of the finest in recent Latin American literature *Visión de Anahúac* (1917) and the several series of *Simpatías y diferencias* show that style at its height

Reyes, Rafael (rāfāĕl'), 1850 1921, president of Colombia (1904-9) When a young man, he explored the upper Amazon wilderness with his brother Later he distinguished himself in the civil wars of 1885 and 1895 Sent to Washington in 1903, he was unable to secure redress for the U S part in the revolution in Panama Elected president, he assumed national powers and vigorously pushed the economic development of Colombia, improving communications, bringing order to the finances, beautifying Bogotá, and encouraging industry He also put down opposition ruthlessly and remade the constitution to his liking A treaty with the United States recognizing the independence of Panama awoke widespread popular opposition that brought about his downfall

Reykjavik (rā'kyuvĭk), Icelandic *Reykjavík* (rā'kyävĕk, rā'kävĭk), city (pop 51,690), capital of Iceland, a port on the Faxa Fjord, SW Iceland The chief commercial center of the island, it is also a Lutheran episcopal see and the seat of a university (founded 1911) Reykjavik was chartered in 1786 and had a relatively recent growth, due chiefly to near-by fisheries One of its remarkable features is its hot-water supply system (completed 1945), which utilizes natural hot springs An important airfield was built at Keflavik, W of Reykjavik, by the U S army during the Second World War The spelling Reikjavik also occurs

Reyles, Carlos (kär'lōs rā'lās), 1868 1938, Uruguayan novelist A wealthy cattleman, he traveled extensively and devoted himself to writing His novels are generally naturalistic, *La raza de Cain* (1900) shows especially the influence of Zola *Beba* (1894) and *El terruño* [the plot of earth] (1916) depict Uruguayan ranch life, but *El embrujo de Sevilla* (1922, Eng tr , *Castanets*, 1929) is a story that is almost a prose poem about the Andalusian city He lost his wealth late in life, and the state created a university lectureship for him

Reymont, Ladislaus Stanislaus, Pol *Władysław Stanisław Reymont* (vwädĭs'wäf stänĕs'wäf rā'mônt), 1867–1925, Polish short-story writer and novelist He was awarded the 1924 Nobel Prize in Literature The early years of his life, which he spent partly as a vagabond and often in poverty, exerted a strong influence on his later writings Reymont turned away from the positivists, who placed their faith in industry, he deplored urbanization and turned to peasant life for his themes Among his best works are *The Comedienne* (1896, Eng tr , 1920), a story of a wandering theatrical troupe, *The Promised Land* (1899, Eng tr , 1927), a novel about the city of Lodz, and *The Peasants* (4 vols , 1902–9, Eng tr , 1924-25)

Reynard the Fox (rĕ'nûrd, rā'närd), celebrated hero of the medieval beast epics, works predominantly in verse which became increasingly popular after c 1150 They are found chiefly in Latin, French, Low German, Dutch and Flemish, High German, and English. The type probably originated in a German-speaking section of what is now Alsace-Lorraine, whence it passed into France, the Low Countries, and Germany The summons of Reynard by King Noble (the Lion) to answer accusations by Isengrim the Wolf and other animals forms the nucleus and starting point of the loosely connected tales Most of the stories reflect in biting satire the peasant's criticism and contempt for the upper classes and the clergy. An episode at once outstanding and typical is the funeral of Revnard, with the pious laments of his late enemies and his devastating resurrection from the grave Professional minstrels and poets soon found these tales good entertainment and made them popular with the upper and middle classes The French, who contributed most to the original story, produced *Le Roman de Reynard* (1170–1250) Caxton translated from a Flemish version his *Historie of Reynart the Foxe* (1481) Modern English versions include T J Arnold's translation (1860) of Goethe's *Reinecke Fuchs*, a paraphrase of an older High German version, and William Rose's *Epic of the Beast* (1924)

Reynaud, Paul (pôl' rānō'), 1878–, French statesman and lawyer He held cabinet posts under Tardieu (1930) and Laval (1931–32) After Nov , 1938, as minister of finance in the cabinet of Édouard DALADIER, he pursued an extremely deflationary policy In the midst of the Second World War he succeeded Daladier as premier in March, 1940 On May 18, when France faced military disaster, he called in Marshal PÉTAIN as vice premier On June 16–17, despite his opposition to surrender he gave way to Marshal Pétain and resigned He was arrested later in 1940 and was one of the defendants at the abortive Riom war-guilt trial Freed (1945) from German imprisonment, Reynaud reentered politics as an advocate of free enterprise

Reynolds, John see RAINOLDS, JOHN

Reynolds, John Fulton (rĕ'nuldz), 1820–63, Union general in the Civil War, b Lancaster, Pa , grad West Point, 1841 He distinguished himself at Monterrey and Buena Vista in the Mexican War In the Civil War, Reynolds was made (Aug , 1861) a brigadier general of volunteers In the SEVEN DAYS BATTLES (1862), he was captured at Gaines's Mill but was exchanged in time to command a division at the second battle of Bull Run (Aug , 1862) In November he was made commander of the 1st Corps of the Army of the Potomac and promoted major general He rendered able service in the battles of Fredericksburg (Dec , 1862) and Chancellorsville (May, 1863) In the GETTYSBURG CAMPAIGN Reynolds directed the fighting on the first day (July 1, 1863) until he was killed

Reynolds, Sir Joshua, 1723 92, English portrait painter, son of a Devonshire clergyman At 17 he was sent to study painting in London and two years later set himself up as a portrait painter in Plymouth Intensely ambitious, he early determined to study in Italy and in 1749 was enabled to do so through the generosity of Captain Keppel, commander of the Mediterranean squadron, who took him there on his own ship After three years of study and travel Reynolds returned and took London by storm His social gifts no less than his talents advanced him, and within a year he was besieged with portrait commissions and was employing assistants For the remainder of his life he continued to better his condition, he would move from one establishment to a more ambitious one, maintaining a gallery not only of his own work but of that of old masters whose paintings he bought and sold and entertaining a wide circle which included not only the world of wealth and fashion but also the great literary figures of the day When the Royal Academy was founded in 1768 Reynolds was elected president and was knighted His yearly discourses before that body and his voluminous correspondence have literary distinction Reynolds's ambition not merely for renown but for greatness gave him no rest, and his life was a constant round of labor and engagements At 59 he had a paralytic stroke, but recovered sufficiently to continue his work for several years Reynolds painted over 2,000 portraits and historical paintings He often used very experimental painting methods, and as a result much of his work is badly preserved At his best, however, his color is rich, and in design he surpassed his rivals Gainsborough and Romney His portraits of Commodore Keppel, Dr Johnson Lord Heathfield, Sterne, Goldsmith, Garrick, Edward Gibbon, Edmund Burke, and Charles James Fox are admirable and have great historic interest Much of Reynolds's work is in private collections He is best represented in the National Gallery, London, but fine examples of his work are to be seen in the Metropolitan Museum, the Museum of Fine Arts, Boston, the Cleveland Museum of Art, the New York Public Library, the Widener Collection, Philadelphia, the Art Institute of Chicago, the Detroit Art Institute, and in the private Frick collection at Prides Crossing, Mass One of his masterpieces, *Mrs Siddons as the Tragic Muse*, is in the Huntington Gallery. See his letters (ed by F W Hilles, 1929), biographies by James Northcote (2 vols , 1818), C R. Leslie and Tom Taylor (1865), Sir Walter Armstrong (1900), and F W Hilles (1936)

Reynoldsville, industrial borough (pop 3,675), W Pa , in the Alleghenies SE of Brookville, settled c 1824, laid out 1873 It produces brick, glass, textiles, and caskets

Rezaieh (rĕzäĕ'ē), city (1947 estimated pop. 45,575), capital of the Fourth Prov. (W Azerbaijan), NW Iran It was the seat of Iran's earliest American mission (1835) Most of the Christian inhabitants fled in 1918; many of those who remained were massacred by invading Kurds The population is mostly Turkomans Rezaieh's fertile plain produces grain, fruit, cotton, and tobacco Nearby mounds have yielded ancient earthenware and coins and also a Babylonian seal The city was formerly Urmia

Rezanov, Nikolai Petrovich (nyĭkulĭ' pĕtrô'vĭch rvĕza'nuf), 1764–1807, Russian trader, an official of the Russian American Company He headed an expedition to Russian America in 1803 There he found (1805) Sitka in desperate need of food and determined to go to California to obtain supplies He reached what is today San Francisco and succeeded in his mission partly because of romantic attachment to Doña Concepción, daughter of the commandant, José Darío Argüello He took the supplies to Sitka but died on his return trip to Russia See Hector Chevigny, *Lost Empire* (1937).

Reza Shah Pahlavi (rĕ'za shä' pälävē'), 1877–1944, shah of Iran (1925–44) He began his career as an army officer and displayed great valor and leadership He led in expelling the Russians and headed a coup d'etat in 1921, establishing a military semi-dictatorship In 1923 Reza Kahn forced his associate out of office, and in 1925 he demanded and got full dictatorial power The Kajar or Qazar dynasty had been deposed, and in Dec , 1925, Reza Khan was made shah, thus founding the Pahlavi dynasty. He introduced many reforms, reorganizing the army, government administration, and finances He abolished all special rights granted to foreigners, thus gaining real independence for Iran The Trans-Iranian RR was built, the Univ of Teheran was established, and industrialization went on apace In the Second World War his rapprochement with the Germans was protested by the Allies, and in 1941 British and Russian forces invaded and occupied Iran Reza Shah was forced to abdicate in favor of his son, Mohammed Reza Shah He went to South Africa in exile His name is also written Riza Shah

Rezekne (rā'zĕknā), Ger *Rositen* (rōzĭ'tun), city (pop 13,139), E Latvia, in Latgale It is an agricultural market center Rezekne was founded (1285) as a fortress by the Livonian Knights, ruins of the ancient castle remain

Rezeph (rē'zĕf), ancient city, probably to be identified with Rasafa, E of Palmyra in the Euphrates valley 2 Kings 19 22, Isa 37 12

Rezia (rēzĭ'u) [Heb ,=delight], son of Ulla the Asherite 1 Chron 7 39

Rezin (rē'zĭn) **1** Syrian king who was defeated and killed by the Assyrian king Tiglath-pileser 2 Kings 15 37, 16 5–9 **2** Family returned from exile Ezra 2 48 Neh 7 50

Rezon (rē'zŏn), founder of a dynasty in Damascus and adversary of Solomon 1 Kings 11 23–25

Rh, chemical symbol of the element RHODIUM

Rhaetia (rē'shŭ), ancient Roman province including parts of S Bavaria, Tyrol, and E Switzerland The larger part lay in the Alps, where the Rhaetian Alps commemorate the name The region was annexed by the Romans c 15 B C , and the capital was set up at Augusta Vindelicorum (now Augsburg) The province had practically no importance except the military The name is spelled also Raetia

Rhaeto-Romanic (rē'tō-rōmă'nĭk), generic name for several Romance dialects spoken in Switzerland and small bordering areas Romansh and the closely related Ladin are spoken in SW Switzerland, Friuli or Friouli in the southeast Romansh is designated as one of the official languages of Switzerland See LANGUAGE (table)

Rhagae: see RAGES

Rhangavis, Alexandros Rizos see RANGABE

Rhazes (rā'zēz) or **Rasis** (rā'sĭs, -zĭs), Arabic *Abu-Bakr Mohammed ibn Zakariya al-Razi*, c 860–c 925, Persian physician A noted clinician, he was chief physician at the Baghdad hospital He formulated the first known description of smallpox which he differentiated from measles in a work known as *Liber de pestilentia* and translated into English as *A Treatise on Smallpox and Measles* (1848, 1939) His works, widely circulated in Arabic and Greek versions and published in Latin in the 15th cent , include also a textbook of medicine known as *Almansor* and an encyclopedia of medicine edited posthumously from his papers and known as *Liber continens*

Rhé, island, France see RÉ

Rhea (rē'ă), in Greek religion, **Titaness,** Great Mother of the Gods She was the daughter of Gaea and Uranus, the wife and sister of Cronus, and the mother of Zeus, Poseidon, Demeter, Hera, Pluto, and Hestia The worship of Rhea evidently originated in Crete, and in early times she was identified with Cybele Like Cybele's, Rhea's worship was orgiastic and associated with fertility rites In Rome, Rhea was worshiped as Magna Mater and identified with Ops

Rhea Silvia. see ROMULUS

Rhegium (rē'jĕŭm), ancient city, S Italy, on the Strait of Messina, today REGGIO DI CALABRIA. Rhegium was founded (c.720 B.C.) as a colony of

Chalcis, later many Messenians settled. It was powerful until defeat and destruction by Dionysius the Elder of Syracuse (386 B C) The Romans, who favored it, called the city Rhegium Julium. It is mentioned in Acts 28 13 The name is spelled also Regium.

Rheims (rēmz), Fr. *Reims* (rĕs), city (pop. 106,081), Marne dept., NE France, in Champagne The center of the CHAMPAGNE industry and seat of the greatest firms, it is situated amid large vineyards Before the champagne industry took on its present proportions in the 18th cent., the chief products of Rheims were woolen textiles As Durocotorum, the city of the Remi, it was one of the most important cities in Roman Gaul. The see of an archbishopric since the 8th cent., it continued to play an exceptional role in French history CLOVIS I was crowned (496) king of all Franks in its cathedral by St Remi, the bishop of Rheims, and it became customary (but not obligatory) for the kings of France to be crowned here In the present cathedral, begun in 1211 by Robert de COUCY and finished a century later by his son, JOAN OF ARC stood next to Charles VII when, at her instance, he was crowned in 1429. The cathedral is a monument of French Gothic architecture It was shelled by the Germans in 1870 in the Franco-Prussian War and in 1914 in the First World War On the second occasion the interior, including most of the irreplaceable stained-glass windows, which made its special fame, was destroyed Restored (partly with funds of the Rockefeller Foundation), it was reopened in 1938 The town hall (17th cent.) and the old Church of St Remi (11th–16th cent.) were also gravely damaged In the Second World War, Rheims again suffered destruction, though all its artistic and historical monuments were spared Here, early on May 7, 1945, German emissaries signed the unconditional surrender of Germany at Allied headquarters Rheims has a university (founded by Pope Paul III in 1547) and a fine municipal library (built by the Carnegie Foundation in 1930). It was the birthplace of Jean Baptiste Colbert and of St JOHN BAPTIST DE LA SALLE

Rhein, river. see RHINE

Rheinberger, Josef Gabriel (yō'zĕf, rīn'bĕrgur), 1839–1901, German composer, studied at the Munich Conservatory, where he later taught Of his works—which include two symphonies, the operas *Die sieben Raben* and *Thurmer's Tochterlein*, two Stabat Maters, and 20 organ sonatas—the sonatas have proved the most enduring

Rheinfelden (rīn'fĕldun), town (pop 3,910), Aargau canton, Switzerland, on the Rhine Here in 1638 Bernhard of Saxe-Weimar defeated the imperial troops and Henri de Rohan was killed The town is noted for its salt mines and baths

Rheinhessen, Germany see HESSE

Rheinland, Germany: see RHINELAND

Rheinpfalz, Germany see PALATINATE

Rheinsberg (rīns'bĕrk), town (pop 4,215), Brandenburg, E Germany, NW of Berlin The rococo palace here was the residence (1736–40) of Crown Prince Frederick, later FREDERICK II of Prussia, who devoted his quasi-exile to music, literature, and study

Rheinwald (rīn'vält), valley, SW Grisons canton, Switzerland. At its western end is the **Rheinwaldhorn** (rīn'vält-hôrn"), a peak, 11,175 ft high, in the Adula group Below it two of the Rhine headstreams originate

Rhenanus, Beatus (bē'tus rēnā'nus), 1485–1547, German humanist After some years spent in Paris and in Basel, he returned to his native city, Schlettstadt, Alsace (1526), where he spent the rest of his life in scholarly activities With Erasmus he had a close friendship, corresponding with him and with others whose tastes were scholarly He edited several classics, including the *Editio princeps* (1522) of Velleius Paterculus, which he discovered himself, and published the works of Erasmus along with his own biography of the great humanist Rhenanus' *Rerum Germanicarum libri tres* (1531) is a fine work of historical research for that period See J E Sandys, *History of Classical Scholarship*, Vol. II (1908)

Rhenish Hesse, Germany. see HESSE

Rhenish Prussia: see RHINE PROVINCE

rhenium (rē'nēum) or **dvi-manganese** (dvī'măng'gunēs, măn'-), heavy, silvery, metallic element (symbol=Re for physical constants, see ELEMENT, table). It was discovered (1925) by Walter Noddack, Ida Tacke, and Otto Berg It is found in the minerals columbite, tantalite, wolframite, and molybdenite

Rhense (rĕn'zu), officially **Rhens** (rĕns), village (pop 2,287), in the former Rhine Prov. of Prussia, W Germany, after 1945 in Rhineland-Palatinate on the Rhine and S of Coblenz The Königsstuhl [royal throne], an octagonal building erected in 1376, is near by, here the electors of the Holy Roman Empire met in the 14th cent. (For the declaration made at Rhense in 1338 by six of the electors, see LOUIS IV, emperor) Rhense is still partly surrounded by its medieval fortifications. A variant spelling is Rense.

rheostat (rē'ustăt), device used to operate or control electrical equipment through variations in resistance. The metallic type, favored for laboratory use, consists of wire wound about an insulated cylinder and in contact with a movable arm. Resistance is increased by moving the arm so as to increase the number of windings through which the circuit passes. Sliding the arm in the other direction to decrease the number of windings lessens the resistance To vary very small currents, carbon rheostats are used As carbon granules are compressed, electricity passes through more easily, and a screw clamp acting on the carbon functions as a rheostat This type is used for volume and tone controls of radio and for brightness, contrast, and focusing controls on television Electrode plates dipped into a tank of salt or acid solution constitute the electrolytic type of rheostat The heat energy generated by currents passing through the solution is dissipated by vaporization, thus enabling electrolytic rheostats to handle heavy loads

Rhesa (rē'su), ancestor of Joseph Luke 3 27.

rhetoric (rĕ'turĭk) As far as is known, the art of effective public speaking was first studied and taught in Greece, where it was called rhetoric. The most distinguished of Greek authorities on the art is Aristotle, Isocrates was the greatest Greek teacher of rhetoric Quintilian is the most famous of Latin rhetoricians In the LIBERAL ARTS of the medieval curriculum, rhetoric, together with grammar and logic, made up the trivium Public speaking came to be studied and taught as a distinct art, and rhetoric to be limited to the art of writing effective prose or composition, as it is now often known. Sound principles of rhetoric hold also in poetry, but rhetoric does not include verse form, or prosody Rhetoricians have understood that in the art of writing, as in other arts, progress requires practice, as well as right aims and methods See also ORATORY

Rhett, Robert Barnwell, 1800–1876, American secessionist, b Beaufort, S C His family changed its name from Smith to Rhett (after a colonial ancestor) in 1837 A lawyer, he was a state legislator, state attorney general (1832), U S Representative (1837–49), and Senator (1850–52) In 1844 he split with John C Calhoun to lead the movement for separate state action on the tariff, an act indicative of his extreme Southern views, he even favored the restoration of the slave trade Rhett was one of the leading "fire-eaters" at the Nashville Convention of 1850, which failed to endorse Rhett's aim of secession for the whole South However, when South Carolina passed (1852) an ordinance declaring the state's right to secede, he felt partially vindicated and temporarily retired from politics, though he continued to express his rabid secessionist sentiments through the Charleston *Mercury*, edited by his son He was a member of the South Carolina secession convention in 1860 and served in the lower house of the Confederate congress until he was defeated in 1863 Rhett was almost always in opposition to President Jefferson Davis, whose office he had coveted See biography by Laura A White (1931)

rheumatic fever: see RHEUMATISM

rheumatism (rōō'mutĭzm), general term applied to painful conditions of muscle, bone, joint, or nerve Among the diseases with which it is associated are arthritis, bursitis, neuritis, lumbago, sciatica, and gout Distinct from these is rheumatic fever, an acute disease with painful migratory arthritis, which often affects the heart and sometimes leads to chronic valvular heart disease Primarily a disease of children, it is evidenced by the rapid development, often within a single day, of fever, swollen joints, and loss of function St Vitus's dance, or chorea, may occur Rheumatic fever attacks especially those between the ages of 5 and 19 years So-called "growing pains" are sometimes caused by it There is no certainty as to the causative factors, but the disease has been attributed by some to streptococcal infection and by others to climate Some evidence for hereditary susceptibility has been adduced An important segment of medical opinion considers sensitization to antigens (allergy) to be the cause of rheumatic fever On an experimental basis, remission of symptoms in rheumatic arthritis has been obtained through the use of Cortisone, a chemical obtained by complex processing from the cortex of the adrenal glands of animals It has also been prepared synthetically from a bile acid

Rheydt (rīt), city (pop 68,921), in the former Rhine Prov of Prussia, W Germany, W of Düsseldorf It forms a twin city with MÜNCHEN GLADBACH An industrial center, Rheydt produces textiles (cotton, silk, and velvet), machinery, chemicals, and shoes. Mentioned from 1180, it was chartered only in 1857 and from 1929 to 1933 was a part of München Gladbach. Rheydt was more than half destroyed in the Second World War

Rh factor, a factor present in the blood of about 85 percent of the total population The term is derived from the rhesus monkey in the blood of which it was discovered (1940) by Karl Landsteiner and Alexander S. Wiener Individuals whose blood contains the Rh factor are said to be Rh positive, those who lack this factor are Rh negative. Blood is now typed to determine the Rh factor before transfusions are given. Blood of an Rh positive donor may be given to an Rh negative recipient without incident, but in the event of a second transfusion of Rh positive blood to the same individual, the result may be fatal because of the formation of antibodies in the blood stream of the recipient stimulated by the Rh factor of the first transfusion. Antibodies may also be formed in the blood of pregnant women who are Rh negative, because the blood of the fetus may be Rh positive through inheritance from the father if he is Rh positive, the Rh factor, passing through the placenta to the blood stream of the mother, stimulates the formation of antibodies In such a case, if a transfusion of Rh positive blood is given to the mother after the birth of her child, the outcome may be fatal, the child of this Rh negative mother may be born with a disease known as erythroblastosis fetalis, usually fatal

Rhind, John Massey (rīnd), 1860–1936, American architectural sculptor, b. Scotland Moving to America in 1889, he designed decorations for public buildings in many cities of the United States and is widely represented by fountains, monuments, and statues His works include the Senator Rufus King Fountain, Albany, N Y., the Corning Fountain and the Colt Memorial, Hartford, Conn., decorations for Alexander Commencement Hall, Princeton, N J., a high relief for the 106th Infantry Armory, Brooklyn, N Y., statues of Andrew Carnegie and Robert Burns in Pittsburgh and Stephen Girard and H H Houston in Philadelphia, and an equestrian Washington in Newark, N J

Rhine (rīn), Dutch *Rijn* (rīn), Fr *Rhin* (rĕ), Ger *Rhein* (rīn), Latin *Rhenus*, river, c.820 mi long, W central Europe and W Europe Its main headstream, the Vorder-Rhein, rises in central Switzerland in the St Gotthard group and flows NE through the Grisons, it is joined by the Hinter-Rhein, with which it forms the Rhine proper. Turning north, the Rhine flows between Switzerland on the west and Liechtenstein and Austria on the east into the Lake of CONSTANCE, which it traverses from southeast to northwest After passing SCHAFFHAUSEN, where it falls in a cataract, it follows the Swiss-German border to Basel, the head of Rhine steamship navigation The Aar is its main tributary above Basel Turning sharply northward at Basel, the Rhine forms the French-German border, between Alsace (France) and Baden (Germany) Strasbourg is the principal city along this section Just S of Karlsruhe the river fully enters German territory and continues generally N past Speyer, Mannheim (where it is joined by the Neckar), Ludwigshafen, Worms, Mainz (where it is joined by the Main), Wiesbaden, Bingen, Coblenz (where it is joined by the Moselle), Bonn, Cologne, Düsseldorf, and Duisburg (where it is joined by the Ruhr), into the Netherlands The section of the Rhine between Mainz and Bonn is particularly famous for its idyllic landscape, its vineyards and superb wine, its romantic castle ruins, its legendary landmarks (such as the LORELEI and the DRACHENFELS), and its historic and cultural past The Rhine valley narrows considerably between Mainz and Bonn, winding through the Rhenish Slate Mts., which include the TAUNUS on the east and the HUNSRÜCK and the EIFEL on the west Between Cologne and the Dutch border the Rhine traverses an important industrial district adjoining in the east on the WUPPER and RUHR districts After crossing the Dutch border the Rhine divides into two branches, the more southern of which is called the WAAL The northern branch or Lower Rhine (Dutch *Neder Rijn*) in turn fans out in several branches Just above Arnhem the IJSSEL branches out to the north, and at some distance below Arnhem another branch, the LEK, continues west The Old Rhine (Dutch *Oude Rijn*), which continues NNW past Utrecht, empties into the North Sea below Leiden, it is less important as a navigation route than the Waal and the Lek, through which it communicates with the Meuse estuary and with the port of ROTTERDAM. The canal systems of Germany, France, Belgium, and the Netherlands and the huge traffic between the Rhine–Ruhr industrial basin and Rotterdam make the Rhine commercially the most important river of Europe Coal, iron ore, and cereals form the bulk of transported goods Duisburg is the largest inland port on the Rhine Seagoing vessels displacing up to 4,000 tons can navigate as far as Cologne The Rhine is regulated throughout its course It was declared free to international navigation in 1868 By the Treaty of Versailles (1919) an international navigation commission, with its seat at Strasbourg, was set up, it resumed functioning after the Second World War In Roman times the Rhine was a fortified boundary of the empire, traces of Roman civilization are still evident Although contested for more than 1,000 years between Germany and France, the Rhine links the economically inseparable regions of E France, NW Germany, and the Low Countries. The Rhine has also functioned throughout all political rivalry as a link of the French, German, and Dutch-Flemish cultures.

Rhine, Confederation of the: see CONFEDERATION OF THE RHINE.

Rhinebeck, village (pop. 1,697), SE N.Y., near the Hudson above Poughkeepsie; settled before 1700, inc. 1834 It is a violet-growing center

Rhine Canals. Among the chief canals linking the Rhine with other river systems are the Rhine-Marne Canal, 195 mi long (built 1841–52); the now unimportant Rhine-Rhone Canal, 217 mi. long, connecting with the Rhone through the Saône (built 1784–1833), and the Rhine-Herne and Dortmund-Ems canals, connecting the Rhine with the German port of Emden Construction of the Rhine-Main-Danube Canal was interrupted by the Second World War

Rhineland (rīn'lănd″), Ger *Rheinland* (rīn'lănt″), region of W Germany, along the Rhine The term is sometimes used to designate only the former RHINE PROVINCE of Prussia, but in its general meaning it also includes the RHENISH PALATINATE, Rhenish and S HESSE, and W BADEN. (For a description, see RHINE) The Treaty of Versailles (1919) after the First World War provided for the Allied occupation of the Rhine Prov of Prussia, the Rhenish Palatinate, and part of Hesse-Nassau The northern zone, including Cologne and Aachen, was to be evacuated after five years; the central zone, with Coblenz, after 10 years, the southern zone, including Wiesbaden, Mainz, Trier, Ludwigshafen, and Speyer, after 15 years In 1921 French troops also occupied Düsseldorf and part of the Ruhr district, on the ground that Germany had not fulfilled its reparations obligations, and in 1923 France and Belgium occupied the remainder of the RUHR and the area around Kehl in Baden, on the same grounds At the same time France and Belgium supported the Rhenish separatist movement, which proclaimed a Rhineland republic at Aachen in 1923, by 1924, however, the movement had collapsed The first Allied troops to withdraw from the Rhineland were the Americans, whose place was taken by the French. The northern occupation zone and the Ruhr were evacuated by the Allies in 1925–26 Thanks mainly to the efforts of the German foreign minister, Gustav STRESEMANN, the last occupation troops (who were French) withdrew from the Rhineland in June, 1930, five years before the term set by the treaty The Treaty of Versailles had provided that after its recovery of the occupied territories, Germany was to maintain no fortifications on the left bank of the Rhine and within a zone 50 km E of the Rhine All existing fortresses were dismantled, and Germany was furthermore forbidden to send troop concentrations into the demilitarized area Germany specifically reaffirmed these conditions in the Locarno Pact of 1925 In March, 1936, however, the National Socialist government of Germany began to remilitarize the Rhineland, and at the same time Hitler denounced the Locarno Pact The League of Nations censured Germany, but no further action was taken - largely because of British unwillingness to support France in a contemplated military intervention The German fortifications in the Rhineland —the so-called Siegfried Line—were an extensive system of defenses in depth, which were penetrated (1944–45) by the Allies in the Second World War after very heavy fighting

Rhinelander, city (pop 8,501), co seat of Oneida co, N Wis, on the Wisconsin and NW of Green Bay, in a lake and dairy region, settled 1882, inc 1894 It is a supply center for a resort area Long a lumbering town, the city still makes paper and wood products

Rhineland-Palatinate (rīn'lănd″-pulă'tĭnĭt″), Ger *Rheinland-Pfalz* (rīn'lănt″-pfälts′), state (7,666 sq mi , pop 2,761,138), set up in Aug , 1946, in the French zone of occupation in W Germany Coblenz is the temporary capital, and MAINZ was designated as the permanent capital The state consists of the Rhenish PALATINATE (taken from Bavaria), of part of formerly Prussian Hesse-Nassau, of Rhenish HESSE, and of the southern portion of the former RHINE PROVINCE of Prussia, including Coblenz and Trier It borders on France, the Saar Territory, Luxembourg, and Belgium in the south and west Drained by the Rhine and Moselle, it includes the Hunsrück and Eifel and other divisions of the Rhenish State Mts. It contains some of the most famous German vineyards, Ludwigshafen and Pirmasens are important industrial centers, Worms and Speyer are rich in historic associations, Bad Ems and Bad Kreuznach are famous spas Rhineland-Palatinate has no historical unity whatsoever It joined (1949) the West German federal republic

Rhine Palatinate: see PALATINATE

Rhine Province, Ger *Rheinprovinz* (rīn'prōvĭnts″), former province (9,451 sq mi , 1939 pop 7,915,830) of Prussia, W Germany, bordering in the west on the Netherlands, Belgium, and Luxembourg Coblenz was the capital, and Cologne, Düsseldorf, and Aachen were among its chief cities Traversed by the Rhine, Moselle, and Wupper rivers and by the lower course of the Ruhr, the province contained some of the most important industrial concentrations of Germany, including part of the RUHR district, WUPPERTAL, SOLINGEN, and REMSCHEID. There are famous wine districts along the Moselle and Rhine valleys in the south. The province was also known as Rhenish Prussia and as the Rhineland, although the term *Rhineland* usually has a more inclusive meaning After the breakup (11th cent) of the duchy of Lower Lorraine (see LOTHARINGIA), of which the area was a part, the region fell into a multitude of ecclesiastic and secular fiefs; Aachen and Cologne became free imperial cities Chief among the territorial princes were the archbishops of COLOGNE and TRIER and the dukes of CLEVES, who also absorbed the duchies of JÜLICH and BERG In 1613 Jülich and Berg passed to the electors of Brandenburg (later kings of Prussia) As a result of the French Revolutionary Wars, France annexed the entire territory W of the Rhine, while the territory E of the Rhine was constituted (1803)(the duchy (after 1806, grand duchy) of Berg The award of the entire territory to Prussia at the Congress of Vienna (1814–15) represented the greatest Prussian territorial gain since the Partitions of Poland One of the strongholds of Roman Catholicism in Germany, the Rhine Prov played an important part in the Kulturkampf later in the century Under the Treaty of Versailles (1919), the border territories of EUPEN and of MALMÉDY and Moresnet were ceded to Belgium, and the southernmost corner of the province was included in the SAAR TERRITORY These were recovered by Germany after 1935, but the status quo as of 1920 (with minor modifications) was restored in 1945 after the Second World War At the same time, the Rhine Prov was divided between the British-occupied state of North Rhine-Westphalia, which received the highly industrial northern part, and the French-occupied state of Rhineland-Palatinate, which received the southern part, including Coblenz and Trier During the Second World War, the Rhine Prov had been the scene of very heavy fighting in 1944–45, when the Allies broke through the Siegfried Line, a powerful chain of defenses in depth All major cities of the Rhine Prov suffered heavy damage For the Allied occupation and for the demilitarized zone of the Rhine Prov after the First World War, see RHINELAND

Rhinns of Galloway, Scotland see GALLOWAY

rhinoceros (rīnŏ'sərŭs), massive ungulate animal of Africa, India, and SE Asia It has a very thick skin, often deeply folded The African species have two nasal horns, the Asiatic, one. The rhinoceros is herbivorous and fond of wallowing in mud and water It was shown in Roman circuses The white African rhinoceros, of which the male may reach a shoulder height of 6 ft 6 in , is the largest

rhizome (rī'zōm) or **rootstock,** fleshy, creeping underground stem by means of which certain plants are propagated Such weeds as Canada thistle and quack grass—both propagated by rhizomes—are hard to eradicate They are perennial and jointed and have buds at the joints When a rhizome is cut up with a cultivating tool, instead of dying, as would a root, it becomes a group of plants in place of one Ginger, the common iris, trillium, and SOLOMON'S SEAL all have rhizomes True ARROWROOT is the starch of the rhizome of a West Indian plant

Rhoda (Gr , =rose), servant of Mary , Mark's mother. Acts 12 13

Rhode Island, state (1,058 sq mi , 1940 pop 713,346, 1949 estimated pop 743,000), NE United States in New England, one of the Thirteen Colonies Providence is the capital Rhode Island, the smallest and most densely inhabited of the 48 states, is bounded on the north and the east by Massachusetts, on the south by the Atlantic Ocean, and on the west by Connecticut The rolling and hilly surface is cut by short, swift streams having numerous falls Officially the State of Rhode Island and Providence Plantations, it takes its familiar name from the largest island in NARRAGANSETT BAY About these waters the earliest English settlements were made Roger WILLIAMS, banished (1635) from the Massachusetts Bay colony, established the first settlement at Providence in 1636 on land purchased from the friendly Narragansett Indians In 1638 William CODDINGTON, John CLARKE, Anne HUTCHINSON, and other Puritan exiles bought, with Williams's aid, the island of Aquidneck (Rhode Island) from the Narragansett Here they settled Portsmouth (1638). Because of factional differences Coddington and Clarke withdrew and founded NEWPORT (1639) on the southwestern side of the island, but the two towns later combined governments (1640–47). A fourth settlement, Warwick, was made on the western shore of Narragansett Bay by Samuel GORTON in 1642 With Massachusetts and Plymouth pressing claims to the area, Williams, through influential friends, secured a parliamentary patent (1644) under which the four towns drew up a code of civil law and organized a government (1647) Coddington received a commission (1651) annulling the patent, but this was in turn revoked through the efforts of Williams and Clarke (1652), and in 1654 the four towns reunited. The surprisingly liberal charter (1663) granted by Charles II, through Clarke's instrumentality, assured the colony's survival, though boundary difficulties with Massachusetts and Connecticut continued well into the 18th cent. The early settlers were mostly of English stock Practically all were drawn by the guarantee of religious freedom, a cardinal principle with Williams, confirmed in the patent of 1644 and reaffirmed by the royal charter of 1663. Quakers came in large numbers and Jews settled in Newport in the first year of Williams's presidency (1654) All the early settlers owned land which, following Williams's practice, was bought from the Indians Fishing and trade with the Indians supplemented the living won from the soil The inhabitants of "Rogues' Island," or "the sink of New England," as others styled it, were an extremely contentious lot who valued highly the liberties of their lively agrarian democracy Viewed with mixed loathing and fear by the more powerful neighboring colonies, Rhode Island was never admitted to the NEW ENGLAND CONFEDERATION, but bore equally the devastation of King Philip's War in 1675–76 (see PHILIP). Charter government was suspended while Sir Edmund ANDROS was governor of all New England (1686–89) Livestock from the Narragansett country (South County), especially the famous Narragansett pacers, figured largely in the early commerce, which developed rapidly late in the 17th cent Until the American Revolution, Newport virtually dominated commercial activity, thriving especially, with other New England ports, on the "triangular trade" in rum, Negro slaves, and molasses Rhode Island, like other colonies, did not take kindly to British mercantilist policies and consistently violated the Molasses Act of 1733 and the Navigation Acts In Narragansett Bay, a notorious haven for smugglers and privateers, the British revenue cutter GASPEE was burned (1772) Militia under Nathanael GREENE joined the Continental Army at Boston in 1775 and the following year Rhode Island renounced its allegiance to George III (May 4, 1776) British forces occupied the island of Rhode Island from 1776 to 1779, when they withdrew before the arrival of the French fleet The Revolution won, Rhode Island, jealous of its independence and exhibiting a kind of congenital obstinacy, was one of the states responsible for the failure of the Articles of CONFEDERATION. It held out against ratifying the Constitution until 1790 The post-Revolutionary era brought bankruptcy and currency difficulties but also the beginnings of the state's industrial greatness Samuel SLATER, with the financial backing of Moses BROWN, pioneered at the end of the 18th cent in establishing cotton textile mills in America An abundance of water power led to the rapid development of manufacturing, in which the wealthy merchants and shipping magnates invested their capital With the growth of industry the towns, especially Providence, increased in population Since the colonial charter limited the suffrage to freeholders, most of the townspeople were disenfranchised Dorr's Rebellion in 1842 (see DORR, THOMAS WILSON) resulted in the adoption of a new constitution (1843) extending suffrage, though the property qualification was not completely abolished until 1888 Until well into the 20th cent Rhode Island's political and economic life was dominated by the mill owners Nelson W ALDRICH was a power in the nation as well as the state The manufacture of textiles (high-grade cotton cloth particularly) and textile machinery, the dyeing and finishing of textiles, and the manufacture of silverware, jewelry, and machine tools became, and for the most part remain, the principal industries The small mill town, with its company houses and company store, and the large foreign-born population were important elements in the social fabric. English, Irish, and Scots began arriving in large numbers in the first half of the 19th cent , French Canadian immigration commenced around the time of the Civil War, and there was a large influx of Poles and Italians at the end of the 19th and beginning of the 20th cent Sporadic labor troubles in the 19th cent. had little effect on the state's economy But after the First World War a long textile strike, centering in the Blackstone Valley, combined with the gradual removal of the mills to the source of supply and cheaper labor in the South led to a partial decline in the cotton-textile industry In recent years new, diversified industries have been introduced The hurricane of 1938 caused extensive damage to life and property In the Second World War the Narragansett Bay area was the site of important military, naval, and air installations Shipbuilding, important earlier, experienced a temporary revival Brown University in Providence is the state's leading educational institution The Rhode Island School of Design, Providence College, and the Rhode Island College of Education (state supported) are also in the capital, Kingston is the seat of the Rhode Island State College See I B Richman, *Rhode Island: Its Making and Its Meaning* (1902), Edward Field, ed , *State of Rhode Island and Providence Plantations* (3 vols, 1902), W B Weeden, *Early Rhode Island, a Social History of the People* (1910), H. M. Chapin, *Documentary History of Rhode Island* (1916), Federal Writers' Project, *Rhode Island* (1937).

Rhode Island, island, c 15 mi long and 3½ mi wide, S R I , at the entrance to Narragansett Bay It gave its name to the state It is the largest island in the bay, with bold cliffs and fine beaches. Known to the Indians and early colonials as Aquidneck, it was officially designated Rhode Island (probably after the isle of Rhodes) in 1644 Newport, Middletown, and Portsmouth are on it

Rhode Island State College, at Kingston, with land-grant support, coeducational, chartered 1888, opened as a school 1890, became a college of agriculture and mechanic arts 1892, renamed 1909 It has schools of agriculture, business administration, engineering, home economics, and science

Rhoden, Ausser and **Inner,** Switzerland see APPENZELL

Rhodes, Cecil **John** (sē'sĭl, rōdz') 1853–1902, British statesman and capitalist, b Hertfordshire He first came to South Africa in 1870 and joined his oldest brother Herbert on a cotton plantation in Natal In 1871 the brothers staked a claim in the newly opened Kimberley diamond fields where Cecil Rhodes was to make most of his fortune Cecil returned to England in 1873 and entered Oxford, but his studies were repeatedly interrupted by visits to South Africa and he did not receive his degree until 1881 A trip in 1875 through the rich territories of Transvaal and Bechuanaland inspired him with the dream of British dominion in South Africa, and in youthful exuberance he envisaged the whole world under British rule His power in the diamond-mining industry developed until, in 1880, he formed the De Beers Mining Company, which was second only to that organized by Barnato Rhodes decided to increase his power by entering politics and in 1881 he was elected to the parliament of Cape Colony, in which he held a seat for the remainder of his life In parliament he stressed the policy of containing the northward expansion of Transvaal, and in 1884, largely at his persuasion, Great Britain annexed Bechuanaland, which was given into Rhodes's charge In 1888 he induced Lobengula, the MATABELE ruler, not to alienate his land and to grant mining concessions which Rhodes exploited through the British South Africa Company (organized 1889) Earlier (1888), Rhodes had secured a monopoly of the Kimberley diamond production by the creation (with Barnato) of the De Beers Consolidated Mines, which reputedly had the largest capital in the world Rhodes became the prime minister of Cape Colony in 1890 and the virtual dictator He was responsible for educational reforms and for restricting the franchise to literate persons (thereby reducing the native vote) His personal and business sympathies with the Uitlanders [Dutch, = foreigners], who were suffering discrimination in Transvaal, brought him to conspire in a movement to seize the Transvaal government Great opposition developed to Rhodes after the raid into Transvaal of Sir Leander JAMESON, and Rhodes resigned as prime minister in 1896 In 1897 a committee of the House of Commons pronounced him guilty of grave breaches of duty as prime minister and as administrator of the British South Africa Company Thereafter he devoted himself mainly to the development of the country which was called Rhodesia in his honor In the South African War he commanded troops at Kimberley and was besieged for a time He died in South Africa from the effect of nearly life long ill-health. Rhodes left nearly all his fortune of £6,000,000 to public service One of his chief benefactions was the Rhodes Scholarships There are 32 scholarships for the United States and other scholarships for the British colonies and for Germany. See biographies by Philip Jourdan (1911) and Sarah Millin (1933)

Rhodes, James Ford, 1848–1927, American historian, b Cleveland, Ohio He studied (1865–66) at the Univ of the City of New York (now New York Univ), at the Univ of Chicago, and in Paris and Berlin (1867–68) While in Europe he visited ironworks and steelworks in Germany and Great Britain, and upon his return he investigated for his father iron and coal deposits in Georgia, North Carolina, and Tennessee In 1874 he became associated with his brother, Robert, and his brother-in-law, Marcus A Hanna, in an iron and coal business at Cleveland Having made a considerable fortune, he retired in 1885 to devote himself to writing history He moved to Cambridge, Mass , in 1891 His major work, *History of the United States from the Compromise of 1850* (7 vols., 1893-1906), which covered the years 1850–77, made him a national figure in historical literature. This work, upon which his fame rests, was highly praised by the critics, especially for its fair-mindedness, and has maintained its reputation fairly well He was honored by numerous academic and literary institutions and societies His other books include *Historical Essays* (1909), *Lectures on the American Civil War* (1913), delivered at Oxford in 1912, *History of the Civil War, 1861–1865* (1917), for which he received the 1918 Pulitzer Prize in history; *History of the United States from Hayes to McKinley, 1877–1896* (1919); and *The McKinley and Roosevelt Administrations, 1897–1909* (1922). See biography by M. A. De Wolfe Howe (1929).

Rhodes (rōdz), Gr. *Rhodos* (rō'dhŏs), island (542 sq mi , pop 55,181), off SW Asia Minor, in the Aegean Sea, largest of the Dodecanese, which belong to Greece The chief city is Rhodes, on the northeast shore The island has a fertile coastal strip, producing wheat, tobacco, cotton, olives, vegetables, and fruit. The interior is mountainous, rising to c 4,500 ft. in Mt Atairo Cattle raising, fishing, and sponge diving are important occupations The population is mostly Greek, but there is an Italian minority (11 percent) Rhodes appears in ancient history before 1000 B C The inhabitants were Dorians, who formed the three city-states of Camirus, Lindus, and Ialysus In the early 7th cent B C , Rhodians established Gela, in Sicily, their principal colony Rhodes retained its independence until the Persian conquest (late 6th cent B C) and joined in the Ionian revolt that led to the PERSIAN WARS The Rhodians joined the Delian League and became dependents of Athens, but fell away from Athens in 411 B C during the Peloponnesian War At the same time the three city-states united in a confederacy, with their federal capital at the newly founded city of Rhodes After the death of Alexander the Great (323 B C) Rhodes asserted its independence from Macedonian hegemony and entered the period of its greatest prosperity, power, and culture Its chief source of wealth was its vast carrying trade In the late 3d cent B C , however, its commerce (and with the commerce, the power of Rhodes) declined sharply, and Rhodes became an ally of Rome Involved in the Roman civil wars of the 1st cent B C , the island was seized and sacked by Cassius in 43 B C The symbol of Rhodes at the height of its greatness was the COLOSSUS OF RHODES, which stood in the harbor of the city The arts and sciences flourished here with the painter Protogenes and the astronomer Hipparchus Later, Rhodes was the seat of a famous school of rhetoric, Julius Caesar studied here, and throughout the early Christian era Rhodes retained a high literary reputation Rhodes continued under the Byzantine Empire until the capture (1204) of Constantinople by the host of the Fourth Crusade It then was under local lords, was held by the Genoese (1248–50), was annexed (1256) by the emperor of Nicaea, and was conquered (c 1282) by the Seljuks In 1309 it was taken by the KNIGHTS HOSPITALERS, who defended the island against the attacks of the Ottoman sultans for 50 years until its fall to the forces of Suleiman I (1522, final capitulation, Jan 1, 1523) The island had prospered under the knights but was neglected by the Turks With the other DODECANESE, Rhodes was taken by Italy in 1912 and was ceded by Italy to Greece in 1947 The city of **Rhodes** (pop 21,694) is a manufacturing center (notably of cigarettes, soap, brandy, carpets, and processed foods) and a port It is near the site of ancient Rhodes, planned in 408 B C by Hippodamus of Miletus After it had repulsed a siege by Demetrius I of Macedon in 305 B C the city erected the Colossus of Rhodes in the harbor The present city was built largely by the Knights Hospitalers and bears many relics of their occupation

Rhodes, Knights of see KNIGHTS HOSPITALERS

Rhodesia (rōdē'zhə, -shə), region of Africa, comprising NORTHERN RHODESIA and SOUTHERN RHODESIA It was named in 1894 for Cecil RHODES, the founder of the British South Africa Company, who took the territory for the company in 1888 The company governed from 1890 to 1923, when the region was divided along the Zambezi river See T. G Standing, *The Story of Rhodesia* (1936)

rhodium (rō'dēəm), hard, gray-ish-white metallic element (symbol = Rh, for physical constants, see ELEMENT, table) It is not affected by acids when pure, but when alloyed with platinum it reacts with aqua regia Alloyed with platinum, it is used in making thermocouples for measuring high temperatures, the element alone is used in plating reflecting surfaces and in treating metals (e g , silver) to prevent tarnish Rhodium occurs with platinum (which it resembles) in its ore in Europe, South America, and the United States. It was discovered (1803) by William Wollaston

rhododendron (rō"dədĕn'drən) [Gr , = rose-tree], any plant of the genus *Rhododendron*, shrubs found chiefly in mountainous regions and particularly abundant in Asia They commonly have large shining leathery evergreen leaves and clusters of large flowers of pink, white, or purplish color Popular for their handsome foliage and flowers, they are planted as single specimens or in groups. Rhododendrons, like most of the plants of the heath family, require an acid soil Many of those in cultivation are hybrids Native American species include the great laurel or rose bay (*Rhododendron maximum*), the common eastern species and the state flower of West Virginia, the catawba or Carolina rhododendron or mountain rose bay (*Rhododendron catawbiense*) of the southern mountains, and the western rhododendron (*Rhododendron californicum*), the state flower of Washington Rhodora, a shrub of Canada and the NE United States that has been immortalized by Emerson for its rose-purple two-lipped flowers, and AZALEA are sometimes included in the genus *Rhododendron* but are usually distinguished by their deciduous leaves.

Rhodope (rō'dupē), mountain range of the Balkan Peninsula, in S Bulgaria and in NE Greece. It extends from the Struma river in the west to the Maritsa in the east and rises to 9,596 ft. in the Musala, its highest point, in Bulgaria It was also known as Despoto Dagh.

rhodora: see RHODODENDRON.

Rhoecus (rō'kŭs), 6th cent B C , Greek sculptor of Samos He and Theodorus, another Samian, are said to have introduced better methods of casting bronze for sculpture Rhoecus is recorded as architect (probably with Theodorus) of the temple of Hera at Samos and the sculptor of the bronze figure *Night* at Ephesus

Rhondda, David Alfred Thomas, 1st Viscount (rŏn'dŭ), 1856–1918, British coal operator and statesman He entered his father's business in S Wales and eventually developed one of the largest coal combines in Britain He sat in Parliament from 1888 to 1910 but achieved no political prominence In the First World War he served the government in facilitating the munitions output and arranging war contracts in the United States and Canada In 1917 he was made food controller instituted a compulsory rationing system of vital foodstuffs, and successfully curbed food profiteering He was created baron in 1916 and viscount shortly before his death See biography by his daughter (1921) That daughter, **Margaret Haig, 2d Viscountess Rhondda,** 1883–, by special provision inherited his title She was active from 1906 to 1914 in the militant suffrage movement and became editor of *Time and Tide*, a liberal and feminist weekly

Rhondda (rŏn'dhə, Welsh rŏn'dhă), urban district (1931 pop 141,346, 1947 estimated pop 112,450), Glamorganshire, Wales, on the Rhondda river, a tributary of the Taff The lower Rhondda valley is the great coal-mining region of S Wales, the upper reaches are noted for beauty of scenery Ystradyfodwg (ŭstrădvŏ'dōog) was an ancient parish in the valley, Rhondda is still sometimes called Ystradyfodwg

Rhône (rōn), department (1,104 sq mi , pop 918,866), E central France, in LYONNAIS, on the west banks of the Rhone and Saône rivers BEAUJOLAIS forms its northern part LYONS is the departmental capital

Rhone, Fr *Rhône* (both rōn), Latin *Rhodanus*, river, 505 mi long, Switzerland and SE France Springing from the Rhone glacier in the upper Valais (Switzerland), it flows west through a narrow, flat valley which separates the Bernese from the Valaisan Alps and enters the Lake of Geneva near Montreux Leaving the lake at Geneva, it enters France and is joined by the Saône at Lyons Now navigable, it flows due S past Vienne, Valence, and Avignon and separates at Arles into the *Grand Rhône* and the *Petit Rhone*, which join the Mediterranean W of Marseilles and enclose the island of CAMARGUE Both branches being silted, a canal has been built connecting the Rhone with the port of Marseilles (see ROVE TUNNEL) With its impetuous Alpine tributaries (Isère, Drôme, Durance, and others), the Rhone has the largest water flow of all the French rivers Exploitation of its hydroelectric potential has only begun There are large power plants near Sion and Geneva (Switzerland), in France, the GÉNISSIAT DAM and allied projects are of the utmost economic importance Almost the entire Rhone valley is covered with excellent vineyards and fruit and vegetable gardens, in the south silkworms are cultivated for the Lyons textile factories, and olives and flowers are important products The Rhone is the cradle of Provençal culture Separating Languedoc from Provence, it forms the main common battery of both these provinces, on which Roman colonization has left an indelible imprint

Rhône, Bouches du, France see BOUCHES-DU-RHÔNE.

rhubarb or **pieplant,** hardy, large-leaved, acid perennial plant (*Rheum rhaponticum*), cultivated for the thick, fleshy leafstalks which are used in pies and sauces, especially in early spring It grows easily and responds well to good cultivation In market gardens near large cities it is forced in fields or under simple protective structures In the home garden one or two plants usually furnish all the rhubarb a family uses The plant is also occasionally grown for ornament where a coarse-leaved, background planting is needed It is sometimes called wine plant Medicinal rhubarb is obtained from the same plant and also from the dried rhizomes of other species of *Rheum* cultivated in Asia

Rhyl (ĭl), urban district (1931 pop 13,485, 1943 estimated pop 15,680), Flintshire, Wales, at the mouth of the Clwyd and NW of Chester, England. It is seaside resort.

rhyme or **rime,** the most prominent of the literary artifices used in VERSIFICATION. It was practically unknown to the ancient Greeks and Romans, although it was used in the oldest extant Oriental poetry. With the decline of the classical quantitative meters and the substitution of accentual meters, rhyme began to develop, especially in the sacred Latin poetry of the early Christian Church. In the Middle Ages, end rhyme, assonance, and ALLITER-

ATION were predominant in vernacular verse, and after 1300 rhyme came to be the outstanding metrical mark of poetry until the introduction of blank verse in the 16th cent By old writers alliteration and assonance were both called rhyme, but today only when the sound of the final accented syllable of a word (placed usually at the end of a line of verse) agrees with the final accented syllable of another word so placed, do we say that the two words rhyme. The vowels in the final accented syllables of the two rhyming words must have the same sound, as must the consonants (if any) succeeding the vowel The consonants preceding the vowel, however, must be dissimilar in sound to make a perfect rhyme, e g , *mark* and *bark*, good, *mark* and *remark*, bad The French distinguish a *rich* rhyme (in which the rhyming syllables are completely identical, e g , beauté and santé from a *poor* rhyme such as English allows (sage and rage) Two words cannot rhyme unless both are accented on the same syllable When rhymes are of one syllable or end in a consonant with no mute *e* following, as *sad* and *bad*, they are said to be a single or masculine rhyme Because of the great number of monosyllabic words in English, this type predominates in English verse When rhymes are of two syllables or, more properly, when they are not accented on the last syllable or end in a final mute *e* (*able* and *cable*), they are said to be weak endings, or double or feminine rhymes This type predominates in Spanish and Italian poetry, while German and French use both to about the same extent Triple rhymes, or three syllable rhymes, as *cheerily* and *wearily*, are less common, especially in serious verse Rhymes of more than three syllables are rare Some rhymes, as *wind* (noun) and *kind*, normally bad rhymes, have come into general use through "poetic license " Occasionally the initial words in a line may rhyme, more often there may be a rhyme within the line Rhymes when used in a set pattern combine with other metrical elements to form such verse structures as the sonnet, the Spenserian stanza, and the heroic couplet See rhyming dictionaries in English (which include discussions of versification) by John Walker (1775, revised and reprinted frequently), Burges Johnson (1931), and Clement Wood (1943, 1947)

Rhys, Ernest (rēs), 1859–1946, British author, editor, and anthologist His creative writing was incidental to his great services as an editor and anthologist He is best known as the editor of Everyman's Library from its inception (1906) till his death He wrote *Welsh Ballads* (1898, Eng tr , 1903), *Everyman Remembers* (1931), and *Wales England Wed* (1940), an autobiography

Rhys, Sir John (rēs), 1840–1915, Welsh Celtic scholar, grad Jesus College, Oxford, 1869 He was an authority on the Welsh language and Celtic folklore and was professor of Celtic at Oxford from 1877 to 1915 His chief works are *Celtic Britain* (1879), *The Welsh People* (1900), and *Celtic Folklore* (1901)

Rhys ap Gruffydd (rēs' ap grĭf'fĭdh), d 1197, ruler of South Wales, called the Lord Rhys The failure of the English troops under Henry II in Wales (1165) and Henry's later troubles with English barons and clergy and with the Irish contributed to Rhys's power He signed a pact with Henry which lasted until Henry's death The authentic history of the National Eisteddfod began with the festival Rhys held in Cardigan in 1176

Rhys ap Tewdr (tōō'dur), d 1093, ruler of South Wales (1078–93) His death at the hands of Norman invaders ended a period of order and opened the floodgates of Norman conquest

rhythm, that basic element of music which is concerned with the duration of sound It is concerned both with the relative duration of tones and with the stress or accent placed upon certain tones The formulation in the late 12th cent of the rhythmic modes—basic recurrent patterns which were adhered to in composition—led to the development of METER In the centuries immediately following, music achieved a rhythmic complexity such as is found in no later music except perhaps that of our own day The degree of rhythmic complexity and the types of rhythms used are major considerations in analysis of the style of a composer or a period In the 20th cent , composers have been much interested in the possibilities of polyrhythm, the simultaneous use of several rhythmic patterns whose accents do not coincide See C F A Willhams, *The Rhythm of Modern Music* (1909), H. D. Cowell, *New Musical Resources* (1930)

Riad, Riyad, or **Riyadh** (all rēäd'), city (pop, c 30,000), capital of Saudi Arabia, in the Nejd. It lies in a palm oasis c 230 mi inland from the Persian Gulf and is a nodal point of desert travel and trade A railroad connecting Riad to the oil-rich Hasa coast is under construction. Riad has been the center of the Wahabi movement in Islam since the early 19th cent The architecture, including notably the palace of King Ibn Saud, is simple in design, reflecting the austere tenets of that sect.

Rialto, city (1940 pop. 1,770, 1949 special census pop 3,104), S Calif , near San Bernardino, in a citrus-fruit region; inc 1911.

Rialto (rēäl'tō, Ital. rēäl'tō), bridge of Venice, Italy, over the Grand Canal. It is named after an island, the most ancient quarter of the city The bridge, built in 1588–91, consists of a single marble arch and has arcades lined with shops

Ribai (rĭ'bā, rībā'), father of one of David's valiant men 2 Sam 23 29, 1 Chron 11.31

Ribalta, Francisco (frănthĕ'skō rēbäl'tä), c 1555–1628, Spanish religious painter Most of his work was done in his native Valencia Ribalta was one of the first Spaniards to use the dramatic strong light and shade characteristic of his pupil Ribera His *Last Supper* (Colegio del Patriarca, Valencia) and *St. Francis* (Prado) are splendid examples of his work

Ribaut or **Ribault, Jean** (both zhä' rēbō'), c 1520–1565, French mariner and colonizer in Florida, b Dieppe When Admiral Coligny decided to plant a French colony as an asylum for Huguenots in the New World, which had been explored for France by Verrazano (1524) and Jacques Cartier (1534–35), he appointed Ribaut to lead the expedition Ribaut sailed from France in Feb , 1562, with five vessels carrying 150 colonists On May 1, after entering the St Johns river, which he called the River of May, he landed in Florida and claimed the land for France Sailing north, he established his colony on present Parris Island, S C (see SEA ISLANDS), naming it Charlesfort, and then returned to Dieppe in July, 1562 With Catholics and Huguenots at war, Ribaut fled to England in October and there published the English translation of his report to Coligny, *The Whole and True Discouerye of Terra Florida* (1563) Queen Elizabeth, after urging Ribaut to join Thomas Stucley in establishing an English colony in Florida, accused him of planning to escape to France with the ships, and Ribaut was for some time imprisoned in the Tower Meanwhile, René de LANDONNIÈRE in 1564 established a new post, Fort Caroline, near the mouth of the St Johns Charlesfort had been abandoned, the colonists sailing for France when aid did not come In 1565 Ribaut sailed with seven ships and reinforcements for Fort Caroline The Spanish, alarmed by the activities of these Frenchmen and heretics, dispatched Pedro MENÉNDEZ DE AVILÉS to drive them out Ribaut's fleet avoided a fight with Menéndez at the mouth of the St Johns, and the Spanish sailed to SAINT AUGUSTINE Ribaut followed intending to annihilate them With Fort Caroline virtually undefended, Menéndez marched overland and killed most of the colonists Ribaut's fleet, meanwhile, was wrecked in a storm He and his followers, stranded on the coast S of St Augustine, were captured by Menéndez, who massacred most of them His narrative has been reprinted in facsimile with notes by H M Biggar and a biography by Jeannette T Connor (1927) See Francis Parkman, *Pioneers of France in the New World* (1865)

Ribbentrop, Joachim von (yō'äkhĭm fŭn rĭ'buntrôp), 1893–1946, German foreign minister (1938–45) After the First World War he grew wealthy as a champagne merchant and early joined the National Socialist party He served as German ambassador at large (1935–36) and was ambassador to Great Britain (1936–38), returning a violent Anglophobe Succeeding Neurath as foreign minister, he was influential in the formation of the Rome-Berlin AXIS, in the conclusion of the Russo-German nonaggression pact of Aug , 1939, and in planning the attack on Poland that set off the Second World War He was dismissed by Admiral Doenitz after Hitler's death Arrested (1945) by British occupation authorities, he was convicted as a war criminal and hanged

Ribble, river of England It rises in the Pennines in the West Riding of Yorkshire and flows 75 mi SW across Lancashire to the Irish Sea through a long estuary, at the head of which is Preston

ribbon, relatively narrow width of woven fabric edged with selvage Ribbons have been used for centuries as girdles, headdress, badges, and decorations The blue and the red ribbon early indicated in England the Orders of the Garter and the Bath, respectively The Ribbon Society in Ireland, opposed to the Orange men, wore a green ribbon As a symbol of awards and favors, the ribbon has long been known and was used in heraldry In the 11th cent , ribbon was woven at Saint-Étienne, France, which with Saint-Chamond still leads in the manufacture Other centers include Basel, Switzerland, Krefeld, Germany, Coventry, England, and Pennsylvania and New Jersey Ribbon weaving is a special branch of textile manufacture, a modern loom weaving from 2 to 40 webs simultaneously. Novelty types include brocade, metallic, two-tone, and picot edge ribbons

ribbon grass, ornamental perennial grass (*Phalaris arundinacea picta*), a variety of the reed canary grass It has green leaves striped with white and is often cultivated in gardens and called gardener's-garters.

Ribe (rē'bŭ), city (pop. 6,770), SW Jutland, Denmark, near the North Sea coast One of the oldest and most important cities of medieval Denmark, it has kept its 12th-century cathedral (restored) and its ancient city hall. The episcopal palace dates from c.1500.

Ribeiro, Bernardim (bĕrnärdēm' rēbā'rō), 1482?–1552?, Portuguese poet Little is known with certainty of his life He was a figure at court, fell deeply in love, and after his beloved was married to someone else, he is supposed to have gone mad His *Saudades* [yearning], usually called *Menina e moça* (the first words of the text), tells of that affair under thin disguise It is a tale of chivalry in the guise of a pastoral romance in eclogues It is remarkable not only for its prevailing tone of melancholy—which became fashionable in bucolic poetry—but also for its tone of simple sincerity and its realistic details in the midst of a complicated romantic tale

Ribera, Jusepe, José, or **Giuseppe** (hōōsā'pā rēbā'ra, hōsā', jōōzĕp'pā), c 1590–c 1652, Spanish religious painter He studied in Valencia with Ribalta and in Rome, but early settled in Naples, then a Spanish possession There, under the nickname of Lo Spagnoletto [little Spaniard], he achieved immense popularity and became court painter to the Spanish viceroy Involved in numerous intrigues, Ribera led a life as dramatic as his painting, but his influence, prestige, and prosperity constantly rose In 1644 he was knighted by the pope The art of Ribera is somber but magnificent in color and luminosity A follower of M. A Caravaggio he surpassed the latter in dramatic power and humanity and in his truly Spanish capacity to combine mysticism and realism His favorite subjects were austere He often painted the single figure of an old saint or martyr stripped to the waist and modeled in strong light and shade against a dark background These intensely realistic studies of old and emaciated figures have extraordinary power, dignity, and beauty Among his many famous paintings are *Martyrdom of St. Bartholomew, Magdalen, Prometheus,* and *Isaac Blessing Jacob* (Prado), *Descent from the Cross* and *Communion of the Apostles* (Naples), *Adoration of the Shepherds* (Louvre), *Pieta* (National Gall , London), and *St Paul* (Hispanic Society, New York) Ribera also produced a few fine etchings.

Riblah (rĭ'blu) [Heb , =fertility] **1** Unidentified boundary landmark, N Palestine, Num 34 11, **2** Important city of ancient Syria, used by the Babylonians as a headquarters in the west It was on the Orontes at the foot of Lebanon, c 40 mi E of Tripoli Its situation at the beginning of the valley between Lebanon and Anti-Lebanon gave it strategic importance, guarding the entrance to Syria and Palestine 2 Kings 23 33, 25, Jer 39 5, 52 9. Diblath Ezek 6 14

Rib Lake, village (pop 1,042), central Wis , NW of Wausau and on Rib Lake, settled 1881, inc 1902

Rib Mountain, 1,940 ft high, central Wis , a quartzite outcrop near Wausau Its summit is a state park Winter sports are held here

riboflavin see VITAMINS

Ribot, Augustin Théodule (ōgustē' tāôdül' rēbō'), 1823–91, French genre painter and engraver In early life he was a commercial designer, but he gained a reputation as a vigorous, realistic painter in his late middle age His *Good Samaritan* and *Jesus among the Doctors* are in the Luxembourg Museum, Paris

Ribot, Théodule, 1839–1916, French psychologist He was professor of experimental psychology at the Sorbonne and later at the College de France His many works in his field include *Heredity a Psychological Study of Its Phenomena, Laws, Causes, and Consequences* (1873, Eng tr , 1875), *The Diseases of the Will* (1884, Eng tr , 1884), *The Diseases of Personality* (1885, Eng tr , 1887), and *The Psychology of the Emotions* (1896, Eng tr , 1897)

Ricardo, David (rĭkär'dō), 1772–1823, British economist, of Dutch-Jewish parentage He was able to retire at 25 on the proceeds of his brokerage business, thereafter he devoted himself to study, writing, and local county affairs save for a brief period in Parliament at the end of his life Ricardo propounded a law of rent, influenced by MALTHUS, the so-called "iron law of wages", and a labor theory of value His law of rent is summed up in the statement that rent is a result and not a cause of price, the "iron law of wages" asserts that, all things considered, wages cannot rise above the lowest level necessary for subsistence, while his theory of value maintains that in exchange the value (not the price) of goods is measured by the amount of labor involved in their production Though Ricardo was a foe of the corn laws and in Parliament once suggested a levy on all property as a means of paying the national debt, his views were in general narrow, and he lacks Adam Smith's social insight and sympathies His application of theory to practice and vice versa was to some extent the foundation of the science of economics. His theory of value had tremendous influence on radical economists, and his recommendations for "sound" currency and banking practices were paramount in the 19th cent Ricardo's chief work was *Principles of Economics and Taxation* (1817).

Ricasoli, Bettino, Barone (bĕt-tē'nō barō'nā rēkä-sō'lē), 1809–80, Italian statesman. An active propagandist for Italian unity, he became (1859) head of the provisional government of Tuscany

after the flight of Grand Duke LEOPOLD II. As a result of his skillful policy the annexation of Tuscany to the kingdom of Sardinia was overwhelmingly voted in the plebiscite of 1860 Ricasoli succeeded Cavour as Italian premier (1861–62) During his second premiership (1866–67) he elaborated a proposal which tended in substance to separate Church and state, but strong opposition in the elections led to his resignation

Ricci, Matteo (mät-tā'ō rēt'chē), 1552–1610, Italian missionary to China He entered the Society of Jesus (1571) and was sent to the Indies (1578) He worked at Goa and Cochin until 1582, when he was called to Macao to enter China In 1583 he and his companion, Father Ruggieri, were at the capital of Liangkwang (present Kwangtung and Kwangsi provs.), studying the language and culture They found ready acceptance among the official classes, for the Chinese took an intense interest in their possessions, such as clocks and Western paintings The missionaries wrote tracts on Christianity, including a dialogue In 1595 Father Ricci, now alone moved to Nanchang, a center of erudition After 1601 he lived at Peking, where he became a court mathematician and astronomer, he made few converts, but he brought Christianity into good repute His maps were eagerly perused by the Chinese, who gained from him their first notion of modern Europe In return, Ricci sent back to Europe the first modern detail on China He composed a number of treatises, the principal being a catechism, *True Doctrine of God*, which was widely printed in China He made a careful study of the translation of Christian teachings into Chinese Concerning the attitude Christians should have toward Chinese official ceremonies, he concluded that the rites expressed respect only, not worship, for Confucius and the imperial ancestors See Henri Bernard, *Matteo Ricci's Scientific Contribution to China* (1937)

Riccio, Andrea see BRIOSCO, ANDREA

Riccio, David see RIZZIO, DAVID

Riccio, Domenico (dōmā'nēkō rēt'chō), c 1516–1567, Italian painter of the Veronese school, called Brusasorci. Most of his paintings, pictorial in style, are in Verona, including his masterpiece, *The Entry of Charles V into Bologna*, a fresco (Ridolfi Palace) He is represented also in the Johnson Collection, Philadelphia Museum of Art

Rice, Alice Caldwell Hegan, 1870–1942, American author, b Shelbyville, Ky , wife of Cale Young Rice Best known for the widely popular *Mrs Wiggs of the Cabbage Patch* (1901), she also wrote *Lovey Mary* (1903), *Sandy* (1905), *Miss Minks' Soldier and Other Stories* (1918), and *Mr Pete & Co* (1933) With her husband she wrote *Turn about Tales* (1921) and *Winners and Losers* (1925) See her autobiography, *The Inky Way* (1940)

Rice, Cale Young, 1872–1943, American poet and dramatist, b Dixon, Ky , grad Harvard (B A , 1895, M A , 1896) He married Alice Caldwell Hegan in 1902 His volumes of verse include *With Omar* (1900), *Sea Poems* (1921), and *Bitter Brew* (1925) He wrote many poetic dramas, two novels, and reminiscences, *Bridging the Years* (1939)

Rice, Dan, 1823–1900, American circus clown, whose real name was Daniel McLaren He was a wandering showman, an acrobat in Barnum's circus, and later a partner in Spalding's circus He performed in many other circuses and gained a wide reputation For his devotion to the works of Shakspere he was called the "Shakspere clown"

Rice, Elmer, 1892–, American dramatist, b New York city, studied law His first play, *On Trial* (1914), was highly successful for its employment of the then unique flashback It was also popular as a moving picture *The Adding Machine* (1923), an expressionistic play which startled audiences with its bluntness, and *Street Scene* (1929), the Pulitzer Prize winner of 1929, established Rice as a leading American dramatist Other plays include *Subway* (1929), *Counsellor-at-Law* (1931), and *We, the People* (1933) *Two on an Island* (1940), *Flight to the West* (1941), *A New Life* (1943), and *Dream Girl* (1945) all starred his wife, Betty Field *Imperial City* (1937) and *The Show Must Go On* (1949) are novels

Rice, Thomas Dartmouth, 1808–60, American singer and comedian, b New York city A strolling player, he first appeared in his famous song-and-dance act, "Jim Crow," c 1828, at Louisville, Ky , and repeated it in 1832 at the Bowery Theater, New York, and later in London with sensational success He popularized the NEGRO MINSTREL See Carl Wittke, *Tambo and Bones* (1930)

rice, cereal grass (*Oryza sativa*), native to the deltas of the great Asiatic rivers, the Ganges, the Tigris, the Yangtze, and the Euphrates Its cultivation has been carried into all regions where conditions of heat and moisture are favorable to its growth, mainly subtropical rather than hot or cold Modern culture makes use of irrigation, and a few varieties of rice may be grown with only a moderate supply of water The plant is an annual, from 2 to 6 ft tall, with a round, jointed stem, long, pointed leaves, and seeds borne in a dense head on separate stalks In S China and some other warm countries two crops a year may be grown. In the East the seed is broadcast in highly fertilized mud; transplanting is done when the young growth is 2 or 3 in. high In the United States the seed is usually drilled, like wheat, and the ground is kept wet until germination When the young plants appear they are flooded, later drained and cultivated, then flooded again Methods of growing differ greatly in different localities, but in most Far Eastern countries the primitive methods of growing and harvesting rice, which have been followed for centuries, are still practiced In lowlands along rivers, canals are used to irrigate the fields, on higher grounds, as in Arkansas and Texas, pumps regulate the supply of moisture, in China and Japan some hillside terraces are watered by pumps operated by treadmills In many parts of the Orient harvesting is done by hand, but in most Western countries cutting and threshing are done by machinery Rice when it comes from the threshing is known as paddy (rice fields are also called paddy fields or rice paddies) and is covered by a brown hull or coating which must be removed before marketing This is done in the Orient mainly by flailing, treading, or working in a mortar, though machinery is being introduced, in the United States a special mill is used After husking, the grains are usually polished and become white and glistening Brown rice, however, has a much greater food value than white, since the brown coatings and germ are rich in vitamins of the B-complex group and in minerals Use of white rice as a staple food when unsupplemented by foods having vitamins, minerals, and other nutrients results in deficiency diseases As a food, rice is rich in starch but low in protein and fat In China and Japan it is eaten with sauces made from the SOY BEAN, which supplies the lacking elements In combination with meat, oil, or cheese rice is a valuable food. Since it is deficient in gluten, it will not make bread unless used with the flour of other grains For feeding domestic animals, the bran, meal, and chopped straw are useful, especially when mixed with the polishings or given with skim milk The straw, which is soft and fine, is plaited in the East for hats and shoes, and the hulls fill beds and supply packing material Laundry starch is manufactured from the broken grain, which is also used by distillers A distilled liquor called arrack is sometimes prepared from a rice infusion, and in Japan the beverage sake is brewed from rice The leading rice-producing countries are India, China, Japan, Indo-China, Java, Egypt, and Brazil From the 17th cent , rice culture has been carried on in the United States, especially in Louisiana, Texas, Arkansas, California, and South Carolina See F H King, *Farmers of Forty Centuries or, Permanent Agriculture in China, Korea, and Japan* (originally privately printed, later reprinted)

rice, wild see WILD RICE

rice bird see BOBOLINK

Rice Institute, at Houston, Texas, nonsectarian, coeducational, chartered 1891, given a bequest by William Marsh Rice, opened 1912 It offers university courses in engineering, science, architecture, and liberal arts The 400-acre campus with Italianate buildings is a show place of the city There are no tuition fees

Rice Lake, city (pop 5,719), NW Wis , NW of Eau Claire, on Rice Lake and the Red Cedar river, in a dairy region, inc 1887 It grew as a lumber town and is a center for the surrounding farm and resort area There are Indian mounds

Rich, Edmund see EDMUND, SAINT

Rich, John, 1692–1761, English pantomime actor and originator of pantomime in England He imported dancing and dumb-show entertainments from the Continent and in his annual productions (1717–60) introduced pantomime to England Uneducated and uncouth in speech, he chose the role of Harlequin and, under the name Lun, first appeared at Lincoln's Inn Fields in 1716 His *Harlequin Sorcerer* (1717) took London by storm, and the success of his production of John Gay's *Beggar's Opera* (1728) enabled him to build Covent Garden theater and open it in 1732 Garrick was his only rival as Harlequin, but Garrick spoke the part See A E Wilson, *King Panto* (1935)

Rich, Penelope, Lady, 1562–1607, the "Stella" of Sir Philip Sidney's *Astrophel and Stella* (1591) Daughter of Walter Devereux, first earl of Essex, she married Lord Rich (later earl of Warwick), after a divorce she married the earl of Devonshire

Rich, Richard, fl 1610, British adventurer Few facts concerning his life are known except that he sailed for Virginia in 1609 and upon his return to England published a narrative poem, *News from Virginia* (1610) This poem includes an account of a shipwreck on the Bermuda rocks, and it is possible that some of the scenes in *The Tempest* may have been suggested to Shakspere by Rich's book There is a facsimile edition of the poem (ed by W F. Craven, 1937)

Richard I, Richard Cœur de Lion (kŭr" dŭ lē'ŭn), or **Richard Lion-Heart,** 1157–99, king of England (1189–99), duke of Aquitaine and Normandy, and count of Anjou. He saw little of England and was concerned with it chiefly as a source of revenue, but his career and his personal qualities have made him a central figure in English romance and an English symbol of chivalry He was the third son of HENRY II, against whom he was at war when only 16 years old (1172–73) as an ally of his mother (ELEANOR OF AQUITAINE) and his two older brothers Later he was at war with his brothers Again in 1189 he warred with his father, defeated him, and after Henry's death succeeded him Though Richard and his father quarreled, they seem to have had genuine mutual affection The most memorable of Richard's many warlike enterprises was the Third Crusade, in which he was allied with PHILIP II of France Departing in 1190, Richard captured Messina and Cyprus en route and married Berengaria of Navarre. He and Philip stormed Acre, and although he did not capture the strongly fortified city of Jerusalem, his valiant conduct made him the subject of many stories Philip left for France, where he plotted with Richard's brother John to divide England After Richard had made a treaty with Saladin that allowed Christians access to the holy places of Jerusalem, he started home He was captured and imprisoned by Leopold II (margrave of Austria) and held in the castle of Dürnstein, where the troubadour BLONDEL DE NESLE is supposed to have found him Leopold was compelled to surrender Richard to Emperor Henry VI, who released him only after Richard was obliged to pay a huge ransom, raised by his English subjects, and to surrender England, receiving it back as a fief Richard returned to England briefly in 1194 to try to repair the treachery of his brother JOHN and to raise funds Thereafter he fought Philip in France, in the process building the famous CHÂTEAU GAILLARD He was killed in a minor engagement Richard's ministers, including William of LONGCHAMPS and Herbert WALTER, were able to rule in the king's long absences by the excellent administrative system set up by Henry II and extended by them By Richard's wish, John succeeded him He is the subject of the romance *Richard Cœur de Lion* (c 1300) and of Maurice Hewlett's *Richard Yea-and-Nay* (1900), and his chivalrous reputation is known to all English-speaking schoolboys through Sir Walter Scott's *Ivanhoe* See Kate Norgate, *Richard the Lion Heart* (1924)

Richard II, 1367–1400, king of England (1377–99) b Bordeaux, France He was the son of Edward the Black Prince, who died in 1376 On the death of his grandfather, Edward III, in 1377, Richard of Bordeaux came to the throne During his minority, his uncle JOHN OF GAUNT was the most influential single noble, but the struggle for power among several rival factions continued the inefficient governments inherited from his predecessor Disastrous wars with France and Spain led in 1380 to a poll tax, a severe hardship for the lower classes This and other political grievances—backed by discontent at repressive labor legislation and the decaying manorial system—led to the peasant uprising of 1381, in which Wat Tyler and John Ball were most conspicuous The king, then but 14 years old, met the chief body of insurgents outside London and with great courage won their allegiance Soon afterwards the rebellion collapsed The royal concessions—abolition of serfdom, market monopolies, and restrictions on commerce—and the royal pardons were revoked, the rebels were ruthlessly persecuted In 1382 Richard married Anne of Bohemia, and the next year he asserted his full independence as ruler There followed another struggle for power between the court party of Richard, led by Michael de la Pole, earl of Suffolk, and that of the barons, led by Thomas of Woodstock, duke of Gloucester The baronial party had Richard's favorite ministers dismissed and established in 1388 a council of lords appellant The following year, however, Richard reasserted himself and with the counsel of John of Gaunt, now returned from Spain, ruled in comparative peace for several years After Anne's death Richard went (1394) to Ireland to settle troubles there, returned, and in 1396 married a young French princess, Isabelle or Isabella, to obtain a long truce with France In 1397 Richard had Gloucester murdered and some of the other appellants executed or banished and won from Parliament considerable revenue Oppressive taxes and the king's highhanded actions made England ripe for rebellion When in 1399 the king's banished cousin, Henry of Bolingbroke, duke of Hereford, returned to England, Richard himself came back hastily from Ireland to find his abdication inevitable Hereford was crowned Henry IV in September of that year Thus the house of Lancaster succeeded the Plantagenets Richard was imprisoned in Pontefract Castle and there either starved himself to death or was murdered the following year Not an ungenerous or unable man, Richard lacked that strength of character and devotion to royal business which alone might have surmounted the political, economic, and religious tensions of his period Chaucer, Gower, Langland, and Wyclif make his reign outstanding in the literary and ecclesiastical history of England. Perhaps it was through Anne that John Huss learned of Wyclif, whose follower he became. Shakspere's *Richard II*

is a subtle interpretation of the king's character based largely on Holinshed's account. See biography by Anthony Steel (1941).

Richard III, 1452–85, king of England (1483–85). The younger brother of Edward IV, of the house of York, Richard, as duke of Gloucester, served his brother faithfully during Edward's lifetime, fighting in England and invading Scotland On the death of Edward IV, his eldest son, then but 12 years old, was proclaimed king as EDWARD V. Richard, with the aid of Henry Stafford, 2d duke of Buckingham, gained control of the young king and nullified the influence of Edward IV's widow, Elisabeth Woodville, and her party These actions were popular enough, but Richard then proceeded to attack the legitimacy of Edward's children and have himself proclaimed king Upon the supposed murder (later almost conclusively proved) of Edward V and his brother in the Tower, a rebellion broke out (1483) led by Richard's erstwhile supporter, Stafford, in favor of the earl of Richmond (later HENRY VII) This was unsuccessful, and Stafford was executed In 1485, however, Richmond landed in England, and Richard was defeated and killed in the battle of Bosworth Field Richmond ascended the throne as HENRY VII Richard was the last of the Yorkist kings, and his death marked the end of the Wars of the ROSES His character has been the subject of some dissension among historians but the general unfavorable impression of him has been that presented in Shakspere's *Richard III*

Richard, earl of Cornwall, 1209–72, titular king of the Romans (see HOLY ROMAN EMPIRE), son of John of England Knighted in 1225 by his brother, Henry III of England, he rebelled against Henry in 1227 and received the grants of land and wealth he regarded as his right, as well as the title earl of Cornwall He went on expeditions, none too successful, to make good English claims in Gascony and Poitou, but all his life preferred arbitration to war He went on crusade in 1240 and, refusing to be drawn into the rivalry of the Knights Templars and Knights Hospitalers in the Holy Land, ratified (1241) a truce begun by his predecessor, Thibaut IV of Navarre and Champagne, with Egypt, and helped Robert of Burgundy rebuild Ascalon On an expedition to Gascony undertaken by Henry immediately on Richard's return, Richard was barely able to save Henry from complete military disaster Henceforth, and after Richard's marriage in 1243 to the queen's sister, Richard was the king's most businesslike adviser and acted as regent when Henry was absent. He became the wealthiest man in England Against his advice Henry accepted for Prince Edward (Edward Crouchback) the Sicilian crown, which Richard had refused Richard himself wanted to be emperor and to that end had himself elected king of the Germans (1257) The minority of the electors who did not favor him stubbornly adhered to their candidate, Alfonso X of Castile Richard was crowned in Germany as king of the Romans and made four visits to Germany, but never ruled all of the country When the BARONS' WAR broke out in earnest, Richard was one of Henry's chief supporters, was captured at the battle of Lewes, and was held prisoner until after the battle of Evesham (1265) In the settlement afterward he advised moderation against the rebels See Noel Denholm-Young, *Richard of Cornwall* (1947)

Richard City, city (pop 1,008), S Tenn , at the Ala. line near Chattanooga Cement is produced

Richard Cœur de Lion see RICHARD I, of England

Richard de Bury (bʊrˈē), 1287–1345, English bibliophile and bishop of Durham His name was Aungerville, but he was called Bury from his birthplace, Bury St Edmunds Under Edward III he served as treasurer and as chancellor and went on numerous diplomatic missions In *Philobiblon* he describes his experiences as a book collector See edition by E. C Thomas (1888, Medieval Library, 1925) of the Latin text with an English translation

Richard Lion-Heart see RICHARD I, of England

Richard of Cirencester (sīsˈĭtur, sĭrˈĭnsĕstur), d c 1401, English chronicler, monk of the Benedictine Abbey of St Peter's, Westminster He compiled the *Speculum historiale de gestis regum Angliae* [historical mirror of the deeds of the English kings], covering the period 447–1066 There is little original material, and as the compilation was carelessly done, the work has small value today Richard's name is better known for the famous forgery (1757) of Charles Bertram, who alleged that Richard was the author of a tract *De situ Britanniae*.

Richard of Devizes (dĭvīˈzĭz), late 12th cent , English chronicler and monk of St Swithins, Winchester He wrote a lively *Chronicon de rebus gestis Ricardi primi* [chronicle of the deeds of Richard I], a valuable historical source having information not found elsewhere. He may also have been the author of part (as far as 1202) of the annals of Winchester

Richard of Saint Victor, d. 1173, Scottish monk, prior of the Abbey of St. Victor, Paris. His principal importance is in the history of mystical theology, in which he is a successor to HUGH OF SAINT VICTOR. In *Benjamin Major* and *Benjamin Minor* he defined anew the stages of mystic contemplation, which he divided into six. He also wrote on rational theology, especially on the Blessed Trinity and on the Incarnate Word

Richards, Ellen Henrietta (Swallow), 1842-1911, American chemist, educator, and organizer of the home economics movement, b Dunstable, Mass , grad Vassar, 1870 In 1870 she began the study of chemistry at the Massachusetts Institute of Technology, being the first woman to enter that school and from 1884 until her death was an instructor there in sanitary chemistry She became (1872) assistant chemist to the Massachusetts state board of health, where she specialized in water analysis After her marriage (1875) she became a pioneer in the systematizing and simplifying of housekeeping to free women for broader living The last 30 years of her life were given to the development of what she called euthenics, "the science of controlled environment" With the spur of her enthusiasm and scientific knowledge, the teaching of HOME ECONOMICS made rapid progress in the first decade of the 20th cent She was an organizer and first president (1908) of the American Home Economics Association Her publications include *Euthenics* (1910) and *Conservation by Sanitation* (1911) See biography by C L Hunt (1912)

Richards, Joseph William, 1864–1921, American chemist and metallurgist, b England, grad Central High School, Philadelphia (B A , 1882) He was at Lehigh Univ from 1887 (as professor from 1903) He wrote *Aluminum* (1887) and *Metallurgical Calculations* (3 vols , 1906–8)

Richards, Laura Elizabeth (Howe), 1850–1943, American author of children's books, b Boston, daughter of Julia Ward Howe and Samuel G Howe She is best known for *Captain January* (1890) and for the Hildegarde books for girls

Richards, Theodore William, 1868-1928, American chemist, b Germantown, Pa , grad Harvard (B A , 1886, Ph D , 1888) After studying abroad he taught at Harvard from 1894 For his work in determining the atomic weights of many elements he received the 1914 Nobel Prize in Chemistry He also worked on electrochemistry, growth of crystals, and the compressibility of atoms and evolved a new atomic theory

Richards, Thomas Addison, 1820-1900, American landscape painter, illustrator, and author, b London He came to the United States in 1841 Richards organized (1858) and was first director of the School of Design for Women at Cooper Union and from 1867 taught art at New York Univ His landscapes, views from many parts of the United States and Europe, include *Warwick Castle*, *Pennsylvania Homestead*, and *French Broad River* For his illustrations for *Harper's Magazine* and elsewhere he drew directly on the wood the scene to be engraved He wrote and illustrated *The Romance of American Landscape* (1854) and *American Scenery* (1854) He became a member of the National Academy of Design in 1851

Richards, William Trost, 1833–1905, American marine and landscape painter, b Philadelphia, studied and painted in Italy, France, Germany, and England He is known especially for his marines He is represented by *The Bell Buoy* (Pa Acad of the Fine Arts), *Germantown Woods* (N Y Public Library), *On the Coast of New Jersey* and *On the Coast of New England* (Corcoran Gallery), and *Rocky Coast, Indian Summer*, and a series of 85 water colors (Metropolitan Mus)

Richardson, Clifford, 1856–1932, American chemist, b Worcester, Mass , grad Harvard, 1877 He served in various departments of the Federal government as chemist and as consulting engineer and is known for his work on asphalt, native bitumens, cements, and the chemistry of American cereals

Richardson, Dorothy M , 1882–, English novelist, whose married name is Mrs Alan Odle Her important work is *Pilgrimage* (12 vols , 1915–38, omnibus ed, 1938) She prefers the label "interior monologue" for her work as more expressive of contemplative consciousness than "stream of consciousness" See study by J C. Powys (1931)

Richardson, Ernest Cushing, 1860–1939, American librarian and bibliographer, b Woburn, Mass , grad. Amherst, 1880, and Hartford Theological Seminary, 1883, Ph D Washington and Jefferson College, 1887 He was assistant librarian at Amherst (1879-80), librarian and professor of bibliology at Hartford Theological Seminary (1884-90), and director of Princeton Univ libraries and professor of bibliography (1890–1925) In 1925 he became consultant to the Library of Congress He was the author of many professional papers and books, including *Classification, Theoretical and Practical* (1901), *Special Collections in American Libraries* (1927), and *Some Aspects of Cooperative Cataloging* (1934)

Richardson, Henry Handel, pseud. of **Henrietta Richardson Robertson,** 1870–1946, British novelist, b Melbourne, Australia. She was named Ethel Florence Lindesay Richardson, but used the name Henrietta Her years of study at the Presbyterian Ladies' College, Melbourne, were reflected in her book *The Getting of Wisdom* (1910) When she was 18, she and her sister were taken by their mother to Leipsig to study music Soon her engagement to be married and her realization that she would never be a concert pianist led her to give up music study, remove to England, and begin translating and writing She and John G Robertson were married in 1895 and lived in Germany until 1903 when he became professor of German at the Univ of London Her first novel, *Maurice Guest* (1909) is a subtle story of a musician Her major work and the most outstanding in Australian fiction is the trilogy published in 1930 as *The Fortunes of Richard Mahony*, it consists of *Australia Felix* (1917), *The Way Home* (1925), and *Ultima Thule* (1929)—the whole a tragedy of personal failure She also wrote *The End of a Childhood* and *Other Stories* (1934) and a fictional biography of Cosima Wagner, *The Young Cosima* (1939) See her autobiographical fragment, *Myself When Young* (1948)

Richardson, Henry Hobson, 1838–86, American architect, b St James parish, La , grad Harvard 1859, studied at the École des Beaux-Arts, great grandson of Joseph Priestley. He was a major exponent of romanticism in American architecture and was noted for his revival of Romanesque design. After employment in Paris, he began practice (1866) in New York but moved to Brookline, Mass in 1874 Trinity Church in Boston (1872–77) was his first monumental, and his finest work, it French Romanesque design was a departure from the Gothic revival which controlled contemporaneous American architecture In this and in subsequent works Richardson developed a free and strongly personal interpretation of Romanesque design The style, known as Richardson Romanesque, spread and won many followers, exerting great influence upon the building arts of the period especially in the young, growing cities of Chicago Cleveland, Cincinnati, and St Louis But the style was finally superseded by the Roman classicism which the World's Columbian Exposition at Chicago, 1893, strongly reestablished Richardson buildings showed strength, simplicity, and a skilful employment of varied materials In his country houses of wood he produced a distinct American type He elevated the position of the minor craft in his work, and to artists such as Augustus Saint Gaudens and John La Farge he entrusted the important units of decoration Among Richardson principal works are the New Brattle Square Church, Boston, public library, Woburn, Mass courthouse and jail, Pittsburgh, Sever Hall and Austin Hall, Harvard, parts of the state capitol at Albany, in association with Eidlety and Olmstec Glessner House, Illinois Institute of Technology Chicago See H R Hitchcock *The Architecture of H H Richardson and His Times* (1936)

Richardson, John, 1796 1852, first Canadian novelist to write in English He wrote a number of frontier romances, of which *Wacousta* (1832) and *The Canadian Brothers* (1840) are the best His personal experiences as a British soldier in Canada and in Europe furnished material for several vivid autobiographical and historical works such as *Personal Memoirs* (1838) and *The War of 181* (1842) See biography by W. R Riddell (1923)

Richardson, Sir Owen Willans, 1879–, English physicist He served as professor at Princeton Univ (1906–14) and at King's College, London (from 1924) For his researches in electrons, by which he established Richardson's law of the motions of electrons emanating from hot bodies, he received the 1928 Nobel Prize in Physics He has also worked on photoelectricity, the gyromagnetic effect, spectroscopy, X rays, and the structure of the hydrogen molecule. He was knighted in 1939 Among Richardson's books are *The Electron Theory of Matter* (1914), *The Emission of Electricity from Hot Bodies* (1916), and *Molecular Hydrogen and Its Spectrum* (1933)

Richardson, Samuel, 1689–1761, English novelist b Derbyshire When he was 50 and established as a prosperous printer, he was asked to compose a guide to letter writing While preparing it, the idea of introducing a central theme occurred to him, he interrupted his task to write and publish his novel of morals in letter form, *Pamela, or, Virtue Rewarded* (2 vols , 1740) The guide known now as *Familiar Letters*, came out in 1741, just before Vols III and IV of *Pamela* He wrote two more long, epistolary novels, *Clarissa, or, The History of a Young Lady* (7 vols , 1747–48) and *The History of Sir Charles Grandison* (7 vols , 1753–54) His novels are didactic, moral, and sentimental and were enormously popular *Pamela* was recommended even from pulpits and was dramatized several times, Rousseau is said to have drawn inspiration from *Clarissa* Richardson was a poor storyteller he won his secure place among the great novelists by his minute realism, his characterizations of women, and his sentimentalism See biography by A D McKillop (1936), bibliographical study by W M Sale, Jr (1936)

Richardson, William Adams, 1821–96, American jurist and U S. Secretary of the Treasury, b Tyngsboro, Mass , grad Harvard, 1843 Admitted to the bar in 1846, he helped to codify the statute law of Massachusetts in 1855 He was appointed Assistant Secretary of the Treasury (1869) by President Ulysses S. Grant, handled the Treasury's

funding operations in London (1871–72), and succeeded his sponsor, George S Boutwell, as Secretary in 1873 In the Panic of 1873 he yielded to the pressure of inflationists and reissued $26,000,000 in greenbacks, though their legality was doubtful Following an investigation into the shady contracts awarded to John D Sanborn for tax collections, by which the Treasury was defrauded of money it would have collected, Richardson was censured and forced to resign Grant, however, appointed (1874) him to the U S Court of Claims, of which he became chief justice in 1885 He wrote *Banking Laws of Massachusetts* (1855) and *Practical Information concerning the Public Debt of the United States* (1872, 3d ed , 1873)

Richberg, Donald Randall, 1881–, American public official, b Knoxville, Tenn , grad Univ of Chicago, 1901, and Harvard Law School, 1904 He practiced law in Chicago, served as attorney for the city and for Illinois, and became nationally known after specializing in railroad and labor legislation He helped draft (1933) the act that established the National Recovery Administration and was its administrator just before NRA was declared (1935) unconstitutional His writings include *A Man of Purpose* (1922), *Tents of the Mighty* (1930), and *Government and Business Tomorrow a Public Relations Program* (1943)

Richelieu, Armand Emmanuel du Plessis, duc de (rĭ'shlōō, Fr armäN' ēmanüēl' du plĕsē' duk' du rēshülyû'), 1766–1822, French statesman An émigré, he was in the service of Russia as governor of Odessa (1803) and of the Crimea (1805) Made chief minister by Louis XVIII after the Hundred Days (1815), he secured the quick payment by France of the indemnity imposed by the Treaty of Paris of 1815 and thus hastened the evacuation of occupation troops In his domestic policy, Richelieu favored leniency toward the ex-revolutionists and Bonapartists, thus displeasing the ultraroyalist faction headed by the king's brother, the comte d' Artois (later Charles X) In 1816 Richelieu advised the king to dissolve the extreme reactionary chamber of deputies (the so-called *chambre introuvable*) rather than submit to its program Richelieu resigned in 1818, but returned to power in 1820, when the murder of the duc de Berry caused the fall of Decazes His measures against the radicals were not sufficient to suit the taste of the comte d' Artois, who applied pressure on Louis XVIII and secured (1821) Richelieu's dismissal With Richelieu's successor, Villèle, the ultras came into power

Richelieu, Armand Jean du Plessis, duc de (Cardinal de Richelieu) (zhä), 1585–1642, French prelate and statesman, minister of Louis XIII, cardinal of the Roman Church Consecrated bishop of Luçon (1607), he was chosen a delegate of the clergy to the States-General (1614) In 1616, through the favor of Marie de' Medici, he became a secretary of state He went into exile with Marie after the murder of Concini (1617) and was her emissary (1621) to the king after the death of Luynes In 1622 he was made cardinal He became chief minister in 1624 The growing jealousy of Marie endangered his position, but he succeeded in procuring her exile in 1630 From then until his death he was in complete control of the government Richelieu's domestic policy aimed at centralizing authority by destroying the power of the Huguenots and the great nobles The Huguenots were humbled by the capture of La Rochelle (1628), the Peace of Alais (1629) ended their special political privileges —without, however, denying them religious toleration Conspiracies of the nobles, who invariably found a figurehead in Gaston d'Orléans, were rigorously suppressed In foreign affairs, Richelieu reacted against Marie de' Medici's pro-Hapsburg diplomacy in favor of the traditional French anti-Spanish and anti-Austrian policy To this end he strengthened the army and navy, made alliances with the Netherlands and the German Protestant states, and in 1631 subsidized Gustavus II of Sweden against the emperor In 1635 he formed an active alliance with Sweden and Bernhard of Saxe-Weimar, and France entered the Thirty Years War The terms of the Peace of Westphalia (see Westphalia, Peace of), though reached six years after his death, were in general conformity with his aims Heavy taxation incident upon the expenses of the war and Richelieu's ignorance of finance depleted the treasury and caused widespread dissatisfaction, which later led to open revolt. On the other hand, Richelieu expanded commerce by organizing companies to trade in the Indies and Canada Richelieu was a patron of the arts and the founder of the French Academy Among his literary works are his memoirs and the *Testament politique* Richelieu's appearance is well known from the portrait by Philippe de Champaigne See biographies by Richard Lodge (1914), Karl Federn (1928), Auguste Bailly (1936, Eng. tr , 1936), and Carl Burckhardt (1940), J B Perkins, *Richelieu and the Growth of French Power* (1900), F C Palm, *The Economic Policies of Richelieu* (1922)

Richelieu (rĭ'shülōō), river, c 75 mi long, issuing from the north end of Lake Champlain, near the N.Y.–Quebec line, and flowing N across S Quebec to the St Lawrence river at Sorel, at the head of Lake St Peter Discovered by Samuel de Champlain in 1609, the river was the route of early explorers. It played a role in the French and Indian War, in the American Revolution, and in the War of 1812 and was important in the logging industry It is a link in the waterway connecting the Hudson and St Lawrence rivers

Richepin, Jean (zhäN' rēshpĕ'), 1849–1926, French poet, dramatist, and novelist His affiliations with the naturalistic school are most evident in the frankness of his poems and in the realistic portrayals in his plays His more successful plays include *Par le glaive* (1892) and *Le Chemineau* (1897) Imprisoned for the "offense to morals" in his *La Chanson des gueux* [the song of beggars] (1876), he later was made a member of the French Academy

Richer (rēshā') fl c 1000 French chronicler, a monk of the abbey of St Remi at Rheims There he was a protégé of Archbishop Gerbert (Pope Sylvester II) He composed a continuation of Hincmar's annals, extending from 884 to 998 It is the prime source on French history of this period

Richet, Charles Robert (shärl' rōbĕr' rēshā'), 1850–1935, French physiologist From 1887 to 1927 he was professor at the Univ of Paris He studied the nervous system, animal heat, serum therapy, and, especially, anaphylaxis—the sensitivity of the body to alien protein substances For his work on anaphylaxis he received the 1913 Nobel Prize in Physiology and Medicine He was also interested in psychical research

Richfield 1 Village (pop 6,750), SE Minn , just S of Minneapolis 2 City (pop 3,584), co seat of Sevier co , S central Utah, in the Sevier river valley Settled in 1863 by Mormons, it was abandoned in the Indian war (the Black Hawk War) of 1865–68 It is processing center for a farm and dairy region, and there are coal and gypsum mines near by

Richfield Springs, village (pop 1,209), E central N Y , SE of Utica, in dairy country, inc 1861, reinc 1934 Its sulphur springs have made the town a health resort since the early 19th cent

Richford, town (pop 2,646), N Vt , at the Canadian line, a port of entry on the Missisquoi, in a lumbering region, settled 1795 Plywood and other wood products are made here

Rich Hill, city (pop 1,994), W Mo , SSE of Kansas City, in a farm and timber area

Richier, Ligier (lēzhyā' rēshyā), c 1500–c 1567, French sculptor Most of his work is in the churches of his native Lorraine The most famous is *The Entombment*, consisting of 13 life-size figures in marble in the Church of St Étienne, Saint-Mihiel The group is dramatically conceived and beautifully executed Other works are in the Church of St Pierre, Bar-le-Duc, and in the Louvre

Richland. 1 City (pop 1,497), SW Ga , SSE of Columbus, in an eroded farm area, inc 1886 Providence Caverns are between Richland and Lumpkin 2 Unincorporated village (pop c 18,000), SE central Wash , on the Columbia and E of Yakima Richland is the headquarters of Hanford Works, run by the U S Atomic Energy Commission for the production of plutonium Richland was built on Federal property from 1943 to 1945 to house the employees of Hanford Works, while it was being built, the workers lived in a temporary camp city called Hanford

Richland Center, city (pop 4,364), co seat of Richland co , central Wis , NW of Madison and on the Pine, settled 1849, inc 1887 It is the trade and industrial center of a dairy region and has several cooperative enterprises Frank Lloyd Wright was born here

Richlands, mining town (pop 2,203), extreme SW Va , near the W Va line, in a coal area of the Allegheny Mts

Richmond, Sir William Blake, 1842–1921, English painter and decorator He is best known for his pictures on classical themes, such as *A Procession in Honor of Bacchus* and *An Audience at Athens* He designed decorations and glass mosaics for the interior of St Paul's Cathedral

Richmond, town (pop 3,082), S Que , on the St Francis river and NNW of Sherbrooke It is a market town for a dairying region, with copper, chrome, and steatite mining near by

Richmond. 1 Municipal borough (1931 pop 37,797, 1947 estimated pop 41,720), Surrey, England, WSW of London and on the Thames It is the site of the Palace of Sheen, in which Edward III, Richard II, Henry V, Henry VII (who changed the name to Richmond), Elizabeth, and other sovereigns lived Charles I established the large deer park Kew Observatory is here The 18th-century Inn of the Star and Garter, which figures in Scott's works, was torn down in 1919 The town is a residential suburb of London and a resort and has market gardens and nurseries 2 Municipal borough (pop 4,769), North Riding of Yorkshire, England, on the Swale river It has an old church and ruins of an ancient castle and a monastery of the Gray Friars

Richmond. 1 City (1940 pop 23,642, 1947 special census pop 101,519), W Calif , NE of San Francisco, across San Francisco Bay, inc. 1905. Originally part of a Spanish rancho founded in 1823, it was heavily settled with the coming of the railroad in 1899 and is now a deep-water port and industrial center with oil refineries, railroad repair shops, and foundries Varied manufactures include metal products, chemicals, canned foods, fish oil and meal, and plumbing and building supplies The council-manager form of government was adopted in 1920 Several areas given over to busy shipyards in the Second World War were returned to private industry in 1947–48 2 City (pop 35,147), co seat of Wayne co., E Ind , near the Ohio border E of Indianapolis, settled 1806, inc 1818 A trading center for a large farming area, it has manufactures of farm machinery and automotive gears Earlham College (Friends, coeducational, 1847) is here and there is a tuberculosis sanatorium Quakers from North Carolina and Pennsylvania made the first settlement of the city 3 City (pop 7,335), co seat of Madison co , central Ky , SSE of Lexington, settled 1784 It is in the bluegrass region and produces tobacco, livestock, and corn The Civil War battle of Richmond, Aug 30, 1862, was a victory for the Confederates under Kirby Smith Richmond is the seat of Eastern Kentucky State Teachers College and of a U S trachoma hospital Cassius M Clay is buried here 4 Town (pop 2,063), SW Maine on the Kennebec 12 mi N of Bath, set off from Bowdoinham and inc 1823 5 Village (pop 1,722), S Mich , SW of Port Huron, in a farm and dairy region, settled 1836, inc 1879 Plows are manufactured There are annual harness races here 6 City (pop 4,240), co seat of Ray co , NW Mo , near the Missouri river ENE of Kansas City, in a farm and coal area, laid out 1827 7 Borough of New York city, SE N Y see Staten Island 8 Rural town (pop 1,629), S R I , set off from Charlestown and inc 1747 Its villages include Wyoming, Carolina, and Usquepaugh 9 Town (pop 2,026), co seat of Fort Bend co , S Texas, on the Brazos and SW of Houston, founded 1822 Prominent at the time of the Texas Revolution, it was a busy plantation market until the Civil War and is now a wide and shady town in a farm and livestock area with some oil There is a monument to a hero of the Texas Revolution, Erastus Smith (Deaf Smith), who is buried here, as is Mirabeau B Lamar A state prison farm is near by 10 City (pop 1,131), extreme N Utah, N of Logan, settled 1859 by Mormons It is the trade and processing center of an irrigated farm and dairy area 11 Town (pop 1,225), NW Vt , SE of Burlington, formed 1794, area first settled 1775 Dairying is done here In the town is a 16-sided church built in 1812 and long used by several denominations 12 City (pop 193,042), state capital, SE Va , largest city of the state, at the head of navigation on the James (which furnishes water power) The courthouse of Henrico co is here Richmond is a port of entry and a shipping, financial, cultural, and distributing center Settled in 1637 as a trading point, it was later the site of a trading post called Byrd's Warehouse, the town was projected by Col William Byrd in 1733, laid out in 1737, and first incorporated in 1742, city incorporation was in 1782 It was made capital of the commonwealth in 1779 and was pillaged by Arnold in 1781 During the Civil War, Richmond was the capital of the Confederacy and the constant objective of Federal troops The city was seriously threatened in the Peninsular campaign (1862), when it was saved by the Seven Days battles, in the Wilderness campaign (1864), and in Grant's campaign of 1864–65 (see Petersburg), which culminated in the city's fall Much of the city was burned during the final evacuation, April 3, 1865 Richmond National Battlefield Park (684 44 acres, est 1944) includes several of the battlefields Chief among its varied industries is the processing of tobacco, machinery, paper, and textiles are also important products Places of interest include the state capitol (begun 1785), with Houdon's figure of Washington, the Washington Monument (by Thomas Crawford), the Valentine Museum, the White House of the Confederacy, once the home of Jefferson Davis, now the Confederate Museum, St John's Church (1741), where Patrick Henry made his famous speech ending, "Give me liberty, or give me death", the Poe Foundation (the oldest building in the city, built c 1686), John Marshall's house (1793), the Virginia Museum of Fine Arts (1934), and Monument Ave , with its statues of Confederate leaders The city is also the seat of Union Theological Seminary, Richmond Professional Institute of the College of William and Mary, the General Assembly's Training School for Lay Workers (Presbyterian, coeducational), Virginia Union Univ (Negro, Baptist, coeducational, 1865), the Medical College of Virginia, and the Univ of Richmond (Baptist, for men and women, 1832) See W A Christian, *Richmond Her Past and Present* (1912), M N Stanard, *Richmond Its People and Its Story* (1923)

Richmond and Derby, Margaret Beaufort, countess of: see Beaufort, Margaret

Richmond and Lennox, Charles Lennox, 3d duke of, 1735–1806, English statesman He served in the army until 1759, meanwhile (1750) succeeding to

his father's titles and taking his place in the House of Lords He served as ambassador to France (1765) and was a staunch defender of the cause of the American colonies, holding that their resistance was justifiable In 1780 he introduced a reform bill which advocated annual Parliaments, manhood suffrage, and equal electoral districts His famous letter advocating universal suffrage was first published in 1783 The following year, however, he joined the ministry of the younger William Pitt, made up his previous differences with George III, and abandoned the cause of reform He held a seat in the Pitt cabinet until 1795.

Richmond and Lennox, Frances Teresa Stuart, duchess of see STUART, FRANCES TERESA, DUCHESS OF RICHMOND AND LENNOX

Richmond Heights, city (pop 12,802), E Mo , near St Louis

Richmond Hill, village (pop 1,345), S Ont., N of Toronto, in a market-gardening area

Richter, Adrian Ludwig (ä'drēən lo͝ot'vĭkh rĭkh'tur), 1803–84, German painter, illustrator, and etcher, son and pupil of the engraver Karl Richter (1778–1848) His characteristic paintings combine figure and landscape, as in *Bridal Procession in Springtime*. Richter made some 240 etchings and scenes in Saxony and Rome and over 3,000 drawings for woodcuts, including illustrations for Goldsmith's *Vicar of Wakefield*, Schiller's poem "Song of the Bell," and many others

Richter, Gustav Karl Ludwig (go͝os'täf kärl' lo͝ot'vĭkh), 1823–84, German figure and portrait painter, studied in Berlin, Paris, and Rome He painted some large compositions, such as *The Raising of Jairus' Daughter*, but excelled as a portraitist His portraits of Countess Karolyi and George Bancroft and his ideal portrait of Queen Louise are good examples The Metropolitan Museum has his *Victory*

Richter, Johann Paul Friedrich (vō'hän poul' frē'drĭkh), pseud **Jean Paul** (zhä pōl'), 1763–1825, German author After completing his university studies, he taught in Leipzig Years of struggle followed until the novel *Hesperus* (1795, Eng tr, 1865) established his fame The fantasies *Leben des Quintus Fixlein* (1796, Eng tr by Carlyle *Quintus Fixlein*, 1827) and *Siebenkäs* (1796–97, Eng tr, 1845) attracted much notice, and Richter was rewarded by a pension in 1800 Other works include the novel *Titan* (1800–1803, Eng tr, 1862) and *Levana* (1807, Eng tr, 1848), a treatise on education Widely admired for the sentiment, humor, and lofty viewpoint, his novels made Jean Paul the outstanding romancer of his period He greatly influenced other German authors and the composer Schumann

Richthofen, Ferdinand, Baron von (fĕr'dē nänt' bärōn' fŭn rĭkht'hōfun), 1833–1905, German geographer, geologist and traveler He took part in a Prussian expedition in E Asia (1860–62), worked as a geologist in the W United States (1862–68), then made several exploring journeys in China and Japan (1868–72) His geographical, geological, economic, and ethnological findings in China were embodied in three volumes and an atlas (1877–85), three posthumous volumes appeared in 1911 and 1912 He was professor at the universities of Bonn (1875–83), Leipzig (1883–86), and Berlin (from 1886) and was a founder and the first director (1902–5) of the Institut für Meereskunde, Berlin

Richthofen, Manfred, Baron von (män'frāt), 1892–1918, German aviator of the First World War He is credited with shooting down 80 planes and was killed in action See Floyd Gibbons, *Red Knight of Germany* (1927)

Richtmyer, Floyd Karker (rĭkt' mī"ur), 1881–1939, American physicist, b Cobleskill, N Y , grad Cornell (B A , 1904, Ph D , 1910) He was associated with Cornell from 1906, as professor from 1918, and as dean of the graduate school from 1931 He studied with K M G Siegbahn and became internationally known for his researches in X rays, especially their absorption by various substances; he also investigated the photoelectric effect, photometry, and physiological optics

Richwood. 1 Village (pop 1,628), W central Ohio, SW of Marion **2** Lumber city (pop 5,051), S W Va , on the Cherry river, in a once-important timber area, inc as a town 1901, as a city 1921 It manufactures many wood products, including clothespins, pulp, and paper

Ricimer (rĭ'sĭmŭr), d 472, Roman general of the tribe of the Suebi In 456 he won a naval victory over the Vandals and deposed the Emperor AVITUS He was thereafter the real ruler of Italy and erected a series of puppet emperors, of whom the only one to show any ability was MAJORIAN, whom Ricimer deposed and killed

Rickenbacker, Edward Vernon (rĭ'kŭnbă"kŭr), 1890–, American aviator, b Columbus, Ohio In the First World War he was commander of the 94th Aero Pursuit Squadron in France He is credited with bringing down 25 German aircraft and for his heroism in action was awarded the Congressional Medal of Honor and the Croix de Guerre He retired from the army with the rank of captain and in 1938 became president of Eastern Airlines. In the Second World War he visited various theaters of operations on special missions for the air force; on one of these trips his plane crashed in the Pacific and he and the crew were adrift for 27 days before being rescued *Seven Came Through* (1943) is his story of this ordeal He also wrote *Fighting the Flying Circus* (1919) See biography by H C Adamson (1946)

Rickert, Heinrich (hīn'rĭkh rĭ'kŭrt), 1863–1936, German philosopher, disciple of Windelband Rickert, interested in the field of values, stressed the selective nature of thought, believing that the bias of each individual influences what he learns. His doctrine, called "the primacy of the ought," declared the values of each individual the starting point of truth His works include *Der Gegenstand der Erkenntnis* (1892) and *Die Grenzen der naturwissenschaftlichen Begriffsbildung* (1896–1902)

rickets (rĭ'kĭts), or **rachitis** (rukĭ'tĭs), acquired constitutional disease of infancy and childhood caused by a nutritional disturbance which affects the calcium metabolism of the body Decrease in the amount of calcium deposited causes softening of bone structure and brings bone deformities The chest may present an abnormal appearance, in some cases showing the "rachitic rosary," a series of enlargements occurring on both sides of the breastbone The child's skull is usually large, and the fontanels are delayed in closing, the teeth are late in developing, the lower jaw may be deformed, causing an "open bite" condition, and the child is late in learning to stand Bowleg, knock-knee, and curvature of the spine occur frequently The disease is prevented and is treated by proper nutrition with adequate amounts of calcium, phosphorus, and vitamin D Sunlight and ultraviolet treatments aid calcium metabolism

Ricketts, Charles, 1866–1931, British artist, b Geneva He and his lifelong friend, Charles Shannon, edited (1897–99) the *Dial*, and Ricketts's oils are notable for their coloring and romantic mood He is best remembered, however, as designer and manager of the VALE PRESS from 1896 to 1904 His contribution to fine bookmaking was very great He also wrote on art See *Self-Portrait Letters and Journals of Charles Ricketts* (1939)

Rickman, Thomas, 1776–1841, English architect He was educated as a physician, but a taste for ecclesiastical archaeology led him to the practice of architecture While his many churches—all in the Gothic style—show a meticulous knowledge of medieval forms rather than any originality of design, Rickman was an important figure in the Gothic revival His book, *An Attempt to Discriminate the Styles of Architecture in England* (1817), the first systematic treatise on the English medieval period, is a standard work Besides innumerable churches, he built, in 1826, the new court of St John's College, Cambridge Univ

riddle, puzzling question, specifically one which consists of a fanciful description or definition of something to be guessed A famous riddle was asked by the Sphinx "What goes on four legs in the morning, on two at noon, on three at night?" OEDIPUS guessed the answer correctly "Man—in infancy he crawls, at his prime he walks, in age he leans on a staff " Samson's riddle is also famous 'Out of the eater came forth meat, and out of the strong came forth sweetness " Judges 14 14 It refers to a lion he had just killed, on which he saw bees and honey, he ate some of the lion and the honey There are many riddles in folklore A common modern one among English-speaking people is "What goes up the chimney down or down the chimney down, but never up the chimney up or down the chimney up?" The answer is, "An umbrella " Punning riddles are common, as "When is a door not a door?" The answer is, "When it's ajar " There is comparatively little riddle literature, but riddles do figure considerably in Old English The Exeter Book contains many English verse riddles of uncertain date, they vary considerably in matter There are also many riddles in Latin hexameters dating from Anglo-Saxon England See Frederick Tupper, *The Riddles of the Exeter Books* (1910), J G Lawson, *The World's Best Conundrums and Riddles of All Ages* (1924)

Rideau Canal (rēdō', rē'dō), 126 mi long, S Ont , connecting the Ottawa river at Ottawa with Lake Ontario at Kingston The canal, which has 47 locks, follows the course of the Rideau river to Rideau Lake, thence the course of the Cataraqui river It was built (1826–32) by army engineers under the direction of Col John By to provide access from the St Lawrence to Lake Ontario without exposure to attack by American forces on the U S shore of the St Lawrence Little used as a waterway, the canal system has become a popular recreation area and scenic attraction

Ridgefield. 1 Residential town (pop. 3,900), SW Conn , at the N Y line, settled 1708, inc 1709 The battle of Ridgefield (April 27, 1777) was fought in an effort to stop Tryon's men in their retreat from Danbury The fine homes on the broad main street include that of Cass Gilbert **2** Borough (pop 5,271), NE N J., E of Rutherford, inc 1892

Ridgway, Robert (rĭj'wā), 1850–1929, American ornithologist, b Mt Carmel, Ill Curator of the division of birds at the U S National Museum from 1880, he is known for his work in systematic ornithology and color definition His works include, besides catalogues of bird collections and descriptions of birds in the National Museum *Manual of North American Birds* (1887), *Birds of North and Middle America* (1901–10), and *Color Standards and Color Nomenclature* (1912)

Ridgway (rĭj'wā) **1** Village (pop 1,167), SE Ill W of the junction of the Wabash and the Ohio in a farm and timber region, inc 1886 **2** Borough (pop 6,253), co seat of Elk co , NW Pa , on the Clarion river and NE of Clarion, laid out 1833 inc 1881 It produces electrical machinery and leather

riding The riding of horses was practiced as far back as the Bronze Age and was thereafter adapted to commerce, industry, and war Diverse styles of riding developed, and the SADDLE, as well as the STIRRUP and other riding aids, were manufactured in conjunction with the different needs of horseback riding Thus the jockey's riding style sacrifices the rider's comfort and security to enable the horse to obtain maximum speed On the other hand, the cowboy's style developed from the need of staying in the saddle for long hours to herd cattle, consequently the legs are straight, the foot normally rests in a large stirrup, the rider does not grip his horse, and he keeps his seat by means of balancing This also was the general style of the knight in the medieval period when horseback riding developed into a sport and an essential part of the gentleman's education The "academy" style of riding is very popular in the NE United States as well as in Europe Horse shows in America date from 1883 and equestrian events have been included in the Olympic games See J M T Baretto de Souza *Horseback Riding Made Easy* (1935), M F McTaggart, *The Art of Riding* (7th ed , 1946), L W Durrell, *Manual for Riders* (1949)

Riding, East, North, West see YORKSHIRE, England

Riding Mountain National Park, 1,148 sq mi , SW Man , S of Dauphin and W of Lake Manitoba, established 1929 A wooded region with several small lakes, on the highest part of the Manitoba escarpment, it is a recreation area and big-game sanctuary

Ridley, Nicholas, 1500?–1555, English prelate, reformer, and Protestant martyr In 1534, while a proctor of Cambridge Univ , he was a signer of the decree against the pope's supremacy in England In 1537 he became chaplain to Cranmer, in 1540 master of Pembroke Hall, Cambridge, and in 1541 chaplain to Henry VIII and canon of Canterbury As bishop of Rochester (1547) Ridley was chosen to strengthen and establish the Reformed teachings at Cambridge In the reign of Edward VI, he took part in compiling (1548) the Book of Common Prayer, and he was a commissioner in the examination that resulted in the deposition of Bishops Stephen Gardiner and Edmund Bonner In 1550 he succeeded Bonner as bishop of London Ridley's support of Lady Jane Grey brought upon him the condemnation of Mary Tudor, shortly after Mary's accession to the throne he was sent (1553) to the Tower and then imprisoned in Oxford, but he would not recant his religious opinions He was declared a heretic and excommunicated At a second trial (1555), Ridley was convicted and sentenced to be burned at the stake With LATIMER he suffered this fate at Oxford See his works (ed by Henry Christmas, 1841), J C Ryle, *Bishops Latimer and Ridley* (1925)

Ridley Park, residential borough (pop 3,887), SE Pa , near Philadelphia, inc 1888 It manufactures rock-wool insulation The home of John Morton is here

Ridpath, John Clark, 1840–1900, American educator and author, b Putnam co , Ind , grad Indiana Asbury College (now DePauw Univ), 1863 He became a teacher in Indiana schools From 1869 to 1885, when he retired to devote his time to writing, he was successively professor of belles-lettres, of history, and of political philosophy at Indiana Asbury, serving also, after 1879, as vice president He was instrumental in interesting Washington Charles De Pauw in the university which was renamed in his honor Ridpath wrote biographies of James G Blaine, James A Garfield, William E Gladstone, and James Otis, monographs on monetary subjects, and popular histories of the United States and of the world, which

have been frequently reissued He was also editor in chief of the *Redpath Library of Universal Literature* (25 vols , 1898, rev. ed., 1906).

Riduna: see ALDERNEY, Channel Islands.

Riehl, Wilhelm Heinrich (vĭl'hĕlm hĭn'rĭkh rēl), 1823–97, German historian and novelist Influenced by Ernst Moritz Arndt, he devoted himself to the cultural and social history of Germany, taught at Munich, and later directed the Bavarian national museum He wrote *Naturgeschichte des Volkes als Grundlage einer deutschen Sozial-Politik* [the natural history of the people as the foundation of a German socio-political system] (4 vols , 1851–64), an important pioneer work in German sociology, and various works of fiction and history His story *Castle Neudeck* (1876) was translated into English (1907)

Riel, Louis (lwē' rĕĕl'), 1844–85, Canadian insurgent, leader of two rebellions, b Manitoba, of French and half-breed parentage In 1869–70 he led the rebels of the Red River settlements and headed the provisional government of their founding Riel's followers were mainly French half-breeds (the BOIS-BRÛLÉS or *métis*) and Indians, who considered that, in the transfer (1869) of the Hudson's Bay Company territory to Canada, their land rights and other interests were threatened Donald A Smith (later Lord Strathcona) was sent by the government to treat with Riel When Canadian and imperial troops under Garnet Wolseley were dispatched (1870) to face the rebels at Fort Garry, the Red River Rebellion collapsed without bloodshed, and Riel fled the country In that year, under the Manitoba Act, the Red River settlements were accorded a provincial government and many of the rights that Riel had sought In 1884 **Riel's Rebellion** occurred when he was summoned back to Canada to lead a group of Indians and *métis* in Saskatchewan, who were bent upon securing titles to their lands The uprising ended with an engagement (1885) at Batoche, his headquarters. He was captured, tried for treason, and hanged See G F G Stanley, *The Birth of Western Canada a History of the Riel Rebellions* (1936)

Riemann, Georg Friedrich Bernhard (gā'ôrkfrē'drĭkh bĕrn'härt rē'män), 1826–66, German mathematician His great contributions to mathematics include his work on the theory of the functions of complex variables and his method of representing these functions on coincident planes or sheets (Riemann's surfaces) He laid the foundations of a non-Euclidian system of geometry (Riemannian geometry) representing elliptic space He was professor at the Univ of Gottingen from 1859 See L P Eisenhart, *Riemannian Geometry* (1926)

Riemenschneider, Tilman (tĭl'man rē'munshnī"dur), c 1460-1531, German sculptor, who worked in stone and in wood Coming from the Harz mts , he is known to have been in Wurzburg by 1483 In 1520 he was made burgomaster, but because of participation in the peasant insurrection, he was imprisoned in 1525, and little is known about his work in later years Among fine sepulchral monuments are the tombs of Bishop Rudolf von Scherenberg (cathedral, Würzburg) and of Emperor Henry II and his wife Kunigunde (cathedral, Bamberg) Other works which are undoubtedly Riemenschneider's are *Adam and Eve* (Frankfurt-am-Main) and a bust of Bishop Burkhard (National Gall of Art, Washington, D C) Riemenschneider is among the foremost German sculptors of the Renaissance.

Rienzi or **Rienzo, Cola di** (kō'lä dē rēĕn'tsē, rēĕn'tsō), 1313'–1354, Roman popular leader Partly through his readings in the classics, he conceived the idea that he had a mission to end the rule of violence in Rome, to establish a democracy, and to make Rome the capital of Italy In 1343 he was sent to Avignon on a mission to Pope Clement VI There he befriended Petrarch and won the pope's confidence. After returning to Rome as papal notary, he won great popular support, wide dictatorial powers were conferred upon him (May, 1347), these he declared he held under papal sovereignty He crushed the barons, started great reforms, and tried to arouse a national conscience rising above factional strife He sought to rally the support of the other Italian cities, dreaming of a popular Italian empire He called himself tribune of the sacred Roman republic The pope, who at first supported him, was now aroused by his policies and incited the barons against Rienzi After a tumult (Dec 1347) Rienzi retired He stayed for two years in a convent in the Apennines In 1350 he went to Prague to tell Emperor Charles IV that they both were called to regenerate the Church and the world Charles jailed him, then sent him (1352) to Avignon to be tried by the Inquisition. Pope Clement VI died in the meantime, and his successor Innocent VI absolved and freed Rienzi and sent him with ALBORNOZ to Italy The cardinal made him senator, and Rienzi entered Rome in triumph, his violent, arbitrary rule, however, resulted soon afterward in his murder in a popular uprising In modern times he has been idealized as a forerunner of Italian nationalism Wagner's opera *Rienzi* is based on his life

Riesa (rē'sa), city (pop 34,406), Saxony, E Germany, NW of Dresden. It is a river port on the Elbe and has steel mills and varied manufactures

Riesener, Jean Henri (rē'sənûr, Fr shäⁿ' ärē' rēsənĕr'), 1734–1806, French cabinetmaker, one of the great artists who contributed largely to the formation of the Louis XVI style in France Born in Germany, he early moved to Paris and joined the Arsenal workshop of J F Oeben, with whom he collaborated in the creation of Louis XV's writing desk, finished in 1769, one of the supremely fine achievements of 18th-century cabinetmaking After Oeben's death (c 1765), Riesener became conductor of the Arsenal workshops and continued the production of sumptuous furniture for the court and fashionable society Riesener's pieces are distinguished for their architectural lines, finely executed adornments in chiseled bronze, and exquisite marquetries Examples are in the Louvre, Compiègne, Fontainebleau, Windsor, and the Wallace Collection, London

Riesengebirge (rē'zungûbĭr'gu), Czech *Krkonoše* (kŭr'kônôshĕ), Pol. *Karkonosze* (kärkônô'shĕ), range extending along the border of Bohemia Czechoslovakia) and Silesia, a part of the Sudetes It is sometimes called, in English, the Giant Mts Its highest peak, the Schneekoppe (Czech *Sněžka*, Pol *Snieżka*) rises to 5,258 ft on the Czech-Silesian border There are numerous spas, notably Johannisbad (Czech *Janské Lázně*), with warm carbonic springs, and many resorts famous for their lovely scenery

Rietschel, Ernst Friedrich August (ĕrnst' frē'drĭkh ou'gōōst rē'chul), 1804–61, German sculptor He was a student of C D Rauch in Berlin and professor at the Dresden Academy Among his most successful works were the Lessing Memorial, Brunswick, the Goethe and Schiller monument, Weimar, a statue of Weber, Dresden, and the Luther Memorial, Worms, completed by Rietschel's students

Rievaulx (rē'vō, rĭv'us) [Rye vale], village, North Riding of Yorkshire, England Here are the noted ruins of Rievaulx Abbey, a Cistercian foundation of 1131, which include the choir and transepts of the church and the refectory

Rif or **Riff**, mountainous region on the Mediterranean seaboard of Spanish Morocco It is a stronghold of Berber tribes, who were unsubdued until overcome by a joint campaign (1925–26) of the French and Spanish against the Berber leader, Abd-el-Krim See W B Harris, *France, Spain, and the Rif* (1927), Ramón J Sender, *Pro Patria* (Eng tr , 1935)

Rifle, town (pop 1,373, alt 5,332 ft), NW Colo., on the Colorado and NE of Grand Junction, inc 1905 It is in a diversified farming area with oil and gas wells and timber

rifle, firearm with the bore spirally grooved to impart a spinning motion to the bullet The principle of grooving or "rifling" the inner surface of the barrel is applied also in artillery and in pistols and revolvers. The grooving was at first straight and in line with the bore so that the accumulation after firings would not be in the bore proper It is not known precisely when the idea of giving projectiles a spinning motion through spiraling of the grooves developed The rifle's history extends back to the 15th cent , but its widespread practical use is traced to the settling of the woodland regions of the present E United States The Swiss colonists in Pennsylvania in the early 1720s possessed rifles, and it is possible that they were constructed in what is now Lancaster co during the same decade This weapon, called the Kentucky rifle, was the pioneer's defense against Indians and also the means of providing him with meat and skins. Its merits were its long range and accuracy, and the outstanding defect was the difficulty and time involved in reloading the weapon through the muzzle The disadvantage against the Indian's bow and arrows was even greater when the pioneer was mounted on a horse It was for this reason that so much importance was attached to marksmanship, as evidenced in Cooper's novels and the stories of Daniel Boone The percussion-cap method of igniting powder, introduced in 1820, resulted from the experiments of A J Forsyth in England, begun in 1793 The Minié rifle, adopted by the United States, British, and French governments midway in the 19th cent , used the principle of gas pressure temporarily sealed in the bore by the base of the bullet Breech-loading rifles were in general use in the United States towards the end of the Civil War. Magazine loading and smokeless powder were the next significant developments in rifles The model 1903 Springfield armory rifle and an English-manufactured variant also using a 30-caliber bullet were standard equipment for U S troops in France in the First World War. The semi-automatic Garand rifle, a self-loading, clip-fed, gas-operated shoulder weapon, weighing just over 9 lb and firing 30-caliber ammunition, supplanted the bolt-action weapon during the course of the Second World War The Garand is equipped with an operating rod which causes automatic rejection and reloading and in an expert's hands can fire 12 clips of eight cartridges within a minute. It is the standard service rifle of the U.S. army, navy, and marine corps. See P. B. Sharpe, *The Rifle in America* (1947); Arcadi Gluckman, *United States Muskets, Rifles, and Carbines* (1948).

Riga (rē'gŭ), city (pop. 392,926), capital of Latvia, in Vidzeme, on the Gulf of Riga and at the mouth of the Western Dvina It is a major Baltic port and a historic, cultural, and industrial center Its industries include manufactures of electrical, heavy, and fine machinery, of precision instruments, of paper, and of textiles Timber, paper, linseed oil, and dairy products are the chief export articles Riga has a university (founded 1919), an academy of fine arts, a conservatory of music, an agricultural college, and several other educational institutions The city was founded in 1201 by Albert, bishop of Livonia. From here the LIVONIAN KNIGHTS, a German order founded by Albert, spread Christianity in the Baltic region Having become an archiepiscopal see (1254) and a member of the Hanseatic League (1282), Riga—essentially a German city in the Middle Ages—soon developed into a major commercial center Although it was part of the domain of the Livonian Knights, it maintained a semi-independent existence under its archbishops and the German merchants, and it controlled a large part of Livonia Riga accepted the Reformation After the dissolution (1561) of the Livonian Knights it was held by Poland, despite attempts by Ivan IV of Russia to seize it, and Polish attempts to reintroduce Catholicism made the capture (1621) of Riga by Gustavus II of Sweden a welcome event for the Protestant citizens Captured (1710) by Peter I of Russia in the Northern War, Riga and the rest of Swedish Livonia were ceded by Sweden to Russia in 1721 In the 19th cent Riga became the second largest Baltic port of Russia A stronghold of the Russian Social Democratic party, Riga played an important part in the Revolution of 1905 It was occupied (1917–19) by the Germans in the First World War, after which it became the capital of newly independent LATVIA When Latvia passed to the USSR (1940), Riga became the capital of the Latvian Soviet Socialist Republic In the Second World War it was again occupied (1941) by the Germans, from whom it was retaken (1944) by the Russian army The old section, or Hansa town, of Riga suffered some damage during the fighting, it is circled by a park-lined moat and contains the chief buildings of the city Among these are the ancient castle (rebuilt at various periods), the Lutheran cathedral (13th cent , rebuilt 16th cent), the Church of St Peter (15th cent), with a steeple 412 ft high, the parliament building (19th cent , in Renaissance style), and the opera. The famous Hanseatic Schwarzhaupter Haus [house of the black heads], dating from the 15th cent , was largely destroyed The old city has retained much of its medieval aspect, its narrow cobbled streets are lined with gabled dwellings and warehouses. The new sections of Riga are planned along spacious, modern lines and contain fine parks and residences Across the Dvina is the industrial city of JELGAVA The harbor of Riga is frozen from December to February, its dock installations extend for miles along both shores of the river The beach resort of Rigas Jurmala was included in the city limits in 1946

Riga, Gulf of, eastern arm of the Baltic Sea, bordering on Estonia in the north and on Latvia in the east and the south In the west it is nearly closed off by SAAREMAA The gulf, which is frozen from January to April, receives the Western Dvina. Riga and Parnu are the chief ports

Riga, Treaty of, name of two peace treaties signed at Riga, Latvia By the Treaty of Riga of **1920**, between the USSR and Latvia, the USSR recognized the independence of Latvia The more important Treaty of Riga of **1921**, between the USSR and Poland, followed a truce concluded late in 1920 The Russo-Polish War of 1920 had been precipitated largely by the demand of POLAND that its eastern border of 1772 be restored. The treaty terms, which fixed the Russo-Polish border, did not fully satisfy the claims of the victorious Poles, but they awarded to Poland large parts of Belorussia and of the Ukraine Nullified by the German and Russian invasion of Poland in 1939, the treaty was replaced in 1945 by a new Russo-Polish border agreement which generally is based on ethnic considerations

Rigaud, André (ädrā' rēgō'), 1761–1811, Haitian mulatto general in the wars that liberated Haiti He sought (1798–1800) unsuccessfully to wrest the leadership from TOUSSAINT L'OUVERTURE. After two years in France he returned to Haiti with General Leclerc, who sent him back to France as a prisoner In 1810, once more on the island, Rigaud tried to take the leadership in the south from Alexandre Pétion Defeated by a military conspiracy, he died, supposedly starving himself to death.

Rigaud, Hyacinthe (Hyacinthe Rigaud y Ros), (yäsĕt', ē rōs'), 1659–1743, French portrait painter, b. Perpignan,[of Spanish ancestry. He won the Prix de Rome in 1682 but remained in Paris and devoted himself to portraiture, rapidly gaining celebrity throughout Europe. His sitters included

most of the distinguished men of the day Rigaud's portraits are excellent likenesses and full of character, his costumes and accessories accurately rendered Among the most celebrated are those of Louis XIV, Philip V of Spain, Bossuet, Desjardins, Robert Cotte, Le Brun, his mother (Marie Serre), and a self-portrait (Louvre); Marquis Dangeau and Mignard (Versailles); and Cardinal Fleury (National Gall., London)

Rigaud (rēgō'), town (pop 1,222), S Que, on the south shore of the Ottawa and W of Montreal Tanning, lumbering, and woodworking are carried on here, in a dairy and apple-growing region

Rigby, city (pop. 1,978), co seat of Jefferson co, E Idaho, NNE of Idaho Falls, settled 1884 by Mormons, inc as a village 1903, as a city 1915 It is a shipping point for an irrigated farming and dairying district

rigging, wire, rope, and chain supporting and operating the masts, yards, booms, and sails of a ship The standard rigging consists mainly of the mast supports (shrouds) running from the masthead to each side of the ship and firmly secured there Ratlines cross them at regular spaces to form ladders Footropes hung from stirrups along the yards enable the crew to furl the sails Running rigging includes the ropes, blocks, and other apparatus needed to operate the yards, booms, gaffs, and sails, to raise and lower boats, and to handle cargo The running rigging of a steamship is restricted to operating the booms swinging off the mast and to the functioning of the shackles, hooks, ships, and nets needed to move cargo See Felix Riesenberg, *Standard Seamanship for the Merchant Service* (1936)

Riggs, Bobby (Robert Larimore Riggs), 1918–, American tennis player, b Los Angeles Playing at tennis from the age of 11, Riggs won several tournaments in 1930s and helped the U S team win the Davis Cup in 1938 After winning the U S singles (1939, 1941) and British singles (1940), he turned professional (1941) He returned to the game after service (1942–45) in the U S navy in the Second World War and won the national professional singles championship in 1946, 1947, and 1949 He wrote *Tennis Is My Racket* (1949).

Riggs, Elias, 1810–1901, American missionary, noted for his mastery of the Semitic languages and of Greek, b New Providence, N J, grad Amherst, 1829 For 67 years after his ordination (1832) to the Presbyterian ministry, Riggs was a missionary in Greece, Asia Minor, and Turkey His translation of the Scriptures into Armenian (1853) was followed by his Bulgarian translation (1871), and he was a member of the committee which prepared the standard Turkish text (1878) He prepared grammars of the Chaldee, modern Armenian, and Turkish languages and translated hymns into Greek, Armenian, and Bulgarian

Riggs, Lynn, 1899–, American dramatist, b near Claremore, Okla, studied at the Univ of Oklahoma His talent for buoyant comedy which stops short of farce has been productive of several fine plays *Green Grow the Lilacs* was produced in New York by the Theatre Guild in 1931, the musical comedy *Oklahoma!* (produced 1943) was based on it His *Russet Mantle* was produced in 1936

Rigga's disease see PYORRHEA

Righi, Switzerland see RIGI

right, In politics, relatively conservative groups make up the right, in contrast to the radical LEFT and the liberal CENTER In some European legislative assemblies, conservative members are seated at the right of the presiding officer The more conservative members of a party are its right wing

Right, Petition of see PETITION OF RIGHT

right of way, in land traffic and in sea and air navigation, rules which determine precedence in the use of traffic lanes The rules are framed in the simplest possible terms and with nearly absolute uniformity in order to minimize the possibility of collisions In land traffic railroad trains, military vehicles in convoy, government vehicles (e g, mail trucks), and emergency vehicles have the right of way over ordinary private vehicles Rules of sea and air navigation are largely governed by international conventions The term "right of way" is also applied to an EASEMENT in gross (e g, that of a railroad)

Rights, Bill of: see BILL OF RIGHTS.

Rights of Man: see DECLARATION OF THE RIGHTS OF MAN

Rigi (rē'gē), mountain, Switzerland, between the lakes of Lucerne, Zug, and Lowerz Its highest peak, the Kulm (5,905 ft.) commands a magnificent view.

rigor mortis (rī'gûr môr'tĭs, rĭ'gûr), stiffened condition of the muscles of the body after death. The time of onset varies from about 10 min to several hours or more. Coagulation of muscle proteins is believed to be the cause, the facial musculature is affected first, and then the condition spreads to other parts of the body The state of rigor passes after about 24 hr as a result of the effects of bacterial decomposition and the formation of acids.

Rigsdag (rĭks'dä), national parliament of Denmark. According to the constitution of 1849, revised in 1915 and 1920, the Rigsdag shares legislative powers with the king and is composed of an upper and lower house, the Landsting (länz'tĭng) and the Folketing (fōl'kŭtĭng) respectively.

Rigsmaal: see NORWEGIAN LANGUAGE.

Rig Veda: see VEDA.

Riis, Jacob August (rēs), 1849–1914, Danish-American journalist and philanthropist, b Denmark He came to the United States in 1870 and, after a desperate struggle to support himself, turned to journalism, in 1877 he became a reporter for the New York *Tribune* and later for the New York *Evening Sun* His first book, *How the Other Half Lives* (1890), began his lifelong friendship with Theodore Roosevelt, and together they worked to improve New York Riis as journalist and lecturer publicized the wretched conditions of slum dwellings His association with social welfare agencies is commemorated in a settlement house (named for him in 1901) in New York city, and with the public park and playground movements by Jacob Riis Park on Long Island See his autobiography, *The Making of an American* (1901), biography by Louise Ware (1938)

Rijeka-Susak, Yugoslavia see FIUME

Rijks Museum or **Ryks Museum** (both rĭks'), at Amsterdam, was opened in 1885 and houses the outstanding collection of Dutch master paintings as well as extensive examples of national crafts Best known are the museum's Rembrandts, among them the *Night Watch* and *Syndics of the Cloth Hall* Frans Hals, Vermeer, Ruisdael, Jan Steen, and others are also well represented The museum building was designed by P J H Cuypers

Rijswijk (rīs'vĭk), municipality (pop 23,017), South Holland prov, W Netherlands, 3 mi SE of The Hague It has varied manufactures A former spelling is Ryswick The Treaty of Ryswick (see RYSWICK, TREATY OF) was signed here in 1697

Riksdag (rēks'dag, rēks'tä), national parliament of Sweden It was formed in 1866 to replace the old diet of the four estates Constitutional revisions took place in 1909 and 1921 The first chamber (upper house) consists of 150 members elected for eight-year terms by the Landstings (county councils) and by the councilors of the six major cities The second chamber has 230 members elected for four-year terms by direct universal suffrage Representation in both chambers is proportional Except in the matter of taxation, which is exclusively reserved to the Riksdag, the king has the right (rarely used) to an absolute veto on legislation The cabinet is responsible to the Riksdag Laws are usually initiated by the government The approval of both chambers is required to validate legislation

Riley, Charles Valentine, 1843–95, American entomologist, b England He came to the United States in 1860 and served as state entomologist (1868–77) of Missouri and as entomologist (1878–79, 1881–94) in the Dept of Agriculture Riley first observed the destructive cottony cushion scale in California and helped introduce scale insect parasites from Australia He first described the rose weevil and suggested the use of American phylloxera-resistant grapevine stock in France The periodical *Insect Life* was founded and edited by him (1889–94)

Riley, James Whitcomb, 1849–1916, American poet, b Greenfield, Ind, whence he was known as the Hoosier poet He tried being a traveling actor, a sign painter, and, finally, a newspaperman Under the name Benjamin F Johnson of Boone he began to write verse for the Indianapolis *Journal* in 1875 and first collected it in "*The Old Swimmin'-Hole*" *and 'Leven More Poems* (1883) This collection was followed by many others, mostly written in Hoosier dialect Among many honors he received was the gold medal of the National Institute of Arts and Letters, and in 1915 Indiana observed his birthday as Riley Day Riley's verse has humor, pathos, simplicity, and sentiment of universal appeal, especially is this true of his children's poems such as "Little Orphant Annie," "The Raggedy Man," and "The Runaway Boy" Among the collections of his verse are *Rhymes of Childhood* (1890), *An Old Sweetheart of Mine* (1902), *When the Frost Is on the Punkin* (1911), and *Knee Deep in June* (1912) See biography by Marcus Dickey (*Youth*, 1919, *Maturity*, 1922)

Riley, Fort, U S military post, established in 1852 on the Kansas river near JUNCTION CITY, Kansas, to protect travelers on the Santa Fe Trail from Indian attacks Because of its position near the geographical center (though not the geodetic center) of the United States, it was first called Camp Center, but in 1853 it was renamed Fort Riley after Gen Bennet Riley In 1855 it became a cavalry post and later (1891) a cavalry school was set up there In 1917 it was made into a training center for reserve officers. Today Fort Riley maintains a permanent garrison for the training of field artillery, cavalry, and other units

Rilke, Rainer Maria (rĭ'nûr märē'ä rĭl'kŭ), 1875–1926, German lyric poet, b Prague Sent to a military school at 10, he became ill and was later sent to a business school. His relations with his father were unhappy, but through an uncle he was able to attend the Univ of Prague. He led an unsettled, wandering life Visits to Russia in 1899 and 1900 made a profound impression on him His *Geschichte vom lieben Gott* (1900; Eng. tr., *Stories of God*, 1931) was one result. Commissioned (1902) to write a monograph on Rodin, he spent some time in Paris with the sculptor and was much influenced by his philosophy of the artist's attitude toward his work Rilke served as Rodin's secretary in 1905–6 His first volume of poetry, *Leben und Lieder* [life and songs], had appeared in 1894, but only with *Das Buch der Bilder* [the book of pictures] (1902, 2d ed, enlarged, 1906) was his peculiar blending of impressionism and mysticism recognized Other collections of his poetry are *Das Stundenbuch* (1905, Eng tr, *Poems from the Book of Hours*, 1941) and *Neue Gedichte* (2 vols, 1907–8) He won a wide popularity with *Die Weise von Liebe und Tod des Cornets Christoph Rilke* (1906, Eng tr, *The Tale of the Love and Death of Cornet Christopher Rilke*, 1932), a series of "ballads in prose" After extensive travels in Italy, North Africa, and elsewhere, he arrived in Paris in 1913, but the First World War drove him back to Germany, there after 1916 his ill-health made any kind of war work impossible and he lived a life of frustration and nonproductiveness in Munich until the end of the war From 1919 he lived at Castle Muzot, in the canton of Valais, Switzerland. There he wrote what he considered his finest achievement, *Duineser Elegien* (1923, Eng trs, *Duinese Elegies*, 1930, 1939) His last work was *Die Sonette an Orpheus* (1923, Eng tr, *Sonnets to Orpheus*, 1936) His later poetry was profound, austere, and without the lucidity of his earlier work Rilke died of leukemia which developed from the prick of a rose thorn His stature as a major poet of his time has increased since his death Most of his work has been translated into English, especially good are the translations by J B Leishman—*Poems* (1934) *Requiem* (1935), *Later Poems* (1938), and *Selected Poems* (1944)—and by M D Herter Norton (1939), C F MacIntyre (1941), and Jessie Lamont (1943) See Rilke's *Journal of My Other Self* (Eng tr, 1930) and the letter collections *Letters to a Young Poet* (Eng tr, 1934), *Wartime Letters* (Eng tr, 1940), and *Letters, 1910–1926* (Eng tr, 1948) Magda von Hattingberg, *Rilke and Benvenuta* (Eng tr, 1949), study by Federigo Olivero (1931), biography by E M Butler (1941)

Rímac (rē'mäk), river rising in W Peru, in the Andes and flowing W through LIMA to the Pacific just N of Callao With ample water, it is used for extensive irrigation The Rímac valley affords one of the chief lines of communication to the high, interior mountain basins

Rimbaud, Arthur (ärtür' rĕbō'), 1854–91, French poet who had great influence on the SYMBOLISTS and subsequent French poets, a prime representative of the DECADENTS At 16 he was a poet corresponding with VERLAINE, and in 1872–73 the two poets lived together in London and Brussels Verlaine's wounding of Rimbaud terminated their relation Thereafter Rimbaud wandered and did many things, including acting as a minister at the Ethiopian court He died at Marseilles His adolescent memoirs are *Une Saison en enfer* (1873) Rimbaud's poetry, never added to after he was 19 was published completely in 1895 It is sometimes called hallucinatory because the poet seems to write not of material reality but of his dreamworld, his technique anticipates the symbolists by its suggestiveness, by its music, and by its nonintellectuality "Le Bateau ivre" is an outstanding example See biography by Enid Starkie (new ed, 1947)

rime see RHYME

Rimersburg (rĭ'mûrzbûrg), coal-mining borough (pop 1,393), W Pa, NNE of Pittsburgh, settled 1829, laid out 1839, inc 1853

Rimini (rĭ'mĭnē, Ital rē'mēnē), anc *Ariminum* city (pop 31,505), Emilia-Romagna, N central Italy, in Romagna, a port on the Adriatic At the junction of the Flaminian and Aemilian Ways it was a Roman colony of strategic importance and became a member of the PENTAPOLIS under Byzantine rule Rimini was included in Pepin the Short's donation to the popes (754) The MALATESTA family seized power in 1295 and later conquered neighboring cities FRANCESCA DA RIMINI married a Malatesta In 1509 the city passed to the popes The 13th-century Church of St Francis (called the temple of the Malatesta after Sigismondo Malatesta renovated it, c 1450, to honor his wife Isotta) was one of the finest Renaissance buildings before it was very severely damaged in 1943–44. Rimini has a triumphal arch and a bridge built by Augustus, a 13th-century town hall, and the ruins of the Malatesta castle It is a fashionable bathing resort The city suffered severe destruction in the Second World War

Rimmer, William, 1816–79, American sculptor and writer, b Liverpool, England He was brought up in the United States and after working as a cobbler in Brockton, Mass, at the age of 30 began the study of medicine He practiced medicine for a number of years, at the same time painting occasional portraits and religious subjects In 1855 he began to carve in granite Among his early works are the colossal head, *St. Stephen* (Mus of Fine Arts, Bos-

ton), and the *Falling Gladiator* (Metropolitan Mus) His knowledge of anatomy and his imaginative power are apparent in the few pieces which survive His work was not appreciated in his lifetime He completed statues of Alexander Hamilton and Osiris in 1864, and other remaining sculptures are *The Dying Centaur* and *Fighting Lions* (Metropolitan Mus) In 1876 Rimmer became professor of anatomy and sculpture at the School of the Museum of Fine Arts, Boston He was director and chief instructor (1866-70) of the School of Design for Women, Cooper Union, New York He wrote *Elements of Design* (1864) and *Art Anatomy* (1877)

Rimmon (rĭ'mun) [Heb ,=pomegranate] **1** Syrian god 2 Kings 5 18 **2** Father of the murderers of Ishbosheth 2 Sam 4 2-9 **3** Rock where the remnants of the Benjamites took refuge after the battle of Gibeah, it was E of Bethel Judges 20 45,47, 21 13 **4** See EN-RIMMON **5** Levitical town, N Palestine 1 Chron 6 77 Remmon-methoar Joshua 19 13 Dimnah Joshua 21 35

Rimmon-parez (-pā'rĕz) [Heb ,=pomegranate of the breach], unlocated camp, S of the Dead Sea Num 33 19,20

Rimouski (rĭmōō'skē), town (pop 7,009), E Que , on the south shore of the St Lawrence at the mouth of the Rimouski and NE of Quebec It has lumber industries, buttermaking, and cod-liver-oil refining A Roman Catholic cathedral and seminary are here

Rimsky-Korsakov, Nicolai Andreyevich (nyĭkŏlī' undrā'uvĭch rĭm'skē-kôr'sukôf), 1844-1908, Russian composer, pupil of Balakirev He prepared himself for a naval career, but in 1871 he became professor of composition at the St Petersburg Conservatory, retiring from the navy in 1873 In 1883 he became assistant to Balakirev, director of the Imperial Chapel He conducted (1886-1900) the St Petersburg Symphony Concerts Though his first symphony (1865) and his symphonic poem *Sadko* (1867) were the first works in these forms composed by a Russian, more important are his operas, notably *The Snow Maiden* (1881), on the play by Ostrovsky, *The Maid of Pskov* (1873, revised 1892, also known as *Ivan the Terrible*), *Sadko* (1895), and *Le Coq d'Or* (completed 1907, posthumously performed) *Scheherezade* (1888), for orchestra, was used by Diaghilev as ballet music He wrote a treatise on orchestration and an autobiography, *My Musical Life* (Eng tr , 3d ed , 1942) Glazunov, Gretchaninov, and Stravinsky were among his pupils See V I Seroff, *The Mighty Five* (1948)

rinderpest (rĭn'dûrpĕst") [Ger ,=cattle plague] or **cattle plague,** communicable disease of cattle, caused by a virus Other animals are also susceptible to it, e g , buffalos, goats, and sheep, but to a lesser degree than cattle It is endemic to Russia, central Asia, and Africa --especially Ethiopia From these lands it has spread to all parts of Europe, as far as England The disease is still unknown in the United States and Canada Symptoms of rinderpest appear from three to nine days after an animal has been infected There is high fever, chills, and a general state of debility Eruptions appear on the mouth, lips, and udder Milk secretions almost vanish, and the animal's breathing is labored Death is usually inevitable There is no available treatment for the diseased animal In countries where it is not indigenous, the animals are slaughtered to prevent its spreading to the others Little success was achieved with preventive inoculations until the time of the Second World War, when significant progress was made toward containing rinderpest Scientists, working under Canadian-U S sponsorship, were experimenting with vaccines to counter a Japanese threat of germ warfare A result of this research was a highly effective vaccine to prevent rinderpest The vaccine, grown in incubated eggs, was sent to China, where cattle plague has long been a major cause of famine It is believed this vaccine may in time help to free China, India, and Africa from the scourge of famine

Rinehart, Mary Roberts (rĭn'hărt), 1876-, American novelist and dramatist, b Pittsburgh A graduate nurse, she married Dr Stanley M Rinehart in 1896 The first of her many mystery stories, *The Circular Staircase* (1908), established her as a leading writer of the genre and, dramatized by Mrs Rinehart and Avery Hopwood as *The Bat* (1920), was her most successful play Her mystery novels include also *The Man in Lower Ten* (1909), *The Case of Jennie Brice* (1914), *The Red Lamp* (1925), *The Door* (1930), and *The Yellow Room* (1945) The humorous stories of "Tish," a self-reliant old maid, were first published in the *Saturday Evening Post* Among her other novels are *K* (1915) and *The Amazing Interlude* (1917) She has also written travel books See her autobiography, *My Story* (1931; rev ed , 1948)

Rinehart, William Henry, 1825-74, American sculptor, b near Union Bridge, Md A Baltimore stonecutter, he became one of the best of the early American sculptors, working in the classic vein He lived in Italy after 1858 His works are best seen in the Peabody Institute, Baltimore, where there are casts of 42 of his figures, reliefs, and busts and three marble originals, including his masterpiece, *Clytie* Rinehart's bronze of Chief Justice Taney is at Annapolis, and a replica is in Baltimore Other memorable works are *Endymion* and *Sleeping Children* (both Corcoran Gall.) and *Latona and Her Children* and *Rebecca* (both Metropolitan Mus.). He left a fund for the education of American sculptors, first used in 1895

ring, small hoop worn as ornament, talisman, or pledge on finger or thumb or attached to the ear or, among primitive peoples, the nose It may be a band, plain, modeled, engraved, encrusted, pierced, or enameled, penannular, spiral, such as the Greek serpent ring, or with a bezel for holding a gem or inscription The signet ring grew from an early custom of wearing a cylindrical seal suspended from the arm or neck, developed in Egypt as a scarab on a swivel for easy use as a seal, and has been widely adopted as a stamp of authority A gold seal ring (Fisherman's ring) with an intaglio of St Peter in a fishing boat is given each pope and destroyed when he dies In ancient Rome the wearing of rings was governed by law During the republic citizens might wear rings of iron, in the reign of Tiberius gold rings became badges of civil or military rank, later the gold ring was permitted to freeborn citizens, silver to freedmen, and iron to slaves The betrothal ring, used by Egyptians, Greeks, and Romans, was adopted by early Christians in the 2d cent and later became the wedding ring The engagement ring set with a precious gem came into use in the Middle Ages, the diamond attained popularity in the 15th cent and became customary c 1800 The ring has had a variety of symbolisms knobbed decade rings were used like a rosary for prayers, memorial rings of the 16th cent were often in mello with designs showing skeletons or coffins and later mourning rings, especially in the 19th cent , enclosed braided hair, charm rings have been credited with conferring health, strength, and, in folk tales, invisibility, rings have figured in the coronation of kings and the consecration of bishops as emblems of authority or mystical significance Poison rings were used (as by Hannibal) for suicide in classical times and for assassination during the Middle Ages and Renaissance See J R McCarthy, *Rings through the Ages* (1945)

ringbone, Bony outgrowths on the front and sides of the pastern bones of the horse's foot result from faulty conformation of the bones in relation to one another They are increased by various injuries, including sprains The horse suffers from lameness, and the condition, once developed, is difficult to remedy It may be controlled by keeping the feet of young animals in proper balance by correct trimming In some cases where swelling above the top edge of the hoof wall has developed and lameness is marked, the sensory nerves may be cut

Ring des Nibelungen, Der see NIBELUNGEN

Ringgold, village (pop 1,006), NW La , SE of Shreveport, in a cotton, farm, and lumber area

Ringwood, borough (pop 977), N N J , near the N Y line, in the Ramapos E of Greenwood Lake Iron was found in this vicinity in 1730, mines and works were developed from 1764 by Peter Hasenclever, who made Ringwood Manor his headquarters His successor, Robert Erskine, produced munitions for the patriots in the Revolution Martin I Ryerson and his sons owned (1807-53) the Ringwood properties, Peter Cooper, Abram S Hewitt, and Erskine Hewitt followed Presented to the state in 1936 by Erskine Hewitt, the 95-acre estate in 1939 became a park, the manor house a museum.

ringworm or **tinea** (tĭ'nēu), fungus infection of the skin, caused by species of *Microsporum* and *Trichophyton* The condition, though widespread, occurs more commonly in the tropics and subtropics than in temperate zones The early lesions of ringworm are characterized by flattened reddish papules, forming disk-shaped areas, the margins of the lesions are sharply demarcated and may be either dry and scaly or filled with fluid Variations of the sores include inflammation and a condition similar to eczema Diagnosis is made from microscopic examination of scrapings from the lesions In an acute inflammatory condition, treatment consists of wet dressings of boric acid or Burow's solution, followed by ointment of ammoniated mercury or tincture of iodine Interdigital ringworm, sometimes called athlete's foot, is believed to be caused by several fungi including *Trichophyton*

Rinnah (rĭ'nu) [Heb ,=a cry], descendant of Judah 1 Chron 4 20

Rinns of Galloway, Scotland see GALLOWAY

Río and Rio, respectively Spanish and Portuguese terms for river For those not listed here, see under the second element of the name Thus, for Rio Amazonas, see AMAZON, for Río Lerma, see LERMA

Riobamba (rēōbäm'bä), city (1944 estimated pop 27,459), central Ecuador Near CHIMBORAZO volcano, in a high basin of the Andes, Riobamba is a commercial center It was completely destroyed by earthquake in 1797. Assembled here in 1830 under Juan José FLORES, a convention proclaimed Ecuador's independence by seceding from the republic of Greater Colombia

Río Branco, Brazil: see BRANCO, RIO.

Río Cuarto (rē'ō kwär'tō), city (pop. 49,186), Córdoba prov., central Argentina, in the W Pampa, on the Río Cuarto A rail hub, Río Cuarto serves as the commercial focus for a large agricultural area yielding fruit and cattle

Rio de Janeiro (rē'ō dŭ jänā'rō, Port rē'ō dŭ zhänā'rō), state (16,443 sq mi , 1940 pop 1,847,857, 1949 estimated pop 2,230,708), SE Brazil, on the Atlantic It encloses but does not include the federal territory in which the city of Rio de Janeiro is situated The capital of the state is NITERÓI The Serra do Mar escarpment divides the area into a coastal lowland, a central hill section, with several health resorts (including Petrópolis), and the fertile Paraíba river valley in the west. The state produces coffee, sugar, citrus fruit, vegetables, and livestock It is a leading industrial region, manufacturing light consumer goods, cement, textiles, and chemicals There is a large steel mill at Volta Redonda The Federal District, originally part of the state, was separated in 1834

Rio de Janeiro [Port ,=river of January], city (1940 pop 1,519,010), capital of Brazil, on Guanabara Bay of the Atlantic Ocean, in the Federal District (524 sq mi , 1949 estimated pop 2,129,648) Rio, as it is popularly known, has one of the most beautiful natural harbors in the world and is surrounded by several outstanding landmarks, including Sugar Loaf Mt (1,290 ft), Corcovado peak (2,310 ft), on which stands a huge statue of Christ, and the hills of Tijuca (3,350 ft) and Gávea (2,760 ft) The harbor is deep enough to permit the largest vessels to come alongside the wharves, which lie near the center of the city , to the right (east) of its entrance is the residential and industrial suburb of Niterói Rio is an important railroad hub and is served by international airways The city handles a major portion of Brazil's trade, exporting coffee, iron ore, manganese, meat, cotton, and hides Its varied manufactures include textiles, glass, household appliances, chemicals, trucks, and leather products Although its climate is hot and humid, Rio is a healthful city and has a world-wide reputation as a tourist center Of particular attraction are the fine, crescent-shaped beaches, especially the Copacabana, with near-by places of entertainment and modern apartment houses The most popular of all holidays is the well-known Mardi Gras carnival, when the streets are thronged with colorful processions and reveling *cariocas* (citizens of Rio) The various parts of the city and the outlying districts are connected with each other by beautiful drives, the result of an extensive rebuilding and modernizing campaign begun in 1902 The palm-lined Avenida Beira Mar skirts the water front through Botafogo and Copacabana districts, while the broad Avenida Rio Branco, with its mosaic sidewalks, is the city's central street Rio has a botanical garden, founded in 1808, and many fine public buildings, including the municipal theater (1909), the national library, the academy of fine arts, the Catete and Guanabara palaces (the president's executive office and residence), and the elaborate Tiradentes Palace, which was completed in 1926 to house the chamber of deputies The Univ of Rio de Janeiro, which was formed in 1920 from the earlier professional and technical schools, is the foremost educational institution, there are also military and naval academies and scientific institutes Religious buildings include the ornate Candalaria Church, where Pedro Alvares Cabral is buried, the 17th-century Franciscan convent, and a 16th-century Benedictine monastery The area was visited by Portuguese explorers presumably in Jan , 1502, whence the name In 1555 French Huguenots, led by Nicholas Villegagnon (for whom an island in the harbor is named), established a colony here, but they were driven out in 1567 by Mem de Sá, governor general of the Portuguese colony of Brazil, who then founded the city of São Sebastião do Rio de Janeiro It replaced Bahia (now called Salvador) as the capital of Brazil in 1763, and subsequently it became the capital of the exiled royal court of Portugal (1808-21), of the Brazilian empire (1822), and of the federal republic (1889) In 1906 the Pan American Congress convened here It is now proposed to transfer the seat of the federal government inland to a site in Goiás state See L E da Costa, *Rio in the Time of the Viceroys* (1936); Hugh Gibson, *Rio* (1937)

Río de Oro see SPANISH SAHARA

Rio Grande (rē'ō grän'dĕ), name of several rivers of Brazil The largest rises in S Minas Gerais and flows c 650 mi WNW to the Paranaíba, with which it forms the Paraná river In its lower course it forms part of São Paulo's northern boundary

Rio Grande (rē'ō grănd', rē'ō grän'dĕ), river, c 1,800 mi long, rising in SW Colorado in the San Juan Mts and flowing south through the middle of New Mexico, then generally southeast as the border between Texas and Mexico, making a big bend (see BIG BEND NATIONAL PARK) and much later emptying into the Gulf of Mexico at Brownsville, Texas, and Matamoros, Mexico. Other paired towns are Laredo, Texas, and Nuevo Laredo,

Mexico, and El Paso, Texas, and Juárez, Mexico. Albuquerque is on its New Mexican course Indian pueblos throve on its banks when Coronado came (1540), and irrigation of the arid country was practiced then Now Elephant Butte Dam, completed in 1916, creates a reservoir (near Hot Springs, N Mex), which serves a large area, including Las Cruces, N Mex , and El Paso Further downstream are irrigated areas about Del Rio and Eagle Pass, Texas, and near the mouth of the Rio Grande is the citrus-fruit and truck region commonly called simply the Rio Grande Valley and developed principally in the 1920s An agreement between the United States and Mexico in 1945 provided for further projects The river is known to Mexicans as Río Bravo del Norte See Harvey Fergusson, *Rio Grande* (1933), Laura Gilpin, *The Rio Grande, River of Destiny* (1949)

Rio Grande City (rē'ō grănd" sĭ'tē), unincorporated town (pop c 2,500), co seat of Starr co , extreme S Texas, on the Rio Grande and WNW of Brownsville The region was settled by Spanish of José de Escandón's colony c 1753, and the town, founded c 1847, was at first called Rancho Davis Cattle and oil from the semiarid plains support the town, which was once a river port and is still a port of entry Near-by Fort Ringgold, established in 1848, had almost a century of border history before it was made inactive in 1944

Rio Grande de Cagayan, Philippines see CAGAYAN

Rio Grande do Norte (rē'ō gran'du dōō nôr'tu), state (20,482 sq mi , 1940 pop 768,018, 1949 estimated pop 927,141), NE Brazil, on the Atlantic Ocean The capital is NATAL It consists of a sandy coastal plain, rising to a semiarid plateau in the south Its valuable mineral resources include saltworks, gypsum quarries, and largely untapped deposits of beryl, diatomite, and columbite Sugar cane is widely grown A European settlement was established near Natal in 1599, and for a brief period in the 17th cent the Dutch occupied the area

Rio Grande do Sul (rē'ō gran'du dōō sōōl'), state (109,066 sq mi , 1940 pop 3,320 681, 1949 estimated pop 4,008 691) S Brazil The capital is PÔRTO ALEGRE Between Argentina on the west and the Atlantic Ocean on the east, Rio Grande do Sul is the southernmost state of Brazil and borders on Uruguay It is Brazil's leading stock-raising and meat-processing state and is also the most important producer of wheat and wine The state's inhabitants are popularly called *gauchos*, and there are many farmers of German and Italian descent, who are noted for their progressive agricultural methods The first European settlement was made by Jesuit missionaries in the 17th cent The state was the scene of a revolt from 1835 to 1845 Getulio Vargas was born here The city of **Rio Grande do Sul** (pop 49,337), also known as Rio Grande, is in the southern part of the state, at the entrance to Lagoa dos Patos It is an important port and commercial center, exporting meat products, hides, wool, and grain There are meat-packing plants, fish canneries, and textile mills The site was settled in 1745

Rioja (rē'ō'hä), region, N Spain, in Old Castile, along the right bank of the Upper Ebro It is very fertile and is famous for its fine wines Logroño is the chief center

Riom (rē'ôN'), town (pop 10,420), Puy-de-Dôme dept , S central France, near Clermont-Ferrand Before the French Revolution it was the seat of the intendants of Auvergne, and it has kept its old aspect In 1942 the Vichy government of France here held a trial of French political and military leaders (including Léon Blum, Édouard Daladier, and Maurice Gamelin), accused of plunging France into the Second World War unprepared When the defendants produced evidence placing the guilt on their accusers, the trial was indefinitely postponed

Río Muni, see SPANISH GUINEA

Rion (rēôn'), anc *Phasis*, river, 195 mi long, rising in the Caucasus near the Mamison Pass, W Georgian SSR, and flowing S and W past Kutais into the Black Sea at Poti Its upper course is used for hydroelectric power In its lower course it passes through the lowland of Mingrelia or Colchis The Ossetian Military Road follows the upper Rion valley

Río Piedras (pyā'dhrās), town (pop 19,935), NE Puerto Rico, just SE of San Juan Seat of the Univ of Puerto Rico (see PUERTO RICO, UNIVERSITY OF), it is also a center of industry and of farm trade

riot, rout, and unlawful assembly, in law, varying degrees of concerted disturbance of the peace At common law, an unlawful assembly is a gathering for a common purpose (whether lawful or unlawful) of at least three persons whose conduct causes near-by observers reasonably to fear that a breach of the peace will result When the meeting is a furtherance of a criminal CONSPIRACY, the participation of only two persons will suffice to constitute the crime of unlawful assembly A gathering, originally peaceable, may be transformed into an unlawful assembly if three or more persons behave in concert so as palpably to threaten disorder Modern statutes have freed the crime of unlawful assembly from some of its technicalities. Thus there are municipal ordinances which make unlawful an unlicensed street assembly which blocks traffic even if there is no danger of tumult An unlawful assembly becomes a rout when the participants take some step which, if consummated, would result in crime, e g , if three men who have assembled unlawfully to commit arson proceed toward the building which they intend to fire, they are guilty of a rout even if they never reach their goal There is a riot if violence actually results from an unlawful assembly If a police officer (or other officer of the peace) commands bystanders at a riot to help him in repressing it, they must obey on pain of themselves being deemed rioters

Río Tinto, Riotinto (both rē'ōtēn'tō), or **Minas de Riotinto** (mē'nas dā), town (pop 2,727), Huelva prov , SW Spain, in Andalusia It is the center of the Río Tinto mining region, named for the river which crosses it Known since Phoenician times, the area has some of the world's largest copper deposits and some iron and manganese

Riouw Archipelago (rē'ou, rō'), island group (2,279 sq mi , pop 77,149), Indonesia, at the entrance to the Strait of Malacca, near Singapore Its largest island, Bintan, has extensive bauxite and tin mines and is the site of Tanjung Pinang, capital of the group The Lingga Archipelago (842 sq mi , pop 30,524) is S of the Riouw Archipelago and has important tin mines

Rio Vista (rē'ō vĭ'stu), town (pop 1,666), central Calif , on the Sacramento river and SSW of Sacramento, in an irrigated farm area, inc 1894 Asparagus and fruit are canned here

Riphath (rĭ'făth), grandson of Japheth Gen. 10 3, 1 Chron 1 6

Ripley, Eleazer Wheelock (ē"lĭzā'zur), 1782–1839, American general, b Hanover, N H , grad Dartmouth, 1800, grandson of Eleazer Wheelock In the War of 1812 he commanded the 21st Infantry Regiment, served in Canada, and in 1814, having been promoted brigadier general, assisted Gen. Jacob J Brown in the Niagara campaign In 1820 he resigned from the army to practice law, served (1832) in the Louisiana legislature, and was a U S Representative from 1835 to his death See biography by his nephew Nicholas Bayles (1890)

Ripley, George, 1802–80, American literary critic and author, b Greenfield, Mass , grad Harvard, 1823 He entered the Unitarian ministry in 1826 He was one of the leaders of the transcendentalists and a contributor to their magazine, the *Dial* In 1841 his interest in social reform led him to resign from the ministry and help found BROOK FARM, where he remained as president until 1847 His edition, with F H Hedge, of *Specimens of Foreign Standard Literature*, in translation (14 vol , 1838–42), increased American knowledge of European literature In his later life he became an influential literary critic on the New York *Tribune* See biography by O B Frothingham (1882)

Ripley, William Zebina, 1867–1941, American economist, b Medford, Mass , Ph D Columbia, 1893 While professor of political economy at Harvard (1901–33), he also served the government, holding advisory posts with the War Dept (1918), the Interstate Commerce Commission (1920–23), and other organizations An authority on railroads, he urged regional consolidation of railway lines He also attacked the practice of corporations in failing to inform small shareholders concerning the affairs of the business His books include *Trusts, Pools, and Corporations* (1905), *Railroads Rates and Regulation* (1912), *Railroads Finance & Organization* (1915), and *Main Street and Wall Street* (1927) *The Races of Europe* (1900) made him known as an anthropologist

Ripley 1 Town (pop 2,011), co seat of Tippah co , NE Miss , SE of Memphis, Tenn , in a farm and dairy area, platted 1835, inc 1837 Near by is Blue Mountain College (Baptist, for women, 1873) **2** Village (pop 1,623), SW Ohio, on the Ohio river and SE of Cincinnati, laid out 1812 There are tobacco farms here The Rankin Home, said to be the Underground Railroad station where the original of Eliza in *Uncle Tom's Cabin* found refuge, was made a state memorial in 1937 **3** Town (pop 2,784), co seat of Lauderdale co , W Tenn , near the Mississippi NNE of Memphis, in a farm and timber area, inc 1838, rechartered 1901 Open Lake is near by

Ripon, Frederick John Robinson, 1st **earl of** (rĭ'pun), 1782–1859, English Tory statesman Ripon, who had the distinction of being the man who introduced the CORN LAWS of 1815 and later advocated their repeal in 1846, entered Parliament in 1806 and served as president of the Board of Trade (1818–23) and as chancellor of the exchequer (1823–27) Although he supported the repressive legislation of 1817–19, he pursued, as chancellor of the exchequer, a liberal policy of lowering tariffs In 1827 he was created Viscount Goderich and was appointed secretary for war and the colonies, and on George Canning's death he became prime minister Want of resolution and internal strife wrecked his ministry in 1828, and Goderich (created earl of Ripon in 1833) later served as secretary for war and colonies (1830–33), lord privy seal (1833–34), and president of the Board of Trade (1841) under Robert Peel, with whom he resigned when the repeal of the corn laws split the Tories in 1846

Ripon, George Frederick Samuel Robinson, 1st **marquess of,** 1827–1909, English statesman, viceroy of India (1880–84) As a young man he was interested in the Christian Socialist movement, lectured at a workingmen's college, and in 1853 entered Parliament He served as undersecretary and secretary for war (1859–61, 1863–66), secretary for India (1866–68), and lord president of the council (1868–73) His successful chairmanship of the commission to negotiate settlement of the *Alabama* claims with the United States was rewarded with the title of marquess (1871) Ripon resigned public office in 1873 just before his conversion to Roman Catholicism (1874), but he accepted the office of viceroy of India under William Gladstone in 1880 He dealt vigorously with the Afghan troubles and incurred the criticism of English Tories and Anglo-Indians by supporting the freedom of the press, racial equality in office-holding and legal status, and extension of self-government On his return to England he served as first lord of the admiralty (1886), colonial secretary (1892–95), and lord privy seal (1905–08) See biography by Lucien Wolf (1921)

Ripon (rĭ'pun), municipal borough (1931 pop 8,591; 1943 estimated pop 11,266) and city, West Riding of Yorkshire, England, on the Ure and NW of York St Cuthbert founded a monastery here c 660, it was refounded a few years later by St Wilfrid, on another site The present minster, restored by Sir George Gilbert Scott, dates from the 12th to the 15th cent , it has a Saxon crypt with a narrow passage called St Wilfrid's Needle, ability to pass through which was supposed to be an indication of chastity The Ripon hospital was originally a 12th-century foundation for lepers The Wakeman's House, in the market place, was the residence of the mayor (wakeman") in the 13th cent In 1640 a treaty here concluded the second of the Bishops' Wars The town has foundries, paint works, tanneries, and breweries

Ripon (rĭ'pun), city (pop 4,566), central Wis , NW of Fond du Lac, settled 1844 as Ceresco, a Fourierist community, inc 1858 as Ripon Washing machines are made Carrie Chapman Catt was born in the city Ripon is the seat of Ripon College (coeducational, 1851)

Ripon Falls (rĭ'pun), 16 ft high and c 900 ft wide, in the Victoria Nile, just below its outlet from Victoria Nyanza in SE Uganda They were named for the viceroy of India by John Speke, who discovered them in 1862

Rip Van Winkle, character in the story of that name by Washington IRVING, published serially in 1819–20 and collected in *The Sketch Book of Geoffrey Crayon, Gent* The story is based on a legend once current in the Catskills of a man who slept for 20 years Several plays have been written from Irving's story, the most familiar one being a collaboration between Dion Boucicault and Joseph Jefferson, played, with immense success, by Jefferson for many years An opera on the theme was produced in Chicago in 1920, the music by Reginald de Koven, the book by Percy Mackaye

Riquet, Pierre Paul de (pyĕr' pōl' du rkā'), 1604–80, French engineer He planned the Canal du Midi, which links the Mediterranean Sea with the Atlantic Ocean by way of the Garonne Construction was begun in 1666 with the approval of Colbert and Louis XIV The difficulties of the work were nearly insuperable at the time, and Riquet spent the rest of his life and his personal fortune on the construction It was finished (1681) a few months after his death

Rishon le Zion (rē'shōn lu zĭ'un, rēshōn' lu tsēōn'), town (pop c 10,000), central Israel, c 10 mi S of Tel-Aviv, founded 1882 There are manufactures of beer, wine, glassware, and textiles

Rising Star, town (pop 1,198), N central Texas, SW of Fort Worth, in an oil, gas, and farm area, settled 1880, inc 1905

Rising Sun, city (pop 1,545), co seat of Ohio co , SE Ind , on the Ohio and SE of Aurora, settled 1812, inc 1849 It is a shipping point for a farming area

Rison (rī'zun), trade town (pop 1,005), co seat of Cleveland co , S central Ark , SW of Pine Bluff, in a cotton area

Risorgimento (rēsôr"jēmĕn'tō) [Ital =resurgence], period of national unification in the history of Italy It is generally considered to have begun in 1815 and to have ended in 1870 Before the Risorgimento, Italy had not formed a political unity since the fall of the Western Roman Empire in the 5th cent Foreign domination or influence became overwhelming in the 16th cent and virtually complete in the French Revolutionary Wars and the period of domination by NAPOLEON I. The French Revolution and the political changes it wrought in Italy were at first enthusiastically welcomed by liberals throughout Italy, who were dreaming of a national revival However, French domination—notably the Murat regime in Naples—soon roused the opposition of the patriots. Secret

societies such as the CARBONARI were organized and continued their revolutionary activities after the restoration of the old order by the Congress of Vienna (1814–15, see ITALY) The Carbonari engineered revolutions in the TWO SICILIES (1820) and in the kingdom of SARDINIA (1821) Despite severe reprisals imposed by the HOLY ALLIANCE, new uprisings occurred in 1831 in the Papal States, Modena, and Parma Being above all a nationalistic movement, the Risorgimento received wide support among all classes, including the highest nobility. Inevitably, however, it split into political groups, each of which also represented economic class interests The radical group was led by MAZZINI, whose secret society Giovine Italia [young Italy], replaced the Carbonari in 1831 Its program was republican and anticlerical and contemplated economic and social reforms The conservative and clerical elements among the nationalists generally advocated a federation of Italian states under the presidency of the pope The moderates, the propertied bourgeoisie, and the N Italian industrialists favored the unification of Italy under a king of the house of Savoy, i e, as events turned out, under VICTOR EMMANUEL II of Sardinia The explosive phase of the Risorgimento began with the revolutionary years 1848–49 The Lombardo-Venetian kingdom rose against Austrian rule After bitter fighting the rebels expelled the Austrians from Milan KING CHARLES ALBERT of Sardinia openly intervened in favor of the rebels, but after some initial successes he was defeated by the Austrians under Radetzky at Custozza Charles Albert signed an armistice and withdrew his forces, in 1849 he renewed his attack, only to be disastrously routed by Radetzky at Novara He abdicated in favor of his son, Victor Emmanuel II, who made peace In the meantime similar revolutions had taken place at Venice (under Daniele MANIN) and in Parma, Modena, Tuscany, the Two Sicilies, and the Papal States A republic was proclaimed at Rome under the leadership of Mazzini after the flight of Pius IX, French intervention brought about its fall in July, 1849, after its heroic defense by Garibaldi Throughout Italy the revolutionary movement was suppressed In fact, however, the liberal movement quietly gained strength More and more liberals rallied around the new king of Sardinia and his *minister* CAVOUR, the chief author of Italian unification Cavour realized that Sardinia could not defeat Austria without foreign aid He set out to secure French support and British sympathy by joining (1855) the allies in the Crimean War At the interview of PLOMBIÈRES, Emperor Napoleon III promised military aid against Austria War broke out in 1859 and the French and Sardinians were victorious over the Austrians at Magenta and at SOLFERINO These victories however, were so costly that Napoleon signed the separate preliminary peace of VILLAFRANCA DI VERONA (later confirmed at Zurich) Sardinia gained only Lombardy Tuscany, Modena, Parma, Bologna, and the Romagna, where the revolutionists had once more set up provisional governments, were to return to their former rulers, actually, however, this provision was not fulfilled, and plebiscites were held (March, 1860) in these states, which voted for their union with Sardinia Napoleon, who countenanced the plebiscites, received Savoy and Nice as a reward In May, 1860, GARIBALDI landed in Sicily with 1,000 volunteers, and after a spectacular campaign he was master of Sicily and Naples by Sept, 1860 Sardinia now sent an army across the Papal States to join Garibaldi The Marches and Umbria were annexed to Sardinia, and only Rome and Latium remained to the pope (thanks largely to French intervention) Naples and Sicily also voted for union with Sardinia When Gaeta, the last stronghold of Francis II of the Two Sicilies, fell to the Sardinian forces, the kingdom of Italy was proclaimed (March, 1861) Through its alliance with Prussia in the AUSTRO-PRUSSIAN WAR of 1866, Italy obtained Venetia, after the fall of Napoleon III and the withdrawal of French troops from the Papal States, Italian forces seized the remainder of the papal possessions, including *Rome itself* (Sept, 1870) See Carlo Tivaroni, *Storia critica del risorgimento italiano* (9 vols, 1888–97), W R Thayer, *Life and Times of Cavour* (2 vols, 1911), G M Trevelyan, *Garibaldi and the Making of Italy* (1911), René Albrecht-Carrié, *Italy from Napoleon to Mussolini* (1949)

Rissah (rĭ'sə) [Heb, =ruin], unlocated desert resting place in the wanderings Num 33 21,22

Ristich, Jovan (yō'vän rĕ'stĭch), 1831–99, Serbian statesman A leader of the liberal party, he was repeatedly foreign minister and was twice premier (1872–73, 1876–80) During his second term Serbia gained full independence and additional territory at the Congress of Berlin (1878) After the abdication of King Milan, Ristich headed (1889–93) the council of regency

Ristori, Adelaide (rēstō'rē), 1822–1906, Italian actress The daughter of strolling players, she appeared at 18 in the title role of an Italian version of Schiller's *Mary Stuart* and became a leading tragedienne In 1847 she married the marchese del Grillo, but continued her theatrical career, winning fame before Italian audiences in the title roles of Alfieri's *Myrrha* and Pellico's *Francesca da Rimini* She triumphed a few years later in Paris in familiar Italian roles and in classical French drama, in which she rivaled Rachel, who was at the Comédie Française She had great success in Europe and, in 1866, 1875, and 1884–85, in the United States A woman of melancholy beauty and graceful movement, she also excelled as Lady Macbeth and Medea See her *Studies and Memories* (Eng tr, 1888)

Ritchey, George Willis, 1864–1945, American astronomer, b Meigs co, Ohio, studied at the Univ of Cincinnati (1883–84, 1886–87) He was superintendent of instrument construction first (1899–1904) at Yerkes Observatory and then (1905–9) at the Solar Observatory of Carnegie Institution From 1901 to 1905 he taught astronomy at the Univ of Chicago Ritchey was in charge of the designing and construction of the 60-inch and the 100-inch reflecting telescopes at Mt Wilson Observatory Later he went to the Paris Observatory as director (1924–30) of the astrophotographic laboratory. He is coinventor of the Ritchey-Chrétien reflecting telescope, and he supervised (1931) the construction of a 40-inch telescope of that type for the U S Naval Observatory The cellular type of optical mirror was also his invention.

Ritchie, Alexander Hay, 1822–95, American engraver and painter, b Scotland His plates display a fine technique and delicate handling Among them are *Lady Washington's Reception Day* after Daniel Huntington and *Death of Lincoln* after Ritchie's own painting

Ritchie, Anna Cora (Ogden) Mowatt see MOWATT, ANNA CORA (OGDEN)

Ritchie, Anne Isabella Thackeray, Lady, 1837–1919, English writer, eldest daughter of William Makepeace Thackeray In 1877 she married a cousin, Richmond T W Ritchie (knighted 1907) Her writings include several novels, biographical notes for an edition of Thackeray's works (1898–99), *Madame de Sévigné* (1881), *Tennyson and His Friends* (1892), and *Chapters from Some Memoirs* (1894) See *Thackeray and His Daughter* (ed by Hester Thackeray Ritchie, 1924)

Ritchie, Thomas, 1778–1854, American journalist, b Tappahannock, Va. As editor (1804–45) of the Richmond *Enquirer* he was practically Democratic boss of Virginia and was also powerful in national politics Under President Polk he edited the administration journal, the Washington *Union*, leaving the *Enquirer* in the hands of his two sons See C H Ambler, *Thomas Ritchie a Study in Virginia Politics* (1913)

Rithmah (rĭth'mə) [Heb, =broom], unlocated desert station of the Jews Num 33 18,19.

Ritschl, Albrecht (ĭl'brĕkht rĭ'chul), 1822–89, German theologian He was professor of theology at Bonn (1852–64) and at Göttingen (from 1864) The Ritschlian theology was very influential in the 19th and early 20th cent, especially among Lutherans It was in some respects a reaction against metaphysical rationalistic speculation in theology It taught that God may be known only in religious faith from the works and person of Jesus Christ Its interest is in the needs and ideals of man's spiritual life Ritschl's most typical work has been translated into English as *The Christian Doctrine of Justification and Reconciliation* (Vols I and III, 1872 and 1900) His son Otto Ritschl wrote his biography (2 vols, 1892–96) See also E A Edghill, *Faith and Fact a Study of Ritschlianism* (1910).

Ritson, Joseph, 1752–1803, English antiquarian and scholar, b Stockton-on-Tees He became a London lawyer Ritson attacked Thomas Warton's scholarship in *Observations on Warton's History* (1782) and protested the "creations" of Bishop Percy's *Reliques* in his own careful editions of *Ancient Songs* (1790), *Robin Hood* (2 vols, 1795), and *Ancient English Metrical Romances* (3 vols, 1802) In his *Remarks on Shakespeare* (1783) he criticized Dr Johnson, George Steevens, and Malone as editors and wrote some notes of real value See biography by B H Bronson (1938)

Rittenhouse, David, 1732–96, American astronomer and instrument maker, b near Germantown, Pa, self-educated A clockmaker by trade, he developed great skill in the making of mathematical instruments He was called upon to determine, with his own instruments, the boundary lines of several states and also part of the boundary known as MASON-DIXON LINE In 1769 he was asked by the American Philosophical Society to observe the transit of Venus His contributions include the use of measured grating intervals and spider threads (1785) on the focus of the telescope Active in public affairs, he was a member of the convention that framed Pennsylvania's constitution and was state treasurer (1777–89) and director of the U.S mint (1792–95). After the Revolution he was Anti-Federalist. He succeeded Benjamin Franklin as president (1791–96) of the American Philosophical Society, most of his writings appeared in its *Transactions*. See biography by Edward Ford (1946)

Rittenhouse, Jessie Belle, 1869–1948, American poet and anthologist, b Mt Morris, N.Y., wife of Clinton SCOLLARD. She compiled five anthologies of American and British verse and wrote criticism in *The Younger American Poets* (1904) Of several volumes of poetry, the last is *The Moving Tide* (1939) She collaborated with her husband in *Patrician Rhymes* (1932) See her autobiography, *My House of Life* (1934)

Ritter, Frederic Louis, 1834–91, Alsatian composer, choral conductor, and music historian, long resident in the United States In 1856 he went to Cincinnati, founding there the Philharmonic Orchestra and the Cecilia Society In 1861 he moved to New York, where he was active as teacher and choral conductor, and later became professor of music at Vassar. His *Music in America* (1883), although not highly reliable, was the first thorough study of its subject Besides other historical works, he wrote music textbooks and composed piano pieces, songs, and chamber music

Ritter, Henry, 1816–53, Canadian marine and genre painter, b Montreal He studied art in Hamburg and Düsseldorf and remained in Germany Most of his works were in German museums

Ritter, Karl, 1779–1859, German geographer, a founder of modern human geography Professor at the Univ of Berlin from 1820, Ritter was an outstanding teacher He helped define the scope of geography and its relationship to other sciences, and he emphasized the influence of natural environment on the development and activities of man His *Comparative Geography* (1852) was translated into English in 1865 and 1881 His most important work, *Die Erdkunde* (2 vols, 1817–18), was revised and enlarged in the second edition (19 vols, 1822–59) See biography by W L Gage (1867)

Rittman, village (pop 2,770), NE central Ohio, SW of Akron Paper products are made here

Ritzville, city (pop 1,748), co seat of Adams co, E central Wash, SW of Spokane, settled c 1878, inc 1906 It processes and ships wheat

Ryukyu Islands see RYUKYU ISLANDS

Rivadavia, Bernardino (bĕrnärdhē'nō rōvä'dhävyä), 1780–1845, Argentine statesman and diplomat, first president of the United Provs of La Plata (1826–27) He served (1806–7) under Jacques de LINIERS against the British invaders and was a leading advocate of independence in 1810 As a member of the first triumvirate of the young republic (1811–12), he exerted a significant influence After six years (1814–20) as a diplomat in Europe, he became a minister under Martín RODRÍGUEZ, governor of Buenos Aires, and was largely responsible for the progressive measures of this administration He was envoy to Great Britain before becoming president of the republic Rivadavia instituted many reforms and strove to impose centralistic government on the nation A unitarian constitution, adopted in 1826, was rejected by QUIROGA and other chieftains, who revolted Rivadavia resigned and went into exile

Riva di Trento (rē'va dē trĕn'tō), town (pop 4,989), Trentino-Alto Adige, N Italy It is a summer resort at the northwest end of Lake GARDA It belonged to Austria until 1919

Rivas, Ángel de Saavedra, duque de (än'hĕl dā savä'dhrä dōō'kā dā rē'vās), 1791–1865, Spanish poet and dramatist of the romantic school He was active in politics and had to flee to England in 1823 Later he went to Italy, France, and Malta, returning to Spain in 1834 His first publication was the narrative poem *El moro expósito* [the Moorish foundling] (1834), followed in 1835 by *Don Álvaro, o, La fuerza del sino*, the first triumph of romanticism in the Spanish theater This play was later used by Verdi for the libretto of *La forza del destino* Rivas is known also for his lyrics and for his collection *Romances históricos* (1841), based on popular legends and written in the traditional ballad meter

Rivas (rē'vās), town (1940 estimated pop 7,311), SW Nicaragua, near the shore of Lake Nicaragua. It is on the Isthmus of Rivas, the narrow land strip between the lake and the Pacific Seat of an Indian civilization at the time of the Spanish Conquest, Rivas continued prominent It controlled the transit route across Nicaragua during the California gold rush, and the loss of Rivas by William WALKER in 1857 ended his Nicaraguan campaign Connected by rail with SAN JUAN DEL SUR and by the Inter-American Highway with Managua, the capital, it is strategically located near the route of the proposed NICARAGUA CANAL

river, stream of running fresh water larger than a brook or creek Land surfaces are nowhere perfectly flat, and the runoff after precipitation tends to flow downward by the shortest and steepest course in depressions formed by the intersection of slopes Runoffs of sufficient volume and velocity join to form a stream that, by EROSION of underlying earth and rock, deepens its bed, it becomes permanent when it cuts deeply enough to be fed by subsurface water. Sea level is the ultimate base level, but the floor of a lake or basin into which a stream flows may become a local and temporary base level. Cliffs or escarpments and differences in the resistance of rocks create such irregularities in the bed of a river as the WATERFALL and the pot-

hole. A stream tends to eliminate irregularities and to form a smooth gradient from source to base level. As it approaches base level, downward cutting is replaced by lateral cutting, and the river widens its bed and its VALLEY and develops a curving course In old rivers the curves form exaggerated loops and bends (meanders), a stream may open up a new channel across the arc of the meander, leaving a cutoff or an OXBOW LAKE The discharge of a river depends on the cross-section area of its channel and on its velocity. Velocity is governed by the volume of water, the slope of the bed, and the shape of the channel (which determines the amount of frictional resistance) The volume is affected by the force and quantity of precipitation and may be increased by receiving water from tributaries, these are commonly formed by headward erosion of the main stream A river system may be enlarged by piracy one river, cutting through the divide (WATERSHED) that separates it from another river, diverts the waters of the other stream into its own channel Rivers modify topography by deposition as well as by erosion The quantity and size of rock fragments and earth a stream can carry depend on its velocity When the velocity is checked by changes of gradient, by meeting the water mass of lakes or oceans, or by the spreading of water when a stream overflows its banks, part of the load carried by the stream is deposited in the stream bed or as ALLUVIUM beyond the channel Land forms produced by deposition include the DELTA, the FLOOD PLAIN, the bar, and the alluvial fan and terrace Stream systems are classified according to their stage of development as young, mature, or old The young stream is marked by a steep-sided valley, steep gradients, and irregularities in the bed, the mature stream, by a valley with a wide floor and flaring sides, by advanced headward erosion by tributaries, and by a more smoothly graded bed, the old stream has graded its course to base level and runs through a peneplain River valleys have been important centers of civilization, they afford travel routes, and their alluvial soils form good agricultural lands Navigable rivers are important in commerce and have influenced the location of cities Among the large or otherwise well-known river systems of the world are the Nile, the Congo, the Niger, and the Zambezi, the Amazon, the Orinoco, and the Río de la Plata, the Mississippi-Missouri, the St Lawrence, the Hudson, the Colorado, the Columbia, the Mackenzie-Peace, and the Yukon, the Danube, the Rhine, the Rhone, the Seine, the Scheldt, the Elbe, the Oder, the Niemen, the Don, the Volga, the Dnieper, the Po, the Tagus, and the Thames, the Tigris the Euphrates, the Ob, the Yenisei, the Lena, the Syr Darya, the Amu Darya, the Amur, the Yellow River, the Yangtze, the Ganges, the Brahmaputra, the Indus, the Irrawaddy, and the Mekong, and the Murray-Darling See also FLOODS, WATER RIGHT, WATERS, TERRITORIAL See F C Lane, *Earth's Grandest Rivers* (1949)

Rivera, Diego (dēā'gō rēvā'ra), 1886–, Mexican mural painter, studied in boyhood under Mexican painters The ancient sculpture of MEXICO deeply impressed him In Europe (1907 9, 1912-21) he worked in several countries and was influenced by the paintings of El Greco and Goya He had close association with Cézanne and Picasso and with communistic Russians in exile He became convinced that a new form of art should respond to "the new order of things and that the logical place for this art belonging to the populace, was on the walls of public buildings" Returning (1921) to MEXICO, he painted, with the assistance of younger artists, large murals dealing with the life, history, and problems of MEXICO, in the Preparatory School and the Ministry of Education in MEXICO city and the Agricultural School of Chapingo To the peasants and workers he became a sort of prophet He visited Moscow in 1927–28 Again in MEXICO, he painted in the National Palace and in the Palace of Cortés at Cuernavaca He painted frescoes in the luncheon club of the Stock Exchange and in the Fine Arts Building, San Francisco, and murals in the Detroit Institute of Arts, giving his interpretation of industrial America as exemplified in Detroit A mural for Rockefeller Center, New York, was rejected because of the inclusion of a portrait of Lenin Rivera in 1936 interceded with President Cárdenas to permit Trotzky to come to MEXICO See biography by B D Wolfe (1939)

Rivera, Fructuoso (frōōktōō-ō'sō), 1790?–1854, first president of Uruguay (1830–34, 1839–42) After serving with ARTIGAS, he was one of the Thirty-three Immortals who raised the standard of independence under Juan Antonio LAVALLEJA He was chosen president and was responsible for the succession of Manuel ORIBE, against whom he revolted in 1836. In the long civil strife, which was to characterize much of Uruguay's subsequent history, two factions appeared, distinguished by their badges, the Colorados [reds] of Rivera and the Blancos [whites] of Oribe Rivera succeeded in 1838 in routing Oribe, who fled to Buenos Aires. The following year Rivera declared war on Juan Manuel de Rosas, ruler of the United Provs (Argentina) With the help of Rosas, Oribe besieged Montevideo from 1843 to 1851 Rivera, opposed by factions within his own party, was exiled from the invested city in 1847, taking refuge in Brazil After the downfall of Rosas and the end of the siege, he was selected (1853) as one of the triumvirate to head the provisional government of Uruguay.

Rivera, José Eustasio (hōsā' āōōstā'syō), 1889–1928, Colombian novelist He was a member of the commission to fix the Venezuela-Colombia boundary deep in the rain forest of the Amazon basin He thus learned about the jungle, which is the setting and the chief actor in his one and masterly novel, *La vorágine* (1924, Eng tr, *The Vortex*, 1935) In fluid, plastic language he tells of the hardships and brutal sufferings of rubber gatherers in the violent and hostile forest He also wrote sonnets in classical manner about the tropics in *Tierra de promisión* (1921)

Rivera, Primo de. see PRIMO DE RIVERA, MIGUEL

Riverbank, city (1940 pop 1,130, 1946 special census pop 2,670), central Calif, on the Stanislaus and SE of Stockton, in a farm area, inc 1922

River Brethren, name used to designate certain Christian bodies originating in 1770 in a revival movement among the German settlers in E Pennsylvania In the 1750s Mennonite refugees from Switzerland had established their homes near the Susquehanna river Their religious leaders, Jacob and John Engle, became associated with Philip William OTTERBEIN, Martin BOEHM, and others in the revival movement The followers of the Engles, who believed in trine immersion, came to be known as the River Brethren, either because they lived "down by the river" or because they were baptized in the Susquehanna upon joining the brotherhood In 1843 a conservative group in York co, Pa, withdrew, these are known as the Old Order or Yorker Brethren In 1852 another group left the main body, under the leadership of Matthias Brunser, adopting the name United Zion's Children The main body took the name Brethren in Christ, by which a group of Mennonites is also known The Brethren are very similar to the Dunkards, they practice trine immersion and foot washing, adhere to a plain dress, and oppose war, alcohol, tobacco, and "worldly" pleasures

Riverdale 1 Village (pop 2,865), NE Ill, just S of Chicago, settled c 1836, inc 1892 It is a rail center with a steel plant 2 Residential town (pop 2,330), W central Md, near Washington, D C, inc 1920 3 Borough (pop 1,110), N N J, near Pompton Lakes, inc 1923

River Edge, borough (pop 3,287), NE N J, on the Hackensack and E of Paterson, inc 1894

River Falls, city (pop 2,806), W Wis, SE of St Paul, Minn, and on the Kinnikinnic, settled c 1850, inc 1875 It has a state teachers college

River Forest, residential village (pop 9,487), NE Ill, west suburb of Chicago, settled 1836, inc 1880 Rosary College and Concordia Teachers College are here The village has a number of houses designed by Frank Lloyd Wright, who lived near by

River Grove, village (pop 3,301), NE Ill, northwest suburb of Chicago, inc 1888

Riverhead (rĭ'vərhĕd), town (pop 8,922), co seat of Suffolk co, on E Long Island, SE N Y, at the mouth of the Peconic on Peconic Bay, settled c 1690 In a potato-growing and truck-gardening area, it is also a fishing center Bedding and cement blocks are made The museum of the Suffolk County Historical Society is here, and near by is a large radio receiving station

Riverina (rĭ"vərē'nə), rural administrative district (26,560 sq mi, pop 83,000), S New South Wales, Australia, between the Lachlan and Murray rivers It produces wool and wheat

River Junction, town (pop 7,110), NW Fla, on the Apalachicola at the Ga line NW of Tallahassee, in a productive tobacco area, inc 1921 The town, which produces lumber and furniture, has long been known as Chattahoochee, and preliminary returns for the 1950 census list it under that name

River of Doubt see ROOSEVELT, river

River Point, R I see WEST WARWICK

River Rouge (rōōzh'), industrial city (pop 17,008), SE Mich, on the Detroit river at the mouth of the Rouge, adjacent to S Detroit, inc as a city 1921 It grew in the 1920s with the expansion of the Ford Motor Company in the area

Rivers, Richard Woodville, Earl, d 1469, English nobleman He was knighted by Henry VI in 1426 and acquired wealth and power by marrying (1436) Jacquetta of Luxemburg, widow of John of Lancaster, duke of Bedford He served in English armies in France and helped suppress the rebellion under Jack Cade in England In the Wars of the Roses, Rivers was a Lancastrian partisan and fought for Henry VI through the Lancastrian defeat at Towton (1461) Then, feeling that the cause was lost, Rivers supported Edward IV, to whom he gave his daughter (see WOODVILLE, ELIZABETH) in marriage (1464) He became treasurer (1465) and was created earl. The favoritism shown the Woodville faction at court embittered Richard Neville, earl of Warwick. In the revolt which Warwick led in 1469, the king was defeated, and Rivers was captured and executed

Rivers, Thomas Milton, 1888–, American bacteriologist, b Jonesboro, Ga, M D Johns Hopkins, 1915 He taught at Johns Hopkins (1917–22) and then joined the Rockefeller Institute, becoming director of its hospital in 1937 An authority on viruses, he developed methods of culturing the germs and made studies of diseases caused by viruses and other microorganisms

Riverside, town (pop 4,878), S Ont, on the Detroit river and E of Windsor It is a residential suburb of Windsor

Riverside 1 Residential city and tourist center (pop 34,696), co seat of Riverside co, S Calif, on the Santa Ana and E of Los Angeles, founded 1870 inc 1883 The navel orange was introduced here in 1873 The city is the seat of a citrus experiment station of the Univ of California, Sherman Indian Institute, a junior college (coeducational), and the Glenwood Mission Inn Easter sunrise services are held on near-by Mt Rubidoux (1,337 ft high), where a large cross stands in memory of Father Junípero Serra March Field (U S army) and the lake resort of Arlington are in the area 2 Residential village (pop 7,935), NE Ill, on the Des Plaines river and W of Chicago, inc 1875 It was designed as a model suburb by Frederick Law Olmsted and Calvert Vaux 3 Commuters' town (pop 1,043), N W Va, near Star City, inc 1912

Riverton 1 Village (pop 1,524), central Ill, just NE of Springfield, inc 1873 2 Borough (pop 2,354), SW N J, on the Delaware between Camden and Burlington, inc 1893 3 Town (pop 2,540), W central Wyo, on the Bighorn river at the mouth of the Wind river and NE of Lander, founded and inc 1906 The Riverton reclamation development is served by several dams (Wind River Diversion, Bull Lake, and Pilot Butte) and irrigates some 42,500 acres The project will ultimately include about 100,000 acres

Rives, Amélie, Princess Troubetzkoy (ămālē' rēvz', trōōbĕtskoi'), 1863–1945, American novelist and playwright, b Richmond, Va After her divorce from her first husband, John A Chanler, she married (1896) Prince Pierre Troubetzkoy, a Russian artist Of her many novels, the first, *The Quick or the Dead* (1888), was sensational in its day Among her plays the best is perhaps *Love-in-a-Mist* (1926), written in collaboration with Gilbert Emery.

Rives, William Cabell (rēvz), 1793–1868, American statesman and diplomat, b Nelson co (then part of Amherst co), Va, grad College of William and Mary, 1809 A lawyer, he served in the Virginia constitutional convention of 1816 and the state legislature (1817–21, 1822–23) and was a U S Representative (1823–29) Rives was twice minister to France (1829–32, 1849–53) and was elected to three terms in the U S Senate (1832–34, 1836–39, 1841–45) Originally a Jacksonian Democrat, he opposed Van Buren's Independent Treasury System and supported William H Harrison for President in 1840, by 1844, when he backed Henry Clay, he was definitely a Whig In 1861 he was a member of the peace convention at Washington sponsored by Virginia in an effort to prevent the Civil War He served in the provisional and then the regular congress of the Confederacy until 1862 His *History of the Life and Times of James Madison* (3 vols, 1859–68) covers Madison's life through the year 1797

Rivesville (rēvz'vĭl), mining town (pop 1,552), N W Va, near Fairmont, in a coal region, laid out 1837

rivet (rĭ'vĭt), solid metal cylinder with a head on one end, the other end being hammered down after passing through the plates or other materials which it fastens closely together Rivets are generally made of the same material as the parts to be joined Steel rivets are made by feeding round bars, heated to a proper temperature, into a rivet-making machine which forms the head and cuts off the bar The steel of rivets should permit bending, when cold, through an angle of 180° without fracture The buttonhead rivet, most commonly used, has a hemispherical head The countersunk-head rivet has a flat head made to fit a countersunk hole Holes for rivets in steel members are either punched or drilled and are generally larger than the rivet diameter The spacing of rivets depends upon the nature of the work, rivets for watertight or oiltight vessels (e g boilers) are placed much closer together than are those in most structural members Rivets for ordinary construction work range from ¼ to 1¼ in in diameter, smaller rivets are made for many purposes Hot rivets are used for heavy construction, they are easier to head and they shrink on cooling, thus pulling pieces closer together Most riveting in the field is done by pneumatic appliances, driven by portable air compressors Split rivets are generally of small diameter and are made of brass or some other relatively soft metal The shank is split part way, and when put in place the split portion is bent over and hammered down The split rivet is used for connecting fibrous material to metal, as in the brake band of an automobile Either split or tubular rivets are used to fasten soft materials such as

leather See A. E. R. de Jonge, *Riveted Joints* (1945)

Riviera (rĭvēâ'ru), narrow coastal strip between the Alps and the Mediterranean, extending, roughly, from La Spezia (Italy) to Hyères (France) Genoa is the center of the Italian Riviera and divides it into the Riviera di Levante (east) and the Riviera di Ponente (west) The French Riviera is also known as the Côte d'Azur The whole region is celebrated for its scenic beauty, mild climate, and luxuriant vegetation Dotted with fashionable resorts, hotels, and villas in a setting of beautiful gardens, it is the major playground of Europe Among the most famous resorts are RAPALLO, SAN REMO, and Bordighera on the Italian Riviera, and NICE, MONTE CARLO, and CANNES on the Côte d'Azur Flowers for export and for use in the perfume industry are grown throughout the region, particularly at Grasse A panoramic highway runs along the Riviera from end to end, its section (the *Corniche du littoral*) between NICE and Menton, which hugs the characteristic red cliffs of the coast line, is particularly famous

Riviera Beach (rŭvēr'ŭ), town (pop 1,981), SE Fla, just N of Palm Beach, inc 1922 It is a tourist and fishing center

Rivière Bleue (rēvyĕr' blû') or **Saint Joseph de la Rivière Bleue** (sĕ zhôzĕf' du la), village (pop 1,082), E Que, on the St Francis and SE of Rivière du Loup, in a dairy-farm and lumbering region

Rivière du Loup (rēvyĕr' dü lōō'), city (pop 8,713), E Que, on the south shore of the St Lawrence at the mouth of the Rivière du Loup and NE of Quebec It is a commercial and industrial center, with railroad shops, woodworking plants, and stove manufacturing and with lumbering and peat cutting in the surrounding area It is also a resort and tourist center The site was visited (1683) by French missionaries, settled after 1833, it was originally called Fraserville

Rivière du Moulin (rēvyĕr' dü mōōlĕ'), village (pop 1,561), S Que, on the Saguenay at the mouth of the Rivière du Moulin It is just NE of Chicoutimi, of which it is a suburb

Rivinus, Augustus Quirinus (ôgŭ'stŭs kwĭrī'nŭs rĭvī'nŭs), 1652–1723, German botanist and physician Rivinus is the Latinized form of his surname, Bachmann. He is known chiefly for his botanical work *Ordo plantarum* (5 parts, 1690–99), which includes his system of classification of plants according to their petals

Rivoli (rē'vōlē), officially **Rivoli Veronese** (vārōnā'zā), village, Venetia, NE Italy, on the Adige and 12 mi NW of Verona It was the scene in 1797 of a decisive French victory over the Austrians Masséna, who participated in the battle under Bonaparte, was later created duke of Rivoli

Rix, Julian Walbridge, 1850–1903, American landscape painter, b Peacham, Vt, mainly self-taught His work is in private collections in New York city, Baltimore, Rochester, N Y, and South Bethlehem, Pa, it includes *Solitude*, *Sunset*, *High Tide*, and *Noonday*

Riyad or **Riyadh,** Arabia see RIAD

Rizal, José (hōsā' rēsäl'), 1861–96, Philippine patriot, author, poet, and physician, b Calamba, Laguna prov He studied at a Jesuit school in Manila, at the Univ of Madrid (M D, 1884, Ph D, 1885), and in Paris, Berlin, Heidelberg, and Leipzig. In Berlin he published his first novel, *Noli me tangere* (1886), a violent diatribe against Spanish administration and the religious orders in the Philippines Because of this attack he was compelled by Spanish officials to leave the islands soon after his return home in 1887 He lived successively in China, Japan, the United States, England and France, before establishing himself in Hong Kong to practice medicine In 1890 he published an annotated edition of Antonio Morga's *Sucesos de las islas Filipinas*, and in 1891 he published his second novel, *El filibusterismo*, a sequel to his first Returning to Manila in 1892, he was arrested as a revolutionary agitator and banished to Dapitan on Mindanao While on his way to Cuba in 1896, he was arrested and returned to Manila There he was given a farcical trial and executed as an instigator of insurrection and founder of secret revolutionary societies He also wrote articles, *Mariang Makiling* (1890), a Philippine folk tale, and considerable poetry See biographies by Austin Craig (1913), Antonio Iraizoz y de Villar (1929, and F C Laubach (1936), C E Russell and E B Rodriguez, *The Hero of the Filipinos* (1923), Austin Craig, ed, *Rizal's Political Writings* (1933), Carlos Quirino, *The Great Malayan* (1940), Rafael Palma, *The Pride of the Malay Race* (1949)

Riza Shah Pahlavi see REZA SHAH PAHLAVI

Rizpah (rĭz'pu), Saul's concubine who held watch over her dead sons on Mt Gibeah 2 Sam 3 7, 21 8–11

Rizzio, David (rĭt'sēō), 1535?–1566, favorite of MARY QUEEN OF SCOTS He was a Piedmontese musician (also called RICCIO) who arrived in Scotland with the ambassador from Savoy He came to the notice of Queen Mary and toward the end of 1564 became her secretary The reliance which Mary placed in him, however, caused jealousy and hatred on the part of many great nobles They persuaded Lord DARNLEY, Mary's husband, that RIZZIO was Mary's lover Then, in 1566, with Darnley's support, they broke into Holyrood Palace, seized RIZZIO in Mary's presence and killed him There is no proof or disproof of the charges that Mary was his mistress, but it is clear that his murder was only part of a larger campaign by Scottish nobles against Mary

Rjukan (rēōō'kan), village (pop 5,460), Telemark co, S Norway, on the Rjukanfoss, a waterfall (780 ft high) of the Mane river Its large hydroelectric and nitrogen-fixation plants were destroyed (1943) by Allied bombings in the Second World War After the war a plant for making heavy water was built here

roach see COCKROACH

road. The history of roads has been related to the centralizing of populations in powerful cities, which they have served for military purposes and for the collection of supplies and tribute In Persia, between 500 and 400 B C, all the provinces were connected with the capital, Susa, by roads, one of them 1,500 mi long Greece, cherishing the independence of city-states and opposing centralization, did relatively little road making The ROMAN ROADS are famous In Italy and in every region that the Romans conquered, they built roads so durable that parts of them yet remain serviceable The Roman roads were generally straight, not avoiding steep grades The surface was of large slabs of hard stone well cut This surface rested on a bed of smaller stones and cement about 3 ft thick Modern engineers criticize the Roman roads for their steep grades and for their disregard of economy of materials and labor The English word *street* is from Latin *via strata*, a paved road From the fall of the Roman Empire until the 19th cent, European roads generally were neglected and hard to travel People usually walked, rode horses (as did Chaucer's Canterbury pilgrims), or were carried in sedan chairs Goods were transported by pack animals In France, Louis XIV and Napoleon built good roads for military purposes Elsewhere on the Continent roads were not much improved before the middle of the 19th cent In Great Britain two Scottish engineers, Thomas TELFORD and John L McADAM, were responsible for the development of the MACADAM ROAD This was an item of some importance to the Industrial Revolution, and the expansion of the Industrial Revolution brought road improvement over the Continent, although the emphasis was on the railroad until after the invention of the automobile In the Americas the Inca empire was remarkable for its fine roads In the present United States, however, the waterways were the normal mode of Indian travel, and the Indian trails, though many, were simply crude footpaths These were used by white settlers and were widened to make wagon trails The increase in stagecoaches did bring some improvement, and the TURNPIKE was introduced with the beginning of the 19th cent Turnpikes were of great significance in the first half of that century One of the big items of internal improvement in that period was planning and building road arteries, notably the NATIONAL ROAD The canal and then the railroad, however, took precedence It was not until the invention of the automobile that the road became paramount again Hard-surfaced highways were stretched across the entire land in a relatively few years, and the complex system came to include superhighways, elevated highways, and many-laned traffic conveyors The building of roads became a major branch of engineering, and even the most difficult obstacles were surmounted Roads have helped greatly to equalize and unify American culture in the 20th cent The highways through Canada and the Pan American Highway are also serving to promote land travel in the Americas and increase understanding For the hard surfacing of roads, see PAVEMENT A B Hulbert wrote and edited many historical works about roads in the present United States, some of them collected into two series, "Historic Highways of America" and "Overland to the Pacific"; the volumes of the "American Trails" series are edited by Jay Monaghan See J W Gregory, *The Story of the Road* (new ed, 1939), Wilfred Owen, *Automotive Transportation* (1949), Jean Labatut and W J Lane, ed, *Highways* (1950)

road runner, a cuckoo found in the cactus country of the W United States and parts of Mexico Terrestrial in habit (although it can fly with ease), it speeds over the ground with its head down, its ragged crest erect, and its long tail extended horizontally Motor traffic has interfered with its pleasure in running ahead of horse-drawn vehicles It eats insects, small reptiles, mice, fruit of the giant cactus, and occasionally small birds It is easily tamed but is mischievous

Road Town see VIRGIN ISLANDS, BRITISH

Roanne (rôän'), town (pop 40,216), Loire dept, SE France, on the Loire It has large textile, machine, and other manufactures

Roanoke (rō'unōk) **1** City (pop 4,168), E Ala, near the Ga line SE of Anniston, in a farm area; settled c 1835, inc 1888 **2** Village (pop 1,090), central Ill, ENE of Peoria in a farm area, inc 1874 **3** City (pop 69,287), SW Va, on the Roanoke river, founded 1834 as Big Lick, inc as a town 1874, name changed to Roanoke 1882 with the coming of the railroad, inc as a city 1884 It is between the Blue Ridge and the Allegheny Mts, and is the southern gateway to the Shenandoah Valley The industrial, rail, and trade center of a coal, lumber, and farm area, it has steel, textile, wood-processing, and other plants and a huge rayon mill Near by are a veterans' hospital and HOLLINS COLLEGE

Roanoke, river rising in SW Virginia and flowing 410 mi SE to Albemarle Sound, N C The Federal government approved (1944) a plan for dams and reservoirs for flood control, hydroelectric power and other purposes in the Roanoke river basin

Roanoke College see SALEM, Va

Roanoke Island, NE N C, off the coast in Croatan Sound between Albemarle and Pamlico sounds Manteo (pop 571) is the chief town, and fishing is the principal industry of the island, which is 12 mi long and averages 3 mi in width The English navigators Philip Amadas and Arthur Barlowe, exploring for Sir Walter RALEGH in 1584, brought back such glowing accounts of the island that Ralegh immediately dispatched a colonizing expedition under Sir Richard Grenville and Sir Ralph Lane The colonists landed on Roanoke in Aug, 1585, and built the "Citie of Ralegh" (or New Fort), but, faring badly, returned to England the next year In 1587 Ralegh sent out another group under John White Forced to return to England for supplies White was unable to come back to Roanoke until 1591, and then the colony had disappeared In 1940 a group of scholars tentatively approved the authenticity of some 40 stone tablets (now at Brenau College Gainesville, Ga), which supposedly record the history of the "lost colony", the first one was found on the banks of the nearby Chowan river in 1937 They tell of the death of many of the colonists (including Virginia Dare, White's granddaughter, the first English child born—on Roanoke—in America) from disease and Indian attacks and of the migration of others into the interior, as far away as present-day Atlanta, Ga If the stones are not a hoax, as some think possible they would seem to dispel forever the CROATAN theory of the colony's disappearance In 1937 Paul Green's symphonic drama *The Lost Colony* was first presented to commemorate the 350th anniversary of the landing of White's colony, and in 1947 U S government archaeologists at Fort Raleigh National Historic Site (16 45 acres, est 1941) announced that they had uncovered other artifacts of the colony In the Civil War, Roanoke Island fell (Jan, 1862) to Union forces under Gen A E Burnside

Roanoke Rapids, industrial city (pop 8,545), N N C, on the Roanoke near the Va line, NNE of Rocky Mount, founded 1893, inc as a city 1931 It has textile and paper mills

roaring forties, name applied, especially by sailors, to the latitudes between 40° and 50° S latitude, where the prevailing westerly winds (here called the brave west winds) blow strongly and steadily The winds are unimpeded by the large land areas which interfere with the westerlies in the Northern Hemisphere

Roaring Spring, borough (pop 2,724), S Pa, c 10 mi S of Altoona, inc 1888.

Roatán, island see BAY ISLANDS

Robbers, Herman (hĕr'man rō'burs), 1868–1937, Dutch novelist He was the author of *De Roman van een Gezin* (1909–10, Eng tr, *The Fortunes of a Household*, 1924)

Robber Synod see EUTYCHES

robbery, felonious taking of property from a person against his will by threatening or committing force or violence The injury or threat may be directed against the person robbed, his property, or the person or property of his relative or of anyone in his presence at the time of the robbery There is no robbery unless force or fear is used to overcome resistance Thus, surreptitiously picking a man's pocket or snatching something from him without resistance on his part is larceny, but not robbery Robbery is distinguished from LARCENY, where the unlawful taking of property without the owner's consent is not accomplished by violence or by inducing fear through threats Robbery differs from EXTORTION, where force or fear are used to obtain the consent of the victim The distinction, however, is tenuous In some states there are several degrees of robbery with graduated penalties, aggravating circumstances, e g, the use of firearms, result in a greater penalty

Robbia, Italian sculptors see DELLA ROBBIA

Robbins, village (pop 1,349), NE Ill, near Chicago, inc 1917. It is an all-Negro community.

Robbinsdale, city (pop 6,018), E Minn, northwest residential suburb of Minneapolis, platted 1887

Robersonville, town (pop. 1,407), NE N C, ESE of Rocky Mount, in a region producing tobacco, cotton, and peanuts, settled in the 1700s, inc. 1872

Robert I, c.865–923, French king (922–23), son of Count Robert the Strong and younger brother of EUDES In 922 he led a rebellion against King CHARLES III (Charles the Simple) and was crowned king at Rheims by a party of nobles, but he was soon killed in battle His son-in-law, Raoul of Burgundy, succeeded him

Robert II (Robert the Pious), c 970–1031, king of France (996–1031), son of Hugh Capet, with whom he ruled jointly after 987. Distinguished for his piety and learning, he also sought to strengthen the weak royal power, conquered several towns, established his claim to the duchy of Burgundy, and formed an alliance with Flanders. His plans for the dismemberment of the empire came to nothing He was compelled to yield to the pope in a controversy over the validity of his second marriage His successor was Henry I

Robert I or **Robert the Bruce,** 1274–1329, king of Scotland (1306–29) He belonged to the BRUCE family and was the grandson of that Robert the Bruce who in 1290 was rejected by Edward I of England as competitor for the Scottish crown against the successful John de Baliol He was earl of Carrick from an early age and in 1304, upon his father's death, assumed the lordship of Annandale and of the hereditary lands in England In 1296 he appears to have sworn fealty to Edward I and to have supported him in his invasion of Scotland after Baliol openly defied the authority of England But when Edward treated Scotland as a fief and established a governor over it, Robert the Bruce was among the leaders in the struggle for national independence (1297–1302) An obscure contest between him and John Comyn, nephew and heir to John de Baliol, for the adherence of the Scottish nation chiefs resulted in Comyn's murder (probably unpremeditated) by the Bruce In defiance of Edward, the Bruce was crowned king at Scone on March 27, 1306 After defeat at Methven, he took refuge in wild country until he could gather up his power According to legend, the Bruce at this time of discouragement learned courage and hope from watching a spider persevere in spinning his web The Bruce estates were confiscated by the king of England, and punishment was dealt out to his followers In 1307 a successful battle at Loudon Hill brought numbers of adherents to his side Edward I, aged and ill, attempting to lead an army against the rebellious Scots, died on the way Edward II failed to pursue the vigorous course of his father The Bruce was able to consolidate his hold on Scotland and recapture lands and castles from the English while raids continued across the border, both to and from England Stirling, the last Scottish castle held by the English, was besieged and so hard pressed that the governor finally agreed to its surrender if relief from England did not arrive to hold it by June 24, 1314 On June 23 and 24 at near-by Bannockburn, the Bruce overwhelmingly defeated a large English force led by Edward II The war went on and in 1318 the Scots took Berwick Robert the Bruce was excommunicated by the pope A truce, made in 1323, was broken in 1327 after Edward III ascended the throne of England Finally, in the Treaty of Northampton (1328), the independence of Scotland and the validity of the Bruce's title to the throne were recognized Robert I passed the short remainder of his life in his castle at Cardross and died there, perhaps of leprosy As he requested, his embalmed heart was given to Sir James Douglas, to be carried to Jerusalem for burial In Spain, Douglas fell in fighting with the Moors The heart of the Bruce, borne safely back to Scotland, was buried in Melrose Abbey His body had been interred in the Abbey of Dunfermline By his skill and courage he had delivered Scotland from the control of England and by his wise policies had set the country on its way to new prosperity He was succeeded by David II The 14th-century poem *The Bruce* by John Barbour is a spirited account of his life See biography by A N Mackenzie (1934)

Robert II, 1316–90, king of Scotland (1371–90) He was the first sovereign of the house of Stuart His father, Walter the Steward, had married Marjory, the daughter of ROBERT I (Robert the Bruce), but their son did not succeed to the throne until the death of his uncle, David II, during whose reign Robert on several occasions acted as regent or joint regent and led the opposition to Edward de Baliol He rebelled in 1363 against David when that monarch proposed an English successor to the Scottish throne, and in accordance with a law of succession adopted in 1318 Robert succeeded to the crown on David's death He was the founder of the dynasty of Stewart or Stuart (see STUART, family) which eventually succeeded to the English as well as the Scottish throne Robert II's first marriage took place after the birth of several of his sons, whose succession to the kingdom was legitimized by an act of Parliament in 1373 One or another of Robert's sons acted as guardian during most of the king's reign The Scots in alliance with France fought invasions by England—one in 1384 led by John of Gaunt and one in 1385 led by Richard II The Scots themselves invaded England in 1388 and won a great victory at OTTERBURN

Robert III, c 1340–1406, king of Scotland (1390–1406) Eldest son of Robert II, he assumed the name Robert when he ascended the throne, although he had previously been John, earl of Carrick A brother, Robert, earl of Montueth and Fife, whom in 1398 he created duke of Albany (see STUART, ROBERT, 1ST DUKE OF ALBANY), guided affairs of state in great measure, because the king was an invalid War with England during this reign was marked by Henry IV's invasion of Scotland, which reached Edinburgh (1400), and a return expedition into England (1402) led by Archibald Douglas The duke of Albany is held to have been responsible for the death of Robert's heir, David STUART, DUKE OF ROTHESAY, in 1402 When another son (later James I) was seized and detained in England by Henry IV, King Robert died—of grief, it is said

Robert I (Robert the Magnificent), d 1035, duke of Normandy (1027–35), father of William the Conqueror He is often identified with the legendary ROBERT THE DEVIL He aided HENRY I of France against his rebellious brother and mother, intervened in the affairs of Flanders, and supported Edward the Confessor, then in exile at Robert's court Having designated as his heir his illegitimate son William, he made a pilgrimage to Jerusalem and died at Nicaea

Robert II (Robert Curthose), c 1054–1134, duke of Normandy (1087–1106), eldest son of WILLIAM I of England Aided by Philip I of France, he rebelled (1077) against his father, whom he wounded in battle (1079) He was subsequently reconciled to him, then again exiled At William's death he succeeded to Normandy, England falling to WILLIAM II He and William were intermittently at war (1091–96) till Robert went (1096–1100) on the First Crusade After his return he disputed the claim of HENRY I to the English throne but was persuaded to accept a settlement The conflict was revived, however, and Henry defeated Robert at Tinchebrai (1106), seized Normandy, and kept Robert a prisoner of the English See biography by C W David (1920)

Robert, Henry Martyn, 1837–1923, American military engineer, b Robertsville, S C , grad West Point, 1857 In the Civil War he was assigned to the engineers and worked on the defenses of Washington, Philadelphia, and the New England coast Almost continuously from 1867 until 1895, he was in charge of river, harbor, and coast improvements along the Pacific and Gulf coasts, on the Great Lakes, and on Long Island Sound In 1901 he was appointed brigadier general, chief of engineers, soon afterward he retired He is best known as the author of a book on parliamentary law, *Pocket Manual of Rules of Order for Deliberate Assemblies* (1876), of which a revision appeared in 1915

Robert, Léopold (lāôpôld' rôbĕr'), 1794–1835, French genre painter, b Switzerland, student of J L David He excelled in depicting Italian folk life in a classical style His two best-known paintings, *Pilgrimage of the Madonna of the Arc*, or *Spring*, and *Harvesters in the Pontine Marshes*, or *Summer*, are in the Louvre

Robert Bruce see ROBERT I, king of Scotland

Robert College, at Istanbul, opened 1863 with funds contributed by Christopher R Robert and other Americans for the higher education of Turkish men In 1912 a school of engineering was added to the college of arts and sciences The buildings are on a hill overlooking the narrowest part of the Bosporus

Robert Curthose see ROBERT II, duke of Normandy

Robert-Fleury, Joseph Nicolas (zhôzĕf' nēkôlà' rôbĕr'-flûrē'), 1797–1890, French historical painter He enjoyed a long career of official honors crowned by the directorship of the Académie de France à Rome in 1864 He is best known for paintings of such subjects as *Scene from the Massacre of St Bartholomew* and *Charles V at Yuste* Many of them are in the Luxembourg Museum, Paris His son, **Tony Robert-Fleury** (tônē'), 1837–1912, also a historical painter, is represented in the Luxembourg Museum and the Metropolitan Museum

Robert Grosseteste see GROSSETESTE, ROBERT

Robert Guiscard (gēskär'), c 1015–1085 Norman conqueror of S Italy, one of the sons of Tancred de Hauteville (see NORMANS) Robert joined (c 1046) his brothers in S Italy and fought with them to expel the Byzantines In 1057 he succeeded his brother Humphrey as count of Apulia, and in 1059 Pope Nicholas II invested him at Melfi with the counties of Apulia, Calabria, and Sicily Most of these lands remained to be conquered, and Robert set himself to the task with the help of his younger brother Roger, who wrested (1061–91) Sicily from the Arabs (see ROGER I) Calabria was occupied by 1060, Bari fell in 1071, Salerno in 1076 Robert's attacks on the duchy of Benevento, a papal fief, provoked papal displeasure (1074), but a reconciliation was brought about because of Gregory VII's need of Norman assistance against Emperor Henry IV Ultimately only the city and a small ring of land around Benevento remained to the pope Robert now coveted the Byzantine Empire Championing the cause of the deposed emperor, Michael VII, he sailed in 1081, conquered Corfu, and defeated (1082) ALEXIUS I. In 1083 he returned to aid Pope GREGORY VII, who was besieged in the Castel Sant' Angelo Robert's troops sacked Rome for three days (1084), but were again expelled by those of Emperor Henry IV. Robert, with his elder son BOHEMOND, resumed their conquests in the east Robert died of fever during the siege of Cephalonia and was succeeded in Apulia by his younger son, Roger

Robert-Houdin, Jean Eugène. see HOUDIN, JEAN EUGÈNE ROBERT

Robert of Brunne. see MANNYNG, ROBERT.

Robert of Courtenay (kôrt'nĕ, kōōrtunā'), d 1228, Latin emperor of Constantinople (1221–28) His father, Peter of Courtenay, count of Auxerre in France, died in 1217, shortly after his election by the Latin nobles to succeed Henry of Flanders as emperor Robert's mother Yolande was regent until 1219, when Robert was elected to succeed his father He was crowned in 1221 Disaster befell the Latin Empire in 1224, when Robert was defeated almost simultaneously by Theodore, despot of Epirus, and by John III, emperor of Nicaea The emperor's territories were reduced to little more than the city of Constantinople Robert was deposed in 1228, and his brother Baldwin II succeeded him under the regency of John of Brienne

Robert of Geneva, d 1394, Genevan churchman, antipope (1378–94, see SCHISM, GREAT) with the name Clement VII He was archbishop of Cambrai (1368) and was created (1371) a cardinal He was subsequently papal legate in Italy, and he put down a rebellion at Cesena with great cruelty In 1378, on the death of GREGORY XI, URBAN VI was elected, but the cardinals reconsidered and elected Robert instead He went to Avignon at once, and the Great Schism had begun He was recognized by France (his protector), by Scotland, (France's ally), and by Castile, Aragon, Navarre, Denmark, and Norway Several Italian and German states also recognized him Portugal twice recognized, and twice repudiated him He was unsuccessful in trying to increase his support He died just as the ideas that led to the conciliar theory were being propagated from Paris His successor at Avignon was Benedict XIII (see LUNA, PEDRO DE)

Robert of Gloucester (glô'stur, glo'stur), fl c 1300, an English writer, possibly a monk of Gloucester To him is attributed a Middle English metrical chronicle in the Gloucestershire dialect which covers the period from Brutus to 1270 Probably the chronicle was written by more than one person, for the two recensions, while having one part (through the reign of Henry I) in common, vary in the length of the continuations, one also has a long insertion in the early material The chronicle is important for philological studies and for the history of the reign of Henry III

Robert of Jumièges (zhumyĕzh'), fl 1037–52, Norman churchman in England, b Normandy As abbot of Jumièges he won the favor of Edward (later EDWARD THE CONFESSOR) during Edward's exile in Normandy He went (1043) to England with the king and received the bishopric of London (1044), becoming archbishop of Canterbury in 1051 A leader of the Norman party of the king, he opposed the powerful Earl Godwin and helped send him into exile in 1051 Upon Godwin's return he fled to France, was later outlawed by the hostile English, and never succeeded in returning to his see, despite the support of the pope

Roberts, Benjamin Titus, 1823–93, American clergyman, one of the founders of the Free Methodist Church , b Gowanda, N Y He was expelled in 1858 from the Genesee Conference of the Methodist Episcopal Church, of New York state, because of his criticisms of conditions and methods of modern Methodism He and other ministers of the same mind formed the Free Methodist Church of North America in 1860, of which he was general superintendent from 1860 to 1893

Roberts, Sir Charles George Douglas, 1860–1943, Canadian author, b near Fredericton, N B , grad Univ of New Brunswick, 1879 After teaching literature several years at King's College, Windsor, N S , he moved to New York (1897), later to England, and finally, after serving in the First World War, back to Canada, settling in Toronto He greatly influenced other young Canadian poets of the "Confederation school,"—such as Bliss Carman and Archibald Lampman—with his nature lyrics and idyls in *Orion* (1880), *Divers Tones* (1886), and other volumes He is best known to the public for his numerous tales of wildlife, e g , *Watchers of the Trails* (1904) and *Hoof and Claw* (1913) He was also the author of many other works, including a popular *History of Canada* (1897) Upon his return to Canada he received many acknowledgments of his literary reputation, among which were the Lorne Pierce medal from the Royal Academy of Canada (1926) and a baronetcy (1935) See his *Selected Poems* (1936), James Cappon, *Roberts and the Influences of His Times* (1905)

Roberts, David, 1796–1864, British landscape and architectural painter, largely self-taught He began as a scene painter in Edinburgh and London Later he traveled widely Both his paintings and his published lithographic reproductions were pop-

ular His painting *Interior of Burgos Cathedral* is in the Tate Gallery, London Among his lithographs are *Sketches in Spain* and *Sketches in Italy*

Roberts, Elizabeth Madox, 1885–1941, American poet and novelist, b Perryville, Ky , grad Univ of Chicago, 1921 Her early poetry was awarded the Fisk Prize at the Univ of Chicago and appeared as *Under the Tree* (1922), poems for children Her later collection, *Song in the Meadow* (1940), displays her lyrical and ballad-writing ability She is best known for her novels and stories of the Kentucky mountain people, and her work is distinguished by fidelity to their speech and customs, Her novels include *The Time of Man* (1926), *My Heart and My Flesh* (1927), *Jingling in the Wind* (1928), *The Great Meadow* (1930), a story of the settling of Kentucky; *A Buried Treasure* (1931), and *Black Is My Truelove's Hair* (1938) Some of her short stories are collected in *The Haunted Mirror* (1932) and *Not by Strange Gods* (1941)

Roberts, Frederick Sleigh, 1st **Earl Roberts of Kandahar** (kăndŭhär'), 1832–1914, British field marshal He was educated at Eton and Sandhurst and joined the Bengal Artillery (1851) for service in India He served under his father on the northwest frontier and distinguished himself in a number of engagements, notably in the Sepoy Rebellion He acquired a reputation as an expert in the quartermaster general's department and had progressed to the rank of major general in 1875 Roberts advocated the "forward" policy against Russian encroachments, which became the general defensive policy of India As commander of the Punjab frontier forces in 1878 Roberts forced the acceptance by Afghanistan of the British demands in the Treaty of Gandamuk (1879) He remained in Afghanistan to repulse subsequent outbreaks, becoming a popular British hero after the defeat of the Afghan forces following a forced march of 300 mi to Kandahar (1880) Roberts was made commander in chief of the Madras army in 1881 and of the entire Indian forces in 1885 In 1893 he returned to England and wrote his reminiscences, *Forty-one Years in India* (1897) In 1899, when the English were meeting reverses at the hands of the Boers in South Africa, Roberts was sent to take control Aided by his chief of staff, Lord KITCHENER, Roberts reorganized the transport system, achieving a mobility that had been lacking By Nov , 1900, the SOUTH AFRICAN WAR seemed near a successful conclusion, and Roberts was returned home and awarded an earldom Roberts's office as commander in chief of the British army was abolished in 1904, and thereafter he devoted himself to the cause of compulsory military service for home defense, setting forth his ideas in *Fallacies and Facts* (1911).

Roberts, Howard, 1843–1900, American sculptor, b. Philadelphia, studied at the Pennsylvania Academy of the Fine Arts and in France His statue *La Première Pose* at the Centennial Exposition, 1876, was the first notable American work to show the influence of modern French schooling He made a statue of Robert Fulton for Statuary Hall, Washington, D C , and portrait busts.

Roberts, Kenneth Lewis, 1885–, American author, b Kennebunk, Maine, grad Cornell, 1908 Well known as staff correspondent for the *Saturday Evening Post* and as the author of travel books, in 1928 he retired to write the *Chronicles of Arundel*, a series of American historical novels including *Arundel* (1930), *The Lively Lady* (1931), *Rabble in Arms* (1933), and *Captain Caution* (1934) He has since written the novels *Northwest Passage* (1937), *Oliver Wiswell* (1940), and *Lydia Bailey* (1946) and several books of essays and has edited two historical source books See the autobiographical *I Wanted to Write* (1949)

Roberts, Owen Josephus, 1875–, American jurist, Associate Justice of the U S Supreme Court (1930–45), b Philadelphia, grad Univ of Pennsylvania (B A., 1895, LL B , 1898) He practiced law in his native city, and while teaching law (1898–1918) at the Univ of Pennsylvania, he was (1901–4) assistant district attorney of Philadelphia co In the First World War he was appointed by the U S Attorney General to prosecute cases involving espionage, and he became nationally known as a prosecuting attorney in the Teapot Dome scandal (1924) While serving as Associate Justice of the Supreme Court, Roberts was appointed (1941) by President F D Roosevelt to head a commission to investigate the Pearl Harbor disaster After he resigned from the Supreme Court, he became (1948) dean of the Univ of Pennsylvania law school

Robertson, Agnes, 1833–1916, British actress The adopted daughter of Charles Kean, she made her debut (1851) at Princess's Theatre, London, as Nerissa in *The Merchant of Venice* In 1853 she married Dion BOUCICAULT and came with him to the United States, where she played leading parts in his Irish dramas Her greatest successes, however, were in the title roles of Boucicault's *Jessie Brown, or, The Relief of Lucknow* and *Dot*.

Robertson, Frederick William, 1816–53, English clergyman and lecturer Ordained (1840) in the Church of England, in 1847 he began his ministry in Trinity Chapel, Brighton. His understanding of the truths of the spiritual life and his power in presenting them gave him great influence in the pulpit He strove to improve conditions among the working classes of Brighton His works, published posthumously, include five series of sermons (1855–74), which were widely read

Robertson, Henrietta Richardson: see RICHARDSON, HENRY HANDEL

Robertson, James, 1742–1814, American frontiersman, a founder of Tennessee, b Brunswick co , Va He was reared in North Carolina. After the failure of the REGULATOR MOVEMENT, he led (1771) a group of settlers from Orange co , N C , to the transmontane region and became a leader of the WAUTAUGA ASSOCIATION In 1779 Robertson explored the Cumberland river country for Richard HENDERSON and his TRANSYLVANIA COMPANY and on Jan 1, 1780, began the settlement of Nashborough, later renamed Nashville Under the Cumberland Compact he became the chief civil and military officer of the community, and its survival was largely due to his wise leadership Neglected by North Carolina, subjected to Indian attacks, and denied free passage to New Orleans for their products, the Cumberland settlers came near placing themselves under Spanish rule But North Carolina's cession (1789) of its Western lands to the United States and the subsequent creation of the Southwest Territory held them in the Union When the state of Tennessee was organized in 1796, Robertson was prominent in drafting its first constitution In his later years he served as agent to the Chickasaw See Archibald Henderson, *The Conquest of the Old Southwest* (1920), biography by T E Matthews (1934)

Robertson, Morgan, 1861–1915, American author of sea stories, b Oswego, N Y His writing was based on his experience as a sailor from 1877 to 1886 Among his books of short stories are *Spun-Yarn* (1898), *Where Angels Fear to Tread* (1899), and *Sinful Peck* (1903)

Robertson, Thomas William, 1829–71, English dramatist Many of his successful comedies, superficial but more realistic than others of the period, were created for the actress Marie Wilton, who became the wife of Squire Bancroft His first success, *David Garrick* (1864), was followed by *Society* (1865), *Ours* (1866), *Caste* (1867), *School* (1869), and *M P* (1870) Several of these, including *Caste*, are still played See his *Life and Writings* (ed by T E Pemberton, 1893)

Robertson, William, 1721–93, Scottish churchman and historian He studied at the Univ of Edinburgh, entered the Church of Scotland, and as a member of its general assembly was the leader of the moderate party His *History of Scotland during the Reigns of Queen Mary and King James VI* (2 vols , 1759) was a factual, pragmatic history, praised for its literary merits and breadth of view by Edmund Burke, David Hume, and others and widely read in Scotland Soon after its success, he became principal of the Univ of Edinburgh, moderator of the general assembly, and historiographer royal *The History of the Reign of Charles V* (3 vols., 1769, ed by W H Prescott, 2 vols , 1857) was his masterpiece, though it has long been obsolete His *History of the Discovery and Settlement of America* (2 vols , 1777) was the first sympathetic treatment in English of the Spanish in America. His interest in the background of history is reflected in his last work, *A Historical Disquisition concerning the Knowledge Which the Ancients Had of India* (1781) A number of collected editions of his work have been published See J B Black, *The Art of History* (1926)

Robertson, Sir William, 1860–1933, English general He enlisted as a private in 1877 and was later sent to India From 1892 to 1896 he served as a staff captain in the intelligence department in India, and in a similar capacity under Lord Roberts in the South African War At the outbreak of the First World War he went to France as quartermaster general of the British army, became (1915) chief of staff to Gen Sir John French, and was promoted general He was chief of the imperial general staff (1915–18) and came into conflict with Lloyd George over the concentration of forces on the Western Front, a move which General Robertson strongly advocated He was relieved of his command in Feb , 1918 He commanded (1919–20) the British army on the Rhine and was made a baronet (1919) and a field marshal (1920) He is the author of *From Private to Field-Marshal* (1921) and *Soldiers and Statesmen, 1914–1918* (1926).

Robert the Bruce see ROBERT I, king of Scotland

Robert the Devil, hero of a medieval legend which perhaps owed certain details to the life of Robert I, duke of Normandy He was sold to the devil by his mother before his birth, but upon discovering the fact did penance and succeeded in purifying himself of his many sins. The story exists in several French and English versions and is the basis of Meyerbeer's opera *Robert le Diable*

Robert the Strong, d 866, French warrior, count of Anjou and Blois, father of the French kings Eudes and Robert I, and ancestor of the Capetians. He joined the rebellious nobles against Emperor Charles II; they invited Louis the German to invade France. Becoming reconciled to Charles in 861, he was charged with the defense of the country between the Seine and the Loire, from which he repelled the Bretons and Normans. He was killed fighting against the Normans.

Roberval (rō'bûrvŭl, Fr rôbĕrvăl'), town (pop. 3,220), S Que , on the southwest shore of Lake St. John and W of Chicoutimi It is a resort, with an airport, in a dairying, lumbering, and potato-growing region

Robeson, Paul (rōb'sŭn), 1898–, American Negro actor and concert singer, b Princeton, N J. The son of a runaway slave who became a minister, Robeson graduated first from Rutgers (1919), where he was a "four letter" man in athletics and a member of Phi Beta Kappa, and then from Columbia Univ School of Law (1923). In 1924 he embarked on a theatrical career, playing leading roles in Eugene O'Neill's *All God's Chillun Got Wings* and *The Emperor Jones* He began his career as a singer (1925) with a program of Negro spirituals, and his rich, warm baritone voice has since become known all over the world His theatrical career continued with triumphs in Ferber and Kern's *Showboat*, Shakespere's *Othello* (in England, 1930, in the United States, 1943–45), and O'Neill's *Hairy Ape* Some of the moving pictures in which he starred include *The Emperor Jones*, *Sanders of the River*, *King Solomon's Mines*, and *Song of Freedom* See biographies by his wife (1930) and Shirley Graham (1946)

Robesonia (rōbusō'nēu), borough (pop 1,570), SE Pa , W of Reading, settled 1855 It has textile mills

Robespierre, Maximilien Marie Isidore (rōbz'pēĕr, -pēr, Fr maksēmēlyĕ' marē' ēzēdōr' rôbĕspyĕr'), 1758–94, one of the leading figures of the French Revolution His youth was poverty-stricken, and he was enabled to study law in Paris only by a scholarship Returning to his native Arras, he practiced law, gained some reputation, and was appointed by his patron, the bishop of Arras, to a judgeship, which he resigned because he objected to capital punishment Robespierre soon came under the influence of Rousseau's theories, democracy and deism became his dogmas, and his emphasis on virtue later earned him the epithet, the Incorruptible Elected to the States-General of 1789, he remained in obscurity, but his influence in the Jacobin Club grew steadily until he became its leader (see JACOBINS). Elected to the Constituent Assembly, he championed the law that made members of the Constituent Assembly ineligible to the Legislative Assembly He unsuccessfully attacked the war policy of the GIRONDISTS, and, though he became a member of the Commune of Paris (Aug 10, 1792), he was not a leader in it As a deputy from Paris in the National Convention, he played an important part in the quarrel between the Girondists and the MOUNTAIN, but he still was overshadowed by Marat and DANTON Robespierre demanded the execution of the king and was a leader in the rising that brought about the destruction of the Girondists On July 27, 1793, he was elected to the second Committee of Public Safety (the "Great Committee"), where his powers waxed while Danton's waned The dangers of foreign invasion and internal dissent led the committee to inaugurate the REIGN OF TERROR, with which the name of Robespierre, its leading apologist, is always associated Having disposed of the Girondists, Robespierre turned against both the extreme left and the so-called moderates Jacques René HÉBERT and his party were overthrown, the moderates led by Danton and Camille DESMOULINS followed soon after (March, 1794) The guillotine having cleared their way, Robespierre and his two lieutenants, Louis de SAINT-JUST and Georges COUTHON, gave every appearance of being masters of France The Law of 22 Prairial (June 10, 1794) made the Revolutionary Tribunal an arbitrary tool and initiated the bloody horrors of the Great Terror, Robespierre even succeeded in forcing his deism on his colleagues by establishing the worship of the Supreme Being However, his dreams of a new state were not yet accomplished His enemies were desperate, and France was sick of the Terror On 9 Thermidor (July 27, 1794) Saint-Just's attack on Robespierre's enemies was the signal for a dramatic rising in the Convention against Robespierre, led by Jean Lambert TALLIEN and BILLAUD-VARENNE Robespierre was arrested, and, though he was freed by the troops of the commune, he hesitated to lead an insurrection against the Convention. BARRAS and his troops did not hesitate but attacked, they seized Robespierre He was summarily tried and guillotined with his followers the next morning (July 28). Legends concerning him and his ideas grew up. Generally he came to be considered an ambitious demagogue and dictator; others praised him as an idealistic champion of social revolution. Among historians, AULARD and MATHIEZ are the chief leaders of the opposing schools. See their works and the biographies by Ernest Hamel (3 vols , 1865–67, in French), Hilaire Belloc (1901), Louis Gosselin (Eng. tr., 1927), J M Thompson (2 vols., 1935), G. J. Renier (1936),

Friedrich Sieburg (Eng. tr., 1937), Ralph Korngold (1937), and James Michael Eagan (1938).

robin or robin redbreast, name in the Old World of a small bird of the warbler family and in the New World of a familiar migratory bird of the thrush family named by English colonists after their beloved redbreast The eastern robin of America is about 10 in. long (more than 4 in longer than the European robin), its back is olive gray, the head and tail darker; the white throat is barred with black, and the breast is chestnut red Its early spring return, its cheerful warble, and its destruction of harmful insects make it a welcome bird. The eggs are a clear greenish blue Usually two broods are raised Geographic varieties of the robin in North America are the western, the northwestern, the southern, and the San Lucas robins

Robin Goodfellow, mischievous and merry elf, sprite, or goblin in diminutive human shape, popularly believed in the 16th and 17th cent to haunt the English countryside Some of his powers and tricks are mentioned by Shakspere (who identified him with Puck) in *A Midsummer Night's Dream* (II 1)

> Either I mistake your shape and making quite,
> Or else you are that shrewd and knavish sprite,
> Call'd Robin Good-fellow are not you he,
> That frights the maidens of the villagery,
> Skim milk, and sometimes labor in the quern,
> And bootless make the breathless housewife churn,
> And sometime make the drink to bear no barm,
> Mislead night-wanderers, laughing at their harm?

See FAIRY See also M W Latham, *The Elizabethan Fairies* (1930)

Robin Hood, legendary outlaw of England With Little John (his chief archer), Friar Tuck, Maid Marian, and his band, he lived in Sherwood Forest and robbed the rich to help the poor He was mentioned in *Piers Plowman* He was the subject of at least 30 ballads and of a collection, *A Gest of Robyn Hode* (c 1510), of many stories and plays, and of an opera by Reginald de Koven

Robins, Elizabeth, 1865–, Anglo-American actress and author, b Louisville, Ky In 1885 she married George Richmond Parks She was noted in the '90s for her roles in Ibsen dramas Her novels, some written under the name C E Raimond, include *The Magnetic North* (1904), about Alaska, *The Convert* (1907), about the English militant suffrage movement, and *My Little Sister* (1913) She also wrote a suffragist play, *Votes for Women* (1905) See her *Theatre and Friendship Letters of Henry James* (1932) and her autobiography, *Both Sides of the Curtain* (1940)

Robinson, Benjamin Lincoln, 1864–1935, American botanist, b Bloomington, Ill, grad Harvard, 1887 He wrote many papers on the classification of the higher plants of the United States, Mexico, and tropical America and also *Flora of the Galapagos Islands* (1902) He edited the seventh edition, *New Manual of Botany* (1908), of Asa Gray's work and parts of the *Synoptical Flora of North America* (1895–97), by Gray and others James Harvey Robinson was his brother

Robinson, Beverley, 1723–92, American Loyalist, b Middlesex co, Va He served as a major under Gen James Wolfe at Quebec His marriage to Susanna Philipse, an heiress to extensive properties on the Hudson river, enabled him to eventually become a wealthy landowner He disapproved of the separation of the colonies from England, and, moving to New York city, he raised a Loyalist regiment, of which he became colonel He was involved in the preliminaries of Benedict Arnold's treason and later pleaded for Major John André's life With his family he was banished from New York The Robinson property was confiscated by the state of New York, £17,000 being paid him by the British government for the loss He died at Thornbury in England

Robinson, Boardman, 1876–, American painter, illustrator, and cartoonist, b Somerset, N S, studied at the Massachusetts School of Art, Boston, and in Paris After four years of painting in San Francisco he went to New York city and was illustrator and cartoonist for the *Morning Telegraph* (1907–10) and for the *Tribune* (1910–14) He went with John Reed to the Balkans and Russia at the beginning of the First World War His *Cartoons of the War* (1916) is a satirical record Robinson was cartoonist for the *Masses* and its successor, the *Liberator*, as well as for the conservative *Harper's Weekly*, until he went to England in 1922 as cartoonist for the London *Outlook* After his return in 1924 he taught at the Art Students League and became known for his murals Since 1930 he has lived at Colorado Springs, Colo, and since 1936 has been director of the Colorado Springs Fine Arts Center. Robinson is perhaps most famous for draughtsmanship in his cartoons and illustrations, e g, for Dostoyevsky's works, Masters's *Spoon River Anthology*, and Melville's *Moby Dick* His murals decorate Rockefeller Center, New York, the Dept of Justice Building, Washington, D C, and many other buildings. See study by A. W. Christ-Janer (1946)

Robinson, Charles, 1818–94, first governor of the state of Kansas (1861–63), b. Hardwick, Mass He was educated at Amherst, studied medicine, and, beginning in 1843, practiced at Belchertown, Springfield, and Pittsfield, Mass. In 1849 he joined the gold rush to California, where he became a miner, a restaurant keeper, and one of the editors of the *Settlers and Miners Tribune* at Sacramento Elected to the California legislature in 1850, he supported squatter sovereignty and opposed the establishment of slavery He returned (1851) to Massachusetts, again practiced medicine, and for two years edited the Fitchburg *News* In 1854 Robinson went to Kansas as agent of the EMIGRANT AID COMPANY, began the settlement of Lawrence, and commanded Free State forces in the Wakarusa War Under the Free State constitution adopted by the Topeka convention, he was elected (Jan, 1856) governor He attempted to avoid conflict with Federal authorities, but ignored the laws passed by the proslavery territorial legislature of 1855 and, after taking office, was arrested for treason and usurpation of office by the proslavery party A Federal grand jury acquitted him Robinson was reelected in 1858 and, under the Wyandotte Constitution, again in 1859, but waited until Kansas was admitted (1861) to the Union before assuming the governorship He was active in organizing Kansas regiments for the Civil War He was elected state senator in 1874 and 1876, was a regent of the state university (1864–74, 1893–94), and was superintendent of the Haskell Institute at Lawrence (1887–89) He wrote *The Kansas Conflict* (1892) See biography by F W Blackmar (1902)

Robinson, Charles Seymour, 1829–99, American Presbyterian clergyman, b Bennington, Vt, educated at Williams College and at Union and Princeton theological seminaries From 1871 he served as pastor of various Presbyterian churches in New York city, but he is particularly remembered as a compiler of books of hymns His *Laudes Domini* (1884) and other hymn collections were widely adopted

Robinson, Edward, 1858–1931, American archaeologist and museum director, b Boston, grad Harvard, 1879 After six years as curator of classical antiquities at the Museum of Fine Arts, Boston, he became its director in 1902, serving until 1905 In 1906 he became assistant director of the Metropolitan Museum of Art, he served as director from 1910 to 1931

Robinson, Edwin Arlington, 1869–1935, American poet, b Head Tide, Maine, attended Harvard (1891–93) He grew up in Gardiner, Maine and returned there to write after leaving Harvard and again after living in New York in 1897 In 1899, having written two volumes of verse, *The Torrent and the Night Before* (privately printed, 1896) and *The Children of the Night* (1897), he settled in New York He was still comparatively unknown and the jobs by which he supported himself included construction work on the subway until in 1905 President Theodore Roosevelt appointed him to the New York customhouse Robinson resigned in 1910, from 1911 he spent his summers at the MacDowell Colony in Peterborough, N H A somber, ironic analysis of character is evident in his portraits of New Englanders (such as "Miniver Cheevy" and "Flammonde") and in "Ben Jonson Entertains a Man from Stratford" They show, too, the same emotional power which underlies his longer tales, e g, *Avon's Harvest* (1921) and *Cavender's House* (1929), his Arthurian romances, *Merlin* (1917), *Lancelot* (1920), and *Tristram* (1927), and his two poetic dramas, *Van Zorn* (1914) and *The Porcupine* (1915) With easy technical mastery, Robinson wrote in traditional metrical forms, often using familiar and colloquial language General recognition, long denied him, came in 1916 for *The Man against the Sky* and was confirmed by three Pulitzer Prizes—for his *Collected Poems* (1921), for *The Man Who Died Twice* (1924), and for *Tristram* (1927) See his *Collected Poems* (complete rev ed, 1937), *Selected Letters* (comp by Ridgely Torrence, 1940), and letters in *Untranquilated Stars* (ed by Denham Sutcliffe, 1947), Laura E Richards, *E A R* (1936), biography by Hermann Hagedorn (1938), critical biography by E E Neff (1948), study by Yvor Winters (1946)

Robinson, Henry Crabb, 1775–1867, English diarist, a lawyer His voluminous correspondence and diaries are a mine of information about his literary acquaintances, among whom were Goethe, Schiller, the Wordsworths, Coleridge, and Lamb Various selections from his writings have been published since 1869, the most recent volumes were edited by E J Morley, who also wrote his biography (1935) See study by J M Baker (1937)

Robinson, Jackie (Jack Roosevelt Robinson), 1919–, American baseball player, the first Negro to play in the major leagues, b Cairo, Ga He was reared in Pasadena, Calif, to which his family removed (1920) after his father died He became an outstanding athlete in high school and junior college. While attending (1939–41) the Univ of California at Los Angeles, he established a state-wide reputation at baseball, basketball, football, and track Robinson left college to support his mother, and in 1941 he played professional football with the Los Angeles Bulldogs of the Pacific Coast League He entered (1942) the U S army in the Second World War and was discharged as a lieutenant in 1945 After coaching (1945) basketball at Samuel Huston College for Negroes in Austin, Texas, he played shortstop for the Kansas City Monarchs of the Negro American Baseball League In Oct, 1945, Branch Rickey, president of the Brooklyn Dodgers baseball organization, signed Robinson to play for the Montreal Royals, a Brooklyn farm club of the International League Despite several tense situations in spring training in the South and many inconveniences during the season, Robinson—the first Negro ball player in that league—excelled as second baseman and won the batting crown of the league for 1946 In 1947 major-league precedent was shattered when Robinson was brought up to the Brooklyn club Negroes had never before played in big-league competition, but resistance against Robinson died down soon after the well-built, agile Negro proved his worth. In 1949 he won the batting crown of the National League, hitting 342, and was named the most valuable player of the league Other Negroes began playing in the major leagues after Robinson's debut. See his autobiography, *My Own Story* (1948)

Robinson, James Harvey, 1863–1936, American historian, b Bloomington, Ill, grad Harvard (B A, 1887, M A, 1888), Ph D Univ of Freiburg, 1890 He taught history at Columbia Univ from 1892 to 1919, becoming a full professor in 1895 In 1919 he was one of the founders of the New School for Social Research, of which he was the first director Through his writings and lectures, in which he stressed the "new history"—the social, scientific, and intellectual progress of mankind rather than merely political happenings—he exerted an important influence on the study and teaching of history An editor (1892–95) of the *Annals* of the American Academy of Political and Social Science, he was also an associate editor (1912–20) of the *American Historical Review* and president (1929) of the American Historical Association Among his many textbooks and books for the general public are *The Development of Modern Europe* (2 vols, 1907–8, rev ed, 1929), with C A Beard, *The New History* (1912), *The Mind in the Making* (1921), which enjoyed a wide sale, *The Humanizing of Knowledge* (1923, rev ed, 1926), *The Ordeal of Civilization* (1926), and *The Human Comedy as Devised and Directed by Mankind Itself* (1937) See biography by L V Hendricks (1946)

Robinson, John, 1576?–1625, English nonconformist pastor of the Pilgrim Fathers in Holland In 1592 he entered Cambridge, in 1597 he received a fellowship and was ordained Soon thereafter he became curate of a church at Norwich He was a member of the group of separatists at Gainsborough and a little later (c 1606) was in the company of the separatists gathered around William Brewster at Scrooby He became their pastor and was a leader in the removal (1608) of the Scrooby group to Amsterdam In 1609 he and his flock moved to Leiden, where they set up a church Robinson actively encouraged the projected emigration (1620) to America and would have accompanied the PILGRIMS had the majority of his congregation gone, with their settlement at Plymouth, CONGREGATIONALISM was founded in the New World Robinson wrote a number of essays and polemics on the separatists' position See his works (ed by Robert Ashton 1851), Champlin Burrage, *New Facts concerning John Robinson* (1910), biography by W H Burgess (1920).

Robinson, Sir John Beverley, 1791–1863, Canadian jurist, b Berthier, Que He was educated at Kingston and at Cornwall under John Strachan, and later he studied law He served as an officer under Isaac Brock in 1812 Appointed acting attorney general (1813), then solicitor general, and attorney general (1818) of Upper Canada, he sat (1821–30) in the legislative assembly of Upper Canada In 1830 he entered upon his 32-year career as chief justice of Upper Canada, in this period he was also briefly president of the executive council and was speaker of the legislative council (1830–41) A man of great ability and integrity, he was, as a leading member of the unpopular and ultraconservative Family Compact group, an opponent of the Reform party in its efforts to secure responsible government and of the union (1841) of Upper and Lower Canada See biography by C W Robinson (1904).

Robinson, Joseph Taylor, 1872–1937, U S Senator (1913–37), b Lonoke, Ark After study at the Univ of Arkansas, he was admitted (1895) to the bar and practiced in his native town He was (1903–13) in the U S. House of Representatives and became (1913) governor of Arkansas, but immediately resigned the post after his election to the U S Senate. He was reelected three times (1918, 1925, 1930) and ran for Vice President on the Democratic ticket along with Alfred E Smith in 1928 As majority leader (1933–37) in the Senate, he steered many New Deal measures through the Senate and assumed (1937) leadership of the fight for President F. D. Roosevelt's Supreme Court organization bill.

Robinson, Lennox, 1886–, Irish dramatist. *The Clancy Name* (1908), in one act, was his first play, but his first successes include the historical drama *The Dreamers* (1915); a play about Parnell, *The Lost Leader* (1918), and the comedy *The White-headed Boy* (1920) His later dramas of Irish life include *The Big House* (1926), *The Far-off Hills* (1928), and *Drama at Inish* (1933, in America, *Is Life Worth Living?*) He was stage manager and director for the ABBEY THEATRE in Dublin from 1910 to 1914 and from 1919 to 1923 and has been a director since 1923. He served as organizing librarian of the Carnegie Trust in Ireland from 1915 to 1925 Robinson has lectured and taught variously in the United States and has written short stories and a novel as well as editing *The Irish Theatre* (lectures, 1939) and Lady Gregory's journals (1946) He also wrote a study of W B Yeats (1939) See his autobiographical *Curtain Up* (1942)

Robinson, Mary Darby, 1758–1800, English actress. She was known as Perdita from her appearances in that role in *The Winter's Tale* and was the mistress of the prince of Wales (later George IV) She had great beauty, and her portrait was painted by Reynolds, Gainsborough, Hoppner, and Romney An edition of her memoirs was published in 1930 See E Barrington, *Exquisite Perdita* (1926)

Robinson, Sir Robert, 1886–, English biochemist, educated at the Univ of Manchester He was professor of organic chemistry (1912–15) at the Univ of Sydney, New South Wales, and subsequently served as professor at the universities of Liverpool, St Andrews, and Manchester and at University College, London In 1930 he became professor of chemistry at Oxford Noted for his work on the structure of vegetable substances and for the synthesis of natural products, including hormones and plant pigments, Robinson was awarded the 1947 Nobel Prize for Chemistry In 1939 he was knighted, and in 1945 he was elected president of the Royal Society

Robinson, Theodore, 1852–96, American landscape painter, b Irasburg, Vt, studied in Paris with Carolus-Duran and Gérôme His impressionistic paintings at first met with adverse criticism Among his works are *The Canal* (Pa Acad of the Fine Arts) and *Girl and Cow, The Old Mill,* and *Bird's-Eye View, Giverney, France* (all three Metropolitan Mus) Most of Robinson's canvases are in private collections

Robinson, William Heath, 1872–1944, English illustrator, designer, and comic artist He collaborated with his brothers, T H Robinson and Charles Robinson, in illustrating *Arabian Nights, Don Quixote,* and other classics He was known especially for the fantastic devices he invented for his cartoons He also produced stage scenery in the same vein

Robinson, city (pop 4,311), co seat of Crawford co, E Ill, near the Wabash SW of Terre Haute, Ind, in an oil and farm area, inc 1886 It manufactures glycerin, china and pottery, and oil-well supplies and refines oil

Robinson Crusoe, famous character created by Daniel DEFOE in *The Life and Strange Surprizing Adventures of Robinson Crusoe* (1719) and two sequels This story of a castaway on a desert island was founded on *A New Voyage round the World* (1697) by William DAMPIER, the adventures of Alexander SELKIRK, a Scottish sailor, and other sources There were many translations and imitations of *Robinson Crusoe,* and a tale by J D WYSS was widely known in its English translation, *The Swiss Family Robinson* See studies by A W Secord (1924) and H C Hutchins (1925)

Robinson-Patman Act, 1936, passed by the U S Congress to supplement the CLAYTON ANTI-TRUST ACT The act, advanced by Wright Patman forbade any person or firm engaged in interstate commerce to discriminate in price to different purchasers of the same commodity when the effect would be to lessen competition or to create a monopoly Often called the Chain-Store Act, this act was directed at protecting the independent retailer from chain-store competition See G H Montague, *The Robinson-Patman Act and Its Administration* (1945).

Roboam (rōbō'ŭm) see REHOBOAM

robot (rō'but, rŏ'but) [from Czech, =compulsory service], mechanical device designed to perform actions or work generally performed by a human being Karel Capek, a Czech dramatist, used the expression in his play *R U R* (*Rossum's Universal Robots*), produced in Prague in 1921 In the play a scientist discovers a method of "organizing living matter," and his engineer son founds a factory for the production by the thousands of artificial workers, or robots They have human form, intelligence, memory, and strength but are devoid of feelings The robots, functioning as workers and soldiers, revolt and slay their creators. Also concerned with the theme of the destruction of persons by their own works is Mary Wollstonecraft Shelley's *Frankenstein* (1818) In the novel Victor Frankenstein, a Swiss student, having found the secret of life creates a powerful monster with human desires The creature escapes from the laboratory only to return, embittered against humans. Frankenstein, his family, and his friends are destroyed because of his unwillingness to make a mate for the monster. The terms *robot* and *automaton* are commonly used to designate a device that supplants a human in the doing of a given task Modern applications of the robot principle include the robot pilot or automatic pilot which automatically keeps an airplane on its course Robot devices have also been developed to control calculating machines. The robot bombs or "buzz-bombs" used against England by Germany in the Second World War were small, pilotless, jet-propelled airplanes, guided by a gyroscopic device and laden with explosives Man's construction of automatic contrivances including figures of animals and humans dates from early times Heron of Alexandria and other ancient experimenters reported the construction of various automatic devices From the time of the Middle Ages flying mechanical creatures were produced The Swiss especially have long made automatic toys, including birds that could fly and sing Many of these devices operated by clockwork Some of the early clocks (e g, the Strasbourg cathedral clock) were lavishly decorated with automata A famous device was a supposedly automatic chess player invented by Wolfgang von Kempelen and demonstrated in Europe in the 18th cent, it was, however, operated by a man cleverly concealed within Among other famous devices was a figure called Psycho (constructed by J N Maskelyne and exhibited in London in 1875) which played cards and made mathematical calculations Various mechanical figures have been demonstrated especially at exhibitions and fairs in recent years

Rob Roy [Scottish Gaelic,=red Rob], 1671–1734, Scottish freebooter, whose real name was Robert MacGregor He is remembered chiefly as he figures in Sir Walter Scott's novel *Rob Roy* (1818) The MacGregors had long been proscribed, and Rob took his maternal name of Campbell on this account Starting as a cattle dealer, he became an outlaw One of his most lucrative types of trade was returning stolen cattle to their owners for a commission From 1712 he was in open conflict not only with the government but also with the duke of Montrose and John MURRAY, 1st duke of Atholl, and he pillaged and burned as they did He was aided on every hand by the people of his own clan and others In 1715 he supported the Pretender (see JACOBITES) but did not join his army In 1727, having submitted voluntarily, Rob Roy was about to be transported to Barbados, but a pardon saved him His lawless career was offset by his kindness to the unfortunate He was converted late in life to Roman Catholicism See A H Millar, *History of Rob Roy* (1883)

Robsart, Amy (rŏb'sărt), 1532?–1560, maiden name of the wife of Robert Dudley, later earl of LEICESTER, a favorite of Queen Elizabeth of England When Lady Dudley was found dead at the foot of a staircase in Cumnor Hall, Oxfordshire, rumor suggested that her husband had arranged her murder so that he might be free to wed the queen An investigating jury returned a verdict of accidental death, but Leicester's innocence or guilt has never been definitely established A garbled version of the story appears in Sir Walter Scott's novel *Kenilworth* See Sir Bartle Frere, *Amy Robsart of Wymondham* (1937)

Robson, Stuart (rŏb'sun), 1836–1903, American comedian, b Annapolis, Md His real name was Robson Stuart He was associated (1877–89) with William H Crane, their partnership reaching its peak in Bronson Howard's Wall St satire, *The Henrietta* (1887)

Robson, Mount see MOUNT ROBSON PROVINCIAL PARK

Robstown, city (1940 pop 6,780, 1947 estimated pop 10,500), S Texas, W of Corpus Christi This packing and shipping center for a truck-farming, cotton, and oil region has benefited from the recent growth in the Corpus Christi region

Robusti, Jacopo see TINTORETTO

Roca, Julio Argentino (hōō'lyō ärhāntē'nō rō'ka), 1843–1914, Argentine general and statesman, president of the republic (1880–86, 1898–1904) Minister of war under Nicolás AVELLANEDA, he drove (1878–79) the Patagonian Indians beyond the Río Negro, opening a vast territory for colonization His first administration effected the federalization of Buenos Aires It was a time of peace and growth, of rapid immigration, of railway construction, and of increased wealth Speculation, however, flourished and later became flagrant Roca's second administration was, indeed, marked by recovery from the crisis caused by the misgovernment of Miguel JUÁREZ CELMAN Paper-currency redemption stabilized money The boundary dispute with Chile was settled in 1902, and perpetual peace between the nations was symbolized in the CHRIST OF THE ANDES (dedicated March, 1904) Roca's foreign minister, Luis M Drago, formulated the significant DRAGO DOCTRINE (1902).

Roca, Cape (rō'ku), W Portugal, not far from Lisbon It is the western extremity of Europe.

Rocafuerte, Vicente (vēsän'tā rōkäfwĕr'tā), 1783–1847, president of Ecuador (1834–39). Rocafuerte headed (1833) the opposition to Juan José FLORES. Leader of a revolt at Guayaquil (1834), he was defeated and imprisoned, but was released after he and Flores settled their differences As president he promulgated a new constitution and accomplished many liberal reforms, notably protection of the Indians and advancement and secularization of education Protesting against the clerical policy and dictatorial practices of Flores, Rocafuerte went into exile in 1843

Rocco, Saint see ROCH, SAINT.

Roch, Saint (rŏk), 14th cent, Frenchman who nursed the plague-stricken in Italy, b Montpellier He is invoked against plague, cholera, and skin afflictions. In Italian the name is Rocco Feast Aug 16

Rochambeau, Donatien Marie Joseph de Vimeur, vicomte de (dônäsyĕ' märē' zhôzĕf du vēmûr' vēkôt' du rôshänbō'), 1750–1813, French general He fought under his father, the comte de Rochambeau, in the American Revolution and in 1793 aided in quelling a Negro revolt in Saint-Domingue (including Haiti and Santo Domingo), of which he was appointed governor in 1796 After commanding (1800) a division in Italy, Rochambeau returned to Santo Domingo in 1803, was captured by the insurgents, and was freed only in 1811. He was killed at the battle of Leipzig See J E Weelen, *Rochambeau, Father and Son* (1936), which includes the younger Rochambeau's journal

Rochambeau, Jean Baptiste Donatien de Vimeur, comte de (zhäN' batēst', kōt'), 1725–1807, marshal of France He took part in the wars of Louis XV and had been promoted to lieutenant general by 1780, when Louis XVI sent him, with 6,000 regulars, to aid Washington in the American Revolution He landed in Newport, R I, and remained there a year because the French fleet was blockaded off Narragansett In July, 1781, he joined Washington on the Hudson and elaborated with him a plan to strike south at Cornwallis instead of attacking Clinton at New York The result was the YORKTOWN CAMPAIGN, which ended the war Congress voted thanks to Rochambeau, and Louis XVI made him a marshal In the French Revolution, Rochambeau commanded the Northern Army, but he soon resigned (1792), being out of sympathy with the revolutionary extremists He was imprisoned in the Terror and barely escaped execution Napoleon restored him to his rank His memoirs of the American Revolution were translated in 1838 See J E Weelen, *Rochambeau, Father and Son* (1936)

Rochdale (rŏch'dāl), county borough (1931 pop 90,263, 1947 estimated pop 86,970), Lancashire, England, on the Roch and NNE of Manchester There is a memorial to John Bright, who was born here and whose father was a cotton spinner here The parish church of St Chad dates from the 12th cent The chief industry is the making of cotton and woolen goods There are also foundries and engineering works

Rochdale Society of Equitable Pioneers, one of the first consumers' cooperatives, founded in 1844 in Rochdale, England, by 28 Lancashire weavers Influenced by the theories of Robert Owen, they opened a grocery store which was so successful that they were able to establish a cooperative shoe factory and textile mill The society laid down the basic tenets of subsequent consumer COOPERATION See Joseph Reeves, *A Century of Rochdale Co-operation, 1844–1944* (1944)

Rochefort, Victor Henri, marquis de Rochefort-Luçay (vēktôr' ärē' rôshfôr' märkē' du rôshfôr'-lusā'), 1830–1913, French journalist and politician, a radical pamphleteer and the editor of the *Figaro* (1863) Founder and editor of the anti-imperial journals, the *Lanterne* (1868) and the *Marseillaise* (1869), he was a bitter opponent of the Second Empire After the Franco-Prussian War he founded the *Mot d'ordre* (1871) and supported the Commune of Paris For his part in the uprising he was sent to the penal colony of New Caledonia in 1873, escaped the following year, and revived the *Lanterne* in Geneva, Switzerland Upon the declaration of general amnesty in 1880 he returned to Paris and started the *Intransigeant* He was twice elected to the chamber of deputies and in 1889 suffered exile with General Boulanger, whom he had supported In 1895 he was allowed to return Rochefort's extreme nationalism led him to take a violent stand against Dreyfus in the Dreyfus Affair. A very able writer, he is remembered for his vigorous, biting style

Rochefort (rôshfôr') or **Rochefort-sur-Mer** (-sürmĕr'), city (pop 22,930), Charente-Maritime dept, W France, in Aunis, a port on the Charente near the Bay of Biscay. It was created (1666) by Colbert and fortified by Vauban Once a busy Atlantic port, it later became noted for its arsenal and its shipyards The military installations were severely damaged in the Second World War, and Rochefort's present importance is chiefly as a fishing port Lafayette embarked at Rochefort for his first trip to America In 1815 Napoleon surrendered himself to a British warship off Rochefort. Pierre Loti was born here.

Rochelle (rōshĕl′). **1** City (pop. 1,175), S central Ga., near the Ocmulgee river S of Macon. **2** City (pop. 4,200), N Ill., S of Rockford, inc. 1869. It is a shipping, processing, and trade center in a farm area.

Rochelle, La (lä rōshĕl′), city (pop. 45,864), capital of Charente-Maritime dept. and of the former province of AUNIS, W France, on the Bay of Biscay. Chartered in the 12th cent., La Rochelle soon became one of the chief seaports of France. It was a Huguenot stronghold during the Wars of Religion and successfully resisted its Catholic besiegers for half a year (1572–73). However, when Cardinal Richelieu resolved to crush the HUGUENOTS, La Rochelle fell after a siege of 14 months (1627–28). Louis XIV had the port refortified by Vauban, his revocation (1685) of the Edict of Nantes resulted in the foundation of NEW ROCHELLE by Protestant refugees. La Rochelle prospered again as it became the chief center of trade with Canada, but it suffered from the loss of Canada by France and from the Continental System under Napoleon. Though its fisheries, canneries, and shipyards still make it a busy port, it never recovered its former importance. The principal harbor is now that of La Pallice, c.3 mi. distant, which was a German submarine base in the Second World War. The picturesque old fishing port in the heart of the city, the Renaissance town hall, and other ancient buildings make the city a favorite tourist center. Only the outlying districts were damaged in the Second World War.

Rochelle salt, sodium potassium tartrate, a chemical compound first made in Rochelle, France, in 1672. In medicine, it is used as a saline purgative and as a chief ingredient of SEIDLITZ POWDERS. It is a chief ingredient also of FEHLING'S SOLUTION.

Rochester, John Wilmot, 2d earl of (rŏ′chĭstur), 1647?–1680, English poet and courtier. He was famous for his profligacy, all that is remembered of him is his witty satires and occasional lyrics, many of them licentious. See his works (ed. by John Hayward, 1926), study by F. J. Whitfield (1936).

Rochester (rŏ′chĭstur), municipal borough (1931 pop. 31,193; 1947 estimated pop. 40,540) and city, Kent, England, on the Medway and near Chatham. It was the Roman Durobrivae and was a place of importance in Saxon times. St. Augustine founded a mission here in 604, and Bishop Gundulf (architect of part of the Tower of London) built a cathedral on its site in the late 11th and early 12th cent., of this there are remains, but most of the present cathedral is of much later structure. A Norman wall 12 ft. thick surrounds ruins of a 12th-century castle, which was besieged several times in the 13th and 14th cent. From Rochester, in 1688, James II embarked in disguise. Charles Dickens's home, "Gadshill Place," is near the city.

Rochester (rŏ′chĕs″tur, rŏ′chĭstur). **1** City (pop. 3,835), co. seat of Fulton co., N Ind., on Lake Manitou E of Winamac, laid out and chartered 1832. Dairy products are made here. It is a popular resort. **2** Town (pop. 1,269), SE Mass., NE of New Bedford, settled c.1638, inc. 1686. **3** Village (pop. 3,759), SE Mich., on the Clinton river and N of Detroit, settled 1817, inc. 1869. Its industries include paper and textile mills. The Parke Davis Biological Farm is near. **4** City (pop. 26,312), co. seat of Olmsted co., SE Minn., SSE of St. Paul, settled 1851, inc. 1858. It is famed as the seat of the MAYO medical center, founded (1889) by Dr. W. W. Mayo, with his sons, Charles Horace MAYO and William James MAYO. The city is a commercial center for the surrounding farm region and, because of the Mayo medical center, has a large transient population. There is an airport here. A state mental hospital is in the city. **5** City (pop. 12,012), SE N.H., along the Cocheco and Salmon Falls rivers and NW of Dover, inc. as a town 1722, settled 1728, inc. as a city 1891. It produces woolens, shoes, and lumber goods; there is also printing. From 1874 an annual farm fair has been held. **6** City (pop. 324,975), co. seat of Monroe co., W N.Y., E of Buffalo, on the Genesee and on Lake Ontario, in a rich fruit and truck-garden region. Permanent settlement by Col. Nathaniel Rochester and others began in 1812. The village was incorporated in 1817, the city in 1834. The Erie Canal gave impetus to Rochester's growth, and the Civil War and the two world wars brought industrial expansion. Its first important industry was flour milling, chief among its later products are cameras, films, optical goods, men's clothing, business machines, and chemicals. Rochester is a port of entry, large quantities of freight are handled at the Port of Rochester on the lake. Noted are the Eastman Kodak, Bausch & Lomb, and Taylor Instrument companies. The Philharmonic, civic, and Eastman orchestras are heard widely, and among the city's educational institutions are the Univ. of Rochester (see ROCHESTER, UNIVERSITY OF), Nazareth College (Catholic, for women, 1924), and the Rochester Institute of Technology. Among the numerous parks is Highland Park, which has many varieties of lilac viewed by scores of people every May. The extensive nurseries here have earned for Rochester the name Flower City. In the city's modern growth, George EASTMAN was prominent. Susan B. Anthony was a Rochester resident, and Frederick Douglass carried on his antislavery work here. Points of interest include Ontario Beach Park, the Rochester Museum of Arts and Sciences, the Memorial Art Gallery, and the Rundel Memorial Building, housing the public library and an art gallery. **7** Borough (pop. 7,441), W Pa., at the confluence of the Ohio and Beaver rivers NW of Pittsburgh, settled 1799, laid out c.1835, inc. 1838. Resources of shale and sandstone are found in the area, and abrasives are made here. **8** Town (pop. 1,129), central Vt., in the Green Mts. E of Brandon. Its center is a summer and winter resort, with some manufactures, near the White River. Talc is found in the town.

Rochester, University of, at Rochester, N.Y., nonsectarian, private, coeducational, chartered and opened 1850 by Baptists. It is especially known for the Eastman School of Music (1918, see HANSON, HOWARD, who became director in 1924), for the school of medicine and dentistry, and for its courses in engineering, optics, and physics. It includes Ward's Natural Science Establishment, geology and biology museums, a herbarium, and the Eastman Theater. The Memorial Art Gallery is affiliated. The buildings are on several sites. See EASTMAN, GEORGE.

Roche-sur-Yon, La (lä rôsh″-sür-yō′), town (pop. 15,278), capital of Vendée dept., W France. It is an agricultural center. Founded by Napoleon I in 1805, it was first named Napoleon-Vendée, then (1814–48) Bourbon-Vendée.

rock, aggregation of solid matter composed of one or more minerals, or glass, or glass and minerals together, forming the earth's crust. The term is applied not only to the solid rock or bed rock, but also to the mantle rock—the fragments which have been detached from the solid rock and overlie it, such as clay, sand, gravel, and broken rock. Rocks are commonly divided, according to their origin, into three major classes—igneous rock, sedimentary rock, and metamorphic rock. Igneous rocks originate from the cooling and solidification of molten matter from the earth's interior. Such rocks formed by rapid cooling and solidification on the earth's surface of magma or lava from within the earth are called extrusive igneous rock; magma which cools and solidifies slowly beneath the earth's surface forms intrusive rock. Among the forms commonly taken by intrusive rocks are batholiths, which are enormous, irregular masses cutting through older formations, stocks, irregular and smaller than batholiths, necks or plugs, columnar in form and probably the result of the hardening of magma in the necks of extinct volcanoes; dikes, more or less vertical, filling fissures in previously existing rock; sills, more or less horizontal, forced between layers of previously existing rock; and laccoliths, modified domelike sills which arch up the overlying rock. Igneous rocks are commonly divided into classes according to texture. Some rocks are markedly granular (e.g., GRANITE, syenite, diorite, gabbro, peridotite, and pyroxenite), while others (e.g., BASALT, trachite, dacite, and andesite) are built up of grains visible only under a microscope. Both fine-grained and coarse-grained igneous rocks frequently contain grains called phenocrysts larger than the surrounding grains in which they are set as in a matrix, such rocks are said to be porphyritic in texture, while rocks with grains of uniform size are called nonporphyritic. Igneous rocks are commonly light in color if their constituent minerals are predominantly alkali feldspars and dark in color if the feldspars are calcic or if magnesia and iron minerals are abundant. The glassy igneous rocks include OBSIDIAN, pitchstone, and PUMICE, which contain few or no phenocrysts, and vitrophyre or glass porphyry which does contain phenocrysts. Rocks such as tuff and volcanic breccia which are formed from fragmental volcanic material are sometimes grouped as pyroclastic rocks. Sedimentary rocks originate from the consolidation of sediments derived in some part from living organisms but chiefly from older rocks of all classes (ultimately the mineral elements are derived from igneous rocks alone). The sediments of mineral origin are chiefly removed from older rocks and transported to the place of deposition by erosion, chemical precipitation from solution is a secondary cause of deposition of mineral matter. Sedimentary rocks are commonly distinguished, according to their place of deposition, by a great variety of terms, such as continental, marine, littoral, estuarine, lacustrine, and fluviatile. The characteristic feature of sedimentary rocks is their STRATIFICATION, they are frequently called stratified rocks. Sedimentary rocks made up of angular particles derived from other rocks are said to have a clastic texture in contrast to pyroclastic sediments, which are particles of volcanic origin. Among the important varieties of sedimentary rock, distinguished both by texture and by chemical composition, are conglomerate, GRAVEL, SAND, SANDSTONE, grit, till, tillite, sedimentary breccia, CLAY, mud, SHALE, MARL, CHALK, LIMESTONE, COAL, PEAT, LIGNITE, GYPSUM, rock salt, and iron ore. Characteristic occurrences in sedimentary rocks are fossils, footprints, raindrop impressions, concretions, oolites, ripple marks, rill marks, and cross-bedding. All of these occurrences are useful in determining the antiquity of sedimentary formations and in interpreting geologic history. Metamorphic rocks originate from the alteration of the texture and mineral constituents of igneous, sedimentary, and older metamorphic rocks (see METAMORPHISM). Some (e.g., MARBLE and QUARTZITE) are massive in structure, others, and particularly those which have been subject to the more extreme forms of metamorphism, are characterized by foliation, i.e., the arrangement of their minerals into roughly parallel planes. This foliation gives them a banded appearance. A distinguishing characteristic of many metamorphic rocks is their slaty CLEAVAGE. Among the common metamorphic rocks are SCHIST (e.g., mica schist and hornblende schist), GNEISS, quartzite, SLATE, and marble. The scientific study of rocks is called petrology. See L. V. Pirsson, *Rocks and Rock Minerals* (3d ed., revised by Adolph Knopf, 1947); S. J. Shand, *Study of Rocks* (2d ed., 1947); H. L. Williams, *Stories in Rocks* (1948).

Rockaway, borough (pop. 3,514), N N.J., W of Paterson, on the Rockaway river and the old Morris Canal, settled 1739, inc. 1894.

Rockaway, narrow peninsula, on SW Long Island, SE N.Y., in Queens borough of New York city. Rockaway Beach stretches for c.5 mi. along its length. The peninsula, which separates Jamaica Bay from the Atlantic, is the site of Fort Tilden (1917), Jacob Riis Park (1937), and several beach resort and commuters' villages, including Far Rockaway, Arverne, Edgemere, and Neponsit.

Rockcliffe Park, village (pop. 1,480), SE Ont., on the Ottawa river just E of Ottawa. It is a residential suburb.

rock crystal see QUARTZ.

Rockdale. **1** Village (pop. 1,532), NE Ill., near Joliet, inc. 1903. Firebrick is made here. **2** City (pop. 2,136), central Texas, S of Waco, settled 1873, inc. 1874. It is a farm market and dairy-processing center with a lignite mine and some oil production.

Rockefeller, John Davison, 1839–1937, American industrialist and philanthropist, b. Tioga co., N.Y. He moved (1853) with his family to a farm near Cleveland, Ohio, and at the age of 16 went to work as a bookkeeper. Frugal and industrious, Rockefeller became (1859) a partner in a produce commission business, and four years later, with his partners, he established an oil refinery, thus taking part in an industry already thriving in Cleveland. In 1870 he and his associates—including S. V. Harkness, H. M. Flagler, and his brother William—organized the Standard Oil Company of Ohio, capitalized at $1,000,000. By enforcing strict economy and efficiency, by mergers and agreements with his able competitors, by ruthlessly crushing his less able opponents, and by accumulating large capital reserves, John D. Rockefeller soon dominated the American oil-refining industry. Agreements with railroads and the control of pipe-line distribution of refined oil strengthened the monopoly of the Standard Oil Company. In 1882 the diverse holdings of the various members of Rockefeller's combination were tied together into the Standard Oil trust. Court action compelled the trust to dissolve 10 years later, and in a few years the Standard Oil Company of New Jersey was chartered as a holding company with a capitalization of $110,000,000. In 1911 a decision of the U.S. Supreme Court required this company to be dissolved as a holding company, and its directors to relinquish their control over the numerous subsidiaries. Rockefeller personally ruled over the great petroleum business until 1911, when he retired with a fabulous fortune. When the United States Steel Corporation was formed (1901) Rockefeller was one of the directors. He was also prominent in the affairs of railroads and banks, being second only to J. P. Morgan in the domain of finance. He generously gave to the Baptist Church, to the Y.M.C.A., and to the Anti-Saloon League. He founded (1892) the Univ. of Chicago (see GATES, FREDERICK TAYLOR). The most prominent of the philanthropic enterprises to which he eventually turned over some $500,000,000 were the Rockefeller Institute for Medical Research, founded in 1901, the General Education Board, organized (1902) to make gifts to various educational and research agencies, the Rockefeller Foundation, established (1913) to promote public health and to further science, and the Laura Spelman Rockefeller Memorial Foundation, founded (1918) in memory of his wife, for the furthering of child welfare and the social sciences. He wrote *Random Reminiscences of Men and Events* (1909). See biography by Allan Nevins (1940). **John Davison Rockefeller, Jr.**, 1874–, b. Cleveland, grad. Brown, 1897, took over active management of his father's interests in 1911 and engaged in numerous philanthropies. Riverside Church, New York city, was built through his gifts. He gave vast sums of money for religious projects, for scientific investigation, and for the restoration of historic monuments. He founded (1931) and helped plan ROCKEFELLER CENTER in New York city, which the Rockefeller interests completed in 1939. His son, **Nelson Al-**

drich Rockefeller, 1908–, b Bar Harbor, Maine, grad Dartmouth, 1930, was director of Rockefeller Center after 1931 He served (1940–45) as Coordinator of Inter-American Affairs in the U S Dept of State and was (1944 45) Assistant Secretary of State

Rockefeller, William, 1841-1922, American capitalist, b Tioga co., N Y , brother of John D Rockefeller He joined (1865) his brother in the oil-refining business William was an able market manipulator and was the New York representative of the Rockefeller interests until the Standard Oil Company of New Jersey was dissolved (1911) by the Supreme Court. He was associated with copper interests, railways, and public utility corporations With his vast resources he built up the National City Bank of New York

Rockefeller Center, in central Manhattan, New York city, between 48th and 51st streets and Fifth Ave and the Ave of the Americas (Sixth Ave) Built in 1931–39, it comprises 14 buildings, including the 70-story RCA (Radio Corp of America) Building, which are occupied by offices, stores, restaurants, exhibition rooms, broadcasting studios, the New York Museum of Science and Industry, the Center Theatre, and the Radio City Music Hall The five western buildings of Rockefeller Center, the radio and entertainment section, are known as Radio City

Rockefeller Foundation, founded in 1913 by John D Rockefeller with an endowment of $150,000,000 Its expressed purpose was to promote the well-being of mankind throughout the world Its work has been in the fields of public health and research in the medical sciences, the natural sciences, and the social sciences Besides maintaining a large staff of experts it has given many fellowships, scholarships, grants-in-aid, and grants to outside agencies. Some of its recent work has been in the field of psychiatry

Rockefeller Institute for Medical Research, philanthropic organization (founded 1901) for studying the nature, cause, and treatment of disease in humans, animals, and plants Many millions of dollars allocated to the institute by the family who founded it and for whom it is named enabled it to develop into one of the principal research groups of the United States It consists of three departments, laboratory, hospital, and plant and animal pathology Research projects in chemistry, physiology, pathology, and bacteriology are continually under way in the laboratories of the institute The laboratories and the hospital are adjacent to the East River in mid-Manhattan, in New York city Only those patients who suffer from diseases which the institute is investigating are admitted to the hospital The diseases include respiratory and metabolic ailments, rheumatic fever, and malfunctions of the liver

rocket, popular name for several plants of the mustard family The dame's or damask violet, dame-wort, or sweet rocket is *Hesperis matronalis*, a hardy, herbaceous Old World perennial with fragrant, four-petaled flowers ranging from white to purple, both single and double in form It grows wild in many parts of North America, where it has escaped from gardens The dyer's rocket or dyer's-weed is *Reseda luteola*, a species of MIGNONETTE. Rocket salad (*Eruca sativa*) is the roquette of France and Italy and is a coarse, weedy plant with whitish or creamy yellow flowers which have an orange-blossom odor Also known as taramira, it is cultivated for salads. Yellow rocket (*Barbarea vulgaris*) is the name for a variety of winter cress or upland cress, a weedy plant sometimes cultivated for salads The sea rocket (*Cakile*) is a fleshy annual with purplish flowers, found on northern seacoasts.

rocket, projectile propelled by a force within itself It is set in motion by the reaction of a rapid stream of gas escaping through vents Rockets were used in Asia before the discovery of gunpowder and have had wide use in festive and military activities throughout the centuries In the First World War they were used to illuminate enemy positions and for purposes of signaling In the Second World War they became the basis of various explosive projectiles Rockets are the motive force for skyrockets, airplane rockets, "bazookas," and plane catapults The Russian "Katusha," the German "Nebelwerfer," and the British "Z-gun" were all essentially rockets, as were the propellants of the German V-2 weapon or "buzz-bombs" The V-1 explosives used against England, often mistakenly spoken of as rockets, were actually pilotless miniature airplanes carrying their own propulsion machinery See also JET PROPULSION

Rock Falls, industrial city (pop 4,987), NW Ill , on the Rock River opposite Sterling, in a farm area, platted 1837, inc 1889 Farm machinery is made

rockfish, name applied to various fishes which frequent rocky shores and reefs, chiefly to members of the family Scorpaenidae Among the more than 50 species of the Pacific coast are the black rockfish or priest fish and the red rockfish (both of the genus *Sebastodes*), of which large commercial catches are made Allied forms live in Asiatic, South American, and African waters

rockfoil: see SAXIFRAGE

Rockford, 1 City (pop 84,637), co seat of Winnebago co , N Ill , on both banks of the Rock River near the Wis line, founded 1834 at a ford, inc. 1839 It is an industrial, shipping, and trade center in a productive grain, dairy, and livestock area Supplied with water power from a dam in the river, it manufactures knit goods, furniture, hardware, agricultural implements, machines, and tools It is the seat of Rockford College (for women, 1847) The city has a large Swedish population Beattie Park contains interesting Indian mounds, near by is Camp Grant, an army training station The historic and scenic Black Hawk Trail runs between Rockford and Dixon 2 Town (pop 1,054), N Iowa, SE of Mason City 3 City (pop 1,773), S Mich , on the Rouge (or Rogue) a tributary of the Grand River and NE of Grand Rapids, in a farm and resort region, settled 1841, inc as a village 1871, as a city 1933 It has a tannery, and shoes are made 4 Village (pop 1,066), W Ohio, on the St Marys river and W of Lima Tomato canneries are here

rock garden, garden planned around natural rock formations or rocks artificially arranged to simulate natural —often mountainous—conditions Tiny streams of water add to the beauty of the garden and provide additional moisture In making a rock garden the rocks must be so laid that there will be deep pockets of soil between them, for rock plants usually have long roots that enable them to obtain moisture even when the surface is hot and dry Low plants requiring well-drained conditions are suited to rock gardens, these include, besides ALPINE PLANTS, many dwarf shrubs (especially evergreens), species of columbine, phlox, bluebell, and rockrose See H H Thomas, *Rock Gardening for Amateurs* (1914), L B Wilder, *Pleasures and Problems of a Rock Garden* (1937), W H A Preece, *North American Rock Plants* (1937)

Rockhampton (rŏkhămp'tŭn), city (pop 34,983), Queensland, Australia, on the Fitzroy river 40 mi from its mouth on Keppel Bay and NNW of Brisbane Founded in 1858 with the discovery of gold near by, it is the principal port for the pastoral and mining regions of central Queensland The chief exports are wool, meat, gold, coal, and copper

Rockhill, William Woodville, 1854–1914, American diplomat, Orientalist, and author, b Philadelphia After graduating from the military academy of Saint-Cyr, France, in 1873, he served in the French army for three years before he was appointed (1884) second secretary of the U S legation at Peking and served (1886–87) as chargé d'affaires in Korea Between 1888 and 1892 he made several explorations in China, Mongolia, and Tibet He became chief clerk in the U S Dept of State (1893) and first Assistant Secretary of State (1896) and served (1897–99) as U S minister to Greece, Rumania, and Serbia On his return and until 1905 he was director of the International Bureau of American Republics (later the Pan American Union) He was (1900–1901) in China as special minister for the settlement of the Boxer Rebellion, was minister to China (1905–9), was ambassador to Russia (1909–11), and finally was ambassador to Turkey (1911–13) While on his way to China again in 1914, he died at Honolulu A translator and editor of Oriental works, he also wrote *The Life of the Buddha* (1884), *The Land of the Lamas* (1891), and *Diary of a Journey through Mongolia and Thibet in 1891 and 1892* (1894) He edited *Treatyes and Conventions with or concerning China and Korea, 1894–1904* (1904)

Rock Hill 1 City (pop 1,821), E Mo , near St Louis, inc 1929 2 City (pop 15,009), N S C , near the Catawba river and the N.C line, SSW of Charlotte, N C , inc 1870 It has textile mills and other plants WINTHROP COLLEGE is here

Rockingham, Charles Watson-Wentworth, 2d **marquess of** (rŏ'kĭng-ŭm), 1730–82, English statesman Entering the House of Lords in 1750 after his father's death, he established himself as an opponent of the "king's friends," held several cabinet offices, and formed a coalition government in 1765 During his ministry the Stamp Act was repealed and conciliation with America attempted, but the administration fell with the resignation of one of its members, the duke of Grafton Rockingham continued to oppose the coercive policy of the government, and in 1782, at the fall of Lord North, he again became prime minister The war was already lost, and Rockingham died before the peace settlement could be reached Rockingham's second ministry was marked by the repeal of Poynings's Law and by measures to reduce corrupt practices in parliamentary elections The unity of the Whigs was broken by Rockingham's death, and the Tories began a long period of ascendancy under the younger William Pitt

Rockingham (rŏ'kĭnghăm″) 1 Town (pop 3,657), co seat of Richmond co., S N.C , SE of Charlotte near the S C line and the Pee Dee river, in a peach and cotton area, settled c.1780, inc 1887. Textiles and paper goods are made here 2 Town (pop. 5,737), SE Vt , on the Connecticut; settled c 1753. It includes BELLOWS FALLS, Saxtons River (pop. 740), seat of Vermont Academy, and Rockingham, notable for its 1787 Congregational church.

Rock Island, village (pop. 1,395), S Que , S of Sherbrooke at the Vt border It has textile milling and granite quarrying and manufactures machine tools and skis Stanstead College is here.

Rock Island, city (pop 42,775), co seat of Rock Island co , NW Ill., on the Mississippi adjacent to MOLINE and opposite DAVENPORT, Iowa, inc. 1841. The three cities, with East Moline, form an economic unit called the Quad Cities Rock Island is a rail, industrial, and trade center with coal deposits near by In 1833 George DAVENPORT built a house on Rock Island, in the Mississippi, the island, fortified in 1816, played an important part in the Black Hawk War. It is government owned and is the site of a U S arsenal The island, the city, Moline, and Davenport are connected by bridges Supplied with water power from a dam in the river, the city's manufactures include agricultural implements and other metal products, paints, and clothing There are foundries, railroad shops, and ironworks AUGUSTANA COLLEGE AND THEOLOGICAL SEMINARY is here, Black Hawk State Park adjoins the city

Rockland, town (pop 2,040), SE Ont , on the Ottawa river and ENE of Ottawa It is in a poultry-raising area and has flour and lumber mills

Rockland. 1 City (pop 8,899), co seat of Knox co , S Maine, settled c 1770 inc 1848 as East Thomaston town, name changed 1853, inc as a city 1854 It has a good harbor on the west side of Penobscot Bay and once shipped quantities of lime from its quarries Rockland today is a fishing place, trading center, port of entry, and resort Edna St Vincent Millay was born here 2 Industrial town (pop 8,087), SE Mass , SE of Boston, settled 1673, set off from Abington 1874 Shoes are its chief product

Rockledge, borough (pop 1,773), SE Pa , near Philadelphia, settled 1880, inc 1893

Rockmart, city (pop 3,764), NW Ga , in the piedmont region WNW of Atlanta, inc 1872 Rubber products are made here

Rockne, Knute Kenneth (rŏk'nē), 1888–1931, American football coach, b Norway In 1893 he arrived with his parents in Chicago, where he attended grade school and worked at odd jobs While studying science at Notre Dame (from which he was graduated in 1914), Rockne excelled at football and in 1913, with Gus Dorais, astounded the football world by upsetting the heavily favored Army team at West Point through the use of the forward pass—a legal but then unused football tactic After becoming (1914) a chemistry instructor at Notre Dame, Rockne was selected (1918) as its head football coach and soon revolutionized the sport by stressing offense, developing the backfield or Notre Dame shift, and perfecting line play He brought forward many football stars, had undefeated, untied teams five seasons (1919 20, 1924, 1929–30), and from 1918 through 1930 gave Notre Dame a football record of 105 games won, 12 games lost, and 5 ties Rockne, a muscular, medium-sized man of forceful character and great energy, not only put Notre Dame on the football map," but also changed football theory He died in an airplane crash He wrote *Coaching* (1925), *Four Winners* (1925), and *Football Problems* (1927) See his autobiography (1931), biographies by Harry Stuhldreher (1931), Warren Brown (1931), and Robert Harron (1931), Francis Wallace, *Notre Dame Story* (1949)

Rockport. 1 City (pop 2,421), co seat of Spencer co , SW Ind , on the Ohio and E of Evansville, settled 1807 Oil is obtained in this area Built on bluffs above the river, it is the site of Lincoln Pioneer Village, a memorial with reconstructed pioneer homes 2 Town (pop 1,526), S Maine, a resort on Penobscot Bay N of Rockland, settled 1769, set off from Camden 1891 3 Town (pop 3,556), NE Mass , on Cape Ann, settled 1690, set off from Gloucester 1840 It is a resort and artists' colony 4 City (pop 1,406), co seat of Atchison co , extreme NW Mo , near the Missouri river, platted 1851 Diversified farming is carried on in the area 5 City (pop 1,729), co seat of Aransas co , S Texas, on Aransas Bay and NE of Corpus Christi Built in the 1860s as a port to ship cattle, it is today a fishing port that attracts vacationers There is a state marine biological laboratory

Rock Rapids, city (pop 2,556), co seat of Lyon co , NW Iowa, on the Rock River near the Minn line, inc 1885. It is a farm and dairy center

Rock River, rising in S Wisconsin and flowing S and SW through NW Illinois to the Mississippi near Rock Island It flows through a fertile farm area, cities on it include Beloit, Wis , and Rockford and Dixon, Ill Lorado Taft's Black Hawk statue stands on a bluff overlooking the river near Oregon, Ill

rock salt: see SALT.

rock sculptures, designs cut into rock surfaces in many parts of the world and attributed to primitive man. They are found on the face of natural rocks and of megalithic monuments, all of prehistoric antiquity. Included among them are the petroglyphs dating from the Neolithic period Some rock carvings seem to be votive in nature. Some portray agricultural scenes, with plowmen, plows, oxen, and oxen and riders, in regions now

sterile, e.g., the Alps of N Italy. Drawings on a grand scale of elk, reindeer, and bears are found on polished rocks in Norway In the 20th cent a systematic search for rock sculptures, carvings, and paintings was made, thousands of new ones being found and copied from Norway to the southern part of Africa and the Near East Two styles of this primitive art have been distinguished One is confined to the walls and ceilings of caves (e g , the Altamira caves in N Spain) and portrays large wild animals usually at rest, the figures of men being seldom reproduced Pictures in the second style are usually found under overhanging rocks or in natural niches in cliffs and are vivid representations of men in motion—hunting, fighting, dancing, and climbing trees Pictures of wild animals are sometimes included Examples of both styles are found side by side See Leo Frobenius and D C Fox, *Prehistoric Rock Pictures in Europe and Africa* (1937).

Rock Springs, city (pop 9,827, alt c 6,270 ft), SW Wyo , on Bitter Creek Settled around a trading post and stage station established in the 1860s, it is now a coal-mining city, with a polyglot population, and a center for hunting and fishing activities in the near-by forest and canyon area

Rocksprings, town (pop 1,339), W Texas, NE of Del Rio and on the Edwards Plateau, settled 1887, inc 1924 Rocksprings, a center of goat and sheep ranching, was almost destroyed by a 1927 tornado

Rockton, village (pop 1,156), N Ill , on the Rock River near the Wis line, inc 1847

Rock Valley, town (pop 1 507), NW Iowa, on Rock River and N of Sioux City, near the S Dak line, inc 1888 There is a large Dutch population The town has a creamery and makes cement blocks

Rockville 1 City (pop 7,572) in Vernon town, N Conn , co seat of Tolland co , chartered 1889 Woolens and worsteds are produced **2** Residential town (pop 2,208), co seat of Parke co , W Ind , near the Wabash NNE of Terre Haute, settled 1823, inc 1854 A state tuberculosis sanatorium is here **3** Town (pop 2,047), co seat of Montgomery co , W central Md , NNW of Washington, D C Near by are Clara Barton's house and the testing laboratory of the Navy Dept

Rockville Centre, residential village (pop 18,613), on SW Long Island, SE N Y , S of Hempstead, inc 1870 Its industries include the making of organ pipes

Rockwall, city (pop 1,318), co seat of Rockwall co , N Texas, near the East Fork of the Trinity and NE of Dallas, on the black land prairie City and county are named for a geological formation that looks like a man-made wall

Rockwell, Norman, 1894–, American illustrator, b New York city, studied at the Art Students League He is best known for his magazine covers, notably for the *Saturday Evening Post;* he invariably depicts, with great clarity and detail, scenes from daily small-town life, taking for models the people and objects surrounding him He has also executed many posters and a series of murals, illustrating the Four Freedoms, in the Nassau Tavern, Princeton, N J

Rockwell City, city (pop 2,391), co seat of Calhoun co , W central Iowa, WSW of Fort Dodge, in the heart of the corn country, inc 1882 The state reformatory for women is here

Rockwood 1 Village (pop 1,147), SE Mich , on the Huron and S of Detroit, in a farm area, inc 1926 **2** Borough (pop 1,375), SW Pa , SE of Pittsburgh, laid out 1857, inc 1885 **3** City (pop 3,981), E Tenn , WSW of Knoxville and near the Tennessee and Clinch rivers, in an area of coal, iron, limestone, timber, and farms, settled c 1816 Ferromanganese is among the city's products

Rocky Ford, city (pop 3,494), SE Colo , on the Arkansas river below Pueblo, inc 1887 The fame of its melons is celebrated in an annual Melon Day The city has food-processing plants and manufactures brooms and pumps Bent's Fort is near by

Rocky Hill, town (pop 2,679), central Conn , on the Connecticut river and S of Hartford, settled 1650, inc 1843 Rayon yarns are produced

Rocky Mount. 1 City (pop 25,568) E N C , on the Tar river and ENE of Raleigh, inc 1867 It is a railroad, cotton, and tobacco center, with processing plants **2** Tobacco town (pop 1,366), SW Va , S of Roanoke, combined with contiguous Mt Pleasant and inc 1873 The courthouse of Franklin co is here

Rocky Mountain College, at Billings, Mont , interdenominational, coeducational It was formed in 1947 by a merger of Billings Polytechnic Institute (chartered 1908, opened 1909) and Intermountain Union College, formed at Helena in 1922 by merging the College of Montana (opened 1878 as a collegiate institute at Deer Lodge, chartered and renamed 1883) and Montana Wesleyan College (opened 1890) The college includes a school of commerce and a conservatory of music and art

Rocky Mountain goat, mammal (genus *Oreamnos*) found in the Rocky Mts of Alaska, British Columbia, and the NW United States. It is not a true goat although it has a goatlike appearance, it is related to the antelope and to the chamois The male stands about 3 ft high at the humped shoulder. The chin is bearded, the face is long, and the sharp black horns (9 to 12 in long) curve slightly backward It traverses barren slopes and precipitous ledges, protected from icy gales by its thick white coat It feeds above the timber line on vegetation

Rocky Mountain House, town (pop 1,017), S central Alta , at the foot of the Rocky Mts , on the North Saskatchewan near the mouth of the Clearwater and W of Red Deer Founded in 1799 as a fortified post of the North West Company, in Blackfoot Indian country and known as Blackfoot Post, it was taken over (1821) by the Hudson's Bay Company and operated until 1875 Lumbering, coal mining, and grain growing are carried on in the region

Rocky Mountain National Park, 252,788 28 acres, N central Colo , est 1915 Estes Park is headquarters A beautiful area in the Front Range, with lakes, streams, waterfalls, and trails, the park includes 65 named peaks over 10,000 ft high Longs Peak, the highest, rises to 14,255 ft

Rocky Mountains, longest and highest mountain system of North America, composed of numerous complex systems, extending S from N Alaska through W Canada and the United States into N New Mexico In Alaska the chain includes the BROOKS RANGE, in Canada it includes the Mackenzie Mts , STIKINE MOUNTAINS, CARIBOO MOUNTAINS, and SELKIRK MOUNTAINS Where the Rocky Mts form the boundary between the provinces of British Columbia and Alberta, they are popularly known as the Canadian Rockies Here lie five national parks—Jasper, Banff, Yoho, Kootenay, and Waterton Lakes Glacier National Park and Mt Revelstone National Park are to the west, in the Selkirk Mts of British Columbia In the United States the Rocky Mts cross portions of Washington, Idaho, Montana, Utah, Wyoming, and Colorado and terminate in N New Mexico The mountain complex, separated in places by high plateaus or wide basins, includes the Lewis Range, Big Belt Mts , BITTERROOT RANGE, SAWTOOTH MOUNTAINS, SALMON RIVER MOUNTAINS, ABSAROKA RANGE, BIGHORN MOUNTAINS, WIND RIVER RANGE, TETON RANGE, WASATCH RANGE, UINTA MOUNTAINS, LARAMIE MOUNTAINS, MEDICINE BOW MOUNTAINS, PARK RANGE, FRONT RANGE, SAWATCH MOUNTAINS, SAN JUAN MOUNTAINS, SANGRE DE CRISTO MOUNTAINS and numerous other groups On the east the system rises from the GREAT PLAINS, on the west the GREAT BASIN and other depressions separate it from the Coast Ranges The Continental Divide follows the crests of the Rockies, the source of the great river systems of the Yukon, Mackenzie, Peace, Athabaska, Saskatchewan, Missouri, Platte, Arkansas, and Rio Grande and, flowing to the Pacific, the Fraser, Columbia-Snake, and Colorado The Rockies, geologically young, are chiefly a granite and gneiss mass but represent a great variety of rocks, with occasional evidence of volcanic action, as in Yellowstone National Park There are a number of glaciers in the system and many snow-capped summits over 14,000 ft high, such as MT ELBERT, MT MASSIVE, MT HARVARD, BLANCA PEAK, UNCOMPAHGRE PEAK, LONGS PEAK, and PIKES PEAK, all in Colorado Gold, silver, copper, lead, coal, and other minerals are found in the system, which also has extensive farming and grazing regions GLACIER NATIONAL PARK, YELLOWSTONE NATIONAL PARK, GRAND TETON NATIONAL PARK, ROCKY MOUNTAIN NATIONAL PARK, and Mesa Verde National Park embrace some of the most interesting and beautiful areas The Rockies were a formidable obstacle to transcontinental crossing, for early travelers' routes, see OREGON TRAIL and OVERLAND TRAIL Explorers of the Rockies have included CORONADO, VÉRENDRYE, Jonathan CARVER, Sir Alexander MACKENZIE, Meriwether Lewis and William Clark (see LEWIS AND CLARK EXPEDITION), Zebulon M PIKE, Stephen H LONG, B L E de BONNEVILLE, J C FRÉMONT, and, more particularly, the host of MOUNTAIN MEN See W W Wilcox, *The Rockies of Canada* (1909), R G Thwaites, *A Brief History of Rocky Mountain Exploration* (1914), W W Atwood, *The Rocky Mountains* (1945), publications of the U S Geological Survey and of the National Park Service of the U S Dept of the Interior

Rocky Mountain sheep see BIGHORN

Rocky Mountain spotted fever, acute infectious disease transmitted to humans by the bite of certain ticks It is most prevalent in the NW United States although it has spread over most of the country The causative agent is *Rickettsa rickettsi,* a member of the group known as rickettsia bodies, forms usually considered intermediate between viruses and bacteria Ticks infected with the germs may be carried on dogs, rodents, cattle, and some other animals and may thus reach humans. If they are removed promptly after coming in contact with the human skin the disease may be avoided Since the young ticks infest grass and brush before finding an animal host, keeping the land clear around dwellings helps to prevent spread of the disease Hemorrhagic skin spots, chills, fever, and pain in the muscles and bones accompany the disease. Fatalities long were very high, but with the development of a preventive vaccine and a serum, these have been reduced

Rocky River, city (pop 8,291), NE Ohio, residential suburb of Cleveland, settled 1815, inc 1903

rococo (rōkō'kō, rō–), style in architecture, especially in interiors and the decorative arts, which originated in France early in the reign (1715–74) of Louis XV It was widely used in other parts of Europe in the 18th cent The term may be derived from the French words *rocaille* and *coquille* (rock and shell), natural forms prominent in the Italian BAROQUE decorations of interiors and gardens The style was an offshoot from baroque, with its abandonment of rules and its free and unsymmetrical handling of architectural forms Juste Aurèle Meissonier of Turin, who worked in Paris after 1723, is considered to have originated rococo by his engraved designs incorporating the shell motifs The Parisian tapestry weavers, cabinetmakers, and bronze workers followed his lead and introduced a new lightness and delicacy in reaction from the sobriety and heaviness of the reign of Louis XIV In room decorations and furniture, shells, scrolls, branches of leaves, flowers, and bamboo stems were organized into deft and engaging compositions The fanciful decorations of monkeys in human costume were termed *singeries,* while the fashionable enthusiasm for Chinese art added to the style the whole bizarre vocabulary of CHINOISERIE motives The rococo vogue spread to other countries, especially to Germany and to Austria, where François de CUVILLIÉS was its pioneer Italian rococo, particularly that of Venice, was brilliantly decorative The furniture of Thomas CHIPPENDALE manifested its influence in England See Fiske Kimball, *The Creation of the Rococo* (1943)

rococo, in music, an offshoot of the baroque Less austere, less formal in structure, it was a graceful, hedonistic style which began in France Its extreme manifestations were in keyboard music A host of minor composers wrote highly ornamented genre pieces, but the greatest rococo composer was François COUPERIN (1668–1733) In Germany the style was taken up by Bach's contemporaries Georg Philipp Telemann (1681–1767) and Johann Mattheson (1681–1764) and in Italy it was represented in the keyboard sonatas of Domenico SCARLATTI Traces of the rococo are present in the works of C P E Bach, Haydn, and Mozart

Rocourt (rōkōōr'), village (pop 2,541), Liége prov , SE Belgium, N of Liége Here in the War of the Austrian Succession the French under Maurice de Saxe defeated (1746) the allied English and Austrians The place was also known as ROCOUX and ROUCOUX

Rocroi (rōkrōwä'), village, Ardennes dept , N France, near the Belgian border Here in the Thirty Years War the French under Louis II de Condé inflicted a decisive defeat on the Spanish

Rod, Édouard (Louis Édouard Rod) (ādwär' rôd', lwē'), 1857–1910, Swiss novelist and critic in France He was editor of the *Revue contemporaine* and, later, professor of comparative literature at Geneva He shared in the idealistic reaction against naturalism, favoring the psychological and analytical method of Stendhal Among his novels are *La Course à la mort* (1885), *Le Sens de la vie* (1889), and *L'Incendie* (1906) His excellent critical volume, *Les Idées morales du temps présent* (1891), is a survey of the literature of the period

Rodanim (rō'du–, rō'du–, rōdā'–) see DODANIM

Rodbertus, Karl Johann (kärl yō'hän rōdbĕr'tōōs), 1805–75, German economist and conservative socialist He held several public offices, but after 1849 devoted himself to his writings in economics He believed that society would eventually attain, without violence, to the socialist ideal of state-owned property His books include *Overproduction and Property* (1850–51, Eng tr , 1898) See E C K Gonner, *The Social Philosophy of Rodbertus* (1899)

Rodenbach, Albrecht (al'brĕkht rō'dənbäkh), 1856–80, Flemish poet His lyrics and verse drama *Gudrun* (1882) place him among foremost Flemish poets See Jethro Bithell, *Contemporary Flemish Poetry* (1917)

Rodenbach, Georges (zhôrzh' rōdənbäk'), 1855–98, Belgian symbolist poet and novelist Living in Paris from 1887, he wrote on Flemish life His works include the poems *Le Foyer et les champs* (1877), *La Jeunesse blanche* (1886), and *Les Vies enclose* (1896) and a novel, *Bruges-la-morte* (1892)

rodent (rō'dənt), member of the largest order of mammals, the Rodentia, with teeth adapted for gnawing and chewing A pair of upper and lower incisor teeth are enlarged and grow throughout life Because enamel is lacking on the posterior surface the cutting edge of the incisors remains chisel shaped as the teeth are worn down Cheek teeth for grinding food number (except in the rabbit) not more than five in the upper and four in the lower jaw and often less Canine teeth are lacking In size rodents range from the harvest mouse (with a length of from 4½ to 7 in including the tail) to the CAPIBARA (about 4 ft long) Among the rodents are the chipmunk, squirrel, rat, beaver, porcupine,

guinea pig, and chinchilla In some classifications the hare and rabbit are included and in others they are placed in a separate order

rodeo (rō'dēō, rōdā'ō), public exhibition of the skill of cowboys in various activities Events include riding broncos, riding steers, "bulldogging" steers, roping and tying steers and calves, the use of the lasso, and other less closely related activities such as contests of marksmanship The rodeo was originally merely an adjunct to the ROUNDUP, a contest of skill between various cow hands, but the spectacle became popular in the late 1880s and the 1890s and gradually took on more and more of the aspect of a circus Today there are rodeo artists who go from exhibition to exhibition There are annual rodeos at many places in the West, in the East the rodeos normally travel like the circus and have only professional entertainers

Roderick (rō'durĭk), d 713?, last Visigothic king in Spain (710–713?) After the death of King Witiza in 708 or 709 the kingdom was thrown into confusion and a group of nobles chose Roderick, duke of Baetica, as successor He defeated Witiza's son and established himself on the throne Of his reign little is actually known because innumerable legends have gathered about it Most of the legends involve one Julian, governor of Ceuta, who—either for political motives or because his daughter had been violated by Roderick—joined the family of Witiza in going over to the side of the Moslems, then pressing on Spain from the south At any rate, the Moslems under TARIK crossed (711) the Strait of Gibraltar, and Roderick, campaigning in the north against the Franks and the Basques, hastened south only to be defeated (711) by Tarik on the shores of Lake Janda, near Medina Sidonia Because of a misreading of the Arabic chronicles, the battle became known as the battle of Guadalete According to some stories, Roderick was killed in the battle, but it is widely believed that he continued to fight until he was slain in 713 The colorful legends that gathered about this "last of the Goths" gained a permanent place in Spanish literature and passed into English writing, especially in the works of Washington Irving, Robert Southey, and Walter Savage Landor

Rodessa, unincorporated town (pop 1,605), extreme NW La , near the Ark and Texas boundaries It boomed when oil was discovered here in 1935

Rodez (rôdĕz'), city (pop 16,366), capital of Aveyron dept , S France, and historic capital of ROUERGUE An episcopal see since the 5th cent , it has a Gothic cathedral (13th–16th cent) of northern French style The town is an agricultural center and has textile manufactures

Rodgers, Christopher Raymond Perry, 1819–92, American naval officer, b Brooklyn, N Y , son of George Washington Rodgers Appointed midshipman in 1833, he saw wide and varied duty at sea before serving in the Mexican War In the Civil War, Rodgers took part in the Union reduction of Port Royal, S C , received the surrender of St Augustine and other Florida and Georgia coastal towns, and commanded the naval forces in the trenches at the capture of Fort Pulaski before Savannah, Ga He was fleet captain commanding the *New Ironsides* in the attack on Charleston in April, 1863 From Oct , 1863, to the end of the war he commanded the *Iroquois* in its world-wide search for the *Shenandoah* and other Confederate cruisers Promoted captain in 1866 and rear admiral in 1874, he was chief of the Bureau of Yards and Docks (1871–74), superintendent of Annapolis (1874–78), and commander in chief of the Pacific squadron (1878–80)

Rodgers, George Washington, 1787–1832, American naval officer, b Cecil co , Md His brother, John Rodgers (1773–1838), secured him a midshipman's warrant in 1804 At the beginning of the War of 1812, he was a lieutenant on the *Wasp*, which captured the *Frolic*, but both were soon taken by a larger British ship After varied service, he was promoted captain in 1825 and at his death was commander of the Brazil squadron

Rodgers, John, 1773–1838, American naval officer, b Harford co , Md He had seen years of merchant service before he became (1798) a lieutenant in the new U S navy He served against the Barbary pirates, and in 1805 he succeeded Commodore Samuel Barron in command of the squadron in the Tripolitan War Later, in the troubles over English impressment of seamen from American ships, Rodgers, in command of the *President*, was sent to stop impressment by the British *Guerrière* He encountered a British ship, gave chase, and overhauled her After a passage between the two, concerning which accounts are varied, a battle between them occurred, and the British vessel, the *Little Belt*, was defeated and cut to bits The incident was one of those leading up to the outbreak of the War of 1812 Rodgers, on the outbreak of the war, at once set out to pursue British ships In a battle he was wounded by an explosion of a gun on his own vessel He later saw distinguished service After the war he was president of the board of naval commissioners (1815–24, 1827–37) and acting Secretary of War in 1823 See biography by C O Paullin (1910)

Rodgers, John, 1812–82, American naval officer, son of John Rodgers (1773–1838). He entered the navy and saw varied service He conducted exploring expeditions in the N Pacific and off the coast of China (1852–55), making valuable surveys and charts, and in 1855 he commanded the *Vincennes* on an expedition to the arctic He served on the Atlantic coast in the Civil War, commanding the *Galena* in the bombardment of Fort Darling (1862) and the monitor *Weehawken* in the capture of the ironclad *Atlanta* Rodgers protected (1865) American interests at Valparaiso in the face of a threatened Spanish attack He commanded (1870–72) the Asiatic fleet and was in charge in the trouble with Korean forts (1870) Later he was in charge of the Mare Island navy yard (1873–77) and was superintendent of the U S. Naval Observatory (1877–82)

Rodgers, Richard, 1902–, American composer, b New York city, studied at Columbia and the Institute of Musical Art, New York He met Lorenz Hart (1895–1943), his lyricist, in 1919, and the first musical comedy in which they collaborated, *Garrick Gaieties* (1925), was an enormous success They worked together on *The Girl Friend* (1926), *A Connecticut Yankee* (1927), *On Your Toes* (1936), *Babes in Arms* (1937), in which *The Lady Is a Tramp* is included, *I'd Rather Be Right* (1937), *I Married an Angel* (1938), and *By Jupiter!* (1942), of which Rodgers was coproducer Rodgers's collaboration with the lyricist Oscar Hammerstein 2d (1895–) began with *Oklahoma!* (1943), which won a special Pulitzer award, and was continued in *Carousel* (1945) and *South Pacific* (1949)

Rodin, Auguste (ōgüst' rôdăⁿ'), 1840–1917, French sculptor, b Paris, of humble parents He began his art study at 14 in the Petite École and in the school of Barye, earning his living by working for an ornament maker In 1863 he went to work for the architectural sculptor Carrier-Belleuse, and from 1870 to 1877 he continued in the same trade in Brussels In the Salon of 1877 he exhibited a nude male figure, *The Age of Bronze* It was extravagantly praised and condemned, his critics unjustly accused him of having made a cast from life The upshot was that Rodin gained the active support and patronage of Turquet, undersecretary of fine arts His *Age of Bronze* and *St John* were purchased for the Luxembourg Gardens, Paris The government gave him a studio in Paris, where he worked the rest of his life with growing fame From 1880 Rodin worked intermittently on studies for a huge bronze door for the Musée des Arts décoratifs It was inspired by Dante's *Inferno* and was to be called the Gate of Hell He never finished it. Among the figures and groups intended for it are *Adam* and *Ève* (Metropolitan Mus) and *The Thinker* (Paris) These, together with his group *The Burghers of Calais* (Calais), completed in 1894, are among his most famous creations Other ambitious works are his monuments to Victor Hugo (1909, Paris) and Balzac Rodin is known also for his many fine portrait busts and for many little figures and groups in marble, such as *The Kiss*, *Ugolino*, and *Danaïd* in the Luxembourg Museum, Paris, and *Pygmalion and Galatea*, *The Bather*, and *The Hand of God* in the Metropolitan Museum He is best represented in these museums and in the Rodin museums of Paris and Philadelphia, but fine examples of his work exist in many galleries throughout the world Rodin's work is usually considered the most important contribution to sculpture of his century Highly realistic in many respects, it is nevertheless always imbued with deep poetic feeling Dante, Baudelaire, Michelangelo, and the Gothic were sources of inspiration Rodin considered his work completed when it expressed his idea Some of his sculpture is polished, some seems scarcely to have emerged from the rough stone He worked long over his more important works, returning to them again and again Their dynamism was the result not of feverish production but of long, patient labor See biography by Judith Cladel (Eng tr , 1937), study by Rainer Maria Rilke (Eng tr , 1945)

Rodman, Hugh, 1859–1940, American admiral, b Frankfort, Ky , grad Annapolis, 1880 After service in the Spanish-American War, he commanded many warships and later held administrative posts and was promoted through the grades to become (1917) rear admiral He led several divisions of the Atlantic Fleet in the First World War and, in command of the 6th Battle Squadron, served (1918) with the British fleet in the North Sea Promoted (1919) admiral, he was given command of the Pacific Fleet He retired from the navy in 1923 and thereafter served on diplomatic missions He wrote *Yarns of a Kentucky Admiral* (1928)

Rodney, Caesar, 1728–84, American Revolutionary patriot, signer of the Declaration of Independence, b near Dover, Del He held several political posts in Delaware and was a delegate to the Stamp Act Congress (1765) Rodney, as a member of the Continental Congress (1774–76), advocated independence Later he was a general commanding Delaware militia in the Revolution and was (1778–82) president of Delaware

Rodney, George Brydges Rodney, 1st Baron, 1719–92, British admiral. He entered the navy in 1732, became a captain in 1742, and served with distinction in the War of the Austrian Succession and the Seven Years War. As rear admiral, he bombarded Le Havre (1759) and prevented the contemplated invasion of England by the destruction of French transports In 1762 he reduced Martinique and was made a vice admiral, and in 1763 he was created baronet. Pressed by debts, Rodney resided in France (1775–78), but in 1778 he was made an admiral and dispatched to the West Indies On the way he crushed a Spanish fleet off Cape St Vincent, relieved Gibraltar, and became a national hero In 1781 he captured St Eustatius in the West Indies and confiscated large quantities of goods belonging to British merchants, who hounded him with lawsuits for the rest of his life Rodney's greatest victory was over the French fleet of Admiral de Grasse (1782) in the West Indies It made possible more advantageous terms of peace with the French at the close of the American Revolution Rodney returned to England (1782), was created baron, and was given a pension See biographies by Godfrey Mundy (1830) and David Hannay (1891)

Rodó, José Enrique (hōsā' ānrē'kā rôdō'), 1872–1917, Uruguayan essayist, literary critic, and moralist He spent most of his life in Montevideo, where he taught at the university He helped to found and edited *La revista nacional de literatura y ciencias sociales* His essays, in the *modernista* manner, gained him acclaim in and outside Spanish America Rodó developed a new philosophy of ethics and sought to create a new spirit in politics In *Ariel* (1900, Eng tr , 1922), his best-known work, he calls upon Latin America (Ariel) to hold to spiritual values unsullied by the materialistic impact of the United States (Caliban) Other collections of essays are *Los motivos de Proteo* (1909, Eng tr , 1928) and *El mirador de Próspero* (1913)

Rodosto, Turkey see TEKIRDAG

Rodrigues Alves, Francisco de Paula (fransēsh'kō dē pou'lu rôdrē'gēsh ul'vĭsh), 1848–1919, president of Brazil (1902–6) As finance minister he played a part in securing a funding loan that made possible the later rehabilitation of Brazil As president he pushed forward national development Public health was under the care of Oswaldo Cruz, who carried out a vast sanitary campaign that rid Brazil of the worst of its plagues of yellow fever, bubonic plague, and smallpox A civic improvement plan made Rio into a luxuriously beautiful modern city The dispute with Bolivia over the territory of Acre was settled through the brilliant diplomacy of the foreign minister, the barão do Rio Branco

Rodríguez, Abelardo Luján (ävälär'dhō lōōhän' rôdhrē'gās), 1889– , Mexican revolutionist and president (Sept , 1932–Nov , 1934) He became a general in the army, and under Álvaro OBREGÓN and Plutarco E CALLES he held various governmental posts On the resignation of President ORTIZ RUBIO, Rodríguez was provisional president until succeeded by LÁZARO CÁRDENAS The conflict between the Catholic Church and the government was resumed in his administration

Rodríguez, Martín (märtēn' rôdhrē'gās), 1771–1844, Argentine general, governor of Buenos Aires province (1820–24) With Juan Martín de PUEYRREDÓN, he organized a force to expel the British invaders of the Río de la Plata, and later he served under Jacques de LINIERS in the recapture (1806) and the defense (1807) of Buenos Aires He was one of the leaders in the revolution of May, 1810, when the viceroy was deposed and a junta was established, and was active in the war against Spain His administration as governor, following a period of anarchy, was progressive Many measures of reform and administrative reorganization were undertaken, chiefly on the initiative of Bernardino RIVADAVIA These served as an example to the other provinces, thus helping to lay the basis for the future national organization

Rodríguez (rôdrē'gās), island (42 sq mi , 1946 estimated pop 12,839), in the Indian Ocean, E of Mauritius It belongs to the British colony of Mauritius and is one of the Mascarene Islands Rodríguez was discovered in 1645 by the Portuguese and briefly occupied (1691–93) by the Dutch Great Britain took it in 1810 Live cattle are exported

Rodríguez Francia, José Gaspar see FRANCIA, JOSÉ GASPAR RODRÍGUEZ

Rodríguez Larreta, Enrique see LARRETA, ENRIQUE RODRÍGUEZ

Roe, Edward Payson, 1838–88, American clergyman and novelist, b Windsor, N Y , studied at Williams and at Auburn Theological Seminary He was a Civil War chaplain and later a Presbyterian minister in Highland Falls, N Y , until literary success turned him to a career of writing His best-known book, *Barriers Burned Away* (1872), based on the Chicago fire, was followed by other moral novels, including *The Opening of a Chestnut Burr* (1874)

Roebling, John Augustus (rō'blĭng), 1806–69, German-American engineer, b Mulhouse He studied engineering in Berlin and in 1831 came to the United States He demonstrated the practicability

of steel cable and established a plant for manufacturing it at Trenton, N J A pioneer in the building of suspension bridges, he built the Allegheny Bridge at Pittsburgh, the Niagara Falls Suspension Bridge (completed 1855), and the Cincinnati and Covington bridge over the Ohio His most ambitious project was the Brooklyn Bridge It was scarcely begun when Roebling, directing operations, was injured in an accident and died a few days later His son **Washington Augustus Roebling,** 1837–1926, b Butler co , Pa , grad Rensselaer Polytechnic Institute, 1857, had aided his father in building the Allegheny Suspension Bridge During the Civil War he joined the Union army as a private, was transferred to Irvin McDowell's engineering staff, and rose to the rank of colonel He went to Europe to study engineering and especially pneumatic caissons After his father's death he directed the construction of Brooklyn Bridge Because of continuous underground work he was stricken (1872) with caisson disease, but despite his invalidism he directed the project until the bridge was opened to traffic (1883) In 1888 he took over the management of the Roebling plant in Trenton See biography by Hamilton Schuyler (1932), D B Steinman, *The Builders of the Bridge* (1945)

Roelas or **Ruelas, Juan de las** (hwän dā lās rō'lās, rō̄ā'lās), c 1558–1625, Spanish painter of the school of Seville He brought the liberating influence of Tintoretto to his native Seville, where he counted among his pupils Zurbarán Among his most famous works are *Martyrdom of St Andrew, St Anne and the Virgin, Pentecost,* and *Circumcision* (all in the museums and churches of Seville)

Roemer, Olaus see ROMER, OLAUS

Roentgen or **Röntgen, Wilhelm Conrad** (both rĕnt'gĭn, rŭnt'-, Ger vĭl'hĕlm kōn't ät rŭnt'gun), 1845–1923, German physicist His notable research in many fields of physics, especially thermology, mechanics, and electricity, have been overshadowed by his discovery (1895) of a short-wave ray, the Roentgen ray or X ray, for which he received the first Nobel Prize in Physics (1901) He taught at several German universities, including those at Würzburg (1888–99) and Munich (1899–1920) See biography by Otto Glasser (1946)

Roentgen ray see X RAY

Roerich, Nicholas Konstantin (rō'rĭkh), 1874–1947, Russian painter, stage designer, and archaeologist Until 1916 he was director of the School for Encouraging Fine Arts in Russia and was connected with the Moscow Art Theatre and the Diaghilev ballet His most important work for the stage was done for Stravinsky's *Sacre du printemps* He was a brilliant colorist He came (1920) to the United States, and in 1921 the Roerich Museum in New York was founded in his honor Roerich spent five years exploring the Himalayas, with 500 pictures as a result, after 1935 he made his home in a valley of the Punjab He is represented in the Louvre and the Luxembourg Museum, Paris, the Victoria and Albert Museum, London, the National Museum, Stockholm, and many American galleries Among his books are *Heart of Asia* (1929) and *Realm of Light* (1931) See N N Selivanova, *The World of Roerich* (1924)

Roermond (rōōr'mŏnd), municipality (pop 20,905), Limburg prov , SE Netherlands, on the Meuse at the mouth of the Roer river It has an electrochemical industry and various manufactures Roermond was an important medieval trade center It suffered heavy damage in the Second World War

Rogaland (rō'gälän"), county (3,543 sq mi , pop 202,252), SW Norway, rising eastward from the North Sea It is deeply indented by fjords STAVANGER is the county seat and chief city.

Rogation Days, in the calendar of the Western Church, four days set apart for solemn processions to invoke God's mercy They are April 25, the Major Rogation, coinciding with St Mark's day, and the three days preceding Ascension Day, these are the Minor Rogations The processions are Christian adaptations of Roman pagan ones, in rural districts they are regarded as blessing the fields The prayers include the Litany of the Saints (see LITANY)

Rogelim (rōgē'lĭm), unidentified town of Gilead, E of the Jordan 2 Sam 17 27, 19 31

Roger I (Roger Guiscard), c 1031–1101, Norman conqueror of Sicily, a son of Tancred de Hauteville (see NORMANS) He came to Italy in 1057 to join his brother, ROBERT GUISCARD, in the conquest of Apulia and Calabria from the Byzantines Between 1061 and 1091 he conquered Sicily from the Arabs Robert made him count of Sicily and Calabria (under Robert's suzerainty) in 1072, after the fall of Palermo Robert's death (1085) left Roger the most powerful Norman lord in S Italy. He ruled justly and tolerantly the various races living in his domains His was a feudal state, with a strong central power In 1099 Roger was made papal legate His son, Roger II, succeeded him.

Roger II, c 1097–1154, count (1101–30) and first king (1130–54) of Sicily, son and successor of Roger I He conquered (1127) Apulia and Salerno despite papal opposition and sided with Antipope Anacletus II (who crowned him king in 1130) against Pope INNOCENT II. Innocent rallied Emperor Lothair II and other allies against Roger, but was defeated in 1139 Naples and Capua recognized Roger's sovereignty, and Innocent was obliged to invest him with all the lands that, for seven centuries, were to constitute the kingdoms of Naples and Sicily Roger also conquered several cities on the African coast He favored a fusion of the disparate ethnic groups in his kingdom and established a strong central administration Sicily recovered its prosperity and Roger's brilliant court at Palermo was a center of the arts, letters, and sciences Roger was succeeded by his son, William I

Roger de Coverley (dŭ kŭ'vûrlē) or **Roger of Coverley,** old English country dance and its tune, which survived into the 20th cent The dancers face each other in two rows and perform figures similar to those of the VIRGINIA REEL, in which each dancer dances with each of the others The Sir Roger de Coverley papers, begun in the SPECTATOR in 1711, introduced the literary character, Sir Roger, as a gentleman of Worcestershire whose "great grandfather was the inventor of the famous country dance which is called after him" Since that time the dance has often been called the *Sir* Roger de Coverley

Roger of Hoveden (hŏv'dun, hūv'dun), fl 1200, English chronicler, probably b Hoveden or Howden (hou'dun), Yorkshire His chronicle, covering the years 732–1201, is an original source only for the period 1192–1201 His life as a member of the household of Henry II and the documents he included make his work important It was translated by Henry T Riley (1853)

Roger of Loria, Lauria, or **Luria,** c 1245–1304, Sicilian-Aragonese admiral After the fall (1266) of MANFRED he went in exile to Aragon where Manfred's daughter Constance was married to King PETER III After holding various posts there he followed Peter to Sicily, Peter having been chosen king of that island as a result of the SICILIAN VESPERS (1282) Roger distinguished himself as commander of the Aragonese fleet in the long war between the Aragonese and the Angevin rulers of Naples for the possession of Sicily He defeated the Angevins at Malta (1283) and in the Bay of Naples (1284), and won a brilliant victory (1285) over the French fleet off the coast of Catalonia After Peter III's death Roger served James (later JAMES II of Aragon), Peter's successor in Sicily, and twice defeated the Angevin fleet In 1295 James reversed his policy, ceding Sicily to the pope, who bestowed it on CHARLES II of Naples, James agreed to help Charles to gain possession of the island Roger, devoted to Aragon, fought with the Angevins against the Sicilians In 1302 he retired to Catalonia, where he died

Roger of Wendover, d c 1236, English chronicler He was a monk of St Albans and for a brief time prior of Belvoir Later, when historiographer of St Albans, he wrote the *Flores historarum,* a general chronicle from the Creation to 1235, which is dependent for the material from 1192 to 1201 on ROGER OF HOVEDEN and is original from 1201 to 1235 His work was carried on by MATTHEW OF PARIS The chronicle was translated by J A Giles (1849)

Rogers, Bruce (rŏj'urz), 1870–, American book designer, b Lafayette, Ind As printing adviser to Cambridge Univ Press and to Harvard Univ Press, as well as to commercial houses specializing in limited editions and fine printing, he earned the reputation of being America's leading book designer of his time. He designed the type face called Centaur and the format of the famous Oxford Lectern Bible (1935) He is the author of *Paragraphs on Printing* (1943) See biography by Frederic Warde (1925)

Rogers, Henry Huddleston, 1840–1909, American financier, b Fairhaven, Mass After he moved (1860) to Pennsylvania, he entered the oil business, experimented in the refining of petroleum, and, in partnership with Charles Pratt, became one of the important independent refiners When in 1874 his company was absorbed by the Standard Oil Company, Rogers—who originated the idea of pipe-line transportation for oil—became a lieutenant of John D Rockefeller His holdings steadily grew larger and more diverse and he became one of America's leading capitalists His son, **Henry Huddleston Rogers,** 1879–1935, b New York city, succeeded to his father's holdings He was interested in military affairs and fought in France in the First World War

Rogers, James Edwin Thorold, 1803–90, English economist He taught (1862–67) at Oxford and was for many years (1859–90) professor of statistics and economics at King's College, London Of his many works most noted is *History of Agriculture and Prices in England* (7 vols in 8, 1866–1902).

Rogers, James Gamble, 1867–1947, American architect, b Kentucky, grad Yale, 1889 Resident in New York from 1905, he designed many buildings for his alma mater, among them the Sterling Memorial Library, the Sterling School of Graduate Studies, Pierson College, and the Harkness Memorial Quadrangle He was for 10 years architectural advisor to Yale. Among his other designs are the Columbia-Presbyterian Medical Center and the Butler Library of Columbia Univ , the New Haven (Conn) post office, and the Deering Library of Northwestern Univ

Rogers, James Harvey, 1886–1939, American economist, b South Carolina, grad Univ of South Carolina (B A , 1906) and Yale (B A , 1909, Ph D , 1916) He was professor of economics at the Univ of Missouri (1923–30) and of political economy at Yale (from 1930) and had written *Stock Speculation and the Money Market* (1927), *The Process of Inflation in France, 1914–1927* (1929), and *American Weights How Gold* (1931) before he was called to Washington as monetary adviser to President F D Roosevelt In 1933 he was sent to Europe to consult with British economists on stabilization and in 1934 went to the Orient to study, for the U S Treasury, the monetary systems of the world's largest silver-using countries He was killed in an airplane crash at Rio de Janeiro.

Rogers, John, 1500?–1555, English Protestant martyr, grad Cambridge, 1526 He became a Roman Catholic priest, but under the influence of William Tyndale, whom he met in Antwerp, he turned (1535) to Protestantism He employed himself in preparing for the press an English version of the Bible, which he published (1537) under the pseudonym Thomas Matthew He contributed prefaces and marginal notes but most of the translation was the work of Tyndale and of Miles Coverdale Returning (1548) to England, Rogers became (1551) a prebendary of St Paul's, London On the accession of Queen Mary he was deprived of his benefices because of anti-Catholic expression in the pulpit and was imprisoned (1554) He was tried and burned at Smithfield as a heretic

Rogers, John, 1627–1665?, English minister He was ordained (1647) a Presbyterian and spent several years preaching in Dublin Upon his return (1652) to England, he joined the FIFTH MONARCHY MEN, a millenarian group His attacks against Cromwell from the pulpit and by pamphlet led to his arrest (1654) He was released (1657) but was imprisoned again (1658) on charges of conspiracy At the Restoration, Rogers fled to Holland, where he studied medicine and received a medical degree at Utrecht in 1662 He died several years after his return to England

Rogers, John, 1829–1904, American sculptor, b Salem Mass Trained as an engineer, he was forced by failing eyesight to work as a machinist He began modeling in clay as a pastime and studied sculpture in Rome for a short while His early clay group, *The Slave Auction,* was given publicity by the abolitionists, and "Rogers groups" by the end of the Civil War had attained great popularity Thousands of copies were made by machine of such subjects as *One More Shot, Going to the Minister,* and *The Wounded Scout* As accurate records of the period, they have regained a certain popularity

Rogers, Lindsay, 1891–, American political scientist b Baltimore, grad Johns Hopkins (B A , 1912, Ph D , 1915) He was (1914–15) a fellow in political science at Johns Hopkins before becoming (1915) professor at the Univ of Virginia In the First World War he was attached (1918) to the general staff corps He lectured (1920–21) on public law at Harvard and after 1920 he taught government and public law at Columbia He was visiting lecturer at several colleges and universities and served with the New York state department of labor (1928), the National Recovery Administration (1933), and Public Works Administration (1934–36) He wrote several books, including *The Postal Power of Congress* (1916), *The American Senate* (1926), *Crisis Government* (1934), and *The Pollsters* (1949)

Rogers, Randolph, 1825–92, American sculptor, b Waterloo, N Y He grew up in Ann Arbor, Mich After some success in portrait modeling he went (1848) to Florence to study From 1857 he lived in Rome Numerous replicas were made of the ideal statues *Nydia* (Art Inst , Chicago) and *The Last Plead* His *Ruth* is in the Metropolitan Museum, the *Angel of the Resurrection* in Hartford, Conn His monumental works include the military memorials at Providence, R I , and at Detroit He made a statue of John Adams (Mt Auburn Cemetery, Cambridge, Mass), a colossal Lincoln (Philadelphia), and a statue of William H Seward (Madison Square, New York), completed the Washington monument (Richmond, Va) begun by Thomas Crawford, and produced the bronze doors for the Rotunda of the Capitol and *The Genius of Connecticut,* on the dome of the capitol at Hartford, Conn He left all his casts to the art gallery of the Univ of Michigan

Rogers, Robert, 1731–95, American frontiersman, b Methuen, Mass As a child he moved with his family to the New Hampshire frontier In the French and Indian War known as King George's War he served as a scout, and in the last of the FRENCH AND INDIAN WARS he headed a company of frontier rangers under the direction of Sir William Johnson Such men as John Stark, Israel Putnam, and James Dalyell or Dalzell distinguished themselves in the company of rangers commanded by Rogers. In 1758 was fought the famous "battle

on snowshoes" at Rogers Rock, Lake George, where the company fought gallantly and was all but decimated. The next year Rogers led his men in a daring expedition which resulted in the destruction of the SAINT FRANCIS INDIANS. At the close of the war he was a major and a popular hero. In 1760 he was sent to receive the submission of the French posts on the Great Lakes, and in 1763 he served under Dalyell on the expedition to crush Pontiac's Rebellion. His participation in illicit trade with the Indians brought him into disgrace, and he went (1765) to England to rehabilitate himself. There he was much feted and had published his *Journals* and *A Concise Account of North America*, both in 1765. He also wrote a crude play, *Ponteach* (1766), important primarily as an early American drama. Successful in securing an appointment as commander of the post at MACKINAC, he returned to the Northwest, but his career there has been the subject of much speculation and discussion. Rogers, who was ambitious to find the Northwest Passage, sent out the mysterious expedition of Jonathan CARVER to the Northwest, quarreled with his associates, was accused of plotting to set up an independent state, and was arrested on charges of planning to sell out to foreign interests. Brought to Montreal in chains and court-martialed, he was acquitted of all charges. He went to England but returned to America and played such an equivocal role at the beginning of the American Revolution that he was imprisoned as a Loyalist spy. He escaped and openly joined the Loyalists, but his record in the war was anything but distinguished. In 1780 he returned to England, dying there in 1795 in obscurity. He has often been reviled for his drunkenness, his dishonesty in money matters, and his violence. Rogers is the central figure in Kenneth Robert's historical novel, *Northwest Passage* (1937). See also F. B. Hough, ed., *Journals of Major Robert Rogers* (1883), Allan Nevins, ed., *Ponteach* (with biographical account, 1914), Arthur Pound, *Native Stock* (1931), V. H. Paltsits, ed., *Journal of Robert Rogers, the Ranger, on His Expedition for Receiving the Capitulation of Western French Posts* (1933).

Rogers, Samuel, 1763–1855, English poet and conversationalist. His poetry, *Pleasures of Memory* (1792), *Jacqueline* (1814), and *Italy* (1822–28), is pleasant though undistinguished. Rich and a honker, he was acquainted with Byron, Lamb, and Wordsworth and other literary men of his day. *Table Talk* (1856) and *Recollections* (1859) indicate his influence.

Rogers, Will (William Penn Adair Rogers), 1879–1935, American humorist, b. Oologah, Indian Territory (now in Oklahoma). From an early age he worked as a cowboy in Oklahoma, and after traveling over the world, he returned to the United States and worked in vaudeville as a cowboy rope-twirler. He was an immediate success when he joined (1915) the Ziegfeld *Follies*. Through moving pictures, a newspaper column, books, and radio, he gained a wide audience, his salty comments on the passing show made the "cowboy philosopher" world-known. A constant booster of airplane travel, Rogers made several long airplane trips, but was killed along with Wiley Post when their plane crashed near Point Barrow, Alaska. See Donald Day, ed., *The Autobiography of Will Rogers* (1944).

Rogers, William Allen, 1854–1931, American cartoonist and illustrator, b. Springfield, Ohio. He worked at various times for the New York *Daily Graphic*, *Harper's Weekly* and *Harper's Monthly*, and the *Century* and from 1923 for the Washington *Post*. He was made a chevalier of the Legion of Honor for a First World War cartoon in the New York and Paris *Herald*. He wrote *America's Black and White Book* (1917), *A World Worth While* (1922), *Danny's Partner* (1923), and *A Miracle Mine* (1925).

Rogers, William Augustus, 1832–98, American astronomer and physicist, b. Waterford, Conn.; grad. Brown, 1857. He was professor of astronomy and mathematics at Alfred Univ. (1858–70) and then went to Harvard as assistant in the observatory. There he mapped a narrow belt of the heavens, north of the zenith. In 1878 he became assistant professor of astronomy, and in 1886 he was appointed to the chair of astronomy and physics at Colby Univ. (now Colby College). He is known particularly for his work on standards of length; he went to Europe to compare standards used there. He was coinventor of a comparator (an apparatus for comparing and subdividing measures of length) of great precision. He contributed to scientific journals and also prepared several star catalogues.

Rogers, Woodes, d. 1732, English navigator and colonial administrator. He wrote *A Cruising Voyage round the World* (1712), the record of a privateering expedition made (1708–11) under his command against the Spanish. The expedition rescued Alexander SELKIRK from Juan Fernández Islands. Rogers leased the Bahama Islands (1717) from the lords proprietors and was twice governor there (1718–21, 1729–32). In his administration, piracy was extinguished, a Spanish invasion was repelled (1718), and the House of Assembly was founded.

Rogers, city (pop. 3,550), extreme NW Ark., in the Ozarks, founded 1881. It ships and processes poultry, fruit (especially apples and grapes), and dairy products of the region.

Rogers, Mount, peak, 5,720 ft. high, extreme SW Va., near the Tenn.–N. C. line S of Marion, highest point in Virginia.

Rogers City, city (pop. 3,072), co. seat of Presque Isle co., N. Mich., on Lake Huron, settled 1869, inc. as a village 1877, as a city 1944. It has limestone quarries and fisheries.

Rogersville, town (pop. 2,018), co. seat of Hawkins co., NE Tenn., WNW of Johnson City and near the Holston, in a farm and timber region, founded 1786. Swift Memorial Junior College (Negro, coeducational) is here. Mineral springs are in the area, and a home for printers is near by.

Roger van der Weyden see WEYDEN, ROGER VANDER.

Roget, Peter Mark (rō'zhā, rōzhā'), 1779–1869, English physician and lexicographer. While he practiced medicine and was secretary (1827–49) of the Royal Society, he worked nearly 50 years preparing his *Thesaurus of English Words and Phrases* (1852). In successive editions supervised by him, his son, and his grandson, it has remained a standard reference book.

Rogue, river of SW Oregon rising in the Cascade Range N of Crater Lake and flowing through a fertile and protected valley, noted for its orchard fruits, to the Pacific c.30 mi. N of the Calif. line.

Rohan, Henri, duc de (ärē' dük' du rôā'), 1579–1638, French Protestant general, son-in-law of Sully. He first appeared as a leader of the HUGUENOTS in 1611. As a consequence of the reestablishment of Catholicism in Béarn (1617), he and his brother, Benjamin de SOUBISE, took up arms against LUYNES in 1621, Rohan led a new revolt in Languedoc and the Cévennes in 1625–26, and again in 1627–29, but was forced to submit to Richelieu in the Peace of Alais (1629), and retired to Venice. In 1635 he was chosen by Richelieu to command the French troops in the VALTELLINA, which he subdued. Treachery and weak official support forced his retreat in 1637. Rohan subsequently joined the army of Bernhard of Saxe-Weimar and was killed at Rheinfelden. He translated and edited the Gallic War and Civil Wars of Caesar under the title *The Complete Captain* (1636, rev. ed., 1638, Eng. tr., 1640) and left *Mémoires* (1644, enl. ed., 1646, Eng. tr., 1660), and other writings.

Rohan, Louis René Édouard, prince de (lwē runā' ādwär' prās'), 1734–1803, French churchman and politician, cardinal of the Roman Church. Although he succeeded (1779) his uncle as archbishop of Strasbourg, he spent most of his career in Paris. As French ambassador to Vienna (1772) he made himself disliked by Empress Maria Theresa because of his worldly behavior. In France, his anti-Austrian attitude earned him the cordial hatred of Queen Marie Antoinette. It was apparently in a desire to curry favor with her that he became involved in the affair of the DIAMOND NECKLACE. For his inglorious part in this he was acquitted of guilt (1786), but lost his office of grand almoner and was banished from Paris. He was elected to the States-General (1789), refused to sign the Civil Constitution of the Clergy (1791), and emigrated.

Rojas, Fernando de (fĕrnän'dō dā rō'häs), 1465?–1526?, Spanish novelist. He was of Jewish descent and studied law in Salamanca. His fame rests on his authorship of *La Celestina* (see CELESTINA, LA). He was mayor of Talavera and was still alive in 1525, but the exact date of his death is unknown. In 1929 an inventory of his library was published in the *Revista de filología española*.

Rojas Zorrilla, Francisco de (fränthē'skō dā rō'häs thōrē'lyä), 1607–48, Spanish dramatist, b. Toledo. He created a type known as *comedia de figurón*, presenting the extravagant or ridiculous aspects of characters in a play. His best-known play is *Del rey abajo ninguno* (none beneath the king), also called *El labrador más honrado* and *García del Castañar*. He wrote more than 60 pieces and was imitated by many playwrights in Spain and in France.

Rokitansky, Karl (karl' rōkĭtän'skē), 1804–78, Austrian pathologist, b. Bohemia. From 1834 to 1873 he taught at the Univ. of Vienna. Many valuable contributions to pathology resulted from his more than 30,000 post-mortem examinations. Besides treatises on diseases of the arteries and defects in the septum of the heart, he wrote *A Manual of Pathological Anatomy* (3 vols., 1842–46, Eng. tr., 4 vols., 1849–54).

Roland (rō'lŭnd), the great French hero of medieval legend and of the Charlemagne cycle of chansons, immortalized in the 11th-century poem, *Chanson de Roland* (shänsōd' rōlā'). The legend has transformed history to a certain extent. Roland was really Charlemagne's prefect of the Breton march, he was one of those killed when Basques cut off in a pass in the Pyrenees the rear guard of the army returning from the Spanish invasion of 778. The legend makes Roland one of Charlemagne's 12 peers and his nephew, changes the Basques into Saracens, and locates the pass at RONCESVALLES. The poem relates: the treason of Ganelon, count of Mayence, a vassal of Charlemagne, the departure of the king from Spain, leaving Roland in command of the rear guard, with his friend Oliver (Olivier) and with Bishop Turpin; the Saracens' attack in the pass of Roncesvalles, instigated by Ganelon; Roland's refusal to blow his horn Olifant to summon aid until the death of Oliver; his attempt to break his sword, Durandal, his heroic death, the tardy return of Charlemagne in response to Roland's horn, and the capture and death of Ganelon. The poem is cast into a heroic mold; the traits are broad and the feats are mighty. The contrast of character between the friends Roland and Oliver is famous—Oliver was prudent, Roland was rash. A striking evidence of the popularity of the poem is Wace's statement that TAILLEFER sang some of it at Hastings. The Roland epopee was long a favorite with French, Spanish, and Italian poets, and Roland was eventually transformed beyond recognition into the *Orlando* of the Italian Renaissance epics of BOIARDO and ARIOSTO. The *Song of Roland* has been translated many times, e.g., by Arthur S. Way (1913) and by Leonard Bacon (1914).

Roland de la Platière, Jean Marie (zhäN' märē' rôlä' du la platyĕr'), 1734–93, French revolutionist. An inspector general of commerce at Rouen and Amiens, he went to Paris when the Revolution began, and published the *Financier patriote*. Roland rose to power with the GIRONDISTS and became minister of the interior in 1792. Accused of royalism in 1793, he resigned and fled Paris. When he heard that his wife, Manon Joanne Roland de la Platière, had been executed, he committed suicide.

Roland de la Platière, Manon Jeanne Phlpon (Mme Roland) (mänô' zhän' flēpô'), 1754–93, French revolutionist. Imbued with classical ideals and with the philosophy of Rousseau, she made her house the intellectual center of the GIRONDISTS. Her husband, Jean Marie Roland de la Platière, was dominated by her, and her influence on Girondist policy was very great. When her party fell, Mme Roland was arrested, as she walked to the guillotine (Nov. 10), she cried out "O Liberty, what crimes are committed in thy name!" See her letters (ed. by Claude Perroud, 1900–1902), biographies by Ida Tarbell (1896) and M. C. Jacquemaire (1930).

Roland Holst, Henriëtte (van der Schalk) (hĕnrēē'tu vän dĕr skhälk' rō'länt hôlst'), 1869–, Dutch poet, a Communist and friend of Lenin. Her poetry won high repute for lyric enthusiasm and delicate expression.

Rolfe, John (rôlf), 1585–1622, English colonist in Virginia. He reached the colony in May, 1610, and introduced (1612) the regular cultivation of tobacco, which became Virginia's staple. A widower, he fell in love with and married (1614) POCAHONTAS, daughter of the Indian chief Powhatan. They went to England in 1616, and there she died (1617). He returned to Virginia, remarried, and held several offices. He was probably killed in the Indian massacre of 1622.

Rolfe, town (pop. 1,122), NW Iowa, NW of Fort Dodge.

Rolla (rō'lu) **1** City (pop. 5,141), co. seat of Phelps co., S central Mo., SE of Jefferson City, founded c.1856. It is in a farm, timber, clay, and pyrite area of the Ozarks. The city is the seat of the Univ. of Missouri school of mines and metallurgy and of the state trachoma hospital. An annual Ozark festival is held. Many caves and springs are found in the region. **2** City (pop. 1,008), co. seat of Rolette co., N. N. Dak., near the Canadian boundary NNW of Devils Lake, in a farm area, inc. 1907. The Turtle Mountain Indian Reservation is near, and the city is headquarters for the International Peace Garden.

Rolland, Romain (rōmĕ' rôlä'), 1866–1944, French novelist, playwright, biographer, and musicologist. He wrote biographies of Beethoven (1903, Eng. tr., 1909), Michelangelo (1905, Eng. tr., 1912), Tolstoy (1911, Eng. tr., 1911), and Mahatma Gandhi (1924, Eng. tr., 1924). His 10-volume novel *Jean-Christophe* (1904–12, Eng. tr., 1910–13), the biography of a German-born musician, is filled with appraisals of contemporary French and German civilization and established his reputation in the literary world. He was awarded the 1915 Nobel Prize in Literature. Rolland's genuine pacifistic philosophy and the courage of his own convictions, reflected in *Au-dessus de la mêlée* (1915, Eng. tr., *Above the Battle*, 1916), led to self-imposed exile in Switzerland, where he remained until 1938. Among his other works are the play *Les Loups* (1898, Eng. tr., *The Wolves*, 1937), inspired by the Dreyfus Affair, and the seven-volume novel *L'Âme enchantée* (1922–33, Eng. tr., *The Soul Enchanted*, 1925–34). In 1945 his biography of Péguy appeared. See biography by Stefan Zweig (Eng. tr., 1921).

Rolle of Hampole, Richard (rōl), d. c.1349, English religious writer, a Yorkshire hermit. He wrote mainly in Latin, but his English works are important for the history of the language. Some of Rolle's Latin works were translated after his death into English, thus becoming disseminated and influential as popular manuals of spiritual life. The

most important of these were *De emendatio vitae* (Eng. tr., *The Mending of Life*) and *Incendium amoris* (tr into Middle English, *The Fyre of Love*, 1896; same, with modern spelling, 1913, new tr., 1935; the 1896 and 1913 editions include *The Mending of Life*) *The Form of Perfect Living* was composed in English. Besides some English lyrics there is a translation of the Psalms (ed by H. R Bramley, 1884) which circulated throughout England Rolle is often regarded as typical of English mystics (see MYSTICISM), so his writings are characterized by tender, burning love of God and of Jesus and Mary, with constant allusions to sweetness and music, there is much lyrical analogy with human affection *The Pricke of Conscience*, a long, devout poem in Northern Middle English, was formerly ascribed to Richard See Robert H Benson, *A Book of the Love of Jesus* (several editions), Frances M M Comper, *The Life of Ruhard Rolle with His English Lyrics* (1928)

Roman architecture First inspired by the Greek buildings of S Italy and Sicily, it later learned post-and-lintel construction in its perfect columnar form from Greece itself and the Hellenistic East From the Etruscans came the true arch and the vault and dome To these elements, adapted to their special needs, the Romans added the use of concrete which, after the 2d cent B C, led them to revolutionary structural forms Of early Rome and of the republic (c 500 B C –27 B C) the aqueducts outside the city of Rome are the most impressive remains The principal examples of Roman architecture belong chiefly to the years between 100 B C and A D 300 The reign of Augustus (30 B C –A D 14) initiated the centuries of far-flung building enterprises The special feature of Roman design was the combined use of arches and columns Though at first tentatively employed in the spaces between the classical columns, the arch eventually came to be the chief structural element, the flanking columns, usually engaged and superimposed, served merely as buttresses or for decoration In few cases, other than temple porticoes, did the pure Greek orders, uncomplicated by arches, prove adequate for the complex Roman buildings As the empire expanded, architectural forms as close as possible to the types of those of Rome itself were brought to distant lands The cut-stone construction of the Greeks was largely replaced after the 2d cent B C by CONCRETE Though unfired brick was employed in all periods, under the empire baked bricks became popular as a facing for concrete walls, triangular in shape, they resembled modern tiles in thickness and were set with points inward From early times stucco was used as a finish for important buildings For luxurious finish of exterior and interior walls sheathings of alabaster, porphyry, or marble were employed Vaults of sun-dried or baked brick were developed to their full capacities The types employed were the barrel vault, the cross or groined vault, and the dome and semi-dome Vault buttresses became an integral part of the interior instead of forming exterior projections The vault surfaces were finished with tile or stucco, or the concrete was cast with recessed coffers, which lightened the weight The immense vaulted halls, unencumbered by supporting columns or piers, created pure spatial effects, as in the domed interior of the Pantheon at Rome Under Trajan (A D 98–A D 117) Roman architecture reached its climax, after that it declined, even if constructive boldness remained In all periods, however, splendor and utility were the Roman ideals; as opposed to the subtle refinements of the Greeks Provincial towns were laid out according to logical plans, particularly in North Africa In Syria colonnaded streets were built Each town's focus was the forum, or open public square, surrounded by colonnades and the principal buildings in axial arrangement In Rome itself civic planning resulted in the series of great fora created by successive emperors to extend the crowded area of the Roman Forum (see FORUM), the most ancient in the city That of Trajan was the latest and most splendid Temples, conforming to Etruscan type, usually were elevated upon high bases with steps ascending to a deep portico. Designed to face the fora, they were adorned merely with pilasters or engaged columns along their sides instead of with side porticoes Their pseudoperipteral type is seen in the Maison Carrée (1st or 2d cent. A.D.) at Nîmes, France Examples of circular temples were the temple of Vesta at Tivoli (1st cent A D) and the 3d-century temples of Jupiter at Split and of the Sun at Baalbek Most important among the buildings developed by the Romans themselves were basilicas, baths, amphitheaters, and triumphal arches. Theaters were derived from those of the Greeks. The auditorium was semicircular, with the orchestra at ground level arranged for the movable seats of distinguished spectators A Roman innovation was the uniting of stage and auditorium as a single structure and the rich architectural embellishment of the stage itself For the amphitheaters there are no known Greek precedents The monumental or TRIUMPHAL ARCH was also a purely Roman invention In the typical dwelling the rooms were grouped about the atrium, which, by means of an opening in its roof also served as a court Beginning in the 2d cent B C the addition of a Greek peristyle provided garden space and a focus for the grouping of the more private apartments In the large cities were houses suggesting modern tenements, probably four or five stories high, with staircases and many large windows and with shops or warehouses on the ground floors At Ostia there are remains of these, mostly from the 3d cent. A D A third type of Roman dwelling was the luxurious country establishment or VILLA

Roman art. Early Etruscan art was strongly influenced by that of archaic Greece, but lacked the underlying sense for rational order and tectonic composition of the Greek models Large polychrome terra-cotta images, sandstone tomb effigies and reliefs, and tomb paintings reveal a native feeling for voluminous forms, bold decorative color effects, and an exuberant, animalistic spirit From c 400 B C the vitality of the earlier art gave way to stolid imitation of Greek classical models Between 300 B C and 100 B C Romano-Etruscan art was influenced by an archaic revival which involved imitation of the conventions of early Etruscan as well as Greek forms After the conquest of Greece (c 146 B C) Greek artists settled in Rome, for about two centuries works executed in the Greek classical manner or in direct imitation of Greek originals found a ready market there While the many works by such copyists are principally of interest for their reflection of earlier Greek art, they throw light on the eclecticism of Roman taste, and their influence was of paramount importance throughout the development of Roman art By the time of the empire, the Roman conception of art was definitely allied with the political ideal of service to the state In the Augustan period (30 B C A D 14) there was an attempt to combine realism with the Greek feeling for idealization and abstract harmony of forms This modification is seen in the famous *Augustus from Prima Porta* (Vatican), which represents the first of a long series of the distinctly Roman type of portrait Under the emperors from Tiberius through the Flavians (A D 14–A D 96) magnificent portrait busts were produced which reveal in general a growing concern with effects of pictorial refinement and psychological penetration The magnificent reliefs from the Arch of Titus, Rome, commemorating the conquest of Jerusalem in A D 70, mark a climax in the development of illusionism in historical relief sculpture From the time of Trajan (A D 98–A D 117) the influence of the art of the Eastern provinces began to gain in importance The spiral band of low reliefs on Trajan's Column (Rome), which commemorates the wars against the Daci, employs a system of continuous narration suggestive of the influence of the Egyptian or Near Eastern illustrative tradition In the period of Hadrian (117–38) there was a reversion to the idealization of the Augustan style and at the same time an almost Oriental sense of voluptuousness Typical of the period are many idealized portraits of the youth Antinoüs, a favorite of the emperor Major works from the later period of the Antonines (138–92) are the column and the equestrian statue of Marcus Aurelius (Rome) From the time of Caracalla to the death of Constantine (211–337) the rapid assimilation of Oriental influence encouraged a tendency toward abstraction Already in the reliefs from such monuments as the Arch of Septimius Severus, Rome (203), there were signs of the decline in technical tradition, and the reliefs of the friezes from the Arch of Constantine, Rome (c 315), may be regarded as the last example of monumental Roman sculpture Roman painting, like sculpture, was strongly influenced by the art of Greece Unfortunately much of the painting has perished What remains suggests that the art was principally conceived as one of interior decoration The largest single group of murals are from Pompeii Until c 80 B C there was an architectonic style with flat areas of color broken by full-scale painted pilasters and imitation marble slabs and diaper patterns. Increased illusionism led to a tendency, most often displayed after A D 50, to dissolve the entire wall surface by representing sequences of receding vistas Many famous paintings, such as the *Aldobrandini Wedding* and *Odyssey Landscapes* (Vatican), are believed to be Roman copies of Greek originals The continued striving after three-

dimensional illusionist effects revealed in the various phases of painting is duplicated in the development of mosaics which were extensively produced throughout the empire In the pictorial arts, as in sculpture, there was from the beginning of the 3d cent A D a strong wave of Eastern influence and a gradual tendency to abandon illusionism for more abstract and symbolic compositions In general the Roman minor arts tend to emphasize sumptuousness of materials and ornamentation Cameos were extensively produced Among the most famous is the large *Cameo of the Deified Augustus* (Paris) Magnificent artistry is revealed in metalwork (e g , plates with emblems and cups with *Augustus Receiving Conquered Peoples* and the *Triumph of Tiberius*, Louvre) Arretine pottery was mass produced and extensively exported Early examples employed a black finish and aimed at imitation of metallic effects From the time of Augustus, the ware is characterized by a deep red glaze with decorative figures in low reliefs applied to the body of the vase There are large collections of Arretine ware in the Museum of Fine Arts, Boston, and the Metropolitan Museum During the 1st cent A D new processes were invented for making glass, and techniques developed for imitation of precious stones which made possible the production of fine murrhine vases (e g , the famous Portland vase, British Museum) See Eugénie Strong, *Art in Ancient Rome* (2 vols ,1928)

Roman Catholic Church, Christian church headed by the pope, the bishop of Rome, regarded as spiritual leader of Christians (see PAPACY and PETER, SAINT) Its commonest title in official use is perhaps Holy Catholic and Apostolic Church "Roman Catholic" is a 19th-century British novelty, which was often resented (see CATHOLIC CHURCH) The term "Roman Church," when used officially, means only the archdiocese of Rome To belong to the Church one must accept as factually true the gospel of Christ as handed down, uncontaminated, by the popes Included in this divine tradition is the BIBLE, its text determined, guarded, and disseminated by the Church Many features of the traditional teaching (dogma) have been analyzed and restated, by the councils and by great theologians (see COUNCIL, ECUMENICAL, CREED, THOMAS AQUINAS, SAINT, TRENT, COUNCIL OF, VATICAN COUNCIL) Members vary in knowledge, but probably all grasp the following points God's objective existence, His interest in individual men, who can, if they want to, enter into relations with Him (through prayer), the immortality of the soul of each human being, each one being accountable at death for his actions in life, with the award of HEAVEN or HELL, the historicity of the Gospels, and the divine commission of the Church and of the pope Since the members, living and dead, share in each other's merits, the Virgin MARY and other saints and the dead in PURGATORY are never forgotten (see CHURCH and SAINT) The Church has from God a system of conveying His GRACE direct to man (see SACRAMENT) The ordinary Catholic frequents the sacraments of PENANCE (minimum, once a year) and the EUCHARIST (minimum, once every Easter time, see also SIN) The Eucharist is the center of public worship, often surrounded with pomp and color (see MASS) Private prayer is essential, contemplation is the ideal (see MYSTICISM), and everyone is expected to devote some time to prayer that is more than begging favors Different methods of prayer are recommended (see ROSARY, IGNATIUS OF LOYOLA, SAINT, THOMAS A KEMPIS) Self-renunciation is a necessary part of prayer (see FASTING and LENT) Catholics are urged to perform every act as an offering to God, either a sacrifice or a free gift, thus the main motive for ethical behavior is the love of God The ethical system is based on the Ten Commandments and the New Testament Everything lies in the intent, the things that God has created are not bad in themselves, but bad use may be made of them Thus, drinking liquor is sinful only through some circumstance, e g , if done at the expense of obligations, similarly sexual relations are laudable in marriage, but otherwise wrong The doctrine concerning persons not Catholic is that since God affords each human being light sufficient to his salvation, all will be saved who persevere in what they believe to be good, regardless of ignorance Only those will be damned who persist in what they know to be wrong, among these are persons who resist the Church when they know her to be the one, true Church There is in Catholic life no division between what is religion and what is not, thus, stealing and refusing to attend Mass on Sunday are both wrong, just so, although there are different ways of learning (e g , through science, revelation, reasoning), the truth is all equally true These ideas, like the solidarity Roman Catholics feel with the martyrs, are examples of a characteristic sense of oneness and wholeness, referred to mystically as the "seamless robe" (John 19 23 24) Some traits of Catholic life are more conspicuous than essential (e g , many ceremonies and blessings, the use of Latin, incense, and images, the calendar, and the occurrence of miracles). Some practices were taken from pagan worship, this "baptizing" of uses of non-Christian cultures is cited as an example of the universalism of the Church There are in Christendom a number of rites, i.e., ancient, independent traditions of discipline and worship, differentiated through isolation (see LITURGY). Doctrine and rite are not interrelated Besides the Roman rite, to which the vast majority belongs, there are among Catholics five Eastern rites, used by a number of communities (Eastern Catholics or Uniates, see PATRIARCH) To the Byzantine, the rite of the Orthodox, belong many groups, including MELCHITES, Ruthenians, Rumanians, and the Italo-Albanians of S Italy Others of the Eastern Catholics are the MARONITES, the Syrian Catholics, and the Malankarese of Malabar, all of the West Syrian or Antiochene rite (see JACOBITE CHURCH), the Catholic Copts and Ethiopians, of the Alexandrian rite (see COPT), the Chaldean Catholics and Syro-Malabarese, of the East Syrian or Chaldean rite (see NESTORIAN CHURCH), and the Armenian Catholics, of the rite of the ARMENIAN CHURCH These rites and communities now have their own organizations under the pope and are protected from attempts to "Latinize" them Best known, perhaps, of the non-Roman Western rites are the Ambrosian, the Dominican, and the Mozarabic Apart from these rites and foreign missions, the organization of the Church is by diocese, the territory of a bishop Important sees have archbishops, who often supervise neighboring, suffragan bishops With certain restrictions, the pope names the bishops Dioceses are made up of parishes, each of which has a church and a priest (the pastor) The pope controls bishops mainly by general legislation His government, which is run by the cardinals living at Rome, is concerned with matters of wide significance, such as MISSIONS and relations with states (see also CARDINAL, PAPAL ELECTION, VATICAN) Cutting across territorial lines are the religious orders of men and women, their field is monastic life and most non-parish activities and schools, they frequently run missions, hospitals, and colleges (see MONASTICISM) Their members generally receive subsistence only The parish clergy support themselves, often with salaries fixed by the bishop Most of the clergy are priests (see ORDERS, HOLY), they are trained (usually from four to six years) in seminaries maintained by the bishops and the orders Members of the clergy do not marry, unless they are parish priests of Eastern rites There is no Church-wide census, and available statistics are based on inconsistent criteria Some parts of the world are traditionally Catholic There most local churches are Catholic and other signs of Catholicism abound (e g , wayside crosses and observance of saints' days), but there is no uniform Catholic percentage in the population Some places have now no Catholics, in others the vast majority may be practicing The traditionally Catholic areas in Europe are Lithuania, Poland, Slovakia, most of Hungary, Croatia, and the continent west of these lands and S of the Baltic, except Denmark, central and N Germany, the Netherlands, and parts of Switzerland and Bohemia In such a category too are Ireland, French Canada, Latin America, and much of the Philippines Catholics are an important minority in the Netherlands, the United States, and many overseas dominions and territories of the British and the French It is true, probably, that there are some hundreds of millions of Roman Catholics and that they include more than half the persons who claim to be members of a Christian Church

The Past of the Church For the first centuries of the Church's history, see CHRISTIANITY From the 9th cent to 1520 the Church was simply Western Europe taken in its religious aspect, and no clear line divided spiritual from temporal life In the West (unlike the East) the religious organization was free for centuries from grave interference from civil rulers Charlemagne was an exception, but his influence was benign In the chaotic 9th and 10th cent every part of the church organization, including the papacy (now an Italian principality), became the prey of the powerful The restoration of order began in monasteries, from Cluny a movement spread to reform Christian life (see CLUNIAC ORDER) This pattern of decline of religion followed by reform is characteristic of the history of the Roman Catholic Church; the reform goals vary but always include the revival of spiritual life in society and the monasteries and the elimination of politics from the bishops' sphere and venality from the papal court The next reform (11th cent) was conducted by popes, notably St Gregory VII and Urban II Part of this movement was to exclude civil rulers from making church appointments—the first, bold chapter in a 900-year battle between the Church and "Catholic princes" (see INVESTITURE and HENRY IV, emperor) The 12th cent , that of the Crusades and the rise of the Hohenstaufen, was a time of great intellectual beginnings St. Bernard of Clairvaux and the Cistercians revived practical mystical prayer Gratian founded the CANON LAW, and civil law began its development. This double study was to provide weapons to both sides in the duel between the extreme papal claims of Innocent III, Innocent IV, and Boniface VIII and the anti-papal theories of Frederick II and Louis of Bavaria In the 12th cent Abelard pioneered in rationalist theology, from his tendency and from Aristotle, newly rediscovered, developed the philosophies and theologies of St Bonaventure and St. Thomas Aquinas (see SCHOLASTICISM) This was the work of the new 13th-century universities, for to them and the friars who animated them, Dominicans and Franciscans, passed the intellectual leadership held by the monasteries St Dominic's order was called to life to preach against the Albigenses (a campaign which produced the Inquisition also) The vast popular movement of St Francis was a spontaneous reform contemporary with the papal reform of the Fourth Lateran Council This 13th cent saw also the flowering of Gothic architecture Meanwhile the contest of Church and state went on It ruined the Hohenstaufen, but in the quarrel with Philip IV of France it brought the papacy near ruin too Now came the Avignon residence—the "Babylonian captivity" of the papacy (1305-77), a time of good church administration, but of excessively pro-French politics At mid-century the Black Death did incalculable damage to all society Except for lonely voices, such as that of St Catherine of Siena, the Church seemed to lose energy, and the longest period without reform set in A long schism and a series of ambitious councils (see SCHISM, GREAT) involved most churchmen in a welter of politics and worldliness There were popular religious movements, characterized by revivalism and a tendency to minimize the sacraments (along with church authority), they encouraged private piety, and one group produced the wonderful *Imitation* ascribed to Thomas à Kempis The popular tendencies were extreme in John Wyclif, who developed an antisacramental, predestinarian theology emphasizing Bible study – Protestant 150 years before Protestantism The 15th-century councils did nothing for reform, and the popes, shorn of power, were reduced to being Renaissance princes Such men could not cope with the revolt of Luther and Calvin (see REFORMATION) The Protestants aimed to restore primitive Christianity (divined from the Bible), and they succeeded in destroying the Church in all N Europe, in Great Britain and in parts of Central Europe and Switzerland Politics and religion were completely intertwined (as in England, Scotland, and France), hence the admixture of religious issues in the Thirty Years War Within the Church there triumphed the most extensive of all the Church's reform movements (see REFORM, CATHOLIC, and JESUS, SOCIETY OF) From its energy sprang a general revival of religion and much missionary activity in the new empires of Spain and Portugal and in the Far East In France, Catholicism found new life, beginning with St Francis of Sales and St Vincent de Paul There, too, began the cultus of the Sacred Heart (i e , God's love for men), which would affect Catholic prayer everywhere A contrary influence was Jansenism, a gloomy antisacramental middle-class movement In all the Catholic countries the 17th cent saw an increase of state control over the Church (see GALLICANISM), and in the 18th the Bourbons began a course openly aimed at eliminating the papacy The suppression of the Jesuits was part of the campaign, which reached a bizarre climax in the legislation of Joseph II The revolutionary movement eventually destroyed the Catholic princes, and the Church now would have to live with secular states, some anti-Catholic, some tolerant The facts of the change were not clear at once, and for much of the 19th cent the popes (and other Catholics) would look back to an imaginary 18th-century golden age before "liberalistic" atheism and materialism The last of these popes was Pius IX, who, unwitting, saw the Church freed of a millstone when he lost the Papal States In enouncing the dogma of papal infallibility Pius vitally cemented church unity In Leo XIII (elected 1878) the Church found new leadership, he and his successors sought vigorously to urge Catholics to take part in modern life as Catholics, abandoning reactionary dreams and reorganizing the inequitable capitalistic order In some countries Catholic political parties were formed Meanwhile oppressive conditions combined with Marxism in much of Latin Europe to detach workingmen en masse from the Church Bismark and "liberal" governments (Italy, France, and Portugal) passed hostile measures, especially against religious orders, and in the 20th cent came bloody persecution (in the USSR, Mexico, Spain, the Baltic states, Yugoslavia, Hungary, Czechoslovakia, and China) Mussolini, Hitler, and militaristic Japan also wrecked as much of the Church as they could In the two centuries after 1730 there was a popular revival of religion, its first figure was St Alphonsus Liguori Religious orders expanded, and foreign missions were revivified There was a series of apparitions of the Virgin Mary In England, CATHOLIC EMANCIPATION and the OXFORD MOVEMENT ushered in a brilliant Roman Catholic revival In the 20th cent Pius X's popular movement for receiving communion frequently has encouraged holiness in laymen living in an unchristian world See F J Sheed, *A Map of Life* (1933); Michael Williams and Julia Kernan, *The*

Catholic Church in Action (1934); W. M Agar, *Catholicism and the Progress of Science* (1940), Joseph McSorley, *Outline History of the Church by Centuries* (1943); Donald Attwater, *The Christian Churches of the East* (1947, 1948), Philip Hughes, *A History of the Church* (incomplete, Vols I and II, rev ed , 1948)*and *A Popular History of the Catholic Church* (1949); Donald Attwater, ed , *A Catholic Dictionary* (2d ed , 1949), *The Catholic Encyclopedia The Church in the United States* The oldest Roman Catholic foundations in U S. territory are of Spanish (mainly Franciscan) origin, in Florida, New Mexico, and California The French left their main religious legacy in the United States at New Orleans English-speaking Catholicism began with Maryland Only there and in Pennsylvania might Roman Catholics worship Independence brought toleration In 1789 John Carroll was made bishop for the United States with Baltimore as his see The Church grew with immigration By 1840 there were 16 dioceses Then in the late 1840s came floods of Irish They were followed by many German Catholics and later by Italians, Poles, and others The Church made a feverish effort (not always successful) to keep up with the arrivals, building thousands of churches and schools (see PAROCHIAL SCHOOL) The fact that the Irish were the first mass of Catholics to come determined that the United States should have a Catholicism officially English-speaking (except, of course in liturgy), but not without resentment from non-Irish Catholics, aggravated by Irish-American hegemony in the clergy The Irish also began the heavy urban concentration of American Catholics There have been several outbreaks of the perennial prejudice against Catholicism—in the 1830s, led by Lyman Beecher and Samuel F B Morse, in the 1850s, the Know-Nothing movement, in the 1890s, the A P A (American Protective Association), in the 1920s, the Ku Klux Klan agitation culminating in the opposition to Alfred L Smith as presidential candidate in 1928 Many leaders have worked to orient American Catholics toward America (away from foreign allegiances) These include John Carroll, Mother Elizabeth Seton, John England, Orestes Brownson, Isaac Hecker, John Hughes, John Ireland, John J Keane, John Lancaster Spalding (bishop of Peoria, d 1910), and the famous Cardinal Gibbons The 20th cent saw new tendencies, including the liturgical movement, the Catholic Youth Organization, Catholic social work (led by the New York Catholic Charities of Patrick Joseph Cardinal Hayes), a movement to enrich and encourage rural life, Catholic trade unions, the Catholic Evidence Guild (for street preaching), and the Catholic Worker (apostolate of the exploited, led by Peter Maurin and Dorothy Day) A new interest in the contemplative life showed in a rapid growth of the Trappists See Ray A Billington, *The Protestant Crusade, 1800–1860* (1938), A G Cronnan, *Sanctity in America* (1939), Dorothy Day, *House of Hospitality* (1930), L G Ligutti and J C Rawe, *Rural Roads to Security* (1940), Theodore Maynard, *The Story of American Catholicism* (1941)

romance (rō'măns, rōmăns') [O Fr ,=something written in the popular language, i e , a Romance language] The *roman* of the Middle Ages was a form of chivalric and romantic literature widely diffused throughout Europe from the 11th cent With the Provençal TROUBADOUR the *roman* was a form of narrative, originally sung but later recited before courts The TROUVÈRE lengthened these into the CHANSONS DE GESTE and the *romans d'aventures*, or romances of love and adventure It is from the latter class that the modern romance descends (see NOVEL) See William Courthope, *The Connexion between Ancient and Modern Romance* (1911)

Romance languages, group of Italic languages of the Indo-European family They are also called Romanic, See LANGUAGE (table)

Roman de la Rose, Le (lu rōmă' du la rōz'), French poem of 22,000 lines in two parts The first (4,058 lines) was written (c 1237) by GUILLAUME DE LORRIS and was left unfinished It is an elaborate allegory on the psychology of love, often subtle and charming The second part, written (1275–80) by JEAN DE MEUN, is of a wholly different nature, for the poet is not at home in allegory, and his digressions into erudition tire the reader Jean's satirical, often brutal, tone seems to typify the medieval bourgeois spirit as against the courtly ideals of Guillaume The *Roman* has been translated into English by Frederick S Ellis as *The Romance of the Rose*. The Middle English *Romaunt of the Rose* (1st ed , 1532, reedited 1911) is a fragmentary translation of the first part and of some of the second part of the *Roman* Chaucer translated the first 1,700 lines of the *Romaunt*

Roman Empire: see ROME, BYZANTINE EMPIRE; HOLY ROMAN EMPIRE.

Romanes, George John (rōmā'nĭs), 1848–94, English biologist, b Kingston, Ont As a youth he went to England and there became a friend of Darwin He lectured (1886–90) at the Univ of Edinburgh, was professor (1888–91) at the Royal Institution, London, and in 1891 established at Oxford the annual Romanes Lectures. He made important studies in animal psychology His works include *Mental Evolution in Animals* (1883), *Mental Evolution in Man* (1888), *Darwin and after Darwin* (3 vols , 1892–97), and *Mind and Motion and Monism* (1895) See biography by his wife (1896)

Romanesque architecture (rōmunĕsk'), style which prevailed throughout Europe from the 11th to 13th cent The term indicates the chief influence behind its evolution—the buildings of the Roman Empire For the basilica type of building which developed in the Mediterranean area after 330, see BYZANTINE ARCHITECTURE In the early Middle Ages monasteries of the increasingly powerful orders fostered a revival of the arts Churches, vast abbeys, and other buildings arose From shortly before the 11th cent until the middle of the 15th, the great evolution progressed from the Romanesque with its round arch to the pointed arch of the Gothic, both were parts of one great style Romanesque building drew inspiration not only from Western classical traditions the East contributed the symbolic and rhythmic treatment of ornament, and the Sassanian architecture of Persia probably furnished ideas, both as to structure and ornament Notable was the return to masonry vaulting which after the decline of Roman building had been ignored However, Romanesque vaults were not of brick and concrete but of blocks of cut stone laid in narrow courses, and the thrust thus exerted introduced the element of equilibrium as against the Roman one of inert stability The wood roofs of early Christian basilicas were abandoned, except in Italy, and vaulted ceilings made the structures fireproof The floor plan of the Italian basilical churches was retained, with its nave and side aisles, apse, transept, and clerestory But to resist the thrust of the masonry vault over the nave, heavy piers replaced the marble columns formerly supporting the clerestory wall The naves became narrower, while the clerestory windows became higher Thus the endeavor to create a vaulted style forced a steady progression in technique, while early efforts in all the countries were characterized by massiveness and simplicity While Italian builders generally held to traditional forms, the new system found its first full organic expression in the Lombard Romanesque, exemplified in the Church of Sant' Ambrogio at Milan Here the nave vaulting is one of the earliest to adopt the use of diagonal ribs at the lines of intersection of the groined vaults Transverse ribs had already been employed, but these furnished little structural advantage, whereas the addition of groin ribs, together with upright supports rising from the pavement to receive them, furnished an adequate framework for carrying the weight of the vault surfaces The essential interdependence of vaults, abutments, and supports was recognized as the chief structural problem The attempts at various solutions culminated in France in the abbey church of St Denis, where the articulated stone skeleton was achieved that permitted the subsequent development of Gothic architecture In the Rhine district of Germany, in Normandy, France, and in England (see NORMAN ARCHITECTURE), the Romanesque found its home as a great northern style Here the demands of the vaulting were paramount in the expression of both exteriors and interiors, whereas in Italy effort was chiefly expended upon beautiful details influenced by classic remains Early Romanesque churches adhered to the general plan of the Christian BASILICA However, after c 1050 the advance toward the plan of fully developed Gothic cathedrals can be seen The chancel end was elongated and often elevated to provide crypts beneath One transept and sometimes two were added, producing a plan shaped like a cross By making the transept width the same as that of the nave, a square was produced at the crossing, emphasized by heavier piers at the four corners, often supporting an exterior tower or cupola Side apses were removed, permitting the side aisle to continue around the outside of the choir to form an ambulatory Both mosaic and fresco were used for interior decorations, chiefly in Italy, Sicily, and Germany With the diminishing of wall areas emphasis was increased upon structural organism to furnish the decoration The use of stained glass to give warmth and color came later, with Gothic design In Romanesque sculptural adornment a consistent general character may be seen, in spite of local variations In Byzantine-influenced ornament floral and animal forms were prominent Sculptural details introduced symbolism and biblical incidents In France the figure sculptures of the style rank among the most beautiful achievements of the Middle Ages The following are noted Romanesque works France—the abbey church (981) at Cluny, Abbaye-aux-Hommes (1066) and Abbaye-aux-Dames (1083) at Caen, and St Sernin (1096) at Toulouse, Germany—the cathedral (1110–1200) at Worms and the Church of the Holy Apostles (1220–1250) at Cologne, Italy—the cathedral (1063–92), baptistery (1153), and campanile (1172) at Pisa and the cathedral (1174) at Monreale, Sicily See Sir T. G. Jackson, *Byzantine and Romanesque Architecture* (1913), R W Hammett, *Romanesque Architecture of Western Europe* (1927).

Romanesque art, developed roughly from 500 to 1200, the period of transition from Roman to Gothic The Roman and Byzantine elements remained more or less dominant though blended with Eastern influences, especially in Persian and Mesopotamian textiles, motifs from these were applied to manuscript illumination and to stone carving There were also Celtic and Lombard elements which lent the barbaric vigor and grotesqueries that so vitalize Romanesque architecture This was the most important expression of the period and with it sculpture was developed decoratively and pictorially, such crowded and dramatic scenes as the *Last Judgment* being employed to enrich the portals of a church (as in the porch of the cathedral at Autun, France) or lintels with processions of apostles (as at the cathedral of Pistoia, Italy) The technique in general is crude but varies somewhat in the different countries, Italy, with her classic traditions, leading in skill Abstract and conventional forms prevail The primitive Norman and Anglo-Saxon carving was surpassed by the more decorative Celtic and Scandinavian expressions, the Norman combined elaborate interlacings with dragons or grotesque figures, as in the stone crosses, and the Anglo-Saxon united pagan and Christian symbolism, as revealed in Norse wood carving German ivory carving (c 820), e g , in St Gall's monastery, Switzerland, followed Byzantine types The monastery at Hildesheim was one of the most active art centers of Romanesque Germany, silverwork, mello, bronze casting, and other crafts were taught and practiced there, giving rise to the Saxon school In this the bronze sepulchral slab originated, and bronze doors for the cathedral of Augsburg and the gold altar front for the cathedral of Basel were designed and executed A Rhenish school also developed (12th cent), which produced superior goldwork and the fine bronze font at St. Bartholomew, Liége Romanesque metalwork also includes much filigree and examples of wrought iron, such as hinges and screens Painting fluctuated through this period without attaining any marked development Mural work in Italy was insignificant, but the frescoes of Sant' Angelo, Rome, show Greek traditions In France, by the 12th cent , there were some few mural achievements, such as at St Jean, Poitiers Ecclesiastic paintings executed wall, panel, and miniature (manuscript) work, mostly after early Christian precedent, yet markedly native in spirit Various churches preserve examples, among them St Michael's, at Hildesheim, and the Brunswick cathedral It was in the decoration of manuscripts that Romanesque painters were most successful, and 7th-century Ireland produced the most brilliant school, long imitated on the Continent Italian skill, especially in Venice and Sicily, in manipulating colored marble or glass tesserae in pictorial design perfected mosaic work, and in this too Byzantine influence was strong French Romanesque artisans produced little masterpieces in colored enamels, among which are reliquaries, chalices, and crosses Needlework is another of the skilled Romanesque crafts, the BAYEUX TAPESTRY and many richly embroidered altar frontals and vestments in numerous churches reveal artistry of no mean consideration in such work Textiles, however, were largely supplied by Persia

Roman law. The term generally denotes the legal system of Rome from the supposed founding of the city in 753 B C to the fall of the Eastern Empire in A D 1453 Most authorities, however, disregard the largely static period following the reign of Justinian I (527–65) Roman law in the earliest period known is typically expressed in the TWELVE TABLES with their marked formalism The usual early procedure was also stereotyped, it was the *legis actio*, a form of charge and denial which had to be followed exactly by the parties at the risk of losing the suit Exact knowledge of the words constituting the *legis actiones* was limited to a body of patrician priests, the College of Pontiffs The reduction of these forms to writing (c 250 B C) was a victory for the plebeians and a step in reducing the religious and formal element in the law Soon the primary source of law became the *lex* (plural *leges*), a statutory enactment which was proposed by a magistrate and accepted by a popular assembly Among the assemblies empowered to enact *leges* was that of the plebeians. In the late 3d cent B C , Roman law could no longer limit itself to the inhabitants of the republic but was forced to take account of the surrounding non-Roman peoples Thus, to the *jus civile*, which governed relations among the Romans and those admitted to Roman status, was added the *jus gentium*, the law applied in dealings with a foreigner The *jus gentium* incorporated much of the highly developed commercial law of the Greek city-states and of other maritime powers Such provisions, being better adapted to Rome's expanding economic needs than the unyielding provisions of the *jus civile*, in time tended to be applied universally The development of new principles was especially vigorous after c.100 B.C.,

with an important source the *jus honorarium*, i.e., the law of the praetors (chief magistrates) On assuming office the praetor announced the principles, sometimes novel, which would govern his decisions The praetors also contributed greatly to making practice more flexible In place of the *legis actiones*, they often used the formulary system A *formula*, like a *legis actio*, was a device for determining the issue between the parties (see PROCEDURE), the *formula*, however, instead of being an interchange of prescribed speeches, was suited exactly to the situation at hand Whichever method was used, when the nature of the dispute was agreed upon, the parties brought their case before the *judex*, a private functionary, who considered the evidence and gave judgment After the establishment of the empire the development of law largely passed from the praetors (the practice of issuing new edicts ended A D c 125) and from the popular assemblies into the hands of the emperors, sometimes operating through the senate Various types of imperial enactments called constitutions were issued in abundance Legal problems attained great complexity, and the aid of a specially trained class of scholars was enlisted for their solution Those jurists with a special license from the emperor could write *responsa* to guide the judges in deciding cases Most prominent among the jurists was PAPINIAN, his work, with that of GAIUS, MODESTINUS, PAULUS, and ULPIAN, attained the highest authority The employment of jurists was a step in making the whole of Roman procedure official, in this process the institution of *judex* was abolished and the trial placed entirely in the hands of a judge By the early 4th cent most branches of Roman law were fully developed The system was generally responsive to legal needs and allowed sufficient variety to meet local customs. A grave disadvantage of the system, however, was that the vast corpus of legal matter included much that was confused, contradictory, or redundant, and reduction to CODE form was required The THEODOSIAN CODE (438), the earliest attempt, was followed by the BREVIARY OF ALARIC (506) Finally the task was accomplished with the culminating work of Roman legal scholarship, the CORPUS JURIS CIVILIS (completed 535) After this date Roman law persisted as a part of the GERMANIC LAWS and was in effect in the Eastern Roman Empire Revival of classical studies in the Renaissance prepared the way for the partial resurrection of Roman law in a large part of the world as the modern CIVIL LAW The *jus gentium* is perhaps most widely represented in modern legal systems, for it is the basis of COMMERCIAL LAW even in those countries which follow COMMON LAW See Leopold Wenger, *Institutes of the Roman Law of Civil Procedure* (1925, Eng tr, 1940), W W Buckland, *A Text-Book of Roman Law from Augustus to Justinian* (1932), H F. Jolowicz, *Historical Introduction to the Study of Roman Law* (1932)

Roman literature see LATIN LITERATURE

Romano, Giulio see GIULIO ROMANO

Romanov (rō'mənôf, Rus rŭma'nuf), ruling dynasty of Russia from 1613 to 1917 The name Romanov was adopted in the 16th cent by a family of boyars (great nobles) which traced its origin to the 14th cent Tsar Ivan IV took as his first wife Anastasia Romanov Anastasia's brother, Nikita, was a regent for Tsar Feodor I His son, Philaret, whom Boris Godunov forced to take monastic vows, was patriarch of Moscow from 1619 till his death in 1633 MICHAEL, Philaret's son, was chosen in 1613 as tsar of Russia His election ended a turbulent period in Russian history Until 1722 the succession was regulated by the law of primogeniture The direct successors of Michael were ALEXIS (1645–76) and Feodor III (1676–82) Ivan V and PETER I (Peter the Great) reigned jointly under the regency of their sister Sophia until 1689, when Peter assumed sole rule. In 1721 Peter was proclaimed emperor of Russia, a title borne by all his successors His succession decree of 1722 denounced the law of primogeniture as stupid and declared that the choice of a successor lay solely with the ruling emperor In 1723 Peter made his consort joint empress as CATHERINE I, and after his death (1725) she continued to rule until she died in 1727 Peter's son by his first marriage, Tsarevich ALEXIS, was executed in 1718 By his second marriage, with Catherine, there were two daughters—Anna, who married Duke Charles Frederick of Holstein-Gottorp, and Elizabeth They were bypassed in the succession of 1727 in favor of PETER II (1727–30), son of Tsarevich Alexis On Peter II's death ANNA, duchess of Courland, a daughter of Ivan V, ascended the throne She died without heirs and was succeeded (1740) by Ivan VI, a great-grandson of Ivan V He was a German, son of the duke of Brunswick and of Anna Leopoldovna, a princess of Mecklenburg The rule of foreigners was unpopular, and Peter I's daughter ELIZABETH executed a coup d'etat in 1741 and was proclaimed empress Her nephew PETER III succeeded her in 1762 but was deposed (and probably assassinated) in 1762 in a coup that made his consort, a princess of Anhalt-Zerbst, empress as CATHERINE II (Catherine the Great) There is some argument as to the paternity of Catherine's son and successor, PAUL I (1796–1801), but it is now generally believed that he was the actual son of Peter III Paul, whose insanity led to his assassination, restored the succession by primogeniture in 1797 His successors were ALEXANDER I (1801–25), NICHOLAS I (1825–55), ALEXANDER II (1855–81, assassinated), ALEXANDER III (1881–94), and NICHOLAS II (1894–1917, executed 1918 by the Bolsheviks). The marriage of Nicholas II with Alix of Hesse (Empress Alexandra) brought hemophilia into the family Their son, Tsarevich Alexis (b 1904, executed 1918) was afflicted with the disease, his apparent cure by RASPUTIN gave that monk tremendous power at the court The members of the Romanov family who escaped execution fled abroad Grand Duke Cyril (1876–1938), first cousin of Nicholas II and grandson of Alexander II, claimed the succession and styled himself emperor He died at Paris, and his son Vladimir (b 1917) succeeded him as pretender See R N Bain, *The First Romanovs* (1905), F A Walsh, *The Fall of the Russian Empire* (1928)

Roman Question. see LATERAN TREATY.

Roman religion The indigenous Italic religion, which was the nucleus of Roman religion, was essentially animistic It depended on the belief that spirits, or *numina*, existed in natural objects and controlled human destiny The spirits were held in awe and were placated with offerings and prayers. By thus giving the gods their due, the Romans hoped to obligate them and so secure peace between gods and men The fundamental Roman religious attitude, therefore, might be said to be basically contractual Not only did the Roman placate the gods, he also attempted to control them by ritual invocation By "naming" the *numina* he tried to focus the vague power on a purpose vital to himself This in general was the kernel of ancient Roman religion In the beginning of the historical period, when Italy was dotted with small agricultural communities, the family and the household were the basic religious units For the perpetuity of the family, the Italian farmer made offerings to the genius of the family For the safety of the household, he worshiped Vesta, the guardian spirit of the hearth fire, the lares and penates, guardians of the house, and Janus, guardian of the door For an abundant harvest, he held three principal festivals, in spring, the Cerealia in honor of Ceres, in summer, the festival to Consus and Ops, and in winter, the Saturnalia in honor of Saturn To protect himself from the spirits of the dead, particularly his ancestors, he made offerings to Dis, ruler of the underworld, to the larvae, and to the manes In performing these religious functions the head of the family acted as the priest and was assisted by his sons and daughters When these families coalesced into tribes and then a state, the family cult and ritual formed the basis of the state cult and ritual Thus by analogy, since Rome was theoretically one family, the king was the head of the family, and as such chief priest He was assisted by his "sons," the former heads of families, and his "daughters" (the vestal virgins). The ritual necessary for the propitiation of the deities was elaborated and recorded by the colleges, and the *pontifex maximus*, their president, regulated the state ceremonies and the ceremonial calendar Among the priests were the augurs, who practiced divination by consulting various phenomena, notably the entrails of animals and the flight of birds The state had special devotion to gods of war and justice Thus in the earliest period of Roman state religion, Jupiter, Mars, and Quirinus were the supreme triad The Romans, always tolerant of new gods and religions, provided that no harm was done to public morals or to the state as such, adopted many foreign gods In the 7th cent they acquired Minerva from the Etruscans, in the 5th cent Diana from other Italic communities, and in the 3d to the 1st cent B C Oriental cults and Greek gods From the Greeks (mainly via S Italy) they acquired the Sibylline Books, the triad of Demeter, Dionysus, and Persephone, and Apollo, Hermes, and Aesculapius The poets and intellectuals of the period equated many of the Greek deities with Roman deities and adopted much of Greek mythology Thus class was also influenced by the Epicurean and Stoic philosophies The Orient contributed new religions, notably the worship of Isis, Osiris, Mithra, Magna Mater (Cybele), and Bacchus Thus at the end of the republic there were in general three religions in Rome—the old religion of the countryside, the Greco-Roman religion of the upper classes, and the Oriental cult-worship. The religious offices at Rome became political sinecures, the augurs used their powers for political ends, and public morality was at low ebb—such was Rome when Augustus became emperor He attempted to institute a religious revival based on the "old way," but to little avail. Roman religion finally degenerated into Oriental emperor-worship. Until the Roman farmers had flocked to the city, the individual Roman was subordinated to his ancestors, his family, and his tribe When he became free of these collectives, he searched for a dramatic, emotional, and optimistic religion which would satisfy his yearnings for salvation. This was the religious air of Rome in which Christianity took root. See J. B Carter, *Religious Life of Ancient Rome* (1911); Franz Cumont, *Oriental Religions in Roman Paganism* (Eng. tr., 1911); W. R Halliday, *Lectures on the History of Roman Religion* (1922); Franz Altheim, *A History of Roman Religion* (1938)

Roman roads, ancient system of communications linking Rome with its most distant provinces. They often ran in a straight line, regardless of obstacles, and were efficiently constructed, generally in four layers of materials; the uppermost was a pavement of flat, hard stones, of concrete, or of pebbles set in mortar. Roads were built or rebuilt by the Romans throughout the empire in Europe, Asia, and Africa Many modern roads are laid out on their routes, and some of the old bridges are still in use. Specimens of Roman roads exist near Rome and elsewhere. Their primary purpose was military, but they also were of great commercial importance and brought the distant provinces in touch with the capital In Italy roads led out of Rome in every direction The most ancient were the Ostiense Road to Ostia at the mouth of the Tiber, the Praenestine Way SE to Praeneste; and the Latin Road or Latin Way to a point near Capua where it later joined the APPIAN WAY, which was the first of the great highways The three roads from Rome to the north were connected with others crossing the Alps by the great Alpine passes—Alpis Cottia (Mont Genèvre), Alpis Graia (Little St Bernard), Alpis Poenina (Great St Bernard), the Brenner Pass, and others leading into Rhaetia and Noricum The FLAMINIAN WAY was the most important northern route Built (220 B C) by Caius Flaminius, it ran from Rome N and NE to the Adriatic at Fanum Fortunae (Fano), thence along the coast to Arimnum (Rimini), from that point it was extended (187 B C) as the Aemilian Way, which ran in a straight line NW through Bononia (Bologna) to the Po at Placentia (Piacenza), later it was extended farther to Mediolanum (Milan) Another northern route was the Aurelian Way from Rome along the Tyrrhenian coast to Pisae (Pisa) and Lunae, from there it was extended to Genua (Genoa) The third northern route was the Cassian Way from Rome through Etruria to Faesulae (Fiesole) and Luca (Lucca), near Luca it joined the Aurelian Way The chief roads leading from Rome to the regions across the Apennines and to the Adriatic were the Salarian Way to Ancona and the Valerian Way to Aternum (Pescara) There were other roads in Italy, most notable among them the Postumian Way, leading from Genua across the Po valley to Aquileia at the head of the Adriatic A wide system of roads was also built and rebuilt by the Romans in Britain, mainly for military purposes The best-known British roads were ERMINE STREET, FOSSE WAY, WATLING STREET, and the pre-Roman ICKNIELD STREET See Thomas Codrington, *Roman Roads in Britain* (4th ed reprint, 1929)

Romans, epistle of the New Testament, the sixth book in the usual order It was written by St PAUL from Corinth before his last trip to Jerusalem, A D c 56 It is substantially a treatise addressed to the church at Rome, apparently to introduce the apostle before his expected visit The subject treated is central in Paul's teaching, the justification by faith, i e, the spiritual process by which the Christian enters into relation with God The same matter is the subject of GALATIANS The letter opens with a solemn introduction (1 1–15) The doctrine (summarized in 1 16–17) explains first that justification is necessary (1 18–4 25), for Gentiles (1 18–32) as well as for Jews (2–3 8), and that it applies to everyone (3 9–4 25), an eloquent chapter (4) on Abraham's faith closes the section Next (5–9) the state of the justified man is treated, listing the fruits of the Redemption as confidence in the defeat of original sin by grace (5), freedom from sin because of death and resurrection "in Christ" (6), and freedom from the Mosaic law (7–8 11), then a magnificent passage deals with the future glory of the just (8 12–39) Finally there is a discussion of the apparent rejection of Israel by God (9–11), but this is shown to be no result of failure on God's part (9–10) and, anyway, the Jews are not irrevocably lost (11) The rest of the epistle is mainly exhortation (12–15 13), beginning with a beautiful general admonition (12) to Christian virtue The end contains remarks of St Paul about his life (15 14–33), greetings to various Romans (16), and a fine doxology (16 25–27) Some critics have rejected the last two chapters as belonging to some other, lost epistle Romans, one of the longest and most important of St Paul's works, is claimed as an authority by many divergent theologians, thus, Lutheran and Roman Catholic interpretations of justification, diametrically opposed, both depend on this epistle. See C J. Callan, O P, *The Epistles of St Paul*, Vol. I (1922); C H Dodd, *The Epistle of Paul to the Romans* (1933)

Romansh see RHAETO-ROMANIC.

Romanshorn (rō'mänś-hôrn''), town (pop. 5,862), Thurgau canton, Switzerland It is a port on the Lake of Constance with steamer and railway connections, there are minor diversified industries.

romanticism (rōmăn'tĭsĭzm), term for a movement in the arts which has been variously defined as a return to nature, an exaltation of the emotions and senses over the intellect, and a revolt against 18th-century rationalism. Many literary historians deny that it is opposed to CLASSICISM, which is concerned with form rather than content. One of its facets is an interest in the supernatural. The romantic movement in literature is usually considered to begin in the middle of the 18th cent. with the works of Jean Jacques Rousseau, who promulgated in an early essay the doctrine that man is by nature good, but is corrupted by bad laws and doctrines. Early romantic writers idealized the savage (the "noble savage" idea), the peasant, and the child, they believed in the importance of the individual. Early French romanticists include Chateaubriand, Mme de Staël, and André Chénier. In Germany the movement was influenced by Kant, especially that aspect of his philosophy which set limits to reason; Lessing, Friedrich von Schlegel, and August Wilhelm von Schlegel were its leading literary exponents. It reached its finest form in the works of Goethe and Schiller and later in those of Heine. In English literature romanticism came to the fore with the publication of *Lyrical Ballads* (1798) of Wordsworth and Coleridge, which included Wordsworth's famous preface. Perhaps the most perfect exponent was William Blake in both his poetry and his painting. Romanticism continued in the poetry of Shelley, Byron, and Keats and in the critical writings of Coleridge and Hazlitt. In 19th-century French literature the chief figure was Victor Hugo, whose preface to *Cromwell* (1828) was a manifesto of romanticism and whose play *Hernani* (1830) was the occasion for a public dispute between the romantics and the classicists. Other French romanticists include Alphonse de Lamartine, Alfred de Vigny, and Alfred de Musset. In Italy the greatest romantic poet was Giacoma Leopardi, and the best-known novelist was Manzoni. In Spain the leading romantic writers were the duque de Rivas, José Espronceda, and Zorrilla y Moral. In every country the literature of this era responded to the romantic impulse, it found expression not only in poetry but in historical novels (such as those of Walter Scott and Alexander Dumas père), in tales of fantasy and horror, and in romances of love and adventure. Some of the world's finest lyric poetry was born of it. In the United States the chief romantic writers were Edgar Allan Poe, James Fenimore Cooper, Nathaniel Hawthorne, and Herman Melville. The idealism and mysticism of New England TRANSCENDENTALISM was a direct offspring. As the 19th cent. progressed, romanticism gave way to realism, and it no longer exists as a literary movement. But its influence is still strong, and it is still the subject of investigation and controversy. In painting, romanticism was the leading movement of the 19th cent. Its general character—avoidance of classic forms and rules, emphasis on the emotional and spiritual, and the predilection for themes drawn from simpler or less civilized ways of living—manifested itself in several ways. In France, introduction of exotic detail was begun by Géricault and perfected by Delacroix, the colors and shapes of the East became romantic themes. The Pre-Raphaelites in England were romanticists, as were the German Nazarenes who worked in Rome. A countermovement in Germany was the trend toward historical painting, choosing especially martial scenes from the Middle Ages and Germanic myth. But the chief, and international, trend in romantic painting was the wide predilection for landscape painting. The classically heroic landscape was abandoned, and emphasis was placed on the intimate and spiritual in nature. John Constable and J. M. W. Turner in England, the Barbizon school in France, the Germans Feuerbach and Arnold Böcklin, and the Hudson River school in America all gave new meaning and new life to landscape painting and managed to instill into their depictions of nature the essence of romantic thought. Musical romanticism, beginning in the late 18th cent. and lasting throughout the 19th cent., emphasizes feeling and deals freely with forms; its early exponents were Mozart, Beethoven, and Schubert. Sonata and symphony, the forms developed during the period of Viennese classicism, were used by the romantics with considerable freedom. Liszt was outstanding in the romantic tendency to link music and literature, creating the SYMPHONIC POEM. This interworking of the arts also appealed to Berlioz, who is generally most prominently associated with PROGRAM MUSIC. Romantic opera began with Weber and culminated in Wagner, who aimed at a complete synthesis of the arts in his idea of the *Gesamtkunstwerk* [total work of art]. Composers such as Mendelssohn, Schumann, Chopin, and Brahms worked much in small forms not rigid in structure, e.g., prelude, intermezzo, nocturne, ballade, rhapsody, and capriccio, especially in solo music for the piano. Chopin and Liszt introduced a new conception of the possibilities of the piano, and it became the foremost solo instrument of the period. Italy in the romantic period simply continued the development of opera with the works of Rossini, Bellini, Donizetti, and—greatest of all—Verdi. These men composed some church music, mostly of a highly dramatic, sometimes even theatrical, nature. France saw the flourishing of grand opera in the 1830s and the rise of the operetta. Catholic church music was written by Berlioz, Franck, and Gounod, some of which has survived in the concert hall; some of it, like most of the output of a host of minor composers rejected as unsuitable by the Church, has passed into oblivion. Germany was the leading nation musically in the romantic period, and perhaps its greatest contribution was the romantic lied (see SONG). While Tchaikovsky held a kinship to the more universal romanticism, nationalism, exemplified by Glinka, was the form taken by the movement in Russia. Smetana and Dvorak in Czechoslovakia and Grieg in Norway also exemplify nationalistic romanticism. It was under the influence of European romanticism that American music began to mature, with Edward MacDowell as the leading figure. The symphony orchestra and the art of orchestration attained their final development in the romantic era, as did the modern art of conducting. Toward the end of the 19th cent. interest in classical forms was revived at the hands of Bruckner, Brahms, Tchaikovsky, and Franck. The end of the period, decadent, grandiose, sometimes even megalomaniac, is often referred to as postromanticism and is represented by Holst and Elgar in England and Mahler and Richard Strauss in German music. IMPRESSIONISM, which appears now as a special sort of romanticism, was a reaction against Wagnerian romanticism. ATONALITY, however is seen by some as in direct line from Wagner through Bruckner and Mahler. Romanticism as the spirit of a work of art may be present in any age and can be found notably in the Middle Ages and the early baroque. For literary romanticism, see Lascelles Abercrombie, *Romanticism* (1926), Hoxie Fairchild, *The Noble Savage* (1928) and *The Romantic Quest* (1931), Ernest Seillière, *Romanticism* (Eng. tr., 1929), Mario Praz, *The Romantic Agony* (Eng. tr., 1933), Jacques Barzun *Romanticism and the Modern Ego* (1944), C. M. Bowra, *The Romantic Imagination* (1949). For the movement in art, see William Gaunt, *Bandits in a Landscape* (1937), John Piper, *British Romantic Artists* (1942). For musical romanticism, see Alfred Einstein, *Music in the Romantic Era* (1947), Dika Newlin, *Bruckner, Mahler, Schoenberg* (1947).

Romanus I (Romanus Lecapenus) (rōmā'nŭs, lĕkŭpē'nŭs), d. 948, Byzantine emperor (919–44). He usurped the throne during the minority of his son-in-law, CONSTANTINE VII. He defended Constantinople against the Bulgars under SIMEON I and in 927 made peace with Simeon's son. He also issued decrees to protect peasant and military holdings from absorption into the estates of the great landowners. In 944 Romanus was overthrown by his two surviving sons, who were in turn overthrown by Constantine VII. See biography by Steven Runciman (1929).

Romanus II, 939–63, Byzantine emperor (959–63), son and successor of Constantine VII. He and his wife Theophano, a former courtesan, probably poisoned Constantine. Romanus was a reckless debauchee and the only significant events of his reign were the military successes of Nicephorus Phocas against the Arabs. Nicephorus married Theophano on Romanus' death and succeeded him as Emperor Nicephorus II.

Romanus III (Romanus Argyrus) (ar'jĭrŭs), d. 1034, Byzantine emperor (1028–34). He married Zoë, daughter of Constantine VIII, and succeeded to the throne. He depleted the treasury by his generosity to the victims of a plague and an earthquake and by his building mania. He was defeated by the Saracens near Antioch in 1030 but took Edessa in 1031. He was probably murdered by Zoë and Michael IV, who succeeded him as emperor and husband.

Romanus IV (Romanus Diogenes) (dīŏj'ənēz), d. 1071, Byzantine emperor (1067–71). He succeeded Constantine X by marrying his widow, EUDOCIA MACREMBOLITISSA. After some early successes against the Seljuk Turks he was crushingly defeated and captured (1071) by Alp Arslan at MANZIKERT. He was ransomed and promised to pay tribute, but he was deposed by his stepson, Michael VII, and died shortly afterward.

Roman Wall, England: see HADRIAN'S WALL.

Romany (rŏ'mŭnē, rō'–), language of the gypsies (see GYPSY). It belongs to the Indic group of the Indo-Iranian subfamily of Indo-European languages. See LANGUAGE (table).

Romberg, Sigmund (rŏm'bûrg), 1887–, Hungarian-American composer, educated in Vienna. He came to the United States in 1910, played in restaurant and café orchestras, and soon had his own orchestra. He wrote the score for *The Whirl of the World* (1914), a musical show produced at the Winter Garden, New York, and his first operetta, *Maytime*, appeared in 1917. It was followed by such outstanding successes as *The Student Prince* (1924), *Blossom Time* (1926, based on the life and music of Franz Schubert), *The Desert Song* (1926), and *The New Moon* (1927). He later wrote scores for moving pictures, some of which were adaptations of his operettas. In 1942 he began to tour with an orchestra and soloists, giving programs of light music. *Up in Central Park* was produced in 1945. Elliott Arnold's *Deep in My Heart a Story Based on the Life of Sigmund Romberg* (1949) contains a complete list of Romberg's works.

Rome, Ital. *Roma* (rō'mä), city (pop. 1,089,996), capital of Italy and seat of the pope, whose residence, VATICAN CITY, is a sovereign state within the city of Rome. Rome is also the capital of Latium, a region of central Italy, and of Rome prov. It lies on both banks of the Tiber, in the CAMPAGNA DI ROMA, near the Apennine mts., c. 15 mi. from the Tyrrhenian Sea. Called the Eternal City, it is one of the richest cities in the world in history and art and one of its great cultural, religious, and intellectual centers. Because of the complexity of the subject matter, the following article is divided into several sections, and additional information will be found in the articles to which there are cross references. See also ROMAN ART, ROMAN ARCHITECTURE, LATIN LITERATURE, ROMAN RELIGION.

Rome before Augustus. Ancient Rome was built on the east bank of the Tiber on elevations (now much less prominent) emerging from the marshy lowlands of the Campagna. The seven hills of the ancient city are the Palatine roughly in the center with the Capitoline to the northwest and the Quirinal, Viminal, Esquiline, Caelian, and Aventine in an outlying north-southwest curve. The Pincian is N of the Quirinal. In the westward bend of the Tiber, W of the Quirinal, lies the Martian Field (Campus Martius), facing the Vatican across the Tiber. Across the Tiber from the Palatine is the Janiculum, a ridge running north and south, which was fortified in early times. Early in the first millenium B.C. the Tiber divided the Italic peoples from the Etruscans in the north and west (see ETRUSCAN CIVILIZATION). Not far to the north were the borders between the Sabines and the Latins, and the Sabines were closely related to Rome, free from the very beginning. The hills of Rome, free from the malaria that has been the bane of Latium, were a healthful and safe spot to live, a convenient outlet for Etruscan trade to the south and to the sea, and a meeting ground for Latins, Sabines, and Etruscans. In the 8th cent. B.C. the fortified elevation of the Palatine was probably taken by Etruscans, who amalgamated the tiny hamlets about the Palatine into a city-state. The traditional story tells of the founding of Rome by ROMULUS in 753 B.C. (hence the dating *ab urbe condita*, or A.U.C., i.e., from the founding of the city), and of the TARQUIN family, the Etruscan royal house. It was probably Etruscan rule that civilized Rome and gave it the hegemony of Latium. About 500 B.C. the Romans overthrew their foreign rulers and established the Roman republic, to last four centuries. The PATRICIAN class controlled the government, but the patricians allowed the PLEBS to elect the two patrician consuls, who held joint power. The plebs, by far the bulk of the population, may possibly have represented the Latin founders of the city, and the patricians, who were originally distinguished from the plebs in religion, custom, and politics, may have been descendants of the Sabine stock of the city; on the other hand, they may have been merely two developing classes of the same people. The vitality of the patricians was remarkable, and long after political power had been given to the plebs, patricians governed Rome. As the majority felt its power and the nobles continued their oppression, the people demanded (and got) privilege after privilege, the greatest was the election of two plebeian tribunes (see TRIBUNE). With the growth of the city multiplication of consular duties called for new officials: QUAESTOR, PRAETOR, and CENSOR. The three popular assemblies, or comitia, developed slowly, but they quietly abstracted legislative power from the patricians. The ancient senate, theoretically the supreme power of the state, became more and more powerful until in the 3d cent. B.C. it controlled the consuls completely. It is incorrect to view the Roman republic as a true democracy at any time, it might be said to have begun as a patrician aristocracy and to have ended a senatorial oligarchy. The history of the Roman republic to all intents is the history of the senatorial administration, under the senate Rome began her march to world supremacy, but in the end the senate was crushed under the weight of the huge problems of empire. In the 4th and 3d cent. B.C. Rome came into full contact with Greek culture which modified Roman life tremendously. The idea of the old Roman courage and morality was always alive among some Romans, typical of it was the elder CATO. In the 4th cent. B.C. Rome ruled W. Latium and S. Etruria. The power of the city may be inferred from the tremendous impression the sack of Rome (390 B.C.) by the Gauls made in subsequent times. The Samnites were subdued in the wars dated conventionally 326–304 B.C. and 298–290 B.C., and the inhabitants of Picenum, Umbria, Apulia, Lucania, and Etruria were "pacified." The Roman policy in dealing with Italy was that of a merciless master with slaves. Tarentum,

besieged by the Romans, called for the aid of PYRRHUS of Epirus, he won victories at Heraclea (280 B C) and Asculum (279 B C), but after a dispute with his Italian allies he returned to Greece, leaving the Romans masters of central and S Italy Rome had been until now a continental power, but S Italy made her look seaward Sicily was the next obvious desideratum, but Rome's rapid conquests could not go on there without meeting the like ambitions of CARTHAGE, which ruled the W Mediterranean The PUNIC WARS were thus inevitable In this titanic struggle the fate of Carthage and the destiny of Rome were decided Rome had no HANNIBAL—not even SCIPIO AFRICANUS MAJOR was so great—but she fought with the resources of Italy behind her Rome gained from the Punic Wars dominion over Spain, Sicily, Sardinia, Corsica, the northern shores of Africa, and the sea, indisputable hegemony in the world west of India, an insatiable desire for conquest, and a consciousness of her destiny Carthage being humbled, the Roman republic could turn eastward Philip V of Macedonia was defeated after two campaigns (214–205, 200–197 B C), and Antiochus III of Syria was conquered at Magnesia (190 B C), eventually the defeat of Perseus (172–168 B C) gave Macedonia to Rome as a province Greece was not made into a province, but the brief opposition of the ACHAEAN LEAGUE was disposed of, and the Greeks became subject to Rome Egypt acknowledged vassalship to Rome (168 B C) The rapid expansion of Roman dominion had terrible effects at home The provinces were governed by the senate for the benefit not of Rome but of the senatorial class Enormous wealth (by graft and by trade) flowed into the hands of the senators, and they used it exclusively to their own advantage The *equites* (see KNIGHT), a class of capitalists came into its own through management of imperial trade Class dissension became the order of the day, and in spite of AGRARIAN LAWS the masses were daily more dissatisfied The slaves in Sicily rebelled twice (c 136–c 131, 104–c 101 B C) to their permanent detriment, and the Gracchus brothers in a political victory tried to make the populace more powerful Massacre and incredible barbarities disposed of the slaves' restlessness, and assassination removed the GRACCHI (133 and 121 B C) JUGURTHA defied Rome in Numidia for a time but in 106 B C he was defeated by MARIUS Marius also conquered the Cimbri and the Teutons (112–101 B C), and foretold a new era by definitively introducing Roman arms into Transalpine GAUL There was a short revolt in Italy, the Social War (90 B C – 88 B C), which forced Rome into extending citizenship widely in Italy, but the republic was really doomed Marius, the idol of the populace, used proscription to rid himself of his foes, but SULLA, a conservative, destroyed Marius' party by the same method After Sulla's retirement his lieutenant POMPEY came forward as a popular champion He abolished some of Sulla's reactionary reforms (70 B C), suppressed Mediterranean piracy, and made himself master of Rome His defeat of MITHRIDATES brought Pontus, Syria, and Phoenicia into the Roman dominion On Pompey's return from the East he found an ally for his ambitions in Julius CAESAR, a popular democratic leader of the best patrician blood With CRASSUS to furnish the funds, Pompey and Caesar formed the First Triumvirate (60 B C), and Caesar departed to make himself immortal in the GALLIC WARS Within ten years Caesar and Pompey fell out, Pompey joined the senatorial party, and Caesar (as the champion of the people and of republican legality) led his devoted army against Pompey PHARSALA was the result (48 B C), and Caesar was master of Rome He governed, through the old institutions, with wisdom and vigor, until his assassination (44 B C) Caesar marked an epoch, for he really completed the destruction of the republic and founded the empire In the view of ages Caesar's additions to the Roman rule were the most important ever made, for his conquest and organization of Gaul placed Rome in the role of the civilizer of barbarians as well as the mistress of the older world The age of Caesar was a great period in Roman culture, and the cosmopolitan Roman became the ideal of men Greek was the language of much of the empire and Greek letters were fashionable Even more influential was Greek thought, which served to destroy Roman religion and to open the Romans to the Eastern cults, which were enormously popular for years Typical of the period before Pharsala was CICERO, who combined political ineptitude with the widest culture At the death of Caesar the territories ruled by Rome included Spain (except part of the northwest), Gaul, Italy, Illyria, Macedonia, Greece, W Asia Minor, Bithynia, Pontus, Cilicia, Syria, Cyrenaica, Libya, Numidia, and the islands of the sea, and Rome completely controlled Egypt and Palestine See bibliography at the end of the following section

The Roman Empire —Caesar's assassination brought anarchy, out of which the Second Triumvirate emerged with the rule of Octavian (later AUGUSTUS), ANTONY, and LEPIDUS Octavian was Caesar's nephew, ward, and heir, and his true successor At Actium (31 B C) he defeated Antony and made the empire one No change was made in the government, but Octavian received from the senate the title Augustus and from the people the tribuneship, this, with the governorship of all the provinces conferred by the senate, made him the real ruler He was called *princeps* [leader] and *imperator* [commander], and is usually considered the first Roman emperor He organized provincial government and the army, rebuilt Rome, and patronized arts and letters Augustus began a long period of peace, 200 years In this time the Roman Empire was at its greatest extent, bounded by Armenia, middle Mesopotamia, the Arabian Desert, the Red Sea, Nubia, the Sahara, the Moroccan mountain mass, the Atlantic Ocean, the Irish Sea, Scotland, the North Sea, the Rhine, the Danube, the Black Sea, and the Caucasus Augustus' chief additions to the empire were a strip along the North sea W of the Elbe and part of the Danubian area The blessings of peace were great for the empire The great system of ROMAN ROADS made transportation easier than it was again until the development of railroads A postal service was developed in connection with the army Commerce and industry were developed to a great extent, particularly by sea, over which the grain ships carried the food for Rome and the West from the ports of the northern African shores The Roman Empire became under Augustus one great nation The enlarged view of the world made a great impression on Rome, where literary and artistic interests were of importance, though nearly always tending to imitation of Greece and of the East Augustus died A D 14, and was succeeded by his stepson TIBERIUS, of more ability than his biographers have granted, his general GERMANICUS fought fruitlessly in Germany CALIGULA, who followed, was a cruel tyrant (A D 37–A D 41), and he was succeeded by CLAUDIUS I (A D 41–A D 54), who was dominated by his wives, but found time to conquer half Britain In his time Thrace, Lydia, and Judaea were made Roman provinces NERO (A D 54–A D 68) won note as an unparalleled tyrant In his reign occurred the great fire of Rome (A D 64), attributed (probably falsely) to Nero, it burnt everything between the Caelian and Palatine and Esquiline, but it was a boon to the city, for Nero rebuilt the region with broader streets and great buildings and moved the population to the right bank of the Tiber, then very thinly populated At that time an entirely new factor made its appearance in Rome, the Christians A barbarous persecution took place at Nero's orders, in which many Christians died, among them St Peter and St Paul Throughout the Roman Empire the Christians expanded steadily for the next centuries Their conflict with the empire, which brought on them persecution after persecution, was chiefly a result of the Christian refusal to offer divine honors to the emperors But Christianity penetrated the army and the royal household in spite of the constant danger of detection and of persecution There were many periods in the first three centuries when Christians worshiped in the open, even in Rome, where the CATACOMBS housed not only graves but also churches With Nero the Julio-Claudian line ended There was a brief struggle (see GALBA, OTHO, VITELLIUS) before VESPASIAN (A D 69–A D 79) took the purple Under him his son TITUS destroyed Jerusalem (A D 70), and Titus succeeded his father After his mild, rather benign rule, his brother DOMITIAN (A D 81–A D 96), a despot and persecutor of Christians, gained the empire In Domitian's reign AGRICOLA conquered England almost entirely Domitian was unsuccessful in his dealings with the Daci and finally bought them off After NERVA came TRAJAN (A D 98–A D 117), one of the greatest of emperors Trajan undertook great public works, defeated the Daci and established Roman colonies there (hence the modern Rumanians), and pushed the eastern borders past Armenia and Mesopotamia His successor, HADRIAN, withdrew Roman rule to the Euphrates and built his wall (HADRIAN'S WALL) in Britain to hold back the barbarians, who constantly threatened that now fast-developing province He also reorganized the senate and the army Roman armies were now seldom seen far from the boundaries of the empire, and life continued throughout the Roman world in peace and quiet Italy was sinking into a purely provincial state, though many emperors made attempts to make it a special country The successors of Hadrian were ANTONINUS PIUS and MARCUS AURELIUS This is commonly called the Golden Age of the empire With COMMODUS (180–92) the decline of the empire is usually said to have begun. The age of the PRAETORIANS was now at hand, when the purple was in the gift of the capital soldiery Septimius SEVERUS (193–211) was unusually able for his period, he campaigned with success against the Parthians and against the Picts of northern Britain His son CARACALLA is noteworthy for extending Roman citizenship to all free men of the empire and for the famous baths named after him Emperors succeeded one another rapidly in the 3d cent . HELIOGABALUS, ALEXANDER SEVERUS, PHILIP (Philip the Arabian), and DECIUS among them Decius was one of the most violent persecutors of Christians, he fell fighting the Goths, first of the GERMANS, who were eventually to overwhelm the empire In 265 the emperor VALERIAN was captured by the Persians, and the empire fell into anarchy To supplement the increasingly bad government of the provinces a pestilence carried off half the population CLAUDIUS II (268–70) revived Roman fortunes somewhat, while AURELIAN (270–75) overthrew the Palmyrene kingdom of ZENOBIA In 283 DIOCLETIAN made himself emperor He was a reformer of government and of the social order, but only one of his efforts was successful This was the division of the empire into four political sections, two east and two west There were to be two Augusti and two Caesars The division of East and West was resumed after the death (337) of CONSTANTINE I, who moved the capital to Byzantium, renamed Constantinople By the Edict of Milan (313) Constantine granted universal religious tolerance, thus placing Christianity on the same footing as the other religions He distributed the empire into prefectures, dioceses, and provinces, the bishops thus gained great influence and shared in the authority of the civil administration There was a brief resurgence of paganism under JULIAN THE APOSTATE On the death of JOVIAN, Julian's successor, VALENTINIAN I (364–75) ruled the West, VALENTINIAN II (375–92) succeeded him After the death (391) of THEODOSIUS I the empire was permanently divided into East (see BYZANTINE EMPIRE) and West, and Rome rapidly lost its political importance Under the emperors, Rome had been the center of the world It must have presented a splendid, though heterogeneous appearance Little remained of the original city, for the emperors had redrawn its map to add to the glory of the city and to their own Parts of the Aurelian Wall still stand On the Capitoline were the citadel (the arx) and the temple of Jupiter Capitolinus, the Palatine was the site of the palaces of Augustus and Tiberius (the word *palace* derives from the hill), the palace of Nero and Trajan's baths were on the southern slopes of the Esquiline South of the Palatine was the CIRCUS MAXIMUS, where the famous chariot races were held The old FORUM, extending from the Capitoline almost to the COLOSSEUM, remained the center of the city, northeast of it were the Emperors' Fora, with many fine public buildings, and the Temple of Peace On the Martian Field were Pompey's theater, the Circus Flaminius, the PANTHEON, and the baths of Agrippa and Nero Across the Tiber was Nero's circus where St Peter's now stands, Hadrian's tomb, now known as the CASTEL SANT' ANGELO, has survived as a major landmark The largest of the many public baths were those of Caracalla, near the Appian Way Nineteen imposing aqueducts, of which many remains are extant, supplied the city with water At its height, imperial Rome counted well over a million inhabitants It was well policed, sanitation was excellent, and a fire-fighting force of seven brigades was maintained Among the rich such luxuries as central heating and running water were not unknown The indigent (c 200,000) were cared for at public expense Not until the 18th cent were luxury and technical proficiency on a like scale to return to any European city Decline came quickly HONORIUS (395–423) made Ravenna the capital of the West, other emperors chose Milan and Trier (Treves), where they were nearer the border to stem Germanic attacks The West sank into anarchy, and Italy was ravaged by invaders ALARIC I took Rome in 410, and GAISERIC conquered it in 455 Attila was kept from sacking it only through the efforts of Pope LEO I In this general disintegration the popes, originally the bishops of Rome, greatly increased their power and prestige, thus restoring to Rome in the religious field the importance it had lost in the political In 476 the last emperor of the West, appropriately called Romulus Augustulus, was deposed by ODOACER, this date is commonly accepted as the end of the West Roman Empire The so-called Dark Ages that followed in Western Europe could not eradicate the profound imprint left by the Roman civilization ROMAN LAW is still alive, the Romance languages are but modifications of Roman speech Roman Catholicism for fifteen centuries was the only religion and the main cultural force of Western Europe The fall of Rome marked no abrupt ending of an era, for the barbarians that filled the gap left by the disappearance of the old order were quick in accepting and adapting what vital elements there remained of it The survival of the East Roman Empire and the creation of the HOLY ROMAN EMPIRE showed what vitality there was left in the imperial ideal Italy itself, however, did not recover from the fall of Rome until the 19th cent General histories of ancient Rome are countless Among the ancient histories, that of LIVY is the only comprehensive work Other great Roman historians were CAESAR, TACITUS, SUETONIUS, POLYBIUS, DION CASSIUS, and JOSEPHUS. The works of MOMMSEN and GIBBON are monumental

Recent general works on ancient Rome include those of J B Bury, Guglielmo Ferrero, Tenney Frank, and Michael Rostovtzeff See also Victor Duruy, *History of Rome* (8 vols in 16, 1883–86), Samuel Dill, *Roman Society in the Last Century of the Western Empire* (1898) and *Roman Society from Nero to Aurelius* (1904), A H J Greenidge, *Roman Public Life* (1901) and *History of Rome During the Later Republic and Early Principate* (1904); F F Abbott, *History and Description of Roman Political Institutions* (1911), Ludwig Friedländer, *Roman Life and Manners* (4 vols, 1908–13), W W Fowler, *Social Life at Rome in the Age of Cicero* (1909) and *Rome* (2d ed, 1947), M Cary, *History of Rome* (1935), F G Moore, *The Roman's World* (1936), A E R Boak, *History of Rome* (3d ed, 1943)

Medieval Rome The history of Rome in the Middle Ages, bewildering in its detail, is essentially that of two institutions, the papacy and the commune of Rome In the 5th cent the Goths ruled Italy from Ravenna, their capital Odoacer and Theodoric the Great kept the old administration of Rome under Roman law, with Roman officials The city, whose population was to remain less than 50,000 throughout the Middle Ages, suffered severely from the wars between the Goths and Byzantines In 552 Narses conquered it for Byzantium and became the first of the exarchs (viceroys) who ruled Italy from Ravenna Under Byzantine rule commerce declined, and the senate and consuls disappeared Pope Gregory I (590–604), one of the greatest Roman leaders of all time, began to emancipate Rome from the exarchs Sustained by the people, the popes soon exercised greater power in Rome than the imperial governors The papal elections were, for the next twelve centuries, the main events in Roman history Two other far-reaching developments (7th–8th cent) were the division of the people into four classes (clergy, nobility, soldiers, and the lowest class) and the emergence of the Papal States The coronation (800) at Rome of Charlemagne as emperor of the West ended all question of Byzantine suzerainty over Rome, but it also inaugurated an era characterized by the ambiguous relationship between the emperors and the popes That era was punctuated by visits to the city by the German kings, to be crowned emperor or to secure the election of a pope to their liking or to impose their will on the pope In 846 Rome was sacked by the Arabs the Leonine walls were built to protect the city, but they did not prevent frequent occupations and sacks by Christian powers By the 10th cent Rome and the papacy reached their lowest point Papal elections, originally exercised by the citizens of Rome, had come under the control of the great noble families, among whom the Frangipani and Pierleone families and later the Orsini and the Colonna were the most powerful Each of these would tear Rome apart rather than allow the other families to gain undue influence They built themselves fortresses in the city (often improvised transformations of the ancient palaces and theaters), and ruled Rome from them From 932 to 954 Alberic, a very able man, governed Rome firmly and restored its self-respect, but after his death and after the disgraceful proceedings that accompanied the coronation of Otto I as emperor, Rome relapsed into chaos, and the papal dignity once more became the pawn of the emperors and of local feudatories Contending factions often elected several popes at once Gregory VII reformed these abuses and strongly claimed the supremacy of the Church over the municipality, but he himself ended as an exile, Emperor Henry IV having taken Rome in 1083 The Normans under Robert Guiscard came to rescue Gregory and thoroughly sacked the city on the same occasion (1084) Papal authority was challenged in the 12th cent by the communal movement A commune was set up (1144–55) and was led by Arnold of Brescia and subdued by the intervention of Emperor Frederick I Finally, a republic under papal patronage was established, headed by an elected senator However, civil strife continued between popular and aristocratic factions, between Guelphs and Ghibellines The commune made war to subdue neighboring cities, for it pretended to rule over the Papal States, particularly the duchy of Rome, which included Latium and parts of Tuscany Innocent III controlled the government of the city, but it regained its autonomy after the accession of Emperor Frederick II Later in the 13th cent foreign senators began to be chosen, among them were Brancaleone degli Andalò (1252–58) and Charles I of Naples During the "Babylonian captivity" of the popes at Avignon (1309–77) Rome was desolate, economically ruined, and in constant turmoil Cola di Rienzi became the champion of the people and tried to revive the ancient Roman institutions, in 1347 he was made tribune, but his fantastic dreams were doomed Cardinal Albornoz temporarily restored the papal authority over Rome, but the Great Schism (1378–1417) intervened Once more a republic was set up In 1420 Martin V returned to Rome, and with him began the true and effective dominion of the popes in Rome, the senator himself becoming a mere municipal officer See Ferdinand Gregorovius, *History of the City of Rome in the Middle Ages* (8 vols in 13, 1894–1902), Alain de Boüard, *Le Régime politique et les institutions de Rome au moyen âge* (1920).

Renaissance and Modern Rome A last effort at restoring the Roman republic failed utterly in 1453 The history of Rome became more than ever that of the papacy The successors of Martin V in the 15th cent and the first half of the 16th cent were chiefly interested in increasing the temporal power of the papacy, in patronizing arts and letters, in beautifying the city, and in raising the fortunes of their relatives The moral tone of the papal court was a scandal to Christendom and contributed not a little to the success of the Reformation The period of the great popes of the Renaissance—Sixtus IV, Innocent VIII, Alexander VI, Julius II, Leo X, Clement VII, and Paul III—was one of sensuous splendor Among the countless artists and architects who served the papal court Bramante, Michelangelo, Raphael, and Domenico Fontana were the chief creators of Rome as it is today The popes also played a leading part in the Italian Wars of the 16th cent As a result of Clement VII's alliance with Francis I of France, Rome was stormed (1527) by the army of Emperor Charles V and subjected to a thorough sack The triumph of the Catholic Reform in the late 16th cent restored dignity and moral power to the papal court and gave the Society of Jesus great influence Though the power of the pope was established as absolute, more religious tolerance (particularly toward the Jews) could be found at Rome than in many other capitals of Europe The city continued to prosper and to benefit by the influx of hundreds of thousands of pilgrims (see jubilee) The great creative effort of the Renaissance was largely spent, but the noble baroque monuments—notably those built by Bernini—that were erected in the 17th and early 18th cent added to the grandiose harmony of the city The splendor of religious ceremonies as well as the encouragement given by the popes to art, music and classical and archaeological studies continued to make Rome a center of world civilization When in 1796 French troops under Napoleon Bonaparte invaded the Papal States, a truce was bought by Pope Pius VI, and many Roman art treasures passed into French possession In 1798 the French occupied Rome deposed the pope, and proclaimed Rome a republic Pius VII reentered Rome in 1800, but in 1808 Napoleon reoccupied the city, and in 1809 he annexed it to France Papal rule was restored in 1814 Pope Pius IX, who ruled during a crucial period (1846–78) yielded to liberal demands and granted a constitution However, disorders in 1849 caused his flight to Gaeta, and once more Rome became a republic, under the leadership of Mazzini French troops intervened, defeated the republican forces under Garibaldi, and restored Pius IX, who made no further attempts at liberalism The Italian kingdom, proclaimed in 1862 included most of the former Papal States but not Rome, which remained under papal rule under the virtual protectorate of Napoleon III Napoleon's fall in 1870 made possible the occupation of Rome by Italian troops, and in 1871 Rome became the capital of Italy Pius IX and his successors did not recognize their loss of temporal sovereignty The conflict between pope and king—or Vatican and Quirinal, as the antagonists were designated because of the location of their palaces—was not solved until the conclusion (1929) of the Lateran Treaty, which gave the pope sovereignty over Vatican City The Fascist march on Rome (1922) brought Mussolini to power In the Second World War, Rome fell to U S troops on June 4, 1944 An air raid (July, 1943) damaged the Basilica of St Lawrence without the Walls (San Lorenzo fuori le Mura), but otherwise Rome remained virtually undamaged by the war The post-war years were marked by a remarkable economic, artistic, and intellectual revival The year 1950 was designated a holy year by Pope Pius XII, and Rome, more than ever the spiritual capital of Catholicism, prepared for the arrival of millions of pilgrims In the past half century Rome has expanded well beyond the walls started in the 3d cent A D by Emperor Aurelian Long sections of the walls have been preserved, however, and archaeology remains an essential element of modern town planning in Rome As in ancient times, the larger section of Rome lies on the left bank of the Tiber, which intersects the city in three wide curves and is spanned by 19 bridges Aside from modern residential quarters, the right-bank section contains Vatican City, including Saint Peter's Church, and the ancient popular quarter of Trastevere In describing the left-bank section one may use the Piazza Venezia, a central square, as a convenient point of departure It lies at the foot of the old Capitol (see Capitoline Hill) and borders on the huge monument to King Victor Emmanuel II and on the Palazzo Venezia, a Renaissance palace from the balcony of which Mussolini used to address the crowds A broad avenue, the Via dei Fori Imperiali runs from the Piazza Venezia SE to the Colosseum, leaving the Emperors' Fora and at a distance the Church of St Peter in Chains (San Pietro in Vincoli) to the left, and the Capitol and the ancient Forum to the right. From the Colosseum the Via di San Gregorio continues south past the Arch of Constantine and the Baths of Caracalla to the Appian Way Here, as in several other places in the outskirts of Rome, are large catacombs From the Piazza Venezia another modern thoroughfare, the Via del Mare, leads southwestward to the Tiber and then east past the Basilica of St Paul's without the Walls (San Paolo fuori le mura) to the sea at Ostia The central part of Rome is cut, roughly from west to east, by a thoroughfare called Via Nazionale and, between the Piazza Venezia and the Tiber, Corso Vittorio Emmanuele, it is continued by a bridge crossing to St Peter's Church Another, nearby, bridge leads to the Castel Sant' Angelo The narrow and busy Via del Corso leads N from the Piazza Venezia past the Piazza Colonna (now the heart of Rome) to the Piazza del Popolo at the gate of the old Flaminian Way E of the Piazza del Popolo are the Pincian Hill, commanding one of the finest views of Rome, and the famous Villa Borghese In the widest westward bend of the Tiber, W of the Via del Corso, is the Campo Marzio quarter (the ancient Martian Field), where most of the medieval buildings are located, here also are the Pantheon (now a church) and the parliament buildings To the east of the Via del Corso the fashionable Via Condotti leads to the Piazza di Spagna, a flight of 132 steps ascends from that square—once the residence of Keats and Shelley—to the Church of Santa Trinità dei Monti and the Villa Medici The Quirinal is NE of the Piazza Venezia In the southeastern section, near the gate of San Giovanni, are the Lateran buildings The various institutes of the Univ of Rome (founded 1303) were formerly scattered throughout the city but were transferred in 1935 to the southeastern section Among the countless churches of Rome there are five patriarchal basilicas—St Peter's, St John Lateran, St Mary Major (Santa Maria Maggiore), St Lawrence without the Walls, and St Paul's without the Walls With the exception of St Mary Major, the basilicas and the other ancient churches occupy the sites of martyrs' tombs Characteristic of the old Roman churches are their fine mosaics (4th–12th cent) and the use of colored marbles for decoration, introduced in the 12th cent by the workers in marble known as Cosmati Among the many palaces and villas of Rome the Farnese Palace and the Farnesina are particularly famous, others, all dating from the 17th cent, are those of the great Roman families, the Colonna Chigi, Torlonia and Doria The richest museums and libraries of Rome are in the Vatican Others include the National, Capitoline, and Torlonia museums, notable for their antiquities, and the Borghese, Corsini, Doria, and Colonna collections of paintings Rome is celebrated for its beautiful Renaissance and baroque fountains, such as the imposing Fontana di Trevi As an educational center, Rome possesses—aside from its university, monuments museums, and libraries—the colleges of the Church several academies of fine arts, and the Accademia di Santa Cecilia (founded 1584), the oldest academy of music in the world See bibliographies at the end of the articles Renaissance and Italy There are numerous good descriptions and guide books of Rome Among the most up-to-date descriptive works Herbert Bittner and Ernest Nash, ed, *Rome* (1950), and Ludwig Curtius, *Rome* (1950) may be noted

Rome 1 City (pop 26,282), co seat of Floyd co NW Ga, at the confluence of the Etowah and Oostanaula rivers NW of Atlanta, founded 1834 on the site of a Cherokee village It is an industrial center, with textile and lumber mills, tanneries, and foundries and is also a cotton market in a farm, timber, and quarry area In the Civil War, Gen N B Forrest captured a Union cavalry force near here (May, 1863) Sherman destroyed the city's industrial facilities in Nov, 1864 Shorter College (Baptist, for women, 1873) and the headquarters of a soil conservation project are here Near by are the Berry schools (see Berry, Martha M) and the state school for the deaf Limestone caves and mineral springs are in the area 2 Industrial city (pop 34,214), a co seat of Oneida co, central N Y, on the Mohawk and the Barge Canal and NW of Utica, laid out c 1786 on the site of Fort Stanwix, inc as a village 1819, as a city 1870 The city flourished with the building of the Erie Canal, which was begun here in 1817, and is noted especially for its copper and brass products The Jervis Library was formerly the home of J B Jervis State schools for the deaf and for mental defectives are here, and near by is a large state fish hatchery

Romeo (rō'mēō), village (pop 2,627), S Mich, N of Detroit, in a rich farm and fruit area, settled c 1830, inc 1838 Cotton textiles and feed are made The vicinity is rich in Indian mounds

Romeo and Juliet, tragedy composed by Shakspere in 1596 His source was Arthur Brooke's poem *Romeus and Juliet* (1562), but the story can be traced through many popular 16th-century Italian versions—such as that of Matteo Bandello—ulti-

mately to the *Ephesiaca* by Xenophon of Ephesus (pseud) of the 3d or 4th cent The play has been used in the librettos of 18 different operas, of which Gounod's is the most famous Also with the same title are Berlioz's Fifth Symphony (1839) and a symphonic tone poem by Tchaikovsky (1870)

Rømer, Olaus or Ole (ōl'ŏŏs, ō'lu rū'mur), 1644–1710, Danish astronomer He is noted for his discovery that light travels at a definite speed and does not move through space instantaneously While assistant (1672–79) at the Royal Observatory, Paris, he estimated the approximate velocity of light through observations of the eclipses of satellites of Jupiter From 1681 he was professor of astronomy at the Univ of Copenhagen and royal mathematician He constructed the first good transit instrument (1690) and the earliest transit circle (1704) and supervised the erection of an observatory near Copenhagen. The name also appears as Roemer.

Romford (rŭm'-), municipal borough (1931 pop 35,918, 1947 estimated pop 70,800), Essex, England, ENE of London It is a market town, manufacturing shoes, pharmaceuticals, and ale It was the capital of the Saxon royal lands called the "Liberty of Havering-atte-Bower "

Romilly, Sir Samuel (rō'mĭlē), 1757–1818, English law reformer Admitted to the bar in 1783, he soon developed a wide chancery practice He was in sympathy with Rousseau's views and he knew well several figures of the Enlightenment, including Diderot and Alembert Romilly's enthusiasm for the French Revolution inspired his *Letters Containing an Account of the Late Revolution in France* (1792) His work in reforming criminal law began with *Thoughts on Executive Justice* (1786), which developed the views of BECCARIA As solicitor general (1806) in the cabinet of Lord Grenville, he ameliorated bankruptcy practice, and later, while in Parliament, he had reduced by a few the many comparatively trivial offenses (e g , pocket picking) which were subject to capital punishment The immediate results of his efforts were small, but in Victoria's reign many of his proposals were adopted See his memoirs (1840), biography by C G Oakes (1935)

Rommel, Erwin (ĕr'vēn rō'mul), 1891–1944, German field marshal An early member of the National Socialist party, he served as Hitler's bodyguard and rose to high rank in the SS Hitler made him an army general after the Polish campaign (1939) In 1940 he trained a special tank corps, the Afrika Korps, for desert warfare This was sent into action in Libya in Feb , 1941 Rommel, later known as the "desert fox," was created field marshal for his early success in North Africa, but he was defeated by Montgomery in Oct , 1942, at ALAMEIN His Afrika Korps was driven into Tunisia, but Rommel was recalled to Germany before its final defeat Rommel was in command of the German forces in N France when the Allies invaded Normandy in June, 1944 Wounded in an air raid in July, he had just recovered when he was reportedly ordered to take poison for having taken part in the plot of July, 1944, against Adolf Hitler

Romney, George (rŏm'nē), 1734–1802, English portrait painter, son of a Lancashire builder He had little early training, but after his marriage in 1756 he was emboldened to set up in Kendal as a traveling portrait painter He left his wife and children in 1762 and went to London, where he rapidly became a popular and fashionable portrait painter He studied in Italy (1773–75), and after his return to London his popularity rivaled that of Reynolds In 1782 Romney met Emma Hart, the future Lady Hamilton, whom he painted over and over, as Joan of Arc, Circe, St Cecilia, the Magdalen, a bacchante, and in other roles During his last years he largely gave up portrait painting for ideal subjects, such as *Milton and His Daughters* and *Scene from "The Tempest"* (for Boydell's Shakespeare Gall) In 1799 his health gave way and he returned to Kendal, where his wife nursed him through his last years Romney's work is uneven, but his best portraits are ranked among the finest of the English school Particularly his portraits of women are famous for their grace and charm Much of his work is in private collections Well known are his portraits of Lady Craven, Lady Prescott and family, and Lady Hamilton as a bacchante (all National Gall , London) He is well represented in the American collections of Frick and J S Bache and in the Huntington Gallery, the Metropolitan Museum, and the National Gallery of Art, Washington, D C See biographies by William Hayley (1809), his son John Romney (1830), H E Maxwell (1902), Lord Ronald Gower (1904), and A B Chamberlain (1910).

Romney (rŭm'nē), officially **New Romney,** municipal borough (pop 1,786), Kent, England, in Romney Marsh SW of Folkestone It was formerly on the seacoast and was one of the CINQUE PORTS. Old Romney is a village farther inland Of several ancient churches, only the partly Norman Church of St Nicholas remains

Romney (rŏm'nē), trading town (pop. 2,013), co seat of Hampshire co , W Va., in the agricultural Eastern Panhandle, on the South Branch of the Potomac and S of Cumberland, Md.; founded 1762. The state schools for the deaf and blind are here. Ice Mt is near by.

Romney Marsh (rŭm'-), tract of pasture land, Kent, England, along the coast NE of Rye and SW of Folkestone It is known for the Romney Marsh sheep Romney is the leading town.

Romo, Dan *Rønø* (rŭm'ō'), island (39 sq mi ; pop 747), Denmark, in the North Sea, one of the North Frisian Islands. Mostly flat and sandy, it is important as a bathing resort.

Romorantin, Edict of see AMBOISE, CONSPIRACY OF

Romsdal (rōōms'dāl'), valley of the Rauma, a river of central Norway, in More og Romsdal co Piercing the sheer mountains of the DOVREFJELL, it is an ancient passage from the western coast to central and SE Norway, connected with the Gudbrandsdal by a pass A force of Scottish mercenaries who sought to join Gustavus II of Sweden during the Kalmar War was almost entirely massacred at Kringen, in the pass, by Norwegian peasants Many jagged peaks line the valley, especially the Vengetinder (6,549 ft), the Trolltinder (5,850 ft), and the Romsdalshorn (5,961 ft), their weird outlines have given rise to many legends The Rauma descends in several cataracts into the Romsdal Fjord, an arm of the Molde Fjord

Romsey (rŭm'zē), municipal borough (1931 pop 4,862, 1943 estimated pop. 5,779), Hampshire, England, near Southampton and on the Test The Church of St Mary and St Æthelflæd was part of a Benedictine convent founded c 907 by Edward the Elder

Romulo, Carlos Pena (rō'mŭlō, Span kar'lōs pā'na rō'mōolō), 1900-, Filipino statesman, b Manila, grad Univ of the Philippines, 1918, M A Columbia, 1921 He returned (1921) from the United States to Manila and became the head of a large Philippine newspaper syndicate When the Japanese invaded the Philippines, Romulo became (1941) a press aide to Gen Douglas MacArthur, Romulo's experiences in the defense of Bataan and Corregidor were recorded in his book, *I Saw the Fall of the Philippines* (1942) He was (1943) a member of Manuel Quezon's government in exile in the United States and served (1944) as resident commissioner of the Philippines in the United States After he became (1945) a delegate to the United Nations, he was elected (1949) president of the United Nations General Assembly He wrote *My Brother Americans* (1945)

Romulus (rŏm'ŭlus), in Roman legend, the founder of Rome He and his twin brother Remus were sons of MARS and Rhea Silvia, daughter of Numitor, king of Alba Longa Her uncle, Amulius, had usurped Numitor's throne and had forced her to become a Vestal Virgin Her infant sons he exposed in a basket on the Tiber A she-wolf suckled them, and the shepherd Faustulus found them and, with his wife, ACCA LARENTIA, reared them When they were grown, the brothers learned their true identity, slew Amulius, and restored Numitor to the throne They then set out to found a new city Though Romulus was chosen as the founder by an omen of birds, the brothers quarreled (one version of the legend says that Remus mockingly leaped over Romulus' new-built wall), and Remus was killed The traditional date of founding—from which Roman historians reckoned the history of the city—corresponds to 753 B C To get wives for his people Romulus led the rape of the Sabine women He also established the constitution of the city After disappearing in a thunderstorm, Romulus was worshiped thereafter as Quirinus

Romulus Augustulus (ôgŭs'tŭlus), d after 476, last Roman emperor of the West (475–76) He was the son of the general ORESTES, who proclaimed him emperor after deposing Julius Nepos He was captured and deposed by Odoacer, who granted him a pension and allowed him to retire to a villa near Naples which had once belonged to Lucullus

Ronan (rō'nun), town (pop 1,032), NW Mont , S of Flathead Lake, settled 1910, inc 1912 The well-irrigated farm and ranch area developed rapidly in the drought and depression years of the 1930s.

Roncesvalles (rōn"thāsvä'lyās), Fr *Roncevaux* (rōsuvō'), mountain pass in the Pyrenees, Navarre, Spain, between Pamplona and Saint-Jean-Pied-de-Port (France) Tradition has made it the scene of the death of the hero ROLAND

Ronceverte (rŏn'suvûrt), trade and rail city (pop 2,265), S W Va., on the Greenbrier and S of Lewisburg, in a farm and livestock area, settled c 1800 Organ Cave is near by

Ronda (rŏn'dä), city (pop 15,813), Málaga prov , S Spain, in Andalusia, beautifully situated above 2,000 ft in the mountains of Sierra de Ronda The old Moorish town, atop a hill, is separated from the lower new town by a deep gorge of the Guadalevín river There are Moorish walls, a gate, and a palace and Roman remains near by.

rondo (rŏn'dō, rŏndō'), instrumental musical form in which the opening section is repeated after each succeeding section containing contrasting thematic material The rondeau of French keyboard music of the 17th cent , the most frequently occurring form, was the predecessor of the 18th-century rondo, which became the usual concluding movement of the classical sonata. The usual plan of the classical rondo was ABACAB'A.

Rondout (rŏn'dout), early village, SE N.Y., on the west bank of the Hudson at the mouth of Rondout Creek. It is now part of KINGSTON.

ronin (rō'nĭn), in Japanese history, masterless SAMURAI. The ronin were usually men who for one reason or another were deprived of their place in the usual loyalty patterns of Japanese feudalism. The DAIMYO they had served might have fallen on evil days, or the conditions of service might have grown so bad that the samurai had to abandon his lord The ronin were knights errant or, in more mundane terms, soldiers of fortune, who were in demand in times of war but might become a burden on society in times of peace The story of the 47 ronin, which was used by Chikamatsu in composing an extremely popular drama, was an actual occurrence A feudal lord had come into disgrace and was compelled to commit suicide His properties were forfeit Compelled to avenge him, 47 of his followers, now ronin, assassinated the man responsible for his disgrace Though their loyalty was universally admired, the code compelled that they all commit suicide

Ronkonkoma, Lake (rŏngkŏng'kumu), central Long Island, SE N Y , SE of Smithtown It is a resort A replica of the Grotto of Our Lady of Lourdes was dedicated here in 1936

Ronne, Dan *Rønne* (rû'nu), town (pop 11,497), capital of Bornholm island, Denmark, on the west coast of the island It has ceramic manufactures and is a fishing port There are granite quarries near by Ronne dates from the 12th cent

Ronsard, Pierre de (pyĕr' du rōsär'), 1525–c 1585, French poet, leader of the PLÉIADE, which formed about him at the Collège de Coqueret (from 1547) Ronsard was a courtier all his life—page (1536), squire (1540), and finally poet royal (c 1563) He was handicapped by deafness He wrote an enormous number of poems, representing all the genres the Pléiade propagated sonnets after Petrarch, odes after Pindar and Horace, elegies, eclogues, and songs Nearly one possible theme is treated by Ronsard, especially love and patriotism Of his love poems perhaps the best appear in *Sonnets pour Hélène* (1578, Eng tr by Humbert Wolfe, 1934) Ronsard's most ambitious effort was *La Franciade* (1572), an unfinished epic Two long patriotic poems deploring the Wars of Religion, written 1562, are *Discours des misères de ce temps* and *Remontrances au peuple de France* Ronsard's reputation was long in eclipse, but since Sainte-Beuve he has taken his place as one of the greatest of French poets See George Wyndham, *Ronsard and the Pléiade* (1906), C H Page, *Songs & Sonnets of Pierre de Ronsard* (1924), Morris Bishop, *Ronsard, Prince of Poets* (1940), D B Wyndham Lewis, *Ronsard His Life and Times* (1944)

Röntgen, Wilhelm Conrad see ROENTGEN

Röntgen ray see X RAY

rood (rōōd), crucifix mounted above the entrance to the chancel and flanked by large figures of the Virgin and St John, an almost invariable feature in the 14th- and 15th-century European churches This group, usually carved in wood and painted and gilded, was in early examples supported upon a beam as wide as the chancel arch By the 15th cent the richly ornamental screen of wood or stone closing the chancel from the nave became the support for the cross and figures and was therefore termed rood screen The screen, built often as a narrow arcaded portico, supported an overhead platform or rood loft reached by a small stairway from the nave and providing access for illuminating and adorning the figures The rood loft, which sometimes had its own small altar, served also for a Palm Sunday ceremonial In England, as a result of the Reformation, many roods with their screens were destroyed, they are not part of the fittings for an Anglican church

Roodepoort-Maraisburg (rō'dupôrt-mä'rĭsbûrg, rōō'-), city (pop 72,034), W Transvaal, Union of South Africa It is on a railroad to Johannesburg Gold is mined near by and metal utensils are manufactured

Roodhouse, city (pop 2,557), W central Ill , SW of Springfield, inc 1881 It is a farm trade center with railroad shops

roof, overhead covering of a building with its framework support Various methods of construction, such as are suited to different climates, have diversified exterior and interior architectural effects A roof may be flat, e g , those built with enormous stone blocks in Egypt and Assyria and the modern roofs commonly employed for attached city dwellings, or it may be low or high pitched (a northern style) in GABLE, GAMBREL, MANSARD, or hip (having four sides sloping from a short ridge or center) form It may be of the lean-to type, as in the simplest shed or as for aisle or penthouse of a cathedral, it may achieve the dignity and aspiration expressed in DOME and SPIRE and embody such features as the dormer window, cupola, or minaret Pointed roof construction includes the tie-beam, trussed-rafter, collar-beam, and hammer-beam types. English churches and halls afford many examples of these various methods, some of which

have open-timber interiors of a highly decorative character. Steel has replaced timber in monumental construction. The simplest roof covering is the primitive thatch (of straw, palm leaves, or other fibers) used by the peasants of many lands Other finishing materials include wood (usually shingles), tile, slate, tin, lead, zinc, copper, felt, and tar A roof's ridge is the point where the rafters meet; its principals, the purlins, resting on center or side posts, support the rafters, a valley or trough is formed by the junction of two slopes (e g , when an ell joins the main structure) The overhang, or eaves, carry gutters or themselves drain water away and the walls and in chalet and bungalow are very wide The concave curve of Oriental roofs is said to have followed the graceful lines of a sagging tent The classic Greek roof of marble slabs upon timber framing was gently sloping, as in the pediment of the Parthenon Early Roman roofs also were timber framed (as in the basilicas), but vault and dome construction (as in the Pantheon) are prominent in later buildings The pointed arch and vaulting gave the slope to the Gothic roofs of Europe, while roofs in Renaissance Italy, except those with domes, were concealed, but France and Germany of this period emphasized the gable The stepped gables of Dutch and German roofs form a picturesque feature, and the cone-topped turrets of the steep French château roof are characteristic Finials, crockets, crestings, gable crosses, bosses, fantastic GARGOYLES, and sometimes the chimney pots form roof ornamentations, being particularly elaborate in Oriental and Gothic architecture

rook (rŏŏk), common European bird of the crow family It is slightly smaller than the American crow and has glossy purplish-black plumage and a bare space around the base of the bill It nests in large colonies It is very intelligent

Rooke, Sir George (rŏŏk), 1650–1709, English admiral He distinguished himself in the War of the Grand Alliance at the battle of La Hogue (1692), and by his good judgment he saved part of his convoy from a French attack off Cape St Vincent (1694) In the War of the Spanish Succession his expedition to Cádiz in 1702 was unsuccessful, but he destroyed the Spanish plate fleet off Vigo, captured Gibraltar (1704), and won over superior forces at Málaga (1704) See his journal for 1700–1702 (ed by Oscar Browning, 1897)

Rookwood pottery, American artware made in Cincinnati since 1880 and having an international reputation Its beauty lies in a range of full, rich colors, well-executed decoration, and superior glazes, both mat and lustrous In addition to the usual potter's mark, each piece is signed individually by the artist who modeled or painted it

Roon, Albrecht Theodor Emil, Graf von (äl'brĕkht tā'ōdōr ā'mēl graf fŏn rōn'), 1803–79, Prussian field marshal He adopted the cause of military reform, and from the time of his service under Prince William (later Emperor WILLIAM I) in the suppression of the revolution of 1849 in Baden, he insistently pleaded for the reorganization of the army In 1859 he was made minister of war, he retained that position until 1873 and was also minister of marine (1861–71) He would have accomplished little but for the hearty cooperation of BISMARCK, for whose appointment as premier Roon was largely responsible Roon instituted the three-year compulsory service and the organization of the civilian population into reserve corps He laid the groundwork for the brilliant success of Prussia in the Danish War (1864), Austro-Prussian War (1866), and the Franco-Prussian War (1870–71) His military books and his memoirs have been the subject of much study

Roos, Johann Heinrich (yō'hän hīn'rĭkh rōs'), 1631–85, German painter of animals and landscapes and etcher He was court painter to Elector Palatine Charles Louis He is represented in German galleries, and the New York Historical Society has two of his paintings His son **Philip Peter Roos,** 1657–1705, known as Rosa da Tivoli, also painted animals and landscapes Two of his paintings are *Sheep Destroyed by a Wolf* (Louvre) and *The Twelve Cascade* (Vienna)

Roosebeke (rō'zŭbā"kŭ), village (pop 428), East Flanders prov , Belgium, E of Oudenarde Here in 1382 the French under Oliver de Clisson defeated the Flemings under Philip van ARTEVELDE The battle restored the control of Louis de Mâle over his county of FLANDERS. The new official spelling is Rozebeke

Roosevelt, Eleanor (Anna Eleanor Roosevelt Roosevelt) (rō'zuvŭlt), 1884–, American humanitarian, b. New York city The daughter of Elliott Roosevelt, she was the niece of Theodore Roosevelt and a distant cousin of Franklin Delano Roosevelt. She was an active and able worker in social causes before she was married (1905) to her cousin Franklin Roosevelt, and she continued her interest in social betterment after her marriage and while bearing her husband five children After he was stricken (1920) with poliomyelitis, she took a more active interest in political issues As wife of the governor of New York and then as wife of the President, she played a leading part in women's organizations and was actively interested in encouraging youth movements, in promoting consumer welfare, in guaranteeing the rights of minorities, and in combating bad housing and unemployment In 1933 she held the first press conference ever held by a president's wife She had previously written much and in 1935 started a daily column, "My Day," syndicated in many newspapers She also for a time conducted (1940-41) a radio program, and she traveled far and wide, lecturing, observing conditions, and furthering causes Her vigor, speaking ability and charm won her many admirers, although she also had many detractors In the Second World War she was (1941–42) assistant director of the Office of Civilian Defense She also visited England (1942), the SW Pacific (1943), and the Caribbean (1944) In 1945 she was appointed a U S delegate to the United Nations, and in 1946 she was made chairman of Commission on Human Rights, a subsidiary of the Economic and Social Council Many of her magazine and book articles have been collected into volumes *This Is My Story* (1937) and *This I Remember* (1949) are autobiographical. See biography by Ruby Black (1940)

Roosevelt, Franklin Delano (dĕ'lunō), 1882–1945, 31st President of the United States, b Hyde Park, N Y Through both his father, James Roosevelt, and his mother, Sara Delano Roosevelt, he came of well-to-do, more or less patrician families He was a distant cousin of Theodore Roosevelt After schooling at Groton, Harvard (B A , 1904), and Columbia Univ School of Law (LL B , 1907), he began a career as a lawyer He had already married a distant cousin, a niece of Theodore Roosevelt, Eleanor Roosevelt, in 1905 His political career was launched when he was elected (1910) to the state senate There he became the leader of a group of insurgent Democrats who prevented the Tammany candidate, William F Sheean, from being chosen for the U S Senate He allied himself even more firmly with reform elements in the party by his vigorous campaign for Woodrow Wilson in the election of 1912 He was rewarded by appointment as Assistant Secretary of the Navy and served (1913–20) with competence and affability In 1920 he was named to run as vice presidential candidate with James M. Cox on the Democratic ticket that lost a bitter election The next year he was spending a vacation at the Roosevelt summer home on Campobello Island, New Brunswick, when he was stricken with poliomyelitis He was at first paralyzed from the waist down, but by unremitting effort he recovered partial use of his legs He found the waters at WARM SPRINGS, Ga., beneficial, and there he was to establish a foundation to help other victims of poliomyelitis To the end of his life he was somewhat crippled, but his vigor reasserted itself He had kept up his interest in politics, partly through the efforts of his wife, and his speech at the Democratic National Convention of 1928, when he nominated Alfred E Smith for the presidency, was a strong statement of liberal principle He reluctantly allowed Smith to persuade him to run for the governorship of New York Elected, he broadened the reform program Smith had initiated His program was one of state action for general welfare, and items were a farm-relief plan, a state power authority, regulation of public utilities, and old-age pensions The economic crash of 1929 soon brought a depression, against which the governor, advised by a little group of intellectuals called the BRAIN TRUST as well as by many other experts, undertook to establish vigorous relief At the same time he struck out at corruption in New York city politics, and an investigation brought the resignation of dapper Mayor James J WALKER. A nation, suffering greatly in the distress of its worst economic crisis, was looking for new leadership When Franklin Roosevelt was chosen by the Democratic party as its presidential candidate in 1932 to face the Republican Herbert C Hoover, whose administration had seen the beginning of the period of disaster and despair, Roosevelt was elected He came to the White House at the height of crisis, for the financial structure of the country was, or at least seemed to be, tottering Roosevelt promptly declared a general bank holiday With that act began a peaceful revolution in U S government The new President had visions not only of relieving the tension with emergency measures but of building a government that would protect the "little man" from the ravages of the economic system permanently His words were words of hope and vigor, his actions were prompt and drastic, The NEW DEAL that he was fashioning was far from being his alone, and his critics accused him of having a superfluity of advisers with "crackpot" schemes of social betterment Some of the Brain Trust accompanied him to Washington, and counselors such as Raymond Moley, Rexford Guy Tugwell, and Adolph A Berle, Jr , were at hand in the early years, as were the members of cabinet, including Henry A WALLACE, Harold L ICKES, Frances PERKINS (one of the first women to be high in government policy making), Cordell Hull, and James A Farley, and various others, notably Harry L Hopkins. Opinions and schemes varied, and in the center was the President himself, listening and choosing. There were no moments of inactivity Congress, stunned by the magnitude of the depression, surrendered much power to the President A series of measures set up governmental agencies to reorganize industry and agriculture under controls and to revive the economy by a vast expenditure of public money in "pump priming" The NATIONAL RECOVERY ADMINISTRATION, the AGRICULTURAL ADJUSTMENT ADMINISTRATION, and the PUBLIC WORKS ADMINISTRATION were all directed to the same general end Finance and banking were regulated by new laws, and in 1934 the gold standard was adjusted to the advantage of the debtor groups and to the detriment of the creditor groups Later the SECURITIES AND EXCHANGE COMMISSION was set up to halt the evils of speculation The hand of government in developing the natural resources of the country grew stronger The TENNESSEE VALLEY AUTHORITY ultimately challenged private utilities interest, as did the RURAL ELECTRIFICATION ADMINISTRATION later The Works Progress Administration (later the WORK PROJECTS ADMINISTRATION) was intended to offer work programs for the employment of those thrown out of work by the depression, while the legislation for SOCIAL SECURITY was a long-range plan for the future protection of the worker in unemployment, sickness, and old age This vast, many-pronged program was not undertaken without a great deal of friction, disorder, and waste There was dissension within the ranks of the President's advisers, and the process of a former counselor breaking from the group, denouncing the policies of the administration, and sometimes pouring acid words upon the President himself began early and became familiar The steady plunge of action, the building-up of the program, and the personality of Roosevelt himself offset early opposition His beautiful and persuasive radio voice, broadcast to the nation in intimate "fireside chats," his self-assured and reassuring bearing, his constant attention to the least (and most numerous) of the citizens held for him the mandate of the nation In 1936 he won, elected by a stupefying majority over his Republican opponent, Alfred M LANDON, who won the electoral votes of only two states The impetus of the reform had, however, begun to slow somewhat Though his admirers continued to shower their admiration on him, the opposition (generally conservative) turned more bitter toward "that man in the white house," who was a "traitor to his class" The enormous expenditures and staggering national budget, the disorderliness of some of the reforms, and the undeniable waste produced unpleasant reaction Quarrels and shifts among supporters in the government continued to have divisive effect The action of the Supreme Court in declaring a number of the New Deal measures invalid--notably those creating the National Recovery Administration and the Agricultural Adjustment Administration—rejoiced the opponents of Roosevelt and tended to reduce the pace of reform to a walk Roosevelt undertook to reorganize the court in 1937, but failed (see SUPREME COURT) He failed, too, in his attempt to "purge" members of Congress who had opposed New Deal measures, for most of those opponents were triumphant in the elections Nevertheless, the policies of social reform had been fixed in the government and were solidifying, while opposition forced some measures of restraint and slowing down The dynamic force of the administration continued, however, to be exerted and to impress foreign observers Roosevelt had become a world figure when he first dramatically attacked the depression His foreign policy featured at the start the "good neighbor" policy toward Latin America, which had already been foreshadowed by the preceding Republican administrations, and relations with the neighboring republics to the south became more cordial than they had ever been before and created a basis for "hemisphere solidarity" in the troubles that were to come By 1938 the international skies were already black, and as the power of the Axis nations grew, increased by the Munich Pact and by inaction, Roosevelt spoke out against aggression and international greed Until 1939 he appealed to Hitler and Mussolini for peaceful settlement, and even after war had begun in Europe negotiations with Japan went on, though the United States refused to recognize the conquest of Manchuria and decried the Second Chino-Japanese War Before war had actually come to Europe in 1939, Roosevelt had begun his move to make the United States the "arsenal of democracy." After fighting had begun, the program for building U S strength was speeded In the gloomy summer of 1940 after the fall of France and while Great Britain was being bombed in the "blitz," aid to Britain (permitted since relaxation of the Neutrality Act) was greatly increased. There was no secret as to where the sympathies of the government and the people of the United States lay How much effect the President himself had in building up opposition to the fascist nations it is impossible to say It is significant, however, that in the presidential election of 1940 there was no opposition between Republicans and Democrats on the issue of foreign

policy Roosevelt broke tradition in accepting the nomination for that year, since never before had a President run for a third term Opposition to him had built up, and some of his former associates were vocal in criticism John N Garner, who had been Vice President, was alienated, and the new vice presidential candidate was Henry A Wallace James A Farley, who had been prominent in managing the earlier campaigns, fell away John L Lewis, with his large labor following, bitterly denounced Roosevelt The Republican candidate, Wendell WILLKIE, had a far greater personal following than Roosevelt's earlier opponents Yet the President won—not so easily as before, but still definitively The mass of the people followed him The story of his third administration was the story of the Second World War The first peacetime selective service act now came into full force In Aug , 1941, Roosevelt met Prime Minister Winston Churchill at sea and drafted the ATLANTIC CHARTER The United States was being more and more aligned with Britain, while U S relations with Japan grew steadily worse through the summer and autumn Negotiations went on, and on Dec 6, 1941, Roosevelt addressed a personal peace message to Emperor Hirohito Already the process of Japanese war making was past recall On Dec 7, 1941, the Japanese attack on PEARL HARBOR plunged the United States into the war, and a startled and angry nation arose to fight Much later, accusations of responsibility for negligence at Pearl Harbor and even for starting the war were leveled at Roosevelt, just what responsibility he had, if any, cannot be determined There is no question, however, that he was responsible at least to a very large extent for the rapid growth of American strength, armament, and air power He was not only the active head of a nation at war but also a world leader against all that Adolf Hitler, Benito Mussolini, and Japanese militarism represented His diplomatic duties were heavy There was no conflict within the United States over foreign policy, and the election that occurred in wartime was again largely on domestic issues In 1944 Roosevelt, who had thrown his personal influence to having Harry S Truman rather than Wallace as a running mate, was triumphant over the Republican Thomas E Dewey The turn in the fortunes of war had already come, and the series of international conferences with Churchill (for whom Roosevelt seems to have had a warm personal friendship), Joseph Stalin, William Lyon Mackenzie King, Chiang Kai-shek and others (see CASABLANCA CONFERENCE, QUEBEC CONFERENCE, TEHRAN CONFERENCE; YALTA CONFERENCE) had turned gradually more to plans for the post-war world rather than war plans Roosevelt spoke eloquently for human freedom and labored to assure perpetual peace through the UNITED NATIONS Just what result the agreement at Yalta would ultimately have yielded if Roosevelt had stayed in command is a matter of debate, for not quite a month before Germany surrendered to the Allies Franklin Delano Roosevelt died suddenly on April 12, 1945 A shocked world mourned The man whose character and achievements are still hotly argued by his fervent admirers and his fierce detractors is buried on the family estate at Hyde Park—much of which he donated to the nation He was succeeded in the presidency by Harry S TRUMAN Franklin D Roosevelt and Eleanor Roosevelt had five children Ann Eleanor Roosevelt (married to Curtis Dall, then to John Boettiger, both marriages ending in divorce), James Roosevelt, Elliott Roosevelt, Franklin D Roosevelt, Jr , and John A Roosevelt All were much in the public eye Franklin D Roosevelt, Jr , was elected to the House of Representatives from New York in 1949, and James Roosevelt also has political prominence Franklin Delano Roosevelt's public addresses and papers for the years 1941–45 were published in 4 volumes in 1950 Others of his papers have been collected and published There are no unbiased accounts of Roosevelt Perhaps outstanding among friendly works are R E Sherwood, *Roosevelt and Hopkins* (1948) and Frances Perkins, *The Roosevelt I Knew* (1946), and outstanding among unfriendly works is J T Flynn, *The Roosevelt Myth* (1948) See also Donald P Geddes, ed , *Franklin Delano Roosevelt* (memorial volume, 1945), Alden Hatch, *Franklin D Roosevelt* (1947)

Roosevelt, Theodore, 1858–1919, 25th President of the United States (1901–9), b New York city, grad Harvard, 1880 Of a prosperous and distinguished family, Theodore Roosevelt was educated by private tutors and traveled widely in his youth His health had been delicate in childhood, and his determination to rebuild his strength later had a marked effect on his character After he graduated from Harvard, he studied law at Columbia His interest was drawn to politics and while serving (1881–84) in the New York state legislature as a Republican member, he strongly opposed the nomination of James G BLAINE for the U.S. presidency After this move failed, however, Roosevelt, in giving support to Blaine, lost much of his political backing Discouraged by this turn of events, and bereaved by the simultaneous deaths (1884) of his mother and his wife, Alice Hathaway, Roosevelt retired to his ranch in the Dakota Territory Though unsuccessful as a rancher, he gained in the West many of the picturesque mannerisms that complemented his positive personality Roosevelt returned (1886) to New York city and ran as the Republican candidate for mayor against Henry George and Abram S Hewitt, he came in third Nevertheless, he became increasingly important in Republican party politics Appointed (1889) by President Benjamin Harrison as a member of the Civil Service Commission, he prosecuted the duties of his office vigorously until he resigned in 1895 As head (1895–97) of the New York city police board, Roosevelt set out on a program of reform that alienated the more corrupt politicians He returned (1897) to Federal office as Assistant Secretary of the Navy under President William McKinley and worked toward putting the U S navy on war basis After the outbreak of the Spanish-American war, he resigned to organize, with Leonard Wood, the volunteer regiment which was to become famous as the ROUGH RIDERS The exploits of that troop gained much public notice, and Roosevelt was a popular hero when he returned from Cuba. "Boss" Thomas C Platt supported him as Republican candidate for governor, but after Roosevelt's inauguration, a half-concealed political battle went on between the two, mainly because Roosevelt imposed taxes on corporation finances It was at least partially to "shelve" Roosevelt that Platt backed his nomination as Vice President in 1900 Roosevelt ran with William McKinley He served as Vice President only a few months McKinley was assassinated, and Roosevelt became (Sept 14, 1901) President at the age of 42 His inexhaustible vitality and enthusiasm, reinforced by his ability to dramatize himself and to coin vivid phrases, won him a large personal following and immediately made him popular His intellectual interests, moreover, did much to elevate the tone of American politics On the other hand, he received quite a bit of criticism for his capacity for self-deception and for his strong inclination toward militarism and jingoistic patriotism He recognized, from the outset of his first administration, the growing demand for reform in America that was apparent in the muckraking criticism From 1902 he set about "trust busting" under terms of the moribund Sherman Anti-Trust Act, directed the successful antitrust suit against the Northern Securities Company, and led the attack on a number of other large trusts In seven and one half years in office he brought about 25 indictments and 18 bills in equity against trusts Roosevelt's threat to intervene in the anthracite coal strike of 1902 caused the operators and the miners to accept arbitration In his first term he also fathered important legislation, e g , the Reclamation Act of 1902 (the Newlands Act) which provided for the establishment of Federal irrigation projects, the bill (1903) setting up the U S Department of Commerce and Labor, and the Elkins Act of 1903 (see INTERSTATE COMMERCE COMMISSION) which forbade railroad company rebates on freight rates Roosevelt's vigorous championship of the rights of the "little man" captured the American imagination, and when he ran for reelection in 1904, he defeated Alton B Parker, the Democratic presidential candidate, by 196 electoral votes In his second administration, with Charles W Fairbanks as Vice President, Roosevelt continued his campaign against the "malefactors of great wealth " He directed the passage (1906) of the Hepburn Act, which revitalized the Interstate Commerce Commission and authorized greater governmental authority over railroads In 1906 T R also backed the passage of the Meat Inspection Act and the Pure Food and Drug Act A firm believer in the conservation of national resources, he followed with determination a policy of preventing the exploitation of timber and mineral supplies by private interests and added many millions of acres of land to public ownership Yet his progressive reforms were not so much directed at the abolition of "big business" as its regulation—an attitude shown by his tacit approval of the absorption of the Tennessee Coal and Iron Company by United States Steel in the Panic of 1907 Roosevelt, by insisting on government right to control business, increased the power of the President by decisive actions—which were equally manifest in his foreign policy Ably backed by John Hay and Elihu Root, he set out to solidify the world position won by the Spanish-American War. His desire to enhance the prestige and influence of the United States brought him the hatred of anti-imperialist groups in the United States. Most notable, perhaps, was his Caribbean policy In the VENEZUELA CLAIMS dispute he advanced the theory—known as the Roosevelt corollary to the Monroe Doctrine—that the United States had direct interest and some police power in the foreign affairs of Latin American countries This "big stick" policy awoke great indignation in Latin America Even more drastic was his action in the matter of the PANAMA CANAL. After the Colombian senate refused to ratify the proposed Hay-Herrán treaty, the U S navy was used (1903) to make the revolution in Panama against Colombia successful The new republic of Panama was immediately recognized, and the Panama Canal begun In 1905 the Dominican Republic, deeply in debt to European bond holders and threatened by intervention by European powers, was persuaded to accept a form of U S control in the appointment of an American receiver of customs Thus, the way was prepared for the American "dollar diplomacy" to gain headway in the Caribbean area Elsewhere the foreign policies of Roosevelt were active He and Hay sought to keep the OPEN DOOR in China. Roosevelt mediated to end the Russo-Japanese War, and the peace conference met at Portsmouth Navy Yard in 1904. He was an ardent advocate of the Hague Tribunal and it was through his offices that the Algeciras Conference (see MOROCCO) was called in 1906 He was awarded the 1906 Nobel Peace Prize In 1907 his gentleman's agreement with Japan, to discourage emigration of Japanese laborers to the United States, eased the tensions caused by California's anti-Japanese legislation He practically dictated the nomination of his presidential successor, William Howard TAFT After an African big-game expedition and a triumphant tour of European cities, "Teddy" Roosevelt returned (1910) to the United States and joined the campaign for the direct primary in New York President Taft had alienated the Progressive Republicans headed by Robert M La Follette, and the Republican party in 1912 was threatened with a split over presidential nomination The conservatives, however, controlled the Republican convention of 1912 and Taft was nominated Roosevelt led his followers out of the convention, organized the PROGRESSIVE PARTY—also called the "Bull Moose" party—and ran for President on this third-party ticket He ran second in the three-cornered presidential election of 1912 which made Woodrow WILSON President Forced into retirement, Roosevelt denounced the policies of Wilson, whose attempt to secure a treaty awarding Colombia damages for the loss of Panama particularly enraged T R After the outbreak of the First World War, he attacked Wilson's neutrality policy and after the United States declared war, he pleaded vainly to be allowed to raise and command a volunteer force He died soon after the end of the First World War Throughout his busy career he had found time not only for hunting and exploring expeditions—one of the most important of which was the exploration (1913) of the River of Doubt (now called the Roosevelt river or Rio Teodoro) in the Amazon jungles—but also for writing a great number of books These deal with history, hunting, wildlife, and politics Among them are *The Naval War of 1812* (1882), biographies of Thomas H Benton (1887) and Gouverneur Morris (1888), *The Winning of the West* (4 vols , 1889–96), *African Game Trails* (1910), *The New Nationalism* (1910), *Progressive Principles* (1913), *Through the Brazilian Wilderness* (1914), and his important autobiography (1913) His daughter by his first wife, Alice Lee Roosevelt, married Nicholas Longworth in the White House, "Princess Alice" by her forthright personality, unconventional ways, and able tongue attracted much notice There were five children of his second marriage—Theodore Roosevelt, Jr , Kermit Roosevelt, Archibald Bulloch Roosevelt, Ethel Carow Roosevelt (Mrs Richard Derby), and Quentin Roosevelt Quentin was killed in the First World War, Theodore, Jr , and Kermit both died in active service in the Second World War See the biographies by J B Bishop (1920), Henry F Pringle (1931), W F McCaleb (1931) and A F Harlow (1943), Tyler Dennett, *Roosevelt and the Russo-Japanese War* (1925), D C Hill, *Roosevelt and the Caribbean* (1927), T A Bailey, *Theodore Roosevelt and the Japanese-American Crises* (1935), G C O'Gara, *Theodore Roosevelt and the Rise of the Modern Navy* (1943), G E Mowry, *Theodore Roosevelt and the Progressive Movement* (1946)

Roosevelt 1 Borough, N J see HIGHTSTOWN 2 [for Theodore Roosevelt] City (pop 1,264), NE Utah, E of Provo, settled 1908, inc 1913 It is a farm and ranch center in the Uintah Basin, S of the Uinta Mts Moon Lake is to the northwest, and some lands are irrigated by the Moon Lake project

Roosevelt, river, c 400 mi long, W Brazil, rising in E Guaporé territory It flows N across NW Mato Grosso and SE Amazonas into the Rio Aripuañia, a tributary of the Madeira. It was called the River of Doubt (Rio da Dúvida) until it was explored by Theodore Roosevelt in 1913 Renamed in his honor, it is also called Rio Teodoro The lower course of the Aripuañia is sometimes also called the Roosevelt See Theodore Roosevelt, *Through the Brazilian Wilderness* (1914)

Root, Elihu, 1845–1937, American statesman, b Clinton, Oneida co , N Y., grad Hamilton College, 1864, and New York Univ law school, 1867 He practiced law in New York city, became prominent in Republican politics, and was appointed

(1883) district attorney of the southern district of New York He soon (1885) returned to his private practice, in which he gained distinction as a corporation lawyer As U S Secretary of War (1899–1904) under William McKinley and Theodore Roosevelt, Root not only improved the efficiency of the War Dept, made drastic reforms in the organization of the army, and established the Army War College, but also helped direct the U S policies in Cuba and in the Philippines He became Secretary of State under Roosevelt in 1905, serving until 1909 He improved relations with Latin America somewhat after much criticism had been leveled at U S activities in Panama, and he brought Japan to confirm the Open Door policy in China by the Root-Takahira Agreement (1908) His great interest was in forwarding international organization and world peace He was reluctant to run for public office—partly, perhaps, because his opponents made much of his having been defense attorney for William M Tweed in 1873—though he did accept appointment in 1909 as U S Senator from New York and served until 1915 In 1912 he was chairman of the Republican national convention, and in the break between Roosevelt and William H Taft adhered to the conservative Taft faction He was a member of the Hague Tribunal (Permanent Court of Arbitration) and was prominent (1910) in the North Atlantic Coast Fisheries Arbitration His reputation as one of the greatest of internationalists was enhanced when he received the 1912 Nobel Peace Prize He took part in the preliminary planning for the League of Nations, helped to bring the World Court (Permanent Court of International Justice) into existence, and was prominent in work for international peace See biography by Philip C Jessup (1938)

Root, George Frederick, 1820–95, American composer, b Sheffield, Mass He taught at Lowell Mason's Boston Academy of Music and in various schools in New York He wrote gospel songs and composed sentimental ballads to Fanny Crosby's lyrics, but best known were his Civil War songs *The Battle Cry of Freedom* and *Tramp, Tramp, Tramp*

Root, John Wellborn, 1850–91, American architect, b Lumpkin, Ga, studied at Oxford, grad Univ of the City of New York (later New York Univ), 1869 He worked in New York with James Renwick and became a partner of D H Burnham in Chicago The firm created the modern type of highly organized architectural office suited to the planning of metropolitan buildings, were pioneers in the development of the steel-frame office building, and won international attention by their planning of the World's Columbian Exposition, Chicago, 1893 Root developed a type of ornament, based upon Romanesque design, which later was to be further developed by Louis Henry Sullivan

root, in botany, the descending axis of a plant, as contrasted with the stem, the ascending axis In the growing plant it is usually underground, but may grow in water or in the air The function of roots is to absorb water and chemical elements from the soil for nutrition and to stabilize the plant Young roots usually have root hairs (cellular projections) which increase the surface for absorption The long main root, the tap root, characteristic of most trees and of many other plants, is edible in the carrot, parsnip, radish, and other root crops Plants are classed by their roots as annual, biennial, or perennial, according to their length of life The bulb, corm, rhizome, and tuber, although they commonly grow partly or entirely underground, are not roots but stem structures A plant that does not root in the soil is known as an air plant or epiphyte The Indians used the roots of many plants for food Those of the Great Basin area depended so much on edible roots for their food supply that they became known as Digger Indians See Vernon Quinn, *Roots Their Place in Life and Legend* (1938)

root, in mathematics If a quantity is multiplied by itself some number of times, the product is a power of the quantity multiplied, which is a root The product of 2x2x2x2 is 16 Since the factor 2 is used four times, 2 is the fourth root of 16, and 16 is the fourth power of 2, or 2 raised to the fourth power. The second root is called the square root, or g, the square root of 16 is 4 The third root is called the cube root the cube root of 64 is 4

root crop, plant cultivated chiefly for its edible roots, e g, the beet, turnip, mangel-wurzel, carrot, and parsnip The term is often used to distinguish such crops from field crops All root crops have a large water content and grow best in deep soil and during cool weather Their harvesting and handling require more handwork than do cereal crops Because they require thorough cultivation of the soil for successful growing, they are often desirable in a rotation of crops—beets and turnips being most frequently so used. Root crops, especially beets, turnips, and carrots, are grown also as food for livestock.

rootstock. see RHIZOME.

Roper, Daniel Calhoun, 1867–1943, U S government official, b Marlboro co, S C, grad Trinity College (now Duke Univ), 1888. He studied law and held many clerkships on Congressional committees Roper was First Assistant Postmaster General (1913–16) and Commissioner of Internal Revenue (1917–20) in the Wilson administration Under President F D Roosevelt, he served as Secretary of Commerce (1933–38) and as minister to Canada (1939) With F H Lovette he wrote *Fifty Years of Public Life* (1941)

Roper, Margaret, 1505–44, English woman of learning, educated by her father, Sir Thomas More She is remembered as much for her sweet disposition and filial devotion as for her learning It is said that, after her father's execution, she secured his head and preserved it until her own death This story, probably untrue, has been often repeated and finds an echo in Tennyson's *Dream of Fair Women* Margaret's husband, **William Roper,** 1496–1578, was the author of *The Life, Arraignement, and Death of That Mirrour of All True Honour and Vertue, Syr Thomas More* (Paris, 1626), an English biographical classic

Rops, Félicien (fālēsyĕ' rôps'), 1833–98, Belgian painter, etcher, and lithographer, of Hungarian descent He was first known through drawings published in a student publication of the Univ of Brussels In 1857 he founded a satirical journal, *Uylenspiegel*, for which he made lithographs and caricatures From c 1862 he lived principally in Paris and became noted as an illustrator of unusual imagination and an artist of great technical skill He illustrated the poems of Baudelaire His etchings, of which there are several hundred, include such series as the *Sataniques* and the *Album of 100 Sketches* He also made many lithographs and water colors

roque see CROQUET

Roquefort cheese (rōk'furt), semihard, unpressed rennet cheese Its distinctive flavor and greenish-blue mottled appearance are produced by a penicillium mold added to the unheated curds The cheese is cured in the limestone caves around Roquefort, Aveyron dept, S France First made over six centuries ago from the milk of ewes, the cheese is now produced also from cow's milk The Roquefort-type cheese manufactured in the United States is known as blue cheese

Roraima (rōrē'mə), mountain, 9,219 ft high, at the junction of the boundaries of Brazil, British Guiana, and Venezuela A giant table mountain, it is the highest point in the Guiana Highlands

Rorer, Sarah Tyson, 1849–1937, American lecturer, writer, and teacher of domestic science and cookery, b Richboro, Bucks co, Pa In 1884 she established the Philadelphia School of Domestic Science and remained until 1902 as principal She edited *Table Talk* (1886–92) and *Household News* (1893–97) and then became domestic editor of the *Ladies' Home Journal* Among her many publications are *Mrs Rorer's New Cook Book* (1902) and *Diet for the Sick* (1914)

Roros, Nor *Røros* (rû'rōs), village (pop 2,556) Sor-Trondelag co, E Norway The copper mines in the vicinity, opened in 1644, are among the most important in Norway The copper ore, mined and smelted by electricity from waterfalls near by, is shipped to Trondheim for export

Rorschach (rōr'shākh), town (pop 10,591), St Gall canton, Switzerland on the southwest shore of the Lake of Constance Artificial-silk textiles are made

Rorschach Test see MENTAL TESTS

Rosa, Salvator (salvätōr' rō'zä), 1615–73, Italian landscape, historical, and portrait painter of the Neapolitan school, as well as etcher and poet For several years he wandered about the wild regions of the Apennines and the shores of S Italy, sketching the mountainous landscapes and the shepherds, bandits, and seamen that appear in many of his most characteristic paintings In 1635 he went to Rome, where he established his reputation with his painting *Prometheus* (Corsini Palace, Rome) At the invitation of the grand duke, he moved (1640) to Florence, where he worked under the patronage of the Medici, returning to Rome in 1649 Salvator Rosa is best known for his spirited battle pieces and for his landscapes, but he also painted admirable portraits and occasionally a fine marine, such as the large *Coast Scene* (Colonna Palace, Rome) His work is characterized by grandeur of design, vigorous execution, and effective chiaroscuro Well-known examples are *Conspiracy of Catalina* and a marine (Pitti Palace, Florence), self-portrait (Uffizi), *Mercury and the Dishonest Woodman* and *Landscape with Figures* (National Gall, London), *St Paul in the Desert* (Milan), *The Shade of Samuel Appearing to Saul* and a battle piece (Louvre) *Sisyphus*, a fine battle piece, and *Christ and the Doctors* (Naples), and a battle piece and a self-portrait (Metropolitan Mus) He also produced vigorous etchings after his own designs and a number of well-known satiric poems, treating of *music, poetry, painting, war*, and other subjects See biography by Lady Sydney Morgan (1824).

Rosa, Monte (mōn"tā rō'zä), mountain group of the Pennine Alps, on the Swiss-Italian border Its highest peak, the Dufourspitze (dūfôr'shpĭ"tsü), 15,217 ft, is also the highest point in Switzerland.

Rosalie, Fort: see NATCHEZ

Rosamond (rō'zumŭnd), fl c 570, wife of the Lombard king Alboin The daughter of King Kunimund of the Gepidae, she was taken captive by Alboin, who had defeated her father and slain him Forced by Alboin to drink out of a cup fashioned from her father's skull, she had him murdered by two of his own courtiers and took refuge with the Byzantine prefect at Ravenna Having married one of her fellow conspirators, Helmechis, she sought to rid herself of him in order to marry the prefect, Longinus She offered Helmechis a poisoned drink, of which he drained half and forced her to swallow the remainder Her story, which has been neither confirmed nor disproved by historical research, is the subject of two tragedies—Swinburne's *Rosamund* and Alfieri's *Rosmunda*

Rosamond, d 1176?, mistress of Henry II of England, who was known as the Fair Rosamond She was the daughter of Walter de Clifford Henry II openly acknowledged his connection with Rosamond (c 1174), after he had imprisoned his wife, Eleanor of Aquitaine A considerable body of legendary material concerning Rosamond was written by the medieval chroniclers but is incapable of proof The best known of these stories tell how Queen Eleanor murdered Rosamond by poison, stabbing, or beheading

Rosario (rôsär'yō), city (1944 estimated pop 522,403), Santa Fe prov, E central Argentina, a port on the Paraná river The second largest city of Argentina, it is on the eastern margin of the Pampa and is primarily the import and export center for the central and northern provinces The chief exports are wheat and other grains, flaxseed, sugar, meat and meat products, hides, wool, and quebracho Although sugar refining and flour milling are the principal industries, there are also large meat-processing plants Rosario is the terminus of several railroads and has splendid port facilities Made the port of the Argentine confederation by Justo José de Urquiza in the 1850s, it grew mainly after 1870 with the rapid development of the productive Pampa

rosary (rō'zurē) [rose garden], prayer of Roman Catholics, in which beads are used as counters It was formerly called the chaplet The term, applied also to the beads, is extended to Moslem and Buddhist prayers which use beads The rosary is a series of 15 meditations on events (mysteries) in the lives of Jesus and Mary The joyful mysteries are (Luke 1–2) the Annunciation, the Visitation, the birth of Jesus, the Purification of the Virgin, and the finding of the child Jesus among the doctors The sorrowful mysteries are (Mat 26–27) the agony of Jesus in the garden, His scourging, the crowning with thorns, the carrying of the Cross, and the Crucifixion The glorious mysteries are the Resurrection (Luke 24), the Ascension (Acts 1 1–11), the descent of the Holy Ghost (Acts 2), the assumption of the Virgin, and her coronation as Queen of Heaven As one dwells on a mystery in thought one recites prayers—the Lord's Prayer once, Hail Mary (Ave Maria) 10 times, and Glory Be to the Father (Gloria Patri) once Count is kept by slipping beads though the fingers, the beads have no other significance The usual string has five sets of 10 beads (decades), between the decades a single bead is set apart, for the Glory of one mystery and the Our Father of the next There is a pendant with crucifix and beads for introductory prayers The rosary is often said in common, as in churches and families, but it remains an individual's prayer Of Christian private systems of prayer it is perhaps the most used, this popularity is often ascribed to the combination of simplicity of method with solidity of subject matter It has been in use some 600 years There is a feast of the rosary, Oct 7, the anniversary of the victory of Lepanto

Rosas, Juan Manuel de (hwän' manwĕl' dā rô's ās), 1793–1877, Argentine dictator, governor of Buenos Aires prov (1829–32, 1835–52) As a boy he served under Jacques de Liniers against the British invaders of the Río de la Plata (1806–7), but most of his youth was spent in the cattle country, where he laid the foundations of his fortune through large-scale ranching In 1820 he began his political career by leading his well-trained gaucho troops in support of the conservatives and federalism, and after the deposition and execution of Manuel Dorrego (1828) he became the federalist leader In conjunction with Estanislao Lopez, Rosas defeated Juan Lavalle (April, 1829), thereby increasing his prestige, and soon he became governor of Buenos Aires (1829) Aided by López and Quiroga, he destroyed, temporarily and with sanguinary thoroughness, the unitarian cause He surrendered office in 1832, but maintained his prestige by a successful expedition against Indians In 1835 he again became governor, by machinations and by agreements with other provincial chiefs, he soon assumed the dictatorship of most of Argentina His power was absolute and his government at times complete tyranny He instituted a régime of terror, he was assisted by spies, servile propagandists, and the *Mazorca* (a secret political society which degenerated into a band of assassins) Few intervals of tranquillity occurred under his dictatorship.

Successive and continuous revolutions were organized against him, secret revolutionary groups were formed, and his conduct of foreign affairs incurred the hostility of foreign nations Argentina was involved with the United States and England in a dispute over the FALKLAND ISLANDS Rosas's ambition led him to interfere in Uruguay, refuge of Argentine exiles, where he supported Manuel ORIBE His suspected designs of reducing Paraguay and Uruguay to dependent Argentine states increased ill-feeling with France and England Argentina was blockaded by France from 1838 to 1840 and by both England and France from 1845 to 1850. Brazil also became apprehensive of Rosas's imperialistic aspirations These foreign difficulties, although they furnished Rosas patriotic support, greatly injured Argentine business and commerce Resentment against the political and economic dominance of Buenos Aires at length resulted in the last and successful revolution against Rosas In 1851, Justo José de URQUIZA, governor of Entre Rios and a lieutenant of Rosas, rose in revolt Aided by Brazil and Uruguay, Urquiza crushed the tyrant's army at Monte Caseros (Feb 3, 1852), and the dictator fled to England, where he lived in exile until his death Rosas, by dominating the provinces and by subjugating the provincial *caudillos*, helped bring about the unification of Argentina

Rosas, Juan Martínez de see MARTÍNEZ DE ROSAS, JUAN

Roscelin (rŏ'sulĭn), fl 1092–1119, scholastic philosopher He is also called Roscellinus, Jean Roscelin, and Johannes Roscellinus He was a canon at Compiegne when in 1092 he was ordered by the Synod of Soissons to recant his doctrines concerning the Trinity He recanted and fled to England, but later returned to France He was an opponent of Anselm and a teacher of Abelard, with whom he later had a violent quarrel A letter answering Abelard's attack is the only writing of Roscelin which has been preserved Roscelin has often been called the originator of nominalism He was certainly opposed to the realists, though his own doctrines are somewhat obscure. That he was, strictly speaking, a tritheist (one who teaches that the three Persons of the Trinity are distinct individuals) has also been questioned He seems to have considered the separate persons as separate beings, having a single will and power

Roscher, Wilhelm (vĭl'hĕlm rō'shur), 1817–94, German economist Criticizing classical economic theorists, he founded the historical school of economics His chief work is *System der Volkswirtschaft* (5 vols, 1854–94, Eng tr of 13th ed, *Principles of Political Economy*, 1878)

Roscius, Quintus (kwĭn'tŭs rō'shus), c 126 B C –62 B C., Roman actor Born a slave at Solonium, he became the greatest actor of his time From the dictator Sulla, Roscius received the honor of the gold ring signifying equestrian rank In a lawsuit Cicero, whom he had taught elocution, defended him by an extant oration, *Pro Q Roscio Comoedo* In British drama the appellation "young Roscius" was bestowed upon William Henry West BETTY, and actors of distinction have often been called the "new Roscius"

Roscoe, Sir Henry Enfield (rŏ'skō), 1833–1915, English chemist He was professor (1857–87) at Owens College, Manchester In 1884 he was knighted He is known for his work, with R W Bunsen, in photochemistry and for his study and analysis of vanadium compounds and his isolation of the metal He wrote two standard works, *Elementary Chemistry* (1866) and, with Carl Schorlemmer, *A Treatise on Chemistry* (3 vols, 1877–84) See his autobiography (1906), study by T E Thorpe (1916).

Roscoe, William, 1753–1831, English historian and author. He was called to the bar in 1774 and later, as a member of Parliament, fought against the slave trade (1806) *The Life of Lorenzo de' Medici* (1795), his principal historical work, received praise, but his *Life of Leo X* (1805) was severely criticized In 1806 he contributed a children's classic, *The Butterfly's Ball and the Grasshopper's Feast*, to the *Gentleman's Magazine* See biographies by C S Jones (1931) and G W Matthews (1931)

Roscoe. 1 Borough (pop 1,372), SW Pa, on the Monongahela and S of Pittsburgh, inc 1892 **2** City (pop 1,166), W Texas, near Sweetwater, inc 1907 It has railroad shops, grain elevators, and cotton gins

Roscommon, Wentworth Dillon, 4th earl of (rŏskŏ'mun), 1633?–1685, English poet and scholar, b Ireland One of the first to praise Milton's genius, he himself made a blank-verse translation (1680) of Horace's *Ars poetica* and wrote an *Essay on Translated Verse* (1684)

Roscommon (rŏskŏ'mun), inland county (951 sq mi, pop 72,510), N central Ireland, in Connaught The county town is Roscommon A part of the central plain of Ireland, the region is low-lying and contains many lakes (Lough Allen and Lough Ree) and bogs. The River Shannon, which forms the eastern border, and the Suck, which borders the county on the west, are the principal rivers It is an agricultural county, chiefly pasturing cattle and sheep Roscommon was organized as a shire with its present boundaries in 1579.

Roscommon, town (pop. 2,038), county town of Co. Roscommon, Ireland It has a Dominican priory and a castle, both dating from the 13th cent

Rose, Gustav (gōōs'täf rō'zŭ), 1798–1873, German mineralogist He served as professor at the Univ of Berlin from 1839 and as director of the Royal Mineralogical Museum from 1859. Noted especially as a crystallographer, he advanced the scientific study of rocks His brother, **Heinrich Rose** (hīn'rĭkh), 1795–1864, an analytical chemist, was professor at the Univ of Berlin from 1835 He demonstrated (1844) that niobium (columbium) and tantalum are different elements

Rose, Sir John, 1820–88, Canadian lawyer and politician, b. Scotland. He went to Canada in 1836, was called (1842) to the bar of Lower Canada, and became a noted lawyer in Montreal In the Macdonald-Cartier administration, he was appointed (1857) solicitor general for Lower Canada and (1858) minister of public works He was a delegate to the conference held at London in 1866–67, at which Canadian confederation measures were framed, and in 1868, after the resignation of Sir Alexander Galt, Rose became minister of finance for the dominion He resigned in 1869 and went to England to live and was created baronet in 1870

Rose, John Holland, 1855–1942, English historian Educated at Manchester and Cambridge universities, he was a reader in history (1911–19) at Cambridge and professor of naval history there from 1919 until his retirement in 1933 An authority on the Napoleonic era, he was noted for careful use of archival materials and corrected old erroneous interpretations His *Life of Napoleon I* (2 vols, 1902) is masterly His other historical works include *The Development of the European Nations, 1870–1900* (1905, 6th rev ed, 1922, bringing the account to 1921) and *Nationality in Modern History* (1916) He was one of the editors of *The Cambridge History of the British Empire* and contributed to other similar works

Rose, Joseph Nelson, 1862–1928, American botanist, b. near Liberty, Ind, grad Wabash College, 1885 He was associated (1894–1928) with the U S National Museum and was research associate (1912 23) of the Carnegie Institution, both in Washington, D.C He made a special study of cacti, several genera being named for him Besides numerous scientific papers, he wrote *Notes on Useful Plants of Mexico* (1899) and *Monograph of North American Umbelliferae* (1901) and collaborated in other books

Rose, Mary Swartz, 1874–1941, American nutrition expert, b Newark, Ohio, grad Teachers College, Columbia (B S, 1906), Ph D Yale, 1909. A teacher from 1899, she joined the faculty of Teachers College in 1909 and became professor in 1921 She was a director (1918–19) of the Bureau of Conservation of the Federal Food Board and of the New York state food commission Her writings include *A Laboratory Handbook for Dietetics* (1912, rev ed, 1937), *Feeding the Family* (1916, rev ed, 1940), *The Foundations of Nutrition* (1927, rev ed, 1938), and *Teaching Nutrition to Boys and Girls* (1932)

rose, wild and cultivated plant, native to the Northern Hemisphere but known and grown all over the world in many hundreds of varieties The blossoms may be single or double, in white, yellow, and many shades of pink and red, and usually fragrant The thorny plant ranges in size from a tiny rock-garden form to a spreading, climbing vine The foliage is often fragrant, as in the European SWEET BRIER The rose has been a favorite flower in many lands since prehistoric times It appears in the earliest art, poetry, and tradition It has been used in innumerable ways in decoration In ancient times it was used medicinally—Pliny lists 32 remedies made of its petals and leaves. Formerly it was eaten in salads and conserves. It was sacred to Aphrodite and was a favorite flower of the Romans, who spread its culture wherever their armies conquered Among the old species are the damask rose and the cabbage or hundred-leaved rose, cultivated in the Old World for ATTAR OF ROSES The famous roses of England include the white rose that was the emblem of the house of York and the red rose of the house of Lancaster in the Wars of the Roses, as well as the variegated red and white rose (now called the York and Lancaster) which was the device of the Tudors because it united the houses of York and Lancaster The RAMBLER, tea, and hybrid tea roses are of more recent origin, the result of modern rose culture which really began when the East India Company's ships brought new everblooming or monthly roses from the Orient The rose is the emblem of England and the flower of New York state, the wild rose, of Iowa, the prairie rose, of North Dakota, and the American Beauty, of the District of Columbia Rose shows are held annually in many cities, and rose carnivals in several, rose gardens are often important parts of civic parks and private gardens Although roses are easy to grow in most soils, many varieties require careful annual pruning and constant spraying against disease and insect pests during the growing season. See the *American Rose Annual*, issued by the American Rose Society, E. A. Bunyard, *Old Garden Roses* (1937); J. H McFarland, *Modern Roses* (3d ed., 1947); R. C. Allen, *Roses for Every Garden* (1948).

Roseau (rō'sō, rōzō'), village (pop 1,775), co. seat of Roseau co., NW Minn., near the Canadian line W of Lake of the Woods It is a port of entry and a trade and shipping center for a farm area

Rosebery, Archibald Philip Primrose, 5th **earl of** (rōz'bŭrē), 1847–1929, English statesman. He succeeded his grandfather as earl in 1868. Rosebery was (1881–83) an undersecretary for home affairs and held the position of foreign secretary under William Gladstone in 1886 and from 1892 to 1894 In the latter office he advocated a form of imperial federation In 1894 he succeeded Gladstone as prime minister but was forced to resign in 1895 because of a split in the support of the Liberal party He became the leader of the Liberal Imperialist division of the party, but retired from politics in 1905 when Henry Campbell-Bannerman was chosen as Liberal prime minister He wrote a number of historical monographs, including *William Pitt* (1891), *Sir Robert Peel* (1899), *Napoleon* (1900), *Oliver Cromwell* (1900), and *Chatham* (1910) See biography by his son-in-law, R O A. Crewe-Milnes, 1st marquess of Crewe (1931)

Rosebud, city (pop 1,842), E central Texas, S of Waco, in a farming area, settled 1890, inc 1906

Roselle Park, borough (pop 9,661), NE N J., near Roselle, inc 1901

rose mallow · see HIBISCUS.

rosemary (rōz'mârʺē) [ultimately from Latin, =dew of the sea], widely cultivated evergreen shrub (*Rosmarinus officinalis*) of the mint family, fairly hardy and native to the Mediterranean region It has small light blue flowers The aromatic leaves, whitish beneath, are used for seasoning, and the oil is used in perfume and medicine. Rosemary from ancient times has been regarded as a token of constancy and remembrance. In *Hamlet* (IV 5) Ophelia says, "There's rosemary, that's for remembrance." There is a prostrate variety.

Rosemont, village, Montgomery co, SE Pa, seat of Rosemont College (Catholic; for women; 1921).

rose moss: see PORTULACA.

Rosenau, Milton Joseph (rō'zənou), 1869–1946, American sanitarian, b Philadelphia, M D Univ of Pennsylvania, 1889 He served in the U S Public Health Service as surgeon (1890–1909) and as member of the national health council (from 1929). He was professor of preventive medicine and hygiene at Harvard (1909–35) and director of the division of public health, Univ of North Carolina (from 1936) He wrote many works in his field

Rosenberg, Alfred (äl'frät rō'zənbĕrk), 1893–1946, German National Socialist leader He was born in Reval (now Tallinn, Estonia), where he was a teacher until he fled (1918) before the Red Army to Germany There he joined the National Socialist party and became the editor of the party organ, *Der völkische Beobachter* The author of an anti-Christian anti-Semitic, and neopagan book, *Der Mythus des 20 Jahrhunderts* [the myth of the 20th cent] (1930), he supplied Hitler with the spurious philosophical and scientific basis of his racist doctrine (see NATIONAL SOCIALISM) In 1941 he was appointed minister for the occupied Eastern territories Responsible for the poisoning of millions of minds and the death of millions of persons, Rosenberg was prosecuted as a war criminal at the Nuremberg trial (1945–46), convicted, and executed See *Memoirs of Alfred Rosenberg* (1949)

Rosenberg (rō'zənbûrg), city (pop 3,457), S Texas, SW of Houston and near Richmond, inc 1902 Founded with the coming of the railroad in 1883, it drew German and Czech immigrants and grew as market and shipping center for a rural area now producing cotton, rice, and truck There are some oil wells

Rosendale, village (pop 671), SE N Y , on Rondout Creek and SW of Kingston, inc 1890 On the Delaware and Hudson Canal, it was known for its production and shipping of Rosendale cement

Rosenfeld, Morris (rō'zənfĕlt), 1862–1924, Jewish poet, b Russian Poland In 1886 he settled in New York, where he edited the *New Yorker Morgenblatt* and later also the *Jewish Annals* His *Lieder Buch* (1897) was translated into English by Leo Wiener as *Songs from the Ghetto* It has also been translated into a number of European languages Rosenfeld, singer of the sweatshop in such poems as "Mein Ingele" and "Cradle Song"

Rosenthal, Moriz (mō'rĭts rō'zəntäl), 1862–1946, Polish pianist, pupil of Liszt He first appeared in the United States in 1888, assisted by Fritz Kreisler, in a concert at the Metropolitan Opera House He was considered one of the greatest pianists of his time, retaining his powers almost until the end of his life

Rosenwald, Julius (rō'zənwôld), 1862–1932, American merchant and philanthropist, b Springfield, Ill He was president (1910–25), and later chairman of the board, of the mail-order house of Sears, Roebuck & Company He established in 1917 the Julius Rosenwald Fund, which was largely used to establish rural schools for Negroes His many philanthropies included also Jewish relief in the Near East, Jewish colonization in Russia, funds for Y M C A and Y W C A buildings in cities with large Negro populations, and grants to educational institutions See biography by M R Werner (1939)

rose of Jericho, desert annual plant of Asia Minor (*Anastatica hierochuntica*), a RESURRECTION PLANT The branches curl into a ball at maturity, after which the plant, in its native habitat, is blown about by the wind and the seeds are dispersed Another plant (*Odontospermum pygmaeum*) of the same region has similar properties and is also called rose of Jericho

Rose of Lima, Saint (lē'mu), 1586–1617, Peruvian Dominican tertiary, of Spanish family She was remarkable for pious austerities St Rose was canonised in 1671 (the first canonised saint of the New World), and her shrine is at Lima Feast Aug 30

rose of Sharon or **shrubby althea** (ălthē'u), common ornamental Asiatic shrub (*Hibiscus syriacus*), cultivated elsewhere for its showy single or double flowers in white, rose, and purple, resembling the blooms of the hollyhock The shrub often reaches the size of a small tree, some forms having variegated leaves One species of St -John's-wort is called rose of Sharon The rose of Sharon of the Scriptures (Cant 2 1) is thought to be either a NARCISSUS or the MEADOW SAFFRON

Rose Polytechnic Institute. see TERRE HAUTE, Ind

Roses, Wars of the, traditional name given to the intermittent struggle for the throne of England between the noble house of LANCASTER (whose badge was a red rose), and the noble house of YORK (whose badge was a white rose) from 1455 to 1485 The Lancastrian house, since the deposition of Richard II 1399), had held the throne in the persons of Henry IV, Henry V, and HENRY VI, when about the middle of the century Richard, duke of YORK, came to the front as the leader of the opposition to William de la Pole, duke of Suffolk, Edmund Beaufort, duke of SOMERSET, and the queen, MARGARET OF ANJOU, who were in control of the weak Henry VI. The York party gained popular support from discontent over the failure of English arms in defense of the French provinces In 1450 Suffolk was impeached, banished, and then murdered as he was leaving the kingdom This was followed by the rebellion of Jack CADE (1450) which indicated strongly that the losses in France, the corruption and waste at court, and political rather than social grievances were at the bottom of popular unrest In the same year Richard returned to England, forced the king to recognize him, and demanded the removal of Somerset Although both sides raised armies, Richard was induced to disperse his troops by promises which were subsequently not kept The situation was complicated by the insanity of the king (1453) and the birth of a son to Queen Margaret Richard managed to gain the position of protector, but this lasted only until the king recovered, late in 1454 Richard was excluded from the royal council at Leicester (1454) and resorted to arms The opposing factions met at St Albans (1455), where Somerset was killed and the Yorkists were victorious over the royal party, now led by Queen Margaret This first battle of St Albans is usually taken as the beginning of the Wars of the Roses Richard again served as protector during another short period when the king lost his reason, and comparative quiet ensued, broken only by minor personal feuds In 1459 both parties were once again in arms, and the royal forces succeeded in driving the Yorkist leaders out of England In 1460 the Yorkists, the earl of Warwick and the earl of March, returned to defeat and capture the king at the battle of Northampton Richard hurried to London to assert his claims to the throne, which were, by laws of strict inheritance, perhaps better than those of Henry VI A compromise was effected, Henry retained the crown, and York and his heirs were declared successors Queen Margaret, whose son was thus disinherited, raised an army in the north and defeated (1460) the Yorkists at Wakefield Richard was killed in this battle and his claims devolved upon his son, the earl of March, but Richard Neville, earl of WARWICK, became the real leader of the Yorkist party Margaret, advancing towards London, defeated (1461) Warwick in the second battle of St Albans and rescued the king. The earl of March, meanwhile, had secured (1461) a Yorkist victory at Mortimer's Cross, marched into London unopposed, and assumed the throne as EDWARD IV With Warwick he pursued the Lancastrians northward and defeated them (1461) near Towton Henry and Margaret, with Scottish aid, continued troublesome in the north until the Yorkist victories of Hexham and Hedgeley Moor (1464) A truce was made with Scotland, Margaret fled to France, and the deposed Henry was captured and put into the Tower (1465) The Lancastrian cause seemed hopeless, but about this time a quarrel broke out between Warwick and Edward after the king's marriage to Elizabeth WOODVILLE in 1464 Warwick secured the support of the king's brother George, duke of CLARENCE, and fomented the rebellions of Robin of Redesdale (1469) and Sir Robert Welles (1470) These were crushed, and Warwick and Clarence fled to France (1470) Warwick became reconciled with Margaret and, supported by Louis XI of France, crossed to England, entered London during Edward's absence, and restored Henry VI. Edward fled to the Netherlands and received the support of Louis XI's enemy, Charles the Bold He returned to England in 1471, was reconciled with Clarence, regained London, and recaptured Henry Edward defeated Warwick and then Margaret at the battles of Barnet and Tewkesbury (1471) Warwick and Henry's son Edward were killed, Margaret was imprisoned, and shortly thereafter Henry died, probably slain at the orders of Edward IV Edward IV was succeeded by his 12-year old son, EDWARD V (1483), but soon the boy's uncle Richard, duke of Gloucester, gained complete control and then became king as RICHARD III Richard's ruthlessness and the murder of Edward V and his brother in the Tower created opposition and advanced the fortunes of Henry Tudor, earl of Richmond, the Lancastrian claimant Henry Stafford, duke of Buckingham, led an unsuccessful revolt in 1483, in 1485 Henry landed from France, gained supporters on his march through England, and defeated Richard at Bosworth Field Richard was killed in the battle and Henry ascended the throne as HENRY VII He secured the right of succession for himself and his heirs from Parliament and further strengthened his title by marrying Edward IV's daughter, Elizabeth, thus uniting the houses of Lancaster and York Except for two efforts to place pretenders on the throne the Wars of the Roses were ended It is generally said that with them ended feudalism in England, since the nobles who participated suffered heavy loss of life and property and were too weak to contest the rise of the monarchy under the Tudors The middle and lower classes, largely indifferent to the struggle, emerged with a strong desire for order and efficient administration. See Sir J. H Ramsay, *Lancaster and York* (1892); Sir Charles Oman, *The History of England, 1377–1485* (1906); K. H. Vickers, *England in the Later Middle Ages* (1930).

Roseto (rōzĕ'tō), borough (pop 1,778), E Pa , near Easton and the Delaware river, inc. 1910. There are slate quarries close by

Rosetown, town (pop 1,563), SW Sask , SW of Saskatoon, in wheat country It has grain elevators.

Rosetsu, Nagasawa (nä'gäsä"wä rō'sĕtsōō), 1755–99, Japanese landscape painter His playful puppies and other animals in his landscape scenes are original and humorous

Rosetta (rōzĕ'tu), Arabic *Rashid*, city (pop 28,698), Egypt, near the Rosetta mouth of the Nile Founded in the 9th cent , Rosetta was once important in commerce Today there is rice growing and fishing The **Rosetta stone** is a basalt slab inscribed by priests of Ptolemy V in hieroglyphic, demotic, and Greek Troops of Napoleon found it near the city in 1799, it was captured by the British in 1801 and is now in the British Museum It gave CHAMPOLLION, Thomas Young, and others the key to Egyptian HIEROGLYPHIC

Rosetti, Constantin (kŏnstăntēn' rōsĕt'), 1816–85, Rumanian statesman He took part in the Revolution of 1848, and after a period of exile in Paris he returned in 1861 to Rumania, was elected deputy, and in 1866 was made minister of public instruction After 1865 he was in a revolutionary group opposing Cuza He was president of the chamber in 1877 and minister of the interior (1881–82) He wrote verse and translated Byron and Lamartine

Roseville. 1 City (pop 6,653), N central Calif , NE of Sacramento, inc 1909 It is a fruit-shipping center, with an airport and railroad shops, in the Sacramento valley **2** Village (pop 1,061), W Ill , SW of Galesburg, in a farm and coal area, inc 1875 **3** Residential village (pop 9,023), SE Mich , northeast suburb of Detroit, inc 1926 There is a sheet-metal plant here **4** Village (pop 1,320), SE central Ohio, SW of Zanesville Clay products are manufactured, and there are coal mines here

rose window, large, circular stone-traceried window of the medieval church, the most noted being those of French Gothic cathedrals Circular windows, usually ornamented by shafts radiating from a small center circle, appeared in the Romanesque churches of both England and the Continent These wheel windows are the rudimentary form preceding the elaborate rose windows The latter, in their full development, were mostly used in France, where they appear in practically every important cathedral, either over the center portal of the west front or on at least one of the transept ends The early examples, as on the west façade of the cathedral at Chartres (12th–13th cent), were filled with plate TRACERY, pierced from a stone slab With the perfection of bar tracery, the typical rose, as in the cathedral at Rheims (13th–14th cent) and in Notre Dame de Paris (12th–14th cent), was filled with numerous radiating bars and intermediate bars, joining to form pointed arches at their outer ends The arches themselves were in turn filled with trefoils, quatrefoils, etc These radiating traceries furnish the term *Rayonnant* for the middle period (c 1220–1350) of French Gothic In the final or flamboyant period (1350–c 1525) the bars were arranged in wavy curves and more intricate patterns This rich and closely packed tracery, as in the fine transept window of St Ouen at Rouen, suggests the design of an open rose.

rosewood, popular name for the ornamental wood of several species of tropical trees, especially for the heartwood of certain leguminous trees of Brazil of the genera *Dalbergia* and *Machaerium* Brazilian rosewood or jacaranda (*Dalbergia nigra*) is one of the best woods of the country, important in commerce for 300 years It is obtained from the purplish-black heartwood of old trees, is rather oily, fragrant—whence the name—and durable, and is used whole or in veneers for piano casings and other kinds of cabinetwork and for tools, instruments, brush backs, and other articles East Indian rosewood, another species of *Dalbergia*, is also called blackwood Honduras rosewood, also of the same genus, is now used chiefly in percussion instruments where Brazilian rosewood was formerly employed Some rosewoods of the genus have been introduced into California as ornamental and timber trees, and one of the rosewoods of the genus *Machaerium* has also been introduced into the S United States as an ornamental tree Jamaica rosewood comes from a tropical tree of the rue family

Rosh (rŏsh) [Heb ,=head], son of Benjamin. Gen 46 21

Rosh ha-Shanah (hŭ-shä'nu) [Heb ,=head of the year], the Jewish New Year, also known as the Feast of the Trumpets It is a day second in importance only to the Day of Atonement (Yom Kippur) It is observed on the first day of the seventh month, Tishri, occurring usually in September. This holy day is held in very great reverence as the day of judgment, when all the people of the earth pass before the Lord and are marked in the "Book of Life" or in the "Book of Death " The 10 days from Rosh ha-Shanah to and including Yom Kippur are observed as days of penitence A distinguishing feature of the New Year is the blowing of a trumpet (shofar—a ram's horn) which summons Jews to their penitential observance.

Rosiclare (rō'sĭklâr"), city (pop 1,774), extreme SE Ill , on the Ohio, inc as a village 1874, as a city 1932

Rosicrucians (rōzĭkrōō'shŭnz), members of an esoteric society or group of societies, who claim that their order has been in existence since the days of ancient Egypt and has over the course of time included many of the world's sages The secret learning deals with occult symbols—notably the rosy cross, the swastika, and the pyramid—and with writings containing cabalistic messages (e g , Hermes Trismegistus) Some scholars trace modern Rosicrucianism to the 16th-century Christian Rosenkranz [rose cross], the pseudonym of Johann Valentin Andreæ, but some of the ideas seem to have been current earlier The adepts are called Illuminati The society was variously called Brothers of the Rosy Cross, Rosy-Cross Knights, and Rosy-Cross Philosophers Some students doubt that such an organization ever existed anciently as claimed They believe that the name was used as a device for arousing attention, by Andreæ and other theological reformers in the 17th and 18th cent In 1614 Andreæ published *Fama fraternitatis*, which caused great excitement in Europe In 1615 appeared the *Confessio rosæ crucis* An obscure connection seems to have existed between the Rosy Cross and Freemasonry American Rosicrucians are largely followers of theosophical doctrines The Rosicrucian Order (Ancient Mystical Order Rosæ Crucis) has headquarters at San Jose, Calif , the Rosicrucian Brotherhood (Fraternitas Rosæ Crucis) has headquarters in Quakertown, Pa , and the Society of Rosicrucians (Societas Rosicruciana in America) has a center in New York city See A. E Waite, *Real History of the Rosicrucians* (1887), H S Lewis, *Rosicrucian Questions and Answers* (1929)

rosin (rŏ'zĭn) or **colophony** (kŏ'lufŏ"nē, kŭlŏ'funē), solid residue obtained from crude turpentine (an oleoresin) after the oil of turpentine has been distilled off It is hard, brittle, translucent, without taste, but with a faint odor of pine or turpentine, usually pale yellow or amber, its color and general appearance depending upon the nature of the crude turpentine used and the method employed in its preparation As a result several grades are known, ranging from brownish black to transparent When prepared from crude turpentine obtained as an exudation from various species of pine, it is called gum rosin, when produced from turpentine obtained from wood, wood rosin Chemically, rosin is not a single substance but is thought to be a mixture containing an organic acid (abietic acid) It is soluble in alcohol, ether, turpentine, and several other organic solvents and in solutions of various hydroxides It is used in making some soaps, varnishes, paints, sealing wax, and cements, for treating violin bows, as a dressing for machine belting, as a sizing material for paper, in the preparation of certain metals for soldering, and, in pharmacy, in some ointments, plasters, and similar preparations Acrobats commonly rub it (in the form of dust) upon their hands and the soles of their shoes, as do prize fighters, to prevent slipping **Rosin soap** is prepared by treating rosin with an alkali The soap is often mixed with other (fatty) soaps, increasing the amount of suds, but its presence is not always of advantage since the soap may cause stains

rosinweed see COMPASS PLANT

Rositten, Latvia see REZEKNE

Roskilde (rōs' kĭlŭ), city (pop 23,497), E Zealand, Denmark, W of Copenhagen It is a port on Roskilde Fjord (an inlet of the Kattegat), with a fishing fleet and with various industries, including meat packing, canning, distilling, and paper milling One of the oldest Danish cities, Roskilde was the capital of Denmark until 1443 Many Danish kings are buried in its magnificent cathedral (11th-12th cent) Copenhagen, the new capital, was a foundation of a bishop of Roskilde, which was the ecclesiastic capital of Denmark until the suppression (1536) of the see in the Reformation The Lutheran bishops of Zealand subsequently resided at Copenhagen, but their cathedral was that of Roskilde In 1923 Roskilde again became an episcopal see By the Treaty of Roskilde (1658) Denmark ceded its lands in S Sweden to CHARLES, X of Sweden

Roslavl (rŏ'slävul, rŏslä'vŭl), city (pop 25,992), W European RSFSR, SE of Smolensk It is a rail junction and the center of an agricultural district Dating from the 14th cent , it was chartered (1408) under Lithuanian rule and passed to Russia by the Treaty of Andrusov (1667). In the Second World War it was the center of heavy fighting and was held (1941–43) by the Germans.

Roslin (rŏz'lĭn), village, Midlothian, Scotland, S of Edinburgh It has ruins of a chapel (15th cent)

Roslyn (rŏz'lĭn) **1** Village (pop 972), on NW Long Island, SE N Y , N of Mineola, inc. 1932 It is a residential suburb of New York William Cullen Bryant's home, "Cedarmere," is in Roslyn Bryant, his wife, and his son-in-law Parke Godwin are buried here **2** Coal-mining city (pop 1,743), central Wash , on the Yakima, settled 1886, inc 1889

Rosmini-Serbati, Antonio (äntō'nyō rōzmē'nē-sĕrbä'tē), 1797–1855, Italian philosopher and theologian. In 1828 he founded the Institute of the Brethren of Charity (Rosminians), whose members were laymen and clergy devoted to education and charity, a work which spread to England and America In 1830 Rosmini wrote *Nuovo saggio sull origine delle idee* (Eng tr , *Origin of Ideas*, 1883–86), and in 1848 *Cinque piaghe della Santa Chiesa* (Eng tr , *The Five Wounds of the Holy Church*, 1883) appeared. This aroused instant opposition, particularly from the Jesuits, and it was placed on the Index but later released The institutions started by Rosmini still are in operation See J F Bruno, *Rosmini's Contribution to Ethical Philosophy* (1916)

Rosny, J. H., aîné (rônē', ânā'), pseud of **Joseph Henri Honoré Boëx** (zhōzăf' ärē' ônôrā' bōĕks'), 1856–1940, and **J. H Rosny, jeune** (zhŭn'), pseud of **Séraphin Justin François Boëx** (sārăfăN' zhŭstăN' frăswa'), 1859–1948, French novelists The brothers were among the original members of the Goncourt Academy Early works, under the pseudonym J H Rosny, are *Le Bilatéral* (1887), *L'Immolation* (1887), *Daniel Valgrave* (1891), *Vamireh* (1892), and *Le Serment* (1896) Some of these were written by the elder Rosny alone, some by both After 1909 they worked separately

Ross, Alexander, 1783–1856 Canadian fur trader and pioneer, b Scotland He went to Canada in 1805, taught school for a while in Upper Canada, and in 1810 left for Oregon as a clerk in Astor's Pacific Fur Company In the founding (1811) of Astoria, Ross played a part When that fur-trading post was sold (1813) to the North West Company, he entered their employ and was a member of the expedition that established (1818) Ft Nez Percé (also called Fort Walla Walla), he was in charge of this post until after the amalgamation (1821) of the North West Company with Hudson's Bay Company His account of these years on the Pacific slope remains in his *Adventures of the First Settlers on the Oregon or Columbia River* (1849, new ed., 1923) and *The Fur-Hunters of the Far West* (1855, new ed , 1924) He was head of an expedition (1823–24) in the Snake river country In 1825 Ross settled in the Red River district, in Assiniboia he was sheriff and a member of the council His *Red River Settlement* was published in 1856, the year he died in that community

Ross, Betsy (Elizabeth Griscom Ross), 1752–1836, American flagmaker, b. Philadelphia. She is known to have made flags during the American Revolution, and the family continued in the flagmaking business long after her death The long-accepted story that she designed and made the first American national flag (the Stars and Bars) is now generally discredited

Ross, Edward Alsworth, 1866–, American sociologist, b Virden, Ill , Ph D Johns Hopkins, 1891 He taught economics (1893-1900) at Stanford Univ , from which he was ousted in a controversy over academic freedom From 1906 to 1937 he was professor of sociology at the Univ of Wisconsin He analyzed collective behavior and social control and wrote voluminously on population and other problems His chief works are *Social Control* (1901) and *Principles of Sociology* (1920) See his autobiography, *Seventy Years of It* (1937)

Ross, George, 1730–79, American Revolutionary patriot, signer of the Declaration of Independence, b New Castle, Del He was a lawyer in Lancaster, Pa , and a member of the colonial assembly (1768–74) before serving as delegate (1774–77) to the Continental Congress

Ross, Sir George William, 1841–1914, Canadian political leader, b Ontario He entered (1872) the Canadian House of Commons and was Liberal prime minister of Ontario from 1899 to 1905 Appointed to the Senate in 1907, he became Liberal leader in that body in 1911 He was a notable public speaker, many of his addresses have been published He wrote *Getting into Parliament and After* (1913) and *The Senate of Canada* (1914) See biography by Margaret Ross (1924)

Ross, Sir James Clark, 1800–1862, British polar explorer and rear admiral In 1818 he accompanied his uncle, Sir John Ross, in search of the Northwest Passage, and later he made several arctic voyages with W E Parry In another expedition (1829–33) with his uncle, he located (1831) in Boothia Peninsula the north magnetic pole (now located in Prince of Wales Island) In command of an expedition (1839–43) of exploration in Antarctica, Ross discovered Ross Sea, reaching Ross Island and following the Ross Shelf Ice eastward for c 350 mi He also discovered Victoria Land He recorded his experiences in his *Voyage of Discovery and Research to Southern and Antarctic Regions* (1847) In 1848–49 he led an expedition to search for Sir John Franklin's party

Ross, Sir John, 1777–1856, British arctic explorer and rear admiral In 1818 he went in search of the Northwest Passage but turned back after exploring Baffin Bay Financed by Sir Felix Booth, he commanded a second search expedition (1829–33), in the course of which he discovered Boothia Peninsula, the Gulf of Boothia, and King William Island His nephew, Sir James Clark Ross, accompanied him on both voyages His last trip to the arctic regions was made in 1850–51, when he went to the Lancaster Sound region to search for Sir John Franklin. He wrote two books describing his quest for the Northwest Passage.

Ross, John, called in Cherokee *Koweskoowe* (kōs"wĭs"kōōwā'), 1790–1866, Indian chief, b near Lookout Mt., Tenn., of mixed Scottish and Cherokee (one eighth) blood He was educated at Kingston, Tenn , and in the War of 1812 served under Andrew Jackson against the Creeks Elected principal chief of the eastern Cherokee in 1828, Ross struggled valiantly to hold the ancestral lands of his people but was unable to withstand the constant pressure of Georgia for removal. In a treaty (1835) of questionable validity, a small minority of the Cherokee ceded the lands and moved west. Ross and the majority refused to acknowledge the cession but resistance was futile, and in 1838–39 he led them on the long, hard journey to what is now Oklahoma Thousands died on the "trail of tears " From 1839 till his death Ross was chief of the united Cherokee nation (the western Cherokee had migrated at the beginning of the century) He counseled neutrality in the Civil War, but the Cherokee ultimately adhered to the Confederacy See biography by R C Eaton (1921), M L. Starkey, *The Cherokee Nation* (1946)

Ross, Nellie Tayloe, 1880–, American public official, b St Joseph, Mo She was elected (1925) governor of Wyoming to fill the unexpired term of her husband, William B Ross, and she served until 1927 She was the first woman to become (1933) director of the U S mint, a post to which she was reappointed in 1938, 1943, and 1948

Ross, Robert, 1766–1814, British general He served against the French in the Netherlands, in Egypt, and in the Peninsular War In 1814 he was sent to the United States in the War of 1812 Advancing through the Chesapeake Bay, he ascended the Patuxent river to Benedict With a reinforcement of marines that brought his army up to 4,500 men, he started toward Washington At BLADENSBURG, Md., he fell upon and defeated (Aug 24, 1814) the American troops, consisting mostly of militia Continuing the march to Washington, on the same day, they surprised and captured the city, burning all the public buildings, but respecting private property The arsenal and vessels under construction in the dockyards were destroyed by the Americans The British reembarked on Aug 30, but, spurred by victory, they decided to attempt the capture of Baltimore On Sept 12, in a thick wood near North Point, they again encountered the American militia, a skirmish ensued, and Ross was killed The attack on Baltimore was abandoned

Ross, Sir Ronald, 1857–1932, English physician, b India He was professor of tropical medicine at University College, Liverpool, from 1902 and directed the Ross Institute and Hospital for Tropical Diseases, London, from 1926 He demonstrated (1898) the malarial parasite in the stomach of the mosquito and, in W Africa, discovered the mosquito that transmits African fever For his work on malaria he received the 1902 Nobel Prize in Physiology and Medicine He was knighted in 1911 See his memoirs (1923), studies by R L Mégroz (1931) and J O Dobson (1934)

Ross, residential town (pop 1,751), W Calif , N of San Francisco, inc. 1908

Rossa, O'Donovan, 1831-1915, Irish rebel, whose original name was Jeremiah O'Donovan He joined the Fenian movement, edited a Fenian newspaper, and was convicted of treason Released in 1871, he emigrated to New York

Ross and Cromarty (krŏ'murtē), maritime county (3,089 sq mi , 1931 pop 62,799, 1948 estimated pop 63,872), N Scotland The county town is Dingwall The county extends from the North Sea to the Atlantic and includes the island of Lewis and many smaller islands The irregular shoreline is indented by Moray, Cromarty, and Dornoch firths on the east and by a series of sealochs on the west Except for a fertile strip along the east coast, it is a mountainous region of moors and barren rocks, reaching its highest point at Mam Soul or Mam Sodhail (3,862 ft) Sheep grazing and fishing are the main occupations The history of the county is largely that of feuds among the local clans Ross-shire, once independent, was incorporated with Cromarty in the latter part of the 17th cent

Rossbach (rŏs'bäkh), village (pop 2,474), in the former Saxony prov of Prussia, after 1945 in Saxony-Anhalt, c 25 mi NE of Weimar Here on Nov 5, 1757, Frederick II of Prussia defeated the imperial army and the French under Soubise in the Seven Years War It was one of Frederick's most brilliant victories, but its effect was largely offset by his defeat at Leuthen one month later

Rosse, William Parsons, 3d earl of (rŏs), 1800–1867, British astronomer and constructor of telescopes He served as member of Parliament for King's co , Ireland (1821–34), Irish representative peer (from 1845), president of the British Association (1843), president of the Royal Society (1849–54) and chancellor of the Univ of Dublin (from 1862) His greatest interest was the construction of specula of large size for reflecting telescopes, he overcame defects caused by warping and cracking of surfaces in the cooling process, and counteracted to a con-

siderable degree other defects His great reflecting telescope, with a speculum 6 ft in diameter, the largest up to that time, was mounted in his park at Parsonstown (now Birr), Ireland, in 1845 For many years it was chiefly devoted to the study of the nebulae Some nebulae which had eluded Sir William Herschel were resolved into groups of stars, many binary and triple stars were discovered, and the moon was more completely described

Rosselli, Cosimo (kô'zēmō rôs-sĕl'lē), 1439–1507, Florentine painter He was one of the artists summoned to Rome by Sixtus IV to assist in decorating the Sistine Chapel For it he painted *The Last Supper* and other subjects Of his many works in Florence the most famous is *The Miracle-working Chalice* in Sant' Ambrogio, in which a great number of persons are represented, some in actual portraits *The Coronation of the Virgin* is in the Church of Santa Maria Maddalena dei Pazzi Other works are *The Virgin Presenting Her Son for the Adoration of Angels and Two Saints* (Louvre), *The Madonna in Adoration, The Adoration of the Child*, and *Madonna and Child* (National Gall of Art, Washington, D C), and *Madonna and Child Enthroned* (Rollins College, Winter Park, Fla) Rosselli's work shows the influence of Benozzo Gozzoli and Baldovinetti

Rossellino, Bernardo (bĕrnär'dō rôs-sĕl-lē'nō), 1409–64, Florentine architect and sculptor, whose real name was Bernardo di Matteo di Domenico Gambarelli With his four brothers he opened a workshop in Florence He built the Rucellai Palace, Florence, the Palazzo Piccolomini delle Papesse, Siena, and a group of buildings in Pienza Under Pope Nicholas V he did important reconstruction work in Rome and made a design for St Peter's, which was afterward altered by Bramante Bernardo's most famous sculpture is the tomb of Leonardo Bruni in Santa Croce, Florence The first example of the arched wall tomb, it is counted the finest of its type **Antonio Rossellino** (antô'nyô), 1427–c 1478, Florentine sculptor, whose real name was Antonio di Matteo di Domenico Gambarelli, was the youngest and most celebrated of the four brothers He is distinguished for his religious sentiment and grace and vigor of style His sculptures (1459–61) for the tomb of the young cardinal of Portugal in San Miniato al Monte, Florence, brought him fame Some of his reliefs, such as the *Nativity* (Monte Oliveto, Naples), show the same pictorial perspective in marble that Ghiberti used for his bronze panels In the Metropolitan Museum, Antonio is represented by a *Madonna and Child* and a terra-cotta group, *Nativity* His *St Sebastian* (Collegiata, Empoli) is one of the finest statues of the early Renaissance

Rossetti, Christina Georgina (rôsĕ'tē), 1830–94, English poet, sister of Dante Gabriel Rossetti Publication of some of her poems in her brother William's magazine the *Germ* was her only contribution to Pre-Raphaelite activities Of a very religious nature, she was a devout member of the Church of England, twice refused to marry, and lived the last 15 years of her life as a recluse in her home Much of her poetry is religious, some of it melancholy, and such poems as her famous "Uphill" and "When I Am Dead, My Dearest" are written about death Her life and her spontaneous lyric gift seem perhaps comparable to Emily Dickinson, though the comparison can go no further, for Christina Rossetti, who came close to technical perfection in traditional poetic forms, experimented very little Her gay and simple songs, especially those in *Sing-Song* (1872), are favorites with children Some of her volumes of poetry are *Goblin Market and Other Poems* (1864), *The Prince's Progress* (1866), and *A Pageant and Other Poems* (1881) See biographies by E W Thomas (1931), T E Walter (1931), and Marya Zaturenska (1949)

Rossetti, Dante Gabriel (dän'tē gä'brēul), 1828–82, English Pre-Raphaelite painter and poet, son of Gabriele Rossetti D G Rossetti began the study of art at 14, and he wrote verses as a child, reaching maturity earlier as a poet than as a painter At 20 he became acquainted with W Holman Hunt, Millais, Woolner, and others and with them formed the brotherhood of PRE-RAPHAELITES The brotherhood published in 1850 a magazine, the *Germ*, edited by Rossetti's brother William Michael Rossetti (1829–1919) Here was printed "The Blessed Damozel" by Dante Gabriel, written when he was 19 In 1860 he married his model, Elizabeth Siddal, who died two years later, in his grief Rossetti buried with her the manuscript of his poems Some years later he permitted them to be recovered In his closing years, his mind was increasingly deranged by his habit of taking chloral Rossetti's translations from the Italian appeared as *The Early Italian Poets* (1861–), later ed as *Dante and His Circle* (1874). *Poems* (1870) and *Ballads and Sonnets* (1881) include the great sonnet sequence "The House of Life" and the ballads "Sister Helen" and "The White Ship." Among his best-known paintings are *Beata Beatrix*, for which Elizabeth Siddal posed, and *Mona Vanna* (Tate Gallery, London); *Lady Lilith* (Metropolitan Mus.); *Proserpina in Hades; The Blessed Damozel;* and a triptych, *Francesca and Paolo*. See edition of his works (1911) and letters (with a memoir, 1895) by W. M. Rossetti; studies by H C Marillier (1901), A C Benson (1904), Hall Caine (1928), Evelyn Waugh (1928), and Violet Hunt (1932)

Rossetti, Gabriele (rôsĕ'tē, Ital gäbrēä'lā rôs-sĕt'tē), 1783–1854, Italian poet and critic, father of Dante Gabriel Rossetti and of Christina Rossetti He was exiled in 1824 and fled to England There he wrote patriotic and liberal verse in Italian As a critic he is noted for his theory that the *Divine Comedy* was wholly symbolic See R D Waller, *The Rossetti Family* (1932).

Rossford, village (pop 3,912), NW Ohio, S of Toledo and on the Maumee river, inc 1939 Glass and chemicals are made here

Rossi, Bruno (brōō'nō rô'sē), 1905–, American physicist, b Italy, Ph D Univ of Bologna, 1927 After teaching at the universities of Florence and Padua he came to the United States and was naturalized (1945) He served as associate at the Univ of Chicago (1939–40), associate professor at Cornell Univ (1940 43), and staff member of the Los Alamos atomic-bomb project (1943–46) and in 1946 became professor at the Massachusetts Institute of Technology An authority on cosmic rays, he wrote *Rayons cosmiques* (1935).
