Orange (ô'rĭnj, ô'rĭzh'), city (pop 8,145), Vaucluse dept., SE France, N of Avignon It has important Roman remains, notably a triumphal arch and an amphitheater which is still in use In the 11th cent it became the capital of a county, later the principality of Orange, which passed (1544), through inheritance, to WILLIAM THE SILENT, of the house of NASSAU Among William's descendants were William III of England and the ruling family of the NETHERLANDS Orange was conquered (1672) by Louis XIV, the Treaty of Ryswick (1697) and the Peace of Utrecht (1713) confirmed it in French possession, though the title remained with the Dutch princes of Orange

Orange (ô'rĭnj) **1** City (pop 7,901), S Calif , SE of Los Angeles; founded 1868, inc 1888 It has plants to pack and process citrus fruits **2** Farming town (pop 2,009), SW Conn , on the Housatonic; set off from Milford 1822 Printing is the chief industry **3** Town (pop. 5,611), N Mass., on Millers river and

E of Greenfield, settled c.1746, inc 1810 Metal and other products are made here **4** Industrial city (pop 35,717), NE N J , western suburb of Newark and New York, settled c 1675, set off from Newark 1806, inc as a city 1872 Calculating machines are made here Orange and the surrounding municipalities of East Orange, West Orange, South Orange, and Maplewood are known as a single suburban community called "The Oranges" **5** City (pop 7,472), co seat of Orange co , SE Texas, on the Sabine and E of Beaumont, founded 1836, inc 1858 In the wet, lush country of the Gulf Coast, Orange is connected with the Gulf by deepwater channel, is a port of entry, and ships oil, lumber, fruit, and rice from the surrounding country It has processing plants and factories, including paper mills and a plant producing nylon salt (basic material for nylon products) Active shipyards increased the population to an estimated 17,000 in the Second World War **6** Town (pop 1,980), central Va , NE of Charlottesville, in the piedmont, settled c 1810, inc 1856 In a farm area, it has some manufactures The courthouse of Orange co is here MONTPELIER is near by

orange, citrus fruit, the most important fresh fruit of international commerce It is one of the oldest cultivated fruits, probably native to the Malay Archipelago and tropical Asia, and was cultivated in China many centuries before reaching Europe The first orange to reach Europe was the sour orange, which was introduced by the Crusaders, culture of the sweet orange did not start until the middle of the 15th cent. Columbus brought the orange to the New World, and it is known that trees were well established in Florida by 1600 and were growing in California about 175 years later The orange now grows in the warm parts of all continents An orange tree begins to bear when it is three years old, but good productivity may not be reached until the seventh or eighth year, after which it bears almost continuously Flowers and fruits in all stages of development are on the tree throughout the year, although a large portion of the fruits ripen at one time Propagation is by budding on two-year or three-year seedling stock (usually sour orange, rough lemon, or trifoliate orange) The orange is attacked by many insects and fungus diseases and is quite sensitive to frost If the fruits are picked when still "green" (though fully mature), they must undergo a bleaching or degreening process to bring out the orange or yellow color in their rinds Some oranges are artificially colored before marketing Among the commercially important species of orange are the sweet or common orange (*Citrus sinensis*), which furnishes most of the varieties for commercial growing, including the Washington navel, Valencia, Hamlin, Pineapple, and Parson Brown, the sour or Seville orange (*C aurantium*), which is grown in the United States chiefly as understock on which to bud sweet orange varieties, although in Europe its fruit is much used in marmalade, the king orange (*C nobilis* or *C reticulata*), which includes the "kid glove" or loose-rind group of mandarin oranges and tangerines, and the Satsuma varieties known for their hardiness, especially when budded on trifoliate stock The orange hybrids include the citrange, the result of crossing the trifoliate orange and a sweet orange variety, and the tangelo, obtained from crossing a tangerine and a grapefruit The raw fruit of orange and its juice are an important source of vitamins The fruit and rind are also much used in MARMALADE, preserves, flavoring, and confections Some varieties yield perfume The flower is a favorite for bridal decoration and is the state flower of Florida The yellow wood, which is hard and close-grained, is manufactured into small articles California, Florida, and Texas are the chief growing centers For history and methods of cultivation, see H J. Webber and L D Batchelor, eds , *The Citrus Industry*, Vol I (1943), H H Hume, *Cultivation of Citrus Fruits* (1926, reissued 1937), state agricultural experiment station bulletins

Orangeburg, city (pop 10,521), co seat of Orangeburg co , central S C , SSE of Columbia and on the North Fork of the Edisto river, settled c 1735 It is the trade and processing center of a productive farm (especially cotton) and timber area SOUTH CAROLINA STATE AGRICULTURAL AND MECHANICAL COLLEGE and Claflin College (Negro, coeducational, 1869) are here The city is the site of the county fairgrounds Near by are U S and county fish hatcheries

Orange City, town (pop 1,920), co seat of Sioux co , NW Iowa, NNE of Sioux City; founded 1869 by Dutch settlers, inc 1884 It holds an annual Tulip Day A junior college is here

Orange Free State, province (49,647 sq mi ; pop 876,634), E central Union of South Africa The capital is Bloemfontein The Orange River marks the southern boundary, and the Vaal the northern boundary The Orange Free State is mainly a plateau (average elevation c 4,000 ft) with a healthful climate. It raises wool and maize Coal, gold, and diamonds are important mineral resources The area was settled from 1835 to 1848 by the Boers. Sir Harry Smith annexed it to Cape Colony (a British possession) in 1848. Recovered by the Boers in 1854, it was constituted the Orange Free State republic, which Great Britain made a colony after the South African War. It became self-governing in 1907 and joined the Union of South Africa in 1910 The population includes 202,077 Europeans

Orangemen, members of the Loyal Orange Institution, an Irish society founded and largely flourishing in the province of Ulster It was established (1795) to maintain in Ireland the Protestant ascendancy in the face of the rising agitation for Catholic Emancipation Its name is taken from the family of King William III of England, who defeated King James II at the BOYNE in 1690 July 12 (as anniversary of this victory) and Nov 5 (the day of William's first landing in England, 1688) are the principal holidays of the order, and to celebrate them the members wear orange-colored flowers and orange sashes and join in parades Branches of the society have been formed in other English-speaking countries

Orange Mountains · see WATCHUNG MOUNTAINS

Orange River, c 1,300 mi long, rising in N Basutoland, Union of South Africa It flows southwest along the boundary of the Orange Free State and Cape Prov and then west in a meandering course through Cape Prov and along the boundary of South-West Africa and Cape Prov to empty into the Atlantic Ocean Shoals, falls, and a sandbar at the mouth prevent much navigation The Vaal river is its chief tributary

Orangeville, town (pop 2,718), S Ont , on Credit river and WNW of Toronto, in a farm area It has flour and knitting mills

orangutan (ōrăng'ōōtăn) or **orangoutang** (-tăng), anthropoid ape native to the swampy coastal forests of Borneo and Sumatra It usually travels through the trees swinging in flying leaps from branch to branch On the ground it walks on all fours and with difficulty The bowed legs are shorter and weaker than the arms, and the heel bone is lacking The hair is shaggy and reddish Adult males are usually about 5 ft in height and weigh about 250 lb Arboreal platform nests are made for sleeping In certain males cheek expansions develop and a huge, pendulous throat sac forms The orangutan is intelligent and usually proves tractable and tractable in captivity

Oranienbaum, RSFSR see LOMONOSOV

Oranienburg (ōrä'nyunbōōrk), town (pop 18,633), Brandenburg, N Germany, on the Havel and NNW of Berlin It manufactures chemicals and metal goods It was the site of one of the earliest concentration camps set up (1933) by the National Socialist regime

oratorio (ōrutō'rēō), musical composition employing chorus, orchestra, and soloists and usually, but not necessarily, a setting of a sacred libretto, but without stage action or scenery The immediate forerunner of oratorio, Emilio del Cavalieri's sacred opera *La rappresentazione di anima e di corpo*, applied the techniques of the newly created opera to the *sacra rappresentazione*, the Italian mystery play It was given in 1600 in one of the oratories of St PHILIP NERI Soon afterward the *oratorio volgare*, which employed a *testo*, or narrator, to advance the action of the story and which was in Italian, developed By c 1640 the term *oratorio* had come to stand for the work itself rather than the place in which it was given, and 10 years later the Latin oratorio, given only in the Oratorio San Marcello, Rome, was given definitive form in the works of Carissimi, whose influence is discerned in the oratorios of Heinrich Schütz and of Handel After Carissimi the only outstanding Italian oratorios are the approximately 150 by Alessandro Scarlatti In Germany settings of the Passion assumed greater importance than the true oratorio, but the oratorios of Heinrich Schütz are significant Bach's Christmas Oratorio is actually a set of six cantatas Handel inaugurated the English oratorio, and his *Messiah*, despite its being unique among his works, became the prototype of oratorio and the model for many later composers Haydn's two great oratorios show somewhat the influence of Handel Mendelssohn's *Elyah* and *St Paul* exerted great influence, particularly in England, where the oratorio enjoyed great vogue throughout the 19th cent , and a long succession of mediocre works was followed by the more notable ones of Elgar, C V Stanford, and Walford Davies Liszt, Franck, Berlioz, and Pierné all wrote romantic oratorios of some note In the 20th cent Honegger's *King David* (1921) and Stravinsky's opera-oratorio *Oedipus Rex* (1927), both recalling the baroque oratorio in the use of a narrator, and William Walton's *Belshazzar's Feast* (1931) are noteworthy

oratory (ō'rutō"rē, ō'ru-), the art of swaying an audience by eloquent speech In ancient Greece and Rome oratory was included under the term RHETORIC, which meant the art of composing as well as delivering a speech First used in the law courts in 5th-century Athens, oratory soon became important in both public and private life and was taught by the Sophists The Ten Attic Orators (listed by Alexandrian critics) were Antiphon, Andocides, Lysias, Isocrates, Isaeus, Aeschines, Demosthenes, Lycurgus, Hyperides, and Dinarchus In Rome the great orators included Cato the Elder, the Gracchi, Marc Antony, and the most famous, Cicero. The theory of rhetoric was discussed by Aristotle and Quintilian, and the subject, with definite rules and models, was of great importance in education during the Middle Ages and the Renaissance St Paul was the great orator among the apostles, and Ambrose, Augustine, and Chrysostom among the Church Fathers During the Middle Ages and the Renaissance, oratory was generally confined to the Church. With the development of parliaments in the 18th cent , great political orators appeared—Charles Fox, Edmund Burke, Henry Grattan, and Daniel O'Connell in England and Ireland, Patrick Henry and James Otis in America, and Danton and Mirabeau in the French Revolution In the 19th cent famous orators include Disraeli and John Bright in England, Lamartine in France, Ferdinand Lassalle in Germany, Louis Kossuth in Hungary, and Joseph Mazzini in Italy The most famous American oration was the Gettysburg Address by Lincoln, but other outstanding American orators in the 19th cent were Henry Clay, John Calhoun, Daniel Webster, Wendell Phillips, Stephen Douglas, Henry Ward Beecher, and Robert Ingersoll In the 20th cent famous orators include Lenin and Trotsky of Russia, Emmeline Pankhurst and Winston L S Churchill in England, and Rosa Luxemburg and Adolph Hitler in Germany William Jennings Bryan was a great orator of the early 20th cent in America Others include the Socialist Eugene Debs, the woman-suffrage leader Susan B Anthony, and Senators Robert La Follette and William Borah In recent years, especially with the advent of the radio, oratory has become less grandiloquent and more conversational, as in the famous "fireside chats" of President Roosevelt The term *oratory* itself has fallen into disuse, giving way to *public speaking*

Oratory, Congregation of the, in the Roman Catholic Church, association of secular priests organized into independent communities according to the rule written by St PHILIP NERI The purpose of the Oratory is to raise the religious standards of the locale To do this they employ three means—prayer, especially the solemn performance of the liturgy, the sacraments, especially the confessional, and preaching, every oratory having daily sermons Confessions are heard at all times The best-known oratory of the English-speaking world is probably that of J H NEWMAN, who introduced it to England as the means best adapted to the needs of the Church there Oratorians have been renowned as preachers and as confessors

orbit, in astronomy, the path in space described by a heavenly body in the course of its revolution around some other such body, which forms a center of attraction for it Planets and comets move in orbits around the sun A satellite of a planet travels around it in an orbit controlled by the attractive force of the planet From earliest times careful study was given to the motions of celestial bodies, but until the 17th cent astronomers assumed that the orbits in which they move were circular Then Johannes Kepler stated three laws summing up what all previous observations had proved as to the movements of the planets the orbit of each planet is an ellipse with the sun at one of its foci, as the planet moves in its orbit, the imaginary line from it to the center of the sun sweeps over equal areas in equal intervals of time, the squares of the revolution periods of any two of the planets stand in the same ratio as the cubes of their mean distances from the sun The planet's mean distance from the sun is half the major axis of the ellipse described by its orbit The point in the orbit nearest to the sun is called perihelion, the point farthest from the sun, aphelion In order to determine the exact position reached by a planet at any time, certain numerical quantities, or elements of a planetary orbit, must be given By two of the elements—half the major axis and the eccentricity—the size and shape of the orbit can be defined By three others—the inclination of the plane of the planet's orbit to that of the ecliptic, the longitude of the ascending node and the longitude of the perihelion from the ascending node—the position of the orbit in its plane can be defined In addition, one other element—the date on which a planet passes some such determinate part of its orbit as perihelion—must be known before it is possible to compute the position of the planet for any interval of time The eccentricity is found by dividing the distance from the sun to the center of the orbit by half the major axis The inclination is the angle between the planes of the earth's orbit and the planet's orbit The planet's orbit cuts the plane of the earth's orbit (the ecliptic) at two points called the nodes The longitude of the ascending node is measured by the angle which the line connecting the two nodes forms with the vernal EQUINOX in the direction of the earth's motion The longitude of the perihelion is measured by the angle from the ascending node to the perihelion point If the planets were acted upon by no other attractive force than that of the sun, their orbits would be true ellipses; but they influence one an-

other's motions, causing slight deviations, known as perturbations. Without taking account of these small irregularities, Kepler's laws can be used to calculate a planet's position, given the elements described above. To determine precisely the orbit of a planet, the perturbations and other deviations have to be computed and allowed for. Methods used by NEWTON, LAPLACE, and GAUSS for computing the orbit of a planet or a comet from three observations of its apparent position are the basis of all methods adopted later. The orbits of comets are far less certain than those of planets, but about three fourths of those that have been computed give strong evidence of being parabolas or very nearly parabolic. When the orbit of a new comet is to be computed, it is assumed to be a parabola. The satellites of planets, when they are distant not more than 10 or 12 times the diameter of their planet, travel in orbits that are circular, lying in planes which nearly coincide with that of the planet's equator. When, like our moon, they are more remote, their orbits exhibit considerable inclination and eccentricity. The orbits of binary stars are of great interest to modern astronomers. In the actual orbit of each such pair of stars, one star is in the focus of the ellipse which the other describes.

Orcades see ORKNEY

Orcagna (ôrkä'nyä) or **Arcagnolo** (ärkä'nyôlō), c 1308–1368, Florentine painter, sculptor, architect, goldsmith, and worker in mosaic, whose real name was Andrea di Cione. He was one of the greatest artists of his day. He learned the goldsmith's art from his father, Cione, studied sculpture with Andrea Pisano, and became a member of the Florentine painters' guild in 1343. His chief paintings are in the Church of Santa Maria Novella, Florence, they include the frescoes (now destroyed) for the choir, painted in collaboration with his brother, Nardo, and the superb altarpiece in the Strozzi Chapel, *Christ in Glory between SS Thomas Aquinas and Peter*, his greatest, and only signed, painting. His *Coronation of the Virgin* is in the National Gallery, London, and *The Virgin and St Bernard* is in the Florence Academy. Orcagna was a close follower of Giotto. Appointed (1358) head architect of the cathedral at Orvieto, Orcagna designed a splendid mosaic for the façade (Victoria and Albert Mus.). His sculptural masterpiece (1357) is the marble tabernacle at Or San Michele, Florence, which with its mosaics, bas-reliefs, and statuary forms one of the outstanding examples of Gothic art in Italy. The large relief, *The Death and Assumption of the Virgin*, at the back of the tabernacle, is one of his greatest works.

orchard. A cultivated group of fruit trees is commonly called an orchard, except that a group of citrus trees is usually a grove. The orchard of ancient times was a pleasure garden of formal design, often adorned with fountains and statuary. In commercial orchards, machinery is now used for cultivating, spraying, picking, and packing. Clean cultivation of the ground may be practiced, or cover crops may be grown, or the two practices may alternate. In young orchards it is usually possible to grow vegetables and berry fruits in the rows between the trees, thus helping maintenance costs until the trees begin to bear. See H. B. Knapp and E. C. Auchter, *Growing Tree and Small Fruits* (2d ed., 1941).

orchard grass, widely distributed perennial grass (*Dactylis glomerata*), sometimes called cocksfoot. It has pale green florets clustered into bunches. It is cultivated as a pasture grass and is capable of enduring shade. A variegated-leaved kind is cultivated in gardens.

Orchard Park, residential village (pop. 1,304), W. N. Y., SE of Buffalo, inc. 1921. Caskets and crates are made here.

Orchardson, Sir William Quiller, 1835-1910, Scottish genre, historical, and portrait painter. In 1863 he settled in London, where he long enjoyed a modest reputation. With the exhibition of his *Napoleon on Board the Bellerophon* (Tate Gall., London) in 1881 he became famous. Also well known are his portraits of Voltaire, Master Baby, Sir Walter Gilbey, Viscount Peel, and H. B. Ferguson. Orchardson's work is distinguished by lightness of touch and restraint. He was knighted in 1907.

orchestra and orchestration. In the late Renaissance, as composers began to develop an instrumental style as distinct from vocal style, the orchestra began its long, slow period of development. Not until the second half of the 18th cent., however, when orchestral music had developed sufficiently to be valued for its own sake and was freeing itself from subservience to vocal music, did the art of orchestration or instrumentation, which is the purposeful combination of instruments and distribution of parts, emerge. In the Middle Ages and Renaissance an instrument might be substituted for a missing part in vocal music, or it might even double some of the voice parts. The selection of the instrument to be used depended on what instruments were available and what their range. When instruments played in ensemble it was in homogeneous groupings of the members of one family of instruments, rather than the blend of different sonorities of the orchestra. Giovanni Gabrieli, in his *Sacrae symphoniae*, was the first to indicate parts for particular instruments. The baroque period, then, was the beginning of orchestral development, and throughout the baroque the center of the orchestra was a keyboard instrument or other chordal instrument, e.g., the lute, which played the *basso continuo* (see FIGURED BASS). Artistic need, economic and social conditions, and the development of the instruments themselves are interworking factors influencing the make-up of the orchestra. The first of the modern instruments to be fully developed was the VIOLIN and its family, which began in the early baroque to assume its dominance of the orchestra, gradually displacing the VIOL family. In the operas of Monteverdi there is the first use of violin tremolo and pizzicato as orchestral effects, but these did not become standard techniques of orchestration for some time—an example of the slowness of development caused by lack of communication among musicians. In the works of Henry Purcell and Alessandro Scarlatti the strings became standardized as a four-part choir, instead of the three or five parts which had been usual. The choice of wind instruments was still haphazard and *tutti*, passages in which all the instruments played together, were still rare. Scores in the 17th cent. did not even always include parts for all the instruments. The ability of the players to improvise a part from the figured bass given them or to play in unison with some of the voices was relied upon. The OBOE and BASSOON had, in fact, assumed their place by the end of the 17th cent., while the FLUTE was regarded as a solo instrument, substituting occasionally for the oboe and not a regular member of the orchestra until the late 18th cent. The small orchestras of princely households and the somewhat larger ones of churches and theaters represented the extent of orchestral development in the 17th cent. In the 18th cent. the orchestra of Frederick the Great at the Berlin opera house had as many as 60 of the finest players of the time, while Handel had an orchestra of about 30, eight of whom played oboes and bassoons, for the performance of his operas and oratorios in London, and Bach produced his cantatas and oratorios with no more than 18 players, many of them amateurs. In Bach's instrumentation he used strings, the oboe, the flute, the TRUMPET, and the FRENCH HORN, but the writing was contrapuntal and the distinction in the parts was according to the range, not the timbre, of the instruments. In the late 18th cent., as the SYMPHONY came into being, interest in purely orchestral music began to grow. Besides the famous orchestra at Mannheim, consisting of 40 or 50 players, there were concert orchestras in both Paris and London, and in 1781 the Leipzig Gewandhaus, Germany's first important concert hall, was opened. Numerous Italian and German cities had opera houses, each with an orchestra, and by 1790 the Paris Opéra had an orchestra of 70 players. The transition from contrapuntal to harmonic writing brought about the change which led to the growth of modern orchestration. Gluck was the most important figure in the transition, and with Mozart and Haydn the new style was fully established. The writing for wind instruments had become more independent, and they were not employed continuously throughout a movement, as they had been in Bach's and Handel's scores, but were used in shorter stretches, with regard for contrast of timbre. The CLARINET appeared, most notably in the scores of Mozart, the flute became a regular member of the orchestra with the displacing of the RECORDER by the transverse flute and the appearance of the PICCOLO, and the keyboard instrument, often still present, was no longer needed to fill in the harmony. The 19th cent. saw the completion of the modern symphony orchestra with the great mechanical improvements in the brass instruments. The OPHICLEIDE (later replaced by the TUBA) and the TROMBONE, long valued for church and ceremonial use, were added, and the trumpet, newly equipped with valves, reassumed the position of importance which it had lost in the late 18th cent. The number of string players was increased to balance the larger wind sections, and the PERCUSSION INSTRUMENTS became more numerous, there remained only to augment further certain families of instruments, e.g., to add the ENGLISH HORN to the oboes and bassoons. Berlioz's *Grand Traité d'instrumentation et d'orchestration* (1844, Eng. tr., 1948) was the first treatise of its kind, and his ideas on the subject were ultimately to have much influence. With Wagner came the rise of the modern art of CONDUCTING and the beginning of the orchestra of monstrous proportions, carried to extremes by Richard Strauss and Mahler. Wagner even invented a group of instruments—the so-called "Wagner tubas"—for the performance of his works. Ultimately, however, this trend gave way to the acceptance of the more or less standard symphony orchestra, having from 75 to 90 players, which various composers, e.g., Debussy and Stravinsky, have been able to use in quite distinctive fashion. Stravinsky's *Sacre du printemps*, however, called for an even larger group of instruments than had Mahler's *Symphony of the Thousand*, but the general 20th-century tendency is toward economy of means. Some important orchestras may be mentioned. The Leipzig Gewandhaus-Konzerte, not called by that name until later, began in 1743, the Philharmonic Society, London, was established in 1813, the Société des Concerts du Conservatoire, Paris, gave its first concert in 1828, the Wiener Philharmoniker Konzerte, Vienna, began in 1842, the Berlin Philharmonisches Orchester was established in 1882, and by the early years of the 20th cent. most of the larger American cities had orchestras, notable among them the New York Philharmonic-Symphony Orchestra, the Boston Symphony Orchestra, the Philadelphia Orchestra, and the Minneapolis Symphony Orchestra. See Adam Carse, *The History of Orchestration* (1925), *The Orchestra in the XVIIIth Century* (1940), *The Orchestra from Beethoven to Berlioz* (1948), and *The Orchestra* (1949), C. S. Terry, *Bach's Orchestra* (1932), Paul Bekker, *The Story of the Orchestra* (1936), Reginald Nettel, *The Orchestra in England* (1946).

orchid (ôr'kĭd), flowering plant of the orchid family—one of the largest groups of flowering plants, containing about 15,000 species. They are found in moist climates in many parts of the world as far north as Greenland, but are most abundant and varied in the tropics, whence come the gorgeously flowered florists' and greenhouse orchids. Among the 140 species native to North America N. of Mexico are the LADY'S-SLIPPER, ladies'-tresses, habenaria, and orchis. The flowers in many species are curiously shaped and beautifully colored. The tropical species are very slow-growing. The pollen of the flowers is not a powder as in most plants, but forms small sticky balls. The orchids hybridize freely, and many beautiful varieties have been produced by amateur and professional gardeners. They are divided into two groups, those which grow in the air and terrestrial plants. Vanilla comes from a tropical North American orchid. There is an American Orchid Society. See C. H. Curtis, *Orchids for Everyone* (1910), E. A. White, *American Orchid Culture* (3d ed., 1942).

orchil see ARCHIL

Orchomenus (ôrkŏ'mĭnus), ancient city of Boeotia, central Greece, W. of Lake Copaïs. It was an important center of the Mycenaean civilization (after 1600 B.C.), perhaps as a Cretan outpost. In later times the city was eclipsed by Thebes. Excavations have been extensive. Near Orchomenus, Sulla won (85 B.C.) a significant victory over Archelaus, general of Mithridates VI. There was another Orchomenus in Arcadia, NW of Mantinea.

Orcus see HELL

Ord, Edward Otho Cresap, 1818-83, Union general in the Civil War, b. Cumberland, Md., grad. West Point, 1839. He commanded a brigade in Virginia (1861-62), was promoted major general of volunteers, and fought at Iuka and Corinth, Miss. (1862). In the last stage of the Vicksburg campaign (1863), Ord led the 13th Corps. Returning to the Virginia theater in 1864, he served briefly as commander in the Shenandoah Valley, and in the final operations against Lee he led successively the 8th Corps, the 18th Corps, and the Army of the James. Ord commanded various departments after the war.

Ord, city (pop. 2,240), co. seat of Valley co., central Nebr., on the North Loup and NNW of Grand Island, surveyed 1874.

ordeal, ancient legal custom connected closely with divination. By an ordeal appeal was made to divine authority to decide the guilt or innocence of one accused of a crime or to choose between disputants. This custom was widespread and was known to primitive peoples as well as to those of fairly advanced material culture. Until recent times the ordeal was practiced in many parts of Asia and Africa. In the early Middle Ages it was widely used in settlement of legal questions in Western Europe, especially in the Germanic countries. In England it was a regular form of trial and persisted until trial by JURY became common. There were numerous forms of the ordeal, varying with the locality and with the nature of the crime. The ordeal by fire—walking through fire or putting the hand into a flame—was common, and related to it were other fiery ordeals, such as walking on hot plowshares and plunging the hand into melted metal or hot water. Usually it was believed that if the accused was innocent God would spare him. Commonly there was a lapse of several days after the ordeal before the injuries were inspected, then some one considered competent as a judge decided from the severity of the injuries as to innocence or guilt. A form of ordeal that has received much attention from antiquarians was that applied to determine whether or not an accused woman was a witch. The woman was bound and cast into water which had been blessed. If the water rejected her—i.e., if she floated—she was considered guilty. If the water received her, she was considered innocent and was drawn out and freed. A common form of ordeal in contentions between two parties was the submission to some trial of chance, e.g., casting lots. Allied to this in spirit was the DUEL, which supposedly worked on the principle that God would favor the cause of the righteous in the battle. The

trial by battle or by combat (sometimes called a judicial duel or wager of battle) was a recognized form of procedure in the Middle Ages It was introduced from France to England after the Norman Conquest In this trial, one of the contending parties issued a wager of battle Both parties on oath declared their assertions truthful; a duel was fought, and the victor was awarded the decision In case one of the parties to the suit was a woman, a child, or a feeble man, he or she could be represented by a champion, i e., a knight who was a relative or who had agreed to fight The use of champions was greatly extended as time went on, and a class of professional champions arose The tendency also was to restrict the trial by battle to criminal rather than civil cases The Roman Catholic Church from early times frowned on the ordeal despite its apparently religious aspect, and in 1215 it categorically forbade the clergy to take part in such ceremonies The trial by battle lasted longer

order, holy see MINISTRY, ORDERS, HOLY, SACRAMENT

Ordericus Vitalis (ôrdĕ'rĭkŭs vītā'lĭs), 1075–c.1143, Norman chronicler, b England He was sent when 10 years old to Saint-Évroul in Normandy and there, as a monk, spent most of his life He began his *Historia ecclesiastica* as a history of his monastery but broadened it into a universal history in 13 books, ending in 1143 It is particularly valuable for a study of the Normans in England, France, and Italy and for the history of his times

Order of American Knights: see KNIGHTS OF THE GOLDEN CIRCLE

orders, holy, in Christianity, the traditional Catholic system of the clergy, the spiritual leaders of the Church (For various Protestant clerical systems, see MINISTRY) In the Roman Catholic and Eastern churches the conferring of holy orders is a sacrament, called order There are three orders—bishop, priest, and deacon The ceremony of installation is called ordination or, in the case of bishops, consecration The orders have double functions, liturgical and administrative The bishop can confer all sacraments, the deacon normally is only an assistant The central sacraments of the Eucharist and penance are especially the work of the priest, Administratively the older churches are all episcopal, i e , the bishop is the typical ruler The people are organized into parishes, each headed by a priest, a number of parishes make up a diocese, which is the bishop's territory The bishop's city is his see Deacons have no administrative role In the Roman Catholic Church the bishops are ruled by the pope, because he is the bishop of Rome (see PAPACY) An archbishop is the bishop of an important center, he usually has a province or collection of dioceses assigned him, but he has no strong authority over the bishops A PATRIARCH is an archbishop who has a number of provinces The term *clergy* is usually restricted to men in holy orders, but not all clergymen are in the administrative system, many are members of religious orders (see MONASTICISM). They are then said to be regular, while clergy not in religious orders are secular Not all parish clergy are secular, but typically they are The secular clergy conceived as an organization is the hierarchy As to CELIBACY of clergy, it is the rule in the Western Church and also in the Eastern churches for all but parish clergy. The polity of the three holy orders is the modern result of the growth of Christianity, but in the Reformation and since many Protestants have claimed to remove accretions and return to apostolic forms of the 1st cent Anglicans and Lutherans are the major Protestant groups maintaining the episcopal system The terms *bishop* and *deacon* occur in the New Testament, e g , 1 Tim 3 and Acts 6 By the time of St IGNATIUS OF ANTIOCH there were three orders, the priest being one of a corps of assistants to the bishop, the deacons were administrative assistants, especially for funds By the 6th cent the cities of the empire each had a bishop, with the city and surrounding country divided into parishes, each with its priest The deacon was now a liturgical assistant to the priest This in principle is the permanent form Ancient subordinate functions are preserved in the names of the minor orders, they are, in the Western Church, doorkeeper, lector, exorcist, and acolyte The subdeacon is regarded in the Western Church as in the major orders

orders in council, in British government **1** An order given by the sovereign on the advice of all or some of the members of his privy council, without the prior consent of Parliament Orders in council, first so named in the 18th cent , are actually recommended to the crown by ministers answerable to Parliament and are thus independent of parliamentary authority only in theory. They are most commonly used in emergencies A notable use of orders in council occurred after 1806 as a result of Napoleon's CONTINENTAL SYSTEM, a series of these orders laid embargoes on Prussian ships in British ports, proclaimed a blockade of the north coast of Europe, forbade neutrals to trade between the ports of France and her allies, and ordered various other similar steps. In the First World War food was declared a contraband of war by order in council. **2** Administrative orders, issued on the authority of a parliamentary act, especially to carry out the provisions of the act Like the "executive order" in the United States, the order in council occupies a middle ground between administrative routine and policy forming and has been criticized as an attempt to circumvent the legislative branch of the government

orders of architecture. In classic styles of architecture the various columnar types fall, in general, into the five so-called "classic orders" which are named Doric, Ionic, Corinthian, Tuscan, and Composite Each order comprises the column with its base, shaft, and CAPITAL and the supported part or entablature, consisting of architrave, frieze, and cornice Each order has its own distinctive character, both as to relative proportions and as to the detail of its different parts. The entablature height is generally about one quarter that of the column, a pedestal, when used, is about one third the height of the column For the DORIC ORDER, the IONIC ORDER, and the CORINTHIAN ORDER, originally developed by the Greeks, the Roman writer Vitruvius attempted to formulate the proportionings of their parts In the 16th cent , Italian architectural writers, notably Vignola and Palladio, crystallized the ancient Greek originals and the Roman versions and additions (Tuscan and Composite) into the five definitely formulated orders, with minute rules of proportion In actual construction the Greeks and Romans had, however, adhered to no set rules In modern times moderately flexible proportions have been adopted Upon the basis of the classic orders, the designers of the Renaissance and of subsequent periods have created numberless variations In Greece the Doric was the earliest order to develop, and it was used for the PARTHENON and for most of the temple masterpieces The Corinthian was little used, its development being chiefly due to the Romans, who employed it more than any other order and who introduced brackets or modillions in its cornice The Roman orders made greater use of ornament than the Greek, and their column proportions were more slender Among Italian Renaissance innovations was the use of colossal or giant orders, in which columns or pilasters extended in height through two stories, as in the façade of St Peter's Church at Rome In countries other than Italy the orders, as they appeared in the earliest period of the Renaissance, were characterized by a naïve incorrectness After the general Renaissance freedom in the use of the orders, a strict adherence to the proportions of the original Greek and Roman models became the rule during the CLASSIC REVIVAL See D S Robertson, *Handbook of Greek and Roman Architecture* (1929)

Ordinance of 1787, adopted by the Congress of Confederation for the government of the Western territories ceded to the United States by the states It created the Northwest Territory and is frequently called the Northwest Ordinance It was based on the ordinance proposed by Jefferson in 1784 for dividing the region into numerous states. The debate concerning the OLD NORTHWEST in 1784 was fruitless, and the question lapsed The application of the OHIO COMPANY OF ASSOCIATES to purchase land in the region hurried the Congress on to action The able leaders of the company, Rufus PUTNAM and Manasseh CUTLER, were influential in the drafting of the ordinance, which was passed July 13, 1787 It set up a government in the region N of the Ohio river A territorial governor, a secretary, and three judges were to be appointed by Congress, which would retain control until the population reached 5,000 voting citizens, when an elected legislature would be set up and the territory would obtain a nonvoting representative in the U S House of Representatives When any portion of the territory should have a population of 60,000 or more, it might apply for admission to the Union as a state according to conditions laid down in the ordinance, there were to be not less than three or more than five states created out of the region (five were ultimately created) Among the other conditions and provisions of the ordinance, the most important were that no man born in the Northwest Territory should be a slave and that no law should ever be passed there that would impair the obligation of contract. The ordinance was the most significant achievement of Congress in the time of the Articles of Confederation It set the form by which subsequent Western territories were created and later admitted into the Union as states It marked the beginning of great Western expansion, and it also increased Federal powers

ordination: see MINISTRY and ORDERS, HOLY

ordnance (ôrd'nuns), ARTILLERY weapons and appliances used in war by army and navy, as distinguished from small arms The word is sometimes used incorrectly to include small arms and other equipment Under the organization (1947) of the National Military Establishment, separate ordnance departments were set up for the U.S army and the U S navy The Bureau of Ordnance of the U.S. navy procures and maintains not only munitions and armor, but also anchors, moorings, and appliances. The Ordnance Dept. of the U.S. army, headed by the chief of ordnance, is charged with the supervision of munitions and vehicles for land combat. The deputy chief of staff for matériel is given similar responsibilities for the ordnance of the U S AIR FORCE

Ordos (ôr'dŏs), Mandarin *Ehr-de-ssu,* desert region, Suiyuan prov., China It lies S and E of the Yellow River. There is a small population of pastoral nomads.

Ordovician period (ôrdōvĭ'shŭn) [from the Ordovices, ancient tribe of N Wales, a type section], second period of the PALEOZOIC ERA of geologic time It was similar to the preceding CAMBRIAN PERIOD, with shallow seas spread for most of the time over the British Isles, Scandinavia, the Baltic region, the Mediterranean region, a large part of Siberia, and much of North America The Ordovician rocks are chiefly sedimentary Because of the restricted area and low elevation of the solid land, which set limits to erosion, marine sediments make up a larger part of the Ordovician system than of the Cambrian, limestone is characteristic, shale and sandstone less conspicuous The Ordovician of North America can best be studied in New York state In the Early or Lower Ordovician epoch, also called the Canadian epoch, the waters spread over the Appalachian area and deposited the Beekmantown limestone, then withdrew generally, to return and deposit the Chazy limestone of the lower Middle Ordovician, also known as the Champlainian epoch In the interval between Beekmantown time and Chazy time, large areas, chiefly outside of New York, were apparently covered with windblown sand which became the St. Peter sandstone In the Middle Ordovician the sea spread over North America to a greater extent than in any other period and laid down the Trenton limestone, which in its eastern section is overlaid or intercalated with the Utica mud shale In the east, increased erosion of the land subsequently led to the deposition of other shales, which became more and more sandy toward the end of the period The Upper Ordovician or Cincinnatian of the west saw the formation of different series of shales, one of them, the Richmond, laid down by a second great Ordovician flood The close of the Ordovician was marked by more general earth disturbances than the close of the Cambrian, the Taconic Mts of New York being thrust up Among the important economic resources of the Ordovician strata are oil, natural gas, the lead and zinc of Wisconsin, Iowa, and Illinois, the "Portland cement rock" of Pennsylvania and New Jersey, Vermont marble, and the calcium phosphate of the Tennessee limestone The Ordovician seas were rich in animal life The most characteristic invertebrates were the minute graptolites, other numerous forms being brachiopods, bryozoans, and trilobites Some cystoids and crinoids appeared, there were a few corals and many fierce cephalopods Especially noteworthy was the appearance of a few primitive fishlike vertebrates

Ordu (ôrdōō'), anc *Cotyora,* town (pop 10,346), N Turkey. It is a Black Sea port W of Trebizond

ore, mineral mass with a high enough content of any given metal for the metal to be extracted profitably for commercial use It consists of metalliferous mineral enclosed in a matrix of minerals without economic importance (gangue minerals) Ores are usually found concentrated in deposits having fixed boundaries or showing at least a definite gradation of metal content from the ore to the country rock, i e , the rock surrounding the ore Ore deposits are classified according to origin as primary and secondary. Primary deposits are formed by the precipitation of minerals held in liquid or gaseous form in molten magmas Types include those formed simultaneously with, and those formed subsequent to, the enclosing rock, such as contact-metamorphic deposits (see METAMORPHISM), deposits in intrusive pegmatite dikes, and deposits formed by the filling of fissures in the parent rock Fissure deposits are called veins and lodes, although a lode is properly a complex of veins, the two terms are used almost interchangeably A vein is usually a tabular mass, possessed of definite boundaries and cutting across the bedding planes of the country rock Fissure deposits usually owe their origin to the rising of superheated minerals in gaseous or liquid form from molten magmas, the minerals on losing heat being precipitated in veins Sometimes the gases are precipitated in open cracks, at other times they dissolve and replace the minerals of a previously existing vein (replacement veins). Vein deposits may be at very great or at very slight depths, the character of both the metals and the gangue minerals varying with the depth of the deposits The chief ores are sulphides and oxides, deep-seated ores are in general sulphides, while ores which approach the surface become oxidized Secondary ore deposits are formed from primary deposits chiefly by weathering, which results in the formation of new minerals by the leaching out of certain constituents and in the secondary enrichment of underlying ores. The erosion of weathered

ore outcrops results in the formation of placers—ore-bearing stream and lake gravels and beach sands—and alluvial deposits. For the exploitation of ore deposits, see MINING, for the separation of the metals from the gangue minerals, see METALLURGY; for chief ores, see the specific metal

oreads (ôr'ēădz") [Gr., =belonging to mountains], in Greek mythology, mountain nymphs Oreads lived in caves and on mountaintops They were close to Artemis, the huntress, with whom they played and danced.

Oreb (ôr'ĕb) [Heb, =raven], Midianite chief defeated by Gideon. Judges 7 25, 8 3; Ps 83 11; Isa 10 26

Orebro, Swed *Örebro* (ûrubrōō'), city (pop 59,919), central Sweden, on Hjalmaren lake Known since the 11th cent, Orebro was the meeting place of a score of national diets, notably of that in 1810, when Bernadotte was elected king of Sweden as Charles XIV It has a 13th-century church and a 13th-century castle (now a museum) After the fire of 1854, the town was rebuilt and modernized The manufacture of shoes is its main industry Orebro is the county seat of **Orebro,** Swed *Örebro län* (lĕn) (3,559 sq mi; pop 235,989), county, which is formed of two historical provinces, Narke and the western part of Vastmanland The county has important iron, zinc, and copper mines and iron and steel manufactures.

Oregon, state (96,981 sq mi, 1940 pop 1,189,684, 1949 estimated pop 1,736,000), NW United States, in the Pacific Northwest, admitted 1859 as the 33d state (a free state) Oregon is bounded on the north by Washington (from which it is largely separated by the rushing waters of the Columbia river), on the east by Idaho (with the Snake river forming the boundary in the northern half), on the south by Nevada and California, and on the west by the Pacific Ocean SALEM, in the heart of the fertile Willamette valley, is the capital The name Oregon was not used by Spanish and English seamen of the 16th cent. who skirted the Pacific coast in search of the NORTHWEST PASSAGE, but later the name took on magic meaning when it was identified with the hypothetical westward-flowing river that would bring quick access to the riches of the Orient During the period of American westward expansion Oregon represented the end of the trail to the settlers who came "the Plains over, the Isthmus across, or the Horn around" Oregon rewarded the daring travelers with a variety of physical features and an abundance of natural resources—great forested mountain slopes and treeless deserts, rushing rivers and barren playas, lush valleys and extensive wastelands The major determinant of the climatic differences is the Cascade Range, a rugged chain running north to south c 100 mi inland Rain falls over the western third of the state as the eastward-moving air masses, warmed by the Japan Current and heavy with moisture from the Pacific, rise and meet the cooler mountain temperatures Dry air and continental climate untempered by ocean currents prevail over the eastern two thirds of the state On the west the shore line (c 300 mi) is bordered by narrow coastal plains of sandy beaches, luxuriant pastures, and occasional jutting promontories Inland some 25 mi the eroded Coastal Range rises to heights of 4,000 ft to serve as the western wall of the Willamette valley Here, where the navigable Willamette river flows through miles of rolling farmlands into the Columbia river, is the agricultural, commercial, and industrial center of the state PORTLAND, whose metropolitan district contains one third of the state's population, straddles the Willamette near its junction with the Columbia Salem and EUGENE lie southward in the valley, serving an area of diversified farming The snow-capped peaks of the Cascades overlook the valley on the east, with beautiful Mt Hood rising to the highest elevation of 11,245 ft Mighty stands of timber, many of them protected as national forests, cover the slopes, and in the south Crater Lake National Park and the Klamath Lake region are places of unusual natural beauty Eastward the slopes of the Cascades level into the plateaus drained in the north by the Deschutes and John Day rivers Lumber camps flourish in the foothills, while large herds of cattle and sheep graze on the plateaus, and dry farming, predominantly in wheat, is practiced in some areas, more of the dry land is being reclaimed by irrigation projects To the south a variegated pattern of marshland and mountain merges in the east into an enormous wasteland There little vegetation grows on the parched land, and the absence of potable water makes habitation difficult. North of this area rise the pine-covered Blue Mts and Wallowa Mts Wheat farms are situated on the river bottoms, but the principal industries are lumbering and gold mining. In some places the mountains extend to the Snake river to form precipitous gorges. Other parts of the region where the Snake cuts through the plateau are more level and through irrigation have been made productive. River resources, with their potential future development, are one of Oregon's greatest assets The ample supply of fish (particularly salmon) in the Columbia and in the ocean was an important food source to the Indians, and fishing is today a great commercial enterprise. River navigation began with the canoe and was continued by the sailboat and the steamer, long serving as the major means of transportation Today the construction of the Bonneville Dam enables large vessels to travel far inland, and though river traffic is not so vital as formerly, the Columbia river cities have developed as transport centers for a vast hinterland to the east. From the turbines of the Bonneville Dam hydroelectric power flows out to surrounding cities and farms These facilities have stimulated industry to round out a diversified economic program Agriculture still employs the largest number of workers, producing wheat and grains in the dry east and choice vegetables and fruits in the warm, moist valley of the Willamette Because mineral resources are extensive, mining gives promise of future development, and at present considerable amounts of gold, quicksilver, silver, copper, and building and construction materials are produced Lumbering, and the industry dependent upon it, is still a powerful factor in economic life Oregon produces more lumber than any other state, and the wealth of standing timber seems to assure a continuing supply However, none of these resources was the stimulus to the development of old Oregon in the late 18th cent It was the wealth of furs—sea otter and beaver—that lured the adventurous and the enterprising to extend the fur trade to the Pacific coast Previously interest in the region had centered around search for the Northwest Passage. Spanish seamen—Bartolomé Ferrelo (1543), Sebastián Vizcaíno (1602), Juan Pérez (1774), and Bruno Heceta (1775)—had skirted the coast to lay claim to the territory The English may have first arrived in the person of Sir Francis DRAKE when in 1579 he sailed along the Pacific coast and possibly reached Oregon Two centuries later in 1778 Capt James COOK, with his eyes on the award of £20,000 for the discovery of the Northwest Passage, charted some of the coast line By this time the Russians were pushing southward from posts in Alaska, and the British fur companies were exploring the West Americans, confident in their newly declared freedom, also turned their eyes westward The coast was soon active with many vessels of several nations engaged in trade with the coastal Indians and taking a rich harvest in furs. British captains, among them John Meares and George Vancouver, made the coast known, but it was an American, Robert GRAY, who in 1792 first sailed up the great river of the West, naming it Columbia after his ship and establishing a U S claim to the great area that it drained The Canadian traders of the North West Company were approaching the Columbia river country when the LEWIS AND CLARK EXPEDITION came across the continent and arrived at the lower Columbia in 1805 The Northwester David THOMPSON was already making his way to the lower river itself when John Jacob Astor undertook his ambitious scheme of a fur-trading post on the Pacific and brought about the founding of ASTORIA in 1811 In the troubles of the War of 1812 the post was sold to the North West Company in 1813, and British interests seemed supreme, though in 1818 a treaty provided for joint rights for the United States and Great Britain in Oregon (i e, the whole Columbia river country) for 10 years, and this agreement was later extended The North West Company was merged with the Hudson's Bay Company in 1821, and soon the Hudson's Bay men dominated the region under the patriarchal guidance of Dr John MCLOUGHLIN at Fort Vancouver He favored settlement of retired company men in the fertile valleys, but made little headway with the plan The approach of the Americans was heralded by the arrival of Jedediah S SMITH, while other mountain men were rivaling the Hudson's Bay men on the southeastern edge of the region U S interest in the Columbia river was growing Hall J KELLEY founded the American Society for Encouraging the Settlement of the Oregon Territory in 1829, and one of his disciples, Nathaniel J WYETH, attempted to set up a Columbia river post These visitors were received kindly by McLoughlin, as were the missionaries, who began to come in some numbers after the first visit of Marcus WHITMAN in 1835 Whitman and his colleagues went into the present Washington and Idaho, but Jason LEE and others came to the Willamette valley itself They were the harbingers of a great rush of farmers westward over the OREGON TRAIL There was soon trouble between the settlers and the British, and feelings rose The Americans under such leaders as Jesse Applegate set out to form their own government, and though little stock is now put in the story of how Marcus Whitman "saved" Oregon by his transcontinental journey, certainly Americans were fired to demands for the ousting of the British from the whole of the Columbia river country up to lat 54° 40′ N One of the slogans of the 1844 elections was "Fifty-four forty or fight," and indeed war with Britain momentarily threatened, but diplomacy prevailed. In 1846 the boundary was set at the line of lat. 49° N. Soon afterward the region was thrown into a turmoil by the massacre of Marcus Whitman and other whites at the hands of the Indians, and it was partly as a measure of protection that Oregon Territory was created in 1848 embracing the area W of the Rockies from the 42d to the 49th parallel. The area was reduced with the establishment of Washington Territory in 1853, and Oregon became a state in 1859 after having rejected a move to permit slavery The California gold rush caused a temporary exodus of settlers and ultimately increased trade as demand for goods spread throughout the area, and the Oregon gold strike of 1861 spread some permanent settlement to the eastern hills and valleys Cattle were brought in to graze on the tall grass which covered the semi-arid plateaus Soon cattle barons, the most prominent being Henry Miller, acquired huge herds and dominated the industry until the late 19th cent, when sheepmen and homesteaders succeeded in reducing the cattle range Oregon took little part in the Civil War, but in the '60s and '70s was plagued by Indian uprisings By 1880 these Indian troubles were over, and the next few decades brought increasing settlement and internal improvements Institutions of higher learning, until now private or denominational, were supplemented by the opening of the state university at Eugene in 1876 Under the manipulation of Henry VILLARD, transcontinental rail lines were completed to the coast and down the Willamette valley into California Manufacturing was stimulated by lumbering, which in the '90s quickly developed into a leading industry. Almost overnight logging camps and sawmills were built in the western foothills The huge stands of Douglas fir and cedar brought fortunes to the lumbering kings, and the threat to natural resources led ultimately to the creation of national forests By the time of the Lewis and Clark Centennial Exposition at Portland in 1905, less than 50 years after statehood was declared, the frontier era had passed Most of the feuding on the eastern plateaus was over, and cattle and sheep grazed peacefully on fenced-in ranges The mythical logger Paul Bunyan had come across the Shining Mountains to find a permanent setting for his legends in the evergreen and hardwood forests of the Pacific Northwest In spring the Willamette valley blossomed pink and white with fruit blossoms, and the river cities were busy with commercial and industrial enterprises. The temper of the people had exhibited itself in complex ways The prevailing political trend has steadily been conservative, both among the agricultural groups and the large business interests, and the Republican party has been strong, though the dissidents from conservatism have shown surprising strength in many instances Oregon, for instance, first instituted initiative, referendum, and recall Several issues have divided conservative and liberal thought sharply One has been the question of minorities The constitution of 1857 banned free Negroes from entering Oregon In the '80s the influx of Chinese threatened the labor market and brought violent anti-Chinese sentiment In the 20th cent a good deal of opposition to the Japanese caused some difficulties, and in the Second World War some American Japanese felt the weight of discrimination harshly This feeling against minorities is, however, by no means universal, and large groups oppose it sturdily. Of recent years one of the most disputed issues has been the exploitation of the resources of the Columbia river through the Columbia Valley Authority, which has been much opposed as a scheme of regimentation and subjection of private interests to an all-powerful government The merits of the utilities program for using the power developed at the Columbia river dams have been hotly debated That the power and irrigation schemes are having a profound effect not only in Oregon but in the entire Pacific Northwest cannot be denied Many acres have been opened to irrigated farming, and the tremendous industrial expansion of the Second World War was to a large extent dependent on the Bonneville power The inherent possibilities of the program still remain to be unfolded The old standard history of Oregon was that written for Hubert Howe Bancroft by Frances Fuller Victor (1886–88) See Graham J Mitchell, *Minerals of Oregon* (1916), Joseph Schafer, *History of the Pacific Northwest* (1917), Constance L Skinner, *Adventurers of Oregon* (1920), G W Fuller, *A History of the Pacific Northwest* (1931), C H Carey, *A General History of Oregon Prior to 1861* (1935–36), M C Jacobs, *Winning Oregon* (1938), Federal Writers' Project, *Oregon End of the Trail* (1940), Nancy Wilson Ross, *Farthest Reach* (1941), Roderick Peattie, ed, *The Cascades* (1949)

Oregon. **1** City (pop 2,825), co seat of Ogle co, N Ill, on the Rock River below Rockford, inc 1843 Near by on a bluff overlooking the river is the Eagle's Nest Art Colony, founded (1898) by Lorado Taft and others Taft executed the soldiers' monument in the city and the great Black Hawk statue on the edge of the bluff The public library includes an art gallery. White Pines Forest State Park is near by. **2** Village (pop 1,005), S Wis., S of Madison, settled 1842, inc 1883

Oregon, University of, mainly at Eugene, state supported, coeducational, chartered 1872, opened

1876 It has a college of liberal arts, schools of architecture and allied arts, business administration, education, journalism, law, music, and physical education, and a lower division There are bureaus of educational, business, and municipal research and of legislation, an art museum, with an important Oriental collection, museums of natural history and anthropology (state), and collections of rare books and manuscripts The medical and dental schools are at Portland

Oregon Caves National Monument: see NATIONAL PARKS AND MONUMENTS (table)

Oregon City, city (pop 6,124), co seat of Clackamas co , NW Oregon, at the falls of the Willamette and S of Portland John McLoughlin founded a sawmill here and had the city platted (1842), but lost his claims to American immigrants, who made it the leading city in early Oregon It was incorporated in 1849, was until late 1851 the territorial capital, and had the first newspaper (the *Oregon Spectator*, 1846) W of the Missouri Later it became a notable industrial city with pulp and paper mills, woolen mills, and other plants Edwin Markham was born here

Oregon grape, evergreen shrub (*Mahonia aquifolia*) of NW North America, cultivated elsewhere, it is the floral emblem of Oregon It has compound leaves with hollylike leaflets, small, bright yellow flowers, and showy clusters of edible blue berries, resembling small grapes and useful for jelly and a beverage Indians obtained a yellow dye from the wood and a tonic tea from the root bark Formerly considered a barberry, the shrub is sometimes called holly-leaved barberry. Related plants are often called Oregon grape

Oregon pine. see DOUGLAS FIR

Oregon State College, at Corvallis, land-grant and state supported, coeducational, chartered 1858 as Corvallis College It has been the state agricultural college since 1868 and entirely state owned since 1885 It has schools of agriculture, education, engineering and industrial arts, forestry, home economics, pharmacy, and science and a division of business and industry There are forest and farm lands and a radio station

Oregon Trail, overland emigrant trail in the United States from the Missouri river to the Columbia river country (all of which was then called Oregon) The pioneers by WAGON TRAIN did not, however, follow any single narrow route, and the conception of the Oregon Trail as a double band of wagon tracks across the continent is misleading In open country the different trains might spread out over a large area, only to converge again for river crossings, mountain passes, and other natural constrictions In time many cutoffs and alternate routes also developed They started out from various places on the Missouri, though Independence and Westport (now in Kansas City) were favorite starting points, and St Joseph had some popularity Those starting from Independence followed the same route as the SANTA FE TRAIL for some 40 mi , then turned NW to the Platte and generally followed that river to the junction of the North Platte and the South Platte Crossing the South Platte, the main trail followed the North Platte to Fort Laramie (see FORT LARAMIE NATIONAL MONUMENT), then to the present CASPER, Wyo , and through the mountains by the broad, level South Pass to the basin of the Colorado river The travelers then went SW to Fort Bridger (see FORT BRIDGER STATE PARK), from which the Mormon Trail continued SW to the Great Salt Lake, while the Oregon Trail went northwest to Fort Hall (see HALL, FORT), on the Snake river It then went along the Snake river The California Trail branched off to the southwest, but the Oregon Trail continued to Fort Boise (see BOISE, FORT) From that point the travelers had to make the hard climb over the Blue Mts Once the mountains were crossed, paths diverged somewhat, though many, if not most, went to Fort Walla Walla before proceeding down the south bank of the Columbia to the Willamette valley, where the early settlement centered The "end" of the trail shifted as settlement spread Frequently, refounded Astoria is called the end, at a later date the trail reached Tumwater, Wash , and a branch of it went up to Olympia and the Puget Sound country Lewis and Clark did not follow the trail, but the expedition going to ASTORIA in 1811–12 followed the western portion, and Philip A Rollins has demonstrated that the eastward-returning Astorians under Robert Stuart went through South Pass and followed a major portion of the trail. It is a moot question whether knowledge of South Pass disappeared and was recovered by Jedediah SMITH and Thomas FITZPATRICK in 1824 There is no evidence that they knew the Stuart route. In any case the mountainmen were chiefly responsible for making the route known to later voyagers, and Fitzpatrick, James Bridger, and Joseph Meek were all known as guides Capt. B L E. de BONNEVILLE first took wagons over South Pass in 1832 The first genuine emigrant train was that led by John Bidwell in 1841, which however, did not go to Oregon but turned off on what was to be the California Trail The first train of emigrants to reach Oregon was that led by Elijah White in 1842. In 1843 occurred the "great emigration" of more than 900 persons and more than 1,000 head of stock; Jesse APPLEGATE was the leader Four trains made the journey in 1844, and by 1845 the emigrants reached a total of over 3,000 The trail continued in use for many years The classic by Francis Parkman, *The Oregon Trail*, actually concerns only the eastern part of the trail See also OVERLAND TRAIL See W. J Ghent, *The Road to Oregon* (1929), P A Rollins, ed , *The Discovery of the Oregon Trail* (1935), Archer B Hulbert and Dorothy Hulbert, ed , *The Oregon Crusade* (1935), Federal Writers' Project, *The Oregon Trail* (1939), Jay Monaghan, *The Overland Trail* (1947)

Orekhova-Zuyevo (ŭryĕ'khuvŭ-zōō'yĭvŭ), city (pop 99,379), RSFSR, on the Klyazma river and c 50 mi E of Moscow It is a major textile center with cotton mills and weaving and dyeing plants

Orel (ôrĕl', Rus ŭryôl'), city (pop 110,567), capital of Orel oblast, central European RSFSR, on the Oka river It is the center of a fertile agricultural district, an important railroad junction, and an industrial center It was (1919) the northernmost point reached by Denikin in the Russian civil war In the Second World War it was the center of heavy fighting and was held (1941–43) by the Germans

Orellana, Francisco de (franthĕ'skō dā ôrĕlyä'nä), d c 1546, Spanish explorer of the Amazon river He took part in the conquest of Peru and was a lieutenant of Gonzalo Pizarro on the expedition that started into the interior of South America in 1538 At the Napo river his detachment was separated from the rest of the expedition, and he went down the Amazon, arriving at its mouth in Aug , 1541 His tales of female warriors (possibly a mistaken impression of long-haired men warriors) gave the river its name He died in a subsequent attempt to explore the river from its mouth An account of the first voyage by a priest who accompanied it, Gaspar de Carvajal, was edited by José Toribio Medina and translated by Bertram T. Lee as *The Discovery of the Amazon* (1934)

Orem (ô'rŭm), town (pop 2,914), N central Utah, just N of Provo in the valley of Utah Lake, inc 1925 In the irrigated section now served by the Provo river project, it has truck gardening and a large cannery

Ore Mountains · see ERZGEBIRGE

Orenburg, RSFSR see CHKALOV

Orense (ôrän'sä), city (pop 17,866), capital of Orense prov , NW Spain, in Galicia, on the Miño river It is the center of an agricultural region with extensive vineyards A Roman settlement, it reached its greatest importance as the capital of the kings of the Suevi (5th–6th cent) It has a fine 13th-century bridge and a Gothic cathedral, frequently restored There are hot sulphur springs

Orestes (ôrĕs'tēz), in Greek mythology, prince of Mycenae He was the only son of Clytemnestra and Agamemnon and was the brother of Electra, Iphigenia, and Chrysothemis When Orestes was a child his father was murdered by Clytemnestra and her lover Aegisthus In fear of vengeance they sent the boy to a distant land When Orestes grew up, however, he returned and, with the help of Electra, avenged the murder by killing his mother and her lover After this matricide, he was persecuted by the Erinyes until he reached Athens, where he was tried and acquitted by the Areopagus To win full purification from his crime, he brought a sacred image of Artemis from Tauris At Tauris he also found his sister Iphigenia, who had been a priestess of Artemis there Orestes was accompanied in all his adventures by his friend Pylades According to some legends Orestes married Hermione, daughter of Menelaus and Helen This story of vengeance and expiation was used by Aeschylus, Sophocles, and Euripides

Orestes, d 476, Roman general He deposed (475) the West Roman emperor, Julius Nepos, and raised his own young son, ROMULUS AUGUSTULUS, to the throne The next year Orestes was defeated and slain by ODOACER at Piacenza, and his son was deposed

Orestia · see ADRIANOPLE, Turkey

Oresund (ôrusŭnd') or **the Sound,** Scandinavian *Öresund* and *Øresund*, sound between Sweden and Denmark, connecting the Kattegat with the Baltic sea, to which it is the deepest channel It is c 60 mi long and between Halsingborg and Helsingor only 2½ mi wide Copenhagen and Malmo are on the Oresund

Orfa, Turkey see URFA

Orfila, Mathieu Joseph Bonaventure (mätyô' zhôzĕf' bônävätür' ôrfēlä'), 1787–1853, French chemist and physician, b Minorca He became professor (1819) and dean (1831) of the faculty of medicine, Paris He was noted for his work on toxicology and on legal medicine. His books include *A General System of Toxicology* (1813–15, Eng. tr., 1817)

Orford, Robert Walpole, 1st earl of: see WALPOLE, ROBERT, 1ST EARL OF ÖRFORD.

Orford, rural town (pop 701), W N.H., on the Connecticut above Hanover, inc. 1761, settled c.1765. Its fine old houses include the Wheeler House (c.1820), said to have been designed by Bulfinch.

organ, musical wind instrument in which sound is produced by one or more sets of pipes, each pipe producing only one pitch, and in which a mechanically produced wind supply is substituted for human blowing Ktesibios of Alexandria, in the 3d cent B C , invented the *hydraulos*, in which water pressure was used to stabilize the wind supply The pipes were arranged in rows upon the wind chest and the air was permitted to enter any pipe at will by means of wooden sliders The *hydraulos* was the prevailing organ for several centuries and reappeared at intervals throughout the Middle Ages Because of its relatively powerful sound, it was the favorite instrument at the Roman games in the time of Nero Thus the early Christians looked upon the organ as a pagan instrument Evidence of the first purely pneumatic organ is found on an obelisk erected at Byzantium before A D 393 Byzantium became the center of organ building in the Middle Ages, and in 757 Constantine Copronymus (Constantine V) presented a Byzantine organ to Pepin the Short This is the earliest positive evidence of the appearance of the organ in Western Europe, when it was first used in connection with Christian worship is not known By the 10th cent , however, organ building had made considerable progress in Germany and England The organ built c 950 in Winchester Cathedral had 400 pipes and 26 bellows and required two players The keyboard was a creation of the 13th cent , making possible the performance of more complex music The organ built in 1381 in the cathedral at Halberstadt had three manual keyboards and a pedal keyboard, and the earliest extant music written specifically for organ, dating from the early 14th cent , gives evidence that by that time the manuals of the organ had full chromatic scales, at least in the middle registers Also, 14th-century representations show the keyboard with the present-day arrangement of black and white keys Pedals, however, did not become universal until the late 19th cent , Italy and England having lagged far behind in this respect Organs in the Middle Ages already had several ranks of pipes, i e , each key caused a number of pipes to sound simultaneously These were all diapasons, or principals, the pipes of timbre characteristic only of the organ, and the various pipes controlled by one key were tuned to the fundamental and several harmonics of a given tone There was no way of sounding only one rank of pipes at a time—i e there were no stops Solo stops, with timbres imitative of other instruments, were added in the late 15th and early 16th cent , the first being a flute stop Reed pipes, with their distinctive and penetrating tone, were introduced at this time It was the Flemish and German builders who developed the organ of distinctive and contrasting timbres, and the peak in organ building was reached in the German organ of the baroque, as described by Michael Praetorius in his *Syntagma musicum* The greatest organ builder, perhaps of all time, was Gottfried Silbermann (1683–1753) of Dresden His organs were of a light, transparent tone, ideal for the performance of the great polyphonic music of the baroque After this period the art of organ building degenerated, and the organ lost its place in the center of musical life. The 19th-century desire for a highly expressive organ led to the obscuring of diapason tone by the large number of stops imitative of orchestral tone and to the common employment of the swell and the crescendo pedal The swell involves enclosing one or more divisions of the organ in a wooden box on one side of which are shutters opened or closed by means of a swell pedal, the crescendo pedal, when gradually opened or closed, adds or takes off stops one by one The early 20th cent saw the electrifying of the mechanical parts of the organ, making possible the culmination of the trend toward monstrous size and overwhelming power In the early 20th cent , however, Albert Schweitzer was instrumental in the preservation and restoration of many fine old organs, and there appeared a movement back to the ideals of Silbermann In the United States, Walter Holtkamp, beginning in 1932, and G. Donald Harrison, beginning in 1935, became the leading figures in this movement Harrison in 1937 completed a true Praetorius organ in the Germanic Museum of Harvard Univ and in addition has designed many organs suitable for the performance of music of all periods. See E J Hopkins and E F Rimbault, *The Organ· Its History and Construction* (1895), E M Skinner, *The Modern Organ* (1917), W H Barnes, *The Contemporary American Organ* (4th ed , 1948)

Organization of American States, international organ created April 30, 1948, at Bogotá, Colombia, by agreement of the 21 American republics It is a regional agency within the United Nations, intended to promote peace, justice, and solidarity and to defend the sovereignty and territorial integrity of the signatory nations.

Organ Pipe Cactus National Monument: see NATIONAL PARKS AND MONUMENTS (table).

Orgetorix (ôrjĕ'tŭrĭks), d. 60? B.C., Helvetian aristocrat, who had dreams of conquering Gaul. The first part of the plan was to be the migration of the Helvetii across Gaul. His plan discovered, he

was tried, but acquitted. He suddenly died soon after. The Helvetii, however, undertook the migration, which embroiled them with Julius CAESAR and began the GALLIC WARS.

Oribe, Manuel (mänwĕl' ôrĕ'bā), d. 1857, president of Uruguay (1834–38) After serving with ARTIGAS, he became one of the Thirty-three Immortals who raised the standard of independence under Juan LAVALLEJA He succeeded Fructuoso RIVERA as president and became friendly with the Argentine dictator, Juan Manuel de ROSAS In 1838 Rivera revolted against, and ousted, Oribe With the help of Lavalleja and Rosas, the exiled Oribe began the long civil war that nearly destroyed Uruguay It was marked especially by the long siege of Montevideo A combined force of Brazilians, rebellious Argentines under URQUIZA, and the besieged (the Colorados) finally defeated Oribe's party (the Blancos)

oriel (ôr'rĕul), projecting or bay window in an upper story, supported on brackets, corbels, or an engaged column It is usually polygonal or curved in plan, sometimes rectangular, and often rises through two or more stories It is most characteristic of the late medieval and early Renaissance period in England, where it was a favorite feature in civic and domestic buildings, but it is also found in France and Germany during the same period It occurs frequently over entrance portals, especially in collegiate structures The term is often loosely but incorrectly applied to any bay window.

Oriel College see OXFORD UNIVERSITY

Oriental music. The oldest musical culture of the Orient is CHINESE MUSIC, the principal source of JAPANESE MUSIC The music of Siam is similar to JAVANESE MUSIC, from which BALINESE MUSIC is derived Also closely related are HINDU MUSIC and ARABIAN MUSIC

orientation, in architecture, the disposition of the parts of a building with reference to the points of the compass, specifically in relation to the east-west axis From remote antiquity the traditional belief in the efficacy of religious ceremonials performed at dawn towards the rising sun has influenced the orientation of temples and other sacred structures In Mesopotamia and Egypt, in Mayan Central America, even at Stonehenge in England, entrances and other important architectural features were designed to point toward the east, the temples of Greece and Rome often, though not invariably, faced the rising sun In medieval Europe and consequently in modern Europe and the Americas it became customary to have the congregation and the priest at the altar facing east So strong was this custom that 'west front" came to be a generic term for the façade of a church Some churches were so built that a central line of the axis of the church pointed exactly to the rising sun on the day of the saint for whom the church is named Such orientation was, however, by no means, universal St Peter's at Rome, continuing an earlier tradition, faces in the opposite direction In Jewish synagogues the holy ark or sanctuary must be placed at the eastern end of the building, a similar tradition in Mohammedan mosques so disposes the mihrab, or prayer niche, that the worshiper always faces the holy city of Mecca Important secular buildings in the west often face toward the cardinal points of the compass, and the gridiron pattern of a city's streets is frequently so laid out Practical considerations also govern orientations The artist's studio in northern latitudes is always placed, where possible, to receive the even north light, greenhouses, schools, and hospitals are commonly orientated to get the maximum amount of sunlight In residential architecture, not only sunlight, but prevailing winds and attractive views are factors in orientation

Origen (ôr'rĭjĭn), 185?–254?, Christian philosopher and scholar, His full name was Origines Adamantius He was born in Egypt, probably in Alexandria When he was quite young, his father was martyred At the age of 18, Origen became head of the catechetical school of Alexandria, where he had studied under Clement of Alexandria In the 28 years of his labors in Alexandria, Origen became famed for his teaching (for which he accepted no money) and wrote prodigiously He was personally sternly ascetic Because he castrated himself (out of zeal for purity), he was not ordained a priest, but was permitted to preach while on journeys to Rome, Caesarea, and Jerusalem His interpretation of the Scriptures in preaching and lecturing won him wide acclaim Later (c 230) the bishops of Jerusalem and Caesarea ordained him, but Demetrius, his bishop, ordered him deposed and banished from Alexandria Origen set up a new school in Caesarea (231), which became even more illustrious than the one in Alexandria Among his students was St Gregory Thaumaturgus In the persecution of Decius (c 250) Origen was imprisoned, tortured, and pilloried, this experience probably caused his death some time after his release Learned in Greek philosophy, he was a most erudite and profound biblical scholar as well According to St Jerome he wrote 800 works Extant are letters, apologies, and exegesis. His critical edition of the Bible, the *Hexapla*, is famous in the history of textual criticism; this was a parallel edition of six Hebrew and Greek versions None of these remains in its original form Origen's system of theology is given in his *De principiis* [on first principles], known through a Latin version of Rufinus The chief of his apologies is *Contra Celsum* [against Celsus] Origen attempted to synthesize the fundamental principles of Greek philosophy, particularly those of NEOPLATONISM and STOICISM, with the Christianity of creed and Scripture, so as to prove the Christian view of the universe to be compatible with Greek thought His teaching had a strong ethical quality which carried much influence His threefold plan of interpreting Scripture (literal, ethical, and allegorical) influenced subsequent exegetical works In spite of Origen's fame as an apologist for Christianity, there was question as to his orthodoxy His somewhat recondite blending of pagan philosophy with Christian theology led to his condemnation by Justinian in the Monophysite controversy There is good reason to believe that he was often the victim of misquotation and unfair interpretation See G W Butterworth, tr, *Origen on First Principles* (1936), R B Tollinton, tr, *Selections from the Commentaries and Homilies of Origen* (1929), René Cadiou, *Origen His Life at Alexandria* (Eng tr, 1944)

original sin, in Christian theology, the SIN of ADAM, by which all mankind fell from divine GRACE In effect it is the fundamentally evil nature of man which requires redemption to save it The waters of BAPTISM are said to wash away original sin and to restore man to his innocent state, but even after baptism original sin leaves a tendency to sin

Orillia (ôrĭl'lēu), town (pop 9,798), S Ont, on Lake Couchiching and N of Toronto Its industries include boatbuilding, woodworking, and flour milling, and it is a summer resort A monument to Champlain, erected in 1925, commemorates his explorations Stephen Leacock lived here

Orinoco (ôrunō'kō), river rising in the GUIANA HIGHLANDS and flowing NW to Colombia, then N to the APURE and E to the Atlantic Most of its course is in Venezuela One of the longest of South American rivers, it has a huge flow of water and a length variously estimated at from 1,200 to 1,700 mi Divided into upper and lower courses by the Ature and Maipures cataracts (40 mi apart but linked by a motor road) it is navigable for most of its length and is joined to the Amazon system by the natural channel of the CASIQUIARE and the RIO NEGRO It flows through tropical rain forest and vast savannas called LLANOS Chief port on it is CIUDAD BOLÍVAR Columbus probably discovered its mouth in 1498, and Lope de AGUIRRE seems to have traveled most of its length in 1560 Centuries later Alexander von HUMBOLDT explored the upper reaches, but it was not until 1944 that an aerial expedition located its source in the inaccessible highlands

oriole (ôr'rōl), name applied to various perching birds of the Old and New Worlds The European orioles are allied to the crows while the American orioles, called hangnests, belong to the blackbird and meadow lark family The golden oriole of Europe is a beautiful orange-yellow bird with black wings and tail, which ranges from England to Siberia and winters in Africa The related mango bird inhabits India, and allied species are found in Africa and Australia The Baltimore oriole is the best known of the American orioles In the male the head, throat, shoulders, wings, and tail are black, and the rest of the plumage is orange Its NEST, a deep, woven bag, is suspended from a high branch of a tree During the mating season a clear, whistled song is produced by both sexes, the male's being longer and louder than that of the female Orioles feed chiefly on insects In the orchard oriole a reddish brown replaces the brilliant orange of the Baltimore oriole Related birds are the black-headed, the hooded, Bullock's, and Lichtenstein's orioles

Orion (ôrī'ŭn), in Greek mythology, gigantic Boeotian hunter He fell in love with Merope, and after her father had delayed their marriage, Orion, when drunken, violated her Her father blinded Orion, but his eyes were healed by the rays of the sun Later he lived with Artemis, who, in some legends, was said to have killed him accidentally In other legends his death is caused by a scorpion In any case, he became a constellation, as centered, as in life, with a sword, a club, and a lion's skin

Orion, in astronomy, a conspicuous and easily recognizable constellation near the equator From ancient times it has been mentioned in the literature of many peoples It is represented pictorially as the figure of a warrior Four of the seven most prominent stars form a huge quadrangle, the other three bright stars lie in a diagonal line in about the center, and these form Orion's belt from which hangs a sword A giant star BETELGEUSE, or Alpha Orionis, forms one corner of the quadrangle, and diagonally opposite it is Rigel, or Beta Orionis, a blue-white star of first magnitude Associated with the middle star in Orion's belt is a great diffuse nebula faintly visible with the naked eye

Oriskany (ôrĭ'skŭnē), village (pop 1,115), central N Y, near Utica and on Oriskany Creek near its confluence with the Mohawk, inc. 1914 An obelisk here marks the site of an engagement (Aug 6, 1777) in the SARATOGA CAMPAIGN

Orissa (ôrĭ'su, ō-), state (59,869 sq mi; pop 13,767,988), E India, on the Bay of Bengal Bhuvaneswar is the capital The relatively unindented coast line (c 200 mi long) is without good ports, and the state depends upon agriculture for its livelihood The narrow, level coastal strip, including the delta of the Mahanadi river, is exceedingly fertile Rainfall is heavy and regular, and two crops of rice (by far the most important food) are grown annually The dense population of this region is Oriya-speaking The interior of Orissa, inhabited largely by Munda-speaking aborigines, is rough, from hilly to mountainous In the north are deposits of iron, manganese, coal, and mica Insufficient rail lines and poor roads hinder the economic development of the state Orissa has no unified history The area came under British control piecemeal early in the 19th cent The coastal section, which was made (1912) part of Bihar and Orissa prov, became in 1936 a separate province In 1948 and 1949 the provincial area was almost doubled and the population was increased by a third with the addition of 24 former princely states Orissa was made a state in 1950

Orizaba (ôrēsä'bä), city (pop 47,910), Veracruz, E Mexico In a fertile valley surrounded by wooded hills, Orizaba has a mild and healthful climate, it is a popular resort The surrounding region yields coffee, tobacco, sugar cane, corn, and some cotton Abundant rainfall and consequent development of water power have made the city an important manufacturing center of cigars, cigarettes, beer, sugar, rum, and especially cotton and wool textiles In 1862 Benito JUÁREZ, attempting to ward off foreign intervention, called a conference of foreign representatives at Orizaba He was unsuccessful The French used the town as a base for their invasion of Mexico

Orizaba, peak, 18,700 ft high, E Mexico, on the Vera Cruz–Puebla border It is the highest in Mexico and second only to Mt McKinley in North America This snow-capped volcano, called Citlaltépetl in Aztec times, is inactive, the last eruption occurred in 1687 The peak was first climbed in 1848

Orkhan (ôrkhän'), d 1362?, Ottoman ruler, son and successor of OSMAN I He defeated the Byzantine emperor Andronicus III and conquered large parts of Asia Minor, including Nicaea and Izmit In 1345 the Ottomans first crossed into Europe to aid Emperor JOHN VI (John Cantacuzene), and Orkhan married John's daughter Theodora Orkhan twice more crossed the Dardanelles, assisting John against Stephen Dushan of Serbia Thus the Turks gained a foothold on European soil Orkhan left a well-organized state to his son and successor, Murad I

Orkhon (ôr'kŏn, ôrkhŏn'), river, c 300 mi long, rising in the Khangai mts, NW Mongolian People's Republic It flows northeast to join the Selenga river just south of the boundary with the USSR The **Orkhon Inscriptions,** dating from the 8th cent, were found near the river's lower course c 40 mi north of the Uigur city of Karakorum They comprise minor Chinese texts and the oldest known material in a Turkic language Vilhelm Thomsen deciphered the Turkic inscriptions

Orkney, county (376 sq mi, 1931 pop 22,077, 1948 estimated pop 22,070), NE Scotland, consisting of the **Orkney Islands** or **Orkneys,** anc *Orcades,* an archipelago c 50 mi long, separated from the north coast of Caithness by Pentland Firth The group consists of 90 islands, fewer than a third of which (including four lighthouse stations) are inhabited The largest islands are Pomona (or Mainland), South Ronaldsay, Westray, Sanday, and Stronsay The county town, Kirkwall, is on Pomona Hoy is the only island which rises to any considerable height The rest are generally low, rocky, and treeless, with an occasional cultivated area The natives, who have much Scandinavian blood, are mostly fishermen and tenant farmers There are prehistoric remains of standing stones, mounds, and monuments The Norseman Harold I (Harold Fairhair) added the Orkneys to the Scandinavian domain in 875, and they remained nominal dependencies of Norway until 1468, when Christian I of Norway and Denmark pledged them as security for the dowry of his daughter, Margaret, who married James III of Scotland The pledge was never redeemed, and the Orkneys remained the property of Scotland At the naval base of Scapa Flow part of the German fleet was scuttled by its crew in 1919 The base was attacked by German raiders in the Second World War See C S Olcott, *The Orkneys and Shetland* (1930)

Orland. **1** Town (pop 1,366), N Calif, NNW of Sacramento, founded 1881, inc 1919 In the Sacramento valley, it is the center of an irrigation project opened in 1910 and controlled by the U S Bureau of Reclamation since 1915 Three dams (completed in 1910, 1915, and 1928) supply water from Stony Creek, a tributary of the Sacramento **2** Town (pop 1,015), S Maine, S of Bangor, settled 1764, inc. 1800

Orlando: see ROLAND.

Orlando, Vittorio Emanuele (vēt-tō'rēō āmänwā'lā ôrlän'dō), 1860–, Italian statesman and jurist. He held several cabinet posts from 1903 to 1917 and was premier from 1917 to 1919. As one of the "Big Four" (Clemenceau, Lloyd George, Orlando, and Woodrow Wilson) at the Paris Peace Conference in 1919, he demanded the fulfillment of the Secret Treaty of London of 1915, by which the Allies had promised Italy ample territorial compensation in Dalmatia for its entry into the First World War Meeting stubborn opposition from Woodrow WILSON and failing to secure British or French support, he dramatically left the conference (April, 1919), but returned in May. Even then no solution satisfactory to Italy was found, Orlando resigned and was succeeded as premier by Francesco NITTI Opposing Fascism, Orlando gave up (1925) his seat in parliament and devoted himself to teaching and writing. After the fall of Mussolini in 1943, he became, with Benedetto Croce and Nitti, a leader of the conservative National Democratic Union and a member of the national assembly of the Italian republic

Orlando (ôrlän'dō), city (1940 pop. 36,736, 1949 special census pop 50,939), co seat of Orange co, central Fla., SE of Lake Apopka Orlando is the trade and shipping center for a region yielding citrus fruits, vegetables, lumber, naval stores, and dairy products The city was settled near Fort Gatlin (1837–48), a post in the Seminole War, and was named Jernigan (1850) for an early settler It was incorporated in 1875 Recent rapid growth has made it the largest inland city in Florida

Orléanais (ôrlāänā'), region and former province, N central France, on both sides of the middle Loire. ORLÉANS (at its center), CHARTRES, and BLOIS are the chief cities The region includes Loiret, Loir-et-Cher, and parts of Eure-et-Loir and Yonne depts BEAUCE in the north, Little Beauce in the west, and Gâtinais in the east are rich agricultural districts, the large and ancient forest of Orléans (northeast of the city) occupies the center, the fertile Loire valley yields fruits, vegetables, and grapes and is dotted by many fine châteaux, notably Blois and CHAMBORD To the south of the Loire bend is the swampy Sologne, which has been considerably improved by drainage in recent years The nucleus of the Orléanais has been part of the royal domain since the days of the first kings of France, and its history is that of Orléans

Orléans (ôrlāä'), family name of two branches of the French royal line The house of Valois-Orléans, founded by Louis, duc d'ORLÉANS, whose assassination (1407) caused the civil war between ARMAGNACS AND BURGUNDIANS, ascended the French throne (1498) in the person of LOUIS XII, who died without male issue Gaston, brother of Louis XIII, was made duke of Orléans, but died without a male heir The present house of Bourbon-Orléans was founded by **Philippe I, duc d'Orléans** (fēlēp'), 1640–1701, a brother of Louis XIV A notorious libertine, he was excluded from participation in state affairs, though he fought in the Dutch War and won the victory of Cassel (1677) He married (1661) HENRIETTA OF ENGLAND and, after her death, ELIZABETH CHARLOTTE OF BAVARIA (1671) His son, **Philippe II, duc d'Orléans**, 1674–1723, regent of France during the minority of Louis XV, distinguished himself in the War of the Great Alliance and that of the Spanish Succession, but became known for his cynicism and immorality The will of Louis XIV which made him president of the regency council severely restricted his authority, but he had the will annulled and governed dictatorially He was responsible for the rise of John LAW and the ruinous MISSISSIPPI SCHEME, concluded the QUADRUPLE ALLIANCE of 1718, and made war on Spain (1719–20) His chief minister was Cardinal DUBOIS Social life during his regency reached an apex of licentiousness The ambitions of the regent and his descendants ultimately brought the house of Orléans into open opposition to the ruling house The regent's great-grandson, Louis Philippe Joseph, duc d'Orléans, called Philippe Égalité (see separate article), supported the French Revolution His adherents, the Orleanists, who sought a compromise between the monarchical and the revolutionary principles, came into power through the Revolution of 1830 and put Philippe Égalité's son LOUIS PHILIPPE on the French throne Representative of the capitalist upper bourgeoisie, the Orleanists limited their definition of revolutionary liberty to freedom for the middle class After the fall of Louis Philippe (1848), they continued to support the claims of his descendants, the Orleanist pretenders, who returned from exile after the fall of Napoleon III (1871) Their prospects, though high under the presidency of Marshal MacMahon, dwindled steadily, especially after the Third Republic exiled all pretenders in 1886 Louis Philippe's eldest son, **Ferdinand Philippe Louis Charles Henri, duc d'Orléans** (fērdēnā', lwē' shārl' ārē'), 1810–42, took part in the French expedition to Belgium (1831–32) and in the Algerian wars (1835–40). His unfinished *Campagnes de l'armée d'Afrique, 1835–39*, was published in 1870. He died in a carriage accident. His eldest son, **Louis Philippe Albert d'Orléans, comte de Paris** (lēlbĕr', kōt' dù pārē'), 1838–94, went to America after his candidacy for the throne had failed in 1848 He fought in the Civil War under General McClellan. Back in France in 1871, he was Orleanist pretender, but relinquished his rights to the legitimist pretender, Henri de CHAMBORD (1873) After Chambord's death (1883), he became head of the entire house of Bourbon. He was the author of *Workingmen's Associations in England* (1869; Eng tr., 1869) and a *History of the Civil War in America* (1874–90, Eng tr., 4 vols., 1875–88), a standard work of military history He died in England. His brother, **Robert Philippe Louis Eugène Ferdinand d'Orléans, duc de Chartres** (rōbĕr', lēnĕn' fērdēnā', dük' dù shär'trù), 1840–1910, fought with him in the Civil War. In the Franco-Prussian War he served in the French army under the name Robert le Fort After 1871 he fought in the Algerian wars, but he went into exile in 1886 Owing to his brother's renunciation of his claims, the duke of Chartres was regarded by many Orleanists as pretender from 1873 to 1883 **Louis Philippe Robert, duc d'Orléans**, 1869–1926, succeeded his father, Louis Philippe Albert, comte de Paris, as pretender in 1894 Born and educated in England, he served in the Indian army (1888–89) He left accounts of his wide travels and explorations He died childless **Jean d'Orléans, duc de Guise** (zhä', gēz' or gwēz'), 1874–1940, son of the duke of Chartres, was pretender after 1926 He lived in exile, as did his son, **Henri Robert Ferdinand d'Orléans, comte de Paris**, 1908–, who succeeded to his father's claim.

Orléans, Charles, duc d' (shärl' dük' dôr'lä'), 1391–1465, French prince and poet, nephew of King Charles VI After the assassination of his father, Louis d'ORLÉANS, he became (1407) titular head of the Armagnacs (see ARMAGNACS AND BURGUNDIANS) He was captured by the English at Agincourt (1415) and remained in captivity in England until 1440, when he was ransomed by PHILIP THE GOOD of Burgundy In retirement at Blois, he devoted the rest of his life to writing verse and to the society of literary men Among his poems, which are remarkable for their polish and charm, are the rondeau beginning, "Le temps a laissié son manteau" and the ballad beginning, "Je meurs de seuf auprès de la fontaune," both still popular There are translations by Andrew Lang, W E Henley, and Ezra Pound Charles's son was Louis XII

Orléans, Gaston, duc d' (gästôⁿ'), 1608–60, son of Henry IV and Marie de' Medici, younger brother of Louis XIII He took part in many of the conspiracies against Richelieu and several times fled from France, he won pardon by deserting and betraying his associates, as he did with the younger Henri de MONTMORENCY and CINQ MARS. After the death of the king he became lieutenant general of France and successfully campaigned against the Spanish He was exiled (1652) to Blois for his leading part in the FRONDE Gaston was the father of Mlle de MONTPENSIER

Orléans, Henrietta Anne, duchesse d' see HENRIETTA OF ENGLAND

Orléans, Henri Philippe Marie, prince d' (ārē' fēlēp' märē' prēs'), 1867–1901, French explorer and author, b England, son of Robert, duke of Chartres After a journey (1889) from Siberia to Siam, by way of Tibet, and a visit (1892) to SE Africa, he left (1895) Hanoi, to complete the earlier work of M J F Garnier on the Mekong river in Indo-China He traveled as far as the Brahmaputra, established the fact that the Salween originates in Tibet, and discovered also the source of the Irrawaddy His accounts of his travels include *Around Tonkin and Siam* (1894, Eng tr , 1894) and *From Tonkin to India* (1897, Eng tr , 1898)

Orléans, Louis, duc d' (lwē), 1372–1407, brother of CHARLES VI of France, whose chief counselor he was from 1388 to 1392 After 1392 he became involved in a long struggle with his uncle, PHILIP THE BOLD of Burgundy, and with Philip's successor, JOHN THE FEARLESS Unpopular because of his extravagance, he was treacherously murdered by John's order in 1407. His death precipitated the civil war between ARMAGNACS AND BURGUNDIANS

Orléans, Louis Philippe Joseph, duc d' (lwē' fēlēp' zhôzĕf'), known as **Philippe Égalité** (āgälētā'), 1747–93, French revolutionist, great-grandson of Philippe II d'Orléans (see ORLÉANS, family), great-great-grandson of Louis XIV He was duke of Montpensier (1747–52) and duke of Chartres (1752–85) before inheriting (1785) the title duke of Orléans In 1771 he was exiled from Paris for opposing MAUPEOU In the next years he became a leader of the discontented faction, and at the first Assembly of Notables (1787) he argued that the power of voting taxes inhered solely in the States-General As a deputy of the nobility to the States-General, he favored voting by head and led the migration of a group of nobles to join the Third Estate (June 25, 1789) His unpopularity with the bourgeois and the privileged classes and his championship of the depressed made his Palais-Royal a gathering place for the radicals and the destitute of all sorts, it also brought upon him such blame for the disturbances in Paris that he thought it well to accept a mission to England (Oct., 1789). He probably could have had the crown when Louis XVI fled to Varennes, but he did not turn from his espousal of the cause of the lower classes. Louis Philippe helped the JACOBINS into power by acting as their banker; with their help, and after exchanging his title for the name Citizen Égalité, he was elected to the National Convention (Sept., 1792) Although he voted for the execution of Louis XVI, he was soon afterward forsaken by the Jacobins, who used the charge of "Orleanism" against his bitter enemies, the Girondists. Arrested (April 7, 1793) on the charge of aspiring to the crown and of having plotted with DUMOURIEZ, he was guillotined on Nov 6, 1793 The charges against him, except his dissolute morals, have never been convincingly proved His son was King LOUIS PHILIPPE

Orléans (ôrlēänz, Fr ôrlāä'), city (pop 64,755), capital of Loiret dept, N central France It has clothing and metal manufactures The old city, on the right bank of the Loire, is surrounded by sprawling modern suburbs It was burned by Julius Caesar and rebuilt by Aurelian, after whom it is named Taken by Clovis I (5th cent), it became the capital of the Frankish kingdom of Orléans under Clodomer, son of Clovis The kingdom existed but briefly except in name (see FRANKS) It was united (7th cent) with Neustria The city soon became, after Paris, the principal residence of the French kings. Orléans, with the surrounding province, the ORLÉANAIS, constituted part of the small nucleus of the royal domain, and it was several times given in apanage as a duchy to the eldest brother of a king of France and to his descendants (see ORLÉANS, family) The siege (1428–29) of Orléans by the English threatened to bring all of France under English rule, and its lifting by JOAN OF ARC turned the tide of the Hundred Years War In the Wars of Religion (16th cent) and the period of the Fronde (17th cent), Orléans again witnessed important events. It was the Huguenot headquarters and was besieged (1563) by the Catholics under François de Guise, who was assassinated under its walls In 1652 it was seized for the Fronde by Mlle de Montpensier In 1940, when the Germans were advancing across France, Orléans was ravaged by fires which wiped out entire districts, additional damage was inflicted in 1944 The Cathedral of Sainte-Croix, rebuilt (17th–19th cent) after its destruction by the Huguenots in 1568, was heavily damaged, the Place du Martroi, with the statue of Joan of Arc, and the Joan of Arc museum were destroyed, numerous Renaissance buildings, however, remained intact, including the town hall, where Francis II, husband of Mary Queen of Scots, died in 1560 The feast of Joan of Arc is celebrated at Orléans with particular splendor early in May

Orleans (ôrlĕnz') **1** Town (pop 1,428), S Ind, near Lost River and S of Bedford, settled 1815 Dairying is done here **2** Resort town (pop 1,451), SE Mass, on Cape Cod, settled 1693, set off from Eastham 1797. **3** Village (pop 1,332) in Barton town, N Vt, S of Newport, settled c 1821. It has furniture and woodworking industries

Orléans, Île d' (ēl' dôrlāä'), or **Orléans Island** (ôrlāä', ôr'lēunz), 20 mi long and 5 mi wide (pop 4,293), S Que, in the St Lawrence NE of Quebec It is connected with the mainland by a highway bridge opened in 1935 Settled (1651) by the French, it was the site of one of Wolfe's camps in his attack on Quebec in 1759 Fruit, vegetables, cheese, and poultry are products

Orley, Bernard van (bĕr'närt vän ôr'lī), or **Barend van Orley** (bä'rənt), c 1491–1542, Flemish painter Little is known of his early life and training, but in 1515 he was settled in Brussels, where he became court painter to Margaret of Austria, regent of the Netherlands, and to her successor, Mary of Hungary His first important work was an altarpiece (c 1512) representing scenes from the lives of St Thomas and St. Matthias Among other works are *Holy Family* (Louvre), a triptych, *The Tribulations of Job* (Brussels), *The Flight into Egypt* (Liverpool Royal Inst), *Crucifixion* (Rotterdam), *The Last Judgment* (Antwerp); and *Virgin and Child with Angels* (Metropolitan Mus) Van Orley also executed designs for stained glass and tapestries, an example of the latter being the *Hunts of Maximilian* (Louvre)

Orlov, Aleksey Grigoryevich, Count (ûlyĭksyā' grĭgôr'yuvĭch, ûrlôf'), 1737–1808, Russian nobleman, brother of Grigori G Orlov. He played an important role in the conspiracy to put Catherine II on the throne It is alleged that he was the actual murderer of PETER III. He distinguished himself in the Russo-Turkish and Napoleonic wars.

Orlov, Grigori Grigoryevich, Count (grĭgô'rē), 1734–83, Russian nobleman One of the first lovers of Catherine II, he was the leader of the conspiracy which put her on the throne. Although the empress was deeply in love with him and owed her power to him more than to any other man, his position as a favorite at Catherine's court did not give him any decisive voice in state affairs He was later supplanted by other favorites, notably Potemkin. Catherine gave him high military posts but did not act on his scheme for emancipation of the serf

Ormandy, Eugene (ôr'mändē), 1899–, American conductor, b Budapest. At the age of five he entered the Budapest Conservatory, where he studied the violin. Graduating in 1914, he then became a member of the faculty. He had appeared as a prodigy since the age of seven In 1921 he came to the United States for a concert tour, which did not materialise He took a job as a violinist in the orchestra of the Capitol Theatre, New York, and later became its conductor After a successful guest appearance with the Philadelphia Orchestra, substituting for Toscanini, who was ill, he was appointed conductor of the Minneapolis Symphony Orchestra in 1931 In 1936 he became conductor of the Philadelphia Orchestra. He became a U S citizen in 1927

Ormerod, Eleanor Anne (ôr'mûrŏd), 1828–1901, English economic entomologist She formed a collection of insect pests for the Royal Horticultural Society and published pamphlets as a result of her observations She became consulting entomologist of the Royal Agricultural Society and lecturer for the Royal Agricultural College Among the insects that were the objects of her research were the hop aphis, Hessian fly, ox warble, and botfly Her works include *Manual of Injurious Insects with Methods of Prevention* (1881), *Handbook of Insects Injurious to Orchard and Bush Fruits* (1898) and *Flies Injurious to Stock* (1900) See her autobiography (1904)

Ormoc (ôrmôk'), town (pop 7,446), on Leyte, Philippine Islands, on the west coast Its chief export is rice During the Second World War, Ormoc was the principal Japanese supply port on the island, captured by U S forces in Dec , 1944

ormolu (ôr'mulōō) [Fr ,=ground gold], finish used on metal to imitate gold It is employed chiefly for furniture mountings The term originally applied to a coating of ground gold and was extended to alloys of copper and zinc Ormolu mountings were characteristic of 18th-century furniture and attained their highest artistic and technical development in France, especially in the work of Charles Cressent, Pierre Gouthière, and Jacques Caffieri Ormolu was produced on a large scale in England, with Matthew Boulton the chief manufacturer Workmanship deteriorated in the 19th cent

Ormond (ôr'mund) [Irish,=east Munster], ancient division of Munster in the south of Ireland, including the present Co. Tipperary It was granted by the English king to the Butlers, who became later the earls of Ormond or Ormonde

Ormond, city (pop 1,914), NE Fla , just N of Daytona Beach and on Halifax River (a lagoon), founded c 1875 as a resort, inc as a city 1929 Across the lagoon is Ormond Beach, with part of the famous Daytona Beach motor speedway "The Casements," former winter home of John D Rockefeller, is at Ormond Beach

Ormonde, James Butler, 12th **earl and** 1st **duke of,** 1610–88, Irish statesman, most powerful royalist influence in Ireland during the PURITAN REVOLUTION A ward of the crown after the death (1619) of his father, Viscount Thurles, he was brought up a Protestant and in 1629 married the daughter of the earl of Desmond Butler succeeded his grandfather (1632) and went to IRELAND (1633), where he gained the favor of Wentworth (see STRAFFORD) In command of the army after Wentworth returned to England, Ormonde was loyal when Wentworth was attacked by Parliament As lieutenant general, he fought the Irish rebels in 1641 and, although greatly hampered by the Irish lords justices, defeated the enemy at Killsalghen and Kilrush He was made a marquess (1642), defeated the rebels (1643), and, under orders from the king, concluded the treaty of "cessation," placing most of Ireland in the hands of the Confederate Catholics Ormonde now dispatched forces to the king in England and was appointed lord lieutenant of Ireland (1643) He skilfully maintained himself against both Catholic rebels and Protestant adherents of the English Parliament In 1647 he made terms with Parliament in order to restore peace in Ireland, but gave up his office He joined the queen and Prince Charles in Paris (1648) but returned to Ireland (1649) and proclaimed CHARLES II Leaving the island again at the insistence of Charles, he commissioned CLANRICARDE his deputy (1650) Cromwell's success again forced Ormonde to return to Paris, where he represented Charles in negotiations preceding the Restoration After 1660 he was given numerous offices and titles, including privy councilor, lord high steward of England, earl of Brecknock (English), and duke of Ormonde (Irish; also English in 1682) His estates were restored Again lord lieutenant, he worked to promote Irish trade and to effect the complicated business of restoration. He was unpopular with the Restoration court, especially with the 2d duke of BUCKINGHAM, who was charged with instigating an unsuccessful attack on his life Ormonde was removed as lord lieutenant (1669) but was restored to office in 1677. Because his anti-Catholic measures at the time of the TITUS OATES plot were mild, he was attacked by the 1st earl of SHAFTESBURY. He was removed from the lord lieutenancy in 1684 as a result of intrigue, remaining in office just long enough to proclaim JAMES II. Thereafter he emerged from retirement only to oppose James's attempt to dispense with the anti-Catholic laws In an age of complex loyalties, Ormonde directed his great talents to the support of the Stuarts, except when opposition to Parliament seemed hopeless. He survived his son, the earl of OSSORY, and was succeeded by his grandson See biographies by Thomas Carte (new ed , 1851) and Lady Burghclere (1912).

Ormonde, James Butler, 2d **duke of,** 1665–1745, Irish soldier and statesman He was the son of Thomas Butler, earl of Ossory He served in the army in Ireland against the duke of Monmouth, succeeded his grandfather as duke of Ormonde (1688), supported the cause of William of Orange (William III), and served him at the battle of the Boyne Early in the War of the Spanish Succession he commanded land forces in the expedition against Cádiz in 1702 Later, as lord lieutenant of Ireland (1703–6, 1710–13) and as Marlborough's successor (1711) in command of the forces, he was one of the most powerful men in the kingdom In following Bolingbroke's commands in his conduct of the war on the Continent he became involved in the plot to prevent the accession of George I, and in 1715 he was impeached Fleeing to France, he was attainted, took part in the rising of the Jacobites in 1715, and spent the rest of his life in exile, chiefly in Spain and Italy

Ormonde, James Butler, 5th **earl of,** 1420–61, Irish nobleman He was knighted in his youth by Henry VI of England, became earl of Wiltshire in 1449, and succeeded to the earldom of Ormonde in 1453 A staunch Lancastrian in the Wars of the Roses, he was made deputy (1451) and then viceroy (1453) of Ireland and lord high treasurer of England (1455) He fought for Henry at St Albans and Wakefield, was defeated by Edward, duke of York (later Edward IV), at Mortimer's Cross, and after being captured at Towton was probably beheaded

Ormonde, Thomas Butler, 10th **earl of,** 1532–1614, Irish nobleman He was brought up in England and was the first of his family to embrace Protestantism He succeeded to the earldom of Ormonde in 1546, and in 1554 he went to Ireland, where he tried to mediate between the Irish and their English rulers He supported the movement against the Irish chieftain, Shane O'NEILL, and became involved in a bitter quarrel with the earl of Desmond, the representative of the traditional enemies of the Ormondes After an extended struggle Ormonde's cause was upheld at Elisabeth's court, and Desmond was imprisoned Ormonde became a favorite of the queen and returned to Ireland (1569) only because his presence there was essential to peace and order Desmond was released in 1572, returned to Ireland, and continued his risings against Ormonde and English rule Thereupon Ormonde was made military governor of Munster and led the fight on the Desmond faction, finally capturing and slaying the rebellious earl (1583) In 1588 Ormonde helped to capture the survivors of the Spanish Armada on the coast of Ireland, and in 1597 he was made lieutenant governor of Ireland and supported the English troops against Hugh O'Neill

Ormskirk, urban district (1931 pop 17,118; 1943 estimated pop 18,400), Lancashire, England, NE of Liverpool The church, with an embattled tower, contains a vault of the earls of Derby Silk and cotton textiles and metal goods are made in Ormskirk Near by is Rufford Old Hall, a 15th-century mansion, presented to the nation in 1936.

Ormulum see ORRMULUM.

Ormuzd see ZOROASTRIANISM

ornament, in architecture, decorative detail enhancing structures Structural ornament, an integral part of the framework, includes the shaping and placement of the BUTTRESS, CORNICE, MOLDING, CEILING, and ROOF and the CAPITAL and other elements of the column, as well as the use of building materials of contrasting color or texture. Applied ornament embraces the adornment of structural members with statuary, carving, molding, paint, inlay, mosaic, and facings Representational ornament depicts natural forms, nonrepresentational includes geometric, conventionalized, and fanciful designs Symbolic ornament is highly developed in primitive and Oriental decoration, and allegorical embellishment is a characteristic of Gothic architecture Decorations of ancient Egyptian structures primarily involved brightly colored surfaces, placement of statuary, and use of papyrus, lotus, and spiral motifs The Greeks were noted for structural ornament; they employed statuary (much of it painted) and popularized dentils and such motifs as the egg and dart, water leaf, anthemion, and acanthus. Roman decoration is a sumptuous composite based in part on an adaptation of Greek motifs and evidencing skillful use of veneers and polychrome marble Byzantine ornament is marked by the use of gilding, mosaics, veneers, patterned bricks, the basket capital, flat, sharply carved designs, and motifs of birds and of Christ's monogram Gothic architecture is characterised by the use of structural adornment including grouped columns and grained vaults, of naturalistic or fanciful statuary and carvings on crockets, corbels, capitals, and gargoyles, and of traceried windows, stained glass was a special decorative feature. The Renaissance brought a vigorous adaptation of classic forms—sculptures, often heroic in size (upon frieze, doorway, panel, and pilaster), motifs of garlands of fruit or flowers, masks, curved shields and cartouches, and strap interlacing Post-Renaissance ornament alternated between classic influences and unrestrained styles such as the rococo Modern architects tend to abandon the eclecticism of the 19th cent Ornament may be omitted or concentrated in telling masses, murals, statuary, living plants, and the use of contrasting materials are often an integral part of the structure In the Orient decorations are colorful with gilding and lacquer, carving and statuary are elaborate Moslem ornament emphasizes geometric or fanciful patterns, latticework, and stalactite details such as pendentives See also articles on the architecture of individual countries and periods, e g , EGYPTIAN ARCHITECTURE and RENAISSANCE ARCHITECTURE

See A D F Hamlin, *A History of Ornament* (2 vols , 1916–23), Talbot Hamlin, *Architecture* (1947)

ornament, in music notes added to a melodic line for the purpose of embellishment or decoration Ornamentation was practiced as early as the Middle Ages by the singers of plain song, and the practice seems to have reached its height in the baroque era, with the rise of accompanied monody Treatises were written and attempts made to standardize practices Symbols were adopted as a kind of shorthand for the notation of some ornaments, others were written out in complete notation, and still others were left to the discretion of the solo performer—often the composer himself Since the baroque era composers have attempted to indicate their intentions regarding ornaments in precise notation In the 20th cent the tendency has been toward a minimum of ornamentation, the same period has seen extensive research to make possible the performance of baroque music in the manner of the baroque era

Ornan (ôr'năn), same as ARAUNAH

Orne (ôrn), department (2,372 sq mi ; pop 273,181), N France, in the hilly inland section of Normandy. It includes part of the PERCHE region ALENÇON is the capital The small Orne river empties into the English Channel at Caen

ornithopter (ôr'nĭthŏp"tur, ôrnĭthŏp'tur) [Gr ,=bird's wing] or **orthopter** (ôrthŏp'tur), heavier-than-air type of aircraft, deriving its support and propulsion from flapping wings, imitating the flight of birds No machine of this type has been successfully devised

Orofino (ôrōfē'nō), city (pop. 1,602), co seat of Clearwater co , N Idaho, on the Clearwater and E of Lewiston, founded 1898, inc 1906. The name was taken from a short-lived mining camp established c 25 mi away in the gold rush of 1861 It is a lumber town in an area of white-pine forests

Orono (ôrunō), town (pop 3,702), S Maine, on the Penobscot 8 mi above Bangor, settled c 1775 as Stillwater, inc 1806 as Orono Until 1840 it included Old Town Wood products and pulp are made The state university is here (see MAINE, UNIVERSITY OF)

Oronsay (ôrunsā, ôrunsā), small island, off W Scotland, in Argyllshire, one of the Inner Hebrides It is just S of COLONSAY There are a sculptured cross and remains of a priory

Orontes (ôrŏn'tēs), river, c 250 mi long, formed in the valley of El Bika (Coele-Syria) in Lebanon It flows generally N through Syria past Homs and Hama, finally turning SW into Turkey for a short course past Antioch to the Mediterranean It is celebrated principally because of the antiquity of the settlements about it and because of the remarkable and huge water wheels of Homs and Hama

Oropus (ôrō'pus), ancient town of Greece, on the border of Attica and Boeotia It was the subject of strife between Athenians and Boeotians from the 5th cent B C The oracle of Amphiaraus was there Excavation has disclosed a temple, a colonnade, and a theater, dating from the 3d cent B C.

Orosháza, Hung. *Oroshdza* (ôrōsh-hä'zô), town (pop 27,062), SE Hungary. It is an agricultural trading center.

Orosius, Paulus (ôrō'shēus), c 385–420, Iberian priest, theologian, and historian, b Tarragona, Spain, or Braga, Portugal He went to see St Augustine (c 413) and wrote, at request, a summary of the errors of Priscillian and of Origen. Augustine then sent him to Palestine to warn St Jerome of the menace of Pelagianism Unable to return to Spain, which was overrun by the Vandals, Orosius remained in Africa, where he completed the *Seven Books of History against the Pagans* (Eng tr by I W Raymond, 1936), which had been undertaken to continue the vein of Augustine's *City of God* The work became a kind of textbook of universal history for the Middle Ages, it treats world history as a concrete proof of the apocalyptic visions of the Bible. King Alfred translated it into English

Oroville (ôrōvĭl) **1** City (pop 4,421), co seat of Butte co., N Calif , N of Sacramento and on the Feather river. Settled in 1849, it boomed as a gold camp and river town but is now the center of an

olive-growing and orchard region of the Sacramento valley The city was incorporated in 1857 Feather River Canyon and Feather Falls are near by **2** Town (pop 1,206), N Wash , a port of entry on the Okanogan river near Canada, inc 1908

Oroya, La (lä ôrō'yä), city (pop 14,494), S central Peru. A highland city, it is chiefly a rail and highway junction between Lima on the coast and the mining and agricultural centers of the mountains Copper ore is smelted here

Orozco, José Clemente (hōsā' klāmān'tā ôrō'skō), 1883–1949, Mexican mural and genre painter and lithographer, grad Mexican National Agricultural School He became an architectural draughtsman and in 1909 turned to painting With Rivera he led the Mexican renaissance His work is stark in its simplicity and deals chiefly and compassionately with social themes, especially with man versus the machine From 1917 to 1919 and from 1927 to 1932 Orozco was in the United States Much of his work is true fresco painting, executed directly on the wet plaster Such is his mural painting in the New School for Social Research, New York His work in the United States includes also *Prometheus* (Frary Hall, Pomona College, Calif) and *Epic of Culture in the New World* (Baker Library, Dartmouth College) There are several fine mural paintings in Mexico, such as those at Guadalajara in the university, the governor's palace, and the orphanage chapel See *José Clemente Orozco* (reproductions of 200 of his paintings, 1932)

Orpah (ôr'pu), sister-in-law of Ruth Ruth 1 4,14

Orpen, Sir William, 1878–1931, British portrait and genre painter, b Ireland He is best known for his scenes from Irish life, his paintings and sketches of life at the front in the First World War, and his portraits Most of the delegates to the Paris Peace Conference sat for him He was a consummate draughtsman, and his paintings are full of vitality and richly colored Many of his war pictures are now in the Imperial War Museum, London Among his works are *The Irish Wedding, In the Wicklow Mountains, Sowing the Seed, The Jockey, Mother and Child,* and *The Unknown British Soldier in France* Other notable works include a portrait of Percy Wyndham and *Myself and Venus* (both Carnegie Inst , Pittsburgh) and *Leading the Life in the West* (Metropolitan Mus) Orpen was president of the National Portrait Society and of the International Society of Sculptors, Painters, and Engravers In 1918 he was knighted and in 1919 became a member of the Royal Academy of Art He wrote *Onlooker in France* (1921) and *Stories of Old Ireland and Myself* (1924)

orphan: see CHILDREN, DEPENDENT, ADOPTION; FOUNDLING HOSPITAL, GUARDIAN AND WARD.

Orpheus (ôr'fēus, ôr'fūs), in Greek mythology, celebrated Thracian bard He was the son of the Muse Calliope by Apollo or, according to another legend, by Oeagrus. The music of his lyre was so beautiful that it charmed the wild beasts, the trees, and the rocks After his return from the Argonaut expedition, he married the nymph Eurydice (yōōrī'dĭsē) She met her death by a snake bite while fleeing the advances of Aristaeus, and Orpheus, disconsolate, went to Hades in search of her The gods of the underworld, charmed by his music, restored his wife to him, but forbade him to look at her until he reached the earth He disobeyed, and Eurydice vanished When Orpheus returned to Thrace his grief led him to scorn all women, a band of Bacchae killed him in revenge Orpheus is considered as the founder of Orphism (see ORPHIC MYSTERIES) The myth of Orpheus, the "inventor of music," and Eurydice has perhaps been used more often than any other subject as an operatic libretto Giulio Caccini's *Eurydice* is the earliest opera of which the music is extant

Orphic Mysteries (ôr'fĭk), secret religious rites in worship of Dionysus The rites were based on the myth of Dionysus Zagreus, which said that Zagreus, son of Zeus and Persephone, was devoured by the Titans at the instigation of the jealous Hera Athena saved his heart and gave it to Zeus, who destroyed the Titans with lightning. From their ashes sprang the race of men, who were now part evil (Titan) and part divine (Zagreus) Zeus swallowed Zagreus' heart and out of it was born the new Dionysus Zagreus Thus the initiate, besides performing the usual tasks of the MYSTERIES, had to eat the raw flesh of an animal (*omophagi*) considered to be the reincarnation of Dionysus Zagreus In this way he achieved a mystical union with the god. EROS, as a god of fertility, was sometimes associated with Dionysus Poems purported to have been written by Orpheus in the 6th cent B C were the basis of the Greek mystery religion

Orphism. Orphism, propagated by wandering priests and pilgrims, explained the good and evil in men by the myth of Dionysus Zagreus It taught the transmigration of souls and the importance of a pure moral and ritual life for immortality. Ritual purity included abstinence from animal food, the avoidance of contact with death or birth, and the wearing of white garments In the next world, reward awaited the righteous, punishment the unrighteous See W. C Guthrie, *Orpheus and Greek Religion* (1935).

orpine: see SEDUM.

Orpington, residential suburb, Kent, England, SE of London Some of Ruskin's works were printed here The town gives its name to Orpington chickens

Orr, James Lawrence, 1822–73, American politician, b Pendleton District (now Anderson co), S C , studied law at the Univ of Virginia He served in the South Carolina legislature (1844–48) and in the U S House of Representatives (1849–59), where he was (1857–59) speaker An anti-Douglas Democrat, Orr became a champion of secession when Lincoln was elected President in 1860 After brief military service, he was elected (Dec , 1861) to the Confederate senate, where he sat throughout the Civil War He was elected governor of South Carolina in 1866 Orr, at first a supporter of President Johnson's Reconstruction plan, became a radical Republican In Dec , 1872, President Grant appointed him minister to Russia, where he died

Orr, John Boyd Orr, 1st Baron, 1880–, British nutritionist and agricultural scientist, b. Scotland, grad Univ of Glasgow He was awarded the 1949 Nobel Peace Prize He served as professor of agriculture at the Univ of Aberdeen (1942–45) and government consultant on nutrition and health and was director general (1946–47) of the United Nations Food and Agriculture Organization He has made notable contributions to the science of nutrition and to the solution of world food problems and has worked toward the establishment of a world government. Knighted in 1935, he was created baron in 1949

Orrefors (ôrufôrs',-fōsh'), village, Kronoberg co , SE Sweden It is famous for the manufacture of fine glassware The near-by village of Kosta is also a center of glassmaking Simon Gate and Edward Hald have made outstanding contributions to the art of engraved glassware, and their work is represented in numerous collections

Orrery, Charles Boyle, 4th **earl of** (ô'rurē), 1676–1731, English nobleman, grandson of Roger Boyle, 1st earl of Orrery He succeeded his brother as earl in 1703 In the controversy with Sir William Temple and Richard Bentley over modern and antique scholarship, Boyle edited (1695) the letters of Phalaris The whole trivial controversy was satirized—and made famous—by Jonathan Swift in his *Battle of the Books* Orrery rose to the rank of major general (1709) in the War of the Spanish Succession, but did not play an important part He later assisted in the negotiation of the Peace of Utrecht

Orrery, Roger Boyle, 1st **earl of,** 1621–79, Irish statesman and writer, who attempted to preserve peace in Ireland by lending his support to whichever regime was most capable of ruling Son of Richard BOYLE, the "great earl" of Cork, he was created Baron Broghill in 1627, studied at Trinity College, Dublin, traveled abroad, and served against the Irish rebels in 1641 Although a royalist, Broghill submitted to Parliament after 1647 He later attempted, in England, to serve the royalists, but, with remarkable shrewdness, Cromwell won him to the Puritan cause, to this he remained faithful until its collapse under Richard Cromwell During this time he helped restore order in Ireland, received large grants of land, and served in the Parliament of 1654 and the Parliament of 1656 and also as lord president of the council in Scotland When the restoration of Charles II seemed inevitable, he crossed to Ireland and, with Sir Charles Coote, secured it for the king He was made earl of Orrery (1660) and a lord justice and served in the Parliament of 1661 and as lord president of Munster until 1668 A friend and patron of the writers of his age, Orrery also wrote rhymed-verse tragedies, among them *Henry the Fifth, Mustapha,* and *The Black Prince,* a romance, *Parthenissa* (1651–69), and a military treatise He is, however, probably best known for his political career See preface by William Smith Clark II to his edition (1937) of Orrery's dramatic works

Orrington (ô'rĭngtun), town (pop 1,517), S Maine, on the Penobscot 8 mi below Bangor, in an orchard area; settled 1770, inc 1788.

orrisroot see IRIS

Orrmulum or **Ormulum** (ôr'mŭlm), Middle English collection of homilies on the Gospels, in verse, comprising about 10,000 lines in all, written by Orrm (or Orrmin), an Augustinian canon of Lincolnshire The manuscript, in the author's own handwriting, is of about the year 1200, and the orthography is of great importance for the study of Middle English phonology.

Orrum, Eilley see BOWERS, EILLEY ORRUM.

Orrville, village (pop 4,484), NE Ohio, NE of Wooster, in a farm area, settled c 1850, inc 1864 Wood-preserving chemicals, castings, and hardware are made here

Ors, Eugenio d' (āōōhā'nyō ôrs'), 1882–, Spanish writer, b Barcelona His style is characterized by precision and interest in form His *glosas* (commentaries), shorter than essays, of which he wrote many, are both in his native Catalan and in Spanish His main interest is in aesthetic problems, and he wrote much on art—*Poussin y el Greco* (1922), *El arte de Goya* (1928), *Cezanne* (1924), *Picasso* (1930). He wrote a novel in Catalan, *La ben plantada* (1912)

Orsay, Alfred Guillaume Gabriel, count d' (älfrĕd' gēyōm' gäbrĕĕl', dôrsā'), 1801–52, French dandy Son of a Bonapartist general, he went to England, where he met the earl and countess of BLESSINGTON, with whose family he was associated for the rest of his life D'Orsay married Lord Blessington's daughter, Harriet, but the union was unsuccessful After Blessington's death D'Orsay and Lady Blessington became the center of a fashionable artistic and literary circle in London. To their dinners at Gore House, Kensington, came the most famous men of the time. D'Orsay was long *arbiter elegantiarum* of English society and was considered an accomplished artist and sculptor In 1849, to escape his creditors, he fled to Paris, where he died See biography by W Teignmouth Shore (1911)

Orsha (ôr'shŭ), city (pop 22,011), NE Belorussia, on the Dnieper It is a rail center and manufacturing city, having textiles, clothing, and processed food among its products. There is a castle dating from the 11th cent

Orsini (ôrsē'nē), powerful Roman family which included Popes CELESTINE III, NICHOLAS III, and Benedict XIII and numerous other churchmen, soldiers, and statesmen Its origins are legendary The eponymous ancestor was one Ursus, but the founder of the family's greatness was Matteo Rosso Orsini (13th cent), who held fiefs in Latium, was a Roman senator, and inaugurated the family policy of devotion to the papal and Guelph causes The long rivalry between the Orsini and the Ghibelline COLONNA family lasted until the early 16th cent and often plunged Rome into anarchy The family divided into several branches and still has representatives Its members were made princes of the Holy Roman Empire in the 17th cent Two prominent members were Lorenzo Orsini (d 1536), who defended (1527) Rome and the Castel Sant' Angelo against the troops of Emperor Charles V, and the princesse des URSINS

Orsini, Felice (fälē'chā), 1819–58, Italian patriot and conspirator A follower of Mazzini, he early became an active revolutionist in the Papal States and in Tuscany He was jailed (1854–56) by the Austrians but escaped from the fortress of Mantua In 1857 he fell out with Mazzini, and in 1858 he made an attempt on the life of Napoleon III, whom he held responsible for the failure of the Italian revolutions of 1848–49 Though ably defended by Jules Favre, he was executed His act, designed to arouse world interest in the Italian cause, influenced Napoleon's decision to intervene in favor of Italian unification

Orsk (ôrsk), city (1926 pop 13,581, 1939 pop 65,799, 1946 estimated pop 100,000), E European RSFSR, on the Ural river It is the center of an important industrial district, with manufactures of machinery and metallurgical plants (nickel and aluminum works) Oil is piped to Orsk from the Emba field (550 mi away) and refined here The city was founded in the 18th cent as a frontier outpost, but its industrial growth is very recent

Ortegal, Cape (ôrtägäl'), NW Spain, in Galicia, extending into the Atlantic It is usually considered the southwestern limit of the Bay of Biscay

Ortega y Gasset, José (hōsā' ôrtā'gä ē gäsĕt'), 1883–, Spanish essayist and philosopher, b Madrid, Ph D Univ of Madrid, 1904 He studied in several German universities, and his early work especially shows the influence of German neo-Kantian thought In 1910 he became professor of metaphysics at the Univ of Madrid In spite of his intellectual aloofness, he was an extremely popular lecturer and writer His essays were first collected in *Meditaciones del Quijote* (1914), comparing Germanic and Mediterranean cultures It is the thesis of Ortega's philosophy that unless the masses are directed by an intellectual minority, chaos will result. Many of the essays in *El espectador* [the spectator] (8 vols , 1916–34) had appeared first in the *Revista de Occidente*, the review he founded (1921) and directed *El tema de nuestro tiempo* (1923), an attempt to systematize his philosophy, was translated (1931) as *The Modern Theme* It was, however, with *La rebelión de las masas* (1930, Eng tr , *The Revolt of the Masses*, 1932) that Ortega became internationally known His earlier *España invertebrada* (1922, Eng tr , *Invertebrate Spain*, 1937) was widely reviewed Ortega supported the republic, but at the outbreak (1936) of the civil war he fled to France and thence to Argentina In 1943 he became a lecturer at the Univ of Lisbon and in 1949 returned to Spain Other collections of essays which have appeared in English are *Toward a Philosophy of History* (1941), *The Mission of the University* (1944), and *Concord and Liberty* (1946) His name is sometimes written José Ortega Gasset

Ortelius, Abraham (ôrtē'lyŭs), 1527–98, Flemish geographer, of German origin. Next to his contemporary Mercator, he is the greatest of the 16th-century Flemish school of geography. He traveled with Mercator in 1560 and was inspired by him to begin his chief work, *Theatrum orbis terrarum* (1570). The first edition of this atlas contained 53

maps, in part compiled from maps of 87 cartographers Ortelius was made geographer to Philip II of Spain in 1575 He produced a number of other geographic works, one of the best known of which is the *Theaurus geographicus* (1587)

Orthez (ôrtĕs'), town (pop 4,609), Basses-Pyrénées dept, SW France, in BÉARN Among picturesque buildings are the house of Jeanne d'Albret and remains of the castle of Gaston Phoebus, count of FOIX Here Wellington defeated the French under Marshal Soult in 1814

Orthodox Eastern Church, community of Christian churches which had their origin in E Europe and SW Asia They agree doctrinally in accepting as ecumenical the first seven councils (see COUNCIL, ECUMENICAL) and in rejecting the headship in the Church of the bishop of Rome (the pope) This repudiation of the papal claims is the single point of faith and morals dividing all Orthodox from all Roman Catholics Many persons whose practices are very like those of the Orthodox recognize the headship of the pope, these are called Catholics to distinguish them from the Orthodox This use of the terms *Catholic* (obeying the pope) and *Orthodox* (belonging to one of the Orthodox churches) is not technical, for both groups call themselves both Catholic and Orthodox (see CATHOLIC CHURCH) The word *Orthodox* became a favorite at the time of the overthrow of iconoclasm in Constantinople Orthodox acceptance of the seven councils entails exclusion from their communion, on grounds of heresy, of the Nestorian, Jacobite, Coptic, and Armenian churches, it also involves holding a sacramental doctrine of grace *ex opere operato* (see GRACE) and of veneration of the Virgin Mary, two points separating the Orthodox from Protestants The term *Greek Church* for the Orthodox is ambiguous, it is best to confine *Greek* to the patriarchate of Constantinople, to the Church of Greece, and to the Byzantine rite The Byzantine rite is the normal form of Orthodox worship The LITURGY is not usually celebrated daily as in the West, and it is always sung Raised bread is used in the sacrifice, and communion is given to laymen in both kinds, with a spoon Infants receive communion and confirmation The other sacraments also are like those of the Latin rite, except in details, e g , confirmation is conferred by priests, unction is for the sick (not just the dying), and confession is much less frequent The churches are generally square with a solid sanctuary screen covered with icons (*iconostasis*) (for the style, see BYZANTINE ARCHITECTURE) The parish priests are married, monks and bishops are not This has created deep cleavage between higher and lower clergy, as bishops are apt to come from the monasteries, not from the parishes The Orthodox comprise a number of autocephalous churches The old mode of government was the patriarchate (see PATRIARCH), but now for the most part each of the churches is governed by a holy synod, a board of bishops and laymen, often appointed by the government, where the head of the church is called patriarch, he is often only the moderator of the synod The number of Orthodox churches recognizing each other as such is indefinite because of the fluid state of the relations of Orthodox bishops in countries to which communicants have emigrated The four ancient patriarchates enjoy highest prestige The patriarchate of Constantinople, having the primacy of honor after Rome, was set up when the Eastern capital was established, it included Asia Minor and the Balkan Peninsula From the time of JUSTINIAN the emperor controlled the patriarch absolutely The patriarch was freer under the Turks, who gave him civil rights over Christians, his quarter in Constantinople, the Phanar, became the Greek center of the Ottoman Empire First the Russians, then the Greeks and the Balkan countries set up autonomous churches, always opposed by the patriarch, especially in the case of Bulgaria In republican Turkey the patriarch rules a remnant only, some Orthodox in the United States recognize his jurisdiction The Orthodox patriarchates of Alexandria and Antioch are minority churches (for the corresponding separated churches, see COPT and JACOBITE CHURCH) The patriarchate of Jerusalem is limited to Palestinian Greeks The patriarch represents Orthodox interests in the shrines There are many churches apart from those directly under the patriarchs A unique, ancient church is that of Mt Sinai, made up of the monastery of St Catherine and its subject houses The archbishop is also abbot There are seven national churches, each the traditional patriotic church of the people The Church of Cyprus has been autonomous since the Council of Ephesus The Church of Georgia is also ancient In the 19th cent it was absorbed by the Russian church, but in 1917 resumed its autonomy The ruler is called catholicus The Russian Orthodox Church, for centuries the greatest in numbers of Orthodox churches, was headed first by the metropolitan of Kiev, under Constantinople The see was moved to MOSCOW, and in 1589 a new patriarchate was set up, under the tsar The language of the ritual is Old Slavonic In 1721 Peter the Great (Peter I) abolished the patriarchate and established a synod, which he controlled through its lay procurator In 1917 the patriarchate was revived, just before the Bolshevik Revolution began the ruin of the church organization In the disturbances many priests and bishops were killed and exiled, and there seems to have been a strong government attempt to found a schismatic church In the Second World War the government consented (1943) to the election of a patriarch (the first since 1925) The new patriarch, Sergius Starogrodsky, died in 1944 and was succeeded by Alexis Simansky Statements emanating from the church emphasized loyalty to the regime and echoed its policy, e g , in vilifying the West in the late 1940s As the USSR annexed lands after 1939, the local Orthodox churches disappeared, the same was true of Catholic churches of the Eastern rites, and thus it was announced that the Byzantine-rite Catholics of the Ukraine and Ruthenia had united with the Russian Orthodox The Church of Greece dates from the Greek War of Independence It is the state church and legally much favored The Serbian patriarch (at Belgrade) heads the Church of Yugoslavia, which is almost wholly made up of Serbs The fate of this church since 1945 is unknown The Church of Bulgaria was severed from communion by the ancient patriarchates in the 19th cent , but the Russian church recognized it Its ruler is an exarch The Rumanian Orthodox Church has a patriarch at Bucharest, it was probably the most carefully organized of Orthodox churches After 1945 the government announced that the Roman Catholic dioceses of the Rumanian rite had been annexed by the Orthodox church The effect of this and the other measures of the government is not known Other Orthodox churches are minority denominations of recent creation The Albanian Orthodox Church is ill organized and poor The Orthodox churches of Finland and of Poland, founded after the First World War, lost most of their members when the eastern sections of the countries were repossessed by the USSR in the Second World War The Japanese Orthodox church became autonomous under government pressure (1939), it had its origin in a Russian mission founded in 1860 There are a number of autonomous Orthodox groups with origin in emigration Thus in the United States there have been separate hierarchies of Greeks, Russians, and others, sometimes in communion with each other There have been many efforts to establish a single American Orthodox church The relations between the Orthodox and the West have been full of misunderstandings, which became grave as political and cultural ties loosened after the 5th cent There were breaks between Constantinople and Rome in the 9th cent (see PHOTIUS) and in 1054 (see LEO IX, SAINT), but the worst obstacle to reconciliation was the conduct of the Crusades, especially the Fourth Crusade, since the whole of Western Christendom, most of all the pope, was inevitably blamed In 1274 there was an attempt at reunion (Second Council of Lyons), and in 1439 another (see FERRARA-FLORENCE, COUNCIL OF), the second was repudiated (1472) by Constantinople In the Middle Ages the points at issue, besides the papal authority, were matters of worship and discipline, not of belief, the addition of a phrase (*filioque*) to the CREED has proved not to involve doctrine at all There have been fractional reunions, notably the Union of Brest-Litovsk (1595) of Ukrainians, who retained their hierarchy and rites Agreement of the Orthodox with Protestants had an ardent apostle in Patriarch Cyril LUCARIS (17th cent) In the 19th cent began the cultivation of cordial relations between Anglicans and Orthodox, and official exchanges between them have become frequent See B J Kidd, *The Churches of Eastern Christendom* (1927), Michael Constantinides, *The Orthodox Church* (1934), S N Bulgakov, *The Orthodox Church* (1935), Donald Attwater, *The Christian Churches of the East* (1946, 1947), George Every, *The Byzantine Patriarchate, 451–1204* (1947)

orthopedics (ôrthupē'dĭks), that branch of surgery concerned with the correction of deformities These may be the result of factors present before birth or of disease or injury after birth Some of these disorders are congenital dislocation of the hips, paralyses from birth injuries or infantile paralysis, curvatures of the spine, clubfoot, flatfoot, and infectious processes of the bones and joints, such as tuberculosis of the spinal column. Measures used in treatment are those of manipulation, appliances, exercise suitable for individual cases, and surgery.

orthopter see ORNITHOPTER

Ortigão, Ramalho (José Duarte Ramalho Ortigão) (rŭma'lyō ôrtēgā'ō), 1836–1915, Portuguese writer He is particularly known for a series of papers *As farpas* [darts], begun with Eça de Queiroz and satirizing Portuguese people, places, and events (including trivial scandals) with deliberate malice, gay-hearted wit, a high purpose of reform, and excellent style He also wrote two travel books, *A Hollanda* (1883) and the Anglophobe *John Bull* (1887)

Ortigueira (ôrtēgā'rā), fishing village (pop. 1,479), La Coruña prov , NW Spain, in Galicia, on the Bay of Biscay near Cape Ortegal.

Orting, town (pop. 1,211), W Wash., SE of Tacoma, inc 1889 The state soldiers' home is here

Ortiz Rubio, Pascual (päskwäl' ôrtēs' rōō'byō), 1877–, Mexican president (1930–32) He was elected to succeed PORTES GIL for the unexpired term of ÁLVARO OBREGÓN Supported by Plutarco E CALLES, Ortiz Rubio's administration was marked by a decided swing toward conservatism. He resigned and was succeeded by Abelardo Luján RODRÍGUEZ

Ortles (ôrt'lĕs), Ger *Ortler* (ôrt'lur), Alpine group, Trentino-Alto Adige (S Tyrol), N Italy Ortles peak, 12,789 ft high, is the highest in the Alps E of Switzerland

Orton, Arthur, 1834–98, English impostor, the chief figure in two famous trials The son of a butcher in Wapping, he went to sea (1849) In 1866 he returned from a small butcher business in Australia to convince the gullible Henriette, Lady Tichborne, that he was her son, Roger, supposedly lost at sea off Rio de Janeiro in 1854 His ejection action against Henry, Baronet Tichborne (1871–72), was followed by his own perjury trial (1873–74) Convicted and given a 14-year sentence, he was released in 1884, later confessed his imposture, and still later retracted his confession

Orton, Edward, 1829–99, American geologist and educator, b Deposit, N Y , grad Hamilton College, 1848 He entered the ministry, but his interest in science led him to teaching He taught science at Antioch and was president of the college from 1872 to 1873, and from 1869 he was affiliated with the Ohio geological survey Orton was president (1873–81) and professor (1873–99) of the newly founded Ohio Agricultural and Mechanical College, which became Ohio State Univ He made important contributions to the economic geology of the state in his studies of natural gas and petroleum

Ortona (ôrtō'nä) town (pop 9,215), Chieti prov , Abruzzi e Molise, S central Italy Now a fishing port on the Adriatic, it was a major port from the 11th cent until 1447, when its fleet and arsenal were destroyed by the Venetians In the Second World War it was severely damaged The 12th-century cathedral (rebuilt 18th cent) was restored after the war, the 15th-century castle suffered heavy damage

Ortonville, city (pop 2,469), co seat of Big Stone co , W Minn , at the S Dak line where Big Stone Lake has its outlet, settled 1872 It is a resort and a farm trade center, with granite quarries

Ortygia see SYRACUSE

Oruro (ôrōō'rō), city (pop 45,355), W Bolivia Oruro was established in 1595 to exploit rich silver deposits near by, but was not officially founded until c 1604 When silver production declined in the 19th cent , it became almost a ghost town, for it is high (12,100 ft) and the dry, cold plateau is too barren to afford anything but the most meager kind of human existence Fuel is scanty, agriculture nonexistent With a new rise in the production of silver and exploitation of wolfram, copper, and especially tin (from the fabulous Patiño mines at Uncía), Oruro has become the third largest city in Bolivia It is also the nation's rail hub, from which lines run N to La Paz, E to Cochabamba, S to Argentina, and W to Chile

Orvieto (ôrvyā'tō), town (pop 8,883), Umbria, central Italy, in the Apennines It is on a rocky hill, probably on the site of the Etruscan town VOLSINII, later rebuilt as Urbs Vetus A free commune by the 11th cent , it was later at the mercy of its own and of foreign tyrants, until it passed to the popes in 1450 Near by are the remains of an extensive Etruscan necropolis There are notable Romanesque, Gothic, and Renaissance buildings, but the fame of the city is mainly due to its beautiful cathedral, begun in 1290 to commemorate the miracle of BOLSENA and completed in the 16th cent Its white and black marble façade is decorated with sculptures and mosaics, the Cappella Nuova has frescoes by Fra Angelico and, mostly, by Luca Signorelli, whose powerful scenes inspired Michelangelo

Orwell, George, 1903–50, English satirist, whose real name was Eric Blair, b India Educated at Eton, he served with the Burmese police (1922–27) His early works, *Down and Out in Paris and London* (1933) and *Burmese Days* (1934), were autobiographical In 1936 Orwell fought with the Republicans in the Spanish civil war, and wrote of the war in *Homage to Catalonia* (1939) Far to the left politically, Orwell hated authoritarianism, and his fears for the destruction of individual liberty are expressed in the amusing satire *Animal Farm* (1946) and the bitter *Nineteen Eighty-Four* (1949)

Orwigsburg (ôr'wĭgzbûrg), industrial borough (pop 2,182), E Pa , near Pottsville, settled 1747, laid out 1796 inc 1813. It produces cotton and rayon goods and shoes

Os, chemical symbol of the element OSMIUM

Osage (ōsāj', ō'sāj), city (pop 3,196), co. seat of Mitchell co , NE Iowa, near the Minn line, NE of Mason City, in a farm area, settled 1853, inc. 1871

Osage, river, c 250 mi. long, formed in W Missouri by the Marais des Cygnes and the Little Osage and winding generally NE to the Missouri river be-

low Jefferson City Its waters, impounded by the BAGNELL DAM, form the Lake of the Ozarks (see OZARKS, LAKE OF THE).

Osage City (ōsāj′ sĭ′tĭ), city (pop 2,079), E central Kansas, SSW of Topeka; settled 1865, inc 1872. It is near the old Santa Fe Trail and is the trade center for a coal and farm area.

Osage Indians (ō′sāj, ōsāj′), tribe of North American Indians of the Siouan linguistic stock In prehistoric times they lived with the Kansa, the Ponca, the Omaha, and the Quapaw in the Ohio valley, but by 1673 they had migrated to the vicinity of the Osage river in Missouri. Here the Osage were encountered by Jacques Marquette They were a warlike people who in the early 18th cent. frequently allied themselves with the French and waged constant warfare on the surrounding tribes, such as the Illinois. In 1802, according to Lewis and Clark, three bands constituted the Osage tribe—the Great Osage, on the Osage river, the Little Osage, farther up the same river, and the Arkansas band, on the Vermilion river, a tributary of the Arkansas They then numbered some 5,500. By a series of treaties the Osage ceded to the United States their extensive territory in Missouri, Arkansas, and Oklahoma, and they moved to a reservation in N central Oklahoma They now number some 4,500. The discovery of oil on their reservation land, plus their landholdings, have combined to make the Osage the "wealthiest Indian tribe in America" The Osage had a typical Plains area culture One distinctive trait, however, was the tribal division between the Wazhashe, or meat eaters, and the Tsishu, or vegetarians See Francis La Flesche, *War Ceremony and Peace Ceremony of the Osage Indians* (1939).

Osage orange or **bowwood,** deciduous tree (*Maclura pomiferma*) of the S central United States but hardy and cultivated elsewhere, commonly as a hedge because of its impenetrable spiny branches It was first found in the country of the Osage Indians and was a favorite bow wood, it has been more recently utilized for fence posts, railway ties, and articles requiring a strong but flexible and durable wood Both wood and roots are orange colored, the roots yielding a yellow dye Male and female flowers are on separate trees, the female followed by orangelike but inedible greenish warty fruits with a milky juice Silkworms have been fed on the leaves

Osaka (ō′säkä), city (1940 pop 3,252,340; 1947 pop 1,559,310), capital of Osaka prefecture, S Honshu, Japan, a port on Osaka Bay It is the second largest city of Japan and its principal industrial and commercial center, the focal point of a chain of industrial cities on the shores of the bay Among its many products are steel, chemicals, and textiles The city is also a major transportation center It is noted for a Buddhist temple (founded in the 6th cent), its universities and theaters (particularly for its puppet theater), and its beautiful parks and gardens As Naniwa, it was the capital of Japan in the 4th cent Its importance as a commercial center dates from the 16th cent , when it was the seat of Hideyoshi, his ruined castle is a landmark. The city was heavily bombed (1945) in the Second World War The urban prefecture of Osaka is rugged in the interior and flat and fertile on the coast Sakai is among its industrial centers.

Osakis (ōsā′kĭs), village (pop 1,483), W Minn., a resort on Osakis Lake E of Alexandria

O Salutaris Hostia (sälˈo͞otä′rĭs, säˈlōōth′rĭs) [Latin,=O saving victim], hymn to the Host, one of the two hymns regularly sung at the exposition in Benediction of the Blessed Sacrament in the Roman Church. The other hymn is *Tantum ergo O Salutaris* is really the last two stanzas of a Corpus Christi hymn, *Verbum supernum prodiens*, probably written by St Thomas Aquinas.

Osawatomie (ō″səwŏ′təmē, ō″sə–), city (pop 4,145), E Kansas, SE of Ottawa and on the Marais des Cygnes; founded 1855 It is a farm trade center with railway workshops The town, once a station on the Underground Railroad, has a memorial park which preserves the cabin where John Brown lived in 1856 A marble shaft commemorates the battle in which some of Brown's men were killed There is a state hospital for the insane

Osborn, Henry Fairfield, 1857–1935, American paleontologist and geologist, b. Fairfield, Conn , grad Princeton, 1877 He went on expeditions to Wyoming and Colorado (1877–78), studied abroad, and returned to Princeton (1881), where he was professor of comparative anatomy (1883-90) He was professor of biology (1891–96) and of zoology (1896–1910) at Columbia Univ , where he was also dean of the faculty of pure science (1892–95) and research professor after 1910. From 1891 he was associated with the American Museum of Natural History as curator of vertebrate paleontology (1891–1910), as assistant to the president (1899–1901), as vice president (1901–8), as president (1908–33), and as honorary life president after 1933 He joined the U S Geological Survey as vertebrate paleontologist in 1900 and became senior geologist in 1924. A major contribution was the development of his department of the museum from its nucleus in the collection of E. D. Cope. His work as teacher and administrator and his studies of living and fossil mammals were also of high value His writings include *From the Greeks to Darwin* (1894), *The Age of Mammals* (1910), *Men of the Old Stone Age* (1915), *The Origin and Evolution of Life* (1917), *Impressions of Great Naturalists* (1924), *Man Rises to Parnassus* (1927), *Creative Education* (1927), *Cope, Master Naturalist* (1931), and *Fifty-two Years of Research, Observation, and Publication, 1877–1929* (1930).

Osborn, Herbert, 1856–, American entomologist, b Lafayette, Walworth co , Wis , grad Iowa State College (B S , 1879) He was affiliated with Iowa State College until 1898, and from 1898 to 1933 he taught at Ohio State Univ. From 1912 he was director of the Ohio Biological Survey He specialized in economic entomology and insect ecology and wrote in these fields.

Osborn, village (pop 1,705), SW Ohio, NE of Dayton, in a farm area

Osborne, Dorothy, later **Lady Temple** (ōs′burn), 1627–95, English letter writer The daughter of a royalist, exiled in Cromwell's time, she became engaged to Sir William Temple against the wishes of her family Her letters to Temple, both through their long engagement and after their marriage in 1655, show her as a woman of wit, learning, and strong character and are an excellent picture of the period. They were first published in 1888, a new edition appeared in 1928 See also Lord David Cecil, *Two Quiet Lives Dorothy Osborne, Thomas Gray* (1948)

Osborne, Thomas Burr, 1859–1929, American chemist, b New Haven, Conn , grad Yale, 1881. From 1886 he was with the Connecticut Agricultural Experiment Station An authority on nutrition, especially proteins, he wrote *Proteins of the Wheat Kernel* (1907) and *The Vegetable Proteins* (1909)

Osborne, Thomas Mott, 1859–1926, American prison reformer, b Auburn, N Y , grad Harvard, 1884 He founded a newspaper in Auburn and was active in civic and political affairs As chairman (1913) of the state commission on prison reform, he became a voluntary prisoner in the Auburn penitentiary in order to learn conditions at first hand *Within Prison Walls* (1914) records his experiences. At Sing Sing Prison, where he was warden (1914–15), he instituted a system of self-government for the inmates The program aroused political hostility, and he resigned after a trial for misconduct although he was acquitted From 1917 to 1920 he was commandant of the U S naval prison at Portsmouth, N H He maintained that prisons should educate rather than punish His views are expressed in *Society and Prisons* (1914) and *Prisons and Common Sense* (1924)

Osborne, city (pop 1,876), co. seat of Osborne co , N central Kansas, on the South Fork of the Solomon and NW of Salina, founded 1871, inc 1879 It is a shipping point for a farm area

Osborne House, a favorite residence of Queen Victoria, near East Cowes, Isle of Wight The queen died here in 1901 Edward VII presented the house to the nation for a home for convalescent officers

Osbourne, Lloyd (ŏz′burn), 1868–1947, American author, b San Francisco, studied engineering at the Univ of Edinburgh He went to Samoa with R L Stevenson, his stepfather, and collaborated with him in the writing of *The Wrong Box* (1889), *The Wrecker* (1892), and *Ebb Tide* (1894) He himself wrote several novels and stories

Oscan, language of the Italic subfamily of the Indo-European languages See LANGUAGE (table).

Oscar I, 1799–1859, king of Sweden and Norway (1844–59), son and successor of Charles XIV His reign was one of social and economic advance Oscar was succeeded by his elder son, Charles XV.

Oscar II, 1829–1907, king of Sweden (1872–1907) and of Norway (1872–1905), younger son of Oscar I He succeeded his brother, Charles XV He refused to concede to NORWAY its own consular representation, thus increasing the tension between Norway and the crown In 1905 Norway completely severed its union with Sweden, and Oscar relinquished the Norwegian throne During the later part of his reign Swedish industry made great progress Oscar was a man of culture and an able musician and writer His best-known work is a life of Charles XII His son Gustavus V succeeded him

Osceola (ŏsēō′lu, ō–), c 1800–1838, leader of the SEMINOLE INDIANS He was also called Powell, the surname of his supposed white father In the early 1830s Osceola was living close to Fort King, near the site of Ocala, Fla Although not a chief, he rose to a position of prominence among the Seminole and led the young warriors who denounced the treaties of 1832 and 1833, which provided for the removal of the Indians to the West. In Dec , 1835, Osceola's warriors killed Wiley Thompson, an Indian agent U S troops under Gen. T. S Jesup drove his band southward into the Everglades, but Osceola, skillfully using guerrilla tactics, resisted capture Fighting ceased early in 1837, only to break out again in June In October, Osceola, with several chiefs, came into St. Augustine under a flag of truce He was seized and imprisoned and died shortly afterward at Fort Moultrie, S.C. See Grant Foreman, *Indian Removal* (1932).

Osceola. **1** (ŏsēō′lu) City (pop. 3,226), a co. seat of Mississippi co., NE Ark., in a rich cotton area. **2** (ŏsēō′lu, ō–) City (pop. 3,281), co. seat of Clarke co., S Iowa, S of Des Moines, settled 1850, inc 1859 Dairying is done here **3** (ŏsēō′lu) City (pop. 1,190), co seat of St Clair co., W Mo , on the Osage river and SSE of Kansas City. It is a resort center in a farm and coal region. **4** (ŏsēō′lu) City (pop 1,039), co seat of Polk co., E Nebr., NW of Lincoln, founded c 1872

Osceola Mills (ŏsēō′lu) or **Osceola,** borough (pop 2,076), central Pa., NNE of Altoona, laid out c.1857, inc 1864

oscillator (ŏ′sĭlātûr), in electronics, a circuit which produces an alternating voltage of audio frequency or of radio frequency It is the initial stage of all radio transmitters since it generates the vital carrier wave It consists of a circuit usually connected to the grid of an amplifier tube with some means of feeding back energy from plate to grid Voltage of the required frequency developed across the tank circuit is amplified by the tube and a portion of the output returned to the grid circuit, causing the process to repeat itself. In reception, too, the radio-frequency oscillator finds application in the SUPERHETERODYNE and superregenerative circuits as well as in the heterodyne method for the reception of unmodulated code transmissions Audio oscillators are used to modulate radio-frequency carriers, in test equipment, and in electronic musical instruments Quartz crystals inserted in the circuit aid in maintaining stability of frequency by means of their piezoelectric effect

Osee (ōsē′), variant of HOSEA.

Osel, Estonia. see SAARE

Osgood, Herbert Levi (ŏz′go͝od), 1855–1918, American historian, b Canton, Maine, grad. Amherst (B A , 1877, M A , 1880), Ph D Columbia, 1889 He studied also at Yale and the Univ of Berlin and taught at Worcester Academy (1877–79) and Brooklyn High School (1883–89) From 1890 to 1896 he was adjunct professor and, after 1896, professor of history at Columbia A recognized authority on American colonial history, he wrote *The American Colonies in the Seventeenth Century* (3 vols , 1904–7) and *The American Colonies in the Eighteenth Century* (4 vols , 1924), which treat especially of the origin and development of English-American political institutions He also wrote *Socialism and Anarchism* (1889). He edited *Minutes of the Common Council of the City of New York, 1675–1776* (8 vols , 1905) and contributed to the *Political Science Quarterly*, of which he was an editor (1891–1918), and the *American Historical Review* See biography by his son-in-law, Dixon Ryan Fox (1924)

Osgood, town (pop 1,198), SE Ind , SE of Greensburg It is a farm trading center and has stone quarries

Osh (ŏsh), city (pop 33,315), capital of Osh oblast, Kirghiz SSR, in the FERGANA VALLEY A major silk-production center for more than a thousand years, it is one of the oldest towns of central Asia and consists of the old Oriental city and a modern Russian section The Tash-Suleiman [Solomon's throne], an odd-shaped rock, was once a place of pilgrimage

O'Shaughnessy, Arthur William Edgar (ōshô′nəsē), 1844–81, English poet and naturalist He was a member of the zoological department of the British Museum. His poetry shows somewhat the influence of D G. Rossetti in the four volumes *Epic of Women* (1870), *Lays of France* (1872), *Music and Moonlight* (1874), and *Songs of a Worker* (1881), one ode, beginning, "We are the music-makers," is his best-known poem

Oshawa (ŏ′shəwə), city (pop 26,813), S Ont , on the north shore of Lake Ontario and ENE of Toronto. Its industries include automobile plants, foundries, woolen mills, and plants manufacturing steel products, glass, and pottery An old portage path to Lake Scugog left Lake Ontario here

Oshea (ōshē′ə), variant of JOSHUA

O-shima (ō′shēmə), island, 9 mi long and 5 mi wide, largest and most northerly of the Izu-shichito group, near the entrance to Tokyo Bay, Japan It is the site of volcanic Mt Mihara (2,477 ft) It was sometimes called Vries Island for the Dutch navigator who visited it in the 17th cent

Oshkosh (ŏsh′kŏsh″), city (pop 39,089), co seat of Winnebago co , E Wis , on the west shore of Lake Winnebago, where the Upper Fox enters, settled 1836, inc 1846 Father Allouez visited the site in 1670, French explorers traveled here in the 18th cent., and a French fur-trading post was set up in the early 19th cent. Oshkosh grew as a lumber town. It is now a resort center and has numerous manufactures—woodwork, metal goods, overalls, and automobile parts among them. A state teachers college is here, and the city's museum is noteworthy

Osiander, Andreas (ändrā′əs ōzēän′dûr), 1498–1552, German reformer. His original name was Hosemann or Heiligmann. Ordained a priest in 1520, Osiander joined the cause of the Reformation in 1522 He supported Martin Luther vigorously, participating in the Marburg Conference (1529), the Diet of Augsburg (1530), and the signing of the

Schmalkaldic Articles (1537). Frequently during controversies the coarseness and violence of his language aroused personal enmity. In 1548 Osiander's refusal to agree to the Augsburg Interim made it necessary for him to leave Nuremberg, and he joined the theological faculty at the new Univ of Königsberg. Osiander's mystical interpretation of the Lutheran doctrine of justification by faith led to a disagreement with his colleagues that subsequently involved the whole German Evangelical Church

osier see WILLOW.

Osijek (ô'sēyĕk), Ger. *Esseg* (ĕ'sĕk), Hung *Eszék* (ĕ'sāk), city (pop 50,398), NE Croatia, Yugoslavia, a port on the Drava river. It is the largest city of Slavonia and a trade and transportation center, and it has various manufactures. The Roman Mursa, Osijek became an early episcopal see. Here in A.D. 351 Emperor Constantine II defeated Magnentius.

Osipenko (ŏsĭ'pyĭn-kŭ), city (pop 51,664), S Ukraine, a port on the Sea of Azov. It exports grain and imports petroleum. Until 1939 its name was Berdyansk.

Osiris (ōsī'rĭs), in Egyptian religion, god of the underworld. He became identified with all the forces which made for fertility, e.g., the sun and the Nile. Osiris brought to the people knowledge of agriculture and civilization. In a famous myth, he was the son of Keb (the Earth) and Nut (the Sky), and he was slain and torn apart by his evil brother, Set (the Night). Thereupon, Isis, sister and wife of Osiris, sought and found his scattered body. She buried the fragments, making each burial spot a sacred place. Abydos, where Osiris had a temple, was the most revered. Horus, son of Osiris and Isis, avenged the death of his father, who, restored by Thoth, became judge and ruler in the underworld. Osiris was the creative force which gave life to seeds, and as such he is linked to the doctrine of immortality which was so potent an influence in Egyptian life. The group of Osiris, Isis, and Horus long held a prominent place in Egyptian religion, and later this trinity was worshiped in Greece and in Rome. Osiris became identified with many other gods, e.g., the Greek Dionysus. As commonly represented, the god was swathed in mummy wrappings and wore the crown of Upper Egypt, a dome shaped hat with a papyrus tuft. See E. W. Budge, *Osiris and the Egyptian Resurrection* (1911).

Oskaloosa (ŏskulōō'sŭ), city (pop 11,024), co. seat of Mahaska co., SE Iowa, ESE of Des Moines, settled 1843 by Quakers, inc. 1853. It is the trade and processing center of a livestock, farm, and coal area and produces wool, poultry, grain, truck, and dairy products. The city has a music-publishing house and is the birthplace of many musicians and composers, including Thurlow Lieurance. Oskaloosa is the seat of William Penn College (1873) and is annually the scene of a Quakers' meeting and of a regional fair. A statue (by Sherry Fry) of the Indian chief Mahaska is here.

Osler, Sir William (ō'slur), 1849–1919, Canadian physician, M.D. McGill Univ., 1872. Renowned as physician, teacher, and medical historian, he was professor at McGill (1875–84), the Univ. of Pennsylvania (1884–89), Johns Hopkins (1889–1904), and Oxford (from 1905). In 1911 he was knighted. His many medical observations include those on blood platelets and on abnormally high, red-blood-cell count in polycythemia. He wrote *The Principles and Practice of Medicine* (1892, 16th ed., 1947) and *A Concise History of Medicine* (1919). See biographies by Harvey Cushing (1925) and E. G. Reid (1931).

Oslo (ŏs'lō, ŏz'lō, Nor. ôōs'lôō), capital of Norway, a city coterminous with Oslo co. (175 sq. mi.; pop. 417,238), SE Norway, at the head of the Oslo Fjord, a large inlet of the Skagerrak. Oslo is the largest city of Norway, its chief commercial, industrial, and intellectual center, the seat of a university (founded 1811), a Lutheran episcopal see, and the seat of the Nobel Institute. Oslo harbor, a busy port, is kept ice free throughout the year. Founded (1050) by Harold III, Oslo came (14th cent.) under the dominance of the Hanseatic League and flourished as a port. Christian IV of Denmark and Norway rebuilt the city after a destructive fire (1624) and renamed it Christiania (or Kristiania), in 1925 the name Oslo again became official. The neighboring commune of Aker (pop. 131,016) was incorporated into Oslo county in 1948. In the Second World War, Oslo fell (April 9, 1940) to the German invaders despite the strong fortifications in the Oslo Fjord. Its easy capture was generally credited to "fifth columnists." It was liberated only when Germany surrendered in May, 1945. Though the city suffered no war damage, the occupation brought great hardship. Oslo is a modern city in design and construction, and its government has striven to foster contemporary art in a number of impressive public projects. Among them are the sculptures of VIGELAND in the famous Frogner Park and the new city hall, inaugurated in 1950, when the 900th anniversary of the founding of Oslo was celebrated. Planned residential sections, in modern architectural design, have made Oslo a slumless city. The chief public buildings of Oslo include the royal palace, the Storting (parliament), the exchange, the national theater, and several fine museums. There are ruins of the Cathedral of St. Hallvard, the first cathedral of Oslo. Among the surviving ancient buildings are the Akerskirke (a 12th-century restored church) and the Akershus fortress (13th cent.). The Folk Museum has reconstructions of old Norwegian timber houses in a natural setting. The forest-clad hills environing the city are favorite excursion points, as are several islands in the Oslo Fjord. Drobak, further south on the fjord, is a winter port and a summer resort.

Osman, caliph see OTHMAN.

Osman I (ŏs'mun, ŏsmän') or **Othman I** (ŏth'mun, ŏthmän'), 1259–1326, leader of the Ottoman TURKS and founder of the Ottoman dynasty (see OTTOMAN EMPIRE). The son of the semilegendary Ertoghrul, he held lands in Asia Minor as vassal of the Seljuk Turks, whom he assisted against the Byzantines. On the collapse of the Seljuk empire he declared his independence. Illness in his later life compelled Osman to delegate the military command to his son and successor, ORKHAN, who took Bursa in 1326. The Osmanli or Ottoman Turks derive their name from Osman.

Osman Nuri Pasha (ŏsmän' nōō'rē päshä'), 1837–1900, Turkish general. He fought in the Crimean War and in Lebanon, Crete, and Arabia and was made *mushir* [marshal] for his successes (1876) in Serbia. In the Russo-Turkish War of 1877–79 he gallantly defended Plevna in Bulgaria against repeated assaults of the Russian army, which finally forced him to surrender. He was war minister (1880–85).

Osmeña, Sergio (sĕr'hō ŏsmä'nyä), 1878–, Filipino statesman, b. Cebu island. He served as provincial governor of Cebu and as first speaker of the Philippine assembly. In 1935 he was elected vice president, and in March, 1942, he fled with President Quezon as the islands fell completely to the Japanese. After Quezon's death in 1944 he was president of the government in exile, returning to the Philippines with U.S. invasion forces in Oct., 1945. In the 1946 presidential election he was defeated by Manuel Roxas.

osmium (ŏs'mēum), blue-white to gray metallic element (symbol=Os, for physical constants, see ELEMENT, table). It has the highest specific gravity of the elements, is difficult to fuse, is not affected by ordinary acids, and is insoluble in aqua regia. It is a member of the group of PLATINUM metals and is found alloyed with other members of the group in platinum ores. With oxygen it forms several oxides, one of which, osmium tetroxide, is sometimes incorrectly called osmic acid, with chlorine it forms chlorides, and with fluorine, fluorides. With iridium, it forms an alloy, osmiridium, used in making fountain pen points. The element was discovered in 1803 by Smithson Tennant.

osmosis (ŏzmō'sĭs, ŏs–), selective passage of fluids through semipermeable substances or membranes. For example, if alcohol is separated from water by a rubber membrane, the alcohol will pass through (diffuse) into the water but the water cannot get through easily to the alcohol. Osmosis is of utmost importance to life in both plants and animals. It makes possible the absorption of water by the roots of plants. The protoplasm of certain epidermal cells of the root acts as a semipermeable membrane permitting passage of water molecules into the cell. Certain salts in solution will also pass in, but outward passage of the dissolved sugar molecules or other fluid material within the cell is ordinarily barred. It is by the process of osmosis that dissolved food materials pass through the walls of the digestive tract of humans and other animals and are absorbed into the blood stream. This process of absorption is essential to the distribution and utilization of nutrients. There are many special cases and conditions involved in osmosis and explanations of the physicochemical processes vary. The tendency is for the less dense substance to pass through the membrane toward the more dense material. Water molecules generally move from where they are more abundant into the substance in which they were originally less numerous. Osmotic pressure develops as a result of differences in concentration of the substances on the opposite sides of the membrane. The osmotic process of interchange will continue until an equilibrium is reached between the concentrations of the two fluids. This equilibrium depends upon the equalizing of the osmotic pressure. It is established that osmotic pressure resembles gas pressure in that it increases with heat.

Osnabrück (ŏs'nübrŏk, Ger. ôs'näbrük'), city (pop 88,663), Hanover, NW Germany, on the Hase river, linked by canal with the Ems-Weser Canal. It is an inland port and an industrial center, with iron and steel mills, machinery plants, and textile and paper manufactures. An ancient Saxon settlement, it was made (8th cent.) an episcopal see by Charlemagne. It was a member of the Hanseatic League, and it accepted the Reformation in 1543. The cathedral, however, remained Catholic, and under the Peace of Westphalia (see WESTPHALIA, PEACE OF)—one of its treaties was signed here in 1648—the see was occupied alternately by Catholic and Lutheran bishops. The bishopric of Osnabrück was secularized in 1803 and the city passed to Hanover at the Congress of Vienna (1815). The Catholic diocese was restored in 1858. Osnabrück suffered much destruction in the Second World War. It has kept its cathedral (consecrated c.785, burned down 1254, rebuilt in late Romanesque style with Gothic additions). The Gothic Church of St. Mary and the Gothic city hall, where the Treaty of Osnabrück was signed, were heavily damaged.

Osnappar see ASSUR-BANI-PAL.

Osorno (ôsôr'nō), city (pop 25,075), S central Chile, in the heart of the lake district. Founded in 1558, Osorno was later destroyed by the Araucanian Indians. It was reestablished in 1776 by order of Ambrosio O'Higgins. An influx of immigrants in the latter half of the 19th cent. has given the city a Germanic atmosphere, it is modern in construction and progressive. In beautiful, forested country, Osorno is chiefly an agricultural distributing center.

osprey (ŏs'prē), bird of prey found in most parts of the world. The American osprey or fish hawk may nest inland, but it is usually seen near large bodies of fresh or salt water. Its white under parts and long, angular wings (with a spread of 5 to 6 ft.) distinguish it from the eagle and from other hawks. It plunges from a height above the water to capture fish and, grasping its prey with sharp talons, flies to a favorite perch to devour it.

Osroene (ŏsrōē'nē), ancient principality of NW Mesopotamia, in present SE Turkey and NE Syria. EDESSA was its capital. It was one of the semi-Hellenistic states that replaced the Seleucid empire (2d cent. B.C.). It came under Roman rule late in the 2d cent. A.D.

Ossa (ŏ'sŭ, Gr. ŏ'sä), mountain, 6,490 ft. high, NE Thessaly, N Greece. The ALOADAE were the giants who tried to pile Pelion on Ossa.

Ossendowski, Ferdynand Antoni (fĕrdĭ'nänt äntô'nē ôsĕndôf'skē), 1876–1944, Polish writer, traveler, and scientist, studied at St. Petersburg and Paris. He taught chemistry at Tomsk, Omsk, and Warsaw and served in the tsarist government until 1917 and after that with Admiral Kolchak. His escape from the Bolsheviats through Mongolia he recounted in *Beasts, Men, and Gods* (1922, Eng. tr., 1922). Although he is best known for his travel books, he also wrote biographies, plays, novels, and scientific works.

Osseo (ŏ'sēō), city (pop 1,105), W central Wis., on the Buffalo and SE of Eau Claire, in a dairy area, settled 1857, inc. as a village 1893, as a city 1941.

Ossetia (ŏsē'shŭ, Rus. ŭsyĕ'tēŭ), region, RSFSR and Georgian SSR, in the central Greater Caucasus. On the northern slope is the North Ossetian Autonomous Soviet Socialist Republic (3,550 sq. mi.; 1946 estimated pop. 450,000), RSFSR, with Dzhaudzhikau (formerly Vladikavkas) its capital, it extends to the north beyond the Terek river. On the southern slope is the South Ossetian Autonomous Oblast (1,500 sq. mi.; 1946 estimated pop. 116,000), Georgian SSR, with Stalinir its capital, it extends southward not quite to the Kura river. Both sections of the region are agricultural in the valleys, producing fruit, wine, grain, and cotton. Lumbering and livestock raising are important in the mountains. North Ossetia has lead, silver, and zinc mines at Sadon, the minerals are processed at Dzhaudzhikau. The Ossetians, who form the majority of the population, are an ancient people speaking an Iranian language. They are mainly Moslems (Sunnites) in the north and Christians (Eastern Orthodox) in the south, where Georgian culture prevails. Northern Ossetia was partly occupied (1942–43) by the Germans in the Second World War.

Ossetian Military Road, c. 120 mi. long, across the Greater Caucasus, linking Kutais (Georgian SSR) with Alagir (RSFSR). It crosses the Caucasian crest as a trail through the pass at MAMISON.

Ossian (ŏsh'ŭn) or **Oisin** (ŭshēn'), legendary Gaelic poet, supposedly the son of Finn mac Cumhail, hero of a cycle of tales and poems which placed his deeds of valor in the 3d cent. A.D. These traditional tales were preserved in Ireland and in the Scottish Highlands, with Ossian as the bard who sang of the exploits of Finn and his Fenian cohorts. A later cycle of Ossianic poetry centered around Cuchulain, another traditional hero. With the passage of time various cycles became confused. Ossian is generally represented as a Homeric figure, an old, blind man who had outlived both his father and his son. The name is remembered by most people in connection with the work of James MACPHERSON and the celebrated Ossianic controversy. See *Ancient Irish Tales* (ed. by T. P. Cross and C. H. Slover, 1936).

Ossietzky, Carl von (fün ôsyŏt'skē), 1898–1938, German pacifist. He was coeditor of the antimilitaristic weekly *Weltbühne* and a leader of the peace movement in Germany after the First World War. Ossietzky was imprisoned (1931–32) for articles appearing in the *Weltbühne*, and after Hitler's rise to power in 1933, he was sent to a concentration camp. Suffering from tuberculosis, he was removed (1936) to a hospital, shortly before the announcement that the 1935 Nobel Peace Prize

had been awarded to him The German government protested the award, barring all Germans in future from acceptance of a Nobel Prize

Ossining (ŏ'sūnĭng), residential and industrial village (pop 15, 996), SE N Y , in Westchester co , on the east bank of the Hudson and near Tarrytown, settled c 1750, inc. 1813 as Sing Sing, renamed 1901 Wire and drugs are made here. Sing Sing state prison (built 1825–28) was long known for its extreme discipline, under Thomas Mott OSBORNE and Lewis Edward LAWES notable reforms were introduced St. John's School for boys is also in Ossining

Ossipee (ŏ'sĭpē), rural and resort town (pop 1,498), co seat of Carroll co , E N H , E of Lake Winnipesaukee, inc 1785 The name, from Indian inhabitants, is applied also to a lake, a river, and mountains West Ossipee, where Whittier spent many summers, has a furniture factory

Ossoli, Marchesa see FULLER, MARGARET

Ossory, Thomas Butler, earl of (ŏ'surē), 1634–80, British statesman and soldier, b Ireland, son of James Butler, 1st duke of ORMONDE Inactive in the civil wars of the Puritan Revolution, he became a member of Parliament in both England and Ireland after the Restoration and was created earl of Ossory in 1662 In 1665 he was made lieutenant general in Ireland and often acted as deputy lord lieutenant there for his father He distinguished himself in naval engagements (1665, 1672) against the Dutch He carried (1674) to the prince of Orange (later William III) the offer of marriage with Princess Mary and in 1678, after Charles II's alliance with William, commanded British troops in Holland

Ossory, ancient kingdom of Ireland, the borders of which are now largely traced by the Roman Catholic episcopal see of Ossory, including Co Kilkenny and parts of Co Offaly and Co Laoighise Ossory was within the lands of the Butler family, hence the name Ossory(as well as Ormonde) for the Butler earldoms

Ostade, Adriaen van (ä'drēän vän ô'städu), 1610–85, Dutch genre painter, b Haarlem, studied with Frans Hals Most of his life was spent in Haarlem, where he became dean of the painters' guild in 1662 He is famous for his small paintings of everyday scenes of peasant and village life—the village barber and doctor, the itinerant musician, tavern scenes with peasants drinking, smoking, and gambling, the village school, and simple domestic interiors All these he portrayed with great vivacity and brilliant characterization His early paintings are cool in tone, but later, under the influence of Rembrandt, he enriched his color and dramatized his light effects Van Ostade is represented in important collections throughout Europe Among his many famous works are *Peasants in an Inn* (The Hague), *The Drinker* (Louvre), *The Smoker* (Antwerp), and *The Old Fiddler* (Metropolitan Mus) Fine examples are in the New York Historical Society, the Art Institute of Chicago, the National Gallery of Art, Washington, D C , and the Pennsylvania Museum of Art, Philadelphia See study by Louis Godefroy (1930, in French) His brother and pupil, **Isaac van Ostade,** 1621–49, was also an admirable painter His early work, such as *Laughing Boor* (Rijks Mus), was in close imitation of his brother, but he soon developed an interest in landscape His rustic scenes with peasants or travelers and especially his winter landscapes are very fine He painted a large number of canvases in his very short life and is represented in many important galleries His *Winter in Holland* (Metropolitan Mus) is characteristic See Adolf Rosenberg, *Adriaen und Isack van Ostade* (1900)

Ostend (ŏstĕnd'), Flemish *Oostende* (ōstĕn'du), Fr *Ostende* (ôstäd'), city (pop 48,519), West Flanders prov , N Belgium, a port and resort on the North Sea It is a major Belgian port, has a large fishing fleet, and is connected by canals with Bruges and Ghent and by steamer with Dover, England Fortified (1583) by William the Silent, it played a glorious role in the Dutch struggle for independence Its garrison resisted a Spanish siege from 1601 to 1604 and surrendered to Spinola only after having cost the Spanish at least 40,000 lives and after Ostend had been reduced to ruins During the First World War, Ostend served as a German submarine base In a daring sea raid (April, 1918), the British partially sealed the harbors of Ostend and Zeebrugge by sinking vessels at their entrance Ostend was again used by the Germans in the Second World War and suffered some damage

Ostend Manifesto, document drawn up in Oct , 1854, at Ostend, Belgium, by James BUCHANAN, American minister to Great Britain, John Y. MASON, minister to France, and Pierre SOULÉ, minister to Spain William L MARCY, Secretary of State under President Franklin Pierce, gave Soulé confidential instructions to try to buy Cuba from Spain, but Soulé's many blunders (he issued an unwarranted ultimatum to the Spanish government on the BLACK WARRIOR affair) led to a conference of the leading U S diplomats in Europe, all proslavery Democrats. The resulting manifesto outlined the value of Cuba to the United States and implied that if Spain refused to sell, the United States might consider taking the island by force Widely denounced both at home and abroad, the manifesto was immediately repudiated by Marcy for the U S. government It remains one of the most curious documents in international relations

Ostenso, Martha (ŏ'stĕnsō), 1900–, American novelist, b. Norway, studied at Manitoba and Columbia universities *Wild Geese* (1925), first of several novels and considered her best work, concerns Scandinavian farmers in Minnesota and Manitoba

osteopathy (ŏstēŏ'pəthē) [Gr , = bone treating], practice of therapy principally through manipulation The principles of this school of healing, founded by A T Still in 1874, are that the normal body produces forces necessary to fight disease and that most ailments are due to "structural derangement" of the body Frequent slight strains are held to be capable of causing misalignment of bones and various other conditions of the muscle tissue and cartilage all of which are termed "lesions " The first school of osteopathy was founded at Kirksville, Mo , in 1892 Certain other colleges in the United States are accredited by the American Osteopathic Association to give the required four-year course of training Although they are privileged to prescribe drugs and practice surgery in most of the United States, osteopathic doctors prefer to treat by manipulation See E R Booth, *History of Osteopathy and Twentieth-Century Medical Practice* (1924)

Ostergotland, Swed *Östergötlands län* (ö'stəryöt"-länts lĕn'), county (4,266 sq mi , pop 332,946), SE Sweden, east of Vattern lake It is roughly coextensive with the historical province of Ostergotland LINKOPING is the county seat, among other cities are NORRKOPING, MOTALA, and VADSTENA Agriculture, livestock raising, lumbering, iron and zinc mining, and textile and paper making are important

Osterhout Winthrop John Vanleuven (ŏ'stərhout), 1871–1939, American botanist, plant physiologist, and educator, b Brooklyn, N Y , grad Brown Univ (B A , 1893) He was on the staff of the Rockefeller Institute for Medical Research from 1925 He wrote *Experiments with Plants* (1905), *Agriculture for Schools of the Pacific Slope* (with E W Hilgard, 1909), *The Nature of Life* (1924), *Some Fundamental Problems of Cellular Physiology* (1927), bulletins on plant nutrition, and articles in scientific journals He was joint editor of the *Journal of General Physiology* from 1919

Osterman, Andrei Ivanovich, Count (ŏ'stərmän, Rus ŭndrā' ēva'nuvĭch ŭstyĭrman'), 1686–1747, Russian statesman, b Germany His original name was Heinrich Johann Friedrich Ostermann He entered the service of Peter I and zealously aided all his reforms, introducing a great many valuable reforms of his own For his services in the Northern War he was made a baron During the reign of Catherine I he was practically the sole arbiter of foreign affairs He was a member of the regency during the minority of Peter II Empress Anna trusted him implicitly because he had abstained from joining the conspiracy to abrogate her autocratic powers As her minister of foreign affairs he brought to a successful close the War of the Polish Succession and the Russo-Turkish War of 1736–39 During the regency of Anna Leopoldovna he was virtually the ruler of Russia Elizabeth, however, believing he had conspired to keep her from the throne, sentenced him to death, but sent a reprieve to the scaffold and banished him to Siberia instead See R N Bain, *The Pupils of Peter the Great* (1897)

Ostersund, Swed *Östersund* (ûstərsŭnd'), city (pop 19,683), W central Sweden, on Storsjon lake It is the county seat and only city of JAMTLAND co It has machinery and furniture factories and is noted for its handicrafts.

Ostfold, Nor *Østfold* (ûst'fôl"), county (1,614 sq mi , pop 178,449), SE Norway, between the Oslo Fjord in the west and the Swedish border in the east Moss is the county seat Sarpsborg, Halden, and Fredrikstad are the chief centers, their industries (mainly making lumber products) receive power from the GLOMMA river

Ostia (ŏ'stēu), ancient city, Italy, at the mouth of the Tiber It was founded (4th cent B C) as a protection for Rome, then developed (from 1st cent B C) as its port, rivaling Puteoli Augustus, Claudius I, Trajan, and Hadrian expanded the city and harbor From the 3d cent the city began to decline The ruins, much studied, rival those of Pompeii in showing the make-up of an ancient Italian city

ostracism (ŏ'strusĭzm), ancient Athenian method of exiling a person It was introduced after the fall of the family of PISISTRATUS If the assembly decided a person was endangering the public welfare or liberty, it set a day for voting When the polling took place, each voter put into an urn a potsherd (*ostracon*) marked with the name of one he wished ostracized The man named on the most *ostraca* was exiled, unless less than 6,000 votes were cast The exile lasted normally 10 years with no confiscation ARISTIDES and CIMON were recalled before 10 years were up. The last ostracism was probably that of Hyperbolus (416 B C.), a demagogue of low origin. Other cities used ostracism also In 1932 *ostraca* with the names of Aristides and Themistocles scratched on them were found in the American zone of the excavation of the agora of Athens

Ostrava, Czechoslovakia: see MORAVSKA OSTRAVA

ostrich (ŏ'strĭch, ô'–, ŏ'strĭj), large flightless bird chiefly of Africa but found in parts of SW Asia, allied to the rhea, the emu, and the extinct moa It is the largest of living birds, some males reach a height of 8 ft and a weight of 200 to 300 lb The ostrich runs at great speed with its wings spread The inner of the two toes on each foot is much the larger and bears most of the bird's weight It kicks when angered and can inflict serious injury In both sexes the head, neck, and thighs are bare or scantily feathered The male is glossy black with beautiful long white plumes on the wings and tail The female is a dull grayish brown Usually the polygamous male has from two to six females in his flock The cock scoops out a hollow for the eggs, which weigh nearly 3 lb each One of the females incubates the eggs during the day, and the cock takes over the task at night, when his plumage makes him inconspicuous After the middle of the 19th cent , when the demand for plumes was great, ostrich farms were established, first in South Africa and later in North America, Australia, and Europe The First World War cut off the markets, fashions changed, and the industry collapsed The South American rhea and the Australian emu are incorrectly called ostriches

Ostrogoths (ŏ'strugŏths"), or **East Goths,** division of the Goths, one of the most important groups of the GERMANS According to an unproved tradition, the ancestors of the Goths were the Gotar of S SWEDEN Whatever their origin, they were settled by the 3d cent A D in the region N of the Black Sea Early in the 4th cent they split into two divisions The VISIGOTHS or West Goths moved west under the pressure of the advance of the HUNS, while the Ostrogoths were subjected by the Huns and served in their army. On the death (453) of Attila, the Ostrogoths settled in Pannonia (roughly, modern Hungary), which they received as allies of the East Roman Empire The Ostrogoths, long ruled by petty chieftains, chose one of these as sole king, he became known to the world as THEODORIC THE GREAT To rid himself of his turbulent ally, the East Roman emperor, ZENO, commissioned Theodoric to reconquer Italy from ODOACER The Ostrogoths entered Italy in 488, defeated and slew (493) Odoacer, and set up the Ostrogothic kingdom of ITALY Theodoric's grandson Athalaric succeeded him (526) under the regency of AMALASUNTHA, who placed herself under the protection of the Byzantine (i e , East Roman) emperor JUSTINIAN I Her murder (535) served as pretext for Justinian to send an army under BELISARIUS to reconquer Italy He crushed the Ostrogothic kingdom, but on his recall (541) the Ostrogoths rebelled under the leadership of TOTILA In 552 the Byzantine general NARSES defeated Totila, who fell in battle The Ostrogoths lost their identity with their kingship, and the hegemony over Italy passed to Byzantium and, shortly afterward, to the Lombards Under the Ostrogothic kings, Roman law and institutions were largely maintained, however, the Ostrogoths were resented as aliens by the Italians, from whom they differed not only in cultural background but also in religion, for they were Arians See Thomas Hodgkin, *Italy and Her Invaders*, Vols I–III (2d ed , 1892–96)

Ostroleka, Pol *Ostrołęka* (ôstrôwĕ'ka), Rus *Ostrolenka*, industrial town (pop 9,279), Poland, on the Narew 62 mi NE of Warsaw It was the scene (1831) of a Russian victory over the Polish insurgents

Ostrovsky, Aleksandr Nikolayevich (ŭlyĭksän'dur nyĭkulā'uvĭch ŭstrôf'skē), 1823–86, Russian dramatist At first a government clerk, he was dismissed from service because of his first play, *The Bankrupt* (1847, later reworked as *It's a Family Affair*, 1850), which was widely read but banned from the stage In 1853 he turned seriously to writing and produced more than 50 plays, most of which deal with the merchant or petty-official class His masterpiece is *The Storm* (1880), a tragedy revolving around a nagging mother which is the basis of Janacek's opera *Katia Kabanova* Very popular is *Poverty Is No Crime* (1854), often played by university groups. Ostrovsky also wrote historical verse dramas, as *The Voyvod* (1865), based on legends of the Volga brigand Stenka Razin, a folk drama *The Snow Maiden* (1873), later used by Rimsky-Korsakov as the libretto of an opera, and a play dealing with the theater, *The Forest* (1871) All the important plays of Ostrovsky are available in English

Ostrovsky, Nikolai Alekseyevich (nyĭkulī' ŭlyĭksyā'-ĭvĭch), 1904–37, Russian novelist. He wrote one of the most popular novels to appear since the revolution, *How the Steel Was Tempered* (1936, Eng tr , *The Making of a Hero*, 1937), an autobiographical tale of the civil wars around 1918 He died prematurely, leaving an unfinished work, of which one volume, *Born of the Storm* (1937, Eng tr., 1939), was published on the day of the author's funeral.

Ostwald, Wilhelm (vĭl'hĕlm ôst'vält), 1853–1932, German physical chemist and natural philosopher, b Riga, Latvia He was professor of chemistry and director of the chemical laboratory (1886–1906) at the Univ of Leipzig He received the 1909 Nobel Prize in Chemistry for his work on catalysis and his investigations into the fundamental principles governing equilibrium and rates of reaction He originated the Ostwald process for manufacturing nitric acid and did outstanding research on color His numerous and widely influential works appeared in many editions These include *Outlines of General Chemistry* (1889, 3d Eng ed , 1912), *The Principles of Inorganic Chemistry* (1900, 4th Eng ed , 1914), *Natural Philosophy* (1902, Eng tr , 1910), and *Colour Science* (1923, Eng tr 1931).

Ostwald process, method for the preparation of nitric acid by the oxidation of ammonia, invented by Wilhelm Ostwald Ammonia mixed with air is heated and led over a catalyst (platinum) It reacts with the oxygen to form nitric oxide, which is then oxidized to nitrogen dioxide, this in turn reacts with water to form nitric acid

Ostyak (ŏs'tēăk"), one of the languages of the Finno-Ugric family See LANGUAGE (table)

Osuna, Pedro Téllez Girón, duque de (pā'dhrō tĕ'lăth hĕrōn' dō'kā dā ŏsōō'nä), 1574–1624, Spanish soldier and administrator He joined the Spanish army in the Netherlands in 1602 and for his remarkable services there was named by Philip III viceroy of Sicily (1611–16) and of Naples (1616–20) Acting with great independence, he led several expeditions against the Turks and the Barbary pirates He strongly opposed Venice for its covert anti-Spanish policy, and in 1617 he led his fleet up the Adriatic to defeat the Venetians at Gravosa Venice vainly protested this act of aggression In 1618 the Venetians accused Osuna of having conspired with Bedmar, the Spanish ambassador at Venice, in a plot to overthrow the Venetian republic and to seize the city Osuna was recalled in 1620 and was charged with seeking to make himself independent ruler of Naples He was jailed in 1621 and died in prison

Osuna (ŏsōō'nä), town (pop 19,552), Seville prov , S Spain in Andalusia It is an agricultural center. It flourished under the Romans, fell to the Moors, and was recovered in 1239 From the 17th cent the dukes of Osuna were prominent The university, founded in 1549 and suppressed in 1820, was a cultural center of Andalusia There is a fine 16th-century collegiate church

Oswald, Saint, d 642?, king of NORTHUMBRIA After his father, Æthelfrith, was killed c 617, he and his brother Oswy became Christians at Iona When King EDWIN was killed by PENDA, Oswald soon (633) slew Penda's ally Cadwallon (or Caedwalla) and made himself king of Northumbria Sending to Iona for a bishop, he received St AIDAN and a band of monks, to whom he gave Lindisfarne for a monastery It became the center for the reconversion of Northumbria to Christianity Oswald also made himself overlord of Wessex, but apparently not of Mercia When Penda killed him at Maserfield (642?), Oswald was succeeded in Bernicia by Oswy and in Deira by one Oswine As one martyred by a pagan king, he was soon venerated, and miracles were attributed to his relics Feast Aug 5

Oswald, Saint, d 992, English churchman of Danish descent He was bishop of Worcester (after 961) and archbishop of York (after 972) He was sent to Fleury, France by St DUNSTAN to become a monk and study the Cluniac reform Oswald returned an ardent reformer He founded many monasteries, the most eminent being Ramsey Feast Feb 28

Oswegatchie (ŏs"wĕgă'chē), river, c 150 mi long, rising in N New York in the Adirondacks and flowing irregularly NW, NE, and again NW to the St Lawrence at Ogdensburg

Oswego (ŏswē'gō) **1** City (pop 1,953), co seat of Labette co , SE Kansas, near the Neosho, in a farming and stock-raising area, founded 1865, inc 1870 A trading post was established here in the 1840s **2** City (pop 22,062), a co seat of Oswego co , N N Y , on Lake Ontario at the mouth of the Oswego and NW of Syracuse; inc as a village 1828, as a city 1848 A trading post, established here after the English founded Oswego (1722), became a vital outlet for the Albany fur trade The strategic location caused early fortification of Oswego, followed (1755) by the building of present Fort Ontario, which was much contested in the colonial wars It was held by the French (1756–59) until it was retaken by Sir William JOHNSON for the English The city is an important lake port, a port of entry, and the northern terminus of the Barge Canal, handling coal, lumber, and freight Among its varied products are rayon, matches, and boilers Oswego has a state teachers college The scene of James Fenimore Cooper's novel *The Pathfinder* is laid in the Oswego river valley. **3** Residential city (pop 1,726), NW Oregon, just S of Portland, on a narrow lake; founded c.1850, inc 1909 Marylhurst College is near Oswego.

Oswego, river formed in central New York by the confluence of the Oneida and Seneca rivers NNW of Syracuse and flowing c 25 mi NW to Lake Ontario at Oswego It is a part of the state's barge transportation system

Oswego tea or **bee balm,** aromatic perennial plant (*Monarda didyma*), used by Indians and colonists for tea It is a typical MINT with square stem and opposite leaves, growing wild or planted for its fragrance and showy blossoms The individual tubular flowers are clustered in a ragged terminal head, usually scarlet, but with cultivated varieties in other colors Oswego tea is long blooming, easy to cultivate, and striking when grown in masses It yields an oil that has been used as a fixative in perfumes The flower is visited by hummingbirds Oswego tea (sometimes called bergamot) and the BERGAMOT mint belong to the same genus

Oswestry (ŏz'wĕstrē, –wus–), municipal borough (1921 pop 9,654, 1943 estimated pop 12,300), Shropshire, England, in a farming region It has ruins of a Norman castle, a grammar school founded in the 15th cent , and the Church of St Oswald (partly Early English) The town is named for St Oswald, Northumbrian king killed here in a battle against King Penda of Mercia Old Oswestry, to the north, was the site of an ancient British fort

Oswiecim, Pol *Oświęcim* (ôshfyĕ'chĕm), Ger. *Auschwitz* (oush'vĭts), town (pop 6,708), S Poland, E of Cracow It is chiefly a trade center, with coal deposits in the vicinity During the Second World War the Germans organized here a CONCENTRATION CAMP system, this included the extermination camp at Brzezinka (Ger *Birkenau*) , where c 4,000,000 inmates, mostly Jews, were annihilated, mainly by gas, but also by phenol injections, shooting, hanging, malnutrition, and disease Poland led the list of the many nations represented among the prisoners

Oswy or **Oswiu** (both ŏz'wē), d 671, king of Northumbria He succeeded his brother OSWALD as king of Bernicia, and when he killed PENDA at the battle of Winwæd, he made himself not only ruler of all Northumbria but of all England as well for three years, until Wulfhere, Penda's son, reconquered Mercia Oswy continued the conversion of England to Celtic Christianity, sending missionaries to Mercia and Essex To resolve the differences between the Celtic and Roman usages of the church in England, the king called the Synod of Whitby (see WHITBY, SYNOD OF) and conformed to the decision there

Otaru (ōt'ärōō), city (1947 pop 164,934), SW Hokkaido, Japan, on Ishikari Bay It is the main coal-exporting port of the island and a center of herring fisheries

Otfried or **Otfrid** (both ôt'frēt), fl 868, German monk and poet He wrote a long metrical version of the Gospels in the vernacular, the first German work by a writer whose name is known to us and the first in which rhyme is used He was more theologian than poet, but his work has passages of charm

Othman (ŏth'mun, ōth'man) or **Osman** (ŏz'mun), c 574–655, 3d caliph (644–56), son-in-law of Mohammed He belonged to the great Omayyad family and was selected as caliph after the murder of Omar Moslem conquests were continued and extended to Bactria and Cyprus He, however, replaced the officers appointed by Abu Bakr and Omar with members of his own family Revolts in Egypt and Mesopotamia were very serious His highhanded methods aroused deep resentment, and in 656 a band of malcontents reached Medina and murdered Othman Ali succeeded to the caliphate

Othman I see OSMAN I

Othni (ŏth'nī), son of Shemaiah 1 Chron 26 7

Othniel (ŏth'nēĕl) [Heb ,=lion of the lord], first judge of Israel after the death of Joshua For capturing a city he was given as wife Caleb's daughter Achsah Joshua 15 17, Judges 3 9–11, 1 Chron 13

Otho. For German rulers thus named, see OTTO

Otho, Marcus Salvius (ō'thō), A D 32–A D 69, Roman emperor (Jan - April, A D 69) He was a friend of NERO, and his wife, Poppaea Sabina, became Nero's mistress, Otho was repaid with the province of Lusitania (A D 58) In A D 68 he joined the revolt of GALBA, but on Galba's success Otho killed him and made himself emperor Meanwhile VITELLIUS had been proclaimed emperor at Cologne and was on the way to Rome Otho was defeated in N Italy and killed himself See B W Henderson, *Civil War and Rebellion in the Roman Empire, 68–70 A D* (1908)

Otis, Bass, 1784–1861, American portrait painter and mezzotint engraver, b Bridgewater, Mass He probably produced the first lithograph in America, a portrait of the Rev Abner Kneeland in a volume of his lectures (1818) Otis practiced portrait painting in New York city and Philadelphia, reproducing some of his works in mezzotint Among his best-known likenesses are those of Thomas Jefferson, Stephen Girard, and James Madison His only known genre composition, *Interior of a Smithy,* is in the Pennsylvania Academy of the Fine Arts, Philadelphia

Otis, Elisha Graves, 1811–61, American inventor, b Halifax, Vt From his invention (1854) of a device to prevent the fall of hoisting machinery, he developed the first passenger elevator (1857) The invention of the elevator permitted the building of skyscrapers and was thus of great architectural importance Otis's manufacturing company became a great industrial enterprise

Otis, Harrison Gray, 1765–1848, American statesman, b Boston, grad Harvard, 1783 He was admitted (1786) to the bar, practiced law in Boston, and was elected (1795) to the Massachusetts legislature Otis, a staunch Federalist, served (1797–1801) in Congress and was a member of the state legislature from 1802 to 1817 In 1814 he was a leader of the Hartford Convention, and by defending that meeting later he lost his chance of becoming a national figure Otis was a U S Senator (1817–22) and mayor of Boston (1829–31) He published *Letters Developing the Character and Views of the Hartford Convention* (1820) and *Otis' Letters in Defence of the Hartford Convention* (1824) See S E Morison, *The Life and Letters of Harrison Gray Otis, Federalist, 1765–1848* (1913)

Otis, Harrison Gray, 1837–1917, American journalist, b Marietta, Ohio In his earlier years he was a printer in the Middle West He was a member of the Republican national convention which nominated (1860) Lincoln for President and served ably in the Civil War Later he was employed by the Government Printing Office (1867–70) and the U S. Patent Office (1871–75) After he moved to California, he acquired (1886) control of the Los Angeles *Times* and directed a bitter journalistic attack on organized labor The dynamiting (1910) of the *Times* building was one of the most dramatic incidents in the history of American labor

Otis, James, 1725–83, American colonial orator and patriot, b Barnstable co , Mass , grad Harvard, 1743 A lawyer first in Plymouth and then in Boston, he won great distinction and served (1756–61) as advocate general He resigned to oppose the issuing of writs of assistance by the superior court of Massachusetts and argued eloquently before the court that the writs violated the natural rights of the colonials as Englishmen and that any act of Parliament violating those rights was void John Adams later declared that with that speech, "the child Independence was born" Otis lost the case but became the leader of the radical wing of the colonial opposition to British measures He was elected (1761) to the colonial assembly, was made head (1764) of the Massachusetts committee of correspondence, and was vigorous in his opposition to the Stamp Act (1765) He proposed the inter-colonial meeting which became the Stamp Act Congress, and his ideas were used in the protests drafted by that body He was much hated by the conservatives The governor Sir Francis Bernard, in 1767 vetoed election of Otis as speaker of the assembly Otis spoke out warmly against the Townshend Acts, directly threatening that British measures were driving the colonies to revolt A commissioner of customs, infuriated at statements Otis made in a newspaper, set upon him (1769) and injured him so severely that Otis's public life was at an end His principles were, however, upheld by Samuel Adams, Paul Revere, Josiah Quincy, and others See biographies by William Tudor (1823) and Francis Bowen (1847), C F. Mullett, ed , *Some Political Writings of James Otis* (1929)

Oto Indians (ō'tō), tribe of North American Indians, also called the Otto, of the Siouan linguistic stock At one time, with the Iowa and the Missouri, they formed part of the Winnebago nation, N of the Great Lakes The Oto with the Missouri left the nation, but after a quarrel the Oto separated from the Missouri and settled in S Minnesota Constantly beset by overpowering enemies, they were driven south and joined the Pawnee near the mouth of the Platte river In 1880–82 the tribe migrated to Oklahoma The Oto had a Plains area type of culture They used a variety of musical instruments Today they live, with the Missouri, on a reservation in N central Oklahoma, where they number some 900 See William Whitman, *The Oto* (1937)

Otomí (ōtōmē'), linguistic stock of American Indians of W central Mexico The groups extend as far east as San Luis Potosí, centering in the valley of Toluca

Otranto (ōträn'tō, Ital ō'trantō), town (pop 2,507), Apulia, S Italy, on the Strait of Otranto, which connects the Adriatic with the Ionian Sea between Italy and Albania Once an important seaport, Otranto was devastated in 1480 by the Turks, it is now of little significance Here are a cathedral, with a fine floor mosaic, and ruins of an imposing castle, the setting of Horace Walpole's Gothic novel, *The Castle of Otranto*

Otsego (ŏtsē'gō), city (pop 3,428), SW Mich , on the Kalamazoo river and NW of Kalamazoo, settled 1832, inc as a village 1865, as a city 1918 Rapids near by furnish power for the paper mills here Indian mounds are in the vicinity

Otsego Lake, 8 mi long, E central N Y., SE of Utica, in a resort area A branch of the Susquehanna issues from its southern end, at Cooperstown The lake is the Glimmerglass of James Fenimore Cooper's tales.

Otsu (ō'tsōō), city (1947 pop 81,426), capital of Shiga prefecture, S Honshu, Japan It is a port for excursion steamers on Lake Biwa Today a tourist and manufacturing center, it was an imperial seat in the 2d and the 7th cent It is the site of Miidera, a 7th-century Buddhist temple Shiga prefecture is mainly agricultural

ottava rima: see PENTAMETER

Ottawa (ŏ'tùwù), city (pop 154,951), capital of Canada, SE Ont, on the Ottawa at the mouth of the Rideau and WSW of Montreal HULL, Que, just across the Ottawa river, at the mouth of the Gatineau, is connected by bridge with Ottawa and forms part of the metropolitan area, the hills and Gatineau valley beyond it afford easily accessible sites for summer cottages and recreation facilities for residents of Ottawa Founded in 1827 by Col John By, an engineer in charge of constructing the Rideau Canal, Ottawa was first called Bytown, the name being changed in 1854 In 1858 it became the seat of government, and in 1867 capital of the dominion The government buildings, housing the dominion Parliament, the ministerial offices, and the Supreme Court, built in 1859–65, were burned in 1916, but rebuilt Other notable buildings are Rideau Hall, the residence of the governor general, Anglican and Roman Catholic cathedrals, the National Victoria Museum, the Library of Parliament, the National Art Gallery, the dominion observatory, the mint, and the Carnegie Library The Rideau Canal separates the city into upper and lower towns, and along the banks of the canal and the rivers are many landscaped drives and much of Ottawa's 1,500 acres of parks Chaudière Falls of the Ottawa river furnish hydroelectric power for the city's industries, which include paper milling, watchmaking, and woodworking The Univ of Ottawa (bilingual, Catholic, pontifical, for men and women, est 1848) is here, as are the Ashbury and La Salle schools for boys, Ottawa Ladies' College, and the dominion experimental farm The population is about equally divided into speakers of French and of English See A H D Ross, *Ottawa Past and Present* (1927), Blodwen Davies, *The Charm of Ottawa* (1932), T M Longstreth, *Quebec, Montreal, and Ottawa* (1933), Lucien Brault, *Ottawa, Old and New* (1946)

Ottawa, I City (pop 16,005), co seat of La Salle co, N Ill, on the Illinois at the confluence with the Fox, laid out 1830, settled after the Black Hawk War (1832), inc as a village 1837, as a city 1853 In a region yielding clay and sand, it makes glass, clay products, and farm machinery The city was the scene of the first Lincoln-Douglas debate (1858) Near by are Starved Rock State Park and Buffalo Rock State Park **2** City (pop 10,193), co seat of Franklin co, E Kansas, SE of Topeka and on the Marais des Cygnes, inc 1866 The Ottawa Indians moved here (1832) after ceding their Ohio lands to the United States In 1837 Jotham Meeker established a Baptist mission The Indians removed to Oklahoma in 1867 The city is a distributing, rail, and manufacturing center in an agricultural area and is the seat of Ottawa Univ, (Baptist, coeducational, 1865) **3** Village (pop 2,342), co seat of Putnam co, NW Ohio, on the Blanchard river and N of Lima, founded 1833 as Tawa Town Beet sugar and canned foods are produced

Ottawa, river, 696 mi long, largest tributary of the St Lawrence It rises in W Quebec in the Laurentian Plateau NE of North Bay and flows W, then SE past Mattawa, Chalk River, Pembroke, and Ottawa, Ont, and Hull, Que, to the St Lawrence just above Montreal For much of its length it forms the boundary between Ontario and Quebec Its lower course has several expansions—known as Allumette, Chats, and Deschênes lakes and Lake of the Two Mountains—and rapids, including Chaudière Falls, which furnish hydroelectric power. Among its chief tributaries are the Mattawa, Petawawa, Coulonge, Madawaska, Mississippi, Rideau, Gatineau, Lièvre and Rouge rivers It is connected with Lake Ontario by the RIDEAU CANAL system The valley of the Ottawa was explored (1613–15) by Champlain and the river, known as the Grand River, became an important highway for fur traders and missionaries See S R Broadfoot, *Holdaying in Canada on the Ottawa River* (1941)

Ottawa, University of. see OTTAWA, Ont

Ottawa Hills, village (pop 1,979), NW Ohio, near Toledo, settled 1916, inc 1924

Ottawa Indians, tribe of North American Indians of the Algonquian linguistic stock. According to tradition the Ottawa, the Ojibwa, and the Potawatami were originally one family dwelling N of the Great Lakes, after the separation the Ottawa settled on the Manitoulin island in Lake Huron and along the shores of Georgian Bay Thus in 1615, when noted by Samuel de Champlain, they lived near the mouth of French river on Georgian Bay. The Ottawa claimed the Ottawa river region and controlled trade with the French on that river. They allied themselves with the French and the Huron Their alliance with the Huron, however, made them the enemies of the Iroquois, who forced them to flee to the islands off Green Bay After a few years a part moved on to Keweenaw Bay in Lake Superior, while another section joined the Huron and went to the Mississippi near Lake Pepin From there the Sioux drove them northward to Chequamegon Bay in N Wisconsin Promised protection by the French, the Ottawa returned (1670) to Manitoulin island, where the mission of St Simon was established among them. Next they joined the Huron at Mackinac in Michigan, and soon after they dispersed over a wide area. The Ottawa were active in the Indian wars of the Old Northwest; PONTIAC was an Ottawa Indian Part of the Ottawa are settled on Walpole Island in Lake St Clair, part are on Manitoulin island, and some are in NE Kansas and in Oklahoma, but the majority have settled in the lower peninsula of Michigan The Ottawa were of the Eastern Woodlands cultural area. They had a well-developed creation myth which stated that they were descended from three families, the Michabou or Great Hare, the Namepich or Carp, and the Bear's Paw. See A S Blackbird, *History of the Ottawa and Chippewa Indians of Michigan* (1897)

otter (ŏ'tûr), aquatic carnivorous mammal of the weasel family, found on all continents except Australia The slender body of the otter of North America is about 3½ to 4½ ft long (smaller in the female) including the long, heavy tail. The head is flattened, the legs are short, and the hind feet are webbed An agile swimmer, it fishes in streams and lakes, along the banks of which it makes its burrow It also eats small mammals and birds Its valuable, thick, brown fur consists of a soft undercoat with overlying glossy guard hairs The **sea otter,** found in and near kelp beds of the N Pacific, is a larger, heavier animal of the same family which habitually swims on its back In this position it carries its cub and eats its meals of abalone, crab, and sea urchin Relentless hunting of the defenseless animal for its fur of rare beauty nearly exterminated it. It is now protected in Alaskan waters

Otter, Peaks of, two peaks, western Va, in the Blue Ridge W of Lynchburg The one, Flat Top, is 4,004 ft high, the other, Sharp Top, 3,875 ft

Otterbein, Philip William (ŏ'turbīn), 1726–1813, German-American clergyman, a founder of the United Brethren in Christ After pastoral work in Germany, he came (1752) to America as a missionary of the German Reformed Church In association with Martin BOEHM, whom he met c 1768, he carried on successful evangelistic work, mainly in the German settlements of Pennsylvania and Maryland His influence was widespread, especially after he became pastor of an independent congregation in Baltimore known as the Evangelical Reformed Church He was in sympathetic fellowship with ministers of other communions, notably Bishop Francis Asbury, at whose consecration he assisted While remaining always a member of the German Reformed Church, Otterbein played a leading role with Martin Boehm and a small group of lay preachers in laying the foundations in 1789 of a denomination to be known as the United Brethren in Christ, of which he and Boehm were elected bishops in 1800 Otterbein College is named for him

Otterbein College. see WESTERVILLE, Ohio

Otterburn, village, Northumberland, England. It was the scene in 1388 of a victory of the Scots over the English, sometimes called the battle of Chevy Chase from the ballad

otter sheep · see ANCON SHEEP.

Ottery Saint Mary (ŏt'urē), urban district (1931 pop 3,713, 1943 estimated pop 4,005), Devonshire, England, E of Exeter It is the Clavering of Thackeray's *Pendennis* and the birthplace of Samuel Taylor Coleridge The 13th-century church is a small copy of Exeter Cathedral

Otto I or **Otto the Great,** 912–73, emperor (962–73) and German king (936–73), son and successor of Henry I of Germany He is regarded as the founder of the HOLY ROMAN EMPIRE Three important departures from his father's policy were his alliance with the Church, his intention of extending his actual rule over all Germany (rather than limit it to his duchy of Saxony), and his interference in the affairs of ITALY The early rebellions (838, 839), led by Duke EBERHARD of Franconia, were crushed in the battles of Birthen and Andernach (839) LOUIS IV of France had assisted the rebels, and Otto campaigned against him (940) with HUGH THE GREAT, but in 942 Otto and Louis reached an agreement and Otto helped Louis to defeat Hugh in 950 In 951 Otto invaded Italy, taking advantage of an appeal from ADELAIDE, who was about to be forced into a marriage with the son of BERENGAR II Otto forced Berengar to become his vassal, assumed the title king of the Lombards, married Adelaide, and returned to Germany. A second rebellion (953), headed by the archbishop of Mainz, CONRAD THE RED of Lotharingia, and Otto's son Ludolf of Swabia, ended when it became necessary to form a united front against the Magyars, who were decisively defeated in the Lechfeld (955). LOTHARINGIA was divided in two; Lower Lorraine (the present Low Countries) was administered by Otto's brother and chief adviser, St. BRUNO (St. Bruno the Great), archbishop of Cologne. Meanwhile in Italy, Berengar II resumed his aggressions Pope JOHN XII appealed to Otto, who entered Rome and was crowned emperor by the pope early in 962 Thus uniting Germany and Italy, Otto created the Holy Roman Empire. When Otto declared that the emperor's confirmation was required for the pope's election and that the pope owed fealty to the emperor for his temporal power, John found Otto's aid too costly; while Otto was campaigning against Berengar, the pope secretly negotiated with Otto's enemies. Otto hastened back to Rome (963) and had John XII deposed and a creature of his own elected pope by a synod over which he personally presided The Romans, seeing all independence lost, rose in 964 and restored John, but John died the same year and Otto restored his own client. Another Roman rebellion (965) Otto drowned in blood (966). Otto's campaign (966–72) to gain control over S Italy was unsuccessful, but a minor diplomatic triumph was scored when (972) Emperor John I of Byzantium gave a Greek princess in marriage to Otto's son and successor, Otto II During Otto's reign the German towns expanded and began to gain prosperity by their trade with the growing Italian market

Otto II, 955–83, emperor (980–83) and German king (973–83), son and successor of Otto I After crushing a revolt in Bavaria, Otto defeated the Danes (974) and the Bohemians (977) In 976 he deposed the duke of Bavaria and reduced the duchy by the creation of independent margraviates in the Nordgau and the East March (AUSTRIA) and a new duchy in Carinthia In 978 he invaded France in retaliation for Lothair of France's invasion of Lorraine, the inconclusive war ended in 980 Campaigning in Italy (980–82), Otto was, after some initial success, disastrously defeated by the Arabs in Calabria In 983 he held a diet of German and Italian nobles at Verona, where he procured the election of his son Otto III as German king He died in the course of an attack on Venice Regarding Germany and Italy as a united realm, Otto II felt his position as emperor more keenly than his role as German king His failures in Italy greatly weakened the imperial prestige

Otto III, 980–1002, emperor (996–1002) and German king (983–1002), son of Otto II and the Byzantine princess Theophano On Otto's accession the duke of Bavaria attempted to obtain the regency and then the crown, but the plot was frustrated and the power was exercised by Theophano till her death in 991 and by Otto's grandmother Adelaide until his majority Otto established his cousin Bruno in the vacant papacy as Gregory V (996) and restored him (998) after his expulsion by a Roman revolt After Gregory's death (999) he installed his tutor Gerbert of Aurillac as pope (see SYLVESTER II) Possessed of brilliant talents and remarkably well educated, Otto III was alternately swayed by his extreme piety, which sent him on pilgrimages and into periods of asceticism and filled him with enthusiasm for church reform, and by ideas of his high position as the scion of both the Western and the Eastern imperial houses After 998 he lived mostly in Rome, where he built himself a palace on the Aventine, dressed in Roman costume, and introduced Byzantine titles and ceremonials into his court He was popular neither in Germany nor in Italy In 1001 he was blockaded in his palace by the Roman mob, after a pathetic appeal, he was allowed to retire to Paterno, where he died Being without direct heir, he was succeeded by the duke of Bavaria, who became emperor as Henry II Otto's reign showed clearly the dangers of the union of the Germans and the Italians under a single ruler

Otto IV, 1182?–1218, emperor (1209–15) and German king, second son of HENRY THE LION, duke of Saxony He was ankling (1198–1208) to the Hohenstaufen PHILIP OF SWABIA The murder of Philip (June, 1208), though not Otto's work, revived his cause His consent to submit to a new election (Nov, 1208), without standing on the validity of his first, smoothed his path By the diploma of Speyer (March, 1209), Otto confirmed his earlier acknowledgment of the papacy's rights to the Papal States and promised aid in upholding papal suzerainty over Sicily He also conceded the freedom of episcopal elections and the unrestricted right of appeal to the pope However, no sooner was he crowned emperor (Oct, 1209) at Rome than he broke all his promises by adopting the Hohenstaufen policy of dominance over Italy He seized (1210) the lands left to the Church by MATILDA of Tuscany, then invaded Apulia and prepared to attack Sicily Pope INNOCENT III promptly excommunicated him, while the German nobles revolted and elected the Hohenstaufen, Frederick of Sicily (later Emperor FREDERICK II), as king In the ensuing war Otto was supported by the nobles of the Lower Rhine and of the northeast, as well as by his uncle, King JOHN of England, but he was defeated (1214) at BOUVINES by Philip II of France. He was deposed in 1215, but still had supporters in Saxony and returned to spend the rest of his life there.

Otto I, 1848–1916, king of Bavaria (1886–1913). Although incurably insane after 1872, he succeeded his brother Louis II under the regency of his uncle Luitpold (1886–1912) and of Luitpold's son Louis (1912–13). In 1913 Otto was deposed by parliament, and the regent became king as Louis III

Otto I, 1815–67, first king of the Hellenes (1832–62) The second son of King Louis I of Bavaria, he was chosen (1832) by a conference of European powers at London to rule newly independent GREECE He ascended the throne under a highly unpopular regency of Bavarians A military coup (1843) forced a constitution on the king. His authority was further weakened when Greece sought to attack Turkey in 1854 after the outbreak of the Crimean WAR, France and Britain as a result occupied the port of Piraeus The king's attempts to discard the constitution led to another military revolt, engineered largely by Constantine Canaris, and to his deposition In 1863 the Greeks chose a Danish prince to become their king as George I.

Otto, 1912–, Austrian archduke and pretender to the Austro-Hungarian throne, son of Emperor CHARLES I and of Empress ZITA He studied at Louvain, Belgium, and received (1935) the degree of doctor of political science After the outbreak of the Second World War he came to the United States, where he made an unsuccessful attempt to rally an Austrian legion against Germany. He returned to Europe in 1944

Otto, Nikolaus August (nē'kōlous ou'gŏost ō't ō), 1832–91, German engineer. He was conventor (1867) of an internal-combustion engine, and he devised (1876) the four-stroke Otto cycle which was widely adopted for automobile, airplane, and other motors

Ottocar I (ŏt'ukär) **or Premysl Ottocar I** (pürshĕm'-ishul ŏt'ŏkär), d 1230, duke (1197–98) and first king (1198–1230) of Bohemia. The royal title was conferred on him by Philip of Swabia and confirmed (1212) by Emperor Frederick II By securing (1216) Frederick's and the nobles' consent to the succession of his son (later King Wenceslaus I), Ottocar practically made the throne hereditary In 1221 he surrendered disciplinary rights over the clergy to the bishop of Prague, retaining control over the secular affairs of the church

Ottocar II or Premysl Ottocar II, d 1278, king of Bohemia (1253–78), son and successor of Wenceslaus I He won the duchy of Austria (1251) by election, marriage, and conquest and became involved in a long war over Styria with BELA IV of Hungary, after defeating Bela (1260), he added Styria to his possessions and, having procured the annulment of his first marriage, married a Hungarian princess In 1269 he acquired, through tricky diplomacy, Carinthia, Carniola, and Istria Thus Ottocar's domains reached to the Adriatic Sea and included most of the later Hapsburg crownlands Ottocar, though prudently refraining from seeking the imperial crown for himself, now sought to become the arbiter of the Holy Roman Empire The election (1273) of RUDOLF I of Hapsburg as German king proved Ottocar's undoing Ottocar, who contested the election of his enemy, was declared deprived of his dominions by the Diet of Regensburg (1274) and was placed by Rudolf under the ban of the empire (1275) In 1276 he yielded to a powerful German-Hungarian coalition headed by Rudolf and surrendered all but Bohemia and Moravia, with which he was reinvested by Rudolf However, Ottocar's revived ambitions and Rudolf's interference in Bohemian affairs provoked a new war On the MARCHFELD, scene of his earlier great victory over Bela IV, Ottocar was defeated and killed in a fierce battle against Germans and Hungarians Ottocar was succeeded by his son, WENCESLAUS II With the exception of George of Podebrad, Ottocar was the greatest of the native kings of Bohemia He greatly encouraged the growth and independence of the towns, thereby earning the reproach of favoring the Germans (most numerous in the towns) over the Czechs, and he sought to reduce the power of the great nobles An astute diplomat, he was also a courageous warrior. He helped to conquer East Prussia from the pagan Prussians and founded the city of Königsberg (now Kaliningrad)

Otto Indians: see OTO INDIANS.

Ottoman Empire (ŏ't ŭmun), vast state conquered in the 14th to 16th cent by the Ottoman or Osmanli TURKS (the last of the Turkish peoples to invade the Near East) and ruled until its dissolution in 1918 by the descendants of OSMAN I It was the greatest of the Moslem states. Modern TURKEY formed only part of the empire, but the terms *Turkey* and *Ottoman Empire* were often used interchangeably. The Ottoman state emerged in parts of Asia Minor after the breakdown of the empire of the Seljuk Turks The early phase of Ottoman expansion took place under Osman I, ORKHAN, MURAD I, and BAJAZET I at the expense of the Byzantine Empire, Bulgaria, and Serbia BURSA fell in 1326, ADRIANOPLE in 1365 The great Turkish victories of KOSSOVO (1389) and NIKOPOL (1397) placed large parts of the Balkan Peninsula under Turkish rule, and awakened Europe to the Ottoman danger. Constantinople was saved in 1402 by the unexpected appearance of Tamerlane, who defeated and captured Bajazet. The Turks, however, soon rallied Their empire, reunited by MOHAMMED I, expanded victoriously under Mohammed's successors MURAD II and MOHAMMED II The victory (1444) at Varna over a crusading army led by Ladislaus III of Poland was followed in 1453 by the capture of CONSTANTINOPLE Within a century the Ottomans had changed from a nomadic horde to the heirs of the most ancient empire of Europe. Their success was due partly to the weakness and disunity of their adversaries, partly to their excellent and far superior military organization. Their army comprised numerous Christians—not only captives, who were organized as the corps of JANIZARIES, but also volunteers Turkish expansion reached its peak in the 16th cent. under SELIM I and SULEIMAN I (Suleiman the Magnificent) The Hungarian defeat (1526) at MOHACS prepared the way for the capture (1541) of Buda and the absorption of the major part of HUNGARY by the Ottoman Empire, TRANSYLVANIA became a tributary principality, as did WALACHIA and MOLDAVIA The Asiatic borders of the empire were pushed deep into Persia and Arabia. Selim I defeated the Mamelukes of EGYPT and SYRIA, took Cairo in 1517, and assumed the succession to the CALIPHATE. ALGIERS was taken in 1518, and Mediterranean commerce was threatened by corsairs, such as BARBAROSSA, who sailed under Turkish auspices. Most of the Venetian and other Latin possessions in GREECE also fell to the sultans During the reign of Suleiman I began (1535) the traditional friendship between France and Turkey, directed against Austria and Spain Suleiman reorganized the Turkish judicial system, and his reign saw the flowering of Turkish literature, art, and architecture The Ottoman state was founded on two basic institutions—the army and religion Military and administrative functions were vested in the military class, while the class of the *ulemas* (the clergy) exercised the functions of judges and teachers In both classes advancement was, theoretically, based on merit However, the military and civil virtues of the ruling class were to disappear in the progressive decay that followed Suleiman's death The first serious blow to Turkey was the naval defeat of LEPANTO (1571), inflicted on the fleet of SELIM II by the Spanish and Venetians under John of Austria However, MURAD IV in the 17th cent temporarily restored Turkish military prestige by his victory (1638) over Persia CRETE was conquered from Venice, and in 1683 a huge Turkish army under Grand Vizier Kara MUSTAFA surrounded Vienna The relief of Vienna by JOHN III of Poland and the subsequent campaigns of CHARLES V of Lorraine, LOUIS OF BADEN, and EUGENE OF SAVOY ended with the Treaty of Karlowitz (1699), which cost Turkey Hungary and other territories, and from which the disintegration of the Ottoman Empire may be dated Economically, socially, and militarily Turkey remained a medieval state, unaffected by the progress of the rest of Europe Turkish domination over the northern part of Africa (except Tripoli and Egypt) was never well defined or effective, and the eastern border was inconstant, shifting according to frequent wars with Persia Of the vassal princes, only the khans of CRIMEA were generally loyal The sultans themselves had sunk into indolence and effeminacy Until the death (1617) of Ahmed I, the succession to the throne was habitually contested by all the sons of the deceased sultan, and it was the patriotic duty of the victor to kill his rivals in order to restore order This practice, though barbarous, was less harmful than the new law of succession, by which the eldest male member of the family was the heir-designate As a result of the law, the imperial princes were kept out of harm's way in luxurious semi-imprisonment until their turn came, by which time they often were hopeless alcoholics or lunatics The actual rule was usually exercised by the grand VIZIERS, many of whom were very able men (notably those of the KUPRILI family) However, palace intrigues tended to disrupt the administration and frequently led to the dismissal of the grand vizier, habitually expressed by the sending of a bowstring, with which the minister was supposed to dispatch himself to a calmer world The sultans themselves often were the creatures of the Janizaries The court of Constantinople (known as the Seraglio and the Sublime Porte) thus showed a not too happy mixture of Byzantine and Asiatic influences The most impressive aspect of Ottoman rule was the all-pervading corruption and bribery that had been raised to a system of administration The pashas and hospodars who administered the provinces and vassal states purchased their posts at exorbitant prices. They recovered their fortunes by extorting still larger sums from their subjects The peasantry—particularly the Christian *rayas* in the Balkans—was thus reduced to abject misery Besides the exaction of taxes and tributes, the Ottoman government took little interest in its provinces A good feature in later Turkish administration was the religious toleration generally extended to all non-Moslems. This, however, did not prevent occasional massacres and discriminatory fiscal practices. In Constantinople the Greeks and Armenians held a privileged status and were very influential in commerce and politics Some of the highest administrative offices were held by Greek families (see PHANARIOTS) The despotic system of government was mitigated only by the observance of Moslem law. The breakup of the state gained impetus with the RUSSO-TURKISH WARS in the 18th cent The treaties of Kuchuk-Kainarji (1784), Jassy (1792), and Bucharest (1812) cost Turkey the northern and northeastern coasts of the Black Sea. Egypt was only temporarily lost to Napoleon's army, but the Greek War of Independence and its sequels, the Russo-Turkish War of 1828–29 (see ADRIANOPLE, TREATY OF), and the war with MOHAMMED ALI of Egypt resulted in the loss of Greece and Egypt, the protectorate of Russia over Moldavia and Walachia, and the semi-independence of Serbia Drastic reforms were introduced in the late 18th and early 19th cent by SELIM III and MAHMUD II, but they came too late to heal the Sick Man of Europe, as Turkey came to be called The disintegration of the Ottoman Empire was regarded by the Western European statesmen as a threat to the general peace and became a major problem in European relations (see EASTERN QUESTION) The European powers had a large economic stake in the Turkish Empire owing to the system of capitulations (privileges accorded to foreign diplomats and traders) Originally (from 1535 to 1740) only France enjoyed preference, but subsequently treaties of capitulation were extended to other powers, and by the 19th cent Turkey had virtually surrendered its economic independence It was unable to control its own customs tariffs, and the resulting influx of foreign manufactured goods greatly harmed the native industries, which were still carried on by artisans Equally disastrous were the influx of foreign capital and the huge loans obtained by the Turkish government from abroad, which brought Turkey under total financial dependency The Ottoman Bank, founded in 1856, was the state bank, but it was in the hands of English and French capital Public works and industrial exploitation were furthered by foreign capital, but the profits went, naturally, abroad The Ottoman public debt reached staggering heights Although Turkey was theoretically among the victors in the CRIMEAN WAR, it emerged from the war economically exhausted The Congress of Paris (1856) admitted Turkey into the Concert of Europe, but this event marked the confirmation of the empire's dependency rather than of its rights as a European power The rebellion (1875) of BOSNIA AND HERCEGOVINA precipitated the Russo-Turkish War of 1877–78, in which Turkey was defeated despite its surprisingly vigorous stand The Treaty of SAN STEFANO (1878) was disastrous, but Austrian and British diplomatic intervention (see BERLIN, CONGRESS OF) mitigated its terms in favor of Turkey Nevertheless, Rumania (i e , Walachia and Moldavia), Serbia, and Montenegro were declared fully independent and Bosnia and Hercegovina passed under Austrian administration Bulgaria, made a virtually independent principality, annexed (1885) Eastern RUMELIA with impunity Sultan ABDU-L-MEJID, who in 1856 promulgated an important body of civil reforms, was followed (1861) by ABDU-L-AZIZ, whose reign witnessed the rise of the liberal party Its leader, MIDHAT PASHA succeeded in deposing (1876) Abdu-l-Aziz ABDU-L-HAMID II acceded (1876) after the brief reign of Murad V A liberal constitution was framed by Midhat, and the first Turkish parliament opened in 1877, but the sultan soon dismissed it and began a rule of personal despotism The Armenian massacres (see ARMENIA) of the late 19th cent alienated world public opinion from Turkey Abdu-l-Hamid was victorious in the Greco-Turkish war of 1897, but CRETE, which had been the issue, was lost to Turkey In the meantime the Young Turk movement, a reformist and strongly nationalist group, grew steadily and gained many adherents in the army In 1908 the rebellious Young Turks forced the restoration of the constitution of 1876, and in 1909 the parliament deposed the sultan and put MOHAMMED V on the throne Taking advantage of the Young Turk revolution, Bulgaria proclaimed its full independence and Austria-Hungary annexed Bosnia and Hercegovina in 1908, while disorders broke out in Albania and Arabia The Sick Man of Europe was at his last gasp A war with Italy (1911–12) resulted in the loss of Libya, and in the two successive BALKAN WARS (1912–13) Turkey lost nearly its entire territory in Europe to Bulgaria, Serbia, Greece, and newly independent Albania The terroristic nationalism of the Young Turks, whose leader ENVER PASHA gained virtual dictatorial power by a coup d'état in 1913, was scarcely of a nature to appease the remaining minorities in the empire The outbreak of the First World War found Turkey solidly lined up with the Central Powers. Ever since the revolution of 1908–9 Germany had obtained increasing influence over Ottoman affairs. The BAGHDAD RAILWAY was built by German interests, and the Turkish armed forces were reorganized and trained by German officers. It was Russia which first declared war on

Turkey in Nov , 1914. The United States merely severed (1917) relations with Turkey, but was not at war with the country Turkish troops were successful against the Allies in the GALLIPOLI CAMPAIGN (1915), while fighting in the Caucasus and in Mesopotamia was long indecisive In 1917, however, the British occupied Baghdad and Jerusalem Arabia rose against Turkish rule, and in 1918 Turkish resistance collapsed both in Asia and Europe. An armistice was concluded in October, and the Ottoman Empire came to an end The Treaty of Sèvres (see SÈVRES, TREATY OF) confirmed its dissolution With the victory of the Turkish nationalists, who had refused to accept the peace terms and who overthrew the sultan in 1922, the history of modern Turkey began See E S. Creasy, *History of the Ottoman Turks* (new ed , 1906), G J S L Eversley, *The Turkish Empire* (2d ed , 1923) See also bibliography under TURKEY

Otto of Freising (frī'zing), d 1158, German chronicler, bishop of Freising, half brother of Emperor Conrad III and uncle of Frederick I He wrote a world history to 1146, usually called *The Two Cities*, modeled on St Augustine's *City of God* Otto develops a philosophy of history For this reason and because of his extensive information, the chronicle is one of the most notable of medieval histories He also began a biography of Frederick I but wrote only two books, two more were added by one Rahewin. See C. C Mierow, tr , *The Two Cities* (1928)

Otto the Great see OTTO I, emperor

Ottumwa (ŏtŭm'wu, ō–), city (pop 31,570), co seat of Wapello co , SE Iowa, on both banks of the Des Moines river SE of Des Moines, settled 1843, inc 1851 An important commercial and industrial center in a farm and coal-mining area, it produces packed meat, dairy products, and farm machinery There is a monument to the Indian chief Wapello, whose grave is near by Ottumwa Heights College (junior, for women) is here

Otus. see ALOADAE

Otway, Thomas, 1652–85, English dramatist, educated at Winchester and at Oxford He left Oxford (1672) to act in London, but failed in his first part Turning author, he produced the heroic tragedies *Alcibiades* (1675), which succeeded chiefly because of good acting, and *Don Carlos* (1676) Two adaptations from the French followed, *Titus and Berenice* (1677) and *The Cheats of Scapin* (1677) *Friendship in Fashion* (1678), a comedy of the lascivious Restoration type, was then held to be very diverting Otway, frustrated in his passion for the actress Mrs Barry, mistress of Lord Rochester, joined the army on the Continent in 1678 He returned in 1679 to write his blank-verse tragedy *The Orphan* (1680), which with *Venice Preserved* (1682) probably reached the highest point of pathetic tragedy in Restoration drama Another coarse comedy, *The Soldier's Fortune* (1681), was continued in *The Atheist* (1684) Because of his disorderly personal life he died in great want His genius lay in his ability to portray the heights of passion and love and the depths of misery and despair, though his lines are occasionally marred by rant See his complete works (ed by J C Ghosh, 1932)

Ötztal Alps (ŭts'tal), mountain group, Tyrol, W Austria, S of the Inn The Wildspitze (12,379 ft) is the highest peak in the Tyrol The village of Obergurgl (alt 6,320 ft) is the starting point for mountain climbing and a skiing resort

Ouachita (wŏ'shĭtô"), river rising in W Arkansas in the Ouachita Mts and flowing southeasterly into NE Louisiana There it becomes part of the Red RIVER system The Ouachita is partially navigable and has several important cities on its banks, including Hot Springs, Ark , and Monroe, La Lakes Hamilton and Catherine, near Hot Springs, were created by the Carpenter (1931) and Remmel (1924) dams on the Ouachita as part of a Federal project for flood control

Ouachita College see ARKADELPHIA, Ark

Ouachita Mountains, range S of the Arkansas river, extending from central Arkansas into SE Oklahoma and attaining a height of 2,800 ft in Mt Magazine Several of the more beautiful parts of the region have been set aside as public parks or forest reservations

Ouagadougou or **Wagadugu** (both wagudōō'gōō), town (pop 14,012), capital of Upper Volta, French West Africa Cotton cloth is woven and peanuts are exported

Ouargla, Algeria see WARGLA

Ouchy (ōōshē'), port of Lausanne, Vaud canton, Switzerland, on the Lake of Geneva. It was a residence of Shelley and Byron and is now a resort

Oud, Jacobus Johannes Pieter (yäkō'bus yōha'nus pē'tur out'), 1890–, Dutch architect He was influential in the growth of modern architecture Contacts with abstract painting led him to conceive of buildings composed in terms of pure planes With several cubist painters in 1917 he established a review, *De Stijl* In 1918 Oud became official architect of Rotterdam and devoted himself to the production of extensive housing groups He soon developed his style and technical methods, using reinforced concrete for the severely simple forms involved and bringing them to full integration in the dwellings (built 1921–22) of the Oud-Mathenesse workingmen's colony Oud is also known for the row of model houses at the Stuttgart exposition of 1927 and for the workmen's dwellings at the Hook of Holland (1926)

Oude Maas, river see MEUSE.

Oudenarde (ōō'dənard, ou'–), Flemish *Oudenaarde* (ou"dənär'də), Fr *Audenarde* (ōdənärd'), town (pop 6,525), East Flanders prov , NW Belgium, on the Scheldt (Escaut) river SSW of Ghent Here in 1708 the allies under Marlborough and Eugene of Savoy defeated the French under Vendôme in the War of the Spanish Succession

Oudh, province, India see UNITED PROVINCES.

Oudh, town, India see AJODHYA

Oudiné, Eugène André (ûzhĕn' ädrā' ōōdēnā'), 1810–87, French medallist and sculptor He made numerous portrait busts, statues, and reliefs, but his highest achievement was in the field of medallic art and the designing of coins

Oudinot, Nicolas Charles (nēkôlä' shärl' ōōdēnō'), 1767–1847, marshal of France A veteran of the French Revolutionary campaigns, he was created duke of Reggio by Napoleon He commanded the national guard during the Hundred Days, participated in the Spanish expedition of 1823, and was raised to the peerage under the Bourbons

Oudjda, French Morocco see OUJDA

Oudry, Jean Baptiste (zhä' batēst' ōōdrē'), 1686–1755, French animal painter, pupil of Largillière He became court painter to Louis XV and recorded in his paintings and tapestry designs the hunts of that monarch He was also director of the Beauvais and the Gobelin tapestry works He is well known for his illustrations of La Fontaine's *Fables* His work is to be seen in galleries throughout France The Metropolitan Museum has *Ducks* and *Dogs Guarding Dead Game*

Ouessant, France see USHANT

Ouezzane, Morocco see WAZZAN.

Ougrée (ōōgrā'), commune (pop 17,869), Liége prov , E Belgium An industrial suburb of Liége, it has blast furnaces.

Ouida (wē'dä), pseud of **Louise de la Ramée** (du lä rŭmā'), 1839–1908, English novelist. She was a prolific writer of romantic tales, in florid prose, of which the best are *Under Two Flags* (1867), *Moths* (1880), and *In Maremma* (1882) Her stories for children include *Two Little Wooden Shoes* (1874), *Bimbi* (1882), and the noted *Dog of Flanders* (1872).

ouija board see PLANCHETTE

Oujda or **Oudjda** (both ōōjdä'), city (pop 88,658), NE French Morocco, founded c 994 Near the frontier, it frequently changed hands It was temporarily occupied by the French in 1844, 1859, and 1907 Oujda is the market of an agricultural area, and it is a commercial center linking Algeria and Morocco

Oulu (ô'lōō), Swed *Uleåborg* (ū'lāôbôr"yu), city (pop 30,315), NW Finland It is a Baltic seaport on the Gulf of Bothnia and at the mouth of the Oulu river, a logging waterway It has important lumber yards and shipyards, cellulose mills, sawmills, and leather works; lumber, tar, and fish are exported Oulu is also a dairy center and tourist resort The city grew around a castle founded in 1375 by the Swedes as an outpost against the Russians, was incorporated in 1605, and flourished in the 18th cent It was almost entirely destroyed by fire in 1822 and was partly destroyed by an allied fleet during the Crimean War

Oumansky, Constantine Aleksandrovich (kŭnstŭntyēn' ûlyĭksan'drŭvĭch ōōmän'skē), 1902–45, Russian diplomat He was Soviet ambassador to the United States (1939–41) and to Mexico (1941–45). In Mexico he exerted himself successfully in restoring relations between Russia and several Latin American nations. He was killed in an airplane crash

Oundle (oun'dul), urban district (pop 2,001), Northamptonshire, England, on the Nene It has old houses and inns, wide streets, and a fine medieval church Oundle School was founded in 1544 by Sir William Laxton, lord mayor of London.

Our American Cousin, play see TAYLOR, TOM

Ouray (ōōrā', yōōrā'), city (pop 951, alt c 7,800 ft), co seat of Ouray co , SW Colo , settled 1875, inc. 1884 Hot springs make it a health resort Mining, stock raising, and farming are carried on in the area.

Ourcq (ōōrk), river, 50 mi long, Aisne and Seine-et-Marne depts , N France, a tributary of the Marne It traverses the CHÂTEAU-THIERRY battlefield of the First World War, where American troops distinguished themselves in 1918 Earlier in the war, the French halted (1914) the German advance at the Ourcq in the first battle of the Marne

Our Father. see LORD'S PRAYER

Ourique (ôrēk'), town (pop 1,413), SE Portugal, in Alentejo, S of Beja It owes its fame to the tradition that Alfonso I of Portugal won his great victory over the Moors here in 1139. Actually it is now universally admitted that the battle of Ourique was not fought here but at some undetermined place, probably near Santarém. Nevertheless the alleged battlefield is still a tourist sight.

Ouro Prêto (ô'rōō prā'tōō) [Port., = black gold], city (pop 8,928), in Minas Gerais state, E Brasil, in the mountains SE of Belo Horizonte Founded in the gold rush about the end of the 17th cent , it was in the 18th cent. a prosperous mining town and one of the chief centers of Brasil, the home of the Minas literary group and the chief seat of the abortive move for independence (the *Inconfidência mineira*) led by TIRADENTES. It sank as the mines lost importance but remained the capital of Minas until 1897, when Belo Horizonte became the capital Since 1933 the city has been a national museum, preserving the 18th-century atmosphere of narrow, twisting, cobbled streets, the old mint, old houses, and the old churches, particularly the Church of São Francisco, decorated with the magnificent carvings of Aleijadinho

Ourthe (ōōrt), river, c 100 mi long, Belgium It rises in Luxembourg prov and winds NW through the Ardennes to join the Meuse at Liége

Ouse (ōōz), rivers in England **1** Also called **Great Ouse,** in the counties of Northampton, Buckingham, Bedford, Huntingdon, Cambridge, and Norfolk It rises near Banbury, and flows 156 mi E, NE, and finally N past Buckingham, Olney, Bedford, St Neots, Huntingdon, and Ely to the Wash near King's Lynn It is navigable for two thirds of its course **2** Sussex, rising near Horsham and flowing 30 mi E and S past Lewes to the English Channel at Newhaven **3** Yorkshire, formed by the confluence of the Ure and Swale rivers NW of York and flowing 45 mi SE past York to join the Trent E of Goole and form the Humber It is navigable below York The Nidd, Wharfe, Derwent, Aire, and Don rivers are tributaries

Outardes (ōōtärd'), river of E central Quebec, rising in the Otish Mts and flowing 300 mi S through Pletipi Lake, with many waterfalls, to the St Lawrence SW of Baie Comeau

outboard motor see MOTORBOAT

Outer Barrier, series of sandy barrier islands, extending for c 75 mi along the south shore of Long Island, SE N Y , from Rockaway Beach at the west to the east end of Shinnecock Bay and separating Great South Bay, Moriches Bay, and Shinnecock Bay from the Atlantic East Rockaway, Jones, Fire Island, Moriches, and Shinnecock inlets pierce the barrier, forming the narrow, sandy islands which are the sites of Atlantic Beach, Long Beach, Jones Beach State Park and other recreational areas Fire Island, and Westhampton Beach

Outer Hebrides, Scotland see HEBRIDES

Outer Mongolia see MONGOLIA

outlaw. In Anglo-Saxon times certain offenses put a man outside the protection of law His property was forfeit and his slayer did no wrong He would have to make his home in the wilderness and live by hunting and robbery After the Norman Conquest, the law of outlawry changed until finally all laws on the subject were repealed or became obsolete, and no person was deprived of legal protection Outlaw came to mean one who persisted in crime, usually adventurous robbery Robin Hood is an outlaw famous in English balladry In America outlaws such as Jesse James often won popular admiration

Outremont (ōōtrumō'), city (pop 30,751), on Montreal island, S Que , a suburb of Montreal

ovary (ō'vurē), sexual gland of the female in which the ova (female reproductive cells) are formed In the human and other higher animals there are two such glands, one on each side of the uterus, supported by a fold of peritoneum known as the broad ligament The ovary, a ductless gland, secretes ovarian hormones which control MENSTRUATION and which, in association with the pituitary gland secretions, control the development of the mammary glands Immature eggs (ova) are present in the ovary at birth At puberty successive eggs mature, and in the human being one is released from the ovary about every 28 days When the ovum is fertilized by the sperm it develops into an individual like the parent In flowering plants that part of the pistil containing the ovules is called the ovary

ovenbird, name applied in North America to a bird of the wood warbler family It is about the size of an English sparrow, olive brown above, white below, with a spotted breast and sides and a black-bordered orange crown Its nest of grass, leaves, and hair is roofed over and resembles a Dutch oven More terrestrial than other warblers, it walks daintily through the forest, hunting for insects It flicks its tail up and down when it pauses in its progress An ecstatic flight song, which compares favorably with that of the European skylark, is less familiar than its cries of "tea-cher" repeated in crescendo with accent on either the first or the second syllable In South America the name ovenbird refers to several species of thrushlike birds which build rounded nests of mud.

Overbeck, Johann Friedrich (yō'hän frē'drĭkh ō'vurbĕk), 1789–1869, German religious painter His opposition to the pseudo-classicism of the Vienna Academy led to his expulsion, whereupon he went to Rome and, with Peter von Cornelius, Veit, Schadow-Godenhaus, and others, formed the group known as the NAZARENES. His first real successes were his frescoes for the Casa Bartholdy

(representing scenes from the life of Joseph) and for Villa Massimo (scenes from Tasso's *Jerusalem Delivered*) Among his most notable paintings are *Christ's Entry into Jerusalem*, *Christ's Agony in the Garden*, and *Triumph of Religion in the Arts* A sincere Christian, Overbeck sought to make his art serve religion His influence was due rather to the purity of his doctrine than to his work, which is often lacking in pictorial appeal and in color He worked strictly from imagination

Overbury, Sir Thomas, 1581–1613, English author and courtier He enjoyed the status of friend and adviser to Robert Carr, an Oxford acquaintance Overbury came into favor with James I when Carr was created Viscount Rochester (1611) and earl of Somerset (1613) Overbury and Carr quarreled violently when Overbury disapproved of Carr's marriage with Frances Howard, divorced wife of the earl of Essex Overbury's hostility was so marked that the Howards brought pressure to bear, and the king had Overbury imprisoned in the Tower, where he was poisoned Carr and Frances Howard were convicted, but their lives were spared by the king Overbury's best-known poem, *A Wife* (1614), outlined his conception of the ideal wife He was the leading writer of "characters," brief informal essays describing a type or an individual Overbury added the element of wit to the classical Theophrastan character form See Sir E A Parry, *The Overbury Mystery* (1925), W J Paylor, *The Overburian Characters* (1936)

overhead, in accounting, the sum of such expenses of a business as cannot be charged against any specific part of the business Taxes, interest, and rent are examples of overhead charges

Overijssel (ō'vurĭ'sul), province (1,300 sq mi , pop 633,558), NE Netherlands, between the IJsselmeer in the west and Germany in the east Zwolle is the capital, other cities include Almelo, Deventer, and Enschede Drained by the IJssel river and by several canals, the province is generally sandy and level and supports extensive stock raising and dairying Textile milling and machine manufacture are the main industries The lordship of Overijssel belonged in the Middle Ages to the bishops of Utrecht, but was sold (1527) to Emperor Charles V It joined (1579) in the Union of Utrecht and became one of the United Provs of the Netherlands Another spelling is Overyssel

Overland, residential city (pop 2,934), E Mo , near St Louis, inc 1939

Overland Trail, name given to several trails of westward migration in the United States It is sometimes used to mean all the trails westward from the Missouri to the Pacific and sometimes for the central trails only Particularly, the term has been applied to a southern alternate route of the OREGON TRAIL It branched from the parent trail at the junction of the North Platte and the South Platte and followed the South Platte to present Julesburg, where it left the river and went to Fort Laramie, rejoining the parent trail The term is also particularly applied to a route to California which went W from Fort Bridger to the Great Salt Lake (thus duplicating in part the Mormon Trail), then on to Sutter's Fort in California, it was much used by California-bound immigrants Jay Monaghan, *The Overland Trail* (1947), is primarily about the Oregon Trail

Overton, town (pop 2,313), E Texas, WSW of Shreveport, La , and near Henderson, Texas, in the East Texas oil field

overture, instrumental musical composition written as an introduction to an opera, play, ballet, or oratorio The earliest Italian opera overtures were simply pieces of symphonic music and were called *sinfonie* Lully standardized the French overture, with an opening section in pompous chordal style and dotted rhythms followed by a fugal section This type of overture was much imitated, an example being the overture to Handel's *Messiah*, and even became part of the instrumental suite of the late baroque German composers In some of the 17th-century Neapolitan operas, to some extent in Rameau's operas, and most notably in Gluck's the overture began to foreshadow what was to come in the opera In many 19th-century operas the overture is simply a potpourri of the opera's tunes The concert overture, a composition in one movement which may be in any of a variety of styles, arose in the 19th cent , those of Brahms, Mendelssohn, and Beethoven are outstanding

Overyssel, Netherlands see OVERIJSSEL

Ovid (Publius Ovidius Naso) (ŏ'vĭd), 43 B C –A D 18, Latin poet, b Sulmo (Sulmona), in the Apennines, NE of Rome He studied for the law, but early became one of the literary circle at Rome His poems and songs were popular, and he was known to Augustus In A D 8, for no clearly known reason he was suddenly exiled to Tomi, a Black Sea outpost, S of the Danube He died at Tomi The poems of Ovid fall into three groups, erotic poems, mythological poems, and poems of exile All his poems but the *Metamorphoses* and a fragment (*Halieutica*) are in elegiacs, which he brought to highest perfection. The love poems include *Epistulae heroidum* [letters from heroines], supposed to have been written by ancient heroines to their absent husbands or lovers, *Amores* [loves], 49 short poems, chiefly celebrating the charms of the poet's mistress Corinna, probably fictitious, *Ars amatoria* [art of love], didactic, in three books, with complete instructions on how to make love, two books written for men, one for women, *Remedia amoris* [love cures], further instructions, this time telling how to free oneself from a lover In the second category are *Fasti*, six books on the days of the year from January to June, giving the myths, legends, ritualistic details, and notable events called to mind on each day, and the *Metamorphoses* This his most important work, in hexameters, a collection of myths, sets forth the changes of form which various persons and things had undergone from the change of the world out of chaos to the transformation of Julius Caesar into a star Notwithstanding the diversity and amount of the matter, the parts and transitions are so well harmonized that the reader is carried along with interest unabated The principal poems of exile are *Tristia* [sorrows], five books of short poems, depicting the poet's wretchedness in his first five years of exile and his pleas for mercy, and the *Epistulae ex Ponto* [letters from the Black Sea], in four books, addressed to various persons in Rome, belonging to the poet's decline in his last years Ovid's ideal of poetry was the ministry of pleasure, there is in his verse a lack of seriousness which contrasts with the tone of Vergil and Horace Ovid possessed a luxuriant imagination and great facility of language, his verse is simple and flowing He has always been a favorite poet, and his works have been frequently translated See E K Rand, *Ovid and His Influence* (1925), Herman Frankel, *Ovid* (1945)

Ovid (ō'vĭd), village (pop 1,248), S Mich , on the Maple river and NE of Lansing, platted 1857, inc 1869 The vicinity is rich in Indian earthworks and village sites

Oviedo (ōvyā'dhō), city (pop 51,410), capital of Oviedo prov and of Asturias, N Spain, on a hill slope near the great mining district of the Cantabrian Mts Oviedo is one of the most important industrial centers of Spain, ordnance, firearms, gunpowder, textiles, and many other products are manufactured in its suburbs Founded c 760, Oviedo flourished in the 9th cent as the capital of the Asturian kings, but lost much of its importance after the capital was transferred to Leon early in the 10th cent The cathedral, begun in 1388, contains the tombs of the Asturian kings and has a high square tower Adjoining it is the Cámara Santa (9th and 11th cent), which housed the cathedral's store of sacred relics and treasures, famous over all Spain The Univ of Oviedo was founded in 1604 The city suffered severely in the revolt of the Asturian miners in 1934 and in a siege in the early days of the civil war Near by at Naranco are two 9th-century churches

Oviedo (ōvē'dō), town (pop 1,356), central Fla , E of Lake Apopka, inc 1925

ovolo see MOLDING

ovum, in biology, a specialized sexual CELL called the egg cell or simply egg It is the female sexual cell, or female gamete, as distinguished from the male sexual cell (SPERM), or male gamete In the higher animals it differs from the sperm cell in that it is larger (because of the great amount of food material stored in it), nonmotile, and smoothly spherical or oval without any processes (such as the flagellum or lashlike process of the sperm) protruding from its surface Like the sperm, however, it has a single nucleus containing one or more small dense bodies called nucleoli and the darkly staining material (chromatin) that forms the bodies (chromosomes) concerned in heredity The mammalian ovum was discovered by K E von Baer Ova are produced in the reproductive organs (ovaries) of the female, being formed from cells of the reproductive tissue (called primordial germ cells) in a complicated process called oogenesis Before fertilization, the ovum, like the sperm, undergoes a series of divisions (this stage in development is known as maturation) by which the number of chromosomes in the mature ovum is reduced to one half the number normally in the cells of the individual This reduction division is known as meiosis (see MITOSIS) In the course of the process an ovum gives rise to three polar bodies (small nonfunctional cells) into which chromosomes pass at each division, and only one functional ovum is formed The union of mature sperm and egg is known as FERTILIZATION and results in a single cell, which, because the sperm and egg each have but one half the normal number of chromosomes, has a full number of chromosomes The cell resulting from the union is known as the fertilized ovum or egg It undergoes a series of divisions, the process being known as cleavage, which results finally in a hollow mass of cells called the blastula which has a wall one cell thick. From the blastula, by the invagination (i e , the bending inward) of a part of its wall, a cuplike body with a wall two cells thick develops, which is called the gastrula and from which the new individual finally develops In all animals reproducing by fertilization, the production and maturation of the ovum, its fertilization, and subsequent development to the gastrula stage are essentially the same In plants which reproduce by fertilization, two kinds of sexual cells are produced as in animals In the mosses and ferns, for example, egg cells are formed in special organs called archegonia, and like the ova of animals have but one half the normal number of chromosomes In the reproductive process they undergo a union with the sperm, which is commonly flagellated and motile like that of animals In the flowering plants the ovary in which the egg cells are formed is situated in the flower at the base of the pistil After fertilization by a sperm produced by a pollen grain, the fertilized egg develops into the embryo of the seed Although the term *ovum* is restricted to the single sexual cell as described, the term *egg* is commonly used to indicate a more complex structure, as a bird's egg, which is only in part produced in the ovary of the bird The yolk of such an egg is in reality a single ovum, or female sexual cell, swollen by the large amount of nutrient material stored within its outer membranes The rest of the egg (the "white" or albumen, the shell, and its membrane) is not cellular and is secreted around the ovum as it passes down the oviduct The ovum undergoes maturation and is fertilized before the albumen, membranes, and shell are secreted If the ovum has been fertilized, cleavage has already begun by the time the egg is laid The development of a new individual from an unfertilized ovum is called PARTHENOGENESIS

Owain Gwynedd (ō'wān gwĭ'nĕdh), d 1170, prince of North Wales, ruled 1137–70 His period saw a resurgence of Welsh national spirit By 1152 the Welsh princes, taking advantage of Stephen's troubled rule, had reoccupied much territory earlier wrested from them, but Henry II, invading North Wales in 1157, joined Rhys ap Gruffydd of South Wales in a successful revolt, and Wales was left in comparative peace until after Owain's death

Owasco Lake (ōwă'skō), c 11 mi long, W central N Y , one of the FINGER LAKES Auburn is at its outlet

Owatonna (ōwutō'nŭ), city (pop 8,694), co seat of Steele co , SE Minn , S of St Paul, settled in the early 1850s It is an industrial and trade center for a dairy, farm, and market-garden region with mineral springs A state school for dependent children was opened here in 1886 In 1933 the city was selected by a group from the Carnegie Foundation and the state university for an experiment in community art education There is a school for boys here

Owego (ōwē'gō), village (pop 5,068), co seat of Tioga co , S N Y , on the Susquehanna and between Binghamton and Elmira, settled 1787, inc 1827 Shoes and furniture are made Thomas C Platt was born here

Owen, David Dale (ō'ĭn), 1807–60, American geologist, b Scotland, studied at the Univ of London, grad Ohio Medical School, 1836 In 1827 he had come to the United States and settled in New Harmony Ind , where his father, Robert Owen, had started a socialistic community In 1837 he was appointed state geologist of Indiana, two years later he surveyed parts of Wisconsin and Iowa and then was U S geologist (1847–52) Further geological studies were made by him as state geologist for Kentucky from 1854 to 1859 and for Arkansas from 1857 to 1859

Owen, John, 1616–83, English Puritan divine and theologian In 1637 he left Queen's College, Oxford, because of Archbishop William Laud's statutes and turned to Presbyterianism In 1646 he shifted to Independency or Congregationalism In the civil war Owen supported the parliamentary cause He so impressed Oliver Cromwell by his speech before Parliament the day after the execution of Charles I that Cromwell took him as chaplain to Ireland and Scotland and had him appointed (1651) dean of Christ Church, Oxford, and vice chancellor (1652) of the university He was ejected (1660) from Christ Church but later found favor with Charles II In 1673 Owen became pastor of an Independent congregation in London A man of piety and learning and a defender of nonconformity, he was called to the pastorate of First Church, Boston, Mass , and to the presidency of Harvard, but he refused Owen's writings include devotional literature and treatises against Arminianism and Socinianism His works were edited by Thomas Russell (with a biography by William Orme, 28 vols , 1826) and by W H Goold (with a biography by Andrew Thomson, 24 vols , 1850–55) See James Moffatt, *The Golden Book of John Owen* (1904), Reginald Kirby, *Threefold Bond* (1936)

Owen, Sir Richard, 1804-92, English zoologist and comparative anatomist He studied medicine in Edinburgh and in 1827 joined the staff of the Hunterian museum of the Royal College of Surgeons, where he was conservator and also first Hunterian professor of comparative anatomy and physiology (1836–56) As superintendent of natural history for the British Museum (1856–83), he organized the Natural History Museum at South Kensington Owen's contributions to science were many and important. His chief writings were

Memoir on the Pearly Nautilus (1832), *Catalogue of the Physiological Series of Comparative Anatomy* (1833–40), *Trichina spiralis* (1835), *Odontography* (1840–45), works on the comparative anatomy and physiology of the invertebrates (1843) and the vertebrates (1866–68), and studies in paleontology

Owen, Robert, 1771–1858, British social reformer and socialist, pioneer in the cooperative movement The son of a saddler, he had little education, but was an omnivorous reader At the age of 10 he was working, having learned the textile business thoroughly, he rose rapidly, becoming by 1794 a successful cotton manufacturer in Manchester In 1800 he moved to New Lanark, Scotland, where he had bought, with others, the mills of David Dale (whose daughter he married) Here he reconstructed the community into a model industrial town with good housing and sanitation, nonprofit-making stores, schools, and, for the time, excellent working conditions Withal, mill profits were increased New Lanark became famous in England and abroad, and Owen tried to spread his ideas The Factory Act of 1819, though emasculated by the House of Commons, was instigated by him He also proposed the formation of a number of cooperative agricultural-industrial communities, experimenting in England and America, where he established (1825) the ill-fated community of NEW HARMONY, Ind Failing to gain the support of the government, partly because of his avowed agnosticism, Owen turned to the masses He promoted the National Equitable Labour Exchange, based on exchange of goods for equal values of labor, rather than money, and other cooperative societies for mutual trading For a time, before its suppression by the government, Owen gave his aid to the trade-union movement, advocating the uniting of unions with cooperative societies His central idea was that men's characters are molded by their environments and can be changed for the better in a society based on cooperation Even in his old age, despite the fact that he had depleted his fortune in his experiments, Owen continued to expound his social, moral, and economic beliefs Late in life he was converted to spiritualism Chief among his extensive writings are *A New View of Society, or, Essays on the Formation of Character* (3 vols, 1813–14), *Report to the County of Lanark* (1821), and his autobiography (1857–58) Several biographies of him have been written, including those by Frank Podmore (1906) and G D. H. Cole (2d ed , 1930)

Owen, Robert Dale, 1801–77, American social reformer, b Scotland, son of Robert Owen He studied at his father's New Lanark school and in Switzerland In 1825 he went to NEW HARMONY, Ind There he met Frances WRIGHT, with whom he established (1829) in New York the *Free Enquirer*, a paper opposing organized religion and urging wide social changes In this and in his *Moral Philosophy* (1830) Owen advocated birth control publicly for the first time in America He later became active in Indiana and U S politics As a member of Congress (1843–47) he was instrumental in the founding of the Smithsonian Institution When the Indiana constitution was revised in 1850, Owen secured an extension of property rights for married women and state provision for public schools He served (1853–58) as minister to Naples, where he became a spiritualist After his return to the United States he strongly advocated the emancipation of slaves and helped investigate the condition of the freedmen His writings include *An Outline of the System of Education at New Lanark* (1824), *Hints on Public Architecture* (1849), *The Wrong of Slavery* (1864), *The Debatable Land between This World and the Next* (1872), a novel, a play, and numerous pamphlets See the autobiography of his early years, *Threading My Way* (1874), biographies by R W Leopold (1940) and Eleanor Pancoast and A E Lincoln (1940)

Owen, Ruth Bryan, 1885-, American public official, b. Jacksonville, Ill , daughter of William Jennings BRYAN She studied (1901–3) at the Univ of Nebraska, and, interested in politics from childhood on, she was her father's secretary in his presidential campaign in 1908. She married (1910) Reginald Owen, a British engineer After Owen's death in 1927 she served (1929–33) in the U S Congress and was appointed (1933) minister to Denmark, the first woman minister of the United States She married Boerge Rohde of the Danish army, and she resigned as minister in 1936 She wrote *Denmark Caravan* (1936), *Look Forward, Warrior* (1942), and *Caribbean Caravel* (1949)

Owen, city (pop 1,083), central Wis , W of Wausau and on the North Fork of the Poplar, settled c. 1890, inc as a village 1904, as a city 1925

Owen Glendower (glĕn'dou"ur, glĕndou'ur), 1359?–1416?, Welsh leader A scion of the princes of Powys, he was also claimant through his mother to the lands of the Lord Rhys (RHYS AP GRUFFYDD). After years as a law student and a soldier in England, he returned to Wales, where he was one of the most powerful lords In 1400 he led a revolt against English rule The immediate occasion was a quarrel with Lord Grey of Ruthin, a typical border baron who hated "Welch doggs," but deeper causes of the national upheaval which followed lay in Welsh antagonism toward their Anglo-Norman overlords, Welsh resentment of unjust English laws and administration, and widespread economic discontent Owen, proclaimed (Sept 16, 1400) prince of Wales by his followers, was an elusive and daring guerrilla fighter, who showed his skill most notably in 1404 when he captured the key castles of Aberystwyth and Harlech He kept the revolt against HENRY IV burning, and the Percys—Sir Henry Percy (Hotspur), his father, Henry Percy, earl of Northumberland, and Thomas Percy, earl of Worcester—and Sir Edmund Mortimer (uncle of the 5th earl of March) allied themselves with him. In fact, Sir Edmund soon married Owen's daughter. Owen grew as a statesman, was recognized by Scotland and by Charles VI of France, and organized a Welsh government which included a representative parliament The failure of the Percys at the battle of Shrewsbury (1403), in which Owen did not take part, coupled with the failure of an expedition from France on his behalf (1405), weakened him, and the recapture by the English of Aberystwyth (1408) and Harlech (1409) left him powerless He disappeared into the mountains and refused to take advantage of the general amnesty issued by Henry V The revolt left Welsh society in ruins, but Owen's creative visions and plans for his people helped to mold unity of feeling in modern Wales He appears (with mythical attributes) in Shakspere's *Henry IV, Part I*

Owens, Jesse, 1915–, American Negro track star, b Alabama He is also called John Cleveland Owens, although his original name is said to be simply J. C Owens After his family moved to Cleveland he excelled at track and field events in high school He won the broad-jump titles at the outdoor (1933–34) and indoor (1934–35) meets of the National Amateur Athletic Union, and while on the track team of Ohio State Univ , Owens broke (1935–36) several world records at broad jumping, hurdle racing, and flat racing At the 1936 Olympic games at Berlin, Jesse Owens, on the U S team, astounded the world and upset Hitler's "Aryan" theories by equaling the world mark (10 3 sec) in the 100-meter race, by breaking world records in the 200-meter race (20 7 sec) and in the broad jump (26 ft. 5$^{3}/_{4}$ in), and by winning also (along with Ralph Metcalfe), the 400-meter relay race Later the same year Owens was barred by the A A U because he failed to go on a scheduled trip to Sweden with a team of American track stars He later participated in professional exhibitions, led a dance band, worked at odd jobs, and ran a sporting-goods firm in Detroit

Owens, river of E California rising in the Sierra Nevada SE of Yosemite National Park and flowing c 120 mi south-southeast, nominally to enter Owens Lake (now nearly dry), near Mt Whitney At a point c 43 mi above Owens Lake, an aqueduct diverts the river's water to Los Angeles, such as is not diverted flows on to Owens Lake, there to disappear by evaporation Bishop is in the Owens river valley

Owensboro, city (pop 30,245), co seat of Daviess co , W Ky , on the Ohio and SW of Louisville, settled c 1800, inc 1866 It is an important oil center and tobacco market and a shipping point for coal and farm products Its varied manufactures include radio tubes, electric-light bulbs, foodstuffs, and whisky Mt St Joseph Junior College (for women) is near

Owen Sound, city (pop 14,002), S Ont , on Owen Sound (an arm of Georgian Bay of Lake Huron) and NW of Toronto, founded 1840 It is a port and railroad terminal In a farming region, it has large grain elevators A hydroelectric plant is near by

Owen Stanley Range, on SE New Guinea, containing Mt Victoria (13,240 ft), highest peak of the Territory of Papua The region is largely jungle In the Second World War the Japanese attempted in 1942 to reach Port Moresby, the Allied stronghold, through the mountain pass at Kokoda, but the drive was checked by Allied forces

Owensville. 1 Town (pop 1,188), SW Ind , NNW of Evansville, settled 1817, inc 1881 The area yields oil 2 City (pop 1,439), E central Mo , ESE of Jefferson City, in a region producing clay, flint, and diaspore, inc 1900

Owenton, town (pop 1,190), co seat of Owen co., N Ky , N of Frankfort, in a farm area.

OWI See OFFICE OF WAR INFORMATION.

owl, chiefly nocturnal bird of prey, found in most parts of the world and related to the nighthawk and whippoorwill Superficially only they resemble hawks Owls have large, strong feet, hooked bills, and long, sharp claws Their eyes, which are directed forward and surrounded by a disklike arrangement of feathers, are adapted for seeing in partial darkness Although they can see in daylight, the majority sleep by day in caves, hollow trees, or other secluded places. So soft and fluffy is the plumage that their flight is almost noiseless The order of owls is divided into two families the barn owls, which can be identified by their heart-shaped faces, comprise one, and all the remaining species the other Owls destroy rodents and insect pests Less than 6 in long is the elf owl of the southwest cactus country, while the eagle owls of Europe and Asia and the horned owl reach 2 ft or more in length. The burrowing owl of North and South America lives in deserted burrows of prairie dogs or other animals or digs its own home The familiar screech owl has a piercing, wailing cry. Common to the Old and New Worlds are the arctic snowy owl, the barn owl, and the short-eared and the long-eared owls. In England the tawny owl is common The owl often symbolizes wisdom.

Owl and the Nightingale, The, Middle English poem written probably by a certain Nicholas de Guildford of Dorsetshire about the beginning of the 13th cent It is in 2,000 lines of octosyllabic couplets, describing a debate between the owl and the nightingale as to their respective merits The argument probably represents in allegory the contest between the older didactic poetry (owl) and the newer secular love poetry (nightingale), apparently favored by the poet himself Conversational diction, humor, and dramatic touches make this poem one of the best of the period.

Owosso (ōwō'sō), city (pop. 14,424), S Mich , on the Shiawassee and NE of Lansing, settled c 1835, inc 1859 Machinery, stoves, caskets, and canned goods are made A log cabin built in 1836 is now a historical museum Thomas E Dewey was born at Owosso An Indian effigy mound and several Indian garden beds are here

Owyhee (ōwī'hē, ōwī'hē), river rising in several branches in SW Idaho, N Nevada, and SE Oregon and flowing NE across SE Oregon to the Snake near Nyssa In 1863 gold and silver were discovered in the region, and for a short time there were many mining camps The Owyhee reclamation project, established in 1928 by the Bureau of Reclamation, improves some 102,500 acres W of the Snake river, 82,000 acres in Oregon near the mouth of the Owyhee, and 30,500 acres in SW Idaho, adjacent to Homedale Owyhee Dam (constructed 1928–32), c 21 mi SW of Nyssa, is 417 ft high and 833 ft long and forms a reservoir 52 mi long The project is contiguous with the BOISE PROJECT and the project at VALE and is closely associated with them Owyhee is a form of the name Hawaii, two Hawaiians, employees of fur traders, were murdered here

oxalic acid (ŏksă'lĭk), strong, organic acid, a colorless, crystalline solid with a sour taste, melting at 190°C It is soluble in both hot and cold water and in alcohol It forms many salts (oxalates), of which those of potassium and calcium are most common The acid is present by itself or in its salts in many plants, as oxalis, sorrel, and rhubarb, but rarely in quantities great enough to be injurious It is used for bleaching cork, leather, straw, and wood, in printing cloth, and to remove stains (as ink) from cloth It is prepared in various ways, e g , commonly, by the treatment of starch with nitric acid, by the reaction of alkalies and nitric acid, and by treating cellulose with alkalies and sulphuric acid The acid and its soluble salts are poisonous (for antidote, see POISONING, table)

oxalis (ŏk'sălĭs) or **wood sorrel,** any species of the genus *Oxalis* (sometimes separated into three genera, *Oxalis*, *Ionoxalis*, and *Xanthoxalis*) Most of the cultivated kinds are tropical herbs used as window plants Commonly the leaves are clover-like, and the dainty flowers white, pink, purple, or yellow Both leaves and flowers usually respond to darkness with "sleep" movements A number of species grow wild in North America, including the white wood sorrel (*Oxalis acetosella*), widely distributed in the North Temperate Zone and one of the plants identified as the SHAMROCK This—and to a lesser extent other species—has long been used for salads and greens because of the pleasantly acid taste, these species contain OXALIC ACID The tubers of some South American kinds have been used for food

oxbow lake, stagnant lake formed in the abandoned river bed when a river cuts through the neck of one of the meanders or loops characteristic of the course of rivers of slow current Without outlet and usually without inlet, the oxbow lake often becomes a marsh or swamp and finally, through evaporation and the growth of vegetation, disappears

Oxenstierna, Count Axel Gustaffson (ŏk'sunstûr"nu, Swed ak'sul gŭ'stafsôn ōōk'sunshĕr"na), 1583–1654, Swedish statesman, a leading figure in the THIRTY YEARS WAR during the reigns of GUSTAVUS II and CHRISTINA. He studied at the universities of Rostock, Jena, and Wittenberg and entered the service of the state. He proved his ability as a diplomat and in 1612 was made chancellor His administrative ability complemented the military prowess of the king Gustavus's reign was one of almost continuous foreign campaigns, and the actual administration of the state was in the hands of the chancellor. He also organized the conquered territories, skillfully managed financial affairs, and aided Gustavus's wars by his diplomatic victories In 1629 he arranged a favorable truce with Poland, freeing the army for the campaign in Germany. Habitually cautious, he opposed Sweden's entry into the Thirty Years War, but acceded to the king's wishes and devoted his

energies to keeping supplies and troops at the command of the king. After the death (1632) of Gustavus II at Lützen, the diet granted Oxenstierna full control of Swedish affairs in Germany, and he directed the warfare. At a congress at Heilbronn (1633), he managed to weld the German Protestant princes into some semblance of unity. The defeat at Nördlingen (1634) forced Oxenstierna to solicit direct assistance from France. After long negotiations with Cardinal Richelieu he secured enlarged subsidies and the open entry of France into the conflict (Treaty of Wismar, 1636). As the dominant member of the council of regency in Christina's minority and virtually ruler of Sweden (1632–44), he followed a cautious foreign policy and distinguished himself by his great program of reforms. These covered a wide range of commercial, administrative, and social improvements. He was the author of the constitution of 1634, which centralized administration. He planned and directed the war with Denmark (1643–45) and brought it to a successful conclusion in the Peace of Bromsebro, by which Sweden gained several Danish provinces. Clashes between Oxenstierna and the young queen led to the decline of his power. He himself took no part in the negotiations of the Peace of Westphalia (1648), but his son was one of the plenipotentiaries. Oxenstierna opposed the abdication of Christina in 1654, but in the short remainder of his life served Charles X well in attempts to rehabilitate Sweden financially.

oxeye, name for several plants, such as the oxeye DAISY and BLACK-EYED SUSAN, but particularly for two genera *Heliopsis*, opposite leaved and native to North America, and *Buphthalmum*, alternate leaved and Eurasian but cultivated elsewhere. Both are yellow composite-flowered perennials. *Heliopsis*, similar to the wild sunflower, is cultivated mostly in a double variety.

Oxford, Edward de Vere, 17th **earl of,** 1550–1604, English poet, b Castle Heddingham, Essex, educated at Queen's and St John's colleges, Cambridge. He traveled in Italy, acted in and produced plays, and was one of the court circle of writers. See his poems (ed by J T Looney, 1921), biography by B M Ward (1928). On his theory that he wrote Shakspere's plays, see studies by Percy Allen, G H Rendall, and J T Looney.

Oxford, Robert Harley, 1st **earl of** see HARLEY.

Oxford, county, England see OXFORDSHIRE.

Oxford, town (pop 1,297), N N S , on the Philip river and NW of Truro. It is a woolen mill center.

Oxford, Latin *Oxonia*, city (1931 pop 80,539, 1947 estimated pop 104,950), co seat of Oxfordshire, England, WNW of London at the junction of the Cherwell with the Thames or Isis river. In the 8th cent Oxford was the site of a shrine of St Frideswide. It developed as a trading town and later (10th cent) as a frontier fort, in the 10th and 11th cent it was raided by the Danes. In the 12th cent it was the site of a castle, a royal palace, and an abbey, and OXFORD UNIVERSITY had its origin. The town grew as a trading, educational, and religious center—it had foundations of several orders, including the Dominicans and the Gray Friars. During the civil wars Oxford was the royalist capital, it was besieged but not injured by the parliamentarians. Although its modern importance is chiefly as the seat of the great university, the manufacture of automobiles has developed rapidly in the suburb Cowley and Iffley. Among famous historic buildings (apart from the colleges) are the Radcliffe Camera (1737), Radcliffe Observatory (1772), and Sheldonian Theatre (designed by Wren), the churches of St Mary the Virgin (13th cent) and St Michael (11th cent), and several old inns. The chapel of Christ Church college (12th cent) is also the cathedral church of the city. See Sir J A R Marriott, *Oxford Its Place in National History* (1933).

Oxford. **1** Industrial town (pop 1,393), NE Ala , just S of Anniston, in a farm area, settled 1855. **2** Rural town (pop 1,375), SW Conn , SE of Southbury, settled c 1680, inc 1798. **3** City (pop 1,020), S Kansas, on the Arkansas below Wichita, in a farm area, founded c 1871, inc 1879. **4** Town (pop 1,316), SW Maine, on Thompson Lake W of Auburn, settled 1794, inc 1829. **5** Town (pop 4,623), S Mass , SSW of Worcester, settled 1687 by French Protestants, inc 1693. Wooden boxes and woolen goods are produced. **6** Village (pop 2,144), S Mich , N of Pontiac, in a farm and lake area, settled 1836, inc 1876. **7** City (pop. 3,433), co seat of Lafayette co., N central Miss , SE of Memphis, Tenn , settled 1835, inc. 1837. Important in the development of the town has been the Univ of Mississippi (see MISSISSIPPI, UNIVERSITY OF). Oxford is the home of William Faulkner. **8** Village (pop 1,141), S Nebr., on the Republican and SW of Kearney, inc. 1879. **9** Village (pop 1,713), S central N.Y., on the Chenango and NE of Binghamton, settled 1788, inc 1808. The New York State Woman's Relief Corps Home is here. **10** Industrial town (pop. 3,991), co seat of Granville co., N N.C., N of Raleigh, in a lumber, cotton, and tobacco area; settled 1760, laid out 1811, inc. 1816. Negro and white orphanages are here. **11** Village (pop. 2,756), SW Ohio, near the Ind. line NW of Hamilton; laid out 1810, inc 1830. It is a college town, seat of MIAMI UNIVERSITY and Western College (for women, 1853). There are many old houses. **12** Borough (pop 2,723), SE Pa., SW of Philadelphia near the Md line, inc 1833. Dairying is done here. It is a tourist center. LINCOLN UNIVERSITY is near by.

Oxford, Provisions of. see PROVISIONS OF OXFORD.

Oxford and Asquith, Herbert Henry Asquith, 1st **earl of,** 1852–1928, British statesman. Of a middle-class family, Asquith attended Oxford, became a barrister in London (1876), and in 1886 was elected to Parliament, where he held a place for most of the remainder of his life. He attracted attention as counsel for the Irish nationalists before the Parnell Commission of 1889 and was secretary of state for the home department (1892–95) in Gladstone's last ministry. After the defeat of the Liberals in 1895 Asquith supported the imperialist Lord Rosebery group and became a strong advocate of free trade. In the Liberal cabinet formed in 1905 Asquith was chancellor of the exchequer (1905–8) under Henry Campbell-Bannerman, in 1908 Asquith became prime minister, serving for eight years during some of the most dramatic triumphs of the Liberal party. The social-reform program of his government led to a bitter and successful conflict with the House of Lords. The social-insurance program was instituted and the power of the Lords broken. The ministry was endangered by its renewed attempts to establish Irish HOME RULE. The bill of 1912 and its subsequent modifications had brought on the danger of imminent civil war in Ireland when the outbreak of the First World War postponed that lesser threat. The war, however, brought about Asquith's downfall. In 1915 he admitted opposition members into his cabinet, but the following year he was forced to resign the leadership of the coalition to David LLOYD GEORGE. In 1925 Asquith was created earl of Oxford and Asquith, and in 1926 he resigned his leadership of the shattered Liberal party. His career is recorded in his *Fifty Years of British Parliament* (1926), *Occasional Addresses, 1893–1916* (1918), *Speeches* (1927), and *Memories and Reflections* (1928). See biography by J A Spender and Cyril Asquith (1932). His second wife, **Margot (Tennant) Asquith, countess of Oxford and Asquith,** 1864–1945, whom he married in 1894, held a high reputation in London society for her wit. Her frank autobiography (1920–22) created a minor sensation. She wrote a novel and several volumes of personal reminiscence, including *Places and Persons* (1925), *More Memories* (1933), and *Off the Record* (1944).

Oxford Group see BUCHMAN, FRANK N D.

Oxford movement, name designating a religious movement, known at first as the Tractarian movement, which had its beginning at Oxford in 1833 and which affected the development of the Church of England from that time. It was an effort to overcome dangers that were threatening the Church as a result of political changes and reforms and general tendencies of thought in Europe during the 18th and early 19th cent. This attempt to stir into new life the Established Church arose among a group of spiritual leaders in Oriel College, Oxford. Prominent among them were J H NEWMAN, John KEBLE, R H Froude, and Charles Marriott. Keble, whose *Christian Year* had appeared in 1827, in July of 1833 preached at the university a sermon *On the National Apostasy*, which Newman held to be the actual opening of the movement. A few days later a meeting was held at Hadleigh, Suffolk, in the rectory house of H J Rose, "the Cambridge originator of the Oxford movement," where a resolve was made to uphold "the apostolic succession and the integrity of the Prayer-Book." Neither Keble nor Newman could attend this conference. Newman, who felt that extensive popularizing was more effective than organization, launched immediately a series of pamphlets, *Tracts for the Times*, of which he wrote many. Keble and E B PUSEY were able associates in preparing them. To the tracts was added *The Library of the Fathers of the Holy Catholic Church*, translations from patristic writings, to encourage a return to the beliefs and customs of the first Christian centuries. The Tractarians preached Anglicanism as a *via media* between Roman Catholicism and evangelicalism. Newman became the acknowledged leader in answering critics and advocating High Anglican institutions. When the Tractarians attacked R D Hampden, a follower of Richard Whately, the liberals, led by Dr. Arnold, opposed them openly. After 1834 Pusey was an influential factor in the movement, adding force and dignity to the controversial manner and emphasizing the observance of ritual. Opponents dubbed the movement "Puseyism." Some of his tracts had wide-reaching effects. Newman's *Tract 90*, on the Thirty-nine Articles, was counted "perilous to the peace of the Church" and brought the series to an end (1841). The movement lost valuable supporters, including Newman, in the secession to the Church of Rome, which began in 1842 and was checked by a sermon preached by Pusey. His leadership resulted in firmer organization and more scientific development of the system, which, step by step, advanced beyond its academic starting point, eventually being extended into Scotland and Wales and beyond the seas. Mission work very early was undertaken in London and other great towns to put a more living interest into religion and set higher standards of worship. Advocates among the clergy made changes, renovating and beautifying their churches, intoning services, insisting upon the wearing of vestments in the chancel, facing East while saying prayers, seeking to restore dignity and warmth to the worship, which had been languishing. Some of the prominent leaders of the movement enriched the Church's hymnody by composing beautiful and significant words, others contributing fine tunes. New importance was given to hymn singing. Every effort to revive ceremonial customs, every innovation, aroused a storm of excitement and opposition, amounting at times to rioting. This violence culminated in 1860 at St George's-in-the-East, London. Because attention was centered upon the forms of expression in the churches, especially between 1857 and 1871, the followers of the Oxford movement became known as "ritualists." Anglo-Catholicism was another name by which the movement was called, as its supporters were earnest and persistent in their effort to secure in the Established Church recognition of Catholic liturgy and doctrine. When sacramental confession was revived in some parishes, public agitation rose high (1873–77). Although the Prayer Book rubric was the basis of the revived customs, they were in a number of instances, between 1850 and 1890, made the subjects of lawsuits. In 1874 the Public Worship Regulation Act was passed by Parliament, avowedly to "put down Ritualism." The struggle on the part of churchmen was really in resistance to the exercise of secular authority in spiritual affairs. No High Churchman could recognize the mandates of a purely parliamentary court, such as the judicial committee of the privy council, which, although it lacked spiritual authority, was the supreme court of ecclesiastical appeal. The last imprisonment for refusal to admit its authority was made in 1887, after which such resistance was respected as reasonable. After the Prayer Book controversy of 1928 when the House of Commons refused to allow the new book, resistance to state authority became even more widespread. Among the means for renewing deep and personal devotion to the teachings of the Bible, Keble, Newman, and especially Pusey had sought to develop religious community life. Sisterhoods were founded, the first in 1844. They became centers of charitable and social work of importance. Communities for men were fewer and expanded less rapidly. In later years the followers of the movement have placed increasing emphasis on the responsibility of Christians in the life of society and have given much attention to social problems. In 1889 the Christian Social Union was established, and it soon won general approbation and support. Numerous religious societies and guilds have come into being also. The celebration in 1933 of the 100th anniversary of the movement was directed by a committee representing the whole Church of England. See R. W Church, *The Oxford Movement* (1891), H L Stewart, *A Century of Anglo-Catholicism* (1929), S L Ollard, *A Short History of the Oxford Movement* (1932), C P S Clarke, *The Oxford Movement and After* (1932), C B Mortlock, *The People's Book of the Oxford Movement* (1933), Geoffrey Faber, *Oxford Apostles* (1934).

Oxfordshire or **Oxford,** inland county (748 sq mi , 1931 pop 209,784, 1948 estimated pop 265,400), S central England. The county town is Oxford, seat of the famous university and an automobile-manufacturing center. The terrain is generally flat except for a branch of the Chiltern Hills in the southeast. The county is drained by the Thames (or Isis as it is sometimes locally called) and its affluents, the Windrush, the Evenlode, the Cherwell, and the Thame. The chief occupation is farming (wheat, barley, and oats). The region was crossed by two Roman roads, which are, in places, still in use. In the Middle Ages it became a part of the Anglo-Saxon kingdom of Mercia. The history of the county is largely that of the city of Oxford, which during the civil war was a stronghold of royalist resistance. At Woodstock, rich in historical associations, is Blenheim Palace, seat of the dukes of Marlborough. The abbreviation of the Latin name is Oxon. See *Victoria History of Oxfordshire* (2 vols , 1907–39).

Oxford University, at Oxford, England, one of the two ancient universities of England. Like Cambridge, it had its beginnings in the early 12th cent in the groups of young scholars who gathered around the learned monks and teachers of the town. Although University College and Balliol had been founded earlier, the present system of residential colleges (see CAMBRIDGE UNIVERSITY), began with Merton College (1264). The university was a primary center of learning throughout the Middle Ages, such scholars as Roger Bacon, Duns Scotus, Wyclif, and Bishop Grosseteste were associated with it. Consisting of a corporation of scholars and masters, having its own statutes, property, buildings, and customs, the medieval college maintained

almost complete autonomy within the university, as it does today The colleges, with their dates of founding, are University (1249), Balliol (1263), Merton (1264), St Edmund Hall (1269), Exeter (1314), Oriel (1326), Queen's (1340), New (1379), Lincoln (1427), All Souls (1437), Magdalen (1458, pronounced mŏd'lĭn), Brasenose (1509; pronounced brāz'nōz), Corpus Christi (1516), Christ Church (1546), Trinity (1554), St John's (1555), Jesus (1571), Wadham (1610, charter received 1612), Pembroke (1624), Worcester (1714), Keble (1871), and Hertford (1874), the women's colleges are Lady Margaret Hall (1878), Somerville (1879), St Hugh's (1886), and St Hilda's (1893) The university has faculties of theology, law, medicine, litterae humaniores, modern history, English language and literature, medieval and modern European languages and literature, Oriental languages, physical sciences (including mathematics), biological sciences, and social studies Oxford has led especially in the classics, in theology, and in political science The Oxford Union is the world's most famous debating club The Ashmolean Museum (founded by Elias ASHMOLE) and the BODLEIAN LIBRARY are notable features of the university Like Cambridge, Oxford has its own two representatives in Parliament Instruction in both universities is by lectures and the tutorial system, i e , each student writes each week a paper on a prescribed subject and discusses it with his tutor A large sum was left for scholarships by Cecil John RHODES The Oxford Univ Press, established in 1585, has a branch in the United States See C E Mallet, *History of the University of Oxford* (3 vols , 1924–27), Sir J A R Marriott, *Oxford Its Place in National History* (1933), Keith Briant, *Oxford Limited* (1937), Christopher Hobhouse, *Oxford* (1939), *Universities Yearbook Oxford of Today* (1922), by L A Crosby and Frank Aydelotte, was written for prospective Rhodes scholars

oxidation (ŏk"sudā'shun) **and reduction.** Originally the term *oxidation* was used in chemistry to indicate a chemical reaction in which oxygen and some other substance combine to form another substance, and *reduction* was used to indicate the removal of oxygen from a substance, i e , a reaction opposite in effect to oxidation Iron, for example, when it rusts combines with oxygen to form iron oxide and therefore undergoes oxidation Hydrogen burns in oxygen to form water, a compound of hydrogen and oxygen, carbon monoxide, a compound of carbon and one atom of oxygen, burns to form carbon dioxide, a compound of carbon and two atoms of oxygen Both reactions are examples of oxidation, and, because of the rapidity with which they take place, these are further distinguished as COMBUSTION When copper oxide, a compound of copper and oxygen, is treated with hydrogen, the oxygen is removed by the hydrogen which combines with it to form water, and the copper is left free In this reaction, although the copper oxide is reduced, the hydrogen at the same time is oxidized In chemistry today, however, the terms *oxidation* and *reduction* have been extended to include a number of chemical reactions, in many of which oxygen is not involved at all This extension of the terms is made possible by their redefinition on the basis of the electron theory (See ELECTRON, ATOM, VALENCE) The atoms of some elements are said to "lend" electrons to other atoms in entering into chemical combination with them, while others are said to "borrow" electrons When, for example, an atom of copper combines with an atom of oxygen to form copper oxide, the copper lends two electrons to the oxygen Since oxygen is a borrower, the combination of another element with it involves a loss of electrons by that other element On the other hand, when oxygen is removed from combination with another element, the electrons are restored to that element and the removal of oxygen involves, therefore, a gain of electrons On this basis, i e , the losing or gaining back of electrons by an element, oxidation and reduction are defined, and the processes are not therefore confined to reactions in which oxygen is taken on or given off For example, one oxidation reaction in which oxygen is not concerned is that in which ferrous chloride (a compound of one atom of iron with two atoms of chlorine) obtains another chlorine atom to become ferric chloride (a compound of one atom of iron with three of chlorine) In the first compound the iron atom is lending two electrons, one to each of the two chlorine atoms, and in the second compound three electrons, since there is an increase to three in the number of chlorine atoms present The reaction is, therefore, termed oxidation because the iron loses, or is called upon to lend, more electrons in the second compound (formed in the reaction) than in the first The iron is said to have increased its positive valence. On the other hand, ferric chloride (which has three chlorine atoms) is reduced to ferrous chloride (in which the valence of iron is 2, i e , the iron holds only two chlorine atoms) when one of the chlorine atoms is removed. Substances which have the power to oxidize other substances (i e , cause an atom to lose electrons) are known as oxidising agents. Some common compounds exhibiting this property are hydrogen peroxide; sulphuric, nitric, and hypochlorous acid, and a number of salts, such as nitrates Some elemental oxidising substances are ozone, oxygen, chlorine, and sulphur A number of substances, such as carbon, hydrogen, and carbon monoxide, which have the power to reduce other substances (i e , cause an atom to take on electrons), are known as reducing agents Whenever oxidation of a substance occurs, it is accompanied by the simultaneous reduction of another substance

oxide (ŏk'sīd), compound of oxygen and some other elemental substance Oxygen combines directly with a great many other elements A number of these binary compounds (i e , compounds consisting of two elements only) occur abundantly and widely distributed in nature Sand and quartz are compounds of silicon and oxygen Carbon dioxide (carbon and oxygen) is given off in the respiration of animals and plants and is used by green plants in starchmaking, or photosynthesis Other important oxides of the nonmetals are those of sulphur, nitrogen, and phosphorus The oxides of certain metals are important as ores Iron is obtained from ferric oxide Bauxite, a hydrated aluminum oxide, is the important source of that metal The oxide of tin is its principal ore, and zincite (an oxide of zinc) serves as one of the chief sources of the metal. Litharge (lead oxide) is important in the manufacture of many paints and varnishes Red lead is another important oxide of lead. The oxides are named commonly monoxide (or simply oxide), dioxide, trioxide, etc , according to the number of oxygen atoms present in a molecule For example, in a molecule of carbon monoxide there is one oxygen atom, in carbon dioxide, two, in sulphur trioxide, three, in phosphorus pentoxide, five Certain oxides, as sodium peroxide, are so named because of the abnormal amount of oxygen present A number of elements, e g , arsenic, carbon, manganese, nitrogen, phosphorus, and sulphur, combine with oxygen to form more than one oxide The oxides are commonly classified as acidic or basic oxides or anhydrides Sulphur trioxide is the acid anhydride of sulphuric acid, for it reacts with water to form that acid Phosphorus pentoxide reacts vigorously with water to form phosphoric acid A solution of carbon dioxide exhibits acid properties (turns blue litmus red), for when the gas is passed into water some of it reacts to form carbonic acid Oxides of metals that react with water form hydroxides which are alkalies For example, lime (calcium oxide) reacts with water, yielding slaked lime (calcium hydroxide) Some oxides of metals are basic in that they neutralize acids to form a salt and water, although they do not react with water Others react with both acids and bases and are known as amphoteric oxides, and still others are neutral Some elements, e g , the inert gases (helium, argon, neon, krypton, and xenon), do not form oxides The halogens and the inactive metals do not combine directly with oxygen but oxides can be formed by indirect methods

Oxnam, Garfield Bromley, 1891–, American Methodist bishop, b Sonora, Calif , studied at the Univ of Southern California, Boston Univ , Harvard, and the Massachusetts Institute of Technology and in Japan, China, India, and England After teaching at the Univ of Southern California (1919–23) and at Boston Univ (1927–28), he was president of DePauw Univ (1928–36) In 1936 he was elected bishop of his denomination Resident bishop of the Omaha area (1936–39) and of the Boston area (1939–44), he was assigned to the New York area in 1944 He is a president of the World Council of Churches A liberal on social problems, he has written *Facing the Future Unafraid* (1944), *Preaching in a Revolutionary Age* (1944), and *Labor and Tomorrow's World* (1945)

Oxnard (ŏk'snărd), city (1940 pop 8,519; 1945 special census pop 18,979), S Calif , near the coast and WNW of Los Angeles, founded 1898, inc 1903 It refines sugar, packs fruits and vegetables (especially beans), and manufactures farm implements.

Oxona see OXFORD, Oxfordshire, England.

Oxus see AMU DARYA

oxyacetylene flame (ŏk"sēusĕt'ulēn) Acetylene burns with a hot, luminous flame It combines with the oxygen of the atmosphere to form carbon dioxide and water, with the liberation of an enormous quantity of heat A device known as the **oxyacetylene torch,** so designed that oxygen can be supplied to an acetylene flame in the amount needed to bring about complete combustion of the gas, is used for cutting steel and in the welding of iron and various other metals In the complete combustion of acetylene, a temperature as high as 3500°C can be obtained

oxygen, colorless, odorless, tasteless gaseous element (symbol=O, for physical constants, see ELEMENT, table) Oxygen is heavier than air, is only slightly soluble in water, is a poor conductor of heat and electricity, and supports combustion but does not burn When the gas is cooled below −118 8°C (its critical temperature), under a pressure of 49 7 atmospheres (its critical pressure), it becomes a pale blue liquid which exhibits magnetic properties At a temperature of −183 6°C. and under standard pressure (one atmosphere or about 15 lb. per square inch) this liquid has a density of 1 132 g per c c. By still further cooling, the liquid changes to a solid which retains the color of the liquid and the magnetic property The density of the solid at −252 5°C and under standard pressure (one atmosphere) is 1 426 g per c c Chemically, oxygen is an extremely active and important substance The common reaction in which it unites with another substance is called oxidation (see OXIDATION AND REDUCTION) The burning of substances in air is rapid oxidation or COMBUSTION The RESPIRATION of animals and plants is also a form of oxidation, and in their nutrition this reaction is essential for the liberation of the energy stored in such food materials as carbohydrates and fats The rusting of iron and the corrosion of many metals results from the action of the oxygen of the air Oxygen forms a great many compounds It unites directly with a number of other elements to form the OXIDE of the element It is a constituent of many acids and of hydroxides, carbohydrates, proteins, fats and oils, alcohols, wood, and numerous other compounds such as the carbonates, chlorates, nitrates and nitrites, phosphates and phosphites, and sulphates and sulphites Oxygen is the most abundant of the elements It is widely distributed in its many compounds Water, for example, is about 89 percent oxygen by weight The oxides occur abundantly in nature The atmosphere is approximately one fifth free oxygen by volume The element is present in all living things, being a constituent of the fundamental living substance, protoplasm. Oxygen is prepared commercially from liquid air It can also be obtained by the electrolysis of water and by the heating of certain of its compounds, such as barium peroxide, potassium chlorate, and the red oxide of mercury The OXYACETYLENE TORCH is an important industrial application Oxygen is utilized in medicine in the treatment of respiratory diseases and is carried in submarines for human respiration and in airplanes flying to high altitudes OZONE, the molecule of which is made up of three oxygen atoms, is an allotropic form of the element More than a hundred years before the isolation of oxygen by Priestley (1774), the existence and properties of the gas had been discussed by John Mayow Prior to Priestley's announcement, Scheele had succeeded in preparing oxygen from a number of substances, but publication of his findings was delayed until after that of Priestley's As a result, Priestley and Scheele are credited with the discovery of the element independently. The fact that the gas is a component of the atmosphere was finally and definitely established by Lavoisier a few years later In 1929 announcement of the discovery of **heavy oxygen,** i e , of two isotopes of oxygen of mass 17 and 18 respectively, was made by W F Giauque and H L Johnston of Ohio State Univ

oxyhydrogen flame. see BLOWPIPE

Oxyrhyncus (ŏk"sĭrĭng'kus), excavation site, Upper Egypt, W of the Nile and near the Fayum Some of the largest finds of papyri have been made here first in 1896–97 and 1906–7, they are partly Ptolemaic in date, but mostly Roman and Byzantine The town is known only from the papyri which tells of a Greek colony first and a Christian monastic center later

Oyama, Iwao, Prince (ēwä'ō ō'yama), 1842–1916, Japanese field marshal A Satsuma clansman, he was trained as a military officer in Europe and returned to become a distinguished commander In the First Chino-Japanese War he captured Port Arthur and Weihaiwei, and in the Russo-Japanese War he was commander in Manchuria As war minister in several cabinets and as chief of staff, he upheld the autocratic power of the clans against democratic encroachments

oyster, edible mollusk found in beds in coastal waters of most temperate regions The shell consists of two unequal valves with a rough outer surface One muscle controls the closing of the shell, and the foot is rudimentary In some species the sexes are separate and in others they are united in one individual Of the 5 to 50 or more million eggs laid annually by each female few survive to maturity The eggs of some forms are laid and fertilized in the water Others retain the eggs within the shell The minute larva swims about before attaching itself to a rough surface under water In the United States, oysters are harvested on both Pacific and Atlantic coasts, on the Atlantic especially in the regions of Delaware and Chesapeake bays and in the waters around Long Island During the two to six year period of growth they are usually transplanted several times To protect the oysters during the breeding season they are harvested preferably between September and April The oyster from which the PEARL is obtained is not of the same family as the common edible oyster of America See J H. Orton, *Oyster Biology and Oyster Culture* (1937).

Oyster Bay, town (pop. 42,594), on W Long Island, SE N.Y., on Long Island Sound W of Huntington, settled 1653 It includes Oyster Bay, Bayville, and other resort and residential villages, mostly on the north shore. The oyster industry is important. A shipyard was built between Oyster Bay village and

Bayville in 1941 A park and a bird sanctuary are memorials to Theodore Roosevelt, who lived at "Sagamore Hill," near Oyster Bay, and is buried near by

oyster plant, name for several plants, among them the GOATSBEARD

Ozaki, Yukio (yōō'kyō ōzä'kē), 1859–, Japanese statesman, the outstanding liberal of modern Japan. In 1881 he helped form the Kaishinto (Reform party) and in 1887 had to leave Tokyo because of his attacks on the conservative government. He was elected to every diet after that institution began functioning, joined the new Seiyukai party in 1900, but later affiliated with the Kenseikai He served under Okuma As mayor of Tokyo he was responsible for the gift of the cherry trees that adorn Washington, D C He fought for universal manhood suffrage and other progressive causes After 1931 he was almost alone in lifting his voice loudly to oppose Japanese militarist policy in China and Manchuria After the militarist policy had come to disaster in the Second World War, he urged reconstruction of Japan on a democratic basis In April, 1950, he visited the United States

Ozanam, Antoine Frédéric (ätwän' frādārēk' ōzänäm'), 1813–53, French Catholic scholar He studied philosophy and law. In 1841 he first achieved notice by a pamphlet against the Saint-Simonians After going to Paris in 1832 to study, he was associated with Chateaubriand, Lacordaire, Ampère, and other leaders of Catholic thought In 1833 he was one of the men who formed a charitable organization that became the world-wide St Vincent de Paul Society He gained his doctorate in law (1836) and then in letters (1838), taught in Lyons, later lectured at the College Stanislas in Paris, and was professor of foreign literature at the Sorbonne after 1841 He is generally considered one of the chief leaders of his time in social Catholic thought, working in the direction that led to Leo XIII's teachings He had great influence in Germany and Italy. His works cover a great range of material, mostly on medieval literature, thought, and history, a notable work deals with the history of the Franks, emphasizing the role of the Church in transmitting Roman civilization to the barbarian cultures of the West. See studies by Kathleen O'Meara (2d ed , 1878), Louis Baunard (1925), and F E Hack (1926)

Ozark (ō'zärk) **1** City (pop 3,601), co seat of Dale co , SE Ala , near the Choctawhatchee, in a diversified farm area **2** City (pop 1,402), a co seat of Franklin co , NW Ark , in the Ozarks and on the Arkansas river, here bridged, settled 1836 Near by are the Ozark National Forest and a U S game refuge

Ozark Mountains, actually a dissected plateau, c 50,000 sq mi , chiefly in Missouri, but partly in Arkansas, Oklahoma, and Kansas, lying between the Arkansas and Missouri rivers Averaging c 2,000 ft in altitude, the plateau slopes gradually into the plains, the BOSTON MOUNTAINS are the highest and most rugged section The Ozarks are rich in lead and zinc, and there are good fruit-growing areas The beautiful scenery of stream, hill, and forest and the mineral springs have made the Ozarks a resort region

Ozarks, College of the see CLARKSVILLE, Ark

Ozarks, Lake of the, large artificial lake, central Mo , SW of Jefferson City Created by the impounding of the Osage river waters by BAGNELL DAM, it is c 110 mi long, of an irregular longitudinal shape The lake offers numerous recreational facilities

Ozd, Hung *Ózd* (ōzd), town (pop 21,277), NE Hungary, WNW of Miskolc, in a lignite-mining area It has large steel and pig-iron plants

Ozem (ō'zĕm) **1** Brother of David 1 Chron 2 15 **2** Descendant of Hezron 1 Chron 2 25

Ozias (-zī'-) [Gr =Heb UZZIAH] **1** Same as UZZIAH **1 2** Ruler of Bethulia at the time of Judith Judith 6–10, 13–16

Ozni (-nī), same as EZBON 1

ozocerite (ōzō'kûrīt, -surīt, ō"zōsēr'īt) or **ozokerite** (ōzō'kûrīt) [Gr ,=wax smelling], waxy solid substance varying in color from white or colorless (when pure) to yellow, brown, or black and sometimes greenish, melting at a temperature below the boiling point of water, and varying in density between 0 85 and 0 95 g per c c Chemically, it is a mixture of hydrocarbons, being classed as a crude paraffin and called, consequently, mineral wax Ozocerite occurs in various parts of the world in rock deposits It is obtained by crushing the material containing it, followed by treatment with hot water, when the ozocerite is melted When refined it appears on the market as ceresin, a colorless waxy solid, which is employed as a substitute for beeswax and also as an adulterant Ozocerite is used in the manufacture of candles and of various composite hard-rubber substitutes, for making polishes, and in electrotyping

Ozolaean Locris see LOCRIS

ozone (ō'zōn), allotropic form of oxygen, its molecule consisting of three atoms of oxygen It is an unstable, pale, bluish gas with a characteristic fresh, penetrating odor, liquefying at −112°C and solidifying at −251 4°C It is more active than oxygen, one and one-half times heavier, more soluble in water, and a more active oxidizing agent, acting directly on mercury and silver to form oxides and affecting many organic compounds It is produced in a number of chemical reactions Ozone is used commercially as a bleaching agent for vegetable dyes, oils, ivory, and other organic compounds and in the purification of water and air The gas is formed when a silent electrical discharge passes through oxygen As a result it is present in minute quantities in the atmosphere owing to the occurrence of electric storms It is sometimes noticeable in the vicinity of electrical machinery and strong ultraviolet lights, being recognized by its odor This odor was first noticed in 1785 by Van Marum and later (1840) by Schonbein, who identified the gas as a new substance and called it ozone

P

P, 16th letter of the ALPHABET, representing the voiceless bilabial stop It corresponds to Greek pi (pĭ), but in form it looks like Greek rho For the technical use of P in higher criticism, see OLD TESTAMENT In chemistry P is the symbol of the element PHOSPHORUS

Pa, chemical symbol of the element PROTACTINIUM

Paarai (pā'ărā, pāurā'ī), same as NAARAI

Paardeberg (pär'dubûrg, -bĕrkh), village, Orange Free State, Union of South Africa Here in Feb , 1900, the Boer forces under Piet Cronje were captured by British troops in the South African War. Cronje was forced to surrender

Paarl (pärl), town (pop 27,271), SW Cape Prov , Union of South Africa, on the Great Berge river It was founded in 1690 by French Huguenot settlers It is on a railroad to near-by Cape Town Textiles are manufactured The population includes 11,184 Europeans

Paasikivi, Juho Kusti (vōō'hō kōōs'tē pa'sīkī"vē), 1870–, Finnish statesman, president of Finland (1946–) He was a member of the Finnish parliament from 1907 and minister of finance in 1908–9 After Finland had proclaimed its full independence from Russia, Paasikivi was briefly premier (1918), and in 1920 he negotiated the peace treaty with the USSR at Dorpat In the subsequent years he devoted himself mainly to his banking firm He took part in the unsuccessful negotiations that preceded the Finnish-Russian War of 1939–40 and headed the Finnish peace delegation to the USSR in 1940 Despite his conservative background, he apparently won favor with the Soviet government, particularly with Stalin, and he opposed the Finnish declaration of war on Russia in 1941 Again he headed the Finnish delegation when an armistice was negotiated in 1944, and in 1946 he was elected president of Finland after Mannerheim's resignation He was reelected in 1950 by a coalition of anti-Communist parties

Pabianice (päbyänē'tsĕ), industrial city (pop. 37,140), central Poland, just SW of Lodz It produces mainly textiles.

Pablos, Juan (hwän' pa'blōs), d 1561?, printer in New Spain He printed in Mexico city the first book known to have been printed in the Western Hemisphere It was a religious manual, *Breve y más compendiosa doctrina christiana en lengua mexicana y castellana,* which appeared in 1539, a full century before the first book printed within the present boundaries of the United States, the *Bay Psalm Book.* Pablos was an Italian, a native of Brescia in Lombardy, and came to Mexico in 1539 as the agent of Juan Cromberger, a printer of Seville Pablos continued to print books with the Cromberger mark after Cromberger's death (1540), but in 1548 he began to print in his own name and continued to do so until 1560. See also MARTÍN, ESTEBAN.

Paca, William (pā'ku, păk'u), 1740–99, American Revolutionary patriot, signer of the Declaration of Independence, b near Abingdon, Md , grad College of Philadelphia (now the Univ of Pennsylvania), 1759, and studied law in England He returned to Maryland and served (1774–79) in the Continental Congress Paca was governor of Maryland from 1782 to 1785 and was also a judge of state courts and of a U S district court

Pace, Frank, Jr (pās), 1912–, American public official, U S Secretary of the Army (1950–), b Little Rock, Ark , grad Princeton, 1933, LL D Harvard, 1936 He was admitted (1936) to the bar and practiced law in Arkansas, where he became assistant district attorney (1936) and attorney (1938) for the state revenue department He later served as assistant to the U S Attorney General (1946) and to the U S Postmaster General (1946–48) Pace was attached (1948–50) to the Bureau of the Budget before he succeeded (April, 1950) Gordon Gray as Secretary of the Army

Pachacamac (pa"chakamäk'), ruins of a walled Indian city, Peru, 25 mi SE of Lima Built before the time of the Inca in one of the irrigable valleys of the coastal desert, Pachacamac is noted for the polychrome frescoes that once adorned its adobe walls Its cultural and chronological affiliation with other ancient coastal cities has not been exactly determined It was an Inca shrine

Pacheco, Francisco (frāntshē'skō pachā'kō), c 1564–1654, Spanish portrait and religious painter Although fine examples of his work are in the galleries of Madrid and Seville, he is best known as the instructor and father-in-law of Velázquez and as the author of *Arte de la pintura* (1649), which contains interesting data on his great contemporaries

Pacher, Michael (mīkh'ĕl pa'khûr), c 1435–1498, German religious painter and wood-carver, a native of the Tyrol His few known works are chiefly altarpieces composed on a monumental scale and distinguished for their beauty of workmanship His masterpiece is the great altarpiece in the village church of Sankt Wolfgang, Austria, executed c 1480 and consisting of a beautifully carved centerpiece in late Gothic style with four wings, painted with scenes from the lives of Christ and St Wolfgang

Pachmann, Vladimir de (vlŭdyē'mĭr du pakh'män), 1848–1933, Russian pianist, studied with his father, a violinist, and at the Vienna Conservatory He first played in the United States in 1891 An eccentric performer, he was particularly gifted in the playing of Chopin's smaller piano pieces

Pachomius, Saint (pŭkō'mēŭs), d 346?, Egyptian ascetic He became a Christian and an anchorite in his youth and later founded a community of men near Dendera, Egypt. When he died, there were several thousand in his nine monasteries, living under a rule of great severity. St. Pachomius was the first to set up a group living a common life with a rule, this, the cenoby, was a new and definitive departure in MONASTICISM

Pachuca (pächōō'kä), city (pop 53,345), capital of Hidalgo, central Mexico Pachuca, founded in 1534 on the site of the ancient Toltec city, Tlahuilpán, at the head of a wide ravine surrounded by the foothills of the Sierra Madre Oriental, is one of the oldest and most famous mining towns of Mexico Here in 1557 Bartolomé de Medina discovered the patio process of ore reduction The region is extremely rich in ore deposits, especially silver, which had been mined in Aztec days Several large companies operate in the vicinity The cobbled streets climb up and down, narrow and twisting, and the houses are squeezed together A notable building is La Casa, erected in 1670 as a storehouse to hold the royal tribute

Pacific, city (pop 1,687), E Mo , on the Meramec and WSW of St Louis, laid out 1852 The area produces silica, sand, and gravel A state arboretum is near by

Pacific, College of the see STOCKTON, Calif

Pacific, War of the, 1879–84, war between Chile and the allied nations, Peru and Bolivia, also called the Chile-Peruvian War The trouble began when President Hilarión DAZA of Bolivia rescinded (Feb , 1879) the contract which had given a Chilean company the right to exploit nitrate deposits in Bolivia's Atacama prov In reprisal Chile took the port of ANTOFAGASTA, and two weeks later the existing war was formally acknowledged Peru, bound since 1873 by a defensive alliance to Bolivia, declined to promise to maintain neutrality, and Chile declared war on Peru At the end of 1879 Chile had not only won the Bolivian province of Atacama and the Peruvian province of Tarapacá, but by capture of the Peruvian ironclad *Huascar* had gained control of the sea Although the presidents of Peru and Bolivia, Manuel Prado and Hilarión Daza respectively, were replaced by other leaders, no change occurred in the fortunes of war, by coordinated sea and land attacks the Chilean conquest continued During 1880 Chilean forces took Tacna and Arica and, after an invasion by sea and the victories of Chorrillos and Miraflores (Jan , 1881), made a triumphal entry into Lima Although the Peruvian leader Andrés A CÁCERES gallantly fought a guerrilla campaign, Peru and Bolivia were thoroughly vanquished The Treaty of Ancón (Oct , 1883) restored peace between Peru and Chile, a truce at Valparaiso (April, 1884) was signed between Bolivia and Chile, but a definitive treaty was not agreed upon until 1904 Chile acquired Bolivia's only coastal territory, the province of Atacama, now called Antofagasta Peru also had to cede Tarapacá to Chile and surrendered control of the provinces of Tacna and Arica, their disposition to be decided by plebiscite after 10

years This provision led to the TACNA-ARICA CONTROVERSY

Pacific Grove, residential and resort city (1940 pop 6,249, 1945 special census pop 8,708), S Calif , on Monterey Bay, founded 1874, inc 1889. Stanford Univ. has the Hopkins Marine Laboratory here

Pacific Islands, Trust Territory of the (685 sq mi , pop 50,978), consisting of the CAROLINE ISLANDS, the MARSHALL ISLANDS, and the MARIANAS ISLANDS, held by the United States under United Nations trusteeship Before the First World War, they belonged to Germany Occupied in 1914 by the Japanese, the islands were mandated to Japan in 1922 During the Second World War, they were occupied in 1944 by U S forces and governed by the naval government in Guam In 1947 the United Nations approved U S trusteeship of the islands

Pacific Ocean, largest ocean, estimated area c 70,000,000 sq mi , named by Magellan (1520) and called also, in the southern part, the South Sea It extends from the arctic to the antarctic regions (merging with the Atlantic and Indian oceans to form the Antarctic Ocean) and is connected with the Arctic Ocean by Bering Strait, the Atlantic Ocean by the Panama Canal, and the Indian Ocean by passages in the Malay Archipelago Its maximum length is c 7,000 mi , its greatest width, c 11,000 mi , between Panama and the Asiatic coast of the China Sea The principal arms are (in the north) the Bering Sea and (in the west) the Sea of Okhotsk, the Sea of Japan, and the Inland, Yellow, China, Coral, and Tasman seas In most parts the east coast rises abruptly from a deep sea floor to mountain heights on land and is margined by a narrow band of shallow water The west coast is deeply indented and fringed with islands along the continental shelf, heights arise farther inland than on the east coast Although few large rivers drain into the Pacific, it receives the Columbia in North America Its numerous islands, some of them still uncharted and uninhabited, are concentrated in the south and west They include, in the north, the Pribilov, Commander, and Aleutian islands, in the west, the Kurile Islands, Sakhalin, Japan, the Ryukyu Islands, Formosa, Hainan, and the islands comprising Oceania, and, in the east, the Galápagos and the Juan Fernández islands Few islands lie in the path of the international date line The deepest ocean, the Pacific has an average depth of c 14,000 ft , the greatest known ocean depth (35,400 ft) occurs off Mindanao Huge whirls approximately north and south of the equator are formed by the chief Pacific currents These are the equatorial currents (North and South), the East Australian Current, the West Wind Drift, and the Humboldt, or Peru, Current in the south, and the Japan Current, flowing along the coast of Asia to the Sea of Okhotsk, where it meets the Oya Shio and then turns eastward to form part of the North Pacific Drift, most of which is deflected to the south as the California Current The Pacific islands of the south and west were populated by Asiatic migrants who crossed long distances of open sea in primitive boats European travelers including Marco Polo had reported an ocean off Asia, and in the late 15th cent trading ships had sailed around Africa to the western rim of the Pacific, but recognition of the Pacific as distinct from the Atlantic dates from Balboa's discovery of its eastern shore (1513) Magellan's crossing to the Philippines (1520–21) initiated a series of explorations, including those of Drake, Tasman, Dampier, Cook, Bering, and Vancouver, which by the end of the 18th cent had disclosed the coast line and the major islands In the 16th cent supremacy in the Pacific area was shared by Spain and Portugal The English and Dutch established a foothold in the 17th cent , France and Russia in the 18th, and Germany, Japan, and the United States in the 19th Sealers and whalers sailed the Pacific from the late 18th cent., and Yankee clippers entered Pacific trade in the early 19th cent The desire to exploit Pacific commerce was a factor in the westward expansion of the United States, which by the 20th cent had extended its interest by the purchase of Alaska, trade agreements with Japan, and the acquisition of the Hawaiian Islands, the Philippines, and Guam. After the Second World War the United States acquired trusteeship of many former Japanese islands The strategic importance of the area has become paramount since the development of the airplane. Scheduled crossings by air date from 1935 See F. R Dulles, *America in the Pacific* (2d ed , 1938), Felix Riesenberg, *The Pacific Ocean* (1940), E G Mears, *Pacific Ocean Handbook* (1944), Fairfield Osborn, ed , *The Pacific World* (1944)

Pacific scandal, 1873, a major event in Canadian political history. Charges were made that the Conservative administration of Sir John A Macdonald had accepted campaign funds from Sir Hugh Allan in return for a promise to award his syndicate the contract to build the Canadian Pacific Railway The government was forced to resign, and the Conservative party was badly defeated in the ensuing elections Lord Strathcona's stand on the Pacific scandal was in part responsible for the downfall of Macdonald's administration.

Pacific Union College: see SAINT HELENA, Calif.

Pacific University: see FOREST GROVE, Oregon.

pacifism, advocacy of suppression of war by individual or collective obstruction of militarism. Although complete, enduring peace is the goal of all pacifism, the methods of achieving it differ Some groups oppose international war but advocate revolution for suppressed nationalities; others are willing to countenance defensive but not offensive war; still others oppose all war, but believe in preserving a police force, relatively few believe in no coercive and disciplinary force at all. The line is sometimes drawn between the advocates of absolute peace (the pacifists) and those who seek to prevent war by international cooperation (the internationalists) One of the strongest motives in the promotion of peace has been religion, the objection to war being, in general, based on the consideration that the willful taking of human life is evil The quietistic Eastern religions, especially Buddhism, decry war and advocate nonresistance, and there has been a strong pacifistic element in Christianity The Sermon on the Mount contains an exhortation to peace Generally the Church continued to oppose war as such, and in the Middle Ages the Truce of God was the outcome of ecclesiastical attempts to halt warfare Some later sects —especially the Quakers, Moravians, and Dukhobors— have elevated nonresistance to a doctrinal position Another motive in creating pacifist feeling has been humanitarianism, the movement was fed by the romanticism of the early 19th cent , and the humanitarian outrage at the destruction caused by war has continued to swell the ranks of the pacifists Economic motives also have played a part in pacifist arguments, the pacifists contend that the economic waste of war is incredibly large and is avoidable Radical Marxists, from the obligation of their theories, oppose "imperialist wars" and interpret all wars fought by capitalist countries as "imperialist" and contrary to the interests of the working class They believe that such wars are a stage in the decline of capitalism and that they will end with the success of the workingman's revolution, which will bring enduring peace There are various other motives which may lead a man to pacifism or to the stand of a "conscientious objector" in opposing war Internationalism and pacifism are closely connected, and pacifists usually advocate international agreements to insure peace Pacifism is also closely connected with the movements for international ARBITRATION and disarmament Modern pacifism is usually said to have begun with the founding in 1815 of the New York Peace Society by David L DODGE, who was the author of *War Inconsistent with the Religion of Jesus Christ* (1812) In 1815 also the Massachusetts Peace Society was formed, with Noah WORCESTER as its chief figure The strong religious air of these bodies made them very similar to Quaker peace societies which sprang up about the same time The Quakers had a very strong influence on all early American pacifism In 1816 the British Society for the Promotion of Permanent and Universal Peace was founded Other countries followed the lead that had been set, France and Switzerland seeing the birth of societies not long afterward In 1828 William LADD, one of the greatest of early pacifists, welded the many local societies that had been established in the United States into the American Peace Society. More radical pacifists came to the fore, and the peace movement in America became connected with other causes in the hands of such men as Elihu BURRITT and William Lloyd GARRISON, who later abandoned his pacifism and advocated war to end slavery The first international peace congress met in London in 1843, and from that time onward the congress was the accepted means of organizing internationally The occurrence of wars naturally did much to injure the peace movement Both the Mexican War and the Crimean War checked development temporarily, and the Civil War completely destroyed for the moment the peace movement in America The so-called peace organizations in the North during the Civil War were not pacifist societies but political groups generally unsympathetic with the Union cause (see COPPERHEADS) After the Civil War, the movement reappeared in new forms, influenced strongly by the Marxian internationalists In France appeared Frédéric PASSY and in England Sir William R CREMER, and their efforts led to the foundation of the Inter-Parliamentary Union in 1892 Elsewhere other leaders appeared, among them men such as Ernesto T MONETA and Alfred H. FRIED The International Peace Bureau was founded at Bern in 1892. The award of the Nobel Peace Prize (see NOBEL, ALFRED BERNHARD) did much to encourage pacifist thought Even the Franco-Prussian and Spanish-American wars did not check the spread of peace agitation. But the peace societies, the international organizations, and the Hague Conferences, all were powerless to check the rush of events to the First World War, which broke out in 1914, and the percentage of conscientious objectors was not large After the war, however, the peace movement reappeared with greater vigor than before, and in spite of increased nationalism in various countries of the world, a great and concerted effort toward peace was shown not only in the PEACE CONGRESSES but also in such agitation as the declaration and pledge of the Students' Union at Oxford and the student strikes to indicate anti-war sentiment in the United States During the 1920s and early 1930s pacifism enjoyed its strongest period, the doctrine of nonresistance as applied in India by Mohandas K GANDHI gained attention and respect for the movement The hopes placed in the League of Nations, however, failed to materialise and some pacifists placed their trust in isolationism and appeasement as events led to the Second World War. This time the number of conscientious objectors in America and Great Britain was larger than previously With the conclusion of the war, broken international contacts were again restored, a world pacifist conference projected for Jan , 1949, in India, was postponed because of the assassination of Gandhi At its meeting in 1948, the World Council of Churches was unable to reach a united agreement in regard to pacifism and the church The presence of figures of prominence in the literary and artistic worlds as ardent pacifists has had an effect in spreading the aims of the movement The writings of Baroness von SUTTNER and of Ludwig QUIDDE demonstrate how pacifism may be espoused in fictional writing Among other notable names in pacifism, apart from such statesmen as Aristide Briand, William Jennings Bryan, Frank Kellogg, and Ramsay MacDonald, are Leo Tolstoy, Jane Addams, Élie Ducommun, Guglielmo Ferrero, Albert Gobat, Alfred H Love, David Starr Jordan, Sir Norman Angell, Nicholas Murray Butler, G Lowes Dickinson, and Mary Emma Woolley Among the many agencies and associations that have been organized for the advancement of world peace, aside from those already mentioned, are the Carnegie Endowment for International Peace, the World Peace Foundation, the Women's International League for Peace and Freedom, the National Council for Prevention of War, and the National Peace Council (London) See Sir Norman Angell, *The Great Illusion* (1910, new ed , 1933), G G Coulton, *The Main Illusions of Pacifism* (1916), F S Marvin, *The Evolution of World Peace* (1921), Sidney Spencer, *Pacifism in Theory and Practice* (1926), Devere Allen, *Pacifism in the Modern World* (1929) and *The Fight for Peace* (1930), M E Curti, *The American Peace Crusade, 1815–1860* (1929) and *Peace or War the American Struggle, 1636–1936* (1936), A C F Beales, *The History of Peace* (1931), W F Galpin, *Pioneering for Peace* (1933), Guglielmo Ferrero, *Peace and War* (1933), L P Richards, *Realistic Pacifism* (1935), G F Hershberger, *War, Peace, and Nonresistance* (1944)

Packard, Alpheus Spring, 1839–1905, American entomologist, b Brunswick, Maine, grad Bowdoin, 1861 He became curator (1867) and later director of the Peabody Academy of Science, Salem, Mass From 1878 he was professor of zoology and geology at Brown Univ A founder and for 20 years chief editor of the *American Naturalist*, he is known especially for his work in economic entomology and in the classification of insects Besides books on these subjects he wrote on general zoology and on geology and is also the author of *Lamarck, the Founder of Evolution* (1901)

Packer, Asa, 1805–79, American industrialist, b Groton, Conn He acquired coal lands in Pennsylvania, constructed canal locks on the Lehigh Canal, and became wealthy operating coal-carrying boats along the canal A county judge for several years, Packer was also a Democratic member of Congress (1853–57) He promoted the Lehigh Valley RR and donated (1866) money and land for the building of Lehigh Univ.

packing industry: see MEAT PACKING

pack train. On the U S. frontier, as in most countries in the pioneer stage of development, the pack horse was used to transport goods In places where road building is difficult, as in the mountains, the pack horse naturally continued to exist much later than in more accessible regions The Allegheny frontier saw the use of pack trains in fur-trading expeditions, then in military expeditions, and finally in settlement After the Revolution, the business was highly organized, some large companies had hundreds of animals, some settlements sent back annual or semiannual pack trains to the coast cities under the care of men chosen from the community Most of the trains were fewer than 30 horses, traveling in single file behind the "bell horse " Pack-train transportation flourished again in the middle of the 19th cent with the development of the trading and mineral frontier in the Rocky Mts Trains of 200 or 300 horses were not uncommon. Whole mining towns were supplied by packers with all furnishings from mining machinery to billiard tables. Among these packers appeared the tales of the mythical superpacker, Bull-o'-the-Woods, and his bell mare Mary, who was fed on mountain lion milk. The pack trains were replaced in the United States by WAGON TRAINS, but in undeveloped and mountainous parts of the world where roads are few, pack trains are still used

Pactolus (păktō'lŭs), small river of ancient Lydia, W central Asia Minor (now Turkey), joining the Hermus (modern Gediz) after passing Sardis. It was famous for the gold washed from its sands, a source of wealth to the kings of Lydia.

Padan-aram (pā'dŭn-ā'răm) [Assyrian, =field of Aram], that part of ARAM which lay in the Euphrates valley, i.e., the region of the great river bend E of Alep. Gen 28 2,5,7, 31 18, 33 18, 35 9, 26, 46,15. Padan· Gen. 48.7 Aram-naharaim in title of Ps 60

Padang (pädäng'), town (pop 52,054), on W Sumatra, republic of Indonesia, on the Indian Ocean at the mouth of the small Padang river An important port, it has a large trade in coffee, copra, rubber, spices, and tobacco, which are shipped principally from its outport, Emmahaven, 4 mi south of the town Padang is the principal outlet for the important Umbilin coal fields

paddlefish, scaleless, fresh-water fish of the Mississippi valley Because of its long, paddle-shaped snout it is often called duckbill Sometimes it exceeds 6 ft in length and weighs over 150 lb Its skeleton is chiefly cartilaginous Small crustaceans are its chief food The small greenish-black eggs are sometimes mixed with those of the sturgeon for caviar. The only other species is a fresh-water Chinese form.

paddle wheel, series of paddles or flat boards inserted radially around a wheel so that when the wheel is turned, the paddles operate like continuous rowing It was known as early as the days of ancient Egypt when it was operated by man power or by oxen, but it became important only when steam power was applied to move it John Fitch built (1786) a steamboat with a paddle wheel on each side and later (1788) made one with one large paddle wheel at the stern Robert Fulton's *Clermont* in 1807 had two paddle wheels each 15 ft in diameter All steamships in very early days were moved by paddle wheels, but the invention of the screw propeller in 1838 ultimately meant the end of the paddle wheel, though sternwheelers and sidewheelers (including the famous sternwheelers on the Mississippi) persisted for a century more on rivers and other inland waters

Paden City (pā'dun), town (pop 2,215), NW W Va., on the Ohio and NE of Parkersburg, settled 1790 Bottles are manufactured here

Paderborn (pä'dĕrbôrn'), city (1939 pop 42,490, 1946 pop 29,033), Westphalia, NW Germany, SSE of Bielefeld It is an important agricultural trade center and has some manufactures Created an episcopal see (c 800), the city later belonged to the Hanseatic League The bishops ruled a large district as princes of the Holy Roman Empire until the bishopric was secularized in 1803 The Catholic diocese of Paderborn was raised to an archdiocese in 1930 There is a theological academy which held university status from 1614 to 1819 Paderborn was nearly entirely destroyed in the Second World War The partly Romanesque, partly Gothic cathedral, the baroque Jesuit church, and the late Renaissance city hall were gutted

Paderewski, Ignace Jan (pädûrĕf'skē, -rĕf'skē, Pol pädĕrĕf'skē), 1860–1941, Polish pianist and statesman, studied at the Warsaw Conservatory and later under Leschetizky Having established his reputation in Europe, he came to the United States in 1891, making repeated appearances here throughout his career Repeatedly discouraged by his early teachers, he was enabled by an enormous capacity for work and an unusual introspective gift to become a great pianist whose world-wide popularity exceeded that of any performer since Liszt An ardent patriot, he worked in behalf of Poland during the First World War, represented her at the peace table in Versailles, and was for 10 months in 1919 premier of a coalition ministry, not resuming his concert work until 1922 In 1940 he was premier of the Polish parliament in exile In Jan., 1941, he died shortly after returning to the United States In addition to his famous Minuet in G for piano, he composed two symphonies, a piano concerto, and the opera *Manon* (Dresden, 1901) In 1936 he appeared in an English moving picture, *Moonlight Sonata* He established (1900) the Paderewski Fund—a sum of $10,000 (later augmented by Henry Higgmson) to forward musical composition in the United States See *The Paderewski Memoirs* (his autobiography to 1914, as told to Mary Lawton, 1938), C J M Phillips, *Paderewski* (1934), Aniela Strakacz, *Paderewski as I Knew Him* (1949)

Padilla, Ezequiel (äsäkyĕl' padhē'yä), 1890–, Mexican statesman, foreign minister (1940–45) He was a leader in the conferences of American foreign ministers in the Second World War and a forceful proponent of inter-American solidarity He was criticized by some for favoring the United States in his policies. Candidate for the presidency in 1945, he was defeated by Miguel Alemán

Padilla, Juan de (hwän' dā pädhē'lyä), c 1490–1521, Spanish revolutionary leader in the war of the *comunidades* [municipalities] against Emperor CHARLES V. The discontent caused in Castile by Charles's conduct led to a rising in Toledo under Padilla's leadership (1520). Soon other cities rose and together formed a provisional government under the Santa Junta, but the movement soon degenerated into class warfare The hesitations of the junta encouraged desertions to the royal cause, and Padilla, the military leader, lacked the necessary political qualities Padilla's army was defeated at Villalar (April, 1521), he himself was captured, summarily tried, and executed

Padon [Heb., =deliverance], ancestor of a family returned from exile Ezra 2 44, Neh 7 47.

Padua (pā'dū), Ital *Padova* (pä'dōva), city (pop 90,325), capital of Padua prov., Venetia, NE Italy It is cut by canals connecting it with the Brenta, Adige, and Po rivers and has characteristic arcaded streets An important agricultural, commercial, and communications center, it also has many modern industries In Roman times Padua, then Patavium, was the richest Italian city after Rome Destroyed by the Lombards (601), it recovered quickly Except for a 20-year period during which it was ruled by EZZELINO DA ROMANO, Padua was from the 12th to the 14th cent a free commune of great political and economic importance It subdued neighboring cities and became an artistic center, where GIOTTO painted his masterpiece, the frescoes in the Capella degli Scrovegni The university at Padua, the oldest school in Italy after that of Bologna, was founded in 1222 by teachers and students who had fled from Bologna The six-domed basilica of St Anthony, which contains the tomb of St Anthony of Padua, was also built in the 13th cent Under the rule of the munificent Carrara family (1318–1405) and under the domination of Venice (1405–1797), Padua continued to flourish for a long time MANTEGNA, a native Paduan, produced much work here, his frescoes in the 13th-century Eremitani church were restored after the church was gravely damaged by Allied bombing in 1944. DONATELLO cast the equestrian statue of Gattamelatta, a Venetian general, and 12 bronze reliefs for the basilica The university, now housed in the palace called Il Bo, established the first anatomy hall in Europe in 1594, Galileo taught here from 1592 till 1610

Paducah. **1** (pŭdū'ku, -dō'kŭ) City (pop 33,765), co. seat of McCracken co., SW Ky., on the Ohio at the mouth of the Tennessee, inc as town 1831, as a city 1856 A bridge crosses the Ohio to Illinois Paducah was settled as Pekin in 1821 in the Jackson Purchase area and was laid out and renamed by William Clark in 1827 A rail and air center and river port, the city is an important dark-tobacco market and a trade and shipping point for a wide area yielding fruit and other farm products, livestock, coal, fluor spar, and lumber Paducah is also an industrial city, with railroad shops, shipyards, dry docks, foundries, shoe factories, hosiery mills, and other plants In the Civil War it was taken by Grant (1861) and held throughout the war by Union forces In 1864 it was the objective of a raid by Forrest A junior college is here Irvin S Cobb was born and lived here **2** (pudō'ku) Town (pop 2,677), co. seat of Cottle co., NW Texas, S of Childress, in a livestock and cotton area, settled 1885, inc 1910

Padus see Po, river

Paean (pē'ŭn), in Greek mythology, divine physician of the Olympian gods Later, Paean apparently became an epithet for Apollo, the healer The paean, hymn of praise to Apollo, was also applied to other gods and heroes It was sung as a prayer for safety or deliverance at battles and other important occasions In Hellenistic times, paeans were addressed to successful individuals According to Homer the peony plant, which is medicinal, was named for Paean, the physician

Paelgni (pĕlg'nī), ancient people of central Italy, related to other Oscan-speaking groups, e.g., the Samnites, whom they joined in unsuccessful resistance to Roman hegemony (c 200 B C)

Paeonius (pēō'nēus), fl. 5th cent B C, Greek sculptor of Mende in Thrace An inscription on the triangular base of the statue of Nike (Victory) at Olympia states that Paeonius made it This figure is so much farther advanced in style and execution than the pediment sculptures for the temple of Zeus, Olympia, that modern authorities doubt the statement of Pausanias attributing those of the eastern end of the pediment to this sculptor The *Nike* was dedicated by the Messenians and Naupactians, probably to commemorate the siege of Sphacteria, 424 B C

Paes, Sidonio: see PAIS, SIDONIO

Paestum (pē'stum), ancient city of Lucania, S Italy It was a colony of Sybaris (c 600 B C) and was first named Posidonia It flourished with the rest of MAGNA GRAECIA through the 6th cent B C The Romans took the city in 273 B C, their name for it was Paestum The ruins, near the present Pesto, include well-preserved Doric temples

Paetus. see THRASEA PAETUS

Páez, José Antonio (hōsā' antō'nyō pā'ās), 1790–1873, Venezuelan revolutionist, president, and *caudillo* He led (1810–19) a band of *llaneros* [plainsmen] in guerrilla warfare against the Spanish, aided Simon BOLÍVAR at the battle of Carabobo (1821), and drove (1823) the Spanish from their last Venezuelan stronghold at Puerto Cabello He led the separatist movement that disrupted Bolívar's Colombian republic and was the first president of Venezuela (1831–35) A conservative oligarch and exponent of personalism, he served again (1839–43), dominating the nation until 1847 Páez commanded unsuccessful revolutions in 1848 and 1849 against José T MONAGAS his own choice for president and was exiled (1850–58) He returned and in 1861 became supreme dictator Two years later he again went into exile He died in New York See biography by R B Cunninghame Graham (1929)

Páez, Pedro (pā'dhrō pa'āth), 1564–1622, Spanish Jesuit missionary He preached in Goa, India, was enslaved for seven years in Sana, Yemen, and in 1603 arrived in Ethiopia He rapidly learned Amharic and converted the royal family from Coptic Christianity to the Roman Catholic religion Later Jesuit missionaries were less tactful and respectful of Ethiopian customs than he had been They were expelled in 1632 by demand of the Coptic clergy, and the Roman Catholic faith was proscribed

Pag (päg), Ital *Pago* (pa'gō), island, area 114 sq mi., off the Dalmatian coast in the Adriatic, belonging to Croatia, Yugoslavia It is noted for the fine embroidery and lace produced here, and it has vineyards, a fishing industry, and bauxite deposits The chief village is Pag, a resort on the eastern coast, with a palace and a cathedral from Venetian times

Pagan (pugan'), ruined city, central Burma, on the Irrawaddy river It was the seat of a dynasty that ruled over most of Burma from the 11th to the 13th cent and beautified Pagan with thousands of Buddhist shrines, largely constructed in brick. At the approach of the invading Mongols in 1287, many of the buildings were pulled down to provide materials for fortifications, and the city was deserted The surviving temples are massive and imposing structures, built with a knowledge of the true arch and showing strong Indian influence

Paganini, Niccolo (nēkōlō' päganē'nē), 1782–1840, Italian violinist, whose virtuosity became a legend He extended the compass of the violin by his use of harmonics, and he was able to play pizzicato and bow passages simultaneously In Genoa, his birthplace, he made his debut as an infant prodigy. He retired to a villa in Tuscany in 1801, learned the guitar, and did not resume his concerts until 1805, when the princess of Lucca made him her court violinist After leaving (1813) her court, his success in Milan carried his fame beyond Italy He became the idol of Vienna (1828), and appearances in Paris and the British Isles (1831) gained him a fortune His retirement in 1835 was followed by the loss of his voice and, later, by death from cancer of the larynx Among the few of his compositions published during his lifetime are the 24 caprices for solo violin, transcribed for piano by Schumann and Liszt Brahms and Rachmaninov wrote variations on one of them His Concerto in D and *Moto perpetuo* are among numerous posthumous works.

Pagasaean Gulf, Greece see VOLOS

Page, Leigh, 1884–, American physicist, b South Orange, N J, Ph B Yale, 1904 He was affiliated with the physics department at Yale from 1909 (as professor of mathematical physics from 1922) Known especially for his work in electrodynamics, he wrote *Introduction to Electrodynamics* (1922), *Introduction to Theoretical Physics* (1928), and, with N I Adams, *Electrodynamics* (1940)

Page, Thomas Nelson, 1853–1922, American novelist and diplomat, b Hanover co., Va The success of his romantic stories of the Old South, collected in *In Ole Virginia* (1887), *The Burial of the Guns* (1894), and other volumes, caused him to give up his Richmond law practice in 1893 and move to Washington, D C, to write His other works include novels—among them *Red Rock* (1898) and *The Old Gentleman with the Black Stock* (1897)—and *Italy and the World War* (1920), the record of his years as ambassador to Italy (1913–19) See Roscwell Page, *Thomas Nelson Page a Memoir of a Virginia Gentleman* (1923)

Page, Walter Hines, 1855–1918, American journalist and diplomat, b Wake co., N C After study at Randolph-Macon College (1872–76) and at Johns Hopkins Univ (1876–78), he became (1880) a reporter on the St Joseph (Mo.) *Gazette* and wrote a series of articles on the problems of the South In 1883 he secured control of the Raleigh (N C) *State Chronicle* and crusaded for reforms in Southern agriculture, education, and industry He was editor of the *Forum* (1890–95) and then (1896–99) of the *Atlantic Monthly* After he became (1899) a partner in the publishing firm of Doubleday, Page and Company, he founded (1900) the magazine *World's Work*, which he edited until he was appointed (1913) U S ambassador to Great Britain by President Woodrow Wilson He did much to better Anglo-American relations, but his outspokenly sympathetic attitude toward the Allied cause in the First World War brought a rift between him and Wilson—who for some time strove to maintain strict American neutrality. See **B. J Hendrick, *The Life and Letters of Walter H Page*** (1925) and ***The Training of an American*** (1928).

Page, William, 1811–85, American historical and portrait painter, b Albany, N Y, studied with S F. B. Morse and at the National Academy of Design Among his best-known works are *Farragut's Triumphal Entry into Mobile Bay* (presented to Grand Duke Alexis of Russia, 1871), *Holy Family* (Boston Athenaeum), *Ruth and Naomi* (N Y Historical Society), *The Young Merchants* (Pa Acad of the Fine Arts), a portrait of John Quincy Adams, and a portrait of Governor Marcy of New York (city hall, New York) He became a member of the National Academy in 1836 and was its president from 1871 to 1873

pageant, semidramatic spectacle, usually held out of doors, celebrating a special occasion or an event in the history of a locality, and generally presented by local talent In medieval times the pageant was a scene or division of a drama The modern form has come into very general use in England and America since the production, in 1905, of L N. Parker's Sherborne pageant in England The Coventry pageant depicting the story of Lady Godiva has been given since 1678 Pageants on the tercentenary of Shakspere's death were held in 1916 at Stratford-on-Avon and in New York, where Percy Mackaye's *Caliban* was given Other notable American pageants were the Hudson celebration at New York in 1909, H B Alexander's Lincoln, Nebr, pageant in 1915, and Mackaye's national pageant for the Washington bicentenary in 1931 Pageants include also processional spectacles such as the Mardi Gras in New Orleans and annual local fruit and flower festivals

Paget, Sir James (pă'jĭt), 1814–99, British surgeon and pathologist He taught and practiced at St Bartholomew's Hospital, London, and catalogued the museums of St Bartholomew's and of the Royal College of Surgeons He was a skilled diagnostician and an authority on diseases of the bones and joints and other pathological conditions His works include *Lectures on Tumours* (1851) and *Lectures on Surgical Pathology* (1853)

Pagiel (pā'gĭĕl, pāgī'ul) [Heb ,=God allots], Asherite chief Num 1 13, 2 27,7 72,77, 10 26

Pago, Yugoslavia see PAG

pagoda (pugō'du), name given in the East to the buildings of tower form which are generally part of a temple or monastery group and serve as shrines Those of India are chiefly pyramidal structures of masonry, tapering to an apex and elaborately adorned with carving and sculptures In China the pagoda, derived from India, is one of the most characteristic architectural types and in general is devoted to sacred usage Usually octagonal in plan, they are built in superimposed stories, sometimes as many as 15, decreasing in size toward the top, with a resulting tapered outline, from each story projects an upward-curving tiled roof The commonest material used is brick, often faced with slabs of glazed and colored tile A few date back to the T'ang dynasty (A D 618–906) In Japan the pagodas were introduced from China with Buddhism They are usually square in plan and five stories high, each story having its projecting roof Generally made of wood, they exhibit superb carpentry craftsmanship The Yakushi-ji tower near Nara, of the 7th cent, is a noted example

Pagopago (pang'ōpang'ō, pang'gōpang'gō), village (pop 934), on the southeastern coast of TUTUILA, American SAMOA, ceded (1872) to the United States as a naval and coaling station It has a landlocked harbor and is the only port of call in American Samoa There are a powerful wireless station and a naval hospital The name also appears as Pangopango

Pagosa Springs (pugō'su), town (pop 1,591, alt 7,077 ft), co seat of Archuleta co, SW Colo, on the San Juan river, platted 1880, inc 1891 It has hot mineral springs Chimney Rock ruins, ancient cliff dwellings, are 18 mi to the west

Pahang (puhăng', puhäng'), state (13,970 sq mi, pop 237,681), central Malaya Largest of the Malay states, Pahang has a long coast line on the South China Sea The capital is Kuala Lipis Clockwise from south to north, it is bordered by Johore, Negri Sembilan, Selangor, Perak, Kelantan, and Trengganu Kuala Lipis is on the Pahang river, longest (c 200 mi) of Malaya's rivers Products include tin, rubber, and rice About half the people are Malays, there is a large Chinese minority Before the 16th cent, Pahang was the vassal state of the various powers that in turn dominated the Malay Peninsula After the fall of Malacca (1511), it formed part of the kingdom of Riouw and Johore until its own rulers established themselves as independent sovereigns Pahang accepted British protection in 1888 and in 1895 became one of the Federated Malay States In 1948 it passed into the federation of Malaya

Pahari (puhä'rē), dialects of the Indic group of the Indo-Iranian subfamily of the Indo-European languages See LANGUAGE (table)

Pahath-moab (pā'hăth-mō'ăb) [Heb ,=governor of Moab], chief house of Judah Ezra 2 6, 8 4, 10 30, Neh 3 11, 7 11, 10 14

Pahlavi language (pä'lŭvē") or **Pehlevi language** (pā'lŭvē"), one of the Middle Iranian languages used in the Middle Ages. It belonged to the Iranian group of the Indo-Iranian subfamily of the Indo-European languages See LANGUAGE (table).

Pahlevi, see REZA SHAH PAHLEVI and MOHAMMED REZA SHAH PAHLEVI

Pahlevi (pälŭvē'), city (pop 37,511), N Iran, the chief Caspian port of the country, NE of Resht. It superseded an older port, Enzeli, near by

Pahokee (puhō'kē), town (pop 4,766), S Fla, on the southeast shore of Lake Okeechobee, inc 1922 It is the shipping point for a productive fruit and vegetable area Near by is the West Palm Beach Canal from the lake to the Atlantic coast.

Pai (pā'ī), variant of PAU

Paignton (pān'tŭn), urban district (1931 pop 18,414, 1943 estimated pop 22,000), Devonshire, England, on Tor Bay SW of Torquay It is a resort It has the 14th-century Bible Tower, part of the former palace of the bishops of Exeter, Miles Coverdale lived here

Päijänne (pä'ĭyăn'nā), lake, area, 563 sq mi, S central Finland, one of the largest of the Finnish lake plateau About 80 mi long, it consists of several long rocky basins, and is dotted with numerous islands The Kymijoki drains it into the Gulf of Finland Lake steamers and lumber rafts utilize the waterway Kotka and Lahti are at the southern end of the lake

pain, sensation arising usually from excessive stimulation of nerve endings (receptors) The stimulus is carried by nerve fibers to centers of consciousness in the brain Pain may be felt at the site of stimulation or in other parts supplied by nerves in the same sensory path, e g, in angina pectoris the pain may extend to the left arm Pain arising from a tumor or injury along the course of a nerve may seem to arise at the site of the nerve ending although the stimulus did not originate there Pain has protective value in serving as a danger signal and in facilitating diagnosis It is treated by relieving the cause but may be allayed by sedatives or soporifics, e g, barbiturates, bromides, and chloral hydrate, by narcotics, e g, opium and morphine, by analgesics, e g, salicylates and acetanilid, by anesthetics, by severing a nerve in the pain pathway, and by prefrontal leucotomy (or lobotomy), a severing of certain nerve connections in the brain Subjective pain, known also as hysterical pain and as psychic pain, originates in the sensory centers of the brain without stimulation from the nerves

Paine, Albert Bigelow (pān), 1861–1937, American biographer and writer of juvenile stories, b New Bedford, Mass He was a department editor (1899–1909) of *St Nicholas* magazine and wrote many books for children, as well as biographies of Thomas Nast (1904) and others and novels, including *The Great White Way* (1901) He became the friend and literary executor of Mark Twain and wrote the authorized biography of him (3 vols, 1912) He also edited Mark Twain's letters (1917), autobiography (1924), and notebook (1935)

Paine, John Knowles, 1839–1906, American composer, organist, and educator, b Portland, Maine, studied in Berlin In 1862 he began to teach music at Harvard, and held (from 1875) the first chair of music in an American university His compositions, romantic and programmatic in style, were received enthusiastically in his day, and he won fame abroad, both as organist and composer His opera *Azara* (1901), for which he was also the librettist, was given only a concert performance, and few of his orchestral works are heard today His fame rests on his pioneer work in music education and the fact that he was in his time the best that America had produced Many of his pupils are among the prominent composers of the generation that succeeded him

Paine, Robert Treat, 1731–1814, American Revolutionary patriot, signer of the Declaration of Independence, b Boston, Mass, grad Harvard, 1749 He served as a chaplain in the French and Indian War but later gave up the ministry for law In 1770 he prosecuted the British troops indicted for murder in the BOSTON MASSACRE Paine was a member of the Continental Congress (1774–78) and in 1775 was sent (with John Langdon and Robert R Livingston) on an unsuccessful mission to win Canada to the patriot cause After the Revolution he held several major public posts in Massachusetts

Paine, Thomas, 1737–1809, American political theorist and writer, b Thetford, Norfolk, England He was the son of a small farmer and corset maker, who was a Quaker Thomas Paine became an excise officer He was twice dismissed from the service and was chosen as agent by the excisemen to agitate for higher salaries (1772) He also had other employment before coming to America in 1774 with letters of introduction from Benjamin Franklin He edited Aitken's *Pennsylvania Magazine* from 1775 to 1777 and was soon deeply interested in the outbreak of trouble between colonies and mother country In Jan, 1776, appeared his *Common Sense*, which had a tremendous effect in helping to bring about the Declaration of Independence Paine, now famous, wrote the first of his series of pamphlets called *The American Crisis*, or simply *The Crisis*, when the fortunes of the patriots were disheartening in 1776; they continued to appear throughout the Revolution, with excellent moral effect He was prominent in the war, principally as a pamphleteer His impetuous frankness brought him into difficulties, but his aid was invaluable He went (1781) to France as aid in the mission of John Laurens In 1787 he went to London, one of his motives was to exhibit the model of an iron bridge he had planned for the Schuylkill river While there he wrote *The Rights of Man* (2 parts, 1791, 1792), directed against the detractors of the French Revolution, especially Edmund Burke Paine's attack on English institutions led to his prosecution and his flight to Paris (1792) There, as a member of the Convention, he took a significant part in French affairs and was profoundly affected by French thought He was hostile to the Jacobins and was imprisoned (1793) It was some time before American influence secured his release His attack on the Bible and defense of deism in *The Age of Reason* (2 parts, 1794, 1795) made him unpopular, not only with Christian religious groups, but also with the large body of the public who were entirely unacquainted with his books He also alienated Washington's friends by his venomous *Letter to Washington* (1796) After his return to the United States in 1802, he was practically ostracized See his writings (ed by P S Foner, 1945) and representative selections (ed by H H Clark, 1944), biography by M D Conway (1892)

Paine College see AUGUSTA, Ga

Painesville, city (pop 12,235), co seat of Lake co, NE Ohio, on the Grand River and NE of Cleveland, in a farm area, laid out c 1805 Chemicals and rayon are made here The city is the seat of Lake Erie College (for women, 1856)

Painlevé, Paul (pōl' pălüvā'), 1863–1933, French statesman and mathematician A mathematical prodigy when a child, he entered on a career devoted to science He was a professor at the Sorbonne and the École polytechnique when the Dreyfus Affair aroused his interest in politics He entered on his political career as a leftist deputy (1910) In the First World War he held several cabinet posts and was briefly premier late in 1917 After the war Painlevé remained in political obscurity until 1924, when he and Herriot triumphed as leaders of the "left cartel" He was premier once more in 1925 and was minister of war (1925–29) and minister of aviation (1930–31, 1932–33) Painlevé's career as a politician has unduly overshadowed his importance as a mathematician and scientist In mathematics he ranked among the best minds of his time, his contribution was particularly important in the field of differential equations He published numerous writings on mathematics, astronomy, mechanics, philosophy, and politics

Paint, borough (pop 1,700), SW Pa, near Johnstown, inc 1900

paint, mixture of a PIGMENT and a binding medium, usually thinned with a solvent to form a liquid vehicle. The term includes LACQUER, Portland cement paint, printing ink, calcimine, and whitewash Paint is used to decorate or protect surfaces and is generally applied in thin coats which dry (by evaporation or by oxidation of the vehicle) to an adhesive film Industrial finishes are usually applied by spraying or immersion and are often hardened by baking Pigments, finely ground, impart color (including black and white) and affect the consistency, crack resistance, and flow characteristics of paint They may be manipulated to produce glossy, satin, or flat finishes Oil paints are pigments dispersed in a DRYING OIL One of the oldest oil vehicles, and still the commonest, is LINSEED OIL, castor, tung, and other vegetable oils and fish oil are also employed The oils are diluted with a thinner, usually turpentine, metallic salts are added to increase the rate of drying For water paints, the vehicle is a mixture of water with a binder such as glue or casein Enamel paints contain varnish and usually dry to a hard, glossy finish Industrial lacquers (widely used on automobiles and furniture) are valued for rapid drying to a hard finish The vehicle is commonly pyroxylin in an organic solvent Luminous paint contains a phosphorescent substance, generally a metallic sulphide

painted cup see INDIAN PAINTBRUSH

painted daisy see PYRETHRUM

Painted Desert, badlands on the east bank of the Little Colorado, N Ariz, stretching from the Grand Canyon south to the Petrified Forest The vivid colors are mostly reds and yellows

Painted Post, village (pop 2,337) S N Y, NW of Corning, settled before 1790, inc 1893 Heavy machinery is made Near by the Tioga and the Cohocton join to form the Chemung

Painter, William, 1540?–1504, English translator His *Palace of Pleasure* (1566–67), a collection of translations from Boccaccio, the *Heptameron*, and many other sources, was drawn upon by Shakspere and other Elizabethan dramatists

painter's colic: see LEAD POISONING

painting, the direct application of pigment to a surface to produce by tones of color or of light and dark some decorative arrangement or the representation of natural forms or objects of the imagina-

tion The materials of the surface, or ground; the pigments employed; the binder, or medium, in which the color is mixed, and the diluent with which it is extended—all help to determine the effects produced in such common techniques as fresco, water color, oil, distemper, tempera, and encaustic. In addition to these techniques, painting properly embraces many others ordinarily associated with drawing, a term which is often used to refer to the linear aspects of the same art But if painting and drawing are not clearly distinguishable from each other, both are to be distinguished from the print in which the design is not produced directly but is transferred from another surface to that which it decorates While the print may be one of many identical works, the painting or drawing is always unique Painting has been freely combined with many other arts, including sculpture and architecture as, for example, in ancient Greece or in medieval Europe, where most buildings and sculpture were painted Most of this perishable decoration has been lost, but other works from ancient Egypt have preserved their coloring and give us an insight into the importance such an art can assume Painting always has played a prominent role in human culture but not always an independent one In medieval Europe the art was primarily subservient and only with the Renaissance achieved complete independence, although at least as early as the 13th cent the introduction of the closed design in mural painting made it possible to regard the individual panel, or subject, as a single and unified whole Above all, in the murals of the great Giotto, painting had freed itself from Byzantine tradition and had become the vehicle for the expression of new and living ideas and sentiments On the other hand, even at the height of the Renaissance a large number of the works were decorations of walls and altarpieces which were necessarily conceived in terms of their part in a larger decorative whole and their appeal for a large public The greatest masterpieces of Raphael and Michelangelo and of the Florentine masters generally are public works of this character The same period, however, saw the rise of the self-sufficient easel painting and the first use of oil on canvas, which facilitated the transportation of large works previously considered as inseparable from a specific site Simultaneously are found the beginnings of genre and other secular themes and the elaboration of the portrait All these tendencies are often associated with Venice, and Titian has sometimes been called the father of modern painting The great baroque masters carried the conception of the painting as microcosm to its extreme development, subordinating color and pattern, as such, to a ruling idea in which representation of lighting effects and space played a dramatic part Since their day the general tendency of Western painting has been largely in the direction of greater intimacy It is noteworthy, for example, that many of the masterpieces of the 19th cent , and particularly of impressionism, are small easel paintings suitable for the private home The same period saw the rise of the large public gallery with passing and permanent exhibitions, an institution greatly expanded in the 20th cent Today the reawakened interest in mural painting and the contributions of painting to such arts as the moving picture have led some to believe that a return to a greater emphasis on the public functions of the art is taking place Such a view can find support in the notable influence of contemporary abstract painting in the fields of industrial and architectural design But the art also continues to enjoy constant popularity in the home and gallery Western painting has had a long and glorious history as an independent art From Giotto to Picasso it has never ceased to produce great exponents who have expressed not merely the taste but the aspirations, space concepts, and philosophy of their respective periods. In this respect it is perhaps rivaled only by that of China As an adjunct to monumental architecture it has probably been surpassed by that of other and older cultures See Ralph Mayer, *Artist's Handbook of Materials and Techniques* (1940)

Paintsville, city (pop 2,324), co seat of Johnson co , E Ky , on Paint Creek and S of Ashland, in a coal and oil area The city has oil refineries An old trading post, Paint Lick Station, was here.

Pais, Sidonio (sēdô'nyō pīsh'), 1872–1918, Portuguese dictator After service in the army he was a professor of mathematics at Coimbra and a leader in the establishment of the republic in 1910 He had cabinet posts and was minister to Berlin before in Dec , 1917, he won supreme power by a coup d'état He was elected president but exercised dictatorial powers that foreshadowed the Carmona and Salazar regime He was assassinated in Dec , 1918 The name was formerly spelled Paes

Paisley (pāz'lē), burgh (pop 86,445), Renfrewshire, Scotland, WSW of Glasgow and on the White Cart 3 mi above its influx to the Clyde Here, c 1163, was founded a Cluniac priory which became an abbey in 1219 The English set fire to it in 1307 The present building, mostly 15th cent , contains the tomb and effigy of Marjory, the daughter of Robert the Bruce John Wilson ("Christopher North" of *Blackwood's Magazine*) and Alexander Wilson lived in Paisley The famous Paisley SHAWL is no longer made. Great factories now produce cotton thread, textiles (woolen and silk), soap, boilers, and chemicals, and tanning and textile bleaching and printing are carried on. The White Cart was made navigable late in the 18th cent

Paiute Indians (pī ōōt'), tribes of North American Indians, who speak Uto-Aztecan languages There is some doubt as to which tribes are correctly called Paiute; some scholars say that only the Southern Paiute are correctly so called, the northern groups being the Pavoseto Indians The name Paiute, however, is commonly given to a large number of Indians who occupy SW Utah, NW Arizona, SE California, and SW Nevada, exclusive of the Chemehuevi Indians of Nevada The Northern Paiute are more warlike than their southern relatives, they fought the miners and the settlers of the '60s, and a considerable part of them joined the Bannock in the war of 1878 They, with the Shoshone and the Bannock, are often called the Snake Indians The Southern Paiute are often called the Digger Indians because they subsisted upon root digging In general, the Paiute of the Great Basin area eked out a meager existence by hunting, fishing, and digging for roots At times they ate grasshoppers They lived in small round huts (wickiups) which were covered with tule rushes It was among the Paiute that the ghost dance religion, which was to be of much significance on the frontier in the '90s, first appeared (c 1870) The Indian messiah, Wovoka, was a Paiute The name is also spelled Piute See J H Steward, *Ethnography of the Owens Valley Paiute* (1933), O C Stewart, *Northern Paiute Bands* (1939)

Pajou, Augustin (ôgüstĕ' pazhōō'), 1730–1809, French sculptor He won the Prix de Rome at 18 and early embarked upon a long career of royal commissions He is noted for his decorations of the Opéra at Versailles and for his additions to Goujon's *Fountain of the Innocents* (Paris) In 1760 he was admitted to the Académie royale de Peinture et de Sculpture for his statue of Pluto (Louvre) His best work, however, is generally considered to be his portrait busts, among which are those of Pascal, Descartes, Buffon, and Mme du Barry He is well represented in the Louvre

Pakenham, Sir Edward Michael (pāk'kunum), 1778–1815, British general He gave distinguished service in the Peninsular War, but is chiefly remembered as the leader of the British forces in the battle of New Orleans, last engagement of the War of 1812, fought on Jan 8, 1815, after peace had been signed at Ghent Andrew JACKSON led the American troops who won a decisive victory over the British Pakenham was killed

Pakistan (pä'kĭstän", pŭkĭstan'), country (360,780 sq mi , pop 80,260,000) E Asia Karachi is the capital Pakistan is divided into two tracts, which are separated by territory of India West Pakistan, which is on the Arabian Sea, is bordered by Iran and Afghanistan on the west and by India on the east It comprises BALUCHISTAN, West Punjab (see PUNJAB), and SIND provs and NORTH-WEST FRONTIER PROVINCE, and the native states BAHAWALPUR and KHAIRPUR East Pakistan, coextensive with East Bengal prov (see BENGAL), is on the Bay of Bengal, it is bordered by India on the west and north and by India and Burma on the east Pakistan also claims KASHMIR The country is a republic and a dominion of the British Commonwealth of Nations It was formed in 1947 out of the areas of India which were predominantly Moslem in population Chiefly responsible for forming Pakistan were Mahomed Ali JINNAH (the first governor general) and the MOSLEM LEAGUE, which he headed. For a discussion of the geography, history, and economy of the areas which constitute Pakistan, see INDIA and articles on the provinces

palace, strictly, the residence of a sovereign or prince, by extension the residence of an important dignitary of Church or state, as an archbishop's palace or a viceroy's palace The term is also used, loosely, for an extensive and sumptuous dwelling, whatever the owner's rank The French equivalent *palais* is often applied to public buildings, as Palais de Justice, the Italian term *palazzo* to any large private mansion in town or country, as well as to public buildings and royal residences

Palacios (pälä'shŏs), town (pop 2,288), S Texas, on Matagorda Bay and SW of Houston, settled 1903, inc 1909 It is a small port with fishing, shrimping, and oystering, and the surrounding country produces cattle and rice A military camp here was active in the Second World War

Palacio Valdés, Armando (ärmän'dō pala'thyō valdās'), 1853–1938, Spanish novelist and critic He studied law at the Univ of Madrid, but turned to writing as a career His publications began with the critical works *Los oradores del Ateneo* [the orators of the Athenaeum] (1878), *Los novelistas españoles* [the Spanish novelists] (1878), and *Nuevo viaje al Parnaso* [new roads to Parnassus] (1879) and another written with Leopoldo Alas, *La literatura en 1881* (1882) He owes his fame to his realistic novels, characterized by a genuinely optimistic outlook on life Some of the best known are *El señorito Octavio* (1881), *Marta y María* (1883; Eng tr , *The Marquis of Peñalta*, 1886), *José* (1885, Eng tr , 1901), *El cuarto poder* (1888, Eng. tr., *The Fourth Estate*, 1901), *La Hermana San Sulpicio* (1889, Eng tr , *Sister St Sulpice*, 1890), and *La alegría del capitán Ribot* (1899, Eng tr , *The Joy of Captain Ribot*, 1900), besides the series in which Dr Angélico appears, *Años de juventud del doctor Angélico* and *La hija de Natalia* (1924) An English collection of short stories appeared in 1935

Palacky, Frantisek, Czech *František Palacký* (frän'tyishĕk pa'lätskē), 1798–1876, Czech national leader and historian, b Moravia One of the leaders in the cultural and national revival of the Czechs, he was elected (1848) to the constituent assembly in Vienna and in the same year presided over the first Pan-Slav Congress (see PAN-SLAVISM) at Prague He later served as a representative both in the Austrian parliament and in the Bohemian diet Strongly influenced by Kant and J J Rousseau, Palacky saw the mission of the Czech nation as a bearer of the democratic ideal Far from wishing the dissolution of the Austro-Hungarian Monarchy, he advocated its reorganization into a federation of free and equal nationalities, pointing the way to a general European solution His paraphrase of Voltaire—"If the Austrian empire did not exist, it would have to be invented"—remains famous A liberal in the best sense of the word, Palacky advocated national liberation through enlightenment and education rather than by revolutionary methods His chief historical work, *Geschichte Böhmens* [history of Bohemia] (in German, 5 vols , 1836–67, in Czech, 5 vols , 1848–67), exerted tremendous influence in giving a direction to Czech national consciousness and thus partially vindicated his method Its scholarliness is marred by Palacky's nationalist and Protestant bias

Palaemon (pulē'mŏn), Greek sea-god, protector of ships, in whose honor the ISTHMIAN GAMES were celebrated Once a mortal (Melicertes), he became a sea-god when he and his mother, INO, leaped into the sea to escape the murderous frenzy of his father, ATHAMAS Palaemon was identified with the Roman god Portumus

palaeo-, for words beginning thus see also PALEO-

Palaeologus (pālēŏ'lugus), Greek dynasty which ruled the Byzantine Empire from its restoration in 1261 to its final conquest by the Turks in 1453 The first emperor was MICHAEL VIII, restorer of the empire He was succeeded by ANDRONICUS II (reigned 1282–1328) and ANDRONICUS III (reigned 1328–41) JOHN V acceded in 1341, but was kept from the throne till 1355 by John VI (John Cantacuzene) and from 1376 till 1379 by his son, Andronicus IV At his death (1391) MANUEL II succeeded He had to share his rule with JOHN VII after 1399 His sons JOHN VIII (reigned 1425–48) and CONSTANTINE XI (reigned 1448–53) succeeded him Constantine XI was killed when the Turks stormed Constantinople Branches of the Palaeologus family survived in various European countries One branch ruled the Italian marquisate of Montferrat from the 14th cent until its extinction in 1536 Many of the Palaeologi distinguished themselves through their humaneness and erudition They fostered a revival of Hellenism which helped the Greek people to retain its identity through the long centuries of Turkish rule that followed As statesmen they had to contend against the pressure of the Turks and against the reluctance of Western Europe to come to the aid of the Orthodox Greeks

Palafox, José de (hōsā' dā pälafōkh'), 1776?–1847, Spanish general in the PENINSULAR WAR, celebrated for his heroic defense of Saragossa He organized resistance against the French invaders in 1808 and was elected captain general of Aragon Holding Saragossa with an improvised garrison of citizens and peasants, he refused to surrender to the French who had breached the city walls and held out behind street barricades from June to Aug , 1808, when the French withdrew In Dec , 1808, the French under Lannes again besieged the city Palafox surrendered only in Feb , 1809, after three weeks of street fighting had resulted in the death of some 50,000 Spaniards He was held a prisoner in France, at Vincennes, until 1813 Palafox commanded the royal guards during the uprisings of 1820–23 against Ferdinand VII, but he lost his post because of his stand in favor of the constitution He later commanded the loyal troops against the Carlists and was created duke of Saragossa in 1834

Palafox y Mendoza, Juan de (hwän' dā pälafōkh' ē mändō'tha), 1600–1659, Spanish churchman and colonial administrator He occupied posts at the court before leaving Spain and arrived in Mexico in 1640 as bishop of Puebla and visitor general of New Spain He involved himself in a struggle with the regular clergy over their privileges and exemptions When the viceroy, suspected of Portuguese sympathies and accused of misgovernment, was removed from office, Bishop Palafox became (1642) viceroy ad interim He refused the archiepiscopal honors offered him, but administered the archdiocese of Mexico. For a short time all the impor-

tant offices of New Spain were centered in him He ruled vigorously and corrected financial abuses Palafox is, however, best remembered for his quarrel with the Jesuits, which began in 1647 The dispute grew acrimonious and reached such lengths that Palafox excommunicated all those who attended Jesuit churches He had to flee Puebla in fear of his life and in 1649 went to Spain, where he received the see of Osma in 1653 His quarrel with the Jesuits was formally closed, but was much discussed by opponents of the order later

Palaihnihan Indians see PIT RIVER INDIANS.

Palai (pä'-) [Heb ,=judge], worker on the wall of Jerusalem Neh 3 25

Palamas, Kostes (kŏstēs' pulamäs'), 1859–1943, Greek poet, studied at the Univ of Athens He served the university as secretary for many years Except for his early work, he wrote in demotic or vernacular Greek and translated into this idiom the New Testament and the works of various European writers Among his volumes of poetry are *Songs of My Fatherland* (1886), *Hymn to Athena* (1889), *The Twelve Speeches of the Gypsy* (1907), *The Flute of the King* (1910), and a lyric drama, *Trisevgene* (1903, Eng tr , *Royal Blossom*, 1923) Part of his *Life Unshakeable* (1904) was published in English as *Life Immovable* (Part I, 1919) and *A Hundred Voices and Other Poems* (Part II, incomplete, 1921)

Palamedes (pălumē'dēz), in Greek mythology, crafty Greek hero in the Trojan War He excited the hatred of Agamemnon and Diomed because he wanted peace and that of Odysseus because he saw through Odysseus' feigned madness Odysseus planted forged evidence of treachery in Palamedes' tent and had him killed for it The invention of scales, measures, dice, the discus, the alphabet, and lighthouses was credited to Palamedes

palate (pă'lĭt), the roof of the mouth It consists of a bony portion (hard palate) and a soft muscular portion (the soft palate) which terminates in the uvula The palate separates the oral cavity from the nasal cavity Failure of the parts of the palate to unite during development results in a condition known as cleft palate, which interferes with eating and speech Cleft palate is best reduced by surgery in infancy, in some cases, mechanical dental appliances known as obturators, are of assistance in correcting the defect

Palatinate (pălă'tĭnĭt"), Ger *Pfalz* (pfälts), two regions of Germany They are related historically, but not geographically The Rhenish or Lower Palatinate (Ger *Rheinpfalz* or *Niederpfalz*), often called simply the Palatinate, extends from the left bank of the Rhine and borders in the south on France and in the west on the Saar Territory It belonged to Bavaria until 1945, but became (1946) a district (2,111 sq mi , pop 958,503) of the newly created state of RHINELAND-PALATINATE, under French occupation Neustadt an der Hardt is the capital, Ludwigshafen, Kaiserslautern, Pirmasens, and Speyer are the chief cities It is a rich agricultural region, famed for its wines The Upper Palatinate (Ger *Oberpfalz*) is a province (3,724 sq mi , pop 888,522) of NE Bavaria, separated in the east from Czechoslovakia by the Bohemian Forest REGENSBURG is the capital Agriculture and cattle raising are the chief occupations The name of the two regions came from the office known as count palatine, a title used in the Roman, Byzantine, and Holy Roman empires and elsewhere, notably in England, Hungary, and Poland The rights of office varied, but in general it may be said that the palatine had superior judicial functions and enjoyed privileges superior to those of other nobles Emperor Frederick I bestowed (1156) the title count palatine on his brother Conrad, who was in possession of territories on both sides of the Rhine More extensive than the present Rhenish Palatinate, these territories included the northern part of modern Baden, but not the bishopric of Speyer and other enclaves in the palatine lands W of the Rhine When Conrad's line died out, the Palatinate passed (1214) to the Bavarian WITTELSBACH dynasty The Wittelsbachs also enlarged their holdings along the Bohemian border, which were constituted as the Upper Palatinate From the 14th cent until 1777 the Wittelsbach holdings were split between the two main lines of the family the senior line held the two palatinates, the junior line held Bavaria The electoral vote (see ELECTORS) alternated at first between the two lines, but was settled (1356) by the Golden Bull on the counts palatine, henceforth known as electors palatine Their territories were called the Electoral Palatinate (Ger *Kurpfalz*) Elector RUPERT became emperor in 1400 After his death the Palatinate line divided into several collateral branches, which held territories of their own The direct line was succeeded (1559) by the counts palatine of Simmern, who in turn were succeeded by the dukes palatine of Neuburg (1685) and the counts palatine of Sulzbach (1742) The Rhenish Palatinate flourished in the 15th and 16th cent , and its capital, HEIDELBERG, was a center of the German Renaissance and Reformation. The election (1619) of Elector Frederick V (see FREDERICK THE WINTER KING) as king of Bohemia precipitated the Thirty Years War, in which the Palatinate was ravaged both by the imperial forces under Tilly and by the Protestant army under Mansfeld A border country, the Rhenish Palatinate was to suffer several more devastations in the wars of the 17th and 18th cent The Upper Palatinate and the electoral vote were taken from Frederick and transferred to Bavaria, but at the Peace of Westphalia (1648) a new vote was created for Frederick's successor, Charles Louis The Palatinate-Neuburg line acquired (1666) the contested duchies of Jülich and Berg but, after its accession (1685) to the Electoral Palatinate, became involved in the War of the Grand Alliance with Louis XIV, who ordered the devastation (1688–89) of the Rhenish Palatinate In 1720 the capital was transferred to MANNHEIM The failure (1777) of the Bavarian line united all Wittelsbach lands except the duchy of ZWEIBRÜCKEN under Elector Charles Theodore. After the War of the BAVARIAN SUCCESSION (1777–79) the succession to Bavaria, the Palatinate, and Jülich and Berg was settled on the Palatinate-Birkenfeld line, which held Zweibrücken However, when Duke Maximilian of Zweibrücken acceded (1799), the palatine lands W of the Rhine had been conquered by France in the French Revolutionary Wars In 1803 Maximilian ceded the palatine lands E of the Rhine to Baden, Hesse, and Nassau, but in 1806 he became king of a much-enlarged Bavaria, and at the Congress of Vienna (1815) he recovered part of the Rhenish Palatinate W of the Rhine, including Speyer and other enclaves Several districts, however, were awarded to Prussia and Oldenburg The Upper Palatinate was increased by the addition of Regensburg, which replaced Amberg as capital Both the Rhenish and the Upper Palatinate became integral parts of Bavaria

Palatine (pă'lătīn), village (pop 2,222), NE Ill , NNW of Chicago, in a farm area, inc 1869

Palatine, hill see *Rome before Augustus* and *Roman Empire* under ROME

Palatka (pŭlăt'kŭ), city (pop 7,140), co seat of Putnam co , NE Fla , on the St Johns and S of Jacksonville. It is a commercial center and river port handling lumber, truck, and fruit Founded as a trading post in 1821, it was the site of a military post in the Seminole War and developed as an important river port and resort in the second half of the 19th cent The city is noted for its azalea gardens

Palau (pälou'), island group (188 sq mi ; pop 5,900), W Pacific, in the W Caroline Islands It is c 550 mi E of the Philippines The group includes four volcanic islands (Babelthuap, Koror, Arakabesan, and Malakal), four coral islands (Urukthapel, Angaur, Aurapushekaru, and Peleliu), Kayangel atoll, and numerous islets Phosphate and bauxite are produced In the Second World War, Palau was the major Japanese naval base in the W Carolines and the only important stronghold in the group to be taken (1944) by U S forces Palau is sometimes spelled Pelew

Palawan (pälä'wän), island (4,550 sq mi ; pop 43,813), Philippine Islands, N of Borneo and between the Sulu and South China seas There is an underground river flowing to the sea on the west coast, its source has not been determined The island is inhabited by Moros It is primarily agricultural, and rice, corn, tobacco, and copra are produced A U S naval air base is here On the east coast is Puerto Princesa, the capital of Palawan prov (5,693 sq mi , pop 93,673), comprising Palawan and the near-by island groups of Calamian and Cuyo

Pale, in Irish history, that district of indefinite and varying limits around Dublin in which English rule was dominant and the authority of the Irish Parliament was exercised before the complete subjugation of Ireland to English rule The term was first used in the 14th cent to designate what had previously been called English land Outlying districts were styled the marches, or border lands In the time of Henry VIII the Pale extended N from Dublin to Dundalk and c 20 mi. inland from the coast It disappeared in the ensuing years as the English control of the whole of Ireland was made effective Another English Pale centered around Calais in France until 1558, and still another in Scotland in the middle of the 16th cent In Russia the Pale designated those regions in which Jews were allowed to live The Jewish Pale was established at the first partition of Poland Many of the restrictions of the system were in force until the Revolution of 1917

Palembang (pälĕmbäng'), city (pop 108,145), capital of the state of South Sumatra, Indonesia, on SE Sumatra, largest city on the island A port on the Musi river, it is the trade center for an area producing oil and rubber There are machine shops and shipyards Palembang in the 8th cent was the capital of a powerful Hindu-Indonesian kingdom

Palencia (pälän'thēä), city (pop, 30,127), capital of Palencia prov., NW Spain, in Leon It is an agricultural trade center noted for the woolen blankets made here Palencia was recovered from the Moors in the 10th cent and was in the 12th and 13th cent a favorite residence of the kings of Leon. The first university in Spain was founded here (1212 or 1214), but was removed to Salamanca in 1238 There is a notable Gothic cathedral (14th–16th cent) containing a fine collection of old Flemish tapestries.

Palenque (pälĕng'kā), ancient city of the MAYA in Chiapas, S Mexico, in the Usumacinta valley. Its architectural elegance, adapted to tropical and topographical conditions, was a high point in the art of the Old Empire. Stucco sculpturing and low-relief paneling reached their highest expression at Palenque Nearly life-size figures were modeled and carved in flowing lines and were lavishly painted Entablatures sloping inward and roofs slanting back to give a mansard effect show the range of architectural ideas among the Maya

Paleocene epoch see EOCENE EPOCH

paleography (pālēŏg'rufē) [Gr.,=early writing], term sometimes meaning all study and interpretation of old ways of recording language In a narrower sense, it excludes epigraphy (the study of inscriptions) and includes only the writing that is done on such materials as wax, papyrus, parchment, and paper The letters of inscriptions favor straight lines and sharp angles Letters made with a stylus, brush, reed, or pen favor curved lines and tend to become cursive, a letter, a word, or several words being made without lifting the writing implement In Western Europe and in regions that have adopted Western European ways of writing, letters of all kinds—capital and lower case, roman, italic, black letter, and script—are derived from the capital letters of Roman inscriptions From these "square" capitals developed less severe capitals called "rustic" and also letters called "uncial," with more curves than capitals have The uncial M, for example, substitutes curves for the two angles at the top, as the lower-case letter does Capitals and uncials are called majuscules and are distinguished from minuscules, the lower-case letters The lower-case letters established themselves definitely in Alcuin's school at Tours in the time of Charlemagne Letters of the kind preferred in that school are known as Carolingian, or Caroline, minuscules. Efforts to make letters ornate led to the development of black letter, no longer in common use except for the German language Letters of this ornate kind, with many angles and with heavy shading, are sometimes called *gothic*—a term that is unfortunately ambiguous, since it is used by printers for very simple letters, without serifs In type, italic letters were introduced by Aldus Manutius, they are said to have been suggested by the handwriting of Petrarch Local, temporary, and individual variations in letter forms are countless As the Spencerian script of the 19th cent enables us to give an approximate date for a document written in it, one skilled in handwriting can often assign a place and a date to a document of earlier times It is possible sometimes even to identify the writer of a document and to distinguish forgeries from authentic documents. Specialists devote themselves also to the many forms of writing not derived from Roman capitals, as Greek, Arabic, and Chinese See also ALPHABET, WRITING, INSCRIPTION, HIEROGLYPHIC

paleolith (pă'lēulĭth) [Gr ,=early stone], any implement of flint, quartzite, or other hard stone, shaped by chipping, found in gravel beds of river valleys and in caves of N France and parts of England, in Belgium, Greece, Italy, Spain, Portugal, and other regions They are unpolished and are the simplest form of instruments for such purposes as cutting, scraping, and boring Some served as axes, others as spearheads Their existence in association with remains of animals now extinct or no longer indigenous to the localities where they are found is an indication of extreme antiquity, and they are classed as belonging to the Paleolithic period

Paleolithic period (pă"lēulĭ'thĭk, -lō-, pā"-) or **Old Stone Age,** the earliest recognized period of human development and the longest phase of mankind's history. It is approximately coextensive with the Pleistocene geologic period, beginning probably 1,000,000 years ago and continuing until the end of the last glaciation, about 20,000 years ago. Definite evidence of human activity in the earlier Pliocene epoch is lacking, but traces of purposeful activity in the earliest Paleolithic indicate that systems of speech and social living were at least rudimentarily developed Hunting characterizes the entire period In the lower phase, the lack of permanent habitations and the nature of the known implements suggest a weak and defensive people Each technological step brought more successful adaptation, and by upper Paleolithic times there apparently were no animals not successfully hunted and few climates too rigorous for survival Earliest centers of culture cannot be established, but despite the preponderance of European data, that area appears to be peripheral to the development and spread of mankind Because prehistoric study was first concentrated in France and Scandinavia, there have arisen detailed classifications of tools and industries identified by local names of places in those countries which fail to convey the extended spatial and time relations of these cultures. More is known of the imple-

ments than of the men who made them. From random utilization of materials at hand, man perfected his pounding, chopping, and scraping tools, once the skill to provide them with cutting edges was acquired, his advance was relatively rapid Three general types of stone industry are characteristic of the Paleolithic The core tools, best exemplified by the *coup de poing* or hand axe, were shaped on a central rock mass Flake implements were fashioned from the struck-off fragments The upper Paleolithic blade industries, associated with modern man, show a refined and skillful combination of techniques providing knife-like and hafted tools In general, flake industries were distributed north of the Eurasian mountains and may indicate a special adaptation of forest hunting peoples The core or hand-axe cultures appear to be confined to the mild phases of the Pleistocene The Abbevillian or Chellean core industries evolved in the middle Paleolithic into the Acheulian, a strikingly conservative phase which lasted over 300,000 years, persisting in Europe until the last glaciation Contemporaneous with the Abbevillian and mid-Acheulian in Europe, the Clactonian flake industry gave rise in its final stage to the Levalloisian technique This method of striking flakes along the line of fracture, from a core prepared to provide an improved cutting edge, was the major step of the middle Paleolithic Also conservative, the Levalloisian industries survived in Europe nearly 200,000 years and in South Africa to modern times The beginnings of extensive hunting are indicated here Here, too, is the first conclusive evidence of belief systems centering on magic and the supernatural and of ritual burial The appearance of the Aurignacian blade industries in the upper Paleolithic coincides with the remarkable spread of *Homo sapiens* Tools were profuse Sewn clothing was worn Ceremonials were much elaborated, and the upper Paleolithic marked the spread of a variety of cultures, invariably associated with Neanderthal man, through central and SW Asia, North Africa, and Europe These cultures, identified as Mousterian, are primarily flake industries but derive certain retouching skills from core techniques This was the period of rock shelter and cave dwelling, and sculpture and painting had their beginnings Climatic fluctuations were the probable cause of great migrations The relatively brief appearance of the Solutrean culture, characterized by fine lance points and blades, was apparently an invasion from Iran into NW Europe and Spain It was replaced by the Magdalenian, the final major phase of the Paleolithic Its blade industries were derived from the Gravettian or upper Aurignacian and lasted about 50 000 years Weapons were highly refined and varied, and cave art was perfected Along the southern edge of the ice sheet, boats and harpoons were developed Microliths, or tiny points, suitable for small game, are most characteristic of the grassy plains of Asia and Africa It is assumed that Combe-Capelle man is associated with the lower Aurignacian Grimaldic man is placed in the middle or upper Aurignacian, contemporary with the two Cro-Magnon races, who also continue through the Solutrean and Magdalenian, when Chancelade man lived By the close of the Paleolithic, agriculture and domestic animals, the principal characteristics of the NEOLITHIC PERIOD, were about to appear See also MAN, PRIMITIVE, and CAVE ART See H F Osborn, *Men of the Old Stone Age* (3d ed , 1919), M C Burkitt, *The Old Stone Age* (2d ed , 1949)

Paléologue, Maurice (mōrēs' pälāôlôg'), 1859–1944, French diplomat and writer He was (1914–17) ambassador at St Petersburg and played an important part in the negotiations preceding the outbreak of the First World War He was a strong advocate of Franco-Russian cooperation His *La Russie des tsars pendant la grande guerre* (3 vols , 1922, Eng tr , 1924–25) is a valuable source book From 1917 to 1920 he was chief secretary in the French foreign office A member of the French Academy from 1928, he wrote studies on Cavour, Alfred de Vigny, Vauvenargues, Empress Eugenie, Chinese art, and diplomacy in the age of romanticism

paleontology (pā"lēŭntŏ'lŭjē, pā"lŏn-) [Gr , =study of early beings], the science of the life of past geologic time as studied through the FOSSIL Although paleontology deals with early forms of life, it is usually treated as a part of geology, rather than biology, because the environment of the animals and plants with which it deals cannot be properly understood and reconstructed without knowledge of the age and structure of the rocks in which their remains are found. Paleontology is further united to geology because paleontological evidence is one of the most important types of evidence for the correlation of the ages of rock strata (see STRATIFICATION). Just as biology is commonly divided into BOTANY and ZOOLOGY, so paleontology is often divided into paleobotany (paleophytology) and paleozoology Paleontology as a science separate from geology dates from the 19th cent , especially from the work of CUVIER on fossils It received a great stimulus from the publication of the evolutionary hypothesis of DARWIN. See E W. Berry, *Paleontology* (1929); J H. Bradley, Jr., *Parade of the Living* (1930), A M Davies, *Introduction to Paleontology* (2d ed., 1947); H. H Swinnerton, *Outlines of Palaeontology* (3d ed., 1947)

Paleozoic era (pā"lēŭzō'ĭk) [Gr , =early life], third grand division of geologic time When shallow seas spread over the land after the long erosion interval which succeeded the Proterozoic era, the continents already had taken the form which they preserved during most of the era In North America two great troughs or geosynclines were the principal physical features One of them, the Appalachian geosyncline, ran from the Gulf of Mexico to Labrador, along the line of the present Appalachian Mts , the other, the Cordilleran geosyncline, followed the line of the present Cordilleran range from the Arctic Ocean to S California These geosynclines were submerged by successive floods and received the products of erosion from the neighboring lands, so that a large proportion of the American Paleozoic rocks lie within the areas which they formerly occupied Outside the geosynclines, the interior of the continent was frequently submerged by a great interior sea The consistently dry areas of the continent were the Atlantic coast, or Appalachia, the Pacific coast, or Cascadia, the Canadian Shield and several smaller regions The rhythm of the Paleozoic era was one of alternating submergences and emergences of the land The CAMBRIAN PERIOD, the ORDOVICIAN PERIOD, the SILURIAN PERIOD, and the DEVONIAN PERIOD passed without notable interruptions of this rhythm In the CARBONIFEROUS PERIOD, however, began a series of major disturbances which, continued in the PERMIAN PERIOD, brought the Paleozoic to a close In the Permian the Appalachian geosyncline passed out of existence The climate of the Paleozoic was in general mild, and there were apparently no gradations of temperature toward the poles The Paleozoic, according to the fossil record, was rich in forms of life At the beginning of the Cambrian there were many marine invertebrates A few primitive fish-like vertebrates appeared in the Ordovician, scorpions in the Silurian, amphibians in the Devonian, reptiles in the Carboniferous During the Permian the reptiles increased in number and in variety The plant life of the Paleozoic reached its climax in the Carboniferous and was much contracted in the Permian The Paleozoic was considerably shorter than the Proterozoic or Archeozoic, an average estimate for its length being 350,000,000 years

Palermo (pulûr'mō, Ital pälĕr'mō), Latin *Panormus*, city (pop 339,497, with suburbs 411,879), capital of Sicily and of Palermo prov , on NW Sicily, Italy It is the largest city and seaport of the island, exporting mainly citrus fruit and wine There are chemical, food, and other manufactures Palermo is splendidly situated at the edge of the Conca d'Oro, a plain covered with orange, lemon, and olive groves The city was founded between the 8th and 6th cent B C , probably by Phoenicians, it later became a Carthaginian military base and was conquered by the Romans in 254–253 B C It was under Byzantine rule from A D 535 to 831, when it fell to the Arabs, who held it until 1072 Palermo's prosperity dates from the Arabic domination and continued under the Normans, who made it the capital of the kingdom of SICILY Under Roger II and later under Emperor Frederick II it reached its greatest artistic, cultural, and commercial flower The Angevin dynasty transferred the capital to Naples, their misrule led to the SICILIAN VESPERS (1282) Palermo is rich in works of art, Byzantine, Arabic, and Norman influences are blended in many buildings In the royal palace is the Palatine chapel with Byzantine mosaics The cathedral (1185) has six tombs of kings and emperors There are Norman-Sicilian, Renaissance, and baroque churches and several palaces, notably the Charamonte and the Sclafani In the royal park are two Norman-Arabian villas Palermo also has a national museum, a university, and a national library Much damage was done by aerial bombings in the Second World War

Palermo stone, diorite stone engraved probably in the 28th cent B C with the earliest extant annals It is a list of the kings of ancient Egypt before and after Menes, with regnal years and notations of events Part of it is in Palermo, Italy, part in Cairo, Egypt

Palés Matos, Luis (lwĕs' pälĕs' mä'tōs), 1898–, Puerto Rican poet He is primarily noted for his Negro poetry, which by use of African words, dance rhythms, and colorful suggestion evokes the speech, the pleasures, the life, and the loves of the Negro of the West Indies Many of his poems are collected in *Tuntún de pasa y grifería* (1937).

Palestine (pă'lĭstĭn) [ultimately from Philistine], country on the eastern shore of the Mediterranean between Syria and Egypt This article chiefly discusses the physical geography and the history before the end of the Second World War; for the economy and later history, see ISRAEL In the Bible, Palestine is called Canaan before the invasion of Joshua, the usual Hebrew name is Erets Israel [land of Israel]. Palestine is the Holy Land, of Jews as having been promised them by God, of Christians because it was the home of Christ, and of Moslems as heirs of Jews and Christians Its boundaries, never long constant, always include at least the land between the Mediterranean and the Jordan river. So taken, the country is c 140 mi long and from c 30 to c 70 mi wide Outside these bounds are such biblical lands as EDOM, GILEAD, MOAB, and HAURAN. The mandate of Palestine included also the NEGEV, a 100-mile-long southern projection reaching to the Gulf of Aqaba Palestine on the whole has a dry, hot climate From east to west the country comprises three zones the depression—the northernmost extension of the Great Rift Valley—in which lie the JORDAN, the DEAD SEA, and the Araba, a ridge rising steeply from this cleft, and a coastal plain a dozen miles wide In N Palestine the ridge is interrupted by the Vale of ESDRAELON and the connecting valley of Beisan The highland area to the north is called GALILEE; its chief centers are SAFED and NAZARETH, near which rises Mt TABOR To the south of the Vale of Esdraelon the broad ridge stretches unbroken to the Negev First there are the hills of SAMARIA, with northward prongs (to the east Gilboa and to the west Mt CARMEL), fronting on Haifa Bay The center of Samaria is NABLUS, which lies between Mt EBAL and Mt GERIZIM, other towns are En-gannim (Jenin) to the north and Tulkarm to the west The mountains of JUDAEA are west of the mouth of the Jordan Here are JERUSALEM, BETHLEHEM, and HEBRON Well to the south, in the Negev, lies BEERSHEBA The coastal plain of Palestine has water, but since great sand dunes block drainage, this was formerly a zone of swamps, desolate and unused, the land, now reclaimed, is fertile and productive The towns of the littoral are ACRE, HAIFA (the chief port and manufacturing center of Palestine), old CAESAREA PALESTINAE, Nathania, JAFFA, and TEL-AVIV Near Tel-Aviv are Petah Tiqvah, LYDDA, RAMLE, and Rehoboth To the south is old GAZA The plain is diversely named, it is the Valley of Zebulun S of Acre, Sharon S of Mt Carmel, and the Shephelah in the extreme south Agriculture in the Jordan valley centers around the lakes, including the BAHR EL-HULEH and the Sea of GALILEE, and in the Beisan area The chief town is TIBERIAS, and there is an important hydroelectric plant just S of the Sea of Galilee Farther south the valley is too narrow for much use, unless for water power, and there is only one city, JERICHO, E of Jerusalem The Dead Sea, into which the Jordan empties, is reputedly the lowest spot on the earth's surface—its surface is 1,300 ft below sea level Before the Jewish colonization of Palestine in the 20th cent the rural people were Arab peasants (fellahin) In cities there were important groups of Christians (at Nazareth, Bethlehem, and Jerusalem) and of Jews (at Safed, Tiberias, Jerusalem, Jericho, and Hebron) Otherwise the population was Moslem Arab The Holy Land has a special character as a place of pilgrimage Shrines cluster most numerously about Jerusalem, Bethlehem, Nazareth, and Hebron, they are commonly shared by several religions The earliest-known inhabitants of Palestine were Neanderthallike and used Mousterian tools By the 4th cent B C there were troglodytic herders and farmers Lying on the coastal route between Egypt and Mesopotamia, Palestine was usually a province of some empire Its detailed history begins with the Hebrews (see JEWS), who profited from the decline of the New Empire in Egypt to set up their own state, possibly driving out the Canaanites By 1000 B C the Hebrew kingdom was well established at Jerusalem, King DAVID, enjoying greater success than his predecessor SAUL, had reduced the Philistines (see PHILISTIA), a seafaring people who had colonized the Shephelah After the expansive reign of SOLOMON, the kingdom fell into two states, Israel, with the capital at Samaria, and Judah, under the house of David, with the capital at Jerusalem. But empires were once more expanding from Mesopotamia, and the kingdoms were destroyed, Israel by ASSYRIA (c 722 B C.) and Judah by BABYLONIA (586 B C) Soon there was a revival under Persian sponsorship at Jerusalem, where ZERUBBABEL, EZRA, and NEHEMIAH reestablished an autonomous community, perhaps the foundation of the modern Jewish people The 4th cent B C saw a westward reorientation of the Near East when Alexander the Great of Macedonia conquered Palestine Eventually, efforts by the rulers to impose Hellenism brought a Jewish revolt under the MACCABEES, who set up a new Jewish state in 141 B C This ruled Palestine for 70 years but finally yielded to Rome Palestine of the time of Christ had puppet kings in the Herods (see HEROD), who never succeeded in reconciling Jews and Romans To suppress the revolt which broke out in A D. 66 the Romans destroyed the Temple (A D 70) and expelled the Jews from Judaea Another revolt in A D. 132 was brutally suppressed Now Tiberias and Caesarea Palestinae became Jewish centers, the main Roman cities were Jaffa and Nablus. With Constantine I, Palestine became a center of Christian pilgrimage The country flourished under Justinian, and agricultural development was encouraged, even in the Negev.

Like its neighbors, Palestine came under the Moslem invader, in 640 the caliph Omar was master The centuries of Moslem domination were generally a period of decline The cultivated valleys became swamps, the formerly beautiful hill slopes were given over to Bedouin grazers, and the highlands were deforested In the 9th cent., when Palestine passed to Egypt, the Fatimite rulers provoked the CRUSADES by destroying the Church of the Holy Sepulcher and molesting pilgrims The Crusaders had no long tenure in Palestine, the Latin Kingdom of Jerusalem lasted less than 100 years after its establishment in 1099 The chief European memorials are the Norman fortresses that mark the countryside The next rulers of Palestine were the Mamelukes, most Moslem monuments date from their reign In 1516 they were beaten by the Ottoman Turks At first the Turks favored Palestine, particularly Jerusalem, but generally their rule was one of decay Jewish colonization from Europe began c 1870, but it was not until the early 20th cent that the impulse of ZIONISM had a marked effect In 1920 the British, who had conquered the area in the First World War, acquired Palestine and Trans-Jordan (now JORDAN) as mandates of the League of Nations By the terms of the mandate and of the British Balfour Declaration (1917) Palestine was marked as the place for the establishment of a Jewish national home, but with due regard for the rights of non-Jewish Palestinians The British exercised control through a high commissioner and an executive council The Jews were officially represented by the Jewish Agency (including most segments of Zionist opinion) A Moslem supreme council regulated Islamic religious affairs, while in time an unofficial Arab high committee developed to carry on anti-Zionist activities The first years of the mandate saw much progress, but soon disorders developed In 1928 there was a Jewish-Arab clash over the Wailing Wall in Jerusalem, and in 1929 there were attacks by Arabs on the Jews at Safed, Hebron, and elsewhere Now there developed a three-way controversy among Jews, Arabs, and the British The Arabs in the '30s were led by Husseini, the mufti of Jerusalem, an implacable enemy of Zionism The main issues at first were Jewish immigration and land purchases, these the Arabs wished to halt and the British proposed limiting, but took no early steps Jewish immigration increased greatly after Hitler came to power in Germany in 1933 There were continual Arab attacks on Jewish agricultural settlements as well as several Arab general strikes In 1936 the British proposed a division of the country territorially between Jews and Arabs Such partition was discussed for the next years, usually with provision for a neutral area of holy places, especially of Jerusalem and near-by Bethlehem The Arab leaders rejected all partition plans, while the World Zionist Congress was willing to consider them In 1939, when there were c 400,000 Jews, c 900,000 Moslems and c 100,000 Christians (mostly Arab) in Palestine, the British issued a state paper (usually called the White Paper of 1939) announcing their intention to create a single independent state predominantly Arab in population The White Paper also provided for limiting Jewish immigration to 1,500 persons a month and for cutting it off entirely in 1944, when the Jewish population would reach 500,000 Zionists both in and out of Palestine were further enraged when, in 1940, the British severely limited the areas in Palestine where Jews might acquire land However, after the outbreak of the Second World War in Sept., 1939, there was considerable diminution in political tensions and all parties hoped to encourage British favor by hearty cooperation in the war effort Palestine, strategically located in the British Middle East defense position, became a great military base (the campaign against Syria was launched from here) and supplied goods to the armed forces The Zionist cause was somewhat hurt in 1944, when Jewish terrorists in Cairo assassinated Lord Moyne, the British resident minister in the Middle East However, the feats of the Jewish Legion in North Africa and Italy helped counteract much antipathy Nevertheless both Jews and Arabs were preparing for the inevitable post-war conflict, out of which the state of ISRAEL would be forged See Guy Le Strange, *Palestine under the Moslems* (1890), George Adam Smith, *The Historical Geography of the Holy Land* (1930), H C Luke and E Keith-Roach, ed, *The Handbook of Palestine and Trans-Jordan* (1934), W C Lowdermilk, *Palestine Land of Promise* (1944), Esco Foundation for Palestine, *Palestine a Study of Jewish, Arab, and British Policies* (1947)

Palestine **1** (pă'lŭstĭn) Village (pop 1,626), E Ill, on the Wabash and NW of Vincennes, Ind, in a farm area, settled 1811, laid out 1816, inc 1855 **2** (pă'lŭstēn) City (pop 12,144), co seat of Anderson co, E Texas, N of Houston, settled 1846, inc 1871 The spreading city, one of the key cities of East Texas, keeps the marks of its past It is a market for the truck, turkeys, and other produce of the rolling red hills as well as a railroad junction point with railroad shops and the center of a rich oil area

Palestrina, Giovanni Pierluigi da (jōvän'nē pyĕrlōō'ē pā'lāstrē'nä) c 1525–1594, Italian composer, b. Palestrina, whence his name. In 1544 he was appointed choirmaster at the cathedral in his native town In 1550 the bishop of Palestrina became Pope Julius III and appointed (1551) Palestrina master of the boys in the Julian Chapel Palestrina's first book of Masses appeared in 1554, dedicated to the pope, who rewarded him with appointment to the Sistine Chapel Choir in 1555, Pope Paul IV dismissed him in the same year Palestrina was for a short time choirmaster of the Cathedral of St. John Lateran In 1571 he returned to the Vatican to assume the leadership of the Julian Chapel Choir Palestrina, called "the first Catholic Church musician," composed unaccompanied polyphonic church music for the most part He is best known for his great *Missa Papae Marcelli* and for his settings of the Song of Songs (1584), which are of intense religious feeling See biographies by Z K Pyne (1922) and Henry Coates (1938), Knud Jeppeson, *The Style of Palestrina and the Dissonance* (1927)

Palestrina (pälästrē'nä), town (pop 6,517), Latium, central Italy It is on the site of Praeneste, an ancient Latin city Its Roman remains include a temple of Fortuna, celebrated for its oracles

Paley, William, 1743–1805, English theologian Ordained in 1767, he lectured on moral philosophy at Christ's College, Cambridge, where he was fellow and tutor (1766–76) Made a prebendary of the cathedral church of Carlisle in 1780, he became archdeacon of the diocese in 1782 and chancellor in 1785 In that year he published *Principles of Moral and Political Philosophy*, which has been called the best statement of the utilitarianism of the 18th cent He wrote *Horae Paulinae* (1790), in proof that the New Testament is not "a cunningly devised fable," and *A View of the Evidences of Christianity* (1794), for which he is celebrated *Natural Theology, or, Evidences of the Existence and Attributes of the Deity* (1802) achieved great popularity In 1825 a complete edition of his writings was published by his son, the Rev Edmund Paley

Palfrey, John Gorham (pôl'frē), 1796–1881, American historian, politician, and scholar, b Boston After graduation from Harvard (1815), he became a Unitarian minister and later was (1831–39) professor of sacred literature at Harvard He was an ardent abolitionist and after service as a Whig in the House of Representatives (1847–49), he joined the Free-Soil party He contributed to periodicals and from 1835 to 1843 owned and edited the *North American Review* He wrote in vast quantity and on all sorts of subjects Perhaps he is best remembered for his *History of New England* (4 vols, 1858–75, additional volume, 1890), a thorough work based on good research in sources and including some material on social history, though the main burden is political history with a patriotic bias

Palghat (palgôt'), town (pop 55,160), SW Madras state, India It is in the Palghat Gap, the major opening through the Western Ghats, and is on a railroad connecting the east and west coasts of India Palghat was of great strategic importance in the British wars with Hyder Ali It trades in timber, grains, tobacco, and vegetable oils

Palgrave, Sir Francis (pôl'grāv, pôl'-), 1788–1861, English historian Educated privately, he was called to the bar in 1827 In 1823 he had embraced Christianity, married, and taken his wife's mother's surname in place of his father's surname, Cohen His antiquarian interests led him to edit with scrupulous accuracy and publish a number of historical records, such as the *Rotuli Curiae Regis* (2 vols, 1835), and to stress their importance as materials for historical writing He was knighted in 1832, and he was from 1838 the official head of the Public Record Office He wrote in the medieval field, emphasizing legal history and the continuity of the Roman tradition in English development One of his best works was his *History of Normandy and England* (4 vols, 1851–64) His son R H I Palgrave edited his father's *Collected Historical Works* (10 vols, 1919–22)

Palgrave, Francis Turner, 1824–97, English poet and anthologist, oldest son of Sir Francis Palgrave Educated at Oxford, he was an official in the government education department until he became (1885) professor of poetry at Oxford He is remembered as the editor of a famous anthology of poetry, *The Golden Treasury of the Best Songs and Lyrical Poems in the English Language* (1861) In its compilation he probably benefited from the advice of his friend Tennyson His revision and his other anthologies were also popular Of his own verse, *The Visions of England* (1881) and a few hymns are the best See biography by G F Palgrave (1899)

Palgrave, Sir Robert Harry Inglis, 1827–1919, English banker and economist, son of Sir Francis Palgrave He edited (1877–83) the *Economist*, wrote *Local Taxation in Great Britain and Ireland* (1871) and *The Bank Rate and the Money Market* (1903), and served on the government commission on the depression of trade and industry (1885), but is best known as editor of *The Dictionary of Political Economy* (3 vols, 1894–99, appendix, 1908, rev. ed. by Henry Higgs, 1923–26).

Pali (pä'lē), dead language of the Indic group of the Indo-Iranian subfamily of the Indo-European languages. See LANGUAGE (table) and PALI LITERATURE.

Palichao (pälē chou') or **Palikao** (pälēkou'), village, Hopeh prov, China, near Peiping. Here, in 1860, a British and French force which had recently occupied Tientsin defeated a Chinese army and invested Peiping. China agreed to all Western demands, including the payment of indemnities and the acceptance of foreign diplomats at the imperial court in Peiping The occupying forces were then withdrawn

Palikao, Charles Guillaume Cousin-Montauban, comte de (sharl' gēyōm' kōōzĕ'-môtôbä' kôt' du pälēkou'), 1796–1878, French general He commanded (1860) the French forces in China, his title was given him after his victory at Palichao near Peking After the outbreak of the Franco-Prussian War he replaced (Aug., 1870) Ollivier as premier under the regency of Empress Eugenie, while Napoleon III left for the front The emperor's capture at Sedan resulted in the overthrow of the Second Empire by a bloodless revolution in Paris, and Palikao fled to England with the empress

Palikao, China see PALICHAO.

Pali literature (pä'lē), sacred literature of BUDDHISM Pali, the language in which it is written, is a dialect of Sanskrit, it was presumably the native language of the BUDDHA The Buddhistic literature, originally oral, began to be put into written form in 483 B C, just after the death of Buddha, and the final canon was completed in 250 B C under Asoka The canon is called the *Tripitaka* [threefold basket] The first part, the *Vinayapitaka* [basket of discipline], contains the monastic rules of the order of Buddhist monks, it was kept secret from all who were not monks The *Suttapitaka* [basket of teaching] is divided into five *Nikayas* [collections] The first four are the main authority for the doctrines of early Buddhism The fifth is a miscellany containing speeches and dialogues of Buddha and of his first disciples, poetry, lives of the saints, and edifying anecdotes Buddha's famous disciple, Ananda, figures in some of the dialogues The fifth *Nikaya* also includes jatakas, fables of former births of the Buddha in various animal guises The final section, the *Abhidhammapitaka* [basket of metaphysics], contains nothing new, it is an analytical, logical, and methodological elaboration of the previous *Pitakas* Pali eventually died out in India, but the literature was transferred (2d cent B C) to Ceylon, where it has been studied and commented on in Pali up to the present day Later Pali was brought to Burma and Siam, there it is still to some degree the language of literature and religion See Moriz Winternitz, *A History of Indian Literature* (1927–33), Caroline Rhys Davids, *Buddhist Psychology* (1924) and *Sakya, or, Buddhistic Origins* (1931), Wilhelm Geiger, *Pali Literature and Language* (1943)

palimpsest see MANUSCRIPT

palindrome see ANAGRAM.

Palisades, bluffs along the west bank of the Hudson, NE N J and SE N Y, extending from the region N of Jersey City, N J, to the vicinity of Piermont, N Y, with a general altitude of from 350 ft to 550 ft The Palisades, rising vertically from close to the water's edge, are the margin of a sill (an intrusion of molten material which hardened to form a great sheet) of diabase Slow cooling developed the columnar structure, uplift and faulting occurred, it is believed, at the close of the Triassic period, and centuries of erosion exposed the cliffs A large part of the most scenic section, lying N of Fort Lee, N J., is embraced in the **Palisades Interstate Park** (more than 47,070 acres in area) The park, lying along the west bank of the river, includes a chain of hilly, wooded recreational areas between Fort Lee, N J, and Newburgh, N Y There are scenic roads, trails for hikers, campgrounds, and facilities for winter and summer sports Notable are the sections about BEAR MOUNTAIN and STORM KING

Palisades Park, borough (pop 8,141), NE N J., adjoining Fort Lee, inc 1899

Palissy, Bernard (bĕrnar' pälēsē'), c 1510–c 1589, French potter For 16 years he worked in vain to imitate white-glazed pottery (probably Chinese), even burning his furniture to fire his kilns He succeeded in producing a widely imitated pottery, Palissy ware, admired for smooth glazes in richly colored enamels He was appointed (c 1562) royal potter to Catherine de' Medici and created platters, ewers, and other ornamented pottery for the French court He is noted for pieces reproducing scriptural and mythological subjects in low relief and for his rustic pieces decorated with sharply modeled forms copied from nature—notably reptiles, insects, and plants He gave (c 1575–1584) public lectures on natural history A writer of outstanding ability on a diversity of topics, including religion, chemistry, mineralogy, philosophy, and agriculture, he published two collections of discourses (several times reedited as his complete works)—*Recepte véritable* (1563) and *Discours admirables* (1580), the latter includes the story of his struggle to create his ware Many of his views on nature have been confirmed by scientists. In 1588 he was sent to the Bastille (as a Huguenot), where he died.

Palk Strait (pôk, pôlk), between Ceylon and India. The strait, c 35 mi wide at its narrowest point, is turbulent and is little used by ships.

pall: see PALLIUM.

Palladio, Andrea (ändrā'ä päl-lä'dēō), 1518–80, Italian architect of the Renaissance He studied in his birthplace, Vicenza, and later in Rome he studied the remains of Roman architecture. The measured drawings he made of these were published, with compositions of his own and a description of practical systems of design and proportioning, in his famous work *I quattro libri dell' architectura* (1570, Eng tr, *The Four Books of Architecture*, 1713), reissued many times His buildings, chiefly town palaces, were executed mostly in Vicenza and its vicinity and generally were in humble materials, brick and stucco, in contrast with their formal classicism of design His characteristic façade displayed superimposed pilasters or columns or often a colossal order two stories in height and supported by a rusticated ground story In the basilica at Vicenza, his greatest work (begun 1549 and unfinished at his death), which was a rebuilding of the medieval town hall, appeared arches supported on minor columns and framed between larger engaged columns Each of these arch-and-column compositions formed what is termed a "Palladian motive" and was much imitated In the unusual Teatro Olimpico (1580) he incorporated a permanent scenic background, built in architectural perspective Near Vicenza, Palladio built the Villa Capra, generally known as the Rotonda, a square structure with a portico on each façade, utilized subsequently, in the 18th cent, by William Kent, Colin Campbell, and others as inspiration for country-house designs At Venice he built only churches, notably San Giorgio Maggiore and the Church of the Redentore In the 17th cent Inigo JONES imported into England Palladio's classic and grandiose type of design, thereby deeply influencing the course of English architecture, subsequently Sir Christopher Wren, Sir William Chambers, and other architects of the Georgian period created a great body of works termed Palladian, being based upon Palladio's compositions

Palladium (pulā'dēum) [Gr, =belonging to Pallas], in Greek and Roman religion, ancient sacred image of Pallas Athena It was the guardian of the safety of a city The Palladium of Troy, said to have fallen from heaven, is especially famous The city could not be taken while the statue remained safe Odysseus and Diomed stole the Palladium, and Troy fell Diomed supposedly brought the image to Greece, but the Romans said that the one Diomed stole was only a copy and that the original statue was brought by Aeneas to Rome, where it was placed in the temple of Vesta

palladium (pulā'dēum), rare, silver-white, lustrous metallic element (symbol=Pd, for physical constants, see ELEMENT, table), strongly resistant to corrosion in the air and to the action of acids, with the exception of nitric acid, at ordinary temperatures It is, however, affected by hot acids and dissolves in aqua regia It is a member of the platinum group of metals, resembling platinum and occurring in the ores of this metal along with other elements of the group Like platinum, it forms two groups of compounds, exhibiting its two valences It forms several oxides A remarkable property of palladium is its great ability to absorb hydrogen, one volume of it when finely divided occluding as many as 900 volumes of the gas The metal is used for plating and is alloyed with platinum or with gold in making scientific instruments and various kinds of jewelry and, either alone or alloyed, is sometimes used as a substitute for platinum The element was discovered by William Wollaston in 1803

Palladius, Saint (pulā'dēus), d 431, first bishop of Ireland Probably of Gallo-Roman origin, Palladius was sent to proselytize among the Irish by Pope Celestine I He arrived in Leinster in 431 with a company of 12 men and established three churches there Palladius was received with suspicion, and his mission was only partly successful He left Ireland the same year and died shortly afterwards in Scotland The details of his life are obscure and have been confused with events in the life of St PATRICK, who succeeded him in his work in Ireland

pallah see IMPALA

Pallas (pă'lăs), in Greek mythology **1** Name given to Athena **2** Giant who was killed by Athena **3** Titan, son of Creus and Eurybia, husband of Styx, and father of Nike

Pallas, Peter Simon (pă'tur zē'mŏn pă'läs), 1741–1811, German naturalist and explorer He became professor at the Academy of Sciences, St Petersburg (1768) In 1769 he was a member of an expedition to observe the transit of Venus, and until 1774 he explored the upper Amur, the Caspian Sea, and the Ural and Altai mts, collecting valuable specimens in natural history His account of the journey (pub 1771–76) was translated into English (2d ed., 1812) He wrote also on natural history and on Bering's discoveries

Pallavicino, Pietro Sforza (pyä'trō sfôr'tsä päl"lävēchē'nō), 1607–67, Italian Jesuit church historian, cardinal of the Roman Church. He wrote a history of the Council of Trent (1656–57) to refute the attack by Paolo Sarpi, but his silences and his failure to touch on the spirit of the Catholic Reform made it a poor reply He also wrote on literary style His collected letters were published in 1669

pallium (păl'ēum) or **pall** (pôl), vestment proper to the pope, who confers it on archbishops in token of their union with, and obedience to, him It is a band of cloth worn around the neck, having a pendant of the same width (2 in) hanging down in front and back There are six black crosses on the pallium It is woven of wool from two lambs presented to the pope on the day of St Agnes The pallium is as old as the 4th cent It is occasionally conferred on bishops

Pall Mall (pĕl' mĕl', păl' măl'), street in W London It was originally an avenue constructed by Charles II for the purpose of playing the game pall-mall St James's Palace and Marlborough House and a number of clubs are in Pall Mall

Pallu (păl'ū) [Heb, =distinguished], son of Reuben Ex 6 14, Num 26 5,8, 1 Chron 5 3 Phallu Gen 46 9 See PELETH **1**

palm, member of a family of plants, the Palmaceae, of which there are about 1,200 species, native mostly to the tropics but with some representatives in warm temperate climates Most palms have a tall, woody, unbranched stem with a crown of compound leaves Some are short and bushy, and a few species are woody vines The COCONUT, the DATE, and the SAGO palms provide food for native populations and are important commercially Carnauba wax, used in making polishing wax, candles, phonograph records, soap, and other products, is obtained from the leaves of a Brazilian palm (*Copernicia cerifera*) A similar wax is obtained from the trunk of another palm, the wax palm (*Ceroxylon andicola*) of the Andes Palm sugar is obtained from the juice of a number of species, e g, the African wine palm (*Raphia inifera*), the wild date (*Phoenix sylvestris*), and the wine palm or toddy palm of India (*Caryota urens*) The royal palm (*Oreodoxa regia*), of which the Florida form is often known as *Roystonea floridana* (or *R regia*), reaches a height of 100 ft or more, its straight trunk as topped with plumelike leaves It is cultivated in many tropical regions Other palms include the CABBAGE PALM and the PALMETTO The largest known nut, which may reach a weight of more than 40 lb, is produced by a palm, *Lodoicea maldivica*, often called the Seychelles nut palm Among the names which have been applied to this bulbed nut are sea coconut and double coconut

Palm oil is the yellowish-orange to brownish-red fat pressed from the fibrous flesh of the fruit of an African palm (*Elaeis guineensis*) It is used chiefly in making soaps and candles and when mixed with other oily substances is used for greasing metals and machines Palm-kernel oil is a white oil obtained from the endosperm It has a pleasant odor and flavor and is used in margarine and also in soaps and candles The palm-kernel cake which remains after the oil has been removed by hydraulic presses or by solvents provides food for cattle

Palma, Jacopo (yä'kōpō päl'ma), c 1480–1528, Venetian painter, called Palma Vecchio He formed his style under the influence of Giovanni Bellini, Titian, and Giorgione and ranks as one of the foremost masters of his school His pictures are notable for their brilliant coloring and lighting and for their idyllic landscape backgrounds He is also known for his female portraits, of which there is a splendid series in the Liechtenstein Gallery, Vienna He left over 40 unfinished works, which were completed by his numerous pupils Among the most important of Palma Vecchio's works are many of his favorite subject, *Sacra Conversazione* (the Holy Family with saints and donors), examples of which are in Naples, Venice, and Vienna, an altarpiece, with a figure of St Barbara (Church of Santa Maria Formosa, Venice), *The Virgin Enthroned* (Church of San Stefano, Vicenza), *Christ and the Adulteress* and *St Peter Enthroned* (Venice Acad), *Adoration of the Shepherds* (Louvre), portraits in the National Gallery, London, and *St Peter Presenting a Worshiper to the Infant Christ* (Palazzo Colonna, Rome) His grandnephew **Jacopo Palma**, 1544–1628, Venetian painter, called Palma Giovane, formed his style by studying the works of Titian, Tintoretto, and the great masters of Rome He was a facile technician and an excellent colorist Examples of his art are *The Last Judgment* and *The Savior Adored by Two Doges* (ducal palace, Venice), *St Catharine Rescued from the Wheel* (Church of the Frari, Venice), and *Madonna with Saints* (Naples)

Palma, Ricardo (rēkär'dhō päl'mä), 1833–1919, Peruvian poet and prose writer He was early embroiled in politics and suffered exile before he was 20 His literary career began with romantic poetry in such volumes as *Poesías* (1855), *Armonías livro de un desterrado* [harmonies book of an exile] (1865), and *Pasionarias* (1870). He also wrote literary criticism and historical works—notably a book on the Inquisition in Lima (1863)—and served as director of the national library, restoring the collections scattered by the War of the Pacific His chief contribution was, however, the long series of volumes called *Tradiciones peruanas*, made up of witty and lovingly imaginative sketches and stories about the colonial days of Peru

Palma, Tomás Estrada: see ESTRADA PALMA, TOMÁS

Palma or Palma de Mallorca (pal'ma dā mälyôr'kä), seaport (pop 97,009), capital of MAJORCA island and of Baleares prov, Spain, on the Bay of Palma The region roundabout is fertile, and Palma is the chief port and commercial center of the BALEARIC ISLANDS The imposing Gothic cathedral, founded after the capture (1229) of Palma by James I of Aragon, was finished only in the 17th cent Near by are the Castillo della Almudaina, with remains of the ancient Moorish castle, and the 15th-century Lonja (exchange) There are several ancient churches, notably that of San Francisco (13th cent), and fine private homes The former royal castle of Bellver, c 2 mi W of Palma, is a good example of 14th-century military architecture Because of its mild climate and beautiful scenery, Palma has long been a favorite resort, Chopin and George Sand were among its visitors (1838) During the Spanish civil war of 1936–39 Palma was an important naval and air base of the Insurgents

Palmas, Las (las pal'mas), city (pop 97,856), capital of Las Palmas prov, Spain, on Grand Canary Chief port of the Canary Islands, it is a coaling station and a popular resort There is a 15th-century cathedral

Palm Beach, town (pop 3,747), SE Fla, on a narrow island between the Atlantic and Lake Worth (a lagoon) The area, settled mainly after 1871, was named Palm Beach in 1887. With the arrival of Henry M Flagler in 1893, it rapidly developed into a wealthy and exclusive winter resort The town has many beautiful estates and a fine arts center. Bridges span the lagoon to West Palm Beach

Palmer, Alexander Mitchell (pä'mûr), 1872–1936, American political leader, b Moosehead, Pa, grad. Swarthmore, 1891 Admitted (1893) to the bar, he built up a large law practice, became a leader in the state Democratic party, and served (1909–15) in Congress In 1912 A Mitchell Palmer helped swing the Democratic convention to nominate Woodrow Wilson for President, and he was appointed judge (1913) of the U S Court of Claims and then (1917) alien property custodian As U S Attorney General (1919–21) he became conspicuous for his ardent prosecution of men and women who were suspected of disloyalty to the United States

Palmer, Alice Freeman, 1855–1902, American educator, b Broome co, N Y, grad Univ of Michigan, 1876 In 1879 she became head of the history department at Wellesley College, later serving as president (1881–87) and as trustee (from 1888) In 1887 she married George Herbert Palmer A member of the Massachusetts state board of education after 1889, she was also dean of women at the Univ of Chicago (1892–95), a director of the World's Columbian Exposition, and twice president of the Association of Collegiate Alumnae (American Association of University Women) See *An Academic Courtship Letters of Alice Freeman Palmer and George Herbert Palmer, 1886–1887* (1940), biography by G H Palmer (1908)

Palmer, Daniel David, 1845–1913, American founder of CHIROPRACTIC, b Canada He practiced and taught chiropractic, chiefly in Davenport, Iowa His work was carried on and extended by his son, Bartlett Joseph Palmer (1881–)

Palmer, Erastus Dow, 1817–1904, American sculptor, b Pompey, N Y, self-taught A carpenter in his youth, he spent his leisure cutting cameos He progressed to carving bas-reliefs and then figures in the round He established himself in a studio in Albany, N Y, and there he worked for the rest of his life, engaging apprentice workmen in the Italian fashion His first full-length figure, *The Indian Girl*, and his most famous sculpture, *The White Captive*, are in the Metropolitan Museum He was successful in making portrait busts, including one of Washington Irving (N Y Historical Society), his statue of Robert Livingston (Statuary Hall, Washington, D C) is full length Palmer was one of the few sculptors of his time who did not study in Italy, he went abroad for a visit in 1873 Walter Launt Palmer was his son

Palmer, Frederick, 1873–, American writer and war correspondent, b Pleasantville, Pa, grad Allegheny College, 1893 Beginning with the Greco-Turkish War of 1896–97, he was a famous reporter of wars, especially the First World War He has written novels, biographies, and many books based on his experiences See his *With My Own Eyes a Personal Story of Battle Years* (1933)

Palmer, George Herbert, 1842–1933, American educator, philosopher, and author, b Boston, grad Harvard, 1864, and Andover Theological Seminary, 1870, studied (1867–69) in Europe He became tutor in Greek at Harvard in 1870, later he was assistant professor of philosophy (1873–83), professor of philosophy (1883–89), and professor of natural religion, moral philosophy, and civil polity (1889–1913). From 1913 he was professor emeritus and overseer (1913–19). His works on literature include *The Life and Works of George Herbert* (1905) and translations of the *Odyssey* and Sophocles' *An-*

tigone; and on philosophy, *The Field of Ethics* (1901) and *Altruism Its Nature and Varieties* (1919). He also wrote a biography (1908) of his second wife, Alice Freeman Palmer, and his own autobiography (1930), as well as a number of essays on education and other topics

Palmer, John McAuley, 1817–1900, American statesman, Union general in the Civil War, b Scott co, Ky He was admitted to the Illinois bar in 1839. A Democrat, Palmer, opposing the KANSAS-NEBRASKA BILL, left his party and became a Republican leader in Illinois In the Civil War he rose from colonel to major general of volunteers He fought at Murfreesboro and in the Chattanooga campaign (1863), led a corps in most of the Atlanta campaign (1864), and was commander of the Dept of Kentucky (1865–66) He succeeded R J Oglesby as Republican governor of Illinois (1869–73) After supporting the Liberal Republicans in 1872, Palmer rejoined the Democrats. He was U S Senator from Illinois (1891–97), and in 1896 he was the presidential candidate of the gold Democrats See his *Personal Recollections* (1901); G T Palmer, *A Conscientious Turncoat* (1941)

Palmer, Nathaniel Brown, 1799–1877, American sea captain, b Stonington, Conn While on a whaling voyage (1820–21) in the South Shetlands, he commanded the *Hero* on an exploring trip to the south and came back reporting that he had sighted land Hence the name Palmer Land for the peninsula later renamed Graham Land by the British and now known as PALMER PENINSULA, Graham Land, or Graham Coast Palmer was well known as a commander and designer of clipper ships. See biography by J. R Spears (1922).

Palmer, Ray, 1808–87, American Congregational clergyman and hymn writer, b Little Compton, R I, grad Yale, 1830 He held pastorates in Bath, Maine (1835–50), and Albany, N Y (1850–66), afterward serving as secretary of the American Congregational Union until his retirement in 1878. He is remembered chiefly for the hymn *My Faith Looks up to Thee* (1830), a world-wide favorite, for which Lowell Mason wrote the tune *Olivet*

Palmer, Samuel, 1805–81, English draughtsman, landscape painter, and etcher Under the influence of William Blake he early produced a series of remarkable drawings in sepia of moonlit landscapes. Palmer is also known for his Italian and English landscapes in water color, for his illustrations of Spenser, Milton, and his own translation of Vergil's *Eclogues;* and above all for his etchings *The Bellman, The Lonely Tower, The Sleeping Shepherd,* and *The Early Ploughman* are fine examples of etchings. He is represented in the National Gallery, London, and in the Victoria and Albert Museum

Palmer, Walter Launt, 1854–1932, American landscape painter, b Albany, N Y, studied with Frederick E Church and in Paris with Carolus-Duran; son of Erastus Dow Palmer Among his works are *The Silent Dawn* (Metropolitan Mus), *Sundown at Walpole, N H* (Albright Art Gall , Buffalo, N Y), *End of a Winter Day,* and *Oaks in Winter.* He became a member of the National Academy in 1897

Palmer, William Jackson, 1836–1907, American railroad builder, b Kent co , Del He was reared in Philadelphia and worked as a railroad engineer In the Civil War he organized the 15th Pennsylvania Cavalry, led it in many battles, and was brevetted general in the Union army. After he went (1865) to the West, he supervised surveys for the Union Pacific RR, directed construction of the Denver & Rio Grande RR, and advised in the building of Mexican railroads Palmer founded (1871) Colorado Springs, Colo , fostered Colorado College, and helped develop the state's industries. See John S Fisher, *A Builder of the West* (1939).

Palmer, village (1930 pop 150, estimated 1949 pop 1,500), S Alaska, NE of Anchorage On a rail spur and good highways, it is the agricultural market of Matanuska Valley and headquarters of the Matanuska Valley farmers' cooperative association

Palmer. 1 Industrial town (pop 9,149), S Mass , ENE of Springfield; settled 1716, inc 1775 Steel is produced **2** Town (pop 1,228), S Tenn , NW of Chattanooga near the Collins river, inc 1925

palmer · see PILGRIM.

Palmer Archipelago, group of islands, ANTARCTICA, off NW Palmer Peninsula and SW of the South Shetlands They include Liége, Brabant, Anvers, and Wiencke islands Discovered (1898) by Adrien de Gerlache, a Belgian explorer, the group of islands is sometimes called the Antarctic Archipelago

Palmer Peninsula, peninsula of ANTARCTICA From its base it extends c 800 mi. toward South America, its tip is 650 mi from Cape Horn and is the farthest point of the antarctic continent from the South Pole The Weddell Sea washes its west shore, and off its coasts lie numerous islands, including the South Shetlands, just off its north tip The whole peninsula is covered with shelf ice, and most of it is mountainous Named for Nathaniel B Palmer, by whom it was discovered (1820), it was first considered part of the antarctic continent and was later thought to be a group of islands, but subsequent exploration has proved its peninsularity It is also called Graham Land or Graham Coast (especially by the British, who claim it as a dependency of the Falkland Islands) and Trinity Peninsula. Argentina and Chile also claim the peninsula, which Chile calls O'Higgins Land

Palmerston, Henry John Temple, 3d Viscount, 1784–1865, English statesman. He succeeded his father as viscount in 1802 Entering Parliament in 1807 as a Tory, he served as war secretary (1809–28), fell out with his party because of his advocacy of parliamentary reform, and joined (1830) the Whig government of Earl Grey as foreign minister As such, his liberal policy abroad was largely responsible (1830–31) for the independence of Belgium, for the suppression of revolutions in Portugal and Spain (1832–34), and for the joint intervention with Russia, Austria, and Prussia which prevented France or Russia from securing control of Turkish affairs (1839–41) at the time of the revolt of MOHAMMED ALI of Egypt Palmerston was in opposition (1841–46) during Sir Robert Peel's administration, but returned to the foreign office under Lord John Russell. Palmerston often acted impulsively and without consultation; he offended foreign powers, his colleagues, and the queen by his friendliness to the revolutionaries of 1848, by his unofficial approval of the coup d'état of Louis Napoleon (see NAPOLEON III), and by other similar actions, and he was dismissed (1851) He became home secretary in 1852 and succeeded Lord Aberdeen as prime minister (1855–58) His vigorous prosecution of the CRIMEAN WAR increased his already great popularity, and he was prime minister again (1859–65) His attitude greatly facilitated the achievement of Italian independence and unity (1858–61), but he was unable to help Poland against Russia or Denmark against Prussia and Austria In the American Civil War he maintained neutrality, despite his sympathy for the South and despite the irritating TRENT AFFAIR He dealt effectively with the SEPOY REBELLION in India Palmerston favored factory acts and other reforms, but he kept the Liberals from dealing with parliamentary reform His diplomacy, reckless and domineering, usually advanced British prestige See biography by H. C F Bell (1936).

Palmerston, Australia see DARWIN.

Palmerston, town (pop 1,418), S Ont , NW of Kitchener. It has railroad shops, gristmilling, and dairying

Palmerston North, city (pop 25,277, metropolitan pop 27,294), on S North Island, New Zealand, NNE of Wellington Clothing and furniture are made There is an agricultural college

Palmerton, industrial borough (pop 7,475), E Pa , on the Lehigh river and near Mauch Chunk, settled 1737, inc 1912 Zinc and other metals are refined.

Palmetto (pălmĕ'tō) **1** City (pop 3,491), SW Fla , S of Tampa near the entrance to Tampa Bay, at the mouth of the Manatee It is a boating and fishing resort and packs and ships fruits and vegetables **2** Town (pop 1,029), NW Ga , SW of Atlanta, inc 1854

palmetto palm or **palmetto** (pălmĕ'tō) [Span , =little palm], popular name for palm trees of the genus *Sabal,* of which there are about 18 species in the United States, Mexico, and Central America Common in the S United States is the cabbage palmetto, *Sabal palmetto* It has an erect stem from 20 to 80 ft. in height, fan-shaped leaves, and a black drupe fruit The young head of leaves—the "cabbage"—is eaten. The wood is used for piles, and the leaves for thatch The palmetto is grown in greenhouses in the North for ornament. South Carolina, where the tree is indigenous, is sometimes called the Palmetto State The palmetto represents the native palms of the United States

Palmieri, Luigi (lwē'jē palmēā'rē), 1807–96, Italian meteorologist and physicist, known for his studies of Mt Vesuvius He was professor at the Univ of Naples from 1847 and director of the Vesuvius observatory from c 1850. He invented a seismograph, a rain gauge, and other meteorological instruments

Palmira (pälmē'rä), city (pop 21,235), W Colombia, just NE of CALI Founded c 1794, Palmira gave its name to the tobacco of the region.

palmistry, form of FORTUNETELLING based on a study of the hand and palm This type of divination was practiced throughout much of the ancient world (e g , Greece, China, and India), and it survives today as a form of amusement and as a serious study Significance concerning human destiny is read into all the characteristics of the hand—shape, size, hardness, softness, and dryness, as well as the number, depth, and length of the lines of the palm The main lines are the life line, which encircles the base of the thumb, the head line and the heart line (nearest the base of the fingers) which lie across the palm, and the fate line, which crosses these from the wrist to the second finger. See Henri Rem, *What Your Hand Reveals* (1928), books by Cheiro (pseud of Louis Hamon), especially *You and Your Hand* (1931)

palmitin (păl'mutĭn), name applied to any fat that is an ester of palmitic acid and glycerin but generally used to refer to the tripalmitate It is a white crystalline solid at ordinary temperatures, soluble in alcohol and ether but insoluble in water. It occurs abundantly in palm oil, lard, and tallow and also in olive oil, cottonseed oil, and butter—in fact, in most FATS AND OILS. When palmitin is heated with alkalies (a process called saponification), SOAP is produced.

palm oil: see PALM.

Palms, Isle of, resort island, SE S.C., just E of Charleston. It has a fine beach.

Palm Springs, city (1940 pop 3,434; 1946 special census pop 7,213), S Calif , E of Los Angeles and NW of the Salton Sea, founded 1876, inc 1938. It is a desert resort, near San Jacinto Peak.

Palm Sunday, in the Christian calendar, the Sunday before EASTER, sixth and last Sunday in LENT, and the first day of HOLY WEEK. It recalls the entry of Jesus into Jerusalem riding upon an ass, when the people shouted "Hosanna" and strewed palms in his way In the Western Church, ceremonies of the day are the blessing and distribution of palm leaves and the recitation of St Matthew's version of the Passion Many wear crosses made of the blessed palm

Palmyra (pălmī'rŭ), ancient city of central Syria An oasis N of the Syrian Desert, NW of Damascus, it was important in Syrian-Babylonian trade by the 1st cent B C. Tradition says it was founded by Solomon, and it appears in the Bible as Tadmor [city of palms] Palmyra became of true importance only after Roman control was established, probably in the reign of Tiberius Local tribes vied for control, which fell to the Septimii by the 3d cent A D The greatest of them, Septimius ODENATHUS, by taking arms for Emperor Gallienus and defeating Shapur I of Persia, built Palmyra into a strong autonomous state that practically embraced the Eastern Empire, with Syria, NW Mesopotamia, and W Armenia After his death his widow, ZENOBIA, briefly increased the territory by conquering Egypt and most of Asia Minor, making Palmyra one of the great cities of the empire But her ambition brought on (A.D 272) attack by Aurelian, who was victorious and partly destroyed the city Palmyra, in decline, was taken by the Arabs and sacked by Tamerlane and fell into ruins Even the ruins were forgotten until the 17th cent The great temple dedicated to Baal and other remains show the Oriental splendor of Palmyra at its prime

Palmyra. 1 City (pop 2,285), co seat of Marion co , NE Mo , on the North River near the Mississippi and NW of Hannibal, settled c 1819 Lumber products are manufactured here **2** Borough (pop 5,178), SW N J , on the Delaware (here crossed by a bridge, 1929) above Camden, inc 1923 **3** Village (pop 2,709), W central N Y , on the Barge Canal and SE of Rochester, inc 1819 Machine parts and paper boxes are made Joseph Smith lived in Palmyra and published the *Book of Mormon* here **4** Borough (pop 5,239), SE Pa , E of Harrisburg, settled 1749, inc 1913 Its manufactures include leather goods, textiles, and boxes Limestone quarrying is done here

Palmyra, atoll (pop 32) comprising 55 islets, central Pacific, one of the Line Islands It is c 1,105 mi SSW of Honolulu and is under the jurisdiction of the city and county of Honolulu An American discovery (1802), the island was annexed (1912), and a naval base was authorized (1939). The Federal government filed suit for the title to the island, which was vested in private owners In 1947 the Supreme Court ruled against the government

Palo Alto (pă'lō ăl'tō) **1** City (1940 pop 16,774, 1947 special census pop 22,789), W Calif , SSE of San Francisco near San Francisco Bay, founded 1891, inc as a town 1894, as a city 1909 A residential city, it is the seat of STANFORD UNIVERSITY **2** Borough (pop. 1,934), E Pa , on the Schuylkill and near Pottsville, laid out c 1844, inc 1854

Palo Alto (pă'lō ăl'tō), locality not far from Brownsville, Texas, where the first battle of the MEXICAN WAR was fought, May 8, 1846 American troops under Gen Zachary TAYLOR defeated a Mexican force led by Gen Mariano Arista, who retreated to RESACA DE LA PALMA

Palomar, Mount (pă'lōmär), peak, 6,126 ft. high, S Calif , NE of San Diego It is the site of Mt Palomar Observatory, operated jointly by the California Institute of Technology and the Carnegie Institution It has a 200-inch reflecting telescope

Palomar Observatory: see PALOMAR, MOUNT

Palomino de Castro y Velasco, Acisio Antonio (äthĕ'slō antō'nyō palōmē'nō dā kä'strō ē vä'läskō), 1653–1726, Spanish historical painter and writer on art, called the Spanish Vasari He painted frescoes and easel pictures in Valencia, Madrid, and Granada, but he is famous chiefly for his history of art, *El museo pictórico y escala óptica* (3 vols , 1715–24), which contains a wealth of biographical material regarding Spanish artists It was translated into English (1739) and also into French, and German.

Palos, Cape (pä'lōs), SE Spain, on the Mediterranean, c.17 mi. E of Cartagena, in Murcia.

Palos de la Frontera (pä'lōs dā lä frōntä'rä), seaport (pop. 1,856), Huelva prov., SW Spain, in Andalusia, on the Río Tinto near its mouth. From here Columbus sailed on his first voyage of discovery (1492), returning and reembarking in 1493 Cortés landed here in 1528 after his conquest of Mexico.

Palouse (pəlōōs', pă-), city (pop. 1,028), SE Wash., on the Palouse river near the Idaho border, in a farm area; settled 1876, inc. 1889

palpitation (păl"pĭtā'shŭn), a rapidly beating heart associated with the sensation of fluttering or thumping The unduly rapid action of the heart may be caused by disease or by functional disturbance. Excessive exertion on the part of an individual with a normal heart may result in palpitation, slight exertion in an individual with an abnormal heart may cause a similar sensation.

Palsgrave, John (pălz'grāv, pôlz'-), d 1554, English scholar, educated at Oxford and at the Univ of Paris. He was tutor of Henry VIII's daughter, Mary (Mary I), who used her influence in his behalf after he had taken holy orders His most important work was his *Lesclarcissement de la langue francoyse*, written to instruct the English in the rules of French grammar It has value today chiefly as a source of information about transitional stages of the English language of that period.

palsy. see PARALYSIS.

Palti (păl'tī) [Heb ,=God's deliverance], one of the 12 spies Num 13 9

Paltiel (păl'tĭul) [Heb ,=God's deliverance], prince of Issachar Num 34 26

Paltite (păl'tīt) see BETH-PALET

Paludan-Müller, Frederik (frĭ'dhŭrĭk pā'lōōdhăn-mū'lur), 1809–76, Danish poet Among his earlier works are *The Dancer* (1833) and *Cupid and Psyche* (1834) His masterpiece, a narrative poem, *Adam Homo* (Part I, 1841, Parts II, III, 1848) is partly autobiographical and deals with the duality of man's personality

Palus Maeotis see AZOV, SEA OF

Pamir (pumēr', pă-) or **Pamirs**, mountainous region, central Asia It is mainly in the Tadzhik SSR, but it also extends to parts of Afghanistan, Sinkiang prov, and Kashmir The highest peak is Mt Stalin (24,590 ft) in the north From the Pamir, called "the roof of the world," radiate several great mountain systems, in the east the Tien Shan, Kunlun, and Karakoram and in the west the Hindu Kush P G E Bonvalot crossed the Pamir in 1886, and there has been considerable later exploration See Anna Louise Strong, *Road to the Grey Pamir* (1931)

Pamlico Sound (păm'lĭkō), 80 mi long, E N C, separated from the Atlantic by a row of sand bars and low islands, the easternmost of which terminates in Cape Hatteras It receives the Pamlico (see TAR) and Neuse rivers

Pampa (păm'pu), city (pop 12,895), extreme N Texas, ENE of Amarillo This cow town on the Panhandle plains still ships cattle and wheat, but discovery of oil and gas has made it an industrial center with refineries, carbon-black plants, and other oil-based industries

pampas (păm'pŭz), wide, treeless grassy plains of S South America, particularly in Argentina, Uruguay, and Paraguay The **Pampa** (pam'pä) (c 250,000 sq mi) of central and N Argentina, embraces the provinces of Buenos Aires, Santa Fe, and Córdoba and the territory of La Pampa Gradually rising from east to west, it for the most part appears level Throughout the colonial period the Spanish used only a small part of the Pampa, economic activity was practically restricted to primitive stock raising for the exportation of hides and—to some extent—jerked beef A new economic era was initiated in the second half of the 19th cent A growing European market for agricultural products brought immigrant farmers (mostly Italian, Spanish, French, and German) to the Pampa, and they spread westward with the expansion of the railroads Unfriendly Indians were driven back, the GAUCHO, the pampean cowboy, yielded to the farmer, and the land was brought under the plow In the 20th cent wheat, corn, and flaxseed have exceeded animal products in value, but agriculture did not replace stock raising, which has continued as a major industry Dairying has become important since the First World War In the seaboard cities are the only considerable industries—meat packing (frozen meat and meat products are exported in large quantities), milling, and the preparation of dairy products The Pampa has made modern Argentina, it has given the country its wealth, industries, and character, and it has shaped the habits and the outlook of the people See Mark Jefferson, *Peopling the Argentine Pampa* (1926)

pampas grass, any species of the genus *Cortaderia*, tall South American grasses cultivated in warm climates for ornament The common pampas grass (*Cortaderia argentea* or *selloana*) is a perennial with a cluster of long narrow drooping leaf blades The male and female flowers are borne on separate plants, the ones which bear the female are the most ornamental, since they have large, silvery, plume-like panicles In California the plumes are sold for decorative purposes

Pampeluna, Spain see PAMPLONA.

pamphlet (păm'flĭt), unbound or paper-bound book of a few pages Its maximum size is sometimes set at 64 pages, sometimes at 80 pages, sometimes at 96 pages The pamphlet is popular as an instrument of religious or political controversy in times of stress. It is relatively inexpensive to the purchaser and to the author or the publisher, it can be more timely than a book bound in cloth or leather, and it gives authors and readers the maximum benefit of freedom of the press Pamphlets are commonly meant to be ephemeral, but some of them have proved to have permanent value and have been reprinted separately or in collections, as the *Harleian Miscellany* (1744–46)

Pamphylia (pămfĭl'ĭu), ancient region, S Asia Minor, on the coast between Lycia and Cilicia, in present S Turkey Its chief city was Perga Pamphylia was not a political entity, except in the provincial administration of Rome, to which it passed in the surrender of Antiochus III (199 B C)

Pamplona (pămplō'nä), city (pop 45,885), capital of Spanish Navarre, N Spain, at the foot of the W Pyrenees It is an important communications center and has iron and lead works and linen manufactures An ancient city of the Basques, it was repeatedly captured (5th–9th cent) by the Visigoths, the Franks, and the Moors, but none of the conquerors, not even Charlemagne who took it in 778 and razed its walls, exercised control for long In 824 the Basque kingdom of Pamplona, later known as the kingdom of Navarre, was founded Pamplona remained the capital of Navarre until 1512, when Ferdinand V united the major part of Navarre with Castile Philip II enlarged the citadel and made it a powerful stronghold Pamplona is still surrounded by old walls and fortifications, and it has retained its Gothic cathedral (14th–15th cent) In the Peninsular War, Pamplona was taken (1808) by the French and (1813) by the English An older spelling is Pampeluna

Pan (păn), in Greek religion, pastoral god of fertility He was worshiped principally in Arcadia, and it is said that he was the son of Hermes, another Arcadian god Pan was supposed to make the flocks fertile, if he did not, his image was flogged to stimulate him Since goat herds were characteristic of Arcadia, Pan was conceived of as being a merry, ugly man with horns, a beard, a tail, and goat's feet He loved to frighten unwary travelers (hence the word *panic*) All his myths deal with amorous affairs In a famous myth he pursued the nymph Syrinx, but before she was overtaken her sister nymphs changed her into a reed Thus Pan plays the reed, or syrinx, in memory of her Later, when Pan was worshiped in other parts of Greece and in Rome, he became associated with the Greek Dionysus and identified with the Roman Faunus, both gods of fertility

Pana (pă'nu), city (pop 5,966), S central Ill, SE of Springfield, inc 1857 It is a shipping center in a farm and coal area and has an important rose-growing industry

Panama (pă'numä", Span *Panamá* (pänämä'), republic (29,128 sq mi, including the PANAMA CANAL ZONE, pop 622,576), Latin America, occupying the Isthmus of Panama, which forms the connecting link between Central and South America The capital is Panama city; the other large city is COLÓN The country is bounded by the Caribbean on the north, by Colombia on the east, by the Pacific on the south, and by Costa Rica on the west Panama has an extreme length of c 385 mi and varies from c 32 to 113 mi in width The range of mountains in the west is rugged and of volcanic origin, though the lofty volcanic peaks (Chiriquí is 11,070 ft) are not active The middle of the country about the Panama Canal is lower, with hills varying from 200 to 1,500 ft in height, in the east they rise again in a low range extending to the Colombian border. The soil is of volcanic origin and fertile The slopes are tree covered, but the vast forest reserves are virtually untouched, especially on the Caribbean watershed where rainfall is heaviest On large tracts of upland savannas subsistence crops, sugar cane, and coffee are grown, and cattle graze The climate is generally tropical and wet, varying somewhat with the altitude Communications over the difficult terrain, except for the INTER-AMERICAN HIGHWAY between Panama city and DAVID and the transisthmian highway between the capital and COLÓN, are limited The Panama RR is devoted to a good extent to service in the Panama Canal Zone and is American owned, short lines in the west serve American banana plantations Bananas are the leading export crop, followed by abacá, cacao, rubber, and mahogany, there is some mining The population is divided into whites, mestizos, Indians (some leading tribal lives quite apart from the general culture), and Negroes, about two thirds are mestizos The population is less than that of any other independent Latin American country, and the rate of increase is slow Although the government distributes land to settlers, much of the population is not fixed, but moves from area to area, and many tend to drift toward the disproportionately large centers of Panama city and Colón These cities grew because of their strategic world position, rather than their direct relationship with the hinterland, their combined population comprises about one quarter of the total of the republic. Large land areas remain unoccupied The advantages of education have not been much pushed Roman Catholicism is the prevailing religion, and Spanish the official language Though the region has been long known to world civilization, it has for the most part been mostly a roadway. Rodrigo de Bastidas discovered the coast of Panama in 1501, and Columbus dropped anchor off the site of future PORTOBELO in 1502 Efforts at colonization in DARIEN were made by Diego de NICUESA and by Martín Fernández de ENCISO, but they failed Vasco Núñez de BALBOA early took control of the region, and in 1513 he made his momentous voyage across the isthmus to the Pacific, and the dominant factor in the history of Panama—the short distance from sea to sea—was made evident Under the governorship of Pedro ARIAS DE ÁVILA (who had Balboa executed) Panama city was founded in 1519 The way was opened for Francisco Pizarro to discover Peru, and Panama became the route by which the treasure from the Inca empire went to Spain Panama was subordinated to the viceroyalty of Peru and remained there until 1740, when it was transferred to New Granada Attempts at Scottish settlement in the DARIEN SCHEME of the late 17th cent failed wretchedly, and Panama continued as only a channel of commerce and a home of Indians The immense wealth carried through its harbors attracted raids of British buccaneers—Sir Francis Drake, William Parker, Sir Henry Morgan, and Edward Vernon—who swooped down on the gold ships and the treasures of PORTOBELO With the breakdown of the Spanish Empire through the revolutions against Spain, Panama lost much of its importance in the carrying trade It became a part of Greater Colombia and then of New Granada (the later Colombia) Its significance as the short route from Atlantic to Pacific was enhanced again when many U S settlers bound for Oregon and then for the gold fields of California crossed through Panama W H Aspinwall built (1848–55) the Panama RR, and the question of a canal across the isthmus became paramount The project ultimately led to the revolution in Panama and its establishment as a separate republic (see PANAMA CANAL). The new state, proclaimed in Nov, 1903, was under the aegis of the United States, and the canal and American control of it became the great determinant of Panama's history One immediate benefit was eradication of yellow fever Generally relations with the United States have been friendly, and Panama fought on the Allied side in the First World War and the Second World War Panama has taken an active part in Pan-Americanism and is a member of the United Nations It has also in recent years taken part in the attempts with Colombia, Ecuador, and Venezuela to further Greater Colombia economic, social, and cultural union The internal politics of the little republic, related to the canal and U S control, have been stormy, with frequent changes of administration The dominant figure in recent years has been Arnulfo Arias, who was a leader of the revolution of 1931 and in 1940 gained personal power He had a new constitution adopted in 1941 but was deposed in that year Late in 1949 he again came to power by a coup, and his government was recognized by the United States early in 1950 See Charles L G Anderson, *Old Panama and Castilla del Oro* (1911), Arthur Bullard, *Panama the Canal, the Country, and the People* (1914), Ralph Hancock, *The Rainbow Republics* (1947). See also bibliography under PANAMA CANAL

Panama, city (pop 111,893), central Panama, capital and largest city of Panama, on the Gulf of Panama, bounded on the west by the Panama Canal Zone Founded in 1519 by Pedro ARIAS DE ÁVILA, the city flourished in early colonial times as the Pacific port of transshipment of Andean riches to Spain After it was destroyed in 1671 by Sir Henry Morgan, it was moved (1673) 5 mi west to a rocky peninsula The city declined as the sources of gold disappeared but revived briefly during the California gold rush and the building (1848–55) of the Panama RR Construction of the Panama Canal brought assured prosperity, and American sanitary measures and disease control made Panama a clean and healthful tropical city Though facing the sea, Panama city is no longer a port, commerce is handled through BALBOA The city is connected by railroad and highway to COLÓN on the Caribbean, by the Inter-American Highway to DAVID, and to western hemispheric capitals by international air lines The Univ of Panama, founded here in 1935, is important because of its inter-American organization and curriculum

Panama Canal, waterway across the Isthmus of Panama, connecting the Atlantic and Pacific oceans, built by the United States (1904–14) on territory leased in perpetuity from the republic of Panama The canal, running S and SE from Limón Bay at COLÓN on the Atlantic to the Bay of Panama at BALBOA on the Pacific, is 40 27 mi long from shore to shore and 50 72 mi long between channel entrances Paradoxically, the Pacific terminus is 27 02 mi east of the Caribbean terminus. The minimum depth is 41 ft From Limón Bay a ship is raised by Gatun Locks (a set of three) to an elevation 85 ft. above sea level, traverses GATUN LAKE, then crosses the Continental Divide through Gaillard (formerly Culebra) Cut, and is lowered by

Pedro Miguel Lock to Miraflores Lake, and then by the Miraflores Locks (a set of two) to sea level Passage requires 7 to 8 hr The average tidal range on the Atlantic side is less than a foot, that on the Pacific side is 12 6 ft. Building an interoceanic canal was suggested early in Spanish colonial times The United States, interested since the late 18th cent in trading voyages to the coast of the Pacific Northwest, became much concerned with plans for a canal after settlers had begun to pour into Oregon and California Active negotiations led in 1846 to a treaty, by which New Granada (Colombia) granted rights to isthmian communication in return for a guarantee of the neutrality and sovereignty of New Granada After the United States had acquired California and the gold rush had begun, the isthmus gained more importance, and the Panama RR was built (1848–55) with U S capital At the same time, interest in the alternate route the NICARAGUA CANAL, was strong in both Great Britain and the United States Rivalry was ended by the CLAYTON-BULWER TREATY (1850), which guaranteed that neither power should have exclusive rights or threaten the neutrality of an interoceanic route This was in 1901 abrogated by a new British–U S agreement, the HAY-PAUNCEFOTE TREATY, which gave sole building rights to the United States Meanwhile a concession for building a canal in Panama granted in 1878 had been acquired by a French company under Ferdinand de LESSEPS Work was begun in 1881, but disease among the workers, construction troubles, and inadequate financing drove the company into bankruptcy in 1889 The government had smiled on the project, and many French citizens had invested in it There were now charges of corruption and a great scandal In 1894 French courts transferred the rights and assets to a new company, in this Philippe BUNAU-VARILLA was a leading figure The Nicaragua route was almost universally favored, though an American representative of the French company, William Nelson Cromwell, was by 1896 working vigorously for the Panama alternative When a U S commission appointed in 1899 recommended (1901) a canal through Nicaragua, the French company undertook to sell its Panama rights to the United States Bunau-Varilla devoted himself to the cause of the Panama route and gained the support of Mark Hanna and later of the new President, Theodore Roosevelt The commission reversed its recommendation, and Congress reversed itself to authorize purchase of the rights and construction of the Panama Canal The HAY-HERRAN TREATY, signed (Jan , 1903) with Colombia, would have given the United States an isthmian strip of land in return for an initial cash payment of $10,000,000 and an annuity of $250,000, but the Colombian senate refused to ratify An insurrection (Nov 3, 1903) in Panama involved Bunau-Varilla and other proponents of the canal as well as natives The United States invoked the treaty of 1846 with Colombia, and the presence of an American warship prevented Colombian troops from quelling the outbreak. The new republic was formally recognized three days later, and on Nov 17 the Hay-Bunau-Varilla Treaty was signed, granting to the United States, in return for the same terms offered Colombia, exclusive control of a canal zone in perpetuity, other sites necessary for defense, and sanitary control of Panama city and Colón Colombia's efforts to secure redress for the loss of Panama resulted in ratification of a treaty (1921) by which the United States paid Colombia $25,000,000 and Colombia recognized the independence of Panama A commission, later headed (1907) by Col G W GOETHALS, was organized and spent the first three years in development of construction facilities, surveys, and disease control The eradication of malaria and yellow fever was a notable achievement The actual construction of the canal took seven years. The canal was informally opened Aug 15, 1914, formally by presidential proclamation July 12, 1915 Total cost was $336,650,000, and about 240,000,000 cu yd. of earth were excavated In 1939 treaty amendments increased Panama's annuity to $430,000, retroactive to 1934 to offset dollar devaluation, provided for a transisthmian highway, and abrogated the U S guarantee of the neutrality and sovereignty of Panama Although in the same year Congress authorized construction of a third set of locks, the Second World War intervened, and subsequent controversy has centered on a sea-level route See Philippe Bunau-Varilla, *Panama the Creation, Destruction, and Resurrection* (1914), I. E Bennett, *History of the Panama Canal* (1915), G. W. Goethals, *The Panama Canal an Engineering Treatise* (1916), D C Miner, *The Fight for the Panama Route* (1940), M. P DuVal, Jr , *Cadiz to Cathay* (1940), N J Padelford, *The Panama Canal in Peace and War* (1942)

Panama Canal Zone, administrative area (552 8 sq mi) of the United States, extending 5 mi on either side of the Panama Canal, bounded by the Caribbean on the north, the Pacific on the south, and Panama on the east and the west The zone is administered by a governor appointed by the United States, but in periods of emergency the governor is subordinate to the commanding general in civil affairs Although it is a government-owned reservation, building sites and agricultural lands may be licensed by responsible companies and individuals CRISTOBAL, BALBOA (Atlantic and Pacific ports, respectively), and ANCON are the chief towns See G W Goethals, *Government of the Canal Zone* (1915), M E Dimock, *Government-operated Enterprises in the Panama Canal Zone* (1934)

Panama City, city (pop 11,610), co seat of Bay co , NW Fla , on St Andrews Bay and E of Pensacola, inc 1909 A Gulf coast resort and port of entry, it has industries centered around lumber, paper, citrus fruit, chemicals, and fish

Pan American Highway, projected system of roads, 15,714 mi long, to link the nations of the Western Hemisphere Suggested at the Fifth International Conference of American States (1923), the system was in 1950 more than 80 percent complete A few gaps remained in the section, called the INTER-AMERICAN HIGHWAY, between the United States and the Panama Canal, the route from the Panama Canal through South America is complete except for an unsurveyed stretch in E Panama and NW Colombia and a gap in S Ecuador Climatic zones along the highway vary from lush jungle to cold mountain passes nearly 15,000 ft high Under consideration is a ferry service from Key West to Cuba and the West Indies and from Cuba to the Yucatan peninsula

Pan-Americanism, movement toward commercial, social, economic, military, and political cooperation among the 21 republics of North, Central, and South America The struggle for independence after 1810 among the Latin-American nations evoked a sense of unity, especially in South America where under Simón BOLÍVAR in the north and José de SAN MARTÍN in the south there were cooperative efforts Briefly Francisco MORAZÁN headed a CENTRAL AMERICAN FEDERATION The United States was looked upon as a model, and recognition of the new republics was a part of U S foreign policy Henry Clay set forth the principles of Pan-Americanism in 1820 Soon afterward, however, the United States declared through the MONROE DOCTRINE a new policy with regard to the interference by European nations in affairs of the New World The policy, at first welcomed even though it established a sort of United States hegemony, later was regarded by the Latin American nations as a mask for imperialistic ambitions In the early 20th cent U S manipulation to secure the PANAMA CANAL and intervention in the affairs of Cuba, Haiti, the Dominican Republic, Nicaragua and Mexico all combined to create deep resentment in Latin America toward the United States Concurrently, national rivalries split the 20 southern republics Pan-Americanism had, however, been slowly gaining again It had all but disappeared when Bolívar's Pan-American conference at Panama proved abortive in 1826 In Latin America military nationalism and personalism came to the fore Venezuela and Ecuador withdrew (1830) from Greater Colombia, the Central American Federation collapsed (1838), a Peru-Bolivia confederation failed (1839) after Chilean intervention, Argentina and Brazil long fought over Uruguay and then all three combined in the War of the Triple Alliance (1865–70) to defeat Paraguay, and in the War of the Pacific (1879–83) Chile defeated Peru and Bolivia Pan-Americanism reappeared in U S policy when Secretary of State James G Blaine sent out invitations to a conference to be held in 1882 Because of the assassination of Garfield the invitations were countermanded, but they were renewed in 1888 At Washington the first (1889–90) of the Pan-American Conferences or Pan-American Congresses was held This and subsequent conferences became the most important expression of Pan-American cooperation and good feeling Treaties for arbitration of disputes and adjustment of tariffs were adopted at the first conference, and the American Republics Bureau, which became the PAN AMERICAN UNION, was established Subsequent meetings were held at Mexico City (1901–2), Rio de Janeiro (1906), Buenos Aires (1910), Santiago (1923), Havana (1928), Montevideo (1933), Lima (1938), and Bogotá (1948) In general, the questions discussed have been those introduced at the first conference While the concepts under consideration usually were slow to take concrete form, there was marked progress in codification of international law, acceptance of peace machinery, and creation of scientific and social agencies Troubles continued to flair, and the efforts of the A B C Powers did not result in any machinery to control peace A major war was fought (1932–35) between Bolivia and Paraguay over the CHACO Relations between the United States and Colombia grew better, however, after a new treaty with Colombia put to rest the problem of the PANAMA CANAL With the administration of Franklin D Roosevelt a policy of determined cordiality toward Latin America—the "Good Neighbor" policy—bore fruit As the Second World War approached, the nations of the Western Hemisphere drew closer together The Inter-American Conference for the Maintenance of Peace at Buenos Aires in 1936 was followed by the Lima Declaration (1938) at the eighth Pan-American Conference providing for consultation in case of outside threat Accordingly after the outbreak of the Second World War the Inter-American Neutrality Conference was held (1939) in Panama A conference of foreign ministers at Havana produced the Act of Havana (1940) declaring against changes of sovereignty in the New World Most of the Latin American nations (except, notably, Argentina) supported or actually joined the Allies after the Japanese attack on Pearl Harbor A significant step was taken at the Inter-American Conference on the Problems of War and Peace in Mexico city in 1945 The Act of Chapultepec adopted there by 20 republics called for joint action in repelling any aggression against an American state, the significant note was that this was to operate in cases of aggression by an American as well as a non-American state Its acceptance by Argentina (accompanied by a declaration of war on the Axis) meant the establishment of machinery to enforce international peace in the Western Hemisphere This was made actual by the Inter-American Conference for the Maintenance of Continental Peace and Security, which met in 1947 at Petrópolis, Brazil, near Rio de Janeiro, and is generally called the Rio Conference The machinery set up there by the Inter-American Treaty of Reciprocal Assistance (the Rio Treaty) proved effective later in the troubles between COSTA RICA and Nicaragua In other fields, too, cooperation has advanced as in commercial and financial matters (e g , the Inter-American Bank) As a consequence, and as the feeling of cooperation, friendliness, and interdependence has grown, at the Bogotá conference of 1948 the ORGANIZATION OF AMERICAN STATES was established to promote hemispheric unity Smaller but no less significant efforts of similar intent, are being made within the framework of the Organization by such groups as the Greater Colombia nations (Colombia, Ecuador, Panama, and Venezuela) See C H Haring, *South America Looks at the United States* (1928), S G Inman, *Problems in Pan-Americanism* (1921, rev ed , 1925) and *Latin America, Its Place in World Life* (1942), J L Lockey, *Pan-Americanism Its Beginnings* (1920), W S Robertson, *History of the Latin-American Nations* (1922, rev ed , 1932), J F Rippy, *Historical Evolution of Hispanic America* (1932), Hubert Herring, *Good Neighbors* (1941), P L Green, *Pan American Progress* (1942)

Pan American Union, international agency founded April 14, 1890, at the first of the modern Pan-American Conferences (see PAN-AMERICANISM) The name Pan American Union was adopted in 1910 Created to promote international cooperation, it offers technical and informational services to all the American republics, serves as the repository for international documents, and is responsible through subsidiary councils for the furtherance of economic, social, juridical, and cultural relations In 1948 it was made the general secretariat for the ORGANIZATION OF AMERICAN STATES The day of its founding, April 14, is Pan-American Day

Panamint Range (păn'ămĭnt), SE Calif , in Inyo co near the Nev line These rugged mountains, with altitudes ranging from c 6,000 to 11,000 ft (Telescope Peak is 11,045 ft high), form the western boundary of Death Valley Panamint Valley is west of the range

Panathenaea (păn"ăthĭnē'u) [Gr , =all-Athenian], in Greek religion, a festival of ATHENA Every year the women of Athens embroidered a beautiful and costly peplos for Athena, and the procession carrying this garment to the Acropolis was the climax of the festival

Panay (pänī'), island (4,446 sq mi , pop 1,291,548), one of the Visayan Islands, in the Philippine Islands It is NW of Negros Primarily agricultural, with products of rice, coconut, and citrus fruit, Panay is also known for horses, bred in the mountainous interior Copper and manganese are mined The chief town is Iloilo

pancake, thin flat cake, made of batter and baked on a griddle or fried in a pan It is probably the oldest form of bread The widespread primitive expedient of baking on hot stones or on a griddle has resulted in a variety of pancakes Old English batter was mixed with ale German and French pancakes, leavened by eggs and much beating, are baked very thin and served with jam or jelly Russian *blini*, thin, yeast-raised pancakes, are commonly served with caviar and sour cream In America pancakes are sometimes called battercakes, griddlecakes, or flapjacks and are usually leavened with baking powder or soda and are served with syrup A pioneer favorite, still surviving in some localities, is the buckwheat cake which in early days was often made with "emptins," i e , on the sour-dough principle of leavening by saving the remnant of one day's baking to start the next Curious old customs, many of them of obscure origin, are connected with the pancake It was customary among Roman Catholics to eat pancakes or flannel cakes on Shrove Tuesday, hence called Pancake Day

Pancevo, Serbo-Croatian *Pančevo* (pän'chĕvō), city (pop 30,816), Serbia, Yugoslavia, in the Vojvodina, on the Danube and ENE of Belgrade It has a glass industry. There is a fine old church con-

taining valuable paintings and other works of Serbian religious art

Panchatantra (pän″chŭtän′trŭ) [Sanskrit,=five threads], principal collection of beast fables in SANSKRIT LITERATURE, probably compiled before A D 500 BIDPAI is the supposed author The work, derived from Buddhistic sources, was originally intended as a manual for the instruction of sons of the royalty The fables are in prose, with interspersions of aphoristic verses The stories in the *Panchatantra* appear to have entered European literature through an Arabic version of the translation into Syriac of the Pahlavi translation from the original See the English translation by Arthur W. Ryder (1925)

Panchen Lama see LAMAISM

Pancoast, Joseph, 1805–82, American surgeon, b near Burlington, N J, M D Univ of Pennsylvania, 1828 He was professor (1838–74) at Jefferson Medical College and was known for his development of operative techniques for treating vaginal fistula (1847), for excision of the fifth cranial nerve, and for exstrophy of the bladder (1858)

pancreas (păn′krēŭs, păng′–), gland that produces both a digestive juice and an endocrine secretion, present in most vertebrates and lying between the stomach and the anterior part of the intestine In man it is an elongated organ extending across the abdominal cavity and composed chiefly of lobes that secrete an alkaline digestive fluid (pancreatic juice), this juice is carried into the alimentary canal by the pancreatic duct (canal of Wirsung) to the common bile duct through which it enters the duodenum of the small intestine The flow of pancreatic juice is stimulated by a hormone, secretin, formed in the duodenum The pancreatic juice contains several digestive enzymes, the chief of which are trypsin, amylase, and lipase Scattered in the pancreas are groups of cells, the islands of Langerhans, that produce the endocrine secretion, INSULIN, which regulates sugar metabolism in the body and the storage of glycogen in the liver

panda (păn′dŭ) The panda (*ailurus*), also known as the lesser panda and cat bear, resembles the raccoon but has a longer body and tail and a more rounded head The fur is rust to deep chestnut with black on the under parts, limbs, and ears, and there are dark eye patches on the white face It spends much of its time in trees It is found in the Himalayas, and a Chinese subspecies inhabits Yünnan, Szechwan, and N Burma The giant panda (*Aluropoda*) lives in bamboo forests of Szechwan and Kansu at altitudes between 6,000 and 14,000 ft Some authorities classify it as a member of the raccoon family, to which the lesser panda belongs, others place it in a separate family The bearlike body is chiefly white, the limbs are brownish black, with the dark color extending up over the shoulder The ears and a patch around each eye are black Adults weigh from 200 to 300 lb and are from 4½ to 5 ft long with a tail of about 5 in It feeds on bamboo shoots In captivity it is gentle, often playful, and sleeps a great deal The few that have been captured have been short-lived

Pandarus (păn′dŭrŭs), in Greek mythology, Trojan hero In the Trojan War (as recounted in the *Iliad*) he broke the truce by wounding Menelaus with an arrow Later Pandarus was killed by Diomed The word *pander* is derived from another Pandarus, the procurer in the story of Troilus and Cressida

Pandean pipes see PANPIPES

Pandects see CORPUS JURIS CIVILIS

Pandemos (păn″dē′mŏs) [Gr ,=all the people], name of Aphrodite as the goddess of carnal or earthly love

Pandharpur (pŭn′durpōōr), town (pop 33,329), E central Bombay state, India Many Hindu pilgrims attend the fairs held three times annually in connection with the temple of Vishnu

Pandit, Vijaya Lakshmi (vĭjĭ′u lŭk′shmē pŭn′dĭt), 1900–, Indian diplomat, b Allahabad, sister of Jawaharlal Nehru Following her brother's lead, she threw herself in the '20s ardently into the activities of the Indian National Congress and especially devoted herself to women's organizations Mme Pandit was three times imprisoned for participating in civil-disobedience movements She served twice (1937–39, 1946–47) as minister of health and of local self-government in the United Provs, the first woman in India to hold ministerial office From 1947 to 1949 she was the Indian ambassador to the USSR At meetings of the General Assembly of the United Nations in 1948 her eloquent attacks on the Union of South Africa for its alleged discrimination against Indian nationals excited much comment In 1949 she was made the Indian ambassador to the United States She has collected some of her addresses in *So I Became a Minister* (1939)

Pando, José Manuel (hōsā′ mänwĕl′ pän′dō), 1848?–1917, Bolivian statesman, president of Bolivia (1899–1904) He earned military fame in the War of the Pacific, and in 1898 he joined the revolutionary junta which overthrew the conservative regime in 1899. The result was a liberal government under Pando, with the capital at La Paz instead of Sucre In his administration financial reforms were accomplished, but trouble with Brazil over Acre resulted (1903) in the loss of that region, with the only solace the promise of the Madeira-Mamoré RR as an outlet for E Bolivia. The groundwork was laid for the settlement of the boundary with Chile, which took place in the administration of Ismael Montes

Pandora (păn″dō′rŭ) [Gr ,=all gifts], in Greek mythology, first woman on earth Zeus ordered Hephaestus to create her as vengeance upon man and his benefactor, Prometheus The gods endowed her with every charm, together with curiosity and deceit Zeus sent her as a wife to Epimetheus, Prometheus' simple brother, and gave her a box which he forbade her to open She opened the box and let out all the evils which have since attended man Only one thing, Hope, remained inside the box

Pandulf (păn′dŭlf″), Ital *Pandolfo*, d 1226, Italian churchman He was first sent to England in 1211 by Pope INNOCENT III on an unsuccessful mission to settle the dispute with King John In 1213 he again went to England, as papal legate to receive John's submission to the pope, and the next year he collected revenues in England After being superseded in 1214 for a short time, he returned to England, where he was elected (1215) bishop of Norwich He remained loyal to John throughout the Magna Carta negotiations and aided royal efforts to revoke the charter Pandulf was again superseded but returned to England in 1218 as papal legate and governed (1219–21) in the minority of Henry III until Stephen LANGTON, archbishop of Canterbury, secured his recall Pandulf's administration had been severe but efficient After resigning his legateship, he was consecrated bishop of Norwich in 1222 See F A Gasquet, *Henry the Third and the Church* (1905)

panel, in architecture, designates a framed compartment (often sunken, but sometimes flush or raised) of a wall, ceiling, wainscoting, door, or window It is usually formed of a thin board beveled to fit the grooves of its frame Such panels may be enhanced with molding, carving, inlaying, or painting, or may be pierced or of lattice work

Pangalos, Theodore (pang′gälôs), 1878–, Greek general and politician He was instrumental in the overthrow (1922) of King Constantine In 1925, by a coup d'état, he ousted Paul Kondouriotis, suspended the constitution, and assumed dictatorial powers He was overthrown in turn (1926) by George Kondylis, who recalled Kondouriotis Pangalos was imprisoned until 1928

Pange lingua (pŭn′jă ling′gwa) [Latin,=sing, O tongue], Corpus Christi hymn of the Roman Church, written by St Thomas Aquinas It is used on various occasions in honor of the Sacrament, the last two stanzas, called, as a separate hymn, *Tantum ergo* (tän′tōōm ûr′gō), are sung at Benediction of the Blessed Sacrament *Pange lingua* has six stanzas of six alternately rhymed trochaic lines, alternately of eight and seven syllables Its first line and its meter are taken from the 6th-century *Pange lingua* of Venantius Fortunatus

Pan-Germanism, German nationalist doctrine aiming at the union of all German speaking countries under German rule Pan-Germanists considered that not only the German groups in neighboring countries, such as Austria, Czechoslovakia, Poland, Switzerland, and Alsace, but even distant German-speaking groups such as Volga Germans, Baltic Germans, Transylvanian Germans and German-Americans were linked by a blood tie to their fatherland The doctrine originated in the late 19th cent as an instrument of German imperialistic expansion, and it became particularly vocal after the First World War had deprived Germany of some border territories and its colonies National Socialism appropriated Pan-Germanism, the annexation of Austria and of German-speaking parts of Czechoslovakia in 1938 and the German demands for Danzig and the Polish Corridor in 1939 helped to precipitate the Second World War, which almost made the Pan-German program a reality

Pangim, Portuguese India see GOA

Pangnirtung (păng″nurtŭng′), frontier station (1941 pop 65), on E Baffin Island, Northwest Territories, on the north side of Cumberland Sound, est 1921 It has a trading post, a radio and meteorological station, a post of the Royal Canadian Mounted Police, an Anglican mission, and a whale-blubber rendering plant. The medical center for Baffin Island and a hospital are here A Hudson's Bay Company fox farm is near

pangolin (păng-gō′lĭn), toothless mammal of Asia and Africa which feeds on insects and is thought to be remotely related to the South American anteater Heavy, horny scales cover the top of the head, the upper part and sides of the body, and the entire surface of the long, thick tail Hairs cover the under surface of the body, and a few are scattered among the scales.

Pangopango. see PAGOPAGO.

Panguitch (păn′gwĭch), city (pop 1,979; alt. 6,624 ft), co seat of Garfield co., SW Utah, where Panguitch Creek joins Assay Creek to form the Sevier river Settled by Mormons c.1865, it was briefly abandoned (1867–71), then became a center of grain farming and of ranching There is a fish hatchery

panhandle, in geography, a strip of land projecting from the main body of an area and shaped like the handle of a pan, such as the panhandles of West Virginia, Texas, and Alaska

panic, term often applied to the acute phase of a financial disturbance characterized by sudden fear and widespread loss of confidence in the soundness of financial institutions There is a general rush to convert assets into money, with runs on banks and a hasty sale of securities, thus involving brokerage houses and stock exchanges Numerous bank failures and bankruptcies result A panic often occurs at the end of a period of prosperity marked by industrial and commercial expansion and rising prices It thus coincides with the "crash" or economic CRISIS in which the upward trend of a business cycle reaches its breaking point and is then followed by a period of business stagnation and depression Among the more severe financial panics in American history were that of 1837 and the panic which occurred on "Black Friday," Sept 19, 1873 The stock-market crash in Oct, 1929, involving the whole range of industrial securities, initiated the prolonged depression of the 1930s Conditions of panic may, however, arise at any point in the business cycle and affect severely a limited portion of the economy Such was the panic that occurred in the early months of 1933 when, at the depth of depression, several hundred banks were forced to close their doors because of inability to liquidate large quantities of frozen assets

Pani Indians see PAWNEE INDIANS

Panipat (pä′nēpŭt″), town (pop 37,837), Punjab state, India, c 50 mi N of Delhi It lies on a plain that is part of the easiest route from Afghanistan to central India, and it has often been the scene of great battles Here, in 1526, Baber defeated the Delhi Sultanate and cleared the path for his later triumphs Panipat saw a victory of Akbar over Afghan forces (1556) and the triumph of an Afghan army over the Mahrattas (1761)

Panizzi, Sir Anthony (panēt′sē), 1797–1879, British librarian, b Italy A political exile, he settled in England (1823) and was naturalized (1832) He was professor of Italian (1828–35), at University College, London, and was associated with the British Museum library as assistant librarian (1831–37), keeper of printed books (1837–56), and chief librarian (1856–67) His 91 rules (1839) became the basis of the museum's catalogue He designed the reading room and galleries of the library, enforced the act requiring deposition at the museum of copies of books copyrighted in Great Britain, and was influential in obtaining for the museum the bequest of the Grenville library in 1846 He was knighted in 1869 See biographies by L A Fagan (1880) and Constance Brooks (1931)

Panj (pänj, pŭnj), Rus *Pyandzh* (pyanch), river, on the border of Afghanistan and the USSR It flows c 400 mi, generally west, and is a headstream of the Amu Darya (Oxus river) The name also appears as Panjab and Ab-i-Panj

Panjab, India see PUNJAB

Panjabi (pŭnja′bē), language of the Indic group of the Indo-Iranian subfamily of the Indo-European languages See LANGUAGE (table).

Panjnad, river, India see SUTLEJ

Pankhurst, Emmeline (Goulden) (pängk′hûrst; gōōl′dun), 1857–1928, English woman-suffragist, leader of the militant movement With her husband, Richard Marsden Pankhurst, she was active in agitation for woman suffrage and in Manchester local politics, serving as a poor-law guardian (1895–1905) and as a member of the Board of Education (1903–5) Convinced by her experiences that suffrage was vital to women's interests, she joined the Independent Labour party, when the party failed to make this a leading issue, she organized (1905) the Women's Social and Political Union, which for nine years waged a militant campaign for woman suffrage, inviting arrest and imprisonment for its methods, but securing a devoted following and much popular sympathy Mrs Pankhurst's genius for organization, her power of oratory, and her personal charm gave her great influence over her large following At the outbreak of the First World War, Mrs Pankhurst ceased her efforts for woman suffrage and devoted her talents to furthering the war effort, and in 1928 she stood for Parliament with the support of the Conservative party After her death a statue was erected to her memory in Westminster, and her portrait was hung in the National Portrait Gallery See *My Own Story* (1914), Ray Strachey, *Struggle* (1928), Sylvia Pankhurst, *The Suffragette Movement* (1931) and *The Life of Emmeline Pankhurst* (1936) Her oldest daughter, **Christabel Pankhurst,** 1880–, was educated for the bar, but was refused admittance because of her sex She shared her mother's activities in the suffrage movement, later becoming an evangelist In 1936 she was made a Dame Commander The youngest daughter, **Sylvia Pankhurst,** 1882–, also a militant suffragist before 1914, became ac-

tive in international and pacifist movements. She wrote *India and the Earthly Paradise* (1926) and *The Home Front* (1933).

Pannag (pä'năg), unidentified article in the trade between Palestine and Tyre Ezek 27 17

Pannonhalma (pô'nônhôl"mô), Benedictine abbey, NW Hungary, c 10 mi SE of Gyor Founded in 980, it is the center of the Benedictine order in Hungary and has a large and precious library

Pannonia (pănō'nēu), ancient Roman province, central Europe, S and W of the Danube, including parts of modern Austria, Hungary, and Yugoslavia Its natives were identified by the Romans with Illyrians Their final subjugation took place in A D 9 Later there were provinces of Upper Pannonia and Lower Pannonia Important centers were Carnuntum, Vindobona (Vienna), Aquincum (Budapest), and Sirmium Pannonia was abandoned by the Romans after 395

Panora (pănō'ru), town (pop 1,169), W central Iowa, on the Middle Raccoon river and W of Des Moines, inc 1872

Panormus (punôr'mŭs), ancient name of PALERMO, Italy Another Panormus was a port of Asia Minor, on the south shore of the Propontis (now the Sea of Marmara) It is the modern Turkish Bandirma, formerly also called Panderma

panpipes, Pandean pipes (păndē'un), or **syrinx** (sĭ'rĭngks), musical wind instrument, consisting of graduated tubes closed at one end and fastened together The player holds the instrument vertically and blows into the open end of the tube, each tube has its own pitch Of Chinese origin, the instrument was known to the Greeks (who connected its origin with the legend of the god Pan and the nymph Syrinx) and survives in some parts of Europe and South America

Pan-Slavism (păn"slä'vĭzm, -sla'vĭzm) In the mid-19th cent, when modern nationalism entered its apogee, Russia was the only independent Slavic state Poland was partitioned, the Czechs, Slovaks, Slovenes, and Croatians were under Austrian and Hungarian rule, the Serbs and Bulgarians were still dependent on the Ottoman Empire The Revolution of 1848, which spread throughout Austria and Hungary, promoted schemes for the liberation of all Slavic peoples from foreign rule In June, 1848, the first Pan-Slav (i e, all Slavic) congress met at Prague under the presidency of Frantisek PALACKY Most of the delegates were Czech. Soon after proclaiming the solidarity of all Slavs, the congress disbanded when Prague was retaken by the Austrian army None of the Slavic people obtained any advantages from the Revolution of 1848, but the Pan-Slav idea bore fruit It met wide support in Russia, which was to assume the role of protector of the Slavic peoples, although its own treatment of the Poles scarcely corresponded to the Pan-Slav ideal The Slavophils in Russia were for the most part a violently nationalist and reactionary group, powerful through its press, which stressed the mission of "Holy Russia" to protect all Slavs and the Orthodox Eastern faith. They played an important role in bringing about the Crimean War and the Russo-Turkish War of 1877–78, which resulted in the independence of Serbia and Montenegro and the autonomy of Bulgaria In these countries the Russian influence became paramount The Russian Pan-Slav policy, having dealt with the Ottoman Empire, now clashed with interests of Austria-Hungary Serbia became the leading advocate of Pan-Slavism in the Balkans The Austrian annexation (1908) of BOSNIA AND HERCEGOVINA dealt a severe blow to Serbian ambitions Austria-Hungary, on the other hand, saw its existence threatened by the Pan-Slav movement, and when, in 1914, a Serbian nationalist assassinated Archduke FRANZ FERDINAND, the Austro-Hungarian government resolved on a war which would crush Serbia This was the immediate cause of the First World War, in which Russia immediately backed up its Serbian ally Bulgaria, on the other hand, having suffered a setback in its ambitions in the BALKAN WARS of 1912–13, eventually joined the Central Powers Pan-Slavism had no part in the independence movement in Poland, where Russia was regarded as the principal oppressor Among the Czechs, however, it had a large following, and it was in Russia that the Czech Legion was formed to fight on the Allied side The end of the First World War brought independence to the Slav nations Soviet Russia disclaimed its role as a champion of Slavdom, but Russian nationalism and Pan-Slavism revived in the Second World War, and many of the Slavs in German-occupied countries looked to the Russians as their liberators In the post-war years, all the Slavic nations came into the Soviet orbit, but Yugoslavia soon broke away from it To ascribe the hegemony of the USSR in Poland, Czechoslovakia, and the Balkans to Pan-Slavism is, however, anachronistic and misleading Rumania, Hungary, and Albania, though non-Slavic nations, came as much under Russian influence as their Slavic neighbors.

pansy [from Fr. *pensée*=thought, pansy], popular garden plant (*Viola tricolor hortensis*), derived from a VIOLET and sometimes called heartsease. Pansies, mostly perennial but often grown as annuals and biennials, are thought to be among the garden flowers longest cultivated, A resemblance to a human face is often seen in the blossoms The modern pansy has been developed to produce large, frequently multicolored flowers—blossoming through the summer if kept picked so that seeds do not form The tufted pansy has been developed from a species native to Spain and the Pyrenees

Pantaleoni, Maffeo (mäf-fä'ō pantälāō'nē), 1857–1924, Italian economist and politician He was finance minister in the D'Annunzio government at Fiume (1919), one of the first senators named by Mussolini, and a delegate (1923) to the League of Nations In *Pure Economics* (1889, Eng tr, 1898), Pantaleoni made a distinguished contribution to the theory of marginal utility He also did notable work in statistics and finance

Pantaloon (păntulōōn"), stock character appearing in the Italian *commedia dell' arte* by 1551 A mean, garrulous, miserly old man, he wore pantaloons, soft slippers, and spectacles In English pantomime he is the butt of clowns' jests See Allardyce Nicoll, *Masks, Mimes, and Miracles* (1931)

Pantelleria (pan"tāl-lārē'a), volcanic island (30 sq mi, pop 9,806) in the Mediterranean, 68 mi SW of Sicily and 44 mi W of the African coast, belonging to Italy The highest point is 2,736 ft There are extinct craters and hot mineral springs A colony of the Phoenicians and Carthaginians, it passed to the Romans, Saracens, Normans, Turks, and Italians Because of its strategic position between Sicily and Tunisia, it was strongly fortified by Italy, the military and air base was bombed into surrender by the Allies in 1943 Sweet wine, raisins, and dried figs are produced and exported

pantheism (păn'thēĭzm) [Gr *pan*=all, *theos*=God], name used to denote any system of belief or speculation which includes the teaching "God is all, and all is God" Pantheism, in other words, identifies the universe with God or God with the universe The term *pantheist* is thought to have been employed first by John TOLAND in the 18th cent, but pantheistic views are of very great antiquity While all pantheism is monistic, it is expressed in different ways, according to what is meant by the one whole which gathers up in itself all that exists, or what is meant by God If the pantheist starts with the belief that the one great reality, eternal and infinite, is God, he sees everything finite and temporal as but some part of God There is nothing separate or distinct from God, for God is the universe If, on the other hand, the conception taken as the foundation of the system is that the great inclusive unity is the world itself, or the universe, God is swallowed up in that unity, which may be designated nature Some forms of pantheism have had their beginnings in religion, others have been based upon a scientific or a poetic point of view Noteworthy among the former is Brahmanism, of the ancient Hindu civilization, in which the only reality, the supreme unity, is Brahma (see HINDUISM) This conception is closely connected with the idea of EMANATION Pantheism had a place in the speculations of some Greek philosophers XENOPHANES taught that the one God could know no motion or change The conception of Parmenides left no room for development or ethical meaning The system of the Stoics gave a more definite expression to pantheistic doctrine, emphasizing the identity of God and the world There is pantheism in the teachings of the NEOPLATONISTS and of such Christian philosophers as ERIGENA The writings of Giordano Bruno of the 16th cent carried such weight as to influence the development of modern thought, especially through SPINOZA, in whose monistic system is found what is considered the most complete and precise expression of pantheism of all times In it God is the unlimited, all-inclusive substance, the first cause of the universe, with innumerable attributes, two of which, thinking and extension, are capable of being perceived Pantheism of a kind can be traced in the idealistic philosophy of Fichte and Schelling, Hegel and SCHLEIERMACHER Together with mysticism, it fills a large place in literature, particularly the poetry of nature, where Wordsworth and Coleridge lead the way

pantheon (păn'thēŏn", -thēun) [Gr, =of all gods], term applied originally to a temple to all the gods and now to a building dedicated to a nation's illustrious dead The **Pantheon** at Rome was built by Agrippa in 27 B C and rebuilt in the 2d cent by Hadrian. Remarkably well preserved, it is mainly of brick with a great hemispherical dome whose supporting walls are set in concrete In 609 it was converted into a Christian church consecrated to Santa Maria dei Martiri. The **Panthéon** (pātāō') in Paris was designed by J G Soufflot and was begun in 1764, the dome was completed (1781) after his death An earlier church on the site was dedicated to Ste Geneviève. The Panthéon was several times secularized and afterwords reconsecrated, becoming finally a mausoleum for illustrious Frenchmen.

panther, name applied to the **LEOPARD**, less correctly to the **PUMA** and other large cats.

Pantoja de la Cruz, Juan (hwän' păntō'hä dā lä krōōth'), 1551?–1608?, Spanish portrait painter, court painter to Philip II and Philip III; pupil and follower of Alonso Sánchez Coello The Prado contains beautiful examples of his severe portraiture and also a fine *Nativity*

pantomime (păn'tŭmīm) [Gr, =all in mimic], silent form of the drama in which the play is developed by movement, gesture, and facial expression It is known to have existed among the Chinese, Persians, Hebrews, and Egyptians and has been observed in many primitive cultures In ancient Rome, where it was often explained by songs or simple action, pantomime was popular with the plebeians The traditional characters of pantomime—HARLEQUIN, CLOWN, PANTALOON, SCARAMOUCHE, and COLUMBINE—take their origin in the COMMEDIA DELL' ARTE of the 16th cent English pantomime, originated by John RICH, was more pageant than pantomime, and in 1818, when J R Planché began his extravaganzas with "speaking openings," pantomime in England became a dramatic spectacle with songs and speeches. Joseph GRIMALDI and Dan LENO were great English pantomime stars In 19th-century France, where pantomime used mechanical scenery and transformation scenes, Jean Gaspard DEBURAU introduced the character of PIERROT With the exception of a few sketches in American vaudeville of the 1870s, pantomime never became popular in the United States In silent moving pictures, where pantomime and titles were depended upon, Charles CHAPLIN made his name as a great pantomime actor See M W Disher, *Clowns and Pantomimes* (1925), C W Beaumont, *The History of Harlequin* (1926), P L Duchartre, *The Italian Comedy* (Eng tr, 1928), Allardyce Nicoll, *Masks, Mimes, and Miracles* (1931), A E Wilson, *King Panto* (1935)

pantone. see PRINTING

Pánuco (pä'nōōkō), river rising in San Luis Potosí, N central Mexico, and flowing generally east to empty into the Gulf of Mexico near Tampico It is navigable for c 200 mi, and tributaries, including the Moctezuma, drain much of the central plateau and, by artificial means, the Valley of Mexico

Panza, Sancho see DON QUIXOTE DE LA MANCHA

Panzini, Alfredo (älfrā'dō päntsē'nē), 1863–1939, Italian novelist, historian, and lexicographer, pupil of Giosue Carducci He taught many years in secondary schools A genial, humorous man, he won personal as well as literary popularity His novels include *Libro dei morti* [book of the dead] (1893), *Santippe* (1914), *Lo cerco moglie* (1920, Eng tr, *Wanted—a Wife*, 1922), and *Il diavolo nella mia libreria* [the devil in my library] (1920) His modern dictionary, which included slang, went through many editions Among his historical works are two books on Cavour and *La vera istoria dei tre colori* [the true history of the three colors, i e, the flag] (1924) Some of his short stories are translated in F M Guercio, *Anthology of Contemporary Italian Prose* (1931)

Paola (pā'ōlu), city (pop 3,511), co seat of Miami co, E Kansas, SSW of Kansas City, laid out 1855, inc as a village 1855, as a city 1860 It is a rail center for a farm area

Paoli, Pasquale (paskwa'lā pa'ōlē), 1725–1807, Corsican patriot He shared (1739–55) the exile of his father, Giacinto Paoli, who had supported Baron NEUHOF ("King Theodore") against the Genoese In 1755 he was recalled by the Corsicans, who chose him president under a republican constitution His capital was at Corte He governed with wide powers, but respected the constitution Material prosperity, public order, and education were greatly furthered In 1768 Genoa, despairing of reducing the island to submission, sold Corsica to France Paoli fought brilliantly against the superior forces of the French, but in 1769 he was decisively defeated and fled to England, where his popularity was great James Boswell, who had corresponded with him and visited him in Corsica, introduced him into the circle of Samuel Johnson After the outbreak of the French Revolution, Louis XVI appointed (1791) Paoli governor of Corsica Paoli subscribed to the liberal revolutionary principles, but opposed the radical turn the French Revolution took and, especially, the centralizing policy of the revolutionary government Accused (1793) of counterrevolutionary activities and summoned to Paris, he proclaimed the independence of Corsica and solicited British aid With the help of Admiral Hood the French were defeated (1794) The pro-French party (including the Bonaparte family) was banished, and the Corsican national assembly (*consulta*) declared the island a British protectorate and chose an English governor Paoli, who favored independence and who had hoped to be appointed viceroy, saw his influence superseded by that of POZZO DI BORGO He was called to England in 1795 and remained there till his death After his departure the islanders rose against the British and in 1796 drove them out with French help. See James Boswell, *An Account of Corsica* (1768)

Paoli (pā'ō'lē), town (pop 2,218), co seat of Orange co, S Ind., S of Bedford, settled 1807, inc 1869 It is a farm trade center and has mineral springs.

Paolieri, Ferdinando (färdēnän'dō päōlyā'rē), 1878–1928, Italian novelist, belonging to the school of

D'Annunsio. He wrote several novels and volumes of short stories in which the life of Tuscany is vividly presented.

Paolo Veronese: see VERONESE, PAOLO

Paonia (pāō'nēu), town (pop 1,117), W Colo, ESE of Grand Junction, in an orchard and dairy area; inc 1902

Paoting or **Pao-ting** (bou'dĭng'), city and county (pop. 409,745), Hopeh prov, China The city is the capital of the province and is a port on the Fu river, a tributary of the Pei. It manufactures cotton cloth and medicines. The city was formerly called Tsingyuan

Papa, Hung *Pápa* (pä'pŏ), city (pop 23,735), NW Hungary Today an industrial center with textile manufactures, it has an 18th-century château built by Count Maurice Esterhazy Alexander Petofi and Maurice Jokai attended school here

papacy (pā'pusē), office of the pope, the head of the Roman Catholic Church He is pope by reason of being bishop of Rome As successor in the see of Rome (the Holy See) of St Peter, its first bishop, the pope claims to be the shepherd of all Christians and representative (vicar or viceregent) of Christ (for biblical references to the Petrine supremacy, see PETER, SAINT) It is further held that God will not permit the pope to make an error in a solemn official declaration concerning a matter of faith or morality (see INFALLIBILITY) The bishop of Rome is also patriarch of the West, and the great majority of his subjects are under his authority as patriarch as well as pope (see PATRIARCH) The distinction between these areas of authority is practical only in the case of some of the patriarchs of Oriental rite, who may, for example, appoint bishops with no need of papal confirmation For these and other features of the ecclesiastical constitution and for the teaching and geographical distribution of the Church, see ROMAN CATHOLIC CHURCH The pope lives generally in Rome, of which a tiny portion (the Vatican City) is politically independent and under his rule, he is thus head of a state and owes no political allegiance (For this territory, its churches, palaces, and collections, see VATICAN and ROME, for the central papal administration, see also CARDINAL) From the earliest times the bishop of Rome has claimed to be the representative of Christ, and Catholic historians hold that the peculiar position of the Holy See was recognized by all Christians until the process of caesaropapism (the emperor controlling the Church) in Constantinople developed in the East a definite antagonism to Rome, where the bishop was politically independent Non-Catholic historians vary greatly as to their interpretation of the history of the attitude of Christendom towards the papacy, they contend that when in the early sources Rome is said to be the chief see, because it is Peter's, the bishop is being accorded honor over other bishops, not authority The see of Rome became increasingly revered as missionaries sent directly from the city founded new churches throughout the West The Roman Church, which was being enriched by gifts of converts, supported struggling young churches everywhere (e g, in Arabia) and founded charitable foundations all over Italy Finally Rome ceased to be an important political capital, and the pope inherited the emperor's position as the symbol of civilization in the West He acquired also a new, fateful political status in the donation of Pepin the Short, the foundation of the PAPAL STATES From the very first the side the popes took in doctrinal disputes was always determined to be orthodox, and the hardihood with which they upheld their convictions enhanced the prestige of the Holy See, this was notably true in the struggles over ARIANISM, MONOPHYSITISM, and MONOTHELETISM The combination of serene assurance and intrepidity when under attack became established in this period (300–700) as a mark of great popes, e g, in SS Julius I, Innocent I, Leo I, Gregory I, and Martin I The Donation of Pepin and the new ecclesiastical establishment among the Germans (founded by St BONIFACE) are both evidences of the recognition by all the West until the Reformation that Christendom was one under the pope, though that recognition had little bearing on the theological problem of papal supremacy By crowning Charlemagne (800) Leo III sponsored the empire which, in the form of the HOLY ROMAN EMPIRE, was to be the chief antagonist of the papacy for centuries The 10th cent was the nadir of the papacy corruption ruled Rome, and the Holy See was bought and sold for money and power Reaction came in the 11th cent, made notable for the papacy by the Hildebrandine reform, initiated and carried through by Gregory VII. This is the first great instance of the reforms of the whole Church undertaken from time to time by the papacy Other efforts of the papacy were the CRUSADES, the missions to Prester John and to China, Persia, and the Moors, and attempts at a reunion between the East and West. Throughout the Middle Ages the popes were in a continual struggle with the temporal power. In the empire its characteristic form was the quarrel over INVESTITURE, in which Gregory VII played the greatest part. In the 12th cent Alexander III came forward as the protector of N Italy against Frederick I, and later Innocent III made himself virtual temporal arbiter of the West Between the papacy and England the favorite theme of contention was the relation between the clergy and the state, the pope standing as the defender of the clergy At the beginning of the 14th cent a new series of problems faced the papacy Boniface VIII found himself opposed by a king, Philip IV of France, who heeded no anathema and cared for no papal claim Temporary victory went to France, and from 1309 to 1378 the popes, all French, lived at Avignon (the "Babylonian captivity") The return to Rome, brought about partly by St CATHERINE OF SIENA, turned into calamity with the Great SCHISM In this disorder (1378–1417) there were two or even three rival popes, it ended in the Council of Constance (see CONSTANCE, COUNCIL OF) Since then, apart from the abortive revolt at the Council of Basel (see BASEL, COUNCIL OF), there has been no schism in the papacy The schism delayed the long-needed reform in the Church The pope had little real power outside Italy, and no 15th-century pope essayed a dynamic role of reform, which must begin by challenging the vested interests of bishops, cardinals, and princes The papal court itself reached a low point of spirituality in the 15th cent; there was wonderful cultivation of art, and Rome became a brilliant Renaissance capital, where pagan culture and morals were more esteemed than Christian virtue This corruption provided a strong stimulus for Luther and his colleagues in the REFORMATION These revolutionaries (like their predecessors, the WALDENSES, the LOLLARDS, and the HUSSITES) were, however, not mere reformers of clerical immorality They denounced the whole accepted view of God's relation to man as well, beginning an intellectual movement which still has broadening effects Within the Church, reformation began in earnest with the election (1534) of Paul III, first of a series of popes who carried out a reconstruction of church life (see REFORM, CATHOLIC, and TRENT, COUNCIL OF) The other major work of the 16th-century popes was the new development of foreign missions, which, as in ancient times, enhanced papal prestige In reform and in missions no one served better than the Jesuits (see JESUS, SOCIETY OF) The 16th cent saw also the stabilization of the Papal States as they would remain until the revolutionary period Unfortunately for the popes, one vital aspect of reform had been (of necessity) left untouched This was the position in the Church of the rulers of states largely Catholic The story was always the same One or one of these "Catholic princes," whether devout, like Philip II of Spain, or notoriously immoral, like many of them, was sure of his power, he determined to include the Church within it (e g, insisting on the deciding voice in selecting the clergy) The king of Spain even ran his own Inquisition It was accepted that these rulers should hold a veto in papal elections By the 18th cent every Catholic prince was at odds with the papacy Spain had the longest record of this sort, lasting into the 20th cent In France the triumphant Bourbons developed GALLICANISM as a theory to justify their ecclesiastical pretensions, Louis XIV was its chief proponent, but the revolutionists of 1790 used it (in the Civil Constitution of the Clergy, banned by Pius VI), and so did Napoleon as soon as he had signed the CONCORDAT OF 1801 Most extreme, and least enduring, were the schemes of Emperor Joseph II In the 18th cent the papacy seemed doomed, its weakness became a spectacle when Clement XIV was hounded into suppressing the Jesuits, the only group in the Church consistently loyal to the pope In the 19th cent the old absolutist states went down, and as they did the papacy imperceptibly gained Even the loss of the Papal States (1870) proved to be a blessing, though it took 60 years to solve the Roman Question, the problem of assuring the pope nonnational status in a nationally organized world (see LATERAN TREATY) The VATICAN COUNCIL enounced papal infallibility in 1870 Since then antipapal activity has vanished from within, and popes in dealing with hostile states have faced not "Catholic princes" but anti-Catholicism (e g, in Bismarck's KULTURKAMPF and in French, Portuguese, and Mexican anticlericalism) or overt opposition to all religion (in the 20th-century totalitarian states) The situation of the papacy in the 20th cent is in several ways different from what it has been before The old Catholic countries of Europe have dwindled in relative size in the Church until their numbers are a minority, elsewhere (as in Ireland and the United States) there is generally no old local vested Catholic interest, and the pope is the single unifying force in the Church Another new development is the personal popularity of the reigning pontiff, first noticeable when Pius VI and Pius VII were being publicly humiliated by the French Beginning with Leo XIII an unusually dynamic sequence of popes has fulfilled strongly the role of preacher and leader, reorienting Catholics in the modern world and urging them to profounder social and political responsibility; hence the "labor encyclicals" of Leo and Pius XI and the continuous encouragement of scientific endeavor. In the same activity they have encouraged laymen to take more part in religious affairs (Catholic Action) and to make themselves more holy (by frequent communion) The rise of the totalitarian states was the most striking problem of Pius XI, who denounced in them the old absolutism untempered even by lip service to the rule of law After the Second World War the governments in the Communist-dominated countries strove always to cut off the pope from the faithful and used for the purpose every sort of maneuver, propaganda, and violence It is known that in some of these countries (e g, Hungary and Czechoslovakia) many of the clergy and laymen showed an obdurate attachment to the Holy See, a stubbornness that was regarded in much of the world as the true cause of the persecutions of leaders like Archbishop Stepinac and Cardinal Mindszenty See COUNCIL, ECUMENICAL, and ORTHODOX EASTERN CHURCH Monumental histories of the papacy in limited periods have been written by Ludwig von Pastor (Catholic, Eng tr still incomplete in 1950), H K Mann, and Mandell Creighton (non-Catholic) See Carl C Eckhardt, *The Papacy and World Affairs* (1936), Josef Bernhart, *The Vatican as a World Power* (1939), John Farrow, *Pageant of the Popes* (1942), *Annuario pontificio* (annually issued in Italian since 1947) The following is a list of the popes The date of election is given rather than that of consecration Before St. Victor I dates may err by one year Official lists no longer number the popes in sequence St PETER, d 67?, St LINUS, 67?–76?, St CLETUS or Anacletus, 76?–88?, St CLEMENT I, 88?–97?, St Evaristus, 97?–105?, St Alexander I, 105?–115?, St Sixtus I, 115?–125?, St Telesphorus, 125?–136?, St Hyginus, 136?–140?, St Pius I, 140?–155?, St. Anicetus, 155?–166?, St Soter, 166?–175?, St. Eleutherius, 175?–189?; St Victor I, 189–99, St Zephyrinus, 199–217, St CALIXTUS I, 217–222 (antipope, St HIPPOLYTUS, 217–35), St Urban I, 222–30, St Pontian, 230–35, St Anterus, 235–36, St FABIAN, 236–50, St Cornelius, 251–53 (antipope, NOVATIAN, 251), St Lucius I, 253–54, St Stephen I, 254–57, St Sixtus II, 257–58, St Dionysius, 259–68, St Felix I, 269–74, St Eutychian, 275–83, St Caius, 283–96, St Marcellinus, 296–304, St Marcellus I, 308–9, St Eusebius, 309 or 310, St Miltiades or Melchiades, 311–14, St SYLVESTER I, 314–35, St Marcus, 336, St JULIUS I, 337–52, LIBERIUS, 352–66 (antipope, FELIX II, 355–65), St DAMASUS I, 366–84 (antipope, Ursinus, 366–67), St Siricius, 384–99, St Anastasius I, 399–401, St INNOCENT I, 401–17, St Zosimus, 417–18; St Boniface I, 418–22 (antipope, Eulalius, 418–19), St CELESTINE I, 422–32, St Sixtus III, 432–40, St LEO I, 440–61, St Hilary, 461–68, St Simplicius, 468–83, St Felix III (II), 483–92, St GELASIUS I, 492–96, Anastasius II, 496–98, St Symmachus, 498–514 (antipope, Lawrence, 498, 501–5), St Hormisdas, 514–23, St. John I, 523–26, St Felix IV (III), 526–30, Boniface II, 530–32 (pope or antipope, Dioscurus, 530), John II, 533–35, St AGAPETUS I, 535–36, St. SILVERIUS, 536–37, VIGILIUS, 537–55, Pelagius I, 556–61, John III, 561–74, Benedict I, 575–79, Pelagius II, 579–90, St GREGORY I, 590–604, Sabinianus, 604–6, Boniface III, 607, St Boniface IV, 608–15, St Deusdedit or Adeodatus I, 615–18; Boniface V, 619–25, HONORIUS I, 625–38, Severinus, 640, John IV, 640–42, Theodore I, 642–49, St MARTIN I, 649–55, St Eugene I, 654–57, St Vitalian, 657–72, Adeodatus II, 672–76, Donus, 676–78, St Agathon, 678–81, St Leo II, 682–83, St Benedict II, 684–85, John V, 685–86; Conon, 686–87 (antipopes Theodore, 687, Paschal, 687), St Sergius I, 687–701, John VI, 701–5, John VII, 705–7, Sisinnius, 708, Constantine, 708–15, St GREGORY II, 715–31, St Gregory III, 731–41, St ZACHARIAS, 741–52, Stephen II, 752 (never consecrated), Stephen III (II), 752–57, St Paul I, 757–67 (antipopes, Constantine, 767–69, Philip, 768), Stephen IV (III), 768–72; ADRIAN I, 772–95, St LEO III, 795–816, Stephen V (IV), 816–17; St Paschal I, 817–24, Eugene II, 824–27, Valentine, 827, Gregory IV, 827–44 (antipope, John, 844), Sergius II, 844–47, St LEO IV, 847–55, Benedict III, 855–58 (antipope, Anastasius, 855), St NICHOLAS I, 858–67, Adrian II, 867–72; JOHN VIII, 872–82, Marinus I, 882–84, St Adrian III, 884–85, Stephen V (VI), 885–91, FORMOSUS, 891–96; Boniface VI, 896, Stephen VII (VI), 896–97; Romanus, 897, Theodore II, 897, John IX, 898–900, Benedict IV, 900–903, Leo V, 903 (antipope, Christopher, 903–4), Sergius III, 904–11; Anastasius III, 911–13, Lando, 913–14, John X, 914–28, Leo VI, 928, Stephen VIII (VII), 928–31, John XI, 931–35, Leo VII, 936–39, Stephen IX (VIII), 939–42, Marinus II, 942–46, Agapetus II, 946–55, JOHN XII, 955–64; Leo VIII, 963–65, or Benedict V, 964–66 (one of these was an antipope), John XIII, 965–72, Benedict VI, 973–74 (antipope, Boniface VII, 974, 984–85); Benedict VII, 974–83, John XIV, 983–84, John XV, 985–96, Gregory V, 996–99 (antipope, John XVI, 997–98), SYLVESTER II, 999–1003, John XVII, 1003, John XVIII, 1004–9, Sergius IV, 1009–12; Benedict VIII, 1012–24 (antipope, Gregory, 1012); John XIX, 1024–32, Benedict IX, 1032–44, 1045, 1047–48 (popes or antipopes. Sylvester III, 1045, Greg-

ory VI, 1045–46, Clement II, 1046–47), Damasus II, 1048; St Leo IX, 1049–54, Victor II, 1055–57, Stephen X (IX), 1057–58 (antipope, Benedict X, 1058–59), Nicholas II, 1059–61, Alexander II, 1061–73 (antipope, Honorius II, 1061–72), St Gregory VII, 1073–85 (antipope, Clement III, 1080–1100 see Guibert of Ravenna), Victor III, 1086–87, Urban II, 1088–99, Paschal II, 1099–1118 (antipopes Theodoric, 1100, Albert, 1102, Sylvester IV, 1105–11), Gelasius II, 1118–19 (antipope, Gregory VIII, 1118–21), Calixtus II, 1119–24, Honorius II, 1124–30 (antipope, Celestine II, 1124), Innocent II, 1130–43 (antipopes Anacletus II, 1130–38, Victor IV, 1138), Celestine II, 1143–44, Lucius II, 1144–45; Eugene III, 1145–53, Anastasius IV, 1153–54; Adrian IV, 1154–59, Alexander III, 1159–81 (antipopes Victor IV, 1159–64, Paschal III, 1164–68, Calixtus III, 1168–78; Innocent III, 1179–80), Lucius III, 1181–85, Urban III, 1185–87, Gregory VIII, 1187, Clement III, 1187–91, Celestine III, 1191–98, Innocent III, 1198–1216, Honorius III, 1216–27; Gregory IX, 1227–41, Celestine IV, 1241, Innocent IV, 1243–54, Alexander IV, 1254–61, Urban IV, 1261–64, Clement IV, 1265–68, Gregory X, 1271–76, Innocent V, 1276, Adrian V, 1276, John XXI, 1276–77, Nicholas III, 1277–80, Martin IV, 1281–85, Honorius IV, 1285–87, Nicholas IV, 1288–92, St Celestine V, 1294, Boniface VIII, 1294–1303, Benedict XI, 1303–4, Clement V, 1305–14, John XXII, 1316–34 (antipope, Nicholas V, 1328–30 see Rainalducci, Pietro), Benedict XII, 1334–42, Clement VI, 1342–52, Innocent VI, 1352–62, Urban V, 1362–70, Gregory XI, 1370–78, Urban VI, 1378–89, Boniface IX, 1389–1404, Innocent VII, 1404–6, Gregory XII, 1406–15 (Avignon succession of antipopes Clement VII, 1378–94 see Robert of Geneva, Benedict XIII, 1394–1423 see Luna, Pedro de), Clement VIII, 1423–29, Benedict XIV, 1425–30, Pisan succession of antipopes. Alexander V, 1409–10, John XXIII, 1410–15 see Cossa, Baldassarre, see Schism, Great), Martin V, 1417–31, Eugene IV, 1431–47 (antipope, Felix V, 1439–49 see Amadeus VIII), Nicholas V, 1447–55, Calixtus III, 1455–58, Pius II, 1458–64, Paul II, 1464–71, Sixtus IV, 1471–84, Innocent VIII, 1484–92, Alexander VI, 1492–1503, Pius III, 1503, Julius II, 1503–13, Leo X, 1513–21, Adrian VI, 1522–23, Clement VII, 1523–34, Paul III, 1534–49, Julius III, 1550–55, Marcellus II, 1555, Paul IV, 1555–59, Pius IV, 1559–65, St Pius V, 1566–72, Gregory XIII, 1572–85, Sixtus V, 1585–90, Urban VII, 1590; Gregory XIV, 1590–91, Innocent IX, 1591, Clement VIII, 1592–1605, Leo XI 1605, Paul V, 1605–21, Gregory XV, 1621–23, Urban VIII, 1623–44, Innocent X, 1644–55, Alexander VII, 1655–67, Clement IX, 1667–69, Clement X, 1670–76, Innocent XI, 1676–89, Alexander VIII, 1689–91, Innocent XII, 1691–1700, Clement XI, 1700–1721, Innocent XIII, 1721–24, Benedict XIII, 1724–30, Clement XII, 1730–40, Benedict XIV, 1740–58, Clement XIII, 1758–69, Clement XIV, 1769–74, Pius VI, 1775–99, Pius VII, 1800–1823, Leo XII, 1823–29, Pius VIII, 1829–30, Gregory XVI, 1831–46, Pius IX, 1846–78; Leo XIII, 1878–1903, Pius X, 1903–14, Benedict XV, 1914–22, Pius XI, 1922–39, Pius XII, 1939–

Papago Indians (pä'pugō, pä-), tribe of North American Indians speaking a language closely related to that of their neighbors, the Pima Indians The Papago formerly occupied S Arizona and N Sonora, Mexico They are a semisedentary tribe who farm corn, beans, and cotton and gather wild vegetable products (e g , the beans of the mesquite and the fruit of the giant cactus) The Papago Indians suffered dreadful oppressions from their enemy, the Apache The Papago were early visited by Spanish missionaries By an executive act of 1874 the United States created a reservation for them in S Arizona There are some 6,500 Papago in the United States, and some 1,000 in Mexico See Ruth Underhill, *Social Organization of the Papago Indians* (1939) and *Papago Indian Religion* (1946)

papal election. The pope is chosen by the college of cardinals meeting in secret conclave not less than 15 or more than 18 days after the death of a pontiff The election is by secret ballot, and two thirds of the votes are required to elect By the election the new pope has full jurisdiction, no further formality is necessary The elected pope may decline, if so, the balloting continues The secrecy of the conclave is assured by shutting off the cardinals completely from the outside world, and expedition is encouraged by severe restrictions of the cardinals' diet after a few days Theoretically any adult male Catholic is eligible, but long-standing practice limits the candidates to cardinals, the last non-Italian elected was Adrian VI in 1522 In the vacancy of the Holy See the entire college of cardinals holds the papal jurisdiction, but its powers are extremely limited The popes were at first elected like other bishops, by the clergy and laity of the diocese, serious political interference was discouraged in 769 by exclusion of laymen from papal election. Later, in successive reform measures the election was limited to the cardinals (by Nicholas II in 1059), the two-thirds rule was established (by Alexander III in 1179), and the conclave was set up in its modern form (by Gregory X, in 1274).

Papal States, former independent territory under the temporal rule of the popes, also called the States of the Church and the Pontifical States It extended north to south across the Italian peninsula from the Adriatic Sea and the lower course of the Po to the Tyrrhenian Sea, thus including the present regions of Latium, Umbria, the Marches, and E Emilia-Romagna The nucleus of the states consisted of endowments given to the popes from the 4th cent in and around Rome, the Italian mainland, Sicily, Sardinia, and other lands, these came to be called the Patrimony of St Peter The popes gradually lost their more distant lands, but in the duchy of Rome papal power became stronger and increasingly independent of the Eastern emperors In 754 Pepin the Short gave to Pope Stephen III (who, like Pope Zacharias, recognized Pepin as rightful king of the Franks and who now needed his assistance against the Lombards) the exarchate of Ravenna and the Pentapolis Over these vast territories the popes were long unable to exercise effective sovereignty Charlemagne confirmed his father's donation in 774, moreover, to give the papal claim to temporal power greater antiquity, the so-called Donation of Constantine I (see Constantine, Donation of) was forged On its basis later popes also claimed suzerainty over Naples, Sicily and Sardinia In 1115 Countess Matilda of Tuscany, by leaving her territories to the Church, helped to precipitate a long struggle between popes and emperors In Rome itself the popes' temporal power, almost nonexistent in the 10th cent , remained greatly limited until the 14th cent by the interference of the emperors, by the power of the nobles, and by the ambitions of the commune of Rome, which pretended that its authority also extended over the Papal States In the 14th cent the emperors renounced their claims to the duchy of Spoleto, the Romagna, and the March of Ancona, however, the free communes and petty tyrannies that dominated these regions long resisted effective papal domination The Comtat Venaissin, a papal possession in S France until 1791 (though not a part of the Papal States), was acquired in 1274, in 1309 Avignon became the seat of the popes From 1309 to 1420, during the "Babylonian captivity" at Avignon and the Great Schism, the Papal States were in condition of chaos only temporarily relieved by the efforts of Cardinal Albornoz Actual control by the papacy of its states began with the 16th cent , when Cesare Borgia, son of Pope Alexander VI, conquered the petty states of the Romagna and the Marches, after his fall (1503) most of them passed directly under papal rule Pope Julius II consolidated papal power by abolishing local autonomies and by participating effectively in the Italian Wars The last principalities to lose their autonomy to the popes were Ferrara (1598) and Urbino (1631) Parma and Piacenza were alienated (1545) through the nepotism of Paul III After the Catholic Reform the spiritual power of the papacy grew while the political power waned Papal troops, mostly Swiss and other mercenaries, opposed almost no resistance to the French invaders under Bonaparte in 1796 Pius VI and his successor, Pius VII, saw their states curtailed, occupied, and twice abolished between 1796 and 1814 The Congress of Vienna (1815) fully restored the states to the papacy and placed them under Austrian protection Conspiracies and revolutions (1831, 1848–49) characterized the following decades Pius IX was liberal at his accession and granted his states a constitution, but the events of 1848 turned him against the revolutionists During the Risorgimento only French intervention at Rome prevented the total absorption of the Papal States After the Austrians left (1859) Bologna and the Romagna, both united (1860) with the kingdom of Sardinia, as did the Marches and Umbria Garibaldi invaded the remaining Papal States twice but was prevented from taking Rome—in 1862 by the intervention of Victor Emmanuel II of Italy, in 1867 by Napoleon III The fall of Napoleon made it safe for Victor Emmanuel to seize Rome in 1870 Pius IX, refusing to recognize the loss of temporal power, became a "prisoner" in the Vatican, and his successors followed his example In 1929 the Roman Question was at last solved by the Lateran Treaty, which gave the papacy full temporal power over Vatican City For bibliography, see papacy See Louis Duchesne, *Beginnings of the Temporal Sovereignty of the Popes, A.D 754–1073* (1898, Eng tr , 1908)

papaw tree or **pawpaw** (both' pô'pô). The common North American papaw (*Asimina triloba*) is native E of the Mississippi It is a small deciduous tree or shrub with large simple leaves and purple flowers The purplish-brown ripe fruit, shaped like a short, thick banana, has a custardlike edible pulp, it is sometimes sold locally and called also custard apple For the tropical American papaw, see papaya.

papaya (pûpl'u), soft-stemmed tree (*Carica papaya*) of tropical America resembling a palm with a crown of palmately lobed leaves It is cultivated for its melonlike yellow fruits eaten raw or cooked and, more recently, for the juice which has become a commercial item in the North The juice contains the enzyme papain, somewhat similar to pepsin and digestant in action. Papaya is also called melon tree and papaw

Papeete (pâpâ-ā'tā), town (pop 12,428), on Tahiti, S Pacific, capital of the French Establishments in Oceania and of Tahiti A port on the northwest coast, it ships copra, vanilla, phosphates, and mother-of-pearl

Papen, Franz von (fränts' fün pä'pün), 1879–, German politician In the First World War he was military attaché at the German embassy in Washington when the discovery of a misdad briefcase revealed his part in espionage and sabotage plots and led (1915) the U S government to request his recall He subsequently served with the Turkish army and, after the war, entered a political career in the Catholic Center party After succeeding (June, 1932) Brüning as chancellor, he acted independently of his party, which shortly expelled him His cabinet represented the interests of the ultraconservative Prussian *Junker* class In the critical year 1932 Papen did much to strengthen the National Socialist party, mainly by lifting the ban on its militia Unable to secure a working majority in the Reichstag, he resigned (Nov , 1932) after two successive elections had failed to end the deadlock Kurt von Schleicher succeeded him In Jan , 1933, Papen was the chief go-between of Hindenburg, Hugenberg, and Hitler and through his maneuvers behind the scenes was instrumental in bringing Hitler into power He served as vice chancellor in Hitler's cabinet, negotiated (1934) the German concordat with Pius XI, and was appointed (1934) German minister to Vienna Here once more he displayed his peculiar talents in helping the National Socialists to prepare the annexation (1938) of Austria to Germany In 1939 he was sent as ambassador to Turkey, where he remained until 1944 After the Second World War, Papen was tried by the Nuremberg war crimes tribunal for his share in instigating the war He was acquitted (1946) A subsequent sentence to eight years' hard labor, imposed by a German "denazification" court, was rescinded in 1949 by a court of review

paper is believed to have been invented in China c 105 by Ts'ai Lun and afterward perfected by the Chinese Papermaking spread to Japan c 610 and to Samarkand c 751, whence it was introduced by the Arabs into Egypt c 900 and by the Moors into Spain (at Játiva) c 1150 Mills were established in Italy c 1276, in France, c 1348, in Germany, 1390, and in England, 1495 Primitive bark paper had been made in Mexico and Central America in pre-Columbian times Paper was first produced in the American colonies in 1690 by William Rittenhouse at Germantown Hand processes, now seldom used in Europe and America, exemplify the fundamental processes of papermaking Vegetable fiber mixed with water is reduced to a pulp into which a vatman dips a porous mold, as he lifts out the mold holding the pulp, he shakes it to cross the fibers for strength The sheet formed in the mold is reversed upon an absorbent felt or cloth The water is pressed from a pile of alternating felts and paper, then the paper is separated, pressed again to the desired smoothness, and hung on racks to dry In Europe early dipping molds were made of strips of wire secured by widely spaced cross lines The horizontal strips marked the paper with so-called laid lines, the cross strips, with chain lines John Baskerville introduced c 1757 the use of wire mesh so finely woven as to leave scarcely discernible marks on the paper, which became known as wove paper The watermark, probably first used in Italy c 1282, is produced by a wire design attached on the mold A machine for making a continuous web of paper was invented by a French papermaker, Nicolas Robert, in 1798 and improved in England for commercial use by Henry and Sealy Fourdrinier In the modern Fourdrinier machine, which is sometimes several hundred feet long and operates at a rate of over a thousand feet per minute, the pulp suspended in water is poured on an endless belt of wire mesh edged with rubber deckle strips, then pressed by a revolving dandy roll to which are sometimes attached wire watermark designs or wires to produce laid lines in imitation of handmade papers The paper is carried between heated drying rolls by a strip of felt until it is firm enough to support its own weight, then it is led over another series of driers and wound on rollers Some paper used for tissue, roofing felt, and paperboard is made on a cylinder machine in which the pulp is lifted from a vat by a mesh mounted on a cylinder. Untreated paper is absorbent and unsuited to pen and ink It may be modified by mixing sizing or loading with the pulp; by coating with a substance such as casein, glue, or clay to impart a smooth, glossy finish suitable for half-tone illustrations, and by calendering (pressing between rollers) Paper was made from linen or cotton rags until the supply became inadequate and other materials such

as esparto grass, straw, and wood came into use. Most paper today is made from wood pulp. Mechanical pulp, prepared by grinding, yields cellulose fibers mixed with impurities that cause rapid oxidation of paper made from it Chemical pulp is almost pure cellulose and is prepared from wood chips boiled under pressure with chemicals The three chief types are soda, sulphite, and sulphate pulp Wood pulp is screened, washed, bleached, and beaten, then is blended to achieve the characteristics required by the proposed use Some 14,000 different products are made from paper One of the largest single uses is for newsprint, made from mechanical wood pulp blended with chemical pulp for strength and printing qualities See Dard Hunter, *Papermaking* (2d ed revised and enlarged 1947), R H Clapperton and William Henderson, *Modern Paper-Making* (3d ed , 1947)

Paphlagonia (păf"lugō'nēŭ), ancient country, N Asia Minor, between Bithynia and Pontus on the Black Sea coast It was mountainous, with the Halys its chief river It was not a political unit Along the coast was a string of Greek colonies, including Sinope Paphlagonia was famous for timber, horses, and mules The kings of Pontus annexed Paphlagonia and finally lost it to the Romans (63 B C).

Paphos (pā'fŏs), two ancient cities, SW Cyprus, on the coast Old Paphos was founded probably by the Phoenicians and was the center of the worship of Astarte or Aphrodite; ruins of the temple have been found New Paphos, now Baffo, lay 10 mi to the northwest, it became an important seaport and, in Roman times, the capital of the island In Acts 13, Paphos is the scene of the miraculous blinding of a sorcerer

Papias (pā'pēus), fl A D 130, a Father of the Church, said to have been bishop of Hierapolis and a friend of St Polycarp Eusebius of Caesarea and St Irenaeus quote fragments from Papias' *Oracles, or, Explanations of the Sayings of the Lord* These are valuable sources for the history of the Church.

papillon (pă'pulŏn), small dog, a toy spaniel It was long a favorite pet in the royal courts, especially in France and Spain Often it was pictured in tapestries and in paintings (e g , those of Watteau and Rubens) It is a slender, active, and hardy little dog The coat, usually white with dark markings or solid brown or tawny, is smooth and rather short, but longer on the legs, the tail bears long, plumy hair There are two varieties, one which carries the ears upright (suggesting the wings of a butterfly) and the other with dropped ears It is naturally good-tempered, affectionate, and courageous

Papin, Denis (dunĕ' papă'), 1647–1712?, French physicist and inventor He was an assistant of Christiaan Huygens and of Robert Boyle and professor of mathematics at the Univ of Marburg (1687 96) He invented (1679) a digester, a vessel in which the boiling point of water is raised by an increase in steam pressure, this device demonstrated the influence of atmospheric pressure on boiling points His other inventions include a safety valve (for the digester), a condensing pump, an air gun, and a paddle-wheel boat A pioneer in the development of the steam engine, he devised in 1690 a pump with a piston raised by steam

Papineau, Louis Joseph (lwē' zhozĕf' papēnō'), 1786–1871, French Canadian political leader and insurgent, b Montreal, educated at the Quebec seminary After serving as an officer in the War of 1812, he entered the legislative assembly of Lower Canada, of which he was speaker (1815–37). Eloquent and able, he soon came to be considered the leader of the French Canadian Reform party His hostility to the British government in Canada, whose measures he considered unfair to the French Canadians, mounted to great intensity and inflamed some of his followers, the *Patriotes*, to open rebellion in 1837, shortly afterwards, a rebellion, incited by William Lyon Mackenzie, broke out in Upper Canada Papineau took no active part in the uprising but fled to the United States, where he sought intervention by the government Failing in this effort, he went to France Though a special amnesty was granted, he did not return to Canada until c 1845 He reentered politics and again sat (1848–54) in the Canadian legislative assembly, but he did not regain his former influence See biography by A D De Celles (in "Makers of Canada" series, Vol, V, 1926)

Papineauville (pă'punōvĭl"), village (pop 1,023), S Que , on the Ottawa river and ENE of Ottawa, in a dairy-farming and lumbering region.

Papini, Giovanni (jōvän'nē papē'nē), 1881–, Italian philosopher and critic His unhappy childhood is described in *Un uomo finito* (1912, Eng tr , *The Failure*, 1924) He adopted idealistic pragmatism as his philosophical standpoint In 1903 he founded *Leonardo*, a philosophical journal. After a life of unbelief, he embraced Catholicism, and shortly afterward he wrote his *Storia di Cristo* (1921, Eng tr., *Life of Christ*, 1923), which was immensely successful Papini wrote fiction, verse, and numerous critical works in which he shows himself as a writer of great intellectual subtlety, fearlessly aggressive. His fiction has a philosophical basis Among his other works are *Il Cervello* (1913, Eng. tr., *Four and Twenty Minds*, 1922), a collection of studies of William James, Nietzsche, Tolstoy, and others, *Gog* (1931, Eng tr , 1934), a bitter satire on modern life; and *Dante Vivo* (1933, Eng tr , 1934)

Papinian (Aemilius Papinianus) (pupĭn'ēŭn), d 212, Roman jurist He was a close friend of Emperor Septimius SEVERUS, under whom he was *libellorum magister* [master of the rolls] and later Praetorian prefect, but Severus' son CARACALLA had Papinian put to death for reasons that are obscure Papinian was a jurist of great comprehension, perhaps the greatest figure in ROMAN LAW, and a stern moralist A constitution of Theodosius II and Valentinian (426) reflects the Roman attitude toward him five jurists (and the authors whom they quoted) were set up as the sole authorities to be cited —Paulus, Gaius, Ulpian, Modestinus, and Papinian If they were not unanimous the majority was to prevail, but, in case of otherwise equal division, the opinion of Papinian was to decide His chief works were *Quaestiones* (37 books), *Responsa* (19 books), *Definitiones* (2 books), and *De adulteris* (2 books) They are known through quotations in the Theodosian Code and in the Digest of the CORPUS JURIS CIVILIS

Pappenheim, Gottfried Heinrich, Graf zu (gōt'frēt hin'rĭkh graf tsōō pă'punhīm), 1594–1632, imperial field marshal in the THIRTY YEARS WAR He studied at Altdorf and Tübingen and traveled throughout Europe In 1614 he was converted to Catholicism An imperial counselor, he abandoned his civil position for a military career and served Sigismund III of Poland and Maximilian I of Bavaria Pappenheim distinguished himself at the White Mt (1620) before entering the imperial service in 1623 From 1623 to 1625 he fought with the Spanish cavalry in Lombardy In 1626 his cavalry crushed a peasants' revolt in Upper Austria On May 20, 1631, he led the assault on Magdeburg, and the subsequent sack is generally written to Pappenheim's discredit He was defeated with TILLY by Gustavus Adolphus at Breitenfeld (1631), but his cavalry was later effective in raids on small bands of Swedish troops Fighting under WALLENSTEIN, he was mortally wounded at Lützen

Pappus (pă'pus), fl c 300, Greek mathematician of Alexandria He recorded and enlarged on the results of his predecessors in his *Mathematical Collection* (8 books, date conjectural) The 6½ extant books, edited and translated into Latin by Commandinus (1588), stimulated a revival of geometry in the 17th cent , Descartes expounded several of his problems and theorems in geometry The collection was reedited by Friederick Hultsch (1876–78). See T L Heath, *A Manual of Greek Mathematics* (1931)

Paps of Jura (jŏō'ru), three peaks, on Jura, Inner Hebrides, Scotland, S of Loch Tarbert The highest (2,571 ft) is Beinn-an-Oir [Scottish Gaelic,= mount of gold]

Papua, see NEW GUINEA

Papua, Territory of (pă'pūu), area (90,540 sq mi ; pop c 533,000), belonging to Australia and including the southeastern part of NEW GUINEA, TROBRIAND ISLANDS, WOODLARK ISLAND, D'ENTRECASTEAUX ISLANDS, and the LOUISIADE ARCHIPELAGO The capital is PORT MORESBY, which is also the temporary capital of the TERRITORY of New Guinea The area was annexed in 1883 by Queensland, and in the following year became a British protectorate In 1888 it was annexed to Great Britain as British New Guinea, since 1906 it has been governed by Australia as the TERRITORY of Papua

papyrus (pupī'rus), a sedge (*Cyperus papyrus*), now almost extinct in Egypt but so universally used there in antiquity as to be the hieroglyphic symbol for Lower Egypt and a common motif in art The roots were used as fuel, the pith was eaten The stem was employed for sandals, boats, twine, boxes, mats, sails, and cloth and most notably as a writing material (used in Egypt until the introduction of paper there in the 8th cent and exported throughout the Mediterranean world) This writing material, which was also called papyrus, was formed into sheets by laying lengthwise slices of the sedge side by side in two layers at right angles and pressing them together with an adhesive probably composed of their own juices and Nile water The sheets were glued end to end and rolled on wooden rods to form manuscripts Many examples have been recovered, especially in Egypt, and have furnished valuable literary and historical matter in Greek and other languages The science of papyrology is concerned with the study of these documents

Pará (pŭrä'), state (469,778 sq mi , 1940 pop 944,644, 1949 estimated pop 1,114,339), N Brazil, lying in the lower Amazon basin, S of the Guianas Belém is the capital It is a hot, humid region, drained by numerous tributaries of the Amazon, including the Tapajós, the Xingu, and the Tocantins The area has not been extensively developed, and the chief means of transport is by river steamer The main products are rubber, Brazil nuts, tropical hardwoods, and medicinal plants, which are exported through Belém Pará was the scene of revolts and disorders from 1832 to 1837, when imperial troops finally restored peace.

Pará, river, c 200 mi long, E Brazil 'Actually it is the southeastern arm of the Amazon, divided from the rest of the river by Marajó island It is an estuary, receiving also the waters of the Tocantins. The great port of Belém is on the right bank

parable, in the Bible The term is used in the Gospels not only for short illustrative narratives, but for figurative statements as well Mat 13, Mark 3 23, Luke 21 24–33 Old Testament parables include the ewe lamb (2 Sam 12 1–4), the boiling pot (Ezek 24 3–5), and the thistle and the cedar (2 Kings 14 8–10) The parables of Jesus include the barren fig tree (Luke 13 6–9), the drawnet (Mat 13 47–50), the Good Samaritan (Luke 10 29–37), the great supper (Luke 14 15–24), the hidden treasure (Mat 13 44), the importunate friend (Luke 11 5–8), the laborers in the vineyard (Mat 20 1–16), the leaven (Mat 13 33, Luke 13 20,21), the lost piece of silver (Luke 15 8–10), the lost sheep (Mat 18 11 14), Luke 15 3–7), the marriage feast (Mat 22 1–14) the mustard seed (Mat 13 31,32 Mark 4 30–32, Luke 13 18,19), the pearl of great price (Mat 13 45,46), the Pharisee and the publican (Luke 18 9–14), the pounds (Luke 19 11 27), the prodigal son (Luke 15 11–32), the rich fool (Luke 12 16 21), the rich man (Dives) and Lazarus (Luke 16 19 31), the seed growing secretly (Mark 4 26 29) the sower (Mat 13 3–9, 18–23, Mark 4 3 9, 14–20, Luke 8 4–15), the talents (Mat 25 14–30), the tares (Mat 13 24–30, 36–43), the ten virgins (Mat 25 1 13), the two debtors (Luke 7 40–50), the two sons (Mat 21 28–32), the unjust judge (Luke 18 1–8), the unjust steward (Luke 16 1–8), the unmerciful servant (Mat 18 23-35), the wicked husbandmen (Mat 21 33–45, Mark 12 1–12, Luke 20 9–19)

parabola (pŭră'bulu), a plane curve such that the distances from any point on it to a fixed point (focus) and a fixed line (directrix) are equal It is also a CONIC SECTION cut by a plane parallel to one of the elements of the cone The axis of the parabola is the line through the focus perpendicular to the directrix The vertex is the point in which the axis intersects the curve The *latus rectum* is the chord through the focus perpendicular to the axis Examples of this curve are the path of a projectile and the shape of the cross section of a parallel beam reflector The curve of the cable of a suspension bridge very closely approximates a parabola

Paracelsus, Philippus Aureolus (fĭlĭ'pus ôrēō'lŭs părusĕl'sus), 1493?–1541, Swiss physician, alchemist, and chemist He traveled widely, acquiring knowledge of alchemy, chemistry, and metallurgy, and although his egotism earned the enmity of learned men of his day, he won great renown, practicing medicine and lecturing in many cities He died in Salzburg, where a monument was erected to him in 1752 Paracelsus had a great influence on his own and succeeding centuries His learning was colored by many of the fantastic philosophies of his time, but he opposed the humoral theory of disease and taught the use of specific remedies. He introduced new medicines—opium, mercury, sulphur, iron, and arsenic—and was the author of numerous medical and occult works The first English translation of his writings was *One Hundred and Fourteen Experiments and Cures* (1596) He is the hero of Robert Browning's *Paracelsus* His real name was Theophrastus Bombastus von Hohenheim See *Four Treatises of Theophrastus von Hohenheim* (ed by H E Sigerist, 1941), studies by A M Stoddart (1911) and J M Stillman (1920)

parachute (pă'rushōōt), umbrellalike device attached to a body falling through the air and designed to protect that body from the effects of the fall This it does by offering resistance to the air Jean Pierre Blanchard claimed the invention of the parachute in 1785, and the first successful parachute descent from a great height was made in 1797 by Jacques Garnerin, who dropped 3,000 ft, from a balloon The development of modern aircraft has led to many experiments in the aerodynamic problems of parachute design, with the result that the parachute of today is a highly efficient instrument Such a parachute must permit slow descent, must be of little weight and small area, must retain its shape in descent and not become unbalanced, and must be of good stability A parachute consists, in general of a flexible material which when extended takes the form of an umbrella and from which a series of cords converge downward to a harness strapped to the user The inflation of the parachute must be under the easy control of its user, who must delay the opening until he is well clear of the aircraft in order to avoid entanglement or fouling The harness must be easily detachable when the earth is reached, since otherwise the parachutist might be drowned or might be injured by dragging along the ground. The rate of descent for man-carrying parachutes is about 16 ft per second Cargo parachutes are similar in appearance but are opened by the weight of the cargo pulling a long rip cord attached to the aircraft It is required by law that all non-emergency parachute jumps be made from at least 2,000 ft. above the ground or water. See H. S. Zim, *Parachutes* (1942).

Paraclete (pă'rŭklēt) [Gr.,=advocate], title of the HOLY GHOST, often translated as "Comforter" or "Advocate" John 14 16,26; 15 26, 16 7, 1 John 2.1

Paradise see EDEN, GARDEN OF, and HEAVEN

paraffin or paraffine (both pă'rufĕn, -fīn), in commerce, a mineral **wax**, a colorless, odorless, tasteless, waxy substance. It is used in making candles, tapers, and paper matches, in the sizing and waterproofing of many materials, and for sealing jellies and preserves Being very inert chemically, it is unaffected by most acids and alkalies Soft paraffin wax melts at 38° to 52°C and boils at 350° to 390°C, while hard paraffin wax melts at 52° to 56°C and boils at 390° to 430°C Paraffin is obtained in the distillation of wood, coal, and oil shale, but its chief commercial source is the fractional distillation of crude PETROLEUM (see also YOUNG, JAMES) The paraffin crystallizes out when the oil which remains after the gasoline and kerosene fractions have been distilled off is cooled, Chemically, paraffin is a mixture of hydrocarbons, chiefly the heavier members of the METHANE SERIES

Paragould (pă"rugōld), city (pop 7,079), co seat of Greene co, NE Ark, near the St Francis river, inc 1882 It has railroad shops and plants processing wood, cotton, and food

Paraguaçu (pă"rugwăsōō'), river, 300 mi long, rising in the center of Bahia state, NE Brazil, and flowing E to Todos os Santos Bay of the Atlantic Ocean It was formerly spelled Paraguassú

Paraguay (pă'rŭgwā, Span parägwī'), republic (c 170,000 sq mi, pop c 1,000,000), SE South America The capital and commercial center is Asunción One of the two inland republics of the continent, Paraguay is enclosed by Bolivia (the other inland republic), Brazil, and Argentina The eastern part of the republic, in which most of the Paraguayans live, lies between the Paraguay river and the Paraná, which forms the eastern and then the southern boundary, joining the Paraguay The northeastern section is separated from Brazil by the Apa river (a tributary of the Paraguay) and two small mountain chains The Paraná, S of the IGUASSÚ river (a name well known because of the falls), separates Paraguay from Argentina, and on the west the Paraguay river is also a boundary with Argentina as far north as the Pilcomayo river The section of Paraguay W of the Paraguay river is part of the CHACO and is bounded on the north by Bolivia This region is not now productive, although it is thought that there may be deposits of petroleum. Cattle are raised, and QUEBRACHO is found in the forests The principal agricultural products in the eastern region are cotton (the most important export), tobacco, sugar cane, manioc (mandioca), rice, beans, corn, and citrus fruits Small industries engage in processing some of this produce Rum, molasses, and alcohol are manufactured Paraguayan orange forests furnish three quarters of the world's supply of oil of petitgrain, used in perfumes and flavorings MATE (Paraguay tea) is used domestically and also exported There are meat-packing plants, and livestock plays an important part in Paraguayan economy Protective duties are levied on imported cotton textiles, rayon, wheat, gasoline, sugar, and shoes Customs duties furnish about one half of the country's revenues All the important cities are in the east Besides Asunción, they are Villarrica (in the southeast), Concepción (on the Paraguay river above Asunción), and Encarnación (on the Paraná river) One of the country's most difficult problems is transportation Though it is being solved to some extent by aviation, Paraguay is still dependent on its rivers The population is largely made up of a homogeneous mixture of Spanish and GUARANÍ strains, and Guaraní is spoken all over Paraguay today, though Spanish is the official language The Guaraní had a high material culture before the coming of the white man, and the Jesuit missions (the REDUCTIONS, operating from the late 16th to the 18th cent.) made it possible for their culture to blend with the Spanish In later days European immigrants—German, Italian, and French, with some Irish and some Scots—have added new elements to the distinctive civilization of Paraguay, which has arts and handicrafts showing the varied strains Perhaps the most notable of modern music, for instance, is the *guaranía*, a form developed by José Asunción Flores from native melodies Some writers, such as the dramatist Julio Correa, write in Guaraní, and the well-known historians, Cecilio Báez, Juan O'Leary, and Natalicio González, have tried to show the growth of the country's individuality. Among the handicrafts that express the mixed culture, lacemaking is notable Outside this compact group, there are "wild" Indians (particularly in the Chaco) who have little part in the national life The established religion is the Roman Catholic, but other faiths are tolerated, and Mennonites have founded settlements in the Chaco which expanded with the coming of refugees from Germany before and during the Second World War The beginnings of the Paraguayan history as such came with the explorations of the Río de la Plata, which introduced the white man Juan Díaz de SOLÍS was the first to come, and Sebastian Cabot followed him (1527) to the Paraguay river. That river promised access to Peru, and, indeed, the semilegendary García is said to have reached Peru via Paraguay before the PIZARRO conquest One of the main reasons for the voyages of Juan de AYOLAS and Domingo Martínez de IRALA was to seek a way across the continent. A colony grew up, as Asunción, founded in 1536 or 1537, became the center of the La Plata region, the remnants of unsuccessful colonies were in 1538 gathered there It was the center from which the new Buenos Aires and many of the Argentine cities (e g, Santa Fe and Corrientes) were founded Irala dominated the colony until his death, not excepting the unhappy period when Álvar Núñez CABEZA DE VACA was governor until deposed (1544) At the end of the 16th cent. the next in the series of forceful rulers of Paraguay, Hernando ARIAS DE SAAVEDRA, called Hernandarias, established Paraguay as virtually independent, it was through his efforts that the administrations of present Argentina and Paraguay were separated, and later the hegemony of the viceroyalty of Peru was not easily imposed The Jesuit missions were founded in the days of Hernandarias (most of them in the trans-Paraná area, now in Argentina) Real independence was asserted when in 1721 José de Antequera led the COMUNEROS of Asunción in successful revolt and governed independently for some 10 years In 1776 the region was made part of the viceroyalty of the Río de la Plata, but was relatively undisturbed by the troubles of Buenos Aires when the revolt against Spain was going its complicated course Manuel Belgrano was unsuccessful in carrying the revolution into Paraguay in 1810, but the next year the colonial officials there were quietly overthrown In 1814 the first of the three great dictators who were to mold Paraguay came to power He was José Gaspar Rodríguez FRANCIA, the incorruptible, harsh, and autocratic dictator known as El Supremo, and he kept Paraguay in the palm of his hand until his death in 1840 He was succeeded by another dictator, Carlos Antonio LÓPEZ, who held absolute power from 1844 to 1862 His son, Francisco Solano LÓPEZ, succeeded him and sought to increase the power of the little country by vigorous measures The result was disaster, when the combined forces of Brazil Argentina, and Uruguay set upon small Paraguay (1865–70, see TRIPLE ALLIANCE, WAR OF THE) The Paraguayans fought heroically for their country and their ruler until the population was decimated and the country in ruins Recovery from the catastrophe was slow, and the desperate state of the economy was matched by political confusion, as warring *caudillos* established short-lived dictatorships Nevertheless, in the late 19th and early 20th cent conditions improved hopefully Trade increased as Paraguayan products found markets, immigration was encouraged, and farming and modest little industries prospered fitfully The unsettled boundary with Bolivia, however, turned from an irritation into a threat, and in 1932 Paraguay plunged into another major war—the CHACO WAR, which lasted until 1935 From it the little country emerged victorious but exhausted The rapid succession of governments afterward was broken by the years when Higinio MORÍNIGO was in power (1940–48) Paraguay took part with the Allies in the Second World War Signs of recovery from the Chaco War appeared in improvements in education, public health, and roads, but the oppressive militaristic dictatorship of Morínigo was challenged by numerous uprisings That in 1947 lasted many months, and in 1948 President-elect Natalicio González ousted Morínigo by a coup He was himself ousted in Jan, 1949, a third coup took place in Feb., 1949, and a fourth in Sept, 1949 See C A Washburn, *History of Paraguay* (1871, violently hostile to dictators), P H Box, *The Origins of the Paraguayan War* (1927), A E Elliott, *Paraguay Its Cultural Heritage, Social Conditions, and Educational Problems* (1931), H G Warren, *Paraguay an Informal History* (1949).

Paraguay, river, c 1,300 mi long, rising in Mato Grosso state, W Brazil, with headstreams in E Bolivia It flows generally southward and is the border between Brazil and Paraguay in a flood-plain region Below the entrance of the Apa from the east, it crosses the center of the republic of Paraguay, dividing the CHACO from agricultural E Paraguay Two large tributaries come in from the west, the Pilcomayo and the Bermejo Below the Pilcomayo, the Paraguay trends southwest as the western boundary of Paraguay with Argentina and joins the PARANÁ. The Paraguay is one of the most important streams of the Río de la Plata system. Its largest port is ASUNCIÓN.

Paraguay tea see MATE.

Parah (pā'ru) [Heb.,=heifer], Benjamite city Joshua 18 23. It has been tentatively located c 5 mi. NW of Jerusalem.

Paraíba or Parahiba (both pärue'bŭ), state (21,780 sq mi; 1940 pop. 1,422,282; 1949 estimated pop 1,716,960), NE Brazil Its capital is João Pessoa (formerly also called Parahiba), on the Atlantic Ocean. Paraíba is primarily an agricultural area (chiefly cotton), but it has suffered from periodic droughts. Several mineral deposits (copper and tin) are worked It was settled by the Portuguese in 1584.

Paraíba or Paraíba do Sul (dōō sōōl), river, c.600 mi. long, rising W of RIO DE JANEIRO, SE Brazil. It flows southwestward to a point NE of Sao Paulo, where it turns sharply and continues in a northeasterly direction to the Atlantic, which it reaches near Campos Its beautiful valley produces rice, sugar cane, and livestock

parakeet or parrakeet (pă'rŭkēt), name applied to various small parrots native to Australia, Polynesia, Asia, and Africa. The Carolina parakeet once abundant in the E and S United States is believed to be extinct A common cage bird is the shell parakeet or zebra parakeet, also known as the undulated grass parakeet and the budgereegah Bright green predominates in the plumage, the head is yellow, the wings are grayish green and the black markings on the wings are shaped like shells The blue and black tail is long and narrow. Some breeders call the bird a love bird but the true love birds are chiefly of African origin and differ from the parakeet in having rather short wide tails and short bodies The love birds build nests and parakeets do not

Paralipomenon see CHRONICLES.

parallel (pă'rulĕl"), of latitude, an imaginary line drawn around the earth joining all points equally distant from the equator By means of the parallels, LATITUDE is reckoned from the equator (lat 0°) northward along any meridian to the North Pole (lat 90° N) and southward to the South Pole (lat 90° S) On most globes and maps only a few of the many possible parallels are shown, usually in multiples of 5° Almost always, however, because of their special meaning, four fractional parallels are shown in addition. These are the Tropic of Cancer (lat 23½° N) and the Tropic of Capricorn (lat 23½° S)—marking the limits of that part of the globe where the sun's rays ever fall vertically—and the parallels of 66½° N and 66½° S, called respectively the Arctic Circle and the Antarctic Circle, at which the noon rays of the sun are tangent to the earth's surface on the shortest day of the year and at which the midnight rays are tangent on the longest day

paralysis or **palsy** (pôl'zĭ) Complete loss of motion or of sensation is termed paralysis, and a weakened power of motion is usually called paresis The lesion causing the loss may be located in the brain, spinal cord, or nerves or in the muscles themselves Accordingly there may be general paralysis, right or left side paralysis (hemiplegia), paralysis on both sides at one level (paraplegia), or paralysis in a small group of muscles The causes include injuries, such as fracture resulting in tearing of tissues, compression, or hemorrhage, tumor, abscess, infectious diseases such as diphtheria, poliomyelitis, and syphilis, and toxic substances, such as lead and alcohol *Paralysis agitans* or Parkinson's disease is a form of paralysis accompanied by a tremor It is also called shaking palsy Cerebral palsy is usually caused by a breakdown in brain motor tissue from an injury at birth Rehabilitation is possible through reeducating other parts of the brain to control activities normally governed by the injured section Some authorities believe that the incidence of cerebral palsy can be lowered through proper medical care during and after childbirth Partial or complete paralysis is often the result of multiple sclerosis, a disease of the brain and spinal column, which attacks a soft substance known as myelin that surrounds the nerve fibers Treatment consists mainly of reeducating muscles, preventing atrophy of muscles, and restoring coordination Paralysis also sometimes occurs in apoplexy.

Paramaribo (pă"rumă'rĭbō), city (pop 71,238), capital of Dutch GUIANA, a port on the Surinam river In 1650 it was made the capital of what was then the new English colony by Lord Willoughby of Parham It is an attractive, clean city, with canals which are reminiscent of the Netherlands Connected with the interior by a single railroad, Paramaribo exports the leading products of Dutch Guiana—rum, coffee, timber, and bauxite

Paramus (purä'mus), residential borough (pop 3,688), NE N J, NE of Paterson, settled 1666, inc 1922 It has an early Dutch church.

Paran (pā'răn), desert, probably S of Beersheba, where Ishmael settled, and also the first resting place of the Israelites after Sinai and the refuge of David when Samuel died Gen 21 21, Num 10 12, 13 3,26, 1 Sam. 25.1 El-paran Gen 14 6 See also Deut 1.1; 33.2, 1 Kings 11 18; Hab. 3.3.

Paraná (pärăna'), state (77, 717 sq. mi., 1940 pop 1,236,276, 1949 estimated pop. 1,492,416), S Brazil, between the Paraná river and the Atlantic Ocean. The capital is Curitiba. A fertile area with a fine climate, Paraná grows coffee, cotton, and fruit. Its population includes many Italians, Germans, and Slavs.

Paraná (pärăna'), city (1945 estimated pop. 79,654), capital of Entre Ríos prov., NE Argentina, a port on the Paraná river. It is the center of a grain and cattle district, there is an agricultural school near by. Founded in 1730, Paraná was the capital of the Argentine confederation from 1853 to 1861.

Paraná, river, c. 2,050 mi. long, formed in S Brazil by the junction of the Paranaíba and the Rio Grande. It flows south and west to its confluence with the Paraguay and then south and east through the northern section of Argentina to join the Uruguay at the head of the Río de la Plata. It is navigable by large river boats as far as Corrientes and by smaller craft to Posadas and the Iguassú, its other ports include Paraná, Santa Fe, and Rosario

Paranaíba (pä"rənäē'bə), river, c 500 mi long, rising in W Minas Gerais state, E central Brazil, and flowing generally westward to join the Rio Grande in forming the Paraná Diamonds are washed along its course The name formerly was spelled Paranahyba

paranoia (pă"rənoi'ə), type of PSYCHOSIS or mental disorder There is no evidence of organic damage or cause in the condition It is characterized by persistent, logically reasoned delusions, commonly a DELUSION of persecution or of grandeur In the former case, the paranoiac may do violence to the imaginary persecutor, in the latter, he may see himself as an exalted person with a mission of great importance to accomplish The paranoiac characteristically shows few signs of mental disintegration True paranoiacs are rare, those displaying paranoid reactions very often being predominantly schizophrenic (see SCHIZOPHRENIA) Psychiatrists generally believe that remission (i e , subsiding of the condition) in cases of paranoia have rarely, if ever, occurred

parapsychology see PSYCHICAL RESEARCH

Para rubber tree (pura', pä'ru), large tree, *Hevea brasiliensis*, of the spurge family, native to tropical South America The chief source of natural RUBBER, it is cultivated also in other tropical countries, especially in the Pacific region It yields the finest quality of rubber, which is obtained by coagulating with formic acid or with acetic acid the latex or milky juice of the inner bark The acid causes the rubber globules in the latex to cohere and float to the surface, where the lump rubber (coagulum) is collected, this is rolled into sheets or thinner strips (crepe rubber) and dried for shipment The Para rubber tree requires a climate with a temperature averaging around 80°F and an annual rainfall of about 80 in The tree grows from 60 to 100 ft in height and from about 8 to 10 ft in circumference When it is between five and seven years old the tree is first tapped for its latex The most common tap consists of a narrow cut or shaving into the inner bark running at an angle of 30° from the horizontal and forming from one third to one half of a spiral around the trunk The first tap is usually made at a height of about 3½ ft on the trunk, with a thin shaving taken off the bottom of the cut at each subsequent tapping The tree is tapped throughout the year (usually in the early morning when latex flow is greatest), on alternate days, or daily in alternate weeks or months, the quantity of the latex increases with the age of the tree The seeds of the Para rubber tree are planted in nurseries, and the seedlings later set out in orchards Seeds from trees of high productivity do not always grow into trees of equally high yield Since the bud of the tree seems to determine the quantity of latex that will be produced, buds from high-yield trees are often grafted on the seedlings Sometimes other trees yielding latex are called Para rubber trees

parasite (pă'rəsīt), plant or animal which at some stage of its existence obtains its nourishment from another living organism called the host Parasites include members of many plant and animal groups, and nearly all living things are at some time hosts to parasitic forms Many bacteria are parasitic on external and internal body surfaces, some of these invade the inner tissues and cause disease (e g , typhoid fever, tuberculosis, and some types of pneumonia) Protozoan parasites which attack man include *Amoeba* (or *Endamoeba*) *histolytica*, the cause of amoebic dysentery and liver abscess, and the several species of *Plasmodium* responsible for the three main types of malaria Parasitic worms include the FLUKE, the TAPEWORM, and the trichina (the cause of TRICHINOSIS) Crabs are parasitized by a degenerate form of the genus *Sacculina* which resembles a tumorous growth on the abdomen of the crab, only by a study of its embryology was it discovered that the parasite, too, is a crustacean animal Insects that live as external parasites on many of the higher animals include the FLEA and the LOUSE Fish are frequently attacked by parasitic fungi Parasitic plants cause great losses among food crops and trees (see BLISTER RUST, RUST, SMUT) Organisms which obtain their nourishment from organic matter but not from a living host are called saprophytes These include the mushroom and the Indian pipe An AIR PLANT or epiphyte, although it lives in association with another plant, is not a parasite

paratyphoid (pă"rətī'foid), infectious disease similar to TYPHOID and caused by several strains of a related bacterium (*Salmonella paratyphi* and *S. schottmuelleri*). It is usually a less serious disease Mild cases are sometimes mistaken for food poisoning. It is preventable by VACCINATION

Paray-le-Monial (pärā'-lə-mônyäl'), town (pop. 6,240), Saône-et-Loire dept , E central France, in Burgundy, N of Roanne Here in the 17th cent. St MARGARET MARY founded the cult of the Sacred Heart of Jesus With the growth of the cult in the 19th cent Paray-le-Monial became one of the major places of pilgrimage in France, second only to Lourdes The Romanesque Church of Notre Dame dates from the 12th cent

Parbar (pär'bär), part of the Temple at Jerusalem. 1 Chron 26 18

Parca (pär'kə), Roman goddess of childbirth Her name was pluralized (PARCAE) and applied to the FATES

parcel post. At the congress of the Universal Postal Union in Paris in 1878, an international parcel-post system was established The British parcel-post bill, passed in 1882, put into effect the next year domestic, colonial, and foreign services Various other countries established such systems, the United States entered into conventions with other governments to convey parcels sent into the country but delayed for many years instituting a domestic service David J Lewis advocated a parcel-post measure in 1911 while serving in the House of Representatives The bill was finally enacted in 1912, and service began in 1913, with eight zones At first the weight was limited to 11 lb , by 1919 it was raised to 70 lb The parcels can be insured for a fee of from five cents up Other fees provide for special handling and special delivery A water route for parcel post via coastwise steamers was started in 1917, and a fleet of motor trucks was put into operation in the East the next year Parcel-post delivery on rural routes was established in 1919, making it possible for farmers to ship eggs and other produce direct to the consumer Small live animals "which do not require food or water while in transit" are accepted In 1931 parcel-post regulations were changed so that 100 in was the limit for girth and length combined and 70 lb for weight Merchandise may be sent C O D even to foreign countries In 1933 the Morgan Parcel Post Station, New York city, with unique machinery to facilitate handling, was completed, it was the first government-owned building exclusively for parcel post Auctions are held quarterly every year for the sale of "dead" parcels

parchesi see BAGGAMMON

parchment, the untanned skins of animals, especially the sheep, calf, and goat, prepared for use as a writing material The name is a corruption of Pergamum, the city where the preparation of parchment suitable for use on both sides was achieved in the 2d cent B C Parchment, which is more durable than papyrus and susceptible of being folded into book form, very gradually superseded papyrus In Europe it gave way to paper for use in books only after the advent of printing The skins were soaked in water, treated with lime to loosen the hair, scraped, washed, stretched, and dried, then rubbed with chalk and pumice stone A fine grade prepared from the skin of the calf or kid became known as vellum, a name applied during the Middle Ages to any parchment used in manuscripts For important manuscripts vellum was often dyed purple Parchment is still used for certain documents and diplomas and for book bindings, lamp shades, and the heads of drums, tambourines, and banjos Vegetable parchment is paper treated to make it tough, translucent, and impervious to water

Pardeeville (pär'dēvĭl"), village (pop 1,001), central Wis , E of Portage and on the Fox, inc 1894

Pardo, Manuel (manwĕl' pär'dō), 1834–78, president of Peru (1872–76) After assisting José BALTA in establishing a constitutional government, Pardo succeeded him as president To recover from the monetary ruin brought on Peru by the Balta regime, he advocated financial and administrative reforms His term is chiefly noted for the signing (1873) of the treaty of alliance with Bolivia which led to war with Chile (see PACIFIC, WAR OF THE) in 1879 Later, because of his opposition to militarism, he was assassinated by a soldier He is remembered for his benevolence and humanitarianism and especially for his services during the yellow-fever epidemic of 1867

Pardo Bazán, Emilia, condesa de (āmē'lyä kōndä'sä dā pär'dhō bathän'), 1852–1921, Spanish novelist and critic She was the most brilliant woman writer of 19th-century Spain and received her title in recognition of her excellence Her biography of St Francis of Assisi appeared the same year as *La cuestión palpitante* (1883), a critical analysis and defense of Zola's naturalism Her realistic novels of her native Galicia include *El cisne de Vilamorta* (1885, Eng tr , *The Swan of Vilamorta*, 1891), *Los pazos de Ulloa* (1886) and its sequel, *La madre naturaleza* (1887), usually considered her best work, and *Morriña* (1889, Eng tr , *Morriña—Homesickness*, 1891) *Insolación* (1889) and *Un viaje de novios* (1881, Eng. tr , *A Wedding Trip*, 1891) are not laid in Galicia.

pardon, in law, exemption from punishment for crime granted by the grace of the executive of a government A general pardon to a class of persons guilty of the same offense (e g , insurrection) is an amnesty. A pardon (at least in the United States) absolutely terminates criminal liability (though the pardoned person is not exonerated from the civil liability which his action may have incurred) and in effect negates the commission of the crime. A pardon is thus to be distinguished from alleviation of punishment (such as commutation of sentence, reprieve, and parole), which involves recognition of criminal guilt The Constitution of the United States gives the President power to grant reprieves and pardons for all Federal crimes, but he may not release a person from the effects of impeachment In most of the states the governor has nearly the same power in respect to state crimes Usually, as in New York, the governor may not pardon those convicted of treason or criminal contempt of court In canon law pardon is ABSOLUTION (see also PENANCE), in the Middle Ages the word was used commonly to mean an INDULGENCE (hence pardoner, a dispenser of indulgences)

Pardubice (pär'dōōbĭtsĕ), Ger *Pardubitz* (pär'dōōbĭts), city (pop 31 420), N Bohemia, Czechoslovakia, on the Elbe It has an oil refinery and other industries There are many notable Gothic and Renaissance buildings Horse races are held here

Paré, Ambroise (äbrwaz' parā'), c 1510–1590, French army surgeon Known especially, for his advancement of more humane methods in medicine, he reintroduced the ligature in amputations, abandoned the boiling-oil treatment of wounds, promoted the use of artificial limbs, and introduced podalic version in childbirth His works on these and other subjects were printed in several languages See study by F R Packard (1921), bibliography of his works by Janet Doe (1937)

Paredes y Arrillaga, Mariano (märyä'nō parā'dhās ē ärēyä'gə), 1797–1849, Mexican general and president (1846), a monarchist and the leader of the ultraconservatives He helped to put SANTA ANNA into the presidency in 1841, but was soon opposing him In 1845 Paredes led a revolt against José Joaquín HERRERA, charging that Herrera was compromising the honor of Mexico by negotiating with the United States concerning Texas Paredes was successful, and the country was plunged into the Mexican War He was made president, but Mexico was in a state of anarchy, and the return of Santa Anna destroyed the hopes of Paredes, who went into exile After the war he led an unsuccessful revolution

paregoric (pă"rəgŏ'rĭk, -gō'rĭk), an anodyne, consisting of a camphorated tincture of opium It is a constituent of many cough mixtures

Pareja, Juan de (hwän' dā pärā'ha), c 1608–1670, Spanish religious and portrait painter, mulatto slave and assistant of Velázquez As it was illegal for a slave to paint, he was given his freedom, but he continued all his life to work for Velázquez and his family *The Calling of St Matthew* (Prado), one of his best works, shows much technical ability

Parent, Étienne (ātyĕn' pärā'), 1801–74, French Canadian journalist, b near Quebec, educated at the College of Nicolet and the Quebec seminary In his career as editor of the *Canadien*, he attained a commanding position in French Canadian journalism and inspired many French Canadian writers In the rebellion of 1837, Parent took no part, but he was briefly imprisoned for his attacks on the government Appointed (1847) undersecretary for Lower Canada, he later served (1867–73) as undersecretary of state in the dominion government

parent and child. The law attaches certain rights and duties to the relation of parent and child The parents are ordinarily obliged to support the child, and they usually have the right to his custody In earlier times the father's right was superior to that of the mother, but today, in the absence of special factors, most courts favor the mother in the belief that her care better serves the child's well-being When neither parent is fit to perform his duties, custody may be awarded to other persons or to institutions In case of divorce the court usually, but not necessarily, awards the custody of the child to the innocent party, custody may also be divided between the parents The mother of an illegitimate child has the right to his custody, but the father usually must contribute to the child's support Whoever has the lawful custody of a child has the right to correct or punish him if the means used are not excessive At common law parents had no right to support by a child, even though they were destitute and infirm. This rule has, however, been changed in many states by statute The parents are entitled to a minor child's services, and consequently to his earnings, if the child lives with them and is supported by them, and if their child is injured through negligence, they may bring suit for loss of his services Emancipation is the dissolution of the parent-child relation It may occur if the parents abandon the child, or at the parents' option (but usually not before 18 years), or when the child marries or attains majority The administration of the laws governing the parent-child relationship has been much affected in recent years by new doctrines in psychology Freudian theories hold that the relationship of an individual to his parents

in early years is a determining factor in the shaping of personality and attitudes (see OEDIPUS COMPLEX) See also GUARDIAN AND WARD, ADOPTION; LEGITIMATION

parent education, movement to help parents' understanding of the problems of child life at home and in the school Much parent education is carried on through the channels of adult education, both formally and informally The Child Study Association (founded 1888) and the National Congress of Parents and Teachers (founded 1897) are active in disseminating literature and promoting discussion groups Many schools have parent-teacher associations The United Parents Associations of New York City is an example of the unification of various groups into one coordinating agency See E C Lombard, *Parent Education Opportunities* (1935), M M Shirley, *Can Parents Educate One Another?* (1938), S M Gruenberg, *We, the Parents* (1939) and *The Use of the Radio in Parent Education* (1939), H E Hanford, *Parents Can Learn* (1940), bibliography by L R Stebbings and C S Hughes, *Child Training and Parent Education* (2d ed revised, 1939)

parenthesis see PUNCTUATION

Pares, Sir Bernard, 1867–1949, British author, authority on Russia Pares, who made some 20 trips to Russia, was attached to the Russian army in the First World War He supported the Kerensky regime after the Revolution of 1917 After that time he became a foremost interpreter of the USSR His books include *Russia and Reform* (1907), *History of Russia* (1926, rev eds, 1928, 1937, 1947), *My Russian Memoirs* (1931), and *Russia and the Peace* (1944) See his autobiography, *A Wandering Student* (1948)

Pareto, Vilfredo (vēlfrā'dō pärā'tō), 1848–1923, Italian economist and sociologist, b Paris, of an exiled family of marquises who returned to Italy in 1858 He studied mathematics and engineering in Turin and worked as an engineer for many years, meanwhile becoming increasingly interested in social and economic problems His economic writings won him (1893) a professorship of political economy at the Univ of Lausanne His notable contribution in applying mathematics to economic theory is found especially in *Cours d'économie politique* (1896–97) In his sociological studies he sought to differentiate the rational and nonrational factors in social action He used this concept as the basis for his theory of the cyclical development and fall of governing elite groups The theory was incorporated into the ideology of the Italian Fascists His chief work, *Trattato di sociologia generale* (1916), has been translated as *Mind and Society* (4 vols, 1935) See G C Homans and C P Curtis, Jr, *An Introduction to Pareto His Sociology* (1934), study by Franz Borkenau (1936)

Paria, Gulf of (pur'ya), between the mainland of Venezuela and the island of Trinidad Almost entirely enclosed by Trinidad on the east and south and the Venezuelan peninsula of Paria on the north, it connects with the Atlantic by two straits

pariah (pur'ı̇a, pä'rēu), a native of India of low CASTE and therefore, in ordinary usage, a term for the outcast The pariah does not belong to any of the four chief castes The pariah dog is a half-savage mongrel and scavenger found in many parts of India

Parian marble see PAROS

Paricutín (parēkōōtēn'), volcano, *c* 8,200 ft high, Michoacán, W central Mexico A remarkable example of a volcano in growth, Paricutin erupted from a field on Feb 20, 1943, and began its rise, which was in 1950 still continuing The name, derived from a Tarascan name, is sometimes given as Parícutin (parē'kōōtēn), but Paricutin has become the more accepted form

Parini, Giuseppe (jōōzĕp'pā parē'nē), 1729–99, Italian poet, a priest and a teacher When the French occupied Milan (1796), Parini was called upon to take public office, and he played his part with energy and judgment His verse is polished and sincere, and his odes (in definitive posthumous editions) had much influence Best known is *Il giorno* [the day], which appeared in several parts (1763–1801), a mock-didactic poem telling the young nobleman how to act all day It is remarkable for maintaining the elevated style throughout, by this means the satire is sharpened to the point of savagery Parini also wrote lyrics, a drama, critical essays, and dialogues

Paris or **Alexander,** in Greek legend, Trojan prince, son of PRIAM and HECUBA His parents, frightened by a prophecy that he would cause the destruction of Troy, sent him to be exposed on Mt Ida, but instead he was reared a shepherd and loved OENONE Athena, Hera, and Aphrodite chose him as judge in their dispute over the APPLE OF DISCORD, inscribed "for the fairest" Athena offered him victory in war, Hera royal power, and Aphrodite the most beautiful woman in the world Paris chose Aphrodite He traveled to Sparta, met HELEN, and eloped with her This caused the TROJAN WAR, in which Paris killed Achilles and was himself mortally wounded by Philoctetes

Paris, Gaston (gästō' pärēs'), 1839–1903, French Romance philologist, son of Pauln Paris He taught (1868–72) at the École des Hautes Études and after 1872 was a professor at the Collège de France, which he directed for a time. He continued the work of his father in studying medieval French literature and became one of the founders of modern Romance philology He edited the *Revue critique*, founded *Romania*, and wrote monographs and critical and historical works on literature He also edited numerous texts and sought with some success to popularize stories from the Old French.

Paris, Henri Robert Ferdinand d'Orléans, comte de: see ORLÉANS, family

Paris, Louis Philippe Albert d'Orléans, comte de: see ORLÉANS, family

Paris, Matthew see MATTHEW OF PARIS

Paris, Paulin (Alexis Paulin Paris) (pōlē' parēs', alĕksēs'), 1800–1881, French scholar, noted for his researches in medieval French literature His studies include *Les Manuscrits français de la Bibliothèque du Roi* (7 vols, 1836–48) and *Les Romans de la Table ronde* (5 vols, 1868–77)

Paris (pă'rı̇s), town (pop 4,637), S Ont, on the Grand River and W of Hamilton It has textile mills

Paris (pă'rı̇s, Fr parē'), city (pop 2,691,473), capital of France With its suburbs it virtually covers SEINE dept (pop 4,775,711) Situated on the Seine, in the center of the Paris basin (see ILE-DE-FRANCE), and only 90 mi from the English Channel, Paris is the commercial, industrial, and intellectual center of France Its river port handles more volume than any other French port Its major railroad stations (Gare de l'Est, du Nord, Saint-Lazare, Montparnasse, d'Orsay, d'Austerlitz, de Lyon), the two complete circuits surrounding the city, and its two chief airports (Le Bourget, Orly) make Paris the communications center of Western Europe Rapid internal communication is assured by a very ramified subway system (*métropolitain* or *métro*) Most of the heavier industries are concentrated in large suburbs, the city itself specializes in luxury products (fashions, perfumes, cosmetics, jewelry), in which it has long led the world and which are an essential part of the French economy Intellectually and artistically, Paris was the "city of light" long before the lavish illumination of its grand arteries and monuments gave the name a material meaning as well Divided into 20 *arrondissements* (boroughs), Paris is governed by a municipal council The Seine is the chief natural division The right (northern) bank (with the BOIS DE BOULOGNE, ARC DE TRIOMPHE, CHAMPS ÉLYSÉES, Place de la CONCORDE, OPÉRA, COMÉDIE FRANÇAISE, and the LOUVRE, the great boulevards, the celebrated Rue de la Paix, and Place Vendôme) is the center of fashions, commerce, business, and amusements It is dominated on the north by MONTMARTRE, highest point of Paris, topped by the Church of SACRÉ-CŒUR Toward the east are the MARAIS, a piece of 17th-century Paris, and the Place de la BASTILLE The left bank (with the SORBONNE, the FRENCH ACADEMY, the PANTHEON, the LUXEMBOURG PALACE and gardens, the Chamber of Deputies, the QUAI D'ORSAY, the Hôtel des INVALIDES, and MONTPARNASSE) is the intellectual, governmental, and military section The old Latin Quarter, for nearly a thousand years the preserve of university students and faculty, and the aristocratic Faubourg Saint-Germain are the most celebrated left-bank districts The EIFFEL TOWER, chief landmark of Paris, stands by the Seine on the CHAMPS DE MARS The historical nucleus of Paris is the Île de la Cité, a small boat-shaped island largely occupied by the huge Palais de Justice and the Cathedral of NOTRE DAME DE PARIS It is connected with the smaller Île Saint-Louis, occupied by elegant houses of the 17th and 18th cent Characteristic of Paris are the tree-lined *quais* along the Seine (famed, on the left bank, for their innumerable open-air bookstalls) and the vast tree-lined boulevards which from the 17th cent began to replace the city walls Much of Paris is planned on a grandiose scale unequaled elsewhere, much remains that is as picturesque as it is unsanitary, and much is drab and mediocre Yet the city possesses an indefinable unity of atmosphere that has fascinated writers, poets, and painters for centuries There are no better guides to Paris than Villon, Balzac, Hugo, Baudelaire, and Proust. After Caesar's conquest, the Gallic fishing hamlet on the Île de la Cité grew into a town (Lutetia Parisiorum), which spread to the left bank and acquired considerable importance under the late emperors The vast catacombs at Montparnasse and the baths (part of the CLUNY MUSEUM) remain from that period Legend says that St DENIS, first bishop of Paris, was martyred on Montmartre (named after the event), and that in the 5th cent. St GENEVIEVE, patron of Paris, through her prayers preserved the city from destruction by the Huns Clovis I and several other Merovingian kings had their capital in Paris, which under Charlemagne became a center of learning After devastating raids by the Norsemen, Paris was refortified and successfully defended (885–87) by Eudes and GOZLIN The Norse raids caused recurrent famines, and Paris resumed its growth only after HUGH CAPET, count of Paris, became (987) king of France. The Capetians firmly established Paris as the French capital Development begun (late 12th cent) by Louis VII, continued by Philip II and Louis IX, and completed (early 14th cent) by Philip IV brought Paris to its medieval flowering. SAINT-GERMAIN-DES-PRÉS, Notre Dame, SAINTE-CHAPELLE, and the first Louvre were built in that period, streets were paved and the city walls enlarged; the Parlement of Paris and the STATES-GENERAL were established, and the schools of the left bank were now merged in the Sorbonne, which ALBERTUS MAGNUS and St THOMAS AQUINAS made the fountainhead of theological learning The prosperous merchants and guilds obtained their own municipal government, headed by the provost of the merchants, whose counterpart, the provost of Paris, represented the king The members of the university (clerics) were under the autonomous ecclesiastic jurisdiction of the Sorbonne From its prosperity also dates the rebellious spirit of Paris. In 1358, under the leadership of Étienne MARCEL, Paris first assumed the role of an independent commune (see COMMUNE OF PARIS) and rebelled against the dauphin (later CHARLES V) The Hundred Years War brought civil strife (see ARMAGNACS AND BURGUNDIANS), English occupation, famine, and the Black Death Reconquered from the English in 1436 (six years after Joan of Arc was captured while attempting to take it), Paris recovered quickly, yet the picture given of Paris under Louis XI by François Villon still shows conditions as fairly primitive In the 16th cent the Renaissance made its appearance, Francis I and Marie de' Medici rebuilt the Louvre and built the TUILERIES, the Luxembourg, and the Hôtel de Ville In the Wars of Religion (1562–98) the Parisians, siding with the Catholics, perpetrated the massacre of SAINT BARTHOLOMEW'S DAY (1572), forced HENRY III to leave the city on the Day of Barricades (1588), and allowed HENRY IV to enter the city only after his conversion (1593) to Catholicism Under Louis XIII, RICHELIEU made Paris the intellectual as well as political hub of Europe The archiepiscopal see was established in 1622 During the FRONDE (1648–53) Paris once more defied the royal authority Louis XIV transferred his court to VERSAILLES, thus gaining safety from, but also losing contact with, the people Parisian industries profited from the lavishness of Versailles, the specialization in luxury goods dates from that time J H MANSART under Louis XIV and François MANSART, J G SOUFFLOT, and J A GABRIEL under Louis XV created some of the most majestic prospects of modern Paris The classical age of Molière and Racine, the Age of Enlightenment of Diderot and Alembert, the international salons of Mme du Deffand, Geoffrin, and Helvétius, the scientific work of Lavoisier and Buffon—everything pertaining to intellect, taste, and luxury was concentrated in Paris On the eve of the French Revolution, Parisian society was locked in mortal struggle at the opera, taking sides for Gluck or for Piccinni Yet the growing industries had resulted in the creation of new classes—the industrial bourgeoisie and the proletariat concentrated in such suburbs (*faubourgs*) as Saint-Antoine and Saint-Denis, when Louis XVI called the fateful States-General of 1789 to Versailles, these mobs, ignored till then, hauled the royal family to Paris, stormed the Bastille, and formed the revolutionary commune (see FRENCH REVOLUTION) Napoleon I, crowned emperor at Notre Dame in 1804, began replanning the city The two triumphal arches, the Vendôme Column, the arcaded Rue de Rivoli, and the enrichment of the museums with conquered art treasures were due to him Twice occupied by the allies (1814, 1815), Paris, after the Bourbon restoration, expanded rapidly In 1817 it had 714,000 inhabitants, in 1861 there were 1,696,000 The July Revolution (1830) and the FEBRUARY REVOLUTION of 1848 again were signals heard by all of Europe In letters, music, and painting Paris also led Balzac, Hugo, Chopin, Liszt, Berlioz, Wagner, Ingres, Delacroix, Daumier, are but random names among those associated with the Paris of the era of romanticism Most of modern Paris dates from Napoleon III The great avenues, boulevards, and parks were the work of HAUSSMANN This period of ostentatious prosperity was interrupted by the FRANCO-PRUSSIAN WAR, the bitter siege of Paris, and the Commune of Paris of 1871 and its reprisal Recovery came soon under the Third Republic, and modernization proceeded rapidly In the First World War, though shelled by long-range guns, Paris remained the unattained goal of the Germans After 1919 the last ring of fortifications was replaced by housing developments, among which the Cité Universitaire, residence for thousands of students, is outstanding It was occupied by the Germans on June 14, 1940 After the Allied invasion of Normandy, Paris was liberated by its own resistance forces, the German garrison surrendered on Aug 25, 1944, after French and American troops had entered the city Only outlying districts had suffered appreciable war damage, but the population continued to suffer from inadequate food and fuel supply and high prices Austerity and drabness, inevitable sequels of the war, did not affect,

however, the continued vitality of the traditional Parisian industries or its intellectual ferment. See Fedor Hoffbauer, *Paris à travers les âges* (2 vols, 1875–82), Fernand Bournon, *Paris* (1887); M S C Smith, *Twenty Centuries of Paris* (1913), Marcel Poëte, *Une vie de cité* (3 vols, 1924–27)

Paris (păr'ĭs) **1** City (pop 3,430), a co. seat of Logan co, W Ark, ESE of Fort Smith, in the Ouachita foothills, a coal-mining and farming region The Subiaco College and Abbey (Benedictine) are near by **2** City (pop 9,281), co seat of Edgar co, E Ill, ESE of Decatur near the Ind line, inc 1853 An industrial and rail center in a farm and coal area, it produces brooms, shoes, and metal products Lincoln practiced law here **3** City (pop 6,697), co seat of Bourbon co, N Ky, NE of Lexington and on the South Fork of the Licking, in the bluegrass region, founded 1789 It is a bluegrass-seed and livestock market and has tobacco storehouses An early distillery here (1790) was one of the first in the state, whisky from the region was called bourbon after the county Among many fine old buildings in the vicinity is "Mt Lebanon" (1786) **4** Town (pop 4,094), co seat (since 1805) of Oxford co, W Maine, NW of Auburn, settled 1779, inc 1793 It includes the villages South Paris and West Paris and the residential Paris Hill, birthplace of Hannibal Hamlin and site of a stone jail (1828) converted into a memorial library Feldspar works and wood-processing factories are in Paris **5** City (pop 1,473), co seat of Monroe co, NE Mo, on the Middle Fork of the Salt river and WSW of Hannibal, in a farm area, laid out 1831 **6** City (pop 6,395), co seat of Henry co, W Tenn, near the Ky line, in an area of farms, clay pits, and timber, laid out and inc 1823 It has railroad shops, cotton gins, and factories producing cosmetics and pottery **7** City (pop 18,678), co seat of Lamar co, E Texas, NE of Dallas and S of the Red River The name was changed from Pinhook to Paris in 1844, and the city, formerly important in cattle raising, now is the processing and industrial center for rich cotton and diversified farms of the blackland region After destruction by fires, notably in 1916, the city was rebuilt in planned style There is a junior college

Paris, Commune of see COMMUNE OF PARIS

Paris, Congress of, 1856, conference held by representatives of France, Great Britain, Turkey, Sardinia, Russia, Austria, and Prussia to negotiate the peace after the CRIMEAN WAR In the Treaty of Paris (March 30, 1856), Russia agreed to the neutralization of the Black Sea, which was to be opened to the merchant marines of all nations, but closed to war vessels The Danubian principalities (Moldavia and Walachia, after 1859 called RUMANIA) were recognized as quasi-independent states under continued Turkish suzerainty, to them Russia ceded the mouth of the Danube and part of Bessarabia The lower DANUBE was placed under an international commission The boundaries of Russia and Turkey in Asia were restored to their pre-war limits (to the detriment of Russia) The Ottoman Empire became a member of the European concert and its independence and integrity were guaranteed, the sultan in turn promised to improve the status of his Christian subjects Several principles of international law were adopted by the congress in the Declaration of Paris The provisions of the treaty were altered (1878) by the Treaty of San Stefano and the Congress of Berlin See C D Hazen, W R Thayer, and R H Lord, *Three Peace Congresses of the Nineteenth Century* (1917)

Paris, Declaration of, 1856, agreement concerning the rules of maritime warfare, issued at the Congress of Paris Conflicting methods used in dealing with property at sea had demonstrated the need for uniformity The respect paid to neutral rights in the Crimean War indicated that the leading powers would agree to decreasing the danger to shipping in time of war Four principles were enunciated by the declaration PRIVATEERING would no longer be considered legal, a neutral flag would protect the goods of an enemy, except for CONTRABAND of war, neutral goods, with the exception of contraband of war, would not be liable to capture when under the enemy's flag, a BLOCKADE would be binding only if it prevented access to the coast of the enemy The United States refused to accept the declaration, claiming that privateers were necessary if a nation did not have a strong navy In the Civil War and in the Spanish-American War, however, the United States accepted the declaration At the beginning of the First World War, prize courts recognized the declaration, but submarine warfare and extensive lists of contraband negated its principles See T C Bowles, *The Declaration of Paris of 1856* (1900); F F Piggott, *The Declaration of Paris, 1856* (1919)

Paris, Pact of see KELLOGG-BRIAND PACT

Paris, Treaty of, term applied to several important treaties, signed in or near PARIS, France. The Treaty of Paris of Feb 10, **1763,** was signed by Great Britain, France, and Spain, together with the Treaty of HUBERTUSBURG, it terminated the SEVEN YEARS WAR. France lost its possessions on the North American continent by ceding Canada and all its territories E of the Mississippi to Great Britain, and by ceding W Louisiana to its ally, Spain, in compensation for Florida, which Spain yielded to Great Britain France retained the islands of St Pierre and Miquelon and recovered Guadeloupe and Martinique in the West Indies from Great Britain, in exchange for which it ceded Grenada and the Grenadines to the English In East India, the French were permitted to return to their posts, but they were forbidden to maintain troops or build forts in Bengal, India thus virtually passed to Great Britain In Africa, France yielded Senegal to Great Britain Cuba and the Philippines were restored to Spain In Europe, the French and Spanish returned Minorca to Great Britain and France withdrew its troops from Germany From this treaty dated the colonial and maritime supremacy of Great Britain By the Treaty of Paris of Sept 3, **1783,** Great Britain formally acknowledged the independence of the United States, and the warring European powers, Britain against France and Spain, with the Dutch as armed neutrals, effected a large-scale peace settlement The preliminary Anglo-American articles (which went unchanged) were signed on Nov 30, 1782, after months of tortuous negotiations, in which the chief American plenipotentiaries, John Adams, Benjamin Franklin, and John Jay, acquitted themselves so well that their achievement has been labeled "the greatest triumph in the history of American diplomacy" France and Spain signed separate preliminary articles with Great Britain on Jan 20, 1783, and the Dutch and British signed theirs on Sept 2, 1783 These preliminary agreements (except the Anglo-Dutch one, which was not ratified by both powers until June, 1784) were signed as definitive treaties on Sept 3, 1783 The Anglo-American settlement fixed the boundaries of the United States In the northeast the line extended from the source of the St Croix river due north to the highlands which separated the rivers flowing to the Atlantic from those draining into the St Lawrence river, thence with the highlands to lat 45° N, and then along the 45th parallel to the St Lawrence From there the northern boundary followed a line midway through contiguous rivers and lakes (especially the Great Lakes) to the northwest corner of the Lake of the Woods, thence "due west" to the source of the Mississippi (which were not then known) The Mississippi, south to lat 31° N, was made the western boundary On the south the line followed the 31st parallel E to the Chattahoochee river and its junction with the Flint river, then took a straight line to the mouth of the St Marys river, and from there to the Atlantic The navigation of the Mississippi was to be open to the citizens of both nations Another section of the treaty granted Americans fishing rights off Newfoundland and the privilege of curing fish in the uninhabited parts of Labrador, Nova Scotia, and the Magdalen Islands, but not in Newfoundland A third part provided that creditors of either side would be unimpeded in the collection of lawful debts In a fourth section the American government promised to recommend to the several states that they repeal their confiscation laws, provide for restitution of confiscated property to British subjects, and take no further proceedings whatever against the Loyalists In the treaty with France, Britain relinquished the restrictions which had been imposed on the French naval port of Dunkirk, but aside from minor adjustments in the West Indies and Africa, the territorial dispositions made in the Treaty of Paris of 1763 were generally continued Spain, however, in its treaty with Britain, reacquired the Floridas in America and the island of Minorca in the Mediterranean, while the British retained Gibraltar The Treaty of Paris of May 30, **1814,** was concluded between France on the one hand and Great Britain, Russia, Austria, and Prussia on the other after the first abdication of Napoleon I France was confined to its boundaries of 1792 No indemnity was exacted, and England returned all the French colonies save Tobago, St Lucia, and Mauritius England also kept Malta A general conference was to be called for the territorial settlement in Europe (see VIENNA, CONGRESS OF) The leniency of the treaty to defeated France was chiefly due to the diplomatic skill of TALLEYRAND, who had engineered the restoration of Louis XVIII on the French throne After Napoleon's return, his defeat at Waterloo, and his second abdication, a new peace treaty was signed at Paris on Nov 20, **1815** This treaty was much sterner than the first. France was reduced to the boundary of 1790, was required to pay 700,000,000 francs in reparations, and was made to pay for the maintenance of an Allied army of occupation in NE France, which was to remain for a maximum of five years. All the provisions of the treaty of 1814 not expressly revoked were to remain binding, as was the Final Act of the Congress of Vienna. On the same day Great Britain, Russia, Austria, and Prussia renewed the QUADRUPLE ALLIANCE For the Treaty of Paris of **1856,** see PARIS, CONGRESS OF. For the Treaty of Paris of **1898,** see SPANISH-AMERICAN WAR. After the First World War several treaties were signed in 1919 and 1920 in or near Paris (see VERSAILLES, TREATY OF, SAINT-GERMAIN, TREATY OF, NEUILLY, TREATY OF, TRIANON, TREATY OF SEVRES, TREATY OF). Again, after the Second World War, peace treaties were signed in Paris in 1947, between the Allies and ITALY, RUMANIA, HUNGARY, BULGARIA, and FINLAND Each treaty is a separate document.

Paris, University of see SORBONNE

Paris green, compound containing arsenic and copper, brilliant green in color, and extremely poisonous (For antidote, see arsenic under POISONING, table) It was formerly used extensively as a pigment, in such materials as wallpapers Paris green is used as an insecticide and to kill plant fungi It should be used with great caution It is also known as Schweinfurt green

Paris Peace Conference, 1919 see VERSAILLES, TREATY OF

Park, Edwards Amasa (ă'musu), 1808–1900, American Congregational clergyman, b Providence, R I, grad Andover Theological Seminary, 1831 He was one of the last proponents of New England theology Park taught (1836–81) at Andover Theological Seminary and was editor in chief (1852–84) of the *Bibliotheca Sacra* See biography by F H Foster (1937)

Park, Marion Edwards, 1875–, American educator, b Andover, Mass, grad Bryn Mawr (B A, 1898, M A, 1918) She taught (1902–6) in the department of classics at Colorado College and was dean of Simmons College (1918–21) and later of Radcliffe (1921–22) In 1922 she was appointed president of Bryn Mawr, and she served in that capacity until her retirement in 1942 Her administration maintained and advanced the high academic standing of Bryn Mawr

Park, Mungo, 1771–1806, Scottish explorer in Africa He set out (1795) under the auspices of the African Association to explore the course of the Niger river Traveling NE from the Gambia river, he reached the Niger at Segu and proceeded 300 mi upstream to Bamako On his return to England he published *Travels in the Interior Districts of Africa* (1799) He was sent (1805) by the government to trace the Niger to its mouth, but at Bussa he and his party were attacked in their canoes by natives and Park was drowned See S L Gwynn, *Mungo Park and the Quest of the Niger* (1934)

Park, William Hallock, 1863–1939, American bacteriologist, b New York city, M D Columbia, 1886 He began a distinguished career in public health and preventive medicine by organizing (1894) a municipal laboratory—first of its kind—for the New York city health department In addition to directing (until 1936) the growing laboratory system, he became consultant bacteriologist to the New York state board of health (1914) and to the U S Quarantine Service (1921) He was professor of bacteriology and hygiene (1897–1937) at New York Univ His contributions include improvements in milk purification, the development of serum therapy for (and later toxoid active immunization against) diphtheria, and progress in poliomyelitis research With associates he wrote *Bacteriology in Medicine and Surgery* (1899, revised as *Pathogenic Microörganisms*, 11th ed, 1939) and *Who's Who among the Microbes* (1929) See biography by W W Oliver (1941)

park, a site maintained for public use The term includes large areas such as county, state, and national parks, landscaped strips along roads and boulevards (parkways), and municipal parks which may be city squares, larger neighborhood parks, or extensive areas (usually on the outskirts) Although since ancient times rulers have laid out pleasure grounds and hunting preserves, such areas were seldom open to the public The Greeks had public groves and athletic training areas Imperial Rome maintained small parks, commons, and the extensive Campus Martius During the Renaissance, European cities began to set aside public promenades and formal gardens, these often marked the lines of fortifications razed to enlarge the municipality During the 19th cent many royal gardens, hunting preserves, forests, and drill grounds became public parks Especially in the United States, cities were laid out before the need for parks was realized The city-planning movement of the late 19th cent stimulated communities to set up park systems The trend today is to emphasize recreational facilities The older parks in the United States include Boston Common, New York's CENTRAL PARK and Prospect Park (in the borough of Brooklyn), Fairmount Park, Philadelphia, and Druid Hill Park, Baltimore Other notable American parks are Rock Creek Park, Washington, D C, Jackson Park and Lincoln Park, Chicago, Belle Isle Park, Detroit, and Golden Gate Park, San Francisco Famous parks in France include the woodland of FONTAINEBLEAU and of the BOIS DE BOULOGNE and the formal gardens of VERSAILLES, HYDE PARK, Regent's Park, Kensington Gardens (see KENSINGTON), and KEW GARDENS are London parks See R C Morrison and M E Huff, *Let's Go to the Park* (1937)

Park City, city (pop 3,739, alt. c 7,000 ft), N central Utah, SE of Salt Lake City. The town grew as

a mining camp after gold, silver, and lead were discovered in 1869, flourished lustily in the late 19th cent, and is still a mining town

Park College, at Parkville, Mo, NW of Kansas City, coeducational, opened 1875, chartered 1879 by Presbyterians. Students operate the college industries.

Parker, Alton Brooks, 1852–1926, American jurist, U S presidential candidate (1904), b Cortland, N.Y., grad Albany Law School, 1873 He practiced law in Kingston, N Y, and was (1877–85) surrogate of Ulster co, N Y He became important in state Democratic politics and successfully managed (1885) the campaign of David B Hill for governor He served as justice of the New York supreme court (1885–89) and of the New York court of appeals (1889–92) before he became (1898) chief justice of the appellate division of the state supreme court As a jurist he became noted for his liberal decisions in labor cases He resigned office as chief justice after he received (1904) the Democratic party nomination for the U S presidency. Division within his own party on the currency issue (see Bryan, William Jennings) and the popularity of Theodore Roosevelt, however, helped make his defeat overwhelming He returned to law practice and defended the American Federation of Labor in the Danbury Hatters' Case and was counsel for the prosecution in the impeachment of Gov William Sulzer

Parker, Dorothy, 1893–, American short-story and verse writer, whose maiden name was Rothschild, b West End, N J She is best known for her humorous and sardonic light verse, which is collected in *Enough Rope* (1927), *Sunset Gun* (1928), *Death and Taxes* (1931), and *Not So Deep as a Well* (1936) Short stories of social satire appear in *Laments for the Living* (1930) and *Here Lies* (1939) Her *Collected Stories* appeared in 1942, and *Collected Poetry* in 1944 In 1949 she collaborated on a play, *The Coast of Illyria,* which was produced in Dallas

Parker, Francis Wayland, 1837–1902, American educator, b Bedford, N H He began teaching at 16 and served throughout the Civil War, retiring as colonel He later taught in Dayton, Ohio, studied German schools and the Herbartian system at first hand (1872), and from 1875 to 1880 served as superintendent of schools in Quincy, Mass There he originated the "Quincy movement," emphasizing such progressive educational principles as learning by doing, socialized activities, the teaching of science, and informal instruction He extended the practice of these principles as a supervisor (1880–83) of schools in Boston, as principal (1883–99) of the Cook County Normal School, Chicago, and as founder and principal (1899–1901) of the Chicago Institute, which became part of the school of education of the Univ of Chicago His valuable pioneer work led to improvements in curriculums and teacher training

Parker, George Howard, 1864–, American zoologist, b. Philadelphia, grad Harvard (B S, 1887) He taught at Harvard from 1888 to 1935 (as professor from 1906) and was director (1921–34) of the laboratory His research includes special work on the nervous system and on the sense organs He wrote *The Elementary Nervous System* (1919), *Smell, Taste, and Allied Senses* (1922), *What Evolution Is* (1925), *Color Changes of Animals* (1936), and the autobiographical work *The World Expands* (1946)

Parker, Sir Gilbert, 1862–1932, Canadian novelist, b Camden East, Ont After 1885 he traveled widely in the British Empire, moved to England in 1889, and was elected member of Parliament from Gravesend In 1902 he was made a knight, in 1915 a baronet, and in 1916 a privy councilor Many of his novels and collections of tales deal with the history of Canada, others with England and the empire Among his works are *Pierre and His People* (1892), *When Valmond Came to Pontiac* (1895), *The Seats of the Mighty* (1896), and *The Promised Land* (1928) He also wrote *World in the Crucible* (1915), a book on the First World War, and collaborated on *A History of Old Quebec* (1903) He was a poet of some skill in his humorous verses, some of which have been set to music, and in his love lyrics

Parker, Horatio William, 1863–1919, American composer, b Auburndale, Mass, pupil of Rheinberger in Munich He played the organ at various churches in New York and taught at St Paul's School in Garden City and at the National Conservatory, New York, until 1893, when he became organist of Trinity Church, Boston In 1894 he accepted the newly created chair of music at Yale Univ He organized and conducted the New Haven Symphony Orchestra, sponsored jointly by the city and the university His church music—anthems, services, hymns, and organ pieces—are among the best of their period German romanticism is the outstanding influence on his works, which include the oratorios *Hora novissima* (1893), a setting of part of Bernard of Cluny's *De contemptu mundi,* and *The Legend of St Christopher* (1898), to a text by his mother; the cantata *A.D. 1919* and the operas *Mona* (1911) and *Fairyland* (1915), all with texts by Brian Hooker, and male choruses, songs, and piano pieces. See biography by his daughter, Isabelle Parker Semler (1942).

Parker, Sir Hyde, 1739–1807, British admiral In the American Revolution he served under Samuel Hood and broke (1776) the strong defenses of the North River at New York city—an exploit for which he was knighted in 1779 He commanded later in Jamaica, the Mediterranean, and the North Sea in the French Revolutionary and Napoleonic Wars Horatio Nelson was Parker's second in command at the great victory of Copenhagen (1801), his failure to observe Parker's signal to cease fighting is one of the most famous incidents of naval history Nelson soon superseded Parker

Parker, Joseph, 1830–1902, English Congregational minister From 1853 to 1858 he was pastor at Banbury, then until 1869 of the Cavendish St Chapel, Manchester His reputation as an eloquent pulpit orator and his influence steadily grew In 1874 the great City Temple on Holborn Viaduct, London, was opened for his congregation Parker made five visits to America His chief work was *The People's Bible* (25 vols, 1885 95) His voluminous writings include *Ecce Deus* (1868) and the autobiographical *A Preacher's Life* (1899) See biography by William Adamson (1902)

Parker, Lottie Blair, 1858?–1937, American playwright, b Oswego, N.Y She was also an actress She is remembered for her melodrama *Way Down East,* first produced in New York in 1898 and played in small theaters for many years

Parker, Matthew, 1504–75, English prelate, archbishop of Canterbury At Cambridge he was influenced by the writings of Martin Luther and other reformers In 1535 he was appointed chaplain to Anne Boleyn, and in 1537 to Henry VIII In 1544 Parker became master of Corpus Christi College, Cambridge, to which he later left his fine collection of ancient manuscripts, and in 1545 was made vice chancellor of Cambridge Univ Under Edward VI he was presented with the deanery of Lincoln, but after the accession of Queen Mary, who deprived him of his preferments, he lived in obscurity until he was called (1559) by Queen Elizabeth to the see of Canterbury He courageously carried the primate's responsibilities in a time of change and peculiar difficulty, sustaining a distinctly Anglican position between extreme Protestantism and the Church of Rome In 1562 he revised the Thirty-nine Articles He supervised (1563–68) the preparation of the Bishops' Bible He published anonymously *De antiquitate Britannicae ecclesiae* (1572) and is also noted for his editions of the works of Matthew of Paris and other chroniclers See biographies by John Strype (new ed, 3 vols, 1821), W M Kennedy (1908), and E C Pearce (1925), W W Greg, *Books and Bookmen in the Correspondence of Archbishop Parker* (1935)

Parker, Sir Peter, 1721–1811, British admiral He fought in the American Revolution, especially in the unsuccessful attack on Charleston (1776) and at New York He became (1799) admiral of the fleet, but is chiefly remembered as a friend and patron of young Horatio Nelson He was made a baronet in 1782 and was succeeded in the title by his grandson, **Sir Peter Parker,** 1785–1814 A captain in the British navy, this Sir Peter served in the Napoleonic Wars and was killed in the United States in the War of 1812

Parker, Theodore, 1810–60, American theologian and social reformer, b Lexington, Mass He studied languages at home, taught school, and passed the examinations at Harvard without attending classes He graduated from Harvard Divinity School in 1836 and was pastor (1837–46) of the First Parish (Unitarian) Church, West Roxbury, Mass The liberalism which he presented in Boston in 1841 and amplified in his scholarly *Discourse of Matters Pertaining to Religion* (1842) was then so radical that the Boston Unitarian clergy withdrew from him, although he remained a member of their association He was one of the transcendentalists, contributed to the *Dial,* and edited (1847–50) the *Massachusetts Quarterly Review* In 1845 he became preacher of the Twenty-eighth Congregational Society of Boston, and in 1846 their pastor His congregation grew to 7,000 In addition he lectured at lyceums throughout the country and was a leader in antislavery and prison-reform activities In 1859 ill-health forced him to retire and travel, and he died in Florence After his death Parker's works were widely read, and his once radical views gained acceptance The best edition of his works is the Centenary (15 vols, 1907–13) See John Weiss, *The Life and Correspondence of Theodore Parker* (1864), biographies by O B Frothingham (1874) and H S Commager (1936)

Parker, Willard, 1800–1884, American surgeon, b Lyndeboro, N.H, M D. Harvard, 1830. From 1839 to 1870 he was professor at the College of Physicians and Surgeons, New York. A noted New York surgeon, he was first in the United States to operate for inflammation and rupture of the bladder and for abscessed appendix. The Willard Parker Hospital in New York was named for him

Parker, city (pop. 1,244), co seat of Turner co., SE S.Dak, SW of Sioux Falls, in a farm and dairy region; settled 1879.

Parker Dam, at the Ariz.-Calif. line, in the Colorado river, completed 1938 It is 320 ft high and 856 ft long. It impounds water for Los Angeles and other coastal municipalities, has a power plant, and supplies some water for irrigation.

Parkersburg, 1 Town (pop 1,260), N central Iowa, W of Waterloo; inc. 1874 Not far is Beaver Meadow State Park 2 City (pop 30,103), co seat of Wood co, NW W Va, SSW of Wheeling at the confluence of the Little Kanawha and the Ohio rivers, settled 1785, chartered 1820 It is an industrial and shipping center in an oil, gas, and coal region, producing oil-well equipment, shovels, lumber, glass, steel, rayon, vitrolite, porcelain, and shoes Near the city, in the Ohio, is historic Blennerhassett Island

Parkes, Sir Henry, 1815–96, Australian statesman He emigrated from England to Australia in 1839 and founded a newspaper, the *Empire* (1849–58), to advocate responsible government and to bring an end to transporting criminals to Australia He served (1854–61) in the legislative council and then in the assembly of New South Wales Returning (1863) from a two-year mission to England in the interests of immigration, he secured, as colonial secretary of New South Wales (1866–68), the passage of the first education act From 1872 to 1891 he dominated provincial politics in five prime ministerships Free trade, civil service reform, public works, and the federation of the Australian colonies were his constant concerns See biography by C E Lyne (1897).

Parkesburg, borough (pop 2,288), SE Pa, W of Philadelphia, inc 1872

Parkes process see SILVER

Park Falls, city (pop 3,252), N Wis, SE of Ashland and on the Flambeau, inc 1912 An early lumber center, it now makes paper

Park Hills, residential town (pop 1,615), N Ky, a suburb of Covington, inc 1927

Parkhurst, Charles Henry, 1842–1933, American clergyman and reformer, b Framingham, Mass, grad Amherst, 1866, and studied theology at Halle and Leipzig He was pastor of the Congregational church at Lenox, Mass (1874–80) and of the Madison Square Presbyterian Church, New York city (1880–1918) Becoming interested in municipal affairs and having been elected (1891) president of the Society for the Prevention of Crime, Parkhurst inaugurated a campaign against Tammany Hall, personally collecting evidences of corruption to substantiate his charges The campaign led to the appointment of the Lexow committee to investigate conditions and to the defeat of Tammany and the election of a reform mayor in 1894 Among Parkhurst's writings are *Our Fight with Tammany* (1895) and *My Forty Years in New York* (1923)

Parkin, city (pop 1,412), NE Ark, on the St Francis river, in a farm area Building machinery is made here

Parkman, Francis, 1823 93, American historian, b Boston, grad Harvard (B A, 1844, LL B, 1846) In 1843–44 he traveled in Europe for his health, and in 1846 he started his journey along the Oregon Trail for the dual purpose of health and study of the Indians He lived for a time with a band of Sioux and mixed freely with hunters, trappers, and other frontiersmen. On his return to Boston he collapsed physically and moved to Brattleboro, Vt There Parkman dictated to his cousin *The Oregon Trail,* published first in the *Knickerbocker Magazine* and in book form as *The California and Oregon Trail* (1849), the shorter title was resumed in later editions Despite his nervous trouble and his extreme weakness of sight, which compelled him to make notes with the aid of a special wire frame from books and manuscripts read to him, he labored on his *History of the Conspiracy of Pontiac* (1851) He grew worse for a time, and temporarily had to abandon his historical work To keep himself occupied he wrote a novel, *Vassall Morton* (1856), which was not very successful, he also took up the study of horticulture In this he became an expert, retaining his interest throughout his life, in 1866 *The Book of Roses* was published and from 1871 to 1872 he was professor of horticulture at Harvard Following a trip to Paris in 1858 to seek medical aid, there were several years in which he was unable to continue his researches His studies of the history of Canada and the early Northwest were eventually resumed, however, resulting in *Pioneers of France in the New World* (1865), *The Jesuits in North America in the Seventeenth Century* (1867), *The Discovery of the Great West* (1869, 11th and later eds, pub as *La Salle and the Discovery of the Great West,* 1879), *The Old Régime in Canada* (1874), *Count Frontenac and New France under Louis XIV* (1877), *Montcalm and Wolfe* (1884), and *A Half-Century of Conflict* (1892) Parkman served for a time as overseer of Harvard and later as a fellow of the Harvard Corp, (1875–88) He was a founder of the Archaeological Institute of America (1879) and was president of the Massachusetts Horticultural Society (1875–78). Despite the severe physical handicaps which beset him, Parkman had superior

literary gifts which, combined with his careful historical research, gained him wide contemporary prominence and established his name among the great historians of America His work showed both anti-Catholic and antidemocratic prejudices, but it usually managed to combine accuracy and vigor of expression. There are several editions of Parkman's complete works His journals have been edited by Mason Wade (1947). See biographies by C H Farnham (1900), H O Sedgwick (1904), and Mason Wade (1942)

Park Range, part of the Rocky Mts , central Colo and S Wyo , extending N from the Colorado river The southeastern part of the range is known as the Gore Range, the northwest extension in Wyoming as the Sierra Madre The highest peak of the Park Range is Mt Lincoln (14,284 ft), at the extreme south end of the Gore Range

Park Rapids, village (pop 2,643), co seat of Hubbard co , N central Minn , E of Detroit Lakes, founded 1880 It is a resort in a lumber and dairy region

Park Ridge 1 Residential city (pop 12,063), NE Ill , northwest suburb of Chicago, inc 1910 2 Borough (pop 2,519), NE N J , S of Pearl River, N Y , settled c 1770, inc 1894

Park River, city (pop 1,408), NE N Dak , on the Park river and NW of Grand Forks, inc 1896 It is a trade center for a farm area

Parkside, borough (pop 1,579), Delaware co , SE Pa , SW of Philadelphia

Parkston, city (pop 1,305), SE S Dak , S of Mitchell, founded 1886 It is a farm trade center for a German and Czech community

parlement (pär'lumunt, Fr pärlumä'), in French history, the chief judiciary body under the *ancien régime* In 1789 there were, besides the Parlement of Paris, provincial parlements with their seats at Aix-en-Provence, Arras, Besançon, Bordeaux, Colmar, Dijon, Douai, Grenoble, Metz, Nancy, Pau, Rennes, Rouen, and Toulouse The Parlement of Paris, however, had superior authority It grew out of the feudal Curia Regis and may be said to have had a separate existence since the reign of Louis IX (13th cent) It consisted of three separate chambers —the *grand-chambre*, the *chambre des requêtes*, and the *chambre des enquêtes*—and it gradually acquired a very complex and elaborate organization Its functions were originally purely judiciary, but it acquired considerable political power from the fact that royal edicts entered into force only after being registered by it and also from its right to make remonstrances The king, however, could force the Parlement of Paris to register any edict if he ordered it to do so in a "bed of justice," i e , a solemn meeting of the parlement at which the king attended in person Though the parlement often championed the rights of the people against arbitrary royal action, its own moves were sometimes dictated by the narrow interests of its members, a hereditary caste of magistrates, and by the desires of the great nobles Such was the case at the time of the FRONDE against Mazarin (17th cent) In the reign of Louis XV the parlements rebelled against continuance of wartime taxes after the end (1763) of the Seven Years War Louis, through his chancellor, René de MAUPEOU, unsuccessfully sought to crush their power The parlements were abolished (1771) and a new judicial system was substituted Although the new system did away with the sale of magistracies, simplified procedure, and represented a step forward, it failed because there were no trained magistrates to replace the old ones Public opinion generally favored the parlements, which were restored (1774) by Louis XVI In 1787–88 the Parlement of Paris and the provincial parlements successfully defied the fiscal reforms proposed by LOMÉNIE DE BRIENNE to save France from bankruptcy, their attitude led directly to the calling of the States-General of 1789, with which the French Revolution began

Parley, Peter see GOODRICH, SAMUEL GRISWOLD

Parliament, legislative assembly of Great Britain and the British Empire It has been, however, from the beginning of its history much more than a legislative body In the course of time it has come to represent the actual sovereign of Great Britian, while the king remains sovereign in name only Parliament consists, technically, of the king, the House of Commons, and the House of Lords, but the word in common usage refers to the members of the two houses or, more usually, to Commons alone The powers of the House of Lords have been negligible since 1911 The great power of the House of Commons lies, historically, in its control of the finances of government Membership in the House of Lords is hereditary (except for the Anglican bishops) for the peers of England, Ireland, and Scotland There are at present more than 800 eligible members of the House of Lords, but only a fraction of that number choose to sit in the House Commons is an elective body of 625 members, 506 for England, 36 for Wales and Monmouth, 71 for Scotland, and 12 for Northern Ireland The presiding officer is the speaker, who is elected from the party in power at the time and who customarily holds office until he decides to retire The two-party system is a feature of English parliamentary government The party elected to a majority position chooses the executive head of the government (the prime minister), and the minority party functions in Parliament as "His Majesty's loyal Opposition" When the government party is unable to get parliamentary support on major issues it is obliged to call a general election for a new Parliament Unlike the American system, there is no clear separation of legislative and executive branches of the government, the executive branch is, in effect, a committee of the legislature The British Parliament has had great influence as a model for legislative bodies in other democratic countries (see LEGISLATURE) In its slow evolution in Great Britain, Parliament drew upon many other institutions and customs, such as the inquest, the jury, popular election, and the clerical convocation There is no historical continuity between the Anglo-Saxon witenagemot and the modern British Parliament The first steps in the development of the modern institution do not become apparent until long after the Norman Conquest The passages in the Magna Carta once thought to refer to Parliament are no longer read in that light It was in the 13th cent , however, that the fundamental changes occurred which were to produce Parliament through a long, slow process of blind evolution working in many lines The Curia Regis, the king's feudal court to which he summoned the tenants in chief and the great barons both lay and clerical, was the kernel of one line of development, which, when completed, produced what is now the House of Lords The other main line of development was the convocation of representatives of other social elements of the state, usually to consult with the king about finances (not to "consent to taxation" in the modern sense) and, less importantly, to discuss other elements of administration, this group was ultimately to become the House of Commons The Curia Regis, more commonly called the king's council or the great council, was not primarily a legislative body but had judicial, executive, and merely quasi-legislative powers Parliament was in its early days the 'high court of Parliament," as it still nominally is The development of the heritable right of certain barons to be summoned to the king's council, which was originally composed at the king's will, gave rise to the peerage, but this development was not at all secure until the reign of Edward III (1327–77), and even then was far from inviolable The name House of Lords was not attached to the body until the time of Henry VIII Commons came, instead, from an irregular series of meetings at which representatives of the country were gathered into a central assembly—the much-disputed St Albans assembly of 1213, the assembly of 1227, the assembly for an aid in 1254 The word *parliamentum* (first known instance, 1239) came to be applied to the meeting of the permanent great council, which sometimes met at the same time as a central assembly, but there was no organic connection between them In 1258 the barons made a powerful bid for authority in their Mad Parliament at Oxford A new molding force came to play in the BARONS' WAR, when Simon de MONTFORT summoned representatives of the counties and the lesser clergy in an attempt to gain popular support His famous Parliament (1265) included two representative burgesses from each borough and apparently met with the great council at London All the elements of the Parliament were now assembled, but the organization into a true Parliament had not yet occurred Even the so-called Model Parliament (1295) summoned by Edward I was far from being a Parliament in the later sense of the word, and its significance was not recognized at the time It did, however, set a precedent for later development It contained a division of greater barons, lay and clerical, and another division of county representatives (knights), borough representatives, and lesser clergy There were as yet no "houses" Neither was there the definite division into three estates as in the continental assemblies (see STATES-GENERAL) Sometime later the lesser clergy retired to their own convocations and thus left only two estates in the developing Parliament Financial questions were important in the early 14th cent , but judicial questions probably dominated This amorphous body—a small permanent council (gradually withdrawn as the privy council), the large summoned council of peers, and the representative assembly, which met more and more regularly at the same time as the peers and was called in to consult with them on affairs of the realm—gradually took on a more definite shape The alarms of the reign of Edward II fostered development of a body that controlled public opinion, and in the reign of Edward III the formative institution began to take on its now familiar appearance One exceedingly important step was the transfer of the control of taxation from the king to Parliament, and soon definitely to Commons In 1340 Parliament was able to assert this control over Edward III, and in spite of later difficulties the right then established became permanent This circumstance gave Parliament the opportunity for asserting other rights. As the high court, it also passed upon novel cases and had thereby the power to determine new laws. Even more important, this court was empowered to receive and consider the complaints and petitions for redress of the nation and to submit these petitions, or others, to the king The power to withhold financial grants to the king enabled Parliament to force his acceptance of, and action on, these petitions Gradually the petition form was supplanted by the drafting of bills sent to the king and ultimately enacted by Commons, Lords, and king together Parliament also was able to assert its right to have a share in the control of the administration; in 1340, with the right to tax, came the right to audit A little later came the right (established by 1376), developed from its judicial authority, of Parliament to impeach officers of the king In the reigns of the Lancastrian kings, Parliament indeed seems to have had an almost complete control of administration In the 15th cent development was somewhat slowed Parliament's legislative functions continued to increase, however, and its judicial powers to decline Members of Parliament had grown self-conscious and even before Tudor times were insisting upon some parliamentary "privileges," notably freedom from arrest and molestation and freedom of speech With the growth of a strong kingship under the Yorkists and especially under the Tudors, Parliament became a mere instrument of the king, but it is significant that the monarch felt obliged to work through Parliament and not outside it The House of Lords with the chancellor and the House of Commons with its speaker now appeared in their modern form The Reformation in England greatly increased the powers of Parliament because it was through the nominal agency of Parliament that the Church of England was established With the accession of James I, Parliament was able to assert its theoretic claims in practice and voiced demands not merely to collateral power but to actual sovereignty This was the fundamental constitutional issue of the PURITAN REVOLUTION The Parliaments of the reigns of JAMES I and CHARLES I led the opposition to the king, and only financial necessity compelled the king to summon them In 1628 Parliament presented the PETITION OF RIGHT to Charles I, demanding that its sole authority to levy taxes be recognized Charles reluctantly accepted this dictum, but continued to oppose Parliament The Short Parliament, which lasted three weeks in 1640 and was prorogued by the king, was a prelude to the Long Parliament (1640–49), which headed the opposition to the king in the civil war Victory did not, however, bring Parliament the complete sovereignty for which it was striving Quarrels with the army led to Pride's Purge (see PRIDE, THOMAS), all members opposed to the army were expelled and the remaining Rump Parliament functioned only lamely until 1653 Then Oliver CROMWELL assumed complete control. The nominated Parliament in the Protectorate was a mere travesty Yet the revolution had really settled the issue The RESTORATION brought Parliament back into power, Charles II accepted it and set about managing it Hatred and distrust of James II led to the Glorious Revolution of 1688, which permanently affirmed parliamentary sovereignty Under Anne even the royal veto on legislation disappeared The appearance of parties (see WHIG and TORY) brought a new turn in parliamentary development. In the 18th cent Parliament established its complete control over the ministry and its appointment, though there was some resistance to this tendency even into the 19th cent , the attempt of GEORGE III to reestablish personal rule failed Another development was slower in coming Parliament actually represented only the propertied upper classes "Pocket" boroughs, in which representative election had become farcical, wholesale manipulation of elections, and control of legislation by the privileged were the accepted rule in the 18th cent , but new and powerful social classes were appearing with the Industrial Revolution Democratic doctrines gained ground A leading issue of politics in the 19th cent was the demand for the extension of the suffrage and the reform of Parliament The first step toward this was achieved in the great REFORM BILL OF 1832 The growth of CHARTISM and continued democratic agitation led to the REFORM BILL OF 1867, supplemented in 1884, and the eventual establishment of universal suffrage in 1918 The growth of Great Britain changed the complexion of Parliament somewhat throughout the centuries Henry VIII made Wales into shires and introduced 24 Welsh members to Commons The union of England and Scotland in 1707 added Scottish peers to the House of Lords and 45 members to Commons. In 1800 the Irish Parliament yielded place to representation by 100 members in the British Parliament The question of Irish representation or a separate Irish Parliament was one of the central questions in the long Irish struggle for HOME RULE. Today only Northern Ireland is consolidated with England, Scotland, and Wales in Parliament The class represented in the House of Lords began to

lose power in the later 19th cent and, through long conflict with Commons the House of Lords lost power too. Commons was able to intimidate Lords by the threat of having the crown create enough new peers to override any opposition in Lords, but the contest between the two houses over the financial bill of 1909 finally led Commons to a more drastic solution The Parliament Act of 1911 stripped the House of Lords of almost all its power. The rise of socialism in Great Britain since 1945 has not greatly affected the machinery of government, and Parliament continues to function in the pattern established over many centuries Parliament is housed in historic Westminster Palace, once a residence of the English kings In May, 1941, the House of Commons chamber was completely destroyed by German bombs The lower house sat in the House of Lords chamber while its own quarters were being restored See A L Lowell, *The Government of England* (1916–17), A B White, *The Making of the English Constitution, 449–1485* (2d ed, 1925), A F Pollard, *The Evolution of Parliament* (2d ed, 1926), G B Adams, *Constitutional History of England* (revised by Robert Schuyler, 1934), Ramsay Muir, *How Britain is Governed* (3d rev ed, 1935), W J Brown, *Everybody's Guide to Parliament* (1946), G F M Campion, *An Introduction to the Procedure of the House of Commons* (2d ed, 1947), W Ivor Jennings, *Parliament* (1948)

parliamentary law, rules under which deliberative bodies conduct their proceedings In English-speaking countries these are based on the practice of the English Parliament, chiefly in the House of Commons British parliamentary law is conventional, rather than statutory, including traditions and precedents as well as the Standing Orders of the House Thomas Jefferson when presiding over the U S Senate prepared a manual of parliamentary law based on the practice of the House of Commons, and this practice has generally been followed in the House of Representatives as well H M Roberts's *Rules of Order* (1876), drawn from the usages of all three bodies, is the usually accepted authority on parliamentary law Parliamentary law includes the rules necessary for the efficient and equitable conduct of business by an assembly In Britain the effective interpreter of parliamentary law is the speaker of the House of Commons, in the United States, it is the speaker of the House of Representatives and the president of the Senate, who are partisan figures, unlike their British counterparts See J J Auer, *Essentials of Parliamentary Procedure* (1942), J Q Tilson, *Manual of Parliamentary Procedure* (1949)

Parlow, Kathleen, 1890–, American violinist, b Canada She appeared in the United States and England as a child prodigy, studied (1906–7) with Leopold Auer in Russia, had a successful concert career, and later taught at Mills College

Parma (par'mu, Ital pär'mä), city (pop 65,126), capital of Parma prov, Emilia-Romagna, N central Italy, on the Aemilian Way It is an agricultural market and a silk-producing center A Roman colony after 183 B C, it was a free commune by the 12th cent, later passed under foreign rulers, and was added (16th cent) to the Papal States by Pope Julius II In 1545 Pope Paul III created the duchy of Parma and Piacenza, a substantial territory, and bestowed it upon his son, Pierluigi Farnese, whose descendants ruled it (with interruptions) till 1731 The duchy then fell, through the female line, to the Spanish Bourbons, the cadet line of Bourbon-Parma began in 1748 It was displaced in 1802, when Napoleon I annexed the duchy to France The Congress of Vienna awarded it to Marie Louise, who ruled it from 1816 to 1847, it was then restored to the Bourbons In 1860 the duchy was incorporated into the kingdom of Sardinia Parma is rich in works of Correggio, who painted frescoes for the Convent of St Paul and for the Romanesque cathedral The octagonal baptistery (13th cent) is one of the finest in Italy Among the buildings damaged in the Second World War is the Pilotta (the unfinished palace of the Farnese), which contains an art gallery, the interesting wooden Farnese Theater (built in 1618), and the Palatina Library Parma was a center of learning in the Middle Ages, its university dates its official existence from 1502 The region of Parma is noted for its hard Parmesan cheese

Parma. **1** Village (pop 1,085), SW Idaho, in the Boise river valley, near the Oregon line NW of Caldwell, inc 1904 The farming center is in the area of the Boise project **2** City (pop 1,187), SE Mo, SW of Cairo, Ill, in a cotton and farm area, inc 1906 **3** City (pop 16,365), NE Ohio, in the Cleveland metropolitan area, inc 1925

Parma Heights, village (pop 1,330), NE Ohio, in the Cleveland metropolitan area, settled 1818, inc 1912

Parmashta (pärmäsh'tü), one of Haman's sons Esther 9 9

Parmenas (pär'mĕnus), one of the seven deacons He is said to have died a martyr at Philippi Acts 6 5

Parmenides (pärmĕn'ĭdēz), b. c.514 B C, Greek philosopher of Elea, leading figure of the Eleatic school The theory of Xenophanes concerning the unity of all existence inspired the basic postulate of Parmenides—that being was the sole and eternal reality He held all change to be an illusion of the senses Sense perception reveals a world of plurality—of appearance and diverse opinions The true world, conceived by logic, is a unity, unchangeable and immovable A dialogue of Plato bears his name

Parmenion (pärmē'nēun), d 330 B C, Macedonian general He served under Philip II On Philip's death Parmenion was largely responsible for the adhesion of the part of the army in Asia to Alexander the Great. He and the young king were warm friends, and at Issus and Arbela, Parmenion commanded the left wing, while Alexander himself led the right When Alexander was pushing eastward in Persia, he left Parmenion to govern Media While the king was in Drangiana (330 B C), a plot was discovered which seemed to implicate Philotas, Parmenion's son Philotas, when tortured, named his father as an accomplice Parmenion was killed at the king's command

Parmesan cheese, (pär'mŭzun, pär'muzŏn″), very hard, sharp-flavored, Italian skim-milk cheese, generally used grated

Parmigiano (parmējä'nō) or **Parmigianino** (-jänē'nō), 1503–40, Italian painter and etcher of the Lombard school His real name was Francesco Mazzola, but he was called Parmigiano from his birthplace, Parma At first influenced by Correggio, he later visited Rome, where he was profoundly affected by Raphael's style His successful career in Rome was interrupted by the sack of the city in 1527, and he fled to Bologna, where he painted for the nuns of St Margaret his famous altarpiece, *Madonna and Child with St Margaret and Other Saints* (Bologna) In 1531 he returned to Parma, where his remaining years were spent in poverty and misfortune Among his important works are *Vision of St Jerome* (National Gall, London), *Madonna dal Collo Lungo* (Pitti Palace, Florence), *Cupid Making a Bow,* his best-known picture, often attributed to Correggio (Vienna), *Annunciation* (Ambrosian Library, Milan), the famous frescoes in San Giovanni Evangelista, Parma, painted before his Roman sojourn, and portraits in the museums of Naples, Madrid, and Vienna Parmigiano is credited with having introduced etching into Italy His few extant prints reveal a sketchy but vigorous and graceful style

Parnach (pär'năk), Zebulunite Num 34 25

Parnaíba (pärnaē'bu), river, c 750 mi long, rising in NE Brazil and forming the boundary between Maranhão and Piauí states It flows generally northward to the Atlantic near the town of Parnaíba (pop 22,176), which is the shipping center of the river valley Former spellings were Parnahiba and Parnahyba

Parnassians (pärnă'shŭnz), group of 19th-century French poets, so called from their journal the *Parnasse contemporain* Issued from 1866 to 1876, it included poems of Leconte de Lisle, Banville, Sully-Prudhomme, Verlaine, and J M de Heredia (1842–1905) The Parnassians, in reaction to the looser romantic forms, strove for exact and faultless workmanship, selecting exotic and classical subjects which they treated with rigidity of form and emotional detachment See symbolists

Parnassus (pärnă'sus), mountain, more than 8,000 ft high, SW Phocis, Greece It was sacred to Apollo, Dionysus, and the Muses The stalactite cave of the Corycian nymphs and the fountain of Castalia were on its slopes, the Pythian games were held higher up, and at the foot lay Delphi Parnassus was thus sacred to letters, learning, and art The modern name is Liakura or Liakoura

Parnell, Charles Stewart, 1846–91, Irish nationalist leader Frail, nervous, haughty, sensitive, and only a mediocre orator, he nevertheless possessed a fascination which enabled him to lead men with remarkable effectiveness A Protestant, an opportunist who was also a fierce lover of justice, he excelled in uniting different elements of Irish patriots—moderate land reformers and Home Rule advocates, friends of law and friends of violence—in a common cause Parnell was made sheriff of Wicklow in 1874 and became a follower of Isaac Butt Elected to Parliament in 1875, he determined soon on a policy of obstruction, impressing the House with the gravity of the Irish problem by filibusters that sometimes kept them in session all night In 1878 he received the support of the Fenians and joined in the agitation against the Irish land laws He also bid for the financial and moral support of Irish-Americans and was well equipped to appeal to them as the grandson of the American naval hero, Charles Stewart In 1879 he became president of the National Land League (see Irish Land Question) and in 1880 visited the United States The agitation produced a great increase in crime against landlords and a harsh bill to check it was passed (1881) over Parnell's opposition In 1881 Parnell started a paper, *United Ireland,* edited by William O'Brien, to support the Land League, he encouraged the boycott as a means of bringing pressure on landlords and land agents. Arrested for his activities and put in prison at Kilmainham, he issued from jail a no-rent manifesto, the popularity of which caused him to be referred to as the "uncrowned king of Ireland" He was released by the so-called Treaty of Kilmainham, by which the government agreed to settle the question of arrears in land for Parnell would help check violence against landlords The slaying (May 6, 1882) of two prominent English officials in Dublin—the famous Phoenix Park murders—shocked Parnell as much as it did the English, but the Irish leader opposed the coercive Crimes Act which followed and was therefore constantly charged with encouraging terrorism He supported the Irish National League, founded to replace the dissolved National Land League, and both Irish and American followers retained confidence in him In 1885 the Liberals' threat to renew the Crime Act of 1882 caused Parnell to throw the Irish vote to the Tories, and the Gladstone ministry fell The Irish question was now paramount in English politics for a decade, and the Irish vote a deciding factor up to the First World War The Home Rule issue split the Liberals (see Liberal party) and defeated the Gladstone government of 1886 At this point, Parnell swung back to the Liberals, forming a definite alliance In 1887 *The Times* printed a series of hostile articles on "Parnellism and Crime," ending with a facsimile letter, purporting to carry Parnell's signature and apologizing for his denunciation of the Phoenix Park murders A special commission found (1889) that this letter, and others, had been forged by one Richard Pigott, and although some of Parnell's activities were censured, he and his associates were exonerated In 1889 Parnell was named as co-respondent in the divorce suit of Capt William O'Shea against his wife, Katharine Adultery was proved and a divorce granted (1890), in 1891 Parnell married Mrs O'Shea The episode ruined his political influence, for the Catholic priests and English Liberals denounced him and the Irish group split into Parnellites and anti-Parnellites His efforts to reunite the party failed and broke his health But the importance of the Irish issue remained, and other leaders working on Parnell's beginnings effected a political combination which secured both a complete land reform (1903) and Home Rule (1914) See biographies by his wife, Katharine Parnell (1914), his brother, J H Parnell (1916), St John Ervine (1925), William O'Brien (1926), and Joan Haslip (1936), M M O'Hara, *Chief and Tribune, Parnell and Davitt* (1919), Henry Harrison, *Parnell Vindicated* (1931)

Parnell, Thomas, 1679–1718, British poet, b Dublin Educated at Trinity College, Dublin, he was archdeacon of Clogher from 1706 He was a friend of Pope and Swift, and his verse was praised by Johnson and Goldsmith His best-known poems, "The Hermit," "The Night-Piece on Death," and "Hymn to Contentment," with others are reprinted in *Minor Poets of the Eighteenth Century* (ed by H I'A Fausset, 1930)

Parnu (pär'nōō), Estonian *Pärnu* (pär'nōō), Ger *Pernau* (pär'nou), city (pop 20,334), SW Estonia, a port on the Gulf of Riga It exports timber and flax and is a sawmilling center It was founded c 1250 by the Livonian Knights and became a Hanseatic city After the dissolution (1561) of the Livonian Order it was contested by Sweden, Russia, and Poland Peter I of Russia took it from the Swedes in 1710, and its cession was confirmed by Sweden in 1721 The name also appears as Pyarnu

parochial school (purō'kēul) [parish school], elementary school supported by a local church In the United States such schools are maintained by a number of denominations, including Lutherans and Seventh-Day Adventists, but vastly the most numerous are those attached to Roman Catholic parishes These are organized by dioceses, each having its independent system with a superintendent (priest or layman) appointed by the bishop Some dioceses maintain high schools Most schools are taught by members of religious orders, who usually receive little more than subsistence Their orders and the Catholic universities maintain schools to train the teachers, many of the teachers are trained at non-Catholic institutions also The maintenance of parochial schools depends on the principle of the Church that, education being first of all moral training, it is the duty and right of the Church to supervise it Catholics are not required, but are strongly urged, to send their children to church schools The nonreligious curriculum of parochial schools parallels that of the public schools The states exercise little supervision over parochial schools, but many require all teachers, public and private, to have state certificates The school is usually the largest feature in the expenditure of a parish Contrary to the opinion of many non-Catholics, the parochial school system is an American creation and was established by a ruling of U S bishops, other countries have parochial schools, but few have systems so thoroughly developed The parochial schools account for the bulk of the attendance at private schools in the United States. They have been the subject of some social friction. A move in Oregon to compel attendance at the public schools and thus legislate the

parochial schools out of existence was declared unconstitutional (1925). Opponents of the schools consider them antidemocratic, and the supporters describe the attacks as dictated by anti-Catholic prejudice and fascistic desires to override a minority. The question of aid to the parochial schools from public tax funds has been hotly debated. Many arguments have been advanced on both sides, one of the side of the opponents is that money contributed by all should not be used to promote a particular creed, especially without strong state control, one of the side of the proponents of state aid is that the money of Catholic taxpayers is an important part of state funds and that the parochial schools educate many students who would otherwise be wholly the burden of the already overtaxed public schools and that therefore some part of the expense should be paid from public taxes

parody (păˊrudē), mocking imitation in verse or prose of a literary work One of the oldest parodies is the Greek *Battle of the Frogs and Mice*, which mocks heroic battles in Homer This method of parody, the use of an author's exalted style to deal with a trivial situation, can be found in all literatures at all periods Aristophanes was a master parodist, especially of Euripides In the Middle Ages the Goliards (see GOLIARDIC SONGS) used the rituals of the Church to sing the praises of Venus and Bacchus. In English literature parodies were written by Chaucer and John Skelton and by scores of writers in the 17th cent Almost all the famous writers, including Shakspere and Milton, have been parodied, and many, including Pope, Swift, Fielding, Byron, Thackeray, and Swinburne, have written parodies In the 19th cent *Blackwood's Magazine* contained numerous mock imitations of the romantic poets In more recent times Max Beerbohm in prose and John Squire in verse are well-known parodists In America, Bret Harte wrote numerous parodies, in the 20th cent Ogden Nash and S J Perelman consciously imitate and ridicule the styles of poets and prose writers, while Carolyn Wells and Louis Untermeyer have written more conventional parodies of single poems See George Kitchin, *Survey of Burlesque and Parody in English* (1931)

parole (purōlˊ), release from prison of a convict before the expiration of his term on condition that his activities be restricted and that he report regularly to an officer The convict remains under sentence until the end of his term, and the restrictions (as of residence, occupation, type of associates) and the supervision are intended to prevent a relapse into crime Any violation of parole may result in return to imprisonment The procedure of parole (often called probation) is regulated by statute in the jurisdictions of the United States It is less often administered directly by the executive than it is by a board or officer with the power to release a convict after he has served the minimum of an indeterminate sentence Parole is granted to one who has shown by his conduct in prison that he has probably reformed It is designed to save the expense of maintaining in prison persons who seem to offer no further risk and speedily to rehabilitate them In military law, a parole is the promise by a prisoner of war on being released from confinement that he will not attempt to escape nor will he take up arms in the current hostilities against the forces which captured him

paronychia see FELON

Paropamisus (păˌrupăˊmĭsus, -pumīˊsus), mountain range, N Afghanistan, stretching W from the Hindu Kush toward the Elburz mts in Iran Occasionally the name is extended to the Hindu Kush The Paropamisus itself gives rise to the Murgab and Hari Rud (Arius) rivers

Paros (păˊrŏs, Gr pàˊrôs), island (77 sq mi , pop 9,993), off SE Greece, in the Aegean Sea, one of the CYCLADES The land slopes from Mt Hagios Ilias, 2,500 ft high, to the coast, on the mountain are the quarries of the beautiful white Parian marble, used by sculptors as early as the 6th cent B C The Ionian colonists of Paros in turn sent out colonies to Thasos and the Sea of Marmara In the Persian Wars the Athenians accused Paros of dealing with the Persians Later the island was taken into the Athenian confederacy On Paros there have been found two marble fragments of a great inscription, called the Parian Chronicle It was set up after 263 B C , its terminal date The dating is Athenian, but the events are more general Of the extant fragments, the larger (covering 1581 B C -354 B C) is one of the Arundel Marbles, at Oxford, England, the smaller (356-299 B C) is in a museum on Paros

Parosh (pā'rŏsh) [Heb , =flea], ancestor of a Jewish family Ezra 2 3, 10.25, Neh 3 25, 7 8, 10 14. Pharosh Ezra 8 3

Parowan (pā'rûwăn", pā'-), city (pop 1,525, alt. 5,990 ft.), co. seat of Iron co , SW Utah, near the Parowan Mts Settled by Mormons in 1851 in the "iron mission" with CEDAR CITY, it was from the beginning a farm community There are many ranches in the area. It was nominally capital of Utah Territory from 1858 to 1859.

Parr, Catherine, 1512-48, queen consort, the sixth wife of Henry VIII of England She was the daughter of Sir Thomas Parr, an officeholder at the court. Catherine had been twice widowed before Henry made her his wife in 1543 She exerted a beneficent influence over the aging king, interceded in behalf of Henry's daughters, Mary and Elizabeth (whom she helped to educate), and served for a time as queen regent (1544) At one time Catherine barely escaped the fate of her queenly predecessors, but she lived to become queen dowager and to wield considerable power at the start of the reign of Henry's son, Edward VI She married (1547) Baron Seymour of Sudeley, but died in childbirth the next year

Parr, Samuel Wilson, 1857-1931, American chemist, b Granville, Ill , grad Univ of Illinois, 1884 He was professor of applied chemistry at the Univ of Illinois from 1891 to 1926 He devised calorimeters for determining the heat value of coal and of combustible gases and discovered illum (an alloy, chiefly nickel, chromium, and copper, used as a substitute for platinum) He wrote on the analysis of fuels, water, and lubricants and on the constitution and classification of coal

Parr, Thomas, 1483?-1635, English centenarian, known as Old Parr His birth date is unauthenticated, and the chief sources of information about him are a pamphlet by John Taylor (the Water Poet) entitled *The Olde, Olde, Very Olde Man* (1635) and an account by the physician William Harvey, who examined him after his death in London Thomas Howard, 2d earl of Arundel, had brought Parr from Parr's native Shropshire to present him to Charles I, and according to Harvey, the old man died from the effects of change of climate and diet He was buried in Westminster Abbey

parrakeet see PARAKEET

Parral see HIDALGO DEL PARRAL

Parramatta (pă"rumăˊtu), municipality (pop 20,825), New South Wales, Australia, a port near the head of Parramatta River and WNW of Sydney, in the metropolitan area It produces and exports woolen and leather goods

Parramatta River, 15 mi long, west arm of Port Jackson, E New South Wales, Australia Many suburbs of Sydney line its shores

Parran, Thomas (păˊrun), 1892-, American surgeon general, b St Leonard, Md , M D Georgetown Univ , 1915 After entering the U S Public Health Service in 1917, he served as chief of the division of venereal diseases (1926-30) and later as surgeon general (1936-48) He launched, in 1937, a nationwide campaign against venereal diseases In 1948 he became dean of the graduate school of public health at the Univ of Pittsburgh He is the author of *Shadow on the Land* (1937)

Parras (păˊrās), city (pop 15,555), Coahuila, N Mexico In a well-watered valley of a semiarid region, Parras has orchards and vineyards that make the city famous for wines and brandies There are also cotton and flour mills It was occupied (1846) by U S troops in the Mexican War, and the French were defeated here (1866) in the French intervention Parras was the home of Francisco I MADERO, Mexican revolutionist and president

Parrhasius (pŭrāˊshēŭs), fl c 400 B C , Greek painter He was born in Ephesus, but settled in Athens and is classed with the Attic painters One of the greatest painters of Greece, a contemporary and rival of Zeuxis, he is credited by ancient writers with having been the first painter to attain perfect symmetry and correct proportions in his figures and the first successfully to suggest contour by the employment of light and shade Among the most celebrated of his numerous works were an allegorical painting, *Demos*, personifying the Athenian democracy, and *Theseus*, which was preserved at the Capitol in Rome All his works have perished and are known only through descriptions by classical writers

Parrington, Vernon Louis, 1871-1929, American educator and literary critic, b Aurora, Ill , grad Harvard, 1893 Professor of English at the Univ of Washington after 1908, he is famous for his stimulating and thoughtful *Main Currents in American Thought* (3 vols , 1927-30, in one volume, 1939), the second volume of which was awarded a Pulitzer Prize in history

Parrish, Stephen, 1846-1938, American etcher and painter, b Philadelphia He painted landscapes but was noted as an etcher His New England scenes, such as the fine series *Cape Ann to Marblehead*, are widely known in America and abroad His son, **Maxfield Parrish,** 1870-, American painter, illustrator, and mural decorator, b Philadelphia, was a pupil of Howard Pyle He is known for his original and highly decorative posters, magazine covers, and book illustrations and for his mural decorations He has painted murals for the home of Mrs Harry Payne Whitney at Westbury, N Y , the building of the Curtis Publishing Company in Philadelphia, and elsewhere His glowing colors, especially the blues, are characteristic He illustrated *Mother Goose in Prose*, Washington Irving's "Knickerbocker" *History of New York*, Eugene Field's *Poems of Childhood*, *The Arabian Nights*, Mrs Wharton's *Italian Gardens*, Kenneth Grahame's *Golden Age* and *Dream Days*, and other volumes He was admitted to the National Academy of Design in 1906

Parris Island see SEA ISLANDS

parrot, name of certain members of a large order of birds which includes the PARAKEET, the COCKATOO, and the MACAW They occur chiefly in tropical and subtropical portions of both hemispheres, though the ranges of some extend into the temperate regions Parrots have four toes, two facing forward and two backward, which are adapted for climbing and perching and for holding food while they eat it, but not for walking The bill is strong and hooked and the upper mandible is hinged to the bones of the head Almost all parrots live on fruits and seeds Usually their voices are harsh Many species in captivity learn to speak by imitation In this ability the yellow-headed parrot found from South America N to Mexico, the Panama parrot, and the African gray parrot excel The thick-billed parrot ranges from Mexico into parts of the SW United States Its plumage is chiefly green with red on the head, shoulders, and thighs The partially insectivorous kea parrot of New Zealand acquired the habit of attacking sheep Parrots have long been popular as cage birds With good care they may live for 100 years Some small parrots are called love birds

parrot fever see PSITTACOSIS

Parrsboro, town (pop 1,971), N N S , a port on the north shore of Minas Basin of the Bay of Fundy. It serves an important mining and agricultural area between the basin and Chignecto

Parry, Sir William Edward (păˊrē), 1790-1855, British arctic explorer and rear admiral He entered the navy at 13 and made his first voyage to the arctic under Sir John Ross in 1818 in search of the Northwest Passage He was then put in command of an expedition (1819-20) to hunt for the passage. F W Beechey was a member of the party Parry sailed westward through Lancaster Sound and discovered and named Melville Island and others of the Parry Islands Two other unsuccessful attempts were made (1821-24, 1824-25) to find the Northwest Passage, in the course of which Hecla and Fury Strait was discovered and new information about the arctic regions was disclosed In 1827 Parry made an attempt to reach the North Pole by sledge from Spitsbergen, attaining lat 82° 45' N He published three journals describing his quest for the passage as well as a narrative of his attempt to reach the pole

Parry Islands, archipelago, off N Canada, in the Arctic Ocean, a part of Franklin dist , Northwest Territories The islands include MELVILLE ISLAND, Bathhurst Island, Devon Island, Prince Patrick Island, and numerous others The group was named for Sir William Edward PARRY, who discovered and named many of the individual islands in his expedition of 1819-20

Parry Sound, town (pop 5,765), S Ont., on Parry Sound (an inlet of Georgian Bay of Lake Huron) and NNW of Toronto It has railroad shops and lumber and woodworking plants and is in a region mining copper and feldspar It is also a summer resort.

Parsees see PARSIS

Parshandatha (purshănˊduthu), one of Haman's sons Esther 9 7

Parsifal (pärˊsĭfəl), figure of ARTHURIAN LEGEND, also known as Sir Percivale, who is in turn a later form of a hero of Celtic myth The name originally occurs as Pryderi, an alternative name of Gwry in the *Mabinogion* in *Pwyll Prince of Dyved* Since Gwry is the original of Gawain, it is not surprising that in the later Perceivale stories Gawain appears, fulfilling often the same role as the hero Another Welsh story, usually included with the *Mabinogion*, is *Peredur Son of Evrawc* This Peredur is another form of Pryderi, and parts of both their stories have survived in the later Percivale stories The great feature of the Percivale cycle is the Holy GRAIL, and the connection of this sacred talisman with the hero is not fortuitous but is to be found in Welsh sources CHRESTIEN DE TROYES is the author of the first great artistic treatment of the theme the hero who finds the Grail at the Fisher King's castle and heals the king Chrestien's poem is unfinished WOLFRAM VON ESCHENBACH's *Parzival* is one of the greatest medieval poems It is drawn largely from Chrestien, but it is manifestly superior In it the story is highly spiritualized and appears practically in the form used by Richard Wagner in his music drama *Parsifal* See R S. Loomis, *Celtic Myth and Arthurian Romance* (1927) and *Arthurian Tradition & Chrétien de Troyes* (1949)

Parsis or **Parsees** (both pärˈsēs, parsēzˈ), religious community of India, practicing ZOROASTRIANISM The Parsis (numbering 114,890) are concentrated in Bombay prov , especially in Bombay city Their ancestors migrated from Iran, apparently in the 8th cent They use the ancient Pahlavi scriptures and are faithful to much of the Zoroastrian dogma The Parsis deny the frequent assertion that they worship fire, rather they reverence fire (along with other aspects of nature) as manifestations of the divinity of Ahura Mazdah The Parsis dispose of their dead so as to avoid contaminating fire, earth, or water. The bodies are exposed naked in "towers

of silence" (buildings some 20 ft high with an enclosed courtyard) where vultures devour them The community is closely unified, and the schools established by the wealthier members have helped make the Parsis one of the best-educated groups of India The economic importance of the Parsis is out of proportion to their small number The cotton industry of Bombay and the steelworks of Jamshedpur are their principal enterprises See D F Karaka, *History of the Parsees* (1884)

parsley, Old World aromatic biennial or short-lived perennial herb (*Petroselinum hortense* or *sativum* or *Apium petroselinum*), cultivated since the days of the Romans for its foliage, used in cookery as a seasoning and garnish In ancient times parsley was used also for chaplets and as a funeral decoration. It contains the oil apiol The leaves are commonly finely cut and curled Hamburg parsley is a variety grown for its edible root

Parsnip, river, 150 mi. long, rising in central British Columbia in the Cariboo dist and flowing northwest to join the Finlay river at Finlay Forks and form the Peace river Discovered by Sir Alexander Mackenzie in 1793, it became, with the Peace, an important fur-trade route

parsnip, garden plant (*Pastinaca sativa*) of the carrot family, native to the Old World It has been cultivated since Roman times for its long, fleshy, edible root. Wine and beer have also been made from it The wild form has become naturalized in North America, often proving a bad pest Parsnip is a biennial but is cultivated as an annual The root can be left in the ground all winter without deterioration It is sometimes used as livestock feed

Parsons, Alfred William, 1847–1920, English landscape painter and illustrator His English scenes in water color are well known Many of his illustrations appeared in *Harper's Magazine* Together with Edwin A Abbey he illustrated *Old Songs, The Quiet Life,* Goldsmith's *She Stoops to Conquer,* and *Notes in Japan* (text also by Parsons)

Parsons, Sir Charles Algernon, 1854–1931, British engineer He invented the steam turbine which bears his name and which revolutionized marine travel His famous *Turbinia,* the first vessel to be propelled by turbines, was completed in 1897 Her amazing speed immediately claimed attention and led to the founding of the Parsons Marine Turbine Company Parsons also invented a device for improving phonographs, was a pioneer in aviation, and produced a nonskid device for automobile tires He was knighted in 1911.

Parsons, Robert · see PERSONS, ROBERT

Parsons, Theophilus, 1750–1813, American jurist, b. Byfield, Essex co , Mass , grad Harvard, 1769 He studied law and later became one of the leading lawyers in New England In 1778 he was an outstanding member of the ESSEX JUNTO in opposition to the state constitution framed by the legislature As a delegate to the state constitutional convention he helped to frame a new constitution He was a warm supporter of the Constitution of the United States in 1788 and helped to secure its ratification by Massachusetts He was chief justice of Massachusetts from 1806 until his death His son, **Theophilus Parsons,** 1797–1882, also a lawyer, was born in Newburyport and was graduated from Harvard (1815) He was a professor of law at Harvard and wrote many manuals on branches of the law He was converted to Swedenborgianism and wrote several religious works

Parsons, Thomas William, 1819–92, American poet, b. Boston He was especially noted for his translation (2 parts, 1843–65) of Dante's *Inferno* See his letters (ed by Zoltan Haraszti, 1940)

Parsons, William: see ROSSE, WILLIAM PARSONS, 3D EARL OF.

Parsons, William Barclay, 1859–1932, American civil engineer, b New York city, grad Columbia, 1879. In the Spanish-American War he served as an officer of engineers Immediately after the war he went to China, where he surveyed a railroad from Canton to Hankow In 1900 he returned to New York, built the first section of the Interborough subway, and as chief engineer of the Rapid Transit Commission designed and constructed New York city's East River tunnels He served as a member of the Isthmian Canal Commission (1904–5) and as chief engineer (1905–14) of the Cape Cod Canal In the First World War, Parsons commanded the 11th Engineers, the first American troops in France, and later was made brigadier general in the reserve corps. He was a member of the board of trustees of Columbia Univ. after 1897 and chairman after 1917 His writings include *An American Engineer in China* (1900), *The American Engineers in France* (1920), and *Robert Fulton and the Submarine* (1922).

Parsons, William Edward, 1872–1939, American architect and city planner, b Akron, Ohio, grad. Yale, 1895, and studied architecture at Yale and the École des Beaux-Arts In 1905 he became a government consultant in the Philippines, where he designed many public buildings and planned the restoration of the old city walls and moats as public parks As a partner in the firm of Bennett, Parsons, and Frost, Chicago, he designed civic improvements in many cities. In 1938 he became associate professor of architecture at Yale.

Parsons. 1 City (pop. 14,294), SE Kansas, W of Pittsburg, laid out 1870, inc 1871. It is a shipping point for grain, dairy products, and livestock There is a state hospital for epileptics 2 Town (pop 1,079), W Tenn , E of Jackson and near the Tennessee, in a farm area 3 City (pop 2,077), co seat of Tucker co , N W Va , NE of Elkins, inc 1893 It has tanneries and woolen mills. The battle of Corrick's Ford was fought here in 1861.

Parsons College . see FAIRFIELD, IOWA

parthenogenesis (pär"thənŏjĕn'əsĭs), in biology, a form of reproduction in which an egg (a female sexual cell) develops into a new individual without fertilization, i e , without union with a sperm cell. The process falls into the category of sexual reproduction—in spite of the fact that only one kind of cell is concerned—because the cell involved is an ovum in that it undergoes maturation as do other ova, in some cases it shows a reduction in chromosomes, and in some cases it may develop when either fertilized or unfertilized Parthenogenesis occurs frequently among the insects A typical example is seen in various species of APHID In the honey bee, fertilized eggs develop into workers and queens, while from unfertilized eggs are developed drones (males) This condition is found also among ants and wasps It was discovered (by Jacques Loeb, 1899) that an unfertilized egg of a sea urchin could be made to begin development by subjecting it to certain stimuli (as salt water of higher salt content than normal) The process is known as artificial parthenogenesis, and the eggs of a number of invertebrates (certain echinoderms, annelids, and mollusks) and of some vertebrates have been treated Mechanical methods used as stimuli include pricking the egg with a sharp needle, stroking the egg, and subjecting it to changes of temperature and pressure Chemical methods include the use of such substances as benzol, chloroform, ether, alcohol, and the solutions of various salts The development of eggs artificially stimulated frequently does not progress to any great extent, although frogs' eggs thus treated have developed into tadpoles which later became frogs and in 1039 the development of a rabbit from an unfertilized ovum was reported Parthenogenesis occurs in relatively few plants, being found in certain lower forms (algae and fungi) and rarely in seed plants (in certain members of the composite group)

Parthenon (pär'thənŏn) [Gr ,=the virgin's place], temple sacred to the goddess Athena, on the ACROPOLIS at Athens, and the culminating masterpiece of Greek architecture It was built under the rule of Pericles, between 447 B C and 432 B C The colossal gold and ivory statue of ATHENA PARTHENOS by Phidias was dedicated c 438 ICTINUS and CALLICRATES were the architects of the building, and PHIDIAS the supervisor of sculpture The temple is peripteral, with 8 Doric columns at each end and 17 on the flanks, it stands upon a stylobate three steps high The body of the building comprised a cella and behind it an inner chamber (the Parthenon proper) which gave the temple its name At front and rear, coming behind the outer colonnade, were two porticoes, the pronaos and opisthodome respectively Within the cella a Doric colonnade two tiers high supported the roof timbers and divided the space into a lofty central nave bounded by an aisle on three sides Toward the west end of this nave stood the *Athena Parthenos,* about 40 ft high The inner chamber, to the west, apparently served as treasury and was entered by a large western doorway The pediments terminating the roof at each end of the building were ornamented with sculptured groups of great perfection The upper part of the cella walls and the friezes above the porticoes formed a continuous band of sculpture around the building, representing the Panathenaic procession held every fourth year in homage to the goddess Of the 525 ft. of this sculptured Panathenaic frieze, 335 ft still exists, the western portion being still in its position, while the greater part of the remainder was removed by Lord Elgin and installed in the British Museum (see ELGIN MARBLES) In the 6th cent the Parthenon became a Christian church, an apse being added at the east end It next served as a mosque, and a minaret was added to it In 1687, in the Venetian attack on Athens, it was used as a powder magazine by the Turks and the entire center portion was destroyed by an explosion In the 18th cent a recognition of the beauty of the remains commenced, and in 1762 measured drawings by James Stuart and Nicholas Revett revealed this beauty to the world, giving strong impetus to the CLASSIC REVIVAL After the end (1830) of Turkish control, concentrated archaeological study of the Parthenon commenced The subtle optical refinements of the structure were discovered and published, notably by F C Penrose in *An Investigation of the Principles of Grecian Architecture* (2 vols , 1851–52). Numerous attempts have since been made to establish the mathematical or geometrical basis supposedly employed in producing the design's high perfection The work of actual reconstruction, utilising existing fragments, has continued up to the present.

Parthenopaeus (pär"thənōpē'əs), in Greek legend, one of the SEVEN AGAINST THEBES, sometimes called a son of ATALANTA.

Parthenopean Republic (pär"thənōpē'ən) [from Parthenope, an ancient name of Naples], democratic government set up in Naples in Jan., 1799, by the French army under CHAMPIONNET and by liberal Neapolitans after the flight of Ferdinand IV (later FERDINAND I of the Two Sicilies) In February, Cardinal Ruffo, at the head of royalist troops, landed in Calabria and made swift progress. French military reverses in N Italy prompted the evacuation by the French of Naples (May), and in June the republic fell Lord NELSON, whose role in the Bourbon victory was crucial, ignored Cardinal Ruffo's generous convention with the surrendering revolutionists and started the brutal reprisals which were continued by the Bourbons

Parthia (pär'thēə), in ancient times, a country of Asia, SE of the Caspian Sea In its narrowest limits, it consisted of a mountainous region intersected with fertile valleys, lying S of Hyrcania and corresponding roughly to the modern Persian province of Khurasan It was included in the Assyrian and Persian empires, the Macedonian empire of Alexander the Great, and the Syrian empire The Parthians, mentioned in Acts 2 9, were of Scythian stock and were famous horsemen and archers In 250 B C , led by Arsaces, they freed themselves from the rule of the Seleucidae and founded the Parthian empire. At its height, in the 1st cent B C , this empire extended from the Euphrates across Afghanistan to the Indus and from the Oxus to the Indian Ocean Defeating Crassus in 53 B C , the Parthians threatened Syria and Asia Minor, but they were turned back by Ventidius in 39–38 B C Then began the decline of the empire, which in A D 226 was conquered by Ardishir (Artaxerxes), the founder of the Persian dynasty of the Sassanidae The chief Parthian cities were Seleucia, Ctesiphon, and Hecatompylos, ("the city of a hundred gates" Such expressions as "a Parthian shot" were suggested by the Parthian ruse in which mounted men used their arrows effectively while in simulated flight

part of speech, in English grammar, one of about eight major classes of words, divided according to function The parts of speech are NOUN, VERB, ADJECTIVE, ADVERB, INTERJECTION, PREPOSITION, CONJUNCTION, and PRONOUN Some grammarians add articles and numerals A few forms are two parts of speech at once, e g , participles, which can be both verbs and adjectives The term "part of speech" is especially appropriate to the Indo-European languages, most of which resemble English grammatically The term for a major class of words determined by form is form class In English, though the parts of speech (which are by definition function, not form, classes) are not coextensive with the form classes, some form classes are peculiar to one part of speech, thus, the form class of words inflected with *-ing* and *-ed* is not identical with, but wholly included in, the function class of verbs Most languages have two or three form classes, but few have so many as the Indo-European languages Some English parts of speech are productive classes (i e , new members may be added), they are nouns, verbs, adjectives, adverbs, and interjections The rest are nonproductive See Edward Sapir, *Language* (1921), Leonard Bloomfield, *Language* (1933)

Parton, Arthur, 1842–1914, American landscape painter, b Hudson, N Y , studied at the Pennsylvania Academy of the Fine Arts He excelled in misty and evening effects, such as *Night in the Catskills* and *Evening Harlem River* (both Metropolitan, Mus) and *Misty Morning* (Brooklyn, N Y , Mus) His *Loch Lomond* is in the John Herron Art Institute, Indianapolis He became a member of the National Academy of Design in 1884

Parton, James, 1822–91, American biographer, b England He came to the United States in 1827 He taught school and in 1848 joined the staff of N P Willis's *Home Journal* in New York city He married Sara Payson Willis, also a writer, in 1856 His biographical writing began with the very successful *Life of Horace Greeley* (1855) and was followed by biographies of Aaron Burr (1857), Andrew Jackson (1859–60), John Jacob Astor (1865), and others He was an unprejudiced student and a vivid writer

Parton, Sara Payson Willis, pseud. **Fanny Fern,** 1811–72, American author, b. Portland, Maine Her once popular writings include *Fern Leaves from Fanny's Portfolio* (1853) and a novel, *Ruth Hall* (1855), which caricatures her brother, N P Willis. She was the wife of James Parton

Partridge, Sir Bernard, 1861–1945, English caricaturist, illustrator, and painter. He was principal cartoonist for *Punch* from 1891 until his death. He began his career by designing for stained glass, worked at church decoration, and painted in water colors, but he is best known for his book illustrations and cartoons.

Partridge, William Ordway, 1861–1930, American sculptor, author, and lecturer, b. Paris, studied in Florence, Rome, and Paris. He made portrait busts of Whittier (Boston Public Library), Tennyson,

and Longfellow and a statue of Shakspere (Lincoln Park, Chicago) Other works are Pocahontas (Jamestown, Va); Kauffmann Memorial and Nathan Hale (Washington, D C), Alexander Hamilton and an equestrian statue of General Grant (Brooklyn, N Y), Thomas Jefferson, Alexander Hamilton, bust of Van Amringe, and Schermerhorn Memorial (Columbia Univ), *Pietà* (St Patrick's Cathedral, New York), and *Peace* (Metropolitan Mus) He lectured on art and sociology Included in his writings are *Art for America* (1894), *Technique of Sculpture* (1895), and *The Angel of Clay*, a novel in verse (1900)

partridge, name used for various henlike birds The true partridges belong to the Old World; the common European or Hungarian species has been successfully introduced into parts of North America The name is used in New England for the ruffed GROUSE, in the West and South for the BOBWHITE Europeans often call the South American tinamou a partridge. The mountain partridge of the West is the mountain QUAIL

partridgeberry, small evergreen trailing plant (*Mitchella repens*) of North American woods The rounded leaves, white twin flowers, and scarlet berrylike fruits have made it popular, particularly for glass bowls at Christmas time It has been used as a tonic, diuretic, and astringent, the fruits, lasting all winter, are edible but tasteless Other names are squawberry and twinberry

party, political, organization of voters and officeholders or candidates for office acting in general agreement on the aims and policies of government and seeking to form or conduct an administration There were popular and aristocratic parties in ancient Greece and Rome, but modern parties date from the growth of concepts of popular government in 18th-century England, France, and America Under dictatorial regimes there is generally a single official party which forms an integral part of the state apparatus and usually suppresses all dissentient bodies Democratic states usually have two or more parties The existence of only two major parties, as in most English-speaking countries, presupposes general public agreement on constitutional questions and on the aims of government Multiple parties, found in Europe and elsewhere, may indicate the existence of conflicting social and economic panaceas or may represent racial or religious groupings among the population Coalition governments usually exist in nations where many parties flourish, and, while flexible and responsive to public opinion, these tend to be less powerful and durable than governments formed from one party See W E Binkley, *American Political Parties* (1943)

Paruah (pär'ŭa, pärū'a), father of one of Solomon's stewards 1 Kings 4 17

Parvaim, (pärvā'ĭm) unknown region whence came gold for the Temple 2 Chron 3 6

Parzifal, see PARSIFAL and ARTHURIAN LEGEND

Pasach (pā'săk), Asherite chief 1 Chron 7 33

Pasadena (pă'sădē'na) **1** Residential and resort city (pop 81,864), S Calif, NE of Los Angeles between the San Gabriel Mts and the San Rafael Hills, founded 1874, inc 1886, chartered 1901 It is the scene of the annual Tournament of Roses and of the East-West football game held (Jan 1) in the famous Rose Bowl (seating 85,000 spectators) The city is the seat of the CALIFORNIA INSTITUTE OF TECHNOLOGY, Pasadena College (Nazarene, coeducational, 1901), a junior college (coeducational), a fine community playhouse, and the Busch Gardens, noted for rare flora Mt Wilson and Mt Lowe observatories are near by, as is the Huntington Library and Art Gallery (at San Marino) **2** Town (1940 pop 3,436, 1947 estimated pop 7,000), S Texas, SE of Houston, inc 1928 It is an industrial suburb with oil refineries and a paper mill

Pasargadae (pŭsär'gŭdē), capital of ancient Persia under Cyrus the Great Its ruins lie 54 mi by road NE of Persepolis and double that distance from modern Shiraz, on the hill-enclosed Murgab plain, on both sides of the Pulvar river The buildings of Cyrus include a stone platform overlooking the plain; a shaft bearing his likeness in low relief, and his tomb, a structure of white stone 18 ft. high, on a more massive base According to Greek historians, Alexander the Great found Cyrus's tomb already rifled and sealed its entrance, the tomb has long since been reopened The Moslems attribute the ruins to Solomon

Pascagoula (păskŭgōō'lŭ), city (pop 5,900), co seat of Jackson co, extreme SE Miss, a port of entry on Mississippi Sound at the mouth of the Pascagoula Resort, pecan-shipping, fishing, and boatbuilding center, it grew around the "Old Spanish Fort," built in 1718, and still extant Large quantities of lumber were shipped in the late 19th cent Pascagoula has U S. dry docks and also a U S coast guard base.

Pascal, Blaise (pă'skăl, păskăl', Fr. blĕz' paskal'), 1623–62, French scientist and religious philosopher Studying under the direction of his father, a civil servant, Pascal showed great precocity. In 1646 the family embraced Jansenism, and its effect was so great that Pascal's sister Jacqueline entered a convent in 1651, and Pascal himself sought retreat at Port-Royal in 1653, although he never entered the order. Pascal was a great mathematician in a time when mathematics was extensively studied, and it is possible that his contributions in this field outweigh the value of his philosophical writings He is credited with founding the modern theory of probabilities, inventing the mathematical triangle (*Pascal's triangle*), discovering the properties of the cycloid, and contributing to the advance of differential calculus. In physics his experiments increased knowledge of atmospheric pressure through barometric measurements and of the equilibrium of fluids (see PASCAL'S LAW) The extent of Pascal's interests and his originality of approach indicate the greatness of his genius When Antoine Arnauld, noted Jansenist, was attacked by the Jesuits, Pascal championed Arnauld in his *Lettres écrites à un provincial* (1656). These *Provincial Letters*, rendered into Latin, quickly traveled throughout Europe and still hold a leading place in the literature of polite irony Pascal's religious writings were published posthumously in 1670 as *Pensées de M Pascal sur la religion et sur quelques autres sujets*, but this edition is regarded as fragmentary and garbled In 1776 Condorcet edited the *Pensées*, but the edition by Prosper Faugère in 1844 is regarded as more competent An English translation, *Thoughts on Religion and Evidence of Christianity*, appeared in 1850 In the *Pensées* Pascal, convinced of the powerlessness of reason to solve man's difficulties or satisfy his hopes, exalts faith and mystic revelation, saying "the heart has reasons of which reason itself knows nothing" See biography by Morris Bishop (1936), Emile Caillet, *The Clue to Pascal* (1944)

Pascal's law [for Blaise Pascal] states that pressure applied to a confined fluid at any point is transmitted undiminished through the fluid in all directions and acts upon every part of the confining vessel at right angles to its interior surfaces and equally upon equal areas Practical applications of the law are seen in hydraulic machines

Paschal II (pă'skul) [Latin, of Easter], d 1118, pope (1099–1118), an Italian (b near Ravenna) named Raniero, successor of URBAN II and predecessor of GELASIUS II He was a Cluniac monk and, as a reformer, was made a cardinal by GREGORY VII He was a loyal supporter of Urban also His reign began well Philip I of France was reconciled with the Church (1104), St ANSELM was victor in his struggle in England, and the Crusaders were successful Emperor HENRY IV was deposed (1105), but his son HENRY V proved no less strongly antipapal in the quarrel over INVESTITURE Henry V invaded Italy in 1110, negotiations between emperor and pope failed, and the emperor captured Paschal, who was compelled to surrender the papal position on investitures Once freed, however, and encouraged by clerical protests, the pope reaffirmed the legislation against lay investiture in 1112 and 1116 The name is also spelled Pascal

Pasco (păs'kō), city (pop 3,913), co seat of Franklin co, SE Wash, near the confluence of the Columbia and Snake rivers, settled c 1880 It is a railroad junction and farm trading center

Pascoli, Giovanni (jōvan'nē pä'skōlē), 1855–1912, Italian poet He succeeded Giosuè Carducci as professor of literature at Bologna in 1905 He wrote lyric verse of an idyllic type, sometimes disfigured by the introduction of technical words, dialect, and other irregularities but abounding in exquisite detail He was called the son of Vergil, not because he wrote Latin poems after the *Georgics* and won the international prize for Latin verse at Amsterdam 14 times, but because he makes the peasant life of Italy as close to the life of flocks and bees as it was in the days of Vergil or Theocritus His verse also abounds in symbolistic effects Besides essays, his Latin verses and seven volumes of Italian poems were published from 1891 to 1913 Translations have not done him justice, but much of his work has appeared in English See his *Poems*, tr by Evaleen Stein (1923) and by A M Abbott (1927), and *Selected Poems* (ed by G S Purkis, 1938), G A Greene, tr, *Italian Lyrists of Today* (1893), R S Phelps, *Italian Silhouettes* (1924).

Pas-dammim, variant of EPHES-DAMMIM

Pas-de-Calais (pä-dŭ-kälā'), department (2,607 sq mi; pop 1,168,545), N France, on the Strait of DOVER (Fr *Pas de Calais*) It occupies ARTOIS and part of PICARDY Calais and Boulogne-sur-Mer are the chief ports, coal mining, fishing, and textile manufacturing are the chief industries Arras is the departmental capital

Paseah (pŭsē'ä) [Heb, =lame] **1** Name in an obscure genealogy. 1 Chron 4 12 **2** Family returned with Zerubbabel Ezra 2 49; Neh 3 6, 7 51. Phaseah Neh. 7.51.

Pashitch, Nikola (nē'kôlä pa'shĭch), Serbo-Croatian *Pašić*, 1846–1926, Serbian statesman He founded (1881) the Radical party, which he led for the rest of his life, and was premier in 1891–92 for the first of many times. Exiled (1899) by King Alexander, he returned to power after the accession (1903) of Peter I and virtually controlled SERBIA in the years preceding the First World War. Strongly pro-Russian and advocating the creation of a greater Serbia, he adopted a violently anti-Austrian policy after the annexation by Austria of BOSNIA AND HERCEGOVINA The Austrian government accused him (1914) of having possessed knowledge of the plot against Archduke FRANCIS FERDINAND, whose assassination precipitated the war He led Serbia through the war and in 1917 negotiated the union of Serbs, Croats, and Slovenes (see YUGOSLAVIA) He was an important figure at the Paris Peace Conference of 1919 and was premier of Yugoslavia for most of the time from 1920 until his death Favoring a centralized state, he met bitter opposition in Croatia Pashitch's chief importance was as a figure in the tortuous diplomatic history of the early 20th cent See S B Fay, *The Origins of the World War* (1928)

Pashur (pā'shur) **1** Official who mistreated Jeremiah Jer 20 3 **2** Messenger to Jeremiah from the king Jer 21 1, 38 1 He is probably the ancestor of a postexilic priestly family 1 Chron 9 11, Ezra 2 38, Neh 7 41, 11 12 **3** Father of a contemporary of Jeremiah Jer 38 1 **4** Priest Neh 10 3

Pasig (pä'sĭg), river of SW Luzon, Philippine Islands, rising in Laguna de Bay and flowing 14 mi NW through Manila to Manila Bay The Pasig is navigable and commercially important

Pasiphaë (pusĭ'fāē), in Greek legend, wife of MINOS and mother of ANDROGEUS, ARIADNE, and PHAEDRA Poseidon gave Minos a white bull for sacrifice, but Minos kept it for himself Poseidon, out of revenge, aroused in Pasiphaë a passion for the bull The child of this union was the MINOTAUR

Paskevich, Ivan Feodorovich (ēvan' fyō'durŭvĭch pŭskyā'vĭch), 1782–1856, Russian general He fought in the Napoleonic Wars, was created count of Erivan after conquering (1827) Persian Armenia, and became field marshal after his successful campaign against the Turks on the Caucasian front (1828–29) He captured Warsaw from the Polish insurrectionists in 1831, for which exploit he was made prince of Warsaw and viceroy of Poland, in 1849 he led the Russian troops which suppressed the Hungarian insurrectionists In the Crimean War he commanded the army of the Danube, which guarded the frontiers against Austria

Pasoeroean, Indonesia see PASURUAN

Paso Robles (pă'sō rō'bulz, pa'sō rō'blĕs), resort city (1940 pop 3,045, 1944 special census pop 6,364), S Calif, on the Salinas and N of San Luis Obispo, inc 1889 It has hot mineral springs San Miguel Arcángel Mission (founded 1797) is near by

pasqueflower (păsk) [O Fr pasque=Easter], bluish open-bell-shaped wild flower of the prairie regions of North America As a herald of spring and a symbol of old age (from the silvery heads of feathery seeds), the plant has been made the subject of Indian song and legend It is the floral emblem of South Dakota Patches of the flowers on their short, furry stems give an appearance of haze, for this reason the plant in the Great Plains region is called prairie smoke Other names for the American variety are gosling flower, sandflower, windflower, wild crocus, and ANEMONE The pasqueflower was so called in Europe because it was in bloom at the Easter season Botanically, the pasqueflower, a perennial, has been known both as *Anemone* and *Pulsatilla* It contains a poison and is an irritant when fresh, the crushed leaves were applied by Indians as a counterirritant in cases of rheumatism and neuralgia.

Pasquier, Étienne (ātyĕn' pakyā'), 1529–1615, French jurist and humanist After study under Cujas, Pasquier began his legal career in 1549 Always a confirmed Gallican, in 1564 he pleaded a famous case for the Univ of Paris against the Jesuits In 1585 he became advocate general of a division of the Parlement of Paris Pasquier's most notable book, *Recherches de la France*, a learned work on French history and literature, showed the tendency of the humanists to write in the vernacular rather than in Latin

Pasquier, Étienne Denis, duc de (ātyĕn' dunē' dük' du pakyā'), 1767–1862, French statesman A moderate, he held high judicial and cabinet posts under Louis XVI, Napoleon I, and Louis XVIII and became president of the chamber of peers under Louis Philippe A part of his memoirs has been translated by C E Roche (1893–94)

pass, usually a defile between mountains, affording passage from one slope to the other, and sometimes (as THERMOPYLAE) a passageway between other barriers. A pass, like an isthmus, may have great strategic and economic importance, the course of history of a nation has often been determined by its success or failure in defending its pass, and land trade routes must necessarily cross passes In the Alps, SAINT BERNARD, SIMPLON, and SAINT GOTHARD are important, in the Caucasus, DARIAL is traversed by a great military road, in Asia, KHYBER PASS into India and the passes of the HIMALAYAS, KARAKORUM, and other ranges are important

Passaic (pusā'ĭk), city (pop 61,394), NE N J, on the Passaic N of Newark, settled 1678 by Dutch traders as Acquackanonk, named Passaic 1854, inc 1873 It developed industrially in the late 19th cent and is known as a textile (especially wool) and metal-products center. In 1926 occurred a

famous strike in protest against a wage cut and involving the right of assembly

Passaic, river rising near Morristown, N J, and flowing with a winding course past many industrial towns c 80 mi to Newark Bay At Paterson is a fall of approximately 70 ft The river's power aided the growth of industry in NE New Jersey See H E Wildes, *Twin Rivers the Raritan and the Passaic* (1943)

Passamaquoddy Bay (păs″ŭmŭkwŏ′dē), inlet of the Bay of Fundy, between Maine and New Brunswick, at the mouth of the St Croix river Most of it (including Campobello island) is within Canada's border New Brunswick towns in the vicinity are St Andrews and St George, Maine towns are Eastport and Lubec (at the bay entrance) A large project (frequently called the Quoddy project) begun in 1935 with PWA funds to convert the heavy tides (18 ft average range) in the U S sector into hydroelectric power was suspended after Congress refused funds in 1936

Passarowitz, Treaty of (pŭsä′rōvĭts), 1718, peace treaty signed at POŽAREVAC (Ger *Passarowitz*), Yugoslavia, between, on the one hand, the Holy Roman Empire and Venice and on the other, the Ottoman Empire In the preceding war (1714–18) the Turks had been successful against the Venetians in Greece and Crete, but had been defeated in 1716 at Petrovaradin by Eugene of Savoy, who in 1717 also stormed Belgrade The treaty reflected the military situation Turkey lost the Banat of Temesvar, N Serbia (including Belgrade), and Lesser Walachia to Emperor Charles VI (Belgrade and Lesser Walachia were recovered again by Turkey at the Treaty of Belgrade in 1739) As for Venice, it lost all its possessions in the Peloponnesus and on Crete to Turkey

Passau (pä′sou), city (pop 34,626), Lower Bavaria, on the Danube at its confluence with the Inn and on the Austrian border It is a port and railroad center and has machinery and textile industries A Roman frontier outpost known as Castra Batava, Passau was made (8th cent) an episcopal see by St Boniface The bishops of Passau were temporal lords of a substantial territory until 1803, when the bishopric was secularized and given to Bavaria, the diocese was restored in 1817 The Treaty of Passau (1552) was negotiated here between Maurice of Saxony and King (later Emperor) Ferdinand I, who represented his brother, Emperor Charles V Ferdinand promised the release of Philip of Hesse and the other captive Protestant princes, while Maurice and his Protestant allies consented to submit the religious question to a diet, the result was the religious peace of 1555 (see Augsburg, Peace of) Among the landmarks of Passau are the cathedral (partly late Gothic, partly baroque), the late Gothic city hall, the baroque episcopal palace, and the Oberhaus fortress (13th–16th cent), there are many fine houses and fountains in the Bavarian baroque style

Passchendaele (pa′sundā″lu), town (pop 3,137), West Flanders prov, Belgium, near Ypres In the First World War it was carried by the British in 1917 after very heavy losses and was retaken by the Germans in 1918 A former spelling is Paschendaele

Pass Christian (păs″ krĭs″chĭăn′), city (pop 3,338), SE Miss, popular resort on Mississippi Sound between Gulfport and Bay St Louis, settled in the 18th cent There are many fine old mansions

passenger pigeon, beautiful wild pigeon of E North America, once one of the world's most abundant birds, now extinct, Historians of the early 17th cent described its profusion in the New World The last survivor of flocks which even in the late 19th cent were measured in square miles died in captivity in 1914 The birds were exterminated chiefly by the white man's slaughter of infinite numbers of them and by his destruction of their forest haunts Predominantly grayish blue above and reddish fawn below, they resembled in form and coloring the smaller mourning dove

passionflower, any plant of the related genera *Passiflora* and *Tacsonia*, mostly tropical American vines having pulpy fruits Some species are grown in greenhouses for the large unusual flowers of various colors, those seen by early Spanish settlers were interpreted as symbolic of the Crucifixion (whence the name), the 10 petals and sepals, fringed corona, five stamens, three styles, and coiling tendrils representing in order the 10 faithful apostles, crown of thorns, wounds, nails, and scourges The most common North American species (*Passiflora incarnata*), sometimes weedy in the South but often cultivated as far north as it is hardy, has purple and white flowers and edible egg-shaped fruits called maypops, it was once the state flower of Tennessee and was formerly used medicinally The large-fruited and the purple-fruited granadillas (*Passiflora quadrangularis* and *edulis*) are cultivated commercially in the tropics for beverages and sherbets.

Passion play, the genre of the miracle play which has survived from the Middle Ages into modern times Its subject is the suffering and death of Jesus. The first Passion plays were in Latin, but as early as the 13th cent. German verses were interpolated, and in the 15th cent. when the Passion plays had reached their highest development, they were entirely in German By the 16th cent. they had become degraded through contact with the carnival plays, and their production was forbidden by ecclesiastical authorities The Reformation too was inimical to their further development The chief survival among the Passion plays is the one performed at Oberammergau in the Bavarian Alps, It has been given every 10 years (with only three interruptions caused by war) since 1634, in fulfillment, it is said, of a vow that was made if the plague would leave the town The play enacts the passion of Christ from his triumphal entry into Jerusalem to the resurrection It consists of 18 acts, each act being prefaced by orchestral selections, choral anthems, and a scene from the Old Testament which prefigures the theme of the act Over 700 villagers participate The play takes a morning and an afternoon to perform In the United States several towns hold Passion plays The oldest of these is *Veronica's Veil*, which has been produced in Union City, N.J , annually since 1914 The most professional performances in the United States are given by the Black Hills Players Their leader, Josef Meier, emigrated to this country from Lünen, Germany, in 1932, bringing with him 10 fellow actors and a play which they claimed had been produced since 1242 In summer their performances are given in Spearfish, S D , in winter they tour U S cities For the Oberammergau Passion play, see M J Utting, *The Passion Play of Oberammergau* (1936), for the English text, see *The Passion Play of Oberammergau* (1934)

passive see VOICE

Passover, one of the most important and elaborate of the Jewish festivals the celebration of which begins on the evening of the 14th of Nisan (first month of the religious calendar, corresponding to March-April) and lasts seven days Numerous theories have been advanced in explanation of its original significance, which has become obscured by the association with the Exodus it acquired in later days In pre-Mosaic times it may have been a spring festival only, but in its present observance by orthodox Jews, who celebrate it in commemoration of their deliverance from the yoke of Egypt, that significance has been practically forgotten In the ceremonial evening meals (called Seders), which are served the first and second nights of the festival, with various special dishes symbolizing the hardships the Israelites went through during their bondage in Egypt, the narrative of the Exodus is recited, and praise is given for the deliverance Only unleavened bread (matzoth) may be eaten throughout the seven days of the festival, in memory of the fact that the Jews, hastening from Egypt, had no time to leaven their bread Tradition also requires that special sets of cooking utensils and dishes uncontaminated by use during the rest of the year, be used throughout the festival The Christian feast of Easter is calculated from the Pasch or Passover See T H Gaster, *Passover Its History and Traditions* (1949)

Passy, Frédéric (frādārēk′ pasē′), 1822–1912, French economist, winner (1901, with J H Dunant) of the first Nobel Peace Prize He studied law, but abandoned it for journalism and the study of economics and problems of peace In 1867 he founded the Ligue internationale et permanente de la Paix, later known as the Société française pour l'Arbitrage entre Nations, serving as its general secretary until 1889, when, in association with Sir William R Cremer, he founded the Inter-parliamentary Union of Arbitration He was a member of the chamber of deputies from 1874 to 1889 Among his best-known works are *La Guerre et la paix* (1867), *La Question de la paix* (1891), and *Historique du mouvement de la paix* (1905) The phonetician Paul Édouard Passy (1859–1940) was his son

pastel (păstĕl′), artists' medium of chalk and pigment, tempered with weak gum water and usually molded in the form of sticks, and also a work done in this medium Pastel was in use in Italy in the 15th cent and is doubtless far older In 18th-century France it was exploited by such masters as Maurice Quentin de la Tour and Vigée-Lebrun, and in the 19th cent by Degas, Manet, Toulouse-Lautrec, Whistler, and Cassatt Pastels are commonly exhibited with paintings and are often classified as such rather than as drawings The medium lends itself to a wide variety of techniques, depending somewhat upon the type of paper used as a ground

Pasternak, Boris Leonidovich (bŭrēs′ lyā″unyē′dŭvĭch pŭstyĭrnäk′), 1890–, Russian poet. At first he was under futurist influence, but his talent transcends classification. A volume of his collected verse was published in 1931 (*Above Barriers*) and another in 1932 (*Second Birth*) He wrote two long narrative poems, *Spektorsky* (1926) and *The Year 1905* (1927) and is known for his translations from foreign poetry. His translation of *Hamlet* appeared in 1941 See his *Collected Prose Works* (Eng. tr., 1945) and *Selected Poems* (Eng tr , 1947)

Pasteur, Louis (păstûr′, Fr. lwē′ păstûr′), 1822–95, French chemist. He taught at Dijon, Strasbourg, and Lille and in Paris at the École normale (1857–67) and the Sorbonne (1868–89). He became the first director of the Pasteur Institute. His early chemical studies of the tartrates in which he discovered (1848) molecular dissymmetry led to his work on fermentation Important outgrowths of these studies were his experiments with BACTERIA, which conclusively (1862) exploded the theory of spontaneous generation, and his work on wine, vinegar, and beer with the resultant development of the process of PASTEURIZATION Of great economic value also was his solution of the control of silkworm disease, his study of chicken cholera, and his technique of vaccination against ANTHRAX, which was successfully extended to HYDROPHOBIA in 1885 See biographies by René Vallery-Radot (1924) and Piers Compton (1932) The **Pasteur Institute,** opened in Paris in 1888, includes a dispensary for the treatment of hydrophobia and a teaching and research center on virulent and contagious diseases Outstanding discoveries have been made at the institute, its staff has included many notable scientists, among them P P E Roux and Élie Metchnikoff Pasteur Institutes have been established in Tunis and in Indo-China and other countries

pasteurization (păs″chōōrĭzā′shun, -rīzā′shun, pă″stu-), method of treating certain foods, especially milk, to make them free from disease-causing bacteria It does not seriously change the food value or taste Pasteurization is not a substitute for sanitary collection of milk, but even under careful supervision occasional disease germs may be present The method consists in heating the milk to about 145° F for 30 min which destroys the bacteria, the milk is then rapidly cooled The milk should be kept under refrigeration, since ordinary bacteria that are resistant are still present, and if the milk is not kept cold they multiply rapidly and change the milk so that it is unfit to drink

Pasto (pa′stō), city (pop 27,564), SW Colombia Founded in 1539, Pasto (alt c 8,500 ft) is a rail and highway commercial center A royalist city in the revolution against Spain, it changed hands several times Here Antonio Nariño was defeated (1814) by the Spanish Occupied for a short period in 1831 by Ecuadorian forces, Pasto was the scene of the treaty (1832) by which Colombia (then called New Granada) and Ecuador became separate states and Pasto with its adjacent territory was confirmed as Colombian The volcano called El Pasto is near by.

Paston Letters, collection of personal and business correspondence of the Paston family of Norfolk and others, covering the years 1422–1509, together with deeds, state papers, and other documents that had come into their possession The collection forms an indispensable source for the history, manners, morals, habits, customs, and moneys of the people of England at the close of the Middle Ages A portion of the letters was published by James Fenn, two volumes in 1787 and two in 1789, but the original manuscripts disappeared and doubt of their authenticity grew However, they were rediscovered after 1865, with additional material, and were reprinted in a definitive edition by James Gairdner (1904) A volume of selections is edited with an introduction by A D Greenwood (1920)

Pastor, Ludwig, Freiherr von (lōōt′vĭkh frī′hĕr fŭn pä′stôr), 1854–1928, German historian The author of the monumental and authoritative *History of the Popes from the Close of the Middle Ages* (Eng tr , 34 vols , 1891–1942) he combined a strictly Catholic point of view with the most painstaking scholarship and erudition He had access to the secret archives of the Vatican, and his history, largely based on hitherto unknown documents, supersedes all previous histories of the popes It has, however, been criticized for its Catholic bias. Pastor was Austrian minister to the Vatican from 1921

Pastor, Tony, c 1837–1908, American theater manager, b New York city. He appeared on the stage from childhood and was an experienced acrobat, dancer, and singer when he opened (1861) his first theater at 444 Broadway, New York He opened a second theater at 201 Bowery in 1865 and another at 585 Broadway in 1875 He established his long-known theater on 14th St in 1881 In these establishments Pastor introduced many performers who became famous and made vaudeville suitable for a mixed audience See Douglas Gilbert, *American Vaudeville* (1940)

pastoral (pă′sturul), literary work in which shepherd life is presented in a conventionalized manner In this convention the purity and simplicity of shepherd life is contrasted with the corruption and artificiality of the court and the city Many subjects, including love, death, religion, and politics, have been presented in a pastoral setting, and the pastoral can be found in poetry, drama, and fiction The earliest pastoral poetry of which there is record was written by the Greek poet Theocritus who lived in Alexandria in the 3d cent B C. It is in his idyls, which celebrate the beauty and simplicity of rustic life in Sicily, that the well-known pastoral characters, Daphnis, Lycidas, Corydon, and Amaryllis, are first encountered. Theocritus was followed by Bion and Moschus in the 2d cent. B.C. and by Vergil, whose *Bucolics* appeared in 37 B.C.,

In these polished and literary *Bucolics*, which were later called eclogues, Vergil describes an imaginary Arcadia in which the landscape and the characters are completely removed from actual life The pastoral scenes are allegorical; they celebrate the greatness of Rome, express thanks to the emperor, and prophesy a golden age In the 3d cent A D a Greek poet, probably Longus, wrote *Daphnis and Chloë*, a pastoral romance which also had much influence on European literature With the Renaissance there was a great revival of the pastoral eclogue Vergil's *Bucolics* were translated in the 15th cent in Italy, and pastoral eclogues were written by Dante, Petrarch, and Boccaccio. The most elaborate pastoral romance was the *Arcadia* by Jacopo Sannazaro, written partly in prose and partly in verse Politian's *Orfeo* (produced c 1471) is one of the earliest pastoral dramas In France the *pastourelle*—a short poem in dialogue in which a minstrel courts a shepherdess—appeared as early as the 14th cent and is exemplified in *Le Jeu de Robin et de Marion*, a play by Adam de la Halle Theocritus was translated by Pierre de Ronsard, who also wrote eclogues modeled on Vergil In 1607 the first part of a prose pastoral, *L'Astrée*, was published by Honoré d'Urfé Another famous prose pastoral was *Diana* by the Spanish writer Montemayor In English literature the pastoral can be found in the work of almost all the Renaissance poets Philip Sidney in his *Arcadia* (1590) places an epic story in a pastoral setting, in *The Shepheardes Calender* (1579) Edmund Spenser, like Vergil, uses the pastoral eclogue to discuss political and religious questions, and many of the love lyrics of Shakspere, Ben Jonson, and Michael Drayton are in a pastoral setting Christopher Marlowe's "The Passionate Shepherd to His Love" (1600) is the most famous of these lyrics In drama well-known examples of the pastoral are Shakspere's *As You Like It* and the shearers' feast in *A Winter's Tale* The most famous pastoral elegy in English is Milton's "Lycidas" (1637) Using the conventions of Theocritus, Moschus, and Vergil, Milton laments the death of his friend Edward King and discusses the question of immortality, his own career, and the corruption of the Church in terms of shepherds and their natural surroundings The pastoral conventions can also be seen in some of the poems by Andrew Marvell and in the pastorals by Alexander Pope In the 19th and 20th cent poets, novelists, and dramatists still use a pastoral setting to express simplicity and innocence in contrast to the artificiality of city life But like Wordsworth they generally do not use the pastoral conventions of Theocritus and Vergil Outstanding exceptions, however, are Shelley's *Adonais* (1821) and Matthew Arnold's *Thyrsis* (1866), both great pastoral elegies See William Greg, *Pastoral Poetry and Pastoral Drama* (1906), Gilbert Highet, *The Classical Tradition* (1949)

pastry, general name for articles of food made of paste or having paste as a necessary ingredient The name is also used for the paste itself The essential elements of paste or pastry are flour, liquid (usually milk or water, sometimes beaten egg), and shortening Pastry is classed according to the amount of shortening used and the method of blending it with the flour, as plain, flaky, and puff pastry The first two are used in making PIES and tarts, the third for patties and fancy concoctions generally Cooks agree that cold ingredients and a light touch are essential in the successful making of any pastry

pasture, land used for grazing livestock Land unsuited for cultivation, often hilly or stony land, may be used as pasture Tilled land and meadow may be pastured after the crops are removed Pastures which have been overgrazed and in which such soil-improving practices as liming, fertilizing, and seeding have been neglected soon become worthless Other factors to be considered in good pasture maintenance include the need for trees to provide some shade, a sufficient water supply, and the need for rotation of animals Sheep are best grazed on dry soils such as make up much of the Western RANGE lands A mixture of Kentucky bluegrass and white clover is famous for grazing, although each section of the country has mixtures best suited to its soil and climatic conditions See *A Pasture Handbook* (U S Dept of Agriculture, Miscellaneous Publication 194)

Pasuruan or **Pasoeroean** (both pä"sōōrōōän'), town (pop 36,973), East Java, Indonesia, a port on Madura Strait It exports sugar, rubber, coffee, and fish

Patagonia (pătugō'nēu), region primarily in S Argentina, S of the Río Colorado and E of the Andes, but including extreme SE Chile and N TIERRA DEL FUEGO. Patagonia, except for the far southern plains, the subandean region, and the Andes, is a vast semiarid grassy plateau, sloping gently toward the east and terminating in cliffs along the Atlantic Crossing from the Andes to the Atlantic are transverse valleys, some cradling rivers Although most of the water courses are intermittently dry, some rivers (Río Negro, the Chubut, the Santa Cruz, and the Gallegos) reach the sea the year round. The subandean region in the west contains numerous large lakes (Nahuel Huapí, Buenos Aires, Viedma, and Argentino) fed by Andean glaciers; it also has some deep, fertile valleys Subantarctic conditions prevail in the far south Sheep raising is the principal industry of Patagonia, but in the Andean region some cattle are raised and agriculture is practiced here and in irrigated oases along the Río Negro and the Chubut Oil production, particularly around COMODORO RIVADAVIA, has been of great importance Tourist resorts are being developed in the lake regions A rich field for the paleontologist, Patagonia has been visited by many scientific expeditions since the days of Charles Darwin. Of the original inhabitants, the Tehuelches (the "Patagonian giants") are the most important Among the native animals are the guanaco, the rhea, the puma and the deer Probably first visited (1501) by Vespucci, the Patagonian coast was explored (1520) by Magellan Settlements were attempted in the 16th and 17th cent, but the inhospitable country and natives discouraged colonization. It was not until after the campaign of J A ROCA against the Indians that Argentine ranchers began entering the territory in the late 19th cent Chileans had been coming in for some time, and despite efforts to exclude them during and after the Argentine-Chilean boundary dispute in the early 20th cent, many continued to immigrate Many Europeans, not a few from Great Britain, took up ranches Comprising more than a third of Argentine territory, Patagonia has less than one percent of the nation's population See W H Hudson, *Idle Days in Patagonia* (1893), Argentine Republic, Comisión de Estudios Hidrológicos, *Northern Patagonia* (Vol. I, 1914), *Reports of the Princeton University Expeditions to Patagonia, 1896–1899* (1901–32)

Pataliputra, India see PATNA

Patan (pä'tun), town (pop 29,830), NW Bombay state, India, founded c 750 Known in ancient times for its great wealth, it is today a drab place Pottery is manufactured, and there are many Jain temples

Patan, city (pop c 100,000), Nepal, in the Valley of Nepal, near Katmandu Founded c 650, it is the oldest of Nepal's three chief cities

Patani (pätänē'), town (pop 8,969), Thailand, on the east coast of the Malay Peninsula, near the mouth of the Gulf of Siam The surrounding territory produces most of the spices grown in Thailand, as well as rubber and coconuts Tin is mined and smelted The people are for the most part Malays Patani was a seat of the Sailendra power during the Sailendra domination of the Malay Peninsula and later was the center of a Malay state, which was drawn into the Thai orbit With Ayuthia, it was one of the first places in Siam opened to the Portuguese in the 16th cent, in the early 17th cent the Dutch and the English in turn established and abandoned factories here At first bound only by tenuous links of suzerainty to the courts of Ayuthia and Bangkok, against which it was several times in revolt, Patani was reduced by stages, culminating in the 19th cent, to the status of a province

Patapsco (pătăp'skō), river rising in N Maryland and flowing SE to Chesapeake Bay SE of Baltimore

Patara (pā'turu), ancient Mediterranean port of Lycia, S Asia Minor (Turkey) It was a Dorian colony St Paul visited Patara Acts 21 1

Patay (patā'), village (pop 1,313), Loiret dept, N central France, NW of Orléans Here Joan of Arc defeated the English in 1429

Patchogue (pă'chŏg",-chōg"), resort and fishing village (pop 7,181), on S Long Island, SE N Y, on Great South Bay and near Islip, inc 1893 A lace mill and a nursery are here

patchouli (păch'ōōlē, puchōō'lē), fragrant shrubby plant of India (*Pogostemon patchouly*), also the perfume obtained from it, distilled out as an essential oil and diluted

Patel, Vallabhbhai (vŭ'lubh putĕl'), 1876–, Indian statesman He was admitted to the bar in England and, returning to India, enjoyed a lucrative practice, chiefly as a criminal lawyer In 1915 he met Gandhi and within a short time became a staunch nationalist and a supporter of the Indian National Congress Patel, a determined and able director, was entrusted with organizing the details of the civil-disobedience campaigns of the '20s and '30s, several times he suffered imprisonment He was mayor of Ahmedabad (1924–28) and was elected (1931) president of the Indian National Congress After his release (May, 1945) from prison for refusing to support the British war effort, Patel was important in the negotiations which led (1947) to the partitioning of India In 1947 he was made deputy prime minister and minister of state affairs, he effected the difficult feat of integrating the many princely states into the Indian political structure, chiefly by unions of states and mergers with existing provinces

Patenier, Joachim de see PATINIR, JOACHIM DE

patent (pā'tŭt), in law, securing to the inventor of a useful product or process the right to exclude others from making his invention Patents developed out of the medieval institution of allowing monopolistic control over useful goods in order to make profitable (and thereby to encourage) their sale and distribution; the authority was contained in letters patent (meaning open, i e, public) The corrupt sale of such privileges and the consequent increase in the price of necessities led in England to the Statute of Monopolies (1623), which abolished all monopolies except that of an inventor in his invention The U S Constitution (Article 1, Section 8) authorizes Congress to enact patent legislation The U S Patent Office was created in 1836, and in 1870 comprehensive legislation substantially established the current American patent law In the United States any process or device may be patented if it is novel and useful and if plans and a working model are supplied In all countries patents are valid for a limited term only (17 years in the United States), this limit ordinarily secures a profit to the inventor for a reasonable period yet will not permanently deprive the public of the free use of the invention The American law was designed to encourage the maximum inventiveness Unlike many European countries where the rights to patents are limited to make innovations in industry easier, the United States imposes no tax on the maintenance of patents, nor does it require the patentee to permit the use of his invention on pain of losing his patent Although there have been many independent inventors in the United States (by 1950 a total of c 2,500,000 patents had been granted), today most important patents are the property of large corporations capable of exploiting them Injurious practices, such as withholding beneficial patents which might require reequipping plants, have developed Other practices, such as acquiring all patents in a given field and granting manufacturing licenses only to firms which promise to refrain from effective competition, have been successfully attacked by the Federal government under the antitrust laws Difficulties have also developed in the effective and equitable regulation of patents taken out by foreigners Full information about patents in the United States may be obtained from the U S Patent Office See W B. Bennett, *American Patent System* (1943)

Pater, Walter Horatio (pā'tur), 1839–94, English essayist and critic, educated at Canterbury and Queen's College, Oxford, elected (1864) a fellow at Brasenose Convinced of the moral importance of artistic perfection, Pater made his own style notable for precision and clarity His first work, *Studies in the History of the Renaissance* (1873), established his reputation There followed *Marius the Epicurean* (1885), by common consent his masterpiece, *Imaginary Portraits* (1887), *Appreciations* (1889), *Plato and Platonism* (1893), *The Child in the House* (1894), and two posthumous publications, *Greek Studies* (1895) and the unfinished historical romance *Gaston de Latour* (1896) See studies by A C Benson (1906), Arthur Symons (1932), H H. Young (1933), and R C Child (1940)

Paternò (pätĕrnō'), rural city (pop 28,533), E Sicily, Italy, at the foot of Mt Etna It is the center of a region of vineyards and orange and lemon groves

paternoster see LORD'S PRAYER

Paterson, William (pă'tursun), 1658–1719, British financier By the time of the Glorious Revolution of 1688 (which he supported) he had acquired considerable wealth and influence through foreign trade In 1691 he was the "chief projector" of the plan to establish the Bank of England, which finally came into being in 1694 Paterson served as a director (1694–95) In 1695 he proposed to the Scottish Parliament the famous but ill-fated DARIEN SCHEME Subsequently he devoted several years to carrying out that plan and accompanied the expedition of 1698 to Darien Paterson advised William III on economic, financial, and state affairs, and he strongly advocated the union of Scotland and England Paterson, an advocate of free trade, wrote much on trade and finance His writings were edited by Saxe Bannister (3 vols, 1859) See biography by Saxe Bannister (1858), J S Barbour, *William Paterson and the Darien Company* (1927)

Paterson, William, 1745–1806, American statesman, b Co Antrim, Ireland, grad College of New Jersey (now Princeton Univ), 1763 He practiced law and was attorney general (1776–83) of the young state of New Jersey, before he became a delegate to the FEDERAL CONSTITUTIONAL CONVENTION (1787) There he was prominent as a champion of the rights of the small states, he set forth the New Jersey or small-state plan (sometimes called the Paterson Plan) He later played a prominent part in state and national life as U S Senator (1789–90), governor of New Jersey (1791–93), and Associate Justice of the U S Supreme Court (1793–1806). See biographies by G S. Wood (1933) and C. A. Shriner (1940)

Paterson [for Gov William Paterson], city (pop. 139,656), co seat of Passaic co, NE N J, at the falls of the Passaic N of Newark It was founded in 1791 by Alexander Hamilton and others of the Society for Establishing Useful Manufactures, who had the help of L'Enfant in planning an industrial community here. The water power was used for cotton spinning in 1794. Paterson is one of the

country's greatest silk centers—an industry started in 1839 The first loom for silk piece goods was built by John Ryle in 1842 The making of machinery, notably that connected with aviation, is important The city, incorporated in 1851, is third in size in the state In 1902 it suffered a great fire and later a flood and a tornado The silk industry, characterised by hundreds of small "family" shops and generally bad labor conditions, saw many strikes, notably in 1912–13, 1933, and 1936 During the Second World War the city's workers were employed largely in metal and rubber industries and in making nylon and other textiles Paterson has a state teachers college (1855) and vocational schools Its museum has natural-history and Indian collections and contains the 14-foot submarine built by John P Holland in 1878 and tested in the Passaic river, from whose bed it was raised in 1927 The public-library building was designed by Henry Bacon

Pathé, Charles (pätĕ', Fr sharl' pätā'), 1873–, French photographer He was the first to present (c 1909) the newsreel as a regular attraction at a theater in Paris In 1910 he introduced the newsreel to the United States, thereafter the Pathé News Reel became an international product

pathology (puthŏ'luj̆, pā-), branch of medicine which deals with the structural and functional changes associated with disease The changes and reactions of the tissues in disease include degeneration, atrophy, hypertrophy, and inflammation In making modern diagnoses the examination of small pieces of living tissue (biopsy) is frequently employed, body fluids are tested for abnormal compositions denoting disturbed function, and X-ray photographs are used Experimental and comparative pathology are branches of the science The first real progress in pathology was made in the 19th cent

Pathros (päth'rŏs), biblical name of Upper Egypt It is mentioned as a place where Hebrews lived The inhabitants are Pathrusim Gen 10 14, Isa 11 11, Jer 44 1,15, Ezek 29 14, 30 14

Patiala and East Punjab States Union (pŭtēä'lu, pŭnjäb'), state (10,099 sq mi , pop c 3,790,000), NW India The capital is Patiala (pop 69,850) The state comprises a large central mass and several smaller detached areas It is predominantly level, and there is considerable agriculture dependent upon irrigation Grains and cotton are the chief crops The state was formed in 1948 by merging eight former princely states It is a center of Sikh population

patience, see SOLITAIRE

Patigian, Haig (hīg' pätĭgyan'), 1876–, American sculptor, b Armenia, son of teachers in a mission school He was largely self-taught Most of his monuments and decorations are in the Pacific coast states Among them are the McKinley monument, Arcata, Calif , statues of Lincoln and General Pershing and a bust of Helen Wills Moody, San Francisco, and the Blethen Memorial, Seattle, Wash. In 1929 he made a bust of President Hoover for the White House, and in 1931 his statue of Thomas Starr King was placed in Statuary Hall, Washington, D C

patina (pă'tunu), protective coating of carbonate of copper on articles of copper or bronze, formed after long exposure to moist atmospheres or burial in the earth Although commonly green, patina varies in color and consistency, it may be red, brown, black, blue, or gray, or it may be smooth, glossy, or crusty It may be imitated by a number of oxidation processes The term has been extended to include the film formed on metals, pottery, marble, and other materials by exposure and also to the mellow surface acquired by furniture with time and waxing.

Patinir, Patenier, or **Patiner, Joachim de** (all yō'äkhĭm du pätēnēr'), c 1485–1524, Flemish landscape and religious painter He probably studied with Gerard David in Bruges In 1515 he was a member of the painters' guild in Antwerp, where he spent the remainder of his life In 1521 his friend Dürer attended his second wedding and painted his portrait Patinir is famous as the first Flemish painter to subordinate figures to landscape His powerful scenes, painted with the limpid and meticulous clarity of his school, have a serene lyricism Among them are *The Flight into Egypt* (one version in Antwerp, another in the Prado), *Baptism* (Vienna), *Temptation of St Anthony*, with figures by Quentin Massys (Prado), *St John at Patmos* (National Gall , London), *Rest by the Way* (Minneapolis Inst of Arts) The Metropolitan Museum has a fine triptych See Sir Martin Conway, *The Van Eycks and Their Followers* (1921).

Patiño, Simón Iturí (sēmōn' ētōō'rē pätē'nyō), 1868–1947, Bolivian capitalist He owned rich tin mines in Bolivia and invested his enormous fortune, thought to have been among the world's largest, in other financial enterprises Patiño reputedly exerted considerable influence on his country's governmental policies, though he spent most of the latter half of his life abroad

Patkul, Johann Reinhold von (yō'han rīn'hōlt fŭn pät'kōōl), 1660–1707, Livonian nobleman He incurred the displeasure of Charles XI of Sweden by championing the rights of the provincial gentry and fled abroad to escape punishment. In 1698 he entered the service of Augustus II of Poland and Saxony He was instrumental in inspiring Augustus's scheme to reunite Livonia with Poland and in forming the anti-Swedish alliance of Poland, Denmark, and Russia which led to the NORTHERN WAR (1700) He held high commands in the subsequent campaign, but when Augustus II made peace with Sweden at Altranstädt (1706) he delivered Patkul to Charles XII, who had him broken on the wheel

Patmore, Coventry Kersey Dighton, 1823–96, English poet Patmore's first poetry, published in 1844, led to an assistant librarianship (1846–65) at the British Museum and later to an association (1850) with the Pre-Raphaelite journal the *Germ* His principal works are *The Angel in the House* (in four books, 1854, 1856, 1860, 1863), which exalts the sanctity of married love, and *The Unknown Eros* (1877), a series of odes reflecting the spiritual change effected by Patmore's conversion to Catholicism (1864) *Tamerton Church Tower* (1853) was reprinted with *Amelia* (1878) and included the "Essay on English Metrical Law " See his *Memoirs and Correspondence* (ed by Basil Champneys, 1900–1901), biography by Edmund Gosse (1905), Frederick Page, *Patmore: a Study in Poetry* (1933), Derek Patmore, *The Life and Times of Coventry Patmore* (1949)

Patmos (pat'mŏs, pāt'mus), island (13 sq mi , pop 2,428), off the coast of SW Asia Minor, in the Aegean Sea, one of the DODECANESE, belonging to Greece Here, according to Rev 1 9, the exiled St. John the Divine wrote the REVELATION

Patna (pŭt'nŭ, pŭt'nu), city (pop 175,706), capital of Bihar state, India, on the Ganges river As Pataliputra, it was the capital of the Maghada kingdom and later (c 320–231 B C) of the Maurya empire There is cotton spinning and weaving The Univ of Patna was opened in 1917

Patras (pŭträs', pă'trus), Gr *Patrai* (pă'trā), Latin *Patrae*, city (pop 79,570), Greece, in the N Peloponnesus It is a port near the head of the Gulf of Patras, which connects the Gulf of Corinth with the Ionian Sea One of the largest cities of Greece, Patras is a commercial and industrial center, exporting currants, olive oil, wine, and citrus fruit A member of the first ACHAEAN LEAGUE, the city sided with Athens in the Peloponnesian War and became (3d cent B C) a leading member of the Second Achaean League It sank into insignificance before the Roman conquest of Greece, but was revived as a Roman colony by Augustus and soon flourished as a port Included after 1204 in the Latin principality of Achaia, it was twice held by Venice (1408–13, 1417–19), later passed to the Turks, and was again held by Venice from 1687 to 1715. Patras was destroyed (1821) in the Greek War of Independence and was rebuilt on a rectangular pattern

patriarch (pā'trēärk) [Gr , =head of a family], in biblical tradition, one of the antediluvian progenitors of the race as given in Genesis (e g , Seth) or one of the ancestors of the Jews (e g , Abraham, Isaac, Jacob, and the sons of Jacob) The Testament of the Twelve Patriarchs is the name of one of the PSEUDEPIGRAPHA

patriarch, in Christian churches, title of certain exalted bishops, implying authority over a number of other bishops The original patriarchates were three the West, held by the bishop of Rome (the pope, see PAPACY), Alexandria, and Antioch To these were added Constantinople (4th–5th cent) and Jerusalem (451) To the West belonged everything W of the Balkans and Cyrene, and Constantinople ruled most of the Byzantine Empire Syria and Mesopotamia were under Antioch, Palestine was under Jerusalem, and Egypt belonged to Alexandria The triumph of Monophysitism in Egypt and Syria (5th–6th cent) created new churches Since then the three Orthodox patriarchs in Asia have had small, minority jurisdictions, they abandoned their local rites in favor of the Byzantine Besides the five ancient patriarchates there are a number of others In communion with the pope there are 14 four Latin-rite patriarchs (dating from the Crusades), Constantinople, Alexandria, Antioch, and Jerusalem, all purely titular except Jerusalem, whose patriarch is bishop of local Latin-rite Catholics, six who are heads of Oriental rites, having generally full patriarchal powers and not usually resident in their official sees, namely, Alexandria (Coptic rite), Antioch (three Syrian rite, Melchite, and Maronite), Babylon (Chaldean rite; see NESTORIAN CHURCH), and Cilicia (Armenian rite), finally, in the Western Church the title patriarch is conferred, purely as an honor, on four prelates, the archbishop of Goa (patriarch of the East Indies), the archbishop of Lisbon, the archbishop of Venice, and the patriarch of the West Indies (normally Spanish) In the Russian Orthodox Church the tsar set up (1589) a patriarch of Moscow, the title was abolished (1721) by Peter the Great and revived in 1917 (see ORTHODOX EASTERN CHURCH) The Orthodox archbishops of Belgrade and of Bucharest are called patriarchs. Besides all these there are a Coptic patriarch of Alexandria, a Jacobite patriarch of Antioch, a Nestorian patriarch, and four Armenian patriarchs (of Echmiadzin, Sis, Jerusalem, and Constantinople).

patriarchy (pā'trēär"kē), term, meaning "father right," used to designate certain features of a family or kinship group ruled by the father or eldest male, the patriarch In the patriarchal family, succession is in the male line; at the death of the patriarch his name, property, and authority descend to the sons Patriarchy was once regarded as a universal stage in social evolution, as was matriarchy. The patriarchal family is strongly developed among the nomads of Asia and in Africa, China, and Japan and in ancient times was firmly established in Palestine, Greece, and Rome In the Roman family the *patria potestas* or authority of the patriarch was developed to the highest point He was the only person recognized as an independent person in Roman law He possessed all religious rights as priest of the family ancestor cult and all economic rights as sole owner of the family property, real and personal. In his power of life and death over the members of the family, including slaves, he exercised the functions of a monarch Polygyny (having several wives) is common in the patriarchal family It is generally agreed that the patriarchal organization of economic and family life was an important factor in developing the state and the institution of private property

patrician (pŭtrĭsh'ŭ) [Latin, =of the fathers], any member of one of the original citizen families of ancient Rome. The patricians constituted the *populus Romanus* of the oldest times They were divided into three tribes, each consisting of 10 *curiae*, which made up the Comitia Curiata Besides these, originally there were only the *clientes* [clients], who had no legal rights and looked to the patricians as their protectors or *patroni* [patrons] The PLEBS, who sprang from the settlement of subjugated Latin tribes in Rome, lacked the rights of the patricians, who exclusively could hold public office, whether civil or religious From the establishment of the republic (6th cent. B C) the plebs struggled constantly for political equality until, by the 3d cent B C , the only offices reserved to the patricians were the civil office of *interrex*, and some priestly offices. The increasing number of plebeians in office together with patricians gave rise to the *nobiles*, an aristocracy of ruling families of both classes Caesar and Augustus promoted plebeians to the patrician class Later, *patrician* became a title of honor External marks of a patrician were a distinctive tunic and a shoe adorned with an ivory crescent The Julian gens (to which Caesar belonged) was perhaps the most illustrious of patrician families.

Patrick, Saint, c 385–461, Christian missionary, the Apostle of Ireland, b Bannavem Taberniae (an unknown place in Britain, possibly near the Severn or in Pembroke) He belonged to a Christian family of Roman citizenship He was captured when barely 16 by Irish marauders and enslaved For six years he worked as a herdsman on the slopes of Slemish (near Ballymena, Co Antrim) or of Croaghpatrick, or (most likely) of both Then, in response to a voice, he escaped and embarked for Gaul He spent some years wandering on the Continent and probably visited the Monastery of St Martin at Marmoutier He entered the monastery at Lérins and received the tonsure He returned c 413 to his native Britain and lived for some years with relatives During this time he had a vision which called him to return to Ireland and make it Christian Accordingly, he returned to Europe (c 419) to perfect himself as a missionary The next 12 years were spent in study at Auxerre In 431 St PALLADIUS, first missionary bishop sent to Ireland, died, Patrick was consecrated (432) in his place by St GERMANUS That winter Patrick landed near Saul and remained until spring, when he went to Tara and gained his first major converts He defied the pagan priests of Tara by kindling the Easter fire on Slane, a near-by hill This challenge to paganism created at first indignation, and subsequently respect, in the court of the high king Tara became Patrick's headquarters, and with a band of followers he converted successively Meath, Leitrim, Cavan, and W Ireland Further details of his missions are only generally known In 441 St Patrick traveled to Rome and received the pallium from Pope St Leo I. In 444 or 445 Patrick returned to Ireland and established his archiepiscopal see at Armagh, enshrining there the relics which Leo had given him St Patrick's mission was most successful, Ireland was almost entirely Christian by the time of his death. He understood and used the social structure of the country, converting the people tribe by tribe. Out of his hierarchy organized by tribal units developed the Celtic abbot-bishop system. At Patrick's instance, the traditional laws of Ireland were codified Patrick modified them to harmonize with Christian practice, and he mitigated the harsher ones, particularly those that dealt with slaves and with taxation of the poor. In 457 he retired to Saul, where he died He was buried in Downpatrick, which was a great European shrine until its destruction by the Eng-

Irish government in 1539. Also holy to him is Croaghpatrick. Patrick's connection with SAINT PATRICK'S PURGATORY in Lough Derg is undoubtedly only legendary. The prime source for Patrick's life is the *Confessions*, a moving apology for his life and work written during his last years Some years earlier he had written the *Epistle against Coroticus*, an appeal to the Christian subjects of Coroticus to repudiate their British, nominally Christian, ruler for his bloody raid on Ireland. St Patrick was probably the author of the *Lorica* (or *Breastplate*) *of St. Patrick*, also called *The Cry of the Deer* (in Irish, *Fáed Fíada*), a wonderful, mystic poem of faith, written in Irish and Latin St Patrick was one of the most successful missionaries in history His personality is said to have been unusually winning. The notion of introducing Christianity with a minimum of alteration of the existing culture was undoubtedly helpful in establishing Christianity firmly in Ireland Feast: March 17. See Whitley Stokes, ed. and tr., *The Tripartite Life of St Patrick, with other Documents Relating to that Saint* (1887), J B Bury, *The Life of Saint Patrick* (1905), Hugh De Blácam, *Saint Patrick* (1941)

Patrimony of Saint Peter: see PAPAL STATES.

Patripassians: see MONARCHIANISM

patristic literature, Christian writings of the first few centuries. They are chiefly in Greek and Latin; there is analogous writing in Syriac and in Armenian The Greek and Latin Fathers are outside the classical literary tradition, because Christianity wrought a revolution in their outlook The first period of patristic literature (2d cent.) includes the works of St Clement I, St Ignatius of Antioch, St Polycarp, and Papias, the writings ascribed to the Shepherd of HERMAS, the DIDACHE, and the first Christian PSEUDEPIGRAPHA The writers of the 3d cent., often called the ante-Nicene Fathers, are principally St Justin Martyr, Clement of Alexandria, St Irenaeus, Origen, Tertullian, and St Cyprian The last two of these are the earliest Fathers to write in Latin As the Church won over paganism, the interest shifted from apologetics to the new theological questions and to sermons and exegesis of Scripture The literary style shows more attention to traditional rhetoric and perhaps less religious fervor. In the 4th and the 5th cent there were a huge number of writers The chief writers in Greek were Eusebius of Caesarea, St Gregory Nazianzen, St Gregory of Nyssa, St Basil the Great, St John Chrysostom, St Cyril of Jerusalem, St Cyril of Alexandria, and St Athanasius. Among the Latin Fathers were St Hilary of Poitiers, St Ambrose, St Augustine, St Jerome (who set a standard for later Latin in the Vulgate), Cassian, Salvian, St Hilary of Arles, Caesarius of Arles, and St Gregory of Tours, the historian The list in the West is closed conventionally with St. Gregory I, but St Bernard of Clairvaux is often called the last of the Fathers The canon of Greek Fathers is closed with St John of Damascus There is a monumental collection of the Fathers (to Innocent III in the West and to the fall of Constantinople in the East) by MIGNE; the Greek texts are accompanied by Latin translations There are several collections of the Fathers in English, including new editions recently undertaken, and innumerable individual translations

Patrobas (păt'rŭbăs), Christian Rom 16 14

Patroclus (pŭtrō'klŭs), in Greek legend, especially in the *Iliad*, hero of the TROJAN WAR, the intimate friend of ACHILLES When Achilles was sulking in his tent, Patroclus borrowed his armor and fought bravely until HECTOR killed him Then Achilles returned to battle and killed Hector Patroclus' excursion is thus the crux of the epic

patron (pā'trŭn) [Latin,=like a father] In Roman law a manumitted slave (*libertus*) became the client of his manumissor, who was then called *patronus*. His duties were ethical and formal, i.e., certain products of his making he had to give his patron The patron had to defend his client legally, and he and his client could neither testify against each other nor sue each other. The client was an heir of the patron In the Roman Empire the relation fell into desuetude and the term patron was applied to persons like MAECENAS who supported artists and literary men and financed their publications Such patronage has continued In the Renaissance and later, patronage was very common and productive of much good Perhaps the most munificent patrons of modern times were found in 15th-century Italy, e.g., the MEDICI, the SFORZA, and many popes. FRANCIS I of France and his sister MARGARET OF NAVARRE were distinguished patrons of art and letters; two famous literary patrons in England were Sir Philip SIDNEY and Lord CHESTERFIELD. Christians since ancient times have honored saints and angels as tutelary guardians of persons, trades, places, and churches These are called patron saints, thus the patron saint of England is St George or Edward the Confessor; of Scotland, St. Andrew; of Wales, St David; of Ireland, St. Patrick; and of America (among Roman Catholics), Our Lady of the Immaculate Conception; of musicians, St. Cecilia; of physicians, SS Cosmas and Damian, and of children, St Nicholas.

Patrons of Husbandry: see GRANGER MOVEMENT.

patroon (pŭtrōōn') [Dutch,=patron or employer], in American history, the name given to a Dutch land owner in New Netherland who exerted manorial rights in colonial times To encourage emigration of Dutch farmers to America, the Dutch West India Company in 1629 granted large estates (16 mi. of land along navigable rivers or 8 on each shore and extending inland as far as it proved convenient) to members of the company who would establish settlements of 50 persons within four years These company members, called patroons, were granted many privileges which were feudal in nature—the right to hold land as a perpetual grant, the right to establish civil and criminal courts, and the right to appoint local officers Settlers were exempt from public taxes for a decade, but they were specifically required to pay the patroon in money, goods, or services Manufacturing was prohibited under heavy penalty, and commerce was restricted to a great extent Before long several estates were established along the Delaware, Connecticut, and Hudson rivers Indian raids, mismanagement, and lack of cooperation from the Dutch West India Company, however, helped to drive most of the patroons to failure A patroonship which did succeed was Rensselaerswyck, a large estate on the Hudson which remained in the hands of the Van Rensselaer family until the middle of the 19th cent In 1640 the charter was revised by the Dutch West India Company, the size of the land grants was halved, manufacturing was permitted, and all Dutch inhabitants in good standing could obtain estates After New Netherland came under English control in 1664, the patroon system continued and underwent few changes until 1775, when patroons became proprietors of estates Some characteristics of feudal tenure did remain, and this condition brought about increasing tension between landlord and tenant in New York state until the middle of the 19th cent., when the antirent rebellion brought about further important modifications See S G Nissenson, *Patroon's Domain* (1937)

Pattee, Fred Lewis (păt'ē'), 1863–, American author and critic, b Bristol, N H, educated at Dartmouth (B A, 1888) and at the Univ of Gottingen He was professor of American literature at Pennsylvania State College (1894–1928) and at Rollins College (1928–41) His books include *History of American Literature since 1870* (1915), *The Development of the American Short Story* (1923), and *The Feminine Fifties* (1940)

Patten, William, 1861–1932, American biologist, b. Watertown, Mass., grad Harvard (B S, 1883) He was professor of zoology at Dartmouth from 1893 and was known for his researches on the anatomy and embryology of invertebrates (especially of mollusks and arthropods), on fossil fishes, and on the evolution of vertebrates He wrote *The Evolution of Vertebrates and Their Kin* (1912) and *The Grand Strategy of Evolution* (1920)

Patten, town (pop 1,548), E central Maine, WSW of Houlton, settled 1828, inc 1841 It is in a hunting, fishing, and lumbering area

Patterson, family of American journalists **Robert Wilson Patterson,** 1850–1910, b Chicago, grad Williams, 1871, became (1871) a reporter on the Chicago *Times* and after 1873 was attached to the Chicago *Tribune* He married Elinor Medill, the daughter of Joseph MEDILL He worked his way up to become managing editor of the Chicago *Tribune*, and upon the death (1899) of his father-in-law, he became editor-in-chief of the newspaper His health began to fail in 1905 but he continued to head the *Tribune* until his death His son, **Joseph Medill Patterson,** 1879–1946, b Chicago, grad Yale, 1901, worked (1901–5) on the staff of the Chicago *Tribune*, was elected (1903) to the Illinois legislature, and served (1905–6) as commissioner of public works in Chicago His earlier socialistic views—recorded in the novels, plays, and articles that he wrote—gradually faded away after 1910, when he returned to the staff of the *Tribune*. By 1914, Patterson gained part control of the *Tribune*, which was managed by his cousins, Joseph Medill McCORMICK and Robert Rutherford McCORMICK, and he remained as its coeditor until 1925. He served in France in the First World War, and upon his return to the United States, he founded (1919) in New York city the *Daily News*—the first successful tabloid in the country By sensationalizing sex and crime and by extensive use of photography, Patterson gave his newspaper the top circulation in the United States In 1925 he relinquished his holdings in the Chicago *Tribune* and then continued to expand the operations of the *Daily News* syndicate He supported President F D Roosevelt until 1940, after which Patterson's isolationist viewpoint caused him to attack the Democratic administration His sister, **Eleanor Medill Patterson,** 1884–1948, b Chicago, also was a newspaper editor She inherited an interest in the Chicago *Tribune* and became attached to the New York *Daily News* She became (1930) editor of the Hearst syndicate's Washington *Herald*, which she leased, together with the Washington *Times*, in 1937 Two years later she purchased the two newspapers and merged them into the Washington *Times-Herald* "Cissy" Patterson became well known for her spectacular news presentation In 1904 she married Count Josef Gizycki of Poland, and after securing (1917) a divorce, she married (1925) Elmer Schlesinger, a Chicago lawyer. Under the name of Eleanor M Gizycka she wrote the books *Glass Houses* (1926) and *Fall Flight* (1928). See John Tebbel, *An American Dynasty* (1947)

Patterson, Elizabeth, 1785–1879, American wife of Jérôme Bonaparte, and celebrated beauty, b Baltimore On a visit to America, Jérôme Bonaparte met and married (1803) her Jérôme was a minor, and Napoleon refused to recognize the marriage When Jérôme returned (1805) to France, his wife was forbidden to land and went to England, where her son, Jerome Napoleon Bonaparte, was born Napoleon issued (1806) a state decree of annulment for his brother, and Elizabeth Patterson was given a large annual pension. See E L Dicker, *Life and Letters of Mme Bonaparte* (1879), C E M Macartney and J G Dorrance, *The Bonapartes in America* (1939)

Patterson, Robert Porter, 1891–, U S. Secretary of War (1945–47), b Glens Falls, N Y, grad Union College, 1912, and Harvard Law School, 1915. He was decorated for heroism in France in the First World War Herbert Hoover appointed (1930) him a U S district judge, and, though a Republican, he was elevated (1939) by President F D Roosevelt to the circuit bench He served as Assistant Secretary of War (July-Dec., 1940) and Undersecretary of War (1940–45) before succeeding Henry L Stimson as Secretary of War He designed the unification of the armed forces under the National Military Establishment (see DEFENSE, UNITED STATES DEPARTMENT OF)

Patterson, 1 City (pop 1,109), central Calif., S of Stockton, in a farm area, inc. 1919 2 Town (pop 1,800), S La., N of Atchafalaya Bay, in a sugar-cane region, settled in the late 18th cent., inc 1907.

Patti, Adelina (ădŭlē'nŭ pă'tē), 1843–1919, coloratura soprano, b Madrid, of Italian parents She was trained in New York, where she made her debut in 1859, thereafter singing with great acclaim in London, Paris, and Milan In 1881 she returned to the United States and eventually became the most popular and most highly paid singer of her day She was unsurpassed for purity of tone and ease of production and had a wide range, with an even quality throughout Her sisters, Carlotta, a soprano, and Amalia, a contralto, followed her to the operatic stage, her brother, Carlo, conducted opera in New Orleans, St. Louis, and New York See Herman Klein, *The Reign of Patti* (1920)

Pattison, Mark, 1813–84, English scholar and author, fellow (1839) and rector (1861) of Lincoln College, Oxford During his college years Pattison was much influenced by J H Newman and the Oxford movement, but his religious crisis produced not faith, but agnosticism He contributed to *Essays and Reviews* (1860), a highly controversial symposium on religious subjects, and wrote biographies of Isaac Casaubon (1875) and Milton (1879), as well as his own outspoken memoirs (1885).

Patton, George Smith, Jr., 1885–1945, American general, b San Gabriel, Calif., grad West Point, 1909 In the First World War he was wounded when commanding a tank brigade in France Subsequently he served in the cavalry and the tank corps In the Second World War he commanded (1942–43) the U S 2d Corps in North Africa and the 7th Army in Sicily Despite a brilliant record, a much-publicized incident (Patton slapped a soldier suffering from battle fatigue) cost him his command and delayed until Aug., 1944, promotion to the permanent rank of major general Early in 1944 he was given command of the 3d Army, which spearheaded the spectacular sweep of U S forces from Normandy through Brittany and N France, relieved Bastogne in Dec., 1944 (see BATTLE OF THE BULGE), crossed the Rhine (March, 1945), and raced across S Germany into Czechoslovakia As military governor of Bavaria, he was criticized for leniency to Nazis and was removed (Oct., 1945) to take charge of the U S 15th Army Patton died after he was injured in an automobile accident in Germany See his autobiography, *War as I Knew It* (1947)

Patton, borough (pop. 3,085), Cambria co., SE Pa., NW of Altoona

Pattonsburg, city (pop 1,017), NW Mo., on the Grand River and NE of Kansas City; first settled 1845

Patuca (pätōō'kä), river of E Honduras, flowing NE to the Caribbean The upper reaches are claimed by Nicaragua as its northeastern boundary with Honduras, instead of the San Juan

Pátzcuaro (pät'skwärō), lake, Michoacán, W Mexico Its indented shores and green islands and the curious native sailboats help make Lake Pátzcuaro popular as a resort The town of Pátzcuaro (pop 9,557) is primarily a Tarascan fishing settlement but also produces some of the finest lacquerware in Mexico

Patzinaks: see PECHENEGS.

Pau (pä'ō), unlocated capital city of an Edomite king Gen. 36.39. Pai 1 Chron. 1 50.

Pau (pō), city (pop 40,604), capital of Basses-Pyrénées dept, SW France, at the foot of the Pyrenees The scenery is renowned The old capital of BÉARN and the residence of the French kings of Navarre, Pau is now an important tourist center In its château Henry IV was born

Paul, Saint, d 67?, the apostle to the Gentiles, b Tarsus, Asia Minor He was a Jew His father was a Roman citizen, probably of some means, and Paul was a tentmaker by trade His Jewish name was Saul He was educated in Jerusalem, where he studied under Gamaliel and became a zealous nationalist, he was probably a Pharisee The chronology of St Paul's life is difficult, but there is general agreement (within a few years) on most details The hypothetical dates given here are according to one chronological "system" The sources for St. Paul's life are the Acts of the Apostles, of which he is the dominating figure, and the Pauline Epistles The value of the latter depends on the extent to which they are accepted as genuinely written by the apostle. Romans, 1 and 2 Corinthians, Galatians, Philippians, Colossians, 1 Thessalonians, and Philemon are undoubted, Ephesians and 2 Thessalonians are accepted by all but a few critics; 1 and 2 Timothy and Titus are said by some to be in their present form of late provenance, finally, Hebrews was probably not written by St Paul himself His first known contact with Christianity is his approving presence at the martyrdom of St Stephen Acts 8, 9 Soon after this he got a commission from the chief priest to go to Damascus to help suppress Christianity there (A D 35) As he approached Damascus he suddenly saw a blinding light and heard a Voice ask, "Why persecutest thou me?" Paul was temporarily blinded and was led into the city, where, at length, he took up his lodgings with the Christians. The experience converted him Acts 9 1–19, 22 3–21, 26 9–23, 1 Cor 9 1, 15 8, Gal 1 12–15, 1 Tim 1.13 Of his first years as a Christian, details are not certain, he visited Jerusalem probably twice (A D 37, 44) and dwelt at Tarsus and Antioch for some time Acts 11 From Jerusalem, Paul set out on his first missionary journey (Acts 13–14 27, A D 45–49), which was to make him the greatest missionary apostle On it he was accompanied by St Barnabas and for a time by St Mark In general the method was to go from city to city preaching in synagogues and in market places Churches were set up, and as soon as the little Christian groups seemed strong enough the apostle and his companions would move on On the first mission they went to Cyprus, thence across to Pamphylia From Perga they moved N to Antioch of Pisidia, then in a southerly turn east of the mountains via Iconium and Lystra to Derbe They now went back over their course to the Pamphylian coast and shipped from Attalia to Antioch About A D 50 there was a council of the apostles at Jerusalem to discuss whether Gentile Christians should be circumcised, i e, whether Christianity was to be a Jewish sect St Paul opposed the Judaistic group vigorously, and the council decided against them Acts 15, Gal 2. On the second mission (Acts 15 36–18 22, A D 50–53) he was accompanied by Silas They went north by land from Jerusalem to Galatia via Lystra Thence they moved W across Asia Minor to the Aegean at Troas On visits to Philippi and Salonica they founded two churches which were to become great After halting at Beroea in Thessaly they sailed to Athens, where Paul delivered his matchless address in the market Acts 17 15 From Athens he went to Corinth, where his daughter church was to call from him two of the greatest epistles In the course of a long stay there he wrote 1 and 2 Thessalonians (A D 52) Either about this time or somewhat later he also wrote his letter to the Galatians. At length Paul sailed to Caesarea of Palestine and visited Jerusalem again He spent some time in Antioch The third missionary journey of St Paul (Acts 18 23–21 26, A D 53–57) took him to Galatia, then Phrygia, and over to Ephesus His two-and-a-half-year stay in Ephesus was one of the most fruitful periods in his life, for in this time he wrote the letters to the Corinthians (A D c 56). By way of Macedonia he went to Corinth to help the Christians there, then back to Ephesus, thence to Jerusalem He wrote Romans probably from Corinth. This was his last visit to the Holy City (57–59), for soon after he had come he was arrested for provoking a riot After being held prisoner for two years and after hearings before the council, before Felix, before Festus, before Agrippa, and again before Festus, he appealed to Rome on his citizen's right So he was sent to Rome under guard Acts 21.27–28 31. On he way they were shipwrecked on Malta, but finally landed at Puteoli (Pozzuoli) He was imprisoned in Rome (60–62) and then apparently acquitted of all charges. The next years are historically almost blank. He went east again and perhaps to Spain, but his headquarters was now Rome In these years he wrote the rest of his epistles and may have had Hebrews written for him He was killed in a persecution under Nero, according to universal tradition he and St Peter suffered on the same day. St Paul has always been said to have been beheaded south of the city, near the Ostian Way His tomb and shrine are at the Roman basilica of St Paul's without the Walls. St Paul's figure dominates the apostolic age, and his epistles have left a tremendous impress on Christianity The first Christian theological writing is found in them, where it is characterized rather by spiritual fervor than by dispassionate analysis St Paul became a fountainhead of Christian doctrine at once, and countless interpretations have been given of his teachings Thus, Catholic theology leans on him at all times, and Luther derived from Romans his principle of justification by faith alone Similarly one school of critics regards Christianity as the work of Paul, Christ being only a symbol, while another regards Paul as the perverter of Jesus' teaching But no one denies to Paul his greatness in the Church, his power as a person or the reality of his animating love of God and man The feast of St Peter and St Paul, June 29, is one of the principal days of the calendar, the conversion of St Paul is commemorated Jan 25 In art St Paul is often depicted with a sword representing his martyrdom There are celebrated mosaics of St Peter and St Paul in Rome (St. Mary Major, St Sabina, and SS Cosmas and Damian) and in Monreale, Sicily See biographies by W L Knox (1932), A D Nock (1938), Cuthbert Lattey (1939), and Joseph Holzner (1944), Irwin Edman, *The Mind of Paul* (1936), H V Morton, *In the Steps of St Paul* (1936), W J McGarry, *Paul and the Crucified* (1940), Sholem Asch, *The Apostle* (1943), a novel

Paul II, 1417–71, pope (1464–71), a Venetian named Pietro Barbo, successor of Pius II and predecessor of Sixtus IV He was a nephew of Eugene IV. A Renaissance pope, he patronized printing, beautified and improved Rome, and collected antiquities Paul, like PIUS II, was involved in struggles with the Bohemian George of Podebrad and with Louis XI of France A plot against the pope's life by some of the group of POMPONIUS LAETUS was frustrated (1468)

Paul III, 1468–1549, pope (1534–49), a Roman named Alessandro Farnese, successor of CLEMENT VII and predecessor of JULIUS III He was created cardinal by ALEXANDER VI, and his influence increased steadily He was one of the most astute diplomats in the Church, directing his efforts chiefly in aid of the reforming party With his election a new era in the papacy opened, for the Catholic Reform (see REFORM, CATHOLIC) began Paul favored a new council to reconcile the Protestants and reform the Church After elaborate preparations, countless intrigues, and several false starts the Council of Trent (see TRENT, COUNCIL OF) convened (1545) At his accession Paul appointed a special commission, made up of the most ardent reformers, this commission was valuable to the council for the information it had on actual conditions in Rome Paul also patronized the newly founded Jesuits (see JESUS, SOCIETY OF), the great agents of the Catholic Reform The pope's interest in art was very great he founded the Farnese Palace, had Michelangelo decorate the Sistine Chapel, and rebuilt and repaved many streets in Rome Paul is often called the last pope of the Renaissance because of his nepotism and his artistic enthusiasm

Paul IV, 1476–1559, pope (1555–59), a Neapolitan named Gian Pietro Carafa, successor of Marcellus II and predecessor of PIUS IV He was a strict ascetic from youth, and he joined the order of St Cajetan—named later the Theatines, in honor of Carafa, who had been bishop of Chieti (Theate). Paul III made him one of the reform commission and soon after created him cardinal He was the chief organizer of the Inquisition set up by Paul III He was elected to succeed Marcellus II as the leading reformer His extreme views and actions alienated all the Catholic powers, even Mary Tudor, whose adjustments with Cardinal POLE of English affairs he reprimanded He formally declared Elizabeth illegitimate and unfit to be queen. Paul did much for the Catholic Reform (see REFORM, CATHOLIC) in purifying the clergy and in breaking for all time the reign in the papal court of worldliness and large-scale nepotism

Paul V, 1552–1621, pope (1605–21), a Roman named Camillo Borghese, successor of Leo XI and predecessor of Gregory XV He was created cardinal (1596) by Clement VIII and became famous for his knowledge of canon law On his election he set out at once to restore all the prerogatives the papacy had ever enjoyed He soon fell out with Venice, where clergymen were tried by civil courts and churches could not be built without government consent. In the dispute Paolo Sarpi led the Venetian side, and Cardinals Baronius and Bellarmine the cause of the Holy See In 1606 the pope put Venice under interdict, but the Venetian clergy refused to obey. The quarrel ended in 1607 with a Venetian victory Paul also had a disagreement with France over Gallicanism and with James I of England over oaths of allegiance He built the Villa Borghese at Rome and added to the Vatican Library. His chapel in the Church of Santa Maria Maggiore, Rome, is famous

Paul I, 1754–1801, emperor and tsar of Russia (1796–1801), son and successor of Catherine II. His mother disliked him intensely, claimed that her husband, Peter III, was not Paul's father, and sought on several occasions to change the succession to his disadvantage It is now generally believed, however, that Peter III was Paul's father. During Catherine's lifetime Paul opposed his mother's reforms, which increased the power of the nobles, and after his accession sought to improve the lot of the serfs. He joined (1799) the second coalition against revolutionary France, but after the defeat of Korsakov at Zürich and Suvarov's passage over the Alps he withdrew from the coalition in the same year (see FRENCH REVOLUTIONARY WARS) He reinstated his mother's policy of armed neutrality at sea and concluded the Northern Convention (1800) of Russia, Sweden, Denmark, and Prussia, directed against British rules on neutral shipping In the meantime it became increasingly apparent that the emperor was insane. No one was safe from his unpredictable fits of rage, and he showered favors and punishments with despotic whimsicality Terror at the court became intolerable, and a conspiracy was formed to force his abdication When Paul refused to give up the throne, the conspirators, crazed by fear, strangled him His son and successor, Alexander I, had knowledge of the conspiracy but was blameless in the murder.

Paul, 1901–, king of the Hellenes (1947–), brother and successor of George II He married (1938) Princess Frederika of Brunswick

Paul, Jean: see RICHTER, JOHANN PAUL FRIEDRICH

Paula, Saint, 347–404, patrician Roman matron When her husband died (379), she founded a religious community in Rome In 382 Paula placed herself under the spiritual direction of St JEROME and was thereafter closely associated with him Paula and her daughter made a journey to the East in 385 and met St Jerome in Bethlehem, where St. Paula built two monasteries One, for men, was under St Jerome, the other, for women, under St Paula Several of Jerome's biblical commentaries were undertaken at her request, and she aided his work Feast Jan 26

Paul-Boncour, Joseph (zhôzĕf' pôl-bôkōr'), 1873–, French statesman Originally a Socialist, he withdrew from the party in 1931 and remained independent of party ties He was permanent French delegate to the League of Nations (1932–36), was briefly premier (1932–33), and held several cabinet posts, notably the foreign ministry in 1933 and in 1938 He voted (1940) against the granting of full powers to Marshal Pétain He was a delegate to the conference at San Francisco to draw up a charter for the United Nations in 1945 Paul-Boncour has long advocated disarmament and the creation of an international police force as the sole effective means to preserve peace

Paulding, Hiram, 1797–1878, American naval officer, b Westchester co, N Y Appointed (1811) a midshipman, he distinguished himself in the War of 1812 as acting lieutenant on the *Tyconderoga* in the battle of Lake Champlain In 1823 he was graduated from the military academy in Vermont which later became Norwich Univ He saw wide and varied sea duty and was promoted captain in 1844 In 1857, as commander (1855–58) of the home squadron off Nicaragua, he arrested William Walker, the American filibuster, for this act he was relieved by President Buchanan. Although retired in Dec, 1861, with promotion to rear admiral in July, 1862, Paulding was active throughout the Civil War He approved the design of the *Monitor* and was influential in hastening its construction, and as commandant at the New York navy yard he aided in quelling the DRAFT RIOTS of 1863 After the war he was governor of the U S Naval Asylum at Philadelphia (1866–69) and port admiral at Boston (1869–70) His *Journal of a Cruise of the United States Schooner Dolphin* (1831) is an account of the pursuit of mutineers in the Pacific, *Bolivar in His Camp* (1834) describes a horseback trip of 1,500 mi in the Andes, when he carried dispatches from Admiral Isaac Hull to Gen Simon Bolívar. See biography by R P Meade (1910)

Paulding, James Kirke, 1779–1860, American author and public official, Secretary of the Navy under Van Buren, b near Millbrook, N Y He collaborated with Washington Irving and William Irving in producing the periodical *Salmagundi* In addition, he wrote a number of humorous satirical works, including *John Bull in America* (1825), some 70 tales and several novels, of which the most successful were *Koningsmarke* (1823) and *The Dutchman's Fireside* (1831), and a popular life of George Washington See biographies by his son, William Paulding (1867), and A L Herold (1926)

Paulding, village (pop 2,044), co. seat of Paulding co, NW Ohio, N of Van Wert, in a region producing sugar beets and oats.

Pauli, Wolfgang (vôlf'gäng pou'lē), 1900–, Austrian physicist He was awarded the 1945 Nobel Prize in Physics for his enunciation (1925) of the exclusion principle, according to which no two electrons in an atom may be in the same quantum state. He has made other important contributions in nuclear

physics and in allied fields Pauli taught (1923–28) at the Univ of Hamburg and became professor at the Federal Institute of Technology, Zurich, in 1928, he was visiting professor (1935–36, 1940–46) at the Institute for Advanced Study at Princeton. He wrote *Meson Theory of Nuclear Forces* (1947; 2d ed , 1948)

Paulicians (pôlĭ'shŭnz), Christian heretical sect The group presumably arose before the 3d cent A D and flourished in E Asia Minor, especially in Armenia, after c 650 Scholars dispute the origin of their religion, of which little is definitely known Their teachings seem to reflect the doctrines of Manichaeism, or of Marcion, or of Paul of Samosata, they called themselves Paulicians after either St Paul the Apostle or Paul of Samosata It is known that they were probably dualistic and that they rejected sacraments, images, the Cross, and much of the Bible Some consider them a survival of early Christianity They spread extensively in Armenia and were persecuted by the Byzantine emperors and the Orthodox Eastern Church With rare exceptions, the iconoclasts regarded them with favor In the 9th cent the Paulicians were a cohesive military and political power, they were defeated in battle by Basil I In the 8th and the 10th cent Paulicians were transferred to Thrace by the thousands to serve as a bulwark against the barbarians Remnants survive, in spite of numerous persecutions From 868, Paulicians proselytized in Bulgaria, where they combined with the BOGOMILS See Steven Runciman, *The Medieval Manichee* (1947)

Paulinus, Saint (pôlī'nŭs), d 644, Italian missionary, first archbishop of York (625–33) He was a Roman monk who went to England with the mission of St AUGUSTINE OF CANTERBURY in 601 For some years he worked in Kent, then went as archbishop to Northumbria Paulinus succeeded temporarily in converting Northumbria and Lindsey, he was forced to flee to Rochester when paganism returned with King Penda after King Edwin's death

Paulinus (pôlī'nŭs) or **Suetonius Paulinus** (Caius Suetonius Paulinus) (swētō'nēŭs), d after A D 69, Roman general Under Claudius I he was stationed (A D 42) in Mauretania, and he advanced inland as far as Mt Atlas In A D 59 he had the command in Britain While on a campaign to reduce the stronghold of Mona (Anglesey), in A D 61, he was recalled to S Britain by the rising of BOADICEA, who defeated Petilius Cerialis and the ninth legion and took Verulamium (St Albans) and Londinium (London) He suppressed the revolt After Nero's death he led the troops of OTHO against VITELLIUS, but the victorious Vitellius pardoned him (A D 69)

Paulist Fathers, American society of Roman Catholic priests, officially named the Society of Missionary Priests of St Paul the Apostle It was founded (1858) by Isaac HECKER, who had the idea of a group of priests who would work for the conversion of Americans in ways appropriate to the U S scene The community has remained very small, and, besides preaching, its activities are all specialized Thus the Paulists do printing, mainly of pamphlets, they have founded radio programs, and they have built an excellent choir Their monthly, the *Catholic World*, long edited by Father Hecker, was one of the earliest U S efforts by Roman Catholics at serious literary journalism The headquarters is in the Church of St Paul the Apostle, New York city See J M Gillis, *The Paulists* (1932)

Paul Knutson (nōōt'sŭn, kunōōt'sŭn), fl 1354–64, Norse leader, alleged to have explored America In 1354 King Magnus of Norway directed Paul Knutson, one of the leading men of Norway, to assemble and conduct an expedition to insure the continuance of Christianity in Greenland, reports having been received of the defection of settlers there The expedition is believed to have sailed from Norway in 1355, the date of its return, though not actually known, is usually set at 1363 or 1364 Nothing is known of the expedition, but those who believe Paul Knutson explored America consider that it was necessary for him to go to the Western Settlements (Vinland) to find the apostates This theory maintains that the KENSINGTON RUNE STONE was a product of his expedition and that he settled in Vinland and spent a number of years exploring the coast Scholars are not in accord as to the authenticity of the stone or of the speculated exploration See *Westward from Vinland* (1940) and *America, 1355–1364* (1946), by Hjalmar R Holand, chief exponent of the theory

Paulina (pôlī'nŭ), town (pop 1,230), NW Iowa, NE of Sioux City, inc 1883

Paullus, Aemilius (Lucius Aemilius Paullus Macedonicus) (ĕmĭl'ēŭs), c 229–160 B C , Roman general His father was the consul L Aemilius Paullus, who fell at Cannae (216 B C) The son was curule aedile (192 B C), praetor (191 B.C.), and consul (182 B C). In his consulship he conquered the Ingauni, a Ligurian people The Macedonian war of Rome and King Perseus had dragged on since 171 B C , when Paullus, in response to the general demand, accepted a second consulship (160 B C) to fight in Macedonia. He captured the king near Pydna and set up the country as a Roman dominion. He also sacked Epirus His name is sometimes spelled Paulus Plutarch wrote his life

Paul of Aegina (ējī'nŭ), 7th cent ?, Greek physician His only extant work is a medical history in seven books, it was translated into English, with a commentary by Francis Adams (3 vols., 1844–47). The sixth book, a treatise on surgery, influenced surgery in Europe and in Arabia

Paul of Samosata (sumō'sutu), fl 260–72, Syrian theologian, heretical patriarch of Antioch He was a friend and high official of ZENOBIA of Palmyra Paul enounced a dynamic MONARCHIANISM, denying the three Persons of the Trinity He taught that the Logos came to dwell in Jesus at baptism but that Jesus possessed no extraordinary nature above other men, while the Logos is merely an attribute of God Paul was repeatedly challenged and finally excommunicated (269), but he continued to function as bishop under Zenobia's protection until the Romans took Palmyra (272) His influence on Arius and Nestorius was considerable, but his supposed connection with the PAULICIANS is disputed

Paul of the Cross, Saint, 1694–1775, Italian religious, founder of the Passionists (Congregation of the Barefooted Clerks of the Most Holy Cross and Passion of Our Lord Jesus Christ) His original name was Paolo Francesco Danei He had visions calling him to found a new order, and for it he received papal permission in 1725 He was ordained in 1727 His order, intended to revive Christian life by emphasis on the Passion, is vigorous and widespread Feast April 28

Paulsboro, borough (pop 7,011), SW N J , near the Delaware below Camden, settled 1681, inc 1904 It was fortified in the Revolution It has oil refineries and chemical manufacturing

Paulsen, Friedrich (frē'drĭkh poul'sun), 1846–1908, German neo-Kantian philosopher and educator A professor at Berlin for many years, he is well known through his textbooks which have been translated into English and are widely used In general he accepted the philosophical position of Fechner His major works include *System of Ethics* (1889, Eng tr , 1899) and *Introduction to Philosophy* (1892, Eng tr , 1895) which clearly shows his affiliations with Fechner One of his educational works of great importance is known in English as *German Education, Past and Present* (1907) See his autobiography (tr and ed by Theodor Lorenz, 1938)

Pauls Valley, city (pop 5,104), co seat of Garvin co , S central Okla , on the Washita river and SE of Oklahoma City, settled c 1887 It is the center of a rich farm and orchard area producing peaches, alfalfa, cotton, broomcorn, sorghum, and pecans A state hospital for epileptics is near by

Paul the Deacon, c 725–799?, Lombard historian He received a good education, probably at Pavia, and he learned Latin well and some Greek He lived at Monte Cassino and at Charlemagne's court His first work was a continuation of the Roman history of Eutropius, taking the narrative down to Justinian He also wrote a history of the diocese of Metz, a source for the early family of Charlemagne Paul's chief work is a history of the Lombards, drawn from sources now lost, covering the last half of the 6th, the 7th, and the first half of the 8th cent It is one of the oldest histories of a Germanic nation by a German He also wrote homilies, poems, and a commentary on the Benedictine rule He is frequently called by his Latin name, Paulus Diaconus

Paulus (Julius Paulus) (pô'lŭs), fl c 200, Roman jurist He was extremely prolific, supposedly having written some 300 books His surviving work displays keen analysis of the opinions of other jurists and trenchant expression of his own views Paulus was held in great respect, almost one sixth of the Digest of the CORPUS JURIS CIVILIS consists of his work, and he was one of the five jurists whose opinions were made authoritative in 426 by a constitution of Theodosius II and Valentinian (see PAPINIAN)

Paulus, Aemilius. see PAULLUS, AEMILIUS

Paulus, Friedrich von (frē'drĭkh fŭn pou'lōōs), 1890?–, German field marshal He commanded the German 6th Army at STALINGRAD and was raised to marshal's rank several hours before his surrender (Jan , 1943) to the Russians In captivity he became the nominal head of the League of German Officers, directed against the Hitler regime in Germany, and for the Russian-sponsored Free German Committee he issued appeals to the Germans to surrender

Paulus Diaconus: see PAUL THE DEACON.

Paulus Hook, N J see JERSEY CITY

Paumotu. see TUAMOTU ISLANDS

Pauncefote of Preston, Julian Pauncefote, 1st Baron (pôns'fōōt), 1828–1902, British statesman and ambassador to the United States As secretary to the colonial secretary, Sir William Molesworth, and as attorney general of Hong Kong, he won a reputation which brought him (1874) the post of attorney general in the Leeward Islands and later other important offices, including the permanent undersecretaryship for foreign affairs in 1882 He served on the Suez Canal commission in 1885 As minister (ambassador after 1893) to Washington from 1889 until his death, Pauncefote dealt successfully with the problems concerning seal fishing in the Bering Sea, the Venezuela Boundary Dispute, and the Panama Canal question, which was readjusted by the HAY-PAUNCEFOTE TREATY of 1901 He preserved friendly relations between Great Britain and the United States during the Spanish-American War and in 1899, as senior British delegate to the First Hague Conference, was a leading figure in the formation of a permanent tribunal of arbitration See biography by R B Mowat (1929)

pauperism see POOR LAW

Pausanias (pôsā'nēŭs), d c 470 B C , Spartan general, nephew of King Leonidas He was the victorious commander at Plataea (479 B C) in the Persian Wars and followed up the battle with expeditions to Cyprus and Byzantium From Byzantium he was called home to face a very circumstantial charge of treating with Persia, he was acquitted (c 475 B C) The accusation was repeated several years later, and he was acquitted again, only to be accused (this time probably justly) of planning a coup at Sparta, in collaboration with the exiled Themistocles To escape arrest he took sanctuary in a temple and was starved to death. Themistocles, denounced to Athens by Sparta, was condemned *in absentia*, this was the occasion of Themistocles' finally leaving Greece for Persia

Pausanias, fl A D 174, traveler and geographer, probably b Lydia His *Description of Greece* is a valuable source on the topography, monuments, and legends of ancient Greece It was translated into English by J G Frazer (with a commentary, 6 vols , 1898, rev ed , 1913) and by W H S Jones (5 vols , 1918–35)

Pausias (pô'shēŭs), fl 1st half of 4th cent B C , Greek painter He was celebrated for his decorative paintings, particularly in encaustic, a method which he is said to have been the first to employ in the adornment of walls and ceilings Two of his most famous works were a portrait of Glycera, a flower girl of Sicyon, and *A Sacrifice* (preserved in the portico of Pompey's temple in Rome), containing an admirably foreshortened and modeled figure of a black bull Pliny said that he painted many miniatures of children and other small works

pavement, the wearing surface of a road, street, or sidewalk Parts of Babylon and Rome are believed to have been paved, and the streets of Pompeii were covered with lava blocks, ROMAN ROADS were noted for their durable stone paving Cobblestones were commonly used from late medieval times into the 19th cent Earth and gravel roads are often treated with tar or oils to prevent dust, true paving surfaces include concrete, penetration macadam and bituminous-mixed macadam, sheet asphalt, bituminous concrete, and brick, wood, or stone-block pavements Desirable qualities in pavements include durability, smoothness, quietness, ease of cleaning, and a nonslippery surface The subgrade must be cut and shaped to suit the thickness and form of paving and rolled to insure equal compression Formerly a foundation of sand-covered earth was considered adequate, today a concrete road slab is commonly used as a foundation for a sheet or block wearing surface The foundation, like the surface, must be crowned for rapid shedding of water or, in the case of walks, sloped toward the gutter Concrete foundations and surfaces must be provided with expansion joints The concrete is often reinforced with steel mesh or steel bars The first concrete pavement in the United States was laid in Bellefontaine, Ohio, in 1894, after 1900 the use of concrete increased enormously, mainly owing to the heavy demands of motor traffic A bituminous macadam pavement made by the penetration method consists of a macadam road on which is poured a bituminous material which penetrates at least 2 in and forms an impervious binder For a bituminous-mixed macadam pavement, a heated mixture of stones or crushed rock and bituminous binder is spread on a macadam surface and rolled into a compact mass A sheet asphalt pavement is built in three courses, a foundation course, a binder course, and a wearing course In a first-class road the foundation is of cement concrete The binder course, whose function is to prevent creepage of the upper course, is composed of broken stone and asphalt cement The wearing surface is a mixture of fine sand, filler, and asphalt cement Each course is applied hot and is then thoroughly rolled A bituminous concrete pavement consists of a mixture of graded stone and sand, filler, and a binder of asphalt cement In a brick pavement an inch-thick bedding of sand, cement mortar, or mastic is laid between bricks and foundation The bricks must be rolled and the joints filled with a cement grout or a bituminous filler For a monolithic brick pavement, the brick is laid directly on a freshly poured concrete base and rolled before the concrete has set Wood blocks were popular in the 19th cent, At first round or hexagonal blocks were laid closely together These were superseded by rectangular blocks, preferably of long-leaf yellow pine treated with a preservative and laid with the grain vertical, joints are closed with a hot bituminous filler Stone-block pavement, an ancient type, is adapted to locations subject to heavy wear. Both stone and

wood pavements tend to be slippery when wet. See T R Agg, *The Construction of Roads and Pavements* (5th ed., 1940). For ornamental pavements, see MOSAIC and TILE

Pavia (pävē'ä), city (pop 40,208), capital of Pavia prov, Lombardy, N Italy, on the Ticino near its confluence with the Po Called Ticinum by the Romans, it was later the capital of the Lombard and the Carolingian kings In the 12th cent Pavia became a free commune, loyal, however, to the emperor It was the last Lombard city to fall under the sway of the VISCONTI (1359), who built the castle and started the construction of the CERTOSA DI PAVIA. It suffered heavily during the Italian Wars, and near here in 1525 Emperor Charles V defeated and captured Francis I of France Successively under Spanish, French, and Austrian domination, it was liberated in 1859 The old and celebrated law school, founded in the 11th cent, became (1361) a university with several faculties, still one of the best in Italy The Church of San Michele (12th cent) is a good example of Lombard Romanesque architecture The medieval covered bridge on the Ticino was heavily damaged in an air raid in 1944

Pavlov, Ivan Petrovich (ēvän' pētrô'vĭch päv'lŭf), 1849–1936, Russian physiologist and experimental psychologist He was professor at the military medical academy and director of the physiology department at the Institute for Experimental Medicine, Leningrad, from 1890 He received the 1904 Nobel Prize in Physiology and Medicine for his work on the digestive glands He is known especially for his studies of conditioned reflexes In 1935 the government built a laboratory for him His chief work was *Conditioned Reflexes* (1926, Eng tr, 1927) See I P Frolov, *Pavlov and His School* (Eng tr, 1937), biography by B P Babkin (1949).

Pavlova, Anna Matveyevna (päv'lô'vu, Rus ən'nŭ mŭtvyā'ĭvnŭ päv'lŭvŭ), 1882–1931, Russian ballet dancer In 1892 she entered the Imperial Ballet School, St Petersburg, where her teachers included Christian Johannsen and Nicholas Legat She made her debut in 1899 at the Mariinsky Theater, but it was only after tours to Scandinavia (1906) and to Leipzig, Prague, and Vienna (1908) that she gained fame At Paris in 1910 she danced with Nijinsky in Diaghilev's Russian Ballet, and at the Metropolitan Opera House, New York, she made her American debut (1910) with Mordkin She played a leading role in the motion picture *The Dumb Girl of Portici* (1916) Pavlova excelled in *Giselle, Autumn Bacchanal, The Dragon Fly,* and especially *The Dying Swan,* composed for her by Michel FOKINE from the music of Saint-Saëns Her perfect classical technique and her ethereal quality brought her universal acclaim See biographies by Walford Hyden (1931), Victor Dandré (1932), and C W Beaumont (1932), André Oliviéroff, *The Flight of the Swan* (1932), *Pavlova* (ed by P D Magriel, 1947)

Pavlovsk (pəv'lôfsk), city (1939 pop over 10,000), RSFSR, near Leningrad, just SE of Pushkin (the former Tsarskoye Selo). It was formerly a summer residence of the St Petersburg nobility and has fine English gardens, villas, and mansions It was held (1941–44) by the Germans in the Second World War

Pawhuska (pôhŭ'skŭ), city (pop 5,443), co seat of Osage co, NE Okla, NW of Tulsa, in an agricultural and stock-raising area, settled 1872, inc 1906 It is the Osage Indian capital and the site of a tribal museum

Pawlet (pô'lĭt), rural town (pop 1,192), SW Vt, at the N Y line NW of Dorset Settled in the 1760s, it grew as a trading and milling center

Pawling, village (pop 1,446), E N Y, SE of Poughkeepsie, in hilly country, settled c 1740 by Quakers, inc 1893. Leather bags are made here The Trinity-Pawling School for boys is here

pawnbroker, one who makes loans on personal effects which are left as security The practice of pawnbroking is ancient, as is recognition of the danger it involves of oppressing the poor, who are given some protection in Ex 22 26,27 and Deut 24 6,12,13,17 In the Middle Ages, Christians generally would not lend at interest, and pawnbroking was left largely to Jews Lombards engaged in it extensively, however, and in London the financial center is still Lombard St The three gold balls that are the pawnbroker's sign are traced to the arms of the Medici Wrongs to the poor are prevented in some European nations by pawnshops under religious, charitable, or municipal auspices Such a pawnshop is known as *mons pietatis* or *mont-de-piété* In England and in American states pawnbroking is regulated by law In New York city the Provident Loan Society was organized in 1891 by the Charity Organization Society, it conducts a large pawnbroking business and charges interest at relatively low rates

Pawnee (pônē'). **1** Village (pop 1,000), central Ill, S of Springfield, in a farm area, inc 1891 **2** City (pop 2,742), co. seat of Pawnee co, N central Okla, near the Arkansas river and NW of Tulsa, founded c 1893 on the site of a trading post and Indian agency. The home and museum of Pawnee Bill (Gordon W. Lillie), one of the wild West heroes, is here

Pawnee City, city (pop 1,647), co. seat of Pawnee co, SE Nebr., near the Kansas line SE of Lincoln, inc 1858

Pawnee Indians or **Pani Indians** (both pôn'ē'), tribe of North American Indians of the Caddoan linguistic stock At one time the Pawnee lived in what is now Texas, but by 1541, when Coronado visited Quivira, they seem to have been settled in the valley of the Platte river in S Nebraska In the early 18th cent the Pawnee were divided into four bands—the Skidi or Wolf, the Grand, the Republican, and the Tapage (or Noisy) They then numbered some 10,000. By the time French traders settled (c 1750) among them, the Pawnee had extended their territory to the Republican river in N Kansas and the Niobrara river in N Nebraska In 1806 Facundo Malgares with Spanish soldiers visited the Pawnee just before they were visited by the expedition of Zebulon M Pike The Pawnee were a warlike tribe hostile to the Sioux and the Cheyenne but friendly towards the Oto They were fierce fighters, but they never warred against the United States, even when badly treated by the government The Pawnee even provided scouts for the U S army in the Indian wars and a "Pawnee battalion" to protect the Union Pacific RR from the depredations of other Indians The Pawnee entered into treaty relations with the Americans early in the 19th cent and from that time until 1876, when they moved to a reservation in Oklahoma, the Pawnee steadily lost their lands Pawnee population was reduced by wars with the Sioux and the Wichita and the smallpox and cholera epidemics of the 1840s—they now number some 1,100 In material culture the Pawnee resembled other "village" Indians of the Plains area but they had a genius for ritualism and mythology Their supreme god was Tirawa (the sun) who with Mother Earth conceived Morning Star Morning Star is an example of the rising and dying god of vegetation The Pawnee sacrificed a captive maiden to Morning Star This custom was one of the few examples of human sacrifice N of Mexico This practice, however, was ended by the great Pawnee chief Petalasharo (b c 1797) See George A Dorsey, *The Pawnee Mythology* (1906), Ralph Linton, *Sacrifice to the Morning Star by the Skidi Pawnee* (1922), Waldo R Wedel, *Introduction to Pawnee Archeology* (1936)

Paw Paw, village (pop 1,910), co seat of Van Buren co, SW Mich, on the Paw Paw river and SW of Kalamazoo, settled 1832, inc 1859 It is in a fruitgrowing and resort region and has an annual grape festival Indian earthworks are hereabout

pawpaw see PAPAW TREE

Pawtucket (pətŭ'kĭt), industrial city (pop 75,797), NE R I, on the Blackstone river at Pawtucket Falls The area was deeded to Roger Williams in 1638 The part east of the river was included in Massachusetts until 1862, when Pawtucket was organized as a Rhode Island town, the city was chartered in 1885 Samuel Slater built the first successful water-power cotton mill in the country here in 1790, the 1793 Slater mill is now a museum Textile manufacture remains the most important industry, electrical equipment is also produced The city has a new post-office and Federal building (1933) and a city hall (1936) Narragansett race track is in Pawtucket and East Providence There were serious strikes in the city in 1922 and 1934

Pax (päks), in Roman religion, goddess of Peace Vespasian erected a temple to her at Rome. Her attributes were similar to those of the Greek Irene, the olive branch and the horn of plenty

Paxo (pak'sō, päk'sō), **Paxos** (päksŏs', päk'sŭs), or **Paxoi** (päksē'), island (7 sq mi, pop 3,050), off W Greece, in the Ionian Sea, one of the IONIAN ISLANDS, S of Corfu It has important olive groves

Paxtang (päk'stăng"), borough (pop 1,707), SE Pa, near Harrisburg The uprising of the Paxtang (Paxton) Boys against the Indians took place here in 1763

Paxton, Sir Joseph, 1801–65, English architect and horticulturist After a successful career as gardener and estate manager, he erected in 1836 a great conservatory for the duke of Devonshire at Chatsworth, Derbyshire, which led to his commission to design a similar but larger glass and iron structure, known as the CRYSTAL PALACE, for the Great Exhibition of 1851 at London Paxton was knighted for this work

Paxton, city (pop 3,106), co seat of Ford co., E Ill, E of Bloomington, in a farm area, settled in the 1850s by Swedes, inc. 1865 Clothing and canning factories are here

Payette (pāĕt'), city (pop 3,322), co seat of Payette co., W Idaho, near the junction of the Payette and Snake rivers and near the Oregon line, settled 1883, inc 1901. It is a trade center for a farm, dairy, poultry, and fruitgrowing area The city serves the BOISE PROJECT and the project at VALE, Oregon.

Payette, river rising in several forks in the mountains of W Idaho and flowing south, southwest, and northwest to join the Snake near Payette. The water is used for the BOISE PROJECT.

Payne, John Howard (pān), 1791–1852, American actor and playwright, b New York city. He is best known for his song *Home, Sweet Home,* which he included in his opera *Clari, the Maid of Milan* (London, 1823). The air was adapted by Henry R Bishop from an Italian song Payne wrote a number of plays successful in England and the United States, in some of which he acted They were largely adaptations and translations, the most successful of which was *Brutus* (1818) After living abroad for many years, Payne returned to the United States in 1832 He was appointed (1842) American consul at Tunis, where he died. His home at East Hampton, L I., N Y, is preserved See biography by Gabriel Harrison (rev ed, 1885)

Payne, Peter, c 1380–1455, English Hussite. He espoused Wyclifite views while studying at Oxford and was forced to leave He went to Prague (c 1416) and became a member of the extreme party of Hussites At the Council of Basel he was (1433) one of their spokesmen, and one of the most unyielding. In the Hussite Wars that followed he joined the Taborites He left Prague in 1437, but was imprisoned in 1439 Ransomed, he is said to have been in Tabor when the fortress was captured

Payne, Sereno Elisha (surē'nō), 1843–1914, American legislator, b Hamilton, N Y, grad. Univ. of Rochester, 1864. He was admitted to the bar (1866), practiced at Auburn, N Y, and was active in Republican politics He served (1883–87, 1889–1914) in Congress and was long a member of the Committee on Ways and Means, becoming chairman in 1899 Payne, a staunch though not extreme protectionist, was active in fostering Republican tariff legislation He helped draft the McKinley Tariff Act (1890), the Dingley Act (1897), and the PAYNE-ALDRICH TARIFF ACT (1909)

Payne, village (pop 1,003), NW Ohio, near the Ind line NW of Van Wert

Payne-Aldrich Tariff Act, 1909, passed by the U S Congress There had been no change in tariff laws since the Dingley Act of 1897, the issue was ignored by President Theodore Roosevelt The Republican platform of 1908 pledged tariff revision, and to this end President W H Taft called (1909) Congress in special session The House promptly passed a tariff bill, sponsored by Sereno E PAYNE, which called for reduced rates, the Senate substituted a bill, fathered by Nelson W ALDRICH, which made fewer downward revisions After a sustained attack on the Aldrich Bill by a group of insurgent Republicans in the Senate, the more moderate provisions of the House bill were passed by compromise, and the act was immediately signed by Taft The Payne-Aldrich Tariff Act—which lowered 650 tariff schedules, raised 220, and left 1,150 unchanged—was less aggressively protectionist than the McKinley Tariff Act (1890) and the later Dingley Act and adopted the principle of maximum and minimum tariffs for compelling concessions from other countries

Paynesville, village (pop 1,317), central Minn, near Lake Koronis or Cedar Lake SW of St Cloud, inc 1887 Dairy products are made here In Aug, 1862, it was stockaded after attacks by the Sioux

Paysandú (pīsändōō'), city (1941 estimated pop 46,000), capital of Paysandú dept, W Uruguay, a port on the Uruguay river Founded in 1772, it is in a rich stock-raising and farming district and has meat-packing plants Soaps and shoes are also made The modern, attractive city is at the head of ocean navigation, it exports meat products

Payson, city (pop 3,591), N central Utah, near Utah Lake S of Provo, settled 1850 by Mormons, inc. 1865. Long irrigated, the lands here are included in the STRAWBERRY VALLEY PROJECT

Pazardzhik (päzärjĭk'), city (pop 30,430), central Bulgaria, on the Maritsa. It is an agricultural center

Pazmany, Peter, Hung *Pázmány* (päz'mänyô), 1570–1637, Hungarian churchman, cardinal of the Roman Church. Of a Calvinist family, he was converted to Catholicism in 1583, entered the Society of Jesus in 1587, and rose to become cardinal and prince primate of Hungary When he began his career, Hungary had largely accepted the Reformation Pazmany, without using coercion, succeeded in winning back to the Roman Church a major proportion of the Hungarian people To this end he founded seminaries, schools, and monasteries, notably that of Nagyszombat, transferred in the 18th cent. to BUDAPEST A powerful orator and an able diplomat, Pazmany also was the author of many literary works, both in Latin and in Hungarian He translated the *Imitation of Christ* (1604)

Paz Soldan, Mariano Felipe (märyä'nō fālē'pā päs' sōl'dän), 1821–86, Peruvian historian. He visited the United States, where he made a study of the prison system, and returned to Peru to advocate prison reform. The result was a model penitentiary in Lima, of which he was named director He was in 1860 appointed director of public works, and at different times he served as minister of foreign relations and of justice. During the War of the Pacific he was exiled in Buenos Aires. He wrote on geography, and his histories include *Historia de la Guerra del Pacífico* (1884) and *Historia del Perú independiente, 1822–1827* (1868–74).

Pazzi conspiracy (pät'tsē), 1478, plot against Lorenzo de' Medici (Lorenzo il Magnifico) and his brother Giuliano, designed to end the hegemony of the Medici family over the Florentine state It was instigated by Pope Sixtus IV, his nephew Girolamo Riario, Archbishop Salviati, and members of the Pazzi family, a wealthy Florentine family who rivaled the Medici. Actually, the Pazzi were tools in the conspiracy, which aimed not only at the death of the Medici, but at the elevation of Riario to power in Florence The details of the plot were worked out by Salviati and the Pazzi, while Riario and the pope remained in Rome On April 26, during High Mass at the cathedral, Giuliano de' Medici was stabbed to death, while Lorenzo escaped with a wound The enraged Florentines seized and killed the conspirators, and the Medici remained firmly entrenched in power

Pb [Latin=*plumbum*], chemical symbol of the element LEAD

Pd, chemical symbol of the element PALLADIUM

pea, hardy, annual, climbing leguminous plant (*Pisum sativum*), used for food by man at least since the time of the lake dwellers It is cultivated everywhere in home gardens and on a large scale commercially for canning The round seed, borne in a pod, is a highly nutritious food, having a large protein content The pod, too, of the varieties known as sugar peas can be eaten, and the whole plant is grown for forage, the vines of garden varieties are also used for feeding stock The garden peas are divided into two groups—those having smooth seeds, which are the hardier and earlier, and those with wrinkled seeds, generally having a better flavor They can be planted very early In New England many gardeners plant them on April 19, the anniversary of the battle of Lexington—hoping to have their first peas by the Fourth of July, when according to traditional use they accompany salmon on the menu Split peas are obtained from the field pea (*Pisum arvense*), grown also for forage and as a green manure The CHICK-PEA and the SWEET PEA belong to different genera

Peabody, Andrew Preston, 1811–93, American Unitarian clergyman and theologian, b Beverly, Mass After a pastorate of nearly 30 years in Portsmouth, N H , he was professor of Christian morals and college preacher at Harvard Univ from 1860 to 1881 From 1853 to 1863 he was editor of the *North American Review*

Peabody, Elizabeth Palmer, 1804–94, American educator, lecturer, and reformer, b Billerica, Mass The family moved (c 1809) to Salem, where the father began practicing dentistry Of the three Peabody sisters, the second, Mary, married Horace Mann, and the youngest, Sophia, married Nathaniel Hawthorne Elizabeth, after a period as governess in Hallowell, Maine, with her sister Mary established a school for girls in what is now Brookline Although she was an inspired teacher, she was a poor businesswoman, and her ventures were short-lived After giving up this school she wrote a series of history textbooks and became a successful lecturer on history She assisted Bronson Alcott in his Temple School and wrote up his educational theories in *Record of a School* (1835) Her path crossed those of most of the great New Englanders of her day—Emerson, William Ellery Channing, and many others The bookshop she opened in Boston in 1840 was a literary center Margaret Fuller held her conversation classes there, and Elizabeth soon found herself a publisher as well as a bookseller, the transcendental magazine, the *Dial*, pamphlets of the Anti-Slavery Society and several of Hawthorne's early works were published by her Of a projected periodical, *Aesthetic Papers*, only one number appeared, in 1849 After closing her bookshop she traveled about, lecturing and selling historical charts An ardent abolitionist, Elizabeth in 1859 went to Richmond to plead unsuccessfully with the governor of Virginia for the life of one of John Brown's aids at Harpers Ferry In 1861 she opened in Boston one of the first kindergartens in the country With her sister Mary she wrote *Moral Culture of Infancy and Kindergarten Guide* (1866) She studied Froebel's methods in Germany in 1867–68, and on her return she established a Froebel Union and opened the first kindergarten training school in the country From then on kindergarten training was the cause which took her traveling about the country After her death a settlement, Elizabeth Peabody House, was established as a memorial See L H Tharp, *The Peabody Sisters of Salem* (1950)

Peabody, Endicott, 1857–1944, American educator, b Salem, Mass , grad Cheltenham College, 1876, LL B Cambridge Univ , 1880 Ordained (1885) in the Protestant Episcopal Church, Peabody had founded in 1884 the Groton School, Groton, Mass , modeled on the English public schools He was its headmaster until he retired in 1940

Peabody, Francis Greenwood, 1847–1936, American Unitarian theologian, b Boston, grad. Harvard (B A , 1869, M A , 1872) and Yale (D D , 1887) He was pastor from 1874 to 1880 of the First Parish Church, Cambridge, Mass At Harvard he was professor of theology (1881–86) and professor of Christian morals (1886–1913). His numerous books include *Jesus and the Social Question* (1900), *The Approach to the Social Question* (1909), *The Social Teaching of Jesus Christ* (1924), and *The Privileges of Old Age* (1931)

Peabody, George, 1795–1869, American financier and philanthropist, b South Danvers (now Peabody), Mass At the age of 11 he was apprenticed to a grocer, and by 1814 he was managing a dry-goods firm in Georgetown, D C He became a partner in this firm, which moved to Baltimore, and he established branches in New York and in Philadelphia While on a business trip to London in 1835 he negotiated a large British loan which helped save the finances of the state of Maryland, but he refused a commission for his services Peabody settled (1837) permanently in London, there he set up a brokerage business which became increasingly prosperous He took Junius Spencer Morgan as a partner in 1854 He used his influence to better Anglo-American relations and financed the exhibition of American products at the Crystal Palace exhibition Prominent among Peabody's philanthropies were large funds given for tenement clearance in London and the Peabody Education Fund of more than $2,000,000 to promote education in the South (partly used for the George Peabody College for Teachers, in Nashville, Tenn) He also contributed to museums, universities, and libraries throughout the United States and endowed the archaeological museum of Harvard and the museum of physical sciences at Yale

Peabody, George Foster, 1853–1938, American banker and philanthropist, b Columbus, Ga Successful early in life as a banker and organizer of railroads and utility companies, he retired (1906) from business to devote himself to philanthropy and public service He became a trustee of many colleges and universities in the United States and fought for the furtherance of education for Negroes As chairman (1910–15) of the New York state reservation commission, he helped reclaim the mineral springs at Saratoga Peabody, the treasurer of the Democratic National Committee (1904–5), was an intimate friend of Woodrow Wilson, Alfred E Smith, and Franklin Roosevelt

Peabody, Josephine Preston, 1874–1922, American poet and dramatist, b New York city, studied at Radcliffe (1894–96) An instructor at Wellesley, she married (1906) Professor L S Marks of Harvard Her poems were popular in magazines and in book publication Encouraged by her teacher, William Vaughn Moody, she finished a play about Shakspere, *Fortune and Men's Eyes* (1900), and a blank-verse tragedy, *Marlowe* (1901) *The Piper* (1910) won the Stratford prize competition in 1910 and was produced in England and America Later plays include *The Wolf of Gubbio* (1913) See her diary and letters (ed by C H Baker, 1925), *Collected Plays* (1927), and *Collected Poems* (1927)

Peabody 1 City (pop 1,367), central Kansas, NNE of Wichita, in a farming and livestock area, platted 1871, inc 1878 2 City (pop 21,711), NE Mass , adjoining W Salem Its great tanning industry dates from early in the 18th cent There are old houses

Peace, river formed in N British Columbia by the confluence of the Finlay and Parsnip rivers at Finlay Forks It flows E into Alberta, past the village of Peace River, then generally N to Fort Vermilion and ENE to the Great Slave river near Lake Athabaska, 1,054 mi from the head of the Finlay river The Peace was probably discovered by Peter Pond in his explorations (1775–88) in the region and was explored (1792–93) by Sir Alexander Mackenzie It became an important route of the fur traders The valley is fertile, and since settlement began in the early 20th cent , coal, salt, gypsum, and oil have been found The Peace river bridge built in 1943 on the Alaska Highway crosses the river near Fort St John, in British Columbia

peace congresses. Although philosophical and religious PACIFISM is almost as old as war itself, organized efforts to outlaw war date from the middle of the 19th cent The term "peace congress" is applied to the meeting of diplomats to end specific wars by treaties acceptable to all combatants, as well as to the internationalists convened to prevent future wars International efforts toward peace have in general followed five lines international ARBITRATION, a league of nations or an international authority; the codification of international law by a tribunal, such as the WORLD COURT or the INTERNATIONAL COURT OF JUSTICE; sanctions or international coercion of the nation judged to be in the wrong, and disarmament The first international peace congress was held in London in 1843 Proposals were made for a congress of nations and for international arbitration, military education was denounced, propaganda against war was urged, and the control of the manufacture and sale of munitions was advocated The second congress, known as the first Universal Peace Congress, met in Brussels in 1848, Elihu BURRITT was its leading spirit This congress stressed a general reduction in armaments and a congress of nations. The second Universal Peace Congress, meeting in Paris in 1849, was the most important in the series It followed Richard Cobden's motion in Parliament that the British government enter into negotiations with foreign governments for a system of arbitration Victor Hugo proposed a United States of Europe The third Universal Peace Congress met in Frankfurt in 1850 Disarmament was the principal matter of discussion The fourth Universal Peace Congress was held in London at the time of the Crystal Palace exhibition in 1851 International peace agitation was interrupted for many years, first by the Crimean War, then by the American Civil War. In 1867 an attempt by Charles Lemonnier to convene a peace congress in Paris was frustrated by the French government A meeting was held in Geneva, however, and the International League of Peace and Liberty was formed After the Franco-Prussian War (1870–71), internationalists renewed their efforts At a peace congress in Brussels in 1873, David Dudley Field's *Proposals for an International Code* formed the basis of discussion The important Paris Congress of 1878 devoted itself chiefly to matters of organization In the years before the next general peace congress, an Anglo-American arbitration treaty was discussed, and in the Western Hemisphere steps were taken which resulted in 1889 in the first Pan-American Conference (see PAN-AMERICANISM) In 1888 the Inter-Parliamentary Union was founded, and in 1889 its first conference was held in Paris In the same year a new Universal Peace Congress was organized This was to meet either just before or after the Inter-Parliamentary Union and in the same city The meeting at the World's Columbian Exposition in Chicago in 1893 discussed a plan for an International Court of Arbitration, which was finally (1899, by the first of the HAGUE CONFERENCES) established at The Hague Between 1899 and 1914 this court settled 14 cases The Second Hague Conference (1907) was concerned, like the first, with arbitration and disarmament A third was planned for 1916, but was not held All international peace organization was disrupted by the First World War In 1915, however, a congress of women met at The Hague under the chairmanship of Jane Addams and formed an international women's peace organization The two international bodies—one legislative, the other judicial—that evolved from the peace proposals of the 19th cent and from the Versailles Treaty were the LEAGUE OF NATIONS at Geneva and the World Court at The Hague After 1919 the chief international peace congresses were the annual meetings of the International Federation of League of Nations Societies, with its central office in Brussels, the Universal Peace Congresses, and meetings of the Inter-Parliamentary Union There were also held NAVAL CONFERENCES, at Washington (1921–22) and London (1930), the DISARMAMENT CONFERENCE, and other diplomatic meetings representing several nations, which resulted in the KELLOGG-BRIAND PACT and the LOCARNO PACT All these efforts went for nought, as the Second World War testifies The horrors of that conflict and particularly the dreaded atomic bomb intensified world-wide movements for peace once the war was over, with much hope and determination that the new UNITED NATIONS would succeed where the defunct League of Nations had failed in maintaining peace Some of the older international organizations, including the Inter-Parliamentary Union (which held a meeting in 1949), were revived A new group, the World Federalists, was organized; it holds that only a world government can avert catastrophic war and establish peace The Cultural and Scientific Congress for World Peace, meeting in New York city in March, 1949, which denounced the United States as an instigator of war and lauded Soviet Russia as the defender of peace, was branded by the U S Dept of State as a Communist sounding board A similar group met as the Continental Congress for Peace in Mexico city in Sept , 1949, one month after the USSR held an All-Union Peace Conference, which established a permanent peace committee to direct Soviet citizens in combating Anglo-American plans for an "imperialist war" At a congress held in Stockholm in March, 1950, the Communists, or the Partisans for Peace, as they in this aspect style themselves, initiated a world-wide campaign to secure petitions for peace, i e , peace according to Russian formula

peace pipe see CALUMET

peach, fruit tree (*Prunus persica* or *Amygdalus persica*), having decorative pink blossoms and a juicy, fine-flavored stone fruit with white, yellow, or orange-reddish flesh It is one of the most important of fresh fruits in the temperate climates Darwin thought it had been developed from the common almond, probably in China, where it has been in cultivation since c 2000 B C It is widely cultivated in the United States (e g , in California, Georgia, Michigan, Arkansas, North and South Carolina, Washington, Pennsylvania, and Texas) and in parts of Canada As many as 500 varieties are grown commercially, and over four times that number are known The Elberta variety is cultivated extensively for commercial purposes Purple-leaved and double-flowering forms are cultivated for ornament The peach tree is attacked by various diseases and

insect pests, a cause of the decline in peach raising in some parts of the country where they were formerly grown in considerable quantity In China, where the flower is much used in decoration, it is considered a symbol of longevity The NECTARINE is a smooth-skinned peach

Peacham, Henry, 1576?–1643?, English author. *The Gentleman's Exercise* (1607), a treatise on art, was many times reprinted, *The Compleat Gentleman* (1622) is his best-known work

Peach Tree Creek, see ATLANTA CAMPAIGN.

Peacock, Reginald see PECOCK, REGINALD

Peacock, Thomas Love, 1785–1866, English novelist and poet He was practically self-educated In 1812 he met Shelley, became one of the poet's most intimate friends, and later was his executor Peacock's best writings were novels which combine satire and extravagant romance and reveal their author's genial, vigorous, witty, and eccentric personality His best-known novels, interspersed with gay songs of high lyric quality, are *Headlong Hall* (1816), *Melincourt* (1817), *Nightmare Abbey* (1818), of which Shelley is the hero, *Maid Marian* (1822), *The Misfortunes of Elphin* (1829), *Crotchet Castle* (1831), and *Gryll Grange* (1860) In 1819 he was employed by the East India Company and was its chief examiner, 1836–56 See biographical introduction to his works (ed by H F B Brett-Smith and C E Jones, 10 vols , 1924–34)

peacock, large bird of the pheasant family, native to E Asia Strictly speaking, the male is the peacock, the female the peahen There are two species, both found in deep forests—the common peacock of India and Ceylon and the Burmese or Javan peacock native to Indo-China The white peacock is thought to be a mutation of the Indian species The crested male of the common peacock, which is often kept in captivity, has a magnificent green and gold erectile train, a modification of the tail coverts, adorned with eyelike blue-green spots This magnificence it displays before the duller plumaged, trainless hen during courtship The peacock is mentioned in the Bible and was known to the Pharaohs of Egypt and to 14th-century Europe It was sacred in some countries and feasted upon in others, and during the Middle Ages was served adorned with plumage

Peacock Throne, see DELHI

Peak, the, tableland, Derbyshire, England, forming the southern extremity of the Pennine Chain It is c 30 mi long and 22 mi wide and culminates in Kinderscout (2,088 ft) Its caves include Peak Cavern and Speedwell The village of Castleton is on the Peak

Peaks of Otter see OTTER, PEAKS OF

Peale, Charles Willson (pēl), 1741–1827, American portrait painter, b Queen Annes co , Md Apprenticed to a saddler in Annapolis, he became at 20 his own master and taught himself various other trades—watchmaking, silversmithing, upholstery, and sign painting He traded a saddle for lessons in painting from John Hesselius Forced into bankruptcy, he fled to Boston, where he worked for a short time in Copley's studio He returned to Annapolis to paint portraits of its wealthy citizens, some of whom sent (1766) him to study with Benjamin West in London Among the portraits of his Annapolis period were those of Mr and Mrs James Arbuckle He returned to America in 1772 and established himself in Philadelphia in 1776 The earliest known portrait of Washington (1772, Washington and Lee Univ) was painted by Peale Of the many he painted of Washington, seven were from life Peale served as a captain of volunteers in the Revolution, painting when he could portraits of the military leaders His group *Washington, Lafayette, and Tench Tilghman* hangs in the chamber of the house of delegates, Annapolis Among his Washington portraits others are in the Brooklyn Museum, New York, the Metropolitan Museum, Princeton Univ , and the National Gallery of Art, Washington, D C After Copley's departure for England, Peale was the most popular portrait painter in the country In 1779 he was elected to the Pennsylvania legislature and in 1802 opened Peale's Museum, consisting of natural history objects and portraits, which were chiefly by himself and his son Rembrandt, the museum was housed in Independence Hall, Philadelphia He was instrumental in founding (1805) the Pennsylvania Academy of the Fine Arts and contributed to its exhibitions for 17 years At the age of 81 he painted *Christ Healing the Sick,* and two years later the full-length self-portrait in the Pennsylvania Academy Among his sitters were Mrs Washington, of whom he painted two miniatures, Benjamin Franklin, Generals Greene, Rochambeau, and Gates and Baron de Kalb, Baron Steuben, Henry Clay, Thomas Jefferson, Robert Morris, and John Hancock Independence Hall has several excellent examples, the New York Historical Society has Alexander Hamilton, Mrs John de Peyster, and a *Family Group,* showing Peale and members of his family, and the Metropolitan Museum has portraits of Samuel Mifflin and of Mrs Mifflin and her granddaughter See biography by C C Sellers (2 vols , 1947) His brother, **James Peale,** 1749–1831, b Chestertown, Md , painted portraits, particularly miniatures, and landscapes A portrait of Washington by him is in the New York Historical Society and another in Independence Hall Of Charles Willson Peale's 11 children, all named after famous artists, three became painters—**Raphaelle Peale,** 1774–1825, still-life painter, b Annapolis, Md , **Titian Peale,** 1799–1885, animal painter, b Philadelphia, and **Rembrandt Peale,** 1778–1860, portrait and historical painter, b Bucks co , Pa Rembrandt Peale practiced for several years in Charleston, S C , became a pupil of Benjamin West in London, and in 1807 and again in 1809 visited Paris, where he painted many eminent Frenchmen In 1810 he settled in Philadelphia, devoting himself chiefly to portraiture He was one of the original members of the National Academy of Design and succeeded (1825) John Trumbull as president of the American Academy of Fine Arts He was also a clever lithographer, a lecturer on natural history, and the author of several books Chief among his paintings are the likeness of George Washington, painted in 1823 and purchased by Congress in 1832 (now in the Capitol, Washington, D C), an equestrian portrait of Washington (Independence Hall, Philadelphia), portraits of Washington and Lafayette (both Metropolitan Mus), of Gilbert Stuart, Thomas Jefferson, and Mrs Madison (all N Y Historical Society), and of Jean Antoine Houdon (Pa Acad of the Fine Arts), *Roman Daughter* (Mus of Fine Arts, Boston), and the large *Court of Death* (Detroit Inst of Art)

peanut, low, annual leguminous plant (*Arachis hypogaea*) and its edible seeds, commonly two to a pod When the pod starts to form, it is pushed into the ground by the elongation of its stalk and matures underground The seeds—peanuts—are eaten fresh or roasted and are used in cookery and confectionery From them is extracted an oil used for food, as a substitute for olive oil, and for other purposes A considerable amount of the oil is imported from the Old World, although large crops are grown annually in the S United States The seeds are ground for peanut butter, an important article of commerce Butter substitutes and peanut-oil cakes for livestock feed are other products George Washington CARVER developed several hundred uses for the peanut The herbage is used for hay, and the whole crop as pasturage for swine Native to South America and cultivated there by pre-Columbian Indians, the peanut was brought to North America by way of Africa (in the slave-trade days), where it is said to have been introduced by early explorers In the United States it has been extensively cultivated only since the late 19th cent , but it is now an important Southern crop It is not grown commercially N of Washington, D C , though it can be grown as far north as New York as a garden plant, few seeds will ripen There are two types, known as bunch nuts and as vine or trailing nuts, from the way the plant grows Other names for the peanut are goober, earthnut, groundnut, and ground pea

Peapack-Gladstone, borough (pop 1,354), N N J , SW of Morristown, settled before 1776, inc 1912

pear, fruit tree of the genus *Pyrus* (closely related to the apple) and its fruit, for which it has been cultivated at least since the time of the lake dwellers About 1,000 varieties are known in the United States, but in Europe, where the climate is better suited to pear cultivation, as many as 5,000 varieties are known The most commonly grown in the United States have been the Bartlett, Kieffer, and Seckel, but newer varieties such as Anjou, Comice, and Bosc are now also grown All the cultivated varieties come from two species, the common European pear (*Pyrus communis*) and the Oriental pear (*P pyrifolia*) A pear of really good quality was not developed until the 19th cent , when a Belgian chemist, Jean Baptiste Van Mons, began to hybridize the fruit and produced some good new forms The pear is grown for canning and drying as well as for eating in the fresh state Though pears are grown in considerable quantities in the E and central United States, the Pacific coast leads in production The most serious disease is pear or fire blight Various insect pests also attack the tree Pear trees sometimes reach a great age See H B. Tukey, *The Pear and Its Culture* (1928)

pear, prickly see PRICKLY PEAR

Pearce, Charles Sprague (pērs), 1851–1914, American figure and historical painter, b Boston, studied under Léon Bonnat in Paris Most of his life was spent in France, and his works are essentially French in subject, spirit, and technique His earliest works were historical, but later his favorite subjects were taken from the peasant life of Picardy He also painted portraits Well-known examples of his art are *The Beheading of John the Baptist* (Art Inst , Chicago), *Return of the Flock* (Bohemian Club, San Francisco), *Across the Common* (Albright Art Gall , Buffalo, N Y), *Fantaisie* (Pa Acad of the Fine Arts), *Meditation* (Metropolitan Mus), *Toilers of the Sea,* and mural decorations in the north hall of the Library of Congress

Pea Ridge, chain of hills, NW Ark , where the Civil War battle of Pea Ridge (or Elkhorn Tavern) was fought March 6–8, 1862 Van Dorn, leading a large Confederate command, which included Sterling Price's retreating Missouri forces and Ben McCulloch's army, attacked the strongly entrenched Union army under S R Curtis The Confederate wings, becoming separated, were crushed on successive days Not until Price's raid (1864) did the Confederates again try to carry the war to Missouri in force

Pearisburg (pâ'rĭsbûrg), town (pop. 987), SW Va , W of Roanoke and on the New River, in the Alleghenies, settled 1782 when Capt George Pearis established a ferry here, inc 1914 The courthouse of Giles co is here Pearisburg is a trade and processing center with a large rayon plant, opened in 1939

Pearl, Raymond, 1879–1940, American biologist, b Farmington, N H , grad Dartmouth (B A , 1899), Ph D Univ of Michigan, 1902 He studied abroad under Karl Pearson and others and was head of the biological department of the Maine agricultural experiment station (1907–18) From 1918 he was associated with Johns Hopkins He is known for his statistical studies on population growth, of mortality, birth rates, and longevity, and of human fertility Besides editing *Human Biology* and *Quarterly Review of Biology,* he wrote many books, including *Introduction to Medical Biometry and Statistics* (1923), *The Biology of Population Growth* (1925), *Alcohol and Longevity* (1926), *To Begin With* (1927), and *The Natural History of Population* (1939)

Pearl, river, China see CANTON, river

Pearl, river rising in E central Mississippi and flowing 485 mi SW and S to Lake Borgne, an inlet of the Gulf of Mexico For 116 mi it forms the boundary between Mississippi and Louisiana

Pearl, The, one of four anonymous medieval alliterative poems, all in the same handwriting, contained in an illustrated manuscript of the 14th or early 15th cent preserved in the British Museum They were written c 1370 90 in the West Midland dialect of Middle English *The Pearl* has been explained as an elegy for the poet's little daughter, in an allegorical vision of singular beauty he sees her a maiden in paradise and becomes reconciled to her death The second poem, *Patience,* tells the story of Jonah, and the third, *Cleanness or Purity,* is a homily on purity and lawful love *Sir Gawayn and the Green Knight,* the fourth poem, relates adventures of Gawain, one of King Arthur's knights For synopses and bibliography, see J E Wells, *Manual of the Writings in Middle English* (1918 and supplements)

pearl, a secretion of the mantle of certain bivalve mollusks, used as a gem It is an organic product and not a mineral and is built up of alternate layers of conchiolin (a horny organic substance) and prisms of calcite or of aragonite (crystallized calcium carbonate), usually around a nucleus such as the body of a parasite or a grain of sand It is thus of the same material as the interior layers of the mollusk's shell, external and internal layers differ only in that the calcium carbonate is calcite in the external layers, aragonite in the internal Pearls may be round, pear shaped, button shaped, or irregular (baroque) and are valued in that order Pearls found attached to the inner surface of the shell are known as blister pearls The best pearls are usually white, sometimes with a creamy or pinkish tinge, but may be tinted with yellow, green, blue, brown, or black Black pearls, because of their rarity, are often highly valued The unique luster or orient of pearls depends upon the reflection and refraction of light from the translucent layers and is finer in proportion as the layers are thinner and more numerous The iridescence which some pearls display is caused by the overlapping of successive layers, which breaks up light falling on the surface Pearls are not cut or polished like other gems They are very soft and are injured by acids and heat, as organic products, they are subject to decay Commercially valuable pearls are obtained from the pearl oyster (especially the species *Margaritifera vulgaris* and *M margaritifera*) and from the pearl mussel (genus *Unio*) Important sources are the Persian Gulf, the coasts of India, China, Japan, Australia, the Sulu Archipelago various Pacific islands, Venezuela, and Central America, and the rivers of Europe and North America In ancient times the Red Sea was an important source Cultured pearls are commonly produced by making a small hole in the mantle of the pearl oyster and placing a little mother-of-pearl bead inside, the opening in the mantle is then sewed up The process is an expensive one Cultured pearls and natural pearls can be distinguished by various methods, e g , by X rays and, if a hole has been bored through the pearl, by devices such as the Zeiss pearl identifier and the endoscope.

Pearl Harbor, U S naval base, Hawaiian Islands, on the south coast of Oahu One of the key naval bases, it has installations and many anchorages around 10 sq mi of deep and protected water Fords Island has a naval air base, and there is another at near-by Barbers Point In this vital area there are also army, air force, and marine installations, notably the U S Air Force base, Hickam Field, and the U S Marine Corps air station, Ewa The United States first gained rights here in

1887 when the Hawaiian government granted permission for maintenance of a coaling and repair station After the annexation of Hawaii, Pearl Harbor was made (1900) a naval station Appropriations were made in 1908 for harbor improvements, and fortifications were later added, especially after the signing of the Berlin Pact (1940) by the Axis nations when war was in progress in Europe and Asia Pearl Harbor was an important Pacific base, but its name was unknown to most ordinary Americans before Dec 7, 1941 By the next day it was on the tongues of all While negotiations were still going on with Japanese representatives in Washington, early on the Sunday morning of Dec 7, Japanese carrier-based planes swept over Oahu and laid Pearl Harbor low Fighters, bombers, and torpedo planes sank or seriously damaged eight battleships and many other warships and craft They destroyed aircraft and damaged hangars at the near-by fields and also at other fields on the island The news of the attack rocked the United States, which was thus immediately thrown into the Second World War There were many charges of negligence on the part of those responsible for the defense of the base A special commission appointed by President F D Roosevelt and headed by Supreme Court Justice Owen J Roberts investigated and in a report on Jan 24, 1942, accused Gen Walter C Short and Admiral Husband E Kimmel of dereliction of duty Threats of court-martial were postponed, and finally the army and the navy after their own investigations announced (Dec 1944) that no valid grounds existed for court-martial A joint congressional committee was appointed in Sept, 1945, and in long hearings obtained much controversial and contradictory information A formal report to Congress was made on July 16, 1946 The majority of the committee found charges against President Roosevelt groundless, absolved Kimmel and Short of blame, praised the conduct of the cabinet generally, but censured the War Dept and the Dept of the Navy

pearl millet, tall annual grass (*Pennisetum glaucum*) native to the Eastern Hemisphere, where it has been cultivated since ancient times as an important food plant It has white grains in dense spikes somewhat resembling cattails In the S United States pearl millet is sometimes cultivated for forage Indian millet is another name for this plant and for durra, a variety of sorghum, sorghum is sometimes called pearl millet

Pearl River, unincorporated village (pop 3,416), SE N Y, near the N J line NW of New York city The Lederle Laboratories are here

Pear Ridge, town (pop 1,198), E Texas, near Beaumont, inc 1935

Pearsall (pĕr'sôl), city (pop 3,164), co seat of Frio co, SW Texas, SW of San Antonio, settled 1881, inc 1909 It is a processing center in a winter-garden area producing peanuts, watermelons, and other truck The area has oil fields and cattle ranches

Pearse, Patrick Henry (pĕrs), 1879–1916, Irish educator and patriot He was educated for the law, but early identified himself with the Gaelic movement in Ireland Pearse was active in the work of the Gaelic League and edited its journal, *An Claidheamh Soluis* He founded the influential bilingual St Enda's School near Dublin He joined the Irish Volunteers (1913) and commanded the Irish forces in the Easter Rebellion of 1916 Upon his surrender he was court-martialed in England and shot His stories, poems, and plays were collected in 1917, his political writings and speeches in 1922. See biography by Louis Leltoux (Eng tr by Desmond Ryan, 1932)

Pearson, Sir Cyril Arthur (pĕr'sun), 1866–1921, English publisher He founded and directed the periodicals *Pearson's Weekly*, *Pearson's Magazine*, *The Lady's Magazine*, and the London *Daily Express* (1900) He controlled a number of newspapers in various English cities and supported Joseph Chamberlain's tariff reform movement, but was forced (1910) to relinquish directing his newspaper interests because of failing eyesight He devoted himself thereafter to the cause of the blind and founded St Dunstan's for soldiers blinded in the First World War He is the author of *Victory over Blindness* (1919) See biography by Sidney Dark (1922)

Pearson, John, 1613–86, English prelate and scholar He was a royalist chaplain (1645) in the civil war, but during Cromwell's regime he lived quietly in London There he preached weekly (from 1654) at St Clement's a series of sermons which formed the substance of his *Exposition of the Creed* (1659) This celebrated work, with its valuable notes, reveals Pearson's patristic and general learning, it has long been a standard in English divinity and has passed through a number of editions After the Restoration, preferments came rapidly to Pearson He was made prebendary of Ely and archdeacon of Surrey and became master of Jesus College, Cambridge, in 1660, Margaret professor of divinity in 1661, master of Trinity College in 1662, and bishop of Chester in 1673 Among the scholars of his time, and especially in the field of systematic theology, he stands preeminent. His *Vindiciae epistolarum S Ignatii* (1672), defending the genuineness of the letters of St. Ignatius of Antioch, was later confirmed Pearson also edited *The Golden Remains of the Ever Memorable Mr John Hales* (1659)

Pearson, John Loughborough (lŏf'bŭrŭ), 1817–97, English architect He was architect of the Gothic cathedral (begun 1880) at Truro, the first Protestant cathedral to be built in England since the Reformation He is known also for his restorations of many cathedrals, of Westminster Hall, and of the north transept of Westminster Abbey He was a fellow of the Royal Institute of British Architects and a member of the Royal Academy He was buried in Westminster Abbey

Pearson, Karl, 1857–1936, English scientist He was Galton professor of eugenics at the Univ of London (1911–33) and director of the eugenics laboratory He is known for applying statistical methods to biological problems, a science which he called biometry He founded and edited *Biometrika* and was author of many works including *Chances of Death* (1897), *Grammar of Science* (1899, reprint, 1937), and a biography of Francis Galton (3 vols, 1914–30) See biography by E S Pearson (1938), bibliography by G M Morant and B L Welch (1939)

Pearson, city (pop 1,057), co seat of Atkinson co, S Ga, W of Waycross

Peary, Robert Edwin (pēr'ē), 1856–1920, American arctic explorer, discoverer of the North Pole, b Cresson, Pa, grad Bowdoin College, 1877 In 1881 he entered the U S navy as a civil engineer and for several years served in Nicaragua, where he was engaged in making surveys for the Nicaragua Canal He became interested in arctic exploration and made a trip to the interior of Greenland in 1886, later (1891–92), having secured a leave of absence from the navy, he led an expedition to Greenland for scientific study and exploration Important ethnological and meteorological observations were recorded, a long sledge journey to the northeast coast of Greenland was made, and Peary Land was explored New expeditions continued the work in 1893–95 and in two summer voyages (1896, 1897), from which Peary brought back to the United States his noted meteorites An account of his arctic experiences appeared in *Northward over the "Great Ice"* (1898) Granted another leave of absence from naval duty, he again led an expedition (1898–1902), this time to search for the North Pole He reached lat 84° 17′ N His *Nearest the Pole* (1907) recorded the events of his 1905–6 expedition when he attained lat 87° 6′ N, which was only c 174 mi from his objective With courage and will undaunted by disappointment and by harsh arctic experiences he set out (1908) for his last and successful quest for the North Pole From Ellesmere Island, Peary, accompanied by his Negro servant and four Eskimo, made a final dash for the pole, which he reached on April 6, 1909 He announced that he had achieved his goal, but on his return he learned of the prior claim of Dr Frederick A Cook, who had been ship's surgeon on Peary's expedition of 1891–92 A bitter controversy followed Although Cook fought to the end of his life, not without some support to substantiate his claim, Congress recognized Peary's achievement (which later scientific investigation has also verified) and tendered him its thanks in 1911, the year in which he was retired from the navy with the rank of rear admiral See his *North Pole* (1910), biography by W H Hobbs (1936), D B MacMillan, *How Peary Reached the Pole* (1934) Peary's wife, **Josephine Diebitsch Peary,** 1863–, accompanied him on several of his expeditions and published her experiences in *My Arctic Journal* (1893)

Peary Land, peninsula, N Greenland in the Arctic Ocean The area is mountainous, free of the inland icecap, and fertile It terminates in Cape Bridgman in the northeast and Cape Morris Jesup in the north, the most northerly point of land yet discovered in the arctic regions The peninsula is named for Robert E Peary, who explored it in his expedition of 1891–92 and again later

Peasants' Revolt see TYLER, WAT

Peasants' War, 1524–26, rising of the German peasants and of the poorer classes of the towns It was largely the result of a rapid deterioration in the condition of the peasants The Commercial Revolution by impoverishing the nobles in the late 15th cent had led them to extort more and more from the peasants, and the introduction of Roman law, with its interpretation of peasant status as strictly servile, was reducing all tenants to serfdom In 1493 the device of the peasant's shoe (whence Bundschuh, the name of the peasant league) was first adopted The war of 1524 began at Stühlingen, near the Swiss border, and within a year spread over W and S Germany The Twelve Articles of Memmingen (1525) listed among the peasants' demands liberty to choose their own pastors, relief from the lesser tithes, abolition of serfdom, the right to fish and to hunt, restoration of inclosed common lands, abolition of death duties, impartiality of the courts, and restriction of the demands of the landlords to their just feudal dues These articles were modified variously to suit local conditions. The revolt took on religious aspects after Zwingli gave it his blessing from Zürich In Thuringia it came under the sway of the fanatic Anabaptist, Thomas MÜNZER The revolt centered in Franconia and in Württemberg, where the peasants were led by discontented nobles such as Florian Geyer, Götz von BERLICHINGEN, and Ulrich I, dispossessed duke of WÜRTTEMBERG There the main attacks were directed against the bishop of WÜRZBURG, who had to take refuge in his castle, abandoning Franconia to the rebels The war was marked by some atrocities by the peasants (e g, the massacre of WEINSBERG), but even greater atrocities were committed by their enemies The revolt was crushed (1525) largely by the forces of the SWABIAN LEAGUE commanded by Georg von Truchsess An important cause of the utter defeat and demoralization of the peasants was the fierce stand taken against them by Martin LUTHER In Austria, where the revolt continued till 1526, the peasants won some concessions The outcome of the war prolonged serfdom in Germany till the French Revolution and stunted German democratic development See E B Bax, *The Peasants War in Germany, 1525–1526* (1899), Friedrich Engels, *The Peasant War in Germany* (Eng tr, 1926)

Pease, Francis Gladheim (pēz), 1881–1938, American astronomer and designer of instruments, b Cambridge, Mass, educated at Armour Institute of Technology (B S, 1901, Sc D, 1927) He was optician and observer at the Yerkes Observatory (1901–4), at Mt Wilson Observatory he served as instrument designer (1904–7, 1908–13) and as astronomer (from 1911) He is noted chiefly for his direct measurement of the diameters of stars by means of analysis of the light rays with the interferometer, the calibration of the speed of light, and the designing of the 100-inch telescope, as well as the mirror for the 200-inch telescope at Mt Palomar Observatory He made direct photographs and spectrograms of the moon, the planets, the nebulae, and star clusters

peat, carbonized, decayed vegetation, found in bogs in various parts of the Temperate Zone It is formed by the slow decay of successive layers of aquatic and semiaquatic plants, e g, sedges, reeds, rushes, and mosses Sphagnum moss is usually the chief constituent of the peat found in northern regions Two varieties of commercial peat are usually distinguished as peat moss and fuel peat The peat moss derived from sphagnum is used in agriculture for poultry and stable litters and as a soil conditioner and mulch It is used in industry in making artificial fertilizer, as an insulating material, and as a packing material for perishable products The fuel peat, when sold, is commonly pressed into briquettes which are more economical to transport Peat is the earliest stage of transition from compressed plant growth to the formation of COAL In the United States the government regards its relatively untapped peat resources as a valuable natural resource Russia, Canada, Sweden, and Finland have greater peat resources than the United States

peat moss see SPHAGNUM

Pec, Serbo-Croatian *Peć* (pĕch), town (pop 17,175), S Serbia, Yugoslavia Stephen Dushan in 1346 made Pec the seat of the Orthodox patriarchs of Serbia, who continued to reside here until the 18th cent The town is noted for its patriarchal cathedral (originally built in the 13th cent) and for the mosques and other buildings dating from the Turkish period It was damaged in the Second World War Under the Turks, Pec was known as Ipek

pecan (pĭkăn′, pĭkan′, pē-, pē'kăn), species of HICKORY (*Carya pecan* or *C illinoensis*), native from S Illinois through the Mississippi valley to central Texas and Mexico It is the most important North American nut-bearing tree, although the nuts became commercially valuable only after the Civil War Besides being table delicacies, the nuts are valued as flavoring for ice creams and confectionery Pecans vary greatly in the quality of the nut meats produced and in the thickness of the shell, the thinner-shelled or "paper-shelled" pecans being the more desirable Cultivated varieties of the nut usually are an improvement over the wild kinds but both are gathered and sold in large quantities The tree is the tallest of the hickories, but its wood is less valuable than that of other species

Pecatonica (pĕkutŏ'nĭkă), village (pop 1,302), N Ill, on the Pecatonica river and W of Rockford, inc 1869 It is a processing center in a farm area

peccary (pĕk'urē), piglike animal native to the Americas It fights viciously when in danger, inflicting severe wounds with its tusks Two species exist the collared peccary or javelina, its bristly, grizzled gray-black hair marked with a white neck band, survives in small numbers in parts of Arizona, New Mexico, and Texas and is more numerous southward to Patagonia, the white-lipped peccary is found from central Mexico to Paraguay Both sexes have a musk gland on the rump Peccaries eat a variety of plant and animal foods Their flesh is palatable

Pechenga (pyĕ'chĭn-gŭ), Finnish *Petsamo* (pĕt'-sămō), town (1948 pop over 2,000), N European

RSFSR, on an inlet of the Barents Sea and near the Norwegian border. There are important nickel mines near by. Pechenga was ceded by Russia to Finland in 1920. In the Second World War it was a supply base in the unsuccessful German drive on Murmansk. It was captured (1944) by Russian troops, and its cession to Russia was confirmed in the Finnish peace treaty of 1947.

Pechora (pyĭchô'rŭ), river, 1,110 mi. long, N European RSFSR. It rises in the N Urals and flows generally north through the forest and tundra regions of the Komi ASSR and the Nenets National Okrug into Pechora Bay (an inlet of the Barents Sea), forming a vast delta at Naryan-Mar. It is navigable for 470 mi. in summer and for 1,040 mi. in spring and autumn. The important Pechora coal basin extends eastward from the middle course of the river. The Pechora is important for its fisheries and as a channel for lumber transport.

Peck, Annie Smith, 1850–1935, American mountain climber, b. Providence, R.I., grad. Univ. of Michigan (B.A., 1878, M.A., 1881). She studied music in Germany (1884–85) and archaeology in Greece (1885–86) before she taught school in Rhode Island, Michigan, Ohio, and New Jersey. Later she was a professor at Purdue Univ. and at Smith College. She became interested in mountaineering, and in 1895—at the age of 45—she climbed the Matterhorn. Two years later she scaled Popocatepetl and Orizaba in Mexico, and after two unsuccessful attempts (1904, 1906), she reached (1908) the summit (22,205 ft.) of Huascarán in Peru. This was at the time the highest mountain climbed in the Western Hemisphere by an American, and the north peak of Huascaran was named Cumbre Ana Peck in her honor. She lectured extensively on Latin American affairs, and her writings include *A Search for the Apex of America* (1911) and *Commercial and Industrial South America* (1922).

Peck, Harry Thurston, 1856–1914, American educator, classical scholar, and critic, b. Stamford, Conn., grad. Columbia, 1881. From 1882 to 1910 he taught at Columbia. He was the first editor of the *Bookman*, wrote essays and books on literature, philology, and history, and edited several reference works, among them *Harper's Dictionary of Classical Literature and Antiquities* (1898), and, with others, *The New International Encyclopaedia* (1st ed.). A breach of promise suit in 1910 ended his career and led to his suicide in 1914.

Peckham, Rufus Wheeler (pĕ'kum), 1838–1909, American jurist, b. Albany, N.Y. Admitted to the bar (1859), he became a leading lawyer of Albany and was prominent in local Democratic politics. He was appointed (1883) by Gov. Grover Cleveland to the state supreme court bench, and after his election (1895) to the state court of appeals, Cleveland, then President, named (1895) Peckham Associate Justice of the U.S. Supreme Court.

Pecock or **Peacock, Reginald** (pē'kŏk), c. 1395–c. 1460, English bishop and writer. He was bishop of St. Asaph (1444) and of Chichester (1450). He was the author of the *Repressor of Over-much Weeting of the Clergy* (c. 1455), against the Lollards, and of other works. He was accused of heresy and had to make public abjuration and resign his bishopric. His writings are interesting to students of the English language.

Pecos (pā'kus), city (pop. 4,855), co. seat of Reeves co., W. Texas, on the Pecos. Founded in the 1880s as a cow town at a crossing of the river, it is now, with a railroad junction and a good highway, the market not only for ranches but also for an area reclaimed by water stored by the Red Bluff Dam up the Pecos.

Pecos, river rising in N. New Mexico near the Truchas peaks and flowing S. and SE. across New Mexico and Texas to the Rio Grande above Del Rio. It is dammed near Carlsbad, N. Mex., to serve the Carlsbad reclamation project and in Texas there is Red Bluff Dam and its small reservoir, long-standing interstate disputes about water use were settled in 1949 when a Federal bill provided for a compact between New Mexico and Texas. Near the village of Pecos, N. Mex., is Pecos State Monument, enclosing the ruins of Pecos pueblo, which was mighty in the times of Coronado but declined later and was abandoned in 1838. In the heyday of ranching in W. Texas, "west of the Pecos" was the term for the distinct wild and mountainous region of the western tip of the state.

Pecs, Hung. *Pécs* (pāch), Ger. *Funfkirchen* (funf'-kĭr'khŭn), city (pop. 73,000), SW Hungary, near the Yugoslav border. It lies in a coal-mining region and produces tobacco, leather goods, and vegetable oil. Dating from Roman times, Pecs became (1009) an episcopal see and (1367) the seat of the first Hungarian university. The city was under Turkish rule from 1543 to 1686. The 11th-century cathedral was rebuilt in the late 19th cent. Several former mosques are now churches.

pectin, any of a group of white, amorphous, complex carbohydrates which occur in ripe fruits and certain vegetables. Fruits rich in pectin are the peach, apple, currant, loganberry, and plum. Protopectin, present in unripe fruits, is converted to pectin as the fruit ripens. Pectin forms a colloidal solution in water and gels on cooling. When fruits are cooked with the correct amount of sugar and when the acidity is optimum and the amount of pectin present is sufficient, jams and jellies can be made. In overripe fruits the pectin becomes pectic acid, which does not form jelly with sugar solutions. Commercial preparations of pectin are available for jelly making. In medicine, pectin has been successfully used in treating diarrhea, as an agent to promote healing of wounds, and as a means of slowing down the rate at which penicillin, streptomycin, and other drugs are eliminated from the body, thus reducing the amount which must be administered.

Peculiar People, small Protestant sect founded in London in 1838 by John Banyard. They were also known as Plumstead peculiars. Putting their trust in prayer, they refused medical aid.

Pedahel (pĕ'dūhĕl, pēdā'hĕl) [Heb., =whom God delivers], Naphtalite chief. Num. 34:28.

Pedahzur (pĕdā'zur) [Heb., =the rock delivers], Manassite. Num. 1:10, 2:20, 7:54.

Pedaiah (pĕdā'yu, pē'dŭī'yŭ) [Heb., =whom God delivers]. **1** Manassite. 1 Chron. 27:20. **2** Grandfather of Jehoiakim. 2 Kings 23:36. **3** Father of Zerubbabel. 1 Chron. 3:18,19. **4** Repairer of the wall. Neh. 3:25. **5** Assistant of Ezra. Neh. 8:4. **6** Benjamite. Neh. 11:7. **7** One of Nehemiah's treasurers. Neh. 13:13. The last four may not all be separate persons.

peddler or **hawker,** itinerant vendor of small articles who carried his pack or drove a horse and cart from door to door in rural areas. While the importance of the peddler to the small community has declined considerably in the United States with the growth of the mail-order house, his role in certain sections of the European and Asiatic markets has not been too greatly affected by economic consolidation. See R. L. Wright, *Hawkers and Walkers in Early America* (1927).

pedestal, a block—square, polygonal, or round—serving as a support for a column or any other superimposed structure. It consists of three parts—a base, a dado or die, and a cap, cornice, or surbase. In classical design its proportions were governed by the superstructure. It was a prominent architectural feature of the Renaissance. A Renaissance example of the sculptural base is the statue of Colleoni by Verrocchio, a modern one is the 142-foot pedestal of the Statue of Liberty, New York harbor.

pediment, in architecture, the triangular gable end on a building of classic type or a similar form used decoratively. It consists of the tympanum, or triangular wall surface, enclosed below by the horizontal cornice and above by the raking cornice which follows the slope of the roof. In Greek architecture the pediment is an important feature over the columnar portico, forming often a setting for sculpture. In the Roman and Renaissance styles it was used also as a purely decorative motive, chiefly over doors and windows, the upper profile of the pediment was sometimes of segmental shape. In later Renaissance and baroque design the pediment often took on fantastic shapes, notably in the variants of the broken pediment, where the two sides of the raking cornice do not join and the central space is filled with ornamental devices. The scrolled broken pediment was a favorite in American colonial work, especially in doorways and overmantels.

Pedrarias see ARIAS DE ÁVILA, PEDRO.

Pedro I (Dom Pedro de Alcántara) (pā'drō), 1798–1834, first emperor of Brazil (1822–31), son of John VI of Portugal. Dom Pedro was only a small boy when the royal family had to flee before Napoleon's conquering French from Portugal to Brazil. He grew up in Rio de Janeiro, and when King John returned (1821) to Portugal, Dom Pedro remained as regent in Brazil. The situation of the colony which had been the center of empire during the royal residence was a touchy one, and attempts by the Portuguese to reduce Brazil again to subordinate status caused dissatisfaction. Heeding his Brazilian advisers, especially José BONIFÁCIO, Pedro took the extreme step of defiance. On Sept. 7, 1822, he issued the *grito de Ipiranga* or *Ypiranga*, which established Brazil as a separate empire. He was not, however, very popular with a large section of his Brazilian subjects, who detested the Portuguese courtiers who surrounded him and did not approve the emperor's own arbitrary measures. He abdicated in 1831 in favor of his son, Pedro II. Curiously, Pedro I, regarded somewhat as a reactionary in Brazil, was the champion of liberalism in Portugal. When John VI died in 1826, the succession to the throne was somewhat cloudy, but Dom Pedro was recognized as Peter IV. After some hesitation, he finally abdicated in favor of his daughter, MARIA II, on condition that she marry her uncle Dom MIGUEL and that Dom Miguel accept a constitutional charter for Portugal. Dom Miguel agreed but in 1828 seized the rule for himself and set up an absolute regime. The Portuguese liberals managed to establish themselves in the Azores. There Dom Pedro joined them, and in 1832 he and a small fleet went to Oporto. In the Miguelist Wars he withstood the siege of Oporto by Dom Miguel. An English sea force fighting for Dom Pedro and Maria II defeated the Miguelist fleet, and Maria was restored to the throne. See Sergio Correa da Costa, *Every Inch a King* (Eng. tr., 1949).

Pedro II (Dom Pedro II de Alcántara), 1825–91, emperor of Brazil (1831–89). He succeeded under a regency when his father, Pedro I, abdicated. Because of their dislike for the regency, the liberals managed to have him declared of age in 1840. His long reign was, after some rebellions at its start, a period of internal peace and material progress. Immigration, produce, and wealth steadily increased. Brazil aided Urquiza in the war against Rosas (1851–52), at the same time taking part in Uruguayan affairs in support of Venancio Flores. Later Brazil was joined with Argentina and Uruguay in the War of the Triple Alliance against Paraguay (1865–70). The genial emperor was personally extremely popular, but fortune betrayed him. In 1850 the slave trade was prohibited, in 1871 a law was passed providing for gradual emancipation, in 1888, when Pedro was in Europe, slavery was abolished altogether. This antagonized the rich planters, who had been the mainstay of the empire. Republican propaganda had long been rife. Pedro's daughter Isabel and her husband, the comte d'Eu, were unpopular. The government had alienated some of the clerical support. Discontent was widespread, and in 1889 a revolution overturned the empire. Pedro II, having received a grant of money from the revolutionary government, spent the remainder of his life in Europe. See M. W. Williams, *Dom Pedro the Magnanimous* (1938).

Pedro. For Spanish and Portuguese rulers thus named, see PETER.

Peebles, county, Scotland. see PEEBLESSHIRE.

Peebles (pē'bulz), burgh (pop. 5,853), county town of Peeblesshire, Scotland, on the Tweed and S. of Edinburgh. The tower of St. Andrew's Church dates from the 12th cent., and the ruins of Neidpath Castle are near. The burgh's chief industry is wool spinning and weaving.

Peebles, village (pop. 1,350), S. Ohio, NW of Portsmouth. Serpent Mound State Park is near by.

Peeblesshire (pē'bulz-shĭr), **Peebles,** or **Tweeddale,** county (347 sq. mi., 1931 pop. 15,051, 1948 estimated pop. 15,100), S. central Scotland. The county town is Peebles. It is mainly a hilly pastoral region, rising to a height of 2,754 ft. in Broad Law, in the south. The region is drained by the Tweed which rises in the county. Only a small portion of the land is arable. See J. W. Buchan, ed., *History of Peeblesshire* (3 vols., 1925–27).

Pee Dee, river rising in W. North Carolina in the Blue Ridge and flowing generally southeast c. 455 mi. to Winyah Bay, S.C. It is called the Yadkin above the mouth of the Uharie in central North Carolina.

Peekskill, city (pop. 17,311), SE N.Y., in Westchester co., on the east bank of the Hudson and N. of Ossining, in a farm and resort area, incorporated as a village 1816, as a city 1940. Gin, jewelry, and food products are made. The Peekskill Military Academy and a military camp are here, as is St. Mary's School for girls. Chauncey M. Depew was born at Peekskill.

Peel, Paul, 1860–92, Canadian landscape and genre painter, b. London, Ont., studied at the Pennsylvania Academy of the Fine Arts and in London and Paris. He worked principally in Paris, and his *How Butter Life Is* obtained honorable mention at the Salon of 1889 and *After the Bath* (Budapest) a gold medal in 1890. His paintings are distinguished for their delicate beauty of coloring and effective handling of light. *Two Friends* is in Buckingham Palace, London, and *Forging the Stream* is in the city hall, Toronto.

Peel, Sir Robert, 1788–1850, English statesman, educated at Oxford. He entered Parliament as a Tory in 1809 and served (1812–18) as chief secretary for Ireland, where he maintained order and the Protestant ascendancy in a difficult time and opposed CATHOLIC EMANCIPATION. As a private member he secured passage of his bill to resume cash payments and stabilize the currency. As home secretary (1822–27) he succeeded in revising and humanizing the criminal laws. Although he had refused to serve under George Canning because that prime minister favored Catholic Emancipation, he later saw the justice and political necessity for that move and, as home secretary under the duke of Wellington, secured the passage (1829) of the bill enabling Roman Catholics to sit in the House of Commons. In 1829 also he established the London police force, called after him Peelers or Bobbies. He recovered in part the Tory support which he had lost because of the Catholic question when he opposed parliamentary reform, and after the Reform Bill of 1832 was passed despite him, he rallied the party and was prime minister briefly (1834–35). While he was in opposition (1835–41) he gathered about him many able young men, including Benjamin Disraeli and W. E. Gladstone, to form a conservative party based on defense of constitution and Church but favorable to general reforms. The new party attitude appeared in his second ministry (1841–46), which brought an in-

come tax, a new system of banking control, an attempt at Irish land reform, and aid to the Irish Catholic Church, these were strange policies for Tories Of far greater importance were the virtual abandonment of customs duties and the repeal of the corn laws These laws were essentially Tory, and Peel had formerly defended them, but he became convinced by his study of the matter and the arguments of Richard Cobden that they must be changed His action lowered the price of bread, but split the party into the liberal followers of Gladstone and the conservatives under Disraeli Peel was a powerful orator and a persuasive character, much abused as an apostate during his life, but now recognized as a practical statesman of forward-looking views and of great courage. His memoirs were posthumously published (1856) His correspondence and private papers were edited by C S Parker (3 vols , 1891–99) and later by George Peel (1920). See biographies by Sir Lawrence Peel (1860) and G K Clark (1936), Tresham Lever, *The Life and Times of Sir Robert Peel* (1942)

Peel, seaport (pop 2,477), on the west coast of the Isle of Man, Great Britain, at the mouth of the Neb It is a resort and a fishing town Peel Castle, on St Patrick's Isle in the river, dates mainly from the 16th cent

Peele, George, 1558?–1597?, English dramatist and poet Despite the fact that his period of dramatic activity lasted only six years, he wrote *Edward I* (1593), *The Arraignment of Paris* (1594), *The Battle of Alcazar* (1594), *The Old Wives Tale* (1595), and *The Love of King David and Fair Bethsabe* (1599) One of the "university wits," Peele was at his best in some of the songs interspersed in his plays He lived a dissolute life, exhausted his property, and died in poverty

Peel Island, Bonin Islands see CHICHI-JIMA

Peet, Stephen Denison, 1831–1914, American archaeologist and clergyman, b Euclid, Ohio, grad Beloit College, 1851 He awakened interest in the scientific study of the American Indian and was founder (1878) and editor of the *American Antiquarian and Oriental Journal* Among his books are *The Mound Builders* (1892), *History of Explorations in the Mississippi Valley* (1896), *The Cliff Dwellers and Pueblos* (1899), and *Aboriginal Religion in America* (1905)

peewee see PEWEE

Pegasus (pĕ'gŭsŭs), in Greek legend, immortal winged horse, offspring of POSEIDON and MEDUSA He became the faithful companion of BELLEROPHON The spring Hippocrene, sacred to the MUSES, was made by a print of his hoof and gave the gift of song to all who drank of it From his connection with this spring came the modern use of Pegasus as a symbol of poetry

Pegasus, in astronomy, a northern constellation lying southwest of Andromeda, named for the mythological Pegasus It is easily identified in the heavens by the bright stars that form the "square of Pegasus" Three of the stars lie in Pegasus and since they are the three brightest of that constellation are known as Alpha, Beta, and Gamma Pegasi, the fourth star of the square is Alpha Andromedae, the brightest star in the constellation Andromeda

Pegram, George Braxton (pĕ'grŭm), 1876–, American physicist and educator, b. Randolph co , N C , grad. Trinity College (now Duke Univ), Durham, N C (B A , 1895), Ph D Columbia, 1903 He joined the faculty at Columbia (1900), was appointed professor (1918), and served as dean of the School of Mines, Engineering, and Chemistry (1918–30) and as dean of the Graduate Faculties (1936–49) In 1949 he became a vice president of the university Pegram demonstrated (1936) the transmutation of elements (sodium to magnesium) by the splitting of an atom with slow neutrons In 1939 he announced the successful splitting of the uranium atom by physicists at Columbia.

Pegu (pĕgōō'), city (pop 21,712), S Burma, on the Pegu river, a tributary of the Rangoon It is on the rail line from Rangoon to Mandalay and the main routes linking Tenasserim with Lower Burma Founded by the Talaings, it was a port until silting closed the river to seagoing vessels From the late 15th cent , it was the center of one of the three chief states of Burma, and in the 16th cent it was the capital of a united Burmese kingdom The capital was removed to Ava in 1635 In the 18th cent the Talaings rebelled against the Burmese and set up their capital at Pegu, it was destroyed by the Burmese in 1757, but was rebuilt as the center of a Burmese province In 1852 the city and province came under British rule

Péguy, Charles (shärl' pāgē'), 1873–1914, French poet and writer. He came of a poor working family and left the École normale supérieure to devote himself to the cause of socialism He was, however, individual in his views and broke with the party. In 1900 he founded the *Cahiers de la Quinzaine*, a periodical in which he published his own works as well as those of other young writers. Through his life he was a passionate worker for causes of justice, truth, and the good of the common man and the world His part in the Dreyfus Affair was notable, and his polemics against injustice were topical but fiery. He was deeply religious, and though formally he was usually at odds with the Roman Catholic Church, he is among the foremost modern Catholic writers He sought to infuse spirituality into every aspect of life and to do away with sordid aims Joan of Arc became for him the symbol of the spiritual in action, and one of the greatest of his poems, *Le Mystère de la charité de Jeanne d'Arc* (1910, Eng tr by Julian Green, *Mystery of the Charity of Joan of Arc*, 1950), expresses his ideal His original, repetitive chantlike verse has great power Others of his long works are *Le Porche du mystère de la deuxième vertu* (1911) and *Eve* (1913) He was killed at the battle front soon after the First World War began Translations of his works appear in *Basic Verities* (1944) and *Men and Saints* (1944), both including prose and poetry and both translated by Ann and Julian Green, Julian Green also translated some of Péguy's religious poetry in *God Speaks* (1945) See Daniel Sargent, *Four Independents* (1935), Daniel Halévy, *Péguy and the Cahiers de la Quinzaine* (Eng tr , 1947)

Peham see BEHAM

Pehlevi language see PAHLAVI LANGUAGE

Pei (pā, bā), river of Kwangtung prov , China, flowing south c 200 mi to join the Si at Samshui near Canton The river is called in Chinese Pei-kiang or Pei-chiang [both=north river]

Peian or **P'ei-an** (pā'ān'), city (pop 70,032), capital of Heilungkiang prov , NE China It is a railroad junction

Pei-kiang, river, China see PEI

Peiping or **Pei-p'ing** (pā'pĭng, bā'–), city (pop 1,672,438), Hopeh prov , capital of the People's Republic of China Since 723 B C several cities, bearing various names, have existed at this site The nucleus of the present city was Kublai Khan's capital, Cambuluc, which he had constructed in A D 1264 Under the name Peking [Chinese,= northern capital] the city was the capital of China from the 15th cent until 1928, when, the seat of government having been transferred to Nanking [Chinese *nan*=southern], the present name, Peiping [Chinese,=northern peace], was adopted Peiping in the main consists of two distinct areas, the Old City or Chinese City, which is surrounded by a comparatively low wall, and the Tartar City with massive walls 50 ft high Within the Tartar City, each with its own wall, are the Forbidden City (formerly the emperor's residence), the Imperial City (where his retinue was housed), and the Legation Quarter In Peiping are many of the greatest examples of architecture of the Ming and Ch'ing dynasties as well as remains from earlier times The Temple of Heaven, set in a large park, contains a massive altar of white marble before which the emperors prayed at the summer solstice In the temple of Confucius are guarded incised boulders which date from the Chou dynasty An ancient astronomical observatory, once used by Catholic missionaries, still functions The Forbidden City, now open to visitors, contains palaces and museums replete with art treasures Just outside Peiping, rivaling the beauties within, is the imperial summer palace (a recent structure) with its lovely parks At Choukoutien, near the city, were discovered several bones of *Sinanthropus pekingensis* (see MAN, PRIMITIVE) Peiping has often been the prize of contending armies, especially in the last century In 1860 Great Britain and France captured it after the battle of Palchiao and forced the Chinese government to concede the Legation Quarter for foreign settlements This cession was among the factors responsible for the Boxer Rebellion (1900), in which the foreign colony was besieged until relieved by a combined expeditionary force of American, Japanese, and European troops The outraged foreign powers exacted a treaty which provided for the permanent garrisoning of foreign troops in Peiping Repeatedly the city changed hands during the civil wars which followed the establishment of the Chinese republic in 1912 Japan occupied Peiping in 1937, in an incident that sped the pace of warfare (see CHINO-JAPANESE WAR, SECOND) The Japanese restored the name Peking and made the city the capital of a puppet state With the end of the Second World War and the abolition of the last foreign concession (1946) Peiping was entirely restored to Chinese sovereignty In 1949 it fell to the Communists, who late that year announced that it was the capital of the newly founded People's Republic of China Besides being the country's chief political center, the city stands foremost in Chinese cultural life Of its many educational institutions, the National Univ , the Peiping Union Medical College, and Yenching Univ are perhaps the best known Peiping is the northern terminus of the Peiping-Canton RR, the longest north-south line of China, and of railroads to Liaoning and Suiyuan provs. It is now eclipsed in commercial importance by the near-by city of Tientsin See Juliet Bredon, *Peking* (2d ed , 1931); William Lewisohn, *In Search of Old Peking* (1935)

Peipus, Lake (pī'pŭs), Estonian *Peipsi Järv* (pāp'sē yärv'), Rus. *Chudskoye Ozero* (chōōt'skŭyŭ ô'zyĭrŭ), lake, area c.1,400 sq mi., NE Europe, between Estonia (on the west) and the RSFSR (on the east) It is 48 mi long and 20 to 30 mi. wide Its southern section is known as Lake Pskov after the Russian city near its shore Lake Peipus has marshy and sandy shores It empties through the Narva river into the Gulf of Finland Fishing is the chief occupation of the largely Russian shore population. On the frozen strait between Lake Peipus and Lake Pskov, St Alexander Nevski defeated (1242) the Livonian Knights

Peirce, Benjamin, 1809–80, American mathematician and astronomer, b Salem, Mass , grad Harvard, 1829 From 1833 he was a professor at Harvard, he helped establish the Harvard Observatory and was an organizer of the Dudley Observatory, Albany, N Y He made a special study of Saturn's rings In the field of mechanics he made studies of the forms of elastic sacs containing fluids From 1867 to 1874 he was superintendent of the U S Coast Survey His fundamental contributions to mathematics were collected as *Linear Associative Algebra* (1870) and reprinted (1882) in the *American Journal of Mathematics* He wrote also *A System of Analytic Mechanics* (1855)

Peirce, Charles Sanders, 1839–1914, American philosopher, b Cambridge, Mass , grad. Harvard, 1859, son of Benjamin Peirce Except for occasional lectures he rejected the regimen of academic life and was in government service with the Geodetic Survey for many years. Regarding logic as the beginning of all philosophical study, Peirce felt that the meaning of an idea was to be found in an examination of the consequences to which the idea would lead This principle was published in 1878 in *Popular Science Monthly*, using the term PRAGMATISM, which was later used by William James with acknowledgment The influence of Peirce is clearly seen in the works of Josiah Royce and John Dewey Recognition of his importance has been delayed because of the scarcity of published works He left many fragmentary manuscripts, but the only book published during his lifetime was *Photometric Research* (1878) After his death his major essays were edited by M R Cohen in *Chance, Love, and Logic* (1923) See his collected papers (6 vols , 1931–35), Justus Buchler, *Charles Peirce's Empiricism* (1939), J K Feibleman, *Introduction to Peirce's Philosophy Interpreted as a System* (1946)

Peirce, Waldo, 1884–, American painter, b Bangor, Maine, studied at Julien's academy, Paris He painted for several years in Spain, where he was especially impressed by Goya After service in the First World War, Peirce remained in Europe, painting in France, Spain, Tunis, and Algiers until 1930, when he returned to settle in his native city Characteristic of his style is an exuberance of brushwork and a vivacity of color somewhat suggestive of the art of Renoir His work is widely exhibited and is represented in New York in the Metropolitan Museum, the Whitney Museum, and the Brooklyn Museum He has painted murals and has illustrated books, including *The Magic Bed Knob* (1943) and *The Children's Hour* (1944)

Peirce City or **Pierce City,** city (pop 1,208), SW Mo , ESE of Joplin, in a farm area, founded c.1870

Peisistratus. see PISISTRATUS

Peixoto, Floriano (flôrē'ä'nō pāshō'tō), 1842–95, Brazilian marshal and statesman He fought with distinction in the War of the Triple Alliance Since he was a member of the imperial cabinet but did not notify his government of the plans to overthrow the empire, his part in the establishment of the republic was somewhat equivocal Nevertheless he was chosen vice president under Deodoro de FONSECA When the president resigned in the face of a revolution, Floriano Peixoto succeeded to the presidency on Nov 23, 1891 A taciturn, strong-handed man, he put down a naval revolt led by Admiral Custodio José de Mello in 1893 and maintained himself in power until the election of 1894, when he was defeated Though he was distrusted and hated by most of the people, he nevertheless by his firmness consolidated the new republican government

Peixotto, Ernest Clifford (pāshō'tō), 1869–1940, American painter, illustrator, and author, b San Francisco, studied at Julien's academy, Paris He lived in Europe many years, and his painting of *The Woman of Rysword* received honorable mention at the Salon His mural paintings decorate the Seamen's Bank for Savings New York, the Bank of New York, and the library of Henry Everett near Cleveland (scenes from *Morte d'Arthur*) After 1897 he contributed drawings to *Scribner's Magazine* and other leading periodicals and illustrated numerous books, among them Henry Cabot Lodge's *Story of the Revolution* Theodore Roosevelt's *Life of Cromwell*, and Mrs Wharton's *Italian Backgrounds* He is author-illustrator of *By Italian Seas* (1906), *Through the French Provinces* (1910), *Romantic California* (1911), *Our Hispanic Southwest* (1916), *A Revolutionary Pilgrimage* (1917), *Through Spain and Portugal* (1922), and *A Bacchic Pilgrimage* (1932) He was official artist in the First World War, and his war drawings are in the National Museum of the Smithsonian Institution He was director (1919–26) of mural painting at the Beaux Arts Institute of Design, New York

Pekah (pē'kŭ) [Heb ,=opening], d c.730 B.C., king of Israel (c.736–c 730 B C). He was a general

under King Pekahiah and murdered him for the throne He went to war with Ahaz of Judah, but soon after lost the northern and eastern parts of his kingdom to Assyria His successor was Hoshea, 2 Kings 15 26–16 9

Pekahiah (pĕ″kŭhī′ŭ) [Heb ,=God opens His eyes], d c 736 B C , king of Israel (c 737–c 736 B C), son and successor of Menahem His reign was ended by his murder at the hands of his general Pekah 2 Kings 15.22–26

Pekalongan (pĕ″kälông′gän), town (pop 65,982), on N Java, Indonesia, on the Java Sea A textile center, it is also the principal port for central Java (an area included in the republic of Indonesia), it exports sugar, rubber, and tea A Dutch fort built in 1753 is here

Pekin (pē′kĭn), city (pop 19,407), co seat of Tazewell co , central Ill , on the Illinois river and S of Peoria, settled 1829, inc 1839 In a farm and coal area, it is a shipping and industrial center which produces grain and leather products Lincoln argued cases in the old courthouse here

Peking, China see PEIPING

Pekingese or **Pekinese**, a toy dog, related to both the spaniel and the pug It originated in China centuries ago and was not known in Europe until after 1860, when a few specimens were taken to England and bred The Pekingese has a broad skull, a black nose, and large, round, and protruding eyes, its coat is long, straight, and silky, and it may be brown, black, red, fawn, sable, brindle, white, or parti-colored It has a proud carriage of its head and tail and is both intelligent and amiable

Peking man see MAN, PRIMITIVE

Pekod (pē′kŏd), designation of a group of people, presumably Babylonian Jer 50 21

Pelagianism (pŭlā′jŭnĭzm), Christian heretical sect which rose in the 5th cent to challenge St Augustine's conceptions of PREDESTINATION and FREEDOM OF THE WILL The doctrine was advanced by the celebrated monk and theologian, Pelagius (c 355–c 425) He was probably born in Britain After studying Roman and Greek law and rhetoric and later theology in England and Rome, he preached in Africa, and Palestine, attracting able followers, such as Celestius and Julian of Eclanum It is said that he disliked theological controversy, even though he was a brilliant polemicist and the author of theological and biblical commentaries Pelagius thought that St AUGUSTINE was excessively pessimistic, blinded by his youthful Manichaeism to an appreciation of the gentle love and mercy of God Pelagius countered St Augustine with more optimistic theses He argued that the admonition of Christ, "Be ye perfect," implies that perfection must be possible to any individual who wholly desires it He maintained that the child is born innocent (as was Adam before the Fall), not in original sin, the subsequent lapse from innocence is due to the sin committed (which is a personal act of the will), not to inherent nature Consequently, human nature is not necessarily vile, sin is not transmitted, and the baptism of infants becomes meaningless Pelagius taught, too, that grace, infused into all creation by God, consists, in man, of the natural attributes which lead him to God, e g , reason, free will, and the understanding of the revealed gospel Pelagianism challenged the very function of the Church, claiming that the law as well as the gospel can lead one to heaven and that pagans had been able to enter heaven by virtue of their moral actions before the coming of Christ This last suggestion, probably derived from Stoicism, tended to make Christianity a rationalistic faith, with each moral act a separate entity without relation to the concept of Christian perfection, which commits the whole soul The Church fought Pelagianism from the time that Celestius was denied ordination in 411 In 415 Augustine warned St JEROME in Palestine that Pelagius was propagating a dangerous heresy there, and Jerome acted to prevent its spread in the East Pelagianism was finally condemned by East and West at the Council of Ephesus (431) But a compromise doctrine, Semi-Pelagianism, was popular in the 5th and 6th cent in France, Britain, and Ireland Semi-Pelagians accepted St Augustine's tenets on man's sinfulness and the Fall and (in modified form) his doctrine of irresistible grace, but they wholly rejected the doctrine of predestination At the instance of St CAESARIUS OF ARLES, Semi-Pelagianism was outlawed by the Council of Orange (529) At the end of the century, Pelagianism disappeared as an organized heresy, but, remaining as a tendency in Christian thought, it continued as a topic of Western theological controversy until the 17th cent Pelagius' *Expositions of Thirteen Epistles of St Paul* were edited by Alexander Souter (3 vols , 1922–31)

Pelaiah (pĕlī″ä′ŭ) [Heb ,=whom God distinguishes] **1** Descendant of David 1 Chron 3 24 **2** Expounder of the Law Neh 8 7, 10 10

Pelaliah (pĕl″ul′ŭ) [Heb ,=God judges], ancestor of Adaiah the priest Neh 11 12

Pelasgians (plăz′jĭănz), in ancient Greek literature, from Homer on, any aboriginal non-Greek inhabitants of Greece If they were a real people, nothing is known of them. The term may refer to the builders of the Mycenaean civilization

Pelatiah (pĕl″ŭtī′ŭ) [Heb ,=God delivers] **1** Zerubbabel's grandson 1 Chron 3.21. **2** Simeonite captain 1 Chron 4 42 **3** Signer of the covenant Neh 10 22

Pelayo (pälä′yō), d 737, first king of Asturias. He defeated the Moors at Covadonga some time between 718 and 725, thus beginning the Christian reconquest of Spain All accounts of him are largely legendary.

Pele (pā′lā), Hawaiian goddess of the volcano Her traditional home is Halemaumau, the fire pit of Kilauea crater on the island of Hawaii The Hawaiians lived in fear of the vengeful powers of Pele until 1824, when a native princess defied the goddess The princess ate sacred berries at the crater's rim without suffering dire results

Pelée (pulā′), volcano, 4,429 ft high, on N MARTINIQUE, French West Indies On May 8, 1902, the day of the eruption of SOUFRIÈRE on St Vincent, Pelée also erupted, engulfing SAINT-PIERRE and killing c 40,000 people in the city and adjacent area Because the chemical composition of the volcanic ash prevents plant life, the thick layer deposited over a wide expanse is almost complete wasteland Pelée also erupted in 1792 and 1851 See Angelo Heilprin, *Mont Pelée and the Tragedy of Martinique* (1903)

Peleg (pē′lĕg) [Heb ,=division], ancestor of David Gen 10 25, 11 16 Phalec Luke 3 35

Pelet (pē′lĕt) [Heb ,=deliverance] **1** Name in an obscure genealogy 1 Chron 2 47 **2** Benjamite leader with David 1 Chron 12 3

Peleth (pē′lĕth) [Heb ,=swiftness] **1** Reubenite, perhaps the same as PALLU Num 16 1 **2** Son of Jonathan 1 Chron 2 33

Pelethites see CHERETHITES AND PELETHITES

Peleus (pē′lūs, pē′lūŭs), in Greek mythology, king of the Myrmidons He was the son of Aeacus, the brother of Telamon, the husband of the nymph Thetis, and the father of Achilles Peleus took part in the Calydonian hunt and the expedition of the Argonauts After he returned from these adventures, he went to Iolcus, where he killed King ACASTUS When Peleus married Thetis, all the gods were invited except Eris In revenge she sent the golden apple of discord, which ultimately caused the dispute leading to the Trojan War

Pelew, Caroline Islands see PALAU

Pelham, Peter (pĕ′lum), American engraver and painter, c 1695–1751, b England, stepfather of John Singleton Copley After studying and practicing in England, Pelham settled (c 1728) in Boston Among his early engravings are portraits of Queen Anne, George I, and the bishop of London, copied from contemporary paintings In America he produced engravings of Cotton and Increase Mather, based on his own paintings, and painted miniatures He also conducted a school to teach dancing, arithmetic, writing, and other subjects

Pelham (pĕ′lum) **1** City (pop 2,579), SW Ga , S of Albany, settled 1870, inc 1881 It is a processing and market center for lumber, cotton, peanuts, and tobacco **2** Village (pop 1 918), SE N Y , in Westchester co , E of Mt Vernon, settled in the 17th cent , inc 1896 It is a suburb of New York city

Pelham Manor, village (pop 5,302), SE N Y , in Westchester co , on Long Island Sound, settled in the mid-17th cent , inc 1891 It is a residential suburb of New York city

Pelias (pē′lĭăs), in Greek mythology, a crafty king who stole the kingdom of Iolcus from his brother AESON and sent Aeson's son JASON in quest of the GOLDEN FLEECE Jason returned and claimed the kingdom The sorceress MEDEA, pretending that she would make Pelias young again, induced his daughters to kill him ACASTUS avenged him

pelican (pĕ′lĭkun), large, gregarious bird of warm regions, allied to the cormorants and gannets and having like them, fully webbed toes Pelicans are heavy-bodied, long-necked birds with very large bills, the upper mandible is hooked and the lower bears a deep expansible pouch in which fish are carried The young birds feed from the pouch and from the throat of the parent The great white pelican of North America is about 5 ft long and has a wingspread of about 8 to 10 ft Both sexes have white plumage with black primary wing feathers, and in both a horny plate forms temporarily on the bill in spring The pelican is now found chiefly in the W United States, sometimes on the seacoasts and at other times on fresh water It catches fish by scooping them into its pouch as it swims, but the brown pelican dives from the air for its prey The eastern brown pelican of the SE United States and tropical America and the California brown pelican are strictly ocean birds The spectacled pelican is found in Australia and New Guinea There are several Old World species.

Pelican Rapids, village (pop 1,560), W Minn , N of Fergus Falls and on the Pelican river, inc 1882 It is a trade and shipping center of a grain and livestock region In 1932 "Minnesota man," a human skeleton believed to be prehistoric, was found near here

Pelion (pē′lĭun), mountain 5,252 ft. high, N Greece, in E Thessaly, near the Aegean coast. In ancient legend, CHIRON lived on the mountain and the ALOADAE piled Pelion on Ossa.

Pella, city (pop. 3,638), S central Iowa, ESE of Des Moines; settled 1847 by Dutch, inc 1855. It is the trade, industrial, and shipping center for a farm region producing grain, truck, and livestock Central College is here An annual Dutch tulip festival is held

pellagra (pulă′gru, pŭlā′grŭ), disease resulting from a nutritional disorder caused by lack of the vitamin B complex in the diet A general diet which includes meat, eggs, and fresh milk supplies the vitamin There are many effects, including reddening of neck and backs of hands, red, sore tongue, gastrointestinal disturbances, including diarrhea, and nervous and mental changes It occurs throughout the world and has been prevalent in the S United States in persons whose food is restricted to pork and cornmeal over a long period It is prevented by proper diet, and cases not too far advanced respond to a diet containing niacin (formerly nicotinic acid), a constituent of the vitamin B complex

Pelleas, Sir (pĕl′ēăs), knight of King Arthur's court see ARTHURIAN LEGEND He is the hero of *Pelleas and Ettarre*, one of Alfred Tennyson's *Idylls of the King*, and of a play by Maurice Maeterlinck, *Pelléas and Mélisande*, given a musical setting by Claude Debussy

Pellegrini, Carlos (kär′lōs pĕyägrē′nē), 1846–1906, president of Argentina (1890–92) He became vice president in 1886 and succeeded to the presidency in Oct , 1890, when public opinion forced JUAREZ CELMAN to resign His administration began in the midst of political discontent and a financial crisis, but public order was maintained, and fiscal reforms were initiated, averting national bankruptcy Although complete economic recovery was not achieved, Pellegrini—aided by the railroad and the plow—did much to alleviate the situation In 1892 he was succeeded by Luis Sáenz Peña.

Pelletier, Pierre Joseph (pyĕr′ zhōzĕf′ pĕlutyā′), 1788–1842, French chemist He was codiscoverer with J B Caventou of quinine, strychnine, brucine, and other alkaloids

Pellico, Silvio (sēl′vyō pĕl′lēkō), 1789–1854, Italian dramatic poet He knew many literary people of his day, including Byron, Madame de Stael, and Schlegel His principal dramatic work is *Francesca da Rimini* (1815, Eng tr , 1856) Imprisoned by the Austrians as a Carbonarist, he wrote an account of his prison life, *Le mie prigioni* (1832, Eng tr , *My Prisons*, 1833) The book is excellent in style, full of emotion, and shows a fine gift of analysis His lyrics are mediocre

Pelly, river of S central Yukon, rising W of the Mackenzie Mts and flowing 330 mi generally west-northwest to join the Lewes at Fort Selkirk and form the Yukon The Pelly receives the Ross and Macmillan rivers It was discovered (1840) by Robert Campbell, of the Hudson's Bay Company

Pelonite (pē′lunīt), obscure epithet of two of David's mighty men Comparison with the parallel passages suggests that it stands for Gilonite (see GILOH) in 1 Chron 11 36 and for Paltite (see BETH-PALET) in 1 Chron 11 27, 27 10

Pelopidas (pĭlŏ′pĭdus), d 364 B C , Theban general When the Spartans seized the citadel of Thebes (382 B C), he fled to Athens and prepared the coup which recovered the city (379 B C) He fostered and commanded the Sacred Band, an elite corps which sparked the Theban victories, e g , at Tegyra (375 B C) and Leuctra (371 B C) Under Epaminondas he joined in the invasion (370–369 B C) of the Peloponnesus On an expedition into Macedonia (368 B C) he was captured by the Thessalian Alexander of Pherae, but Epaminondas rescued him Pelopidas went the next year to Persia as ambassador to Artaxerxes He was killed at the hour of victory in a battle with the Thessalians at Cynoscephalae Plutarch wrote his life

Peloponnesian League see SPARTA

Peloponnesian War (pĕl″upunē′zhun, -shŭn), 431–404 B C , decisive struggle in ancient Greece between Athens and Sparta It ruined Athens The rivalry between Athens and Sparta was of long standing, in spite of well-differentiated spheres of interest The Athenian empire was a maritime domain (see DELIAN LEAGUE) consisting of the Aegean, the shores of Chalcidice, Gallipoli, Byzantium, and many Black Sea colonies, for grain Athens was dependent on Thrace and the Black Sea Sparta had a land empire Its center was the Peloponnesus, but since Corinth and Thebes were Spartan allies, much of Greece was under its control Most Greek cities, aside from monolithic Sparta, had for years seen vigorous struggles between oligarchic and democratic parties, and Athens under Pericles (from 445 B C) had become a model of Greek democracy, with a regular foreign policy of intervention wherever possible to help local democrats, the Spartans favored oligarchies. As a result most cities, including Athens, had pro-Spartan minorities when the democrats had power and pro-Athenian minorities otherwise There was then nothing to resemble modern concepts of national loyalty or treason. The two empires were unstable at best, for Sparta and Athens were equally ruthless, governing their dependencies wholly for profit and with cold-blooded brutality, hence the

subject cities were always ready for revolt. A basic military fact was this: well-walled Athens could be beaten only by a fleet, and Sparta could be taken only by full-scale invasion. When Sparta did form a navy, much of the action naturally took place in the Bosporus and the Dardanelles, vital to the grain route. At the start, however, Athens had no land army and Sparta no navy, still, the great Delian treasury at Athens meant a real advantage, and throughout the war a consciousness of weakness led Sparta to repeated efforts for peace. The war began after sharp contests between Athens and Corinth over Corcyra (433) and Potidaea (432). The first important action was the initial invasion of Attica by a Spartan army (431), which became for years an annual event of the fighting season. Pericles brought the rural population within the walls, which included a passage to the harbor at Piraeus. The Athenian fleet began raids, reduced rebellious Potidaea (430 or 429), won victories off Naupactus (429), and suppressed a revolt in Lesbos (428). Meanwhile plague (perhaps bubonic) wiped out probably a quarter of the population of Athens (430–428), and Pericles died. His successor was CLEON. Sparta victoriously took the long-besieged Plataea, an Athenian ally, but suffered a real defeat when (425) Athens established a base under Sparta's nose at Pylos and captured Sphacteria island with an important Spartan contingent. Sparta suggested peace and was refused. The Spartan leader Brasidas now brilliantly surprised Athens with a campaign in NE Greece, taking (424) Athenian cities, including Olynthus and Amphipolis. Fighting went on over these even after an armistice (423) and ended in a decisive Spartan victory at Amphipolis, in which Brasidas and Cleon were both killed (422). The new Athenian leader, NICIAS, now arranged a peace (421), despite its terms, it actually froze the situation. At Athens the respite saw the rise of the brilliant demagog ALCIBIADES. He helped in a futile revolt of Spartan allies that ended at MANTINEA (418), he also led (416) the sack of neutral MELOS. In 416 an embassy from Segesta, Sicily, came to ask Athenian help against its enemy city, Selinus. As Selinus was an ally of powerful Syracuse, the debate at Athens was on the question whether Athens should attack Syracuse. The proponents, led by Alcibiades and dazzled by the prospect of an unexampled imperial acquisition, won. In this, the greatest expeditionary force a Greek city had ever assembled, Alcibiades and Nicias both had commands (415), but before the attack on Syracuse had begun, Alcibiades was recalled to Athens to face a charge of sacrilege. He fled to Sparta, at his advice the Spartans set up a permanent base at Decelea in Attica and sent a military expert, Gylippus, to Syracuse. The incompetent Nicias lost his chance to surprise Syracuse, had to have large reinforcements, and after two years was himself overwhelmed, his force was wiped out (413). For Athens the loss of men and matériel was irretrievable. All Greece knew this, and soon Persia was financing a Spartan fleet. Alcibiades sailed it across the Aegean, and there was a general revolt of Athenian dependencies (412). At Athens the oligarchs managed a futile coup (411), and Alcibiades, who had quit the Spartans, received an Athenian command (410). The Spartans had been hammering at the straits of the Hellespont and had been beaten off Abydos (411), now Alcibiades destroyed their fleet at Cyzicus (410). Sparta sought a truce, but in vain. Alcibiades won another victory or two for Athens. But the able new Spartan admiral, LYSANDER, built (407) a fleet with money from the Persian Cyrus the Younger and won an engagement off Notium. This was used by the enemies of Alcibiades to drive him from Athens for good (407 or 406). The Athenians won one more victory (ARGINUSAE, 406) and spoiled it by declining an offer of peace. The next year Lysander took a fleet to the Dardanelles and, profiting by the overconfidence of CONON, wiped out the Athenian navy (at AEGOSPOTAMOS, 405). Master of the seas, Lysander sailed to the Piraeus, there was an army of Spartan allies on the land side, and after eight months starving Athens surrendered (404 B.C.). Corinth and Thebes wished to destroy Athens, but the Spartans refused. Lysander installed an oligarchic government (the Thirty Tyrants). Athens was never again so important a political factor as before. For about 30 years Sparta was the real ruler of Greece. The primary source for the Peloponnesian War (to 411 B.C.) is THUCYDIDES, Xenophon's *Hellenica* is an inferior sequel. See also G. W. Henderson, *The Great War between Athens and Sparta* (1926), G. B. Grundy, *Thucydides and the History of His Age* (2d ed., 1948).

Peloponnesus (pĕl'ŭpŭnē'sŭs) or **Morea** (mōrē'ŭ), southernmost region of continental Greece. The name Morea was used from the Middle Ages until recently, when the classic Greek name was restored. The Peloponnesus is a peninsula extending c. 140 mi. from north to south and from east to west. It is linked with central Greece by a narrow land strip (see CORINTH, ISTHMUS OF), and it is washed by the Aegean Sea on the east and southeast, by the Ionian Sea on the southwest and west, and by the gulfs of Patras and Corinth on the north. Its deeply indented southern coast terminates in Cape MATAPAN. The country is largely mountainous, the Eurotas, the Alpheus, and the Peneus are the chief rivers. Predominantly agricultural and pastoral, the Peloponnesus produces currants, grapes, fruit, tobacco, and olives, but it lacks wheat crops and other grains. Sheep and goat raising, sericulture, and fishing are among the main sources of livelihood. There are deposits of pyrite, manganese, and lignite, but industries are little developed. The port cities of Patras, Corinth, Kalamata, and Nauplia are the chief modern centers of the Peloponnesus. The chief ancient divisions of the Peloponnesus were ELIS, ACHAEA, ARGOLIS, and the city-state of CORINTH in the north, ARCADIA in the center, and LACEDAEMONIA (comprising MESSENIA and LACONIA) in the south. SPARTA, Corinth, ARGOS, and MEGALOPOLIS were among its chief cities in ancient times. Except for the ACHAEANS in the northwest, the DORIANS predominated in the peninsula in historic times. At the time of the Peloponnesian War (5th cent. B.C.) the entire peninsula except Achaea and Argos was dominated by Sparta. Spartan hegemony, which after the defeat of Athens extended over all Greece, was broken in the 3d cent. by EPAMINONDAS of Thebes, who thus prepared the establishment of Macedonian supremacy over the Peloponnesus by Philip II of Macedon. The second ACHAEAN LEAGUE, unable to shake off the Macedonian yoke, was ended in 146 B.C. by the Roman conquest of the Peloponnesus. Under Roman and Byzantine rule the Peloponnesus was reduced to provincial status. When, in 1204, the leaders of the Fourth Crusade set up the Latin Empire of Constantinople (see CONSTANTINOPLE, LATIN EMPIRE OF), the French VILLEHARDOUIN family received the principality of Achaia or Achaea (i.e., the Peloponnesus) as fief, except for several ports, which passed to Venice. A French feudal state was created and went through a period of great prosperity and chivalrous culture under the Villehardouin princes. Their dynasty survived the fall (1261) of the Latin Empire to the Byzantines, but after the death (1278) of William of Villehardouin the principality passed first to the Angevin dynasty of Naples (by marriage), later to various nobles, and in 1383 to a body of Navarrese soldier-adventurers. Meanwhile the Byzantine Greeks were gradually recovering a good part of the peninsula, and in 1432 their control was complete. Their triumph, however, was short-lived, for by 1460 Sultan Mohammed II had conquered the peninsula and annexed it to the Ottoman Empire. In the Turko-Venetian Wars from the 15th cent. until the Treaty of Passarowitz (1718), Venice held parts of Morea at various times and the entire peninsula from 1687 to 1715. Many castles remain to show the unique mixture of French feudal culture and Hellenistic civilization that flourished in the Peloponnesus in the 13th cent. Under Turkish rule the region fell into a decline from which it has not recovered.

Pelops (pē'lŏps), in Greek myth, son of TANTALUS. He was served up by his father at dinner for the gods. Only DEMETER ate of him, but the shoulder she had eaten she replaced by an ivory one after Hermes reassembled Pelops and restored him to life. He won Hippodamia's hand when he defeated her father in a race, having bribed her father's charioteer to wreck the chariot. After winning he would not pay the charioteer's reward, but drowned him instead. Dying, the charioteer cursed Pelops and his seed, hence the misfortunes of Pelops' house, notably of ATREUS and THYESTES. The Peloponnesus was named for Pelops.

pelota (pəlō'tə), name for several Spanish ball games which originated in the Basque Provs., but more particularly a game which is commonly known as jai alai (hī' lī'). Jai alai is played on a court having two parallel walls and a connecting wall perpendicular to them. Jai-alai courts vary in dimensions, but a pass line, parallel to the front and back walls divides the court in half, and a fault line is always marked off halfway between the front wall and the pass line. The hard ball (made of rubber, covered with goat skin, and 2 in. in diameter) must be hit against the front wall with the *cesta*—a long, narrow, and curved wicker basket which is attached to the player's arm—and must bounce between the fault and pass lines on the service. The perpendicular side wall, usually marked off by equally spaced lines to aid the player's judgment, and the back wall are in play. The object is to hurl the ball out of the reach of the opponent so that after it bounces once it cannot be returned to the front wall. Jai alai is one of the fastest of all games. It is scored on the same general principles as handball, and in singles matches the winning score is usually 6 or 7 points, while in doubles matches it may be as high as 25. Wire netting is frequently fixed along the top of the court to protect spectators. Jai alai is very popular in Spain and in Latin America and is known by several names.

Pelotas (pəlō'təsh), city (pop. 61,985), S Rio Grande do Sul state, SE Brazil, a port on a lagoon 88W of Pôrto Alegre. It is a leading meat-packing center, with a large export trade. There are professional and technical schools and a Jesuit college. The city was founded in 1789.

Peltier, Leslie Copus (pĕltēr'), 1900–, American amateur astronomer, b. Delphos, Ohio. He is noted for his discoveries of comets, some of which bear his name, and of other astronomical bodies seen from his observatory with telescopes lent him by Princeton and Harvard universities. In 1933 he was the first to see the outburst of Nova Ophiuchi (first detected in the 17th cent.), and in 1936 he observed Nova Lacerta.

Pelusium (pĭlōō'shēŭm), ancient city of Egypt, on the easternmost branch of the Nile (long since silted up) and c. 20 mi. E of modern Port Said. Here supposedly Sennacherib's Assyrians were struck by a pestilence, and Cambyses' Persians overthrew Psamtik III (525 B.C.). It is reputedly the birthplace of Ptolemy the astronomer. The present ruins, wholly from the Roman period, consist of low mounds extending east-west. It is mentioned in the Bible under the name Sin. Ezek. 30:15,16.

Pelvoux (pĕlvōō'), Alpine group, in Dauphiné, SE France, culminating in the BARRE DES ÉCRINS.

Pemaquid (pē'mukwĭd), peninsula in Bristol town, S Maine, S of Damariscotta. Pemaquid Point has a lighthouse, and Pemaquid Beach has a reproduction of the tower of Fort William Henry (the fort built here by Sir William Phips in 1692).

Pemba (pĕm'bŭ), island (380 sq. mi., pop. c. 100,000), off E Africa, in the Indian Ocean. It was formerly a notorious slave market, and it now has a large trade in cloves. It is part of Zanzibar protectorate.

Pemberton, John Clifford, 1814–81, Confederate general, b. Philadelphia, grad. West Point, 1837. He served in the Seminole and Mexican wars and at various frontier posts. He resigned from the U.S. army in April, 1861, and in June became a Confederate brigadier general. Pemberton was made a lieutenant general in Oct., 1862, and was assigned to command the region about Vicksburg. In the VICKSBURG CAMPAIGN, Grant's tactics were successful against his defense. Pemberton surrendered on July 4, 1863. After his exchange, he resigned his lieutenant generalcy (May, 1864) and served as a colonel of ordnance for the rest of the war. See biography by J. C. Pemberton (1942).

Pemberville, village (pop. 1,636), NW Ohio, S of Toledo and on the Portage river, settled 1834, inc. 1876.

Pembina (pĕm'bēnu), city (pop. 703), extreme NE N. Dak., at the confluence of the Pembina and Red rivers, a port of entry near the Canadian boundary, inc. 1885. There was a trading post here in 1797, and settlers arrived as early as 1812, the first permanent settlement in the state was made here in 1819. Great buffalo hunts were organized from the post, but as the fur trade declined and settlers established farms in the Red River valley with the coming of the railroad, Pembina lost its early importance.

Pembroke, Aymer de Valence, earl of (pĕm'brōōk), d. 1324, English nobleman, nephew of Aymer of Valence, bishop of Winchester. He succeeded his father, William, as earl of Pembroke in 1296. Edward I made him (1306) guardian of Scotland, but he was unable to stop the advance of Robert the Bruce. Under Edward II he was one of the lords ordainers, who tried to limit the king's power, but was disgusted by the murder of Piers Gaveston, the king's favorite, by treacherous nobles. In vain he supported Edward II in the defeat of the English at Bannockburn (1314). By 1318 he had organized a moderate royalist group of barons which mediated successfully between king and barons until the advent (1321) of Hugh Despenser and his son as the king's favorites. He died suddenly on a diplomatic mission to France.

Pembroke, Mary Herbert, countess of, 1561–1621; sister of Sir Philip Sidney. His *Arcadia* was dedicated to her. She was a patron of a number of poets including Jonson, Spenser, and Daniel, and she herself wrote one volume of verse, *Antonius* (1592). William Browne's famous epitaph, "Underneath this sable hearse," was written for her.

Pembroke, Richard de Clare, 2d **earl of,** d. 1176, English nobleman, also known as Richard Strongbow. Having wasted his inheritance, he went (1170) to Ireland at the request of the hard-pressed DERMOT MCMURROUGH, king of Leinster, whose daughter Strongbow married. The earl subdued much of E Ireland, including Dublin, in victories over Rory O'CONNOR, king of Connaught. The wary Henry II, although he had given permission for the earl's expedition, visited him in 1171 to claim the rich coastal cities and to receive Strongbow's homage for the fief of the interior of Leinster. The whole was returned to the earl's government in 1174 after he had helped Henry II in Normandy (1173), but Strongbow survived only two years more of almost continuous fighting to retain his holdings against the hostile Irish. He was badly defeated (1174) at Thurles.

Pembroke, William Herbert, 3d **earl of,** 1580–1630, English patron of letters. Son of Mary, countess of

Pembroke, and nephew of Sir Philip Sidney, he was tutored by Samuel Daniel, settled (c 1598) in London, and succeeded his father, Henry, 2d earl of Pembroke (in the Herbert line), in 1601 An influential courtier at Elizabeth's court and at that of James I, he has been one of those suggested the "Mr W H" to whom the sonnets of Shakspere were dedicated (1609) by their publisher, and his mistress, Mary Fitton, is thought by some to be the Dark Lady of the sonnets In 1623 Shakspere's works in the First Folio edition were dedicated to him and his brother by name Pembroke furthered the exploration and colonization of America, served as lord chamberlain of the royal household (1615–25) and lord steward (1626–30) Pembroke College, Oxford, was named (1624) in his honor when he was chancellor of Oxford

Pembroke, William Marshal, 1st **earl of,** d 1219, English nobleman He was (1170–83) one of those in charge of Prince Henry, the heir apparent of Henry II, and he went on crusade for the prince In the family quarrels of 1188 he served Henry II Upon the accession (1189) of Richard I, Marshal married Isabella, daughter of Richard de Clare, earl of Pembroke and took her titles, thereby becoming 1st earl of Pembroke in the Marshal line He supported Prince John against William of Longchamps, but later aided (1193) King Richard against John He had a reputation for valor and for integrity Elected regent for young HENRY III by the barons in 1216, Marshal successfully waged war against the invading Louis (later Louis VIII) of France, and by a firm policy toward recalcitrant barons he secured a comparatively stable kingdom See Sidney Painter, *William Marshal* (1933)

Pembroke, county, Wales see PEMBROKESHIRE.

Pembroke (pĕm'brōk), town (pop 11,159), S Ont , WNW of Ottawa and on the Ottawa river where it widens to form Lake Allumette It is a lumbering and machine-making center and is the gateway to Algonquin Provincial Park

Pembroke (pĕm'brōk) **1** City (pop 1,039), E Ga , W of Savannah **2** Town (pop 1,029), SE Maine, NE of Machias, settled 1770, inc 1832 It packs sardines and blueberries **3** Town (pop 1,718), SE Mass , SE of Boston, settled 1650, set off from Duxbury 1712 **4** Town (pop 2 769), S N H SE of Concord, inc 1759 It includes the villages Pembroke, near the Merrimack, and Suncook, on the Suncook river, which enters the Merrimack here The town was granted in 1727 to veterans of Indian wars and their heirs

Pembroke (pĕm'brōōk), municipal borough (pop 12,009), county town of Pembrokeshire, Wales, on a creek flowing into the bay of Milford Haven Part of the 13th-century town walls remain The ruins of Pembroke Castle (11th cent) cover 4 acres A natural subterranean passage beneath the castle to the harbor is called the Wogan Henry VII was born in Pembroke

Pembroke College see BROWN UNIVERSITY, CAMBRIDGE UNIVERSITY, OXFORD UNIVERSITY

Pembrokeshire (pĕm'brōōk-shĭr)[or **Pembroke,** mar- itime county (614 sq mi , 1931 pop 87,206, 1948 estimated pop 86,108), SW Wales The county town is Pembroke The coast line is severe and greatly indented, as at St Bride's Bay and Milford Haven The terrain is a succession of rolling hills and fertile valleys The principal occupations are farming and cattle grazing There are deposits of coal, lead, zinc, and iron Pembrokeshire is rich in megalithic remains The region was harried by the Norsemen in the Middle Ages and conquered by the Normans in the 11th cent In the 12th cent the district was planted with Flemish settlers Modern Pembrokeshire is one of the most Anglicized of the Welsh counties, despite the remoteness of its location Chief towns are Pembroke, Newport, Tenby, and Haverfordwest The cathedral at SAINT DAVID'S is one of the major ecclesiastical monuments of Wales

pemmican (pĕ'mĭkun), a travel food of the North American Indian. Slices of lean venison or buffalo meat were sun dried, pounded to a paste, and packed with melted fat in rawhide bags Dried currants were sometimes included in the paste Pacific coast Indians used a similar fish compound An adaptation manufactured from beef, suet, and usually raisins and sugar is still a ration of exploring, hunting, and army expeditions Although the nutritive value and palatability are debated, the food is valued for its concentrated form and keeping qualities

pen, pointed writing implement employing ink or some similar material Reeds frayed at the end or slit (the calamus) were used in antiquity, similar pens, often of bamboo, are still employed in the Orient In ancient Greece and Rome much writing was done by scratching the wax coating of a tablet with a stylus or style, a pointed implement whose blunt end was used to make erasures by smoothing the wax Quills were introduced early in the Middle Ages. They were plucked from live birds (usually geese), the quills were treated by heat and shaped with a penknife, and they required frequent sharpening Although metal pens had been known to the Romans and a few had been made in Europe in the 18th cent., a cheap, efficient slip-in nib did not come into common use until after 1828, when Josiah Mason improved existing models and began large-scale production at Birmingham, England. The fountain pen, which feeds ink to the pen point from a reservoir, was first successfully produced on a commercial scale in the 1880s. The stylographic pen is a fountain pen with a pencillike point. The ball-point pen, introduced c 1944, is tipped with a ball bearing which rolls a gelatinous instant-drying ink onto the paper

Peñalara, Pico de (pē'kō dā pānyälä'ra), peak, c 7,900 ft high, central Spain, highest of the Sierra de GUADARRAMA

Penal Laws (pē'nul), term generally applied to the body of discriminatory and oppressive legislation directed against the Catholics of England and Ireland This series of laws—the first of them dating from the time of Henry VIII—was inspired as much by political fear and economic considerations as by religious hatred The Penal Laws against Catholics grew from those acts which established the royal supremacy in the Church of England (see ENGLAND, CHURCH OF) in the reigns of Henry VIII and Elizabeth Under Henry VIII and Edward VI civil disabilities were imposed on those who remained in communion with the Holy See and so denied the king's spiritual headship Elizabeth made it impossible for Catholics to hold civil offices and imposed severe penalties upon Catholics who persisted in recognizing papal authority Fines and prison sentences were prescribed for all who did not attend Anglican services, and the celebration of the Mass was forbidden under severe penalties In 1585 Jesuits and seminary priests were expelled from England under penalty of treason, and harboring or aiding priests was declared a felony Many Catholics were executed for treason (e g , Edmund CAMPION) The strictness with which these recusancy laws were administered varied The excommunication of Elizabeth (1570) by Pope PIUS V and the Catholic plots of MARY QUEEN OF SCOTS and PHILIP II of Spain roused the government and public opinion to an intensely anti-Catholic pitch Under James I the GUNPOWDER PLOT caused added severity, but the official attitude softened after 1618, as James sought to promote peace in Europe by friendly relations with Spain Charles I's wife, Henrietta Maria, was a Catholic, and her position made some open disregard of the restrictive laws easy The Puritan faction was infuriated and suspected the king of the intention to restore Catholicism In the PURITAN REVOLUTION the Catholics sided with the king, and Cromwell punished them, along with royalist Anglicans, by wide confiscations, although few were executed After the Restoration the attempts of Charles II to place Catholics in office were met with the Test Act (1673) requiring officeholders to take various oaths of loyalty and to receive the sacrament of the state Church Exclusion of Catholics from office now was identified with the policy of limiting the power of the crown and was the basic consideration in the formation of the Whig party, which was helped by the excitement growing out of the alleged Popish Plot manufactured by Titus OATES (1678) The anti-Catholic movement culminated in the Glorious Revolution of 1688 against the Catholic James II, and the Bill of Rights (1689) and the Act of SETTLEMENT (1701) excluded the Catholic branch of the house of Stuart from the throne The JACOBITES in their attempt to restore this branch kept the politico-religious issue of Catholicism alive until 1745 By this time the relatively small number of Catholics in Scotland and England made the anti-Catholic laws there a minor issue In 1715 the number had dropped to 30,000 in England and 40,000 in Scotland In Ireland, however, the population was predominantly Catholic On them the Penal Laws in the 18th cent were extremely oppressive Such laws had existed in Ireland, as in Scotland and England, from Elizabeth's time By 1695 nearly all the good land of Ireland had been taken over by Englishmen, as a result of "plantations" under James I, Cromwell, and William III (see IRISH LAND QUESTION) In that year the Protestant Irish Parliament made the Penal Laws harsher The object was to protect the English in the possession of their land by changing conditions of inheritance and sale of land and by excluding Catholics from public life, so that neither lawyers nor Parliament could alter the existing arrangements. Catholics could neither teach their children nor send them abroad, persons of property could not enter into mixed marriages, Catholic property was inherited equally among the sons unless one was a Protestant, in which case he received all, a Catholic could not inherit property if there was any Protestant heir, a Catholic could not possess arms or a horse worth more than £5, Catholics could not hold leases for more than 31 years and could not make a profit greater than a third of their rent. There might be only 1,100 priests in Ireland, and all were registered. No priest could be educated in Ireland, and Catholics could not vote (1727), hold public office, hold seats in the Irish Parliament (1692), or practice law Cases against Catholics were tried without juries, and bounties were given to informers against them. Under these restrictions many able Irishmen left the country, and regard for the law declined, with even Protestants assisting Catholic friends in evasion. In the latter half of the 18th cent there was a general mitigation of the treatment of Catholics in the British Isles, and the long process of CATHOLIC EMANCIPATION began See E A Gasquet, *A Short History of the Catholic Church in England* (1903), Brian Magee, *The English Recusants* (1938).

penance (pĕ'nuns), SACRAMENT of the Roman Catholic Church By it the penitent (the person receiving the sacrament) is absolved of his sins by his confessor (the person hearing the confession and conferring the sacrament) Every Catholic is required to confess all his mortal (serious) sins before receiving communion and at least once a year He need confess only the sins he has committed since baptism or since his last confession. To make the sacrament valid the confessor must be a priest or a bishop and the penitent must have true contrition for his sins and a firm purpose of amendment Sins inadvertently forgotten after a careful examination of conscience are included in the ABSOLUTION The confessor before giving absolution may admonish the sinner, and he inflicts a penance (a punishment for guilt, usually consisting of some prayers) The penitent is required to make restitution for injuries to others According to a canon of the Council of Trent, Jesus instituted this sacrament when he first appeared to the disciples after the resurrection John 20 19-23 In the Eastern churches confession is required before communion, but there has been no development of moral theology or of casuistry comparable to that of the West The priest acts in the sacrament only as an instrument of God, who forgives sins by the sacrament

Penang (punăng'), settlement (388 sq mi , pop 446,422), NW Malaya, on the Straits of Malacca It consists of Penang island (108 sq mi) and Province Wellesley (280 sq mi), a strip of territory on the Malay Peninsula adjacent to Penang island The island produces rubber, coconuts, and tin, Province Wellesley has tin-smelting works, but is largely agricultural Well over half the people in the settlement are Chinese, Indians are numerous, less than a third are Malays Occupation of Penang island for the British by Francis Light was permitted (1786) by the sultan of KEDAH, after an unsuccessful attempt to retake the island (1791), the sultan ceded Penang and Province Wellesley in return for an annual payment (1800) In 1826 the administration of Penang was combined with those of Singapore and Malacca (see STRAITS SETTLEMENTS) The early history of Penang under the British was one of rapid growth in size and commercial importance, it was soon overshadowed, however, by Singapore After the dissolution of the Straits Settlements, Penang became (1946) part of the union, later the federation (1948), of Malaya

Pen Argyl (pĕn' är'jĭl), borough (pop 4,059), E Pa , near the Delaware N of Easton, inc 1882 It has slate quarries and textile factories

Penarth (pĕnärth'), urban district (1931 pop 17,719, 1943 estimated pop 16,080), Glamorganshire, Wales Suburb of Cardiff and seaside resort, it also has cement works and docks (part of the port of Cardiff), from which great quantities of coal are shipped

Penbrook, borough (pop 3,627), SE Pa , near Harrisburg

pencil. From prehistoric times lumps of colored earth or chalk were used as markers The Egyptians ruled lines with metallic lead, as did medieval monks The so-called lead pencil —a rod of graphite encased in wood—came into use in the 16th cent At the end of the 18th cent clay was combined with pulverized graphite and served as a binder and to secure different degrees of hardness —the more clay, the harder the pencil Today the mixture is forced through dies, cut to the required length, and kiln-fired The rods are laid in grooves of a thin board, a similar board is placed over them, and the wood is shaped into pencils of round or hexagonal cross section Pencils are also manufactured with cores of colored pigments mixed with clay and wax and of other materials

Penck, Albrecht (äl'brĕkht pĕngk'), 1858–1945, German geographer and geologist He was professor at the Univ of Vienna (1885-1906) and at the Univ of Berlin (1906–26) and was director (1906-22) of the institutes of oceanography and of geography, Berlin He is noted for his study of glaciation (especially in the Alps), for his pioneer classification of land forms, and for his work in the development of modern regional geography. He advocated before the International Geographical Congress a world map on a scale of 1 1,000,000 (see MAP) Outstanding among his many works is *Morphologie der Erdoberfläche* [morphology of the earth's surface] (1894, rev ed , 1928).

Penez, Georg (gā'ôrk pĕnts'), c.1500–1550, German painter and engraver of the Nuremberg school He probably studied with Dürer in Nuremberg. He was banished in 1525 but soon returned. In 1539 he visited Italy, where he is thought to have worked

with Raimondi. Of his paintings the best are portraits, such as those of Marshal Schirmer, Erhard Schwetzer and his wife, and *Young Man* (Vienna). His *Adoration of the Magi* and *St Jerome* are also well known As an engraver he ranks among the best of the German "Little Masters" Notable prints include *Six Triumphs of Petrarch;* portrait of John Frederick I, elector of Saxony, *Life of Christ,* 26 plates See W B Scott, *The Little Masters* (1879).

Penda, d 655, king of Mercia (632–55) His claim to descent from Woden through Offa of Angel (probably Angeln in Schleswig) is the only one to connect an English dynasty with its continental ancestors In 629 he fought the king of Wessex for lands along the Severn, but was still probably simply a noble of the Mercian royal house when he allied himself with Cadwalla or Cadwallon of Wales, defeated Edwin of Northumbria, and made himself king of Mercia A great fighting king, he was the central figure of English history for nearly a generation thereafter He defeated and slew (642?) Oswald of Northumbria and extended his power over Wessex (645) and East Anglia (650) His Greater Mercia included all the Midlands However, he still had an enemy in the new king of Northumbria, Oswy, and in a battle to destroy him the powerful Penda was himself killed Penda had remained heathen, but at the time of his son Peada's marriage had consented to that son's Christian baptism Eight of Penda's descendants ruled Mercia, beginning with his son Wulfhere

Pend d'Oreille Indians (pŏn″durā′) [Fr ,=earring], tribe of North American Indians of the Salishan linguistic stock This name is frequently given to the Kalispel Indians, but a few authorities separate the Kalispel from the "true" Pend d'Oreille The name is derived from their custom of wearing shell earrings In the early 19th cent the Kalispel or Pend d'Oreille occupied NW Montana, N Idaho, and NE Washington They then numbered some 1,600 Their culture was like that of the Spokan and other tribes of the Plateau area Today the Pend d'Oreille live on reservations in Montana and Washington In Washington they number some 100, in Montana they live with the Flathead The Pend d'Oreille are also known as the Earring People, the Ear Drops, and even the Hanging Ears

pendentive, in architecture, a constructive device permitting the placing of a circular dome over a square room or an elliptical dome over a rectangular room The pendentives, which are triangular segments of a sphere, serve to fill the four corners at the upper part of such a room They taper to points at the bottom and spread at the top to establish the continuous circular or elliptical base needed for the dome In masonry the pendentives thus receive the weight of the dome, concentrating it at the four corners where it can be received by the piers beneath Prior to the pendentive's development, the devices of corbeling or of squinches in the corners of a room were used The first attempts at pendentives were made by the Romans (3d cent A D), e g, the temple of Minerva Medica Greater perfection was shown in early Christian buildings in Ravenna, Italy, but full achievement of the form was reached only by the Byzantines in Hagia Sophia at Constantinople (6th cent) Pendentives appear in French and Italian Romanesque churches and are an invariable feature of the domes of the churches of the Renaissance

Pender, Harold, 1879–, American electrical engineer, b Tarboro, N C , grad Johns Hopkins (B A , 1898) He was dean of the school of electrical engineering at the Univ of Pennsylvania from 1923 In 1903 at the Sorbonne, Paris, he demonstrated the existence of a magnetic field around a moving electrically charged body His works include *Electricity and Magnetism for Engineers* (1918–19), *Direct Current Machinery* (1922), and, with S R Warren, *Electric Circuits and Fields* (1943) He was an editor of several editions of a handbook for electrical engineers.

Pender, village (pop 1,135), co seat of Thurston co , NE Nebr , near the Missouri NNW of Omaha, inc 1886

Pendergast, Thomas Joseph, 1873–1945, American political boss, b St Joseph, Mo After holding (1899–1910) minor political offices in Kansas City, Mo , he became the acknowledged Democratic leader in city and state In 1934 he supported the election of Harry S Truman to the U S Senate He was in 1939 convicted of income-tax evasions Released (1940) from Leavenworth, paroled on condition that he abstain from political activity for five years, he later faced sentence for criminal contempt of court, but the U.S Supreme Court reversed (1943) the decision against him under the statute of limitations See W B. Reddig, *Tom's Town* (1947), M M Milligan, *The Inside Story of the Pendergast Machine* (1948)

Pendleton, Edmund (pĕn′dəltun), 1721–1803, American Revolutionary patriot and Virginia jurist, b. Carolina co , Va. He began law practice in 1745 and in 1752 was elected to the Virginia house of burgesses, where, though a leading conservative, he became outstanding in the patriot cause. Pendleton was a member of the Virginia committee of correspondence, delegate to the First Continental Congress (1774), president of the Virginia committee of safety (1775), and president of the convention (1776) which adopted his resolution instructing Virginia delegates to the Continental Congress to propose independence from Britain After independence he was elected speaker of the new house of delegates With Thomas Jefferson and George Wythe he completed (1779) the revision of the state's laws and was president of the court of appeals (1779–89) and of the reorganized supreme court of appeals from 1789 till his death In 1788 he presided over the state convention which ratified the Federal Constitution and in his later years supported Jefferson's liberal policies See biography by R L Hilldrup (1939)

Pendleton, George Hunt, 1825–89, American political leader, b Cincinnati, Ohio, great-grandnephew of Edmund Pendleton Educated at Cincinnati College and abroad, he was admitted to the Ohio bar in 1847 and served (1854–56) in the state senate He was an anti-war Democrat in the House of Representatives (1857–65) and the vice presidential candidate on the unsuccessful Democratic ticket headed by Gen G B McClellan in the Civil War election of 1864 Pendleton advocated the so-called Ohio Idea—to pay in greenbacks those government bonds not specifying payment in specie (see GREENBACK), this stand doubtless cost him the Democratic presidential nomination in 1868 After his defeat by Rutherford B Hayes for the governorship of Ohio in 1869, he was president of the Kentucky Central RR until 1879, when he returned to Congress as U S Senator from Ohio He secured the adoption of legislation introducing competitive examinations in the CIVIL SERVICE For this and his support of other reform measures the Democratic party in Ohio denied him renomination, and in 1885 President Cleveland appointed him minister to Germany, which post he held till his death in Brussels, Belgium

Pendleton. 1 Residential town (pop 1,681) E central Ind , NE of Indianapolis, settled 1826 It is the seat of a state reformatory 2 City (pop 8,847), co seat of Umatilla co , NE Oregon, on the Umatilla river and SW of Walla Walla, Wash , founded 1869 on the old Oregon Trail, laid out 1870, inc 1880 It is a shipping center for a wheat-raising and sheep and cattle area, has flour and woolen mills, and manufactures saddles and harness Near by are Umatilla National Forest and the Umatilla Indian Reservation Indians from the reservation take part in the annual Pendleton Roundup in September An agricultural experiment station of Oregon State College and the Eastern Oregon State Hospital are here 3 Town (pop 1,278), NW S C , near the Seneca river, NW of Anderson, in a farm and livestock area, founded in the late 18th cent

Pend Oreille (pŏn″durā′), river, N Idaho, draining Pend Oreille Lake It flows W and NW into Washington and then into Canada, where it joins the Columbia near the International boundary It is also sometimes called part of the CLARK FORK

Pend Oreille Lake (pŏn″durā′), 65 mi long, N Idaho, largest lake in Idaho Fed by the Clark Fork and drained by the Pend Oreille river, the lake with its irregular shore line and the surrounding national forests is a place of beauty as well as a landmark in a farming, lumbering, and mining region

Pendragon, Uther, father of King Arthur see ARTHURIAN LEGEND

pendulum, a weight (bob) suspended from a fixed point so that it can vibrate in an arc determined by its momentum and the force of gravity The length of a pendulum is the distance from the point of suspension to the center of gravity of the bob Chance observation of a swinging church lamp led Galileo to find that a pendulum made every swing in the same time, a fact which he used in measuring time in his astronomical studies His experiments showed that the longer the pendulum, the longer is the time of its swing Christiaan Huygens determined the exact relation between the length of the pendulum and the time of vibration and in 1673 devised a practical means of making a pendulum control the speed with which a clock mechanism runs down after winding This impetus to clock-making resulted not only in the development of many types of clock, such as the "wag at the wall," the grandfather clock, and the banjo clock, but also in the application of pendulum control to other mechanisms Metal pendulums are lengthened by heat, to counteract the effect of temperature changes, compensation pendulums have been devised, many of them operating by the opposite expansion of different metals in compound (gridiron) rods Forces acting on the bob affect its swing Since gravity varies from place to place, the pendulum has been used to determine the shape and mass of the earth It measures the intensity of gravity In the seismograph (see SEISMOLOGY), a pendulum registers the direction of an earthquake In 1851 J. B L Foucault demonstrated the rotation of the earth by suspending in the Pantheon in Paris a 200-foot pendulum that traced its path in sand on the floor A pendulum made to swing in a circle, describing a cone, is called a conical pendulum. In the torsion pendulum the bob vibrates by twisting and untwisting, as in the balance wheel of a watch.

Penelope (punĕ′lupē), in Greek legend, queen of Ithaca She was the wife of Odysseus and the mother of Telemachus In the *Odyssey* she is pictured as a chaste and faithful wife When Odysseus was away, she was surrounded by suitors who tried to persuade her that he would never return She agreed to choose another husband when she finished weaving Laertes' shroud, but this was never done—for she unraveled by night what she wove by day At last her strategem was discovered, and the suitors were enraged She promised to marry the man who could bend the great bow of Odysseus None of the suitors could do this, but Odysseus, who had returned disguised as a beggar, bent the bow, then killed all the suitors

Penetanguishene (pĕn″ətăng″gwishēn, -gwishēn′), town (pop 4,521) S Ont , on Georgian Bay and NNW of Toronto Settled under the French regime, it still has a large French population It is a port with extensive lumber industries A provincial establishment for the criminal insane is here.

Peneus (pĭnē′us), river, 134 mi long, N Greece, in Thessaly It rises in the Pindus mts and flows generally E past Larissa and through the valley of TEMPE into the Aegean Sea It has also been known as the Salambria

Penfield, Edward, 1866–1925, American illustrator and painter, b Brooklyn, N Y , studied at the Art Students League of New York He was the originator in America of the colored poster, in which art he excelled From 1891 to 1901 he was art editor and illustrator for *Harper's Magazine* and *Harper's Weekly* His designs were forceful in their originality and humor He wrote *Holland Sketches* (1907) and *Spanish Sketches* (1911)

Penge (pĕnj), urban district (1931 pop 27,771, 1947 estimated pop 25,080), Kent, England, near Croydon It is a suburb of London

penguin (pĕng′gwĭn, pĕn′–), flightless swimming and diving bird with a white breast and gray or gray-blue back, found in the Southern Hemisphere from the antarctic region to the Galapagos Islands On land the birds usually walk upright, but some can travel faster over the ice and snow on their stomachs by using their wings and feet The wings are stiff, flattened, and unjointed When the bird swims, the wings are moved simultaneously by muscles attached to the enlarged shoulder blades The webbed feet are used only for stopping or steering in the water Small feathers cover the body, and when oiled they form a waterproof protection Most penguins feed on fish, but some eat mollusks and crustaceans Hordes of Cape or jackass penguins breed on Dassen Island, South Africa The blue penguin of Australia and New Zealand is the smallest penguin, and the emperor (3–4 ft) is the largest The emperor and the king penguins are antarctic birds which incubate their single egg on the top of the foot in a fold of skin

penicillin (pĕ″nĭsĭl′lĭn), antibiotic substance secreted by certain strains of the mold *Penicillium notatum* It was discovered by Sir Alexander FLEMING, and its antibacterial powers and nontoxicity to humans were established by 1941 through studies by Sir H W Florey, E B Chain, and others The value of the drug in the prophylactic and therapeutic treatment of war casualties was recognised, and production was begun in England and the United States The mold was originally grown in glass jars containing a nutrient fluid, the penicillin collecting on the surface This method proved too slow to meet the demands for the new drug Mold strains of greater productivity were developed, and in 1943 the fermentation (or submerged-culture) process was adopted Wood shavings impregnated with mold are placed in tall metal tanks and a nutrient fluid (usually corn-steep liquor) is introduced at the top The fluid filters down through the shavings, is collected at the bottom, and the penicillin is extracted from it When dried and purified, penicillin is a white crystalline powder The production and allocation of the drug were controlled by the War Production Board, which did not lift quota restrictions on civilian supplies until March, 1945 Penicillin has proved effective in treatment of streptococcal and staphylococcal infections resistant to the sulphonamides Gas gangrene, meningitis, pneumonia, gonorrhea, syphilis, and some forms of bacterial endocarditis are among the diseases which have been successfully treated with penicillin, several types of which, differing in all-over and specific antibiotic potency, are produced by the mold Though penicillin G has been synthesized in minute quantities, the precise molecular structure of penicillin is still unknown The introduction of penicillin spurred research and resulted in the discovery of other antibiotic substances

Peniel (pēnī′ŭl), variant of PENUEL 1.

Penikese Island: see ELIZABETH ISLANDS

Peninnah (pēnĭn′ə) [Heb.,=coral], wife of Elkanah. 1 Sam 1 2

Peninsular campaign, April–July, 1862, of the Civil War It was the attempt of the Union Army of the Potomac under Gen. G. B. McCLELLAN to capture

Richmond, Va , by way of the peninsula between the York and James rivers Early in April, 1862, McClellan had about 100,000 men at Fort Monroe Instead of trying to break through the Confederate line across the peninsula, he prepared to besiege Yorktown, the strongest point in the line Gen J E Johnston, the commanding Confederate, evacuated Yorktown (May 3) just as McClellan had completed his preparations An indecisive, though severely contested, rear-guard action was fought at Williamsburg (May 5) as the Confederates retired on Richmond The evacuation of Yorktown opened up the York river to the Union fleet, and on May 16 McClellan established his base at White House Landing (c 20 mi E of Richmond) on the Pamunkey river, which joins with the Matapony river to form the York Meanwhile, the Union advance into the interior forced the Confederates to abandon Norfolk (May 10), where they destroyed their formidable ironclad, the *Virginia* (see MONITOR AND MERRIMAC), thus opening up the James river Federal gunboats then controlled the James as far as Drewrys Bluff (9 mi S of Richmond), where Confederate batteries repulsed them on May 15 McClellan soon had his army straddled across the Chickahominy river near Richmond S P Heintzelman's 3d Corps and E D Keyes's 4th were on the S side, W B Franklin's 6th Corps, Fitz-John Porter's 5th, and E V Sumner's 2d, on the N Irvin McDowell's Army of the Rappahannock (formerly the 1st Corps), which had been left before Washington, was to march S from its position near Fredericksburg and unite with the right wing N of the Chickahominy McClellan would then move against the inferior forces of Johnston However, the brilliant campaign of T J (Stonewall) JACKSON in the Shenandoah Valley caused the diversion of McDowell's corps from the army threatening Richmond Late in May heavy rains swelled the Chickahominy so that communication between the two wings of McClellan's army became precarious On May 31 Johnston moved against the left wing (Keyes and Heintzelman), where the lines extended to Fair Oaks, a railroad station c 6 mi E of Richmond In the ensuing battle of Fair Oaks or Seven Pines (May 31–June 1, 1862), the Confederate attack, led by James Longstreet, was badly executed With the help of John Sedgwick's division of Sumner's corps, which managed to cross the river, the Union left wing held its ground Johnston, severely wounded on May 31, was succeeded on June 1 by Gen R E Lee, who withdrew the Army of Northern Virginia to Richmond Lee's subsequent offensive in the SEVEN DAYS BATTLES closed the campaign See K P Williams, *Lincoln Finds a General* (1949)

Peninsular War, 1808–14, fought by France against Great Britain, Portugal, and Spanish guerrillas in the Iberian Peninsula The conflict was precipitated when Portugal refused to comply with Napoleon's CONTINENTAL SYSTEM By a secret convention reached at Fontainebleau (Oct , 1807), Spain agreed to support France against Portugal, which was occupied by a French army under Andoche JUNOT (Nov , 1807), King JOHN VI and his family having fled to Brazil without resisting Napoleon now began a series of backhanded maneuvers to secure Spain for France French troops seized Pamplona and Barcelona (Feb , 1808), and on March 23 Marshal Joachim MURAT entered Madrid Meanwhile, a palace revolution (March 19) had deposed King CHARLES IV and his favorite, GODOY, and placed FERDINAND VII on the throne However, both Charles and Ferdinand were lured into French territory and forced to abdicate (May 5–6) An uprising in Madrid (May 2) was drowned in blood by Murat, and on June 15 Napoleon's brother Joseph BONAPARTE was proclaimed king of Spain The Spanish now rose in revolt throughout the country When the insurrectionists captured (July 23) a French force dispatched to seize Seville, King Joseph evacuated Madrid (Aug 1) and withdrew beyond the Ebro Another French force was repulsed by José de PALAFOX in his heroic defense of Saragossa (June–Aug) In Portugal, where revolt had also broken out, a British expeditionary force under Arthur Wellesley (later duke of WELLINGTON) landed in Aug , 1808, and defeated Junot at Vimeiro (Aug 21) Cut off from Joseph's army, Junot negotiated a convention at Cintra (Aug 30), surrendering Lisbon in return for repatriation of his troops by British ships With Sir John MOORE as commander in chief, the British now invaded Spain, thus beginning a long series of seesaw campaigns Napoleon hastened personally to Spain with more than 200,000 troops, stormed Madrid (Dec 3, 1808), had Marshal Lannes lay siege to Saragossa, and ordered Marshal Soult to pursue Moore, who had retreated into Galicia Soult was repulsed long enough at Coruña (Jan 16, 1809) to permit the British to embark Saragossa, which Palafox had held for two months at the cost of 50,000 lives, fell in Feb , 1809 In April, Wellesley arrived in Lisbon to take charge of the British and Portuguese forces there He drove the French out of Portugal, invaded Spain, and with the help of a Spanish army defeated the French under Joseph at Talavera (July 27–28) Driven back into Portugal by André MASSÉNA, whom he repulsed at Bussaco (Sept , 1810), he retired behind a strong fortified line centered at Torres Vedras Lacking supplies, Masséna again retreated into Spain (March–April, 1811), meanwhile Soult had marched N from Cádiz to join Masséna, but their junction was prevented by Wellington and William Carr BERESFORD at Fuentes de Oñoro and at Albuera (May, 1811) Early in 1812 Wellington attacked once more, and on July 22 he inflicted decisive defeat on the French under MARMONT at Salamanca He briefly occupied Madrid (Aug–Oct , 1812), but retreated to Ciudad Rodrigo when the French, who had had time to consolidate their armies, counterattacked from three directions Placed in command of all the allied forces in the peninsula, Wellington took the offensive in May, 1813, routed the French under Joseph Bonaparte and Marshal Jourdan at Vitoria (June 21), and pushed them back into France In October, Wellington invaded France He laid siege to Bayonne, heroically defended by Soult, and had reached Toulouse, when on April 12, 1814, news of Napoleon's abdication arrived, the Peninsular War was ended It had immeasurably raised Britain's military prestige and had contributed heavily to Napoleon's downfall The war marked the lowest point of decline and degradation for the Spanish Bourbon dynasty, but the spirit of the Spanish people asserted itself in fearless guerrilla warfare against the French oppressors In Latin America, the war served as detonator for the revolutions of the Spanish colonies, who were then beginning the struggle for independence The brutal impact of the war on the common people of Spain was the theme of a celebrated series of etchings by Francisco de GOYA There are histories of the Peninsular War by Robert Southey (3 vols , 1823–32), W F P Napier (1850), H R Clinton (3d ed , 1890), and C W C Oman (7 vols , 1902–30)

Penitentes (pĕnĭtĕn'tēz), secret lay order in the U S Southwest, particularly New Mexico, noted for flagellating rites in Holy Week It arose from the third order of the Franciscans and is sometimes called Los Hermanos Penitentes del Tercer Orden de Franciscanos Though condemned in 1889 by the Roman Catholic archbishop of Santa Fe, the Penitente customs still persist in many of the small villages of New Mexico The ceremony involves the carrying of heavy wooden crosses by penitents, who are beaten by heavy cord On Good Friday the rites culminate with a crucifixion The rites have been observed by very few outsiders See A C Henderson, *Brothers of Light* (1937).

penitential psalms see PSALMS

penmanship see HANDWRITING

Penn, John, 1729–95, lieutenant governor of Pennsylvania, b London A grandson of William Penn, he was the last proprietary official of the colony He was under the domination of the Penn family in his two administrations (1763–71, 1773–76) In his time Pennsylvania was torn by a bitter struggle between those who favored proprietary government and those who sought to end it A troubled career was capped by the intense dislike of most of his colonial subjects caused by his loyalty to England in the American Revolution He lost power in 1776

Penn, John, 1740?–1788, American Revolutionary patriot, signer of the Declaration of Independence, b Caroline co , Va Penn, a lawyer, moved (1774) to North Carolina and was (1776–80) a delegate to the Continental Congress

Penn, Thomas, 1702–75, colonial proprietor of Pennsylvania, b Bristol, England, son of William Penn Coming to Philadelphia, he managed (1732–41) the proprietary rights he inherited with his two brothers and thereafter remained in charge of the colony's business in England His letters to his governors are of historical significance

Penn, Sir William, 1621–70, British admiral He served in the Irish fleet in the service of Parliament and in 1651 assisted in the pursuit of the fleet of Prince RUPERT in the Mediterranean He commanded part of the fleet in the first war against the Dutch (see DUTCH WARS) and in 1654 was made commander in chief of the fleet which set out for the West Indies and captured the island of Jamaica (1655) The cause of Penn's arrest on his return to England has never been definitely established It probably had nothing to do with Penn's secret negotiations with the exiled king, who, when restored to the throne, knighted Penn (1660) and made him a commissioner of the navy, in this latter capacity he was associated with Samuel Pepys, who speaks of Penn with vituperation in his famous diary. Penn served as second in command to the duke of York (later James II) in the action of the fleet in 1665 and retired to shore duty when the duke was relieved of command Penn was the father of William Penn, the founder of Pennsylvania See Granville Penn, *Memorials ... of Sir William Penn* (1833).

Penn, William, 1644–1718, English Quaker, founder of Pennsylvania, b. London, England; son of Sir William Penn At Oxford, Penn showed religious scruples and was expelled (1662), he was then sent by his father to the Continent to overcome his penchant for Quakerism Though he spent some time at the French court, he continued to study theology and to search for religious truth It was in Ireland, while holding an office under the lord lieutenant of Ireland, that he became a staunch member of the Society of Friends He was imprisoned (1668) for writing a tract (*The Sandy Foundation Shaken*) against the doctrine of the Trinity, but, undaunted, he wrote *No Cross, No Crown* and *Innocency with Her Open Eyes* in the Tower He preached in England, the Netherlands, and Germany and wrote numerous tracts Penn argued ably for freedom of conscience and sought to create a haven in America for the Friends Becoming one of the trustees of West Jersey, he helped draw up a liberal charter for the Quakers settling there, and with several others he acquired East Jersey (see NEW JERSEY) In payment of a debt owed his father, he obtained (1681) from King Charles II a charter for Pennsylvania (named by the king) for the establishment of his "holy experiment," a colony where religious and political freedom could flourish After acquiring (1682) the Three Lower Counties-on-the-Delaware (present Delaware) from the duke of York (later James II), Penn came to his province in 1682 and laid out the city of Philadelphia He framed for his colony a liberal government He also established the friendly relations with the Indians that were to distinguish the early history of Pennsylvania Returning to England (1684) he asserted his boundary claims against Charles CALVERT, 3d Lord Baltimore Penn's friendship with the deposed James II led to his being accused of treason, and the crown took and held (1692–94) his colony Penn continued writing religious and political tracts and preached extensively Difficulties in Pennsylvania caused his return there for a short time (1699–1701) The actions of his steward led to a new imprisonment, and his last years were fraught with grief over the difficulties of his colony and troubles concerning his son WilliamPenn A stroke of apoplexy in 1712 removed him from active life See biographies by S G Fisher (1900), Bonamy Dobrée (1932), C E Vulliamy (1934), and W I Hull (1937), Arthur Pound, *The Penns of Pennsylvania and England* (1932), E C O Beatty, *William Penn as Social Philosopher* (1939)

Penn, borough (pop 1,081), Westmoreland co , SW Pa , SE of Pittsburgh, laid out 1859, inc 1865

Pennacook Indians (pĕ'nukŏk), group of North American Indian tribes of Algonquian linguistic stock Although of the Eastern Woodlands culture area, they depended to a large extent on sea food In the early 17th cent they occupied NE Massachusetts, SW New Hampshire, and SW Maine They then numbered some 3,000, but by 1674 smallpox and wars had reduced them to some 1,250 Most of the Pennacook remained neutral in King Philip's war (1675), but when 200 of them were treacherously seized (1676), the remainder fled to Canada and to the West, the survivors of the western group settled with the Mahican. The Pennacook in Canada first settled near Quebec, but in 1700 this group moved to St Francis, where they joined the exiled Abnaki The two tribes became bitter enemies of the English

Pennamite Wars The first permanent settlement of Connecticut colonists in the WYOMING VALLEY in Pennsylvania (1769) brought rivalry between the Yankee and the Pennsylvania settlers The First Pennamite War (1769–71) did not solve the problem, nor did the brief skirmish between the rivals in 1775 After Pennsylvania's petition to the Continental Congress for settlement of the dispute, a decision was made in favor of Pennsylvania (1782), but it brought on the Second Pennamite War (1784) when the Connecticut settlers refused to leave After 1800, however, Connecticut yielded to Pennsylvania's claims

Pennell, Joseph (pĕ'nul), 1860–1926, American illustrator, etcher, lithographer, and author, b Philadelphia, studied at the Pennsylvania Academy of the Fine Arts Much of his time was spent in Europe, particularly in London, where he was greatly influenced by Whistler He is one of the foremost American graphic artists Among his outstanding book illustrations are those for several volumes on travel by his wife, Elizabeth Robins Pennell (1855–1936), W D Howell's *Tuscan Cities*, Washington Irving's *Alhambra*, and Henry James's *Little Tour in France* His subjects are chiefly landscapes and architectural views, and his art is distinguished for its simplicity, artistry, technical perfection, and illustrative quality He is represented by etchings, drawings, and lithographs in the Luxembourg Museum, Paris, the Uffizi; Gallery of Modern Art, Venice, Gallery of Modern Art, Rome, British Museum and the Guildhall, London, Royal Gallery, Brussels, Library of Congress, Washington, D C., Pennsylvania Academy of the Fine Arts, Carnegie Institute, Pittsburgh, Brooklyn Museum, Brooklyn, N Y ; and elsewhere He was a member (1909) of the National Academy of

Design and of numerous European societies and was a lecturer on illustration at the Slade School of Art, London, and the Royal College of Art, South Kensington. His publications include *An Italian Pilgrimage* (1886), *Our Sentimental Journey through France and Italy* (1888), *Pen Drawings and Pen Draughtsmen* (1889), *Modern Illustration* (1895), *Lithographs of New York* (1905), *Etchers and Etching* (1919), *Adventures of an Illustrator* (1925), and, with his wife, a biography of James McNeill Whistler (1908) See *The Life and Letters of Joseph Pennell* (2 vols , 1929) by his wife

Penner (pĕ'nûr), river, c 350 mi long, rising in NE Mysore state, E central India It flows N and E through Madras state to empty into the Bay of Bengal Of the ports at the mouth of the river Nellore is the chief

Pennine Chain (pĕ'nĭn), long hill range, sometimes called the "backbone of England," extending from the Cheviot Hills to the Peak in NW Derbyshire It appears in Cumberland, Northumberland, Durham, Lancashire, Yorkshire, Cheshire, Derbyshire, Staffordshire, and Nottinghamshire The range consists of a series of upland blocks, separated by transverse valleys (Tyne, Tees, and Aire) The scenery is notable Lakes are few, there are caverns, and several chasms are more than 300 ft in depth Cross Fell (2,930 ft) is the highest peak On the Continent the name Pennines is applied to the Pennine Alps (see ALPS)

Pennington, borough (pop. 1,492), W N J , N of Trenton, settled 1708, inc 1890 It is the seat of Pennington School for boys (1838)

Pennington Gap, town (pop 1,990), extreme SW Va , in the Cumberlands near the Ky line, in a truck area, inc 1891 or 1892

Pennsauken (pĕnsô'kĭn), township (pop 17,745), SW N J , near Camden, settled 1840, inc. 1892

Pennsboro, town (pop 1,738), NW W Va , E of Parkersburg, settled in the early 1800s It is an important market and shipping center for the surrounding farm, oil, and gas area

Pennsburg, borough (pop 1,548), Montgomery co , SE Pa , NW of Philadelphia, settled 1840, inc 1887

Penns Grove, residential borough (pop 6,488), SW N J , on the Delaware opposite Wilmington, settled 1675, inc 1894

Pennsville, unincorporated village (pop 1,864), SW N J , on the Delaware, opposite New Castle, Del , with which it is connected by ferry

Pennsylvania (pĕnsulvā'nĭ-u) [New Latin,=Penn's wood], state (45,333 sq mi , 1940 pop 9,900,180, 1949 estimated pop 10,633,000), NE United States, one of the Middle Atlantic states and one of the Thirteen Colonies It is bounded on the north by Lake Erie and New York, on the east by the winding Delaware river, which separates it from New York and New Jersey, on the south by Delaware, Maryland, and West Virginia, and on the west by West Virginia and Ohio HARRISBURG, midway between the metropolitan areas of PHILADELPHIA and PITTSBURGH, is the capital Except for coastal plains SE of Philadelphia and around Lake Erie, the state is a succession of mountains and rolling hills with narrow valleys Mountain ridges rise from the Delaware river into the piedmont, with the parallel ranges of the Blue Mts and Allegheny Mts occupying the central portion of the state Uplands of the plateau extend to the western border The great forests and lush vegetation which once covered the entire state were transformed during the Carboniferous period into tremendous deposits of anthracite coal in the east and extensive bituminous beds in the west Large areas of woodlands remain and, in some isolated sections, have retained an almost primitive wildness In general the vast resources of the state have been tapped and disciplined to yield an abundant harvest The valleys have become rural centers, the mountainsides have been slashed with quarries and mine shafts, and at strategic spots have grown great metropolitan centers In the east the state is drained by the Delaware and Susquehanna river systems, in the west by the Allegheny and Monongahela rivers, which join forces at Pittsburgh to form the Ohio river Passing transversely through the strata, these turbulent streams and rivers have cut spectacularly beautiful water gaps, natural passageways for roads and rail lines. Long known as the Keystone State because of its central position between the northern and southern colonies, Pennsylvania has increased the significance of its nickname far beyond the original meaning. The state has an abundance of coal and on that basis has built great steel mills (at first using Pennsylvania iron), and the importance of steel has made Pennsylvania a keystone of the national economy Powered by water, the iron industry was initiated in early colonial days In the 19th cent. with the Bessemer process and the utilization of coal came the rapid construction of mighty forges and furnaces to meet the world's demand for steel Other valuable minerals, such as petroleum, natural gas, lead, zinc, feldspar, and building materials, contribute to a vast manufacturing program. Additional important industries, such as textiles, lend diversity and strength. Pittsburgh and Philadelphia, situated at opposite ends of the state and dominating the commercial and industrial life of their regions, present startling contrasts in production and culture Other leading centers are Allentown, Bethlehem, Erie, Reading, Scranton, and Wilkes-Barre. Agriculture is concentrated in the fertile counties of the southeast, the principal crops being corn, wheat, oats, buckwheat, potatoes, and fruit One of the prize farmlands of the nation is the Great Valley, a straight, wide, limestone channel between Philadelphia and Lancaster, in which the Pennsylvania Dutch farmer has built a culture that is identified with the bountiful agrarian life Transportation facilities have kept pace with the state's rapid development The accessible and landlocked harbor of Philadelphia has been supplemented by the Great Lakes port of Erie and access to the South and Middle West by Pittsburgh and the Ohio river Over a fine system of highways and a complex network of railroads the products of farms, factories, and mines are taken to port cities to be sent out to the rest of the world Into the building of this rich and complex commonwealth has entered the work of many racial and economic groups, contributing not only the pleasures of diversity but also the pressures of conflicting interests Pennsylvania is too complicated a state to be disposed of in generalities, it is a miniature United States possessing a degree of self-sufficiency enjoyed by few nations of the world Its material achievements—if not its cultural and political trends—would be appreciated by William PENN, the man whose family name was given to the state and who played such an important part in the state's history Very little effective settlement took place before William Penn secured proprietary rights in 1681 to almost all of the area of what is now Pennsylvania In the early 1600s the English, Dutch, and Swedes disputed right to the region—exploration being confined to the Delaware river vicinity and the first activity that of fur trade with the Indians The original permanent settlement was made at Tinicum Island in 1643 by Johan Printz, governor of NEW SWEDEN, and was followed in the succeeding years by the neighboring colony of Uppland Swedish jurisdiction was shortlived, because the Dutch, operating from their stronghold in New Amsterdam, gained control of the mideastern region in 1655 In turn the Dutch submitted to the forces of Col Richard Nicolls, acting for the duke of York (later James II), and in 1664 the English took over the Delaware area The duke of York remained in control until 1681, when, in payment of a royal debt held by Penn's father, William Penn was granted the area and, in addition, leased the three Lower Counties (see DELAWARE) In his native country Penn had already suffered for liberal beliefs well in advance of the temper of the times A devout Quaker, Penn viewed his colony as a holy experiment, designed as an asylum for the persecuted under conditions of equality and freedom which approximated what has become known as the "American dream " In 1681 he sent William Markham as deputy to establish a government at Uppland and sent instructed commissioners to plot the City of Brotherly Love (Philadelphia), which was laid out at the forks of the Delaware and Schuylkill rivers Penn carefully constructed a Frame of Government which guaranteed to the colonists complete religious freedom and some degree of political responsibility In 1682 he arrived at Uppland (renamed CHESTER), and shortly thereafter the assembly adopted the Frame of Government At about this time Penn met with the chiefs of the Delaware tribes at Shakamaxon (now part of Philadelphia), and a famous treaty was signed which promoted long-lasting good will between the Indians and the white settlers Almost immediately Penn found the colonists desirous of more power than the liberal Frame of Government permitted Dissension in government persisted for many years, high-lighted by a jealousy between executive and legislative branches and intensified by Penn's prolonged absences from the province Three factions were formed—the dominant proprietary party, with James LOGAN at the head of its wealthy Quaker-controlled council and assembly, the anti-proprietary party under David LLOYD, and the non-Quaker church party, supported by Episcopalians who wanted to convert the province into a crown colony. During the emergence of these political groups, Penn had returned to England (1694) to defend his proprietary rights against the claims of Lord Baltimore After William and Mary ascended the throne (1689), Penn's friendship with the deposed James II opened him to accusations of treason, and in 1692 the province was taken away from him and placed under the administration of Benjamin Fletcher, governor of New York, with William Markham as deputy. In 1694 full proprietary rights were restored, and in 1699 Penn returned to his colony He remained until 1701, during which time he formulated a new constitution, the Charter of Privileges, which increased the power of the assembly and provided for the voluntary withdrawal of the Delaware counties (accomplished in 1703). After Penn's death in 1718 proprietary rights were held by his heirs By this time Pennsylvania had developed into a dynamic and growing colony, enriched by the continuous immigration of numerous different peoples The Quakers, English and Welsh, concentrated in Philadelphia and the eastern counties, where they acquired great commercial and financial power through foreign trade and achieved a political dominance which they held until the time of the American Revolution. Philadelphia had by then become the finest city in the nation, a leader in the arts and the professions. The Germans (Pennsylvania Dutch)—largely of the persecuted religious sects of Mennonites, Moravians, Lutherans, and Reformed—settled in the farming areas of SE Pennsylvania, where they retained their cohesion and to a considerable extent their language, customs, architecture, and superstitions After 1718 the Scotch-Irish began colonizing in the Cumberland Valley and gradually pushed the frontiers toward W Pennsylvania Their rugged independence and the peculiarities of their frontier problems made them rebellious against the established order Throughout the province agriculture was the chief occupation, although industry was spurred by abundant water power and resources in spite of the discouragement of the mercantile policy of the mother country In the west settlement was hindered by a growing unrest among the Indians Penn's heirs lacked both the good sense and the ethical values that prompted Penn's fair and considerate treatment Resentful of encroachment on their lands and of the land purchase made by the ALBANY CONGRESS (1754), the Indians allied themselves with the French, who were then fortifying positions in the Ohio valley (see FRENCH AND INDIAN WARS) The French and Indian invasion was successfully opposed, but the inept defenses provided by the Quaker-controlled assembly aroused the bitter resentment of the frontiersmen and helped make them ready for radical changes As the drive for American independence took shape, the Loyalist groups were strengthened by the pacifist stands of Quakers and noncombatant Germans This alliance was powerless in the face of a citizenry aroused by restrictive measures and imbued with the spirit of freedom Many important Pennsylvanians became leaders of the revolutionary movement—Benjamin FRANKLIN, Joseph REED, Thomas MIFFLIN, John DICKINSON, Robert MORRIS, and Haym SALOMON Committees of safety were formed, and gradually the provincial government was taken over by the group favoring the patriot cause Philadelphia became the scene of history-making events--the First and Second Continental Congresses (1774, 1775–81), the signing of the Declaration of Independence, and the framing of the Federal Constitution (1787) In 1776 a new liberal state government, the Commonwealth of Pennsylvania, was adopted It was in effect until 1790 The countryside was invaded by British troops, and notable engagements were fought in 1777 on the Brandywine and at Germantown Philadelphia was occupied by the British, while VALLEY FORGE witnessed the heroic endurance of Washington's troops in the winter of 1777–78 that has made that spot a shrine of patriotism. Difficulties were increased by the renewal of Indian depredations, the worst being the WYOMING VALLEY massacre of 1778 The state moved into the post-war period as a dynamic leader of the new nation, with Philadelphia as the national capital from 1790 to 1800 and a financial center through the organization of the BANK OF THE UNITED STATES in 1791 and the U S mint in 1792 Boundary disputes which had persisted during the colonial period were resolved with Maryland in 1784 by acceptance of the Mason-Dixon line, with New York in 1789, when the port of Erie was acquired, and with Connecticut after bitter dissension in 1800 (see PENNAMITE WARS) A new constitution which was adopted in 1790 reflected the dominance of the conservative group, improved the structure of government, and reiterated the principles of freedom and equality for all men—thereby reaffirming the act of 1780 which provided for the gradual abolition of slavery The economic dislocation of the post-war period, intensified by the burden of national taxes, was expressed in violence during the WHISKY REBELLION of 1794 and the Fries Rebellion of 1798 (see FRIES, JOHN) Economic conditions improved as immigration streamed westward, new industries were founded, and markets were opened through an intensive program of internal improvements The force of the westward movement was demonstrated by the removal of the state capital to Lancaster in 1799, then to Harrisburg in 1812, and the emergence of Pittsburgh and Erie as important gateways to the West The turnpike era, initiated by the incorporation of the Lancaster Turnpike in 1792, was followed by an extensive canal-building program in the 1820s and 1830s and, after the introduction of steam, by an era of railroad construction. Adequate provisions for free public education, championed by Gov George Wolf and Thaddeus STEVENS in the 1830s, was implemented by a legislative act of 1849 requiring compulsory attendance Much of the early education was denominational, and many schools remain church-affiliated Among the institutions of higher learning are the Univ of Pennsylvania, the Univ. of

Pittsburgh, Duquesne Univ, Lehigh Univ., and Temple Univ, the Carnegie Institute of Technology, and Bryn Mawr, Swarthmore, Franklin and Marshall, Pennsylvania State College, and Washington and Jefferson. Political life was dominated by factional strife. The Democratic party was generally dominant until the Civil War. Pennsylvania's only contribution to the presidency was the last President before the war, James BUCHANAN. With the growth of the antislavery movement, the new Republican party grew strong. Pennsylvania was the first state to have troops arrive in Washington for the war. Its position close to the South exposed it to invasion through the Cumberland Valley, particularly in the decisive GETTYSBURG CAMPAIGN of 1863. CHAMBERSBURG was burned in 1864. With the close of the war came the rapid emergence of the state as a mighty industrial commonwealth. Favored by high protective tariffs, the industries found favorable markets and a constant supply of immigrant labor. The first oil well was dug at Titusville before the Civil War, and the Rockefeller fortune was founded on petroleum, but it was steel that became the basic industry, using iron ore brought across the Great Lakes and the native Pennsylvania coal. Under the manipulation of such men as Andrew CARNEGIE, Henry FRICK, Charles SCHWAB, and J. Pierpont MORGAN numerous interests were merged into vast combines whose power entered in and extended beyond state and national influence into the area of world finance. In the face of this increasing concentration of power, labor struggled to achieve safer working conditions, higher wages, and shorter hours. The campaign brought bloodshed during the fight between mine owners and the radical MOLLY MAGUIRES and reached a climax in the HOMESTEAD strike in 1892. During the 1930s the Congress of Industrial Organizations successfully promoted unionization in many new areas and somewhat weakened the strength of the American Federation of Labor. The United Mine Workers acquired increasing strength in the coal fields. In political life after the Civil War a powerful and corrupt machine was built by Simon CAMERON and continued until the death of Boies PENROSE in 1921. Gifford PINCHOT, who was governor for two terms (1923–27, 1931–35), was a Progressive Republican and a vigorous "dry." He did much to repair government through a new administrative code, an improved budget system, and pioneer work in conservation. The election of 1934 made George H. Earle the first Democratic governor in many years. He secured the passage of numerous welfare measures and aroused considerable antagonism from mine owners and industrialists by his prolabor stands. Prolonged law suits followed charges of maladministration and graft laid to his administration. In 1938 the Republican party regained control of the state. Through political and economic organization some amalgam of various racial and social characteristics has taken place. Nevertheless the diversity of economic activity and the variety of physical features has made possible the retention of a high degree of individuality and, in some cases, almost regional cultures have developed. The startling contrasts between befogged mill and mine towns and the quiet charm of rural Lancaster and between the slums of Philadelphia and the suburban delights of the "Main Line" both intrigue and dismay the onlooker. The blessings of Penn's "good and fruitful land" have been unevenly distributed but seldom have the essential freedoms been threatened. Save for political variations from its first attribute, the motto of Pennsylvania, "Virtue, Liberty, and Independence," stands unchallenged. See Sydney George Fisher, *The Making of Pennsylvania* (5th ed., 1932), John Palmer Garber, *The Valley of the Delaware and Its Place in American History* (1934), Frederic Antes Godcharles, *Pennsylvania Political, Governmental, Military, and Civil* (5 vols., 1934), Cornelius Weygandt, *The Blue Hills* (1936), Federal Writers' Project, *Philadelphia a Guide to the Nation's Birthplace* (1937), S. Buck, *The Planting of Civilization in Western Pennsylvania* (1939), Federal Writers' Project, *Pennsylvania a Guide to the Keystone State* (1940), Henry Seidel Canby, *The Brandywine* (1941); Frederick Way, *The Allegheny* (1942), Cornelius Weygandt, *The Plenty of Pennsylvania* (1942), Maxwell Struthers Burt, *Philadelphia: Holy Experiment* (1945).

Pennsylvania, University of, in Philadelphia, nonsectarian, private, for men and women, planned 1740 as a charity school, opened 1751 as an academy (with Benjamin Franklin as chief founder). It was chartered in 1755 as the College and Academy of Philadelphia and reorganized in 1779 as the Univ. of the State of Pennsylvania. In 1789 the college was restored, but in 1791 the university absorbed it under the present name. A pioneer in secular education in the colonies, it had the first university medical and business schools in the United States (1765 and 1881, respectively). It now has colleges for men and women, schools of animal pathology, dentistry (with Evans Institute), education (including nursing), electrical engineering (Moore), fine arts (with architecture), finance and commerce (Wharton), law, medicine, and veterinary medicine; and Towne Scientific School. There are research institutes, a library with especially good collections in medieval history and Shakespeariana, a famous archaeology museum which controls extensive excavations, an observatory (Flower), botanical gardens, an arboretum, a chemistry museum, a psychological clinic, and a university press. The Pennsylvania School of Social Work is affiliated. An office of director of inter-American activities was created in 1946. See E. P. Cheyney, *History of the University of Pennsylvania, 1740–1940* (1940), C. M. Dowlin, ed., *The University of Pennsylvania Today* (1940).

Pennsylvania Academy of the Fine Arts, at Philadelphia, established in 1805 and incorporated in 1806. The academy grew out of a proposal, in 1791, by Charles Willson Peale for an art institution, this led to the founding of the Columbianum, which held (1794) the first art exhibition in the United States. The academy was formed to supersede it, sponsored by 71 public-spirited Philadelphia citizens, among them Peale, Charles Biddle, William Rush, and George Clymer. The present building was constructed in 1876 for the purpose of housing the academy's art collection, which includes the Temple Collection of modern American paintings, the Gibson Collection of 19th-century European paintings, and the John Frederick Lewis Collection of early American paintings. Connected with the academy also is the oldest American art school, which is active both in Philadelphia and in the year-round country school at Chester, Pa. The academy is supported by private endowment.

Pennsylvania Dutch, name popularly but erroneously applied to the Pennsylvania Germans, particularly those in the present counties of Northampton, Berks, Lancaster, Lehigh, Lebanon, York, and adjacent districts. The colony established by William Penn as a refuge for Quakers offered other groups the prospect of religious freedom. In 1683 the village of Germantown was established by a band of Mennonites led by Francis Daniel Pastorius, and in succeeding years other groups, such as the Dunkards and the Moravians, settled in Pennsylvania. However, the bulk of immigration occurred after 1710, when the Germans from the Palatinate first arrived. Many of this group had sought economic and religious freedom in England, from there a number were sent to the Hudson valley to engage in the production of naval stores, but with the failure of that project many Palatines moved to Pennsylvania. Enthusiastic reports brought other settlers from Germany, until by the time of the American Revolution the population of Pennsylvania, according to Benjamin Franklin, was one-third German. At first the large influx of German settlers antagonized the English but they were gradually accepted, and during the Revolution they provided valuable assistance. Most of the settlers turned to farming, at which they were extremely successful. For the most part they maintained their own language and customs, the family became the principal economic and social unit and the Church was next in importance. The aim of the various religious sects was to establish a Christian, democratic society, for many years they opposed public schooling, preferring to retain their own standards and manners, and they strongly resisted signs of progress and worldly living. Several of the sects are completely pacifistic, such as the Amish and the Mennonites. The Amish are particularly strict in the matter of dress, maintaining a simple, but distinctive garb, and also have a strong aversion to such modern contraptions as the automobile and the tractor. The Church of the Brethren, incorrectly but popularly known as the Dunkards or Dunkers from their manner of baptism, and the Schwenkfelders are two other sects. The Pennsylvania Dutch, or Pennsylvania German, language is a blend of several dialects, particularly Palatinate, with some admixture of High German and English. A substantial Pennsylvania German literature has made use of it. Recently more attention has been paid to the art and architecture produced by the Pennsylvania Dutch. Many written records were adorned with illuminated writing, and such common articles as pottery, furniture, needlework, and barns made use of decorative motifs, often of a highly artistic nature. Their buildings are usually of heavy stone and timber construction, with steep roofs and small, irregular windows. Despite the slighting remarks cast on the "dumb Dutch," a number of Pennsylvania Germans have reached positions of learning and influence. The Pennsylvania-German Society, organized in 1891, has published much material relative to the history and folklore of the Pennsylvania Dutch. See M. D. Learned, *The Pennsylvania German Dialect* (1889); L. O. Kuhns, *The German and Swiss Settlements of Colonial Pennsylvania* (1901; 3d ed., 1945); J. L. Rosenberger, *The Pennsylvania Germans* (1923); Cornelius Weygandt, *The Red Hills* (1929) and *The Dutch Country* (1939); J. W. Frey, *A Simple Grammar of Pennsylvania Dutch* (1942); Ralph Wood, ed., *The Pennsylvania Germans* (1942), E. F. Robacker, *Pennsylvania German Literature* (1943); Henry Kauffman, *Pennsylvania Dutch American Folk Art* (1946).

Pennsylvanian period: see CARBONIFEROUS PERIOD.

Pennsylvania Railroad. Incorporated (1846) by act of the Pennsylvania legislature, the Pennsylvania Railroad Company completed (1854) a single-track line between Philadelphia and Pittsburgh. The company then (1857) purchased many railroads—notably the Allegheny portage railroad with its inclined planes, which had been in operation since 1834—that were owned and operated by the state of Pennsylvania. The Pennsylvania RR took a prominent part in the movement of troops and munitions in the Civil War, and under the astute management of such presidents as John E. Thomas (1852–74), Thomas A. SCOTT (1874–80), George B. Roberts (1880–97), and Alexander J. CASSATT (1899–1906) the railroad rapidly extended operations between the Atlantic seaboard and the Mississippi river and between the Great Lakes and the Ohio river. In the 20th cent. the expansion continued while large expenditures were made for facilities. See G. H. Burgess and M. C. Kennedy, *Centennial History of the Pennsylvania Railroad Company, 1846–1946* (1949).

Pennsylvania State College, at State College, land-grant and state supported, coeducational, chartered 1855, opened 1859 as Farmers' High School, called Agricultural College of Pennsylvania 1862, renamed 1874. It includes schools of agriculture (with forestry), chemistry and physics, education, engineering (with architecture), home economics, liberal arts (with journalism), physical education and athletics, and mineral industries, as well as five junior branches throughout the state. It has a forest school at Mont Alto and an institute of animal nutrition. The Ellen H. Richards Institute was established in 1941 for research on textiles, nutrition, and housing. See history by W. F. Dunaway (1946).

Penn Yan (pĕn″ yăn′), village (pop. 5,308), co. seat of Yates co., W. central N.Y., in the Finger Lakes grape-growing region, on an arm of Keuka Lake, inc. 1833. It was settled by Pennsylvanians and New Englanders ("Yankees"), whence the name. The farm given Jemima WILKINSON by her disciples was near here. Penn Yan produces wines, fruit juices, fruit baskets, flour, and boats. Keuka College (Baptist, for women, 1888) is at near-by Keuka Park.

pennyroyal, name for two similar plants of the MINT family, usually distinguished as true or European pennyroyal (*Mentha pulegium*) and American or mock pennyroyal (*Hedeoma pulegoides*). Both have small bluish or purplish flowers in the leaf axils. The European pennyroyal is perennial and prostrate, the American, annual with numerous erect branches. Both contain a pungent oil said to be repellent to insects. The oil, obtained chiefly from the American pennyroyal, is used medicinally. Pennyroyal tea was an old domestic remedy. Other species of *Hedeoma* are sometimes called pennyroyal, but the false and bastard pennyroyals are different plants.

Penobscot (punŏb′skŏt), river, 350 mi. long, formed in N. and central Maine. Its headstreams are the outlets of many lakes, the South Branch draining Penobscot Lake near the Quebec boundary and uniting with the North Branch to form the West Branch. The East Branch, formed by the outlets of Matagamon, Seboeis, and other lakes, joins the West Branch near Medway. The united stream, its power used for pulp and paper mills, flows S. past Lincoln, Howland, Old Town, Bangor, Bucksport, and many other towns to Penobscot Bay. It is navigable to Bangor, the upper course, in an area noted for hunting and fishing, is a favorite canoe route. The chief freight on the river is lumber.

Penobscot Bay, triangular, islanded inlet of the Atlantic, 30 mi. long, S. Maine, with shores lined with summer resorts. The bay was entered by Martin Pring in 1603, Champlain, after leaving a colony on Mt. Desert Island in 1604, ascended the Penobscot river, probably to the site of Bangor. Trading posts and missions were established, and for many years possession of the area was disputed between the English and the French. The principal French post was at Castine, long known as Penobscot. See G. S. Wasson, *Sailing Days on the Penobscot* (new ed., 1949).

Penobscot Indians, North American Indian tribe of Algonquian linguistic stock. They were the most numerous tribe of the Abnaki Confederacy and resembled the other members culturally. In the early 17th cent. they inhabited the region around Penobscot Bay and the Penobscot river in Maine. A French mission was established among them in 1688 on the site of the present city of Bangor. The Penobscot were active in all the New England frontier wars, generally in support of the French, until 1749, when a peace treaty with the English put an end to their hostilities. The treaty created ill-feeling with other Abnaki tribes, who remained firm supporters of the French. The Penobscot numbered some 700 in 1750. The assistance of the Penobscot in the American Revolution gained for them a reservation at Old Town, Maine. Today there are some 500 living there. See Frank Speck, *Penobscot Man* (1940).

Penokee-Gogebic: see GOGEBIC.

Penrhyn (pĕn'rĭn) or **Tongareva** (tŏng"gŭrĕ'vŭ), atoll (4,000 acres; pop. 654), S Pacific, c.735 mi NNE of Rarotonga (one of the Cook Islands). Penrhyn is c.40 mi. in circumference. Discovered in 1788 by the British, in 1901 it was placed, along with the other MANIHIKI islands, under the New Zealand Cook Islands administration. Omoka village has a good harbor. The chief exports are copra and pearl shells.

Penrith (pĕn'rĭth), urban district (1931 pop 9,066, 1943 estimated pop 10,923), Cumberland, England, SE of Carlisle. It is in a farming region at the edge of the Lake District, for which it is a tourist center. There is a 14th-century ruined castle. The grammar school was founded in the 14th cent. and refounded in Elizabeth's reign. The churchyard has two ancient monuments, the "Giant's Grave" and the "Giant's Thumb."

Penrose, Boies (boiz' pĕn'rōz), 1860–1921, American political leader, b. Philadelphia, grad. Harvard, 1881. He read law, was admitted (1883) to the bar, and, as a member (1884–96) of the Pennsylvania legislature, collaborated with Edward P. Allison in writing *The City Government of Philadelphia* (1887). His talent for political organization was soon employed for the state Republican party machine, he became the henchman of Matthew S. QUAY, the state boss. He was elected (1896) to the U.S. Senate, and after Quay's death (1904) Penrose became the Republican leader of Pennsylvania. Penrose, immense in stature, a tremendous and zestful eater, was the subject of many stories. He served in the Senate until 1921 and there dominated the finance committee. He played a leading role in Republican national politics and, after the retirement of Nelson W. Aldrich, became Republican leader of the Senate. See biography by R. D. Bowden (1937).

Penry, John, 1559–93, British Puritan author, an instigator of the MARPRELATE CONTROVERSY, b. Wales, grad. Cambridge and Oxford. While at college he became an ardent Puritan. In 1587 his pamphlet assailing the spiritual destitution of the Welsh clergy was seized and burned, and he was briefly imprisoned. Puritans were aroused, and Penry and several associates were helped to set up a hidden printing press from which emerged (1588–89) seven pamphlets attacking alleged evils of the Church of England and its clergy. They appeared under the pseudonym Martin Marprelate, Penry was perhaps the chief author. When his associate John Udall was arrested (1590), Penry fled to Scotland, he returned secretly in 1592. He was arrested, tried on the doubtful charge of writing with intent to excite rebellion, and hanged. See his *Notebook* (ed. by Albert Peel, 1944), biography by William Pierce (1923).

Penryn (pĕnrĭn'), municipal borough (1931 pop. 3,414, 1943 estimated pop. 3,968), Cornwall, England, at the head of the Penryn estuary NW of Falmouth. It is famous for its polished granite, quarried in the neighborhood.

Pensacola (pĕnsăkō'lŭ), city (pop. 37,449), co. seat of Escambia co., extreme NW Fla., on Pensacola Bay, inc. 1822. A port of entry with one of the best natural harbors in the United States, it has industry and trade in lumber, naval stores, commercial fishing, and farm produce. The region was known to the Spanish in the early 16th cent., and the shore here was the site of a short-lived Spanish settlement (1559–61). In 1698 the Spanish under Andrés de Arriola founded a new colony, and Fort San Carlos was built on Santa Rosa Island, across the bay. Between 1719 and 1763 possession of the city shuttled between Spain and France. It passed to the British in 1763 but reverted to Spain in 1783, after being captured by Bernardo de GÁLVEZ in 1781. It was the capital of West Florida until 1822. Pensacola, though still Spanish, was a British base in the War of 1812 until captured (1814) by Andrew Jackson. He seized it again in 1818, and the United States took formal possession in 1821. In the Civil War, Pensacola was held alternately by Confederate and Union forces, although Fort Pickens (see PICKENS, FORT) remained in Federal possession throughout the war. The important U.S. naval aviation station here was established in 1914, much of the life of the city revolves about the base. Fort Barrancas is the only garrisoned fort protecting the harbor now, there are ruins of old Fort Barrancas and of Forts San Carlos (built in the 1780s on the site of Arriola's fort), Pickens, and McRae (built in the 1830s).

Pensacola Bay, inlet of the Gulf of Mexico, c.13 mi. long and averaging c 2½ mi. in width, NW Fla. The city of Pensacola is c 7 mi. from the entrance, which is less than a mile wide, being nearly closed by the peninsula and the island of Santa Rosa. The Escambia river enters at the north, through Escambia Bay; to the east is another extension, East Bay.

Pensacola Dam: see GRAND RIVER DAM.

Pensauken, N.J.: see PENNSAUKEN.

pension. The granting of pensions by sovereigns for service rendered or as a gratuity to a favorite, an artist, a political refugee, or the like was widely practiced from very early days in the history of both West and East. It was continued in France until the French Revolution and in England into the 19th cent. In the Roman Empire there was a well-established system to care for soldiers who were disabled or had grown old. The French government early in the 19th cent. and the British later (1834) made provisions for superannuated public servants. In the United States pensions have been given veterans of all wars since the Revolution. There was considerable abuse of the system after the Civil War. In the First and Second World Wars a system of insurance was established to which the service man contributed. Civil service pensions were a later development in the United States than in Western Europe. Old-age pensions were given by cities to certain groups of public employees—firemen, policemen, and later teachers (usually under a state law), with compulsory contributions from the employee. Pensions to federal employees were authorized in 1920. The idea of extending such protection to all citizens also appeared earlier in Europe (notably in Germany) than in the United States, where it was a 20th-century development (see SOCIAL SECURITY). Many corporations and groups (such as church organizations and colleges) had made provision for their own employees before the social security legislation was passed in 1935, and many have supplemented social security by more adequate provision. The usual method is through group INSURANCE to which the employee contributes half. This may be compulsory or voluntary. Many labor unions—notably the United Mine Workers—have included old-age pensions in their contracts with their employers. See A. D. Cloud, *Pensions in Modern Industry* (1930), H. S. Pritchett, *The Social Philosophy of Pensions* (1930).

pentameter (pĕntă'mutur) [Gr., =measure of five], in prosody, a line to be scanned in five feet (see VERSIFICATION). Iambic pentameter is the great English meter. Chaucer first used it in what was later called rhyme royal, seven iambic pentameters rhyming *ababbcc*, as Chaucer pronounced a final short *e*, his pentameters often end in an 11th unstressed syllable. In his *Canterbury Tales*, the pentameters are disposed in rhyming pairs which do not necessarily contain a complete thought. The pentameter couplet also was used by his imitators in Scotland, with the important difference that when the final *e* disappeared from speech the couplet was one of strict pentameters. Thus, as the heroic couplet, became important in the 17th and 18th cent., notably in the hands of Dryden and Pope. Example:

> True wit is Nature to advantage dress'd,
> What oft was thought, but ne'er so well express'd
> —*Essay on Criticism*

Blank verse, a succession of unrhymed iambic pentameters, is primarily an English form and has been used in the loftiest epic and dramatic verse from Shakspere and Milton to the present. Examples:

> And, like the baseless fabric of this vision,
> The cloud-capp'd towers, the gorgeous palaces,
> The solemn temples, the great globe itself,
> Yea, all which it inherit, shall dissolve
> And, like this insubstantial pageant faded,
> Leave not a rack behind. We are such stuff
> As dreams are made on, and our little life
> Is rounded with a sleep. —*The Tempest*, IV, i

and how he fell

> From Heav'n, they fabled, thrown by angry Jove
> Sheer o'er the Chrystal Battlements, from Morn
> To Noon he fell, from Noon to dewy Eve,
> A Summer's day, and with the setting Sun
> Dropt from the Zenith like a falling Star,
> On Lemnos th' Aegaean Ile
> —*Paradise Lost*, I, 740–46

Renaissance England borrowed several stanza forms from Italy. The ottava rima, eight iambic pentameters rhyming *ababbcbc*, was made famous by Ariosto and Tasso and later was used by Byron, but its principal English significance was that Spenser made his stanza by adding an ALEXANDRINE to the eight lines (see also ONOMATOPOEIA). The SONNET is one of the most familiar and successful uses of iambic pentameter in English poetry. Paradoxically this greatest of English lines is seldom used in the commonest English stanza, the quatrain, but that the iambic pentameter is unsuited to four-line verses is untenable if an example like the following is considered:

> The breezy call of incense-breathing morn,
> The swallow twitt'ring from the straw-built shed,
> The cock's shrill clarion or the echoing horn,
> No more shall rouse them from their lowly bed
> —Gray's *Elegy*

Pentapolis (pĕntă'pŭlĭs) [Gr., =five cities], collective name anciently applied to several groups of five cities. The chief cities of Cyrenaica on the northern coast of Africa (Apollonia, Arsinoë, Berenice, Cyrene, and Ptolemais) were thus called from the 4th cent. B.C. to the 7th cent. A.D. So were Rimini, Ancona, Fano, Pesaro, and Sinigallia on the Adriatic coast of Italy, where the term originated in the 5th cent. under Byzantine rule and continued to be used until the 11th cent. Other groups called Pentapolis were in Asia Minor and in Palestine.

Pentateuch (pĕn'tutūk) [Gr., =five books], the first five books of the OLD TESTAMENT.

pentathlon (pĕntăth'lun), composite athletic contest in ancient Greece comprising five separate events—leaping, foot racing, wrestling, throwing the discus, and casting the javelin. In the modern OLYMPIC GAMES, the pentathlon comprises throwing the discus, casting the javelin, a running broad jump, and a 200-meter and a 1,500-meter flat race.

Pentecost (pĕn'tĭkŏst) [Gr., =fiftieth], important Jewish and Christian feasts. The Jewish feast of Pentecost, in Hebrew *Shabuot* [weeks], is called in the Bible the Feast of Weeks, of Harvest, and of the Firstfruits. It is the Palestinian celebration of the closing of the grain harvest, which began formally in Passover. It falls on the 6th and 7th of the month of Sivan, the 6th being the 50th day from the second day of Passover. The number 50 arose from the length of the grain harvest, seven weeks. It was marked before the final dispersion by the sacrifice, in the Temple, of loaves made of the first fruits of the wheat harvest, the last grain to ripen. From ancient times Pentecost was known also as the anniversary of the giving of the Law, and this aspect has prevailed in modern Judaism, except in the ritual, which includes the reading of Ruth, a harvest story. In modern times pious customs of Pentecost are decoration of synagogues and homes with flowers, study of the Law all night before the feast, and confirmation of girls. See Ex. 23:16, 34:18–26; Lev. 23:15–22; Num. 28:26; Deut. 16:9–12, 2 Chron. 8:13. On the Pentecost after the resurrection of Jesus (i.e., 50 days from the Passover, in which He was crucified), the disciples, according to Acts 2, received from the Holy Ghost the power of speaking in diverse tongues, the gift was accompanied by tongues of fire and the sound of a rush of wind. The Christian feast of Pentecost is an annual commemoration of this event, and it has ever been solemnly observed by the Church as her birthday and the feast of the Holy Ghost. In Christian calendars Pentecost is the seventh Sunday after Easter and closes Easter time. In the Western Church there are special observances, e.g., a penitential vigil, and anciently neophytes were baptized at this time. From the white garments of these converts comes *Whitsunday*, an English name for Pentecost. The Monday after is in many places a holiday, as in England, where it is called Whitmonday, or Whitsun Monday. The great Latin hymns VENI CREATOR SPIRITUS (sung in the divine office) and *Veni Sancte Spiritus* (the sequence of Mass) were composed for Pentecost. The octave day of Pentecost is Trinity Sunday, the Roman calendar counts the Sundays from Pentecost to Advent according to their number after Pentecost.

Pentelicus (pĕntĕ'lĭkus) or **Pentelikon** (pĕntĕ'lĭkun, -kŏn), mountain, 3,637 ft. high, central Greece, NE of Athens. The fine white marble quarried here was largely used for the buildings of ancient Athens.

Penthesilea (pĕn"thĕsulē'u), in Greek mythology, queen of the Amazons. After Hector was killed in the Trojan War, Penthesilea joined the Trojans. Achilles killed her.

Pentheus (pĕn'thūs), in Greek religion, king of Thebes, son of Cadmus' daughter Agave. When DIONYSUS came to Thebes teaching his new religion, Pentheus imprisoned him. Agave, however, became a follower of the god. Pentheus spied upon the sacred rites of the BACCHAE of Thebes, and the maddened women, led by his mother, killed him.

penthouse, subsidiary structure built against the wall of a larger building and covered by a roof of one slope which pitches away from that wall. In more usual modern usage, however, the term is applied to a subsidiary structure above the main roof line of a building and usually set back from the exterior wall lines, containing water tanks, elevator machinery, or other services, or to a similar structure containing living quarters. In modern American cities the penthouse apartment, especially on a tall building with its opportunities for fresh air, sunlight, and an attractive outlook, is a desirable residence and has been often elaborately developed, notably in New York, with gardened terraces and a luxurious interior.

Pentland Firth (pĕnt'lund fûrth'), channel, 6¼ to 8 mi. wide and c 14 mi. long, separating the Orkneys from the mainland of Scotland. The tides and currents cause whirlpools dangerous to small boats.

Pentland Hills, range of uplands, 4 to 6 mi. wide, extending from Edinburgh c 16 mi. SW through Midlothian, Peeblesshire and Lanarkshire, Scotland. Carnethy rises to 1,890 ft., Scald Law to 1,898 ft. The Covenanters were defeated in 1666 in the battle of the Pentlands.

pentlandite (pĕnt'lundīt), yellowish-bronze, opaque mineral, a sulphide of iron and nickel. It is found in masses nearly always associated with another nickel-bearing ore, pyrrhotite. The largest deposit of this important ore of nickel is at Sudbury, Ont.

pentstemon. see BEARDTONGUE.

Penuel (pēnū'ĕl) [Heb., =face of God]. **1** Unidentified place, E of the Jordan, in Gilead, by the river Jabbok where Jacob wrestled with the angel. It was destroyed by Gideon and later rebuilt by Jeroboam. Gen. 32:31, Judges 8:8, 1 Kings 12:25.

Peniel Gen. 32 30 **2** Founder of Gedor. 1 Chron. 4 4 **3** Benjamite chief. 1 Chron 8 25

Penutian (pūnō'shun), linguistic family of California Indians. It includes five groups of languages —Miwok (formerly spoken N of San Francisco Bay and S of Lake Tahoe), Costanoan (extinct, S of San Francisco), Yokuts, Maidu, and Wintun (upper and lower Sacramento valley) Some other stocks have been suggested as related to Penutian These are Takelma, Coos, Siuslaw-Yakonan, Kalapuya, and Chinook, Tsimshian, Shahaptin, Waiilatpuan, and Lutuamian, and Mixe-Zoque and Huave in S Mexico

Penza (pyĕn'zä), city (pop 157,145), capital of Penza oblast, E central RSFSR, on the navigable Sura river It is the center of a large fertile black-earth district It has varied manufactures and plants for processing agricultural products Founded in the 17th cent as a fortress, it developed into a commercial and administrative center in the 18th cent

Penzance (pĕnzăns'), municipal borough (1931 pop. 11,331, 1943 estimated pop 19,964), Cornwall, England, at the head of Mounts Bay NE of Lands End It is a fishing center and a popular watering place with a good esplanade, two piers, and museums and libraries It is a port for the Scilly Islands and has flour mills It was sacked by the Spanish in 1595 and until the 18th cent was subject to raids by Mediterranean pirates Sir Humphry Davy was born here

peonage (pē'ŭnĭj), system of involuntary servitude based on the indebtedness of the laborer (the peon) to his creditor It was prevalent in Spanish America, especially in Mexico, Guatemala, Ecuador, and Peru The system arose because labor was needed to support the agricultural, industrial, mining, and public works activities of conqueror and settler in the New World With the Spanish Conquest of the West Indies, the ENCOMIENDA, establishing proprietary rights over the Indians, was instituted In 1542 the New Laws of LAS CASAS were promulgated, defining Indians as free subjects of the king and prohibiting forced labor Negro slave labor and wage labor were substituted Since the Indians had had no wage tradition and the amount paid was in any event pitifully small, the New Laws proved impractical under existing colonial conditions To find a way out, the system of the *repartimiento* [assessment] and the *mita* was adopted, it gave the state the right to force its citizens, upon payment of a wage, to perform work necessary for the state In practice, this meant that the Indian spent about one fourth of a year in public employment, but the remaining three fourths he was free to cultivate his own fields and provide for his own needs Abuses under the system were frequent and severe, particularly until its codification under the Ordinances of 1609, but the *repartimiento* was far less harsh and coercive than the slavery of debt peonage which followed independence from Spain in 1821 Forced labor under the *repartimiento* had not included plantation crops—sugar, cacao, cochineal, and indigo, their increasing value brought greater demand for labor control, and in the 19th cent the cultivation of coffee, tobacco, henequen, and other crops on a large scale required a continuous and cheap labor supply Through advances on wages, through requiring purchase of necessities from company-owned stores, and through loss of land which the Spanish government had set aside for his subsistence, the Indian found himself reduced to peonage, caught in a system from which he could not escape He could not change his employment until his debts were paid, and prices were so adjusted that he could not meet the obligations He became virtually a serf, but without the serf's customary rights In Mexico, a decree against peonage was issued in 1915, but the evil persisted Partly to alleviate it, Lázaro Cárdenas instituted the EJIDO in 1936 In that year, too, debt peonage was abolished in Guatemala In the United States after the Civil War peonage existed in several Southern states as it had in the Southwest after its acquisition from Mexico Not only Negroes and Mexicans but white farmers as well found themselves enmeshed, until state and national measures were taken

peony (pē'ŭnē), any plant of the genus *Paeonia*, mostly Eurasian species popular as garden and florists' flowers Herbaceous peonies—formerly and still sometimes called piney—are hardy perennial bushy plants that die back each year, they have handsome foliage and large, usually spring-blooming, single or double flowers, often fragrant and commonly ranging in shades from red to white Tree peonies have a somewhat woody, persistent base and are usually taller than the herbaceous, with more abundant and larger blossoms, they often are very long lived but are less common in cultivation Both kinds of peony have long been venerated in China and Japan The peony was formerly regarded as both ornamental and medicinal—the roots were used to prevent convulsions There is a species of peony that is native to the West Coast of North America. See Mrs Edward Harding, *The Book of the Peony* (1917), publications of the American Peony Society

People's Charter: see CHARTISM.

People's party: see POPULIST PARTY.

Peor (pē'ôr) [Heb.,=opening], mountain, E of Jordan, to which Balak took Balaam to deliver his curses Num 23 28 It was anciently said to be near Heshbon See BAAL-PEOR

Peoria (pēō'rēu), city (pop 105,087), co seat of Peoria co, central Ill, on the Illinois river where it widens into Lake Peoria. A port of entry, it is a trade, industrial, and shipping center in an extensive agricultural and coal area La Salle established Fort Creve Coeur in the region in 1680 The spot later (1691) became a trading post in the Illinois country During the Revolutionary War it was abandoned for a time Fort Clark was built here in 1813 and was the nucleus, after the War of 1812, of American settlement Peoria was incorporated as a town in 1835 and as a city in 1845 Among its many manufactures are agricultural machinery and implements, packed meat, liquors and other corn products, feeds, bricks and tiles, chemicals, and cotton goods It ships livestock and grain, mines coal, and is a wholesale market Lincoln delivered (1854) at the old courthouse a speech on slavery Bradley Univ (coeducational, 1896) is here Near by are Fort Creve Coeur State Park, Jubilee College State Park, and Metamora courthouse (1845, now a state memorial)

Peoria Heights, village (pop 4,376), central Ill, near Peoria, inc 1898

Peotone (pē'ŭtōn), village (pop 1,146), NE Ill, SE of Joliet, in a farm area, inc 1869

Pepi I (pā'pē), king of ancient Egypt (c 2595–c 2571 B C), of the VI dynasty He was responsible for the rise of the able official UNI His monuments are found throughout Egypt The reign of his son **Pepi II** (c 2567–c 2473)—variously given at 94, more than 90, and 100 years—is the longest recorded in history Thanks largely to the ability of the powerful southern lords at Elephantine, it was a successful one, in which victorious expeditions penetrated well into Nubia and a prosperous trade was carried on with Lebanon and with Punt

Pepin I (pĕ'pĭn), d 838, king of Aquitaine (817–38), son of Emperor LOUIS I. He joined in the risings of 830 and 833 against his father but in each case helped restore him shortly afterwards

Pepin, Lake (pĕ'pĭn, pĭ'–), a widening of the Mississippi, 21 mi long and 3 mi wide, SE Minn, between Wabasha and Red Wing

Pepin of Héristal (hĕr'ĭstŭl), d c 714, mayor of the palace of the Frankish kingdom of AUSTRASIA, grandson of Pepin of Landen and father of Charles Martel After defeating the nobles of Neustria at the battle of Tertry (687), Pepin made himself ruler of all the Frankish kingdoms, with the Merovingian dynasty retaining the nominal kingship He defeated the Frisians, the Alemanni, and the Bavarians and established a strong government, thus laying the foundation of the empire of his descendants, the Carolingian mayors and kings

Pepin of Landen, d 639?, mayor of the palace of the Frankish kingdom of AUSTRASIA With Arnulf, bishop of Metz, he aided King CLOTAIRE II of Neustria in overthrowing (613) Queen BRUNHILDA of Austrasia Pepin and Arnulf were chosen (c 622) by Clotaire to rule Austrasia in the name of the young DAGOBERT I After Dagobert succeeded his father (629), Pepin lost his influence and withdrew into Aquitaine By the marriage of Pepin's daughter with Arnulf's son, Pepin and Arnulf became the ancestors of the CAROLINGIANS

Pepin the Short, c 714–768, first Carolingian king of the FRANKS (751–68), son of Charles Martel and father of Charlemagne Succeeding his father as mayor of the palace (741), he ruled Neustria, Burgundy, and Provence, while his brother CARLOMAN received Austrasia In 743 the brothers chose Childeric III, a Merovingian, as nominal king of all the Franks With the help of St Boniface, they effected far-reaching reforms which halted the decay of the Frankish church After Carloman had retired to religious life (747) Pepin, with the consent of the pope, St Zacharias, forced Childeric into a monastery and had himself proclaimed king (751) In return for the pope's support, Pepin defended Rome against the Lombards (754, 756), from whom he wrested RAVENNA and other cities These he ceded to the pope, thus laying the foundation of the Papal States Pepin also extended his territories and reconquered AQUITAINE Pepin's wife was BERTHA OF THE BIG FOOT

Pepper, Claude Denson, 1900–, U S Senator (1936–), b Dudleyville, Ala, grad Univ of Alabama, 1921, LL B Harvard, 1924 He was admitted (1928) to the bar, practiced law in Florida, and held many state offices Elected to the Senate as a Democrat, Pepper proved himself an ardent supporter of social-reform measures and a strong advocate of international cooperation.

Pepper, George Wharton, 1867–, American jurist, b Philadelphia, grad Univ of Pennsylvania (B.A., 1887, LL B, 1889). Admitted (1889) to the bar, he practiced law in Philadelphia and was (1893–1910) professor of law at the Univ. of Pennsylvania. He lectured (1915) at Yale and was (1920–21) a member of the commission for revising the Pennsylvania constitution. Pepper was appointed in 1922 to the U S Senate to fill the vacancy caused by the death of Boies Penrose, and, elected on the Republican ticket later the same year, he served in the Senate until 1927 He wrote many books on law and was the author of *In the Senate* (1930) and *Family Quarrels* (1931) See his autobiography, *Philadelphia Lawyer* (1944).

Pepper, William, 1843–98, American physician, b. Philadelphia, M D Univ. of Pennsylvania, 1864 From 1868 he was associated with the medical department of the Univ of Pennsylvania (as provost, 1881–94). Under his administration the course was modernized, the university hospital was established, and new departments and laboratories of hygiene and clinical medicine were added See E P Cheyney, *History of the University of Pennsylvania* (1940), biography by F N Thorpe (1904)

pepper, name given to the pungent fruits of several plants used as condiments or in medicine The true or black pepper (*Piper nigrum*) is a native of the East Indies, whence it was introduced into other tropical countries, as the West Indies and parts of South America It is a perennial climbing or rambling shrub with a woody stem The pea-sized berries are bright red when ripe, and the plants yield two crops annually for about 12 years When the fruit begins to ripen, it is gathered, dried, and winnowed Black pepper is the ground product of the dried fruit Its pungency is owing to a derivative of PYRIDINE White pepper is made by using only ripe fruit, freed from skin and fleshy parts, it has a milder and less biting flavor Allied to black pepper are two kinds—one native to India, the other to Java—both known as long pepper, they are generally crudely prepared and used chiefly in pickling The red peppers of temperate regions, eaten as a table vegetable and used as a condiment or medicine, in either a green or ripe state, are various species of the genus *Capsicum*, known, according to variety, as pimento, Jamaica, or Guinea peppers or, in the United States, as sweet or bell peppers They are annual or biennial plants, bushy and woody stemmed, and they bear inconspicuous flowers and membranous seed pods They were in cultivation in South America prior to the time of Columbus, who is said to have carried home specimens Cayenne pepper is made from a variety perennial in tropical countries, very sharp and biting Paprika (the Hungarian name for red pepper) is prepared from less pungent varieties. The mild Spanish-type paprika is commonly used in the United States The "chili" pepper is much used in Mexican cooking and in a pepper sauce known in the United States by the trade name Tabasco sauce Another variety, with delicate leaves and cherrylike fruit, is grown as an ornamental plant In the earliest days of commerce, black pepper was a great luxury and a staple article of trade between India and Europe So high was its price that a few pounds made a royal gift, and the great demand was one of the causes of the search for a sea route to the East Pepper was known to Hippocrates for its medicinal properties It is a heart and kidney stimulant and is used as a powder or tincture, as a local irritant or liniment, or as a gargle for malignant sore throat

Pepperell (pĕ'pərul), town (pop 3,114), N Mass, near the N H line W of Lowell, settled 1720, set off from Groton 1753 Paper products are made here

peppergrass, any species of the genus *Lepidrum*, widely distributed herbs of the mustard family with a peppery taste They commonly have toothed leaves, clusters of small usually white flowers, and little flat, roundish pods that are often fed to tame birds, whence the name canary grass Most species are weedy, but one—the garden cress (*Lepidrum sativum*)—is sometimes cultivated as an annual salad plant Shepherd's-purse, often confused with peppergrass, has triangular pods

pepperidge. see BLACK GUM

peppermint, aromatic perennial mint (*Mentha piperita*), European, but widely naturalized in the United States, where it is also cultivated commercially for the oil Peppermint resembles spearmint (for differentiation, see MINT) but is the more important of the two It has purplish flowers and a creeping rootstock The leaves and tops are sometimes dried and utilized for flavoring and in medicine but are chiefly in demand for the oil, distilled out for use as a carminative and a stimulant, for its derivative MENTHOL (obtained also from other mints), and for flavoring purposes As a flavoring the oil, pleasantly pungent in odor and taste and suggesting a breath of cold air, is commonly used in chewing gum and candy and as a disguise for disagreeable drugs Because of its penetrative odor it is used in testing pipes for leaks Large-scale cultivation of peppermint is centered chiefly in Indiana and Michigan.

Pepperrell, Sir William, 1696–1759, American colonial military commander, b Kittery Point, Maine (then part of Massachusetts) A wealthy merchant, landowner, and businessman, he became a colonel in the colonial militia, was a delegate to the Massachusetts General Court, and was appointed chief justice in 1730—thereby being forced to study law. In 1745 he was given command of the land forces in one of the most important expedi-

tions of the FRENCH AND INDIAN WARS In cooperation with the British fleet under Sir Peter Warren he brilliantly captured the fortress of LOUISBURG from the French In recognition of this service, he was the first native American to be created baronet (1746) Sir William also commanded a regiment in the last of the French and Indian Wars, and, as president of the council, he briefly governed (1756–57), Massachusetts His journal of the Louisburg expedition was published by the American Antiquarian Society in its *Proceedings*, Vol XX (1911) See J F Sprague, *Three Men from Maine* (1924)

pepper tree, ornamental resinous evergreen tree (*Schinus molle*), native to Peru and cultivated in both hemispheres where the climate is mild It has graceful pinnate leaves and panicles of greenish flowers followed by rose-colored berrylike drupes about the size of peppercorns The fruits are sometimes ground and substituted for pepper or used to adulterate real pepper Pepper trees have been planted extensively in S California, but those in the vicinity of citrus groves have had to be destroyed because they are highly susceptible to black scale, a disease destructive to citrus fruit trees Peruvian mastic tree is another name for the tree

pepper vine · see AMPELOPSIS

pepperwood, name for several plants, among them the CALIFORNIA LAUREL

pepsin, an enzyme in gastric juice which, in the process of digestion, changes insoluble proteins of food into peptones It acts only in an acid medium, which in the body is supplied by hydrochloric acid secreted by the stomach Pepsin is sometimes used as a remedy for indigestion, being obtained as an extract from sheep, calf, or hog stomachs It is not always useful, since cases involving a lack of this secretion are not common, there being usually some other cause for the disorder Many plants secrete an enzyme which has an action similar to that of pepsin

Pepusch, John Christopher (pā'pōōsh), 1667–1752, German musician, who lived in London from 1700 until his death A composer, an organist, one of the founders (1710) of the Academy of Ancient Music, and long director of Lincoln's Inn Theatre, he is best known for having composed the overture and arranged the rest of the music for John Gay's ballad opera *The Beggar's Opera* (1728)

Pepys, Samuel (pēps), 1633–1703, English diarist and public official, b probably Brampton, grad Magdalene College, Cambridge (B A, 1653, M A, 1660) He married Elisabeth St Michel in 1655 and entered (1656) the service of a relative, Sir Edward Montagu (later earl of Sandwich), whose secretary he became in 1660 In the same year he started as a clerk in the navy office and diligently improved his position until by 1668 he was one of the most important naval officials and owned a considerable estate In 1672 he was made secretary to the admiralty He sat in the Parliament of 1679, but, having been friendly with the duke of York, was the object of an attack resulting from popular hysteria over the Popish Plot (see OATES, TITUS) Charged with betraying naval secrets to the French, he was imprisoned in the Tower in 1679 and vindicated and freed the next year In 1682 Pepys went to Tangier for the decommissioning of the naval station there In 1684 he was reappointed secretary to the admiralty and was made president of the ROYAL SOCIETY In the admiralty he successfully worked to restore the English fleet to its previous excellence The accession of William III forced Pepys into retirement, where he wrote his *Memoirs of the Royal Navy* (1690) Pepys left his valuable library, including his diary in cipher, to his nephew John Jackson and in turn to Magdalene College, Cambridge The diary was partially deciphered and in 1825 was first published, an almost complete text was edited by H B Wheatley (1893–99) It is an intimate record of the daily life and reflections of an ambitious, observing, and fun-loving young man, it extends from January 1, 1660, to May 31, 1669, when failing eyesight forced him to stop Like the record of his friend Evelyn, Pepys's diary gives a graphic picture of social life and conditions of the early Restoration period. See abridgment of the diary, *Everybody's Pepys* (ed by O F Morshead, 1926, reprint, 1947), biography by Arthur Bryant (3 vols, 1933–38)

Pequot Indians (pē'kwŏt), tribe of North American Indians of the Algonquian linguistic stock The Pequot were of the Eastern Woodlands cultural area Originally they were united with the Mohegan tribe, but when Uncas revolted, the Pequot moved southward to invade and drive off the Niantic Thus the Pequot, in the early 17th cent., came into possession of the northeast coast of Connecticut They then numbered some 3,000 The warlike Pequot, under their chief, Sassacus, had by 1630 extended their territory W to the Connecticut river. Numerous quarrels between the English who had settled in the Connecticut valley and the Pequot led to the Pequot War (1637) The precipitating cause was the murder of John Oldham, an English trader, by the Pequot The English under John Mason and John Underhill attacked the Pequot stronghold on the Pequot river and destroyed 500 Indians The remaining Pequot fled in small groups. One party went to Long Island, and a second fled into the interior A third, led by Sassacus, was intercepted near Fairfield, Conn, here almost the entire party was killed or captured. The captives became slaves to the colonists or were sold into the West Indies. A few Pequot, including Sassacus, who managed to escape the English were put to death by the Mohawk A remnant of the Pequot begged mercy of the English and were scattered among the S New England tribes, but their treatment there compelled the colonial government to settle them (1655) near the Mystic river in Connecticut Today a few Pequot remain in this area.

Pera, Turkey see ISTANBUL

Perea (pĕrē'ŭ), in Roman times, the region E of the Jordan, S of the Decapolis. It is the Gilead of the Old Testament

Perak (pā'ru, pā'rāk), state (7,856 sq mi, pop 944,725), NW Malaya, on the Straits of Malacca The capital is Taiping Clockwise from north to south, Perak is bordered by Penang, Kedah, Thailand, Kelantan, Pahang, and Selangor The state is drained by the Perak river (c 170 mi long) The Kinta Valley of Perak is an important tin-mining district The mines employ many Chinese workers, the Chinese constitute about half the population, Malays about a third Rice and rubber are grown Before the 16th cent, Perak was the vassal state of the powers that in turn dominated the Malay Peninsula After the fall of Malacca (1511), it was for a time dominated by the sultan of Acheh in Sumatra, in the 17th cent it was invaded by Bugis from Selangor Civil war, augmented by disorders among the Chinese tin miners, plunged Perak in the 19th cent into anarchy In 1874 Perak accepted a British protectorate, in 1895 it became one of the Federated Malay States Since 1948 it has been part of the federation of Malaya

Perazim (pĕ'ruzĭm) see BAAL-PERAZIM

Percé Rock (pĕrsā'), E Que, just off the tip of the Gaspé Peninsula, opposite the mainland village of Percé It is a massive rock (1,420 ft long and about 300 ft wide, 290 ft at the highest point), rising sheer from the Atlantic It takes its name from an opening 50 ft high through the rock near its outer end With near-by Bonaventure Island, it is a famous tourist attraction

Perceval, Spencer, 1762–1812, English statesman He had a profitable law practice before he entered the House of Commons as a Tory in 1796 Rising to be solicitor general (1801-2), attorney general (1802–7), and, under the duke of Portland, chancellor of the exchequer (1807-9), Spencer became prime minister in 1809 Though he opposed (1811) the regency of the prince of Wales (later George IV), he continued in office under the prince Without much political support he financed the Napoleonic Wars until he was assassinated by a bankrupt madman with a grievance against the government

perch, small fresh-water fish of Europe, Asia, and North America, the type of a large family of spiny-finned fishes It has a slender, graceful body and is beautifully colored, the maximum weight attained is about 5 lb, of small game fishes, it is one of the most desirable as food. The yellow perch is common in North America and is known by a variety of names, including red perch

Perche (pĕrsh), agricultural region, NW France, mostly in W Maine and S Normandy Its hills form a continuation of the hills of Normandy Alençon is the chief center Horse breeding is an important activity, and Perche has given its name to the Percheron (see HORSE)

Percier, Charles (shärl' pĕrsyā'), 1764–1838, French architect He won (1786) the Grand Prix de Rome, and in 1794 he became associated with P F L. Fontaine Napoleon appointed them as government architects, and this post lasted until his fall In the development of the Empire style under Napoleon's official sponsorship, Percier and Fontaine became its dictators and official interpreters, not only for Paris but also in Antwerp, Brussels, and Rome, where they designed many residences They worked (1802–12) upon the palaces of the Louvre and the Tuileries, designed the Arc de Triomphe du Carrousel, and did alterations and decorations for the imperial châteaux of Versailles, Malmaison, Compiègne, and Saint-Cloud As interior decorators they designed every detail of furniture, fabric, hardware, and wallpaper in conformity with Empire motives In general their work had finesse and elegance The partnership dissolved in 1814, and Percier thereafter conducted a student atelier With Fontaine he published books, some of which are still used for architectural study They include *Palais, maisons et autres édifices de Rome moderne* (1802), *Choix des plus célèbres maisons de plaisance de Rome et de ses environs* (1809–13), and *Recueil des décorations intérieures* (1812).

Percival, James Gates, 1795–1856, American poet and geologist, b Kensington, Conn, grad Yale (B A, 1815, M.D, 1820). A brilliant and learned man, he had brief careers as a physician, a teacher, an editor, and a linguist, but finally paranoia drove him to stay, voluntarily, at the state hospital in New Haven for several years He was state geologist of Connecticut (1835–42) and of Wisconsin (1854–56) During his lifetime he was best known as a romantic poet, whose *Poems* (1821), *The Dream of a Day* (1843), and other volumes were popular, but which are now forgotten

Percivale, Sir, knight of King Arthur's court · see ARTHURIAN LEGEND and PARSIFAL.

percussion instrument, in music, any instrument whose sound is produced by a blow from another like instrument or from a mallet or a stick Percussion instruments are scientifically classified as idiophones (those made of a substance, such as wood or metal, which vibrates when struck) and membranophones (those whose sound-producing agent is a stretched skin). Idiophones tuned to definite pitches include the BELL, the CELESTA, the GLOCKENSPIEL, and the XYLOPHONE Those of indeterminate pitch include the CASTANETS, the CYMBALS, the GONG, the TAMBOURINE, and the TRIANGLE All membranophones are various kinds of DRUM, only one of which, the KETTLEDRUM, is tuned to definite pitch

Percy. For members of the British family not listed under the family name, see NORTHUMBERLAND

Percy, George, 1580–1632, deputy governor of Virginia (1609–10, 1611), son of Sir Henry Percy, 8th earl of Northumberland He came to Virginia with the expedition of 1607 and was deputy governor after John Smith's return to England and, later, in the absence of Sir Thomas Gates In 1612 Percy himself returned to England He wrote *A True Relation of Virginia* (c 1622) in self-defense after another writer (presumably John Smith) had criticized Percy's leadership in the "starving time." He also wrote a *Discourse of the Plantation of . . . Virginia*

Percy, Sir Henry, 1366–1403, English nobleman, called Hotspur or Harry Hotspur Knighted (1377) by Edward III, Percy was early associated with his father, the 1st earl of NORTHUMBERLAND, in the suppression of the Scots in the north In 1388 he fought with his brother Ralph the famous battle of Otterburn, or Chevy Chase, against the Scots Hotspur was captured but later ransomed, and he returned to his post of warden of Carlisle and the West Marches He went to Calais in 1391 and served (c 1393–1395) as governor of Bordeaux, but by 1398 he was back on the Scottish border With his father he joined Henry of Lancaster, and after the latter's accession as HENRY IV, Hotspur was called upon to take command of the Welsh border Called again (1402) to the defense of the Scottish border, he with others won a notable victory over the Scots at Humbledon Hill, capturing the Scottish leader, Archibald, 4th earl of Douglas A bitter quarrel between Hotspur and Henry IV ensued when Percy refused to turn Douglas over to the king except in exchange for the ransom of Sir Edmund Mortimer, Hotspur's brother-in-law In 1403 the Percys planned with Thomas Percy, earl of Worcester, Owen Glendower, and Sir Edmund Mortimer to dethrone Henry and crown Edmund, earl of March, the nephew of Hotspur's wife Henry anticipated the move and in a battle near Shrewsbury (1403) the king was victorious and Hotspur was slain The character of Hotspur in Shakspere's *Henry IV* was derived mainly from Holinshed's *Chronicle*. See Gerald Brenan, *A History of the House of Percy* (1902)

Percy, Thomas, 1729–1811, English antiquary and churchman Educated at Oxford, in 1782 he became Protestant bishop of Dromore (Ireland) He achieved literary fame as the editor of the *Reliques of Ancient English Poetry* (3 vols, 1765), a collection of 176 English and Scottish ballads, 45 of them taken from a 17th-century manuscript Its publication marked the beginning of general interest in the earlier literary forms, and it exercised a great influence on the romantic poets See *The Correspondence of Thomas Percy and Richard Farmer* (ed. by Cleanth Brooks, 1946)

Perdiccas (purdĭ'kus), d 321 B C, Macedonian general under Philip II and Alexander the Great. After the death of Alexander (323 B C) he ruled as regent from Babylon He strove in vain to hold the empire together, but was opposed by others of the DIADOCHI He was defeated by Ptolemy I in Egypt and was killed in a mutiny of his troops

Perdido, Monte (mōn'tā pĕrdhē'dhō), Fr *Mont Perdu* (mō"pĕrdü'), peak, 10,994 ft high, NE Spain, near the French border It is one of the highest peaks of the Pyrenees

Perdu, Mont: see PERDIDO, MONTE.

Pereda, José María de (hōsā' mārē'ä dā pārā'dhä), 1833–1906, Spanish novelist His stories are laid chiefly in his native Santander An aristocrat by birth, he wrote sympathetically of the peasants but disliked the bourgeoisie His *Escenas montañesas* [mountain scenes] (1864), a collection of stories and episodes, and *El sabor de la tierruca* [the taste of the earth] (1881) show his love of nature *Sotileza* (1884) and *Peñas arriba* (1894) are among his best-known novels

Pereira, Nun'Álvares (nōōn"äl'vŭrĭsh pĕrā'rŭ), 1360–1431, Portuguese hero, called the Great Constable He was the friend, counselor, and general of John I, and it was largely to his efforts that John owed his victory at Aljubarrota (1385) and his

winning of the throne. Nun'Álvares was an astute statesman and an able strategist He was also noted for his devotion to religion and for his private virtue and charity He spent his last years as a monk in Lisbon. He was beatified by Pope Benedict XV in 1918. One of his daughters married a natural son of John I, and from that union came the house of Braganza

Pereira (pərā'rə), city (pop. 30,762), W central Colombia, SW of Manizales In a coffee-growing area of the upper Cauca valley, it is a rail and highway center and manufactures glass

Perekop, Isthmus of (pĕrĭkôp'), c 20 mi long and from 4 to 15 mi wide, USSR, connecting the Crimea, RSFSR, with the Ukrainian mainland It separates the Gulf of Perekop (an arm of the Black Sea) in the west from the Sivash Sea (an inlet of the Sea of Azov) in the east At the small village of Perekop, on the isthmus, there are ruins of Greek and Tatar fortifications which once controlled the only land route to the Crimea Here in 1920 the Red Army decisively defeated General Wrangel in the Russian civil war

Père-Lachaise see CEMETERY and LA CHAISE, FRANÇOIS D'AIX DE

perennial, any plant that lives for more than two years, as contrasted to the ANNUAL and the BIENNIAL Perennials are of two kinds, herbaceous (surviving the winter chiefly by underground STEMS) and woody (surviving the winter by roots, stems, and, sometimes, leaves) In horticultural usage, the term *perennial* refers to herbaceous perennials Bulbous plants, though mostly perennial in habit, are not usually classed as perennials Sometimes a perennial (e g , the castor-oil plant), when cultivated outside its native habitat, is treated as an annual because of its inability to endure the weather extremes Plants considered typical perennials include species of chrysanthemum, iris, peony, phlox, and pink Herbaceous perennials are usually most easily propagated by division of the underground stems, in fact, division every few years is often necessary for continued vigor, a few perennials, such as the lupine, are best undisturbed See A C Hottes, *A Little Book of Perennials* (1923), V H Ries, *How to Grow Perennial Flowers* (1936)

Peresh (pĕ'rĕsh) [Heb , =dung], son of Machir the Manasate 1 Chron 7 16

Pereslavl-Zalesski (pĕrĕ'slälf'vəl-zŭlyĕ'skē), city (pop 13,386), central European RSFSR, c 70 mi SW of Yaroslavl It has a kremlin with a cathedral dating from 1152 and a convent dating from 1392 and was the center of a principality which passed to Moscow in 1302 The city is on Lake Pleshcheyevo (19 sq mi), where Peter I built the first ships of the Russian navy Remains of the flotilla are in a near-by museum The city was formerly called Pereyaslavl-Zalesski, and the lake was also known as Lake Pereyaslavl

Peretz or **Perez, Isaac Loeb** (both: pĕ'rĕts, lōb'), 1851–1915, Jewish poet, novelist, and playwright, b. Zamosc, Poland His early work was written in Hebrew, which he abandoned for Yiddish All his work is imbued with the spirit of his people and an understanding of Jewish life His finest work is contained in his Hasidic sketches, highly imaginative and sympathetic, such as *Stories and Pictures* (1900–1901; Eng tr , 1906). Selections from his works were published (1947) in Yiddish and English See Maurice Samuel, *Prince of the Ghetto* (1948)

Pereyaslav-Khmelnitski (pĕrĕsläf'-khmĭlnyĭt'skē), city (pop 15,466), central Ukraine, SE of Kiev. Known since the 10th cent , it was the capital of a principality (11th-12th cent) of Kievan Russia. Its former name was Pereyaslavl, it was modified in 1944 in honor of Bohdan Chmielnicki, who in 1654 proclaimed the union of the Ukraine with Russia here

Pereyaslavl-Zalesski, RSFSR see PERESLAVL-ZALESSKI.

Perez (pĕ'rĕz), variant of PHARES

Pérez, Antonio (äntō'nyō pä'räth), b between 1534 and 1540, d 1611, Spanish politician From 1573 until 1579 he was the confidential adviser of King Philip II. Ambitious and unscrupulous, he became very powerful and was with the princess of ÉBOLI a center of court intrigues In 1578 Escobedo, secretary to John of Austria, was assassinated, and in 1579 Pérez was arrested, public opinion accusing him of having procured the murder The most likely version of the murder is that Pérez procured it on the king's order on the ground that Escobedo was fostering dangerous ambitions in John of Austria Another theory is that Escobedo was killed after detecting Pérez in an intrigue with the princess Philip's order to arrest Pérez may have been inspired by jealousy, for Philip is said to have loved the princess Pérez was prosecuted on various charges until in 1590 he fled to Saragossa, where he placed himself in the hands of the authorities of his native Aragon He then openly accused the king of having ordered Escobedo's murder The king contested the procedure, and the case became a struggle between Philip and the people of Aragon, who, jealous of their privileges, sided with Pérez and revolted, the rising was ruthlessly suppressed (1591). The Inquisition intervened, accusing Pérez of heresy and claiming jurisdiction Pérez finally fled (1591) to France and England.

Perez, Isaac Loeb: see PERETZ, ISAAC LOEB

Pérez, Juan (hwän' pä'räth), d. 1774, Spanish colonial naval officer, explorer on the coast of the Pacific Northwest. He commanded a vessel in the expedition to San Diego under general command of Gaspar de Portolá, and in 1774 he was in command of a fleet sent by Viceroy Bucareli to investigate Russian advances down the northern coast, to visit the coast to lat 60° N, and to take formal possession for Spain. He sailed from Monterey northward, but was prevented from landing by bad weather and turned back at lat 55° N He had traffic with the natives of Queen Charlotte Island, sighted Vancouver Island, and on Aug 8, 1774, discovered Nootka Sound, which he called the harbor of San Lorenzo He reached Monterey late in August and died at sea when bound for San Blas The diary of one of the chaplains, Juan Crespi, gives a fine narrative of the voyage

Pérez de Ayala, Ramón (rämōn' pä'räth dā äyä'lä), 1881–, Spanish poet, novelist, and essayist, b Asturias He was educated at a Jesuit college, which he satirizes in the novel *A M D G* (1910, *Ad majorem Dei gloriam*) From 1904 to 1916 three books of his poems were published, each of which has a special symbolism—*La paz del sendero* (1903), the earth, *El sendero innumerable* (1916), the sea, and *El sendero andante* (1921), the river. His first book of essays, *Las máscaras* [the masks], appeared in 1917 Among his novels, which are often interspersed with poems, are *Belarmino y Apolonio* (1921), three "poematic" novels in one volume, *Prometeo, Luz de domingo*, and *La caída de los Limones* (1916, Eng. tr , *Prometheus, The Fall of the House of Limón, Sunday Sunlight*, 1920), *La pata de la raposa* (1912, Eng tr , *The Fox's Paw*, 1924), the story of his courtship of an American wife, and *Tigre Juan* (1926, Eng tr , *Tiger John*, 1933) The republican government appointed Pérez de Ayala ambassador to London in 1931 His novels and essays are characterized by originality, philosophical insight, and mastery of the subtleties of Spanish

Pérez de Montalván, Juan (hwän' pä'räth dā möntälvän'), 1602–38, Spanish dramatic poet He was the close friend and biographer of Lope de Vega He wrote many successful plays, among them *Los amantes de Teruel* [the lovers of Teruel]

Pérez Galdós, Benito (bānē'tō pä'räth gäldōs'), 1843–1920, Spanish novelist and dramatist, b Canary Islands He went to Madrid at 20 and lived there most of his adult life He owes his fame chiefly to the *Episodios nacionales*, a series of 46 novels relating episodes in the history of Spain from 1805 (*Trafalgar*, 1873) until the end of the century, *Cánovas*, the last, was published in 1912 He wrote also many novels dealing with contemporary life and problems, such as *Doña Perfecta* (1876, Eng tr , 1880), dramatized in 1896, *Gloria* (1877, Eng tr , 1883), *Marianela* (1878, Eng tr , 1883), *La familia de León Roch* (1878, Eng tr , *Leon Roch*, 1886), *Fortunata y Jacinta* (4 vols , 1886–87), *Misericordia* (1897), and *Ángel Guerra* (1890–91) In 1897 he was elected to the Royal Academy, and in 1907 he became deputy of the republican party in Madrid After 1912 he was blind but continued to dictate his books until his death.

Perez-uzza or **Perez-uzzah** (both pĕ'rĕz-ŭz'ə) [Heb , =breach of Uzzah], threshing floor where Uzzah touched the ark and died It had previously been called Chidon or Nachon. 2 Sam 6 6–8, 1 Chron 13 9–11

perfect: see TENSE

Perfectionists see NOYES, JOHN HUMPHREY

perfume, aroma produced by burning INCENSE, by the essential oils of plants, and by synthetic aromatics It has been used from antiquity in the Far East, Egypt, Greece, and Rome, and its use was revived in Europe during the Crusades Since the early 19th cent , chemists have analyzed many essential oils and have produced thousands of synthetics, some imitating natural products and others yielding new scents Most perfumes today are blends of natural and synthetic scents and of fixatives which equalize vaporization of the blends and add pungency. These include the animal fixatives, AMBERGRIS, MUSK, CIVET, and castor (from the beaver), balsam and other resins, and synthetic substitutes Leading producers of perfume oils are the East Indies, Réunion island, and the South of France, especially Grasse, which is the center also of the natural perfume industry Bulgaria is noted for ATTAR OF ROSES, the Philippines for ilang-ilang, Sicily for orange and neroli oils, and England for lavender and mint The ingredients are usually combined with alcohol for liquid scents and with fatty bases for many cosmetics See Edward Sagarin, *The Science and Art of Perfumery* (1945); Y. R Naves and Gabriel Masuyer, *Natural Perfume Materials* (Eng tr , 1947).

Perga (pûr'gə), ancient city, Pamphylia, S Asia Minor (now S Turkey) It was of importance under the Romans. St. Paul came here on his first journey (Acts 14.24,25). The ruins of Perga include a theater and a stadium.

Pergamum (pûr'gəməm), ancient city, NW Asia Minor (Turkey), in the fertile valley of the Caicus. It became important c.300 B.C., after the breakup of the Macedonian empire, when a Greek family (the Attalids) established a brilliant center of Hellenistic civilization. Its chief glory was its sculptures, at two periods. The first Pergamene school celebrated the decisive victory of Attalus I (d. 197 B.C.) over the Galatians (c.230 B.C.); the *Dying Gaul* is an example of the realism of the art. The later period produced a frieze for a great altar of Zeus, glorifying especially the defeat of Antiochus III (190 B.C.). The cultured Pergamene rulers also built up a library second only to the Alexandrian, one of its specialties was the use of PARCHMENT, which takes its name from the city. Eventually the library was given by Antony to Cleopatra As a political unit the kingdom reached its chief importance under Attalus I, Eumenes II (d 160 or 159 B C), and Attalus II (d 138 B C) These kings followed a pro-Roman policy through fear of the imperialism of Philip V of Macedon and of Antiochus III The independence of Pergamum ended dramatically when Attalus III (d. 133 B.C.) bequeathed the kingdom to the Roman people It was reconstituted as the province of Asia. Under the Romans Ephesus rapidly eclipsed Pergamum as chief city Pergamum knew Christianity early, it was one of the Seven Churches of Asia (Rev. 1 11, 2 12) Various forms of the name are Pergamus, Pergamon, and Pergamos See E V. Hansen, *The Attalids of Pergamon* (1947).

Pergolesi, Giovanni Battista (jōvän'nē bät-tēs'tä pĕrgōlā'zē), 1710–36, Italian composer of the Neapolitan school He composed some sacred works and instrumental pieces, but his real bent was for the stage However, only one of his operas—*La serva padrona* (Naples, 1733), originally written as an intermezzo—was a real success, although his musician contemporaries esteemed his work highly *La serva padrona* became the model for the *opera buffa* Performed between the acts of an opera by Lully in Paris in 1752, it precipitated a controversy concerning Italian versus French opera and found an ardent champion in J J Rousseau Pergolesi's *Stabat Mater*, for treble voices, was completed just before his death.

Perham (pû'rəm), village (pop 1,534), W Minn , SE of Detroit Lakes It is a resort in a lake and farm area

Peri, Jacopo (yä'kōpō pä'rē), 1561–c 1633, Italian composer and singer *Dafne* (c 1597), the first opera on record, was jointly composed by Peri and Giulio Caccini Each composed a setting of *Euridice* (1600), the earliest opera whose music is extant, for the wedding of Marie de' Medici and Henry IV of France

peri (pĕr'ē), in Persian mythology, supernatural female being Peris are comparable to fairies and elves Peris are said by some Moslems to be descendants of the fallen angels

Periander (pĕ'rēăn"dər), d. 585 B.C , one of the SEVEN WISE MEN OF GREECE, tyrant of Corinth His rule raised his city to a high state of prosperity, and he had friendly relations with Mitylene He established colonies at Potidaea and probably at Apollonia, and he fought successfully against Epidaurus and Corcyra. There were many stories told of him and many maxims attributed to him

Peribonca (pĕrĭbŏng'kə), river rising in central Quebec in the Otish Mts and flowing 300 mi S through Peribonca Lake to Lake St John.

Pericles (pĕ'rĭklēz), c 495–429 B C , Athenian statesman He was of the ALCMAEONIDAE, his father, Xanthippus, had been Athenian admiral at Mycale (see PERSIAN WARS), and his mother was a niece of Cleisthenes The young man studied under notable masters, such as Zeno of Elea and Anaxagoras To the influence of the latter is attributed much of the composure and dignity which gave Pericles so great an advantage as orator and as leading citizen Appreciation of beauty and an ambition that Athens should be unrivaled in splendor made him a great patron of the arts He encouraged music and the drama, and under his direction Ictinus and Callicrates, Phidias, and others produced the monuments (e g , the Parthenon) that have made his city glorious Pericles' political leadership depended upon an alliance with the people His foremost opponent was CIMON, who was much abroad carrying on wars against the Persians Dominated by Pericles, democracy advanced through various steps until all officials of Athens were paid salaries by the state, and every office was open to most citizens Pericles' policy was always the aggrandizement of Athens, under Athenian hegemony he sought to found a Hellenic confederacy (448 B C.), but Sparta would have none of it Under Pericles the DELIAN LEAGUE reached its maximum efficiency as an instrument of Athenian despotic imperialism. Peace with Persia was made in 448 B.C., after Cimon's death In 445 B C a 30-year truce was arranged between Athens and Sparta The 14 years of peace that followed gave Pericles a period of power for the development of Athens as he desired. The PELOPONNESIAN WAR began in 431 B.C. This, which Pericles helped to bring on, was to undo Pericles' work and ruin Athens. When the war went against the city, Pericles' enemies attacked him. The cele-

brated funeral oration he made at the end of the first year of war (as told by Thucydides) was a strong appeal to the pride and patriotism of the citizens. The next year brought the plague and afterward the deposition of Pericles, who was tried and fined, then reinstated a little before his death. Alcibiades was a ward of Pericles. Aspasia was his mistress. Thucydides and Plutarch left accounts of his life and character. See W. W. Lloyd, *The Age of Pericles* (1875), E. A. Gardner, *Ancient Athens* (1902); J. B. Bury, *Ancient Greek Historians* (1909).

Perida (pĕrī'dȧ), family returned from exile. Neh. 7:57. Peruda. Ezra 2:55.

Périer, Casimir Pierre (käzēmēr' pyĕr' pĕryā'), 1777–1832, French statesman. He was a member of a wealthy bourgeois family, his father, Claude Périer, a textile manufacturer and financier of Grenoble, had been an important figure in the Bank of France, and several of his brothers were prominent. In 1801 Casimir Périer founded a bank at Paris with his brother Scipion. After the Bourbon restoration Casimir Périer, like many other bourgeois, became an opponent of reactionary tendencies in the government. He wrote pamphlets against the duc de Richelieu, entered the chamber of deputies in 1817, and bitterly opposed Villèle and Polignac. In the July Monarchy of Louis Philippe he was prominent and served as minister without portfolio (resigning when Laffitte became premier). When the Laffitte ministry fell, Casimir Périer headed the new ministry in 1831. His ministry was conservative, he put down risings in Grenoble and Lyons and set out to repress republican sentiment and maintain a constitutional monarchy. He refused to lend the least aid to the Polish revolution, but sent an army to Belgium, thus helping the insurgents there to win independence from Dutch rule. Casimir Périer's exertions in behalf of the stricken in the cholera epidemic of 1832 led to his own death. The family continued prominent, taking the name CASIMIR-PERIER.

Périgord (pārēgôr'), region and former county, SW France, drained by the Dordogne and Isle rivers. It is now included in Dordogne dept. and in part of Lot-et-Garonne dept. It consists of arid limestone plateaus (*causses*), cut by deep and fertile river valleys. The plateaus have extensive oak forests, at the roots of the oak trees truffles are found (see TRUFFLE), they constitute a major export article, as do the huge livers of the geese that are raised in the valleys. Périgueux and Bergerac are the chief towns. Near Madeleine and Moustier numerous cave dwellings have been found (see PALEOLITHIC PERIOD). The county of Périgord, originating in the 9th cent., was enfeoffed to AQUITAINE. It was definitively wrested from English rule c. 1370 and passed, as a fief of the French crown, to the house of Bourbon. After Henry of Navarre, who inherited it, became king of France in 1589, he incorporated Périgord into the royal domain as part of Guienne prov.

Périgueux (pārēgû'), city (pop. 37,287), capital of Dordogne dept., SW France, on the Isle river. It has ruins dating from Roman times. The Cathedral of St. Front, in Byzantine style, and the Basilica of St. Étienne date from the 12th cent. Périgueux is the historical capital of Périgord and is famous for the *pâtés* (especially of goose livers and truffles) which are exported.

Perim (pārēm', pĕr'ĭm), island (5 sq. mi., pop. 360), belonging to the British crown colony of Aden. It is the only important island in the Bab el Mandeb, the strait which connects the Arabian Sea and the Red Sea. In 1857 Perim was occupied by the British, who have fortified and garrisoned it.

Perino del Vaga (pārē'nô dĕl vä'gä) or **Pierino del Vaga** (pyārē'nô), 1500–1547, Italian painter, whose real name was Perino or Pierino Buonaccorsi. He worked chiefly in Rome and Genoa. He worked for Raphael in the loggia of the Vatican and painted the figures of the planets in the Appartamento Borgi. After the sack (1527) of Rome he fled to Genoa, where his chief paintings were the very fine historical and mythological frescoes of the Doria Palace (partially destroyed), including *War of the Gods and Giants*. Shortly after 1536 he returned to Rome, under the patronage of Pope Paul III, and worked on the decorations of the Sala della Segnatura in the Vatican and the Sala Regia.

period: see PUNCTUATION.

periodical, publication issued at regular intervals, usually distinguished from the NEWSPAPER in that it purports to express the points of view of its authors and editors in the articles instead of recounting current news and also by the frequency of its publication, which may be weekly, monthly, quarterly, and even annually, rather than daily. The folds of pages of the periodical are usually bound together inexpensively, whereas there is no binding of newspaper folds. The term *periodical* is applied to journals, literary reviews, and fiction magazines, but the term *magazine* is usually limited to those periodicals designed primarily for entertainment. The French *Journal des savants* (1665–1792, 1797–; before 1797 the spelling *sçavans* was used) is considered the first periodical. Its articles are both scientific and literary. Other important French periodicals, past and present, include the *Revue des Deux Mondes*, founded in 1829 but discontinued late in the Second World War; the *Mercure de France* (1672–1832), which after a long period of inactivity was again published in 1890 and is still published; the *Revue de Paris* (1894–), the *Revue politique et littéraire* (*Revue bleue*), which was begun in 1863 but suspended publication in 1939, and the contemporary *Revue scientifique* (*Revue rose*) published after 1863. In Switzerland the *Bibliothèque universelle et revue suisse* (1846–57, 1858–78, 1879–95, 1896–1924) was widely known, as was its successor the *Bibliothèque universelle et revue de Genève* (1924–30). Germany has had innumerable scientific and scholarly journals. The *Deutsche Rundschau* (1874–) has a long tradition of excellence in the field of literature, as did the *Preussische Jahrbücher* (1858–1933). The humorous *Fliegender Blätter*, started in 1845, and *Simplicissimus*, launched in 1896, also were famous, but they ceased publication in the Second World War. The Italian *Nuova antologia* (1866–) developed a wide foreign circulation. *De Gids* (1837–) is the best-known Dutch periodical. *Samtiden* (1890–) is a general Norwegian periodical, *Samtid och framtid* (1946–) is the best-known Swedish magazine. The first English periodical, *Mercurius Librarius* (1680), was styled after the *Journal des savants*. *Weekly Memorals for the Ingenious* was published for one year, 1682–83. The *Gentleman's Journal* (1691–94) contained news and original prose and poetry. The *History of the Works of the Learned* (1699–1712, 1737–43) consisted largely of descriptions of foreign books. The great 18th-century essayists reached their readers chiefly through the weekly review. Daniel Defoe's *Review*, for the most part political, ran from 1704 to 1713. Jonathan Swift edited the *Examiner* in 1710–11. Sir Richard Steele's *Tatler* (1709–11) was the predecessor of the *Spectator* (1711–12), for which Steele and Joseph Addison were jointly responsible. Of the 208 essays of the *Rambler* (1750–52) all but five were written by Samuel Johnson. Tobias Smollett and Dr. Johnson contributed to the Tory *Critical Review* (1756–1817). In the name *Gentleman's Magazine* (1731–1868) the word *magazine* is for the first time used in the sense of a periodical for entertainment. In 1802 the famous *Edinburgh Review* was launched by Francis Jeffrey, Henry Brougham, and Sidney Smith. Constable was its first publisher. It ran until 1929, among its famous contributors were Sir Walter Scott, Thomas Macaulay, Thomas Carlyle, Matthew Arnold, and William Hazlitt. In 1809 Scott left the Whig *Edinburgh Review* for the Tory *Quarterly Review*, started that year by John Murray, with William Gifford as its first editor. It is still published. It was the habit of literary reviews to make the criticism of a single book or a group of books the springboard for an essay on the subject. Other famous quarterlies begun in the early 19th cent. include the *Westminster Review* (1824–1914), an organ of Benthamite reform, and the *Dublin Review* (1836–), Roman Catholic, of which Wilfrid Ward was long editor. G. H. Lewes was the first editor of the *Fortnightly Review* (1865–), monthly after 1866. Other famous monthlies are the *Nineteenth Century and After* (1877–) and the *Contemporary Review* (1866–). The great 19th-century English novels usually appeared first in magazines. Charles Dickens edited *Household Words* (1850–59) and *All the Year Round* (1859–95), and many of his novels appeared in them. Charles Kingsley wrote for *Macmillan's*, which ran from 1859 to 1907. The *Cornhill Magazine* (1860–) was first edited by Thackeray and published his last two novels as well as some by Mrs. Gaskell and by Anthony Trollope. *Fraser's Magazine*, published by James Fraser, was started by William Maginn and Hugh Fraser in 1830. It published some of the best works of Thackeray and Carlyle. Longmans publishing house took over the magazine in 1863, and it ran until 1882. *Blackwood's Magazine* was founded in 1817; Thomas De Quincey was among its early contributors. The *English Review*, founded in 1908, was one of the best-known literary monthlies of the early 20th cent. It introduced the poetry of John Masefield. In 1937 it was incorporated into the *National Review* (1883–). The *National and English Review* was started in 1950. The more famous English literary and political weeklies of the 19th and 20th cent. include the *Examiner* (1808–81), started by Leigh Hunt and his brother John, the *Academy* (1869–1916, weekly after 1874), the *Athenaeum* (1828, the *Nation and Athenaeum*, 1921–31, merged in 1931 with the *New Statesman* under the title the *New Statesman and Nation*), of which Charles Wentworth Dilke was the outstanding editor, the *Spectator* (1825–); and the *Saturday Review* (1855–1938). The English humorous weekly *Punch* (1841–) is undoubtedly the most famous of its kind in the world. Noted contributors included Thackeray, Thomas Hood, and Douglas William Jerrold and the illustrators John Leech and Sir John Tenniel. In colonial America, periodical publication was at first hampered by indifference and by difficulties of distribution. Postage was practically prohibitive, since postmasters could frank what they sent out, they frequently became publishers. Early periodicals, usually short-lived, were Andrew Bradford's *American Magazine* (Philadelphia, 1741), Benjamin Franklin's *General Magazine and Historical Chronicle* (Philadelphia, 1741), and William Bradford's *American Magazine and Monthly Chronicle* (Philadelphia, 1757–58), edited by William Smith. Among those published in the early days of the republic were the *American Museum* (Philadelphia, 1787–92), edited by Mathew Carey, Noah Webster's *American Magazine* (New York, 1787–88), the *Columbian Magazine* (Philadelphia, 1786–92), the *Massachusetts Magazine* (Boston, 1789–96) of Isaiah Thomas, the *New-York Magazine* (1790–97) of Thomas and James Sword, and the *Port Folio* (Philadelphia, 1801–27), published by Joseph Dennie until 1808 and later edited (1812–14) by Nicholas Biddle. *Niles' Weekly Register* (1811–49), published from 1811 to 1836 by Hezekiah Niles, is valuable for its honest record of political events. The *Analectic Magazine* (1813–21) was at first edited (1813–15) by Washington Irving. The *New-York Mirror* (1823–57), founded by George Pope Morris and Samuel Woodworth, came to hold a high position for its literary reviews and for its superior typography and illustrations. Edgar Allan Poe contributed (1844–45) many critical essays to this periodical. *Graham's Magazine* (Philadelphia, 1826–58) was edited at different times by Poe (1841), Rufus W. Griswold (1842), and Bayard Taylor (1848). *Godey's Lady's Book* (Philadelphia, 1830–92, New York, 1892–98) was one of the most famous of the periodicals planned to interest women, its colored fashion plates are valued by collectors. Sara Josepha HALE was long its editor. Other magazines which were notable in the 19th cent. were the *Knickerbocker Magazine* (New York, 1833–65), the *Southern Literary Messenger* (Richmond, 1834–64), edited (1835–37) by Poe for a short time and publishing much of the work of William Gilmore Simms, the *Democratic Review* (Washington and New York, 1837–59), to which Nathaniel Hawthorne, William Cullen Bryant, and Walt Whitman contributed, and the *Dial* (Boston, 1840–44), the organ of the transcendentalists, edited by Margaret Fuller (1840–42) and by Ralph Waldo Emerson (1842–44). Another *Dial* (Chicago and later New York, 1880–1929) was famous for its literary criticism. American periodicals which have had long histories include the *North American Review* (Boston and later New York, 1815–1940), edited by James Russell Lowell (1864–72), Charles Eliot Norton (1864–68), and Henry Adams (1870–76), the *Living Age* (Boston, 1844, a weekly until 1927, then a monthly until it ceased publication, 1941), made up of articles reprinted or translated from European journals, the *Atlantic Monthly* (Boston, 1857–), which has had several outstanding editors, including William Dean Howells (1871–81), and *Harper's Magazine* (New York, 1850–), edited (1869–1919) by Henry Alden Mills. *Scribner's Monthly* (1870–81) was renamed the *Century Illustrated Magazine* (1881) and the *Century Monthly* (1925), which united (1929) with the *Forum* to form the *Forum and Century* (1930–40). J. G. Holland (1870–81) and R. W. Gilder (1881–1909) edited this series of periodicals for years. Another monthly periodical with the name *Scribner's Magazine* ran from 1887 to 1939. From 1866 to 1878 the *Galaxy* (New York) was a rival of the *Atlantic Monthly*. Well-known American weeklies are the *Nation* (New York, 1865–), edited first by Edwin L. Godkin and later by Oswald Garrison Villard from whom it was taken over by Freda Kirchwey, originally a conservative organ of opinion noted for its excellent book reviews and now a vehicle for liberal views, *Harper's Weekly* (New York, 1857–1916), for which George W. Curtis wrote famous editorials and Thomas Nast made cartoons; the *Saturday Evening Post* (Philadelphia, 1821–), now chiefly a fiction magazine, the *Independent* (New York and Boston, 1848–1928), at first Congregationalist under the editorship of Henry Ward Beecher (1861–63) and Theodore Tilton (1863–70), but later a nonsectarian, crusading publication, the *Outlook* (New York, 1893–1935), which under the direction of Lyman Abbott superseded the *Christian Union* (1870–93), and the *New Republic* (New York, 1914–), an organ of liberal and radical opinion. Both *America* (1909–) and the *Commonweal* (1924–) are well-known Roman Catholic weeklies. The *Churchman* (1845–) is a liberal Episcopal weekly. The *New Englander* (New Haven, 1843–92) became in 1892 the *Yale Review*, a literary quarterly still current. The *American Mercury* was founded in 1924 by H. L. Mencken and George Jean Nathan. The *Overland Monthly* (San Francisco, 1868–) had many distinguished contributors and was long associated with its first editor, Bret Harte (1868–70). Other important Western periodicals devoted to literature include *Poetry* (Chicago, 1912–), edited by Harriet Monroe until 1936, and *Midland* (Iowa City, 1915–33). The era of muckraking in the latter years of the 19th cent. and first decade of the 20th cent. brought into prominence *McClure's* (New York, 1893–1928); *Hampton's Magazine* (New York, 1898–1912); the *Cosmopolitan* (New York, 1886–1925), which was

bought by the Hearst syndicate and is still published; the *Arena* (Boston, 1889–1909); *Collier's* (New York, 1888–), and others The *Youth's Companion* (Boston, 1827–1929) and *St Nicholas* (New York, 1873–1940), long edited by Mary Mapes Dodge, were famous juvenile magazines The *Ladies' Home Journal* (Philadelphia, 1893–) contains topics of general interest to women *Esquire* (Chicago, 1933–) became widely read as a magazine for men, and the *New Yorker* (1925–) became noted for its sophisticated humor and for its literary quality The *Saturday Review of Literature* (New York, 1924) is one of the best-known literary periodicals A comparatively recent development has been the weekly magazine—e g , *Time* (New York, 1923–) and *Newsweek* (Dayton and New York, 1933–)—which is exclusively devoted to the condensed coverage and interpretation of news, earlier the *Literary Digest* (1890–1938) had condensed editorials and articles from newspapers and periodicals *Reader's Digest* (Pleasantville, N Y , 1922–) did much to popularize condensations of magazine articles and literature Specialized periodicals, which cover a great many fields of knowledge, endeavor, and beliefs, are widely published throughout the world Some of the oldest American scientific periodicals are the *American Journal of Science* (New Haven, 1818–), the *Franklin Journal* (Philadelphia, 1826–), and the *Scientific American* (New York, 1845–). Agricultural journals include the *American Agriculturalist* (1842–) and the *Rural New Yorker* (1851–) Among trade journals is the *Publishers' Weekly*, organ of book publishers For indexes to periodicals, see INDEX See G S Marr, *Periodical Essayists of the Eighteenth Century* (1924), Walter Graham, *English Literary Periodicals* (1930), F L. Mott, *A History of American Magazines, 1741–1885* (3 vols , 1930–38), J E Bakeless, *Magazine Making* (1931), M M H Thrall, *Rebellious Fraser's* (1934), M M Bevington, *The Saturday Review, 1855–1868* (1941), Winifred Gregory, ed , *Union List of Serials* (2d ed , 1943), C F Ulrich, *Ulrich's Periodical Directory* (5th ed , 1947), Playsted Wood, *Magazines in the United States* (1949), the annual N W Ayer & Son's Directory

periodic law, Prior to the work of Mendelejeff (1869), a number of chemists had been working toward a universal system for the classification of the chemical elements J W Dobereiner in 1829 arranged a number of the elements in groups of three, called triads, on the basis of their physical and chemical properties, observing that in each of these groups the element lying between the other two exhibited properties between those of the other two and had an ATOMIC WEIGHT which was almost exactly equal to the average (or mean) of their atomic weights For example, calcium, strontium, and barium fall naturally together in respect to their chemical activity and when arranged in order of increasing atomic weight strontium has an atomic weight (87 63) very nearly equal to the average of that of calcium (40 08) and barium (137 36) In the same way lithium (at wt =6 940), sodium (at wt =22 997), and potassium (at wt = 39 096) fall together, sodium being in between and having an atomic weight very nearly equal to the average of those of the other two elements J A R Newlands discovered (1863–65) that when the elements are listed according to increasing atomic weight, it is found that, beginning with the second, the 8th element following any given element is very similar in chemical properties, and the 16th element following it is also similar in properties Because of this counting by groups of eight, Newlands's law was known as the law of octaves About the same time A E B de Chancourtois arranged the elements in one continuous order also by atomic weights A few years later (1869) Mendelejeff brought forward his periodic system for the grouping of the elements, using, like Newlands and Chancourtois, an order of increasing atomic weight His periodic law states that the properties of the chemical elements are periodic functions of their atomic weight—i e , that there is a definite relationship which is seen in the periodic, or regular, occurrence of similar properties in certain elements when all are arranged according to increasing atomic weight Lothar Meyer, working independently of Mendelejeff, drew a similar conclusion, pointing out in this respect for the first time the relationship between the so-called atomic volumes of the various elements, the atomic volume of an element being the ratio of its atomic weight to its specific gravity At the time when Mendelejeff announced his periodic law, there were a number of elements still undiscovered As a result, his arrangement of the elements in tabular form (in vertical columns) showed a number of spaces into which no element then known would fit He concluded that these spaces indicated elements not yet discovered By means of his periodic system, he was able to predict with startling accuracy the atomic weights and general properties of these undiscovered elements (see GALLIUM, GERMANIUM, and SCANDIUM). In spite of this remarkable success, however, his periodic law has certain defects Not all the elements fall, when arranged in order of increasing atomic weight, into positions corresponding correctly to their chemical properties For example, the inert gas argon (at wt =39 944) follows potassium (at wt =39 096) with respect to atomic weight, but according to its chemical properties should precede the metal in order to fall into the same group as the other inert gases of similar properties In the same way, tellurium and iodine must be interchanged so that the latter can be placed in the same group as fluorine, chlorine, and bromine (see HALOGEN), which it closely resembles Cobalt (at wt =58 94) and nickel (at wt =58 69) are also interchanged so that the cobalt can be nearer in the arrangement to iron, which it resembles more closely than does nickel. The occurrence of these exceptions to Mendelejeff's law was corrected by the work of Moseley which led to the statement of a new periodic law that has no exceptions In this system, the elements are arranged according to their X-ray spectra (in order of decreasing wave length) and not according to their atomic weights The order in which they fall, however, is almost identical with that of increasing atomic weight In the new system, the elements are numbered according to the position they occupy, and this number is called the atomic number The atomic number indicates both the number of positive electrical charges on the nucleus and the number of electrons outside the nucleus It is the number and arrangement of these outer electrons that is believed to be chiefly responsible for determining the properties of the elements The new periodic law states, then, that the properties of elements are periodic functions of their atomic numbers The tabulation consists of nine vertical columns called groups and a number of horizontal columns called periods For example, the gases helium (atomic no =2), neon (atomic no =10), argon (atomic no =18), krypton (atomic no =36), and xenon (atomic no =54), which are all chemically inert, fall into the so-called zero group (the first vertical column) and all have a VALENCE of zero The property of chemical inertness is seen to be of periodic or regular occurrence on the basis of atomic numbers The position of hydrogen is in question, but it is commonly placed in group one (the second vertical column) along with lithium, sodium, potassium, copper, rubidium, silver, cesium, gold, and francium, which are arranged below it in that order (copper, silver, and gold, however, are classed together since they resemble each other more than they do the other metals of the group) Beryllium and magnesium are the first two elements of the second group, boron and aluminum, of the third group, carbon and silicon, of the fourth, nitrogen and phosphorus, of the fifth, oxygen and sulphur, of the sixth, fluorine and chlorine, of the seventh, iron, cobalt, and nickel are in the eighth The so-called first period (i e , the first horizontal column not counting that containing hydrogen alone) consists of the first element of each of the groups (or vertical columns) and includes, therefore, helium, lithium, beryllium, boron, carbon, nitrogen, oxygen, and fluorine The second period includes neon, sodium, magnesium, aluminum, silicon, phosphorus, sulphur, and chlorine The new periodic table is of great importance to the chemist By the use of the table it has been possible to predict the existence and properties of a number of elements not known at the time, among these being hafnium, masurium, and rhenium Furthermore, the table has served as a reliable check for disputed or uncertain data concerning various of the known elements

Peripatetics (pĕ″ruputĕ′tĭks) [from Gr ,=walking about, from Aristotle's manner in teaching], the followers of ARISTOTLE THEOPHRASTUS, friend of Aristotle and cofounder with him of the Peripatetic school of philosophy, succeeded him as its head and did much to bring it into favor Strato of Lampsacus was the next leader of the school Later Peripatetics were largely occupied in preparing paraphrases, commentaries, and interpretations of the teachings of Aristotle The first complete edition in ancient times was arranged by Andronicus of Rhodes (60 B C –50 B C) The devotees of the school defended the essential doctrines of the founder against the Stoics and others, but some turned into paths of their own in certain matters, particularly concerning the explanation of nature.

periscope (pĕ′rĭskōp) [Gr ,=view around], instrument to enable a person to see objects not in his direct line of vision or concealed by some intervening body Its essential parts are a tube, prisms, lenses, mirrors, and an eyepiece The image is received in one mirror and reflected through the tube with its lenses to a mirror visible to the person Periscopes used in submarines must be so arranged that they can be turned to permit a view of the entire horizon Such periscopes are of noncorrosive metal, have tubes up to 30 ft long and about 6 in in diameter (only a small section projects above the water), and may be withdrawn into the submarine There are many types of smaller land instruments

peritonitis (pĕ″rĭtŭnī′tĭs), inflammation of the peritoneum, the membranous tissue lining the abdominal cavity and surrounding many of the organs Though most commonly caused by perforation of the gastrointestinal tract (e g , by ulcer and tissue degeneration in typhoid fever) and by rupture of a distended appendix, it is also a hazard of abdominal surgery Sometimes it occurs from a primary infection, e.g , in pneumococcus infections, particularly among children, or in the course of tuberculosis of the bowel It may result from abortions or gonococcal infection of the Fallopian tubes Whatever the avenue of access, bacteria are generally the causative agents of peritonitis Surgery is needed when the condition does not respond to sulfa compounds, penicillin, or other drugs

periwinkle (pĕ′rĭwĭng″kŭl), small mollusk with a conical, spiral shell, found in most temperate and cold waters, often partially terrestrial and frequently seen on rocks and seaweed The edible European species is established on the Atlantic coast of North America

periwinkle, name for plants of the Old World genus *Vinca* The common periwinkle (*Vinca minor*), often called myrtle, is much cultivated—frequently naturalized—as a trailing ground cover for shady places It has dark evergreen leaves and, commonly, blue flowers A variegated-leaved variety of one species (*Vinca major*) is a popular window-box vine

Perizzite (pĕ′rĭzīt, pĕrĭz′–), aboriginal people of Palestine Nothing is known of them Gen 13 7, 15 20, 34 30, Ex 3 8, Joshua 9 1, 11 3, 17 15, Judges 1 4, 3 5, 1 Kings 9 20, Ezra 9 1

perjury (pûr′jûrē), the act of willfully and knowingly stating a falsehood under oath or under affirmation in judicial or administrative proceedings If the person accused of perjury had any probable cause for his belief that the statement he made was true, then he is not guilty of perjury In many jurisdictions perjury is a felony if the statement made related to a material matter, a misdemeanor if it related to an immaterial matter In U S Federal law, making a false statement is perjury only if it relates to a material matter and, therefore, the crime is always a felony See SUBORNATION OF PERJURY

Perkasie (pûr′kŭsē), borough (pop 4,121), SE Pa , NNW of Philadelphia Quarrying is done in this region

Perkin, Sir William Henry, 1838–1907, English chemist He discovered, in 1856, the first aniline dye (aniline purple, known as mauve and mauveine), founded a factory to make it, and thereby established the industry in England He was knighted in 1906

Perkins, Charles Callahan, 1823–86, American art critic and etcher, b Boston He was president of the Boston Art Club and one of the founders of the Museum of Fine Arts and by his writings and lectures materially influenced the development of art in America He was critical editor of Champlin's *Cyclopaedia of Painters and Paintings* and wrote *Tuscan Sculptors* (1864) and *Italian Sculptors* (1868), illustrated with etchings by himself, *Raphael and Michelangelo* (1878), *Sepulchral Monuments in Italy* (1883), and *Ghiberti and His School* (1885)

Perkins, Frances, 1882–, U S Secretary of Labor (1933–45), b Boston, grad Mt Holyoke College, 1902, M A Columbia, 1910 She was executive secretary of the New York Consumers' League (1910–12) and of the New York Committee on Safety (1912 17) and directed (1912–13) investigations for the New York state factory commission She became an authority on industrial hazards and hygiene and began lobbying in Albany for more comprehensive factory laws and for maximum-hour laws for women Gov Alfred E Smith appointed (1923) her to the New York State Industrial Board, and later (1926–29) she served as its chairman Gov Franklin D Roosevelt named her (1924) industrial commissioner of New York state to direct the enforcement of factory and labor laws As President, Roosevelt appointed her U S Secretary of Labor—the first U S woman cabinet member Despite the bitter criticisms of business, labor, and political leaders, she administered efficiently the vast new duties created by the New Deal After she resigned, she became (1946) a member of the U S Civil Service Commission In 1913 she married Paul C Wilson Besides books on labor problems, she also wrote *The Roosevelt I Knew* (1946).

Perkins, Lucy Fitch, 1865–1937, American author and illustrator, b Maples, Allen co , Ind She was married to Dwight Heald Perkins in 1891 Her books for children were popular, especially the "Twins" series, such as *The Dutch Twins* (1911), designed to promote international good will

Perkins Institution and Massachusetts School for the Blind, at Watertown, chartered 1829, opened 1832 in South Boston, as New England Asylum for the Blind, named Perkins Institution and Massachusetts Asylum 1839, given present name 1877, moved 1912 Samuel G HOWE was the first director. Among the school's pupils were Laura Bridgman and Anne Sullivan Macy, the tutor of Helen Keller.

Perkin Warbeck: see WARBECK, PERKIN.

Perlepe, Yugoslavia see PRILEP

Perley, Sir George Halsey, 1857–1938, Canadian statesman, b Lebanon, N.H., grad. Harvard.

1878. With his parents he went as a child to Ottawa, and later he entered the lumber business established there by his father. In 1904 he was elected to the Canadian House of Commons as a Conservative, serving there almost continuously until his death. In 1911 he was made minister without portfolio in the cabinet of Sir Robert Laird Borden; from 1914 to 1922 he was high commissioner for Canada in London. In the second brief government of Arthur Meighen (1926) Perley was secretary of state, and in Richard B. Bennett's administration (1930–35) he was minister without portfolio and, on occasion, acting prime minister. Out of the personal fortune which he accumulated from his business enterprises, Perley gave generously to philanthropic causes.

Perlis (pûr'lĭs), state (316 sq. mi., pop. 70,538), N Malaya, on the Straits of Malacca. It is bordered on the north and east by Thailand and on the southeast by Kedah, of which it formed a part till 1842. In 1909 suzerainty over Perlis was transferred from Siam to Great Britain. Before the establishment of the federation of Malaya (1948), Perlis was classed as one of the Unfederated Malay States. The rich alluvial plains of Perlis form one of Malaya's major rice-growing areas. Over three quarters of the people are Malays.

Perm, RSFSR: see MOLOTOV.

Permanent Court of Arbitration: see HAGUE TRIBUNAL.

Permanent Court of International Justice: see WORLD COURT.

Permian period (pûr'mēun) [from the Perm region, Russia], sixth and last period of the PALEOZOIC ERA of geologic time. The Permian period saw the climax of the changes in the earth's surface which had begun in the preceding CARBONIFEROUS PERIOD. At the close of the Carboniferous, large areas of E North America were dry land. In the Lower Permian, sandy shales, sandstones, and thin limestones, making up the Dunkard formation (formerly called the Upper Barren measures), were laid down in the remaining submerged areas of West Virginia, Pennsylvania, and Ohio, but the continued rising of the land soon put an end to deposition. The Dunkard is the last Paleozoic formation of the E United States. More extensive deposits were formed in the West. Parts of Texas, Oklahoma, Kansas, and Nebraska were covered by an arm of the sea or possibly by a salt lake or a series of salt lakes or lagoons, now represented by masses of salt or gypsum in layers separated and overlaid by red beds. There are important Permian salt mines at Hutchinson and Lyons in Kansas, and gypsum mines in Oklahoma, Texas, and Kansas. The longest marine submergence of the Lower Permian in North America was in W Texas and SE New Mexico, where there is a system of marine limestones and sandstones from 4,000 to more than 6,000 ft. thick. The Cordilleran region was also submerged, here marine structures are more common toward the west, and land sediments, especially red beds, toward the east. The red beds are generally considered to be indicative of increasingly arid conditions in Permian times. In the Upper Permian practically all of North America was above sea level, and the continent was larger than at present. In or at the close of the Upper Permian, the greatest earth disturbance of the Paleozoic era thrust up the Appalachian mts. The Lower Permian or Rothiegendes (red layers) of Europe was marked principally by erosion from the Paleozoic Alps of the Carboniferous into the low-lying land to the north, the formations are chiefly shale and sandstone, with some conglomerate and breccia. Red is a prominent color for the beds. The Upper Permian was a period of more extensive marine invasion, the Zechstein (mining stone) formation is predominantly limestone, though it includes rich deposits of copper, salt, gypsum, and potash. The Upper Permian beds of Germany were long the chief source of the world's potash. The Permian and late Carboniferous of the Southern Hemisphere were radically different from those of the Northern Hemisphere. Australia, India, South Africa, and South America passed through a series of glacial periods, as is shown by the presence of tillite and of conspicuous striations of the underlying rock formations. Paleozoic glaciation in North America is suggested by the Squantum tillite near Boston, Mass. This glaciation and the aridity of which the red beds seem to be the result are the two most strongly marked characteristics of the Permian period. The life of the Permian was in general transitional between that of the Paleozoic and that of the succeeding MESOZOIC ERA. Some marine animals became extinct, but there was at the same time an evolution to more modern types, a marked change in the insects, and a notable increase in numbers and varieties of reptiles. The aridity of the Northern Hemisphere led to the dwarfing and gradual extinction of some of the Carboniferous types. Lepidodendron and Sigillaria became rare, but ferns and conifers persisted. The "tongue fern," *Glossopteris*, which spread over the Southern Hemisphere and part of the Northern Hemisphere and which was apparently successful in resisting glacial conditions, was the most conspicuous development in the Permian flora. Its wide distribution led some geologists to argue the existence of a great southern continent, Gondwana Land, occupying the S Atlantic Ocean and continuous with South America and Africa. However, many now believe that the existence of land bridges between continents in the Southern Hemisphere is a more probable explanation.

Pernambuco (pĕr"numbōō'kō), state (37,458 sq. mi., 1940 pop. 2,688,240, 1949 estimated pop. 3,243,909), NE Brazil, extending inland from the Atlantic. Its capital is RECIFE, sometimes also called Pernambuco. The area is an important agricultural and stock-raising region, growing sugar cane, cotton, tobacco, and coffee; much of which is processed by local industries. The first European settlement (1530s) in the area was at Olinda. It was occupied by the Dutch in 1630–54. The state has had a turbulent history, being the scene of several revolts in the first half of the 19th cent.

Pernau, Estonia: see PÄRNU.

Perón, Juan Domingo (hwän' dōmēng'gō pārōn'), 1895–, president of Argentina (1946–). An army officer, he emerged into prominence after the overthrow of the government of Ramón Castillo in 1943 and was one of the "colonels' group" in the administrations of Arturo Rawson, Pedro Ramírez and Edelmiro Farrell, all of which were dominated by the military, nationalistic group. Under Farrell, Perón was secretary of labor and social welfare and later minister of war and vice president. He developed a large following that had as its core the ranks of the workingmen, whom he favored. A coup in 1945 threw him out of power momentarily, but he returned with prestige enhanced. The United States complained bitterly of the totalitarian leanings of the army group and especially of Perón. At the time of the elections in Feb., 1946, in which Perón was the leading candidate, the United States issued a publication documenting the charges against him, but the result was, if anything, the strengthening of Perón's position, for the booklet was used as a demonstration of U.S. desire to interfere in Argentine affairs. Perón was elected by a huge majority. He immediately set out to put into effect revolutionary measures generally collectively termed Peronismo. Strongly nationalistic, the program called for building up the national economy, therefore stringent economic measures were adopted with the purpose of holding down Argentina's imports and building an autarchic state. The stringency immediately affected all Argentine industry and wrought some hardships. Opposition was prevented from too serious attacks on Peronismo, and enemies of the state were dealt with in summary fashion. An attempt was made to broaden elementary education, but institutions of higher learning, like the press, were severely channeled. A new constitution, adopted in 1949 permitted reelection of the president, and in that year Perón was nominated for the election of 1952. Argentina influence spread into the neighboring countries and to the Pacific coast of South America. In spite of great economic troubles, the Perón dictatorship, supported by a combination including labor, reactionaries, the military, nationalists, and the clergy, continued to maintain full power and to push Peronismo. Perón's wife, the charming Eva Duarte de Perón (Evita Perón), who had been a moving-picture star, had a spectacular place in the government.

Péronne (pārōn'), town (pop. 3,669), Somme dept., N France, in Picardy, on the Somme river. Here in 1468 took place the "interview" between LOUIS XI of France and CHARLES THE BOLD of Burgundy. Rebuilt after virtual destruction in the First World War, Péronne was damaged again in the Second World War.

Pérouse, Jean François de Galaup, comte de la: see LA PÉROUSE.

Perov, Vasily Grigoryevich (vŭsē'lyĭ grĭgôr'yŭvĭch pyĭrôf'), 1833–82, Russian historical, genre, and portrait painter, leader of the realist school in Russia. His early work was satirical, but he is best known for his sympathetic treatment of scenes of peasant life. Perov shared the idealism of the intelligentsia in the 1860s and their disillusionment in the reactionary '70s and '80s. Among his best-known works are *An Village Funeral* and *The Arrival of the Governess*. His portraits include those of Turgenev and Dostoyevsky.

peroxide of hydrogen: see HYDROGEN PEROXIDE.

Perpendicular style, term given the final period of English Gothic architecture (late 14th–middle 16th cent.) because of the predominating vertical lines of its tracery and paneling. It is also called rectilinear for the prevailing angularity of the designs. The work produced after 1485 is sometimes classified as TUDOR STYLE. The use at the Gloucester cathedral, about the middle of the 14th cent., of numerous vertical panels of tracery for both windows and walls led to a rapid spread of the style. Its climax was reached in Henry VII's chapel, Westminster, where panelings cover both exterior and interior surfaces. At Winchester they cover the whole west front. In some cases church windows were of great size, making the west end practically a wall of glass with mullions running vertically for the entire height. Traceried fan vaulting was one of the distinctive creations of the style, and roofs of elaborately carved open-timber construction were numerous. A number of elaborate chapels were built in this period, especially at Oxford and Cambridge, and various study buildings, such as the divinity school at Oxford (completed 1480). It was a period of much manor-house construction.

Perpetua, Saint: see FELICITY AND PERPETUA, SAINTS.

Perpignan (pĕrpēnyä'), city (pop. 72,194), capital of Pyrénées-Orientales dept., S France, near the Spanish frontier and the Mediterranean. It is an important trade center, handling especially wine and fruits. Founded in the 11th or 12th cent., Perpignan was the capital of the Spanish kingdom of MAJORCA and, after 1642, of the French province of ROUSSILLON. Its architecture shows much Spanish influence. Among its notable buildings are the Loge (14th cent.), built to house the merchants' exchange, the Gothic Cathedral of St. Jean (14th–16th cent.), and the castle of the kings of Majorca (13th–15th cent.), which forms part of the old citadel dominating the city.

Perrault, Charles (sharl' pĕrō'), 1628–1703, French poet. He wrote a collection of eight fairy tales, *Histoires ou contes du temps passé* [stories or tales of olden times] (1697), which gave classic form to the stories of Bluebeard, Sleeping Beauty, Cinderella, Puss in Boots, Little Red Ridinghood, and Hop-o'-My-Thumb. In the frontispiece of the collection appears the expression "Contes de ma mère Loye" [tales of Mother Goose]. Perrault also published three tales in verse (1694). He was the center of a stormy literary quarrel, which he began (1687) by a comparison of ancient authors with contemporaries of his which was very unfavorable to the ancients. Boileau, the chief defender of the ancients, bandied insults with Perrault until 1694. This "quarrel of the ancients and the moderns" is considered a harbinger of the 18th-century Enlightenment. Perrault's tales have been translated into English many times.

Perrault, Claude (klōd), 1613–88, French architect, scientist, and physician. One of the most eminent French scholars of his time, he advanced the study of anatomy and made other scientific contributions. His greatest architectural achievement is the east façade of the Louvre, known as the Colonnade. The execution of his design, adopted in 1667 after others by Le Vau and by Bernini had been rejected, did much to establish the qualities of classical balance and order in French Renaissance architecture. Perrault also built portions of the south façade of the Louvre and the Paris Observatory (1667–72), which, with adaptations to modern scientific requirements, is still in use. Charles Perrault was his brother.

Perrers, Alice (pĕr'urz), d. 1400, mistress of EDWARD III of England. She entered the service of Philippa, Edward's queen, married William de Windsor, became Edward's mistress (possibly as early as 1366), and wielded great influence over him. Her interference in the promotion of lawsuits in the courts led to her banishment (1376) and to an act forbidding women to practice law. She returned in 1377 and later gained, despite another sentence of banishment, some favor and much wealth in the court of Richard II.

Perrin, Jean Baptiste (zhäⁿ' batēst' pĕrē'), 1870–1942, French physicist. From 1910 to 1940 he was professor at the Univ. of Paris. In 1941 he came to the United States, and he died in New York city. He specialized in the molecular phenomena of oscillation (see BROWNIAN MOVEMENT). For his work on the discontinuous structure of matter and for his discovery of the equilibrium of sedimentation (which permitted an accurate calculation of the size of atoms), he received the 1926 Nobel Prize in Physics. He is noted also for his work on X rays and cathode rays. His works include *Atoms* (1903, Eng. tr., 1923).

Perrine, Charles Dillon (purĭn'), 1867–, American astronomer, b. Steubenville, Ohio. From 1893 to 1909 he was on the staff of Lick Observatory (as astronomer from 1905) and from 1909 to 1936 was director of the Argentine National Observatory in South America. In 1901 he discovered the extraordinary motion in the nebulosity about the nova in Perseus and in 1905 became celebrated as the discoverer of the sixth and seventh satellites of Jupiter. He made special studies of comets and discovered several. Between 1900 and 1908 he accompanied four eclipse expeditions, he was in charge of the one sent from Lick Observatory to Sumatra in 1901.

Perris, city (pop. 1,011), S Calif., SSE of Riverside; platted 1885, inc. 1911.

Perrot, Georges (zhôrsh' pĕrō'), 1832–1914, French archaeologist. He was professor at the Sorbonne from 1875, director of the École normale supérieure, Paris, from 1888 to 1902, and permanent secretary of the Academy of Inscriptions. While a member of an archaeological expedition (1861) to Asia Minor, he reconstructed the text of a bilingual record of the reign of Augustus on the walls of a temple at Ancyra and published his results in

Exploration archéologique de la Galatie et de la Bithynie (1862–72) He edited and contributed to the *Revue archéologique*. His works include *Histoire de l'art dans l'antiquité* (with Charles Chipiez, 10 vols , 1882–1914).

Perrot, Nicolas (nĕkôlä'), 1644-c 1718, French explorer in Canada and the Old Northwest He came to New France as a child and, in service of the Jesuit missionaries, became acquainted with the Indians and Indian languages Later, as a fur trader about Green Bay, he acquired considerable influence over the Indians of Wisconsin and in 1670 was sent to the West by Frontenac to take formal possession for France In 1684, with Duluth, he helped bring the Western Indians into the French campaign against the Iroquois, and in 1690 he wanted Mackinac to prevent an Iroquois alliance Perrot was made (1685) commandant of the territory about Green Bay and opened trade with the Sioux as well as with other Indians and in 1689 formally claimed possession of the upper Mississippi region for New France Probably in 1690 he discovered the lead mines of SW Wisconsin. When all trading licenses were revoked, he returned to Lower Canada and was employed as Indian interpreter in 1701 He is best remembered for his *Mémoire sur les mœurs, coustumes et religion des sauvages de l'Amérique Septentrionale* (1864), the one memoir which survives out of his many writings

Perry, Bliss, 1860–, American educator, author, and editor, b Williamstown, Mass , educated at Williams (B.A , 1881) and at the universities of Berlin and Strasbourg He was professor of English at Williams (1886–93) and at Princeton (1893–1900), editor of the *Atlantic Monthly* (1899–1909), and professor of English literature at Harvard (1907–30) His works include biographies of Whitman (1906), Whittier (1907), and Richard Henry Dana (1933); *The American Spirit in Literature* (1918) and *A Study of Poetry* (1920), and several books of selections, among them *The Heart of Emerson's Journal* (1926) See his autobiography, *And Gladly Teach* (1935)

Perry, Frederick John, 1909–, English tennis player, b. Stockport, Cheshire, England He became interested in tennis at the age of 15 In 1933, 1934, and 1936 he won the U S singles championship and also took (1934–36) the British singles title He led the British team to four consecutive (1933–1936) Davis Cup victories He also won French, Australian, and Argentina championships along with other national tennis crowns In 1936 Perry turned professional and was the professional singles champion in 1938 and 1941 He retired from active play after injuring (1941) his arm in a match with Bobby Riggs He later became a U S citizen, served in the U S army in the Second World War, and coached tennis at Washington and Lee Univ. He wrote *On Tennis* (1937) See his autobiography, *My Story* (1934)

Perry, Matthew Calbraith, 1794–1858, American naval officer, b South Kingstown, R I He spent his boyhood in Newport Appointed a midshipman in 1809, he first served under his brother Oliver Hazard Perry on the *Revenge* and then was aide to Commodore John RODGERS on the *President*, which defeated H M S *Little Belt* before the War of 1812 had been formally declared Perry saw little action in that war after he was assigned to the *United States*, which the British bottled up at New London On his first command, the *Shark*, he conveyed (1821) U S agent Eli Ayers to Liberia In 1833 he was assigned to the New York (now Brooklyn) navy yard, where he pioneered in the application of steam power to warships, commanding (1837) the *Fulton*, first steam vessel in the U S navy, and encouraged all kinds of naval education Promoted captain in 1837, Perry was shortly granted the title of commodore He became (1841) commandant of the New York navy yard and led (1843–44) the African squadron in suppressing the slave trade In the Mexican War, after replacing David CONNER as commander of the entire Gulf Fleet early in 1847, he supported Gen Winfield Scott in taking Veracruz Perry was ordered (March, 1852) to command the East India squadron and charged with the delicate task of penetrating isolationist Japan Much careful preparation went into the expedition before Perry, after stopovers on the China coast and Okinawa and a side excursion to the Bonin Islands, anchored his four ships, including the powerful steam frigates *Mississippi* and *Susquehanna*, in lower Tokyo (then Yedo) Bay on July 8, 1853 The Japanese ordered him to go to Nagasaki, the only port open to foreigners, where the Dutch operated a limited trading concession under humiliating conditions, but Perry firmly declined On July 14 he presented his papers, including a letter from President Millard Fillmore to the emperor, requesting protection for shipwrecked American seamen (heretofore treated badly), the right to buy coal, and the opening of one or more ports to trade The expedition then retired to the China coast, returning, with an increased fleet, in Feb , 1854 Perry's show of pomp (at which he was expert) and power obviously impressed the insecure Tokugawa shogunate, and on March 31, 1854, near Yokohama was concluded a treaty which acceded to American requests, opening the ports of Shimoda (to which Townsend HARRIS came in 1856) and Hakodate to U.S. trade. For his successful expedition Perry was awarded $20,000 by Congress, which also paid for publication of the official *Narrative of the Expedition of an American Squadron to the China Seas and Japan* (3 vols., 1856), compiled under Perry's supervision See E M Barrows, *The Great Commodore* (1935); Arthur Walworth, *Black Ships off Japan* (1946)

Perry, Oliver Hazard, 1785–1819, American naval officer, b South Kingstown, R I , brother of Matthew Calbraith Perry. Appointed a midshipman in 1799, he served in the war with the Barbary States, was promoted lieutenant (1807), and from 1807 to 1809 was engaged in building gunboats In the War of 1812 he was commissioned to build, equip, and man a fleet at Erie, Pa On Sept 10, 1813, Perry's fleet left Put in Bay and met a slightly inferior British force In the battle of Lake Erie that followed, Perry's flagship, the *Lawrence*, was reduced to ruins, but he transferred his flag to the *Niagara* and shortly forced the British to surrender His report of the battle sent to Gen. William H Harrison—"We have met the enemy and they are ours"—has become famous The victory, which made Perry a national hero, gave the United States control of Lake Erie and helped pave the way for Harrison's victory in the battle of the Thames, in which Perry participated Following the war he served as a captain in the Mediterranean Later, on a special mission to Venezuela, he contracted yellow fever, died, and was buried in Trinidad His body was later reinterred at Newport, R I , where a monument was erected to him In 1913 a memorial was dedicated to Perry at Put in Bay See biography by C J Dutton (1935), C. O Paullin, ed , *The Battle of Lake Erie* (1918)

Perry, Ralph Barton, 1876–, American philosopher, b Poultney, Vt , grad Princeton (B A , 1896) and Harvard (M A , 1897, Ph D , 1899) He taught at Harvard from 1902, becoming professor of philosophy in 1913 and professor emeritus in 1946 He revised (1925) Alfred Weber's *History of Philosophy* Editor of the works of William James, he won the 1936 Pulitzer Prize in biography for *The Thought and Character of William James* (1935) His other writings include *Approach to Philosophy* (1905), *The New Realism* (1912), *General Theory of Value* (1926), and *One World in the Making* (1945)

Perry, 1 Town (pop 2,668), co seat of Taylor co , NW Fla , SE of Tallahassee and c 15 mi from the Gulf, in a fishing and hunting region It is an industrial center processing lumber **2** City (pop 1,542), co seat of Houston co , central Ga , S of Macon, in a farm and quarry area, settled c 1820 **3** City (pop 5,977), central Iowa, near the Raccoon river NW of Des Moines, settled in the 1860s, inc 1875 Rail, trade, and processing center in a farm area, it has railroad shops and meat-packing plants **4** Village (pop 4,468), W N Y , SW of Rochester, settled 1815, inc 1830 It makes dairy goods **5** City (pop 5,045), co seat of Noble co , N central Okla , NE of Oklahoma City, in a farming area, settled 1893, inc 1894

Perrysburg, village (pop 3,457), NW Ohio, on the Maumee river and S of Toledo, laid out 1816 A monument in a state park, near by, marks the site of Fort Meigs (see MEIGS, FORT)

Perry's Victory and International Peace Memorial National Monument. see NATIONAL PARKS AND MONUMENTS (table)

Perryton, city (1940 pop 2,325, 1947 estimated pop 3,000), co seat of Ochiltree co , extreme N Texas, NE of Amarillo and near the Okla line, founded 1919, inc 1920 It is the shipping and manufacturing center of a wheat-growing area in the plains of the Panhandle

Perryville. **1** Town (pop 462), central Ky , W of Danville and SW of Lexington Near by is Perryville Battlefield State Park, site of a Civil War battle fought here Oct 8, 1862, between the Confederates under Braxton Bragg and the Union forces under D C Buell Though the battle was indecisive, it marked the end of Bragg's invasion of Kentucky, as he retreated from the state the next day. A national cemetery is in the vicinity **2** City (pop 3,907), co seat of Perry co , SE Mo , near the Mississippi NNW of Cape Girardeau, in a farm region, founded c 1821. Among its products are shoes and cigars

Perse, St.-J., see LÉGER, ALEXIS SAINT-LÉGER

Persephone (pərsĕ'fənē), Latin *Proserpine* (prŏ'sûrpĭn) or *Proserpina* (prōsûr'pĭnə), in Greek religion, goddess of fertility She was the daughter of Demeter and Zeus and the wife of Hades, or Pluto Hades, ruler of the underworld, stole her and married her, but Demeter induced the gods to let Persephone return to her for eight months each year Persephone was required to remain in the underworld for four months because Pluto had tricked her into eating a pomegrante there When Persephone left the earth, the flowers withered and the grain died, but when she returned, life blossomed anew She personified the birth and decay of vegetation. Under the name of Kore (kō'rē) she appeared with Demeter and Dionysus in the Eleusinian Mysteries. As queen of the underworld, sometimes confused with HECATE, Persephone was conceived of as a stern goddess with the pomegranate as an attribute, but as the daughter of Demeter she was a beautiful young maiden with the horn of plenty as an attribute The Romans identified her with Bona Dea and Libera, and she is comparable to Idun in Norse mythology.

Persepolis (pərsĕ'pəlĭs) [Gr ,=city of Persia], ancient city, ceremonial capital of the Persian empire under Darius and his successors. The administrative capitals were elsewhere—notably at Susa and Babylon Its ruins lie NE of Shiraz in a fertile plain of the Pulvar river, with strong natural mountain defenses Its great ruins, including columns 60 ft. high, the palaces of Darius I, Xerxes, and later kings, and the citadel (which contained the rich treasury looted by Alexander), stand on an immense platform constructed of limestone from the adjacent mountain A few miles distant are the rock-hewn tombs of Achaemenid kings, on a mountainside known as Naksh-i-Rustam, "picture of Rustam," after the incorrect native identification of the principal figure of the near-by rock sculptures—in reality Shapur I, shown triumphing over the Roman emperor, Valerian, here too is a 3,000-year-old inscription of Shutruk-Nakhkhunte Scattered over the plain, a short distance from the platform of Persepolis, are the ruins of Stakhr or Estakhr, the official capital of the Sassanians, whose administrative capital was Ctesiphon Excavations have disclosed, 2 mi away, a village of the Neolithic period, with mural decorations in red ocher, c 4000 B C The Iranian Room in the Oriental Institute of the Univ of Chicago contains many pieces from Persepolis, products of the research of 1931–41

Perseus (pûr'sūs, -sĭəs), in Greek mythology, hero, son of Zeus and DANAË and grandson of Acrisius When Perseus was a child, his grandfather, warned by an oracle that his grandson would kill him, put him and his mother in a chest and set it afloat. They drifted to Seriphus, where King Polydectes befriended them After a time Polydectes fell in love with Danae, but Perseus stood in his way He sent Perseus to fetch the head of Medusa, thinking that Perseus would die in the attempt The gods, however, loved Perseus Hermes gave him a curved sword and his winged sandals, Athena a murrorlike shield, and Hades a helmet which made Perseus invisible Thus accoutered, Perseus slew Medusa While fleeing the other Gorgons, Medusa's sisters, Perseus asked Atlas for help Atlas refused, and Perseus promptly turned him into a stone mountain by means of the Medusa head On his way home Perseus rescued Andromeda from a sea monster and married her He arrived home just in time to kill Polydectes, who had been making advances to Danaë Perseus gave the Medusa head to Athena and with his mother and wife went to Argos Here while competing in a discus contest, Perseus killed his grandfather Thus the prophecy was fulfilled Perseus was the father of Electryon, who was grandfather of Hercules The famous sculpture *Perseus* by Benvenuto Cellini stands in the museum at Florence

Perseus, c 212–166 B C , last king of Macedon (179–168 B C), son and successor of Philip V He became involved in Greek politics and excited the fears of Eumenes II of Pergamum, who went to Rome to provoke war against him by pointing to alignments of Perseus with anti-Roman factions in Greece. The resultant Third Macedonian War (171–168 B C) began with a Macedonian cavalry victory, then dragged on indecisively Finally L Aemilius PAULLUS took command and soundly defeated Perseus at Pydna (168 B C) Perseus graced Paullus' triumph and died in captivity

Perseus, in astronomy, a northern constellation lying in the Milky Way near Cassiopeia Algol is a visible VARIABLE STAR in Perseus, it is of the type known as an eclipsing variable A double star cluster in Perseus can be seen with a low-power telescope. A shower of meteors known as the Perseids radiates from a star in Perseus; these showers can be seen every year for several nights beginning Aug 10, after midnight In 1901 a brilliant nova was observed in the constellation.

Pershing, John Joseph (pûr'shĭng), 1860–1948, American general, commander in chief of the American Expeditionary Force in the First World War, b Linn co , Mo , grad Kirksville Normal School (Mo), 1880, and West Point, 1886 A cavalry officer, he rode in campaigns against Geronimo (1886) and against the Sioux (1890–91). He was an instructor in military tactics (1891–95) at the Univ of Nebraska, where he earned (1893) a law degree, and then (1897–98) taught at West Point After he fought (1898) in the Spanish-American War, Pershing achieved national notice when he served (1899–1903) in the Philippines, commanding in the campaign against the Moro He was (1905) an American military attaché in the Russo-Japanese War and was promoted (1906) brigadier general. Twice (1906, 1909) he returned to the Philippines to campaign against the Moro In 1913 he completely defeated them. His wife, Helen Francis Warren Pershing, and his three daughters died (1915) when fire destroyed their

home in San Francisco; only his son, Warren, survived. Pershing led the much-publicized but unsuccessful punitive expedition (1916) against Francisco Villa in Mexico. After the First World War had begun, Pershing was appointed (1917) to head the American Expeditionary Force in France. His talent for organization was largely responsible for the molding of hastily trained American troops into well-integrated combat units. His book, *My Experiences in the World War* (1931), recounts his war years. After the war he was promoted (1919) permanent general of the armies of the United States. He was chief of staff (1921–24) before retiring from the army in 1924. He headed (1925) the Tacna-Arica plebiscitic commission and later took part in numerous philanthropic campaigns. See biographies by Harold McCracken (1931) and Frederick Palmer (1948).

Persia pûr'shŭ-shu), old alternate name for the Asiatic country Iran. The article IRAN contains a description of the geography and economy of the modern country and a short account of its history since the Arab invasion of the 7th cent. The present article is a brief sketch of the history of the ancient Persian Empire, which also had its core in the present Iran. Just when the speakers of Iranian languages came into that part of Asia is unknown. Presumably they were originally a nomadic tribe who filtered down through the Caucasus to the Iranian plateau. They apparently subjugated peoples already there and mingled with them, but their dominance of particular areas is recorded in the place names Parsua and Parsumash. The Assyrian rulers were by the 9th cent. B.C. sending expeditions against them, and the recurrence of these campaigns is evidence of the strength of the early Persians. By the 6th cent. B.C. they were established in the present region of Fars and were benefiting from the decline of Elam. Fars (or Persia) was a recognizable district of the Assyrian Empire like the neighboring but greater Media. The Persian rulers, claiming descent from one Achaemenes (or Hakhamanesh), were associated with the Medes, who created a strong state in the 7th cent. Cyaxares of newly united Media was one of the kings who brought about the fall of Nineveh (606 B.C.) and broke the hegemony of the Assyrians. The Persian ruler of about the same time, Cambyses I, seems to have been tributary to Cyaxares. According to Herodotus he married the daughter of the Median ruler, and his son Cyrus was thus also grandson of Cyaxares, this account has been branded by some scholars as a pious attempt to falsify genealogy. At any rate after the Persians had aided the Medes in establishing the power of the Medes, they emerged in the person of this Cyrus, who was CYRUS THE GREAT, to take over the rule of Media from Astyages in the middle of the 6th cent. B.C. In an amazingly short time Cyrus had extended his conquests from Elam and Media west and north. He pushed into Asia Minor, where Croesus, the king of Lydia, vainly sought by an alliance with Nabonidus of Babylonia and Amasis II of Egypt to withstand the conqueror. Cyrus crushed the coalition, and by 546 B.C. the greatness of the Persian Empire was established. It was to endure long under his successors, the Achaemenidae. From the beginning the Persians built on the foundations of the earlier states. The organization of the Assyrians was taken over and improved, and Cyrus himself imported artists and artisans from Babylonia and Egypt to create his palace and tomb at Pasagardae. The dynamic new state was, however, troubled almost from the start by dynastic troubles. CAMBYSES, a son of Cyrus, did away with Smerdis, another son of Cyrus, in order to have unchallenged power, but when Cambyses was absent on a successful raid into Egypt, an imposter claiming to be Smerdis appeared, and there was civil war. A new claimant, Darius I, appeared after Cambyses committed suicide. He made his claims good, and after putting down disorders, he molded the administration of the empire into the centralized system that was remarkable for its efficiency. Satraps or governors were set up to rule firmly and arbitrarily over the various regions, but to keep check on the satraps, who were potential aspirants to central power, each was accompanied by a secretary and a military commander who were responsible to the Great King alone. This centralized system was supported by an intricate and excellent system of communication, for the Persians were the first important ancient people to use the horse efficiently for communication and transport. Darius also continued and broadened the policy of Cyrus of encouraging the local cultures within the empire, leaving them their gods and their customs so long as those did not conflict with the necessities of Persian administration. The religion of Persia itself was Zoroastrianism, and to the unifying effect of the broadly established faith part of the unity of Persia was to be attributed. Darius was also a patron of the arts, and magnificent palaces standing on high terraces beautified the capitals of Susa and Persepolis (see PERSIAN ART AND ARCHITECTURE). He was likewise a conqueror. Persian rule was pushed far eastward past the Arius (Hari Rud) river into modern Afghanistan and NW India. Egypt had already been attacked by Cambyses, and though it was to prove recalcitrant and rebellious, succeeding Persian kings were to maintain hegemony there. Darius pushed as far north as the Danube in his exploits, but the fighting against the Scythians was obscure and certainly unfruitful. Even more unfruitful for Persia was embroilment with the Greeks. The Persians in taking over Lydia had come into contact with the Greek colonies in Asia Minor (Ionia). There were Greeks (notably the exiled Athenian tyrant, Hippias) at the court of Darius, and the Persians immediately began to borrow from Greek art and thought, as they did from all advanced cultures to the enrichment of Persia. At the beginning of the 5th cent. B.C., however, the Ionian cities were involved in trouble with the Great King. Darius put down the rebellion, then organized an expedition to punish the city-states in Greece proper that had lent aid to the rebellious cities. This expedition commenced the PERSIAN WARS. Ultimately Darius' host was defeated at Marathon, and his son Xerxes I, who succeeded to the throne in 485 B.C., fared no better at Salamis. The Greeks had successfully defied the power of the Great King. The effects of the Greek victory were, however, confined to Greece itself and had no consequences in Persia. Nor did it exclude Persia from taking part in the affairs of the Greek world. Persian influence was strong, and Persian gold was poured out to aid one Greek city-state or another in the interminable struggle for power. It is noteworthy that when Themistocles, the victor of Salamis, was exiled from Athens, he took refuge at the court of Artaxerxes I, who had succeeded Xerxes I in 465 B.C. In the time of Artaxerxes the difficulties of maintaining so wide an empire had begun to appear. Some of the satraps showed ambitions to rule, and the Egyptians, helped by the Athenians, undertook a long rebellion. Violence against the Great King himself was a disturbing factor. Xerxes I had been murdered, and Xerxes II, son of Artaxerxes, was killed after a reign of 45 days by a half brother, who was in turn overthrown by another half brother, Darius II. In the reign of the second Darius the power of the satraps was shown in the careers of PHARNABAZUS and TISSAPHERNES, who interfered with some effect in the affairs of Greece. When Darius II died, the most celebrated of the dynastic troubles occurred in the rebellion of CYRUS THE YOUNGER against ARTAXERXES II, which came to an end with the death of Cyrus in the battle of Cunaxa (401 B.C.). The intrinsic importance of this can be easily exaggerated because it was recorded by Xenophon in one of the most famous narratives of all time. Yet it cannot be denied that there were signs of decay. Though Evagoras of Cyprus was brought to heel after the Peace of ANTALCIDAS (386 B.C.) was dictated to Greece by the Great King, Egypt had become independent again in 405 B.C. and the efforts of Artaxerxes II's armies to reassert control were fruitless. Artaxerxes III, after he had waded to the throne through blood, was more successful in Egypt, but his triumph was evanescent. He was himself killed by his counselor, the eunuch Bagoas. Darius III in turn murdered Bagoas and ruled with considerable splendor after 336, but only briefly. Suddenly the end came. ALEXANDER THE GREAT and his Macedonian army crossed the Hellespont in 334 and routed the Persians on the Granicus. The battle of Issus followed in 333, and in 331 the battle of Gaugamela brought an end to the Achaemenid empire. Darius, last of the Great Kings, fled east before the conqueror to the remote province of Bactria, where he was assassinated by his own cousin, Bessus. Alexander also came east and, defeating Bessus, had the whole empire in his grasp. On he went to India, and the greatest empire the world had yet seen was created. It lasted only for the brief days of his life, then was torn apart by the quarrels of his successors (the DIADOCHI). Persia fell for the most part to Seleucus I and his successors (the Seleucids), but their grasp on the vast territories was weak administratively, though they did introduce a fruitful Hellenistic culture, mingling Greek with Persian elements. Media Atropatene (Azerbaijan) was never really under Seleucid rule. The rulers of Bactria from the beginning were at least quasi-independent and in the middle of the 3d cent. revolted and established absolute independence. At the same time Parthia under the leadership of the Arsacidae (see ARSACES) cast off Seleucid rule and established a Parthian empire as a sort of successor to the old Persian empire. Though even under the greatest of the Parthians (Tiridates, Mithridates I, and Mithridates II) the realm did not have the old extent, it was formidable and was a rival to Rome. The Romans in almost continuous warfare failed to halt the Parthian drives to the west, which were often supported by local ambitious or frightened rulers under Rome. Only in the 2d cent. A.D. did the Parthians begin to wane. They were replaced (A.D. c 226) by a more vigorous dynasty, the SASSANIDAE or Sassanian kings, when ARDASHIR I (whose name is another form of the name Artaxerxes) ousted and killed the last Parthian ruler and builded a new empire out of the ruins of Parthian and Seleucid power. The Sassanidae were the true heirs of the Achaemenidae. Ardashir I, Shapur I, and Shapur II all were strong kings, doughty and successful opponents of the Romans. Ctesiphon became the center of a magnificent state that persisted while the Roman Empire was whittled away. The Byzantines were unable to match them. Khosru I in the 6th cent. invaded Syria, and under Khosru II (whose affairs were linked with those of the Byzantines) the Sassanian court was legendary in its splendor. Ctesiphon and Firusabad were magnificent cities, the administration of the empire was efficient, the productivity of the cities was remarkable, and the art in metalwork, in architecture, in sculpture, and in textiles was superb. Shortly after the death of Khosru II, however, the old Sassanian power was toppled. Invading Arabs succeeded in taking Ctesiphon in 641 or 642. Islam replaced Zoroastrianism, and the caliphate made Persia a part of a larger pattern, from which later was to emerge modern Iran. See Sir Percy Sykes, *History of Persia* (3d ed., 1930); Ernst E. Herlzfeld, *Archaeological History of Persia* (1935), G. G. Cameron, *History of Early Iran* (1936); A. T. Olmstead, *History of the Persian Empire* (1948, Achaemenid period only).

Persian art and architecture. Throughout Persian history incursions of migratory peoples, changes in the national boundaries, and periods of foreign domination have encouraged the development of a cosmopolitan art which utilizes imported art forms and translates them in terms of a distinctly Persian aesthetic. Discovery and classification of prehistoric art of the Iranian region is still proceeding. Pottery and cult figurines from Susa and Samarra, bronzes from Luristan, and great rock carvings in SW Persia are variously dated from the 4th through the 2d millennium B.C. While these ancient works show strong affinities with contemporary Mesopotamian art, they already embody characteristically Persian qualities in the feeling for decorative motifs and type of stylization. In the Achaemenidae period (c 550–330 B.C.) the peoples —Medes, Babylonians, Lydians, and Egyptians— conquered by Cyrus the Great and his immediate successors contributed to the formation of an artistic culture that centered on the glorification of the monarchs. The emergence of the Zoroastrian cult with its characteristic reverence for the principles of fire and air was reflected in the artistic symbolism which employed disk, halo, wing, and bird motifs and in the development of such distinctive architectural types as the fire altar and the rectangular freestanding stone mausoleum (e.g., the tomb of Cyrus the Great, Pasargadae). Foundations of the palace of Cyrus at Pasargadae, of Artaxerxes I at Susa, and above all extensive remains of the magnificent palace complex of Darius I and Xerxes I at Persepolis reveal plans which characteristically show great columned audience halls, in front of the halls were colonnaded porticoes, flanked by square towers and set on high terraces. The palaces were approached by double flights of steps converging at the top. Although there are marked analogies to Egyptian, Greek, and Assyrian architecture, the style as a whole and the feeling for space and scale is distinctive. The Persepolitan columns were slenderer and more closely fluted than those of Greece. The bases were high, often bell shaped. The capitals were composed of the fore parts of two bulls set back to back above volutes with rosette ornament. In the sculpture, of an ordered clarity and simplicity, heraldic stylization is subtly combined with effects of realism. Typical are the low stone reliefs of a procession of tribute bearers which adorn the great double staircase approaching the audience hall of Xerxes I (Persepolis) and the famous *Frieze of Archers* (Louvre, from the palace of Darius I at Susa), executed in molded and enameled brick, a technique of Babylonian-Assyrian origin. Outstanding among the minor arts is magnificent metalwork, especially gold and silver ornaments, decorated with both stylized and naturalistic animal forms and often embellished with cloisonné. Chalcedony stamp seals, engraved with ancient religious scenes and secular scenes, suggest the strong influence, if not the actual execution, of Greek craftsmen. For the five centuries after the conquest of the Achaemenidae by Alexander the Great the few remains of art reveal the strong impress of provincial Hellenism and the influence of Roman motifs. In the period of the Sassanidae (c 226–c 640) there was a revival of native aesthetic feeling. Remains of great palaces at Ctesiphon and Firusabad reveal enormous structures, massively constructed principally of rubble and brick with rich stucco decoration. The problems entailed in buttressing large-scale barrel vaults and in setting enormous circular domes over square rooms were solved by the development of the axial plan and the squinch, fundamental innovations which were of paramount importance in architectural history. In sculpture rock-cut reliefs on the cliffs and in ceremonial grottoes at Naksh-i-Rustam near Persepolis and elsewhere reveal individualiza-

tion of forms and realism in surface modeling Only negligible fragments of wall paintings survive, but enough to suggest the antiquity of the native tradition in this field Mani, the founder of Manichaeism, attained legendary fame as a painter and encouraged the art as an adjunct to his religion Similar in style to the sculpture is the *repoussé* work on silver and gold vessels Hunting scenes and heraldic animals were often represented on low bowls or dishes A favorite motif was the *simurgh*, a fabulous beast with the head of an animal and body of a bird with talons and an exotically plumed tail Similar designs were woven in magnificent silk textiles long preserved in Europe as wrappings for the relics of early Christian martyrs The Mohammedan Arabs who came into power in the 7th cent employed Persian architects, artists, and designers, whose work was in turn modified by contact with workmen from other Islamic regions Consequently there was a progressive merging of the Islamic and Persian cultures Unfortunately little remains of early Islamic art on Persian soil Chief remains from the first centuries after the Arab invasion are fine ceramics, including so-called Gabri ware decorated with animal and stylized human forms executed in relief Descriptions of ancient mosques in Persia (see MOSQUE) reveal that Achaemenid and Sassanian architecture exercised powerful influence The 11th and 12th cent witnessed a great florescence of Persian culture Contact with China is subtly reflected in the refinement of shapes and delicacy of design and finish of Rages pottery and in a new elegance in textile designs. Builders drew on all the resources of earlier architectural tradition to produce consummate masterpieces Faïence decoration, stone and stucco honeycomb ornament, and calligraphic friezes contributed to effects of unexampled richness and harmony The Great Mosque at Isfahan, largely built in this period, stands as one of the world's great architectural monuments Its superbly designed domes, its great entrance portal, its minaret, a tall cylindrical tower surmounted by a balcony from which the faithful are called to prayer, represent features that are standard in Islamic Persian architecture After the invasion (1220) of the Mongols under Jenghiz Khan, the Persian artistic tradition persisted and even profited through contact with the arts and artisans of China imported by the invaders In imitation of Chinese square seals Persian calligraphers devised a rectangular Kufic script that was to be continuously employed in architectural inscriptions until the 17th cent Chinese phoenix, lotus, and key and fret motifs became popular in ceramic and architectural decoration The earliest examples of book illumination, dating from the early 13th cent, variously suggest the influence of Byzantine, Syrian, and Chinese prototypes adapted to the Islamic taste for two-dimensional decorative effects A new style marked by the emergence of a distinctly Persian quality in the use of vibrant color and animation of line appeared slightly later The arts of book illumination, of mosaic faïence, and of tile marquetry continued to develop throughout the 14th cent under a succession of petty princes who were enthusiastic patrons of the arts The achievements of this period prepared the way for the great artistic florescence under the dynasty (c 1385–c.1500) established by Tamerlane At this time the classic or Timurid style of miniature painting took form For the most part these miniatures illustrate manuscripts of epics or romantic poems Purity and intensity of color are combined with flexibility and economy of line in a decorative pattern in which there is no attempt at realistic modeling or perspective illusion The most renowned painter was Behzad, who illuminated the *Bustan* of Saadi Architectural masterpieces of this period are the famous Blue Mosque at Tabriz and the shrine at Meshed, which employ the bulbous double dome set on a high drum and elaborate tile mosaic and enameled brick decoration that were to become typical features of subsequent Persian architecture With the re-establishment of a native Persian dynasty in 1502 there developed an era of prosperity with expanded production in all the arts A group of painters continued in the tradition of Behzad The earliest extant carpets date from this period and are unexampled in subtlety of design and quality of material. Great weaving establishments at Kerman, Shushtar, Herat, Hamadan, and Tabriz produced carpets for the wealthy and for export and continued in existence until modern times Floral motifs elaborated in an endless variety are typical of the designs which are commonly classified as being of the tree, hunting, or vase carpet type The architecture was remarkable for lavishness of scale and ornament Under Abbas I (1587–1628) a great building scheme was inaugurated at Isfahan At the beginning of the 16th cent single miniatures, at first mostly portraits to be individually mounted in albums, began to be painted This type of miniature became very popular in the 17th cent when Reza Abbasi attempted to break away from tradition and create a new style dependent on purely linear effects rather than on rich color. Under his followers this style lapsed into mannerism In the same period various European influences began to operate which, down to modern times, have tended to debase rather than invigorate the native art In architecture there were no significant developments The custom of covering domes with gilt copper arose late in the 17th cent, and charming effects resulted from the combination of gold and blue tiles In the 18th cent there was a revival of opulently carved stucco and multiple stalactite ornament, but the refinement of earlier design was gone See Basil Gray, *Persian Painting* (1930), E D Ross and others, *Persian Art* (1930), A U Pope, *An Introduction to Persian Art* (1931)

Persian Gulf, arm of the Arabian Sea, between Iran and Arabia It extends c 600 mi from the mouth of the Tigris-Euphrates river (its chief affluent) to the Strait of Ormuz, which connects it with the Gulf of Oman The chief ports are Bushire, Abadan, and Kuwait Bahrein is the largest island In the Second World War the Persian Gulf was part of the shipping route along which the United States dispatched lend-lease supplies to the USSR via the ports of Iran See Sir Arnold T. Wilson, *The Persian Gulf* (1928)

Persian language, Iranian language of the Indo-Iranian subfamily of Indo-European languages See LANGUAGE (table)

Persian literature. The oldest extant literature of the Persians is found in the ancient inscriptions, but these are of historical and not literary value Such is not true of the religious works later produced, particularly the scriptures of the *Avesta* and the later Pahlavi writing of the Sassanian period (see ZOROASTRIANISM) After the Sassanidae were overthrown by the invasion of the Arabs (7th cent A D), the new religion of Islam became the dominant theme and Arabic became the usual language for a time, so that many notable works in Arabic are of Persian authorship In the 9th cent, however, Persian emerged again as the literary language, now garnished with many Arabic words Though political disasters fell upon the land, literature flourished in the 10th cent and the ages that followed The national epic, the *Shah Namah*, was written by FIRDAUSI, and a century later the mathematician OMAR KHAYYAM wrote the verses that are, through Edward FitzGerald's adaptation, better known to the English-speaking world than any other Persian work FERID ED-DIN ATTAR (d c 1229) was converted to SUFISM and produced mystical poetry of the highest order, and there was a succession of other mystic poets Jalal ed-Din RUMI and SADI continued and expanded the mystic poetry of Sufism in the 13th cent, and the exquisite lyrics of the 14th-century HAFIZ are interpreted by Moslem scholars as religious allegories The form of this mystic poetry and its subtle symbols make it one of the greatest of all contributions to world literature Its influence in the whole Moslem world was almost incalculably great The prose literature—stories, fables, allegories, and philosophical and scientific works—also had tremendous influence Many of the stories that later had great popularity in the West are to be found in the earlier Persian collections After the 15th cent there was something of a decline in Persian literature The great mass of the writing from that time to the present day, when new forms of poetry and of the short story are flourishing, is almost entirely untranslated and virtually unknown in the West See E G Browne, *A Literary History of Persia* (4 vols., 1929)

Persian lynx see CARACAL

Persian Wars, 500 B C–449 B C, fought between Greek states and the Persian Empire Herodotus, who was born c 484 B C, is the great source of knowledge of their history At the beginning of the wars, the Persian empire of Darius I included all of W Asia as well as Egypt On the coast of Asia were a few Greek city-states, and these revolted (c 500 B C) against his despotic rule Athens and Eretria gave them some help but not enough, and they were subdued by the Persians (494 B C) Darius I determined to punish Athens and Eretria and to add Greece to his vast empire In 492 B C a Persian expedition commanded by Mardonius conquered Thrace and Macedon, but its fleet was crippled by a storm In 490 B C a second expedition, commanded by Artaphernes and Datis, set out It destroyed Eretria, then proceeded against Athens The army encamped 20 mi from the city, on the coast plain of Marathon Here it was attacked and decisively defeated (Sept 12) by the Athenian army of 10,000 men, with the help of 1,000 men from Plataea The Athenians were outnumbered, possibly six to one, but proved adequate because of their courage and the strategy of MILTIADES They had sought the help of Sparta, the Athenian courier Pheidippides covering the 150 mi from Athens to Sparta within two days The Spartans would not set out until the moon was full, they reached Marathon the day after the battle The Persian commander did not continue the war Darius at once began preparations for a third expedition, so powerful that the overwhelming of Greece would be certain He died (486) before his preparations were completed, but they were continued by Xerxes, his son and successor. The Athenians, led by THEMISTOCLES, prepared also. In 480 Xerxes reached Greece with a tremendous army and navy. The route of the land army lay through the narrow pass of THERMOPYLAE. The pass was defended by Leonidas, king of Sparta, with c 8,000 men, of whom only 300 were Spartans. This small army held back the Persians for three days, until a Persian detachment had been led through the mountains by a treacherous Greek to the rear of the Spartan position. When Leonidas learned that his army would be trapped in this way, he permitted those to leave him who did not wish to remain, the 300 Spartans with some 2,000 others remained to die fighting in the pass The Athenians put their trust in their navy and made little effort to defend their city, which was taken by the Persians Shortly afterwards the Persian fleet was crushed in the straits off Salamis by an inferior Greek force The Greek victory was aided by the strategy of Themistocles Xerxes returned to Persia, but left in Greece his general, Mardonius, supposedly with 300,000 men The defeat of this army in 479 B C. at Plataea by a Greek army under Pausanias, a Spartan, and a Greek naval victory at Mycale in Asia Minor ended all danger from Persian invasions of Europe The commander of the Athenian troops at Plataea was Aristides Through the remaining period of the Persian Wars the offensive was with the Greeks, who were not seeking conquest and merely strengthened their position

persimmon (pərsĭ'mŏn), any of several trees of the large genus *Diospyros* The common persimmon (*Diospyros virginiana*) is native to the eastern half of the United States except in the northernmost states The leaves, simple and lustrous, have been found to have a very high vitamin C content and to yield a palatable tea The fruits are orange or tan, variable in flavor, and highly astringent until thoroughly ripe They are not marketed because of their softness The heartwood of this species is popular for golf clubs and for shuttles and is heavy and hard The Japanese persimmon or kaki (*D. kaki*) has a much larger reddish fruit of less flavor It is cultivated in the South and in California and is the persimmon found in markets Persimmons are propagated by seed, budding, and grafting Ebony is of the genus *Diospyros*

Persis (pûr'sĭs) [Gr., = Persian woman], Christian at Rome. Rom 16 12

Persis, ancient region, SW Iran See FARS

Persius (Aulus Persius Flaccus) (pûr'shəs, ô'lus, flă'kus), A D 34–62, Roman satirical poet, b Etruria A member of a distinguished family, he went to Rome in boyhood, was educated there, and came under the influence of the Stoic philosopher L Annaeus Cornutus, to whom he became attached in lasting friendship Gentle and modest by nature, Persius was upright in thought and conduct His writings (only six short satires), influenced in manner by HORACE and LUCILIUS, preach Stoic moral doctrine He exposed to censure the corruption and folly of Roman contemporary life, contrasting it with the ideals of the Stoics and of earlier Rome

Persons or **Parsons, Robert** (both par'sŭnz), 1546–1610, English Jesuit missionary He left a fellowship at Balliol College, Oxford, and went to the Continent to be received (1575) into the Roman Catholic Church, then entered the Society of Jesus and was ordained (1578) Active in the English College at Rome, Persons probably suggested the Jesuit mission to England That mission (1580–81), which he undertook with Edmund CAMPION, was the most notable event in Persons's career When Campion was taken, Persons fled to the Continent, where he remained the rest of his life, trying to promote Catholicism in England by political schemes and by building up in France and Spain seminaries and monasteries for English Catholics The school he founded at Eu was later transferred to Saint-Omer and is now continued at Stonyhurst, England. Persons was rector of the English College from 1597 to 1610 Of his many works the best remembered is the devotional *Book of Resolution, or, The Christian Directory* (1582)

perspective, in art, may be described as any method employed to represent three-dimensional space on a flat surface or in relief sculpture The two principal methods are linear perspective, which establishes the relative dimensions of objects as seen in space, and aerial perspective, which makes use of variation in color, light and dark, and contour to express depth Although many periods in art showed some progressive diminution of objects seen in depth, linear perspective, in the modern sense, was probably first formulated in 15th-century Florence by the architects Brunelleschi and Alberti and the painter Uccello In this strictly geometric system everything in a picture is represented as seen from a single point of view. The various types of linear perspective—parallel, angular, and architect's—are all different applications of the same principle of projection While no strictly accurate reproduction of what is seen can be rendered in two dimensions, the relations obtained

in linear perspective closely approximate those of photography. It has exercised an immense influence on Western art Strict application of its geometric laws is rare in the fine arts today, but its influence is still very marked A related, and parallel, development is the art of foreshortening, which deals with the freehand drawing of objects as seen in depth While linear perspective can be learned and applied by any intelligent student, the subtleties of aerial perspective vary greatly with the individual artist and school In general, aerial perspective is based on the fact that contrasts of color and of light and dark appear greater, and contours more defined, in near objects than in far. It also takes note of the recessive character of cool colors and the prominence of warm colors

Perth, city (pop 98,924, metropolitan pop 272,586), capital of Western Australia, on the estuary of the Swan river 12 mi from its mouth Fremantle is the port for Perth The commercial and cultural center of the state, Perth was founded in 1829 The Univ of Western Australia is at near-by Crawley There are Anglican and Roman Catholic cathedrals, a museum, and an art gallery The chief products are clothing, furniture, sandalwood oil, and flour There is a state-owned munitions plant Several of the western suburbs are seaside resorts

Perth, town (pop 4,458), S Ont , SW of Ottawa It has varied industries, including woodworking

Perth, burgh (1931 pop 34,807, 1948 estimated pop 40,123), co seat of Perthshire, Scotland, on the west bank of the Tay and NW of Edinburgh It is beautifully situated, backed by Moncrieffe, Kinnoull, and other hills, and with parks along the Tay The suburb Bridgend lies across the river Perth, or St Johnstoun, was the capital of Scotland until the murder here of James I (1437), after which it was superseded by Edinburgh The fierce battle between two clans on the North Inch (a park) in 1396 is recounted in Scott's *Fair Maid of Perth* Other events in the long history of the burgh are the mysterious Gowrie Conspiracy in 1600 (see RUTHVEN, family) and the battle of Tippermuir in 1644 in which MONTROSE defeated the Covenanters John Knox delivered his famous sermon against idolatry in the Church of St John in 1559 Many parliaments and councils were held in Perth It was the site of four monasteries, but few traces remain, the Hospital of King James VI (1569), now a workmen's dwelling place, is on the site of the old Carthusian monastery The General Prison for Scotland was established in Perth in 1812 Perth's industries include the manufacture of carpets and of textile and farm machinery

Perth Amboy (ăm'boi), city (pop 41,242), NE N J , with a good harbor at the mouth of the Raritan on Arthur Kill, here crossed to Tottenville, Staten Island, by the Outerbridge Crossing (1928) Perth Amboy was settled in 1683 and incorporated in 1718 It was capital of East Jersey from 1686 until the union of East and West Jersey and thereafter, for a time, alternate capital with Burlington It grew after connections with the interior were established, particularly after it became the tidewater terminal of the Lehigh Valley RR in 1876 and began to ship coal It is a port of entry The smelting and refining of metals and the making of bricks, tile, pottery, and terra cotta (clay is available locally) are the leading industries The mansion of Gov William Franklin, used as a British military office in the Revolution, was later converted into a hotel Of interest also are St Peter's Church (1722, Episcopal), Parker Castle (1723), and Lawrence Kearny's home (now occupied by the local historical society) William Dunlap was born in Perth Amboy

Perthshire or **Perth**, inland county (2,493 sq mi , 1931 pop 120,793, 1948 estimated pop 130,539), central Scotland The county town is Perth It is largely a mountainous region, the heights of the Ochils, the Sidlaws, and the Grampians are within its borders ' Lochs Tay, Earn, Rannoch, Ericht, and Katrine are among the largest of its many lakes The Forth and the Tay, with their tributaries, are the principal rivers Wild forests and rolling moor cover much of the area, which is noted for its fine scenery Agriculture and grazing are the leading industries, Strathearn and the Corse of Gowrie being especially fertile districts Perthshire has played an important role in Scottish history Kings of Scotland were long crowned at Scone, site of a royal residence. The county was the scene of the battles of Dupplin Moor, Tippermuir, Killiecrankie, and Sheriffmuir

Pertinax (Publius Helvius Pertinax) (pûr'tĭnăks), 126–93, Roman emperor (193), b. Liguria. He reluctantly succeeded COMMODUS on the throne and, on attempting to curb license in the Praetorian guard, was slain by the soldiers after a reign of three months Didius Julianus succeeded him

Pertinax: see GÉRAUD, ANDRÉ

Pertz, Georg Heinrich (gā'ôrk hĭn'rĭkh pĕrts), 1795–1876, German historian, first editor of the *Monumenta Germaniae historica* Appointed through the influence of Stein in 1823, he remained in charge until 1874 He also wrote lengthy biographies of Stein and Gneisenau and an excellent work on the Merovingians.

Peru (purōō') Span *Perú* (pārōō'), republic (482,257 sq mi , including lakes and islands, pop. 7,023,111), W South America The capital is LIMA Stretching from the Pacific coast on the west across the great mountain masses of the Andes and down to the rain forest of the W Amazon basin on the east, Peru has a great variety of climate and topography The heavily forested slopes of the Andes in the montaña of the east go down to great Amazon plain This jungle country has great resources as yet scarcely tapped The UCAYALI flows through the forest to join the MARAÑÓN, which rises in the mountains not far from the Pacific coast and comes east as the parent stream of the Amazon All this eastern country is well watered, and the forests and savannas supposedly have potentially rich soil Some of it is being exploited, and IQUITOS is a center of farm trade as well as of some gathering of rubber and balata Rubber once caused a boom in the Amazon country from the 1880s to 1912, but except when world conditions create unusual demands it is now of minor importance Inaccessible from the west until a road was completed in the 1940s to link the Pacific with the Ucayali, the eastern section, though it comprises about half of Peru's territory has but a tiny fraction of the population There are Indian tribes living in isolation in the same meager and untouched existence that their ancestors had when the powerful Inca empire occupied central and W Peru before the white man came Efforts are being made to pierce further the barrier of mountain and forest The boundaries with Colombia and Ecuador in this great wilderness were long subject to bitter dispute, but are now presumably fixed, the argument over the Leticia area ending in 1934, that over the Putumayo area closing at least tentatively in 1944 What this whole region may yield is a matter for the future, but up in the higher country within the mountain valleys and the high altiplano there were ancient cultures, and there the great Inca empire had its core The Andes in Peru as in Bolivia are fanned out in eastern and western ranges The volcanoes of the western range are especially lofty, the cordillera rising to the towering HUASCARÁN The eastern cordillera is also rugged, though its peaks are not quite so impressive as those in the west In S Peru is the volcano El MISTI, celebrated in Peruvian legend Between the major cordilleras lie the upland basins of the altiplano (more than 10,000 ft above sea level) Though called a plateau, the altiplano is actually rough with diagonal mountain ranges crossing it It begins in central Peru and broadens southward into Bolivia High, cold, and generally barren, the region has spots where rainfall is sufficient and the land level and fertile enough to yield potatoes and grains Thus around cold Lake Titicaca, which Peru shares with Bolivia, there are cultivated fields The higher *puna* yields enough grazing for llamas, alpacas, and sheep The very lofty *paramo* is too bleak for much use In the deep mountain vallevs, which cut down to a warmer clime, all sorts of crops can be grown and the land has been cultivated for many centuries for the support of the Indian villages and towns The great centers of the central region are AREQUIPA and the old Inca city of CUZCO Quite apart from the immemorial pattern of the Indian farming and pastoral life is the great industry of the mines Gold and silver were extracted in the time of the Incas, and the mountains yielded a tremendous wealth to the Spanish conquerors, who forced the Indians to hard labor for obtaining the prize Silver and gold still are exported, but in modern times CERRO DE PASCO has been known for its copper Lead, zinc, and other metals are also produced and Peru is a leading exporter of bismuth In the highlands the labor is almost exclusively Indian, and in the rarefied atmosphere of the mountains they are capable of enormous physical exertion that quickly exhausts the foreigner From early days European visitors noted with astonishment the endurance of the Indians, who would tirelessly carry heavy packs over mountain trails, chewing the while on the native coca leaves (containing cocaine), which supposedly deadened fatigue Beyond the crests of the high western Andes lies the region most familiar to the foreigner, the long coastal desert stretching for 1,400 mi Here is the great port of CALLAO a few miles from the capital city of Lima The extreme aridity is caused by the northward-moving and cold Humboldt or Peru Current, which yields little moisture to the winds blowing to the coast. What moisture there is is carried high over the desert to be precipitated on the mountains Thus in the south the skies are often cloudy but there is little rain In the north there is even less Very occasionally (once in several decades) warm water will backwash southward in the sea bringing torrential and damaging rain, but such disasters are much rarer than the earthquakes that frequently shake parts of the mountain and coastal areas The rain precipitated on the mountains causes dense vegetation of the lower mountain slopes, but the coastal cities and farms must depend on irrigation from the short and sometimes intermittent streams that plunge down from the Andes Where the rivers form alluvial fans, irrigation produces Peru's two most important crops, cotton and sugar cane The districts about CHICLAYO and TRUJILLO account for much of the agricultural export Farther south around Pisco and Ica there are large vineyards Off the coast are small islands, notably the *Lobos* and Chincha islands, which yield a singular source of income, guano, which is formed by the droppings of sea birds, who haunt the islands to feed on the marine life, guano, rich in nitrate, is used as a fertilizer, but its importance has been greatly diminished by the manufacture of synthetic fertilizers More important is the mineral wealth of petroleum, which is found principally in the northwestern desert Petroleum and the minerals from the mountains are the basis for much of the industrial activity of Peru Ore reduction and oil refining are prominent. There are also cotton and woolen textile mills and various minor manufactures in the cities Transportation has been one of the major difficulties in the path of Peruvian development. The building of railroads from the coast to the sierra meant battling with desert and mountain The building of the first from the southern port of MOLLENDO (now being superseded by the new port of Matarani) to Arequipa was a task of heroic proportions This was accomplished (1868–71) by Henry Meiggs, who also undertook the even greater task of building the railroad W from Callao and Lima over a mountain pass to Oroya The difficulties and expense involved continued to keep the mileage of Peruvian railroads low The same sort of difficulty faces the builder of highways Nevertheless, highways have been put through, though not in an extensive net Air transport has helped to solve some of the problem, but terrain is still the determinant in Peruvian life The count of the entire Indian population cannot be exact, but it is generally assumed that pure Indians make up about half the population Of the remainder by far the larger part is mestizo, with a small number of Orientals (mostly Japanese) and Negroes and a somewhat larger number of European extraction (mostly Spanish, with some Germans and Italians). The prevailing religion is Roman Catholic Although primary education is free, the problems of terrain and of the mixed social order have tended to keep the rate of illiteracy high, strenuous efforts have been made by the ministry of education to reduce it—particularly since 1941 The national universities, particularly the Univ of San Marcos at Lima (one of the oldest of American institutions of higher education) offer many facilities and there are various technical schools Many of Peru's problems have been inherited from the Spanish Conquest, which might in a certain sense be said never to have finished It was one of the most astonishing and dramatic chapters in the history of the two Americas The empire of the Inca, which had superseded earlier Indian cultures (e g , the AYMARA), was a highly developed and highly organized Indian civilization Its greatness seemed undiminished in 1532 though actually there were fissions within it In that year Francisco PIZARRO with a small band of adventurers arrived on the coast of Peru They toiled up the Andes and entered Cajamarca, seized the Inca, ATAHUALPA, by treachery, imprisoned him, and finally executed him By boldness and by firearms (unknown to the natives of Peru) the downfall of a mighty state was brought about instantaneously Before another year was out the Inca capital had been captured and the conquest was virtually complete The Indians had been less subjugated than betrayed, but Spanish power was immediately firm, and the uprisings of Manco Capac and of the much later Tupac Amaru were unavailing. Pizarro and his brothers and companions (notably such men as BENALCÁZAR) having prevented the attempt of Pedro de ALVARADO to take present Ecuador, set out to exploit the land The Indian was made to work in the mines, on the lands held in ENCOMIENDA, and in the textile mills (*obrajes*) The Spanish quarreled over profit and loot Diego de ALMAGRO, who first took the conquest into Chile, engaged in actual civil warfare against the Pizarros, and internecine strife went on. The younger Diego de Almagro battled against the representative of the crown, VACA DE CASTRO The New Laws, which would have done away with the abuses of the encomienda system, caused Gonsalo Pizarro to revolt He defeated the first viceroy, Blasco NÚÑEZ VELA, and was in turn defeated by Pedro de la GASCA. He was executed, but the New Laws were never administered for the benefit of the Indians Order was firmly established after Francisco de TOLEDO arrived in 1569 He inaugurated measures to improve the lot of the Indians, im-

proved administration, and generally made of Peru a functioning government The foundation he laid kept the viceroyalty functioning well through the colonial period, despite occasional poor administrations The area of the viceroyalty was reduced by the creation of new organs of government (e g , the creation of the viceroyalty in the Río de la Plata country, now ARGENTINA), but it remained the most powerful of the Spanish bodies in the New World, except for New Spain The government was reformed (1784) with the establishment of intendancies, but little power or even voice was given to the creoles (those of Spanish descent born in the colony), much less to the oppressed Indians The general efficiency of the government perhaps explains why Peru was the last of the South American colonies to gain independence from Spain Patriots did conspire against the government and there was an abortive uprising at Cuzco in 1813, but real revolution waited until after José de SAN MARTÍN came to Peru and, on the evacuation of Lima by the viceroy, José de la SERNA, proclaimed (July 28, 1821) the independence of Peru That was not to be won by him, however, for the northern liberator, Simón BOLÍVAR, also came to Peru After a mysterious interview the self-abnegating San Martín withdrew, and the conquest of Peru was accomplished by Bolívar and his lieutenant Antonio José de SUCRE in the battles of JUNÍN and AYACUCHO in 1824 Peru and Bolivia were set up as governments by Bolívar, but in the tensions of the time no stability was obtained in either After the departure of Bolívar in 1826, Andrés SANTA CRUZ was chief executive in Peru, and after Sucre left Bolivia in 1828, Santa Cruz took power there He attempted to mold the two countries into a confederation, but his schemes were brought to dust by his defeat in the battle of Yungay (1839) Peru was torn by civil strife until Ramón CASTILLA emerged in 1845 as one in a succession of strong men who have ruled Peru. The power of the military was already strong in government and remained so Dictatorship and revolts came in succession, and most of the economic power was in the hands of an oligarchy The restless change of political life was reinforced by outside trouble Spain, seeking compensation for losses in the revolution, seized the Chincha Islands S of Callao in 1863, and an intermittent war of small naval engagements went on until U S mediation was successful in 1871. Chile, Bolivia, and Ecuador had all supported Peru Before the war's end José BALTA had become president and had begun the material expansion of Peru That was shortly to be hampered by new war The valuable nitrate deposits in the deserts of what was then coastal Bolivia (particularly ATACAMA) were being worked by Chileans Peru and Bolivia in 1873 joined in a secret defensive alliance Therefore when disagreement over the mining led to war between Chile and Bolivia, Peru tried to mediate but refused to declare neutrality, and Chile declared war in 1879 The fighting went disastrously against the allies (see PACIFIC, WAR OF THE), and Peru was compelled to yield up the province of Tarapacá altogether and to surrender the other south coastal provinces of Tacna and Arica to Chilean administration until a plebiscite should be held 10 years later The plebiscite was not held, and charges and countercharges developed into the TACNA-ARICA CONTROVERSY, which was not ended until 1929, when ARICA was awarded to Chile, Tacna to Peru Attempting to reconstruct Peru out of the ruins, President A A CÁCERES created a syndicate of foreign capitalists to manage the guano deposits and the railroads Thus foreign influence and holdings in Peru grew stronger The boom in wild rubber brought some returns to Peru and also showed in the PUTUMAYO investigation (made at the request of the Peruvian government) to what lengths mistreatment of the Indians could go The wretched financial situation was improved somewhat under the long rule of Augusto B LEGUÍA but his administration, praised for its modernization and economic expansion was also criticized by liberals as harshly dictatorial. After the First World War a new party emerged, the Alianza Popular Revolucionario Americana, known as APRA (its members are Apristas) and headed by Víctor Raúl HAYA DE LA TORRE Its program is radical reform (though expressly not Marxist) and particularly bettering the condition of the Indians. Although it was usually outlawed, it gained much strength after the downfall of Leguía in 1930. The violently reactionary parties also gained in strength, and the contest between the left and the right was bitter A middle-of-the-road path seemed to be found with the victory of the moderate reformist party under José Luis Bustamante Rivero in 1945 with the aid of the Apristas. Soon, however, the administration had split with APRA on the program, and the rightists were bitterly hostile. A revolution by the Apristas in 1948 was followed by a coup at Arequipa in November of that year. Manuel Odría was made president, backed by the army and the conservatives He was in May, 1950, preparing to run as candidate in forthcoming elections A classic narrative of the Spanish Conquest is that of W. H. PRESCOTT See C R. Markham, *History of Peru* (1892); P. A. Means, *Fall of the Inca Empire and the Spanish Rule in Peru; 1530–1780* (1932), Blair Niles, *Peruvian Pageant* (1937); M. B B. Kidder, *No Limits but the Sky* (1942), T. R. Ybarra, *Lands of the Andes* (1947)

Peru (pərōō′) 1 City (pop 8,983), N Ill , on the Illinois river adjacent to La Salle and NNE of Peoria, in a coal area, founded 1835, inc 1845 Its manufactures include clocks, screens and other metal products, wagons, and beverages; it has zinc smelters and a foundry The Illinois river bridge here dates from 1869 2 City (pop 12,432), co seat of Miami co , N Ind , on the Wabash and E of Logansport, laid out 1825 It is in a fertile agricultural area and produces electrical equipment The city has a historical museum with examples of pioneer handicraft A naval air base is here 3 Village (pop 1,024), SE Nebr , on the Missouri and SE of Lincoln, inc 1860 A state teachers college is here Indian mounds are near by

Peruda (pĕrōō′dù), variant of PERIDA

Perugia (pərōō′ju, Ital pārōō′jä), city (pop 31,839), capital of Perugia prov and of Umbria, central Italy. It is beautifully situated on a hill overlooking the Tiber valley and is a commercial and industrial center famous for its chocolate Perugia was inhabited by the Umbrians and (4th cent B C) the Etruscans before it fell to the Romans in the 3d cent B C It became (12th cent A D) a free commune, which soon gained hegemony over other Umbrian cities Although nominally under papal rule, it was in fact mostly at the mercy of cruel tyrants until in 1540 Pope Paul III conquered it To keep it subdued he built a powerful citadel designed by Antonio da San Gallo, which was dismantled in 1860 As the chief city of Umbria, Perugia was its artistic center The Umbrian school of painting (13th–16th cent) reached its greatest splendor with Perugino, Raphael's master, and with Pinturicchio Perugino's frescoes decorate the Cambio [exchange hall] The university at Perugia may be traced to the 13th cent , special courses for foreign students are now held here each year Near the city important Etruscan tombs were found The extant city walls are partly Etruscan, partly Roman, partly medieval The cathedral (14th–15th cent) has a fine white and red marble façade, near by is a marble fountain with sculptures by Nicola and Giovanni Pisano The pinnacled town hall (13th cent) houses the best Umbrian art collection The Church of Sant' Angelo (5th or 6th cent) and the Renaissance churches of San Bernardino and San Pietro deserve mention There are very-well-preserved medieval quarters

Perugino (pĕ″rōōjē′nō, Ital. pārōōjē′nō), c.1445–1523?, Umbrian painter, b near Perugia His real name was Pietro di Cristoforo Vannucci He studied under Fiorenzo di Lorenzo, assisted Piero della Francesca at Arezzo, and was a fellow pupil of Leonardo da Vinci and Lorenzo di Credi in Verrocchio's studio in Florence In 1475 he was commissioned to paint in the Palazzo Pubblico, Perugia, a series of frescoes (no longer extant), and in 1478 he executed the fresco *St Sebastian* in the Church of Cerqueto, near Perugia, one of his earliest known works In 1480 he was summoned to Rome by Pope Sixtus IV to paint in the Sistine Chapel of the Vatican. Of the four frescoes executed by Perugino only one remains, *Christ Giving the Keys to St Peter*, the others having been destroyed to make room for Michelangelo's *Last Judgment* From 1486 to 1491 Perugino worked chiefly in Florence, making occasional visits to Perugia and one to Rome, where he painted for Cardinal della Rovere the beautiful altarpiece now in the Villa Albani Other important works of the middle period are the *Madonna with Saints and Angels* (Louvre), *Madonna with Two Archangels* (National Gall , London), *The Crucifixion* (Uffizi), *Pietà* (Pitti Palace, Florence), *The Crucifixion*, fresco (Santa Maria Maddalena dei Pazzi, Florence), *Madonna Enthroned with Saints* (Vatican); and *The Crucifixion* (National Gall of Art, Washington, D C) His last period (c 1496–1523), centering mainly about Perugia, was one of great productivity He had many pupils and assistants, among them the youthful Raphael From 1496 to 1498 Perugino worked on the great altarpiece, *The Ascension*, for San Pietro of Perugia (five panels at Perugia; the rest in Lyons, Nantes, and Rouen museums, Vatican Gallery, and St Gervais, Paris). His most ambitious decorative work was the fresco series for the audience hall of the Cambio in Perugia, consisting of allegorical figures and two sacred subjects, *The Nativity* and *The Transfiguration* In 1500 he painted the altarpiece *Madonna and Saints* for the Certosa of Pavia. Only the figure of *God the Father* remains in the Certosa, *Virgin Adoring the Infant Christ, St. Raphael with Tobias*, and *The Archangel Michael* are in the National Gallery, London. Other important works of the last period are *The Marriage of Joseph and the Virgin Mary* (Caen), *The Adoring Madonna* (San Agostino, Perugia); *Triumph of Chastity* (Louvre), a panel painted for the study of Isabella d'Este at Mantua; *Virgin between St. Jerome and St. Francis* and *The Adoration of the Shepherds*, his last work, painted for the Church of Castello di Fontignano (both: National Gall , London); and *The Annunciation* (National Gall of Art, Washington, D C) In the Metropolitan Museum is a *Resurrection*, part of a predella, and *Adoration of the Infant Christ* is in the New York Historical Society. Perugino is, after Raphael, the greatest painter of the Umbrian school. He was one of the first Italians to master the oil medium and also materially advanced the science of perspective At first influenced by the Florentine school, he gradually developed an individual style noted for its delicacy and grace of line, Umbrian tenderness of color, and noble portraiture In his later years the artistic merit of much of his work declined See biographies by G C Williamson (1903) and Edward Hutton (1907)

Peruvian bark see CINCHONA

Peruzzi, Baldassare (bäldäs-sä′rā pārōōt′tsē), 1481–1536, Italian architect He was one of the great architects of the zenith of the Italian Renaissance His early training was in painting, existing mural decorations show his fine talents in that field In 1508 he moved to Rome, where he built the Farnesina, collaborating with Raphael in adorning it with frescoes The Massimo Palace (c 1530) at Rome is his masterpiece For some years he assisted Bramante in the work for St Peter's and later was appointed superintendent, closely adhering in his plans to Bramante's designs The capture of Rome in 1527 prevented its execution In addition to many buildings in Rome, he designed numerous villas and palaces elsewhere in Italy

Pesaro (pāsä′rō), city (pop 24,163), capital of Pesaro e Urbino prov , the Marches, central Italy, a port on the Adriatic Sea It was a Roman colony and later one of the cities of the PENTAPOLIS The house of Malatesta gained power in the 13th cent , then the Sforza and the dukes of Urbino held it until (1631) it passed directly under the Holy See Pesaro has several churches, a ducal palace (14th–15th cent), and the richest collection in Italy of ceramics, manufactured here since the 15th cent It was Rossini's birthplace and is the seat of a conservatory of music Near here are the Rocca Gradara, a fort of the Malatesta, and the Villa Imperiale, decorated with 16th-century frescoes damaged in the Second World War

Pescadores (pĕskudô′rus, -rōs), Mandarin *P'êng-hu*, group of 25 small islands, area c 50 sq mi , between Formosa and the mainland of China China ceded them (1895) to Japan after the First Chino-Japanese War, and they were returned to China after the Second World War Much sugar cane is grown

Pescara, Ferdinando Francesco d'Avalos, marchese di (fārdēnän′dō frēnchā′skō davä′lōs markä′zā dē pāskä′rä), 1490?–1525, Spanish-Neapolitan general in the Italian Wars He served Emperor Charles V and was chiefly responsible for the brilliant Spanish victory over Francis I of France at Pavia (1525) A partisan of the dispossessed Sforza dukes of Milan tried to induce the general to join in promoting an Italian national party, but Pescara revealed the plot to the emperor

Pescara (pāskä′rä), city (pop 35,877), capital of Pescara prov , Abruzzi e Molise, S Italy, a fishing port on the Adriatic It suffered considerable damage in the Second World War D'Annunzio was born here

Pesellino, Il (ēl pāzēl-lē′nō), 1422–57, Italian painter of the Florentine school, whose real name was Francesco di Stefano He was a grandson and pupil of Giuliano Giuochi, called Pesello, and later assisted Fra Filippo Lippi Pesellino is famous for the decorative qualities of his work and for his splendid paintings of animals His exceedingly rare extant works are highly prized He excelled in the painting of *cassone* pictures (decorative panels for chests), such as the *Judgment Scene* and the *Story of Griselda* (Bergamo) and the *Triumphs of Petrarch* (Gardner Mus , Boston) *Scenes from the Story of the Argonauts*, two chest panels (Metropolitan Mus.), are attributed to the school of Pesellino. Other known works by the artist are *Madonna with Saints* and *Crucifixion* (Metropolitan Mus); *The Crucifixion with St Jerome and St Francis* and *Madonna and Child* (National Gall of Art, Washington, D C), *Madonna* (Chantilly), five fragments of the fine predella for Lippi's altarpiece in the Church of Santa Croce, Florence (three in Florence Acad and two in the Louvre), the altarpiece of the *Trinity*, begun by Pesellino for Santa Trinità at Pistoia and believed to have been completed at his death by Lippi (National Gall , London); *Annunciation* (Uffizi), and a miniature altarpiece, *Madonna and Six Saints*

Peshawar (pūsha′wūr, pūshô′ūr), city (pop. 173,420), capital of North-West Frontier Prov , Pakistan. It is 10 mi E of Khyber Pass, and it is a major depot for trade with Afghanistan. There is weaving of silk, cotton, and wool. The city, once a Greco-Buddhist center, has a large Buddhist stupa of the 2d cent. In the 19th cent. Peshawar was under Sikh control until its capture by the British in 1848.

Peshtigo (pĕsh′tēgō), city (pop 1,947), NE Wis., SW of Marinette and on the Peshtigo river, in a

dairy area; inc. 1903 The city has paper milling and boatbuilding Near by is a memorial of the 1871 fire which ravaged NE Wisconsin.

Pest, Hungary: see BUDAPEST.

Pestalozzi, Johann Heinrich (yō'hän hĭn'rĭkh pĕˢ-stälôt'sē), 1746–1827, Swiss educational reformer, b Zurich His theories laid the foundation of modern elementary education He studied theology at the Univ. of Zurich but was forced to abandon his career because of his political activity. From 1769 to 1798 he lived at his farm "Neuhof" near Zurich, where he conducted a school for poor children. From 1799 to 1804 he directed a school at Burgdorf, and from 1805 until his retirement to "Neuhof" in 1825 he was director of the experimental institute at Yverdon, which was established on Pestalozzian principles Pestalozzi's writings include *Abendstunde eines Einsiedlers* (1780, Eng tr, *The Hours of a Hermit*, in J A Green and F A Collie, *Educational Writings of Pestalozzi*, 1912), a collection of aphorisms, *Lienhardt und Gertrud* (4 parts, 1781–87, rev eds, 1790–92, 1819–20, Eng trs, *Leonard and Gertrude*, 1801, 1894), a novel of social reform through education, *Christoph und Else* (1782), a series of didactic conversations, *Wie Gertrud ihre Kinder lehrt* [how Gertrude teaches her children] (1801), 14 letters on education, *Buch der Mütter* [the mother's book] (1803), one of three "elementary books" on instructional methods, and the autobiographical *Schwanengesang* [swansong] (written 1811–13, pub 1826) Pestalozzi's theory of education is based on the importance of a pedagogical method which corresponds to the natural order of individual development and of concrete experiences This theory and Pestalozzi's methods of applying it have profoundly influenced both European and American education See W S Monroe, *History of the Pestalozzian Movement in the United States* (1907), J A Green, *Life and Work of Pestalozzi* (1912)

Pestszenterzsebet, Hung *Pestszenterzsébet* (pĕsht'-sĕntĕr"zhābĕt), city (pop 76,876), N central Hungary, just SE of Budapest It is an industrial center with petroleum refineries and iron and steel plants The name formerly was Erzsebetfalva

Pestszentlorinc, Hung *Pestszentlo"rinc* (pĕsht'-sĕntlō"rĭnts), city (pop 42,075), N central Hungary A southwestern suburb of Budapest, it has iron, steel, and machinery plants

Petah Tikva or **Petah Tiqva** (both pĕtä' tĭk'vä), town (pop c 25,000), central Israel, c 7 mi E of Tel-Aviv; founded 1878 It is the oldest modern settlement in Palestine and is a manufacturing center, producing textiles and processed foods

Pétain, Henri Philippe (ärē' fēlēp' pātăⁿ'), 1856–, marshal of France In the First World War he saved France by halting the Germans at VERDUN (1916) He became (1917) French commander in chief, but was passed over (1918) in favor of Foch when the Allies chose a joint supreme commander Made a marshal in 1918, Pétain later went to Morocco, where he brought the joint French and Spanish campaign against ABD-EL-KRIM to a successful conclusion (1926) In 1939 Pétain was appointed French ambassador to Spain after France had recognized the newly established regime of Francisco Franco, who had served under Pétain in Morocco In the Second World War, when France was on the brink of collapse, Premier Paul REYNAUD recalled (May, 1940) Pétain from Spain and made him vice premier in an attempt to restore French morale with the name of the hero of Verdun Pétain recommended (June, 1940) that France sue for an armistice, and on the night of June 16 Reynaud resigned and was succeeded by Pétain as premier The armistice, signed at Compiègne, went into effect on June 25, and half of France was occupied by the Germans On July 10, 1940, a rump meeting of the parliament suspended the constitution of the Third Republic, and Pétain took office as "chief of state" at Vichy, in unoccupied France The VICHY GOVERNMENT was fascistic and authoritarian Pétain sought to improve the lot of France and the French prisoners of war by collaborating "honorably" with Germany, but his popularity decreased as he yielded to ever-harsher German demands without obtaining much in return In April, 1942, Pierre LAVAL took power, and the marshal became a mere figurehead After the Allied invasion of France (June 6, 1944) Pétain was taken, allegedly over his protests, to Germany In April, 1945, he voluntarily returned to France to face treason charges. His trial (July–Aug, 1945), at which much contradictory evidence was presented, ended when he was convicted of intelligence with the enemy The court, whose impartiality was widely contested, sentenced him to death, "national indignity," and loss of property General de Gaulle commuted the death sentence to life imprisonment. Detained at first at a fortress in the Pyrenees, he was later transferred to the island of Yeu.

petal: see COROLLA.

Petaluma (pĕtŭlōō'mŭ), city (pop 8,034), W Calif., N of San Francisco and NW of San Pablo Bay; founded 1852, inc 1858. It is the center of a large poultry industry. Its manufactures include incubators and poultry foods.

Petavius, Dionysius (dīōnĭ'shēŭs pētä'vēŭs), Fr *Denys Pétau*, 1583–1652, French Jesuit theologian and philologist His editions of late Greek theological works are still important His chief work (incomplete), on Christian doctrine, was bold in imputing slight unorthodoxy to certain Fathers of the Church and a Jansenist tinge to St Augustine

Petchenegs (pĕchunĕgs') or **Patzinaks** (pätsĭnaks'), nomadic people of the Turkic family Originating in the Ural region, they invaded (A D c 880) the plains of the lower Danube, driving the MAGYARS before them They threatened Constantinople (934) and in 968 besieged Kiev and killed the Kievan duke Sviatoslav After once more besieging Constantinople (c 1075), they were virtually annihilated in 1091 by Emperor Alexius I and the CUMANS, a tribe closely related to the Petchenegs

Petén (pātān'), region (c 15,000 sq mi, pop 11,475), N Guatemala, politically a department Sometimes referred to as the panhandle of Guatemala, it is a humid expanse of dense, tropical, hardwood forests interrupted by savannas and crisscrossed by ranges of hills rising no more than 1,000 ft It is related geographically to Yucatan, E Chiapas, and British Honduras rather than to the rest of Guatemala The USUMACINTA system drains the western and major portion, though lesser rivers flow E into British Honduras There are large, permanent lakes, notably Lake Petén or Petén Itzá, and heavy rainfall (from 70 in a year in the north to 150 in a year in the south) brings floods and temporary lakes connecting the permanent ones The inaccessible region has been little developed and produces only chicle, lumber, and some rubber and cacao Most of the Indians live in the deep forests independently of the few whites Once Petén was the center of the Old Empire of the MAYA and had a dense population It is rich in archaeological ruins, notably TIKAL and Uaxactún Although the Spanish nominally conquered the area and Cortés passed through on his epic march to Honduras (1524–25), efforts at subjugation were only sporadic until the ITZA were driven in 1697 from their stronghold at Lake Petén

Peter, Saint [Gr *Petros*, Gr *petra*=rock, this is a translation of *Cephas*], d A D 67?, Prince of the Apostles, the disciple listed first in the Gospels His original name was Simon, but Jesus gave him the nickname Cephas (sē'fus) [Aramaic, =rock] He was a native of Bethsaida, and St Andrew was his brother, he was married Peter and Andrew were called by Jesus from their fishing to be disciples at the same time as the sons of Zebedee Mark 1 16–20,29–31, 3 14–16, Luke 5 1–11, John 1 40–44 He appears throughout the Gospels as leader and spokesman of the Twelve Apostles, and Jesus most often addressed him when speaking to them Mat 10 2, 14 28, 15 15, 17 24, 19 27, Luke 8 51, 12 41 Peter's honored position comes out most clearly in two high points of Jesus' ministry—when Peter confessed Jesus to be the Christ and was told "upon this rock I will build my Church" and when he, with James and John, was chosen to see the transfiguration Mat 16 13–20, 17 1 He was with Jesus at the Last Supper and accompanied him into Gethsemane When Judas came to betray Jesus, Peter drew his sword to defend him, but later in the same night Peter denied him John 13, Mat 26 26–35,57–75 After the resurrection occurred the scene by the lake when Jesus charged Peter to "feed my sheep" John 20 1–10, 21 The Acts of the Apostles deals largely with Peter in its first chapters and shows him as the leader of the Twelve in replacing Judas by Matthias and in the public declaration at Pentecost Acts 1 15–26, 2 14–40 Much attention is given to Peter's miracles and to his defense of Christianity Acts 3, 4, 5 1–11,29–32, 8 14–25, 9 32–43, 10, 11 1–18 Peter's deliverance from prison by an angel is a celebrated incident He was a leader at the council of Jerusalem called to discuss the integration of the non-Jews into the Christian organization, his hesitation to accept them freely was rebuked by St Paul Acts 15, Gal 2 A few facts of St Peter's life are known from 2d-century sources He left Antioch for Rome A.D c 55, there he died as head of the local church, a martyr under Nero A very ancient tradition makes him die the same day as St Paul, crucified with his head downward From earliest times the Vatican hill has been pointed out as the place of his martyrdom, St Peter's Church houses his tomb, replacing the church St. Constantine built over Peter's burial place The apostle's tomb is the principal shrine of Europe and draws as many pilgrims as the Holy Places at Jerusalem It was reported (but not confirmed by early 1950) that archaeologists had in 1947 discovered a crypt with coins from very early days and inscriptions that to some degree bear out the traditional belief that St Peter actually was interred at the spot There is a very ancient tradition, accepted by most critics, that the Gospel of Mark was largely done with St Peter's help and that it consists essentially of his memoirs. The epistles of Peter (see PETER, epistles) are regarded by many critics as falsely attributed From earliest times Christians looked for leadership to the successors of Peter, the bishop of Rome. Whether this primacy should be one of honor only (as held by the Orthodox East) or of actual rulership is one of the chief dividing questions of Christian history, and it sharply sets off the ROMAN CATHOLIC CHURCH, which consists of those who are in communion with the pope. Peter's successor at Rome, and therefore in obedience to him (see PAPACY). The biblical passages said to support these Petrine claims are Mat 16 13–20 and John 21 15–25 From the first comes the familiar symbolism of the keys to represent the papal power as well as the popular picture of St Peter as the doorkeeper of heaven. There are four feasts of St Peter in the West St Peter and St Paul, June 29, St Peter's Chains (anniversary of the dedication of the basilica of St Peter-in-Chains at Rome), called Lammas Day in England, Aug 1, St Peter's Chair at Rome (commemorating his bishopric at Rome), Jan 18, and St Peter's Chair at Antioch (commemorating his bishopric at Antioch), Feb 22 Good interpretations of the sources about St. Peter are found in histories of the Church and in biblical commentaries Among careful biographies are those by F J Foakes-Jackson (1927, critical Protestant) and W T Walsh (1948, Roman Catholic)

Peter I or Peter the Great, 1672–1725, emperor (1721–25) and tsar (1682–1725) of Russia, founder of the modern Russian state He was the youngest child of Tsar Alexis, by Alexis's second wife, Natalya Naryshkin From Alexis's first marriage (with Maria Miloslavsky), Feodor III, Sophia Alekseyevna, and the semi-imbecile Ivan were born On Feodor III's death (1682), a struggle broke out for the succession between the Naryshkin and Miloslavsky factions Helped by the citizens of Moscow, the Naryshkins at first succeeded in setting Ivan aside in favor of 10-year old Peter Shortly afterward, however, the Miloslavsky party incited the Moscow garrison (the streltsi) to rebellion In the bloody disorder that followed, one of Peter's chief supporters was cut to pieces even while seeking protection by clutching the child's person. This episode is held to have left a permanent scar on Peter's psychology and to have been the cause of the convulsive fits from which he suffered As a result of the rebellion Ivan was made, as IVAN V, joint tsar with Peter, under the regency of SOPHIA ALEKSEYEVNA A virtual exile, Peter spent most of his childhood in a suburb of Moscow, surrounded by playmates drawn from the roughest social elements His talent for leadership soon became apparent when he organized military games which became regular maneuvers in siege craft His Dutch and Swiss mentors, Franz Timmermann and François LEFORT, wakened his interest in building a navy and modernizing the army In 1689 the report that Sophia Alekseyevna was plotting against his life roused Peter from his military pastimes, aided by the loyal part of the streltsi, he overthrew the regent and assumed personal rule Ivan V, whose death in 1696 left Peter sole tsar, took no part in the government Peter continued his shipbuilding experiments, begun on a small scale on Lake Pereyaslavl (now Lake Pleshcheyevo), on the White Sea His realization that Russia required better maritime outlets in order to become a commercial and naval power directed his ambitions to the shores of the Baltic Sea, then dominated by Sweden, and of the Black Sea, controlled by Turkey Russian expansion in these two directions became the fixed object of his foreign policy His earliest venture was the conquest of Azov from the Turks A first expedition (1695) ended in disaster, his second attempt (1696) was better prepared and was successful Peter now embarked on a tour (1697–98) of Western Europe, traveling mostly incognito His attempt to gain allies against Turkey failed, but he put his time to good use by studying European industrial techniques, working even, for a time, as a ship's carpenter in Holland He was called back to Russia by the news of another military revolt, instigated by Sophia Alekseyevna Peter took drastic and sadistic vengeance on his luckless opponents At the same time he initiated his program of intensive reform by personally cutting off the beards of his principal nobles Beards were symbols of the medieval social state of Russia, which Peter was determined to end After concluding (1699) peace with Turkey, Peter, in alliance with Denmark and the combined Saxony-Poland, began the NORTHERN WAR (1700–1721) against CHARLES XII of Sweden Though disastrously defeated at first, he routed Charles at Poltava in 1709 and was in control of Karelia, Ingermanland, and Livonia by 1710 At the Treaty of Nystad (1721) he retained most of his conquests Peter's conquests in the south were less permanent Azov was restored to Turkey in 1711, Derbent, Baku, and the southern coast of the Caspian Sea, conquered in a war (1721–24) with Persia, were soon lost again Peter took advantage of his foreign wars to speed internal reform Symbolically, he shifted his capital from Moscow to St Petersburg (see LENINGRAD), newly founded in conquered territory on the Baltic shore He introduced universal taxation, he unified the currency; he released women from their servile status, he ordered the building of stone houses and

the creation of fire departments to stop the disastrous conflagrations of the largely wooden cities; he abolished the Byzantine court ritual, he simplified the alphabet, he reformed the calendar, he encouraged the rise of private industries and the expansion of trade; he built the first modern hospitals and medical schools in Russia; and he prescribed that Russians were to wear European dress instead of their Russian garments However, he did not confine himself to details he also established government control over monastic estates and abolished the patriarchate of Moscow, replacing it as supreme religious authority in Russia by a holy synod, headed by the tsar himself. Aiming at the complete subordination of society to the state, he also reorganized from the ground up the civil administration of Russia, created a new nobility of civil servants and military officers, and kept a watchful eye on the nobility of birth He did nothing, however, to restrict serfdom, which during his reign became more firmly entrenched as an institution than it had been before Peter's interest in imperial expansion led him to finance the first exploration voyage of Vitus BERING Although Peter sought to enforce all his reforms, whether large or small, with equal severity, he was unable to eradicate the traditional corruption of officials or to impose Western ways on the peasantry His reforms, often bordering on the whimsical and sometimes on the sacrilegious, met widespread opposition in all classes The conservatives among the clergy accused him of being Antichrist, and his own son, ALEXIS, joined the opposition Alexis was eventually tried for treason and died (1718) as a consequence of torture In 1721 Peter had himself proclaimed "emperor of all Russia " In 1722 he abolished the imperial succession by primogeniture, declaring the choice of a successor to be dependent on the sovereign's will, this decree (valid until the reign of Paul I) preceded the proclamation (1724) of his second wife as joint empress CATHERINE I, who was to succeed him as sole empress, was a Livonian peasant girl, whom Peter had made his mistress, then his wife (1711) after repudiating his first consort Her accession on Peter's death was largely engineered by Peter's chief lieutenant and favorite, A D MENSHIKOV Although many of Peter's innovations were too hasty and arbitrary to be successful, his reign revolutionized Russia in a measure comparable to the Bolshevik Revolution of 1917 Before his accession, Russia was, in relation to Europe, a remote Asiatic country After his death, it ranked among the major European powers Peter's personal traits ranged the whole gamut from bestial cruelty and vice to the most selfless devotion to duty At all times, he seems to have placed the greatness and prestige of Russia above everything else, his order to his troops at Poltava read, "Remember that you are fighting not for Peter, but for the state " Of bearlike constitution, gigantic stature, and herculean physical prowess, he would drink himself into stupors and indulged in all conceivable vices, but he was able to rouse himself at a moment's notice and was willing to undergo all the physical exertions and privations that he exacted from his subjects Unfortunately, not all his subjects had his constitution, and thousands died needlessly in such projects as the building of St Petersburg Peter himself eventually died of his excesses Having no regard whatever for the lives, liberties, and dignity of individuals, Peter believed in the necessity, for the welfare of the state as a whole, to carry through reforms as quickly as possible and by the most ruthless means, like many of his successors he had little faith in the ability of the Russian people to accomplish anything without prodding He was admired in the 18th cent as a forerunner of "enlightened despotism," and he is revered in Soviet Russia as a forerunner of Stalin Whatever he was, it remains a perhaps significant paradox that the man who introduced Western civilization into Russia was himself regarded by his contemporaries in Western Europe as the embodiment of Russian barbarism The first biographer of Peter the Great was Voltaire Later biographies include those by Eugene Schuyler (2 vols , 1884) and Kazimierz Waliszewski (2 vols , 1897) See also R N Bain, *The Pupils of Peter the Great* (1897)

Peter II, 1715–30, emperor and tsar of Russia (1727–30) A grandson of Peter I and the son of the tsarevich Alexis, he succeeded on the death of Catherine I He was too young to rule, but he willingly lent himself to a court intrigue which resulted in the fall of the all-powerful minister, A D Menshikov, and the return to power of the reactionary nobility, represented by the Galitzin and Dolgoruki families He died of smallpox on his wedding day His successor was Empress Anna

Peter III, 1728–62, emperor and tsar of Russia (1762), son of Charles Frederick, dispossessed duke of Holstein-Gottorp, and of Anna Petrovna, daughter of Peter the Great. He succeeded to the throne on the death of his aunt, Empress Elizabeth, and one of his first acts was to take Russia out of the Seven Years War and to conclude an alliance with Frederick II of Prussia, whom he passionately admired He thus saved Prussia from almost certain defeat and sacrificed all the advantages Russian arms had gained in the conflict. In 1744 Peter had married Sophia of Anhalt-Zerbst, who was to become Empress CATHERINE II Dissolute, mentally unbalanced, and in some respects retarded, he neglected his wife, who went her own way and soon had a series of lovers Catherine's assertion, however, that the later emperor, Paul I, was not her son by Peter is probably unfounded After he became emperor, Peter's general unfitness became increasingly obvious In the summer of 1762 a conspiracy, headed by Catherine's lover Grigori Orlov and his brother Aleksey, was set in motion Catherine was proclaimed sole ruler, and the imperial guards, led by Catherine in person (who had donned the guards' uniform), set out to Peterhof, where they forced Peter to sign his abdication A few days later he died in circumstances which remain mysterious It is generally believed that he was assassinated by a group of officers headed by Aleksey Orlov Peter's claim to ducal Schleswig-Holstein passed to his son Paul, in whose name Catherine ceded it to Denmark in exchange for Oldenburg in 1773 See biography by R N. Bain (1902)

Peter I, d 1104, king of Aragon and Navarre (1094–1104), son and successor of Sancho I He continued the fight against the Moors, won the battle of Alcoraz (1096) with the help of Alfonso VI of Castile, and took Huesca the same year His son Alfonso I succeeded him

Peter II, 1174–1213, king of Aragon (1196–1213) and count of Barcelona, son and successor of Alfonso II He had himself crowned at Rome by Pope Innocent III, whom he accepted as overlord over Aragon and Catalonia In 1212 he helped Alfonso VIII of Castile defeat the Moors at Navas de Tolosa Although a devout Catholic, Peter was obliged to assist Raymond VI of Toulouse against Simon de Montfort, leader of the Albigensian Crusade, when Simon refused Innocent III's command to do homage to Peter Peter was slain in the battle of Muret, which marked the end of Catalan influence in S France His son James I succeeded him

Peter III, 1239?–1285, king of Aragon and count of Barcelona (1276–85) and king of Sicily (1282–85), son and successor of James I He was compelled to grant wide privileges to the nobles In 1280 he established Aragonese influence on the northern shores of Africa From his marriage to Constance, daughter and heir of MANFRED of Sicily, were derived the claims of the house of Aragon to Sicily and S Italy After the insurrection of the SICILIAN VESPERS against CHARLES I of Anjou, Peter was offered the crown of Sicily and took possession of the island (1282) Pope Martin IV excommunicated him and declared him deprived of his states on the basis of Peter II's declaration of vassalage to the Holy See A crusade against Aragon was organized by the pope and the French, who invaded Catalonia but were repulsed by Peter and defeated at sea by ROGER OF LORIA Peter founded the first university in Aragon at Huesca He was succeeded in Aragon by his eldest son, Alfonso III, and in Sicily by his second son James (later James V of Aragon)

Peter IV (Peter the Ceremonious), 1319?–1387, king of Aragon and count of Barcelona (1336–87), son and successor of Alfonso IV He supported ALFONSO XI of Castile at the battle of Tarifa (1340), recovered (1343–44) the kingdom of Majorca, and engaged in an indecisive naval war with Genoa, which had encouraged disorders in Sardinia Though forced to confirm the privileges granted to the nobles by Alfonso III, Peter later defeated the troops of the nobles and withdrew their charter In 1381 he assumed suzerainty over the duchy of Athens His son John I succeeded him

Peter I, Port *Pedro o Severo*, 1320–67, king of Portugal (1357–67), son and successor of Alfonso IV He married Constance Manuel, a Castilian noblewoman, but fell violently in love with one of her ladies in waiting, Inés de CASTRO Their tragic love affair is the great romantic story of the Portuguese When Alfonso IV allowed her to be murdered (1355), the prince led a rebellion The warfare was ended by intervention of the archbishop of Braga, and the prince formally pardoned the murderers Nevertheless, when he became king he had two of them executed by having their hearts drawn out This act and his liking for bringing criminals to punishment earned him the name of Peter the Severe, Peter the Justiciar, and Peter the Cruel He asserted that he had married Inés but could not prove it He was succeeded by Ferdinand I

Peter II, 1648–1706, king of Portugal (1683–1706), younger son of John IV His brother ALFONSO VI was afflicted in both mind and body, and by a coup Peter had him abdicate and ruled the country as prince regent from 1767 to his brother's death The marriage of Marie Françoise to Alfonso was annulled, and she married Peter The reign was one of prosperity and peace until the last years Portugal drew close to England, and the two countries were bound together by treaty, notably by the Methuen Treaty of 1703 English pressure ultimately brought reluctant Portugal into the War of the Spanish Succession, and campaigns were going on when the king died. He was succeeded by John V.

Peter III, 1717–86, king of Portugal, younger son of Joseph He married his niece (MARIA I) and was joint ruler with her.

Peter I, 1844–1921, king of Serbia (1903–18) and king of the Serbs, Croats, and Slovenes (1918–21), son of Prince ALEXANDER of Serbia (Alexander Karageorgevich). He was brought up in exile in Geneva and Paris while the Obrenovich line ruled Serbia, and he fought in the French army in the Franco-Prussian War (1870–71) In 1876 he joined the Bosnian insurrection against the Turks The assassination (1903) of King ALEXANDER of Serbia brought Peter to the throne Peter proved an able and conscientious ruler and restored dignity to the court of Belgrade He reformed the constitution, the army, and the school system and fostered improved methods of agriculture The outstanding figure of his reign was Nikola PASHITCH, who directed Serbian policy in the BALKAN WARS (1912–13) and in the First World War Early in 1914 Peter, who was in ill-health, retired from active rule and his son, the later King Alexander of Yugoslavia, became regent Peter took part in the retreat (1915–16) of the Serbian troops through Albania to Corfu In 1918 he was chosen to rule the kingdom of the Serbs, Croats, and Slovenes (later known as Yugoslavia), while his son and successor remained regent

Peter II, 1923–, king of Yugoslavia (1934–45) He succeeded under the regency of his cousin, Prince Paul, when his father, King Alexander, was assassinated at Marseilles When Paul's government signed (March, 1941) an agreement with the Axis Powers, the army and people of YUGOSLAVIA overthrew the regent. Peter's personal rule began with the German invasion (April, 1941) of Yugoslavia His troops were soon defeated and Peter fled to England, where he headed a government in exile After the war the newly elected Yugoslav assembly abolished (Nov , 1945) the monarchy and proclaimed a republic headed by Marshal TITO Peter protested the action and remained in exile

Peter I (Pierre Mauclerc), d 1250, duke of Brittany (1213–37) The son of Robert II, count of Dreux, and a grandson of Louis VI of France, he married Constance, sister of Duke ARTHUR I and heiress of Brittany He earned the surname Mauclerc by his quarrels with the Breton clergy which brought his excommunication in 1217 Making peace with the Church soon afterward, he took part in the Albigensian Crusade Peter was a leader in several rebellions of the nobles against the regency of BLANCHE OF CASTILE Defeated, he ceded Brittany to his son, accompanied Louis IX as a simple knight on the Crusade to Egypt in 1248, and died on his return voyage He is also known as Peter of Dreux See Sidney Painter, *The Scourge of the Clergy* (1937)

Peter, Hugh see PETERS, HUGH

Peter, epistles of the New Testament, occupying the 21st and the 22d place in the usual order, called First and Second Peter They are classified among the Catholic (or General) Epistles Each opens with a statement of authorship by the apostle St Peter 1 Peter, the longer, is addressed from Rome to the Christians of Asia Minor It opens with the grounds for holy living which lie in the redemption (1 1–21), then passes to duties of Christians—unity with each other and with God (1 22–2 10), obedience to the state (2 11–17), obligations of slaves (2 18–25), of married persons (3 1–7), of all (3 8–12) This leads to a section of consolation and encouragement under persecution (3 13–4 19) The conclusion is also hortatory (5) This epistle contains many beautiful passages, often quoted The ascription to St Peter is questioned by many critics, who then date the letter near A D 100 It was accepted as canonical in the earliest times (see NEW TESTAMENT) This was not true of 2 Peter, written after the other, being put by many critics as late as A D 150, it was one of the last New Testament books to be admitted to the canon This epistle is an exhortation to virtue (1), followed by a passage (2) based on JUDE which warns against heresy that leads to immorality, the whole concludes with a reminder of the Second Coming (3)

Peter, Apocalypse of: see PSEUDEPIGRAPHA

Peterborough, Charles Mordaunt, 3d **earl of,** 1658–1735, English general and diplomat He assisted with arms the Glorious Revolution of 1688, and William III made him a privy councilor, first lord of the treasury, and earl of Monmouth In 1694 Mordaunt lost his honors and fell from favor for his support of a bill for triennial meetings of Parliament He was further injured by his connection with the Jacobite plot of Sir John Fenwick (1696) Mordaunt succeeded to the earldom of Peterborough in 1697, and at the accession of Queen Anne (1702) returned to favor and was made governor of Jamaica In the War of the Spanish Succession he was sent to Spain in 1705 in command of a fleet and a land force He led the successful assault on Barcelona and proclaimed as king Archduke Charles (later Emperor Charles VI). Peterborough's incompetence and intrigues would have permitted

early recapture of the city except for relief sent by Sir John Leake against his orders Peterborough was recalled to England, charged with incompetence, insubordination, and exceeding authority, and his actions became the subject of partisan controversy, with the Tories supporting and the Whigs attacking him Peterborough was vindicated when the Tories came to power (1710) and went on diplomatic missions, mostly unsuccessful At the accession of George I, who disliked him personally, he fell from favor and became friendly with the JACOBITES He continued to dabble in verse and to cultivate the friendship of great literary men, including Swift and Pope See G D Warburton, *Memoir of Charles Mordaunt* (1853), biography by William Stebbing (1890)

Peterborough, city (pop 25,350), S Ont , NE of Toronto It is at falls of the Otonabee river, which connects, through the Trent Canal, with Lakes Ontario and Huron Settled early in the 19th cent. as a lumber town, it has become a railroad and industrial center, manufacturing machinery, lumber products, sport goods, food products, paper, and clothing, it is the headquarters of the Canadian General Electric Company There are a normal school, a technical school, and two institutes. The Peterborough canoe is made here

Peterborough, municipal borough (1931 pop 43,551, 1948 estimated pop 52,900) and city, Northamptonshire, England, co seat of the administrative county of the Soke of Peterborough (53,464 acres, 1931 pop 51,839, 1948 estimated pop 62,092), the origin of which was in the soke (jurisdiction) of the abbey here The city, on the Nene at the edge of the fen country on the Huntingdon-Cambridge border, is a rail, engineering, and farm trade center, with manufactures of leather, machine tools, paper, and other products In the 1930s the river was deepened to make Peterborough accessible from the Wash The great Benedictine abbey was founded in 655 by Saxulf In 870 it was destroyed by the Danes, in the 10th cent it was restored, in the 11th plundered, and in 1116 burned The impressive cathedral, formerly the abbey church, has three great arches in the west front It was partly ruined by Cromwell's men in 1643 The bishop's palace and remains of the old abbey buildings and ancient gates are noteworthy The original name of the town was Medeshamstede Queen Katharine of Aragon and Mary Queen of Scots were buried here The suburb Old Fletton is noted for brickmaking

Peterborough, town (pop 2,470), S N H , on the Contoocook and between Keene and Nashua, granted 1738 to Samuel Hayward and others, settled by Scotch-Irish, inc 1760 Both a resort and a mill town, Peterborough has had textile mills since the early 19th cent. It is, however, best known for its artist colony, planned by Edward MACDOWELL and founded and sustained by the efforts of his widow Trees and buildings of the colony were damaged in the 1938 hurricane The first free tax-supported library in the United States opened here in 1833 The Unitarian church is said to have been designed by Bulfinch.

Peter CANISIUS, Saint (kunĭ'shĭŭs), 1521–97, Dutch Jesuit, Doctor of the Church, b Nijmegen He spent his life traveling throughout the empire strengthening wavering Catholics, preaching, and instructing He was one of the most vigorous of the Roman Catholic preachers in the regions affected by Lutheranism, above all in W and S Germany St Peter wrote much, his catechism was especially important and was one of the earliest popular expositions of the faith Part of his success may be attributed to his sweetness of disposition Feast: April 27.

Peter Claver, Saint (klā'vur), 1581–1654, Spanish Jesuit missionary, called the Apostle of the Negroes He was sent to what is now Colombia in 1610 and began at once his life work of ministering to the bodies and souls of the West African slaves, then being imported in numbers He worked indefatigably under the most loathsome conditions and was generally unappreciated by Spanish officialdom and even by his colleagues Feast Sept. 9 See Arnold Lunn, *A Saint in the Slave Trade Peter Claver* (1935).

Peter Damian, Saint (dā'mēăn), Ital *Pietro Damiani*, 1007?–1072, Italian reformer, Doctor of the Church, b Ravenna He became a monk at Fonte-Avellino (near Gubbio) and because of his rigor and asceticism was made prior He was strong in the reforming party of Hildebrand (later Gregory VII) and c 1050 wrote a terrible denunciation of the clergy, called *Gomorrhianus;* this created a sensation In 1057 Stephen X made him a cardinal against his will. Nicholas II sent him as legate to reform Milan, notorious for simony and clerical concubinage; the mission was successful In 1069 he was papal legate to stop the quarrel between Emperor Henry IV and the empress In the dispute with Berengar of Tours, St Peter deprecated the application of reason in theology Feast Feb. 23.

Peter des Roches (dā rōsh'), d 1238, English churchman and statesman, b. Poitou. In the service of Richard I of England he was made a chamberlain, and for serving John well he was made bishop of Winchester (1205) and given rich estates. In John's struggle with Pope Innocent III, Peter took the part of the king as far as he could without endangering his office He was one of the regents in John's absence in 1214, having been made justiciar the year before On the accession (1216) of Henry III he was made the young king's guardian, and after the death of the regent, William Marshal, earl of Pembroke, in 1219, he began a violent struggle for power with Hubert de Burgh Hubert de Burgh prevailed, and in 1227 Peter went on a crusade under Emperor Frederick II He returned to England in 1231, secured the fall of Hubert de Burgh, and helped his Poitevin friends to the highest government offices The revolt of the English barons which followed was a failure, but Peter lost power when Henry was forced by the archbishop of Canterbury to remove aliens from among his advisers In 1235 he left England and entered the service of the pope In 1236 he was back in England, and eventually he was reconciled with Hubert de Burgh

Peter Gonzalez, Saint (gŏnzä'lĭs), 1190–1246, Spanish Dominican priest He worked first among the Moors, then among the mariners of NW Spain As a patron of sailors he was confused with St Elmo, an older mariners' saint, a 4th-century martyr The name of St Elmo's fire recalls this patronage Peter Gonzalez has never been canonized

Peterhead (pētûrhĕd'), burgh (pop 12,545), Aberdeenshire, Scotland, on a peninsula NE of Aberdeen It is the easternmost burgh of Scotland, founded in 1593 by George Keith, 5th earl marischal It has a good harbor of refuge and is the site of a prison There is a statue of James Keith, who, with his brother George Keith, 10th and last earl marischal, was exiled from Scotland for permitting the secret landing of the Old Pretender at Peterhead in 1715 Chiefly a herring fishery center, Peterhead has fish canneries, distilleries, and woolen mills

Peterhof (pē'turhŏf, Rus pĕtyĭrgŏf') or **Petrodvorets** (pyĕ'trudyĭrĕts'), city (pop 11,504), RSFSR, on the Gulf of Finland, SW of Leningrad It was founded (1711) by Peter I and became the most lavish of the summer residences of the tsars The Château of Monplaisir was Peter's earliest residence The Great Palace was built in 1715 and enlarged in 1750 One of several smaller palaces is the Marly, built in 1714 All these are surrounded by vast parks which rivaled Versailles and were famous for their fountains and cascades Peterhof was occupied (1941–44) by the Germans in the Second World War Sacked and largely destroyed, it was restored after the war Its name was Russianized in 1944

Peterhouse College. see CAMBRIDGE UNIVERSITY

Peterkin, Julia (Mood), 1880–, American novelist, b Laurens co , S C , grad Converse College, 1896 She is noted for her sympathetic stories about the Gullah Negroes, whom she has known well on her plantation *Scarlet Sister Mary* (1928), her best-known novel, was awarded a Pulitzer Prize in 1929 and was successfully dramatized, her other novels include *Black April* (1927) and *Bright Skin* (1932) Some of her short stories are collected in *Green Thursday* (1924)

Peterkin Papers, The see HALE, LUCRETIA PEABODY

Peter Lombard, Latin *Petrus Lombardus,* c 1100–c 1160, Italian theologian He studied at Bologna, Rheims, and Paris, where he is said to have been a student of Abelard He acquired some fame as a teacher and was given high offices, serving for a time as archbishop of Paris His *Sentences,* one of the most celebrated of all theological works, is a systematization of theology, it consists largely of an arrangement of opinions of theologians which often conflict and are not always reconciled It was particularly important because its doctrine on sacraments (that a SACRAMENT is both a symbol and a means of grace and that seven fulfill the required conditions) was adopted as the official doctrine of the Roman Catholic Church at the Council of Trent (see TRENT, COUNCIL OF) All his teachings had much weight, particularly because the work was used as a theological text Many of the greatest scholastics wrote commentaries on it

Peterloo massacre, public disturbance in St Peter's field, Manchester, England, Aug 16, 1819, also called the Manchester massacre A crowd of some 60,000 men, women, and children were legally and peaceably gathered under the leadership of Henry Hunt to petition Parliament for the repeal of the corn laws and the reform of Parliament At the behest of the magistrates, yeomanry and cavalry charged and dispersed the crowd, wounding over 600 persons and killing a number of others The government's endorsement of the magistrates' action created widespread indignation which considerably aided the reform movement The name Peterloo, later given the incident, was suggested by the name Waterloo See F A. Bruton, *Three Accounts of Peterloo* (1921)

Petermann, August Heinrich (ou'gōst hĭn'rĭkh pā'tûrmän), 1822–78, German geographer, an authority on the geography of Africa and the arctic. He had (1847–54) a cartographical establishment in London and in 1854 became director of the Perthes Geographical Institution, Gotha. In 1855 he founded a monthly geographical journal, *Petermann's Mitteilungen*

Peter Martyr: see PETER OF VERONA, SAINT; ANGHIERA, PIETRO MARTIRE D', VERMIGLI, PIETRO MARTIRE.

Peter of Blois (blwä), c 1135–c 1203, French writer in England He was educated in the law, theology, and liberal arts He was in Sicily (1167–69) as tutor to William II of Sicily, but his influence caused great jealousy, and he fled He soon went to England, where he served Henry II and the archbishop of Canterbury in secretarial and diplomatic capacities He was twice envoy to the pope The widowed Eleanor of Aquitaine made him her secretary, and he was archdeacon of London He is chiefly remembered because of the quantities of his invaluable correspondence surviving

Peter of Dreux see PETER I, Duke of Brittany

Peter of Verona, Saint, 1206?–1252, Italian preacher, a Dominican He traveled all over Italy on tours of preaching and was especially known for his opposition to the Cathari He was murdered by some of this sect and was canonized the next year as a martyr He is called St Peter Martyr Feast April 29

Peters, Carl (kärl' pā'turs), 1856–1918, German explorer in Africa In 1884 he made treaties with East African chiefs which resulted in the establishment of German East Africa (Tanganyika Territory) A treaty made by him in 1890 with the king of Uganda was nullified because of a prior understanding between Germany and Great Britain defining spheres of interest In 1899 Peters discovered gold mines and traces of ancient settlements along the Zambezi His autobiography, *Lebenserinnerungen,* appeared in 1918

Peters, Charles Rollo (pē'turs), 1862–1928, American genre and landscape painter, b San Francisco, studied at the École des Beaux-Arts His best-known works are *Legend of Brittany* (Bohemian Club, San Francisco), *The Oregon, Camp by the Cross, After the Gringo Came, The River,* and numerous paintings of the old California missions

Peters, Christian Henry Frederick, 1813–90, American astronomer, b Schleswig He was assistant in observatories at Copenhagen and Göttingen, then went to Italy, where he was connected with the topographic bureau of Naples and worked on a survey of Mt Etna In 1854 he came to the United States, was engaged in the coast survey, and in 1858 became professor of astronomy and director of the Litchfield Observatory at Hamilton College In 1874 he headed a government expedition to New Zealand to observe a transit of Venus. He discovered about 48 asteroids and two comets His *Celestial Charts* were published in 1882–88

Peters or **Peter, Hugh,** 1598–1660, British Puritan divine, educated at Cambridge He became a priest of the Established Church, but his Puritan doctrines forced him to leave England for Holland c 1629 In 1635 he went to the Massachusetts Bay colony, became pastor of the church at Salem, and was active in the colony's ecclesiastical and political affairs He returned to England in 1641 as an agent for the colony, served as chaplain (1642–49) with various forces, including Oliver Cromwell's, in the Puritan Revolution; and was executed in the Restoration

Peters, Richard, 1744–1828, American jurist, b. Philadelphia, grad Philadelphia College, 1761 He served briefly in the Continental Congress (1782–83) and in the state legislature (1787–91) After 1792 he was a judge of the U S district court for Pennsylvania and handed down decisions in many admiralty cases He was much interested in the improvement of agriculture

Petersburg, town (pop 1,323), on Mitkof Island, in the Alexander Archipelago, SE Alaska, inc 1910 It was settled (1897) by Norwegian fishermen, and the population remains largely Scandinavian Fishing is the chief industry, with lumbering and fur farming next in importance The town owns its water system and a hydroelectric plant The Univ. of Alaska maintains an experimental fur farm here.

Petersburg. 1 City (pop 2,586), co seat of Menard co , central Ill , on the Sangamon and NNW of Springfield, in a farm and coal area, founded c 1836, inc 1841 The grave of Ann Rutledge is here Near by is NEW SALEM (now a state park) 2 Town (pop 3,075), co seat of Pike co , SW Ind , on the White River and SE of Vincennes; laid out 1817, inc 1924 It is a trading center for an agricultural area 3 City (pop 30,631), SE Va , on the Appomattox and S of Richmond Fort Henry was built here in 1646 on the site of an Indian village, a trading post was established, and in 1784 three villages—Petersburg, Blandford (both laid out 1748), and Pocahontas (1752)—were combined and incorporated as Petersburg town (incorporation as a city was in 1850) In the American Revolution the city was taken (1781) by the British under Benedict Arnold and William Phillips, from here Cornwallis began the campaign which ended at Yorktown In the Civil War, Petersburg, which guarded the southern approach to Richmond, became an important Union objective in 1864. Having failed to destroy Lee's army in the WILDERNESS CAMPAIGN, Grant slipped from his lines at Cold

Harbor, crossed the James (June 12–16), and moved on Petersburg. Union assaults failed to penetrate the city's defense, as Beauregard's small force, which repulsed the first attacks, was soon joined by most of Lee's army. On July 30, 1864, a large mine was exploded under a portion of the Confederate works Troops from Burnside's corps poured into "the Crater," but the Confederate forces rallied and drove them out with heavy losses Petersburg underwent a partial siege that lasted till April, 1865 Grant, fenting at Richmond on his right, gradually extended his left SW of Petersburg in order to cut off Lee's supplies from the Lower South Lee, forced to spread his smaller army thinly over many miles of entrenchments, contested Grant's move in many hard-fought actions But Sheridan's victory at FIVE FORKS on April 1, 1865, followed by a general assault on the Petersburg lines, finally broke Lee's resistance Petersburg fell, April 3, 1865 Richmond entered Union hands the same day Lee surrendered the remnants of his army at APPOMATTOX COURTHOUSE one week later Petersburg National Military Park (1,324 62 acres, est 1926) encloses much of the battlefield, many old earthworks and tunnels are preserved Today Petersburg is a port of entry and important shipping point It processes tobacco and peanuts and manufactures luggage and textiles The city is, however, best known for its past and has numerous buildings, monuments, and cemeteries of historical interest, including Blandford Cemetery, with 30,000 Confederate dead, Blandford Church (1735), the Golden Ball Tavern (c 1750), Center Hill Mansion (1825, now a U S museum), "Battersea" (18th cent), and the Wallace-Seward House (where Grant and Lincoln conferred after Lee's retreat, April, 1865) The city is the seat of Bishop Payne Divinity School and VIRGINIA STATE COLLEGE, both for Negroes 4 Town (pop 1,751), co seat of Grant co , W Va , in the Eastern Panhandle, on the South Branch of the Potomac river, in a farm area, settled c 1745 A tannery and a state trout hatchery are here An annual tri-county rodeo is held

Peter's pence [the Holy See is the see of Peter], in the Roman Catholic Church, the annual voluntary laymen's contribution to the support of the pope Formerly Peter's pence were a yearly tax of a penny levied by the Holy See on every household in England and elsewhere

Peter the Cruel, 1334–69, Spanish king of Castile and Leon (1350–69), son and successor of Alfonso XI His desertion of his wife, Blanche of Bourbon, for María Padilla and his favors to the Padilla family met the opposition of the nobles and led to a rebellion fomented by Peter's half brothers Peter ruthlessly repressed the rebels and had two of his half brothers murdered in 1358 From 1356 to 1361 he was at war with Peter IV of Aragon His eldest half brother, Henry of Trastamara, obtained the help of Aragon and of DU GUESCLIN, defeated Peter, who fled, and was crowned king as HENRY II at Burgos in 1366 Peter, however, allied himself with EDWARD THE BLACK PRINCE, with whose help he defeated Henry and Du Guesclin, defeated Peter at Montiel (1369), and slew him after the battle Despite his reputation for cruelty, Peter has many apologists, who see him as a defender of the rights of the commoners and the throne against the turbulent nobles Peter's daughter Constance married John of Gaunt, who contested Henry II's succession to Castile, another daughter, Isabella, married Edmund, duke of York

Peter the Great: see PETER I, emperor

Peter the Hermit, c 1050–1115, French preacher, b. Amiens In 1095 he was a very successful preacher of the First Crusade (see CRUSADES), and he led one of its bands In 1096 he reached Constantinople with his undisciplined followers, when they arrived in Asia Minor, Peter went back for help from the emperor, Alexius I In 1098 at Antioch he tried to run away, still he was trusted later with a mission to the Moslem ruler of Mosul He went home after the taking of Jerusalem and settled in a monastery in the diocese of Liége His place in the Crusade was greatly exaggerated, for he seems to have been only one of many preachers and leaders, albeit a very early one

Peterwardein, Yugoslavia, see PETROVARADIN

Pethahiah (pĕ"thūhī'u) [Heb.,=God has opened] 1 Priest of David. 1 Chron 24 16 **2** One who married a foreigner. Ezra 10.23 **3** Royal counselor Neh 11 24.

Pethor (pē'thôr), unlocated town of Mesopotamia, home of Balaam. Num. 22 5, Deut 23 4.

Pethuel (pĕthū'ul), father of Joel Joel 1 1

Pétion, Alexandre (ālĕksä'dru [pătyō'), 1770–1818, Haitian revolutionist After taking part in the expulsion of the English from Haiti (1798), he joined (1799) André RIGAUD against TOUSSAINT L'OUVERTURE and commanded the heroic but tragic defense of Jacmel, a city on the southern coast He was exiled, but returned with the French army under Leclerc in 1802 Rejoining the patriots because he feared reestablishment of slavery, Pétion, after the death of DESSALINES, engaged in a fierce but inconclusive struggle with CHRISTOPHE for control of Haiti. Chosen (1807) president of the republic in S Haiti for life, the mild, easy-going Pétion presided over a government that was liberal but tinctured with waste and corruption.

Pétion de Villeneuve, Jérôme (zhārōm' pătyō' dŭ vēlnûv'), 1753?–1794, French revolutionist. A leader of the Jacobins, Pétion sat in the Constituent Assembly, was elected mayor of Paris over the candidacy of Lafayette (Nov., 1791), and by his inaction aided the insurrection of June 20, 1792 Elected to the Convention, he went over to the GIRONDISTS He was proscribed (May, 1793) but escaped and died in mysterious circumstances while in hiding near Bordeaux

Petition of Right, 1628, sent by the English Parliament to Charles I Refusal by Parliament to finance the king's unpopular foreign policy had caused his government to impose illegal taxes (forced loans) and to quarter troops in subjects' houses as an economy measure Arbitrary arrest and imprisonment for opposing these policies had produced in Parliament a violent hostility to Charles and the duke of Buckingham The Petition of Right, based upon earlier statutes and charters, secured recognition of four principles no taxes may be levied without consent of Parliament, no subject may be imprisoned without cause shown (reaffirmation of the right of habeas corpus), no soldiers may be quartered upon the citizenry, martial law may not be used in time of peace In return for his acceptance (June, 1628), Charles was granted subsidies Although the petition is of immense importance as a safeguard of civil liberties, its spirit was immediately violated by Charles, who continued to collect tonnage and poundage duties without Parliament's authorization and to prosecute citizens in an arbitrary manner

Petit Nord Peninsula: see GREAT NORTHERN PENINSULA

Petitot, Jean (zhä' pŭtētō'), 1607–91, French painter in enamel, b Switzerland He was apprentice and later partner to a goldsmith, Pierre Bordier, whom he accompanied to France and later to England There Petitot entered the service of Charles I Upon the execution of Charles he returned to Paris and entered into a partnership of 35 years' duration with Jacques Bordier, a cousin of Pierre He enjoyed the favor of Louis XIV and painted portraits of many of the celebrities of the court On the revocation of the Edict of Nantes, Petitot was imprisoned as a Protestant, but escaped to Switzerland Petitot brought the art of portrait painting in enamel to great perfection, and his works are extremely valuable Examples are to be found in the collection at Chatsworth, England, and in the Louvre His son and worthy successor, **Jean Louis Petitot** (lwē), 1652–c 1730, was in the service of Charles II of England Specimens of his work are preserved in the Victoria and Albert Museum See G C Williamson, *The History of Portrait Miniature* (1904)

Petofi, Alexander (pĕ'tûfē, Hung *Petőfi Sándor* (shän'dôr), 1822–49, Hungarian poet and patriot, killed in the Hungarian revolutionary war He was the author of exquisite lyrics, of the national poem "Up, Magyar," and of several epics, including *Janos Vitez* (Eng tr , 1866) His poetry, deeply patriotic, served as inspiration to the patriots of the Hungarian revolution

Petoskey (pĕtō'skē, pu–), resort city (pop 6,019), co seat of Emmet co , N Mich., on Little Traverse Bay, in a farm and lake region, settled c 1860, inc as a village 1879, as a city 1895 Its abundant limestone is used for the production of Portland cement A winter carnival and a summer Indian pageant are held Magnus State Park is here

Petra (pē'tru), ancient rock city of Jordan, near the foot of Mt Hor, known to the Arabs as Wadi Musa for the stream which flows through it The capital of the Edomites and later of the Nabataeans and sometimes identified with the SELA of the Old Testament, it was for many centuries a wealthy and celebrated city with a vast caravan trade It declined with the rise of Palmyra Under the Romans it was included in the province of Arabia Petraea An early seat of Christianity, it was conquered by the Moslems in the 7th cent. and in the 12th cent was captured by the Crusaders who built a citadel here The approach to the city is through a narrow, winding defile, once paved, which follows the course of the Wadi Musa Limestone walls tower above the pass to a height of several hundred feet Suddenly it widens to disclose the pale rose façade of a rock-cut temple of the Roman period, the first of the famous ruins to greet the traveler. It was thus that John Lewis Burckhardt came upon the ruins in 1812 after the city had dropped from history for centuries. Beyond the columned temple the Wadi Musa enters an open plain, the site of the ancient city. The plain is surrounded by rocky hills in many places honeycombed with tombs and surmounted by temples All of the ruins, including a great theater, dwellings, and altars, are carved (not built) from rock stratified in a soft profusion of colors, in which rose, crimson, purple, and saffron mingle with black and white The famous line describing Petra as "A rose-red city half as old as time" is by John William Burgon.

Petrarch (pē'trärk) or Francesco Petrarca (frängchä'skō pāträr'kä), 1304–74, Italian poet and scholar. He was educated in France and Italy, where he studied for the law. Upon the death of his father (1326) he went to Avignon and took lesser orders He turned definitely to literature In 1327 he first saw Laura, who was to be the inspiration of his love poems He served Cardinal Colonna, traveled through Europe, was made a canon, and went to Rome. He retired to Vaucluse and began a history of Rome in Latin, which he abandoned for a Latin epic, *Africa*, celebrating the Punic Wars His Italian poems had become famous, and he was crowned (1341) with the laurel at Rome He returned to Italy on a diplomatic mission and then went to Avignon In 1348 Laura and his patron, Cardinal Colonna, both died of the plague He served the Visconti family, studied, hunted manuscripts, wrote the *Trionfi* [triumphs], and finally retired to Arquà, where he died Petrarch, as a figure in Italian literary history, is surpassed, if at all, by Dante alone He made Italy supreme in European literature, advanced the standing of letters, and was one of the first and greatest of all humanists His Latin works are the epic, *Africa, Metrical Epistles; On Contempt for the Worldly Life, On Solitude, Eclogues;* the *Letters*, invaluable as documents, and several other compositions In Italian he wrote the *Trionfi* and the *Canzoniere* [song book], which contains the lyrics for which he is best known. Most of them are poems inspired by Laura, the collection forms one of the most splendid bodies of amorous verse in literature As a sonnet writer, Petrarch is remarkable for exquisiteness and finish His odes, e g , *Italia mia*, are more vigorous Petrarch, with Dante and Boccaccio, is considered one of the three "fountains" of Italian literature He had, however, no such pride in the "vulgar tongue" as Dante had, and he judged his Latin (he was a master of Latin) more important than his Italian works Among the early English translators of the sonnets and songs were Chaucer, Spenser, Surrey, and Wyatt Joseph Auslander translated the sonnets in 1931 See biography by Henry Reeve (1912)

Petre, Sir Edward (pē'tûr), 1631–99, English Jesuit, confessor of James II of England He attended the Jesuit seminary of Saint-Omer He was imprisoned (1679–80) in connection with the Popish Plot and again (1680–83) because of his appointment as Roman Catholic rector of the London district He succeeded to the title on the death of his brother in 1679 At the accession of James II (1685) Petre became his confessor and was perhaps the most influential member of a secret council which included Robert Spencer, earl of Sunderland, Richard Talbot, and Henry Jermyn Pope Innocent XI refused James's request (1686) for Petre's preferment in the church, but in 1687 Petre was made a privy councilor Very unpopular with the people, he fled at the Glorious Revolution of 1688 He later was rector of the seminary of Saint-Omer

petrel (pē'trul) sea bird belonging, like the albatross and the shearwater, to the order of tube-nosed swimmers Some species pat the surface of the water with their feet, thus giving the appearance of walking on the water Petrels are tireless fliers and often follow ships for days At night they rest on the water, and many of them return to land only to breed. The petrels include the small stormy petrels or Mother Carey's chickens of the family Hydrobatidae and the petrels of the shearwater family, Procellariidae The diving petrels are auklike birds of the Southern Hemisphere

Petrie, Sir William Matthew Flinders (pē'trē), 1853–1942, English archaeologist, a noted Egyptologist He excavated ancient remains in Britain (1875–80), Egypt (1880–1921), and Palestine (1927–38) and was professor of Egyptology at University College, London (1892–1933) In 1894 he founded the Egyptian Research Account which became, in 1905, the British School of Archaeology in Egypt Outstanding among his discoveries are the sites of Greek settlements at Naucratis (1885) and Daphnae (1886), tombs of the first dynasty at Abydos (1899), the stele of Merneptah at Thebes (1896) inscribed with the earliest known Egyptian reference to Israel, and ruins of 10 cities at Tel-el-Hesy (S of Jerusalem) His numerous writings include many works on ancient Egypt, *Methods and Aims in Archaeology* (1904), and *Seventy Years in Archaeology* (1931) He edited *A History of Egypt* (rev. ed , 6 vols , 1923–27), of which he wrote the first three volumes. He was knighted in 1923

Petrified Forest National Monument: see NATIONAL PARKS AND MONUMENTS (table).

Petrillo, James Caesar (pĕtrĭ'lō, pĭ–), 1892–, American labor leader, president of the American Federation of Musicians (1940–), b. Chicago. He left elementary school in the fourth grade and was employed at various jobs in Chicago He had learned to play a trumpet at the age of eight, and he organized his own bands. In 1915 he became president of the American Musicians' Union, an independent union of Chicago, but three years later he joined Local 10 of the American Federation of Musicians and in 1922 was elected the local's presi-

dent. He built Local 10 into a highly disciplined outfit, expanded its membership, and became a force in local politics As national president of the American Federation of Musicians, he called several strikes—often without the support of public opinion—against radio, television, and recording companies in order to strengthen the organization of his union and to combat increased use of technological devices which created less employment for musicians.

Petrodvoretsk, RSFSR. see PETERHOF.

Petrograd, RSFSR see LENINGRAD.

Petrokrepost, RSFSR see SCHLÜSSELBURG.

petrolatum (pĕtrūlā'tŭm), colorless to yellowish-white substance, a hydrocarbon obtained from petroleum. In its jellylike semisolid form (known as petroleum jelly and also by several trade names) it is used in preparing many medicinal ointments and for lubrication As a nearly colorless, highly refined liquid known as liquid petrolatum and mineral oil it is used as a lubricant and as a laxative

petroleum (pŭtrō'lēŭm), [Latin *petra*=rock, *oleum*=oil], name applied generally to an oily, inflammable liquid, sometimes almost colorless or black, but usually of a dark brown or greenish hue Petroleum also appears in gaseous form and as a near-solid substance (asphalt) and is rather widely found in the upper strata of the earth Petroleum has been known throughout historic time It is described by Herodotus and other ancient writers It was used in mortar, for coating walls and boat hulls, and as a fire weapon in defensive warfare Rarely it was burned in lamps North American Indians used it in magic and medicine and in making paints White pioneers bought it from the Indians for medicinal use and called it Seneca oil and Genesee oil In Europe it was scooped from the tops of streams or dipped from holes in the ground, and in the early 19th cent small quantities were made from shale In 1815 several streets in Prague were lighted with petroleum lamps The modern petroleum industry began in 1859, when E L Drake drilled a producing well on Oil Creek in Pennsylvania at a place that later became Titusville Many wells were drilled in the region Kerosene was the chief finished product, and kerosene lamps soon replaced whale-oil lamps and candles in general use Early court decisions determined ownership of petroleum under the common law of capture (i e , ownership was determined by where the oil came or was brought to the surface, not by the location of its subterranean source), and this led to a multiplicity of competing wells in the oil fields Production of crude oil in excess of demand and a severe drop in price resulted The refining industry, however, quickly assumed corporate form and came under the domination of John D ROCKEFELLER Little use other than as lamp fuel was made of petroleum until the development of the gasoline engine and its application to automobiles, trucks, tractors, and airplanes Today Western civilization is heavily dependent on petroleum for motive power, lubrication, fuel, dyes, drugs, and many synthetics Of the military supplies shipped from the United States during the Second World War 60 percent of the tonnage consisted of petroleum products The exploitation of the world's supplies of petroleum has been recklessly wasteful To forestall early exhaustion of the supply new methods of prospecting have been developed, using magnetometers, gravitometers, and seismographic studies of explosives to map subterranean strata formations New and more efficient methods of extraction are being used These include repressuring of wells by pumping in gas or salt water, extracting oil at the rate most favorable to maintaining pressure, increasing drainage by horizontal drillings from a vertical shaft, and the mining of oil-saturated sands The origin of petroleum is debated Some believe that it is produced by a decomposition of rocks, but the more generally held theory is that it is of organic origin, being derived from accumulations of plant and animal life of past ages, including especially microscopic forms, as well as mollusks, seaweeds, and peat Petroleum as it issues from the ground varies in appearance, viscosity, and chemical composition with the locality in which it occurs In general it is a complex mixture of hydrocarbons (compounds of hydrogen and carbon) together with varying percentages of other compounds which contain nitrogen, oxygen, and sulphur Certain petroleums, e g., that from Pennsylvania, are especially rich in hydrocarbons of the paraffin series, yield a solid, waxy substance upon distillation, and are called paraffin-base petroleums. Other petroleums yield a black, pitchy substance and are commonly classified as asphaltic-base petroleums Crude petroleum is refined by a process known as fractional distillation It is based upon the fact that the different components of petroleum have different boiling points and can, therefore, be separated from one another, within certain limits, by heating the crude oil to successively higher temperatures and collecting the portions that boil off within certain temperature ranges. Various kinds of special apparatus are used for the purpose. The portions of oil given off within certain temperature ranges are known as fractions, and they have specific qualities making them suitable for a number of uses. Gasoline, benzine, naphtha, and kerosene are important fractions. To meet the great demand for gasoline another process called cracking has been introduced, which consists essentially of the breaking down, or "cracking," of the heavier hydrocarbon molecules, by heat, pressure, and the use of catalysts, into the lighter ones that make up gasoline. The nature of the *fractions* with higher boiling points obtained in the distillation of the crude oil depends upon the nature of the petroleum treated From different crude oils are obtained lubricating oils, paraffin, fuel oil, petrolatum, and certain carefully refined so-called "mineral oils" used in medicine as laxatives Leading producers of petroleum are the United States (chiefly Texas, California, Louisiana, Oklahoma, and Kansas), the USSR, Venezuela, and Iran See Gustav Egloff, *Earth Oil* (1933), J J Crowther, *About Petroleum* (1938); J. J Floherty, *Flowing Gold the Romance of Oil* (1945), C M Wilson, *Oil across the World* (1946); R. F. Goldstein, *Petroleum Chemicals Industry* (1949), C C Rister, *Oil! Titan of the Southwest* (1949), Kermit Roosevelt, *Arabs, Oil, and History* (1949)

Petrolia, town (pop 2,801), S Ont , ESE of **Sarnia,** in an extensive oil field

petrology (pĕtrŏ'lŭjē), branch of geology specifically concerned with the origin, structure, properties, and interrelationships of rock It comprises petrography, the systematic description of rocks, and petrogenesis, the study of the origin of the various kinds of rock

Petronius (pĭtrō'nēŭs), d c 66, Roman satirist, known as Petronius Arbiter because of his now generally accepted identity with C Petronius, to whom Tacitus refers as *arbiter elegantiae* in the court of Nero According to the historian, that Petronius served first as proconsul, then as consul of Bithynia, although he is remembered chiefly as the indolent and profligate lover of luxury, so accomplished in elegance as to be made its arbiter, directing the emperor's entertainments When Tigellinus, a jealous rival for the favor of Nero, planned the downfall and caused the arrest of Petronius, the latter ended his own life, at Cumae, by opening his veins He made dying a leisurely procedure, attended by festivity among his associates To him is accredited the authorship of a satirical work, a romance with skillful delineation of characters, written in prose interspersed with verse, *Petronii arbitri satyricon* Parts of the 15th and 16th books have been preserved Among the surviving fragments the most complete and valuable bit is the *Cena Trimalchionis* (*Trimalchio's Dinner*), presenting a humorous episode of vulgar display on the part of a freedman whose great wealth is newly acquired These satires are unique in furnishing a vivid study of the life and manners of the time and in giving a sustained, connected example of the colloquial language The Latin style of Petronius is of the best of its period His existing writings have appeared in a variety of editions, some including the *Cena* only

Petropavlovsk (pyĕtrupäv'lŭfsk), city (pop 91,678), capital of North Kazakhstan oblast, N Kazakh SSR, on the Ishim river It is at the junction of the Trans-Kazakhstan RR with the Trans-Siberian RR Founded in 1752 as a Russian fortress, it was once a caravan trading center for silk, carpets, and skins It is now the market center of an agricultural area and has flour mills and a meat-packing plant The population is mainly Russian

Petropavlovsk or **Petropavlovsk-Kamchatski** (kŭmchät'skē), city (1939 pop over 20,000), capital of Kamchatka oblast, Khabarovsk Territory, RSFSR, on the southeast coast of the Kamchatka peninsula and on Avacha Bay of the Pacific Ocean It is a port and a naval base It is free of ice nine months of the year and has shipyards and a fish-canning industry There are monuments to La Pérouse and to Bering Bering founded the port in 1740 and named it for his ship, the *St Peter and St Paul*

Petrópolis (pŭtrō'pŭlĭsh), city (pop 46,361), Rio de Janeiro state, SE Brazil, picturesquely situated in hills just N of Rio de Janeiro It is a fashionable resort, with a healthful climate and beautiful wooded estates, flower gardens, and tree-lined avenues It was colonized by German immigrants in 1845 and soon afterward became the summer residence of Dom Pedro II, after whom the city is named. Among its many fine buildings are a Gothic cathedral, an academy of letters, and the old imperial palace It is near-by hotel the Inter-American Conference was held in 1947.

Petrov, Yevgeny Petrovich (yĭvgā'nyĭ pētrō'vĭch pētrŏf'), 1903–42, Russian writer His real name was Yevgeny Petrovich Katayev (kŭtī'ŭf), and he was the brother of Valentin Petrovich Katayev Petrov collaborated with Ilya Arnoldovich ILF on various satirical novels, including *The Little Golden Calf*. After Ilf's early death Petrov was a journalist and a war correspondent. He was killed in the Second World War.

Petrovaradin (pĕ"trōvärä'dēn), Ger. *Peterwardein* (pā"tûrvärdīn'), suburb of Novi Sad, Serbia, Yugoslavia, on the Danube. It is supposedly named for Peter the Hermit, who assembled here the host of the First Crusade in 1096 Here in 1716 Prince Eugene of Savoy defeated the Turks Petrovaradin retains its old castle

Petrovgrad, Yugoslavia see ZRENJANIN.

Petrozavodsk (pyĕ"truzŭvôtsk'), city (pop. 50,050), capital of the Karelo-Finnish SSR, a port on Lake Onega, NE of Leningrad and on the Murmansk RR It was founded in 1703 by Peter I as an ironworking center, though the iron deposits of the region were already being exploited in the Middle Ages by the people of Novgorod The city now produces machinery In the Second World War it was held (1941–44) by German and Finnish troops

Petrucci, Ottaviano dei (ôt"tävyä'nō dā'ĕ pätrōōt'chē), 1466–1539, Venetian printer He was the inventor of printing music by movable metal type His patent for the process was issued by the Venetian Republic in 1498

Petrunkevitch, Alexander (pĕtrŭnkĕ'vĭch), 1875–, American zoologist, b Russia, Ph D Univ of Freiburg, 1901 He lectured at Harvard (1904–5) and at the Univ of Indiana (1906) and from 1910 to 1944 was at Yale (as professor of zoology from 1917) He devised a method of staining blood cells for microscopic examination and worked on invertebrate morphology and on spiders, about which he wrote a number of books He also wrote, with others, *The Russian Revolution* (1918) and translated *Selected Poems of Pushkin* (1938).

Petsamo, RSFSR see PECHENGA

Pettit, Edison, 1890–, American astronomer, b **Peru,** Nebr , grad State Normal College, 1911, Ph.D Univ of Chicago, 1920. He was instructor in astronomy and physics at Washburn College (1914–17) and assistant astronomer at Yerkes Observatory (1918–20) In 1920 he became astronomer at Mt Wilson Observatory Giving particular study to the physics of the sun, he was a member of several solar eclipse expeditions and discovered the law of motion of solar prominences He also measured the radiation on the sun, the stars, and the planets, made a determination of the temperature of the moon, and investigated the transmission properties of glass and other optical materials He wrote *Forms and Motions of the Solar Prominences* (1925)

Petty, Sir William, 1623–87, English statistician and physician He was a founder of the Royal Society and was physician general to the army of Ireland in 1652 Petty's Down Survey of the Irish estates appropriated by Cromwell, begun in 1654 and carried out in 13 months, was the first attempt at scientific surveying on a large scale He won favor with Charles II, was knighted (1662), and became survey or general of Ireland In 1673 Petty's detailed map of Ireland was completed It is as a political economist that Sir William is remembered He disapproved of the ban on bullion export, favored an Irish-British union, and contended that labor determines price His important writings include *A Treatise on Taxes and Contributions* (1662) and *The Political Anatomy of Ireland* (1691).

pétunia, any plant of the genus *Petunia*, South American herbs of the same family as tobacco The common garden petunias, favorites also for window boxes, are all considered to be hybrids of white-flowered and violet-flowered species from Argentina The plants are of straggling habit, sticky to the touch, and produce an abundance of large, funnel-shaped, soft flowers which are often very fragrant at nightfall There are also double and fringed kinds Petunias are usually treated as tender annuals and are very easy to grow, but to have the colors come true, they are best grown from cuttings

Peulthai (pēŭl'thā, pēŭl'thāl) [Heb.,=wages of God], son of Obed-edom 1 Chron 26.5.

Peutinger, Konrad (kôn'rät poi'tĭng-ûr), 1465–1547, German humanist and antiquarian, b Augsburg Through his writings on Roman inscriptions he helped to introduce the Italian Renaissance spirit into Germany He is known chiefly as the owner of the *Tabula Peutingeriana*, or *Peutinger Table*, an ancient chart 21 ft long and 1 ft wide which shows a plan of the military roads of the Roman Empire radiating from Rome It is probably a 13th-century copy of a 3d-century original, found by Celtes, who bequeathed it to Peutinger

Pevensey (pĕv'ŭnsē), village, head of the Rape of Pevensey, Sussex East, England, on the English Channel It is the site of the Roman fort ANDERIDA and has remains of Roman walls and a Norman castle The town, near Hastings, was the landing place of William the Conqueror and was a "member" of the CINQUE PORTS It declined after the recession of the sea The church is partly Early English

Pewaukee (pûwô'kē), village (pop 1,352), SE **Wis.,** on Lake Pewaukee and W of Milwaukee, inc. 1876. It is a farm trade center and a resort

pewee or **peewee** (pē'wē), small American woodland bird of the flycatcher family, also called wood pewee It differs from the related phoebe in having whitish wing bars and a shorter tail which it does not wag It feeds on insects in the manner of the phoebe and has a plaintive song Related birds are the western and the large-billed wood pewees

pewter, any of a number of ductile, silver-white alloys consisting principally of tin. The properties

vary with the percentage of tin and the nature of the added materials, such as lead, which imparts a bluish tinge and increased malleability and tends to escape from the alloy in poisonous quantities if the percentage used is too large, antimony, which adds whiteness and hardness, and other metals including copper, bismuth, and zinc Pewter is shaped by casting, hammering, or lathe spinning on a mold and is usually simply ornamented with rims, moldings, or engraving, although some continental display ware, especially of the Renaissance period in France and Germany, shows intricate ornamentation Pewter was early used in the Far East, and Roman pieces are extant England was a pewter center from the Middle Ages, and pewter was the chief tableware there until it was superseded by china America imported much English pewter in colonial times and from c 1700 made large quantities The craft had virtually disappeared by 1850 but was revived in the 20th cent. in reproductions and in pieces of modern design The collection and study of pewter are increasingly popular, although relatively little old pewter has been preserved because of its small intrinsic value and of the ease with which it may be melted and re-used Pieces made of BRITANNIA METAL are similar in appearance to pewter See H H Cotterell, *Pewter down the Ages* (1932), B N. Osburn and G O Wilber, *Pewter, Spun, Wrought, and Cast* (1938)

peyote (pāō'tē), Aztec *peyotl*, a spineless cactus producing a drug used by Indians in N Mexico and the SW United States Like a turnip root in shape and growing mostly below ground, the peyote produces a top (popularly called mescal button, but unrelated to MESCAL) which is similar to a mushroom in appearance Cut from the plant, the tops are eaten or brewed in a concoction for drinking They are bitter and produce nausea followed by hallucinations of geometric figures against a kaleidoscope of colors There is no loss of consciousness and no urge toward violence, a feeling of well-being is created and rarely are there uncomfortable after effects There is no conclusive evidence that peyote is habit forming The drug has become the basis of a religious cult which spread from Mexico to the Indians of the W United States It met with violent opposition from missionary groups

Pezuela, Joaquín de la (hwäkēn' dā lä pāswā'lä), d 1830, Spanish general, viceroy of Peru (1816–21) He fought against the revolutionary armies and the growing sentiment for independence which supported them, until his vacillation in meeting the liberating army of San Martín caused his generals to force his resignation and to replace him with José de la SERNA Pezuela was later captain general of New Castile

Pfäfers, Switzerland see RAGAZ, BAD.

Pfalz, Germany see PALATINATE.

Pfeffer, Wilhelm (vil'hĕlm pfĕ'fur), 1845–1920, German plant physiologist He was professor of botany successively at the universities of Bonn, Basel, Tübingen, and Leipzig (from 1887) With Julius von Sachs he was a leader in systematizing the fundamentals of plant physiology. His experiments in osmotic pressure were fundamental to modern physical chemistry He was the author of a standard work, *Physiology of Plants* (1881, Eng tr, 1900–1906)

Pfister, Albrecht (äl'brĕkht pfi'stür), c 1420–c 1470, printer, of Bamberg, Bavaria He is believed to have been the first to print illustrated books (c.1460) and to have been the printer of the Latin Bible called Pfister's Bible or the Bamberg Bible, in double-column pages of 36 lines His type indicates that his work is related to that of Gutenberg. His illustrations are woodcuts

Pflüger, Eduard (ä'dōōärt pflu'gur), 1829–1910, German experimental physiologist He studied under J. P. Müller and Du Bois-Reymond at the Univ of Bonn, where he became professor (1859) and founded (1878) and directed the institute of physiology He contributed a monograph on electrotonus and many studies in cross-fertilization, metabolism, and respiration He showed that respiration actually occurs in the tissues themselves, not in the lungs or blood He devised instruments for his work and founded (1868) the famous *Archiv für die gesamte Physiologie*

Pforzheim (pfôrts'hĭm), city (1939 pop 79,011, 1946 pop. 46,752), N Baden, W Germany, SE of Karlsruhe, at the foot of the Black Forest It is a center of the German jewelry industry and also manufactures machinery and precision instruments. An ancient place, Pforzheim was an important medieval trade center It suffered in the Thirty Years War, was devastated (1689) by the French in the War of the Grand Alliance, and was more than three quarters destroyed in the Second World War. Its historic buildings, including two 13th-century churches, were heavily damaged. Johann von Reuchlin was born here

pH, symbol to indicate hydrogen-ion concentration see ION

Phaeacia (fēā'shə), in Greek mythology, island of Scheria (location unknown) It was inhabited by a seafaring people who were hospitable to sailors and fond of joyous, luxurious living. When Odysseus was shipwrecked on their coast, their king, Alcinoüs, and his daughter, Nausicaä, entertained him. Odysseus stayed with them for some time and told them his story Books VI-XIII of the *Odyssey* are called the Phaeacian episode.

Phaedo (fē'dō), fl 399 B C, Greek philosopher, b. Elis A disciple of Socrates, he is remembered because his name is attached to a dialogue of Plato

Phaedra (fē'drə), in Greek mythology, daughter of Minos and Pasiphaë. She married Theseus and then caused the death of her stepson, HIPPOLYTUS.

Phaedrus (fē'drus), fl 5th cent B C, Athenian philosopher He was an associate of Socrates, and Plato gave his name to one of the Platonic dialogues

Phaedrus, fl. early 1st cent. A.D, Macedonian freedman of Augustus He wrote, in Latin, five books of versified fables of AESOP The prose collections of fables which were used all over Western Europe in the Middle Ages were probably largely derived from Phaedrus

Phaer, Thomas (fār), 1510?–1560, English writer, one of the first to translate the *Aeneid* of Vergil into English His mediocre metrical translation covers only seven books

Phaëthon (fā'uthŭn, -tun) or **Phaëton** (fā'ŭtŭn), in Greek mythology, son of Helios and the nymph Clymene He once tried to drive his father's golden chariot, but he could not restrain the horses As the chariot plunged to earth it burned Mt Oeta and dried the Libyan Desert The world would have been destroyed if Zeus had not killed Phaëthon with a thunderbolt and hurled him into the Po river Helios is sometimes called Phaëthon.

phagocyte see WHITE CORPUSCLE

phalanstère or **phalanstery** see FOURIER, CHARLES.

phalanx, ancient Greek formation of infantry The soldiers were arrayed in rows (8 or 16), making a solid block that could sweep bristling through the more dispersed ranks of the enemy It was originally employed by the Spartans and was developed by Epaminondas of Thebes (d 362 B C) The phalanx reached its apex when Philip II and Alexander the Great used the great Macedonian phalanx (16 deep and armed with the *sarissa*, a spear 24 ft long) to conquer all Greece and the Orient The Romans in the 2d cent B C demonstrated the weaknesses of the phalanx (notably the lack of protection of the right because shields were carried on the left arms and the awkward slowness in maneuvering) by conquering the Macedonians at Pydna (168 B C) Thereafter the phalanx was obsolete

Phalaris (fā'lərĭs), c 570–c 554 B C, tyrant of Agrigentum, Sicily, notorious for his cruelties He burned alive his victims in a brazen bull (making his first experiment upon Perillus, its inventor), the cries representing the bellowing of the bull Richard BENTLEY proved the forgery of 148 Greek letters which represented him as a gentle ruler and a patron of the arts

Phalec (fā'lĕk), variant of PELEG

Phaleron (fulĕr'un) or **Phalerum** (-um), port of ancient Athens, Greece, on the Bay of Phaleron, an inlet of the Saronic Gulf of the Aegean Sea It was superseded (5th cent B C) by Piraeus

phallicism (fă'lĭsĭzm), worship of the reproductive powers of nature as symbolized by the male generative organ The aim of the worship was to increase the tribe, the flocks, the herds, and the crops (see FERTILITY RITES). Phallicism is an element in the religions of many peoples, e g, among the Hindus in the worship of Siva, among the Greeks especially in the worship of Dionysus, Priapus, Pan, and Hermes, among the Egyptians in the worship of Osiris, among the American Indians, such as the Mandan, who had a phallic buffalo dance, among the Japanese, who incorporate it into Shinto, and among the ancient Scandinavians in the worship of Frey. See Clifford Howard, *Sex Worship* (1902), Sanger Brown, *The Sex Worship and Symbolism of Primitive Races* (1916), G R Scott, *Phallic Worship* (1941)

Phallu (făl'ū), variant of PALLU

Phalti (făl'tī) or **Phaltiel** (făl'tĭul) [Heb ,=God's deliverance], husband of Michal, previously David's wife 1 Sam 25 44, 2 Sam 3 15,16

Phanar or **Fanar** (both fă'nur, funär'), Greek quarter of Constantinople (now ISTANBUL) Under the Ottoman Empire, Phanar was the residence of the privileged Greek families, called **Phanariots** (funā'rēuts) These came into prominence in the late 17th cent and held some of the most influential positions until 1821 The high clergy of the Greek Orthodox Church, the governors of Moldavia and Walachia, and the chief dragoman of the Porte (equivalent to minister of foreign affairs) were ordinarily chosen from among the Phanariots. These offices (except, in theory, the clerical dignities) were obtainable only by purchase, and the Phanariot officials did their best to recover their expenses by accepting bribes and extorting excessive taxes Their greed and arrogance earned them the hatred of the Christian subjects whose affairs they administered, including the other Greeks. The Phanariots' hold over Ottoman diplomacy was due in part to their knowledge of foreign languages, which the Moslems spurned to acquire. Many Phanariots joined the cause of Greek independence in the 1820s Being wealthier and far better educated than most of the other Greeks, they played an important part in Greek politics in the 19th cent.

Phanuel (fănū'ĕl, fān'ūĕl), father of Anna the prophetess, Luke 2 36.

Pharaoh (fā'rō, -rēo, fā'-) [Heb., from Egyptian, = the great house], title of the kings of ancient Egypt Of the Pharaohs in the Bible, Shishak is SHESHONK Tirhakah is TAHARKA, Neco or Necoh is NECHO, and Hophra is Apries (Jer 37 5–15; Ezek 29) Breasted has identified the Pharaoh of Hadad (1 Kings 11 18–20) and of Solomon (1 Kings 2 46; 3.1, 9 16, 11 1) as Sheshonk, he doubts that Rameses II was the Pharaoh who oppressed the Jews (Ex 1–14), and he does not attempt to name the Pharaohs of Abraham (Gen. 12.10–20) or of Joseph (Gen 39–47)

Pharez (fā'rĕz) or **Phares** (fā'rēz) [Heb ,=breach], ancestor of David. Gen 38 29, Mat 1 3. Perez 1 Chron 27 3

Pharisees (fā'rĭsēz), one of two great Jewish religious parties that arose within the synagogue The opponents were the SADDUCEES. The important activity of the Pharisees began after the family of the MACCABEES succeeded in delivering their people from Syrian oppression and when John Hyrcanus, who was high priest (135–105 B C), had established the secular principate The strong nationalists who had supported the liberators and had cherished the sacred religious beliefs and customs of their ancestors were the HASIDIM Their aim was to keep all that was Jewish set apart from all that was not Jewish and therefore would defile Those who were extreme in this attitude and effort came to be known as Pharisees Basing all upon the Law, without which there could be no authorization for religious customs, the Pharisees insisted upon the strictest observance of the ordinances and dues of the Jewish religion In addition to the Torah, the Written Law, the Pharisee laid great importance upon the traditional or Oral Law, which he as far as possible adjusted to the Written Law Thus upholding and advancing customs and practices which had grown out of popular usage, Pharisaism was democratic in its nature and influence and deeply affected the lives of the people Great emphasis was placed upon exegesis of the Scriptures, that they might be the familiar possession of the people All life was drawn more and more closely under the regulations of religious observance Precepts and rules were magnified as well as multiplied The extreme or professional Pharisees called forth severe criticism There are many examples of these criticisms in the Talmud, as well as in the New Testament, where the denunciations made by Jesus are recorded The active period of Pharisaism extended to A D c 135 It counted largely in the development of later orthodox Judaism See R Travers Herford, *Pharisaism Its Aim and Its Method* (1912), Louis Finkelstein, *The Pharisees the Sociological Background of Their Faith* (1938)

pharmacopoeia (fär"mukupē'u) [Gr ,=making of medicines], authoritative list of drugs, describing their properties, use, dosage, and tests of purity Most nations have their own pharmacopoeia which dispensers of drugs are generally required by law to follow Probably the first official work of this kind was published in Nuremberg in 1546 It was followed by one in London issued by the College of Physicians in 1618, one in Edinburgh in 1699, and one in Dublin in 1807 The lack of uniformity in these led to the publication in 1864 of the British Pharmacopoeia In the United States an early pharmacopoeia for army use appeared in Philadelphia in 1778 Others soon followed, and in 1820, as a result of a convention of medical societies in Washington, D C, the first national pharmacopoeia was issued By the terms of the Food and Drugs Act enacted in 1906 this pharmacopoeia became the legal standard for the country The Pharmacopoeia of the United States (13th revision, 1947) is periodically brought up to date by a committee of the U.S Pharmacopoeial Convention

pharmacy (fär'musē), term used for the practice of preparing medicines according to a physician's prescription and also for an establishment used for the purpose. Pharmacy dates from ancient times and was long the province of the physician Probably the first store in colonial America devoted to dispensing drugs was opened in Boston in 1648 However, not until the 18th cent was the practice of pharmacy separated from that of medicine The Philadelphia College of Pharmacy and Science, the first school of its kind in the New World, was founded in 1821. Ten years after the formation of the Pharmaceutical Society of Great Britain, the American Pharmaceutical Association met formally in New York city in 1851 The expansion of modern pharmacy has necessitated steadily advancing requirements in training pharmacists. In the United States, in 1932, the study was changed from a three-year to a four-year course. See C. H. LaWall, *Four Thousand Years of Pharmacy* (1927); H. M. Burlage, *Fundamental Principles and Processes of Pharmacy* (1944).

Pharnabazus (fär'nŭbă'zŭs), d after 374 B C. Persian governor He had an important satrapy in Asia Minor under Darius II and Artaxerxes II. He supported Artaxerxes in the rebellion of Cyrus the Younger (401 B C.) Pharnabazus and his fellow satrap, Tissaphernes, were responsible for the revival of Persian power in the Greek world by supporting now Sparta, now Athens in the Peloponnesian War and later. He collaborated with Conon in the restoration of the Athenian fleet (394 B.C.) He was in command of two unsuccessful Persian invasions of Egypt (385, 374 B C.)

Pharnaces II (fär'nusēz), d 47 B C, king of Pontus, son of MITHRIDATES VI In the Roman civil war he overran Colchis and central Asia Minor. Julius Caesar came from Egypt and defeated him at Zela—with such ease that he informed the senate with the words "Veni, vidi, vici" [I came, I saw, I conquered]. Pharnaces was killed soon after in a revolt

Pharos (fā'rŏs, fă'–), peninsula, belonging to Alexandria, Egypt Originally an island a short distance offshore, it was united to the mainland by a mole constructed by order of Alexander the Great. On Pharos stood the celebrated lighthouse completed (c 280 B C.) by Ptolemy II which was in ancient times usually included among the Seven Wonders of the World It was 100 ft. square and perhaps twice as high, and it gave its name to many other ancient lighthouses It was demolished by earthquake in the 14th cent

Pharosh (fā'rŏsh), variant of PAROSH

Pharpar (fär'pur), river of Damascus 2 Kings 5 12 Its identity with the Awaj, a river flowing easterly c 10 mi south of the city, is doubtful The other river of Damascus was the ABANA

Pharr (fär), city (pop 4,784), extreme S Texas, WNW of Brownsville, founded c 1909 In the irrigated region of the lower Rio Grande valley, it packs and cans fruit and vegetables

Pharsala (fär'sălu), ancient city, Thessaly, Greece Near here in 48 B C, Julius CAESAR routed POMPEY The battle, also called Pharsalus (farsā'lŭs) and Pharsalia, was a brilliant tactical accomplishment Lucan's *Pharsalia* is an epic of the civil war

Phaseah (fusē'ŭ), variant of PASEAH 2

Phaselis (fŭsē'lĭs), ancient seaport, Lycia, S Asia Minor (now S Turkey) It was a colony of Rhodes Later it was the seat of pirates

Phazania (fuzā'nēu), ancient region, Libya, N Africa It is the Fezzan today

pheasant (fĕ'zunt), Old World game bird, characterized by its wattled head and long tail, and by the brilliant plumage and the courtship displays of the male Both the English pheasant, introduced in early times from the shores of the Black Sea, and the more abundant hybrids of this bird and the Chinese ring-necked pheasant are referred to in England as the common pheasant The Japanese pheasant has also interbred with these birds The hybrid ring-necked pheasant is established as a common game bird in the E United States The plumage of the male is mostly reddish brown on the body and dark green with a purplish sheen on the head and neck The face is red and the neck is ringed with white The adults eat berries, seeds, young shoots, insects, and worms and like rather open country with trees, underbrush, and tall grasses Among the hardier imported pheasants are the golden, the silver, and the Lady Amherst, all of China The Reeves pheasant of China has central tail feathers which are sometimes more than 6 ft long In the Himalayas are found the highly iridescent Impeyan pheasant or common monal and the horned pheasants or tragopans The Manchurian pheasant is one of the eared pheasants, dull-colored birds of the forests of Tibet and China, some of which are found at 12,000 ft above sea level The ruffed GROUSE is sometimes incorrectly called pheasant in the United States

Phebe or **Phoebe** (both fē'bē) [Gr, fem. of Phoebus], deaconess at Cenchreae. Rom. 16.1.

Pheidias, see PHIDIAS

Pheidippides (fīdĭ'pĭdēz), **fl. 490 B C**, Athenian courier sent to Sparta to ask help when the Persians landed at Marathon Herodotus says he ran the 150 mi in two days

Phelps, Edward John, 1822–1900, American lawyer and diplomat, b Middlebury, Vt, grad Middlebury College, 1840 He attended (1841–42) Yale Law School, was admitted (1843) to the bar, and practiced law in Vermont and later in New York city. He was second comptroller of the U S Treasury (1851–53), U S. minister to Great Britain (1885–89), and senior counsel (1893) for the United States in the arbitration of the Bering Sea Fur-Seal Controversy with Great Britain He was a founder and president (1880) of the American Bar Association and taught law at Yale after 1881 His *Orations and Essays* appeared in 1901.

Phelps, Samuel, 1804–78, English actor and manager He appeared in the provinces for some years and in 1837 established his reputation by playing Shylock at the Haymarket, London. His repertoire included major and minor Shaksperian parts, and he excelled as Sir Pertinax Macsycophant in Macklin's *Man of the World*. He made a great contribution to the 19th-century theater when he joined in opening (1844) Sadler's Wells, London, he was its manager in 1860–61 Here, where melodrama had reigned, he and Thomas Greenwood staged Shakspere and other classics with fine taste and conception Sadler's Wells finally proved unprofitable, Phelps resumed acting at Drury Lane in 1862

Phelps, William Lyon, 1865–1943, American teacher and critic, b New Haven, Conn, educated at Yale and at Harvard He taught at Yale from 1892 and was professor of English literature there from 1901 to 1933 His enthusiasm for literature led him to write a great many books about it, to conduct a department, "As I Like It," in *Scribner's Magazine*, and to lecture widely His writings include *Essays on Russian Novelists* (1911), *Browning* (1915), *The Excitement of Teaching* (1931), and his *Autobiography with Letters* (1939)

Phelps, village (pop 1,499), W central N Y, in the Finger Lakes region, NW of Geneva, inc 1855 Its chief product is sauerkraut It has gravel and stone quarries

phenacetin (fună'sutĭn), drug derived from amidophenol and consisting of colorless crystals only slightly soluble in water It is widely used as an antipyretic and to relieve headache, neuralgia, and rheumatism

Phenice (fēnī'sē), in the Bible **1** Same as Phoenicia, the Syrian coast Acts 11 19. **2** Harbor, S Crete, probably the modern Lutro. It was also called Phoenix Acts 27 12

Phenicia, see PHOENICIA

Phenix City (fē'nĭks), city (1940 pop 15,351, 1948 special census pop 22,187), a co seat of Russell co, E Ala, on the Chattahoochee opposite Columbus, Ga, in a cotton area Textiles and brick are produced Near by is the site of U S Fort Mitchell (1811–37)

phenol see CARBOLIC ACID

phenolphthalein (fē"nôlthă'lĭn, fē"nôlfthă'lĭn), white crystalline substance melting at 261°C, soluble in alcohol, but only slightly so in water Chemically, it is a compound of carbon, hydrogen, and oxygen and is used widely in the laboratory as an indicator (i e, to indicate the presence of a hydroxide or an acid) because, when it is added to the solution of an alkali (a hydroxide), a red coloration results but when added to an acid solution there is no change in color The substance is obtained by heating phthalic anhydride with phenol (carbolic acid) and sulphuric acid It finds important use in medicine as a laxative

Pherecrates (furĕ'krutēz), fl c 437 B C, inventive and highly esteemed Greek poet of the Old Comedy. Fragments of his plays are extant

Phi Beta Kappa see FRATERNITY

Phichol (fī'kŏl), chief captain of Abimelech's army. Gen 21 22,32, 26 26

Phidias or **Pheidias** (both fī'dēus), c.500–c 432 B C, Greek sculptor, considered the greatest artist of ancient Greece. No original in existence can be attributed to him with certainty, and no copies that give adequate impression of his works have been found, but the estimates of ancient writers, their descriptions of his statues, and his influence on all later sculpture have secured his fame His greatest achievements were the ATHENA PARTHENOS at Athens and the *Zeus* in the temple at Olympia, both colossal figures of chryselephantine workmanship (draperies of beaten gold, flesh parts incrusted with ivory) The *Athena*, dedicated c 438 B C, was the chief treasure of Athens The *Zeus* was a benignant and majestic bearded figure seated upon a magnificently ornamented throne and wearing a mantle strewn with sculptured decorations These two great conceptions of deity established an ideal for representations of godhead that influenced religious art into Christian times Which of the two figures was made earlier is not determined The *Zeus* was counted one of the Seven Wonders of the World Works of the master's younger years include a colossal bronze Athena (called the *Promachos*) and the *Athena Lemnia* for the Acropolis, a chryselephantine Athena for Pellene; *Apollo Parnopius*, and *Aphrodite Urania* for Elis A torso of Athena in Paris is considered the nearest approach to the original handiwork of Phidias that has survived Tradition declared him to have been in charge of the sculptures for the Parthenon and other great works on the Acropolis, done for Pericles It is probable that they were executed from his designs by his pupils and assistants Part of the frieze is now in the British Museum (see ELGIN MARBLES)

Phigalia (fĭgā'lēŭ), ancient city, Greece, in SW Arcadia. It gives its name to the **Phigalian Marbles,** a frieze 100 ft long and 2 ft high, in high relief, representing battles between the Lapithae and the Centaurs and between the Amazons and the Greeks. The frieze, since 1814 in the British Museum, was incorporated in the great temple of Apollo Epicurius at Bassae, near Phigalia, the architect of which (c 430 B C) was probably Ictinus, who helped design the Parthenon The temple (well preserved) was described by Pausanias.

Philadelphia, name of several ancient cities One was in Lydia, W Asia Minor (now W Turkey) It was at the foot of Mt. Tmolus and near the location of modern ALASHEHIR It was founded by Attalus II Philadelphus of Pergamum Earthquakes damaged the city several times Here was one of the Seven Churches in Asia (Rev 3 7) AMMAN was also renamed Philadelphia

Philadelphia. **1** City (pop 3,711), co seat of Neshoba co, E central Miss, NW of Meridian, in a farm area It is the seat of the Choctaw Indian Agency (1918), which is the administration unit for most of the state's Indians **2** City (pop 1,931,334), SE Pa, on the Delaware c 100 mi upstream at the influx of the Schuylkill It is a key port and a great commercial center, in 1940 it was the third largest city in the United States The site was first occupied by Indians, and in the 17th cent there was a Swedish settlement In 1682 Philadelphia, the "City of Brotherly Love," was founded as a Quaker colony by William PENN—hence the nickname Quaker City Its commercial, industrial, and cultural growth was rapid Except for the British occupation (Oct, 1777–June, 1778) after the battle of Brandywine, it was the American capital (see CONTINENTAL CONGRESS) during the Revolution It was the capital of the new republic, 1790–1800, as well as the state capital (to 1799) Philadelphia is connected with the interior by the Pennsylvania, the Baltimore and Ohio, the Philadelphia and Reading, and other railroads It has an airport, an excellent harbor, and a network of highways The city was an important trading and manufacturing center before the Revolution and now ranks high for its textiles, metal products, and numerous other manufactures and for its printing and publishing industry A nucleus of American culture in colonial times (when among its prominent citizens was the scientist and statesman Benjamin Franklin), it is still the seat of many philosophical, artistic, dramatic, musical, and scientific societies, e g, the Pennsylvania Academy of the Fine Arts (1805), the American Philosophical Society, and the scientific Franklin Institute (1824) with its addition (1933), the Benjamin Franklin Memorial, an important unit of which is the Fels Planetarium Musical activities flourish in the city, which has an outstanding symphony orchestra During the summer popular programs are presented in the outdoor setting of Robin Hood Dell, a natural amphitheater in Fairmount Park This, the largest of the city's parks and one of the largest in the world, has numerous historic monuments and shrines Here are the art museum, the central branch of the public library, the Rodin Museum, the aquarium, and the zoological and botanical gardens (Horticultural Hall) In this park, too, are buildings of the 1876 Centennial Exposition, which was a factor in Philadelphia's modern development Among Philadelphia's numerous educational institutions are the Univ of Pennsylvania (see PENNSYLVANIA, UNIVERSITY OF), TEMPLE UNIVERSITY, DREXEL INSTITUTE OF TECHNOLOGY, Dropsie College for Hebrew and Cognate Learning, La Salle College, Chestnut Hill College, St Joseph's College, GIRARD COLLEGE, CURTIS INSTITUTE OF MUSIC, HAHNEMANN MEDICAL COLLEGE, Jefferson Medical College (for men, 1825), and colleges of optometry, osteopathy, pharmacy, and occupational therapy Important historic shrines of Philadelphia include INDEPENDENCE HALL, where the Declaration was signed and the LIBERTY BELL is kept, the neighboring Congress Hall, Carpenters' Hall, where the First Continental Congress met, the Betsy Ross House, where, according to one story, the first American flag was made, and Gloria Dei (Old Swedes') Church The city has a navy yard on League Island and a U S mint The large city hall is a conspicuous building surmounted by a statue of William Penn From the city hall, the city stretches for miles Chestnut Hill and GERMANTOWN bordering the Wissahickon valley are well-known residential sections The so-called "Main Line" of the Pennsylvania RR traverses a wealthy outlying district See Agnes Repplier, *Philadelphia the Place and the People* (1898), Christopher Morley, *Travels in Philadelphia* (1920), Federal Writers' Project, *Philadelphia a Guide to the Nation's Birthplace* (1937)

Philadelphia Museum of Art, established in 1875 and chartered in 1876 When the city of Philadelphia planned to erect a building to house the Centennial Exposition of 1876, provision was made to keep the building permanently occupied, the Pennsylvania Museum and School of Industrial Art was privately established for that purpose The name was changed in 1929 to the Pennsylvania Museum of Art, and the present name was adopted in 1938 Its present building, also city owned, was opened in 1928. The museum owns many fine collections, the outstanding one being the John G Johnson Collection of European old masters, bequeathed to the museum on the death of the owner in 1917, in the same field of art are the Wilstach, Elkins, and McFadden collections The Dale, Gallatin, and Stieglitz collections cover contemporary art, and the Crozier Collection embraces Persian and Chinese art Connected with the museum are also the School of Industrial Art (est 1877) and the Textile Institute (est. 1883), both of which have a four-year study plan.

Philadelphia Orchestra, founded in 1900 by Fritz Scheel, who was its conductor until 1907 He was followed by Karl Pohlig (1907–12) Under the leadership (1912–36) of Leopold Stokowski the orchestra made tremendous progress and won widespread fame Eugene Ormandy was appointed permanent conductor in 1936, but Stokowski continued to conduct for part of each season until 1941 The orchestra made transcontinental tours in 1936 and 1937.

Philae (fī'lē), island, SE Egypt, in the Nile river above the Aswan Dam It is now submerged except from July to October, when the sluices of the dam are open Of its temples, all dating from late Egyptian and classical times (600 B C –A D 600), the most famous was the temple to Isis, built by the early Ptolemies and not closed to pagan worship until the reign of Justinian

Philaret or **Filaret, Vasily Drozdov** (both vŭsē'lyĭ drŭzdôf' fēlŭrĕt'), 1782–1867, Russian prelate, author, and preacher He became archbishop of Tver and a member of the holy synod in 1819 and metropolitan of Moscow in 1826 He long urged the abolition of serfdom and is generally considered the author of the Edict of Emancipation promulgated by ALEXANDER II in 1861 Philaret also wrote a standard catechism of the Russian Orthodox Church.

philately (fĭlă'tŭlē), the collection and study of postage stamps and of materials relating to their history and use Collecting became a recognized hobby in the 1850s, the first printed catalogue was issued in 1861, the first album in 1862 Scientific study of the history of stamp issues and of details including watermarks, perforations, gum, and cancellations dates from the 1860s Collectors today usually concentrate on issues of definite areas (e g , the Scandinavian countries) or on such specialties as *air-mail* or commemorative stamps, stamps depicting subjects such as bridges, trades, or animals, or covers with special cachets or censors' markings The value of stamps depends on rarity and condition See annual catalogues issued by the Scott Publishing Company, E A Kehr, *The Romance of Stamp Collecting* (1947)

Philemon (fīlē'mŭn), 361–262 B C , Greek poet of the New Comedy He was in ancient times considered second only to MENANDER Only fragments of his plays survive

Philemon [Gr , =loving], epistle of the New Testament, the 18th book in the usual order It was written by St PAUL to a Colossian named Philemon under the same circumstances as those under which he wrote COLOSSIANS Onesimus, Philemon's fugitive slave, had fallen in with Paul, who sent him back to his master with this little personal note, adjuring the Christian master to forgive his slave, liable to crucifixion for escaping This is the shortest of the Pauline Epistles The addressee is not otherwise known

Philemon and Baucis (bō'sĭs), in Greek legend, husband and wife who survived a great flood Zeus and Hermes, visiting the earth as men, were refused food and shelter until Philemon and Baucis took them in The gods sent a flood which drowned all their unkind neighbors After a long life together Philemon and Baucis died at the same time and were turned into trees

Philetus (fĭlē'tŭs) [Gr , =lovely], Christian denounced by Paul 2 Tim 2 17.

Philidor (fĭ'lĭdôr, Fr fēlēdôr'), assumed name of the Danican family of French musicians The outstanding member of the family was **François André Danican Philidor** (frāswä' ädrā' dänēkä'), 1726–95, chess player and composer For many years he commanded the French stage with such operas as *Le Maréchal ferrant*, *Le Diable à quatre*, *Tom Jones*, and *Ernelinde* In addition to his accomplishments in music, he possessed a genius for chess He wrote *Analyse du jeu des échecs* (1749) and gave exhibitions of simultaneous blindfold play which were remarkable in his time

Philip, Saint (fĭ'lĭp) [Gr , =lover of horses], one of the Twelve Apostles, from Bethsaida in Galilee He is mentioned several times in the Gospels Mat 10 3, John 1 43–51, 6 5,7, 12,21,22, Acts 1 3 He is said to have been martyred at Hierapolis of Phrygia Feast (with St James the Less) May 1

Philip, Saint, one of the seven deacons chosen by the Twelve Apostles He is called also St Philip the Evangelist and St Philip the Deacon He evangelized Samaria and later converted the eunuch of Queen Candace of Ethiopia Acts 6 5, 8 25–40, 21 8–10 Feast June 6

Philip or **Philip the Arabian** (Marcus Julius Philippus), 204?–249, Roman emperor (244–249) He served under Gordian III against the Persians and instigated the assassination of the emperor He concluded a peace with Persia The secular games were celebrated by him with splendor to commemorate the millennium of Rome (248) DECIUS was sent to the Danube to quell an insurrection of the troops, who forced him to accept the purple and march upon Italy Philip met them near Verona and was slain Philip tolerated the Christians, but probably did not become one

Philip I, 1052–1108, king of France (1060–1108), son and successor of Henry I He enlarged, by arms and by diplomacy, his small royal domain. In order to prevent the union of England and Normandy under a single ruler, he consistently supported ROBERT II of Normandy (Robert Curthose) In spite of his efforts, the royal power remained weak Philip's practice of simony and his consequent opposition to the reforms of Gregory VII brought him into conflict with the Holy See. This conflict was intensified by Philip's scandalous private life Philip repudiated his first wife, Bertha, daughter of the count of Holland, and married, over the opposition of the Church, Betrada of Montfort, wife of Count Fulk of Anjou, while both Bertha and Fulk were still living. Philip was excommunicated by Urban II and Paschal II, but remained defiant until 1104 In his last years his son, Louis VI, ruled for him

Philip II or **Philip Augustus,** 1165–1223, king of France (1180–1223). He began to rule for his father, Louis VII, in 1179 During his reign, the royal domain was more than doubled in size, important administrative and judicial reforms were effected, and the royal power was consolidated at the expense of feudalism. Philip defeated a coalition of Flanders, Burgundy, and Champagne (1181–86), securing Amiens, Artois, and part of Vermandois from the count of Flanders (1185) He then attacked the English territories in France (1187, 1188) In 1189, after forming an alliance with King HENRY II's rebellious son Richard, he compelled Henry to cede several territories, in the same treaty he and Henry agreed to go on crusade In 1190, after Henry's death, Philip and RICHARD I of England left for the Holy Land (see CRUSADES) They soon quarreled, and after the capture of ACRE, Philip returned to France (1191) He formed an alliance against Richard with Emperor Henry VI but was compelled, after five years of warfare (1194–99) to surrender most of his annexations However, after JOHN acceded to the English throne, Philip espoused the cause of ARTHUR I of Brittany and made war upon John, forcing him (1204) to surrender Normandy, Brittany, Anjou, Maine, and Touraine He later also conquered Poitou In 1214, at Bouvines, Philip defeated the allied forces of John, Emperor OTTO IV, and the count of Flanders, France was now established as a leading European power In 1216–17 Philip sent his son Louis (later LOUIS VIII) to invade England, Louis's campaigns against the ALBIGENSES (1215, 1219) prepared the ground for the annexation of S France under Louis IX Philip's principal reforms were the substitution of an advisory council for the household offices held in hereditary fief under his predecessors and the creation of a royal court of justice with investigative powers Great social changes occurred, or were completed, during his reign Serfdom nearly disappeared, urban communities became prosperous and powerful, commerce was stimulated by the great fairs of Champagne, commoners gained in influence, and, though outwardly maintained, feudalism became outmoded The new wealth of the towns was reflected in many improvements and in the building of the great cathedrals, particularly in PARIS, where Philip had the streets paved, continued the construction of NOTRE DAME DE PARIS, and built the first LOUVRE See Achille Luchaire, *Social France at the Time of Philip Augustus* (Eng tr , 1912)

Philip III (Philip the Bold), 1245–85, king of France (1270–85), son of Louis IX He secured peaceable possession of Poitou, Auvergne, and Toulouse by a small cession to England (1279), married his son, later King Philip IV, to Jeanne of Navarre, thus bringing about the first union of Navarre and France, and began an expedition against Sancho IV of Castile He invaded Aragon in 1285 but was forced to retreat and died on the march A weak man, he was controlled first by a favorite and later by his family

Philip IV (Philip the Fair), 1268–1314, king of France (1285–1314), son and successor of Philip III He adopted a policy well calculated to strengthen the French monarchy and particularly to increase its revenues He early attempted to perpetuate for his own use the special taxation of the clergy temporarily tolerated by the Church to support the Albigensian and Aragonese crusades, Pope BONIFACE VIII declared his hostility to this measure by the bull *Clericis laicos* (1296) However, when Philip forbade the export of precious metals, thus depriving the pope of his revenues from France, Boniface capitulated (1297) The bitterness between Philip and Boniface was revived by the arrest (1301) of Bishop Bernard SAISSET For the first time in French history, Philip convoked the nobility, clergy, and commons in a STATES-GENERAL, to hear his justification of his course of action (1302–3), while the pope (1302) issued the bull *Unam sanctam* in assertion of his right to intervene In 1303 Boniface was seized at Anagni, though freed by the townspeople, he died shortly afterward After the brief pontificate of Benedict XI, Philip secured the election of his own candidate CLEMENT V, who in 1309 transferred the papal residence to Avignon, thus beginning the "Babylonian captivity" (see PAPACY). Important in Philip's subsequent relations with the Church was his persecution, under the cloak of religious reform, of the KNIGHTS TEMPLARS, a large part of whose wealth he diverted to the royal treasury Other wealthy groups persecuted by Philip were the Jews and the "Lombards" (or Italian bankers) Philip also debased the coinage. Between 1294 and 1296 Philip successfully overran Guienne, of which Edward I of England was duke, in 1297 Edward came to the defense of his territories and a truce was arranged, which in 1303 became a permanent peace, under which Philip surrendered Guienne After the withdrawal of Edward in 1297 Philip conquered Flanders, but the Flemings rose in rebellion and defeated him at the disastrous battle of Courtrai (1302) By subsequent treaties Philip was forced to reduce his demands upon the Flemings Beside the meeting of 1302–3 Philip summoned the States-General in 1308 and 1314. His son, Louis X, succeeded him

Philip V (Philip the Tall), c 1294–1322, king of France (1317–22), son of Philip IV He became regent on the death of his brother Louis X (1316) On the death of Louis's posthumous son, JOHN I, he declared that the SALIC LAW governed the royal succession in France and, in the absence of a direct male heir, proclaimed himself king (1317). Philip's reign was notable for his frequent consultations of the STATES-GENERAL, his administrative, judiciary, and military reforms, and his unsuccessful attempt to unify coinage, weights, and measures In 1321 the lepers and Jews were persecuted by fanatic bands who accused them of poluting the wells, the king had the bands suppressed, but confiscated the goods and money of the Jews His brother, Charles IV succeeded him

Philip VI, 1293–1350, king of France (1328–50), son of CHARLES OF VALOIS and grandson of Philip III He succeeded his cousin Charles IV, invoking the SALIC LAW to set aside both Charles's daughter and Charles's sister's son, EDWARD III of England However, he allowed the claim to the kingdom of Navarre of Jeanne, daughter of Louis X of France By the victory of Cassel (1328), he reinstated the count of Flanders, who had been deposed by his rebellious subjects After 1337 Philip's reign was dominated by the opening phases of the HUNDRED YEARS WAR After his defeat at Crécy (1346) and the English capture of Calais (1347), Philip signed a truce which lasted till after his death To meet the expenses of the war, Philip resorted to extraordinary sources of revenue, including the sale of privileges to provincial assemblies, a general salt tax, loans, and the debasement of the coinage Late in his reign France was ravaged by the PLAGUE (the Black Death) Philip increased the royal domain by the purchase of Montpellier and the Dauphiné His son, John II, succeeded him

Philip II, 382–336 B C , king of Macedon (359–336 B C), son of Amyntas II While a hostage in Thebes (367–364 B C), he gained much knowledge of Greece and its people He was appointed regent for Amyntas, young son of his brother Perdiccas III, but seized the throne for himself, ruthlessly suppressing foreign and Macedonian opposition Reorganizing his army and training it in the effective Theban phalanx formation, he entered upon an ambitious career of expansion by conquest and diplomacy In the first two years he moved eastward, taking over Amphipolis and the gold mines of Thrace, where he founded Philippi The coasts of NE Greece were an old Athenian preserve, and DEMOSTHENES at Athens became Philip's chief antagonist, delivering the first of the denunciatory *Philippics* in 351 B C. By 348 Philip had annexed the Chalcidice (including Olynthus) and was involved in a war over the Delphic oracle between Phocis and its neighbors In the settlement (346 B C) Philip became a member of the Delphic council, with a recognized position in Greece But Demosthenes continued to agitate, and when Philip moved to absorb the European side of the straits and the Dardanelles (340 B C), Athens and Thebes went to war with him Philip crushed them at Chaeronea (338 B C) He was now master of Greece and established a federal system of Greek states He was preparing an attack on Persia when he was killed His wife, OLYMPIAS, was accused of the murder. Philip's consolidation of his kingdom and his reduction of Greece to relative quiet were the essential background of the campaigns of his son, Alexander the Great Philip was the true founder of Alexander's army and trained some of his best generals, e g , Antigonus Cyclops, Antipater, Nearchus, Parmenion, and Perdiccas See D G Hogarth, *Philip and Alexander of Macedon* (1897)

Philip V, 238–179 B C , king of Macedon, son of Demetrius II He succeeded Antigonus III in 221 B C He won fame in a war in Greece in which he sided with the Achaean League against the Spartans and the Aetolians; in 217 B.C the war ended Philip tried to profit by Hannibal's invasion of Italy to take the Roman holdings in Illyria and made a treaty with Hannibal after Cannae (216 B.C.). This began the First Macedonian War (215–205 B C.), which ended in a draw Philip now set out to expand in the Aegean at the expense of Ptolemy V, and the frightened

states of Rhodes and Pergamum coaxed Rome into the Second Macedonian War (200 B C). This ended when Flamininus decisively defeated Philip at Cynoscephalae (197 B C) From then on Philip never opposed the Romans and was well paid for collaborating He devoted his main efforts to rebuilding his kingdom He was succeeded by his son Perseus See F. W Walbank, *Philip of Macedon* (1940)

Philip I (Philip the Handsome), 1478–1506, Spanish king of Castile (1506), archduke of Austria, titular duke of Burgundy, son of Emperor MAXIMILIAN I From his mother, MARY OF BURGUNDY, he inherited (1482) the Low Countries However, he was kept a virtual prisoner of the city of Ghent until 1493, when he became nominal governor of the Low Countries under his father's guardianship He married JOANNA, daughter of FERDINAND V and Isabella I, who in 1504 became queen of Castile under her father's regency Philip contested Ferdinand's rights and in 1506 became joint ruler of Castile with his wife His death in the same year acutely aggravated his widow's insanity Ferdinand again became joint ruler of Castile with Joanna, while Philip's dominions in the Low Countries passed to his son (later Emperor Charles V)

Philip II, 1527–98, king of Spain, Naples, and Sicily (1556–98) and, as Philip I, king of Portugal (1580–98) He ascended the throne on the abdication of his father, Emperor CHARLES V, who had previously made over to him the Low Countries, Franche-Comté, and the duchy of Milan After the death of his first wife, Mary of Portugal, he married (1554) Queen MARY I of England Shortly after Philip's arrival at London, England officially returned to the Roman Church Extremely unpopular with the English, Philip soon left again and took no pains to satisfy Mary's ardent hope for progeny Continuing his father's war on Henry II of France, he drew England into the conflict in 1557 In the same year Spain won the major victory of Saint-Quentin, but in 1558 England lost Calais to France After Mary's death (1558), Philip offered his hand to Queen ELIZABETH, but was refused The general peace (see CATEAU-CAMBRÉSIS, TREATY OF, 1559) made Spain the greatest power of continental Europe and left the greatest colonial power in the world To maintain and strengthen this hegemony and to secure the triumph of the Roman Church over heresy were the two immutable objects of Philip's subsequent policy The fanaticism, inflexibility, and cruel arrogance with which he undertook these objects were almost unrivaled in history Paradoxically, Philip began his career as the champion of Catholicism by making war (1556–57) on Pope Paul IV, whom he suspected of seeking to expel the Spanish from Italy It may be said that beginning with Philip's reign Spain evolved its individual and gloomy kind of Catholicism, orthodox but often at odds with the Holy See The Spanish INQUISITION reached the height of its power and excesses under Philip He succeeded in keeping Spain purely Catholic, his measures against the MORISCOS led to their revolt (1568–71), which was cruelly suppressed The victory (1571) of his half brother, JOHN OF AUSTRIA, over the Turks at the battle of LEPANTO was a major triumph of Christendom Elsewhere, however, his policies led to disaster His appointment (1567) of the duque de ALBA to replace his half sister, MARGARET OF PARMA, as governor of the mutinous Netherlands made his name anathema not only with Protestant Europe but with all those who valued sanity and humaneness The Netherlands (see NETHERLANDS and NETHERLANDS, AUSTRIAN AND SPANISH) rose in revolt under the leadership of WILLIAM THE SILENT, Alba's successors—REQUESENS, John of Austria, and Alessandro FARNESE—could salvage only the S Netherlands for Spain The sack of ANTWERP was characteristic of the manner in which the war was conducted In the meantime, Spain also interfered unsuccessfully in the war of the Catholic LEAGUE against Henry IV of France and undertook a fateful expedition against England, which supported the rebels in the Netherlands and which was challenging Spanish sea power The pretext for Philip's expedition was the last will of Mary Queen of Scots, who before her execution in 1587 disinherited her son James in favor of Philip as claimant to the English throne Philip was fitting out a fleet when, in 1587, Sir Francis Drake raided the port of Cádiz and intercepted a Spanish squadron at Cape St Vincent Philip, whose "beard had been singed," vowed vengeance and fitted out the Invincible ARMADA, which the English, aided by storms, utterly destroyed in 1588 England had replaced Spain as mistress of the seas The only major military success of Philip's later reign was the conquest of Portugal, to which he had a claim as son of Isabella of Portugal, daughter of Manuel I. When King Henry of Portugal died (1580) without issue, Alba overran the country and Philip was recognised as king by the Portuguese Cortes Philip's third wife, ELISABETH OF VALOIS, died in the same year (1568) as Philip's son from his first marriage, the unfortunate Don CARLOS. His fourth wife, Anne of Austria (d. 1580), daughter of Emperor Maximilian II, gave birth to Philip's successor, Philip III The main stage of Spanish colonial expansion was completed before Philip's accession, during his reign, however, the Spanish established colonies and garrisons in the present S United States and conquered the PHILIPPINE ISLANDS (named for the king) The debilitating effects of depopulation, of colonial overexpansion, and of the influx of gold began to make itself strongly felt in Philip's Spain American gold and the proceeds of an increasingly burdensome taxation were engulfed by Philip's foreign wars and interventions and had to be supplemented with loans Philip, however, worked hard to increase Spanish commerce and industries (particularly the textile industry), and his reign saw a short-lived economic prosperity Philip was not entirely the blood-thirsty tyrant portrayed by his contemporary enemies and by later writers The embodiment of the hard-working civil servant and bureaucrat, he sought to direct the destinies of a world empire from the seclusion of his cabinet, devoting infinite time and pains to the minutest administrative details, which he was unwilling to delegate In his workroom, surrounded by the grotesquely stiff Spanish court etiquette—largely his creation—he was divorced from contact with human reality His administration, involving overpowering paper work, was generally just, fair, and inhuman His morbid suspiciousness and authoritarianism made him tolerant of mediocrity and failure (as evidenced in his gracious treatment of MEDINA SIDONIA) and vindictive toward insubordination (as in the case of Antonio PÉREZ) His court at the ESCORIAL, which he built, was the gloomiest in Europe, yet in literature and the arts his reign saw the beginning of the Golden Age, which reached its flower under Philip III See biographies and studies by W H Prescott (3 vols , 1855–58), M A S Hume (1897), and J H Mariéjol (Eng tr , 1933), R B Merriman, *The Rise of the Spanish Empire*, Vol IV (1934)

Philip III, 1578–1621, king of Spain, Naples, and Sicily (1598–1621) and, as Philip II, king of Portugal (1598–1621), son and successor of Philip II His reign saw the increasing decay of Spain and its empire at the same time as the Golden Age of Spanish art and literature Dividing his time between bigoted devotion and the pursuit of pleasures, Philip left the actual government to his favorite, Francisco de LERMA Peace had been made with France by the Treaty of Vervins (1598) shortly before Philip III's accession Peace with England followed in 1604, and in 1609 a 12-year truce was made with the United Provinces of the Netherlands. In 1620, however, Spanish troops began to take part in the campaign against Frederick the Winter King, thus entering the Thirty Years War Philip's bigotry was a factor in the final expulsion (1609) of the Moriscos from Spain While agriculture and trade declined, the grandees gathered huge estates in their hands, and the Church prospered with some 9,000 monasteries Culturally, however, Spain was in the midst of a glorious period which gave the world Cervantes, Lope de Vega, El Greco, and Zurbarán Philip III was succeeded by his son, Philip IV His daughter was Anne of Austria, consort of Louis XIII of France

Philip IV, 1605–65, king of Spain, Naples, and Sicily (1621–65) and, as Philip III, king of Portugal (1621–40), son and successor of Philip III His father's chief minister, Francisco de LERMA, was overthrown at his accession and was replaced by the honest but unsuccessful OLIVARES, who held power until 1643 Spain continued to decline politically and economically War with the Netherlands was resumed in 1621 War with France, which broke out in 1632 over the VALTELLINA question, became a part of the Thirty Years War, it continued, however, after the Peace of Westphalia (1648), became complicated by Spanish intervention in the French FRONDE, and ended (1659) with the humiliation of Spain (see PYRENEES, PEACE OF THE) The war gave Portugal the opportunity to revolt (1640) and to choose John IV as king. Catalonia also rose and was long occupied by the French Spain was obliged to recognise the independence of the United Provinces of the Netherlands at the Peace of Westphalia and lost Roussillon and part of the Spanish Netherlands to France at the Peace of the Pyrenees His daughter, Marie Thérèse, was married to Louis XIV of France Thanks to the presence of Velázquez at his court, Philip was probably one of the most frequently portrayed monarchs in history He also was a patron of Rubens, Calderón de la Barca and Tirso de Molina continued the great tradition of Spanish drama during his reign He was succeeded by his son, Charles II

Philip V, 1683–1746, king of Spain (1700–1746), first Bourbon on the Spanish throne. A grandson of Louis XIV of France and a younger brother of Louis, duke of Burgundy, he was titular duke of Anjou before CHARLES II of Spain designated him as his successor. Louis XIV accepted the Spanish throne for his grandson and thus precipitated the War of the SPANISH SUCCESSION (1701–14), which reduced Spain to a power of the second rank. The peace treaties (see UTRECHT, PEACE OF) left Spain its colonial empire, but forced it to cede the Spanish Netherlands, Sardinia, Milan, and Naples to Austria and Sicily to Savoy Philip kept the Spanish throne but was obliged to introduce the Salic law of succession in order to preclude the possibility of a personal union with France For having sided with Philip's chief rival in the war, Archduke Charles (later Emperor Charles VI), Philip deprived Catalonia, Aragon, and Valencia of most of their autonomous privileges Of weak, indolent, and melancholy disposition, Philip was during his whole life dominated by women At first the princesse des URSINS, lady in waiting to Philip's first consort, María Luisa of Savoy, dominated his court and made French influence paramount In 1714 Philip married ELIZABETH FARNESE, who took complete possession of her husband's policy and who was in turn dominated by the chief minister, Cardinal ALBERONI The queen's and Alberoni's attempt at reconquering the former Spanish territories in Italy led to the formation of the QUADRUPLE ALLIANCE in 1718, to which Spain had to submit in 1720 The purely dynastic policy of Spain continued throughout Philip's reign and was successful so far as the house of BOURBON was concerned In the War of the POLISH SUCCESSION (1733–35) Naples and Sicily passed to Don Carlos (later Charles III of Spain), son of Philip and Elizabeth, in the War of the AUSTRIAN SUCCESSION (1740–48) Parma and Piacenza passed to Charles's younger brother Philip Spanish entry into the War of the Austrian Succession was preceded (1739) by the outbreak of the War of JENKINS'S EAR with Great Britain. During Philip's reign the first Franco-Spanish FAMILY COMPACT was concluded (1733) Philip was succeeded by Ferdinand VI, his son by María Luisa

Philip, half brother of Herod Antipas, called Philip Herod He was the first husband of Herodias, who divorced him to marry Herod Antipas See HEROD, dynasty

Philip, d A D 34, tetrarch of Ituraea, son of Herod the Great He was perhaps the ablest of the HEROD dynasty Luke 3 1

Philip (King Philip), d 1676, Indian leader in the most important Indian war of New England, chief of the Wampanoag Indians, son of MASSASOIT His Indian name was Metacom, Metacomet, or Pometacom Upon the death (1662) of his brother, Alexander (Wamsutta), whom the Indians suspected the English had murdered, Philip became sachem and maintained peace with the colonists for a number of years Hostility developed over the steady succession of land cessions forced on the Indians by their growing dependence on English goods Suspicious of Philip, the English in 1671 questioned and fined him and demanded that the Wampanoag surrender their arms In 1675 a Christian Indian, who had been acting as an informer to the English, was murdered, probably at Philip's instigation Three Wampanoags were accused of the murder and were executed Indian resistance was fired by this act, and **King Philip's War** began The Indians made sudden raids on the border settlements, towns were burned and many whites, men, women, and children, were slain Unable to draw the Indians into a major battle, the English resorted to similar methods of warfare in retaliation The first attacks were about Narragansett Bay, but eventually the rest of the New England colonies were involved The Wampanoag and the Nipmuck were the principal tribes leading the attack, but they were assisted by the Narragansett, especially after that tribe was attacked by the colonists A massacre near Deerfield in the autumn of 1675 was one of the best-known incidents of the war Philip's cause began to decline when he made a long journey west in an unsuccessful attempt to secure aid from the Mohawk In 1676 the Narragansett were completely defeated and their chief, Canonchet, was killed in April of that year, the Wampanoag and Nipmuck were gradually subdued Philip's wife and son were captured, and he was killed by an Indian in the service of Capt Benjamin Church after his hiding place at Mt Hope (Bristol, R I) was betrayed His body was drawn and quartered and his head exposed on a pole in Plymouth The war, which was extremely costly to the colonists in men and money, resulted in the practical extermination of tribal Indian life in S New England and the disappearance of the fur trade The New England Confederation now had the way completely clear for white settlement See G M. Bodge, *Soldiers in King Philip's War* (1891, 3d ed , 1906), G. W. Ellis and J. E. Morris, *King Philip's War* (1906), J. T. Adams, *The Founding of New England* (1921).

Philip Augustus: see PHILIP II, king of France.

Philiphaugh (fĭl'ĭp-hôkh), mansion and estate on the Yarrow, Selkirkshire, Scotland, W of Selkirk. Near here David Leslie and the Covenanters defeated Montrose in a battle in 1645

Philip Neri, Saint (nā'rē), 1515–95, Italian reformer, b Florence. His original name was Filippo Romolo de' Neri From boyhood he was religious, but he

always cultivated an air not of asceticism but of kindness, good humor, and urbanity. In 1533 he went to Rome, leaving his money at home In his first years at Rome he studied, then, c 1537, he sold his books and gave the money to the poor He was supported by a Florentine whose sons he tutored He now devoted his time to working among the people of Rome, visiting the sick, and frequenting crowded places to talk to people about the need of religion In 1548, with his confessor, he founded the Confraternity of the Most Holy Trinity to care for pilgrims and convalescents He preached (though still a layman) with great success at the exercises of the society In 1551 he was ordained He went to the Church of San Girolamo, where the priests conducted city missionary work St Philip's confessional was constantly frequented, and his informal meetings for men and boys wrought an access of religion in Rome So great was his personal effect on individuals of every class that he is called the Apostle of Rome He built an oratory over the church and conducted exercises with vernacular prayers and hymns for the people. Concerts of sacred music were also included, and from these the oratorio derives its name He accepted besides his place at San Girolamo the rectorship of the Florentine Church of San Giovanni and founded an oratory there His community of secular priests was canonically established in 1575, this was the beginning of the Congregation of the ORATORY In 1593 he resigned his position as superior of his community Besides the extraordinary revivification of the faith, he is credited with extension of vernacular services and of the exposition of the Sacrament Feast May 26 See Theodore Maynard, *Mystic in Motley* (1946)

Philip of Hesse (hĕ'sē, hĕ'sŭ, hĕs), 1504–67, landgrave of Hesse (1509–67), champion of the Reformation, called Philip the Magnanimous Declared of age in 1518, he soon displayed his warlike, crusading disposition in helping to suppress the Peasants' War (1525) He embraced Protestantism (1524) and, after vainly trying to reconcile Luther and Zwingli, signed the Augsburg Confession (see CREED) As a leader of the Protestant princes, Philip, in 1531, with the elector of Saxony and others, formed the SCHMALKALDIC LEAGUE to oppose Emperor Charles V He founded the first Protestant university (Marburg, 1527) and did much to advance Lutheranism, but the scandal following his bigamous marriage (1540), which had been reluctantly sanctioned by Luther and Melanchthon, led him to make peace with Charles in 1541 However, in 1546, after winning MAURICE of Saxony from Philip's camp, the emperor turned on the Schmalkaldic League and crushed it (1547) at Mühlberg Philip was imprisoned until 1552 and emerged a broken man In 1567 he divided his lands among his four sons (see HESSE)

Philip of Swabia (swā'bēu), c 1177–1208 German king (1198–1208) After the death (1197) of his brother, Emperor HENRY VI, he attempted to secure the succession of his infant nephew, the later Emperor FREDERICK II, but he finally consented, for the sake of the house of HOHENSTAUFEN, to his own election Shortly afterward a minority of the princes elected OTTO IV king Philip was supported by the majority of princes and by Philip II of France, while Otto could depend only on a few traditionally Guelphic nobles and on his uncle, RICHARD I of England Though successful at first, Philip's cause was weakened when Pope INNOCENT III declared (1201) for Otto and absolved Philip's vassals from their oath of fealty However, the year 1204 marked a turn in Philip's favor, with his capture (1206) of Cologne, the war was virtually ended Negotiations with the pope had resulted in a satisfactory settlement when Philip was murdered by a private enemy Otto IV was elected his successor Philip had married the Byzantine princess Irene, daughter of Emperor ISAAC II When Alexius III deposed (1195) and blinded Isaac, Isaac's son Alexius (later Emperor ALEXIUS IV) sought refuge and aid from his brother-in-law, Philip of Swabia. It has been widely held that Philip used this appeal as a pretext for persuading the leaders of the Fourth Crusade (see CRUSADES) to attack Constantinople and thus to embarrass Innocent III, on whom he wished to force a reconciliation There is, however, no direct evidence to support this view

Philippe Égalité: see ORLÉANS, LOUIS PHILIPPE JOSEPH, DUC D'

Philippeville (fēlēpvēl'), city (pop 40,647), NE Algeria, a port on the Mediterranean Sea It was founded by the French in 1838 on the site of a Carthaginian colony, Rusicada, later a flourishing port under the Romans. Philippeville is the port for Constantine. It handles chiefly agricultural products

Philippi (fĭl'pī), ancient city, E Macedonia. It was founded (358 or 357 B.C.) by Philip II of Macedon Near here was fought the decisive battle in which Octavian (Augustus) and Antony defeated (42 B C) Brutus and Cassius It was the scene of St Paul's first preaching in Europe; the epistle to the Philippians was addressed to the church here. Acts 16 12, 20 6, 1 Thess 2 2

Philippi (fĭl'pē, fĭ'lŭpē), city (pop, 1,955), co seat of Barbour co., N W Va., on the Tygart and S of Fairmont, settled c.1780 An early battle of the Civil War was fought here, June 3, 1861 Alderson-Broaddus College is here

Philippians (-lĭp'-), epistle of the New Testament, the 11th book in the usual order. It was written by St PAUL from captivity in Rome (A D c 60) to the Christians of Philippi (Macedonia) The letter thanks them and congratulates them on the wholesome state of the community It is more like an ordinary letter than any other epistle because of its careless arrangement and its pleasant, intimate air Some of the most eloquent of St Paul's lines are here, e.g., on his motives (1 21–26), on humility (2 1–11), on the Christian's joy and fear (2 12–18), on renunciation for Christ (3 7–16)

Philippics (fĭlĭ'pĭks) [Gr , = of Philip], a series of three denunciations of PHILIP II of Macedon by DEMOSTHENES The scathing polemics of CICERO against MARC ANTONY are also called Philippics

Philippine Islands (fĭ'lĭpēn), group of some 7,000 islands and rocks off SE Asia, in the Malay Archipelago, constituting the republic of the Philippines (proclaimed on July 4, 1946, total land area 114,830 sq mi , 1948 pop 19,234,182) QUEZON CITY, near the metropolis of MANILA, on LUZON, officially became the capital in 1948 Other important centers are Cebu, on CEBU, ZAMBOANGA and DAVAO on MINDANAO, Jolo, on Jolo in the SULU ARCHIPELAGO, and ILOILO, on PANAY The islands, extending 1,152 mi in the SW Pacific S to the Celebes Sea and 688 mi E from the Pacific to the China Sea, are comprised in three natural divisions—the northern, which includes Luzon and MINDORO, the central, occupied by the VISAYAN ISLANDS, and the southern, containing Mindanao and the Sulu Archipelago Politically, the republic is divided into 51 provinces The largest islands, in order of their size, are Luzon (40,420 sq mi), Mindanao, SAMAR, NEGROS, PALAWAN, PANAY, Mindoro, LEYTE, Cebu, BOHOL, and MASBATE (1,262 sq mi) For the most part the Philippines are of volcanic origin, being the higher portions of a partly submerged mountain mass However, some islands are overlaid with coral, and many of the small southern islands and rocks are wholly of coral formation All islands and rocks, irrespective of size, which project above sea level at high tide are included in the total land area, even though over 4,000 of them remain unnamed Only about 400 of the islands are permanently inhabited Most of the larger islands are traversed by mountain ranges, with Mt Apo (9,690 ft) on Mindanao the highest peak Extensive coastal plains, wide valleys, volcanoes, mineral springs, and hot springs further characterize the larger islands Of the many navigable rivers, CAGAYAN on Luzon is the largest, there are also large lakes on Luzon and Mindanao The Philippines are entirely within the tropical zone Manila, with a mean daily temperature of 79 5°F , is typical of the climate of the lowland areas throughout the group—warm, humid, and enervating The highlands, however, have a bracing climate, e g , BAGUIO, the summer capital, on Luzon, has a mean annual temperature of 64°F The seasons generally fall into two periods, that of the northeast monsoon, which brings rain to the eastern coasts of the islands, and that of the southwest monsoon, which marks the rainy season on the western coasts, some areas have as much as 250 in of rainfall a year Rainfall in the southern islands, however, is evenly distributed over the year, and this region is not in the typhoon belt, which embraces the rest of the islands With their tropical climate and naturally fertile soil, much of which is still uncultivated, the Philippines are predominantly agricultural Rice and corn (which cover the largest areas), abacá (Manila hemp), coconuts (from which are derived coconut oil and copra), sugar cane, and tobacco are the chief crops, and sugar, copra, abacá, and tobacco are the principal exports Rubber, quinine, kapok, and the lumbang nut (for tung oil) are raised on a small scale, but the production of all could be profitably increased Cotton, coffee, and citrus and other tropical fruits are also readily grown, but as yet have no significant markets. Fishing is a common occupation, and the Sulu archipelago is noted for its pearls and mother-of-pearl The raising of carabao (used in rice cultivation), cattle, pigs, and goats is important to the economy The islands have one of the world's great stands of commercial timber and abound in mineral resources (many of which are unexploited)—gold (which has been mined for centuries), iron, bituminous coal (of an inferior quality, however), chromite, and manganese Copper, silver, lead, platinum, sulphur, molybdenum, asbestos, and zinc are also found, but are not mined so extensively. Industrially the nation is still in its infancy, most of the factories are in Manila. With the exception of a small number of mountain and forest inhabitants of Negrito, Negroid, or undetermined blood, the people of the Philippines belong to the Malay group and are known as Filipinos The Filipinos, living mostly in the lowlands, constitute the only Christian nation in this part of the world. Roman Catholicism, a heritage from their Spanish conquerors, is professed by more than two thirds of the people, and there are an estimated 1,000,000 Aglipayans, members of the Philippine Independent Church, a nationalistic offshoot of Catholicism (see AGLIPAY, GREGORIO). Mohammedans, concentrated on Mindanao and the Sulu Archipelago (see MORO), pagans and persons not belonging to any organized religious group, and Protestants are the next most numerous The Christian Filipinos of all sects are divided into eight groups differing from each other in habitat, speech, and other cultural elements Largest of these groups are the Visayan, in the Visayan Islands, the TAGALOG, native to the eight provinces adjacent to Manila, and the Ilocano, of NW Luzon Indonesian and Mongoloid elements have been blended with the dominant Malay strain in almost every one of the eight groups Much has been made of the language barrier as an element of national disunity The Visayan, Tagalog, Ilocano, and other languages are, it is true, different from one another, a Visayan is unable to converse with a Tagalog unless he resorts to English or Spanish Yet, at the same time, these languages are so similar (they are all in the Malayo-Polynesian linguistic group) that any Filipino can easily learn the speech of groups other than his own The Philippine government's solution to the problem has been to adopt Tagalog as the basis of the new national language A considerable number of Filipinos speak English, and Spanish is still spoken by a much smaller number The first Malayans to reach the Philippines represented an early and crude epoch of Malayan culture, which has apparently survived to this day among certain groups such as the IGOROT Later came the invasions of Malayan tribes with more highly developed material cultures The first Europeans to visit (1521) the Philippines were those in the world-circling Spanish expedition led by the Portuguese Ferdinand MAGELLAN Other Spanish expeditions followed, including one from New Spain (Mexico) under López de Villalobos, who, in 1542, named the islands Las Felipinas for the infante Philip, later Philip II However, Spanish conquest of the Filipinos did not really begin until 1564, when another expedition from New Spain, commanded by Miguel LOPEZ DE LEGASPI, arrived He was a pacificator as well as a conqueror, and Spanish hegemony was soon established over many small independent communities which before had known no central rule This weak political and social organization was doubtless a strong factor in the comparatively easy conquest effected by a handful of courageous Spanish soldiers When the Spanish came, the political and social unit among the Filipinos was the barangay, a small community of from 30 to 100 families, which still survives in the islands as the barrio At the head of each barangay was a chief known as the *dato* The barangays were grouped together in tiny federations, sometimes headed by a single chief whose power occasionally extended over a whole small island More often, however, such a realm extended only a few miles, and all those outside it were at least foreigners and very often enemies Warfare was frequent, Magellan was killed supporting one Filipino chief against another There were three classes freemen, who did not pay tribute to the *datos* but served them in honorable ways, freedmen or liberated slaves, who owed the *datos* heavy debts of service which were passed on from generation to generation, and slaves (most numerous) Agriculture and fishing were the chief occupations Settlement was sparse, compared with today, and this too figured in Spain's success, in which missionaries—Augustinians, Franciscans, Jesuits, and Dominicans—according to the traditional Spanish colonizing pattern, played a role as vital as that of the soldiers. The Filipinos (except, of course, the Moros) were impressed by and took readily to Catholicism, while the friars in turn, impressed by this lively, intelligent people, were all the more zealous for their conversion The Filipino languages, especially Tagalog, with a syllabary supposedly showing the influence of Hindu culture (other groups also had syllabaries), particularly intrigued the more scholarly friars By 1571, when *López de Legaspi* established the Spanish city of Manila on the site of a Moro town he had conquered the year before, the Spanish foothold in the Philippines was secure, despite the opposition of the Portuguese, eager to maintain their monopoly on the trade of the Orient Manila repulsed the attack of the Chinese pirate Limahong in 1574. For centuries before the Spanish arrived the Chinese had traded with the Filipinos, but evidently none had settled permanently in the islands until after the conquest. Chinese trade and labor was of great importance in the early development of the Spanish colony, but the Chinese, never quite looked on with favor, came to be feared and hated because of their increasing numbers, and in 1603 the Spanish slew thousands of them (later, there were lesser massacres of the Chinese). The Spanish governor, made an actual viceroy in 1589, ruled with the advice of the powerful royal *audiencia*. There were frequent uprisings by the Filipinos, who resented the ENCOMIENDA

system. The Spanish, however, beyond grouping the barangays into pueblos or towns headed by the former *datos*, left the old social order of the Filipinos virtually untouched. The religious orders, which established schools and hospitals in addition to pursuing their missionary activities, were each made dominant in a particular area. By the end of the 16th cent. Manila had become a leading commercial center of the Far East, carrying on a flourishing trade with China, India, and the East Indies. The Philippines supplied some wealth (including gold) to Spain, and the richly laden galleons going their way between the islands and New Spain were the object of attack by English freebooters. There was also trouble from other quarters, and the period from 1600 to 1663 was marked by continual wars with the Dutch, laying the foundations of their rich empire in the East Indies, and with Moro pirates. After the English defeat of the Spanish Armada (1588), Spain went into a slow decline, and the period 1663–1762 in the Philippines has been called "a century of obscurity." The islands, becoming profitless to Spain, were little more than great missionary establishments, directed by the religious orders. In the great European wars of the 18th cent., the Philippines played a small part, and Manila was held from 1762 to 1764 by the British, who failed to make other gains in the islands. One of the most difficult problems the Spanish faced was the subjugation of the warlike Moros, who continued to harass the other Filipinos. Intermittent campaigns were conducted against them but without conclusive results until the middle of the 19th cent. As the power of the Spanish Empire waned, the orders (the Jesuits, expelled from the islands at the same time they were ousted from Spain and the other Spanish colonies in the late 18th cent., returned in the 19th cent.) took more and more of a guiding hand in the Philippines and acquired great amounts of property. It was opposition to the power of the clergy that in large measure brought about the rising sentiment for independence. This movement was led by José RIZAL and the "Young Filipinos." The Cuban crisis helped to precipitate revolt in the islands, which became particularly violent after the execution of Rizal (1896). Emilio AGUINALDO was the leader of the Filipino forces, and he achieved considerable success before a peace was patched up with Spain. This did not last long, for the insurgents accepted American aid when the SPANISH-AMERICAN WAR broke out. One of the most notable incidents of the war was the victory of Admiral George DEWEY in Manila Bay (1898). American forces under Gen. Wesley MERRITT invested Manila while Aguinaldo led a new insurrection. The expectation of the Filipinos was that they would be given immediate independence, and Aguinaldo established a republic. Instead, the treaty that closed the war transferred the Philippines from Spain to the United States. Aguinaldo, at this turn of events, led a revolution against the United States which flared high in 1899, but subsided to guerrilla warfare, and was practically ended when Gen. Frederick FUNSTON captured Aguinaldo in 1901. The islands were subdued, but the question of the independence of the Philippines remained a burning issue in the politics of the United States as well as in the islands. The various administrations in the United States made efforts to reach some solution satisfactory in both lands. The first of these was the Taft or Philippine Commission sent out in 1900. William Howard TAFT was made governor general, and he endeavored by a "Philippines for the Filipinos" policy to ingratiate American rule with the natives, who were given a share in the government. His Republican successors more or less followed his lead in the following years, pursuing a conservative course with most attention devoted, as in Cuba, to the development of material improvements. Education also saw great development with occupational instruction stressed. The result was increasing prosperity and a readjustment of economic life in the Philippines. Though comparatively little American capital was invested in island industries, American trade bulked larger and larger until the Philippines became almost entirely dependent upon the exportation of sugar, coconut oil, abacá, and other products to the United States, and the islands became an important market for American merchants. The establishment of free trade by the act of 1909—expanded in 1913—was the chief force in increasing this movement toward the economic dependence of the islands. The Democrats had, as a general rule, favored in their platforms a liberal policy in the Philippines leading to almost immediate independence, and the governor general appointed by President Woodrow Wilson, Francis Burton Harrison (1913–21), instituted a new regime. Its most important change was the rapid replacement of American officers of the government by Filipinos. Self-government was immediately increased, and the U. S. Congress set up a legislative body in the Philippines to consist of a senate and a house of representatives with almost all members elected by popular vote. A new Organic Act was created by the Jones Bill, which promised independence in general terms (proposals of independence in two or in four years were stricken from the bill). This act bestowed a much greater share of self-government and completely reorganized Philippine affairs. In Harrison's administration the government also launched many state-capitalistic schemes (the Philippine National Bank, the National Development Company, and the Manila RR.) and made efforts to reform and improve agriculture. The shortcomings of some of the departments, now under Filipino officials, led to severe criticism. When the Republicans regained power in the United States, Gen. Leonard WOOD was appointed governor. He felt that the self-government schemes were inefficient and to a large extent suspended Filipino activities in the administration, supplanting them with a semimilitary rule. Meanwhile new elements had greatly altered the Philippine problem. A large number of Americans had been led on economic grounds to oppose the U. S. tenure of the islands, labor leaders objected to the disturbing effect of the admission of Filipino labor into the United States without hindrance, the American growers of sugar and American investors in the Cuban sugar industry felt the pressure of competition from duty-free Philippine sugar, various other business groups also found themselves injured by the free trade with the Philippines. Filipino leaders, once clamoring for independence, had also realized the tremendous shock a separation from the United States would give economic life in the islands and sought for a compromise that would bring independence without ruin. Wilson had sent out a commission to the Philippines and the Wood-Forbes Commission had been sent out by President Warren G. Harding before Wood was made governor general. The reports of these commissions were of some weight in the alteration of government. The report of Col. Carmi A. Thompson sent out by President Calvin Coolidge (1926) recommended a delay in the granting of Philippine independence, and after Wood's death Governor General Henry L. STIMSON (1927–29) somewhat allayed the storms raised among the Filipinos by Wood's administration. In the administration of Dwight F. Davis (1929–32), however, the feeling in Congress veered sharply toward the granting of immediate independence, and the Hawes-Cutting Act (1932) provided for the complete independence of the islands in 1945 after 10 years of independence under the tutelage of the United States. President Herbert C. Hoover, perhaps influenced by the report of Secretary of War Patrick J. Hurley, who went to the islands in 1931, maintained that the bill left the United States with some responsibility but no power and vetoed it. It was passed over his veto (1933). It had been drawn up with the aid of a commission from the Philippines, but Manuel L. QUEZON, the leader of the dominant Nationalist party, opposed it, partially because of its threat of American tariffs against Philippine products but principally because of the provisions leaving naval bases in American hands. The Philippine legislature rejected the bill and new arrangements had to be made. Another Democrat, Franklin D. Roosevelt, had taken office in the United States and a new governor general, Frank MURPHY, in the Philippines before any satisfactory arrangement was made. Under the Tydings-McDuffie Independence Act (1934), the form of government of the Philippines was changed in 1935. A constitution, approved by President Roosevelt (March, 1935), was accepted by the Philippine people in a plebiscite (May). In Sept., 1935, Quezon was elected president, and, at the time of his inauguration (Nov. 15, 1935), the Commonwealth of the Philippines was formally established. The islands began a 10-year transition period of controlled autonomy, with the withdrawal of American sovereignty and the establishment of complete independence to take place on July 4, 1946. Murphy became the first American high commissioner, he was succeeded (1937) by Paul V. McNUTT, Francis B. SAYRE replaced McNutt in 1939. Filipinos expressed concern about the economy of an independent Philippines, and the U. S. Congress adopted (1939) legislation to cushion the anticipated economic blow. Amendments to the constitution, approved by a plebiscite (June, 1940) and by Roosevelt (Dec., 1940), permitted the president to succeed himself (formerly prohibited), changed the presidential term from six to four years, and made bicameral the unicameral assembly. Quezon was returned to office in elections of Nov., 1941. To develop defensive forces against possible aggression, Gen. Douglas MACARTHUR was brought to the islands as military adviser in 1935, and the following year he became field marshal of the Commonwealth army. The expansion of this army, as well as of the Philippine Dept. of the U. S. army, was accelerated as tension increased in the Far East. In July, 1941, the military forces of the Philippines were organized into the U. S. Army of the Far East, under the command of MacArthur. War came suddenly to the Philippines on Dec. 8 (Dec. 7, U. S. time), 1941, when Japan attacked without warning. On that day surprise air attacks on airfields near Manila destroyed most of the U. S. aircraft, leaving the Japanese bombers free to wreck Cavite naval base (Dec. 10). The Japanese landed at Aparri (Dec. 10), Vigan (Dec. 10), and Legaspi (Dec. 12). A landing attempt at Lingayen Gulf was repulsed (Dec. 13), but the Japanese returned in great force (Dec. 22) and, joined by the forces landed at Vigan, pushed down the central Luzon plain toward Manila. MacArthur's scattered defending forces (90,000 troops, four fifths of them Filipinos) were forced to withdraw. Manila was declared an open city (Dec. 26), but the Japanese disregarded the declaration and bombed the city mercilessly. Manila was occupied Jan. 2, 1942. MacArthur withdrew to BATAAN peninsula. Outnumbered, starving, and plagued with disease, the gallant Allied force stood off the enemy for months. MacArthur, ordered by President Roosevelt to go to Australia, left Bataan March 11, officials of the Philippine government (headed by President Quezon and Vice President Sergio OSMEÑA) also left and eventually came to the United States. Jonathan M. WAINWRIGHT remained in command. Bataan's exhausted 36,000-man garrison surrendered on April 9. Wainwright fought on from the island of CORREGIDOR until May 6, 1942, when he surrendered with 11,500 troops. In the meantime the Japanese had invested the other islands of the Philippines, and with the fall of Corregidor only guerrilla resistance remained. Under the Japanese, the surrendered fighters fared harshly. The survivors of Bataan were subjected to a brutal "death march" in which thousands perished. Soldiers and civilians alike were crowded into concentration camps under intolerable conditions and subjected, in many cases, to inhuman treatment. Japan's efforts to win native loyalty found expression in the establishment (Oct. 14, 1943) of the "Philippine Republic," with José P. Laurel, former supreme court justice, as president. The puppet government, however, gained little support from the people. Guerrilla resistance, organized and coordinated by U. S. army and Philippine officers, continued in the interior. The stage was set for the return of the Americans to the Philippines by conquests in the Pacific, culminating in the seizure (1944) of the Caroline Islands and the Marianas Islands. The Philippines, defended by some 500,000 Japanese troops, offered numerous invasion points. U. S. planes hammered Mindanao for months before the Americans surprised the Japanese by landing the U. S. 6th Army at Leyte, in the heart of the islands, on Oct. 20, 1944. With the invasion forces were the officers of the Philippine Commonwealth, headed by President Osmeña (who had succeeded Quezon on the latter's death, Aug. 1, 1944), the Philippine government was established at Tacloban, Leyte, on Oct. 23. The invasion of Leyte was a huge and masterful amphibious operation which gained a swift and secure beachhead. The Japanese, however, poured thousands of troops into Leyte, and the fighting was bitter. Success hinged on the ability of the U. S. navy to prevent heavy Japanese reinforcements and to protect the American supply lines. The decisive naval battle (called, variously, the battle of Leyte Gulf and the second battle of the Philippine Sea) took place Oct. 23–26, 1944. The battle resulted in a great U. S. victory. It was fought in three general areas: in Surigao Strait, off Samar, and off Cape Engaño. In the course of the four-day battle the Japanese navy was so badly depleted that never again was it capable of offering concerted opposition to the U. S. forces. On Dec. 15 Mindoro was invaded, and by the end of Dec., 1944, MacArthur announced that Leyte was won. Luzon was invaded at Lingayen Gulf by the U. S. 6th Army (Jan. 9, 1945), at Subic Bay by the U. S. 8th Army (Jan. 29), and at other points. U. S. forces pushed down the central Luzon plain. Manila was taken in February. The Japanese continued to fight for months in the mountains of Luzon and at Davao, Mindanao. On July 5, 1945, MacArthur announced that "all the Philippines are now liberated." The Japanese lost over 425,000 troops in dead alone in the Philippines. U. S. casualties included some 12,000 dead and over 42,000 wounded. Thousands of U. S. and Philippine prisoners were liberated, it was partly on their testimony that Japanese Generals Yamashita and Homma and other war criminals were later tried and convicted. MacArthur had turned over the civil government to Osmeña on Feb. 27, 1945. By September all military rule had ended. The Philippine congress met on June 9, 1945, for the first time since its election in 1941. In Sept., 1945, the Commonwealth ratified the United Nations Charter. The Philippine economy was completely dislocated because of the war, and unrest in the islands resulted in violence by restless guerrilla fighters in October. Fear of impending economic disaster should the islands be cut adrift from the United States as well as a vigorous struggle for political power in the Philippines fostered demands both that the liberation date be advanced and that it be postponed. Osmeña's leadership was challenged (Jan., 1946) when one wing (now the Liberal party) of the Nationalist party nominated for president Manuel ROXAS, who defeated Osmeña in April. On April 30, 1946, President Harry S. Tru-

man signed bills providing for free trade with the Philippines for eight years following independence, with graduated tariff increases for 20 years thereafter, and setting up a rehabilitation fund. Independence came as scheduled on July 4, 1946, when Truman issued a proclamation recognizing the independence of the Philippines, and the new republic was inaugurated with impressive ceremonies at Manila. Filipino ties with the United States were hardly severed, however. In a national plebiscite (March, 1947) Filipinos voted to grant the United States equal trading rights until 1974 in return for $620,000,000 in U S rehabilitation funds (the measure also pegged the Philippine peso at 2 to 1 U S. dollar until 1974). In that month also President Roxas and U S Ambassador McNutt signed a 99-year treaty guaranteeing the U S military and naval bases in the islands and a five-year military assistance pact. With their losses in the Second World War estimated at 1,000,000 dead and $6,000,000,000 in property destroyed, the Filipinos could well use U S assistance. The Hukbalahap guerrillas (Huks) of central Luzon became a constant source of trouble at the end of the war. President Roxas, charging that the Huks, led by Luis Taruc, were linked to the Communist party, outlawed them in March, 1948, but they continued their raids. In April, 1949, Aurora Quezon, widow of the Filipino leader, was one of 13 people killed in a Huk ambush. On Roxas's death in April, 1948, Vice President Elpidio QUIRINO became president, and in a bitterly contested election in Nov., 1949, he defeated José P. Laurel for a full four-year term. See E. H. Blair and J. A. Robertson, ed., *The Philippine Islands, 1493–1898* (55 vols., 1903–9, Vol. LIII, *Bibliography*), C. H. Philippines, University of the, mainly at Manila, coeducational, state controlled, founded 1908. It includes at Manila colleges of education, engineering and business administration, law, liberal arts, medicine, pharmacy, and veterinary science, schools of dentistry, fine arts, and hygiene and public health, and a music conservatory. An agricultural college is at Laguna, junior colleges are at Vigan and Cebu.

Philippopolis: see PLOVDIV, Bulgaria.

Philippsburg (fĭ'lĭpsbōrk), Fr. *Philippsbourg*, town (pop. 3,567), N Baden, near the Rhine. It was an important German fortress, situated in the territory of the bishops of Speyer. In the Thirty Years War it was held by the Swedes and then by the French, but was taken (1634) by the imperials, the French under Condé recaptured it in 1644, and the Peace of Westphalia (1648) gave France the right to garrison the place. Lost (1675) in the Dutch Wars, the fortress was ceded by France in the Treaty of Nijmegen (1678–79), was retaken by the French in 1688, and was again ceded in the Treaty of Ryswyck (1697). Custine took it (1792) in the French Revolutionary Wars, and in 1800 Emperor Francis II yielded the fortress to the French, who razed it.

Philips, Ambrose, 1675?–1749, English author, educated at Cambridge. A set of his pastoral poems was published in the 1709 edition of Jacob Tonson's miscellany, which also included pastorals by Pope. This led to a famous quarrel between the two, occasioned by the veiled ridicule of Philips's pastorals in an article written by Pope for the *Guardian*. Philips became friendly with Swift, wrote *The Distrest Mother* (1712), a play taken from Racine, and started (1718) the *Freethinker*, a periodical imitating the *Spectator*. He went to Ireland (1724) as Archbishop Boulter's secretary, sat in the Irish Parliament, became (1733) a judge, and returned to London in 1748. Henry Carey gave him the nickname "Namby-Pamby" because of some of his juvenile poems. See his poems (ed. with introduction by M. G. Segar, 1937).

Philips, John, 1676–1709, English poet. One of the few men to use blank verse in the age of the couplet, he wrote an imitation of Milton, *The Splendid Shilling* (1705), which was highly praised by Addison. Philips's *Blenheim* (1709), written as a Tory reply to Addison's *Campaign* (1705), was a failure. His blank-verse *Cyder* (1708), describing the cultivation of apples and the pressing of cider, is modeled after Vergil's *Georgics*. Philips was one of the first poets to turn to nature for his subject matter, and *Cyder* is the best example of this tendency.

Philips, Katherine Fowler, 1632–64, English poet and letter writer. She was founder and "Matchless Orinda" of the Society of Friendship, a literary group whose members assumed romantic names. Her correspondence with Sir Charles Cotterell was published as *The Excellent Letters of Orinda to Poliarchus* (1705, augmented ed., 1729). See P. W. Souers, *Matchless Orinda* (1931).

Philipsburg. 1 City (pop. 1,304), co. seat of Granite co., W Mont., NW of Butte, settled 1866, inc. 1890. Silver and manganese are mined here. 2 Industrial borough (pop. 3,963), central Pa., in the Alleghenies SE of Clearfield, laid out 1797, inc. 1804. Metal products and bituminous coal are produced.

Philipse, Frederick (fĭ'lĭps), 1626–1702, merchant and landowner in colonial America, b. Holland. He went (1647) with his family to New Amsterdam, where he became wealthy as a merchant. He bought (1672) a large estate, Philipse Manor, and later erected a church and also Castle Philipse on the site of North Tarrytown, N.Y. His town house in New York city was confiscated by the New York state government in the American Revolution (see MORRIS, ROGER).

Philipse Manor or **Philipsburgh Manor,** colonial estate of Frederick Philipse, confirmed by a royal charter (1693), extending from the present North Tarrytown, N.Y., to the present Yonkers, with the Hudson on the west and the Bronx river on the east. At Yonkers, on the Nepperhan, Philipse built a mill and a manor hall (c. 1682), the permanent family seat. The manor passed into British and American hands during the Revolutionary War, soon after, a New York merchant bought it, in 1868 Yonkers purchased it, making it the village hall. The state now owns the surrounding ground and the manor hall, where historical collections are displayed. Frederick Philipse also built (c. 1683) a mill and a manor hall, Castle Philipse, the northern family seat, at North Tarrytown, on the Pocantico. It was ultimately united with the Yonkers manor hall under one administration until the Revolution, after which it went through several hands and numerous changes. In 1943, after restoration to its original appearance by the Historical Society of the Tarrytowns, it became a permanent museum and shrine of colonial Dutch life.

Philip the Arabian: see PHILIP, Roman emperor.

Philip the Bold: see PHILIP III, king of France.

Philip the Bold, 1342–1404, duke of Burgundy, a younger son of King JOHN II of France. He fought at Poitiers (1356) and shared his father's captivity in England, then was successively made duke of Touraine (1360) and duke of Burgundy with the rank of first peer of France (1363). In 1369 he married Margaret, heiress of Flanders. With his brothers, Philip was appointed by King Charles V as regent for Charles VI, soon after the young king's accession (1380) he became the virtual ruler of France. In 1382 he brought about an expedition against the Flemish rebels under Philip van ARTEVELDE, defeating them at Roosebeke, and in 1384 he inherited Flanders from his father-in-law. Philip retired to his duchy at the beginning of Charles VI's personal rule (1388), but he returned to prominence at the appearance of the king's madness (1392) and became the chief rival for power of the king's brother Louis d'ORLÉANS. Their rivalry was accentuated by their different policies toward England and toward the papacy. Philip's son, JOHN THE FEARLESS, inherited the quarrel.

Philip the Fair. see PHILIP IV, king of France.

Philip the Good, 1396–1467, duke of Burgundy (1419–67), son of John the Fearless. After his father was murdered he formed (1419), an alliance with Henry V of England. He was a party to the Treaty of Troyes (1420, see TROYES, TREATY OF) and aided Henry in establishing English rule in France. However, the discontent of his subjects, English interference in Hainaut, and the death of his English wife finally led him, in return for important concessions, to make peace with Charles VII of France in the Treaty of Arras (1435, see ARRAS, TREATY OF). Philip more than doubled his territory by acquiring—through marriage, treaty, conquest, and purchase—Hainaut, Holland, Zeeland, Friesland, Brabant, Limburg, Namur, Luxembourg, Liége, Cambrai, and numerous other cities. His power brought him into conflict with Charles VII. He attempted to win influence by ransoming Charles d'ORLÉANS, supported for a time the rebellious nobles in the PRAGUERIE, and gave asylum to the dauphin (later LOUIS XI) when Louis was in revolt against his father. In 1463 he was forced to return some of his lands to Louis XI. Philip was often involved in difficulties with his Flemish subjects, notably in the revolt of Ghent (1448–53). In 1453 he took a vow to go on crusade, but this project was never realized. Philip's court was the most splendid in the Western Europe of his time. He was succeeded by his son, CHARLES THE BOLD.

Philip the Handsome: see PHILIP I, Spanish king of Castile.

Philip the Tall: see PHILIP V, king of France.

Philistia (fĭlĭs'tyə), ancient region of SW Palestine, comprising a fertile plain extending to the Mediterranean and including a portion of S Canaan. The five chief cities, Gaza, Ashkelon, Ashdod, Ekron, and Gath, strategically located on the great commercial route from Egypt to Syria, formed a confederacy. The first three were on the coast, and of these Gaza retains importance in modern times. Ekron and Gath were inland. In the Bible the great Hebrew antagonists of the Philistines are SAMSON, SAUL, and DAVID. They were independent at the time of AMOS, and the Jews never really conquered them. Philistia was laid under tribute by Assyria, and the invasion of Palestine by SENNACHERIB was brought on by Hezekiah's imprisonment of the Assyrian faithful tributary, the king of Ekron. There is reason to believe that the Philistines originated in Crete. See A. R. Burn, *Minoans, Philistines, and Greeks* (1930).

Phillip, John, 1817–67, Scottish genre painter. He traveled in Spain and is best known for his paintings of Spanish life, such as *La Gloria* (National Gall., Edinburgh). His *Gossips at the Well* is in the Metropolitan Museum.

Phillips, Samuel, 1752–1802, American educator and statesman, b. North Andover, Mass., grad. Harvard, 1771. He was a member of the Massachusetts provincial congress (1775–80) and a delegate to the state constitutional convention (1779–80) and served in the state senate (1780–1801), except for one year. He is best known, however, as the founder of PHILLIPS ACADEMY at Andover (opened 1778), a leading preparatory school for boys. His uncle, John Phillips, the founder of PHILLIPS EXETER ACADEMY, provided financial backing. Shortly after his inauguration (1801) as lieutenant governor of Massachusetts he died. See C. M. Fuess, *An Old New England School* (1917).

Phillips, Stephen, 1868–1915, English poet and dramatist. His best-known works are the poetic dramas *Paolo and Francesca* (1900), *Herod* (1901), and *Ulysses* (1902).

Phillips, Ulrich Bonnell, 1877–1934, American historian, b. La Grange, Ga., grad. Univ. of Georgia (B.A., 1897, M.A., 1899), Ph.D. Columbia, 1902. After teaching history at the Univ. of Wisconsin (1902–8), he became professor of history and political science at Tulane Univ. (1908–11) and then professor of American history at the Univ. of Michigan (1911–29) and at Yale (1929–34). His doctoral dissertation, *Georgia and State Rights* (1902), received the Justin Winsor Prize from the American Historical Association. An authority on the ante-bellum South, he wrote *A History of Transportation in the Eastern Cotton Belt to 1860* (1908), *The Life of Robert Toombs* (1913), *American Negro Slavery* (1918), *Life and Labor in the Old South* (1929), and *The Course of the South to Secession* (posthumous, 1939). Phillips also edited *Plantation and Frontier Documents, 1649–1863* (2 vols., 1909) and *The Correspondence of Robert Toombs, Alexander H. Stephens, and Howell Cobb* (1913).

Phillips, Wendell, 1811–84, American reformer and orator, b. Boston, grad. Harvard (B.A., 1831, LL.B., 1834). Although he was admitted to the bar in 1834, Phillips, a "proper Bostonian" of first rank, had sufficient income to abandon his law practice and devote his life to fighting for causes inimical to the interests of his class. Revolted by the mobbing (1835) in Boston of William Lloyd GARRISON and prodded by his brilliant young wife, the former Ann Terry Greene, he entered full swing into the abolitionist crusade. His eloquent protest (1837) in Faneuil Hall on the assassination of the abolitionist editor Elijah P. LOVEJOY marked the beginning of his long and distinguished career as a lecturer. Phillips frequently contributed to the *Liberator* and, like its publisher, refused to identify his abolitionism with any political party. He also followed Garrison in other causes, notably woman's rights, but never advocated nonresistance. He was a delegate to the World Anti-Slavery Convention in London (1840), opposed the Mexican War and the annexation of Texas, came to advocate the dissolution of the Union, and aroused considerable hostility by his vehement denunciations of slaveholding. In the Civil War he attacked Lincoln for his moderate stand on emancipation of the slaves and opposed Lincoln's renomination. After the war he succeeded Garrison as president of the American Anti-Slavery Society, keeping it active until the adoption of the Fifteenth Amendment enfranchised Negroes. While most of the victorious crusaders for abolition were content to rest on their laurels, Phillips continued his agitation for social reform, speaking for many unpopular causes—prohibition, the abolition of capital punishment, currency reform (see GREENBACK), and the rights of labor. He was the unsuccessful candidate of the Labor and Prohibition parties for the governorship of Massachusetts in 1870. Phillips's advanced doctrines became indistinguishable from those of Marxian socialism, and he defended the Commune of Paris of 1871 and Russian nihilism. As an orator he was rated with Edward Everett and Daniel Webster; his style, however, was easy and colloquial. See his *Speeches, Lectures, and Letters* (1st series, 1863; 2d series, 1891); bi-

ographies by S. L Austin (1884), Lorenzo Sears (1909), C E. Russell (1914); Ralph Korngold, *Two Friends of Man* (1950).

Phillips. **1** Town (pop. 1,186), W central Maine, NW of Farmington, in a wooded hilly region; settled 1791, inc 1812. Diatomaceous earth is found here. **2** City (pop 1,915), co seat of Price co, N Wis, WNW of Rhinelander, in a river and dairy region, settled 1874, inc 1891.

Phillips Academy, at Andover, Mass, nonsectarian, for boys; opened 1778, chartered 1780 by Samuel PHILLIPS. It is often called Andover and Phillips Andover. It was the model for many later schools, and noted men studied here. Andover Theological Seminary (now part of Andover Newton Theological School at Newton Centre, Mass.) was affiliated from 1808 to 1908, its buildings then passed to the academy. Samuel Francis Smith wrote *America* while he was a student at the seminary. Evening classes for adults were started in 1935. See C. M. Fuess, *An Old New England School* (1917).

Phillipsburg **1** City (pop 2,109), co seat of Phillips co, N Kansas, platted 1872, inc 1880. It is a trade center in a corn-growing area. A rodeo is held annually in August. **2** Industrial town (pop 18,314) NW N J., on the Delaware opposite Easton, Pa., settled 1739, inc 1868. It grew with the iron and steel industry. Peter Cooper introduced the Bessemer steel process here, 1856. Cement, chemicals, and machinery are made in the town.

Phillips Exeter Academy (ĕk'sŭtûr), at Exeter, N H., nonsectarian, for boys, chartered 1781, opened 1783 by John Phillips (see PHILLIPS, SAMUEL). It has been an influential preparatory school, with noted graduates. Edward S. Harkness endowed it in 1931. Ralph A. Cram designed a number of buildings.

Phillips University, see ENID, Okla.

Phillpotts, Eden (fil'pŏts), 1862-, English novelist and dramatist. He left the insurance business for authorship, and his regional novels of Dartmoor have been likened to those of Thomas Hardy. His most famous are *The River* (1902) and *Widecombe Fair* (1913). His other works include poems, mystery novels (e.g., *The Grey Room*, 1921), and the plays *The Farmer's Wife* (1917) and *Yellow Sands* (written with his daughter, 1926). See Charles Meadowcroft, *The Place of Eden Phillpotts in English Peasant Drama* (1924).

Philmont, village (pop 1,679), E N Y., E of Hudson, inc 1892. It has a yarn mill and a county tuberculosis hospital.

Philo (fī'lō) or **Philo Judaeus** (jōōdē'ŭs) [Latin,=Philo the Jew], c 20 B C–A D. c 50, Alexandrian Jewish philosopher. His doctrines had an extraordinary influence on both Jewish and Christian religious writings. Philo was sent to Rome A D. c 40 to represent the Jews of Alexandria in seeking the restoration of privileges lost because they had refused to obey an imperial edict to worship Caligula. *De legatione ad Caium* is a report of his embassy. The works of Philo were partly listed by Eusebius. Only fragments of some are in existence, but much can be sifted out of the early Christian literature, where numerous and ample quotations from his writings are found. He conceived of the Mosaic law as the foundation of philosophy and believed the universe to have been produced by a Creator, living and personal. God, however, created the world indirectly through his potencies or attributes, which exist in the great region between his perfection and infinity and all that is imperfect and finite. All the mediate beings have unity in, and proceed from, the divine Logos, through which God directs all. In the creation of man the Logos had the cooperation of some of the lower mediate potencies. Thus man from the first had within him the possibility of sinning, but, though fallen, he still retains in his soul something of the image of God and through the Logos can receive revelations of God. Philo's doctrine of intermediary beings and the Logos has various parallels in Plato's Ideas and in certain of the New Testament writings. See his works (tr. by F. H. Colson and G. H. Whitaker, 10 vols., 1929–, Loeb Classical Library), E. R. Goodenough, *An Introduction to Philo Judaeus* (1940), H. A. Wolfson, *Philo* (1947).

Philoctetes (fĭlŏktē'tēz), in Greek mythology, king of the Malians of Mt. Oeta. He was the friend of Hercules (for whom he lit the fire on Mt. Oeta) and inherited his bow and poisoned arrows. On the way to the Trojan War, Philoctetes was bitten by a snake, and his companions left him on the desolate island of Lemnos. When an oracle declared that Troy would not be taken without the weapons of Hercules, Philoctetes was brought by Diomed and Odysseus to Troy, where he was healed of his wound by Machaon, son of the physician Asclepius. Philoctetes killed Paris. It is said that after the Trojan War he wandered to S Italy. Sophocles' drama *Philoctetes* is based on the legend.

Philologus (fĭlŏ'lōgŭs) [Gr.,=lover of words], Roman Christian. Rom. 16 15.

philology (fĭlŏ'lŭjē) [Gr.,=love of the word], study of texts, especially to establish correct ones. Classic examples of philology are the work of Richard Bentley and Friedrich August Wolf. In the 19th cent. the term was extended to include the comparative study of languages, which used new methods and had different goals from philology; this was called comparative philology. The word LINGUISTICS then came into general use for the scientific study of language (including comparative linguistics), and the term *philology* fell back into its old restricted use, it is especially used in Latin and Greek studies. See LANGUAGE.

Philomela (fĭlōmē'lŭ), in Greek myth, daughter of King Pandion of Attica and sister of Procne (prŏk'nē). Tereus (tē'rēŭs), a Thracian king, son of Ares, married Procne and had by her a son, Itys or Itylus. Tereus had Procne and married Philomela, whose tongue he cut out to silence her, she told her story in writing. The sisters avenged themselves by killing Itys and serving his flesh to his father. When Tereus set out to kill them, the gods changed all three into birds. Philomela became the nightingale.

Philopoemen (fĭlupē'mŭn), c 252 B C–183 B C., Greek statesman and general, b. Megalopolis. For years he fought as a mercenary in Crete. In 209 B C. he received command of the Achaean cavalry, with which he defeated the Aetolians and Eleans. He next became (208 B C.) commander of the ACHAEAN LEAGUE. He defeated Machanidas, tyrant of Sparta, at Mantinea. Nabis, successor of Machanidas, was driven out of Messene and defeated in Laconia (201–200 B C.) by Philopoemen. When Nabis was assassinated, the Spartans were induced to join the Achaean League (192 B C.), but revolted and were again conquered by Philopoemen (188 B C.). He was captured and poisoned by Messenian rebels. Philopoemen was glorified by his compatriot, Polybius, Plutarch wrote his life.

philosopher's stone see ALCHEMY.

philosophy [Gr.,=love of wisdom], study of the ultimate reality, causes, and principles underlying being and thinking. It has many aspects and different manifestations according to the problems involved and the method of approach and emphasis used by the individual philosopher. This search for truth began, in the Western world, when the Greeks first established (c 600 B C.) inquiry independent of theological creeds. Philosophy is distinguished from theology in that philosophy ignores dogma and deals with speculation rather than faith. Philosophy differs from science in that both the natural and the social sciences base their theories wholly on established fact, whereas philosophy covers the area of inquiry where no facts as such are available, originally, science as such did not exist and philosophy covered the entire field, but as facts became available and tentative certainties emerged, sciences broke away from metaphysical speculation to pursue their different aims. Thus physics was once in the realm of philosophy, and it is only lately that psychology was established as a science apart from philosophy. Philosophy is divided into divisions of speculation, dealing with different topics. Metaphysics, the major province of philosophy, concerns itself with inquiry into the nature of the physical world and the place of the individual in the universe, logic, subdivided into formal and material, probes the nature of knowledge, epistemology seeks to coordinate knowledge and the natural world, ethics is concerned with the morality of the individual and the group, and aesthetics deals with the fundamentals of artistic expression. On another level, divisions in philosophy are made according to the attitude taken by the philosopher toward his subject. Idealism (also called subjectivism) maintains that what is real is in the form of thought rather than material, materialism considers matter and its motions as the universal reality, influencing the abstract, dualism recognized two realities, such as mind and body, spirit and matter; and positivism, most allied to science, refuses to speculate beyond asserting that what is experience exists in itself and is the basis for any action. All these attitudes and divisions were already present in Greek philosophy, and later Western speculation has based itself on the earliest philosophies. Historically, philosophy falls into three large groups—Greek philosophy, which existed primarily as a social function, concerned with improving the city-state and the citizen, medieval philosophy, inseparable from early Christian theology, and, beginning in the Renaissance, modern philosophy, which leans often toward the natural sciences. The first Greek philosophers—the Milesian school consisting of Thales, Anaximenes, Anaximander, and Heraclitus—were concerned with finding the one natural element underlying all nature and being. They were followed by Parmenides, Leucippus, Anaxagoras, Empedocles, and Democritus, all engaged in the same inquiry and developing ever more complex solutions. Socrates was the first to inquire also into social problems, this speculation was carried on by his pupil Plato and Plato's pupil Aristotle at the Greek Academy. Roman philosophy was based mainly on the later schools of Greek philosophy, such as STOICISM, cynicism, or epicureanism. Only Plotinus, the Neoplatonist, connected the great Greek philosophies with emerging Christianity. Arabian thinkers, Avicenna and Averroës foremost among these, managed to preserve Greek philosophy, and especially Aristotelianism, during the period when these teachings had been forgotten in Europe. SCHOLASTICISM, the high achievement of medieval philosophy, was again based, however, on some Aristotelian principles. St. Thomas Aquinas was the foremost of the schoolmen, just as St. Augustine—several centuries his predecessor—was the foremost spokesman for the Church of pure belief. The Renaissance with its new physics and astronomy revolutionised philosophic thought. Francis Bacon introduced the modern scientific inductive method of reasoning. René Descartes is considered the founder of modern philosophy since he was the first to be profoundly affected by the new attitude. Dualism, in a form known as Cartesianism, was once again a feasibility as it had not been since the Greeks. In England empiricism prevailed in the work of Hobbes, Locke, and Hume, as well as with Berkeley, who was the outstanding idealist. Spinoza's pantheistic philosophy was chiefly an ethical one, based on Descartes and Hobbes. Leibniz, though affected by Spinoza, introduced 18th-century realism and inaugurated the German school of philosophy with its transcendental overtones realized in Kant and pronounced in Fichte, Hegel, and Schelling. The romantic movement had its 18th-century beginnings in the philosophy of Rousseau, its 19th-century adherents included the pessimists Schopenhauer and Nietzsche, as well as the American transcendentalists. Opposed to the romanticists was the dialectic materialism of Karl Marx. The evolutionary theories of Charles R. Darwin profoundly affected mid-19th-century thinking. Social—rather, ethical—philosophy culminated in England in the utilitarianism of John Stuart Mill and in France in the positivism of Auguste Comte. The transition to the 20th cent. came with the French Henri Bergson, whose metaphysics can be traced back to Heraclitus. The American William James was the founder of pragmatism, the most important movement of the early 20th cent. This movement was enlarged and elaborated by John Dewey. The first impetus toward it had been given by C. S. Peirce. Among idealists in America, the best known is Josiah Royce; studies in aesthetics were made by Santayana, Irwin Edman, and Susanne Langer. At the same time, in Germany, Husserl and Heidegger developed phenomenalism. Modern Italian philosophers are Giovanni Gentile and Benedetto Croce, in France, the conservative Jacques Maritain is best known. The newest modern movement, and most important, is that of logical analysis of science. This movement, which is closely allied to modern mathematics, was developed by Bertrand Russell and A. N. Whitehead in England. In Oriental thought it is difficult to make a distinction between philosophy and religion—see BUDDHISM, CONFUCIANISM, HINDUISM, JAINISM, SHINTO, TAOISM, VEDANTA. See W. P. Montague, *The Ways of Things* (1940), C. E. M. Joad, *Great Philosophers of the World* (1928), J. H. Randall, *Philosophy an Introduction* (1942), B. A. G. Fuller, *A History of Philosophy* (1945), Bertrand Russell, *A History of Western Philosophy* (1945), H. G. Townsend, *On the History of Philosophy* (1946).

Philostratus (flavius Philostratus), (fĭlŏ'strutus, fīlā'vēus), fl. c 217, Greek Sophist, called the Athenian. He wrote an excellent *Life of Apollonius of Tyana* (a philosopher) and *Lives of the Sophists*.

Philotas (fĭlō'tus), d. 330 B C., Macedonian general of Alexander the Great, son of PARMENION. He campaigned in Thrace and Illyria and commanded the elite corps of cavalry. Accused of being privy to a plot against Alexander, he was executed.

Philoxenus (fĭlŏk'sunus), c 436–380 B C., Greek dithyrambic poet, b. Cythera. In Syracuse, imprisoned by Dionysius (out of whose good graces he had fallen, perhaps because of an intrigue with Dionysius' mistress), he wrote his *Cyclops*, mocking the emperor. *Cyclops* (fragments of which remain) utilized a solo to the lyre—an innovation in the dithyramb.

Phinees (fĭ'nēus), variant of PHINEHAS.

Phinehas or **Phinees** (both fĭ'nēus) **1** Grandson of Aaron. His prompt punishment of two flagrant sinners made his name a symbol of holy, zealous indignation. Ex 6 25, Num 25, 31 6, Joshua 22 13, 24 33, Judges 20 28, 1 Chron 6 4,50, 9 20, Ezra 7 5, Ps 106 30, Ecclus 45 23, 1 Mac 2 26,54. **2** One of Eli's sacrilegious sons: see HOPHNI. **3** Father of a priest. Ezra 8 33.

Phippsburg, town (pop 1,020), SW Maine, at the mouth of the Kennebec S of Bath, inc. 1814. The town includes the resort Popham Beach at the end of a peninsula. Phippsburg was in 1607 the site of Fort St. George, a colony sent out by the Plymouth Company and led by George POPHAM. Destroyed by the Indians, it was resettled c 1737. Fort Popham, begun in 1861, was never completed.

Phips, Sir William, 1651–95, American colonial governor. Born in what is today Maine, he was a carpenter and shipbuilder in Boston and became interested in sunken treasure. His second hunt for treasure, which was financed by Christopher Monck, 2d duke of Albemarle, was astonishingly successful (1687). Phips recovered some £300,000 worth of Spanish gold. His fortune made, he became provost marshal general at Boston. He

supported Increase MATHER in the fight against Sir Edmund Andros for restoration of charter government in Massachusetts, which ended with the overthrow of Andros In King William's War (see FRENCH AND INDIAN WARS) Phips led (1690) the expedition that took Fort Royal (now Annapolis Royal) but failed to take Quebec, and he was also involved in the expedition against Montreal that failed He was made first royal governor of Massachusetts through the influence of Increase Mather and took office in 1692 In the great witchcraft mania, he appointed a commission to try those accused of witchcraft Many disputes won him enemies, and in 1694 he was called to London to answer charges, but he died before hearings began The name is also spelled Phipps The biography by Cotton Mather (ed by Carl Van Doren, 1929) is, naturally, biased See biographies by H O Thayer (1927) and Alice Lounsberry (1941), C H Karraker, *The Hispaniola Treasure* (1924)

Phiz, see BROWNE, HABLOT KNIGHT

Phlegethon (flĕ'guthŏn), river of fire in Hades

Phlegon (flē'gŏn) [Gr, =burning], Christian at Rome, Rom 16 14

Phlegraean Fields (flĭgrē'un), fertile volcanic region, Campania, S Italy, W of Naples It is rich in mythological associations In Roman times the cities of Cumae, Baiae, and Puteoli were fashionable watering places Some craters still emit sulphurous vapors and mineral waters

phloem, see BAST

phlogiston theory (flŏjĭ'stun, -stŏn) of combustion was advanced by J J Becher (in the late 17th cent) and extended and popularized by G E Stahl The theory stated that in all materials which burn there is present phlogiston, a substance without color, odor, taste, or weight, and that this phlogiston is given off in burning "Phlogisticated" substances are those which contain phlogiston and which, on being burned, are "dephlogisticated" The ash of a burned material was held to be the true material The theory received strong and wide support throughout a large part of the 18th cent until it was overthrown by the work of Lavoisier Priestley defended the theory throughout his lifetime Cavendish remained doubtful, but most other chemists of the period, including Berthollet and Kirwan, rejected it Lavoisier revealed the true nature of combustion

phlox (flŏks), any plant of the genus *Phlox*, annual and perennial herbs native to North America and Russian Asia, widely cultivated as garden flowers Garden phloxes are usually showy with terminal masses of flowers from white to shades of red and pink, delicately fragrant Annual garden phloxes are mostly derived from *Phlox drummondii*, a native of Texas from which a number of color forms have been developed with a long blooming season Most phloxes are perennial, they are often tall, but a few are low creeping plants, e g, the ground or moss pink (*Phlox subulata*), native to the E United States and a favorite evergreen for rock gardens, which it blankets with flowers in the early spring The wild sweet William (*Phlox divaricata*) is a common eastern wild phlox

Phocaea (fōsē'ù), ancient city, W Asia Minor, N of Smyrna. It was northernmost of the Greek Ionian cities. It grew into a maritime state, its chief colony was Massilia (Marseilles) In 540 B C, in a siege by the Persians, most of the inhabitants left, going mainly to Elea in Italy The city never recovered from the loss The location is now Foca

Phocion (fō'shŭn), c 402–318 B C, Athenian general He served successfully against the forces of Philip of Macedon—in Euboea (348 B C) and at Byzantium (339 B C), when he forced Philip to abandon his siege of that city In Athens, Phocion was a leader of the peace party and urged conciliation with the Macedonians, in this he was opposed by Demosthenes, whose surrender by the Athenians was demanded by Alexander Phocion urged compliance with the demand, but when the Athenians refused, he led a successful embassy of conciliation to Alexander In the turmoil following the death of Antipater (319 B C) Phocion intrigued with Cassander Later, when the Athenian democrats won, they forced him to drink hemlock, but repented after his death and raised a statue in his honor

Phocis (fō'sĭs), ancient state, central Greece It included Delphi, Mt Parnassus, and Elatea, Thermopylae was to the northwest, Boeotia was on the east, and the Gulf of Corinth was on the south After the Sacred War of c.596 B C. ("sacred" because it involved the oracle), Phocis lost control of Delphi to a council of states With Athenian help Phocis regained hold of the oracle in 457 B C Early in the next century Phocis passed under Theban control The Sacred War of 356–346 B C began with Phocis trying to reestablish itself and ended with the victory of Philip II of Macedon, who thereby became arbiter of Greece

Phocylides (fusĭ'lĭdēz), fl early 6th cent. B C, Greek gnomic poet, b Miletus His moral epigrams exist in fragments

Phoebe (fē'bē), in Greek mythology **1** Titaness, daughter of Gaea, wife of Coeus, mother of Leto and Asteria, and grandmother of Artemis. According to one story Phoebe succeeded her mother as patroness of the Delphian oracle. **2** Name given to Artemis as goddess of the moon.

Phoebe, in the Bible see PHEBE.

phoebe, small migratory bird of the flycatcher family, native to North America. The eastern phoebe or water pewee is brownish gray on the upper parts, with the head darker and slightly crested, and the under parts pale yellow and gray It perches on a branch, preferably near a stream, characteristically flicking its tail up and down and from side to side It flits from its perch to catch passing insects Wherever there is an overhead shelter, under bridges or against buildings, the phoebe will make its nest of mud and grass Bird lice often infest the nest Say's phoebe, the black phoebe, the San Jose phoebe, and the San Lucas phoebe are western birds

Phoebus: see APOLLO

Phoebus (fē'bus), residential and fishing town (pop 3,503), SE Va, on Hampton Roads ENE of Newport News, settled c 1840, inc. 1900.

Phoenicia (fĭnē'shŭ, fĭnĭ'shŭ), territory occupied by the peoples of Phoenician civilization Because the city-states of the Phoenicians were not continuous, the name is a vague one geographically and may be used to mean all those spots on the shores of the E Mediterranean where the Phoenicians established colonies More often it is used for the heart of the territory where the great Phoenician cities, notably Tyre and Sidon, stood The core of this region roughly was the coast of present-day Lebanon The region was included in the general heading of Syria in ancient times Phoenicia also appears as Phenice and Phenicia

Phoenician civilization. Some time at the dawn of history in the Middle East, a people speaking a Semitic language moved westward and occupied the coast of the E Mediterranean This may have been as early as 2000 B C Certainly by 1250 B C the people who have come to be known as Phoenicians were well established as the navigators and traders of the Mediterranean world, enjoying the commerce that had once been apparently in the hands of the Minoans of Crete The Phoenicians were organized in city-states The greatest of these were Tyre and Sidon Others were Tripoli, Aradus, and Byblos These were the home cities, but where the Phoenicians ranged across the Mediterranean they founded posts and colonies, which later became independent states Of these the most important were Carthage and Utica, and the connections with the parent city lasted long, Carthage seems to have paid a form of rent to the Phoenicians as late as the 6th cent B C The Phoenicians had a language and culture like those of other Semitic peoples in the general area and may be said to have been identical with the Canaanites of N Palestine except for the development of their seagoing culture They worshiped fertility gods and goddesses generally denominated by the terms *Baal* and *Baalat*, sacrifice of the first-born, both of humans and of animals, was practiced. Astarte and Adonis were also known The Phoenicians were more or less under the intermittent influence and control of the Egyptians, but with the weakening of Egyptian power in the 12th cent, Phoenician seamen came to dominate the Mediterranean They went out to the edges of the known world, trading briskly from the Iberian Peninsula to the Dardanelles They may have sailed as far as the British Isles and have obtained tin there, though there is some question as to this There is evidence that in Egyptian service they may have sailed down the western coast of Africa, and possibly their little ships even rounded Africa and reached the East Indies Their carrying trade was enormous, and their wares were varied They had a monopoly on the great cedars of Lebanon from their homeland, they manufactured glassware and metal articles, and they colored cloth the famous Tyrian purple with dye obtained from shellfish They were skilled architects. Phoenician artisans were imported by the Egyptians, and Hiram, king of Tyre, lent assistance to Solomon in building The greatest contribution of the Phoenicians to Western civilization was, however, the invention of an alphabet, an idea taken over by the Greeks, the use of symbols for sounds in place of clumsier cuneiform and hieroglyphic was a tremendous advance The great Phoenician cities were well defended and had natural advantages for defense The Phoenicians were, therefore, able to withstand most of the attacks of the Assyrian kings. To the tolerant empire of the Persians, however, they submitted in the 6th cent. B C, keeping their own autonomy but gradually being absorbed more and more in the Persian pattern. Phoenician sailors, architects, and craftsmen were all prominent in Persian service. They also served elsewhere, however, and Phoenician ships were in the Greek navy that defeated Xerxes I at Salamis. The individuality of the Phoenician cities was dwindling, and with the rise of Greek naval and maritime power, the importance of the Phoenicians disappeared They were, however, able in the 4th cent to offer serious resistance to Alexander the Great, who was able to take Tyre only after a long and hard siege (333–332 B.C.) After that time and into Roman days the cities remained important and had some autonomy, but Hellenistic culture had eliminated the last traces of Phoenician civilization See George Rawlinson, *History of Phoenicia* (1889); A. T. Olmstead, *History of Palestine and Syria* (1931)

Phoenix, John, see DERBY, GEORGE HORATIO.

Phoenix (fē'nĭks), Crete see PHENICE **2**.

Phoenix (fē'nĭks). **1** City (pop. 65,414), state capital, and co seat of Maricopa co, S central Ariz, on the Salt river, founded 1867, inc 1881 Though it has drawn somewhat on the mining and ranching of the surrounding desert and mountains, Phoenix was primarily dependent on irrigated agriculture before it succeeded (1889) Prescott as territorial capital and is today the center of the prodigally rich SALT RIVER VALLEY The sunny climate, though hot in summer, has made the city a winter resort and a health resort, with much tourist trade and with opulent winter residences, many in modified Spanish style Near by is Frank Lloyd Wright's "Taliesin West" Points of interest include the Arizona Museum, the Heard Museum, La Ciudad [the city], remains of an old Indian pueblo, a U S Indian school, and, outside the city, huge South Mountain Park, with an active gold mine An annual rodeo features Old West atmosphere **2** Village (pop 2,875), NE Ill, residential suburb of Harvey S of Chicago, inc 1900 **3** Village (pop 1,757), central N Y, on the Oswego river and the Barge Canal and NW of Syracuse, inc 1849 Paper and chairs are made

phoenix (fē'nĭks), fabulous bird of Egypt It was sacred to the Egyptian sun-god and was worshiped at Heliopolis According to legend, the phoenix lived in Arabia, when it reached the end of its life's span (500 years), it burned itself on a pyre From the ashes a new phoenix arose The phoenix as a symbol of death and resurrection has been a favorite metaphor in pagan and Christian literature

Phoenix Islands, group of eight coral islands (11 sq mi, pop. 984), central Pacific, 700 mi N of Samoa. The most important are CANTON ISLAND and Enderbury Island, which were placed (1939) under Anglo-American control The other islands were annexed (1947) to the GILBERT AND ELLICE ISLANDS colony, belonging to Great Britain The islands, formerly worked for guano, now produce copra The group was visited by an expedition in 1937 to study the solar eclipse Phoenix Island (3 sq mi) is the most fertile of the group, it was discovered in 1859 by American traders

Phoenixville (fē'nĭksvĭl), industrial borough (pop 12,282), SE Pa, on the Schuylkill and NW of Philadelphia, settled 1720, inc 1849 It produces pig iron and textiles Valley Forge is near here Phoenixville was the most western point in the state reached (1777) by the British during the Revolutionary War The Valley Forge General Hospital for veterans was built in 1942

phonetics (fōnĕ'tĭks, fu–) and **phonemics** (fōnē'mĭks, fū–), system of sounds of language, studied from two basic points of view Phonetics is the study of the sounds of language according to their production in the vocal organs (articulatory phonetics) or their effect on the ear (acoustic phonetics) All phonetics is interrelated because human articulatory and auditory mechanisms are uniform Systems of phonetic writing are aimed at transcribing accurately any sequence of speech sounds, the most famous is the International Phonetic Alphabet Each language uses a limited number of the possible sounds and the hearer-speaker is trained from childhood to classify them into groups of like sounds, rejecting as nonsignificant all sorts of features actually phonetically present So the English speaker does not know that he always makes a puff of air when he pronounces the *p* of *pin* and never makes the puff with the *p* of *spin*; for him they are the same sound Yet in some languages (as in India) just the presence or absence of that puff in both words would make the sounds different, and two words might differ in meaning because of the puff In English there is no phonemic difference between the two sounds, which belong to one group of like sounds, the phoneme *p*. In the other situation aspirated *p* (*p* with a puff) and unaspirated *p* are separate phonemes Phonemes include all significant differences of sound, including features of ACCENT, pitch, intonation, pauses, and the like The study of the phonemes and their arrangement is the phonemics of a language See GRAMMAR, LANGUAGE, WRITING See Leonard Bloomfield, *Language* (1933), Daniel Jones, *An Outline of English Phonetics* (1940), Bernard Bloch and G L Trager, *Outline of Linguistic Analysis* (1943), Martin Joos, *Acoustic Phonetics* (1948).

phonograph, device for reproducing sound waves which have been recorded in a spiral groove on a cylinder or disk As the record revolves, a needle traverses the grooves and transmits the vibrations to any of various types of mechanism by means of which a reproduction of the original sound eventually emerges from an amplifier. Sound waves had been recorded in the middle of the 19th cent, but Thomas A. Edison in 1877 built the first machine which would reproduce the recorded sound. His records were wax cylinders upon which a groove

of unvarying direction but varying depth was cut, a method later known as "hill-and-dale" recording In 1887 Emile Berliner invented the disk record (patented in 1896) with grooves of unvarying depth but varying direction His machine he called the gramophone, the name by which the phonograph is called in England, and his method became known as lateral recording Berliner also invented the matrix record, from which unlimited duplicate recordings could be pressed In these early recordings the sound was directed into a horn, which by means of a diaphragm transmitted the vibrations directly to the stylus that cut the groove. Only a limited frequency range and part of the overtones could be recorded, and orchestral recording, not attempted until c 1913, was very unsatisfactory Threatened with being made obsolete by the radio, the phonograph began to regain its place after 1925 with the development of electrical methods of recording and reproduction In 1948 several companies began to issue records made to revolve at slower speeds, thus lengthening the amount of material which could be recorded on a single disk Besides musical performances, the phonograph is used to reproduce sound effects for radio and the theater, transcriptions of radio broadcasts, "talking books" for the blind, and lessons for language study The dictaphone is a kind of phonograph for recording dictation and reproducing it for a typist The "juke box" is a coin-operated phonograph capable of playing by automatic selection about 20 records Its great popularity arose in the 1930s, but its history dates from the early part of the century with the coin-operated phonographs in the penny arcade See L H Hughbanks, *Talking War* (1945)

Phorcus (fôr'kus), in Greek mythology, god of the sea He was the son of Gaea and Pontus, the husband and brother of Ceto, and the father of the Gorgons, the Sirens, and Scylla

phosphate, salt of PHOSPHORIC ACID Deposits of phosphates occur throughout the world, especially in Europe (the British Isles and the Continent), Algeria, Central America, and the United States (Florida, Georgia, Idaho, South Carolina, Tennessee, Wyoming, and Utah) The most abundant and important phosphate is calcium phosphate, which makes up the larger part of so-called phosphate rock Although not itself suitable, because of its slight solubility, to be used by plants as a source of the phosphorus necessary for life, from it are prepared the enormous quantities of the soluble acid calcium phosphate used for making fertilizers When the calcium phosphate is treated with sulphuric acid, a mixture of the acid calcium phosphate and calcium sulphate results which is known as SUPERPHOSPHATE OF LIME in the fertilizer industry Trisodium phosphate is employed as a cleaner and for softening water Disodium phosphate is used to some extent in medicine This acid phosphate of sodium is used in preparing some baking powders Various other acid phosphates, e g , those of calcium, magnesium, and sodium, are sometimes present in the soda-fountain "phosphate" Sodium and magnesium are present with the ammonium radical in sodium ammonium phosphate (called microcosmic salt and used in chemical analysis) and magnesium ammonium phosphate Several reagents are used in testing for the presence of a phosphate in solution Silver nitrate gives a yellow precipitate when certain phosphates are present and a white precipitate for others Magnesium chloride and ammonium hydroxide give a white precipitate

phosphorescence (fŏsfurĕ'sŭns) or **luminescence** (lōōmĭnĕ'sŭns), in the general sense, the property of emitting light without perceptible heat Phosphorescent phenomena are believed to result from the motion of electrons, they are classified according to the method of producing this motion Kinds of phosphorescence include chemiluminescence, produced by certain chemical reactions, chiefly oxidations, at low temperatures, electroluminescence, produced by electric discharges, which may appear when silk or fur is stroked or when adhesive surfaces are separated, and triboluminescence, produced by rubbing or crushing crystals Luminescence may be caused also by the absorption of radiant energy by certain substances, it is known as FLUORESCENCE if the phenomenon ceases when radiation is discontinued If this type of luminescence continues after the radiation causing it has ceased, it is called phosphorescence (although this term is commonly synonymous with luminescence, it is restricted by physicists to this form of luminescence) Luminescence emitted by living organisms (bioluminescence) is believed to result in many cases from chemical reactions occurring in the organism. The phosphorescence observed in the sea is produced by living organisms, many of them microscopic, that collect at the surface Luminous fungi produce luminescence on the surface of rotting wood, and luminous bacteria may appear on decomposing flesh Glowworms, fireflies, and many deep-sea fish have organs that produce phosphorescence. See E. W. Harvey, *Living Light* (1940)

phosphoric acid (fŏsfŏ'rĭk, -fō'rĭk). Three different phosphoric acids are known, all of which are derived from phosphorus pentoxide by the addition of water They can be distinguished from one another on the basis of the number of water molecules needed. The prefixes meta-, pyro-, and ortho- are used to indicate this distinction, metaphosphoric acid is essentially the result of the addition of one molecule of water to one of phosphorus pentoxide, pyrophosphoric acid, of two molecules of water, and orthophosphoric acid, of three molecules of water All the acids are, however, phosphoric acids and their salts are all phosphates The salts are also distinguished by use of the same prefix as that of the specific acid from which they are derived Orthophosphoric acid is the ordinary phosphoric acid and is commonly called simply phosphoric acid Its molecule consists of three atoms of hydrogen and the phosphate radical (one phosphorus and four oxygen atoms, $-PO_4$) It appears both as a crystalline (rhombic) solid and as a thick liquid It has a specific gravity of 1.834, melts at 42 3°C , and is soluble in alcohol and extremely so in water It is prepared commercially from phosphate rock (calcium phosphate) by heating with sulphuric acid, but the pure acid is obtained by treating red phosphorus with nitric acid It is used in the laboratory and in medicine in the form of salts It forms three types of salts (primary, secondary, and tertiary salts)

Phosphorus see LUCIFER

phosphorus (fŏs'furus), nonmetallic chemical element (symbol=P, for physical constants, see ELEMENT, table) Phosphorus exhibits ALLOTROPY, appearing in three forms, the difference in the forms resulting apparently from differences in the molecular structure One form, white phosphorus, is an extremely poisonous (for antidote, see phosphorus under POISONING, table), yellow to white, waxy, solid substance melting at 44 1°C , boiling at 280°-C , and having a density of 1 83 g per c c at ordinary temperatures It is insoluble in water, but soluble in carbon disulphide When exposed to air it ignites spontaneously at 35°C , and for this reason it is kept under water It glows in the dark at low temperatures Because of its extremely poisonous nature and tendency to catch fire, white phosphorus must be handled with great care, an extremely small dose is fatal, and it can cause severe burns When heated out of contact with the air to over 250°C , it changes to another form of phosphorus which, because of its color, is called red phosphorus This allotropic form of the element appears as a dull, reddish-brown crystalline powder and is heavier than the white phosphorus, having a density of 2 2 g per c c It changes directly into a vapor Red phosphorus is insoluble in carbon disulphide and other solvents for white phosphorus It does not glow in the dark and, because it does not ignite at ordinary temperatures (it is less active than white phosphorus), need not be kept out of contact with the air It is not poisonous Another form of phosphorus, called black phosphorus because of its dark color, is known, it was prepared from white phosphorus by P W Bridgman through heating the white form under a pressure of 1,200 kg per square centimeter at a temperature of 200°C It has a density of 2 69 g per c c at ordinary temperatures There are a number of compounds of phosphorus With oxygen the element forms several oxides, the most important being the pentoxide, a white, powdery substance produced when either white or red phosphorus burns in air or oxygen A molecule of it consists of two phosphorus atoms and five oxygen atoms From this oxide is derived PHOSPHORIC ACID, the salts of which are the important PHOSPHATE compounds From another oxide, phosphorus trioxide, having a molecule of two atoms of phosphorus and three atoms of oxygen, is obtained phosphorous acid Phosphorus combines with the halogens to form compounds called halides With hydrogen it forms, among other compounds, a colorless, poisonous gas, phosphine It combines also with various other nonmetals and also with some metals Because of its chemical activity phosphorus does not occur free (i e, uncombined) in nature, but is found abundantly in certain compounds, e g , calcium phosphate There are large deposits of phosphate rock in various parts of the world Phosphorus is present in animals, especially in the bones, teeth, and nervous tissue, and in various parts of plants It is a constituent of the fundamental living substance, protoplasm, and is, therefore, necessary to life As a result, compounds containing it are essential in the food of living things It is supplied to plants in an available form in fertilizers The important industrial use of phosphorus is in the manufacture of matches The fact that phosphorus burns in air to form dense white clouds of the pentoxide is utilized in the laying down of smoke screens in warfare Phosphorus is employed in poisons for rodent pests In metallurgy it is used sometimes as a deoxidizing agent and also in certain alloys, such as phosphor bronze Phosphorus is prepared commercially in the electric furnace from phosphate rock, and it is also obtained from phosphates by the action of sulphuric acid The element was discovered in 1669 by Hennig Brandt (or Brand), an alchemist, who prepared it from urine, the only source known until 1775, when it was obtained by Scheele from bones

Photius (fō'shus), c 820–892?, Greek churchman and theologian, patriarch of Constantinople, b Constantinople He came of a noble Byzantine family Photius was one of the most learned men of his time, a professor in the university at Constantinople, and, under MICHAEL III, president of the imperial chancellery He was a leader of the orthodox who wished to treat indulgently the repentant iconoclasts, the head of the sterner orthodox was the patriarch, St IGNATIUS OF CONSTANTINOPLE In 858 Ignatius was forced from the patriarchate, and Photius, a layman, was chosen to fill his place He was rushed within a week through the orders necessary, a procedure uncanonical, but not without precedent In 861 the legates of Pope St NICHOLAS I approved the election of Photius, but the pope refused to recognize him In 867 Photius retaliated by calling a synod which challenged the rights of Rome in Bulgaria, questioned certain Latin practices, particularly the proposed inclusion of the *filioque* phrase in the CREED, and, finally, challenged the pope's right to judge the canonicity of the election of the patriarch Nicholas died without learning of this When BASIL I became Byzantine emperor (867), Photius stepped down and St Ignatius became patriarch again Two years later Photius was condemned (see CONSTANTINOPLE, FOURTH COUNCIL OF) Later, Photius was reconciled with Basil and Ignatius, and on the death of Ignatius he again became patriarch (877) Pope JOHN VIII recognized him as patriarch and sent legates to a synod, held in 879–80, which the ORTHODOX EASTERN CHURCH regards as an ecumenical council This synod affirmed that Photius had been legally elected, nullified those synods which had condemned Photius, ruled against laymen being elevated to the episcopacy, and agreed that Constantinople would relinquish authority in Bulgaria The acts of this council were apparently approved by John VIII ,but without any retraction of his predecessors' condemnations Photius continued as patriarch until the accession of LEO VI in 886, when he was forced to resign under imperial pressure, he died in exile Photius is a figure of controversy In later years the deep cleavage between East and West was reckoned from the schism of Photius This may be unfair, for Photius was not the obdurate rebel against papal claims that has been pictured in both East and West He is venerated as a saint by the Orthodox East Many of his letters, homilies, and dogmatic and polemical works are extant His *Myrobyblion* or *Bibliotheca* contains quotations from lost Greek writings See J H Freese, *The Library of Photius* (1920), Francis Dvornik, *The Photian Schism* (1948)

photoelectric cell or **phototube,** electron tube in which one of the two electrodes emits electrons as a result of irradiation by ordinary visible light or by ultraviolet or infrared rays Heinrich Hertz discovered the photoelectric or photoemissive effect, many other scientists contributed to the understanding of photoemission and its applications There are two main kinds of photoelectric cells—the vacuum type (those that are highly evacuated) and the gas type (those in which an inert gas, e g , argon, has been introduced) The form of the photoelectric cell varies according to the purpose for which it is designed A commonly used form consists of an enveloping glass tube within which is a cathode made of a half-cylindrical piece of metal (usually silver or silver-plated copper) coated with a photoemissive substance (often cesium or cesium oxide), the other electrode, the anode, is commonly a single upright wire Another type of photoelectric cell has a coating of a thin film of cesium or other photoemissive substance on the inside of the glass tube, a small portion of the glass being left uncoated in order to admit light, the anode in this case is usually a loop of wire (often nickel or copper), placed near the middle of the cell In addition to cesium, certain other substances can be used to emit electrons under the stimulus of light, these include sodium, potassium, lithium, and rubidium Only a slight current is produced in a photoelectric cell in response to the effect of light Therefore, when the photoelectric effect is utilized, a battery is connected with the tube so that the cathode (or electron emitter) is joined to the negative terminal and the anode is made positive by its connection with the positive terminal and therefore attracts the electrons Thus the photoelectric cell can be used in the capacity of a switch, causing an electric device to operate when light stimulates the flow of electrons comprising the current and turning it off when the light source is cut off This principle has applications in the "electric-eye" devices used as burglar alarms and door openers and for counting and sorting products In addition to their numerous other uses, photoelectric cells—termed phototubes in this sense—form an integral part of sound-reproducing and television apparatus

photoengraving, photomechanical process in the graphic arts, used principally for reproducing illustrations The subject is photographed, the image being recorded on a sensitized metal plate, which is then etched in an acid bath. In the case of line

cuts (drawings in solid blacks and whites without gradations of color), the photoengraving is done on zinc, and the result is called a zinc etching In the case of half-tone cuts, the work is done on copper. The half-tone effect is accomplished by photographing the subject through a wire screen, which breaks the light rays so that the metal plate is sensitized in a dotted pattern, the larger dots creating the darker areas, the smaller dots the high lights The finer the screen, the greater the precision of detail in the printed product Half tones made with a screen having 65 lines to the inch are considered coarse Those having 150 lines to the inch are considered fine

photogrammetry see AERIAL PHOTOGRAPHY

photography, science and art concerned with the forming and the fixing of an image on a film or a plate made sensitive to the effects of light The earliest known form of camera is the camera obscura (see CAMERA) or pinhole camera, the principles of which were set forth in unpublished manuscripts of Leonardo da Vinci Leonardo explained how a small hole, drilled in the wall of a room or a building, would cause the formation, on the wall facing the hole, of an inverted image of an illuminated object or scene outside of the room This description remained unknown for several centuries, and Giambattista della Porta, who probably did not know of Leonardo's discovery, is generally credited with the first clear presentation of the use of the camera obscura in his widely read *Magiae Naturalis*; Porta introduced a concave mirror for producing the image The device was often used by artists for tracing scenes In his time a room was generally adapted for use as a camera obscura, but portable forms were soon employed The history of the development of light-sensitive surfaces capable of producing and retaining an image begins with the discovery (1727) by Johann Heinrich Schulze, as a result of careful experiments with silver nitrate, that darkening of silver salts is caused by the effects of light and not by heat In 1757 Giacomo Battista Beccaria, known as Beccarius, discovered that silver chloride is sensitive to light Earlier experimenters knew something of the properties of silver salts, but their work was inconclusive. The experiments of Schulze were extended in the years following, and silver nitrate came to be used for producing designs on bone, marble, and white agate William Lewis, in a volume on the history of colors (London, 1763) described these uses Later Thomas, a son of Josiah Wedgwood, influenced by the work of Schulze and Lewis and probably by Joseph Priestley, began to experiment in photography, in a dissertation prepared with Sir Humphry Davy, which appeared in 1802, is a description of Wedgwood's method of reproducing, on a surface of white leather or white paper sensitized with silver nitrate or with silver chloride, paintings or silhouettes originally made on glass Davy contributed to photography by his production of silver iodide, later used by Daguerre and Niepce and also by Talbot, Davy also discovered (1802) a method of projecting images by photography Wedgwood and Davy did not pursue their work in the field far enough to discover a medium for fixing the images permanently on the silver-coated surface A solution to the problem lay, however, in an earlier discovery by Carl Wilhelm Scheele that ammonia liberates silver chloride from the photochloride darkened by light and that the ammonia precipitates the black metallic silver formed by the action of light In the following decades many chemists and physicists who investigated properties and behavior of chemical elements and compounds and of light made discoveries that contributed in some way to the development of photography Sir John Herschel discovered and described (1819) hyposulphites, but the possibility of the use of sodium hyposulphite as a fixative for silver chloride was not realized until Herschel pointed out its value when daguerreotypy became known in 1839 Joseph Nicephore Niepce is credited with making the first photograph by exposure of a light-sensitive surface within a camera, there is considerable evidence that this was accomplished in 1822 Niepce conducted photographic experiments over many years, in 1829 he began a collaboration with Louis J M Daguerre for the purpose of improving photographic methods After the death of Niepce in 1833 his son Isidore Niepce became Daguerre's partner In 1837 Daguerre discovered that an image formed on a silvered metal plate coated with a thin film of silver iodide could be developed in the presence of mercury vapor, it was agreed that the process be named for Daguerre, and the photographs came to be known as daguerreotypes Daguerre and Niepce were unable to sell shares to promote the use of the process and so, in 1839, through François Jean Arago, the invention was disclosed to the French Academy of Sciences, and in the same year the rights to the process were purchased by the French government and given to the world Cameras for making daguerreotypes were soon produced on a commercial scale The word *photography* became widely known after its use, in 1839, by Sir John Herschel, research indicates that its use by a German newspaper antedated Herschel's introduction of it by a few days, however In America, John W. Draper and Samuel F B Morse promoted the use of the daguerreotype, which achieved great popularity. At first the process, because of the long exposure required, was used only for landscapes and for architectural and other inanimate objects, but later it was applied to portrait making Draper is believed to have made the first portrait by daguerreotypy in 1839, using a long exposure (said to have been a half hour) The coloring of daguerreotypes was probably practiced as early as 1840 Later inventors developed more sensitive coatings and better lenses Tintypes also became popular in the 19th cent To William Henry Fox Talbot is credited the introduction of a practical method of photography in which a negative image was formed within the camera on a light-sensitive paper from which positive images or prints could be made Talbot later modified the process and applied the name calotype and afterward talbotype to it, he employed paper coated with silver iodide and developed in gallic acid, he applied for a patent on the process in 1841 Some of his early experiments are described in *The Pencil of Nature* (1844), which he illustrated with paper negatives made by the calotype process The introduction of the wet collodion process replaced earlier processes of photography Frederick Scott Archer is credited with making this process practicable (1851) Claims to credit for invention of the process were also made by Gustave Le Gray in France and Robert J Bingham in England Despite the difficulties of transporting darkroom facilities to the scene, many notable photographs were made by the wet collodion process during the 1850s and 1860s, these included alpine landscapes and war scenes An American photographer, Mathew B Brady, made thousands of photographs of Civil War scenes Others in the United States who made notable early photographs included T H O'Sullivan, Alexander Gardner, John K Hillers, Ferdinand Vandiveer Hayden, and William Henry Jackson Early action photographs were made by Eadweard Muybridge, Thomas Eakins, and Jules Étienne Marey During the second half of the 19th cent stereoscopic photography was popular, paired prints were observed through a stereoscope in order to obtain a three-dimensional effect Twin-lens cameras were developed for taking the pictures Their use has been revived in recent times By the 1850s photography had begun to develop into an art concerned with portraiture and with architectural and landscape photography In the late 1850s, in England, Henry Peach Robinson did much to promote photography through his writings as well as his many art photographs, his style, however, in much of his photographic work suggested artificiality and imitated paintings Oscar G Rejlander was a pioneer in taking portraits depicting facial expressions Peter Henry Emerson in England encouraged naturalism in photography Among those whose work represents the best in early photographic achievement are Alfred Stieglitz and Edward J Steichen Numerous others contributed to the growth of the photographic art, these include Charles Sheeler, Paul Strand, Edward Weston, and Clarence H White Jacob Riis made early photographs of slum areas, later Dorothea Lange and Margaret Bourke-White depicted the lot of itinerant agricultural workers Berenice Abbott became known especially for her recording of scenes in New York city and for her portraits Photographic exhibitions date from the time of the early ventures in the art, and these served as a stimulus to its development Photography assumed importance not only as an art but also as a medium for preserving a record of historical events, for illustration of books, periodicals, newspapers, and advertising matter, for documentary material to be used as propaganda and for other purposes, for teaching, e g , in medical education as well as education for certain manual skills, and for numerous other purposes For decorative purposes photomurals came into use, these are greatly enlarged photographs, often of landscapes, used as wall decoration Various photographic "tricks" are sometimes employed to create a desired effect, among them the making of composite pictures known as montages These can be produced either by projecting a number of negatives on one piece of paper or by pasting together a number of prints which are then rephotographed To achieve the desired effect the images are either blended together or allowed to remain as separate pictures related by means of the pattern or design With the development of many different styles of cameras and of many kinds of film, photographic equipment became adaptable to all kinds of situations Both the wet and dry collodion plates used in early work were impractical because of their fragility, because they had to be used while moist, and because the equipment that had to be transported was extremely heavy and bulky. In 1884 George Eastman introduced a roll film consisting of a paper covered with a gelatine silver-bromide emulsion; in 1888 a transparent nitrocellulose base replaced the paper. The daylight-loading roll-film camera came into use in 1891. Many kinds of film are now in use. The box camera, folding hand camera, and miniature cameras employ roll film; the film is wound on a spool, and for various cameras the size of the negative varies. The number of exposures ranges from 6 to 36. For cameras having a ground-glass plate on which the image is focused, film pack is used; film pack consists of a light-tight box in which separate pieces of cut film (commonly 12 pieces) are packed and each is drawn into the correct position for exposure by pulling, in turn, the numbered tabs projecting from the top Film for moving-picture cameras is made in widths of 8 mm, 9 mm, 16 mm, and 35 mm; the 35-millimeter width is used chiefly for theater film, and the other three sizes are used in amateur photography The sensitivity of the film depends upon the kind of coating or emulsion Modern films are made with varying degrees of sensitivity suitable for use under different lighting conditions and for various purposes The achievement of film capable of reproducing natural color was the goal of many experimenters Finally, in 1935, a color film was introduced which required that only one exposure be made (not several as some earlier films needed) and which could be used in an ordinary camera From this type of film, commonly made in the 35-millimeter size, enlarged color prints can be made The film itself after processing (it is first developed to make a negative and then converted to a positive) can also be used in projectors which cast the enlarged picture in color upon a screen Another type of color film became available (1942) in roll film of most ordinary camera sizes; in the developing process this film remains a negative which shows a reversal of color as well as of light and shade From this negative, color prints can be made Printing papers for black-and-white prints are made with emulsions of varying degrees of sensitivity and with ingredients that lend varying tones to the finished photograph Bromide papers with silver bromide as the principal light-sensitive substance are much used; these are known also as "fast" papers Chlorobromide papers are "slow" papers coated with an emulsion containing both the chloride and the bromide of silver The cost of a camera depends to a great extent upon the quality of the lens Modern lenses are corrected to prevent the appearance of many optical faults Anastigmatic lenses prevent astigmatism, i e , they render sharp images of both horizontal and vertical lines in the same plane The better lenses are also corrected to avoid chromatic aberration and spherical aberration (see ABERRATION) and other defects Special lenses have been introduced for certain kinds of work, these include the portrait lens, the telephoto lens and the high-speed lens capable of producing a clear image of rapidly moving bodies There are several systems for indicating the diaphragm opening (the size of which determines the amount of light permitted to pass through the lens), the commonest being generally known as the F number system The F number represents the ratio of the focal length to the effective diameter of the lens The F numbers are marked on the lens barrel, the usual series is 4, 5 6, 8, 11 3, 16, 22 6, 32, 45 2, and 64 The relative exposure with any two adjacent numbers is in the ratio of one to two, i e , under the same lighting conditions the larger number admits one half as much light and requires an exposure twice as long Methods of using cameras and of developing and printing and principles of composition are given in many books on photography See J M Eder, *History of Photography* (Eng tr of 1932 ed , 1945), C E K Mees, *Photography* (2d ed , reissue, 1945), P E Boucher, *Fundamentals of Photography* (2d ed , 1947), Eastman Kodak Company, *How to Make Good Pictures* (28th ed , 1948), Beaumont Newhall, *The History of Photography* (1949)

photogravure see PRINTING

photometry (fōtŏm'mətrē) [Gr , =measuring of light], branch of physics which deals with the measurement of the intensity of a source of light, such as an electric lamp The practical importance of photometry to man is realized when the amount of artificial light used and the great need for illumination most beneficial to the eyes are considered Instruments used for measuring the intensity of a given source of light are called photometers They make possible a comparison between an unknown intensity and a standard or known intensity They are based essentially upon a fact shown to be true by much experiment that illumination of a surface by a light source of constant intensity becomes less, by a definite amount, as the light source is moved away from that surface This fact is incorporated in the so-called law of inverse squares, which states in effect that, as a source of light is moved away from a surface which it illuminates, the illumination decreases in an amount inversely proportional to the square of the distance. For example, the illumination of a surface by a source of light 2 ft away is ¼ of the illumination at 1 ft. from the surface. Conversely, for two light sources, one at 1 ft and the other at 2 ft., to give the same illumination it would be necessary for the source at 2 ft. to have an intensity 4 times that of the source at 1 ft. In the commonly used Bunsen photometer (named for

R W. Bunsen) the intensity of a light source is determined by comparison with a known, or standard, intensity. The two light sources (one of known and the other of unknown intensity) are placed on opposite sides of the surface (a disk of paper) to be illuminated In the center of this surface is a translucent spot which appears equally bright from either side when the illumination is the same on both sides Since the illumination given by a light source decreases as the square of its distance from the illuminated surface, the intensity of the unknown light source can be easily determined when the relative distances at which the two sources produce equal illumination are known The Rumford photometer (named for Count Rumford) is sometimes called a shadow photometer because intensities of light sources are compared by the denseness of shadows which they can produce In the Lummer-Brodhun photometer, each side of an opaque screen is illuminated by one of the two sources, and a comparison is made possible by an ingenious arrangement of prisms From the use of a photometer, therefore, the statement of the intensity of a given source of light is essentially a statement of the number of times greater or less it is in intensity than a chosen standard The intensity of electric lights (i e , their power to illuminate) is commonly given as so many candle power, i e , so many times the intensity of the "international candle" which is maintained in the United States, England, and France In England a sperm candle of definite dimensions is considered as a standard, in France, a Carcel lamp burning colza oil, and in Germany, a Hefner lamp supplied with amyl acetate The French unit of intensity is called, consequently, the Carcel unit, the German, the Hefner unit The intensity of illumination, or the degree to which a surface is illuminated, is distinguished from the intensity of the light source and is given in foot-candles, i e , so many times the illumination given by a standard candle at 1 ft

photosphere (fō'tusfēr"), luminous, apparently opaque layer of gases between the dense interior gases of the sun and the more attenuated gases of the chromosphere Its incandescent gases, estimated to attain temperatures close to 6000°C , are so bright in comparison with gases in other layers that they are perceived as the apparent surface of the sun The mottled appearance of the photosphere is attributed to constantly shifting granules, several hundred miles in diameter, that probably result from differences in the density of gases of the solar surface Sunspots are believed to extend deep into the photosphere See also SUN

Photostat (fō'tustăt"), trade name of a photographic camera especially adapted to making copies (photostats) of drawings, manuscripts, and rare printed books The process is rapid and inexpensive and is much used in libraries

photosynthesis (fō"tōsĭn'thusĭs), process in which green plants utilize the energy of sunlight to manufacture carbohydrates from carbon dioxide and water. All animal and plant life ultimately depends upon it for food and oxygen All plant forms that contain the essential green pigment (see CHLOROPHYLL) are capable of carrying on photosynthesis, and the process takes place only in those parts of the plant where chlorophyll is present (Fungi and other plant forms lacking chlorophyll must secure their food nutrients from other organic material) It is known that in the presence of the chlorophyll and sunlight (or suitable artificial light) carbon dioxide and water obtained by the plant from its environment are combined to form carbohydrates, in the form of sugar and starch, and oxygen is released Some phases of the process are completed in darkness The exact chemical reactions involved are not fully understood The equation generally employed to represent the process is $6\ CO_2+6\ H_2O=C_6H_{12}O_6$ (glucose) $+6\ O_2$ Some scientists consider that the chlorophyll not only serves to absorb the light and make its energy usable but also that it may enter into the chemical changes For storage purposes some of the glucose produced is converted into starch, starch grains can be seen in various parts of the plant with the aid of the microscope Various intermediate products (e g , formaldehyde and formic acid) have been postulated as being formed prior to the production of glucose Recent studies with radioactive carbon indicate, however, that the intermediate products are chiefly amino acids, other organic acids, and neutral sugars Energy for photosynthesis is derived mainly from the red and blue-violet portions of the visible spectrum of light Therefore the presence of window glass between the plant and its light source does not interfere with the process In land plants the carbon dioxide utilized enters chiefly through the stomates, the water enters through the roots, and the process is carried on chiefly in the leaves. Oxygen is released into the atmosphere through the stomates. Plants, like animals, must use oxygen in the process of respiration in order to obtain energy; this process is therefore carried on by all plants, day and night, independently of photosynthesis From the carbohydrates the green plant can, with the aid of enzymes, produce fats and oils. With the addition of nitrogen and other essential elements obtained from the soil the plants can synthesize proteins. For the production of the fats, oils, and proteins the presence of chlorophyll and light are not necessary

phototube: see PHOTOELECTRIC CELL

Phraates (frā-ā'tēz), kings of Parthia of the dynasty of ARSACES

Phraates II, fl 130 B C , decisively defeated Antiochus VII of Syria (129 B C), annexing permanently E Mesopotamia to his kingdom

Phraates IV, d 2 B C , had an early success in driving Antony out of Parthia (36 B C.). After 31 B C he had to cope with a stubborn rebellion His son, who had joined in this (perhaps unwillingly), was handed over to Augustus as a hostage for Phraates, but was later taken back in an exchange of prisoners and battle standards. Phraates died in a palace intrigue

phrenology (frēnŏ'lujē), theory developed by Franz Joseph Gall It maintains that the mind consists of a group of separate, localized faculties, each seated in a particular organ or locality of the brain The development of each separate faculty may be judged by the shape of the skull Orson Fowler and Lorenzo Fowler were important in popularizing the theory in the United States

Phrixus (frĭk'sus), in Greek mythology, son of Nephele and ATHAMAS and father of ARGUS His stepmother, INO, plotted to kill him and his sister Helle, but Nephele saved the children, the ram with the GOLDEN FLEECE carried them over the sea Helle was drowned in the strait which bears her name, the Hellespont Phrixus reached the land of Colchis, where the ram was sacrificed and its fleece hung in a sacred grove

Phrygia (frĭ'jēu), ancient region, central Asia Minor (now central Turkey) The Phrygians, who settled here c 1200 B C , came from Europe and apparently spoke an Indo-European language Nothing is known of their history, from c 700 B C , Lydia dominated the area The Greeks told of Phrygian kings named GORDIUS and MIDAS, they knew Phrygia best as a source of slaves and as a center of the cult of CYBELE N Phrygia became Galatia with the invasion of the Gauls (3d cent B C) The kings of Pergamum ruled much of Phrygia, and when it passed to the Romans, most of it was assigned to the province of Asia. St Paul visited Phrygia (Acts 16 6, 18 23)

Phryne (frī'nē), 4th cent B C , Greek hetaera, b Thespiae, Boeotia She was said to have been the model for Praxiteles' Cnidian statue of Aphrodite She was charged with impiety and defended by Hyperides, one of her lovers, who secured her acquittal by exhibiting her in the nude

Phrynichus (frĭ'nĭkŭs), fl c 512–476 B C , Athenian tragedian, by some ancients considered the founder of tragedy The painful theme of his play *The Taking of Miletus* so moved the audience that Phrynichus was fined Fragments of his dramas survive

Phrynichus, fl 430 B C , Athenian comic poet None of his works (of the Old Comedy) survive

Phrynichus, fl 180, Greek grammarian, b Bithynia, He collated a lexicon of Attic words

Phuket (pōō'kĕt), island, area more than 200 sq mi , off the west coast of the Malay Peninsula, belonging to Thailand It has tin mines, which were formerly the most important tin producers in Siam, the other major product is rubber The chief town (pop 18,759) is also called Phuket Long in dispute between Burma and Siam, Phuket was incorporated into Siam only in the 19th cent The Malay name, Ujong Salang [Cape Salang], was corrupted by early European voyagers to Junkceylon

Phurah (fū'rŭ), servant of Gideon Judges 7 10,11

Phut (fŭt), son of Ham and eponym of an African people Gen 10 6, Ezek 27 10 Put Nahum 3 9 Put **2** is perhaps the same

Phuvah (fū'vu), son of Issachar, ancestor of the Puntes Gen 46 13 Pua Num 26 23 Puah 1 Chron 7 1

Phyfe, Duncan (fīf), c 1768–1854, American cabinetmaker, b Scotland He came to America c 1783, settling at Albany, N Y , where he was apprenticed to a cabinetmaker In the early 1790s he established a shop in New York for the production of furniture, after several moves he finally settled in Partition St (later changed to Fulton St) He first spelled his name Fife but c 1793 adopted the form Phyfe He practiced originally under his own name alone, later, in 1837, as Duncan Phyfe and Sons, and from 1840 until his retirement in 1847, as Duncan Phyfe & Son He made mainly chairs, sofas or settees, tables, and sideboards, using in great part solid mahogany but also some mahogany veneer, a little satinwood and maple, and in later years rosewood During his most productive period (until 1820) he was influenced by, and adapted the forms of, the Adam brothers, Hepplewhite, and Sheraton and characteristics of the French Directoire and Consulate styles. Later his designs followed the Empire style, becoming in his final period heavy, overornamented, and to a great degree characterless Phyfe employed in general the highest standards, applied under supervision to carefully selected woods. His first designs are characterized by excellent proportions, graceful curves often accentuated by parallel rows of reeding, simple ornament well placed and carved with precision, and decorative motifs such as the lyre, the acanthus or oak leaf, and the drapery swag Though much furniture termed Phyfe may not have been produced in his workshop, his designs were the nucleus of the Duncan Phyfe style

Phygellus (fĭjĕl'us), man at odds with Paul 2 Tim. 1 15

phylacteries (fĭlăk'tŭrēz) [Gr ,=safeguard], two small leather boxes worn during prayers by orthodox Jews after the age of 13 years and one day Each box contains strips of parchment inscribed with verses from the Scriptures Ex 13 1–10, 13 11–16; Deut 6 4-9, 11 13–21 One box is fastened to the forehead and the other to the left arm, they are intended to serve as a reminder of the constant presence of God and thus safeguard the wearer from committing a sin They are not worn on the Sabbath or holy days, since these days are in themselves a reminder of God

phylloxera (fĭlŏk'surŭ, fĭluksēr'u), small greenish insect, classed by some authorities with the aphids and considered by others to belong to a group closely related to the aphids Many phylloxeras produce galls on deciduous trees, e g , on the hickory, oak, and willow However, the best-known species is the grape phylloxera, *Phylloxera vitifoliae*, the most harmful vineyard pest in the W United States and in Europe It is believed to have been introduced into France c 1860 in rootstocks obtained from the United States, and its devastation of vineyards nearly caused the destruction of the wine industry there It soon spread through all the vine-growing countries of Europe and other parts of the world Grapes grown in the E United States, where the insect is native, have developed immunity to its attack Grafting the European vines on this resistant stock proved a useful measure in saving the European vineyards. The phylloxera produces both winged and wingless forms, and the life history is complex. Wingless forms attack the roots, and winged forms fly to the leaves, where they cause the formation of galls The resulting injury to the roots and foliage causes loss of vigor and often death of the vine

physical education and training Systems of GYMNASTICS were developed in several European countries—notably Germany, Sweden, and England—and introduced into the United States in the 19th cent These systems have been widely practiced as a means of increasing and maintaining physical fitness Out of this interest grew a movement to have compulsory physical training in the American public schools and to establish courses in physical education in the higher educational institutions In 1885 the American Association for the Advancement of Physical Education was organized Physical training in the schools of the United States now generally includes formal exercises (with and without apparatus), sports, and contests The playground became an important extension of the movement See E H Le Maistre, *Physical Education* (1946), F E Leonard, *Guide to the History of Physical Education* (3d ed , 1947), L E Means, *Physical Education Activities, Sports, and Games* (1947)

physical geography, see GEOGRAPHY

physical therapy (thĕ'rupē) or **physiotherapy** (fĭ"zēō–), branch of medicine and surgery which treats diseases and other conditions with the aid of physical agents It is often practiced under the supervision of a physician, after correct diagnosis has been made The methods used depend on the nature of the condition Radiation, light, heat, water, massage, exercise, activity, and rest are all utilized according to the need of the patient Whirlpool baths are valuable in the treatment of traumatic and chronic inflammatory conditions Massage can be extremely helpful in relieving the pain caused by arthritis and rheumatism, it is also employed in disorders of the nervous system, such as infantile paralysis, in minimizing atrophy. Exercise is an important phase of physical therapy, it is generally supplemented by occupational therapy A popular form of physical therapy is sunbathing See Richard Kovacs, *Manual of Physical Therapy* (3d ed , 1944), H F Wolf, *Practice of Physical Medicine* (1947)

Physick, Philip Syng, 1768–1837, American surgeon, b Philadelphia, M D Edinburgh, 1792 He was the first professor of surgery at the Univ of Pennsylvania (1805–19) and was long a surgeon at the Pennsylvania Hospital A pioneer in forwarding American surgery, he performed numerous lithotomies and operations for cataract and improved the methods of treating fractures

physics, the science which deals with matter and energy and the relationships between them It is essentially a science of measurement, since, in addition to its major objective, the rational explanation of natural phenomena, it seeks to define quantitatively the factors concerned in these phenomena It is not focused upon any specialized form of matter, as is biology upon that which has life or as is chemistry upon the make-up of the different kinds of matter and the changes from one kind to another Matter is anything which has weight and occupies space, and for a long time in the develop-

ment of the science it was of interest only for these two properties and the effects which forces acting upon it could produce It was clearly distinguished from energy For convenience, physics has long been divided into various branches—MECHANICS, HEAT, LIGHT, SOUND, MAGNETISM, and ELECTRICITY However, with the increased knowledge of the nature of matter obtained through the discoveries which have shown it to be fundamentally electrical, higher physics and chemistry have become very closely interrelated See P R Heyl, *New Frontiers of Physics* (1938), F L Darrow, *The New World of Physical Discovery* (1932), Albert Einstein and Leopold Infeld, *The Evolution of Physics* (1938), H B Lemon, *From Galileo to the Nuclear Age* (2d ed , 1946), N H Black, *Introductory Course in College Physics* (3d ed , 1948), C G Fraser, *Half-Hours with Great Scientists* (1948), Sir James Jeans, *The Growth of Physical Science* (1948), N H Black and H N Davis, *Elementary Practical Physics* (rev. ed , 1949)

physiocrats (fĭ'zēōkrăts"), school of French thinkers in the 18th cent who evolved the first complete system of economics They were also referred to simply as "the economists" or "the sect " The founder and leader of physiocracy was François QUESNAY His most ardent disciple, Victor de MIRABEAU, was the author of the physiocratic tax doctrine, Pierre Samuel DU PONT DE NEMOURS and Mercier de la Rivière elaborated on Quesnay's and Mirabeau's ideas Among the antecedents of physiocracy the single-tax schemes of VAUBAN and BOISGUILBERT and the free-trade ideas of Vincent de GOURNAY may be cited However, Quesnay's original contribution, and the basis of the doctrine, was the axiom that all wealth originated with the land and that agriculture alone could increase and multiply wealth Industry and commerce, according to the physiocrats, were basically sterile and could not add to the wealth created by the land They did not advocate that industry and commerce be neglected in favor of agriculture, but they tried to prove that no economy could be healthy unless agriculture were given the fullest opportunity Agricultural methods had to be scientifically improved, and—above all—fair prices had to be maintained for agricultural production, according to Quesnay's maxim, only abundance combined with high prices could create prosperity This could be obtained only if the "economic law," which the physiocrats envisaged as somewhat as immutable as the law of gravity, were allowed to act untrammeled Absolute freedom of trade was necessary to stabilize prices at a fair level, and laissez faire was to restore the economic process to its natural course, from which all further benefits would flow To tax anything but the land was futile because only the land produced wealth and because manufacturers and traders pass their tax burden on to the farmer, only taxation at the very source of wealth was reasonable and economical—an argument not without charm for industrialists. However, the experiments of TURGOT and of Emperor JOSEPH II, both somewhat influenced by the physiocrats, were failures—in part because of the unfavorable conditions in which they were carried out Although physiocracy, because of its dogmatism, has become dead doctrine, it profoundly influenced Adam SMITH (who even intended to dedicate his *Wealth of Nations* to Quesnay) and thus the entire classical school of economists Henry GEORGE virtually repeated the single-tax argument of Mirabeau Thomas Jefferson's agrarianism was probably influenced by Du Pont de Nemours The physiocrats made no contribution to purely political thought except the idea of "legal despotism," by which the king and his government were to enforce the economic laws of nature—a mere play on words Actually, the physiocrats differed among themselves in their political ideas Their fanaticism in economic doctrine was much ridiculed by their contemporaries, notably by Voltaire and by the Abbé Galiani Extracts from the writings of Quesnay, Du Pont de Nemours, Mercier de la Rivière, and other physiocrats have been published as *Les Physiocrates* (ed by Eugène Daire, 2 vols , 1846) See Henry Higgs, *The Physiocrats* (1897), Georges Weulersse, *Le Mouvement physiocratique en France* (2 vols , 1910), Charles Gide and Charles Rist, *A History of Economic Doctrines* (Eng tr , 1915), Max Beer, *An Inquiry into Physiocracy* (1940)

physiology (fĭzēŏ'lŭjē), study of the normal functioning of plants and animals during life and of the activities by which life is maintained and transmitted It is based fundamentally on the activities of protoplasm, especially the processes comprising metabolism, and was developed in part by the application of techniques of chemistry and physics It includes the study of vital activities in cells, tissues, and organs—of processes including contractility in muscle tissue, coordination through the nervous system, feeding, digestion, excretion, respiration, circulation, reproduction, and secretion Plant physiology includes also the study of photosynthesis and of transpiration. The study of human physiology was stimulated by the development of medicine and rests in part on experimental work on the higher vertebrates. Plant physiology, now a separate and specialized branch, arose from attempts to apply the findings of animal physiology to plants and in its turn contributed to the development of general physiology, especially in the study of cells Outstanding among the many scientists who advanced the study of physiology are Albrecht von HALLER, J P MÜLLER, Theodor SCHWANN, Emil Du BOIS-REYMOND, K F W LUDWIG, H L F von HELMHOLTZ, J E PURKINJE, François MAGENDIE, Claude BERNARD, and I P PAVLOV See W D Zoethout and W W Tuttle, *Textbook of Physiology* (9th ed , 1948), F R Winton and L E Bayliss, *Human Physiology* (3d ed , 1948), S J R Dunn, *Elementary Plant Physiology* (1949)

physiotherapy: see PHYSICAL THERAPY

pi, in mathematics, the ratio of the circumference of a circle to its diameter The symbol for pi is π. The ratio is the same for all circles and is approximately 3 1416 It is of great importance in mathematics not only in the measurement of the circle, but also in more advanced mathematics in connection with such topics as continued fractions, logarithms of imaginary numbers, and periodic functions Throughout the ages progressively more accurate values have been found for it, starting with the value 3 given in the Bible and the familiar Greek approximation $3\frac{1}{7}$, found by considering the circle as the limit of a series of regular polygons with an increasing number of sides inscribed in the circle In more recent times its value has been found correct to 707 decimal places by means of infinite series

Piacenza (pyächĕn'tsä), city (pop 49,527), capital of Piacenza prov , Emilia-Romagna, N central Italy, on the right bank of the Po Today an important agricultural center, it was a Roman stronghold against the Gauls and was later occupied by the Goths, the Lombards, and the Franks A free commune by the 12th cent , Piacenza joined the Lombard League In 1545 it formed, with PARMA and its territory, the duchy of Parma and Piacenza under the FARNESE family The city has several fine churches, among them the 13th-century cathedral with important frescoes, and the Renaissance Church of Santa Maria de Campagna The 13th-century town hall is one of the finest in Italy

Piankhi (pĭăng'kē, pēăng'kē), king of Nubia (c 741–c 715 B C) and conqueror of Egypt After taking Upper Egypt, he defeated (c 721 B C) Tefnakhte, lord of Sais, who had just completed the conquest of Lower Egypt. Piankhi was victorious at Memphis also and forced Tefnakhte to submit He shortly (c 718) returned to his Nubian capital, Napata, and erected there a granite stele on which he inscribed an unusually clear and interesting account of his campaign Immediately on his withdrawal the XXIII dynasty reasserted itself at Thebes and Tefnakhte reestablished his principality in the north Piankhi's rule in Egypt was too short to achieve much, though he did a slight amount of building at Thebes

piano or **pianoforte,** musical instrument whose sound is produced by vibrating strings struck by felt hammers which are controlled from a keyboard Its earliest predecessor was the DULCIMER The first piano was made in 1709 by Bartolomeo Cristofori, a Florentine maker of harpsichords, who called his instrument *gravicembalo col piano e forte* Upon this instrument the German organ builder Gottfried Silbermann based his *Hammerclavier*, which he showed to J S Bach, who, after some improvements had been made, praised the instrument but wrote nothing for it Its advantage over the harpsichord was that by varying the touch one could vary the volume of tone This expressive quality was shared by the clavichord, but the latter was a much more delicate instrument Mozart and Haydn were the first great composers to write for the piano Beethoven's sonatas and concertos are possibly the greatest works in the piano repertoire With the works of Chopin, Schumann, and Liszt the piano became the outstanding solo instrument Debussy used the special effects peculiar to the piano in a highly original way In the 20th cent some composers, notably Bartok, have abandoned the piano's expressiveness for its percussive qualities Until the 1870s the square piano, with strings parallel to the keys as in the clavichord, was the most popular domestic piano Its tone, however, was thin and harsh The upright piano as it is known today was developed in the early 19th cent and because of its compactness eventually became the principal domestic piano, in spite of its decided limitations In the late 19th cent a mechanism was developed which enabled the piano to be played mechanically A paper roll was passed over a cylinder containing apertures connected to tubes, which were in turn connected to the piano action. As often as a hole in the paper passed over an aperture a current of air passed through a tube and caused the corresponding hammer to strike the string. The performances of the finest pianists could be reproduced with some skill on the part of the operator, who controlled the dynamics These mechanical pianos, called by various trade names, were known commonly as player pianos See R E M Harding, *The Piano-Forte* (1933); Ernest Closson, *History of the Piano* (Eng tr , 1947); Ernest Hutcheson, *The Literature of the Piano* (1948).

Piast (pyäst), first dynasty of Polish dukes and kings. Duke MIESZKO I (962–92) began the unification of POLAND and introduced Christianity. His son, BOLESLAUS I, was crowned king in 1025. His successors were MIESZKO II (reigned 1025–34), CASIMIR I (reigned 1039–58), BOLESLAUS II (reigned 1058–79), Ladislaus Herman (reigned 1079–1102), and BOLESLAUS III (reigned 1102–38) Boleslaus III created four hereditary duchies for his four sons—SILESIA, MASOVIA, Great Poland (with Gniezno and Poznan), and SANDOMIERZ The royal throne at CRACOW and the rest of the Polish territory was to belong to the oldest member of the dynasty, thus passing in rotation to the different branches This law of succession caused the temporary disintegration of the kingdom However, CASIMIR II (who, probably a posthumous child, was left out of Boleslaus's will) united Masovia and Sandomierz under his power, was crowned at Cracow in 1177, and secured (1180) for his descendants the hereditary right to the kingship Dynastic struggles continued, nevertheless, until in 1320 LADISLAUS I restored the royal authority With his son, CASIMIR III, the Piast dynasty in Poland died out in 1370 and was succeeded by the JAGIELLO dynasty In 1335 Casimir III had recognized John of Luxemburg, king of Bohemia, as suzerain over the Piast domains in Silesia, which in the meantime had broken up into many principalities The Silesian Piasts, as vassals of Bohemia and mediate princes of the Holy Roman Empire, retained the ducal title and continued to hold the duchy of Oppeln until 1532 and the principalities of Brieg, Liegnitz, and Wohlau until their extinction in 1675

Piatigorsky, Gregor (pyätĭgôr'skē), 1903–, Ukrainian-American cellist, studied at the Moscow Conservatory In 1923 he became first cellist of the Berlin Philharmonic, leaving in 1928 to devote his time to solo work He came to the United States in 1929 He taught (1942–44) at the Curtis Institute, Philadelphia Concertos have been written for him by several composers, including Hindemith and Prokofiev He became a U S citizen in 1944

Piauí (pyouē'), state (96,261 sq mi , 1940 pop 817,601, 1949 estimated pop 986,907), NE Brazil, on the east bank of the Parnaíba river The capital is TERESINA Piauí has extensive livestock grazing and exports babassu nuts, oilseeds, cotton, tobacco, and rubber

Piave (pyä'vā), river, 137 mi long, rising in the Carnic Alps and flowing through Venetia, NE Italy, to the Adriatic Sea In the First World War, after their defeat at Caporetto (1917), the Italians withdrew to the Piave, despite fierce onslaughts by the Austrians, the line was held until in Oct , 1918, the Austrians were routed by a combined Allied attack

Piazzi, Giuseppe (jōōzĕp'pā pyät'tsē), 1746–1826, Italian astronomer, a Theatine priest from 1765 He became (1781) professor of mathematics at the Univ of Palermo, supervised the construction of a government observatory (opened 1791) at Palermo, and was its first director He also established a government observatory at Naples (1817) On Jan 1, 1801, he discovered the first asteroid to be seen by man, he named it Ceres It 1803 he published a catalogue of the fixed stars and in 1814 enlarged it to include 7,646 stars He wrote *Lezioni elementari di astronomia* (1817)

Pi-beseth (pĭbē'sĕth), biblical name of BUBASTIS

pibroch (pē'brōkh), Scottish music for the BAGPIPE, consisting of sets of variations on a theme called urlar The variations are often highly complex and were originally set down in a unique notation which employed syllables to indicate whole melodic patterns

Picard, Jean (zhä' pēkar'), 1620–82, French astronomer, noted for having made the first accurate measurement of a degree of the earth's meridian The figures he established were of great value to Newton in his calculation of the force of gravitation Picard, who had previously been the prior of Rillé, in Anjou, went to Paris to occupy the chair of astronomy in the Collège de France in 1655 He determined (1671) the latitude and longitude of Tycho Brahe's observatory at Ven in order to be able to use Brahe's observations of the positions of heavenly bodies To him is due in great part the establishment of the Paris Observatory and of the *Connaissance des temps*, the first five volumes (1679–83) of which he wrote

Picard, Louis Joseph Ernest (lwē' zhōzĕf' ĕrnĕst'), 1821–77, French statesman He was one of the liberal members of the *corps législatif* in the Second Empire (see OLLIVIER, ÉMILE, and FAVRE, JULES) After the downfall of the empire he was minister of finance in the government of national defense (1870). Later, as minister of the interior under THIERS, he was covered with abuse by the monarchists and the left wing He was ambassador at Brussels (1871–73).

Picardy (pĭ'kurdē), Fr *Picardie* (pēkärdē'), region and former province, N France, stretching E from the English Channel to the Belgian border S of the Sambre. It now includes parts of Pas-de-Calais, Aisne, and Oise depts. and all of Somme dept.

Largely agricultural, it has important textile industries in the towns Amiens (the historical capital), Abbeville, Calais, Boulogne-sur-Mer, and Saint-Quentin are the chief cities The name Picardy appeared only about the 13th cent and designated the numerous small feudal holdings (VERMANDOIS, Amiens, Boulogne, Ponthieu, and others) added to the crown by Philip II Ceded to Burgundy in the Treaty of Arras (1435), the possessions reverted to France in 1477 and were organized into a province under the jurisdiction of the Parlement of Paris. The northeastern part of Île-de-France (including Soissons, Beauvais, and Laon), though not included within the provincial boundaries, is also considered part of the region, and the word *Picard*, always vaguely used, also applies to the inhabitants of neighboring Artois Picardy was the scene of heavy fighting in both world wars

Picasso, Pablo (Pablo Ruiz y Picasso) (pä'blō pēkä'sō, rōōēth' ō), 1881–, Spanish painter, son of a drawing master in Málaga He studied in Barcelona and in Paris, where he established himself in 1900 and became associated with such innovators as Derain, Bracque, and Matisse and with the writers Gertrude Stein and Guillaume Apollinaire Most of his life has been spent in Paris and the South of France His early work is graphic and sometimes recalls Toulouse-Lautrec, but c 1910, together with Bracque, he invented CUBISM Since then, throughout many startling changes of manner, Picasso has been consistently concerned with the architectonics of painting Not content with subordinating or distorting the subject, he has practically suppressed it, producing an abstract art which has had interesting repercussions throughout the field of applied design He has said, "Through art we express our conception of what nature is not" He has long maintained his position as leader of the left wing in art He is represented in leading collections of contemporary painting Picasso has also produced numerous etchings, illustrations, and drawings Many of these are neoclassical in feeling and admirable in draughtsmanship He painted stage sets for the Diaghilev Russian Ballet, and his mural *Guernica* (reproduced with text by Juan Larrea, 1947) adorned the Spanish Pavilion at the Paris exposition of 1937 His portrait of Gertrude Stein is in the Metropolitan Museum See studies by Gertrude Stein (1938) and Alfred H Barr, Jr (1946)

Picayune (pĭkyo͞on'), city (pop 5,129), S Miss, near the Pearl river NE of New Orleans, settled 1885, inc 1906 It is the trade, processing, and shipping center for a tung-tree area

Piccadilly (pĭk"ədĭl'ē), famous street of W London Starting at Piccadilly Circus (London's center of traffic and of amusement), it runs to Green Park, bounded on the north by Mayfair It is a street of shops, hotels, and clubs The Albany was the residence at various times of W E Gladstone, the novelist Bulwer-Lytton, and George Canning A number of buildings, among them St James's Palace and the Royal Academy of Arts, were damaged in air raids in the Second World War

Piccard, Auguste (ōgust' pēkar'), 1884–, Belgian physicist He became professor of physics at the Polytechnic Institute of Brussels Univ in 1922 He is famous for his balloon ascents into the stratosphere, in May, 1931, he reached an altitude of 51,793 ft, and in Aug, 1932, he ascended to c 55,500 ft The special object of the flights has been to study cosmic rays Since 1938 he has worked to break the depth record attained in undersea dives in the bathysphere His twin brother, **Jean Piccard** (zhäN), 1884–, an American citizen from 1931, is a chemist and aeronautical engineer He did research work and taught at several American and foreign universities before becoming professor of aeronautical engineering at the Univ of Minnesota (1937) He also has made stratosphere balloon ascents

Piccinni or **Piccini, Niccolò** (both nēk-kōlō' pēchē'nē), 1728–1800, Italian composer of over 100 operas His early works were very successful in Italy, and *La buona figliuola* (Rome, 1760), an *opera buffa*, established his reputation throughout Europe In 1776 he went to Paris, where the opponents of GLUCK made him their unwilling champion When the Revolution began he returned to Italy, but shortly before his death he was made an inspector of the Paris Conservatoire

Piccirilli (pēt-chērē'lē), family of Italian-American marble cutters and sculptors Their workshop in the Bronx, New York, is known throughout the country The father, a sculptor, brought his family to the United States in 1888 Of his six sons the best known are Attilio and Furio **Attilio Piccirilli** (ät-tē'lyō), 1866–1945, b Italy, executed the sculptures on the *Maine* monument, Columbus Circle, New York, and the Firemen's Memorial, Riverside Drive, New York, other works are *Flower of the Alps*, *Fragelne* (Metropolitan Mus), and a sculptural glass panel for Rockefeller Center, New York See biography by J V Lombardo (1944). **Furio Piccirilli** (fōō'rēō), 1868–, b Italy, was represented at the Panama-Pacific Exposition, San Francisco, by four groups for the Court of the Seasons For the house of the provincial legislature, Winnipeg, Man., he carried out sculptural decorations including a fine statue of Pierre Gautier de la Varenne Of his other reliefs and statues, a *Seal* in black marble is in the Metropolitan Museum. He later returned to Italy

piccolo (pĭ'kulō) [Ital, =little], small FLUTE, pitched an octave higher than the standard flute It sounds an octave higher than the notes written for it Its tone is bright and shrill, it is used in the orchestra and is indispensable in the band

Piccolomini, Enea Silvio de' see PIUS II

Piccolomini, Octavio (ōktä'vyō pēk-kōlō'mēnē), 1599–1656, Italian general in the imperial army in the Thirty Years War (1618–48) He came of a distinguished Sienese family, was duke of Amalfi, and was made prince in Hagenau in the Holy Roman Empire After fighting in Bohemia, Hungary, the Netherlands, and Italy, he served under WALLENSTEIN (after 1627) and was a commander of Wallenstein's bodyguard. He was punished for extortion (1629), but was, nevertheless, among those who urged the recall of Wallenstein in 1630 He distinguished himself at the battle of Lützen (1632) Piccolomini supported the conspiracy against Wallenstein After the defeat at Breitenfeld (1642), Piccolomini served for the Spanish in the Netherlands, but returned to the imperial army in 1647 His last campaign was terminated by the war's end He was an imperial plenipotentiary in the negotiations for the execution of the Peace of Westphalia

Pic du Midi de Bigorre (pēk dü mēdē" du bēgôr'), peak, 9,439 ft high, S France, in the central Pyrenees, SE of Lourdes

Pic du Midi d'Ossau (dôsō'), peak, 9,466 ft high, S France, in the W Pyrenees near the Spanish border

Pichegru, Charles (sharl' pēshgrü'), 1761–1804, French general in the FRENCH REVOLUTIONARY WARS. Successful on the Rhine front (1793), he conquered the Netherlands (1794), entered Amsterdam in 1795, and captured the Dutch fleet, which had been frozen in the ice However, in the same year, he secretly entered into negotiations with the Austrians after being promised rich compensation if the French monarchy were restored Pichegru deliberately allowed the Austrians to retake Mannheim Recalled by the Directory, he was later arrested in the coup d'état of 18 Fructidor (1797), but he escaped to England and returned in 1803 to carry out a royalist conspiracy with Georges CADOUDAL Pichegru was arrested and died in prison, possibly by suicide

Picher (pī'chûr), city (pop 5,848), extreme NE Okla, near the Kansas border, in an area of zinc and lead mining

Pichincha (pēchēn'chä), volcano, 15,918 ft high, N Ecuador On its lower slopes, in the decisive battle of Pichincha on May 24, 1822, patriot forces under Antonio José de SUCRE routed the Spanish royalists Entering Quito the following day, they freed the territory that was to become Ecuador

Pickel, Konrad see CELTES

Pickens, Andrew, 1739–1817, American partisan leader in the American Revolution, b near Paxtang, Pa He moved (1752) to South Carolina and took part (1761) in frontier warfare against the Cherokee In the CAROLINA CAMPAIGN of the American Revolution, he, like Francis Marion and Thomas Sumter, formed an armed band to harass the British After Nathanael Greene took command, Pickens and his men cooperated with him Pickens was with Daniel Morgan in the victory at Cowpens, was a leader in the recapture of Augusta, Ga, and was one of the American commanders at Eutaw Springs (all three actions in 1781) After the war he again defeated the Cherokee Prominent in local politics, he was also a U S Congressman (1793–95)

Pickens, Francis Wilkinson, 1805–69, American politician, b Colleton District, S C, grandson of Gen Andrew Pickens He was educated at South Carolina College (now the Univ of South Carolina), became a lawyer, and served in the state house of representatives He was an ardent supporter of NULLIFICATION Pickens was a Democrat in Congress (1834–43) and was minister to Russia (1858–60) Under his administration as governor of South Carolina (1860–62), the state seceded and demanded the Federal forts in Charleston harbor (see SUMTER, FORT)

Pickens, town (pop 1,637), co seat of Pickens co, extreme NW S C, W of Greenville, settled 1868, inc 1908 Sewing machines are made here Near by is the site of Fort Prince George (1753), the center of conflict in the Cherokee War of 1760–62

Pickens, Fort, fortification on the west end of Santa Rosa Island at the entrance to Pensacola Bay, Fla, completed in 1834 When Florida passed an ordinance of secession on Jan 10, 1861, Lt Adam J Slemmer evacuated Fort Barrancas on the mainland and took his command to Fort Pickens, which he refused to surrender to Florida authorities The fort was soon reinforced, and in Oct, 1861, a Confederate attack was repulsed Fort Pickens remained in Union hands throughout the war

pickerel (pĭ'krul, pĭ'kûrûl), name for various small members of the pike family The eastern or common pickerel and the barred pickerel inhabit fresh waters of the E United States.

Pickering, Edward Charles (pĭ'kərĭng), 1846–1919, American astronomer and physicist, b. Boston, grad. Harvard (B S, 1865), brother of W. H Pickering He was professor of physics (1868–77) at the Massachusetts Institute of Technology and is credited with initiating general instruction in physics in a laboratory equipped with instruments and apparatus. The results of work in photographic photometry and spectroscopy done under his direction at the Harvard Observatory are recorded in more than a quarter of a million plates Pickering devised several instruments used in the measurements In addition to editing 70 volumes (1855–1919) of the *Annals of Harvard Observatory*, he wrote *Elements of Physical Manipulations* (1873–76)

Pickering, Timothy, 1745–1829, American Revolutionary general and statesman, b. Salem, Mass, grad Harvard, 1763 He was admitted to the bar (1768) and played an active part in pre-Revolutionary activities In 1774 and 1775 he was connected with the Massachusetts Committee of Correspondence and held other local offices Entering the Continental army as a colonel, he rose to become adjutant general and a member of the Board of War (1777) and quartermaster general (1780–85) In 1785 he moved to Pennsylvania and two years later was sent to the Wyoming Valley to organize the newly formed Luzerne co, becoming involved in the dispute over land claims between Connecticut settlers and Pennsylvania He was a member of the state constitutional convention (1789–90) and spent some time concluding treaties with various Indian tribes for the Federal government He was Postmaster General (1791–95), Secretary of War (1795) and then Secretary of State (1795–1800), but was dismissed when his anti-French attitude and political manipulations offended President John Adams Returning to Massachusetts, he became chief justice of the court of common pleas and was later a U S Senator (1803–11) and Representative (1813–17) A strong Federalist and an opponent of Adams, Pickering was a leading figure in the ESSEX JUNTO He wrote *Political Essays* (1812) See biography by his son, Octavius Pickering, and C W Upham (4 vols, 1867–73)

Pickering, William see WHITTINGHAM, CHARLES

Pickering, William Henry, 1858–1938, American astronomer, b Boston, grad Massachusetts Institute of Technology (B S, 1879), brother of E C Pickering He taught at the Massachusetts Institute of Technology (1880–87) and at Harvard Observatory Between 1878 and 1901 he led five solar eclipse expeditions and established several observatories and astronomical stations In 1900 he set up a station for Harvard at Mandeville, Jamaica, which he converted (1925) into a private observatory Pickering discovered (1899) the ninth satellite of Saturn, called Phoebe In 1919 he predicted the existence and the location of a ninth planet discovered later and named Pluto His observations of the moon, including the study of lunar craters, is of lasting importance He also accomplished important work in photographing the planets and measuring their brightness His later researches were devoted to Mars In addition to a number of papers in astronomical journals, his publications include *The Moon* (1903), *Lunar and Hawaiian Physical Features Compared* (1906), and *Mars* (1921)

Pickering, urban district (pop 3,668), North Riding of Yorkshire, England. It has ruins of a partly Norman castle in which Richard II was imprisoned

picketing, act of guarding a place of work (store, restaurant, factory, and others) affected by a strike in order to discourage its patronage, to make public the workers' grievances, and in some cases to prevent strikebreakers (scabs) from taking over the strikers' jobs Picketing may be by individuals or by groups (mass picketing) It has also been used by political movements (e g, suffragists) to influence legislation The use of pickets was for a long time held by the courts to be unlawful because of its intimidatory aspects and because it was considered harmful to the interest of the employer Recent court decisions have in many cases set limits upon the number of pickets allowed, placing a firm ban on mass picketing and also prohibiting the use of vile and obscene language and of threatening gestures by the pickets Some state laws have interdicted any picketing except when a majority of the pickets were employees of the firm involved and then only in issues directly relating to wages, hours, and working conditions

Pickett, George Edward (pĭ'kĭt), 1825–75, Confederate general, b Richmond, Va., grad West Point, 1846 He won two brevets in the Mexican War, distinguishing himself especially at Chapultepec Pickett served on the Texas frontier (1849–55) and in Washington Territory (1856–61) He figured prominently in the SAN JUAN BOUNDARY DISPUTE as commander of the small U S force that occupied the island in 1859. On Virginia's secession Pickett resigned from the army, and in Feb, 1862, he became a Confederate brigadier general He fought in the Peninsular campaign and was severely wounded at Gaines's Mill in the SEVEN DAYS BAT-

TLES On his return to the army in Sept., 1862, he was promoted major general and given a division in James Longstreet's corps He is best remembered for his part in the GETTYSBURG CAMPAIGN "Pickett's charge" on July 3, 1863, which resulted in the virtual annihilation of his division, was one of the most magnificent military efforts in the history of the United States Pickett later commanded in North Carolina, and in 1864 he was one of the defenders of Petersburg His defeat by Philip Sheridan in the battle of Five Forks (April 1, 1865) began the fall of Lee's army See A. C. Inman, ed., *The Heart of a Soldier* (1928, Pickett's letters to his wife); L. C. Pickett, *Pickett and His Men* (1899), D. S. Freeman, *Lee's Lieutenants* (3 vols , 1942–44)

Pickford, Mary, 1893–, American moving-picture actress and producer, whose real name is Gladys Smith, b. Toronto, Ont As a child she appeared with a Toronto stock company and later played in *The Warrens of Virginia* (1907) and *A Good Little Devil* (1913), both produced by Belasco in New York. In 1913 she began her moving-picture career with the Biograph Company, under D W Griffith She rose to fame in such films as *The Violin Maker of Cremona*, *The New York Hat*, *Poor Little Rich Girl*, *Tess of the Storm Country*, *Rebecca of Sunnybrook Farm*, *M'liss*, and *Daddy Long Legs* She became an American legend for her simple and sentimental roles and was known as "America's Sweetheart" In 1919 she was a cofounder of United Artists Company with D. W. Griffith, Douglas Fairbanks, and Charles Chaplin In 1920 she married as her second husband Douglas Fairbanks, whom she divorced in 1935; in 1937 she married Charles Rogers

pickle, general name for fruits or vegetables preserved in vinegar, usually with spices or sugar or both. A great variety of materials and combinations have been used in many lands Vegetables commonly pickled include the cucumber, tomato, onion, cauliflower, cabbage, beet, and sweet pepper Mixed pickles include piccalilli, chowchow, mustard pickles, and chutney Dill pickles are cucumbers flavored with dill Sweet pickles are made from various fruits or vegetables—e g , tomatoes, cucumbers, peaches, or plums—with sugar added Pickles have little food value and are used for their appetizing qualities Before the days of refrigerator cars they furnished a sort of winter substitute for salads. The ability to make pickles was formerly looked upon as an index of housewifely skill, but they are now largely manufactured commercially In the United States alone some 4,000,000 bu of cucumbers are pickled yearly in commercial salting stations They are commonly placed underripe in 10 percent brine, allowed to undergo a lactic acid fermentation, soaked in hot water to remove excess salt, then covered with vinegar and other ingredients. In a wider sense, a pickle is an acid or saline liquid, such as brine or saltpeter for meat, lime-water or water glass for eggs, brandy for fruit, or alcohol for laboratory specimens

Pickthall, Marjorie Lowry Christie (pĭk'thôl), 1883–1922, Canadian poet, b England. She was brought to Toronto in 1889 Her volumes of poetry include *The Drift of Pinions* (1914) and *The Woodcarrer's Wife and Other Poems* (1922) Her poetry is notable for the intensity and freshness with which she treats details of nature, her chief subject. She also wrote *Angel's Shoes* (1923), a collection of short stories, and two imaginative novels with Canadian settings, *Little Hearts* (1916) and *The Bridge* (1921) An edition of her complete poems appeared in 1937

picnic, The Picnic Society was formed in London early in the 19th cent. by a group of fashionable people for purposes of social entertainment of various types, including excursions and private theatricals. Each member was expected to provide a share of the entertainment and the refreshments, and this idea of mutual sharing or cooperation was fundamental to the original significance of the picnic. Later the word took on the additional meaning of an outdoor pleasure party The word as now used includes almost every type of informal or outdoor meal or festivity, such as CLAMBAKE, BARBECUE, fish fry. The custom of cooperative dining is ancient, as Greek men of letters are known to have held reunions where each guest contributed his quota of the food.

Pico (pē'kō) [Port., =peak], island, in the N Atlantic, one of the Azores. It takes its name from the mountain, called simply Pico or Pico Alto [high peak], which rises more than 7,000 ft.

Pico della Mirandola, Giovanni, Conte (jōvän'nē kōn'tā pē'kō dĕl'lä mērän'dōlä), 1463–94, Italian humanist, renowned for his vast learning and brilliance and for his piety, his good manners, and his handsome figure. He was suspected of heresy because of a series of theological questions published by him, but was later acquitted of the charge by Alexander VI. His library was one of the largest and most varied of his time. Pico appears as a principal figure in the *Cortegiano* of Baldassare Castiglione. He composed *Heptaplus*, a mystical account of creation, and an uncompleted work against astrology. There is a modern reprint of Sir Thomas More's *Life of John Picus, Earl of Mirandula*, which was a translation of the biography by Pico's nephew, Giovanni Francesco Pico della Mirandola. Walter Pater has dwelt upon him in writing on the Renaissance See Pearl Kibre, *The Library of Pico della Mirandola* (1936).

Pico Turquino: see TURQUINO.

Picquart, Georges (zhôrsh' pēkär'), 1854–1914, French general As chief of the intelligence section in 1895 he made the discovery that the *bordereau* on the evidence of which Captain Dreyfus had been convicted (see DREYFUS AFFAIR) had probably been forged by Ferdinand Walsin ESTERHAZY. Higher officials warned him not to disclose his discovery, he persisted and was sent (1897) to Tunis and was demoted. After the trial of ZOLA, Picquart was dismissed from the service, and in 1898 the minister of war caused him to be arrested for forgery The exoneration of Dreyfus in 1906 was also that of Picquart, who was promoted to general and entered Clemenceau's cabinet as war minister. Picquart's devotion to a personal sense of justice, even if it conflicted with the commands of his superiors, has few parallels in military history.

picquet: see PIQUET.

picric acid (pĭ'krĭk), explosive, pale yellow, bitter tasting crystalline solid, melting at about 120°C, imparting a yellow stain to organic material with which it comes in contact. It is slightly soluble in water and is soluble in alcohol, ether, and many other organic solvents. Chemically, it is a compound of carbon, hydrogen, oxygen, and nitrogen and is prepared by the action of sulphuric and nitric acids on phenol (carbolic acid), being known consequently as trinitrophenol The acid itself is stable, burns quietly by itself under ordinary circumstances, but reacts with metals to form salts (picrates) which are highly explosive However, picric acid explodes violently upon detonation and is the basic substance in the high explosives lyddite (British), melinite (French), and shimose (Japanese) In requiring a detonator it is similar to trinitrotoluene (TNT) Picric acid is used as a yellow dye and, in medicine, as an antiseptic

Picton, town (pop. 3,901), S Ont., on Adolphus Reach, an arm of Lake Ontario, and ESE of Trenton It is the chief town of the rich agricultural and dairying area of the peninsula of Prince Edward co

Pictor, Fabius: see FABIUS

Pictou (pĭk'tōō, pĭktōō'), town (pop 3,069), N N.S , on Pictou Harbour, an inlet of Northumberland Strait, and NE of Halifax It is a fishing port and the terminal of a ferry to Prince Edward Island It has shipbuilding and diversified industries and there are coal mines in the area Pictou was settled (1763) by a group of colonists from Philadelphia, under a land grant, and later received many settlers from the Scottish Highlands

Picts, ancient inhabitants of central and N Scotland and the northern counties of Ireland The Picts of Scotland may have come (possibly c 1000 B C.) from the Continent in pre-Celtic times, those in Ireland perhaps emigrated from Scotland in the 2d cent A D In the 4th cent the Scottish kingdom of Dalriada in Argyll—a rival to Pictavia—was settled from Irish Dalriada (Co. Antrim and Co Down) Early Latin writers refer to the Picts and Scots as the barbarians who assailed Hadrian's Wall in the 4th cent., but, according to Bede, St Ninian about that time converted the southern Picts to Christianity, as St Columba later converted the northern Picts. Rivalry between Pictavia and Dalriada continued until, in the 9th cent , Kenneth MacFergus united the thrones of the Picts and Scots. There is no undisputed interpretation of the language or the shadowy culture of the Picts. See H M Chadwick, *Early Scotland* (1949).

pidgin English or **pigeon English** [*pidgin*, supposedly from *business*], auxiliary language of Far Eastern ports, used principally for trading between Europeans and Chinese It has a generally English vocabulary with Malay, Chinese, and Portuguese elements The syntax is imitative of Chinese. The general term for such a nonnative, mainly commercial auxiliary language is LINGUA FRANCA. Other examples are the CHINOOK JARGON, SWAHILI, and a widely used variety of Malay

pie, meat, fish, fowl, fruit, or vegetables baked with a crust of PASTRY The pies of the Romans, especially at banquets in the days of the empire, were often elaborate concoctions, such as the showpieces in which were enclosed live birds. In England meat and fish pies had become common by the 14th cent., and fruit pies, often called tarts, in the 16th cent. The mince pie was a time-honored feature of the Christmas festivities and was called by the Puritans "superstitious pie" in protest against what seemed to them a pagan manner of celebrating a holy fast The mincemeat filling was a finely chopped, cooked mixture, including raisins, currants, apples, suet, sugar, spice, and often meat, brandy or cider, candied peel, and other ingredients A meat pie is often called a pasty, e.g., the Cornish pasty (liked by the miners of Cornwall) consisting usually of pork, mutton, onions, potatoes, and turnips The English settlers in America retained their taste for pie and adapted it to their new conditions, evolving the pumpkin and the cranberry pies Pie has remained a popular dessert in America.

piecework, work for which the laborer is paid on the basis of the amount of work done. The system is best adapted to standardized operations in which quantity is preferred to quality. Its advocates maintain that it pays the worker according to his ability. Its opponents argue that it tends to pay the best worker what he would receive on a time basis, while other workers receive less than they would by the hour and that it invites speeding of workers. In the United States the Jan., 1950, amendment to the WAGES AND HOURS ACT, setting a minimum wage of 75 cents per hour, with time and a half pay for hours over 40 per week, necessitates a record of hours worked and therefore lessens the utility of the piecework system.

Piedmont (pēd'mŏnt), Ital *Piemonte* (pyämôn'tā), region, NW Italy (9,817 sq. m ; pop 3,418,300). It is divided into the provinces of Turin, Alessandria, Asti, Cuneo, Novara, and Vercelli, all named after their chief cities TURIN is the capital Piedmont is bounded in the west and north, along the high Alpine crests, by France and Switzerland and in the northwest by the Val d'Aosta (until 1945 a part of Piedmont). To the south are the Apennines. The region includes the upper Po valley, rich mountain pastures sloping to well-cultivated hills, and a fertile plain. Grapes, cereals, rice, and chestnuts are the chief products Among its numerous industries are automobiles, textile, cement, and paper manufactures, metalworks, and hydroelectric plants. The region, which came to be known as Piedmont by the 13th cent., grew out of two western marches of the Lombard kingdom of Italy—Turin and IVREA. Created in the 10th cent , they passed by marriage (11th cent) to the SAVOY dynasty. In the 12th cent free communes were instituted in many cities, while others remained under feudal lords Besides the counts (later dukes) of Savoy, the marquises of SALUZZO and MONTFERRAT were powerful nobles, but by the 15th cent Savoy emerged as the chief power. The French often entered Piedmont through the strategic Mont Cenis and Mont Genèvre passes, either as allies or as enemies; they greatly influenced Piedmontese history and culture Piedmont was, moreover, a major battlefield in the Italian Wars (16th cent), the wars of Louis XIV, and the French Revolutionary Wars The dukes of Savoy, who in 1720 became kings of Sardinia, had acquired all of present Piedmont by 1748 From 1798 to 1814 Piedmont was annexed to France After its restoration to the kingdom of Sardinia it was the nucleus of Italian unification during the RISORGIMENTO

Piedmont. 1 City (pop 4,019), NE Ala , near the Ga line E of Gadsden, in a farm area It has cotton and lumber mills **2**, Residential city (pop. 9,866), W Calif., within the confines of Oakland, inc. 1907 3 City (pop. 1,177), SE Mo , WSW of Cape Girardeau, in a farm area Clearwater Dam in the Black River is SW of Piedmont. **4** Commercial city (pop. 2,677), W Va , in the agricultural Eastern Panhandle, on the North Branch of the Potomac and NW of Keyser, chartered 1856

piedmont, any foothill plateau, particularly the alluvial plateau extending from New York to Alabama E of the Appalachians and W of the Atlantic coastal plain. In Maryland, Virginia, and North Carolina it is E of the Blue Ridge The plateau is cut by numerous small rivers, whose fall line is along the eastern edge of the plateau

Pied Piper of Hamelin, legendary figure of HAMELN, Germany He rid the town of its rats and mice by charming them away with his flute playing When the citizens refused to pay the price agreed upon, he charmed away their children out of revenge Allegedly this occurred in 1284. Among those who immortalized this legend are Goethe, Robert Browning, and the brothers Grimm

Piedras Negras (pyā'dhräs nā'gräs) [Span , =black stones], ruined city of the Old Empire of the MAYA, NW Petén, Guatemala, in the Usumacinta valley. Reaching a peak of sculptural achievement (according to one dating system, between 731 and 795), Piedras Negras had some of the finest pre-Columbian stonework.

Piedras Negras, city (pop 15,663), Coahuila, N Mexico, on the Rio Grande opposite Eagle Pass, Texas Founded in 1849, the city grew as an international shipping point. There is a large steel blast furnace The surrounding valley is under cultivation, and coal is mined in the vicinity In 1888 Piedras Negras was renamed Ciudad Porfirio Díaz in honor of the dictator, but the old name was restored after his overthrow

Piegan Indians: see BLACKFOOT INDIANS.

Piekary Slaskie, Pol. *Piekary Śląskie* (pyĕskä'rĭ shlô'skyĕ), town (pop. 21,467), Silesia prov., SW Poland, N of Katowice. It is an industrial center.

pieplant: see RHUBARB.

pier, in engineering, term applied to a mass of masonry supporting a large structure, such as a bridge Structures which extend out from the shore and over the water, serving as a place to land passengers and merchandise from vessels, are also known as piers. Bridge piers are generally of masonry or concrete construction. When they are built on ground of poor bearing value, it is often necessary to drive piles to obtain a firm base. Piers built in

river beds are generally executed by the use of cofferdams or caissons. Piers are used in many harbors when there is ample width of stream, in New York harbor, for example, great economy of shore front is realized by building piers out at right angles to the shore. These piers are generally built on pile foundations. In architecture the term applies to the clustered Gothic pillar, to a wall between openings, and to a detached masonry mass serving as a gate post.

Pierce, Franklin, 1804–69, 14th President of the United States (1853–57), b Hillsboro, N.H., grad Bowdoin College, 1824. Admitted to the bar in 1827, he entered politics as a Jacksonian Democrat —like his father, Benjamin Pierce, who was twice elected governor of New Hampshire (1827, 1829) He served in the New Hampshire General Court (1829–33), being speaker in 1831 and 1832, and had an undistinguished career in the House of Representatives (1833–37) and the Senate (1837–42) On resigning from the Senate, partly because of his wife's ill-health, he achieved success as a lawyer in Concord, N.H., and continued to be important in state politics A strong nationalist, he vigorously supported and served in the Mexican War, becoming a brigadier general of volunteers. In 1852 the Democratic party was split into hostile factions led by Wilham L. MARCY, Stephen A DOUGLAS, James BUCHANAN, and Lewis CASS, none of whom could muster sufficient strength to secure the presidential nomination Pierce, personally charming and politically unobjectionable to Southerners since he favored the COMPROMISE OF 1850, was made the "dark horse" candidate by his friends, won the nomination, and went on to defeat the Whig candidate, Gen Winfield SCOTT, his commander in the Mexican War His desire to smooth over the slavery quarrel and unite all factions of the Democratic party was reflected in his cabinet, for which he chose outstanding sectional representatives such as Marcy, Jefferson DAVIS, and Caleb CUSHING A vigorous foreign policy was adopted, but it failed in most of its objectives The latent Southern desire to acquire Cuba was quickened after the BLACK WARRIOR affair, which was poorly handled by Pierre SOULÉ, bumbling minister to Spain and one of the authors of the unfortunate OSTEND MANIFESTO Troubled relations with England, where Buchanan was U S minister, were not improved by the U S naval bombardment of SAN JUAN DEL NORTE, British protectorate in Nicaragua, and the filibustering activities of Wilham WALKER further aggravated Central American affairs Moves to annex Hawaii, acquire a naval base in Santo Domingo, and purchase Alaska ended fruitlessly One achievement, the successful Japanese expedition of Commodore M C PERRY, had been initiated in Fillmore's administration On the domestic scene Pierce stood for development of the West (the GADSDEN PURCHASE was made), but plans for a transcontinental railroad fell through Conciliation of the South went too far, many Northerners thought, in the KANSAS-NEBRASKA BILL, which brought on the explosive sectional difficulties in "bleeding Kansas" Pierce, become unpopular, was passed over by the Democrats for renomination, and Buchanan succeeded him He never warmly supported coercion of the South and his opposition to the Civil War made him disliked more than ever in the North, where he died in obscurity. A well-meaning mediocrity, he probably fared no worse than would have another and more talented man in the difficult era of the 1850s. See biography by R F Nichols (1931)

Pierce, George Washington, 1872–, American physicist, b Webberville, Texas, grad Univ of Texas, 1893, Ph D Harvard, 1900 He taught at Harvard from 1902 and was chairman of the DIVISION OF PHYSICAL SCIENCES there from 1927 to 1940. He is known especially for his work on electricity and sound in connection with radio and wireless telegraphy He wrote *The Principles of Wireless Telegraphy* (1910) and *Electric Oscillations and Electric Waves* (1920)

Pierce, city (pop 1,249), co seat of Pierce co. NE Nebr., NNW of Norfolk; settled 1870.

Pierce City, Mo.: see PEIRCE CITY

Pieria (plēr'ēŭ), region of ancient Macedonia, W of the Gulf of Salonica. It included Mt. Olympus and Mt Pierus (pī'urŭs), an early seat of the worship of Orpheus and the Muses The spring here (the Pierian Spring) was supposed to bubble with the water of learning and the arts. The Muses were sometimes called the Pierides (plē'rĭdēz), a name given also to nine daughters of the legendary King Pierus of Macedonia. They contested with the Muses in song, were defeated, and were changed into magpies.

Pierino del Vaga: see PERINO DEL VAGA.

Piermont, residential village (pop. 1,876), SE N.Y., on the Hudson near the N.J. line, inc 1847. Corrugated paper containers are made here. The pier from which the village was named, built by the Erie RR, was used for the debarkation of troops in the Second World War.

Pierné, Henri Constant Gabriel (ärē' kōstä' gäbrēäl' pyĕrnā'), **1862–1937**, French organist, conductor, and composer; pupil of Massenet and César Franck. His cantata *Edith* won the Prix de Rome in 1882. He was organist at Ste Clotilde, 1890–96, succeeding Franck. At the death of COLONNE in 1910, he became chief conductor of the Colonne Concerts His best-known works are oratorios, *La Croisade des Enfants* (1902), *Les Enfants à Bethléem* (1907), and *Françoise d'Assise* (1912), ballets, *Cydalise et Le Chèvrepied* (1914), and incidental music for Rostand's *Princesse lointaine* and Loti's *Ramuntcho* He also wrote instrumental and orchestral music and songs.

Piero della Francesca (pyä'rō dĕl'lä frănchä'skä), c 1420–1492, Umbrian painter, known also as Piero de' Franceschi. His innovations in decorative design and perspective, his delineation of architectural backgrounds, and his mastery of light and atmosphere made him the important influence of his period on the art of central Italy. His notable works include the fresco series *Story of the True Cross* (Church of San Francesco, Arezzo), *Resurrection* (town hall, Sansepolcro); *Flagellation* (cathedral, Urbino), the portraits of Duke Federigo of Urbino and his wife, Battista Sforza (Uffizi), *Madonna* (Milan), *Nativity* and *Baptism of Christ* (National Gall., London), *Saint* (Frick Coll, New York), and *Hercules*, a fresco formerly in a palace in Sansepolcro (Gardner Mus, Boston) Piero was the author of two remarkable theoretical treatises *Libellus de V Corporibus regularibus* (MS in Vatican Library) and *De Prospectiva pingendi* (MS in Ambrosian Library, Milan), the second was published in 1899 See study by W G Waters (1901)

Piero di Cosimo (dē kō'zēmō), 1462–1521, Florentine painter, whose real name was Piero di Lorenzo. He adopted the name of his master, Cosimo Rosselli, whom he accompanied to Rome in 1482 and assisted in the decorating of the Sistine Chapel Piero is famed for his mythological and religious works, his pictures being noted particularly for their fine landscape backgrounds In his later years he was greatly influenced by Leonardo da Vinci Chief among his works, which are rare, are *Death of Procris* (National Gall, London), *Perseus and Andromeda* and *The Immaculate Conception* (Uffizi), *Coronation of the Virgin* (Louvre), *Allegory*, *The Visitation with Two Saints*, and *The Nativity with the Infant St John* (National Gall of Art, Washington, D C), two small panels, *Hunting Scene* and *Return from the Hunt*, and *Young St John the Baptist* (Metropolitan Mus), *Adoration of the Child* (Toledo Mus), *Vulcan and Aeolus* (National Art Gall of Canada, Ottawa) See biography by R Langton Douglas (1946)

Piérola, Nicolás de (nēkōlas' dä pyä'rōla), 1839–1913, president of Peru (1879–81, 1895–99) Minister of finance under José BALTA, he was accused of misappropriating funds and was exiled From Chile he invaded Peru and unsuccessfully attempted to stir up revolution Later he was allowed to return (1879) to take part in the war against Chile (see PACIFIC, WAR OF THE) When Mariano I PRADO abandoned Peru, Piérola took over the government, but continued failure in the war caused his own flight He did not succeed in an attempt to seize the government in 1885 After ousting Andreas A CÁCERES in 1894, he became president again and set about the reconstruction of devastated Peru by initiating fiscal, military, religious, and civil reforms

Pierpont, Francis Harrison (pēr'pŏnt), 1814–99, Civil War leader of the Union government in Virginia, "father of West Virginia," b near Morgantown, Va (now W Va), grad Allegheny College, 1839 When Virginia seceded, he became a leader of the disaffected Unionist forces in the western part of Virginia and was made head of the government set up by the Wheeling Convention of June, 1861. This government granted (1862) the approval, necessary under the Constitution, for the organization of the western counties into a new state, West Virginia, and after its admission (1863) to the Union, Pierpont moved his "restored government" of Virginia from Wheeling to Alexandria (he was never governor of West Virginia) At the end of the Civil War, Pierpont moved to Richmond and was supported by President Johnson, but was forced to retire as governor in 1868 after the radical Republicans took over Reconstruction He himself seems to have spelled his name Pierpoint. See biography by C H Ambler (1937)

Pierpont Morgan Library, originally the private library of J. Pierpont Morgan, in 1924 made a public institution by J. P Morgan as a memorial to his father. The management was vested in a board of trustees, and Belle da Costa Greene, who had been librarian for both the Morgans, was director until her retirement in 1948 The library occupies a white marble building at Madison Ave. and 36th St, New York city; an annex was built and donated to the library by J. P Morgan in 1928. The library is especially rich in illuminated manuscripts and in authors' manuscripts (including, among others, some of Dickens, of Scott, and of Balzac), it has hundreds of Bibles in all languages and has the only perfect copy of Malory's *Morte d'Arthur* printed by Caxton. The publications of the library include monographs, catalogues of collections or of exhibits, and reprints and facsimiles. Other services to the public are lectures and exhibitions. Except to exhibitions, admittance is only by card.

Pierre (pēr), city (pop 4,322), state capital (since 1889), and co seat of Hughes co, central S.Dak., on the east bank of the Missouri opposite Fort Pierre, founded 1880, inc 1883 The city boomed with the coming of the railroad (1880) and became the state's principal trading and distributing center for both the eastern farm and the western ranch areas It ships livestock and farm products and has railroad workshops. Besides the capitol, the city has Federal buildings, a memorial hall housing historical records and collections, a municipal park, an artificial lake, and an airport It is the seat of a U S Indian school.

Pierre de la Ramée: see RAMUS, PETRUS

Pierreville (pyĕrvēl'), village (pop 1,802), S Que., on the St Francis river near its mouth on the St. Lawrence and E of Sorel. Industry is concerned with lumbering and woodworking.

Pierrot (pē'urō) [Fr.,=little Peter], character in French pantomime A buffoon, he wore a loose white tunic with big buttons, balloon sleeves, and white pantaloons His face was painted white. Giuseppe Giaratone or Geratoni (fl. 1639–97), as usually credited with creating the character. Deburau introduced Pierrot in the early 19th cent. at the Théâtre des Funambules, and the character was revived at the end of the 19th cent. when pantomime reappeared

Piers Plowman (pērz' plou'mún). *The Vision concerning Piers Plowman* is a 14th-century allegorical English poem written in unrhymed alliterative verse, satirizing and attacking the clergy and exalting the simple life It recounts a series of dreams with subject matter similar to that of *Pilgrim's Progress* and with allegorical characters, including Lady Meed, Holy Church, Conscience, False, Dowel, Do-bet, Do-best, and Piers Plowman At first the incarnation of the virtuous laborer, Piers Plowman later becomes almost identical with the Christ. It contains a detailed and trustworthy picture of the life of the time There are 47 manuscripts of the poem extant, which fall into three groups the A-text (2,567 lines, 1362), the B-text, a revision of A (1,242 lines, 1376–77), and the C-text, a revision of B (7,357 lines between 1393 and 1399). The view of many scholars that the poem was the work of William LANGLAND, whose biography has been deduced from passages in the poem, has been disputed by other scholars, who suggest two, or even five authors See the monumental edition of the poem by W W Skeat (1886) and the modern versions by W W Skeat (1905), Donald Attwater (1930), and H W Wells (1935), J E Wells, *A Manual of the Writings in Middle English, 1050–1400* (1916, with later supplements, 8th sup, 1941).

Pietà (pēätä') [Ital.,=pity], in Christian art, the representation of the Virgin mourning over the dead Christ First depicted in the late 13th cent., the subject has been portrayed in the painting and sculpture of many of the greatest artists

Pietermaritzburg (pē"turmä'rĭtsbûrg), city (pop. 61,018), capital of Natal, Union of South Africa; founded by the Boers in 1838 It is on a railroad to Durban An educational center, it is the seat of the Univ of Natal Its population includes 26,890 Europeans The name is commonly shortened to Maritzburg

Pietersburg (pē'tûrsbûrg), town (pop 15,641), N Transvaal, Union of South Africa It was named in memory of Piet Joubert. Near by are gold, asbestos, and corundum mines The population includes 6,345 Europeans

Pietism (pī'utizĭm), a movement in the Lutheran Church, most influential between the latter part of the 17th cent and the middle of the 18th It was an effort to stir the church out of a settled attitude in which dogma and intellectual religion seemed to be supplanting Bible rules and religion of the heart. The first great leader was Philipp Jakob SPENER, who began (1670) to hold devotional meetings. His *Collegia Pietatis* were designed to bring Christians into helpful fellowship and increase Bible study Spener's book, *Pia desiderta* (1675), emphasized the need of earnest Bible study and the belief that the lay members of the church should have part in the spiritual control. Spener's belief that Christian belief should be shown in everyday living was interpreted by some as justification by works, an idea contrary to Martin Luther's views, and the Pietists met considerable opposition After Spener's death the work was carried on by August Hermann FRANCKE, but after his time Pietism declined. Its effect was strongest in N and central Germany but reached into Switzerland and other parts of Europe Through Count Zinzendorf the Moravian Church was touched by it The movement lacked organization to keep it in operation actively after the early leaders were gone In some places Pietists adopted a distinctive dress and strongly puritanical ways. Such entertainments as dancing, the theater, and public games were renounced Puritanism was not, however, implicit in the movement; the essential aim of the true Pietist was to place the spirit of Christian living above the letter of doctrine. See K S Pinson, *Pietism as a Factor in the Rise of German Nationalism* (1934).

pietra dura (pēā'trù dōō'rù, Ital. pyā'trā dōō'rā) [Ital , =hard stone], term used in Italy to denote a particular type of building material and also a semiprecious stone. As employed in English, however, it refers to a form of inlay in which hard, semiprecious stones, such as agate or cornelian, are cut to shapes, arranged in decorative patterns, and polished to an even plane to create a mosaiclike surface The method originated in the 16th cent , probably in Florence, where the best work is found

Pietro d'Abano · see ABANO, PIETRO D'

piezoelectric effect (pīē"zōĭlĕk'trĭk), phenomenon manifested in various crystals, especially those of quartz and Rochelle salt, whereby mechanical pressure exerted upon a crystal results in the production of an electrical charge along its surfaces The converse effect, the distortion of the crystal, can be achieved by the application of an electrical charge. Crystals are employed for their piezoelectric effect in the MICROPHONE and in the radio OSCILLATOR

pig: see SWINE

Pigalle, Jean Baptiste (zhā' bătēst' pēgăl'), 1714–85, French sculptor, son of a carpenter In his youth he suffered great privations and worked hard for the success he later achieved His *Mercury* (Louvre) gained him admission to the Académie royale de Peinture et de Sculpture in 1744 and is one of his most inspired works A model in terra cotta for this statue is in the Metropolitan Museum His *Love and Friendship* (Louvre), done for Mme de Pompadour, and his tombs of Maurice de Saxe (Strasbourg) and Marshal d'Harcourt (Notre Dame, Paris) are among his finest works

Pigeon, short river flowing E into Lake Superior and forming part of the boundary between NE Minnesota and W Ontario It was the terminus of the GRAND PORTAGE

pigeon, member of a large family of birds related to the plover and characterized by a compact body with well-groomed, usually softly colored plumage, short legs, and a horny-tipped bill with soft swellings at the base of the nostrils Pigeons are found in most temperate and tropical regions of the world The terms DOVE and pigeon are often used interchangeably The birds are hatched in an immature state and are fed on 'pigeon's milk' from the crops of both parents The common pigeon seen in city streets and parks the world over is descended from the rock dove, which is native to the coasts of Europe and is thought to be the ancestor of all the domesticated pigeons For centuries the favorites among the domesticated varieties developed by selective breeding have included the fantail, with its numerous erectile tail feathers, the Jacobin, with a hoodlike ruff of feathers surrounding the head, the tumbler, which turns backward somersaults as it flies, the pouter, with an enormous crop, and the quarrelsome carrier, with its rosettelike eye and nose wattles The homing pigeon has been used as a carrier of messages, especially in wartime It has sporting value as a racing bird The commonest extant American wild pigeon is the mourning dove, which is similar to the extinct PASSENGER PIGEON Other wild American pigeons are the band-tailed, the red-billed, and the white-crowned pigeons In Europe the turtledove, the rock pigeon or rock dove, the stock dove, and the ringdove or wood pigeon are common The gouras or crowned pigeons of New Guinea are the largest of the family The most colorful are the fruit pigeons of Australia and the Pacific islands The bleeding-heart pigeon is found in the Philippines Related birds, which have long been extinct, are the DODO and the solitaire See W M Levi, *The Pigeon* (1941)

pigeon English see PIDGIN ENGLISH

Piggott (pĭ'gŭt), city (pop 2,034), and co seat of Clay co , extreme NE Ark , in a farm and fruitgrowing region

pig iron: see IRON.

pigment, in paint, the powdered substance which, mixed in the liquid vehicle, imparts the color to the surface treated. The pigments used in paints are nearly all metallic compounds Most black pigments, however, are organic, e g , bone black (animal black or charcoal) and lampblack Some of the metallic substances occur naturally The brilliant and beautiful coloring of the rock and soil in some parts of the United States, especially in the Grand Canyon of the Colorado river, the Painted Desert of Arizona, and Bryce and Zion canyons of Utah, is largely produced by such compounds, chiefly oxides Yellow ocher, sienna, and umber are oxides of iron Litharge is a yellow oxide of lead Red lead is also an oxide of this metal Lead chromate or chrome yellow is an important yellow pigment White lead, or basic lead carbonate, is a pigment long in use The mixture of this pigment with zinc oxide is more durable Cadmium yellow is a sulphide of cadmium Ultramarine is an important blue pigment, as is also Prussian blue (ferric ferrocyanide) Green pigment is produced by mixing Prussian blue and chrome yellow. Vermilion (mercury sulphide) is red. LAKE is prepared artificially Pigments occur in plant and animal bodies The bright colors of plants, for example, are the result of the presence of such substances as chlorophyll (green) and xanthophyll (yellow), both of which are also found in some animals. Among others are carotene, the yellow of carrots, and certain other vegetable products and anthocyanin, which imparts blue, red, and purple to flowers Blood receives its color from the hemoglobin in the red corpuscles Coloration of the skin (PIGMENTATION) of man is caused by the presence of pigments

pigmentation, coloring matter which is found in certain plant and animal cells. The common pigment in plants is CHLOROPHYLL Pigmentation in certain animals sometimes serves as a protection and helps them to survive The chameleon, for example, is capable of adapting itself to the color of its environment and thus often escapes detection by its enemies In higher animals a black pigment called melanin is found in the dermis of the skin, in the hair, and in the retina of the eye The degree of melanin in the skin determines the dominant color, thus a dark skin has a greater proportion of this pigment than a light skin Melanoid, a diffuse form of melanin, was more recently reported to be present in both light and dark skins In addition to these, there are several other pigments that are found in the skin of all people Two are derived from the hemoglobin of the blood and are chiefly responsible for the pinkish flesh tones, these are oxyhemoglobin and oxygen-free hemoglobin Carotene, long known to be present in carrots, sweet potatoes, corn, and butter, is said to be found in humans in the skin of the eyelids, the palms of the hands, and the soles of the feet.

pignut hickory · see HICKORY

Pigou, Arthur Cecil (pĭ'gōō), 1877–, British political economist, grad King's College, Cambridge After lecturing at University College, London, and Cambridge Univ , he was (1908–43) professor of political economy at Cambridge He was a member of the committee on currency and foreign exchange (1918) and of the royal commission on income tax (1919) He is a leading exponent of the theory that economic waste due to unemployment, poor health, and poor housing is a responsibility of society, which should bear the costs Among his many works are *Wealth and Welfare* (1912), *The Economics of Welfare* (1920), *The Political Economy of War* (1921, new ed , 1941), *The Theory of Unemployment* (1933), *Socialism versus Capitalism* (1937), *Employment & Equilibrium* (1941), and *Income: an Introduction to Economics* (1946)

pigweed, name for several weedy plants, particularly the common pigweed or LAMB'S-QUARTERS, the rough pigweed or green AMARANTH, and the winged pigweed, a TUMBLEWEED

Pi-hahiroth (pī'-hăhī'rŭth), place, between Migdol and Baal-zephon, where the Israelites encamped Ex 14 2,9, Num 33 7

Pike, Albert, 1809–91, American lawyer, Confederate general, and Freemason, b Boston He settled (1832) in Arkansas, where he became a newspaper editor and a lawyer He was a captain in the Mexican War In the Civil War, Pike secured for the Confederacy the loyalty of the tribes in the Indian Territory Widely criticized for inept handling of his Indian brigade, especially at the battle of Pea Ridge (March, 1862), he resigned After the war he practiced law in Memphis and Washington His *Prose Sketches and Poems Written in the Western Country* (1834) resulted from a trip over the Santa Fe Trail Most important of his many writings on Freemasonry (he joined the order in 1850) is *Morals and Dogma of the Ancient and Accepted Scottish Rite of Freemasonry* (1871)

Pike, Zebulon Montgomery, 1779–1813, American explorer, an army officer, b Lamberton (now part of Trenton), N J He joined the army early, perhaps in 1793, and was commissioned second lieutenant in 1799 In 1805 he led an exploring party to search for the source of the Mississippi, though he mistakenly identified Red Cedar Lake (now Cass Lake) in Minnesota as the source, he was not far wrong After his return he was sent by his commander, James Wilkinson, on an expedition (1806–7) through the Southwest in the recently acquired Louisiana Territory Pike and his men went up the Arkansas to the site of Pueblo, Colo , and he explored much of the country, sighting the peak which is called after him Pikes Peak When he and a small party went to the Rio Grande, he was captured peaceably by the Spanish, taken to Santa Fe and then to Chihuahua, and finally released at the border of the Louisiana Territory The motive behind this official incursion into Spanish territory has never been satisfactorily cleared up Pike may have been a straying explorer, or he may have been secretly commissioned by the government to spy in the Spanish lands At the time he was accused of complicity in the plot of Aaron Burr and James Wilkinson to detach Western territory from the United States, and he was a defender of Wilkinson, he was, however, exonerated by the Secretary of War There is no doubt, however, concerning his valor, resourcefulness, or leadership in his exploration, nor is there doubt of the value of the narratives of his voyages—*An Account of the Expeditions to the Sources of the Mississippi and through the Western Parts of Louisiana* (ed. by Elliott Coues, 3 vols., 1895; partly reproduced in *Overland to the Pacific*, Vol I, ed. by A. B. Hulbert, 1932) He died at 34, killed in the War of 1812 when he was a brigadier general in command of troops assaulting York (now Toronto) See W. Eugene Hollon, *The Lost Pathfinder* (1949)

pike, fresh-water game fish of the Northern Hemisphere The body is elongated, the only dorsal fin is far back on the body, and the long jaws are armed with strong teeth. The common American pike, northern pike or great northern pike, which varies in length from 1 to 4 ft. and may reach a weight of 50 lb , is considered by many to be the same species as the pike (*Esox lucius*) of Europe and Asia See also MUSKELLUNGE and PICKEREL

pike, in U S history see TURNPIKE.

Pikes Peak, 14,110 ft high, central Colo , in the southern part of the Front Range of the Rocky Mts There are many higher peaks in the Rockies, but this is the best known and most conspicuous because of its location on the edge of the Great Plains At its eastern base are Colorado Springs and Manitou Springs, Denver lies to the north Its summit, generally snow covered, is reached by a cog railroad and a highway. The peak is named for Zebulon M PIKE, who discovered it in 1806

Pikeville, town (pop 4,185), co seat of Pike co , E Ky , in the Cumberlands and on the Levisa Fork It is in a coal and timber region. A coeducational junior college is here.

Pila, Pomerania see SCHNEIDEMÜHL

pilaster (pĭlă'stûr), in architecture, an upright supporting member, attached to and projecting slightly from the face of a wall and equipped with a base and capital like a column, and also a similar form used decoratively The pilaster in general follows the rules and proportions of the classic orders, it may be fluted or not, but usually has no entasis or taper It was used by the Romans, the Greek antae (projections of the wall at the corners only), although similar in function, differ in base and capital from the columns which stand between them In the Renaissance, particularly the later phases, the pilaster, used as a purely decorative device, was often paneled and ornamented

Pilate see PONTIUS PILATE

Pilatus (pĭlă'tus, Ger pēlä'tōōs), mountain, 6,995 ft high, Switzerland, S of Lucerne According to legend, the corpse of Pontius Pilate was thrown into a small lake on the mountain

Pilcomayo (pēlkōmī'yō), river rising in the Bolivian Andes E of Lake Poopó and flowing 700 mi SE across the CHACO to the Paraguay near Asunción In the Chaco it is the boundary between Argentina and Paraguay

Pildash, son of Nahor Gen 22 22

pile, post of timber, steel, or concrete used to support a structure Vertical piles or bearing piles, the most common form, are generally needed for the foundations of bridges, docks, piers, and buildings Slender tree trunks, roughly trimmed and about 10 in thick at the butt, are used in foundations for houses Spruce, pine, and hemlock are sturdy enough for soft soil, and elm, beech, oak, and hickory are more suitable for compact soil Wooden piles continuously under water will last a very long time, those under the campanile in St Mark's Square, Venice, dating from the 10th cent , were found to be in excellent condition when the building collapsed in 1902 Wooden piles are shaped for driving and sometimes have a pointed iron shoe set on the sharp end, with the butt end encircled by an iron band to prevent brooming under the blows of the pile driver They are spaced according to the nature of their task, generally 3 or 4 ft apart from center to center Concrete piles are in general of two types, the precast and the cast in place They have great strength and durability, are free from deterioration when wholly in the ground, and are immune from the attacks of the teredo and other borers Precast piles are made of concrete reinforced with steel bars looped one to the other and are tipped and topped with protective steel when driven into the ground. The steel is not needed when the piles are set by the force of jets of water, in this method an iron pipe is set in the center of the pile, and water under pressure is sent down to wash away the sand, silt, or soft earth which it is to displace Only in such subsurfaces can the water-jet system be employed Cast-in-place piles are variously made One method consists of driving a hollow steel sheet into the ground and filling it with concrete, after which the shell is withdrawn and the molded concrete is in place Sheet piling consists of wooden boards or interlocking steel plates and is used largely as a cofferdam to keep water from structural work Concrete sheet piling is also used. Pilings are driven into the ground by pile drivers using drop hammers, steam hammers, or compressed-air hammers

pile dwelling · see LAKE DWELLING.

Pileha (pī'lēhă), signer of the covenant Neh. 10.24

piles, in medicine · see HEMORRHOIDS.

pilgrim, one who travels to a shrine out of religious motives. Pilgrimages are a feature of many cultures, they imply a widespread common religious system. Examples in ancient Greece were Eleusis

and Delphi. Pilgrimages are well established in India (e g., to Benares, Puri, Allahabad, and the Ganges), in China (e g , to Mt Tai), and in Japan (e g , to Uji-yamada and Taisha). The Temple at Jerusalem was the center of an annual pilgrimage of Jews at Passover Every Moslem tries to make the pilgrimage to Mecca once in his life, this is the pilgrimage (Hajj) par excellence and has had a remarkable effect in unifying ISLAM A favorite Shiite shrine is KARBALA The Christian pilgrimage to the Holy Places of Jerusalem, Bethlehem, and Nazareth, already well established, received great impetus in the 4th cent from the finding of the True Cross by St Helena Protection of this pilgrimage has repeatedly been a political crux, as in the CRUSADES and in the 20th-century Palestine problem In Western Europe the principal shrine is Rome, sacred to St Peter and St Paul and the martyrs Since 1300 the popes have set aside holy years (see JUBILEE) for special pilgrimages to Rome Another historic shrine is SANTIAGO DE COMPOSTELA, NW Spain, one explanation of the origin of the CHANSON DE ROLAND connects it with songs sung to entertain the Compostela pilgrims The chief shrine of medieval England was the tomb of St Thomas à Becket at Canterbury—its pilgrimage was immortalized by Chaucer Other English pilgrimages were to Walsingham and Glastonbury Badges to show what pilgrimages one had made were a feature of medieval dress Thus, a palm badge symbolized the visit to the Holy Land, and its bearer was called a palmer In recent times the Christian Church which most fosters pilgrimages is the Roman Catholic, its shrines include Rome, the Holy Land, LORETO, Compostela, MONSERRAT, FÁTIMA, LOURDES, Ste Anne d'Auray (see AURAY), EINSIEDELN, CZESTOCHOWA, CROAGHPATRICK, SAINT PATRICK'S PURGATORY, SAINTE ANNE DE BEAUPRÉ (Quebec), and GUADALUPE HIDALGO (Mexico) See Sir R F Burton, *Personal Narrative of a Pilgrimage to El-Medina and Mecca* (1855), Jules Jusserand, *English Wayfaring Life of the Middle Ages* (1889), F L Gulford, *Travellers and Travelling in the Middle Ages* (1924)

Pilgrimage of Grace, 1536, rising of Roman Catholics in England It was a protest against the government's action in abolishing papal supremacy (1534) and confiscating the monastic properties below £200 (1535), the Catholics protested their loyalty to Henry VIII, citing as their "great grudge" the position and influence of Thomas CROMWELL, who was largely responsible for the state policy In Oct , 1536, there was a gathering of some thousands of men at Louth to protest the suppression of the monasteries, George Talbot, 4th earl of Shrewsbury, dispersed them by assuring them Parliament had sanctioned the action Almost before this was over there was a great rally in Yorkshire in favor of the papal supremacy and the monasteries The movement gathered strength, and in a week or two all England N of the Humber had joined the movement It was led by Robert Aske of Aughton, Yorkshire, the banner bore the device of the Five Wounds At York, Aske and some thousands of men reopened the monasteries and forced the royal officers to obey them They moved on to Doncaster, where the number of men was 40,000 at least They came from all walks of life, including such noblemen as Baron Darcy The earl of Shrewsbury and Thomas Howard, 3d duke of Norfolk, met them and promised from the king a general pardon and a Parliament to be held at York in a year The men dispersed now and went quietly home Aske was invited to London and received well by the king In Jan , 1537, Francis Bigod of Settrington, Yorkshire, led a rising at Beverly Although Aske and the other leaders of the Pilgrimage of Grace had tried to prevent this new disorder, they were arrested and tried in London They were executed in June, 1537, as was Bigod The northern counties were heavily garrisoned, and many people were killed on suspicion of disaffection In S England the sympathisers with the Pilgrimage of Grace were not very numerous, but in the west it caused great excitement and undoubtedly increased the religious disaffection which came to a head in the Cornish rising of 1549 The repression in N England after the Pilgrimage of Grace put an end to open opposition to the government religious policy

Pilgrims, in American history, the group of separatists and other individuals who were the founders of PLYMOUTH COLONY in Massachusetts The nucleus of the group came into being in the meetings of a group of Puritans at Scrooby, a village not far from York, N England Opposed to the episcopal jurisdiction and the rites and discipline of the Church of England, the group had formed as a separatist Congregationalist church by 1606, with John ROBINSON eventually becoming their minister. The congregation was composed mainly of neighboring farmers and artisans, men of little education or position, although William BREWSTER, one of their leaders, was a man of some importance in the town and had spent some time at Cambridge. Although not actively persecuted, the group was subjected to ecclesiastical investigation and, because of their rather ostentatious godliness, to the mockery, criticism, and disfavor of conformists in the vicinity. To avoid contamination from their neighbors and to escape the hated Church from which they had separated, the sect decided to move to Holland, where other groups had found religious liberty, despite the law which forbade emigration without royal permission After several false starts, two of which were frustrated by the law, small groups made their way to the Netherlands in 1607, and by the middle of 1608 most of them had reached Amsterdam They went from there to Leiden, where they established themselves as artisans and laborers Life in Holland was not easy, however, and the immigrants found the presence of radical religious groups there objectionable Dutch influence also seemed to be altering their British ways, and the prospect of war with Spain threatened For these reasons they considered moving to the New World In 1617 John CARVER and Robert Cushman went to London to make arrangements with the Virginia Company, cautiously negotiating to make pledges that would satisfy company, king, and bishops and still keep the religion of the dissenters pure In 1619 a charter was secured from the company in the name of one John Wincob, but it was never used The matter lapsed until early in 1620, when Thomas Weston, speaking for a group of London merchants, offered them support and the use of a charter already obtained from the Virginia Company A joint-stock company for seven years was arranged The congregation voted on the voyage, but only about half of the members decided to go A small vessel, the *Speedwell*, was obtained to carry the Pilgrims to England, where that vessel joined the MAYFLOWER for the trip to America Difficulties arose, however, over restrictive arrangements included by Weston in the agreement in order to guarantee more strongly the investment by the merchants, and the Pilgrims, unwilling to accept the revised agreement, sailed without reaching a settlement The *Speedwell* proved unseaworthy and returned to port, many of the passengers and much of her cargo were crowded on the *Mayflower*, which set out alone Though outnumbered by the English group that had been gathered for the trip, many of whom were not even separatists (they were thus called "Strangers"), the Leiden group (the "Saints") retained control and were the moving force behind the emigration In Dec , 1620, the *Mayflower* entered Plymouth harbor, where the settlers established dwellings The name Pilgrim Fathers is given to those members who made the first crossing on the *Mayflower* See William BRADFORD, *History of Plimmouth Plantations* (pub 1856), H M Dexter, *The England and Holland of the Pilgrims* (1905), R G Usher, *The Pilgrims and Their History* (1918), G F. Willison, *Saints and Strangers* (1945)

Pilgrims' Way, ancient road in England, from W Hampshire to Canterbury in Kent From the 12th to the 16th cent the Canterbury pilgrims followed this road to the shrine of Thomas à Becket The track mainly corresponds to the modern Dover road See Hilaire Belloc, *The Old Road* (1911)

Pilibhit (pēlēbēt'), town (pop 44,709), N central United Provs , India In the 18th cent it was a center of the Moslem Rohilla power There is a trade in farm produce

pillar, freestanding columnar supporting member, of irregular cross section It is a general term, little used as an exact architectural definition except as applied to an upright support in the medieval styles, consisting of an assemblage of juxtaposed shafts and moldings, unlike the column, it does not adhere to the rules of the orders In art and especially in religion (Gal 2 9) a pillar has always symbolized strength or support

Pillars of Hercules (hûr'kyōlēz), promontories at Gibraltar (anc. *Calpe*) in Europe and at Ceuta (anc *Abyla*) in Africa, at the east end of the Strait of Gibraltar They are also called the Gates of Hercules

Pillau (pĭ'lou), town (1939 pop 12,379), former East Prussia, an outer port of Königsberg, on the Frisches Haff It was included in 1945 in the Kaliningrad oblast of the RSFSR and was officially renamed Baltisk Pillau was developed (17th cent) as a fortified port under Frederick William the Great Elector

Pillnitz (pĭl'nĭts), village, Saxony, E Germany, on the Elbe near Dresden. There is a castle that was formerly a royal residence Here in Aug , 1791, Emperor Leopold II and King Frederick William II of Prussia met to discuss the problems arising out of the French Revolution and issued a declaration calling on the European powers to restore Louis XVI to his full authority as king of France To impress the French people with the seriousness of their purpose, the two monarchs agreed to mobilise their forces The declaration aroused the Girondist war party in France and helped to create the impression that the French royal couple were in league with an anti-French coalition It thus helped to bring on the French Revolutionary Wars and to undermine the royal authority in France

Pillow, Gideon Johnson, 1806–78, American general, b Williamson co , Tenn , grad Univ of Nashville, 1827. He was appointed brigadier general of Tennessee volunteers in the Mexican War by his former law partner, President James K Polk As commander of a wing of Winfield Scott's army he took part in the battles leading to the surrender of Mexico city (see especially CONTRERAS) and was made a major general (1847) A quarrel with Scott led to a court of inquiry which acquitted Pillow of insubordination When the Civil War broke out he became a Confederate brigadier general His conduct in escaping from Fort Donelson (see DONELSON, FORT) before the Confederate surrender caused the suspension of his command

Pillow, Fort, Civil War fortification on the Mississippi river, c 40 mi N of Memphis, built by G J. PILLOW in 1862 Evacuated by the Confederates after the fall of Island No 10, it was occupied by Union troops (June 6, 1862) N B FORREST stormed and captured it on April 12, 1864, and a large proportion of the garrison (about half of which was Negro) was killed Forrest, charged with ruthlessly killing the men, reported that the Union command did not surrender and that the soldiers were killed attempting to escape capture.

pillow lace see LACE

Pillsbury, Harry Nelson (pĭlz'bûrē, -bĕ"rē), 1872–1906, American chess player, b Somerville, Mass. He won first prize at Hastings, England, in 1895 against the best masters of his day In 1900 he attracted wide attention by his blindfold play of 20 games simultaneously See P W Sergeant and W H Watts, *Pillsbury's Chess Career* (1923)

Pillsbury, John Sargent, 1828–1901, American miller and governor of Minnesota (1876–82), b Sutton, N H He went west in 1855 and settled at St Anthony (now Minneapolis), Minn As a member of C A Pillsbury & Company and later of the Pillsbury-Washburn Company he was interested in flour milling He served several terms as state senator and was for 38 years a regent of the Univ. of Minnesota, to which he gave $150,000 for Pillsbury Science Hall

Pilnyak, Boris (burĕs' pēlnyăk'), pseud of **Boris Andreyevich Vogau** (ŭndrā'ŭvĭch vô'gou), 1894–, Russian novelist He was not known as a writer until after the revolution, which gave him material for *The Naked Year* (1922, Eng tr , 1928), the first major novel to depict this period Later novels—*Wolves and Machines* (1923), *Mother Damp Earth* (1925), and *Mahogany* (1927)—with their anti-urban note brought him into suspicion with orthodox Communist critics, a condition which his later novel *The Volga Falls to the Caspian Sea* (1930, Eng tr , 1931) did little to dispel, as it emphasized the cost in human life of a great dam In 1931 Pilnyak visited the United States, describing his experiences in an unflattering report *OK* (1932) Pilnyak never quite accepted the revolution, this is seen in *The Birth of a Man* (1935), less so in *The Ripening Fruits* (1938)

pilocarpine see JABORANDI under POISONING, table

Pilon, Germain (zhĕrmĕ' pēlô'), 1535–90, French sculptor He was court sculptor under the later Valois sovereigns He executed the kneeling bronze portraits and the reclining marble figures of Henry II and Catherine de' Medici on the king's mausoleum at Saint-Denis *Three Graces* supporting an urn which formerly held the heart of Henry II, portrait busts of Henry II and Henry III, and, his masterpiece, the kneeling figure in bronze of Chancellor René de Birague are all in the Louvre A marble head of Charles IX is in the Metropolitan Museum As controller of the mint under Charles IX he made fine medallions, medals, and coins

pilot, person responsible for the safe NAVIGATION of a vessel through a certain zone Laws governing the pilotage of ships and pilots have been enacted by all the maritime nations of the world and by the seaboard states of the United States The master or another officer may perform this duty provided he has passed the necessary examinations which entitle him to a pilotage certificate. The licensing of ship pilots is the responsibility of the U S. coast guard The airplane pilot, often with the assistance of a copilot, is in command of an airplane in flight. Before a pilot gains his license in the United States, he is required to have a prescribed amount of solo-flying experience, to pass a rigid physical examination, and to pass a flying test given by the U.S. Civil Aeronautics Board

Pilot Point, town (pop 1,122), N Texas, NNW of Dallas, in a farm area, settled 1835, inc 1906

Piloty, Karl von (karl' fŭn pēlô'tē), 1826–86, German historical painter, son of Ferdinand Piloty (1786–1844), a noted German lithographer Karl studied in Munich, Antwerp, and Paris and first won recognition for his genre paintings, such as *The Nurse* (1853) However, he soon turned to historical paintings, which were famous in his day for their realism and emphasis on color As a popular professor of the Munich Academy he exercised a great influence on many important German painters In 1874 he was made director of the academy Among his well-known works are *The Death of Caesar*, *Galileo in Prison*, *Godfrey of Bouillon with the Crusaders at the Holy Sepulchre*; *Triumph of Germanicus* (replica in the Metropolitan Mus), and *The Wise and Foolish Virgins* (Metropolitan Mus).

Pilsen (pĭl'sən, -zən, Ger. pĭl'zən), Czech *Plzeň* (pə̆l'zĕnyū), city (pop. 103,767), NW Bohemia, Czechoslovakia It is the center of a coal-mining region, but is famous for its beer, exported to the whole world, and for the huge Skoda works (now nationalized), which produce locomotives, automobiles, farm machinery, and armaments. Withstanding long sieges, Pilsen remained a center of Catholicism throughout the Hussite Wars. One of the earliest printing presses was established here c 1470 Though largely a modern city, Pilsen has a Gothic church (St Bartholomew's, 15th cent.) and a Renaissance town hall, both on the old town square

Pilsudski, Joseph (pĭlsōōd'skē), Pol *Józef Piłsudski* (yōō'zĕf pē"ōōsōōt'skē), 1867–1935, Polish general and statesman, b. near Vilna He was exiled (1887–92) to Siberia for an alleged attempt on the life of Emperor Alexander III On his return he joined the Polish Socialist party and began (1894) publication of the *Robotnik* [the worker], a secret party organ. Again imprisoned in 1900, he later abandoned socialism and struggled exclusively for the restoration of an independent Poland. To that end he organized various anti-Russian militant groups, notably, after the outbreak (1914) of the First World War, the Polish Legions, which he commanded under Austrian sponsorship When Pilsudski protested against the failure of the Central Powers to honor their promises to Poland, his legions were disbanded and Pilsudski was imprisoned at Magdeburg. Released in Nov., 1918, he returned to Warsaw, took over command of the Polish armies and proclaimed an independent Polish republic, of which he was the head Meanwhile a Polish national committee, which had favored cooperation with the Allies in the war, had established itself at Paris and won Allied recognition. Pilsudski was supported by leftist groups, the national committee was more conservative A compromise was reached in 1919 when Paderewski became premier while Pilsudski continued as chief of state. He used force to expand the eastern frontier of Poland, seeking the restoration of the 1772 borders. Though he did not completely reach his aim, the peace treaty with Russia (see RIGA, TREATY OF, 1921) incorporated millions of Ukrainians and White Russians into Poland In accordance with the Polish constitution of 1921, Pilsudski surrendered (1922) his powers and retired to private life. Irritated by the policy of the WITOS cabinet, he overthrew the government by a coup d'état in 1926 He refused the presidency, but as war minister he exercised a virtual dictatorship until his death He also was premier from 1926 to 1928 and in 1930 The constitution of 1935 made a hollow pretense of parliamentary democracy Pilsudski's regime was a military dictatorship with fascistic overtones, but it never was formalized as was the case in fascist countries His succession was assumed by the clique of "colonels," among them Rydz-Smigly See Pilsudski's memoirs (Eng tr., 1931); biographies by Rom Landau (1930), Grace Humphrey (1936), and W. F Reddaway (1939).

Piltai (pĭl'tā, pĭltā'ī) [Heb., = whom God delivers] member of a priestly family Neh. 12 17.

Piltdown man: see MAN, PRIMITIVE

Pima Indians (pē'mə), North American Indian tribe of S Arizona They speak the Piman language of the Uto-Aztecan linguistic family The Pima are also known as the Upper Pima to distinguish them from the Nevome or Lower Pima Their traditions place their origin in the Salt river valley and attribute to their ancestor Sivano the construction of the now ruined adobe building called Casa Grande or Sivanoki—but this is doubtful Many of the ruined pueblos in the Pima territory have been attributed to an ancient Pueblo tribe Tradition further states that increased population forced the Pima to spread over a larger territory, but invading hostile tribes (probably Apache) forced them to consolidate. Thus in 1697, when visited by Father Eusebio Kino, the Pima lived on the Gila river in S central Arizona. Although the Pima were warlike towards the Apache, they were friendly to the Spanish and, later, to the Americans The Pima villages were a stopping place for Americans who took the southern route to California The Pima are sedentary agriculturists of the Southwest area, by means of irrigation they farm corn, squash, beans, cotton, and wheat (introduced by the Spanish). They live in dome-shaped huts built of poles and covered with mud and brush. Marriage among the Pima is not binding. Women perform much of the labor including basketmaking; their baskets are noted for their beauty. The Pima were expert with the bow and arrow, and had war clubs and rawhide shields Pima religion, probably influenced by Spanish missionaries, is much less complicated and impressive than that of the Pueblo Indians. The Pima numbered some 2,500 in 1775, but their population was increased when the Maricopa joined them in the early 19th cent. Today the Pima living on reservations in S Arizona number some 5,500.

pimento (pĭmĕn'tō), tropical American tree (*Pimenta officinalis*) of the myrtle family, bearing small flowers which, when mature, become the ALLSPICE berries of commerce. In America the name is also applied to the large, sweet Spanish PEPPER (Span. *pimiento*), which is used as a vegetable and a garnish or as seasoning, as in pimento cheese and stuffed olives.

Pimería Alta (pēmärē'ä äl'tä), region in the U.S. Southwest and N Mexico, chiefly in SW Arizona and NW Sonora It was inhabited by the Pima Indians and was the scene of missionary labors of Father Eusebio Kino in the late 17th cent and early 18th cent

Pimlico (pĭm'lĭkō), district of W London, England, E of Chelsea. It has a residential region and an industrial and commercial region along the Thames.

pimpernel (pĭm'pûrnĕl), any species of the genus *Anagallis*, mostly Old World low herbs with bright, starlike flowers in the leaf axils. The common or scarlet pimpernel, called also poor-man's-weatherglass, has scarlet or sometimes white or blue flowers that are open only in the sunshine. It is a trailing Eurasian plant naturalized in North America and sometimes cultivated.

pimple, small pointed elevation of the skin, which may or may not contain pus. The formation of pimples is frequently associated with an infection or overactivity of the sweat glands and a blocking of the duct of such glands Chronic eruptions of pimples are often attributed to ACNE.

pin. One of the earliest artifacts of man, pins were at first made of thorns, bone, or wood and were used as clothing fasteners, hairpins, and meat skewers. These long, single-shaft pins were early imitated in metal and were often tipped with ornamental knobs The fibula, prototype of the safety pin and probably one of the earliest applications of the spring coil, was popular from early antiquity through medieval times It was the forerunner of the modern brooch through the hinged pin, developed by the Romans Bent-wire hairpins are believed to have originated in England in the 16th cent Adam Smith in his *Wealth of Nations* (1776) cites pinmaking as an early example of division of labor In the 14th and 15th cent in England the costliness and scarcity of plain pins caused Parliament to limit their sale to the first two days of January, for which women saved money all year—hence the term "pin money" See also NAIL

Pinar del Río (pēnär' dĕl rē'ō), city (pop 26,241), capital of Pinar del Río prov., W Cuba It is connected by rail and highway to Havana and is famous for the tobacco grown in the VUELTA ABAJO district

pinchbeck see BRASS

Pincher Creek, town (pop 1,148), SW Alta., on Pincher Creek and WSW of Lethbridge, in a ranching, lumbering, and coal-mining area.

pin cherry see CHERRY

Pinchot, Gifford (gĭ'fûrd pĭn'shō), 1865–1946, American forester and public official, b Simsbury, Conn., grad Yale, 1889. He went to Europe for further study of forestry and then (1892) undertook systematic work in forestry at the Vanderbilt estate in North Carolina He became (1896) a member of the National Forest Commission and served (1898–1910) as chief of the division of forestry in the U.S. Dept of the Interior He was dismissed (1910) by President W H Taft because of his public criticism of the Secretary of Interior, Richard A BALLINGER, for his administration of coal lands in Alaska Pinchot's dismissal helped widen the rift in the Republican party and the estrangement between President Taft and Theodore Roosevelt. In 1912 Pinchot joined Roosevelt in forming the PROGRESSIVE PARTY After he helped found the Yale School of Forestry, he was (1903–30) professor there while serving on numerous conservation commissions He was twice (1923–26, 1931–34) governor of Pennsylvania In his first term Pinchot directed the reorganization of the state government. He wrote many books on forestry and timber, his book *Breaking New Ground* (1947) sums up many years of his study of conservation

Pinckney: see also PINKNEY.

Pinckney, Charles, 1757–1824, American statesman, governor of South Carolina (1789–92, 1796–98, 1806–8), b Charleston, S.C.; cousin of C. C. and Thomas Pinckney. He fought in the American Revolution, and in the British capture of Charleston (1780) he was taken prisoner. A delegate to the Federal Constitutional Convention of 1787, he submitted a plan for the Constitution. Although its exact provisions are not known, his plan is known to have had considerable influence on the final draft of the Constitution In 1798 he became a U.S Senator, and in 1801 his services in forwarding Jefferson's presidential candidacy were rewarded by his appointment as minister to Spain. His principal assignment was to secure, with James Monroe's help, the cession of Florida to the United States. The attempt failed, and Pinckney returned home in 1805. From 1819 to 1821 he was a member of the House of Representatives, where he made a celebrated speech against the Missouri Compromise. See A. J Bethea, *The Contribution of Charles Pinckney to the Formation of the American Union* (1937).

Pinckney, Charles Cotesworth, 1746–1825, American statesman and diplomat, b. Charleston, S.C.; brother of Thomas Pinckney and cousin of Charles Pinckney. After attending Oxford and the military academy at Caen, France, he returned to Charleston, where in 1769 he began to practice law. Subsequent to serving (1775) in the provincial congress, he joined the Continental army in the American Revolution and was captured by the British at Charleston in 1780. Pinckney was a delegate to the Federal Constitutional Convention of 1787 and helped to secure South Carolina's ratification of the Constitution. In 1796 he was sent as minister to France but was not received by the French government The next year he joined Elbridge Gerry and John Marshall in the mission which led to the notorious XYZ AFFAIR Pinckney was unsuccessful Federalist candidate for the vice presidency in 1800 and for the presidency in 1804 and 1808.

Pinckney, Thomas, 1750–1828, American diplomat and statesman, b. Charleston, S.C., educated at Oxford and at the military academy in Caen, France, brother of C. C Pinckney and cousin of Charles Pinckney. In 1774 he began to practice law in Charleston At the outbreak of the American Revolution he joined the militia, he saw action in Florida, took part in the defense of Charleston (1780), and was wounded and captured at Camden in the Carolina campaign After the war he served as governor (1787–89) While minister to England (1792–96), he was sent as envoy extraordinary to Spain (1794–95) His treaty with Spain (1795) established commercial relations between the United States and Spain, provided for free navigation of the Mississippi by American citizens and Spanish subjects, and set the boundaries of Louisiana and E and W Florida. As a member of Congress (1797–1801) he upheld Federalist measures and took part in the impeachment procedure against William Blount In the War of 1812 Pinckney was a major general, distinguishing himself at Horseshoe Bend. See biography by C C Pinckney, S F. Bemis, *Pinckney's Treaty* (1926)

Pinckneyville, city (pop. 3,146), co. seat of Perry co., S Ill., near the Mississippi N of Cairo, in a farm and coal area, inc 1861

Pinconning (pĭnkŏ'nĭng), city (pop 1,027), N Mich., on the Pinconning river near Saginaw Bay and N of Bay City, settled c 1866, inc as a village 1877, as a city 1941 It is a farm trade center.

Pincus, Gregory (plng'kŭs), 1903–, American zoologist and physiologist, b Woodbine, N.J., grad Cornell (B S., 1924). He taught at Harvard (1930–38) and at Clark Univ (1938–45) and became research professor at Tufts College in 1946 He is known for his work in animal genetics and in parthenogenesis He transplanted to a female rabbit an ovum artificially stimulated with saline solution, the host mother gave birth to a normal female rabbit

pincushion flower see SCABIOSA.

Pindar (pĭn'dur), 518?–c 438 B C., Greek poet, generally regarded as the greatest Greek lyric poet He was a Boeotian of noble blood, and he lived principally at Thebes. He traveled widely and lived for some time at Athens and in Sicily at the court of Hiero at Syracuse and also at Acragas (Agrigento) His chief medium was the choral lyric, and he set the standard for the triumphal ode or epinicion. Of his complete works only 44 odes survive, these make one of the greatest collections of poems by a single author in Greek His fragments are exceptionally numerous and some of them very famous The epinicia celebrate victories in athletic games; there are 14 Olympian odes, 12 Pythian odes, 11 Nemean odes, and 4 Isthmian odes Each was written to be sung in a procession for the victor, usually on his return to his home city Pindar wrote on commissions, but he was quite independent of any meretriciousness, because of his lofty conception of his poet's vocation Pindar's style loses more in translation than that of any other Greek writer It has a high-flown diction and an intricate word order, dependent partly upon the complexity of his metrical requirements. The characteristic of each ode is its narrative myth, which is always connected with the winner, albeit somewhat distantly. The myth makes appropriate the elevated moral tone and the religious flavor characteristic of Pindar's poems. The edition by B L. Gildersleeve of *Olympian and Pythian Odes* (2d ed., 1892) and the editions by J. B. Bury of *Nemean Odes* (1890) and *Isthmian Odes* (1892) have copious notes and valuable supplementary material The name **Pindaric ode** (pĭndă'rĭk) is applied to a verse form used especially in England in the 17th and early 18th cent., based on an incorrect understanding of the metrical schemes used by Pindar The form, which originated in "Pindarique Odes" (1656) of Abraham COWLEY, was used by John DRYDEN, Alexander POPE, Jonathan SWIFT, and others but was ever characterized by looseness, irregularity, metrical license, and grandiose diction.

Pindar, Peter: see WOLCOT, JOHN.

Pindus (pĭn'dŭs), Gr. *Pindos*, mountain range, c.90 mi. long, NW and W central Greece, along the border of Thessaly and Epirus or, in political terms,

Greece and Albania. A continuation of the Dinaric Alps, it has several peaks more than 8,000 ft high and slopes down in the south. The range is rich in timber and in wildlife

pine, coniferous evergreen of the genus *Pinus*, of which there are about 80 species, all in the Northern Hemisphere Most pines are tall (although a few are shrubby) and somewhat pyramidal The needlelike leaves, enclosed at the base in a sheath, are produced singly (in some species of the W United States) or in clusters of two, three, four, or five. Because the leaf surface is so reduced and the stomates are placed deep, the loss of water by transpiration is low and the trees can survive in cold and in dry regions The needles are from about 1 in. to about 12 in long, and they remain on the branch for from 2 to 10 years Small, thin deciduous scales sometimes called primary leaves are found on the buds and young shoots The staminate and pistillate cones are borne on the same tree Pollination is effected by the wind, and maturation of the seeds takes from about six months to three and a half years after fertilisation The seeds of most species have a broad wing and can be carried by the wind. Pines are valuable as sources of timber and of turpentine and rosin and for ornament One of the most valuable of timber trees is the white pine (*Pinus strobus*) It is used especially for interior trim and cabinetwork. It once grew densely in North America from Newfoundland to Manitoba and over much of the E United States and westward to Minnesota Constant cutting and attacks of the white-pine blister rust have greatly depleted the stands, especially in the NE United States Other pines with similar straight-grained, soft wood containing little resin are called white pines, e g , the western white pine (*P monticola*), the lodgepole pine (*P contorta*), and the sugar pine (*P lambertsiana*) The wood of the hard, pitch, or yellow pines is more resinous, heavier, and harder than that of the white pines The southern yellow or longleaf pine (*P palustris*) is used for heavy construction work, and its highly resinous wood is a source of turpentine, rosin, and other naval stores It is also a source of pulpwood Other hard pines are the western yellow pine (*P ponderosa*), the red or Norway pine (*P resinosa*), the shortleaf pine (*P echinata*), and the loblolly pine (*P taeda*) In the forests of Europe the Scotch pine (*P sylvestris*) is one of the principal coniferous trees The kauri pine (*Agathis australis*) of New Zealand, a member of the pine family, though not a true pine, is a commercial source of timber and rosin The seeds of some pines are edible (see PINE NUT)

pineal gland (pĭ'nēŭl), small cone-shaped body on the roof of the brain Its tissue is glandular up to the age of about seven years, when the gland begins to retrogress and the tissue gradually becomes fibrous Precocious sexual development in males is believed to be related to malignancy of the pineal gland There is some evidence that extracts of the organ retard growth generally, but little is understood of its precise role in human physiology It is sometimes known also as the pineal body It is present in a rudimentary form in vertebrate forms from fish to mammals, in some of the fish and reptiles it is supported by a stalk, and because it somewhat resembles an eye is called the pineal eye It is probably the vestige of a functional sense organ of early, primitive vertebrates.

pineapple, herbaceous perennial (*Ananas sativa*), native to the tropics of Central and South America, and its spiny, juicy fruit of delicious flavor, for which it is cultivated throughout the tropics The sword-shaped, spiny leaves yield a strong, fine fiber—the most delicate and probably most costly of vegetable fibers—which is made into piña or pineapple cloth in the Philippines In the United States, pineapples were grown commercially in Florida, where they were first introduced c 1850, but because of a number of circumstances including disease, unfavorable temperatures, and the development of its culture elsewhere, the pineapple as a commercial crop is no longer important in that state Most of the imported fruit comes from Hawaii and the West Indies Large quantities of the flesh (both sliced and grated) and of the juice are canned. Pineapples are sometimes grown for ornament.

Pine Bluff, city (1940 pop 21,290; 1949 special census pop. 34,630), co. seat of Jefferson co , SE central Ark , on the Arkansas river and SE of Little Rock, settled 1819. It is a railroad center, with cotton and lumber industries and, since 1936, stockyards. Arkansas Agricultural, Mechanical, and Normal College (Negro; coeducational; chartered 1873) is here. Near by are a state recreational park for Negroes and a state prison farm.

Pine City, village (pop 1,718), co seat of Pine co., E Minn , on the Snake and N of St. Paul near the Wis. line, in a farm and dairy area; platted 1869, inc 1881

Pine Grove, borough (pop. 2,239), E Pa , between Harrisburg and Pottsville; settled 1771, laid out 1830, inc. 1832.

Pine Hill, borough (pop. 1,537), SW N J., SE of Camden; inc. 1929.

Pinehurst, winter resort, central N.C , SW of Raleigh, developed after 1895, chartered 1911 Its mild climate, native longleaf pine, and sports facilities, especially golf and riding, make it a popular recreation center

Pine Island, village (pop 1,040), SE Minn , NW of Rochester, settled 1854, inc 1878 With many Swiss settlers, it is a center of cheese making

Pinel, Philippe (fēlēp' pēnĕl'), 1745–1826, French physician, M D Univ of Toulouse, 1773 After moving to Paris in 1778, he was appointed (1793) director of the Bicêtre hospital and shortly thereafter of the Salpêtrière His *Traité médico-philosophique sur l'aliénation mentale* (2d ed., 1809), based on observations in both these hospitals, advocated humane treatment of the insane and a more empirical study of mental disease He furthered psychiatry through his reforms, his stress on the role of passions in mental disease, and his establishment of the custom of keeping well-documented psychiatric case histories for research

pine nut or **pińon** (pĭn'yun, pēn'yōn), edible seeds of various species of pine (*Pinus*) trees of W North America and Mexico and of the Old World Among the North American species which bear such edible seeds are the nut pines *Pinus edulis* and *P monophylla*, the Digger pine *P sabiniana*, and the Torrey pine, *P torreyana* The nuts have a thin red-brown shell and range in size from about $^3/_4$ in to about $1^1/_2$ in. Pine nuts were an important food for the early American Indians and are still harvested by some tribes both for food and for trading Pignolia nuts are the seeds of *P pinea* of S Europe, where they are much used for food Quantities are exported to be used salted and in confectionery In the trade the name pignolia is often applied to all pine nuts

Pinero, Sir Arthur Wing (pĭnēr'ō), 1855–1934, English dramatist, b London, of a Portuguese-Jewish family *Sweet Lavender* (1888), a highly popular sentimental comedy, was surpassed in success by *The Second Mrs Tanqueray* (1895) The production of this play, which raised shocked protest, marked a new period in modern stage history A number of problem plays followed, including *The Notorious Mrs Ebbsmith* (1895), *The Thunderbolt* (1908), and *Mid-Channel* (1909) A successful farce was *Trelawny of the Wells* (1898) Pinero was important for his anticipation of the trend towards realism in the theater He was knighted in 1909 See H H Fyfe, *Sir Arthur Pinero's Plays and Players* (1930), biography by W D Dunkel (1941)

Pinerolo (pēnārō'lō), Fr *Pignerol* (pē"nyurôl'), town (pop 15,363), Piedmont, NW Italy, SW of Turin and at the foot of the Cottian Alps It passed to the house of Savoy in 1243 and was a strong citadel It was repeatedly in French hands between 1536 and 1814 Nicolas Fouquet died in the citadel after 19 years of imprisonment, and the Man with the IRON MASK was held here from 1679 until his transfer to the Bastille

Pines, Isle of, Span *Isla de Pinos* (ēs'lā dā pē'nōs), island (1,182 sq mi , pop 9,812), off SW Cuba Pine forests cover much of the island, which is in general a plateau from 50 to 100 ft above the sea The southern third is salt marsh, but on the northern half are low ridges from which marble is quarried Much of the land is owned by U S citizens The chief products are tobacco, citrus fruits, pineapples, and winter vegetables With a mild, healthful climate, it is a popular tourist resort Discovered by Columbus in 1494, the island was long used as a penal settlement and was a rendezvous for buccaneers Surrendered by Spain after the Spanish-American War and omitted from the Platt Amendment, which defined Cuba's boundaries, it was claimed by American residents as well as Cubans until the U S Supreme Court declared (1907) that it did not belong to the United States A treaty confirmed (1925) the island as Cuban.

Pines, Isle of, or **Kunié** (kōōn'yā), island (58 sq mi , pop 600), S Pacific, 30 mi SE of NEW CALEDONIA, of which it is a dependency It was formerly a penal colony

Pineville. **1** Town (pop 3,882), co seat of Bell co., S Ky , in a bend of the Cumberland river near Cumberland Gap and N of Middlesboro It is a resort and tourist center in a coal and timber area The town was settled around a tollgate (1797–1830) on the old Wilderness Road at a gap in Pine Mt At near-by Pine Mountain State Park occurs the annual mountain-laurel festival **2** Town (pop 4,297), central La., on the Red River opposite ALEXANDRIA, settled in the early 18th cent , inc. 1878 Tombstone manufacture is its chief industry. Louisiana College, a state hospital, and a national cemetery are here; near by are Camp Beauregard (an army camp), a U S veterans' hospital, the state colony for the feeble-minded, and a state industrial school for girls. **3** Textile-mill town (pop 1,144), S N C , at the S C. line S of Charlotte James K Polk was born near by.

Ping-pong: see TABLE TENNIS.

pink or **dianthus** (dīăn'thŭs), any plant of the genus *Dianthus*, widely cultivated Old World herbs Several species of pinks are better known by their individual names, such as CARNATION and SWEET WILLIAM. Those that are best known as pinks include a large number of easily cultivated garden flowers, usually with fringed and spicily fragrant blossoms, either single or double and shading from white to red The grass pink (*Dianthus plumarius*) is an old-fashioned flower and the most common; the maiden pink (*Dianthus deltoides*) is a popular, densely tufted species Some kinds, called annual pinks, bloom the first year from seed. A number of other plants share the name of pink, e g , the ground pink, a PHLOX

Pinkerton, Allan, 1819–84, American detective, founder of the Pinkerton National Detective Agency, b Glasgow, Scotland A cooper by trade, he came to America in 1842 and opened in West Dundee, Ill , a cooper's shop, which became a station on the Underground Railroad. His discovery and capture of a band of counterfeiters led to his election (1846) as county sheriff and, in 1850, to an appointment as the first city detective on the Chicago police force He established in the same year a private detective agency which had considerable success in solving train and express-company robberies In 1861 he foiled a plot to assassinate Lincoln, on his way to Washington for his inauguration, and in the Civil War organized an espionage system behind the Confederate lines His agency secured (1869) evidence on which the organization of the MOLLY MAGUIRES was broken up After Pinkerton's death, the agency was continued by his sons, Robert A Pinkerton and William A Pinkerton, and was active in the Homestead strike of 1892 The agency has been chiefly identified with industrial disputes, and its methods, including the use of labor spies, have resulted in bitter condemnation by labor and in investigations by Congress of industrial espionage Pinkerton wrote of his own experiences in *Criminal Reminiscences and Detective Sketches* (1879), *The Spy of the Rebellion* (1883), and *Thirty Years a Detective* (1884). See R W Rowan, *The Pinkertons* (1931)

pinkeye, name for an acute contagious CONJUNCTIVITIS, or inflammation of the mucous membrane lining the eyelids and covering the eyeball. It is prevalent among horses and is fatal if not properly treated, it produces a mucopurulent (mucous and pus) discharge from the eyes and loss of appetite In humans it is also called Koch-Weeks conjunctivitis and is characterized by an angry redness of the membranous sheathing of the eye

Pinkie, battlefield E of Edinburgh, Scotland Here the English under Edward Seymour, duke of SOMERSET, defeated a larger Scottish force, Sept 10, 1547 Seymour's invasion of Scotland to enforce a marriage treaty between the boy Edward VI and little Princess Mary of Scotland so angered the Scots that Mary was sent to France to avoid the marriage

Pinkney see also PINCKNEY

Pinkney, Edward Coote, 1802–28, American poet, b London, son of William Pinkney The lyrics in his *Poems* (1825) establish him as a true, if minor, poet See collection of his prose and verse (with memoir by T O Mabbott and F L. Pleadwell, 1926)

Pinkney, William, 1764–1822, American statesman, b Annapolis, Md Admitted to the bar in 1786, he soon became prominent in state politics In 1796 he was sent to England as a commissioner under Jay's Treaty, remaining until 1804 Two years later he was sent with James Monroe on a special mission to England to deal with reparations and impressments Pinkney remained as minister to England (1807–11), but was unsuccessful in settling difficulties between the two countries He was U S Attorney General (1811–14) and fought in the War of 1812, being wounded at Bladensburg (1814) After serving as a U S. Congressman (1815–16), he was minister to Russia (1816–18), he also went on a special mission to Naples to adjust claims of American merchants against Naples After his return he practiced law, gaining a considerable reputation as a constitutional lawyer, and served in the U S Senate (1819–22) See biography by his nephew, William Pinkney (1853), H H. Hagan, *Eight Great American Lawyers* (1923).

pinkster flower. see AZALEA.

pinnacle (pĭ'nĭkŭl), minor architectural motive of vertical tapering shape, usually crowning a pier, buttress, or gable Though sometimes it appears in Renaissance design, as in the Certosa di Pavia, it is almost exclusively a medieval form, originating in the late Romanesque and becoming common in Gothic Topping the piers of the flying buttresses of side aisles and choirs, pinnacles weighted the pier and thus counteracted the thrust of the flying arch, while furnishing also effective vertical adornments At the summit of a square tower bearing an octagonal spire they filled the corner angles and created a graceful transition. With the advance of the Gothic, pinnacles appeared in all parts of the church In France they multiplied and assumed the widest variety of forms, adorned with gables, tracery, colonnettes, and canopied niches and culminating in a richly crocketed finial. In some flamboyant churches they rise in an actual forest from buttresses and chapel piers. In England they were far less important and remained

relatively simple. Pinnacles also adorned tombs, choir screens, pulpits, and furniture, as well as numberless objects of medieval art

Pinnacles National Monument: see NATIONAL PARKS AND MONUMENTS (table)

Pinocchio · see COLLODI, CARLO

pinochle (pē'nŭ"kŭl), card game played by two, three, or four players, with a deck of 48 cards This deck is made up of two each of 9 through ace in all four suits. Auction pinochle, probably the most popular form of the game, is played by three persons at one time, although any number of persons may play in rotating units of three Each of the three players is dealt a hand of 15 cards, and three cards are dealt face down to the table Bidding generally starts at 250 or at 300 points and progresses in rotation and in multiples of 10 points The highest bidder takes the contract, picks up the three cards on the table, and in turn buries, or puts down, three cards from his hand But first he melds, i e , shows combinations of cards, which are scored as follows ace through 10 in one suit (flush) =150 points, an ace in each suit=100, a king in each suit=80, a queen in each suit=60, a jack in each suit=40, a jack of diamonds with a queen of spades=40 (pinochle, double pinochle=80, although some players count it as 300), king and queen (a "marriage") of the same suit=20 (40 if in trumps) In the trump suit 9s count 10 points Should the meld score closely approach, equal, and go over the bid score, the bidder wins, and if there is an insurmountable deficit the bidder loses If there is a redeemable deficit, the bidder must gather in his meld and play to wipe it out and thus win. He then names trumps and leads the first trick. The two non-bidders play against the bidder, and in play cards rank aces, 10 points, 10s, 10 points, kings, 5 points, queens, 5 points, jacks, no points, and 9s, no points There are other means of scoring cards in play The suit led must be followed, and the highest card takes the trick, and if two cards of the same rank are played, the first one down wins If a player has no cards in the suit that is led, he is obliged to throw trump—which has priority in rank over all other non-trump cards A trump that is led must be followed by higher-ranking trump If a player has no cards in the suit that is led and no trumps, it is his option to throw any card—which will have no rank at all Taking the last trick brings an award of 10 additional points In two-handed pinochle 12 cards are dealt to each player, a card is turned up which determines trump suit, and players may meld after each trick that is won Thus meld and play continue concurrently until the stock is used up—after which play is continued until the last 12 cards in the hand are exhausted—and the highest combination score of meld and tricks wins Four-hand, or partnership, pinochle may be played on an auction basis—in which case each member receives 12 cards and bids to meld and to name trump After melding, the bidder joins forces with his partner in play against the other set of partners Another form of partnership pinochle is played by opening the bottom card to determine trump All four players meld before the opening trick is led In all these forms of pinochle, an arbitrary point goal is often set, e g , 1,000 points, instead of just playing for game Pinochle probably originated in Europe in the 19th cent and later became a very popular game in the United States See Michael MacDougall, *On Pinochle* (1947), R L Frey, ed , *The New Complete Hoyle* (1947)

Pinon (pē'nōn), duke of Edom Gen 36 41, 1 Chron 1 52

piñon. see PINE NUT

Pinos, Isla de see PINES, ISLE OF

Pinsk (pĭnsk, Rus. pēnsk), city (1931 pop 31,913), capital of Pinsk oblast, W Belorussia, in the Pripet Marshes It is a port on the Pina river (part of the Dnieper-Bug waterway) and has varied manufactures Founded (1097) by Kievan Russia, it passed to Lithuania in the 14th cent and developed as a Polish city in the 16th cent It passed to Russia in the second partition of Poland (1793), reverted to Poland in 1921, and was ceded to the USSR in 1945 Until the Second World War the larger part of the inhabitants were Jews, they were virtually exterminated during the German occupation

Pinski, David (pĭn'skē), 1872–, Yiddish playwright and novelist, b. Russia He wrote stories and plays in Yiddish about the ghetto and assisted in editing a Yiddish periodical in Moscow After studying medicine in Berlin for two years, he came (1899) to the United States In New York he edited several labor and socialist papers He was one of the most successful playwrights of the Yiddish Theatre, and *The Treasure* was produced in English by the Theatre Guild in 1920 Among his works available in English are *Ten Plays* (Eng tr , 1920), *King David and His Wives* (Eng tr , 1923), a play, and *Arnold Levenberg* (1928), a novel

Pinto, Fernão Mendes (fĕrnŭ'ō mĕn'dĕsh pēn'tō), c 1514–1583, Portuguese traveler For some 20 years he traveled in Africa and Asia, visiting far places and undergoing great hardships, including years when he was kept in slavery His account, *Peregrinação* [wanderings] (1614), is one of the most colorful narratives of world travel literature. Its truthfulness has been much assailed, but it is now generally agreed that the story is basically true, though much exaggerated

Pinturicchio (pēntōrē'kyō) or **Pintoricchio** (pēntō–) [Ital ,=little painter], c 1454–1513, Umbrian painter, pupil of Fiorenzo di Lorenzo His real name was Bernardino di Betto He was famous for his highly decorative frescoes and panel pictures. He was influenced by Perugino, with whom he collaborated on the frescoes for the Sistine Chapel in the Vatican Pinturicchio worked chiefly in Perugia, Rome, and Siena Many of his best works have survived, among them the paintings of the life of St Bernardine in the Aracoeli, Rome, the frescoes in the Borgia apartments in the Vatican, including the noted *Dispute of St Catherine*, and the frescoes in the Church of Santa Maria Maggiore at Spello His masterpiece, the elaborate decorations in the cathedral library at Siena representing 10 scenes from the life of Pius II, are among the best preserved in Italy In the Metropolitan Museum are the 22 panels of mythological paintings from the ceiling of the reception room of the Palazzo del Magnifico in Siena The National Gallery of Art, Washington, D C , has *Madonna and Child, Portrait of a Youth*, and *Madonna Adoring the Child* See studies by E M Phillipps (1901) and Corrado Ricci (1902)

pinxter flower. see AZALEA

Pinza, Ezio (āts'yō pēn'tsä), 1895–, Italian-American basso, b Rome, studied at the Univ of Ravenna and the Bologna Conservatory He served (1915–18) in the Italian artillery After his operatic debut (1919) in Rome, he sang at La Scala in Milan In 1926 he was engaged by the Metropolitan Opera Company There, in revivals of Mozart's *Don Giovanni* (1929) and *The Marriage of Figaro* (1939) and in Moussorgsky's *Boris Godunov* (1939), he achieved outstanding success He also appeared on the musical-comedy stage in *South Pacific* (1949)

Pinzón, Martín Alonso (martēn' älōn'sō pēnthōn'), d 1493, Spanish navigator The commander of the *Pinta* on Columbus's first voyage to the New World in 1492, he was already an experienced seaman and an influential citizen of Palos de la Frontera The support given to Columbus by him and his brothers is not definitely known, but it was important to the eventual success of the expedition For reasons which are not clear, he abandoned Columbus in the Antilles for more than six weeks and upon rejoining him was rebuked for treasonable conduct On the return voyage his ship was separated from that of Columbus in a storm, but both reached Palos the same day, March 15, 1493 He died soon afterward His younger brother, **Francisco Martín Pinzón** (franthē'skō), fl 1492, was master of the *Pinta* Another brother, the youngest, **Vicente Yáñez Pinzón** (vēthān'tā yä'nyāth), fl 1492–1509, commanded the *Niña* on Columbus's expedition When the *Santa María* was wrecked on the coast of Hispaniola, Vicente Pinzón took his chief aboard, and Columbus finished the voyage in the *Niña* In 1495 Pinzón received letters patent for an expedition, but it is unknown whether he made a voyage immediately He commanded an expedition which sailed from Palos in Nov , 1499, reached the coast of Brazil (Jan , 1500), probably near its easternmost point, and discovered the mouth of the Amazon river In 1505 he was made governor of Puerto Rico, with permission to colonize the island He explored the coasts of Yucatan, Honduras, and Venezuela with Juan Díaz de Solís (1508–9) The Pinzón family was granted armorial bearings by royal order in 1519

Piombo, Sebastiano del: see SEBASTIANO DEL PIOMBO

Piotrkow Trybunalski, Pol *Piotrków Trybunalski* (pyô'turkôf trĭbôonal'skē), city (pop 40,141), central Poland, S of Lodz Founded in the 12th cent , it was the seat of several diets (15th–16th cent) and tribunals (16th–18th cent) Chiefly a trade center, the city also has a metal industry, there are quartzitic slates and glass sand in the vicinity

Piozzi, Madame see THRALE, HESTER LYNCH

pipal: see BO TREE

pipe, a structure, usually cylindrical, for the conduction of materials It is widely used to carry liquids or gases for such purposes as irrigation, water supply, heating and ventilation, refrigeration, and sewerage, as a structural material, and for conduits for electrical wiring Pipes may be made of metal, wood, fiber, clay, cement, concrete, glass, plastics, or stone Metal pipes, the most commonly used, are generally of iron, steel, copper, brass, lead, or block tin Lead pipes, used since ancient times, were at first made by bending a sheet of lead around a core and soldering or welding the edges together, after c 1800 molten lead was forced through a die Cast-iron pipes, commonly used for water and gas mains of large diameter, are made by pouring molten metal into a mold consisting of a core and a flask An early use of wrought-iron pipe was for gun barrels, these were made by bending strips of iron into a circular form and welding the edges together Most wrought pipe today is of steel and is either seamless or welded. Seamless pipes are made from cylindrical ingots forced or drawn at white heat over a long bar (mandrel) Welded pipe is made from a flat strip of metal (skelp) bent to a tubular shape, and lap- or butt-welded, usually by passing through welding rolls. For lap-welded seams the edges are beveled and overlapped, for butt-welded seams the skelp is bent so that the edges are in perfect contact For some pipes of large diameter overlapping edges are hammer-welded by power hammers The edges of copper or brass seamed pipe are soldered or brazed. Very thin metal pipes have interlocked edges Fiber pipes, used chiefly for conveying chemicals, are made by winding sheets of wood pulp over a core Fire-clay pipes, used extensively for drains, are either left porous or made impermeable with a salt glaze Large water pipes are commonly made of concrete reinforced with steel mesh or bars or of cement or asbestos cement. Wooden pipes were at first made by boring logs In the 19th cent an improved type made of staves bound together with wires or hoops became common See Sabin Crocker, *Piping Handbook* (4th ed , 1945) Common use is made of **pipe lines** for conveying water, petroleum, and natural gas from their source over long distances to a refinery or to a place of consumption Probably the first line for piping crude petroleum was one c 4 mi long laid (1865) near Titusville, in NW Pennsylvania, the first real trunk line was constructed (1879) to connect the oil fields of W Pennsylvania with refineries on the coast In Texas the first long pipe line for conveying natural gas, the forerunner of the many later ones, was constructed in 1910, connecting a field in Clay co with Fort Worth and later with Dallas During the Second World War the U S government financed the construction of the "Big Inch" pipe line (completed July, 1943) for carrying crude oil from Texas to refineries in Philadelphia, New Jersey, and New York and the "Little Big Inch" (completed in Dec , 1943) for conveying gasoline and other petroleum products from Texas to the New York area Oil from the fields of Iraq is carried by pipe line to Haifa See C M Wilson, *Oil across the World the American Saga of Pipelines* (1949)

pipe, tobacco. In pre-Columbian time pipes for smoking TOBACCO were used by many tribes of American Indians, and finely carved stone pipes are characteristic relics of the mound builders The smoking of the CALUMET or peace pipe was a ceremony that established a covenant between tribes Sir Walter Ralegh is believed to have popularized pipe smoking in England Through English influence especially, the custom traveled eastward around the world, even to Indians of W North America who had not learned it from eastern tribes of their own race The Oriental water pipe (the hookah or narghile) passes the smoke through water to cool and cleanse it Notable pipe materials include MEERSCHAUM, brier, calabash (a bottle gourd of tropical America), clay, and corncobs Clay pipes include the short dudeen of Ireland and the long churchwarden. Early clay pipes were small because tobacco was expensive, they have been called elfin pipes and have been wrongly attributed to times before tobacco was introduced in Europe The cob of the Indian corn is extensively used for pipe bowls in Europe as well as in America See Alfred Dunhill, *The Pipe Book* (1924)

pipe lines see PIPE

pipe rolls, ancient records of the crown revenue and expenditures of England, so called, probably, because of the pipelike form of the rolled parchments on which these records were kept The oldest pipe roll dates from the 31st year of the reign of Henry I (1131), and from 1156 they are almost completely intact The earliest of these records have been published and are an invaluable source for social history The pipe rolls were not completely abandoned for modern accounting methods until 1833

Pipe Spring National Monument see NATIONAL PARKS AND MONUMENTS (table)

Pipestone, city (pop 4,682), co seat of Pipestone co , SW Minn , near the S Dak line. It is the center of a farm and dairy region Near by are pipestone quarries used by Indians, seen by Catlin in 1836, and made part (1937) of Pipestone National Monument (115.6 acres) The Pipestone Indian Training School was founded here in 1893

pipestone, hard, dull red clay stone, used by Indians in making pipes Called calumets, the pipes were extensively used in ceremonials The Indians held pipestone sacred, and even in time of war the quarries were regarded as neutral ground Pipestone is also called catlinite, in honor of George CATLIN, who lived among the Indians It is found in Minnesota and the Dakotas, in Canada, and in scattered places elsewhere Pipestone and Pipestone co. in Minnesota and Pipestone river in Canada are named after the material.

pipe tree: see LILAC and MOCK ORANGE.

pipe vine: see DUTCHMAN'S-PIPE.

Pippi, Giulio · see GIULIO ROMANO.

Pippin. For Frankish rulers thus named, see PEPIN.

Piqua (pĭ'kwä), city (pop 16,049), W Ohio, on the Great Miami river and N of Dayton, settled 1797 as Washington, named Piqua 1816, inc as a town

1823, as a city 1850. Aircraft parts and motor vehicles are made here.

piquet (pēkā'), card game played by two persons with a deck of 32 cards—7 up to ace in each suit The name also appears as picquet Each player receives 12 cards, and eight cards are left on the table face down. The non-dealer (the minor) discards from one to five cards and picks up an equal number from the table The dealer (the major) is entitled to exchange the remaining number of cards. Trumps are not named After the draw from the table, the hands are compared and points are given for the greatest number of cards in each suit, for the highest index value—aces counting 11 and face cards 10—in suits of equal length, for the longest sequence in each suit, and for the highest set of three or four of a kind Points are also scored for having a hand without a face card (*carte blanche*) and for scoring 30 points before the opponent scores one point before the opening lead (*repique*) Play begins after the card combinations have been announced and scored, and tricks are won by a higher card of the suit lead Additional points are tallied for taking in tricks with a card of 10 or higher, for winning a majority of the tricks, and for taking the last trick A player suffers *pique* if the opponent scores 30 or more consecutive points after the opening lead Piquet au cent and Rubicon piquet are variations of the game The origin of piquet is not clear, but it is known to have been established by the 16th cent , to have been popular in France, Spain, and Italy, and to have spread to England under the name cent. See R L Frey, ed , *The New Complete Hoyle* (1947)

piracy, robbery committed on the high seas by force of arms, comparable to brigandage on land It is distinguished from PRIVATEERING in that the pirate holds no commission and receives the protection of no national flag, but, on the contrary, usually attacks vessels of all nations A pirate, therefore, is a highwayman of the sea Since piracy is a crime against mankind, not against any one nation, those practicing it may be tried in any competent court, regardless of nationality Except in battle, pirates may not be executed without trial To the forms of piracy defined by international law, a nation may add offenses committed on board its own vessels or in its own territorial waters Such crimes can be punished only by the nation which passes the law Since the line between privateering and piracy is often hard to draw, opportunity exists for varied determinations as to what acts constitute piracy, and any act of doubtful legality committed on the high seas may be characterized as piracy Thus the sinking of merchant vessels by the Germans in the First World War was characterized by some as piracy, but the validity of this theory is questionable as the act was done by authority of a national state However, at the Washington Conference of 1921 a treaty was concluded which declared that improper visit and search (see SEARCH, RIGHT OF) by a person in the service of any power would constitute piracy Piracy, a result of failure or laxity in patrolling sea routes, flourished in times of unrest, or when navies ordinarily protecting commerce were engaged in war Pirates found their most suitable base of operations in an archipelago which offered shelter together with proximity to trade routes Pirates preyed upon Phoenician and Greek commerce and were so active in the 1st cent B C that Rome itself was almost starved by their interception of the grain convoys Pompey swept piracy from the Mediterranean, but with the decline of the Roman empire it revived there and continued prevalent until modern times The vikings harassed commerce of the Baltic Sea and the English Channel, Moslem pirates infested the W Mediterranean, and even the Venetians, who ostensibly policed the E Mediterranean, preyed upon the maritime trade of rival cities The Barbary states got much of their revenue from piracy In the North, the Hanseatic League early succeeded in curbing piracy When new trade routes were opened in the Renaissance, the exportation of precious metals from the Spanish colonies, the rich trade with the East, and the development of the slave trade, made piracy especially lucrative At this period no great stigma was attached to piracy, because maritime law had not been systematized This fact, together with the increasing colonial rivalry of the powers, led states to countenance those pirates who promoted the national cause by attacking the commerce of rival nations With the tacit approval of provincial authorities, the Antilles became a pirates' rendezvous, and the English buccaneers of the SPANISH MAIN in the 17th and 18th cent , who despoiled the Spanish treasure armadas and pillaged Spanish-American coast settlements, returned to England to divide their spoils with the crown and to receive the royal pardon. The development of national navies caused the decline of piracy Beginning in 1803, the United States endeavored to crush the corsairs of Tripoli In 1815 and 1816 the United States, the Netherlands, and Great Britain wiped out the Barbary pirates, who had exacted tribute under the threat of capturing ships and imprisoning their crews. In 1816, Great Britain and the United States began operations against pirates in the West Indies particularly those on the Cuban coast, and in 1825 the United States sent David PORTER to complete the task The last existing strongholds of piracy were along the Straits of Malacca and the China seas, where, to the present time, sporadic cases of piracy occur, though the power of the pirates was broken after the Opium War In the long history of piracy, many famous characters appear Sir Francis DRAKE, Sir John HAWKINS, and John CAVENDISH were the most noted of the Elizabethan buccaneers, Edward MANSFIELD and Henry MORGAN followed in their wake Other well known pirates are Jacques NAU, Jean LAFFITE, and Edward Teach (BLACKBEARD) The case of Captain KIDD is doubtful The pirate is a frequent figure in literature, especially in books written for boys Perhaps the most famous fictional pirate is Long John Silver in R L Stevenson's *Treasure Island* Sir Walter Scott and James Fenimore Cooper each wrote a novel entitled *The Pirate*, Charles Kingsley wrote of buccaneers in *Westward Ho!*, and Sir William Gilbert ridiculed pirate stories in his *Pirates of Penzance* See G F Dow, *The Pirates of the New England Coast* (1923), Philip Gosse, *The Pirate's Who's Who* (1924) and *The History of Piracy* (1932), H A Ormerod, *Piracy in the Ancient World* (1924), Owen Rutter, *The Pirate Wind* (1930), C B Driscoll, *Pirates Ahoy!* (1941)

Piraeus (pīrē'us), Gr *Peiraieus* or *Piraieus* (both pērā'fēs'), city (pop 205,404), Attica, E central Greece, 5 mi SW of Athens and on the Saronic Gulf It is the port of Athens and the largest port of Greece Its construction was planned by Themistocles and executed (c 450 B C) by the architect Hippodamus of Miletus in the time of Pericles, who is also credited with the building of the Long Walls These two parallel walls, about 200 yd apart, connected Athens with Piraeus and enabled Athens to receive supplies from its port during the Peloponnesian War The port, itself strongly fortified, consisted of three harbors, one for corn vessels, one for merchant ships in general, and one for warships In 404 B C the Spartans destroyed the Long Walls to the accompaniment of flute music, but Conon rebuilt them in 393 The arsenal (built 347–323 B C) and fortifications were destroyed by Sulla in 86 B C , and few traces of the Long Walls remain Piraeus regained importance only after Greece recovered its independence in the 19th cent It was heavily bombed in the Second World War The modern port has shipyards, and the city is an important trading and manufacturing center

Piram (pī'rām), Amorite king defeated and killed by Joshua Joshua 10 3–27

Pirandello, Luigi (lwē'jē pērändĕl'lō), 1867–1936, Italian dramatist and novelist, b Sicily He won the 1934 Nobel Prize in Literature Educated in Rome and at the Univ of Bonn, he was professor (1897–1921) of Italian literature at the Normal College for Women in Rome His first writing was in poetry, but on the advice of Giovanni Verga he turned to short stories and novels Of the novels, *Il fu Mattia Pascal* (1904, Eng tr , *The Late Mattia Pascal*, 1923) achieved wide popularity after his reputation as playwright had been made by the immediate international success of his drama *Sei personaggi in cerca d'autore* (1921, Eng tr , *Six Characters in Search of an Author*, 1922) He was thereafter recognized as the outstanding figure in contemporary Italian literature Pirandello's output includes some 300 stories, six novels, and about 50 plays In the novels and plays he presents philosophical problems, often subtle, such as the value of actuality and the unity or diversity of the self, he has even dramatized aesthetic problems Perhaps his most prominent characteristics are intellectuality and wit He was one of the first Italian intellectuals to accept Fascism Among his works are three translated selections of short stories, *Horse in the Moon* (Eng tr , 1932), *Better Think Twice about It* (Eng tr , 1935), and *The Medals and Other Stories* (Eng tr , 1939) His translated novels include *L'esclusa* (1901, Eng tr , *The Outcast*, 1925), *I vecchi e i giovani* (1913, Eng tr , *The Old and the Young*, 1928), and *Si gira* (1915, Eng tr , *Shoot!* 1926) His translated plays include *Il piacere dell' onestà* (1917, Eng tr , *The Pleasure of Honesty*, 1923), *Così è, se vi pare* (1917, Eng tr , *Right You Are if You Think So*, 1922), *Enrico IV* (1922, Eng tr , *Henry IV*, 1922), and *Come tu mi vuoi* (1930, Eng tr , *As You Desire Me*, 1931), made into a moving picture starring Greta Garbo See W F Starkie, *Luigi Pirandello* (rev ed , 1937), Domenico Vittorini, *The Drama of Luigi Pirandello* (1935)

Piranesi, Giovanni Battista (jōvän'nē bät-tē'stä pē'ränā'zē), or **Giambattista Piranesi** (jäm"bät-tē'stä), 1720–78, Italian engraver and architect The greater part of his life was passed at Rome, where he made engravings of the buildings and monuments of the ancient and modern city His copperplates number over 1,000 (many of them of large size) and are executed in a bold, powerful manner His architectural designs are notable for their accuracy and grandeur. Among his finest plates are the 14 celebrated *Carceri* plates. See study by A. M. Hind (1922).

Pirate Coast: see TRUCIAL OMAN.

Pirathon (pī'rŭthŏn), unidentified place, central Palestine, the native town of one of David's captains and one of the judges, Abdon Judges 12 13,15; 2 Sam 23 30, 1 Chron 27 14

Pirenne, Henri (ärē' pērĕn'), 1862–1935, Belgian historian He was long a professor of medieval and Belgian history at the Univ of Ghent One of the leaders of Belgian passive resistance in the First World War, he was held (1916–18) as a hostage by the Germans In his *History of Belgium* (Eng tr , 7 vols , 1899–1932), he showed how traditional and economic forces had drawn Flemings and Walloons together through the course of history Another important work in Belgian history is *Belgian Democracy Its Early History* (Eng tr , 1915) He was an authority on the growth and persistence of cities, and in *Medieval Cities Their Origin and the Revival of Trade* (Eng tr , 1925) he revolutionized the accepted views He laid stress on Roman influences Other works are *Economic and Social History of Medieval Europe* (Eng tr , 1936) and *Mohammed and Charlemagne* (Eng tr , 1939)

Pirgos, Greece see PYRGOS

Pirmasens (pĭrmäzĕns'), city (1939 pop 50,401 1946 pop 37,859), Rhenish Palatinate, W Germany It is a leather-manufacturing center Here in 1793 the allies defeated the French in the French Revolutionary Wars

Pirna (pĭr'nä), city (pop 37,426), Saxony, E Germany, on the Elbe and SE of Dresden It has various manufactures, notably of rayon, paper, and glassware and enamelware There are sandstone quarries near by Pirna was first mentioned in 1233 It has a 16th-century church and city hall, and it is overlooked by the old Sonnenstein castle, now an insane asylum

Pisa (pē'zä), in ancient Greece, region around Olympia, center of an area called Pisatis. The inhabitants long contended with the Eleans for the presidency of the Olympic games until c 572 B C , when they were defeated by the Spartans and Eleans There may have been a city Pisa, but all traces have been lost

Pisa (pē'zä, Ital pē'sä), city (pop. 49,471), capital of Pisa prov , Tuscany, central Italy, on both banks of the Arno It is now 6 mi from the Tyrrhenian Sea, which once reached the city Probably a Greek colony, later certainly an Etruscan town, Pisa grew under Roman rule By the end of the 11th cent Pisa had developed into a powerful maritime republic, fighting the Arabs throughout the Mediterranean and rivaling Genoa and Venice With the acquisition of possessions and trading privileges in the Orient during the Crusades, Pisa's political and commercial power grew Rivalry with Genoa for the possession of Corsica and Sardinia caused long wars until Pisa's naval power was crushed by Genoa at the battle of Meloria (1284) As a Ghibelline center Pisa was also chronically at war with Florence throughout the 13th and 14th cent Ruled at times by tyrants, the city valiantly defended its autonomy until in 1406 it fell to Florence A school of sculpture founded by Nicola Pisano flourished in Pisa in the 13th and 14th cent It gave the city some of its great art treasures. The university at Pisa, dating from the 14th cent , enjoyed a great reputation, Galileo, who was born here, was a student and later a teacher here Before the Second World War, Pisa was a marvel of Romanesque and Gothic architecture, its oldest monuments were built in the characteristic Pisan style, a variation of the Romanesque The ancient houses that lined the Arno were heavily damaged, all but one of its bridges were blown up In the *camposanto* [cemetery] the fine tracery and frescoes by Gozzoli and other Tuscan artists of the 14th and 15th cent were virtually ruined. Besides the *camposanto* the celebrated square of Pisa contains the ancient cathedral, which has a fine marble façade and is rich in works of art, the baptistery, and the famous leaning tower (180 ft high and 14 ft out of the perpendicular) These were only slightly damaged Among the other ancient churches, only Santa Maria della Spina (14th cent) escaped heavy damage

Pisa, Council of, 1409, uncanonical council of the Roman Catholic Church It was summoned to end the Great SCHISM by members of the two colleges of cardinals of the rivals, Gregory XII (in Rome) and Benedict XIII (Pedro de LUNA, in Avignon) The plan was to depose both men claiming to be pope and elect a new one The council was brilliant, having wide international attendance It declared both popes to be heretical and schismatic and therefore not popes, the cardinals proceeded to elect Pietro Cardinal Philargki as Alexander V This move served to complicate the schism with a third claimant rather than to dissolve it This council first gave quasi-official expression to the conciliar theory, i e , that councils are supreme in the Church, a notion that became prominent again at Constance and at Basel (see CONSTANCE, COUNCIL OF, and BASEL, COUNCIL OF) The canonical illegality of the council rests on several features, e g , most of the cardinals involved owed their creation to popes whom they declared to be holding office illegally.

Pisan, Christine de (krēstēn' dŭ pēzäⁿ'), b. 1364, d. between 1429 and 1431, French poet, of Italian descent. She wrote a large number of verse romances, works in prose, and lyric poems Her lyric poems are especially esteemed She was a woman of remarkable character and virtue and one of the first since antiquity to earn her living and support her family by writing Her writings translated into English include *Le Livre des faus d'armes et de chevalerie*, first translated and printed by Caxton as *The Book of Fayttes of Armes and of Chivalry* (re-edition, 1932), and *Le Livre du duc des vrays amans* (Eng. tr., *The Book of the Duke of True Lovers*, 1908). See Alice Kemp Welch, *Of Six Medieval Women* (1913)

Pisanello (pēzänĕl'lō), c 1395–1455?, Italian medalist, painter, and draughtsman of the early Renaissance He was also called Vittore Pisano, but his real name was Antonio Pisano Little is known of his life and artistic training, but his art shows the influence of Gentile da Fabriano, whom he assisted in the ducal palace in Venice Pisanello enjoyed great celebrity as a painter of frescoes, portraits, birds, and animals and wielded an important influence on Venetian art He was employed by princes throughout Italy, for whom he painted portraits and decorations for palaces and modeled medals He painted frescoes in the Lateran, Rome, in the Sala del Gran Consiglio, Venice, in the Castello, Pavia, and in Florence and Verona All have perished except *The Annunciation* in the Church of San Fermo Maggiore at Verona and *St George Mounting His Horse* in the Pellegrini Chapel, Church of Sant' Anastasia, Verona Among Pisanello's noble patrons were the Este family, the duke of Ferrara, and Alfonso V of Aragon and Naples. His very rare paintings are highly prized His surviving easel paintings are *The Miraculous Stag Appearing to St Eustace* (National Gall, London), portrait of a princess of the Este family (Louvre), portrait of Lionello d'Este (Bergamo), and *Portrait of a Lady* (National Gall of Art, Washington, D C) It is as a medalist, however, that Pisanello is chiefly known today His medals are of the highest artistic merit and greatly valued as historic memorials of the Renaissance Among the best known are those of Leonello d'Este, Francesco Sforza, Alfonso V, and Sigismondo Malatesta (all British Mus) and Vittorino da Feltre The Louvre has a number of his admirable nature and animal drawings See his *Drawings* (selected by G F Hill, with an introduction, 1929)

Pisano, Andrea (andrā'ä pēzä'nō), c 1270–c 1348, Italian sculptor, also called Andrea da Pontedera He is considered the founder of the Florentine school of sculpture He is said to have received his early training under Giovanni PISANO and to have worked in Venice before going to Florence, where he made the first bronze doors for the baptistery (finished 1336) Of the 28 panels, 20 relate the life of John the Baptist and eight present the cardinal and theological virtues The groups and figures are finely composed in a style well suited to relief modeling Through Andrea, Italian sculpture came under the influence of the architect and painter, GIOTTO, whom he succeeded as head of the work on the cathedral and the campanile at Florence To Andrea are ascribed a number of the panels in relief on the campanile (Giotto's Tower), executed perhaps from designs by Giotto himself, although that is questioned Andrea spent his last year in Orvieto, directing work on the façade of the cathedral there

Pisano, Nicola (nēkō'lä), b c 1220, d between 1278 and 1287, Italian sculptor and architect, supposed to have come from Apulia The period of his greatest productivity was from 1260 to 1278 He was the founder of a new school of sculpture in Italy A skilled carver, he studied the sculptures on antique sarcophagi and also studied natural forms He was already famous as an architect when he made his first great work of sculpture, the marble pulpit for the baptistery in Pisa, completed in 1259 or 1260 It was hexagonal, with panels in high relief, and was supported on columns, three of which rested on carved lions From 1265 to 1269 he worked on a pulpit for the cathedral at Siena, on which he was assisted by his son Giovanni and other pupils This was octagonal and larger, with more decorations than the pulpit at Pisa He designed the great fountain for Perugia and probably made 24 statuettes for it The work was completed by Giovanni in 1278 Other sculptures of Nicola are on the cathedral at Lucca He was the first great Italian sculptor In his art the classic and Gothic elements are harmoniously combined See study by C H Crichton and E R Crichton (1938) His son, **Giovanni Pisano** (jōvän'nē), b c 1245, d after 1314, was also an architect and sculptor Besides assisting his father in work on the pulpit for the cathedral at Siena and on the fountain at Perugia, he independently executed a pulpit (1298–1301) for Sant' Andrea, Pistoia, his masterpiece, and a pulpit (1302–10) for the cathedral at Pisa. The last was destroyed by fire in 1595, but fragments are preserved He did some interesting Madonnas and in 1312 was commissioned to make the tomb of Margaret, wife of Emperor Henry VII. Fragments of it are still in Genoa. As architect, Giovanni was in charge of important works in Pisa and Siena The beautiful cloisters of the *camposanto*, Pisa, and the façade of the cathedral at Siena are masterpieces of his designing.

Pisano, Vittore, see PISANELLO.

Piscataqua (pĭskă'tŭkwŭ, -kwä), name of the Salmon Falls River from E of Dover, N H., to Portsmouth Harbor, forming part of the N.H.–Maine border. Navigable, it was important in colonial history

Pisces (pī'sēz) [Latin,=fishes], in astronomy, a zodiacal constellation lying directly south of Andromeda It is described as two fishes with one end of a long rope tied to the tail of each The brightest star (Alpha Piscium) is a close double. Although Pisces is the 12th sign of the zodiac, the vernal equinox which marks the beginning of the astronomical year is now located in this constellation Because of the precession of the equinoxes, the vernal equinox has moved westward from the constellation Aries (where it was located ages ago) into Pisces

Pisco (pē'skō), city (pop 14,609), SW Peru, on the Pacific Pisco serves as the port for ICA and other near-by oases on the desert coast, but it is celebrated chiefly as the home of the brandy to which it has given its name.

pisé de terre see RAMMED EARTH.

Pisek, Czech *Písek* (pē'sĕk), city (pop 16,858), S Bohemia, Czechoslovakia, on the Otava river. It has several Gothic and baroque buildings There are tobacco, paper, and fur industries

Pisemsky, Aleksey Feofilaktovich (ălyĭksyä' fä"ufĭlak'tuvĭch pē'syĭmskĭ), 1820–81, Russian novelist and playwright. A realistic writer in the tradition of Gogol, he is known for his novels of country life prior to the emancipation In these he displays sympathy toward the peasant Of his novels, *A Thousand Souls* (1858) is outstanding, and of his plays, *A Bitter Fate* (1860, Eng tr, 1953)

Pisgah (pĭz'gu), mountain ridge, Jordan, just E of the N Dead Sea and of the S Jordan valley Its summit was called Mt Nebo Num 21.20, 23 14, Deut 3 27 See also ASHDOTH-PISGAH

Pishpek, KIRGHIZ SSR see FRUNZE.

Pisidia (pĭsĭ'dēŭ, -dĭ-), ancient country of S Asia Minor, S of Phrygia and N of Cilicia and Pamphylia It was a mountainous country, traversed by the Taurus, in whose fastnesses its warlike tribes maintained their independence until the country became a Roman province

Pisistratus (pĭsĭs'trutus), c 605–527 B C, Greek statesman, tyrant of Athens His power was founded on the cohesion of the rural citizens, whom he consolidated with farseeing land laws His coup d'état (c 560 B C) was probably not unpopular His rivals, the ALCMAEONIDAE and the aristocracy, managed to exile him twice, but in his last years he established himself sufficiently to leave Athens in the hands of his sons, HIPPIAS and HIPPARCHUS His foreign policy was to make Athens as great as Sparta by gaining Ionian leadership He first won Salamis for Athens and established Attic hegemony in the Dardanelles He did much to enhance Athenian cultural prestige, thus he established the preeminence of the Panathenaea and beautified the city He had an official text of Homer written down, probably the first. His name also appears as Peisistratus

Piso (pī'sō), distinguished family of the ancient Roman gens Calpurnia One of the best-known members was **Lucius Calpurnius Piso Caesoninus** (sē"zōnī'nus), d after 43 B C, father-in-law of Julius Caesar Piso, as consul (58 B C), aided in the banishment of Cicero Macedonia was his proconsular province (57 B C, 56 B C), and Cicero attacked him in the senate for extortion, especially in the orations *De provinciis consularibus* and *In Pisonem* In 50 B C Piso was censor Although he accompanied Pompey in the outbreak of the civil war (49 B C) he later was friendly with Caesar **Caius Calpurnius Piso**, d A D 65, was a prominent patron of literature He led a conspiracy against Nero, but it was discovered, and Piso killed himself

Pison (pī'sun), river of Eden Gen 2 11

Pispah (pĭ'spu) [Heb.,=expansion], son of Jether. 1 Chron 7 38.

Pissarro, Camille (kämē'yu pēsärō'), 1830–1903, French impressionist painter, b St Thomas, Virgin Islands, son of a Frenchman and a creole mother He was educated in Paris but did not begin his art study there until 1855, when he came under the influence of Corot and the Barbizon school Later he allied himself with Monet, Sisley, Renoir, and others in the impressionist movement Most of his life was passed in financial straits, and his work became popular only c.1890 Pissarro is famous for his light effects achieved through the use of broken color. He painted chiefly scenes of everyday life in the streets of Paris, London, and Le Havre He is represented in leading collections of French impressionist painting in Europe and America His *Bather in the Woods* is in the Metropolitan Museum

pistachio (pĭstä'shō, pĭstä'shē), tree or shrub of the genus *Pistacia*. The species which yields the pistachio nut of commerce is *Pistacia vera*, native to Asia Minor, Syria, and Palestine It is now cultivated on a small scale in parts of the SW United States and in many of the warmer parts of Europe and Asia; the trade supply comes largely from Persia, Syria, Afghanistan, Italy, and Sicily The tree grows usually to about 20 or 30 ft. in height. Staminate and pistillate flowers are borne on separate trees; the fruit is botanically a dry drupe with a greenish seed known as the pistachio nut The nut is eaten salted and is used in making confections In Syria and some other countries it is more widely used and is traditional at weddings and on other occasions A flavoring oil is derived from the nuts. Related species include the TEREBINTH or turpentine tree, the Chinese pistachio, *P chinensis*, grown in Florida and California both for ornament and as grafting stock for *P vera*, and a small evergreen species (*P lentiscus*) of Mediterranean regions, a source of both mastic and oil much used in Arabia and Turkey

Pistoia (pēstō'yä), city (pop 29,532), capital of Pistoia prov, Tuscany, central Italy, at the foot of the Apennines and NW of Florence It is the center of a region producing grapes and fruit and has canneries and textile industries Catiline was killed in battle near here in 62 B C. The city rose to prominence as a free commune in the 12th and 13th cent and made important contributions to architecture and sculpture Hampered by wars and factional strife between the Blacks and the Whites (these factions were transferred from Pistoia to Florence), it fell under the hegemony of Florence in the 14th cent The city is rich in works of art, notably a fine marble cathedral, the churches of Sant' Andrea (with a Pisano pulpit) and San Paolo, a baptistery, the town hall, the Palazzo Pretorio; and the Ospedale del Ceppo, with a fine frieze by Giovanni della Robbia Pistols, first manufactured here in the 16th cent, take their name from Pistoia

pistol, small FIREARM, designed for use with one hand. It was first manufactured (c 1540) by Camillo Vettelli in Pistoia, Italy (which gives the pistol its name) The early weapons, such as the "dags" carried by English cavalrymen in the days of Henry VIII, had short barrels and heavy butts and were very clumsy Improvements were, however, made rapidly until the 19th cent The invention of the REVOLVER (c 1835) made the old type of pistol obsolete The revolver was in turn almost superseded in the 20th cent by the automatic pistol, which carries more ammunition, has greater power, and is more accurate The ammunition of a revolver is placed in a revolving drum, that of the automatic is in a clip inside the stock Weapons similar to automatic pistols but much larger were developed in the Second World War

Piston, Walter, 1894–, American composer, b Rockland, Maine, grad Harvard, 1924, and studied in Paris with Nadia Boulanger He joined the faculty of Harvard in 1926, becoming professor of music in 1944 As a composer he is a neoclassicist, using the traditional forms of absolute music with a sure technique and an intellectual, dissonant style His compositions, in which he avoids any programmatic suggestion, include three symphonies (1938, 1944, 1948), his *Suite for Orchestra* (1930), a concertino (1937) for piano and orchestra, a violin concerto (1940), a toccata (1948) for orchestra, and chamber music for various instrumental combinations He is the author of three textbooks—*Principles of Harmonic Analysis* (1933), *Harmony* (1941, rev ed., 1948), and *Counterpoint* (1947)

Pitcairn, John (pĭt'kărn), 1722–75, British royal marine officer in the American Revolution Major Pitcairn commanded the British troops at Lexington (see LEXINGTON AND CONCORD, BATTLES OF) on April 19, 1775, but whether he ordered his men to fire on the colonial militia or was forced to return their fire is a historical problem He was later killed in the battle of Bunker Hill Pitcairn Island is named for his son Robert Pitcairn (c 1747–c 1770), who as a midshipman under Philip Carteret first sighted it on July 2, 1767

Pitcairn, industrial borough (pop 6,310), SW Pa., ESE of Pittsburgh, laid out c 1890, inc 1891 It has coal mines, railroad repair shops, and a brickyard

Pitcairn Island, volcanic island (2 sq mi, pop 126), S Pacific, c 3,775 mi SE of Hawaii. It was discovered in 1767 by Philip Carteret, British admiral The natives are descendants of mutineers of the BOUNTY and the Tahitian women brought with them in 1790 In 1808 the colony was discovered by Americans, who found John Adams the only survivor of the crew Overpopulation caused the removal (1856) of the inhabitants to NORFOLK ISLAND, but many returned to Pitcairn, which is the smaller of the two colonies. In 1898 the island was placed under the Western Pacific High Commission at Suva, Fiji The Pitcairn Island dist includes Henderson, Ducie, and Oeno islands, annexed in 1902 These small uninhabited atolls have lagoons potentially valuable as seaplane bases. See H L. Shapiro, *The Heritage of the Bounty* (1936)

pitch, in music, the position of a tone in the musical scale, today designated by a letter name and determined by the frequency of vibration of the source

of the tone. Pitch is an attribute of every musical tone, and the first harmonic of any tone is perceived as its pitch. The first successful attempt to standardize pitch was made in 1858, when a commission of musicians and scientists appointed by the French government settled upon an A of 435 cycles per second, this standard was adopted by an international conference at Vienna in 1889 In the United States, however, the prevailing standard is an A of 440 cycles per second. Before the middle of the 19th cent, pitch varied according to time, place, and medium of musical performance, and the only generalization possible is that since the classical period the trend has been gradually upward, even in the 20th cent there have been orchestras and other groups which have tuned to an A higher than 440 The relative pitch of a tone is an expression of its pitch in relation to the pitch of some other tone taken as a standard, in contrast to ABSOLUTE PITCH.

pitch: see TAR AND PITCH.

pitchblende (pĭch'blĕnd"), dark, lustrous, amorphous mineral, a source of radium and uranium Largely natural uranium oxide, it has variable quantities of lead, calcium, iron, copper, and bismuth It is massive in form, frequently with a botryoidal or grape-cluster appearance, and has a variable but high specific gravity Pitchblende is greenish, brownish, or black in color, with a pitchy to submetallic luster. The uranium yield is from 50 to 80 percent Uraninite, a closely related ore richer in uranium, commonly crystallizes in the octahedral system It yields 65 to 80 percent uranium and has a specific gravity somewhat higher than that of pitchblende The color range is from deep black through brown to yellow Both varieties of the ore occur as primary constituents of quartz and with other metals They supply (in addition to uranium) radium, polonium, and plutonium Although the ores occur in small quantities throughout the world, the Great Lakes region of Canada, the Belgian Congo, and Czechoslovakia are major sources

Pitcher, Molly, c 1754–1832, American Revolutionary heroine, whose real name was Mary Ludwig Hays or Heis, b near Trenton, N J As the wife of John Hays or Heis, she carried water for her husband and other soldiers in the battle of Monmouth (1778) and earned her sobriquet The legend that she manned her husband's gun is apocryphal and possibly rose from confusion with Margaret CORBIN After Hays's death, she married George McCauley, and in 1822 she was pensioned by Pennsylvania See W S Stryker, *The Battle of Monmouth* (1927)

pitcher plant, any of several carnivorous or insectivorous plants, the leaves of which are adapted for trapping insects Each leaf forms a "pitcher," a somewhat trumpet-shaped enclosure, usually containing some liquid An insect which enters is prevented from retreating by deflexed bristles and ultimately is drowned in the fluid Certain pitcher plants are said to digest the insects, although this has been questioned by some scientists It has also been suggested that the plants absorb the nitrogenous material from the soil after the leaves and entrapped insects have dropped to the ground and decayed The best-known pitcher plants of North America belong to the genus *Sarracenia* The common pitcher plant or sidesaddle flower, *Sarracenia purpurea*, is found in bogs from Labrador to Florida and Iowa and has long-stalked flowers of purple, red, or, rarely, yellow This plant has been used medicinally by both Indian and white man Oriental pitcher plants of the genus *Nepenthes* are cultivated in greenhouses for the curious leaves in which the midrib is prolonged into a long tendril bearing at the end a pitcher The California pitcher plant (*Darlingtonia*, or *Chrysamphora, californica*) is native to the West Coast and resembles *Sarracenia* The Australian pitcher plant (*Cephalotus follicularis*) produces a low rosette of leaves some of which are slipper shaped Other insectivorous plants include the BLADDERWORT, VENUS'S-FLYTRAP, sundew, and butterwort

Pitch Lake see TRINIDAD AND TOBAGO

pitch pipe, in music, small pipe used to establish a certain PITCH and having either a constant note or a gauged slide In 1946 there was developed in the United States an electronic device for producing constant pitch, this device is now used frequently for orchestral tuning

Pite, William Alfred, 1860–, English architect He is best known for his important series of hospitals, notably King's College Hospital (Denmark Hill, London), and numerous churches and private houses He is a fellow of the Royal Institute of British Architects

pith or **medulla** (mĭdŭ'lə), core of the stem of both herbaceous and woody dicotyledonous plants. Pith is composed of relatively large cells loosely fitted together, and it is chiefly a region of food storage. As the stems grow older the pith usually dries out, and in some it disintegrates and the stems become hollow. In trees the pith becomes much reduced as the woody tissue grows In the Orient, rice paper has been made from the pith of shrubs, e.g., *Tetrapanax papyriferum* (or *Fatsia papyrifera*) and *Edgeworthia gardneri* The pith of certain rushes is used for wicks of candles Pith is used in biological work for holding the tissue when cutting sections of it by hand.

Pithecanthropus erectus: see MAN, PRIMITIVE.

Pithom (pī'thŏm), ancient store city of Egypt, built by the Israelites, 12 mi SW of Ismailia Ruins include statues of Ramses II and other kings up to the Ptolemies See Ex 1 11

Pithon (pī'thŏn), descendant of Saul 1 Chron 8 35, 9 41

Pitman, Sir Isaac, 1813–97, English phonographer. In *Stenographic Soundhand* (1837) he set forth a shorthand system based on phonetic rather than orthographic principles, this became one of the most-used systems in the world Through his own publishing house he published many manuals, journals, and books about shorthand See biography by Alfred Baker (1908) The Pitman system was introduced to the United States through Stephen P Andrews and Sir Isaac's brother, **Benn Pitman,** 1822–1910, who emigrated to the United States in 1852 and established at Cincinnati the Phonographic Institute to teach and publish works on shorthand He taught wood carving at the Cincinnati Art Academy, invented (1855) an electrochemical process of relief engraving, and wrote a biography of his brother (1902)

Pitman, borough (pop 5,507), SW N J , S of Camden near Glassboro, settled 1871 as a place for Methodist camp meetings, inc 1905

Pit River Indians, group of North American Indian tribes of the Shastan linguistic stock, also called the Palaihnihan In the 19th cent they occupied the Pit river region in NE California Pit river derived its name from the many game pitfalls which these Indians constructed along the river They lived in bark or brush dwellings or in semisubterranean houses resembling sweat houses Polygamy was practiced, and women held a low position Religious ceremonies were not prominent, but they had an elaborate creation myth Today there are some 400 living on reservations in California and in Oregon

Pitt, William (1708–78) see CHATHAM, WILLIAM PITT, 1st EARL OF

Pitt, William, 1759–1806, English statesman, second son of William Pitt, 1st earl of Chatham He entered Parliament in 1781 and in 1782 at the age of 23 became chancellor of the exchequer under the earl of Shelburne At the fall of the Portland cabinet, dominated by Charles James Fox and Lord North, Pitt was made (1783) prime minister by George III He met strong opposition in Parliament, where the king's interference was resented The long-postponed general election held in 1784 gave him a parliamentary majority over the Whigs and established the custom of "appealing to the country"—i e , holding a general election Pitt was a liberal Tory, and his policies included reduced expenditures, new taxes to cut the national debt, and commercial treaties with France, all in accordance with the theories of Adam Smith, and also parliamentary reform In colonial affairs he backed an important revision of Indian government through the East India Company and a bill (1791) establishing a Canadian government which gave a degree of freedom to French Canada His popularity increased steadily, and when the mental illness of the king became apparent, Pitt's control of government was supreme His liberal policies were, however, doomed by the French Revolutionary Wars and the Napoleonic Wars Pitt's first desires in 1789 were for peace and neutrality, and when France finally declared war on England (1793), he failed to foresee either the length or the seriousness of the struggle Fearing revolutionary activities in England, he instituted such repressive measures as the suspension (1794) of habeas corpus In the conduct of the war Pitt's financial support of England's allies brought a monetary crisis in England His three military coalitions against France (1793, 1798, 1805) were as unsuccessful on land as the British navy was victorious at sea Rebellion in Ireland hampered the war effort and convinced Pitt that the solution to the Irish problem lay in parliamentary union of Ireland with England, plus Catholic Emancipation so that Roman Catholics could hold office By wholesale bribery union was achieved (1800), but when the king refused CATHOLIC EMANCIPATION, Pitt resigned (1801) He was recalled as prime minister (1804) to repel an invasion by Napoleon which never materialized, but the news of the defeat of England and her allies at Austerlitz proved to be his death blow See biographies by Lord Rosebery (1892) and J H Rose (1923), D G Barnes, *George III and William Pitt, 1783–1806* (1939)

Pitt, Fort: see DUQUESNE, FORT, and PITTSBURGH

Pittacus (pĭ'tăkŭs), c 650–c 579 B C , Greek statesman, poet, and military leader He helped to overthrow the tyrant of Mytilene in Lesbos and became the lawgiver there, ruling for 10 years He prevented the nobles in exile (among them ALCAEUS) from returning and left the city established in republicanism Little is known of his elegiac poetry. He is listed as one of the SEVEN WISE MEN OF GREECE.

Pitt Island, Gilbert Islands see MAKIN.

Pittsburg (pĭts'bûrg). 1 Industrial city (pop 9,520 W Calif , at the junction of the Sacramento and th San Joaquin rivers and NE of Oakland; laid ou 1849, inc. 1903 Steel, canned fish and fruit chemicals, asbestos, and rubber goods are amon the city's varied products 2 City (pop 17,571 SE Kansas, near the Mo line, founded 1872 as mining town, inc 1880 It is a manufacturing an mining center near large coal deposits A stat teachers college is here Near by is a state qua hatchery 3 City (pop 2,916), co seat of Camp co E Texas, SW of Texarkana, settled 1854 It proc esses black-eyed peas and sweet potatoes and th pine from the surrounding woods Indian artifact and skeletons were excavated near by

Pittsburgh (pĭts'bûrg), city (pop. 671,659), co seat of Allegheny co , SW Pa , at the confluence of th Allegheny and Monongahela rivers which form th Ohio here It is a port of entry. The Indian tow of Shannopin, on the site of the present city, was i the last half of the 17th cent a fur-trading po with many Indian canoe routes and trails. Th land was contested by the French and the Englis Fort Duquesne (see DUQUESNE, FORT), built b the French in the middle of the 18th cent , later fe to the English and became Fort Pitt The villag surrounding the fort was settled in 1775; it wa incorporated as a borough in 1794 and became city in 1816 The modern "Steel City," or "Smok City," is at the junction of east-west transportatio arteries and has access to immense reserves of raw materials It draws on a large labor supply Th city has become a primary industrial center of th nation Iron and steel products are the foremos manufactures of Pittsburgh, but it is also know for glass, coke, canned goods, electrical supplie and aluminum and for its meat-packing industry The city, built on a dissected plateau, has a fin park system, of which Schenley is the principa unit Pittsburgh is the seat of the CARNEGIE IN STITUTE OF TECHNOLOGY, the Univ of Pittsburgh the Pennsylvania College for Women, Duquesn Univ (Catholic, coeducational; 1878), and an ex perimental station of the Bureau of Mines Th Carnegie Museum, the Music Hall, and the Car negie Library (a pioneer in methods, with a librar school and extensive collections) are well known The Pittsburgh Symphony Orchestra is noted. Th seminaries include Pittsburgh-Xenia, Reforme Presbyterian, and Western Theological Th blockhouse of the old fort (1764) is still here I March, 1936, the city suffered the most disastrou flood of its history when the Allegheny and th Monongahela rose 46 ft , inundating much of th business and industrial district, paralyzing the city and taking 45 lives There was a flood of lesse extent (34 ft) in Jan , 1937 See Leland D Bald win, *Pittsburgh the Story of a City* (1937).

Pittsburgh, University of, at Pittsburgh, nonsectar ian, private, coeducational, chartered and opene as an academy 1787, called Western Univ of Penn sylvania 1819–1908 It includes a college an schools of business administration, dentistry, edu cation, engineering, law, medicine, mines, nursing pharmacy, public health, and social work Ther are business and retail-training research bureaus a cyclotron, the pioneer Allegheny Observator (1859), a university press, and MELLON INSTITUT OF INDUSTRIAL RESEARCH Outstanding building are the Cathedral of Learning (a skyscraper), th chapel, and the Stephen Collins Foster Memoria

Pittsburg Landing: see SHILOH, BATTLE OF

Pittsfield. 1 City (pop 2,884), co seat of Pike co W Ill , between the Mississippi and the Illinois Ri of Quincy, in a farm area; laid out 1833, inc 1869 Shoes are made here 2 Town (pop 3,329), S Maine, between Skowhegan and Bangor, settle 1794, inc 1819 as Warsaw, name changed 1824 Maine Central Institute, a preparatory school, is i the town 3 City (pop 49,684), co seat of Berk shire co , W Mass , between mountain ranges, on branches of the Housatonic, settled 1752, inc as town 1761, as a city 1889 The metropolis of th Berkshires, the city produces electrical machinery and woolen goods, bank-note paper is made a near-by Dalton Oliver Wendell Holmes lived near Pittsfield, and "Arrowhead" was Herman Melville's home, 1850–63 4 Town (pop 2,183), SE N H , on the Suncook and NE of Concord, settled 1768, inc 1782 The industrial village of Pittsfield is included Textiles and shoes are manufactured

Pittsford. 1 Residential village (pop 1,544), W N.Y. near Rochester, inc 1827 A fish hatchery is here and condiments are made 2 Town (pop 2,093), W Vt , N of Rutland This area, about a ford where the Crown Point military road crossed Otter Creek was settled in 1769 Fort Mott was built here in 1777, and Fort Vengeance, a stronger fort near by was kept garrisoned from its completion in 1781 until the end of the Revolution Pittsford Mills near Furnace Brook, had an iron industry in the early 19th cent There are marble quarries. The town has the Caverly Preventorium for children, a state tuberculosis sanatorium, and a Federal trout hatchery.

Pittston. 1 Town (pop 1,114), S Maine, on the Kennebec and near Gardiner, settled c.1759, inc. 1779

2 Industrial city (pop. 17,828), NE Pa., on the Susquehanna midway between Scranton and Wilkes-Barre; settled 1770 by the Susquehanna Company of Connecticut, laid out 1772, inc as a borough 1853, as a city 1894 Anthracite is mined here. In 1942 a mine cave-in wrecked many homes

pituitary gland (pĭtū'ĭtĕr"ē), small round organ which is attached to the base of the brain and functions as an endocrine, or ductless, gland Hormones produced by one of its three parts, the anterior lobe, regulate growth, the development of sexual characteristics, lactation following pregnancy, and certain other functions The hormones of the posterior lobe affect chiefly blood pressure, kidney function, and the action of certain muscles Little is understood of the effect upon human physiology of the third part, the pars intermedia. Pituitary overactivity results in giantism and in acromegaly (abnormal growth, in an adult, of the face, hands, and feet) Underactivity causes dwarfism Extracts from the pituitary glands of animals used for food by man are employed to counteract hormone insufficiences and to intensify certain functions of the body at a critical period (e.g., to induce contraction of the uterine muscles after childbirth and to raise blood pressure following surgical shock).

Piura (pyōō'ra), city (pop 20,093), NW Peru Its full name, San Miguel de Piura, recalls the first Spanish settlement established in Peru Francisco Pizarro founded San Miguel on the coast in 1532, but the site was unhealthful and the settlement was moved shortly to present Piura From here in 1533 Sebastián de BENALCÁZAR set out on his conquest of Ecuador In the irrigated Piura valley on the Peruvian coastal desert, the city is the commercial center for cotton raised in the region and for cattle driven S from Ecuador

Pius II (pī'us), 1405–64, pope (1458–64), a Sienese (b. Corsignano, renamed after him Pienza) named Enea Silvio de' Piccolomini (often, in Latin, Aeneas Sylvius), successor of Calixtus III and predecessor of Paul II He attended the Council of BASEL (1432, see BASEL, COUNCIL OF) and joined its secretariat. Naturally he was a determined supporter of the conciliar theory and an opponent of Eugene IV, and in 1439 he was a leader at the court of Antipope Felix V (AMADEUS VIII of Savoy) Meanwhile he gained a European reputation as a humanist, and Emperor FREDERICK III made him court poet and in 1442 secretary to the chancery in Vienna In 1445 Piccolomini was converted from the disorderly life he had been leading and began a new career He went to Rome to submit to the pope and soon became a priest (1446) He was made bishop of Trieste (1447), bishop of Siena (1450), and a cardinal (1456) As pope he tried in vain to unite Christendom against the Turks In 1460 he condemned appeals from the Holy See to an ecumenical council. He was in a continual dispute with Louis XI of France who constantly attempted to control ecclesiastical affairs Pius continued the quarrel with the Bohemians led by GEORGE OF PODEBRAD Pius did not patronize art or literature His literary talents were excellent Of his works the most useful is his memoirs, the only autobiography of a pope

Pius IV, 1499–1565, pope (1559–65), a Milanese named Giovan Angelo de' Medici, successor of PAUL IV and predecessor of ST PIUS V. He was probably not related to the great Medici family His career in Rome began in 1527, and he held increasingly important offices under Clement VII, Paul III, and Julius III Paul III created him cardinal Cardinal Medici was one of the reform party, but he was no rigorist, hence he was out of favor with Paul IV He was elected partly because of his winning manners and his amiable disposition The great feature of his pontificate was the reconvening of the Council of Trent (see TRENT, COUNCIL OF) for its last and most important session (1562–63). By backing the council in everything Pius made himself one of the great popes of the Catholic REFORM He welcomed the final break with Protestantism which the council brought His good political relations with Spain were in contrast with Paul IV's anti-Hapsburg policy Pius's chief aid was his nephew, St. CHARLES BORROMEO

Pius V, Saint, 1504–72, pope (1566–72), an Italian (b near Alessandria) named Michele Ghislieri; successor of PIUS IV and predecessor of GREGORY XIII He was ordained in the Dominicans (1528) and became celebrated for his austerity Paul IV made him cardinal (1557) and inquisitor general, under his direction the Roman Inquisition reached a new degree of efficiency On his election he set about putting the decrees of the Council of Trent (see TRENT, COUNCIL OF) into effect, he thus occupies a key position in the Catholic REFORM, for his activity in these years just after the council insured the permanence of its work He governed the Papal States with severity. St. Pius was the first pope after the Reformation to put Catholicism on the political offensive Thus he declared Queen Elizabeth deposed (1570) and wrote Mary Queen of Scots to console her in captivity He united Venice and Spain with him against the Turks, an alliance which helped to bring the victory of Don Juan of Austria over the Turks at Lepanto. He has been much attacked as a persecutor of heresy, but he was certainly not privy to the massacre of St Bartholomew's Day in France He is the last pope to have been canonized Feast May 5

Pius VI, 1717–99, pope (1775–99), an Italian (b Cesena) named G Angelo Braschi, successor of CLEMENT XIV and predecessor of PIUS VII. He was created cardinal in 1775 Early in his reign he was faced with the attempts of Emperor JOSEPH II to "reform" the Church by suppressing monasteries, assuming rights of appointment of clergy, and making other changes In 1782 Pius visited Vienna to dissuade him from his course, but fruitlessly; the struggle continued Joseph was imitated in Spain and Italy, and in 1786 a synod at Pistoia adopted antipapal resolutions Joseph's attempts to make the state supreme in matters of conscience were not less extreme than the efforts in the FRENCH REVOLUTION to set up a state church by the Civil Constitution of the Clergy (1790) Pius hesitated long but eventually (April, 1791) condemned this new Gallican church and forbade the clergy to take the oaths The French annexed the papal property at Avignon and Venaissin The pope protested Louis XVI's execution and sided with the anti-French coalition, and Napoleon attacked the Papal States In 1797 a treaty at Tolentino ceded Avignon, Venaissin, Ferrara, Bologna, and the Romagna to the French, along with a huge indemnity and many treasures In 1798 a French general was murdered in Rome, and a republic was set up by the French The pope was taken to Siena, thence to Florence, soon, though he was ill and feeble, the French took him to Turin and to Grenoble, he died at Valence In 1802 his body was taken to Rome

Pius VII, 1740–1823, pope (1800–1823), an Italian (b Cesena) named Barnaba Chiaramonti, successor of PIUS VI and predecessor of LEO XII Pius VI created him cardinal in 1785 He conducted himself ably in the French invasion, showing sympathy for the social aims of the Revolution A protracted conclave in 1799–1800 ended with his election His secretary, Ercole Consalvi, was a guiding force throughout his pontificate An early event was the CONCORDAT OF 1801 with Napoleon, to reestablish the Church in France and set up a new hierarchy, much of it was vitiated by Napoleon's Organic Articles, which Pius would not accept In 1804 Napoleon made Pius come to Paris to consecrate him as emperor He found Pius intractable when out of the hands of the French, who eventually took Rome (1808) and the Papal States (1809) Pius excommunicated the assailants of the Holy See, and Napoleon had him taken prisoner and removed to Fontainebleau The pope was browbeaten into signing a new concordat, which he disavowed after the battle of Leipzig In 1814 he returned to Rome in triumph One of his first acts was to restore the Society of JESUS. The rest of Pius's pontificate was devoted to reestablishing the Church in Europe Consalvi regained the Papal States at Vienna and contracted a series of concordats At the same time Pius VI's and Pius VII's stolidity in the face of humiliation began a revival of personal popularity for the pope that has since characterized Catholicism Napoleon had treated Pius VII with sneering brutality, and the pope's treatment of the fallen emperor's family excited the admiration of Europe he gave them haven at Rome and he interceded with the British to lighten Napoleon's treatment He was on better terms with Great Britain than any pope since the Reformation, and he was keenly interested in the United States and the Church here His patronage of artists was munificent, his tomb was made by the Protestant Thorvaldsen

Pius IX, 1792–1878, pope (1846–78), an Italian (b Senigallia) named Giovanni M Mastai Ferretti, successor of GREGORY XVI and predecessor of LEO XIII He was cardinal and bishop of Imola when elected For two years he pursued a progressive policy in governing the Papal States and granted a constitution But in 1848 rioting drove him from Rome to Gaeta, and he returned (1850) to be supported in power only by the arms of Napoleon III The Italian nationalists were eager for Rome and the Papal States, and in 1860 Victor Emmanuel seized all but Rome and its neighborhood In 1870, on the collapse of Napoleon, the Italians entered Rome, and Pius returned to the Vatican, refusing to recognize the new kingdom and to accept the proffered indemnity The anomalous situation, called the Roman Question, was settled eventually by the LATERAN TREATY. Pius's dealings with other nations were not fortunate, and he did not conduct his side of the KULTURKAMPF with the finesse of his successor. In 1854 Pius declared the dogma of the Immaculate Conception of the Virgin to be an article of faith It had long been nearly universally held by Catholics In 1864 he issued the encyclical *Quanta cura*, accompanied by a list (*Syllabus*) of erroneous modernistic statements In 1869 he convoked the VATICAN COUNCIL, the principal work of which was the enunciation of papal infallibility. Pius IX's was the longest pontificate in history.

Pius X, 1835–1914, pope (1903–14), an Italian (b. near Treviso) named Giuseppe Sarto, successor of LEO XIII and predecessor of BENEDICT XV Before his election he was known for his interest in the secular clergy and in the poor Soon after his accession the severe regulations of church property, education, and customs in France brought a crisis, which Pius met with resolution (1904), the whole Catholic body in France followed his voice, giving up the church property (including churches, rectories, schools, and monasteries) rather than cooperate with the government Pius's decree of 1905 encouraging frequent communion has had great effect on Catholic life. In 1907 the decree *Lamentabili* and the encyclical *Pascendi* condemned religious modernism The whole Church felt his reorganizing spirit He set up a commission to recodify the canon law, he encouraged the use of plain song, he set up the new Roman breviary as the norm for the whole Church, he removed negligent bishops, he made the Roman congregations more efficient, he set up a commission to translate the Bible anew and another to study the interpretation of the Bible, and he regularized the position of the hierarchies in many countries Pius was on better terms with the Italian government than his predecessors He was of very holy life and was unusually interested in the common people, thus he heard their confessions even while he was pope The veneration begun in his lifetime continued after his death, and in the 1940s his beatification was being sought See biography by Katherine Burton (1950)

Pius XI, 1857–1939, pope (1922–39), an Italian (b Desio, near Milan) named Achille Ratti, successor of BENEDICT XV and predecessor of PIUS XII His father was a silk weaver He studied in Milan and the Gregorian Univ., Rome, and was ordained in 1879 His excellence in philosophy brought him to the attention of Leo XIII He taught in the Milan seminary, was appointed (1888) one of the college of doctors of the Ambrosian Library, Milan, and won a name for his studies in paleography In 1907 he was made chief librarian Called by Pius X to Rome, he was vice prefect of the Vatican Library In 1918 Benedict XV entrusted him with the difficult legateship in Poland There he put the Church on good terms with the new government and helped, as much as possible, the Catholics of Russia In 1919 he was made nuncio to Poland Two years later Benedict appointed him archbishop of Milan and created him cardinal Cardinal Ratti was elected pope eight months later (Feb 6, 1922) Pius's pontificate was marked by great diplomatic activity and by many important papers, often in the form of encyclicals In diplomatic affairs Pius was aided at first by Pietro Gasparri and after 1930 by Eugenio Pacelli (later Pius XII) Cardinal Gasparri's masterpiece was the LATERAN TREATY (1929) Soon after it the Fascists and the pope were in open disagreement over restriction of youth activities, this culminated in a strong papal letter (*Non abbiamo bisogno*, 1931), showing the impossibility of being at once a Fascist and a Catholic Relations between Mussolini and the Holy See were cool ever after To Cardinal Pacelli it fell to negotiate a concordat for all Germany (1933) The Hitler government never pretended to observe the treaty In 1937 after interference of every sort by the National Socialists in Catholic life the pope denounced the government and the Nationalist Socialist theory in a powerful encyclical, *Mit brennender Sorge* A few days later he issued a definitive analysis of communism from the Roman Catholic point of view in *On Atheistic Communism* Pius also denounced persecutions in Russia, Mexico, and Spain With England, the Netherlands, and France (where he condemned the royalist *Action française* movement in 1925) the pope was on unprecedentedly cordial terms He cried out continually against nationalism, racism, and totalitarianism and their menace to human dignity, hence the new feast of Christ the King, established to recall the rights of religion in the state and hence, too, his denunciation of anti-Semitism The pope, highly critical of laissez-faire capitalism, urged social reform especially in his stirring encyclical, *Quadragesimo anno* (1931), which renewed the plea made by Leo XIII 40 years before Pius appealed directly to the laity for greater participation in all things religious—this he called Catholic Action Many of his addresses and letters were really sermons to the whole church membership, as those on the secularization of life, on marriage and divorce, and on the destruction of family life In the missions he laid great stress on the necessity of integrating Christianity with native cultures without trying to make them European This is seen in the Pontifical Work of St Peter the Apostle for the Native Clergy, which he set up in 1929. To protect Catholics of Eastern rites from Latin influence he augmented the powers of their congregation and established a commission to study their canon law He also called on Western Catholics to increase and exhibit greater understanding of the Orthodox and other ancient churches of the East, notably in the encyclical *Rerum Orientalium* (1928). Pius took delight in new technological developments; he es-

tablished a broadcasting station at the Vatican, introduced improvements, and advanced the modernization of the Vatican Library. To signalize his interest in the progress of science he reconstituted the Pontifical Academy of the Sciences (1936), with a large international membership. Many of Pius's papers have been published See Philip Hughes, *Pope Pius the Eleventh* (1938).

Pius XII, 1876–, pope (1939–), an Italian (b. Rome) named Eugenio Pacelli, successor of Pius XI. At Rome he was educated, ordained priest (1899), and trained as a diplomat. He became undersecretary of state (1912) and, after receiving bishop's orders, nuncio to Bavaria (1917) He stayed on in Germany and concluded concordats with Bavaria and Prussia He was made cardinal in 1929 and papal secretary of state in 1930, succeeding his teacher, Cardinal Gasparri He negotiated the concordat for all Germany in 1933 He made two trips abroad while papal secretary, to South America (1934) and to the United States (Oct–Nov 1936). In the conclave after Pius XI's death he was elected on the third ballot (March 2, 1939, coronation, March 12), the first papal secretary to be elected in centuries and the first Roman pope since 1730 The new pope made peace his reiterated theme, and until the end of the Second World War his energies were consumed in trying to prevent the war, to limit it, and to alleviate its effect In these efforts he used every means of public utterance, from broadcasts to encyclicals He tried to keep Italy out of the war, and he was ever appealing to the belligerents to be humane As early as 1943 he warned (at a meeting of the Pontifical Academy of Sciences) against the use of atomic energy for destructive purposes Although he had called for a union of democratic nations having forceful authority as the hope of lasting peace, he maintained neutrality toward the United Nations, as Pius XI had toward the League of Nations Pius XII sponsored in the war a vigorous program for prisoners, and afterwards he interested himself in the destitute and the displaced He urged the opening of lands to the exiles and reproved (1946) early efforts by the British and the United States to repatriate unwilling citizens of the USSR Like Pius XI he spoke out against the tyranny of states over individuals and families, e g , in his first encyclical (*Summi pontificatus*, 1939) Of the attacks by Communist states on religion itself the pope spoke bitterly, and he denounced especially the persecution of Eastern-rite Catholics in Rumania, Ruthenia, and former E Poland, Russian attempts to annex the Ruthenians to the Orthodox Church were publicized in an encyclical (1946) commemorating the Ruthenian union with the pope (1546). He plainly called on Catholics, especially women, to take part in politics in Italy and defeat the Communists at the polls (June 1946), but his fear of atheistic Communism did not lead the pope into consenting (with Hitler in 1941 or with others, even Catholics, in post-war years) that war against its sponsors would be a "crusade" In the Palestine crisis (from 1946) he called for an international guardianship of the Holy Places. Like his predecessor he opposed laissez-faire capitalism and preached social reform, one encyclical (*Optatissima pax*, 1947) was a call to workmen and employers to cooperate for social justice, ending class hatred While hostilities lasted, the pope would create no cardinals, at last, on Feb 18, 1946, he created 32 new ones, bringing the number to 69 (of a possible 70) The cardinals then included men from 22 nations, some of which (e g China) had never been represented before For the first time since the late 15th cent the Italian cardinals did not have a majority, they now numbered 27. Pius issued his main directives in encyclical form, their subjects included the progress of U.S Catholicism (*Sertum laetitiae sanctae*, 1939), the doctrine of the mystical body of Christ, i e , the Church (*Mystici Corporis Christi*), biblical studies (*Divino afflante*), and the 14th centenary of St Benedict (1947) and the liturgy and practices surrounding it (*Mediator Dei*, 1947). He continued Pius XI's educational and missionary policies; thus, he erected four new pontifical universities in South America (at Lima, Medellín, Rio de Janeiro, and Santiago de Chile), and in China he organized (1946) a local territorial hierarchy The year 1950 was, as expected, designated a holy year Pius XII's secretary of state was Cardinal Luigi Maglione (d 1944), after his death the pope acted as his own secretary of state. A novel feature of the pontificate was the personal relationship between Pius and President Franklin D. Roosevelt, they met in 1936 and corresponded, and the President sent (1940) Myron C. Taylor as a personal representative to the pope (1940). See Charles H. Doyle, *The Life of Pope Pius XII* (1945), Reginald F. Walker, *Pius of Peace* (1946); Jan Olav Smith, *Angelic Shepherd* (Eng. tr., 1950).

Piute Indians: see PAIUTE INDIANS

Pi y Margall, Francisco (frănthĕ'skō pē' ē märgäl'), 1824–1901, Spanish statesman and author. A liberal journalist, he fled to France after the unsuccessful uprising of 1866 against R. M Narváez, duque de Valencia. After the revolution of 1868 he was elected (1869) to the Cortes. He briefly was president (1873) of the short-lived first Spanish republic, and he continued as deputy in the Cortes after the restoration of the monarchy He defended the principle of federalism against centralism, thus gaining wide popularity in Catalonia, and he favored autonomy for Cuba. His uprightness and intelligence won him the respect even of the hostile right Among his writings was a history of Spanish painting (1851), which was condemned by the Church

Pizarro, Francisco (pĭzä'rō, Span frănthĕ'skō pēthä'rō), c 1476–1541, Spanish conquistador, conqueror of Peru An illegitimate son of a Spanish gentleman, born in Trujillo, Spain, he was as a boy an illiterate swineherd Pizarro accompanied Ojeda to Colombia in 1510 and was with Balboa when he discovered the Pacific Hearing of the fabled wealth of the Inca, he formed (1524) a partnership with Diego de ALMAGRO and Fernando de Luque (a priest who secured funds) The first expedition reached the San Juan river, part of the present boundary between Ecuador and Colombia, and on the second (1526–28) Pizarro explored the swampy coast farther south while his pilot, Bartolomé RUIZ, crossed the equator and then returned to bring definite news of the southern realms Ruiz and Amalgro went back to Panama for supplies, Pizarro and a few followers remained behind and endured severe hardships When supplies finally came, he sailed south along the Peruvian coast before returning to Panama In 1528 his partners sent him to Spain to secure royal aid, which he did, gaining for himself the lion's share of future profits Pizarro managed to soothe the disgruntled Almagro Sailing south, he landed at Tumbes (1532) and ascended the Andes to Cajamarca, where the Inca, ATAHUALPA, awaited him Pizarro, professing friendship, enticed Atahualpa into the power of the Spanish, seized him, exacted a stupendous ransom, and then treacherously had him executed The conquest of Peru was virtually completed by capture of Cuzco, which was later defended against Inca forces led by Manco Capac Pizarro set about consolidating his conquest by founding new settlements, notably the present capital of Peru, Lima, and allotting land and Indians in encomienda to his followers An attempt by Pedro de ALVARADO to claim Quito was forestalled by Sebastián de BENALCÁZAR and Almagro Pizarro now made a pact with Almagro, whom he had cheated several times in the division of spoils, granting him the conquest of Chile, when Almagro returned empty-handed and tried to redress his wrongs by seizing Cuzco, Pizarro sent his half brother, Hernando Pizarro, to CUZCO Almagro was defeated and put to death In 1539 Francisco appointed his brother Gonzalo Pizarro governor of Quito His greed and ambition, extreme even in a conquistador, had, however, offset his resourcefulness, courage, and cunning By alienating the Almagro faction he paved the way for conspiracy A band of assassins surprised him at dinner, and although he fought desperately, he was overpowered and slain The account by W H Prescott, *History of the Conquest of Peru*, is classic An early account is Pedro Pizarro, *Relation of the Discovery and Conquest of the Kingdoms of Peru* (Eng ed , 1921) See biographies by F A Ober (1906) and Felix Shay (1932), Hoffman Birney, *Brothers of Doom* (1942)

Pizarro, Gonzalo (gônthä'lō), c 1506–1548, Spanish conquistador, brother of Francisco Pizarro A lieutenant of his brother in the conquest of Peru, he aided in the defense of Cuzco (1536–37) against the Inca MANCO CAPAC, reduced Charcas (present Bolivia), and fought against Diego de ALMAGRO (1537–38) Appointed (1539) governor of Quito, he in 1540 commanded a disastrous expedition down the Napo river to the Amazon From the extreme hardships, augmented by the disaffection of ORELLANA, he and his few remaining men staggered back two years later Gonzalo then learned of the assassination of Francisco and offered to help the crown's representative, VACA DE CASTRO, but was refused When the newly arrived viceroy, Blasco NÚÑEZ VELA, peremptorily enforced the New Laws, framed by Bartolomé de LAS CASAS and promulgated in 1542 to protect the Indians, popular indignation broke out, and Gonzalo was chosen to lead the revolt In 1546 he defeated Núñez When, however, the king's new representative, Pedro de la GASCA, arrived and offered pardon as well as repeal of the New Laws, Gonzalo's popular support evaporated Most of his army deserted just before the crucial battle Their commander surrendered and was beheaded.

Pizarro, Hernando (ĕrnän'dō), fl 1530–60, Spanish conquistador, half brother of Francisco Pizarro. He aided Francisco in the conquest of Peru. Much older than his half brothers, Francisco, Juan, and Gonzalo, and, unlike them, legitimate by birth and educated, Hernando accompanied Francisco from Spain in 1530. After the conquest he returned (1533) to advance the fortunes of the family at court at the expense of Diego de ALMAGRO, Francisco's partner. In 1536, back in Peru, he defended (1536–37) Cuzco against the Inca MANCO CAPAC. Hernando then fought against Diego de Almagro, was captured (1537), released, and returned (1538) to defeat and execute Almagro Because of his standing at court, he was sent (1539) to Spain to argue the cause of the Pizarros in the recent civil war, but gold and bribery were not enough. Hernando suffered mild imprisonment for 20 years. Released in 1560, he died some time later, according to one chronicler at the age of 100

Pizarro, Juan (hwän), d 1536, brother of Francisco Pizarro He aided Francisco in the conquest of Peru With his other brothers, Gonzalo and Hernando, he fought valiantly against the Inca MANCO CAPAC during the siege of CUSCO in 1536 He was killed leading an attack on the Indian fortress, SACSAHUAMAN

Pizzetti, Ildebrando (ēldäbrän'dō pēt-tsĕt'tē), 1880–, Italian composer, grad Parma Conservatory, 1901 In 1909 he joined the faculty of the Istituto Musicale, Florence, becoming director in 1919 He was director (1924–36) of the Conservatorio G Verdi, Milan, leaving to replace Respighi at the Conservatory of St Cecilia, Rome He is primarily an opera composer and is modern without attempting radical reforms Outstanding operas are *Fedra* (1915; libretto by D'Annunzio) and *Débora e Jaële* (1922) A composer also of choral works, he often employs polyphonic choruses in his operas

pizzicato (pēt"tsēkä'tō), in music, the technique of plucking the strings of an instrument that is usually bowed Directions for playing pizzicato are found in 17th-century music Left-hand pizzicato, making it possible to play bowed tones and pizzicato tones simultaneously or in alternation, was introduced by Paganini Pizzicato is used in solo music and by whole string sections in orchestral music

Place, Francis, 1771–1854, English radical reformer. For years a breeches maker and a tailor, he educated himself and made his shop a meeting center for radicals and reformers He was especially active in the trade-union movement, through his efforts the antiunion Combination Acts of 1799–1800 were repealed (1824) He was also an early leader of the Chartists (see CHARTISM), helping to draft the "People's Charter" His pamphlets on social questions include *Illustrations and Proofs of the Principle of Population* (1822), one of the earliest tracts on birth control See biography by Graham Wallas (4th ed , 1925)

placenta (plusĕn'tu) or **afterbirth**, thick, disk-shaped mass with a diameter of about 7 in , permeated by blood vessels and connected with the fetus by the UMBILICAL CORD Made up of tissue from both mother and embryo, it is an organ of exchange and permits mutual passage of blood components. Blood itself, however, does not mingle The placenta also functions as an endocrine gland, it is believed to produce estrogens, progesterone, and gonadotrophin Shortly after birth it is forced out by contraction of the uterus Severe hemorrhage may occur if the uterus does not contract properly or if the placenta does not emerge in its entirety. It is susceptible to infection with syphilis and malaria

Placentia (plusĕn'shu), city (pop 1,472), S Calif., SE of Los Angeles, inc 1926 Mineral springs near by make the city a health resort The area produces fruits and oil

Placentia Bay (plusĕn'shū), SE N F , with several minor bays and sheltered harbors, some of which are ice and fog free It has been a naval base since 1622, at first for France, then for Great Britain, and recently for the United States In the Second World War the United States established a naval and air base at Argentia, on the east shore just NNW of Placentia town (1945 pop 538).

placer mining: see MINING

Placerville (plās'survĭl), city (pop 3,064), co seat of Eldorado co , N central Calif , ENE of Sacramento; inc as a town 1854, as a city 1903 After gold was discovered at near-by Coloma in 1848, Placerville was large and prosperous Gold mining is still carried on in the region, together with fruit raising, limestone quarrying, and lumbering

Placid, Lake, NE N Y , in the Adirondacks It is 4 mi long and c 1 to 2 mi wide and lies at an altitude of 1,859 ft LAKE PLACID village touches its south end Whiteface Mt and Mt Marcy are near by.

Placidia, Roman empress: see GALLA PLACIDIA

plague (plāg), infectious disease carried by rat fleas that have become infected through biting diseased rats In the United States certain squirrels on the West Coast harbor the disease During a great epidemic in China the plague germ was discovered (1894) independently by Shibasaburo Kitasato and Alexandre Yersin It is a rod-shaped bacterium called *Pasteurella pestis* An epidemic disease, the plague is the cause of three types of infection In the bubonic type the germ enters a lymph gland, causing fever, swellings (*buboes*) of the glands in the groin or arm pit, and prostration In the pneumonic type the lungs are primarily infected; this type is very communicable, and the mortality rate is high In septicemic plague the blood is fatally infected. Septicemic and bubonic plague probably never spread directly from person to person. The disease can be eradicated by destroying infected rats; quarantine of ships from plague

areas is necessary. Another measure is to make dwellings, granaries, and other buildings ratproof. The last European outbreak occurred on the Volga in 1878–79, but there have been more recent epidemics in the Far East The most widespread and catastrophic epidemic of bubonic plague was that known as the Black Death (from the dark color of the body after death), it began in Constantinople in 1347 and devastated much of Europe It is estimated to have killed from one quarter to three quarters of the population The great plague of London in 1665, which spread throughout England, has been recorded in Daniel Defoe's vivid but fictitious *Journal of the Plague Year* (1722) The *Diary* of Samuel Pepys also contains a grim account of it In recent years new advances have been made in combating the plague Powerful insecticides such as DDT have been used to destroy the disease-carrying fleas. Sulfa drugs and streptomycin are useful in the treatment and control of the disease

plague, cattle. see RINDERPEST.

plagues of Egypt, in the Bible, the plagues and other troubles brought on Egypt by God through the hands of Moses, because Pharaoh would not let the people of Israel go out of Egypt The account, in Exodus, tells how Pharaoh relented each time until the plague was removed, then hardened his heart, in the end he let the children of Israel go, only to pursue them into the Red Sea. The plagues were 10 in number plague of blood by which the waters of Egypt were turned to blood, Ex 7 19–25, plague of frogs, 8 1–15, plague of lice, 8 16–19, plague of flies, 8 20–32, plague of murrain, by which all the cattle of Egypt and none of the Israelites' cattle were killed, 9 1–7, plague of boils, 9 8–12, plague of hail, 9 13–35, plague of locusts, 10 1–20, plague of darkness, by which for three days darkness covered Egypt, 10 21–29, plague of the first born, by which all the first born of Egypt were killed, 11, 12 1–36 The first Passover was observed the night of the 10th plague After it the Israelites left Egypt

plaice (plās), flatfish of the seas of N Europe, commercially important as a food fish Its olive-brown upper surface is spotted with red It usually weighs from 8 to 10 lbs

plaid (plăd), long shawl or blanketlike outer wrap of woolen cloth, usually patterned in checks or tartan figures Now distinctive of the Highland costume, it was formerly worn in all parts of Scotland and in N England by both men and women The early Celtic people excelled in dyeing and in Roman times wore gay, many-colored, checkered plaids, woven or sewed together in squares of different colors Through the Middle Ages and until the 18th cent the people of North Britain belted their plaids about them, the lower part forming the kilt, the upper part the cloak A shepherd's plaid is of black-and-white check A tartan plaid has crossbars of three or more colors combined in designs distinctive of the different Highland clans and serving a heraldic purpose In modern usage plaid may signify merely pattern, as a plaid gingham See Thomas Innes, *The Tartans of the Clans and Families of Scotland* (1938)

Plain, the, in French history, term designating the independent members of the National Convention during the FRENCH REVOLUTION The name was applied to them because, in contrast to the radical MOUNTAIN, they occupied the lower benches of the chamber Although numerically in the majority, the Plain was an ineffectual, leaderless mass and a pliable instrument in the hands of the Girondists and later of the Jacobins It came into its own on 9 Thermidor (July, 1794), when its vote helped to overthrow Robespierre, but after this effort it again lost its cohesion

plain, large area of level or nearly level land An elevated plain is called a PLATEAU or tableland, and a very low, wet plain is a SWAMP. Plains have different names in different climates and countries They include the TUNDRA, STEPPE, PRAIRIE, PAMPAS, SAVANNA, LLANOS, flood plains of rivers, coastal plains, loess plains, and plains (see DESERT), and lacustrine plains The erosive action of water, glaciation, the draining of a lake, deposition of sediment, and the uplift of a continental shelf or a part of the ocean's floor are some of the causes of the formation of plains. The extensive area comprising the western part of the Mississippi watershed, very gradually rising to the foothills of the Rockies, and having, largely, a steppe climate, is called the Great Plains region of the United States The coastal plains region of the United States along the Gulf Coast and the Atlantic seaboard is widest in the south and southeast.

plain chant. see PLAIN SONG.

Plain City, rural village (pop. 1,385), central Ohio, on Big Darby Creek and NW of Columbus, laid out 1818, named Plain City 1851.

Plain Dealing, town (pop 1,085), NW La , near the Red River and the Ark boundary; founded 1888 as a sawmill and cotton-ginning center

Plainfield. **1** Town (pop. 7,613), E Conn , E of Willimantic, settled c.1690, inc. 1699. Textiles and other products are made here. **2** Village (pop. 1,485), NE Ill , SW of Chicago, on the Du Page river, in a farm area, settled 1829, inc. 1869. **3** Town (pop 1,811), W central Ind , WSW of, and near, Indianapolis It has a state boys' school **4** City (pop 37,469), NE N J , near the Watchung Mts. SW of Newark; settled 1684 by Friends, inc. 1869 It manufactures trucks and printing machinery. The city has a Friends' meetinghouse (1788) and other 18th-century buildings, E C Stedman lived in the Martine house (1717), the local historical society occupies the Drake house (1746), known as Washington's Headquarters There is a fine view of the western side of metropolitan New York from Washington Rock near Plainfield.

Plains of Abraham: see ABRAHAM, PLAINS OF

plain song or plain chant, unison vocal music of the church, particularly of the Roman Catholic Church. The texts of plain song are the ordinary and the proper of the Mass, the Psalms, canticles, and certain verse hymns. In a broad sense the chant of the Orthodox Eastern Church, as well as that of the four main Western rites—Ambrosian, Roman, Mozarabic, and Gallican—is considered to be plain song, although the term is often used synonymously with Gregorian chant Plain song is as old as the Christian Church itself and was for many centuries the only church music Byzantine plain song, which was the basis for the music of the Eastern Church, had its roots in the music of the Near East, but there was mutual influence to some degree between Eastern and Western church music The various chants of the Western Church all seem to be derived from similar sources, principally Hebrew and Greek music, though how much they owe to each has not been determined Ambrosian chant is the plain song introduced by St AMBROSE into the cathedral of Milan, where it is still in use In form it less often adheres to a pattern than Gregorian chant, which is the norm throughout the Western Church Gregorian chant underwent much development in the early centuries of the Christian era, but its greatest period of development and codification was in the 7th cent , when Gregory I founded or reorganized the Schola Cantorum and may have compiled the Roman antiphonary Gregory's contribution to liturgical music seems certain, although its exact nature is not known In the Middle Ages, polyphony to a large extent supplanted plain song, and many abuses found their way into the Church in succeeding centuries In the 19th cent the Benedictine monks of Solesmes undertook many years of research to restore the Gregorian chant to its original form and to establish its proper rhythm They began to publish the results of their labors in 1889, and in his *Motu proprio* (1903) Pope Pius X restored the use of the chant, authorizing the Solesmes version The tonality of Gregorian chant derives from the eight church modes (see MODE), which are comparable to the eight *echoi*, four authentic and four plagal, of Byzantine chant Notation of Byzantine chant and of Gregorian chant evolved into systems of neumes (see MUSICAL NOTATION) which are still used in preference to modern mensural notation for plain song The rhythm of plain song always stems from the rhythm inherent in the text, whether prose or verse Most of the Gregorian melodies for the ordinary and the proper of the Mass and for the offices are to be found in an ecclesiastical manual, the *Liber usualis* See R R Terry, *The Music of the Roman Rite* (1931), Winfred Douglas, *Church Music in History and Practice* (1937), Gustave Reese, *Music in the Middle Ages* (1940), Marie Pierik, *The Song of the Church* (1947)

Plainview. **1** Village (pop. 1,500), SE Minn , NE of Rochester, in a farm region, platted 1857, inc 1875. **2** City (pop 1,411), NE Nebr , NNW of Norfolk, in a livestock area, inc 1880 **3** City (1940 pop 8,263, 1947 estimated pop 13,500), co seat of Hale co , NW Texas, S of Amarillo on the Llano Estacado, founded 1886, inc 1907 The level plain, irrigated by shallow wells, produces rich crops of wheat, alfalfa, other grains, cotton, potatoes, and truck Plainview ships and processes these, chickens and turkeys, and dairy products and has small industries Wayland College is here

Plainville. **1** Town (pop 6,935), central Conn., SW of Hartford, set off from Farmington 1869 Its metal products include ball bearings and tools Several 18th-century buildings survive. **2** City (pop 1,232), W central Kansas, near the Saline N of Hays, in a wheat area, settled 1877, inc 1888. **3** Town (pop 1,302), SE Mass , near the R I. line, settled 1661, set off from Wrentham 1905.

Plainwell, city (pop 2,424), SW Mich., on the Kalamazoo river and N of Kalamazoo; settled 1836, inc. as a village 1869, as a city 1934. Products include paper and canned goods. Onions are the chief crop of the area Indian mounds are hereabout.

Plaistow (plă'stō), town (pop. 1,414), SE N.H., set off from Haverhill, Mass., and inc. 1749.

planchette (plănchĕt', plăshĕt'), instrument used in spiritistic or AUTOMATIC WRITING. It consists of a triangular piece of wood mounted at the base on small wheels and with a pencil upright through a hole at the apex. When the tips of the fingers of one or two persons are placed on the planchette, it will trace words or messages on a sheet of paper. The ouija board is similar in purpose, this has no pencil, but a small board moves under the finger tips of some people to spell out words from an alphabet printed on a large board.

Planck, Max (mäks' plängk'), 1858–1947, German physicist. He was professor at the Univ. of Berlin (1889–1928) and president of the Kaiser Wilhelm Society for the Advancement of Science, Berlin (1930–35). His early researches were in thermodynamics, on the basis of which he evolved his revolutionary QUANTUM THEORY. For this he received the 1918 Nobel Prize in Physics. Many of his works have been translated into English, these include *Introduction to Theoretical Physics* (5 vols , 1932–33), *Philosophy of Physics* (1936), *Treatise on Thermodynamics* (3d Eng rev ed , 1945), and *Scientific Autobiography and Other Papers* (1949).

Plançon, Pol Henri (pôl' äNrē' plāsôN'), 1854–1914, French operatic bass. He made his debut in 1877 and in 1883 appeared at the Paris Opéra as Mephistopheles in Gounod's *Faust*, his most famous role. He sang (1891–1904) regularly at Covent Garden, London, and made his debut at the Metropolitan Opera House in 1893. A suave and polished singer, he was a leading bass of his time

plane, in geometry, a flat SURFACE of infinite extent but no thickness It is defined as a surface which contains all of any straight line which has two of its points on the surface An example of a plane, or more exactly of a bounded portion of a plane, is the surface forming one face or side of a cube Any three points determine a plane, a point and a line or two parallel lines determine a plane, but any two lines in space do not usually lie in the same plane

plane, a woodworker's tool related to the CHISEL In the plane the cutting blade is fixed in a block of wood or metal which is pushed or drawn over the surface to be cut down or smoothed Planes of different forms and lengths are used for different purposes, in general, the longer planes leave a flat surface which is made more smooth by the short "smoothing plane" Planes much like those now in use were employed in ancient and medieval times See Thomas Hibben, *The Carpenter's Tool Chest* (1933)

planet (plă'nĭt) [Gr , =wanderer], name given by the Greeks to each of those heavenly bodies which seem to move back and forth among the constellations of the stars The stars themselves never change position relatively to one another Another distinction is that the stars twinkle or sparkle, while the planets, except when low in the sky, near the horizon, shine with a steady light Their light is reflected sunlight, for they are not luminous They are opaque and spherical and revolve around the sun in nearly circular orbits, all in the same direction, contrary to that of the hands of a clock To the Greeks who accepted the explanation of PTOLEMY that the earth was the central heavenly body, the "planets" included the sun and the moon, as well as MERCURY, VENUS, MARS, JUPITER, and SATURN, which are plainly visible to the unaided eye These seven bodies were represented as swinging around the earth in epicycles. When the system of COPERNICUS gave the sun the central position, the earth was shown to be one of the planets of the great SOLAR SYSTEM and the moon simply a satellite circling around the earth The planetary family has been discovered since then to be much larger than was suspected before the telescope extended man's vision. In 1781 URANUS was first seen and in 1801 Ceres, the first of a host of minor planets (see ASTEROID), in 1846 NEPTUNE was discovered, and in 1930 a photographic plate revealed PLUTO The order of the planetary orbits outward from the sun is Mercury, Venus, the earth, Mars, the asteroids (or planetoids), Jupiter, Saturn, Uranus, Neptune, and Pluto The known asteroids number more than 1,500. Mercury and Venus are called inferior planets, because their orbits lie inside that of the earth With the earth and Mars, they make up a group of the smallest planets (the dimensions of Pluto are not yet determined). The superior planets are those with orbits outside that of the earth Jupiter is the giant, in volume more than a thousand times as great as the earth. Saturn is next in size Neptune and Uranus have dimensions far less than the two greatest and far greater than the four smallest of the planets. The density of each of the four largest planets is roughly about one quarter that of Mercury, Venus, and Mars and about one fifth that of the earth The distances separating these great planets from one another are far greater than those lying between any two of the inner group The orbits of Uranus and Neptune are over 1,000,000,000 mi apart, an interval wider than the distance between the sun and Saturn. Pluto is calculated to be c.3,670,000,000 mi. from the sun, which is about 100 times as great a distance as that from the sun to Mercury. The orbits of all the major planets except Mercury and Pluto lie in nearly the same plane and have slight eccentricities. The eccentricity of the orbit of Mercury is about .2; that of Pluto, .25; of Mars, .09. The orbits of the asteroids show great diversity in their eccentricities and their inclination to the plane of the ecliptic. Mercury and Venus, whose orbits are within that of the earth,

present dark sides to the earth part of the time and pass through phases similar to those of the MOON There is great difficulty in determining their rotation periods Of all the planets, Jupiter rotates most rapidly; and all the larger planets rotate in shorter periods than do the smaller ones With the exception of Mercury, Venus, and Pluto, the planets are known to be attended by one or more satellites The laws of planetary motion were formulated by Johannes Kepler See Mary Proctor, *The Romance of the Planets* (1929); G E. Frost, *Planets, Stars, and Atoms* (1946)

planetarium (plănĭtā'rĭum), name used both for a projecting device or a model that portrays the heavenly bodies and for a theatrelike chamber with a hemispherical ceiling upon which the celestial phenomena are reproduced by optical projection Several dozen planetaria are now in operation in various large cities of the world; one of the earliest was built in 1924 on a roof of the Carl Zeiss optical works in Jena. A multi-motored machine consisting of a thick axis terminating in globular structures makes rotational movements, enabling beams of light emitted from windows in the globes to travel in predetermined paths on the ceiling The juxtaposition of the lights and their movements reproduce a panorama of the sky as it might be seen under optimum conditions. The Hayden Planetarium (1935) in New York city employs more than 100 separate projectors to cast the fixed stars of the northern and southern skies, the nebulae, the sun, the moon, and the planets. Some of the projectors are used to reproduce the whole zodiac, the ecliptic and solar circles, as well as the Milky Way The Adler Planetarium (1930) in Chicago was the first in the United States In 1934 the Fels Planetarium was added to Franklin Institute in Philadelphia The Planetarium Theatre of Griffith Observatory in Los Angeles was opened in 1935, the Buhl Planetarium in Pittsburgh, in 1939 A more recent institution was established as the Morehead Planetarium (1949) in Chapel Hill, N C As many as 9,000 stars can be shown on their ceilings The widely used Zeiss apparatus is sometimes called a Ptolemaic planetarium, as distinct from the orrery (after Charles Boyle, earl of Orrery), which is in effect a Copernican model of the solar system A great variety of orreries exist, and these find considerable use as aids in the teaching of celestial mechanics An American, Frank Korkosz, invented and built in 1937 a 2,500-pound ball-shaped aluminum projector, capable of making precessional and equatorial revolutions It is installed at the Springfield Museum of Natural History in Massachusetts and gives an approximation of the Zeiss machine's effects Portable planetaria developed at Franklin Institute are in use throughout the nation

planetesimal hypothesis (plănŭtĕ'sĭmul), theory of the origin of the planets, developed by T C Chamberlin and F R Moulton after 1900, when the NEBULAR HYPOTHESIS was rejected With some modifications, it is accepted by a large group of scientists The theory assumes that in the extremely distant past our sun was passed by another star not too far from it to exert a strong attractive force upon the fluid mass which was the sun Huge tides were raised on the sun, one in the direction of the passing star and one in exactly the opposite direction Assuming that the sun was affected by the same eruptive forces then as now, the eruptions took place with greatest violence and frequency in the regions where the tidal bulges were As the star swung on its orbit, the tidal bulges on the sun and the attendant eruptions occurred toward the star and on the side away from the star, always in the line joining the star and the sun The materials ejected by the sun in its eruptions, affected by a cross-pull which was exerted by the moving star, were set to moving in elliptical orbits around the sun Thus, as long as the star was passing, masses of material of various sizes, some with greater, some with lesser velocity, were being ejected Those of least velocity dropped back Those of extremely high velocity shot out beyond the reach of the sun's gravitational attraction and were lost But those of the speeds between these extremes continued to revolve in elliptical paths around the sun, after the star had left the neighborhood. Smaller masses quickly cooled and became solid These revolving bodies are called planetesimals because they were like little planets As the orbits of some crossed, the larger nuclei swept in the smaller masses. This resulted in the formation of the planets Our planetoids (see ASTEROID) occupy a region in which no dominating nucleus existed to bring them together as a planet Our meteors can be accounted for as leftover planetesimals which never were caught up into larger masses The TIDAL THEORY is a modification of the planetesimal hypothesis See T C. Chamberlin, *The Origin of the Earth* (1916); F R Moulton, *Introduction to Astronomy* (rev. ed , 1916); H N. Russell, *The Solar System and Its Origin* (1935).

planetoid: see ASTEROID.

plane tree, any species of the genus *Platanus*, deciduous trees of temperate regions American plane trees are commonly called sycamore, but this is more correctly the name of a species of fig. Plane trees have a loose bark which scales off leaving patches of lighter colored inner bark and giving the tree a mottled appearance. The dry, seedlike fruits are densely packed into a hard brown ball—whence the name buttonwood—which usually remains on the tree until spring, when it separates into tufts of down and is scattered by the wind The common American plane tree (*Platanus occidentalis*) is native E of the Rockies and is one of the largest of North American deciduous trees The wood is hard and beautifully grained It is used for furniture, butchers' blocks, cigar boxes, and paneling The London plane (*Platanus acerifolia*, thought to be a hybrid) is now commonly cultivated in eastern cities where it is incorrectly called Oriental plane, a species seldom grown in America

plankton: see MARINE BIOLOGY

Plano (plā'nō) **1** City (pop 1,930), N Ill , SW of Aurora, settled 1835, inc 1865 It is a farm trade center. **2** City (pop 1,582), N Texas, NNE of Dallas on the blackland prairie, founded 1848, inc as a city 1930

plant, any organism of the vegetable kingdom, as opposed to one of the ANIMAL kingdom It may be microscopic in size and simple in structure, as are certain one-celled algae, or a many-celled complex structure such as a tree The plant kingdom plays an extremely important role in the balance of nature and the life of man Since only green plants can perform PHOTOSYNTHESIS, they are the ultimate source of all food and probably of most of the oxygen for all animals They are the most abundant form of life on earth They are sources of food, shelter, and clothing In order to attain full growth a plant requires light, water, oxygen, carbon dioxide, varying quantities of nitrogen, phosphorus, sulphur, magnesium, potassium, calcium, and iron, and small amounts of other elements The plant kingdom is commonly divided into four large groups or phyla, based chiefly on reproductive structure the spermatophytes or seed plants (conifers and flowering plants), the pteridophytes (ferns, club mosses, and horsetails), the bryophytes (mosses and liverworts), and the thallophytes, including all plants not differentiated into stem and leaves (algae, fungi, lichens, and bacteria) Each phylum is further divided into classes, orders, families, genera, and species In a given species there may also be different varieties Proponents of the theory of evolution have suggested that the simple algae gave rise to the bryophytes and the pteridophytes and ultimately to the more complex seed plants In the majority of plants the life cycle consists of two alternating generations, the gametophyte and the sporophyte The gametophyte, the conspicuous generation (the plant body) in the mosses, liverworts, and most algae, produces gamete cells (usually sperms and eggs) and these fuse in pairs The fusion cell (or fertilized egg) develops into a sporophyte, and this is the conspicuous generation in the ferns, conifers, and flowering plants Reproduction of the sporophyte is by means of spores, which germinate to form gametophytes The gametophyte generation is much reduced in the flowering plants A pollen grain represents the male gametophyte, and the ovule (which becomes the seed after the fusion of gametes) within the ovary contains the small female gametophyte In the ferns the gametophyte generation is an independent and free-living prothallus (see FERN), while in the liverworts and mosses it is the chief vegetative body and supports the sporophyte The plant body (i e , the sporophyte) of the higher plants is differentiated into organs which are specialized in structure and function A tree, for example, has a branching root system below ground and a branching shoot system above ground The shoots are composed of stems and leaves in addition to the reproductive organs of the flowers Running throughout the tree is a fibrous or woody conducting system The fruits of the higher plants—particularly the grains of wheat, rice, corn, and other grasses—have been a basic cultivated food of man since prehistoric time Plants are a source of innumerable other foods, of wood, textiles, drugs, oils, rubber, and many other things Organic matter from plants of past ages is found in coal and probably in petroleum. The scientific study of plants is called BOTANY; the study of their relation to their environment and of their distribution is plant ECOLOGY, the cultivation of plants for food and for decoration is HORTICULTURE

Plantagenet, English royal house see ANGEVIN

plantain (plăn'tĭn), name for plants of the genus *Plantago*, chiefly annual or perennial weeds now widely distributed The plantains are usually characterised by low clusters of ribbed leaves and narrow spikes of small whitish flowers The pollen is often a hay-fever irritant At one time common kinds were eaten as a potherb and valued medicinally—the leaves used externally as a poultice and the seeds internally for their mucilaginous quality. At the present time the seeds are used for bird food *Plantago psyllium*, called psyllium or fleawort, is an Old World plant the mucilaginous seeds of which are imported as psyllium seed and are used as a laxative A beverage is made of the seeds of the ispaghul (*Plantago ovata*) of India Most plantains growing in the United States are weed pests, occasionally utilized locally for forage For the tropical plantain, see BANANA

plantain lily. see DAY LILY

Plant City, city (pop 7,491), W central Fla , E of Tampa, inc 1885 Settled on the site of an Indian village, it developed with the arrival of the railroad in 1884 In an area producing vegetables, fruit, phosphates, and timber, it is a processing and shipping center, especially for strawberries

Plantin, Christophe (krēstôf' plăN'), 1514–89, printer In Antwerp his work, at first as a bookbinder, began in 1549 His production and publishing of books began in 1555, his establishment continued the work until 1867, and is now preserved as the notable Plantin-Moretus Museum Plantin was the leading printer of the second half of the 16th cent , and his books are admired for their accuracy and their typography His equipment included types designed by Garamond and Granjon The central detail in his mark is a pair of compasses.

plant louse see APHID

plants, domestication of see DOMESTICATION.

Planudes Maximus (plănū'dēz măk'sĭmŭs) or **Maximus Planudes,** c 1260–c 1330, Greek scholar, a very learned monk and one of the principal ornaments of Byzantine culture His edition of the GREEK ANTHOLOGY was long the standard His prose collection of Aesop's *Fables* is important

Plaquemine (plăk'kŭmĭn, plāk'mĭn), town (pop 5,049), parish seat of Iberville parish, SE La , near the Mississippi S of Baton Rouge, inc 1838 Government locks with a lift of 55 ft connect Bayou Plaquemine and the Intracoastal Waterway with the Mississippi In 1936 the Federal Delta Migratory Waterfowl Refuge was established near the town

Plassey (plă'sē), village, S West Bengal state, India Here, in 1757, Robert Clive's decisive defeat of the Nawab of Bengal prepared the way for British dominion over NE India and earned him the title Baron Clive of Plassey

plaster casting, as a sculpture process, is of three kinds One is accomplished in a waste mold, another in a piece mold (both plaster of Paris), and the third in a gelatin mold, all have the impression of the original clay or wax model executed by the sculptor The waste mold is chipped away (wasted) to free the hardened cast, which was poured in as liquid plaster The gelatin mold, being pliable, may with care be sprung from the cast and removed intact and used for replicas The piece mold also may be used again, being so divided as to be readily drawn away from the undercutting of the cast without damage to either Plaster casts are used not only for the creation of new sculptures, but also for the manifold replicas of famous marble or stone statues In another sense of the word, plaster casting refers to the surgical technique of encasing any part of the body in which bones are broken in a plaster-of-Paris cast, so that the bones may set smoothly without interference by motion, jarring, or physical shock

plastering The term commonly refers to the application of plaster to walls and ceilings, exterior plasterwork being of a different composition and generally known as STUCCO Plaster was used by the Egyptians (chiefly as a surface to receive color decorations) and by the Greeks The Romans used it extensively, and there remain, especially at Pompeii, many ceilings and walls, with beautiful relief ornamentation, of a hard, fine plaster such as has not been excelled up to the present Italian Renaissance artists imitated this type of Roman work, and relief ornament in plaster was employed in England for the rich ceilings and interiors of the reigns of Elizabeth and James I and later in those designed by Robert and James Adam In the United States many fine ornamented plaster ceilings were executed in the 18th cent Interior plastering is applied over a base which will furnish a proper grip—by means of interstices provided by wood lath or metal lath or by irregularities of surface such as in hollow tile To secure best results three successive coats of plaster are requisite in most types of work The first, or scratch, coat, composed of sand and lime mixed with abundant hair or fiber, must be thoroughly grounded into the lath and before it hardens is scratched to provide key or adhesion for the next coat The second, or brown, coat is composed of sand and lime, without hair, and is worked to a hard, compact texture, with its surface roughened to receive the final coat The third, or white finishing coat is composed of plaster of Paris, slaked lime, and white sand, mixed with water to form a paste consistency It is troweled on the wall to form a hard, smooth surface, the process requiring a skilled worker The total thickness of the three coats is about ¾ in Moldings, cornices, and relief ornament are cast separately and then mounted into place, though in former times ornamental details were modeled in their location, from the damp plaster

plaster of Paris: see GYPSUM.

plastics, name for various organic derivatives of resin, cellulose, and protein that are capable of being shaped by the application of heat or pressure or

both. Although the first important synthetic plastic, celluloid, was discovered (c 1869) by John W. Hyatt and manufactured by him in 1872, plastics did not come into modern industrial use until after production of bakelite by L H Baekeland c 1907. Celluloid, a mixture of cellulose-nitrate, camphor, and alcohol is thermoplastic, it has the property of softening again and again at high temperatures The bakelite product, made by polymerization, or the linking together of the chains of molecules (in this case phenol and formaldehyde), is thermosetting The chemical change which ensues when high temperature is applied makes the product an infusible and insoluble mass All plastics are either *thermosetting* or *thermoplastic*, and they are further grouped as phenolic, urea, cellulose, acrylic, polystyrene, and vinyl plastics, depending upon the substances from which they are derived Virtually any desired color or shape and many combinations of the properties of hardness, durability, elasticity, and heat, cold, and acid resistance can be obtained in a plastic Plastics are available in the form of bars, tubes, sheets, coils, and blocks, and these can be machined to specification However, plastic articles are commonly manufactured of plastic powders with which desired shapes are fashioned by compression, transfer, injection, and extrusion molding The phenolic and urea materials are generally put in mold cavities where the application of heat and pressure makes them first plastic, then hard or polymerized This method is known as compression molding The transfer method in which the compound is plasticized by outside heating and then poured into a mold to harden is used for designs of intricate shapes and great variations in wall thickness Injection-molding machinery dissolves the powder plastic in a heating chamber and by plunger actions forces it into cold molds, where the product sets Each operation takes place at rigidly controlled temperatures and intervals Extrusion molding employs a heating cylinder, pressure, and an extrusion die through which the molten plastic is sent and from which it emits in continuous form to be cut in lengths or coiled An endless variety of plastic products, many resulting from industrial developments concurrent with the Second World War, has become available Optical lenses, artificial eyes, and dentures of acrylic plastics, splints which X rays may pierce, nylons, machine gears, fabric coatings, wall surfacing, and plastic lamination have emerged within a decade Among the trade names by which many plastic products are known are Plexiglas, Lucite, Polaroid, Cellophane, Vinylite, and Koroseal From these and nearly 600 other varieties of plastics are fashioned safety glass, electrical equipment, ravon fabrics, tableware, radio housings, musical instruments, records, upholstery, automobile parts, and costume jewelry See Josephine Berry, *The Plastics Industry* (1947), Stephen Bass, *Plastics and You* (1947)

plastic surgery, specialized branch of surgery which deals with the repair of deformities, either congenital or acquired, and aims to improve the appearance and function of tissue defects The outer surfaces of the body are most commonly involved in such surgical repair, although deeper tissues may also be included The plastic surgeon may use tissues adjacent to the area of repair or transplanted tissue grafts from other parts of the body Simple defects, such as small scars, can usually be repaired in a relatively short period of time Extensive defects, such as those resulting from gunshot wounds or other severe trauma, may require repeated tissue grafts over many months and sometimes years

Plata, Río de la (rē'ō dā lä plä'tä), estuary, SE South America, formed by the Paraná and Uruguay rivers It is c 120 mi wide at its mouth on the Atlantic and decreases to c 20 mi near its head Focal point of one of the great river systems of the continent, it receives a tremendous volume of water Extensive sandbanks and shoals reduce the navigability, but dredged channels permit navigation by large vessels Its great ports are Buenos Aires and Montevideo. Discovered by Juan Díaz de Solís (1516), it was explored by Magellan in 1520 and by Sebastian Cabot from 1526 to 1529 The first settlement on its banks was made at Buenos Aires by Pedro de Mendoza (1536) A principal channel into the interior of SE South America, it is very important commercially In English it is sometimes called River Plate The viceroyalty of Río de la Plata, more or less corresponding to the present Argentina, was established in 1776

Plataea (plutē'u), ancient city, S Boeotia, Greece, on the slope of Mt Cithaeron Plataea had voluntarily passed from Theban to Athenian protection before the Persian Wars and stood by Athens at Marathon (490 B C) At Theban instigation Xerxes destroyed the city (480 B C), in the following year it was the scene of the decisive defeat of the Persians by the Greeks under Pausanias (with Aristides commanding the fleet) At the beginning of the Peloponnesian War, Thebes attacked the city, but, failing to take it, induced the Spartans to besiege it (429–427 B C). Plataea was captured and sacked. It was subsequently rebuilt.

plate, in radio, the element which forms the anode in a vacuum tube. Generally in small vacuum tubes the plates consist of small nickel tubes, circular in section for single filaments, oval in section where V or W filaments are used The metal is thin, and so the plate is cramped in the flat surfaces and often the edges are flanged. One, two, or more supports add to the rigidity In some cases, plates have been constructed of close-mesh nickel wire screen The plate is charged to some high positive voltage, from 150 volts in small triodes to 20,000 volts in oscillators and power tubes The plate voltage directly determines the quantity of power the tube can deal with In large oscillator tubes about 40 percent of the power delivered to the plate is lost, in the plate, as heat In the smallest tubes the outside surface of the plate is blackened to increase radiation, and in this way most of the heat is dissipated In the larger power tubes the glass must conduct much heat, and air cooling is necessary Above one kilowatt of power (nominal rating) the plate must be water-cooled Modern tubes delivering over one kilowatt are so built that the plate forms part of the outside of the tube It is usually in the form of a cylinder of copper sheet, a few inches long, and encloses the grid and filament The tube is fixed to the vacuum tube, which is of glass or quartz, by one of several specially developed methods of joining glass to metal In operation, the plate is completely immersed in a water jacket The electric power for the plate can be obtained from batteries (B batteries) or from an alternating-current source If taken from any alternating-current source, the current must be rectified and then filtered to remove any ripple effect If taken from a direct-current generator, the ever-present ripple or slight fluctuation of current must also be filtered out See also TUBE, VACUUM

Plate, River see Plata, Río de la

plateau (plă"tō'), an elevated portion of the earth's surface, larger in summit area than a MOUNTAIN, and bounded on at least one side by lower land The origin of plateaus is assumed to be the same as that of mountains, the earth movements involved being distributed more uniformly over a wider area Some plateaus, e g , the Deccan of India and the Columbia river plateau of the NW United States, are basaltic and were formed as the result of lava flows, others are the result of upward folding, and still others have been left elevated by the erosion of adjacent lands Plateaus, like all elevated regions, are subject to dissection by erosion and are continuously being peneplained Low plateaus are often agricultural regions, like the neighboring plains, while high plateaus are usually fit chiefly for stock grazing Many of the world's high plateaus are deserts Other notable plateaus are the Colorado plateau of the W United States, the Ecuadorian and Bolivian plateaus in South America, and the plateaus of Anatolia, Arabia, Iran, and Tibet

plate mark see HALLMARK

Platen, August von (ou'gōōst fŭn plä'tun), 1796–1835, German poet, whose full name was August, Graf von Platen-Hallermund An opponent of romanticism after his earliest work, he satirized the "fate tragedy" in his travesty *Die verhängnissvolle Gabel* [the fatal fork] (1826) He has been called a German Aristophanes His finest work, however, was his classically beautiful verse, such as the *Sonette aus Venedig* (1825, Eng tr , *Sonnets on Venice*, 1914), the odes, and the verse on the Polish insurrection of 1830 See Norman Macleod, *German Lyric Poetry* (1931)

plateresque (plătŭrĕsk') [Span , =silversmith], earliest phase of Spanish Renaissance architecture and decoration, in the early 16th cent The designation probably derives from the delicate and minute ornament suggestive of the craftsmanship of a silversmith (*platero*) This rich ornamentation was based upon the work of the Italian Renaissance mingled, however, with surviving Moorish and late Gothic design which resulted in an entirely distinctive manner In characteristic Spanish decorative spirit, structure received little emphasis, while doorways and other details displayed concentrated richness against a foil of bare wall space Columns of candelabrum form were among the favorite motives, as were pilasters enriched with arabesque reliefs and topped with free Corinthianesque capitals, columns with bracketed capitals, heraldic escutcheons, and fancifully twisted scrolls It was in the plateresque period that Spanish workers in wrought iron reached an unlimited technical skill, translating Renaissance motives into terms of metalwork to form the superb *rejas* of the churches (see REJERÍA) Among the great plateresque buildings are the town hall at Seville, the university at Alcalá de Henares, and the cathedral at Granada by Diego de Siloe From the latter half of the 16th cent a much more classic and restrained form of Renaissance design supplanted the plateresque

plating, the application of a plate or coat of metal to a metallic or other object for decoration, protection against corrosion, or increased wearing qualities The practice is of ancient origin; GILDING was developed early, the Romans soldered silver plates to articles of baser metals, and in the 5th cent. a process was described by which iron weapons were coated with copper by dipping in a copper solution In the 18th cent. the plating of copper or brass with silver by fusion was originated in England (see SHEFFIELD PLATE) GALVANIZING iron by dipping it in molten zinc also dates from the 18th cent Plating by dipping, fusion, and soldering methods has been largely superseded by the welding of plates and especially by electrolytic deposition (see ELECTROLYSIS) The term *electroplating* is commonly applied to the electrolytic depositions of decorative or protective coats, and *electroforming* to the formation of metallic objects by deposition of metal on temporary cores and to the coating of electrically negative casts or molds for the reproduction of printers' type, engravings, medals, or other objects (see ELECTROTYPE) Metals commonly applied to electroplating include chromium, nickel, cadmium, lead, tin, copper, silver, gold, and a few alloys, especially brass and alloys of tin Nickel was formerly widely employed to impart a shiny surface, but has been largely superseded by chromium, which is not only shiny and resistant to tarnish, but is exceptionally hard and durable Chromium, because of its cost and poor bonding with many metals, is usually applied over an undercoat of nickel plate It is used in thin coats for decorative purposes, e g , on automobile accessories, and usually in heavier coats for the finishing of tools The adherence of electroplate depends on the bonding qualities of the foundation and coating metals, it must be applied to surfaces free from dirt, grease, and chemical impurities See William Blum and G B Hogaboom, *Principles of Electroplating and Electroforming* (3d ed , 1949)

platinite: see Guillaume, Charles Édouard

platinum, grayish-white metallic element (symbol = Pt, for physical constants, see ELEMENT, table) It is malleable and ductile Chemically it is not active It is not attacked by ordinary reagents but is soluble in aqua regia (chloroplatinic acid being formed) It does not combine with oxygen even at higher temperatures With certain fused alkalies, however, it forms platinates Since it has two valences it forms two groups of compounds platinic and platinous Because of its resistance to corrosion, platinum is used (alloyed with other metals) for making laboratory utensils (e g crucibles), for electric wires and contact points, for standard weights (the standard kilogram weight in France is made of a platinum-iridium alloy), and for foil Since its coefficient of expansion is close to that of glass, it is valuable in apparatus in which a metal is fused in glass and which is to be subjected to strong heating Platinum is a strong catalytic agent, being so employed in the contact process for the manufacture of sulphuric acid and in a process (Ostwald) for the preparation of nitric acid, which involves the oxidation of ammonia The metal exhibits this catalytic property especially in several of its forms, e g , when appearing as a spongy mass (called then platinum sponge) prepared by igniting the ammonium salt of chloroplatinic acid, as a black powder (platinum black), and as platinized asbestos, obtained when asbestos dipped in chloroplatinic acid is heated The metal is used also in making jewelry (generally in alloy form), in dentistry, and in photography Most important of the alloys are those with iridium Because of the cost of platinum various substitutes for this metal are employed, e g , platinite (an alloy of nickel and iron discovered by C E. Guillaume) and white gold Platinum is found in nature chiefly alloyed with other metals, from which it is separated by complex chemical methods Russia has rich deposits of platinum, but in recent years the world's supply has come chiefly from Canada, South America (especially Colombia), the United States, and South Africa The other metals with which it is usually alloyed are known as the platinum metals They are iridium, osmium, palladium, rhodium, and ruthenium Discovery of the element is variously accredited It was probably known and used, although rarely, several centuries B C In the middle of the 18th cent some platinum from the New World reached England, and soon thereafter many leading chemists published reports on it A process discovered (1803 or 1804) by W H Wollaston for making the metal malleable made possible its commercial use for laboratory apparatus and other purposes

Plato (plā'tō), 427?–347? B C., Greek philosopher, son of noble parents After pursuing the liberal studies of his day, he became in 407 B C a pupil and friend of Socrates In 388 B C he lived for a time at the court of Dionysius the Elder, tyrant of Syracuse On his return to Athens, Plato founded a school in the grove of Academus, the Academy, where he taught mathematics and philosophy until his death His teaching was interrupted by two more visits to Syracuse (367 and 361 B C), which he made in the vain hope of realizing his political ideals in Sicily. All of Plato's known writings have come down to us The works attributed to him are 35 dialogues, 13 epistles, some definitions, and some selections in the Greek Anthology. The definitions, at least two of the epistles, and some of the dialogues are spurious, and the poems may be. Plato's

great work is in his dialogues, which are perfect of their kind. He was of a poetic turn, and his writing, in admirable prose, reveals a character of singular dignity, urbanity, humor, and aristocratic distinction The dialogues are divided roughly into groups according to the probable order in which they were written The earliest group, called Socratic, include *Apology*, the defense of Socrates, *Hippias Major* and *Hippias Minor*, *Charmides*, on virtue as self-knowledge, *Laches*, on virtue as valor, *Lysis*, on friendship; *Euthyphro*, on religion, *Crito*, expounding why Socrates was willing to die, *Protagoras*, on virtue as knowledge, *Ion*, on the origin of poetic ability, *Menexenus*, a satire on oratory In a second group, which reveals probably the development of Plato's views out of those of Socrates, may be set the following *Phaedrus*, on rhetoric, *Gorgias*, on absolute right and wrong, *Meno*, on the difficulty of acquiring knowledge, *Euthydemus*, on false logic, *Theaetetus*, one of the most splendid, on how to define knowledge, *Sophist*, *Politicus*, on whether democracy or autocracy is better, *Parmenides*, on the One and the Many, a refutation of the Eleatic philosophers, *Cratylus*, on the nature of names The last group of his dialogues may be said to include some of his greatest *Symposium*, on love, i e, the love of beauty (this includes the famous speech by Alcibiades), *Phaedo*, a very beautiful demonstration of immortality, *Philebus*, on the mean as the ethical ideal, *Republic*, the next longest and the most celebrated of his dialogues, a demonstration of justice by picturing an ideal state, *Timaeus*, *Critias*, *Laws*, the longest dialogue, his last, a summary of his practical teachings, *Epinomis*, a supplement to the *Laws* The following are universally considered spurious *Alcibiades I* and *II*, *Erastae*, *Hipparchus*, *Theages*, *Minos*, and *Clitophro* As to the order in composition, many put the *Symposium*, *Republic*, *Phaedrus*, and *Phaedo* at Plato's prime, long before his old age, when he wrote the *Laws* Plato himself made no formal division of his philosophy, but from ancient times his thought has been discussed under the headings of *dialectic*, *physics*, and *ethics* He used the term *dialectic* to describe all logical thinking For Plato the process of thinking is twofold the establishment of general ideas by induction and their classification by logical division This represents his philosophical inheritance from Socrates Plato, however, went beyond Socrates in preaching the objective reality of Ideas He argued for the independent reality of Ideas as the only guarantee of objective scientific knowledge, a position in which scholastic realism agreed with him Ideas are, he held, the Forms or Archetypes of all concrete things, their number is indefinite, their being is changeless and eternal, they are the ground of all temporal phenomena The supreme Idea is the Idea of the Good, whose function and place in the world of Ideas is analogous to that of the sun in the world of the senses The *Phaedrus* contains a discussion of mystical contemplation of the Idea Plato explained the physical world as possessing only relative reality, and that by participation in the reality of the Ideas The world of Ideas was seen by Plato as the source which gave life and significance to the world of the senses Ideas are, moreover, the Final Cause that makes all existence purposeful The most celebrated exposition of this is the "parable of the cave" in the *Republic* Plato's universe accommodates the changeless Being of Parmenides and the perpetual flux of Heraclitus Plato suggested the existence of a world soul and postulated a Demiurge or Creator as the fashioner of the physical universe The rational soul he held to be immortal because, like the Ideas, it is not made up of parts and is accordingly indestructible He taught also the preexistence of the soul and believed in a priori knowledge The *Meno*, in a well-known passage, teaches that knowledge is partly a matter of recollection of previous life Virtue, according to Plato, is the harmony or health of the soul, secured when the rational part rules the other parts The cardinal virtues are justice, temperance, courage, and wisdom, the last being the highest of all There is in Plato an ascetic strain, tending toward contempt of the world and praising the life of pure contemplation His *Republic*, the first Utopia, was a state based on justice, where each class in society happily performed the function for which it was suited Thus the philosopher ruled, the warrior fought, and the worker enjoyed the fruits of his labor Plato proposed communism for the two highest classes, not because equality was a good in itself, but in order to better insulate the men with power from the temptations and distractions of the temporal world In the *Symposium* and the *Phaedrus* he celebrates the philosophic love of ideal beauty in passages of matchless eloquence Plato's writings constitute one of the most influential bodies of work in the history of the race So subtle, searching, and wide-ranging is his thought that almost all the problems of subsequent philosophy are traceable in his dialogues, his work is likewise, because of its verbal charm and its vivid portrayal of contemporary life, a part of the world's literature. See Benjamin Jowett, *The Dialogues of Plato* (5 vols., 3d ed., 1920), A. E Taylor, *Plato: the Man and His Work* (1927); Raphael Demos, *The Philosophy of Plato* (1939), Alexandre Koyré, *Discovering Plato* (1945); John Wild, *Plato's Theory of Man* (1946); Ludwig Marcuse, *Plato and Dionysius* (1947)

Platt, Charles Adams, 1861–1933, American architect, landscape architect, painter, and etcher, b New York city He studied etching with Stephen Parrish and painting, in Paris, under Boulanger and Lefebvre He won distinction in both fields before travels in Italy turned his interests towards architecture and garden design Platt painted many landscapes of New Hampshire scenes His architectural designs are based upon Italian and Georgian traditions He was a fellow of the American Institute of Architects Platt's works include numerous important city and country residences, the latter complete with their gardens, the Freer Gallery of Art at Washington, D C (1918), an addition to the Corcoran Gallery, a building for the *Leader News* in Cleveland, buildings for the Univ of Illinois at Urbana, including its library, and a number of buildings (e g, chapel, library) for Phillips Academy, Andover, Mass He wrote *Italian Gardens* (1894) See monograph of his work with introduction by Royal Cortissoz (1913)

Platt, Orville Hitchcock, 1827–1905, U S Senator (1879–1905), b Litchfield co, Conn Admitted (1849) to the bar, he practiced law at Meriden, Conn He held many public offices in Connecticut before he served in the U S Senate Platt helped frame the high protective tariff measures of 1883, 1890, and 1897 He opposed "cheap money" schemes and all attempts to regulate big business An expansionist, he was important in the annexation of Hawaii and the occupation of the Philippines He also framed the **Platt Amendment**—a rider attached to the Army Appropriations Bill of 1901 It stipulated the conditions for American intervention in Cuban affairs The amendment, which practically made Cuba an American protectorate, was forced into the constitution of Cuba and was incorporated in a permanent treaty between the United States and Cuba, it set the terms under which the United States intervened in Cuban affairs in 1906, 1912, 1917, and 1920 Rising Cuban nationalism and widespread criticism led to its abrogation in 1934 See L A Coolidge, *An Old-fashioned Senator* (1910)

Platt, Thomas Collier, 1833-1910, American politician, b Owego, N Y He attended Yale (1849-50), became president of the Tioga County National Bank, and had considerable commercial interests by the time he served in the U S House of Representatives as a Republican (1873-77) In 1881 he became a U S Senator, but, following his mentor Roscoe CONKLING, in a quarrel with President James Garfield over patronage, resigned almost immediately, thereby winning the nickname "Me Too" Platt With Conkling he sought vindication in a new election, but both were defeated Platt remained prominent in New York politics, gaining new power and using methods that won him the name of the "easy boss" Again from 1897 to 1909 he was a U S Senator One of the most powerful of Republican politicians, he was largely responsible for the election (1898) of Theodore ROOSEVELT as governor of New York Although Roosevelt occasionally consulted with Platt, he was largely independent in political matters, and in 1900 Platt succeeded in shelving him (as he thought) into the vice presidency Afterward Platt's power declined See his autobiography (1910), H F Gosnell, *Boss Platt and His New York Machine* (1924)

Platt Amendment see PLATT, ORVILLE HITCHCOCK

Plattdeutsch, Low German, especially in Germany See LANGUAGE (table)

Platte (plăt), city (pop 1,017), SE S Dak, NW of Yankton, in a dairy and farm area, settled 1882

Platte, river formed in S central Nebraska by the junction of the NORTH PLATTE and the SOUTH PLATTE and flowing c 310 mi through S Nebraska to the Missouri near Plattsmouth

Plattensee, Hungary see BALATON

Plattesville (plăt'vĭl), city (pop 4,762), SW Wis, SW of Madison and on the Little Platte, founded 1827, inc 1876 It is a center of lead and zinc mining and dairying A state teachers college is here At near-by Old Belmont is Wisconsin's early territorial capitol (1836), now restored in a state park

Platt National Park see NATIONAL PARKS AND MONUMENTS (table)

Plattsburg. **1** City (pop 1,915), co seat of Clinton co, NW Mo, on the Little Platte and NE of Kansas City, in a farm region, founded c 1835 **2** City (pop 16,351), co seat of Clinton co, NE N Y, on Lake Champlain at the mouth of the Saranac, laid out 1784, inc 1902 Near here in the War of 1812, Thomas MACDONOUGH and Alexander MACOMB repulsed (Sept., 1814) a British sea and land invasion from Canada led by Sir George Prevost. Today, papermaking is the city's chief industry A state teachers college is here, and a Catholic summer school is near by The Plattsburg military training camps, established during the First World War to train army reserve officers, were closed in 1946 The barracks were converted into use for Champlain College, one of the state's emergency colleges for veterans, now part of the State Univ. of New York

Plattsmouth (plăts'mouth, -muth), city (pop 4,268), co seat of Cass co, SE Nebr, S of Omaha, at the junction of the Platte with the Missouri; founded 1854–55 It is a railroad and trade center Stone and clay deposits are near

platypus (plă'tupus) or **duckbill,** an egg-laying mammal of Australia, of the order Monotremata, the most primitive group of living mammals Its only near ally is the echidna The adult male is about 2 ft long, including the 5 or 6-inch tail The head, trunk, and tail are broad and flattened The thick, dark brown pelage consists of a coarse outer coat and woolly underfur The muzzle has the shape of a duck's bill and is covered with soft, leathery skin made sensitive by the presence of nerve endings The eyes are small, and there is no external ear The five-toed feet are webbed, the web of the forepaw extends beyond the tips of the claws but can be folded back, and that of the hind paw comes only to their base The male platypus has on its heel a spur, directed backwards and inwards, which is hollow and connects with a poison-secreting gland, this spur is probably used as a weapon The platypus is semiaquatic, feeding entirely on small, fresh-water animals Both sexes live in a simple burrow in a stream bank except during the breeding season, when the female makes a separate and more elaborate burrow containing a nesting chamber approached by a long tunnel One, two, or three eggs are laid at a time The female platypus lacks teats, and the young take the secretion of the abdominal mammary glands through many small openings in the skin The platypus, in spite of certain superficially birdlike characteristics, may more correctly be considered a link between mammals and reptiles See C L Barrett, *The Platypus* (1944)

Plauen (plou'un), city (pop 84,778), Saxony, E Germany, on the White Elster river and at the northwestern foot of the Erzgebirge. It has been a textile-manufacturing center since the 15th cent and also produces machinery, electrical appliances, and leather An ancient Slavic settlement, it became (1224) the seat of a branch of the Teutonic Knights, passed (1327) to Bohemia, and came to Saxony in 1577 Among the ancient buildings of the city are its castle (1224), the city hall (15th cent), and a 12th-century church

Plautus (Titus Maccius Plautus) (plô'tŭs), c 254-184 B C, Roman comic poet, b Umbria His plays adapted from those of Greek New Comedy, are popular and vigorous representations of middle- and lower-class life Written with a mastery of idiomatic spoken Latin and governed by a genius for situation and coarse humor, Plautus' comedies achieved a great reputation, today they make some of the most fascinating of classical reading Characteristic of his plays are the stock comic figures—the knavish, resourceful slave, the young lover and his mistress, the courtesan, the grouchy and often avaricious father the parasite, the braggart soldier His plots and characters have had great influence upon later literature, with adaptations and imitations by many writers, e g, Molière (*L'Avare*), Corneille (*L'Illusion comique*), Jonson (*The Case Is Altered*), Shakspere (*Comedy of Errors*) Of Plautus' plays, 21, more or less complete, survive *Amphitruo* (*Amphitryon*), *Asinaria*, *Aulularia*, *Bacchides*, *Captivi*, *Casina*, *Cistellaria*, *Curculio*, *Epidicus*, *Menaechmi*, *Miles gloriosus*, *Mercator*, *Mostellaria*, *Persa*, *Poenulus*, *Pseudolus*, *Rudens*, *Stichus*, *Trinummus*, *Truculentus*, and *Vidularia* (in fragments)

Playfair, Sir Nigel (nī'jul plā'fâr), 1874-1934, English actor-manager He acted in F R Benson's Shakespeare Company and with George Alexander and Beerbohm Tree From 1919 to 1932 he was manager of the Lyric Theatre, Hammersmith, where his productions included John Drinkwater's *Abraham Lincoln* (1919) and a very successful revival of Gay's *Beggar's Opera* in 1920

playground see RECREATION

playing cards There is evidence that playing cards were in use in the ancient world, but they were probably first known to Europeans in the 14th cent In the British Museum there is a 14th-century manuscript depicting a card game played by a king and two courtiers, the arrangement of the pips on the cards is similar to that of the present day Playing cards are referred to in the household expense accounts of Charles VI of France for 1392 In 1397 the provost of Paris issued an edict prohibiting the people from playing certain games on working days, and among these, cards are mentioned. The manufacture of playing cards in Germany dates from the beginning of the 15th cent, and in Italy they were made in 1425, but it was not until 1463 that they were made in England, and the earliest designs produced there were painted by hand There were usually four suits, in Germany these were called hearts, bells, leaves, and acorns, while in Italy they were known as swords, batons, cups, and money. The present-day variety of hearts, diamonds, clubs, and spades were adopted in France in the 16th cent In addition to these cards, called "numeral" cards, there were also

cards known as tarots, or *triomphes* (trumps), because when played in combination with numeral cards the tarots had a higher value A full pack consisted of 78 cards, 22 bearing emblematic designs and 56 others which were divided into four suits of 14 cards each Three of these were called coat cards (from which the present court card comes), so named because each card bore a coated figure—king, chevalier, and valet. The 10 other cards were numbered with pips from 1 to 10. The game played with these cards was called *tarocchi*. The modern deck consists of 52 cards, divided into four suits (spades and clubs, black, hearts and diamonds, red), in each suit there are king, queen, knave or jack, and 10 cards bearing pips from 1 (the ace, the highest card in most games) to 10 In gambling games, such as poker, an extra card called the "joker" is often used. Throughout the world cards have been manufactured from time to time to glorify contemporary leaders and heroes.

pleadings see PROCEDURE.

Pleasant Grove. **1** Town (pop. 1,066), N central Ala., a suburb of Birmingham; inc 1933 **2** City (pop 1,941), N central Utah, in the valley of Utah Lake near Provo, settled 1849 by Mormons, inc 1855 A processing center of an irrigated fruit and berry region, the town now receives water from the Provo river project.

Pleasant Hill, city (pop 2,118), W Mo., SE of Kansas City, in a farm area, laid out 1843

Pleasant Ridge, city (pop 3,391), SE Mich., NW of Detroit, inc as a village 1921, as a city 1928.

Pleasantville. **1** Residential city (pop. 11,050), SE N.J., near Atlantic City, inc 1914 **2** Residential village (pop 4,454), SE N.Y., in Westchester co., N of White Plains, settled 1732, inc 1897. It has a large publishing house

Pleasonton, Alfred (plĕ'zŭntun), 1824–97, Union general in the Civil War, b Washington, D.C., grad West Point, 1844 He served in the Mexican War and in the Indian wars on the frontier In the Civil War, Pleasonton served with distinction in the PENINSULAR CAMPAIGN (1862) and was made brigadier general of volunteers He fought at Antietam and Fredericksburg, and his defense against Stonewall Jackson at Chancellorsville was invaluable He commanded all the Union cavalry in the Gettysburg campaign, giving a good account of himself at BRANDY STATION and other engagements Transferred to Missouri, Pleasonton defeated Gen Sterling PRICE at Westport and Marais des Cygnes (1864), ending the last Confederate threat in the West

plebeians. see PLEBS

plebiscite (plĕ'bĭsĭt) [Latin,= popular decree], vote of the people on a question submitted to them, as in a referendum In Roman times the term meant a law voted by the plebs Hence, to Montesquieu a plebiscite was a law made by plebeians, while Voltaire, familiar with the voting customs of the Swiss cantons, considered it to mean an assembly The modern employment of plebiscites stems from the influence of Rousseau's theory of indivisible sovereignty on political thought Plebiscites fall into three rough classes. Plebiscites which determine ordinary legislation are still taken in the assemblies of the Swiss cantons Constitutional plebiscites have been used in France, Australia, and the United States to ratify a prepared document or constitutional amendment Annexation plebiscites were held in the French Revolution, in the unification of Italy, and after the First World War to determine the wishes of a population as to their national allegiance This device has been prevalent in deciding the status of disputed or border territories, particularly those with large minorities Prominent recent examples were Schleswig and the Saar Territory The plebiscite has been frequently criticized as oversimple and subject both to official manipulation and to the merely passing considerations of the voters See Sarah Wambaugh, *Plebiscites since the World War* (1933)

plebs (plĕbz) or **plebeians** (plĭbē'ŭnz) [Latin *plebs* =people], part of the population of ancient Rome, in historical times always considered to be descended mainly from the Latins settled on Roman territory by the kings Tullus Hostilius and Ancus Martius. They lacked, at first, most of the PATRICIAN rights, but with the establishment of the tribune of the people in 491 B.C., they gradually removed their disabilities Marriage with the patricians was validated (445 B.C.), and plebeians were admitted to the quaestorship (409 B.C.), to the consulate (367 B.C.), to the dictatorship (365 B.C.), to the censorship (351 B.C.), and to the praetorship (338 B.C.), they finally obtained the important priestly offices of the pontificate and augurship in 300 B.C. The gulf between plebs and patricians was bridged, under the emperors, by the *nobiles*, a new aristocracy of office, and from this time the name plebs passed to the lower ranks of the people as contrasted with the nobler class

Plehve, Vyacheslav Konstantinovich (vyăchĕslăf' kŏnstăn'tyĭnuvĭch plyĕ'vyĭ), 1846–1904, Russian statesman As director of the police (1881–84), vice minister of the interior (1884–99), secretary of state for Finland (1899–1902), and minister of the interior (1902–4), he consistently pursued an ultrareactionary policy. He subjected minorities to forced Russification, secretly organized Jewish pogroms, and helped precipitate the Russo-Japanese War hoping it would divert public opinion from internal conditions and increase Russian prestige He was killed by a revolutionist's bomb

Pleiad (plī'ăd) [from Pleiades], a group of seven tragic poets of Alexandria who flourished under Ptolemy II Philadelphus, c 280 B.C. Of the works of the men usually given in lists of the Pleiad only LYCOPHRON survives, and his extant piece is not a tragedy A group of enthusiastic French poets took the name **Pléiade** (plāyăd') from the Alexandrian Pleiad, c 1553. The conventional seven of this group are RONSARD (the leader), Joachim DU BELLAY, BELLEAU, JODELLE, TYARD, BAÏF, and DAURAT The Pléiade had as its avowed purpose to encourage the writing of French as against Latin, to enrich the language, and to establish a modern literature equal to other literatures They cultivated the use of classical and Italian forms, especially of the sonnet. For translations of poems of the poets, see George Wyndham, *Ronsard and the Pléiade* (1906), John Payne, *Flowers of France the Renaissance Period* (1907)

Pleiades (plē'ŭdēz, plī'-), in Greek mythology, seven daughters of ATLAS and the nymph Pleione They were attendants of ARTEMIS Their names were MAIA, Electra, Merope (mĕ'rupē), Celaeno (sŭlē'nō), Taygeta (tăĭjē'tŭ), Sterope (stĕ'rupē) or Asterope (ăstĕ'-), and Alcyone (ălsī'ŭnē) They were changed into stars. The lost Pleiad was either ELECTRA or MEROPE

Pleiades (plē'ŭdēz, plī'-), in astronomy, a group of stars known as an open (as contrasted with a globular) cluster in the constellation Taurus. The cluster consists of probably several hundred stars and is said to be 325 or 350 light years distant from the earth. Six stars are easily visible to the naked eye Known as the Seven Sisters, this group was named by the Greeks for the seven daughters of Atlas and Pleione, the seventh Pleiad was, according to legend, lost or in hiding Visible with the telescope is a faint star associated with the other six, it is believed that in very early times this may have been much brighter and visible to the naked eye, thus accounting for the many early references to seven stars

Pleistocene epoch (plī'stusēn) [Gr.,=most recent], sixth epoch of the Cenozoic period of geologic time If the Paleocene is not considered as a separate epoch preceding the Eocene it is the fifth division of the Cenozoic. The name Quaternary was early applied to the period beginning with this epoch, and this name is still used although its validity is denied by many It is the most celebrated GLACIAL PERIOD of the earth's history At their maximum extent, the Pleistocene ice sheets covered all of Antarctica, large portions of Europe, North America, and South America, and small areas in Asia. In North America they stretched over Greenland and Canada and over the United States as far south as a line drawn westward through New Jersey and Pennsylvania and along the line of the Ohio and Missouri rivers to North Dakota, then through N Montana, Idaho, and Washington to the Pacific, in Europe, they covered Scandinavia, Finland, NW Russia, N Germany, and the British Isles. Glaciers distinct from the main sheets were formed in the Rockies and the Alps In South America, Patagonia and the S Andes lay under an extension of the antarctic sheet, while in Asia the Caucasus, the Himalayas, and other mountain regions were glaciated. The ice sheets of North America advanced from two main centers of accumulation or of radiation identified as the Keewatin, W and NW of Hudson Bay, and the Labrador, E of James Bay. The Cordilleran ice sheet covering much of the mountainous region of W Canada and the NW United States was not strictly a center of radiation. The ice sheets of Europe radiated from Scandinavia. The glaciation of the Pleistocene was not continuous but was interrupted by interglacial stages, during which the ice disappeared, according to the opinion of most geologists, and a comparatively mild climate prevailed In the Mississippi valley of North America the Nebraskan glacial stage was succeeded by the Aftonian interglacial stage; there followed the Kansan (glacial), Yarmouth (interglacial), Illinoian (glacial), Sangamon (interglacial), Iowan (glacial), Peorian (interglacial), and Wisconsin (glacial) stages—as named, five glacial and four interglacial stages. In all probability there were actually only four glacial stages, the Iowan and Peorian being included in the Wisconsin as one complex stage In the Alps, the other region in which Pleistocene glaciation has been extensively studied, four glacial stages are recognised and are known as Günz, Mindel, Riss, and Würm. The characteristic formation laid down in the glacial stages of the Pleistocene, as in all glacial periods, is the DRIFT. The interglacial stages were marked by the weathering of the till of the drift to form a sticky, heavy soil called the gumbotil and also by the deposition of PEAT and LOESS Peat is plentiful in the Aftonian, Yarmouth, and Sangamon of North America, while the Peorian is noted for loess. The Pleistocene glaciers made important alterations in the topography of the glaciated regions, leveling hilly sections to slightly rolling plains, both by erosion and by deposition of drift, eroding hollows which later became lakes, and forcing rivers to cut new channels by filling their former beds. Among the characteristic surface features formed in the Pleistocene are the DRUMLIN, KAME, ESKER, and MORAINE. The retreat of the ice after the Wisconsin glacial stage was followed by the formation, at the edge of the melting glaciers, of lakes, such as the extinct Lake AGASSIZ and the present GREAT LAKES. The further retreat of the ice led to the flooding by the Atlantic of the NE United States and SE Canada, which had been depressed below sea level by the weight of the ice The valley of the St Lawrence to Lake Ontario, the valley of the Ottawa river, and Lake Champlain were covered by a shallow sea connected with the Atlantic to the south by a strait over the site of the Hudson, but a rise of the land caused this area to assume its topography of historic times. In the areas of North America not covered by ice, the Pleistocene was marked chiefly by erosion, with only very slight marine transgressions over the coast On the Atlantic coast S of New Jersey the Columbia sand, gravel, and clay were laid down as a result of erosion, while in Florida the sea deposited limestone Heavy precipitation in the West was responsible for two great lakes—Lake Lahontan of Nevada and Lake Bonneville of Utah, which is now represented by Great Salt Lake During the Pleistocene there were volcanic activity and warping of the earth's surface on the Pacific coast The cutting of the Grand Canyon took place chiefly in Pleistocene time. The fact that the time elapsed since the retreat of the Wisconsin ice is generally conceded to be shorter than one or more of the interglacial stages of the Pleistocene makes it possible that the so-called Recent epoch, in which continental glaciers lie over Greenland and Antarctica, may be merely another such interglacial stage and that the glaciers may at some future time, return Among the characteristic Pleistocene mammals of North America were at least four species of elephants, including the mastodon and the mammoth, true horses, of the same genus as the domestic horse though not of the same species, and others such as sabertooth cats, large wolves, giant armadillos and ground sloths, bisons, camels, and wild pigs Among the arctic mammals that ranged far south in the glacial stages were the musk ox in North America and the woolly mammoth in Europe The Pleistocene saw the beginning of the trend toward the extinction of the mammals, which continued into historic times The Pleistocene also saw the rise of man Evidence indicates that Piltdown man (*Eoanthropus*) lived in the early Pleistocene and that the ape man of Java (*Pithecanthropus*) and Peking man (*Sinanthropus*) existed in about the middle Pleistocene Heidelberg man flourished in Europe probably in the first interglacial period (Günz-Mindel), Neanderthal man, in the third (Riss-Würm), and Cro-Magnon man appeared just after the climax of the Würm glaciation See also PALEOLITHIC PERIOD. See G. F. Wright, *The Ice Age in North America* (1920); R. A. Daly, *The Changing World of the Ice Age* (1934); R. F Flint, *Glacial Geology and the Pleistocene Epoch* (1947).

Plekhanov, Georgi Valentinovich (gĕôr'gē vŭlyĭntyĕ'nuvĭch plyĭkhă'nŭf), 1857–1918, Russian revolutionist and social philosopher, one of the chief exponents of MARXISM. At first a Populist, he turned to Marxist socialism after leaving (1882) Russia as a political refugee. He spent most of his exile in Geneva, Switzerland, until his return to Russia after the outbreak of the February Revolution of 1917. He was one of the chief founders of the League for the Emancipation of Labor, the nucleus of the Russian Social Democratic party, and in 1900 he began to publish, with V I. Lenin, the Socialist newspaper *Iskra* [spark]. In his writings Plekhanov took the view that conditions in Russia would not be ripe for socialism before capitalism and industrialization had sufficiently progressed. This opinion was the basis of Menshevik thought after the split (1903) of the Russian Social Democratic party into BOLSHEVISM AND MENSHEVISM. Although Plekhanov still supported Lenin at the fateful party congress of 1903, he soon afterward became a consistent opponent of Bolshevism At the same time he continued to oppose revisionist socialism. Plekhanov's most original contributions were in the field of aesthetics, where he sought to trace the relationship between art and economics. Among his translated works are *Socialism and Anarchism* (Eng. tr., 1895) and *Fundamental Problems of Marxism* (Eng. tr., 1929).

Plentywood, city (pop 1,574), co seat of Sheridan co, extreme NE Mont, on Big Muddy Creek, inc. 1912. It grew as a wheat-raising center

Pleshcheyevo, Lake, RSFSR. see PERESLAVL-ZALESSKI

plesiosaurus (plē"sēōsô'rŭs), member of a genus of predaceous marine reptiles which arose in the Triassic period of geologic time and continued into the Jurassic and Cretaceous They became extinct at the close of the Mesozoic era. Skeletons have been found in North America, Europe, and Australia The plesiosaurus had a small, short head, a long, snakelike neck, a broad, solid body, and a short tail Its four paddlelike legs were similar to those of a marine turtle In total length the plesiosaurs ranged from about 10 to 60 ft.

Plessisville (plĕ'sĭvĭl), village (pop. 3,522), S Que., on the Bécancour river and SW of Quebec, in a flax-growing region It has linen and hosiery mills and plants which make shoes and other leather products

Plethon, Georgius. see GEMISTUS, GEORGIUS

pleurisy (plo͝o'rĭsē), infected condition of the serous membranes, or pleurae The inflammation causes friction between the visceral pleura covering the lung and the parietal pleura adhering to the inner wall of the chest and thus produces pain Normally there is no friction because the two surfaces in close contact are smooth and are moistened by serum Sometimes in pleurisy the fluid is greatly increased and has to be removed surgically. Purulent matter which may collect in the cavity as a result of pneumonia or other causes produces a condition known as empyema

pleurisy root: see BUTTERFLY WEED

pleuropneumonia (plo͝o"rōnōmō'nyŭ), contagious disease of cattle caused by infection of the pleurae covering the lungs and of the lungs themselves Its cause is attributed to a virus. The characteristics of the disease are those of pleurisy in humans Stringent measures eliminated it from the United States and from Great Britain at the end of the 19th cent.

Plevna (plĕv'nŭ), Bulgarian *Pleven* (plĕ'vĕn), city (pop 39,997), N Bulgaria It is an agricultural center and manufactures textiles, foodstuffs, and machinery The city is famous for its defense by the Turks against the Russians in the Russo-Turkish War of 1877–78 The siege was planned by the Russian general Totleben It fell (1877) to the Russians after more than three months of fighting The fall of Plevna caused the Turks to demand an armistice early in 1878

Plimer, Andrew, c 1763–1837, English miniature painter He was an apprentice to Cosway, whom he succeeded as court miniaturist. His fine portraits are to be seen in the Victoria and Albert Museum and in the Metropolitan Museum His brother **Nathaniel Plimer,** c 1757–1822, was also an able miniaturist

Plimsoll, Samuel (plĭm'sŭl), 1824–98, English reformer, particularly interested in the welfare of sailors As a member of Parliament from Derby (1868–80), he secured legislation limiting the loading of ships, and this compulsory load line is therefore called Plimsoll's mark or the Plimsoll line He wrote *Our Seamen* (1872)

Plinlimmon or **Plynlimmon** (both plĭnlĭ'mŭn), mountain, 2,468 ft high, Wales, on the Montgomeryshire-Cardiganshire border W of Llanidloes It has three summits and is the source of the Wye, Severn, and other streams

Pliny the Elder (Caius Plinius Secundus) (plĭ'nē), A D. 23–A D 79, Roman naturalist, b Cisalpine Gaul. He was a friend and fellow soldier of Vespasian, and he dedicated his great work to Titus He died of asphyxiation in the neighborhood of Vesuvius, having gone to investigate the eruption His one remaining work is an encyclopedia of natural science (*Historia naturalis* or *Naturalis historia*). It is divided into 37 books and, after a preface, deals with the nature of the physical universe, geography, anthropology, zoology, botany, including the medicinal uses of plants, curatives derived from the animal world; and mineralogy, containing an account of the uses of pigments and a history of the fine arts. Pliny's industry was immense, and his knowledge of sources wonderful, but his natural science is all secondhand and quite useless as science. His nephew and ward, **Pliny the Younger** (Caius Plinius Caecilius Secundus), A.D 62?–A.D. c 113, was an orator and a statesman. He was quaestor (A.D. 89), tribune (A.D 91), and praetor (A.D. 93) and subsequently held treasury posts He was consul (100) and died in his proconsular province of Pontus-Bithynia His fame rests on his letters, written probably for publication. They are an excellent mirror of Roman life, composed in good taste and in good Latin. He wrote a biography of Pliny the Elder.

Pliocene epoch (plī'ŭsēn) [Gr., =more recent], fifth epoch of the Cenozoic period of geologic time. If the Paleocene is not considered as a separate epoch preceding the Eocene, the Pliocene is the fourth Cenozoic epoch. By the beginning of the Pliocene, the outlines of North America were almost the same as in recent time, and encroachments of the sea on the land were limited to a narrow strip along the coasts of the Carolinas, Georgia, Florida, and the Gulf states and an embayment, smaller than that of the preceding Miocene epoch, in California The Pliocene formations on the Atlantic coast are chiefly marine marls, on the Gulf they are nonmarine sediments resulting from erosion In California they contain much volcanic ash The Pliocene formations of the western interior are small and scattered In western interior North America and on the west coast, volcanic activity continued into the Pliocene from the Miocene The close of the Pliocene was marked in North America by the Cascadian revolution, in the course of which the Sierra Nevada were elevated and tilted to the west The Cascades, Rockies, Appalachians, and the Colorado plateau were uplifted, and there was activity in the mountains of Alaska and in the Great Basin ranges of Nevada and Utah In Europe the Pliocene sea covered small parts of the northwest of the continent and a large area around the present Mediterranean, a number of volcanoes were active, among them Vesuvius and Etna There was considerable mountain building, including the folding and thrusting of the Alps The climate of the Phocene was markedly cooler and drier than that of the Miocene and foreshadowed the glacial climates of the PLEISTOCENE EPOCH The life of the Phocene was notable for its modern appearance, the Phocene marked the climax, and perhaps the initial decline, of the supremacy of the mammals

Plock (plôtsk, plŏtsk), Pol *Płock* (pwôtsk), city (pop 28,508), central Poland, on the Vistula and NW of Warsaw. A medieval residence of the dukes of Masovia, it passed to Prussia in 1793 and to the Russian Empire in 1815 It reverted to Poland in 1921 Plock is chiefly a market center of an agricultural region and has metal, electrical, and food industries Its 12th-century cathedral, with tombs of Polish kings and dukes, was seriously damaged during the Second World War

Ploesti (plô̆ĕsht'), city (pop 95,632), S central Rumania, in Walachia, NNW of Bucharest It is the chief center of the Rumanian petroleum industry and of the important Ploesti oil region An earthquake (1940) and repeated Allied aerial bombardments (especially in 1943) inflicted heavy damage After the Second World War, Rumania nationalized the Ploesti oil industry, which until then had belonged largely to foreign capital The city is also a railroad junction and a manufacturing center for textiles and other goods

Plombières (plôbvĕr'), town (pop 1,452), Vosges dept, E France, in the Vosges mts It is a fashionable watering place with radioactive springs In a conference held here in 1858 by NAPOLEON III and CAVOUR, it was agreed that France would give the kingdom of Sardinia military aid against Austria to form a kingdom of N Italy reaching the Isonzo, while Savoy and Nice were to be ceded to France

Plotinus (plōtī'nŭs), c 205–270, Neoplatonist philosopher A native of Egypt, perhaps of Roman descent, he went to Alexandria in his 28th year to devote himself to philosophy For 10 years he was the earnest disciple of Ammonius Saccas To learn of the philosophies of India and Persia, Plotinus in 242 traveled in the Eastern expedition of Emperor Gordian III, but when Gordian was assassinated in Mesopotamia, Plotinus escaped to Antioch From 244 he lived in Rome, where his school attracted wide attention Many followed his advice and example, giving their riches to those in need and turning to contemplative thought However, he never taught or practiced extreme asceticism His pupil PORPHYRY, who wrote a biography of him, was responsible also for the preservation and arrangements of the teachings of Plotinus The theories of Plotinus were fundamentally those of Plato but included something of other Greek philosophies as well, all drawn together into an original system which rapidly won followers and in time had considerable influence on the thinkers of the Christian Church, although Plotinus himself opposed Christianity His development of the idea of EMANATION was fuller than that found in the teachings of the Stoics and of Philo. This cosmological conception is the chief point of NEOPLATONISM, which received its form from Plotinus All else, even his ethics, depends upon this view of the world Among the virtues set forth by Plotinus are political or social virtues, concerning man's relations to his fellow men, the higher purifying virtues, needed to help the soul become like God by removing from it as much as possible that which is of the senses, and the still higher deifying or enlightening virtues, through the exercise of which man may attain to the fulfillment of his true nature But unification with the highest, with God, is not possible through thought. It is attained only when the soul, in an ecstatic state, loses the restraint of the body and has for a time an immediate knowledge of God (see MYSTICISM) See *The Essence of Plotinus* (extracts from the six *Enneads*, and Porphyry's life of Plotinus, comp by G. H. Turnbull, 1934), W R Inge, *The Philosophy of Plotinus* (1928); Thomas Whittaker, *The Neoplatonists* (1928).

plough: see PLOW.

Plovdiv (plôv'dĭf), city (pop 125,440), central Bulgaria, on the Maritsa. A commercial center, it also manufactures machinery, textiles, leather goods chemicals, and tobacco The ancient Philippopolis, it was named for Philip II of Macedon, who established a military post here in 341 B C It became the capital of Thrace under Roman rule, was conquered (13th cent) from the Byzantines by the Bulgarians, and was the capital of Eastern RUMELIA in the 19th cent

plover (plŭ'vur), small shore bird of the Old and New Worlds, related to the gulls Plovers have plump bodies, short necks and tails, relatively long legs, long pointed wings, and a rather short pigeon-like bill enlarged at the tip Small marine animals form much of their food, but many feed on dry uplands, where they destroy grasshoppers and other harmful insects They are generally gregarious and migratory Nonstop flights of over 2,000 mi are often made by the eastern American golden plover, which migrates in autumn from its arctic and Canadian breeding grounds to Nova Scotia and then over the Atlantic Ocean to South America, and by the Pacific golden plover, which breeds in Alaska and Siberia and winters in the Hawaiian Islands Among the American plovers are the killdeer, the semipalmated, the black-bellied, and the piping plovers The ringed plover, the European golden plover, and the LAPWING are European forms.

plow or **plough** In the skillful farming of the Neolithic period, the soil was stirred by no implement but the spade and the hoe The American Indians used no plows until white men came The plow came into use in the Bronze Age Its beginnings are associated with the domestication of draft animals and the rise of cities It enables farmers to produce the surplus that feeds cities Like the first hoes, the first plow was no doubt a forked stick From the beam projected a short, pointed branch that served as a share and also a longer branch that served as the single handle characteristic of primitive plows Hesiod tells how the Greek farmer made such a plow of one piece of wood Chinese farmers still use a small plow drawn by a man, and no doubt a plow drawn by a man or men was known before oxen drew the plow The ox has drawn the plow through most of its history In America horses largely displaced oxen in the 19th cent, and in the 20th cent tractors have largely displaced horses The acre was originally the land that a yoke of oxen could plow in a day The point or share of the plow was made of iron or steel when the metals became available, and often the wooden moldboard was faced with sheet iron Ancient plows merely stirred the soil and did not turn the furrow slice The graceful and efficient shape of the moldboard of the modern turning plow is due especially to Jethro Wood, whose final patent was granted in 1819 John DEERE and Leonard ANDRUS were leaders in introducing the steel moldboard which would scour—i e, was self-cleaning—even in sticky soil James Oliver made an efficient moldboard of cast iron by chill hardening the casting The disk plow does its work by means of one or more revolving disks The plow often symbolizes agriculture, as in the great seals of New Jersey, Pennsylvania, Tennessee, and some other states See H P Smith, *Farm Machinery and Equipment* (3d ed, 1948), E H Faulkner, *Plowman's Folly* (1943), which urges the use of the harrow and green manure instead of plowing

Plücker, Julius (yo͞o'lyōos plü'kur), 1801–68, German mathematician and physicist He became professor of mathematics (1836) and of physics (1847) at the Univ of Bonn He is known for his work in analytical geometry, in magnetic properties, and in spectroscopy, in which he first suggested that the lines in the spectrum of an element were peculiar to that element He originated line geometry, which substitutes the straight line for the point as the unit in space

plum, name for a tree and its edible fruits, which are drupes, comprising many species of *Prunus* Some are useful in landscaping because of their ornamental flowers and colored foliage The plum is cultivated generally in the temperate zones, although there are suitable varieties for such regions as S Florida and the Gulf Coast, of its more than 100 species 30 are native to North America. It has been cultivated since prehistoric times, longer perhaps than any other fruit except the apple Alexander the Great is said to have introduced it into Greece from Syria or Persia, where the damson plum had long been grown The name damson is now applied to several varieties of *Prunus domestica*, the common garden plum of European or Asiatic origin, e g. *P domestica insititia* and others having small leaves and small, oval fruits usually borne in clusters The fruits are generally tart and are favored for preserves Plum trees that run wild usually revert to the damson type Over 2,000 varieties of the plum are known. In the United States the wild red plum (*P americana*) is found along streams and in thickets from New York to the Rocky Mts Its small, sweet fruit has a purple bloom This plum was utilized by the Indians, who ate it raw, cooked, and dried, when dried it was a staple article of diet Plum butter is made from it Another American variety is the beach plum or shore plum (*P. maritima*), a low-growing shrub

common along the eastern coast, especially on Cape Cod, where the gathering of fruit for jelly and preserves has become a commercial project Most of the cultivated plums in the United States are derived from European and Japanese varieties, although some good ones have come from native species and are valuable in that they thrive in the extreme north and south Among these are red, blue, and green or yellow plums, of the last, varieties of the greengage are best known The typical plum tree is low and wide-spreading and is one of the earliest fruit trees to bloom In Japan, where there are many famous plum gardens, the feathery blossoms are much used in decoration The plum is also of ornamental value in the United States, many of the varieties so used having red or purple foliage and double white, pink, or lilac flowers See also MYROBALAN and PRUNE See U P Hedrick, *Fruits for the Home Garden* (1944)

plumage, of birds see FEATHERS

plumb. The use of a cord weighted at one end to determine a true vertical line was known to mechanics in Egypt, Greece, Rome, and other ancient nations The plumb has not changed essentially, but the SPIRIT LEVEL has superseded it in some of its uses See Thomas Hibben, *The Carpenter's Tool Chest* (1933)

plumbago · see GRAPHITE

plumbing, the part of the water supply and the sewerage inside buildings. The use of piping for conveying water from a source of supply and for the disposal of wastes was introduced first by the Romans, but the practice was lost during the Middle Ages For centuries all refuse was thrown into open drains which ran through the center of the streets After sanitary systems were adopted, pipes were long made of lead, hence the name plumbing from the Latin word *plumbum* for lead Later iron or steel pipes were used for water supply and cast-iron pipes for sewage In modern buildings the piping for water supply is usually made of brass and is concealed inside partitions or walls Exposed piping under fixtures (e g , in basins) is usually made of nickel or chromium-plated brass In tall buildings where the water pressure cannot reach the upper floors, a storage tank is erected on the roof The water is pumped into it and then fed to the fixtures in the building The first storage tanks were made of wood and were exposed on the roofs, in modern houses they are fabricated of steel and are often enclosed in ornamental towers Waste and soil piping must be impervious to water and gas. Absence of corners, where filth may collect, is essential A water-sealed trap is installed between each fixture and the piping The traps are protected from gas pressure and siphoning To prevent siphon action venting is often used This consists of a second system of piping, made of galvanized iron, carried from fixtures to a point on top of the roof and connected with the water and sewage piping on the sewer side of the traps This system balances the air pressure on each side of the traps, stops siphoning action, and permits a free circulation of air through the piping and dissipation of any sewer air which may be present

plumbism. see LEAD POISONING

Plumptre, Edward Hayes (plŭmp'trē), 1821–91, English clergyman and classical scholar At King's College, London, he was chaplain (1847–68), professor of pastoral theology (1853–63), and professor of New Testament exegesis (1863–81) In 1863 he became a prebendary of St Paul's, London In 1881 he was made dean of Wells Plumptre was one of the revisers (1869–74) of the Old Testament His hymns include *Rejoice, Ye Pure in Heart* (1865) Among his publications are *Lazarus and Other Poems* (1864), *Master and Scholar* (1866), and *Things New and Old* (1884) He made standard translations of the plays of Sophocles (1865, rev ed , 1867) and Aeschylus (1868) and of Dante in *Commedia and Canzoniere* (1886–87)

Plunket, Oliver (plŭng'kĭt), 1629–81, Irish churchman and martyr, b Co Meath He was educated at Rome and named Roman Catholic archbishop of Armagh in 1669 He was on good terms with local Protestants and worked with much success After the Test Act (1673) he kept mainly in hiding In his fabrication of tales about the Popish Plot, Titus Oates accused him of planning a foreign invasion of Ireland He was taken to London, tried, convicted, and hanged, drawn, and quartered The proceedings were manifestly false from beginning to end Plunket was the last Roman Catholic to be executed at Tyburn on politico-religious grounds He was beatified in 1920 Feast July 11

Plunkett, Sir Horace Curzon (plŭng'kĭt), 1854–1932, Irish statesman and agricultural reformer Educated in England, Plunkett spent 10 years (1879–89) in Wyoming as a cattle rancher. He returned to Ireland and there became an ardent exponent of farming cooperatives He founded (1894) the Irish Agricultural Organization Society and as a member of Parliament (1892–1900) drafted legislation for Irish agricultural needs From 1900 to 1907 he served as vice president of the new department of agriculture for Ireland He was a prominent mediator in the Irish uprisings prior to and during the First World War, serving (1917–18) as chairman of the Irish convention founded to effect a peaceful settlement of the outbreaks He wrote *Ireland in the New Century* (1904), *The Rural Life Problem in the United States* (1910), and numerous pamphlets See R A Anderson, *With Horace Plunkett in Ireland* (1935), Margaret Digby, *Horace Plunkett, an Anglo-American Irishman* (1949)

pluralism, in philosophy, a theory which sees the universe controlled by many principles or composed of many ultimate substances It describes no particular system and may be embodied in such opposed philosophical concepts as materialism and idealism Since it has no distinct features its definitions are vague and debatable However, Empedocles, Leibniz, and William James are among the philosophers generally considered as pluralistic

Plutarch (plōō'tärk), A D 46?–A D c 120, Greek essayist and biographer, b Chaeronea, Boeotia He traveled in Egypt and in Italy, visited Rome (where he lectured on philosophy) and Athens, and finally returned to his native Boeotia, where he became a priest of the temple of Delphi His great work is *The Parallel Lives*, 46 biographies (surviving of a greater number) arranged in pairs (one Greek life with one comparable Roman) and four single biographies, some 19 short comparisons added to the lives are of doubtful authenticity Though there is evident pride in the culture and in the greatness of the men of his Greece, Plutarch is nevertheless fair and honest in his treatment of the Romans As a biographer Plutarch is almost peerless, his facts are not always accurate, but his biographical pictures are whole, real, profoundly incisive Since his purpose was to portray character and reveal its moral implications, his technique included the use of much anecdotal material, always germane to his purpose His dignity, narrative charm, and even his ever-present moral judgments have made Plutarch a much-loved and widely read writer The English translation by Sir Thomas NORTH had a profound effect upon English literature, it supplied, for example, the factual bases for Shakspere's *Coriolanus*, *Julius Caesar*, *Antony and Cleopatra*, and *Timon of Athens* Less known, but also of great charm and interest, are Plutarch's *Moralia*, dialogues and essays on ethical, literary, and historical subjects, some of the titles are *The Late Vengeance of the Deity*, *On Superstition*, *The Right Way of Hearing Poetry*, and *Advice to Married Couples* Plutarch's quotations (frequent and long) from the old dramatists are often our only record of such writings

Pluto (plōō'tō) [Gr , = rich], in Greek religion, god of the underworld He is also called Hades and, by the Romans, who derived him from Greece, Dis or Dis Pater He ruled Hades (see HELL), and his queen was PERSEPHONE

Pluto, in astronomy, a planet discovered (1930) by Clyde W Tombaugh, working on reckonings made (1914) by Percival Lowell from perturbations in the orbits of Neptune and Uranus Pluto is the ninth major planet, revolving around the sun once in about 248 years, in an orbit outside that of Neptune, at a mean distance of 3,670,000,000 mi from the sun It is of the 15th magnitude, it is not known whether it is dim because it is small or because its surface reflects poorly Although it has been generally considered to be smaller than the earth, some think that it may be larger Its orbit's eccentricity (0 25) is the greatest in the solar system, and when it is nearest the sun, it is nearer than Neptune As the inclination of its orbit to the ecliptic is very high (17°8'57"), its path and that of Neptune do not cross each other

plutonium (plōōtō'nēum), metallic element (symbol = Pu, for physical constants, see ELEMENT, table), having the property of RADIOACTIVITY In 1940 G T Seaborg and his co-workers at the Univ of California produced, in the cyclotron, an infinitesimal quantity of plutonium by fission of uranium Through tracer chemistry (studying invisible amounts of radioactive elements in their progress through chemical reactions by means of a Geiger counter) the properties of the substance were established before large-scale production ensued in 1944 Within massive atomic "piles" (combinations of uranium and a moderator), at Hanford, Wash , uranium of atomic weight 235 as a result of a process of fission emitted neutrons which were captured by uranium of atomic weight 238 to produce the unstable uranium (atomic weight 239) whose disintegration yields plutonium The process employs graphite as a moderator to slow down the neutrons sufficiently for them to be engaged by uranium of atomic weight 238. Once begun, the reaction in the pile proceeds automatically until the rods of uranium have become rods of uranium-plutonium mixture Dissolved in acid, the mixture is made to yield pure plutonium by chemical means. One of the three atomic bombs of the Second World War was made with plutonium

Pluviôse. see FRENCH REVOLUTIONARY CALENDAR

Plymouth (plĭ'muth), county borough (1931 pop 208,182; 1947 estimated pop 185,380) and city, Devonshire, England, on PLYMOUTH SOUND It is a seaport and naval base The Three Towns which Plymouth has comprised since 1914 are Plymouth to the east, Stonehouse (with barracks, a naval hospital, and the extensive Royal William Victualling Yard), and Devonport (with a naval engineering college, naval barracks, and military hospital) across Stonehouse Pool Plymouth carries on an important commercial trade in minerals (tin, copper, and lead), granite, marble, kaolin, and fish, distills gin, and manufactures paint and oleomargarine It is well situated on a promontory between inlets of the harbor—Sutton Pool and Mill Bay The ridge of the promontory is called the Hoe At its extremity are the old Royal Citadel (17th cent), the upper part of Smeaton's lighthouse brought from Eddystone, an Armada memorial, a statue of Sir Francis Drake, and a naval war memorial Beneath the Hoe are a promenade and a beach. Noteworthy also are the marine biological laboratories, the aquarium, the municipal museum and the Athenaeum, the Gothic guildhall, several 15th-, 16th-, and 17th-century churches, and the Roman Catholic cathedral Plymouth was held by the parliamentarians for four years in the civil war, when the rest of Devonshire and Cornwall were royalist The port was the rendezvous of the anti-Armada fleet From it Drake, Hawkins, Ralegh, and several later explorers set forth, it was the last port touched by the *Mayflower* before its American voyage The first English factory making porcelain like that of the Chinese was established here in 1768 by William Cookworthy A tablet commemorates the arrival in 1919 of the first transatlantic airplane In air raids of March, 1941, whole sections of the city were destroyed by high-explosive and incendiary bombs, there were many casualties, and eight churches, the royal naval hospital, and a number of historic landmarks were destroyed Robert Falcon Scott was born in Devonport See C W Bracken, *A History of Plymouth* (1931)

Plymouth 1 Town (pop 6,043), W Conn , N of Waterbury, settled 1728, inc 1795 Locks and other metal products are made here 2 City (pop 5,713), co seat of Marshall co , N Ind , S of South Bend, settled 1834, inc 1872 It is a shipping and trading center and produces automobile parts Lakes near here are popular as resorts The Potawatami Indians had a village on this site 3 Town (pop 13,100), co seat of Plymouth co , SE Mass , on Plymouth Bay SE of Boston Here was made the first permanent white settlement in New England (see PILGRIMS and PLYMOUTH COLONY) Most famous of its monuments is Plymouth Rock, since 1880 on its original site Legend has it that on this boulder the Pilgrims stepped when they disembarked from the *Mayflower* Along Leyden St , the first laid out by the Pilgrims, are old houses Pilgrim Hall contains many relics Near the site of the original village is the 80-foot granite *National Monument to the Forefathers* (1889) Modern Plymouth is much visited as a resort It is a port of entry and has a few industries, rope, twine, and worsteds are the chief products 4 Industrial city (pop 5,360), SE Mich , on a branch of the Rouge and W of Detroit, settled 1825, inc as a village 1867, as a city 1932 Its manufactures include air rifles and automobile parts A county school for the feeble-minded and a women's prison are near 5 Resort town (pop 2,533), central N H , on the Pemigewasset and S of Franconia Notch, inc 1763 Plymouth Teachers College was the first normal school established (1871) in the state The town's old buildings include the courthouse (now a library), where Daniel Webster pleaded his first case Hawthorne died in Plymouth 6 Town (pop 2,461), co seat of Washington co , NE N C , on the Roanoke river near the head of Albemarle Sound, founded in the late 18th cent , inc 1800 It is a canning and lumber-processing center in a truck and timber area In the Civil War, Lt W B Cushing destroyed (Oct , 1864) the Confederate ram *Albemarle* here 7 Village (pop 1,403), N Ohio, NW of Mansfield, settled 1815, inc 1838 Railroad equipment is made 8 Industrial borough (pop 15,507) NE Pa , on the Susquehanna and SW of Wilkes-Barre, inc 1866 Anthracite is mined here, and factories distill its by-products Plymouth was inundated by flood in 1940 9 Town (pop 432), S central Vt , in hills SE of Rutland Calvin Coolidge was born here, and the farmhouse where he took the oath of office is near by He is buried in the local cemetery A state forest near the village is named for him The town yielded iron and some gold in the 19th cent 10 Industrial city (pop 4,170), E Wis , between Sheboygan and Fond du Lac and on the Mullet, inc 1877. It is a cheese center and the seat of the Wisconsin Cheesemakers' Association and the Wisconsin Cheese Exchange

Plymouth Brethren, sect of Christian believers originating in the early 19th cent. in Ireland and spreading from there to the Continent, the British dominions, and the United States. The members are sometimes known as Darbyites, one of their notable leaders was John Nelson DARBY. They refer to themselves as Brethren, Christians, or Believers In a reaction against the formality of prescribed ritual, the requirements of ministerial ordination, and other established conditions in the churches of the times, groups of believers began to meet independently in Dublin and elsewhere for

spiritual communion. Associations were formed c.1828 in Dublin and c.1830 at Plymouth, England, whence the popular name Plymouth Brethren Congregations grew up under the guidance of different leaders. Since there was no general organization, no required form of worship, and no ordained ministry, the feeling of individual responsibility was strong. Followers of different leaders withdrew from time to time from the main body to form new congregations. This tendency to divide was carried over into the United States and Canada by the emigrants, who established new meetings of the Brethren there. In the United States there are eight separate divisions, some of the "exclusive" and some of the "open" type. The doctrines accepted in general are those held by evangelical Christians. The Scripture is considered the only true guide. No officers are chosen to preside over the congregations, the privileges and duties of the ministry depend upon the personal gift of the individual member. Baptism is required, the Lord's Supper, as a commemorative act of "breaking bread," is observed once a week. The Brethren expect the personal premillennial second coming of Christ. See W. B. Neatby, *A History of the Plymouth Brethren* (1901).

Plymouth Colony, settlement made by the PILGRIMS on the coast of Massachusetts in 1620. Previous attempts at colonization in America (1606, 1607–8) by the Plymouth Company, chartered in 1606 along with the LONDON COMPANY, were unsuccessful and resulted in the company's inactivation for a number of years. In 1620 the company, reorganized as the Council for New England, secured a new charter from the king, granting it all the territory from lat. 40° N. to 48° N. and from sea to sea. Also in 1620 the Pilgrims, having secured a patent granting them colonization privileges in the territory of the London Company, left Leiden and proceeded to Southampton, where the MAYFLOWER was fitting out for Virginia. The *Mayflower* sailed from Plymouth, England, and in Nov., 1620, sighted the coast of Cape Cod instead of Virginia. After five weeks spent in exploring the coast, the ship finally anchored in Plymouth harbor and the Pilgrims established a settlement there. As the patent from the London Company was invalid in New England, the Pilgrims drew up an agreement called the Mayflower Compact, which pledged allegiance to the king but established a somewhat democratic form of government. Patents were obtained from the Council for New England in 1621 and in 1630, but the Mayflower Compact remained the basis of the colony's government until union with Massachusetts Bay colony in 1691. During the first winter of the colony, about half of the settlers died from scurvy and exposure. A little corn was raised in 1621, but the arrival of more colonists necessitated half rations. John CARVER, the first governor, died in 1621, when William BRADFORD assumed the post and served, except for the five years he refused the position, until his death in 1657. A treaty made in 1621 with Massasoit, chief of the Wampanoag, resulted in 50 years of peace with that tribe. The Narragansett farther west were hostile, but Bradford took a firm stand and prevented trouble from that quarter. In 1623 Capt. Miles STANDISH marched against the Indians to the northwest, who were accused of plotting to exterminate the colonists settled at Weymouth by Thomas Weston. The Indians were gradually pushed back and deprived of their lands. A communistic system of labor, adopted for seven years, was abandoned in 1623 by Bradford because it was retarding agriculture, and land was parceled out to each family. A well-managed fur trade enabled the colony to liquidate its debt to the London merchants who had backed the venture. The colony, which developed into a quasi-theocracy, expanded slowly due to the infertility of the land and the lack of a staple money-making crop. After several years the colonists could no longer be restrained from settling on the more productive land to the north, and settlements such as Duxbury and Scituate, modeled on the civil and ecclesiastical style of Plymouth, were founded. In 1633 Plymouth established a fort on the Connecticut river above a Dutch post in order to intercept the Indian trade, but this was soon absorbed by the wave of Puritan settlers from Massachusetts Bay colony. In 1640 a boundary dispute with Massachusetts was settled by compromise. With the growth of additional towns, a representative system was introduced in 1638, using the town as a unit of government and establishing the General Court, along with the governor and his council, as the lawmaking body. In 1641 Bradford deeded to the freemen of the Plymouth Corp. the patent of 1630. By the time the colony joined the NEW ENGLAND CONFEDERATION in 1643, 10 towns had been established. The colony became part of the Dominion of New England under the governorship of Sir Edmund ANDROS. After the Glorious Revolution of 1688–89 in England, the territory which had been under Andros's authority was reorganized, and Massachusetts Bay, Plymouth, and Maine became the one royal colony of Massachusetts. See N. B. Shurtleff and David Pulsifer, ed., *Records of the Colony of New Plymouth in New England* (12 vols., 1855–61); J. G. Palfrey, *History of New England* (5 vols., 1858–90); L. G. Tyler, *England in America, 1580–1652* (1904); H. L. Osgood, *The American Colonies in the Seventeenth Century* (3 vols., 1904–7); Edward Channing, *A History of the United States*, Vols. I and II (1905–8); Arthur Lord, *Plymouth and the Pilgrims* (1920); J. T. Adams, *The Founding of New England* (1921); C. M. Andrews, *The Colonial Period of American History*, Vol. I (1934); G. F. Willison, *Saints and Strangers* (1945).

Plymouth Sound, deep inlet of the English Channel, between Devonshire and Cornwall, England. It is a famous roadstead and forms a bay c. 3 mi. broad, receiving the Tamar river through its estuary the Hamoaze and the Plym through its estuary the Cattewater. Breakwaters further protect the harbor, west and east. St. Nicholas's, or Drake's, is an islet off the Hoe of PLYMOUTH. The sound has been protected by forts for centuries.

Plympton Saint Mary (plĭmp'tŭn), rural district (pop. 26,790), Devonshire, England. It includes the two small adjacent towns of Plympton St. Mary and Plympton Maurice, or Earl's Plympton. There are a ruined Norman castle, two 15th-century churches, part of an ancient Augustinian priory, a guildhall founded in 1696, and a 17th-century grammar school, of which Sir Joshua Reynolds's father was master.

Plynlimmon, Wales: see PLINLIMMON.

plywood (plī'wo͝od), three or more plies of wood glued together under pressure with the grains at right angles. It is distinguished from laminated wood, which is made of veneers laid up in one direction. It is noted for strength, durability, lightness, rigidity, and resistance to splitting and warping. It can be molded into curved or irregular forms for use in truck, airplane, and boat bodies, luggage, furniture, and tubing, or it can be made into large panels suitable for structural use. Plywood was made in antiquity in Egypt and China. It was first patented in the United States in 1865. Since c. 1932 waterproof synthetic resins have been used for bonding the layers and sometimes as a coating, especially for plywood destined for exterior use. Honeycomb, metal, or fabric cores may be substituted for the usual wood core. See L. H. Meyer, *Plywood* (1947).

Plzn, Czechoslovakia: see PILSEN.

Pm, chemical symbol of the element PROMETHIUM.

pneumatic appliances and tools (no͞omă'tĭk, nū-). The advantages of COMPRESSED AIR as a means of power have led to its application to a great variety of tools and appliances. Pneumatic tools are of two general types, percussion tools and reciprocating-motor-driven tools. Percussion tools employ a piston striking a rapid succession of blows, in the reciprocating-motor-driven tools the spindle, in which the tool is held, is revolved by gearing actuated by a reciprocating piston. Pneumatic hammers are of the percussion type. In operation the air enters through the handle, where there is a valve controlled by a trigger. By an arrangement of internal valves a piston or plunger is operated. For rivet-driving, the pneumatic hammer is in universal use. Pneumatic rivet sets are used to hold the head of the rivet in place while the point is being hammered down. Pneumatic hammers are adaptable to many other uses, including metal chipping, joint caulking, and removing scale, paint, and rust. Rock drills, worked on the same principle as the pneumatic hammer, are used for road construction work and for boring holes for blasting operations in mining, shaft sinking, and quarrying. Among the reciprocating-motor-driven tools are pneumatic drills, grinders, buffers, wood borers, and hoists. The body of a drilling machine contains the mechanism, and from the bottom extends the revolving socket for holding the tool. On each side are handles by which the operator holds the machine, one handle being hollow and connected with the air line. Within the handle is a valve controlling the air supply. In the machine shop, pneumatic appliances are manifold. Air lifts are placed over lathes and other machines so that one man can handle large pieces of machinery with ease. Chucks for turret lathes, presses, riveting machines (portable and stationary), drilling and tapping machines of all types, saws, vises, and a great variety of other tools are actuated freely and efficiently by compressed air. In the forge shop forging hammers and drop hammers driven by air are widely used, while in boiler and structural shops large stationary pressing, bending, punching, and grinding machines all actuated pneumatically are employed. Machines for cleaning, called blow guns, are used to clean machinery and corners inaccessible with an ordinary brush. They have also superseded the bellows for blowing forges and heating devices. Where much painting is required, the air brush has supplanted the hand brush. The application of paint, varnish, enamel, whitewash, and other protective coatings by spraying with an air brush, besides being much more rapid, gives a smooth uniform coat and the material enters all cracks and crevices. Air brushes are of two general types, the high pressure and the low pressure. In the high-pressure type the paint is drawn from a container by the vacuum created by a blast of air passing the tube leading to the container and is carried forward and sprayed on the work. In the low-pressure type air is admitted into the container and the paint is forced out through a nozzle by the air pressure thus created. The air gun is a type of weapon in which compressed air is used as the propelling force for the bullet. When the trigger is pulled, a portion of the air is released in an enclosure behind the bullet, and the bullet is expelled from the barrel by the expansion of the air. See handbook of the Compressed Air Institute (1947).

pneumonia (no͞omō'nyu), inflammation of the lungs. Parts of one or both lungs are affected by either bacterial or virus infection. Symptoms of pneumonia are sudden chills accompanied by fever, pain on breathing, and coughing. The disease is often complicated by pleurisy, empyema, and other serious conditions. In primary or lobar pneumonia, the pneumococcus is the chief offender. In the early phase of the disease the patient is critically ill, but after a few days there is usually sudden change for the better. It is believed that the general improvement in the patient results from the development in the body of enough antibodies to conquer the disease. This turning point has often been called the "crisis." Secondary pneumonia or bronchopneumonia is very often a complication of some other disease, sometimes it develops after whooping cough and measles in children. Careful nursing during the course of the disease is an important factor in recovery. A relatively mild case of the disease, believed to be caused by a virus, is called atypical pneumonia. Susceptibility to colds, influenza, and other infections of the respiratory tract may lead to pneumonia, which occurs most commonly in winter and spring. The use of sulfa drugs and penicillin has reduced the mortality rate considerably.

Pnom Penh (nŏm'pĕn', punŏm'pĕn'), city (pop. 102,678), capital of Cambodia, on the right bank of the Tonle Sap river at its confluence with the Mekong. Situated 173 mi. from the sea, it has a port able to receive ships with a draught of 15 ft. and carries on trade in cattle, rice, and dried fish. Founded in the 14th cent., it was the Khmer capital in the 15th cent., after the abandonment of Angkor, and became the capital of Cambodia in 1867.

Po, Latin *Padus*, 405 mi. long, largest and longest river of Italy, forming the widest and most fertile valley of the country. Rising from Monte Viso in the Cottian Alps, it winds generally E. through Piedmont, then separates Lombardy and Venetia from Emilia, and empties in the Adriatic. Its delta pushes farther into the sea each year. The most important of its numerous tributaries, the Dora Baltea, the Ticino, the Adda, and the Mincio, all come from the Alps, those descending from the Apennines are much smaller. The river is navigable from Casale Turin, Piacenza, and Cremona are the largest cities along its banks.

Po, chemical symbol of the element POLONIUM.

Pobyedonostzev, Konstantin Petrovich (kŏnstuntyēn' pĕtrô'vĭch pŭbyĕdŭnôs'tsyĭf), 1827–1907, Russian statesman and jurist. As professor of civil law at Moscow (1860–65), he attracted the tsar's attention and was appointed tutor to the future Alexander III. From 1880 to 1905, as procurator of the holy synod, he founded parochial schools to unify religious belief, influenced Alexander to persecute nonconformists, and aimed to create a moral and learned clergy. He was the proponent of Russification of subject peoples and believed in suppression of liberal agitation. His influence declined under Nicholas II. In his *Reflections of a Russian Statesman* (Eng. tr., 1898), he developed his criticism of Western rationalism and liberalism, revealing a political philosophy resembling that of Edmund Burke and Joseph de Maistre. He wrote a three-volume work on Russian civil law.

Pocahontas (pōkəhŏn'təs), c. 1595–1617, daughter of the American Indian chief POWHATAN. Pocahontas, meaning "playful one" (her real name was said to be Matoaka), used to visit the English in Virginia at Jamestown. The authenticity of the famous story of how she saved the life of the captured Capt. John SMITH, just as he was about to have his head smashed at the direction of Powhatan, is still disputed among historians. In 1613 Pocahontas was captured by Capt. Samuel Argall, taken to Jamestown, and held as a hostage for English prisoners in the hands of her father. At Jamestown she was converted to Christianity and baptized as Rebecca. John ROLFE, a settler, fell in love with Pocahontas, and with the permission of the governor, Sir Thomas Dale, and Powhatan married her in April, 1614. The union brought peace with the Indians for eight years. With her husband and several other Indians, Pocahontas went to England in 1616. There she was received as a princess and presented to the king and queen. She started back to America in 1617 but was taken ill and died at Gravesend, where she was buried. Pocahontas bore one son, Thomas Rolfe, who was educated in England, came (1640) to Virginia, and gained considerable wealth. Many claim descent

from his daughter, Jane, who married Robert Bolling See J G. Fletcher, *John Smith—also Pocahontas* (1928)

Pocahontas. 1 City (pop 3,028), co seat of Randolph co , NE Ark., on the Black River, in a farm area. Shoes are made here 2 Town (pop 1,730), co. seat of Pocahontas co , NW Iowa, NW of Fort Dodge and on Lizard Creek; inc 1892 3 Coal-mining town (pop 2,623), SW Va , near the W Va line NW of Bluefield, W Va., in the Alleghenies, founded 1882, inc 1884. The only exhibition coal mine in the world is here

Pocatello (pōkutĕ'lō), city (pop. 18,133), co. seat of Bannock co , SE Idaho, on the Portneuf, a tributary of the Snake, inc as a village 1889, as a city 1902. Begun as a railroad junction in 1882, it was settled in 1887–88 and is now the second largest city in Idaho, a large shipping point for dairy and farm products of surrounding irrigated areas, and still a railroad center Fort Hall Indian Reservation with its irrigation project is to the north, old Fort Hall was on the Snake to the northwest Idaho State College is at Pocatello

Poccetti, Bernardino (bĕrnärdē'nō pōtchĕt'tē), c 1542–1612, Florentine landscape and figure painter, whose real name was Bernardino Barbatelli He was noted for his mural decorations and grotesques, painted chiefly for palaces and churches in Florence and other Tuscan cities

Pochereth (pŏ'kûrĕth), family returned from exile. Ezra 2 57, Neh 7 59.

Po Chü-i (bō' jōō-ē'), 772–846, Chinese poet He passed the final civil service examination at the very early age of 17, and he occupied several important posts, rising (841) to the presidency of the imperial board of war He wrote over 3,000 poems, mostly topical and quite short Some of his poetry deals with the grief he suffered on being separated from his friends by the periodic shifting of officials about the country Perhaps his most noted poem is *The Everlasting Wrong* (806), which recounts the sufferings of Emperor Ming Huan (685–762) on the murder of his concubine by rebels Po Chü-i continued to write despite partial paralysis and arthritis, and he had the satisfaction of enjoying great fame during his lifetime See Arthur Waley, *The Life and Times of Po Chü-i, 772–846* (1949).

pocket gopher. see GOPHER

Pococke, Edward (pō'kŏk), 1604–91, English Orientalist, grad Corpus Christi College, Oxford (B A , 1622; M A , 1626) Ordained a priest in 1629, he resided at Alep as a chaplain, where he collected manuscripts and pursued his studies He made a Latin translation of the work of Bar-Hebraeus, part appearing as *Specimen historiae Arabum* (1650) and a fuller version as *Historia compendiosa dynastarum* (1663) He also wrote commentaries on Hosea, Joel, Micah, and Malachi The name appears also as Pocock

Pocomoke City (pō'kumōk), town (pop 2,739), Eastern Shore, Md , on the Pocomoke river near the Va border, in a farm area, founded c 1700

Pocono Mountains (pō'kunō), range forming part of the Appalachian system, E Pa , NW of Stroudsburg in Monroe and Carbon counties, c.2,000 ft high Scenic beauty and the climate make the Pocono a resort area

pod or legume (lĕ'gūm, lĭgūm'), fruit of a member of the legume family The pod is the developed single, simple pistil having two valves within which the seeds are attached in a row along one suture When the seeds are mature, the pod splits along both edges and thus the seeds are released Pods are produced by some herbivorous plants (e.g , the bean and the pea) and by a few woody plants (e g , acacia, locust, and mimosa)

Podebrady, Czech *Poděbrady* (pō'dyĕbrădĭ), city (pop. 10,540), central Bohemia, Czechoslovakia, on the Elbe The castle, founded in the 12th cent , was the birthplace of GEORGE OF PODEBRAD The discovery of mineral springs here (1905) made Podebrady a spa for heart diseases

Podgorica, Yugoslavia. see TITOGRAD.

Podkarpatska Rus: see RUTHENIA.

Podmokly (pŏd'mōkl̆ĭ), Ger *Bodenbach* (bō'dunbukh), city (pop. 17,558), N Bohemia, Czechoslovakia, a port on the Elbe The export center of a coal-mining region, it has several industries, notably production of machinery.

Podolia (pōdō'lyu), region, W central Ukraine, between the Dniester and Southern Bug rivers. Mogilev-Podolski, Kamenets-Podolski, Vinnitsa, and Proskurov are the chief centers of the predominantly agricultural region Podolia was part of Kievan Russia from the 10th cent and after the 13th cent was ruled in succession by the Tatars, the Lithuanians, the Poles, the Turks, and again the Poles, until in 1793 it passed to Russia in the second partition of Poland Centuries of warfare among its various rulers kept the country in a backward state A large Jewish minority had settled here in the Middle Ages They were severely persecuted in the pogroms of the late 19th and early 20th cent and suffered still worse when the region was occupied (1941–43) by the Germans in the Second World War

Poe, Edgar Allan (pō), 1809–49, American author and critic, b. Boston, of actor parents When his widowed mother died in Richmond in 1812, John Allan, a Richmond merchant, took the boy, without adoption, and educated him in schools in England (1815–20) and in Richmond (1820–26) and for eight months at the Univ of Virginia Poe's brilliant scholastic record did not outweigh his gambling debts in Allan's mind, and Poe was forced to leave the university. After a quarrel with Allan, Poe went to Boston, where his first book, *Tamerlane and Other Poems* (1827), appeared anonymously He enlisted in the army in May, 1827, and served until April, 1829, when his somewhat reconciled foster father obtained his honorable discharge and an appointment for him in 1830 to West Point During the interval in 1829, Poe brought out *Al Aaraaf, Tamerlane, and Minor Poems.* When Allan remarried, Poe lost all hope of assistance from him and with it his own interest in army life He broke enough minor rules to be dismissed from West Point, published his *Poems* (New York, 1831), and went to Baltimore to live with his aunt, Mrs. Clemm, and her daughter Virginia Without a profession or financial resources except occasional sales of his short stories, Poe hoped to start a magazine of contemporary American writing In 1835 J. P. Kennedy helped him to become an editor of the *Southern Literary Messenger* in Richmond, in spite of able writing, he failed because of his drinking Even mild indulgence made him incapable of work In 1836 he married his child cousin, Virginia Clemm, and in 1837 they went to New York, where he published *The Narrative of Arthur Gordon Pym* (1838). From 1838 to 1844 he lived in Philadelphia, editing Burton's *Gentleman's Magazine* (1839–40) and *Graham's Magazine* (1841–42) His criticism in these magazines and in the *Messenger* was both just and caustic and made him respected and feared Some of his magazine stories were collected as *Tales of the Grotesque and Arabesque* (1840) At this time he began writing mystery stories "The Murders in the Rue Morgue," "The Purloined Letter," and others which rank at the top of their genre, in 1843 "The Gold Bug" brought a prize of $100 The Poes and Mrs Clemm in 1844 moved to New York, where Poe worked on the *Evening Mirror* and then was editor and later owner (on borrowed money) of the *Broadway Journal* In 1845 *The Raven and Other Poems* won him fame here and abroad as a poet In 1846 he moved to the Fordham cottage which is now a museum and there wrote "The Literati of New York City" for *Godey's Lady's Book* After Mrs Poe died in 1847, Poe fell in love successively with several women and was once engaged to marry the poet Sarah Helen WHITMAN of Providence (she was the subject of his second poem with the title "To Helen") In 1849, in Richmond, he planned to marry his boyhood sweetheart, the widowed Elmira Shelton On his way north to bring Mrs Clemm to the wedding, he was by some means started on a drinking debauch in Baltimore, there he died and is buried Poe's literary executor, R W GRISWOLD, overemphasized Poe's personal faults and distorted his letters However, Poe was recognized as a great writer of short stories and a critic and expositor of the art of writing Especially in France he has been admired and studied His poetry is full of haunting melancholy, fantastic imagery, and persistent melody and rhythm, its form is almost perfect in such poems as "To Helen," "Israfel," "The Raven," "The Bells," "The Sleepers," "The City in the Sea," "Ulalume," and "Annabel Lee " In his day his concern with beauty to the exclusion of an ethical message was not generally understood, later generations gave him a higher place than did his own See his complete poems and stories (ed by H E Quinn and E H O'Neill, 1947) and his letters (ed by J W Ostrom, 1948), Killis Campbell, *The Mind of Poe* (1933), biography by A. H. Quinn (1941)

poet laureate (lō'rĕĭt), title conferred in England by the king on a poet whose duty it is to write commemorative odes and verse It is an outgrowth of the medieval custom of having versifiers and minstrels in the king's retinue and the later royal patronage of poets, such as Chaucer and Spenser Ben Jonson seems to have had what amounted to the laureateship from Charles I in 1617, but the title of laureate, adopted from the Greek and Roman custom of crowning with a wreath of laurel, was first given to John Dryden in 1670 His successors have been Thomas Shadwell (1688–92), Nahum Tate (1692–1715), Nicholas Rowe (1715–18), Laurence Eusden (1718–30), Colley Cibber (1730–57), William Whitehead (1757–85), Thomas Warton (1785–90), Henry Pye (1790–1813), Robert Southey (1813–43), William Wordsworth (1843–50), Alfred, Lord Tennyson (1850–92), Alfred Austin (1892–1913), Robert Bridges (1913–30), and John Masefield (1930–) See E. K Broadus, *The Laureateship* (1921)

poetry (pō'utrē) For lyric poetry, see BALLAD, ELEGY, HYMN, LYRIC, ODE, PASTORAL, SONNET For narrative poetry, see CHANSONS DE GESTE, EPIC, IDYL, ROMANCE Dramatic poetry is incidentally treated in the articles DRAMA, MASK, and TRAGEDY See also articles on individual poets and on various national literatures For technical discussions of poetry, see FREE VERSE, RHYME; VERSIFICATION

Pogany, Willy (William Andrew Pogany) (pōgä'nē), 1882–, American artist, b. Hungary, studied in Budapest, Munich, and Paris He is well known as an illustrator (especially of children's books), a mural painter, a designer of stage sets, and an art director of moving pictures. Mural paintings by Pogany are in the Children's Theatre of the Heckscher Foundation, New York; Convention Hall, Atlantic City, N.J., and the building of the Niagara Falls (N.Y.) Power Company He has illustrated editions of Lewis Carroll's *Alice in Wonderland*, Swift's *Gulliver's Travels*, Omar Khayyam's *Rubaiyat*, Padraic Colum's *Children's Homer*, and collections of fairy tales.

Poggendorff, Johann Christian (yō'hän krĭs'tyän pō'gundôrf"), 1796–1877, German physicist and chemist He founded (1824) and edited the important *Annalen der Physik und Chemie* and edited the first two volumes (1863) of *Biographisch-literarisches Handwörterbuch*

Poggio Bracciolini, Gian Francesco (jän' fränchä'skō pōd'jō brät"chōlē'nē), 1380–1459, Italian humanist He was apostolic secretary and subsequently (1453–58) chancellor of Florence Many classical works, including Lucretius' *De natura rerum* and Quintilian's *Institutio oratorica*, were discovered by him He is now best known as author of the *Facetiae* (1474, Eng tr , 1928), a collection of tales sometimes obscene Poggio's satires are virulent and often indecent, his controversies with Lorenzo Valla and Francesco Filelfo were sensational

Pogodin, Nikolai Feodorovich (nyĭkùlī' fyô'dûrùvĭch pŭgô'dyĭn), 1900–, Russian dramatist Of a peasant family, he went to work at an early age, as a farm laborer, an ironworker, and a bookbinder His plays, of which about one a year were presented after 1930, draw on his experiences as a worker, and the scenes are laid in Soviet factories or on collective farms They are humorous and optimistic in tone Among the most popular are *Tempo* (1930, Eng tr , 1936), *After the Ball* (1934), *Aristocrats* (1935, Eng tr , 1937), *The Man with the Gun* (1937; Eng tr , 1938), *The Headwoman* (1944), of the siege of Stalingrad, and *The Creation of the World* (1945)

pogrom (pō'grum, pōgrŏm'), Russian word, originally meaning literally a riot It has come, however, to be applied to attacks on Jews in Russia or Russian-controlled countries Pogroms were few before 1881, but after the assassination of Alexander II, with the connivance of the government or at least without hindrance, there were many pogroms throughout S and SW Russia In many places soldiers and police looked on without interference. These pogroms occasioned the first Russian-Jewish emigration to the United States After 1882 there were no pogroms for 20 years, but in 1903 at Kishinev for three days at Easter there was an extremely violent pogrom Plehve, the minister of the interior, was particularly hostile to the Jews After the abortive revolution of 1905, pogroms increased in number and violence as the government attempted to direct the revolutionary anger of the masses toward the Jews After the Bolshevist Revolution there were pogroms in the Ukraine and White Russia in 1920–21 by anti-Bolshevist groups

Pohai or P'o-hai (pō'hī'), arm of the Yellow Sea, indenting the coast of N China Shantung, Hopeh, and Liaoning provs border it on the south, west, and north respectively It was formerly called the Gulf of Chihli

poi, slightly fermented, sticky food paste eaten in the Pacific islands with meat or fish or as a porridge It is made by grinding or pounding the roasted, peeled roots of the TARO

Poincaré, Jules Henri (zhül' ärē' pwĕkärā'), 1854–1912, French mathematician, physicist, and author He was from 1881 connected with the faculty of sciences at the Univ of Paris One of the greatest mathematicians of his age, Poincaré by research in the theory of functions, especially the automorphic, Fuchsian, and Abelian functions, enlarged the field of mathematical physics He did notable work also in differential equations and the astronomical theory of orbits His works include *Les Méthodes nouvelles de la mécanique céleste* (3 vols , 1892–99) and three works (1902, 1904, 1908) published in English as *The Foundations of Science* (1913, reprinted 1947)

Poincaré, Raymond (rämō'), 1860–1934, French statesman, president of France (1913–20), cousin of Jules Henri Poincaré. He held numerous cabinet posts from 1890 to 1906, when he turned to practicing law for five years He returned to public life in 1912, becoming premier and foreign minister In 1913 he was elected to succeed Fallières as president A conservative and a nationalist, he tightened the French alliances and assumed a definitely anti-German policy. He made an official visit to Russia in 1912 and another in July, 1914, during the crisis that followed the murder of Archduke Francis Ferdinand and precipitated the First World War. During his stay at St. Petersburg he undoubtedly induced—if such inducement was necessary—the Russian foreign minister Sazonov to take a firm stand and gave Russia full assurance of French aid in case of war. After the war Poincaré called for harsh punishment of Germany and for adequate

guarantees of French security Regarding the Treaty of Versailles as too lenient, he resigned in 1920. Paul Deschanel succeeded him as president Poincaré continued in the senate, to which he had been elected in 1903, and became a leader of the Bloc National, a conservative party coalition This brought him to the premiership as well as the ministry of foreign affairs in 1922 He at once embarked on a policy of making Germany pay by declaring reparations in default and occupying the RUHR in 1923 He remained inflexible in the face of German opposition until his overthrow by Herriot in 1924 Returning to power again in 1926 in the midst of a grave financial crisis, he pursued an extreme deflationary policy, balancing the budget and securing (1928) the stabilization of the franc at one fifth of its former value He retired from office in 1929, but continued to preach the need for security and to proclaim his opposition to treaty revision Poincaré remains a controversial figure Some see in him a prophetic mind who foresaw and sought to prevent the rebirth of German militarism, others consider him responsible, by his intransigent nationalism, for the conditions which drove millions of Germans into Hitler's arms Among Poincaré's writings are *How France Is Governed* (Eng tr, 1919) and his memoirs (Eng tr, 1926) See Sisley Huddleston, *Poincaré* (1924), Gordon Wright, *Poincaré and the French Presidency* (1942)

poinciana (poinsēā'nu, -ā'nû), tropical shrub or tree of the pulse family It has long, bipinnate leaves and bears racemes of showy orange or scarlet flowers The fruits are long, flat pods The royal poinciana, or peacock flower, native to Madagascar, is one of the most striking of tropical trees, it is popular in the West Indies, S Florida, S California, and Bermuda It is a rapid-growing deciduous tree, reaching 20 to 40 ft in height and bearing scarlet flowers

Poindexter, George (poin'dĕk"stur), 1779–1853, American political leader, b Louisa co, Va Admitted (1800) to the bar, he practiced in Richmond, Va, and removed to Mississippi, where he took part in the efforts to bring Aaron BURR to trial He served (1807–13) in the U S Congress and later was (1813–17) U S district judge He was influential in framing (1817) the Mississippi constitution and was chiefly responsible for the revised state law code (1824) Poindexter served again (1817–19) in Congress and was later (1819–21) governor of Mississippi As U S Senator (1830–35) he broke with President Andrew Jackson, with whom he had served in the War of 1812

Poindexter, Miles, 1868–1946, U S Senator, b Memphis, Tenn, grad Washington and Lee Univ, 1891, in law He settled in Washington state, practiced law, and was (1904–8) judge of the superior court He served (1909–11) in the House of Representatives, acting with the Republican insurgents As U S Senator (1911–23) he was a Progressive He voted for the Underwood Tariff, but later joined the "irreconcilables" in opposing the Treaty of Versailles and the League of Nations, and he sponsored antistrike legislation After he failed of reelection in 1922 he was (1923–28) minister to Peru and then returned to law practice He wrote *The Ayar-Incas* (1930)

Poinsett, Joel Roberts (poin'sĕt), 1779–1851, American statesman, b Charleston, S C He studied in England and at the Univ of Edinburgh, but abandoned both law and medicine because of ill-health He traveled for many years in Europe and in 1809 was sent to South America by President James Madison to investigate the conditions of the countries struggling for independence He was (1821–25) a member of the U S House of Representatives and, as minister (1825–29) to Mexico, sought to strengthen the bonds between the two republics A strong opponent of NULLIFICATION, he was Secretary of War (1837–41) under Martin Van Buren Poinsett then retired to his plantation near Georgetown, S C The flowering plant which he introduced into this country is called poinsettia See biography by J Fred Rippy (1935)

poinsettia (poinsĕt'ŭ, -sĕt'ēŭ) [for J R Poinsett], ornamental shrub (*Poinsettia,* or *Euphorbia, pulcherrima*) native to tropical America It has attractive foliage and small true flowers in the center of a rosette of usually bright red bracts which resemble petals The plant, related to the spurges, contains a milky juice, it is propagated by cuttings The poinsettia is a popular Christmas decoration Stored away dry after blooming, it may be revived in May for blooming the next Christmas by gradual watering in a 60° temperature The shrub often grows to a height of 10 ft Another species of the genus somewhat resembles poinsettia and grows wild in the United States, it is called Mexican fire plant and is cultivated in gardens as an annual

Point Barrow (bă'rō), northernmost point of Alaska, on the Arctic Ocean, at lat 71° 23' N and long 156° 30' W Discovered in 1826 by F. W. Beechey and named by him for Sir John BARROW, it has since been visited by many expeditions and has figured prominently in arctic aviation. Near by is a naval base (est. 1944), but navigation is open for only two or three months a year. To the southwest is the village of Barrow (pop 363), the trading center of N Alaska. It has a meteorological station, an airfield, a school, and a hospital Hunting and fishing are the main occupations of the Eskimo Farther south is a monument to Will Rogers and Wiley Post, who lost their lives here in an airplane crash in 1935

Pointe-à-Gatineau (pwĕtägätēnō'), town (pop 2,230), SW Que, on the Ottawa at the mouth of the Gatineau. It is a northeast suburb of Hull.

Pointe-à-Pitre (pwĕtäpē'trū), city (pop 41,323), Guadeloupe dept, French West Indies It is on Grande-Terre island at the southern entrance of the Rivière Salée, the narrow and shallow ocean channel which separates Guadeloupe proper from Grande-Terre Although the harbor is narrow and open to severe hurricanes, which sweep in from the southeast, and the capital is at BASSE-TERRE, Pointe-à-Pitre is the largest and most important city in the department It exports chiefly sugar, rum, and bananas

Pointe-au-Pic (pwētōpēk'), village (pop 1,083), S Que, on the north shore of the St Lawrence near La Malbaie It is a popular summer resort

Pointe aux Trembles (pwētōtrā'blu), residential town (pop 4,314), S Que, on the east shore of Montreal island, on the St Lawrence and NNE of Montreal

Pointe Claire (point klâr', Fr, pwĕt klĕr'), town (pop 4,536), S Que, on the south shore of Montreal island, on Lake St Louis and SW of Montreal, of which it is a residential suburb

pointed style see GOTHIC ARCHITECTURE

Point Edward, village (pop 1,363), S Ont, on the St Clair river at the foot of Lake Huron and just N of Sarnia It is connected by bridge with Michigan, at Port Huron

Pointe Noire (pwĕt'nwär'), town, S French Equatorial Africa, a port on the Atlantic Ocean It is the terminus of a railroad from Brazzaville Hard woods are exported

pointer, smooth-coated hunting dog Its origin is not definitely known, but it is believed to have been developed as a definite breed before the setters Although it was long thought that the pointers first used in England were obtained from Spain, it was later concluded that the dogs came to be used at about the same time in the British Isles and in Spain and near-by countries of Europe Its ancestors are believed to be the foxhound and greyhound and possibly the bloodhound It is believed that in the early 18th cent some crosses were made in England with the Spanish pointer, which had a strong pointing instinct although it was slower than the English, French, and German pointers When the dog comes upon game birds, it points them with its nose, remaining motionless until the bird attempts to fly It is also capable of scenting a bird and pointing while running The American or English pointer is liver and white, orange and white, or lemon and white The German short-haired pointer is liver-colored or liver and white It is useful as a pointer and retriever and as a trailing dog for night hunting

Point Grey, suburb of Vancouver, SW British Columbia It is the site of the Univ of British Columbia

Point Judith, promontory in Narragansett town, S R I A lighthouse and a U S coast guard station are maintained here The full violence of the 1938 hurricane struck Point Judith. The village of Point Judith is a resort

Point Marion, industrial borough (pop 2,068), SW Pa, on the Monongahela and SW of Uniontown, laid out 1842 Its industries produce glass, sand, and gravel

Point Pleasant. **1** Borough (pop 2,082), E N J, near the Atlantic S of Asbury Park, settled 1850, inc 1920 **2** City (pop 3,538), co seat of Mason co, W W Va, on the Ohio at the mouth of the Kanawha, settled around Fort Blair (built 1774) The city is supported by its shipyards In the battle of Point Pleasant (1774), a large force of Indians led by Cornstalk was defeated by Andrew Lewis and frontiersmen

Point Pleasant Beach, borough (pop 2,059), E N J, a resort on the Atlantic NE of Point Pleasant, inc. 1886.

Point Roberts, township (pop 310), NW Wash, on the Strait of Georgia, at the tip of a peninsula extending S from British Columbia and separated from the Washington mainland by Boundary Bay The point was probably visited by Spaniards in the 18th cent, and it was visited and named (1792) by Capt George Vancouver It is a summer resort and salmon-fishing center. Point Roberts can be reached by land from the United States only by going through British Columbia

Poiré, Emmanuel: see CARAN D'ACHE

poison, an agent which may produce chemically an injurious or deadly effect when introduced into an organism in sufficient quantity See separate articles on BITES AND STINGS; BOTULISM; CARBON MONOXIDE, FOOD POISONING; LEAD POISONING, POISON IVY, SNAKE BITE. For the symptoms and treatment of many poisons, see POISONING table on pages 1566–69. Many agents listed in the table are poisons only if introduced into the organism in certain ways or forms and in large quantity. A minute quantity of some, e g, of hydrocyanic acid, may be fatal, while a relatively large amount of certain others, e g, quinine, may have little injurious effect The injurious effects are usually greater under certain conditions, e g, if the poison is in solution, if it is in a concentrated form, if it is a vapor, if it has been administered intravenously or subcutaneously, if it has been swallowed when the stomach is empty, and if the individual is very young, very old, ill, or abnormally susceptible to a given poison The action of a poison may be local, systemic, or both Poisons may be classified according to type as corrosive, irritant, or systemic poisons Most corrosive poisons, such as mineral acids and lye, act as irritants when very dilute Treatment varies greatly When poisoning is suspected (pain, nausea, and fright are common symptoms), a doctor should be called immediately, since usually his knowledge and equipment (antidotes and stomach tube or pump) are necessary Emergency treatment should be given promptly (consult the POISONING table) If poison has been swallowed, several glasses of water should usually be given immediately to dilute the poison Except for corrosive poisons, the unabsorbed poison in the stomach should then be removed by causing vomiting by mechanical means or by giving an emetic (a tablespoonful of common salt in a glass of lukewarm water, four times, or a teaspoonful of dry mustard in a glass of warm water, ¼ glassful at a time alternated with a glass of warm water) In the case of corrosive poisons, vomiting may cause rupture of injured tissues, but emetics are sometimes given if the poison is only slightly corrosive or if taken in very dilute form If poison has had time to enter the intestinal tract, enemas and cathartics may assist in removing them, before these are used, however, it should be certain that poison has been swallowed, since the abdominal pain may be caused by appendicitis An antidote may be given to neutralize certain poisons (see the POISONING table), often between intervals of vomiting For corrosive or irritant poisons, a demulcent should be given to form a soothing coating over injured tissue, readily available demulcents include raw white of egg, milk, flour solution, and oatmeal gruel (not hot). Certain powders, notably medicinal charcoal, are sometimes useful for adsorbing toxic substances For gas poisoning, provide fresh air and employ artificial respiration (for description of the process, see ARTIFICIAL RESPIRATION article) External burns should be washed, then neutralized (for acid burn milk of magnesia or sodium bicarbonate, for alkali burn lemon or other citrus juice or vinegar) Severe poisoning is often followed by symptoms of SHOCK (see separate article) If pulse or breathing is weak, give a STIMULANT such as hot, black coffee, strong tea, or aromatic spirits of ammonia Keep the patient warm, and if necessary apply dry heat with heat pads, hot-water bottles, heated blankets, or bricks or flatirons wrapped in towels If breathing fails, use artificial respiration See W F Boos, *The Poison Trail* (1937), V J Brookes and H N. Alyea, *Poisons* (1946)

Poison Affair, scandal implicating a number of prominent persons at the court of Louis XIV It began with the trial of Marie Madeleine d'Aubray, marquise de Brinvilliers (c 1630–1676), who poisoned her father and at least one brother for interfering with her adulterous relations with Godin de Sainte-Croix, an army captain Her husband was saved from the same fate by his complacency. An investigation was made, and the marquise fled abroad, but in 1676 she was arrested at Liège The marquise was, despite her homicidal weakness, a devout Catholic, she wrote a general confession which was found by the police, but which was not used as evidence in her trial The affair greatly worked on the popular imagination, and unfounded rumors were circulated to the effect that she had tried out her poisons on hospital patients She was beheaded and then burned Mme de Sévigné, who witnessed the execution, wrote that "the following day people sought to recover her bones, believing she was a saint" The Brinvilliers trial attracted attention to other mysterious deaths, and several people were charged with selling poison (called "inheritance powders" at the time) to members of the highest society Most of these charges were unfounded Parisian society had, however, been seized by a fad for spiritualist séances, fortunetelling, and the use of love potions Some of the quack practitioners undoubtedly also sold poison, at any rate, after their arrest they furnished the police with lists of their clients, who often were guilty merely of having their palms read or of buying an aphrodisiac, and accused them of complicity in their crimes The most celebrated case was that of La Voisin, a midwife and fortuneteller whose real name was Catherine Deshayes Monvoisin and whose clientele included Mme de Montespan, Olympe Mancini (niece of Mazarin and mother of Prince Eugene of Savoy), her sister Marie Anne Mancini, Marshal Luxembourg (duke and peer of France and one of the military heroes of the time), and Racine Most spectacular were the charges against Luxembourg, who even was detained in a solitary cell at the Bastille for several weeks. No

Call a doctor *immediately* if poisoning is suspected Give first-aid treatment suggested in table below Watch for signs of SHOCK (see separate article). Keep patient warm and quiet Do *not* give liquids to an unconscious patient If breathing fails, give ARTIFICIAL RESPIRATION (for method, see separate article) See also separate article on POISON

POISON [Type of poison is in italic]	SUBSTANCES WHICH MAY CONTAIN THE POISON	SYMPTOMS	TREATMENT
acetanilid *Systemic*	Drugs to relieve headache neuralgia, fever, muscular pain	Cyanosis, nausea, pulse slow and weak, subnormal temperature, sluggishness, sometimes stupor and collapse	Give emetic, stimulant, keep patient warm and quiet
ACETIC ACID *Corrosive and systemic*	Solvents, stain removers, liquids used in acetate, printing, and other industries	Same as acids, mineral, in this table	Same as acids, mineral, in this table
acids, mineral HYDROCHLORIC ACID (muriatic acid) NITRIC ACID SULPHURIC ACID (oil of vitriol) *Corrosive*	Liquids for laboratory and (especially sulphuric acid) industrial uses, drugs, hydrochloric acid used for digestive disorders, nitric and sulphuric in cauterizers and caustics for warts and sores	Burns on lips and mouth, pain in throat and stomach, often vomiting and diarrhea, sometimes with blood, weak, rapid pulse, slow, shallow breathing, twitching, collapse	Do *not* give emetic or carbonates (chalk, whiting, or baking soda) if concentrated acid was taken, give antidote of milk of magnesia or limewater, much water, soothing drinks of eggs and milk, wash external burns with much water and soap then cover with baking soda paste or milk of magnesia, keep patient warm and quiet, give stimulant
ACONITE *Systemic*	Root of wolfsbane (monkshood), drugs for local relief of pain and for reducing the rate of heart beat	Tingling especially of mouth, lips, throat, salivation, often nausea, vomiting, diarrhea, dizziness, difficult breathing, slow, weak pulse, collapse	Emetic to be given *immediately* after swallowing of poison or not at all, give tannic acid, medicinal charcoal, patient should be down with head low and be kept warm and quiet, give aromatic spirits of ammonia
ALCOHOL see ethyl alcohol or wood alcohol (methyl alcohol) in this table			
ALKALI see lye in this table			
allonal see barbitals and barbiturates in this table			
AMMONIA *Corrosive*	Household cleaning fluid	Pain in mouth, throat, stomach, often swollen throat, vomiting, diarrhea, often bloody, skin cold and damp, breathing difficult, pulse weak	Do *not* give emetic, give dilute vinegar or citrus juice, follow with raw eggs, milk, cream, or olive oil, stimulant if necessary, keep patient warm and quiet
amytal see barbitals and barbiturates in this table			
ANTIMONY (compounds) *Corrosive*	Paints, explosives, drugs for parasitic diseases, expectorants, emetics, as tartar emetic	Metallic taste, vomiting, often bloody, spasms in arms and legs, breathing difficult, weak, rapid pulse, skin cold and damp	Give 20 grains tannic acid in warm water or strong tea, follow with emetic if needed, give much water, raw eggs, milk, keep patient warm and quiet
ARSENIC (compounds) *Systemic and corrosive*	Insecticides, rat poisons, drugs for syphilis and other protozoan diseases, skin disorders, pigments, compounds used in tanning and other industries	Symptoms usually delayed, pain in stomach, thirst, nausea, vomiting, diarrhea, pallor, cold, moist skin, weak pulse, shallow breathing, collapse	Give emetic, much water, antidote is hydrated oxide of iron and magnesia (magnesia alone is helpful), give saline cathartic, e.g., Epsom salts give castor oil, raw eggs, milk, stimulant, keep patient warm and quiet
ATROPINE *Systemic*	Many internal and external medicinals, especially anodynes, respiratory stimulants, eye drops	Dry, flushed skin, dilated pupils, thirst, rapid pulse, sometimes excitement or delirium, convulsions, stupor, coma	Give tannic acid or strong tea, medicinal charcoal, emetic, coffee or other stimulant, apply ice to head, heat to body, artificial respiration if necessary
barbitals and barbiturates *Systemic*	Drugs for relief of pain, anticonvulsants, sedatives	Confusion, drowsiness, coma, weak, rapid pulse, moist skin, low blood pressure	If patient is conscious, an emetic may be given stomach lavage, by physician is preferable, give black coffee, try to keep patient awake and warm
BARIUM (compounds) *Corrosive*	Rat poison, paints, matches	Abdominal pain, nausea, vomiting, diarrhea, salivation, paralysis of arms and legs, pallor	Give Epsom salts, avoid emetic if poisoning is severe, give raw egg whites, milk, or olive oil, stimulant if needed, keep patient warm
BELLADONNA *Systemic*	Deadly nightshade or banewort and other *Solanaceae* plants	Abdominal pain, nausea, vomiting, diarrhea, salivation, pallor, sometimes paralysis	See atropine in this table
BISMUTH *Systemic*	Drugs for indigestion, syphilis, skin disorders	Symptoms delayed, pallor, dark line on gums, flow of saliva, swollen gums, tongue, throat, often nausea and vomiting	If swallowed, give warm water, emetic, if poisoning from bismuth dressings, remove dressings, keep patient warm
BORAX (in large doses) *Systemic*	Antiseptics, cleansing preparations, gargles, skin lotions, eye washes	Nausea, diarrhea, abdominal pain	Give warm water, emetic, stimulant if needed
BOTULISM see separate article			
BROMIDES *Systemic and corrosive*	Sedatives, drugs for allaying vomiting, convulsions, hysteria	Sluggishness, apathy, mucous membranes irritated, acne may follow prolonged use, acute poisoning (rare) causes depression of respiration, stupor	For acute poisoning give emetic, give soothing drinks if mucous membranes affected, stimulants
CAFFEINE *Systemic*	Drugs, especially diuretics and stimulants, large quantities of coffee or tea	Restlessness, nervousness, pain over heart, heart palpitations, rapid pulse, later pallor, skin cold and damp, sometimes coma	After concentrated dose, give emetic, warm water, keep patient warm
calcium hydroxide see lye in this table			
CAMPHOR *Systemic*	Moth preventives, liniments, gargles, nasal sprays, respiratory and heart stimulants, insect repellents	Burning in throat and stomach, nausea, headache, dizziness, weak pulse, cold, moist skin, pallor, sometimes delirium, convulsions, collapse	Emetic, much warm water, Epsom salts, stimulant if needed keep patient warm and quiet
CANTHARIDIN *Systemic and irritant*	Drugs to cause irritation or blistering, hair tonics, aphrodisiacs	Burning in mouth and throat, vomiting, thirst, abdominal pain, bloody diarrhea, sometimes chills, delirium, collapse	Emetic, much water, raw eggs and milk, keep patient warm and quiet
CARBOLIC ACID (phenol) *Corrosive and systemic*	Antiseptics disinfectants, dyes	Burns on lips and mouth, pain in throat and stomach, sometimes vomiting, cold, damp skin, headache, dizziness, labored breathing, sometimes coma	Emetic, Epsom salts, much water, raw eggs and milk, stimulant, keep patient warm and quiet, do *not* give oils or fats, wash external burns with alcohol, then much water
CARBON MONOXIDE *Systemic*	Producer gas, water gas, illuminating gas, coal gas, automobile exhaust	Headache, dizziness, vomiting, weak pulse, difficult breathing, loss of consciousness, often bluish-red color of skin, lips, nails	Fresh air, artificial respiration, stimulants, keep patient warm and quiet, see also separate article on CARBON MONOXIDE
carbon tetrachloride *Systemic and irritant*	Cleaning fluids, solvents, hookworm remedies	Dizziness, excitement sometimes followed by convulsions and coma, subnormal temperature, then fever, feeble pulse, if swallowed, abdominal pain, vomiting, diarrhea	If inhaled give fresh air, artificial respiration if needed, if swallowed, do *not* give oils or alcohol, give Epsom salts, emetic, stimulant of black coffee, keep patient warm and quiet
CHLORAL (compounds) *Systemic and irritant*	Soporifics, sedatives, liniments	Drowsiness, then sleep, sometimes coma, nausea, pulse and breathing slow, pupils often contracted, low blood pressure and temperature	Do *not* give alcohol, if patient is conscious, give emetic and stimulants, keep patient lying down, apply external heat

Cross references are indicated by SMALL CAPITALS. The key to pronunciation faces page 1.

Call a doctor *immediately* if poisoning is suspected Give first-aid treatment suggested in table below. Watch for signs of SHOCK (see separate article) Keep patient warm and quiet Do *not* give liquids to an unconscious patient If breathing fails, give ARTIFICIAL RESPIRATION (for method, see separate article). See also separate article on POISON

POISON (Type of poison is in italic)	SUBSTANCES WHICH MAY CONTAIN THE POISON	SYMPTOMS	TREATMENT
CHLORINE *Corrosive and systemic*	Water purifiers, disinfectants, antiseptics; bleaches, cleaning fluids, deodorizers	Difficult breathing, weak pulse, pallor, if swallowed, burning in throat and stomach, nausea, vomiting	Have patient sniff ammonia or ethyl alcohol, give starch or flour solution, milk of magnesia, raw eggs and milk, emetic, keep patient warm, if chlorine inhaled also give fresh air
CHLOROFORM *Systemic*	Anesthetic, liniments, solvents, cough medicines, drugs to check vomiting, diarrhea	Slow, weak, irregular pulse and breathing, pallor, dilated pupils, if swallowed hot feeling in mouth and stomach	If inhaled, give fresh air, lower head, artificial respiration, keep patient warm, if swallowed, also give emetic and stimulants
COAL GAS see carbon monoxide in this table			
COCAINE *Systemic*	Local anesthetics, narcotics	Pupils dilated, restlessness, pallor, cold sweat, sometimes convulsions, rapid pulse and breathing becoming slow and weak, coma	If swallowed give tannic acid or strong tea, emetic, if breathing fails, give artificial respiration
CODEINE see opium in this table			
COPPER (salts) *Corrosive*	Fungicides, insecticides, pigments, astringents, dyes, tanning compounds, drugs for anemia	Nausea, vomiting of greenish matter, metallic taste, diarrhea with mucus and blood, burning pain in digestive tract, salivation, convulsions	Antidote is potassium ferrocyanide, give raw eggs and milk, emetic, much water, apply external heat
CORROSIVE SUBLIMATE (bichloride of mercury) *Corrosive*	Antiseptics, antisyphilitics, insecticides	Burning pain in throat, abdominal cramps, metallic taste, vomiting, diarrhea, weak, rapid pulse, pallor, cold sweat, sometimes convulsions, coma, collapse	Give medicinal charcoal, emetic, much warm water, raw egg whites, apply external heat, antidote is sodium formaldehyde sulfoxylate
creolin, CREOSOTE, and cresols *Corrosive and systemic*	Disinfectants, antiseptics, wood preservatives	See carbolic acid in this table	See carbolic acid in this table
CROTON OIL *Systemic and irritant*	Drastic purgatives, vesicants	Pallor, severe abdominal pain, violent purging, sometimes vomiting, collapse	Emetic, much water, raw eggs, milk, flour solutions, apply external heat
CYANIDE (salt of hydrocyanic acid) *Corrosive and systemic*	Insecticides, case-hardening, electroplating, blueprint materials, dyes	If severe, immediate collapse, smaller dose, dizziness, panting, convulsions, collapse with cold skin, dilated pupils, fixed eyeballs, often froth on mouth, odor of bitter almonds	Give 2 teaspoonfuls hydrogen peroxide in water, emetic, have patient inhale ammonia fumes, give artificial respiration if needed
digitalis *Systemic*	Heart supportants and stimulants, diuretics	Headache, vomiting, slow, weak, irregular pulse, faintness, pallor, body often cold	Give tannic acid or strong tea, emetic, patient must lie flat even after danger seems past, apply external heat, especially near heart, give stimulants
ERGOT *Systemic*	Abortifacients, drugs to induce labor, to produce contraction of the uterus, to check uterine bleeding	Slow, weak pulse, tingling skin, often vomiting, diarrhea, abdominal cramps, sometimes delirium, convulsions, coma	Give emetic, medicinal charcoal, black coffee, keep patient warm and recumbent
ETHER (ethyl ether) *Systemic and irritant*	Anesthetics, solvents for fats, oils, cough medicines, carminatives	Slow, gasping breathing, face blue, low blood pressure, pupils usually dilated	Apply external heat, artificial respiration, if needed, lower head, if swallowed, give emetic
ETHYL ALCOHOL (grain alcohol) *Systemic*	Alcoholic beverages, perfumes, lotions, denatured alcohol solvents	Often excitement followed by depression, nausea, vomiting, dizziness, see also separate article ALCOHOLISM	Give emetic, cold applications to head, black coffee, keep patient warm and quiet
fluorides *Systemic and corrosive*	Insecticides, wood preservatives, moth preventives	Abdominal cramps, burning, pallor, salivation, weak pulse, often vomiting, diarrhea, twitching, convulsions	Give much water followed by limewater, chalk or weak calcium chloride solution, milk, emetic
FOOD POISONING see separate article			
FORMALDEHYDE *Corrosive*	Antiseptics, disinfectants, preservatives for anatomical specimens	Burning pain in throat and stomach, reddening of eyes and mouth, vomiting, swollen throat, pallor, cold, moist skin	Give emetic, aromatic spirits of ammonia or inhalation of ammonia fumes, medicinal charcoal, soothing drinks, e g , raw eggs, milk, flour solution
GAS see carbon monoxide in this table			
GASOLINE *Systemic*	Automobile fuel, cleaning fluids, solvents for fats and oils	Headache, dizziness, red face, excitement, vomiting, disturbed vision	Emetic, black coffee or aromatic spirits of ammonia, do *not* give alcohol or camphor, remove gasoline-soaked clothing, apply external heat
HASHISH see marijuana in this table			
HEROIN (derivative of morphine) see opium in this table			
HYDROCHLORIC ACID see acids, mineral, in this table			
HYDROCYANIC ACID (prussic acid)	Fumigants	See cyanide in this table	See cyanide in this table
IODINE *Systemic and corrosive*	Antiseptics, goiter remedies, liquid used in photography	Metallic taste, burning pain in mouth, throat stomach, vomiting, diarrhea, salivation, pallor, weak, rapid pulse, mouth stained brown	Give antidote of starch or flour in water, emetic if effect of dose not too corrosive, stimulants, raw eggs and milk, apply external heat, for iodoform (a compound of iodine) give sodium bicarbonate, much water, emetic
JABORANDI (contains pilocarpine) *Systemic*	Drugs to promote perspiration and salivation, relieve itching, eye drops	Salivation, sweating, eyes water, vision blurred, pupils constricted, vomiting, diarrhea, choking	Give tannic acid or strong tea, emetic, apply external heat, physician may give atropine, an antidote
laudanum see opium in this table			
LEAD (compounds) *Corrosive*	Paints, pigments, gasoline, water from lead pipes, ointments, antiseptic lotions, sugar of lead	Abdominal pain, excitement, vision affected, bluish line on gums, vomit often white, diarrhea, often black matter passed, sometimes convulsions, paralysis, and coma	Antidote is Epsom salts or Glauber's salt, much water, emetic, soothing drinks, e g , raw eggs, milk, olive oil, stimulant, external heat, see also separate article on LEAD POISONING
LIME (quicklime) *Corrosive*	Disinfectants, insecticides, plaster, whitewash, bleaching powder	Pain in mouth, throat, stomach, often vomiting with blood and mucus	Lemon juice or diluted vinegar, then soothing drinks, e g , raw eggs, milk, olive oil, flour solutions, keep patient warm
LOBELIA	Drugs for control of tobacco habit	See nicotine in this table	See nicotine in this table
luminal see barbitals and barbiturates in this table			
LYE (caustic soda, caustic potash) *Corrosive*	Household cleansers, disinfectants, drain openers, materials used in soap, tanning, cellulose, petroleum-refining, and other industries	Severe pain in mouth, throat, stomach, vomiting and diarrhea, often bloody, pallor, weak, rapid pulse, cold, moist skin, collapse	Do *not* give emetic, give diluted vinegar and much citrus juice, soothing drinks, as cream, olive oil, raw eggs, milk, keep patient warm and quiet, stimulants, wash external burns with water, lemon juice or vinegar, again water
lysol (compound of cresol and soap) for symptoms and treatment, see carbolic acid in this table			

Call a doctor *immediately* if poisoning is suspected Give first-aid treatment suggested in table below. Watch for signs of SHOCK (see separate article). Keep patient warm and quiet Do *not* give liquids to an unconscious patient. If breathing fails, give ARTIFICIAL RESPIRATION (for method, see separate article) See also separate article on POISON

POISON [Type of poison is in italic]	SUBSTANCES WHICH MAY CONTAIN THE POISON	SYMPTOMS	TREATMENT
MARIJUANA (cannabis) *Systemic*	Narcotics, cigarettes known as *reefers*	Hallucinations, sense of prolongation of time, ideas disconnected, often exhilaration, sometimes moodiness	Give emetic, with much water, keep patient warm and quiet
MERCURY (compounds) *Corrosive and systemic*	Antiseptics, antisyphilitics, diuretics, calomel	See corrosive sublimate in this table	See corrosive sublimate in this table
METHYL ALCOHOL see wood alcohol in this table			
MORPHINE *Systemic*	Drugs to relieve pain, induce sleep, and quiet muscles	See opium in this table	See opium in this table, see also separate article on MORPHINE
muriatic acid (hydrochloric acid) see acids, mineral, in this table			
MUSHROOMS *Systemic*	See separate article on the MUSHROOM	Abdominal pain, vomiting, diarrhea, cold, moist skin, pallor, often jaundice, convulsions, coma	Give emetic, medicinal charcoal, stimulants, apply external heat, physician may give atropine or potassium permanganate, antidotes for certain mushrooms
nembutal see barbitals and barbiturates in this table			
NICOTINE *Systemic*	Insecticides, chewing and smoking tobacco, snuff	Salivation, abdominal pain, face livid, vomiting, diarrhea, dizziness, weakness, poisoning from smoking is rare and usually not serious	Give medicinal charcoal, emetic, stimulants, keep patient lying down and warm, artificial respiration, if needed
NITRIC ACID see acids, mineral, in this table			
NITROGLYCERIN *Systemic*	Explosives, drugs for heart disease, high blood pressure, asthma, muscle spasms	Headache, cold, moist skin, dizziness, pallor, weak pulse and breathing, coma, sometimes pain in stomach	Give emetic, stimulants, apply external heat, keep patient lying down, artificial respiration, if needed
NUX VOMICA see strychnine in this table			
OPIUM (contains morphine, codeine, and other alkaloids) *Systemic*	Narcotics, drugs to produce sleep, relieve pain, or quiet nerves and muscles, paregoric, heroin, laudanum, cough syrups	Pupils contracted, drowsiness may be followed by coma, slow, shallow breathing, muscular relaxation, insensitivity	Tannic acid (strong tea), potassium permanganate are antidotes, give emetic, black coffee, apply external heat, keep patient awake by shouting, flipping with wet towel, do *not* make patient walk, artificial respiration if breathing fails
OXALIC ACID *Corrosive and systemic*	Bleaches, ink eradicators, metal polishes	Pain in mouth, throat, stomach, vomit, usually bloody, rapid pulse, thirst, faintness, body cold	Do *not* give baking soda, carbonates, or alkalis, give much water, give milk of magnesia or chalk, emetic if effect of dose not too corrosive, give raw eggs and milk, keep patient warm and lying down
PARIS GREEN see arsenic in this table			
PHENACETIN (similar to acetanilid) see acetanilid in this table			
phenobarbital see barbitals and barbiturates in this table			
phenol see carbolic acid in this table			
PHOSPHORUS (white or yellow) *Corrosive and systemic*	Rat poison, match heads (very rare), fireworks	Symptoms may be immediate or delayed or may recur after 1 to 3 days, vomiting, diarrhea, garlic taste, abdominal pain	Antidote is copper sulphate, potassium permanganate, or hydrogen peroxide (2 teaspoonfuls in glass of water), do *not* give fats, oils, or milk, give emetic, saline cathartic, e.g., Epsom salts, egg whites, wash external burns with copper sulphate or baking soda solution and keep wet
pilocarpine see jaborandi in this table			
potassium cyanide see cyanide in this table			
potassium hydroxide see lye in this table			
prussic acid see cyanide in this table			
ptomaine see separate article on FOOD POISONING			
quicklime see lime in this table			
QUININE *Systemic and irritant*	Remedies for malaria, drugs to reduce fever or pain; tonics	Ringing in the ears, headache, disturbed vision, confusion, often abdominal pain, vomiting, diarrhea, delirium, impairment of hearing	Emetic, give lemon juice or dilute vinegar, keep patient warm and quiet
RESORCINOL *Systemic and irritant*	Dyes, antiseptics, ointments and lotions for skin disorders	Irritation of mucous membranes, pain in stomach, dizziness, salivation, perspiration, sometimes convulsions	See carbolic acid in this table
SALICYLIC ACID, salicylates *Systemic and irritant*	Aspirin, drugs to relieve fever and pain, rheumatism, dyes, antiseptics, food preservatives, oil of wintergreen	Headache, dizziness, ringing in the ears, difficulty in seeing and hearing, sweating, thirst, nausea, sometimes vomiting, diarrhea	Emetic, much warm water, keep patient warm and quiet, raw egg whites, milk
SANTONIN *Systemic*	Remedy for roundworm	Objects appear blue, then yellow to patient, headache, confusion, sometimes abdominal pain, diarrhea, convulsions, skin rash	Emetic, much warm water, cathartic, medicinal charcoal, keep patient warm
silver nitrate (lunar caustic) *Corrosive*	Drugs for ulcers, infections, cauterizers, astringents, antiseptics, inks, dyes, photographic materials	Pain in mouth, throat, stomach, lips whitish, then black, face livid, vomiting, weak pulse, sometimes convulsions, coma	Salt water (antidote) emetic, soothing liquids as raw eggs, milk, olive oil, stimulants, external heat
sleeping preparations see barbitals and barbiturates, bromides, chloral, morphine, opium, sulphonal in this table			
snake venom see separate article SNAKE BITE			
sodium fluoride see fluorides in this table			
sodium hydroxide see lye in this table			
STRYCHNINE *Systemic*	Poisons for animal pests, nux vomica, stimulants, tonics	Neck stiff, jaws locked, twitching, spasms, then convulsions	Do *not* give emetic as this may bring on convulsions, give strong tea; medicinal charcoal; little can be done except by physician who may give antidote of potassium permanganate and inject chloral or a barbiturate
sulphonal *Systemic*	Hypnotic drugs (now rare)	Drowsiness, then deep sleep and prolonged coma, chronic poisoning symptoms include confusion, ataxia, gastrointestinal upsets, pink urine	For acute poisoning give emetic, baking soda, stimulant, try to rouse patient, chronic cases to be treated by physician only
SULPHURIC ACID see acids, mineral, in this table			
TARTAR EMETIC see antimony in this table			
TOBACCO see nicotine in this table			
TURPENTINE *Systemic*	Paints, varnishes, counter-irritants, expectorants, insecticides	Pain in stomach, vomiting; diarrhea, colic, excitement, sometimes delirium, blood in urine, ataxia	Give emetic, Epsom salts, much water, soothing drinks, e.g., raw eggs, milk, olive oil; black coffee, keep patient warm and quiet

Call a doctor *immediately* if poisoning is suspected Give first-aid treatment suggested in table below Watch for signs of SHOCK (see separate article). Keep patient warm and quiet. Do not give liquids to an unconscious patient If breathing fails, give ARTIFICIAL RESPIRATION (for method, see separate article). See also separate article on POISON.

POISON [Type of poison is in italic]	SUBSTANCES WHICH MAY CONTAIN THE POISON	SYMPTOMS	TREATMENT
VERATRINE *Systemic and irritant*	Insecticides (sabadilla), counterirritants (rare)	Vomiting, pulse weak, cold, moist skin, sometimes convulsions, paralysis	See aconite in this table
VERDIGRIS (copper acetate, sometimes formed in copper cooking utensils) see copper (salts) in this table			
vitriol, oil of (sulphuric acid) see acids, mineral, in this table			
white lead see lead (compounds) in this table, see also separate article on WHITE LEAD			
wood alcohol (METHYL ALCOHOL) *Systemic*	Paints, varnishes, solvents, formaldehyde, denatured alcohol, antifreeze	Excitement, then dizziness, vomiting, headache, sometimes delirium, blindness, coma	Give much warm water, emetic, apply external heat, strong coffee
ZINC (compounds) *Systemic and irritant*	Ointments, lotions, liniments, deodorants, antiseptics, astringents, disinfectants, dusting powders, wood preservatives	Metallic taste, pain in stomach, salivation, vomiting (sometimes bloody), diarrhea	Give medicinal charcoal, much water, egg whites, bicarbonate of soda

formal charges were made against any of these, and there is absolutely no evidence that they were seriously implicated, yet a permanent stain was left on their names La Voisin was burned as a poisoner and a sorceress in 1680 Indeed, charges of witchcraft and of intercourse with the devil were intermingled with concrete accusations As a result of the La Voisin trial a special court, the *chambre ardente* [burning court], was instituted to judge cases of poisoning and witchcraft, and the poison epidemic came to an end in France The Poison Affair was symptomatic of the witchcraft trials of the period throughout Europe and in New England, however, the judicial investigation was conducted generally with far more regularity and far less hysteria than elsewhere.

poison gas, name for various substances employed chiefly in warfare because of their poisonous or corrosive nature Some are gases at ordinary room temperature (e g , chlorine and phosgene), but more commonly the substances are used as liquids or solids that vaporize CHLORINE was first used by the Germans in the First World War The first gas attacks were successful because of the unpreparedness of the Allies However, the difficulties met with in directing such a gas as chlorine against the enemy—changing winds often drove it back upon those using it—and the rapid development of the gas mask led to the use of other poisonous substances which could be handled more effectively and resisted less easily Phosgene, a compound of carbon, oxygen, and chlorine which is easily liquefied, was used in shells in addition to the usual "cloud attack " Like chlorine it affects the lung tissue Two very poisonous, volatile liquids, MUSTARD GAS and lewisite, attack the skin Lewisite is a complex compound of carbon, hydrogen, chlorine, and arsenic which causes severe burns, absorption of the arsenic by the body may prove fatal Chlorpicrin, or chloropicrin, is a volatile, liquid compound of carbon, chlorine, nitrogen, and oxygen which causes vomiting It also irritates the eyes and seriously injures the lungs Certain other gases primarily affect the eyes and are classed as TEAR GAS Others cause violent sneezing and choking See also CHEMICAL WARFARE

poison ivy, native woody vine or trailing or erect shrub closely related to the poison sumac and Japanese lacquer tree The vine clings by means of many short roots Small flowers in greenish clusters are followed by berrylike fruits similar to those of mistletoe and often persisting through winter. The leaves are composed of three leaflets, the margins varying in different localities from entire to deeply lobed—each type sometimes considered a different species (the common one, *Toxicodendron radicans* or *Rhus toxicodendron,* is nearly entire). Plants having wavy-margined leaves, particularly the bushy kind, are often called poison oak—a name generally used for Western and Southern kinds. The poisonous principle, toxicodendrol, is present in practically all parts of the plant, the irritation, usually an itching sensation, redness, and blistering, may be started by direct contact or by indirect contact as from clothing, tools, or animals that have touched the plant or smoke from burning plants. Immunity is apparently not constant for any one individual. Preventive measures after exposure include immediate repeated gentle washings using several washcloths and an alkaline, nonoily soap Some relief may be obtained by applying a strong solution of cooking soda, but it is best to consult a physician. See *Poison Ivy and Poison Sumac and Their Eradication* (U.S. Dept. of Agriculture, Farmers' Bul. 1166).

poison oak: see POISON IVY.

poisonous plant, any plant possessing a property injurious to man or animal Plants may be poisonous to the touch (e.g , poison ivy, poison sumac), orally poisonous (e g , poison hemlock, deadly amanita), or mechanically poisonous (chiefly to grazing animals, e g., cocklebur, needle grass). Many poisonous plants are of great value medicinally, e g , digitalis, belladonna, and aconite A number of plants are poisonous in part and harmless otherwise (the leaf blades, not the stalks, of rhubarb are poisonous) or poisonous at one season and not at another (the very young poke shoot is sometimes cultivated as a green vegetable but the older plant is poisonous) Some plants contain properties which are poisonous only under certain conditions, such as those causing photosensitivity. White animals which feed on these plants (St - John's-wort and others) and are subsequently exposed to sunlight develop a serious skin disorder called photosensitization A poisonous property (selenium) of some soils, particularly in parts of the West, is absorbed by some of the growing plants, not always in themselves poisonous, and transmitted to animals and sometimes to man Since this poison is returned to the soil by the death of the plants and animals which have absorbed it, is again available to other plants and may even be absorbed by crop plants Locoweed is an example of a selenium-poisoned plant Poisoning has been said to occur indirectly from certain plants from which toxic honey has been produced Many of our ornamental plants are poisonous—larkspur, oleander, English ivy, and lily of the valley Poisoning by ingestion of plants in the case of human beings is usually a matter of mistaken identity, particularly with the mushrooms Poisonous plants are seldom eaten by animals unless the pasture is overgrazed Poisonous principles may be found throughout the plant kingdom from bacteria and fungi to ferns and flowering plants See W C Muenscher, *Poisonous Plants of the United States* (1939)

Poisson, Siméon Denis (sēmāō' dunŏ' pwäsôN'), 1781–1840, French mathematician and physicist. From 1802 he taught at the École polytechnique, Paris, and was also on the faculty of sciences at the Univ of Paris from 1809. Although he did important work in many fields, notably in definite integrals, his chief interest lay in the application of mathematics to physics, especially in electrostatics and magnetism He wrote more than 300 papers on mathematics, physics, and astronomy, and his *Traité de mécanique* (1811) was long a standard work

Poissy, Colloquy of (pwäsē'), 1561, conference of Roman Catholic prelates and Protestant ministers, initiated by Catherine de' Medici and Michel de L'Hôpital in the hope of bringing about a peaceful reunion of the two communions As a result of the opposition of both parties to compromise on essential points, the conference was unsuccessful Those present included Theodore Beza, Pietro Martire Vermigli, and Charles de Guise, Cardinal de Lorraine

Poitiers, Diane de: see DIANE DE POITIERS

Poitiers (poitĕrs', Fr. pwätyā), city (pop 41,279), capital of Vienne dept , W central France, and the ancient capital of Poitou Dating from pre-Roman times, Poitiers early became an episcopal see and was a stronghold of orthodoxy when St HILARY OF POITIERS (4th cent) was bishop here It was a residence of the Visigothic kings until its capture (507) by the Franks under Clovis I In 732 Charles Martel turned the Moslem tide by defeating the Saracens between Poitiers and Tours Sharing the history of POITOU, Poitiers was twice under English domination (1152 1204, 1360–69). Here in 1356 EDWARD THE BLACK PRINCE defeated and captured John II of France and his son, Philip the Bold of Burgundy Charles VII, who in 1428 had summoned to Poitiers the ecclesiastic commission which examined Joan of Arc, founded a university at Poitiers in 1432 In the Wars of Religion the city was unsuccessfully besieged (1568) by the Huguenots under Coligny, the Peace of Bergerac (1577) is also known as the Edict of Poitiers (see RELIGION, WARS OF). Architecturally, Poitiers is one of the most interesting cities of Europe. Its Roman amphitheater and baths, the baptistery of St. John (4th–12th cent), the churches of Ste Radegonde (9th–12th cent), St Hilary (11th cent., restored 19th cent), St Porchaire (12th cent.), and Notre-Dame-la-Grande (11th-12th cent.), the Cathedral of St Pierre (12th–14th cent), the courthouse (12th–15th cent , formerly a royal residence), and its numerous late medieval and Renaissance residences are all magnificent examples of 15 centuries of civilization Some damage was inflicted on the city in the Second World War

Poitou (poitōō', Fr. pwätōō'), region and former province, W France, stretching from the Atlantic coast eastward slightly beyond the Vienne river. It is now divided into three administrative departments, Vendée in the west, Deux-Sèvres in the center, and Vienne in the east The Vendée region, or Lower Poitou, extends beyond the departmental boundary of Vendée, it is mostly a pastoral hedgerow country (the *bocages*), with swamps in the west and the south, but a narrow strip, the Vendean plain, is an intensive wheat-growing region Upper Poitou is a rich agricultural region The chief Poitevin cities are POITIERS (the historic capital of Poitou), Châtellerault, and Niort The towns of Vendée—La Roche-sur-Yon, Les Sables-d'Olonne, and Luçon—are less important A part of the Roman province of Aquitaine, Poitou fell to the Visigoths (5th cent.) and to the Franks (507) The counts of Poitiers, who originated in the 9th cent., assumed the title duke of AQUITAINE in the 9th cent With Aquitaine, Poitou passed (1152) to England, but it was recovered by Philip II of France Louis IX gave (1241) Poitou in appanage to his brother ALPHONSE, upon whose death (1271) it reverted to the crown Although Henry III of England had renounced his claim to Poitou in 1259, it was conquered by Edward the Black Prince (1356) and ceded to England by the Treaty of BRÉTIGNY (1360) Du Guesclin won it back to France c 1370, and at the end of the Hundred Years War, Charles VII definitively incorporated it in the French crown lands

Pokanoket Indians: see WAMPANOAG INDIANS

poker, card game, believed to have been first played in the United States on the Mississippi river steamboats A traditional cutthroat gambling game in the 19th-century America, poker gained wide popularity as a social game in the 20th cent and now is internationally known. The two basic forms are draw poker and stud poker, in both of which a deck of 52 cards is used and sometimes a joker is added Five players are said to make the best game, although from 2 to 14 are able to play at once All suits are equal and the cards rank from ace as high down through the 2, or deuce—which often upon unanimous agreement is designated "wild," to count optionally for any other card In both draw and stud poker the player who holds the best combinations of cards of the game in his hands wins Combinations rank as follows, four aces, royal flush (10 upward through ace in one suit), straight flush (a five-card sequence in one suit), four of a kind (except aces), full house (three of a kind plus a pair), flush (five of one suit), straight (five-card sequence regardless of suit), three of a kind, two pairs, one pair, and, in case no player holds a combination, the highest card dealt ranks first. In draw poker five cards are dealt singly, face down and in rotation, to each player—who pays an ante before play begins Starting at the dealer's left the players each put up an "opener," or a small wager Each player equals the amount of the first opener unless he wishes to drop out of the game. The opener may be raised. In jack pots, perhaps the commonest variety of draw poker, the opening player must have at least a pair of jacks to open When the game is opened, each player may, regardless of his cards, stay in by checking or following an opening bet. A player may "stand pat" (hold his five original cards), but generally he "draws" from one to four cards (i e , discards from his hand and has new cards dealt to him). The betting begins with the player to the left of the dealer. He makes a bet or drops out. Proceeding in clockwise fashion,

each player must meet the bet to stay in the game; he may raise the bet A player wins if his bet is not met, in which case he does not show his hand, he also wins if, when the bet is called (i e , just matched), he shows the best hand In stud poker, sometimes called open poker, each player is dealt one card face down and one card face up Each player looks at the card he has "in the hole," but lets it remain face down The player with the highest card showing may open the betting or may drop out and in some games is required to open When the bet is made, the other players in turn meet this bet, raise it, or drop out Another card is then dealt to each of those still playing, and again the one holding the highest ranking open cards and combinations bets first Thus goes on until each player has four cards showing and one still face down When the final betting on these hands is finished, the face-down card is exposed, and the best hand wins The many variations of poker include high-low poker, seven-card stud poker, and "spit in the ocean " See R L Frey, ed , *The New Complete Hoyle* (1947), Oswald Jacoby, *On Poker* (rev ed , 1948)

pokeweed, tall, bushy perennial herb (*Phytolacca americana*) native to North America but cultivated and naturalized in Europe It has small white flowers in elongated clusters, followed by dark purple flattened berries A crimson juice, present in the berries, was once used in Europe for coloring wines, although considered poisonous Youngshoots of the plant are sometimes eaten like asparagus, but the roots are poisonous—used medicinally as an emetic and purgative It is also called poke, inkberry, and garget

Pokrovsk, RSFSR see ENGELS

Pola (pō'lä), Serbo-Croatian *Pula* (pōō'lä), city (pop 22,714), Croatia, Yugoslavia, an Adriatic seaport near the southern tip of Istria Pola stands near the site of the Roman city Pollentia Herculeana, later known as Pietas Julia It was a Venetian possession from 1148 until the Treaty of Campo Formio (1797), when it passed to Austria From 1806 to 1814 Pola was annexed to Italy by Napoleon I, but the Congress of Vienna restored it (1815) to Austria Under Austrian rule Pola became the chief naval base of the Hapsburg empire The Treaty of Saint-Germain (1919) gave it to Italy, and the Treaty of Paris of 1947 gave it to Yugoslavia Pola has many important and well-preserved ruins of the Roman period, notably a large amphitheater, the Porta Aurea (a triumphal arch of the 1st cent B C), and the temple of Augustus and Roma (1st cent A D)

Poland, Pol *Rzeczpospolita Polska* (zhĕch'pôspôlē'tä pôl'ska), republic (120,359 sq mi , pop 23,929,757, including the former German territories placed under Polish administration in 1945), E central Europe Warsaw is the capital Bounded by Germany in the west, the Baltic Sea in the north, the USSR in the east, and Czechoslovakia in the south, Poland is largely a lowland, gradually rising from the Baltic to the CARPATHIANS, on its southern border The highest point, the Rysy (8,210 ft) is in the TATRA MTS The main rivers (including the VISTULA, the WARTA, and the Western BUG) flow N into the Baltic and are important traffic lanes More than half of the land is arable, and there are extensive forests Natural resources include the large coal mines of SILESIA, oil in the Rzeszow area, salts at Wieliczka, and iron, zinc, lead, copper, tin, manganese, and uranium ores Industries center especially around KATOWICE in Silesia, around Sandomierz in central Poland, and around BRESLAU (Pol *Wroclaw*) in formerly German Silesia Other important or historic cities include LODZ, CRACOW, POZNAN, Lublin, Czestochowa, Kielce, Bydgoszcz, Chorzow, Gdynia, and Danzig (Pol *Gdańsk*) All Poland, including the administered territories, is divided into 16 administrative provinces As a result of the Second World War, of the 1945 boundary treaty with the USSR, and of the expulsion since 1945 of the German population from the administered territories, the population of Poland now possesses an ethnic and religious homogeneity that it lacked in the past Nearly the entire population is Polish-speaking and the vast majority of those affiliated with any creed are Roman Catholics Poland has 11 universities, notably those of Warsaw, Lodz, Poznan, Breslau, Cracow, Torun, and Lublin

Beginnings through the Age of Greatness Authentic Polish history began in the early 9th cent when the Polians [dwellers in the field] obtained hegemony over the other Slavic tribes that occupied the country Their principal dynasty (see PIAST) accepted Christianity in 966 Poznan was the earliest Polish capital and GNIEZNO the first episcopal see The Piasts expanded their domains in wars against the German emperors, Hungary, Bohemia, POMERANIA, Denmark, and Kiev, and in 1025 BOLESLAUS I took the title king At the death (1138) of BOLESLAUS III the kingdom broke up, it was restored with the coronation (1320) of LADISLAUS I During that period the TEUTONIC KNIGHTS gained a foothold in the then-pagan territory of N Poland Their power, though challenged in many wars, was broken by their defeat (1410) at TANNENBERG and by the subsequent two treaties of TORUN (1411, 1466), which made them vassals of the Polish kings. The main line of the Piast dynasty ended (1370) with CASIMIR III, and the crown passed successively to Casimir's nephew, LOUIS I of Hungary, and to Louis's daughter, JADWIGA Jadwiga married Ladislaus Jagiello, duke of Lithuania, who became king of Poland as LADISLAUS II The JAGIELLO dynasty ruled Poland and LITHUANIA from 1386 to 1572, a period generally considered the golden age of Poland Though drawn into incessant wars with Hungary, Moscow, Moldavia, the Tatars, and the Turks, the closely allied Polish and Lithuanian states successfully maintained an empire that reached from the Baltic to the Black Sea King LADISLAUS III (after 1440 also king of Hungary), though routed and killed by the Turks in the battle of Varna (1444), gave Poland the prestige of championing the Christian cause against the Moslem tide In 1569 Poland absorbed Lithuania by the Union of Lublin The arts and sciences flourished under Jagiello rule and culminated in the figure of Copernicus At the same time, however, the seeds of decay were sown, and the extinction of the Jagiello dynasty brought them to fruit By the 15th cent the gentry, or petty nobles, began to acquire great political influence, in 1505 they forced King Alexander to recognize the legislative power of the diet The diet comprised a senate and the Sejm, which consisted of the deputies of the gentry. The *liberum veto*, which allowed any deputy to dissolve the diet and even to annul its previous decisions, was applied with growing recklessness in the 17th and 18th cent The Polish kings had always been elective in theory, in practice the choice usually fell on the incumbent representative of the ruling dynasty After 1572, however, no dynasty maintained itself for long, and the theory that the entire nobility could take part in the royal elections, now applied in practice, frequently led to contested elections and civil wars Though it weakened the state, the constitution of the royal republic created a certain democratic equalitarianism among the upper classes The peasantry, however, had been reduced to serfdom, and its condition tended to worsen rather than improve There was considerable religious toleration in 16th-century Poland, and the progress of Protestantism was arrested without coercion by the Jesuits, who introduced the Catholic Reform in 1565 Relations between the Roman Catholic ruling class and the followers of the Greek Orthodox Church in Belorussia and the Ukraine (then parts of Lithuania) were less happy and helped to involve Poland in frequent wars with Russia Much of the reigns of STEPHEN BATHORY (1575–86) and of SIGISMUND III (1587–1632) were taken up with schemes to conquer Russia Like most of their successors, these two rulers were foreign princes, for the rivalry among the great Polish families prevented the establishment of a native dynasty The great figure of their reigns was the chancellor Jan ZAMOJSKI Sigismund III, a prince of the Swedish ruling house of Vasa, also became king of Sweden, after his deposition (1599) by his Swedish subjects he continued to push his claims, thus starting a long series of Polish-Swedish wars He was succeeded by his sons LADISLAUS IV (1632–48) and JOHN II (1648–68) John's reign came to be known in Polish history as the Deluge Discontent in the Ukraine flared up in the rebellion of the Cossacks under Bohdan CHMIELNICKI In 1655 CHARLES X of Sweden overran the country, while Tsar ALEXIS of Russia attacked from his side Only the miracle of CZESTOCHOWA saved Poland from annihilation The Peace of OLIVA (1660) cost Poland considerable territory, and by the Treaty of ANDRUSOV (1667) the E Ukraine passed to Russia With John II the Vasa dynasty ended JOHN III (John Sobieski), the savior of Vienna, temporarily restored Polish greatness, but with his death Poland virtually ceased to be an independent country

Division and Regeneration The fate of the nation was determined with increasing cynicism by its three powerful neighbors—Russia, Prussia, and Austria In 1697 the elector of Saxony was chosen king as AUGUSTUS II by a minority faction who were supported by Tsar Peter I Augustus allied himself against Charles XII of Sweden with Russia and Denmark In the ensuing NORTHERN WAR (1700–1721) he was forced (1700) to renounce the Polish crown in favor of STANISLAUS I (Stanislas Leszczynski), but in 1716 he returned to power The War of the POLISH SUCCESSION (1733–35), precipitated by Augustus II's death, resulted in the final abdication of Stanislaus I and the accession of AUGUSTUS III Though Augustus took part in the War of the Austrian Succession and the Seven Years War in his capacity as elector of Saxony, Poland itself remained neutral in these conflicts Poland had reached such a point of political decay that it seemed ready to fall into any conqueror's lap French influence was completely eliminated in the election of 1764, which placed STANISLAUS II (Stanislaus Poniatowski), a member of the powerful CZARTORYSKI family, on the Polish throne with the support of Catherine II of Russia and Frederick II of Prussia. Opposition to increasing Russian domination resulted in the formation (1768) of the Confederation of BAR, which was defeated by Russia despite Turkish help Fearing that all Poland might fall into Russian hands, Frederick II proposed a partition plan to Catherine II and to Maria Theresa of Austria Three successive partitions (1772, 1793, 1795, see POLAND, PARTITIONS OF) resulted in the disappearance of Poland from the European map In those years of national degradation, however, a new spirit began to make itself felt. It manifested itself in a thorough, though belated, constitutional reform (1791) for the then-still-independent part of Poland, and above all, in the heroic revolt (1794) led by KOSCIUSKO In 1807, by the Treaty of Tilsit, Napoleon I created a Polish buffer state, the grand duchy of Warsaw, under King Frederick Augustus I of Saxony Napoleon's defeat was fatal to Polish independence The Congress of Vienna (1814–15) set up a nominally independent kingdom, in personal union with Russia under the tsar The western provinces were awarded to Prussia, GALICIA was given to Austria, and Cracow was made a separate republic The Polish nationalist revival led in 1830 to a general insurrection in Russian Poland At first successful, the Polish army was defeated (1831) at Ostroleka, and the Russians reentered Warsaw The Polish constitution was suspended, and the kingdom became virtually an integral part of Russia Thousands of Poles emigrated abroad, notably to Paris, which became the center of Polish revolutionary activities An anti-Austrian insurrection (1846) in Galicia led to the Austrian annexation of Cracow New rebellions broke out in 1848 in Prussian and Austrian Poland, and in 1863 the Russians, after crushing a Polish revolt, inaugurated an intense program of Russification A similar policy of Germanization in Prussian Poland was linked with Bismarck's Kulturkampf (see LEDOCHOWSKI, COUNT MIECZISLAW) Only in Galicia could the Poles enjoy a considerable degree of autonomy

The Restoration The First World War (1914–18) gave Poland an opportunity to recover its independence The early efforts of the nationalists were directed against Russia Polish legions, led by PILSUDSKI, fought for two years alongside Germany and Austria Late in 1916 Germany and Austria proclaimed Poland an independent kingdom, but when Germany, which occupied the country, retained control over the government, Pilsudski resigned and was imprisoned The independence movement from then on was centered at Paris The armistice of Nov 11, 1918, made Poland an independent state The Treaty of Versailles (1919) gave Poland access to the Baltic Sea through the POLISH CORRIDOR and forced Germany to restore Prussian Poland DANZIG became a free city and parts of Silesia were awarded to Poland after plebiscites were held The Polish-Russian border proposed at the Paris Peace Conference (and later named after Lord Curzon) would have awarded to Russia large parts of the former eastern provinces of Poland, inhabited largely by Belorussians and Ukrainians However, Poland insisted on its 1772 borders, and war with Russia resulted (1920) In the Treaty of Riga (1921) Poland secured most of its claims Poland also entered on protracted disputes over VILNA with Lithuania and over TESCHEN with Czechoslovakia The fact that a third of the population of the reborn state was made up of Germans, Ukrainians, Belorussians, Jews, and Lithuanians—and the generally inequitable treatment given to these minorities—eventually contributed to a new catastrophe A republican constitution was adopted in 1921 Financial and agrarian reforms were undertaken and industrialization progressed, but the condition of the peasantry remained generally wretched while the land-owning aristocracy retained most of its wealth In 1926 democratic government was suspended by a military coup d'état that made Pilsudski virtual dictator After his death (1935) RYDZ-SMIGLY took over control Parliamentary forms were retained under a new constitution (1935), but parliament was reduced to a mere tool of the governing clique, called the colonels Foreign policy, at first based on alliances with France and Rumania, swung toward the AXIS Powers under the guidance of Col Josef Beck However, when in 1939 Chancellor Hitler of Germany demanded the return of Danzig, Poland, having previously secured guarantees against aggression from England and France, rejected the demand Negotiations of England and France with the USSR for a military agreement fell through, and Germany and the USSR arrived at a nonaggression pact in Aug , 1939 On Sept 1, 1939, Germany, refusing further negotiations with Poland and its allies, invaded Poland and thus precipitated the Second World War German columns advanced with spectacular speed On Sept 17 Soviet troops invaded Poland from the east Polish resistance was crushed within six weeks, and Poland was partitioned between Germany and the USSR A central section, called Government General, was annexed by neither power but was placed under German rule After the German attack (1941) on Russia all Poland passed under German occupation.

Through the Holocaust. The condition of Poland in the war years can be described as an inferno The German authorities proceeded methodically to exterminate a large part of the population by massacres and starvation and in extermination camps such as OSWIECIM and to reduce the rest to servitude The worst fate was reserved for the Jews, who numbered 3,113,900 before the war Jewish immigration into Poland—mostly from central Europe—had begun as early as the 9th cent Protected to some extent by the kings in the Middle Ages, the Polish Jews—mostly small tradespeople—later had to suffer many persecutions, first at the hands of the Cossacks and later of the Poles themselves The majority lived apart in ghettos, clung to rigid orthodoxy, and spoke Yiddish, a dialect based on German, rather than Polish Some discriminatory laws were passed against them in the pre-war regime The Germans, hunting them down like animals, exterminated all but some 100,000 Jews Of these, many sought to emigrate after the war because of local outbreaks of Polish anti-Semitism Despite German oppression, many Poles succeeded in organizing an underground resistance movement that gathered power as Germany suffered military reverses A Polish government in exile was established first in France, then in London Polish prisoners of war in the USSR were allowed to form a corps under Gen Wladyslaw Anders and fought with distinction with the Allies, particularly in Italy, other Polish units were organized in Great Britain and Canada The German announcement (1943) that a mass grave of some 10,000 Polish officers, allegedly executed by the Russians, had been discovered in the KATYN forest led to a break between the Polish government in exile and the Soviet Union The rift widened because of Russian demands for the "Curzon line" as the new Polish-Russian frontier When Russian troops entered Poland, a provisional Polish government was set up under Soviet auspices at LUBLIN In the summer of 1944 a Polish uprising at WARSAW failed The last German troops were expelled from Poland early in 1945 By an agreement at the YALTA CONFERENCE the government in exile was merged into a new united government by having MIKOLAJCZYK join the Lublin government, the new government was subsequently recognized by England and the United States The Polish-Soviet border was fixed by treaty slightly E of the "Curzon line," and 15 percent of German reparations payments to the USSR were allotted to Poland At the POTSDAM CONFERENCE (1945) the sections of Prussia E of the Oder and Neisse rivers, including Danzig and the southern part of EAST PRUSSIA (altogether c 39,000 sq mi), were placed under Polish administration, pending a general peace treaty with Germany, the expulsion of the German population from these territories was sanctioned Repatriation of some 3,000,000 Poles—displaced persons in Germany as well as former servicemen—created a difficult international problem, especially as many refused to return to their Communist-dominated homeland A unicameral parliament was established (1946) after popular referendum All large estates were broken up, and industries were partially nationalized Legal opposition was limited almost entirely to Mikolajczyk's Peasant party, but nationalists, rightists, and some other opponents operated as "underground forces " The government-controlled elections of 1947 gave the government bloc a huge majority, Mikolajczyk resigned and fled abroad The underground after lengthy fighting was dissolved when the government proclaimed a political amnesty The Communists and left-wing Socialists held sole power, and Poland became a "people's democracy" on the Soviet model Regardless of political differences, the Poles set about with astounding energy to rebuild their devastated country UNRRA help was of immense assistance in the first stage of reconstruction Polish foreign policy, paralleling domestic developments, soon became identical with that of the USSR, and relations with the United States were tense Though the government did not attempt a direct attack on the deep-rooted Catholicism of the Poles, it sought to gain control over the clergy Relations with the Vatican were severed in 1945, and the Vatican appointments of bishops for vacant sees were not recognized See R L Buell, *Poland Key to Europe* (1939), Oscar Halecki, *A History of Poland* (1943), B E Schmidt, *Poland* (1945), Zygmunt Wojciechowski, *Poland's Place in Europe* (1947)

Poland. 1 Town (pop 1,441), SW Maine, 10 mi W of Auburn, settled c 1768, inc 1795 It includes the resort Poland Spring, long known for its mineral water The Mansion House, Poland's first inn, dates from 1797. The Maine building of the Chicago world's fair (1893) was rebuilt here **2** Village (pop 1,240), NE Ohio, near the Pa line S of Youngstown, settled 1799

Poland, Partitions of. The basic causes leading to the three successive partitions (1772, 1793, 1795) that eliminated Poland from the map were the decay and the internal disunity of Poland and the emergence of its neighbors, Russia and Prussia, as leading European powers. The first partition was proposed when Frederick II of Prussia feared that Empress Catherine II was about to attach all Poland to the Russian Empire Maria Theresa of Austria, though opposing the scheme both on moral and political grounds, reluctantly partook in the spoils, which otherwise would have fallen entirely to Russia and Prussia King STANISLAUS II of Poland was unable to resist his three neighbors The partition of 1772 gave West Prussia to Prussia, Latgale and Belorussia E of the Dvina and Dnieper rivers to Russia, and Galicia to Austria When in 1791 the remainder of Poland showed signs of regeneration, particularly in the adoption of a new constitution, a Russian army invaded Poland (1792) Prussia invaded the country in turn, and in 1793 a second partition—this time without Austrian participation—was arrived at Only the central section of Poland was left independent, and that under Russian control The national uprising under KOSCIUSKO (1794) led to the final partition of 1795, in which all Poland was divided among Russia, Prussia, and Austria Russia, which also formally annexed COURLAND, got the major share of territory, but the capital, Warsaw, went to Prussia At the Congress of Vienna (1814–15) Poland remained partitioned, although the boundaries were radically changed in favor of Russia (For the provisions made at Vienna and for the Polish partition of 1939, see POLAND)

polar bear see BEAR

polar exploration see ARCTIC REGIONS and ANTARCTICA

polar front, in METEOROLOGY, the surface of separation between the cold polar easterly winds of the north and the warmer prevailing westerlies of lower latitudes Its position varies from about lat 60° N in summer to about lat 30° N in winter In addition to this seasonal migration, the position of the polar front varies day by day according to the relative activity of the opposing air masses on either side of it The extratropical CYCLONE (the common storm of the temperate latitudes) has its origin as a "wave" in the polar front

polarimeter: see POLARIZATION OF LIGHT

Polaris see POLESTAR

polariscope see POLARIZATION OF LIGHT

polarization of light When a ray of light enters a flat piece of ordinary glass with parallel sides, at an angle not too small, it undergoes REFRACTION away somewhat from the direction in which it was originally traveling, and it is bent again on leaving the glass at the other surface in such a way that its new path is parallel to its original one When, however, the ray enters the glass at right angles to its surface, it is not bent, but passes directly through the glass and remains unbent when it emerges Crystals of certain substances, such as calcite, or Iceland spar, possess the peculiar property of being able to separate an entering ray of light into two separate parts, permitting one part to pass directly through the crystal with ordinary refraction but bending the other part still farther away from the line (the line of propagation) along which the ray was originally traveling This phenomenon is known as double refraction That part of the original ray which undergoes ordinary refraction is called the ordinary ray, and the other part is called the extraordinary ray Each of the two parts which emerges is said to be polarized The explanation of this condition is based upon the assumption that light waves exhibit transverse VIBRATION, i e , vibrate at right angles to the direction in which they are traveling, and that a single ray of light consists of vibrations in all planes at right angles to this line of propagation Polarized light (i e , either of the two parts of the ray after emergence from the calcite) vibrates only in one plane This one-plane vibration, if it could be observed, would cause a ray of polarized light to appear different when viewed from the side rather than from above or below Polarized light is described, therefore, as two-sided, i e , as having (unlike ordinary light) a different appearance from different sides As an analogy, a string vibrating transversely would appear different when viewed from the side and when viewed from above or below The calcite crystal in acting as a polarizer splits the original ray into two distinct parts, each composed of vibrations in one plane and with the planes at right angles When a single ray of light polarized in one plane is desired, a specially prepared prism, called the NICOL PRISM, is employed A similar ray of light can be produced also by using a tourmaline crystal, which permits one ray to pass through but absorbs the ordinary ray Such a crystal will permit light to pass through it only if the vibration is in a certain plane, and it blocks the passage of light vibrating in other planes This is shown when light that has been passed through one crystal (and is, therefore, plane polarized) is directed to a second crystal which is arranged with its AXIS of crystallization at right angles to that of the first crystal The light is blocked because the position of the second crystal is such that its plane is opposed to that of the polarized light As the crystal is turned or rotated, however, light begins to pass through until finally, when its axis of crystallization is parallel to that of the first crystal, the light is unobstructed A number of substances can polarize light in other ways than in one plane, causing, for example, circular polarization or elliptical polarization Organic substances which affect polarized light when it is passed through their solution are called optically active In the case of certain acids and other solutions, the plane of polarized light is turned or rotated either to the right or left Their activity is usually indicated by the addition to their name of the prefix "dextro-" if the rotation is to the right or by "levo-" or "laevo-" if the rotation is to the left The instrument used to determine in which direction the rotation occurs is called a polariscope A very simple form consists essentially of two crystals of some polarizing substance such as tourmaline, between which is placed the solution to be tested Light is directed through the first crystal or polarizer and is plane polarized It passes on through the solution and its plane is turned or rotated, the direction and the degree of this rotation are indicated by the position in which the second crystal must be placed to permit passage of the light that has gone through the solution The polarimeter is a polariscope that measures the amount of rotation and when used for sugar solutions is commonly called a saccharimeter Many new and practical uses for polarized light are being discovered constantly in addition to those that have already made its discovery important to the scientist Its use is suggested, for example, to eliminate the glare of automobile headlights, to add the dimension of depth to moving pictures, and to filter sunlight for eye comfort

polar regions see ARCTIC REGIONS and ANTARCTICA

Polasek, Albin (pôl'shĕk), 1879–, American sculptor, b Czechoslovakia He came to the United States in 1901 From 1910 to 1913 he held the fellowship in the American Academy in Rome In 1916 he became head of the department of sculpture at the Art Institute of Chicago His work is to be seen in museums throughout the country—*Fantasy* and a bust of J Pierpont Morgan (Metropolitan Mus), bust of Francis D Millet (Pa Acad of the Fine Arts), *The Sower* and several fine busts (Art Inst , Chicago), *Aspiration* (Detroit Inst of Arts) Among his memorials are those to Gov Richard Yates, Springfield, Ill , Theodore Thomas, Chicago, and Woodrow Wilson, Prague Czechoslovakia Busts of F D Millet, Charles Grafly, Elihu Vedder, and C W Hawthorne are in the Hall of American Artists, New York Univ

Pol de Mont see MONT, POL DE

Poldhu (pôldū', pôl'dū), village, Cornwall, England on the coast NW of Lizard Point Marconi's first transatlantic transmission of radio signals from his station here to Newfoundland (1901) is commemorated by a monument

Pole (pōl), English noble family The first member of importance was **William de la Pole,** d 1366, first mayor of Hull and baron of the exchequer He lent money to the government His eldest son, **Michael de la Pole,** 1st **earl of Suffolk,** d 1389, fought in France in the Hundred Years War under Edward the Black Prince He became the trusted adviser of Richard II, who made him (1383) chancellor His enemies forced his dismissal and imprisonment, but he escaped and died in Paris His grandson, **William de la Pole,** 4th **earl and** 1st **duke of Suffolk,** 1396–1450, took an active part in the Hundred Years War and for a time held the chief command He arranged the marriage of Margaret of Anjou to Henry VI and under that king rose to great power in England His persistent efforts to gain peace with France enabled his enemies to accuse him of treason, especially after disastrous losses in Normandy His long and distinguished record, his eloquent appeal to Parliament, even the favor of the king could not save him When setting out for a five-year exile he was abducted from his ship and beheaded in a boat off Dover His letter of farewell to his little son is included in the Paston Letters. His wife was the granddaughter of Geoffrey Chaucer His son, **John de la Pole,** 2d **duke of Suffolk,** 1442 91, married Elizabeth, sister of Edward IV, and held offices under Edward IV He later supported Richard III, yet was favored by Henry VII Of his sons, the eldest, **John de la Pole, earl of Lincoln,** c 1464–1487, had a claim to the throne based on the declaration by Richard III He joined the revolt against Henry VII in favor of Lambert Simnel and was killed at the head of an army invading England The second son, **Edmund de la Pole, earl of Suffolk,** c 1472–1513, agreed with Henry VII to forego the ducal title in return for property which had been forfeited Later he declared his ambition for the throne and tried to get help on the Continent He was eventually delivered as a prisoner to Henry VII, was imprisoned for years, and finally executed by Henry VIII The fifth son, **Richard de la Pole,** d 1525, pretended to the throne He lived abroad after 1501 and died fighting at Pavia for Francis I He was the last of his line

Pole, Reginald, 1500–1558, English churchman, archbishop of Canterbury (1556–58), cardinal of the Roman Church He was a cousin of the Tudors, being the son of Sir Richard Pole and Margaret,

countess of Salisbury, daughter of George, duke of Clarence, brother of Kings Edward IV and Richard III. He studied at Magdalen College (Oxford), at Padua, and at Paris He did not take orders until late in life, but he was devout from the first, and he was in great difficulties when Henry VIII, his benefactor, broke with the pope He was glad in 1536 to accept Paul III's invitation to sit on the commission to reform the pontifical administration He was created cardinal the same year, though still a layman In 1538 he was active in trying to organize a league against Henry, who now was setting out to destroy the Pole family, but, unsuccessful, Cardinal Pole returned to Rome and received the legatine governorship of Viterbo He was one of the legates appointed to open the Council of Trent (1545) In 1553, on Edward VI's death, Julius III made him legate to England, and he and Mary set about restoring the Roman Catholic Church Unfortunately he fell afoul of Philip II first and of Pope PAUL IV later, and his difficulties were vastly multiplied He was always a mild man and would have nothing to do with the burning of heretics In 1556 he was consecrated archbishop of Canterbury. He worked indefatigably to reestablish the ecclesiastical authority He died the same day as Mary and is buried in St. Thomas's Chapel, Canterbury

Pole, Richard de la: see POLE, family.

Pole, William de la. see POLE, family

polecat (pōl'kăt'), mammal native to Europe and Asia, allied to the ferret, weasel, and marten The brown fur of the European polecat is sold under the name of fitch The scent gland under the tail emits a fetid-smelling secretion and is most active when the animal is alarmed The polecat is extremely destructive to poultry and small game Its nearest allies are the Old World ferret—presumably a domesticated polecat—and the black-footed ferret of North America The name polecat is incorrectly applied to the skunk

poles, magnetic. see MAGNETIC POLES and MAGNETISM

polestar, the conspicuous star nearest to the north celestial pole The star holding that position at present is Polaris, or Alpha of the constellation Ursa Minor, the star at the end of the tail of the Little Bear (another variant name is Little Dipper) It is easily located by following the line connecting Beta and Alpha of Ursa Major, known as the Pointers in the Big Dipper, to a position about five times the distance between Beta and Alpha The distance of Polaris from the true pole is now about 1° 9', and in less than 200 years the distance will have diminished to about ½° The star is estimated to be about 25,000,000 times as far from our solar system as the sun is from the earth Measurements show its light power to be about 47 times as great as the sun's About 2300 B C , Alpha Draconis was the nearest prominent star to the celestial pole, and in about 12,000 years Vega will hold that position The polestar, also called the North Star, is of very great service in navigation and furnishes a good starting point for the study of the northern skies

pole vaulting: see TRACK AND FIELD ATHLETICS

Polevoy, Nikolai Alekseyevich (nyĭkulĭ' ălyĭksyā'-lyĭch pŭlyĭvoĭ'), 1796–1846, Russian journalist, critic, novelist, dramatist, and historian With the Moscow *Telegraph*, which he founded in 1825, he laid the groundwork of serious journalism in Russia After the *Telegraph* was suppressed (1836), he edited the St Petersburg journal *Son of the Fatherland* and from 1841 the *Russian Herald* He was the author of colorful and patriotic historical dramas, e g , *The Grandfather of the Russian Fleet* (1838), and romances and novels, such as *The Curse at the Master's Grave* (1832) and *Abadonna* (1834) His principal historical work was a history of the Russian people through the reign of Feodor I (6 vols , 1829–33) Of his critical works, outstanding are those on Derzhavin, Zhukovsky, and Lermontov

police, public and private agents concerned with the enforcement of law, order, and public protection In modern cities their duties cover a wide range of activities, from criminal investigation and apprehension to crime prevention, traffic regulation, and maintenance of records In many countries they have also had a political function (see SECRET POLICE). The foundations of the present English metropolitan police system were laid in 1829 by Sir Robert PEEL In that year also SCOTLAND YARD was reorganized On the American frontier, before the government was well organized, vigilance committees (see VIGILANTES) functioned as volunteer police The TEXAS RANGERS and the ROYAL CANADIAN MOUNTED POLICE are examples of organizations that function especially in the open country The colonies maintained constables, and the office survives in the rural sheriff. Regular police forces in many states followed the establishment (1844) of the New York city organization Administration of the police system varies in different countries. In Europe, especially on the Continent, it tends to be centralized. In the United States there is complete decentralization; metropolitan police have the widest functions, state police are created chiefly for traffic control, and there is no regular Federal force outside the Federal Bureau of Investigation (FBI) for detection. See R B Fosdick, *European Police Systems* (1915); August Vollmer, *The Police and Modern Society* (1936); Bruce Smith, *Police Systems in the United States* (1940).

police court, in law, a court with jurisdiction limited to minor offenses, chiefly misdemeanors and breaches of municipal ordinances The trial is usually held before the judge sitting without a jury A police court may also examine persons accused of felony and commit them to jail pending indictment and trial or release them on reasonable bail Magistrate's court, justice's court and municipal court are other designations of the police court.

police dog: see SHEPHERD DOG

police power, in law, right of a government to make laws necessary for the health, morals, and welfare of the populace The term has greatest currency in the United States, where it has been defined by the Supreme Court as the power of the states to enact laws of that type even though they may contravene the literal terms of the Constitution The doctrine was first stated by Chief Justice John Marshall, who ruled that the power of Congress over interstate commerce (Article I, Section 8) could not prevent the states from controlling goods shipped from another state after they had been broken out of the original package Chief Justice Roger B TANEY added to the concept The police power became of great moment after the passage (1868) of the Fourteenth Amendment While the traditional subjects of police regulation—e g , NUISANCE and crimes—were not affected by the amendment, in other respects delicate adjustment was required of the court On the one hand, the states had to be restrained from taking liberty or property without due process of law, on the other hand, the states could not be made helpless in dealing with grave problems of an economic and social nature Gradually the court evolved from a strict interpretation of the Fourteenth Amendment to an attitude tolerant of economic regulation by the states By the late 1930s the practice of the court was to uphold almost all such laws as falling within the police power

Polignac, Jules Armand, prince de (zhul' ärmä' prĕs' du pōlēnyäk'), 1780–1847, French statesman Belonging to one of the oldest families of France, he emigrated during the Revolution Under Napoleon he was imprisoned (1804–14) for his part in the conspiracy of Georges CADOUDAL In 1815 Louis XVIII named him a peer of France He served as ambassador to England from 1823 to 1829 A champion and leader of the ultraroyalists in the reigns of LOUIS XVIII and CHARLES X, Polignac was strongly clerical, even refusing to take the oath to the charter on religious grounds He became minister of foreign affairs and premier in Aug , 1829, and by his reactionary measures precipitated the July Revolution in 1830 In March, 1830, a majority of the chamber of deputies demanded the dismissal of the Polignac ministry Instead, the chamber was dissolved, and when the new elections again resulted in a liberal majority, Polignac issued the July Ordinances, which dissolved the new chamber even before it met, established a new electoral law, and ended the freedom of the press (July 26, 1830) On July 27 the revolution broke out Polignac was arrested and condemned by the chamber of peers to life imprisonment Amnestied in 1836, he withdrew to England He wrote *Considérations politiques* (1832, Eng tr 1832), *Études historiques, politiques et morales* (1845), and *Réponse à mes adversaires* (1845)

Polignac, Melchior de (mĕlkyôr'), 1661–1742, French diplomat, churchman, and author, cardinal of the Roman Church As ambassador to Poland he directed (1697) the unsuccessful candidacy of François Louis de Conti for the Polish crown He was one of the negotiators of the Peace of Utrecht (1713–14) After being in disgrace during the regency of Philippe d'Orléans, he served as ambassador to the Holy See His *Anti-Lucretius* (1745, in Latin, Eng tr , 1757) is a philosophical poem attacking materialism from the Cartesian viewpoint

Polignac, Yolande Martine Gabrielle de Polastron, duchesse de (yôlăd' märtēn' gäbrĕĕl' du pôlästrôn' dŭshĕs'), c 1749–1793, favorite of Queen Marie Antoinette of France Her husband, Jules, comte de Polignac, was created duke and accumulated a huge fortune through her favor with the queen Fearing the hatred of the revolutionists, she emigrated in 1789 She died in Vienna She was the mother of the reactionary statesman, Jules Armand de POLIGNAC

Polillo (pōlē'lyō), island (233 sq mi , pop 6,716), Philippine Islands. Polillo Strait separates it from E Luzon. Coconuts are the chief product, and coal is mined

Poling, Daniel Alfred (pō'lĭng), 1884–, American clergyman, editor, and author, b Portland, Oregon, grad Dallas College (B A., 1904; M.A , 1906) and studied at Lafayette Seminary, Oregon, and at Ohio State Univ He was pastor (1923–30) of the Marble Collegiate Church, New York city, in 1930 he became pastor of the Baptist Temple, Philadelphia. He is editor of the *Christian Herald* and *Christian World Endeavor*. Some of his radio programs were published as *Radio Talks to Young People* (1926) and *Radio Talks* (1927). He edited *A Treasury of Best-loved Hymns* (1942) and *A Treasury of Great Sermons* (1944). His own writings include *Learn to Live* (1923), *Youth and Life* (1929), *Between Two Worlds* (1931), and *A Preacher Looks at War* (1943).

poliomyelitis (pō"lēōmī"ĕlī'tĭs) or **infantile paralysis,** inflammation of the gray matter of the spinal cord, caused by a virus. It is a communicable disease often occurring in epidemics among children especially in late summer and fall Symptoms occur suddenly and are often associated with fever, gastrointestinal disturbances, and a stiff and painful neck Sometimes motor nerve paralysis causes atrophy of groups of muscles and permanent deformity However, a majority of cases do not result in paralysis. In the early stages of the disease paralysed muscles can be protected and treated. Treatment by physical therapy is generally favored in preference to the older practice of immobilization Sudden chill and overfatigue increase the susceptibility to the disease. A cure is not available, but much research is concerned with the problem. It is prevalent chiefly among peoples living in societies with modern sanitation facilities. Epidemics are rare in China and the Middle East, where it occurs endemically In the United States the National Foundation for Infantile Paralysis raises funds and aids victims of the disease Many patients are cared for at the Georgia Warm Springs Foundation (see WARM SPRINGS)

Polish Corridor. The Treaty of Versailles (1919) gave to newly independent Poland a strip of territory, taken from Germany, which provided Poland with an outlet to the Baltic Sea Called the Polish Corridor, this strip contained the lower course of the Vistula (except the territory constituting the Free City of Danzig) and the towns of Torun, Grudziaz, and Bydgoszcz GDYNIA was developed as the chief Polish port The corridor separated East Prussia from the rest of Germany, but provision was made for free transit across the corridor for Germans Historically, Poland had some claim to the territory, which had formed part of the once Polish POMERANIA A large minority of the population, however, was German-speaking The arrangement caused chronic friction between Poland and Germany In March, 1939, Germany demanded the cession of Danzig and the creation of an extraterritorial German corridor across the Polish Corridor Poland rejected these demands and obtained a French and British guarantee against aggression In Aug , 1939, the Polish-German crisis reached an acute stage, which led (Sept. 1) to the German invasion of Poland and the Second World War Germany annexed the territory constituting the corridor, but lost it again when defeated in 1945

polishes, substances applied to surfaces to produce smoothness and gloss They include abrasives, e g , emery, steel wool, sandpaper, and pumice stone, as well as various chemical compounds for use on soft metals such as silver, copper, and brass. Diatomaceous, or infusorial, earth made up of the shells of diatoms is the basis of many polishes One of these, tripoli, is employed to make metallic surfaces smooth following treatment with coarser abrasives Where a high polish is desired, use is made of jeweler's rouge, which is calcined sulphate of iron Gems are polished with very fine abrasives such as diamond dust. Finished surfaces cannot be treated with abrasives since these will scratch and eventually remove the paint, enamel, varnish, or other material Luster is restored to finished woods by means of prepared mixtures containing linseed oil, turpentine, resins, and wax, sold as furniture polish Unfinished wood is rubbed with sandpaper of increasing fineness, then coated with varnish. Leather polishes consist of various wax varnishes and resin soaps They fill in irregularities of the surface by making a level film of wax which can be made smooth and lustrous by rubbing

Polish language, one of the Slavonic subfamily of Indo-European languages See LANGUAGE (table).

Polish literature. The early literature of Poland was written in Latin, the chief writers of that period include the historians Martin Gallus (12th cent.) and Jan Dlugosz (1415–80), the astronomer Copernicus (1473–1543), and the poet Klemens Janitius (1516–43) The first book printed in Poland was issued in 1474 at Cracow Among the first authors who wrote in Polish were the historian Martin Bielski (c 1495–1575); Mikolaj Rej (1505–69), called the "father of Polish literature", A F. Modrzewski (1503–72), Stanislaus Orzechowski (1513–66), and Jan Kochanowski (1530–84), the greatest Polish poet of the Renaissance. The 17th cent was a period of twilight in Polish literature, and it was not until the middle of the 18th cent that the period of classical recovery began Among the Polish writers of the time, influenced by the French Enlightenment, Ignacy Krasicki (1735–1801) was outstanding. Modern journalism was born, and light drama flourished under the playwrights Wojciech Boguslawski (1757–1829) and J. U Niemcewicz (1757–1841). The age of romanticism in Polish literature is best represented

by the poets Adam Mickiewicz (1798–1855), Julius Slowacki (1809–49), and Sigismund Krasinski (1812–59) Other writers of the period include the dramatist Alexander Fredro (1793-1876) and the novelist Michal Czajkowski (1808-86) The romantic poet Cyprjan Norwid (d 1885) indirectly introduced the positivist philosophy of the next period in Polish literature, the age of realism, which began in the middle of the 19th cent. Prose writing, which dominated the era, produced notably the novel Among the leading novelists of the time were J I Kraszewski (1812–87), Adolf Dygasinski (1839–1902), Eliza Orzeszkowa (1841–1910), Boleslaus Prus (1847–1912), and Henryk Sienkiewicz (1846–1916), whose trilogy of historical novels were internationally famous The following period, that of neo-romanticism, began at the close of the 19th cent Its outstanding figures were the poet Jan Kasprowicz (1860–1926), the poet and dramatist Stanislaus Wyspianski (1869–1907), the novelists and dramatists Stefan Zeromski (1864–1925), Stanislaus Przybyszewski (1868–1927), and Gabrielle Zapolska (1860–1921), and the novelist W S Reymont (1867–1925) Reestablished as an independent nation (1919), Poland inherited from the period of subjection the poet Leopold Staff (1878–), among the founders of its new literature were the poets Julian Tuwim (1894–), Jaroslaw Iwaszkiewicz (1894–), and Kazimierz Wierzynski (1894–) The contemporary Polish novelists include F A Ossendowski (1876–1944), Zofja Kossak-Szczucka (Sophia Kossak, 1890–), Zofja Nalkowska (1885–), Marja Kuncewiczowa (1897–), and Joseph Wittlin (1896–) One of the founders of contemporary Polish drama was Marja Jasnorzewska (1899–1945) See Roman Dmowski, *Periods of Polish Literary History* (1923) and *Modern Polish Literature* (1924), Julian Kyzyzanowski, *Polish Romantic Literature* (1930), and W J Rose, *Polish Literature* (1944)

Polish Succession, War of the, 1733–35 On the death (1733) of Augustus II of Poland, STANISLAUS I sought once more to ascend the Polish throne He was supported by his son-in-law, Louis XV of France The rival candidate for the throne was Augustus II's son, the elector of Saxony, supported by Emperor Charles VI and by Anna of Russia Stanislaus was elected by a majority of the Polish nobles, but a minority proclaimed the elector of Saxony king of Poland as AUGUSTUS III Stanislaus, being without troops, could not resist the Russian forces that intervened in his rival's behalf, after the fall (1734) of Danzig, he fled to France The war continued to be fought along the Rhine and in Italy, with Spain and Sardinia joining France against the emperor Spain sought to recover Naples and Sicily, which it had ceded to Austria at the Peace of Utrecht, and Sardinia sought to dislodge the Austrians from Lombardy The allies were successful in Italy, where Spanish troops seized Sicily and Naples The territories of the duke of Lorraine (Charles VI's son-in-law, later Emperor FRANCIS I) were in the meantime occupied by the French In 1735, at the preliminary Treaty of Vienna, peace was obtained through a general dynastic reshuffle Stanislaus I renounced Poland, though he retained the royal title, and was compensated with the duchies of Lorraine and Bar, which were to pass to the French crown at his death The dispossessed duke of Lorraine was promised the succession to the grand duchy of Tuscany after the death of its last Medici ruler (which occurred in 1737) Spain received Naples and Sicily and in exchange ceded to Austria its claims to the duchy of Parma Austria retained Lombardy, in addition, the emperor received from France a guarantee of the Pragmatic Sanction. Sardinia neither gained nor lost anything A final peace treaty was signed after lengthy negotiations in 1738

Politian (pŏll'shŭn), Ital *Poliziano* (pōlētsēä'nō), surname of **Angelo Ambrogini** (ăn'jĕlō ämbrōjē'nē), 1454–94, Italian poet and humanist At 16 he translated several books of Homer into Latin so well that he received the title *juvenis Homerus* [young Homer]. Under the patronage of Lorenzo de' Medici he was tutor to the young Medici, and he taught at the Univ of Florence A fine Latin and Greek scholar, he was also the leader, with his patron, in the cultivation of Italian Among his works is *Orfeo* (Eng trs by H M Ayres, 1929, and L E Lord, 1931), which is the earliest Italian play of any quality and is one of the finer lyric works of the Italian Renaissance His miscellaneous lyrics are hardly surpassed by Michelangelo, Ariosto, or Tasso *Stanze per la giostra*, a description of a tournament in which Giuliano de' Medici was victorious, is one of his most delightful pieces For translations, see Lorna de' Lucchi, *An Anthology of Italian Poems* (1922)

political science, the science of the nature and functions of the state and of government as the organization through which the state exercises its powers. Illustrious names in its early history include Plato, Aristotle, and Cicero. The highest of human organizations is the state, the purpose of which, to Aristotle, is to aid the good life. The state must not be too small; one household could not provide the desirable services It must not be too large; the citizen could not then be an informed and effective participant in the government Plato reached the conclusion that 5,040 households would be the ideal for a state; Aristotle thought this number obviously too large Modern political science studies the actual workings of existing governments and tries to determine the principles underlying efficient government It pays attention to the size of the state only in so far as this affects the processes of government Written and unwritten constitutions, the making and administration of laws, police and welfare activities of government, cabinet and presidential government, federal and centralized government, local, city, and national government, colonial government, elections and representation, political parties and public opinion, citizens and their rights, courts and judges, aliens and minorities, taxation and public finance, international relations—these form an important part of the subject matter of political science It also considers such subjects as the nature of SOVEREIGNTY, the origin and development of the state, its ends or purposes, theories of government such as individualism and collectivism, state SOCIALISM, syndicalism, ANARCHISM, COMMUNISM, FASCISM, the nature of international law, and international associations such as the United Nations See C E M Joad, *Introduction to Modern Political Theory* (1925), R G Gettell, *Political Science* (1933), George Catlin, *The Story of the Political Philosophers* (1939)

Poliziano · see POLITIAN

Polk, James Knox (pōk), 1795–1849, 11th President of the United States (1845–49) b Mecklenburg co, N C His family moved (1806) to the Duck river valley in Tennessee and there, after graduating from the Univ of North Carolina (1818) and studying law under Felix Grundy, he began (1820) to practice law at Columbia Polk served in the state legislature (1823–25), and in the House of Representatives (1825–39), where he was speaker for the years 1835–39, he was a leading Jacksonian Democrat In 1839, to save Tennessee for his party, he ran for and won the governorship, but was defeated for reelection by the Whig candidate in 1841 and 1843 Polk harbored vice presidential ambitions, but Jackson, convinced that Martin Van Buren had committed political suicide by announcing his opposition to the annexation of Texas, urged Polk to consider the presidency With the Van Buren and Calhoun factions deadlocked at the Democratic convention at Baltimore in 1844, George BANCROFT advanced Polk as a candidate behind whom both sections could unite, and the "dark horse" won the nomination Polk narrowly defeated Henry CLAY by carrying New York state, where the popular Democratic candidate for governor, Silas WRIGHT, strengthened him and the presidential candidacy of James G BIRNEY of the LIBERTY PARTY cut into Clay's vote Polk, to the surprise of many, was his own President, he even ignored Jackson's wishes on several matters Renouncing a second term for himself, he required the members of his cabinet, including James Buchanan, Robert J Walker, William L Marcy, and Bancroft, to devote all their energies to their offices, not to campaigning to succeed him He ably managed the MEXICAN WAR which followed the annexation of Texas The "four great measures" he announced for his administration were all achieved reduction of the tariff (the Walker Tariff was one of the lowest in U S history), reestablishment of the INDEPENDENT TREASURY SYSTEM, settlement of the dispute over OREGON (the Democratic campaign slogan, "Fifty-four forty or fight," was disregarded), and the acquisition of California More territory was added to the United States under Polk than under any other President except Jefferson The myth, inspired by the Whigs in 1844 ("Who is James K Polk?" they sarcastically asked) and perpetuated by later Republican historians, that he was a political nonentity raised to high office by accident has only recently been dispelled Actually, few Presidents have equaled his record of attaining specific, stated aims, few worked harder He labored so strenuously in fact that his health gave way and he died a few months after leaving office See M M Quaife, ed, *The Diary of James K Polk* (4 vols, 1910), abridged in one volume by Allan Nevins (1929), E I McCormac, *James K Polk* (1922), A M Schlesinger, Jr, *The Age of Jackson* (1945), M M Morrel, *"Young Hickory"* (1949)

Polk, Leonidas, 1806–64, Protestant Episcopal bishop and Confederate general, b Raleigh, N C, grad West Point, 1827 He left the army to study for the ministry and took orders (1830–31) Polk, missionary bishop of the Southwest (1838–41) and bishop of Louisiana (1841–61), was the principal founder of the Univ of the South, Sewanee, Tenn (1857) In the Civil War he became a major general (June, 1861) and was at first engaged in the defense of the Mississippi river He commanded a corps at Shiloh (April, 1862), was promoted lieutenant general shortly after fighting at Perryville (Oct), and commanded the Confederate right at Murfreesboro (Dec., 1862–Jan., 1863). In the CHATTANOOGA CAMPAIGN Bragg accused him of dilatoriness at Chickamauga (Sept) and had him relieved. Polk assumed command of the Army of Mississippi (Dec) and fought in the ATLANTA CAMPAIGN until he was killed (June, 1864) at Pine Mountain, Ga See biography by his son, W H Polk (1893)

Polk, Leonidas Lafayette, 1837–92, American agrarian leader, b Anson co, N C He studied agriculture at Davidson College, and after he married (1857) Sarah Geddy he managed a plantation in North Carolina He served with the Confederate army in the Civil War and then returned to farming He led in the North Carolina Granger movement after 1872 and helped bring about many state reforms, including the creation (1877) of the North Carolina department of agriculture and the founding (1887) of what today is the North Carolina State College of Agriculture and Engineering He became (1887) president of the National Farmers Alliance and played an important role in the formation (1891) of the Populist party

Polk, residential borough (pop 3,690), NW Pa, near Franklin, settled c 1798, laid out 1839, inc 1886 It is a resort center

polka (pō'ku, pōl'ku), a lively dance which originated in Bohemia c 1830 A turning-couple dance in quick 2-4 time, it had 10 figures, only five of which were performed in usual ballroom dancing Dvorak and Smetana composed many polkas

Pollaiuolo (pōl-lay-ōō-ō'lō), family of Florentine artists **Jacopo Pollaiuolo** (yä'kōpō) was a noted 15th-century goldsmith. His son and pupil **Antonio Pollaiuolo** (äntō'nyō), 1429?–1498, goldsmith, sculptor, painter, and engraver, became head of one of the foremost Florentine workshops, with many pupils and assistants He was a great draughtsman and is said to have been the first artist to study anatomy by dissection Many of Antonio's paintings were executed in collaboration with his brother Piero Although mannered and lacking in breadth, they display great vitality, excellent draughtsmanship, careful finish, and considerable anatomical knowledge and are full of action Among the most important are *Apollo and Daphne* and *The Martyrdom of St Sebastian*, which may have been a joint work (National Gall London), *Labors of Hercules* (Uffizi), *Holy Family* (Borghese Palace, Rome), *Tobias and the Angel* (Turin), and *Hercules and Nessus* (Jarves Coll, Yale) The fresco of *St Christopher and the Infant Christ* (Metropolitan Mus) is attributed by some critics to Piero and by others to the school of the Pollaiuolos The Uffizi also has Antonio's fine *Hercules Slaying Cacus*, a bronze group, *Ten Fighting Nudes*, one of his rare engravings, and *The Young Warrior*, a terra-cotta bust In 1484 he was summoned with his brother to Rome by Pope Innocent VIII and there executed the bronze tomb of Sixtus IV and the monument to Innocent VIII in St Peter's The National Gallery of Art, Washington, D C, has *Portrait of a Man* **Piero Pollaiuolo** (pyä'rō), 1443–96, a painter, was associated with his brother but also painted many independent works, such as the *Coronation of the Virgin* in the Church of Sant' Agostino at San Gimignano, *Prudence*, and a portrait of Galeazzo Sforza (Uffizi), and *Portrait of a Young Lady* (Gardner Mus, Boston). Their nephew, **Simone del Pollaiuolo** (sēmō'nā dāl), 1457–1508, Italian architect, worked chiefly in Florence after early training as a woodworker After a visit to Rome to study the remains of antiquity, he was nicknamed Il Cronaca because of the endless tales he told His chief monument is the noble Strozzi Palace, which he finished after the death of Benedetto da Majano, Cronaca is responsible for the beautiful cornice and interior courtyard. His minor works include the sacristy of San Spirito, which he erected after a model by Giuliano da Sangallo, the Great Hall of the Palazzo Vecchio (1495), the Church of San Salvatore al Monte (1504), and probably the Guadagni Palace See study by Maud Cruttwell (1907)

Pollard, Albert Frederick (pŏl'lûrd), 1869–1948, English historian, educated at Oxford He served (1893–1901) as one of the editors of the *Dictionary of National Biography* He was professor of constitutional history at the Univ of London from 1903 to 1931 and founder and director (1920–39) of the Institute of Historical Research Pollard was an authority on the Tudor period in English history, and his objective, scholarly works include *Thomas Cranmer and the English Reformation* (1904, 2d ed, 1926), six chapters in the *Cambridge Modern History*, *Henry VIII* (1902, new ed., 1905), a volume in William Hunt and R L Poole, ed, *A Political History of England, Factors in Modern History* (1907, 3d ed, 1932), *The Evolution of Parliament* (1920, 4th ed., 1938), *A Short History of the Great War* (1920); and *Wolsey* (1929)

polled Durham cattle (pōld' dŭ'rum) or **polled shorthorn cattle,** dual-purpose breed of cattle originated in the United States from the SHORTHORN They are much like the shorthorns, but are hornless Although these cattle are called polled Durham cattle, their original designation, the name polled shorthorn is now preferred.

pollen, grains containing the male element of flowering plants and borne, usually as a yellow powder, on slender filaments, the stamens, within the COROLLA of a FLOWER Pollen grains, microscopic in size, are invisible to the eye except in quantity, but they are so diversified in appearance that plants may be identified by their pollen alone, as is often done in determining the vegetation of a past period by boring into bogs The transfer of the pollen grain to the female part (pistil) of a flower is called POLLINATION After successful pollination the pollen grain germinates and produces a tube which grows down through the pistil of the flower, and, on reaching the base, fertilizes the OVUM or egg lying there The ovum then grows into the embryo of the SEED Some flowers are sterile to their own pollen, and in many flowers there are various devices seen for preventing self-pollination and insuring cross-pollination, e g , the different time of maturation for the stamens and pistil of any one flower Pollen contains stored food and is collected and used for food (as is nectar) by some insects, such as bees Showers of pollen are sometimes observed floating from trees, since more pollen is produced than is used Many people are allergic to certain kinds of pollen in quantity (see HAY FEVER), the most common offender being ragweed Through the agency of pollen, characters of the male parent plant are added to the potentialities of the offspring and find expression in succeeding generations Rudolph Jacob Camerarius (1665–1721) was the first to demonstrate the function of pollen by experiments Since then many new flowers, fruits, and vegetables have been produced and old varieties improved through selective pollination

pollination, the transfer of pollen from the stamen to the pistil of the same or another flower The most common agents of pollination are insects and wind but snails and hummingbirds also serve Self-pollination is usually avoided in flowers (see POLLEN) and adaptations insuring cross-pollination are common, an exception occurring in certain cleistogamous flowers (see VIOLET) which never open and are thus self-pollinated It is commonly believed that cross-pollination makes for stronger offspring There is often a close correlation between the flower and its chief pollinizing agent, seen in the adaptations between insect and flower, as in the snapdragon and the bumblebee and, as extreme examples, the YUCCA and the yucca moth and the caprifig (see FIG), which did not fruit when introduced into California until the fig wasp was imported There are also various intricate devices seen in many flowers for effectively dusting the insect with pollen In hybridizing experiments and selective breeding, hand pollination is usually accomplished with a small camel's-hair brush, and it is necessary that both stamens and pistils be used at maturity and be protected from undesired pollen Pollination, formerly thought to be fertilization, actually is a purely mechanical process preceding fertilization For wild flowers and their insect pollinators, see Neltje Blanchan, *Nature's Garden* (1905)

Pollio, Caius Asinius (kā'ŭs ăsĭ'nĭŭs pŏ'lēō, kĭ'ŭs), c 76 B C–A D c 5, Roman historian He was a partisan of Julius Caesar and of Marc Anthony, but his account (now lost) of the civil war was renowned for its impartiality and its scientific handling of evidence He was a friend of Vergil and also wrote poetry and drama

Pollock, Sir Frederick (pŏ'lŭk), 1845–1937, English jurist, b London He was educated at Eton and Cambridge and was admitted to the bar in 1871 He was (1887–1903) professor of jurisprudence at Oxford Pollock devoted himself to legal study and writing, after 1914, however, he was judge of the admiralty court of the Cinque Ports Some of his books, including *The Principles of Contract* (1876) and the *Law of Torts* (1887), have been frequently republished Pollock was editor (1885–1919) of the *Law Quarterly Review*, a major British legal periodical, and editor in chief (1895–1935) of the *Law Reports*, the chief medium for publishing decisions of the British courts He collaborated with F W Maitland on *The History of English Law* (1895), contributing the material on Anglo-Saxon law He wrote monographs on Spinoza (1880, 1935) and *Leading Cases Done into English* (1876), a parody of legal style His correspondence with O. W Holmes was published as *The Holmes-Pollock Letters* (1941) See Pollock's *For My Grandson* (1933)

Pollock, Oliver, 1737–1823, American merchant, b Ireland He arrived in America at the age of 23 and became a successful merchant After moving to New Orleans, Pollock speculated advantageously in land and in the slave trade and gained the confidence of the Spanish government He contributed generously to the cause of the colonies in the American Revolution, obtained supplies from the Spanish, and paid out from his personal funds to help finance George Rogers Clark's conquest of the Northwest After the war, the American government tardily and incompletely met its debts to him See biography by J A James (1939)

Polonarrua or **Polonnaruwa** (both pŏ"lŭnŭrōō'ŭ), ruined ancient city, on central Ceylon It became a royal residence in the late 3d cent and the capital of Ceylon in the mid-8th cent. Its most impressive ruins date from the 12th cent. They include palaces, temples (both Hindu and Buddhist), and three colossal figures of the Buddha carved out of single blocks of stone The name is also spelled Pollanarrua.

poll tax, in U S history, a tax levied by a state on its voters, usually ranging from $1 to $5 Though states, e g , Massachusetts and Indiana, levied poll taxes which did not have the effect of limiting suffrage, many states in the South imposed poll taxes that resulted in the disfranchising of otherwise eligible voters Thus, poll taxes enacted by Florida (1889), Mississippi (1890), Tennessee (1890), Arkansas (1892), South Carolina (1895), Louisiana (1898), North Carolina (1900), Alabama (1901), Virginia (1901), Texas (1902), and Georgia (1907) not only resulted in keeping many Negroes from the poll but also barred a great many poor whites Various movements were made to abrogate poll taxes, and they were abolished in North Carolina (1920), Louisiana (1934), Florida (1937), and Georgia (1945) After 1942 numerous efforts were made by members of Congress to pass legislation forbidding poll taxes as prerequisite for voting for Federal candidates, but maneuvers in the Senate continually prevented enactment The modern poll tax has little in common with the ancient capital tax sometimes called a poll tax

Pollux, Greek hero see CASTOR AND POLLUX

Pollux, Julius (pŏ'lŭks), fl 180, Egyptian Greek lexicographer, b Naucratis He compiled a Greek lexicon for his pupil, afterwards Emperor Commodus It is valuable for the information on Greek culture

Pollux, in astronomy see GEMINI.

Polo, Marco (mär'kō pō'lō), 1254?–1324?, Venetian traveler in China His father, Niccolò Polo, and his uncle, Maffeo Polo, had made (1260) a trading expedition to the Crimea A war blocked their return, and they journeyed eastward to reach Kublai Khan's eastern capital at Kaifeng in 1266 They returned to Venice in 1269, and in 1271 they left with Marco and two Catholic missionaries for Kublai's court The missionaries soon abandoned the party, which reached Cambaluc (Peiping) in 1275 Marco Polo became a favorite of the khan, who employed him on business in central and N China, SE Asia, and S India For three years he apparently ruled a Chinese city (Yangchow) After 17 years the travelers left (1292) Kublai's realm, acting as escort for a wife of the khan of Persia, and were back in Venice in 1295 Marco Polo promptly joined the Venetian forces fighting Genoa and was taken prisoner (1296) During his captivity he dictated an account of his travels, apparently in French, to a fellow prisoner The prologue of the work tells of Polo's life The remainder of the book describes the places which he visited and the customs and history of the Mongols Polo was wonder-struck at the splendors which he saw and of which he heard, in some instances he was credulous, but most of the book seems to be factual and it has been of great value to historians During the Renaissance it was the chief —almost the sole—Western source of information on the East, and until the late 19th cent there was no other European material on many parts of central Asia Of the annotated translations of his book the most useful is that by Sir Henry Yule, entitled *The Book of Ser Marco Polo* (3d ed , revised by Henri Cordier, 1903) See H H Hart, *Venetian Adventurer* (1942)

Polo, city (pop 2,071), NW Ill , NNW of Dixon, inc 1857 It is a farm trade center

polo (pō'lō), game played on horseback Outdoor polo is played by teams of four on a field 200 by 300 yd Safety zones surround the grassy or leveled playing field, and goal posts stand 10 ft high and 8 ft apart at either end of the field If the field is surrounded by a board wall, it measures 160 yd wide If it is unboarded, it is larger The outdoor ball, weighing from $4^1/_4$ to $4^3/_4$ oz and measuring not more than $3^1/_4$ in in diameter, is made of wood or willow root The indoor field, usually composed of a tanbark surface and surrounded by embankments, is not standardized in dimensions, and sometimes the 10-foot high, 8-foot wide goal posts are represented by stripes painted on the wall Teams of three men play the indoor game, and the ball, measuring $4^1/_4$ to $4^1/_2$ in in diameter and weighing 6 to $6^1/_2$ oz is made of rubber which is inflated Whereas an outdoor match is made up of eight periods (called chukkers) of $7^1/_2$ min each, the indoor match comprises four such periods Standard polo equipment includes a specially made brimmed helmet, long, flexible-stemmed mallet some 4 ft long, which meets the ball on the side of the mallet-head, and the usual equestrian equipment Play is directed toward hitting the ball through the opponents' goal Substitution of players is permitted only in case of injury Penalties—e g , automatic goals, free hits, and disqualification—are meted out by an umpire, also on horseback, for dangerous riding, carrying the ball, or illegal use of the mallet The umpire starts each period and begins play after each goal by throwing the ball in a marked-off center court between the two lines of opposing players. Polo ponies, small and agile horses, are of no special breed They are required to undergo a long and rigorous period of training in order to meet the bruising emergencies of the game This game is said to have had its origin in Persia, whence it extended into Turkey, India, and Tibet and, with some modifications, into China and Japan In the 19th cent it was revived in India, where it became popular with British army officers stationed there and spread to other countries It was introduced into England in 1869, and seven years later it was brought to America by James Gordon Bennett. After 1886 tournaments for the International Polo Challenge Cups were played from time to time between English and American teams Polo players are ranked from 10 down, depending upon how many goals they are expected to score in a regular game Thomas Hitchcock, Jr , is generally considered to have been the world's greatest polo player Other famous names, past and present, are Gerard Balding, George H Bostwick, Winston F C. Guest Stewart B Iglehart, Michael G Phipps, and Cecil Smith See E D Hiller, *Modern Polo* (6th ed , 1929), P G Kendall, *Polo Ponies* (1933), Sir Beauvoir De Lisle, *Tournament Polo* (1938), Paul Brown, *Polo* (1949)

polonaise (pō"lŭnāz', pŏ"–), Polish national dance, in moderate 3-4 time and of slow, stately movements It evolved from court processions and ceremonies of the late 16th cent and made its way into the compositions of Beethoven, Schubert, Liszt, and especially Chopin

polonium (pulō'nēum), element similar to radium (symbol=Po, for physical constants, see ELEMENT, table), having the property of RADIOACTIVITY It was discovered (1898) by Pierre and Marie Curie in pitchblende and was named for Poland, where Mme Curie was born Generally found with bismuth, polonium is easily isolated

Polonnaruwa: see POLLONARRUA

Polotsk (pô'lŭtsk), city (pop 25,820), capital of Polotsk oblast, NE Belorussia, on the Western Dvina Known since the 9th cent , it was the capital (10th–13th cent) of a principality and flourished as a trade center from the 14th to the 16th cent It is now a rail and river transportation point and has a lumber industry

Polovtsi see CUMANS

Polson (pōl'sŭn), city (pop 2,156), co seat of Lake co , NW Mont , at the south end of Flathead Lake, in the farm region of the Flathead valley, inc 1902

Poltava (pŭltä'vŭ), city (pop 130,305), capital of Poltava oblast, E central Ukraine It is the center of a rich agriculturalregion Near by is the battlefield where Peter I of Russia completely routed (1709) Charles XII of Sweden and the Cossack Mazeppa, who both fled to Turkey (see NORTHERN WAR) In the Second World War, Poltava was held (1941–43) by the Germans The city was the home of Gogol (many of whose stories are laid in the near-by village of Dikanka) and of Korolenko

poltergeist (pōl'turgīst) [Ger ,=noisy spirit], name applied to certain phenomena, such as rapping, knocking, unexplained movements of furniture breaking of crockery, and the like, long associated with supernatural forces, and common to spiritistic seances The Society for Psychical Research has proved much poltergeist activity to be fraudulent Some cases, however, remain without satisfactory natural solution

Polyaenus (pŏ"lē-ē'nŭs), fl c 153, Macedonian Greek writer His *Stratagems*, anecdotes on ruses of war, takes much from sources now lost

polyandry: see MARRIAGE

Polybius (pōlĭ'bēŭs), 203? B C–c 120 B C , Greek historian, b Megalopolis The son of Lycortas, a leader of the ACHAEAN LEAGUE, and an intimate friend of PHILOPOEMEN, he was influential in Greek politics Having advocated the neutral stand of the League in the war between Rome and Macedon, he was deported (167 B C) with a large number of Achaeans to Rome after the Roman victory over Macedon He obtained the protection of Aemilius Paullus and of the Scipios, and under their patronage he undertook several voyages, notably one to Achaea, where he sought to win favor for the Roman government It was under the Scipios' patronage also that Polybius undertook his universal history, one of the great historical works of all time Of the 40 books only the first five survive intact, of the rest there are generous fragments. It was Polybius' chief aim to trace for his contemporaries the causes of the sudden rise of Rome; his history covered the Mediterranean world from before 220 B C to 146 B C A historian of the school of Thucydides, Polybius spared no efforts in his research for detail, accuracy, and unbiased truth, although he could not avoid a measure of partiality His presentation is soberly analytical and devoid of rhetoric. Not content with setting forth the facts, Polybius stopped his narrative to insert general considerations on the purpose of history writing (which he considered, like Thucydides, a guide to political conduct), on the principles of the Roman state (a balance of the monarchic, aristocratic, and democratic institutions), and on other

general subjects. His style has been criticized for its lack of grace, for the superabundance of tedious details, and for its moralizing tone There are many translations

Polycarp, Saint (pŏ'lĭkärp), A.D c 70–A D 156?, Greek bishop of Smyrna, a Father of the Church. He was a disciple of St. John, who appointed him bishop Thus, he linked the apostles and such 2d-century Christian expositors as St IRENAEUS St Polycarp was a close friend of St IGNATIUS OF ANTIOCH As a very old man, Polycarp went to Rome to discuss the problem of dating Easter, he died a martyr there His one surviving work, the *Epistle to the Philippians*, has been the subject of recent controversy Some scholars have maintained that the letter is really two—one written c 115, enclosing St Ignatius' epistles, and the other written c 135 to warn the Philippians against the teachings of Marcion He was in his time the mainstay of Christianity in Asia Minor Feast Jan 26 See P N Harrison, *Polycarp's Two Epistles to the Philippians* (1936)

Polycletus (pŏlĭklē'tus) or **Polyclitus** (-klī'tus), two Greek sculptors of the school of Argos **Polycletus**, the elder, fl c 450–c 420 B C , was a contemporary of Phidias Born either in Sicyon or Argos, he became the head of the Argive school He worked principally in bronze and made a number of statues of athletes His most famous statue embodied his ideal of physical perfection, and this "Canon of Polycletus" became the standard of proportions for sculptors It is best known through a copy, the *Doryphorus* or *Spear-Bearer* (Naples) Other statues representing his athletic, muscular, square-headed type, preserved through copies, are the *Diadumenenus*, a man binding a fillet about his head, and an *Amazon* Another of his works praised by ancient writers was a gold and ivory Hera for a temple at Argos No recognized originals of Polycletus exist today, **Polycletus**, the younger, worked in the 4th cent, B C He also was a sculptor of athletes and made a statue of Zeus in marble

Polycrates (pŏlĭ'krŭtēz), d c 522 B C , tyrant of Samos By piratic raids and indiscriminate warfare he dominated the E Aegean, capturing the island of Rhenea and defeating the Lesbians, who had gone to the aid of Miletus His tyranny drove Pythagoras, the philosopher, from Samos He sent 40 ships manned by Samian malcontents to aid the Persian king, Cambyses, against the Egyptians (c 525 B C), but the crews revolted and persuaded the Spartans to make a fruitless war against Polycrates Oroetes, Persian satrap of Sardes, lured him to Magnesia and crucified him He did much to aid Samian industry and art

Polydeuces see CASTOR AND POLLUX

Polydorus (pŏlĭdô'rus), in Greek legend, Trojan prince, son of Priam and Hecuba See HECUBA

Polydorus, Greek sculptor see LAOCOON

Polyglot Bible (pŏ'lĭglŏt), Bible in which different versions, often in different languages, are given in parallel columns Origen's HEXAPLA was the most famous ancient example Modern Polyglot Bibles include the Complutensian Polyglot, which contained the first printed Greek New Testament (prepared at Alcalá, Spain, 1514–17, under Cardinal Jiménez), the Antwerp Polyglot (1572), the Paris Polyglot (1645), the London, or Walton's, Polyglot (1657), the most elaborate, containing besides the usual Hebrew and Greek, the Samaritan Pentateuch and Syriac, Ethiopic, Arabic, and Persian versions of the New Testament

Polyhymnia see MUSES

polymerization (pŏ"lĭmurĭzā'shŭn, pulĭ"–), the joining together of a number of molecules of the same kind to form a single larger MOLECULE Although the new molecule is heavier, it has the same percentage composition by weight as each of the original smaller molecules, i e , its weight is a multiple of the weight of the smaller molecules Two compounds having molecules so related are called polymers

Polymnia see MUSES

Polynesia (pŏlĭnē'zhu, –shu) [Gr ,=many islands], one of the three main divisions of the Pacific islands, in the central and S Pacific The larger islands are volcanic, the smaller are generally coral formations The principal groups are the Hawaiian Islands, Samoa, Tonga, and the islands of French Establishments in Oceania Ethnologically though not geographically, Polynesia embraces New Zealand The languages of the area are Malayo-Polynesian (see LANGUAGE, table)

Polynesian languages or **Malayo-Polynesian languages:** see LANGUAGE (table)

Polynices (–nī'sēz), in Greek legend, leader of the SEVEN AGAINST THEBES He sought to wrest from his brother ETEOCLES his rightful share in the kingdom left by their father, OEDIPUS They killed each other in single combat CREON, regent of Thebes, refused to bury Polynices, but ANTIGONE, daughter of Oedipus, risked her life to perform the funeral rites for her brother.

polyp (pŏ'lĭp), the elongated or hydroid form of various coelenterates (jellyfish and their relatives) Alternation of generations between the polyp and the jellyfish or medusa stage is common. The polyp is composed of two layers of cells, the ectoderm and the endoderm, with a layer of noncellular material between It is radially symmetrical and generally cylindrical and hollow Stinging cells are usually present and are often borne on tentacles surrounding the mouth, as in the small, freshwater hydra, one of the simplest polyps The coral animal and the sea anemone are polyp forms Many marine coelenterates, both attached and pelagic forms, are di-, tri-, or polymorphic, having certain polyps specialized for reproductive, nutritive, and other functions

Polyphemus (pŏlĭfē'mŭs), in Greek mythology, a CYCLOPS or one-eyed giant He was a shepherd, son of POSEIDON In the ODYSSEY, Polyphemus captured ODYSSEUS and his friends Odysseus blinded the giant, and the men escaped from the cave where they were imprisoned by hiding under sheep which were going out A later legend tells of his love for the nymph GALATEA, who scorned him She loved ACIS, whom Polyphemus killed

polyphony (pulĭ'funē, pŏ–), music whose texture is formed by the interweaving of several melodic lines Contrasting terms are *homophony*, wherein one part dominates while the others serve only a harmonic function, and monody, wherein there is but a single melodic line Out of the monody which is Gregorian chant grew organum, a species of music in which a melody is paralleled by another at the interval of a fourth or a fifth This practice, first described in the *Musica enchiriadis* (9th cent), developed into a freer form during the Middle Ages, leading to the great age of polyphony in the 16th cent In the music of Palestrina, Lassus, and their contemporaries, the harmonies all seem to be generated by the melodic lines With the gradual acceptance of major and minor tonalities, polyphonic music adopted a style more dependent on harmony—a type of polyphony consummated in the works of Bach Homophonic texture gained ascendancy in 19th-century music, but in our own day many composers have returned to the writing of music which recalls medieval and Renaissance polyphony See also COUNTERPOINT See Gustave Reese, *Music in the Middle Ages* (1940), Knud Jeppeson, *The Style of Palestrina and the Dissonance* (rev ed , 1946)

Polyxena (pŏlĭk'sĭnu), in Greek legend, Trojan princess, daughter of PRIAM, loved by ACHILLES When Paris killed Achilles, she was sacrificed on his grave

Pombal, Sebastião José de Carvalho e Melo, marquês de (sĕbustyä'ô zhōōzä' du kärva'lyô ē mĕ'lô märkäs' du pômbäl'), 1699–1782, Portuguese statesman After studying law at the Univ of Coimbra, he was designated ambassador to England (1739) and was then envoy to Austria He returned to Lisbon in 1749, was made secretary of state for foreign affairs and for war by King Joseph in 1750, and in that position ruled Portugal for 26 years Pombal was an exponent of absolutism, an anticlerical, and a zealous organizer The vast program he conceived was executed by a ruthless suppression of opposition, and thousands were imprisoned by his orders He curbed the power of the Inquisition by subordinating it to the king's authority, expelled the Jesuits from Portugal and its colonies, and redrafted the property laws to prevent the accumulation of great wealth by the Church Under his direction the educational and military systems were reorganized, agriculture and industry were encouraged, and he established monopolies The creation of a wine monopoly caused an uprising in Oporto, which was put down (1757) with severity An attempt by the nobles, who hated Pombal, to kill the king only increased Pombal's hold He took strong measures to build up Brazil with increased production of minerals, tobacco, and sugar He also sought to regulate Portuguese commerce and strengthen it, thus making the country less dependent upon the English. When Lisbon was destroyed by earthquake (1755), Pombal met the emergency and later planned a safer and more beautiful city and had it reconstructed accordingly Upon the death of King Joseph (1777), he was deprived of his power, and many of his measures were revoked. The new ruler, Maria I, exiled Pombal to his castle

pomegranate (pŭm'grăˈnĭt, pŏm'–), handsome, large, somewhat thorny deciduous shrub or small tree (*Punica granatum*) native to the Old World, where it has long been cultivated It bears rather shining leaves, showy red or orange-red flowers, and fruit the size of an apple, with a hard yellowish to purple rind Grenadine syrup, in which the juice of the acid fruit pulp is the chief ingredient, is used in wines, cocktails, carbonated drinks, preserves, and confectionery The rind and flowers are employed in medicine for their astringent properties, and the rind is also used, because of its tannin, in the staining of morocco leather The tree is very ornamental for about nine months in the year It is very long lived, a specimen in Paris is said to have fruited for over 200 years. Now grown as a market crop in America, the tree thrives and bears well in California and Arizona. It is hardy as far north as Washington Double-flowered and single-flowered forms are grown for ornament, as hedge plants, and as conservatory specimens Solomon sang of an "orchard of pomegranates" The pomegranate was a symbol of hope in Christian art and in classic, Jewish, and Christian tradition an emblem of fertility and eternity.

pomelo see GRAPEFRUIT

Pomerania (pŏmûrā'nēu), region of E central Europe, extending along the Baltic Sea from a line W of Stralsund, Germany, to the Vistula river in Poland From 1919 to 1939 Pomerania was divided among Germany, Poland, and the Free City of DANZIG The German part constituted the Prussian province of Pomerania (Ger *Pommern*, 14,830 sq mi , 1939 pop 2,393,844), with STETTIN as its capital The Polish part formed the province of Pomerelia (Ger *Pommerellen*, Pol *Pomorze*, c 7,700 sq mi , 1946 pop 1,406,453), with Bydgoszcz as its capital After the Second World War and the POTSDAM CONFERENCE of 1945, all formerly Prussian Pomerania W of the Oder (but excluding Stettin) was incorporated into the Russian-occupied German state of Mecklenburg, the remaining and larger part (including Stettin) was transferred to Polish administration and was incorporated by the Polish government with the provinces of Szczecin (see STETTIN), Gdansk (see DANZIG), and POZNAN A part of the North European plain, Pomerania is a primarily agricultural lowland, with generally poor, often sandy or marshy soil There are large forests and lakes Cereals, sugar beets, and potatoes are the main crops, cattle raising and fishing are important occupations Along the Baltic coast there are numerous seaside resorts The history of Pomerania is extremely complex By the 10th cent A D , when its recorded history began, Pomerania was inhabited by Slavic tribes It was conquered by Boleslaus I of Poland, but became an independent duchy early in the 11th cent Poland regained control in the 12th cent and introduced Christianity The country was split into two principalities, and in 1181 the duke of W Pomerania paid allegiance to Emperor Frederick I, thus becoming a prince of the Holy Roman Empire and severing his ties with Poland Pomerelia, as E Pomerania came to be known, became independent in 1227, was annexed to Poland in 1295, and was ceded in 1308 to the TEUTONIC KNIGHTS, who incorporated it with their domain in East Prussia The histories of Pomerania and Pomerelia after 1308 must be traced separately Pomerelia, including Danzig, was restored by the Teutonic Knights to Poland at the Treaty of Torun of 1466 Though frequently overrun in the wars of the following three centuries, it remained an integral part of Poland until the first Polish partition (1772), when it passed to Prussia and was constituted into the province of WEST PRUSSIA In 1919 part of West Prussia was given to Poland (see POLISH CORRIDOR), where it constituted Pomorze prov , Danzig became independent, and a small part of West Prussia, including Marienwerder, was incorporated with neighboring East Prussia After the outbreak (1939) of the Second World War, Danzig and Pomorze were reannexed to Germany, which lost them again in 1945 In the meantime Pomerania continued as a duchy of the Holy Roman Empire until the death (1637) of Bogislav XIV The dukes accepted the Reformation in the 16th cent In the Thirty Years War the imperial generalissimo Wallenstein undertook the occupation of Pomerania in 1628, with consent of Duke Bogislav, STRALSUND, however, resisted Its defense was aided by Denmark and helped to precipitate the intervention (1630) of GUSTAVUS II of Sweden The Peace of Westphalia (1648) gave Hither Pomerania—i e , the western part, with Stettin, Stralsund, and the island of Rugen—to Sweden, and Farther Pomerania—i e , the eastern part, with Stargard—to the electorate of Brandenburg (after 1701, the kingdom of Prussia) In the third of the Dutch Wars, Charles XI of Sweden lost most of Hither Pomerania to Elector Frederick William of Brandenburg, but thanks to French influence he recovered all but a strip E of the Oder at the Treaty of Saint-Germain (1679). In 1720, as a result of the NORTHERN WAR, Sweden lost about half of its part of Pomerania (including Stettin but not Stralsund) to Prussia For the rest of Swedish Pomerania, the kings of Sweden remained princes of the Holy Roman Empire until its dissolution in 1806 NAPOLEON I overran Swedish Pomerania in the War of the Third Coalition, but restored it on making peace with Sweden in 1809 In the Treaty of Kiel (1814) Sweden exchanged Pomerania with Denmark in return for Norway, but at the Congress of Vienna (1815) Denmark ceded its share of Pomerania to Prussia, receiving the duchy of Lauenburg in return Thus, from 1815 to 1919, all Pomerania and all Pomerelia were in Prussian hands Pomerania by then was already thoroughly Germanized Pomerelia was, like the rest of Prussian Poland, subjected to intense Germanization However, the majority of the population in what became in 1919 Pomorze prov. still was Polish-speaking Pomerelia, moreover, was predominantly Catholic, while Pomerania was Protestant. After the transfer in 1945 of the larger part of Pomerania to Polish administration, the German-speaking

population was largely expelled. Its fate was shared by the German population of S East Prussia, which contained that section of West Prussia that had remained German after 1919. The history of the principal cities of Pomerania and Pomerelia differs somewhat from the history of the territories in which they are located. The most important of these cities—Danzig, Stralsund, Stettin, Stargard, Torun, Chelmno, and Marienburg—were long flourishing members of the HANSEATIC LEAGUE By the 17th cent., however, they had lost the virtual independence they had enjoyed during the greatness of the League, and of the ports only Danzig and Stettin are still important

Pomeranian dog, toy breed generally agreed to have originated in Pomerania It is believed to include in its ancestry the large white spitz dog derived from sledge dogs of Iceland and Lapland, the Pomeranian was for a time known as the spitz dog Dogs of the Pomeranian breed are small and compact and give an impression of buoyancy and vitality Many colors are acceptable, e g , black, brown, red, cream, sable, blue, white, and parti-colors The fluffy undercoat is covered by a long, straight, glistening coat, especially abundant around the neck, shoulders, and chest The hair on the hind quarters should be long, and the tail should bend over the back with the long hair of the tail spreading over the dog's body The head is somewhat wedge shaped and rather foxlike, and the small ears are carried erect

Pomeranus: see BUGENHAGEN, JOHANN.

Pomerelia see POMERANIA

Pomeroy, 1 Village (pop 3,581), co. seat of Meigs co., SE Ohio, on the Ohio river and SW of Marietta, settled in the early 19th cent., inc 1840 The town has an iron foundry, and other products include chemicals and lumber 2 City (pop 1,723), co seat of Garfield co., SE Wash., NE of Walla Walla, in a grain and cattle area, settled 1863, inc 1886

Pomfret (pŏm'frĭt, pŭm'-), town (pop 1,710), NE Conn., settled before 1700, inc 1713 Pomfret School (1894) is a preparatory school for boys

Pommerellen see POMERANIA.

Pommern: see POMERANIA

Pomona (pumō'nŭ) [from Latin, = fruit], in Roman religion, protectress of fruit trees She had a close connection with other field divinities, and her cult was widespread in the countryside

Pomona (pōmō'nu), city (1940 pop 23,539, 1947 special census pop 31,329), in San Jose township, S Calif., E of Los Angeles, laid out 1875, inc 1887 It packs and ships citrus fruit and has some refining of oil and manufacture of metal and paper products, tiles, and brick It is the seat of the Los Angeles County Fair

Pomona (pumō'nu, pō-) or **Mainland,** island (c 189 sq. mi., pop 13,352), off N Scotland, largest of the Orkney Islands Kirkwall (the capital) and Stromness, the only burghs of the Orkneys, are on Pomona Kirkwall Bay and SCAPA FLOW deeply indent its shores, the coast line on the east and south is very irregular, that on the west precipitous The interior has hills, moors, several lakes containing trout, and fertile valleys Local customs in some districts reveal the Norse ancestry of many of the inhabitants There are numerous Pictish remains—mounds, underground dwellings, circles, and standing stones, some of which figure in Sir Walter Scott's *Pirate* Most famous are the MAESHOWE, between Stromness and Kirkwall, and the Standing Stones of STENNESS

Pomona College. see CLAREMONT COLLEGE

Pomorze, Poland see POMERANIA and WEST PRUSSIA

Pompadour, Jeanne Antoinette Poisson Le Normant d'Etioles, marquise de (pōm'pŭdōr, Fr zhän' ätwänĕt' pwäsôN' lu nôrmä' dätyôl' märkēz' du pōpadōr'), 1721–64, French beauty She became the mistress of Louis XV in 1745 and until her death was virtual ruler of France She was responsible for the appointment of Choiseul and other ministers and was instrumental in the French alliance with Austria which involved France in the Seven Years War Although her position at court was insecure because of her middle-class origin, she kept her influence over the king by her wit and capabilities She used her influence in favor of Voltaire and other writers of the *Encyclopédie* and employed many artists to decorate her residences Her enormous expenses made her unpopular See P de Nolhac, *Louis XV et Madame de Pompadour* (1902); H N Williams, *Madame de Pompadour* (1904), and Marcelle Tinayre, *Madame de Pompadour* (1924, Eng tr, 1926)

Pompano (pŏm'pŭnō), city (pop 4,427), SE Fla., on the Atlantic coast N of Fort Lauderdale, settled c 1900, inc. 1907. It is a trade center for a truck area

Pompeia (pŏmpē'yŭ), fl 61 B C, wife of Julius Caesar; daughter of Q Pompeius Rufus and granddaughter of Sulla. She married Caesar in 67 B C and was divorced in 61 B C, because of an intrigue with CLODIUS while celebrating the mysteries of Bona Dea.

Pompeii (pŏmpā', Ital. pōmpā'ē), ancient city, S Italy, a port near Naples and at the foot of Mt Vesuvius. Possibly an old Oscan settlement, it was a Samnite city for centuries before it passed under the Roman yoke at the time of L. Cornelius Sulla (1st cent B.C.). Pompeii was not only a flourishing port but a resort with many villas of the wealthy An earthquake in A D 63 did much damage, and an eruption of Vesuvius in A D. 79 buried the city (as well as Herculaneum and Stabiae) under cinders and ashes that preserved the ruins of the city with magnificent completeness—down to the fresh colors of the wall paintings The long-forgotten site of the city was rediscovered in 1748 and has been sporadically excavated ever since Many of the earlier finds are scattered among the museums of the world *The Last Days of Pompeii*, a novel by E G E L Bulwer-Lytton, is a highly colored account of the destruction of the city familiar to several generations of English readers See A W Van Buren, *A Companion to the Study of Pompeii and Herculaneum* (1933), R C Carrington, *Pompeii* (1936), H H Tanzer, *The Common People of Pompeii* (1939).

Pompeius, Sextus (sĕk'stŭs pŏmpā'us), d. 35 B C, Roman commander, one of the sons of Pompey the Great. He fought for his father at Pharsalia, then went to Egypt and, after the battle of Thapsus, to Spain, where he continued warring against Caesar's followers after the death of his elder brother in 45 B C A settlement was patched up in 44 B C, and in 43 B C. he was given command of the fleet Later outlawed, he seized Sicily and prevented grain ships from reaching Rome He supported Antony, but in 40 B C came to an agreement with Octavian (Augustus) Two years later trouble and the grain blockade were resumed Sextus Pompeius, aided by a storm, defeated Octavian in 38 B C, and again a storm helped him early in 36 B C Later he was crushed at Naulochus and fled to Asia Minor, where he was captured and killed

Pompeius Magnus see POMPEY

Pompey (Cneius Pompeius Magnus) (pŏm'pē), 106 B C–48 B C, Roman general, the rival of CAESAR. He was the son of Cn Pompeius Strabo (consul in 89 B C), a commander of equivocal reputation The young Pompey fought for SULLA in Picenum, in Sicily, and in Africa so successfully that Sulla allowed him to enter Rome in triumph and receive (81 B C) the title Magnus He helped drive LEPIDUS from Italy (77 B C.) and went to Spain (76 B C) to fight the remnants of the Marius party led by SERTORIUS After this he returned to Italy (72 B C) and broke up the last opposition in the slave revolt of SPARTACUS Although he was not legally eligible, he was elected consul in 70 B C, he supported laws restoring the powers of the tribunes and forcing the senate to share some of the magistracies with the knights Pompey's main career as a general began in 67 B C, when he was commissioned by the law proposed by Aulus Gabinius to destroy the pirates infesting the Mediterranean. From this success he went on to conquer MITHRIDATES VI and Tigranes, king of Armenia He next annexed Syria and Palestine and began the Roman organization of the East In 62 B C he returned to Rome, but found the senate jealous, ungrateful, and stingy. This arose from the influence of the METELLUS faction of senatorial extremists, who thus drove Pompey into alliance with their deadly enemy, Caesar The First Triumvirate was established in 60 B C, and Caesar, Crassus, and Pompey were rulers of Rome Pompey profited least from the combination He was never popular, and his residence in Rome, while Caesar was away, diminished his hold on the people At the same time the behavior of CLODIUS and Pompey's own inclinations made him more and more sympathetic with the senate The relations of Pompey and Caesar, however strained, were always amicable while Pompey's wife Julia, Caesar's daughter, lived, but after her death (54 B C) Pompey became Caesar's jealous enemy Finally, after the disorders of the gangs organized by Clodius and Milo, in 52 B C Pompey received the sole consulship as the leader of the senatorial party. He made Q Caecilius Metellus Pius Scipio his colleague Caesar broke with the senate and crossed (49 B C) the Rubicon, and the civil war began Pompey was defeated at Pharsala (48 B C) and fled to Egypt, where he was assassinated by one of his old centurions as he stepped ashore Though a good soldier, he was scarcely a great general, and as a statesman he showed himself weak and irresolute

Pomponazzi, Pietro (pyā'trō pŏmpōnät'tsē), 1462–1525, Italian philosopher He was a professor at Padua, Ferrara, and Bologna One of the first to question the dogmas of scholasticism, he attacked the interpretation of Aristotle as given by Thomas Aquinas In his *De immortalitate* (1516) he argued that the soul is mortal but that the values of the church may be preserved by viewing virtue as an end in itself His naturalist position is developed in *De incantationibus* (1520), in which he stressed the evolution of man and of nature He sought to evade charges of heresy by urging that what is true in philosophy may not be true in theology, and vice versa. His works were published at Basel in 1567.

Pomponius Laetus, Julius (pŏmpō'nēŭs lē'tŭs), 1425–98, Italian humanist, also called Giulio Pomponio Leto. He was a professor at the Gymnasium Romanum and founded a philosophical academy which was accused of paganism and republicanism after efforts to revive Greek and Roman life. He was imprisoned for an attempt to assassinate Pope Paul II in 1468 but was acquitted for lack of evidence. His collected works were published as *Opera Pomponii Laeti varia* (1521).

Pomponius Mela (mē'lŭ), fl A D. c 50, geographer, b Spain. His *De situ orbis*, a description of the Mediterranean region, was published in Latin in 1471 and translated into English by Arthur Golding as *The Cosmographer* (1585).

Pompton Lakes, borough (pop 3,189), N N J., NW of Paterson, settled 1682 by Dutch, inc 1895 Explosives are made here. There are several pre-Revolutionary houses

Pompton Plains, unincorporated village (pop 1,273), N N.J., S of Pompton Lakes

Ponape (pō'näpä), volcanic island (129 sq mi, pop 5,735), W Pacific, in the E Caroline Islands Ponape has deposits of bauxite, iron, and iron sulphate There are ruins of ancient stone walls and dikes The chief products are copra, dried bonito, and native handicraft In the Second World War the island was the site of a Japanese air base, but was not invaded by U S forces Ponape was formerly called Ascension Island

Ponca (pŏng'kŭ), city (pop 1,003), co. seat of Dixon co., extreme NE Nebr., on the Missouri and NW of Sioux City, Iowa, inc 1856 It is one of the oldest towns in the state Ponca State Park is near by.

Ponca City, city (pop 16,794), N Okla., near the Arkansas river, founded 1893, inc. 1902 It is a city of many parks, in a farming, stock-raising, and oil-producing area, and has a huge oil refinery, grain elevators, and food-processing plants An Indian reservation is near by

Ponca Indians, tribe of North American Indians of the Siouan linguistic stock, one of the five tribes of the Dhegiha group (see LANGUAGE, table) According to tradition the group lived in the Ohio valley, but migrated to the mouth of the Osage river Here the Ponca and the Omaha separated from the main group and went to SW Minnesota After game became scarce in this area, they moved NW to the Big Sioux river, where they built a fort War with the Sioux forced the Ponca to flee to the Black Hills, in South Dakota The Ponca subsequently rejoined their allies and moved to the mouth of the Niobrara river, in Nebraska The Ponca remained here, but the other tribes moved on Lewis and Clark met them in 1804 when the Ponca, recovering from a smallpox epidemic, only numbered some 200 Raids by the Sioux forced the Ponca to migrate to Oklahoma in 1877 A commission appointed (1880) by President Hayes studied the land claims of the tribe, as a result the major portion remained in Oklahoma, while a band numbering some 225 returned to their former home in Nebraska Today the Ponca living on a reservation in Oklahoma number some 900, and those in Nebraska 400 The Ponca were "village" Indians of the Plains area, they farmed corn and hunted buffalo See George Dorsey, *Ponca Sun Dance* (1905)

Ponce (pōn'sä), city (1940 pop 65,182, 1949 estimated pop 75,000), S Puerto Rico The second largest city of the island, it is a thriving port (the Playa de Ponce being the port section) and a center of agricultural trade for a rich region growing sugar cane, fruits, and coffee The industries depend largely on processing sugar (refining and rum distilling), but there are also textile mills and small factories (candy, hats, and needlework) The old fort (18th cent.), the cathedral, and spacious colonial houses give a quiet balance for the busy modernity of the business sections

Ponce de León, Juan (pōns' dŭ lē'ŏn, Span. hwän' pōn'thä dä lāōn'), c 1460–1521, Spanish explorer, discoverer of Florida, b San Servos, Leon. He served against the Moors of Granada and in 1493 accompanied Columbus on his second voyage to America From 1502 to 1504 he assisted in the conquest of Higuey (the eastern part of Hispaniola, now the Dominican Republic) and was made governor of that province After finding gold on Boriquén (Puerto Rico) in 1508, he conquered the island and, as governor (1509–12), made a fortune in gold, slaves, and land Hearing tales from the Carib Indians of a wonderfully rich island called Bimini, said to be N of Cuba, Ponce de León secured a commission (Feb, 1512) to discover, conquer, and colonise the place The legend that he was seeking a spring whose waters had the power of restoring youth has been discredited. From Puerto Rico on March 3, 1513, with three vessels, he sailed NE through the Bahamas, sighting the Florida peninsula late in March and landing near the site of St. Augustine early in April. Probably because the discovery occurred at the time of the Easter feast (*Pascua Florida*), Ponce de León named the land he claimed for Spain La Florida. He turned south, exploring the coast to Key West, and proceeded up the west coast as far as Cape Romano Then, retracing his route, he sailed to

Miami Bay via Cuba and from there returned to Puerto Rico, arriving Sept 21, 1513 After partly pacifying Puerto Rico, which had been in revolt, he sailed to Spain, where the king commissioned him (Sept, 1514) to conquer and colonize the "isle of Florida" In 1515 he led an expedition against the Caribs south of Puerto Rico and returned to Puerto Rico, where he resided until 1521 With two vessels, 200 men, 50 horses and other domestic animals, and farm implements, he sailed for Florida in 1521 Upon landing on the west coast, probably in the vicinity of Charlotte Harbor, his party was fiercely attacked by Indians, and he was severely wounded by an arrow The expedition sailed immediately for Cuba, where Ponce de León soon died See F A Ober, *Juan Ponce de León* (1908), Woodbury Lowery, *The Spanish Settlements within the Present Limits of the United States, 1513–1561* (1901)

Poncelet, Jean Victor (zhäⁿ' vēktôr' pôslā'), 1788–1867, French mathematician and army engineer, b Metz While a prisoner of war (1813–14) at Saratov following Napoleon's Russian campaign, he evolved the foundations of the modern form of projective geometry and incorporated his results in *Traité des propriétés projectives des figures* (1822, 2d ed, 2 vols, 1865–66) He established courses in applied mechanics and was professor at the school of mechanics at Metz (1825–35) and at the Faculty of Sciences, Paris (1838–48), as commandant of the École polytechnique, Paris (1848–50), he reorganized its mathematics curriculum He retired (1852) from the army with the rank of general

Poncha Pass (pŏn'chŭ), 9,010 ft high, central Colo, in the northern tip of the Sangre de Cristo Mts and near Salida One of the lowest mountain passes in Colorado, it was used by the Indians and the mountain men Now it is crossed by a highway

Ponchatoula (pŏnshutōō'lu), town (pop 4,001), SE La, E of Baton Rouge, settled c 1830, inc c 1860 It is a shipping point for strawberries and vegetables A resort beach is near

Ponchielli, Amilcare (ämēlka'rā pŏngkyĕl'lē), 1834–86, Italian composer of several operas which were immensely successful *La Gioconda* (Milan, 1876), with libretto by Boito after Hugo's *Angelo*, still holds the stage In 1881 he was appointed choirmaster at the cathedral in Bergamo

Pond, John, 1767–1836, English astronomer At Westbury, near Bristol, he made observations with an altazimuth circle, 2½ ft in diameter, and submitted them to the Royal Society His studies revealed that the mural quadrant at Greenwich had changed its form After he had been appointed astronomer royal in 1811, he undertook the re-equipment and improvement of the observatory at Greenwich He wrote a number of important papers, translated (1809) Laplace's *Système du monde*, published a star catalogue, and superintended the publication of the *Nautical Almanac* (1832–33) as well as eight volumes of *Greenwich Observations*

Pond, Peter, 1740–1807, American fur trader and explorer of the Old Northwest, b Milford, Conn He served in the last of the French and Indian Wars and in 1765 became a western trader First at Detroit, he later removed to Mackinac and made journeys (1773–75) to the upper Mississippi country and to Wisconsin He then went by way of Lake Superior N to the Saskatchewan In 1778 he went to the Athabaska district with stock pooled from several traders and established the first post in the region on the Athabaska river Accused of the murder of a rival trader in 1782, Pond was acquitted when tried He was included in the organization (1783–84) of the North West Company, but in 1788 withdrew in anger Pond is best known for his maps of the country covered in his voyages, which he presented to Congress, copies were sent to Great Britain and France and another map was prepared for Russia The accusations that Pond was guilty of violence, dishonesty, and lawlessness appear at least partially unjust His narratives appear in *Five Fur Traders of the Northwest* (ed. by C M Gates, 1933) See H A Innis, *Peter Pond, Fur Trader and Adventurer* (1930).

Pond Creek, city (pop 1,019), N Okla, N of Enid, in a wheat-growing area, settled c 1889 on the site of an old railroad terminus

Pondichéry (pōdēshārē') or **Pondicherry** (pŏndĭchĕ'rē, -shĕ'rē), French settlement (113 sq mi, pop 222,572), on the Bay of Bengal, adjacent to Madras state, India It is the largest of the settlements constituting French India The territorial limits were established in 1815. The capital of French India is the town Pondichéry (pop 53,101) It was founded in 1674 It was taken three times (1761, 1778, 1793) by Great Britain in the course of the struggle with France for the control of India Its once great trade declined after the 18th cent Today cotton cloth is woven and peanuts are exported.

Pond Inlet, trading post (1943 pop. 179), on N Baffin Island, Northwest Territories, opposite Bylot Island. A government radio station, a post of the Royal Canadian Mounted Police, and Anglican and Roman Catholic missions are here.

pond lily, spatterdock, or cow lily, names for aquatic plants of the WATER LILY family and of the genus *Nuphar* (or *Nymphozanthus* or *Nymphaea*), native to the North Temperate Zone Pond lilies are somewhat coarse in appearance, with yellow cup-shaped flowers and erect or floating leaves Seeds of a western American species (*polysepalum*) were prepared and eaten much like popcorn or were made into meal by the KLAMATH INDIANS

Pondoland · see TRANSKEIAN TERRITORIES

pond scum, accumulation of floating green filamentous algae on the surface of stagnant or slowly moving waters, such as ponds and reservoirs One of the commonest forms is *Spirogyra* Pond scums can be destroyed by adding small quantities of copper sulphate (blue vitriol or bluestone) to the water

pondweed, weedy aquatic herb of the genus *Potamogeton*, of which about 40 known species inhabit North American ponds and slow streams They have rather slender stems and small spikes of inconspicuous flowers appearing above the water, and many have two kinds of leaves—narrow grass-like submerged filaments and stouter floating leaves Some species are found only locally, others are widespread They are often found as weeds in aquatic gardens, and a few species are cultivated as aquatic plants

Poniatowski, Jozef Anton, Prince (yōō'zĕf än'tôn pônyätô'fskē), 1763–1813, Polish general, nephew of Stanislaus II He fought the Russians in the campaign (1792) preceding the second Polish partition and again in the insurrection (1794) of Kosciuszko He became minister of war of the grand duchy of Warsaw set up by Napoleon I and in 1809 led the Polish troops in Napoleon's campaign against Austria He again commanded a corps under Napoleon in the Russian campaign of 1812 He drowned himself after the battle of Leipsig, in which he had covered the withdrawal of the French troops

Poniatowski, Stanislaus Augustus. see STANISLAUS II

Ponoka (punō'kŭ), town (pop 1,468), central Alta, on the Battle river and S of Edmonton It is a hog-shipping center, in a ranch and lumbering area A provincial mental hospital is here

Pons, Jean Louis (zhäⁿ' lwē' pôs'), 1761–1831, French astronomer He was noted for his success in detecting comets He discovered 37, a record number, between 1801 and 1827 He became assistant director of the Marseilles Observatory in 1813 In 1819 he was put in charge of a new observatory near Lucca, Italy, and in 1825 he became director of the observatory at Florence

Pons, Lily (panz, Fr pôs), 1904–, French-American coloratura soprano Having first studied piano at the Paris Conservatoire, she made her operatic debut in Mulhouse in 1928 and first appeared with the Metropolitan Opera Company in 1930 For her the Metropolitan revived Delibes's *Lakmé*, Vincenzo Bellini's *La Sonnambula*, and Donizetti's *La Fille du regiment* She appeared in three moving pictures In 1938 she was married to the conductor André Kostelanetz, and in 1940 she became a U S citizen

Ponselle, Rosa (pônzĕl'), 1894–, American operatic soprano, b Meriden, Conn, of Italian parentage. Trained in the United States, she made her debut at the Metropolitan Opera House in 1918, singing opposite Caruso in Verdi's *La forza del destino* She was an outstanding member of that company until her retirement in 1937. Her sister, **Carmela Ponselle** (karmĕ'lu), 1892–, mezzo-soprano, b Schenectady, N Y, also sang for a few seasons with the Metropolitan Opera Company beginning with the season 1925–26

Ponsonby, Sir Henry Frederick (pŭn'sunbē), 1825–95, English administrator, private secretary to Queen Victoria After a military career that included service in the Crimean War, he became an equerry to the prince consort in 1857 and in 1870 private secretary to Victoria, a position that he held for 25 years In 1878 he was made keeper of the privy purse and in 1880 privy counselor His biography, compiled from his extensive correspondence and written by his son, Arthur Ponsonby, was published in 1942

Ponsonby, Vere Brabazon · see BESSBOROUGH, VERE BRABAZON PONSONBY, 9TH EARL OF

Ponta Delgada (pôn'tŭ dĕlga'du), city (pop 21,048), capital of Ponta Delgada dist, in the Azores, belonging to Portugal It is on São Miguel island and is the largest city of the islands and a port of some importance It is also a popular resort.

Pontano, Giovanni (jōvän'nē pōnta'nō), 1426–1503, Italian poet, historian, and statesman, who used also the Latin form Jovianus Pontanus He was protected by Alfonso of Aragon, who made him his chancellor of Naples (1447) and later his secretary Pontano personally surrendered Naples to the French invaders He was a noted humanist and discoverer of Donatus' commentary on Vergil. His verse, in Latin, is notable for grace, harmoniousness, and the naturalness of its sentiment, his history of Naples was a fine work

Pontchartrain, Lake (pôn'chŭrtrān), shallow lake, 41 mi long and 25 mi. wide, SE La, N of New Orleans. It is connected with Lake Maurepas, with the Mississippi, and with the Gulf of Mexico through Lake Borgne The narrow eastern part is crossed by a concrete bridge, 10 mi long with its approaches, from Slidell to the New Orleans side There are many small resorts on the shores

Pont du Gard (pôⁿ' dü gär'), Roman aqueduct built 19 B C across the Gard river near Remoulins, Gard dept, S France It supplied Nimes with water Consisting of three tiers of arches, it is c 900 ft long and c 160 ft high, of extremely solid construction, and admirable in its architectural proportions The lowest tier is now in use as a road bridge

Ponte, Giacomo da. see BASSANO, JACOPO.
