Monte Cassino (mŏn"tē kusē'nō), Ital môn'tā kasē'nō), monastery on a hill, 1,702 ft high, overlooking the town of Cassino, Latium, central Italy The abbey was founded c 529 by St BENEDICT of Nursia, whose rule became that of all Benedictine houses in the world. Monte Cassino was throughout the centuries one of the great centers of Christian learning and piety, its influence on European civilization is immeasurable (see BENEDICTINES) Its greatest abbot after St Benedict was Desiderius (later Pope VICTOR III) The buildings of the abbey were destroyed four times by the Lombards (581), by the Arabs (883), by an earthquake (1349), and, after their restoration in the 17th cent, by a concentrated Allied aerial bombardment in 1944 (see CASSINO) The German garrison, who had used the abbey as a fortress, easily survived the bombing in previously dug caves, but the buildings were flattened and most of their art treasures destroyed A considerable part of the invaluable manuscripts of the library had been put into safety by the monks. Several reconstruction projects were under consideration in 1949.

Montecatini (môn"täkätē'nē), town (pop. 8,292), Tuscany, central Italy, at the foot of the Apennines It is a popular health resort, noted for its warm saline springs

Monte Cristo (mŏn"tē krĭ'stō, Ital. môn'tā krē'stō), small rocky island, area c 4 sq mi, belonging to Italy, in the Tyrrhenian Sea between Corsica and the Italian coast It became famous because of the novel by Alexandre Dumas père, *The Count of Monte Cristo*

Montecuccoli or **Montecuccoli, Raimondo, conte di** (rīmōn'dō kōn'tā dē mōn"täkōōk'kōlē, -kōlē), 1609–81, Italian field marshal in the imperial service He distinguished himself in the Thirty Years War and in 1661 was sent to Hungary to take the field against the Turks His victory (1664) at Szent-Gotthard was the first serious blow to Turkish power in Hungary Subsequently Montecuccoli commanded imperial forces in the Dutch War of 1672–78 with indifferent success He was made a prince of the Holy Roman Empire After his retirement he wrote works on military subjects.

Montefiore, Sir Moses Haim (mŏn"tĭfē'ō'rē), 1784–1885, British-Jewish philanthropist, b Leghorn He became affiliated with the Rothschilds and accumulated a fortune on the London stock exchange, retiring (1821) from business to devote himself to philanthropy and to the securing of political and civil emancipation for Jews in England He was sheriff of London (1837), was made a baronet in 1846, and as president (1835–74) of the Board of Deputies of British Jews worked to alleviate discriminatory practices against Jews in Europe He founded a hospital and girls' school in Jerusalem in 1855 and was influential in stimulating the rise of Jewish nationalism, out of which developed modern political Zionism The *Diaries of Sir Moses and Lady Montefiore* appeared in 1890 See biographies by Lucien Wolf (1884), Eugen Wolbe (1909), and Paul Goodman (1925)

Montego Bay (môntē'gō), port (pop 11,560), on NW Jamaica, British West Indies A rail terminus with an excellent harbor, Montego Bay is, next to KINGSTON, the most important port and commercial city on the island In winter it is a popular tourist resort

Montejo, Francisco de (frănthĕ'skō dā môntā'hō), b c 1473 or c 1479, d c 1548, Spanish conquistador After considerable experience in the New World, he was commissioned *adelantado* to conquer the Maya of YUCATAN, but failed in his attempt (1527–28) to conquer the peninsula from the east He went to Mexico and then, by first subduing Tabasco (1530), conducted (1531–35) a campaign from the west Partially successful at first, he was forced to withdraw because the Maya rose against him, and his men, finding no booty, deserted Disillusioned and impoverished, he returned to Mexico and in 1540 entrusted the conquest to his son, Francisco de Montejo, who effectively subdued the western part from 1540 to 1542 and, after a general Indian uprising had been quelled, finally conquered the eastern portion in 1546

Monteleone di Calabria, Italy see VIBO VALENTIA

Montello (môntĕ'lō), city (pop 1,138), co seat of Marquette co, central Wis, N of Portage and on the Fox, settled 1849, inc as a city 1938 There are granite quarries

Montemayor, Jorge de (hôr'hā dā mōn"tämīvôr'), c 1520–1561, Spanish poet and novelist Born in Portugal, he lived most of his life in Spain and wrote in Spanish His chief work is the first and most renowned of Spanish pastoral novels, *Diana* (1559?), which has some of his songs Many editions of this book and translations in different languages were published The *Arcadia* of Sir Philip Sidney and *L'Astrée* of Honoré d'Urfé show its influence Montemayor was also a professional musician

Montemezzi, Italo (ē'tälō mōntāmĕt'tsē), 1875–, Italian operatic composer, studied at the Milan Conservatory His first and greatest success was his *L'amore dei tre re* [the love of the three kings] (Milan, 1913), composed in the tradition of Italian romantic opera. *La nave* (Milan, 1918) is based on a tragedy by D'Annunzio *L'incantesimo* (1943) is a one-act opera written and broadcast in the United States

Montenegro (mŏn"tunē'grō), Serbo-Croatian *Crna Gora* (tsŭr'na gō'ra), autonomous republic (5,343 sq mi., pop 370,573), SW Yugoslavia, bounded by the Adriatic Sea on the southwest, Bosnia and Hercegovina on the northwest, Serbia on the northeast, and Albania on the southeast Both its names mean "black mountain" Titograd (formerly Podgorica) is the capital Situated at the southern end of the Dinaric Alps, Montenegro is nearly entirely mountainous and difficult of access It consists of two regions, the barren karst of Montenegro proper, on the west, is separated by the Zeta river and plain from the higher Brda, on the east, which has forests and pastures Sheep and goat raising are important occupations Agriculture, mainly in the Zeta valley and near the Lake of SCUTARI (which forms part of the Albanian border), is poorly developed There are only home industries, and transportation is poor. CETINJE, Niksic, and KOTOR (the main port) are the

principal towns. The Montenegrin people are Serbs, belonging mostly to the Orthodox faith. For 500 years—from the 14th to the 19th cent.—their principal activity was to fight the Turks, who never entirely conquered their mountain stronghold. In Tennyson's words, "They kept their faith, their freedom, and their height,/ Chaste, frugal, savage, armed by day and night,/ Against the Turk" The region constituting present Montenegro was in the 14th cent. the virtually independent principality of Zeta in the Serbian empire. After Serbia was defeated by the Turks in the battle of Kossovo (1389), Montenegro continued to resist and became a refuge for Serbian nobles who fled the Turkish yoke. The sultans did not formally recognize Montenegrin independence, but, although they thrice destroyed Cetinje, they never succeeded in making Montenegro tributary However, the princes of Montenegro ruled only a small part of the present republic, the rest being governed by Turkey and by Venice, which held Kotor. From 1516 until 1851 the rule of Montenegro was vested in the prince-bishops (called *vladikas*) of Cetinje, these were assisted by civil governors Social organization, geared almost exclusively to the needs of war, was largely military and patriarchal With Danilo I (Danilo Petrovich of Niegosh), who ruled from 1696 to 1735, the episcopal succession was made hereditary in the Niegosh family, the office passing ordinarily from uncle to nephew, because the bishops could not marry Danilo I also inaugurated (1715) the traditional alliance of Montenegro with Russia, the emperors of Russia were henceforth considered as at least the spiritual suzerains of the *vladikas* Peter I, who reigned from 1782 to 1830, defied both France and Austria when the Treaty of Campo Formio (1797) transferred the Venetian possession of Kotor to Austria, but he failed to obtain the coveted port He instituted internal reforms and sought to end the blood feuds and lawlessness that had become a traditional way of life He was canonized as a saint after his death Peter II (reigned 1830–51), a gifted poet, continued his predecessor's work of reform and fostered a revival of learning and culture, aside from occasional border warfare, he lived in relative peace with his neighbors, Turkey and Austria Danilo II, who succeeded him, secularized his principality in 1851 and transferred his ecclesiastic function to an archbishop Under Nicholas I (reigned 1860–1918) Montenegro was formally recognized as an independent state at the Congress of Berlin (1878), which vastly increased its territory and gave it a narrow outlet on the Adriatic In 1910 Nicholas proclaimed himself king He fought Turkey in the Balkan Wars and took Scutari in 1913, but was forced by the pressure of the European powers to evacuate it Montenegro did, however, receive part of the territory claimed by newly independent Albania, and when the First World War broke out (1914), the Montenegrins invaded Albania Montenegro declared war on Austria in Aug , 1914, but late in 1915 it was overrun by Austro-German forces In Nov., 1918, a national assembly declared Nicholas deposed and effected the union of Montenegro with Serbia The new constitution (1946) of Yugoslavia made Montenegro an autonomous people's republic and enlarged its territory by adding a section of the Dalmatian coast

Montereau, Pierre de, see Montreuil, Pierre de.

Monterey (mŏn'tûrā) 1 City (pop 10,084), S Calif , on Monterey Bay and S of San Francisco. Rich in historic tradition, it is today a resort and the home of many artists and authors The bay was entered and named by Sebastián Vizcaíno in 1602. In 1770 Gaspar de Portolá established a presidio (now a U S army post) and Junípero Serra founded a Franciscan mission (which was moved the next year near the present Carmel). Monterey was the capital of Alta California during many of the years between 1775 and 1846. In 1846 the city was taken by a U S. naval force under Commodore John D Sloat In 1849 the state constitutional convention met in Monterey The city was incorporated in 1850 California's first theater (1844) and first brick building (1847) are still standing here, and here its first newspaper was established in 1846 Monterey has an important sardine industry and fruit and vegetable canneries It holds a yearly fiesta 2 Farm trade town (pop 1,742), central Tenn , E of Nashville

Monterey Park, city (1940 pop. 8,531; 1949 special census pop. 18,865), in San Gabriel township, S Calif , E of Los Angeles, founded 1910, inc 1916

Montero Ríos, Eugenio (āōhā'nyō mŏntā'rō rē'ŏs), 1832–1914, Spanish statesman and jurist He abandoned theological studies and became professor of canon law at Oviedo, Santiago, and Madrid. He entered the Cortes (1869), was several times in the ministry, and effected many important reforms. Montero Ríos was active in securing the accession of Amadeus and was one of his most faithful supporters A liberal leader, he was chief delegate to the Paris conference which concluded the Spanish-American War (1898) and was premier in 1905.

Monterrey (mŏntûrā', Span. mŏntĕrā'), city (pop. 186,092), capital of Nuevo León, NE Mexico, the third largest city of Mexico (after Mexico city and Guadalajara). Founded in the 16th cent, Monterrey is today, except for Mexico city, the most important industrial city of the nation About 150 mi. S of Laredo, Texas, in a valley surrounded by mountains, the city is the rail and highway hub (see Inter-American Highway) of NE Mexico. The moderate, dry climate, the cool mountains and foothills, and hot springs make Monterrey a popular resort The city is bustling and prosperous, factories, housing, recreational facilities, and social centers are modern and efficient The wealthier suburbs have houses built of stucco in a style derived from Spanish colonial and called Monterrey After the discovery by early settlers of a large lake (capable of supplying water for a city several times the size of the present one) of pure water, breweries were established Later came glass factories, metalworks, and paper mills The city's iron and steel foundries are the largest in Mexico, among other factories are those making furniture, textiles, cigars, and bricks and cotton and flour mills By the laying of pipe lines to tap natural gas in Texas, industrial output was increased enormously, essential supplies of coal and petroleum come from the neighboring states of Coahuila and Tamaulipas respectively Monterrey is generally regarded as an outstanding example of Mexico's potential ability to be less dependent upon foreign industrial output and to approach a balance of agricultural and manufactured produce In the Mexican War, Monterrey was captured by Zachary Taylor only after a courageous defense (Sept 19–24, 1846) by Mexican defenders

Montes, Ismael (ēsmäēl' mōn'tĕs), 1861–1933, Bolivian statesman His studies in law were interrupted by the war with Chile (the War of the Pacific) in 1879 He was admitted to the bar in 1886 In the liberal revolution of 1898 he again took up a military career and became minister of war in 1900 He served in the Acre campaign in the war with Brazil He was elected president of Bolivia for the term 1904–8 but, upon the death of his successor, served until April, 1909 His administration was notable for its program of wide administrative reform He was again president (1913–17) Montes was the ambassador to England and to France and from 1920 to 1928 lived in France as a political exile

Montesano (mŏntĭsā'nō), lumber city (pop 2,242), co seat of Grays Harbor co , W Wash , on the Chehalis river; inc 1883

Montespan, Françoise Athénaïs, marquise de (frāswäz' atānāēs' märkēz' du mōtuspā'), 1641–1707, mistress of Louis XIV of France She was maid of honor to Queen Marie Thérèse and was introduced to the king by Mlle de la Vallière, whom she superseded as mistress (c 1667) She bore the king several children Their education was entrusted to Mme de Maintenon, who succeeded her in the king's favor She later retired to a convent See H N Williams, *Madame de Montespan* (1903)

Montesquieu, Charles Louis de Secondat, baron de la Brède et de (shärl' lwē'du sükōdä' bärō' dù la brĕd' ā dù mōtuskyû'), 1689–1755, French jurist and political philosopher He was councilor (1714) of the parlement of Bordeaux and its president (1716–28) after the death of an uncle, whom he succeeded in both title and office. Except for travels in Europe, he lived in retirement in his feudal castle near Bordeaux His *Lettres persanes* (1721, Eng tr , *Persian Letters*, 1730) brought him immediate notoriety In these letters, under the guise of light, colorful studies of Oriental life, he satirized and criticized French institutions In 1734 he produced a scientific historical study of the rise and fall of Rome, *Considérations sur les causes de la grandeur des Romains et de leur décadence* (Eng tr , 1734) His greatest work, *De l'esprit des lois* (1748, Eng tr , *The Spirit of Laws*, 1750), is a comparative study of three types of government, republic, monarchy, and despotism Written with brilliance of style, it is considered to be one of the most important political studies in existence, and its far-reaching impact is to be found in the formation of the American Constitution.

Montessori, Maria (märē'ä mŏntĕs-sō'rē), 1870–, Italian educator and physician She was the originator of the Montessori method of education for the preschool child and was the first woman to receive a medical degree in Italy (1894) She later became a lecturer on pedagogical anthropology at the Univ of Rome and government inspector of schools Encouraged by her success with subnormal children in the Orthophrenic School, of which she was appointed director in 1898, she applied her educational method to the normal preschool child in several *case dei bambini* [houses of children], the first of which was opened in the Roman schools in 1907 The main features of the Montessori method, which has been widely used in Europe and America, are the development of the child's initiative through individual freedom of action, improvement of sense perception through training, and development of coordination through exercises and games The teacher provides didactic material and acts as a supervisor and guide. Dr. Montessori wrote *The Montessori Method* (1912), *Pedagogical Anthropology* (1913), *The Advanced Montessori Method* (1917), and *The Secret of Childhood* (1936). See D. C Fisher, *A Montessori Mother* (1912), W H. Kilpatrick, *The Montessori System Examined* (1914).

Monteux, Pierre (pyĕr' mōtû'), 1875–, French-American conductor, studied at the Paris Conservatoire As conductor (1911–14) of Diaghilev's Ballet Russe, he conducted the premières of ballets by Stravinsky, Ravel, and Debussy. He came to the United States in 1916 to conduct the Ballet Russe on its American tour, and he remained to conduct two seasons at the Metropolitan Opera House and to conduct the Boston Symphony Orchestra from 1919 to 1924 For the next 10 years he appeared as guest conductor of the Amsterdam Concertgebouw Orchestra He became conductor of the Paris Symphony Orchestra in 1930 and of the San Francisco Orchestra in 1935 In 1942 he became a U S citizen

Montevallo (mŏntĭvă'lō), town (pop 1,490), central Ala , S of Birmingham, in a farm area noted for its watermelons; settled c 1815, inc 1848 Alabama College (state; for women, 1893) is here

Monteverdi, Claudio (klou'dyō mŏntāvĕr'dē), 1567–1643, Italian composer, first great figure in the history of opera He was attached to the duke of Mantua from 1590 until 1613, when he became choirmaster of St Mark's, Venice His first opera, *Orfeo* (Mantua, 1607), surpassed operas of his Florentine contemporaries Peri and Caccini Of *Arianna* (Mantua, 1608), only the celebrated lament, which Monteverdi himself later arranged as a five-part madrigal, is extant In his dramatic cantata, *Il combattimento di Tancredi e da Clorinda* (Venice, 1624), he introduced the string tremolo to portray agitation In Venice, Monteverdi occupied himself chiefly with madrigals and church music, but after 1637, when Venice built its first opera theater and assumed musical leadership, the aged composer produced several operas, including *L'incoronazione di Poppea* (1642), which show a great development over his earlier style and mark him as a master at depicting the character and emotions of human personality Of his 21 dramatic works, only six, including three operas, are extant See Henry Prunières, *Monteverdi His Life and Work* (1926)

Montevideo (mŏntĭvĭdē'ō), city (pop 5,220), co seat of Chippewa co , W Minn , on the Minnesota and NW of Granite Falls, platted 1870, inc as a village 1879, as a city 1908 It is a farm trade center, and dairy products are made Camp Release State Park, near by, commemorates the release here in 1862 of 269 white captives of the Sioux

Montevideo (mŏntĭvĭdē'ō, -vĭdä'ō, Span mŏntāvĕdhä'ō), city (1943 estimated pop 708,233), S Uruguay, capital and largest city of Uruguay On the Río de La Plata, it is one of the major ports of South America Montevideo was founded because of the colonial rivalry and expansion of the Portuguese and the Spanish Atop the hill which overlooks the harbor the Portuguese constructed a fort in 1717. Captured by the Spanish in 1724, it became the nucleus of the settlement founded in 1726 by Mauricio de Zabala, governor of Buenos Aires It is today spacious, modern, and attractive, with broad, tree-lined boulevards, numerous and beautiful parks, and fine buildings and residences Notable among the parks is the Prado, which, with its lovely botanical gardens containing many thousands of plant species, is a popular promenade, among the impressive buildings are the *cabildo*, the legislative palace, the government palace, and the cathedral As a center of learning, Montevideo has the national university, with its colleges for advanced study, and many other cultural institutions It has long been a popular tourist mecca, particularly for Argentines, because of the beaches of fine white sand and luxurious resort hotels along the Plata estuary E to Punta del Este on the Atlantic Governmental, financial, and commercial focus of Uruguay, from which all railroads and highways radiate, Montevideo is primarily a port city on which much of the S Atlantic fishing fleet is based and from which are exported the chief products of the republic—frozen and canned meats and fish, wool, grains, flax, and linseed Manufacturing is concentrated about the city environs and is largely devoted to processing meats During the turbulent 19th-century civil wars of Uruguay, Montevideo suffered much and withstood a siege from 1843 to 1851 by forces under Oribe, assisted by the Argentine tyrant, Juan Manuel de Rosas

Monte Vista (mŏn"tĭ vĭs'tu), city (pop 3,208, alt c 7,500 ft), S Colo , in the San Luis Valley on the Rio Grande, inc 1886 It is the trade and shipping center of a fertile farm and dude-ranch area, with gold and silver mines and timber The city is headquarters for the Rio Grande National Forest A state soldiers' and sailors' home is near by, as are also Picture Rocks (with pictographs)

Montez, Lola (mōn'tĕs, mŏntĕz'), 1818?–1861, Irish adventuress, whose real name was Marie Dolores Eliza Rosanna Gilbert Her early marriage to an army officer ended in scandal and divorce She adopted the name Lola Montez, claimed Spanish descent, and became a dancer Her dancing was mediocre, but her beauty, her extravagant charm,

and her adventures were legendary. She gained sensational success in Europe, and by 1847 she was recognised as the mistress of Louis I of Bavaria, who made her countess of Lansfeld She virtually ruled Bavaria until the Revolution of 1848, when she was banished She returned to England (1849) and married again In 1851 she toured the United States and after the death of her second husband married P P. Hull, a San Francisco newspaperman After an Australian tour (1855–56), she returned to the United States and ultimately died in poverty See William Boltho, *Twelve against the Gods* (1929), Isaac Goldberg, *Queen of Hearts* (1936), Horace Wyndham, *The Magnificent Montez* (1936)

Montezuma (mŏntŭzōō'mŭ) or **Moctezuma** (mŏktăsōō'ma), 1480?–1520, Aztec emperor (1502–20 or 1503–15) He is sometimes called Montezuma II because there was an earlier Montezuma who ruled from 1440 to 1469 and carried on conquests both east and west of the Aztec capital TENOCHTITLÁN The later Montezuma was his grandson His reign was marked by incessant warfare, and his despotic rule caused some unrest When Hernán CORTÉS arrived in Mexico he was thus able to gain native allies, notably the Tlaxcalans Montezuma, believing the Spanish to be descendants of QUETZALCOATL, tried by offering rich gifts to persuade them to leave This failing, he received them at Tenochtitlán in Nov , 1519 Cortés later seized him as a hostage and attempted to govern through him In June, 1520, the Aztec rose against the Spanish Montezuma was killed, whether by the Spanish or the Aztec is not certain His successor died a few months later and was replaced by CUAUHTÉMOC The name sometimes appears as Montecuzhoma

Montezuma. 1 City (pop 2,346), W central Ga , SSW of Macon and on the Flint river, developed 1851 with the railroad's coming, inc 1854 It is a processing center in a farm area, peaches, cotton, corn, and truck are shipped 2 Town (pop 1,366), W Ind , on the Wabash and N of Terre Haute, settled c 1820, platted 1849, inc 1851 Bricks is made here 3 Town (pop 1,477), co seat of Poweshiek co , SE Iowa, E of Des Moines, inc 1868

Montezuma Castle National Monument see NATIONAL PARKS AND MONUMENTS (table)

Montfaucon (môfōkô'), village (pop 412), Meuse dept , NE France, NW of Verdun Atop Montfaucon hill and amid the ruins of the old Montfaucon village (destroyed in 1918) there rises the American memorial to the Meuse-Argonne battle of 1918, the largest American First World War memorial in Europe

Montferrat (mŏntfŭrät', –rät'), Ital *Monferrato* (mônfär-ra'tô), historic region of Piedmont, NW Italy, S of the Po, now mostly in Alessandria prov A marquisate after the end of the 10th cent , it was first under the Aleramo, then under the Paleologo families Casale, the chief city, was conquered in 1404, made the capital in 1435, and strongly fortified After the extinction of the Paleologo line, Emperor Charles V gave (1536) Montferrat to the Gonzaga family of Mantua, despite the claims of the house of Savoy After Francesco Gonzaga's death in 1612, Savoy renewed its claims on Montferrat and invaded it Spain and France intervened. The treaty of Cherasco (1631) assigned part of Montferrat to the house of Savoy, while the rest, including Casale, followed the fortunes of the duchy of Mantua and passed to the Nevers (French) branch of the Gonzaga family This territory was recognized as belonging to the house of Savoy by the Peace of Utrecht (1713) Montferrat is a noted winegrowing region

Montfort, Simon de (mônt'furt, Fr môfôr'), c 1160–1218, count of Montfort and earl of Leicester, leader of the crusade against the ALBIGENSES Capable, ambitious, and fanatically religious, he became the leader of the crusaders who remained in the South of France after the taking of Carcassonne (1209) and was invested by the papal legate with the viscounties of Béziers and Carcassonne In 1211 he attacked the remaining territories of RAYMOND VI of Toulouse and overran all but Toulouse and Montauban Pope Innocent III attempted to make him recognize PETER II of Aragon as overlord, but in 1213 Simon de Montfort defeated Peter and Raymond at Muret He was proclaimed lord of Toulouse and Montauban by the crusaders (1215), and his title was confirmed by the pope in the same year Raymond having recaptured (1217) some of his territories, Simon renewed his warfare against him and was killed while besieging Toulouse Through his mother he claimed the English earldom of Leicester, to which his right was intermittently recognized by King John He was the father of Simon de Montfort, the leader of the English barons

Montfort, Simon de, c 1208–1265, earl of Leicester, leader of the revolt against HENRY III of England He was born in France, the son of Simon de Montfort, leader of the Albigensian crusade. After his father's death, he and his brother Amaury reached a settlement by which Simon received the claim to the earldom of Leicester (inherited from his grandmother) He came to England in 1229 and two years later was recognized by Henry as earl of Leicester He became one of the king's foreign advisers and in 1238 married Eleanor, Henry's sister. Flurries of disagreement with the king occurred, but no serious trouble In 1240 Simon distinguished himself on crusade in Palestine under Richard of Cornwall Returning to France in 1242, he joined Henry III in the Gascon campaigns of 1242–43. Simon was preparing to go on a new crusade when in 1248 Henry sent him to Gascony with unlimited powers to bring order out of the anarchy of petty feudal wars and rebellions against English authority Simon de Montfort was skillful and ruthless in using military force to crush the turbulent Gascon barons He accomplished much toward establishing English authority, and despite his methods he even achieved a somewhat unstable order Loud Gascon protests provoked Henry III in 1252 to call Simon to an inquiry in England After a quarrel with the king had been patched up, Simon returned to Gascony, only to be interrupted by a royal order to desist in the middle of his campaign so that young Prince Edward (later EDWARD I) might take Gascony in charge Henry's abortive scheme for obtaining the Sicilian crown for his son Edmund Crouchback increased baronial opposition to the king, and in 1258 Simon was an active member of the party that forced the king to turn over the power of government to a committee of 15, which ruled under the PROVISIONS OF OXFORD Simon was one of the 15 It is not clear what part he had in the Provisions of Westminster (1259), but they probably represented his views He was important in the negotiations which led to the Treaty of Paris (1259) between Henry III and Louis IX of France, but he broke definitely with the English king the next year When Henry III repudiated his agreements and commenced the royalist reaction, Simon de Montfort led the opposing barons until in 1261 a majority of them consented to an unfavorable compromise with the king, and Simon left England He returned in 1263 to assume leadership in the BARONS' WAR The constitutional quarrel was submitted to Louis IX to settle, in the award of Amiens (1264) he decided in favor of Henry Fierce civil war now broke out In May, Simon won a great victory at Lewes and became master of England, which he now placed under a moderately liberal government similar to that prescribed in the Provisions of Oxford Simon, his sons, and Gilbert de Clare, 8th earl of GLOUCESTER, were the most powerful men in the kingdom The so-called Great Parliament which he summoned to meet early in 1265 was one of the most important in the history of PARLIAMENT in that he called not only knights from each shire to represent the rural nobility but also, for the first time, representatives from boroughs and towns Gloucester, however, deserted and with Prince Edward joined the nobles of the Welsh Marches to start the wars again Simon de Montfort was defeated and killed at Evesham See Charles Bémont, *Simon de Montfort* (Eng tr by E F Jacob , 1930), R F Treharne, *The Baronial Plan of Reform* (1932), E C Lodge, *Gascony under English Rule* (1926), H W C Davis, *England under the Normans and Angevins* (1930)

Montgolfier, Joseph Michel (zhôzĕf' mĕshĕl' môgôlfyā'), 1740–1810, and **Jacques Étienne Montgolfier** (zhak' ātyĕn'), 1745–99, French inventors, brothers Together they invented the first practical BALLOON On June 5, 1783, they sent up at Annonay, near Lyons, a large linen bag inflated with hot air The flight covered more than a mile and lasted 10 min They gave another demonstration in Sept , 1783, before the court at Versailles

Montgomerie, Alexander (mŭntgŭ'murē), c 1550–c 1610, Scottish poet, who received for a time a pension from the Scottish crown His principal poem, *The Cherry and the Sloe* (1597), is a pedestrian and ambiguous allegory which enjoyed considerable popularity Its stanza form of 14 lines with six rhymes was much imitated and was used by Robert Burns in *The Jolly Beggars* Montgomerie's 70 sonnets are occasionally awkward, but often even and stately He wrote a verse polemic against Home of Polwarth, much in the customary fashion The Scottish Text Society has edited his poems

Montgomery, Bernard Law, 1st **Viscount Montgomery of Alamein** (mŭntgŭ'murē, ăl'umān'), 1887–, British field marshal He entered the army in 1908 and rose in rank through long service In the Second World War he commanded (1939–40) the 3rd DIVISION in France until the evacuation of Dunkirk In 1942 he was sent to Egypt to command the British 8th Army in Africa under the Middle Eastern Command headed by Gen Sir Harold R L G ALEXANDER Winning the battle of ALAMEIN and driving the Germans 2,000 mi across Africa into Tunisia (see NORTH AFRICA, CAMPAIGNS IN) made Montgomery an idol of the British public. He led the 8th Army in Sicily and Italy until Dec , 1943 In the invasion of Normandy he was field commander of all ground forces until Aug , 1944, then headed the 21st Army Group When the Germans advanced in the Battle of the BULGE he was given temporary command of two American armies Afterwards his troops thrust across N Germany to the Baltic, and he headed (1945–46) the British occupation forces in Germany. He was made field marshal in 1944 and created viscount in 1946 He was chief of the imperial general staff from 1946 to 1949, when he was made chairman of the commanders in chief in committee under the permanent defense organisation of Britain, France, Belgium, the Netherlands, and Luxembourg His writings include *Normandy to the Baltic* (1947) and *El Alamein to the River Sangro* (1948) See biography by Alan Moorehead (1947)

Montgomery, Gabriel, seigneur de Lorges, comte de (gäbrēĕl' sānyûr' dŭ lôrsh' kŏt' dŭ môgômurē'), c 1530–1574, French soldier Captain of the Scottish guards of King Henry II of France, he accidentally killed the king in a tournament in 1559. Disgraced at court, he retired first to Normandy, then to England, where apparently he was converted to Protestantism He returned to France, where he fought (1562-70) with distinction on the Protestant side in the Wars of Religion He returned again in 1574, but was captured and put to death.

Montgomery, Lucy Maud (muntgŭ'murē), 1874–1942, Canadian novelist, b Prince Edward Island, studied at Prince of Wales College and Dalhousie Univ Her first novel, *Anne of Green Gables* (1908), a warm-hearted, sentimental story for girls, met with immediate success It has been widely translated, a moving-picture version of the story was produced in 1935 A number of popular sequels followed—*Anne of Avonlea* (1909), *Chronicles of Avonlea* (1912), *Anne of the Island* (1915), *Anne's House of Dreams* (1917), and others The author (in private life the wife of Ewan Macdonald, a Presbyterian minister) also wrote other similar stories for girls

Montgomery, Richard (muntgŭ'murē), 1738?–1775, American Revolutionary general, b Swords, Co Dublin, Ireland, educated at Trinity College, Dublin He was sent as a soldier (1757) to Canada in the French and Indian War and saw action at Louisburg, Ticonderoga, and Montreal before participating in operations against Martinique and Havana (1762) Montgomery returned from Great Britain, settled (1772) near New York city, and married a daughter of Robert L Livingston He joined the patriots as a brigadier general (1775) and replaced Philip J Schuyler as commander of the Montreal expedition in the ill-fated QUEBEC CAMPAIGN After taking Montreal, he joined with Benedict Arnold and was killed (Dec 31, 1775) in the assault on Quebec

Montgomery, county, Wales see MONTGOMERYSHIRE

Montgomery (mŭntgŭ'murē) **1** City (pop 78,084), state capital, and co seat of Montgomery co , SE central Ala , near the head of navigation on the Alabama river, in the Black Belt It is a railroad center and an important cotton, livestock, dairy, and lumber market, it produces textiles, cotton goods, fertilizer, packed meat, and lumber products The city was settled in 1817 and incorporated in 1819 In 1846 it was voted state capital and was the first capital of the CONFEDERACY (1861) It fell to Union troops in 1865 The city is the seat of Huntingdon College (Methodist, for women, 1854) and of a state teachers college for Negroes, a museum of fine arts, the "First White House of the Confederacy," and the state capitol Near by are Maxwell Field, with a U S advanced military air-training school, state penal institutions, and the site of historic Fort Toulouse **2** City (pop 1,741), SE Minn , NW of Faribault, platted 1877, inc 1902 It is a farm trade center, and clothing is made **3** Borough (pop 1,893), NE Pa , SE of Williamsport, settled 1778, inc 1887 It manufactures leather products **4** Rural town (pop 1,208), N Vt , NE of St Albans, chartered 1789, settled 1793 **5** Coal city (pop 3,231), S W Va , on the Kanawha and SE of Charleston, inc 1890 A state college is here

Montgomery, municipal borough (pop 918), county town of Montgomeryshire, Wales, near the Severn and SW of Shrewsbury It has ruins of a 13th-century castle Offa's Dyke is particularly well preserved here

Montgomery City, city (pop. 1,671), co seat of Montgomery co , E central Mo , WNW of St. Louis, laid out 1853 It is a trade center in a dairy, stock, and grain area

Montgomeryshire (muntgu'murēshĭr) or **Montgomery,** border county (797 sq mi , 1931 pop 48,473, 1948 estimated pop 45,544), E central Wales The county seat is Montgomery The region is largely hilly and is drained by the Dovey, the upper Severn, the Tanat, and the Vyrnwy At one time lead was mined and flannel manufactured in the county, but now the region is devoted mostly to pasturage and, in the valleys on the English border, to farming. The district was important in medieval times as the heavily fortified border district of the Norman lords of the Welsh Marches It was organized as a county in 1535.

month [connected with *moon*], in chronology, the conventional period of a lunation, i e , the passage of the moon through all its phases It is usually reckoned at about 29 or 30 days For the computation of the month and its harmony with the solar calendar and for the months in others than the

Gregorian calendar, see CALENDAR For the difference between the sidereal month and the synodic month, see MOON. Certain stones have in ancient and modern times been connected with the months; these lucky stones or birthstones are often given as follows· *January* [from the god JANUS] garnet; *February* [from Latin,=expiatory, because of important rites in February] amethyst, *March* [from the god MARS] bloodstone, *April* diamond, *May* agate or emerald, *June* [from the gens *Junius*]: emerald or agate, *July* [from Julius CAESAR] ruby or onyx, *August* [from AUGUSTUS] carnelian, *September* [from Latin,=seven, formerly the seventh month] chrysolite or sapphire, *October* [eight]. beryl, aquamarine, or opal, *November* [nine] topaz; *December* [ten] ruby

Montherlant, Henry de (ārē′ du mōtĕrlä′), 1896–, French novelist His novels, decadent and egotistical, glorify force and masculine virility Montherlant, who fought in the First World War, later was an athlete and a bullfighter His translated novels include *Les Bestiaires* (1926, Eng tr , *The Bullfighters*, 1927), *Les Célibataires* (1934, Eng tr , *Lament for the Death of an Upper Class*, 1935, American title, *Perish in Their Pride*, 1936), and *Les Jeunes Filles*, a series in four parts—*Les Jeunes Filles* (1936), *Pitié pour les femmes* (1936, Eng tr of both in one volume, *Young Girls* and *Pity for Women*, 1937), *Le Démon du bien* (1937), and *Les Lépreuses* (1939, Eng tr of both in one volume, *The Lepers*, 1940, American title, *Costals & the Hippogriff*, 1940)

Montholon, Charles Tristan, marquis de (shärl′ trēstä′ märkĕ′ dŭ mōtôlôⁿ′), 1783–1853, French general in the Napoleonic Wars He accompanied Napoleon to St Helena Returning to Europe after the emperor's death, he lost, in commercial speculations, the legacy which Napoleon had willed him Involved (1840) in Louis Napoleon's unsuccessful coup at Boulogne (see NAPOLEON III), he was imprisoned from 1840 to 1847 After the Revolution of 1848 he was elected a deputy to the constituent assembly He was the author of *Mémoires secrets relatifs à la Révolution française* (1834) and *Histoire de la captivité de Ste Hélène* (1846)

month's mind, in the Roman Catholic Church, a solemn commemoration of the death of a person one month (or 30 days) after It is normally a Mass of requiem It was formerly customary to have a feast also

Monti, Vincenzo (vēnchän′tsō mōn′tē), 1754–1828, Italian poet and dramatist He was for a time secretary to the duke of Braschi, the pope's nephew Later he was historian to the court under Napoleon, under Austrian rule he accommodated himself to the new order Among his many works the best known is *Bassvilliana* (1793), an epic and Dantesque treatment of the assassination of Hugo Bassville, the French envoy, at Naples Monti is also remembered for the tragedies *Aristodemo* (1787), translated in 1818 by Fanny Burney, and *Caio Gracco* (1788–90) and for *Il bardo della Selva Nera* (1806), an epic dedicated to Napoleon. He also translated the *Iliad* and the *Odyssey*

Montmagny (mômänyĕ′), town (pop 4,585), SE Que , on the south shore of the St Lawrence and ENE of Quebec , founded 1678, inc 1845 It has silk and rayon mills and woodworking plants and manufactures stoves and pumps

Montmartre (mômär′tru) [Fr from Latin,=hill of the martyrs, i e , St DENIS and companions], hill in Paris, France, on the right bank of the Seine, the highest point of Paris It is topped by the famous Church of SACRÉ-CŒUR Sections of the ancient quarter on its slopes were long a favorite residence of the bohemian world Montmartre is also famed for its night life, of its innumerable night clubs the Moulin Rouge is the best known The cemetery of Montmartre contains the tombs of Stendhal, Berlioz, Renan, Heine, and Alfred de Vigny

Montmorency, Anne, duc de (mônt″murĕn′sē, Fr an′ dük′ du mômôräsē′), 1493?–1567, constable of France He was made a marshal (1522) by Francis I, was captured with Francis at Pavia (1525), helped negotiate (1526) Francis's release, and soon after the king's return received the governorship of Languedoc, which remained in his family till 1632 His policy of peace with Emperor Charles V finally led to his disgrace (1541), which lasted till Francis's death (1547) King Henry II restored him to a degree of favor limited by the countervailing influence of François and Charles de GUISE. He took Metz from the Spanish (1552) and was captured (1557) by Emmanuel Philibert of Savoy at Saint-Quentin, but was soon released Dismissed by Francis II, he was restored to office by Catherine de' Medici He joined the Guises in the Wars of Religion, was captured at Dreux (1562), and was killed in the siege of Paris

Montmorency, Henri, duc de (ärē′), the elder, 1534–1614, marshal and constable of France, younger son of Anne de Montmorency He was known as Henri, comte de Damville, before 1579 He took Louis I de CONDÉ prisoner at Dreux (1562) In 1563 he succeeded his father as governor of Languedoc A zealous Catholic and adherent of the Guises till his father's death, he was led by the subsequent decline of his family's fortunes and by the murder of his relative COLIGNY to associate himself with the moderates who favored a rapprochement with the Huguenots Resisting all royal efforts to remove him from Languedoc, where he was practically an independent sovereign, he was in alliance with the Huguenots from 1575 to 1577, but thereafter remained aloof from both parties, while attempting to bring about their conciliation He adhered to KING HENRY IV in 1589 and became constable in 1593 After Henry's death (1610) he retired to his province

Montmorency, Henri, duc de, the younger, 1595–1632, admiral and marshal of France, son of the elder Henri de Montmorency He became governor of Languedoc in 1613 and fought in the religious and foreign wars of Louis XIII's reign In 1632 he joined in a conspiracy of Gaston d'ORLÉANS and was captured and executed

Montmorency, Mathieu, baron de (matvû′ bärō′ du mômôräsē′), d 1230, constable of France (1218–30), called the Great Constable He fought under PHILIP II (Philip Augustus) at Château-Gaillard (1203–4) and Bouvines (1214) and under Louis VIII against the English (1224) and the Albigenses (1226) In Louis XI's minority he supported BLANCHE OF CASTILE

Montmorency (mônt″murĕn′sē), village (pop 5,393), S Que , on the St Lawrence at the mouth of the Montmorency river and just NE of Quebec It has textile mills and a hydroelectric plant furnishing power for Quebec and the surrounding area

Montmorency (mônt″murĕn′sē, Fr mômôräsē′), town (pop 10,511), Seine-et-Oise dept , N France, a northern outer suburb of Paris The château of the ducal family of Montmorency was razed in 1814 J J ROUSSEAU lived here (1756–62), first at the near-by "Hermitage," a cottage on the estate of his friend, Mme d'Épinay, and after his quarrel with her, at Montmorency itself, under the protection of the duc de Luxembourg

Montmorency, river of S Quebec, rising in the Laurentian Mts and flowing generally S to the St Lawrence Near its mouth are **Montmorency Falls** (265 ft high), providing hydroelectric power

Montour Falls (mŏn′tōōr″), village (pop 1,345), W central N Y , in the Finger Lakes region, near Watkins Glen N of Elmira, inc 1836

Montoursville (mŏntōōrz′vĭl), residential borough (pop 3,019), NE Pa , on the West Branch of the Susquehanna and near Williamsport, settled 1807, laid out 1820, inc 1850 It has silk mills and a furniture factory

Montparnasse (môpärnäs′), quarter of Paris, France, on the left bank of the Seine, centering on the intersection of the Boulevard de Montparnasse and the Boulevard Raspail Its famous cafés (the Dôme, the Rotonde, the Coupole, and others) are centers of the Parisian artistic and intellectual world It contains the Montparnasse railroad station, the Pasteur Institute, the ancient catacombs, and the Montparnasse cemetery, with the tombs of Saint-Saëns, Houdon, Baudelaire, Poincaré, César Franck, Maupassant, and Leconte de Lisle

Mont Pelée see PELÉE, MONT

Montpelier (mŏntpēl′yur) **1** City (pop 2,824), SE Idaho, near the Bear river and SE of Pocatello Founded (1864) by Mormons and named (1865) for the capital of Brigham Young's native state, the little center of an area producing alfalfa, grain, and livestock has today a tabernacle of the Latter-Day Saints **2** City (pop 1,800), E Ind , E of Marion, settled 1836, inc 1937 **3** Village (pop 3,703), NW Ohio, on the St Joseph river and W of Toledo, settled 1855, inc 1875 Stove and office fixtures, metal stampings, and truck bodies are manufactured here **4** City (pop 8,006), state capital (since 1805), and co seat of Washington co , central Vt , on the Winooski and NW of Barre, inc 1894 Col. Jacob Davis arrived in 1787—he and others had been granted Montpelier town in 1780—and built a sawmill and a gristmill The region is known for its granite The present capitol (1836), of Barre granite, was rebuilt after a fire in 1857, the gilded dome is surmounted by Larkin G Mead's *Ceres*, and Mead's heroic *Ethan Allen* is within the Doric portico The supreme court, near by, contains, besides state and public libraries, the collections of the Vermont Historical Society, among them the Stephen Daye press Montpelier was the birthplace of Admiral George Dewey and of Thomas Waterman Wood, the Wood Gallery (1895) contains Wood's collection The Kellogg-Hubbard Library and Hubbard Park are other points of interest Daniel Pierce Thompson edited a paper in Montpelier Montpelier Seminary, a 19th-century school, is now Vermont Junior College The city was disastrously flooded in 1927, it escaped serious damage from the 1936 flood because dams had been constructed on the upper Winooski and its tributaries The city shares an airport with Barre

Montpelier, estate, central Va , near Orange, home of James Madison, now privately owned The mansion was built c 1760 by Madison's father. Madison and his wife are buried near by

Montpellier (môpĕlyā′), city (pop 80,873), capital of Hérault dept , S France, near the Mediterranean coast It is a trade center for wines, brandy, and silk Dating from the 8th cent , it was, with the surrounding countryside, a fief under the counts of Toulouse, it passed (13th cent) to the kings of Majorca, from whom it was purchased (1349) by Philip VI of France A Huguenot center, it was besieged and taken by Louis XIII in 1622. Montpel-

her was the seat of the provincial estates of LANGUEDOC The fame of the city rests mainly on its university, founded here in 1289 The faculty of medicine, celebrated for seven centuries, is traced to the 10th cent , its most famous student was Rabelais It is now housed in a 14th-century building There are many handsome houses of the 17th and 18th cent The botanical garden was founded by Henry IV in 1593

Montpensier, Anne Marie Louise d'Orléans, duchesse de (an' märē' lwēz' dôrlāä' düshĕs' du môpāsyā'), 1627–93, French princess, called Mademoiselle and La Grande Mademoiselle, daughter of Gaston d'Orléans She took an active part on the rebel side in the FRONDE of the Princes, in 1652 she relieved Orléans at the head of her troops and opened the gates of Paris to Condé's retreating soldiers Exiled with her father (1652), she returned to court in 1657 She fell in love with LAUZUN, the king's permission for their marriage was granted only to be revoked (1670) Shortly thereafter, Lauzun was imprisoned (1671) Mademoiselle bought his release in 1681 and apparently married him, but they soon separated Mademoiselle spent the rest of her life in pious works and the composition of her memoirs See Arvède Barine (pseud of Cécile Vincens), *Louis XIV and La Grande Mademoiselle, 1652–1693* (1905)

Montreal (mŏntrēôl'), city, (pop 903,007, metropolitan pop 1,138,431), S Que , on Montreal island in the St Lawrence It is the largest city in Canada and its commercial, financial, and industrial center It lies at the foot of Mt Royal (900 ft high) and has an excellent harbor with modern dock facilities at the head of ocean navigation on the St Lawrence, which is here spanned by the Victoria Bridge (opened 1860, remodeled 1898) and by the Jacques Cartier Harbour Bridge (1930) The Lachine Canal provides a direct waterway for shipping to the Great Lakes A stockaded Indian village, Hochelaga, was found here (1535) by Cartier, who climbed Mt Royal and so named it, and the site was visited in 1603 by Champlain, but it was not settled by the French until 1642, when a band of priests, nuns, and settlers, under Paul de Chomedey, sieur de Maisonneuve, founded Ville Marie de Montréal The settlement grew slowly and suffered numerous Indian attacks, but became an important center of the fur trade and the starting point for the western expeditions of Jolliet, Marquette, Father Hennepin, Vérendrye, and the sieur Duluth It was fortified in 1725 and remained in French possession until 1760, when Vaudreuil de Cavagnal surrendered it to superior British forces under Amherst. The American patriot forces under Richard Montgomery occupied it briefly in 1775 From 1844 to 1849 it was the capital of United Canada. The population has remained largely French Among the notable buildings are Hôtel Dieu (built 1644, present building 1861), Notre Dame Church (founded 1656, present building 1824), the Seminary of St Sulpice (1661, present building 1712), the Château de Ramezay (1705, a museum since 1894), the Grey Nunnery (1738), Christ Church Cathedral (1814, rebuilt 1859), the Cathedral of St James (a smaller reproduction of St Peter's in Rome), and St Joseph's Shrine and Oratory (given papal benediction 1910). It is the seat of MCGILL UNIVERSITY, of the Montreal School of Social Work, of several theological schools, and of the Roman Catholic archbishopric The Univ. of Montreal (French language, Catholic, pontifical, coeducational), founded in 1876 and opened in 1878 as a branch of Laval Univ , was separately organized in 1889 and chartered in 1920 Besides faculties of dental surgery, law, letters, medicine, philosophy, sciences, and theology, it has schools of pharmacy and of social, economic, and political sciences. The Agricultural Institute of Oka (with a school of veterinary medicine) is affiliated Montreal's industries include the manufacture of steel products, railroad equipment, glass, electrical equipment, furniture, clothing, and shoes and tobacco processing, there are flour and sugar mills, grain elevators, and cold-storage plants. Montreal is Canada's most important port for transshipment of wheat, flour, coal, oil, lumber, canned goods, iron, and steel. See Victor Morin, *Old Montreal* (1929), T. M. Longstreth, *Quebec, Montreal, and Ottawa* (1933), Stephen Leacock, *Montreal, Seaport and City* (1942)

Montreal, city (pop 1,700), N Wis , SE of Ashland and on the Gogebic iron range, inc. 1924

Montreal, University of. see MONTREAL, Que

Montreal East, town (pop 2,355), S Que , on Montreal island, SW of Montreal. It is a copper-refining center.

Montreal North, town (pop. 6,152), S Que , on Montreal island. It is a suburb of Montreal

Montreal South, town (pop 1,441), S Que., a residential suburb of Montreal, at the east end of the Jacques Cartier Harbour Bridge across the St Lawrence.

Montreal West, town (pop. 3,474), S Que., on Montreal island, near Lachine.

Montreuil or Montereau, Pierre de (pyĕr' du môtrē'yu, môtürō'), d 1266, French architect, a prominent figure under the patronage of Louis IX. He built the refectory (1239–44) and the Lady Chapel (1244) at the monastery of Saint-Germain-des-Prés, Paris, destroyed during the Revolution, and is credited with the design of the chapel of the château of Saint-Germain-en-Laye (1240) near Paris and the refectory of Saint-Martin-des-Champs (*c* 1250), Paris

Montreux (môtrü'), extreme northeast bank of the Lake of Geneva, Vaud canton, Switzerland, between Vevey and Villeneuve It is composed of three communities, Montreux-Châtelard (pop 9,990), Planches (pop 4,492), and Veytaux (pop 667), and is an unbroken succession of villages and resorts. Chocolate is made, and there is woodworking The tourist traffic is large

Montreux Convention, 1936 The request made by Turkey for permission to refortify the Straits zone (see DARDANELLES) resulted in the meeting, at Montreux, Switzerland, of the powers that had been parties to the Treaty of Lausanne of 1923 (see LAUSANNE, CONFERENCE OF) With Italy abstaining, the powers decided to return the Straits area to Turkish military control. Turkey was furthermore authorized to close the Straits to warships of all countries when it was at war or threatened by aggression, merchant ships were to be allowed free passage, the USSR was authorized to send its fleet through the Straits into the Mediterranean in peacetime, powers with no territory touching the Black Sea were permitted to concentrate no more than 45,000 tons of warships there The Montreux Convention was ratified by Turkey, England, France, the USSR, Bulgaria, Greece, Germany, Yugoslavia, and—with reservations—Japan It remains in effect despite efforts by the USSR, after the Second World War, to obtain a revision

Montrose, James Graham, 5th earl and 1st marquess of (mŏntrōz'), 1612–50, Scottish nobleman and soldier. He succeeded to the earldom in 1626 and, having been treated with disdain by Charles I, joined the COVENANTERS in 1638. At first he was a leader in the BISHOPS' WARS, suppressing royalists and Episcopalians, but after the Pacification of Berwick (1639) *he took the king's side because he* feared a Presbyterian oligarchy controlled by Archibald CAMPBELL, 8th earl of Argyll He desired a constitutional government, but believed some form of monarchy was necessary to control the turbulent Scottish nobility. Charles consented to Presbyterianism so late (1641) that compromise was impossible, warfare was resumed, and Montrose invaded Scotland in the king's name, but failed He then visited the Highlands in disguise, organized a force there, and defeated the Lowland Presbyterian army of Argyll in six engagements, of which Tippermuir, Inverlochy, and Kilsyth were the greatest (1644–45) Never in command of a very large army, Montrose was successful because of his brilliant strategy coupled with spirited and inspiring leadership of the fierce Highland clansmen He was in control of Scotland for a short time, but the defeat of Charles at Naseby (1645) left him without support, and even he could not permanently unite the Scottish royalists. David Leslie beat his small army at Philiphaugh (1645) and in 1646 Montrose fled to Norway In 1650 he returned to Scotland to try to make the nominal rule of Charles II a reality, but was captured and hanged He quite evidently acted from conviction rather than scheming ambition, and although the excesses of his wild troops have been sharply criticized, his reckless daring and his successes have made him one of the most romantic figures in Scottish history He was the author of poetry (ed by G L Weir, 1938) See John Buchan, *Montrose* (1928), Margaret Irwin, *Proud Servant* (1934), a historical novel

Montrose, burgh (pop 10,196), Angus, Scotland, on a low sandy peninsula between the mouth of the South Esk and Montrose Basin, an inlet dry at low tide There is a bridge to Rossie island, or Inchbrayock, in the Esk. Montrose was a port in the 14th cent when it was swept by fire John de Baliol surrendered to Edward I here in 1296 The burgh is a fishing center with distilleries and the manufacture of fertilisers

Montrose 1 City (pop 4,764, alt, 5,820 ft), co seat of Montrose co., SW Colo , on the Uncompahgre river and SE of Grand Junction, in an orchard and farm area, founded and inc. 1882 Carnotite deposits near by are a source of radium The Black Canyon of the Gunnison National Monument is near 2 Town (pop. 592), extreme SE Iowa, on the Mississippi above Keokuk One of the first permanent white settlements in Iowa was made here in 1799 when Louis H Tesson, a French-Canadian, established a trading post. The town was laid out in 1837 3 Borough (pop 1,977), co seat of Susquehanna co., NE Pa , NNW of Scranton, settled 1799, laid out 1811, inc 1824. It has machine shops and a publishing plant

Monts, Pierre du Guast, comte de (pyĕr' dü gwäst' kōt' dü mō'), c.1560–c 1630, French colonizer in North America, called the sieur de Monts. A wealthy Huguenot and a favorite of Henry IV, he was the holder of a trade monopoly in New France and the patron of Samuel de CHAMPLAIN. Monts had visited the St. Lawrence in 1603. In 1604–5 he and Champlain explored the coast of New Brunswick and New England as far south as Cape Cod He planted the first French colony in Canada at Port Royal (the modern ANNAPOLIS ROYAL, N.S) in 1605. Leaving it in Champlain's care, he returned to France but sent ships in 1607 and 1608 to aid the colonists Monts's monopoly of the fur trade was soon afterward revoked See William Inglis Morse, ed , *Pierre du Gua, sieur de Monts Records* (1939).

Mont-Saint-Jean (mō-sĕ-shĕ'), village, Brabant prov., central Belgium, on a height S of Waterloo Here the British resisted the French onslaught at the end of the WATERLOO CAMPAIGN (1815)

Mont-Saint-Michel (mō-sĕ-mēshĕl'), rocky isle (pop 149) in the English Channel, Manche dept , NW France, 1 mi off the Norman coast near Avranches It is accessible by land at low tide and also is connected with the mainland by a causeway. Its celebrated Benedictine abbey was founded in 708 by Aubert, bishop of Avranches, according to directions received from the Archangel Michael in a vision A gigantic pile of buildings, rising three stories high, serves, with the summit of the cone-shaped rock, as a base for the great abbey church which crowns them Six of these structures on the side facing the sea form the unit called La Merveille [the marvel], constructed from 1203 to 1228. It includes the almonry and the cellar (first story), the refectory and the hall of knights (second story), and the dormitory and the cloister (third story) The whole forms one of the most imposing achievements of Gothic architecture. Strongly fortified, the abbey was frequently assaulted by the English in the Hundred Years War, but was never captured It survived the Second World War undamaged and remains one of the major tourist attractions of Europe Henry ADAMS wrote of it feelingly in *Mont-Saint-Michel and Chartres*

Montserrat (mŏntsurät'), island (*c* 37 sq mi ; pop 14,275), British West Indies A presidency of the LEEWARD ISLANDS colony, it exports cotton, limes and lime products, and vegetables Discovered by Columbus in 1493, *Montserrat* was colonized by the British in 1632 In the colonial wars between France and England the island changed hands several times, but was finally awarded to Great Britain in the Treaty of Paris of 1783

Montserrat or **Monserrat** (both mŏn"surät', mŏnt"- , Span mônserrat'), mountain, 4,054 ft high, NE Spain, rising abruptly from a plain in Catalonia, NW of Barcelona On a narrow terrace, more than halfway up its precipitous cliffs, is a celebrated Benedictine monastery, one of the greatest religious shrines of Spain Only ruins are left of the old monastery (11th cent) The new monastery was built in the 19th cent The Renaissance church (16th cent , largely restored in the 19th and 20th cent) contains the black wooden image of the Virgin which, according to tradition, was carved by St Luke, brought to Spain by St Peter, and hidden in a cave near here during the Moorish occupation. In the Middle Ages the mountain, also called Monsalvat, was thought to have been the site of the castle of the Holy GRAIL At Montserrat, St Ignatius of Loyola devoted himself to his religious vocation just before the founding of the Society of Jesus

Montt, Jorge (hôr'hā mŏnt'), 1846–1922, president of Chile (1891-96) He was a vice admiral and distant relative of Manuel and Pedro Montt A leader in the revolution against BALMACEDA, he commanded the insurgent forces (both sea and land) and later headed the provisional junta of government His presidency was honest but undistinguished, and his program of fiscal and political reform to aid in reconstruction was largely entrusted to others

Montt, Manuel (manwĕl'), 1809–80, president of Chile (1851–61) A conservative who displayed conspicuous organizational and administrative ability, Montt continued the progressive reform begun by Diego PORTALES He especially emphasized educational and scientific advancement, improved relations with Chile's neighbors, and brought prosperity. While his stern and sometimes illegal methods of suppressing opposition earned him the hatred of the liberals, his administration is remembered as a kind of golden age

Montt, Pedro (pā'dhrō), 1848–1910, president of Chile (1906–10). Son of Manuel Montt, he held with distinction numerous governmental posts He was a minister in the BALMACEDA cabinet and took part in the overthrow of that leader. Elected president in the hope that his name and career would bring moral regeneration to Chile, he was hampered by disruptive social forces and political corruption. He died in office.

Montúfar, Lorenzo (lōrän'sō mŏntōō'fär), 1823–98, Guatemalan historian He occupied a number of governmental posts. His *Reseña histórica de Centro América* is his best-known work.

Montvale, borough (pop 1,342), NE N.J., N of Hackensack, inc 1894

Mont Valérien (mō välāryĕ'), hill, 532 ft. high, in the western part of greater Paris, France, at Suresnes. Fortified in 1841, it is a vital strong point in the outer defenses of Paris, and it played

an important part during the siege of Paris (1870–71) in the Franco-Prussian War

Montville, town (pop 4,135), SE Conn, NW of New London; settled 1670, inc 1786. Paper products are made here.

Montyon, Antoine Jean Baptiste Robert Auget, baron de (ätwän' zhäⁿ bäptēst' rôbĕr' ōzhä' bärō' du môtyō'), 1733–1820, French lawyer and philanthropist, best known for the prizes he established to reward scientific and literary achievements At his death he also left large sums to each hospital in Paris. Montyon wrote extensively on economic subjects, viewing them as a philanthropist. See biography by Louis Gumbaud (1909, in French)

monument, structure intended to perpetuate the memory of persons or events The term is also applied to buildings of unusual size or representing the architectural achievements of a period or people, e g, the Alhambra of Spain, Gothic cathedrals, the Vatican and St Peter's Church, Rome, Westminster Abbey; the Parthenon, the Temple of Heaven, Peking, the temple of Amon at Karnak, and many palaces Early monuments include MEGALITHIC MONUMENTS and such forms as the STELE, the OBELISK, the typically Roman TRIUMPHAL ARCH and column, and tombs of various types such as the PYRAMID, the Harpy tomb from Xanthus (now in the British Museum), the tomb of Mausolus at Halicarnassus, and Hadrian's tomb, Rome Monuments of a commemorative character include Chinese memorial arches (paifous), the Taj Mahal, and the Washington and Lincoln memorials at Washington, D C The last century has seen a trend to bring the preservation of monuments under state control and to apply scientific methods to their upkeep and restoration See also BRASSES, MONUMENTAL OR SEPULCHRAL

Monumenta Germaniae historica (mŏnūmĕn'tŭ jurmā'nē-ē histō'rĭkŭ), comprehensive collection of documents relating to the history of medieval Germany The society for publishing it was founded by Karl vom und zum STEIN in 1819, and the first volume appeared in 1826 G H PERTZ, the general editor until 1874, was succeeded by Georg WAITZ, the work was then taken over by the Prussian Academy of Sciences Many very eminent scholars took part in the project, and the *Monumenta* is, perhaps, the greatest of all collections of source materials

monumental brasses see BRASSES, MONUMENTAL

Monvel, Louis Maurice Boutet de Monvel. see BOUTET DE MONVEL, LOUIS MAURICE

Monviso see VISO, MONTE

Monza (mōn'tsä), city (pop 58,503), Lombardy, N Italy, 8 mi NE of Milan It is a rapidly expanding industrial center, manufacturing felt hats, textiles and machinery Its history is closely related to that of Milan Its cathedral, founded (6th cent) by the Lombard queen Theodolinda, contains the iron crown of Lombardy, which was made, according to tradition, from the nails of Christ's cross Charlemagne, Charles V, Napoleon I, and other emperors were crowned with it as kings of Lombardy or Italy An expiatory chapel was built at the place where King Humbert was assassinated in 1900 Modern Monza is also known for its automobile races

mood or **mode,** in Latin INFLECTION, one of four major sets of forms of verbs Three of them cross with the category of person and are subdivided by tenses, they are the indicative (used normally), imperative (in commands), and subjunctive (in certain kinds of subordinated constructions) The fourth set, the infinitive (nonpersonal, generalizing), is sometimes not called a mood These names of moods are often used for similar categories in other languages, and many languages are far richer than Latin in analogous patterns, especially common meanings of this sort are narrative, quotative, mythical, desiderative, optative, and negative In standard English the verb *be* has special modal inflections

Moodus, village in East Haddam town, S Conn The "Moodus noises," subterranean rumblings about which the Indians had legends, are believed to be caused by the shifting of rock strata along lines of fracture

Moody, Dwight Lyman, 1837–99, American evangelist, b Northfield, Mass He became successful in business in Chicago, where he settled in 1856 His activities there as a Sunday-school teacher and superintendent were so successful that in 1861 he withdrew from business to devote himself to city missionary work In 1870 he met Ira D SANKEY, who for a number of years thereafter was associated with him in evangelistic campaigns They made several notable tours in Great Britain, large crowds were also attracted to their meetings in the United States, and their collections of gospel hymns were received with great enthusiasm Moody's preaching was simple, colorful, and direct; he stressed God's love and mercy rather than retribution and hell-fire His interest in religious education led him to found the Northfield Seminary (now Northfield School) for girls (1879) and the Mt Hermon School for boys (1881), both in Northfield, Mass In 1889 his Bible Institute for Home and Foreign Missions (now the Moody Bible Institute) opened in Chicago The conferences for Christian workers which Moody inaugurated at Northfield, Mass, are annual gatherings See biographies by his sons, W R Moody (1900) and Paul D. Moody (1938), Gamaliel Bradford, *D. L Moody, a Worker in Souls* (1927)

Moody, Helen Wills: see WILLS, HELEN NEWINGTON

Moody, John, 1868–, American financial writer, b Jersey City, N J He worked on a newspaper and in a bank until 1900, when he founded *Moody's Manual of Railroads and Corporation Securities*, followed in 1905 by *Moody's Magazine*, a monthly, and in 1909 by *Moody's Analyses of Investments*, an annual He wrote *The Truth about Trusts* (1904), *The Art of Wall Street Investing* (1906), *The Investor's Primer* (1907), *Masters of Capital in America* (1911), *John Henry Newman* (1945), and a two-volume autobiography, *The Long Road Home* (1933) and *Fast by the Road* (1942)

Moody, William Henry, 1853–1917, American cabinet officer and Associate Justice of the U S. Supreme Court (1906–10), b Newbury, Mass, grad Harvard, 1876 He practiced law in Haverhill, Mass, and was city solicitor (1888–90) and district attorney (1890–95) for E Massachusetts Elected (1895) to the U S. House of Representatives to fill a vacancy, he was thrice reelected He resigned in 1902 and became Secretary of the Navy and then (1904) U S Attorney General under President Theodore Roosevelt, who later appointed him to the Supreme Court bench

Moody, William Vaughn, 1869–1910, American poet and dramatist, b Spencer, Ind, grad Harvard, 1893 He taught English at Harvard and Radcliffe and at the Univ of Chicago until financial returns from a textbook he wrote with Robert Morss Lovett freed him for travel His lyric, philosophic poetry appeared in *The Masque of Judgment* (1900), *Poems* (1901), and other books His most popular work was the prose play *The Great Divide* (1909, originally produced as *A Sabine Woman*, 1906), *The Faith Healer* (1909) was less successful In 1909 he married Mrs Harriet Converse Brainerd, a brilliant woman whose home was a gathering place for writers and artists and who was a famous epicure and caterer as well Moody's poems and plays were collected in 1912 (2 vols) See his *Some Letters* (ed by D G Mason, 1913) and *Letters to Harriet* (ed by Percy MacKaye, 1935), study of Moody by D C Henry (1935) and of Mrs Moody in O H Dunbar, *A House in Chicago* (1947)

moon, the one satellite of the earth, its companion in the annual circuit of the sun The mass of the moon as compared with that of the earth is greater than that of any other satellite in comparison with its primary planet The two bodies may be thought of as the earth-moon system, making their journey around the sun in an orbit which is really the orbit of the center of the mass which they make together, rather than the orbit of the earth alone, as we usually regard it The center of their combined mass lies within the earth, it is true, but c 2,900 mi. from the earth's center The mean distance between the center of the earth and that of the moon is 238,857 mi The moon revolves around the earth in an orbit that is elliptical, not circular, therefore the distance between them is not always the same When the satellite is nearest, it is said to be in perigee, when farthest, in apogee The diameter of the moon is 2,160 mi, somewhat more than one quarter that of the earth The area of its surface is about one fourteenth as great as the earth's, and its volume very nearly one forty-ninth that of the earth The moon's phases, or apparent changes of figure, result from the fact that it is itself a dark globe, one hemisphere of which reflects the light of the sun, and that varying amounts of that lighted surface are presented to the observer as the moon's revolution brings it into different positions with relation to the sun and the earth The phase of the new moon occurs when the moon holds the position between the sun and the earth, presenting to the earth its dark side, by about the second day this surface shows the light of the crescent moon. When half of the bright side has come into view, we have the first quarter, when the moon is opposite the sun, it is at full phase, the following half moon is the last quarter Between the quarter and the full phase it is gibbous The convex illuminated edge is always towards the sun On the moon there shines earthlight (sunlight reflected from the earth), just as moonlight shines upon the earth, but the earthlight shines about 40 times brighter than the light of the full moon The fullest phase of this earthlight occurs when we have a new moon When there is a crescent moon, that part of the disk not lighted directly by the sun can be seen more faintly illuminated by the earthshine It is estimated that only about 7 percent of the light that falls upon the moon's surface is reflected, the rest being absorbed In astronomy, a month is measured by the moon's revolution The sidereal month is the interval between the time when the moon is in conjunction with a certain star and the time when it is next in conjunction with the same star This period averages very nearly 27⅓ days. The synodic month, averaging somewhat more than 29½ days, is the time required to bring the moon again into the same position with relation to the sun, or the interval from one new moon to the next The difference of about 2¼ days between the sidereal and the synodic month is owing to the earth's moving forward in its path around the sun Because of the earth's rotation, the moon seems to be moving westward, rising and setting like the other heavenly bodies visible from the earth But on account of its revolution around the earth it seems to be moving eastward also, with relation to the constellations This eastward movement is so much more rapid than the sun's apparent motion in the same direction that the moon's day is longer than that of the sun, and it rises on an average about 50½ min later from one night to the next, but there are many variations in this retardation, according to the latitude and the time of year In the North Temperate Zone, when the moon is full near the time that the sun is approaching the autumnal equinox, moonrise occurs at about the same hour several nights in succession (HARVEST MOON) The average inclination to the ecliptic of the moon's apparent path through the heavens is about 5°9′ Owing to this slight inclination, the moon changes its position north and south in the course of the month in about the same way that the sun does in a whole year In winter the full moon rides across the sky at its highest Because the moon makes one rotation on its axis in the same length of time required for one revolution around the earth, it turns toward the earth almost exactly the same hemisphere always, although certain apparent rocking movements, or librations, make it possible for us to see sometimes a little farther over one edge of the exact half sphere, sometimes a little farther over another edge Actually, 59 percent of the surface of the moon comes into the view of the observer on the earth in a month The rest can never be seen Therefore about 41 percent is never visible, another 41 percent is always visible, and 18 percent is sometimes visible One kind of libration is due to the inclination of the moon's equator to the plane of its orbit The resultant tipping of the poles brings into view sometimes a region a little beyond the north pole and again a region a little beyond the south pole Another libration depends upon the lack of uniformity in the rate of the moon's revolution, although its rotation is uniform or nearly so (in the long run the periods of the two agree) This rocking motion is east and west, or longitudinal, presenting areas of the moon's surface that would not otherwise be seen. The earth's rotation accounts for another slight libration The surface of the moon was studied by scientists long before Galileo c 1610 first examined it with the telescope, but the use of photography in connection with telescopic observation in recent times has made possible the mapping in detail of the whole visible area A complete lunar atlas was finished in 1903 for the *Harvard Annals* by W H Pickering On the moon's surface large dark regions, now regarded as depressed plains, were long ago supposed to be bodies of water and were called seas (*maria*) Generally circular in shape, these are known by individual names, such as Mare Imbrium It is now believed that there is no moisture on the moon A great part of the surface is covered with mountains, usually of circular formation The heights of peaks can be accurately determined Some have an elevation of 26,000 ft Among the mountains are thousands of so-called craters Their origin is attributed by some astronomers to volcanic action within the moon and by others to bombardment of the surface by meteorites There are, besides, clefts, or rills, and bright streaks known as rays From the 17th cent, when Riccioli introduced the custom, the various features of the lunar surface have been called by the names of, for example, scientists, mythological beings, and earthly geographical divisions There is conclusive evidence that the moon has no appreciable atmosphere From careful observation, it has been estimated that the temperature of the surface may reach about 215°F in the middle of the lunar day in full sunlight and −250°F at night It is calculated that in order to produce light equal to that of the sun about 570,000 full moons would be needed An ECLIPSE of the moon takes place when at its full phase the satellite passes into such a position that the earth's shadow lies upon it, shutting off the light of the sun, and a solar eclipse occurs when the new moon takes such a position between sun and earth that its shadow lies upon some part of the earth's surface, obscuring the sun's light in that region In 1946 radar signals were sent to the moon and were reflected back to the earth See G P Services, *Story of the Moon* (1928); G C Fisher, *The Story of the Moon* (1943); R. B Baldwin, *The Face of the Moon* (1949)

Moon, Mountains of the: see RUWENZORI

Moonachie (mōōnă'kē), borough (pop 1,554), NE N J, SE of Paterson, inc 1910

Mooney, Edward Francis, 1882–, American churchman, (cardinal of the Roman Church, b Mt Savage, Allegany co, Md. He was ordained priest in 1909 He was head of the North American Col-

lege in Rome (1923–26) and then was sent to India as apostolic delegate (1926–31) He was next apostolic delegate in Japan (1931–33) and returned to be bishop of Rochester, N Y (1933–37). He became first archbishop of Detroit (1937) and gained prominence in the American hierarchy as a champion of workingmen's rights and social justice He received the red hat from Pius XII in 1946

Mooney, James, 1861–1921, American ethnologist, b Richmond, Ind After 1885 he was active in the Bureau of American Ethnology, Washington, D C Mooney had much to do with the preparation of the *Handbook of American Indians* (1907–10). He made many important ethnological studies

Mooney, Thomas J, 1883–1942, American labor agitator, b Chicago Known as an active leader in several violent labor struggles in California before 1916, he was convicted as a participant in the bomb killings of the San Francisco Preparedness Day parade in 1916 and was sentenced to death His case aroused international interest because of the widely held belief in his innocence and the confessions of perjured testimony at his trial, and in 1918 his sentence was commuted to life imprisonment Many organizations and individuals sought unsuccessfully to obtain a new trial until Jan, 1939, when Gov Culbert L Olson of California pardoned him unconditionally See the *Mooney-Billings Report* (1932), E J Hopkins, *What Happened in the Mooney Case* (1932)

moonflower, name for any plant of the genus *Calonyction*, tropical American night-blooming vines The common moonflower (*C aculeatum*) is a fast-growing perennial but is usually cultivated as a tender annual It has large, morning-glorylike, fragrant white flowers There are also purple- and blue-flowered kinds

moonlight school see ILLITERACY

moonstone, an orthoclase FELDSPAR found in Ceylon, Burma, and Madagascar and formerly in the St Gotthard district of Switzerland In spite of its softness and pronounced cleavage, it is widely used as a gem, the refraction of light by the thin, paired internal layers causes its milky bluish sheen

Moor, Antonis see MORO, ANTONIO

Moore, Albert Joseph, 1841–93, English decorative painter, pupil of his father, William Moore (1790–1851), a portrait painter His best-known works include the murals *The Last Supper* and *Feeding the Five Thousand* (Church of St Alban's, Rochdale) and the paintings *Blossoms* (Tate Gall, London), *The Open Book*, and *Somnus* (Victoria and Albert Mus) Moore's paintings evoke a dreamworld, with classical overtones

Moore, Anne Carroll, 1871–, American librarian and author of children's books, b Limerick, Maine, grad Pratt Institute Library School, 1896 She was children's librarian at Pratt (1896–1906) and supervisor of work with children at the New York Public Library (1906–41) A well-known consultant on reading for children, she has written a series of books for children (the "Nicholas" books), one of her works about children's books is *My Roads to Childhood* (1939)

Moore, Clement Clarke, 1779–1863, American educator and poet, b New York city, grad Columbia, 1798 He became in 1821 professor of biblical learning, later of Oriental and Greek literature, at the Episcopal General Theological Seminary, erected in New York city on land which he had given He published in 1809 the first Hebrew and Greek lexicon issued in the United States and in 1844 a volume of poems containing the well-known "Visit from St Nicholas," beginning, "'Twas the night before Christmas" first published in the Troy *Sentinel* in 1823

Moore, Douglas Stuart, 1893–, American composer, b Cutchogue, N Y, grad Yale (B A, 1915, B Mus, 1917), studied with Horatio Parker and Ernest Bloch and with Nadia Boulanger and Vincent d'Indy in Paris In 1926 he joined the music faculty of Columbia Univ, becoming chairman of the department in 1940 His compositions include *Pageant of P T Barnum* (1924) and *Moby Dick* (1928) for orchestra, *The Headless Horseman* (composed 1936, produced 1937), an operetta with libretto by Stephen Vincent Benét, an opera, *The Devil and Daniel Webster* (New York, 1939), based on the story by Benét, choral settings of poems by Benét, Vachel Lindsay, and Archibald MacLeish; songs to texts from John Donne, chamber music, and two symphonies (1930, 1945) He wrote *Listening to Music* (1932) and *From Madrigal to Modern Music* (1942)

Moore, Edward, 1838–1916, English Italian scholar. He edited one of the best complete editions of the works of Dante, generally called the Oxford Dante (1894)

Moore, Eliakim Hastings, 1862–1932, American mathematician, b Marietta, Ohio, grad. Yale, 1883 From 1892 to 1931 he was professor of mathematics at the Univ of Chicago and from 1896 to 1931 was head of the department of mathematics, which he created. He was a founder and editor (1899–1907) of the American Mathematical Society *Transactions* His chief work was *General Analysis* (Part I, 1935, Part II, 1939)

Moore, George, 1852–1933, Irish novelist, noted for his brilliant style, associated with George Russell, Edward Martin, Synge, Yeats, and Lady Gregory in the modern Irish literary movement He lived in Paris as a young man, trying to learn to paint He turned to poetry, but, after producing *Flowers of Passion* (1878) and *Pagan Poems* (1881), abandoned it for prose *A Modern Lover* (1883) and *A Mummer's Wife* (1885) were his earliest novels, *Esther Waters* (1894), *Evelyn Innes* (1898), and its sequel, *Sister Teresa* (1901), of his middle period, are considered by many his best These were followed by *Brook Kerith* (1916), on the life of Christ, and *Héloïse and Abélard* (1921) He also wrote short stories and several plays, of which *The Making of an Immortal* was successfully produced in 1927 His *Confessions of a Young Man* (1888), *Hail and Farewell* (1911–14), and *Conversations in Ebury Street* (1924) are autobiographical *Aphrodite in Aulis* (1931) was his last completed book See studies by Humbert Wolfe (1931) and Charles Morgan (1935), biography by Joseph Hone (1936)

Moore, George Edward, 1873–, English philosopher He was lecturer (1911–25) in the department of moral sciences at Cambridge Univ and professor of philosophy from 1925 until his retirement in 1939 as professor emeritus He edited (1921–47) the periodical *Mind* and was also visiting professor at many universities in the United States from 1940 to 1944 Moore is a neorealist whose position is similar to that of Bertrand Russell His writings include *Principia Ethica* (1903) and *Philosophical Studies* (1922) See *The Philosophy of G E Moore* (ed by P A Schilpp, 1943), which contains a short autobiography

Moore, George Foot, 1851–1931, American biblical scholar, b West Chester, Pa, grad Yale, 1872, and Union Theological Seminary, 1877 In 1878 he was ordained in the Presbyterian ministry He was professor of Hebrew (1883–1902), at Andover Theological Seminary and professor of theology (1902–4) and of religious history (1904–28) at Harvard An eminent oriental scholar and a noted teacher, he wrote a number of books, among them *The Literature of the Old Testament* (1913), *History of Religions* (Vol I, 1913, Vol II, 1919), *Metempsychosis* (1914), and *Judaism in the First Centuries of the Christian Era* (1927)

Moore, George Thomas, 1871–, American botanist, b Indianapolis, grad Harvard (B A, 1895, Ph D, 1900) He became director of the Missouri Botanical Garden in 1912 and is known for his work on algae and in plant physiology He discovered a method for preventing water pollution by algae and bacteria and perfected a method for inoculating soil with nitrogen-fixing bacteria, on both of which subjects he has written articles for scientific journals and bulletins for the U S Dept of Agriculture

Moore, Sir Henry, 1713–69, British colonial administrator, b Jamaica, British West Indies He was acting governor of Jamaica for almost all of the period 1755–62, and he put down the slave insurrection of 1760 He was rewarded for his services with a baronetcy and was governor of New York (1765–69) In the agitation concerning the Stamp Act he expressed sympathy for the hardships of the colonists

Moore, Henry, 1898–, English sculptor After studying at the Royal College of Art he was awarded (1925) a traveling fellowship which took him to Italy and Paris In 1928 he had his first one-man show in London, and in 1946 the Museum of Modern Art, New York, gave him a retrospective exhibition He executed (1944) a large *Madonna and Child* for a church in Northampton, England, and was commissioned (1945) to carve a memorial figure for the grounds at Dartington Hall, Devonshire His works, in wood, stone, and cement (done without clay models), are characterized by their organic shape and often by holes which Moore introduces for contrast and to give added three-dimensionality to the form During the Second World War, when materials for carving were scarce, he concentrated on drawing and was commissioned (1940) by the government to do a series of studies in the underground bomb shelters, these drawings were exhibited and later published (1944) in book form See studies by Herbert Read (1934), Geoffrey Grigson (1943), and J J Sweeney (1946)

Moore, Sir John, 1761–1809, British general He served (1775–83) against the Continental army in the American Revolution and between 1792 and 1809 fought successively in the Mediterranean, the West Indies, Ireland, Holland, Egypt, Sicily, Sweden, and Spain He was a master of strategy and a great trainer of men As commander (1808) of English troops supporting the Spanish army against Napoleon (see PENINSULAR WAR) he was forced by the defeat of the Spanish to conduct a valorous and brilliant retreat of 250 mi to Coruña There he was victorious over the French, but was fatally wounded See his diary (ed by J F Maurice, 1904), biographies by J C Moore (1834) and Beatrice Brownrigg (with his letters, 1923) His father was **John Moore,** 1729–1802, a Scottish physician He wrote several novels and *A View of Society and Manners in France, Switzerland, and Germany* (1779).

Moore, John Bassett, 1860–1947, American authority on international law, b Smyrna, Md, grad. Univ of Virginia, 1880. He was admitted to the Delaware bar in 1883 He was (1885–89) a law clerk in the Dept of State and in 1898 was Assistant Secretary of State He represented the United States on several important international commissions. He was (1912–38) on the panel of the Hague Tribunal and was (1921–28) the first American judge on the World Court (the Permanent Court of International Justice). Moore believed that the system of alliances which grew up after the First World War threatened to make every conflict world-wide and that maintaining neutrality would tend to localize wars. His *History and Digest of International Arbitrations* (6 vols., 1898), *Digest of International Law* (8 vols, 1906), and *International Adjudications, Ancient and Modern* (8 vols, 1937) are standard compilations His other books include *American Diplomacy* (1905), *Four Phases of American Development* (1912), *International Law and Some Current Illusions* (1924), *The Permanent Court of International Justice* (1924), and *Collected Papers* (7 vols, 1945) He also edited the works of James Buchanan (12 vols, 1909–11).

Moore, Marianne, 1887–, American poet, b St Louis, grad Bryn Mawr, 1909 She taught stenography in Carlisle, Pa (1911–15), and was an assistant in the New York Public Library (1921–25) Meanwhile she had, since 1915, been contributing poetry to the English magazine of the imagists, the *Egoist*, and her first volume, *Poems* (1921), was selected from that magazine, by friends, without her knowledge *Observations* (1924) she prepared herself She was acting editor of the *Dial* from 1925 to its expiration in 1929 Her polished, witty, and precise comments in poetry are perhaps best in her shorter pieces Later volumes are *Selected Poems* (with introduction by T S Eliot, 1935), *The Pangolin and Other Verse* (1936), *What Are Years* (1941), and *Nevertheless* (1944)

Moore, Thomas, 1779–1852, Irish poet, b Dublin Appointed admiralty registrar at Bermuda in 1803, he left the work to a deputy, whose defalcation plunged Moore into a debt of £6,000, which he paid He is best remembered for his *Irish Melodies*, a group of songs published between 1808 and 1834 and set to music by Sir John Stevenson and others His numerous hymns, patriotic airs, and love lyrics included several of lasting fame—"Believe Me if All Those Endearing Young Charms," "Oft in the Stilly Night," "The Harp That Once through Tara's Halls," "She Is Far from the Land," and the hymn, "Come Ye Disconsolate" His amusing satires, *Intercepted Letters, or, The Two-Penny Post Bag* (1813) and *The Fudge Family in Paris* (1818), were widely read, and the Oriental romance, *Lalla Rookh* (1817), was one of the most popular poems of his day He was a friend of Byron, whose memoirs, left to Moore, were destroyed by him Moore's biographies of Byron and of Lord Edward Fitzgerald (1831) are among his best prose works See biographies by S L Gwynn (1905), H M Jones (1937), and L A G Strong (1937)

Moore, Thomas Sturge, 1870–1944, English writer and wood engraver His works on art include *Albert Durer* (1905), *Correggio* (1906), and *Art and Life* (1910) Also noteworthy are *Armour for Aphrodite* (1929), a book of essays, *Mystery and Tragedy* (1930), two dramatic poems, *The Poems of T Sturge Moore* (1931–32), and *The Unknown Known* (1939) Of his wood engravings, his bookplate designs are especially noted

Moore, Willis Luther, 1856–1927, American meteorologist, b Scranton, Pa He was professor of applied meteorology at George Washington Univ and head (1895–1913) of the U S Weather Bureau He wrote *Moore's Descriptive Meteorology* (1901) and *The New Air World* (1922)

Moorefield, town (pop 1,291), co seat of Hardy co, W Va, in the Eastern Panhandle, S of Keyser at the junction of the Moorefield river and the South Branch of the Potomac, in a hunting and fishing area, settled 1777 It has a tannery

Moorehead, Warren King, 1866–1939, American archaeologist, b Italy His researches among the prehistoric mounds of the North American Indian are the most extensive of any single investigator From 1888 to 1890 he was an assistant at the Smithsonian Institution He was placed in charge of surveys for the Chicago Columbian Exposition of the Hopewell mounds in Ohio and of the San Juan and Chaco pueblos in the Southwest From 1901 to 1938 he was affiliated with Phillips Academy, Andover, Mass, where he was director of the archaeology department His appointment in 1907 to the Board of Indian Commissioners permitted his investigation of reservation conditions described in *The American Indian* (1914) Among his many publications are *Fort Ancient* (1890), *Primitive Man in Ohio* (1892), *The Stone Age in North America* (1910), *A Report on the Archaeology of Maine* (1922), and *Archaeology of the Arkansas River Valley* (1931)

Moores Creek National Military Park: see NATIONAL PARKS AND MONUMENTS (table)

Moorestown, township (pop. 7,749), SW N.J., W of Mt Holly and E of Camden, laid out 1722. It has several 18th-century houses.

Mooresville. 1 Town (pop 1,979), central Ind , SW of Indianapolis, settled 1824. Engine bearings are made here 2 Textile-mill town (pop 6,682), W central N C., N of Charlotte, founded 1868

Moorhead. 1 City (pop 9,491), co seat of Clay co., NW Minn , on the Red River opposite Fargo, N. Dak , inc. 1881 It is a commercial and industrial center and ships potatoes and dairy products. A state teachers college (1888) and Concordia College (Evangelical Lutheran; coeducational, 1891) are here 2 Town (pop. 1,504), W Miss., near the Sunflower between Greenville and Greenwood, in a cotton area, inc. 1899 A district junior college is here

Moorish art and architecture: see MOSLEM ART AND ARCHITECTURE.

moorland. see SWAMP.

Moors, nomadic people of the northern shores of Africa, originally the inhabitants of Mauretania. They mixed with successive conquerors and are now a dark-skinned race chiefly of Berber and Arab blood In the 8th cent they were converted to Islam and became fanatic Moslems Under TARIK they crossed into Spain in 711 and without difficulty overran the crumbling Visigothic kingdom of RODERICK They spread beyond the Pyrenees into France, where they were turned back at Tours by CHARLES MARTEL (732) In 756 ABDUR-RAHMAN I established the Omayyad dynasty at Córdoba This emirate became under Abdur-r-Rahman III the Caliphate of Córdoba The court there grew in wealth, splendor, and culture The regent Al MANSUR in the late 10th cent waged bitter warfare with the Christians of N Spain, where, from the beginning, the Mohammedan conquest had met with its only opposition The cities of the south, TOLEDO, CÓRDOBA, and SEVILLE, speedily became centers of the new culture and were famed for their universities and architectural treasures (See MOSLEM ART AND ARCHITECTURE) With the exception of brief periods, there was, however, no strong central government, the power was split up among dissenting local leaders and factions The caliphate fell in 1031, and the ALMORAVIDES in 1086 took over Mohammedan Spain, which was throughout the whole period closely connected in rule with Morocco Almoravid control slowly declined and by 1174 was supplanted by the ALMOHADES These successive waves of invasion had brought into Spain thousands of skilled artisans and industrious farmers who contributed largely to the intermittent prosperity of the country They were killed or expelled in large numbers (to the great loss of Spain) in the Christian reconquest, which began with the recovery of Toledo (1085) by ALFONSO VI, king of Leon and Castile The great Christian victory (1212) of Navas de Tolosa prepared the way for the downfall of the Moslems Córdoba fell to FERDINAND III of Castile in 1236 The wars went on, and one by one the Moorish strongholds fell, until only Granada remained in their hands. Málaga was taken (1487) after a long siege by the forces of Ferdinand and Isabella, and in 1492 Granada was recovered Many of the Moors had accepted Christianity, these, called Mudejares, were now joined by new converts, the MORISCOS They were allowed to stay in Spain, but were kept under close surveillance They were persecuted by Philip II, revolted in 1568, and in the Inquisition were virtually exterminated In 1609 the remaining MORISCOS were expelled Thus the glory of the Moorish civilization in Spain trailed out Its contributions to Western Europe and especially to Spain were well-nigh incalculable—in art and architecture, medicine and science, and learning (especially Greek learning) See Stanley Lane-Poole, *The Moors in Spain* (new ed , 1911); Bernard Whishaw and Ellen M Whishaw, *Arabic Spain* (1912), R. P. A. Dozy, *Spanish Islam* (Eng. tr , 1913)

Moose, river formed in central Ontario by the Mattagami and Missinaibi rivers SW of Moosonee and flowing northeast to its confluence with the Abitibi, thence past Moosonee to James Bay

moose, largest of the deer family, belonging to the genus *Alces* or *Alce*, of which the Old World species is known as the elk It is found in Canada, Alaska, and the N United States Two species are identified in North America, the American and the Alaska or Kenai moose The moose has a heavy brown body supported by long, lighter-colored legs (the front pair longer than the hind ones), flattened, usually palmately branched antlers, sometimes with a 5 to 6-foot spread, a thick, overhanging, flexible muzzle, and a short neck. A flap of skin covered with long hair and called a bell hangs from the throat The largest species is the Alaska moose, the male or bull moose weighs from 1,000 to 1,800 lb , has forelegs about 4 ft. long, and measures as much as 7½ ft. to the top of the humped shoulder Moose eat leaves, twigs, buds, and some bark of woody plants, as well as lichens, aquatic plants, and some of the taller herbaceous land plants Protection in national parks and reserves in Canada and the United States saved the moose from extermination

Moose Factory, trading post, NE Ont., on the Moose at its mouth on James Bay A fort was built here by Radisson and Groseilliers for the Hudson's Bay Company in 1671 In the struggle between the English and French in Canada, the fort changed hands several times and was finally destroyed shortly after 1696 In 1730 the company built a post close to the ruins of the original fort This post has been in continuous operation to the present day

Moosehead Lake, 35 mi long and 10 mi wide, with an area of 120 sq mi , W Maine, N of Augusta The largest lake in Maine, it has irregular shores and many islands It is beautifully situated in a mountainous region Steamers connect Greenville, Kineo, and other shore points The Kennebec river rises in the lake

Moose Jaw, city (pop 23,069), S Sask , W of Regina It is a railroad and distribution center, with oil refineries, meat-packing plants, flour, lumber, and woolen mills, and dominion grain elevators and stockyards There is also an airport

Moose Lake, village (pop 1,432), E Minn , SW of Duluth, founded before 1875 as a lumber town It was rebuilt after destruction by forest fire in 1918

Moose Lake, 4.3 mi long, W Man , E of The Pas It drains S through Cedar Lake to Lake Winnipeg

Moosic (mōō'sĭk), residential borough (pop 4,568), NE Pa , on the Lackawanna river and SW of Scranton

Moosomin (mōōsŏ'mĭn), town (pop 1,134), SE Sask , E of Regina and near the Man border It is in a dairy and stock area and has a grain elevator

Moosonee (mōō'sunē), village (estimated pop 300), E Ont , on the outlet of the Moose river on James Bay, opposite Moose Factory Moosonee is the northern terminus of the Ontario Northland RR

Moppo, Korea see MOKPO

Mopsuestia (mŏp"sūĕs'chu), ancient city of Cilicia, S Asia Minor, on the Pyramus river in present S Turkey It was a free city under the Romans, who built here a fine bridge across the river

Moqui Indians. see HOPI INDIANS

Mor, Antonis see MORO, ANTONIO

Mora, village (pop 1,494), co seat of Kanabec co , E Minn , on the Snake and N of Minneapolis, settled 1881 by Swedes It is a farm trade center The Izaak Walton League has a log museum here.

Moradabad (mōrudubăd', mōradabad'), city (pop 142,414), N central United Provs , India It is a railroad junction The Jama Masjid [great mosque], erected 1631, is the most notable building Brassware is manufactured, and there is trade in produce

Moraes, Francisco de (fransĕsh'kō du mōrĭsh'), c 1500–c 1572, Portuguese writer He was prominent at the court of John III and accompanied the Portuguese ambassador to Paris, where he was involved in a tragico-comic love affair His claim to fame is as the author of one of the Palmerin romances, *Palmeirim de Inglaterra*, an interminable, episodic narrative of chivalry It was very popular in its day Many modern scholars have attributed it to the Spanish Luis Hurtado, but there is now no doubt that Moraes was the author Moraes is the more familiar form, though the reformed spelling is Morais

Moraes Barros, Prudente José de (prōōdĕn'tù zhōōzā' du mōrĭsh' ba'rōōsh), 1841–1902, Brazilian statesman, a leader of the republicans under the empire As a deputy after 1866 he did much to bring on the revolution of 1889 He was governor of São Paulo (1889–90) and unsuccessful candidate for the presidency in 1891 but later was elected to succeed Floriano PEIXOTO and was the "first civilian president" of Brazil (1894–98) His administration brought the country through a period of great financial stress Order was established, and the republic was made secure

moraine (murān', mō–), rock debris carried and finally deposited by a GLACIER Material which falls on the sides of a glacier from the bounding cliffs makes up the lateral moraines, running parallel to the sides When two or more glaciers unite, the lateral moraines unite to form a medial moraine, running down the center of the glacier The rock material carried on the under side of the glacier is called the ground moraine, while that which is pushed ahead of the glacier is called the terminal moraine After the retreat of the glaciers the moraines remain as prominent features of the topography of the region which the glacier covered The margins of the great ice sheets of the Pleistocene are marked by terminal moraines stretching across North America and Europe

Morales, Luis de (lwĕs' dā mōrā'lĕs), c 1509–1586, Spanish devotional painter, also called El Divino Morales. He lived and worked in Badajoz, his birthplace. His vivid portrayals of saintly suffering were very popular and much copied Their harshness, intensity, and melancholy are profoundly Spanish Fine examples are his *Ecce Homo*, *Mater Dolorosa*, and *Virgin and Child* (all Prado) and *Holy Family* and *Virgin and Child* (both Hispanic Society, New York) Others exist in the churches of his native province

morality play. see MIRACLE PLAY.

morals. see ETHICS

Moran, Edward (mûrăn'), 1829–1901, American painter of marine and historical subjects, b England. He came to the United States with his family in 1844. In 1899 he completed a series of 13 paintings illustrating epochs in the maritime history of America from the landing of Leif Ericsson to the return of Admiral Dewey's fleet from the Philippines in 1899 (Pa Mus of Art, Philadelphia) Other works are *Launching of the Life-Boat, Outward Bound, Coming Storm in New York Bay, Fishing-Boats in the Irish Channel*, and *The South Coast of England* The Metropolitan Museum has a marine His brother **Thomas Moran,** 1837–1926, was an American landscape painter, illustrator, and etcher He accompanied the exploring expeditions of Professor F V Hayden to the Yellowstone (1871) and of Major J W Powell down the Colorado river (1873) and made the illustrations on wood for the expeditions' reports and the sketches from which he painted the two large canvases now in the Capitol at Washington, *The Grand Canyon of the Yellowstone* and *Chasm of the Colorado* In 1884 he became a member of the National Academy of Design As a painter Moran was strongly influenced by the art of Turner Other examples of his painting are *Ruins on the Nile* (Wilstach Coll , Philadelphia), *Bringing Home the Cattle* (Buffalo, N Y , Mus), *The Grand Canal, Venice*, *The Dream of the Orient*, and *Tower of Cortez, in Mexico*, a water color He also produced many etchings and magazine illustrations on wood Another brother was **Peter Moran,** 1841–1914, American landscape and animal painter and etcher Good examples of his painting are *Pasture Land, Santa Barbara Mission, Pueblo of Zia, New Mexico; The Stable Door*, and *Return of the Herd*, awarded a medal at the Centennial Exposition (1876), where his etchings of animals also were awarded a medal Edward's sons and pupils **Edward Percy Moran,** 1862–1935, and **John Léon Moran,** 1864–1941, were both genre painters

Morand, Paul (pôl' mōrā'), 1888–, French author He became known with two novels, *Ouvert la nuit* (1922, Eng tr , *Open All Night*, 1923) and *Fermé la nuit* (1923, Eng tr , *Closed All Night*, 1925) Educated partly in England, Morand traveled widely as a diplomat Later works include *Bouddha vivant* (1927, Eng tr , *Living Buddha*, 1928), *Magie noire* (1928, Eng tr , *Black Magic*, 1929), and *Champions du monde* (1930, Eng tr , *World Champions*, 1931), studies of cultural groups, *Air indien* (1932, Eng tr , *Indian Air*, 1933), travel sketches, and *New York* (1929, Eng tr , 1930)

Morando, Paolo see CAVAZZOLA

Morat (mōrä'), Ger *Murten* (mōōr'tun), town (pop 2,405), Fribourg canton, Switzerland, on Lake Morat The walls date from the 14th to 15th cent In 1476 the Swiss here defeated CHARLES THE BOLD.

Moratín, Leandro Fernández de see FERNÁNDEZ DE MORATÍN, LEANDRO

moratorium, extension of time for meeting financial obligations, usually by executive or legislative decree, but sometimes granted to debtors by an individual or a corporation In developed countries, the measure is seldom employed except in times of war or great disaster or of financial crisis See C B Eveiberg, *Extension Agreements with Debtors* (1944)

Morava (mō'rävä), Ger *March* (märkh), river, c 180 mi long, Czechoslovakia and Austria The chief river of Moravia, it rises in the Sudetes and flows generally S past Olmütz (Czech *Olomouc*) and Kremsier (Czech *Kroměříž*) into the Danube, just W of Bratislava Its lower course forms the border between Austria and Czechoslovakia. See also MARCHFELD

Morava (mō'rävä), river, 134 mi long, Yugoslavia It is formed by the confluence of the Western Morava, which rises NW of Novi Pazar, and of the Southern Morava, which rises N of Skoplje, and flows northward to join the Danube E of Belgrade

Moravia, Alberto (älbĕr'tō mōrä'vyä), 1907–, Italian novelist, whose real name is Alberto Pincherle He became a prominent literary figure with his first novel, *Gli indifferenti* (1929, Eng tr , *The Indifferent Ones*, 1932) His short stories have not been translated, but two later novels, grimly realistic in tone, have appeared in English– *Le ambizioni sbagliate* (1935, Eng tr , *The Wheel of Fortune*, 1937) and *La romana* (1947, Eng tr , *The Woman of Rome*, 1949)

Moravia (murā'vēu, mō–), Czech *Morava* (mō'rävä), Ger *Mähren* (mā'run), region, central Czechoslovakia With the Czechoslovak part of SILESIA, it formed until 1949 the province of Moravia and Silesia (10,350 sq mi , pop 3,134,614), with BRNO (Ger *Brünn*) its capital The western and northern boundaries of Moravia with, respectively, Bohemia and Silesia are hilly regions In the east the Little and White Carpathians separate Moravia from Slovakia Central Moravia is a valley, drained by the Morava river and its tributaries, which opens in the south on Austria Moravia is a fertile agricultural country, but it also is important for its industries Brno is one of the major textile centers of Europe, ZLIN is the seat of the Bata shoe industry, MORAVSKA OSTRAVA is a coal-mining center and has a large metallurgical industry Other important cities are OLMÜTZ (Czech *Olomouc*) and—in Silesia—TROPPAU and TESCHEN. Moravia was

probably occupied by Germanic tribes before the great migrations. The Moravians, a branch of the Western Slavs, settled here (about the 6th cent. A D) and were united by the 9th cent. under dukes who ruled a mighty empire, including Bohemia, Silesia, S Poland, and N Hungary They were chronically at war with their German neighbors In 863 the missionaries CYRIL AND METHODIUS were sent to Moravia on the appeal of Duke Rostislav, and the Moravians accepted Christianity and placed themselves under the Roman Church The Moravian empire reached its height under Svatopluk (d 894), but after his death it broke apart and early in the 10th cent fell to the Magyars Emperor Otto I defeated (955) the Magyars, and Moravia became a march of the Holy Roman Empire From the early 11th cent it was in effect a crownland of the kingdom of BOHEMIA, whose history it shared and with which it passed (1526) under Austrian rule However, Moravia retained its separate diet and was at times separated from the Bohemian crown (e g , at periods during the Hussite Wars of the 15th cent. and from 1608 to 1611, when Bohemia was ruled by Emperor Rudolf II and Moravia by his brother Matthias) Perhaps even more thoroughly than those of Bohemia, the Moravian towns had undergone a process of Germanization since the 13th cent Under Hapsburg rule nearly the entire upper and middle classes were German, cities such as Brno were predominantly German-speaking islands surrounded by Czech-speaking people in the countryside. In 1918 Hapsburg rule was overthrown, and the former Austrian crownlands of Moravia and Silesia joined the Czechoslovak republic as a province. The German element, however, continued to play an important part in Moravian life The Munich Pact of 1938 resulted in the annexation by Germany of all Czech Silesia and of NW and S Moravia. In 1939 Moravia and Bohemia became a German "protectorate," but after the Second World War the pre-1938 boundaries were restored and the larger part of the German-speaking population was expelled

Moravia, village (pop 1,231), W central N Y , in the Finger Lakes region, near Owasco Lake SW of Syracuse; inc. 1837. Fillmore Glen State Park, near here, commemorates Millard Fillmore, born near Moravia.

Moravian Church, Renewed Church of the Brethren, or **Unitas Fratrum,** an evangelical Christian communion whose adherents are sometimes called United Brethren or Herrnhuters. It originated (1457) among some of the followers of John HUSS After his martyrdom in 1415, those of his followers who wished to preserve the spirit of his teachings gathered in societies through Bohemia and Moravia In 1457 near Kunwald, Bohemia, an association was formed to strengthen the influence of spiritual teaching and apostolic standards The name Church of the Brotherhood was chosen In 1467 one of the Brethren was consecrated bishop by Stephen of the Waldenses. This brought about a break between the new brotherhood and the Church of Rome. Persecution drove many of the Brethren out of Bohemia and Moravia into Poland, Austria, and elsewhere. The Moravians established schools and printing presses—some of the finest in Europe. The last of the bishops of the United Church was John Amos Comenius, appointed in 1632 He published a history of the church and an account of its doctrines and order and also provided for a continuance of the episcopacy. However, by the end of the Thirty Years War (1648), only a remnant of the movement remained; in Moravia, secretly carrying on the tradition, were the "Hidden Seed " In 1722 a company of those still faithful to the teachings of the Brethren took refuge in Saxony, on the estates of Graf von ZINZENDORF, where they built a town, Herrnhut There the elements of the ancient church were revived. The sect was active in evangelising, in 1732 the great modern missionary movement had its beginning. The work extended to the West Indies, to North and South America, to Africa, and to Asia. In 1735 David Nitschmann and a company of fellow workers bound for Georgia met and influenced John WESLEY Bethlehem, Nazareth, and Lititz, Pa., were founded (c 1740); from these Moravian settlements and from that in Salem, N C., missionary work among Indians and white settlers was actively carried forward Educational activities also have had an important place The Moravian College for Women was founded in 1742, Moravian College (for men) in 1807, both now at Bethlehem, Pa. Moravians emphasize Christian unity and personal service. They take the Scriptures as a rule of faith and practice, they pattern their preaching and administration of the Sacrament upon apostolic example and precepts The form of organization is a modified episcopacy; there are three orders in the ministry, bishops, presbyters, and deacons. Worship is in general liturgical but the ritual is simple The music in the Moravian churches is famous, especially the part-singing of the congregations See J T Hamilton, *A History of the Church Known as the Moravian Church or the Unitas Fratrum* (1900); J. J. Sessler, *Communal Pietism among Early American Moravians* (1933); A. L. Fries, *The Road to Salem* (1944).

Moravian College and **Moravian College for Women:** see BETHLEHEM, Pa

Moraviantown, Ont see THAMES, BATTLE OF THE.

Moravska Ostrava, Czech *Moravská Ostrava* (mô'räfskä ô'strävä), Ger *Mährisch Ostrau* (mä'rĭsh ô'strou), city (pop 116,225), NE Moravia, Czechoslovakia, near the junction of the Oder and Ostravice rivers With Slezska Ostrava, in Czech Silesia, and with several other near-by communes it forms Greater Ostrava (pop c 180,000) and is the center of the most heavily industrialized region of Czechoslovakia The Ostrava-Karvinna coal field (a section of the Upper Silesian basin) produces anthracite and bituminous coal Greater Ostrava has iron and steel mills and manufactures finished and semifinished articles (notably rolling stock, machinery, and ship and bridge parts) It also has a large chemical industry. The first foundry was built in 1829, but large-scale expansion came only in the 20th cent Several plants were damaged in the Second World War

Moray. For Scottish names spelled thus, see MURRAY

Moray Firth (mŭ'rē, -rä), inlet of the North Sea, NE Scotland It stretches from Kinnairds Head in Aberdeenshire to Duncansbay Head in Caithness The name is often restricted to that part of the inlet between Morayshire and Ross and Cromarty co

Morayshire (mŭ'rēshĭr) or **Elginshire** (ĕl'gĭn-shĭr), maritime county (477 sq mi , 1931 pop 40,806, 1948 estimated pop 46,867), NE Scotland, on the south shore of the Moray Firth The county town is Elgin. The hills of the interior, which rise to more than 2,000 ft , are devoted to grazing The coastal plain is intensively cultivated, the chief crops being oats and barley The Spey and the Findhorn are the principal rivers The present county is part of the older and much larger province of Moray, which played an important role in the history of Scotland. The region was the scene of much strife among the early Pictish tribes and was not brought under the control of the Scottish kingdom until the 12th cent

Morazán, Francisco (fränsĕ'skō mōräsän'), 1799–1842, Central American statesman, b Tegucigalpa, Honduras He led the revolutionary army that overthrew ARCE (1829) and was proclaimed president of the Central American Federation (1830) The opponents of Guatemalan domination caused Morazán to move the capital to San Salvador As a liberal he promoted education and abolished most monastic orders Elected to a second term, he was unable to combat the increasing opposition of the conservatives, and his congress dissolved the federation in 1838 Nevertheless, in 1839 he attempted to recapture Guatemala from Rafael CARRERA, but was defeated In the following year he went into voluntary exile until recalled in 1842 by Costa Rica and proclaimed president there Again attempting to restore the federation, he was betrayed and shot Sept 15, 1842, by his own partisans

Morbihan (môrbēän'), department (2,739 sq mi , pop 506,884), NW France, in Brittany, on the Atlantic coast. It includes the QUIBERON peninsula and several islands Vannes is the capital, Carnac is famous for its megalithic monuments, Lorient is the chief city and port

mordant (môr'dŭnt) [Fr , =biting], substance used in dyeing to make fast certain dyes (mordant dyes) upon cloth Either the mordant itself, if it is a colloid, or a colloid produced by the mordant adheres to the fiber and attracts and fixes an oppositely charged colloidal dye, forming an insoluble precipitate called a LAKE Chemical compounds used as mordants are either acidic or basic in character Acid mordants (e g , tannic acid) are employed when the dye to be used is basic, basic mordants (e g , alum, chrome alum, and certain salts of aluminum, chromium, copper, iron, potassium, and tin) are employed for acid dyes In practice, the cloth is often treated with the mordant first and then with the dye Cloth upon which is to be printed a colored design (using an acidic dye) is first treated with the mordant in the form of a metallic salt, which is stamped on in the desired pattern When the cloth is then dipped in the dye and afterwards washed, the color remains only in the pattern Commonly, also, mordant and dye are applied together. Chemically, the activity involved is one in which the metallic salt undergoes hydrolysis, the resulting hydroxide reacting with the dye to form the colored compound (lake) which will not wash off For example, certain salts of aluminum yield the gelatinous, white aluminum hydroxide which upon precipitation reacts with the dye. Alizarin and morin are two mordant dyes so affected The vividness of certain dyes which ordinarily do not require the use of a mordant is markedly increased when one is employed.

Mordaunt, Charles: see PETERBOROUGH, CHARLES MORDAUNT, EARL OF.

Mordecai (môr'dĕkī, môr"dĕkā'ī), guardian and uncle of ESTHER

Morden, town (pop 1,690), S Man., SW of Winnipeg. It has a grain elevator and lumbering, dairying, and stock farming are carried on. A dominion experimental fruit farm is here.

Mordkin, Mikhail (mĕkhōyĕl' môrt'kĭn), 1881–1944, Russian ballet dancer. He rose to fame at the same time as Anna Pavlova and was her partner at Paris in Diaghilev's Russian Ballet, at London (1909), and on her American tour (1910–11) He remained in the United States after 1924 and later formed the Mordkin Ballet, which became (1940) the Ballet Theatre Mordkin did the choreography for the ballet *Voices of Spring.* He was a master of pantomime dancing. His "Bow and Arrow Dance" was famous.

Mordovian Autonomous Soviet Socialist Republic: see MORDVINIAN AUTONOMOUS SOVIET SOCIALIST REPUBLIC

Mordred, Sir, King Arthur's treacherous nephew: see ARTHURIAN LEGEND.

Mordva. see MORDVINIAN AUTONOMOUS SOVIET SOCIALIST REPUBLIC

Mordvinian Autonomous Soviet Socialist Republic (môrdvĭ'nēun), autonomous republic (10,080 sq mi , pop 1,188,598), central European RSFSR, in the uplands W of the Middle Volga It is also known as Mordovian ASSR Saransk is the capital Drained by the Moksha and Insar rivers, the region has a humid continental climate and is largely agricultural. Wheat, hemp, rye, oats, potatoes, sunflower seeds, and vegetables are the chief crops Mineral resources include oil shale, peat, and phosphorite The population consists of Russians (55 percent), Mordvinians (40 percent), and Tatars (5 percent) The Mordvinians (Rus *Mordva*) are a Finnic-speaking people, among them the Russians established colonies in the 16th cent , they adopted Russian culture and the Greek Orthodox religion. Many Mordvinians live outside the limits of the Mordvinian SSR, which was formed in 1934

More, Sir Anthony, see MORO, ANTONIO.

More, Hannah, 1745–1833, English author, a noted BLUESTOCKING Two tragedies, *Percy* (1778) and *Fatal Falsehood* (1779), were produced by Garrick Turning to religious and philanthropic works, she wrote *Thoughts on the Importance of the Manners of the Great to General Society* (1788) and was instrumental in founding in 1799 the Religious Tract Society In 1808 appeared her popular novel *Coelebs in Search of a Wife.* William Roberts's *Memoirs of the Life and Correspondence of Mrs Hannah More* (1834) pictures the society in which she moved. See studies by A M B Meakin (1911) and M A Hopkins (1947)

More, Henry, 1614–87, English philosopher, one of the foremost representatives of the school of CAMBRIDGE PLATONISTS. His writings emphasize the mystical and theosophic phases of this philosophy, and as he grew older the mysticism dominated his writing His chief works are *Philosophical Poems* (1647) and *Divine Dialogues* (1668) See P R Anderson, *Science in Defence of Liberal Religion* (1933)

More, Paul Elmer, 1864–1937, American editor, essayist, and critic, b St Louis, grad Washington Univ , 1887, M A Harvard, 1893. He was literary editor of the New York *Independent* (1901–3) and the New York *Evening Post* (1903–9) and editor (1909–14) of the *Nation* He then taught at Princeton, retiring in 1933 Associated with Irving Babbitt in the humanistic movement, More ultimately became an outstanding authority on Greek philosophy His major works are the *Shelburne Essays* (11 vols , 1904–21), *The Greek Tradition* (5 vols , 1921–31), and the *New Shelburne Essays* (3 vols , 1928–36) See Robert Shafer, *Paul Elmer More and American Criticism* (1935); bibliography by Malcolm Young (1941)

More, Sir Thomas (Saint Thomas More), 1478–1535, author of UTOPIA and English statesman, considered a martyr in the Roman Catholic Church He spent two years at Oxford, where he came under the influence of the new learning. Though he later devoted himself to law, his interest in humanism continued, he counted Colet, Lilly, and Erasmus among his intimate friends. A successful lawyer, he attracted the attention and friendship of Henry VIII, rose in royal favor, occupied important offices, and finally became lord chancellor at the fall of Wolsey (1529) Because he disapproved of Henry's divorce from Katharine of Aragon, he retired (1532) to private life, but Henry's disfavor and Anne Boleyn's hatred followed him. He cleared himself of charges connected with the case of Elizabeth BARTON, but, firm in allegiance to the pope, refused to subscribe to the Act of Supremacy He was committed to the Tower, imprisoned, and finally beheaded on a charge of treason A man of noble character and deep religious conviction, More had great personal charm, unfailing good humor, piercing wit, and courage that enabled him to jest on the scaffold. His *Utopia* (published in Latin, 1516, first Eng tr , 1551) is a classic picture of an ideal state. He wrote numerous religious tracts and other works, among them *The Apology of Sir Thomas More* (1533,) *A Dialogue of Comfort against Tribulation* (1553), and *The Life of John Picus, Earl of Mirandula* (1510?). His English works were edited by W. E. Campbell and A. W. Reed

(1931); his correspondence (ed by E. F. Rogers, 1947) contains all his letters except those to Erasmus. The biography of More by his son-in-law, William Roper (ed. by E. V. Hitchcock, 1935), has been the principal source of later biographies, among them one by a descendant, Cresacre More (1631?), and modern ones by W. H. Hutton (1895), R. W. Chambers (1935), Algernon Cecil (1936), and Theodore Maynard (1947) Holbein painted several portraits of him More was beatified (1886) by a decree of Pope Leo XIII and canonized (1935) by Pius XI Feast July 6

Morea, Greece see PELOPONNESUS

Moréas, Jean (zhä' môrāäs'), 1856–1910, French poet, b. Athens. His name was originally Papadiamantopoulos He went to Paris in 1872 An ardent supporter and defender of the symbolists, Moréas wrote two volumes of symbolist verse, *Les Syrtes* (1884) and *Le Pèlerin passionné* [the passionate pilgrim] (1891). However, with the publication of *Enone au clair visage* [Enone with the bright face] (1893) and *Eriphyle* (1894), Moréas showed a return to classical style, and he further refuted the new movements in poetry with his *Stances* (1899–1901) His *Iphigénie* (1903) was a restoration of dramatic classicism

Moreau, Gustave (güstav' môrō'), 1826–98, French painter, known for his pictures of the weird and mystical. He was the recipient of many honors but refused to sell his paintings except to friends. Professor at the École des Beaux-Arts, he counted among his pupils Matisse and Rouault On his death his house in Paris (now the Musée Moreau), with his fine art collection, was bequeathed to the state *Apparition* (Luxembourg Mus , Paris) and *Oedipus and the Sphinx* (Metropolitan Mus) are characteristic works

Moreau, Jean Michel (zhä' mēshĕl'), 1741–1814, French draughtsman and engraver, called Moreau le jeune. He is noted for his charming illustrations of the work of Voltaire, Molière, and Rousseau and for his admirable engravings of court masques and fêtes His brother, **Louis Gabriel Moreau** (lwē' gabrēĕl'), 1740–1806, called Moreau l'aîné, was a notable landscape painter, water-colorist, and etcher His *Coteaux de Meudon* and *Environs de Vincennes* are in the Louvre

Moreau, Jean Victor (zhä' vēktôr'), 1763–1813, French general in the FRENCH REVOLUTIONARY WARS Despite his successes on the Rhine and in Germany (1796–97), he was dismissed after the coup d'état of 18 Fructidor (1797), but was reinstated (1799) at the head of the French army in Italy, after helping Bonaparte in the coup d'état of 18 Brumaire In 1800 he was given command in Germany and routed the Austrians at Hohenlinden At the conclusion of the war Moreau began to oppose Bonaparte, and his name rallied republican sentiment Informed of the royalist CADOUDAL plot, he neither joined nor revealed it, after its discovery he was arrested and sentenced to imprisonment for two years. The sentence was commuted to exile, which he spent in Spain and America Returning to Europe in 1813 he assisted the allies as an adviser in their war against Napoleon, but was killed in battle

Moreau, Louis Gabriel. see MOREAU, JEAN MICHEL

Moreau (murō'), river rising in several branches in NW South Dakota and flowing c 290 mi E to the Missouri S of Mobridge The Missouri river basin project includes Bixby Dam, in the Moreau, and Oahe Dam, in the Missouri, which will drown the lower Moreau basin

Morecambe and Heysham (môr'kum, hē'shum, hē'sum), municipal borough (1931 pop 24,542, 1943 estimated pop 34,000), Lancashire, England, near Lancaster and on Morecambe Bay Morecambe is a seaside resort, and Heysham a port with service to Belfast

Morecambe Bay, shallow inlet of the Irish Sea, c 16 mi long and 10 mi wide separating Furness from the main part of Lancashire, England It receives the Leven, Kent, and Lune rivers

Moreh (mō'rĕ) **1** Unlocated plain, Abraham's first resting place after entering the land of Canaan Gen. 12 6, Deut 11 30 **2** Hill of N Palestine by which Gideon camped before he attacked the Midianites. Judges 7 1

Morehead, town (pop. 1,901), co seat of Rowan co , N Ky , ENE of Lexington near the Licking river It is the seat of Morehead State College. The area has valuable clay deposits

Morehead City, resort and fishing town (pop 3,695), E N C., on the Newport river opposite Beaufort, founded 1857 It is a port of entry with an ocean-shipping port terminal (built 1935–37). Fort Macon State Park is near

Morehouse, city (pop. 1,598), SE Mo , on the Little River and ENE of Poplar Bluff, in a cotton and farm area; settled 1880. Near by is a large privately owned drainage development

Morelia (mōrä'lyä), city (pop 44,304; alt. c 6,200 ft), capital of Michoacán, W Mexico. Founded as Valladolid in 1541 by Antonio de Mendosa, first viceroy of New Spain, Morelia is a clean, attractive city built on a rocky hill and surrounded by a fertile valley at the western edge of the central plateau. High peaks border the valley on three sides. The climate is warm but healthful. The city is supplied with water by an aqueduct dating from the colonial period The most imposing Spanish structure is the cathedral, begun in 1640, colonial architecture, a few modern buildings, and shaded plazas give the city a pleasant atmosphere Chief manufactures are shawls, hats, flour, cotton goods, soap, beer, *guayabate* (a sweetmeat made from quinces), cigars, cigarettes, and wine Morelia was the birthplace of Agustín de ITURBIDE and MORELOS Y PAVÓN, for whom it was renamed in 1828

Morel-Ladeuil, Léonard (lāônär' môrĕl'-lädö'yü), 1820–88, French goldsmith and sculptor, expert in the processes of chasing and *repoussé* He worked in Birmingham, England, for 23 years Among his productions was the Helicon Vase presented to Queen Victoria on the occasion of her first jubilee

Morellet, André, Abbé (ädrä' abä' môrĕlā'), 1727–1819, French writer and economist, contributor to the *Encyclopédie* He was an early advocate of laissez faire His style was forceful and caustic His *Mélanges de littérature et de philosophie du 18e siècle* (1818) contains selections from his works

Morelos (mōrā'lōs), state (1,917 sq mi , 1946 estimated pop 213,920), central Mexico Lying south of the east-west volcanic range which crosses central Mexico and separates Morelos from the Federal District and Mexico state, the state is mountainous, with numerous broad semiarid valleys opening to the south toward the southern ranges of the country The climate varies from cold in the mountains to hot in the valleys Chiefly agricultural, Morelos raises sugar cane, rice, coffee, cereals, tropical fruits, and vegetables Sugar and rum are manufactured. The principal towns are CUERNAVACA, the capital, and Cuautla Morelos, which is famous for its defense (1812) by MORELOS Y PAVÓN in the war against Spain The state, created in 1869, was named in his honor During the revolutionary depredations of Emiliano ZAPATA and the regime of Venustiano CARRANZA, the state's sugar industry and agricultural productivity suffered almost irreparable damage

Morelos y Pavón, José María (hōsā' märē'ä mōrā'lōs ē pavōn'), 1765 1815, Mexican leader in the revolution against Spain, a national hero He was, like HIDALGO Y COSTILLA, a liberal priest Joining the revolution (1810), he conducted a brilliant campaign in the south, winning a brilliant victory at Tixtla After the execution of Hidalgo he was insurrectionary chief He defended Cuautla against CALLEJA for several months, then cut through the siege After taking Orizaba and Oaxaca (1812), Morelos captured Acapulco (1813) The Congress of Chilpancingo, convened in 1813 under his protection, elected him generalissimo with the powers of chief executive Late in 1813 his forces were routed at Valladolid (later named Morelia in his honor) by ITURBIDE and were later again defeated In 1815 Morelos was captured, degraded by the Inquisition, and shot. Only a few leaders, notably GUERRERO and GUADALUPE VICTORIA, were left to continue the revolution

Morenci (mŭrĕn'sē) **1** Unincorporated town (pop 3,421), E Ariz , near the N Mex line It is built on a steep slope about rich copper mines discovered in 1872 **2** City (pop 1,845), S Mich , on the Tiffin near the Ohio line and SW of Adrian, inc as a city 1934 Chemicals are made here

Moreno, Mariano (märyä'nō mōrā'nō), 1778–1811, Argentine revolutionist and publicist He became prominent as legal counselor to the royal *audiencia* and to the *cabildo* of Buenos Aires His condemnation of the Spanish colonial system and his advocacy of liberal economic principles attracted attention A leader in the revolution of May, 1810, which deposed the viceroy, he was secretary of the first revolutionary governing junta and exerted a significant influence He founded (June 7, 1810) the *Gaceta de Buenos Aires* and, as editor, championed in its columns his democratic, reform ideas In 1810 he founded the national library His liberal policy provoked a conflict with the conservatives, who, in spite of Moreno's opposition, admitted provincial deputies to the junta, Moreno resigned (Dec , 1810) His resignation checked the democratic movement in the Río de la Plata and initiated a protracted struggle between Buenos Aires and the country provinces Appointed to a diplomatic mission abroad, he sailed for Europe (Jan., 1811) and died at sea

More og Romsdal, Nor *Møre og Romsdal* (mö'ru ô rōms'dal), county (5,809 sq. mi , pop 182,859), W Norway. It is a mountainous region, containing the DOVREFJELL and cut by numerous fjords, among them the Molde Fjord. Kristiansund (the county seat), Alesund, and Molde are the chief towns

Moresheth-gath (môr'ĕshĕth-gāth'), unidentified town, SW Palestine. Micah 1 14

Moresnet (môrānā'), commune (pop 1,363), Liége prov, E Belgium, on the German border near Aachen The former neutral territory (1½ sq mi) of Moresnet, under joint Belgian and Prussian suzerainty, was awarded (1919) to Belgium under the Treaty of Versailles

Moresque art and architecture: see MOSLEM ART AND ARCHITECTURE.

Moreton Bay (môr'tun), inlet of the Pacific, 65 mi long and 20 mi. wide, SE Queensland, Australia, nearly enclosed by the mainland and Moreton and Stradbroke islands It receives the Brisbane river. There are many resort towns on its west shore. The area around Redcliffe was the site of the state's first penal settlement (1824–43)

Moreto y Cabaña, Agustín (agōstēn' mōrā'tō ē kabä'nya), 1618–69, Spanish dramatic poet of the Golden Age He was ordained priest but continued to write for the theater He was a skillful technician, his characters are alive, and his lines witty, but he used chiefly the plots of others, especially of Lope de Vega His most famous plays are *El lindo don Diego* [the handsome Don Diego] and *El desdén con el desdén* [meeting contempt with contempt].

Moretto, Il (ēl mōrĕt'tō), c 1498–1554, Italian painter of portraits and religious subjects, whose real name was Alessandro Bonvicino He was the leading representative of the Brescian school. He worked mainly in the churches of Brescia, where his art can best be studied While following the style and technique of the great Venetian masters, he developed a markedly individual mode, characterized by cool and luminous coloring. His portraits, with those of his great pupil, Giovanni Battista Moroni, are regarded as among the best of the 16th cent Besides his works in Brescia are *Christ Bearing the Cross* (Bergamo Municipal Gall.), his earliest painting, *St Justina* (Vienna), *The Entombment*, his last work, and *Christ in the Desert* (Metropolitan Mus), *Madonna and Child with St Stephen and St Jerome, St Jerome Penitent*, and *Portrait of a Lady in White* (National Gall of Art, Washington, D C), *Portrait of a Nobleman* (National Gall , London), and *The Death of Adonis* (Uffizi)

Moret y Prendergast, Segismundo (sähēsmōōn'dō mōrā' ē prĕndĕrgast'), 1838–1913, Spanish statesman In 1863 he was elected to the Cortes, and as minister of colonies in the Prim cabinet (1869) he advocated the abolition of slavery For a brief period he was ambassador to London After the restoration of Alfonso XII he reentered the Cortes and held several cabinet posts After the death of Sagasta he became a Liberal party leader and was twice premier (1905–6, 1909) He advocated a policy of conciliation for Cuba and Puerto Rico and opposed the Spanish-American War (1898)

Morey, Samuel, 1762–1843, American inventor, b Hebron, Conn He moved to Orford, N H , where he became a successful lumberman He helped construct the Connecticut river locks He made experiments with heat and light c 1780, and c 1790 he began experimenting with steamboats In 1793, on the Connecticut river at Orford, he operated a small boat by means of a steam engine mounted on the bow, and the following year he built a boat which ran at Hartford, Conn , by means of an engine and wheel on the stern He moved to Bordentown N J , where he built a side-wheel steamship, he had hoped for financial assistance but was disappointed After failing to interest Robert Fulton in his steamboat model, Morey claimed his ideas were stolen In 1826 he obtained a patent for one of the first internal-combustion engines in the United States See biography by Gabriel Farrell, Jr (1915)

Morgagni, Giovanni Battista (jōvan'nō bät-tē'sta mōrgan'yē), 1682–1771, Italian anatomist For his accurate studies of disease and of its effects on the human body, which he observed in post-mortem examinations, he is known as a founder of modern pathology He recognized the relation of consolidation of the lungs to pneumonia, observed many of the internal lesions of syphilis, and pointed to ear infection as a cause of meningitis His influence was perpetuated by his chief work, *De sedibus et causis morborum* (1761)

Morgan, American family of financiers and philanthropists **Junius Spencer Morgan,** 1813–90, b West Springfield, Mass , prospered at investment banking When a boy he became a dry-goods clerk in Boston, later he entered a brokerage house in New York He became a partner in mercantile firms in Hartford, Conn , and in Boston and then (1854) went to London to become a partner of George PEABODY Ten years later he assumed entire control, the firm becoming J S Morgan & Company He expanded this international banking enterprise, handling most of the British funds invested in the United States His syndicate's loan of $50,000,000 to the French government at the time of the Franco-Prussian War was one of the most spectacular transactions of the time. His son, **John Pierpont Morgan,** 1837–1913, b Hartford, Conn , built the family fortunes into a colossal financial and industrial empire He studied abroad and in 1857 entered the New York banking house of Duncan, Sherman & Company Three years later he became the New York agent for his father's firm in London After he became (1864) junior partner in the new firm, Dabney, Morgan & Company, he helped form (1871) the New York firm of Drexel, Morgan & Company—which in 1895 became J P Morgan & Company On the death of his father (1890) he became sole manager of J S. Morgan & Company—later (1910) Morgan, Gren-

fell & Company—of London. J. P. Morgan's ascent to power, however, was accompanied by dramatic financial battles He wrested control (1869) of the Albany and Susquehanna RR from Jay GOULD, he broke the government-financing privileges of Jay COOKE (thereby helping precipitate the Panic of 1873), and he developed a railroad empire by reorganizations and consolidations in all parts of the United States He backed James J HILL in preventing (1901) the interests of Edward H Harriman from controlling the Northern Pacific RR and, with it, the Chicago, Burlington & Quincy RR. Agreement between the factions resulted in formation of the Northern Securities Company, which was dissolved (1904) by court action, with Morgan and President Theodore Roosevelt arrayed as antagonists In the industrial field, Morgan formed (1901) the U S Steel Corp , the first billion-dollar corporation in the world He financed manufacturing and mining and controlled banks, insurance companies, shipping lines, and communication systems Through his firm came enormous funds from abroad to develop American resources He was widely criticized on many occasions for backing the sale of obsolete carbines to the Union and for his gold speculations in the Civil War, for the harsh terms of his loan of gold to the Federal government in the 1895 crisis, for his financial dominance in the Panic of 1907, and for bringing on the financial ills of the New York, New Haven & Hartford RR He was largely deaf to popular criticism In 1912 he appeared and publicly defended himself before the Pujo Committee of Congress, which was investigating the "money trust" and which was aimed particularly at him He was an ardent sportsman, and his yacht entered many international races He was a prominent lay leader in the Protestant Episcopal Church He personally dispensed numerous philanthropies, and he was a renowned art collector After his death the Metropolitan Museum of Art, of which he had been president, received a valuable portion of his collection, which is housed in the Pierpont Morgan wing See biographies by J K Winkler (1930), Lewis Corey (1930), and H L Satterlee (1929) **John Pierpont Morgan**, 1867–1943, b Irvington, N Y, grad Harvard, 1889, became active head of the house of Morgan when his father died in 1913 The firm was called upon to help finance the first World War As American agent for Allied countries, the banking house raised huge funds—one issue valued at $500,000,000—and systematized the purchases of military supplies The Morgan firm was not important in war financing after America's entry, but in the post-war period it floated securities of foreign governments and corporations reaching $2,000,000,000, at the same time sponsoring over $4,000,000,000 of domestic securities Morgan and his partners actively promoted great mergers after 1922 and controlled numerous nonbanking corporations The younger J P Morgan resembled his father in his dislike for publicity and continued the father's philanthropic policy In 1920 he gave his London residence to the U S government for use as its embassy and later endowed the Pierpont Morgan Library in New York city as a research institute in memory of his father See biography (1949) by F L Allen A sister of the younger J Pierpont Morgan, **Anne Morgan**, 1873-1936, was devoted to numerous philanthropic and civic organizations and constantly voiced the rights of the American woman

Morgan, Arthur Ernest, 1878–, American engineer, educator, and public official, b Cincinnati He practiced engineering after 1902, directed numerous drainage and flood-control projects, and led in the drafting of state drainage codes He served (1920–36) as president of Antioch College, where he instituted the educational plan of alternate study and work He was appointed chairman of the TENNESSEE VALLEY AUTHORITY in 1933 but was dismissed (1938) by President F D Roosevelt after a split in the TVA directorate Among his writings are *My World* (1927), *The Seedman* (1932), *The Long Road* (1936), *The Small Community* (1942), *Edward Bellamy* (1944), and *Nowhere Was Somewhere* (1946)

Morgan, Conwy Lloyd, 1852-1936, English psychologist He was professor of zoology at University College, Bristol (1887-1909) and was first vice chancellor of the Univ of Bristol (1909–10) and professor of psychology and ethics until his retirement in 1919 He was one of the founders of animal psychology and a leading advocate of emergent evolution His works include *Animal Life and Intelligence* (1890), *Habit and Instinct* (1896), *Instinct and Experience* (1912), *Emergent Evolution* (1923), and *The Animal Mind* (1930)

Morgan, Daniel, 1736–1802, American Revolutionary general, b Hunterdon co , N J He moved (1753) to Virginia and later served in the French and Indian War and several Indian campaigns In the Revolution, Morgan assumed command of the attack on Quebec (see QUEBEC CAMPAIGN) after Benedict Arnold was wounded, but Morgan himself was captured He was exchanged (1776) and took part in the Saratoga campaign, but, dissatisfied with the congressional policy of promotions, he retired in 1779. Morgan reentered the army in 1780 and joined General Gates in the Carolina campaign Under Nathanael Greene's orders he defeated the British under Tarleton at Cowpens (1780) After the war he helped to suppress the Whisky Rebellion and served (1797–99) as a U S Congressman

Morgan, Edwin Denison, 1811–83, American merchant and politician, b Washington, Berkshire co , Mass He clerked in the store of an uncle in Hartford, Conn., before establishing himself in New York From his wholesale grocery, banking, and brokerage enterprises, Morgan amassed a large fortune He served in the state senate (1850–55) and, an early Republican, was chairman of the party's national committee (1856–64, 1872–76) While governor of New York (1859–62), he was made a major general of volunteers in command of the Dept of New York (1861–63) and supervised the state's Civil War recruiting He served one term (1863–69) in the U S Senate and was defeated for reelection See W B Hesseltine, *Lincoln and the War Governors* (1948)

Morgan, George, 1743–1810, American merchant, Indian agent, and land speculator, b Philadelphia In 1765 he went as his firm's representative to engage in the fur trade in Illinois, but the venture failed Morgan, interested in a tract of land (2,862 sq mi) in what is now West Virginia ceded by the Indians in repayment for property destroyed in Pontiac's War (1763), formed (1776) the Indiana Company, with a land office at Fort Pitt The state of Virginia successfully contested the company's claim after several years of litigation In the American Revolution, Morgan served as an Indian agent and as a colonel in the commissary until 1779, when he retired to his estate near Princeton, N J In 1789 he entered into a scheme with the Spanish minister to the United States for colonizing Spanish territory and established (1789) the colony of New Madrid in what is now Missouri The project was opposed by the Spanish governor of Louisiana, and Morgan abandoned it in 1796 when he took up scientific agriculture on a large tract of land he inherited in W Pennsylvania See biography by Max Savelle (1932)

Morgan, Harcourt Alexander, 1867–, American entomologist and public official, b Canada, grad Univ of Toronto, 1889 After graduate study (1891–98) at Cornell, Morgan engaged in scientific research at various experiment stations in the United States He served (1919–33) as president of the Univ of Tennessee—where he had been professor (1905-19) and then (1913–19) dean Appointed (1933) a director of the TENNESSEE VALLEY AUTHORITY by President F D Roosevelt, he became (1938) chairman of the TVA on the dismissal of Arthur E MORGAN When (1941) David E LILIENTHAL succeeded him in this post he assumed the post of vice chairman

Morgan, Sir Henry, 1635?–1688, British buccaneer, b Wales Perhaps kidnaped to Barbadoes as a child, he seems to have joined the pirates there On the death (c 1666) of Edward Mansfield, leader of the buccaneers, Morgan took command He operated as a privateer His exploits, authorized by commissions from the British authorities, included the capture of Puerto Principe (Camaguey, Cuba) and the sack of Puerto Bello (1668), the capture of Maracaibo (1669), the ravaging of the Cuban and American coasts (1670), and the daring capture of Panama (1671) His operations were always marked by indescribable brutality and debauchery, but were executed with skill and bravery, sometimes against great odds He was accused of dishonest distribution of the spoils Sent a prisoner to England (1672) on complaints of piracy, he soon became a hero, was knighted (1674), and was sent as lieutenant governor of Jamaica, where he spent the rest of his life and was acting governor (1680–82) See A O Exquemelin, *Buccaneers of America* (1891 ed), a novel by John Steinbeck, *The Cup of Gold* (1929), fictionized biographies by W A Roberts (1933) and Rosita Forbes (1940)

Morgan, Jacques Jean Marie de (zhäk' zhă' märĕ' du môrgă), 1857–1924, French archaeologist He discovered the site of a stele of the Hammurabic code at Susa, Persia After expeditionary work in India, Malacca, and Russia, he became (1892) director of the French antiquarian service in Egypt Transferred to Persia (1897), he explored the Pushti Kuh range and Mesopotamia He made a valuable collection of primitive Persian pottery His works on archaeology include *Prehistoric Man* (Eng tr , 1925)

Morgan, John Hunt, 1825–64, Confederate general, b Huntsville, Ala He spent most of his early life in Kentucky At the outbreak of the Civil War, Morgan joined the Confederates as a cavalry scout The daring and skillful raids which made him and his men romantically famous began in 1862 For his success at Hartsville, Tenn , in Dec , 1862, he was made a brigadier general The raid through Kentucky, Indiana, and Ohio in the summer of 1863 was Morgan's outstanding feat, even though it ended in capture (July, 1863) He escaped from prison in November and in April, 1864, was assigned to command in SW Virginia. Federals who had penetrated the Confederate lines killed him at Greeneville, Tenn , in Sept., 1864 See Howard Swiggett, *The Rebel Raider* (1934), C F. Holland, *Morgan and His Raiders* (1942).

Morgan, John Pierpont, 1837–1913, and 1867–1943 see MORGAN, family

Morgan, Junius Spencer: see MORGAN, family.

Morgan, Justin: see JUSTIN MORGAN.

Morgan, Lewis Henry, 1818–81, American anthropologist, b Aurora, N.Y., grad Union College, 1840 He was a practicing lawyer who became interested in the Indians of his locality, and in 1847 he was made an adopted member of the Seneca tribe His *League of the Ho-de-no-sau-nee or Iroquois* (1851) is unexcelled among early descriptive reports He was interested in social organization to the almost complete exclusion of other cultural factors, and he devised a theory correlating kinship terminologies with forms of marriage and rules of descent His *Systems of Consanguinity and Affinity of the Human Family* (1870) presented this principle His *Ancient Society* (1877), an even more extended synthesis classifying the cultures of the world into progressive stages—savagery, barbarism, and civilization—attracted the attention of Marx and Engels, who interpreted its evolutionary doctrine as support to their materialistic theory of history See biography by B J Stern (1931)

Morgan, Matthew Somerville, 1839–90, Anglo-American caricaturist and scene painter, b London He served as artist-correspondent for the *Illustrated London News* and contributed cartoons to the periodical *Fun* He was editor and owner of the short-lived *Tomahawk* In 1870 he moved to America, where he was associated with *Frank Leslie's Illustrated Newspaper* and *Harper's Weekly*, managed several theaters in New York city, and founded the Matt Morgan Art Pottery Company and the Art Students' League, both in Cincinnati He was also a clever poster and scene painter

Morgan, Thomas Hunt, 1866–1945, American zoologist, b Lexington, Ky , Ph D Johns Hopkins, 1890 He was professor of experimental zoology at Columbia (1904–28) and from 1928 was director of the laboratory of biological sciences at the California Institute of Technology He is noted for his ingenious demonstration of the physical basis of heredity, using the fruit fly, *Drosophila* For his theory that hereditary unit characters are dependent upon certain factors, or genes, in the chromosome, the behavior of which he studied and mapped in elaborate detail, he received the 1933 Nobel Prize in Physiology and Medicine His books, classics in the literature of genetics, include *Heredity and Sex* (1913), *Mechanism of Mendelian Heredity* (1915), *The Physical Basis of Heredity* (1919), *Evolution and Genetics* (1925), *The Theory of the Gene* (1926), *Experimental Embryology* (1927), and *Embryology and Genetics* (1934)

Morgan, William, 1774?–1826?, American Freemason His mysterious disappearance in W New York led to formation of the ANTI-MASONIC PARTY

Morgan, city (pop 1,078), co seat of Morgan co , N Utah, on the Weber river and SE of Ogden, settled 1860 by Mormons A trade and processing center in an irrigated region now served by the Weber river project, it is also a resort

Morgan City, city (pop 6,969), S La , a port on the Atchafalaya river at Berwick Bay, which is spanned by a bridge, settled 1850, inc 1860 as Brashear City, renamed 1876. A fishing, hunting, and lumbering center, it also ships quantities of shells for road building

Morganfield, city (pop 3,079), co seat of Union co., W Ky , near the Ohio SW of Henderson It is a railroad shipping point in an area of coal mines and farms (producing especially grain, lespedeza, and tobacco) and has a seed-cleaning plant

Morgan Hill, town (pop 1,014), W Calif , SE of San Francisco, in a fruitgrowing area, inc 1906

morganite see BERYL

Morgan le Fay, fairy sister of King Arthur, whose death she tries to procure by necromancy In some versions of his story, she reveals to him Guinevere's unfaithfulness with Lancelot, and she is one of the three queens who carry him to Avalon in a boat See ARTHURIAN LEGEND She also figures as Fata Morgana in the *Orlando Innamorato* of Boiardo

Morgan Library see PIERPONT MORGAN LIBRARY

Morgan State College, at Baltimore, Md , Negro, coeducational, opened 1869 by Methodists as Centenary Biblical Institute, renamed 1890, transferred to the state 1939 Courses in education, home economics, and liberal arts are included

Morganton, town (pop 7,670), co seat of Burke co., W N C , ENE of Asheville in the Catawba valley It has textile, hosiery, and furniture mills and a tannery Near by are a state school for the deaf and a state hospital for the insane

Morgarten (môr'gärtŭn), mountain slope, Switzerland, c 5 mi. N of Schwyz. Here on Nov. 15, 1315,

a small Swiss force decisively defeated the Austrians, thus paving the way for Swiss independence.

Morgenstern, Christian (krĭs'tyän môr'gunshtĕrn), 1871–1914, German poet-philosopher Both his father and his grandfather were prominent artists in Munich In his early 20s Morgenstern became tubercular; it is impossible to estimate the extent to which the prospect of an early death influenced him, but many of his writings reflect an intense desire to find a satisfactory meaning of life in what he called an "incessant effort after profundity." This search for spiritual truth led Morgenstern to mysticism and finally to the theosophical and anthroposophical teachings of Rudolph Steiner At the same time, exposed to the enthusiasms of a revived German literary world, he shared the appreciation for Goethe and Nietzsche and expressed himself in cosmopolitan and sophisticated patterns Morgenstern frequently clothed his spiritual thoughts in humorous fantasy He played with words and meanings, and his melodic gift, whimsical imagination, and clever use of enjambment and word analogy sometimes resulted in what has been called "superior nonsense", some of his most successful caprices have become proverbs *Galgenlieder* (1905) and *Palmström* (1910) are his best-known volumes of grotesque verse, while *Ich und du* (1911) contains love lyrics of great beauty Among his other writings are *Auf vielen Wegen* (1897), *Ich und die Welt* (1898), *Ein Sommer* (1899), *Melancholie* (1906), and *Wir fanden einen Pfad* (1914)

Morgenthau, Henry (môr'gunthô), 1856–1946, American banker, diplomat, and philanthropist, b Mannheim, Germany, grad Columbia School of Law, 1877 He practiced law in New York city and built up a large fortune in real-estate speculation and banking An ardent supporter of Woodrow Wilson, he became finance chairman of the Democratic National Committee in 1912 and held the same position in 1916 He was (1913–16) ambassador to Turkey, and after the outbreak of the First World War he was entrusted with the duty of acting for Great Britain, France, Italy, Russia, and other nations His service there is recorded in *Ambassador Morgenthau's Story* (1918) He attended the Paris Peace Conference as an adviser on Near East and Eastern European problems, and later (1919–21) he led in the raising of funds for relief in the Near East He was made chairman of the Greek Refugee Settlement Commission, which was created by the League of Nations in 1923, the story of his direction of the resettlement of Greek refugees was told in *I Was Sent to Athens* (1929) He was one of the incorporators of the American Red Cross (1919) and was prominent in the activities of the Federation of Jewish Charities See his autobiography, *All in a Lifetime* (1922) His son, **Henry Morgenthau, Jr**, 1891–, b New York city, attended Cornell to study architecture, but became interested in agriculture He afterwards bought a farm in Dutchess co, N Y, and in 1922 purchased the *American Agriculturalist*, a leading Eastern farm journal As governor of New York state Franklin D Roosevelt appointed Morgenthau chairman of the state agricultural advisory committee and later made him state conservation commissioner When Roosevelt became President in 1933, he appointed Morgenthau chairman of the Federal Farm Board and governor of the Farm Credit Administration Upon the illness of William H Woodin, Morgenthau was appointed (Nov, 1933) Undersecretary of the Treasury As Secretary of the Treasury (1934–45), he administered Federal tax programs which raised unprecedented revenues, supervised the sale of over $200,000,000 worth of government bonds to finance America's defense and war activities, and advocated international monetary stabilization In his book *Germany Is Our Problem* (1945), Morgenthau outlined his famous plan for controlling Germany by reconverting the concentration of heavy industries to agriculture and the service trades without a dislocation in German economy There were attempts to put this plan in operation, but they were speedily abandoned

Morghen, Raffaello (räf'fäĕl'lō môr'gĕn), 1758–1833, Italian engraver He assisted in engraving the paintings of Raphael for the Vatican and later became professor in the academy in Florence He was invited by Napoleon to Paris, where he received many honors His plates number more than 250, many of them reproducing the works of such masters as Raphael, Leonardo da Vinci, Guido Reni, and Van Dyck They also include portraits of Dante, Ariosto, Boccaccio, and Petrarch

Moriah (môrī'u), place, where Abraham was to sacrifice Isaac Gen 22 2 It has been identified by some with Mt Moriah

Moriah, Mount, biblical name of the hill of E Jerusalem. It was the site of Solomon's temple 2 Chron 3 1.

Morier, James Justinian, 1780–1849, British author, b Smyrna He spent six years in Persia with the British diplomatic service and wrote *A Journey through Persia . . 1808 and 1809* (1812) and other travel books His picaresque romance *The Adventures of Hajji Baba of Ispahan* (1824) and its entertaining sequel *The Adventures of Hajji Baba of Ispahan in England* (1828) are often reprinted.

Mörike, Eduard Friedrich (ā'dōōärt frē'drĭkh mû'rĭkù), 1804–75, German poet, a leader of the Swabian school He was a clergyman Over 50 of his rich and varied lyrics, such as "Schlafendes Jesuskind" [the sleeping Christ Child] and "Auf ein altes Bild" [to an old painting], were set to music by Hugo Wolf, and one of his best-known poems, "Beauty Rohtraut," was translated by George Meredith He also wrote a novel, *Maler Nolten* (1832), and a distinguished *Novelle, Mozart's Journey from Vienna to Prague* (1856, Eng tr, 1913–15).

Morillo, Pablo (pä'blō mōrē'lyō), 1778–1837, Spanish general Sent in 1815 to put down the revolution in New Granada, he captured Cartagena, went to Bogotá in May, 1816, and then into present Venezuela His regime was ruthless and bloody. Under orders from Spain he negotiated (1820) an armistice with Simón Bolívar Soon recalled at his own request, he continued to serve the crown in the wars in Spain

Morin, Paul (pōl' môrĕ'), 1898–, French Canadian poet, b Montreal After taking degrees in arts, science, and law at Laval Univ, he went to Paris for further study His two books of poems, *Le Paon d'émail* [the enamel peacock] (1911) and *Poèmes de cendre et d'or* [poems in ashes and gold] (1922), are remarkable for technical brilliance, exotic language, and clear music

Morínigo, Higinio (ēhē'nyō mōrē'nēgō), 1897–, president of Paraguay (1940–48) An active commander in the Chaco War, he became chief of the armed forces at the war's end and in 1940 minister of war and the navy When President José Félix Estigarribia was killed in an air accident, Morínigo seized power, suspended the constitution, and established an autocratic, army-controlled regime, public health and housing were bettered, but a disproportionate amount of the national budget went to the army Representatives of the exiled political parties were brought into a more democratic cabinet in 1946 When they were ousted (March 7, 1947) on suspicions of treason, civil war broke out and lasted for some time In 1948 he was ousted by a coup

Morioka (mōrē'ōkä), city (1940 pop 49,478, 1947 pop 107,096), capital of Iwate prefecture, N Honshu, Japan, on the Kitakami river Iwate prefecture is a major livestock-raising area, with extensive lumbering, fishing, and raw-silk industries and iron, gold, silver, and copper mines

Moriscos (môrĭs'kōz) [from Span ,=Moorish], name applied to the Moors converted to Christianity after the Christian reconquest of Spain The Moors who had become subject to Christian kings as the reconquest progressed to the 15th cent were called Mudejares (Span *mudéjares*) Their religion and customs were generally respected After the fall of Granada (1492) Cardinal Jiménez converted many by pacific means However, the rigor shown against those who refused, or apostatized from, the new faith led to a rising (1500–1502) in Granada This was soon suppressed Faced with the choice between conversion or banishment, the majority accepted conversion, but many continued secretly to practice Islam Persecuted by the Spanish Inquisition and subjected to restrictive legislation (1526, 1567), the Moriscos rose in a bloody rebellion (1568–71), which Philip II put down with the help of John of Austria Intelligent and hard-working, the Moriscos prospered in spite of persecutions and furthered Spanish agriculture, trade, and industries In 1609 Philip III, influenced by Lerma, decreed their expulsion for both religious and political reasons Like the expulsion of the Jews in 1492, this inhuman measure had disastrous consequences for Spanish economy, though it achieved religious unity and ethnic homogeneity of a sort

Morison, James (mô'rĭsun), 1816–93, Scottish clergyman In 1839 he was licensed to preach by the United Secession Church He became a successful evangelist and published a tract (1840) giving his view that atonement is for all mankind The influence of the religious awakening in the church at Kilmarnock, where he became minister in 1840, spread rapidly In 1841 the presbytery suspended him for his denial of strict predestinarianism With others of like views, Morison organized the Evangelical Union in 1843 and a theological academy, of which he was the first principal From 1853 to 1884 he was a minister in Glasgow

Morison, Robert, 1620–83, Scottish physician and botanist to Charles II His *Plantorum historiae universalis Oxoniensis*, one of the first monographs on a group of plants, was planned as a three-volume work, the first volume was published in 1680, the second in 1699, after completion by one of his pupils, and the third never appeared

Morison, Samuel Eliot, 1887–, American historian, b Boston, grad Harvard (B A, 1908, Ph D, 1912) and Oxford (M A, 1922) He began teaching history at Harvard in 1915, became full professor there in 1925, and was (1922–25) Harmsworth professor of American history at Oxford He was a private in the U S army in the First World War and later served in the American delegation at the Paris Peace Conference Among his books are *The Maritime History of Massachusetts, 1783–1860* (1921; new ed, 1941); *The Oxford History of the United States, 1783–1917* (1927); *Builders of the Bay Colony* (1930), *Three Centuries of Harvard, 1636–1936* (1936), an unofficial history; and *Admiral of the Ocean Sea* (1942), a biography of Christopher Columbus which won a Pulitzer Prize in 1943 With Henry Steele Commager he wrote *The Growth of the American Republic* (1930, 3d rev and enl ed, 1942), utilizing parts of the *Oxford History*. Historian of Harvard, he wrote the official *Tercentennial History of Harvard College and University* in three volumes—*The Development of Harvard University since the Inauguration of President Eliot, 1869–1929* (1930), *The Founding of Harvard College* (1935), and *Harvard College in the Seventeenth Century* (1936) In 1942 he was appointed historian of U S naval operations in the Second World War, with the rank of lieutenant commander (he was promoted captain in 1945) Thus far he has completed 5 of the 14 projected volumes of *History of United States Naval Operations in World War II* (1947–) Morison's literary style is much admired for its clarity and classic simplicity His skill as an amateur yachtsman has served him well in his maritime writings, notably in the biography of Columbus, whose route Morison himself retraced by sail

Morison, Stanley, 1889–, English typographer and journalist He was after 1923 typographical consultant to Cambridge Univ Press and to the English Monotype Corp and editor of the *Fleuron* from 1926 to 1930 He was (1929–44) typographical adviser to the London *Times*, and he designed a new format and a new type face called Times Roman In 1945 he became editor of *The Times Literary Supplement* Among his works on type are *Four Centuries of Fine Printing* (1924) and *First Principles of Typography* (1936) His writings cover a wide range and include a multivolume history of *The Times*, of which the third volume appeared in 1947

Morisot, Berthe (bĕrt' môrēzō'), 1841–95, French impressionist painter She studied under many gifted painters, including Corot She formed a close friendship with Manet and married his brother in 1874 She served as model for several of Manet's famous paintings and was greatly influenced by him in her earlier work Later she inclined rather toward the pure impressionism of Claude Monet *La Toilette* (Art Inst, Chicago) is a beautiful example of her work She is best known, perhaps for her studies in oil of women and children, often out of doors and always painted in clear, luminous color

Morlaix (môrlā'), town (pop 12,176), Finistère dept, NW France It is a Breton fishing port on an inlet of the English Channel An ancient town, it dates from Roman times

Morland, George, 1763–1804, English genre, animal, and landscape painter, pupil of his father, Henry Morland (c 1730–1797), a portrait painter and picture restorer At 10 he exhibited sketches at the Royal Academy and at 17 found a ready market for his copies of Dutch and Flemish masters At about 21 he left his father's shop and started on a lifelong career of debauch, which his marriage in 1786 only briefly interrupted Nevertheless he painted constantly, producing over 4,000 pictures in his short life His work was eagerly sought by dealers, and he made large sums of money, which he squandered In 1791 he painted his masterpiece, *Interior of a Stable* (National Gall, London) Often imprisoned for debt, Morland died in a sponging house His paintings of rural life and landscapes of the English countryside have never ceased to delight collectors Their rich color and gusto atone for an obvious haste in execution He is represented in the Louvre, Metropolitan Museum, Corcoran Gallery, and many British galleries His *Dogs Fighting* and *Old English Sportsman* (both N Y Historical Society) and *Pigs in a Fodder Yard* (N Y Public Library) are representative See biographies by Ralph Richardson (1895), Sir Walter Gilbey and E D Cumming (1907), and G C Williamson (1907)

Morley, Christopher, 1890–, American editor, novelist, and poet, b Haverford, Pa, grad Haverford College, 1910 He was a Rhodes scholar He was one of the founders and an editor (1924–40) of the *Saturday Review of Literature* His novels, generally in a light vein, include *Parnassus on Wheels* (1917), *The Haunted Bookshop* (1919), *Where the Blue Begins* (1922), *Thunder on the Left* (1925), *The Trojan Horse* (1937, dramatized 1941), *Kitty Foyle* (1939, filmed 1940), and *The Man Who Made Friends with Himself* (1949) Volumes of his poetry are *Middle Kingdom* (1944) and *Spun Level and Other Poems* (1946) He has revised and enlarged Bartlett's *Familiar Quotations* (1937, 1948)

Morley, Edward Williams, 1838–1923, American scientist, b Newark, N J, grad Williams College, 1860 He was professor of chemistry at Western Reserve (1869–1908) He is known for his research on the oxygen content of the atmosphere, for his determinations of the density of oxygen and hydrogen and their combining ratio in water, for his work with A A Michelson and D C Miller in investigating the relative motion of the earth and ether and in developing the interferometer as a

means of measuring length and distance; for his determination of the velocity of light in a magnetic field, and for his experiments on thermal expansion

Morley, Felix, 1894–, American journalist, b Haverford, Pa, grad Haverford College, 1915, and Oxford, 1921, brother of Christopher Morley He began his journalistic career as a reporter in Philadelphia After service in the First World War, he returned to the United States, worked (1922–29) on the Baltimore *Sun* and was editor (1933–40) of the Washington *Post* Morley was (1940–45) president of Haverford College while he served as a government adviser. His championship of internationalism and democracy are seen in *The Society of Nations* (1932) and *The Power in the People* (1949)

Morley, Henry, 1822–94, English author, educator, and editor He studied medicine, but turned to teaching and had a successful school of his own near Liverpool He closed his school to assist Dickens in editing *Household Words* and thereafter until 1867 was editor of various periodicals He was professor of English at University College, London He wrote several biographies but is best known as the editor of Morley's University Library, Cassell's National Library, and other series

Morley, John, 1838–1923, English statesman and man of letters Educated at Oxford, he was called to the bar and practiced both law and journalism in London Succeeding (1867) G H Lewes, he edited the *Fortnightly Review* with eminent success until his election to Parliament in 1883 as a strong supporter of Gladstone, who made him chief secretary for Ireland in 1886 His anti-imperialistic beliefs lost him his place in 1895, but he regained it the following year Between 1905 and 1910 he distinguished himself as a vigorous secretary of state for India He was raised to the peerage in 1908 as Viscount Morley of Blackburn, served as lord president of the council from 1910 until, in opposition to the war policy, he resigned (1914) and retired to write his *Recollections* (1917), an explanation of his Victorian liberalism One of the best biographers of his time he wrote lives of Voltaire (1872), Rousseau (1873), Cobden (1881), Robert Walpole (1889), Cromwell (1900), and Gladstone (1903, perhaps his best work) He was general editor of the "English Men of Letters" series, for which he wrote a life of Burke (1879) His political and critical writings reveal him as an agnostic and a disciple of the utilitarians Among them are *Critical Miscellanies* (1871–77), *On Compromise* (1874), *Diderot and the Encyclopedists* (1878), *Studies in Literature* (1890), and *On Politics* (1914) See F W Hirst, *Life and Letters of John Morley* (1927), studies by F W Knickerbocker (1943) and Warren Staebler (1943)

Morley, Sylvanus Griswold, 1883–1948, American archaeologist, b Chester, Pa, grad Harvard, 1907 He was a specialist in Middle American archaeology and in Maya hieroglyphics Morley did field work (1909–14) in Central America and Mexico for the School of American Archaeology In 1915 he became research associate and in 1918 associate of the Carnegie Institution of Washington, D C He was in charge of its Central American expeditions and directed (1924–40) research at Chichén Itzá His writings include *An Introduction to the Study of Maya Hieroglyphs* (1915), *The Inscriptions at Copan* (1920), *Guide Book to the Ruins of Quiriguá* (1935), and *The Inscriptions of Petén* (5 vols, 1938)

Morley, Thomas, b 1557 or 1558, d 1603, English madrigal composer, pupil of Byrd His *Plain and Easy Introduction to Practical Music* (1597) was the first English theoretical work He was a gentleman of the Chapel Royal and organist of St Paul's Cathedral He is noted mainly for his madrigals and settings of some of Shakspere's songs He also wrote anthems, services, and Latin motets His was the earliest musical setting of the burial service from the English Prayer Book

Morley, municipal borough (1931 pop 23,396, 1947 estimated pop 39,680), West Riding of Yorkshire, England, SW of Leeds It has wool and glass factories, tanneries, coal mines, and stone quarries Morley was besieged by royalists in the civil war

Mormons, name used in common parlance for the members of the Church of Jesus Christ of Latter-Day Saints (a brief description of the church is given under that heading) The religion was founded by Joseph Smith after the golden tablets containing the Book of Mormon had been revealed to him at Palmyra, N Y He rapidly gathered followers and in 1831 established his headquarters at Kirtland, Ohio Intensive missionary activity brought many converts both from the United States and (especially later) from abroad. Stakes of Zion, as the Mormons called their settlements, were started in W Missouri Smith prepared (1831) to make this the permanent home of his people, but first at Independence and then at little Far West, the Mormons came into conflict with their "Gentile" Missouri neighbors The Mormons were a close-knit body with a communal economy, and the other settlers feared the strange and aloof Saints. Trouble rose to violence and to persecution; Mormon leaders were jailed and their followers mistreated. Finally in 1838–39 Gov. Lilburn W. Boggs ordered their expulsion (see also Doniphan, Alexander W.). The Mormons sought a new Zion in Illinois in the town of Nauvoo. They received a charter giving them virtual autonomy with the right to maintain their own militia and their own court and the power to pass any laws not in conflict with state or Federal constitutions Nauvoo grew as many converts poured in from abroad, and by 1842 it was the largest town in Illinois—and consequently had the most political power It prospered as most Mormon settlements have prospered wherever planted Unfortunately this state of affairs caused envy and fear among their neighbors Dissension appeared in their own ranks and weakened them The hostility of their neighbors again mounted to violence On June 24, 1846, Joseph Smith and his brother Hyrum were arrested on charges of treason They were murdered in jail in Carthage, Ill, by a mob three days later This sealed the fate of Nauvoo as a Mormon home and threatened the unity of the Church Many fled, dissension and suspicion were rife, and there was question of the succession to Smith's leadership Another brother, William Smith, and several prominent leaders were possible choices, notably Sidney Rigdon, James Jesse Strang, Lyman Wight, and Brigham Young The church leaders chose Young He was to prove a forceful and able leader, a man who dominated and worked for the good of his people Again it was necessary for the Mormons to find a home Under Young's guidance a remote spot was chosen, the valley of the Great Salt Lake in present Utah Preparations were made for the Saints to migrate by wagon and on foot with handcarts to carry their goods across a little-known wilderness At this time those who rejected Young's leadership and claimed the succession for a son of Joseph Smith declined to accompany the main body to Utah, they ultimately constituted themselves into the Reorganized Church of Jesus Christ of Latter Day Saints In July, 1847, the first settlers reached what is now Salt Lake City There they planted crops and built shelters The first few years were extremely hard, but the organization of the Mormons for community welfare, their great industry (the beehive is one of their symbols), and their unflagging attempts to utilize all means made for their success They initiated irrigation, and the desert lands began to blossom Young's genius for organization and determination to create a self-sustaining economy helped to make the Mormon dream come true It was not, however, yet firmly established when trouble came once again The Mormons sent a force (the Mormon Battalion) to fight in the Mexican War, but that war prepared the way for the admission of California to the Union and made future trouble for the Saints The discovery of gold there was to bring hordes of "Gentiles" trooping across the land The Mormons wished to have their communities admitted to the Union as the State of Deseret, but they were to be disappointed It was in 1850 made into Utah Territory Brigham Young was made territorial governor and superintendent of Indian Affairs, but Mormon isolation was destroyed Non-Mormons filtered in They were resented by the Mormons, and in turn the newcomers were resentful of the Mormon exclusiveness and church control Clashes with overland travelers were frequent Young's formal announcement in 1852 of the doctrine of plural marriage, based on a vision of Joseph Smith in 1843, further set the Mormons apart from non-Mormon Americans. From that time for nearly 40 years the question of polygamy was lustily discussed in the newspapers of the United States, and even today the forgotten issue is sometimes refurbished in sensational magazines There were also non-Mormon stories of the dark and violent doings of a secret Mormon police force, the Danites, who forced the will of the Church on Mormon and non-Mormon alike The antagonism was very real in the 1950s, and when Albert S Johnston was sent out with an army force in 1857, Brigham Young called in the settlers who had been sent forth south and north and west and prepared to defend the Mormon state Fortunately this Mormon campaign or Utah War did not rise to serious proportions, but the bitterness of feeling was shown in the massacre of the innocent members of a wagon train at Mountain Meadows in 1857 The question of plural marriage was the important point in Utah's demand for statehood Congress passed laws against polygamy, aimed solely at Utah. By the time of Brigham Young's death in 1877 the Mormon community was a thoroughly established commonwealth with a large and prosperous population It was long overdue for statehood when a statement from President Wilford Woodruff on polygamy in 1890 made it possible for Utah to enter the Union in 1896. Wilford had succeeded John Taylor, who had succeeded Brigham Young. Later presidents have been Lorenzo Snow, Joseph F. Smith, Heber J Grant, and George A. Smith The history of Utah has been the history of the Church, but Mormonism has been spread much wider than that state. It has great strength in Idaho and Arizona, and there are Mormon temples and tabernacles in most of the states, particularly in the West.

Mornay, Philippe de, seigneur du Plessis-Marly (fēlēp' dŭ môrnā' sānyûr' dŭ plĕsē'-märlē'), 1549–1623, French Protestant leader, also known as Du Plessis-Mornay. Until 1572 he spent much time in the Netherlands and Germany. After the massacre of St Bartholomew's Day he remained a year in England He became one of the chief agents for Henry of Navarre (later Henry IV of France), for whom he arranged a reconciliation with Henry III (1589). In reward he was made governor of Saumur and, later, a councilor of state. After Henry's conversion, he became the leader of the Huguenots Louis XIII ousted him from Saumur, and he died in retirement Mornay was an excellent organizer and a spirited writer Among his works are *De l'institution, usage et doctrine du saint sacrement de l'eucharistie en l'église ancienne* (1598, Eng tr, 1600), the subject of a public disputation on the ancient Eucharist with the bishop of Évreux, who was the victor, *Le Mystère d'iniquité, c'est à dire, l'histoire de la papauté* (1611, Eng tr., 1612), and memoirs and correspondence

morning-glory, name for plants of the genus *Ipomoea*, widely distributed annuals or perennials, usually twining and herbaceous vines. *Ipomoea purpurea*, the most commonly cultivated in North America, is popular for its prolific growth and broad funnel-shaped blossoms of various colors open only in the morning In Japan unusually large flowers have been developed, grown mostly as pot plants The genus *Ipomoea* includes the sweet potato, the American manroot with enormous starchy roots, and plants sometimes used for the drug jalap A number of related plants are called morning-glory.

Morningside, village (pop 1,282), E Minn, southwest suburb of Minneapolis.

Morny, Charles Auguste Louis Joseph, duc de (sharl' ōgüst' lwē' zhōzĕf' dük' dŭ mônā'), 1811–65, French statesman, illegitimate son of Hortense de Beauharnais and Flahaut de la Billarderie After an army career (1830–38) during which he fought in North Africa, Morny entered politics and was elected a deputy in 1842 In 1851 he was the leading organizer of the coup d'état which gave his half brother, Louis Napoleon Bonaparte, dictatorial powers Made minister of the interior, Morny, by means of unscrupulous intimidation made certain of the issue of the plebiscite which placed Bonaparte on the throne as Napoleon III Morny subsequently was president of the legislative assembly and played a considerable role in the affairs of the Second Empire See biography by Maristan Chapman (1931)

Moro [Span, =Moor], one of a group of Moslem natives of Mindanao and the Sulu Archipelago in the Philippines and of Borneo, who were converted in the great missionary extension of Islam from India in the 15th and 16th cent Not ethnically or linguistically units, they are of largely Malayan stock Though their knowledge of the Mohammedan religion is scanty, they are devout followers of the faith Some 300,000 Moros are included in the population of the Sulu Archipelago and S Mindanao They have long maintained enmity toward the Christian Filipinos Their principal occupation is agriculture, and their products include tapioca corn, rice, sugar cane, hemp, cacao, and sweet potatoes Their industries are cloth weaving, pottery making, boatbuilding and metal craftsmanship The Moros fabricate iron, brass, silver, and gold The Sulu dialect is called Bahasa-Sug, and the Moros employ voweled Arabic in writing it Much superstition is involved with their mode of living They are conspicuous as a fierce, proud people

Moro, Antonio (ântō'nyō mō'rō), c 1512–c 1575, Flemish portrait painter, known also as Antonis Mor or Moor and as Sir Anthony More He studied in Utrecht (probably under Scorel), where he became a member of the painters' guild After a short visit to Italy he rapidly rose to fame as a portraitist and was made court painter to the house of Hapsburg In this capacity he visited Spain, Portugal, and, later, England. His portrait of Mary Tudor (Prado) is justly famous After a second visit to Spain, Moro settled in Antwerp, where he executed several commissions for the duke of Alba Moro's portraits are masterly and convincing. He was a superb draughtsman and colorist Among his most celebrated paintings are those of Jean d'Archel (National Gall., London), Hubert Goltzius (Brussels), the artist's wife (Prado), the archduchess, Margaret of Parma (Vienna), the duke of Alba (Hispanic Society, New York), and *Portrait of a Gentleman* (National Gall. of Art, Washington, D C)

Morocco (mŭrŏ'kō), sultanate (172,104 sq. mi, pop c.9,650,000), North Africa, on the Mediterranean Sea and the Atlantic Ocean It is bordered on the south by the Spanish Sahara and by Algeria (boundary partly undefined) and on the east by Algeria Ifni is a Spanish-owned enclave on the Atlantic coast. The country is nominally under the rule of the sultan of Morocco; for the most part, however, he functions only as the religious leader of the Moslem community In actual administration Morocco is divided into three territories. French Morocco (153,870 sq. mi.; pop. c.8,500,000) is a protectorate

and, since 1946, an associated state of the French Union. It is ruled by a resident general at RABAT. It occupies most of the sultanate and all but the most northerly section of the Atlantic coast. Spanish Morocco (18,009 sq mi ; pop 1,082,009), with its capital at TETUÁN, is a protectorate under a Spanish high commissioner. Here religious functions are delegated to a khalifa, a Moslem official nominated by the high commissioner and approved by the sultan For the most part Spanish Morocco lies on the Mediterranean coast and is roughly coextensive with the RIF Two of the coastal cities, Ceuta and Melilla, are part of metropolitan Spain The remaining division of Morocco is the international zone of TANGIER The population of Morocco is concentrated in the coastal regions, where rainfall is most plentiful. In parts of the Rif some 40 in fall a year, and wheat and other cereals can be raised without irrigation On the Atlantic coast, where there are extensive plains, olives, citrus fruits, and grapes are grown, largely with water supplied by artesian wells Part of the maritime population fishes for its livelihood. Agadir, Mogador, Mazagan, and Larache are among the important fishing harbors CASABLANCA is by far the largest port for the extensive overseas trade Central Morocco is largely occupied by the ATLAS MOUNTAINS In the northern foothills especially, there are large mineral deposits; phosphates lead in importance, and there are also zinc, copper, lead, molybdenum, cobalt, and the only sizable coal deposits in all North Africa. MARRAKESH, MEKNÈS, and Fez are the most important centers in the mineral trade S Morocco is part of the Sahara A few areas of oasis, notably Tafilelt, are all that relieve the desert wastes The coastal areas and the mineral-producing interior region are linked by c 1,200 mi of railroad and c 2,700 mi of road Only trails reach into the desert In ancient times Morocco was roughly coextensive with the Roman district of MAURETANIA The Vandals were the earliest (5th cent) of barbarous peoples to take the area after the Roman collapse The Arab conquest, which first swept over Morocco in 683, brought with it Islam Christianity was all but extirpated, but the Jewish colonies by and large retained their religion Many Moroccans served in the Arab forces which invaded Spain in the early 8th cent. Morocco became an independent state in 788 under the royal line founded by Idris I The country lapsed into anarchy in 974, but it revived strongly under the FATIMITE caliphs (who conquered Egypt) and two Berber dynasties, the ALMORAVIDES and the ALMOHADES, who ruled both Morocco and Spain The Merinid dynasty (1259–1550), after some successes in Spain and North Africa, was limited to Morocco Rarely, however, was the country completely unified, and conflict between Arabs and BERBERS was incessant Spain and Portugal, not content with expelling the Moors (i e , persons from Morocco) from the Iberian Peninsula, fell upon the Moroccan coast Beginning with the capture of Ceuta in 1415, Portugal took all the chief ports except Melilla and Larache, both of which fell to Spain The Christian threat stimulated the growth of resistance under religious leaders, one of whom established (1554) the Saadian, or first Sherifian, dynasty At the battle of ALCAZARQUIVIR (1578) the Saadian king decisively defeated Portugal The present ruling dynasty (the Filali, or second Sherifian, dynasty) came to power in 1660 and recaptured many European strongholds. Morocco, like the other BARBARY STATES, was, from the 17th to the 19th cent , a base of pirates preying upon the Mediterranean trade In the 19th cent the strategic and economic importance of Morocco excited the interest of the European powers France before 1850 had advanced from the south and occupied several oases, inflicting defeat on Sultan ABD-ER-RAHMAN In 1880 the major European nations decided at Madrid to preserve the territorial integrity of Morocco and to maintain the Open Door policy in trade Political and commercial rivalries soon disrupted this cordial arrangement and brought on several international crises In general France sought to gain Spanish and British support against the opposition of Germany Thus, in 1904, France concluded a secret treaty with Spain to partition Morocco and secretly agreed with Great Britain not to oppose British aims in Egypt in exchange for a free hand in Morocco In 1905, after France had asked the sultan of Morocco for a protectorate, Germany moved dramatically by having the German emperor land at Tangier from his yacht and declare for the independence of Morocco. On German insistence the Algeciras Conference (Jan – March, 1906) was called to consider the Moroccan question. The principles of the Madrid Conference were readopted and German investments were assured protection, but French and Spanish interests were given high recognition by the decision to allow France to patrol the border with Algeria and to allow France and Spain to police Morocco. Under the claim of effecting pacification, the French steadily annexed territory. In 1908 friction arose at Casablanca, under French occupation, when the German consul gave refuge to deserters from the French Foreign Legion. This dispute was settled by the Hague Tribunal Shortly afterward a coup d'état unseated ABDU-L-AZIZ IV and installed on the throne his brother, ABDU-L-HAFID He had difficulty maintaining order and received help from France and Spain, especially in a revolt which broke out in 1911 In this situation the appearance of the German warship *Panther* at AGADIR on July 1, 1911, was interpreted as a threat of war and speeded a final adjustment of imperial rivalries On Nov 4, 1911, Germany agreed to a French protectorate in Morocco in exchange for the cession of French territory in equatorial Africa Finally, at FEZ (March 30, 1912), the sultan agreed to a French protectorate, and on Nov 27 a Franco-Spanish agreement established substantially the present administrative arrangement. The French protectorate was placed under the rule of LYAUTEY, who remained in office until 1925 A strong threat to European rule was posed (1924–26) by the revolt of ABD-EL-KRIM Spanish Morocco in 1936 witnessed the beginning of Francisco Franco's successful revolt against the republic government of Spain French Morocco, under the rule of Resident General Noguès remained loyal to the Vichy government after the fall of France in 1940 The Germans swiftly organized the economy so as to supply their country On Nov 8, 1942, Allied forces landed at all the major cities of Morocco and Algeria There was sharp fighting at Casablanca only, and on Nov 11 all resistance ended (see NORTH AFRICA, CAMPAIGNS IN) Noguès, who continued in effect laws directed against the Jews (c 195,000) and was in general extremely conservative, was dismissed in 1943 After the war a nationalist movement grew powerful and received the active support of the sultan, Sidi Mohammed, who demanded a unitary state and the departure of the French and Spanish In French Morocco the sultan was supported by the strongest native political group, the Istiqlal France, with some 250,000 French people living in Morocco and with France itself heavily dependent upon Moroccan food, resisted the independence movement In Spanish Morocco political activities in general were forbidden See Budgett Meakin, *Moorish Empire a Historical Epitome* (1899), Ellis Ashmead-Bartlett, *Passing of the Sherifian Empire* (1910), Eugene N Anderson, *The First Moroccan Crisis, 1901–1906* (1930), Melvin M Knight, *Morocco as a French Economic Venture* (1937), Ima C Barlow, *The Agadir Crisis* (1940), James Haldane, *Trekking among Moroccan Tribes* (1948)

Morocco, town (pop 1,151), NW Ind , NW of Lafayette, settled 1833, laid out 1850, inc 1890

morocco, a goatskin leather, dyed on the grain side and boarded by hand or machine to bring up the grain in a bird's-eye effect Probably it originated with the Arabs in North Africa as an alum-tanned product typically dyed red, and it then spread to the Levant, to Turkey, and along the Mediterranean, where it was tanned with sumac Today the term is applied also to chrome-tanned goat leather whether boarded or embossed to show the characteristic grain, it is often crushed and glazed Hard, but pliable, it is valued especially for bookbindings and purses Levant morocco is larger grained, French morocco is a sheepskin imitation

Morone (mōrō'nā), name of two Italian historical and religious painters of the Veronese school

Domenico Morone (dōmā'nēkō), b c 1442, d after 1517, may have studied in the school of Pisano His few surviving works reveal a broad and powerful style, based upon his study of the principles of Mantegna They include two decorative panels (National Gall , London); *Miracle of St Dominic* (Metropolitan Mus), and *The Adoration of the Magi, Madonna and Ecce Homo,* and *Dominican Preaching* (National Gall of Art, Washington, D C) His son, **Francesco Morone** (frānchā'skō), 1471–1529, after assisting his father, set up an independent practice He, too, was strongly influenced by Mantegna, and his masterpiece, the frescoes in the sacristy at Santa Maria in Organo, Verona, is composed largely of incidents adapted from Mantegna's *Camera degli sposi* at Mantua Other works by the artist are an imposing altarpiece, *Virgin Enthroned with Saints,* in the same church; *Virgin and Child* (Milan), and *Virgin and Child* (National Gall , London)

Moroni, Giovanni Battista (jōvän'nē bät-tē'stä mōrō'nē), c 1525–1578, Italian portrait painter of the Brescian school, pupil of Il Moretto He also painted numerous altarpieces His portraits, which were forceful in characterization and admirable in pose and coloring, were highly esteemed by Titian and exerted a considerable influence upon the art of Van Dyck Among the best are *Widower with Two Children* (Dublin), *The Tailor* and portrait of Canon Ludovico de' Terzi (National Gall , London); *Nobleman Pointing to a Flame* and self-portraits (Uffizi), portrait of Bartolomeo Bongo (Metropolitan Mus); *Portrait of a Lady* (Walters Art Gall., Baltimore), *Portrait of a Man* (Gardner Mus , Boston); and *A Gentleman in Adoration before the Madonna* and another portrait of a man (National Gall of Art, Washington, D C)

Moroni (mōrō'nē) [for the angel who appeared to Joseph SMITH], city (pop 1,158, alt 5,520 ft), central Utah, on the San Pitch in the Sanpete Valley, S of Provo; settled 1859 by Mormons, inc 1866 Primarily a turkey-growing center, Moroni has some irrigation, supported by water brought by the Sanpete project from a Green River tributary

moronity: see FEEBLE-MINDEDNESS

Moronobu: see HISHIGAWA MORONOBU

Morosini, Francesco (frānchā'skō mōrōsē'nē), 1618–94, Italian soldier, doge of Venice (1688–94), of a family distinguished in Venice for five centuries He was captain general of the fleet in a war with the Turks (1651–61) and was tried and acquitted for being defeated by the Turks in Crete He again fought brilliantly against the Turks (1667–69, 1684–88) He conquered the Peloponnesus, and under his leadership the Venetian empire had a brief recrudescence

Morotai (mōrōtī'), island (c 695 sq mi , pop 7,833), East Indonesia, one of the Moluccas It is NE of Halmahera Heavily wooded, it produces timber and resin A leper colony is here In the Second World War, Morotai was a major Japanese air base which was easily taken in 1944

Morpeth (môr'puth), municipal borough (1931 pop 7,391, 1943 estimated pop 10,000), Northumberland, England, on the Wansbeck and N of Newcastle-on-Tyne It is an agricultural market with woolen mills Only the gateway remains of the ancient castle around which the town grew

Morpheus (môr'fēus, môr'fōs) [Gr ,=shaper], in Greek and particularly Roman mythology, god of dreams He was the son of Sleep and a creature of the night Morpheus brought dreams of human forms

morphine (môr'f n) [from MORPHEUS], an alkaloid of opium derived from the poppy plant It is of great value in medicine and surgery for the relief of pain It is also used to produce sleep, to relieve the cough reflex, and to relax tenseness caused by fear Continued doses of morphine of increasing size produce a tolerance to quantities which would ordinarily prove fatal Habitual use (morphinism) brings about a condition eventually so critical that it can be corrected only by specialized medical attention

Morphy, Paul Charles (mor'fē), 1837–84, American chess player, b New Orleans At 10 he learned the game and at 21 was acknowledged as the greatest player in the world Not only was Morphy possessed of a phenomenal memory, which he demonstrated in astounding feats of simultaneous blindfold play, but his style of play was in direct contrast to that of his time He was a master of the open game, in which center pawns are exchanged, open files are utilized, and rapid development of the pieces is demanded Harrwitz, Lowenthal, and Anderssen were among the many who fell before his crushing combinations After 1859, when he had returned to New Orleans from world triumphs, mental instability ended his chess play See biography by Regina Morphy-Voitier (1926), J J Lowenthal, *Morphy's Games of Chess* (1860), P W Sergeant, *Morphy Gleanings* (1932)

morrice dance see MORRIS DANCE

Morrill, Justin Smith (mŏ'rul), 1810–98, U S Representative (1855–67) and Senator (1867–98) from Vermont, b Strafford, Orange co , Vt A prosperous merchant, he helped organize (1855) the Republican party in Vermont In his 43 years of continuous service in Congress, the longest on record, he was chairman (1865–67) of the House Committee on Ways and Means and long headed the Senate Committee on Finance He is best known for the Morrill Act, a bill first introduced in 1857 and finally passed in 1862, which provided for the granting of public lands for the establishment of educational institutions, these came to be known as LAND-GRANT COLLEGES See biography by W B Parker (1924)

Morrilton, city (pop 4,608), co seat and trade center of Conway co , W central Ark , on the Arkansas river, founded in the 1870s A large cotton mill and Petit Jean State Park are near by

Morris, family of prominent American landowners and statesmen **Richard Morris,** d 1672, left England after serving in Oliver Cromwell's army, became a merchant in Barbados, and migrated to New York when it was known, under the Dutch, as New Amsterdam There he purchased a tract of land which, along with other real estate, descended to his son, Lewis Morris (1671–1746, see separate article) The New York estate was erected into a manor, called Morrisania, in 1697 **Lewis Morris,** 1698–1762, b Morrisania, second lord of the manor, was judge of the high court of admiralty His brother, **Robert Hunter Morris,** c 1700–1764, b Morrisania, was chief justice of New Jersey and governor of Pennsylvania (1754–56) The third and last lord of the manor was Lewis Morris (1726–98, see separate article) His brothers included Gouverneur Morris (see separate article) and **Richard Morris,** 1730–1810, b Morrisania, a state senator and chief justice of the state supreme court Morrisania was annexed to the city of New York in 1774 Other prominent members of the family were **Robert Morris,** c 1745–1815, b New Brunswick, N J., judge of the U.S. district court in New Jersey, **Lewis Richard Morris,**

1760–1825, b Scarsdale, N Y , member of the state assembly and a U S. Representative (1797–1803), and Richard Valentine Morris (see separate article) See L D Akerly, *The Morris Manor* (1916)

Morris, Alexander, 1826–89, Canadian politician, b Perth, Ont He was the first graduate in arts at McGill Univ By his speeches and his pamphlet *Nova Britannia* (1858) he lent strong support to the confederation movement, and, entering (1861) the legislative assembly as a Conservative, he played a part in effecting the coalition of 1864, which paved the way to confederation In 1869 he joined Sir John A Macdonald's cabinet as minister of inland revenue, and in 1872 he became lieutenant governor of Manitoba and the Northwest Territories

Morris, Clara, 1849–1925, American actress, b Canada She began her career as a dancer in the Academy of Music, Cleveland, but rose to be leading woman in emotional roles In 1870 she appeared with Augustin Daly's company in New York, winning fame as Cora in *Article 47* In *Camille, Miss Moulton,* and other plays of the type she excelled almost every actress of the '70s and '80s. In 1874 she married Frederick C Harriott and thereafter made only occasional appearances on the stage Her writings are voluminous and include *Life on the Stage* (1901), *Stage Confidences* (1902), and *The Life of a Star* (1906)

Morris, Edward Patrick Morris, 1st **Baron,** 1859–1935, Newfoundland statesman and lawyer, b St John's Admitted to the bar in 1885, he entered the Newfoundland legislature as a Liberal the same year He was a delegate to the conference (1895) called at Ottawa to discuss terms for the possible entry of Newfoundland into the dominion, later represented his country at many imperial conferences, and was counsel for the British government in the N Atlantic fisheries dispute at The Hague (1910) Morris edited the 19th-century Newfoundland law reports From 1909 to 1919 he was prime minister of Newfoundland After the First World War he went to England to live Morris was knighted in 1913 and raised to the peerage in 1918

Morris, George Pope, 1802–64, American poet and journalist, b Philadelphia He founded (1823) the *New-York Mirror,* a literary weekly to which W C Bryant, J K Paulding, and their friends contributed Morris's most quoted poem is "Woodman, Spare That Tree!"

Morris, Gouverneur (gŭvûrnēr', -nōōr'), 1752–1816, American statesman, b Morrisania, N Y (now part of the Bronx), grad King's College (now Columbia Univ), 1768, grandson of Lewis Morris (1671–1746) He studied law and was admitted (1771) to the bar His family background and his personal charm and intelligence gave him social prestige and furthered his political career At the outbreak of the American Revolution he adopted the patriot cause (although several members of his family were Loyalists) and was a member (1775–77) of the provincial congress of New York After helping to draft the first state constitution and serving on the Council of Safety, Morris sat (1778–79) in the Continental Congress, where he was prominent in financial, military, and diplomatic affairs In 1779 appeared his *Observations on the American Revolution* He failed of reelection to the Congress and moved to Philadelphia, resuming his law practice A series of newspaper articles on finance secured him the position of assistant to Robert Morris (no relative) in handling the finances of the new government (1781–85) As a member of the Federal Constitutional Convention of 1787 he played an active role, defending a centralized government, opposing concessions to slavery, and aiding in the writing of the Constitution He remained, however, a champion of aristocracy who distrusted democratic rule In 1789 he went to France as a private business agent for Robert Morris, remained in Europe, and was appointed (1792) U S minister to France During the French Revolution his sympathies lay with the royalists, he even planned the rescue of Louis XVI His recall was requested in 1794, but he traveled for several years before returning to America in 1798 From 1800 to 1803 Morris, a Federalist, was a U S Senator from New York He then retired to his estate at Gouverneur, N Y , married for him He condemned the War of 1812, going so far as to recommend the severance of the Federal Union He was a strong advocate of the Erie Canal, serving as chairman (1810–13) of the canal commission See his *Diary of the French Revolution* (2 vols , 1939), edited by his great-granddaughter, Beatrix Cary Davenport, biographies by Theodore Roosevelt (1888) and Daniel Walther (1934)

Morris, Lewis, 1671–1746, American colonial official, first lord of the manor of Morrisania in New York He was born in that part of Westchester co that is now part of the Bronx, New York city He inherited large properties in New York and New Jersey, and in 1697 his New York estate was made a manor In 1702 he traveled to England to help bring about the fall of proprietary government in New Jersey. He became a bitter opponent of the arbitrary rule of Lord Cornbury, who was governor of both New York and New Jersey, and aided in securing his removal. In 1715 his friend Gov. Robert Hunter made Morris chief justice of New York, but a subsequent struggle with Gov. William Cosby resulted in his removal (1733). During his terms as councilor and as member of the assembly he upheld the popular cause, and upon the separation of New Jersey from New York he became the first governor of New Jersey (1738–46) His stern administration was marked by much opposition and quarreling

Morris, Lewis, 1698–1762 see Morris, family

Morris, Lewis, 1726–98, signer of the Declaration of Independence, b. Morrisania, N Y (now part of the Bronx), grad Yale, 1746, elder half brother of Gouverneur Morris As a wealthy landowner and third lord of the manor of Morrisania after 1762, he was prominent among the opponents of British policies and was influential in promoting the provincial convention of New York (1775) In the Continental Congress (1775–77) he dealt principally with military and Indian affairs Made a brigadier general in the patriot army, he served in the New York campaign of 1776 After the war he restored his estate at Morrisania, which had been burned and plundered by the British He was prominent in New York affairs, serving as state senator (1777–81, 1784–88) and as a member (1784–98) of the first board of regents of the Univ of the State of New York

Morris, Sir Lewis, 1833–1907, British poet and lawyer, b Wales, M A Oxford, 1858 Greatly interested in higher education, he helped found the Univ of Wales He was for 27 years chairman of the Eisteddfod His poetry includes *Songs of Two Worlds* (1871–75) and *Epic of Hades* (1876–77) He was knighted in 1896

Morris, Lewis Richard, 1760–1825 see Morris, family

Morris, Mary Philipse see Morris, Roger

Morris, Richard, d 1672, and 1730–1810 see Morris, family

Morris, Richard Brandon, 1904–, American historian, b New York city, grad College of the City of New York, 1924, and Columbia (M A , 1925, Ph D , 1930). From 1927 to 1949 he taught history at the College of the City of New York, becoming a full professor in 1947 He became a professor at Columbia in 1949 In 1930 he received the joint award of the Colonial Dames of America and the National Society of Colonial Dames for his contribution to American history His works include *Civilization in Europe* (with J S Schapiro, 1928), *A Guide to the Principal Sources for Early American History (1600–1800) in the City of New York* (with Evarts B Greene, 1929), *Studies in the History of American Law, with Special Reference to the Seventeenth and Eighteenth Centuries* (1930), and *Government and Labor in Early America* (1946) He edited *The Era of the American Revolution* (1939) and, with L L Snyder, *A Treasury of Great Reporting* (1949)

Morris, Richard Valentine, 1768–1815, American naval officer, b Morrisania, N Y (now part of the Bronx), son of Lewis Morris (1726–98) After the American Revolution he entered the navy and was commissioned captain in 1798 As commander of a squadron in 1802, he was sent to the Mediterranean to undertake negotiations with Tripoli, Algiers, Tunis, and Morocco (the Barbary States) Unsuccessful in concluding peace with Tripoli and unfortunate in dealing with the other powers, Morris was relieved of his command (1803), and his commission was revoked His pamphlet, *A Defense of the Conduct of Commodore Morris during His Command in the Mediterranean* (1804), which emphasized factors other than his ineffectiveness, is of importance to historians because in it he incorporated many official documents See G W Allen, *Our Navy and the Barbary Corsairs* (1905)

Morris, Robert, 1734–1806, American banker, "financier of the American Revolution," and signer of the Declaration of Independence, b Liverpool, England Morris came to America as a boy, entered business, and later (1754) became a partner of Thomas Willing in Philadelphia He opposed British restrictions prior to the Revolution and served (1775–78) as a member of the Continental Congress From 1781 to 1784 he was superintendent of finance at a period when financial ruin threatened Morris labored hard and well, he guided the organization of a national bank, retrenched expenditures, sought to force the states to supply money, and borrowed in Europe He also acted as marine agent of the new government Morris was convinced by his financial difficulties that a stronger national organization was necessary. He was a member of the Federal Convention of 1787 and later was Senator from Pennsylvania (1789–95) His private business, continued in his terms of office, was involved in difficulties by his speculation in Western lands and ultimately ended in bankruptcy The Holland Land Company got many of his lands Morris was in debtor's prison from 1798 to 1801 and never recovered his fortune See biographies by E. P Oberholtser (1903) and Eleanor Young (1950); W. G. Sumner, *The Financier and the Finances of the American Revolution* (1891).

Morris, Robert, c.1745–1815: see Morris, family.

Morris, Robert Hunter: see Morris, family

Morris, Roger, 1727–94, Loyalist in the American Revolution, b Yorkshire, England He came to America in 1755 as aide-de-camp to Edward Braddock and fought under James Wolfe at Quebec After his army service he settled (1764) in New York city His marriage to wealthy Mary Philipse made him prominent They lived in the famous Morris Mansion (later the Jumel Mansion) At the outbreak of the American Revolution, Morris was sympathetic to the British but refused to fight against the patriots His wife, **Mary Philipse Morris,** 1730–1825, inherited her wealth from her father, Frederic Philipse Handsome and imperious, she is said to have attracted numerous suitors, among them George Washington After her marriage, her property holdings—including a large estate in Putnam co., N Y.—were passed on to Roger Morris After she and her husband were attainted (1776) by the New York state legislature and after the family's property was confiscated, she returned (1783) with her husband and four children to England Her heirs (who by Mary Philipse's marriage settlement had a right to those estates and had not themselves been attainted) sold their reversionary interests to John Jacob Astor for £20,000 To this the British government added £17,000 in compensation for Morris's losses incurred by New York state's confiscation

Morris, William, 1834–96, English artist, writer, printer, and socialist, b Walthamstow, educated at Marlborough school, grad Exeter College, Oxford, 1855 At Oxford, Morris, with his lifelong friend Burne-Jones, found artistic and poetic inspiration in the Middle Ages and confirmed it by studies of French Gothic cathedrals and by reading John Ruskin Morris's life became one of perpetual experiments in expression, made possible by his father's modest fortune He wrote (1856) for the *Oxford and Cambridge Magazine,* though articled to an architect, he studied painting instead with D G Rossetti With friends he started in 1861 the firm of decorators later famous as Morris and Company, which made carvings, stained glass, carpets, wallpapers, chintzes, and furniture and which during its long career improved and refreshed Victorian taste In his factory he incorporated parts of what he found best in medieval society—the nearness of the designer-craftsman to his product and the essential equality of the craftsmen—and thus indirectly sponsored the Arts and Crafts movement His verse tales in *The Life and Death of Jason* (1867) and *The Earthly Paradise* (3 vols , 1868–70) were literary successes His Icelandic studies and trips resulted in translations of early sagas with his teacher, Eirikr Magnusson, and in Morris's epic poem, *Sigurd the Volsung* (1876) During the last 20 years of his life he wrote and worked to foster his kind of socialism His prose *Dream of John Ball* (1888) contrasts 19th- and 14th-century England, and *News from Nowhere* (1891) pictures a socialist utopia, while *Socialism Its Growth and Outcome* (1893) sets forth his historical position In 1883 he joined the socialist Democratic Federation and in 1885 went with those who seceded from it and formed the Socialist League That group became too anarchistic for him, and in 1890 he withdrew to the Hammersmith Socialist Society Meanwhile he had continued to write romances, including *The House of the Wolfings* (1889) and *The Wood Beyond the World* (1894) His last artistic venture was the Kelmscott Press in Hammersmith, where he designed the type, page borders, and bindings of fine books See his collected works (ed by May Morris, 24 vols , 1910–15), study of his art by Aylmer Vallance (1897), biographies by J W Mackail (2 vols , 1899), May Morris (2 vols , 1936), and L W Eshleman (1940), M R Grennan, *William Morris, Medievalist and Revolutionary* (1945)

Morris, William Richard, see Nuffield, William Richard Morris, 1st Viscount

Morris. 1 City (pop 6,145), co seat of Grundy co., NE Ill , on the Illinois river and SW of Chicago, in a coal and clay area; platted 1842, inc 1853 It is a shipping and industrial center, among its manufactures are paper and leather and limestone products Near by is Gebhard Woods State Park on the old Illinois and Michigan Canal. 2 City (pop 3,214), co. seat of Stevens co , W Minn., near the Pomme de Terre W of Glenwood, in a farm area; platted 1869, inc as a village 1878, as a city 1903 The West Central School of Agriculture and experiment station here (a branch of the state university) originated as a Roman Catholic mission school for Indians. Pomme de Terre State Park is near 3 City (pop 1,197), E central Okla., SE of Tulsa, in an oil region

Morris Brown College: see Atlanta, Ga.

Morrisburg, village (pop 1,575), SE Ont., on the St. Lawrence and WSW of Cornwall. Stoves, sheet-metal products, and brushes are made here. Ferry service connects it with Waddington, N Y.

morris dance or **morrice dance,** rustic dance of the north of England which had its origin in country festivals, such as those of May Day and Whitsunday. Reference to it in English literature is made

as early as the 15th cent. The main dancers were called Robin Hood, Maid Marian, the hobbyhorse, and the bavian or fool They were accompanied by a piper or taborer. An ambulatory dance, it was often performed from one village to another by the main dancers and six other dancers, three in a row The morris dance was a sword dance in many vicinities See E K Chambers, *The Mediaeval Stage* (1903), C. J. Sharp and H C Macilwaine, *The Morris Book* (5 vols , 1909–13)

Morris Island: see CHARLESTON, S C

Morris Jesup, Cape (jĕ'sŭp), northernmost land point in the world, N Greenland, in Peary Land At lat 83° 39′ N, it is 440 mi distant from the North Pole

Morrison, Arthur, 1863–1945, English novelist and critic of Oriental art His stories of London slums, *Tales of Mean Streets* (1894) and *A Child of the Jago* (1896), are powerful He also wrote an excellent detective series, built around the character Martin Hewitt, and *The Painters of Japan* (1911)

Morrison, Herbert Stanley, 1888–, British statesman Born in London of poor parents, he went to work at the age of 14 He entered the labor movement as a young man and became chairman of the London Labour party in 1915, a position he held until 1947 He was elected to Parliament in 1923 for a brief period and served again (1929–31), in the second Labour government of Ramsay MacDonald, he was minister of transport He was a member (1931–45) of the London County Council During his leadership in the council (1934–40) he brought the transit system of London under a unified system of public ownership and embarked on an ambitious program of slum clearance He was reelected to Parliament in 1935 In the Second World War he was home secretary and minister of home security (1940–45) and served as a member (1942–45) of Churchill's war cabinet With the Labour victory in 1945, Morrison became lord president of the privy council and leader in the House of Commons He spoke for self-government of the British colonies

Morrison, city (pop 3,187), co seat of Whiteside co , NW Ill , NE of Rock Island, in a farm and dairy area, founded 1855, inc 1867

Morrison, Mount, Chinese *Erh-shan* or *Ninkao-shan*, Jap *Niitakayama*, peak, 12,956 ft high, S Formosa It is the greatest elevation in Formosa

Morrison Cave State Park, SW Mont , on the Jefferson river and SE of Butte The large limestone cavern was in the former Lewis and Clark Cavern National Monument

Morrisonville, village (pop 1,206), central Ill , SSE of Springfield, in a farm region, inc 1872

Morris Plains, borough (pop 2,018), N N J , N of, and near, Morristown, inc 1926 Greystone Park, a state hospital for the mentally ill (1871), is near

Morristown. 1 Residential town (pop 15,270), co seat of Morris co , N N J , WNW of Newark, settled c 1710, inc 1865 Electrical products are made in the town Its old buildings include the Jabez Campfield House (now D A R property), where Alexander Hamilton courted Elizabeth Schuyler, 1779–80 The courthouse (1826) and the municipal building (built in 1918 as the home and museum of Theodore N Vail) are of interest S F B Morse and Alfred Vail worked in Morristown It was a home of Thomas Nast, Bret Harte, and Frank R Stockton The Seeing Eye establishment for training dogs to aid the blind is near here Morristown was important in Washington's Revolutionary campaigns, particularly in the winters 1776–77 and 1779–80 Morristown National Historical Park (958 37 acres, est 1933) includes the Ford House (Washington's quarters), a historical museum (1938) at the rear of the Ford House, the reconstructed Fort Nonsense, and the Jockey Hollow camp of the Revolutionary soldiers **2** Town (pop 8,050), co seat of Hamblen co , E Tenn , ENE of Knoxville, settled 1783, inc 1855 It is a dairy, poultry, and tobacco center in the fertile valley of a mountainous region Morristown Normal and Industrial College (junior, Negro) is here Cherokee Dam in the Holston and Douglas Dam in the French Broad are near by **3** Town (pop 3,130), N central Vt , N of Waterbury, in a farming and lumbering region, chartered 1781 by Moses Morse and others It includes Morrisville village (pop 1,967) A municipal hydroelectric plant was built in 1894 on the Lamoille

Morrisville. 1 Borough (pop 5,493), SE Pa , on the Delaware river opposite Trenton, N J , settled c 1772, inc 1804. It is a farm trade center with a large residential section Washington had headquarters here Dec 8–14, 1776 Near by is William Penn's manor, Pennsbury, the reconstruction of which was completed in 1940 **2** Village, Vt see MORRISTOWN

Morro Castle (mŏ'rō), fort at the entrance to the harbor of Havana, Cuba It was erected in 1589 to protect the city from English, French, and Dutch buccaneers The fort was also used as a prison Morro Castle was captured by the British under Sir George Pocock in 1762 The fort at the entrance to the harbor of Santiago de Cuba is also called Morro Castle and was built shortly after the Morro Castle of Havana It was taken by the American forces in the Spanish-American War (1898) Morro Castle on the harbor of San Juan, Puerto Rico, is also a picturesque old Spanish fort

Morrow, Dwight Whitney, 1873–1931, American banker and diplomat, b Huntington, W Va , grad Amherst College (1895) and Columbia School of Law, 1899. He practiced law in New York city and, interested in banking and finance, entered (1914) the banking house of J P Morgan and Company After the United States entered the First World War, he was made a member of the transport council and chief civilian aide to Gen John J Pershing In the midst of the ill feeling aroused by the Mexican laws expropriating American holdings in Mexico, President Calvin Coolidge appointed (1927) Morrow ambassador to Mexico His service was notable because it marked a new spirit in U S relations with Latin America, the spirit of cooperation He was afterwards (1930) a delegate to the London Naval Conference and served (1930–31) in the U S Senate His daughter, Anne Spencer Morrow, married Charles A LINDBERGH See biography by Harold Nicolson (1935)

Morrow, Prince Albert, 1846–1913, American physician, b Mt Vernon, Ky , M D New York Univ , 1874 A specialist in dermatology and venereal diseases, he is also known for his work in social hygiene He advocated public dissemination of medical information on venereal diseases and instruction in sex hygiene and wrote several books on these subjects

Mors (môrs), island (140 sq mi , pop 26,988), Denmark, in the LIM FJORD It has fertile agricultural soil and there are oyster fisheries Nykobing is the chief town

Morse, Edward Sylvester, 1838–1925, American zoologist, b Salem, Mass He was an authority on brachiopods in the waters along the Atlantic coast and in the Pacific Ocean He was professor of zoology at Bowdoin College (1871–74) and later at the Tokyo Imperial Univ (1877–80) His invaluable collection of Japanese potteries (the Morse collection) was bought by the Museum of Fine Arts, Boston, which appointed Morse as its curator In 1901 he issued the noted catalogue of the collection He was well versed in many branches of science and art including astronomy, archaeology, and anthropology, and was a founder of the *American Naturalist* He was after 1880 director of the Peabody Museum Among his writings are *Japanese Homes* (1886), *Glimpses of China* (1902), and *Mars and Its Mystery* (1906)

Morse, Jedidiah, 1761–1826, American Congregational clergyman, b Woodstock, Conn , grad Yale, 1783 He taught and preached before his ordination in 1786, and in 1789 he became minister of Charlestown, Mass , where he remained 30 years A staunch conservative, he opposed Unitarianism and in 1805 founded the *Panoplist* He was interested in improving the lot of the Indians, and in 1820 he was appointed to visit various tribes, the result was the well-known *Report to the Secretary of War* (1822) He produced a series of textbooks in geography that were widely used He also wrote on the history of New England and on the American Revolution Sidney Edwards Morse and S F B Morse were his sons

Morse, John Torrey, 1840–1937, American lawyer and biographer, b Boston, grad Harvard, 1860 Admitted to the bar in 1862, he practiced law in Boston until 1880, when he turned all his attention to writing With Henry Cabot Lodge he was for a time editor of the *International Review* He wrote books on law and biographies, including those of Alexander Hamilton (1876) and O W Holmes (1896), in addition to his biographies of Abraham Lincoln, John Quincy Adams, Thomas Jefferson, and Benjamin Franklin for the "American Statesmen" series, of which he was editor

Morse, Samuel Finley Breese, 1791–1872, American inventor and artist, b Charlestown, Mass , grad Yale, 1810 He studied painting in England under Washington Allston and achieved some success with his paintings *The Dying Hercules* and *The Judgment of Jupiter* He returned to the United States in 1815, took up portrait painting, and gained considerable reputation He was a founder (1825) of the National Academy of Design He spent the years from 1829 to 1832 in further European study His interest in electricity began in his college days, it was further aroused by the lectures of James F Dana in 1827 and later by contacts with members of the faculty of New York Univ The idea for the electric telegraph occurred to him in 1832, and for the next 12 years he worked, with the aid of Leonard Gale, Joseph Henry, and Alfred Vail, to perfect his instrument. In 1844 Morse demonstrated to Congress its practicality by transmitting messages over a wire from Washington to Baltimore (see MORSE CODE) Morse subsequently was compelled to defend his invention in court, although he commanded the acclaim of the world He later experimented with submarine cable telegraphy Both Morse and John Draper were instrumental in introducing the daguerreotype into the United States See biographies by S I Prime (1875), E L Morse (1914), H B. Wehle (1932), and F C Mabee (1943)

Morse, Sidney Edwards, 1794–1871, American journalist, inventor, and geographer, b Charlestown, Mass , grad Yale, 1811, son of Jedidiah Morse and brother of S F B Morse With his brother Richard Cary Morse he founded in 1823 the *New-York Observer*, a religious weekly which he edited until 1858 He was conventor (c 1839) of a method (cerography) of making stereotype plates which permitted the printing of colored maps with type He perfected (1866) the bathometer, an instrument for exploring the ocean floor Morse edited (some in collaboration with his father) and wrote many geography textbooks His works include *A New System of Modern Geography* (1822), *The Cerographic Atlas of the United States* (1842–45), and *Premium Questions on Slavery* (1860)

Morse code [for S F B Morse], the arbitrary set of signals used on the TELEGRAPH The international (or continental) Morse code is a simplified form generally used in radio telegraphy The American Morse differs from the international in 11 letters, in all the numerals except the numeral 4, and in the punctuation The unit of the code is the *dot*, representing a very brief depression of the telegraph key The *dash* represents a depression lasting three times as long as a dot Between the depressions there is a pause equal in time to one dot, except in a few letters and signs, when there is a wait of two dots The pause between letters in a word lasts as long as one dash, between words it lasts as long as two dashes The international Morse is as follows (all but the starred letters are the same in the American Morse)

A . –	J* . – – –	R*. – .
B – . . .	K – . –	S . . .
C*– . – .	L* . – . .	T –
D – . .	M – –	U . . –

mortality see VITAL STATISTICS

mortar, mixture of lime or cement with sand and water, used in building as a bedding and adhesive between adjacent pieces of stone, brick, or other material in masonry construction Lime mortar, a common variety, consists usually of one volume of well-slaked lime to three or four volumes of sand, thoroughly mixed with sufficient water to make a uniform paste easily handled on a trowel Lime mortar hardens by absorption of carbonic acid from the air Once universally used, lime mortar is now less important, because it does not have the property of setting under water and because of its comparatively low strength It has largely been supplanted by cement mortar, commonly made of one volume of Portland cement to two or three volumes of sand, usually with a quantity of lime paste added to give a more workable mix Cement mortar, besides having a high strength, generally equal to that of brick itself, has the very great advantage of setting or hardening under water by a process of crystallization Other varieties include gauge mortar, for rapid setting, composed of plaster of Paris either used pure or combined with lime or with lime and sand and grout, a thin liquid mixture of lime or cement, poured into masonry to fill up small interstices Primitive mortars took various forms in early Egypt, Nile mud was used as an adhesive, the Mesopotamians used bitumen (the slime mentioned in Genesis) or sometimes a mixture of clay, water, and chopped straw, to cement together their unbaked bricks, Greeks of the Mycenaean era probably employed a soft bituminous clay The advanced Greek buildings are notable for their construction without mortar, the huge blocks of stone being consummately fitted with dry beds The Romans likewise used little mortar in cut stonework or vaulting, but in later periods bedded the rough stone of their mass masonry in a strong cement mortar In medieval times and in all periods since, mortar of some sort has been almost universally used in masonry construction

mortar, in warfare, field piece which fires projectiles at a high trajectory Mortars vary greatly in size, but are most commonly used as a light field piece by infantry, their greatest value lies in the ease of emplacement and ease of management The mortar is not classed as artillery The length of a mortar is much shorter in relation to its caliber than

is that of other guns (e g., the howitzer) Its aim may be altered by changing either the angle or the fire power The largest mortar ever used by the Germans was at the siege (1941–42) of Sevastopol in the Second World War.

mortar and pestle (pĕs'sĭl), a vessel and tool used for pulverizing They date from prehistoric times and were at first used chiefly for making flour. The mortar is usually basin or vase shaped, the pestle is elongated and has a flattened knob at one or both ends. They have been made in a variety of sizes and of many materials, including stoneware, glass, cast iron, **brass**, and agate The mortar and pestle symbolize the apothecary.

Morte d'Arthur (môrt' dur'thûr), work by Sir Thomas MALORY on the ARTHURIAN LEGEND, published (1485) by William Caxton Alfred TENNYSON later used the same title for part of "The Passing of Arthur," one of the *Idylls of the King*

Morteratsch (môr'tŭrăch), glacier, at the foot of the **Piz Morteratsch** (pēts'), 12,315 ft high, in the BERNINA group, Switzerland

mortgage (môr'gĭj), in law, a device for protecting a creditor by giving him an interest in property of his debtor The form of the transaction, generally, is a sale upon condition subsequent, i e., the mortgagor sells realty (real property mortgage) or personal property (chattel mortgage) on the condition that if the debt is repaid by a certain time the sale will be rescinded The mortgagor continues in possession until, following default, the mortgagee brings suit to foreclose the mortgagor's right to redeem the property The mortgagee by his technical purchase has the legal title to the property and the mortgagor's equity (right) of redemption gives him the equitable title, both estates are salable During economic depressions excessive foreclosures of real property mortgages may threaten realty values In such emergencies many states enacted temporary mortgage moratorium statutes which forbid foreclosure if a given rate of interest is paid on the indebtedness

Mort Homme, Le (lu môrtôm') [Fr ,=the dead man], hill, 968 ft high, NE France, NW of Verdun During the French defense of Verdun in the First World War, it was the scene of murderous fighting and was recaptured by the French in 1916

Mortier, Édouard Adolphe Casimir Joseph (ādwăr' ädôlf' kăzēmēr' zhôzĕf' môrtyā'), 1768–1835, marshal of France He held high commands under Napoleon, who created him duke of Treviso Mortier was one of those who refused to judge at the court-martial of Michel NEY He was killed in the attempt by FIESCHI on the life of Louis Philippe

mortification: see GANGRENE

Mortimer, Edmund de, 3d **earl of March** and 1st **earl of Ulster,** 1351–81, English nobleman He succeeded (1360) his father Roger, 2d earl of March, married (1368) Philippa, daughter of Edward III's son Lionel of Antwerp, and on Lionel's death (1368) inherited his estates and the title of earl of Ulster Later the house of York traced to this union the claim to the throne which resulted in the Wars of the Roses Mortimer held the office of marshal of England from 1369 to 1377 and supported the constitutional party in opposition to John of Gaunt After the accession of Richard II (1377) he was a member of the council set up to rule for the boy king, but in 1379 he was sent as lieutenant of Ireland to subdue Irish unrest His daughter Elizabeth married Henry Percy, called Hotspur

Mortimer, Edmund de, 5th **earl of March** and 3d **earl of Ulster,** 1391–1425, English nobleman He succeeded (1398) his father, Roger de Mortimer, as earl of March and Ulster and as the heir presumptive to the throne. After the Lancastrian revolution (1399) and the coronation of Henry IV, Mortimer was imprisoned, although allowed to inherit his estates Unsuccessful attempts to effect his escape were made by partisans who supported his claim to the throne, but after the accession of Henry V (1413), he was released, served Henry in the French wars, refused to countenance plots of partisans (including his uncle, Sir Edmund de Mortimer) to raise him to the throne and even denounced a body of these conspirators to the king After Henry V's death, Mortimer became (1422) a member of the regency council, but in 1424 was required to take the post of lieutenant of Ireland, where his death by plague ended the male line of the earls of March His heiress was his sister Anne, whose son by Richard, earl of Cambridge, was Richard, duke of York, father of Edward IV and Richard III

Mortimer, Sir Edmund de, 1376–1409?, English noble and rebel in the reign of HENRY IV, youngest son of Edmund de Mortimer, 3d earl of March In 1398 when young Edmund, 5th earl, nephew of Sir Edmund de Mortimer, succeeded to the title while still a minor, Sir Edmund became the most powerful representative of his family and enjoyed the favor of Henry of Lancaster when the latter acceded to the throne as Henry IV. In 1402 Mortimer was captured by the rebellious Welshman, OWEN GLENDOWER. When the suspicious king forbade his ransom, Edmund entered an alliance with Glendower and married his daughter. Supporting the right of the young earl of March to the throne, he and Glendower continued to fight even after Henry Percy, Mortimer's brother-in-law and ally, was defeated and slain at Shrewsbury (1403). In 1405 Mortimer signed a treaty to partition England and Wales with Glendower and Henry Percy, 1st earl of NORTHUMBERLAND. As Glendower continued to suffer defeats, Mortimer's own effectiveness declined, and he died when besieged by royal forces

Mortimer, Roger de, 1st **earl of March,** 1287?–1330, English nobleman. He inherited (c 1304) the vast estates and the title of his father Edmund, 7th baron of Wigmore Under Edward II he was (1316–21) warden of Ireland, his efforts to consolidate his own estates and to pacify the English possessions there met with only moderate success, although during his viceroyalty (1316–21) Edward Bruce was finally defeated (1318) In the same period, however, he and his uncle, Roger Mortimer, obtained control of the Welsh Marches He opposed EDWARD II and the Despensers in the wars of 1321–22, surrendered, and was imprisoned, but escaped in 1324 to France There Queen ISABELLA of England, on a mission to her brother, Charles IV of France, became his mistress Mortimer and Isabella invaded England (1326) and routed Edward II, whom they forced to abdicate and later had murdered They secured the crown for young EDWARD III (1327) With Isabella, Mortimer virtually ruled England and acquired great wealth He became earl of March in 1328 Finally in 1330 he was seized by Edward III, tried and convicted by Parliament on several charges of corruption, and executed

Mortimer, Roger de, 4th **earl of March** and 2d **earl of Ulster,** 1374–98, English nobleman He succeeded (1381) his father Edmund, 3d earl of March Because of his lineage, he was brought up as a royal ward under the care of Thomas Holland, earl of Kent, whose daughter Eleanor he married (1388) In 1385 Richard II proclaimed him heir presumptive to the throne He came into possession of his estates in 1393, and in 1394 he went to Ireland with Richard II to subdue the rebel Irish chiefs His bravery, prowess, and liberality gained him great popularity with the people but stirred up animosity among court rivals However, their plot against him failed to develop before his death in a battle with the clans of Leinster

Mortimer's Cross, locality, Herefordshire, England, c 5 mi N of Leominster It was the scene of a battle in the Wars of the Roses, which ended with a decisive victory for the Yorkist forces under Edward, duke of York, over the Lancastrians under Jasper Tudor, earl of Pembroke Edward then marched to London, where he proclaimed himself Edward IV

Mortlake, parish, Surrey, England, on the Thames, W of London and near Richmond It is the terminus of the Oxford-Cambridge boat races, which begin at Putney The tapestry industry for which Mortlake became famous was established by James I

mortmain (môrt'mān") [Fr ,=dead hand], ownership of land by a religious, charitable, or business corporation Since a corporation is an imperishable legal entity (a juridical person), it can hold property permanently, in effect it is as if a dead hand, one whose control could never be relaxed, has the ownership A disadvantage of such ownership is that property instead of being periodically redistributed on the death of the owner accumulates in ever-enlarging estates. The vast landholdings of religious corporations were long considered a danger by the secular authorities Estates bequeathed as alms offerings to monasteries and similar religious corporations were generally exempt from taxation and payment of feudal dues The burden on secular property was thereby greatly increased In England attempts to limit ecclesiastical mortmain go back to the 13th cent , and elsewhere in Europe there was often conflict between Church and state on this matter. The right of religious bodies to own land was in general highly restricted by the late 19th cent In many countries the principle prevailed that ecclesiastical ownership must be limited to absolutely necessary holdings Limitation on the property rights of business corporations was usually associated with mortmain law, but in time these restrictions were all but removed in most countries In the United States ecclesiastic mortmain was never a serious problem, and the statutes on the subject in several states are essentially inoperative vestiges of the former English law See H C Lea, *The Dead Hand* (1900), Carl Zollman, *American Civil Church Law* (1917)

Morton, Henry, 1837–1902, American scientist and educator, b New York city, M A Univ. of Pennsylvania, 1857 He served as professor of chemistry at Philadelphia Dental College (1863) and at the Univ. of Pennsylvania (1868–70) and in 1870 became the first president of Stevens Institute of Technology. His researches include work on fluorescence, artificial lighting, Roentgen rays, and liquid air.

Morton, James Douglas, 4th **earl of,** d. 1581, regent of Scotland (1572–78). A nephew of Archibald DOUGLAS, 6th earl of Angus, he married Elizabeth Douglas, from whose father he inherited (1553) the earldom of Morton A member of the Protestant party, he became lord high chancellor of Scotland in 1563 He was a principal in the murder of David RIZZIO (1566) and fled thereafter to England. Pardoned, he returned to Scotland the following year after Mary's marriage to BOTHWELL. He turned against Bothwell, however, and against Mary, whose forces he defeated at Langside (1568). He was chief counselor to the regent James Stuart, 1st earl of MURRAY, and became regent himself (1572) on the death of the earl of Mar His rule was devoted to the pacification of a religiously divided and war-torn Scotland In 1578 he was forced out by a junta of nobles, who persuaded the boy king, James VI, to assert his power. Morton attempted to reestablish himself and seized Stirling Castle and the person of the young king, but in 1581 a plot against him resulted in his being tried, convicted, and beheaded for taking part in the murder of DARNLEY. Morton possessed for some time the *Casket Letters* (see MARY QUEEN OF SCOTS), which implicated Mary in Darnley's death.

Morton, John, c.1420–1500, English prelate and statesman, cardinal of the Roman Church, b Dorsetshire, educated at Oxford He studied law and began practice in the London ecclesiastical courts A supporter of the Lancastrian party in the wars of the ROSES, he received a number of church livings, but after the Yorkist victory of Towton (1461) he was attainted and lived in exile at the court of Margaret of Anjou He returned to England in 1470, taking an active part in the coalition against EDWARD IV, but after Edward's victory at Tewkesbury (1471), his petition to Edward for a reversal of his attainder was granted He was made a master of the rolls in 1473, was sent on a mission to Hungary (1474), and became bishop of Ely in 1479. Arrested after the accession of Richard III, he escaped to Flanders and was recalled by Henry VII on his accession in 1485 Morton became the king's principal counselor, was made archbishop of Canterbury (1486) and lord chancellor (1487), and was created a cardinal in 1493 He probably was the author of the original Latin version of *The History of Richard III*, which is usually ascribed to Sir Thomas More See biography by R. I Woodhouse (1895)

Morton, John, c 1724–1777, American Revolutionary patriot, signer of the Declaration of Independence, b near Glenolden, Pa He was a member of the Pennsylvania assembly (1756–66, 1769–75), the Stamp Act Congress (1765), and the Continental Congress (1774–77).

Morton, Julius Sterling, 1832–1902, American cabinet officer, b Adams, N Y , studied at the Univ of Michigan He settled in Nebraska (1854), founded the pioneer Nebraska City *News*, and became territorial secretary In 1872 he originated ARBOR DAY for tree planting, since 1885 a legal holiday in Nebraska on April 22, Morton's birthday He was Secretary of Agriculture (1893–97) under Grover Cleveland His landed estate at Nebraska City became a memorial park

Morton, Levi Parsons, 1824–1920, American banker and statesman, Vice President of the United States (1889–93), b Shoreham, Addison co , Vt He engaged in business in Hanover, N Y , after 1845 and then removed (1850) to Boston He entered (1854) the dry-goods business in New York city and in 1863 organized the banking firm of Levi P. Morton and Company—which became one of the more important financial organizations in the country In 1869 he founded Morton, Bliss and Company, and in 1899 he regrouped his holdings in the Morton Trust Company Meanwhile, he had become interested in politics and served in Congress (1879–81) and as U.S minister (1881–85) to France before he was elected (1888) Vice President on the Republican party ticket along with President Benjamin Harrison He was later (1895–97) governor of New York. See biography by R. M McElroy (1930)

Morton, Oliver Perry, 1823–77, Civil War governor of Indiana (1861–67), b Salisbury, Wayne co , Ind. He left Miami Univ in 1845 to study law, was admitted (1847) to the bar, and began practice in Centerville, Ind Morton helped organize the Republican party in Indiana and was its unsuccessful candidate for governor in 1856 When Gov Henry S Lane went to the Senate in 1861, Morton, as lieutenant governor, succeeded him, he was elected to the office in his own right in 1864 Despite having to contend with a hostile Democratic legislature for part of his tenure, he was one of the ablest of the war governors and a strong supporter of the Lincoln administration In 1867 he resigned to enter the Senate, where he served till his death There, as one of the leading radical Republicans, he fostered extremist Reconstruction legislation and was prominent in the impeachment of President Andrew Johnson He was a member of the electoral commission in the disputed presidential contest of 1876. See biography by W. D. Foulke (1899); W. B Hesseltine, *Lincoln and the War Governors* (1948).

Morton, Rosalie Slaughter, 1876–, American surgeon, b. Lynchburg, Va., M.D. Woman's Medical College of Pennsylvania, 1897 She was the first woman member of the faculties both of the New York Polyclinic Medical School and Hospital (1912–18) and of the College of Physicians and Surgeons (1916–18) During the First World War she was active in hospital work especially during the Salonica campaigns and in Yugoslavia, Serbia, and France For this work and for her efforts which made possible the education in the United States of 60 Serbian students, she was decorated by foreign governments and by the state of New York After 1930 she engaged in private practice in Florida. She took part in public health and welfare activities, invented a number of surgical instruments and appliances, and wrote many articles, especially on gynecology and arthritis. See her autobiography, *Woman Surgeon* (1937).

Morton, Sarah Wentworth, 1759–1846, American poet, b. Boston. The descendant of wealthy Boston merchants, Sarah Apthorp (she herself took her mother's maiden name, Wentworth) received an education unusual for girls of her day She moved in the best Massachusetts social circles and in 1781 married a brilliant Boston lawyer, Perez Morton Soon afterward she contributed to the *Massachusetts Magazine*, and later to other periodicals, poems that were given high praise Her pseudonym, Philenia (adopted after surrendering her first pseudonym, Constantia, to Judith Sargent Murray, who had prior claims), became widely known Mrs Morton's long poems, didactic, patriotic, sentimental, and lachrymose, were in strict imitation of English 18th-century styles Published in book form were *Ouâbi; or, The Virtues of Nature, an Indian Tale* (1790), two parts of a projected history of the American Revolution in verse, *Beacon Hill, a Local Poem, Historic and Descriptive* (1797) and *The Virtues of Society* (1799); and an odd collection of prose and verse scraps, *My Mind and Its Thoughts* (1823?). Her name is best known as the reputed author of the first American novel, *The Power of Sympathy* (1789) That work contains a highly colored episode reflecting a scandal that involved Perez Morton and Mrs Morton's sister There seems to be no real evidence for thinking her the author, and there is evidence for assigning the book to William Hill Brown See Emily Pendleton and Milton Ellis, *Philenia* (1931)

Morton, Thomas, fl 1622–47, British trader and adventurer He went to New England in 1622 and again in 1625 with Captain Wollaston, who founded a settlement in Massachusetts at Mt Wollaston (now Quincy) When Wollaston went to Virginia, Morton took charge of the settlement, which was renamed Ma-re Mount, whence it was called Merry Mount The Plymouth settlers objected to Morton and his companions, who were of the Anglican faith and who started a rival fur trade with the Indians His revelry about the Maypole at Merry Mount scandalized the Pilgrims A force under Miles Standish, prodded by John Endecott, seized Morton, who was sent (1628) to England on charges of trading arms to the Indians and harboring runaway servants He returned in 1629 and resumed his fur trading, but upon renewal of his trouble was again brought to court (1630) and sent to England There he was employed by Sir Ferdinando Gorges as legal counsel in the attempt to void the charter of the Massachusetts Bay Company Going once more to New England, he was imprisoned in Boston (1644–45). Later he moved to Maine, where he died His book, *New English Canaan* (1637, reprinted 1883, with notes by Charles Francis Adams, 1835–1915), gives his views of New England Morton's adventures are the subject of Nathaniel Hawthorne's story, "The Maypole of Merry Mount," and of two novels by John Lothrop Motley

Morton, William Thomas Green, 1819–68, American dentist and physician, b Charlton, Mass , studied at Baltimore College of Dental Surgery He practiced dentistry in Boston, for a time with Horace Wells, whose unsuccessful demonstration of laughing gas he sponsored in 1845. C T Jackson interested him in ether anesthesia, and in 1846 Morton demonstrated its use at Massachusetts General Hospital during an operation performed by J. C Warren. H J Bigelow wrote the published account. The prior work of C W Long had not then been made public Morton's subsequent efforts to patent his ether preparation under the name of letheon were sharply criticised See J T. Flexner, *Doctors on Horseback* (1937)

Morton. 1 Village (pop 2,241), central Ill , just SE of Peoria; inc 1877. It is a processing center in a farm area **2** Borough (pop 1,316), Delaware co , SE Pa , inc. 1898. **3** Town (pop 1,137), co. seat of Cochran co., NW Texas, WNW of Lubbock on the Llano Estacado; inc 1934. It is in an area of ranches and poultry and grain farms and has an oil refinery.

Morton Grove, village (pop. 2,010), NE Ill , near Evanston; inc. 1895.

Mortons Gap, town (pop. 1,072), W Ky., SSW of Owensboro, in a coal and farm area. Thomas Morton's house (1804) is standing.

Morvan (môrvä'), mountainous region, E central France, in Nivernais and Burgundy The northernmost part of the Massif Central, it rises to 2,959 ft Here the Yonne river has its source. Cattle raising is the industry

mosaic (mōzā'ĭk), art of arranging differently colored pieces of marble, glass, tile, wood, or other material in such fashion as to produce a surface ornament In Egypt and Mesopotamia furniture, small architectural features, and jewelry were occasionally adorned with inset bits of enamel, glass, and colored stone Roman marble floor mosaics were no doubt based upon Greek examples, and glass mosaics applied to columns, niches, and fountains are to be seen at Pompeii In Italy and the Roman colonies the floor patterns were produced both by large slabs of marble in contrasting colors (*opus sectile*) and by small marble tesserae or cubes (*opus tessellatum*) The tessera floors varied from simple geometrical patterns in black and white to huge pictorial arrangements of figures and animals, examples were found in Rome, Pompeii, and North Africa In the early centuries A D glass mosaics brought color and decoration to the broad walls of the basilicas By the 4th cent the triumphal arch between nave and apse and the walls above the nave arcades received mosaic adornment, while the entire domed apse was lined with a mosaic picture, generally that of Christ surrounded by saints and apostles In this period Byzantium (Constantinople) became the center of the craft, which reached perfection in the 6th cent Hagia Sophia exhibits glittering gold backgrounds, a special feature of Eastern mosaic art which later spread to the West A gold tessera was produced by applying gold leaf to a glass cube and covering it with a thin glass film to protect against tarnishing, for the other tesserae the colors were produced by metallic oxides The numberless tesserae were set by hand in the damp cement mortar, and the resulting irregularities, causing the facets to reflect at different angles, were an essential factor of effect In the West the mosaicists composed, in glorious effects of color, complete pictorial schemes In the 5th and 6th cent Ravenna became the Western shrine of Byzantine mosaic, and these examples, as well as those in Rome, show the Byzantine characteristics of stylized rigidity in the figures, symbolism of ornament, and naïveté of composition Owing to the importation of Greek workmen, a revival took place in Italy in the 11th cent which lasted into the 13th cent , producing the beautiful mural works of Rome, of Saint Mark's Church and Torcello at Venice, and of Palermo, Monreale, and Cefalù in Sicily The glorious gold backgrounds of Constantinople are often repeated, notably at St Mark's. Byzantine influence was also expressed in the rich medieval mosaic floors of Italy, Sicily, and the East These purely geometrical patterns achieved by bands and slabs of marble contrasting with tesselated areas are termed *opus Alexandrinum* From the 12th cent , mosaic in Italy and Sicily, extended to many architectural elements, such as pulpits, bishops' thrones, paschal candlesticks, and the twisted columns of cloisters These adornments are commonly termed Cosmati work, after the family of Roman craftsmen especially gifted in their execution. The rise of fresco decoration in the early 14th cent in Italy superseded mosaic, which then began to deteriorate into mere simulation of painting, though it lingered in Greece and Constantinople The Gothic revival of the 19th cent produced some modern attempts, as in Westminster Abbey and the houses of Parliament In the 20th cent. the medium has been used with truer understanding, as in the modernist mosaics for the Stockholm town hall In modern work the ancient system is followed as well as a new method of fastening the tesserae with glue upon a paper cartoon drawn in reverse, applying fairly large sections of this into proper position upon the damp mortar, and then washing away the paper after the mortar has hardened and the tesserae have set See E W Anthony, *A History of Mosaics* (1935)

Mosander, Carl Gustav (kärl' gŭs'tăv mōsēn'dur), 1797–1858, Swedish chemist and mineralogist A pupil, friend, and assistant of Berzelius, he was for many years professor of chemistry and mineralogy at Caroline Institute, Stockholm He demonstrated the complexity of two of the rare earths, ceria and yttria In 1839 he discovered in crude ceria the oxides of two new elements, cerium and lanthanum, in 1841 he isolated an oxide which he thought contained a new metal, didymium (see neodymium), and in 1843 he pointed to the presence in yttria of new elements that were later isolated by other scientists.

Mosby, John Singleton (mōz'bē), 1833–1916, Confederate partisan leader, b Powhatan co , Va , grad. Univ. of Virginia, 1852 He was practicing law in Bristol, Va , when the Civil War broke out Mosby served brilliantly in the cavalry under J E B Stuart until Jan , 1863, when he began his partisan operations in N Virginia—soon called "Mosby's Confederacy." Moving swiftly and secretly, Mosby's men (who never numbered more than 200) continually routed Federal cavalry, destroyed communications, appropriated supplies, and were, in general, a great nuisance to the Army of the Potomac. Perhaps Mosby's most famous exploit was the capture of Gen Edwin H Stoughton at Fairfax Courthouse in March, 1863. Protected by the people of the region, Mosby's Partisan Rangers eluded the strong forces sent to capture them and were active till Lee surrendered. Mosby secured his parole only through the intercession of Grant, of whom he naturally became a great admirer He joined the Republican party and later held minor government positions He wrote *Mosby's War Reminiscences and Stuart's Cavalry Campaigns* (1887) and *Stuart's Cavalry in the Gettysburg Campaign* (1908) See J J Williamson, *Mosby's Rangers* (1896); C W Russell, ed , *The Memoirs of Colonel John S Mosby* (1917), V. C Jones, *Ranger Mosby* (1944)

Moschus (mŏ'skus), fl c 150 B C , Greek bucolic poet of the school of Theocritus He is called a Syracusan and lived in Alexandria An idyl on Europa is among his few extant pieces *Lament for Bion*, a beautiful dirge traditionally ascribed to Moschus, is probably of later date.

Moscow (mŏ'skou, mŏ'skō), Rus. *Moskva* (mŭskvä'), city (125 sq mi , pop 4,137,018), capital of the USSR, of the RSFSR, and of Moscow oblast, central European RSFSR, on the Moskva river near its junction with the Moscow Canal The largest city of the Soviet Union, it also is its leading political, industrial, and cultural center and a focal point for rail, river, and air transportation It is the seat of numerous cultural and scientific institutions, notably of the Univ of Moscow (founded 1755), of the Academy of Sciences of the USSR, of a famous conservatory of music, and of the Tretyakov art gallery, and it is the center of Soviet publishing Among its many theaters are the Moscow Art Theatre and the Bolshoi Theater (opera and ballet) Moscow also is the see of a patriarch, head of the Orthodox Eastern Church in Russia, and the headquarters of the Communist party in the USSR The industrial output of Moscow represents about 15 percent of the total Soviet production Quality steels, machinery and machine tools, precision instruments, automobiles, aircraft, electric locomotives and motors, chemicals, wood and paper products, and textiles are the chief industries A subway system, remarkable for the esthetic care lavished on the stations, was opened in 1935 Administratively, Moscow is directly subordinated to the government of the RSFSR It is governed by a city council and is divided into 25 districts First mentioned in 1147, Moscow became (c 1271) the seat of the grand dukes of Suzdal-Vladimir, who later assumed the title grand dukes of Moscow (see Moscow, grand duchy of) It thus became the capital of the modern Russian state In 1713 Peter I transferred the government to St Petersburg (now Leningrad), which became the new capital, but the Soviet regime in 1918 made Moscow again the sole capital Moscow was burned down by the Tatars in 1381 and again in 1572 During the Time of Troubles (see Russia), it was taken by the Poles but was liberated (1612) by a people's army under Prince Pozharski and the merchant Minin Moscow until the 19th cent was largely built of wood and therefore suffered from many conflagrations The most famous fire of Moscow broke out in Sept , 1812, after its occupation by Napoleon I Nearly the entire city, except the great stone churches and palaces, burned down The exact cause of the fire is uncertain, Rostopchin denied the accusation of having commanded the city to be fired in order to drive out the French It is likely that the fire was accidentally begun by French looters and that it was intentionally fanned by fanatic patriots among the handful of Russians who had remained behind when Napoleon entered the city Rebuilt, Moscow developed as a major industrial center Despite the transfer of the government to St Petersburg, Moscow had never ceased to be the religious center of Russia Its cultural and social life also continued uninterrupted Under the Soviet regime the city underwent spectacular growth, and its population doubled between 1926 and 1939 In the Second World War, Moscow was the goal of a two-pronged German drive late in 1941. Although the spearheads of the German columns were stopped (Dec , 1941) at but 20 to 25 mi from the center of the city, Moscow suffered virtually no war damage The center of Moscow is the famous Kremlin, a walled city in itself Its walls represent the city limits as of the late 15th cent Adjoining the Kremlin in the east is the vast Red Square, originally a market place and a meeting place for popular assemblies, it still is used as a parade ground and for demonstrations. On the west side of the Red Square and along the Kremlin wall are the Lenin Mausoleum and the tombs of other Soviet figures, notably Maxim Gorki, on the north side is the historical museum (19th cent.), and at the southern end stands the imposing cathedral of Basil the Beatified One of the most exuberant examples of Russian architecture, the cathedral was built in the 16th cent , each of its numerous cupolas, grouped around a central dome, is of different design and painted in different colors, yet

the general impression is a happy combination of variety and unity. The monument to Minin and Pozharski stands in front of the cathedral. To the east of the Red Square extends the old district of Kitaigorod [Chinatown], once the quarter of the merchants, later the banking section, and now taken up by various ministries and government offices. Gorki St., one of the main thoroughfares, extends N from the Kremlin, it is lined with large modern buildings, including that of the council of ministers, and is continued by the Leningrad Highway, which passes the huge Dynamo stadium and the central airport. Near the beginning of Gorki St. is the large Sverdlov Square, with the Bolshoi [great] Theater and the Maly [little] Theater, also called Ostrovsky Theater. Except for its historical core, Moscow has been transformed into a modern city under the Soviet regime. Among the large modern structures the best known are the Moskva Hotel, near Sverdlov Square, and the Palace of Culture, the workers' club building of the Stalin automobile plant. The construction of the Palace of the Soviets, which is to be more than 1,300 ft. tall, was delayed by the Second World War. Moscow has numerous large parks and recreation areas, notably the Gorki Central Park, in the southwest, the forested Ismailovo and Sokolniki parks in the eastern and northeastern outskirts, and Ostankino Park, with large botanical gardens, in the north.

Moscow. 1 (mŏs'kō) City (pop. 6,014), co. seat of Latah co., NW Idaho, at the Wash. boundary N of Lewiston, founded 1871. It is a shipping and marketing center for an agricultural and wheat-raising area. The Univ. of Idaho (see IDAHO, UNIVERSITY OF) and a school of forestry experimental station are here. 2 (mŏs'kou) Borough (pop. 1,097), NE Pa., SE of Scranton, settled 1830. Maple syrup is made here.

Moscow, grand duchy of. Among the principalities of central RUSSIA in the 12th and 13th cent., the principality of Suzdal-Vladimir (see VLADIMIR), in which the present city of Moscow was a mere fortified village, was the most important. The rulers of Vladimir were the only Russian princes who bore the title grand duke, and they were regarded as suzerains of the other princes. Daniel, son of Grand Duke Alexander Nevsky, founded (c. 1271) the principality of Moscow or Muscovy. The site—at the crossing of the early trade routes and outside the area most frequently ravaged by nomad invasions—was advantageous, and Moscow gradually rose to a leading position. Under Ivan I (Ivan Kalita), grand duke of Vladimir (1328–41), the city of Moscow became the center of the chief principality and the ruler was called the grand duke of Moscow. The adjacent areas were subdued or acquired, and the importance of the grand duchy continued to increase, particularly under DMITRI DONSKOI (1359–89). IVAN III (1462–1505), by acquiring Tver, Novgorod, Rostov, and Vyatka, built the Great Russian state and threw off the Tatar yoke. Under the rule of his son, VASILY III, grand duke of Moscow and all Russia, the unification of the Great Russian lands was completed and the history of the grand duchy became that of Russia.

Moscow Art Theatre, world-famous Russian theatrical organization, founded in 1898 by Constantin Stanislavsky and Vladimir Ivanovich Nemirovich-Danchenko. In this repertory theater, actors were highly trained, plays were chosen for their literary merit, and scenery and costumes were realistic. It exercised a great influence upon the Russian theater and upon the theaters of the world. The Moscow Art Theatre gained fame when it produced the plays of Chekhov, whose works complemented its theories and atmosphere. The company made several successful tours of the United States. See *Moscow Art Theatre Plays* (ed. by O. M. Sayler, 1923); O. M. Sayler, *Inside the Moscow Art Theatre* (1925), Constantin Stanislavsky, *My Life in Art* (1924); V. I. Nemirovich-Danchenko, *My Life in the Russian Theatre* (1936).

Moscow Basin, lignite basin, central European RSFSR. It extends in an arc c. 600 mi. long NW, W, and SW of Moscow. Its reserves are estimated at 12,000,000,000 tons. Its coal provides fuel for the power plants of Moscow and the Moscow industrial area.

Moscow Conferences, four meetings held between 1941 and 1945 at Moscow, RSFSR. At the first conference (Sept.–Oct., 1941) American and British representatives laid the basis for LEND-LEASE aid to the USSR in the Second World War. The second conference (Oct., 1943), attended by the American, British, and Russian foreign ministers, resulted in the pledge to establish a United Nations organization for the maintenance of peace. At the third Moscow Conference (Oct., 1944) Prime Minister Winston Churchill and Joseph Stalin discussed the political difficulties of Poland and agreed on armistice terms for Bulgaria and a joint policy with respect to Yugoslavia. For the fourth Moscow Conference (Dec., 1945), see FOREIGN MINISTERS, COUNCIL OF.

Moseley, Henry Gwyn Jeffreys (mōz'lē) 1887–1915, English physicist, grad. Trinity College, Oxford, 1910. He began his research under Ernest Rutherford while serving as lecturer at the Univ. of Manchester and soon devoted himself entirely to research. Extending the work of Max von Laue and of W. H. Bragg and W. L. Bragg on the X-ray spectra of elements, Moseley made systematic studies of the relation between the bright-line spectra of different elements. He found that the frequency of vibration of the X rays emitted by each element when bombarded with cathode rays bore a simple relationship to whole ordinal numbers. These ordinal numbers are the atomic numbers. Moseley concluded that the atomic number is equal to the charge on the nucleus. When the elements are arranged according to their atomic numbers the sequence, although almost the same as Mendeleieff's arrangement in order of increasing atomic weight, differs slightly, these differences account for the few discrepancies inherent in the Mendeleieff system (see PERIODIC LAW). The genius of Moseley's work was widely recognized. He was killed at Gallipoli in the First World War.

Moselle (mōzĕl'), department (2,405 sq. mi., pop. 622,145) NE France, in LORRAINE, bordering on Luxembourg in the north and Germany in the east and drained by the Moselle river. METZ is the capital. Moselle was annexed to Germany (1871–1918) and again briefly in the Second World War.

Moselle (mōzĕl', mō-, Fr. mōzĕl'), Ger. *Mosel* (mō'zŭl), river, 320 mi. long, E France and W Germany. It rises in the Vosges mts. and winds generally N past Épinal, Toul, Metz, and Thionville. Leaving France, it forms the border between the grand duchy of Luxembourg and Germany, then enters Germany, passes Trier, and cuts between the Eifel and the Hunsrück ranges to reach the Rhine at Coblenz. The German section of the Moselle valley is dotted with numerous old castles and is covered with celebrated vineyards. It is navigable for c. 200 mi.

Mosera (mō'sĕ-ru), unidentified place, S Palestine, where Aaron died. Deut. 10:6.

Moseroth (mō'sĕ-rŏth), unidentified desert resting place of the Israelites. Num. 33:30,31.

Moses (mō'zĭz), lawgiver of Israel, the prophet who led his people out of bondage in Egypt to the edge of Canaan. The Bible narrative is the source of information on Moses' life. As an infant he was divinely protected, and as a young man he received a special calling at the burning bush. Ex. 2–3. Moses lived in constant touch with God, who guided him in leading Israel out of Egypt and across the desert. God promulgated the Law through his mouth, not only the Ten Commandments and the criminal code, but the whole liturgical law as well. In his old age, when the Hebrews were at the Jordan ready to cross, God gave Moses a view of the Promised Land from Mt. Pisgah, but he did not enter it, for he died and was buried in Moab. All this is told in the books of EXODUS, LEVITICUS, NUMBERS, and DEUTERONOMY. The authorship of these and Genesis (collectively the Pentateuch) has been ascribed to Moses since earliest times, hence they are called the Books of Moses. The Law he promulgated is called the Mosaic law. Many critics deny the Mosaic authorship of the books, and some even consider Moses a mythical figure. Moses, one of the great names of Hebrew history, is referred to repeatedly in the Bible. Examples of eulogies are in Ecclus. 45:1-5, Heb. 11:23-29. Among the PSEUDEPIGRAPHA there is an Assumption of Moses. Among artistic work inspired by him is Michelangelo's celebrated ideal sculpture.

Moses, Anna Mary Robertson, 1860–, American painter, known as Grandma Moses, b. Washington co., N.Y., self-taught. She lived the arduous life of a farmer's wife, first in the Shenandoah Valley and later at Eagle Bridge, near Hoosick Falls, N.Y. When she was in her 70's and too frail to do hard work she began to paint. Her pictures, called American primitives, simple, gay scenes of farm life, struck the popular fancy and became widely known through prints and Christmas cards. They have such subjects as *Sugaring-off*, *Catching the Thanksgiving Turkey*, and *The First Skating*. See *Grandma Moses, American Primitive* (ed. by Otto Kallir, 1946), with reproductions of 40 paintings.

Moses, Bernard, 1846–1930, American historian, b. Burlington, Conn., grad. Univ. of Michigan, 1870, Ph.D. Univ. of Heidelberg, 1873. From 1876 until his death he was professor of history and political science, actively and as professor emeritus, at the Univ. of California. He served on the U.S. Philippine Commission (1900–1902) and in 1910 was minister plenipotentiary to Chile on a special mission. An authority on the colonial era of Spanish America, he wrote *The Establishment of Spanish Rule in America* (1898), *South America on the Eve of Emancipation* (1908), *The Spanish Dependencies in South America* (2 vols., 1914), and *The Intellectual Background of the Revolution in South America, 1810–1824* (1926).

Moses, Robert, 1888–, New York city park commissioner (1934–), b. New Haven, Conn., grad. Yale (B.A., 1909) and Oxford (B.A., 1911), Ph.D. Columbia, 1914. He was appointed (1919) by Alfred E. Smith to the committee to study and revamp New York state government machinery, became (1924) chairman of the state council of parks, and served (1927–28) as New York secretary of state until disagreement with Gov. Franklin D. Roosevelt forced him from that position. In 1933 he declined the Fusion nomination for mayor of New York city, and in 1934 he was, as Republican candidate for governor, defeated by Herbert H. Lehman. As park commissioner under Mayor Fiorello H. LaGuardia and Mayor William O'Dwyer, Moses was responsible for reorganizing the department of parks and for altering the face of New York city with new and improved highways, parks, bridges, and beaches.

Mosinee (mōzĭnē'), city (pop. 1,361), central Wis., on the Wisconsin and SW of Wausau, inc. as a city 1931. It has paper mills.

Moskva (mŭskvä'), river, 315 mi. long, central European RSFSR. It rises in the hills W of Moscow and flows generally E past Moshaisk, Moscow, and Kolomna into the Oka. It is connected with the Volga by the Moscow Canal (80 mi. long), completed in 1937, and is navigable (April–Nov.) from Moscow.

Moslem (mŏz'lŭm) [Arabic *Muslim*=one who surrenders (himself to God), an agent form of the verb of which ISLAM is a verbal noun], one who has embraced Islam, a follower of MOHAMMED. The forms Muslim and Mussulman have also appeared in English. Moslems are also called Mohammedans.

Moslem art and architecture. The nomadic Moslems who, in the 7th cent., conquered the lands around the Mediterranean—Syria, Egypt, Mesopotamia, Armenia, Persia, North Africa, and Spain—possessed no definite building style, they practiced a merely decorative art based on pure ornament, in which naturalism never existed. Since their religion discouraged the representation of all living forms, their designers produced instead a superb scheme of purely geometrical decoration consisting chiefly of complex interlacing lines. Local builders in the new territories, however, were soon pressed into service, and the local styles, mainly Christian—i.e., Syrian, Byzantine, or Coptic—were used as a basis on which the great mosques evolved, embodying the designers' highest artistic talents. Moslem architecture is not founded on a great structural system, it is, rather, a style whose surface decorations form its most impressive element and give a general unity to its various local forms. In the 8th cent. a technique of monumental building arose in the Moslem world, as well as a distinctively Eastern system of ornament, characterized by the covering of large unbroken surfaces with stucco carvings and brilliant polychrome ceramics. Important mosques were built as early as the 7th cent.—the mosque of Amr at Cairo, the great mosque of Kairwan in North Africa, and the Dome of the Rock at Jerusalem. To the 8th cent. belong the great mosque of Damascus and the largest of all mosques, that at Córdoba, Spain, begun in 780 with the establishment of the Western caliphate and enlarged in the 10th cent. Under the Fatimites, Egypt became the center of architectural activity, and here, in the 11th cent., the Persian dome was adopted and a distinctive type of tomb mosque was developed, culminating at Cairo in the mosques of Kalaun (1284), of Sultan Hasan (1356), and of Kait Bey (15th cent.). Elaborate minarets were built, and the decorative arts were highly developed, especially ceramics and stalactite work. This flowering of the Cairene school synchronized with the culmination of the Moslem style in Spain in the centuries prior to the expulsion (1492) of the Moors. Examples of this Spanish-Moresque school are the GIRALDA tower (c. 1190), Seville, several alcazars or palaces (see ALCAZAR), and the palace of ALHAMBRA (1248–1354), Granada, with its picturesque courts and galleries, unsurpassed in the rich juxtaposition of stuccoes, ceramics, and stalactites. Even with the departure of the Moors, their influence on Spain's subsequent arts continued into the 16th cent. and is covered by the term MUDEJAR. Persia brought into the Moslem world in the 7th cent. a race endowed with an independent artistic heritage—a system of building pointed arches and vaults of brick, the dome on squinches, and the use of colorful tiles for surface decoration. Under the conquerors, therefore, the Persians met the new needs with their own equipment. A distinctive MOSQUE type was created, the madrasah, which served also as a theological school. In this a courtyard is surrounded by arcades, and upon it open assembly halls, one in the center of each side of the court. The chief hall is domed, for this, as well as for the sepulchral chambers of the founders, the bulbous pointed dome, narrowed at the bottom, is the distinctive Persian type—most extensively used from the 13th to the 16th cent. The primitive colonnaded prayer halls were replaced in the 15th and 16th cent. by large, square, domed chambers, and magnificent polychrome tiles, used as an all-over veneer on the surfaces of walls, domes, and vaults both inside and out, attained a splendor of color and design rarely, if ever, surpassed. Major works of the period are the Blue Mosque at Tabriz (1437–68), sheathed with incomparable blue tiles, and the imperial

mosque at Isfahan (1585–1612). In the Moslem architecture of India, Persian influences dominated even the native traditions inherited from Jain and Buddhist construction This is clear in the façades composed of lofty niched portals flanked by minarets, as well as in the use of bulbous domes and four-centered pointed arches, although the traditional Persian tile sheathing is largely restricted to interiors Stone and white marble give them a solid monumentality, while inlays of colored stones create rich, flowing arabesques, best seen in the famed TAJ MAHAL at Agra (1630) The Mogul dynasty introduced a culminating period of brilliant work—the mosque (16th cent) of Fatehpur Sikri, the tomb of Mahmud Shah at Bijapur, and the Pearl Mosque (1646–53) at Agra In Turkey the established Byzantine scheme of planning and domical construction, as seen in HAGIA SOPHIA, was taken over by the Seljuk Turks after the fall (1453) of Constantinople Turkish mosques thus use the Byzantine dome on pendentives buttressed by half domes and show few changes other than the addition of tall, slender minarets on exteriors and of Moslem surface adornment in the vast interiors The style's greatest architect was Sinan, who built at Constantinople such superb monuments as the mosque (1550–57) of Suleiman I and the huge mosque (1608–14) of Ahmed I In all Moslem styles the arch occurs in many variations, reducible to four general types—the pointed, used chiefly in Egypt, the ogee, in Persia and India, the multifoil, in Spain and also in India, and the horseshoe, in Spain and North Africa Interlacing arches are featured in Spanish work, the horseshoe and multifoil types being sometimes thus combined, and stalactite arches and vaults are common Distinct architectural types were developed in mausoleums, caravanseries, alcazars, fountains, and baths (an establishment existed in every community) and in dwelling houses—the arrangement of which has been preserved to the present In these protection from heat and the insuring of privacy are primary considerations Their ornamentation is almost exclusively internal, with ceramic wainscots and pavements and stucco wall carvings, which appear in inner courtyards enclosing fountains and in rooms grouped around them Houses are flat-roofed, with blank exterior walls relieved only by an ornamented doorway and by small, closely latticed windows Women's quarters are segregated at the back or in the upper story In all forms of Moslem art, ornament tends to cover the surface, but is generally organized into bands and panels, delicately carved in low relief or inlaid in contrasting tones or materials Arms, armor, and other metal work, especially of Cairo and Damascus, show damascening, chasing, chiseling, or encrusting Pottery is rich in color and all-over designs, and ivory has been much used for inlays and carving Ornament, in short, is the center of Moslem art and has supplanted all the other possibilities offered by different individual techniques Based on the arabesque, intertwined bands and the flowing Arabic script, it is a self-contained world of form, turning every material to its own uses Texts from the Koran formed the so-called mnemonic ornament, in either the early Kufic or the later Italic characters, and were used especially in textile designs Moslem fabrics and rugs are of exceptional fineness and beauty Lattice-work screens of turned wood, in house façades, projecting bays, and windows and at drinking fountains, are particularly characteristic The galleries of Near Eastern art in the Metropolitan Museum and the Saracenic Galleries of the Victoria and Albert Museum exhibit fine collections of Moslem art objects See M S Briggs, *Muhammadan Architecture in Egypt and Palestine* (1924), M S Dimand, *Handbook of Muhammadan Art* (1947)

Moslem League, political organization of India, founded 1906 It was weak until 1934 when JINNAH won control Few candidates of the Moslem League won office in the elections of 1936, but by 1940 it had gained such power that it demanded the establishment of PAKISTAN despite the opposition of the INDIAN NATIONAL CONGRESS In the Second World War the Congress was banned, but the League was free and gained strength Its claim to represent the Moslems was vindicated when it won nearly all the Moslem vote in the elections of 1946 In 1947 the Congress assented to the creation of Pakistan

Mosler, Henry (mōz'lûr), 1841–1920, American genre painter, b New York city, studied with J H Beard and in Düsseldorf He served as art correspondent for *Harper's Weekly* in the Civil War and later lived in Paris, where he was the recipient of the cross of the Legion of Honor His works include *Le Retour*, the first American painting purchased for the Luxembourg Museum, Paris, *A Wedding Feast in Brittany* (Metropolitan Mus), *Spinning Girl* (Grenoble), *Saying Grace* (Corcoran Gall), *Wedding Morning* (Sydney, Australia, Mus), *Rainy Day* (Pa. Acad of the Fine Arts), and *Last Sacrament* (Polytechnic Inst., Louisville Ky). His son and pupil, **Gustave Henry Mosler,** 1875–1906, was a genre and portrait painter His portrait of Gov. J W. Stewart is in the state capitol of Vermont, and *The Empty Cradle* is in the Toledo Art Club.

Mosley, Sir Oswald Ernald (mōz'lē), 1896–, British fascist leader After a parliamentary career (1918–31) as, successively, Conservative, Independent, and Labour member, Mosley organized (1932) the British Union of Fascists, modeled upon the German and Italian fascist parties Until after the outbreak of the Second World War, he conducted a speech-making campaign of vilification and abuse, directed largely against the Jews In 1940 Mosley and his wife (the former Diana Guinness, sister of Unity Freeman-Mitford, both of whom had been friends of Hitler) were interned They were released in 1943. After the Second World War, Mosley attempted to revive his movement

mosque (mŏsk), building for worship used by the Moslem faith Certain mosques, called madrasahs, also serve as religious academies Although the early Moslems had no architectural style of their own, they were quick to learn the technique of conquered peoples, so that, with the spread of Islam, mosque designs came to vary widely in different parts of the Moslem world Nevertheless, certain essential elements, which appear in the primitive mosques and derive from the necessities of the cult itself, remain reasonably constant The first of these, the *maksoura* or prayer hall, is a roofed rectangle wider than it is deep, enclosed by walls at the back and ends and opening on the front to a court At the middle of the long wall opposite the entrance is the mihrab or prayer niche, which indicates the direction of Mecca Flanking it at the right stands the tall mimbar or pulpit, approached by a long flight of steps and covered by a high pyramidal or domical roof, and near at hand—in later mosques—appears the *dikka*, a large platform raised on arches, from which prayers and services are read by the imam Floors are covered with rugs or matting, and many oil lamps hang from the ceiling The second main element is a large rectangular court, enclosed by high walls and surrounded on its three remaining sides by arcaded porticoes In addition to its central fountain for ceremonial ablutions, it sometimes also includes the tomb of the mosque's founder Finally, the corners of the court or other points in the general plan are often marked by tall minarets from which the imam sounds the call to prayer From this primitive sort of arcaded or colonnaded mosque five regional types arose The early structures of the first school, that of Syria and Egypt, follow closely the primitive form, as in the mosque (begun 642) of 'Amr and that (879) of Ibn Tulun, both at Cairo The first domical mosque, that of Omar (687) at Jerusalem, perhaps better known as the Dome of the Rock, follows an octagonal Byzantine plan, with a dome entirely of wood Domed mosques were not commonly built, however, until some six centuries later In the 14th cent another type appeared, in which four arms roofed with pointed vaults form a cruciform plan about the central court The arm towards Mecca, wider and deeper than the others, contains the mihrab The finest example is the great mosque (1356) of Sultan Hasan at Cairo The second or Moorish school, that of North Africa and Spain, clung to the primitive type, as in the African mosque of Kairwan (late 7th cent) The more important structure at Córdoba, Spain, was begun in 780 and enlarged in the 10th cent until its prayer hall, with 16 rows of columns and arches, occupied an area greater than that of any Christian church It became the cathedral of Córdoba in 1238 Mosques of the third regional type, the Persian, inherited the Sassanian vaulting tradition and surface decoration with gorgeous ceramics They thus possess a very distinctive character in their pointed bulbous domes, lofty pointed portals, and magnificent polychrome tiles In the 15th and 16th cent the colonnaded prayer halls were replaced by large, square, domed interiors, sometimes surrounded by lower vaulted side aisles, as in the Blue Mosque at Tabriz (1437–68) This structure, of essentially Byzantine plan, is sheathed with incomparable blue ceramics The imperial mosque at Isfahan (1585–1612) had four impressive porticoes on the court, and its main prayer hall, crowned by a bulbous dome and with a porch having an enormous pointed arch flanked by slender minarets, represents the climax of Persian mosque design When the Turks took Constantinople (1453) and converted the great Byzantine Church of HAGIA SOPHIA to use as a mosque, they employed it as a model for the fourth school of Islamic religious structures To the great open type of Hagia Sophia's plan, with its dominant dome, they added smaller domes, half domes, buttresses, and minarets and, using Persian tiles and rather garish painted decoration for interiors, achieved at Constantinople such superb monuments as the mosque (1550–57) of Suleiman I, the Magnificent, by the architect Sinan and the huge Ahmediyeh mosque (1608–14) of Ahmed I. Indian mosques, the fifth regional group, betray their Persian origin in the prevalence of bulbous domes, round minarets, and great portals with pointed arches, although the traditional Persian tile sheathing is largely restricted to interiors. The use of stone and marble for exteriors, however, lends them a solid monumentality rarely seen in other Moslem styles, while colored stones inlaid against the white marble add touches of vivid beauty. During the Mogul dynasty, particularly under the brilliant reign of Shah Jehan (1627–58), mosques of surprising grandeur were erected Among the finest Mogul examples are the huge mosque with its superb domes and entrance at Fatehpur Sikri (1556–1605); the three-domed Pearl Mosque at Agra (1646–53), famous for its simple plan and delicate inlays, and the Jama Masjid [great mosque] at Delhi, the largest in India, to which the characteristic Indian beam construction and lavish use of colored marbles give a tone essentially non-Moslem

Mosquera, Tomás Cipriano de (tōmäs' sēprēä' nō dā mōskā'ra), 1798–1878, Colombian general and president He first earned notice by his service in the war against Spain As president (1845–49), he began as a conservative, but became more liberal, sponsoring numerous reforms and encouraging the nation's material growth After the conservatives gained control in 1856, Mosquera led a successful revolt (1860–62) which resulted (1863) in a federalist United States of Colombia He served as provisional president until 1864 Domineering, unscrupulous, and violently emotional, he was feared and mistrusted even by his adherents, but he was a vigorous leader Although again elected (1866) president, he was imprisoned (1867), tried, and banished He went to Peru, but returned later to become governor and senator of Cauca.

Mosquitia see MOSQUITO COAST

mosquito (mŭskē'tō), insect of the fly family found in almost all parts of the world Only the female pierces the skin, injects some of its own salivary fluid, and sucks the blood of humans and of many wild and domestic animals The males, and in some species the females, feed on plant juices Usually the eggs are laid in stagnant water The larva, or wiggler, has an air tube near the end of the abdomen which is held at the surface of the water to receive air, supplementing the work of the gills The pupa is also aquatic and active It has air tubes on the thorax In temperate regions the bite of the common house mosquito of the genus *Culex* is irritating, but in the S United States and in the tropics members of this genus are among those which carry filariasis Many species of *Anopheles* mosquitoes carry the parasites which cause malaria Yellow fever, jungle yellow fever, and dengue or breakbone fever, which are believed to be caused by viruses, are transmitted by the *Aedes* mosquito See bulletins of the U S Dept of Agriculture

Mosquito Coast or **Mosquitia** (mŭskē'tēŭ, mŏskētē' a), region, east coast of Nicaragua and Honduras Never exactly delimited, it is a belt c 40 mi wide extending from the SAN JUAN river N into NE Honduras The territory is sultry and swampy, rising to low hills in the west English and Dutch buccaneers preyed on Spanish shipping from coastal bases, and English loggers exploited the forest products Banana culture, developed in recent times, has suffered from leaf blight The name is derived from the Mosquito or Miskitto Indians, remnants of the CHOROTEGA, over whom Great Britain established a protective kingdom at BLUEFIELDS in 1678 Importation of Jamaican Negroes to increase the labor supply resulted in racial mixture British dominance of the region and of the BAY ISLANDS continued, and in 1848 the British claimed and took SAN JUAN DEL NORTE to offset U S interest in a transisthmian route to California Nicaragua protested the seizure The CLAYTON-BULWER TREATY (1850) between the United States and Great Britain checked British expansion, but relinquishment of the coast was delayed until a separate treaty was concluded with Nicaragua (1860), which established the autonomy of the so-called Mosquito Kingdom In 1894 José Santos ZELAYA ended the anomalous position of the territory by forcibly incorporating it into Nicaragua The northern part, however, is still claimed by Honduras

Moss (mŏs), city (pop 17,415), co seat of Ostfold co, SE Norway, on the east shore of the Oslo Fjord It has important shipyards, sawmills, iron foundries, and various manufactures It also is a seaside resort Here on Aug 14, 1814, the convention establishing personal union of Sweden and Norway was signed

moss, any species of the class Musci, small plants of world-wide distribution Although usually of delicate appearance, they are extremely hardy, growing almost anywhere except in the ocean Mosses are often evergreen and may be creeping or erect, they range in size from nearly microscopic to several feet in length (sphagnum) The fertilized egg cell on the moss plant gives rise to a capsule containing the spores The spores of common mosses on germinating produce green filaments from which arise buds that develop into the moss plant Mosses are of value chiefly in paving the way for higher plants in barren habitats, but SPHAGNUM or peat moss has other important uses Leafy liverworts are easily confused with mosses but they commonly have a flattened appearance not seen in many mosses Plants sharing the name of moss but not related

include the flowering moss OF PYXIE, CLUB MOSS, REINDEER MOSS, and SPANISH MOSS. See E M. Dunham, *How to Know the Mosses* (1916); A. J. Grout, *Mosses with a Hand-Lens* (1924).

moss agate: see AGATE.

Mossamedes (mŏsä'mûdĕs), town (pop 23,000), S Angola, a port on the Atlantic Ocean, founded 1840 It is the terminus of a railroad to the fertile interior Fish products are exported

Mossel Bay (mŏ'sul), town (pop 8,075), Cape Prov., Union of South Africa, a port on the Indian Ocean. It was founded (1501) by the Portuguese and has an early 16th-century church

Moss Point, city (pop 3,042), extreme SE Miss., near Pascagoula A paper mill is here

Most, Johann Joseph (mōst), 1846–1906, anarchist, b. Augsburg, Germany A bookbinder by trade, he became editor of Socialist papers in Germany and Austria. His publications were suppressed, and for his public denunciation of religion, patriotism, and the accepted moral standard he was frequently imprisoned After serving (1874–78) in the German Reichstag, he removed to France and then to England His anarchistic views led to his expulsion from England He then (1882) emigrated to the United States, where after the assassination of President McKinley he was imprisoned for alleged sedition

Most (môst), Ger *Brüx* (bruks), city (pop 23,077), N Bohemia, Czechoslovakia The center of a lignite basin, it has also a ceramic industry

Mostaert, Jan (yän' mŏ'stärt), c 1475–c 1556, Dutch painter of portraits and religious scenes. He was long associated with Margaret of Austria and may have been employed by her as court painter He was commissioned to do several altarpieces, one of which is in Brussels His work is also in collections in Amsterdam, London, and Vienna

Mostaganem (mŏ"stäganĕm'), city (pop 50,403), NW Algeria, a port on the Mediterranean Sea It was founded in the 11th cent and reached its commercial height in the 16th cent under the Turks Its population had declined to c 3,000 when the French arrived in 1833 There are exports of wine, grains, meat, and wool

Mostar (mŏ'stär), city (pop 23,239), Bosnia and Hercegovina, Yugoslavia, on the Neretva river and SW of Sarajevo It is the largest city of Hercegovina, the see of an Orthodox and of a Catholic bishop, and an agricultural market center First mentioned in 1442, it has retained many mementos of the Turkish period

most-favored-nation clause, provision in commercial treaties that the signatory will enjoy benefits equal to those accorded to any other state The purpose of such clauses is to insure equal commercial opportunities, especially with regard to freedom of investment and beneficial tariff arrangements In some cases the clause is unilateral, i e, only one of the two signatories is to receive most-favored-nation treatment, bilateral clauses are more common today Until recent years many nations of the Far East were bound to Western states by unilateral clauses

Mosul (mō'sul, mōsōōl'), city (pop c 70,000), N Iraq, on the Tigris river, opposite the ruins of NINEVEH and 15 mi S of Tepe Gawra Mosul is inhabited chiefly by Arabs, and the surrounding region is peopled by Kurds It became (c 750) the chief city of N Mesopotamia It was the seat of independent dynasties in the 10th and 11th cent. Its walls resisted sieges by Saladin and Nadir Tamerlane spared it and repaired the picturesque pontoon bridge across the Tigris It was occupied by the British a few days after the close of the First World War and was formally renounced by Turkey, in the face of united European insistence, in 1926 There are numerous mosques and several churches of the Assyrians (Nestorian Christians) The city was once known for fine cotton goods called muslins from its name Today it produces excellent metalware In the vicinity of Mosul are extensive oil fields leased to American and British companies

Motagua (mōtä'gwä, mōtä'wa), river, c 250 mi long, rising in S central Guatemala and flowing NE to the Gulf of Honduras, the longest river within Guatemala Some of the banana plantations of the United Fruit Company are in this valley The Motagua is also called the Río Grande, particularly in its upper reaches

Motala (mōō'tä"lä), town (pop 9,300) Ostergotland co, S central Sweden, on Vattern Lake It is the site of a large power plant and of a powerful radio station.

motet (mōtĕt'), name for the outstanding type of musical composition of the 13th cent and for a different type which originated in the Renaissance The 13th-century motet, a creation (c.1200) of the school of Notre Dame de Paris, was a polyphonic composition based on a TENOR which was a fragment of plain song (or, later, of any type of melody, sacred or secular) arranged in a brief, reiterated rhythmic pattern called an *ordo*. Its original text, sometimes only a word or two, was kept, but the tenor may have been played on instruments. The second part, called *motetus* (from Fr. *mot* = word), had its own text, usually sacred and in Latin but by the second half of the century sometimes secular and in French The third voice, the triplum, had still another text, and very often the motet combined a triplum which was a French love song and a *motetus* which was a Latin hymn to the Virgin Mary The outgrowth of this early motet was the isorhythmic motet of the late 13th and the 14th cent It employed a recurring rhythmic pattern called a *talea*, longer than an *ordo* and not restricted to the tenor part Of the 23 extant motets of Guillaume de Machaut (c 1300–c 1377), an outstanding 14th-century composer, 20 are isorhythmic. Isorhythmic technique was not confined to the motet and persisted into the early 16th cent The Renaissance motet had but one text, in Latin, and was a polyphonic, unaccompanied composition, it had usually from four to six voices and was free from the 13th-century rhythmic rigidity. Cultivated by composers of the Flemish school, it had spread throughout Europe by the middle of the 16th cent. Outstanding composers are Josquin des Prés and Orlando di Lasso of the Flemish school, the Italians Andrea Gabrieli, Giovanni Gabrieli, and Palestrina, the Spaniard Tomás Luis de Victoria, and the Englishmen Thomas Tallis and William Byrd In the baroque era the greatest motets were written in Germany to German texts The *Symphoniae Sacrae* of Heinrich Schütz include many motets in various styles, with the addition of solo voices and instrumental accompaniment The peak is reached in the six motets of Bach, one of which has organ accompaniment Since Bach's time the term *motet* has been applied to almost any kind of sacred choral polyphony but usually refers to unaccompanied Latin motets for use in Roman Catholic services Many anthems in English, however, have been designated motets by their composers

moth, any of the group of insects which, with the BUTTERFLY group, makes up the order Lepidoptera The pupa of most moths is protected by a covering or cocoon, in which a leaf is sometimes enclosed and which is often made largely of silk Some moths pupate underground The cocoon of the domesticated silkworm moth is the source of silk of commercial value Among the large and beautiful moths in America are the pale green luna moth, the cecropia, the promethea, and the polyphemus moths Great damage is done in the larva stage by many moths, e g CODLING MOTH, GYPSY MOTH, CLOTHES MOTH, and CUTWORM See W J Holland, *The Moth Book* (1914)

Mother Carey's chicken, name popularly applied to several species of PETREL but especially to the storm or stormy petrel

Mother Goose, name associated with nursery rhymes Most English nursery rhymes, including "Jack and Jill," "Simple Simon," and "Little Jack Horner," have been ascribed to Mother Goose The origin of the name is still a matter of dispute Some trace it to a French collection of tales by Charles Perrault (1697) which had the subtitle *Contes de ma mère Loye* [tales of Mother Goose] This name has in turn been traced to Queen Goosefoot, the mother of Charlemagne and a patron of children Others claim an American origin in *Mother Goose's Melodies*, published 1719 in Boston by Thomas Fleet, whose mother-in-law was said to be Elizabeth Vergoose A collection of Mother Goose rhymes was published by John Newbery in London in 1765 The subject matter of the rhymes has been linked by some scholars to actual events in English political history See A E Moore, *Literature Old and New for Children* (1934)

Mother Lode, belt of gold-bearing quartz, central Calif., along the western foothills of the Sierra Nevada The term is sometimes limited to a strip c 70 mi long and 1 to 6¼ mi wide, running NW from Mariposa Popularly it is used to mean the gold-bearing area E of the Sacramento and San Joaquin rivers and W of the Sierra The discovery of gold on the South Fork of the American led to the 1848 gold rush Mark Twain and Bret Harte helped make the Mother Lode famous See Joseph Henry Jackson, *Anybody's Gold* (1941)

mother-of-pearl or **nacre** (nā'kur), the iridescent substance which forms the lining of the shells of some fresh-water and some salt-water mollusks Like the PEARL it is a secretion of the mantle composed of alternate layers of calcium carbonate and conchiolin. Among the chief sources are the pearl oyster found in warm and tropical seas chiefly in the Orient, the fresh-water pearl mussel which lives in many rivers of the United States and Europe, and the abalone of California, Japan, and other Pacific regions Mother-of-pearl is used for buttons, for knife handles, for inlay work, and for many other purposes

Motherwell, William, 1797–1835, Scottish poet and journalist His collection of ballads, *Minstrelsy Ancient and Modern* (1827), contains a fine historical introduction. His well-known "Jeanie Morrison" is in *Poems, Narrative and Lyrical* (1832)

Motherwell and Wishaw (wĭ'shô), burgh (1931 pop 64,710; 1948 estimated pop 70,624), Lanarkshire, Scotland, on the Clyde and SE of Glasgow. The two parts of the burgh were officially united in 1920 In a region of coal and iron, the town has an important steel industry. Other manufactures include electrical equipment, boilers, and hosiery and (at Wishaw) chocolate, railroad equipment, and cement.

motion. When a body is in the act of changing its position in relation to some other body, it is said to be in motion with respect to that other body For example, a train is in motion when it is changing its position with respect to the earth. If, however, motion is to be considered as relative, it should be possible to advance logically the apparently paradoxical statement that a body can be in motion and at rest at one and the same time, for although such a body might be in motion (changing its position) with respect to some one other body, it might also be at rest (not changing its position) with respect to still another body That such a condition is possible is illustrated by the example of a man seated in a moving automobile, this man is in motion with respect to the earth, but at the same time at rest with respect to the automobile A body may be in motion with respect to two or more other bodies at one time. Bodies in motion on the earth are also in motion with respect to the other through which the earth is moving (if the ether is held to be stationary or not moving at the same velocity as the earth) It follows, then, that the relative motion of two bodies depends upon their relative speeds (velocities) through space Two bodies moving at the same rate of speed, or velocity, through space would be at rest with respect to each other, while two bodies moving at different velocities would be in motion with respect to each other, one body being considered to be in motion and the other at rest Although the movement of the stars and planets was observed by the ancients and although Copernicus some 1,200 years later deduced the movement of the earth and Galileo still later in the 16th cent. made his famous investigations of the relative speeds of falling bodies, it was not until Newton brought forward his *Principia* that the foundation was laid for a consideration of the relative motions of all bodies Newton's **laws of motion** hold that (1) a body remains in a state of rest or of uniform motion in a straight line unless compelled by some external force acting upon it to change that state, (2) a change in MOMENTUM is proportional to the force causing the change and takes place in the direction in which the force is acting, or the increase or decrease in velocity is proportional to the force, and (3) to every action there is always an equal and opposite, or contrary, reaction These three laws (and also that of universal GRAVITATION) have served and continue to serve as the basic principles of dynamics, maintaining their position of fundamental importance through the subsequent times of new discovery and hypothesis which led to Einstein's theory of RELATIVITY

motion pictures see MOVING PICTURES.

motive or **motif** (mōtēf'), in music, a theme expressed in a short phrase or passage and repeated or elaborated throughout the composition The term is usually used synonymously with FIGURE A special kind of motive is the leitmotiv or leitmotif, wherein a character or a dramatic idea is represented throughout an opera by one or more motives The leitmotiv technique is almost as old as opera itself, but its most extensive application is found in Wagner's works

Motley, John Lothrop (mŏt'lē), 1814–77, American historian and diplomat, b Dorchester, Mass., grad Harvard, 1831 He made an extended study tour of Europe before his marriage in 1837 Author of two novels concerning Thomas MORTON—*Morton's Hope* (1839) and *Merry Mount* (1849)—as well as a number of articles for the *North American Review*, he began (c 1847) to study the history of the Netherlands The resultant book, *The Rise of the Dutch Republic* (3 vols., 1856), achieved a success both with scholars and with the public, although it paid small attention to economic or social matters and displayed the author's dislike of Roman Catholicism *History of the United Netherlands*, a work of greater scope, was published in four volumes (1861–68), and his last work, *The Life and Death of John of Barneveld*, appeared in 1874. Motley spent a short period in 1841 as secretary of the U S. legation at St Petersburg and later was minister to Austria (1861–67) President Ulysses S Grant appointed him minister to Great Britain in 1869, but difficulties arising from Motley's tendency to ignore the instructions of Secretary of State Hamilton FISH (1808–93) and from Grant's animosity toward his sponsor and friend, Charles SUMNER, caused him to be relieved of his post in 1870 See O W Holmes, *John Lothrop Motley a Memoir* (1879), G. W. Curtis, ed., *The Correspondence of John Lothrop Motley* (1889), *John Lothrop Motley and His Family* (ed. by his daughter, Susan M. Mildmay, and Herbert S. Mildmay, 1910).

Moton, Robert Russa (mō'tŭn), 1867–1940, American Negro educator, b. Amelia co., Va., grad Hampton Institute, 1890. He was commandant there from 1890 until he succeeded Booker T Washington as principal of Tuskegee Institute in 1915, later becoming president. He retired in 1935. Moton served as presidential adviser on Negro

affairs and was a member of the National Advisory Commission on Education and chairman of the commission on education in Haiti (1930) For his achievement in the fields of Negro advancement and race relations, he received the Harmon award in 1930 and the Spingarn medal in 1932 Moton wrote *Racial Good Will* (1916), his autobiography, *Finding a Way Out* (1920), and *What the Negro Thinks* (1929).

motor, electric, machine for transforming electrical energy into mechanical energy In this respect it is the reverse of the electric GENERATOR, although it is based fundamentally upon the same general principle The electric motor consists, essentially, of a fixed member, or frame, and a revolving member The frame is commonly of cast iron and is fitted with lugs for attachment to a rigid support. It appears, in general, in the form of a hollow cylinder which has extensions at each end to accommodate bearings Within it are the field coils, which consist of copper conductors wound through or about iron parts so as to produce a magnetic field of force (see MAGNETISM) through the internal part of the cylindrical frame The revolving member consists of the ARMATURE, which is commonly cylindrical in form and is mounted on a shaft resting in the bearings of the frame The interaction between the magnetic poles (the fields of force) produces rotation of the armature which is free to revolve and which is connected to the driving gear through the shaft Electric motors are commonly classified according to the type of electric current by which they are driven, i e , as direct-current (DC) or alternating-current (AC) motors Direct-current motors are further distinguished according to whether the armature and the field coils are connected in series or in parallel, whether they are series-wound or shunt-wound, some motors are a combination of both Alternating-current motors are classified on the basis of the type of alternating current used, as single-phase, two-phase, three-phase, and multiphase One type of motor, the universal motor, can be employed for either direct or alternating current and is used widely to drive small portable machines in which not more than one horsepower is required Their efficiency is, however, not high Motors used where dust, moisture, acid, or fumes are present are totally enclosed In cases where wide variation of running speed is required, direct-current motors are usually employed Some of the variable-speed, alternating-current motors have speeds ranging from 600 to 3,600 revolutions per minute Speed reduction is obtained by varying the size of the pulleys used or by so-called speed-reduction units which are employed largely in cases where the motor is directly coupled to the driven machine Electric motors are rated according to the horsepower they develop

motorboat, small vessel propelled by a gasoline engine or other type of INTERNAL-COMBUSTION ENGINE There are various types- open launches, outboard runabouts, racing boats, cruisers, auxiliaries, tunnel boats, hydroplane boats, motor lifeboats, and aerial-propelled boats Motorboat hulls are usually of mahogany, oak, or other hard wood They may be carvel- or clinker-built Motor boats 50 ft or more in length frequently have hulls of steel plate The introduction of the outboard motor opened up a new field in the motorboat industry This motor is self-contained, and the unit is built to clamp on the stern of any boat of suitable size The propeller is geared to a vertical shaft extending up to the engine, the rudder being also a part of the unit On their inception such motors were made in small horsepower units, but their power was later considerably increased Cruisers are pleasure craft of the heavier type, fitted with internal motors and equipped with cabins These boats vary in length up to 50 ft , the larger type having a 180-horsepower motor giving a speed of 20 mi per hour Auxiliaries are sailing vessels fitted with a motor for use in adverse winds or calm weather Tunnel boats are used in shallow water or in the vicinity of sand bars and mud flats The hull is constructed with a hollow space or tunnel near the stern, in which the propeller revolves. The propeller does not extend below the bottom of the tunnel and hence is not liable to damage from grounding Aerial boats are fitted with an airplane engine mounted entirely above water and are for use in shallow waters and waters infested by weeds A hydroplane or skimmer boat has the bottom so constructed that it lifts itself out of the water towards the forward end when running, thus reducing surface resistance This tendency to lift is further increased by providing steps or jogs in the bottom A high-powered motor is necessary for this class of boat, which is mainly used for racing. The popularity of speed-boat racing has been one of the main factors in developing the present high efficiency and speed of motorboats. Speedboat records have been steadily increased. In 1939 Sir Malcolm Campbell attained a speed of 141.74 mi. per hour In warfare motorboats have been much used as torpedo boats.

motorcycle, small motor vehicle equipped with two or three wheels and with one or two saddles. Gottlieb Daimler attached an internal-combustion gasoline motor to his BICYCLE in 1885, and in 1892 Henry Hildebrand of Munich made an improved powered cycle The motorcycle became dependable and popular only after 1900. It is widely used for pleasure riding, for racing, for police patrol of highways, for commercial transportation of small and light goods, and for various purposes in the armed forces England, Germany, the United States, and France are the principal manufacturers and users of the motorcycle A sidecar, usually supported by a third wheel, is often added to carry a passenger or a goods compartment

Mott, Frank Luther, 1886–, American professor of journalism and author, b near What Cheer, Iowa, grad Univ of Chicago, 1907, Ph D Columbia, 1928 He worked as a reporter and newspaper editor and taught before he directed (1927–42) the school of journalism at the State Univ of Iowa Since 1942 he has been dean of the school of journalism at the Univ of Missouri With John T Frederick he was editor and publisher (1925–30) of the *Midland* Among his best-known works are *Six Prophets out of the Middle West* (1917), *The Literature of Pioneer Life in Iowa* (1923), *A History of American Magazines* (3 vols , 1930–38), for which he was awarded (1939) the Pulitzer Prize in American history, *American Journalism 1690–1940* (1941), and *Jefferson and the Press* (1943)

Mott, James, 1788–1868, American abolitionist, b North Hempstead, L I , N Y He and his wife, Lucretia Coffin MOTT, were Quakers who worked constantly for the antislavery cause and for woman suffrage In 1840 they were delegates to the World Anti-Slavery Convention in London, and in 1848 he presided over several sessions of the first national woman's rights convention at Seneca Falls, N Y Mott also aided in the founding (1864) of Swarthmore College

Mott, John Raleigh, 1865–, American official in the Young Men's Christian Association and authority on foreign mission work, b Livingston Manor, N Y grad Cornell, 1888 He is noted for his wide activity in organizing foreign Y M C A and missionary organizations and for his war work in connection with these groups With Emily G Balch he shared the 1946 Nobel Peace Prize He is honorary president of the World Council of Churches His many books include *The Future Leadership of the Church* (1908) and *The Larger Evangelism* (1944)

Mott, Lucretia (Coffin), 1793–1880, American feminist and reformer, b Nantucket, Mass She moved c 1803 with her family to Boston and later to Philadelphia A Quaker, she studied and taught at a Friends' school near Poughkeepsie, N Y There she met James MOTT, whom she married in 1811 and who cooperated in her later activities After 1818 she became well known as a lecturer for temperance, peace, the rights of labor, and the abolition of slavery, after 1827 she allied herself with the liberal, or Hicksite, Friends Her home became a station on the Underground Railroad, and, following the meeting (1833) of the American Anti-Slavery Society, she organized the Female Anti-Slavery Society Refusal of the world anti-slavery convention in London (1840) to recognize women delegates led to her championship of the cause of woman's rights, and with Elizabeth Cady Stanton she organized (1848) at Seneca Falls, N Y , the first woman's rights convention in the United States In 1870 she became president of the Pennsylvania Peace Society See A D Hallowell, ed , *James and Lucretia Mott Life and Letters* (1884), L C M Hare, *The Greatest American Woman, Lucretia Mott* (1937)

Mott, Valentine, 1785–1865, American surgeon, b Glen Cove, N Y , M D Columbia, 1806 He was on the Columbia medical faculty (1811–26, 1830–35, and from 1850) He was a founder (1826) of Rutgers Medical School (no longer in existence) and also took part in the founding of New York Univ (1832) and its medical school (1841), of which he was president until 1850 A famous surgeon, he was noted especially for his skill in ligating the large arteries, in operating on the bones and joints, and in performing lithotomies and amputations See memoir by S D Gross (1868)

Mott, city (pop 1,220), co seat of Hettinger co , SW N Dak , on the Cannonball river and WSW of Bismarck, inc 1928 It is a farm trade center

Mottl, Felix (fā'lĭks mŏt'tul), 1856–1911, Austrian conductor He assisted Wagner in preparing the first Bayreuth Festival, at which he conducted the *Ring* cycle He conducted (1880–1903) at the court at Karlsruhe, where he produced the complete cycle of Berlioz's operas In 1903 he went to Munich, there in 1904 he became director of the Royal Academy of Music, and in 1907 director of the Court Opera In the season 1903–4 he conducted Wagnerian opera at the Metropolitan Opera House. He made important editions of Berlioz's operas, Bellini's *Norma*, and works by Wagner, Liszt, and other composers.

Moukden, China see MUKDEN.

mould see MOLD.

Moulins (mōōlăⁿ'), city (pop. 20,832), capital of Allier dept , central France, on the Allier river. It manufactures leather goods and clothes The ancient capital of the duchy of BOURBONNAIS, Moulins has remarkable artistic and historic treasures The cathedral contains a 15th-century triptych, considered among the finest French paintings of the period. The former convent of the Order of Visitation (now a school), founded in 1616 by St. Jane Frances de Chantal (who died here), contains the tomb of Henri de Montmorency, by François ANGUIER Other historical buildings are the ruined castle of the dukes of Bourbon and the Renaissance pavilion of Anne de Beaujeu In 1566 a great assembly was held here by Charles IX, it adopted the important legal and administrative reforms proposed by the chancellor, Michel de L'Hôpital

Moulmein (mōōlmān', mōl-), town (pop 65,506), S Burma, a port near the mouth of the Salween river It has rice and teak mills In the period 1826–52 Moulmein was the chief town of British Burma

Moulton, Richard Green (mōl'tun), 1849–1924 American educator and critic, b England, grad Cambridge, 1874 He taught (1892–1919) at the Univ of Chicago The author of several volumes of Shakesperian criticism and other literary studies, he is best known as the editor of the *Modern Reader's Bible* (25 vols , 1895–1923), in which he analyzed the Bible as a literary collection See biography by his nephew, W F Moulton (1926)

Moulton, town (pop 1,181), S Iowa, near the Missouri line SW of Ottumwa, settled 1867, platted 1868 as Elizabethtown, named Moulton 1869

Moultrie, William (mōōl'trē), 1731–1805, American Revolutionary general, b Charleston, S C. He had fought against the Indians (1761) and served in the colonial assembly before the advent of the American Revolution In the war his gallant defense of a small fort on Sullivans Island (later named Fort Moultrie) prevented (1776) Sir Henry Clinton and Sir Peter Parker from taking Charleston Even Moultrie's skill failed to prevent the fall of Savannah to the British in 1778 He was captured in the fall of Charleston to the British in 1780 After the war he served as governor of South Carolina (1785–87, 1795–97) and U S Senator (1787–91) He wrote *Memoirs of the Revolution as Far as It Related to the States of North and South Carolina* (1802)

Moultrie (mōōl'trē), city (pop 10,142), co seat of Colquitt co , SW Ga , on the Ochlockonee river and NNE of Thomasville, inc 1859 It ships farm produce, especially melons, tobacco and cotton, and has a meat-packing plant

Moultrie, Fort, on Sullivans Island at the entrance to the harbor of Charleston, S C It was originally called Fort Sullivan Constructed by Col William Moultrie, it was renamed for him after he gallantly defended it against a British attack (June, 1776) Fort Moultrie figured in the action that precipitated the Civil War (see SUMTER, FORT) The Confederates held it until the evacuation of Charleston in Feb , 1865 It was the chief harbor defense until 1947, when it was abandoned The tomb of Osceola, imprisoned here in 1837, is in the fort In 1949 ownership of the fort was transferred from the Federal government to Sullivans Island township

Mound, village (pop 1,189), E Minn , on Lake Minnetonka and W of Minneapolis, settled 1854, inc 1912 It is a resort in a farm area

mound, hill or heap of earth or stones built up over a burial place (a tumulus or CAIRN) or serving as a defensive embankment or a site for religious rites Such piles are found in many parts of the world but the name is applied in particular to those of North America, ascribed to a people of undetermined origin and date, known as mound builders

Mound Bayou (bī'ō"), town (pop 806), NW Miss , NNE of Greenville, in a farm area, founded 1887, inc 1898 It is an all-Negro self-governing community See Hodding Carter, *Lower Mississippi* (1942)

mound builders, in American archaeology, name given to those people who built mounds in a large area from Wisconsin to the Gulf of Mexico and from the Mississippi river to the Appalachian Mts The greatest concentration of mounds are found in the Mississippi and Ohio valleys Although the name "mound builders" implies homogeneity, most authorities hold that they were not connected politically Economically, however, they were similar - sedentary farmers who lived in permanent villages. It is also believed that they are the ancestors of the Indians found inhabiting the regions of the mounds by the first European explorers. Due to locality and tribal customs there is much variation in the shape, size, and purpose of mounds Shapes included conical tumuli, elongated or wall-like mounds, pyramidal mounds, and effigy mounds (bird, animal, or serpentine forms). In size they varied from an area of less than an acre to that of more than 100 acres—the Cahokia Mound in Illinois being the largest (1,000 ft from north to south, 700 ft from east to west, 100 ft high) The mounds were used as burial places, foundations for buildings (e g , temples), fortresses (e g , Fort Ancient in Ohio), and totemic representations (e g , Serpent Mound in Ohio and Elephant Mound in Wisconsin). Mounds also vary in age, some go back almost 2,000 years, but others (particularly in the Southeast area) were built in historic times Stone, copper, mica, obsidian, and meteoric iron

were widely used by the prehistoric mound builders Obsidian coming from the Rocky Mts., mica from the S Appalachian Mts , and copper from Wisconsin indicate widespread trade They knew weaving and pottery making Their stone carvings of animal and human figures and especially of pipes are excellent The mounds at Hopewell, Mound City, and Newark in Ohio, as well as many in Louisiana, Illinois, Indiana, Wisconsin, and Iowa have been extensively studied See Henry Shetrone, *The Mound-Builders* (1930)

Mound City. 1 City (pop 2,465), co. seat of Pulaski co , S Ill , on the Ohio and near Cairo, in a rich agricultural region, inc 1857 During the Civil War it was an important Union naval base, the shipyard which was in use then is still in operation There is a national cemetery near by The city was severely damaged by the flood of 1937 2 City (pop 1,606), NW Mo , near the Missouri river NW of St Joseph, in a stock and grain area, laid out 1857 Near by are a state park and a U S wildlife refuge

Mound City Group National Monument see NATIONAL PARKS AND MONUMENTS (table), MOUND BUILDERS

Mounds, city (pop. 2,144), S Ill , just N of Cairo, inc 1908

Moundsville, city (pop 14,168), co seat of Marshall co , W Va , in the Northern Panhandle, on the Ohio and S of Wheeling, organized 1865 It is a coal and manufacturing center producing glass, zinc, and enamel products The state penitentiary is here Grave Creek Mound, in the city, is a large Indian burial ground

Moundville, town (pop 812), W central Ala , SW of Birmingham and on the Black Warrior river, in a region noted for the number and size of its Indian mounds. The site has been made a state monument, and a museum (1939) has been built

Mounet-Sully, Jean (zhäⁿ' mōōnā'-sülē'), 1841–1916, stage name of Jean Sully Mounet, French actor He began his career at the Odéon, Paris, in 1868, served in the Franco-Prussian War, and in 1872 made his debut at the Comédie Française He performed major roles in the plays of Voltaire, Racine, and Victor Hugo, but his finest portrayals were Hamlet and Oedipus Rex In 1900 he appeared in the title role of *The Old Age of Don Juan*, which he wrote with Pierre Barbier His brother, **Paul Mounet,** 1847–1922, made his debut at the Odéon in 1880 in Corneille's *Horace* and in 1889 joined the Comédie Française, where he excelled as a tragedian in classical and modern drama

Mount, William Sidney, 1807–68, American genre and portrait painter, b Setauket, L I , N Y His childhood was spent at Stony Brook on the north shore of Long Island, the scene of many of his pictures At 17 he was apprenticed to his elder brother Henry, a sign and ornament painter William Mount studied at the National Academy of Design for about a year (1826) and then began to support himself by portrait painting His success in that field was only moderate After 1836 he lived in Stony Brook, and there he painted the humorous genre pictures for which he is noted Horse trading, country dances, farm scenes with landscape and figures, are favorite subjects He was among the first to paint the American Negro Mount became a member of the National Academy in 1832 Most of his paintings are in private collections, but many of them are known through lithographs and engravings *Raffling for the Goose* and *Long Island Farmhouses* are in the Metropolitan Museum See study by Bartlett Cowdrey and H W Williams, Jr (1944)

Mountain, the, term designating the deputies of the extreme left who occupied the raised seats in the National Convention during the French Revolution. Identified chiefly with the JACOBINS, the Montagnards (men of the Mountain) also included the CORDELIERS and the followers of HÉBERT After crushing the GIRONDISTS, the Mountain ruled France under the REIGN OF TERROR (1793–94) See also PLAIN, THE

mountain, a high land mass having little level ground at its summit Although isolated mountains are not unusual, mountains commonly occur in a group or range, consisting of either a single complex ridge or a series of related ridges A group of ranges closely related in form and origin is a mountain system, a group of systems occupying the same general region is a chain, and the complex of ranges, systems, and chains that occupies a whole area of a continent is a cordillera, zone, or belt Mountains and mountain ranges originate in numerous ways Some are the remains of plateaus dissected by EROSION and owe their existence to being composed of more resistant rock than the rest of the plateau or to lying on the divides or at the sources of the eroding streams. Others are either cones built up by volcanoes or domes pushed up by intrusive igneous rock Fault-block mountains are formed by the raising of huge blocks of the earth's surface relative to the neighboring blocks All the great mountain chains of the earth are either fold mountains or complex structures in whose formation folding, faulting, and igneous activity have taken part. The growth of folded or complex mountain ranges is preceded by the accumulation of sediments in troughs, or geosynclines, occupied by arms of the sea The sediments—which are generally conglomerate, sandstone, shale, and limestone—are derived both from marine deposition and from the erosion of neighboring land masses, thus, the sedimentary rocks of the Appalachian Mts were formed in a geosyncline bounded on the east by Appalachia, the name given to the ancient elevated land of unknown extent which formed part of the coastal region of E North America Similar conditions entered into the formation of the Rockies, the Alps, and the Carpathians The period of sedimentation is followed by folding and thrust faulting, with alteration of sedimentary rock into metamorphic rock Most high mountain ranges are uplifted vertically subsequent to folding These processes sometimes overlap, an initial period of folding being followed by renewed subsidence and sedimentation Mountains are at all times subject to erosion, after folding ceases, sharp peaks and deep valleys are formed, then the peaks are attacked and cut down Mountains may be entirely base-leveled, or they may be rejuvenated by new uplifts Most of the great mountain systems now in existence were developed fairly late in geologic history The essential movements of the earth's surface involved in mountain building are generally conceded to be compression, which produces folding, thrust faulting, and possibly some normal faulting, tension, which produces most normal faulting, and vertical uplift The ultimate causes of these movements are not known, and there are marked contrasts among the hypotheses proposed, dependent as they are on the various hypotheses of the earth's origin One hypothesis, perhaps the most widely accepted, is that earth movements are adjustments of the crust to a shrinking interior The long-accepted explanation of this supposed shrinkage is that the interior contracts because of loss of heat, those who deny a hot interior explain shrinkage as a decrease in volume accompanied by an increase in density, caused by the pressure of the overlying crust Another hypothesis is that earth movements are isostatic, i e , adjustments which keep the weights of the sections of the earth's crust approximately equal (see CONTINENT) A third hypothesis ascribes mountain building to the horizontal thrust of the oceans and ocean bottoms against the land A hypothesis radically different from all the preceding makes mountain building an incident of the supposed drift of continents The greatest mountain masses are the North and South American cordillera, in which the Andes, Rockies, Sierra Nevada, and Coast Ranges of the United States, Canada, and Alaska are included, and the Eurasiatic mountain belt, in which lie the Pyrenees, Atlas Mts , Alps, Balkans, Caucasus, Hindu Kush, Himalayas, and other ranges There is a considerable mass in central Africa Among notable single peaks are, in Asia, Everest, Godwin-Austen, and Kanchanjanga, in South America, Aconcagua, Chimborazo, and Cotopaxi, in North America, McKinley, Logan, and Popocatepetl, in Europe, Mont Blanc and Elbrus, in Africa, Kilimanjaro, Kenya, and Ruwenzori Mountains have important effects upon the climate, population, economic life, and state of civilization of the regions in which they occur By intercepting prevailing winds they cause precipitation, regions on the windward side of a great range thus have plentiful rainfall, while those on its lee side are arid Mountains are in general thinly populated, not only because the cold and the rarefied atmosphere of high regions are unfavorable to human life, but also because the higher reaches of mountains are unfit for agriculture Timber grows only up to a certain altitude (the timber line), grass grows a little higher, but the crests of high mountains are barren and snow-covered Mountains frequently contain veins of valuable mineral ores, deposited out of solution by water or by gases Mountains act as natural barriers between countries and peoples, they determine the routes followed by traders, migrants, and invading armies The difficulties of travel and communication in mountain regions tend to favor political disunity, as well as conservatism in customs and beliefs See Roderick Peattie, *Mountain Geography* (1936), F S Smythe, *Peaks and Valleys* (1938), C L Fenton and M A Fenton, *Mountains* (1942)

Mountainair, village (pop 1,477, alt over 6,000 ft), central N Mex , SSE of Albuquerque, in a farming area Gran Quivira National Monument and Gran Quivira State Monument are south, Quarai State Monument is north

Mountain-Altai or **Mountain-Altay** (both· (älti', äl'ti, alti'), Rus *Gorno-Altai* (gôr"nu-ŭlti'), autonomous oblast (35,800 sq mi ; pop 161,431), SE Altai Territory, RSFSR, in S Siberia, bordering on Mongolia in the south. It contains most of the Altai mts and is drained by the Biya, Katun, and Chuya rivers More than half the district is forested, agriculture and dairy farming are carried on in the river valleys The region has many mineral resources, notably gold, manganese, and mercury. Slightly more than half the population is Russian The remainder consists mostly of the Altai-speaking Oirats or Oirots (see LANGUAGE, table); they were, until recently, seminomadic shamanists, but are now largely settled on collective farms Formed in 1922, the district was known until 1948 as the Oirat or Oirot Autonomous Oblast Its capital is Gorno-Altaisk (pop 23,573), an agricultural center; it was originally called Ulala and was known between 1936 and 1948 as Oirot-Tura

Mountain Ash, urban district (1931 pop 38,386, 1947 estimated pop 31,610), Glamorganshire, Wales, near Aberdare. It is an industrial town, dependent upon the great coal mines near by

mountain ash, name for any species of the genus *Sorbus*, hardy ornamental trees and shrubs native to the Northern Hemisphere, not related to the true ashes They have compound leaves and flat-topped clusters of white flowers followed by orange or red berrylike fruits, for which they are widely cultivated Of native kinds the most common is the American mountain ash, *Sorbus americana*, which ranges from Newfoundland to North Carolina. Introduced species are often cultivated in this country, especially the common European mountain ash or rowan tree (*S aucuparia*) This tree is one of the most revered plants in the folklore of the Old World It warded off evil influences and was "Thor's helper", bits of the wood were thought to avert almost any disaster

Mountain-Badakhshan (-bŭdŭkhshän'), Rus *Gorno-Badakhshan*, autonomous oblast (23,600 sq mi , 1946 estimated pop 50,000), SE Tadzhik SSR, in the PAMIR It borders on China in the east and on Afghanistan in the south and west and is separated from Pakistan only by a narrow strip of Afghan territory Khorog is the capital The region consists of a plateau, from 11,500 to 13,000 ft high, in the east and of deep valleys and lofty ranges in the west There are many lakes, notably Kara Kul Livestock (cattle, sheep, goats, yaks) is raised and some wheat is grown, and there are salt deposits and some placer mining of gold The population is mainly Tadzhik with some Kirghiz tribes Despite Afghan claims and British opposition Russia annexed the region in the late 19th cent The autonomous oblast was formed in 1927

Mountain City, town (pop 1,021), co seat of Johnson co , NE Tenn , in the mountains It is a farm trade center

mountaineering, the practice of climbing to elevated points for sport, pleasure, or research Standard mountaineering equipment includes rope, spiked botts, and pick-like instruments for cutting ice The first significant achievements in mountaineering were the ascents of Mont Blanc made in 1786 by Jacques Balmat and Michel G Paccard and in 1787 by Horace B de Saussure Between 1800 and 1850 the Finsteraarhorn, Jungfrau, Ortles, Mont Pelvoux, and several peaks of the Monte Rosa chain were climbed, and much information was gathered by geologists and topographers English and German poets glorified the Alps, while John Ruskin in the fourth volume of *Modern Painters* (1856) and Joseph M W Turner gave them a prominent place as subjects for painters Modern mountaineering may be dated from the ascent of the Wetterhorn in 1854, surpassed in popularity by the victory of Edward WHYMPER on the Matterhorn in 1865 The sport rapidly attracted devotees The Alpine Club of London was founded in 1858, and its publication, the *Alpine Journal*, was begun in 1863 A class of professional guides soon established itself, and techniques for snow and ice and for rock climbing were developed to the point where highly hazardous ascents were possible for the experienced As the Alps became familiar, climbers ventured to other mountainous areas The English Lake District, Wales, and the Scottish Highlands offered climbing problems of all degrees of difficulty William C Slingsby led the way to the Norwegian mountains Douglas W FRESHFIELD, was one of the pioneer climbers in the Caucasus, soon followed by Albert F. MUMMERY In Africa, KILIMANJARO was climbed in 1889 and Mt Kenya in 1899, the duke of the ABRUZZI explored the Ruwenzori group in 1906 The Rocky Mts of the United States were visited by various travelers early in the 19th cent The Grand Teton of the Teton Range was climbed in 1872 In the 1860s and 1870s Clarence KING and John MUIR ranged through the Sierra Nevada The duke of the Abruzzi ascended Mt St Elias in Alaska in 1897, Mt Blackburn and Mt McKinley were ascended in 1912 and 1913 In South America, Whymper climbed Chimborazo in 1880 and later (1897) Aconcagua and Tupungato Minya Konka, in China, was climbed in 1932. The most challenging of all are the mountain systems of the Himalayas CONWAY OF ALLINGTON explored the Karakorum in 1892, in 1895 J Norman Collie, C G Bruce, Geoffrey Hastings, and Albert Mummery attempted Nanga Parbat, near which Mummery disappeared. Since then many expeditions have been undertaken. Prominent among the peaks climbed are Kamet and Nanda Devi (c.25,650 ft), the highest summit yet reached, although 28,126 ft. has been reached on Mt EVEREST. The giants—Mt. Everest, Mt Godwin-Austin, and Mt. Kanchenjunga—are un-

conquered, despite the efforts of such climbers as George H. L. Mallory, Francis S. Smythe, and Harold W. Tilman. Many clubs of mountaineers have been formed, notably the Schweizer Alpen Club, Club Alpino Italiano, Club Alpin Français, the Himalayan Club, the Alpine Club (London), the Scottish Mountaineering Club, the American Alpine Club, the Appalachian Mountain Club, the Sierra Club, and the Alpine Club of Canada. Most of these render valuable service by building and maintaining shelter huts and providing information concerning topography, routes, and mountain craft. There is a rich and extensive literature of mountaineering, partly because the sport has steadily attracted persons of cultural accomplishment. See Edward Whymper, *Scrambles amongst the Alps* (1871), D. W. Freshfield, *The Exploration of the Caucasus* (1896), G. W. Young, *On High Hills* (1927) and *Mountain Craft* (7th ed., 1949), R. L. G. Irving, *The Romance of Mountaineering* (1935), Sir Leslie Stephen, *The Playground of Europe* (2d ed., 1936), H. W. Tilman, *The Ascent of Nanda Devi* (1937) and *Mount Everest, 1938* (1948), H. E. G. Tyndale, *Mountain Paths* (1949), W. R. Irwin, ed., *Challenge: an Anthology of the Literature of Mountaineering* (1950)

mountain goat. see Rocky Mountain goat.

Mountain Grove, city (pop 2,431), S Mo., ESE of Springfield, in a farm and timber area, settled 1851, inc. 1882. State fruit and poultry experiment stations are near by.

Mountain Home. **1** Ozark resort town (pop. 927), co. seat of Baxter co., N Ark., near Missouri. **2** Village (pop. 1,193), co. seat of Elmore co., SW Idaho, on a plain near the Snake and SE of Boise, inc. 1896. The name in old stagecoach days belonged to a station several miles away but was adopted by the present village, a wool-shipping center on the railroad. Some 5,000 acres near the village are irrigated, as are other isolated tracts, by dams and reservoirs in creeks of the area. A large reclamation project was authorized in 1948.

Mountain Iron, village (pop. 1,492), NE Minn., just W of Virginia, settled 1890 after iron was discovered in the Mesabi range, inc. 1892.

Mountain-Karabakh (kürŭbäkh'), Rus. *Nagorno-Karabakh*, autonomous oblast (1,700 sq. mi., 1946 estimated pop. 130,000), SW Azerbaijan SSR, on the eastern slopes of the Lesser Caucasus. It is bounded in the west by the Karabakh Range. Stepanakert, the capital, and Shusha are the chief towns. It has large forests, especially in the west. Livestock raising and dairying are important. Cotton, fruit, and grapes are grown, and silkworms are cultivated. The population is about 90 percent Armenian. The region was formed into an autonomous oblast in 1923.

Mountain Lake, village (pop. 1,745), SW Minn., between Windom and St. James, in a farm area, laid out 1872. It is the home of a Mennonite colony, which holds here an annual festival of Mennonite choirs.

Mountain Lakes, residential borough (pop. 2,205), N. N. J., E of Dover and N of Morristown, settled 1915 as a real-estate development in a district of lakes, inc. 1924.

mountain laurel, evergreen shrub (*Kalmia latifolia*) native to E North America, not the true laurel. The state flower of Connecticut and Pennsylvania, it is a beautiful bush with leathery leaves and large clusters of pink or white flowers borne in the spring at the ends of the branches. The flowers are unusual in having the anthers of the stamens held in little pockets of the corolla and released like a spring when touched by insects. Mountain laurel, called also calico bush and spoonwood, is poisonous to livestock but seldom palatable, formerly its leaves were used as a remedy for skin diseases and spoons were made from the hard wood. Like other species of *Kalmia* (named for Peter Kalm) which share its poisonous quality and elastic stamens, it is an acid-soil plant. The sheep laurel or lambkill (*Kalmia angustifolia*) has smaller deeper pink flowers not borne at the tips of the branches.

mountain lion. see puma.

Mountain Meadows, small valley, c 3 mi. long and c ¼ mi. wide, extreme SW Utah, c 300 mi. SSW of Salt Lake City. In Sept., 1857, a party of some 140 emigrants bound for California were massacred here. In a period when friction between Mormons and non-Mormons was acute and when Mormons bitterly resented the coming of U. S. troops under Albert Sidney Johnston, a party of emigrants from Arkansas, with a few from Missouri and Illinois, led by Charles Fancher, encamped at Mountain Meadows, a well-known camp site on the Spanish Trail. They were attacked by a large band of Paiute Indians. After three days (Sept. 8–11) in which the emigrants defended themselves behind their wagons, they were approached by white settlers, under a flag of truce, who offered to protect them in a retreat to Cedar City, but instructed them to go unarmed and on foot to allay the suspicions of the Indians. Following these instructions, the entire party, with the exception of a few small children, were massacred. The Mormons were charged with inciting and directing the attack, and anti-Mormon feeling was intensified. Several investigations were made, but it was not until 1874 that John D. Lee, a fanatical Mormon settler, was arrested. In 1875 Lee and three associates accused of complicity were excommunicated by the Church. Lee was convicted of murder and in 1877 was put to death on the site of the massacre.

mountain men, trappers and traders who opened the area of the Rocky Mts. of the United States to general knowledge. Expeditions had been venturing to the upper Missouri since the days of French domination, and there were famous expeditions to and through the mountain country in the early 19th cent., notably the Lewis and Clark expedition, the land voyage to Astoria and the return voyage under Robert Stuart, and the ventures of the Missouri Fur Company under Manuel Lisa. The region of the mountains was still virgin fur-gathering country, however, when W. H. Ashley led his trading expedition up the Missouri in 1822. Of the men who accompanied him, many were to spend most of the next decades living in the mountains, sharing the hardships of Indian life, learning the paths and the rivers and the peaks, and gathering furs. These and others who joined them in this life were the mountain men. They were a tough and self-reliant crew, able to deal with and fight the Indians, able to survive in the wilderness alone. They were members of loose companies, after Ashley retired, the company of Smith, Jackson, and Sublette was formed, to be succeeded by the Rocky Mountain Fur Company. The roving trappers gathered together each year at an appointed spot to receive the goods brought up from St. Louis for the year's trade. This meeting was the rendezvous and was an occasion of rough celebration—for many of the mountain men the nearest approach to civilization that they had for several years at a stretch. Prominent among the mountain men were Thomas Fitzpatrick, James Bridger, Jedediah S. Smith, Kit Carson, John Colter, Milton Sublette, William Sublette, Joseph L. Meek, Hugh Glass, James Beckwourth, Edward Rose, Old Bill Williams, Dave Cook, Warren Ferris, and Hugh Glass. The country of the Southwest where Carson, the Bent Brothers, Louis Vazques, Ewing Young, and others traded among the civilized Indians is also often included in the territory of the mountain men. The Hudson's Bay Company from the Columbia river country sent men into the mountains and the Great Basin, notably Alexander Ross and Peter Skene Ogden. In 1832 the American Fur Company also began to send traders and trappers into the fastnesses of the mountain men, William Vanderburgh and Andrew Drips were outsmarted by their rivals and killed by the Indians, but the company persisted with the activities of such able men as Lucien Fontenelle and ultimately employed many of the old mountain men. The intrusion of Capt. B. L. E. de Bonneville and Nathaniel Wyeth heralded the opening of the mountains, and with the expeditions of J. C. Frémont (who was guided by mountain men) and the beginning of the wagon trains of settlers to Oregon (also guided by mountain men), the old free life began to shrink. The fur trade fell off, civilization pressed closer, and after the early 1840s the day of the mountain men was done. See Hiram M. Chittenden, *The History of the American Fur Trade of the Far West* (3 vols., 1902), Bernard De Voto, *Across the Wide Missouri* (1947). A fictional portrait of a mountain man is A. B. Guthrie's novel, *The Big Sky* (1947).

mountain sheep see bighorn.

Mountainside, borough (pop. 1,148), NE N. J., SW of Newark, inc. 1895.

Mountains of the Moon see Ruwenzori.

Mountain View **1** City (1940 pop. 3,946, 1947 special census pop. 5,868), W Calif., SE of San Francisco, inc. 1902. In an orchard and truck region, it has fruit and vegetable canneries and produces olive oil. **2** Town (pop. 1,075), SW Okla., on the Washita river and N of the Wichita Mts.

Mount Airy, town (pop. 6,286), N. N. C., NW of Winston-Salem in the Blue Ridge foothills. It has a large granite quarry and manufactures textiles and furniture.

Mount Allison University see Sackville, N. B.

Mount Angel, city (pop. 1,032), NW Oregon, NE of Salem, inc. 1905. It is a trade center, with canneries, for a fruit-raising area. Near by is Mt. Angel Seminary (Catholic, Benedictine, for men, 1883).

Mount Auburn see Cambridge, Mass.

Mount Ayr (âr), town (pop. 1,930), co. seat of Ringgold co., SW Iowa, near the Mo. line SE of Creston, founded c. 1855, inc. 1875.

Mountbatten. see Battenberg, family.

Mountbatten, Louis Francis Albert Victor Nicholas, 1st **Earl Mountbatten of Burma** (mountbă'tŭn), 1900–, British admiral, son of Prince Louis of Battenberg (later Mountbatten), marquess of Milford Haven, and Princess Victoria, granddaughter of Queen Victoria. He entered the navy as a cadet in 1913 and saw service as a midshipman in the First World War. At the outbreak of the Second World War he was a commander in the dangerous destroyer service until he returned to England to become adviser to and later director (1942–43) of combined operations, he directed the commando raids upon Norway and France. In 1943 he was appointed to head the Southeast Asia Command and directed Allied operations against the Japanese in Burma. He was last British viceroy of India (1947), and as governor general of the dominion of India (1947–48), he relinquished British power to native rule in June, 1948.

Mountbatten, Philip see Edinburgh, Philip Mountbatten, duke of.

Mount Carmel. **1** City (pop. 6,987), co. seat of Wabash co., SE Ill., on the Wabash below Vincennes, Ind., laid out 1818, inc. 1825. It is a trade and industrial center in a rich agricultural area. Electronic equipment and paper products are made here. Indian mounds in the vicinity have been excavated. **2** Borough (pop. 17,780), E Pa., E of Sunbury, laid out 1835, inc. 1864. Anthracite mining accounts for the growth of the town.

Mount Carroll, city (pop. 1,845), co. seat of Carroll co., NW Ill., near the Mississippi, in a farm and dairy area, founded 1843, inc. 1867. It is the seat of Frances Shimer College (junior) for women.

Mount Clemens (klĕm'ŭnz), city (pop. 14,389), co. seat of Macomb co., SE Mich., NE of Detroit, on the Clinton river near its mouth on Lake St. Clair, settled c. 1798, platted 1818, inc. as a village 1837, as a city 1879. It is a health resort, known for its mineral waters. Electric irons and dinnerware are made. A U. S. military air base, Selfridge Field, was established near here during the First World War. The Indian lake shore trail crossed here.

Mount Desert Island (dĭzûrt'), off the coast of S Maine, SE of Bangor. It is almost divided by the long, narrow Somes Sound into an east and a west half, each c. 10 mi. long and 5 mi. wide, the east half includes most of Acadia National Park (except Schoodic Point, on the mainland) and the leading "village," Bar Harbor. Mountainous (Mt. Cadillac reaches 1,532 ft.) and with lakes, trout streams, rocky shores, and small beaches, the island has some of Maine's finest scenery. It is the site of resorts and summer homes, many of which were destroyed by forest fires in Oct., 1947. Champlain, who named the island, landed here in 1604. A Jesuit mission and colony, the first in what is now the United States, was established in 1613 at Fernald's Point. In the same year Samuel Argall dispersed the group and destroyed the buildings, the English claiming this region by virtue of the Cabot explorations. In 1688 Louis XIV granted the island, with other lands, to Antoine de la Mothe Cadillac, but the French relinquished their claims in 1713. The first permanent settlement is believed to have been made c. 1762. Fishing villages grew up, and Mt. Desert town (pop. 2,047) was incorporated in 1789. Resort development began about the middle of the 19th cent. A public park was set aside for the state and in 1916 transferred to the Federal government, it was called Sieur de Monts National Monument, Lafayette National Park (1919), after 1928, Acadia National Park (now 28,309.7 acres). At Islesford, on Little Cranberry Island, off the south coast, is Sawtelle Museum, with historical collections relating to the island. Seal Harbor and Northeast Harbor are resorts on the south shore. The Mt. Desert marine biological laboratory is at Salsbury Cove, a few miles from Bar Harbor. See G. E. Street, *Mount Desert a History* (new ed., 1926), Harold Peabody and C. H. Grandgent, *Walks on Mount Desert Island* (1928).

Mount Dora, town (pop. 1,880), central Fla., on Lake Dora N of Lake Apopka, settled 1874, inc. 1912. It is a yachting center, with one of the oldest yacht clubs in the state, and holds an annual regatta.

Mount Ephraim, borough (pop. 2,282), SW N. J., near Camden, settled before 1800, inc. 1926.

Mount Forest, town (pop. 1,892), S Ont., on a branch of the Saugeen river and NNW of Kitchener. It has knitting, woodworking, and woolen mills.

Mount Gilead (gĭl'ēud), village (pop. 2,008), co. seat of Morrow co., N central Ohio, E of Marion, founded c. 1824, named Mt. Gilead 1832. Hydraulic presses are made here.

Mount Healthy, village (pop. 3,997), SW Ohio, near Cincinnati, founded 1817. Machine tools and clothing are made.

Mount Holly. **1** Unincorporated village (pop. 6,831), co., seat of Burlington co., W. N. J., S of Trenton and E of Camden, settled c. 1680 by Friends. It is a trade center. Of interest are a Friends' meetinghouse (1775), used by the British as a commissary when they occupied the town in 1776, the courthouse (1796), the old firehouse (1752), and Stephen Girard's home (1777). The John Woolman Memorial Building (1771) was Woolman's daughter's home. **2** Textile-mill town (pop. 2,055), W central N C., on the Catawba and just NW of Charlotte.

Mount Holly Springs, industrial borough (pop. 1,260), S Pa., c. 18 mi. SW of Harrisburg, inc. 1873. It manufactures clothing and paper. Near here is white clay which is used as a filler and base in many products.

Mount Holyoke College (hōl'yōk), at South Hadley, Mass., nonsectarian, for women, chartered 1836, opened 1837 as Mount Holyoke Female Seminary. Founded by Mary Lyon, it equaled some of the colleges of the day and was the model for many of

the early women's schools and colleges It was rechartered in 1888 as Mount Holyoke Seminary and College and in 1893 as Mount Holyoke College It provides for graduate work, including a degree in education The college has an arboretum, a laboratory theater, and a good art museum on its campus Mary Woolley (1901–37) was a noted president See A C Cole, *A Hundred Years of Mount Holyoke College* (1940)

Mount Hope, city (pop 2,431), S W Va, NE of Beckley, in a coal area, inc 1897

Mount Horeb (hôr'ŭb), village (pop 1,610), S Wis, SW of Madison, in a dairy region, settled 1860 by Norwegians and Swiss, inc 1899

Mount Jewett, borough (pop 1,445), NW Pa, in the Alleghenies near Smethport, settled c 1838, inc 1893 Tanning is done here

Mount Joy, borough (pop 2,855), SE Pa, near the Susquehanna SE of Harrisburg, settled 1768, laid out 1812, inc 1851 Its manufactures include shoes, textiles, and iron castings

Mount Kisco, residential village (pop 5,941), SE N Y, in Westchester co, N of White Plains, inc 1874

Mount McKinley National Park, 1,939,319 04 acres, central Alaska, in the Alaska Range, est 1917, enlarged 1922 and 1932 It is only a little smaller than Yellowstone National Park A region of spectacular mountain scenery, the park contains several glaciers and some partly forested (spruce, birch, and willow) valleys Wildlife abounds, including caribou, mountain sheep, bears, and wolves The highest peaks are Mt Foraker (17,000 ft) and, notably, Mt McKinley (locally called Denali, 20,300 ft), the highest point in North America The first successful ascent of Mt McKinley was made in 1913, by Hudson STUCK Access to the park, which is open from June to September, is from McKinley Park station on the Alaska R R See A H. Brooks, *The Mount McKinley Region* (1911), Hudson Stuck, *The Ascent of Denali* (1914), W N Beach, *In the Shadow of Mount McKinley* (1931).

Mount Morris. **1** Village (pop 2,304), N Ill, SW of Rockford, settled 1838, inc 1857 A number of agricultural periodicals are printed here **2** City (pop 2,237), S Mich, residential suburb of Flint, settled 1842, inc as a village 1867, as a city 1930 **3** Village (pop 3,530), W central N Y, in the Finger Lakes region, SW of Rochester, inc 1835 Canning is done here A tuberculosis hospital is in the village Houghton College is near by

Mount of Olives: see OLIVES, MOUNT OF

Mount Olive. **1** City (pop 2,559), SW Ill, NE of St Louis, in a coal area, inc 1917 It has the graves of "Mother" Jones and "General" Alexander Bradley, pioneers in the fight for unionization of the miners **2** Town (pop 2,929), E N C, SE of Raleigh, in a tobacco, cotton, and truck-farm area, founded c 1840

Mount Oliver, borough (pop 6,981), Allegheny co, SW Pa, S of, and near, Pittsburgh, inc 1892

Mount Olympus: see OLYMPIC MOUNTAINS and OLYMPUS (Greece)

Mount Palomar Observatory: see PALOMAR, MOUNT

Mount Penn, residential borough (pop 3,654), SE Pa, near Reading, inc 1902

Mount Pleasant **1** City (pop 4,610), co seat of Henry co, SE Iowa, NW of Burlington, founded 1839, inc 1842 It was the site of Iowa's first courthouse Iowa Wesleyan College, a soldiers' and sailors' hospital, and a state hospital for the insane (1861) are here Oakland Mills State Park is near by **2** City (pop 8,413), co seat of Isabella co, S Mich, W of Bay City and on the Chippewa, settled before 1860, inc as a village 1875, as a city 1889 Dairy products are made The city has grown since oil was found near by (1928) It is the seat of a state teachers college and a state vocational school for feeble-minded children **3** Town (pop 1,017), S N C, ESE of Charlotte, in a farm area **4** Borough (pop 5,824), SW Pa, SE of Pittsburgh, laid out c 1797, inc 1828 Among its manufactures are coke and glass **5** Town (pop 1,698), SE S C, on Charleston Harbor It is connected with Charleston by a bridge **6** Town (pop 3,089), central Tenn., SSW of Nashville and near Columbia, in a phosphate-mining, timber, and farm area Meriwether Lewis National Monument is near **7** City (pop. 4,528), co seat of Titus co., E Texas, SW of Texarkana; inc. 1900 Settled before the middle of the 19th cent, Mt Pleasant was a lumbering center of the pine woods The region produces oil as well as sweet potatoes, truck, peanuts, and cotton **8** City (pop. 2,382, alt 5,850 ft), central Utah, in the Sanpete Valley S of Provo, settled 1852 by Mormons, inc 1868. Sheep are raised, and alfalfa for winter pasture is grown by irrigation, now with the aid of water brought from a Green River tributary by the Sanpete project

Mount Prospect, village (pop 1,720), NE Ill., near Evanston, in a farm area, inc 1917.

Mount Pulaski (pŭlă'skĭ), city (pop 1,378), central Ill, NE of Springfield, in the Lincoln country; inc. 1893 In 1936 the state purchased the old courthouse (1847) and made it a historical monument.

Mount Rainier (rā'nēr), town (pop. 4,830), W central Md., a suburb of Washington, D.C.

Mount Rainier National Park (rānēr', rŭ-), 241,-524 77 acres, SW central Wash., in the Cascade Range SE of Tacoma; est 1899 It is dominated by Mt Rainier, volcanic peak, 14,408 ft high, discovered and named by Captain Vancouver in 1792 The mountain is snow-crowned and has 26 glaciers, its heavily forested lower slopes are popular with mountain climbers.

Mount Revelstoke National Park, 100 sq. mi, SE British Columbia, in the Selkirk Mts, just E of the Columbia river valley, est. 1914 It is on a high plateau, rising to c 7,000 ft in Mt Revelstoke, and has several small lakes A popular resort area, it is noted especially for winter sports

Mount Robson Provincial Park (rŏb'sun), 803 sq mi, E British Columbia, in the Rocky Mts W of Jasper, Alta It is a dominion forest reserve, containing high peaks, glaciers, lakes, and waterfalls. Mt Robson (12,972 ft high), in the park, is the highest peak in the Canadian Rocky Mts

Mount Royal, town (pop 4,888), S Que., on Montreal island It is a west suburb of Montreal

Mount Rushmore National Memorial, 1,668 27 acres, SW S Dak, in the Black Hills and NE of Custer, est 1929 Carved on the face of the mountain, visible for 60 mi, are colossal busts of Washington, Jefferson, Lincoln, and Theodore Roosevelt The memorial was authorized March 3, 1925, by act of Congress Gutson Borglum was selected as sculptor The sculpture was nearly completed when Borglum died (1941), it was finished later in the year by his son Lincoln Borglum

Mount Saint Scholastica College see ATCHISON, Kansas

Mount Shasta (shă'stu), resort town (pop 1,618), N Calif, at the foot of Mt SHASTA, settled in the 1850s, inc 1905 A state fish hatchery is near by

Mount Stephen, George Stephen, 1st Baron, 1829–1921, Canadian financier and railroad builder. He came to Canada from Scotland in 1850, became a manufacturer, and was made (1876) president of the Bank of Montreal With his cousin, Lord Strathcona, and others, including James J Hill, he helped to construct the Canadian Pacific Railway, lending to the project his considerable financial skill From 1881 to 1888 he was president of the railroad In later years he lived in England His philanthropies were numerous He was created baronet in 1886 and baron in 1891

Mount Sterling. **1** City (pop 2,140), co seat of Brown co, W central Ill, E of Quincy, settled 1830, inc 1837 It is a processing center of a farm area **2** City (pop 4,782), co seat of Montgomery co., N central Ky, E of Lexington, in the bluegrass region, platted 1793 It is the trade center for a livestock and farm area Mt Sterling was captured and sacked by Gen John H Morgan in the Civil War Numerous Indian mounds are in the county **3** Village (pop 1,115), S central Ohio, SW of Columbus, in a farm and dairy area, founded 1828

Mount Union, industrial borough (pop 4,763), S Pa., on the Juniata river and SE of Huntingdon, laid out 1849, inc 1867 Its industries include brickmaking, lumbering, farming, and quarrying

Mount Union College see ALLIANCE, Ohio

Mount Vernon. **1** City (pop 14,724), co seat of Jefferson co., S Ill, SE of Centralia, inc 1837 It is a trade, rail, and industrial center for a farm, coal, and oil area. Its principal manufactures are freight cars, shoes, furniture, and hosiery **2** City (pop 5,638), co seat of Posey co, SW Ind, on the Ohio near the confluence of the Wabash and W of Evansville, settled 1816, inc. 1865. It is a trading center for a farming area Prehistoric remains have been discovered near by **3** Town (pop 1,489), E Iowa, ESE of Cedar Rapids, inc 1869 Cornell College (Methodist, coeducational, 1853) is here Palisades-Kepler State Park is near by **4** Town (pop 1,100), co seat of Rockcastle co., central Ky, S of Lexington and on the old Wilderness Road, settled 1810, inc 1818 The Langford House (1790) here served as a fort against the Indians Near by are the Great Saltpeter Caves, mined extensively during the Civil War Limestone, coal, and oil are found in the region **5** City (pop 1,982), co seat of Lawrence co, SW Mo, E of Joplin, in a farm region, laid out 1845. A milk condensery is here The city is the site of a state tuberculosis sanatorium. **6** Industrial and residential city (pop. 67,362), SE N.Y, in Westchester co, just N of the Bronx, settled 1664, inc 1892 Its industries include die casting and the making of electrical instruments, vitamin products, and decalcomania, it is a large oil distribution center St Paul's Church (c 1761) is here (see EASTCHESTER) **7** City (pop. 10,122), co seat of KNOX co., central Ohio, NE of Columbus; laid out 1805 It is a trade center for a farm and livestock area. Gas, oil, and Diesel engines are made here. Daniel Decatur Emmett was born here. Near by is a state hospital for the tubercular **8** Town (pop. 1,443), co seat of Franklin co, E Texas, SW of Texarkana The county has pine woods, cotton fields, truck farms, and oil wells. **9** City (pop. 4,276), co. seat of Skagit co., NW Wash., on the Skagit river and SE of Bellingham; settled c.1877. It has farm and dairy manufactures and a junior college.

Mount Vernon, national shrine, N Va., overlooking the Potomac near Alexandria, 8 of Washington, D C; home of George Washington from 1747 until his death. The land was patented in 1674, and the house built in 1743 George Washington inherited it in 1754 and made additions which were not completed until after the Revolution The mansion is a wooden structure of Georgian design, two and one-half stories high, with a broad, columned portico, wide lawns, fine gardens, and subsidiary buildings surround it The mansion has been restored, after Washington's detailed notes, with much of the original furniture, family relics, and duplicate pieces of the period. The estate was purchased in 1860 by the Mount Vernon Ladies' Association (organized 1856), its permanent custodian In the tomb (built 1831-37) are the sarcophagi of George and Martha Washington and the bodies of other members of the family See Paul Wilstach, *Mount Vernon* (4th ed, 1930), H. H. Dodge, *Mount Vernon* (1932)

Mount Wilson Observatory: see WILSON, MOUNT

Mourne Mountains (môrn), in the southern part of Co Down, Northern Ireland. Slieve Donard (2,796 ft) is the highest peak.

mourning bride: see SCABIOSA.

Mourzouk, Libya see MURZUK.

mouse, name for various small rodents found on all continents Mice have soft fur, usually some shade of gray or brown above, often white on the under parts The tail is scaly and hairless in some and hairy in others, and the ears are usually large The senses of smell and hearing are keen It is believed that the house mouse (*Mus musculus*) evolved from wild mice of central Asia which spread by trade and travel routes to all parts of the world It eats and contaminates man's food, damages leather and other articles, and sometimes destroys field crops It may mate at the age of two months and can produce five to eight litters a year Among the New World mice are the white-footed or deer mouse, which eats plant foods as well as insects and other small animals, the harvest mouse, which lives in wet and dry grassy places, and the predaceous grasshopper mouse of N North America Voles, stocky forms with short ears and blunt heads, include the meadow mouse (*Microtus*) of North America, Europe, Asia, and North Africa and the red-backed mouse (*Clethrionomys*) of cold north temperate regions Mice are eaten by nearly all carnivores. The mouse, especially the albino or white house mouse, is used in scientific research The dormouse, jerboa, jumping mouse, and pocket mouse are related rodents

Mousinho de Albuquerque, Joaquim (zhwăkēm' mōzē'nyō dăl"bŭkĕr'ku) 1855–1902, Portuguese military commander in Mozambique After service in India, he was made governor of Lourenço Marques in 1890 He took a large part in suppressing the rebellion of the native tribes of S Mozambique in 1895 and 1896 and, as governor of Gaza, was in command By a daring coup he captured Gungunhana, the native leader, and he established order, making the Portuguese hold on Mozambique firm Displeased with the political intrigues of colonial politics, he resigned and returned to Lisbon, where he committed suicide

Moussorgsky, Modest Petrovich (mŭdyĕst' pĕtrô'vĭch mōsôrg'skē), 1839–81, Russian composer, one of the nationalist school His masterpiece is the opera *Boris Godunov* (1868–69, revised 1871-72, produced 1874), after the play by Pushkin It was later edited and revised by Rimsky-Korsakov, as was the unfinished opera *Khovanshchina* (produced 1885) Outstanding are his piano suite, *Pictures at an Exhibition* (1874), later orchestrated by Ravel, *St John's Night on the Bare Mountain*, for orchestra (1867); and many fine songs See biographies by Oskar von Rieseman (Eng tr, 1929) and M. D Calvocoressi (1946), V I Seroff, *The Mighty Five* (1948)

Mousterian: see PALEOLITHIC PERIOD

mouth or oral cavity, the beginning of the digestive tract The mouth cavity is divisible into two portions, the vestibule and the mouth cavity proper The vestibule is the potential space between the lips and cheeks (forming the outer boundary) and the teeth and gums of both jaws The mouth cavity proper extends from the inner arches of the teeth and gums to the throat The roof of the mouth is formed by the hard and the soft palate, the tongue rests on the floor of the mouth Salivary and mucous glands open into the vestibule and into the mouth cavity proper The action of saliva, by means of an ensyme (ptyalin), changes starch to sugar in the mouth cavity, thus initiating the process of digestion. The chewing and grinding action of the teeth prepares the food for digestion by ensymes in the stomach and small intestine.

mouth organ: see HARMONICA 1.

moving pictures, motion pictures, or cinema (sĭ'nŭmă), a series of pictures produced by projecting on a screen the images in a film. Although the images are photographs of bodies at successive instants of motion, they are projected so rapidly that the human eye perceives them in continuous motion because of the retention of an image as an afterimage (persistence of vision). In the sound moving pic-

ture, photographs are recorded on a celluloid roll film; sound is recorded, in terms of light variations, on a band running the length of the film (see SOUND RECORDING). The standard width for theatrical film is 35 mm; many documentary films are recorded or reproduced on 16-millimeter film for use on smaller projectors; amateurs commonly use 8-millimeter film. The origins of the moving picture must be sought in devices, commonly wheels or disks, designed to give the illusion of motion by the rapid viewing of serial pictures and in the development of inventions and techniques for photographing movement. In the 1870s serial photographs of race horses in motion were obtained in California by Eadweard Muybridge and J. D. Isaacs by setting up a row of cameras with electrically operated shutters. To exhibit the shots, Muybridge invented the zoopraxiscope, essentially a revolving disk from which the photographs were projected. Methods of serial photography and of projection were improved in the 1880s by E. J. Marey, a French physician, in the course of his study of motion. At about this time Thomas Alva Edison and his staff were developing the Kinetograph, a camera using rolls of coated celluloid film, and the Kinetoscope, an apparatus for peep-show viewing. Marketed in 1893, the Kinetoscope became popular immediately in penny arcades. The rate of invention was accelerated. Especially notable was the work in France of the Lumière brothers, who invented the *Cinématographe*, an apparatus for taking and for projecting serial pictures, in 1895. The Lumières exhibited in Paris moving pictures projected on a screen. In the United States also projection machines, notably the Pantopticon and the Vitascope, were developed at about the same time. The Kinetoscope was soon superseded by pictures projected on a screen. Shops and storerooms were converted for presenting the brief and shaky pictures that were the product of the early cameras and projectors. Many of these impromptu theaters charged a nickel for admission and were therefore known as *nickelodeons*. The moving picture developed simultaneously as a new art form and as an industry. Early pictures recorded scenes, and simulations of scenes, from life. As the novelty wore off, the makers of pictures were forced to introduce improvements in techniques and in subject. Longer pictures were made, romance and adventure were introduced. A pioneer in the new mode was the French producer, Georges Méliès, who broadened film subjects by using incidents approaching story importance, fantasy, and comedy and who enlarged film technique with many camera tricks and film-editing devices. Influenced by the success of the Méliès films, Edwin S. Porter, an American director, carried the editing principle further, using such devices as parallel and contrast cutting for joining and interpreting separate themes into one narrative. He made *The Great Train Robbery* (1903), whose popularity insured the continuance of the new style. David Wark Griffith recognized the possibilities of motion pictures and set the general structure of the form as it is known today. He substituted the single shot for the scene as the unit in editing film, introduced or improved devices such as the close-up, fade-in, and dissolve, and used a mobile camera. His *Birth of a Nation* (1915) and *Intolerance* (1916) set a new mark in technique. Editing techniques to increase tension, contrast and meaning were further developed especially by Russian and German producers and are usually grouped under the term *montage*. The tradition of the spectacle film, popularized by Griffith, was perpetuated in later pictures such as *The Covered Wagon* (1923). The form of the motion picture was influenced also by the introduction of full-length feature pictures from Europe, notably *Quo Vadis?* (Italian, 1913). The early years of the industry were marked by bitter disputes over patent rights. Companies holding essential patents formed (1909) the Motion Picture Patents Company, which attempted to keep unlicensed companies out of production and distribution. Many independents moved their operations to Los Angeles in order to be close to the Mexican border in case of injunction, and Hollywood, Calif., eventually became the movie capital. Films were at first sold outright to exhibitors, later they were distributed on a rental basis through film exchanges. In the early films, players were presented anonymously, but the tremendous popularity of Mary Pickford, who came to be called "America's Sweetheart," and of Charles Chaplin, considered by many the world's greatest comedian, marked the star as the key to box-office success. Thereafter the star system was established; the player dwarfed the producer, and the salaries of stars rose dizzily. Acting improved and expert pantomime replaced extravagant gestures. International renown was attained by many actors, notably William S. Hart, Douglas Fairbanks, Sr., Theda Bara, Rudolph Valentino, and Greta Garbo. The skill of cameramen and directors increased, technical problems were solved, and the polished techniques for which Hollywood has become famous were developed. During the First World War the United States became dominant in the industry; American producers acquired virtual control of moving-picture distribution throughout the world. Antitrust suits by the U.S. government have sought to break the connection between distribution and production. Although the United States still dominates the world industry, its position has been challenged by the production abroad of excellent and artistic films and by foreign regulations limiting the importation of American films. Dependent upon mass production and mass support, pictures tend to mirror the opinions and attitudes of the time, in the effort to avoid offending any large section of society, strength of artistic production is frequently lost. Criticism by educational, religious, and other groups and the fear of organized censorship induced the industry to establish (1922) an organization for self-regulation, the Motion Picture Producers and Distributors of America (headed until 1945 by William H. Hays), and to accept its production code (known as the "Hays Code"). The taste in movies has in general run to the sensational, as in Western films, the "sex-appeal" films in the 1920s, and gangster movies in the 1940s. Almost from the start there were attempts to make movies with sound, movies with color, and three-dimensional movies. In 1926 sound effects and music were successfully used, dialogue was introduced in *The Jazz Singer* (1927) with Al Jolson. Color was successfully employed following the development (c. 1932) of Technicolor, a three-color (red, blue, yellow) process. Special types of films include the ANIMATED CARTOON, the documentary film, and the newsreel. The documentary, broadly defined, includes the newsreel, travel film, educational film, and all other fact or nonfiction films. The term is sometimes limited to artistic, interpretive films developing out of the work of Robert Flaherty in the '20s, examples are Flaherty's *Nanook of the North* (1922) and Pare Lorentz's *The Plow That Broke the Plains* (1936) and *The River* (1937). The documentary has proved its value in the schoolroom and in training programs during the Second World War and both here and abroad has been used as a medium for propaganda. Among the earliest film types is the newsreel, which was first presented as a regular attraction by Charles Pathé in Paris c. 1909 and in the United States in 1910. See Terry Ramsaye, *A Million and One Nights* (1926), Maurice Bardèche and Robert Brasillach, *The History of Motion Pictures* (1937, Eng. tr. 1938), Lewis Jacobs, *The Rise of the American Film* (1939), Gloria Waldron, *The Information Film* (1949), Paul Rotha, *The Film Till Now* (1930, rev. 1949).

Mowat, Sir Oliver (mō'ut), 1820–1903, Canadian statesman, b. Kingston, Ont. He was called to the bar of Upper Canada in 1841 and entered the Canadian legislative assembly as a Liberal in 1858. As a member of the Quebec conference in 1864, he helped to draft the resolutions on confederation. Mowat was a champion of provincial autonomy, his long term (1872–96) as Liberal premier and attorney general of Ontario was marked by a series of successful attempts to secure local sovereignty for that province. Appointed (1896) to the dominion senate, he was minister of justice under Sir Wilfrid Laurier until 1897, when he retired to accept the post of lieutenant governor of Ontario. See biography by C. R. W. Biggar (1905).

Mowatt, Anna Cora (Ogden) (mou'ut), 1819–70, American actress and playwright. She made her debut in 1845 in *The Lady of Lyons*, supporting E. L. Davenport, and produced her comedy *Fashion*, which won popular acclaim, in the same year. Davenport became her leading man, and they had success in her play *Armand* (1847) and in tours (1845–54) of England and the United States, when she played such roles as Lady Teazle, Juliet, and Katharina in *The Taming of the Shrew*. Edgar Allan Poe called her plays "theatrical but not dramatic," but was captivated by her charm and natural manner. In 1854 Mrs. Mowatt married W. T. Ritchie and retired from the stage. See her autobiography (1854).

Mowbray, Harry Siddons (mō'brā), 1858–1928, American figure and decorative painter, b. Egypt, of English parents. He was taken to the United States in 1859. His works include *Idle Hours* (National Gall. of Art, Washington, D.C.), *A Lady in Black* (Buffalo, N.Y., Acad.), a frieze, *Development of Law*, in the Appellate Courthouse, New York, and mural decorations in numerous residences in New York and Washington, D.C., in the library and council room of the University Club, New York, in the Federal Courtroom, Cleveland, in the art gallery of Breckenridge Long, St. Louis, and in the church and Gunn Memorial Library at Washington, Conn. He was a member of the National Academy of Design and the first director (1903) of the American Academy in Rome.

Mowbray, Thomas: see NORFOLK, THOMAS MOWBRAY, 1ST DUKE OF.

Mowequa (mōwē'kwŭ), village (pop. 1,366), central Ill., S of Decatur, in a farm and coal area; inc. 1877.

mower. The machine, drawn by horses or by a tractor, that has generally superseded the scythe in cutting meadows for hay is an adaptation of the REAPER, which has a far longer history. Mowers were first used extensively in the time of the Civil War in America, when scarcity of labor encouraged the use of machinery. The lawn mower is a relatively small machine for cutting the grass of lawns and parks. It is propelled either by hand or by gasoline engines.

Moza (mō'zŭ). **1** Son of Caleb. 1 Chron. 2.46. **2** Descendant of Saul. 1 Chron. 8.36,37.

Mozah (mō'zu), unlocated town, apparently W of Jerusalem. Joshua 18.26.

Mozambique (mō"zumbēk'), Port. *Moçambique*, Portuguese colony (297,731 sq. mi., pop. 5,085,630), on the Indian Ocean. It is also called Portuguese East Africa. The capital is Lourenço Marques. It is bordered on the north by Tanganyika, Nyasaland, and Northern Rhodesia and on the west by Southern Rhodesia and the Union of South Africa. Mozambique Channel (c. 250 mi. wide) separates it from Madagascar. There are coastal lowlands and in the interior undulating savanna highlands. Roads and railroads link the prosperous plantations and mining areas with the ports. Cotton, sisal, tobacco, coffee, and tea are grown. Aluminum, asbestos, tin, tungsten and coal are mined in the northwest. The Portuguese founded settlements and occupied the coast in the early 16th cent. When the Dutch occupied the Portuguese establishments in Angola (1640–48), the Portuguese slave traders transferred to Mozambique, and Portugal's hold on the region was strengthened. Slavery was abolished in 1878. Since then Mozambique, despite its hot, damp climate, has attracted as settlers Portuguese and other Europeans, especially British. Mozambique is ruled by a governor with the aid of elected councilors.

Mozarabs (mōzā'rubz), Christians of Moslem Spain. Their position was that of Christians and Jews usually in Islam: they were a separate community locally autonomous, and they paid a special tax instead of the requirement made of Moslems to serve in the army. In Spain the Christians elected their own ruler, called count, who was directly responsible to the Moslem emir or caliph, their taxes, separate from those of Moslems, were collected by special agents. They were allowed to maintain their hierarchy (the primate of Spain being the archbishop of Toledo), and they used the Visigothic, not the Moslem, canon law. Their LITURGY, called the Mozarabic rite, was very like that of ancient Gaul. It is preserved only in chapels at Toledo and Salamanca. For one or two periods, notably in the 11th cent., the Mozarabs were persecuted. The chief Mozarab centers were Toledo, Seville, and Córdoba. The Christians were probably Arabic-speaking, and their culture, basically Romance-Visigothic, was heavily influenced by Moslem civilization. The influence of the Mozarabs in modern Spain was very great.

Mozart, Wolfgang Amadeus (mō'zart, Ger. vôlf'gäng ämädā'ōos mō'tsart), 1756–91, Austrian composer, b. Salzburg. Under the tutelage of his father he became an infant prodigy at the harpsichord, violin, and organ, and he and his older sister were displayed by their father at the court of Maria Theresa, at the principal aristocratic households of Central Europe, in Paris, and in London. Mozart met J. C. Bach (whose influence was of great significance) in London and composed his first symphonies there. During travels in Italy (1768–71) he absorbed Italian style, successfully produced his second opera, *Mitridate, re di Ponto* (Milan, 1770), and in Rome in 1770 wrote down Allegri's *Miserere* from memory after a single hearing. He was appointed concertmeister to the archbishop of Salzburg in 1771. In 1777, accompanied by his mother, he began his last tour, in search of a satisfactory position. It lasted until 1779 and included Munich, Augsburg, Mannheim (where he fell in love with the singer Aloysia Weber), Versailles, and Paris. Paris, where his mother died, with its opera dominated by Gluck, had little time for Mozart, despite the successful performance there of his symphony in D (1778), known as the Paris Symphony. Back in Salzburg he composed *Idomeneo* (Munich, 1781) for the Bavarian court. This opera, one of the last examples of the late 18th-century *opera seria* and in many respects the best, is the first work of Mozart's maturity. In the year of its production he resigned from the archbishop's service and moved to Vienna, where in 1782 he married Constanze Weber, Aloysia's sister, and began his friendship with Haydn. The six string quartets (1782–85) dedicated to Haydn are testimony of the influence of Haydn, who was in turn influenced by the later quartets of Mozart, avowing that he considered Mozart the greatest living composer. Mozart's German Singspiel *Die Entführung aus dem Serail* (1782) had some success, but the Viennese court opera was dominated by Italian opera, and in his next three operas Mozart turned to *opera buffa*, with librettos by Lorenzo Da Ponte. *Le Nozze di Figaro* (1786) was fairly well received in Vienna, but in Prague it found immediate and lasting acceptance, and from Prague came the commission which resulted in *Don Giovanni* (Prague, 1787), which the people did not understand. At the death of Gluck (1787), Mozart succeeded him as chamber musician and court composer to Joseph II. His salary was far less than Gluck's had been, however,

and his financial troubles persisted to the end of his life In the space of three months in 1788 Mozart composed his last three symphonies—No 39 in E flat, No 40 in G minor, and No 41, called Jupiter Symphony, in C These display complete mastery of symphonic form as established by Haydn, while they are at the same time intensely personal, immitable works In 1789 Mozart accompanied Prince Carl Lichnowsky to Berlin In Potsdam he was presented to King Frederick William II, whose offer of a position he refused For the king, an accomplished cellist, Mozart's last three string quartets (1789–90) were written Returning to Vienna he composed his clarinet quintet (1789), his last *opera buffa*, *Così fan tutte* (1790), and his last piano concerto (1791), in B flat In 1791 *Die Zauberflöte*, with the actor Schikaneder as librettist, was begun as a fairy opera Both men were Masons, however, and during the course of its composition the opera was turned into a symbolic glorification of Freemasonry Its composition was interrupted by a commission from a wealthy nobleman for a Requiem Mass and by the composition of *La clemenza di Tito*, an *opera seria* for the coronation of Leopold II as king of Bohemia After the production of *Die Zauberflöte*, Mozart worked feverishly on the Requiem, with the foreboding that it was to be his own Requiem He died without finishing it, the work was completed by his pupil Franz Sussmayr Nearly all of Mozart's works were composed upon commission, and he wrote in all forms—Masses and other church music, songs, concert arias, instrumental dances, suites, serenades, and *divertimenti*, chamber music for various combinations, sonatas, concertos; cantatas, symphonies; and operas Opera, however, seems to have been his chief interest Although admired by Gluck, Mozart's operas embody the opposite of Gluck's ideals, in Mozart everything is conceived in terms of the music, and the music characterizes where the words do not In antitheses to Gluck's choruses are Mozart's ensembles, with their sharp character delineation Mastery of symphonic form is also apparent in the operas A thematic catalogue of Mozart's works was made by Ludwig von Köchel and published in 1862, an edition revised by Alfred Einstein appearing in 1937 Works are usually identified by their numbers in this list, e g , the Piano Concerto in B flat, K 595 See biographies by Otto Jahn (4 vols , 1856–59, Eng tr , 1882), Eric Blom (rev ed , 1937), W J Turner (1938), and Alfred Einstein (1945), T. F Dunhill, *Mozart's String Quartets* (1927), E J Dent, *Mozart's Operas* (2d ed , 1947), Georges de Saint-Foix, *The Symphonies of Mozart* (Eng tr , 1947), A J B Hutchings, *A Companion to Mozart's Piano Concertos* (1948), C M Girdlestone, *Mozart's Piano Concertos* (1948) Mozart's father, **Leopold Mozart** (lā'ōpōlt), 1719–87, besides being the teacher of his famous son, was a capable composer and was author of *A Treatise on the Fundamental Problems of Violin Playing* (1756, Eng tr , 1948), a work of interest today as a record of 18th-century musical practice

Mozhaisk (mŭzhīsk'), city (1939 pop over 10,000), central European RSFSR, W of Moscow and on the Moskva river Chartered in 1231, it was formerly an important fortress town Here Napoleon awaited the evacuation of Moscow by the Russians (1812) A highway junction, Mozhaisk was held (1941) by the Germans in their attempt to take Moscow in the Second World War

Mozier, Joseph (mō'zhur), 1812–70, American sculptor, b Burlington, Vt He went to Italy to study and practice art, after retiring from business in 1845 Some of his works are *Prodigal Son* (Pa Acad. of the Fine Arts), *Rebecca* (N Y Public Library), *Il Penseroso* (Horticultural Hall, Philadelphia), *Rizpah* (Metropolitan Mus), and *Wept of Wish-ton-Wish* (New Haven)

Mta (umstä'), river, c 275 mi long, NW European RSFSR It rises near Borovichi and flows generally W into Lake Ilmen near Novgorod Once an important navigation route, it is now of only local significance

Mtskhet (umtskhyĕt') or **Mtskheta** (mutskhyĕ'tŭ), town (1939 pop over 2,000), Georgian SSR, NW of Tiflis and on the Kura river and the Georgian Military Road An ancient city, it was the capital of Georgia until the 5th cent. A D , when it was superseded by Tiflis Its 15th-century cathedral, containing the tombs of Georgian rulers, was built on the site of a building destroyed by Tamerlane Another church (12th cent) was restored in 1903

Muallaqat (mōō'läkät'), Arabic anthology compiled by the scholar Hammad al Rawiya (d c 775). It consists of seven (or, in some versions, nine) odes, all by different poets of the 6th or early 7th cent They are generally esteemed the finest of Arabic odes, and they present an unexampled picture of Bedouin life in its state before Islam. According to legend (probably by popular etymology) the poems were hung up in the enclosure at Mecca The greatest Arabic poets are represented in the Muallaqat. The name also appears as Moallakat

Muawiya (mōō'wēä), d 680, first OMAYYAD caliph, one of the greatest of Moslem statesmen, son of Abu Sufyan, a native of Mecca He submitted to Islam the year of the surrender of Mecca and became Mohammed's secretary Under Omar he became the very able governor of Syria He struggled with ALI over the government of the empire and led in the deposition of HASAN As caliph he made Islam an autocracy, retaining the old forms of self-government By continual raids beyond his borders he maintained himself from aggression Under him the Arabs became an obedient, flexible instrument of war Muawiya's policy was always tolerant, and he displayed an enlightened point of view in all his dealings He made the Moslem empire the remarkably unified force that it was

Much Wenlock, Shropshire, England see WENLOCK

mucilage (mu'sĭlĭj), a thick glutinous fluid related to the natural gums It is secreted by a variety of plants, notably by the root of the marsh mallow and the seed of flax, it is the chief constituent of agar Its function in the plant is varied, it sometimes serves to check loss of water, to facilitate seed dispersal, and as a food reserve In medicine it is known as an emollient and demulcent Mucilage is used also as an adhesive, and the term is extended to include other slimy adhesives, especially solutions of gum, such as tragacanth mucilage

Muck, Karl (kärl' mōōk'), 1859–1940, German conductor, studied at the universities of Leipzig and Heidelberg (Ph D , 1880) and at the Leipzig Conservatory After a debut as a pianist, he made numerous appearances as an opera conductor and was musical director (1892–1912) of the Royal Opera, Berlin He conducted (1901–30) at the Bayreuth Festivals, and he was conductor of the Boston Symphony Orchestra from 1906 to 1908 and from 1912 until his internment as an enemy alien in 1918 In 1919 he returned to Germany and was conductor (1922–33) of the Hamburg Philharmonic Orchestra

Muckross see KILLARNEY, Co Kerry, Ireland

Mudania or **Mudanya** (both mōōdä'nyä), town (pop 5,624), NW Turkey It lies on the Asiatic shore of the Sea of Marmara and functions as port for near-by Bursa

Mudd, Samuel Alexander, 1833–83, Maryland physician and Confederate sympathizer who on April 15, 1865, set the broken left leg of Lincoln's assassin, John Wilkes BOOTH Tried along with Booth's accomplices (see SURRATT, MARY EUGENIA), he was sentenced to life imprisonment at Fort Jefferson in the Dry Tortugas, Fla Since Dr Mudd had nothing to do with the assassination and since Edward Spangler, the sceneshifter at Ford's Theater convicted of abetting Booth's escape, was let off with six years, this extreme penalty was quite unjust However, he was pardoned by President Johnson in 1869 See *The Life of Dr Samuel A Mudd* (ed by his daughter, Nettie Mudd, 1906)

Mudejar, Span *mudéjar* (mōō-dhā'här), name given to the MOORS in Spain converted to Christianity and to the style of Spanish architecture and decoration, strongly influenced by Moorish taste and workmanship, which developed after the Christian reconquest In erecting Romanesque, Gothic, and Renaissance buildings, elements of Mohammedan art were used, achieving sometimes striking results The dominant geometrical character, distinctly Oriental, emerged conspicuously in the accessory crafts—tilework, brickwork, wood carving, plaster carving, and ornamental metals Even after the Mohammedans themselves were no longer employed, many of their contributions remained as an integral part of Spanish building A particularly fine Mudejar example is the Casa de Pilatos, of the early 16th cent , at Seville See G G King, *Mudejar* (1927)

mud hen see COOT

Mueller, Paul Herman (poul' hĕr'män mü'lûr), 1899–, Swiss research chemist In 1939 he discovered the insecticidal powers of DDT (dichlorodiphenyl-trichloroethane), which was widely used as a means of checking insect-borne diseases in the Second World War For his discovery he was awarded the 1948 Nobel Prize in Physiology and Medicine

Mufaddaliyat see MOFADDALIYAT

mufti (mŭf'tē), in Moslem law, attorney who writes his opinion (*fatwa*) on legal subjects for private clients or to assist judges in deciding cases The recorded opinions of the muftis are a valuable source of information for the actual working of Moslem law as opposed to the abstract formulation Only in the fields of marriage, divorce, and inheritance are the *fatwas* binding precedents, on other subjects they might be set aside In the Ottoman Empire the muftis were state officials. The British retained the institution in some Moslem areas which they controlled, e g , in Palestine, where HUSSEINI (Amin el Hussein) was made mufti of Jerusalem in 1921

Muggleton, Lodowicke, 1609–98, English sectarian, a journeyman tailor With his cousin John Reeve, also a tailor, he founded a new sect In 1652 they claimed to have been appointed by revelation as the two witnesses of Rev 11 3, Reeve as the messenger and Muggleton as his mouthpiece in declaring a new spiritual dispensation. They denied the doctrine of the Trinity, teaching that God the Father came on earth to die and left Elijah to be his vice regent in heaven They held that God's person is that of a human being, that Eve became the incarnation of the evil spirit, and that the sun travels around the earth. Both Reeve and Muggleton were imprisoned (1653) for blasphemy; the former died in 1658. Their doctrines gained a number of adherents called the Muggletonians, and the sect did not die out until about the middle of the 19th cent An autobiography of Muggleton is included in the posthumously published *Acts of the Witnesses* (1699) See *The Works of J Reeve and L Muggleton* (ed by Joseph Frost and Isaac Frost, 3 vols , 1832)

Mughal see MOGUL

Mugodzhar Hills (mōōgŭjär'), range, c 250 mi long, Kazakh SSR The southernmost extension of the Urals, it forms the divide between the Caspian and the Aral basin Its highest point is 2,145 ft There are coal, iron, nickel, and chrome deposits

mugwumps (mŭg'wŭmps"), slang term in American political history meaning the Republicans who in 1884 deserted their party nominee, James G BLAINE, to vote for the Democratic nominee, Grover CLEVELAND The term is only rarely applied today to a voter who bolts his regular party

Muhammad: see MOHAMMED

Mühlback, Luise (lōō'sŭ mül'bäkh), 1814–73, German novelist, whose real name was Klara Mundt She wrote many historical novels, popular both in German and in English translation They include *Daughter of an Empress* (1848, Eng tr , 1869), and *Frederick the Great and His Court* (1853, Eng tr , 1866)

Mühlberg (mül'bĕrk), town (pop 4,466), in the former Saxony prov of Prussia, E Germany, SE of Torgau Here in 1547 Emperor Charles V defeated the SCHMALKALDIC LEAGUE and captured Elector John Frederick I of Saxony

Mühldorf (mül'dôrf), town (pop 8,687), Upper Bavaria, on the Inn It dates from the 10th cent Near by Emperor Louis IV defeated (1322) his rival, Frederick the Fair.

Mühlenberg, Heinrich Melchior (hĭn'rĭkh mĕl'khĭôr mü'lunhĕrk), 1711–87, American Lutheran clergyman, b Germany, educated at Göttingen and at Halle He arrived (1742) in Pennsylvania to serve as pastor of several congregations in and near Philadelphia, but he soon became the leader of all the Lutheran groups in the colonies Often called the patriarch of Lutheranism in America, he organized (1748) the first Lutheran synod in the country See his journals (Vol I, 1942, Vol II, 1945), biography by W J Mann (2d ed , 1911).

John Peter Gabriel Muhlenberg (mü'lunbûrg), 1746–1807, American Lutheran clergyman, Revolutionary officer, and legislator, eldest son of Heinrich, was born in Trappe, Pa , and studied at Halle After pastorates in Pennsylvania, New York, and Virginia, he left his church in Woodstock, Va , to raise and lead a noted regiment in the American Revolution Throughout the war he served with distinction, retiring (1783) as brevet major general He entered political life in Pennsylvania and served three terms in Congress in the House of Representatives Statues of him were erected at the Capitol, Washington, D C , and in City Hall Plaza, Philadelphia **Frederick Augustus Conrad Muhlenberg,** 1750–1801, Lutheran clergyman and legislator, second son of Heinrich, also was born at Trappe, Pa , and educated at Halle He was pastor of various churches in Pennsylvania and pastor (1773–76) of Christ (Lutheran) Church, New York city Because of Revolutionary sympathies, he left New York and returned to Pennsylvania Muhlenberg was a delegate (1779–80) to the Continental Congress and a member (1789–97) of the House of Representatives, twice serving as speaker His vote insured the ratification of JAY'S TREATY See P A W Wallace, *The Muhlenbergs of Pennsylvania* (1950)

Muhlenberg, William Augustus (mü'lunbûrg), 1796–1877, American Episcopal clergyman, hymn writer, and philanthropist, b Philadelphia, grad Univ of Pennsylvania, 1814 He was a great-grandson of Heinrich Melchior Mühlenberg Baptized in the Lutheran communion, he joined the Episcopal Church, in which he was ordained priest in 1820. In 1846, after pastorates in Lancaster, Pa , and Flushing, L I., N Y , he became rector of the Church of the Holy Communion, New York city Muhlenberg helped found (1858) St Luke's Hospital, of which he was first pastor and superintendent He also founded St Johnland, an industrial Christian settlement on Long Island He was an influential leader in movements advancing Christian brotherhood and the unity of evangelical bodies throughout the world Among his best-known hymns are *I Would Not Live Alway* and *Saviour, Who Thy Flock Art Feeding.* See biography by W W Newton (1890).

Muhlenberg College. see ALLENTOWN, Pa.

Mühlhausen (mülhou'zŭn), city (pop. 48,013), Thuringia, central Germany, on the Unstrut. It is an industrial center, manufacturing electrical equipment, sewing machines, cotton, paper, and leather. Barite is mined near by. Fortified (10th cent) by Henry I, it was a center of the Teutonic Knights in the 13th cent. and became a member of the Hanseatic League. It became (16th cent.) an

Anabaptist center and was dominated during the Peasants' War by Thomas MÜNZER, who was executed here in 1525 A free imperial city from 1251 until 1803, Mühlhausen changed hands several times before the Congress of Vienna awarded it (1815) to Prussia. It was transferred to Thuringia after 1945. Mühlhausen has a 17th-century city hall, several Gothic churches, and many houses dating from the 16th, 17th, and 18th cent

Muich-Dhui, Ben, Scotland see BEN MACDHUI.

Muir, Alexander (mūr), 1830–1906, Canadian song writer, b Scotland He was brought to Canada in 1833 and was graduated from Queen's Univ at Kingston in 1851 In 1867 he wrote the words and music for *The Maple Leaf Forever*, which is regarded by many as the national hymn of Canada

Muir, Edwin, 1887–, British poet, novelist, and critic, b Orkney In 1901 his family moved to Glasgow, and Muir at 14 became an office clerk With little schooling, he read avidly His first book, *We Moderns*, was published in 1918. He lived on the Continent from 1921 to 1927, supporting himself by contributions to the *New Age* and the *Freeman* and by translations from the German He is known especially as a shrewd and perceptive critic of fiction, *The Structure of the Novel* (1928) is representative The five collections of his poetry include *First Poems* (1925) and *The Voyage* (1946) He has written three novels, *The Marsoncite* (1927), *The Three Brothers* (1931), and *Poor Tom* (1932) A biography of John Knox appeared in 1929 See his autobiography, *The Story & the Fable* (1940)

Muir, John, 1838–1914, American naturalist, b Dunbar, Scotland, studied at the Univ of Wisconsin He came to the United States in 1849 and settled in California in 1868 In recognition of his efforts as a conservationist and a crusader for national parks and reservations, Muir Woods National Monument was named for him He made extended trips throughout the country, often on foot, he also traveled in Alaska (discovering Muir glacier) and in Russia, India, and Australia His books include *The Mountains of California* (1894), *My First Summer in the Sierra* (1911), *The Story of My Boyhood and Youth* (1913), *Travels in Alaska* (1915), *A Thousand-Mile Walk to the Gulf* (1916), and *Steep Trails* (1918) *John of the Mountains* (ed by L M Wolfe, 1938) contains his journals See studies by S H Young (1915), W F Bade (1924), and L M Wolfe (1945)

Muir Glacier, area c 350 sq mi, SE Alaska in Glacier Bay National Monument, 40 mi SW of Skagway It was named for John Muir, who explored the region in 1879–80

Muir Woods National Monument see NATIONAL PARKS AND MONUMENTS (table)

Mukachevo, Czech *Mukačevo* (both mo͞o'kuchĕvô), Hung *Munkács* (mo͝ong'kāch), city (pop 26,123), W Ukraine, in RUTHENIA It is a trade center and has oil refineries, breweries, distilleries, and various manufactures

Mukalla (mukä'lû, mo͞okä'lu), town, Aden protectorate, a port on the Gulf of Aden It is the chief settlement of the Hadramaut Hides and coffee are exported

Mukden (mo͞ok'dŭn, mo͞ok'dun), officially **Shenyang** (shŭn'yang'), city and county (pop 508,882), Liaoning prov, China The city is the provincial capital From 1625 to 1644 it was the capital of the Manchu emperors (see CH'ING, dynasty), whose palaces and tombs still stand Shenyang was largely developed by Russia in the late 19th and the early 20th cent During the Russo-Japanese War (1904–5) it was an important military objective, which fell to Japan near the conclusion of hostilities After the establishment (1912) of the Chinese republic Shenyang was the headquarters of several war lords, notably Chang Tso-lin Largely a modern city, it is important today as the junction of the two main branches of the South Manchurian RR Soybean processing and railroad maintenance are the important industries

Mulai el-Hassan (mo͞o'lī ĕl-hä'sŭn), d 1894, sultan of Morocco (1873–94) He brought the weak and disorganized country firmly under his control and held in check attempts by European powers at domination He placed (1877) the instruction of his army under a French military mission

Mulai Ismail (mo͞o'lī ĭsmāēl'), 1646?–1727, sultan of Morocco (1672–1727) He organized corps of Sudanese Negroes to subdue the revolts that followed his accession He attacked Christian strongholds in Morocco, regaining Larache and Arzila, and encouraged trade with Europe He signed a commercial treaty with France (1682) and corresponded with Louis XIV At Meknes he built his new capital, known as the Versailles of Morocco.

mulatto (mŭlä'tō, mū-) [Span], strictly, the offspring of the union of a white person and a Negro The term is frequently applied to persons of various degrees of mixed white and Negro blood The typical mulatto is of light brown color

Mulberry. **1** City (pop 1,502), W central Fla., E of Tampa, in an extensive phosphate-mining area It has a fertilizer-mixing plant. **2** City (pop 1,175), SE Kansas, at the Mo. line N of Pittsburg, near coal fields; inc 1902.

mulberry, ornamental tree of the mulberry family (Moraceae), with asymmetrical, sometimes lobed leaves and blackberrylike fruit Several species, natives of the Old World, are widely cultivated and are often found naturalized in North America The white mulberry, (*Morus alba*) has been cultivated in China since very early times for the leaves, used as food for silkworms In the Middle Ages it began to replace the black mulberry (*M nigra*), which had been grown by the Greeks and Romans and, from the 9th cent, by the people of N Europe for silkworm culture Both the red and white species have been cultivated in America since colonial times, in the South the fruit of the red mulberry (*M rubra*), which is native to North America, is considered a valuable food for pigs and poultry In Asia the bark of the paper mulberry (*Broussonetia papyrifera*), grown in the E and S United States for ornament, is converted into paper and cloth The French mulberry (*Callicarpa americana*) is a southern shrub of the vervain family, cultivated for its ornamental foliage and deep violet fruit In Greek legend the white berries of the mulberry turned red when its roots were bathed by the blood of the lovers Pyramus and Thisbe, who killed themselves

mulch, covering of manure, straw, leaves, peat moss or other loose material placed around plants to conserve moisture, to protect them from injury during the winter, or to keep down weeds The original meaning was a covering to prevent moisture evaporation from the soil

mule, the hybrid of jack and mare. The name is also used for the hybrid of stallion and jennet, more precisely called a hinny and distinguished from the mule, to which it is considered inferior Mules are usually or always sterile Reported instances of fertility are doubted The hardiness, sure-footedness, and other qualities of mules cause them to be preferred to horses in some work, as on farms in the S United States and for pack animals In general, they are larger and more spirited than asses In the U S army the mule is the favored pack and draft animal Mules are mentioned many times in the *Iliad*, the *Odyssey*, and the Old Testament George Washington imported jacks and was interested in introducing mules in America See also HORSE and ASS See C S Plumb, *Types and Breeds of Farm Animals* (rev ed, 1920)

mule, in manufacturing see SPINNING

Muleshoe (mūl'shō͞o), town (pop 1,327), co seat of Bailey co, NW Texas, NW of Lubbock and near the N Mex line, settled 1913, inc 1926 The area has ranches (the name comes from a cattle brand) and also farms irrigated by wells

Mulgrave or **Port Mulgrave** (mŭl'grāv), town (pop 1,057), NE N S, on the Strait of Canso It is a fishing port, and terminal of a railroad ferry to Cape Breton Island

Mulhacén (mo͞olāthān') or **Muley-Hacén** (mo͞olā'-āthān'), peak, 11,411 ft high, S Spain, highest of the Sierra Nevada and of Spain

Mulhall, Michael George, 1836–1900, British statistician, b Dublin, educated at Irish College, Rome, He went (1858) to Buenos Aires, where in 1861 he founded the *Standard*, the first English-language daily paper in South America He wrote *Handbook of the River Plata* (1869), but is best known for his statistical works, *Dictionary of Statistics* (1883), *History of Prices* (1885), and *Industries and Wealth of Nations* (1896)

Mülhausen, France see MULHOUSE

Mülheim (mül'hĭm) or **Mülheim an der Ruhr** (an dĕr ro͝or'), city (pop 132,370), in the former Rhine Prov of Prussia, NW Germany, on the Ruhr and adjoining Essen, Oberhausen, and Duisburg It is an industrial center of the RUHR district

Mulholland, John (mŭl'hŏ͝lund), 1898–, American magician, b Chicago, Ill While still a schoolboy he established a reputation for his skill in magical tricks, and he came to be one of the most celebrated of stage performers of magic He also wrote with simplicity and charm on the subject and on spiritism Among his works are *Quicker than the Eye* (1932), *Story of Magic* (1935), *Beware Familiar Spirits* (1938), *The Girl in the Cage* (with Cortland Fitzsimmons, 1939), and *The Art of Illusion* (1944)

Mulhouse (mülo͞oz'), Ger *Mulhausen* (mül'hou'-zun), city (pop 85,956), Haut-Rhin dept, E France, in Alsace, on the Ill river and the Rhone-Rhine Canal It has large cotton and chemical industries, and the only important potash mines in Western Europe are located near by Mulhouse became a free imperial city in the 13th cent and from 1515 was an allied member (but not a canton) of the Swiss Confederation Here Thomas Münzer and the Anabaptists had a brief government in the early 16th cent In 1798 it voted its union with France The town hall (16th cent) is the only important old building of Mulhouse The city suffered heavy damage in the Second World War

Mull, island (224,324 acres, pop 2,903), off W Scotland, in Argyllshire, one of the Inner Hebrides. Tobermory (pop 772), the only burgh, is a summer resort The island is separated from the mainland of Scotland by the Sound of Mull (¼ mi wide) The coast is deeply indented and picturesque, especially about the sea cliffs of Carsaig The surface is mountainous (Ben More is the highest peak, 3,169 ft), with lakes, streams, glens, woodlands, and pastures. Grazing is the chief occupation, but the island has some agriculture, granite quarrying, fishing, and hunting A beacon on Duart Point commemorates William Black, the novelist, who described this region

Mullan, John, 1830–1909, American army officer and pioneer road builder, b Norfolk, Va, grad St John's College, 1847, and West Point, 1852 He served (1853–54) under Gen. I I STEVENS, who was directed by Jefferson Davis, then Secretary of War, to survey a route for a railroad from St Paul, Minn, to the Pacific Later he was in regular service (1855–57) in the army From 1858 to 1862 he was engaged in building a military road from Fort Benton, Mont, at the head of navigation on the Missouri, to Walla Walla, Wash This road, known as the Mullan Wagon Road, was important in opening up the country to miners and settlers His report (1863) to the Secretary of War and his *Miners' and Travelers' Guide* (1865) added greatly to the knowledge of the country He resigned from the army in 1863 and after two unsuccessful ventures took up the practice of law, first in San Francisco and later in Washington, D C

Mullan [for John Mullan], village (pop 2,291), N Idaho, in the Coeur d'Alene Mts, near the Montline E of Wallace, inc 1904 A mining town from its founding (1884), Mullan produces lead and silver

mullein (mŭl'ĭn), any plant of the genus *Verbascum*, herbs, chiefly biennial, native to the Old World The great or common mullein (*Verbascum thapsus*), called also Aaron's-rod, flannelleaf, and torches, has become so thoroughly naturalized in America that it is a plant typical of fallow fields It has gray-green, densely hairy leaves and, the second year, a tall (often 6 ft high) flowering stalk with yellow flowers The large stalks are said to have been oiled and used for funeral torches in earlier times Numerous medicinal virtues were long claimed for the great mullein, which is occasionally used yet in domestic remedies, e g, as a tea for coughs The moth mullein (*Verbascum blattaria*) is smaller and daintier species with cream-colored flowers

Mullens, city (pop 3,026), S W Va, NW of Bluefield Coal mines were opened near by c 1907

Müller, Ferdinand von (fĕr'dēnänt fŭn mu'lur), 1825–96, German botanist and explorer He was government botanist (1848–52) for Victoria, Australia, and director (1857–73) of the botanical gardens in Melbourne which he made among the most famous in the world He introduced many plants into Victoria and made the eucalyptus known in the Mediterranean regions and other tropical and temperate lands Among his works are *The Plants Indigenous to the Colony of Victoria* (1860) and, with George Bentham, *Flora Australiensis* (1863–78)

Müller, Frederik Paludan see PALUDAN-MÜLLER

Müller, Friedrich (frē'drĭkh mū'lûr), 1749–1825, German poet, painter, and etcher, known as Maler [painter] Müller He was court painter and etcher at Zweibrücken Although without much originality, he was a prominent figure of the *Sturm und Drang* He wrote a lyric drama, *Niobe* (1778), a drama in two parts on the Faust theme (1776–78), and *Golo und Genoveva*, probably his best drama completed in 1781 but not published until 1811 Among his paintings is *Ulysses Invoking the Shade of Ajax*

Müller, Friedrich Maximilian see MÜLLER, MAX

Müller, George, 1805–98, philanthropist and preacher in England, b Prussia A firm believer in prayer, he refused to take a salary from his congregation, but depended upon voluntary contributions for his living and for his orphanage at Ashley Down, near Bristol, which eventually housed 2,000 children Late in life Müller made a world-wide missionary tour See his book, *The Lord's Dealings with George Müller* (1845)

Müller, Hermann (hĕr'mun mu'lur), 1876–1931, German statesman A Social Democrat, he succeeded (1919) BROCKDORFF-RANTZAU as foreign minister and signed the Treaty of Versailles He was chancellor in 1920 and again from 1928 to 1930 During his second tenure Germany accepted the KELLOG-BRIAND PACT and the YOUNG PLAN Largely because of the diplomatic efforts of Müller's foreign minister, STRESEMANN, the Rhineland was evacuated in 1929 Brüning succeeded Müller as chancellor

Muller, Hermann Joseph (mŭ'lûr), 1890–, American geneticist and educator, b New York city, grad Columbia (B A, 1910, Ph.D, 1916). He taught (1915–18) at Rice Institute, Texas, at Columbia (1918–20), and at the Univ. of Texas from 1920 until he became senior geneticist (1933–37) of the Institute of Genetics in Moscow For his discoveries regarding heredity changes or mutations produced by X rays he was awarded the 1946 Nobel Prize in Physiology and Medicine In 1945 he became professor of zoology at Indiana Univ His writings include *Out of the Night* (1935) and, with others, *Genetics, Medicine, and Man* (1947).

Müller, Johannes: see REGIOMONTANUS.

Müller, Johannes Peter (yōhä'nus pā'tûr mū'lûr), 1801–58, German physiologist and anatomist

From 1833 he was professor at Berlin. He was famed as a teacher and for his researches in his own fields as well as in pathology, embryology, chemistry, and psychology He evolved the law of specific energies, i e , each sensory nerve when stimulated responds by a specific sensation He wrote a monumental work on human physiology (1833–40) which included the comparative and psychological aspects of physiology

Müller, Johannes von (yōhä'nus fŭn mŭ'lur), 1752–1809, Swiss historian He spent a large part of his life in Germany, where he held important political posts under the elector of Mainz, the king of Prussia, and King Jérôme Bonaparte of Westphalia His five-volume history of Switzerland (1796–1800, in German) has long been superseded, but it was hailed in its day with extraordinary enthusiasm throughout Europe Müller's work is patriotic in tone He fully accepted the authenticity of the William Tell legend, and it was from Müller's history that Schiller drew the material for his drama

Müller, Karl Otfried (kärl' ōt'frēt' mŭ'lur), 1797–1840, German classical scholar and archaeologist In 1819 he was appointed professor of ancient literature at the Univ of Göttingen His aim was to view all aspects of Greek life as a whole, and his work toward this end helped to develop a new conception of Hellenism Müller was a pioneer in the research into the sources of Greek myths His chief work was the *Geschichte hellenischer Stämme und Städte* [history of Hellenic origins and cities], of which he completed two volumes (1820, 1824) A history of the literature of ancient Greece appeared in 1840 See J E Sandys, *A History of Classical Scholarship*, Vol III (1908)

Müller, Max (Friedrich Maximilian Müller, Friedrich Max Müller, or Friedrich Max-Müller) (mäks' mŭ'lur), 1823–1900, German philologist and Orientalist; son of the poet Wilhelm Müller After studying in Germany, he went to Oxford, where he lived the remainder of his life Müller did more than any other scholar to popularize philology and mythology, particularly in his lectures *Science of Language* (1861, 1863) He was more interested in mythology and comparative religion than in scientific linguistics His edition of the *Rig-Veda with Commentary* is standard About 1875 he began his greatest work, the edition of *Sacred Books of the East* (51 vols), translations of important Oriental non-Christian religious writings He was engaged in this task until his death

Müller, Wilhelm (vĭl'hĕlm), 1794–1827, German lyric poet, father of Max Müller. His verse, which is simple and imbued with a love of nature, was collected in *Gedichte aus der hinterlassenen Papieren eines reisenden Waldhornisten* (2 vols , 1821–24) and *Griechenlieder* (5 sections, 1821–24) The song cycles *Die schone Müllerin* (1823, Eng tr , *Maid of the Mill*) and *Winterreise* (1827, Eng tr , *Winter's Journey*) by Franz SCHUBERT are set to Müller's lyrics

Mullingar (mŭlĭngär'), town (pop 5,443), county town of Co Westmeath, Ireland, WNW of Dublin and on the Brosna river and the Royal Canal It is the market for an agricultural region and the seat of the Roman Catholic bishop of Meath It was once the site of an Augustinian and a Dominican abbey (13th cent) and was the headquarters of William III before the siege of Athlone Loughs Owel and Ennell near by are fishing resorts Mullingar has an annual horsefair

Mullins, town (pop 4,392), NE S C , near the Little Pee Dee river and the N C line, E of Florence. It is a large tobacco market in an area also yielding cotton

mullion (mŭl'yun), in architecture, a slender, upright intermediate member which subdivides an opening, as a division between lights of a window or between adjacent windows Although the mullion occurs in some form in nearly all architectural styles, it is perhaps most characteristic of the elaborate Gothic systems of stone tracery, where, often exquisitely slender and molded, it is used to divide the large windows into areas suitable for glazing

Mull of Galloway (gă'lŭwā), headland, Wigtownshire, forming the extreme southern point of Scotland

Mull of Kintyre (kĭntīr'), headland of S Kintyre peninsula, Scotland It has a lighthouse

Mulock, Dinah Maria (mū'lŏk), later **Mrs. Craik,** 1826–87, English didactic novelist She was the author of *John Halifax, Gentleman* (1856) and the children's classics, *The Adventures of a Brownie* (1872) and *The Little Lame Prince* (1875) See L P Stebbins, *A Victorian Album* (1946)

Mulock, Sir William, 1843–1944, Canadian statesman and jurist, b Ontario, grad Univ of Toronto (B A , 1863, M A , 1871). Called to the bar in 1868, he entered the Canadian Parliament in 1882 as a Liberal In Laurier's cabinet he was postmaster general (1896–1905) and Canada's first minister of labor (1900–1905) As postmaster general he achieved notable improvements in mail service and was responsible for securing the adoption of penny postage within the empire at the Inter-Imperial Postal Conference (1898). As minister of labor he organized the department and appointed Mackenzie King as his first deputy minister. In 1905 Mulock retired from political life and became chief justice of the exchequer division of the supreme court of Ontario; from 1923 to 1936 he was chief justice of the province He was long associated with the Univ of Toronto—as vice chancellor (1881–1900) and as chancellor (1924–44) His longevity and his distinguished career won for him the appellation "Canada's grand old man." See biography by W J Loudon (1932)

Mulready, William (mŭlrĕd'ē), 1786–1863, Irish genre painter He began as a drawing master and an illustrator of children's books After 1809 he devoted himself to genre and won a high reputation His popular little paintings show the influence of Sir David Wilkie and of the Dutch school Well-known examples are *Choosing the Wedding Gown*, *The Sonnet*, and *First Love* (all Victoria and Albert Mus) and *Snow Scene* (Tate Gall , London) Mulready illustrated Goldsmith's *Vicar of Wakefield*

Mulroy Bay, inlet of the Atlantic, 12 mi long, indenting the north coast of Ireland, in Co Donegal. It is almost landlocked and has small islands.

Multan (mōōltän'), city (pop 142,768), West Punjab prov , Pakistan Since 300 B C it has suffered repeated conquest and destruction Its architecture, including a wall which nearly surrounds the city, was created after the 13th cent Multan fell to the British in 1849 Today it trades in produce and manufactures cloth

Multatuli see DEKKER, EDUARD DOUWES

multiple birth, condition in which more than one offspring is brought forth at a birth Heredity is a factor in causing multiple births Twin births in humans are quite common occurrences, triplets are infrequent, quadruplets are rare, and quintuplets are extremely rare The Dionne quintuplets of Canada are well known Several cases of sextuplets have been recorded although none survived for more than a few days Twins which develop from a single fertilized ovum are known as identical twins and are of the same sex, those from two fertilized ova are known as fraternal twins—they may or may not be of the same sex and resemble each other no more than any other siblings See H H Newman, *Multiple Human Births* (1940)

multiplication, fundamental process in ARITHMETIC and algebra, in which a number or numerical quantity is increased by taking it a certain number of times The number or numerical quantity acted upon is called the multiplicand, and the number indicating the number of times the multiplicand is to be taken is called the multiplier The result is known as the product The symbol of the operation is × or the and, in algebra, simple juxtaposition (e g , xy means x × y) In the expression 2×5, the number five is shown to be taken twice The same result, however, is obtained when five is added to five, 5+5 Thus, it may be seen that the multiplicand is treated as a unit and taken the number of times there are units in the multiplier Quantities with units may frequently be multiplied (e g , 2 hr × 20 mi per hour=40 mi , 5 men × 3 hr =15 man hours) Like ADDITION, multiplication has the properties of associativity, commutivity, and distributivity, i e , in multiplying three numbers together any two can be multiplied first and this product multiplied by the third

Multscher, Hans (hänz' mōōl'chur), fl 1427–67, outstanding German sculptor and painter of the Swabian school of Ulm His principal work was the famous altarpiece at Sterzing (now Vipiteno) in the Tyrol The altarpiece, a combination of painting and wood carving, was scattered, except for the figure of the Virgin, among the churches and public buildings of the town Mussolini was said to have presented (1941) part of the altar to Hermann Goering

Mulvian Bridge see MILVIAN BRIDGE.

Mumford, Lewis, 1895–, American author, editor, and critic, b Flushing, L I , N Y He was associate editor of the *Dial* in 1919 He has lectured at various institutions, including Dartmouth (1929–47), Harvard (1939), and Stanford (1942–44) He is active in regional planning activities, but calls himself primarily a social philosopher His publications include *The Story of Utopias* (1922), *Sticks and Stones* (1924), *Herman Melville* (1929), and *The Brown Decades* (1931) His major views are set forth in a trilogy, *Technics and Civilization* (1934), *The Culture of Cities* (1938), and *The Condition of Man* (1944), supplemented by *The South in Architecture* (1941) *Green Memories* (1947) is a biography of his son who was killed in the Second World War

Mummery, Albert Frederick, 1855–95, English mountaineer He contributed notably to improvement of equipment for mountain climbers, and in the Alps and the Caucasus he made many ascents by new routes. He disappeared near Nanga Parbat in the Kashmir Himalaya He wrote *My Climbs in the Alps and the Caucasus* (1895).

mummy, a dead human or animal body preserved by the ancient Egyptian method of embalming. Mummies more than 5,000 years old consist of hardly more than bones, skin, and hair and owe their preservation largely to the dryness of the air of Upper Egypt, where they were buried. In Lower Egypt practically all mummies have perished. By the time of the New Kingdom the art of EMBALMING had reached its height, and it is possible to gain a good idea of how the great Pharaohs appeared in life, e g , Amenhotep II (in his tomb near Thebes), Thutmose III, Thutmose IV, Tut-ankh-amen, Seti I, and Ramses II (all in Cairo). Mummification seems to be connected with a belief in life after death, the body being preserved so that the soul might return to it. The method of preparing the body varied at different periods and also according to the wealth and importance of the person. In the most costly processes the internal organs were removed (leaving the heart in place, however) and the treatment included long soaking in a solution of carbonate of soda and the filling of the body cavities with spices The organs were often wrapped separately and replaced in the body. After careful wrapping in fine linen bandages treated with a gum or resin, the body was usually enclosed in a wooden case having somewhat the shape of the human At first only kings were mummified, later his courtiers and servants were also thus preserved to provide him with a retinue in the afterlife; even the meat offerings placed in the tomb for food were embalmed Cats, hawks, and other sacred animals were likewise embalmed. "Mummy," consisting of ground fragments of mummified bodies, was used as a drug in medieval Europe Mummification was also practiced by some Indians in dry climates in parts of North and South America

mumps, epidemic disease caused by a virus It is characterized by inflammation, swelling, and pain in the salivary glands (chiefly the parotid glands in front of and below the ears); the infection is also called parotitis Considered a mild disease of childhood, occurring most commonly in children from 5 to 15 years, it is more serious in male adults, since it sometimes causes sterility The incubation period ranges from 12 to 26 days, the patient is infectious before the symptoms develop and until all symptoms have disappeared Convalescent serum and gamma globulin are used after exposure to lessen the severity of the disease and, if given soon enough, to prevent it from developing An attack generally produces permanent immunity

Mumtaz Mahal see TAJ MAHAL

Mun, Albert, comte de (älbĕr' kōt' du mŭ'), 1841–1914, French Catholic leader and politician Though a monarchist at first, he later loyally supported the Third Republic and accepted the letter and the spirit of the papal encyclical *Rerum novarum* (1891) of LEO XIII Mun played the leading part in organizing associations of Catholic workers and advocated social reforms, A strong nationalist, Mun bitterly opposed Germany See P T Moon, *The Labor Problem and the Social Catholic Movement in France* (1921)

Mun, Thomas (mŭn), 1571–1641, English writer on economics A merchant in Italy and the Levant, he became (1615) a director in the East India Company In his *Discourse of Trade from England unto the East Indies* (1621) he refuted claims that the company reduced the amount of bullion in England by exporting too much of it to India He further defined his theory of the balance of trade in *Discourse on England's Treasure by Foreign Trade* (written 1630, pub 1664) See E A J Johnson, *Predecessors of Adam Smith, the Growth of British Economic Thought* (1937)

Munch, Andreas Peder (ändrā'ăs pā'dŭr mōngk'), 1810–63, Norwegian historian and philologist As one of the main figures in the Norwegian literary revival, he contributed an authoritative history of the Norwegian people, *Det norske folks historie* (8 vols , 1852–63) He maintained that the *Eddas* and sagas of Old Norse literature belonged to a purely Norwegian-Icelandic literature and not, as was generally supposed, to a common Scandinavian tradition. This view was later generally accepted

Münch, Charles (shärl' mŭnsh'), 1891–, French conductor, b Alsace He learned the violin from his father, then studied at the Strasbourg Conservatory, where he later taught and conducted. Having led the Leipsig orchestra and then various French orchestras, he was conductor (1938–46) of the orchestra of the Paris Conservatoire In 1947 he came to the United States, and for three seasons he appeared as guest conductor of the New York Philharmonic In 1949 he succeeded Koussevitsky as conductor of the Boston Symphony Orchestra

Munch, Edward (ĕd'värt mōngk'), 1863–1944, Norwegian genre, landscape, and portrait painter and etcher, leading Norwegian painter of his day. He studied in Christiania (now Oslo) and in Paris under Bonnat and traveled in Germany and Italy. Much of his life was spent abroad, but in 1909 he returned to Norway, where he painted murals for the Univ. of Oslo and an Oslo chocolate factory. His early work was realistic, but he later came under the influence of neo-impressionism Munch's work is highly original, daring in color and design, and full of psychological suggestion. Among his well-known works are *The Sick Child* (Oslo), *Lady in Black* (Copenhagen); *Ashes; The Death in the Room, Summer Night;* and *White Night* Munch is represented in the galleries of Moscow and of Detroit.

Munchausen, Baron (münchô'sün,-chou'sün), Ger. *Karl Friedrich Hieronymus, Baron von Münchhausen*, 1720–97, German cavalry officer whose alleged tales of his impossible adventures in Russia are classics of their kind Written and published in English in 1785 by Rudolf Erich RASPE, the tales were rendered into German by Wilhelm August BÜRGER and were for a time attributed to him Whatever their origin, they are inseparably bound up with the name of the German gentleman who is supposed to have related them to his friends, and in 1936 the municipality of Bodenwerder, his birthplace, established a museum in the baron's house. The original six chapters of the tales have been enlarged upon by various hands and have been translated into many languages.

Münch-Bellinghausen, Eligius, Baron von: see HALM, FRIEDRICH

München, Bavaria. see MUNICH.

München Gladbach (mün'khün glät'bäkh), city (pop. 110,444), in the former Rhine Prov of Prussia, NW Germany, W of Düsseldorf It is the twin city of adjacent RHEYDT and is the center of the Rhenish cotton textile industry The city developed around a Benedictine abbey (founded 972), which was several times rebuilt between the 14th and 18th cent and which is now the city hall

Münchhausen, Karl Friedrich Hieronymus, Baron von. see MUNCHAUSEN, BARON

Muncie (mün'sē), city (pop 49,720), co seat of Delaware co, E Ind, on the White River and NE of Indianapolis, platted 1827, inc as a town 1847, as a city 1865 It is a railroad and trading center for a rich agricultural area The city produces glass products, machinery, cutlery, silver-plate ware, and wire, other industries are dairying and meat packing It is the seat of Ball State Teachers College Muncie is the original of "Middletown" in a sociological research carried on by Robert S Lynd and Helen M Lynd and published as *Middletown* (1929) and *Middletown in Transition* (1937)

Muncy (mün'sē), borough (pop 2,606), N central Pa, on the West Branch of the Susquehanna and SE of Williamsport, laid out 1797, inc 1826 Its manufactures include textiles and machinery

Munda. see NEW GEORGIA.

Munda languages (mōōn'du), family of languages spoken in the Himalayas and in Chota Nagpur in India

Munday or **Mundy, Anthony,** 1553–1633, English dramatist and actor, a member of the earl of Oxford's company He wrote a number of plays (some in collaboration with other writers), pageants, and ballads and translated popular French romances, among them *Amadis de Gaul* His plays include *John a Kent and John a Cumber* (1595) and two on Robin Hood, *The Downfall* (1598–99) and *The Death of Robert, Earl of Huntington* (1601) See study by J C Turner (1928)

Munday (mün'dā), town (pop 1,545), N Texas, SW of Wichita Falls, inc 1906 The region has cattle ranches and cotton, wheat, and diversified farms

Mundelein, George William (mün'dulīn), 1872–1939, American churchman, cardinal of the Roman Church, b New York city He was graduated from Manhattan College in 1889 and studied also at Rome He was ordained in 1895. He was secretary to the bishop of Brooklyn (1895–98) and his chancellor (1898–1900) He became a monsignor (1906) and auxiliary bishop of Brooklyn (1909) In 1915 he was made archbishop of Chicago, and he was created cardinal in 1924 In 1937 the cardinal's bitter public remarks about Hitler and the Nazi regime drew much attention, including abuse from Germany He was a friend of President F D Roosevelt He was active in movements to reduce poverty, slums, and juvenile delinquency His diocesan seminary, St. Mary's of the Lake, Mundelein, Ill, was one of the finest in the country

Mundelein, village (pop. 1,328), NE Ill, a lake resort NNW of Chicago, inc 1909 as Area, renamed 1925 for Cardinal Mundelein. The seminary St Mary of the Lake is here. A eucharistic congress was held in 1925.

Mundelein College: see CHICAGO, Ill

Münden (mün'dün) or **Hannoversch-Münden** (hänō'vursh-), town (pop 19,193), S Hanover, W central Germany, on the Weser, which is formed here by the confluence of the Fulda and Werra rivers A picturesque old place, it has a castle (renovated 16th cent), a stone bridge (built c 1400), and a Renaissance town hall It was a member of the Hanseatic League. Münden manufactures machine tools, chemicals, and rubber goods and has a food-processing industry.

Mundy, Anthony: see MUNDAY, ANTHONY.

Munhall (mün'hôl), industrial borough (pop 13,900), SW Pa, on the Monongahela and ESE of Pittsburgh, inc. 1900 The Carnegie-Illinois Steel Company is here It was a site of the Homestead strike (see HOMESTEAD, Pa) in 1892

Munich (mū'nik), Ger. *München* (mün'khun), city (pop 751,967), capital of Bavaria and of Upper Bavaria, on the Isar river and at the foot of the Bavarian Alps It is a cultural, commercial, and industrial center and an important communications point. An archiepiscopal see, it also is the seat of a university (founded 1472 at Ingolstadt, transferred in 1800 to Landshut and in 1826 to Munich), of a famous academy of fine arts, of the Bavarian academy of arts and sciences, of a conservatory of music, and of several celebrated museums Munich also is an operatic and theatrical center and the seat of many large book-publishing and printing firms Besides its excellent beer, Munich produces machinery, chemicals, processed foods, precision and optical instruments, and textiles It has a large tourist trade Chartered in 1158, Munich became (1255) the residence of the dukes of Bavaria Though it remained the capital of Bavaria ever afterward, its main growth dates only from the 19th cent, when the art-loving kings Louis I, Maximilian II, and Louis II built it up as a "modern Athens" Munich played a leading role in the development of German painting in the 19th and 20th cent and at the same time acquired a reputation for its easygoing and somewhat bohemian life After the First World War it became a center of political unrest The Bavarian Socialist government that succeeded (1918) the monarchy was replaced (1919), after the assassination of Premier Kurt Eisner, by a Communist regime, this, in turn, was promptly suppressed by the reactionary parties National Socialism was founded here, and in 1923 Adolf HITLER attempted his Munich "beer-hall putsch" Despite this fiasco, he made Munich the headquarters of his party, which in 1933 took power in all Germany and suppressed a Bavarian separatist plot at Munich Under the National Socialist regime the archbishop of Munich, Michael Cardinal Faulhaber, was one of the few outspoken critics of the government In 1938 Munich was the scene of the signing of the Munich Pact (see separate article) Almost half of the handsomely laid-out city was destroyed in the Second World War The Old Pinakothek and New Pinakothek, which were among the foremost art museums of the world, were destroyed, but most of their collections had been taken to safety Of the chief landmark of Munich, the 15th-century Liebfrauenkirche [church of Our Lady], only the two belfries were relatively unharmed St Michael's Church, one of the finest baroque churches in Germany, was, however, undamaged, the fine neoclassic Propylaen, a monumental gate on the palace square, also escaped harm The royal palace was heavily damaged, and the GLYPTOTHEK was destroyed, though its collections remain intact Near Munich is the famous château of NYMPHENBURG

Munich Pact, 1938 In the summer of 1938 Chancellor Hitler of Germany began openly to support the agitation of Konrad Henlein, leader of the German nationalists in CZECHOSLOVAKIA, for an improved status of the German minority, particularly in the Sudetenland (see SUDETES) The Czech government promised a new nationality statute, but rejected Henlein's demands, which would have made Czechoslovakia a vassal of Germany The mission (Aug., 1938) of a British mediator, Lord Runciman, served as pretext for renewed agitation, while Hitler adopted an increasingly threatening attitude In September the crisis reached its height Hitler now demanded that the Sudetenland be given the right of self-determination Disorders broke out in Czechoslovakia, martial law was proclaimed, and war seemed imminent Prime Minister Neville CHAMBERLAIN of Great Britain at this point held his first conference with Hitler, at Berchtesgaden, and substantially yielded to Hitler's demand for annexation of the border areas of Czechoslovakia where German was predominantly spoken France, though pledged by treaty to support Czechoslovakia against aggression, also yielded, and both Britain and France forced Czechoslovakia to accept the proposal However, at a second meeting between Hitler and Chamberlain, held at Bad Godesberg, Hitler vastly increased his demands, which were rejected by Chamberlain War now seemed unavoidable At last, after appeals by President Roosevelt and Benito Mussolini, a conference met at Munich to avert open conflict (Sept. 29). Great Britain was represented by Chamberlain and Halifax, France by Édouard Daladier and Georges Bonnet, Italy by Mussolini and Galeazzo Ciano, Germany by Hitler and Joachim von Ribbentrop Neither Czechoslovakia nor Russia, which had offered aid to the threatened country under terms of a 1935 treaty, was represented or even consulted England and France, reaching the peak of their "appeasement policy" toward Germany and Italy, surrendered within a few hours to Hitler's demands The Munich Pact (signed Sept 30 but dated Sept 29) permitted the immediate occupation by Germany of the Sudetenland, but also contained provisions for plebiscites which, however, were never carried out France and Britain guaranteed the new Czech boundaries When Prime Minister Chamberlain returned from Munich to London, he announced that he had secured "peace in our time" Abandoned by its allies Czechoslovakia gave in to the terms, and President Benes, the target of Hitler's most venomous attacks during the crisis, resigned Poland and Hungary, for whose minorities promises had been made at Munich, were allowed to seize, respectively, the TESCHEN district and parts of SLOVAKIA In March, 1939, Czecho-Slovakia, as the truncated state was called, was dissolved by Hitler, but neither France nor England took action Chamberlain's and Daladier's actions have since found defenders who pleaded the military unpreparedness of England and France, on the other hand, it has been debated whether Hitler himself was actually prepared to go to war or whether he obtained his triumph through mere bluff and intimidation The Munich Pact, at any rate, became the symbol of cowardly appeasement and shook the confidence of Eastern Europeans in the good faith of the Western democracies

municipal government: see CITY GOVERNMENT

municipal home rule: see HOME RULE, MUNICIPAL.

municipal ownership: see PUBLIC OWNERSHIP

Munising (mū'nīsing), city (pop 4,409), co seat of Alger co, N Upper Peninsula, N Mich., on Munising Bay of Lake Superior and SE of Marquette It was incorporated as a village in 1897, as a city in 1916 Paper and other wood products are made. The region, heavily wooded, among cliffs and falls, is attractive to tourists and fishermen Grand Island is offshore

Munk, Kaj (kī' mōōngk'), 1898–1944, Danish playwright and clergyman His dramas, all with a strong ethical slant, were very popular in the 1930s They include *En Idealist* (1928), *The Word* (1932), a religious drama, perhaps his best work, *He Sits by the Melting Pot* (1938), an anti-Nazi play, and *Niels Ebbesen* (1943, Eng tr in *Scandinavian Plays of the Twentieth Century*, Ser 2, 1944) Outspoken against the Nazi invaders of Denmark, he was murdered by a band of Germans or of Danish sympathizers

Munkacs, Ukraine see MUKACHEVO

Munkacsy, Michael (mōōn'käch), Hung *Mihály Munkácsy* (mī'hī), 1844–1900, Hungarian genre and historical painter, whose real name was Michael Lieb His youth was spent in poverty In 1868 he went to Düsseldorf, where he painted *The Last Day of a Condemned Man* (Wallstein Coll, Philadelphia), which won him a gold medal in the Paris Salon of 1870 and wide recognition In 1872 he settled in Paris From 1881 he painted chiefly religious and historical subjects in a highly dramatic style His *Christ before Pilate* (John Wanamaker Coll, Philadelphia) was exhibited throughout Europe and America and has been widely reproduced He is represented in museums of Vienna, Philadelphia, and Chicago and in the Metropolitan Museum and the New York Public Library

Munn vs. Illinois, case decided by the U S Supreme Court in 1876 Munn, a partner in a Chicago warehouse firm, had been found guilty (1872) by an Illinois court of violating the state laws providing for the fixing of maximum charges for storage of grain He appealed to a higher state court and then to the Supreme Court, contending that the fixing of maximum rates constituted a taking of property without due process of law The Supreme Court upheld the constitutionality of the Granger laws (see GRANGER MOVEMENT), maintaining that Munn had devoted his business to a public use and that regulation of it was, therefore, a matter of public interest

Muñoz Marín, Luis (lwēs' mōō'nyōs marēn'), 1898–, Puerto Rican liberal leader and journalist He organized (1938) and headed the Popular Democratic party The slogan "Bread, Land, and Liberty" won a large peasant following Contributor to numerous Latin American and North American publications, among them the New York *Times* and the *New Republic*, he also edited and published the *Democracia*, a San Juan daily He became president of the Puerto Rican senate in 1941. In 1948 he won the first election for governorship of Puerto Rico

Munro, Dana Carleton (mün'rō'), 1866–1933, American educator and historian, b Bristol, R I, grad Brown (B, 1887, M A, 1890), brother of Wilfred Harold Munro After studying in Germany he was appointed (1893) an instructor in history at the Univ of Pennsylvania From 1902 to 1915 he was professor of European history at the Univ of Wisconsin, and in the First World War he was chairman (1918–19) of the National Board of Historical Service From 1915 to his death he was professor of medieval history at Princeton An authority on the Crusades, he adopted a rigorous scientific method of research, basing all facts on references to contemporary sources He was president (1925–26) of the American Historical Association and managing editor (1928–29) of the *American Historical Review* He wrote *A History of the Middle Ages* (1902), *The Middle Ages and Modern Europe* (with Merrick Whitcomb, 1903), *A Source Book of Roman History* (1904), *The Middle Ages, 395–1272* (1921, rev ed, *395–1500*, with R J Sontag, 1928), and *The Kingdom of the Crusaders* (1935) He translated and edited, with George C. Sellery, *Medieval Civilization Selected Studies from European Authors* (1904, enl ed, 1907) "The Speech of Pope Urban II at Clermont, 1095" and "The Children's Crusade," two brief articles he wrote for the *American Historical Review* (Vol. XI, 1906, Vol. XIX, 1914), are also noteworthy.

Munro, Hector Hugh, pseud. **Saki** (sä'kē), 1870–1916, British author and journalist, b. Burma, of Scottish parentage While he was a foreign correspondent (1902–8) for the Tory *Morning Post* and a contributor to other newspapers, he wrote urbane but often savage and fantastic short stories, collected in *Reginald* (1904), *The Chronicles of Clovis* (1911), *Beasts and Super-Beasts* (1914), and other volumes Of his two novels, *The Unbearable Bassington* (1912) somewhat recalls Oscar Wilde or Max Beerbohm. Munro was killed as a soldier in the First World War *The Short Stories of Saki* (1930) and *The Novels and Plays of Saki* (1933) continue to appeal to many readers

Munro, Hugh Andrew Johnstone, 1819–85, Scottish classical scholar His best-known work is an edition of Lucretius (1860–64) with critical notes, commentary, and an English prose translation, this was regarded as an outstanding contribution to Latin scholarship He prepared also a text of Horace (1869) and a book on Catullus (1878)

Munro, Wilfred Harold, 1849–1934, American historian and educator, b Bristol, R I , grad Brown (B A , 1870; M A , 1873), brother of Dana Carleton Munro From 1870 to 1871 he was a master at De Veaux College, Niagara Falls, N Y , where he later served as president (1881–89) After studying (1890–91) at the universities of Freiburg and Heidelberg, Munro became (1891) associate professor of history and director of university extension work at Brown From 1899 until his retirement in 1911 he held the chair of European history there In his lifetime Munro traveled widely For many years president of the Rhode Island Historical Society, he was considered the foremost expert on Rhode Island history. His works include *The History of Bristol, R I* (1880), *Picturesque Rhode Island*, (1881), *The Most Successful American Privateer* (1913), *Tales of an Old Sea Port* (1917), and *Among the Mormons in the Days of Brigham Young* (1927) He edited a 22-volume edition (1905–6) of the works of William Hickling Prescott

Munroe, Charles Edward (munrō'), 1849–1938, American chemist and educator, b Cambridge, Mass , grad Harvard (B S , 1871) From 1874 to 1886 he was professor of chemistry at the U S Naval Academy, and from 1892 to 1918 he was at George Washington Univ as professor of chemistry and in executive positions From 1910 to 1933 he served the U S Bureau of Mines An authority on explosives and the inventor of smokeless powder, he was also the author of many books and papers on explosives and related subjects

Munroe, Kirk, 1850–1930, American author of books for boys, b near Prairie du Chien, Wis At 16 he traveled with a party who were surveying for the Santa Fe RR westward from Kansas City, Mo , to California He had been a newspaper reporter and editor of *Harper's Young People* when he began writing boys' stories Several of these are laid in S Florida, which he knew well His books include *The Flamingo Feather* (1887), *Canoemates* (1893), *With Crockett and Bowie* (1897), and *The Painted Desert* (1897).

Munsee Prophet, fl 1766–75, one of the Indian prophets, successor of the Delaware Prophet and forerunner of the Shawnee Prophet He continued the doctrine of the Delaware Prophet among the Munsee Delaware

Munsey, Frank Andrew (mŭn'sē), 1854–1925, American publisher and author, b Mercer, Maine In 1882 he quit a telegraph operator's job in Maine to begin a career as publisher in New York He started the *Golden Argosy* (1882) as a juvenile magazine, for which he wrote serials himself, changed it to the *Argosy* for adults, and supplanted this with *Munsey's Magazine* (1889), the first 10-cent periodical When one of his magazines failed, he scrapped it and started another, Munsey thus disposed of *Godey's Magazine*, *All-Story Magazine*, and many others Turning to newspapers, he bought the New York *Star* in 1891, renamed it the *Continent*, and made it a tabloid, probably New York's first, but it failed Later, using the wealth he made from his magazines, from a chain of grocery stores, and from the financial operations of his trust company, he bought several newspapers, hoping to found a chain of them However, he lost a great deal on the Boston *Journal* and the New York *Daily News* The Washington *Times* and the Baltimore *Evening News* were among his successful papers In 1916 he began buying papers to consolidate, for which he was sometimes called the executioner of newspapers He merged the New York *Press* in the *Sun*, and in 1920 the unsuccessful *Sun* in the New York *Herald* In 1924 he sold the *Herald* to the New York *Tribune*, having meanwhile renamed the *Evening Sun* the *Sun* and absorbed in it (1923) the *Globe and Commercial Advertiser*. His last purchase was that of the New York *Mail*, which he merged in his *Evening Telegram* in 1924. See biography by George Britt, *Forty Years, Forty Millions* (1935)

Munsey Park, village (pop 1,456), on NW Long Island, SE N Y., near Manhasset, inc. 1930

Münster, Sebastian (sābäs'tyän mün'stur), 1489–1552, German scholar and geographer He was a Franciscan monk, but after the Reformation became a Protestant and taught at Heidelberg and at Basel, where he lived after 1536 A noted theologian and Hebraist, he edited the first Hebrew Bible produced (1534–35) by a German His chief work is the *Cosmographia universalis* (1544), a descriptive geography standard for more than a century and translated into several languages

Munster (mŭn'stur), province (9,317 sq mi ; pop 917,306), Ireland, largest of the four provinces and occupying the southwest third of the island It includes the counties of CLARE, CORK, KERRY, LIMERICK, TIPPERARY, and WATERFORD One of the ancient kingdoms of Ireland, its control passed, after the Anglo-Norman invasion of Ireland, to the great families of the Fitzgeralds (earls of Desmond) and the Butlers (earls of Ormond)

Münster (mün'stur), city (1939 pop 141,059, 1946 pop 86,366, 1949 estimated pop 104,000), capital of the former Westphalia prov of Prussia, NW Germany, a port on the Dortmund-Ems Canal. It produces machinery, hardware, and various manufactured goods and has a grain and lumber trade Münster was founded (c 800) as an episcopal see, its bishops ruled a large part of Westphalia as princes of the Holy Roman Empire from the 12th cent until 1803, when the bishopric was secularized Münster was an important member of the Hanseatic League, in 1533–35 it was the scene of the Anabaptist experimental government under JOHN OF LEIDEN In 1648 the Treaty of Münster was signed here (see WESTPHALIA, PEACE OF) The Congress of Vienna awarded (1815) Munster to Prussia Until its virtual destruction in the Second World War, Münster was famous for its medieval character Among the heavily damaged buildings were the cathedral (12th-13th cent), the Lambertikirche (14th-15th cent), the Liebfrauenkirche (14th cent), and several other churches, as well as the university (founded 1773), the Gothic city hall (12th-13th cent), the former episcopal palace (17th cent), and the Westphalian museum (the contents of which were saved) Most of the Gothic and baroque private residences were also burned down

Munster, residential town (pop 1,751), NW Ind , near Highland Garden produce is shipped from here

Münsterberg, Hugo (mün'stürbûrg, mĭn'-), 1863–1916, American psychologist, b Danzig, Ph D Univ of Leipzig, 1885, M D Univ of Heidelberg, 1887 At the instigation of William James he came from Germany to Harvard as professor of psychology (1892–1916), becoming director of the psychological laboratory in 1905 He wrote many books on psychology and on American life and problems See biography by M A A Münsterberg (1922)

Muntenia, Rumania see WALACHIA

Munthe, Axel (ak'sul mün'tu), 1857–1949, Swedish physician and writer His fame rests almost entirely upon one book, written in English, *The Story of San Michele* (1929), which became a world-wide best seller He wrote also in English *Memories and Vagaries* (1898) and several books of travel letters He practiced in Paris as a psychiatrist, but for many years before the Second World War he lived on the island of Capri In 1943 he returned to Sweden, where he was the guest of the royal family

Münzer, Thomas (tō'mäs mün'tsur) c 1489–1525, German Anabaptist, a popular leader of the Reformation Münzer left his home and his position as a magistrate to join Luther at Wittenberg in 1519, and he was a member of the delegation at the disputation with Johann M von Eck at Leipzig in the same year His position soon diverged from Luther, as he became increasingly monoclastic in theology and radical in political and social beliefs Münzer claimed divine illumination for his doctrines, and while pastor (1520–23) at Zwickau, he helped disturb affairs at Wittenberg with radical doctrine during the time that Luther was in retirement at the WARTBURG Münzer was ousted from Zwickau, Allstedt (in Thuringia), and Mulhouse, everywhere he went he aroused the dissatisfied peasantry and the workingmen of the town He proclaimed that God's will was the overthrow of the social structure and the establishment of a simple, godly society, with community of property At Mulhouse he had worked with Heinrich Pfeiffer When the PEASANTS' WAR broke out the two men succeeded in returning and taking over the town council of Mulhouse They set up a communistic theocracy With the defeat of the peasant party, Münzer was one of the leaders who was beheaded

Muonio, river see TORNE

Muppim (mŭ'pĭm), variant of SHUPHAM

Mur (mo͝or), Hung and Serbo-Croatian *Mura* (mo͝o'rə), river of Austria, Hungary, and Yugoslavia. Rising in the Hohe Tauern, it flows 300 mi east and south to join the Drave (the Drau) near the Yugoslav-Hungarian border. It is navigable below Graz.

Murad I (mo͝oräd', myo͝or'räd), 1326?–1389, Ottoman sultan (1362?–1389), son and successor of Orkhan He widened the Turkish foothold on European soil, conquering Macedonia and making Adrianople his residence In 1373 he forced the Byzantine emperor JOHN V to pay tribute Murad was killed in the battle which marked his greatest triumph, at KOSSOVO, where Serbia fell to Turkish rule. A cruel and inexorable monarch, Murad had his eldest son blinded in 1374 to punish him for attempted rebellion His son Bajazet I succeeded

Murad II, 1403–51, Ottoman sultan (1421–51), son and successor of Mohammed I. He was opposed at his accession by a pretender who rapidly gained control over most of the Ottoman possessions in Europe After defeating his rival, Murad unsuccessfully laid siege (1422) to Constantinople In 1430 he seized Salonica from the Venetians and invaded Greece In the north Murad met the determined resistance of John HUNYADI Basically of peaceful disposition, Murad sought to retire from public life on several occasions, but was each time recalled by the pressure of events In 1444 he won the great victory of Varna against the crusading host led by King LADISLAUS III of Poland and Hungary His court was very cultured, and he was a patron of poetry and learning. His son Mohammed II succeeded him

Murad III, 1546–95, Ottoman sultan (1574–95), son and successor of Selim II He was dominated by his harem, and though his generals were successful against Persia, his reign marked the beginning of the decay of Turkish rule His son Mohammed III succeeded him

Murad IV, 1612?–1640, Ottoman sultan (1623–40), nephew and successor of MUSTAFA I The last of the warrior-sultans, he recovered (1638) Baghdad which Shah Abbas I of Persia had seized On his victory he sent the order to murder his brother BAJAZET Murad IV was of prodigious strength and terrible severity Cyril LUCARIS was another of his victims Murad was succeeded by his brother Ibrahim (1640–48) and Ibrahim's son Mohammed IV (1648–87).

Murad V, 1840–1904, Ottoman sultan (1876), son of Abdu-l-Mejid He came to the throne when his uncle, ABDU-L-AZIZ, was deposed, but he was soon declared insane and was succeeded by his brother, Abdu-l-Hamid II His brief reign was dominated by MIDHAT PASHA

Murad, river see EUPHRATES

mural painting, essentially a form of architectural decoration The term is commonly applied to the decoration of ceilings and architectural members as well as to walls The earliest murals of historic times were probably those of Egypt, fine Egyptian tomb paintings dating back to 1900 B C have been discovered These works were done in *fresco secco* and owe their preservation to complete protection from light and moisture Many of them depict objects which the deceased wished to enjoy in an afterlife. Everything is represented in its most characteristic or informative aspect with superimposition in place of perspective This convention, together with the total absence of light and shade in Egyptian painting, lends itself to a flat decorative treatment in which the art excels Egyptian architecture, like that of Greece and Rome, was decorated inside and out Nothing remains of Greek mural painting, which probably began as a highly geometric style and saw a long development with illusionistic phases Examples of Roman painting from Pompeii often show an architectural framework for figures or landscape Frequently a single figure is used to decorate the center of a panel More skill is shown in the drawing and foreshortening of the figure and in decorative elements than in illusionism Perspective is attempted but never related consistently to a single point of view The *Nozze Aldobrandini*, excavated in Rome and now in the Vatican, is a fine example of Roman mural painting in which a monumental figure composition is achieved In Rome mosaic vied with painting as decoration and was bequeathed as a highly developed art to the Byzantines, who used it in their magnificent religious mural decorations, still to be seen in Constantinople, Ravenna, Rome, and Venice This formalized, austere, symbolic art has survived almost to our times in the Russian icon In Italy, however, a great art of fresco painting supplanted Byzantine decoration in the 13th cent and laid the foundation for the whole subsequent development of Western art For over 400 years, from Giotto to Tiepolo, an art of mural painting, largely in fresco, was practiced by the Italian masters In France the art tended to be more purely decorative until the 18th cent, when Fragonard and Boucher produced delicate and charming boudoir painting Among the great French mural painters of the 19th cent are Delacroix, Ingres, and Puvis de Chavannes Chavannes executed a large mural in oils for the Boston Public Library, where John S Sargent and Edwin A Abbey are also represented Prior to 1890 little mural painting was done in the United States except for the fine religious paintings of John La Farge After that date the conservative painters Blashfield, Kenyon Cox, N C. Wyeth, and Vedder gained a popularity which was later shared with Arthur B. Davies, T H. Benton, and Boardman Robinson. In the 1920s the Mexican fresco painters Rivera and Orozco stimulated a new interest in the art by their vigorous composition and controversial themes In 1934 the U S government established a permanent Section of Painting and Sculpture for the decoration of public build-

ings. This provided the greatest stimulus for mural painting and attracted many of the best talents in the country, among them George Biddle, John Steuart Curry, H V Poor, Paul Sample, and Maurice Sterne Because of its potentialities as a great public art and also, perhaps, because of the new emphasis on formal values as opposed to extreme individualism in art, mural painting has experienced a great revival in 20th-century America

Murano (mōōrä'nō), town (pop 6,368), Venetia, NE Italy, on several small islands in the lagoon of Venice It was the center of the Venetian glass industry as early as the 13th cent Revived by Antonio SALVIATI, the industry is again flourishing today Murano, with its old houses, canals, and bridges, has the same quaint charm as Venice There are a Venetian-Byzantine church (7th-12th cent) and a museum of ancient and modern Venetian glass

Murasaki Shikibu (mürä'sa"kē shkē'bōō), b c 978, Japanese novelist, lady of the court at the height of the Heian period (795–1185) She is celebrated as the author of the romantic novel *Genji-Monogatari* [tale of Genji], one of the first great works to be written in Japanese and not in Chinese as the fashion had hitherto been There is an excellent translation, *Tale of Genji* (one-volume ed , 1935), by Arthur Waley

Murat, Achille (äshēl' mürä'), 1801–47, crown prince of Naples (1808–15) and American author, b Paris, eldest son of Joachim Murat and Caroline Bonaparte After Joachim's defeat by the Austrians at Tolentino (1815), his family went into exile Achille came to America in 1823 and ultimately settled on the plantation he called "Lipona," near Tallahassee, Fla He married (1826) a great-grandniece of George Washington and became (1828) a U S citizen He practiced law, dabbled in politics, held several minor offices, and speculated in land Hoping to foster democracy in Europe and, incidentally, to recoup Bonapartist fortunes, Murat returned there several times but failed to obtain his ends His writings on the United States (he greatly admired its system of government) had some contemporary success in Europe Chief among them are *Esquisse morale et politique des Etats-Unis de l'Amérique du Nord* (1832, Eng tr , 1833, 1849) and *Exposition des principes du gouvernement républicain, tel qu'il a été perfectionné en Amérique* (1833) See A J Hanna, *A Prince in Their Midst* (1946)).

Murat, Joachim (zhōäshē'), 1767–1815, marshal of France, king of Naples (1808–15) He abandoned his theological studies to enter the army and fought in Egypt under Napoleon, whom he helped (1799) in the coup d'état of 18 Brumaire Having married (1800) Napoleon's sister Caroline BONAPARTE, he was made grand duke of Berg (1806) and in 1808 was chosen to succeed Joseph Bonaparte as king of Naples A brilliant and dashing cavalry leader, Murat played an important part in Napoleon's victories, in the Russian campaign (1812), and in the battle of Leipzig (1813) After Leipzig, however, he reached an agreement with Austria in order to save his own throne During the Hundred Days he deserted his new allies and again joined Napoleon Defeated by the Austrians at Tolentino, he fled to Corsica after Napoleon's fall In an attempt to regain Naples he was arrested and executed See R M Johnston, *The Napoleonic Empire in Southern Italy* (1904)

Muratori, Ludovico Antonio (lōōdōvē'kō äntō'nyō mōōrätō'rē), 1672–1750, Italian Roman Catholic priest, historian, and antiquarian One of the foremost scholars of his age, he was noted for his researches into the sources of Italian history and archaeology From 1700 he was archivist and ducal librarian at Modena He discovered the *Muratorian Canon*, a scrap of early Christian literature of A D c 190 containing the earliest known list of the New Testament books He edited the important collections *Rerum Italicarum scriptores* (1723–51) and *Antiquitates Italicae medii aevi* (1738–42)

Murchison, Sir Roderick Impey (mûr'kĭsun), 1792–1871, British geologist He served in the Napoleonic Wars, but after the peace turned his attention to science In the 1830s he undertook the investigation of the previously undifferentiated rock strata lying below the Old Red Sandstone, as a result of his researches he established the Silurian as a new geologic system and described it in *The Silurian System* (1838). With Adam Sedgwick he later established the Devonian system Murchison carried on an extended survey in Russia (1840–44), his last investigations were directed toward the geology of the Scottish Highlands In 1846 he was knighted He was appointed (1855) director general of the Geological Survey of Great Britain He endowed at the Univ of Edinburgh a chair of geology and mineralogy He revised and modified the material of his earlier work in *Silurica* (1854) and collaborated in the *Geology of Russia and the Ural Mountains* (1845) See biography by Sir Archibald Geikie (1875)

Murcia (mûr'shŭ, mōōr–, Span. mōōr'thyä), region (10,108 sq mi ; pop 1,094,173) and former Moorish kingdom, SE Spain, on the Mediterranean, comprising the present provinces of Albacete and Murcia Except for its coastal plain, it has a generally rugged terrain and is one of the hottest and driest regions of Europe However, its irrigation system (dating from Moorish times) and several fertile valleys (especially that of the Segura river) permit the growing of large crops of citrus and other fruits, vegetables, almonds, olives, and grapes Hemp and esparto and minerals (lead, silver, zinc) are exported Sericulture is a traditional occupation The region was settled by the Carthaginians, who founded here (3d cent B C) the port of Cartago Nova (modern CARTAGENA) It was taken (8th cent A D) by the Moors and emerged after the fall (11th cent) of the caliphate of Córdoba as an independent state Later occupied by the Almoravides and Almohades, it regained independence in the 13th cent The kingdom of Murcia then also included parts of the modern provinces of Alicante and Almería It became (1243) a vassal state of Castile, which in 1266 annexed it outright

Murcia, city (pop 60,113), capital of Murcia prov , SE Spain, on the Segura river It lies in one of the finest garden regions in Spain and has long been noted for its silk industry There also are flour mills, and food and other industries Lead, silver, sulphur, and iron are mined near by Possibly of Roman origin, Murcia rose to prominence under the Moors when it was for a time the capital of the independent kingdom of Murcia (see separate article) The Gothic cathedral (14th-15th cent), with a rococo façade and a fine tower, and the episcopal palace are landmarks Murcia is the see of a bishop and has a university (founded 1915)

murder, criminal HOMICIDE, usually distinguished from MANSLAUGHTER by the element of MALICE aforethought Malice aforethought essentially means that at some time (no matter how recent) before actually accomplishing the homicidal act the slayer adopted the deliberate cold-blooded intent to commit it Very often, however, malice aforethought is presumed from the circumstances rather than directly proved The most clear-cut case of this presumption of malice is when the killer by inadvertence slays some person other than his intended victim Murder may also be committed if the slayer intended to inflict serious bodily injury or if he behaved with such reckless disregard of the safety of others as to betray a "depraved heart" Likewise a killing incidentally committed in the course of a felony (e g , robbery or rape) is deemed murder, if the felony was accomplished by more than one person, all are equally guilty of the murder, not only the actual slayer A killing incident to a misdemeanor, however, is treated as manslaughter Many states prescribe various degrees of murder Murder in the first degree generally is a calculated act of slaying and receives the severest penalty, often CAPITAL PUNISHMENT In some states certain crimes which are defined as murder of a lower degree approximate more closely to the definition of manslaughter in common law In a slaying it is frequently difficult to determine whether malice aforethought was present, consequently the governor of a state (or other chief executive) not infrequently uses his power of commutation of sentence to avoid the death penalty, and in some states the appellate courts automatically review all convictions of murder

Murdoch, James Edward (mûr'dŏk"), 1811–93, American actor, b Philadelphia He made his debut in Philadelphia (1829) and subsequently appeared with success as Romeo and Hamlet and as Charles Surface in Sheridan's *School for Scandal*

Murdock, William, 1754–1839, Scottish engineer, inventor of coal-gas lighting He worked for the company of James Watt in Soho, London There he began, in 1792, experiments which resulted in 1803 in the use of coal-gas illumination in the foundry

Mures (mōō'rĕsh), Hung *Maros* (mō'rōsh), river, 550 mi long, rising in the Carpathians in Rumania and flowing generally W through Transylvania into Hungary, where it joins the Theiss at Szeged

Muret (mürä'), town (pop 2,632), Haute-Garonne dept , S France, SSW of Toulouse Here in 1213 Simon de Montfort, leader of the Albigensian Crusade, defeated the nobles of S France, led by Raymond VI of Toulouse and by Peter II of Aragon, who fell in the battle The battle marked the end of the independence of the nobles in S France

Murfree, Mary Noailles see CRADDOCK, CHARLES EGBERT

Murfreesboro (mûr'frēzbŭ"rō) **1** Town (pop 835), co seat of Pike co , SW Ark , near the Little Missouri river, in a farm area The country's only diamond mine, now closed, is near by **2** Town (pop 1,550), NE N C , NW of Albemarle Sound near the Va line, in a farming and lumbering area, founded c 1787 **3** City (pop 9,495), co seat of Rutherford co , central Tenn , on Stones river and SE of Nashville, inc 1817 It is the shipping, processing, and trade center of a dairy, grain, and timber area It was the capital of Tennessee from 1819 to 1825 Andrew Jackson and Thomas Hart Benton practiced law here It is the seat of Middle Tennessee State College The Civil War battle of Murfreesboro (or Stones River) was fought here Dec 31, 1862–Jan 2, 1863 With the retreat of Gen Braxton Bragg's Confederate army from Kentucky, Gen W S Rosecrans had concentrated his Union Army of the Cumberland at Nashville On Dec 26 Rosecrans advanced on Bragg, who confronted him just N of Murfreesboro Each planned to attack the other's right, but Bragg moved first and on Dec 31 nearly routed the Union forces After a day's lull, Rosecrans repulsed another attack and then forced Bragg to retreat to Tullahoma Stones River National Military Park (323 86 acres, est 1927) commemorates the battle

Murgab (mōōrgäb'), river rising in NE Afghanistan, in the northern slopes of the Paropamisus range, and flowing NW into Turkmenistan, through the Merv oasis, to lose itself in the Kara Kum after a course of 400 mi

Murger, Henry (ärē' mürzhĕr'), 1822–61, French poet and novelist His *Scènes de la vie de Bohème* [scenes from bohemian life] (serially, 1845–49, book form, 1851) provided the material for Puccini's opera *La Bohème* English translations of Murger's work appear under the titles *The Bohemians of the Latin Quarter* (1905) and *The Latin Quarter* (1930) See Arthur Moss and Evalyn Marvel, *The Legend of the Latin Quarter* (1946)

muriatic acid see HYDROCHLORIC ACID

Murillo, Bartolomé Estéban (myōōrē'lō, Span bartōlōmā' ĕstā'ban mōōrē'lyō), 1617?–1682, Spanish religious and portrait painter He was born in Seville, where most of his life was spent An orphan, he was early inured to hardship and independence and earned his living painting cheap religious pictures Having saved a little, he proceeded to Madrid in 1642, and there, thanks to Velásquez, who befriended him and taught him much, he was enabled to study in the royal galleries After three years he returned to Seville, where he painted for the Franciscan convent a series of 11 pictures of the history of the order These are now scattered, one being in the Louvre, another in Madrid They brought him instant fame, and for the remainder of his life he was the favorite painter of the wealthy and pious Andalusian capital His next pictures, including *St Leander, St Isidore, Vision of St Anthony* (all cathedral, Seville), and *Nativity of the Virgin* (Louvre), are characterized by a warmer color There followed a group of large pictures painted for the Church of Santa María la Blanca, including the *Immaculate Conception* (Louvre) and *Founding of Santa Maria Maggiore* (Madrid), which show progress in the use of subtle light and shade Murillo's work is sometimes classed in three styles, *frio, caluda,* and *vaporoso* These classifications of cold, warm, and misty do not, however, indicate periods in his development He appears to have painted at various times in all three manners In 1660 he was instrumental in founding the Seville Academy, of which he shared the presidency with the younger Francisco de Herrera From 1670 to 1682 Murillo painted many of his best works, among them eight masterpieces for the Church of St George of Charity Hospital, where the *Moses, Miracle of the Loaves and Fishes,* and *Charity of St John* remain (the others are now in Madrid, Leningrad, and England), and a series of 20 pictures for the Capuchin convent (now largely in the Seville Mus) In 1682, while painting the *Marriage of St Catherine* for the Capuchin church of Cádiz, he fell from a scaffold and subsequently died In addition to his religious subjects Murillo painted several fine portraits and a number of pictures of humble life, particularly of street urchins Murillo's forceful rendering of everyday subject matter made him perennially popular and beloved His religious pictures evoke very human sentiments of sweetness and humility, rather than ecstasy or severe virtue His work is uneven, sometimes descending to the commonplace, and is always naturalistic At his best none can deny his great gifts His most renowned achievements are his paintings of the *Assumption,* of which one is in the cathedral at Guadalajara, Mexico While he is best seen in Seville, fine examples of his work are in the Prado, the Louvre, the National Gallery, London, the Widener Collection, Philadelphia, and the Metropolitan and Cincinnati museums See studies by G C Williamson (1902), A F Calvert (1907), and A L Mayer (1912, in German)

Murmansk (mōōr'mŭnsk), city (1926 pop. 8,777; 1939 pop 117,054), capital of Murmansk oblast, N European RSFSR, on the NW Kola Peninsula, an ice-free port on the Kola Gulf of the Barents Sea The largest city within the Arctic Circle, it is a fishing and shipbuilding center, the northern terminus of the Murmansk RR (which connects it with Leningrad), and the site of a polar research station Fish, lumber, and apatite are exported Murmansk oblast, which has rich apatite and nickel mines, was enlarged after the Second World War by the incorporation of former Finnish territories notably Petsamo (Rus *Pechenga*) The port of Murmansk was founded in 1915, the Murmansk RR was completed in 1916. They were of strategic importance in both world wars for the supplies to Russia from the Western Allies In the civil war Murmansk was occupied (1918–20) by Allied intervention forces. It developed tremendously in the 1930s In the Second World War it was bombed by the Germans, who unsuccessfully sought to reach it

Murner, Thomas (tō'mäs mo͝or'nûr), 1475–1537, German satirist, an Alsatian and a Franciscan monk. He was the most scurrilous writer of his time and spared no one in his satire He attacked the clergy, even his own order, but when the German Reformation turned into more radical channels, Murner did not follow His most celebrated work is a violent attack on Luther, *Von dem grossen Lutherischen Narren· wie in Doktor Murner beschworen hat* [on the great Lutheran Fool how Dr Murner exorcised him], the Fool in this pamphlet is the Reformation

Murom (mo͝o'rŭm), city (pop 22,607), central European RSFSR, on the Oka river One of the oldest of Russian cities, it was founded in 864 and was a medieval trade center The Mongols destroyed it in 1232, and it remained nearly deserted until 1393, when it passed to the grand duchy of Moscow There are a cathedral and monasteries dating from the 16th cent Its modern industries include locomotive and machine-tool plants

Muroran (mo͝o'rō'rän), city (1940 pop 107,628, 1947 pop 96,722), SW Hokkaido, Japan, a port on Uchiura Bay A coal-loading port and an iron and steel center, it was heavily bombed in the Second World War

Murphy, Charles Francis, 1858-1924, American politician, b. New York city He was the owner of many saloons in New York city and took a keen interest in politics His services to Tammany brought him a job as dock commissioner After the retirement of Richard CROKER, Murphy displaced Lewis Nixon and became (1902) boss of Tammany Hall He held control until his death, continued to build his political machine, and brought about the election of three New York city mayors—George B McClellan, William Jay Gaynor, and John Francis Hylan. His influence extended to state and national politics

Murphy, Frank, 1893–1949, Associate Justice of the U S Supreme Court (1940–49), b Harbor Beach, Mich , grad Univ of Michigan (LL B , 1914) He began his public career as chief assistant U S attorney in the Eastern District of Michigan (1919–20), taught law at the Univ of Detroit (1922–27), and was judge of recorder's court (1923–30) Elected mayor of Detroit in 1930, he resigned to become governor general (1933–35) and later (1935–37) U.S high commissioner in the Philippine Islands He was elected governor of Michigan in 1936, and his settlement of the automobile strike (1937) in Flint, Mich , made him a national figure He was defeated for reelection in 1938 In Jan , 1939, Murphy, a New Deal Democrat, was appointed U S Attorney General and served until his appointment to the Supreme Court For a short time in 1942 he left the bench to serve as an army officer Justice Murphy's opinions, which were usually aligned with those of Hugo L BLACK, William O DOUGLAS, and Wiley RUTLEDGE, reflected his ardent liberalism

Murphy, John Benjamin, 1857–1916, American surgeon, b Appleton, Wis , M D Rush Medical College, 1879 He was professor of surgery at Rush (1905–8) and at Northwestern Univ (1901–5, 1908–16) Highly skilled both in surgery and in teaching, he contributed to the techniques of surgery of the blood vessels, of gastro-intestinal surgery, and of chest surgery (chiefly in promoting collapse of the lung in treating pulmonary tuberculosis) See study by Loyal DAVIS (1938)

Murphy, John Francis, 1853–1921, American landscape painter, b Oswego, N Y , self-taught He first exhibited at the National Academy of Design in 1876 and became a member in 1887 Among his works are *The Old Barn* (Metropolitan Mus), *October* (Corcoran Gall), *The Path to the Village* (National Gall of Art, Washington, D C), *Afternoon Lights on the Hills* (Carnegie Inst , Pittsburgh), and *The Hill-Top* (Art Inst , Chicago)

Murphy, Robert Cushman, 1887–, American naturalist, b New York city, grad. Brown, 1911, M A Columbia, 1918 Associated with the American Museum of Natural History from 1921, he became (1942) chairman of the department of birds and, in 1948, curator. He was elected president of the American Ornithological Union in 1948 Peru honored him (1949) for his pioneer ecological studies in their coastal waters which were credited with saving the guano industry The results of his many scientific expeditions are recorded in articles in various technical periodicals He is also the author of *Bird Islands of Peru* (1925), *Oceanic Birds of South America* (1936), and *Logbook for Grace* (1947)

Murphy, William Parry, 1892–, American physician, b. Stoughton, Wis , M.D Harvard, 1922 He taught at Harvard from 1923 and was associated with the Peter Bent Brigham Hospital in Boston from 1922 He made special studies on diabetes and diseases of the blood and particularly on the liver treatment for pernicious anemia. For his work on anemia he shared with G H. Whipple and G R Minot the 1934 Nobel Prize in Physiology and Medicine. He wrote *Anemia in Practice Pernicious Anemia* (1939)

Murphy, town (pop. 1,873), co seat of Cherokee co , extreme W N.C., in the Nantahala National Forest near the Ga. line; founded c 1830. Textiles and wood products are made here.

Murphysboro (mûr'fēsbŭ"ru), city (pop 8,976), co. seat of Jackson co , S Ill , on the Big Muddy River and N of Cairo; founded 1843, inc. 1867 It is a trade, distributing, and processing center for a dairy area with coal and silica deposits. The city has silica refineries and ironworks There is a memorial to John Alexander Logan, who was born here

Murray, Alexander Stuart, 1841–1904, British archaeologist He was assistant keeper (1867–86) and keeper (from 1886) of Greek and Roman antiquities at the British Museum From 1894 to 1896 he had charge of excavations in Cyprus. Included in his writings are *Manual of Mythology* (1873, rev ed , 1895), *Handbook of Greek Archaeology* (1892), *Terra-Cotta Sarcophagi* (1898), and *Excavations in Cyprus* (1900)

Murray, Lord George, 1694–1760, Scottish general He took part in the risings of the JACOBITES in 1715, 1719, and 1745 In the rising of '45 he was the most able commander in the victory of Prestonpans and in the retreat from the invasion of England He opposed the strategy which led to the defeat at Culloden Moor In 1746 he escaped to Holland See biography by Winifred Duke (1927)

Murray, George Gilbert Aimé (Gilbert Murray), 1866–, British classical scholar, b Sydney, Australia Murray was appointed in 1908 regius professor of Greek at Oxford. He wrote a number of books on English politics, but is best known as a Greek scholar and especially as a translator of Greek drama Among his works are a *History of Ancient Greek Literature* (1897), *The Rise of the Greek Epic* (1907), *Euripides and His Age* (1918), and *The Classical Tradition in Poetry* (1927)

Murray, James, 1722–94, British general, first civil governor of Canada, b Scotland He came to Canada as an army officer in 1757 and was prominent at the siege of Louisburg (1758) and in the crucial battle on the Plains of Abraham Murray was given command of Quebec and withstood the efforts of the French under Lévis He was made military governor of Quebec and after the Treaty of Paris (1763) became (1764) the first civil governor of Canada, then styled the province of Quebec His efforts to protect the French Canadians prepared the way for the Quebec Act (1774), and they earned him the enmity of many of the English Summoned (1766) to England to face charges, he was vindicated, but although he held the governorship until 1768, he did not return to Canada In 1774 he was appointed governor of Minorca He was forced to surrender (1782) the island after a long siege by Spanish and French troops and faced a court-martial (1783), but was acquitted and was promoted general the same year See biography by R H Mahon (1921), A C Murray, *The Five Sons of Bars Betty* (1936)

Murray, Sir James Augustus Henry, 1837–1915, English lexicographer In 1879 he assumed the editorship of the *New English Dictionary* (the *Oxford English Dictionary*), which was his life's work Murray was a guiding force in this compilation, a triumph of modern scholarship, and it owes largely to him its general plan and much of the work on details He was knighted in 1908 See M M Mathews, *A Survey of English Dictionaries* (1933)

Murray or **Moray, James Stuart, 1st earl of** (both mûr'rē), 1531?–1570, regent of Scotland (1567–70) A natural son of James V and a daughter of the earl of Mar, he was, therefore, half brother of MARY QUEEN OF SCOTS Early a Protestant sympathiser, he was already a lord of the congregation in 1558 and a leader of the opposition to the regent, MARY OF GUISE After the return of the young queen (1561), he was her adviser, always favoring friendship with England and advocating religious reform His complicity, though discreet, in the murder of David RIZZIO was known, and he was certainly aware that something was afoot before the murder of Lord DARNLEY, whom he regarded as an enemy both of Protestantism and of Elisabeth. He emerged, after the short triumph of the earl of BOTHWELL had ended and Mary was imprisoned (1567) at Lochleven, as the only feasible candidate for regent He made every effort to perpetuate Mary's incarceration and worked in the interests of the young King James VI, the English, and Protestantism He was assassinated by one of the Hamiltons. With John Knox, who wrote a panegyric on him, Murray was largely responsible for the success of the Scottish Reformation

Murray, John, 2d marquess and 1st duke of Atholl (ă'thûl), 1660–1724, Scottish noble; son of the 1st marquess of Atholl He supported William III against James II and held high government posts in Scotland. He successfully weathered a plot against him by James Douglas, duke of QUEENSBERRY, and opposed the Scottish JACOBITES as vigorously as he opposed the union of England and Scotland He supported the accession of George I and remained loyal to the government against the Scottish rebels in 1715, although three of his sons were Jacobites

Murray, John, 2d earl and 1st marquess of Atholl (ă'thûl), c.1635–1703, Scottish noble. He sided with Charles I in the civil war. After the Restoration he held high office in Scotland, until he urged moderation in the measures against Presbyterians (1678). He later regained the royal favor and fought vigorously against Archibald CAMPBELL, 9th earl of Argyll in 1685. In 1688 he was lukewarm to the accession of William III and allowed his troops to be used at Killiecrankie to the discomfiture of the supporters of the new king.

Murray, John, 1741–1815, founder of the Universalist denomination in America, b. England He was excommunicated by the Methodists after he had openly accepted Universalism as taught by James Relly Murray emigrated to America in 1770 where, after traveling as a Universalist preacher for four years in New Jersey, New York, and New England, he settled in Gloucester, Mass He continued his preaching there and in near-by centers In 1775 Washington announced Murray's appointment as chaplain to the Rhode Island troops. He served as pastor of the newly organized Independent Church of Christ (1779) at Gloucester until in 1793 he was called to the pastorate of the Universalist Society of Boston.

Murray, Sir John, 1841–1914, British oceanographer and marine naturalist, noted for his deep-sea observations, b Canada A naturalist with the CHALLENGER EXPEDITION (1872–76), from 1882 to 1895 he edited its reports and was co-author of a *Narrative of the Cruise* (1882–85) and of a *Report on Deep-Sea Deposits* (1890) He took an active part in bathymetric exploration of the waters in and around Scotland In 1910 he participated in an expedition to investigate the physiography of the N Atlantic Ocean and its marine life and published his observations in *The Depths of the Ocean* (with Johan Hjort, 1912) and *The Ocean* (1913) He was influential in causing Great Britain to annex (1889) Christmas Island (in the Indian Ocean) and in 1897 financed a scientific investigation of the island

Murray, Lindley, 1745–1826, American grammarian Born in Pennsylvania, he practiced law until the Revolution, during which he acquired a fortune and in 1784 went to live in England He was a recorded minister of the York Monthly Meeting of the Society of Friends He devoted his time to writing books on English grammar and religious essays. His most popular book was his *English Grammar* (1st ed , 1795), written for a Friends' school It was the first standard English grammar and was tremendously popular Over a million and a half copies of his works on English were sold within 40 years of their publication

Murray, Nicholas, 1803–61, Presbyterian clergyman, b Ireland He emigrated to America in 1818 From 1834 until his death he was pastor in Elizabeth, N J Wide attention was attracted to his letters to the Right Rev John Hughes, Roman Catholic bishop of New York, which appeared in the *New-York Observer* under the name "Kirwan" Nicholas Murray Butler was his grandson See S I Prime, *Memoirs of the Rev Nicholas Murray* (1862)

Murray, Philip, 1886–, American labor leader, b Blantyre, Scotland He came to America in 1902 and later worked in the Pennsylvania coal mines Because he was discharged for fighting with a foreman, 600 miners struck, formed a local of the United Mine Workers of America, and elected Murray local president A skillful negotiator, he rose to the vice presidency of the union by 1920 When the C I O was formed (see CONGRESS OF INDUSTRIAL ORGANIZATIONS), he became a C I.O vice president and headed (1936) its successful steel workers' organizing campaign He broke with John L Lewis whom he succeeded as C I O president (1940) Murray also became president of the new United Steel Workers of America For supporting President F. D. Roosevelt's foreign policy, he was ousted (1942) by Lewis from the U.M.W. vice presidency.

Murray or **Moray, Thomas Randolph, 1st earl of** (both mûr'rē), d 1332, Scottish nobleman, nephew of Robert I (Robert the Bruce) He supported his kinsman, Robert I, until 1306, when Edward I of England captured Randolph and forced him to swear fealty. Recaptured by Sir James Douglas in 1308, he soon became one of Robert I's strongest warriors. He was made earl of Murray in 1314 and in that same year took Edinburgh by a daring escalade and led a division at Bannockburn He accompanied Edward Bruce on his invasion of Ireland in 1315 After the end of the war with England he was a principal party in the negotiations which led to recognition of Robert I by Edward III of England. He was regent (1331–32) of Scotland for the young DAVID II.

Murray, William: see MANSFIELD, WILLIAM MURRAY, 1ST EARL OF.

Murray. 1 City (pop. 3,773), co. seat of Calloway co , SW Ky., SE of Paducah and near the Tenn line, in a tobacco and livestock area. Murray State Teachers College is here. 2 City (pop. 5,740), N central Utah, S of Salt Lake City, inc. 1902. In an irrigated farm area, the city also has a smelter for treating lead.

Murray, principal river of Australia, rising in New South Wales in the Australian Alps near Mt Kosciusko and flowing generally westerly to form

for 1,200 mi. the boundary with Victoria before crossing South Australia in a generally southwestward course to enter Encounter Bay through Lake Alexandrina. It receives its main tributary, the Darling, 400 mi above its mouth. The Darling-Murray watercourse is 2,310 mi Important primarily for irrigation, the Murray is the site of hydroelectric plants and reservoirs, including the HUME RESERVOIR, part of a river development scheme financed and shared by New South Wales, Victoria, and South Australia The Murray also receives the Murrumbidgee with its tributary, the Lachlan.

Murray Bay, Que see LA MALBAIE

Murray City, village (pop. 1,009), S central Ohio, SE of Lancaster

Mürren (mü'rün), resort, Bern canton, Switzerland, opposite the Jungfrau.

Murrieta, Joaquin (hwäkēn' mōōryā'tä), 1829?-1853, California bandit, b Mexico From 1849 to 1851 he mined in the California gold fields After he and members of his family had been mistreated by American miners and driven from their claim, he became the leader of a band of desperadoes For two years his robberies and murders terrorized California, until the legislature authorized Capt Harry Love, deputy sheriff of Los Angeles co , to organize a company of mounted rangers to exterminate Murrieta's band Surprized at his camp near Tulare Lake, Murrieta was shot, and most of his followers were killed or captured His head was preserved and exhibited for identification See W N Burns, *The Robin Hood of Eldorado* (1939)

Murrumbidgee (mŭrumbĭ'jē), river 1,050 mi long, rising in SE New South Wales, Australia, in the Monaro Range and flowing N and W to the Murray on the Victoria border It has Burrinjuck Dam and is important for irrigation It was explored by Charles Sturt

Murry, John Middleton, 1889–, English author and critic While a student at Oxford he founded, with Michael Sadleir, a short-lived literary magazine, *Rhythm,* which published the early stories of Katherine MANSFIELD, whom he later married Subsequently he wrote for and edited a number of literary periodicals, notably the *Adelphi* (1923–48), which he founded His critical writings include *Fydor Dostoevsky* (1916), *Keats and Shakespeare* (1925), and *William Blake* (1933), in addition to his valuable biography of Katherine Mansfield (1933) and his editions of her work and to his biography of his friend, D H Lawrence, *Son of Woman* (1931) His private, mystical religion is somewhat explained in *God* (1932), *The Necessity of Communism* (1935), and *Christocracy* (1942) See his autobiographical *Between Two Worlds* (1935)

Mursa see OSIJEK, Yugoslavia

Murten, Switzerland see MORAT

Murviedro, Spain see SAGUNTO

Murzuk or **Mourzouk** (both mōōr'zōōk), town (pop 2,129), Libya It is the chief settlement of Fezzan There is an old ruined fort (c 1310)

Mus or **Mush** (both mōōsh) town (pop 5,040), E Turkey, SSE of Erzerum It is an old city of Armenia

Musa Dag or **Musa Dagh** (both mōō'sä dä'), peak, 4,445 ft high, S Turkey, rising from the Mediterranean W of Antioch The heroic resistance here of the Armenians against the Turks in the First World War is the subject of Franz Werfel's novel *The Forty Days of Musa Dagh*

Musala (mōōsälä'), mountain, 9,596 ft high, SW Bulgaria It is the highest peak of Bulgaria and of the Rhodope range Its name also appears as Mus Allah

Muscat, Maskat, or **Masqat** (all mŭ'skăt, mŭ'skŭt), city (pop c 5,500), capital of Oman, SE Arabia, a port on the Gulf of Oman It is flanked by rugged mountains Musa'at, with one of the best harbors in E Arabia, was seized by the Portuguese Afonso de Albuquerque in 1508 and kept by Portugal until 1648 Persian princes held it until 1741, when it became the capital of the powerful sultanate of OMAN Today the city exports dates and mother-of-pearl

Muscatine (mŭskŭtēn'), city (pop 18,286), co seat of Muscatine co , SE Iowa, on the Mississippi (spanned by a toll bridge) below Davenport; settled 1833 as a trading post, surveyed 1836, inc 1839, reinc 1851 It was an early center of river traffic and of lumbering Mussels in the waters here provide shells for a noted pearl-button industry begun in 1891 Farm products are processed and shipped There is a junior college Near by are Muscatine Island, noted for its fine melons, a fish hatchery, at Fairport, and Wild Cat Den State Park

muscle, tissue of the body which has the power of contractility. There are three types—skeletal (striated) muscle, plain (unstriated) muscle, and cardiac (heart) muscle Skeletal muscles are attached to bones by tendons (strong fibrous bands) and are controlled by the will They produce voluntary movements of the body, constitute the red flesh of the body, and account for a great deal of the body weight. Excessive muscular contraction, without sufficient rest, causes fatigue Muscles may be developed by exercise and tend to atrophy from disuse Plain (unstriated) muscles are found in the walls of the alimentary canal and the blood vessels Both unstriated and cardiac muscles are controlled by the autonomic nervous system

Muscle Shoals, town (pop 1,113), NW Ala , on the Tennessee river opposite Florence; inc 1923 Here formerly the river descended in a series of rapids called Muscle Shoals (more than 35 mi long with a drop of more than 130 ft) They were unnavigable, and early in the 19th cent plans were made for a canal around them A canal built by Alabama in the 1830s silted up, however, and was abandoned A canal was successfully built by the army engineers in 1890 In the First World War a project for extracting nitrate was undertaken here, but the nitrate works built in 1916 remained unused until the area was bought (1933) by the TENNESSEE VALLEY AUTHORITY The building of Wilson Dam had already begun the submersion of all the upper shoals, including the old canal It and Wheeler Dam have obliterated the shoals TVA made Muscle Shoals the center of experimental development of phosphate and nitrate fertilizers and animal foods Various products (including synthetic rubber) are made in the chemical works, and the industrial development extends to Florence and other near-by towns

muscovite see MICA.

Muscovy see MOSCOW, GRAND DUCHY OF

Muscovy Company (mŭ'skŭvē), or **Russia Company,** first major English joint-stock trading company It began as an organization directed by Sebastian Cabot, which sent out an exploring expedition (1553), the mariners Richard CHANCELLOR and Stephen BOROUGH reached the White Sea and later opened negotiations with Ivan IV of Russia The company was chartered in 1555 under a long name, which was not much used It sent out trading and exploring expeditions to Russia and to Asia and sponsored Henry Hudson's unfortunate voyage in search of the Northwest Passage By 1615 the company's trading ventures had come to a virtual end, and its business was never successfully revived See A J Gerson and others, *Studies in the History of English Commerce in the Tudor Period* (1912)

Muses [Gr , whence also *music*], nine Greek goddesses, patrons of arts and sciences, daughters of ZEUS and MNEMOSYNE CALLIOPE was the Muse of epic poetry and eloquence, Euterpe (ūtûr'pē), of music or of lyric poetry, Erato (ĕr'ütō), of the poetry of love, Polyhymnia (pŏlĭhĭm'nēu) or Polymnia (pŏlĭm'nēu), of oratory and sacred poetry, Clio (klī'ō), of history, Melpomene (mĕlpŏm'nē), of tragedy, Thalia (thulī'u), of comedy, Terpsichore (tûrpsĭk'urē), of the choral song and dance, Urania, of astronomy APOLLO was their leader Their worship originated among the Thracians, from whose early home, PIERIA, the Muses were sometimes called the Pierides The Castalian spring and the fountains of AGANIPPE and Hippocrene were sacred to them

Museum of Fine Arts, Boston, chartered and incorporated (1870) after a decision (1869) by the Boston Athenaeum, Harvard Univ , and the Massachusetts Institute of Technology to pool their separate collections of art objects and house them in adequate public galleries The first building was opened in 1876, the present one, designed by Guy Lowell, in 1909, the museum is supported entirely by private contributions and endowments Most notable of its collections is that of Chinese and Japanese art, built around several donated groups supplemented by purchase The Egyptian wing, housing the Way Collection, as well as the results of special expeditions, is rivaled only by the collections at Cairo The collection of John Singer Sargent paintings is housed in the rotunda which also has a Sargent mural The painting galleries are notable for the many Millets, works by American artists, and examples of Spanish art

Museum of Modern Art, New York city, established and incorporated in 1929 It is privately supported The founders were Mrs John D Rockefeller, Lillie P Bliss, Mrs W Murray Crane, A Conger Goodyear, Frank Crownnshield, and Paul J Sachs, Goodyear served as its first president, and Alfred H Barr, Jr , was appointed director Operating at first in rented galleries, the museum specialized in loan shows of contemporary European and American art. A start toward the permanent collection was made with the Lillie P Bliss bequest, which included nine Cézannes and the Daumier *Washerwoman* A permanent building was erected by Philip L Goodwin in 1939 on ground donated by the Rockefellers The museum also has a reference library and a film library There are annual circulating exhibits and associated art classes for nonprofessionals. The museum publishes a monthly *Art Calendar* and a quarterly *Bulletin,* as well as books on individual arts and artists in connection with exhibitions

Museum of the American Indian, Heye Foundation, New York city, devoted solely to the collection, preservation, and presentation of the culture of the aborigines of the Western Hemisphere It was founded by Dr. George G Heye and was opened to the public in 1922 The museum issues bulletins and monographs and conducts extensive field work. There are over 500,000 objects displayed in the three floors of the building

museums of art. Leading European galleries include: *Great Britain*—BRITISH MUSEUM, VICTORIA AND ALBERT MUSEUM, NATIONAL GALLERY, TATE GALLERY, and Wallace Collection (see WALLACE, SIR RICHARD) (all London) and the Glasgow Corporation Art Galleries; *Austria*—Liechtenstein Gallery, Belvedere, Albertina, and the Czernin Collection (all Vienna), *Belgium*—the Royal Museum of Fine Arts and Old Museum (both Brussels) and the Museum of Fine Arts (Antwerp); *France*—LOUVRE, Luxembourg Palace, and Cluny, Carnavalet, and Estampes museums (all Paris), the Versailles Museum, and institutions of Nantes, Marseilles, and other cities; *Greece*—Acropolis Museum, National Museum of Antiquities, and the National Archaeological Museum (all Athens), *Italy*—UFFIZI, Pitti Palace, Academy art museum, and Bargello (all Florence), the VATICAN, Lateran, Farnese, and Borghese palaces (all Rome), Academy of Venice and Scuola di San Rocco (both Venice), Brera Palace (Milan), and National Museum (Naples), *Netherlands*—Rijks Museum (Amsterdam) and Mauritshuis (The Hague), *Portugal*—National Museum (Lisbon), *Russia*—Hermitage (Leningrad) and Museum of Western Art (Moscow), *Scandinavia*—Royal Academy of Arts and National Museum (both Copenhagen) and National Museum and Picture Gallery (both Stockholm), *Spain*—Prado, Escorial, and Armería (all Madrid) and the El Greco Museum (Toledo), *Switzerland*—Swiss National Museum (Zurich) Many of the German museums were destroyed or damaged in the Second World War, though most of the collections in Berlin and Munich museums were saved In the United States the chief museums are the Metropolitan Museum of Art, Museum of Modern Art, Frick Collection, Whitney Museum Hispanic Society gallery, and Brooklyn Museum (New York city), Museum of Fine Arts and Gardner Museum (Boston), Fogg Museum of Art (Cambridge, Mass), Worcester (Mass) Art Museum Yale Gallery of Fine Arts (New Haven, Conn), Pennsylvania Academy of the Fine Arts (Philadelphia), Walters Art Gallery (Baltimore), National Gallery of Art and Corcoran Gallery of Art (Washington, D C), Albright Art Gallery (Buffalo, N Y), Carnegie Institute (Pittsburgh), Cleveland Museum of Art, Art Institute of Chicago, Henry E Huntington Library and Art Gallery (San Marino, Calif), and museums in Newark (N J), Detroit, Cincinnati, Columbus (Ohio), Toledo (Ohio), Indianapolis, St Louis, Kansas City (Mo.), New Orleans, Dallas (Texas), Minneapolis, Milwaukee, San Francisco, and Los Angeles In Egypt the Cairo Museum excels in the ancient art of that country, while in Istanbul are the Turkish Museum of Antiquities and the New Museum, where may be seen the art of Babylon, Assyria, and Byzantium The Teheran Museum and the Government Collections, Teheran, hold the most important Persian art treasures The Calcutta Museum presents the art of India In the Imperial Museum (Tokyo), the Kyoto Museum, and the Nara Imperial Museum and in collections of Shoso-in, or Imperial Treasure House (Nara), all periods of Japanese art are well represented See L V Coleman, *The Museum in America* (3 vols , 1939)

museums of science. Many early museums of science, e g , the Ashmolean Museum (1683) at Oxford Univ , originated from gifts of private collections At first most exhibits consisted of classified and labeled geological or biological specimens Later exhibition techniques have emphasized the grouping of specimens to illustrate origins, associations, and interrelationships Exhibition devices include habitat groups, restorations, murals, dioramas, models, and key installations in feature exhibits. The illustration of abstract ideas in biology e g , evolution and heredity, was extended to physics and chemistry, long neglected in science museums A pioneer in showing the principles of mechanics, light, heat, and sound was the Buffalo Museum of Natural Science The modern science museum has a threefold function - exhibition of collections, sponsoring of research, and education Many museums provide catalogued reserve collections for students and undertake research and the publication of results, some participate in expeditions for research or for enlarging collections Provisions for adult education include guided tours, lectures, and classes, museums cooperate with schools by providing loan exhibitions, special exhibits and tours for children, and story hours Outstanding in developing educational functions are the AMERICAN MUSEUM OF NATURAL HISTORY and the CHICAGO NATURAL HISTORY MUSEUM Although most science museums cover the general field, there are many, including a number of university and college teaching museums, that specialize, notably in anthropology, one of these is the Heye Foundation, Museum of the American Indian, New York city The establishment of the Adler Planetarium, Chicago (1930), the Fels Planetarium (1933) of the Franklin Institute, and the Hayden Planetarium (1935) of the American Museum of Natural History have stimulated science

museums to deal with astronomy Pioneers in the field of applied science include, in Europe, the Conservatoire des Arts et Métiers, Paris (the first industrial museum, est 1799), the Science Museum, London; the Technical Museum, Vienna; and the Deutsches Museum, Munich In the United States are the New York Museum of Science and Industry, the Museum of Science and Industry, Chicago, and the Franklin Institute, Philadelphia. A recent development in American science museums is the local trailside museums, most of them in national parks, whose establishment was stimulated by the success of the Yosemite Museum (1921) Other notable specialized museums are the museums of oceanography at Monaco and at Berlin Most of the principal countries of the world have national science museums or strong science collections in general museums In England are the great natural history collection of the British Museum, housed in South Kensington, the Museum of the Royal College of Surgeons, London, with its Hunterian Collection (greatly damaged by German bombs), the Horniman Museum, London, and science museums in Hull, Liverpool, Manchester, and Bristol Other noted science museums in Europe include the Bergen Museum, Norway, the Royal Museum of Natural History, Stockholm, the National Museum, Copenhagen, the Rijks Museum, Leiden, noted for its departments of geology, mineralogy, and zoology, the University Museum, Amsterdam, the Natural History Museum, Vienna, the Natural History Museum, Paris, and the Museum of the Academy of Sciences, Leningrad Germany has many excellent science museums in her cities and universities, and many Italian universities are noted for their science collections Many museums in Europe were damaged or destroyed during the Second World War, the United Nations Educational, Scientific, and Cultural Organization is cooperating in the work of restoration The chief cities of Australia, New Zealand, Africa, and Latin America are known for outstanding collections in local natural history and ethnology Canada has notable collections, especially in Toronto, Ottawa, and Quebec. The U S National Museum is a bureau of the SMITHSONIAN INSTITUTION There are many municipal and state museums of science Among notable university and college museums are the Harvard University Museum, which includes the Peabody Museum of Archaeology and Ethnology, the Peabody Museum of Natural History, Yale; the Dyche Museum, Univ of Kansas, the Museum of Natural History and the Dudley Herbarium, Stanford Univ , the University Museums of the Univ of Michigan, embracing museums of anthropology, palaeontology, and zoology, the Walker Museum of Palaeontology, Univ of Chicago, and the museums of anthropology, paleontology, and vertebrate zoology of the Univ of California See L V Coleman, *The Museum in America* (3 vols , 1939)

Mush, Turkey see MUS

Mushi (mŭ'shĭ) [Heb , =withdrawing], founder of a Levitical family Ex 6 19, Num 3 20,33, 26 58, 1 Chron 6 19,47, 24 21,23, 24 26,30

mushroom, fungus having a stout stalk and a somewhat umbrella-shaped cap at the top with spore-bearing gills on its under surface The mushroom absorbs water and nutriment through the mycelium (a mass of branching white filaments) which penetrates the organic material on which the fungus grows. Sometimes the name toadstool is used for the inedible or poisonous mushrooms, but there is no scientific reason for using this term The only safe way of distinguishing between the edible and the poisonous forms is to learn to identify them Many poisonous mushrooms are of the genus *Amanita* One of the most highly poisonous species is *Amanita phalloides,* the deadly amanita or death angel, recognizable by the presence of a cup at the base of the stalk. The common edible meadow mushroom is *Agaricus campestris* In the United States it is the chief and almost the only one raised on a large scale for marketing The bulk of the crop in the United States is grown near Philadelphia where the industry was started in 1904, and mushrooms are also raised in the vicinity of Chicago, St Louis, New York, and other large cities In Europe 50 or more species are marketed France was for long the chief growing center of the world Some of the mushroom cellars there have miles of underground corridors The temperature and humidity must be maintained at a constant level for the growing of mushrooms Mushroom culture is usually begun by planting spawn, a mass of the mycelium growing in manure, since the fungi do not grow readily from the spores. Mushrooms contain some protein, vitamins, iron, and copper Their use as food dates back at least to early Roman times See W. S Thomas, *The Field Book of Common Mushrooms* (2d ed , 1936), C M. Christensen, *Common Edible Mushrooms* (1943), M M C Ravner, *Trees and Toadstools* (American ed , 1948).

Musi, Agostino di: see AGOSTINO VENEZIANO

music. Since music is perceived only through the ear it is necessarily a time art; such conceptions as "high" or "low" PITCH and "tone color" are only borrowed for convenience from the more describable realm of things perceived by the eye. The most basic element of music, then, is RHYTHM, which originates in motor impulses of the human body MELODY stems from the capacity of the human VOICE—undoubtedly the first MUSICAL INSTRUMENT—to produce TONE, and singing, like the rhythmic impulse, is a motor reaction of the human body Beyond these general considerations, there are only theories as to the primitive origins of music In cultures of some sophistication the "invention" of music is generally ascribed to some hero or deity HARMONY, although considered a basic element of music, is not present in ORIENTAL MUSIC and is a late development in Western music The tonal material of any culture may be formulated into a SCALE The history of Western music may be considered to be divisible into seven periods—antiquity, the Middle Ages, the Renaissance, the baroque era, the classical era, the romantic era, and the 20th cent GREEK MUSIC was the outstanding musical culture of Western antiquity Medieval music, beginning with PLAIN SONG, was largely dominated by the Christian Church, a significant medieval Christian culture was BYZANTINE MUSIC The most important bodies of medieval secular music are the song of TROUBADOUR and TROUVÈRE in France and of MINNESINGER and MEISTERSINGER in Germany About the 9th cent. the gradual development of POLYPHONY began, necessitating a precise, measured MUSICAL NOTATION The 13th cent , now known as the period of the *ars antiqua,* produced as its outstanding technical achievement the isorhythmic MOTET In the *ars nova* of the 14th and early 15th cent , notation reached a very advanced stage, polyphony reached an unprecedented complexity, and many new forms were created, notably the MADRIGAL Renaissance is a term without precise or literal meaning in music The date of its beginning depends on what aspect of the period is emphasized Freedom from the domination of the Church comes with the *ars nova,* while the clarity of style, balance, the development of principles of composition and artistic standards, and the use of imitation as a unifying principle—all characteristic of the music of the Renaissance—would date the period from somewhere in the 15th cent The Burgundian school of the early 15th cent , with Guillaume DUFAY as its leading exponent, was a reaction against the complexities of the *ars nova* It was superseded in the late 15th cent by the Flemish school, an international school responsible for the great flowering of polyphony in the 16th cent The outstanding Flemish composers were JOSQUIN DES PRÉS and Orlando di LASSO The movement of Flemish musicians to Italy gave rise to the Venetian school, founded by Adrian WILLAERT and including Andrea and Giovanni GABRIELI PALESTRINA, whose only possible rival as the greatest composer of the Renaissance was Lasso, established the Roman school of polyphonic church music which continued into the BAROQUE period, side by side with the *nuove musiche,* the monophonic art of the baroque An offshoot of the late baroque in France and Italy was the ROCOCO The death of J S Bach in 1750 is taken as the end of the baroque period, it was followed by CLASSICISM with its perfection of the forms of SONATA, SYMPHONY, CONCERTO, and *opera buffa* (see OPERA) MUSICAL ROMANTICISM prevailed from c 1820 throughout the 19th cent Beethoven represents both the culmination of classicism and the beginning of romanticism, and Schubert, while really a romantic, retains the formal perfection of classicism Toward the end of the 19th cent , IMPRESSIONISM arose as a reaction against romanticism, ultimately, however, it seemed actually a part of romanticism The real reaction began c 1890 and represented the most radical musical revolution since the *nuove musiche* of the baroque, indeed, the term "new music" has been applied to the sum of the many and divergent antiromantic trends of the 20th cent , which include ATONALITY and neoclassicism Neoclassicism became a significant movement in the 1920s, a great vogue for the music of J S Bach, followed by revived interest in all of the baroque and even earlier periods and their forms, resulted HINDEMITH and STRAVINSKY are its leading representatives JAZZ, which may be regarded as American folk music, has strongly influenced American and European composers alike See Sir George Grove, *Dictionary of Music and Musicians* (3d ed., 6 vols , 1927–28, supplement, 1940), P A Scholes, *The Oxford Companion to Music* (1938), *International Cyclopedia of Music and Musicians* (ed. by Oscar Thompson, 1939), Willi Apel, *Harvard Dictionary of Music* (1944), Willi Apel and A. T Davison, *Historical Anthology of Music* (1946), Karl Nef, *An Outline of the History of Music* (Eng tr., 1935); P. H Lang, *Music in Western Civilization* (1941), Alfred Einstein, *A Short History of Music* (Eng. tr., rev ed , 1947); D N Ferguson, *A History of Musical Thought* (rev ed , 1948)

musical comedy: see OPERETTA.

musical glasses: see HARMONICA **2.**

musical instruments are classified in various ways, but the system devised in 1914 by Curt Sachs and E. M. von Hornbostel has found recognition from both anthropologists and musicologists because it is applicable not only to modern Western instruments but to primitive and exotic instruments as well This system divides instruments into five main classes, idiophones, membranophones, aerophones, chordophones, and electrophones Most idiophones, which are instruments made of a sonorous material not needing any additional tension, and membranophones, whose sound is produced by the vibrations of a membrane stretched over a hollow resonator, are popularly grouped as PERCUSSION INSTRUMENTS, certain of them, however, such as the JEW'S-HARP and the glass harmonica (see HARMONICA **2**), which are idiophones, are not percussion instruments. Aerophones are of two types, free aerophones, which include those REED INSTRUMENTS which employ free reeds, and WIND INSTRUMENTS, which produce sound by means of an enclosed, vibrating column of air Chordophones are STRINGED INSTRUMENTS Electrophones, a development of the 20th cent., are of two types, those which simply add an electric amplifier to some existing instrument, e g , guitar or reed organ, and those whose sounds originate with electrical vibrations, e g , the Hammond electric organ See Curt Sachs, *The History of Musical Instruments* (1940), Karl Geiringer, *Musical Instruments* (1943)

musical notation, the visual symbols which make possible the reproduction of musical sound Little is known of the notation of ancient Greek music except that it was by means of letters Notation of Gregorian chant was by means of neumes, which were probably derived from grammatical accent marks Neumes were certainly in use by the 6th cent , although the earliest extant manuscripts containing them are fragmentary ones from the 8th cent. These neumes only indicated the grouping of sounds in a given melody, evidently to remind a singer of the general shape of a melody already learned by ear Heighted neumes, arranged above and below a line, made the intervals of a melody more discernible in 10th-century notation, and by the end of the 12th cent the STAFF perfected by Guido d'Arezzo was in use Guido placed letters on certain lines to indicate their pitch, and thereby the pitch of the remaining lines and spaces The letters evolved into the clef signs in use today—the G, or treble, clef, the F, or bass, clef, and the C clef, which was originally much used in vocal music and is now used mainly in scoring for certain instruments, such as the viola The rhythm implied in plain-song notation is still the subject of controversy Mensural notation became a necessity with the development of polyphony Certain neumes were selected to represent tones of long and short duration In his *Ars cantus mensurabilis* (c 1280) Franco of Cologne, to standardize mensural notation, codified a set of rhythmic modes based on the metrical feet of poetry In the 14th cent Philippe de Vitry, author of *Ars nova,* which expands the system of Franco, freed music from the rigid system of the rhythmic modes Notes (see NOTE) were divided into smaller fractions than halves A staff of five lines for vocal music was adopted in France, and six lines in Italy; plain song still employs a four-line staff Red ink and black ink were used to indicate whether a note was to be divided into two or three units, and a dot was employed whose function was similar to the bar line which today indicates the MEASURE Signs for chromatic alteration of tones—the sharp to raise the tone a half step and the flat to lower it a half step—appear frequently in 14th-century music They had assumed their present shapes by the end of the 17th cent In the 15th cent the shape of notes became round, as it is today, instead of the old square or diamond shape, and time signatures replaced coloration in indicating whether notes of long duration were made up of two or three units Today's time signature is a fraction indicating the number of beats in a measure and the note value which is to be the unit of beating Instrumental music employed staves of varying numbers of lines until the 16th cent , when the five-line staff became the standard and ledger lines were invented to indicate pitches outside the compass of the staff Expression signs and Italian words to indicate tempo and dynamics came into use in the 17th cent The key signature originated early, in the form of one flat used to indicate that the mode employed had been transposed Sharps were not generally used in signatures until the 17th cent With the adoption of EQUAL TEMPERAMENT and the major and minor modes, signatures each of which indicates a major key or its relative minor became conventional, assuming their present form by the time of Bach and Handel The solmization syllables (do, re, mi, etc) of GUIDO D'ARETZO were the basis of a system of notation introduced into England in 1841 by John Curwen (1816–80) and much used there for the teaching of sight singing English publishers usually print the tonic sol-fa notation above the staff notation in choral music For a system of notation of lute and keyboard music, see TABLATURE See also SCORE See C. F A Williams, *The Story of Notation* (1903); Gustave Reese, *Music in the Middle Ages* (1940); Willi Apel, *The Notation of Polyphonic Music, 900–1600* (2d ed , 1944).

music hall. As the early English theater had its origin in the courtyards of Elizabethan inns and taverns, so the English music hall developed from entertainments in these places. The Licensing Act of 1737 confined regular or legitimate plays to the two royal theaters—Drury Lane and Covent Garden—but various methods were employed to circumvent this regulation. Usually this was accomplished by selling tickets for the musical, acrobatic, or dancing portions of the performance and then giving gratis a regular play. The demands of the rising lower and middle classes for entertainment were answered by ballets, pantomime, instrumental music, and singing and later by comic skits and sketches provided by keepers of inns, taverns, baiting rings, and "tea gardens," all operating under the Music and Dancing Act passed in the reign of George II and allowing smoking, drinking, and eating during the performance. Occasionally the keepers of these places were prosecuted by a royal theater when they encroached on the latter's prerogative. A Theatre Act (1843) followed the abolition of the royal theater patents and established the lord chamberlain as censor and controller of legitimate plays, while the music halls were responsible to local magistrates. Thereafter the rise of the music hall as a separate place of variety entertainment was rapid, and it flourished in the last half of the 19th cent., producing such stars as Joseph GRIMALDI, Albert CHEVALIER, and Dan LENO. Like American vaudeville, the English music hall went into a decline with the coming of the radio and the moving picture. See Samuel McKechnie, *Popular Entertainments through the Ages* (1931), Harold Scott *The Early Doors* (1946).

musk, substance secreted by an abdominal gland of the MUSK DEER. It is one of the most valuable perfume fixatives. References to musk are said to be found in writings of the 10th and 11th cent. It is believed to have been introduced into Europe from the Orient, where it was supposedly discovered by Chinese mandarins. The animals are killed in order to obtain the musk, although it has been found that the material can be removed from captive animals without destroying them. Only the adult males yield the secretion, which, when fresh, is a reddish-brown material with a honeylike consistency. Very soon after the pouch is cut the secretion hardens, assumes a blackish-brown color, and when dry becomes granular. In commerce the musk pouches are called musk pods, and the dried secretion, musk grains. The musk grains comprise about 70 percent of the weight of the better pods and from about 40 to 60 percent of the poorer ones. The yield diminishes as the animal ages. Usually tinctures using 96 percent alcohol are made from the musk grains. The chief constituent which gives musk its characteristic odor is muscone, this was isolated by H. Walbaum (1906), and its chemical composition was determined by Leopold Ruzicka (1926). A number of synthetic forms of musk are now marketed. Animals, other than the musk deer, from which musk can be obtained include especially the American muskrat. The muskrat secretes a muskilke substance which has only a faint odor. However, chemists discovered that by subjecting the material to a process of oxidation the odor can be greatly increased and a product is obtained with a fixative value about equal to that of high-quality musk from the deer. Some plants yield oils which resemble musk. These include the seed of ambrette (*Hibiscus abelmoschus*) and the sumbul root (*Ferula sumbul*) of central Asia and Turkistan.

musk deer, small deer found at high altitudes in parts of Siberia, Tibet, the Himalayas, Korea, and Sakhalin. It is usually 20 to 24 in. high at the shoulder, with thick, coarse, generally brown hair, often spotted with brown or yellowish. The hind limbs are long and stout, the tail is rudimentary, and neither sex bears antlers. The male has tusklike upper canine teeth. Destruction of the animal for MUSK has depleted its numbers. About six varieties of the single genus and species (*Moschus moschiferus*) exist.

Muskegon (muskē'gun), city (pop 47,697), co seat of Muskegon co., S Mich., on the south shore of Muskegon Lake, settled c 1810, inc. as a village 1861, as a city 1869. Its situation aided an early fur trade and later (1837–c 1890) a thriving lumbering industry. It is a port of entry and an industrial and shipping center and port for a resort, farm, and fruitgrowing region. There are oil wells and refineries and manufactures which include piston rings, iron castings, and automobile parts. The city has an art gallery, several parks, and an old Indian burial ground.

Muskegon, river, 227 mi. long, rising in Houghton Lake, N Mich., and flowing SW to Lake Michigan. At its mouth the river widens into **Muskegon Lake,** c 2½ mi. wide and c 5½ mi. long, on the south shore of which stands the city of Muskegon.

Muskegon Heights, industrial city (pop 16,047), S Mich., south suburb of Muskegon, inc. as a village 1891, as a city 1903. Machinery is made.

muskellunge (mŭ'skŭlŭnj), carnivorous, fresh-water game fish of the pike family. It sometimes reaches a length of 8 ft. and weighs more than 60 lb. Usually the body is silvery with dark markings. It is found from the Great Lakes region to Canada and in the upper Mississippi valley. The Chautauqua muskellunge and the northern or unspotted muskellunge are related forms.

musket (mŭ'skĭt), the infantry firearm in use before the introduction of the RIFLE. It was the successor to the harquebus in the 16th cent. The early matchlock type was so heavy that a rest on which to support it was necessary. Subsequent improvements included wheel locks and flintlocks.

Muskhogean: see NATCHEZ-MUSKOGEAN.

Muskingum (mŭskĭng'gum), river, c 111 mi. long, formed in E Ohio at Coshocton by the union of the Walhonding and Tuscarawas rivers and flowing S through Zanesville, then SE to the Ohio at Marietta. Fourteen dams of the Muskingum Conservancy District in the Tuscarawas valley were built (1935–41) with Federal aid.

Muskingum College see NEW CONCORD, Ohio.

muskmelon see MELON.

Muskogean see NATCHEZ-MUSKOGEAN.

Muskogee (mŭskō'gē), city (pop 32,332), co. seat of Muskogee co., E Okla., near the junction of the Verdigris, Grand, and Arkansas rivers SE of Tulsa, settled 1872. In 1874 it was made a Federal Indian agency. The city-manager form of government was adopted in 1920. It is an important railroad and trading center, serving a rich farming region in which potatoes and cotton are the chief products; there is also oil in the area. Its industries include cotton and food processing, oil refining, and iron and brick manufacture. A U.S. veterans' hospital and memorial park and a state school for the blind are here. Also noteworthy is the large Federal Building. Near by is Bacone College.

Muskogian: see NATCHEZ-MUSKOGEAN.

Muskoka Lakes (mŭskō'kŭ), S Ont., E of Georgian Bay, including Lakes Muskoka, Joseph, and Rosseau. Lake of Bays is farther east. The Muskoka river drains Lake Muskoka, flowing W into Georgian Bay. The region has many summer resorts.

musk ox, hoofed, herbivorous mammal (*Ovibos moschatus*) of arctic America and Greenland. In Alaska it was exterminated about the middle of the 19th cent., but was later restored there on Nunivak island. The oxlike body, often 4 to 5 ft. high at the shoulder in the bull, is insulated by a woolly undercoat covered by long brown to black hair which conceals the short tail and the upper part of the short legs. The horns are broad and flattened and nearly meet across the forehead. They curve downward and then upward in a hook. When in danger the herds, usually 10 to 20 or more animals, form a circle facing the enemy with a phalanx of death-dealing horns. This makes them an easy prey to the rifle. When protection has sufficiently restored the musk oxen, it is expected that their palatable flesh and milk and their wool will aid the economy of the people of the Far North.

muskrat, North American aquatic rodent sometimes called musquash. The common muskrat (*Ondatra*) has dense gray underfur covered with shining guard hairs of black, brown, or rust. Including the long, scaly, flattened tail it is from 17 to 25 in. long. The hind feet are partially webbed. It lives in marshes, quiet streams, and ponds and eats vegetation and some animal food. Its home may be in a steep bank, where it constructs chambers above the water level entered through an underwater entrance and tunnel, or in a hut similar to a beaver's lodge. The fur is much used, chiefly for women's coats. When dyed black it is sold as Hudson seal-dyed muskrat. The dark muskrat flesh is marketed as marsh rabbit, marsh hare, and terrapin. The secretion of the musk glands is used in the perfume industry.

Muslim see MOSLEM.

muslin, an inclusive name for plain woven fine white cottons for domestic use. Originally the name referred to the gauzy cottons of ancient India, the muslins of Madras and Dacca were called running water and woven air, a turban 1 yd. wide and 20 yd. long could be drawn through a finger ring. Many of these ancient muslins were woven or embroidered with gold. Swiss muslin is a modern crisp, semitransparent fabric, either dyed or white, dotted, figured, plain, or tamboured. Certain sheetings are known as muslins. Bookbinders' muslin, a Scotch manufacture, is fine and crisp.

mussel, bivalve MOLLUSK of which there are many marine and fresh-water species. The sea mussel is common on the Atlantic coasts of North America and Europe. It is much used for food in European countries. It attaches itself to a rock by means of viscous threads secreted by the byssus gland. Fresh-water mussels found in the rivers of Europe and central North America are a source of the PEARL, and the mother-of-pearl lining of the shells is made into buttons.

Musselburgh (mŭ'sulbŭrŭ), burgh (pop. 17,007), Midlothian, Scotland, a suburb of Edinburgh, at the mouth of the Esk on the southern shore of the Firth of Forth. Fisherrow is an adjacent fishing village. The golf links and racecourse of Musselburgh are celebrated. A 16th-century tolbooth (prison), the market cross in front of it, the Roman bridge, Loretto School (on the site of a 16th-century shrine), Pinkie House (Jacobean), and a memorial to David Moir are features. The burgh's industries include papermaking.

Musselshell, river, 292 mi. long, rising in W central Montana in the Crazy Mts. and flowing generally east, then northeast to join the Missouri. Harlowton and Roundup are on the Musselshell.

Musset, Alfred de (Louis Charles Alfred de Musset) (alfrĕd' dŭ mŭsā'), 1810–57, French poet, dramatist, and fiction writer. His first work, the Byronic *Contes d'Espagne et d'Italie* (1829), exhibited genius. Four years later he went to Italy with George Sand, but his romantic infatuation resulted in disillusionment. Most of his poems appeared first in *Revue des Deux Mondes*, they included such famous pieces as the gloomy "Rollo" (1833) and the exquisite love lyrics "La Nuit de mai," "La Nuit d'août," "La Nuit d'octobre," and "La Nuit de décembre" (1835–36). As a dramatist he is represented by the *Fantasio* (1833) and by a series of comedies based on proverbs, including *Il ne faut jurer de rien* (1834) and *On ne badine pas avec l'amour* (1836), echoing his affair with George Sand. Attractive as are these plays to read, few have been successful on the stage. He wrote some brilliant *nouvelles*, but from 1840 he passed into increasing eclipse. His correspondence with George Sand appeared in 1904. His work was translated in *The Complete Writings of Alfred de Musset* (10 vols., 1905, rev. ed., 1907). See biographies by his brother, Paul de Musset (Eng. tr., 1877), and H. D. Sedgwick (1931).

Mussolini, Benito (mōō'sulē'nē, Ital. bānē'tō mōōssōlē'nē), 1883–1945, Italian dictator, founder of Fascism. His father, an ardent Socialist, was a blacksmith, his mother was a schoolteacher. After teaching for a short period, Mussolini went to Switzerland (1902) as a stonemason. He later edited a Socialist newspaper and was expelled from Switzerland because of his revolutionary agitation. In 1909 he became editor of a Socialist paper in Trent (then in Austria), but was soon expelled as an irredentist and revolutionist. Back in Italy, he continued his journalistic career, becoming the editor of the Socialist daily *Avanti*, in Milan. However, soon after the outbreak of the First World War he joined the pro-Allied interventionists, broke with the Socialist party, and founded his own daily, the *Popolo d'Italia*. He served in the army (1915–17) and was severely wounded. In the troubled post-war period (see ITALY), Mussolini organized his followers, mostly war veterans, in the *Fasci di combattimento*, which stood for aggressive nationalism and violently opposed the Communists and Socialists, these were the nucleus of the Fascist party (see FASCISM) and adopted as their uniform the black shirts of the followers of D'ANNUNZIO. Unemployment, strikes, and social unrest won adherents to Mussolini's program of restoring order, in May, 1921, he was elected to the parliament, and in November the Fascist party was officially organized. On Oct. 28, 1922 Mussolini took advantage of the increasing disorder and sent the Fascists, who were organized on a military pattern to execute their march on Rome. King VICTOR EMMANUEL III permitted the Fascists to enter the city and called on Mussolini, who had remained in Milan, to form a cabinet. By gradual measures the new premier transformed the government into a dictatorship. In 1924 the murder of the Socialist deputy MATTEOTTI threatened to upset the government, but Mussolini weathered the storm and emerged more powerful than before. Opposition was ground down ruthlessly by an efficient secret police and the Fascist militia. The press was regimented. Parliamentary government was suspended in 1928, and the state economy was reorganized along the lines of the Fascist corporative state. The long-standing conflict between Church and state was composed in the LATERAN TREATY (1929). Mussolini was called Duce [leader] by his followers, his official title was "head of the government," and he held, besides the premiership, as many portfolios as he saw fit. His ambition to restore the glory of the Augustan empire found expression in grandiloquent slogans and speeches, in the substitution of the "Roman salute" for the handshake, in the erection of monumental buildings of dubious taste—as well as in accomplishments of permanent value, such as the draining of the PONTINE MARSHES and the building of superhighways. However, the ancient greatness he sought to resurrect was largely a hollow showpiece. The encouragement he gave to the already high Italian birth rate, his imperialistic designs, and the warlike atmosphere in which Italian youth was reared created an explosive situation which Mussolini could not master. Mussolini, whose career and philosophy had influenced those of Adolf HITLER, was at first cool to the German dictator, whose designs on Austria he firmly opposed. However, when Mussolini became diplomatically isolated as a result of his attack (1935) on ETHIOPIA, a rapprochement with Germany became inevitable. In 1936 both Hitler and Mussolini intervened in the Spanish civil war by aiding Francisco FRANCO, the Rome-Berlin AXIS was born and was strengthened by a formal alliance (1939), which Mussolini's

son-in-law and foreign minister, Galeazzo CIANO, helped to create Early in 1938 Mussolini allowed Hitler to annex Austria, and later in the year his mediation brought about the MUNICH PACT; in April, 1939, he ordered the occupation of Albania By now Mussolini had definitely been reduced to the role of a satellite to Hitler, the course he had chosen ultimately led him to complete subservience. On German pressure, Mussolini inaugurated an anti-Semitic policy in Italy—a policy which found no popular response The Ethiopian and Spanish wars had diminished the Duce's popularity, and he did not at first enter the Second World War. In June, 1940, he entered the war as France was falling The failure of Italian arms in Greece and Africa and the imminent invasion by the Allies of the Italian mainland at last caused a rebellion within the Fascist party On July 25, 1943, the Fascist Grand Council refused to support his policy—dictated by Hitler during a previous meeting at Verona—and the king dismissed him and had him placed under arrest He was freed two months later by a daring German rescue party and became head of the Fascist puppet government set over N Italy by Hitler On the German collapse (April, 1945) he attempted to flee to Switzerland but was captured near Como, subjected to a summary court-martial, and shot with his mistress, Clara Petacci Their bodies, brought to Milan, were hanged in a public square and buried in an unmarked grave Mussolini wrote copiously Many of his political speeches and pamphlets have been translated into English His literary productions include *The Cardinal's Mistress* (Eng tr, 1928), *John Huss* (Eng tr, 1929), and the drama *Napoleon the Hundred Days* (in collaboration with Giovacchino Sforzano; Eng tr., 1932) *My Autobiography* (latest Eng. ed , 1939) is supplemented by *The Fall of Mussolini; His Own Story* (ed by MAX ASCOLI, Eng tr., 1948) See V. E de FIORI, *Mussolini* (1928), Alexander Robertson, *Mussolini and the New Italy* (1928); C H. Sherrill, *Bismarck and Mussolini* (1931); Gilbert Seldes, *Sawdust Caesar* (1935), Gaudens Megaro, *Mussolini in the Making* (1938), Giorgio Pini, *Official Life of Benito Mussolini* (1939)

Mussorgsky, Modest Petrovich. see MOUSSORGSKY

Mussulman: see MOSLEM.

Mustafa I (mustä'fü, mōō'stäfä"), 1591–1639', Ottoman sultan (1617–18, 1622–23), brother and successor of Ahmed I Set aside for incompetence, he was succeeded in 1618 by his nephew Osman II, who died in 1622 Mustafa returned to the throne only to be displaced by another nephew, Murad IV

Mustafa II, 1664–1703, Ottoman sultan (1695–1703), nephew and successor of Ahmed II His grand vizier, Hussein KUPRILI, exercised the actual rule The Turkish defeat (1697) at Zenta by Prince Eugene of Savoy forced Turkey to consent (1699) to the Treaty of KARLOWITZ Mustafa II was succeeded by his brother, Ahmed III

Mustafa III, 1717–74, Ottoman sultan (1757–74), son of Ahmed III He succeeded his cousin Osman III The chief event of his reign was the war of 1768–74 with Russia (see RUSSO-TURKISH WARS), which ended disastrously for Turkey in the Treaty of KUCHUK-KAINARJI His brother Abdu-l-Hamid I succeeded him.

Mustafa IV, 1778–1808, Ottoman sultan (1807–8), son of Abdu-l-Hamid I. He was raised to the throne by the reactionary Janizaries who had deposed his reforming uncle, Selim III When a Turkish army marched on the capital to restore Selim, Mustafa had him murdered, but the rebels killed Mustafa in turn and placed his brother, Mahmud II, on the throne During Mustafa's brief reign the Russo-Turkish War of 1806–12 continued without any decisive action.

Mustafa, or **Kara Mustafa** (kärä' mōō'stäfä", mŭstä'fŭ) [Turkish *kara* = black], d. 1683, Turkish grand vizier under Sultan Mohammed IV He succeeded his brother-in-law, Ahmed KUPRILI Ambitious and belligerent, he allied himself with the Hungarian rebels under THOKOLY against Emperor Leopold I and led the siege of VIENNA in 1683 His military incompetence facilitated the relief of Vienna by King John III of Poland, and the besieging army, including Mustafa, fled in a panic Mustafa suffered several routs during his retreat through Hungary and, having reached Belgrade, was ordered by the sultan to commit suicide

Mustafa Kemal: see ATATURK, KEMAL.

mustang (mŭ'stăng) [Span.], small semiwild horse of the W United States, Texas, and Mexico The HORSE was unknown to the American Indians when the Spanish explorers and conquerors came bringing their mounts, these Spanish horses were of the Arabian type From time to time horses escaped from the Spaniards. The region was suited to them, and they became the foundation stock of herds of wild horses called mustangs The Indians of Mexico and Texas learned to capture and use mustangs, and soon a "horse culture" spread to all the Indians of the Great Plains The hunting of the buffalo and other game at once became far more successful. With a food supply for the first time assured, the Plains Indians grew more numerous and powerful Mounted, they could travel farther and could carry more equipment with them. They were seldom seen without their horses. The mustang had revolutionized the lives of these Indians It is a small, swift, hardy horse, uniquely adapted to Great Plains conditions Cowboys, cavalrymen, and others learned to prefer it to other horses for use on the plains An untamed mustang is called a bronco (brŏng'kō) [Span., = wild] Some broncos refuse to be tamed. The Cayuse (kīyōōs') Indians of Washington and Oregon became famous breeders of mustangs, and the name cayuse was given to a mustang of this somewhat domesticated strain. Sometimes the names mustang, bronco, cayuse, and Indian pony are used without discrimination See Clark Wissler, *Man and Culture* (1923), W. P. Webb, *The Great Plains* (1931).

Mustapha. For persons thus named, see MUSTAFA.

mustard, name for several plants of the cabbage genus, known from remote times. Most important commercially are the black mustard (*Brassica nigra*), white mustard (*Brassica alba*), and Indian mustard (*Brassica juncea*) These are yellow-flowered annuals naturalized in the United States; the black mustard is often a weed, infesting grainfields, as is also the charlock or wild mustard (*Brassica arvensis*) The black and the white mustard resemble each other and are used more or less similarly. They are cultivated for the seeds, which are ground and used as a condiment, usually mixed to a paste with vinegar or oil, sometimes with spices or with an admixture of starch to reduce the pungency (The pungency of mustard does not develop until it is moistened.) These mustards are also grown as salad plants and for greens The white mustard is used in some localities as a forage crop for sheep and as a green manure Black mustard has several important medical uses It is a valuable counterirritant (either as a liniment or as a plaster), a stomach stimulant, and an emetic Its seeds are more pungent than the white and yield a yellowish, biting oil, mustard oil, also useful in medicine The New Testament imagery of the mustard seed as a symbol of creative faith is sometimes identified with the black mustard, which in Palestine grows to a height of 10 or 12 ft , with branches frequented by birds (Mat 13 31, 32, Luke 13 19)

mustard gas, substance used as a POISON GAS in the First World War, so named because of its "mustard" odor when impure and its blistering properties It is called also yperite, because of its first use by the Germans at Ypres, and yellow cross, because of the yellow crosses placed on the shells and containers in which it was confined Chemically, mustard gas is a light, colorless, oily liquid compound of carbon, hydrogen, chlorine, and sulphur which readily vaporizes For this property and its toxic effect it became important as a gas in warfare The liquid, sprayed from a bursting shell, forms an invisible vapor which attacks the mucous membranes of the respiratory tract and destroys lung tissue when inhaled in minute quantities, blisters the skin, and produces severe conjunctivitis It can be prepared by the action of ethylene (a carbon-hydrogen compound) upon sulphur monochloride (sulphur and chlorine)

Mutankiang (mōō'tän'kyäng'), Mandarin *Mu-tan-chiang*, city (pop. 179,217), capital of Sungkiang prov , China It is a railroad junction in a rich timber region, and manufactures wood pulp and paper

mutation (mūtā'shŭn), in biology, a change in a GENE resulting in the appearance in the offspring (of a plant or an animal) of a character which is not present in the parents but which is potentially transmissible to its offspring Sometimes the word *mutation* is more broadly used to include (in addition to changes in the constitution of the gene itself) variations resulting from recombinations of genes and from chromosome aberrations (e g , change in the number of chromosomes and loss or rearrangement of a part of a chromosome) A mutation may take place in either somatic (body) tissue or germinal (sex-cell) tissue. If it occurs in somatic tissue of an animal it is lost, if it appears in somatic plant tissue it can be transmitted by vegetative (or asexual) propagation of plants, e g , by grafting Hugo de Vries presented, in 1901, his belief that new characters may appear suddenly and that these characters are inheritable, he had observed a number of mutants or sports among evening primrose plants De Vries proposed mutation as a factor more influential in evolution than the slight, gradual changes emphasized by Darwin In recent years numerous studies have been made of gene mutations The fruit or vinegar fly, *Drosophila*, has proved especially useful in these investigations Among those who have contributed to the understanding of mutations are H. J Muller, T. H. Morgan, Miluslav Demerec, A E. Emerson, Theodosius Dobzhansky, and L J Stadtler Much remains to be learned about mutations, and therefore present knowledge may require revision. The cause of mutation is not known, but studies indicate that mutations occur more frequently in offspring of parents treated with X rays, radium, ultraviolet radiation, heat rays, and certain chemicals Most mutations tend to be harmful to the organism in its existing environment; sometimes, however, if the environment changes, the mutations prove useful in the new environment. H. J. Muller pioneered in the use of X rays in producing mutations and developed a method of recognising lethal mutations with no visible effects (produced in *Drosophila* by X-ray radiation) which aided genetic studies. The occurrence of a type of somatic mutation known as a bud mutation has sometimes been important to agriculture; e.g., the nectarine developed as a bud mutation of the peach, and the navel (or seedless) orange as a bud mutation of the seed orange These are propagated by inserting buds from the mutated branch into stock trees In humans certain abnormal characters believed to arise as mutations are transmitted, e g , hemophilia (transmitted as a sex-linked recessive trait) Mutation is believed to be a chief agent in evolution, since by such changes new species are believed to evolve and by inability to mutate in a changing environment some species become extinct.

mutation, in language, see UMLAUT

Muth-labben (mŭth-lă'bĕn), obscure word in the title of Ps 9.

mutiny (mū'tĭnē), concerted disobedient or seditious action by persons in military or naval service or by sailors on commercial vessels. Mutiny may vary from simple combined refusal to obey orders to active revolt or going over to the enemy In the armed forces it is one of the gravest crimes against military law Mutiny may be committed on a private vessel whether it is at sea or in port, hence, seamen bound by a ship's articles have no right to strike Two extensive naval mutinies occurred in Great Britain in 1797. The mutiny at SPITHEAD ended without violence or convictions In the mutiny at Nore and Sheerness, however, the mutineers bombarded loyal ships and the ringleader, Richard Parker, was hanged. Many of the abuses in the navy—bad food, brutal discipline, withholding pay—were remedied as a consequence of this disaffection Other well-known mutinies were that aboard the BOUNTY and the SEPOY REBELLION in India. Mutinies may occur with some frequency in the armed forces of nations on the point of suffering defeat, thus, in 1918 the German navy mutinied at Kiel and the Austrian navy at Cattaro (now Kotor). A mutiny may be the signal for a revolution, as the Russian mutinies in 1905 and 1917 at KRONSTADT. See Conrad Gill, *The Naval Mutinies of 1797* (1913), G E. Manwaring and Bonamy Dobrée, *The Floating Republic* (1938), Robert L Hadfield, *Mutiny at Sea* (1938).

Mutis, José Celestino (hōsă' thälĕstē'nō mōō'tēs), 1732–1808, Spanish naturalist and plant explorer He was one of Linnaeus' first disciples in Spain He went to South America and settled c 1760 in Bogotá He collected plants, especially in the Andes, and introduced several into general use. His study of quinine, on which he wrote *El arcano de la quina* (1793), facilitated the colonization of malaria ridden regions Most of his monumentally planned work, *Flora de Bogotá ó de Nueva Granada*, was left in manuscript, only the first volumes being published Some of his voluminous correspondence with Linnaeus has been published in *A Selection of the Correspondence of Linnaeus* (1821) Mutis was chiefly responsible for the creation of the Bogotá Observatory and gathered about him a group of scholars who made the university a renowned center of research See biography by A. F. Gredilla (1911, in Spanish)

Mutsuhito (mōō'tsōōhē'tō), 1852–1912, emperor of Japan (1867–1912) His reign name was MEIJI He ascended the throne when he was but 14, and the next year the forces of discontent in Japan triumphed The shogun fell, and the power that had been held by the shogunate was returned to the emperor. This was the MEIJI restoration, the chief event in the modern history of Japan, for it meant the downfall of Japanese feudalism and the forging of a new and modern state. The court was transferred from Kyoto to Tokyo. The four great clans surrendered their fiefs, and the land was nationalized The possibility that the change would be to a new type of feudalism was definitely ended when the rebellion of the great Satsuma clan was crushed in 1877 A new constitution was drafted on the basis of European constitutions and was formally adopted in 1889. Such statesmen as ITO and YAMAGATA prepared the way for the industrial growth of Japan The military tradition was revivified, and Japanese military greatness was firmly established by the First CHINO-JAPANESE WAR and the RUSSO-JAPANESE WAR. Japan emerged as a world power See G. B Sansom, *The Western World and Japan* (1950)

mutton, the flesh of sheep prepared as food. It is deep red with firm, white fat In Eastern and pastoral countries it is a staple meat, but in the West mutton and lamb comprise only about 5 percent of the total meat. In the United States the flesh of lambs six weeks to three months old is preferred The cuts are leg, loin (chops and roasts), rack (rib chops and French chops), chuck, breast, and flank The kidneys, heart, and sweetbreads are especially delicate.

Muttra (mŭ'trŭ) or **Mathura** (mä'thōōrä, mŭ'trŭ), town (pop. 80,832), W central United Provs., In-

dia, on the Jumna river. The region, which may have been inhabited since the 7th cent B C., is rich in archaeological remains. The Moslem rulers (16th–18th cent.) destroyed all Hindu structures in the city and built several mosques. The reputed birthplace of Krishna, Muttra is visited by many Hindu pilgrims.

Muybridge, Eadweard (ēd'wûrd mī'brĭj), 1830–1904, English photographer and student of animal locomotion. His name originally was Edward James Muggeridge. In 1872 he made some experiments in photographing moving objects for the U. S. government. Afterwards he was engaged by Leland Stanford to record, with a succession of cameras, the movements of a horse. He invented (1881) the zoopraxiscope, which projected animated pictures on a screen, a forerunner of the moving picture. He wrote *The Horse in Motion* (1878) and *Animal Locomotion* (1887, reprinted as *Animals in Motion*, 1899).

Muzaffar-ed-Din (mōōzăf'ûr-ĕd-dēn'), 1853–1907, shah of Persia (1896–1907), son of NASR-ED-DIN Shah. He borrowed money from Russia and failed to oppose the encroachments of Russia and England on Persian sovereignty. Much disaffection arose among the people. After a revolutionary outburst, he proclaimed (1906) the long-expected liberal constitution providing for a parliament. He was succeeded by Mohammed Ali.

Muziano, Girolamo (jĕrō'lämō mōōtsyä'nō), c 1528–1592, Italian painter, also known as Girolamo Bresciano. His great painting *The Resurrection of Lazarus* gained him the friendship of Michelangelo. Muziano was noted for his landscapes and painted many historical compositions for the churches and palaces of Rome, but he is best known as the founder of St Luke's Academy in Rome and for his notable contributions to the development of mosaics. He was superintendent of the works of the Vatican under Gregory XIII.

MVD. see SECRET POLICE.

Mwanza (mwän'zä), town (pop. c 4,000), NW Tanganyika, on Lake Victoria. It is the terminus of a railroad from Tabora. There is gold-mining.

Mycale (mī'kulē), mountain, W Asia Minor, opposite Samos island. In the temple of Poseidon here was the center of the Ionian League. On the beach the Greeks destroyed the Persian fleet (479 B.C.). This ended the Persian Wars for European Greece and began the rapid liberation of the Greeks of Asia Minor. Mycale is now called Mt. Samsun. It is also called Mt. Lydia.

Mycenae (mīsē'nē), ancient city of Greece, in Argolis. In historic times it had little importance and was usually dependent on Argos. Its significance is in its remote past as a center of Mycenaean civilization.

Mycenaean civilization (mĭsēnē'un), type of ancient AEGEAN CIVILIZATION known from the excavations at Mycenae. These were first undertaken by Heinrich Schliemann and others after 1876, and they helped to rewrite the early history of Greece. The locale was inhabited as early as 3000 B.C., and its first periods paralleled in chronology and culture the contemporary Minoan civilization. The inhabitants then were not Greeks, but when the period of the city's greatness began c 1600 B.C., the people were Achaeans, an early and distinct offshoot of the Greek family. Mycenae was a royal fortress-palace, the citadel, the palace, and the tombs (called beehive tombs from the shape) have been uncovered. In the walls is the often-pictured Lion Gate. Everything about these buildings is massive, thus the lintel over the door of the Treasury of Atreus (most famous of the tombs) weighs more than 130 tons. Since the finds at Mycenae similar discoveries have been made at Tiryns, Pylos, Orchomenus, Thebes, and Athens and other places in Greece. Trinkets, weapons, and pottery like that found at Achaean Mycenae are found at many spots in the E Mediterranean world. Though the Mycenaean Greeks had close relations with Crete (then in the Late Minoan period) and drew their artistic inspiration from there, Mycenaean culture has properties of its own. Thus the palaces were built about great halls (a type found much earlier in the second city of Troy), instead of around a patio, the Minoan style. Mycenaean men were bearded and wore armor in battle, unlike the Cretans, who kept their hair trimmed and used only shields for protection. Most significant of all, the Mycenaean Greeks were illiterate, though there are many examples of Cretan writing in the earlier Mycenaean remains. After c.1300 B.C. a new invasion of Greeks from the north began, and the Mycenaean civilization went into an accelerating decline, it was dead by 900 B.C. The invaders assimilated much, but the new Greek civilization was to arise from a new base. Nevertheless, there was a continuity in Greek tradition, seen in legend (e.g., the destruction of Thebes, c.1200 B.C., as recalled in the story of the Seven against Thebes) and in Homer. Whether or not the *Iliad* recounts an actual expedition of Achaeans against Troy—the Troy of Mycenaean times was destroyed by fire c.1200 B.C.—the evaluation of Homer has undergone a radical change since the discoveries of Mycenaean Greece. Now he is considered to give admirable glimpses of the culture of the ruling class of Greeks (Achaeans) of the 12th cent. B.C., a style of life materially much cruder than that of the Mycenaean heyday 300 years before. The *Iliad* and the *Odyssey* are then important, unique sources of information on a phase of Mycenaean civilization. See C. Tsountas and J. S. Manatt, *The Mycenean Age* (1897); Thomas D. Seymour, *Life in the Homeric Age* (1907); Gustave Glotz, *Aegean Civilization* (1925); A. R. Burn, *Minoans, Philistines, and Greeks* (1930); Sir William Ridgeway, *The Early Age of Greece* (1930–31).

Mycerinus: see MENKURE.

My Country, 'Tis of Thee: see AMERICA, hymn.

Myddleton or **Middleton, Sir Hugh** (both mĭ'dûltŭn), 1560?–1631, British contractor and engineer. He was a successful London goldsmith, merchant, and clothmaker. In 1603 he was elected to Parliament, where he served until 1628. He contracted to supplement the London water supply and in 1609 began work on the New River project, a canal to bring water from springs near Ware to London, a distance of some 38 mi. With the financial aid of James I, the work was completed in 1613. In 1620 he began to reclaim flooded lands on the Isle of Wight, a project that was revived and completed in 1882.

Myers, Frederic William Henry (mī'ûrz), 1843–1901, English essayist and poet. For a short time he was a classical lecturer at Cambridge. His publications include the poems *St. Paul* (1867) and *Essays, Classical and Modern* (1883). He is well known for his investigations of psychic phenomena in connection with the Society for Psychical Research, which he helped found in 1882, and for his *Human Personality and Its Survival of Bodily Death* (1903).

Myers, Gustavus, 1872–1942, American historian, b. Trenton, N.J. Myers worked on a number of newspapers and magazines in New York city, joined the Populist party and the Social Reform Club, and was a member (1907–12) of the Socialist party. Such books as *The History of Tammany Hall* (1901, rev. ed., 1917), *History of the Great American Fortunes* (3 vols., 1910, rev. ed., 1936), and *History of the Supreme Court of the United States* (1912) were detailed, realistic exposés through which he made his reputation in the muckraking era of American literature. His other works are *History of Canadian Wealth* (1914), *Ye Olden Blue Laws* (1921), *The History of American Idealism* (1925), *America Strikes Back* (1935), *The Ending of Hereditary American Fortunes* (1939), and *History of Bigotry in the United States* (1943).

Myers, Jerome, 1867–1940, American painter, b. Petersburg, Va. At 19 he went to New York, where he worked as a scene painter and studied at Cooper Union and the Art Students League. On his return from a visit to Paris in 1896, he began painting the Manhattan street scenes for which he is famous. *The End of the Street* (Art Inst., Chicago) is a characteristic oil. Myers is represented in principal galleries throughout the country. See his autobiography, *Artist in Manhattan* (1940).

Myerstown, borough (pop. 2,692), SE Pa., c 30 mi. E of Harrisburg, laid out 1768, inc. c 1910. Its manufactures include textiles, cigars, pretzels, and foundry products.

Myitkyina (myĭt'chĭna), town (pop. 7,328), N Burma, on the Irrawaddy river. It is on the Stilwell Road and is the terminus of a branch rail line from Mandalay. In the Second World War its capture (Aug., 1944) by Allied troops after a siege of 78 days marked an important stage in the liberation of Burma from the Japanese.

Mykonos (mē'kônŏs), Aegean island (33 sq. mi., pop. 4,464), off S Greece, N of Naxos, in the Cyclades. Largely rocky, it is important for its fisheries and is a popular tourist resort.

Mylae (mī'lē), ancient port, N Sicily, now MILAZZO. It was colonized by Messina. Here in 260 B.C. the Romans in a new-built fleet were led to victory over the Carthaginians by the consul C. Duilius in the First Punic War, it was Rome's first naval effort. Mylae was the scene (36 B.C.) of a naval victory of Agrippa over Sextus Pompeius, the pirate ruler of the W Mediterranean.

myopia: see NEARSIGHTEDNESS.

Myra (mī'ru), ancient city and seaport of Lycia, S Asia Minor. It was visited by Paul (Acts 27:5). There are ruins of ancient edifices hewn from the rock. It was the see of St. NICHOLAS.

Myrdal, Gunnar (gŭ'nar mûr'dăl), 1898–, Swedish economist, sociologist, and public official, b. Kopparberg co., Sweden, grad. Univ. of Stockholm law school, 1923. He practiced law in Sweden and traveled widely in England, France, Germany, and the United States. He was appointed lecturer (1927) and professor (1931) in the Univ. of Stockholm and also taught (1930–31) political economy in Switzerland. He served (1933–38) as adviser to the Swedish government on economic and social policy. He undertook a study (1938–42) for the Carnegie Corp. of America and, in collaboration with Richard M. E. Sterner and Rose Arnold, wrote *The American Dilemma* (1944)—a relatively objective and exhaustive commentary on the problem of the Negro minority in America. After his return to Sweden, he served as secretary of commerce (1945–47) and was appointed (1947) to the United Nations Economic Commission for Europe. He also wrote *The Cost of Living in Sweden*, 1830–1930 (1929), *Monetary Equilibrium* (1939), and several books on economic theory which were published in Sweden.

Myrmidons (mûr'mĭdunz, –dŏnz"), ancient Greek tribe of Thessaly who colonized the island of Aegina. Homer immortalized them as the warriors of Achilles. They were said to be descendants of ants [Gr. *myrmex*=ant], metamorphosed into men by Zeus to serve Aeacus.

myrobalan (mīrŏb'ulŭn, mĭ'–) or **cherry plum,** slender, sometimes thorny plum (*Prunus cerasifera*) with leaves and fruit smaller than those of the common species *P. domestica*, for which it is often used as an understock. There are varieties of ornamental value which have doubled flowers and variously colored foliage. Myrobalan is also the common name for the emblic and the tropical or Indian almond, two trees native to Asia.

Myron (mī'run), 5th cent. B.C., Greek sculptor. He is supposed to have been a pupil of Ageladas, but he worked largely in Athens. A worker in bronze, he was noted for his animals (of which no examples have survived) and for his athletes in action. His works are known through descriptions by ancient writers and two of them by copies, the DISCOBOLUS and *Athena and Marsyas*, of which there is a copy in Rome.

myrrh (mûr), small thorny tree (*Commiphora myrrha* or *Balsamodendron myrrha*), native to Ethiopia, Somaliland, and Arabia. The name is also used for the pale yellow liquid gum resin that oozes from the stem. This kind of myrrh, known also as herabol myrrh and bitter myrrh, is sometimes used in antiseptics, stimulants, tonics, and mouthwashes. It is distinguished from bisabol myrrh or sweet myrrh, obtained from another species, *C. erythraea*; sweet myrrh is used in some perfumes. On solidifying, myrrh forms small spherical or irregular lumps varying from brownish yellow to reddish yellow to dark red-brown; it has an aromatic odor, but the herabol myrrh is bitter in taste. Myrrh was anciently used in embalming and for incense. In biblical literature it is often associated with frankincense; these and gold comprised the three gifts of the Magi of the Gospels (Mat. 2:11). It is believed by some authorities that in some biblical passages the name myrrh has been used for a fragrant gum produced by several species of rockrose (*Cistus ladaniferus, C. villosus, C. creticus*, and *C. salvifolia*). The rockrose is an evergreen plant from 3 to 5 ft. tall with a large flower that resembles a single rose. Probably the biblical myrrh was often a mixture of several of the substances called myrrh. A European herb, sweet cicely, is sometimes called myrrh.

myrtle, plant of the genus *Myrtus*, most species of which are shrubs. The common myrtle (*Myrtus communis*) is native to the Mediterranean regions of Europe and Asia and is often grown elsewhere for ornament. It has small, shiny, aromatic leaves and white or pinkish flowers followed by blue-black berries. Wreaths of myrtle were awarded to victors in the ancient Olympic games. In America several plants of the sweet gale family are known as myrtles, e.g., the wax myrtle (*Myrica cerifera*) and Dutch myrtle (*M. gale*). The sand myrtle (*Leiophyllum*) is a low evergreen shrub of the heath family found on pine barrens and mountains from New Jersey to Florida. The blue-flowered PERIWINKLE and the yellow-flowered moneywort (*Lysimachia nummularia*) are incorrectly called myrtles.

Myrtle Beach, town (pop. 1,597), E S.C., on the coast SE of Conway, inc. 1938. It is a large and popular beach resort. A state park is here.

Myrtle Point, town (pop. 1,296), SW Oregon, on the Coquille and S of Coos Bay, near the coast, settled 1858, inc. 1903. It is a trade center for a farm, lumber, and dairy region.

Mysia (mĭ'shēu), ancient region, NW Asia Minor. It was between Lydia and the Troad, its coast facing Lesbos. Mysia was not a political unit and passed successively to Lydia, Persia, Macedon, Syria, Pergamum, and Rome. St. Paul passed through Mysia on his second missionary journey (Acts 16:7,8).

Mysore (mīsôr'), state (29,458 sq. mi.; pop. 7,329,140), S India, formerly a princely state. Mysore is a plateau varying in height from 2,000 to 3,000 ft. The western portion is hilly while the central and eastern portions are level. The rainfall, generally moderate, is supplemented by irrigation works which draw upon several rivers, including the Cauvery and the Penner. Rice, millet, sugar cane, and cotton are grown in the plains, and sheep are raised in the hill country. Mysore produces nearly all India's gold and much iron, manganese, and chrome. The state, unlike most of India, has many government-operated industries, steel and steel products and airplanes are among its manufactures. There is a good system of roads and railroads. The population of Mysore, more than 90 percent Hindu and almost entirely Kanarese-speaking, is among the most homogeneous in an area of this size in India. This has facilitated primary instruction, and Mysore's literacy rate is one of the

highest in the country. Higher education is provided by the Univ of Mysore (founded 1916) The Hindu princely family which ruled until 1947 came to power in the 17th cent. In the late 18th cent. the Moslem adventurers Hyder Ali and Tippoo Sahib controlled Mysore, but after the British in 1799 killed Tippoo in battle they restored the old dynasty. Mysore was under direct British administration from 1831 to 1888 Later, under its maharajas, its government was one of the most progressive of India The state joined the Union of India in 1947 **Mysore,** city (pop 150,540), the capital, is at an elevation of 2,525 ft Its clean streets and many parks make it a "garden city" The maharaja's throne, of ivory inlaid with gold and silver and carved with mythological figures, is considered to rival the Peacock Throne of Delhi Mysore's manufactures include silk cloth, fertilizers, and chemicals

mysteries, in Greek religion, term used for certain secret cults. The conventional religions of both Greeks and Romans were alike in being largely taken up with propitiation and prayers for the good of the city-state, the tribe, or the family and, only secondarily, of the person In historical times, in Greece and Rome both, the traditional rites had become formalistic and barren of any emotional interest so far as the individual was concerned In reaction to the distant Olympian deities, the individual Greek sought an emotional religion which would fulfill his desire for personal salvation and immortality. Whether the mysteries were of a foreign origin or whether they were quasi-subterranean survivals of indigenous religion, by the 5th cent B C they were part of the fabric of Hellenic life. Although the mysteries were highly secret, an outline of the four stages through which the initiate passed has come down to modern times—purification rites, usually by sea bathing and the sprinkling of pig's blood on one's person, the teaching of mystic knowledge by the hierophant, the sacred drama, which was the core of the mystery, the garlanding of the initiate to signify that he had achieved a mystical union with the deity Since the mystery deities, e g., Demeter, Persephone, and Dionysus, who were the chief characters in the sacred drama were fertility deities, many authorities believe that these cults were based on ancient agricultural FERTILITY RITES The two most important mystery cults in Greece were the ELEUSINIAN MYSTERIES and the ORPHIC MYSTERIES In Rome all the mysteries were importations They made only limited headway until the 1st cent A D , when they became increasingly popular The Phrygian cult of Cybele and Attis was the first to arrive in Rome (c 200 B C) It was forbidden by the state because of its orgiastic ritual The Isis cult came from Egypt a fertility cult but became (before the 3d cent A D) an ascetic religion glorifying continence and chastity See Lewis Farnell, *The Cults of the Greek States* (5 vols , 1896–1909), Franz Cumont, *Oriental Religions in Roman Paganism* (1911), Martin Nilsson, *History of Greek Religion* (Eng tr , 1925).

mystery play. see MIRACLE PLAY

mystery story. see DETECTIVE STORY.

Mystic. 1 Unincorporated village (pop 2,069) in Stonington town, SE Conn , on the east bank of the Mystic river It is a resort favored by artists Mystic was known for its clipper ships and as a whaling port There are small industries now Old Mystic lies to the north **2** Mining city (pop 1,884), SE Iowa, near the Mo line SW of Ottumwa, inc 1899

Mystic. 1 Short river, SE Conn , flowing past Old Mystic and Mystic villages into Long Island Sound E of the Thames **2** Short navigable river, E Mass , entering Boston Bay Medford was one of the important early settlements on its banks

mysticism (mĭs'tĭsĭzm) [Gr , =the practice of those who are initiated into the mysteries], the practice of putting oneself into, and remaining in, direct relation with the Deity or other unifying principle of life Mysticism is inseparably linked with religion Because of the nature of mysticism, first-hand objective studies of it are virtually impossible, and the student must confine himself to accounts of mystics, autobiographical and biographical The terms *mystic* and *mysticism* are much abused in English, being extended even to mean magic, occultism, or the esoteric The use of the term to describe certain phenomena of the religions of India is not quite accurate, these practices are rather extreme quietism A characteristic difference between the quietist and the mystic is that the latter, burning with a zeal for the good of others, feels that his prayers and his unity with God can accomplish great good for them, while the quietist knows no such conviction. There are certain common fallacies current about mysticism that mystics are not "practical" and that they are revolutionary, on the contrary, the greatest mystics have been usually both intensely active and submissive to authority of whatever sort. Nor is the "lonely thinker" necessarily, or even usually, a mystic. There is no accepted explanation of mysticism, and few psychologists have interested themselves in its practice William James attacked the nature of mysticism, but reached no satisfactory conclusion. There are two general tendencies in the speculation of mystics—to regard the transcendent God as outside the soul, which rises to its God by successive stages, or to regard the immanent God as dwelling within the soul and to be found by going deeper into one's own reality The idea of transcendence as held most firmly by mystics is the kernel of the ancient mystical system, NEOPLATONISM Their explanation of the connection between God and man by EMANATION is epoch-making in the philosophy of contemplation Classic among those who think of God as within the soul are the FRIENDS (Quakers) Many mystics use language which betrays no preference for the transcendence or immanence of God, accepting both as true Judaism, Christianity, and Islam have (until the rise of MODERNISM) held God to be both immanent and transcendent The language of mysticism is always difficult and usually symbolic This is readily seen in the works of William BLAKE The mystics of the Catholic tradition have made use of a terminology borrowed from ordinary human love. These analogies are at least as old as Christianity and seem inevitable The progress of the soul in its path to God is described ever differently, but its descriptions bear a constant resemblance A conventional analysis is as follows the soul undergoes a purification (the purgative way), which leads to a feeling of illumination and greater love of God (the illuminative way), after a period the soul may be said to enter into mystical union with God (the unitive way), which begins with the consciousness that God is present to the soul, the soul progresses through a time of quiet and an ecstatic state to a final perfect state of union with God (spiritual marriage) Late in this process there is an experience (the dark night of the soul) wherein the contemplative finds himself completely deserted by God, by hope, and, indeed, even by power to pray, it lasts sometimes for years The relation of the quietists and the Indian ascetics to mystics lies in that the quietistic person dwells permanently in a state of quiet characteristic of the earliest part of the mystical union Visions, voices, ecstasies, may accompany any or none of the states of contemplation before the final union It is because of these external and nonessential manifestations that the erroneous idea has arisen that all enthusiastic and nonintellectual religious movements are necessarily mystical The positive convictions of the mystic arise from the fact that they are based on what he must regard as objective reality directly perceived Among the principal contemplatives of Christianity from post-Apostolic times to the Reformation are CLEMENT OF ALEXANDRIA, ORIGEN, St AUGUSTINE, the false DIONYSIUS THE AREOPAGITE, CASSIAN, St GREGORY I, ERIGENA, St PETER DAMIAN, St ANSELM, St BERNARD OF CLAIRVAUX, St HILDEGARD OF BINGEN, JOACHIM OF FLORIS, RICHARD OF SAINT VICTOR, HUGH OF SAINT VICTOR, HADEWIJCH, St GERTRUDE, St FRANCIS, JACOPONE DA TODI, St BONAVENTURE, St THOMAS AQUINAS, Raimon LULL, DANTE, ECKHART, TAULER, SUSO, RUYSBROECK, GROOTE, THOMAS À KEMPIS, NICHOLAS OF CUSA, ROLLE OF HAMPOLE, Walter HILTON, JULIANA OF NORWICH, Margery KEMPE, St BRIDGET OF SWEDEN, St CATHERINE OF SIENA, GERSON, St BERNARDINE OF SIENA, and St JOAN OF ARC. The Catholic tradition was continued by St IGNATIUS OF LOYOLA, St THERESA of Ávila, St JOHN OF THE CROSS, St ROSE OF LIMA, St FRANCIS OF SALES, and St THERESA of Lisieux Certain orders gave their names to types of mysticism—CARMELITES, CARTHUSIANS, and CISTERCIANS Among great Protestant mystics are BOEHME and George FOX, founder of Quakerism, the Protestant mystical movement par excellence, in America, Quakerism produced WOOLMAN In the 17th and 18th cent much literature of the contemplative life was written by the METAPHYSICAL POETS and by Henry MORE, William LAW, and others Extremes in post-Reformation mysticism are seen in JANSENISM and in QUIETISM, and SWEDENBORG may be regarded as a Protestant mystic In Judaism the mystical tradition represented by the CABALA was continued notably in the modern HASIDIM For Moslem mysticism, see SUFISM and AL-GAZEL, FERID ED-DIN ATTAR, HAFIZ, JAMI, and SAADI See Evelyn Underhill, *Mysticism* (rev ed , 1930), Baron F von Hügel, *The Mystical Element of Religion* (2d ed , 1923), Albert Farges, *Mystical Phenomena* (1926), Auguste Poulain, *The Graces of Interior Prayer* (Eng tr., 1928), John W Graham, *The Divinity in Man* (1927); Rufus M Jones, *Studies in Mystical Religion* (1909), T H Hughes, *The Philosophical Basis of Mysticism* (1937), P de Jaegher, *An Anthology of Mysticism* (1935), Auguste Saudreau, *Divine Communications* (1935), William Fairweather, *Among the Mystics* (1937), W R Inge, *Christian Mysticism* (1899), Lucy Menzies, *Mirrors of the Holy* (1928, on 10 women mystics), Cuthbert Butler, *Western Mysticism* (1922), David Knowles, *The English Mystics* (1927), E Allison Peers, *Spanish Mysticism* (1924), J Abelson, *Jewish Mysticism* (1913), R A Nicholson, *Studies in Islamic Mysticism* (1921); S N. Dasgupta, *Hindu Mysticism* (1927).

Mytens, Daniel (dän'yĕl mī'tŭns), b. c.1590, d. between 1642 and 1648, Dutch portrait painter He went to London c.1618, becoming popular at the courts of James I and Charles I. He was gradually supplanted by Van Dyck and returned to The Hague in 1630 Mytens painted in the style of Rubens and Van Dyck, his paintings being notable for their simplicity of design, breadth of treatment, and admirable color. There are many full-length portraits by him, including Charles I with Henrietta Maria and child and a fine portrait of the dwarf, Jeffery Hudson, with a landscape background (Hampton Court Palace), Sir Randolph Crewe (National Portrait Gall , London), and another portrait of Charles I of England (Metropolitan Mus.).

myth (mĭth) [Gr], in its usual sense, traditional story which concerns supernatural events and gods It is to be distinguished from legends or sagas, which are about human doings, and fables or fairy tales, which are inventions to amuse or to teach Most myths, however, contain elements of a legendary and fabulous nature The association of myth with religious ceremony is very close, and many religions offer examples of the rite as the rehearsal of the events of a myth Thus some scholars hold that in ancient religions the myth took the place of dogma Myths not only have a religious purpose, but also an explanatory, or etiological, one, i e , the mythmaker tried to explain natural phenomena in terms of personifications Thus, in a wider sense, myth is a symbolical narrative or picture representing a cosmic process or, for the individual, a psychological state The study and interpretations of myths, or mythology, probably began in the 4th cent B C when Euhemerus explained myths as exaggerated adventures of historical individuals Thus mythological personages such as Zeus were considered to have been at one time men who after death had been glorified, then deified In the late 18th cent there was a great burst of interest in myths, directed mainly at discovering common origins Such men as Jean Sylvain Bailly were prominent. Modern investigation is commonly said to begin with Max MÜLLER, who believed that myths were linguistic corruptions, e g , the phrase "sunrise follows dawn" spoken in Greek could be interpreted as meaning Apollo pursues DAPHNE, the maiden of the dawn The allegorical interpretation of myths, stemming from the 18th-century study, says that at one time myths were invented by wise men to point out a truth, but after a time the myths were taken literally, e g , CRONUS, who devoured his own children, is identified with the Greek word for time, which may be said to destroy whatever it brings into existence The theological interpretation states that all myths are foreshadowings of facts of the Scripture or corruptions of them, e g , DEUCALION is only another name for Noah The German school believed that myths are the personifications of natural elements, e g , Apollo would be the personification of the sun and Artemis of the moon This theory presupposes that all people were at one time nature worshipers Recently, the Freudian school explained myths as a mechanism of wish fulfillment, and the Jungian school denoted them the expression of the unconscious dreams of a people Sir James Frazer, whose epoch-making book *The Golden Bough* is a standard work on mythology, believed that all myths were originally connected with the idea of fertility in nature, with the birth, death, and resurrection of vegetation as a constantly recurring motif Today most anthropologists do not believe in one general interpretation for all myths but rather in a specific explanation for the myths of a single people Myth has, of course, been constantly used for the enrichment of literature since the times of Aeschylus and has been prominently employed by some of the greatest of English poets (e g , Milton, Shelley, and Keats) In fairly recent times some of the leaders of literature, notably James Joyce, Franz Kafka, W B Yeats, and T S Eliot, have consciously constructed personal myths, using the old materials and newly created symbols Literary critics have therefore devoted much time recently to studying the significance of mythmaking and particular myths See FERTILITY RITES and FOLKLORE See Andrew Lang, *Myth, Ritual, and Religion* (new ed , 1899), Lewis Farnell, *The Value and Methods of Mythologic Study* (1919), Herbert Rose, *Handbook of Greek Mythology* (1928), E. B Hungerford, *Shores of Darkness* (1941), Edith Hamilton, *Mythology* (1942), Richard V Chase, *Quest for Myth* (1949)

Mytilene (mĭtĭlē'nē), city (pop 27,839), chief city on the island of LESBOS (also called Mytilene), Greece It is a port on the Aegean Sea opposite Asia Minor The name is sometimes spelled Mitilini or Mitylene

Mzab (ŭmzäb'), stony, barren valley, Algeria, in the N Sahara It was settled c 1000 by members of an austere Moslem sect The Mzabites dug wells, created date-palm oases, and built seven towns, united in a confederation Their aptitude for trade made the area a caravan junction France occupied the Mzab in 1853 and annexed it formally in 1882. Many Mzabite men spend several years in urban centers, amassing wealth as tradesmen.

N

N, 14th letter of the ALPHABET It is a usual symbol for a voiced alveolar (or dental) nasal, as is *not* The digraph *ng* represents a different sound, a voiced velar nasal, as in *sing* The Greek correspondent is nu (nū) In chemistry N is the symbol of the element NITROGEN

Na, chemical symbol of the element SODIUM.

Naam (nā'ăm) [Heb ,=pleasantness], son of Caleb. 1 Chron 4 15.

Naamah (nā'umù) [Heb ,=pleasant] **1** Daughter of Lamech Gen 4 22 **2** Mother of King Rehoboam 1 Kings 14 21 **3** Unidentified town, SW Palestine. Joshua 15 41

Naaman (nā'umŋ) [Heb ,=pleasant] **1** Syrian captain whom Elisha cured miraculously of leprosy. 2 Kings 5 **2** Benjamite. Gen 46 21, Num 26 40, 1 Chron 8 4.

Naamathite (nā'umùthīt), obscure epithet applied to Job's friend, Zophar Job 2 11

Naarah (nā'ăru, nāā'ru) [Heb ,=girl] wife of Ashur. 1 Chron 4 5,6.

Naarai (nā'ărā, nāurā'ī), one of David's warriors. 1 Chron 11 37 Paarai 2 Sam 23 35

Naaran (nā'urăn) or **Naarath** (–răth), unidentified town, central Palestine Joshua 16 7, 1 Chron 7 28

Naas (nās, nā'us), urban district (pop 3,774), Co. Kildare, Ireland, WSW of Dublin It was once the residence of the kings of Leinster and had a castle and several monastic establishments There are remains of a rath, a meeting place of delegates from the states of Leinster prov

Naashon (nā'ushŏn, nāā'shùn) or **Naasson** (nā'usŏn, nāā'sun), same as NAHSHON

Nabal (nā'bl) [Heb ,=fool], wealthy sheep owner who resisted David's attempt at extortion David's anger was appeased by the blandishments of ABIGAIL, Nabal's wife 1 Sam 25

Nablus (nublōōs'), town (pop c 17,000), central Palestine, N of Jerusalem Under Hadrian, who rebuilt the city on the site of the older Hebrew city SHECHEM, it was called Neapolis (from this the present name derives) The town is beautifully situated in a fertile valley between Mt Gerizim (Jebel et-Tor) and Mt Ebal Near by are the reputed sites of the tomb of Joseph and the well of Jacob Long the capital of Samaria, Nablus still has a small community of SAMARITANS The population is overwhelmingly Moslem, and the city, now in territory claimed by Jordan, is a center of Arab nationalism

Nabonidus (năbŏnī'dŭs), d 538? B C , last king of the Chaldaean dynasty of Babylonia He was not of Nebuchednezzar's family, and it is possible that he usurped the throne He was absorbed in antiquarian and religious speculations, and he seems to have built temples while the state was left undefended He came into conflict with the priests and was thoroughly unpopular with the people When the Persian threat of Cyrus the Great grew strong, Nabonidus allied himself with Croesus of Lydia and Amasis II of Egypt, but to no avail Probably the dissatisfaction of his people contributed to his downfall At any rate, the kingdom fell to Cyrus with no resistance in 538 B C (or 539 or possibly 540 B C) This account is based on cuneiform records The Bible calls the last king of Babylonia BELSHAZZAR

Naboth (nā'–), Jezreelite stoned to death because he would not let King Ahab have his vineyard Elijah's curse on the royal family for their treatment of Naboth forecast the downfall of the dynasty. 1 Kings 21, 2 Kings 9 21–37

Nabuchodonosor (nă"bŭkudŏ'nusŏr"), variant of NEBUCHADNEZZAR

Nabuco, Joaquim (zhwakēm' nubōō'ku), 1849–1910, Brazilian writer and statesman A man of action, he was a deputy in imperial days and was perhaps the strongest single force in bringing about the abolition of slavery He was a statesman and diplomat under the republic, spending some time in Great Britain In the United States he served as ambassador and also delivered many addresses at colleges He was a forceful figure in Brazilian letters, and his autobiography, *Minha formação* (1900), is a classic of its kind.

Nachon (nā'kŏn), later PEREZ-UZZA.

Nachor (nā'kôr), variant of NAHOR

Nachtigal, Gustav (gōō'stäf näkh'tĕgäl), 1834–85, German explorer in Africa He went (1869) on a mission for the king of Prussia to the sultan of Bornu He visited the central Sahara region and reached Khartoum in 1874 In 1884 he annexed Togoland and the Cameroons for Germany

Nacogdoches (nă"kudŏ'chĭs), city (pop 7,538), co. seat of Nacogdoches co , E Texas, NE of Houston A Spanish mission, Nuestra Señora de Guadalupe (Our Lady of Guadalupe), was founded here in 1716, but permanent settlement was not made until 1779. It was an eastern bastion of the Spanish colony against the French in Louisiana, and after the Louisiana Purchase it was twice (1812, 1819) seized by filibustering expeditions from the United States. The city aided the rebels in the Texas Revolution (1835–36) and grew in the period before the Civil War to be a market for cotton plantations Nacogdoches today, still with old houses as reminders of the past, is primarily a center of sawmills and small factories The chief resource is lumber from the surrounding pine woods. On the campus of Stephen F. Austin State Teachers College is a replica of a Spanish colonial presidio called the Old Stone Fort.

nacre see MOTHER-OF-PEARL.

Nadab (nā'dăb) **1** Aaron's eldest son, set apart for the priesthood The exact nature of the transgression ("offering strange fire") for which he and his brother Abihu died is not clear Ex 6 23, 24, 28, Lev 10, Num 3 1–4, 26 61, 1 Chron 6 3, 24 1–2 **2** Died c 909 B C , king of Israel (c 910 c 909 B C), son and successor of Jeroboam I He was assassinated by BAASHA in the siege of Gibbethon 1 Kings 15 25–31 **3** Descendant of Jerahmeel. 1 Chron 2 28 **4** Benjamite 1 Chron 8 30

Nadelman, Elie, 1882–1946, Polish-American sculptor, b Warsaw After his first one-man show (1909) at Paris, he became very popular with modern artists and is said to have influenced Picasso Before he settled (c 1917) in America he had exhibited in New York at the Armory Show of 1913 He later exhibited at Stieglitz's "291" gallery His works of wood or metal have a smooth realistic simplicity, often reminiscent of early American carving Later in his life he became comparatively unknown until interest in him was revived by the Museum of Modern Art's retrospective exhibition (1948) of a large amount of his work See studies by Lincoln Kirstein (1948)

Nader Shah see NADIR SHAH

Nadezhdinsk, RSFSR see SEROV

nadir (nā'dur) [Arabic,=opposite, i e , opposite the zenith], in astronomy, that point in the invisible part of the celestial sphere which is directly underfoot from the observer In other words, it is the point opposite the ZENITH A straight line in the direction of the plumb line and extended up to the zenith and down to the nadir would pass through the position of the observer Since the HORIZON is a great circle in the celestial sphere halfway between zenith and nadir, each of these points is 90° from any part of the horizon

Nadir Shah or **Nader Shah** (both nä'dĕr shä'), 1688–1747, shah of Iran (1736–47), sometimes considered the last of the great Asiatic conquerors He was a member of the Afshar tribe Taken prisoner by the Uzbeks while he was still a child, he managed to escape and entered the service of the governor of Khurasan There he earned a reputation for bravery A quarrel with the governor caused him to take reprisals Then he entered the service of Tahmasp, the son of Shah Sultan Husein (see HUSEIN), who was asserting his claims against the dominant Afghans and was holding court in Ashraf (Mazanderan) Nadir took the name Tahmasp Kuli [Tahmasp's slave] and proceeded to win a series of battles against the Afghans They were swept before him and had to retire with heavy losses to their native land Tahmasp was restored to the rule over Iran Nadir, however, was the powerful figure of the realm He warred against the Turks successfully, and when the shah turned victory to disaster by a conciliatory peace, Nadir in 1732 deposed him Tahmasp's little son Abbas was placed on the throne with Nadir as regent The conquests continued, and the western boundary was restored to what it had been before the Afghan invasions In 1736 Abbas died, and the Safavid line came to an end Nadir himself was made shah He attempted to weld Iran and the Ottoman lands by unifying the Shiites and Sunnites This led to much dissatisfaction in Shiite Iran, and the plan came to nothing Difficulties with the Mogul emperor in India grew worse, and Nadir led an invading force He was brilliantly successful, taking and sacking Delhi and Lahore and carrying off vast treasure, including the Koh-i-noor diamond and the Peacock Throne He also continued his conquests in other directions Bukhara was subdued, and the limits of Iran were extended to be the largest that they had been since the days of the Sassanidae War with the Turks occupied his attention from 1743 to 1746 His later years were, however, darkened by a turn toward tyranny, suspicion, and greed So much did he fear opposition that he had his own son blinded Though the dynasty he founded, the Afshar dynasty, was short-lived, Nadir is generally viewed as one of the greatest of all rulers of Persia

Naegele, Charles Frederick (nā'gulu), 1857–1944, American portrait painter, b Knoxville, Tenn Among his works are *Mother Love* (National Gall of Art, Washington, D C) and portraits of Peter Cooper, Gen. J D Bryant, C. L Tiffany, John W Gates, Gen. E. A McAlpin, Nellie Tayloe Ross, and Martha Berry

Naegeli or **Nägeli, Karl Wilhelm von** (both kärl' vĭl'hĕlm fŭn nā'gulē), 1817–91, Swiss botanist He was professor at the Univ of Munich from 1858 and is noted especially for his work on plant cytology and development He made studies of the process of division in pollen grains and in unicellular algae and determined the function of many plant parts, such as the antheridia and spermatozoids of ferns In his studies of cells he made a distinction between the nuclear material and a mucous layer of living matter (protoplasm) His numerous and influential writings include *Memoir on the Nuclei, Formation, and Growth of Vegetable Cells* (1844–46, Eng. tr , 1846) and, with Simon Schwendener, *The Microscope in Theory and Practice* (2 vols , 1865–67, Eng tr , 1892)

Naestved (nĕ'st'vĕdh), city (pop 15 104), Zealand, Denmark, SW of Copenhagen, a Baltic port It produces paper, glass, pottery, agricultural machinery, and canned meat It dates from the 12th cent , as do two of its churches.

Nafa, Ryukyu Islands see NAHA.

Näfels (nā'fŭls), village (pop 3,140), N Glarus canton, Switzerland Here in 1388 the Swiss defeated the Austrians. A Catholic village Näfels has a Capuchin monastery, a baroque church, and a museum with local antiquities

Nafud, see NEFUD.

Nagano (nagu'nō), city (1947 pop 94,993), capital of Nagano prefecture, central Honshu, Japan, on the Tenryu river This religious center is the site of Zenkoji, a 7th-century Buddhist temple Nagano prefecture, with a high mountain range to the west, has a large raw-silk industry, of which Matsumoto is a center

Nagaoka (nagu'ōkä), city (1947 pop 54,958), Niigata prefecture, central Honshu, Japan It is an industrial center, with oil refineries, chemical plants, and engineering works

Nagara Thom see ANGKOR THOM

Nagasaki (nagu'sä'kē), city (1940 pop 252,630, 1947 pop 198,642), capital of Nagasaki prefecture, W Kyushu, Japan, a port on Nagasaki Bay It has shipbuilding yards, collieries, and fisheries Nagasaki was early a Christian center Its port, the first in Japan to receive Western trade, was known to Portuguese and Spanish traders before it was opened (1560) to the Dutch Dutch traders were restricted (1641–1858) to DE-SHIMA, an island in the harbor and part of the city In 1854 the port was opened to the United States, and in 1858 to other Western countries In the Second World War the city was the target (Aug 9, 1945) of the second atomic bomb, which killed or wounded c 75,000 people and devastated over one third of the city The prefecture is mainly agricultural It includes Goto-retto Raw-silk production is widespread and coal is mined near Sasebo, a naval base Hirado is known for its fine porcelain ware

Nagel, Charles (nā'gul), 1849–1940, American lawyer and cabinet officer, b Colorado co , Texas, grad St Louis Law School (1872) He studied law at the Univ of Berlin in 1873 and later was a leader of German elements in the Middle West He was admitted to the bar in 1873, practiced in St Louis, lectured (1885–1909) at St Louis Law School, served (1881–83) in the Missouri legislature, and was president (1893–97) of the St Louis city council He was (1908–12) a member of the Republican National Committee and was (1909–13) Secretary of Commerce and Labor under President W H Taft He returned to law practice, and he was one of the first to oppose Hitlerism See his *Speeches and Writings* (1931) and his autobiography, *A Boy's Civil War Story* (1937)

Nägeli, Karl Wilhelm von see NAEGELI.

Nagge (nă'gē), in the Gospel genealogy Luke 3 25

Nagorno-Karabakh, Azerbaijan SSR see MOUNTAIN-KARABAKH

Nagoya (nä"gō'yu), city (1940 pop 1,328,084, 1947 pop 853,085), capital of Aichi prefecture, central Honshu, Japan, a port on Ise Bay A major transportation and industrial center, with engineering works, chemical plants, and textile mills, it also produces fine porcelain and cloisonné It is the seat of Nagoya Imperial Univ Of interest are a Shinto shrine (founded in the 2d cent), two famous Buddhist temples, and a castle built (1612) by Ieyasu The city was heavily bombed (1945) in the Second World War Aichi prefecture yields raw silk and farm products The city of Toyohashi in it has silk culture and agricultural experiment stations

Nagpur or **Nagpore** (both nag'pōōr), city (pop 301,957), capital of Madhya Pradesh, India Founded early in the 18th cent , it is now a leading commercial and industrial city and a rail and road center Cotton thread and cloth are manufactured

Nagybecskerek, Yugoslavia see ZRENJANIN

Nagykanizsa (nŏ'dyukŏn"zhŏ), city (pop 30,791), SW Hungary It is a market and manufacturing center It is sometimes called Kanizsa

Nagykoros, Hung *Nagykőrös* (nŏ'dyukû"rûsh), city (pop 29,899), central Hungary It is the center of a fruitgrowing region

Nagyszeben, Rumania see SIBIU.

Nagyszombat, Czechoslovakia see TRNAVA.

Nagyvarad, Rumania see ORADEA.

Naha (na'hä), city (1940 pop. 65,765), on Okinawa island, in the Ryukyu Islands. It is a port on the southwest coast and the chief manufacturing center, was until 1945 the capital of Okinawa prefecture, and in Aug., 1945, became headquarters of the U S military governor of the Ryukyus. Other forms of the name are Nafa and Nawa. See OKINAWA.

Nahalal, Nahallal (both nä'hŭlăl), or **Nahalol (-lŏl)**, [Heb., =pasture], unidentified city, N Palestine. Joshua 19 15, 21 35, Judges 1 30

Nahaliel (nähāl'ēĕl) [Heb., =valley of God], unidentified desert camping place. Num 21 19

Naham (nā'hăm) [Heb., =consolation], name in a genealogy. 1 Chron 4 19

Nahamani (nähä'mănī) [Heb., =compassionate], leader among the returned exiles. Neh 7.7

Nahant (nūhănt'), resort town (pop. 1,835), E Mass., on a rocky peninsula NE of Boston, settled 1630, set off from Lynn 1853. Fort Ruckman is in Nahant.

Naharai (nā'hărā'ī) **or Nahari** (nā'hărī) [Heb., =snorer], armor-bearer of Joab. 2 Sam 23 37; 1 Chron 11 39

Nahash (nā'-) [Heb., =serpent] **1** Ammonite king whose cruelty caused his destruction by Saul. 1 Sam 11; 12. His successor was HANUN. **2** Father of SHOBI, called Nahash of Rabbah, perhaps the same as **1**. **3** Father of ABIGAIL. **2**

Nahas Pasha (Mustafa Nahas Pasha) (nähäs' päshä'; mustä'fu, mōō'stäfä"), 1876–, Egyptian political leader. He rose rapidly to prominence in the WAFD party and on the death (1927) of Zaghlul Pasha succeeded to the party leadership. He was the chief negotiator of the Anglo-Egyptian treaty of 1936 which set Egypt free. Several times prime minister of Egypt (1928, 1930, 1936–37), he was called back in 1942 when a strong pro-Allied stand was taken by the king. He lost his office in 1944 but returned as prime minister in 1950, after his party's smashing victory. Twice (1937, 1945) he escaped assassination attempts.

Nahath (nā'hăth) [Heb., =going down]. **1** Duke of Edom. Gen 36 13, 17, 1 Chron 1 37. **2** Levite. 2 Chron 31 13. **3** Ancestor of Samuel. 1 Chron. 6 26. Toah 1 Chron 6 34. Tohu 1 Sam. 1.1.

Nahbi (nā'bī), one of the spies sent by Moses into Canaan. Num 13 14

Nahor (nā'hôr) **1** Abraham's grandfather. Gen 11 22-25. Nachor. Luke 3 34. **2** Abraham's brother. Gen 22 20–23. Nachor. Joshua 24 2.

Nahshon (nā'shŏn) [Heb., =enchanter], ancestor of David. Num 1 7, Ruth 4 18–20, 1 Chron 2 10. Naashon. Ex 6 23. Nuasson. Mat 1 4, Luke 3 32.

Nahuatlan (nä'wŏt"lun), group of languages of the Uto-Azteran linguistic stock. It includes the Nahuatl languages (Aztec and Nahuat) and also a number of other languages such as Pipil and Pochutla. A number of the Nahuatlan languages are extinct, e.g., Toltec, Chichimec and Nahuatlato.

Nahum (nā'ŭm) [Heb., =consoler], book of the Old Testament, seventh of the books of the Minor Prophets. It is a prophecy of doom against Nineveh, which fell in 612 B.C. One analysis of the book divides it into four poems, the first (an acrostic, 1.2–8) and second (1.9–2.1) on the awful power of God, the others (2.2–14 and 3) being splendid descriptions of the destruction of the city. The prophet is not otherwise known; he mentions the fall of Thebes (666 B.C.) in 3.8–10. For bibliography, see OLD TESTAMENT.

naiads (nā'ădz, nī'-) [Gr., =belonging to the flowing, i.e., of water], in Greek mythology, daughters of Zeus. They presided over fresh-water streams, lakes, and wells, and because water is essential for agricultural fertility, they were regarded as deities of fertility. The naiad was a sort of NYMPH.

Naidu, Sarojini (surō'jĭnē nī'dōō), 1879–1949, Indian poet and political leader; educated at King's College, London, and at Cambridge. She was elected (1914) a fellow of the Royal Society of Literature. Her salon at the Taj Mahal Hotel in Bombay was a center of intellectual society. She was active in the Indian National Congress, and in 1925 she became its first woman president. Participation in passive disobedience campaigns brought her several jail sentences. Mme Naidu's poetry, written in English, deals in a romantic vein with Indian themes and is collected in *The Sceptred Flute* (1928).

nail, in anatomy, a horny, transparent shield protecting the ends of the fingers and toes. It develops from the epidermis of the skin. The growing root is in a fold of the skin in the region of the base of the nail, the pale area near the base is called the lunula. The average time for growth from root to the free edge is four months. If the root is destroyed, no new nail grows. A FELON may result from infection starting in a hangnail. Pressure from improperly fitted shoes may cause the toenails to cut into the skin, at the sides, and infection often develops in the flesh around these ingrowing nails.

nail, in carpentry, elongated, slender, pointed piece of metal (sometimes of wood) used for holding together layers of wood or other materials or for suspending an object. Nails of iron were used in ancient times. The making of similar nails by hand was a cottage industry on American farms as late as the 19th cent. Nails are now commonly made of steel wire by machinery. The names of their sizes (e.g., eightpenny, tenpenny) originally indicated price, the number of pence charged for a hundred nails. The largest nails, those used for holding railroad rails in position, are called spikes; brads and tacks are varieties of small nails. The staple is a nail bent so that both ends may be driven into wood or another substance, both ends are pointed. See also PIN.

Nain (nā'ĭn), village of Galilee, Palestine, SE of Nazareth. Here Jesus raised a widow's son from the dead. Luke 7 11.

Nain (nīn), town (pop. 6,790), central Iran. In one of its several old mosques there is a very fine example of a wooden pulpit. Formerly noted for its woolen cloaks, the town now produces rugs.

Naioth (nā'yŏth) [Heb., =habitations], unlocated place (apparently N of Jerusalem) to which David fled. 1 Sam 19–20.

Nairn, county, Scotland. see NAIRNSHIRE.

Nairn (nârn), burgh (pop. 4,201), county town of Nairnshire, Scotland, at the mouth of the Nairn on Moray Firth. It is a fishing center and a resort with a good harbor.

Nairne, Carolina (Oliphant), Baroness (nârn), 1766–1845, Scottish poet. The well-known songs and ballads, which she wrote anonymously, include *The Land o' the Leal*, *The Laird o' Cockpen*, and the Jacobite songs *Charlie Is My Darling* and *Will Ye No Come Back Again*. Her poems were collected and published as *Lays from Strathearn* (1846). See Charles Rogers, *Life and Songs of the Baroness Nairne* (1886).

Nairnshire (nârn'shĭr, -shur) or **Nairn**, county (163 sq. mi., 1931 pop. 8,294, 1948 estimated pop. 9,203), N Scotland. The county town is Nairn. The land rises gradually from the level coast (along Moray Firth) to a height of 2,162 ft. at Carn Glas on the southern border. The Nairn and the Findhorn are the chief rivers. Most of the land is given over to cattle grazing. Among the antiquities of the county is Cawdor Castle, traditional scene of the murder of Duncan by Macbeth.

Nairobi (nīrō'bē), town (pop. 47,644), capital of Kenya, northwest of its port, Mombasa, founded 1899. It is healthfully situated at an altitude of 5,452 ft. Nairobi was rebuilt (c. 1920) on a modern town plan. It is a railroad junction connected with Mombasa on the coast and has an airport. Coffee and sisal are exported.

Naismith, James (nā'smĭth), 1861–1939, American athletic director, inventor (1891) of basketball, b. Ontario prov., grad. McGill Univ., 1887. While a director (1890–95) of physical education at the Y.M.C.A. College at Springfield, Mass., Naismith with the aid of Luther H. Gulick originated (1891) basketball as a gymnasium sport and created rules for the game. Under his direction basketball was originally played with two peach baskets and a soccer ball. He later (1898–1937) was director of physical education at the Univ. of Kansas. His books include *Basket Ball Rules* (1891) and *The Basis of Clean Living* (1918).

Naivasha (nīvä'shu), lake, 12 mi. long and 9 mi. wide, Kenya, in the Great Rift Valley, at an altitude of c. 6,300 ft. The lake is the haunt of hippopotamuses and flamingos.

Najaf, Iraq. see NEJAF.

Nájera (nä'härä), city (pop. 2,994), Logroño prov., N Spain, in New Castile. Founded in 1052, it was a medieval capital of Navarre. Here in 1376 PETER THE CRUEL and Edward the Black Prince defeated Henry of Trastamara (later HENRY II of Castile) and Du Guesclin.

Nakhichevan (nŭkhĕchĭvan'yŭ), city (pop. 10,296), capital of Nakhichevan ASSR, Azerbaijan SSR, near the Aras river. The ancient Naxuana, it has Greek and Roman remains and well-preserved medieval ruins. It was ruled by Armenians, Persians, Arabs, Mongols, and Turks, became a flourishing Armenian trade center in the 15th cent., and was ceded by Persia to Russia in the Treaty of Turkamanchai (1828). Its industries include food processing, wine making, and cotton ginning.

Nakhichevan Autonomous Soviet Socialist Republic, autonomous republic (2,100 sq. mi.; 1946 estimated pop. 130,000), Azerbaijan SSR, bordering on Iran in the south. It is separated from the rest of the Azerbaijan SSR by a strip of Soviet Armenia and from Iran by the Aras river. Nakhichevan is the capital. The lowlands are irrigated and produce cotton, tobacco, rice, and wheat. In the foothills wine is grown and silkworms are raised. The population consists mainly of Azerbaijani Turks (80 percent) and of Armenians (15 percent). The republic was founded in 1924.

Nakhon Ratchsima, Thailand. see KORAT.

Naksh-i-Rustam, Iran. see PERSEPOLIS.

Nakskov (näk'skou), city (pop. 15,506), Laaland island, Denmark, a Baltic port. There are sugar refineries, agricultural processing plants, and shipyards.

Nalchik (näl'chĭk), city (pop. 47,993), capital of Kabardian ASSR, RSFSR, on the northern slope of the greater Caucasus and on the small Nalchik river. A health and tourist resort, it also has considerable industries, notably machine plants (hydroelectric turbines) and agricultural and medical schools. It was founded in 1817 as a Russian stronghold. In the Second World War it was held (1942–43) by the Germans.

Namangan (nŭmŭn-gän'), city (pop. 77,351), capital of Namangan oblast, Uzbek SSR, in the FERGANA VALLEY. It is a textile center (cotton and silk). An earthquake caused grave damage in 1927.

Namaqualand (nŭmä'kwulănd), region (c. 150,000 sq. mi., pop. c.40,000), southwest coast of Africa. It is largely a desert. The Orange river divides it into Great Namaqualand in South-West Africa and Little Namaqualand in Cape Prov., Union of South Africa. A rich diamond field extending from the mouth of the Orange river to Port Nolloth was discovered in 1926. The Namaqua (c. 15,000) who inhabit Namaqualand are Hottentots.

name. Names are found in every language known, and they often pass from one language to another. Hence the occurrence of Indian place names in America and the occurrence among Anglo-American families of names of various linguistic origins (e.g., Roosevelt, Hoover, La Follette, LaGuardia). Single names of persons are presumably earlier in use than double ones, as in the Bible, where double names are mainly confined to those who have common forenames, e.g., Judas Barsabas and Mary Magdalen. English surnames developed in the late Middle Ages. They come from a variety of origins, e.g., patronymics (Adams, Jefferson, Jackson, Harrison), from places (Lincoln, Garfield, Cleveland), from trades (Tyler, Taylor), from personal traits (Stout, Black). The Irish *mac*, "son" (Mac, Mc, and M'), and *ua*, "grandson" (*O'* see O), were attached to family and tribe names, respectively, the latter were apparently not used in Scotland. The Welsh in translating their patronymic (*ap* "son of") settled on English forms in *-s*, hence Welsh names such as Davis (from David) and Jones (from John). French *de*, when written separately, like German *von* is deemed to mark a noble name. Spanish practice varies by country, one common usage gives a surname combining those of each parent, e.g., Serrano y Domínguez or Serrano Domínguez, for one whose father was a Serrano and his mother a Domínguez. In Russian the middle name consists of the father's forename with a patronymic suffix. In the Roman republic there were three names, the forename (*praenomen*), of which there were less than 20, the gens or tribe name (*nomen*), and finally the family name (*cognomen*), e.g., Caius Julius Caesar, or Caius of the Caesar family of the Julian gens. An additional name (*agnomen*) might be added, as a nickname or honor, e.g., Africanus for victory in Africa in the case of Scipio. In many cultures the name is of supernatural significance. Besides animistic commonplaces such as naming children after lucky men or wily animals, there are widespread taboo practices, such as not naming children after living relatives or changing the name on the death of a namesake, or avoiding the name of a family totem. In the Judeo-Christian tradition the name has great significance, especially the divine names, thus the Hebrews did not utter the name of God, and many Christians bow the head at the name of Jesus, especially Roman Catholics, who have a cultus of the Holy Name. In the Bible many names are divinely conferred, e.g., Abraham, Sarah, Israel, John the Baptist, and Jesus. Gen 17 5,15, 32 28, Luke 1.13, 2 21. Christians have traditionally baptized children with an appropriately Christian name, especially the name of a saint, henceforth the patron, an additional name is taken at confirmation. An echo of this was the Puritan penchant for Old Testament names. In English-American law the traditional rule allows anyone to use any name, so long as fraud or damage is not intended or perpetrated. The practice of changing names by court action is widespread as affording a clear record. There are many popular collections of names with derivations. Apart from a few specialized studies, none are authoritative.

Nameoki (nămēō'kī), village (pop. 2,701), SW Ill., near St. Louis, inc. 1917.

Namhoi (näm'hoi'), Mandarin *Nan-hai*, city (pop. 95,529), E Kwangtung prov., China, in the Canton delta. It was formerly called Fatshan. The manufactures include porcelain and silk.

Nampa (năm'pu), city (1940 pop. 12,149, 1948 special census pop. 15,922), SW Idaho, W of Boise, est. 1885, inc. 1890. The city is the commercial and processing center and shipping point for a rich agricultural and dairy region, now in the BOISE PROJECT. It is the seat of Northwest Nazarene College (coeducational) and the Idaho state school and colony for the feeble-minded.

Namsos (nam'sŏs), town (pop. 4,047), Nord-Trondelag co., W Norway, N of Trondheim, at the point where the Namsen river empties into the Namsen Fjord. It is a seaport and the trading center of the fertile Namdal valley. Lumbering and salmon canning are the chief industries. There are copper mines near by. It was occupied (April-May, 1940) by British forces in the Second World War.

Namur (nămōōr', nä-, Fr. nămür'), Flemish *Namen* (nä'mu), province (1,413 sq. mi.; pop. 351,183), S Belgium, bordering on France in the south. Namur, its capital, and Dinant are the

chief cities. A hilly region, it is drained by the Meuse and the Sambre and is traversed in the south by the Ardennes There are large marble, chalk, and building-stone quarries, several coal and iron mines, and glass and cutlery factories The population is mainly French-speaking (see WALLOONS) The province was formed by combining the former county of Namur with part of the former bishopric of Liége and part of Hainaut

Namur, Flemish *Namen,* city (pop 30,702), capital of Namur prov, S Belgium, at the confluence of the Meuse and Sambre rivers and at the junction of several important roads It is an episcopal see Its factories produce leather goods, flour, cutlery, and machinery Namur was the seat of a county from the 10th cent until it was sold (1421) to Philip the Good of Burgundy The county of Namur, now part of the province of the same name, later shared the history of the Austrian and Spanish Netherlands Owing to its strategic position Namur was frequently attacked In the War of the Grand Alliance it fell (1692) to the French and was retaken by the Dutch in 1695 The first Barrier Treaty (1709) gave the Netherlands the right to garrison Namur, a right confirmed by the second and third Barrier Treaties (1713, 1715) which supplemented the Peace of Utrecht Captured (1792) by the French Revolutionary forces, it was annexed to France until 1814 The old fortifications were razed (1862–65) and a new citadel and forts were constructed In the First World War, Namur was taken (1914) by the Germans and remained under their occupation until the armistice In the Second World War parts of the city suffered heavy damage

Namur, Marshall Islands see KWAJALEIN

Nan, mountain range, China see NANLING

Nanaimo (nunī'mō), city (pop 6,635), on Vancouver Island, SW British Columbia, on the Strait of Georgia and NNW of Victoria It is a port (shipping coal from near-by mines), the base of a herring-fishing fleet, and the trade center for a farm and lumbering region

Nana Sahib (nä'na sä'hĭb), b c 1821, leader of the Sepoy Rebellion, whose real name was Dandhu Panch The adopted son of the last peshwa (hereditary prime minister) of the Mahrattas, he vainly asked the British to grant him the peshwa's pension In the outbreak (1857) of the rebellion in Cawnpore his men massacred the English garrison and colony He escaped to Nepal, where he probably perished

Nanchang or **Nan-ch'ang** (both nän'chäng'), city (pop 260,651), capital of Kiangsi prov, China It is on the Kan river near the southern end of Poyang lake There is a rail line connecting it with the railroad from Canton to Peiping

Nancy (näN'sē, Fr näsē'), city (pop 108,131), capital of Meurthe-et-Moselle dept, NE France, on the Meurthe river and the Marne-Rhine Canal Situated at the edge of the huge Lorraine iron fields and surrounded by smaller industrial towns with iron mills and breweries, Nancy is the administrative, commercial, artistic, and educational center of Lorraine The city grew around a castle of the dukes of LORRAINE and became then capital in the 12th cent In 1477 Charles the Bold of Burgundy was defeated and killed at the gates of Nancy by the Swiss and the forces of René II of Lorraine The major part of the center of Nancy was built in the 18th cent during the liberal reign of STANISLAUS I, duke of Lorraine and ex-king of Poland It is a model of urban planning and a gem of 18th-century architecture Particularly noble and harmonious is the Place Stanislas, a square surrounded by public buildings and closed off by four magnificent wrought-iron screens At one end is a triumphal arch, flanked by the statues of Jacques Callot and of Héré (the architect who planned the square), both natives of Nancy The statue of King Stanislaus was erected in the center of the square in 1831 The oblong Place de la Carrière also is a perfect 18th-century ensemble Other outstanding buildings are the severe cathedral (1703–42), begun by J H. Mansart and completed by Germain Boffrand, and the old ducal palace (1502–44) Nancy has a rich fine arts museum, a historical museum, an academy of fine arts, a school of forestry, and a large university founded in 1854 and housed in a modernistic structure

Nanda Devi (nŭn'dŭ dā'vē), peak, c 25,650 ft high, N United Provs, India, in the Himalayas Hindus believe that Siva's wife, Nanda, lives here Nanda Devi was climbed (1936) by an Anglo-American expedition See Eric Shipton, *Nanda Devi* (1936)

Nanga Parbat (nŭng'gŭ pŭr'but), peak, c 26,620 ft high, Kashmir, India, in the Himalayas Here A F Mummery apparently perished in 1895 There have been several disastrous attempts to climb it See Fritz Bechtold, *Nanga Parbat Adventure* (Eng tr, 1935).

Naniwa, Japan see OSAKA

Nanking (nän'king'), Mandarin *Nan-ching* [southern capital], city (pop 1,030,572), in, but independent of, Kiangsu prov, China, on the Yangtse river. It has been long celebrated as a literary and political center Nanking was the capital of China from the 4th to the 6th cent and from 1368 to 1403. In 1842, at the end of the Opium War, there was signed here the Treaty of Nanking which opened China to foreign trade. During the Taiping Rebellion insurgents held the city from 1853 to 1864 It was captured by the revolutionists in 1911, and in 1912 it became the capital of China's first president, Sun Yat-sen When in 1927 the city fell to the revolutionary Nationalist army, the foreign residents fled to the protection of British and American warships on the Yangtse river Nanking became the regular Nationalist capital. In 1932 when the Japanese were threatening to attack the city, the government was temporarily removed to Loyang, and Nov 21, 1937, just before Nanking fell to the Japanese in their advance up the Yangtze valley, it was moved to Chungking Chinese forces reoccupied the city Sept 5, 1945, and the capitulation of the Japanese armies in China was signed there on Sept 9 A great wall, 26 mi long and 70 ft high, encloses, besides the crowded metropolitan area, villages and open fields The tomb of the first Ming emperor is approached by an avenue lined with colossal images of men and animals A memorial to China's war dead in the form of a modern steel-construction pagoda and the tomb of Sun Yat-sen are other notable buildings Nanking fell to the Chinese Communists in April, 1949

Nanling (nän'lĭng') or **Nan,** mountain range, S China, on the boundary of Kwangtung and Kwangsi provs The mountains reach 6,000 ft They lie in parallel ranges which hinder travel

Nansen, Fridtjof (frĭt'yôf nän'sun), 1861–1930, Norwegian arctic explorer, scientist, statesman, and humanitarian He made his first trip to the arctic on a sealer in 1882 and upon his return became curator of the natural history collection of the Bergen Museum In 1888, with a party of five, he made a memorable journey across Greenland on skis, described in his *First Crossing of Greenland* (1890) Conceiving a startling and much-derided plan for reaching the North Pole by drifting in the ice, he sailed to the arctic in 1893 in the *Fram,* especially designed to resist crushing by ice The *Fram* was anchored in the ice pack at lat 81° 59′ N, drifted northward to 85° 57′, and later (1896) returned safely to Norway, as Nansen had predicted, by way of Spitsbergen In the meantime, Nansen had left the ship in 1895 and with F H Johansen set forth to complete the journey to the pole by sledge They were, however, turned back by ice conditions at lat 86° 14′ N, the most northerly point to have been reached by man at that time When they were wintering (1895–96) on Franz Josef Land (now often called Fridtjof Nansen Land), Frederick G Jackson chanced upon them and sent them home in a ship of his expedition Nansen's arrival in Norway was followed dramatically eight days later by that of the *Fram,* under Otto Sverdrup Although neither he nor his ship had reached the North Pole, his expedition gave to the world much valuable new information about the Arctic Ocean and the arctic regions and made Nansen internationally famous *Farthest North,* his account of the brilliant exploit, appeared in translation in 1897, and the expedition's scientific material was published as *The Norwegian North Polar Expedition* (ed by Nansen, 6 vols, 1900–1906) The Nansen Fund for scientific research was established in his honor At the university in Christiania (now Oslo), he became professor of zoology (1897) and of oceanography (1908) Nansen's career as a statesman began in 1905, when he worked for the peaceful separation of Norway from Sweden, his efforts were rewarded by his appointment as Norway's first minister (1906–8) to Great Britain In 1901 he had become director of an international commission to study the sea, and he made (1910–14) several scientific journeys, mainly in the N Atlantic In the years after the First World War he added to his role of great explorer that of great humanitarian, becoming internationally renowned for his service to famine-stricken Russia as well as for his work in the repatriation of war prisoners Appointed (1921) as League of Nations high commissioner for refugees, Nansen received the 1922 Nobel Peace Prize, and the League honored him by creating (1931) the Nansen International Office for Refugees, which won the 1938 Nobel Peace Prize As a memorial to his father, Odd Nansen founded (1937) the Nansen Help to supplement the work of the Nansen International Office The diversity of Fridtjof Nansen's interests is shown in his writings, which include in addition to those already mentioned *Eskimo Life* (1893), *Closing-Nets for Vertical Hauls and for Vertical Towing* (1915), *Russia & Peace* (1923), and *Armenia and the Near East* (1928) See biographies by Jon Sorensen (1932) and Anna Gertrude Hall (1940)

Nan Shan: see KUNLUN

Nantasket Beach (nănta'skĭt), resort village (pop. 1,092) in Hull town, E Mass., NE of Hingham

Nantes (nänts, Fr nät), city (pop 187,259), capital of Loire-Inférieure dept, W France, on the Loire It is an important industrial and shipping center with its ocean port at SAINT-NAZAIRE Of pre-Roman origin and an early episcopal see, Nantes was ravaged by the Norsemen (9th cent) and in the 10th cent. fell to the dukes of Brittany In the French Revolution, Nantes was nearly stormed by the royalist troops of the VENDÉE and was the scene of massacres (see NOYADES) by the revolutionists (1793) A center of resistance to German occupation during the Second World War, Nantes suffered through the Allied bombing of its vital rail yards and factories and the ruthless German reprisals against the civilian population It was liberated by U S troops in Aug, 1944 Notable monuments include a 10th-century castle on the Loire and a 15th-century cathedral containing tombs of dukes of Brittany

Nantes, Edict of, 1598 To restore internal peace to France, which had been torn by the Wars of Religion, King Henry IV promulgated at Nantes an edict which was to define the rights of the French Protestants (see HUGUENOTS) These included full liberty of conscience and private worship, liberty of public worship wherever it had previously been granted and its extension to numerous other localities and to estates of Protestant nobles, full civil rights, royal subsidies for Protestant schools, special courts, composed of Catholic and Protestant judges, to judge cases involving Protestants, retention of the organization of the Protestant church in France, and Protestant control of some 200 cities then held by the Huguenots, including such strongholds as La ROCHELLE, with the king contributing to the maintenance of their garrisons and fortifications The last condition, originally devised for an eight-year period but subsequently renewed, was to serve as guarantee to the Huguenots that the other rights would be respected, however, it gave French Protestantism a virtual state within a state and was incompatible with the centralizing policies of Richelieu, Mazarin, and Louis XIV The fall (1628) of La Rochelle to Richelieu's army marked the end of Huguenot political privileges In 1666 LOUIS XIV embarked on a policy of persecuting the Protestants and by a series of edicts reduced the Edict of Nantes to a scrap of paper Finally, in 1685, he declared that the majority of Protestants had been converted to Catholicism and that the edict of 1598, having thus become superfluous, was revoked No French Protestant was allowed to leave the country, those who openly remained Protestants were promised the right of private worship and freedom from molestation, but the promise was not kept Thousands fled abroad to escape the system of DRAGONNADES, and several provinces were virtually depopulated The revocation of the Edict of Nantes greatly weakened French economy, and its ruthless application increased the detestation in which England and the Protestant German states held the French king Its object—to make France a Catholic state —was fulfilled on paper only, for many secretly remained faithful to Protestantism, while the prestige of the Catholic Church suffered from Louis's barbarity

Nanteuil, Robert (rōbĕr' nätû'yu), 1623?–1678, French draughtsman and engraver His crayon portraits early gained him popularity Louis XIV made him draughtsman to the royal cabinet He is best known for his splendid portrait engravings, of which he made over 300 His work is original and excels in the subtlety of its values and the vivacity and precision of its characterization Among his finest works may be cited the portraits of Gilles Ménage, Jean Loret, the duc de la Meilleraye, and the duchesse de Nemours He made 11 portraits of Louis XIV and 14 of Mazarin

Nanticoke (năn'tĭkōk), city (pop 24,387), NE Pa, on the Susquehanna below Wilkes-Barre, inc as a borough 1874, as a city 1926 It produces rayon and nylon yarn and cigars and is important as an anthracite center

Nantucket (năntû'kĭt), island, 14 mi long and 3½ mi wide, lying c 27 mi S of Cape Cod, Mass., from which it is separated by Nantucket Sound Muskeget Channel separates it from Martha's Vineyard on the west Nantucket and the small adjacent islands comprise both Nantucket town (pop 3,401) and Nantucket co of Massachusetts Visited by Gosnold in 1602, it was settled after 1659 It was one of the chief whaling towns until the decline of the industry (c 1850), later it developed as a summer resort and artists' colony There is a whaling museum in an old sperm-candle factory A windmill (1746) is preserved The village of Nantucket, with its fine harbor and many old houses, is the trade center of the island, Siasconset lies E on the Atlantic The first U S lightship station (1856) is off Nantucket See W F Macy, *Story of Old Nantucket* (enl ed, 1928), W O Stevens *Nantucket* (1936)

Nantwich (nănt'wĭch, -ĭch), urban district (1931 pop 7,133, 1943 estimated pop 8 453), Cheshire, England, on the Weaver and SW of Crewe Its brine baths were opened in 1883, Nantwich was formerly very important in salt production, having more than 300 works The grammar school dates from 1611, and the church from the 13th and 15th cent The town's industries include tanning and the manufacture of shoes and clothing

Nanty Glo (năn'tē glō'), borough (pop 6,217), SE Pa, NE of Johnstown. Coal is mined here and farming is carried on in the area.

Nantyglo and Blaina (năn'tĕglō', blī'nū), urban district (pop 13,189), Monmouthshire, England It is in a coal-mining and ironworking region

Nanuet (năn'ŭĕt'), unincorporated village (pop. 2,057), SE N Y , W of Nyack It is the seat of the International Shrine of St Anthony

Nanumea (năn'ōōmā'ă), atoll, area 2 sq mi , S Pacific, northernmost of the Ellice Islands In the Second World War it was occupied in 1943 by U.S. marines The island was formerly called St Augustine Island.

Naomi (nā'ō'mē, –mī, nā'ō–) [Heb ,=pleasant], in the Bible, Ruth's mother-in-law Ruth 1 19,20

naos (nā'ŏs) [Gr ,=ship], inner portion of a Greek temple, enclosed within walls and generally surrounded by colonnaded porticoes In it stood the statue of the deity to whom the temple was consecrated Sometimes there were additional compartments for treasuries, but the long narrow naos itself was generally the only chamber It was the prototype for the CELLA of the Roman temple

Napa (nă'pŭ), city (1940 pop 7,740, 1944 special census pop 12, 987), co seat of Napa co , W Calif , on the Napa river and NE of San Francisco, settled 1840, inc 1872 It is in a fruit, dairy, and poultry area Products include wine, clothing, leather, and dairy products Fruit is canned and dried

Napanee (nă'pănē", nă"pănē'), town (pop 3,405), S Ont , on the Napanee river and W of Kingston, in a lumber and dairy-farming region

Napata (nūpā'tu, nupā'tu), ancient city, Egypt, just below the Fourth Cataract, where the Nile flows southwest From about the 8th cent B C , Napata was the capital of NUBIA Many great buildings like those of Thebes were built here by TIRHAKA (XXV dynasty) The capital of Nubia was later (perhaps 4th cent B C.) moved to Meroë, far up the river

Naperville (nā'pŭrvĭl), city (pop 5,272), NE Ill , E of Aurora, in a farm area; settled 1831–32, inc. 1857 It manufactures furniture and other products North Central College (Evangelical, coeducational, 1861) and an Evangelical seminary are here

Naphish (nā'fĭsh), son of Ishmael Gen. 25 15; 1 Chron 1 31 Nephish 1 Chron 5 19

Naphtali (năf'tulī) [Heb ,=wrestling], son of Jacob and Bilhah and progenitor of one of the 12 tribes Its allotment lay NW of the Sea of Galilee In its early days the tribe was warlike and its hero was BARAK It was part of the kingdom of Israel and shared its fate Gen 30 7, 46 24, 49 21 Nephthalim Mat 4 13,15, Rev 7 6

naphtha (năp'thu, năf'–), term usually restricted to a colorless, volatile, inflammable liquid mixture of hydrocarbons (chiefly octane and heptane) It is obtained as one of the more volatile fractions in the fractional distillation of PETROLEUM (when it is known as petroleum naphtha), in the fractional distillation of coal tar (coal-tar naphtha), and in a similar distillation of wood (wood naphtha) It is used widely as a solvent for various organic substances, such as fats and rubber, and in the making of varnish Because of its dissolving property it is important as a cleaning fluid, it is incorporated also in certain laundry soaps It sometimes serves as a fuel and an illuminant Originally the term indicated a colorless inflammable liquid obtained from the ground in Persia Later it came to be applied to a number of other natural liquid substances having similar properties

naphthalene (năf'thulēn, năp'–, năfthulēn', năp–), colorless, crystalline solid with a pungent, mothball odor, melting at 80°C , boiling at 218°C , and subliming upon heating It is a coal-tar derivative, insoluble in water, somewhat soluble in alcohol, soluble in benzene, and very soluble in ether, chloroform, and carbon disulphide Its molecule consists of 10 atoms of carbon and 8 of hydrogen arranged in two hexagonal BENZENE rings set side by side so that two of the carbon atoms form part of both rings, the hydrogen atoms are attached each to an outside carbon atom Derivatives of naphthalene are used in the preparation of dyes and as insecticides and organic solvents

naphthol (năf'thōl, –thōl, –thôl, năp'–), name used for either of two crystalline compounds having the same chemical formula but differing in the arrangement of the atoms of carbon, hydrogen, and oxygen making up their molecules (see ISOMERISM) They are distinguished as alpha- and beta-naphthol Both are derivatives (hydroxyl) of naphthalene, being prepared by the action of sulphuric acid on that substance Among the ways in which they differ is the form of their crystals—alpha-naphthol crystallizes in prisms and beta-naphthol in plates Both naphthols exhibit antiseptic properties They are soluble in alcohol and ether and slightly so in hot water. They are used in the preparation of certain azo dyes. Solutions of the two are used in analysis to indicate the presence of ferric (see IRON) compounds in solution. Alpha-naphthol turns such a solution violet, beta-naphthol turns it green.

Naphtuhim (năf'tūhĭm), descendant of Noah. Gen. 10 13, 1 Chron. 1 11

Napier, Sir Charles James (nā'pēr, nūpēr'), 1782–1853, British general, brother of Sir William F. P. Napier. Like his brother he served in the Peninsular War. Later in India he was chiefly responsible for the conquest of Sind (1841–43). See works about him by his brother.

Napier, John, 1550–1617, Scottish mathematician. He invented the logarithm and wrote *Mirifici logarithmorum canonis descriptio* (1614), containing the first logarithmic table and the first use of the word *logarithm* In 1617 his *Rabdologiae* appeared. This work contains various methods for the abbreviation of arithmetical calculations, including Napier's rods or bones and a kind of chessboardlike abacus worked by moving counters The principle of Napier's rods was based on the multiples of numbers In 1619, after Napier's death, his *Mirifici logarithmorum canonis constructio*, which gave the method of construction of his logarithms, was published by his son Robert and edited by Henry Briggs Napier introduced the decimal point in writing numbers

Napier, Robert Cornelis, 1st Baron Napier of Magdala, 1810–90, British general In the engineering service in India, he served in the wars against the Sikhs (1845–49) and in the relief of Lucknow (1857) He undertook an expedition to Ethiopia in 1868, capturing Magdala and compelling the release of British captives He later acted as commander in chief in India (1870–76) and as governor of Gibraltar See biography by his son, H. D Napier (1927), and his letters (ed by his son, 1936)

Napier, Sir William Francis Patrick, 1785–1860, British general and historian, brother of Sir Charles James Napier He served in the Peninsular War and wrote a famous and still authoritative *History of the War in the Peninsula* (6 vols , 1828–40)

Napier (nā'pēr), borough (pop 17,243, metropolitan pop 20,297), on E North Island, New Zealand, on Hawke Bay It is the seat of an Anglican cathedral The center of a rich grazing district, it exports meat and leather and has woolen mills and breweries Port Ahuriri is its harbor

Naples (nā'pulz), Ital *Napoli* (na'pōlē), city (pop 739,349, with suburbs 865,913), capital of Campania and of Naples prov , S Italy It is the second largest seaport of Italy and has machine, locomotive, leather, and food manufactures Built at the base and on the slopes of a ridge of hills rising from the Bay of Naples (an inlet of the Tyrrhenian Sea), Naples occupies one of the most beautiful sites of Europe The bay, extending from Cape Miseno in the north to the Sorrento peninsula in the south, is dominated by Mt Vesuvius and dotted with towns and villas Near its entrance are the islands of Capri, Ischia, and Procida Famous for its songs, festivals, and gaiety, Naples is a crowded and noisy city Most of its worst slums have been replaced by new buildings, the old Santa Lucia quarter is still the most characteristic An ancient Greek colony, Naples was mentioned as Parthenope, Palaepolis, and Neapolis It was conquered (4th cent B C) by the Romans, who favored it because of its Greek culture, its scenic beauty, and its baths Vergil, who often stayed here, is buried near by In the 6th cent A D Naples passed under Byzantine rule, in the 8th cent it emerged as an independent duchy Its autonomous development was checked by the Normans, in 1139 ROGER II added the duchy to his kingdom of Sicily Emperor Frederick II embellished the city and founded its university (1224) The execution (1268) of CONRADIN left Charles of Anjou (CHARLES I) undisputed master of the kingdom Charles transferred his capital from Palermo to Naples After the Sicilian Vespers (1282) Sicily proper passed to the house of Aragon, and the Italian peninsula S of the Papal States became known as the kingdom of Naples (see separate article) Naples was its capital until it fell to Garibaldi and was annexed to the kingdom of Sardinia (1860) In the Second World War the city suffered tremendous damage The industrial suburbs were heavily bombed by the Allies, but the worst destruction was wrought by the retreating Germans in 1943 The harbor section was demolished, entire blocks disappeared, and part of the rich archives and libraries were burned Among the innumerable churches (most of them restored in baroque style in the 17th and 18th cent), those of Santa Chiara, containing the tombs of the Angevin kings, and of Monteoliveto, rich in Renaissance sculpture, suffered most damage, the Cathedral of St Januarius, patron of the city, was also harmed In a chapel of the cathedral are two vials containing the saint's blood, which is said to liquefy miraculously twice a year Naples has several medieval castles (Castel dell' Ovo, Castel Nuovo, Castel Sant' Elmo). The imposing royal palace (17th and 19th cent) was damaged and despoiled A cultural and artistic center, Naples is particularly famous for its national museum (containing, among others, the Farnese collection and most of the objects excavated at Pompeii and Herculaneum) and for the San Carlo Opera, opened in 1737 As a musical center Naples reached its greatest brilliance in the 17th and 18th cent , Alessandro and Domenico Scarlatti, Porpora, Pergolesi, Paisiello, and Cimarosa were among the representatives of the Neapolitan style. Naples has a conservatory and several art academies. The aquarium also enjoys world fame.

Naples. 1 Town (pop 1,253), SW Fla., a resort on the Gulf coast S of Fort Myers, inc 1927. **2** Village (pop 1,152), W central N Y., in the Finger Lakes region, SW of Canandaigua, inc 1894. Wine and grape juice are made

Naples, kingdom of, former state, occupying the Italian peninsula south of the former Papal States It comprised roughly the present regions of CAMPANIA, ABRUZZI E MOLISE, BASILICATA APULIA, and CALABRIA Naples was the capital In the 11th and 12th cent the Normans under ROBERT GUISCARD and his successors conquered S Italy from the Byzantines The popes, however, claimed suzerainty over S Italy and were to play an important part in the history of Naples In 1139 ROGER II was invested by Innocent II with the kingdom of SICILY, of which the Norman fiefs in S Italy were a part FREDERICK II, CONRAD IV, MANFRED, and CONRADIN of Hohenstaufen succeeded the Norman dynasty Under them S Italy flowered, but in 1266 CHARLES I (Charles of Anjou), founder of the ANGEVIN dynasty, was invested with the crown He lost Sicily in 1282, but retained his territories on the mainland, which came to be known as the kingdom of Naples Refusing to give up their claim to Sicily, Charles and his successors warred with the house of Aragon, which held the island, until in 1372 Queen JOANNA I of Naples formally renounced her claim During her reign began the struggle for succession between Charles of Durazzo (later CHARLES III of Naples) and Louis of Anjou (LOUIS I of Naples) The struggle was continued by their heirs Charles's descendants, LANCELOT and JOANNA II, successfully defended their thrones despite papal support of their French rivals, but Joanna successively adopted as her heir ALFONSO V of Aragon and LOUIS III and RENÉ of Anjou, and the dynastic struggle was prolonged Alfonso defeated René in 1442 and was invested with Naples by the pope His successor in Naples, FERDINAND I (Ferrante), suppressed (1485) a conspiracy of the powerful feudal lords Meanwhile the Angevin claim to Naples had passed to the French crown with the death (1486) of René's nephew, Charles of Maine CHARLES VIII of France pressed the claim and in 1495 briefly seized Naples, thus starting the ITALIAN WARS Louis XII of France, jointly with Spain, dethroned Frederick, the last Aragonese king of Naples, in 1501, but fell out with his allies, who defeated him The treaties of Blois (1504 5) gave Naples and Sicily to Spain, which for two centuries ruled the two kingdoms through viceroys —one at Palermo, one at Naples Gonzalo FERNÁNDEZ DE CÓRDOBA was the first viceroy of Naples Under Spain, S Italy became one of the most backward and exploited areas in Europe Heavy taxation (from which the nobility and clergy were exempt) filled the Spanish treasury, agriculture suffered from the accumulation of huge estates by Italian and Spanish nobles (who, moreover, quarreled with each other) and by the church, famines were almost chronic, disease, superstition, and ignorance flourished The effects of these conditions are still felt The popular revolt led by MASANIELLO was crushed (1647) In the War of the Spanish Succession the kingdom was occupied (1707) by Austria, which kept it in the Peace of Utrecht (1713, see UTRECHT, PEACE OF) In connection with the War of the POLISH SUCCESSION, however, Don Carlos of Bourbon (later CHARLES III of Spain) reconquered Naples and Sicily The Treaty of Vienna (1738) confirmed the conquest, and the two kingdoms became subsidiary to the Spanish crown, ruled in personal union by a cadet branch of the Spanish line of BOURBON Naples now had its own dynasty, but conditions improved little In 1799 Ferdinand IV and his queen, MARIE CAROLINE, were expelled by the French. The PARTHENOPEAN REPUBLIC was set up, but the Bourbons returned the same year with the help of English arms under Lord NELSON Reprisals were severe, Sir John ACTON, the queen's lover, once more was supreme In 1806 the French again drove out the royal couple, who held only Sicily Joseph BONAPARTE, made king of Naples, was replaced in 1808 by Joachim MURAT Murat's beneficent reforms were revoked after his fall and execution (1815) by Ferdinand, who was restored to the throne In 1816 Ferdinand merged Sicily and Naples and styled himself FERDINAND I, king of the Two Sicilies For the remaining history of Naples, annexed to Sardinia in 1860, see TWO SICILIES, KINGDOM OF THE See Benedetto Croce *Storia del regno di Napoli* (1925)

Napo (nă'pō), river, more than 550 mi. long, rising in N Ecuador near Cotopaxi volcano and flowing SE into Peru, where it joins the Amazon Navigable for c.400 mi , it was first explored (1540) by ORELLANA and later (1638) by TEIXEIRA.

Napoleon I, 1769–1821, emperor of the French. Born Aug. 15 at Ajaccio, Corsica, the son of Carlo and Letizia BONAPARTE (or Buonaparte), young Napoleon was sent (1779) to French military schools at Brienne and Paris, where his small stature won him the nickname "the Little Corporal." He received his commission in the artillery in 1785. At the outbreak of the French Revolution he

took part in the Corsican uprising against PAOLI—an adventure which ended for the Bonapartes in 1793, when Paoli forced them to leave the island for France Bonaparte first attracted notice by his distinguished part in dislodging the British from Toulon (1793); he was promoted brigadier general and sent to the Italian front After a short imprisonment in the Thermidorian reaction (1794) he was released but remained out of favor A political event was to reopen his career overnight In Oct, 1795, the Convention was assailed by a Parisian mob (see VENDÉMIAIRE), and BARRAS, sharking the unpleasant duty of dealing with the situation, delegated his command to Bonaparte, his protégé, who dispersed the mob with what he called "a whiff of grapeshot"—a whiff which killed about 100 insurgents Napoleon's name was made After drawing up a plan for an Italian campaign, he was, again with Barras's help, made commander in chief of the Army of Italy He left for Italy in March, 1796, after marrying Josephine de Beauharnais (see JOSEPHINE) Assuming command of a starving and ragged army, he succeeded within a short time in transforming it into a first-class fighting force The brilliant success of his Italian campaign was based on three factors his supply system which he made virtually independent of the pinch-penny Directory by allowing the troops to live off the land, his reliance on speed and massed surprise attacks by small but compact units, against the larger but broken-up Austrian forces, and his magic influence over the morale of his soldiers, which enabled him to push them to incredible feats of endurance In MAY, 1796, Sardinia signed a separate peace After his victory at Lodi (May 10), Bonaparte entered Milan (May 14), laid siege to Mantua (July, 1796), and made a brief dash southward, obtaining favorable armistices from the king of Naples and the pope After the great victories of Arcole (Nov, 1796) and Rivoli (Jan, 1797) and the fall of Mantua (Feb, 1797), Bonaparte began to cross the Alps toward Vienna However, the slow advance of the northern French armies in Germany and the danger of being cut off in the rear caused him to arrange—without instructions from Paris—the truce of Leoben (April, 1797), later complemented by the Treaty of CAMPO FORMIO Now the idol of half of Europe Bonaparte returned to France and drew up a plan to crush the British empire by striking at EGYPT and, ultimately, at India The plan was supported by TALLEYRAND and by the directors, who were eager to rid themselves of the ambitious young general Bonaparte sailed with his fleet in May, 1798, and, shortly after landing, won a brilliant victory over the Mamelukes in the battle of the Pyramids (July, 1798) His successes, however, were made useless from the start by the utter destruction of the French fleet by Lord NELSON at Abouku (Aug 1–2) Turkey declared war on France An expedition to Syria was repelled at ACRE and was abandoned (May, 1799) when the plague broke out in the French army Meanwhile, matters were going from bad to worse in Europe The French were expelled from Italy by the forces of the Second Coalition (see FRENCH REVOLUTIONARY WARS), and at home the Directory faced bankruptcy Unannounced, Napoleon returned to France, leaving General KLÉBER in charge of a hopeless situation in Egypt Hailed as the "man of the hour," he fitted perfectly into a conspiracy already hatched by SIEYÈS, one of the directors *The Consulate* The Directory was overthrown by the coup d'état of 18 BRUMAIRE (Nov 9, 1799), and the CONSULATE was set up, with Bonaparte as First Consul The autocratic constitution of the year VIII was accepted by plebiscite Taking energetic measures, Bonaparte stabilized the French currency, established the Bank of France, and turned the tide of financial disaster Peace with the Church came with the CONCORDAT OF 1801, and legal reforms paved the way for the CODE NAPOLÉON In 1800, Napoleon turned against the foreign foe, crossed the St. Bernard, and defeated the Austrians at Marengo (June 14) With the Treaty of Lunéville (1801) with Austria and the Treaty of Amiens (1802) with England, the Second Coalition was ended, and France had become paramount on the Continent Napoleon's ambition did not rest In Aug, 1802, a plebiscite approved his becoming consul for life, a modified constitution, that of the year X, came into force In the same year he incorporated Piedmont into France and once more interfered in the affairs of the HELVETIC REPUBLIC England, on the other hand, failed to restore Malta to the Knights Hospitallers, as the Treaty of Amiens had stipulated Tension between the two countries increased, and in May, 1803, England again declared war on France Napoleon elaborately planned to invade England, but the invasion fleet which he assembled in Boulogne (1803–5) was repeatedly wrecked by storms, and a major part of the French fleet was engaged in the disastrous LECLERC expedition to Haiti, he abandoned the project

The Empire While warfare languished, Napoleon took advantage of the plot of Georges CADOUDAL against his life, seized and executed the duc d'ENGHIEN, and had himself proclaimed emperor of the French by a subservient senate and tribunate (May, 1804) Confirmation by plebiscite was a foregone conclusion, and on Dec 2, in the Cathedral of Notre Dame, Napoleon took the crown from the hands of Pope PIUS VII and set it on his own head An imperial court and a nobility were created The constitution of the year XII retained the features of the previous two constitutions, but its liberal provisions were gradually restricted. When Napoleon, in 1805, proclaimed himself king of Italy and annexed Genoa to France, a Third Coalition was formed against him by Great Britain, Austria, Russia, and Sweden Napoleon crushed the Austrians at Ulm, occupied Vienna, and won (Dec 2, 1805) his most brilliant victory over the combined Russians and Austrians at AUSTERLITZ Austria, with the harsh Treaty of Pressburg (Dec 26), was forced out of the coalition Prussia, which entered the coalition late in 1806, was thoroughly defeated at Jena (Oct 14), and Napoleon entered Berlin in triumph British sea power, however, had grown stronger than ever through Nelson's victory at TRAFALGAR (1805), and Napoleon resolved to defeat Britain by economic warfare His CONTINENTAL SYSTEM was answered by the British ORDERS IN COUNCIL On land, warfare with Russia continued The virtual defeat at EYLAU (Feb 8, 1807) was made good by Napoleon at Friedland (June 14), and Russia submitted By the Peace of Tilsit (July, 1807), FREDERICK WILLIAM III of Prussia lost half of his territories and became a vassal to France, Russia recognized the Grand Duchy of WARSAW, created from Prussian territory Sweden was defeated in 1808 with the help of Russia With only England left in the field, Napoleon was now master of the Continent The whole map of Europe was rearranged The states of Germany had been altered by the CONFEDERATION OF THE RHINE, Napoleon's allies, the electors of Bavaria, Württemberg, and Saxony, were made kings, the Holy Roman Empire was dissolved (1806), the kingdoms of Holland and Westphalia were created (1806 and 1807), with Napoleon's brothers Louis and Jérôme BONAPARTE occupying the thrones Napoleon's stepson, Eugène de BEAUHARNAIS, was made viceroy of Italy (1805), and a third brother, Joseph BONAPARTE, became king of Naples (1806) In 1808, Napoleon made Joseph king of Spain, and replaced him in Naples with his brother-in-law, Marshal Joachim MURAT Another Napoleonic marshal, Bernadotte, became heir to the Swedish throne in 1810 (see CHARLES XIV) An attempt (1809) by Austria to reopen war against France was crushed at Wagram (July 6, 1809), and resulted in the cession of Illyria to France by the Treaty of Schonbrunn The Papal States were declared annexed to France (1809), and when PIUS VII replied with an excommunication, he was imprisoned and forced to sign an additional concordat Perhaps the crowning glory was attained when, after securing an annulment of his marriage with Josephine, who was unable to bear him a child, he was married in March, 1810, to MARIE LOUISE, the daughter of Emperor Francis II A son was born to them (the "king of Rome," later known as the duke of Reichstadt or NAPOLEON II), and it seemed that Napoleon had founded a permanent, solid empire, when it suddenly collapsed under its own weight

Decline and Fall England had never submitted, and the Continental System proved difficult to enforce Napoleon's first signs of weakness appeared in the PENINSULAR WAR (1808–14) The victory of 1809 over Austria had been costly, and the victory of Archduke CHARLES at Aspern (May, 1809), showed that the emperor was not invincible Everywhere forces were gathering to cast off the Napoleonic yoke Napoleon's decision to invade Russia marked the turning point of his career His alliance with Tsar ALEXANDER I, dating from the Congress of ERFURT (1808), was tenuous When the tsar rejected the Continental System, which was ruinous to Russia's economy, Napoleon gathered the largest army Europe had ever seen The *Grande Armée*, some 500,000 strong, including troops of all the vassal and allied states, entered Russia in June, 1812 The Russian troops, under KUTUZOV and BARCLAY DE TOLLY, fell back, systematically devastating the land After the indecisive battle of Borodino (Sept 7), with about 80,000 casualties, Napoleon entered Moscow (Sept 14), where only a few thousand civilians had stayed behind On Sept 15, fires broke out all over Moscow, they ceased only on Sept 19, leaving the city utterly destroyed With his troops decimated, his prospective winter quarters burned down, his supply line overextended, and the Russian countryside and grain stores empty, Napoleon, after sending an unsuccessful plea to the tsar for peace, began his fateful retreat on Oct 19 Stalked by hunger, the *Grande Armée*, now only a fifth of its original strength, reached the Beresina late in November After the passage of that river, secured at a terrible sacrifice, the retreat became a rout On Dec 3 Napoleon left his army and hastened to Paris to prepare French defenses Of his allies, Prussia was the first to desert, a Prussian truce with the tsar (Dec 30) was followed by an alliance in Feb, 1813 England and Sweden joined the coalition, followed (Aug., 1813) by Austria, and the "War of Liberation" began At the Battle of the Nations at LEIPZIG (Oct 16–19), Napoleon was forced to retreat, despite his brilliant defense against a vastly superior enemy The allies now closed in on Paris, which fell to them on March 31, 1814 Napoleon abdicated (April 12) and was exiled to Elba, which the allies gave him as a sovereign principality His victors were still deliberating at the Congress of Vienna, when Napoleon, with a handful of followers, landed near Cannes (March 1, 1815) In the course of a triumphant march northward he once more rallied France behind him LOUIS XVIII fled, and Napoleon entered Paris (March 20), beginning his ephemeral rule of the Hundred Days Attempting to reconstruct the empire, he liberalized the Constitution, but his efforts were cut short when warfare began again Napoleon was utterly crushed in the WATERLOO CAMPAIGN (June 12–18) He again abdicated and surrendered himself to a British warship, the *Bellerophon*, in the hope of finding asylum in England Instead, he was shipped as a prisoner of war to the lonely island of SAINT HELENA, where he spent his remaining years quarreling with the British governor, Sir Hudson LOWE, talking with his ever-dwindling group of faithful followers, and dictating his memoirs After long suffering from cancer, he died May 5, 1821 The Bourbon monarchs were restored in France, but Bonaparte was not forgotten The Napoleonic legend, the picture of a liberal conqueror carrying the eagles and standards of the French legions and the motto of the French Revolution to the peoples of the world, was a potent factor in French history and helped make Napoleon's nephew emperor as Napoleon III No less great was Napoleon's impact on European literature in the romantic era Estimates of Napoleon's place in history differ widely A certain parallelism between his career and that of Adolf Hitler has greatly harmed Napoleon's repute in recent years He was beyond doubt one of the greatest conquerors in history He also promoted the growth of liberalism, introduced an admirable code of laws, and improved the economic condition of his people Though he made use of such ruthless police chiefs as FOUCHÉ and SAVARY to suppress all opposition, he often was surprisingly generous to his enemies Such men as Goethe admired him throughout their lives, and Beethoven had made him his hero until Napoleon showed ambitions for the crown Napoleon was deeply interested in science, which he encouraged unstintingly, in the arts, he displayed a dubious taste for pseudo classicism and pompousness, but his era produced the EMPIRE STYLE and saw the beginnings of the transformation of Paris into a modern city Besides the duke of Reichstadt, Napoleon had at least one son, Count Alexander WALEWSKI Napoleon's remains were ordered returned to France by Louis Philippe in 1840 and are now entombed under the dome of the Invalides in Paris More or less apocryphal sayings and anecdotes illustrating Napoleon's character, manners, and private life are as innumerable as the books written about him A standard biography is that by August Fournier See also the writings of Louis Madelin, J H ROSE, Frédéric MASSON, Albert VANDAL, Eugene Tarlé, and Octave Aubry, and the bibliographies in their works, Napoleon's own memoirs, dictated to LAS CASES and others, and his correspondence Among the countless contemporary memoirs, those of P P de SÉGUR and A A L de CAULAINCOURT are especially noteworthy

Napoleon II, 1811–32, son of Napoleon I and MARIE LOUISE, known as the king of Rome (1811–14), as the prince of Parma (1814–18), and after that as the duke of Reichstadt Napoleon's abdication in 1814 was in favor of his son, so that the king of Rome was known as Napoleon II, though he never ruled His life after 1815 was that of a virtual prisoner in Vienna, where he died of tuberculosis In 1940 his remains were transferred, as a "gift" to France from Adolf Hitler, from Vienna to the dome of the Invalides in Paris, where he now rests beside his father The pitiful life of the "Eaglet" is the subject of Rostand's drama *L'Aiglon* See Octave Aubry, *The King of Rome* (Eng tr, 1932)

Napoleon III (Louis Napoleon Bonaparte), 1808–73, emperor of the French (1852–70), son of Louis BONAPARTE, king of Holland The nephew of Napoleon I, he spent his youth with his mother, Hortense de BEAUHARNAIS, in Switzerland and Germany, studied artillery under General Dufour, and became a captain in the Swiss army Animated by a mixture of liberalism and Bonapartism, he indulged (1830–31) in revolutionary activities in Italy In 1836 he attempted, with a group of Bonapartists, a ludicrous military coup at Strasbourg Louis Philippe's government exiled him, putting him aboard a ship bound for New York He returned to Switzerland The French request (1838) for his expulsion from Switzerland was refused by the Swiss diet and nearly led to war, but Louis Napoleon finally left voluntarily for England A new attempt (1840) to stir up an army insurrection was made at Boulogne-sur-Mer He

was tried and sentenced to life imprisonment Detained in the fortress of Ham, Somme dept., he wrote letters, pamphlets, and books, among them his mildly socialistic *Extinction du pauperisme* He made his escape in 1846 and went to England After the FEBRUARY REVOLUTION of 1848 he returned to France He rapidly gathered a following, was elected to the national assembly, and in Dec , 1848, defeated Louis Eugène CAVAIGNAC in the presidential elections by an overwhelming majority His surprising success was largely due to the excellent propaganda of his chief followers and to the unpopularity of Cavaignac with the working classes As president of the Second Republic, Louis Napoleon carefully prepared his eventual seizure of dictatorial powers, while pretending to defend French democracy against the legislative assembly The Catholic opposition was strong at first, but he conciliated it by allowing (1849) a French army to restore Pope Pius IX to Rome and by assenting (1850) to the education bill presented by Frédéric de Falloux, which greatly favored the Church Late in 1849 his administration took a decidedly dictatorial turn Increasingly severe measures against radicalism prepared the coup d'état of Dec 2 1851, largely engineered by Louis Napoleon's half brother, the duc de MORNY The legislative assembly was dissolved and its meeting place occupied by the army, universal suffrage was restored, and a plebiscite, authorizing the revision of the constitution, was announced An attempted workers' uprising was repressed with a brutality which anticipated the methods of more modern dictators The plebiscite, partly thanks to Morny's intimidating measures, overwhelmingly favored constitutional revision The new constitution (Jan , 1852) gave the president dictatorial powers and created a council of state, a senate, and a legislative assembly subservient to the president Subsequent decrees barred republicans from the ballot and throttled the press Finally, in Nov , 1852, a plebiscite confirmed the dictator's new title, emperor of the French For eight years Napoleon continued to exercise dictatorial rule which, however, was tempered by considerable material progress His foreign ventures were successful at first The CRIMEAN WAR (1854–56) and the Congress of Paris (see PARIS, CONGRESS OF) brought little material advantage to France but restored its leading position on the Continent Napoleon now turned toward Italy, the unification of which he advocated Meeting CAVOUR at Plombières, he secretly agreed on a joint campaign of France and Sardinia against Austria and on a general redraft of the Italian map, this involved the incorporation of Lombardy, Venetia, and Emilia-Romagna with the kingdom of Sardinia and the compensation of France by Savoy and Nice War broke out in 1859 (see RISORGIMENTO) However, after the costly victory of the French and Sardinians at SOLFERINO, Napoleon suddenly deserted his Italian ally and, to the indignation of the Italians made a separate peace with Austria at VILLAFRANCA DI VERONA This act was partly motivated by the opposition of the clerical party in France to a policy threatening the PAPAL STATES, which Napoleon now took under his protection Having lost much of his popularity, the emperor inaugurated a more liberal domestic policy, widening the powers of the legislative assembly and lifting many restrictions on civil liberties During the "Liberal Empire" (1867–70) such opposition leaders as Jules FAVRE, Émile OLLIVIER, and Adolphe THIERS were the outstanding figures A commercial treaty (1860) with Great Britain opened France to free trade and improved Franco-British relations Imperialistic expansion was pushed by the French-British expedition (1857–60) against China, the acquisition of COCHIN CHINA, and the construction of the SUEZ CANAL Less fortunate was Napoleon's intervention (1861–67) in the affairs of MEXICO, the French troops finally withdrew upon the demand of the United States, leaving Emperor MAXIMILIAN to his fate Napoleon remained neutral in the AUSTRO-PRUSSIAN WAR of 1866, mistakenly counting on an Austrian victory The sudden rise of Prussia under the leadership of BISMARCK caused Napoleon to reorganize the French army The confidence he displayed in French military strength was, as it turned out, misplaced Napoleon's aggressive attitude regarding the candidature of a Hohenzollern prince to the Spanish throne gave Bismarck the opportunity to goad him into war (see EMS DISPATCH) The FRANCO-PRUSSIAN WAR (1870–71) brought ruin to the Second Empire, Napoleon himself took the field, leaving his empress, EUGÉNIE, as regent He early devolved his command to BAZAINE He was caught in the disaster of Sedan (Sept 1, 1870), captured by the Prussians, and declared deposed (Sept 4) by a bloodless revolution in Paris Released after the armistice (1871), he went into exile in England He bore his defeat with remarkable dignity His only son, the prince imperial (see under BONAPARTE, family), fell in British service Napoleon III was an enigmatic and complex figure puzzling to historians His policy was contradictory, swaying from ruthless self-aggrandizement and rank imperialism to idealistic schemes and generosity. However, he was mostly unsuccessful in both tendencies his position in favor of national self-determination helped to bring about German unity which proved his undoing, his neglect of the same principle in the Mexican venture brought him no advantage The superficial brilliance of his reign left one permanent result—the planning of modern PARIS The official intellectual life of the Second Empire was arid and academic, while the true cultural leaders of the period, among whom Victor HUGO was outstanding, opposed his regime Modern French poetry and art began during the Second Empire with IMPRESSIONISM and the early SYMBOLISTS Alexandre DUMAS the younger and Jacques OFFENBACH were representative of the mundane aspects of Parisian society See Alexis de Tocqueville, *Recollections* (complete Eng tr , 1949), Pierre de la Gorce, *Histoire du second empire* (7 vols , 1894–1905), Émile Ollivier, *L'Empire libéral* (17 vols , 1895-1915), Philip Guedalla, *The Second Empire* (1922), F A Simpson, *The Rise of Louis Napoleon* (new ed , 1925) and *Louis Napoleon and the Recovery of France* (1923), Robert Sencourt, *Napoleon III* (1933), Alfred Neumann, *Another Caesar* (1935) and *The Gaudy Empire* (1937), Octave Aubry, *The Second Empire* (Eng tr , 1940), Albert Guérard, *Napoleon III* (1943)

Napoleon, village (pop 4,825), co seat of Henry co , NW Ohio, on the Maumee river and SW of Toledo, platted 1832 Its manufactures include farm machinery and food products

Napoleonic Wars, 1803–15, the wars waged by or against NAPOLEON I, they followed the FRENCH REVOLUTIONARY WARS (1792–1802)

Napoleonville, town (pop 1,301), parish seat of Assumption parish, SE La , S of Baton Rouge, founded c 1818, inc 1878 It has a fine old church and several ante-bellum houses

Nappanee (năp'ănē, năpănē'), city (pop 3,028), N Ind , SE of South Bend, platted 1874, inc 1926 It is in an area growing mint and onions, and furniture is manufactured

Nara (nä'rä), city (1940 pop 57,273, 1947 pop 82,399), capital of Nara prefecture, S Honshu, Japan First permanent capital (710–84) of Japan, this ancient cultural and religious center has many Buddhist temples and Shinto shrines The noted temple, Todai-ji, has an 8th-century bronze image of Buddha The Imperial Museum, housing art treasures of the Nara period (700-800), and the park are celebrated Near by is Horyu-ji, built in the 7th cent , the oldest Buddhist temple in Japan, with the grave of Jimmu, the first emperor Most of the population of the prefecture lives in the vicinity of Nara

Narbada or **Nerbudda** (both nŭrbōō'dŭ), river, c 750 mi long, rising in Madhya Pradesh, India, and flowing W to the Arabian Sea It forms part of the boundary of Madhya Pradesh and Madhya Bharat and crosses Bombay state The Narbada, turbulent and confined between steep banks, is useless for navigation and irrigation A pilgrimage on foot from its mouth to the source and back is highly esteemed by Hindus

Narberth (när'bûrth), borough (pop 5,217), SE Pa , near Philadelphia, settled 1860, inc 1895

Narbonne (närbôn'), city (pop 26,301), Aude dept , S France, in Languedoc, near the Mediterranean coast As Narbo Martius, it was the first Roman colony established (118 B C) in Transalpine GAUL and became the capital of Narbonensis Taken by the Arabs in A D 719 and by the Franks in 759, it became the seat of the viscounts of Narbonne, vassals of the counts of Toulouse Its port, later silted up, brought great wealth to the city, which long had its own government and its magistrates, the consuls Narbonne was an important center of the Jews in the Middle Ages Their expulsion (late 13th cent) and the Black Death (1510), which is said to have taken 30,000 lives, were severe blows to the city's prosperity An archiepiscopal see since the 3d or 4th cent , Narbonne has a splendid cathedral and an archiepiscopal palace (now the town hall) dating from the 13th cent

narcissism (närsĭ'sĭzĭm), Freudian term, drawn from the Greek myth of Narcissus, indicating an exclusive self-absorption A normal stage in the development of children, it is called secondary narcissism when occurring after puberty , it indicates that the libido or sexual energy of the individual is directed exclusively towards himself and that, therefore, he is incapable of emotional relationships with others

Narcissus (närsĭ'sŭs), in Greek myth, beautiful youth who refused all offers of love, including that of ECHO On seeing himself in a pool he fell in love with his image and, pining away, died for love of himself

Narcissus, Roman whose household was partly Christian Rom 16 11

Narcissus, d A D 54, secretary of the Roman Emperor Claudius I A freedman, he had great influence In 43 he had a command in the expedition to Britain He revealed to Claudius the intrigue of MESSALINA and expedited her death (A D 48) The woman he chose, however, for Claudius' next wife was passed over in favor of AGRIPPINA II, who was hostile to him. She drove Narcissus to commit suicide at Claudius' death. Narcissus amassed a fortune equal to many millions of dollars

narcissus, name for several species of the genus *Narcissus*, which includes also the daffodil and jonquil These names are often used interchangeably, but strictly the daffodil is *Narcissus pseudo-narcissus*, yellow, with a long trumpet-shaped central corona, the jonquil is *Narcissus jonquilla*, fragrant, usually yellow, with a short, soft corona and with very narrow, nearly round leaves; the poet's narcissus is *Narcissus poeticus*, fragrant, white, with a short, stiff corona having a red rim, and the polyanthus narcissus is *Narcissus tazetta* with a short, soft corona, leaves flat and about three fourths of an inch broad—it includes the varieties paper-white narcissus and Chinese sacred lily All of these are hardy with the exception of the polyanthus narcissus, which in the North is cultivated for forcing indoors—often in water All species are Old World bulbous plants. See also ROSE OF SHARON

narcosis (närkō'sĭs), state of stupor induced by drugs The use of narcotics as a therapeutic aid in psychiatry is believed to have a history dating back to the use of opium for mental disorders by the early Egyptians Prolonged narcosis was employed at the beginning of the 20th cent , its chief value being the reduction of excitement and tension in the psychotic patient J S Horsley introduced (1936) the term *narcoanalysis* for the use of narcotics to induce a trancelike state in which the patient talks freely and intensive psychotherapy may be applied It was used with considerable success in treatment of acute combat neuroses during the Second World War

narcotics (närkŏ'tĭks), substances which affect man and other animals in such a way as to produce a stupor that eventually becomes profound coma and may result in death Narcotics are used in medicine to relieve pain (anodynes) or to produce sleep (hypnotics) The various anesthetics may be termed narcotic, but the term is generally reserved for certain drugs, although the distinction is artificial The chief narcotics are OPIUM and opium preparations (COCAINE, MORPHINE, and heroin, CODEINE, and cannabis indica) Opium contains chiefly morphine and some related alkaloids In medicine the narcotic drugs are most useful, but their use by individuals has led to an enormous world-wide illicit traffic, fought by the various nations for many years In the United States the Bureau of Narcotics was created (1930) in the Treasury Dept In May, 1931, a conference for the limitation of the manufacture of narcotic drugs and their distribution was held in Geneva, most nations being represented The various nations agreed to manufacture only sufficient narcotics for medical requirements, and such drugs were to be transported only by licensed persons A commission on narcotic drugs was established (1946) by the General Assembly of the United Nations See also DRUG ADDICTION

Narew (nä'rĕf), Rus *Narev* (nä'rĕf), river of E Europe, rising 45 mi NE of Brest (Byelorussian SSR) and flowing 245 mi W to the Vistula near Warsaw (Poland) The Narew is connected with the Pripet, the Niemen, and the Pregel rivers, it is navigable for about half its course Its chief tributary is the Western Bug

Narezhny, Vasily Trofimovich (vŭsĕ'lyĭ trŭfē'mŭvĭch nŭrĕzh'nĭ), 1780–1825, Russian novelist In his use of the Ukraine as background for his novels and in his realistic manner he was the direct forerunner of Gogol He is best known for the long novel *The Russian Gil Blas* (1814)

narghile. see PIPE, TOBACCO

Nariño, Antonio (äntō'nyō närĕ'nyō), 1765–1823, Colombian revolutionist, b Bogotá A liberal intellectual, Nariño was one of the first to foment revolution against Spain in South America For secretly translating and distributing copies of *The Declaration of the Rights of Man* he was condemned to prison (1795), but escaped to France and England, returning (1797) to New Granada to continue secret agitation Arrested, he was released, imprisoned again, and, after an escape, confined at Cartagena He was freed by the revolutionists and, returning to Bogotá, became (Sept , 1811) president of Cundinamarca, one of the independent states formed after the dissolution of the viceroyalty of New Granada Advocating strong central government as the only way of preserving independence, Nariño was opposed by the military juntas of other states, which desired simply a loose federation He was involved in civil wars with the federalists until he was granted dictatorial powers and succeeded in uniting the patriot forces to repel a royalist invasion He drove the Spanish from Popayán, but was defeated (May, 1814) at Pasto He surrendered himself but not his army and was later imprisoned for four years in Cádiz He was released by Spanish revolutionists in 1820 and returned to aid Simón BOLÍVAR, who made him vice president of the republic of Greater Colombia (1821), but he resigned two months later. Often vilified for his stubborn adherence to his own opinions, Nariño was not recognized until many years later as one of the greatest and most self-sacrificing

of the early advocates of independence. He was a propagandist rather than a statesman

Narke, Swed. *Närke* (nĕr'kŭ), historic province of central Sweden. It is now administratively part of Orebro co

Naroda (nä'rŭdŭ), peak, 6,184 ft high, RSFSR, the highest peak of the Urals, in the northern section of the range Until its discovery in the 1930s Telpos-Iz was thought to be the highest point

Narragansett (nărugŭn'sĭt), town (pop. 1,560), S R.I , along the west shore of Narragansett Bay, N from Point Judith, settled in the mid-17th cent , set off from South Kingstown 1888, inc 1901 The resort village **Narragansett Pier** grew up near a pier built in the 18th cent to accommodate trade and travel The 1938 hurricane did great damage

Narragansett Bay, arm of the Atlantic, 30 mi long and from 3 to 12 mi wide, deeply indenting Rhode Island state Its many inlets provided harbors that were advantageous to colonial trade and later to resort development At the head is Providence Newport and Portsmouth are on Rhode Island, at the entrance Other islands are Conanicut and Prudence The 1938 hurricane swept up the bay, carrying destruction along the shores

Narragansett Indians, tribe of North American Indians of the Algonquian linguistic stock In the early 17th cent they occupied most of Rhode Island, from Narragansett Bay on the east to the Pawcatuck river on the west The Narragansett escaped the great pestilence of 1617 which swept through S New England, and the remnants of tribes who had suffered joined them for protection Thus the Narragansett became a powerful tribe In 1636 Canonicus, the Narragansett chief, sold Roger Williams the land on which he settled Williams gained great influence over the Narragansett, inducing them to become the allies of the Massachusetts colonists in the Pequot War (1637) The Narragansett in 1674 numbered some 5,000 The next year witnessed the outbreak of King Philip's War (see Philip), which destroyed the Indian power in S New England The Narragansett shared the common fate Their fort near the site of Kingston, R I , was attacked (1675) by a colonial force under Josiah Winslow, and in that engagement, known as the Swamp Fight, the Narragansett under Canonchet lost almost a thousand men The survivors migrated to the north and to the west, but a number of them received permission to return and settle among the Niantic Indians on a tract near Charlestown, R I , the combined group taking the Narragansett name Their numbers steadily declined, and by 1832 there were 80 left A few Narragansett, after the Swamp Fight, had joined the Mahican and the Abnaki The Narragansett were of the Eastern Woodlands culture, farming corn and living in wigwams See H M Chapin, *Sachems of the Narragansetts* (1931)

Narragansett Pier, R I see Narragansett

Narrows, town (pop 1,489), SW Va , on the New River and in the Alleghenies near the W.Va line, inc 1904

Narrows, the see New York Bay.

Narses (nar'sēz), c 478–c 573, Roman official and general, one of the eunuchs of the palace He assisted in the suppression of the Nika riot (532) by bribing the Blues of the Circus to return to their allegiance to Justinian I In 538 he was sent to Italy to cooperate with Belisarius, their dissensions delayed the campaign, and he was recalled After the recall of Belisarius, he returned to Italy and completed the conquest, defeating (552) Totila He defeated (554) an army of Franks and Alemanni at Capua He was subsequently appointed exarch of Italy, but his administration was unpopular, and he was recalled

narthex (nar'thĕks), entrance feature peculiar to early Christian and Byzantine churches, though also found in some Romanesque churches, especially in France and Italy Usually extending across the entire west front of the building, it was a vestibule for the penitents and catechumens who were not admitted to the church proper The narthex was either enclosed within the building and often separated from the nave by a more screen of columns or consisted of an exterior colonnaded or arcaded portico In the latter case it was sometimes merely a continuation of the atrium, as in a number of Italian basilical churches, including the original basilica (4th cent) of St Peter's Church, Rome The inner narthex was particularly characteristic of the monastic churches, where admission was restricted In churches having both types of narthex, as in Hagia Sophia, Constantinople (originally a Christian church), the outer one is termed exonarthex The 12th-century narthex of St Mark's, Venice, is a deep, vaulted vestibule, shut off from the church interior and adorned with superb mosaics With the growth of unrestricted entry into the churches, the narthex served no further ritual purpose after the 13th cent. The deeply recessed portals of Gothic cathedrals are derivatives of the narthex

Naruszewicz, Adam Stanislaw, Polish *Adam Stanislaw Naruszewicz* (ä'dăm stanĕs'wäf nărōōshĕ'vĕch), 1733–96, Polish historian. A Jesuit, he became, after the suppression of his order, bishop of Smolensk (1788) and of Lutsk (1790). At the court of Stanislaus II he held a position equivalent to that of poet laureate. Naruszewicz organized extensive historical research in the archives and wrote a seven-volume history (1780–86) of the Polish nation

Narva (när'vŭ), city (pop 23,512), NE Estonia, on the Narva river and on the Russian border It has large cotton and linen manufactures, machinery plants, and sawmills Founded by the Danes in 1223, Narva passed to the Livonian Knights in 1346 and was a member of the Hanseatic League After the dissolution (1561) of the Livonian Order, Narva was first seized by the Russians, then taken (1581) by the Swedes, it continued to be contested by the two nations As early as in 1492 Ivan III built the fortress Ivangorod on the right bank of the Narva, facing the Hermann fortress of the knights In 1700 Charles XII of Sweden, with inferior forces, resoundingly defeated Peter I of Russia at Narva in the first great battle of the Northern War Peter, however, captured the city in 1704, and it remained in Russian hands until 1919 In 1945 all Estonian territory E of the Narva, including Ivangorod castle, was ceded to the RSFSR The city is dominated by the two old fortresses and it has retained a 14th-century Eastern Orthodox cathedral (originally Roman Catholic), and a 17th-century town hall and exchange building

Narva, river, 47 mi long, NE Europe, forming the border between Estonia and RSFSR It rises in Lake Peipus and flows NNE past Narva into the Gulf of Finland The falls at Narva supply power for the textile industry of that city

Narváez, Pánfilo de (pan'fēlō dā närvä'ĕth), c 1470–1528, Spanish conquistador After service in Jamaica, he aided Diego de Velázquez in conquering Cuba and was sent (1520) to Mexico by Velázquez to force Cortés into submission Narváez's force was defeated, and he was captured and imprisoned Released in 1521, he returned to Spain, and Charles V commissioned him *adelantado* to conquer and settle Florida With five vessels and 600 men he sailed from Sanlúcar in June 1527, and, after desertions and storms had cost the expedition much in time and men, he reached Florida (probably near Tampa Bay) in April, 1528 Narváez sent his ships on towards Mexico and then led 300 men inland to Apalachee (near the present Tallahassee) in a futile search for gold Disappointed and much harassed by Indians, the Spanish turned back to the coast There they built several crude vessels in which they set out for Mexico, but all except Cabeza de Vaca and three companions were lost off the coast of Texas or after landing among hostile Indians See E G Bourne, *Spain in America, 1450–1580* (1904), W Lowery, *Spanish Settlements within the Present Limits of the United States 1513–1561* (1901), Gonzalo Fernández Oviedo y Valdez "The Expedition of Pánfilo de Narváez," ed by Herbert Davenport in *Southwestern Historical Quarterly,* Vols XXVII–XXVIII (1923–25)

Narváez, Ramón María (rämōn' märē'ä närvä'ĕth), 1800–1868, Spanish soldier and statesman He distinguished himself in the fighting against the Carlists (1833–39) When Espartero rose to power, Narváez joined (1840) the partisans of Maria Christina in exile He returned in 1843 to take part in Espartero's overthrow and was created (1845) duque de Valencia The leader of the moderates, Narváez held the premiership often after 1844 His reactionary policy suppressed revolutionary movements, but it also prepared the uprising which soon after his death caused the downfall of Queen Isabella II

Narvik (närvĭk), town (pop 10,281), Nordland co , NW Norway, a port on Ofoten Fjord opposite the Lofoten Islands Called Victoriahavn until 1898, it was founded (1887) as the Atlantic port for the Kiruna iron mines in Sweden Its harbor is ice free In the Second World War, Narvik fell to the Germans when they invaded Norway on April 9 1940 To prevent the Germans from using Narvik as a shipping base for Kiruna ore, an Allied expeditionary force recaptured the port (May 28, 1940) after heavy fighting, but had to abandon it on June 9

Narym (nŭrĭm'), region, RSFSR, in Siberia, N of Tomsk It is drained by the Ob The village of Narym is its center The region was one of the places of exile for political exiles, including Stalin, under the tsarist regime, and, according to some reports, it has also been used for political prisoners

Naryn (nŭrĭn'), river, 470 mi long, Kirghiz SSR and Uzbek SSR It rises in several branches in the Tien Shan mountain system and flows generally W through the Fergana Valley, where it joins with the Kara Darya to form the Syr Darya Its lower course is used for irrigating a cotton-growing area The city of Naryn (pop 4,552), Kirghiz SSR, on the upper course of the river, at an altitude of 6,610 ft , is the center of a wheat-growing and sheep-grazing district

Nasby, Petroleum V , pseud of **David Ross Locke,** 1833–88, American journalist and satirist, b Vestal, N Y. He was editor of the Findlay, Ohio, *Jeffersonian* when he first became prominent by publishing in it (1861) the Nasby letters. The writer, the Rev. Petroleum Vesuvius Nasby, was ostensibly an ignorant, violently prejudiced proslavery sympathizer, and the letters, which caught the fancy of readers from Lincoln down, were of great aid to the Union cause in the Civil War When Locke became editor and part owner of the Toledo *Blade,* he transferred the series to that paper , he used the letters as satiric propaganda for other causes, including the favorite one of his later life, prohibition See Cyril Clemens, *Petroleum Vesuvius Nasby* (1936)

Naseby (nāz'bē), village, Northamptonshire, England, SW of Market Harborough Near here, on June 14, 1645, the parliamentarians under Fairfax and Cromwell defeated the royalists under Charles I and Prince Rupert in a decisive battle An obelisk commemorates the battle

Nash, John, 1752–1835, English architect, pupil of Sir Robert Taylor He began to work in London c 1792 His capacities were greatest in town planning, and he is chiefly known for his boldly planned development of the Marylebone region of London His scheme, as put into execution in 1812, comprehended Regent St , with its Quadrant, and Regent's Park, with its terraces and surrounding streets of formally designed town houses Nash also designed Haymarket theater and remodeled Buckingham Palace He imitated the neoclassic Regency style and was responsible for an extensive use of stucco for the façades of city buildings See biography by J N Summerson (1935)

Nash, Ogden, 1902–, American humorous poet, b Rye, N Y , studied at Harvard The versifying in his satirical or nonsense verse is original and often absurd His collections include *Hard Lines* (1931), *I'm a Stranger Here Myself* (1938), *The Face Is Familiar* (1940), *Many Long Years Ago* (1945), *Selected Verse* (1946), and *Versus* (1949)

Nash, Paul, 1889–1946, English painter and wood engraver, studied at the Slade School of Art, London Wounded in the First World War, he later returned to the front as official artist, an office he filled also in the Second World War Examples of his war paintings and drawings are in the Imperial War Museum, London Nash is well known for his landscapes, often in water color These are usually subdued in color, poetic, and abstract His wood engravings for the book of Genesis show his skill in that technique

Nash, Richard, 1674–1762, Englishman of fashion, known as Beau Nash As master of ceremonies at Bath he was the able and recognized leader of society He maintained his luxurious mode of living by gambling until gaming was forbidden in 1745 He was later pensioned by the town See Lewis Melville, *Bath under Beau Nash* (1907), Edith Sitwell, *Bath* (1947)

Nashe or **Nash, Thomas** (both năsh), 1567–1601, English satirist, studied at Cambridge He went to London before 1589 to live by his pen His *Anatomie of Absurditie* (1589) was full of ephuistic moral reflections and satiric studies of manners Hatred of Puritanism led Nashe into the Martin Marprelate controversy, in which some of the pamphlets signed "Pasquil" are attributed to him *Pierce Pendilesse His Supplication to the Divell* (1592) was a bitter satire on contemporary society in which he also answered an attack on him by Richard Harvey A scurrilous pamphlet battle between him and Gabriel Harvey resulted and was complicated by Nashe's defense of his dead friend Robert Greene *Christ's Teares over Jerusalem* (1593) first continued an attempt to end the quarrel, but a second edition continued it, and *Have with You to Saffron-Walden* (1596) was a merciless blast of ridicule at Harvey Nashe's best work was *The Unfortunate Traveler or The Life of Jack Wilton* (1594)—a forerunner of the type of novel written by Defoe and of later historical fiction—and *Nashe's Lenten Stuff* (1599) a burlesque panegyric of the herring industry For his part in the lost play *The Isle of Dogs* (1597) he was sentenced to prison, but seems to have evaded serving His one extant play is *Summer's Last Will and Testament* (1600), *Dido Queen of Carthage* was published in 1594 as by Marlowe and Nashe See his works (ed by R B McKerrow 5 vols , 1904–10), E G Harman, *Gabriel Harvey and Thomas Nashe* (1923)

Nashoba (năshō'bŭ) former community, SW Tenn , on the Wolf river near Memphis It was founded by Frances Wright and others as a place in which Negro slaves, purchased especially for the purpose, might be educated for freedom Influenced by the example of Robert Owen's cooperative colony at New Harmony, Ind , Miss Wright bought the land in 1825 She and the other trustees were impractical administrators, however, and the venture was unsuccessful from the beginning The difficulties of pioneering were increased by the prevalence of swamp fever and by poor management during her frequent absences The community was denounced as a center of free love and miscegenation and by 1829 was practically deserted by its white members The following year the slaves were transported to Haiti

Nashua (nă'shōōă) **1** Town (pop 1,439), NE Iowa, near the confluence of the Cedar and Little Cedar rivers SE of Charles City, inc. 1857 At Bradford, a village near by, is the Little Brown Church in the

Vale, familiarized in the song by W. S. Pitts. **2** City (pop 32,927), a co seat of Hillsboro co , S N H , at the confluence of the Nashua with the Merrimack near the Mass. line, settled c 1655, inc 1673 as Dunstable, reinc 1746, renamed 1836, chartered as a city 1853 Having good water power, Nashua developed as a textile-mill town in the first half of the 19th cent Some of the Nashua Company houses still stand, but fire destroyed large sections of the city in 1930 Nashua's manufactures include textiles, shoes, and wood and paper products A threatened closing in 1948 of the largest textile mill resulted in sale of the mill to a group of citizens who arranged partial operation of the mill immediately with eventual utilization of the rest of the plant in other ways The city has a municipal airport

Nashville. 1 City (pop 2,782), co seat of Howard co , SW Ark , in a rich diversified farm area It is noted as a peach-shipping center **2** City (pop 2,449), co seat of Berrien co , S Ga , N of Valdosta, in a tobacco and farm area, inc 1892 **3** City (pop 2,418), co seat of Washington co , S Ill , ESE of St Louis, in a farm and coal area, inc 1853 **4** Town (pop 493), co seat of Brown co , S central Ind , E of Bloomington In an area of beautiful scenery, it attracts many tourists **5** Village (pop 1,279), S Mich , on a tributary of the Grand and SW of Lansing, platted 1865, inc 1869 Tables are made here **6** Town (pop 1,171), co seat of Nash co (formed 1777), E central N C , ENE of Raleigh, in a tobacco, cotton, and diversified farm area **7** City (pop 167,402), state capital, and co seat of Davidson co , central Tenn , on the Cumberland river, in a fertile farm region Founded in 1780 by James Robertson (who is buried here), it was incorporated as a city in 1806 and was made permanent capital of the state in 1843 The northern terminus of the NATCHEZ TRACE, the city developed early as a cotton center and river port and later as a railroad center After the fall on Feb 16, 1862, of Fort Donelson (see DONELSON, FORT), Nashville was abandoned to Union troops under D C BUELL and became an important Union base for the rest of the Civil War The Union general G H THOMAS won a decisive victory over J B Hood here, Dec 15–16, 1864 The city today is a port of entry and an important shipping, industrial, and educational center Among its manufactures are food and tobacco products, shoes, rayon, and cellophane, and it has printing and publishing houses and railroad shops In Nashville are VANDERBILT UNIVERSITY, FISK UNIVERSITY, MEHARRY MEDICAL COLLEGE, George Peabody College for Teachers (coeducational, began as Davidson Academy, 1785, became Cumberland College, 1806, then Univ of Nashville, 1826, funds from George Peabody, 1875), Scarritt College for Christian Workers, Trevecca Nazarene College, Tennessee Agricultural and Industrial State College (Negro, coeducational), Andrew Jackson Univ , David Lipscomb College, Ward-Belmont School (for women), and a state school for the blind Madison College (coeducational, 1904) is near by Among the points of interest are the capitol (designed by William Strickland), with the tomb of James K Polk, the war memorial building, with museums, and several old churches and fine ante-bellum houses Near by is the HERMITAGE, home of Andrew Jackson

Nashwauk (năsh'wôk), village (pop 2,228), NE Minn , SW of Hibbing and on the Mesabi iron range

Nasik (nā'sĭk), town (pop 52,386), NE Bombay state, India It is holy as the site of events in the lives of the Hindu god Rama and Sita, his wife Near by are ancient Jain and Buddhist caves

Nasiriya (năsĭrē'ə), town, SE Iraq, on the Euphrates river The British captured it from Turkey on July 25, 1915, in the Mesopotamian campaign of the First World War The town is also called An Naasiriya

Nasmyth, Alexander (nā'smĭth), 1758-1840, Scottish landscape and portrait painter His *Stirling Castle* (National Gall , London) is a good example of his simple, picturesque Scottish scenes His portrait of Robert Burns is in the National Gallery of Edinburgh He was also an architect and a landscape architect His son and pupil, **Patrick Nasmyth**, 1787–1831, also known as Peter Nasmyth, was a celebrated landscapist His *Woody Landscape* is in the New York Public Library and *At Penshurst, Kent* is in the Metropolitan Museum

Nasmyth, James, 1808–90, Scottish machinist, engineer, and inventor (1839) of the steam hammer, the forerunner of the modern pile driver, son of Alexander Nasmyth His foundry at Bridgewater, near Manchester, England, was noted for the excellence of its products, many of which he invented, such as a nut-shaping machine and a hydraulic punch His recreation was astronomy With James Campbell he wrote *The Moon Considered as a Planet, a World, and a Satellite* (1874) His autobiography was edited in 1883 by Samuel Smiles

Nasmyth, Patrick see NASMYTH, ALEXANDER.

Nasoraeans. see MANDAEANS

Nasr-ed-Din (nă'sur-ĕd-dēn'), 1831?–1896, shah of Iran (1848–96). He and his able vizier, Amir Kabir (or Emir Kabir), were responsible for shaking Iran from a long period of inertia. He traveled much in Europe and brought back many European ideas He also undertook government reorganization with administrative division of duties and the creation of government departments Nasr-ed-Din Shah had ambitions to reclaim some of the old Persian territories to the east and made an effort to wrest Herat from Afghanistan, but British intervention put an end to his hopes and forced Iran to recognize the claim of Afghanistan Nasr-ed-Din Shah granted numerous concessions to the British, including the Reuter concession in 1872 and the Imperial Bank of Persia in 1889 His reign saw the rise of BABISM He was assassinated by one of his subjects and was succeeded by Muzaffar-ed-Din

Nass (năs), river of W British Columbia, rising in the Coast Mts and flowing 195 mi southward to Portland Inlet of the Pacific It is navigable for 25 mi and has valuable fisheries

Nassau (nă'sô, Ger nä'sou), former duchy, W Germany, N and E of the Main and Rhine rivers It is now comprised in HESSE Wiesbaden is the chief city It is a fertile agricultural and forested district and is famous for its Rhine wines, notably those of the Rüdesheim and Johannisberg regions Besides Wiesbaden, there are many mineral spas, notably Bad Homburg, Bad Schwalbach, and Schlangenbad in the beautiful TAUNUS hills and Bad Ems on the Lahn river The region takes its name from the small town of Nassau, on the Lahn E of Ems, where the original castle of the house of Nassau was built in the early 12th cent by a count of Laurenburg His descendants took the title counts of Nassau In 1255 the dynasty split into two main lines The ruling line was called the Walramian line for Count Walram II, his younger brother, Otto, founded the Ottonian line In 1806 Nassau, which had received some territorial additions, joined the Confederation of the Rhine and was raised to a duchy In 1816 the territories belonging to the various branches of the Walramian line were united by Duke William His successor, Adolf, sided against Prussia in the Austro-Prussian War (1866) and as a result lost his duchy to Prussia Nassau was then united with former Electoral Hesse to form the Prussian province of Hesse-Nassau, which after 1945 was incorporated in the American-occupied state of Hesse Duke Adolf of Nassau, however, succeeded in 1890 to the grand duchy of Luxembourg, where his descendants continue to rule The Ottonian line of Nassau acquired (15th cent) the lordship of Breda and settled in the Netherlands It came into European prominence in the 16th cent with WILLIAM THE SILENT, who inherited the principality of ORANGE in S France and became stadholder of the Netherlands His sons, MAURICE OF NASSAU and FREDERICK HENRY, succeeded him as princes of Orange and as stadholders, these titles then passed to Frederick Henry's son, WILLIAM II of Orange, and to William's son WILLIAM III, who also became king of England William III died (1702) without direct heirs, and the principality of Orange (which had become purely titular) passed to John William Friso, of the collateral branch of Nassau-Dietz His son, Prince William IV, became (1747) hereditary stadholder of the Netherlands, and from him all subsequent rulers of the NETHERLANDS (except Louis Bonaparte) are descended in direct line The Dutch line of the Nassau family is known as the house of Orange

Nassau (nă'sô), city (pop c 20,000), capital of the BAHAMA ISLANDS, a port on New Providence It has an improved and beautiful harbor and is the commercial and social center of the colony Its warm, healthful climate has made it a winter resort for Americans Formerly called Charles Towne, it was named Nassau in 1695 In the early 18th cent it was a rendezvous for pirates, among them Blackbeard Three forts, Nassau (1697), Charlotte (1787 94), and Fincastle (1793) were built to ward off numerous Spanish invasions American revolutionists in 1776 captured and held it a short time

Nassau, Fort 1 Built (1614) by the Dutch explorer Hendrick Christiaensen on Castle Island, in the Hudson river, south of the present Albany, N Y The fort served as a trading post for the Dutch until 1617, when it was destroyed by an overflow of the Hudson river, and a new fort, Fort Orange, was built on the west bank of the river on the site of Albany **2** Built (1623) by the Dutch under Capt Cornelius Jacobsen Mey on the east bank of the Delaware river, near the present Gloucester City, N J The Dutch soon abandoned the fort, but after the Swedish colonization in this area, the Dutch reoccupied it and for a time united with the Swedes against the English Fear of Swedish competition in the fur trade, however, caused Gov Peter Stuyvesant to take over (1655) the Swedish forts on the Delaware basin After the Swedes evacuated Fort Elfsborg, the Dutch destroyed Fort Nassau

Nast, Thomas, 1840–1902, American caricaturist, illustrator, and painter, b Landau, Germany He was brought to the United States in 1846 He began his career as a draughtsman for *Frank Leslie's Illustrated Newspaper* and *Harper's Weekly* He was sent to England by the *New York Illustrated News*, served (1860) as artist correspondent in Garibaldi's campaign, contributing sketches to English, French, and American papers, and attracted wide attention with his cartoons of the Civil War, published in *Harper's Weekly* He is best known for his clever and forceful political and personal cartoons, which were instrumental in breaking the corrupt Tweed Ring in New York city It was Nast who created the tiger, the elephant, and the donkey as political symbols of Tammany Hall, the Republican party, and the Democratic party Nast was also an illustrator of note and a painter in oil His *Head of Christ* is in the Metropolitan Museum, and *The Departure of the Seventh Regiment* in the Seventh Regiment Armory, New York He died at Guayaquil, Ecuador, where he was American consul general See biography by A B Paine (1904)

nasturtium (nŭstûr'shĭəm), any plant of the genus *Tropaeolum*, tropical American herbs cultivated for the spurred flowers mostly in shades of yellow or red and attractive to hummingbirds The common species (*Tropaeolum majus* and *minus*), climbing or dwarf, are not completely hardy in this country and blossom best in poor soil, fully double flowers are a recent introduction The leaves are usually rounded, in the climbing plants the leafstalks serving as tendrils Luminosity has been observed in the plants In some places the seeds are pickled and used like capers, and the pungent flowers and leaves are added to salads, whence the name Indian cress The tubers of *Tropaeolum tuberosum* are edible *Tropaeolum peregrinum* is the canary-bird flower *Nasturtium* is sometimes a botanical name for the water cresses

Natal (nətăl'), province (35,284 sq mi , pop 2,197,-879), E Union of South Africa, on the Indian Ocean The capital is Pietermaritzburg Natal is bordered on the north by Mozambique The tropical climate favors the production of plantation crops, especially sugar and tobacco, along the level coast Much coal is produced in the high inland region The British settlement of Durban in 1824 was one of the earliest made here by Europeans The Boers on their TREK reached Natal in 1837 They defeated the Zulu and founded the Natalian republic The British annexed it in 1843 and in 1856 made Natal a crown colony, to which Zululand was added in 1897 In 1910 the colony became an original province of the Union The population includes 236,697 Europeans See A T Bryant, *Olden Times in Zululand and Natal* (1929), A F Hattersley *Portrait of a Colony* (1940)

Natal (nutal'), city (pop 51,479), capital of Rio Grande do Norte state, NE Brazil, a port just above the mouth of the Potengi river Its great importance lies in the fact that it is far out on the northeastern bulge of Brazil and therefore is less than 2,000 mi from towns in Africa It was much developed as an airport with U S help in the Second World War Its traffic continued heavy The port is also of importance, handling coastwise shipping Natal is also a rail terminus Near by the Portuguese erected (c 1597) a fort to forestall French settlement, and Natal was founded in 1599 It was held by the Dutch from 1633 to 1654 There are a few colonial buildings, but the town, with its aeronautical installations, is largely modern

Natanya, Israel see NATHANIA

Natashkwan (nă"tăshkwŏn', nutash'kwun), river rising in S Labrador and flowing 200 mi S across E Quebec to the Gulf of St Lawrence It is noted for trout and salmon fishing

Natchez (nă'chĭz), city (pop 15,296), co seat of Adams co , SW Miss , on bluffs above the Mississippi The trade, shipping, and processing center for a cotton and livestock area, it also makes rubber goods It was founded in 1716 when Bienville established Fort Rosalie here, but Natchez Indians annihilated the garrison in 1729 The area passed to England (1763), to Spain (1779), and to the United States (1798) Natchez was capital of the Territory of Mississippi from 1798 to 1802 It was incorporated in 1803 The NATCHEZ TRACE and the city's strategic situation on the Mississippi caused a prosperous development of the area, Natchez became an important river port before the Civil War It was taken by Federal forces in 1863 Many of the city's fine colonial and ante-bellum houses (some dating from the 18th cent) are visited annually during a festival period in March and April See T B Marshall and G C Evans, *They Found It in Natchez* (1940), H T. Kane, *Natchez on the Mississippi* (1947)

Natchez Indians, tribe of North American Indians of the Natchez-Muskogean linguistic stock In the 17th cent they lived in SW Mississippi near the present city of Natchez They then numbered some 6,000 The Natchez were typical of the Southeast culture area—a sedentary, agricultural people, who had an elaborate form of sun worship Their chief, ruler of a strict class society, held absolute sway over the lives and property of his subjects The Natchez were first visited by the French in 1682, and in 1716 and 1722 there was warfare between them and the French. In 1729 the Natchez, angered at French encroachments, massacred the French at Fort Rosalie The French, aided by the Choctaw, retaliated by attacking the Natchez vil-

lages and scattering the inhabitants One small group settled near their former home, and a second crossed the Mississippi into E Louisiana; there they were attacked (1731) by the French, who killed or captured many of them Some 450 Natchez captives were sold into slavery A third, the most numerous, group joined the Chickasaw This group numbered some 700 in 1735 Other Natchez Indians settled with the Cherokee and the Creek A few survivors existed in Oklahoma until very recent times See John Swanton, *Indian Tribes of the Lower Mississippi Valley* (1911)

Natchez-Muskogean (mŭskō'gēun), linguistic family of North America It included languages of the Natchez, Alibamu, Choctaw, Chickasaw, Creek, and Seminole and probably also Yamasee and Apalachee The name is also written Natchez-Muskhogean and Natchez-Muskogian. See LANGUAGE (table) and HOKAN

Natchez Trace, road, from Natchez, Miss , to Nashville, Tenn , of great commercial and military importance from the 1780s to the 1830s It grew from a series of Indian trails used increasingly in the 18th cent by the French, English, and Spanish successively At first traveled only northward from Natchez to Nashville, since the American frontiersman could float his goods down to New Orleans by flatboat, it came to be used in both directions with U S expansion into the Old Southwest It was made a post road in 1800 and improved by the army Andrew Jackson marched over the Trace to New Orleans in the War of 1812 and later used it in his Indian campaigns With the coming of steamboat transportation, it passed into decline The Natchez Trace Parkway (13,648 87 acres, est 1934) memorializes and generally follows the old Natchez Trace When completed (construction, begun in 1937, was interrupted by the Second World War), it will be c 450 mi long

Natchitoches (năk'ĭtŏsh), city (pop 6,812), parish seat of Natchitoches parish, NW La , near the Red River SE of Shreveport The oldest city in Louisiana, it was founded in 1715 as a French military and trading post, it was incorporated in 1819 and reincorporated in 1872 The city's industry is centered on the production, processing, and shipping of cotton Many old houses remain, and the state teachers college and a U S fish hatchery are here

Nathan (nā'thun) [Heb ,=given] **1** Prophet in the time of David and Solomon With his parable of the ewe lamb he denounced David for his abduction of Bathsheba Later his advice saved the kingdom for Solomon It is recorded that he wrote the lives of David and Solomon *2 Sam 7, 12, 1 Kings 1, 1 Chron 29 29, 2 Chron 9 29* **2** Son of David *1 Chron 3 5, 14 4, Luke 3 31* **3** Father of one of David's guard *2 Sam 23 36* **4** Brother of one of David's men *1 Chron 11 38* **5** Descendant of Jerahmeel *1 Chron 2 36* **6** Companion of Ezra *Ezra 8 16* **7** One who had a foreign wife *Ezra 10 39*

Nathan, George Jean, 1882–, American editor and critic, b Fort Wayne, Ind , grad Cornell, 1904, and studied at the Univ of Bologna, Italy His career as a dramatic critic was marked by his long association with H L Mencken on the magazine *Smart Set* (1914–23) and on the *American Mercury*, which they founded in 1924 Nathan remained contributing editor until 1930 He also was one of the founders and an editor (1932–35) of the *American Spectator* His rigorous criticisms of the American stage are collected in *Mr George Jean Nathan Presents* (1917), *Materia Critica* (1924), *The Testament of a Critic* (1931), *Since Ibsen* (1933), *The Entertainment of a Nation* (1942), and other volumes His *Autobiography of an Attitude* (1925) reveals his critical doctrine See Constance Frick, *The Dramatic Criticism of George Jean Nathan* (1943)

Nathanael (nuthă'năĕl) [Gr from Heb ,=gift of God], disciple mentioned only in St John's Gospel and very plausibly identified with BARTHOLOMEW. John *1 45–51, 21 2 n*

Nathania (năth'nya), town (pop c 9,000), Israel, on the Mediterranean Sea and c 20 mi N of Tel Aviv, founded 1929 It is a center for the farm settlements of the region and a seaside resort There are small industries, notably diamond cutting The name is also spelled Natanya and Nathanya

Nathan-melech (nā'thăn-mē'lĕk) [Heb ,=gift of the king], chamberlain of Josiah *2 Kings 23 11*

Natick (nā'tĭk), town (pop. 13,851), E Mass , W of Boston, inc 1781 Founded (1651) as a "praying Indian" village by John ELIOT, it soon became a white settlement Among Natick's several industries, shoemaking became most important After a 14-week strike in 1858–59, shoe workers gained a wage increase

Nation, Carry, 1846–1911, American temperance agitator, b Garrard co , Ky. Her family (her maiden name was Moore) moved a great deal, finally settling at Belton, Mo , where she married (1867) William Gloyd, a physician. When they were living at Holden, Mo , he turned out to be a hopeless drunkard and died shortly. She taught school for a time at Holden In 1877 she married David Nation, a minister and lawyer They moved from place to place It was in Medicine Lodge, Kansas, that she became convinced of her divine appointment to destroy the saloon In 1900 she supplemented public prayers and denunciations by personal destruction of property in saloons, commencing with smashing bottles and beer kegs Later that year she adopted the hatchet as her weapon in these exploits—hatchetations, she called them In 1901 her husband divorced her, and she devoted the rest of her life to the cause, lecturing on temperance all over the United States and in Europe Shortly before her death, a school for young prohibitionists was organized at Eureka Springs, Ark , but she died before it could commence operation Her own apologia was offered in *The Use and Need of the Life of Carry Nation* (1904) See biography by Herbert Asbury (1929)

National Academy of Design, society composed of American painters, sculptors, and engravers, with its headquarters in New York city The academy was established in 1825, incorporated in 1828 Prominent among its founders were S F B Morse (its president for 20 years), Asher B Durand, and Daniel Huntington It holds two exhibitions a year and offers prizes for outstanding work in different fields In 1906 the Society of American Artists merged with the National Academy and the membership was expanded from 100 to 175, it was later increased to 204 with 162 associates In 1942 as a result of a gift by Archer M Huntington, the academy moved to permanent headquarters on upper Fifth Ave The academy operates a school in which tuition is free

National Archives, established in 1934 by act of the U S Congress Though displeasure concerning the keeping of national records was voiced in Congress as early as 1810, the United States until very recently entrusted the records to the various agencies that had accumulated them This resulted in much loss, confusion, deterioration, and destruction of documents It was not until 1926 that Congress provided for the construction of a national archives building, where Federal government records could be stored, assembled, and preserved The congressional act of 1934 organized the National Archives to be administered by the archivist of the United States Aided and advised by the National Archives Council, the archivist was charged with accepting and preserving government records The building to house them was completed in 1935 See Wilson Bulle, *Guide to the Material in the National Archives* (1941)

national assembly, name given to a number of past and present constituent or legislative bodies Under the French constitution of 1946 (see FRANCE) the lower house of parliament is called the national assembly, usually, however, national assemblies were provisional rather than permanent legislative bodies. In times of crisis, when the old order of things has dissolved through revolution, war, or simply decay, it is found necessary that a new order be worked out by the people as a whole, as being the collective sovereign of the land Such was the case in the French Revolution of 1789, when members of the STATES-GENERAL proclaimed themselves a national assembly and thus virtually defied the authority of the king The FEDERAL CONSTITUTIONAL CONVENTION of 1787 and the FRANKFURT PARLIAMENT of 1848–49 were national assemblies In the Franco-Prussian War of 1870–71, after the downfall of Napoleon III, France again had a national assembly, and under the Third Republic the name national assembly applied to joint sessions of the senate and the chamber of deputies when they met at Versailles to elect a president or to consider a constitutional amendment National assemblies framed the republican Weimar constitution of Germany in 1919 and the Bonn constitution for Western Germany in 1948–49 For a list of some of the chief legislative bodies of the world, see LEGISLATURE See also PARLIAMENT

national bank, in the United States, a bank of a class authorized by Congress in acts of 1863 and 1864 These acts were intended to provide a way of marketing the large bond issues made necessary by the Civil War and to give circulation to a paper currency more trustworthy than the notes of state banks had proved to be The act of 1864 authorized the forming of private banking corporations which should invest a large part of their capital in bonds of the United States and which might then issue their notes as currency to the amount of 90 percent of the face value of these bonds, the amount not to exceed 90 percent of their market value Subsequent acts modified the act of 1864 in various details, and the plan was changed fundamentally by the Federal Reserve Act of Dec 23, 1913, which provided for the gradual substitution of Federal reserve notes and Federal reserve bank notes for national bank notes This act required all national banks to become members of the FEDERAL RESERVE SYSTEM For bibliography, see BANKING

National City, city (1940 pop 10,344, 1945 special census pop. 17,654), S Calif., on San Diego Bay SW of San Diego, inc 1887 It is a residential and industrial city in a fruit and truck-farm area.

national debt. see DEBT, PUBLIC.

national forests have been set aside in 42 states of the United States and in Alaska and Puerto Rico Vast areas in the mountainous sections of the Western states are so preserved, and there are large national forests in the White Mts , Green Mts , Alleghenies, and other eastern ranges The total area of national forests is over 220,000,000 acres In addition, the Federal government owns about 4,500,000 acres of forest lands in its national parks and monuments and over 8,000,000 in Indian reservations In 1891 the President was authorized to set aside national forest reserves, these areas were administered by the General Land Office of the Dept of the Interior until 1905, when they were transferred to the Forest Service of the Dept of Agriculture The Forest Service had existed since 1881 as a division and later as a bureau of the Dept of Agriculture The Forest Service carries on research work in all aspects of forestry—forest fires, tree diseases and pests, lumber products, land drainage and correct harvesting See also FOREST See publications of the Forest Service, U S Dept of Agriculture, and the American Tree Association, Washington, D C

National Gallery, London, one of the permanent national art collections of Great Britain Its building in Trafalgar Square is in Greek style, designed and erected (1832–38) by William Wilkins The nucleus of this collection was formed in 1824 with 38 pictures from J J Angerstein's collection The gallery is rich in Italian paintings of the 15th and 16th cent and has fine collections of Flemish and Dutch masters The collections were moved to a remote, bomb-proof cave in the Second World War The National Portrait Gallery adjoins the building The National Gallery of British Art, more usually the TATE GALLERY, was controlled by the National Gallery until 1917

National Gallery of Art, Washington, D C , a bureau of the Smithsonian Institution, established by act of Congress, March 24, 1937 Funds for construction of the building and his own collection of paintings were given by Andrew W Mellon The building, of marble, was designed by John Russell Pope, it was opened in March, 1941 Other gifts to the gallery include Samuel H Kress's collection of Italian masterpieces (1939) and the Joseph E Widener Collection (1942) The paintings number over 800 The collection is especially rich in Italian and French painting The government turned over to the gallery the Index of American Design, consisting of about 20,000 drawings and water colors in decorative and folk art made by WPA artists David E Finley was appointed first director of the gallery

National Guard, in French history, body of militia created in 1789 at the suggestion of the comte de Mirabeau and commanded by Lafayette It was originally intended to advance the cause of the French Revolution against the royalists, but in the course of events and reorganization it became reactionary In 1795 it was dissolved The name was also given to a group of militia instituted in 1805 by Napoleon and to the new group established in 1830 This national guard was active in the Revolution of 1848 In 1870 the Parisian national guard, which after service in the Franco-Prussian War had been left with its arms and refused to surrender them, played a large part in the story of the Commune of Paris in 1871

National Guard, in U S history In the United States, the Federal Constitution, in Article 1, Section 8, provides that Congress shall have the power to call forth "the Militia to execute the Laws of the Union, suppress insurrections and repel invasions " Congress was entrusted with organizing, arming, and disciplining the MILITIA, but the appointment of officers and the authority of training the militia was reserved to the states Further provisions were made in the Second Amendment In 1792 Congress passed an act establishing uniform state militias, but its clauses proved ineffective in times of war It was not until 1903 that Congress altered this situation by passing the Dick Bill, which set up the National Guard and a reserve militia The terms of service were adequately prescribed, and five years later an amendment to the bill authorized the service of the guards outside the boundaries of the United States and abrogated the nine-month limit on service Although it was put under the jurisdiction of the states in times of peace and could be used by governors to quell local disturbances, the equipment and personnel of the National Guard were standardized to conform to the U S army In the First World War the National Guard was as always with militia in wartime—absorbed into the armed forces An act in 1920 provided for further peacetime integration within the framework of the regular army As prescribed in Article 2, Section 2, of the Constitution, the President becomes commander in chief of the National Guard when called into actual service of the United States in time of emergency It is administered by the National Guard Bureau of the National Military Establishment and is divided into several corps areas which overlap state boundaries Enlistment is voluntary, compensation, paid by the Federal government, is given for periods of drill and field training. After the Second World War, the facilities of the National Guard were vastly increased

and in July, 1946, the National Guard forces numbered over 080,000.

National Industrial Recovery Act: see NATIONAL RECOVERY ADMINISTRATION

nationalism, political or social philosophy in which the good of the nation is paramount The word is used loosely and almost always in a derogatory sense to carry the implication of excessive zeal for the national welfare and advancement Its exponents usually employ other terms Because of the somewhat unstable use of the words *nation* and *nationality* on which the meaning of nationalism is based, the vagueness of the word *nationalism* makes careful definition impossible In general it may apply to either type of NATIONALITY A nation, in the political sense, may be nationalistic, and a nationality, meaning any group of people who have, or think they have, a common culture, may be nationalistic When a state is dominated by a group that has nationalistic ideas, strong efforts are made by the government to instill patriotic ideals into the people, and an effort is usually made to compel any alien group (such as the Poles in imperial Russia) to surrender its identity—language and culture - and accept that of the ruling group Nationalism is profoundly interested in the education of children since it is deemed important to perpetuate and glorify the traditions of the people and of the nation Since fervent love of the nation implies fear of a rival people, a strong nationalism naturally leans to defensive and even to offensive measures and to continuous hostility toward some other nation or nations Such state nationalism is also frequently linked with IMPERIALISM, as shown obviously in Fascist Italy and National Socialist Germany Those and the other fascist powers showed, too, the value of nationalistic propaganda in giving individual citizens a feeling of status, of belonging to a great and glorifying whole Nationalism in a "suppressed nationality"—an ethnic or cultural group in a state dominated by another group—is almost always revolutionary in tone, either by implication or by direct action One of the highest political ideals of the 19th cent was the liberation of peoples then subject to a power foreign to them, notably the Irish and the Poles Ethnocentrism—the blind belief in the superiority of one's own culture and fear of rival cultures—can be discovered in the most primitive of tribes This feeling is the basis of nationalism, and doctrines of similar import played a part in the history of most of the successful ancient states Much stronger, however, was the tendency toward the creation of universal states that bound together diverse peoples The Roman Empire was the sterling example of this trend With its dissolution and the creation of innumerable small states, the creation of universality did not die The universal Church, the use of a common language of learning, and the existence of the Holy Roman Empire all gave an air of common enterprise to all the peoples of Western Europe, this was strengthened by the local economy of FEUDALISM and the MANORIAL SYSTEM, which encouraged devotion to the small group rather than to a whole people Nationalism as such could not precede the rise of nations in the later Middle Ages, it actually did not come until long after the development of absolute monarchies had led to the breakdown of universal connections. The REFORMATION and the religious wars it brought in its wake set nation against nation Yet as long as absolute monarchy had the support of the governed, loyalty to the sovereign rather than to the nation was the dominant theme With the development of commerce and colonization, the economic doctrine of MERCANTILISM grew up, this had many of the elements of economic nationalism The growth of the middle classes and their desire for political power had a disquieting effect in politics The development of democratic political theory was closely connected with the emergence of nationalism Nationalism appeared with ROMANTICISM in literature Herder was an advocate of nationalism in Germany, where politically national sentiment was completely lost in the localism in the host of inconsequential independent states He saw in the energetic development of the national sentiment no danger to other nationalities, each could serve the world best, he thought, by the full development of its individual attributes Jeremy Bentham in England also advocated nationalism in his liberal utilitarian scheme Thus in the beginning nationalism walked hand in hand with democracy and liberalism It first emerged into politics in the French Revolution The revolutionists glorified their nation as well as the principles of liberty, equality, and fraternity They desired to spread their doctrines abroad by force of arms if necessary It was in opposition to NAPOLEON that nationalism first appeared as a vital force in European politics The Napoleonic conquests awakened the national spirit of Spain, in the Peninsular War; they finally awakened a nationalistic spirit in Prussia, they stirred up German Austria In the era of reaction under Metternich strong efforts were made to put down nationalistic strivings But the Latin American republics insisted upon imitating the United States, and the Balkans were shaken, especially by the Greek War of Independence. The revolutions of 1830 were, to a large extent, nationalistic, and the year 1848 saw Hungary, Italy, Germany, and all the Continent overrun with nationalistic fervor. Nationalism was a major force in 19th-century politics Germany and Italy sought and obtained unity through revolution and bloodshed, and Bismarck's plans led to three wars The last of them, the Franco-Prussian War, led to a new nationalistic problem by the taking of Alsace-Lorraine, for IRREDENTISM is close to nationalism Even the Crimean War had nationalistic aspects Hungary, Bohemia, Ireland, Poland, all saw strong nationalist movements Also the other type of nationalism appeared in the attempts to "Russify" Poland and to "Germanize" the Czechs in Austria, as well in colonization and in irredentist movements Liberal elements had been discarded slowly, and now, from glorifying the traditions of the past, nationalism had turned toward reaction to that past Nationalist conflicts had much to do with bringing on the First World War, and Woodrow Wilson's Fourteen Points guaranteed the self-determination of peoples Boundaries were resettled and new states were created at the Paris Peace Conference The years after the war saw a resurgence of nationalism New irredentist problems sprang up Nationalistic economic movements (high tariffs, the "Buy British" campaign, and the like) appeared Fascism, which sprang up and took control in Italy, Germany, and Japan, was the culmination of nationalism The fascist dictatorships took full advantage of nationalist sentiments to divide their opponents and to unify their own groups At the same time there seemed to be before and during the Second World War a recrudescence of nationalism in Russia The nations of the Far East and of Africa, in seeking to cast off the imperial bonds on them, also expressed nationalism of an extreme sort Though the ideal of the United Nations—like that of the League of Nations—was an end to nationalism, nationalistic feelings were still strong in 1950 See Carlton J H Hayes, *Essays in Nationalism* (1926) and *The Historical Evolution of Modern Nationalism* (1931, new ed., 1948), H A Gibbons, *Nationalism and Internationalism* (1930), W C Langsam, *The Napoleonic Wars and German Nationalism in Austria* (1930), Hans Kohn, *Nationalism in the Soviet Union* (1933) and *The Idea of Nationalism* (1948), F O Hertz, *Nationality in History and Politics* (1944)

nationality, in political theory, term designating the persons who make up a nation, in the sense of a group united by various strong ties Among the possible ties are a belief in membership in the same general community and common customs, culture, tradition, history, language, and literature While no one of these factors is essential, some must be present for cohesion to be strong enough to justify the term *nationality* Used in this sense, a nationality or nation is not always coextensive with a political state There are many examples of nations divided between several states and of states composed of several nations and parts of nations Thus, not all Albanians live in Albania, and, on the other hand, Great Britain includes persons of English, Scottish, and Welsh background, and Switzerland has citizens whose native languages are German, French, and Italian In political theory the belief that a state should be identical with a nation is often called the "principle of nationalities" This view is a typical expression of NATIONALISM, it was advanced partly as a means of solving the problem of the national MINORITY Nationality in its specific legal sense is a very different concept, it is attachment to a state by a tie of allegiance Nationals in this meaning are fundamentally distinguished from ALIENS, and in most, but not all, countries are identical with CITIZENS Nationality gives the state the right to impose certain duties, especially military service Some states will punish their nationals for crimes wherever committed, the United States, however, punishes only those crimes, except treason, which are committed within American territorial jurisdiction Nearly all modern states tax the income and other assets of their nationals regardless of whether they reside abroad. The national owes duties to his government but is also entitled to diplomatic protection when in a foreign country Such protection includes the assistance of consular officials when the national is accused of crime and the offering of refuge in emergencies In international relations only the individual's nationality is considered and no heed is paid to the question whether he enjoys full citizenship In many instances certain persons, particularly those who have undergone NATURALIZATION, will be regarded as a national by two states at once The problems of dual nationality arising thereby have been a frequent cause of international diplomatic disputes

National Labor Relations Board (NLRB), set up under the National Labor Relations Act of 1935 (also known as the Wagner Act), which affirmed labor's right to organize and bargain collectively. The quasi-judicial board of five members (appointed for five-year terms) is assisted by 22 regional directors. This board determines proper bargaining units, conducts elections for union representation, and investigates charges of unfair labor practices by the employer These consist of interference, coercion, or restraint in labor's self-organizational rights; domination over or interference with the formation of labor unions, encouraging or discouraging membership in a union, and refusal to bargain collectively with the duly chosen representatives of his employees. The Wagner Act was validated by the Supreme Court in 1937, but criticism persisted, mainly because of union rivalry and because of the inability of the employers to initiate complaints Recommendations by a House committee to curtail NLRB powers were not adopted, although after 1940 the board followed more conservative policies The NLRB functioned during the Second World War, but labor relations were mainly handled by the National War Labor Board (WLB), created by executive order in Jan., 1942, and continued until Dec., 1945 A 12-man body, with the public, management, and labor equally represented, the WLB soon shifted from arbitration to formulating policies, notably the "maintenance of union membership" principle and the "Little Steel Formula" of July, 1942 (strongly opposed by labor), which permitted general wage increases of no more than 15 percent over Jan., 1941, levels The WLB gained statutory authority through the Wage Stabilization Act (Oct., 1942), requiring board approval for most wage raises, and the War Labor Disputes Act (June, 1943) With the passage of the Taft-Hartley Act in June, 1947, the NLRB was converted into a purely judicial body, with the prosecution of unfair labor practices transferred to a general counsel The board's membership was increased from three to five, while its action upon any petition was conditioned on the filing of non-Communist affidavits and complete financial data by the union chiefs The NLRB's field of investigation was also extended to cover the following practices as unfair to employers refusal to bargain collectively, coercing employers in the selection of their bargaining agency, persuading employers to discriminate against certain employees (unless in accordance with the law), and conducting secondary boycotts or jurisdictional strikes

National Military Establishment see DEFENSE, UNITED STATES DEPARTMENT OF

National Museum of the United States. see SMITHSONIAN INSTITUTION

National Park, borough (pop 1,977), SW N J, on the Delaware below Camden, inc 1902. In a park here is the site of a battle (commonly called the battle of Red Bank) fought in defense of Fort Mercer against a British attack in 1777

national parks and monuments The National Park Service, a bureau of the U S, Dept of the Interior, was established in 1916 to correlate the administration of the national parks and monuments then under the charge of the department Stephen T Mather was its first director In 1933 its trusteeship was extended to include certain areas hitherto under the jurisdiction of other government departments, by 1949 it was administering "for the benefit and enjoyment of the people" some 174 areas of scenic, historic, or scientific interest In addition to those listed in the national parks and monuments table, the National Park Service has charge of certain national cemeteries, national parkways, and national capital parks and also has specified responsibilities toward certain national recreational areas and national historic sites not owned by the Federal government It has four regional headquarters—in Richmond, Va., Omaha, Nebr., Santa Fe, N Mex., and San Francisco, Calif Instructed by act of Congress to "conserve the natural and historic objects in such manner as will leave them unimpaired for the enjoyment of future generations," the National Park Service has great and varied responsibilities, directing a wide program of construction and of educational and protective work. Its duties include seeking to prevent forest fires and stream pollution and the safeguarding of plant and animal life (such as the herds of elk, caribou, deer, bear, mountain sheep, bison, and other animals in the national parks). National parks may be established only by Congress, the President has authority to designate national monuments. Future projects include two national historical parks, one at CUMBERLAND GAP, the other in Philadelphia (to preserve some of the old structures), and a national memorial in Florida (to commemorate the explorations of De Soto). A list of national parks, national historical parks, national monuments, national military parks, national memorial parks, national battlefield parks, national battlefield sites, national memorials, and national historic sites is given in the table on pages 1362–65, separate articles on the more important of these are there indicated by an asterisk. See publications of the National Park Service, U S Dept of the Interior, Washington, D C.; Devereux Butcher, *Exploring Our National Parks and Monuments* (new ed., 1949)

National Recovery Administration, U S administrative bureau established under the National Industrial Recovery Act of 1933. In response to Presi-

dent F D. Roosevelt's congressional message of May 17, 1933, Congress passed the National Industrial Recovery Act, an emergency measure designed to encourage national industrial recovery and to help combat widespread unemployment The act declared that codes of fair competition—for the protection of consumers, competitors, and employers—were to be drafted for the various industries of the country and were to be subject to public hearings The administration was empowered to make voluntary agreements dealing with hours of work, rates of pay, and the fixing of prices and to license business enterprises which were operating contrary to purposes of the act Employees were given the right to organize and bargain collectively and could not be required, as a condition of employment, to join or refrain from joining a labor organization The National Recovery Administration (the NRA) —by a separate executive order—was put into operation soon after the final approval of the NIRA President Roosevelt appointed (June, 1933) Hugh S JOHNSON as administrator for industrial recovery, and four boards were created to assist him Until March, 1934, the NRA was engaged chiefly in the drawing up of industrial codes, a blanket code for all industries was adopted, and well over 500 codes of fair practice were adopted for the various industries Patriotic appeals were made to the public, and firms were asked to display the Blue Eagle, an emblem signifying NRA participation In May, 1935, in the case of the Schechter Poultry Corp vs United States the U S Supreme Court voided the compulsory code system on the grounds that the NRA had improperly delegated legislative powers to the executive and that the provisions of the poultry code did not constitute a regulation of interstate commerce The NRA was extended in skeletonized form until Jan 1, 1936 Many labor provisions of the NRA were reenacted in later legislation (e g , WAGES AND HOURS ACT and NATIONAL LABOR RELATIONS ACT) See L S Lyon and others, *The National Recovery Administration* (1933), C L Dearing and others, *The ABC of the NRA* (1934), Hugh S Johnson, *Blue Eagle from Egg to Earth* (1935), C A Pearce, *NRA Trade Practice Programs* (1939)

National Republican party, in U S history, a short-lived political organization opposed to Andrew JACKSON Jackson, defeated for President in 1824 when Henry CLAY threw his support to John Quincy ADAMS, won an overwhelming victory in 1828 The wealthier classes and all others who feared Jackson's radical ideas soon organized themselves as the National Republicans They upheld the tariff and the United States Bank and, following the lead of the Anti-Masonic party, held a national nominating convention at Baltimore in Dec , 1831 Their candidate, Clay, was badly defeated by Jackson in 1832 By 1836 the party had united with other anti-Jackson groups to form the WHIG PARTY

National Road At the time of its construction, the National Road was the most ambitious road-building project ever undertaken in the United States It finally extended from Cumberland, Md , to St Louis, and it became, from the time of its opening, the great highway of Western migration Agitation for a road to the West began c 1800 Congress approved the route and appointed a committee to plan details in 1806, contracts were let in 1811, but the War of 1812 intervened and construction did not begin until 1815 The first section (called the Cumberland Road) was built of crushed stone Opened in 1818, it ran from Cumberland to Wheeling, following in part the Indian trail (Nemacolin's Path) over which George Washington and Christopher Gist had traveled and Gen Edward Braddock's wagon train had gone Largely through the efforts of Henry Clay it was continued (1825-33) westward through Ohio, using part of the road built by Ebenezer Zane By this time the older part of the road was badly in need of repair Control of the road was therefore turned over to the states through which it passed, where tolls for maintenance were collected It was carried on to Vandalia, Ill , and finally to St Louis The old route is followed closely in the National Road of today (U S Highway 40) At points on the road copies of a statue called the *Madonna of the Trail* have been erected to honor the pioneer women who went west over the National Road See Philip D. Jordan, *The National Road* (1948)

National Socialism, political and social ideology of the National Socialist German Workers' party (Ger *Nationalsozialistische Deutsche Arbeiterpartei;* abbreviated as NSDAP) in GERMANY after the First World War It became the program of the totalitarian dictatorship (1933-45) of Adolf HITLER The term *Nazi* (nät'sē, nät'sē) was a derisive abbreviation of National Socialist The nucleus of the party was the small German Workers' party, founded in 1918, which Hitler joined after moving to Munich Its chief theoretician then was Gottfried Feder, who advocated certain socialist reforms, such as state ownership of land and nationalization of banks, along with a strongly nationalist and antiparliamentarian program His was but one of the many extreme nationalist and militarist groups that sprang up in Germany in the midst of defeat, revolution, and unemployment Its earliest members were chiefly discontented war veterans (such as Hitler, Rudolf HESS, and Hermann GOERING), frustrated intellectuals (such as Alfred ROSENBERG, P J GOEBBELS, and, again, Hitler), and assorted riffraff (typically represented by Julius STREICHER) By demagogic appeals to latent emotions—ANTI-SEMITISM, fear of Communism, and resentment against the Treaty of Versailles—the party soon gained considerable following The bulk of the party throughout its phenomenal growth was the lower middle class, which had lost its savings in the war and the inflation and faced the prospect of being wiped out altogether in the economic crisis that began in 1929 Though it called itself a workers' party, it had relatively few members among the working class, and these were for the most part unemployed workers The NSDAP, reorganized in 1920 with Hitler at its head, gained the support of such war heroes as LUDENDORFF and of several industrialists who saw in Hitler an instrument for undermining the Social Democratic regime in Germany The fiasco of the Munich "beer-hall putsch" (for details, see HITLER, ADOLF) in 1923 only temporarily disrupted the party, which made tremendous gains after the depression began Hitler, during his brief detention after the 1923 putsch, wrote the bible of National Socialism—*Mein Kampf* An irrational amalgam of half-digested philosophical, scientific, social, political, and economic ideas, *Mein Kampf* in fact superseded the program of Gottfried Feder, who became a mere mouthpiece whenever Hitler sought to win the more rational segment of his audience The socialist features of the program virtually disappeared and were replaced by what was called the National Socialist *Weltanschauung,* with some important borrowings from Italian FASCISM As an ideology, National Socialism can be reduced to two basic principles—the principle of racial inequality and the leader (Ger *Führer*) principle In Nazi racial doctrine each race has its characteristics that can be scientifically determined, on this basis peoples can be classified into superior and inferior races The highest racial type is the Nordic or Germanic type of the "Aryan" race, Negroes and Jews occupy the bottom rungs of the racial ladder Intermarriage of a superior with an inferior racial type contributes to the deterioration of the superior race Jews, according to the doctrine, are the greatest threat to Aryan racial purity Their influence was represented as a consistently malignant and destructive force Marxism international finance, and Freemasonry were all Jewish devices to dominate the world The international Jewry was responsible for the humiliation of Germany, and German Jewry was responsible for the German defeat in 1918 (According to National Socialist propaganda, Germany had won the war militarily, only to be betrayed by sinister elements within) It was up to the German people to awake to the danger, to overthrow the Jewish money oligarchy and to restore Germany to greatness in an empire (the "Third Reich") to last for a thousand years Both in Germany and abroad, the Hitler movement was sympathetically viewed by many non-Nazis because it regarded Soviet Russia as the major enemy of Aryan civilization and because a National Socialist Germany would form a bulwark against Communism Alfred Rosenberg, the major Nazi "philosopher," denounced Christianity as a Jewish creation, but Hitler hedged on that delicate point Toward the end of the regime, however, a blueprint for the eradication of the Christian churches was under consideration The leader principle was intimately linked with the race principle The "master race" was born to leadership of the inferior peoples A nation of rulers, warriors, and thinkers, the master race was destined to govern the inferior races and to live on their labor It was to be ruled itself by a hierarchy of leaders, who possessed the racial characteristics in the highest degree and who were headed by the infallible supreme *Führer* In its program of action National Socialism was not entirely based on racial theory Its success depended less on the truth of its ideological premises than on their propaganda appeal (In fact, serious modern science has totally rejected the concepts of racial inequality and racial purity) National Socialists were hostile to democratic equalitarianism not only because it conflicted with their racial doctrine, but also because it appeared to them as an invention to bolster the weak and the mediocre and to inhibit the strong and the dynamic Moreover, they regarded democracy as an inefficient tool for national aggrandizement In *Mein Kampf,* Hitler outlined his program with cynical frankness and detail The first step—to seize power in Germany—was to be accomplished by a "legal revolution," i e , by using parliamentary methods to end parliamentarianism The next step was the creation of a totalitarian state, entirely controlled by Hitler through his party Next, taking advantage of the weakness of the "decadent" Western democracies, Germany was to break one by one the clauses of the Treaty of Versailles, United and once more in possession of a strong war machine, Germany then could—either by intimidation or actual aggression—reunite all German-speaking peoples in its fold (see PAN-GERMANISM) and embark on its venture for world hegemony In his plans for expansion—which he followed fairly consistently—Hitler leaned heavily on GEOPOLITICS, the science invented by Karl HAUSHOFER In terms of geopolitics, Germany as a young and dynamic nation was entitled to more "living space" than the Treaty of Versailles had allotted it The party organization itself was an essential feature of National Socialism From Communism, Hitler borrowed the cell system and hierarchic party discipline From Fascism, he took the idea of a uniformed party militia or private army The mass of the militia was the brown-shirted SA (abbreviation of *Sturmabteilung,* or storm troops) The elite, originally Hitler's bodyguard, was the SS (abbreviated form of *Schutzstaffel,* or security echelon), which adopted a black uniform and the death's head insignia. The party had its own salute (the raised arm and the words *Heil Hitler!*), its symbol (the swastika), and its anthem (the *Horst Wessel Lied,* celebrating the murder, allegedly by Communists, of an SA man named Horst Wessel actually a procurer killed in a brawl) The ceremonial, mass meetings, and military trappings proved effective propaganda means and were symptomatic of Nazi mentality The militia was outlawed by Chancellor Brüning, but Chancellor Franz von PAPEN lifted the prohibition in 1932, when the Nazi party became the largest single German party Thousands of brown shirts suddenly appeared in the streets and acts of violence multiplied When Papen fell short of a parliamentary working majority, the Reichstag was dissolved and a new election ordered At that time Hitler obtained much-needed financial aid at a secret conference with a group of Rhenish industrialists and bankers His language to the masses and his promises to his capitalist paymasters differed widely Seeing the last shreds of their socialistic program abandoned, members of the left wing of his party, led by the brothers Gregor and Otto Strasser, resorted to open rebellion against Hitler's leadership Hitler succeeded in crushing them In Jan , 1933, after the resignation of Chancellor Kurt von SCHLEICHER, Hitler was appointed chancellor by President HINDENBURG, who was advised by a powerful reactionary cabal The REICHSTAG fire, shortly before new elections were held in March, 1933, furnished Hitler with a pretext for expelling the Communist deputies, a few weeks later, the Reichstag voted dictatorial powers for Hitler The "legal revolution" was completed The NSDAP was made the sole legal party, and in June, 1934, Hitler made his hold over his own party complete by the famous "Blood Purge," in which the remnants of the left wing were liquidated Ernst Rohm, leader of the SA and one of the oldest party members, was among those killed The hopes of Hitler's capitalist and monarchist backers were disappointed when Hitler, whom they had regarded as their tool, proved their master However, although the state took control of the entire national economy, the owners of private enterprise continued to reap benefits On the other hand, labor unions were abolished and replaced by an all-inclusive National Socialist labor organization, headed by Robert Ley—in fact, labor lost all its rights and was regimented even in its recreational activities by the "Strength through Joy" movement Not only labor, but also youth, schools, and the press were "coordinated" (Ger *gleichgeschaltet*) under party control The introduction of compulsory labor service for young men after leaving school was a preliminary step to the revival of compulsory military training (1936) The sovereign rights of the German states having been abolished in 1934, Germany was divided into party districts (Ger *Gaue*), the gauleiter [district leaders] for all practical purposes superseded state governments Even Germans abroad were placed under the jurisdiction of a gauleiter Justice was reorganized and people's courts were organized to deal with political offenses Anti-Semitic legislation (the Nuremberg Laws) forbade intermarriage with Jews, deprived Jews of civic rights, and barred Jews from the liberal professions A concordat (1933) with the Vatican was honored mainly in the breach, and Catholic opposition was severely persecuted A "German Christian Church" was set up by Hitler with the purpose of gaining control over the Protestant churches and Pastor Martin NIEMOELLER, who led the Protestant opposition, was arrested In 1936 a four Year Plan, directed by Goering, was instituted to rearm Germany The attempt to establish autarchy (economic self-sufficiency), a major plank in the National Socialist economic program, resulted in severe currency restrictions and in the production of *ersatz* (substitute) articles for consumer goods However, unemployment disappeared, large public projects (such as strategic highways and huge stadia) were completed, and an industrial boom began The undeniable economic recovery and the success of Hitler's foreign policy (see GERMANY) gave the National Socialist state the overwhelming support of

the Germans Leftist opposition had been eradicated from the outset by the Gestapo (see SECRET POLICE and CONCENTRATION CAMP) In 1936 Heinrich HIMMLER, leader of the SS, also took over the secret police His methods were responsible for the extermination of millions of Jews, Poles, Russians, and others during the Second WORLD WAR The war was a direct result of National Socialist aggression Its end in 1945 brought the collapse of the Nazi regime. The collective insanity that had seized the larger part of the German people manifested itself during the peak of Nazi domination in organized atrocities as well as in such eccentric experiments as human stock breeding to perfect the Nordic type With defeat in prospect, opposition inside Germany gained strength, and during the last months of their lives Hitler and Himmler kept their power only by using the very terroristic measures in Germany they had applied in conquered countries In 1945 the Allied occupation authorities in Germany and Austria outlawed all Nazi organizations and tried the surviving Nazi leaders for WAR CRIMES German "denazification courts," under Allied supervision, were set up to weed out former Nazis from public life, but their efforts were often halfhearted More or less secretly, Nazism lingered on It had also found many adherents and sympathizers outside Germany In AUSTRIA, the National Socialist party was powerful, but it was kept in check until 1938, when German pressure resulted in the inclusion of its leader, SEYSS-INQUART, in the Austrian government and brought the subsequent annexation of Austria by Germany In Czechoslovakia, the Nazis formed the Sudetendeutsche Partei (see SUDETES), whose agitation was a prelude to the MUNICH PACT In Norway, the followers of QUISLING betrayed their country to the Germans The party of Jacques DORIOT in France, the Rexists in Belgium, the IRON GUARD in Rumania, the Hungarian National Socialists, and the German-American *Bund* in the United States were all affiliated to some extent with the Nazi movement Many parallels have been drawn between Nazism and Stalinist Communism, yet, although the two systems share certain features common to any kind of TOTALITARIANISM, they are at opposite poles in their ideologies and their stated aims Many have been forerunners of National Socialism in GOBINEAU, H S. CHAMBERLAIN, Richard Wagner, NIETZSCHE, and others The dead cannot answer, but a simple examination of the writings of these men should prove that the use made of them by Nazi ideologists was a distortion of their ideas (particularly in the cases of Wagner and Nietzsche) See Gottfried Feder, *Hitler's Official Programme and Its Fundamental Ideas* (1934), Konrad Heiden, *A History of National Socialism* (1934), F L Schuman, *The Nazi Dictatorship* (1936), Henri Lichtenberger, *The Third Reich* (1937), Hermann Rauschning, *The Revolution of Nihilism* (1939), *The Voice of Destruction* (1940), and *The Conservative Revolution* (1941), W M McGovern, *From Luther to Hitler* (1941), Franz Neumann, *Behemoth the Structure and Practice of National Socialism* (1942), E A Tennenbaum, *National Socialism vs International Capitalism* (1942), Otto Nathan and Milton Fried, *The Nazi Economic System* (1943)

National Trust, British association to preserve for the nation places of natural beauty or buildings of architectural or historic interest in the British Isles, founded 1894, chartered 1895 By act of Parliament (1907) the Trust was empowered to acquire land inalienably and to be exempt from duties on property given or willed In 1934 the Trust received special powers to protect by covenant privately owned property The owner retains such property and its income, but may neither build on it nor alter its use without permission The Trust owns over 115,000 acres and protects by covenant over 40,000 acres See J DIXON-SCOTT, *England under Trust* (1937), James Lees-Milne, ed , *The National Trust* (1945)

National University, at Manila, founded 1900 as the Colegio Filipino. It was reorganized (1905) as the Colegio Mercantil and again (1916) as the National Academy, it was incorporated under its present name in 1921 The first nonsectarian university in the Philippines, it has colleges of liberal arts, commerce, dentistry, education, engineering, law, and pharmacy The university was closed during the Japanese occupation in the Second World War, but reopened in July, 1945

National Youth Administration, established in 1935 by the U S Congress. At first within the Works Progress Administration, it was transferred in 1939 to the Federal Security Agency and was placed in 1942 under the War Manpower Commission until that organ was abolished (1948). Aubrey W Williams was its director, and Josephine A Rocke was chairman of the executive committee Created in a period of widespread unemployment, the NYA at first engaged in getting part-time work for unemployed youths As unemployment decreased and war approached, emphasis was gradually shifted to training youths for war work until, early in 1942, all NYA activities not contributing to the war effort were dropped The agency was increasingly

criticized for outgrowing its need, for competing with established educational institutions, and for hoarding of machinery and manpower. Its activities ceased on Jan 1, 1944.

Natron, Lake (nā'trun), 35 mi long and 15 mi. wide, E Africa, on the Tanganyika-Uganda border. It contains salt and soda deposits

Nattier, Jean Marc (zhā' märk' nätyā'), 1685-1766, French painter, son of the painter Marc Nattier His early works include historical and mythological subjects as well as portraits of Peter the Great and Catherine I of Russia After 1718 he rose to top rank as a fashionable portraitist and became official painter to the court of Louis XV and a favorite of the marquise de Pompadour He usually rendered his sitters in the guise of mythological characters and sought generalized effects of graceful elegance at the expense of characterization He is extensively represented in European museums Typical of his works is the portrait *Princesse de Condé as Diana* (Metropolitan Mus)

Natural Bridge, village, western Va , SW of Lexington, at the entrance to the Jefferson National Forest Not far is the famous Natural Bridge over Cedar Creek. The bridge is a limestone arch 215 ft high and has a span of 90 ft , it was once owned by Thomas Jefferson and is still privately owned

Natural Bridges National Monument see NATIONAL PARKS AND MONUMENTS (table)

natural gas, natural mixture of gases found issuing from the ground or obtained from specially driven wells Because of its inflammability and high calorific value, it is extensively used as an illuminant and a fuel It is produced and utilized in greatest quantity in the United States, in smaller amounts in Canada, Mexico, and parts of Europe and Asia Although commonly associated with the production of petroleum, it appears also at a distance from such fields in sand, sandstone, and limestone deposits The largest producers of the gas are Texas, Oklahoma, California, Louisiana, and West Virginia, but it occurs in quantity also in Arkansas, Colorado, Illinois, Indiana, Kansas, Kentucky, Michigan, Missouri, Montana, New York, Ohio, Pennsylvania, South Dakota, Tennessee, Utah, and Wyoming The composition of natural gas varies in different localities Its chief component, methane, makes up usually from 80 to 95 percent, the balance being composed of varying amounts of other HYDROCARBON compounds, carbon dioxide, nitrogen, hydrogen, carbon monoxide, helium, and sometimes other gases, such as hydrogen sulphide The HELIUM content of the Texas wells is relatively high Some gasoline is obtained from the natural gas associated with petroleum In one process for gasoline extraction the natural gas is passed through oil and the gasoline is absorbed In another process the natural gas is first compressed and then allowed to expand, when a part of it liquefies and the gasoline is thus separated Natural gas was known to the ancients, but was considered by them to be a supernatural manifestation because, noticed only when ignited, it appeared as a mysterious fire bursting from fissures in the ground One of the earliest attempts to harness it for economic use occurred in the early part of the 19th cent in Fredonia, N Y Toward the latter part of the century large industrial cities began to make use of natural gas, and pipe lines were constructed to conduct the gas to these centers Now many pipe lines exist, some over 1,000 mi long, and the gas is used both in industry and for heating and lighting dwellings

Natural History, American Museum of see AMERICAN MUSEUM OF NATURAL HISTORY.

naturalization, official act by which one is made a national of a country other than his native one In some countries naturalized persons do not always become CITIZENS but may merely acquire a new NATIONALITY There is no such limitation in the United States, because the Fourteenth Amendment to the Constitution declares that "all persons born or naturalized in the United States" and subject to U S jurisdiction are citizens Article 1, Section 8, of the Constitution gives Congress the power to enact uniform naturalization laws These laws always provide for EXPATRIATION, i e , the renunciation of previous national allegiance Under the first American statute (1790) all unindentured white males who had lived in the United States for two years might become citizens The period of residence was lengthened to five years in 1795 and, in the stress of antiforeign feeling then prevalent, to 14 years in 1798 In 1802 it was reduced to five years, still the usual term The governing statute in the United States is the Nationality Act of 1940, it is administered by the Bureau of Immigration and Naturalization of the Dept of Justice (until 1940 the bureau belonged to the Dept of Labor) Only Negroes, white persons, native inhabitants of North and South America, Filipinos, Chinese (after 1943), and Asiatic Indians may be naturalized, all other Orientals are excluded (see IMMIGRATION). After two years' continuous lawful residence in the United States the prospectively eligible person may file a declaration of intention to become a citizen Two years later (but not before a total of five years of residence) a petition for naturalization may be submitted The

petitioner must meet several requirements, including the ability to read and to speak English, he must swear to support the Constitution and be of good moral character The actual conferring of citizenship is in most cases the action of a Federal court. Since 1922 alien women do not become U S citizens by marrying a citizen or by the naturalization of their husbands. Children under 18, however, become citizens automatically on the naturalization of the head of the family, usually the father The process of naturalization in some circumstances is shortened for members of the U S armed forces and for the wives of American citizens In addition to individual acts of naturalization, whole populations may be naturalized Examples are the conferring of U S citizenship on the citizens of Texas, Alaska, Hawaii, Puerto Rico, and the Virgin Islands

natural resources, conservation of see CONSERVATION OF NATURAL RESOURCES

natural rights, theory which maintains that man is born with certain inalienable and inherent rights which cannot be denied Although the existing concept of natural rights was formulated in the 17th and 18th cent, both the Greeks and the Romans held some ideas of natural rights as evidenced in the *jus gentium* of the Romans In the Middle Ages human rights were identified with the law of God because of the dominance of religion It was not until the decline of feudalism and the period of the Enlightenment that the doctrine began to be formulated The emphasis on natural rights as against divine rights did not indicate a break between divinity and nature The term "divine rights" was associated with clerical monopoly and the divine right of kings, therefore it was replaced by an expression which avoided connotations of royal and clerical prerogatives Liberty was thought of as the release of the individual from government oppression To achieve such a release it was necessary to assume that men were by nature sufficiently rational and good to govern themselves The essential freedoms that men sought were those that had been most commonly denied—opinion, economic enterprise, and self-government To achieve these freedoms men desired the rights of speech, worship, and public meeting An important addition to this list was made by John Locke when he proposed the rights of private ownership of property Rousseau, the leading propagandist of the doctrine of natural rights, supplemented the doctrine with the concept of SOCIAL CONTRACT The doctrine of natural rights was used as both cause and justification for the revolutionary movements on the Continent and in the United States in the 18th cent In the United States the writings of Thomas Jefferson and Benjamin Franklin and the pamphleteering of Samuel Adams promoted the growth of the doctrine of natural rights The chief codifications of the doctrine are the English Bill of Rights (1689), the bills of rights in American state constitutions, the French *Declaration of the Rights of Man and the Citizen* (1789), and the first 10 amendments to the Constitution of the United States (the so-called Bill of Rights, 1791) In more recent times the rise of National Socialism has threatened the theory of natural rights Nazi Germany was founded on the doctrine of the superior race, which refutes the basic position of natural rights In countries where the doctrine of natural rights is an accepted principle, two major difficulties with the doctrine have been reconciling the enumerated rights, e g , the antithesis between liberty and equality, and the violation of rights by legislative enactments, e g , voting restrictions See B F Wright, *American Interpretations of Natural Law* (1931), C L Becker, *The Heavenly City of the Eighteenth-Century Philosophers* (1932), Benedetto Croce and others, *Freedom Its Meaning* (ed by R N Anshen, 1940), Irwin Edman and H W Schneider, *Fountainheads of Freedom* (1941)

natural selection. see SELECTION

Nau, Jacques Jean David (shak' zhā' dāvēd' nō'), c 1630–1671, French pirate in the West Indies, b Sables d'Olonne, France He is also called François L'Olonnois He went to the West Indies in 1650 Expelled in 1653 from the Spanish colony of Santo Domingo for buccaneering activities, he found refuge on Tortuga, fitted out a vessel, and began plundering Spanish possessions His cruelty toward prisoners was bestial, and he was feared over the Spanish Main In a fight with the Spanish in Campeche all his men were killed, but Nau, disguising himself, watched the celebration of his death and then escaped in a canoe with a few French fugitive slaves Capturing a Spanish boat in a surprise attack off Cuba, he continued plundering, sacking Maracaibo in 1667 Wrecked by a storm in the Gulf of Darien, Nau was killed by the Indians.

Naucratis (nô'krutĭs), city of ancient Egypt, on the Canopic branch of the Nile 45 mi SE of Alexandria Before the rise of Alexandria and shifting of the Nile caused its decline, Greek "lords of the sea" made it under Amasis II the chief commercial city of Egypt The site has been excavated, revealing coins, inscribed pottery, and ruins of Greek temples

Naugatuck (nô'gutŭk), borough (pop 15,388), SW Conn , on both sides of the Naugatuck river below

Waterbury; settled 1702, inc 1893, coextensive with Naugatuck town, inc 1844 Iron and rubber products are made, Charles Goodyear had established a rubber plant here in 1843 School, library, and other buildings were designed by McKim, Mead, and White.

Naugatuck, river rising in NW Connecticut and flowing S to the Housatonic at Derby Many manufacturing centers are along its banks.

Nauheim, Germany see BAD NAUHEIM

Naum (nä'ŭm), name in the gospel genealogy Luke 3 25

Naumann, Friedrich (frē'drĭkh nou'man), 1860–1919, German politician A Lutheran pastor, he renounced (1894) the ministry to enter politics He was a founder (1896) and the first president of an association which, though called the National Socialist party, had nothing in common with Hitler's party As a member of the Reichstag (1907–12, 1913–18), he favored liberal legislation Naumann founded and edited the political weekly, the *Hilfe* He was the author of *Mittel-Europa* (1915, Eng tr , *Central Europe*, 1916), perhaps the most significant work of the Pan-German movement

Naumburg (noum'bo͝ork), city (pop 41,379), in the former Saxony prov of Prussia, E central Germany, on the Saale, between Weimar and Halle It is the center of a wine-producing region Dating from the 11th cent , it has retained parts of its medieval walls and a beautiful cathedral (13th-14th cent) with some of the finest sculptures of the German Gothic period

Naupaktos (nôpăk'tŭs), Latin *Naupactus*, town (pop 5,494), W central Greece, a port on the Gulf of Corinth Captured (456 B C) by the Athenians, Naupaktos was an important Athenian naval base in the Peloponnesian War It declined but again rose to commercial importance in the Byzantine Empire Known also as Lepanto in medieval and modern times, it came under Venetian rule in 1407 and under the Turks in 1499 A major naval victory of the Holy League over the Turks took place off Naupaktos in 1571 (see LEPANTO, BATTLE OF) From 1687 to 1699 the port was again held by Venice It fell to the Greek insurgents in 1828

Nauplia (nô'plē-u), Gr *Nauplion* or *Navplion* (both naf'plē-ŏn), town (pop 7,960), S Greece It is a port and commercial center on the east coast of the Peloponnesus It was held by Venice from 1388 to 1540 and again from 1866 to 1715 It was the first capital of independent Greece from 1830 to 1834, when it was superseded by Athens

Nauru (nä-o͞o'ro͞o), atoll (8 sq mi , pop 2,855), central Pacific, 1,300 mi NE of Australia It was discovered in 1798 by the British and annexed in 1888 by Germany Occupied in the First World War by Australian forces, it was placed (1920) under mandate and later (1947) under United Nations trusteeship held jointly by Great Britain, Australia, and New Zealand Throughout the Second World War the island was occupied by the Japanese It is important for its large and rich phosphate deposits, which form the bulk of the central plateau The island was formerly called Pleasant Island

nausea (nô'shu, nô'sē-u), a qualmish sensation felt in the region of the stomach, accompanied by general weakness and increased flow of saliva and usually followed by VOMITING Where nausea is caused by fright, vomiting may be prevented by lying down If often precedes fainting and may serve as a timely warning to lie down Some types of nausea are relieved by vomiting, especially where irritant food in the stomach is the cause

Naushon (nôshŏn'), island, 7 mi long, off SE Massachusetts, largest of the Elizabeth Islands Buzzards Bay washes its northwest shore In the Second World War it was turned over to the army for maneuvers

Nausicaä (nôsĭ'kā-ē), in the *Odyssey*, princess of Phaeacia She was the beautiful daughter of Alcinoüs and Arete When she found Odysseus shipwrecked near her home, she conducted him to her father's court Here she helped her father entertain him

nautch (nôch), dance performed in India by nautch girls, low-caste girls who dance at the temples It is characterized by slow, fluid undulatory movements, erotic posturing of the body, and little use of the feet

Nautical Almanac, annual publication by the British Admiralty issued four years in advance of the dates covered and containing information specially prepared for use by astronomers and navigators It contains ephemerides of the principal heavenly bodies, including the times of the sun's meridian adapted to the Greenwich meridian, tables and calculations of the tides, data on eclipses, and many other calculations and tables The first edition of the *Nautical Almanac* was published in 1767 It is a book of precise information of constant use to the astronomer, and by its aid the navigator is able to find his way across the seas, since from it he can obtain the position of the sun, the moon and the planets at a given latitude and longitude at any day or hour of the year In the United States the Bureau of Navigation publishes a similar

book, the *American Ephemeris and Nautical Almanac*, in three parts—the ephemeris for the Greenwich meridian, the ephemeris for the meridian at Washington, and predictions of phenomena with information for their observance. It was first published in 1855 The *American Nautical Almanac*, compiled for the special use of navigators, is composed of portions of the *American Ephemeris and Nautical Almanac* and is adapted to the Greenwich meridian Germany, France, and Spain publish similar almanacs

nautilus (nô'tĭlŭs), name used to refer to two cephalopods of the mollusk phylum The genus *Nautilus* is represented by the pearly or chambered nautilus found in the S Pacific and known to many through Oliver Wendell Holmes's poem "The Chambered Nautilus " The spiral shell secreted by the mantle consists of a series of chambers Each outgrown chamber is walled off by a septum, and the animal's body is enclosed in the largest and newest chamber A tubular elongation of the body extends through the septa to the apex of the shell The paper nautilus or argonaut is found in most warm waters It is related to the octopus and is not a true nautilus A delicate shell-like structure used to hold the eggs is secreted by the skin of one pair of arms in the female only The male is much smaller than the female

Nauvoo (nôvōō'), city (pop 1,088), W Ill , on heights overlooking a bend in the Mississippi and N of Keokuk, Iowa, settled shortly after 1830 as Commerce, occupied and renamed 1839 by the MORMONS under Joseph SMITH, inc 1841 The city reached its most prosperous and populous state under the Mormons, with about 20,000 inhabitants After Smith and his brother were killed by a mob in Carthage jail in 1844, the group left Illinois for Utah (1846) A colony of French communists (the Icarians) under Étienne CABET occupied the city in 1849, but the settlement broke up in 1856 because of internal disagreements Smith's house, part of an old hotel, and other old buildings are still standing The city is a farm trade center, with grape and dairy products

Navaho Indians or **Navajo Indians** (both nä'vuhō), tribe of North American Indians of the Athapascan linguistic stock At some time in the distant past a band of Navaho migrated from the north to the Southwest area Here they assimilated other groups—notably Pueblo, Shoshone, and Yuma—a fact which may account for the wide variety of physical features among them Thus the Navaho are a composite group with over 50 separate clans In the 17th cent they occupied the region between the San Juan and Little Colorado rivers in NE Arizona but they ranged far outside that territory The Navaho were a predatory tribe who (often in alliance with their relatives, the Apache) constantly raided the PUEBLO INDIANS, and after Spanish settlement of New Mexico, the Mexicans When the Americans occupied (c 1846) New Mexico, the Navaho pillaged them They even killed the first American Indian agent sent to them Punitive expeditions against the Navaho were only temporarily successful until Kit Carson, by destroying the Navaho's sheep subdued them in 1863–64 A majority of the tribe was imprisoned for four years at Fort Sumner in New Mexico In 1868 they were released from prison and given a reservation of some 16,000,000 acres in NE Arizona, NW New Mexico, and SE Utah and a new supply of sheep The Navaho then numbered some 9,000 Since that date they have remained a peaceful and industrious people and have been steadily increasing in number Today there are some 61,000 of them The Navaho were a nomadic tribe of the Southwest area In winter they lived in earth-covered lodges and in summer in brush shelters They farmed (corn and beans), hunted (deer, elk, and antelope), and gathered wild vegetable products After sheep were introduced (early 17th cent) by the Spanish, sheep raising superseded hunting and farming Thus the Navaho became a pastoral people They have adopted many peaceful arts—from the Mexicans metalworking, from the Pueblo Indians weaving With crude tools they make expert turquoise and silver finger rings, and with primitive looms they weave brightly colored blankets which are famous for their beauty Navaho religion is elaborate and complex, with many deities, songs, prayers, and chants and numerous colorful ceremonies, such as the squaw dance and the night chant. Their vast mythology includes a creation myth which states that Esdzanadkhi (probably Mother Earth) created man In recent years the Navaho have become victims of soil erosion caused by the flocks, which have overgrazed the fields The U S government has tried to reduce the size of the flocks but to no avail A policy of placing some Navaho in private and public industry has been suggested For a fictional account of Navaho life, see Oliver La Farge, *Laughing Boy* (1929) See Dane Coolidge and M B Coolidge, *The Navajo Indians* (1930), Clyde Kluckhohn and Dorothea Leighton, *The Navaho* (1947)

Navajo National Monument. see NATIONAL PARKS AND MONUMENTS (table)

Naval Academy, United States: see UNITED STATES NAVAL ACADEMY.

naval architecture, the science of designing a SHIP. A naval architect must consider especially the following factors floatability, the ability of the ship to remain afloat while meeting the requirements of the vessel's service under normal and abnormal weather and water conditions, or after being damaged by collision or grounding, strength, for the vessel must be structurally sound to meet the class of trade she is intended for, stability, the capability of the vessel to return to an upright position, after being inclined by wind, sea, or conditions of loading, speed, which is affected by the outline of the hull and the type of engines, boilers, and propellers, steering, the design of the rudder and the hull structure to effect efficient turning, rolling and pitching motions and their effect on the structure, living conditions, including adequate ventilation and natural lighting, and the arrangement of the structure and equipment to facilitate handling of cargoes The design of WARSHIPS involves many problems not met with in merchant-ship design Heavy concentrated loads in the form of gun turrets, the protective armor, and other factors make warship design a field in itself The three principal plans made for the construction of a ship are the sheer plan, a profile of the ship, showing the outline of the intersection of a series of vertical longitudinal planes with the shell of the ship and including the location of the transverse bulkheads, decks, and main structures, the body plan, a view showing sections made by vertical transverse planes, and the half-breadth plan, indicating the outline of a series of horizontal longitudinal planes In addition, there are, of course, innumerable general and detail drawings made, which include all the internal and external equipment

naval conferences, series of international assemblies, meeting for consideration of the rules of naval warfare, the limitation of armaments, and related topics. The *London Naval Conference* (1908–9), composed of delegates of 10 naval powers convened at the invitation of the British government to reach an agreement on the establishment of an International Prize Court, resulted in the Declaration of London (see LONDON, DECLARATION OF), which, though unratified, greatly influenced international law Desire to limit armaments and to promote better relations among the Pacific naval powers led President Warren G Harding to call the *Washington Conference* (1921–22), which was attended by Great Britain, Japan, Italy, France, the United States, China, the Netherlands, Portugal, and Belgium Several treaties resulted The Five-Power Treaty limited tonnage of aircraft carriers and capital ships (war vessels with tonnage in excess of 10,000 tons displacement or carrying a gun of more than 8-inch caliber) through quota allotments and through provision for scrapping ships already built or planned Great Britain and the United States were each entitled to 525,000 tons of capital ships, Japan was to have 315,000 tons, while France and Italy were each limited to 175,000 tons The respective ratio thus established was 5 5 3 1 67 1 67 The treaty limited aircraft carriers to 135,000 tons each for Great Britain and the United States, 81,000 tons for Japan, and 60,000 tons each for Italy and France No agreement could be reached concerning other types of ships, for the other powers refused to accede to the abolition of submarines, as urged by Great Britain, and the British, in turn, refused to agree to a limitation of destroyers Another five-power treaty provided that rules of warfare applying to surface ships should also govern submarines, and the same pact prohibited the use of poisonous gases In the Four-Power Pact, France, Japan, Great Britain, and the United States agreed "to respect their rights in relation to their insular possessions and insular dominions in the region of the Pacific Ocean " Prompt and frank exchange of communications was enjoined concerning action to be taken in the event that a nonsignatory power threatened aggression Though not a guarantee of the status quo, these agreements made possible the lapse of the Anglo-Japanese alliance, which was much criticized in the British dominions and the United States These treaties were to remain in force until Dec 31, 1936, unless terminated by a signatory upon two-years notice One of the most important of the conference treaties was that in which Great Britain, Japan, and the United States agreed to maintain the status quo as it regarded naval bases and fortifications in the W Pacific Two Nine-Power Treaties guaranteed the independence and territorial integrity of China and granted that country greater control over its tariff Other treaties signed were those between the United States and Japan, regarding cable rights on the island of Yap, and between Japan and China, providing for the return of Shantung to China Because naval competition was again manifesting itself in the construction of war vessels not limited by the Washington Conference, President Calvin Coolidge issued an invitation to the other naval powers to discuss the limitation of cruisers, destroyers, and submarines This *Geneva Conference* (1927) was a virtual failure, for France and Italy declined to accept the invitation, and Great Britain and the United States reached a deadlock on the cruiser problem While Britain was anxious to limit heavy cruisers, which were preferred by the United States, the British were unwilling to agree to the limitation of light cruisers The *London Conference* (1930) was an attempt to settle the problem of relative cruiser strengths The chief obstacles to its success were the French refusal to agree to parity with Italy and the French demand for political guarantees, to compensate for a smaller navy, which neither the United States nor Great Britain was ready to give As a result of this conflict, both Italy and France refused to sign the third and essential part of the treaty This section established tonnages on heavy cruisers, small cruisers, destroyers, and submarines for Japan, Great Britain, and the United States Japan won a 10 10 7 ratio in small cruisers and destroyers, while a 5 5 3 ratio was maintained in large cruisers, each nation was allowed a tonnage of 52,700 in submarines A so-called "escalator clause" gave each of the three powers the right to increase its tonnage if naval building of a nonsignatory nation threatened its security, provided the other signatories were notified and thus were entitled to proportionally increase their own fleets The rest of the treaty concerned all the naval powers By the first part the further construction of capital ships was deferred, the second part limited the displacement of submarines, the third part reiterated the principle that undersea craft must conform to the same rules of war as apply to surface vessels, and the last part provided that the treaty was to remain in force until Dec , 1936 (with the exception of the fourth part, the duration of which was indefinite) The same section stipulated the calling of another naval conference in 1935 However, the notice of Japan in 1934 of the intention to terminate the Washington Conference treaty resulted in another *London Conference* (1935), to which the United States, the British Empire, Japan, France, and Italy were invited Japan soon withdrew when Japanese demands for parity with Great Britain and the United States were rejected The remaining powers drew up an agreement providing for the annual exchange of full information about naval building plans and decided on a limitation of 8,000 tons for light surface craft (cruisers and destroyers) and 35,000 tons for capital ships Because of League of Nations sanctions, Italy refused to sign, but the remaining countries signed on March 25, 1936 Germany and the USSR accepted the general scheme of limitations in bilateral treaties with Great Britain in 1937 The refusal of Japan to reveal details of the building program, reported to be in excess of 35,000 tons, led the United States, Great Britain, and France to raise the limit on capital ships to 45,000 tons in 1938 With the outbreak of war in 1939 the treaties were completely abandoned See C P Howland, ed , *Survey of American Foreign Relations* for 1928, 1930, and 1931 (pub by the Council of Foreign Relations), F L Schuman, *International Politics* (1933, 4th ed , 1948), S F Bemis, 4 *Diplomatic History of the United States* (1936, 3d ed , 1950)

naval science see STRATEGY AND TACTICS

naval stores, trade term for the products obtained from the pine tree Old stumps and fallen branches as well as newly cut trees yield the products It originally included the masts and cordage of ships, but is now applied only to such materials as rosin, TAR, pitch, spirits of turpentine, and pine oil Most of the naval stores used in the world are produced in North and South Carolina, Florida, Georgia, Alabama, and Mississippi Naval stores are now used largely in the manufacture of soap, paint, varnish, shoe polish, lubricants, linoleum, and roofing material

Navan (nă'vun) or **An Uaimh,** urban district (pop 4,103), Co Meath, Ireland It is a manufacturing town at the confluence of the Boyne and Blackwater There are remains of the old town walls

Navarino, battle of (navärē'nō), 1827, naval battle resulting from the intervention of the European powers in the Greek War of Independence England, France, and Russia had demanded an armistice in the Greek-Turkish fighting This was refused by the Porte, and the three European powers sent their fleets to stop Egyptian reinforcements from landing in Greece In Sept , 1827, a large Egyptian fleet, with troop transports, commanded by Ibrahim Pasha, landed at PYLOS, then called Navarino, but the allied fleet commander, Admiral Sir Edward Codrington, persuaded Ibrahim to await further instructions from his father, Mohammed Ali of Egypt When the Greeks continued operations, Ibrahim disregarded the agreement, thereupon the allied ships entered the harbor of Pylos and made short shrift of the Egyptian fleet, which was bottled up and defenseless Its destruction helped to bring about the withdrawal (1828) of Mohammed Ali from the war in Greece

Navarre (nuvär'), Span. *Navarra* (nävä'rä), province (4,024 sq. mi., pop. 369,618), N Spain, border-

ing on France, between the W Pyrenees and the Ebro river. PAMPLONA is the capital Navarre and the BASQUE PROVINCES form together the region Vascongadas y Navarra The higher mountain slopes have extensive pastures, used for cattle raising, but most of the country is poor and sparsely populated The creation of hydroelectric plants is beginning to permit some industrial development In the Ebro valley there are vineyards The population of Navarre is largely of Basque stock, and the early history of the region is the history of the BASQUES The pass of RONCESVALLES, which leads from France to Navarre, gave the region great strategic importance throughout the ages The Basques defended themselves successfully against the Moorish invaders as well as against the Franks, the domination of Charlemagne, who conquered Navarre in 778, was short-lived In 824 the Basque chieftain Iñigo Arista was chosen king of Pamplona, which was expanded under his successors and became known as the kingdom of Navarre It reached its zenith under SANCHO III (1000–1035), who married the heiress of Castile and ruled over nearly all Christian Spain On his death the Spanish kingdoms were again divided among his sons García (reigned 1035–54) inherited Navarre On the death (1076) of his son, Sancho IV, Navarre was united with Aragon under the Aragonese line, but in 1134 it again became separate under García's descendants The kingdom at that time comprised the present province of Navarre, the Basque Prov (which it later lost to Castile), and, N of the Pyrenees, the district called Lower Navarre, now in France In 1234, on the death of Sancho VII, it passed to Sancho's nephew, Count THIBAUT IV of Champagne The crown remained with the house of Champagne until 1305, when on the death of Joan, queen of Navarre and countess of Champagne, it passed to her husband, King Philip IV of France (Philip I of Navarre) Louis X, Philip V, and Charles IV, the four last direct Capetian kings of France, were kings of Navarre as, respectively, Louis I, Philip II, and Charles I The Salic law did not apply to Navarre, which on Charles's death (1328) passed to his niece, Joan II She married Count Philip of Évreux Their son, CHARLES II or Charles the Bad, played an important part in the Hundred Years War and in the French civil troubles of the time The marriage of Blanche, heiress of Navarre, to JOHN II of Aragon made John master of Navarre in 1425 CHARLES OF VIANA, their son, succeeded (1442) on his mother's death, but was involved in civil war with his father, who outlived him John died in 1479 and his daughter, Leonora, who had married Count Gaston of Foix, succeeded to Navarre, she died in the same year and her son, Francis Phoebus of Foix, inherited the kingdom His sister and successor, Catherine, married Jean d'Albret, thus bringing the crown into the house of ALBRET, through which it passed to the Bourbon kings of France, beginning with Henry IV (king of Navarre as Henry III from 1572, king of France from 1589) The kings of France until Louis XVI carried also the title kings of Navarre In fact, however, Ferdinand V of Aragon occupied (1512) most of Navarre and annexed (1515) it (except Lower Navarre) to the Spanish crown Thus the kings of Spain until 1833 also carried the title kings of Navarre In 1833 Navarre sided with the Carlists and recognized Don Carlos as Charles III of Navarre, but in 1839 Isabella II was recognized as queen In the Middle Ages the prerogatives of the Navarrese kings were strongly limited by the Cortes Lower Navarre (the part retained by France) was united with Béarn into a French province, with its parlement at Pau It kept many of its privileges until the French Revolution, when it became part of Basses-Pyrénées dept

Navarre, rural village (pop 1,703), NE Ohio, on the Tuscarawas river and SW of Canton Sewer pipe is made here Near by are Fort Laurens State Park, on the site of a Revolutionary fort, and the Beach City and Bolivar flood-control dams

Navarrete, Juan Fernández (hwän' fĕrnän'dāth nävärrā'tā), 1526–79, Spanish religious painter, called El Mudo [the mute] He studied in a monastery and later in Italy, perhaps with Titian In 1568 he became court painter to Philip II, for whom he enriched the Escorial with eight fine altarpieces, among them *Nativity, Abraham and the Three Angels* (Escorial), and *Baptism* (now in the Prado) Through Navarrete, Venetian influence reached Spain

Navarrete, Martín Fernández de (märtēn' fĕrnän' dāth dā), 1765–1844, Spanish historian and hydrographer, b. La Rioja prov, Spain He entered (1780) the Spanish navy and later served against France (1793) and England (1794) He was in the navy department from 1796 and established its hydrographic office He was (1803–7) chief clerk and then became (1807) accountant of the tribunal of the admiralty After Napoleon took Spain, Navarrete refused office and retired (1809) Later he became (1823) director of the hydrographic office and in 1834 was named a member of the marine division of the Royal Council of the Indies In 1824 he became director of the Royal Academy of History. He is famous for his collection (1825–37) of the narratives of Spanish voyages of discovery of the late 15th and 16th cent He also wrote a biography of Cervantes (1819) and a maritime dictionary (1831)

Navarro, Madame de. see ANDERSON, MARY A.

Navarro, Tomás (tōmäs' nävä'rō), 1884–, Spanish philologist In 1909 he entered the National Archives and Library Service, becoming (1936) director of the National Library of Madrid Professor (1931–36) of phonetics at the Univ of Madrid, he became notable as an authority on the Spanish language His *Manual de la pronunciación española* (1918) is standard In 1940 he became professor of Spanish philology at Columbia

Navas de Tolosa (nä'väs dā tōlō'sä), city (pop 7,120), Jaén prov, S Spain, in Andalusia Here in 1212 ALFONSO VIII of Castile decisively defeated the Moors and obtained a hold upon Andalusia

Navasota (nă'vusō'tu), city (pop 6 138) E central Texas, near the confluence of the Navasota with the Brazos and NW of Houston The place was known to the Spanish, but the town grew about a stagecoach stop and was laid out in 1858 It is a shipping center for a diverse farming and lumbering region and has small industries A statue of La Salle commemorates the tradition that he was killed near Navasota

nave (nāv), in general, all that part of a church which extends from the atrium to the altar and is intended exclusively for the laity In strictly architectural sense, however, the term indicates only the central aisle, excluding side aisles The floor plan of a wide central portion with narrower aisles on either side existed in the typical HYPOSTYLE hall of Egyptian temples and later in the Roman civic basilicas From the latter it passed into the churches of the early Middle Ages and gradually to Gothic cathedrals The nave, in developed Gothic, became the main body of the structure, its vaulted roof borne high above the aisles on a slender masonry skeleton, transmitting its thrusts downward and outward through great piers and flying buttresses Internally the piers, rising the full height of the nave walls to carry the ribs of the four-part vault or SEXPARTITE VAULT, divided these walls into a series of bays in which three features, ground floor arcade, TRIFORIUM, and CLERESTORY, were evident, one above another Thus, the clerestory lighting, high above the aisle roofs, still related the Gothic nave to its original Egyptian and Roman prototypes The French Gothic cathedral (begun 1220) at Amiens contains a nave 140 ft high England's highest nave, at Westminster Abbey, is only 101 ft, and most English naves are much lower Monumental Renaissance churches, such as Saint Peter's Church and Saint Paul's Cathedral, have naves covered with classic barrel vaults and domes

navigable water, in the broadest sense, a stream or body of water which can be used for commercial transportation When, as in the early common law, the term is restricted to waters affected by tides it denotes only the open sea and tidal rivers In most of the American states the definition tends to be all-embracing and even includes streams which can be used only for logging and for small pleasure boats Each state determines what private use may be made of wholly intrastate navigable waters (see WATER RIGHT), but the Federal government alone has authority over navigable interstate and international waters In general, if the water is of restricted navigability, the right of public use is strictly confined to transporting goods and use of the water for irrigation, power, and the like is limited to the abutting owners

navigation In ancient times, navigation must have been by the guidance of the sun and stars and landmarks along the coast In classical times the Phoenicians were probably the most daring navigators They built large ships and traveled out of sight of land by day and by night They probably circumnavigated Africa The vikings often carried birds which were used to find land when no coast was visible A bird would be released and its flight watched, since the bird on rising to a higher altitude might sight land and naturally would fly towards it In England, Queen Elizabeth did much to establish navigation laws, giving additional powers to Trinity House, a guild which had been created in 1514 for the piloting of ships and the regulation of British navigation During this period hydrography was given much attention, and harbors and the outlets of rivers were surveyed and buoyed A tremendous advance in navigation had taken place with the introduction of the compass early in the 14th cent Early in the 15th cent there was progress by the Portuguese under the leadership of Prince Henry the Navigator, who built an observatory and formulated tables of the declinations of the sun, collected a great amount of nautical information, which he placed in practical form, made charts, and carried out expeditions which led to numerous discoveries With the development of shipbuilding and the increase in knowledge of astronomy, there was increased use of instruments The cross-staff was used early in the 15th cent. It consisted of two pieces of wood, the cross at right angles to, and sliding on, the staff. At each end of the 26-inch cross a small hole was bored, and at the end of the staff a sight was fixed To measure the altitude of a heavenly body the instrument was sighted in that direction and the cross was moved forward or back until the heavenly body appeared through the upper hole and the horizon through the lower The altitude could then be read on a scale marked on the staff. Another device used for finding latitude was the ASTROLABE Both were far from accurate The navigating equipment carried by Columbus probably was simply a compass, a cross-staff, and a table of the sun's declination Vasco da Gama on his first voyage around the Cape of Good Hope in 1497 used the astrolabe Mercator's work in improving charts at the end of the 16th cent, the works of Martín Cortes during the same period, the determining of the earth's circumference, and the introduction of logarithms at the beginning of the 17th cent by Napier were all factors that did much to advance the intricate science of navigation However, up to the beginning of the 18th cent, while the quadrant was used to find latitude and the LOG line and half-minute glass employed to tell the distance traveled, the problem of finding the longitude had not been satisfactorily solved before the invention of the chronometer The appearance of the NAUTICAL ALMANAC in 1767 was a great step forward in navigation, and the 19th cent saw the development of books on navigation that far surpassed any earlier instructions, such as the standard book by Nathaniel Bowditch The system of DEAD RECKONING (i.e., figuring the position from a landmark and the distance traveled) was refined, and the use of buoys and making of careful charts made navigation easier, while the fixing of positions by SEXTANT and astronomical charts was greatly improved The next great revolution in navigation, however, waited until well into the 20th cent when radio signals came into wide use The development of RADAR (including Loran) in the Second World War caused fundamental changes in navigational practice although their effects have not as yet been seen in the full Air navigation, the science of determining the geographical position of an aircraft and of maintaining its desired course relative to the earth's surface, is similar in principle to sea navigation It uses the same general methods, employed singly or in combination These include celestial navigation, accomplished by carefully timed sextant observations of celestial bodies, dead reckoning, by the use of knowledge of distances and directions traveled from an observed point of known location, piloting, by continuous observation of visible landmarks, radar navigation, by observation of a radarscope or other radar device, and radio navigation, by observation of radio bearings to broadcasting stations of known position

Navigation Acts, in British colonial history, name given to certain parliamentary acts more properly called the British Acts of Trade The acts were an outgrowth of MERCANTILISM, and they were a natural consequence of previous legislation restricting trade in the interest of the state The rise of the Dutch carrying trade, which threatened to drive English navigators from the seas, was the immediate cause for the Navigation Acts in the interregnum The Act of 1651 dealt comprehensively with British commercial policy, forbidding the importation of plantation commodities of Asia, Africa, and America except in ships owned, commanded, and for the most part manned by Englishmen As to European goods, they could be brought into England, Ireland, Berwick-upon-Tweed, and English possessions only in ships belonging to Englishmen or ships belonging to people of the country whence the cargo came, the country where the cargo was produced, or the country of the port of first shipment With the RESTORATION this act lost its validity, but it was substantially reenacted in the First Navigation Act of 1660 (confirmed by regular Parliament, 1661), which had as its aims the barring of foreigners from the English trade, the encouragement of English navigation, and the regulation of plantation trade to insure a balance of trade favorable to England The First Act further listed "enumerated" articles produced in the English colonies, these were to be supplied only to England and included such things as sugar, tobacco, cotton, indigo, ginger, and dyewoods Enumeration was partly to give England a secure monopoly of commodities she could not produce and partly to add to the revenue by taxing them when reexported from England This First Act was expanded and altered by the succeeding Navigation Acts of 1662, 1663, 1670, and 1673 In 1663 an important principle was formally added to the system, the policy of the staple, this required that all foreign goods shipped to the American plantations be shipped from English ports The system largely restricted the shipping to the English and compelled the importation of all goods into the colonies to be from England only and the exportation of many commodities to England alone There was considerable complaint from the colonies, especially the West Indies, and there was wholesale evasion, but all in all matters

seemed to progress without too much trouble. The Act to Prevent Frauds and Abuses, of 1696, is the last of the important Navigation Acts, all of them remained in force and were executed with more or less vigor The enumeration of articles was shifted to suit convenience. The Molasses Act of 1733 aroused some resentment, but for the most part smuggling was the cure for any colonial dissatisfaction Patriotic historians of the United States have decried the Navigation Acts as unjust and tyrannous and have argued that opposition to them was a major cause of the American Revolution There seems to be some question about this Thus, although the Act of 1696 granted customs officers the right of forcible entry, writs of assistance do not seem to have been used in the colonies until after 1750, and then they were used sparingly The vigorous attempt to prevent smuggling in the American colonies after 1765 awakened keen resentment The legislation had a much more unfavorable effect, however, upon the citizens of Ireland, Scotland (before the Act of Union of 1707), and the Channel Islands, who were cut out of the plantation trade and were in fact deprived of their shipping rights The system fell into decline after the American Revolution, especially with the decline of mercantilism The acts were finally repealed in 1849 See G L Beer, *Origins of the British Colonial System* (1908) and *The Old Colonial System* (1912), H L Osgood, *American Colonies in the Seventeenth Century* (new ed , 1930) and *American Colonies in the Eighteenth Century* (1924), *Cambridge History of the British Empire*, Vol I (1929), L A Harper, *The English Navigation Laws* (1939)

Naville, Édouard Henri (ādwar' ārē' nāvēl'), 1844–1926, Swiss Egyptologist After 1891 he was professor of Egyptology at the Univ of Geneva He conducted excavations in Egypt from 1883 to 1912 For several years he was president of the International Red Cross In 1874, for the London Congress of Orientalists, he undertook the editing of the Egyptian Book of the Dead, a task involving 10 years of research Included among his works are *Store-City of Pithom and the Route of the Exodus* (1885), *Goshen and the Festival Hall of Osorkon II* (1887), and *The Old Egyptian Faith* (1909)

Naviti Levu, Fiji see VITI LEVU

navy. Originally including all ships of a nation, for war or commerce, the term *navy* now designates only such vessels as are built and maintained specifically for war and for certain other duties pertaining to national protection Navies were maintained by all the early Eastern nations bordering on the Mediterranean The Greeks and the Romans, the Italian republics, and France had navies of a similar nature In the north the famous viking ships were organized into small but efficient fleets It was to meet their attacks that King Alfred, in the 9th cent , was the first to realize that a navy was essential to England With the navy he formed, he was able to meet his enemies on the open seas and to attack them in their ports Henry VIII organized a navy and established dockyards, and Elizabeth's reign saw great naval development France's navy originated with Louis IX in the mid-13th cent Spain, after the disaster of the ARMADA, rebuilt the Spanish navy In Russia, Peter I established a navy Germany, Italy, and Japan developed strong navies in the 19th cent A congressional vote of $100,000 in 1775 was the beginning of the U S navy in the American Revolution It did not, however, attain any considerable size until after war with France was threatened In 1798 the Dept of the Navy was established In 1809 the UNITED STATES NAVAL OBSERVATORY came into being, and in 1845, through the efforts of George BANCROFT, the UNITED STATES NAVAL ACADEMY was opened The ships constituting navies have evolved from the early GALLEY pulled by oars and the sailing ship to steam-driven vessels Of the sailing ships, outstanding types were the line-of-battle ship and the FRIGATE The line-of-battle ships were the most heavily armed, often carrying as many as 100 guns or more and were designed to bear the brunt of the battle, while the frigates were more lightly armed, were built for speed, and were employed to harass the enemy, destroy its commerce, and protect the commerce of their own country. Following these came iron and steel ships, carrying a smaller number of guns of larger caliber and protected by armor (see MONITOR) The ships of the modern navy include the various types of WARSHIP—AIRCRAFT CARRIER, CRUISER, DESTROYER, GUNBOAT, and SUBMARINE The modern navy requires many land institutions and training establishments as well as navy yards and naval bases across the world The scope of naval activity was well shown by the U S navy in the Second World War, when armies had to be transported to various parts of the world and active fighting had to be pursued in the various theaters, but most notably in the Pacific See STRATEGY AND TACTICS, SEA POWER, NAVAL CONFERENCES *Brassey's Naval Annual* and *Jane's Fighting Ships* are standard current records of the world's navies

Navy, United States Department of the, established in 1798 by act of Congress The conduct of naval affairs was entrusted to the Dept. of War after 1789, but upon the recommendation of President John Adams, Congress created a separate executive department headed by the Secretary of the Navy The exigencies of the War of 1812 pointed up the need for competent assistance to the Secretary of the Navy To this end the Board of Navy Commissioners was established (1815), but the board was later (1842) abolished in favor of five specialized bureaus In the Civil War these divisions were reorganized (1862) into eight bureaus, these administrative bureaus, thereafter, were readjusted to the changing needs of the U S navy The office of judge advocate general was established in 1865, the first Assistant Secretary of the Navy took office in 1890, and the office of chief of naval operations was established in 1915 To promote naval aviation, the Bureau of Aeronautics was created (1925) After directing the activities during the Second World War of the largest navy in U S history, the Dept. of the Navy was incorporated (1947) in the National Military Establishment and in 1949 became a division of the U S Dept of National Defense

Navy Island, in the Niagara river, just above Niagara Falls, belonging to Canada It is famous as the scene of the last stand made by William Lyon MACKENZIE and some of his fellow rebels in the Upper Canadian rebellion of 1837

Nawa, Ryukyu Islands see NAHA.

Nawiliwili Harbor (näwē'lēwē'lē), on SE Kauai, T H , principal port of the island, near Lihue

Naxos (näk'sŏs, Gr nak'sŏs), island (170 sq mi ; pop 20,132), off S Greece, in the Aegean, the largest and most important of the CYCLADES It exports almonds, citrus fruit, figs, olive oil, wheat, and a noted white wine The main town, Naxos (pop 2,455), is on the northwest shore In legend Naxos is famous as the place where Theseus abandoned ARIADNE Naxos was in ancient times a center of the worship of Dionysus Colonized by the Ionians and sacked (490 B C) by the Persians, Naxos later joined the Delian Confederation, but became a tributary to Athens c 450 B C

Nazuana see NAKHICHEVAN, city

Nayarit (nīyärēt'), state (10,547 sq. mi , 1946 estimated pop 257,801), W Mexico, on the Pacific For the most part wild and rugged, Nayarit is broken by western spurs of the Sierra Madre Occidental In the northeastern section are broad tropical plains watered by the Santiago, a continuation of the LERMA river The volcanic soil, heavy rains, and variation in altitude produce a variety of products of tropical and temperate agriculture—sugar cane, cotton, coffee, tobacco, and grains Cattle are raised, forest and mineral wealth on the mainland and on LAS TRES MARIAS islands are almost unexploited Though not finally conquered until the early 17th cent , the region was known to the Spanish early in the 16th cent , and one of its towns, Compostela, S of TEPIC, the present capital, was the first capital of NUEVA GALICIA Shortly afterwards Nayarit became a dependency of Guadalajara and, with independence, part of Jalisco Continued turbulence in the 19th cent led to its separation as a territory in 1884 Youngest of the Mexican states, it was not admitted to the union until 1917

Nayler, James, 1617?–1660, English Quaker leader He served for about eight years in the parliamentary army In 1651 he became a Quaker and a disciple of George Fox, but gradually gathered a band of followers about himself In 1656 he rode into Bristol, his followers crying "Holy, holy, holy, Lord God of Israel " Nayler's explanation that his disciples were worshiping the "Christ within him" rather than himself did not prevent a parliamentary trial (1656) He was sentenced to be pilloried, whipped, branded, and imprisoned Nayler was author of a number of well-written religious pamphlets, both devotional and controversial His collected works were published in 1716 See biographies by M R Brailsford (1927) and Emilia Fogelklou (1931)

Nazarene (nă'zurēn), term used of early Christians It alludes to Nazareth Acts 24 5

Nazarenes (nă'zurēnz), group of German artists of the early 19th cent who worked in Rome and attempted to revive Christian art They took as their inspiration the work of early Italian painters and worked from imagination, not from nature They were at one time called Pre-Raphaelites, but there is little similarity between their work and that of the later English group They founded (c 1812) the Brotherhood of San Isidoro in a deserted Franciscan monastery of that name, there they lived in almost monastic simplicity, devoting the mornings to household tasks and the afternoons to painting Outstanding members were J F Overbeck, Philipp Veit, Peter von Cornelius, Schnorr von Carolsfeld, and Schadow-Godenhaus Many of them collaborated on the well-known frescoes in the Casa Bartholdy and Villa Massimi Although much of their work was uninspired, the Nazarenes exercised a considerable influence in Germany, whither most of them returned.

Nazareth (nă'zurĭth), town (pop over 20,000), N Israel, in the Lower Galilee highland. As the home of Jesus Christ it is a great place of pilgrimage, and there are many churches and shrines, including a church built on the traditional site of the Annunciation The inhabitants are mainly Christian.

Nazareth, borough (pop 5,721), E Pa , near the Delaware NW of Easton, settled c.1740 by Moravians, inc. 1863. Clothing and Portland cement are made here. Whitefield House, built in 1740, is an example of Moravian architecture

Nazareth College see KALAMAZOO, Mich , LOUISVILLE, Ky , ROCHESTER, N Y

Nazas (nä'sus), river rising in Durango, N Mexico, and flowing generally southeast and east to end near TORREÓN Sometimes called the American Nile because of yearly silt deposits, it inundates a vast desert basin and, with its control dams, provides water for irrigating the LAGUNA DISTRICT

Nazca (nä'ska), ancient civilization of the Nazca (Rio Grande) and Ica river valleys on the desert coast of S Peru Flourishing independently but contemporaneously with Classic TIAHUANACO, Nazca was after A D 900 apparently under Tiahuanaco influence until the Inca conquered the region in the 15th cent Little is known of the people, but they seem to have been a loosely organized group of farmers Although archaeological remains characterized by huge shell mounds exist, no villages or buildings can be positively identified as Nazcan Examples of the skilled ceramic and textile arts are, however, found in burial pits Highly polished, expertly designed, and with polychrome painting, the pottery is unlike that of other Peruvian cultures Textiles show a multitude of weaving techniques and skill in dyeing with several shades of the same color, both coastal cotton and highland alpaca wool were used See P A Means, *Ancient Civilizations of the Andes* (1931)

Naze, the, hook-shaped headland, Essex, England, S of Harwich and NE of London

Naze, the, NORWAY see LINDESNES

Nazi see NATIONAL SOCIALISM

Nazianzen see GREGORY NAZIANZEN, SAINT.

Nazimova, Alla (nuzĭ'muvu), 1879 1945, Russian-American actress She turned from music to the drama, studied with Stanislavsky, and appeared at the Moscow Art Theatre and in stock companies in Germany and London In 1905 she came to New York and played Russian roles in her native tongue In 1906 she made her English-speaking debut in Ibsen's *Hedda Gabler* and later increased her reputation as an Ibsen interpreter with leading roles in *Ghosts*, *A Doll's House*, *The Master Builder*, and *The Wild Duck* An actress of beauty and sensitivity, she gave memorable performances in 1928 as Mme Ranevsky in Chekhov's *Cherry Orchard* and in 1931–32 as Christine in O'Neill's *Mourning Becomes Electra* She also acted in moving pictures

Nazis and **Nazism** see NATIONAL SOCIALISM

Nb, chemical symbol of the element NIOBIUM

Nd, chemical symbol of the element NEODYMIUM

Ne, chemical symbol of the element NEON

Neagh, Lough (lŏkh nā'), lake, 18 mi long and 11 mi wide, maximum depth 102 ft , central Northern Ireland, in Counties Armagh, Tyrone, Londonderry, Antrim, and Down It is the largest fresh-water body in the British Isles Fed by the Upper Bann, Blackwater, and other streams and drained to the north by the Lower Bann, it is noted for pollan, trout, and eel fisheries There are few islands, Ram's Island has ruins of a round tower According to a legend, quoted by Giraldus Cambrensis and cited in Thomas Moore's "Let Erin Remember the Days of Old" (*Irish Melodies*), the lake occupies the site of a town, the buildings of which may sometimes be seen through the water

Neagle, John, 1796–1865, American portrait painter, b Boston He was reared in Philadelphia, where he was apprentice to a coach painter After travel in the West, he settled in Philadelphia and married the stepdaughter of Thomas Sully He made a name for himself by his famous portrait *Pat Lyon at the Forge* (Pa Acad of the Fine Arts) in 1826 Other works are in the museums of Cleveland, Minneapolis, New Orleans, and New York Neagle became director of the Pennsylvania Academy of the Fine Arts in 1830

Neah (nē'u), unidentified place, N Palestine *Joshua* 19 13

Neal, David Dalhoff (nēl), 1838-1915, American historical and portrait painter, b Lowell, Mass , studied in Paris and Munich He painted for many years in Munich, and in sentiment and style his works belong with the Munich school Among his paintings are *Oliver Cromwell Visits John Milton* (public library, Cleveland) and portraits of Mark Hopkins (Williams College), Teackle Wallis (Athenaeum Club, Baltimore), Adolph Sutro, and D. O Mills

Neale, John Mason (nēl), 1818–66, English clergyman, historian, and hymn writer, grad Trinity College, Cambridge, 1840 An enthusiastic supporter of the High Church movement, he never attained any important position in the church and was even under the inhibition of his bishop from 1846 to 1863 From 1846 until his death he was warden of Sackville College, East Grinstead, Sussex, a charitable institution for the aged, there he wrote voluminously—history, theology, travel

books, poems, hymns, and books for children. A nursing sisterhood which he had founded elsewhere was moved to East Grinstead in 1856 and continued there as St Margaret's Sisterhood Neale knew 20 languages and is best known for his numerous translations of Greek and Latin hymns In 1859 appeared his translation of a sizable part of Bernard of Cluny's *De contemptu mundi*, from which several of Neale's best-known hymns are taken His daughter, Mary Sackville Lawson, edited his *Collected Hymns, Sequences, and Carols* (1914) and a selection of his letters (pub 1910). See biography by Eleanor A Towle (1906)

Neander, Johann August Wilhelm (yō'hän ou'gōost vil'hĕlm nāan'dur), 1789–1850, German theologian and church historian Of Jewish parentage, he renounced Judaism and became a Lutheran (1806), changing his name from David Mendel to Neander In 1813 he became professor of church history at the Univ of Berlin He wrote many books, of which the best known is *Allgemeine Geschichte der christlichen Religion und Kirche* (11 vols, 1825–52, Eng tr, *General History of the Christian Religion and Church*, 9 vols, 1847–55) This has gone through many editions

Neanderthal (nēān'dŭrtăl", Ger nāān'durtāl"), small valley, W Germany, E of Düsseldorf Here in 1856 skeletal remains of the so-called Neanderthal man were discovered (see MAN, PRIMITIVE)

Neapolis (nēă'pulĭs) [Gr, =new city], name of many cities in ancient Greek and Roman times The most important is the modern NAPLES, Italy

Nearchus (nēăr'kus), fl 324 B C, Macedonian general, friend of ALEXANDER THE GREAT In 325 B C, Alexander, about to quit India, had a fleet built in the Indus to transport part of the army home Nearchus was put in command They sailed up the unknown Persian coast and rejoined (324 B C) Alexander at Susa Nearchus' own account of this navigation, together with his account of India, is included in Arrian's *Indica*

Neariah (nē"urī'u) [Heb, =servant of God] **1** One of David's line 1 Chron 3 22,23 **2** Son of Ishi, a Simeonite captain 1 Chron 4 42

Nearing, Scott, 1883–, American economist and sociologist, b Morris Run, Pa, grad Univ of Pennsylvania (B S, 1905, Ph D, 1909) He taught economics at the Univ of Pennsylvania, Swarthmore College, and the Univ of Toledo from 1906 to 1917 and lectured at the Rand School of Social Science, New York city, after 1916 In 1919 he was defeated as the Socialist candidate for Congress from New York Among his many books are *Social Adjustment* (1911), *Income* (1915), *Poverty and Riches* (1921), *The American Empire* (1921), *Dollar Diplomacy* (with Joseph Freeman, 1925), *Twilight of Empire* (1930), *Democracy Is Not Enough* (1945), and *Tragedy of Empire* (1945)

Near Islands see ALEUTIAN ISLANDS

nearsightedness or **myopia** (mīō'pēu), defect of sight in which objects at a distance appear blurred This condition is commonly the result of abnormal length of the eyeball from front to back or of the distortion of the lens of the eye from fatigue through excessive use of the muscles which control its degree of convexity The light rays passing through the lens are brought to a focus in front of the retina instead of upon it, as is necessary for clear vision Glasses having concave lenses are used to remedy the condition, and rest, when the cause is fatigue, is important to limit its progress

Neath (nēth), municipal borough (1931 pop 33,340, 1947 estimated pop 31,860), Glamorganshire, Wales, on the Neath and ENE of Swansea The ruins of Neath Abbey, founded in 1130, include the walls and parts of the chapel, chapter house, abbot's house, and refectory The gate and tower remain of a castle burned in 1231 Since the development of the coal and iron industry of Glamorganshire, Neath has become an industrial town, producing tin plate, iron, steel, and copper

neat's-foot oil, light yellow and practically odorless oil, obtained by boiling the shin bone and feet of cattle, for which neat is an old term Today the feet of horses and sheep are often substituted It is used as a lubricant for delicate machinery and in leather dressing

Nebai (nĕ'bāī, nēbā'ī), signer of the covenant Neh 10 19

Nebaioth (nēbā'yŏth), Arabian tribe living probably SE of Palestine Isa 60 7

Nebajoth (nēbā'jŏth), son of Ishmael Gen 25 13, 28 9, 36 3

Neballat (nēbă'lăt), unidentified Benjamite town, W central Palestine, reoccupied after the return from captivity Neh 11 34

Nebat (nē'băt) [Heb, =aspect], father of King Jeroboam I. 1 Kings 11 26

Nebo (nē'bō). **1** Town of Moab, near Mt Pisgah (Mt Nebo) and S of Heshbon Num 32 3,38, 33 47, 1 Chron 5 8, Isa 15 2, Jer. 48 1,22. **2** City of Judah of postexilic times Ezra 2 29, 10.43, Neh. 7 33

Nebo, Mount: see PISGAH

Nebraska (nŭbră'skŭ), state (76,653 sq mi., 1940 pop 1,315,834, 1949 estimated pop 1,285,000), central United States, in the Great Plains region, admitted 1867 as the 37th state. LINCOLN is the capital, and OMAHA is the largest city. The state is roughly rectangular, except where the Missouri river makes an irregular boundary in the northeast and the east and the state of Colorado cuts out a squared corner in the southwest Elsewhere Nebraska is bounded by Wyoming on the west, by South Dakota on the north, by Iowa and Missouri on the east, and by Kansas on the south. The land rises more or less gradually from 840 ft in the east to 5,300 ft in the west Across it from west to east the great but shallow Platte river, formed in W Nebraska by the junction of the North Platte and the South Platte, runs to join the Missouri The Platte and the Missouri with their tributaries give Nebraska its all-important watercourses, essential to farming in an agrarian state The river valleys also offer routes westward, used from the time of the Indian and the fur trader Today the transcontinental railroads and highways use the valleys, and the traveler, following the gentle slope, sees Nebraska only as level prairies where the grasslands blend into the sky Elsewhere the topography is more varied with great scenic beauties other than the severe patterns of cloud and sunshine and the color of blossoms half hidden in the grass From the Missouri westward over about half the state stretch undulating farm lands, where the fertile silt is underlaid by deep loess soil Here in the years just after the Civil War the first farming pioneers came to spend brief but miserable years in sod houses in a timberless land before the richness of the soil yielded them wealth Here still the population is concentrated, living mostly from production of grains for the market or for feeding hogs and dairy cattle Here are the two great cities, Omaha and Lincoln, and many of the larger towns The industries are for the most part dependent on the agricultural production —processing of grains and sugar beets and animal products To the west and northwest the sand hills of Nebraska fan out, their wind-eroded contours now more or less stabilized by grass coverage Cattle graze on the slopes and tablelands, protected in the severe winters by the sand bluffs and the valleys The climate is severely continental, as it is in the rest of Nebraska, but averages for the state are almost meaningless, with great variations from place to place A low of 40°F below zero in the winter is not unusual, and the short, intense summers may easily reach 110°F above Rainfall is almost twice as heavy in the east as in the west Yet in the west along the river valleys the mixture of silt and sand is watered enough to yield abundantly even under semiarid conditions Hundreds of fresh and alkali lakes attract sportsmen and campers Irrigation along the Platte and its tributaries has promoted extension of the sugar-beet crop, while on the southwest plateaus wheat farming flourishes In the far west the land rises to the foothills of the Rockies and shows spectacular bedrock foundations The whole state is dependent on agricultural pursuits The only minerals are construction materials To promote agriculture the Univ of Nebraska maintains nine experimental agricultural stations A program of soil conservation has been developed with a shelter belt running across the state from north to south to check the effect of wind erosion, and dry-land-farming techniques have also been pushed The land has been somewhat given to farming since prehistoric times, though the Indians of the plains—notably the PAWNEE INDIANS—devoted themselves more to hunting the buffalo (then abundant), the pronghorn, and lesser animals Coronado and his men probably came through Nebraska in 1541, the first white men to visit the region, and the Spanish thus established a shadowy claim The French also came and in the 18th cent engaged in some fur trading, but real development began after the area passed to the United States in the LOUISIANA PURCHASE (1803) The Lewis and Clark expedition and the explorations of Zebulon M PIKE and later of Stephen H LONG made the country known, but more immediately valuable were the activities of the fur traders The first post was probably founded by Manuel LISA in 1807, and BELLEVUE, the first permanent settlement in Nebraska, grew up about a trading post Steamboating on the Missouri gave busy commerce to the river ports of Omaha City and Brownville Military posts, notably Fort Atkinson (1819–27), were founded to protect the commerce against the Indians The natural highway of the Platte valley, known to the earliest of the fur traders was in the 1840s and 1850s deeply rutted by the wagons of the pioneers going west over the OREGON TRAIL and also over the California Trail and the Mormon Trail The settlers along the way in Nebraska made money out of supplying the migrants with fresh mounts and pack animals as well as food There were few settlements Nebraska was involved like Kansas in the fierce struggle concerning slavery in the territories after the passage of the KANSAS-NEBRASKA BILL (1854) That established two territories, but the heat and the blood of the struggle were concentrated in Kansas Nebraska, at first stretching from lat 40° N to the Canadian border, was firmly Northern and Republican in sympathy in the Civil War As settlers were coming in, the territory was reduced in size Congress passed an enabling act in 1864, but the original provision in the state constitution limiting the franchise to white men delayed statehood until 1867 In that year the Union Pacific RR was built across the state, and the land boom, already vigorous, became a rush Farmers settled on the free land under the Homestead Act of 1862, and E Nebraska took on a settled look The population rose from 30,000 in 1860 to 122,000 in 1870 The Pawnee had been subdued in 1859, and by 1860 the war with the Sioux and other disturbances were over and danger from the Indians had disappeared The coming of the railroads had built up cow towns, such as Ogalalla and Schuyler, as shipping points on overland cattle trails Ranches in Nebraska also prospered, and it was no accident that Buffalo Bill's Wild West Shows, commemorating the raucous days of cowboy, cattleman, and Indian scout, opened in Nebraska in 1882 The farmers had long since been staking out homestead claims across the sand hills to the high plains The ranchers, trying to preserve the open range, ruthlessly opposed them, but the persistent farmers won, many conservationists believe that much land was plowed under that should have been left with grass cover to prevent the later dust storms Nature was never kind to the people of Nebraska Ranching was especially hard hit by the ruinous cold of the winter of 1880–81, and farmers were plagued by insect hordes from 1856 to 1875, by prairie fires, and by the recurrent droughts of the '90s Many had joined the GRANGER MOVEMENT in the lean '70s In the dry '90s the beleaguered farmers, faced with ruin and angry at the practices of the railroads and the financiers, formed marketing and stock cooperatives and in large numbers voiced their discontent by joining the POPULIST PARTY Better conditions in the early 1900s caused Populism to decline, and the prosperous days were marked by progressive legislation, the building of highways, and conservation measures The flush of prosperity, largely caused by the demand for foodstuffs in the First World War, was almost feverish Overexpansion of credits and overconfidence made the depression of the following years in the '20s and '30s all the more stringent Many farmers were left destitute, and many were enabled to survive only by the moratorium on farm debts in 1932 Federal aid was tendered to them in the desperate years of drought in the '30s until better weather and the huge food demands of the Second World War helped to renew prosperity in Nebraska Serious efforts are being continued to make the best use of the water supply (notably in such Federal plans as the Missouri river basin project and the dams and water-diversion schemes involving the Platte system) and to conserve the soil The energy of the people of Nebraska in meeting the problems of nature merely continues the spirit of the first sod-house settlers and such immigrants as the Swiss Jules Sandoz, who made the sand hills bloom with fruit trees, and the German Henry A Koenig, who introduced cultivation of the sugar beet to the Western plateaus The interest in the old social and athletic centers of the German Turnverein and the Czech Sokol have perhaps yielded to enthusiasm for football and other American sports, the Univ of Nebraska football team, the Cornhuskers, to some degree illustrates the blending of various peoples in Nebraska The self-reliant independence of the Populists and William Jennings BRYAN was continued by George W NORRIS, who championed conservation of resources and the cause of the common man It was Norris who was largely responsible when Nebraska (which had in 1897 showed a pioneering legislative spirit by adopting the initiative and the referendum) took a radical step in creating a nonpartisan unicameral legislature Today the Nebraskan seems to be just as cursed by the weather and just as wedded to his own ideas of democracy as his grandfather was in pioneering days See J Sterling Morton and Albert Watkins, *An Illustrated History of Nebraska* (rev ed, 3 vols, 1918), Addison E Sheldon, *New Standard History of Nebraska* (1928–29) and *Nebraska Civil Government* (2d ed, 1936) J E Weaver and W J Himmel, *The Environment of the Prairie* (1931), George E Condra *Geography, Agriculture and Industries of Nebraska* (1934), Mari Sandoz, *Old Jules* (1935) Federal Writers' Project, *Nebraska a Guide to the Cornhusker State* (1939), E A Whitcomb, *This Is Nebraska* (1941), Everett N Dick *The Sod-House Frontier* (1937)

Nebraska, University of, mainly at Lincoln, land-grant and state supported, coeducational, chartered 1869, opened 1871 It has colleges of agriculture (with its own campus), arts and sciences, business administration, dentistry, engineering (with an experiment station), law, medicine (at Omaha) and pharmacy, a teachers college, schools of fine arts, music, journalism, and social work, a junior division, and a high school There is a large library The state museum, the Nebraska Conservation and Survey Division, and a modern art collection are here. Archaeological research is carried on

Nebraska City, city (pop. 7,339), co. seat of Otoe co., SE Nebr., on the Missouri and E of Lincoln, founded 1854, inc 1855, consolidated 1857 with two contiguous settlements It is the commercial center of a livestock area and has processing plants It was the home of J S Morton, originator of Arbor Day, whose estate has been made a state park A state school for the blind is here

Nebraska Wesleyan University see LINCOLN

Nebuchadnezzar (nĕ″bŭkudnĕ′zûr, nĕ″bû–), d 562 B C, king of Babylonia (c 605–562 B C), son and successor of Nabopolassar Many scholars prefer the form Nebuchadrezzar for his name, and it also appears as Nebuchodonosor In his father's reign he was sent to oppose the Egyptians, who were occupying W Syria and Palestine At Carchemish he met and defeated Pharaoh NECHO in 605 B C and thus definitely ended the Egyptian threat His annals are lost, and little is actually known of his reign The Bible records that JEHOIAKIM of Judah rebelled against him, and in 597 B C, Nebuchadnezzar quelled the revolt, taking Jerusalem after a siege He carried away the young king, Jehoiachin, and many nobles to Babylon and set Zedekiah on the throne A new rebellion occurred, and after a long siege Jerusalem fell It was left in ruins in 586 B C, and the king and many nobles were taken off to be imprisoned or settled in Babylonia Nebuchadnezzar was a great builder, and the later Babylonian Empire reached its zenith under him Babylon was then the greatest city of the ancient world It was, however, shortly to lose that glory and to fall under conquest when Nabonidus was king Nebuchadnezzar features greatly in the book of Daniel, which tells of his going mad and eating grass See also Jeremiah and 2 Kings 24

nebula (nĕ′byŏolu) [Latin, =mist], in astronomy any one of the many masses of matter, cloudlike in appearance, usually softly luminous but sometimes dark, which occur in different parts of the sky It has comparatively recently been concluded that not all nebulae are in our own Galaxy, the Milky Way system, although they are numerous all through it Some are discovered to be in other galaxies outside our own, and these are called extragalactic nebulae Nebulae have been observed from the time of Sir Isaac Newton, but the exact knowledge about them could be obtained before the spectroscope and photographic processes were used for their study Some astronomers believed that they might be swarms of stars, but Sir William Herschel concluded that they were of a continuous fluid matter William Huggins by examining the spectra of nebulae (1864) confirmed this conclusion, since the spectra of some of the nebulae are made up of bright lines which are characteristic of radiating gases Many nebulae of different types have been examined since Few can be seen by the naked eye The most conspicuous and best known is the Great Orion nebula, in the sword of that constellation The so-called Great Nebula in ANDROMEDA has been found to be a separate Galaxy, a whole universe in itself Within our galaxy are found planetary nebulae, bright diffuse nebulae, and dark diffuse nebulae Planetary nebulae consist of a central star surrounded by a shell of gaseous material and are not related to planets Through the telescope they appear as small disks with well-defined boundaries Many evidences of rotation have been noted It has not yet been possible to determine with any exactness their distances It is estimated that their diameters measure thousands of times the distance from our earth to the sun These nebulae do not vary greatly in appearance On the other hand, bright diffuse nebulae present remarkable variety Some are like clouds closely associated with stars, as in the case of the Pleiades and Orion Some sweep like long veils irregularly across vast stretches, some are like a thin haze enveloping great areas An explanation of the luminosity of the diffuse nebulae has long been sought It is now believed that they derive their luminosity partly from reflection of starlight and partly from radiation excited in the nebulae by the radiation of extremely hot stars Dark diffuse nebulae are believed to be masses of opaque matter cutting off the light of the stars beyond them Sometimes parts of bright nebulae are shut off by them They explain the patches of blackness in the Milky Way, earlier supposed to be holes or huge unoccupied spaces among the stars The extragalactic nebulae are aggregations (most of them spiral in form) of stars similar to our Galaxy and, like it, including within their boundaries giant stars, star clusters, novae, dark nebulae, bright diffuse nebulae, and other objects These extragalactic nebulae appear to be receding rapidly from the earth, observations of this phenomenon give support to the theory of the expanding universe See Edwin Hubble, *The Realm of the Nebulae* (1936)

nebular hypothesis, an attempt to explain the regularity of arrangement and motion exhibited by the planetary system It originated in the 18th cent and was propounded by Swedenborg and Kant before Laplace gave it scientific form It was long accepted by astronomers, but is no longer tenable The theory assumes that in its first state in the far remote past our solar system was a vast mass of rarefied matter—a nebula—slowly rotating and enormously hot Gradually cooling because of the loss of heat by radiation, the mass contracted little by little, and as the volume grew less, the rotation was more and more rapid Laplace assumed that in time there would come a stage when the centrifugal force at the equator, driving away from the center, must equal the pull of gravity, the attraction toward the center of the mass Then a ring of gaseous matter would become separated from the outer rim Equilibrium would be restored for the time by the detaching of the ring Again contraction would bring about the balance of the two opposing forces, and again a ring would be left outside the further contracting central mass The process would be repeated several times, until the diminished nebula at the center would be surrounded by a series of rings, all revolving, the smaller the more rapidly Out of the material of each ring would in some way be formed a single great ball of gases, which by shrinking would eventually become a planet The mass at the center of the whole system after condensation would form the sun Modern studies in mechanics have pointed out objections to this hypothesis, these are chiefly that rings of material thrown off as postulated in this hypothesis would tend to form swarms of small bodies and not to condense into planets and that the angular momentum (momentum of rotation) of the planets is too great in proportion to that of the sun to make the theory plausible

Nebushasban (nĕ″bŭshăz′băn) [Heb., =Nebo save me], official under Nebuchadnezzar Jer 39 13

Nebuzaradan (nĕ″bûzâ′rûdăn) [Heb., =Nebo has given children], trusted official of Nebuchadnezzar 2 Kings 25 8–20, Jer 39 11, 40 1, 52 30

Necessity, Fort, entrenched camp built in July, 1754, by George Washington and his Virginia militia at Great Meadows (near the present Uniontown, Pa.) He retired here when he learned that the English fort at the forks of the Ohio (the site of Pittsburgh) had been captured (and renamed Fort Duquesne) by the French In late May, 1754, a French patrol had been defeated and its leader, Joseph Coulon, sieur de Jumonville, killed in a surprise attack led by Washington near Great Meadows A large French reprisal force led by Coulon's brother, the sieur de Villiers, attacked Fort Necessity and forced Washington to surrender on July 4 He secured easy terms from the French and departed for Virginia with all his surviving men and their baggage These two skirmishes marked the opening of the last of the French and Indian Wars Near Fort Necessity National Battlefield Site (2 acres, est 1931) is the grave of Gen Edward Braddock See D S Freeman, *George Washington*, Vol I (1948)

Nechako (nĭchă′kō), river of central British Columbia, rising in Tetachuck and Ootsa lakes and flowing c 250 mi NE and E to the Fraser river at Prince George

Necho (nĕ′kō), fl 670 B C, lord of Sais, Egypt He was confirmed in his holding after the Assyrian conquest in 670, he was later taken to Nineveh in chains for plotting to revolt, but was pardoned and restored He probably fell opposing (663) the Nubian reconquest under Tanutamon His son PSAMTIK founded the XXVI dynasty Psamtik's son, the Pharaoh **Necho,** 609–593 B C, took advantage of the confusion which followed the fall of Nineveh (612) to invade Palestine and Syria, which he took without difficulty King Josiah of Judah tried to stop him with a little force at Megiddo and was overwhelmed The empire lasted some years, then Nebuchadnezzar came west Necho met him at Carchemish on the Euphrates, was thoroughly beaten (605), and fled to Egypt, where he thenceforth remained He made an attempt to reexcavate the canal from the Nile to the Red Sea and also sent out some Phoenicians on a three-year expedition in which they were said to have circumnavigated Africa The name also appears as Neco See 2 Kings 23 29,33, 2 Chron 35 20–23, 36 1–4, Jer 46 2

Neckar (nĕ′kar), river, 228 mi long, rising in Württemberg, SW Germany, in the Black Forest It flows NE past Rottweil, Rothenburg, and Tubingen, then turns and continues NNW past Esslingen, Stuttgart, and Heilbronn, then turns westward and crosses N Baden, past Heidelberg, to join the Rhine at Mannheim The Neckar is celebrated for its scenic charm, its hilly banks are covered with fine vineyards, orchards, and woods It is navigable from Stuttgart, a canal to the Danube at Ulm is projected

Necker, Jacques (zhak′ nĕkĕr′), 1732–1804, French financier and statesman, b Geneva, Switzerland In 1747 he went to Paris, and, entering the banking business, he rose rapidly to importance and established a bank of his own He became a director of the French East India Company and also served as diplomatic representative of Geneva in Paris As a writer, Necker opposed the then fashionable PHYSIOCRATS and free traders, his eulogy on Colbert was crowned (1773) by the French Academy, and his *Essai sur la législation et le commerce des grains* (1775) criticized the policy of TURGOT In 1776 Necker, who had previously aided the government with loans, was made director of the treasury, in 1777 he was given the title director general of finances. By borrowing and by measures of reform and retrenchment he sought to set in order the finances of France and gain the confidence of the people The salon of his wife, Suzanne NECKER, exerted considerable influence. Necker, however, fell into disfavor at court In 1781 he published his *Compte rendu*, setting before the people the country's financial situation, resigned, and retired to "Coppet," his Swiss estate There he wrote the *Traité de l'administration des finances de la France* (1784) He returned to Paris in 1787, but was soon exiled from the city for having engaged in public controversy with CALONNE In 1788 Louis XVI recalled him as director general of finances and minister of state The populace acclaimed him, and he won their further approval by recommending that the States-General be summoned When his enemies at court again secured his dismissal in 1789, the populace stormed the Bastille (July 14) and he was once more recalled His final resignation came in 1790 His last years were spent in "Coppet" His daughter, Mme de STAËL, wrote *La Vie privée de M Necker* (1804), and his grandson edited a collected edition of his writings (1820–21)

Necker, Suzanne (Curchod) (sŭzăn′ kûrshō′), 1739–94, French writer on literary and moral subjects, wife of Jacques Necker and mother of Mme de Staël Her salon, frequented by celebrated Frenchmen and foreign visitors, was a famous meeting place A hospital which she founded c 1776 is still in existence Her writings include *Des inhumations précipitées* (1790), *Reflexions sur le divorce* (1794), and miscellaneous collections published as *Mélanges* in 1798 and 1801

Neco: see NECHO

nectar see AMBROSIA

nectarine (nĕk′tŭrĭn), smooth-skinned variety of peach (*Prunus persica nectarina*), with clingstone or freestone kernel and red, white, or yellow fleshed fruit The tree is very much like the peach tree and occasionally produces peaches (as the peach tree occasionally bears nectarines) The nectarine is a classical example of bud variation It has been known for at least 2,000 years The fruit is cultivated more extensively in Europe than in North America, though it is grown to some extent in California In commercial orchards it is grafted on stocks of almond In the 16th cent it was called the nut of Persia

Nedabiah (nĕ″dŭbī′ŭ), one of David's line 1 Chron 3 18

Needham (nē′dŭm), residential town (pop 12,445), E Mass, WSW of Boston, settled 1680, set off from Dedham 1711 Clothing is made here

needle, implement of metal or other material used to carry the thread in sewing and in various forms of needlework and manufacturing The earliest needles were merely awls or punches Stone, bone, ivory, and thorns, with or without an eye, were used by primitive peoples The midrib of the palm is used in Africa, with the thread tied on Much of the embroidery of antiquity must have required fine needles, China is supposed first to have used those of steel, and the Moors are credited with carrying them to the West The needlemaking trade was established in Nuremberg in the 14th cent and in England in Elizabeth's reign In 1656 the first needlemakers' guild was chartered Manufacturing by machinery developed gradually In 1785 the first steel rod was mechanically prepared, in 1826 eyes were drilled by stamping, and by 1870 the manufacture was mostly mechanical Different kinds of steel are used for different needles, as chromium and stainless steel for surgical and hypodermic uses Over 250 kinds of needles are made, such as the pearl needles of India, bead needles for fine beadwork, and others for carpets, shoes, upholstery, sailmaking, KNITTING, and every type of SEWING MACHINE England is noted for the manufacture of fine hand-sewing needles, the United States for machine needles

needlepoint see EMBROIDERY and LACE

Needles, city (pop 3,624), SE Calif., on the Colorado near Hoover Dam, founded 1883, inc 1913 It is a railroad division point in a farming area and a trade center for the Mojave Indians

Needles, the, western extremity of the Isle of Wight, England, with several spirelike rocks

needlework, work done with a needle, either plain sewing, mending, or ornamental work such as EMBROIDERY, quilting, smocking, drawn work, hemstitching, fagoting, some kinds of lacemaking (see LACE), patchwork, and appliqué KNITTING, crocheting (see CROCHET WORK), netting, and tatting are also classified as needlework, being done with specialized needles or, as in netting and tatting, with shuttles Many of the processes used are ancient, and some have several uses, as the darning stitch employed in mending, embroidery, and lacemaking Quilting has been done for warmth and ornament in China and N India for generations, and patchwork or appliqué, consisting of a cut or pieced design of one fabric applied to the surface of another, was used in ancient Egypt, Ceylon, and Burma See Gertrude Whiting, *Tools and Toys of Stitchery* (1928); I R. Duncan, *Complete Book of Needlecraft* (1949).

Neenah (nē'nŭ), city (pop 10,645), E Wis, on Lake Winnebago adjacent to MENASHA; settled 1835, inc 1873 Paper and dairy products are made

Neepawa (nē'puwŏ), town (pop 2,468), SW Man, on the Whitemud river and NE of Brandon, in a grain and stock-raising region Neepawa has woodworking and marble-processing plants

Neer, Aert van der (ärt' vän dĕr nār'), 1603–77, Dutch landscape painter. Most of his life was passed in Amsterdam He excelled in painting unusual light effects, such as moonlight scenes, sunsets, and conflagrations His winter scenes, often with skaters, are also famous He is well represented in many European galleries The Metropolitan Museum has his *Sunset, The Farmer,* and *Landscape* His son and pupil, **Eglon Hendrik van der Neer** (ĕg'lŏn hĕn'drĭk), c 1635–1703, Dutch genre, landscape, and portrait painter, practiced in Rotterdam and Brussels and in Düsseldorf, where he was court painter to the elector palatine He excelled in painting luxurious interiors, hunting scenes, and mythological or biblical subjects in Dutch settings His *Esther and Ahasuerus* (Uffizi) and *Lady Tuning Her Lute* are characteristic

Neerwinden (nārvĭn'dun), village (pop 911), Liége prov, Belgium, SE of Louvain Here in the War of the Grand Alliance the French under Marshal Luxembourg defeated (1693) William III of England In the French Revolutionary Wars, Neerwinden was the scene of a French defeat (1793), which resulted in the defection of DUMOURIEZ

Nees von Esenbeck, Christian Gottfried (krĭs'tyän gŏt'frēt nās' fŭn ā'zunbĕk), 1776–1858, German botanist He specialized in the study of fungi, liverworts, and grasses He was the author of several books on botany, entomology, and philosophy and of many scientific papers

Nefud (nĕfōōd') or **Nafud** (nafōōd'), name applied to two deserts of red sand in the Nejd, Saudi Arabia The An Nefud is in the north The Nefud Dahi adjoins the Rub al Khali, the great desert of S Arabia

negative, in photography, name for the photographic film or plate after it has been developed and fixed It is so named because the light and dark areas of the image are reversed, i e, the parts of the object photographed which are brightest are darkest on the negative, and the darkest are brightest In preparing a negative, two steps are involved, developing and fixing The first step is accomplished by means of a DEVELOPER, the film after development, however, being still sensitive to light For this reason, developing is performed in a 'dark room," and chemical treatment is required which will stop further reduction of the silver salts This is accomplished in fixing the negative By dipping the developed film into a solution of sodium thiosulphate ("hypo") the unreduced silver salt is changed into a soluble salt which is then washed off Metallic silver and gelatine which remain form the image of the so-called negative Production of the finished picture (the positive) from the negative is known as printing The negative is placed between a light source and the sensitive paper upon which the positive is to be printed The light striking the negative is transmitted to the sensitive paper in proportion as the parts of the negative are light or dark After a certain period of exposure, the sensitive paper is treated chemically (see PHOTOGRAPHY) and the "print" or positive is washed and dried

Negaunee (nĭgô'nē), city (pop 6,813), W Upper Peninsula, N Mich, on the Marquette iron range near Ishpeming, in a resort area, settled 1846, inc as a village 1862, as a city 1873 Iron ore was discovered in this region in 1844

Negev (nĕ'gĕv) or **Negeb** (nĕ'gĕb), [Heb, =dry], region (c 3,000 sq mi), the southern triangle of Israel, extending S to the Gulf of Aqaba and adjoining the Sinai peninsula of Egypt The name was formerly applied to a larger area including part of SW Jordan The Negev is a highland with less than 2 in of rain a year Beersheba is its only town, and normally most of the inhabitants are Bedouin herders In ancient times, however, there were several prosperous cities along the principal wadis (watercourses) It comprises more than one third of the territory of Israel, and long-range plans have been made to open it up to agriculture and settlement It is believed that water from the JORDAN river can be used to irrigate the north and that dry farming is possible elsewhere The Negev was the scene of much fighting between Egyptian and Israeli forces after the partition (May, 1948) of Palestine

Neginah (nĕ'gĭnä) [Heb, =stringed instrument], plural **Neginoth** (nĕg'ĭnŏth), direction for the accompaniment of a psalm. Pss 4, 6, 54, 55, 61, 67, 76.

negligence, in law, breach of an obligation to act with care. Such obligation may arise out of contract, as in the duty of a common carrier to exercise a high degree of care in preserving from injury goods or persons being transported The law also supposes that persons in the ordinary course of conduct must take pains to avoid inflicting injuries on others or on themselves. In all noncontractual situations the standard applied to determine the existence of negligence is the presumptive behavior of the "reasonable, prudent man." Injury which results despite that degree of care or from circumstances beyond control (see ACCIDENT and ACT OF GOD) is not compensable It is usually the function of the jury to determine whether the injurious act was negligent, on the other hand, in cases where due care must have been absent (e g, when an automobile collapses on first being driven) the judge may apply the doctrine of *res ipsa loquitur* [Latin, =the thing speaks for itself] and rule that there was negligence as a matter of law Ordinarily if the plaintiff was guilty of contributory negligence, he may not recover damages, a typical case is that of a pedestrian who crosses a street without looking out for motorists and is hit by a vehicle In the case supposed, if the motorist nevertheless sees the pedestrian and negligently fails to stop (i e, if he has a "last clear chance" to avoid injury), he is nevertheless liable Certain restrictions have been imposed on the right to recover damages for injury due to negligence Thus, damages ordinarily are not allowed for the consequences of nervous sufferings (except miscarriage) unless the plaintiff experienced some physical impact also At common law the right to recover for negligence belonged to the injured party only, if he died before completion of his lawsuit or as a result of his injuries, his heirs might not recover Today all jurisdictions have statutes which permit the heirs to bring suit both for the wrongful death and for the injuries to the decedent Negligence claims are the chief source of current civil litigation, the bulk of cases arises from vehicular traffic Besides its civil aspects, negligence may also be criminal if it results in MANSLAUGHTER or if it is a serious breach of a public duty (e g, carelessness by the engineer of a railroad train)

Negoiul (nĕgoi'ōōl) or **Negoi** (nĕgoi'), peak, 8,346 ft high, Rumania, NW of Campulung It is the highest peak of the Transylvanian Alps, a section of the Carpathians

negotiable instrument, bill of exchange, check, promissory note, or other written contract that may be transferred by delivery or by endorsement and delivery so as to give the new holder of the contract the right to enforce fulfillment in his own name Negotiable instruments made payable to bearer are transferred by delivery, those made payable to order are transferred by endorsement and delivery

Negri, Ada (ä'da nā'grē), 1870–1945, Italian poet and prose writer Her first poems, *Fatalità* (1892, Eng tr, *Fate and Other Poems,* 1898), voiced bitter protest against the state of the poor Its lyric promise was recognized, and the young poet was promoted from teaching in an elementary school to a professorship in a normal school In 1896 she married a wealthy industrialist, but the marriage ended in 1910 Her joy in motherhood was poured out in the volume of verse *Maternità* (1904) Her passionate and beautiful love lyrics reach their climax in *Il libro di Mara* (1919) In 1924 was published *I canti dell' isola,* singing the beauty of Capri In her last years Negri found religion the only refuge from the frustrations and disillusions of life, and her last volumes of poetry—*Vespertina* (1931) and *Il dono* (1936)—express resignation and serenity Her prose includes *Le solitarie* (1917), short stories, and the autobiographical novel *Stella mattutina* (1921, Eng tr, *Morning Star,* 1930) She became the first woman member of the Italian Academy in 1940

Negrillo see PYGMY.

Negri Sembilan (nä'grē sĕmbē'lun), state (2,560 sq mi, pop 267,281), SW Malaya, on the Straits of Malacca The capital is Seremban Clockwise from northwest to south, the state borders on Selangor, Pahang, Johore, and Malacca The chief industry is tin mining, rubber, rice, and betel nuts are grown More than half the people are non-Malays (Chinese and Indians) The separate political existence of this state began in the 18th cent After a considerable immigration of Minangkabaus from Sumatra, the Negri Sembilan [nine states] broke away from the kingdom of Riouw and Johore to form a loose confederation Each state was then practically independent The British established their influence by making treaties with the separate states (1874–80) and by re-forming them into a closer federation (1895), which became one of the Federated Malay States and in 1948 passed into the federation of Malaya

Negrito see PYGMY

Negro, member of any of several groups of peoples, characterized physically by a black or dark brown skin, wooly hair, broad flat nose, prominent eyes with yellowish cornea, thick lips, and prognathous jaw Most Africans are Negroes, but the term is more properly applied to tribes of central and W Africa, e g, the SWAHILI, BANTU, and ZULU Negroid peoples include the Negrillo and Negrito (see PYGMY) In general the Negroes in Africa are semisettled and practice a crude form of agriculture and simple handicrafts such as weaving narrow strips of cloth from grass and making pottery and also bracelets of brass and of ivory. Their religion is generally a form of ANIMISM, though in coastal regions, Mohammedanism has won many converts and Christianity some adherents Fetishism and witchcraft are widespread and have given rise to voodoo The women generally carry on the agriculture and menial labor However, many African Negroes have lived in a far more advanced stage of material culture from ancient times Negroes were one of the many peoples who invaded Egypt, and they influenced and were influenced by the civilization which developed there In the period c 1700–1580 B C, Egyptians and Nubians mingled freely, and black men came to hold important positions in Egyptian government Much later, beginning c 741 B C, the Nubians initiated a campaign of conquest which held Egypt in subjugation for about a century In the northern and western sections of Africa an indigenous Negro culture flourished for centuries before the Arab invasions in the 7th cent A D Ghana, originally a confederacy of settlements from the Senegal to the upper Niger, doubtless had a history extending back into the pre-Christian era, although evidence of its existence dates only from the 4th cent A D This state, which apparently had a high degree of political organization, expanded greatly Agriculture and, to a lesser extent, trade occupied the people With the coming of the Arabs, Ghana prospered, but in the 11th cent, religious wars, in which fanatical Mohammedans triumphed, and droughts so weakened Ghana that it fell to conquerors in the 12th and 13th cent A second Negro kingdom, Melle, flourished especially from the 13th to the 15th cent At its height it included most of what is now French West Africa A third kingdom, Songhay, began early in the 8th cent at Gao, near the bend of the Niger It came to be dominated by Melle until the 15th cent, when it conquered that kingdom, only to fall itself to Spanish Moors in the 16th cent Lesser Negro states rose and declined periodically in Africa, always north of the equator Little is known about the Negro tribes south of that line Slavery was a recognized institution among the Africans, but it was not until the 15th cent that Europeans began taking Negro slaves out of Africa By 1460 hundreds of slaves were being carried annually to Portugal, and by the 17th cent the slave trade had become a profitable European enterprise (see SLAVERY) Negro slaves accompanied the early Spanish and Portuguese explorers of the New World, and there have been Negroes in the Americas since at least 1501 The Europeans turned to Negroes for their labor supply The year 1517, when the Spanish were permitted to import 12 Negroes each, is said to mark the formal opening of the Negro slave trade to the New World, and by 1540 it has been estimated that 10,000 Negroes were being imported annually to the West Indies The first Negroes in what is now the United States came to Virginia in 1619 At first their status was similar to that of white indentured servants A few Negroes even owned plantations with their own servants, including in at least one case, white servants However, the English, in need of a labor supply, turned to the inexhaustible supply of Negroes available first in the West Indies and then directly in W Africa itself With the success of tobacco planting assured, Negro slavery was sanctioned by law in Virginia in 1661 and in Maryland in 1663 The institution was the foundation of the economy in all the Southern colonies, including Georgia, where it had originally been forbidden The Northern colonies also had Negro slaves, in lesser numbers, but only in the Hudson valley and Pennsylvania were they used extensively in agriculture In Pennsylvania, home of the Quakers, they received their best treatment, but, even so, disapproval of the institution was widespread among the Quakers and Germans there Although the Massachusetts "Body of Liberties" of 1641 banned bond slavery in the colony, the Puritans played a large role in fostering the institution in America through their activities in the slave trade Boston, Newport, and other New England ports profited from the "triangular trade" in molasses, rum, and Negroes, and many slaves were kept in New England All the colonies had codes or individual laws regulating the activities of Negroes These were mildest in New England and most severe in the South, where the growth of the Negro population, from continued forced immigration and from natural increase, had alarmed the whites Under the Virginia code, for instance, which was well established by the end of the 17th cent, no slave was allowed to leave the plantation without the written permission of his master Slaves found guilty of murder or rape were hanged Robbery and lesser offenses were punished by whipping, maiming, or branding Southern fears of slave insurrections were well grounded, for, contrary to popular impression, many Negroes were not disposed to accept their bondage docilely As early as 1663 Virginia Negroes conspired to rebel Not until after the French and Indian Wars was there any considerable sentiment against slavery in America Then not a few among the colonists seemed to become aware of the inconsistency which saw them as oppressed by the British yet themselves

oppressing Negroes The fact that one of the men killed in the Boston Massacre, Crispus Attucks, was a runaway slave, doubtless pricked many a conscience, and in Massachusetts, at least, it became habit to denounce England and slavery in the same breath Thomas Jefferson's "vehement philippic against Negro slavery" was deleted from the Declaration of Independence Nevertheless, approximately 5 000 Negroes fought for the patriot cause and their own freedom in the American Revolution Others fled slavery to find personal liberty fighting for the British Most of the Negroes in the Continental army and navy came from the North, although only Georgia and South Carolina among the new Southern states refused to permit the recruiting of Negroes, a plan which George Washington came to accept completely The vast majority of Negro soldiers served alongside their white comrades, not in segregated fighting groups After the war antislavery and manumission societies became widespread and slavery was more or less gradually abolished in the Northern states The provision in the Ordinance of 1787 barring slavery and involuntary servitude in the Northwest Territory marked a peak in post-war antislavery sentiment A conservative reaction then set in, and slavery was protected by the Constitution of the United States, under which three fifths of a state's slaves were counted towards its portion of the representation in Congress (Article 1, Section 2) The Constitution also recognized the public obligation to return fugitive slaves (Article 4, Section 2), but prohibited the slave trade after 1808 (Article 2, Section 9) Despite these constitutional guarantees, slavery slowly declined and might well have died a lingering death in the South had not the invention of the cotton gin (1793) radically changed the economic scene The cotton gin spurred large-scale production of cotton, which required the labor of increasing numbers of slaves as new lands were quickly opened up westward to the Mississippi It is with the cotton plantation that Negro slavery in the United States is especially associated By 1830 there were more than 2,000,000 slaves At the bottom on a typically large cotton plantation were the field hands, men, women, and older children, who performed the backbreaking productive work of the plantation from sunrise to sunset and at harvest time often after dark They were either supervised by the planter himself or by his overseer, who, lacking any personal interest in the Negroes, was apt to be responsible for much of the cruelty that existed under the system Only a few plantations rewarded conscientious work, and hence the Negroes did not extend themselves unless they were forced Somewhat better off than the field slaves were those who performed the semiskilled manual tasks incident to the upkeep of a plantation —carpenters, blacksmiths, and the like Such workmen were often hired out by their owners at a profit Best off in the slave social order were the house servants, better clothed and fed and with much less onerous duties than the field hands, whom they tended to view with contempt Only the larger plantations had house servants, and their number came to be an indication of a planter's wealth This group, from a natural disinclination to see its progeny become field hands tended to increase itself beyond the actual need for its services Unfettered by inhibitions, the slave children and white children played together about the plantation, even in the "big house" and the cabins, but this idyl ended for the slaves when they came of working age For mature slaves life was generally barren, although in the Christmas season and the summer layoff they could either work for themselves or seek rest and recreation No work was performed on Sunday, and religious activity among the Negroes was not opposed so long as it was not accompanied by incitement to freedom Early in the 18th cent there were some slave congregations on the larger plantations and in the towns In the 1830s, however, Negro preachers were outlawed in most states, and the slaves were more and more required to attend the churches of their masters Religious instruction for the Negroes laid emphasis on obedience and subserviency, and the Southern churches of all sects (except the Quakers) became strong defenders of the "peculiar institution" Despite universal laws against teaching Negroes, many of the slaves did receive some education, and there were even a few schools for Negroes A poet such as the colonial Boston girl Phillis WHEATLEY was a rare curiosity, however The economic interests of the slaveowner, it has been said, were often inimical to a stable family life for his slaves Slave unions were not usually blessed with religious ceremony Too often after a "marriage," when children came, the family was broken up as its members were sold apart from each other. This was doubtless the most vicious of the many unpleasant features of the institution That miscegnation (involving white males and Negro females almost exclusively) was widespread is well attested by the varied complexions of the mulattoes, quadroons, and other mixtures which came to abound The attractive quadroons of New Orleans, where it was the custom of the rich young bloods to set up establishments, often luxurious, for their concubines, were a class apart. Kind masters were not lacking under slavery, and it was not uncommon for them to free their slaves by a last will and testament Many free Negroes, however, either bought their own freedom or had it bought by other free Negroes, usually someone in the family On the other hand, there were free Negroes who owned slaves themselves For the most part the free Negroes in the South lived in the larger towns, where they were generally mechanics and artisans, hated and feared by the poor whites as economic competitors Their situation was often less enviable than that of highly favored house servants, for they were severely restricted in their movements and in other ways Yet they dearly cherished their freedom Others could always dream of escape to the North, and thousands did escape, aided by the UNDERGROUND RAILROAD The possibility of a general slave insurrection was a perpetual nightmare to Southerners, but none ever occurred, not even in the course of the Civil War when most able-bodied Southern white men were at the fighting fronts Most famous of Negro rebels were Denmark Vesey, a freeman of Charleston, S C, whose elaborate plot (1822) was made known to the whites before it went into effect, and Nat TURNER, a Virginia slave, leader of the Southampton Insurrection (1831), which was quickly put down Turner's revolt killed what small organized sentiment had existed in the South for manumission, but by that time antislavery sentiment in the North began to reach crusading proportions and never slackened thereafter (see ABOLITIONISTS) Most prominent among Negro abolitionists was Frederick DOUGLASS Josiah HENSON, Sojourner TRUTH, and Harriet TUBMAN also performed valuable services for their race Slavery, particularly the question of its extension into the new Federal territories, had been a serious national political issue ever since the adoption of the MISSOURI COMPROMISE in 1820 and with the COMPROMISE OF 1850, which featured stricter FUGITIVE SLAVE LAWS, and the KANSAS-NEBRASKA BILL (1854), it became the dominant theme in politics (see also DRED SCOTT CASE) A new party, the Republican, was organized to oppose the further extension of the institution When its candidate, Abraham Lincoln was elected President in 1860, the Southern states seceded from the Union and the sections were soon in arms against each other More than 186,000 Negroes fought in the Union ranks in the Civil War, 93 000 of them coming from the Confederate states They fought in segregated units and were mostly led by white officers, with some Negro noncommissioned officers Lincoln's EMANCIPATION PROCLAMATION, while having no effect on Negroes of the border slave states, technically freed the slaves in the Confederacy There, in the great Union invasion of 1864–65, they habitually flocked in huge numbers to the Northern armies where, styled "contrabands," they posed a serious problem Many of them were set to work in tasks auxiliary to the movements of the conquering host Negroes suffered severely in the New York city DRAFT RIOTS of 1863 With the Union triumph in April, 1865, came the "day of jubilee" for almost 4,000,000 slaves Their general lack of education and the complexity of the modern world made the problem of their adjustment to freedom a difficult one The Federal government established the FREEDMEN'S BUREAU to help them, and the Republican party organized the Union League Clubs to corral their newly won and powerful vote In the heyday of the radical Republican RECONSTRUCTION program for the South, the Negro enjoyed great political power, but the excesses of Republican rule brought an equally unpleasant reaction in such organizations as the KU KLUX KLAN, by which Southerners set out to maintain "white supremacy." The nation finally became weary of the Southern problem, and when, after the disputed presidential election of 1876, Federal troops were withdrawn from the South, the Republicans lost their prop The "black legislatures" of Reconstruction, as they were often called, despite their corruption did enact much sound social legislation, especially concerning public education Economically, freedom left the Negro not much, if any, better off than he had been under slavery The share-cropping system, which replaced the ante-bellum plantation, held him, as well as the poor white, in another kind of bondage His dream of "40 acres and a mule" proved illusory A crowning disappointment came in the 1880s and 1890s, when the Southern states, beginning with Mississippi, adopted new state constitutions which, in providing for the poll tax and education requirements for voting, effectively disfranchised the Negro despite the Fifteenth Amendment to the Constitution These constitutions marked the final triumph of "white supremacy." Meanwhile the pattern of segregation had been firmly established when Tennessee enacted laws prohibiting the intermarriage of the races (1870) and adopted (1875) the first "Jim Crow" law. The rest of the South rapidly followed suit, and the new state constitutions firmly established the color line. Negroes and whites were separated (and still are) on trains, in railroad stations, and on wharves, and towards the end of the 19th cent Negroes were barred from white hotels, barber shops, restaurants, and theaters Even justice was difficult to obtain, and when mob feeling was high, LYNCHING too often resulted. The policy of segregation in the schools of the South became expensive, one which the region could ill afford, and its effect was noticed in the generally low level of Southern education Despite all these handicaps and considering the short span of his free status, the Negro, under such leaders as Booker T WASHINGTON of TUSKEGEE INSTITUTE, made great strides forward Other Negro institutions of higher education had already been founded Washington wisely emphasized vocational and technical training for his people and insisted that their future was still in the South But he was not disposed to protest disfranchisement and the abrogation of civil rights and was therefore roundly attacked by other Negro leaders, notably William E B Du Bois Many Negroes migrated to Northern cities, where they found work chiefly in domestic service and as laborers There their status was, in general, considerably improved In the South there was also a movement from rural areas toward the city In their new homes, they organized their own churches, having long since embraced evangelical Christianity with all the emotional fervor of the race The churches became the center of social activities, which were further extended through numerous lodges and orders The benefit and burial societies also became popular organizations Although labor unions generally did not welcome Negro membership, the migration citward was peaceful except where Negroes were introduced as strikebreakers, in such cases riots often occurred In the First World War, when the supply of European laborers was cut off, the lack was supplied by importing large numbers of Negroes into the North Many entered the semiskilled occupations, particularly the building and allied trades, and other branches of industry New York, Philadelphia, Chicago, St Louis, Detroit, and other urban centers received large Negro populations closely crowded into fairly well-defined districts Accommodations were poor and costly in comparison with similar quarters rented to whites Sanitary conditions were bad, and Negro mortality ran high above the average for the rest of the population Many Northern whites resented this mass intrusion and the competition consequent upon it in industry and in housing Race rioting broke out in several places, one of the worst occurring in East St Louis, Ill, in 1917, there was another in Chicago in 1919 In spite of these sporadic outbreaks, the Negro was definitely established in the urban and industrial centers, particularly of the N Atlantic and North central states And in spite of the frequently wretched physical conditions under which he lived, he had the vote, even in some cases to the extent of controlling the election, while public schools, conveyances, and to some degree places of recreation and amusement were open to him The scope of his activities in industry, business, the trades, and the professions was constantly widened To this progress the National Association for the Advancement of Colored People, organized in 1910, contributed much For his part the Negro made, as he continues to do, definite cultural contributions to American life, in literature, the arts, scholarship, science, the drama, and especially in NEGRO MUSIC Until the 1930s most Negroes were Republican in politics, but when Franklin D Roosevelt's New Deal brought them increased social and economic benefits they soon became one of the most important elements in the Democratic coalition In the First World War, 367,000 Negroes were called to the armed forces through selective service, while another 20,000 were already in the regular army and the National Guard, and roughly 1,000,000 Negro men and women served in the Second World War In that conflict the migration from the South to the boom cities of the North was repeated as the rigid anti-Negro policy in industry was broken When industrial production skyrocketed even before the United States entered the war, Negro leaders threatened a march on Washington unless job discrimination were ended This was forestalled when, on June 25, 1941, President Roosevelt issued Executive Order 8802, which prohibited "discrimination in the employment of workers in defense industries or government because of race, creed, color, or national origin" A Committee on Fair Employment Practices, composed of representatives of the public, management, and labor, was set up to receive and investigate complaints, and although it had no punitive powers, its very existence improved the employment status of Negroes. The armed forces, however, continued their policy of segregation; as a result William H Hastie, Negro civilian aide to the Secretary of War, resigned in Jan., 1943. Negroes serving their country abroad were much better received than their comrades

stationed in the United States. However, there were a few compensations The army had its first Negro general, Benjamin O Davis, whose son, B O. Davis, Jr , commanded a highly praised Negro fighter group in the air force With the end of the war, the "Negro problem," or "an American dilemma," as Gunnar Myrdal calls it, was still very much with the nation Negroes were estimated to number 13,000,000 and thus roughly 10 percent of Americans were "second-class citizens" The battle for civil rights went on, though no Scottsboro Case cropped up again The U S Supreme Court required several Southern states to either admit Negroes to state professional schools or establish equal facilities for the race And the achievements of Ralph J Bunche in diplomacy and Jackie Robinson in becoming the first Negro ballplayer in the major leagues were heartening to their people Even the armed forces went quietly about letting down the color bar in certain units Such gains, small as they are, mean much towards making Negroes first-class citizens at last The literature on the Negro, mostly by Negroes, is enormous For titles published before 1928, see M N Work, *A Bibliography of the Negro in Africa and America* (1928) For the Negro outside the United States, see Maurice Delafosse, *The Negroes of Africa History and Culture* (Eng tr , 1931), Geoffrey Gorer, *Africa Dances a Book about West African Negroes* (1935), J J Sweeney, ed , *African Negro Art* (1935), Donald Pierson, *Negroes in Brazil* (1942), Eric Williams, *The Negro in the Caribbean* (1942), Gilberto Freyre, *The Masters and the Slaves a Study of Brazilian Civilization* (Eng tr , 1946), H A Wieschhoff, *Anthropological Bibliography of Negro Africa* (1948), Walter Fitzgerald, *Africa* (6th rev ed , 1949) Outstanding among the general studies on the Negro in the United States are B G Brawley, *A Short History of the American Negro* (4th rev ed , 1939), E R Embree, *Brown Americans* (1943), Gunnar Myrdal and others, *An American Dilemma the Negro Problem and Modern Democracy* (2 vols , 1944, condensed in one volume by Arnold Rose as *The Negro in America*, 1948), *Encyclopedia of the Negro* (preparatory volume, 1945), J H Franklin, *From Slavery to Freedom* (1947), C G Woodson, *The Negro in Our History* (9th ed , further revised and enlarged, 1947), Ron Ottley, *Black Odyssey* (1948), E F Frazier, *The Negro in the United States* (1949), the *Negro Year Book* (annual) M R Eppse, *A Guide to the Study of the Negro in American History* (3d printing revised and enlarged, 1943) is useful Important special studies of the American Negro are M J Herskovits, *The Anthropometry of the American Negro* (1930), C G Woodson, *The Rural Negro* (1930), Vernon Loggins, *The Negro Author* (1931), S D Spero and A L Harris *The Black Worker* (1931), B G Brawley, ed , *Early Negro American Writers* (1935), W E B Du Bois, *Black Reconstruction* (1935) and *Black Folk—Then and Now* (1939), Otto Klineberg, *Negro Intelligence and Selective Migration* (1935) and *Characteristics of the American Negro* (1944), H A Wyndham, *The Atlantic and Slavery* (1935) and *The Atlantic and Emancipation* (1937), Alain Locke, *Negro Art, Past and Present* (1936) and *The Negro in Art* (1940), B G Gallagher, *American Caste and the Negro College* (1938), E F Frazier, *The Negro Family in the United States* (1939, abridged ed , 1948), E B Henderson, *The Negro in Sports* (1939), C S Mangum, Jr , *The Legal Status of the Negro* (1940), S D Smith, *The Negro in Congress, 1870-1901* (1940), Richard Wright, *12 Million Black Voices* (1941), L J Greene *The Negro in Colonial New England, 1620 1776* (1942), Herbert Aptheker, *American Negro Slave Revolts* (1943), R M E Sterner and others, *The Negro's Share* (1943), R W Logan, ed , *What the Negro Wants* (1944), H R Northrup, *Organized Labor and the Negro* (1944), S C Watkins, ed , *Anthology of American Negro Literature* (1944), S J Schoenfeld, *The Negro in the Armed Forces* (1945), Walter White, *A Rising Wind* (1945), J R Ismael, ed , *The Negro in the American Theatre* (1947), C S Johnson and others, *Into the Main Stream a Survey of Best Practices in Race Relations in the South* (1947), M R Davie, *Negroes in American Society* (1949), Langston Hughes, ed , *Poetry of the Negro* (1949)

Negro, Río (nā'grō nä'grō), river formed in N central Argentina by the junction of the Neuquén and the Limay and flowing E across Río Negro prov (N Patagonia) to the Atlantic The river is used for irrigation and is partly navigable

Negro, Rio, river of N Brazil, one of the chief tributaries of the Amazon and a primary commercial channel It originates as the Guainía in Colombia and receives the Içana and the Branco (its main tributary) The Río Negro is connected with the Orinoco by the Casiquiare, a natural canal Pedro Teixeira discovered (1637–38) the Negro

Negro, Río, river of Uruguay, rising in S Brazil and flowing SW to the Uruguay near its mouth on Río de la Plata estuary

Negro minstrel, white entertainer in Negro make-up Thomas Dartmouth Rice, a white comedian who gave the first solo performance in blackface (c 1828) and introduced the song-and-dance act *Jim Crow*, is called the "father of American minstrelsy" The first public performance of a minstrel show by white men was presented early in 1843 by the Virginia Minstrels (formed in 1842), headed by Daniel Decatur Emmett Christy's Minstrels (for whom Stephen Collins Foster wrote some of his most popular songs) appeared in 1846, headed by Edwin P Christy Bryant's, Dockstader's, Thatcher, Primrose, and West's, and Neil O'Brien's were among the great minstrel companies that followed the pattern set by Christy The minstrel show had three parts In the first part the company, in blackface and gaudy costumes, paraded to chairs placed in a semicircle on the stage The interlocutor then cracked jokes with the end men, and, for a finale, the company passed in review in the "walk around" In the second part a vaudeville or olio was offered in front of the curtain The third or afterpart presented a burlesque on a play or an opera The minstrel show reached its peak from 1850 to 1870, but passed with the coming of vaudeville, moving pictures, and radio entertainment See Dailey Paskman and Sigmund Spaeth, *"Gentlemen, Be Seated!"* (1928), Carl Wittke, *Tambo and Bones* (1930), Alain Locke, *The Negro and His Music* (1936)

Negro music see African music, blues, jazz, ragtime, spiritual

Negropont, Greece see Euboea and Chalcis

Negros (nā'grōs), island (4,905 sq mi , pop 1,218,710), one of the Visayan Islands, in the Philippine Islands It is between Panay and Cebu The island is mountainous, particularly on the east coast, and lacks good harbors Sugar cane, rice, hemp, corn, and tobacco are grown Important centers are Bacolod on the west coast and Dumaguete on the southeast coast where Silliman Univ (1901) is situated Negritos inhabit the interior

Nehavend (nā"hävĕnd'), town, W Iran, S of Hamadan It is the center of a complex of agricultural villages, which have in all a population of c 65,000 Nehavend was the scene of a decisive victory of the Arabs over the Persians in 641 or 642 The name also appears as Nehawand

Nehelamite (nēhĕl'umīt), obscure epithet of the false prophet Shemaiah Jer 29 24–31

Nehemiah (nē"umī'u) [Heb ,=consoled by God] **1** Central figure of the book of Nehemiah see Ezra **2** One who returned from the Exile Ezra 2 2, Neh 7 7 **3** Worker on the wall Neh 3 16

Nehemiah, book of the Bible see Ezra

Nehiloth (nē'hĭlōth), in the title of Ps 5, musical direction of unknown meaning

Nehru, Jawaharlal (juwuhŭrlal' nĕ'rōō), 1889–, Indian statesman, b Allahabad, educated at Harrow and Cambridge, son of Motilal Nehru He was admitted to the bar in 1912 and practiced law in India for several years After the massacre at Amritsar (1911) he devoted himself to the struggle for India's freedom His compelling oratory and his charming personality contributed to making him a leader of the Indian National Congress, and in 1929 (the first of four times) he was elected its president Most of the period from 1930 to 1936 he spent in jail for conducting civil disobedience campaigns About 1939 disharmony developed between him and Gandhi, the major figure in the Congress Nehru, who had been influenced by a study of Marxism, opposed Gandhi's ideal of an agrarian society and advocated a program calling for the industrialization and socialization of India During the Second World War, however, the two were united in their opposition to aiding Great Britain unless India were immediately freed, and Nehru was jailed from Oct , 1942 to June, 1945 After his release, he participated in the negotiations which led to India's freedom, and in 1946 he was made vice president of the interim Indian government After the formation of Pakistan (Aug , 1947), he became the prime minister and the minister of foreign affairs of India At least temporarily he abandoned his socialist position, perhaps so that the Congress might be united in the difficult early years of independence In foreign affairs, however, he continued vigorously to oppose imperialism, particularly as displayed by the Netherlands in Indonesia On a visit to the United States in Oct , 1949, he called for world peace but stated that India would not adopt a pacifist position if attacked, some interpreted this statement as abandonment of Gandhi's principles Nehru wrote voluminously, especially while in prison (*Glimpses of World History* (1936) comprises letters to his young daughter *The Discovery of India* (1946) also deals with history See his autobiography, *Toward Freedom* (American ed , 1941)

Nehru, Motilal (mō'tĭlāl), 1861–1931, Indian political leader, b Kashmir, educated at Muir College, Allahabad, father of Jawaharlal Nehru A successful attorney, he joined the Indian nationalist movement at his son's urging. Nehru was twice president of the Indian National Congress and was several times jailed for participating in civil-disobedience campaigns.

Nehum (nē'hum), alternative name of Rehum **2**

Nehushta (nēhŭsh'tu) [Heb ,=brass], wife of King Jehoiakim 2 Kings 24 8.

Nehushtan (nēhŭsh'tăn) [Heb ,=brazen], brazen serpent made by Moses It came to be worshiped by the Israelites, and Hezekiah destroyed it Num 21 9, 2 Kings 18.4

Neidhart von Reuental (nīt'härt fŭn roi'untāl), c 1180–c 1245, Bavarian court poet He introduced a new note in the songs of the minnesingers—bright, humorous lyrics of village and peasant life

Neiel (nē'yul, nē'ul), unidentified landmark, N Palestine Joshua 19 27

Neihardt, John Gneisenau (nī'hart), 1881–, American poet, b Sharpsburg, Ill , grad Nebraska Normal College, 1897 He lived (1901–7) among the Omaha Indians at their reservation near Bancroft, Nebr , and wrote lyrics and stories about them His epic cycle of the Indians and frontiersmen is in five book-length poems—*The Song of Hugh Glass* (1915) properly the second volume, *The Song of Three Friends* (1919), first in the story, *The Song of the Indian Wars* (1925), *The Song of the Messiah* (1935), and *The Song of Jed Smith* (1941) His prose includes *The Splendid Wayfaring* (1920), a history of Jedediah Smith, *Poetic Values* (1925), *Indian Tales and Others* (1926), and *Black Elk Speaks* (1932), the autobiography of an Indian medicine man as told to Neihardt See also his *Collected Poems* (1926) for his shorter narratives and lyrics

Neillsville (nēl'zvĭl), city (pop 2,562) co seat of Clark co , central Wis , SE of Eau Claire and on the Black River, settled 1844, inc 1882 The Winnebago Indian Mission School is here

Neilson, Adelaide (nēl'sun), 1848 80, English actress, whose real name was Elizabeth Ann Brown She made her debut as Juliet in 1865 and added Rosalind, Beatrice, Imogen, and other Shakspearian characters to her repertoire She acted with great success in England and from 1872 to 1879 in the United States

Neilson, William Allan (nēl'sun), 1869–1946, American educator, b Scotland, M A Univ of Edinburgh, 1891, Ph D Harvard, 1898 He taught English in Scotland and Canada and at Bryn Mawr and Columbia and served (1906–17) as professor of English at Harvard From 1917 until his retirement in 1939 he was president of Smith College He was author of a number of critical works, editor of the Cambridge and Tudor editions of Shakspere (1906, 1911), and editor in chief of the second edition (1934) of *Webster's New International Dictionary*

Neipperg, Adam Adalbert, Graf von (ä'däm ä'dälbĕrt graf' fŭn nī'pĕrk), 1775–1829, Austrian general and diplomat He fought in the Napoleonic Wars and, as ambassador to Sweden (1811–13), helped to turn Bernadotte against France He represented Empress Marie Louise, Napoleon's consort, at the Congress of Vienna (1814–15) and accompanied her to the duchy of Parma, where he served as her chief minister In 1821, on Napoleon's death, he married her morganatically

Neisse (nī'su) two rivers of Silesia The **Glatzer Neisse** (gla'tsur, Pol *Nysa Kłodzka* (nĕ'sä kwôts'ka), 120 mi long, rises in the Sudetes and winds NE past Glatz to join the Oder It is entirely in territory administered (since 1945) by Poland Farther west is the **Lausitzer Neisse** (lou'zĭ"tsur) or **Lusatian Neisse** (lōōsā'shun), Czech *Lužická Nisa* (lōō'zhĭtska nī'sa), Pol *Nysa Łużycka* (nĕ'sa wōōzhĭts'ka), also known as Gorlitzer Neisse It is 140 mi long and rises in N Bohemia, Czechoslovakia flowing generally north, it crosses the Sudetes and flows past Görlitz, through Lusatia, into the Oder It forms, from the Czech frontier to its mouth, the border between Russian-occupied Germany and the German territories placed (1945) under Polish administration

Neith, see Egyptian religion

Nejd (nĕjd), former emirate, N central Arabia Riad is the chief city The Nejd is a vast plateau from 2,500 ft to 5,000 ft high There is a chain of oases in the eastern section, elsewhere the inhabitants are nomadic Bedouins The Nejd, from the beginning the center of the Wahabi movement, was gradually conquered from Turkey by the Wahabi leader, Ibn Saud From this base he completed his conquest of the Hejaz and El Hasa In 1932 the Nejd became part of his newly constituted domain, Saudi Arabia

Nejef (nĕ'jĕf) or **Najaf** (nä'jaf), town, Iraq, on the banks of shallow Nejef lake The town is also called Meshed Ali, after the tomb (enclosed in a mosque) which supposedly contains the remains of Ali, son-in-law of Mohammed the Prophet The town is a great pilgrimage center for Shiite Moslems

Nekeb see Adami

Nekhtnebf I (nĕkt"nĕ'buf), Gr *Nectanebos I* (nĕktă'nŭbus), king of ancient Egypt (379–361 B C), founder of the XXIX dynasty By the gallant defense of the delta fortresses and then of Memphis until the rise of the Nile, he saved his country from the Persian invasion of Pharnabazus in 374 B.C This defeat of the Persians touched off a general revolt of the satraps of W Asia, which occupied Persia for the rest of his reign His splendid tem-

ples at Bubastis, Memphis, Abydos, Karnak, and Edfu are worthy to rank with those of the Saïte renaissance (663–525 B C) His son, Tachos, while invading Syria, was overthrown by **Nekhtnebf II** (reigned 359–343), son of the Egyptian viceroy This Nekhtnebf was likewise a great builder, as an all-granite temple at Horbeit, a kiosk at Philae, bas-reliefs at Karnak, and statues at Abydos and Bubastis testify Persia had now recovered its strength and bent all its efforts to reconquer Egypt Thanks to Greek aid Nekhtnebf beat off the first attack in 351, but in 343, hopelessly outnumbered, he was defeated and fled

Nekoda (nĕkō'dù), name of two families returned from exile Ezra 2 48,60, Neh 7 50,62

Nekoosa (nĭkōō'sù), city (pop 2,212), central Wis , on the Wisconsin and SW of Wausau, settled 1892, inc as a city 1926 It has paper mills

Nekrasov, Nikolai Alekseyevich (nyĭkûl' ůlyĭksyà'-lyĭvĭch nyĭkrà'suf), 1821–77, Russian poet, editor, and publisher The driving force of his life was to improve conditions in Russia, especially the lot of the peasant This is seen in his work as owner and editor of the progressive literary journal *Contemporary* (1846–66), in his short folk lyrics, in his longer narrative poems, of which a good example is the realistic fantasy of peasant life, *The Red-nosed Frost* (1863, Eng tr , 1887), in the tragic poem *Russian Women* (1867), and in the satirical portrait of Russia as it was under serfdom, *Who Is Happy in Russia?* (1873) Many of Nekrasov's poems are available in English See Leo Wiener, *Anthology of Russian Literature* (1902).

nekton see MARINE BIOLOGY

Neligh (nē'lĭ), city (pop 1,796), co seat of Antelope co , NE Nebr , on the Elkhorn river, inc 1873.

Nelson, Aven, 1859–, American botanist and educator, b Keokuk, Iowa, M A Harvard, 1892 He was connected with the Univ of Wyoming as professor (1887–1940) and as president (1917–22) His writings include *Trees of Wyoming* (1899), *Key to Rocky Mountain Flora* (1902), *Spring Flora of the Intermountain States* (1912), and numerous contributions to botanical magazines

Nelson, Byron (John Byron Nelson, Jr), 1912–, American golfer, b Fort Worth, Texas In 1926 he began playing golf as a caddy, and while later working at odd jobs, he entered professional tournament play A member (1937–40) of the victorious U S Ryder Cup team, Nelson also won the U S National Open title (1939) and the Professional Golfers Association championship (1940) He set a record by winning $35,000 in eight professional tournaments in 1944. He wrote *Winning Golf* (1946)

Nelson, Donald Marr, 1888–, American businessman and administrator, chairman of the U S War Production Board (1942–44), b Hannibal, Mo , grad Univ of Missouri, 1911 He was executive vice president of Sears, Roebuck and Company when called (1940) into government service on economic boards for converting industry to defense and war purposes After leaving the WPB, he was sent as personal representative of President F D. Roosevelt to China (1944–45), he then was (1945–47) president of the Society of Independent Motion Picture Producers He is the author of *Arsenal of Democracy* (1946)

Nelson, Horatio Nelson, Viscount, 1758–1805, English naval hero, b Norfolk, son of a clergyman He entered the navy in 1770 After a long period of arduous training, he became a captain at the age of 20 and saw service in the West Indies, in the Baltic waters, and in Canada During these years he became friendly with Prince William Henry (later William IV), who acted as best man when Nelson married (1787) a widow, Frances Nisbet, in the West Indies. That same year he returned to England and remained inactive and somewhat in disfavor at the admiralty until the outbreak of the FRENCH REVOLUTIONARY WARS (1793), when he was given command of the English ship *Agamemnon* Nelson served in the Mediterranean, fighting at Toulon and helping to capture Corsica At Calvi he lost the sight of one eye Under Sir John Jervis he was largely responsible, acting without orders, for the victory over the Spanish off Cape St. Vincent (1797) He was made a rear admiral by seniority and created a knight of the Bath In the unsuccessful English attempt (1797) to capture Santa Cruz de Tenerife, Nelson lost his right arm, and he was returned to England. Upon his return to service, he was sent on detached duty to find the French fleet After a long pursuit the French fleet was by brilliant seamanship destroyed at ABOUKIR (1798), ending the dream that NAPOLEON I had cherished of conquest in the East Nelson was showered with rewards and honors, but received only the comparatively modest title of Baron Nelson of the Nile. He was placed in command of a squadron assisting the kingdom of the Two Sicilies. Here he fell in love with Emma, Lady HAMILTON, the wife of the British ambassador, who became his mistress. After the French took possession of Naples (1799), Nelson blockaded the city, terminated an armistice which Cardinal Ruffo had made with the Neapolitan rebels, and executed the Neapolitan admiral, Francesco CARACCIOLO, for desertion to the French. For these acts he was later severely criticized, but he was created duke of Bronte in Sicily When the British commander in chief in the Mediterranean, Lord Keith (George Keith Elphinstone), ordered him to Minorca, Nelson refused to obey on the grounds that his presence in Naples was politically necessary, but it was suspected that he did not wish to leave Lady Hamilton In 1800 he returned to England with the Hamiltons and soon separated (1801) from his wife The same year, Lady Hamilton bore him a daughter, Horatia He was second in command against the armed neutrality in the Baltic and defeated the Danes at Copenhagen (1801), ignoring Sir Hyde Parker's order (which he knew to be optional) to cease action by putting his telescope to his blind eye and saying that he could not see the signal He was made a viscount, returned to England, and was given command of the Channel fleet to repel an expected French invasion During the interlude of peace (1802–3), he lived in the country with the Hamiltons Upon the outbreak of war (1803), Nelson was given command of the fleet in the Mediterranean and blockaded the French fleet at Toulon for 22 months Upon their escape and flight to the West Indies, Nelson pursued the French across the Atlantic and back but never overtook them In 1805 he destroyed the combined French and Spanish fleets off Cape TRAFALGAR, but was killed in the action It was before this battle that he gave the famous signal, "England expects that every man will do his duty " His body was returned to London, given a state funeral, and buried in St Paul's Cathedral He is commemorated by the celebrated Nelson Column in Trafalgar Square, London See biographies by Robert Southey (1813, ed by G A R Callender, 1922), A T Mahan (1897), C S Forester (1929), Carola Oman (1946), and W M James (1949)

Nelson, John Maurice, 1870–, American chemist and educator, b West Point, Nebr , grad Univ of Nebraska (B S , 1901), Ph D Columbia, 1907 A teacher from 1902, he joined the Columbia faculty in 1908, becoming assistant professor of organic chemistry (1915), professor (1920), and emeritus professor (1948) He developed with K G Falk the electronic theory of valence originally advanced by J J Thomson, He is a recognized authority on the isolation and purification of naturally occurring enzymes, his research in this field has been concerned especially with invertase and tyrosinase

Nelson, Knute (knōōt'), 1843 1923, U S Senator (1895–1923), b Norway He was brought to America at the age of six, grew up on a Wisconsin farm, and served in the Union army He was admitted (1867) to the bar, practiced law in Minnesota, and entered Republican politics After service (1875–78) in the Minnesota state senate, he was (1883–89) U S Congressman and then (1893) became governor of Minnesota He resigned the governorship to serve in the U S Senate, where, dissenting from orthodox Republicanism, he favored a modified tariff, supported antitrust and income-tax legislation, backed U S membership in the League of Nations, and helped create the Dept of Commerce and Labor See biography by M W Odland (1926)

Nelson, Robert, 1794–1873, Canadian rebel, b Montreal, brother of Wolfred Nelson Like his brother, he was a surgeon in the War of 1812, and with him he entered the legislative assembly of Lower Canada in 1827 as a supporter of Papineau Although Robert Nelson took no active part in the rebellion of 1837, after its collapse he organized in the United States a band of adventurers, he invaded Canada in 1838, proclaiming the country a republic and himself president of the provisional government The invasion was quickly put down, and Nelson fled back to Vermont In the last years of his life he was a surgeon in New York city

Nelson, Thomas, 1738–89, American Revolutionary general, signer of the Declaration of Independence, b Yorktown, Va , grad Trinity College, Cambridge, England, 1761 He was a delegate to the Continental Congress (1775–77), commander (1777–81) of the Virginia militia in the Revolution, and governor of the state in 1781 He lost his fortune aiding the patriot cause and died impoverished

Nelson, William Rockhill, 1841–1915, American journalist, b Fort Wayne, Ind Because he was unruly, his father, hoping to discipline him, sent him to Notre Dame for two years He practiced law, speculated unsuccessfully in cotton, and then engaged in the contracting business in Fort Wayne Interesting himself in Democratic politics, he bought a local paper and, becoming devoted to journalism, later (1880) launched the Kansas City *Evening Star* Under Nelson's supervision the *Star*, independent politically, increased its circulation rapidly while adhering to high journalistic standards. It inspired community spirit in Kansas City, crusaded for many civic reforms, and gained national attention See I F. Johnson, *William Rockhill Nelson and the Kansas City Star* (1935).

Nelson, Wolfred, 1792–1863, Canadian rebel, b. Montreal He served as a surgeon in the War of 1812. In 1827 he entered the legislative assembly as a supporter of Papineau. For the leading part which he played in the rebellion of 1837, Nelson was banished (1838) to Bermuda, but with the amnesty of 1843 he returned to Montreal, resumed his medical practice, and in 1844 was again elected to the legislative assembly

Nelson, city (pop 5,912), SE British Columbia, on the Kootenay, at the end of the west arm of Kootenay Lake and N of Spokane, Wash. It is a railroad divisional point, with shops, and is the trade center of an extensive mining district

Nelson, municipal borough (1931 pop 38,304, 1947 estimated pop 33,420), Lancashire, England, N of Manchester It has cotton and rayon factories and electrical engineering works

Nelson, city (pop. 13,030, metropolitan pop 16,577), on South Island, New Zealand, on the north coast at the head of Tasman Bay The Cawthron Institute for scientific research is here There are fruit canneries, confectioneries, and sawmills

Nelson, river of N Manitoba, flowing 390 mi northeast from the north end of Lake Winnipeg to Hudson Bay at Port Nelson Its mouth was discovered (1612) by Sir Thomas Button The river was long a thoroughfare of fur traders, and the trade was long dominated by the Hudson's Bay Company post, YORK FACTORY

Nelsonville, city (pop 5,368), SE Ohio, SE of Lancaster, in a coal, clay, and farm area, laid out 1818 as Englishtown, renamed 1824 Brick and tile are manufactured here

Nemacolin's Path (nĕ'mukō"lĭnz), Indian trail between the Potomac and Monongahela rivers, going from the site of the present Cumberland, Md , to the mouth of Redstone Creek (where Brownsville, Pa , now stands) It was blazed and cleared in 1749 or 1750 by the Delaware chief, Nemacolin, and the Maryland frontiersman, Thomas Cresap (krē'săp) The path was of great military importance, as the route of George Washington's first Western expedition and of Gen Edward Braddock's expedition in the French and Indian War It was known as Braddock's Road until the Cumberland Road or NATIONAL ROAD was built on the same route

Neman, river see NIEMEN

Nemcova, Bozena, Czech *Božena Němcová* (bô'zhĕnà nĕm'kôvà), 1820–62, Czech novelist and storyteller Her best-known novel is *Babicka* (1855, Eng tr , *The Grandmother*, 1891), a faithful and charming portrait of Czech village life in the mid-19th cent Of her many other stories and novels, *Mountain Village* (1856), *The Disobedient Kuba and Other Tales* (Eng tr , 1921), and *The Shepherd and the Dragon Fairy Tales* (Eng tr , 1930) have been translated

Nemea (nē'mēu, nĭmē'u), city of ancient Greece, in N Argolis At the temple of Zeus were held the Nemean games, one of the four Panhellenic festivals (from 573 B C), they were held in the second and fourth years of each Olympiad Of Pindar's odes 11 celebrate Nemean victories The temple and palaestra have been excavated

Nemean lion (nĭmē'un, nē'mēun), beast of Nemea invulnerable to weapons To kill it was the first of Hercules' 12 labors He did so by strangling it with his bare hands

Nemesis (nĕm'ĭsĭs), Greek personification of law and order as avenging itself on the violator Possibly at first an abstraction, it became personalized as a fatal goddess or a spirit of vengeance

Nemesius (nĭmē'shēus), fl c 350, Christian philosopher, bishop of Emesa, Syria He wrote *The Nature of Man*, an essay in anthropology, holding the superiority of the soul and the indestructibility of matter It is remarkable for its knowledge of the nervous system

Nemi, Lake (nā'mē), Latin *Nemorensis lacus*, small picturesque crater lake, Latium, central Italy, in the Alban Hills Here are the sacred wood and the ruins of the celebrated temple of DIANA Whoever killed the priest of the temple was recognized as his successor this cruel custom was discussed by Sir James Fraser in his *Golden Bough* In 1930 31 two pleasure ships of the Roman emperor, Caligula, lying at the bottom for almost 2,000 years, were raised from the lake after its level had been lowered about 70 ft No valuables were found, but objects interesting from the artistic and technical point of view were recovered The ships were burned by the retreating Germans in 1944

Nemours, Gaston de Foix, duc de: see FOIX, GASTON DE

Nemours, Louis Charles Philippe Raphaël d'Orléans, duc de (lwē' shärl' fēlēp' rāfāĕl' dôrlāā' dük' du numōōr'), 1814–96, French prince, second son of King Louis Philippe In 1831 he was offered the throne of Belgium, which Louis Philippe made him decline in order to avoid antagonizing Great Britain. He fought in Algeria, and after the February Revolution of 1848 he lived in England. Returning to France in 1871, he helped to bring about the rapprochement between the legitimist pretender, the comte de Chambord, and the Orleanist pretender, his nephew Louis Philippe Albert d'Orléans

Nemours (nümōōr'), town (pop. 5,336), Seine-et-Marne dept , N France, SE of Paris. It was the capital of a duchy, the title to which was borne by a branch of the house of Armagnac (until 1505), by Gaston de Foix (1507–12), by a branch of the house of Savoy (1528–1657), and by several members of

the Bourbon-Orléans line. Here in 1585 Henry III of France revoked concessions earlier made to the Protestants The Dupont family originated here

Nemuel (nēmū'ĭl) **1** Descendant of Reuben. Num. 26 9 **2** See JEMUEL

Nemunas, river· see NIEMEN.

Nen· see NENE

Nenagh (nĕ'nu, nĕ'năkh), urban district (pop 4,517), Co Tipperary, Ireland, near the Nenagh river and NE of Limerick It is an agricultural market with varied manufactures It has the round keep of a 12th-century castle

Nene (nēn, nĕn) or **Nen** (nĕn), river of Northamptonshire, Cambridgeshire, and Lincolnshire, England It rises just SSE of Daventry and flows 90 mi NE past Northampton, Oundle, Peterborough, and Wisbech to the Wash It has been made navigable to Peterborough

Nenets National Okrug (nyĕ'nyĭts), administrative division (67,300 sq mi , 1946 estimated pop 30,000), NE European RSFSR Comprised in Archangel oblast, it extends along the tundra coast of the Barents Sea and the Kara Sea The capital is at Naryan-Mar, a sawmilling and lumber-exporting center on the mouth of the Pechora river Reindeer raising, fishing, and seal hunting are the main occupations of the population, which consists chiefly of Nentsy—formerly and still generally known as SAMOYEDS The okrug was formed in 1929

Nennius (nĕ'nĭus), fl 796, Welsh writer, to whom is ascribed the *Historia Britonum*, a compilation treating the early history of Britain and the Teutonic invasions There are several manuscripts of it in Latin and in Irish It is considered by some writers to have been compiled by Nennius from various works, but most students think the history was a revision by Nennius of an older work It is chiefly important for the study of early British legends, especially the ARTHURIAN LEGEND There are several translations, notably one by A W Wade-Evans (1938) of a Latin text

Neocaesarea (nē″ōsĕzurē″u), ancient city of Pontus, NE Asia Minor, on the Lycus river Under the names Cabeira and Diospolis it was a royal capital of Pontus The Romans refounded (A D 64) and renamed it, and it was a provincial capital The Turkish name is Niksar

neoclassicism (nē″ōklă'sĭsĭzm) The literary period of the RESTORATION and the 18th cent in ENGLISH LITERATURE is often called the Age of Neoclassicism or the Age of Reason, because of the stress on classical learning and the ancient "rules" of literature, the emphasis on reason and common sense, and the negation of enthusiasm and uncontrolled imagination For neoclassicism in architecture, see CLASSIC REVIVAL

Neodesha (nēō″dushă'), city (pop 3,376), SE Kansas, on the Verdigris and N of Independence, laid out 1869, inc 1871 With refineries, it is in a region producing oil and natural gas Near by is an Indian mound, said to be the site of an early Indian village

neodymium (nē″ōd'ĭmĕum), rare metallic element (symbol=Nd, for physical constants, see ELEMENT, table), one of the RARE EARTHS Its discovery (1885) is accredited to Welsbach, who separated an earth called didymia into the two parts, neodymia (containing neodymium) and praseodymia (containing praseodymium) It occurs combined with other metals of the rare earths, as in monazite, and forms a few compounds with other elements (e g , with oxygen, an oxide, and with chlorine, a chloride) It is used in making some yellowish-green glassware and in goggles for glass blowers

Neoga (nēō'gu), city (pop 1,062), E Ill , SE of Decatur, in a farm area, inc 1930

Neolithic period (nēŭl'thĭk, nēō–) or **New Stone Age** is characterized by the development of new sources of food supply The already perfected stoneworking techniques of the preceding PALEOLITHIC PERIOD were somewhat modified by increased use of grinding and polishing, chiefly, the peoples of this age had only to put old stone tools to new use A transitional Mesolithic period is sometimes postulated to fill the gap between the last glacial retreat and the rise of agriculture and animal domestication Characteristic Mesolithic cultures are the Tardenoisian of the arid lands of North Africa and Spain, the Azilian of Western Europe, which emphasized fishing activities, and the Maglemosian of N and Central Europe, essentially a forest hunting culture Trade contacts spread among the rapidly increasing Neolithic peoples Pottery making, carpentry, and weaving emerged No single point of origin is known for agriculture, but species of wheat including emmer (*Triticum dvococcum*), barley, and millet were grains in early use No new important species have been added to the animals first domesticated under Neolithic culture Where simple hoe cultivation combined with an animal-using economy, as in the Nile valley, the peasant village was created and became the base for all future civilizations The Neolithic is not a single chronologic phase, but a way of life without, or preliminary to, the use of metals and the development of urbanization Among the many Neolithic sites that have been excavated are those at Fayum and many other places in Egypt, at Anau, at Samarra, and in E central Europe (the Danubian culture) and Western Europe (the culture of the Swiss lake dwellers)

Neon, town (pop 1,187), E Ky , in the Cumberlands, E of Hazard and near the Va line, in a coal area

neon, rare gaseous element (symbol=Ne, for physical constants, see ELEMENT, table), colorless, odorless, and tasteless Chemically inert, it forms no compounds, it is grouped with helium argon, krypton, xenon, and radon in the periodic table It is present in the atmosphere in extremely minute quantities and is produced for commercial purposes as a by-product in the preparation of liquid air Being a conductor of electricity, the gas has found wide use in electric advertising signs It produces a bright reddish-orange glow when confined in a glass tube through which an electric current passes The light given off penetrates fog, and the gas is therefore utilized in airplane beacons Neon lamps are used in moving-picture sound apparatus and neon tubes are used in television The element was discovered by Sir William Ramsay and M W Travers in 1898

Neoplatonism (nē″ōplā'tunĭzm), last, in time, of the great pagan philosophies It derives its name and its basic distinctions from Plato, but it is entirely independent of Platonism proper Neoplatonism is the most elaborate and consistent philosophy dealing basically with the phenomena and speculation of MYSTICISM It is unique among the great mystical systems in being fundamentally philosophical (not religious) and among them and the other great pagan philosophies in having no ethic It represented in the first centuries of the Christian era the declining effort of Greco-Roman thought, and it enshrined, albeit imperfectly, all that was still vital in the brilliant Platonic tradition The term is sometimes too closely attached to the activities of the schools of Alexandria or is even made to cover the intellectual movement originating in that center, but Neoplatonism cannot properly be so localized Its true founder was PLOTINUS(3d cent) For a number of years there had been a tendency to reach back beyond the doctrines of Stoics and Epicureans and revive the views of Plato At the very beginning of the Christian era, Philo had striven to harmonize Plato's conception of mind as the cause of all things with Hebrew religious thought Other commentators and adapters of Plato's writings followed It was the work of Plotinus to put into systematic form an idealistic philosophy He opposed the arguments of materialism that had been prevalent In Plato's teaching the soul, which has itself a permanent existence, is the place of ideas Plotinus presented the real existence of the soul in contrast rather than in relation, to the existence of bodily things The soul cannot be really explained in terms of the body, but terms of the soul may be used to make clear truths concerning the body The One who is the great Cause and Principle on which the existence of the visible world depends is above and beyond all thought and being From this One or Unity emanates the divine Mind or pure intelligence, from which in turn emanates the world soul Next in the scale come particular souls and material things subject to change The soul is related upward to ideas and downward to matter The crux of the Neoplatonic system lies in its doctrine that there is an utterly transcendent One from whom all may be said to come by the process of EMANATION, the individual human soul being thus indivisibly connected with the One PORPHYRY, Plotinus' disciple, biographer, and editor, and IAMBLICHUS were chiefly responsible for disseminating through the world the system of Plotinus as they held it The chief late exponents of Neoplatonism were PROCLUS at Athens and HYPATIA at Alexandria Earlier Christian theologians showing Neoplatonic ideas were CLEMENT OF ALEXANDRIA and ORIGEN Damascius was Proclus' chief follower at Athens, and the pagan revival of Emperor JULIAN was Neoplatonic In spite of the tacit connections of Neoplatonism with much in Catholic theology, it fell under the ban (529) of JUSTINIAN on pagan schools, and it did not survive The permanent influence of Neoplatonism is largely exercised through two figures, the anonymous author of the works ascribed to St DIONYSIUS THE AREOPAGITE and John Scotus ERIGENA The high authority assigned to the Pseudo-Dionysius in the Middle Ages greatly increased the force of this influence in Western Europe Among the medieval philosophers who drew much of their system of mystical theology from the Pseudo-Dionysius, HUGH OF SAINT VICTOR and RICHARD OF SAINT VICTOR were the chief There is little doubt that St AUGUSTINE shows Neoplatonic connections, and through him Neoplatonic thought has been said to have become part and parcel of Christian theology The nature of Christian speculation concerning mysticism is such, however, that it is difficult if not impossible to assume that what resembles Neoplatonism in tendency is pagan in origin, for the idea of the soul rising to meet its God through successive grades of approach is an obvious, easy explanation of the mystical experience See W R Inge, *Christian Mysticism* (1899), *The Philosophy of Plotinus* (1918), and *The Platonic Tradition* (1926), F W Bussell, *Neoplatonism and Christianity* (1911), Thomas Wittaker, *The Neo-Platonists* (1928), Evelyn Underhill, *Mysticism* (rev ed , 1930), R B Tollington, *Alexandrine Teaching on the Universe* (1932)

Neoptolemus (nē″ŏptŏ'lĭmus), [Gr ,=new in war], in Greek mythology, son of Achilles and Deidamia. In the Trojan War he proved himself brave but cruel He killed Priam at the altar of Zeus and threw Astyanax, son of Hector, from the wall of Troy After the war, Andromache and Helenus were his slaves He married Hermione, daughter of Menelaus and Helen He was sometimes called Pyrrhus

Neo-Pythagoreanism (nē'ō-pĭthă″gurē'unĭzm), philosophico-religious movement of the 2d and 1st cent B C , centering at Alexandria The chief figure was Apollonius of Tyana It threatened for a while to overshadow Neoplatonism Neo-Pythagoreanism attempted to revive what the Alexandrians thought were the doctrines of PYTHAGORAS a certain objective reality of numbers, transmigration of souls, and the oneness of all in God The sterility of Roman religion opened the way for the influx of Oriental cults, thus preparing the ground for a revival of Pythagorean mysticism with its sacrifices and miracles The fundamental weakness of the system seems to have lain in the fact that it presented no unified metaphysics for the thoughtful man, to whom alone it would appeal because of its archaizing tendency and its emphasis on such rarefied ideas as the Pythagorean numbers Unlike Neoplatonism, Neo-Pythagoreanism had no exponents worthy of great or universal respect See Kurt von Fritz, *Pythagorean Politics in Southern Italy* (1940)

Neosho (nēō'shō), city (pop 5,318), co seat of Newton co , SW Mo , SSE of Joplin, in the Ozark farm and resort area, settled c 1840, inc 1855 Milk condensing is the chief industry A U S fish hatchery is near by In the Civil War a pro-Confederate convention met here (1862) and passed an ordinance of secession which, however, was ineffective, as Missouri was kept in the Union

Neosho, river, c 460 mi long, rising in E central Kansas, flowing SE into Oklahoma (where it is generally known as the Grand River), then south to join the Arkansas near Muskogee GRAND RIVER DAM is SE of Vinita, and Fort Gibson Dam is NNE of FORT GIBSON

NEP see NEW ECONOMIC POLICY

Nepal (nupôl'), kingdom (c 54,000 sq mi , pop c 6,282,000), central Asia Katmandu is the capital It is bordered by India on the west, south, and east and by Tibet on the north Topographically Nepal comprises three bands which extend east and west The south is a comparatively low region of swamp and jungle where timber is cut central Nepal is occupied by moderately high mountains, and in the north is the main section of the Himalayas, including Mt Everest, the highest peak in the world The Valley of Nepal, with an area of c 250 sq mi , is in the east, this is the only densely populated area and has the cities of Katmandu, Bhatgaon, and Patan It is 4,700 ft high and is surrounded by mountains which rise to 9,000 ft Here the characteristic crops of Nepal, rice, wheat, and fruit, grow abundantly Nepal's two short railroads, which connect with lines in India, do not reach the valley, which is served by a suspended rope cable The extreme difficulty of communication restricts industry to handicrafts foreign trade is limited to India and Tibet The population is divided into many tribes which speak Tibeto-Burman languages Except that Buddhism was early introduced, little is known of Nepal's history before the late 15th cent The country was frequently divided and in the 18th cent fell to the Gurkhas, who established Hinduism as the official religion and laid down substantially the present boundaries At about this time developed the present administrative system with a titular king and a hereditary prime minister who actually wields power Nepal first entered into treaty relations with Great Britain in 1792 Acceptance of British direction after a border war (1811–16) led to the belief that the country was not independent Its full sovereignty was expressly affirmed, however, by a treaty with Great Britain in 1923 Nepal supplied many troops for the British army in both world wars In 1949 the USSR prevented Nepal from obtaining membership in the United Nations, See Ikbal Ali Shah, *Nepal the Home of the Gods* (1938), Hassoldt Davis, *Land of the Eye* (1940)

Nepheg (nē'fĕg) [Heb ,=sprout] **1** Descendant of Kohath Ex 6 21 **2** Son of David. 2 Sam 5 15, 1 Chron 3 7, 14 6

Nephele· see ATHAMAS and PHRIXUS.

Nephi (nē'fī), city (pop 2,835), co seat of Juab co , central Utah, SSW of Provo, settled 1851 by Mormons Dry farming is practiced, especially in wheat growing, and a Federal agricultural station is near by Gypsum is mined and made into plaster

Nephilim (nĕfĭl'ĭm), Hebrew word of no known meaning retained in RV It is translated "giants" in AV Gen 6 4, Num 13 33

Nephish (nē'fĭsh), variant of NAPHISH.

Nephishesim (nĕfĭ'shēĭsm), family returned from exile Neh 7 52 Nephusim Ezra 2 50

nephrite, see JADE

Naphthalim (năf'thulĭm), variant of NAPHTALI.

Nephtoah (nĕftō'ă) [Heb ,=opening], unidentified town, near Jerusalem Joshua 15 9, 18 15.

Nephusim (nĕfū'sĭm), variant of NEPHISHESIM

Nepomuk, John of, see JOHN OF NEPOMUK, SAINT

Nepos, Cornelius (nē'pŏs), c 100 B C –c 25 B C, Roman historian He was an intimate of Pomponius Atticus, Cicero, and Catullus His only extant work is a collection of biographies, mostly from a lost larger work, *De viris illustribus* The general method was to compare the lives of great Romans and Greek leaders together with other foreigners Nepos wrote in a popular manner in clear and simple Latin his work was hasty and inaccurate, but significant in the history of biography writing

Nepos, Julius, d 480, Roman emperor of the West (474–75) A Dalmatian official, he was appointed emperor by Leo I of the Eastern Empire, but was deposed by ORESTES

Neptune, in Roman religion, ancient god of water The Romans dedicated green arbors to him on the Neptunalia (July 23) to obtain water in this hot and dry time Neptune was probably an indigenous god of fertility, but in later times he was identified with the Greek POSEIDON, god of the sea

Neptune, township (pop 10,207), E N J, near Asbury Park, inc 1879

Neptune, in astronomy, the eighth of the major planets in the order of distance from the sun, around which it revolves in a period of about 164 8 years Its mean distance from the sun is c 2,793,400,000 mi Because of its remoteness, it cannot be seen with the naked eye Its discovery resulted from an investigation of apparent irregularities in the behavior of URANUS J C Adams of Cambridge, England, and U J J Leverrier of Paris working independently computed the hypothetical position of a planet which must be influencing Uranus In 1846 J G Galle of Berlin found Neptune in the position indicated by Adams and Leverrier The mean diameter of Neptune is c 31,000 mi and its period of rotation about 15 8 hr The inclination of the plane of the orbit to the plane of the ecliptic is 1°46' No other planet but Venus shows less eccentricity of orbit, that of Neptune is only 0 00855 The mass of Neptune is about 17 times that of the earth A month after the detection of the planet itself, Lassell discovered a satellite, Triton, which revolves in the retrograde direction (east to west) in a period of 5 days 21 hr A second satellite was discovered (1949) by G P Kuiper Neptune is probably enveloped in an atmosphere containing chiefly hydrogen and methane in addition to some unknown gases

Neptune Beach, resort town (pop 1,363), NE Fla, on the Atlantic E of Jacksonville, inc 1931

Neptune City, borough (pop 2,392), E N J, near the Atlantic ESE of Freehold, inc 1881

Ner (nûr) [Heb ,=lamp], father of Abner 1 Sam 14 51

Nerbudda, India see NARBADA

Nerchinsk (nyĕr'chĭnsk), city (1937 estimated pop 15,300), RSFSR, in SE Siberia It is on the Trans-Siberian RR Nerchinsk was formerly a place of exile The Nerchinsk mountain range, which extends from the Mongolian frontier 125 mi NE to the Argun river, rises to 4,300 ft and has silver, lead, and zinc mines A Russo-Chinese border treaty was signed at Nerchinsk in 1689

nereids (nē'rēĭdz), in Greek mythology, daughters of Nereus and Doris They were nymphs who presided over the sea, protecting sailors in distress The nereids lived in Nereus' palace in the depths of the Mediterranean Amphitrite, Galatea, and Thetis were nereids

Nereus (nē'rōōs, nē'rūs), in Greek mythology, god of the sea He was the son of Pontus and Gaea, the husband of Doris, and the father of 50 sea nymphs —the nereids He was conceived of as a kindly old man who had the power of prophecy and the ability to change his shape

Nereus (nē'rūs), Roman Christian Rom 16 15

Nergal (nûr'găl, -gul) [Babylonian,=hero], Assyrian-Babylonian deity, a god of war, pestilence, and the chase He was worshiped in Samaria by Cushite captives 2 Kings 17 30

Nergal-sharezer (shurĕ'sur) [Babylonian,=Nergal protect the king], one of the Babylonians who rescued Jeremiah from prison He bore the title Rab-mag He had the same name, and could be the same person, as the Babylonian king Neriglissar (reign, 559–555 B C) Jer 39 3,13.

Neri (nē'rī), name in Luke's genealogy Luke 3 27

Neri, Filippo de' see PHILIP NERI, SAINT

Neriah (nĕrī'ă) [Heb ,=lamp of God], father of Baruch Jer 32 12, Baruch 1 1

Nernst, Walther (văl'tur nĕrnst'), 1864–1941, German physicist and chemist, a founder of modern physical chemistry After doing outstanding research on osmotic pressure and ionization, he turned to thermodynamics, establishing in 1906 a new tenet (often called the third law of thermodynamics) dealing with the behavior of matter at temperatures approaching absolute zero For his work in thermodynamics he won the 1920 Nobel Prize in Chemistry He later specialized in electroacoustics and astrophysics Nernst invented (1898) an electric metallic-filament lamp, a link between the carbon lamp and the incandescent lamp His works include *Theoretical Chemistry from the Standpoint of Avogadro's Rule and Thermodynamics* (1893, 5th Eng ed, 1923) and *The New Heat Theorem* (1918, Eng tr, 1926)

Nero (Nero Claudius Caesar) (nēr'ō), A D 37–A.D. 68, Roman emperor (A D 54–A D 68) He was originally named Lucius Domitius Ahenobarbus and was the son of Cn Domitius Ahenobarbus (consul in A D 32) and of AGRIPPINA II, who was the great-granddaughter of Augustus Agrippina married CLAUDIUS I (who was her uncle) and persuaded him to adopt her son and to make him the guardian of Claudius' son BRITANNICUS, Nero was given Claudius' daughter Octavia as his wife On Claudius' death Nero was easily made emperor His chief advisers were SENECA and the head of the Praetorian guard, Burrus, as long as they were in power, the government was fairly good In A D 55 Agrippina saw the bonds of her domination of Nero loosening and intrigued in favor of Britannicus Nero poisoned the boy POPPAEA SABINA, the wife of his friend OTHO, soon became his mistress, and rumor blamed her for the worst of Nero's behavior In A D 59 he murdered his mother and in A D. 62 his wife Burrus died in 62, and Seneca retired, leaving Nero and the administration in the hands of a group of scoundrels Rome was half burned in a fire (A D 64), intended (said rumor) to serve as a background for a recitation by Nero on the fall of Troy Nero accused the Christians of starting the fire and began the first Roman persecution, according to Christian tradition this included among its victims St Peter and St Paul Nero rebuilt the city magnificently, laying out broad, regular streets and erecting a splendid palace By now he was hated, and in A D 65 there was a plot to make C Calpurnius Piso emperor The detection of this began a string of violent deaths, e g, of Seneca, Lucan Poppaea (now Nero's wife), and Thrasea Paetus Nero had ambitions to be a poet and artist, and he was an enthusiastic admirer of Greek culture, in A D 67 he went to visit Greece To meet his presence the games were all rescheduled, Nero competed in them all victoriously Even there he was not too busy to have important officers murdered In A D 68 a general in Gaul, C Julius Vindex, revolted unsuccessfully, then GALBA and Otho revolted too The Praetorian guard joined this sedition, and Nero killed himself Among his last words were, 'What an artist the world is losing in me!' His memory was publicly execrated Nero was the last emperor of the family of Julius Caesar For Christians he became the type of the anti-Christian tyrannical monster See B W Henderson, *The Life and Principate of the Emperor Nero* (1903)

Nero, Caius Claudius, fl 216–201 B C, Roman general in the Second Punic War He was the victor over the forces of HASDRUBAL in the battle of the Metaurus (207 B C)

Neruda, Jan (yän' nĕ'rōōdă), 1834–91, Czech essayist and poet He was born in Prague, and his most popular book is a collection of tales based on his childhood experiences in the Mala Strana section of that city (*Stories from Mala Strana*, 1878) As a poet he has been compared to Heine because of the clarity and simplicity of his style and his lyric quality His finest poetry is contained in the volumes *Ballads and Romances* and *Plain Themes* (both 1883) He wrote a number of dramas, of which *Francesca da Rimini* (1860), a tragedy, is the best known See Paul Selver, *A Century of Czech and Slovak Poetry* (1946)

Neruda, Pablo (pä'blō nārōō'dhä), 1904–, Chilean poet, whose real name is Neftalí Ricardo Reyes After 1927 he was in consular service in the Far East, in Argentina, and in Mexico A surrealist poet, he revitalized everyday expressions and employed bold metaphors in free verse His sensuous poems are filled with grief and despair An innovator in both literary and social thought, he has exerted wide influence in Hispanic America His best collections are *Crepusculario* [twilight book] (1919), *Veinte poemas de amor y una cancion desesperada* [20 poems of love and one song of despair] (1924) *Residencia en la tierra, 1925–1931* [residence on earth] (1933) and *España en el corazón* [Spain in my heart] (1937)

Nerva (Marcus Cocceius Nerva) (nûr'vă), A.D c 30–A D 98, Roman emperor (A D 96–A D 98) He had an honorable career as a law officer at Rome and a blameless reputation At the death of DOMITIAN he was chosen emperor by the senate in a strong reaction toward constitutionalism and senatorial influence and away from hereditary succession and absolutism Nerva was mild and unassuming, he made economies, reformed the land laws in favor of the poor, revised taxation, and tolerated the Christians. He was unable, however, to manage the Praetorian guard, who killed some of the murderers of their idol, Domitian. The elderly Nerva, seeing a strong hand was needed, adopted TRAJAN and turned over the government to him He died soon afterward See B. W. Henderson, *Five Roman Emperors* (1927).

Nerval, Gérard de (shărär' dù nĕrvăl'), 1808–55, French writer, one of the younger romantics. His real name was Gérard Labrunie He wrote translations from German, including *Faust* (1828); fantastic short stories, notably in *Les Filles du feu* (1854, partial Eng. tr., *Daughters of Fire*, 1922); travel sketches, as in *Voyage en Orient* (1851), and poems His *Aurélia* (1854, Eng tr, *Aurelia*, 1932), a sort of fantastic spiritual autobiography, mirrors the tortured moments of lucidity in a life that ended in madness and suicide

nerve see NERVOUS SYSTEM

Nervii (nûr'vēĭ), ancient people of Belgica, GAUL They were warlike and prohibited importations which might tend to soften the character of their people They tried to raise a general revolt against the Romans and were crushed by Julius Caesar (57 B C)

Nervo, Amado (ämä'dhō nĕr'vō), 1870–1919, Mexican poet Known as the "monk of poetry," he studied for the priesthood but abandoned a clerical career for writing An intimate friend of Rubén DARIO, he also wrote in the modernist manner, his poetry is known for its qualities of simplicity and music His early writings showed pantheistic influences, but in his later years they were touched by Buddhist quietude Most of his verses deal with his inward world, where he sought peace from the torments without Some of his volumes express this in their titles—*Serenidad* (1914), *Elevación* (1916), *Plenitud* (1918) He spent a number of years in diplomatic service and died when he was Mexican minister to Uruguay See E T Wellman, *Amado Nervo, Mexico's Religious Poet* (1937)

nervous system, body system which includes all the nerves and nerve tissue of the animal body and is concerned with the coordination and control of other body systems and organs In the human (and some other higher vertebrates) it consists of a highly developed central nervous system (the BRAIN and SPINAL CORD), the peripheral nervous system (i e, the nerve fibers connecting the receptors, or sense organs, with the effectors, or muscles and glands), and the autonomic nervous system The unit of structure in the nervous system is the neuron or nerve cell The neuron varies in size and form but typically consists of a nucleated cell body having one or more branching processes known as dendrons or dendrites and a single process (usually longer and less branched) called an axon The axon, often termed a nerve fiber, is surrounded by a coating known as the myelin sheath or medullary sheath A number of fibers bound together with connective tissue form a nerve Fibers that carry an impulse from a receptor to the spinal cord or to the brain are designated as sensory, or afferent, fibers, those that transmit an impulse to an effector are called motor, or efferent, fibers In some nerves all the fibers are of one type, and in others, known as mixed nerves, both kinds are present In the human body there are 12 pairs of cranial nerves, some are sensory (the olfactory, optic, and auditory nerves), some are motor (e g, the oculomotor which controls muscles of the eye), and others are mixed (e g, the facial nerve, which sends motor fibers to the muscles of the face and neck and sensory fibers to part of the tongue and middle ear) The 31 pairs of spinal nerves emerge from both sides of the spinal cord along its entire length Spinal nerves are all mixed nerves The autonomic nervous system consists of nerves and ganglia (groups of nerve cells) which regulate the action of the smooth or visceral muscle tissue (e g, in the walls of the digestive organs and blood vessels), the heart muscle, and the secretory action of glands The parasympathetic, or craniosacral, nervous system is the portion of the autonomic system which includes nerve fibers arising from the midbrain and the medulla oblongata and from the sacral region of the spinal cord The sympathetic system or thoracolumbar system includes preganglionic fibers originating in the thoracic and lumbar regions of the spinal cord, a chain of sympathetic ganglia on either side of the vertebral column from the base of the skull to the coccyx, and three great plexuses (composed of ganglia and fibers) known as the cardiac plexus, the celiac plexus (or solar plexus), and the hypogastric plexus Most organs are innervated by both the sympathetic and the parasympathetic systems, the two systems function antagonistically, e g, stimulation by the parasympathetic system causes dilation of certain blood vessels, while the sympathetic causes contraction of the same blood vessels All the fibers of the autonomic system are efferent fibers, and they obtain their impulses from within the body, in the gray matter of the nervous tissue. The functions of organs innervated by the autonomic system are, in general, not under the control of the will though the emotions influence them. Although the vegetative functions of the internal organs are thus largely controlled involuntarily, with impulses traveling through efferent fibers only, other activities of the body are generally the result of a stimulus which acts upon a receptor (or sensory surface) and causes an impulse to travel over sensory fibers to the spinal

cord or to the brain and thence over motor fibers to the effector One or more neurons called central, connecting, or internuncial neurons are found between the afferent and efferent neurons Such a pathway from a receptor to an effector is known as a reflex arc The afferent impulses are transferred to the efferent fibers in the gray matter of the brain and spinal cord where the endings of one neuron lie close to the dendrons of another neuron This point of very close approach between two neurons is called a synapse, and it is there that an impulse passes from neuron to neuron Reflex action is the muscular or glandular action that results from stimulation of a sensory nerve Such actions are not under voluntary control Certain reflex actions that occur repeatedly have their connections between afferent and efferent fibers in areas sometimes known as reflex centers Such a center is the respiratory center of the medulla oblongata (of the brain), in it the afferent fibers from many parts of the body, e g , the lungs, aorta, and skin, convey impulses to many interconnected efferent neurons which in turn send impulses to the diaphragm, the intercostal muscles, and other muscles involved in maintaining the breathing process Actions other than simple reflexes are the concern of the higher brain centers, and the pathways involved are of varying complexity depending upon the nature of the activity Conditioned reflexes are acquired reflexes learned through association of a particular stimulus with a certain result Pavlov performed experiments in which he developed conditioned reflexes in dogs by causing them to associate the sound of a bell with receiving food, after this pattern had been repeated frequently, the dogs responded to the bell by salivating even when food was not presented to them Such a response is a conditioned reflex The acquiring of conditioned reflexes is a basis of habit formation, learning, and education

Nescopeck (nĕs'kŭpĕk), borough (pop 1,805), E Pa , on the Susquehanna and SW of Wilkes-Barre, settled 1786, inc 1896 Peter Frederick Rothermel was born here

Nesfield, William Eden, 1835–88, British architect He was of the group, including R N Shaw and P S Webb, which rescued English domestic architecture from its Victorian mediocrity and led it back to its former traditions of good design and honest craftsmanship Nesfield built numerous houses, turning to the humble English cottage and farmhouse architecture of the past for his inspiration The two lodges which he designed, one at Regent's Park (1864) and the other at Kew Gardens (1866), strongly affected English contemporaries His *Architectural Sketches from France and Italy* (1862) was influential

Nesiotes see CRITIUS AND NESIOTES

Ness, Loch (lŏkh), lake, Inverness-shire, Scotland, along the Great Glen and forming part of the Caledonian Canal It is c 24 mi long and a mile in average breadth Very deep and remarkably ice-free, it is fed by the Oich and other streams and drained by the Ness to Moray Firth Mountains rising to 2,284 ft overhang the loch In 1933 and later, newspapers published accounts of a "monster," 40 to 50 ft long, which was said to be seen in the loch

Ness City, city (pop 1,355), co seat of Ness co , W central Kansas, in a wheat area, founded 1878, inc. 1886 Oil fields were developed in the 1930s

Nesselrode, Karl Robert, Count (nĕs'ulrōd, Rus nyĕslrô'dyĭ), 1780–1862, Russian statesman of German descent, b Lisbon He played an important role at the Congress of Vienna (1815) and in 1816 became foreign minister Guiding Russian policy for the next 40 years, Nesselrode favored the Holy Alliance, intervened (1849) in Hungary, where Russian troops put down the anti-Austrian revolution, and was partially responsible for the Crimean War (1853–56) His autobiography was published in 1866

Nessus (nĕ'sŭs), in Greek mythology, centaur, son of Ixion and Nephele He used to carry travelers across the river Evenus, but one day while carrying Deianira he tried to make off with her Hercules shot him with a poisoned arrow The dying centaur persuaded Deianira to save his bloody robe, telling her to give it to Hercules, her husband, when the hero's love waned Later, Deianira gave the poisonous robe to Hercules and thus caused his death

nest, structure or refuge in which an animal lays its eggs or gives birth to its young and in which the young pass their period of helplessness Birds are the chief nest builders, but nests are also made by many insects, by some fish and reptiles, and by squirrels, mice, and some other mammals Among birds the male selects the territory in which the female usually chooses the site and does most of the construction of the nest The preferred site is one which is accessible to the feeding grounds and which offers some protection from the elements and concealment from enemies. In some species the male assists the female in incubating the eggs. The megapodes or mound birds of Australia leave their eggs after laying them in a mound of decaying vegetation, the heat of which enables the embryo to develop. Birds of the altricial type, in which the young are hatched in a helpless condition, usually build nests which are more elaborate and placed higher above the ground than those of the precocial birds, which are able to run about and feed soon after hatching Many sea birds, shore birds, and game birds make no real nest but lay their eggs directly on a rocky ledge or on the ground or in a shallow depression scooped out of the sand or earth Elaborate domed nests are built on the ground by the meadow lark and the ovenbird Herons, mourning doves, and cuckoos make loose platform nests of sticks in trees or shrubs Eagles' nests, made in the tops of trees or on cliffs, are often enlarged each year and reach 5 to 12 ft in diameter The woodpeckers, the nuthatches, some owls, and the hornbills utilize holes in trees The male hornbill seals the female in the nesting cavity, leaving a small aperture through which he feeds her while she sits on the eggs The kingfisher and the bank swallow dig out nesting holes in sandy banks Intricately woven arboreal nests are made by the American orioles or hangnests and by the Old World weaver birds The oriole's nest is a deep, pendent bag The Baltimore oriole constructs it of vegetable fibers, often with yarn or string added, while the orchard oriole uses grasses In the SW United States the cactus wren makes a down-lined nest of woven grasses among the thorns of the cholla cactus Mud or salivary secretions cement the nests of some birds Robins, cliff and barn swallows, and phoebes are among those that use mud The nest of an Oriental swift is made entirely of salivary secretion and is used in making bird's-nest soup

Nestor (nĕ'stûr), in Greek mythology, wise king of Pylos He was the husband of Eurydice and the father of Antilochus Nestor took part in the expedition of the Argonauts and the Calydonian hunt and when he was very old in the Trojan War Here, because of his great age and experience, his advice was constantly sought Nestor was noted for his prolixity After his return to Pylos he was visited by Telemachus in search of information about Odysseus

Nestor (nĕ'stur), d 1115, Russian chronicler A monk in a monastery of Kiev, he wrote biographies of two saints and of the prior of his monastery Until recently the authorship of the *Russian Primary Chronicle*, known also as *The Tale of Bygone Years* and as the *Chronicle of Nestor*, was attributed to him It is now believed that he was the author of one of its sources See *Russian Primary Chronicle* (tr by S H Cross, 1930)

Nestorian Church, Christian community of Iraq, Persia, and Malabar, India It represents the ancient church of Persia and is sometimes called the Assyrian (or East Syrian) Church It numbers fewer than 100,000, including emigrants to the United States It has much in common with other Eastern rites The liturgy (said in Syriac) is probably of the Antiochene family of liturgies, the rite is called Chaldean or East Syrian The churches are not much ornamented, but the Nestorians offer great honors to the Cross A unique feature of their worship is their "holy leaven," continuously used for the altar bread, they believe it is derived from dough used at the Last Supper The theology of the church is not precise, but there are traits of ancient Nestorianism— they venerate Nestorius as a saint, they deny the Virgin the title Mother of God while otherwise honoring her highly, and they reject the ecumenical councils after the second The ancient Persian church was the only one to espouse the cause of Nestorius, as a result it lost communion with the rest of Christendom The official head calls himself patriarch of the East, the office is hereditary, from uncle to nephew The church has relations with some Jacobites and some Anglicans Among the Nestorians and outnumbering them lives a community in communion with the pope and called usually Chaldean Catholics They have rite and practices in common with the Nestorians, but have had a separate church organization since the 16th cent The largest group using this rite is that of the Malabar Chaldean Catholics, who ultimately derive their Christianity from Nestorian missions in India The great period of expansion of the Nestorian Church was from the 7th to the 10th cent There were missions to China and India A famous monument in Sian, China, was put up by Chinese Nestorians (781) The missions were destroyed and the church reduced by persecutions by the Chinese, the Hindus, and the Moslems In the 19th and early 20th cent there were terrible massacres of Nestorians and Chaldeans by Kurds and Turks. See Donald Attwater, *The Christian Churches of the East* (1947, 1948); H. C. Luke, *Mosul and Its Minorities* (1925)

Nestorianism. In 428 Emperor Theodosius II named an abbot of Antioch, Nestorius (d 451?), as patriarch of Constantinople In that year Nestorius, who had been a pupil of THEODORE OF MOPSUESTIA, outraged the Catholic world by opposing the use of the title Mother of God for the Virgin on the grounds that, while the Father begot Jesus as God, Mary bore him as a man. This view was contradicted by Cyril, patriarch of Alexandria, and both sides appealed to Pope Celestine I. The Council of Ephesus (see EPHESUS, COUNCIL OF) was convened in 431 to settle the matter This council (reinforced by the Council of Chalcedon in 451) clarified orthodox Catholic doctrine, pronouncing that Jesus Christ, true God and true man, has two natures, at once perfectly distinct and inseparably joined in one person and partaking of the one divine substance Nestorius, deposed after the Council of Ephesus, was sent to Antioch, to Arabia, and finally to Egypt He wrote in *The Book of Heraclides* an account of the controversy The patriarch of Antioch and his bishops, accusing Cyril of sharp practice, stayed out of communion with Alexandria until a compromise was reached in 433, but in spite of discussion of the subject in 553 at the Council of Constantinople (see CONSTANTINOPLE, COUNCIL OF), Nestorianism was practically dead in the empire after 451 The doctrines that continued in the Nestorian Church had diminishing connections with those of Nestorius The teachings of EUTYCHES and MONOPHYSITISM grew partially in reaction to Nestorianism

Nestos, river see MESTA

Nestroy, Johann Nepomuk (yō'hän nā'pōmōōk nĕs'troi), 1801 02, Austrian dramatist and actor He made his debut in 1821 and later proved himself a brilliant writer of farces and satires Among his works were *Lumpacivagabundus* (1833) and a parody of *Tannhäuser* (1852)

net, mesh fabric, known from prehistoric times Nets have been made of many materials, including sinews, strips of hide, silk, vegetable and synthetic fibers, and metallic threads Their earliest use was probably for snaring animals and for fishing Fishing nets include the stationary net, an early type, the drift net, an oblong vertical net, buoyed on its upper edge, the seine, whose ends are brought together to enclose the fish, and the bag-shaped trawl net, dragged along sea bottom Hair nets include the gold or silver, wire or cord cauls worn in ancient Egypt, Greece, and Rome, reticulated caps and cauls popular in Europe especially in the 14th cent , chenille or ribbon snoods of the 19th cent , and the "invisible" net of human hair Net fabrics include veilings, tulle, and maline, as well as heavier dress nets, curtain nets, and *filet*, a foundation for lace Nettings are used also for safety nets, for hammocks, and for hoisting loads

Netcong (nĕt'kŏng), borough (pop 2,157), NW N J , near Lake Musconetcong, inc 1894 It has railroad repair shops, it grew as a residence for iron miners and ironworkers and as a resort A transoceanic radiotelephone station is here

Nethaneel (nĭthă'nēûl, nĕ'thunēl) [Heb ,=gift of God] **1** Prince of Issachar Num 1 8 **2** Brother of David 1 Chron 2 14 **3** Priest 1 Chron 15 24 **4** Levite 1 Chron 24 6 **5** Porter of the Temple 1 Chron 26 4 **6** Prince under Jehoshaphat 2 Chron 17 7 **7** Levite 2 Chron 35 9 **8** One who had married a foreign wife Ezra 10 22 **9** Priest Neh 12 21 **10** Trumpeter Neh 12 36

Netherlands (nĕ'dhurlŭndz), Dutch *Nederland* (nā'durlant) or *Nederlanden* (-lăndun), kingdom (12,868 sq mi , with water surface, including the Ijsselmeer, 15,765 sq. mi , pop. 9,542,393), NW Europe, bounded by the North Sea in the north and west by Belgium in the south, and by Germany in the east It is popularly known also as Holland AMSTERDAM is the constitutional capital, The HAGUE is the royal residence and the seat of the government The coastal provinces of the Netherlands are ZEELAND and SOUTH HOLLAND, at the estuaries of the SCHELDT, MEUSE, WAAL, and RHINE rivers, NORTH HOLLAND, UTRECHT, GELDERLAND OVERIJSSEL, and FRIESLAND, on the west, south, and east of the IJSSELMEER (known as the ZUIDER ZEE before it was dammed up), and GRONINGEN, on the Ems estuary and bordering on Germany Much of the fertile land consists of polders, below sea level, won from the sea in centuries of toil There are numerous islands, notably WALCHEREN, NORTH BEVELAND and SOUTH BEVELAND, and the WEST FRISIAN ISLANDS The country is crossed by drainage canals and the main rivers are canalized and interconnected by artificial waterways, which are linked with the river and canal systems of Belgium and Germany It may truly be said that the maritime provinces of the Netherlands are largely the creation of man Dairying and cattle raising are very important sources of wealth ALKMAAR and EDAM are internationally famous as cheese markets Truck gardening, fishing, and flower raising (particularly at HAARLEM) are equally important The canals, drawbridges, windmills, and local costumes of Holland are famous all over the world. The maritime provinces have the most famous cities of the Netherlands— Amsterdam and ROTTERDAM (the chief ports) and The Hague, Haarlem, LEIDEN, DELFT, UTRECHT, DORDRECHT, SCHIEDAM, and FLUSHING. The inland provinces, with generally poorer soil, are NORTH BRABANT, with the historic city of BREDA and the industrial centers of 's' HERTOGENBOSCH,

EINDHOVEN, and TILBURG, LIMBURG, with important coal mines and the industrial and commercial centers of MAASTRICHT and HEERLEN, and DRENTHE, largely a stock-raising and dairying region In S Gelderland are the industrial centers of ARNHEM and NIJMEGEN Besides coal, the Netherlands has no important resources, though it relies on imports of rubber, oil, and tin from INDONESIA (the former Dutch colonies of the East Indies, since 1949 a sovereign confederation under the Dutch crown) Textiles, machinery, electrical equipment, processed foods, and chemicals are among the chief industrial products Amsterdam is a world center of the diamond industry and trade, it is also one of the chief international financial centers Dutch interests control a large part of the world's petroleum and tin production, and the Dutch merchant marine ranks fourth after the United States, Great Britain, and Norway The Dutch colonies (see WEST INDIES, DUTCH, and GUIANA, DUTCH) play an important part in the economy of the metropolis The government of the Netherlands is a constitutional monarchy The constitution was promulgated in 1814 and was revised frequently The executive power rests with the crown and the cabinet, the legislative power is vested in the two chambers of the States-General The members of the upper chamber are elected by the 11 provincial estates, which have important powers in their respective provinces The lower chamber is elected by direct universal suffrage The royal succession is settled on the house of Orange (see NASSAU) The royal house belongs to the Dutch Reformed Church There is complete freedom of worship, and each religious community receives state subsidies The Catholics, who nearly equal the Protestants in number, are most numerous in the southern provinces The archbishop of Utrecht is the Catholic primate of the Netherlands The four university cities are Leiden, Utrecht, Groningen, and Amsterdam One of the LOW COUNTRIES, the Netherlands had no unified history before the 16th cent The region left of the Rhine formed part of the Roman province of Lower Germany and was inhabited by the BATAVI, on the right bank were the Frisians Nearly the entire area was taken by the Franks between the 5th and the 8th cent, and with the breakup of the Carolingian empire it passed (9th cent) to the east Frankish (i e, German) kingdom and thus to the Holy Roman Empire The counts of HOLLAND emerged as the most powerful medieval lords of the region, next to their southern neighbors, the dukes of Brabant In the 15th cent Holland, Zeeland, Gelderland, and Brabant passed to the dukes of BURGUNDY, who thus controlled virtually all the Low Countries Though the Dutch towns and ports were slower in their economic development than the great commercial and industrial centers of Flanders and Brabant, they began to rival them in the 14th cent They nearly all belonged to the Hanseatic League, and they enjoyed vast autonomous privileges In 1477 MARY OF BURGUNDY by the Great Privilege restored all the liberties of which her predecessors had deprived the provincial estates of the Low Countries Her marriage with the Archduke Maximilian (later Emperor MAXIMILIAN I) brought the Low Countries to the house of Hapsburg Emperor Charles V made them over (1555) to his son PHILIP II of Spain By that time the northern provinces (i e, the present Netherlands) had reached great economic prosperity. Philip's attempt, through Cardinal GRANVELLE, then through the duke of ALBA, to introduce the Spanish Inquisition and to reduce the Low Countries to the status of a Spanish province met determined opposition among all classes of the population, Catholics and Protestants alike This was only increased by Alba's barbarous and terroristic measures The struggle for the independence of the Low Countries took place mainly in Flanders and Brabant, while the northern provinces, under the leadership of WILLIAM THE SILENT, prince of Orange, early succeeded in expelling the Spanish garrisons. The Low Countries united in their struggle against Spain in the Pacification of GHENT (1576) Alessandro FARNESE, who in 1578 succeeded John of Austria as Spanish governor, eventually reconquered the southern provinces, which remained in Spanish possession (see NETHERLANDS, AUSTRIAN AND SPANISH) The seven northern provinces—Holland, Zeeland, Utrecht, Gelderland, Overyssel, Friesland, and Groningen—drew together in 1579 in the Union of Utrecht and declared (1581) their independence The struggle continued. *William the Silent, assassinated in 1584*, was succeeded as stadholder (chief of state) by his son, MAURICE OF NASSAU, who was at first guided by OLDENBARNEVELDT. An English expedition under Robert Dudley, earl of LEICESTER, to aid the Dutch against Farnese, was ineffectual, but subsequently Maurice won important successes, and in 1609 he concluded a 12-year truce with SPINOLA, the Spanish commander Fighting was resumed in the Thirty Years War, at the end of which the independence of the United Provinces—as the independent Netherlands was called—was recognized in the Peace of Westphalia (1648) Spain also ceded North Brabant, with Breda, and part of Limburg, with Maastricht While still struggling for their independence and while involved in the religious struggle between Calvinists and REMONSTRANTS, the Dutch laid the foundation of their commercial and colonial empire The Dutch EAST INDIA COMPANY was founded in 1602, the Dutch WEST INDIA COMPANY in 1621. The decline of Antwerp under Spanish rule and the right (awarded to the Dutch in the Peace of Westphalia) to control the Scheldt estuary gave supremacy to the Dutch ports, particularly Amsterdam Dutch merchants traded in every continent (they even enjoyed exclusive privileges in Japan), and Dutch vessels captured the major share of the world's carrying trade The United Provs opened their doors to religious refugees, notably to Portuguese and Spanish Jews, and to French Huguenots, these contributed vastly to the immense prosperity of 17th-century Holland With material wealth came a cultural golden age In the day of Rembrandt, DUTCH ART reached its peak, the Univ of LEIDEN won world fame, Descartes lived in Holland, and Spinoza was a native of Amsterdam Prince FREDERICK HENRY, who had succeeded his brother Maurice in 1625 as stadholder, was in turn succeeded by his son, Prince WILLIAM II, in 1647 His death in 1650 was the signal for the opponents of the hereditary privileges of the house of Orange to reassert the rights of the provinces and the States-General Jan de WITT, the political leader of the estates of Holland (the most powerful of the seven provinces), was chosen (1652) grand pensionary of Holland and directed the fate of the Dutch republic for the following 20 years To prevent Prince WILLIAM III of Orange (son of William II) from regaining the authority of his father, De Witt by the Eternal Edict (1667) abolished the office of stadholder in Holland and secured the virtual exclusion of the house of Orange from state affairs De Witt's administration was largely taken up by the DUTCH WARS with England (1652–54, 1664–67), arising out of the first of the English NAVIGATION ACTS (1651) and the Dutch-English commercial rivalry The Treaty of Breda (1667) was advantageous to the Netherlands, which reached the peak of its political power when, by forming the TRIPLE ALLIANCE with Sweden and England, it forced Louis XIV of France to halt the War of Devolution against Spain Louis XIV took his revenge by starting (1672) the third of the Dutch Wars, in which the French overran the Netherlands In defense, the Dutch opened their dikes and flooded the country De Witt sought to negotiate peace but was assassinated (1672) by members of the Orange faction, which restored the stadholderate to William III (after 1689 also king of England) The war devastated the provinces, but in the Treaty of Nijmegen (1678–79) the Dutch obtained important concessions from France, while their ally Spain paid the bill The Netherlands again fought Louis XIV in the War of the GRAND ALLIANCE and in the War of the SPANISH SUCCESSION On the death (1702) of William III the stadholderate was again suspended and the States-General resumed control of the government, but in 1747 the republican party lost out and William IV of Orange became hereditary stadholder Dutch power declined steadily after 1715 and was overshadowed by England The Netherlands sided against England in the American Revolution and as a result lost several colonies at the Treaty of Paris of 1783 (see PARIS, TREATY OF) In 1794–95, in the French Revolutionary Wars, the French overran the country William V fled abroad, and the BATAVIAN REPUBLIC was set up (1795) under French protection Louis BONAPARTE was made king of Holland in 1806 by his brother, Napoleon I, but was deposed in 1810, his kingdom was annexed to France At the Congress of Vienna (1814–15) the former United Provs and the former Austrian Netherlands were united as a kingdom under King WILLIAM I, son of William V of Orange In 1830, however, the former Austrian provinces (i e, Belgium), rebelled against Dutch rule and declared their independence A final agreement between Belgium and the Netherlands was reached only in 1839 (see LONDON CONFERENCE) William I was forced to abdicate in 1840 and was succeeded by WILLIAM II, under whom Jan THORBECKE introduced important reforms in 1848 Under WILLIAM III (1849–90) the Netherlands passed through a period of commercial expansion and internal development He was succeeded by Queen WILHELMINA, who continued her predecessor's work and kept her country neutral in the First World War In the Second World War, however, Germany invaded (May, 1940) the Netherlands without warning, quickly crushed Dutch resistance, and wantonly destroyed Rotterdam The queen and her government fled abroad, and Dutch forces continued to fight alongside the Allies. Indonesia was lost to Japan early in 1942 after brief but heavy fighting Meanwhile the German occupation authorities, headed by Arthur Seyss-Inquart, established a reign of terror Underground resistance led to mass executions and deportations. Of the 112,000 Dutch Jews 104,000 were deported to Poland and exterminated In Sept, 1944, the Dutch population rose against the Germans in the premature hope that the Allied air-borne landings at Arnhem and Eindhoven would liberate the country However, only Zeeland, North Brabant, and Limburg were liberated, and in the rest of the country the Germans meted out terrible reprisals Starvation set in The German collapse in May, 1945, was followed by the immediate return of the queen and the cabinet and by relatively speedy recovery One of the original United Nations, the Netherlands joined (1947) in a close economic and political alliance with Belgium and Luxembourg, the three countries became known jointly as the Benelux group, which in 1948 joined with England and France in the Five-Power Pact The five nations acted jointly in the European Recovery Program and in the North Atlantic Treaty A major postwar problem was the revolt of INDONESIA, which Dutch arms were unable to suppress Queen Wilhelmina abdicated (1948) in favor of her daughter, JULIANA, who continued to rule with a coalition cabinet dominated by the Catholic and Labor parties For a general account of the modern Netherlands and its people, see A J Barnouw, *The Dutch* (1940) A standard history is P J Blok, *History of the People of the Netherlands* (Eng tr, 5 vols, 1898–1912) The volumes by J L Motley, *Rise of the Dutch Republic* (3 vols, 1856) and *History of the United Netherlands* (4 vols, 1861–68), are brilliant but scarcely impartial See also George Edmundson, *Anglo-Dutch Rivalry during the First Half of the Seventeenth Century* (1911) and *History of Holland* (1922), H W Van Loon, *The Fall of the Dutch Republic* (1913) and *The Rise of the Dutch Kingdom* (1919), A J Barnouw, *Holland under Queen Wilhelmina* (1922), Pieter Geyl, *The Revolt of the Netherlands* (1932), B H M Vlekke, *Evolution of the Dutch Nation* (1945), Bart Landheer, *The Netherlands in a Changing World* (1947), Sacheverell Sitwell, *The Netherlands* (1948)

Netherlands, Austrian and Spanish, that part of the Low Countries which, from 1482 until 1794, was in possession of the house of Hapsburg It corresponds, roughly, to modern Belgium The Low Countries passed from the house of Burgundy to that of Hapsburg through the marriage (1477) of MARY OF BURGUNDY (d 1482) with Archduke Maximilian (later Emperor Maximilian I), their son Philip (later PHILIP I of Castile) inherited FLANDERS, BRABANT, ARTOIS, HAINAUT, LUXEMBOURG, LIMBURG, HOLLAND, and ZEELAND, which constituted the possessions still left to the house of Burgundy His son, Emperor Charles V, added UTRECHT, GELDERLAND, OVERIJSSEL, FRIESLAND, and DRENTHE, and in 1547 declared the entire Netherlands hereditary Hapsburg possessions In 1555 he abdicated the Netherlands in favor of his son, PHILIP II of Spain. The provinces of the Netherlands retained their individual institutions and provincial estates, which limited the powers of the Spanish governors who resided at Brussels The harsh regime of the duke of ALBA, who after replacing (1567) Margaret of Parma as governor suspended constitutional procedure, provoked the opposition of the Dutch and Flemish nobles and people, led by WILLIAM THE SILENT of Orange, MARNIX, OLDENBARNEVELDT, and others In 1576 they drew together in the Pacification of GHENT Despite the ruthless campaigns of Alba and his successors—REQUESENS, JOHN OF AUSTRIA, and the more diplomatic Alessandro FARNESE—Spain recovered only the southern provinces (i e, modern Belgium) while the seven United Provs of the NETHERLANDS gained independence The bloody struggle ruined the prosperous Flemish cities, particularly ANTWERP Protestantism was extirpated in the Spanish Netherlands, and Belgium remains to this day Catholic The unfortunate provinces were to provide a battleground in every major European war from the 17th cent to the present, but their industry and commercial enterprise each time made a prompt recovery possible Spain lost North Brabant and part of Limburg to the United Provs at the Peace of Westphalia (1648), Artois and parts of Hainaut and of Luxembourg to France at the Peace of the Pyrenees (1659), parts of Flanders (including Dunkirk and Lille) and of Hainaut to France in the Treaties of Aix-la-Chapelle (1668) and Nijmegen (1678–79); and its remaining possessions in the Low Countries to the Austrian branch of the Hapsburgs at the Peace of Utrecht (1714) The bishopric of LIÈGE, an ecclesiastic principality, was not a part of the Hapsburg possessions but was under Spanish and (after 1714) Austrian influence and shared the history of the neighboring provinces After 1781 Emperor Joseph II, in his zeal for reform, ordered changes in the traditional administrative and judicial procedures which aroused the opposition of the conservative and Catholic leaders. Joseph partially withdrew his reforms in 1787, but failed to conciliate the opposition and to win the support of the liberals. Finally, late in 1789, the States-General of the Austrian Netherlands declared Joseph deposed and proclaimed the republic of the United States of Belgium Joseph's successor, Leopold II, succeeded in conciliating the States-General, which in 1790 elected his son Charles as hereditary grand duke The Austrian recovery of Belgium was short-lived, for by 1794 the FRENCH

REVOLUTIONARY WARS had brought the whole area under French control, and in 1797 it was formally ceded to France in the Treaty of Campo Formio For the history of the area after its incorporation (1815) with the kingdom of the Netherlands, see BELGIUM and LUXEMBOURG

Netherlands East Indies see INDONESIA

Netherlands New Guinea or **Dutch New Guinea**, territory (159,375 sq mi , pop 345,087) comprising the western half of New Guinea and offshore islands The capital is Hollandia The Dutch first visited the west coast of the island in 1606 In 1828 they claimed possession of the coast west of the 141st meridian, and in 1848 of the north coast W of Humboldt Bay The Dutch claim to the western half of the island was recognized by Great Britain and Germany in 1885 Until Dec , 1949, the territory was part of the Netherlands East Indies (now the United States of Indonesia) At the Dutch-Indonesian conference of 1949 the settlement of the political status of the area was postponed for a year The Indonesian name for the area is Irian

Netherlands West Indies see CURAÇAO

Nethersole, Dame Olga (nĕ'dhursōl), 1870–, English actress, b London From 1887 she acted in England and in 1899 won fame in the United States as an emotional actress in *Camille*, Clyde Fitch's *Sapho*, and Pinero's *Second Mrs Tanqueray* She was made Dame of the British Empire in 1936

Nethinim (nĕ'thĭnĭm) [Heb , =dedicated], alien captives of the Jews who performed the humblest tasks of the temple Their lot improved until in postexilic times they became the equals of other temple officials Joshua 9 3–27, Ezra 2 43,58,70, 7 7,24, 8 17,20, Neh 10 28

Néthou, Pic de see ANETO, PICO DE

Netley, village, Hampshire, England, SE of Southampton Ruins of the Cistercian abbey built c 1240 include parts of the cruciform church and the abbot's and chapter houses The Royal Victoria Hospital (built after the Crimean War) is one of the chief military hospitals in England

Netophah (nĕtō'fu), unidentified town, apparently near Bethlehem Ezra 2 22, Neh 7 26

Netscher, Kaspar (kus'pär nĕ'chur), 1639–84, Dutch portrait and genre painter, b Heidelberg He early moved to Holland, where he studied with Ter Borch His meticulous little portraits and conversation pieces won him a high reputation, and he was a favorite portrait painter of William of Orange Fine examples of his work are in the National Gallery, London, and the Louvre, the Rijks Museum has 16 portraits The Metropolitan Museum contains *The Card Party* and two portraits, and the Museum of Fine Arts, Boston, his *Boy Blowing Bubbles*

nettle, any species of the genus *Urtica*, annual or perennial plants, commonly weedy and with inconspicuous flowers and small stinging hairs These hairs, when touched to the skin, emit small amounts of FORMIC ACID and produce a rash Nettles have been used in the Old World as fiber for cordage, nets, cloth, and paper and as a potherb for greens or broth Indians of the New World have utilized the fiber Medicinally the plants have been used both internally as a medicament and externally as a stimulative in a process known as urtication The Roman nettle was reputedly introduced into Britain by Roman soldiers for a somewhat similar purpose—to scour their flesh for warmth against the cold RAMIE, of the nettle family, was once included in the genus *Urtica* Various other plants, often having the stinging property of the true nettle, are called nettle, e g , the false nettle, HORSE NETTLE, and nettle tree (see HACKBERRY)

nettle rash see URTICARIA

Nettuno (nĕt-tōō'nō), resort, Latium, central Italy, on the Tyrrhenian Sea With ANZIO, 2 mi to the northeast, it was the site of the Allied landing (Jan. 22, 1944) in the Second World War

Neuber, Karoline (Friederike Karoline Neuber) (kurōlē'nu noi'bur, frēdurē'ku), 1697–1760, German actress-manager, whose family name was Weissenborn After years as a strolling player, she assumed management (1727) of a disbanded company with her husband, Johann Neuber, and began one of the most notable careers in the history of the theater She obtained the aid of Johann Christoph GOTTSCHED and through his translations presented many of the dramas of Racine, Corneille, and Molière for the first time in Germany She trained her players, filled them with ambition, and disciplined their private lives She was stage director and leading actress, her repertoire outside the French classics including farces, musical sketches, and pastoral plays, many of which she wrote or adapted For more than 10 years she continued to raise the standards of the stage in Leipzig and throughout Germany In 1748 she played the leading role in Lessing's first drama, *Der junge Gelehrte* See Rosamond Gilder, *Enter the Actress* (1931)

Neuchâtel (nûshätĕl'), Ger *Neuenburg* (noi'ùnbōōrk), canton (309 sq mi , pop 117,900), Switzerland, in the Jura mts Its chief products are cattle, cheese, cotton goods, and—notably in Le LOCLE and La CHAUX-DE-FONDS—watches and cutlery There are rich asphalt deposits A part of Burgundy by the 11th cent , Neuchâtel was later governed by counts under the Holy Roman Empire The county, declared independent in 1648, had passed to the house of Orléans-Longueville in 1504, and, upon the extinction of that family, chose King Frederick I of Prussia as its prince (1707) It remained an autonomous principality, though in 1815 it became a canton of the Swiss Confederation, with which it had been allied since the 15th cent In 1848 a revolution abolished the monarchy, and in 1857, after some complications, the king of Prussia renounced his claim to the canton The population is mainly French-speaking and Protestant The capital, **Neuchâtel** (pop 23,799), produces machinery, chocolate, and tobacco It has a cathedral, an ancient castle, and a university The town is on the **Lake of Neuchâtel**, 24 mi long and 4 to 5 mi wide, which is surrounded by valuable vineyards and picturesque settlements There are many remains of lake dwellings

Neufahrwasser see DANZIG

Neu Hannover, Bismarck Archipelago see LAVONGAI

Neuhof, Theodor, Baron von (tā'ōdōr bärōn' fŭn noi'hōf), 1686–1756, German adventurer, b Metz, France He was known as Theodore I, king of Corsica from 1736 to 1743 After serving in the French and the Swedish armies he was chargé d'affaires at Florence (1732) under Emperor Charles VI There some Corsican patriots in exile, believing he could be of use to their cause, asked him to become king The proclamation was made after he landed on the island in 1736 He was at first successful against the Genoese He several times went to the Continent to obtain help His last effort to hold Corsica was in 1743, when the French and Genoese forced him to leave After wandering about, he went to London in 1749 Imprisoned for debt, he was freed through the influence of Horace Walpole King Theodore figures grotesquely in Voltaire's *Candide* See Valerie Pirie, *His Majesty of Corsica* (1939)

Neuilly, Treaty of (nûyĕ'), 1919, peace treaty concluded between the Allies and Bulgaria after the First World War It was signed at Neuilly-sur-Seine, France Bulgaria ceded part of W Thrace to Greece and several border areas to Yugoslavia, S Dobruja was confirmed in Rumanian possession

Neuilly-sur-Seine (-sür-sĕn'), city (pop 58,658), Seine dept , N France, a residential suburb of Paris near the Bois de Boulogne

Neu Lauenburg, Bismarck Archipelago see DUKE OF YORK ISLANDS

Neumann, Alfred (älfrät noi'man), 1895–, German novelist and dramatist His story *Der Patriot* (1925, Eng tr , *The Patriot*, 1928) was dramatized as *Such Men Are Dangerous* (produced in London, 1928) A brilliant historical novel, *Der Teufel* (1926, Eng tr , *The Devil*, 1928), won him the Kleist Prize This was followed by *Rebellen* (1927, Eng tr , *The Rebels*, 1929), *Guerra* (1928, Eng tr , 1930), *Der Held* (1930, Eng tr , *The Hero*, 1931), on the murder of Rathenau, and *Kaiserreich* (1936, Eng tr , *Gaudy Empire*, 1937) Neumann fled Nazi Germany and took refuge in the United States

neume, in music see MUSICAL NOTATION

Neu Mecklenburg, Bismarck Archipelago see NEW IRELAND

Neumünster (noi'mün'stûr), city (pop 66,185), Schleswig-Holstein, N Germany, SSW of Kiel It is a rail center and has large textile, leather, machinery, and paper manufactures It suffered damage in the Second World War

Neunkirchen (noin'kĭr'khŭn), town (pop 10,056), Lower Austria, 10 mi SW of Wiener Neustadt It has ironworks and textile mills

Neunkirchen, city (pop 37,250), Saar Territory, NE of Saarbrücken It is a coal-mining center and has iron and steel works and coke ovens

Neu Pommern, Bismarck Archipelago see NEW BRITAIN

neuralgia (nōōrăl'ju, nyōō–), paroxysmal attack of pain distributed along the course of a peripheral sensory nerve or its branches Neuralgia is not a disease but is often symptomatic of a constitutional disturbance It is rare in children and usually occurs past middle life Hysterical neuralgia occurs in neurotic individuals Trigeminal neuralgia (*tic douloureux*), occurring mainly in adults and more commonly in women, is an extremely painful involvement of the fifth cranial nerve which is sometimes relieved only by surgical interference Varieties of neuralgia are distinguished according either to the part affected or to the cause, e g , facial, occipital, intercostal, and syphilitic neuralgia

neurasthenia (nyōō"rŭsthē'nēu), psychiatric term for a neurosis characterized by general lassitude, irritability, lack of concentration, worry, and hypochondria Used by Freud to describe a fundamental functional mental disorder, the term was incorrectly applied as a description of almost any neurosis and has been largely abandoned

Neurath, Constantin, Baron von (kôn'stäntēn bärōn' fŭn noi'rät"), 1873–, German statesman After holding numerous diplomatic posts, he was (1932–38) foreign minister under Papen, Schleicher, and Hitler Dismissed in favor of RIBBENTROP, Neurath was appointed (1939) "protector" of Bohemia and Moravia, but he was considered too lenient in his treatment of the Czechs and was replaced by Reinhard Heydrich in 1941 After the Second World War, Neurath was indicted at the Nuremberg war-crimes trial and was sentenced (1946) to imprisonment for 15 years

neuritis (nōōrī'tĭs, nyōō–), degenerative change in the nerve fibers resulting from a deficiency in vitamins B_1 and B_2 particularly and also of vitamins A, C, and D "Peripheral neuritis," formerly thought to result from an inflammatory process, responds clinically to vitamin therapy The term *neuropathy* has been suggested as a substitute for the term *neuritis* Symptoms of neuritis include pain, tenderness along the nerve, impairment of sensation (e g , touch, temperature, pain, and vibration), and impairment of muscular action Local causes of neuritis include wounds, fractures, and pressure from crutches, bandages, tumors, or a cervical rib Multiple neuritis, in which similar nerves on both sides of the body are affected, is caused by the toxic action of alcohol, lead, arsenic, and certain other substances

neurosis (nyōōrō'sĭs), functional mental disorder The symptoms are the result of a compromise between gratification of libidinal (see LIBIDO) impulses and defense against these impulses It is differentiated from PSYCHOSIS in that it involves no appreciable loss of reality sense, primary mood disturbance, or consistent deterioration in intellectual functions It was largely owing to FREUD, who originated the term *psychoneurosis* to indicate a neurosis of mental origin, that attention was turned from the brain and nervous system to that of the emotional life of the individual as the genesis of a neurosis Freud, who believed almost without qualification that the causal factors in neurosis could be found roughly in the first six years of life, when the personality or ego is weak and afraid of censure, attributed neurosis to the frustration of infantile sexual drives, such as eating and toilet habits and the parent-child relationship (see OEDIPUS COMPLEX) These infantile conflicts, remaining unsolved, appear in adulthood under conditions of stress as neurotic symptoms (see PSYCHOANALYSIS) Although many Freudian concepts have received general acceptance, there is a variation of emphasis among the different schools of psychiatry Ernst Kretschmer and W H Sheldon place greatest weight upon constitutional factors as the cause of neurosis, while others attribute the genesis to organic reasons Among psychoanalysts who have deviated from Freudians, such as Alfred ADLER, C G JUNG, Karen HORNEY, and H S SULLIVAN, each attributes a different factor as the cause of neurosis Whatever the basic cause, neurosis has a crippling effect upon the individual, expressing itself in such symptoms as tenseness, persistent fatigue, feelings of emotional unrelatedness, construction of intellectual faculties, and somatic disorders (see PSYCHOSOMATIC MEDICINE) Normal, neurotic, and psychotic are no longer regarded as distinct and clearly differentiated entities, but rather are believed to differ on a quantitative basis The complex and competitive urban society, as compared with the more static, less intellectually vital, rural community, is believed to offer a more fertile field for the growth of emotional conflicts Further complications in the concept of neurosis have been introduced by social anthropologists, such as Ruth Benedict and Margaret Mead, who have demonstrated that behavioral patterns considered neurotic in one culture are considered normal in another While the problem of neurosis is still being clarified and developed, psychoanalysis, as a means of prevention, has focused attention on the crucial period of childhood See Karen Horney, *The Neurotic Personality of Our Time* (1937), Abram Kardiner, *The Individual and His Society* (1939), O S English and G H J Pearson, *Emotional Problems of Living* (1945), Otto Fenichel, *Psychoanalytic Theory of Neurosis* (1945), Sigmund Freud, *Outline of Psychoanalysis* (1949)

Neu-Sandec, Poland see NOWY SĄCZ

Neusatz, Yugoslavia see NOVI SAD

Neuse (nūs), river rising in N North Carolina in the piedmont near the Va line and flowing southeast c 300 mi across the coastal plains to Pamlico Sound

Neusiedler Lake, Ger *Neusiedlersee* (noi'zēdlurzā'), Hung *Fertő tó* (fĕr'tŭ tō'), E Austria and W Hungary, SE of Vienna About 20 mi long, it varies in area and depth (average 5 ft) with the seasons A heavy growth of reeds supplies the Austrian cellulose industry There are remains of lake dwellings The region (part of BURGENLAND) produces wine

Neuss (nois), city (pop 54,961), in the former Rhine Prov of Prussia, NW Germany It is a rail junction and a port on the Erft Canal, near the left bank of the Rhine opposite Düsseldorf Food stuffs, metal goods, and other manufactured articles are produced here Built on the site of a Roman camp, Neuss was chartered in the 12th cent It belonged to the archbishopric of Cologne until the French Revolution In 1474–75 Charles the Bold of Burgundy, supporting the archbishop in a quarrel with the chapter of Neuss, besieged the city long and unsuccessfully Neuss suffered damage in the Second World War.

Neustadt an der Haardt (noi'shtät ăn dĕr härt'), town (pop 23,946), capital (since 1945) of the Rhenish Palatinate It is a center of the wine trade of the region and has various manufactures

Neustrelitz (noi"shtrā'lĭts), town (pop 24,692), Mecklenburg, N Germany, c 60 mi NNW of Berlin. It was founded (1733) as capital of Mecklenburg-Strelitz after the earlier ducal residence at near-by Strelitz had burned down (1712) Half the town was destroyed in the Second World War

Neustria (nûs'trēu), western portion of the kingdom of the FRANKS in the 6th, 7th, and 8th cent, during the rule of the MEROVINGIANS It comprised the Seine and Loire country and the region to the north, its principal town was Soissons The realm took its origin from the partition (511) of the lands of CLOVIS I among his sons CLOTAIRE I, king of Neustria, temporarily united his lands with the neighboring kingdom of AUSTRASIA (558–61) Constant dynastic rivalries culminated in the long and bitter war between Queen FREDEGUNDE of Neustria and Queen BRUNHILDA of Austrasia, their struggle ended when CLOTAIRE II united all Frankish lands and put Brunhilda to death (613) Divided once more, the two realms were again united for a brief period under Clotaire's son DAGOBERT I After Dagobert the kings sank to insignificance, while the mayors of the palace rose in power PEPIN OF HÉRISTAL, mayor of the palace of the king of Austrasia, defeated his Neustrian rival and united (687) Austrasia and Neustria His descendants, the CAROLINGIANS, continued to rule the two realms, first as mayors and after 752 as kings The name Neustria ceased to have any geographic significance early in the 10th cent See F Funck-Brentano, *Earliest Times* (Vol I of *National History of France*)

Neutra, Czechoslovakia see NITRA

neutrality, in international law, status of a nation which refrains from participation in a war between other states and maintains an impartial attitude toward the belligerents At the opening of hostilities a nonbelligerent state generally issues a proclamation of neutrality, which not only explains its international position but also serves as a warning to its own nationals, whom it declines to protect if they are penalized by a belligerent *for committing* an unneutral act After the proclamation is issued it is the duty of the neutral power to observe strict impartiality in its relations with the warring nations There must be no discrimination or preference The duty of the belligerent, on the other hand, is to respect neutral territory and neutral territorial waters Neutrality is perpetual when it is imposed upon a nation by treaty obligations Though its sovereignty is thus limited, the state becomes inviolable Switzerland, neutralized by the Congress of Vienna (1815), is an example of a perpetually neutral state When a nation, by armed intervention, demands the respect of its neutral rights by the belligerents, its policy is one of armed neutrality Temporary neutrality flows from the unlimited sovereignty of the state, which allows it freely to decide its position in time of war and voluntarily to abstain from participation The terms *benevolent* and *hostile*, when applied to neutrality, imply the sympathy or the antagonism of a neutral for one of the belligerents In medieval times, neutrality as a concept was impossible, for feudal obligations prevented states from exercising the sovereignty which this doctrine necessitates However, the powerful states which later evolved were free to follow a policy of noninterference in the wars of neighboring nations Maritime warfare gave great impetus to the development of neutrality laws Belligerents wished to destroy the enemy's commerce, and nonbelligerents demanded freedom to trade impartially The belligerent could not interefere too drastically with the neutral's trade, for fear that the noncombatant would become allied with the enemy, and in time compromises were effected Neutral states might trade, but under certain conditions and with certain exceptions Neutral duties and rights, first recognized by the 14th-century *Consolato del mare* [tribunal of the sea], were codified or incorporated in treaties and thus became part of international law While the Hanseatic League and the maritime cities of the Mediterranean had been able to demand respect for neutral rights, it was not until much later that the duties of neutrals were stressed George Washington in his neutrality proclamation (1793) not only insisted upon respect for American neutrality but also promised the fulfillment of its accompanying duties The Declaration of Paris (1856) liberalized the laws of neutrality, the Declaration of London (1909) clarified certain principles, and at the Second Hague Conference (1907) neutral obligations and rights, as now practiced, were defined in two conventions The general neutrality convention, after declaring neutral territory inviolable, laid down regulations for neutral states and listed acts which should not be regarded as favoring one of the belligerents The convention on neutrality in naval war, which was fuller, elaborated upon the duties of neutrals but did not incorporate rules for CONTRABAND and BLOCKADE In the First and Second World Wars, violations of neutrality by both sides were frequent, and attempts were made to justify the action by assertions that changed methods of warfare warranted changes in the observance of international law When the League of Nations was established, it was generally recognized that member states could not be neutral in any dispute where the League called upon them to intervene The United States, which was not a member, asserted its intention to remain aloof from all wars and adopted (1935) the Neutrality Act The United Nations, unlike the League, includes all the major world powers Their obligations under the charter to restore and maintain the peace seem to preclude neutrality, and states, such as Switzerland, which are committed to neutrality cannot become members On the other hand, the United Nations, just as the League, seems obliged to protect neutrals from attack See D C Brewer, *Rights and Duties of Neutrals* (1916), Philip C Jessup, Francis Deak, and others, *Neutrality Its History, Economics, and Law* (4 vols, 1935–36), Edwin Borchard and W P Lage, *Neutrality for the United States* (1937)

Neutrality Act, passed by the U S Congress and signed by President F D Roosevelt in Aug, 1935 It was designed to keep the United States out of a possible European war by banning shipment of war materials to belligerents at the discretion of the President The act was amended (Feb, 1936) to prohibit the granting of loans to belligerents, and later (Jan, 1937) neutrality was extended to cover civil wars A new act in May, 1937, continued the 1935 act and in Nov, 1939, this act was revised in favor of supplying warring nations on the "cash-and-carry" principle U S vessels were excluded from combat zones—a provision lifted by amendment in Nov, 1941, after the LEND-LEASE policy was long established The act was thus practically out of operation even before American neutrality ended with Pearl Harbor In Feb, 1942, Congress modified the act to supply credit to the Allies

neutralization, chemical process which involves the mixing and reaction of an acid solution and a base solution It is commonly applied to the reaction between an active ACID and an active BASE which results in the formation of a SALT and water Such a reaction is based fundamentally on the coming together of the hydrogen (H) ION of the acid and the hydroxyl (OH) ion of the base to form water (HOH), which ionizes practically not at all If, for example, to an acid solution (e g, hydrochloric acid) colored red by LITMUS a solution of an active base (such as sodium hydroxide) is added drop by drop, eventually the solution becomes colorless This condition would indicate that hydrogen and hydroxyl ions have come together to form the nonionizing substance water, which, when pure, is neutral to litmus (i e, does not change its color) In addition, a salt is formed which can be obtained by evaporation of the liquid remaining after the neutralization is completed, this salt is found to be made up of the metallic element or radical of the base (in the case of sodium hydroxide, it is sodium) and of the element or radical (other than hydrogen) of the acid (in the case of hydrochloric acid, this is chlorine) Sodium chloride, common salt, is thus formed from this acid and base The heat produced in the reaction is known as the heat of neutralization, and in the case of a strong acid being neutralized by a strong base, it is proportional to the number of equivalent weights of water formed, being about 13,700 calories for each formula weight or gram-molecular weight (18 g) of water Neutralization is commonly necessary in the chemical laboratory and is an important procedure in determining the concentration of acids in solution For example, the concentration of an acid can be determined by mixing it drop by drop with a solution of a known concentration of a base (colored with litmus) and measuring the volume of the base needed to neutralize a given volume of the acid The reaction is employed in various industrial processes Certain oils containing acid (sulphuric acid is used in the preparation of some lubricating oils) are neutralized by the use of sodium carbonate Excess acid remaining in the preparation of certain explosives is removed by neutralization In many simple operations, neutralization is involved, for example, household ammonia (a basic solution) relieves the pain of some insect bites by neutralizing the formic acid present

Neutral Nation, group of North American Indian tribes of the Iroquoian linguistic stock In the early 17th cent they occupied the territory along the northern shore of Lake Erie They then numbered some 12,000 Their culture was substantially that of the Eastern Woodlands area Father Joseph Daillon visited them in 1626 and reported that their manners and customs were very similar to those of the Huron Indians The French gave the Neutral Nation its name because of its neutrality in the Iroquois-Huron wars. This neutrality, however, was short-lived, for when the remnants of the Huron joined (1649) them, the Iroquois Confederacy practically wiped out the Neutral Nation. A few survivors were adopted by the Seneca Indians

neutron (nōō'trŏn, nū'–), nuclear particle of matter of extremely minute size and without charge (in this respect differing from the positive proton and the negative electron) The neutron was discovered in 1932 by James Chadwick of the Cavendish Laboratory of Cambridge Some investigators believe that the particle consists of a proton and an electron held together. The neutron passes directly through some materials, and this property caused much difficulty in controlling and directing it in experiments Neutrons are obtained by bombarding beryllium with deuterons or with alpha particles Bombardment of some elements with neutrons produces nuclear changes, fission of uranium atoms and the release of ATOMIC ENERGY were accomplished by the use of neutrons

Neva (nā'vŭ, Rus. nyĭvä'), river, 46 mi long, RSFSR, connecting Lake Ladoga with the Gulf of Finland, an inlet of the Baltic Sea In its delta is the site of Leningrad. The Neva is connected by canal systems with the Volga river and with the White Sea It is navigable except in winter

Nevada (nuvä'du, nŭva'du), state (109,802 sq. mi, 1940 pop 110,247; 1949 estimated pop 174,000), W United States, in the Rocky Mt region, admitted 1864 as the 36th state CARSON CITY is the capital, RENO is the largest city, and LAS VEGAS is also of importance It is bounded on the west by California, on the north by Oregon and Idaho, on the east by Utah, and on the southeast by Arizona (with the COLORADO river marking most of the border) Since Nevada runs almost to a sharp point, there is only a fragmentary border with Arizona on the south Most of the state is within the GREAT BASIN The rivers in the southeast belong to the Colorado system and those in the extreme north drain to the Snake, but typically the Nevada rivers, chief among them the HUMBOLDT, go nowhere, ending instead in desolate alkali sinks —except where the water is diverted for irrigation before the river can reach its natural end The alkali sinks and great arid stretches clothed with sagebrush and creosote bush are typical of Nevada, as are the mountain chains, which run generally north and south and segment the state On the California border are the lofty and well-named Sierra Nevada [snowy range] The days in this dry country are generally clear with a pure clarity of height, for the mean elevation of Nevada is c 5,500 ft The temperature varies not only with the season but also with the altitude, in the north and west the winters reach extreme cold, and in parts of the south the summers reach ovenlike heat Many of the high plateau areas are excellent for grazing, and the raising of cattle and sheep is one of the state's main industries Given the prevailing dryness and the steep slopes, agriculture is naturally not highly developed It is partially devoted to growing hay and alfalfa as winter food for the cattle and sheep Nearly all foodstuffs are imported The population has been sparse since the time when the Paiute Indians and other tribes obtained a meager living from the land and the animals The fortune of Nevada has been not in its land but in the almost incredible wealth below the surface of the land—silver, gold, copper, zinc, lead, mercury, antimony, manganese, arsenic, and tungsten The Spanish in the Southwest, though they were hungry for gold, did not discover that underground wealth In 1776 Father Silvestre Vélez de Escalante came near the present Nevada in his northward voyage, and his report on the forbidding aspect of the steep and dry "unknown land" was enough to discourage exploration A half century later the fur traders thrusting into the Rockies for beaver pelts made the mountain region known Jedediah S SMITH thrust across the southern part of Nevada on his venturesome way to California The next year when he returned across central Nevada to the Great Salt Lake, Peter Skene OGDEN, a Hudson's Bay Company man trading out of the Oregon country, entered the present NE Nevada In 1828 Ogden discovered the Humboldt Joseph Walker in 1833–34 went along the Humboldt and across the Sierra Nevada to California Many other wagon trains later were to cross Nevada to the promised land of gold especially in and after the rush of '49, but the difficulties of the voyage can be seen in the calamitous experiences of the DONNER PARTY Travelers going to California over the Old Spanish Trail also crossed S Nevada, and Las Vegas appeared as a station on the route With Kit CARSON, John C FRÉMONT had explored much of Nevada between 1843 and 1845, and his reports gave to the United States the first full information on the future state His account was probably of some value to Brigham YOUNG when he was shepherding the stout Mormons west to build a new home in the mountains and valleys of the Great Basin Nevada was an adjunct of the new Mormon commonwealth in present Utah, and when the Federal government set up Utah Territory in 1850, almost all of Nevada was included except the southern tip, which was then in New Mexico. When trouble between the U.S. government and the Mormons led to the army campaign against the Mormons in 1857, Brigham Young called back most of the few Mormon settlers to Salt Lake City The non-Mormons who came to Nevada were averse to being in a Mormon-dominated territory; many non-

Mormons did come after gold was found in 1859 A rush from California began; it was to be multiplied manyfold as the news of the rich silver strike of the COMSTOCK LODE was spread abroad Most of the newcomers preferred to consider themselves as still being within California, and the political question added a little to the upheaval Miners coming helter-skelter raised camps that grew overnight into such booming and raucous towns as VIRGINIA CITY Partly to bring order to the lawless, wide-open mining towns, Congress made Nevada into a territory in 1861 as fortune hunters and the venturesome and curious poured in Mark Twain, who was one of the newcomers, has left a vivid picture of these raw Nevada days in *Roughing It* The territory, which was enlarged by moving its eastern boundary one degree of longitude in 1862, was rushed to statehood in 1864, with young Carson City as the capital President Lincoln signed the proclamation, though the territory did not actually have enough population for statehood, more votes were necessary to pass the Thirteenth Amendment, and Nebraska had failed to qualify In 1866 Nevada acquired its present bounds, when the southern tip was added and more eastern land was gained from Utah Connection with the East, which had been spectacularly but briefly created by the pony express, was firmly established by completion of the transcontinental railroad in 1869 The Silver State continued to be dominated by its precious ores Its fate was affected by new strikes, such as the "big bonanza" that enriched the silver kings, J W MACKAY, J G FAIR, W S O'BRIEN and J C FLOOD, the discovery (1900) of the silver deposits at Tonopah and of gold at Goldfield, and the finding of copper at Ely Resting on so small a base, the economy has been seriously shaken by mining depressions and by changes in the value of the minerals Naturally the political leaders of Nevada (which has two Senators and only one Representative) were vociferous in favor of the free coinage of silver From the '70s to the '90s the people of Nevada were strong supporters of the "cheap money" advocates and were thus linked with the discontented farmers of the Middle West in favoring the BLAND-ALLISON ACT and the SHERMAN SILVER PURCHASE ACT (though both were considered insufficient) They enthusiastically endorsed the silver program of William Jennings Bryan and the Democrats in 1896, and even after that resounding defeat they continued to plead for government purchase and coinage of silver down to the present time Nevada is however, the Sagebrush State as well as the Silver State, and large ranches have helped to stabilize the insecure basis of the mining wealth In the 20th cent , too, resorts have been developed, notably at Reno (the "divorce capital of the world") and Las Vegas, and the revenues from the resorts and from tourists who enjoy the high, clear air of the mountains are perhaps a more constant contribution to the support of the state than the riches to be gained from such large demands for metal as those caused by the Second World War See E G Lillard, *Desert Calling* (1896, new ed , 1942), E H Mack, *Nevada* (1936) and, with B M Sawyer, *Our State Nevada* (1940), Federal Writers' Project, *Nevada* (1940), Dale Morgan, *The Humboldt* (1943), Oscar Lewis, *The Silver Kings* (1947)

Nevada (nuvă'du) **1** City (pop 3,353), co seat of Story co , central Iowa, E of Ames, founded c 1853, inc 1869 The city ships poultry **2** City (pop 8,181), co seat of Vernon co , SW Mo , E of Fort Scott, Kansas, founded 1855 It is a shipping center for a farm, oil, asphalt, and coal area Cottey College (junior, for women) is here. A state mental hospital is near

Nevada, University of (nuvă'du, nuvä'du), at Reno, land-grant and state supported, coeducational, chartered 1873, opened 1874 at Elko, moved 1886 It has colleges of agriculture, arts and science, and engineering (with the Mackay School of Mines) and a school of education State and U S bureaus of mines (rare and precious metals research) and a desert geology library are here

Nevada City (nuvä'du), city (pop, 2,445), co seat of Nevada co , N central Calif , NE of Sacramento, in a gold-mining, orchard, and resort area of the Sacramento valley; laid out 1849, inc 1851 Several landmarks of the 1860s and '70s survive

Nevers (nəvĕr'), city (pop 32,246), capital of Nièvre dept , central France, on the Loire and Nièvre rivers It is today a commercial center with large pottery and china manufactures and was long the capital of the duchy and province of NIVERNAIS Among its important buildings are the ducal palace (15th–16th cent), now the courthouse, the Church of St Etienne (11th cent), a gem of Romanesque architecture; and the cathedral (13th–16th cent), damaged in the Second World War. The Convent of St Gildard has the remains of St Bernadette, who lived here from 1860 to 1879

Neville, Charles: see WESTMORLAND, CHARLES NEVILLE, 6TH EARL OF

Neville, Ralph: see WESTMORLAND, RALPH NEVILLE, 1ST EARL OF.

Neville, Richard: see WARWICK, RICHARD NEVILLE, EARL OF.

Nevin, Ethelbert Woodbridge (nĕ'vĭn), 1862–1901, American pianist and composer, b Edgeworth, Pa , studied in Boston and in Germany He made his debut as a pianist in Pittsburgh in 1886, but devoted most of his time to composition of songs and piano pieces, unpretentious and sentimental One song, *My Rosary* (1898), found immense popularity Other popular works are *Narcissus*, from the piano cycle *Water Scenes* (1891), and settings of Eugene Field's "Little Boy Blue" and "Wynken, Blynken, and Nod " See biography by J T Howard (1935)

Nevin, John Williamson, 1803–86, American theologian and educator, b near Strasburg, Pa , grad Union College, 1821, and Princeton Theological Seminary, 1826 He was professor of biblical literature (1830–40) in Western Theological Seminary at Allegheny (now part of Pittsburgh), and from 1840 he taught theology at the German Reformed Church Seminary, Mercersburg, Pa He served (1841–53) as acting president of Marshall College, which in 1853 became part of Franklin and Marshall College, here he was president from 1866 to 1876 His writings and teachings set forth his opinions on various disputed theological matters and gave rise to what was called the Mercersburg theology Among his works are *The Anxious Bench* (1843), *The Mystical Presence* (1846), and *Anti-Christ; or, The Spirit of Sect and Schism* (1848)

Nevins, Allan, 1890–, American historian, b Camp Point, Ill , grad Univ of Illinois (B A , 1912, M A , 1913) After a career as a journalist, he was professor of American history at Cornell Univ (1927–28) and an associate in history at Columbia (1928–31) He became a full professor at Columbia in 1931 In 1940–41 he served as Harmsworth professor of American history at Oxford One of the most prolific and versatile of recent American historians, Nevins is noted for the brilliance of his literary style He won the Pulitzer Prize for biography twice, for *Grover Cleveland* (1932) and for *Hamilton Fish* (1936) Other works include *The Evening Post* (1922), *The Emergence of Modern America, 1865–1878* ("History of American Life" series, Vol VIII, 1927), *Henry White* (1930), *Abram S Hewitt, with Some Account of Peter Cooper* (1935), *The Gateway to History* (1938), *Frémont the Pathmarker of the West* (1939), *John D Rockefeller* (1940), and *A Short History of the United States* (with Henry Steele Commager, 1945) In *The Emergence of Lincoln* (2 vols ; 1950), Nevins completed his notable study of the years (1847–61) before the Civil War, begun with *Ordeal of the Union* (2 vols , 1947) He has also edited *The Diary of Philip Hone* (1927), *The Diary of John Quincy Adams, 1794–1845* (1928), *Polk the Diary of a President, 1845–1849* (1929), *Letters of Grover Cleveland, 1850–1908* (1933), *The Heritage of America* (with H S Commager, 1939, rev and enl ed , 1949), and *America through British Eyes* (1948, rev and enl ed of *American Social History as Recorded by British Travellers*, 1923)

Nevis, British West Indies see SAINT KITTS.

Nevis, Ben, Scotland see BEN NEVIS

New, Harry Stewart, 1858–1937, U S Postmaster General (1923–29), b Indianapolis He studied at Butler Univ , and after 1878 he was connected with the Indianapolis *Journal* He was an Indiana state senator (1896–1900), was chairman (1907–8) of the Republican National Committee, and served (1917–23) in the U S Senate While Postmaster General under Warren G Harding and Calvin Coolidge, New built up the air-mail service and extended it to South America

New Albany (ôl'bunē) **1** City (pop 25,414), co seat of Floyd co , SE Ind , on the Ohio opposite Louisville, Ky , settled c 1800, inc 1813 Screened sand and gravel used in preparation of concrete are obtained here The home of William Vaughn Moody is in the city **2** City (pop 3,602), co seat of Union co , N Miss , NW of Tupelo and on the Tallahatchie, in a farm and dairy area, settled c 1840

New Alesund see SPITSBERGEN

New Amsterdam, early name of NEW YORK city It was a Dutch colony (1625–64) at the mouth of the Hudson on Manhattan island and was the capital of NEW NETHERLAND

New Archangel, Alaska see SITKA.

Newark, Ont see NIAGARA-ON-THE-LAKE

Newark (nū'ûrk), municipal borough (1931 pop. 18,060, 1943 estimated pop 21,000), Nottinghamshire, England, on a short branch of the Trent and NE of Nottingham The site was occupied in ancient British and Roman times There are ruins of a castle, partly built in the 12th cent by Bishop Alexander, where King John died in 1216 It was besieged three times in the civil war The Church of St Mary Magdalene is partly 13th cent , the Beaumont Market Cross is 15th cent , and the grammar school dates from 1529 The town has varied manufactures—metal goods, boilers, and farm machinery. Gypsum and limestone are found in the vicinity.

Newark. 1 (nōō'ûrk", nū'–) Town (pop. 4,502), NW Del , SW of Marshallton, settled before 1700, inc 1852 The Univ. of Delaware (see DELAWARE, UNIVERSITY OF) is here Vulcanized fiber is manufactured here, and a food-packing plant is near by **2** (nōō'ûrk, nū'–, nōōrk) City (pop 429,760), co. seat of Essex co , NE N J , largest city in the state, important industrial and commercial center on the Passaic river and Newark Bay W of lower Manhattan, inc 1836 Settled from Connecticut in 1666 by Robert Treat and others, it grew slowly until after the Revolution (there were skirmishes here) Tanning and shoemaking became important, the jewelry industry began in 1801, and insurance in 1810 Hundreds of manufactures were added in the 19th cent , particularly after rail and water transportation improved, and Newark became the metropolis of a wide area Celluloid was first made here (1872, by J W Hyatt), Seth Boyden carried on much of his work here Chemicals and electrical equipment are made and meat is packed The city is a port of entry The Plume House (c 1710) is probably the oldest house in Newark Other points of interest include Trinity Cathedral (1810), with the spire of the church built in 1743) in Military Park, the Sacred Heart Cathedral (begun 1898), the First Presbyterian Church (1791), the Newark Public Library, one of the finest in the country, founded in 1888 and developed mainly by John Cotton DANA, who founded the Newark Museum (1909, building designed by Jarvis Hunt and given by Louis Bamberger in 1926), and the county courthouse (1906, designed by Cass Gilbert) Gutzon Borglum's statue of Lincoln is in front of the courthouse, and his large group *Wars of America* (1926) is in Military Park There is a fine municipal park system Newark was the birthplace of Aaron Burr, whose father later was president of the College of New Jersey (see PRINCETON UNIVERSITY) A playground, memorial to Stephen Crane, is on the site of the author's birthplace Other noted residents of Newark have included Mary Mapes Dodge, Marion Harland, and E C Stedman The Newark Colleges of RUTGERS UNIVERSITY, Newark Academy for boys (opened 1774), and a state teachers college are here Newark College of Engineering (state and city supported, mainly for men) was opened in 1919 as a development of Newark Technical School The Newark airport was the leading Eastern terminal from 1929 until the opening of LaGuardia Field in 1939, in 1940 the large new municipal hangar was leased for an airplane factory Port Newark was developed as an army base in the First World War Port Newark and the airport are administered by the Port of New York Authority **3** (nōō'ûrk, nū'–) Village (pop 9,646) W central N Y , on the Barge Canal and SE of Rochester, in a farm area, inc 1839 Among its manufactures are paper and paper products Its nurseries are famous A state school for mental defectives is here **4** (nōō'ûrk, nū'–) City (pop 31,487), co seat of Licking co , central Ohio, on the Licking and ENE of Columbus, platted 1801. It is a railroad, industrial, and trade center with manufactures including glass, stoves, aluminum processing, and rubber products It is noted for the number and size of its Indian mounds—Octagon Mound (50 acres), Circle Mound (20 acres), and a circular mound enclosing a huge eagle effigy (see MOUND BUILDERS)

New Athens (ā'thunz), village (pop 1,355), SW Ill , on the Kaskaskia and SE of St Louis, in a farm and coal area, inc 1869

Newaygo (nēwā'gō), village (pop 1,282), S Mich , on the Muskegon and N of Grand Rapids, in a farm and lake region, settled 1836, inc 1867 Indian mounds abound in the vicinity Near by is Ashland College, a folk school

New Baden (bā'dun), village (pop 1,176), SW Ill , E of St Louis, in a farm and coal area, inc 1867

New Baltimore, resort city (pop 1,434), SE Mich , on Lake St Clair and NE of Detroit, in a farm area, inc as a village 1867, as a city 1931

Newbattle Abbey, estate near Dalkeith, Midlothian, Scotland The present building is chiefly of the 18th–19th cent , but parts of the old abbey, built by David I in 1140, remain In 1937 the 11th marquess of Lothian donated it to Scottish universities as a college for adult education

New Bedford, city (pop 110,341), a co seat of Bristol co , SE Mass , with a good harbor at the mouth of the Acushnet on Buzzards Bay, settled 1640, set off from Dartmouth 1787, inc as a city 1847 In the Revolution the British nearly destroyed the village, a haven for privateers The first New Bedford whaler was fitted out in 1755, and New Bedford became the world's greatest whaling port As whaling waned, cotton manufacturing grew New Bedford Textile Institute is here Fishing continues of some importance, and tools, electrical equipment, and aircraft parts are produced The city is a port of entry The Jonathan Bourne whaling museum is noted, the Seamen's Bethel (1832) was a scene in Melville's *Moby Dick*

Newberg, city (pop 2,960), NW Oregon, in the Willamette valley SW of Portland, founded by Quakers, named in 1869, inc 1893. It is the trade center of a fruit- and nut-growing area and has flour and pulp mills and sawmills Pacific College is here

New Bern, city (pop. 11,815), co. seat of Craven co , E N C , a port and trading center at the junction of the Neuse and Trent rivers Settled in 1710 by Swiss under Baron Christopher de Graffenried and

John LAWSON, it was an early colonial capital and in 1774 was the seat of the first provincial convention Notable among the old buildings is Tryon Palace (1767–70), the capitol and governor's mansion, badly burned in 1798, plans to restore it have been approved In the Civil War the city was captured (March, 1862) by Union forces under Gen. A E Burnside

Newbern, town (pop 1,740), W Tenn , near Dyersburg NNE of Memphis It is a shipping center in a farm area

Newberry, John Strong, 1822–92, American geologist and paleontologist, b Windsor, Conn , grad Western Reserve, 1846, M D Cleveland Medical College, 1848 He joined expeditions (1855–61) to the West Coast and the Colorado river region and served on the U S Sanitary Commission throughout the Civil War From 1866 he was professor of geology and paleontology at Columbia Univ He also served as state geologist of Ohio (1869–74) and as paleontologist for the U S Geological Survey His special work was on fossil fishes and fossil plants, his writings, chiefly in connection with the surveys, include *Paleozoic Fishes of North America* (1889) and *Later Extinct Floras* (1898). See memoir by C A White (1909)

Newberry, Oliver, 1789–1860, American merchant and shipbuilder, b East Windsor (in the section now South Windsor), Conn , brother of Walter L Newberry He served in the War of 1812 At its close he opened a general store in Buffalo He moved (1826) to Detroit, where he opened a new store, became an American Fur Company agent, and began to build vessels to handle a growing commission business His fleet grew steadily, in 1833 he built the *Michigan*, then the largest Great Lakes steamship, in 1835 he set up a regular service between Detroit and Chicago His interests in Detroit were exceptionally widespread

Newberry, Truman Handy, 1864–1945, American naval officer and cabinet official, b Detroit, grad Yale, 1885 He engaged in various financial enterprises and led in the organization of the Packard Motor Car Company, of which he was president after 1903 A founder and active member of the Michigan state naval brigade, he served as lieutenant on the U S S *Yosemite* in the Spanish-American War He later was Assistant Secretary (1905–8) and Secretary (1908-9) of the navy, and in the First World War he was assistant to the commandant of the Third Naval Dist Truman H Newberry was elected Republican Senator from Michigan in 1918 and resigned his seat in 1922 after he was convicted in Michigan courts of corruption in obtaining the nomination The case was dismissed by the Supreme Court, and he was exonerated (1922) by a Senate committee

Newberry, Walter Loomis, 1804–68, American merchant and banker, b East Windsor (in the section now South Windsor), Conn ; brother of Oliver Newberry Failing his physical examination after appointment to West Point, he entered (1822) the shipping business with his brother in Buffalo and in 1826 accompanied his brother to Detroit, where they established a prosperous dry-goods business In 1833 he moved to the newly established town of Chicago, where he previously had made extensive investments in real estate He engaged in the commission business, prospered, and later entered banking and also became president of the Galena and Chicago Union RR He was active in civic affairs, founded the Young Men's Library Association, and made numerous philanthropic gifts His will provided for the founding and endowment of the **Newberry Library** in Chicago, a free reference library which has specialized in the fields of history, literature, music, and philology and has gained an international reputation It has a fine collection of Americana

Newberry, 1 Village (pop 2,732), co seat of Luce co , E Upper Peninsula, N Mich , between Sault Ste Marie and Munising, in a fertile farm area, settled 1882, inc 1886 Lumber and chemicals are made. A state hospital for the insane is here. 2 Town (pop 7,510), co seat of Newberry co , N central S C., NW of Columbia, in a farming and dairying region Cotton goods are made Newberry College (Lutheran, coeducational, 1856) is here

Newberry Library: see NEWBERRY, WALTER LOOMIS.

Newbery, John, 1713–67, English author, publisher, and bookseller He is noted as the first to publish books designed to amuse children It is not known how many of the children's books he published were actually written by him, but *A Little Pretty Pocket Book* (1744) and *The History of Little Goody Two-Shoes* (1765) may have been In 1922 the Newbery medal was established by Frederic Melcher to be awarded the most distinguished children's book of the year written by an American

New Bethlehem, borough (pop 1,622), W Pa., c 53 mi NE of Pittsburgh, settled 1785, laid out 1840, inc. 1853. It is a trading center for farmers

Newbolt, Sir Henry John, 1862–1938, English poet, critic, and historian, educated at Oxford He became a barrister but abandoned law for literature in 1898 His first publication was a novel, *Taken from the Enemy* (1892). He wrote other novels, but his poems of the sea are better remembered; collections of them include *Admirals All* (1897), *The Sailing of the Long Ships* (1902), and *Drake's Drum and Other Songs of the Sea* (1914)—all very hearty and imperialistic He edited the *Monthly Review* during its four years of publication (1900–1904) The centennial history, *The Year of Trafalgar* (1905), made him known as a naval historian He was official naval historian from 1923, and his *Naval Operations* (of the First World War) appeared in five volumes at intervals from 1920 to 1931 See his autobiographical *My World as in My Time* (1932)

New Boston 1 Village (pop 6,024), S Ohio, on the Ohio and near Portsmouth, in a steel-producing area, founded 1891. 2 Town (pop 1,111), E Texas, W of Texarkana, near the northeast corner of the state, inc 1910. In a pine-woods farming area settled in the 1820s when pioneers crossed the Red River by the Pecan Point ferry, New Boston was itself founded later but keeps a pioneer air

New Braunfels (broun'fuls), city (pop 6,976), co. seat of Comal co , S central Texas, on the Guadalupe and NE of San Antonio, inc 1847 Here the Comal river rises in Comal Springs and flows 4 mi to the Guadalupe, its green-bordered beauty and the surrounding parks add to the attraction the city has for visitors Settled by Germans in 1845, the city still has a German neatness, though the population is now mixed and includes many Mexicans New Braunfels is also a thriving industrial city with a big power plant and manufacturing of clothing, hosiery, lime, rock wool, and cedar oil. Landa Park is near by

New Bremen (brē'mŭn), village (pop 1,484), W Ohio, NNW of Dayton, settled 1832, inc 1833

New Brighton, industrial borough (pop 9,030), W Pa , on the Beaver river and NW of Pittsburgh, settled c 1801, inc 1838 It has factories which make metal products and pottery The Merrick museum and library (founded 1865) is here

New Britain, industrial city (pop 68,685), central Conn , SW of Hartford, settled 1686–90, inc 1870, coextensive with New Britain town, inc 1850 Its tin shops and brassworks were started here in the 18th cent , and New Britain became famous as the Hardware City, tools and machinery are also produced The first state teachers college in Connecticut was established here in 1850 There is an art museum

New Britain, volcanic island (14,600 sq. mi , pop c 80,000), SW Pacific, largest of the BISMARCK ARCHIPELAGO and part of the Territory of New Guinea There are active volcanoes and hot springs on the mountainous island The products are copper, gold, and some iron and coal In the Second World War, Rabaul, former capital of the Territory of New Guinea, was the key Japanese naval base (1942–44). The island was formerly called Neu Pommern, later New Pomerania

New Brunswick (brŭnz'wĭk), province (27,473 sq mi , with water surface 27,985 sq mi , 1941 pop 457,401, 1948 estimated pop 503,000), E Canada Fredericton is the capital, other important cities are St John and Moncton One of the Maritime Provs , New Brunswick is bounded on the north by Chaleur Bay and Quebec prov , on the east by the Gulf of St Lawrence, Northumberland Strait, and Nova Scotia, on the south by the Bay of Fundy, and on the west by Maine Its irregular coast line of almost 600 mi provides excellent facilities for fishing and shipping enterprises A gently rolling countryside, marked by some mountainous ridges in the north and the southeast, is crossed by miles of navigable rivers—the first means of transportation and still the major arteries of travel The largest river, the St John, crosses the province from northwest to southeast, and the Miramichi river, which flows northeasterly for 135 mi , drains the central lowlands Most of the roads wind along the river banks and through the broad, fertile valleys which form the heart of the farmlands Dairying thrives on fine pasturage, and the major crops are hay, clover, oats, potatoes, berries, and fruit A careful conservation program maintains a supply of second-growth hardwoods and softwoods and has made lumbering an important industry, with which is associated the bulk of manufacturing in the making of pulpwood and paper products, the mills at Dalhousie on the north coast are among the largest in the world One of the best schools of forestry on the continent is part of the Univ of New Brunswick at Fredericton. New Brunswick's fisheries are among the most valuable in Canada, with a variety of fresh-water and saltwater fish (cod, salmon, herring, and sardines) as well as oysters Some fish and agricultural products are processed in canneries and freezing establishments, and butter and cheese are also made Industry is generally run by hydroelectric power, and fuel resources include much untapped water power, coal, gas, and oil. Trade flows in and out of the ports of St John and Moncton, facilitated by railroad connections throughout the province, eastward to Nova Scotia and westward to Quebec Open all year, St. John is particularly important when the St. Lawrence ports are icebound. In recent years New Brunswick has derived a considerable income from an increasing number of sportsmen, vacationists, and tourists Easy accessibility from the United States has made Woodstock the gateway to the sylvan and pastoral beauty of the province Fine fishing streams and an abundance of fur-bearing animals, including deer and black bear, invite anglers and hunters Special tourist attractions include the Grand Falls on the upper reaches of the St. John, the spectacular Fundy tides which create the bore at Moncton, and the Reversing Falls at St John Permanent summer residences have centered around Passamaquoddy Bay, at resorts like St Andrews-on-the-Sea and the islands of Grand Manan and Campobello (made famous as a vacation home of F D Roosevelt) One of New Brunswick's most delightful features has been the charm of an isolated culture The first white man who is said to have sailed along its coast was the perhaps mythical Portuguese navigator, Estevão Gomes (1525), although there is evidence of Basque fishermen at an earlier date Jacques Cartier landed at Point Escuminac in 1534 and skirted the shores of Miramichi Bay The first white settlement was made in 1604 at the mouth of the St Croix river by the sieur de Monts and Champlain, it was moved to Port Royal (now Annapolis Royal) in 1605 During this early period of exploration and conquest, while France and England made conflicting territorial claims, the present provinces of Nova Scotia and New Brunswick were considered one region—called ACADIA by the French and Nova Scotia by the British Early in the 17th cent the Acadian Charles de la Tour built a fort at the mouth of the St John river, which the British captured in 1654 By the Treaty of Breda (1667) France was awarded the territory, but the terms were reversed by the Peace of Utrecht (1713–14), and England gained control of Acadia or Nova Scotia Doubting the loyalty of the Acadians, the British expelled them, although some found safety in the interior. New Brunswick became a separate colony in 1784, after British colonizers who settled in 1762 were joined by large numbers of British Loyalists who fled from New England in the American Revolution Settlement proceeded slowly, each wave of European immigration bringing a few new colonists As the straight white pines were cut to serve as masts for the ships of the British mercantile fleet, the land was cleared for agricultural development By the middle of the 19th cent lumbering and farming were extending into the interior, and St John was a busy port and shipbuilding town Dissatisfaction with the arbitrary rule of the provincial governor resulted in the achievement of responsible government in 1849 In 1867, under the British North America Act, federation with the other provinces into the dominion of Canada was somewhat reluctantly accepted At present the population is about equally distributed in farm, non-farm rural, and urban areas, and although manufacturing has become the chief source of income, more people are engaged in the basic industries Any extensive industrialization promises to bring quite radical changes in the social and economic life of the province See J C Webster, *A Historical Guide to New Brunswick* (1928), L O Thomas, *The Province of New Brunswick* (1940), L M B Maxwell, *Outline of the History of Central New Brunswick to the Time of Confederation* (1937), L J Thomas and R W Barton, *In New Brunswick We'll Find It* (1939), E C Wright, *Miramichi* (1944)

New Brunswick, city (pop 33,180), co seat of Middlesex co , E N J , on the Raritan at the terminus of the old Delaware and Raritan Canal and between Newark and Trenton, settled 1681, inc 1730 RUTGERS UNIVERSITY and the affiliated New Jersey College for Women and New Jersey State College of Agriculture are here The village grew as a commercial center, collecting and shipping especially grain British troops were quartered here before and in the Revolution, and Washington, retreating from New York, stopped here in 1776 In the 19th cent rubber and chemicals and then textiles became important, Johnson & Johnson opened a medical and surgical supply factory in 1886. Thomas Hill was born in New Brunswick Joyce Kilmer's birthplace and several pre-Revolutionary houses, including one that sheltered Thomas Paine, are preserved Near by is Camp Kilmer, an important troop center in the Second World War and afterward.

New Brunswick, University of, at Fredericton, provincially supported, coeducational, chartered and opened 1800 as the College of New Brunswick, called King's College by royal charter 1828, reorganized and renamed 1859 Sir Howard Douglas was the first chancellor of King's College The university has faculties of applied science, arts and science, and law (at St. John, N B).

New Buffalo, village (pop. 1,190), extreme SW Mich., on Lake Michigan, in a fruit and farm area; inc. 1836 It is the center of a summer-camp region Indian mounds are found in the vicinity.

Newburg, city (pop. 1,056), S central Mo., SSE of Jefferson City near Rolla, platted 1883. It is a railroad division point, with shops, in a farm and recreation area in the Ozarks.

Newburgh (nū'bûru), burgh (pop 2,152), Fifeshire, Scotland, near the Firth of Tay It has a fishing industry Remains of the 12th-century abbey of Lindores and of the Macduff Cross are near

Newburgh (nōō'burg, nū'-) **1** Town (pop 1,374), SW Ind., on the Ohio near Evansville, settled 1817 Coal is mined here **2** City (pop 31,883), SE N Y, on the west bank of the Hudson opposite Beacon, settled 1709 by Palatines, resettled 1752 by English and Scotch, inc 1865 The streets run steeply to the river Washington made his headquarters at Hasbrouck House here (now a state museum) from April, 1782, to Aug, 1784 It was in Newburgh that the Continental army was disbanded The city was once an important whaling town, and its harbor is still used for shipping Fabrics and rugs are its chief manufactures George Inness was born here, and Cadwallader Colden's estate was near by

Newburgh Heights, village (pop 3,830), NE Ohio, near Cleveland

Newburn, urban district (pop 19,542), Northumberland, England, on the Tyne and WNW of Newcastle It is a coal-mining and industrial center

Newbury, municipal borough (1931 pop 13,340, 1943 estimated pop 14,710), Berkshire, England, on the Kennet river and on the Kennet-Avon canal In a farming region, it has trade in wool, malt, and farm products Aircraft is manufactured The town was formerly noted for cloth manufacture, and the 16th-century cloth hall now contains a museum Battles were fought at Newbury in 1643 and 1644

Newbury. 1 Town (pop 1,599), NE Mass, near the mouth of the Merrimack, settled and inc 1635 There are many old buildings **2** Town (pop 1,723), E Vt, E of Barre, on the Connecticut, settled 1762 on the site of an Abnaki Indian village, chartered 1763 It includes the industrial village Wells River This region, to which the Connecticut was navigable, was known as the Coos, or Cohassee, Intervals and was the eastern terminus of the road built in 1776, at Washington's order, across Vermont to Canada A Revolutionary fort was here

Newburyport, city (pop 13,916), a co seat of Essex co, NE Mass, on the Merrimack just above its mouth, settled 1635, set off from Newbury 1764, inc as a city 1851 Shipping, whaling, and shipbuilding, important through the clipper-ship era, were replaced by manufacturing Shoes, silverware, and electrical supplies are the chief products The city's old buildings include a garrison house Fire in 1811 destroyed much of the village William Lloyd Garrison was born in Newburyport See Caleb Cushing, *History of Newburyport* (1826)

New Caledonia, Fr *Nouvelle Caledonie,* volcanic island (8,548 sq mi, pop c 48,000), S Pacific, 750 mi E of Australia The island is on the California–New Zealand air route, and there is regular steamship service to Sydney, Australia The resources are extensive Nickel, chrome, cobalt, iron, and manganese are mined, gold and silver have also been found Coffee is the chief agricultural product The natives are a blend of Melanesian and Polynesian Indentured Javanese and Tonkinese laborers work the mines and plantations The island was discovered in 1774 by Capt James Cook It was claimed in 1853 by France and used (1864–94) as a penal colony The colony of New Caledonia (9,401 sq mi; pop c 60,000) includes the dependencies of the Loyalty Islands, the Isle of Pines, Walpole Island, and Huon, Chesterfield, and Belep islands Nouméa, the capital and chief port of the colony, is on New Caledonia In the Second World War the colony was Free French It was occupied in 1942 by U S forces to prevent Japanese invasion

New Canaan (kā'nun), residential town (pop 6,221), SW Conn, NE of Stamford, settled c 1700, inc 1801

New Carlisle, village (pop 1,237), SW Ohio, W of Springfield

New Castle, Spain see CASTILE

Newcastle, Thomas Pelham-Holles, duke of, 1693–1768, English politician For his support of George I and his help against the Jacobites in 1715, he was created duke of Newcastle-on-Tyne, and to his inheritance and marriage he owed wealth and connections with Robert Walpole and Lord Townshend Walpole made him secretary for the southern department (1724), but as the prime minister's popularity waned Newcastle turned against him Despite Newcastle's ineffective and irresolute conduct of foreign affairs, mingled with political intrigue, he retained office until 1754 and succeeded his brother, Henry Pelham, as prime minister (1754–56) His weak policy in the Seven Years War forced his resignation He was nominal head of the Pitt-Newcastle administration formed in 1757, but was forced out, after George III's accession, by the king's favorite, Lord Bute (1762) As lord privy seal under the marquess of Rockingham (1765–66) he favored repeal of the Stamp Act See Basil Wilhams, *Carteret and Newcastle* (1943)

Newcastle, William Cavendish, duke of, 1592–1676, English soldier and politician A nobleman of great wealth, he became a privy councilor and the governor of the prince of Wales in 1638 and supplied financial and military aid to the royalist cause in the Puritan Revolution, raising, maintaining, and leading troops in the northern counties He was successful in a number of engagements with Thomas Fairfax, but part of his force was defeated at Winceby by Cromwell in 1643, and after his defeat with Prince Rupert at Marston Moor in 1644 he retired to the Continent He returned to England with Charles II at the Restoration, having expended nearly £1,000,000 in the royalist cause His estates were restored, and he was created duke of Newcastle in 1665 He engaged little in politics thereafter Newcastle wrote several plays and books on horsemanship and was a lifelong patron of artists, among others Ben Jonson (who wrote two masques for the entertainment of Charles I at Newcastle's Welbeck estate in 1633) and, later, John Dryden His second wife, **Margaret (Lucas) Cavendish, duchess of Newcastle,** 1623–1674, achieved contemporary notice as a writer of poems, plays, essays, and her memoirs, *Nature's Pictures* (1656) Her biography of her husband (1667) was edited by C H Firth (1906) See H T E Perry, *The First Duchess of Newcastle and Her Husband as Figures in Literary History* (1918)

Newcastle, city (pop 127,188), New South Wales, Australia, NNE of Sydney, on the south shore of Port Hunter (see HUNTER, PORT) It is the second port in size of New South Wales and is the center of the largest coal-mining area of Australia Founded in 1797, it is now a thriving industrial city with steel mills, state-owned shipyards, and floating docks Its principal exports are coal, wheat, and wool There is an Anglican cathedral

Newcastle, town (pop 3,781), NE N B, on the Miramichi and NNW of Moncton It is a port of entry and has much coastal shipping trade in lumber and iron, with shipyards and pulp mills

New Castle 1 City (pop 4,414), NE Del, on the Delaware river and S of Wilmington, inc 1875 Peter Stuyvesant built (1651) Fort Casimir near here Successively it was held by the Swedes, the Dutch, and the English, who changed the name of the settlement from New Amstel to New Castle William Penn formally took possession (1682) of it and the Three Lower Counties-on-the-Delaware, and from 1704 to 1777 New Castle was their capital A rayon plant is here, and aircraft plants are near by Robert Montgomery Bird was born here See Federal Writers' Project, *New Castle on the Delaware, 1651–1936* (1937), Anthony Higgins, *New Castle, Delaware, 1651–1939* (1939) **2** City (pop 16,620), co seat of Henry co, E Ind, on the Blue River and S of Muncie, founded c 1820, laid out 1836 It is a trading and distributing center for an agricultural area, and its manufactures include machinery, automobiles, and metal products There is a monument to Wilbur Wright, who was born near here The city is the seat of a state colony for epileptics Prehistoric remains have been discovered in this area **3** Town (pop 542), SE N H, on an island in Portsmouth Harbor, inc 1693 Here are the ruins of Fort Constitution (previously Castle William and Marv), seized by the colonists in 1774 **4** City (pop 47,638), co seat of Lawrence co, W Pa, on the Shenango river and c 50 mi NNW of Pittsburgh, settled 1798, laid out 1802, inc as a borough 1825, as a city c 1869 The area yields coal, limestone, clay, and natural gas Its manufactures include steel, chemical, and foundry products Cascade Park is a summer amusement center near by The site was an Indian trading post

Newcastle 1 Town (pop 994), S Maine, connected with Damariscotta by a bridge over the Damariscotta river Wood products and machine parts are made here **2** City (pop 1,044), N Texas, SSW of Wichita Falls, settled 1908, inc 1913 Coal mining, which once flourished, sank to insignificance after oil fields were developed in the general region Near present Newcastle was the frontier army post, Fort Belknap **3** City (pop 1,962), co seat of Weston co, NE Wyo, near the S Dak line and SW of the Black Hills, founded 1889 In a livestock and dairy area, it also ships lumber, oil, and bentonite Near by is a scenic region of caves, canyons, lakes, and streams

Newcastle Harbour, Australia see HUNTER, PORT

Newcastle-on-Tyne or Newcastle-upon-Tyne, county borough (1931 pop 283,156, 1947 estimated pop 293,570) and city, co seat of Northumberland, England, on the north bank of the Tyne 5 mi from the sea It is on the site of the Roman military station Pons Aelii, on Hadrian's Wall Later the site was occupied by the Angles and until the Conquest was called Monkchester or Monk Chester because of the number of monastic settlements In 1080 Robert of Normandy built a fortified castle from which the town took its name The castle was several times besieged and repaired, the oldest parts now standing date from 1177 The town walls, of which traces and towers remain, are attributed to Edward I The Cathedral of St Nicholas dates partly from the 14th cent, the Royal Free Grammar School was founded in 1525 There are several hospitals and orphans' homes—Trinity Almshouse dates from 1492 The College of Medicine and Armstrong College of Science here are affiliated with the Univ of Durham Newcastle's coal-shipping industry began in the 13th cent. and is still of great importance The city is also one of the chief shipbuilding centers of England. In the late 1920s the Tyneside areas suffered from the depression in the coal and shipping industries, and severe unemployment resulted There is a monument to George Stephenson and his brother Robert, who built one of the bridges over the Tyne The High Level Bridge, built in 1928, has a 531-foot arch Newcastle and the surrounding district were frequently bombed in 1940–41 See F J. C Hearnshaw, *Newcastle-upon-Tyne* (1924)

Newcastle-under-Lyme, municipal borough (1931 pop 23,246, 1947 estimated pop 69,450), Staffordshire, England, on the Lyme and in the Potteries area W of Stoke-on-Trent It has coal mines, potteries, and other industries The youngest son of Henry III, Edmund, earl of Lancaster, built a castle here The 13th-century parish church was rebuilt in 1876 by Sir George Gilbert Scott The borough has included Wolstanton United since 1932

New Cumberland 1 Borough (pop 4,525), S Pa, on the Susquehanna and near Harrisburg, laid out c 1810, inc 1831 It produces textiles, hosiery, and tobacco goods **2** Town (pop 2 098), co seat of Hancock co, W Va, in the industrial Northern Panhandle, on the Ohio and N of Weirton, platted 1839 Tomlinson Run State Park is near by

New Deal, expression—first used by Franklin D ROOSEVELT in accepting the Democratic party nomination for President in 1932—commonly adopted to describe the reform legislation enacted by the Roosevelt administration beginning in 1933 Immediately after President Roosevelt's inauguration, the U S Congress in special session enacted (1933) laws designed to combat the economic depression which had begun in 1929 and to institute long-range social and economic reforms The measures of the special session instituted many emergency organizations, notably the NATIONAL RECOVERY ADMINISTRATION, the AGRICULTURAL ADJUSTMENT ADMINISTRATION, the CIVILIAN CONSERVATION CORPS, and the PUBLIC WORKS ADMINISTRATION Congress also instituted farm relief, tightened regulations of banking and finance, and founded some long-term organizations such as the TENNESSEE VALLEY AUTHORITY. Later Democratic

Congresses devoted themselves to expanding and modifying these laws In 1934 Congress founded the SECURITIES AND EXCHANGE COMMISSION and the Federal Communications Commission and passed currency acts, the Reciprocal Tariff Act, and the National Housing Act The Social Security Act (see SOCIAL SECURITY) and the WAGES AND HOURS ACT were passed in 1935—the year the NATIONAL YOUTH ADMINISTRATION and the WORK PROJECTS ADMINISTRATION were set up Beginning in 1934 the Supreme Court handed down many decisions which were adverse to the New Deal program, and after the invalidation of the NRA (1935) and of the AAA (1936), President F. D. Roosevelt unsuccessfully sought to reorganize the Supreme Court. Other laws were substituted for these unconstitutional acts Important defense measures were being enacted as war clouds gathered over Europe The New Deal, which had especially received the endorsement of the agrarian, the liberal, and the labor groups, met with increasing criticism The speed of reform slackened after 1937, and there was growing Republican opposition to the huge public spending, high taxes, and centralization of power in the executive branch of government, within the Democratic party itself there was strong disapproval from the "old guard" and from members of the Brain Trust. The emphasis of government shifted to foreign affairs. There was little retreat from reform, however, after the end of the Second World War, most of the New Deal legislation was still intact See F. R Fairchild, *A Description of the "New Deal"* (1935), A M. Schlesinger, Jr , *The New Deal in Action, 1933–1939* (1940), Basil Rauch, *History of the New Deal, 1933–1938* (1944)

New Eagle, borough (pop 1,936), SW Pa , on the Monongahela and S of Pittsburgh, inc 1912

New Echota Marker National Memorial. see NATIONAL PARKS AND MONUMENTS (table)

New Economic Policy (NEP), economic reconstruction program of Soviet Russia, officially announced by Lenin in 1921 The principal features of the program were the abandonment of grain requisitioning and the restoration of the principle of free trade in grain, the inauguration of an agricultural tax in lieu of the wartime grain assessments, the return of the smaller business enterprises and factories to private owners, restoration of the wage system, special concessions to foreign capitalists for working special areas, and the organization of industry into "trusts" free to operate in the market at their own discretion but controlled by the supreme economic council of the state in the fixing of prices and the appointment of directorate boards, accountable to the government for about half of the profits, but otherwise operating as separate legal entities The NEP represented a return to a limited capitalist system It was intended as a temporary measure, made necessary by the need of conciliating anti-Communist elements in the task of reconstructing war-torn Russia, as such it was successful In 1928 the NEP was replaced by a program of rigorous economic planning and collectivization—the first Five Year Plan

Newell, Frederick Haynes (nōō'ŭl, nū'-), 1862–1932, American civil engineer, b Bradford, Pa., grad Massachusetts Institute of Technology, 1885 He was assistant hydraulic engineer (1888–90) and hydrographer (1890–1902) of the U S Geological Survey After the passage of the Reclamation Act (1902) he was made chief engineer of the Reclamation Service and was its director from 1907 to 1914, in his administration 25 irrigation projects in 18 states were undertaken From 1915 to 1919 he was professor of civil engineering in the Univ of Illinois In 1919 he became president of Research Service, Inc., consulting engineers He served on several government commissions and wrote a number of books, especially on irrigation

Newell, Peter, 1862-1924, American illustrator and author, b near Bushnell, Ill , studied at the Art Students League He began his career by drawing portraits in crayon and became well known especially for his illustrations in current periodicals and for his children's books for which he supplied both text and illustrations His publications include *Topsys and Turvys* (1893), *Peter Newell's Pictures and Rhymes* (1899), *The Hole Book* (1908), *The Slant Book* (1910), and *The Rocket Book* (1912) He illustrated Lewis Carroll's *Alice in Wonderland* and *Through the Looking-Glass*, Mark Twain's *Innocents Abroad*, and John Kendrick Bangs's *House-Boat on the Styx* and *Mr. Munchausen*

New England, name applied to the region comprising six states of the NE United States—Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut. The region was so named by Capt John Smith because of its resemblance to the English coast (another source has it that Prince Charles, afterwards Charles I, inserted the name on Smith's map of the country) Geographically it is partly cut off from the rest of the nation by the Appalachian Mts. on the west. From the Green Mts. and the White Mts and the Berkshire Hills, the land slopes gradually toward the Atlantic Ocean and Long Island Sound, and there are many beautiful mountain and shore resorts. Many short, swift rivers furnish a large amount of water power. The Connecticut is the only long river. The generally rather barren soil helped to encourage the development of commerce and fisheries along the deeply indented coast line It was a great shipbuilding center until the end of the era of wooden ships. During the colonial period it carried on a more extensive foreign commerce than the other colonies and was, therefore, more affected by the passage of the English Navigation Acts. It was the chief center of the events leading up to the American Revolution, particularly after 1765, and was the scene of the opening engagements of the Revolution The return of peace necessitated the reorganization of commerce, with the result that connections were made with the American Northwest and China So great was the opposition to the Embargo Act of 1807 and the War of 1812 that New England threatened secession After the war the growth of manufactures (especially cotton textiles) was rapid, and the region has become highly industrialized A large part of the great migration to the Northwest originated here Agriculture dwindled with the growth of the West. Prior to the Civil War, the section furnished leaders for most of the social and humanitarian movements, and it has long been a leading literary and educational center of the country The geographic and early political conditions developed a New England type of British stock, generally referred to as Yankee, according to tradition, he has a genius for self-government, thrift, generosity to a cause considered worthy, and general resourcefulness Numerically, the Yankees have been almost outstripped, especially in S New England, by the huge immigration from Europe, beginning before the Civil War with the Irish The region had trouble surviving the economic depression of the 1930s but with the help of the New Deal and its own traditional resourcefulness made an impressive comeback. A tropical hurricane and tidal wave swept New England (Sept 21, 1938) with a loss of more than 600 lives and enormous property damage Ensuing floods left many homeless, especially in Connecticut and Rhode Island Strenuous reconstruction efforts, accomplished largely with Federal help, succeeded in cleaning up most of the debris by the fall of 1939. Confiscation of land by the Federal government for flood-control purposes met with resistance by the New England states Vermont led the fight (Jan , 1939) over the alleged violation of states' rights A compromise allowed the states to pass legislation enabling the Federal government to go ahead under the terms of the Flood Control Act The New England governors voiced disapproval of the new date for Thanksgiving Day in 1939 set by President Franklin D Roosevelt, and New Englanders adhered to the traditional last Thursday of the month The Second World War occasioned an immense boom in industry, which did not completely slack off in the post-war period See W B Weeden, *Economic and Social History of New England, 1620-1789* (1890), C M Andrews, *The Fathers of New England* ("Chronicles of America" series, Vol VI, 1919); J T Adams, *The Founding of New England* (1921), *Revolutionary New England, 1691–1776* (1923), and *New England in the Republic, 1776–1850* (1926), D C Brewer, *The Conquest of New England by the Immigrant* (1926), H. W Lawrence, *The Not-Quite Puritans* (1928), C F Ware, *The Early New England Cotton Manufacture* (1931), H F Wilson, *The Hill Country of Northern New England Its Social and Economic History, 1790–1930* (1936), Van Wyck Brooks, *The Flowering of New England, 1815–1865* (1936, new and rev ed , 1937) and *New England Indian Summer, 1865–1915* (1940), Lawrence Dane, *New England Comes Back* (1940), J B. Mussey, *Old New England* (1940)

New England Confederation, union for "mutual safety and welfare" formed in 1643 by representatives of the colonies of Massachusetts Bay, Plymouth, Connecticut, and New Haven. They met in Boston and adopted a written constitution binding them as "The United Colonies of New England" in a league, chiefly for the purpose of defense, the internal affairs of each colony were to be left to its own management. Questions of war and peace and other matters of mutual concern were to be determined by a body of eight commissioners, two from each of the colonies It required six of the commissioners to form a working majority Meetings of the board were to be held at least once a year The burden of expense for war was to be levied against the four colonies in proportion to the male population of each between the ages of 16 and 60 The first experiment in federation in America, the league was based upon compromise; its chief weaknesses lay in the inability of the commissioners to do much more than advise and in the petty rivalries among the colonies. Massachusetts, having by far the largest population, had to furnish more in fighting men and in taxes than did any other colony and felt aggrieved at not having more power in the confederation In 1653 Massachusetts flatly refused to undertake the war against the Dutch that the confederation planned. Maine and the Narragansett Bay settlements (Rhode Island) sought admission to the union, but were refused on political and religious grounds After 1664, shortly before New Haven was annexed to Connecticut, the regulations were changed and meetings of the commissioners were to be held once in three years, but the confederation gradually declined It revived in 1675–76 to undertake its most important task, completely breaking the power of the Indians of S New England in King Philip's War (see PHILIP) With the revocation of the Massachusetts charter in 1684, the confederation was dissolved See H L Osgood, *The American Colonies in the Seventeenth Century* (3 vols , 1904–7)

New England Conservatory of Music, at Boston, founded 1867 It has a noted opera department and a large music library The main auditorium, Jordan Hall, is used also for professional recitals

New England Primer, famous American schoolbook, first published before 1690 Its compiler was Benjamin Harris, an English printer who emigrated to Boston It was reprinted many times, with changes in text and even in title Though the copies sold in the 18th cent are estimated to have been as many as 2,000,000, the book is now rare In the English colonies in America, it was usually from this book that children learned to read See P L Ford, *The New England Primer* (1897)

New Forest, ancient royal hunting ground, Hampshire, England, bounded by the Avon, the Solent, and Southampton Water It was named in 1079 and afforested under the forest laws of William I The deer were removed in 1851, and since 1877 the area, some 92,400 acres, has been administered as a national park The woods are mostly oak and beech, there are extensive tracts of bog and heath, and about a fourth of the land is cultivated Pigs, cattle, and ponies are raised. Lyndhurst and Ringwood are in the New Forest

Newfoundland (nū"fŭndlănd', nū'fŭndlănd"), island and province, with LABRADOR as a dependency (excluding Labrador, 42,734 sq mi , 1945 pop 316,300), E Canada St John's is the capital and by far the largest city Newfoundland lies in the mouth of the Gulf of St. Lawrence, its shores washed on the north, east, and south by the Atlantic Ocean and separated on the northwest from Labrador by the Strait of Belle Isle Steep, rocky cliffs, which rise from deep on the ocean floor, edge a thousand inlets The high plateau of the interior, which reaches its greatest elevation of over 2,000 ft in the northwest, is scattered with lakes and marshes An abundance of fur-bearing animals, waterfowl, and fish thrive in the inland wilderness, while caribou feed on the tundras of the subarctic northern wastelands Over much of the area are stands of spruce and pine, although where fires have devastated the forests the second growth is poor During the 20th cent pulpwood and paper factories have been built, and much of the newsprint for England ships out of the port of Botwood Hydroelectric power is abundant and useful for manufacturing and mining Newfoundland is rich in minerals (copper, gypsum, iron, and zinc), and plans are under way to extend mining operations Agriculture is limited by unfavorable soil and climatic conditions, and much food must be imported Fishing dominates the economy, although to a somewhat lesser degree than it did at the beginning of the 20th cent Much of the fishing is done at the GRAND BANKS, probably the best cod-fishing region in the world, extending some 300 mi NE and SW of Cape Race Between May and October great fishing fleets move northward into the waters off the Labrador coast The most important catch is cod, which is dried and salted for world markets and also used for cod-liver oil. Salmon and herring are abundant, and seals are hunted on ice fields in spring and used for skins and oil The climate is generally moist and cool, its severity tempered by the adjacent waters Persistent fog, caused by the mingling of warm air from the Gulf Stream with the cold air of the Labrador Current, continuously envelops the Grand Banks but does not penetrate far inland The island's population is concentrated on the Avalon Peninsula at the southeastern corner, with some 60,000 residents in metropolitan St. John's The remainder live in over 1,300 communities scattered along the 6,000 mi of coast line Most of the people are native-born of Irish or British extraction Newfoundland is Britain's senior colony, based on John Cabot's discovery of a "new-founde-land" in 1497 and on Sir Humphrey Gilbert's formal claims in 1583 Using the island as a station, fishing boats from many European countries began to make yearly visits. France contested the British claims, but a settlement was made at the Peace of Utrecht (1713–14), when sovereignty was given to England, and France retained, until 1904, special fishing rights. Newfoundland achieved additional territory when it was awarded jurisdiction over the coast of Labrador in 1763, thereby aiding the summer fishing in northern waters. Settlement was not encouraged and proceeded slowly, although immigration increased in the early 1800s when the market for fish was good and later in the 1840s with an influx of Irish settlers fleeing the potato famine. Handicapped by many difficulties—poor communication

and transportation facilities, lack of trained civil servants, and marginal economy—Newfoundland's government has been charged with being generally inefficient and frequently corrupt Representative government was established in 1832, and responsible government was set up in 1855 Although the British North America Act provided for the admission of Newfoundland as part of Canada, the islanders rejected the right in 1869, and when the question was reopened in the '90s Newfoundland's precarious financial position made entry impossible Some degree of prosperity was achieved in the early 1900s with an improvement of the fishing market and a development of lumbering and mineral enterprises By a decision of the British privy council in 1927 Newfoundland was awarded 110,000 sq mi of Labrador as a dependency In the First World War, Newfoundland made considerable contributions both in man power and in money When the war was over the island undertook extensive internal improvements and by the time the world markets collapsed in the '30s had fixed debt charges equaling one half its diminishing revenue Unable to cope with its problems, the government invited the United Kingdom to send out a commission to study the situation, and from this study emerged the celebrated Amulree Report Following the recommendations of the report, responsible government was suspended in 1934 and a commission was appointed to administer all affairs of the island The ensuing years brought great hardships and much dissension, but gradually the economy was reestablished on a firmer basis Meanwhile Newfoundland's strategic position in relation to America and Europe had been recognized—first when the port of Trinity became the western terminal of the transatlantic cable in 1866 and again in 1929 when the first transatlantic air-mail service was inaugurated in St John's With the coming of the Second World War, Newfoundland's position became increasingly important The sea and land airport at Gander was begun by Canada in 1936, and in 1941 the agreement was signed whereby Newfoundland became one of the bases leased by the United States from Great Britain and one of the most heavily defended areas in the world The Atlantic Charter was signed in Newfoundland waters in 1941 With economic independence, a convention was called (1946) to consider alternative forms of future government, and in 1948 the people voted by a small margin for confederation with Canada While many of Newfoundland's services have been improved and the economy has been broadened, the province remains dependent upon export demands for the products of its basic industries See J R Smallwood, ed, *The Book of Newfoundland* (2 vols, 1937), R H Tait, *Newfoundland* (1939), T G Taylor, *Newfoundland* (1946), R A MacKay, ed, *Newfoundland Economic, Diplomatic, and Strategic Studies* (1946), Sir Gordon Macdonald, *Newfoundland at the Crossroads* (1949)

Newfoundland dog (nō͞ofound'lund, nū-), one of the largest dogs, about 27 in high and usually weighing over 100 lb It was introduced to European notice from Newfoundland about the middle of the 18th cent, but its origin is a matter of conjecture, it may be a descendant of the Great Pyrenees dog or of large hounds taken in early times to Newfoundland There it was used for hauling sledges The breed has nearly died out in Newfoundland, but is fostered in Great Britain and the United States The Newfoundland is particularly noted for its aquatic skill, and many instances are known of the saving by Newfoundlands of persons who were drowning The dog has a very dense coat, usually black, although it sometimes has white markings on the chest and feet It is good tempered and very intelligent

New France see CANADA

New Franklin, city (pop 1,144), central Mo, near the Missouri NW of Jefferson City, in a farm area, laid out 1928

New Freedom, borough (pop 1,137), SE Pa, near the Md boundary SSE of Harrisburg, inc 1879

New Galicia see NUEVA GALICIA

Newgate (nū'gĭt), former London prison, originally in the gatehouse of the principal west gate of London Dating from the 12th cent and burned by Wat Tyler's followers in 1381, it was rebuilt in the 15th cent with funds bequeathed by Sir Richard Whittington. The great fire of 1666 damaged it, and the Gordon rioters partially burned it again in 1780 Newgate was the scene of efforts by both John Howard and Elizabeth Fry to improve prison conditions From 1868, executions were held within the prison rather than outside, where they had been attracting huge crowds of sensation-seekers The prison was not used after 1877, and in 1902 it was torn down

New Georgia, island group, S Pacific, in the SOLOMON ISLANDS It is NW of Guadalcanal The largest island, also called New Georgia, is 50 mi long. In the Second World War the island was occupied in 1942 by the Japanese; the air base at Munda was taken in 1943 by U.S forces The islands of the group include Kolombangara, Vangunu, Rendova, and Gizo.

New Glarus (glä'rŭs), village (pop. 1,068), S Wis, SW of Madison; founded 1845 by Swiss, inc. 1901. The village, largely inhabited by Swiss descendants, is a cheese center

New Glasgow, town (pop. 9,210), N N S., on East River and NE of Halifax. In a coal region, it is an industrial town, manufacturing steel products, boilers, bricks, and tiles There are foundries, machine shops, and clay works

New Gloucester (glŏ'stur), town (pop 2,334), SW Maine, S of Auburn, settled c 1743 from Gloucester, Mass, inc 1774 It became the seat of a Shaker community c 1793

New Goa, Portuguese India see GOA.

New Granada (grŭnä'dù), former Spanish colony, N South America It included at its greatest extent modern Colombia, Ecuador, Panama, and Venezuela Between 1499 and 1510 a host of conquerors explored the Caribbean coast of Panama and South America—VESPUCCI, OJEDA, COBA, BASTIDAS, BALBOA, COLUMBUS, NICUESA, and ENCISO After 1514 Pedro ARIAS DE ÁVILA was successful in assuring permanent colonization of the isthmus, at SANTA MARTA (1525) and CARTAGENA (1533) Spanish control of the Colombian coast was firmly established, and in the next few years the northern hinterland was explored Between 1530 and 1546 German adventurers, notably Nikolaus FEDERMANN, penetrated the Venezuelan and Colombian llanos By far the greatest of the conquerors was Gonzalo JIMÉNEZ DE QUESADA, who in 1536 ascended the MAGDALENA, climbed the mighty Andean cordillera, where he subdued the powerful CHIBCHA, and by 1538 had founded Santa Fe, later known as BOGOTÁ Reminded by the upland plains of his native Granada, he named the region El Nuevo Reino de Granada [the new realm of Granada] During the next 10 years the conquest was virtually completed The New Laws, designed to stop the rapacities of the conquerors against the Indians and their own internecine lawlessness, were published in 1542 Enforcement met with insistent protests to Spain, causing annulment of some provisions and establishment (1549) of an *audencia* at Bogotá Within its jurisdiction were the provinces of New Granada, Tunja, Santa Marta, Cartagena, Popayán, and Venezuela To further stabilize colonial government, New Granada was created a presidency (an administrative and political division headed by a governor) in 1564, and the *audencia* was relegated to its proper judicial functions Loosely attached to the viceroyalty of Peru, the presidency came to include Panama, Venezuela, and Colombia except the province of Popayán in the southwest Disputes with—and the great distance from—Lima led to the creation (1717) of the viceroyalty of New Granada comprising Colombia, Ecuador, Panama, and Venezuela Reduced to a presidency in 1723, it was recreated a viceroyalty in 1739 Later the captaincy general of Venezuela and the presidency of Quito were detached, creating a political division that was to survive the revolution against Spain and the efforts of Simón Bolívar to establish a greater COLOMBIA Foreshadowing independence was the abortive revolt of the COMUNEROS (1780-81) See Sir Clements Markham, *The Conquest of New Granada* (1912), R B Cunninghame Graham, *The Conquest of New Granada* (1922), J M Henao and Gerardo Arrubla, *History of Colombia* (Eng tr, 1938)

New Guinea (gĭ'nē) or **Papua** (pä'pŭù, pä'pōōä), island (c 304,200 sq mi, pop c 1,500,000), except for Greenland the largest in the world, separated from N Australia by Torres Strait and the Arafura Sea It comprises three political sections, Netherlands New Guinea (west), the Territory of Papua (southeast), formerly British New Guinea, and the Territory of New Guinea (northeast) The island is c 1,500 mi long and 400 mi wide at the center Largely tropical jungle, it has vast mountain ranges with peaks from 10,000 to more than 16 000 ft high, Mt Carstensz in the west central area is the highest. The lower courses of the large rivers (Fly, Sepik, Mamberamo, and Purari) are generally swampy, with a few grassy plains The inhabitants are Melanesians, Negritos, and Papuans, some of whom (in the unexplored interior) still practice head-hunting and cannibalism Indigenous plants include sago, sugar cane, coconuts, rubber, nutmeg, and tobacco, there are mangrove and sandalwood forests Generally similar to that of Australia, the fauna consists largely of marsupials and monotremes, and among the reptiles are venomous snakes The island is known for its many unique species of butterflies and birds of paradise The principal product is copra, there is limited production of rubber, coffee, sisal hemp, and kapok Gold is mined in the eastern area, with the principal gold field in the Morobe dist of the Territory of New Guinea, and some oil is produced in the western area, which is virtually unexploited There are pearl-shell and tortoise fisheries along the coast Probably first sighted by the Portuguese Antonio d'Abreu in 1511, the island was visited a few years later by Spanish as well as Portuguese explorers, who were followed in the next two centuries by the Dutch, English, and Germans In the Second World War a Japanese invasion (1942) in the north was followed by gallant defense by a few Allied planes and men based at Port Moresby and the failure of a Japanese push overland in the autumn of 1942 Soon afterward began the Allied offensive Air bombing and protection by air and sea made possible a series of landings at scattered strong points (with much use of aerial transport), and by July 30, 1944, all New Guinea was recaptured See Caroline Mytinger, *New Guinea Headhunt* (1946)

New Guinea, Territory of (93,000 sq mi, pop c 725,000), SW Pacific It includes the northeastern part of the island of New Guinea, the BISMARK ARCHIPELAGO, and the northernmost Solomon Islands of Buka and BOUGAINVILLE Port Moresby (the capital of the Territory of Papua) became in the Second World War the acting capital of the Territory of New Guinea and in 1946 was officially made temporary capital in place of Rabaul The territory was formerly German New Guinea (1884-1914), in which Northeast New Guinea constituted a separate unit called Kaiser-Wilhelmsland and was governed along with the Bismarck Archipelago and the North Solomons Occupied in 1914 by Australian forces, the territory was mandated in 1920 to Australia, which received United Nations trusteeship over it in 1947 See also NEW GUINEA

Newgulf, unincorporated town, S Texas, SW of Houston and near Wharton, founded 1928 It is a center of sulphur mining with some oil wells.

New Hamburg, village (pop 1,402), S Ont, on the Nith river and WSW of Kitchener Felt shoes, leather goods, and furniture are made here

New Hampshire, state (area 9,304 sq miles, 1940 pop 491,524, 1949 estimated pop 544,000), NE United States, in the New England group, one of the Thirteen Colonies It is bounded on the north by the Canadian province of Quebec, on the east by Maine and the Atlantic Ocean, on the south by Massachusetts, and on the west by the Connecticut river, which separates it from Vermont CONCORD is the capital, MANCHESTER the largest city The continental ice sheet once covered the entire state and, in receding, scraped the mountains, peneplained the intervening upland areas, and rerouted the water courses into precipitous streams and beautiful lakes Across the north central part of the state the residual WHITE MOUNTAINS of the Appalachian chain form ranges abruptly broken by notches cut into their rocky walls Between Carter-Moriah Range and the PRESIDENTIAL RANGE in the east the Ellis river drops 80 ft through Pinkham Notch West of the Presidential Range (which includes Mt WASHINGTON, highest peak in New England at 6,288 ft), the cascaded courses of the Ammonoosuc and Saco rivers divide it from the FRANCONIA MOUNTAINS at CRAWFORD NOTCH To the southwest Franconia Notch overlooks the famous Old Man of the Mountain, beneath which the Pemigewasset tumbles on its way to join the MERRIMACK The northernmost gap, Dixville, is surrounded by rocky pinnacles which look down upon a fir-covered and wild country abounding in lakes and streams South of the mountains the lake and upland area is frequently interrupted by isolated peaks called "monadnocks" from the original MONADNOCK in SW New Hampshire Practically every part of the state is within sight of, and identifies itself with, some high peak WINNIPESAUKEE is the largest lake in the state, its 44,000 acres of silvery water dotted with 274 inhabitable islands, its wooded shores scalloped with sheltered coves and rocky points The land surface declines seaward and westward to the broad valley of the Connecticut river The upper Connecticut valley, known as Coos country, is pleasantly pastoral—its lush meadows and lilac-framed farmhouses rimmed with pleasant hills DARTMOUTH COLLEGE, located here at Hanover, is the state's leading institution of higher learning and has long been an important cultural center Industry is concentrated in the intervales of the lower Connecticut and Merrimack, the largest towns being Manchester NASHUA, Concord, and KEENE Along the Atlantic shore 18 mi, of curving beaches and rocky promontories, much of it under state ownership, offer attractive vacation and recreation areas Within sight of the coast lie the rugged ISLES OF SHOALS, some of which are owned by New Hampshire These islands were fishing colonies before the mainland was settled, but today they are largely used as summer residences. The estuary of the Piscataqua river, called the Salmon Falls river above DOVER, stretches its fringed edges inland from the coast On its banks is situated PORTSMOUTH, New Hampshire's only port—its tree-lined, flagstoned streets flanked by colonial houses reminiscent of the days when Portsmouth ships sailed the world Along the coast the ocean tempers the climate, but inland temperature extremes are great Occasional high winds and violent storms roar through the narrow valleys and bounce against the rocky walls Annual precipitation is about 40 inches, with snowfall mounting to eight feet in the mountain regions The state's resources and topography have determined a development that is primarily urban and industrial. Abundant water power has been

harnessed for industrial production concentrating on textiles, leather goods, and wood products New Hampshire contributes the raw materials for its extensive and diverse wood manufacturing, most important of which is pulpwood and paper The virgin forests of spruce, fir, and hardwoods which once covered the entire state have been logged, but second growth now extends over two thirds of the land Of this area the State Forestry and Recreational Commission controls more than 41,000 acres, the United States Forest Service 663,084 acres, the largest reserve being the White Mountain National Forest Enormous tracts of woodlots are part of the farmlands which cover one third of the state's area and contribute a valuable source of income as well as being used for pasturage Other major farming enterprises are dairying, poultry raising, and the potato and apple crops Intensive agricultural production is made difficult by unfavorable topography and large regions of unfertile and stony soil Economically more important than agriculture, and second only to industry, is the all-year vacation and recreation trade Modern transportation has enabled large numbers of visitors to enjoy the pleasures of beaches, mountains, and lakes On winter week ends snow trains are packed with skiers headed for the lodges and camps located on many of the mountain slopes To encourage this new industry highways have been improved and extended to provide access to almost all parts of the state Since New Hampshire has long been known as the Granite State, it is strange that the mineral production of building stone, clay, sand and gravel, feldspar and mica is such a minor factor in its economy However, granite exists in large deposits and, although not extensively quarried at present, has been used in the construction of such important buildings as the Congressional Library in Washington and the state capitol at Concord The first accounts of the territory were based on the expeditions of Martin Pring (1603) and Capt John Smith (1614) In 1620 the Council for New England, formerly the Plymouth Company, received a royal grant of land between lat 40° N and lat 48° N, with power to trade, colonize, and lease or sell rights One of the Council's leaders, Sir Ferdinand GORGES, formed a partnership with Capt John MASON (1586–1635) and obtained rights between the Merrimack and Kennebec rivers in 1622 By a division in 1629 Mason took the area between the Piscataqua and the Merrimack, naming it New Hampshire in honor of his English home The Gorges-Mason partnership was dissolved in 1634, and in 1635, when the Council for New England relinquished its charter, Mason secured confirmation of his grant He died later in the same year and his claims became grounds for suits brought by his heirs Meanwhile the first settlement had been made at Odiorne's Point in 1623, when David Thomson set up a fishing and trading post The Thomson site was soon abandoned and the first permanent colony was established by Edward Hilton at Dover some time before 1628 Through the activities of a colonizing agent of Gorges and Mason, a sizable group of Anglican farmers and fishermen founded Portsmouth in 1630 In 1638 the Reverened John WHEELWRIGHT, brother-in-law of Anne Hutchinson and exile from Massachusetts for his antinomian views, founded EXETER, and in the same year a Puritan group settled at Hampton In less than 15 years of limited settlement three conflicting religious positions were represented in four towns at a time when theological doctrine was of great importance Through claims based on its charter which set its northern boundary at the headwaters of the Merrimack, Massachusetts annexed S New Hampshire in 1641–43 The Mason heirs disputed this move, but with little success until in 1679 they succeeded in having New Hampshire proclaimed a royal colony, with appointees of the crown in authority in 1682–85, 1686–89, and from 1692 until the American Revolution Massachusetts continued to press land claims until commissions set up the eastern boundary in 1739, the southern boundary in 1741 In 1741 Benning WENTWORTH, a native of New Hampshire and former member of the provincial council, was made the first governor of New Hampshire alone Wentworth and his friends purchased the Mason rights in 1746 (see MASONIAN PROPRIETORS) laying claim to lands east of the Hudson and thereby provoking a protracted controversy with New York (see NEW HAMPSHIRE GRANTS) Although a royal order in 1764 established the Connecticut river as the western boundary of New Hampshire, the dispute flared up again during the American Revolution and was only settled when Vermont became a state The French and Indian Wars, which had prevented colonization of the inland areas, pointed up the need for mutual defense and New Hampshire sent delegates to the colonial conference of 1754 By this time, however, the hostile Indians had been quite thoroughly defeated and a land rush began into the interior Lumber camps were set up and sawmills built along the streams The king's deputies blazed the tall white pines with arrows to mark them as masting for the royal navy. The Scotch-Irish settlers had already initiated the textile industry by growing flax and weaving linen By the time of the Revolution the 80,000 inhabitants of the province had tired of British rule and were eager for independence A Committee of Safety was organized, and it is claimed that the Sons of Liberty in Portsmouth erected the first Liberty Pole in the entire colonies Early in 1775 the patriots attacked Fort Constitution in Newcastle and sent the captured ammunition by oxcart to Cambridge The New Hampshire Revolutionary Congress was formed and declared for independence Dissatisfied with the provincial congress, the members consulted the Continental Congress and were advised to call a meeting and decide upon a form of government Out of this meeting on Jan 5, 1776, emerged the state, with a constitutional framework, a bicameral legislature and a council In the American Revolution Generals John STARK and John SULLIVAN of the Continental army were New Hampshire men After the war economic depression coupled with the costs of establishing a central government moved the people to open protest against the state legislature and the courts Continental forces under General Sullivan put down the insurrection without bloodshed (1786) Largely through the efforts of John LANGDON, New Hampshire became the ninth and last necessary state to ratify (1788) the new Constitution of the United States The Federalists dominated political activity until 1816, and the gradual change of control to the Democrats at that time resulted in the famous DARTMOUTH COLLEGE CASE (1819), in which Daniel WEBSTER, New Hampshire's famous native son, acted as eloquent counsel for the Federalist trustees of Dartmouth In the same year New Hampshire abolished state support of the Congregational Church through the Toleration Act New Hampshire's northern boundary was fixed in 1842 when the Webster-Ashburton Treaty set the international line between Canada and the United States The Democrats remained in control of political office until 1846, when the party members were divided over the slavery question U S Congressman John P HALE, in a campaign known as the "Hale Storm of 1845," attempted to secure the support of his constituents in his refusal to support the annexation of Texas on the grounds that it was a proslavery action The inability of the Democratic party to take a united antislavery stand brought about its decline By the time Franklin PIERCE, New Hampshire's only President of the United States (1853–57), signed the KANSAS-NEBRASKA BILL in 1854, antislavery sentiment was strong enough to alienate many of Pierce's friends and former supporters After the Civil War the newly formed Republican party came into power and since that time has generally carried both national and state elections The growth of industrial cities has strengthened the Democratic party so that many elections are closely contested Perhaps the most novel feature of New Hampshire politics is its legislature When it is in session Concord houses the second largest representative governmental body in the world—443 men and women In 1941 the Constitutional Convention, which meets regularly every seven years, proposed to limit the members of the house to 400 but the voters rejected the amendment During the 19th cent the state's economy emerged as primarily industrial, and population growth was steady although never spectacular The production of woolen and cotton goods and the manufacturing of shoes led all other enterprises The forests were rapidly and ruthlessly exploited as valuable tracts were given to schools, railroads, and churches or sold to cover road and public building costs In 1870 a crusade to save the woods began, and in 1911 a bill was passed to protect big rivers by creating forest reserves at their headwaters Since that time numerous conservation measures have been enacted and large tracts of woodlands have been placed under state and national ownership In 1937 measures to place control of lake waters in the hands of the Water Resources Board were upheld by the state supreme court These same measures permit the installation of state hydroelectric projects The world depression of the 1930s severely dislocated the state's economy, especially in towns concentrating on one industry Since that time an effort has been made to broaden economic activities Competitive textiles remain a great threat to the important woolen and cotton industries Although as yet of minor economic importance, the New Hampshire League of Arts and Crafts, started in 1931, is an interesting experiment designed to revive native crafts and has been subsidized by the state The League provides instruction and leadership, and opens shops for the sale of many products of needlework, woodcarving, weaving, and pottery making. Such a plan seems to blend well with the best of native New England traits, providing for the preservation of fine old skills, the expression of individuality through creative activity, and the recognition of Yankee practicality by making this craftwork profitable See F B Sanborn, *New Hampshire* (1907); W H Fry, *New Hampshire as a Royal Province* (1908); E S Stackpole, *History of New Hampshire* (5 vols, 1917), L S Morrison, *The Government of New Hampshire* (1922; rev. and enl. ed, 1943), New Hampshire Forestry and Recreation Commission, *Forest Industries of New Hampshire* (1936); Richard Upton, *Revolutionary New Hampshire* (1936), Cornelius Weygandt, *New Hampshire Neighbors* (1937) and *The Heart of New Hampshire* (1944), E S Bowles, *Let Me Show You New Hampshire* (1938), Federal Writers' Project, *New Hampshire, a Guide to the Granite State* (1938) and *Hands That Built New Hampshire* (1940), M N Rawson, *New Hampshire Borns a Town* (1942), K W Jennison, *New Hampshire* (1944), Ernest Poole, *The Great White Hills of New Hampshire* (1946)

New Hampshire, University of, at Durham, land-grant and state supported, coeducational, chartered 1866 Opened in 1868 as the state college of agriculture and mechanic arts at DARTMOUTH COLLEGE, it was reorganized in 1891, moved in 1893, and became a university in 1923 It has colleges of agriculture, liberal arts, and technology A government research bureau, a marine laboratory, and a biological institute are here

New Hampshire Grants, early name for the region that is now Vermont, given because most of the early settlers came in under land grants from Benning Wentworth, colonial governor of New Hampshire Though the charter for New York given to the duke of York (later King James II) in 1664 set the eastern boundary of that province at the Connecticut river, there was promptly trouble The colony of Connecticut in 1683 managed to get the southern part of the New York boundary set instead at a line 20 mi E of the Hudson river Massachusetts was in 1749 in the process of forcing this line north as the Massachusetts-New York border, though this settlement was not approved by the crown until 1757 Governor Wentworth, assuming that these changes would mean that the line could be carried even farther north, proceeded without authority to issue a grant for the settlement of Bennington in 1749, and in the next few years he issued many more for the region, incidentally making a fortune for himself from them New York protested the infringement, but the last of the French and Indian Wars intervened, and it was not until after 1760 (when Wentworth had resumed making grants) that the matter was taken up by the British authorities In 1763 a decision was rendered unequivocally in favor of New York To enforce the decision was another matter The speculators who had the grants and settlers who came in under them opposed the New York claims The GREEN MOUNTAIN BOYS were organized, and resistance was led by Ethan ALLEN It mounted to violence, and it was this struggle that determined the early history of VERMONT

New Hampton, city (pop 2,933), co seat of Chickasaw co, NE Iowa, E of Charles City, inc 1873

New Hanover, Bismarck Archipelago see LAVONGAI

New Harmony, town (pop 1,390), SW Ind, on the Wabash and NNW of Mt Vernon, founded 1815 Oil, sand, and gravel are obtained here It was settled by the HARMONY SOCIETY under George Rapp In 1825 the Harmonists sold their holdings to Robert OWEN, he established here a communistic colony which gained prominence as a cultural and scientific center and to which were attracted William Maclure, Thomas Say, Frances Wright, and others Dissension arose in the community, and in 1828 it ceased to exist as a distinct enterprise Many old Rappite buildings remain See G B Lockwood, *The New Harmony Movement* (1905)

New Hartford. **1** Resort town (pop 1,836), NW Conn, SE of Winsted, settled 1733, inc 1738 Metal products are made here Part of the town was badly flooded in 1936, when Greenwood Dam broke **2** Village (pop 1,914), central N Y, near Utica, settled c 1787, inc 1870

Newhaven, urban district (pop 6,789), Sussex East, England, at the mouth of the Ouse It is a fortified seaport

New Haven. **1** City (pop 160,605), a co seat of New Haven co, S Conn, where the Quinnipiac and other small rivers enter Long Island Sound, inc 1784 It was founded in 1637–38 by Puritans led by Theophilus Eaton and John Davenport and was the chief town of a colony which later included several other towns—Milford, Guilford, Stamford, Branford, and Southold (on Long Island) Its government was a strict theocracy, religion was a test for citizenship, and life was regulated by strict rules (see BLUE LAWS) In 1664 the colony was reluctantly united with CONNECTICUT. It was joint capital with Hartford from 1701 to 1875 In the late 18th and the early 19th cent New Haven was a considerable port, especially for sealing vessels, and it is still a port of entry New Haven was raided by a British and Tory force in the American Revolution, and the port was blockaded in the War of 1812 Manufacturing grew, and though the once famous New Haven coaches and carriages have disappeared, firearms, clocks, locks and other hardware, toys, and electrical equipment are made, and the city has railroad shops It is also an educational center, and the industrial tone is mitigated by YALE UNIVERSITY, its allied institutions (e.g.,

New Haven Hospital and the Institute of Human Relations), and other schools, such as Albertus Magnus College (Catholic, for women, 1925) and a state teachers college The city centers upon a large green, on which stand three churches built between 1812 and 1816—Center Church (First Church of Christ, Congregational), Trinity Church (Episcopal), and United Church (Congregational) —all noted for their grace Landmarks in the city are two sandstone cliffs—West Rock, with the Judges' Cave (in which two regicides hid), and East Rock 2 Residential town (pop 1,872), NE Ind , on the Maumee and near Fort Wayne It is a trading center for farmers 3 City (pop 1,002), E Mo , on the Missouri and W of St Louis, in a farm area, laid out 1856

New Hebrides (hĕ'brĭdēz), Fr *Nouvelles Hébrides*, island group (c 5,700 sq mi , pop 44,750), S Pacific, 1,100 mi E of Australia It is a 400-mile chain of volcanic islands, of which the most important are ESPIRITU SANTO (the largest), EFATE, Malekula, and Tanna There are minor coral islands The group is mountainous, the highest peak (6,195 ft) being on Espiritu Santo The group is in the malarial area The natives are Melanesians, and there are Tonkinese laborers Copra, coffee, cocoa, and mother-of-pearl are produced The islands were discovered in 1606 by Queiros They were placed in 1887 under an Anglo-French naval commission, which was replaced in 1906 by an Anglo-French condominium, with the capital at Villa on Efate In the Second World War the group supported the Free French See Tom Harrisson, *Savage Civilization* (1937)

New Holland, borough (pop 2,153), SE Pa , ENE of Lancaster, settled 1728, inc 1895

New Holstein (hōl'stēn), city (pop 1,502), E Wis , NE of Fond du Lac, settled 1849, inc as a city 1926 Farm machinery is made

New Hope, residential borough (pop 1,053), SE Pa , on the Delaware and NW of Trenton, N J , settled c 1712, inc 1837 It is an artists' colony, and the neighborhood has many interesting old stone farmhouses

New Hyde Park, residential village (pop 4,691), on NW Long Island, SE N Y , near Mineola, inc 1927 Hosiery is made here

New Iberia (ībē'rĭə), city (pop 13,747), parish seat of Iberia parish, S La , on Bayou Teche, probably settled 1779 by Spanish, inc 1839 as Iberia, renamed 1868 Processing of the products from the rich surrounding area—chiefly sugar, rice, vegetables, and sea food—constitutes its chief industry Near by are oil fields and Avery Island A magnificent plantation house and St Peter's College are in the city

Newington, industrial town (pop 5,449), central Conn , near Hartford, settled in the last quarter of the 17th cent , inc 1871 It has a home for crippled children, a state tuberculosis sanatorium, and a veterans' hospital

New Ireland, volcanic island (3,340 sq mi , pop c 19,000), SW Pacific, in the BISMARCK ARCHIPELAGO and part of the Territory of New Guinea It is largely mountainous, rising to 4,000 ft Kavieng is the chief town and port, coconuts are the chief export The island was formerly called Neu Mecklenburg, later New Mecklenburg

New Jersey, state (7,522 sq mi., with water surface, 8,204 sq mi , 1940 pop 4,160,165, 1949 estimated pop 4,873,000), E United States, one of the Middle Atlantic States and one of the Thirteen Colonies The capital is TRENTON Surrounded by water on all sides except the northern boundary (50 mi long) with New York state, New Jersey is bounded on the east by the Hudson river, New York Bay, and the Atlantic Ocean, on the south and west by Delaware Bay and the Delaware river (which separate it from Delaware and Pennsylvania) The northern third of the state lies within the Appalachian Highland region Ridges running northeast and southwest shelter valleys abounding with pleasant streams and glacial lakes Beyond the crest of each wooded slope appear long-established farmlands given over to dairying and field crops Across the northwest corner run the Kittatinny Mts with the highest elevations of the state They stretch from the New York border to the spectacular DELAWARE WATER GAP South of the Highlands lie the Triassic lowlands or piedmont plains, a belt paralleling U S Route 1 from NEWARK to Trenton, it encompasses every major city of the state except CAMDEN and ATLANTIC CITY The monotony of the lowlands is broken by ancient trap-rock ridges which extend to the Palisades of the Hudson, and many pleasant commuter towns are located along the wooded slopes Acres of tidal marshes E of Newark and HACKENSACK have been partially filled, and industrial plants have been built upon them Drainage is provided by the state's major rivers, the PASSAIC, the RARITAN, and the HACKENSACK The busy lowlands give way in the south to the coastal plains, which cover more than half the state The coast, except in the south, is highly developed as a resort area. Sandbars prevent good harborage but offer 115 mi. of excellent inland waterways and a superior combination of bay and ocean facilities. Fishing, continually jeopardized by indiscriminate disposal of sewage and industrial waste, supplements the resort trade In the southern inland region the wasteland of scrub pine ravaged by fire and reckless lumbering, is used for cranberry and blueberry culture to provide a meager living for isolated communities North of the pine belt the clay and marl soil is extremely fertile, and the moderate temperatures permit a productive season for the asparagus and cranberry crops Urban centers are Atlantic City, a de luxe beach-land and amusement center, and Camden, outpost of Philadelphia and largest Jersey port on the Delaware The focus of industry of the state is Newark, which claims more different types of manufacturing than any city in the nation New Jersey is one of the leading manufacturing states Surprisingly, since it has few minerals except deposits of zinc, marl, clay, and construction stone, it leads the nation in smelting and refining copper It also produces rubber goods and textiles (notably at PATERSON and PASSAIC) as well as silk goods, rayon, and chemicals An almost fantastic transportation system, concentrated in the industrial lowlands, funnels the state products and a tremendous interstate traffic to the seaboard ports of Newark, HOBOKEN, JERSEY CITY, and BAYONNE and to the New York area With eight great trunk lines, New Jersey has more railroad tracks per square mile than any other state Highways, including the majestic Pulaski Skyway across the Newark (or Jersey) Meadows, provide wide, straight roads to all major points The Delaware is spanned by 10 toll and 15 free bridges, and traffic into New York is provided by numerous ferries and railway tunnels and the facilities of the Port of New York Authority the George Washington Bridge, the Lincoln and Holland vehicular tunnels, and three bridges to Staten Island Airports are operated by many cities, and Newark airport ranks as one of the busiest in the world Important water navigation centers around the seaports on the Hudson river and New York Bay, with a minor traffic of seagoing vessels on the Delaware proceeding as far north as Trenton From the time when the dogwood and rhododendron begin to bloom until the maples turn yellow and red, traffic piles up across the state as city visitors seek the varied pleasures of ocean, inland lakes, and state forests and parks The diversity of economic life provided by varied industry, agriculture, and resort attractions is rivaled by the diversity of population Social differences run from migrant worker to gentleman farmer, slum dweller to owner of a palatial residence Proximity to Ellis Island and the varied labor market have combined to attract large numbers of immigrants The directories of many communities include not only foreign-born and first-generation Americans but also names which appear in the records of New Jersey's early history The English made no settlement here until after both Dutch and Swedish communities had been established Dutch claims to the Hudson and Delaware valleys were based on the voyages of Henry Hudson, who sailed into Newark Bay in 1609, and the explorations of the lower Delaware by Cornelis Jacobsen May in 1614 Under the auspices of the Dutch West India Company patroonships were offered for settlement, and small colonies were located on the present sites of Hoboken, Jersey City, and Gloucester City Swedes and Finns of NEW SWEDEN, who predominated in the Delaware valley after 1638, were annexed by the NEW NETHERLAND colony in 1655 In 1664 Richard NICOLLS, deputy governor for James, duke of York (later James II), seized New Netherland, and James granted proprietorship of lands between the Hudson and the Delaware to Lord John BERKELEY and Sir George CARTERET Nicolls, unaware of the transaction, permitted New England religious dissenters to buy Indian land in the Elizabethtown and Monmouth purchases Carteret and Berkeley encouraged settlement by providing a liberal charter, free land grants, and provisions for an appointed council and an elected assembly New Jersey remained under proprietary rule until it was returned to the crown in 1702 During that period New Jersey's history was marked by a confusion of disputed land titles, dubious business transactions, and frequent changes of authority Out of this confusion certain trends emerged which have had significance in development of the area The original grants to Berkeley and Carteret divided the region, and the split became defined with the Quintipartite Deed of 1674, which separated the two Jerseys by a line from Little Egg Harbor to just north of the Delaware Water Gap. Subsequent cultural and economic developments have preserved the tie between N New Jersey and New York, and S New Jersey and Philadelphia The other trend was a popular flouting of constituted authority, expressed in protest against such proprietary demands as quitrents, in frequent refusals to submit to the dictates of royal governors, and later in the emasculated executive power provided in the New Jersey constitution of 1844 East Jersey was held by Carteret until his death in 1680, his cousin Philip CARTERET serving as governor Difficulties arose in 1670 when the Nicolls patentees refused to pay quitrents, noted, and set up a rump assembly. These chaotic conditions obtained until after the Dutch conquest of New Jersey and New York in 1673 When the colonies were returned to England under terms of the Treaty of Westminster, all titles were invalidated Proprietorship was returned to Carteret, but the Elizabethtown and Monmouth purchases were not regranted In 1682 William PENN and 11 other Quakers purchased West Jersey from Carteret's widow Within the year ownership was extended to 12 other proprietors, and from that time the land was subdivided by sale, Scottish proprietors playing a major part in development A board of proprietors was set up to assist in governmental affairs, and Perth Amboy became the capital In West Jersey the Berkeley interests were sold in 1674 to John FENWICK, acting as agent for Edward Byllynge—for which service he received one tenth interest Both men being in financial straits, the land was held in trust for creditors by Penn and two other Quakers In 1677 two Quaker companies purchased the Fenwick rights, except for a small tract of land on which Fenwick founded Salem A democratic constitution was framed, and the first assembly met at the capital, Burlington, in 1681 The Byllynge title was bought by Dr Daniel Coxe in 1687 and sold to the West Jersey Society in 1692 In both Jerseys confusion resulting from the unwieldy number of landowners and widespread resentment against authority caused the proprietors to surrender voluntarily their governmental powers to the crown in 1702, although they retained their land rights New Jersey's independence from New York was recognized, but authority was vested in the governor of New York until 1738 when Lewis MORRIS was appointed governor of New Jersey alone Until Trenton became the capital in 1790, the legislature met in alternate years at Perth Amboy and Burlington Under the royal governors the same problems persisted—land titles were in dispute and opposition to the proprietors culminated in riots of the 1740s The assembly advantageously used its control of the public revenue to withhold the governor's salary until a desired privilege or a particular legislative enactment was granted East Jersey took on the somber color of Calvinism implanted by Scottish and New England settlers while in West Jersey the Quakers soon developed a landed aristocracy with strong political and economic influence Anti-British sentiment gradually spread from its stronghold in East Jersey throughout the colony and took shape in Committees of Correspondence The strength of the Tory party is attested by its contribution of six Loyalist battalions The patriot cause was, however, generally accepted, and in June, 1776, the provincial congress adopted a constitution and declared New Jersey a state Because of its strategic importance, New Jersey was of major concern in the American Revolution The memorable Christmas attack on the Hessians at Trenton in 1776, followed by victory for the Continental forces at Princeton, restored the confidence of the patriots and gained increased cooperation Washington wintered at Morristown in 1777 and again in 1778–79 There were numerous smaller battles, and one other important battle was fought in New Jersey, that of Monmouth in June, 1778 At the Federal Constitutional Convention in 1787, the delegates from New Jersey sponsored the cause of the smaller states and carried the plan for equal representation in the Senate New Jersey was in Dec , 1787, the third state to ratify the Constitution By this time its population had grown from an estimated 15 000 in 1700 to approximately 184,000 Agriculture had been supplemented by considerable mining and processing of copper and iron and by the production of lumber, leather, and glass During the next 50 years an enormous expansion brought with it the transition from a landed aristocracy to an industrial democracy The important textile industry, powered by the falls of the Passaic, was initiated at Paterson Potteries, shoe factories, and brickworks were built Highways were improved, the Morris Canal and the Delaware and Raritan Canals were chartered, and the Camden and Amboy RR completed a line from New York to Philadelphia with monopoly privileges Although two important colleges had been established in the 18th cent (Princeton, as the College of New Jersey in 1746, Rutgers, as Queen's College in 1766), free public education had not been established The beginning of what has become a superior educational system was forwarded by some state fiscal support in 1828, although a complete system of free public schools was not set up until 1871 Institutions of higher learning have gradually increased to include such institutions as the New Jersey College for Women, Seton Hall Univ , Upsala College, the Stevens Institute for Technology, and a comprehensive system of state teachers colleges Prior to the Civil War an era of reform resulted in the framing of a new constitution (1884) in which property qualifications for suffrage were abolished, provisions were made for the popular election of the governor and assemblymen, and a balance of power and responsibility was established among the executive, legis-

lative, and judicial departments. In spite of some pro-Southern sentiment, New Jersey recruited its quota of regiments and gave valuable financial aid to the Union in the Civil War The war demands proved lucrative for commerce and industry, and the expanding labor market attracted large numbers from various groups of immigrants By 1865 the pattern of the state's development was molded Population and industrial growth showed a steady and rapid increase Large economic interests grasped control of political power, with sporadic but unsustained public movements for reform The Camden and Perth Amboy RR was transferred by lease to the Pennsylvania RR in 1871, although its monopolistic power was lessened by legislation opening the state to all rail lines and by the assessment and taxation of railroad properties After the 1870s easy incorporation laws and low corporation tax rates attracted new trusts to incorporate through "dummy" offices in the state There was much liberal sentiment against the power of "big business" A general reform movement sponsored by Woodrow WILSON when he was governor (1910–12) resulted in such legislation as the direct primary, a corrupt practices act, and the "Seven Sisters" acts for the regulation of trusts Later these laws for control of corporations were repealed The state voted predominantly Democratic from the Civil War until 1896 Since that time it has frequently voted Republican in national elections, and in state politics it has often had its powers divided between Democratic governors and Republican legislatures The well-oiled machine of Frank HAGUE, centered in Jersey City, wielded great influence in the Democratic party from 1913 to 1949, when it was defeated by insurgents within its ranks During the Second World War industry soared to new production heights and the state became a mass distribution point for men and materials In the 1940s the state took further steps to adapt the structure of government to meet modern needs After frequent attempts to amend the antiquated constitution of 1844, the determined efforts of Gov Charles Edison in 1942 and the sustained work of such civic groups as the New Jersey League of Women Voters succeeded in having a new constitution framed and accepted in 1947 The liberal Bill of Rights was preserved and extended, governmental departments were streamlined, the cumbersome court system was simplified, the executive power was strengthened, and labor's right to organize and bargain collectively was recognized Legislation has been passed to protect civil liberties, to equalize school finances, and to encourage municipal government reform In 1950 pending bills, enthusiastically supported by many civic groups, included provision for reorganization of the health and public welfare agencies and the revision of a tax structure, which rested at that time almost entirely on property taxes Diverted by involvement in the metropolitan areas of New York city and Philadelphia, New Jersey has frequently been exposed to ridicule as the bedroom or commuter state or viewed merely as a highway or vacationland Awakened public interest gives promise in 1950 of extending beyond mere institutional reform and reassertion of the state's strength as a cultural, social, and economic unit See Edwin P Tanner, *The Province of New Jersey, 1664–1738* (1908); Edgar Jacob Fisher, *New Jersey as a Royal Province, 1738 to 1776* (1911), Irving S Kull, ed, *New Jersey a History* (5 vols, 1930), Walter R Fee, *The Transition from Aristocracy to Democracy in New Jersey 1789–1829* (1933), Federal Writers' Project, *New Jersey* (1939), Wheaton J Lane, *From Indian Trail to Iron Horse* (1939), Harry Emerson Wildes, *The Delaware* (1940), Leonard Lundin, *Cockpit of the Revolution* (1940), Donald L Kemmerer, *Path to Freedom* (1940), Harry Emerson Wildes, *Twin Rivers the Raritan and the Passaic* (1943)

New Jersey College for Women. see RUTGERS UNIVERSITY

New Jerusalem, Church of the, or **New Church,** religious body instituted by the followers of Emanuel SWEDENBORG Knowledge of his teachings was extended in England largely through the efforts of two clergymen, Thomas Hartley and John Clowes, and through the zeal of Robert Hindmarsh, a printer, the son of a Methodist minister The first public services of an organized congregation were held (1788) in London In 1789 a general conference met In America the teachings of Swedenborg were first introduced (1784) by James Glen, member of a London society. In 1792 a New Church society was formed in Baltimore, in 1817 a general convention of the New Jerusalem in the United States of America was organized In polity it is a modified episcopacy, with each society enjoying great freedom in administering its own affairs. A general convention is held annually In 1890 a number of members broke their connection with the general convention to form a separate organization, which in 1897 took the name the General Church of the New Jerusalem. This body regarded Swedenborg's theological writings as "the very Word of the Lord revealed at his second coming" Swedenborg taught that the Scripture, properly understood, reveals the great law of correspondence—that every natural object is the expression of a spiritual cause There is one God in him is a Divine Trinity, not of persons but of essence The Father is the Divine Essence of Love, the Son is the Divine Wisdom or Divine Word, and the Holy Spirit is the Divine Proceeding, by which life, love, and truth are made available to man When Jesus assumed humanity and lived on earth, he met and overcame the temptations of evil When he had laid down in death every part of him that was not in accord with His divinity, he took upon himself a new spiritual humanity So, when man will by faith work with him in love and obedience, man shall have salvation, subduing the enemies of the soul See theological works of Swedenborg, Robert Hindmarsh, *Rise and Progress of the New Jerusalem Church* (1861), M B Block, *The New Church in the New World* (1932)

New Kensington, city (pop 24,055), SW Pa, on the Allegheny river and NNE of Pittsburgh, laid out 1891 on the site of colonial Fort Crawford, inc as a borough 1892, as a city 1933 Shale is quarried, along the river is the plant of the Aluminum Company of America (ALCOA)

New Liskeard (lĭs'kärd), town (pop 3,019), E Ont, at the north end of Lake Timiskaming and N of North Bay It has pulp and lumber mills and is a trade center for the surrounding mining area

New London. 1 City (pop 30,456), a co seat of New London co, SE Conn, on the Thames, which here forms a good harbor, laid out 1646 by John Winthrop, who built a mill here (1650), called Pequot until 1658, chartered 1784. Weathering the Revolution (when it was a privateers' rendezvous), a partial burning by Benedict Arnold in 1781, and a British blockade in the War of 1812, New London flourished as a shipping, shipbuilding, and whaling and sealing port, reaching the height of its maritime prosperity in the 19th cent The last whaler returned to port in 1909, and the harbor is now used mainly by the U S navy as a submarine base, by the U S coast guard, whose academy was established here in 1932, and by yachtsmen The city is a port of entry Annual Yale-Harvard boat races are held on the Thames The city has a whaling museum, an art museum (1931), and many old buildings Bishop Samuel Seabury, Sarah Knight, and Richard Mansfield are buried here Old Fort Trumbull (built in 1849 *on the site* of the Revolutionary fort, of which only the powder house remains) is occupied by the coast guard The New London Lighthouse (1760) was rebuilt in 1801 CONNECTICUT COLLEGE for women is at New London **2** Town (pop 1,340), SE Iowa, NW of Burlington, founded as Dover, inc 1860 **3** Farm trading city (pop 1,005), co seat of Ralls co, NE Mo, on the Salt river and near Hannibal, founded 1819. **4** Town (pop 1,039), S N H, in hilly country (alt 1,326 ft) near Sunapee and other lakes, NW of Concord, settled 1775, inc 1779 It is the seat of Colby Junior College for girls There is a summer theater (1933) The Tracy Memorial is a library and community house. **5** Village (pop. 1,656), N Ohio, SW of Cleveland, settled 1816 It is a farm trade center and shipping point Uniforms and tile brick are manufactured here **6** City (pop 4,825), central Wis., on the Wolf and NW of Appleton, founded 1853, inc. 1877 Wood and dairy products are made The Carr Museum has natural history exhibits and historical material.

Newlyn, village (pop. 3,544), Cornwall, England, S of Penzance It is a seaport, resort, and fishing center (pilchard, mackerel, lobster) A well-known artists' colony here has given name to an open-air school of painting. St Peter's Church contains modern murals

New Madrid (măd'drĭd), city (pop 2,450), co seat of New Madrid co, SE Mo, on the Mississippi SW of Cairo, Ill It is a cotton center in a farm area and a port It was laid out in 1789 by George MORGAN on land granted by the Spanish In the Civil War, Federal troops captured it from the Confederates before taking ISLAND No 10 (1862)

Newman, Ernest, 1868–, English music critic He began his musical career in 1903 as an instructor at Midland Institute, Birmingham, joining the staff of the Manchester *Guardian* in 1905, the Birmingham *Daily Post* in 1906, the London *Observer* in 1919, and *The Times* of London in 1920 Outstanding among his writings is his *Life of Richard Wagner* (4 vols, 1933–46) He is the translator of Schweitzer's *J S Bach* and Romain Rolland's *Beethoven the Creator* and is the author of numerous important books about music

Newman, Francis William, 1805–97, English scholar, brother of Cardinal Newman In 1830 he withdrew from a fellowship at Balliol, Oxford, because he could not assent to Anglican orthodoxy He taught Latin at Manchester New College (1840–46), a Unitarian foundation, and at University College, London (1846–69) His principal work, *Phases of Faith* (1850), reveals his diametric opposition to his brother, for he was an absolute rationalist See I G Sieveking, *Memoir and Letters of Francis W Newman* (1909)

Newman, John Henry, 1801–90, English churchman, cardinal of the Roman Church, one of the founders of the OXFORD MOVEMENT, b London He studied at Trinity College, Oxford, and held a fellowship at Oriel College, where he became tutor (1826) after his ordination in the Church of England (1824) He was made vicar of St Mary's, Oxford, in 1827 and was (1831–32) select preacher to the university He had been, since the age of 15, of a deeply religious nature, and in 1832 he resigned his tutorship after a dispute over the religious duties of a tutor and went on a Mediterranean tour with Hurrell Froude While he was on this trip he wrote *Lead, Kindly Light* and other hymns of the *Lyra Apostolica* His difficulties were given expression and opportunity for solution after his return to England, when KEBLE preached the celebrated sermon *National Apostasy*, Newman threw himself into the discussion in the summer of 1833 and in September began the *Tracts for the Times* These joined with his sermons in St Mary's in giving constant guidance and inspiration to the OXFORD MOVEMENT About 1840 Newman was losing his faith in the position he had taken, and an article by WISEMAN led him to reconsider the Roman Catholic claims In 1841 his Anglican career came to a crisis when *Tract 90*, demonstrating that the Thirty-nine Articles were consistent with Catholicism, brought a great outcry from Anglicans everywhere and a ban on the *Tracts* from the bishop of Oxford Newman now went into retirement at Littlemore (a chapelry attached to St Mary's), where he remained for more than a year, living with a group of men in a sort of monastic seclusion He gave up his living in Sept, 1843, and in 1845 was received into the Roman Catholic Church The chief literary products of Newman's retirement consisted of the *Essay on Miracles* and the *Essay on the Development of Christian Doctrine*, both of them serving not only to show the state of the author's mind but to acquaint the English-speaking world with two important principles of Roman Catholicism In 1846 he went to Rome, where he received ordination and a doctorate of divinity He entered the Oratorians and came back to England (1847) filled with the idea of extending the Church in England by means of the Oratory After living at various places he settled at Edgbaston (on the outskirts of Birmingham), there, in the Oratory he founded, he remained the rest of his life Newman's life was marked by several unpleasant public events, the first of these being a libel suit against him by an ex-friar Newman lost the suit, but was later exonerated, and a great fund was publicly raised to defray the expense and the fine he had incurred In 1854 the bishops of Ireland tried to found a Catholic university at Dublin and made Newman its head; the project was ill planned and abortive, so Newman found himself involved in difficulties at once Newman's theories appearing in his *Idea of a University Defined* (1873) were chiefly developed about this time, his "idea" was that education should be moral training rather than instruction, and a token of this was his proposal for a Catholic hall at Oxford to provide Catholics with the advantages of Catholicism and university training together. This (1858) was opposed by Henry Edward MANNING and the English hierarchy, much to Newman's disappointment Newman's reputation in England was greatly enhanced soon after this by one of the most celebrated incidents of his career, the controversy with Charles KINGSLEY. This began in 1864 when Kingsley re-

marked in a review that the Catholic clergy was not interested in the truth for its own sake After several exchanges Newman published the *Apologia pro Vita Sua* (beginning 1864), a masterpiece of religious autobiography, undoubtedly its author's greatest work. A few years later an ambitious work of another kind appeared, the *Grammar of Assent* (1870), designing to set forth a sort of logic of religious belief At this time Newman was involved in an annoying incident that gained more notice than its importance warranted, Newman, who opposed the enunciation at the time of the infallibility dogma, was quoted as denouncing those (including Cardinal Manning) who advocated its definition. He was misunderstood in England and his enemies (Catholic and non-Catholic) spread in Rome rumors that he opposed the dogma itself The cloud under which Newman existed so far as the papacy was concerned was not lifted until after the death of Pius IX, whose successor, Leo XIII, created him cardinal (1879) at the general demand of English Catholicism About the same time (1878) Trinity College (Oxford) gave him an honorary fellowship Cardinal Newman spent his declining years at Edgbaston, loved and admired by all England Newman ranks as one of the masters of English prose, his style is simple, lucid, clear, and unusually convincing His poems never gained great reputation, except for *The Dream of Gerontius* (1866) His novels (religious), *Loss and Gain* (1848) and *Callista* (1850), are not read Newman's misunderstanding with Manning lasted over 30 years, they were temperamentally poles apart, for Newman had no interest in social reform, Manning no taste for theological controversy It was formerly assumed that Newman and Manning led rival parties in English Catholicism, it is much nearer the truth to say that their difficulty was a private quarrel Newman's works were published in his lifetime, for the collected editions the author wrote refutations of his own Anglican writings, especially of those dealing with Anglicanism as a *via media* Newman's immediate influence was greatest c 1840, and many Anglicans entered the Roman Catholic Church at his inspiration His essays retain their vitality and popularity New editions of a number of his works have appeared since 1947, edited by C F Harrold, who also edited *A Newman Treasury* (1943) Other selections appear in W S Lilly, ed , *A Newman Anthology* (1949), and Henry Tristram, ed , *Living Thoughts of Cardinal Newman* (1949) The definitive biography is that by W P Ward (1927) See also biographies by S L May (1930), G G Atkins (1931), and Robert Sencourt (1948), Eleanor Ruggles, *Journey into Faith* (1949), Maisie Ward, *Young Mr Newman* (1948)

Newman. 1 City (pop 1,214), central Calif , W of Merced, in a dairying area of the San Joaquin Valley, laid out 1887, inc 1908 2 City (pop 1,103), E Ill , SW of Danville, founded 1857, inc 1895 It has farm-product processing plants

Newman Grove, city (pop 1,036), NE Nebr , in a prairie region SW of Norfolk

Newmarket, town (pop 4,026), S Ont , on the Holland river and N of Toronto Its industries include tanning, furniture making, and processing of dairy products

Newmarket, urban district (1931 pop 9,752, 1943 estimated pop 7,330), Suffolk West, England, NE of Cambridge It has been a racing center since early in the 17th cent The courses on Newmarket Heath are c 4 mi long and are crossed by an ancient earthwork known as the Devil's Dyke There are eight principal races, which include the Two Thousand Guineas, the Cambridgeshire, and the Cesarewitch

New Market, town (pop 629), N Va , in the Shenandoah Valley NE of Staunton, inc 1796 In a Civil War battle here (May 15, 1864), Gen J C Breckinridge defeated Gen Franz Sigel A gallant charge by Virginia Military Institute cadets figured in the Confederate victory Near by are limestone caverns

Newmarket, town (pop. 2,640), SE N H , on Great Bay W of Portsmouth, inc 1727 Its textile-milling village is at falls of the Lamprey

New Martinsville, town (pop 3,491), co. seat of Wetzel co , NW W Va , on the Ohio and SW of Moundsville, in a rich oil region, platted 1838.

New Mecklenburg, Bismarck Archipelago see NEW IRELAND.

New Mexico, state (121,511 sq. mi ; 1940 pop 531,818, 1949 estimated pop 589,000), SW United States, in the Rocky Mt region of the Southwest, admitted 1912 as the 47th state The capital is SANTA FE, the largest city ALBUQUERQUE. The state is bounded on the north by Colorado, on the east by Oklahoma and Texas, on the south by Texas and Mexico, and on the west by Arizona At its northwest corner, four states (Arizona, Utah, Colorado, and New Mexico) meet— the only such point in the United States New Mexico is roughly bisected by the RIO GRANDE and has an approximate mean altitude of 5,700 ft ; it has a spacious sweep of grazing lands for sheep and cattle, broken mesas, wide deserts, heavily forested mountain wilderness, and high, bare peaks. Water is a rare and precious thing in the semiarid region There are only two notable rivers besides the Rio Grande —the PECOS and the SAN JUAN They are used for some irrigation, but extensive farming is supported only by such uses of the Rio Grande as at the Elephant Butte Dam and in the CARLSBAD project There are also regions that support dry farming Fruits, vegetables, grains, alfalfa, and cotton are grown More picturesque are the harvests of pifion nuts, pinto beans, and chili—crops characteristic of New Mexico The mountain ranges, rising to their greatest height in the SANGRE DE CRISTO MOUNTAINS, are in broken groups, running north to south through central New Mexico and flanking the Rio Grande In the southwest is the tumbled Gila Wilderness Millions of acres of the wild and beautiful country of New Mexico are under Federal control as national forests, Indian reservations, and national monuments (e g , CARLSBAD CAVERNS NATIONAL PARK and White Sands National Monument) The mountains and plateaus have yielded mineral wealth in zinc, copper, molybdenum (one of the largest of U S molybdenum mines), gold, iron, lead, and manganese Silver and turquoise have been much used in Indian jewelry since long before the time of the white man In SE New Mexico petroleum and natural gas have been found to furnish a modern note Potash is mined from one of the world's largest deposits, but huge coal reserves, mostly near GALLUP, are nearly untouched because they are far from any manufacturing center Use of the minerals and of the land goes back to the still unknown time of the early Indian cultures in the Southwest which long preceded the flourishing sedentary civilization of the PUEBLO INDIANS the Spanish found along the Rio Grande and its tributaries Many of the Indian pueblos exist today much as they were in the 15th cent and constitute one of the three bases of the unique and colorful New Mexican pattern, which is Indian, Spanish American, and Anglo-American Word of the pueblos reached the Spanish through CABEZA DE VACA, who had apparently wandered across S New Mexico in 1536, they were enthusiastically identified by Fray MARCOS DE NIZA as the Seven Cities of Cibola, a full-scale expedition (1540–42) went north under the leadership of Francisco Vásquez de CORONADO The treatment of the Indians by Coronado and his men led to the long-standing hostility between the Indians and the Spanish and made Spanish conquest of the land a long and difficult business An attempt by missionaries to convert the natives in 1581 led to the death of the friars who headed it Antonio de ESPEJO, sent out on an expedition (1582–83) to find the friars, explored much of the country His report of precious minerals and grazing lands led to the founding of the first regular colony at SAN JUAN by Juan de OÑATE in 1598 Almost immediately he was faced with a serious revolt at Acoma and had to suppress it In 1609 Pedro de Peralta was made governor of the "Kingdom and Provinces of New Mexico", he had his capital at Santa Fe The little colony with the high-sounding name did not prosper greatly, though some of the missions flourished and haciendas were founded Forced labor caused further Indian trouble The fierce Apache rose in 1676, and in 1680 came the great Pueblo revolt The Indians fell upon the Spanish and wiped out their settlements, and the survivors were driven entirely out of New Mexico, not to return until the stern campaign of Diego de VARGAS reestablished Spanish control in 1692 In the 18th cent , development of ranching and of some farming and mining was more thorough, and the foundations were laid for the Spanish culture in New Mexico that still persists About half the population today is of mixed Spanish descent (many of them, however, fairly recent immigrants from Mexico), until recently Spanish was an accepted official language, and in many isolated communities Spanish is still the dominant tongue The progress of the colony depended somewhat on the governors, some of whom were able The first approach of the Anglo-Americans was marked by the Louisiana Purchase in 1803, and the Spanish officials tried earnestly to prevent American penetration Yet by 1822, after central control of New Mexico had been weakened by the Mexican revolt against Spain, the SANTA FE TRAIL was being traveled by the wagon trains of American traders In 1841 after Texas was established as a republic, a group of Texans embarked on an expedition to exert Texas claims to part of New Mexico, they were captured and treated with justifiable severity by the Mexican governor. Their treatment may perhaps have had some slight effect in bringing on the Mexican War. That war marked the coming of the Anglo-American culture to New Mexico Stephen W. KEARNY entered (1846) Santa Fe without opposition, and two years later the Treaty of Guadalupe Hidalgo gave New Mexico to the United States The territory, which included Arizona and other territories, was enlarged by the GADSDEN PURCHASE A bid for statehood with an antislavery constitution was halted by the Compromise of 1850, and New Mexico was more or less neglected In the Civil War, New Mexico was at first occupied by Confederate troops from Texas but was taken over by Union forces early in 1862 After the war and the withdrawal of the troops, the land was relatively unprotected and was scourged by Apache and Navaho raids Indian troubles were to continue sporadically in New Mexico and Arizona (made a separate territory in 1863) until the Apache chief GERONIMO surrendered in 1886, and there were local troubles after that time Already the ranchers had taken over much of the grasslands The coming of the Santa Fe RR in 1878 encouraged the great cattle boom of the '80s New Mexico saw typical cow towns, feuds among cattlemen and between cattlemen and the authorities (notably the Lincoln County War), the activities of such outlaws as BILLY THE KID, and wealthy comfort appearing on the well-established ranches The cattlemen were unable to keep out the sheepherders and were overwhelmed by the homesteaders and squatters, who fenced in and plowed up the "sea of grass" Land claims gave rise to bitter quarrels among the homesteaders, the ranchers, and the old Spanish families claiming under the original grants Ranching survived, however, despite overgrazing and reduction of lands It and mining and the limited but scientifically controlled irrigated and dry farming have continued important in the period of Anglo-American domination The clear, dry air and the startling and grandiose scenery have in the 20th cent made New Mexico a place of winter or all-year residence for those seeking health or a place of retirement Many writers and artists have made their homes in communities such as Taos and Santa Fe Thousands of tourists come yearly, too, to see not only the spectacular beauties of the land but also the Indian relics (of serious interest to archaeologists), the Indian pueblos, and the contrasts that sharply individualize New Mexico – the half-Spanish villages sleeping in the sun, the brisk business of auto courts, the solemn rites of the PENITENTES and the age-old Indian ceremonies, all to be seen not too far from Los ALAMOS, noted for the tryout in the Second World War of that newest of marvels, the atomic bomb Of the several institutions of higher learning which have contributed to the knowledge about, and the advance of, things New Mexican, the most noted is the Univ of New Mexico See E L Hewett, *Ancient Life in the American Southwest* (1930), R E Twitchell, *Leading Facts of New Mexico History* (2 vols , 1911–12), L B Bloom and T C Donnelly, *New Mexico History and Civics* (1933), *New Mexico's Own Chronicle* (ed by M G Fulton and Paul Horgan, 1937), Harvey Fergusson, *Rio Grande* (1933), Federal Writers' Project, *New Mexico a Guide to the Colorful State* (1940)

New Mexico, University of, mainly at Albuquerque, state supported, coeducational, chartered 1889, opened 1892 It includes colleges of arts and sciences, business administration, education, engineering, fine arts, law and pharmacy and a two-year general college The state public health laboratory, an anthropology museum, a school of inter-American affairs, and a university press are here There are summer field sessions in anthropology (Chaco Canyon and Jemez), art (Taos), and Indian art (Santa Fe) See Dorothy Hughes, *Pueblo on the Mesa* (1939)

New Mexico College of Agriculture and Mechanic Arts, at State College, near Las Cruces, with land-grant support, coeducational, chartered and opened 1889 It has schools of agriculture, arts and sciences, and engineering

New Miami (mī'mē), village (pop 1,443), SW Ohio, near the Ind line NW of Cincinnati; inc 1928

New Milford. 1 Town (pop 5,559), a co seat of Litchfield co , W Conn , hilly, crossed by the Housatonic, settled 1707, inc 1712 Electrical equipment and textiles are produced Canterbury School for boys is here The town hall is on the site of Roger Sherman's shop 2 Borough (pop 3,125), NE N J , N of Hackensack, inc 1922

Newnan, city (pop 7,182), co seat of Coweta co , W Ga , SW of Atlanta, in a farm and livestock area; inc 1828 It has cotton and lumber mills

New Netherland, territory included in an indefinite commercial grant by the government of Holland to the Dutch West India Company in 1621 Colonists were settled along the Hudson river region The principal settlement in the tract after 1625 was known as New Amsterdam (later New York city) at the lower end of Manhattan island, which was purchased from the Indians in 1624 Colonization proceeded slowly, hampered by Indian troubles, poor administration, and rivalry with settlers from New England In 1664 the territory was taken by the English, who divided it into two colonies known as New York and New Jersey. See NEW YORK, state See E L Raesly, *Portrait of New Netherland* (1945)

Newnham College (nū'num), affiliated with Cambridge Univ , for women, organized as a residence hall 1873, opened as a college 1875 Anne Jemima Clough was the first principal In 1881 some of the examinations and other privileges of the university were open to women, degrees were not conferred until 1921

New Orleans (ôr'lēănz), city (pop 494,537), parish seat of Orleans parish, SE La , on the Mississippi c.107 mi by water from the river's mouth It was built within a great bend of the river (and is therefore called the Crescent City) on subtropical lowlands, now protected by levees, and near Lake Pontchartrain The river is crossed here by the large Huey P Long Bridge (completed 1935) New Orleans is the largest city of the South and a major U S port of entry Coffee, sugar, and bananas are among the cargoes that come to its wharves, lumber, petroleum products, and machinery are among those that leave them Coastwise traffic is heavy (partially through the Intracoastal Waterway), and New Orleans handles much rail and air transport Among the diversified industrial products are twine, sugar, furniture, construction materials, and processed foodstuffs Most of the larger industries are of recent growth, but soon after the sieur de Bienville had the city platted in 1718 it took on prominence as a port, and in 1722 it became the capital of the French colony The transfer of LOUISIANA to Spain by the secret Treaty of Fontainebleau (1762) was confirmed by the Treaty of Paris (1763) New Orleans—deeply involved in the struggle for control of the Mississippi—passed back into French hands only briefly before going to the United States with the Louisiana Purchase (1803) Nevertheless the tone of the city's life was dominated by Creole culture until late in the 19th cent , and the French influence has by no means vanished even today Particularly after Andrew Jackson by his victory over the British at New Orleans (Jan 8, 1815) had written a postscript to the War of 1812, the westward movement in the United States carried the queen city of the Mississippi to almost fabulous heights as a port and a market for cotton and slaves New Orleans then was stamped with its lasting reputation for glamour and gay living, elegance and wickedness Then as now Negroes were a large element in the population, and they contributed to the exotic flavor in the American city The quadroon balls—sumptuous affairs attended by rich whites and their quadroon mistresses—disappeared with the Civil War, but unfamiliar Negro folkways and stories of voodoo magic persist The golden era ended when in the Civil War the city fell (1862) to Admiral David G FARRAGUT and suffered under the occupation by Union troops under Benjamin F BUTLER New Orleans recovered from the Reconstruction passed through the end of the river-steamboat era, and settled down to being the sober city of today Its past, however, is perhaps stronger than the warm, damp climate in attracting visitors and artists and writers The picturesque French quarter (Vieux Carré) of the old city north of broad Canal St attracts sight-seers In the heart of the quarter is Jackson Square (the former Place d'Armes), fronting upon it are the Cabildo (formerly the government building, now a museum) and St Louis Cathedral Several world-famous restaurants, specializing in shrimp, oysters, and fish from near-by waters, uphold the New Orleans tradition of good living, and the annual Mardi Gras is perhaps the best-known festival in the United States Parks, museums (including the Isaac Delgado Museum of Art), and all sorts of provisions for the comfort and entertainment of visitors support the charm of the place. The unusual life and history of the city has produced a whole literature of New Orleans, including the works of George W Cable, Lafcadio Hearn, Grace Elizabeth King, Charles Gayarré, and Alcée Fortier New Orleans is also a center of higher learning, with TULANE UNIVERSITY and LOYOLA UNIVERSITY and, for Negroes, DILLARD UNIVERSITY and Xavier Univ (Catholic; coeducational, 1915) See Lyle Saxon, *Fabulous New Orleans* (1928, new ed , 1947), Federal Writers' Project, *New Orleans City Guide* (1938), E S Basso, ed , *The World from Jackson Square a New Orleans Reader* (1948), Harnett T Kane, *Queen New Orleans, City by the River* (1949), Robert Tallant, *The Romantic New Orleanians* (1950)

New Oxford, borough (pop 1,194), S Pa , NE of Gettysburg, laid out 1792, inc 1874 Its products include shoes, clothing, and brick Fruit is grown in this area

New Paltz (nōō' pôlts, nū'), resort village (pop 1,492), SE N Y , on the Wallkill and SW of Kingston, in a farm area, settled 1677 by Huguenots, inc 1887 It is the seat of a state teachers college Several Huguenot houses remain

New Philadelphia. **1** City (pop 12,328), co seat of Tuscarawas co , E central Ohio, on the Tuscarawas river and S of Canton, in a coal and clay area, founded 1804, inc 1833 Enamelware, clay products, and steel are made here Near by is Schoenbrunn Memorial State Park **2** Borough (pop. 2,453), E Pa , near Pottsville, inc 1808. Anthracite mining is done here

New Plymouth, borough (pop 18,558; metropolitan pop 20,642), on W North Island, New Zealand, at the base of Mt. Egmont NNW of Wellington There are dairy plants and an iron foundry, near by is an oil field

New Pomerania, Bismarck Archipelago: see NEW BRITAIN

Newport, Christopher, 1565?–1617, English mariner, commander of early voyages to Virginia He served in Drake's Cádiz expedition (1587), commanded a privateering expedition to the West Indies (1592), and returned to England with the Spanish vessel *Madre de Dios*, the richest prize ever taken by the Elizabethan privateers He was employed by the London Company to command their expeditions to Virginia On the first voyage he sailed from England with Capt John Smith and other colonists on Dec 20, 1606, and arrived near the site of Jamestown on May 13, 1607 He returned to England on July 29 and sailed again for the colony Oct 8, with the "first supply" of emigrants and provisions, reaching Jamestown on Jan 2, 1608, to find the colonists greatly reduced and in dissension He brought the "second supply" from England (Aug , 1608–Jan , 1609) and explored the country beyond the falls of the James river On his fourth voyage from England (1609), Newport was wrecked on the Bermudas with Sir Thomas Gates and Sir George Somers and did not reach Virginia until May, 1610 In 1611 he made his last voyage to the colony, bringing out Sir Thomas Dale In his later years Newport made three voyages for the East India Company, dying at Bantam, in present Indonesia, on the last See William Strachey, *The Historie of Travaile into Virginia Britannia* (1849), Edward Arber and A G Bradley, ed , *Travels and Works of Captain John Smith* (1910)

Newport. **1** Municipal borough (1931 pop 11,322, 1943 estimated pop 19,970), capital of the Isle of Wight, England, near the center of the isle and on the Medina river It occupies a very old site, possibly of a Roman station Its grammar school was built in 1612 A prison and barracks are near the town **2** County borough (1931 pop 89,203, 1947 estimated pop 102,090), Monmouthshire, England, on the Usk 4 mi above its junction with the Severn Newport has extensive docks and is one of the chief coal and iron exporting points in Great Britain It makes aircraft and has manufactures of tin plate, iron, steel, copper, and other metal goods In 1839 it was the scene of Chartist riots The Church of St Woolos, partly Norman, was made the procathedral of Monmouth diocese in 1921 It stands on Stow Hill, above the town **3** Urban district (pop 3,437), Shropshire, England, E of Shrewsbury

Newport **1** City (pop 4,321), co seat of Jackson co , NE Ark , on the White River near its junction with the Black, settled c 1873 A railroad and trade center, it is noted for pecans and button blanks, which are made from mussel shells found in the vicinity **2** City (pop 30,631), co seat of Campbell co , N Ky , on the Ohio opposite Cincinnati and on the east bank of the Licking opposite Covington, laid out 1791, inc as a village 1795, as a city 1835 Clifton was annexed in 1935 Newport is a residential and industrial city, with metal manufactures Near by is FORT THOMAS **3** Town (pop 2,052), S central Maine, settled 1808, inc 1814 Its center is a commercial village and fishing resort on Sebasticook Lake W of Bangor **4** Town (pop 5,304), co seat of Sullivan co , SW N H , on the Sugar and E of Claremont, inc 1761 Sarah Josepha Hale was born here Shoes and woolen goods are manufactured **5** City (pop 2,019), W Oregon, a port of entry on Yaquina Bay, W of Corvallis, settled c 1855, inc 1891 It is a resort, with excellent fishing **6** Borough (pop 1,897), S Pa , on the Juniata and NW of Harrisburg, settled 1789, laid out 1814, inc 1840 It produces leather goods, mechanics' tools, and limestone **7** City (pop 30,532), co seat of Newport co , on SW Rhode Island, SE R I William CODDINGTON and others came here in 1639 Newport and Portsmouth, united in 1640, entered a permanent federation with Providence and Warwick in 1654 Shipbuilding, dating from 1646, and foreign commerce, especially the "triangular trade" in rum, Negro slaves, and molasses, brought prosperity to the village The Revolution temporarily ruined Newport's economic position the British occupied the town, 1776–79, most of the citizens moved away, and many buildings were destroyed Survivors are Trinity Church (1726, Episcopal), the Sabbatarian Church (1729), the Touro Synagogue (oldest in the country, built in 1763 from Peter Harrison's designs, and since 1946 a national historic site), the Redwood Library (founded 1747, also designed by Harrison), the brick market house or city hall (1760, also Harrison's work), and the old colony house or statehouse (1739, designed by Richard Munday) The Old Stone Mill, in Touro Park, is believed by some to have been a gristmill owned by Benedict Arnold, 17th-century colonial governor, by others to be a Norse relic Newport harbored refugees of various groups Friends and Jews first arrived in the 1650s, and the Seventh-Day Baptists organized a church here in 1671 Jewish merchants contributed greatly to Newport's pre-Revolutionary prosperity Newport was chartered as a city in 1784, but from 1787 to 1853 was returned to town status Until 1900 it was joint capital with Providence In the 19th cent the city developed as a fashionable resort of the very wealthy Polo, tennis, boating, and other meets are held here It is a port of entry. Government works in the vicinity include Fort Adams (closed as a U.S army defense bastion in 1950), a torpedo station, the naval training station and naval war college fostered by Stephen B Luce, a naval radio station, a naval hospital, and a coast guard station The historic ship *Constellation* is used for training purposes Newport suffered severely in the 1938 hurricane **8** Town (pop. 3,575), co seat of Cocke co., E Tenn , on the Pigeon river and E of Knoxville, in a farm and timber area Near by are the John Sevier Preserve and Great Smoky Mountains National Park **9** City (pop 4,902), co seat of Orleans co , N Vt , resort, trade center, and port of entry on Lake Memphremagog, settled 1793, chartered 1803, inc 1917 To the west lies Newport town (pop 1,064), which includes the village Newport Center The city has long been important as a gateway between Canada and the United States **10** Lumber town (pop 1,174), co seat of Pend Oreille co , NE Wash , on the Clark Fork at the Idaho border, settled c 1885, inc 1903

Newport Beach, resort city (1940 pop 4,438, 1948 special census pop 10,994), S Calif , SE of Long Beach and on landlocked Newport Bay, inc 1906

Newport News, city (pop 37,067), SE Va , one of the ports of HAMPTON ROADS, with a large harbor at the mouth of the James, settled 1611 and 1621 by Irish colonists, inc 1896 The importance of the city dates from 1880, when it was selected as the terminus of the Chesapeake & Ohio Railway In 1886 its great shipbuilding industry was begun Today it has one of the largest dry docks and one of the largest shipbuilding plants in the world and is a busy import and export center It is the seat of the state school for colored deaf and blind children The town has a World War museum, and near by is the Mariners Museum (1930)

New Prague (prāg), city (pop 1,645), SE Minn , SSW of Minneapolis, in a diversified farm region, settled by Bohemians, inc as a village 1877, as a city 1891

New Providence, borough (pop 2,374), NE N J , WSW of Newark, settled c 1720, called Turkey till 1778, inc. 1899 It is a center of horticulture.

New Providence see BAHAMA ISLANDS

Newquay (nū'kē), urban district (1941 pop 5,959, 1943 estimated pop 8,500), Cornwall, England It is a seaport and resort and exports kaolin and stone

New Red sandstone, name for the thick red layer of the TRIASSIC formation in Great Britain It does not have the threefold division of the Triassic in Germany It is many thousands of feet thick and is composed chiefly of red sandstones, clays, and conglomerate, the red color and the occurrence of workable quantities of salt and gypsum suggest markedly arid conditions at the time of deposition

New Richmond. **1** Village (pop 1,767), SW Ohio, on the Ohio river and SE of Cincinnati, founded 1816 Woolen yarns are made here Point Pleasant, to the south, is the birthplace of Ulysses S Grant **2** City (pop 2,388), W Wis , NE of St Paul, Minn , inc 1885

New River, rising in W North Carolina and flowing NE and N through SW Virginia into West Virginia, where at Gauley Bridge it joins the Gauley river to form the Kanawha The Bluestone Dam (2,062 ft long and 165 ft high), for flood control, built between 1940 and 1948, is near Hinton, W Va

New Roads, town (pop 2 255), parish seat of Pointe Coupee parish, S central La , near the Mississippi above Baton Rouge, on the shore of an oxbow lake. It is a cotton and fishing town

New Rochelle (rōshĕl'), city (pop 58,408), SE N Y , in Westchester co , on Long Island Sound and E of Mt Vernon, settled 1688 by Huguenots, inc as a village 1858, as a city 1899 Plumbing and heating supplies and surgical dressings are made here The harbor is a center of yachting and fishing The house where Thomas Paine lived is used by the Huguenot and Historical Association of New Rochelle, and a memorial (1925) to Paine contains a number of his effects The College of New Rochelle (Catholic, for women, 1904) is here

New Rockford, city (pop 2,017), co seat of Eddy co , E central N Dak , on the James river and NNW of Jamestown, in a dairy and poultry region, inc 1912

New Rocky Comfort, town (pop 1,007), SW Ark , S of De Queen Its post office is Foreman.

New Romney, Kent, England see ROMNEY

New Ross, urban district (pop 4,898), Co Wexford, Ireland, on the Barrow below the junction of the Nore, in a farming region Traditionally the town was founded by Strongbow's daughter, it was once fortified The suburb Rosborcon was the seat of a 13th-century abbey

Newry, urban district (pop. 12,746), mostly in Co Down, but extending into Co Armagh, Northern Ireland, on the Newry river and SW of Belfast It has canal connection with Carlingford Lough, the Bann river, and Lough Neagh It is a seaport with linen mills and tobacco processing and varied manufactures In the 12th cent. Maurice MacLoughlin, king of Ireland, founded an abbey here, around which the town grew; the abbey became in 1543 a collegiate church of secular priests and was later dissolved. The town's castle was taken by

Edward Bruce in the 14th cent The duke of Berwick burned part of Newry in his retreat before the forces of Schomberg Newry is the seat of the Roman Catholic bishop of Dromore

news agency, local, national, international, or technical agency which gathers and distributes news As early as the 1820s a news agency, the Association of Morning Newspapers, was organized in New York city for the purpose of gathering incoming news from Europe Other local news agencies sprang up, and by 1856 the General News Association—which included in its membership many important New York city papers—was organized Out of this agency the New York Associated Press, a cooperative news agency for the New York papers which sold copy to daily publications throughout the country, was established in the 1870s, and a rival organization, the United Press, was founded in 1882 Ten years later these organizations merged their interests, but the same year the Associated Press of Illinois was founded After the Associated Press of Illinois secured exclusive contracts for news exchange with the three major news agencies of Europe—Agence Havas of Paris (dating from 1835), the Reuter Telegram Company of London (dating from 1851 and known simply as Reuters), and the Continental Telegraphen Compagnie of Berlin (dating from the late 1830s and commonly called the Wolff Agency)—the United Press went under in 1897 In 1900 the Associated Press, desiring the right to restrict its membership, reincorporated in New York state In 1906 William Randolph Hearst founded the International News Service In 1907 the United Press Associations, almost universally called United Press though there was no connection with the earlier organization, became the news agency for the Scripps-Howard newspapers and sold its news to other papers These major American news agencies, the AP, the UP, and the INS, enlarged their facilities and their scope of operations throughout the years, but then treatment of news has tended toward uniformity For the gathering of news the agencies have depended on exchange agreements and on their own reporters, while the transmission of news to member publishers is done primarily by way of teletype While the news agencies in the United States are in no way linked with the government, most of the European news agencies are either controlled or subsidized by their governments In the USSR the central news agency, Tass, is an organ of the Communist party See Kent Cooper, *Barriers Down* (1942).

New Salem, former town, Menard co, central Ill, NW of Springfield and on the Sangamon river Lincoln's home was here from 1831 to 1837 The site is now a state park, the buildings which were here in Lincoln's day have been restored so that the town appears as it did then It was settled in 1828 and shortly thereafter had a population of about 100, but decline was rapid after 1839 as near-by Petersburg grew Among the old places restored are the Rutledge Tavern, Denton Offut's store, and the Lincoln-Berry store A small museum houses pioneer relics See T P Reep, *Lincoln at New Salem* (2d ed, 1927)

New Sarum, Wiltshire, England see SALISBURY

New School for Social Research, in New York city, nonsectarian, coeducational, chartered and opened 1919 for adult education The founders included Charles A Beard, John Dewey, James Harvey Robinson, and Thorstein Veblen The school has a graduate faculty of political and social science formerly known as the University in Exile, an institute of world affairs, schools of philosophy and liberal arts and politics, the Center of Near East Civilization, and a dramatic workshop Alvin S. Johnson was director from 1923 to 1945

New Sharon (shā'run, shăr'-), town (pop 1,214), SE Iowa, N of Oskaloosa, settled by Quakers

New Shoreham, RI see BLOCK ISLAND

New Siberian Islands, Rus *Novo-Sibirskiye Ostrova* (nô"vu sēbēr'skēu ŭstruva'), archipelago, area 11,000 sq mi, between the Laptev and East Siberian seas of the Arctic Ocean, belonging to the Yakut Autonomous SSR, RSFSR The central group of islands, also called the New Siberian Islands or Anjou Islands, has an area of 8,200 sq mi and includes Kotelny Island, Faddei Island, Novaya Sibir Island, and other smaller islands The sparsely settled New Siberian Islands, perpetually almost covered with ice and snow and with only a scanty tundra, were discovered (1773) by Lyakhov, a Russian merchant The archipelago is also considered to include the Lyakhov Islands, separated from the Anjou group by Sannikov Strait, as well as the De Long Islands Mammoth fossils have been found on the islands, which were often visited by Siberian fur and ivory hunters

New Smyrna Beach (smûr'nu), city (pop 4,402), NE Fla, S of Daytona Beach, at the southern end of Halifax River (a lagoon) It is a coast resort and fishing, shrimping, citrus-fruit-packing, and railroad center On the site of an Indian village called Caparaca, a Spanish Franciscan mission was established here in 1696, the ruins are extant In 1767 Andrew Turnbull, a Scottish doctor, recolonized the place with some 1,500 Minorcans, Greeks, and Italians, indigo was grown and shipped to England The colony was abandoned in 1776 and was not resettled until c 1803 There are ruins of an old fort of unknown origin and an Indian turtle mound made of shells

New South Wales, state (309,433 sq mi, pop 2,985,464), SE Australia It was in 1901 federated into the commonwealth Sydney is the capital The Pacific is on the east, Tasman Sea on the southeast, Victoria on the south, South Australia on the west, and Queensland on the north The area was first visited in 1770 by Capt James Cook, who proclaimed British sovereignty over the east coast of Australia Sydney, the first Australian settlement, founded in 1788 as a penal colony, became the capital of the original British colony which included Tasmania, South Australia, Victoria, Queensland, the Northern Territory, and New Zealand These territories were separated (1825–63) from New South Wales The Australian Capital Territory (site of Canberra, the federal capital) was ceded in 1911 to the commonwealth, the territory in the Jervis Bay area also being ceded in 1915 Being in the temperate zone, New South Wales has a generally favorable climate During part of the year there is snow on Mt Kosciusko (highest peak of Australia) in the Australian Alps The Murray, which forms the greater part of the southern border, and its principal tributaries (the Darling the Murrumbidgee with the tributary Lachlan) are important for extensive irrigation projects Since 1797, when the Merino sheep was introduced, wool has become an increasingly valuable export Wheat and dairy products are also important, and millions of tons of coal are mined annually The rich mineral resources include gold, iron, copper, silver, lead, and zinc There are a few opal mines in the west central area Tropical fruits and sugar cane are grown in the northeast Besides Sydney, the principal centers are Newcastle on Port Hunter, Lismore, Wollongong, and Broken Hill (chief center of silver-lead mining)

New Spain, Spanish viceroyalty in North America, created in 1535 under Antonio de MENDOZA From it the republic of Mexico is politically descended The territory to which the term was applied in colonial times varied greatly It first was used by Grijalva to designate the Yucatan peninsula (1518), Cortés applied it to his early conquest, and at one time it included generically practically all the Spanish possessions in North America Although New Spain early embraced Central America, this area soon came to be called the kingdom of Guatemala, and in 1549 a boundary was established between Guatemala and New Spain which made Guatemala practically independent The northern boundaries were very indefinite Not until 1670 did Spain recognize any counterclaims in North America In that year the Savannah river was made the boundary between the English colony of Georgia and Spanish Florida Florida and Louisiana (which was ceded to Spain by France in 1762 and remained Spanish until just before the LOUISIANA PURCHASE) were governed by the captaincy general of Havana and were not properly part of New Spain, although they were subject, as was Guatemala, to the viceroy of New Spain in matters of general policy and defense In Texas the boundary line varied with the efforts to extend Spanish influence eastward, and in New Mexico the area included Taos Although the Pacific coast was not occupied north of the peninsula of Lower California until the middle of the 18th cent, some of the coast had been explored much earlier Spanish retrogression began with the loss of Nootka (1790) and continued with the losses of Texas (1836) and Arizona, New Mexico, California, Colorado, Nevada, Utah, and part of Wyoming (1848–53) For the history of New Spain from 1535 to 1821, see MEXICO

newspaper, publication issued periodically, usually daily or weekly, to convey news It now frequently advocates opinions, often contains advertisements, and prints matters of public interest The earliest recorded effort to inform the public of current events was the Roman *Acta diurna*, instituted by Julius Caesar and posted daily in public places China's oldest newspaper, in Peking (Peiping), began in the 8th cent In the 15th cent, manuscript newssheets were issued in several German cities In 1556 the Venetian government posted the *Notizie scritte*, for which readers paid a small fee (*gazetta*) It became so popular that it was finally printed Early English journalism consisted chiefly in newsletters written by professional letter writers, of whom Thomas Archer and Nathaniel Butter were best known The first English publication that resembled the modern newspaper was Butter's *Weekly Newes*, begun in 1622, because of difficulties with the censor it ceased in 1641 The London *Gazette*, founded (1665) in Oxford, is still published as a court journal The first daily paper in England was the *Daily Courant* (1702) In the 18th cent many journals of opinion of high literary caliber were published—the *Review* (1704–13) of Daniel DEFOE, the *Examiner*, which Jonathan SWIFT edited (1710–11), and the *Tatler* (1709–11) and the *Spectator* (1711–12) of Joseph ADDISON and Richard STEELE John WILKES waged a successful battle for greater freedom for newspapers, and in the 19th cent English newspapers began to reach the masses (see COBBETT, WILLIAM, and HUNT, LEIGH) Of several present-day London papers which began in the 18th cent *The Times* is internationally known It was founded (1785) by John Walter, renamed (1788) *The Times*, and published many years by his descendants John T Delane edited *The Times* from 1841 to 1877 Other London newspapers are the *Daily Express*, the *Daily Graphic*, the *Daily Herald*, the *Daily Mirror*, the *Daily Telegraph and Morning Post*, the *Daily Worker*, the *News Chronicle*, and the *Star* Of English provincial newspapers the most famous is the Manchester *Guardian*, founded in 1821, internationally known as a journal of honesty and independence, it has included on its staff such men as C P Scott, C E Montague, George Saintsbury, and Laurence Housman The Yorkshire *Post* and the Glasgow *Herald* are also influential On the Continent, one of the earliest newspapers to be printed, *Aviso Relation oder Zeitung*, appeared in Germany in 1609 The *Nieuwe Tydingen* was published in Antwerp in 1616 The first French newspaper was the *Gazette*, later the *Gazette de France*, founded in 1631 French newspapers of today include the *Aube*, the *Aurore-France libre*, *Combat*, the *Figaro*, *France-Soir*, the *Humanité*, *Paris-Presse*, and the *Populaire* Prominent newspapers of contemporary Germany are the *Tagesspiegel* of Berlin, the *Welt* of Hamburg, *Rheinische Merkur* of Coblenz, and the *Frankfurter Rundschau* Other well-known European newspapers include the *Irish Independent* (Dublin), the *Popolo* (Rome), the *Osservatore Romano* (Vatican), and *Neue zuercher Zeitung* (Zurich) In the USSR, *Pravda* is the daily newspaper of the Russian Communist party American newspapers have had a shorter history than those of many European countries, but with more political freedom they developed far more quickly A single number of a newssheet, *Publick Occurrences*, was issued in Boston in 1690, but it was suppressed by royal authority In 1704 appeared John Campbell's Boston *News-Letter*, which endured until 1776 The next newspaper was the Boston *Gazette*, followed by an opposition paper, the *New England Courant* (1721), founded by James Franklin His brother, Benjamin Franklin, founded (1728) the *Pennsylvania Gazette* Other colonial papers were the *American Weekly Mercury*, Philadelphia, the New York *Gazette*, the New York *Weekly Journal*, and the *Maryland Gazette* The first American daily paper, the *Pennsylvania Packet and Daily Advertiser*, appeared in Philadelphia on Sept 21, 1784 In the *Independent Journal* of New York the famous Federalist essays first appeared Two opposing political organs were Alexander Hamilton's *Gazette of the United States*, edited by John Fenno, and Thomas Jefferson's *National Gazette*, edited by Philip FRENEAU The first New York daily newspaper was the *Minerva*, in 1793, with Noah Webster as its first editor, it later became the *Globe and Commercial Advertiser* and lasted into the 20th cent The New York *Evening Post* was established in 1801 and is the oldest American newspaper having a continuous daily publication, William Cullen BRYANT was long its editor The most famous organ of the abolitionists was William Lloyd Garrison's *Liberator* The Boston *Evening Transcript* was published daily for over a century from 1830 to 1941 Other American newspapers which have had long histories are the Springfield (Mass) *Republican* (1824) and the Boston *Herald* (1846) The New York *Sun* (1833) achieved national fame under Charles A DANA, the New York *Herald*, started (1835) by James Gordon BENNETT and continued by his son, was famous for its foreign news A Paris edition of the *Herald* was later established Horace GREELEY, perhaps the best-known figure in American journalism, was proprietor and editor of the New York *Tribune* from its founding in 1841 until 1872 The *Tribune*, a Whig and later a Republican organ, was very influential in the Civil War period The New York *Times* was founded (1851) by Henry J Raymond, and under the supervision of Adolph S OCHS it achieved world-wide coverage and audience, which it maintains in 1950 From 1883 to 1931 one of the most influential New York newspapers was the New York *World*, which attained importance after its purchase by Joseph PULITZER Other important American newspapers include the Providence *Journal*, the Baltimore *Sun*, the Washington *Post*, the Brooklyn *Eagle*, the Cleveland *Plain Dealer*, the St Louis *Post-Dispatch*, the Chicago *Tribune*, the Chicago *Sun-Times*, the Des Moines *Register*, the Kansas City *Star*, the Atlanta *Constitution*, the Los Angeles *Times*, the San Francisco *Chronicle*, the *Christian Science Monitor*, the Dallas *News*, the Philadelphia *Inquirer*, the Philadelphia *Bulletin*, the Richmond *News Leader*, the Denver *Post*, the New Orleans *Times-Picayune*, and the Louisville *Courier-Journal* There are many foreign-language papers, published mostly in urban areas of America, e g, the *Jewish Daily Forward*

in New York city and the *Deutsche Zeitung* in Milwaukee. A few trades publish newspapers (e g., *Variety*), and there are others devoted only to finance, such as the *Wall Street Journal*. Most of the larger universities issue newspapers for their students In recent years labor-union newspapers have increased in number Canadian newspapers include the Montreal *Gazette*, the Winnipeg *Free Press*, and the Toronto *Star* In the 20th cent there have been many newspaper consolidations in both England and America In England large newspaper chains were built up by Lord Northcliffe and Lord Beaverbrook One of the largest chains in the United States is the Scripps-Howard syndicate, which bought up papers in all parts of the country and by a consolidation brought into being (1950) the New York *World-Telegram and the Sun* Another vast chain is that controlled by William Randolph HEARST Frank A MUNSEY also made many consolidations Although the illustrated daily paper has been popular for many years in England, in the United States the smaller-sized tabloid paper, consisting largely of illustrations, is a fairly recent development While the great city newspapers are read all over the country, small towns and rural districts usually have local papers which may be daily or weekly and which are usually made up largely of syndicated matter with about one page of local news and editorials of local interest These local papers are frequently organs of a political party and often wield great influence The typical American newspaper has its most important foreign and domestic news on the front page, with that of first importance on the right-hand column The editorials are usually on one of the middle pages, followed by sports news and classified advertising Other features of the modern paper are obituary notices, dramatic criticism, book reviews, a woman's page, and often some of the features of the PERIODICAL Peculiar to the American newspaper is the comment on current events of the newspaper COLUMNIST The news collecting, writing, editing, printing, distribution, and financial management are a gigantic, elaborately organized industry The invention of the telegraph enormously facilitated the rapid gathering of news, and the great news agencies, such as the Reuters agency in England, the Havas agency in France, and the Associated Press in the United States, sell their services to newspapers or distribute news among their associate members (see NEWS AGENCY) The improvements in typesetting (e g , the LINOTYPE) and in PRINTING, especially the web press, have made possible the publication of huge editions at great speed Modern newspapers are supported mainly by their advertising, since they are sold for only a small fraction of the cost of production To what extent the editorial policy of a paper is affected by the interests of its advertisers has been a subject of frequent discussion Ethics of JOURNALISM in America supposedly preclude the coloring of the news columns, either by the political bias of the proprietor or by the interests of the advertisers The influence of newspapers on public thinking, while very important, has probably been lessened by such other agencies of mass communication as the radio and the moving picture For discussion of newspaper censorship, see PRESS, FREEDOM OF THE See W G Bleyer, *Main Currents in the History of American Journalism* (1927); A M Lee, *The Daily Newspaper in America* (1937), H B Hough, *Country Editor* (1940); F L Mott, *American Journalism* (1942), Ignaz Rothenberg, *The Newspaper* (1946), Francis Williams, *Press, Parliament and People* (1946), R E Wolseley and L R Campbell, *Exploring Journalism* (2d ed , 1949)

newsreel see MOVING PICTURES

Newstead Abbey (nū'stĭd, -stēd), Nottinghamshire, England, on the border of Sherwood Forest, founded in 1170 by Henry II in atonement for the murder of Thomas à Becket It was secularized and granted to Sir John Byron by Henry VIII The poet Byron succeeded to the estate in 1798, after his final departure from England (1816), he sold the property. His rooms are preserved as he left them

New Stone Age: see NEOLITHIC PERIOD

New Straitsville, village (pop 1,473), S central Ohio, S of New Lexington, in an extensive coal area, founded 1870 by a mining company, inc 1871 A mine fire, burning since 1884, was stopped from spreading when the Federal government built (1936–39) barrier tunnels.

New Style dates. see CALENDAR

New Sweden, Swedish colony (1638–55), on the Delaware river, including parts of present Pennsylvania, New Jersey, and Delaware. With the support of Axel Oxenstierna, Admiral Klas Fleming (who was a Finn), and Peter Minuit, the New Sweden Company was organized in Sweden in 1637 Two ships, the *Kalmar Nyckel* and the *Fogel Grip*, commanded by Minuit, reached the Delaware river in March, 1638 Minuit immediately bought land from the Indians and founded Fort Cristina (or Christina), where Wilmington now stands In 1643 TINICUM ISLAND was made the capital About half the colonists were Finns, since Finland was then part of Sweden Later governors of New Sweden were Johan Bjornsson PRINTZ (1643–53) and Johan Rising (1654–55). Peter STUYVESANT with Dutch soldiers more numerous than the population of New Sweden (c 300) took the little colony (1655) Swedish log houses—possibly the first in what became the American pattern—were built until the 18th cent , while several Swedish churches remain See Amandus Johnson, *The Swedish Settlements on the Delaware, 1638–1664* (1911); J H Wuorinen, *The Finns on the Delaware, 1638–1655* (1938)

newt, name of certain tailed amphibian animals smaller than the closely related salamander. The common spotted newt, called also pond newt and red eft, so often seen in woods especially after rain is found over the eastern half of the United States and in parts of the West and Canada During its two or three years on land it is a slender brick or orange-red creature, 1 to 2 in long, with a row of black-ringed vermilion spots along each side of the upper part Underneath it is paler and spotted with black In winter it hibernates under the leaves When mature it lives in the water but must rise to the surface for air During this stage it is about 3½ in long, olive green above and spotted as in the land stage and yellow underneath The eggs are laid in spring, singly, and are attached to water plants The gill-breathing greenish-brown larvae remain in the water for several months before emerging as the red, lung-breathing, terrestrial creatures

New Territories see HONG KONG

New Testament, the distinctively Christian portion of the BIBLE, consisting of 27 books of varying length dating from the earliest Christian period The works are, in the conventional order four biographies of Jesus called Gospels (see GOSPEL), namely, MATTHEW, MARK, LUKE, and JOHN, a history of apostolic missionary activity, the ACTS OF THE APOSTLES, 21 letters of apostolic times, called epistles, named for their addressee or, in the case of the last seven, for their author, ROMANS, 1 and 2 CORINTHIANS, GALATIANS, EPHESIANS, PHILIPPIANS, COLOSSIANS, 1 and 2 THESSALONIANS, 1 and 2 TIMOTHY, TITUS, PHILEMON, HEBREWS, JAMES, 1 and 2 PETER, 1, 2, and 3 JOHN, and JUDE, and finally a prophecy, the REVELATION or Apocalypse The books were not written in the same time or place, and each presents its peculiar problem of date, composition, and, in some cases, authorship The 27 books of the New Testament represent a portion only of PATRISTIC LITERATURE, and there are other gospels, epistles, narratives, and prophecies, especially among the PSEUDEPIGRAPHA The selection by the Church of these books as being alone of divine inspiration took place slowly for some books, but by the latter half of the 4th cent there was universal agreement among Christians on the present list There had never been doubt about most of the books, but seven (Hebrews, James, 2 Peter, 2 and 3 John, Jude, Revelation) were subject to discussion for a century or two Other books considered canonical by many but finally rejected were the epistles of St IGNATIUS and St CLEMENT and the Shepherd of HERMAS These books are genuine, but not accepted as inspired—canonicity is regarded in Christendom as a guarantee of divine inspiration, not as an authentication of a particular human authorship In the Reformation there was questioning of the New Testament canon, notably by Luther, who would reject especially James, because of its disagreement with the Lutheran tenet of justification by faith alone All major Christian churches use the same New Testament See E F Scott, *The Literature of the New Testament* (1932), Kirsopp Lake and Silva Lake, *An Introduction to the New Testament* (1937), Henry Schumacher, *Social Message of the New Testament* (1937)

New Thought, popular philosophical movement with religious implications which affirms "the creative power of constructive thinking." It grew out of the healing practices of P P Quimby and the "mental science" of W F Evans, a Swedenborgian minister From being primarily interested in the healing of disease, it developed into an intensely individualistic and optimistic philosophy of life and conduct The name New Thought was adopted in the 1890s to indicate this broader interest Annual national conventions were held from 1894, and in 1914 was formed the International New Thought Alliance, with branches in England, Australia, and elsewhere Composed of many smaller groups, such as Divine Science, UNITY (until 1922), Home of Truth, and others, the alliance is held together by one central teaching, namely that man is spirit or mind and that through the constructive use of his mind he can attain freedom, power, health, prosperity, and all good, through his thought he can mold his body as well as the circumstances of his life. This teaching was widely popularized by writers like Ella Wheeler Wilcox and O S Marden. Individual New Thought leaders, possessing complete freedom of speculation, have drawn heavily upon the writings of Ralph Waldo Emerson and have added ideas from the Vedanta philosophy and from every variety of idealistic, spiritualistic, pantheistic, cabalistic, and theosophical thought, as well as from Christianity, with frequent overtones of the mystical, occult, and miraculous, including such ancient beliefs as reincarnation and such modern theories as extrasensory perception Unlike CHRISTIAN SCIENCE, New Thought does not deny the existence of matter, matter is simply the expression of mind. Since man's mind is identical with divine mind or spirit, man partakes of the omniscience and omnipotence of God or the "Supreme One," who pervades the universe as life, intelligence, and energy and reaches his highest expression in man, to whom he reveals man's divinity It is only necessary for man to "recognize" or become conscious of the truth that God dwells within him and to obey the voice of this "Indwelling Presence" to obtain everything that his heart desires By prayer he can lift his conscious mind to come in touch with universal mind Followers of New Thought meet in numerous local "centers" or churches for instruction, prayer, and meditation See R W Trine, *In Tune with the Infinite* (1897), Thomas Troward, *Edinburgh Lectures on Mental Science* (1909), H W Dresser, *A History of the New Thought Movement* (1919), Emmet Fox, *The Sermon on the Mount* (1934)

Newton, Alfred, 1829–1907, English ornithologist and animal geographer, b Geneva He was the first (1866) to occupy the chair of zoology and comparative anatomy at Cambridge The Royal Society, London, later awarded him the Royal Medal He wrote *Zoology of Ancient Europe* (1862), *Ootheca Wolleyana* (1864), *Zoology* (1874), and *Dictionary of Birds* (1893–96) and compiled a list of the birds of Jamaica

Newton, Sir Charles Thomas, 1816–94, English archaeologist An assistant (1840–52) in the antiquities department of the British Museum, he entered (1852) the consular service with the object of exploring the coasts and islands of Asia Minor He made important discoveries at Cnidus and Didyma, near Miletus, and at Budrum he identified the site of Halicarnassus and recovered (1856–57) the fragments of the famous mausoleum He described his results in *A History of Discoveries at Halicarnassus* (with R P Pullan, 1862–63) and in *Travels and Discoveries in the Levant* (1865) As keeper (1861–85) of Greek and Roman antiquities at the British Museum, he secured noted collections of gems and sculptures He was Yates professor of classical archaeology (1880–87) at University College, London, and was knighted in 1887 He wrote *Essays on Art and Archaeology* (1880)

Newton, Gilbert Stuart, 1794–1835, English genre and portrait painter, b Halifax, N S , studied in Boston under his uncle, Gilbert Stuart, and later at the Royal Academy schools London He was greatly influenced by the 17th-century Dutch masters He was elected to the Royal Academy of Arts in 1832 His last two years were spent in a mental hospital Good examples of his art are *Yorick and the Grisette* and *The Window* (National Gall , London), *Portia and Bassanio* (Victoria and Albert Mus), *Deserted* (Metropolitan Mus), *The Dull Lecture* (N Y Public Library), *The Lute Players* (N Y Historical Society), and portraits of Washington Irving, Thomas Moore, and Walter Scott

Newton, Hubert Anson, 1830–96, American mathematician and astronomer, b Sherburne, N Y , grad Yale, 1850 He was professor of mathematics at Yale from 1855 His principal field in study and teaching was higher mathematics, but he is better known for his collection of statistics on comets and meteors and for his investigations of their laws and relations He was associate editor of the *American Journal of Science*. He was made an associate of the Royal Astronomical Society of London and foreign member of the Royal Philosophical Society of Edinburgh

Newton, Sir Isaac, 1642–1727, English physicist and philosopher He studied at Cambridge and was professor there from 1669 to 1701 Recognized as one of the greatest of scientists whose work profoundly influenced 18th-century thought, he made notable contributions to physics and to mathematics (especially calculus) In his experiments on light he was able to break up white light into the colors of the spectrum by means of a prism and to recombine the colors into white light. His interpretation of the nature of light combined elements of both the corpuscular theory and the wave theory. Newton was also the inventor of a reflecting telescope He is probably best known for his formulation of the law of GRAVITATION and of the laws of MOTION He represented his university in Parliament, held other official positions, and was president of the Royal Society from 1703. He is buried in Westminster Abbey For Newton's rings, see INTERFERENCE His chief writings are the *Philosophiae naturalis principia mathematica* (1687) and *Opticks* (1704) See memoir by Sir David Brewster (1855); biographies by C. D Broad (1927), Selig Brodetsky (1928), L. T. More (1934), and J. W. N. Sullivan (1938).

Newton, John, 1725–1807, English clergyman and hymn writer. Until 1755 his life was spent chiefly at sea. Then until 1760 he was surveyor of tides at

Liverpool, using his leisure for the study of Greek, Hebrew, and theology. After being ordained he became curate of Olney, Buckinghamshire, in 1764. When William COWPER made his home in the parish, friendship and literary sympathy between the two men resulted in their publishing jointly the *Olney Hymns* (1779 and later eds.). Among the best known of Newton's hymns are *How Sweet the Name of Jesus Sounds* and *Glorious Things of Thee Are Spoken*. From 1779 he was rector of St. Mary Woolnoth, London.

Newton, John, 1823–95, American brigadier general and engineer, b. Norfolk, Va., grad. West Point, 1842. He served with distinction in the Civil War and later was in charge of improving the navigability of the East River. After serving as commissioner of public works for New York city (1887–88), he became president of the Panama RR. in 1888.

Newton. **1** City (pop. 2,347), co. seat of Jasper co., SE Ill., on the Embarras river and SE of Mattoon, in a farm area, settled 1828, inc. 1831. Its manufactures include brooms, handles, boxes, and baskets. **2** City (pop. 10,462), co. seat of Jasper co., central Iowa, ENE of Des Moines, settled 1846, inc. 1857. The washing-machine industry here is important. **3** City (pop. 11,048), co. seat of Harvey co., S. central Kansas, N. of Wichita, in a wheat area, founded 1871, inc. 1872. It boomed as a cattle town (1871–73) when it was the railhead for the Chisholm Trail, it is an important railroad division point. In the early 1870s German Mennonites from Russia brought seed for what became the first hard winter (Turkey red) wheat in Kansas. Bethel College (Mennonite, coeducational, 1887) is north of the town. **4** City (pop. 69,873), E. Mass., on the Charles and W. of Boston, settled before 1640, inc. as a town 1688, as a city 1873. It comprises a large number of beautiful residential villages and several industrial villages. Radio supplies and textile and paper products are made. Horace Mann, Nathaniel Hawthorne, Mary Baker Eddy, and Samuel Francis Smith lived here. Andover Newton Theological School is at Newton Centre. **5** Town (pop. 1,800), E. central Miss., W. of Meridian, in a farm area. Clarke Memorial College (junior) is here. Near by are a U.S. school for Indians and a district junior college. **6** Town (pop. 5,533), co. seat of Sussex co., NW N.J., settled c.1760, inc. 1864. It is a dairy center. The Little Flower Monastery (Benedictine) is near here. **7** Town (pop. 5,407), co. seat of Catawba co., W. central N.C., NW of Charlotte, settled in the mid-18th cent. Its manufactures include textiles and lumber products.

Newton, Mount. see SPITSBERGEN.

Newton Abbot, urban district (1931 pop. 15,010; 1943 estimated pop. 14,640), Devonshire, England, at the junction of the Lemon with the Teign estuary. It is the market town of a farm area and has tanneries. Charles I stayed at Ford House, a Tudor mansion, and William III was proclaimed king there.

Newton Falls, village (pop. 3,120), NE Ohio, on the Mahoning and NW of Youngstown. It has steel mills.

Newton in Makerfield, urban district (1931 pop. 20,152, 1943 estimated pop. 20,560), Lancashire, England, W. of Manchester. It includes Newton-le-Willows and Earlestown and has locomotive works, paper mills, glassworks, and plants which make explosives.

New Toronto (tərŏn'tō), town (pop. 9,504), S. Ont., on Lake Ontario. It is an industrial and residential suburb W. of Toronto. Tires are made here.

Newtown. **1** Town (pop. 4,023), SW Conn., hilly, bordered on the northeast by the Housatonic, settled c.1708, inc. 1711. Its products include plastic moldings. **2** Village (pop. 1,146), SW Ohio, a suburb of Cincinnati. **3** Borough (pop. 2,009), SE Pa., NE of Philadelphia, settled 1684, laid out 1733, inc. 1838. Washington wrote a victory message to Congress here on Dec. 27, 1776.

Newtown and Llanllwchaiarn (lăn-thlōōk'ärn), urban district (pop. 5,154), Montgomeryshire, Wales, on the Severn. Newtown is a livestock and wool market, with tanneries. It is the birthplace of Robert Owen.

Newtownards (nūtŭn-ärdz'), urban district (pop. 10,546), Co. Down, Northern Ireland, near the head of Strangford Lough and E. of Belfast. Walter de Burgh founded a Dominican monastery here in 1244. The ruins of the abbey of Movilla, founded by St. Finian, are near by.

New Ulm (ŭlm), city (pop. 8,743), co. seat of Brown co., S. Minn., on the Minnesota and NW of Mankato, founded 1854 by Germans, inc. as a village 1857, as a city 1876. It is a manufacturing and farm trade center. It harbored many refugees, defended by C. E. FLANDRAU, in the Sioux outbreak of 1862. Cottonwood State Park is near.

Newville, borough (pop. 1,758), S. Pa., SW of Carlisle, laid out 1794, inc. 1817. Clothing and canned goods are produced here.

New Waterford, town (pop. 9,302), on NE Cape Breton Island, N.S., NE of Sydney. It is chiefly a mining center.

New Westminster, city (pop. 21,967), SW British Columbia, on the Fraser and just ESE of Vancouver; founded 1859 as Queensborough. It was the capital of British Columbia until Victoria was made capital after the union of British Columbia and Vancouver Island. It is a year-round port, with an excellent harbor which is the base of the Fraser river fishing fleet and a shipping point for grain, lumber, minerals, and canned goods. Among the city's industries are salmon, fruit, and vegetable canneries, foundries, oil refineries; paper, lumber, and flour mills, and meat-packing plants. Columbia and St. Louis colleges are here, as are Anglican and Roman Catholic cathedrals.

New Wilmington, borough (pop. 1,018), W. Pa., N. of New Castle, inc. 1863. It is the seat of Westminster College (United Presbyterian, coeducational, 1852).

New Windsor, Berkshire, England. see WINDSOR.

New Year's Day, observed generally as a festival. In the Gregorian calendar it is the first of January. In the Christian Church the Feast of the Circumcision occurs on that date. The Jewish New Year is the first day of Tishri, which corresponds roughly to September. The Chinese New Year (between Jan. 10 and Feb. 19 of the Gregorian calendar) is the most important festival of the year. In the Western world New Year's Eve is celebrated in merriment and, theoretically at least, in the meeting of old friends.

New York, state (47,576 sq. mi.; 1940 pop. 13,479,142, 1949 estimated pop. 14,392,000), E United States, one of the Middle Atlantic states and one of the Thirteen Colonies. ALBANY is the capital, New York city is the metropolis. It is irregular in shape and is bounded on the north by the Canadian provinces of Quebec and Ontario, the Saint Lawrence river and Lake Ontario marking the Ontario border. In the northwest the Niagara river with the magnificently scenic Niagara Falls marks the border with Ontario on the narrow strip between Lake Ontario and Lake Erie. Lake Erie itself and a tiny portion of Pennsylvania make the rest of the western border. Pennsylvania and New Jersey are to the south except where the state thrusts to the Atlantic at New York city and Long Island. To the east New York borders on Connecticut, Massachusetts, and Vermont. Lake Champlain, stretching past the Canadian border into Canada, is part of the boundary with Vermont. It is also the chief northern feature of the great valley that dominates all E New York, with the Hudson river and its tributary from the west, the Mohawk. Lake Champlain, neighboring Lake George, and the Hudson are all noted for beauty and have many resorts. To the west are the wild and rugged ADIRONDACK MOUNTAINS with their northern woods and such sports and health centers as Lake Placid and Saranac Lake. The rest of the northeastern section is hilly, sloping gradually to the valleys of the St. Lawrence and Lake Ontario. The Mohawk marks the "water-level" route to the Great Lakes and the West. Most of the southern part of the state is on the Allegheny Plateau, which rises in the southeast to the CATSKILL MOUNTAINS. The western extension of the state to Lakes Ontario and Erie is hilly land, cupping many smaller lakes, notably Lake Oneida and the celebrated FINGER LAKES. This region, too, has its resorts as well as its large industrial cities, notably BUFFALO on Lake Erie, ROCHESTER, and smaller JAMESTOWN, while farther to the east lie SYRACUSE and BINGHAMTON. The western section is drained by the Allegheny and rivers of the Susquehanna and Delaware systems. The lower Mohawk and the Hudson also have notable industrial cities, SCHENECTADY, Albany, and New York are prominent, but most of the river towns have smaller factories and handle manufactured goods as well as the products of the rich soil. Except in the mountain regions, the areas between the cities are rich agriculturally. The Great Lakes region has apple orchards and vineyards, and other areas yield diverse crops, especially grains, truck, hay, and potatoes (grown in great quantity on E. Long Island). The farmers of New York constitute an important element of the population of the state, making the backbone of conservative "upstate" as opposed to metropolitan New York city and, to a lesser degree, the other industrial cities. The state has some mineral resources (natural gas, oil, lead, zinc, salt, limestone, gypsum, and cement) but most of the great industries depend on importation of raw materials. With the intensive manufacturing development goes the development of transport; there is a complex system of highways (which never seem sufficient to the weekend traveler) and railroads. The rivers also carry much freight, though their importance has sunk somewhat, and the canal system of the Barge Canal is still of great value, though it is not of the prime importance that it boasted in the days of the Erie Canal. Industrial products show the whole range of modern manufacture, mostly in finished goods, from heavy machines to notions, with many specialties such as wearing apparel, textiles, paper, electrical equipment (notably Schenectady), and optical instruments and cameras (Rochester). The state was first approached from two directions, westward from the sea and southward from Canada. Giovanni da VERRAZANO is said to have visited the great harbor of New York Bay, but little is known of his claims. Much later, in 1609, Samuel de CHAMPLAIN went down the lake now bearing his name and Henry HUDSON in the service of the Dutch went up the Hudson nearly to Albany. The French from Canada continued to penetrate the north and west of the state, and valiant missionaries such as St. Isaac JOGUES and the other JESUIT MARTYRS OF NORTH AMERICA tried to win the Indians to Christianity in the 17th cent. But the French, who had allied themselves with the Huron Indians, met the uncompromising hostility of the IROQUOIS CONFEDERACY which dominated all W. New York, the Canadians, therefore, remained only a threat through the colonial period to the settlements that spread up the Hudson. The Dutch early claimed the Hudson region, and the DUTCH WEST INDIA COMPANY (chartered in 1621, organized in 1624) planted their colony of NEW NETHERLAND, with its chief settlements on Manhattan (purchased according to legend for trinkets worth 24 dollars) and Albany. To forward slow colonization the Dutch established the PATROON system in 1629, and thus first set up the landholding aristocracy that was to be the hallmark of colonial New York. The little colony throve none too well under its governors, who included Peter MINUIT, Wouter VAN TWILLER, and Willem KIEFT. Minuit, in some disgust, went over to Swedish service, and the colony of NEW SWEDEN was viewed by the Dutch as an intrusion. The last and most able of the Dutch administrators, Peter STUYVESANT, captured New Sweden and made it Dutch in 1655. Stuyvesant also reorganized the insecure little colony of New Amsterdam, making himself very unpopular by his high-handed ways as he did so. He was unable to meet the threat of the English, who had been penetrating Long Island and the southeastern part of New York ever since Lion GARDINER came in 1639. The English, claiming the whole region on the basis of the explorations of John CABOT, made good their claim in the Second Dutch War. In 1664 an English fleet sailed into the harbor of New Amsterdam (now New York city) and forced Stuyvesant to capitulate. New Netherland then became the colony of New York, which was granted by King Charles II to his brother, the duke of York (later James II). Except for brief recapture (1673–74) by the Dutch, it was to remain English to the American Revolution. Richard NICOLLS was the first English administrator, and transition from Dutch rule was made peacefully, with the Dutch settlers sharing in the limited self-government that was established under the Duke's Laws. After the parlous early days of the colony the popular governor Thomas DONGAN in his administration (1683–88) established New York on a firm basis and also set about establishing the alliance of the English with the Iroquois, which was to play so important a part in New York history. The attempt to combine New York and New Jersey with New England under the rule of Sir Edmund ANDROS in 1686 was a failure, and that imperious governor managed to turn almost all the colonists against him. Soon afterward the rebellious Jacob LEISLER was successful in gaining brief control of the government and putting the popular, antiaristocratic party in power (1689–90). He was put down and executed, but the rift widened between the great landholders (of whom Frederick PHILIPSE and Stephen VAN CORTLANDT were typical) and the small farmers and the mechanics, who had the increasingly powerful merchant group as their ally. The threat of the French was continuous, and New York was involved in the FRENCH AND INDIAN WARS. The friendship of Sir William JOHNSON with the Iroquois gave the British much help in the warfare and also opened a large part of central New York to settlement. The newcomers were mostly from the British Isles, though a number of Germans settled about Newburgh, most of them later moving on to Pennsylvania. Raids and counterraids of the wars and sporadic Indian massacres, however, hindered growth, and much of W. New York was still wilderness in the early 19th cent. The colonial assembly showed itself increasingly aware of its own powers exercised by control of the purse, and the trial of John Peter ZENGER established freedom of the press. The little colony, with its busy shipping, spreading farms, and small fishing fleets, was beginning to find a unity of its own, divorced from that of England. The first college was founded in New York in 1754—King's College (now COLUMBIA UNIVERSITY), and colonial society was firmly based. Self-assertiveness grew when the war with the French ended, and there was considerable objection to the restrictive commercial laws, the Navigation Acts were flouted by smuggling, which was not too much frowned upon by the merchants. When the Stamp Act was passed, New York was a leader in the opposition and the STAMP ACT CONGRESS met in New York. Against the Tory policies of Cadwallader COLDEN there was considerable complaint, and unrest grew. When trouble flared into the American Revolution, Yorkers were divided. Many, especially among the great landholders, were Loyalists. To draw a strict parallel between the social classes and the patriotic senti-

ments of the people would be misleading, for the situation was confused The first major military action in New York state was the capture of TICONDEROGA by Ethan Allen and his Green Mountain Boys and Benedict Arnold CROWN POINT was also taken In 1776, however, George Washington was unable to hold lower New York against the British under William Howe and lost the battle of Long Island (see LONG ISLAND, BATTLE OF) and the succeeding actions at Harlem Heights and White Plains The British invested New York city and held it to the war's end The state had, however, declared independence and operated with Kingston as its capital, George Clinton as its first governor, and John Jay as its first chief justice New York, was in 1777 the key in the over-all British campaign plan, which was directed toward taking the entire state and thus cutting New England from the South This failed finally in the battles near the present resort of Saratoga Springs (see SARATOGA CAMPAIGN), considered generally as the decisive action of the war The British alliance with the Iroquois was now, however, turned against the patriots Sir William JOHNSON, John BUTLER and his Rangers, and the Indians kept the frontier in turmoil The most striking incident was the wanton massacre in Cherry Valley (1778), but John SULLIVAN and James CLINTON led a successful punitive expedition in 1779 and quieted W New York For the rest of the war there was more or less of a stalemate with the British in New York city, the patriots holding most of the rest of the state, and Westchester co disputed ground The attempt of Benedict Arnold to betray West Point to the British was a failure After the war speculation in western lands (some newly acquired by quieting Massachusetts claims) and development rose to dizzying heights The HOLLAND LAND COMPANY, for example, took over the vast holdings of Robert MORRIS The eastern boundary was finally settled after long wrangles and violence by admission of VERMONT as a state in 1790 The influence of Alexander HAMILTON was paramount in bringing New York to accept the new Constitution of the United States, though other leaders, mostly from the landed aristocracy (such as John JAY and Gouverneur MORRIS) were also powerful New York city was briefly (1789–91) the capital of the new nation and was also the state capital, holding that position until 1797, when Albany became the capital Political dissension between the Federalists and the Jeffersonians was particularly keen in New York state, and Aaron BURR had much to do with swinging the state to Jefferson George Clinton and his nephew, De Witt CLINTON, were prominent in public affairs, and the old landed families, such as the DE LANCEY family and the LIVINGSTON family, retained much of their old power, while commerce (somewhat slowed by the Embargo Act of 1807) and industry, especially textile milling, were beginning to mark the turn away from the old order It was on the Hudson that Robert Fulton demonstrated his steamboat In the War of 1812 W New York saw action in 1813–14, with the British capture and American recapture of Fort NIAGARA and particularly with the brilliant naval victory of Thomas MACDONOUGH over the British at Plattsburg (Lake Champlain) The state continued its development, and that development was hastened and multiplied by the building of the Erie Canal, which made New York the chief route for westward-going immigrants and for produce coming in from the West Cities along the canal blossomed into importance—Buffalo, Utica, Syracuse, Schenectady, and Rome Albany gained, and New York city became the financial center of the country A new constitution had been drawn up in 1821, with broadened suffrage, and slavery was abolished in 1827 The trend to democracy and industrialization continued Politics were largely controlled from the '20s to the '40s by the ALBANY REGENCY, with Martin VAN BUREN as its chief figure, though that control was challenged by Thurlow WEED, W H SEWARD, and the ANTI-MASONIC PARTY The rise of the slavery issue broke the Democratic party, already hard hit by the Panic of 1837, which caused the ousting of William L MARCY Prominent among the early abolitionists were the Tappan brothers, Arthur and Lewis Seward, who succeeded Marcy as governor, was a strong antislavery man The frontier had been developing to a large extent with immigrants from New England, and in Seward's administration antirent rebellions were directed against the last of the manorial system Into New York city and to some extent out of it into the rest of the state came the great wave of immigrants, notably Irish and German. The new state constitution of 1846 broadened the suffrage further. New York sent another man to the presidency in Millard FILLMORE, and the immense political significance of New York was recognized The split of the Democrats over the slavery issue into the BARNBURNERS and the HUNKERS helped to pave the way for New York's swing to the Republicans and Abraham Lincoln in the fateful election of 1860 Despite the draft riots in New York city and the activities of Peace Democrats, New York state was almost solidly for the Union and contributed much to the Union cause in the Civil War The war made New York rich Industries producing wearing apparel, metalware, and liquor as well as plants processing sugar, meat, and other foods were well developed. Already some intellectual leadership had been attained, and wealth tended to increase the number of libraries and to center periodical and book publication more and more in New York city The newspapers had considerable national influence, notably the *Tribune* under the guidance of Horace Greeley Railroad building, well begun in the 1830s had made rapid strides, and Cornelius VANDERBILT consolidated the NEW YORK CENTRAL RAILROAD system Wall St in New York city was undisputed financial center of the nation The Empire State was justifying its nickname Political corruption was rampant in the rich state, and the activities of the Tweed Ring headed by William Marcy TWEED brought the Democrats into some disrepute, and Samuel J TILDEN won a national reputation for prosecuting it The Democrats in New York city, however, soon recovered from the blow, and the city organization Tammany Hall soon had its sway again The Republican party also had its bosses, notably Roscoe CONKLING and Thomas Collier PLATT, and the split between Democratic New York city and Republican upstate widened Chester A ARTHUR and Grover CLEVELAND went from New York to the White House The impouring of immigrants from Ireland, Italy, and the countries of Eastern Europe brought workers for the old industries which were expanding and for new ones, including the electrical and chemical, which were being built Labor conditions grew worse, but were soon challenged by the growth of unions, who fought against the sweatshops (particularly notorious in New York city) Labor legislation and social insurance plans were inaugurated and gradually advanced The violent critics of conditions, called the muckrakers, were particularly vociferous in New York in late 19th and early 20th cent It was from this fury of reform that Theodore ROOSEVELT came to the presidency, where he carried out some of the reforms on a national level A political clean-up campaign also brought Charles Evans HUGHES forward The Democrats came back to state power in 1912, and thereafter New York seesawed from one party to the other The reform programs continued to gain ground, however, and after the First World War—in which the state contributed 10 percent of the nation's fighting forces the administration of Alfred E SMITH (1918 28) saw reorganization of the state budget, institution of the state income tax in 1919 and many social welfare and labor laws These were continued under the governorship of Franklin D ROOSEVELT and Herbert H LEHMAN and were expanded to a full-scale program In 1942 the election of Thomas E DEWEY brought the Republican party back to power Social legislation was further extended and such reforms as the law against racial discrimination were adopted Dewey had the immense task of coordinating state activities with national efforts in the Second World War, which strained the great resources of the state to the utmost In 1948 the state legislature approved the creation of a state university (see NEW YORK, STATE UNIVERSITY OF) Among the other many colleges of the state are Alfred Univ, Bard College, Brooklyn College, Canisius College, the College of the City of New York, Colgate Univ, the College of the Senecas, Columbia Univ, Cooper Union, Cornell Univ, Fordham Univ, Hamilton College, Hunter College, Long Island Univ, the New York State College for Teachers, New York Univ, Niagara Univ, Rensselaer Polytechnic Institute, St John's Univ, Syracuse Univ, Union College, the Univ of Buffalo, the Univ of Rochester, Vassar College, and Wells College See J R Brodhead, *History of the State of New York* (2 vols, 1871–74), D S Alexander, *A Political History of the State of New York* (3 vols, 1906–9), A C Flick, ed, *History of the State of New York* (10 vols, 1933–37), Edward Hungerford, *Pathway of Empire* (1935), Carl Carmer, *Listen for a Lonesome Drum* (1936), Dixon Ryan Fox, *Yankees and Yonkers* (1940), E L Raesly, *Portrait of New Netherland* (1945), Federal Writers' Project, *New York a Guide to the Empire State* (revised printing, 1946), Warren Moscow, *Politics in New York State* (1948), B M Wanger and E. B Oagley, *Exploring New York State* (1948)

New York, city (area with water surface 365 sq mi, 1940 pop 7,454,995, 1948 estimated pop 8,067,000), SE N Y, largest city in the United States, on NEW YORK BAY and at the mouth of the HUDSON river here called the North River It comprises five boroughs, each coextensive with a county MANHATTAN (New York co), the heart of the city, an island, the BRONX (Bronx co), on the mainland, NE of Manhattan and separated from it by the HARLEM RIVER, QUEENS (Queens co), on W Long Island, E of Manhattan and bordering the EAST RIVER, BROOKLYN (Kings co), on SW Long Island, on the East River adjoining Queens and on New York Bay, and Richmond (Richmond co), on STATEN ISLAND, SW of Manhattan and separated from it by Upper New York Bay. The metropolitan area (1947 pop 12,684,411) includes parts of SE New York and NE New Jersey, although possessing many industries, the area is also residential, the home of thousands of Manhattan workers. The history of the five boroughs began with settlements by the Dutch, although the region had earlier known the presence of explorers and traders (see NEW YORK, state) In 1625 a settlement was made on the southern tip of Manhattan, and in 1626 Peter MINUIT of the DUTCH WEST INDIA COMPANY bought the island from the Indians for trinkets worth $24 He built up the settlement as New Amsterdam, capital of the colony Under the Dutch, schools were opened and the Dutch Reformed Church was established In 1664 the English, engaged in a war with Holland (see DUTCH WARS) and dating claim to the region from the explorations of John Cabot in the 15th cent, seized the colony for the duke of York, for whom it was then named Peter STUYVESANT was supplanted by Richard NICOLLS The Dutch returned to power in New York in 1673–74 A liberal charter granted in 1686 under Thomas DONGAN was in effect for many years, but transition to English rule was not accomplished without dissension New York was in 1689–91 the scene of a rebellion, led by Jacob LEISLER, one of the causes of which was autocratic British government in the colonies Nevertheless, New York grew, its expanding commerce drew settlers from many nations It hailed its first newspaper, the New York *Gazette*, in 1725, 10 years later the trial of John Peter ZENGER, editor of the New York *Weekly Journal*, helped to establish the principle of a free press Race riots, in which over a hundred Negroes were tortured or killed, horrified responsible citizens in 1741 New York was active in the colonial opposition to British measures after the trouble in 1765 over the STAMP ACT, and as the clouds of revolt gathered, the New York Sons of Liberty forced (1775) the British soldiers and Governor Tryon from the city Though many New Yorkers were Loyalists, Continental forces commanded by Washington defended (1776) the city After the patriot defeat in the battle of Long Island (see LONG ISLAND, BATTLE OF), Washington gave up New York, and the British occupied the city until 1781 The old provincial capital remained the state capital until 1797 and was briefly (1789–90) the first U S capital under the Constitution, and President Washington was inaugurated at Federal Hall, where the Subtreasury Building now stands New development was marked by such events as the beginning of the stock exchange and the foundation of the Bank of New York under Alexander HAMILTON in the city which was the largest in the United States by 1790 with over 33,000 inhabitants and had grown to 60,515 in 1800 The opening of the Erie Canal in 1825 was of tremendous importance to New York, ushering in another era of commercial expansion The New York and Harlem RR was built in 1832 The fire of 1835, one of a series of disastrous conflagrations, destroyed most of the old Dutch town but it brought about new building laws and the construction of the Croton water system By 1840 New York had become the shipbuilding center and leading port of the nation During the Civil War the sympathies of New Yorkers largely lay with the Union, the DRAFT RIOTS of 1863 were demonstrations against the provision which permitted moneyed conscripts to buy exemption Extensive immigration before the Civil War had created such congested areas as the notorious Five Points of the lower East Side After 1865, with the acceleration of industrial development, another tide of settlers from abroad began to roll in, to reach its crest in the late 19th and early 20th cent Europeans settled in distinct ethnic neighborhoods which, although lending variety and color to the city's pattern, were crowded slums TAMMANY and the Tweed Ring (see TWEED, WILLIAM MARCY) dominated the political life, exposure came in 1871 In 1898 New York took one of the most significant steps in its history it adopted a new charter, which transformed it into a metropolis of five boroughs, with a hugely increased population Pressing problems of transportation and building space faced the enlarged city The Flatiron Building (1902) foreshadowed the skyscrapers of later years that give Manhattan its famous skyline, the first subway (1904) was the forerunner of the present far-flung system of rapid transit New York in the 20th cent has been served by such mayors as Seth Low, William J Gaynor, John Purroy Mitchel, John F. Hylan, James J Walker (whose resignation was brought about by the Seabury investigation), Fiorello LaGuardia, and William O'Dwyer The need for regional planning resulted in the zoning legislation of 1916 and the formation of such bodies as the PORT OF NEW YORK AUTHORITY (1921), the Regional Plan Association (1929), the Municipal Housing Authority (1934), and the City Planning Commission (1938). New housing for low-income residents is changing the aspect of areas in each of the boroughs New bridges, tunnels, and highways have been added to the interborough and interstate transportation systems. The city's many bridges

include the George Washington, Henry Hudson, Triborough, Bronx-Whitestone, and Brooklyn bridges The Holland and Lincoln tunnels under the Hudson and the Queens-Midtown Tunnel under the East River carry vehicular traffic, a tunnel between Brooklyn and the Battery was started in 1940 Municipal airfields are LaGUARDIA FIELD and NEW YORK INTERNATIONAL AIRPORT Islands in the East River include Welfare Island (with municipal welfare institutions), Rikers Island (site of the city penitentiary, 1935), Randalls Island (with a stadium and other recreational facilities), and Wards Island (with a large sewage-disposal plant) In New York Bay are BEDLOE'S ISLAND, with the Statue of Liberty (see LIBERTY, STATUE OF), ELLIS ISLAND, and GOVERNORS ISLAND The NEW YORK WORLD'S FAIR was held in 1939 and 1940 In 1946 a site in Manhattan (overlooking the East River) was selected for the permanent headquarters of the United Nations Financial center and largest port of the world, with a magnificent harbor and a water front of over 500 mi, New York is a leading center of manufacture and commerce, among its principal industries are clothing, textiles, printing and publishing, machine-shop and metal products, and foods With its vast array of cultural and educational resources, famous shops and restaurants, places of entertainment, its striking architecture, colorful nationality neighborhoods, and rich historic background, New York is almost unparalleled The College of the City of New York, comprised of four colleges, is part of the public education system, there are many private colleges, universities, and special schools (See also MANHATTAN) The NEW YORK PUBLIC LIBRARY is the largest of the hundreds of libraries and special book collections Of the city's numerous museums and scientific collections, the METROPOLITAN MUSEUM OF ART, the AMERICAN MUSEUM OF NATURAL HISTORY (with the Hayden Planetarium), and the BROOKLYN INSTITUTE OF ARTS AND SCIENCES are among the best known (See also BRONX, THE, BROOKLYN, QUEENS) Among the numerous landmarks are Fraunces Tavern (built 1719), where Washington took farewell of his officers after the Revolution, and the Gracie Mansion (built 1760), now the official residence of the mayor See Mrs Schuyler Van Rensselaer, *History of the City of New York in the Seventeenth Century* (1909), A E Peterson and G W Edwards, *New York as an Eighteenth Century Municipality* (1917), I N Phelps Stokes, *The Iconography of Manhattan Island* (6 vols, 1915–28), S I Pomerantz, *New York an American City, 1783–1803* (1938), Federal Writers' Project, *New York City Guide* (1939), Allan Nevins and J A Krout, eds, *The Greater City New York, 1898–1918* (1948), Cleveland Rodgers and R B Rankin, *New York the World's Capital City* (1948), E B White, *Here Is New York* (1949)

New York, College of the City of, a system organized in 1929, including BROOKLYN COLLEGE, CITY COLLEGE, HUNTER COLLEGE, and QUEENS COLLEGE

New York, State University of. In accordance with recommendations made by a state committee, headed by Owen D Young, the New York legislature approved (1948) the foundation of a state university made up of units in different parts of the state, but administered by a single board of 15 trustees In 1949 Alvin Christian Eurich was appointed president, 72 scholarships in medicine and 28 in dentistry were voted, and the two medical units of the university (Long Island College of Medicine, at Brooklyn, and the College of Medicine of Syracuse Univ) had been selected By 1950 the university had taken form it had taken over the 11 teachers colleges of the state, two four-year liberal arts colleges (Champlain College at Plattsburg and Triple Cities College at Endicott), two two-year community colleges (at Middletown and at Jamestown), as well as a number of technical institutes and seven four-year professional schools, including the colleges of agriculture, home economics, labor relations, and veterinary science at Cornell Univ, the college of ceramics at Alfred Univ, the college of forestry at Syracuse Univ, and the maritime academy at Fort Schuyler in the Bronx

New York, University of the State of, unique organization which now oversees all educational activities in the state, chartered in 1784 Its board of regents (1894), of which the state commissioner of education is president, head the state education department and act as a legislative body to determine policy, but they are subordinate to the legislature The regents grant educational charters, professional and vocational licenses, and honorary degrees

New York Bay, arm of the Atlantic, enclosed by the shores of NE New Jersey, Staten Island, Manhattan island, and Brooklyn (on the western tip of Long Island) and opening on the southeast to the Atlantic between Sandy Hook, N J, and Rockaway Point, N Y. It is divided into Upper Bay and Lower Bay, which are connected by the Narrows, a strait c.2 mi. long and 1 mi wide, separating Staten Island from Brooklyn. The Upper Bay, c 6 mi in diameter, is joined to Newark Bay (to the west) by KILL VAN KULL and to Long Island Sound by the East River It has extensive port facilities on the New Jersey, Manhattan, and Brooklyn shores (see PORT OF NEW YORK AUTHORITY), its islands include ELLIS ISLAND, GOVERNORS ISLAND, and BEDLOE'S ISLAND (site of the Statue of Liberty) The larger Lower Bay, including Raritan Bay at the west and Gravesend Bay at the northeast, is joined to Newark Bay by Arthur Kill Ambrose Channel, Federally maintained, crosses Sandy Hook bar at the bay's entrance and extends north to the piers of New York harbor, it is called Anchorage Channel in the Upper Bay, where it is 2,000 ft wide Buttermilk Channel, between Governors Island and Brooklyn, leads into the East River U S Forts Hamilton and Wadsworth overlook the Narrows, Fort Jay is on Governors Island

New York Central Railroad In 1853 many small railroads of New York state -e g, the Mohawk and Hudson RR, on which the first locomotive of the state, the *DeWitt Clinton* was run (1831) were consolidated into the New York Central Railroad Company in order to connect Albany with Buffalo Cornelius VANDERBILT became (1867) president of this railroad and through a series of mergers he formed the New York Central and Hudson River Railroad Company, which connected New York with Buffalo by rail Vanderbilt continued to expand his railroad empire through financial maneuvers, and in the 20th cent, New York Central trains reached Chicago, Cleveland, Indianapolis, and St Louis After the Lake Shore and Michigan Southern RR and many smaller railroads had been bought (1914), the railroad was renamed the New York Central Railroad Company It had trunk lines in six states Other large railroads were added later, and by 1930 the New York Central was one of the leading railroads connecting the cities of the Eastern seaboard with those of the Midwest See Edward Hungerford, *Men and Iron* (1938)

New York International Airport, municipal airport, 4,900 acres, in S Queens borough of New York city, at Idlewild on Jamaica Bay, opened 1948 It is administered by the Port of New York Authority and has accommodations for seaplanes and landplanes

New York Mills, village (pop 3,628), central N Y, near Utica, inc 1922

New York, New Haven, and Hartford Railroad, incorporated (1872) as a consolidation of the New York and New Haven RR (opened in 1849) with the Hartford and New Haven RR (completed in 1839) When J P Morgan gained control of this railroad system, Charles S Mellen became (1903) president of the New York, New Haven, and Hartford Railroad Company and vastly expanded the railroad's holdings Not only was the trackage extended throughout New England, but the New Haven came to own intercity electric railroads, steamship lines, and various public utilities The New York, New Haven, and Hartford was confronted with financial catastrophe in 1913, and the methods by which Mellen had expanded the railroad were made open to public question in 1914 by the Interstate Commerce Commission The New Haven struggled along and went bankrupt in 1934, but later under new management recovered and prospered after 1940 See H L Staples and A T Mason, *The Fall of a Railroad Empire* (1947)

New York Philharmonic-Symphony Orchestra. The New York Philharmonic Society was formed and gave its first concert in 1842 Its first president was Ureli Corelli Hill, a violinist who also was one of the leaders of the orchestra The first permanent conductor, Carl Bergman, was appointed in 1865 Other important conductors were Leopold Damrosch (1877–78), Theodore Thomas (1880–91), Anton Seidl (1891–98), Walter Damrosch (1902–3), Gustav Mahler (1909–11) and Joseph Stransky (1911–23) In 1921, at the suggestion of Willem Mengelberg, its conductor, the National Symphony Orchestra was absorbed by the Philharmonic, and Mengelberg was one of the conductors of the latter until 1930 In 1878 Leopold Damrosch had founded the New York Symphony Orchestra, which he conducted until his death in 1885 He was succeeded by his son Walter Damrosch In 1928 the New York Symphony and the New York Philharmonic merged, becoming the New York Philharmonic-Symphony Orchestra, of which Walter Damrosch was one of the conductors for one season Arturo Toscanini had become a conductor of the Philharmonic in 1926 and remained to conduct the Philharmonic-Symphony until 1936 Following him were John Barbirolli (1937–42) and Artur Rodzinski (1943–47) Dimitri Mitropoulos and Leopold Stokowski shared the conductorship for the season 1949–50, Mitropoulos becoming permanent conductor in 1950 Most of the world's distinguished conductors have at one time or another been guest conductors of the New York Philharmonic or the Philharmonic-Symphony. See John Erskine, *The Philharmonic-Symphony Society of New York Its First Hundred Years* (1943)

New York Public Library, free library supported by private endowments and gifts and by New York city, chartered in 1895. A bequest (1848) of John Jacob Astor left $400,000 for a reference library, which was chartered in 1849, constructed on Lafayette Place, and opened to the public in 1854 J G COGSWELL, superintendent (1848–61), compiled the first catalogue The Lenox Library (chartered 1870, opened 1876) on Fifth Ave at 70th St was the gift of James Lenox, a noted book collector, it, too, was strictly a reference library The will of S J Tilden established (1886) the Tilden Trust (chartered 1887) for the maintenance of a free reading room After extended litigation, the sum of $200,000 was made available in 1892 An act consolidating the Astor and Lenox libraries and the Tilden Trust was passed in 1895 J S BILLINGS was appointed first director of the library In 1897 New York city agreed to build and equip a central building on the site of the Croton Reservoir on Fifth Ave at 42d St and to provide for its maintenance and repair The building, designed by Thomas Hastings and J M Carrère, was completed in 1911 A circulation department was formed by the absorption (1901) of the 11 branches of the New York Free Circulating Library founded (1878) by teachers of a Grace Church sewing class and chartered in 1880 In 1901 Andrew Carnegie gave more than $5,000,000 for buildings for circulation branches, provided the city would give the land and guarantee maintenance From this fund 39 Carnegie branches have been built The circulating department also absorbed several independently endowed circulating libraries including the Harlem Library, the Washington Heights Library, the Aguilar Free Library (Jewish, four branches), and the Cathedral Library (Roman Catholic, five branches) The department now has 65 branches in the boroughs of Manhattan, the Bronx, and Richmond, Queens and Brooklyn have independent systems The central building houses the reference collection of over 3,250,000 volumes, the executive offices for both reference and circulation departments, an art gallery, a library for the blind, and circulation branches for adults and for children The library has especially fine collections on Americana, art, economics, folklore, music, Negro history and literature, New York city, and Semitic languages It was the recipient of the Berg, Howe, and Young collections of English and American literature (1939–41) and of the George Arents collection on tobacco (1944) See history by H M Lydenberg (1923)

New York School of Social Work, founded 1898 by the Charity Organization Society, New York city, since 1940 a part of Columbia Univ (though maintaining a separate corporate existence) It began as a six-week summer course, became in 1904 the New York School of Philanthropy with a one-year program (lengthened to two years in 1912), and changed its name in 1918 Since 1939 it has been administered by the Community Service Society of New York It is a post-graduate professional school giving an M S degree In 1949 the school was given a rent-free lease on the Andrew Carnegie house and grounds on upper Fifth Ave

New York State Barge Canal, 525 mi long, traversing New York state and connecting the Great Lakes with the Hudson river and Lake Champlain The canal, a modification and improvement of the old ERIE CANAL, was authorized (1903) by public vote, was begun in 1905, and was completed in 1918 Its main sections are the Erie Canal, extending from Troy to Tonawanda, the Champlain Canal, joining the Erie Canal at Waterford and extending (via the Hudson as far as Fort Edward) to Whitehall on Lake Champlain, the Oswego Canal, connecting the Erie Canal with Oswego on Lake Ontario, and the Cayuga and Seneca Canal, joining the Erie Canal with Cayuga and Seneca lakes The 12-foot-deep Barge Canal, with 310-foot electrically operated locks and accommodating 2,000-ton vessels, cost the state over $175,000,000 to build, it is toll free Its total cargo traffic for 1947 was nearly 4,000,000 tons

New York State College of Forestry, see SYRACUSE UNIVERSITY

New York University, in New York city, private, nonsectarian, mainly coeducational, chartered 1831, opened 1832 as the Univ of the City of New York, renamed 1896 It expanded much under the administration of Henry M MACCRACKEN It now has colleges of dentistry, engineering (with a Guggenheim school of aeronautics), liberal arts and science (Washington Square and University Heights), and medicine, schools of commerce, accounts, and finance (with journalism), education, law, nursing, and retailing, graduate courses including business administration, public service, and a fine arts institute The evening and graduate classes are large The medical college absorbed in 1898 the Bellevue Hospital Medical College Land was purchased in 1946 for an enlarged medical center There are psychological clinics, a modern art museum, service and research bureaus, and a university press The HALL OF FAME is on the University Heights campus in the Bronx See T. F. Jones, ed, *New York University* (1933).

New York World's Fair, 1939–40, opened at Flushing Meadows, Long Island, on April 30, 1939, and closed Oct 31, reopened on May 25, 1940, and closed on Oct. 27 The 1,216-acre site, reclaimed from a tidal swamp, was dedicated to "The World

of Tomorrow" and was dominated by the theme center the 700-foot Trylon and the Perisphere, 200 ft in diameter The site of the fair became Flushing Meadow Park, here the United Nations General Assembly set up temporary headquarters in 1946.

New Zealand (nē'lănd) British dominion (103,416 sq mi, pop 1,702,298) S Pacific, 1,200 mi SE of Australia The capital is WELLINGTON New Zealand comprises NORTH ISLAND and SOUTH ISLAND (the two principal islands), STEWART ISLAND, and the CHATHAM ISLANDS North Island is known for its active volcanic mountains and its hot springs On South Island, the massive Southern Alps, containing Mt Cook (highest peak of New Zealand), extend almost the entire length of the island, and in the southwest are many beautiful fjords. The largest river (the Waikato) and the largest lake (Taupo) are both on North Island New Zealand has varied and abundant flora and fauna The native flora include kauri pine, giant tree ferns, rata trees (*Metrosideros robusta*), and, on South Island, edelweiss and other alpine flora The largest areas of virgin forest are in the south and north extremities of South Island Among the native fauna are the kiwi, the albatross, native parrots, the tuatara (survivor of the prehistoric order of reptiles, *Rhynchocephalia*), and poisonous spiders, there are no land snakes Large oyster beds are found in Foveaux Strait between Stewart Island and South Island Extensive areas of New Zealand have been set aside as national parks, the most impressive being Tongariro, Tasman, and Fiordland parks Over 90 percent of the MAORIS, Polynesian natives of New Zealand, live on North Island, largely in the hot-springs district The principal cities are AUCKLAND (the largest), Wellington, CHRISTCHURCH, DUNEDIN, and INVERCARGILL The Univ of New Zealand with headquarters at Wellington comprises four university colleges at the major cities Auckland is the principal port of the dominion, the principal exports are dairy products, meat, and wool Other important products include wheat, fruits, and kauri gum Some coal and gold are mined, there are small deposits of mercury, manganese ore, wolfram, sulphur, asbestos, tin, platinum, and phosphates The dominion is divided into nine provincial districts, Auckland, Hawke's Bay, Taranaki, Wellington, Nelson, Westland, Marlborough, Canterbury, and Otago These districts, which represent the old provinces (abolished in 1875), are used for census purposes Small outlying islands belonging to New Zealand are Auckland Islands, Campbell Island, Antipodes, Three Kings Islands, Bounty Islands, Snares Island, and Solander Island Dependencies are the Kermadec Islands, Cook Islands, Tokelau, Niue, and Ross Dependency Western Samoa is under New Zealand trusteeship, Nauru is under control held jointly by New Zealand, Great Britain, and Australia New Zealand was discovered in 1642 by the Dutch navigator, A J Tasman It was visited in 1769 by Capt James Cook, and the first missionary arrived in 1814 In 1840 the colony became a dependency of New South Wales, but in the following year it was made a separate British colony In 1907 its status was elevated to that of dominion The period between 1854 and 1864 was a bloody one, with a series of unsuccessful attempts to subdue the hostile Maori natives By the Treaty of Waitangi (1840) the Maoris were guaranteed full possession of their land in exchange for permission to admit British settlers Social welfare laws have been notable New Zealand was the first to adopt (1898) noncontributory old-age pensions and to establish (1907) a national infant welfare system The Social Security Act of 1938 provided greater old-age benefits, widows' pensions, family-benefit payments, care of orphans, minimum-wage levels, a 40-hour week, and unemployment and health insurance The most startling innovation was the program for socialized medicine (1941) In the Second World War, New Zealand declared war on Germany in Sept 1939, and on Japan in Dec, 1941 The administration is vested in a governor general (representing the British sovereign) and a Parliament, consisting of the House of Representatives and the Legislative Council See J B Condliffe, *New Zealand in the Making* (1930), *Cambridge History of the British Empire*, Vol VII, Part II (1933), J B Condliffe and W T G Airey, *Short History of New Zealand* (1935); J C Beaglehole, *New Zealand* (1936) and *The Discovery of New Zealand* (1939), Horace Belshaw, ed, *New Zealand* (1947)

New Zealand literature. The home of the newest colonial branch of English literature, New Zealand has produced only a few writers known outside her own islands among them are Katherine MANSFIELD, short-story writer, Hector Bolitho, biographer; Eileen Duggan, Catholic poet, Kenneth Sisam, scholar; "G B Lancaster," (born in Tasmania), historical novelist; and Ngaio Marsh, writer of detective fiction. From such 19th-century writers as Alfred DOMETT and Samuel BUTLER to present-day students of Maori culture and of New Zealand government, authors from outside New Zealand have found fascinating subject matter there See E H McCormick, *Letters and Art in New Zealand* (1940), G H Scholefield, *Dictionary of New Zealand Biography* (1940), short histories of New Zealand literature by Alan Mulgan (1943) and J C Reid (1946)

Nexo, Martin Andersen. see ANDERSEN NEXO.

Ney, Elisabeth or **Elisabet** (nī), 1833–1907, German-American sculptor, b Münster, Germany After studying sculpture at Munich and Berlin, she traveled widely and executed busts of King George V of Hanover, Garibaldi, and Bismarck In 1863 she married Edmund Duncan Montgomery, and seven years later she left for America In 1873 Montgomery purchased the plantation "Liendo" near Hempstead, Texas, where his wife lived for two decades She removed (1892) to Austin, Texas, and there made statues of Stephen F Austin, Samuel Houston, and other prominent Texans See biography by J I Fortune and Jean Burton (1943), Vernon Loggins, *Two Romantics and Their Ideal Life* (1946)

Ney, Michel (mēshĕl' nā'), 1769–1815, marshal of France Called "the bravest of the brave" by Napoleon I, Ney, a cooper's son from Saarlouis, rapidly rose to glory in the French Revolution His greatest feat was his defense of the rear in the retreat from Moscow in 1812 Created duke of Elchingen and prince of the Moskowa by Napoleon, Ney was raised to the peerage (1814) by Louis XVIII, whom he supported after Napoleon's abdication On Napoleon's return from Elba, Ney promised the king that he would bring Napoleon to Paris in a cage, but instead he joined forces with Napoleon and commanded the Old Guard at Waterloo He was condemned for treason by the house of peers and shot, despite the duke of Wellington's intervention See Henri Welschinger, *Le Maréchal Ney* (1893) A theory that Ney escaped execution and lived in North Carolina till 1846 is set forth in LeGette Blythe, *Marshal Ney a Dual Life* (1937)

Nezhin (nyĕ'zhĭn), city (pop 37,990), N Ukraine An agricultural trading center known since the 11th cent, it was also a cultural center of the Ukraine in the 18th cent

Neziah (nēzī'ə), family of Nethinim returned from exile Ezra 2 54, Neh 7 56

Nezib (nĕ'zĭb) [Heb, =garrison], city, SW Palestine, c 10 mi NW of Hebron Joshua 15 43

Nez Percé Indians (nā' pûrsā', nĕz' pûrs') [Fr, =pierced nose], tribe of North American Indians, also called the Sahaptin, of the Shahaptin linguistic stock The Nez Percé were given this name by the French presumably because the Indians wore nose pendants, but this custom does not seem to have been widespread among them They were a typical tribe of the Plateau area, they fished for salmon and gathered camas, cowish, and other roots After the introduction (c 1700) of the horse they adopted many Plains area traits, including buffalo hunts In 1805, when visited by Lewis and Clark, they occupied a large region in W Idaho, NE Oregon, and SE Washington They then numbered some 6,000 The Nez Percé ceded (1855) a large part of their territory to the United States The gold rushes in the '60s and '70s, however, caused trouble with the whites, and a treaty of cession was fraudulently extracted from part of the tribe This led to the uprising under Chief JOSEPH in 1877 There are a few Nez Percé on the Colville reservation in Washington but the majority are on a reservation in Idaho Today they number some 1,500 See Kate McBeth, *The Nez Percés since Lewis and Clark* (1908)

Ngami, Lake (ung-gä'mē, ung-ä'mē), N Bechuanaland When discovered by David Livingstone in 1849, it was an inland sea, but since that time it has shrunk to being a reedy marsh, which receives the Okavango from the west

Ni, chemical symbol of the element NICKEL.

Niagara, Ont see NIAGARA-ON-THE-LAKE

Niagara (nīă'grə, -gərə), village (pop 2,266), NE Wis, at falls of the Menominee and NE of Rhinelander, in 1914 Paper products are made

Niagara, river, c 34 mi long, issuing from Lake Erie between Buffalo, N Y, and Fort Erie, Ont. It flows north, forming the international line, around Grand Island (American) and over NIAGARA FALLS between the two cities of Niagara Falls to Lake Ontario The upper section is navigable for c 20 mi to a series of rapids above the great falls, in its last 7 mi the river is again navigable, from Lewiston, N Y, to Lake Ontario. The New York State Barge Canal enters the river at Tonawanda, N Y, the Welland Canal, on the Ontario side, is a lake-freighter route around the falls Many bridges cross the Niagara river, notably Peace Bridge (1927), bridges linking Grand Island with both shores (1935), and Rainbow Bridge (1941) below the falls.

Niagara, Fort, post on the east side of the Niagara river. The spot was a strategic one for the fur trade, and the French came here early. In 1679 La Salle erected a blockhouse on the river, and in 1687 another log fort was built. A stone fort was erected in 1726–26 and was rebuilt in 1756. This was captured (1759) in the last of the French and Indian Wars by a British force under Sir William Johnson. It was a British stronghold in the American Revolution and was surrendered to the United States only in 1796 after Jay's Treaty In the War of 1812 it was again taken by the British and was held until 1815. The fort remained a military post until 1946

Niagara Falls, city (pop 20,589), S Ont, on the Niagara river opposite Niagara Falls, N Y, at the west end of the railroad and highway bridges which cross the gorge below the falls It was formerly called Clifton It is a port of entry and an important industrial city, the home of Canadian factories for many well-known U S firms, electric power is supplied by the falls Between the city and the falls and along the gorge is beautiful Queen Victoria Park

Niagara Falls, city (pop 78,029), W N Y, on the Niagara at the falls and NW of Buffalo, settled after 1800, inc as a city 1892, when it united with Suspension Bridge village Power from the falls is widely distributed in the state, and at the city it supplies many plants Aircraft, metal goods, chemicals, abrasives, cereals, and paper are produced The New York State Niagara Reservation (1885) comprises Goat Island and other islands in the river and Prospect Park and other areas along the river Niagara Falls Museum, moved here from the Canadian city, is one of the oldest in the country and has numerous exhibits The city is a port of entry, several bridges cross the river to Canada Catering to tourists is one of the city's oldest occupations Near by is Niagara Univ (Catholic, partly coeducational, 1856)

Niagara Falls, in the Niagara river, W N Y and S Ont, one of the most famous spectacles in North America and an important source of hydroelectric power The falls are on the international line, between the cities Niagara Falls, N Y, and Niagara Falls, Ont Goat Island splits the cataract into the American Falls (c 165 ft high and c 1,000 ft wide) and the Canadian, or Horseshoe, Falls (c 155 ft high and c 2,500 ft wide) Behind the American Falls is a natural chamber made by action of the water and known as the Cave of the Winds A narrow gorge, with the spectacular Whirlpool Rapids, has been formed below the falls by the gradual recession (now lessening) of the crest Here is Rainbow Bridge (1941) between the United States and Canada, replacing the span destroyed by ice in 1938 The two governments control the appearance of the surrounding area, much of which has been included in parks since 1885, colored lights illuminate the falls at night International agreements control the diversion of water for power, weirs divert part of the flow above the deeper Canadian Falls to supplement the shallower American Falls The earliest written description of the falls is that of Louis HENNEPIN (in *Nouvelle Découverte*, 1697), who was with the expedition of La Salle in 1678 Historical and natural history relating to the region is in the Niagara Falls Museum in the city of Niagara Falls, N Y

Niagara-on-the-Lake or **Niagara**, town (pop 1,541), S Ont, on Lake Ontario at the mouth of the Niagara and E of St Catharines It was settled (1780) by Loyalists, and in 1792 SIMCOE established here the capital of Upper Canada, renaming the town Newark The legislature met here until 1796 Fort George, built to defend the settlement, was taken in 1813 by the Americans, but retaken in the same year The town is usually called Niagara-on-the-Lake to distinguish it from the Canadian and U S cities of Niagara Falls

Niamey (nyämā'), town, capital of Niger, French West Africa, a small port on the Niger river Peanuts, hides, and skins are exported

Nias (nē'äs), volcanic island (1,569 sq mi, pop 187,190), Indonesia, in the Indian Ocean off W Sumatra. It is subject to violent earthquakes Native handicraft is highly developed

Nibelungen, Niebelungen (both. nē'bəlŏng"ən), or **Nibelungs**, in Germanic myth and literature, an evil family possessing a magic hoard of gold. The hoard is accursed The **Nibelungenlied** (-lēt") [Ger, =song of the Nibelungen] is a long Middle High German epic composed by an Austrian or south German poet c 1160 It enshrines many pagan legends and traditions, but it is quite patently the work of a Christian courtly civilization Many scholars believe that it represents, in its present form, a redaction of earlier poetic materials. Its action takes place at Worms, capital of Burgundy, and at Etzel's court The warrior SIEGFRIED, having obtained the Nibelung hoard, marries KRIEMHILD and procures for her brother, King Gunther, the Icelandic Brunhild Brunhild contrives Siegfried's death at the hands of Hagen, who takes the treasure and buries it in the Rhine The rest of the poem is a grim account of how Kriemhild avenged her husband's murder She marries Etzel (Attila the Hun) and has a child by him Lulled into security, her brother's court accepts her invitation and visits her. The poem ends in a general slaughter and holocaust, leaving only Etzel and a few others alive. The Nibelungenlied is full of stylistic flaws, but its delineations of character are admirable, especially in the persons of Kriemhild, Siegfried, and Hagen. There are

many English translations, e g., by A. G. Foster-Barham (1887) and by Alice Horton (1898). **Der Ring des Nibelungen** (dĕr rĭng dĕs nē'bŭlŏng"ŭn) [Ger.,=the ring of the Nibelung] is an operatic tetralogy by Richard Wagner, comprising the four operas *Das Rheingold*, *Die Walküre*, *Siegfried*, and *Die Götterdämmerung*. The last two were produced in Bayreuth, in 1876, when the entire cycle had its première. The legends of which Wagner made use are largely taken from Icelandic literature, especially from the VOLSUNGASAGA, but the composer has also introduced elements from the *Nibelungenlied*. See S. H. Hamer, *The Story of the Ring* (1933), Gertrude Henderson, *The Ring of the Nibelung* (new ed., 1939).

Nibhaz (nĭb'hăz), deity worshiped in Samaria by the captive Avites. 2 Kings 17 31.

Nibshan (nĭb'shăn), unidentified desert place, S Palestine. Joshua 15 62.

Nicaea (nĭsē'ŭ), city of Bithynia, N Asia Minor, built by Antigonus I on the site of an older city and renamed Nicaea by Lysimachus for his wife. It flourished under the Romans and was the scene of the ecumenical council called by Constantine, in A.D. 325, a council held in 787 sanctioned the devotional use of images. The city, captured by the Turks in 1078 and by the Crusaders in 1097, passed finally to the Turks in 1330. It is sometimes called Nice (nī'sē, nēs).

Nicaea, empire of, 1204–61. The Fourth Crusade resulted (1204) in the breakup of the Byzantine Empire and the establishment of a Latin Empire (see CONSTANTINOPLE, LATIN EMPIRE OF) by the Crusaders. The Crusaders' sway did not, however, extend over the whole Byzantine Empire, where several Greek successor states, among them the empire of Nicaea, sprang up (see also EPIRUS, DESPOTAT OF, and TREBIZOND, EMPIRE OF). The empire of Nicaea was founded by THEODORE I (Theodore Lascaris) in NW Asia Minor, with Nicaea as its capital. It was destined to play the decisive part in the reunion of the Byzantine Empire. Theodore I and his successors of the LASCARIS family expanded their domains, defeated their neighbors to the south, the Seljuk Turks, and in alliance with IVAN II of Bulgaria weakened their chief rivals, the despots of Epirus, and successfully warred against the Latins. MICHAEL VIII (Michael Palaeologus), who usurped the throne of Nicaea in 1259, captured Constantinople from the Latins and restored the Byzantine Empire (1261).

Nicaea, First Council of, 325, the first ecumenical council, convened by Constantine the Great to solve the problems raised by ARIANISM. It has been said that 318 attended, but a more likely number is 225, including every Eastern bishop of importance, four Western bishops (among them HOSIUS of Córdoba, president of the council), and two papal legates. The chief figures at the council were ARIUS and his opponent, ATHANASIUS. The council adopted as a test of faith a formula based on a simple baptismal creed presented by Eusebius of Caesarea, this was not, however, the misnamed Nicene Creed (see CREED). The formula included the word *homoousion* [consubstantial], used concerning the Son and the Father. The word, suggested by Hosius, became the touchstone of orthodoxy and the bugbear of Arianism, for it established the divinity and the equality of the Son in the Trinity. The creed was accepted by all the bishops except two, who were banished along with Arius to Illyricum. The council ruled on other questions as well, attempting to standardize the date of Easter, undertaking to reform the clergy, and granting patriarchal authority to the bishop of Alexandria. The First Council of Nicaea was significant as the model and the original of ecumenical councils. The test it adopted provided a universal statement of faith in place of the earlier and varying baptismal formulas. In calling the council, however, Constantine had foreshadowed the caesaropapism of later emperors, he was more concerned with civil order than with religious truth.

Nicaea, Second Council of, 787, the seventh ecumenical council, convened by Empress IRENE. Against ICONOCLASM, the council declared that images ought to be venerated (not worshiped) and ordered them restored in churches. Practically the only Western delegates were the papal legates, but popes have confirmed the conciliar canons. See E. J. Martin, *A History of the Iconoclastic Controversy* (1930).

Nicanor (nĭkā'nôr) [Gr.,=conqueror], one of the seven deacons. Acts 6.5.

Nicaragua (nĭkurā'gwŭ) [Span.,=water of Nicarao], republic (57,145 sq. mi., 1946 estimated pop. 1,121,904), Central America. The capital is MANAGUA. The country is bounded on the north and northwest by Honduras, on the east by the Caribbean, on the south by Costa Rica, and on the southwest by the Pacific. There are three main geographic areas. The northwestern highlands produce cattle and gold (which sometimes surpasses coffee as a source of revenue). On the Caribbean the MOSQUITO COAST, populated chiefly by Jamaican Negroes and the remnants of the Mosquito Indians, once produced valuable hardwoods and bananas, exported through BLUEFIELDS, but the forests have been partially denuded and banana production has been seriously curtailed by leaf blight. It is in the third region, a narrow volcanic belt extending southwest from the border of Honduras to Costa Rica and squeezed between the Pacific and the lakes—Lake Managua and Lake Nicaragua—that the productive wealth and the population (almost entirely mestizo) are concentrated. From CORINTO are shipped most agricultural exports—coffee, cotton, and sugar. The fertile soil produces subsistence foodstuffs. Nicaragua's foreign commerce is in value one of the smallest in Latin America, partially because of geographical drawbacks, but primarily because of the country's turbulent political history. The nation has been torn by civil strife and has been subject to foreign intervention. About one third of the population lives in urban centers, leaving the hinterland undeveloped. The country probably takes its name from Nicarao, an Indian cacique defeated in 1522 by Gil GONZÁLEZ DE ÁVILA. In 1524 Francisco FERNANDEZ DE CÓRDOBA founded LEÓN and GRANADA. León became the political and intellectual capital, Granada the stronghold of the aristocracy. After gaining independence from Spain (1821), Nicaragua was briefly part of the empire of Agustín de Iturbide and then (1823–38) a member of the CENTRAL AMERICAN FEDERATION. After the dissolution of the federation came a brief interim of Liberal government, which ended in 1844. The Liberals and the Conservatives, León and Granada, were locked in conflict, and the founding (1855) of Managua as a compromise capital did not end the trouble. British influence had been established on the east coast in the 17th cent., and in 1848 British seizure of SAN JUAN DEL NORTE opened a period of conflict over the control of the Mosquito Coast and the BAY ISLANDS. The United States was interested in a transisthmian canal, and that interest was heightened by the discovery of gold in California. In 1851 Cornelius VANDERBILT opened a transisthmian route for the gold seekers. The CLAYTON-BULWER TREATY (1850) settled some of the issues between Great Britain and the United States. Nicaragua remained, however, in a state of internal warfare that reached a peak with the temporary triumph (1855–57) of the filibuster, William WALKER. After his defeat there was a long period of quiescence under Conservative control until the Liberal leader, José Santos ZELAYA, became president in 1894. He instituted a vigorous dictatorship, set about reforms, and took over the Mosquito Coast. The United States was hostile to him and helped to keep him from suppressing a revolt and to bring about his resignation in 1909. A harsh struggle brought confusion. In 1910 a group of U.S. bankers (the Dawson mission) drew up a plan to stabilize Nicaraguan finances, but the plan was not adopted. In 1912, at the request of the provisional president, Adolfo Díaz, U.S. marines were landed. The Bryan-Chamorro Treaty, giving the United States an option on a route for the NICARAGUA CANAL, was ratified in 1916, but the fight of the Liberals against U.S. influence continued in almost constant guerrilla warfare. American occupation was ended in 1925 but resumed in 1926. Henry L. Stimson succeeded in getting most factions to adhere (1927) to an agreement concerning the elections, and some measure of order was restored, though Augusto César SANDINO continued the guerrilla warfare. The U.S. marines were withdrawn in 1933. Three years later Anastasio SOMOZA, heading an army junta, emerged as the new strong man in Nicaragua and later consolidated his power as president. Elections were held in 1947, but after less than a month in office the new president, Leonidas Argüello, was ousted by Somoza. The regime aroused much criticism among liberal groups in other Latin American countries. The prolonged political strife slowed down modernization of Nicaragua, but the western section is supplied with railroads and roads. The INTER-AMERICAN HIGHWAY has opened part of the northwestern highlands. For the most part the central and eastern sections are still poorly supplied with communications. See W. O. Scroggs, *Filibusters and Financiers* (1916), D. G. Munro, *Five Republics of Central America* (1918), I. J. Cox, *Nicaragua and the United States, 1909–1927* (World Peace Foundation Pamphlets, 1927), H. N. Denny, *Dollars for Bullets* (1929), Ralph Hancock, *The Rainbow Republics* (1947).

Nicaragua, Lake, area 3,089 sq. mi., SW Nicaragua, the largest between the Great Lakes and Peru. Once a part of the ocean, it was formed when the land rose. Marine life (e.g., sharks and tuna) seems to have adapted itself gradually to fresh water. There are several small volcanoes (some active) rising above the surface along the western shore. Commerce is considerable. The lake, 110 ft. above sea level and 12 to 84 ft. deep, forms a vital part of the proposed NICARAGUA CANAL.

Nicaragua Canal, proposed waterway between the Atlantic and the Pacific. It would be 172.8 mi. long and would generally follow the SAN JUAN river, then go through Lake Nicaragua near the southern shore and across the narrow isthmus of RIVAS. First proposed by Henry Clay in 1826, the route was an important factor in negotiation of the CLAYTON-BULWER TREATY (1850). In later times the route has been considered as an adjunct to the PANAMA CANAL, it would shorten the water distance between New York and San Francisco by nearly 500 mi. Under the Bryan-Chamorro Treaty (1916), the United States paid Nicaragua $3,000,000 for an option in perpetuity and free of taxation, including 99-year leases to the CORN ISLANDS and a site for a naval base on the Gulf of FONSECA. Costa Rica protested that Costa Rican rights to the San Juan river had been infringed, and Salvador maintained that the naval base affected both Salvador and Honduras. Both protests were upheld by the Central American Court of Justice, which had been created by the Washington Conference of 1907 under the auspices of the United States and Mexico. The court rulings were ignored by Nicaragua and the United States. The action, bitterly criticized by Latin Americans and others as an example of American imperialism, led to the dissolution of the court.

Niccoli, Niccolò de' (nĕk-kôlō' dā nĕk'kōlē), 1363–1437, Italian humanist of Florence. He was a scholar, learned in classical literature, and a collator of ancient manuscripts. Many of them he copied. One of the most distinguished of the group of scholars attached to Cosimo de' Medici, Niccolò made a center at his own house for the world of literature and art in Florence. Concerning literary matters his word was authority among them. His collection of Greek and Latin manuscripts was the beginning of the Laurentian Library of Florence.

Niccolini, Giovanni Battista (jōvän'nē bät-tē'stä nĕk-kôlē'nē), 1782–1861, Italian dramatic poet. His dramas, mainly historical, include *Antonio Foscarini* (1827) and *Arnaldo da Brescia* (1843). Niccolini also wrote lyric verse and translated (1838) Shelley's *Cenci*.

Niccolino, Messer see ABBATE, NICCOLÒ DELL'.

Niccolò d'Arezzo see NICCOLÒ DI PIERO LAMBERTI.

Niccolò di Piero Lamberti (nĕk-kôlō' dē pyā'rō lämbĕr'tē), d. 1451, Italian sculptor and architect of the early Renaissance, sometimes called Niccolò d'Arezzo (därät'tsō). He worked mostly in Florence on decorations for the cathedral and for the church of Or San Michele and was one of the first to break away from medieval traditions and seek greater freedom in his art.

Nice (nēs), Ital. *Nizza* (nēt'tsä), city (pop. 181,984), Alpes-Maritimes dept., SE France. The most famous resort on the French RIVIERA, the city depends mainly on the tourist trade, numerous festivals are held here, and the Mardi Gras of Nice marks the height of the season. Perfumery is an important industry. Probably a Greek colony (Nicaea) established in the 5th cent. B.C., Nice became an episcopal see in the 3d cent. A.D. It was ceded to France by Sardinia in 1796, restored to Sardinia in 1814, and again ceded to France after a plebiscite in 1860.

Nicene Creed see CREED.

Nicephorus, Saint (nĭsĕ'fûrŭs), 758?–829?, patriarch of Constantinople (806–15), Byzantine historian and theologian. He attended the Second Council of Nicaea as lay representative of the emperor. His appointment by Emperor Nicephorus I to the patriarchate while he was still a layman aroused the wrath of the monastic party under St. Theodore of Studium, but the quarrel was patched up. St. Nicephorus opposed ICONOCLASM and secured a pledge of orthodoxy from Emperor MICHAEL I. LEO V, however, insisted that the patriarch modify his views, and Nicephorus, when he refused, was deposed and exiled. In exile he wrote a brief narrative of Byzantine history from 602 to 769 and several tracts against iconoclasm. Feast: March 13.

Nicephorus I, d. 811, Byzantine emperor (802–11). He was minister of finance under Empress IRENE, whom he deposed and whose succession he assumed. He improved the state of the treasury and vigorously asserted the imperial authority over the Church. His appointment of St. Nicephorus to the patriarchate of Constantinople and his assumption of supreme authority in ecclesiastic matters precipitated a conflict with THEODORE OF STUDIUM, whom he exiled in 809. Nicephorus was killed while fighting against the Bulgars and was succeeded by his son-in-law, Michael I.

Nicephorus II (Nicephorus Phocas) (fō'kŭs), c. 913–969, Byzantine emperor (963–69). He was a successful general under Constantine VII and Romanus II. On Romanus' death (963) he married the emperor's widow, Theophano, and usurped the throne. Clerical opposition to his marriage caused him to pass severe laws against the monasteries. These and the heavy taxes he imposed to support his military ventures against the Arabs and the Bulgars caused widespread discontent. His downfall, however, was the result of a palace intrigue between Theophano and her new lover, John Tzimisces, who murdered him in a slow and elaborate manner. Tzimisces assumed the succession as JOHN I.

Nicholas, Saint, 4th cent., bishop of Myra, Asia Minor. His relics were stolen in the Middle Ages and taken to Bari, Italy. He is patron of boys, young men, and sailors, of Greece and Sicily, and of many other places and persons. He is very

popular in the Eastern churches St Nicholas was the popular subject of many legends, and the three balls used as a symbol of the pawnbroker were originally associated with him There is a famous painting by Bicci de Lorenzo in the Metropolitan Museum. He is called St Nicholas of Myra, St Nicholas of Bari, or St Nicholas the Wonder-Worker In the Netherlands and elsewhere his feast (Dec 6) is a children's holiday, appropriate for gifts The English in New York accepted from the Dutch the now unrecognizable saint, calling him Santa Claus They moved him to the English gift holiday, Christmas The career and qualities attributed to Santa Claus are all recently acquired

Nicholas I, Saint (Nicholas the Great), c 825–867, pope (858–67), a Roman, successor of Benedict III and predecessor of Adrian II He was a vigorous and politically active pope who arbitrated both temporal and religious disputes His decisions often set important precedents, as when the pope upheld the right of the bishop of Soissons to appeal to Rome against his superior, HINCMAR Much of his pontificate was concerned with preventing the proposed divorce of LOTHAIR of Lotharingia, who wished to remarry Even when Emperor Louis II occupied Rome, the pope refused to yield In the end he forced Lothair to reinstate his wife Nicholas challenged the right of PHOTIUS to occupy the see of Constantinople and attempted to have St IGNATIUS OF CONSTANTINOPLE restored to it St Nicholas worked with Boris I to introduce Roman ecclesiastical jurisdiction in Bulgaria, which had recently been converted by the Byzantines A letter from the pope to Boris is extant Feast Nov 13

Nicholas II, d 1061, pope (1059–61), a Burgundian named Gerard, successor of Stephen X and predecessor of Alexander II He was bishop of Florence when he was elected There was an antipope, Benedict X, elected just before Nicholas, but he had little following Nicholas was one of the reforming party of Hildebrand (later GREGORY VII) and in his pontificate vigorously suppressed simony and clerical concubinage all over Europe A synod under Hildebrand's guidance met at the Lateran (1059) and regulated for the future the election of the pope The new law was decisive in eliminating local and imperial influence from the election

Nicholas III, d 1280, pope (1277–80), a Roman named Giovanni Gaetano Orsini, successor of JOHN XXI and predecessor of MARTIN IV As a cardinal he made a great reputation in diplomacy, and he was a close confidant of popes for 30 years He was elected after a six-month delay Nicholas's principal efforts were directed to rendering the Holy See free of civil interference, he was most successful in obtaining renunciation by Rudolf I (Rudolf of Hapsburg) of all control over the Romagna By passing laws preventing non-Romans from obtaining privileges in Rome he quietly frustrated the ambitions of Charles I, king of Naples, to dominate central Italy He was the first pope in a century to live regularly in Rome, and he has been called the founder of the Vatican Dante denounced him in the *Inferno* for nepotism

Nicholas V, antipope (1328–30) see RAINALDUCCI, PIETRO

Nicholas V, 1397–1455, pope (1447–55), an Italian (b probably Sarzana, Liguria) named Tommaso Parentucelli, successor of Eugene IV and predecessor of Calixtus III He was brought to Rome by his friend the celebrated Niccolò d'Albergati, bishop of Bologna After Niccolò's death (1443) Tommaso stayed at the papal court Eugene IV depended much on him and made him a cardinal (1446) Nicholas was renowned for learning and piety A conciliatory policy gained the Concordat of Vienna (1448) with FREDERICK III, this undid much of the work of the Council of Basel (see BASEL, COUNCIL OF), and after it the council submitted to the pope (1449) Nicholas gave the repentant antipope, Felix V (Amadeus VIII), the red hat In 1450 a splendid jubilee marked the schism's end The pope's reforming zeal led him to send NICHOLAS OF CUSA to Germany (1450) Nicholas V established the papacy as a patron of the humanities and was a founder of the Vatican Library Lorenzo Valla benefited from his generosity Nicholas's days were clouded by a plot of Stefano Porcaro against him (1453) and by the fall of Constantinople

Nicholas I, 1796–1855, emperor and tsar of Russia (1825–55), third son of Paul I His brother and predecessor, Alexander I, died childless (1825), next in succession was Paul's second son, Constantine, who had, however, secretly renounced (1823) the throne after marrying a Polish lady The secrecy of the act resulted in confusion at Alexander's death, thus facilitating the outbreak (1825) of the DECEMBRIST CONSPIRACY, which was ruthlessly crushed Nicholas, the very image of the autocrat and the champion of reaction, always strove to serve his country's best interests as he saw them, but his methods were dictatorial and paternalistic and—in the case of his attempts to solve the problem of the serfs—hopelessly inadequate He mercilessly suppressed the uprising (1830–31) in POLAND and abrogated the Polish constitution and Polish autonomy, with the motto "orthodoxy, autocracy, and national unity," he subjected the press, the universities, and the administration to the supervision of his dreaded secret police, he concluded a new HOLY ALLIANCE with Austria and Prussia in 1833, and in 1849 his troops helped Austria put down the revolutionists in Hungary Though successful in his war (1828–29) against Turkey (see RUSSO-TURKISH WARS), Nicholas invited catastrophe when he deliberately entered the CRIMEAN WAR (1853–56) Dying before its disastrous conclusion, he was succeeded by his son, Alexander II It was in the reign of Nicholas I that Russian economic and political progress fell seriously out of step with the rest of Europe, and conditions were created that made the subsequent revolutions of 1905 and 1917 almost inevitable It certainly was under his rule that the Russian revolutionary movement acquired its cohesion and its characteristics From the cultural point of view, a national tradition of literature and music came into existence with PUSHKIN, LERMONTOV, GOGOL, and GLINKA

Nicholas II, 1868–1918, last emperor and tsar of Russia (1894–1917), son of Alexander III and MARIE FEODOROVNA His education was directed successively by an English tutor, by General Danilovich, and by Konstantin POBYEDONOSTZEV While on a tour of the Orient in 1890–91 he barely escaped assassination in Japan In 1894 he married Princess Alix of Hesse (see ALEXANDRA FEODOROVNA) His attitude in foreign affairs was pacific, and he is credited with the initiation (1899) of the first of the HAGUE CONFERENCES As for internal policy, Nicholas declared soon after his accession that he wished to preserve the foundations of autocracy as firmly and consistently as his father had But the revolutionary movement and the liberal opposition were on the increase Terrorists, in a series of assassinations, killed high officials (including the minister of the interior, PLEHVE) and even an uncle of the tsar, while the Marxist Social Democratic party organized the workers The humiliating outcome of the RUSSO-JAPANESE WAR (1904–5) resulted in the peasant revolts, industrial strikes, and violent outbreaks known as the Revolution of 1905 In Jan, 1905, a crowd of workers who had come to petition the tsar peacefully were fired upon before the Winter Palace, the government's action on that "Bloody Sunday" proved fateful After the general strike of Oct, 1905, Count WITTE, the new prime minister, induced Nicholas to sign a manifesto promising representative government and the basic civil liberties An elective DUMA and an upper chamber were set up, but neither the extreme revolutionists nor the tsar were seriously disposed to uphold the parliament Nicholas soon curtailed the Duma and dismissed Witte in 1906, replacing him with P A STOLYPIN The outbreak in 1914 of the First World War briefly swept aside internal conflict, but Nicholas and his ministers ignored the opportunities now available for ordering the internal affairs of state In 1915 Nicholas took the command of the army from Grand Duke Nicholas and left the empress in virtual control at home This act led to a constant stream of resignations from his ministers, their posts were filled by the creatures of the empress, who was completely dominated by RASPUTIN After Rasputin's murder (1916) Nicholas ceased in effect to reign Discontent at home spread, the army was tired of war, the food situation deteriorated, the government tottered, and in March, 1917, Nicholas was forced to abdicate (see RUSSIAN REVOLUTION) He was held first in the Tsarskoye Selo palace, then near Tobolsk The advance, in July, 1918, of counter-revolutionary forces caused the soviet of Ekaterinburg (now Sverdlovsk) to fear that Nicholas might be liberated, after a secret meeting a death sentence was passed on the tsar and his family, who were shot in a cellar at Ekaterinburg on the night of July 16 Their bodies were burned The succession was later claimed by his cousin, Grand Duke Cyril (see ROMANOV) The last emperor's vague mysticism, limited intelligence, and submission to sinister influences made him particularly unfit to cope with the events that led to his tragic end See *The Letters of the Tsar to the Tsaritsa* (1929) and *The Secret Letters of the Last Tsar* (1938), Sir John Hanbury-Williams, *The Emperor Nicholas II* (1922); Michael Florinsky, *The End of the Russian Empire* (1931), Sir Bernard Pares, *My Russian Memoirs* (1931), Paul Bulygin, *The Murder of the Romanoffs* (1935)

Nicholas I, 1841–1921, prince (1860–1910) and king (1910–18) of Montenegro He succeeded his uncle Danilo II In 1862, after a series of frontier incidents, war broke out between Montenegro and the Ottoman Empire. Despite the heroic resistance of the Montenegrins, Nicholas was obliged to conclude an unfavorable peace. Nicholas reorganized his army and in 1876 allied himself with Serbia, intervened in favor of the rebels in Bosnia and Hercegovina, and declared war on Turkey, in 1877 Russia entered the war against Turkey. Nicholas waged a successful campaign The Treaty of SAN STEFANO (1878) trebled the size of Montenegro, but the final boundaries adopted at the Congress of Berlin reduced the Montenegrin gains somewhat. Montenegro was recognized as fully independent, and in 1910 Nicholas proclaimed himself king He sided with Serbia in the First World War, but sought a separate peace with the Central Powers after his troops had been routed. He resisted the proposed union of Montenegro with Serbia and as a result was deposed (1918) by a national assembly, which proclaimed the union King Nikita, as he was nicknamed, succeeded in marrying off his five handsome daughters into the most prominent houses of Europe Zorka married Peter I of Serbia, Helena married Victor Emmanuel III of Italy; Anastasia married Grand Duke Nicholas of Russia, Militza married Grand Duke Peter (Grand Duke Nicholas's brother), Anna married into the Battenberg family He also wrote poetry and drama

Nicholas (Nikolai Nikolaevich) (nĭk'kulī' nĭ'kulī'-ŭvĭch), 1856–1929, Russian grand duke, first cousin of Emperor Alexander III and grandson of Nicholas I He distinguished himself in the Russo-Turkish War of 1877–78 and was commander in chief of the Russian armies at the outbreak of the First World War In 1915 Emperor Nicholas II, who was influenced against the grand duke by the tsarina and by Rasputin, relieved him of his post and took over the command himself Grand Duke Nicholas was made commander in the Caucasus, where he won successes against the Turks until the February Revolution of 1917 deprived him of his command He left Russia in 1919 and settled in Paris

Nicholas II Land, RSFSR see SEVERNAYA ZEMLYA

Nicholas of Cusa (kū'zu), 1401?–1464, German churchman and humanist, cardinal of the Roman Church He was educated in law at Padua At the Council of Basel he supported Eugene IV firmly In 1448 Nicholas V gave him the red hat He became bishop of Brixen (Bressanone) in 1450 and wrought many reforms He encountered great opposition from Archduke Sigismund of Austria About this time he was made papal legate and traveled (1451–52) all over the empire, preaching, reforming monasteries, and building good relations for the Holy See This great effort was successful as a start, but it was never followed up Nicholas was a Renaissance man His voluminous writings advanced a notion of replacing reason with mystical intuition as the basic way to knowledge, like some other writers on mysticism, Nicholas seems at times to verge on pantheism He held that the world is round and that the stars are other worlds He found some lost plays of Plautus He was one of the first to work on the exposure of the False Decretals

Nicholasville, city (pop 3,192), co seat of Jessamine co, central Ky, just SSW of Lexington near the Kentucky river, in a fertile bluegrass farm region, settled 1798

Nicholls, Francis Redding Tillou (nĭk'lz), 1834–1912, governor of Louisiana, b Donaldsonville, La, grad West Point, 1855 He resigned from the army and practiced law At the outbreak of the Civil War he helped organize a company of Confederate volunteers and through active service rose to the rank of major general Returning to law after the war, he was nominated for governor in 1876 by the Democrats in a desperate effort to end the carpetbag rule in Louisiana He was thus involved in the disputed state and presidential election returns of 1876 and shared in negotiations that placed him in the governorship and swung the electoral votes to Rutherford B HAYES A conservative, Nicholls served with ability, then retired to private life, only to become candidate for governor again as the foe of the notorious Louisiana Lottery The destruction of the lottery was the chief event of his second administration (1888–92) He was a state supreme court justice (1892–1911)

Nichols, Edward Leamington, 1854–1937, American physicist, b Leamington, England, of American parents, grad Cornell (BS, 1875) He was (1887–1919) professor of physics at Cornell and was known for his researches in light, especially in luminescence He founded and edited (1893–1912) the *Physical Review* and wrote with others a number of books

Nichols, Jeanette Paddock, 1890–, American historian, b Rochelle, Ill, grad Knox College, 1913, and Columbia (MA, 1919, PhD, 1923) She was an instructor in history in the extension division of Columbia (1919–21) and acting professor at Wesleyan College, Macon, Ga (1922–23) In 1920 she married Roy Franklin Nichols A contributor to various scholarly journals, she has written several books with her husband, as well as *Alaska a History of Its Administration, Exploitation, and Industrial Development* (1924) and *Twentieth Century United States* (1943) She edited, with J G Randall, *Democracy in the Middle West, 1840–1940* (1941)

Nichols, Roy Franklin, 1896–, American historian, b Newark, NJ, grad Rutgers (B.A., 1918; MA., 1919), Ph D. Columbia, 1923 He was an instructor in history at Columbia from 1922 to 1925 and later became assistant professor (1925) and full professor (1930) of history at the Univ. of Pennsylvania. He served as president of the Pennsylvania Historical Association (1936–39) and was visiting professor in American history at Cambridge Univ.,

England (1948–49). Among his books are *The Democratic Machine, 1850–1854* (1923); *Franklin Pierce, Young Hickory of the Granite Hills* (1931); and, with his wife, Jeanette Paddock Nichols, *The Growth of American Democracy* (1939) and *The Republic of the United States, a History* (1942). He received the Pulitzer Prize in history for *The Disruption of American Democracy* (1948)

Nicholson, Francis (nĭ'kŭlsŭn), 1655–1728, British colonial administrator Lieutenant governor under Sir Edmund Andros, he fled (1689) to England from the revolt in New York led by Jacob LEISLER He returned to America as lieutenant governor of Virginia and was later governor of Maryland (1694–98) and governor of Virginia (1698–1705) *A Modest Answer to a Malicious Libel* (1704) is a defense of his conduct in quarrels in Virginia In 1709 Nicholson led the abortive expedition against Port Royal (now Annapolis Royal, N S) and the next year successfully occupied the town, recording his experiences in the *Journal of an Expedition for the Reduction of Port Royal* (1711) He was named governor of Nova Scotia but his term of office soon ended on the death of Queen Anne in 1713 He was royal governor of South Carolina (1720–25)

Nicholson, James, c 1736–1804, American naval officer, b Chestertown, Md , brother of Samuel Nicholson In the American Revolution, Nicholson, appointed (1776) a captain in the Continental navy, was senior officer after the dismissal of Esek Hopkins in 1778 While awaiting the *Virginia*, his first command, Nicholson and his crew fought at the battle of Trenton (Dec , 1776) In attempting to elude the British blockade of Chesapeake Bay, the *Virginia* ran aground and was captured (1778), though Nicholson escaped His next ship, the *Trumbull*, held the *Watt* to a draw in 1780, but in 1781 was captured by superior British forces Nicholson later lived in New York city, where he was active in Republican (Jeffersonian) politics He was the father-in-law of Albert Gallatin

Nicholson, James William Augustus, 1821–87, American naval officer, b Dedham, Mass The grandson of Samuel Nicholson, he was appointed a midshipman in 1838 As an officer of the *Pocahontas*, he took part in the attempt to relieve Fort Sumter (1861), and in the Civil War he commanded ships in the successful assaults on Port Royal, S C , Jacksonville and other Florida coastal cities, and Mobile Bay He was retired in 1883 with the rank of rear admiral

Nicholson, Meredith, 1866–1947, American author and diplomat, b Crawfordsville, Ind He wrote more than 30 novels, of which the most popular were *The Main Chance* (1903), *The House of a Thousand Candles* (1905), *The Port of Missing Men* (1907), *The Lords of High Decision* (1909), and *Broken Barriers* (1922) *The Hoosiers* (1900), a study of Indiana authors, and *A Hoosier Chronicle* (1912), a semi-autobiographical novel, are among his other writings He served as U S minister to Paraguay (1933–34), to Venezuela (1935–38), and to Nicaragua (1938–41)

Nicholson, Samuel, 1743–1811, American naval officer, b Maryland The brother of James Nicholson, he also served in the Continental navy in the American Revolution, taking many prizes He was commissioned (1794) captain in the new U S navy superintended the construction of the *Constitution*, and on her completion in 1798 (at the time of American-French difficulties) cruised the Atlantic in search of French ships At his death he was senior officer of the navy

Nicholson, Seth Barnes, 1891–, American astronomer, b Springfield, Ill He specialized in solar astronomy and the radiation of stars Since 1915 his work has been carried on at the Mt Wilson Observatory, near Pasadena He is the discoverer of the 9th, 10th, and 11th satellites of Jupiter, and with Edison Pettit and others he made particularly successful measurements of planetary radiation from Mars

Nicholson, Sir William, 1872–1949, English wood engraver and painter He used his wood-engraving technique, consisting of flat blocks with very little shading, to great effect on posters, on many of which he collaborated with James Pryde, their pseudonymic signatures of "W & J Beggerstaff" on these led to their being called the Beggerstaff Brothers As an illustrator Nicholson was responsible for the books *An Alphabet*, *Almanac of Twelve Sports* with Rudyard Kipling, and *London Types* with W E Henley (all 1898) and *A Book of Blokes* (1930), among others His woodcut portraits, verging sometimes on caricature, cover a large segment of London society and include Queen Victoria, his portraits in oils are also widely praised, two of them hanging in the Tate Gallery. He was knighted in 1936 See study by Marguerite Steen (1943).

Nicholson, borough (pop 1,012), NE Pa., NW of Scranton, inc. 1875 Dairying is done here.

Nicias (nĭ'shēăs) d 413 B C Athenian statesman, a man of immense wealth After Pericles' death he came forward as the opponent of Cleon. As an oligarch he worked hard to compose the PELOPONNESIAN WAR, and in 421 B.C he arranged the Peace of Nicias. The increasing popularity of ALCIBIADES made a natural enemy of Nicias, who was respectable and pious, and unimaginative as well When the expedition to Syracuse was proposed, Nicias said it would cost much more than any previous estimate, his purpose was to discourage the people Instead, Athens took his estimate and made him commander with Alcibiades and Lamachus. When Alcibiades had to leave the expedition in Nicias' care, he sealed its fate Nicias vacillated for two years in his policies in the siege of Syracuse When the Spartan Gylippus arrived, and only retreat from Syracuse was feasible, Nicias saw an eclipse of the moon and refused to allow a retreat The Athenian fleet and expedition were shortly overwhelmed by the Syracusans, and Nicias was captured in a hasty retreat on land He was executed He is a famous example of the timid, cautious, superstitious man

nickel, lustrous, silvery-white metallic element (symbol = Ni, for physical constants, see ELEMENT, table), malleable, ductile, hard, taking a high polish, and having magnetic properties In its magnetic properties and in its chemical activity it resembles iron and cobalt It forms two groups of compounds, nickelous (the more commonly used), in which nickel has a valence of 2, and nickelic, in which it has a valence of 3 It combines individually with oxygen, chlorine, and sulphur, and with sulphur and oxygen together, carbon and oxygen, hydrogen and oxygen, and carbon and nitrogen Among its important commercial compounds are the carbonate and the sulphate, which are used in baths for nickel plating The metal itself, however, is much used in the preparation of alloys, such as MONEL METAL, GERMAN SILVER (called also nickel silver), and nickel bronze The chief attributes of nickel alloys are strength, ductility, and resistance to corrosion and heat Alloyed with copper, the metal is used extensively for coins Added to aluminum it increases hardness, and added to iron (often with chromium) it produces a cast iron of great strength Nickel steel and nickel-chromium steel are two important STEEL alloys The metal is also used as a catalyst, as in the hydrogenation of oils Nickel occurs in a number of minerals, its chief ores being PENTLANDITE, GARNIERITE, and PYRRHOTITE (magnetic pyrites) The metal is present in meteorites Nickel is extracted from its ores with difficulty, the sulphide ore (pentlandite) is first roasted, smelted in the blast furnace, and treated in a Bessemer converter The metal is separated from copper by electrolysis and from copper and cobalt by the Mond process Discovery of the element (1751) is credited to Cronstedt, who obtained it from the mineral niccolite

Nickerson, city (pop 1,052), central Kansas, on the Arkansas and near Hutchinson, inc 1879

Niclaes, Hendrik see FAMILISTS

Nicobar Islands (nĭkōbär'), archipelago (635 sq mi , pop 12,452), India, in the Bay of Bengal The climate is tropical, there is lumbering, and coconuts are cultivated The native population is Mongoloid The islands are joined with the Andaman Islands to the north in a centrally administered state, with the capital at Port Blair

Nicodemus (nĭ"kudē'mŭs) [Gr ,=conqueror of the people], member of the Sanhedrin interested in Jesus He helped St Joseph of Arimathea to bury Him John 3 1–21, 7 50,51, 19 39–42 Among the PSEUDEPIGRAPHA is a Gospel of Nicodemus

Nicolai, Otto (ō'tō nēkōlī'ē, nē'kōlī), 1810–49, German composer As conductor of the Philharmonic Concerts, Vienna, which he had founded in 1842, he did much to improve the type of concert program offered in his day His masterpiece was his comic opera *The Merry Wives of Windsor* (Berlin, 1849), which admirably used elements of the Italian *opera buffa*

Nicola Pisano see PISANO, NICOLA

Nicolas (nĭ'kōlŭs) [Gr ,=conqueror of the people], one of the seven deacons He was a proselyte from Antioch Acts 6 5

Nicolay, John George (nĭ'kulā), 1832–1901, biographer of Lincoln, b Rhenish Palatinate In 1848 he was brought to America, and his family settled in Pike co , Ill He worked on the Pittsfield, Ill , *Free Press* and was its editor from 1854 to 1856 In 1860 he and his close friend, John Hay, became private secretaries to Abraham Lincoln and continued as such during his presidency Nicolay and Hay brought out in 1890 their *Abraham Lincoln a History* (10 vols), which had been planned since 1861. It is the authorized biography, and though biased by hero worship and some over-respect for conventions, it is a basic historical work for study of the period Hay and Nicolay also edited Lincoln's complete works See biography by his daughter, Helen Nicolay (1949)

Nicole, Pierre (pyĕr' nēkōl'), 1625–95, French Jansenist writer. He studied and taught at Port-Royal, where one of his pupils was Racine He worked with Pascal on the *Provinciales* His chief writings in his mission of popularizing JANSENISM were two series of epistolary essays, *Les Visionnaires* and *Lettres sur l'hérésie imaginaire* In 1679 he fled to Belgium, but returned to France in 1683 Subsequently he led in the attack on quietism

Nicolet, Jean (zhäN' nēkōlā'), 1598?–1642, French explorer in the Old Northwest He came to New France with Samuel de CHAMPLAIN in 1618 In 1634, under the direction of Champlain, he took a notable voyage west in search of the Northwest Passage, exploring Lake Michigan, Green Bay, and the Fox river. He was drowned on a trip to Trois Rivières

Nicolet (nēkōlā'), town (pop 3,751), S Que , on the Nicolet river near its mouth on the St Lawrence and WSW of Trois Rivières It has textile and hosiery mills and a furniture factory A Roman Catholic cathedral and seminary are here

Nicoll, James Craig (nĭ'kul), 1847–1918, American marine painter and etcher, b New York city His pictures, mainly scenes along the Atlantic coast from the Gulf of St Lawrence to Florida, received numerous awards He was admitted to the National Academy of Design in 1885 Good examples of his art are *Squally Weather* (Metropolitan Mus), *On the Rocks near Portland*, *Stormy Day at Block Island*, and *Twilight*, and the water colors *Off Portland Harbor*, *Moonlight—Cape Ann*, and *Fog and Sunshine on Campobello Island*

Nicolle, Charles Jules Henri (shärl' zhül' ärē' nēkôl'), 1866–1936, French physician and microbiologist He worked with P P E Roux in Paris and was director of the Pasteur Institute in Tunis from 1903 and professor at the Collège de France, Paris, from 1932 He worked on various diseases, including whooping cough, measles, trachoma, and influenza, and demonstrated (1909) the transmission of typhus by the body louse For his work on typhus he received the 1928 Nobel Prize in Physiology and Medicine

Nicollet, Joseph Nicolas (zhôzĕf' nēkôlä' nēkôlā'), 1786–1843, French mathematician and astronomer, explorer in America, b Cluses, Savoy Nicollet was something of a mathematical prodigy, and he made a name for himself by his mathematical calculations and astronomical observations He was professor at the Collège Louis-le-Grand before his unfortunate financial adventures led him to emigrate to America in 1832 He settled in New Orleans, but he visited in St Louis and became interested in Western exploration In 1836–37 he headed an expedition in search of the source of the Mississippi He was invited to Washington and in 1838–39 was sent out on a government surveying expedition up the Missouri J C Frémont accompanied him on this journey He spent much time in preparing a map of the region of the upper Mississippi and its tributaries and wrote a report, which was published in 1843 He also wrote works on mathematics, astronomy, and life insurance actuarial computation His name is frequently, but erroneously, given as Jean Nicolas Nicollet

Nicolls, Richard, 1624–72, first English governor of New York, b Bedfordshire, England He served in the English civil war as a royalist and followed the Stuarts into exile, where he entered the service of the duke of York (later King James II) In 1664 Charles II laid claim to the Dutch colony in America and gave it to the duke of York, who appointed Nicolls governor He and his followers took New Amsterdam from the Dutch with little difficulty, in spite of Peter STUYVESANT Nicolls ruled the new colony of New York well, despite his arbitrary powers, balancing the interests of the English and Dutch settlers and effecting a gradual transition to English institutions He issued the legal code known as the Duke's Laws in 1665 After his resignation (1668) he returned to England and was killed at the naval battle of Southwold Bay in the Third Dutch War

Nicol prism (nĭ'kul), optical device invented by William Nicol of Edinburgh (1828) It consists essentially of a crystal of calcite, or ICELAND SPAR, which is cut at an angle into two equal pieces and joined together again with Canada balsam An ordinary beam of light entering the crystal undergoes double refraction, i e , is split into two parts, each of which is affected in a different way One of these parts, the so-called ordinary ray, undergoes total reflection at the Canada-balsam joint and is turned off from its course to pass out at one side of the crystal The other ray, the extraordinary ray, passes on through the crystal By means of this device, a beam of light can be polarized (see POLARIZATION OF LIGHT) or a beam of polarized light can be subjected to analysis The principle involved has been applied to the microscope in the illumination of the field

Nicolson, Harold (nĭ'kulsŭn), 1886–, English biographer and historian, b Teheran, Iran, educated at Oxford He entered the foreign office in 1909, was a member of the British delegation to the Paris Peace Conference in 1919, and represented his government in various parts of the world until he resigned in 1929 He was elected to Parliament in 1935 Among the subjects of his skillful and sympathetic biographies are Paul Verlaine (1921), Tennyson (1923), Byron (1924), Swinburne (1926), Curzon (1934), and Dwight Morrow (1935) *Peacemaking, 1919* (1933) records his impressions of the peace conference Other works are *Diplomacy* (1939), *The Congress of Vienna* (1946), and *The English Sense of Humour* (1947). In 1913 he married Victoria Sackville-West.

Nicomedia (nĭkōmē'dēă), ancient city, NW Asia Minor, near the Bosphorus. It was refounded (264 B.C.) by Nicomedes I of Bithynia for his capital, replacing ANCYRA. It flourished for centuries. The Goths sacked the city in A.D. 258. Diocletian chose it for the eastern imperial capital, but it was soon superseded by Byzantium (Constantinople). The modern city here is IZMIT.

Nicopolis (nĭkŏ'pŭlĭs, nī-) (Gr., =city of victory), ancient city, NW Greece, in Epirus. It was founded by Octavian (later Augustus) to celebrate the victory (31 B.C.) at Actium, which is near by. The city largely eclipsed Ambracia. It is mentioned by St. Paul (Titus 3:12). The ruins at Nicopolis, including a well-preserved theater, are near the modern Prevesa.

Nicosia (nĭkusē'u), Gr. *Lefkosia* (lĕfkōsē'ä), city (pop. 34,485), capital of Cyprus, in the central plain of the island. It is also known by its Turkish name, Lefkosha. Nicosia is an agricultural trade center and has brandy, cigarette, leather, and other manufactures. The residence of the LUSIGNAN kings of Cyprus from 1192, it became a Venetian possession in 1489 and fell to the Turks in 1571. The tombs of the Lusignans are in the former Church of St. Sophia (13th cent.), now a mosque. There also are remnants of the Venetian fortifications. In the Second World War the city suffered several air raids. The name is also spelled Nikosia.

nicotiana (nĭkō"shēā'nù) [see NICOTINE], any plant of the genus *Nicotiana*. There are about 50 species, most of them native to tropical America, although a few North and South American species and one Australian species are known. Many species are now cultivated in all parts of the world for their highly fragrant, trumpet-shaped flowers. The flowers are white, yellow, greenish, violet, or purple, and they usually open at night. The plants are chiefly herbaceous annuals and perennials, a few are shrubs. Commercial TOBACCO is obtained chiefly from the leaves of *Nicotiana tabacum*, originally a tropical species but now cultivated in many subtropical and temperate regions. It grows to a height of from 3 to about 6 ft and has large oval leaves (sometimes more than a foot long) and clusters of pink flowers that open by day. A smaller hardier species (*N. rustica*) with yellowish flowers was cultivated and smoked by the Indians of the E United States before the arrival of the white man. It was introduced into Europe (c 1558), it is now grown in parts of Europe and Asia largely for local use both for smoking and for making insecticides.

nicotine (nĭ'kŭtēn", nĭ"kutēn') [for Jean Nicot, who introduced tobacco into France], colorless, oily liquid alkaloid having a pungent odor and a biting taste. It turns brown on exposure to air, boils at 247°C., and is readily soluble in water, alcohol, and most organic solvents. It occurs in the leaves of the tobacco plant in combination with citric and malic acids. It is widely used in solution as an insecticide, forming the basis for many commercial preparations. Nicotine is extremely poisonous to man, a very small dose (less than a drop) proving fatal within a few minutes. There is evidence that some nicotine is present in tobacco smoke, although much of it is converted into harmless products. See also PYRIDINE.

nicotinic acid: see VITAMINS.

Nicoya, Gulf of (nēkō'yä), Pacific inlet, Central America, between the Nicoya Peninsula and the northwest mainland of Costa Rica. The catch from the fine fishing in the gulf is canned at PUNTARENAS. The village of Nicoya on the peninsula was probably the first Spanish settlement (c 1530) in Costa Rica.

Nictheroy, Brasil see NITERÓI.

Nicuesa, Diego de (dyä'gō dā nēkwā'sä), d. 1511?, Spanish explorer. Appointed governor of Panama and Central America (1508), he sailed from Santo Domingo in 1509 and aided OJEDA at Cartagena before reaching his own territories, where he and his men suffered great hardship. An attempt to assert his authority over a group of men who had been brought by ENCISO into Nicuesa's territory also failed. Nicuesa is said to have perished in a shipwreck on his way back to Santo Domingo.

Nidaros, Norway: see TRONDHEIM.

Nidwalden, Switzerland see UNTERWALDEN.

Niebelungen: see NIBELUNGEN.

Niebuhr, Barthold Georg (bär'tōlt gä'ôrk nē'bōr), 1776–1831, German historian, b. Copenhagen, son of Karsten Niebuhr. He served first in the Danish and, after 1806, in the Prussian civil service, took part in the foundation of the Univ. of Berlin, and was (1816–23) Prussian ambassador to the Holy See. From 1823 to his death he taught at the Univ. of Bonn. Niebuhr's chief work was his history of Rome (3 vols., 1811–32, Eng. tr., 3 vols., 1828–42), which may be said to have inaugurated the modern scientific historical method. Niebuhr aimed at relating individual events to the political and social institutions of ancient Rome, and he sought to recreate the past in terms understandable to the modern reader. An admirer of the Roman republic, he favored agrarianism as the basis of a well-balanced state. He regarded Prussia as a modern parallel of the Roman state and advocated Prussian leadership in the unification of Germany. His liberalism was antirevolutionary and sympathetic to reforms instituted from above. Many of his lectures were translated as *Collected Lectures* (8 vols., 1852–53).

Niebuhr, Karsten (kär'stŭn), 1733–1815, German traveler in Arabia. He was sole survivor of a party of five (of whom the best known was Peter Forskal, a Swedish naturalist) sent by Frederick V of Denmark to explore Arabia (1761–63). From Mocha, Niebuhr sailed for India, returning to Europe by way of the Persian Gulf and the Tigris, Palestine, Syria, and Constantinople (1767). He wrote several accounts of his travels.

Niebuhr, Reinhold (rīn'hōld nē'bōr), 1892–, American theologian, b. Wright City, Mo.; grad. Elmhurst College (Ill.), 1910, and Eden Theological Seminary, 1913, M.A. Yale Divinity School, 1915. From 1915 to 1928 he served as pastor of the Bethel Evangelical Church, Detroit. Many of his parishioners were automobile workers, with whom he sided in their struggle for better working conditions. In 1928 he began teaching at Union Theological Seminary, becoming professor of applied Christianity in 1930. A liberal in politics, in theology he has abjured the liberal Protestant's belief in the essential goodness of man. In various of his writings—notably *Beyond Tragedy* (1938) and *The Nature and Destiny of Man* (Vol. I, 1941, Vol. II, 1943)—he has set forth in brilliant writing his tenet that man, beset by sin, must rely solely on the goodness of God. Later works are *Discerning the Signs of the Times* (1946) and *Faith and History* (1949). See biography by D. R. Davies (1945).

Niehaus, Charles Henry (nē'hous), 1855–1935, American sculptor, b. Cincinnati, studied there and in Munich. He became a member of the National Academy of Design in 1906. His works are in many American cities, among them are a statue of President Garfield, Cincinnati, memorials to Dr. Hahnemann and John Paul Jones, Washington, D.C., Francis Scott Key monument, Baltimore, and an equestrian statue of General Forrest, Memphis, Tenn.

Niel, Adolphe (adôlf' nyĕl'), 1802–69, marshal of France. He served with the corps of engineers in the Algerian campaigns, in the French intervention against the Roman republic (1849), in the Crimean War, and in the Italian war of 1859. Becoming minister of war in 1867 he started a program of far-seeing military reforms which his death interrupted. The pale yellow Marshal Niel rose was named in his honor.

niello (nēĕl'lō) [Ital. from Latin *nigellus*=blackish], black metallic alloy of sulphur, copper, silver, and usually lead, used as an inlay on engraved metal. The metal surface is brushed with a borax solution as a flux, dusted with powdered niello, then heated. After cooling, the surface is scraped and shows a black pattern in the incised lines. Pulling a paper proof of the design in order to make corrections before inlaying is said to have been the start of printing from an engraved plate. The Egyptians are credited with originating niello decoration, which was practiced in classical times, spread throughout Europe during the Middle Ages, came into high repute in the 15th cent. with the work of the Florentine goldsmith Finiguerra, and is still widely used in Russia and India. Roman niello is preserved in the British Museum, pieces by St. Bernward are in the cathedral at Hildesheim, and a pyx by Finiguerra is in Florence.

Niembsch von Strehlenau, Nikolaus see LENAU, NIKOLAUS.

Niemcewicz, Julian Ursyn (yōōl'yan ōōr'sĭn nyĕmtsĕ'vĭch), 1757–1841, Polish writer and patriot. A member of the Polish diet, he served under Kosciusko in the insurrection of 1794 and with him was imprisoned in St. Petersburg. With him he later went to the United States. Niemcewicz returned to Poland in 1807 and became the secretary of the senate and an educator. He went on a mission to London in the insurrection of 1831 and he died, an exile, in Paris. He wrote historical and political plays (tragedies and comedies), satires, and several novels. As a poet he is noted for his epics, ballads, and eulogies.

Niemen (nē'mun), Ger. *Memel* (mā'mûl), Lithuanian *Nemunas* (nyĕ'mōonäs), Pol. *Nsemen* (nyĕ'mĕn), Rus. *Neman* (nyĕ'mŭn), river, 552 mi. long, E Europe. It rises in Belorussia SSW of Minsk and flows generally W through S Lithuania and along the border of Lithuania and former East Prussia (now Kaliningrad oblast, RSFSR) into the KURISCHES HAFF, an inlet of the Baltic Sea. Its mouth forms a small delta. Grodno, Kaunas, and Tilsit (now Sovetsk) are the main cities along its course. Navigable from c.60 mi. above Grodno, it carries chiefly timber and wood products. Until the Second World War a large section of the upper Niemen ran through Polish territory.

Niemeyer, John Henry (nē'mīur), 1839–1932, American painter and art teacher, b. Germany. He came to the United States in 1843 and later studied in France at the École des Beaux-Arts. His mediums were oil, water color, and crayons, and he won distinction as a portraitist and landscape painter. During his long career as professor of drawing (1871–1908) at the Yale school of fine arts and as professor emeritus, Niemeyer exercised a great influence upon the development of American art, among his pupils being Frederic Remington and Bela Lyon Pratt. He was also a lecturer in art at Smith College.

Niemoeller or **Niemöller, Martin** (both, mär'tēn nē'mûlur), 1892–, German Protestant churchman. He studied theology after distinguishing himself as a submarine commander in the First World War. Though at first a supporter of National Socialism, Niemoeller (then a pastor at Berlin-Dahlem) preached courageously against the neopagan tendences of the Hitler regime after it had come into power in 1933. He attacked Hitler's creation of a "German Christian Church" and became the leader of the German pastors' emergency league. Briefly arrested in 1937, he was imprisoned again from 1938 until his liberation (1945) by the Allies. Niemoeller's stand against Nazism was caused chiefly by the government's interference in church affairs, for politically Niemoeller always insisted on his complete loyalty as a German patriot. After his release Niemoeller became (1947) church president (the equivalent of bishop) of the Protestant churches of Hesse and Rhineland-Palatinate, with his seat at Wiesbaden, and founded a cooperative council of all German Protestant churches, of which he became president. After the war he lectured in the United States. Among his writings are his autobiography, *From U-Boat to Pulpit* (1934).

Niepce, Joseph Nicéphore (zhōzĕf' nēsāfôr' nyĕps'), 1765–1833, French chemist, who originated a process of PHOTOGRAPHY. From 1826 he worked with DAGUERRE, who perfected the process after the death of Niepce. A nephew, **Claude Félix Abel Niepce de Saint-Victor** (klōd' fālĕks' abĕl', du sē-vēktôr'), 1805–70, also a chemist, was the first to use albumen in photography and also produced photographic engravings on steel.

Nietzsche, Friedrich Wilhelm (frē'drĭkh vĭl'hĕlm nē'chu), 1844–1900, German philosopher, son of a minister. His father died when Nietzsche was young, and his mother, treating him as a delicate child, raised him with a piety from which, in later life, he intellectually revolted. Educated at Bonn and Leipzig, he was appointed professor of philology at Basel in 1869. He had an unimportant and, to him, disappointing military experience in 1867 and 1870–71. Schopenhauer's philosophy and the friendship of Richard Wagner were of great importance in his early development, but Nietzsche later turned away from both, as he did from his other interests and friends. Nervous disturbances and eye trouble forced him to leave his post at Basel (1879), and thereafter he moved from place to place hoping to improve his health. Frequently in great pain, he nevertheless worked steadily through this period until 1889, when he became hopelessly insane. Nietzsche's work has a poetical grandeur and an intensity that reflect the sensitivity of his mind and his devotion to music. It exhibits also a progressively passionate intemperateness and sense of mission which anticipate his later breakdown. Among his works, all available in English translation, the first important one is *The Birth of Tragedy* (1872, Eng. tr., 1910). His greatest work, *Thus Spake Zarathustra* (Parts I–III, 1883–84, Part IV first printed publicly, 1891, Eng. tr., 1909, 1930), is essentially a poem proclaiming the gospel of the *Übermensch* [superman]. Zarathustra is the Persian ZOROASTER. The book presents the author's doctrine in a symbolic expression which is sometimes obscure. Condemning the traditional morality (especially the Christian ethic) as the code of slavish masses, in which nobility is put down and weakness idealized, Nietzsche preached the superiority of the aristocrat, the morality of masters, in which a life by the might of its own superiority will survive. The will of man must make the superman, who would be above good and evil and would eradicate decadent democracy. The influence of Nietzsche on various aspects of German thought was strong. He also wrote *Human, All Too Human* (1878, Eng. tr., 1909–11), *Joyful Wisdom* (1882, Eng. tr., 1910), and *Beyond Good and Evil* (1886, Eng. tr., 1907). See *The Nietzsche-Wagner Correspondence* (Eng. tr., 1921), biographies by his sister, E. Förster-Nietzsche (Eng. tr., *The Young Nietzsche*, 1912, *The Lonely Nietzsche*, 1915), Gerald Abraham (1933), Crane Brinton (1941), and H. A. Reyburn and others (1948), A. H. J. Knight, *Some Aspects of the Life and Work of Nietzsche* (1933).

Nieuport, Flemish *Nieuwpoort* (both nē'ōōpôrt), town (pop. 4,943), West Flanders prov., N Belgium, a fishing port on the North Sea. There are large oyster beds. It was rebuilt after its partial destruction in the First World War.

Nieuwland, Julius Arthur (nū'lŭnd), 1878–1936, American chemist and botanist, b. Belgium. He was brought to the United States at the age of three and was graduated from the Univ. of Notre Dame in 1899. In 1903 he was ordained a priest. He was professor of botany at the Univ. of Notre Dame (1904–18), dean of the College of Science (1918–22), and professor of organic chemistry from 1918. He is known for his study of the reactions of acetylene which were the basis for the development of Lewisite gas and Duprene, a synthetic rubber.

Nièvre (nyĕ'vrŭ), department (2,659 sq mi.; pop. 248, 559), central France, named after a small tributary of the Loire. It occupies the old province of NIVERNAIS. Nevers is the capital

Niflheim (nĕ'fŭlhīm″), in Norse myth, the lowest region and farthest north, perhaps the same as Hel. It is cold and dreary, inhabited by frost giants, who will go forth at Ragnarok

Nigel (nī'jul), town (pop 30,660), Transvaal prov., Union of South Africa. It is connected by rail with Durban. The population has grown remarkably in recent times because of increased gold mining in the locality

Niger (nī'jŭr), in the Bible. see SIMEON 4.

Niger (nē'zhĕr'), overseas territory (c 457,100 sq mi.; pop. c 1,873,000), French West Africa. The capital is Niamey. It is bordered on the north by Algeria and on the south by Nigeria. Niger is crossed by the Niger river. The south is well wooded and suitable for ranching, while the north is largely desolate. There are roads to Nigeria. Hides and skins are exported

Niger, river, c 2,600 mi. long, rising in NE Sierra Leone. On its initial northeasterly course it flows through French Guinea and French Sudan. After passing Timbuktu, it turns southeast and crosses French Niger and Nigeria to empty into the Gulf of Guinea. The Benue, the chief tributary, enters the Niger at Lokaja in Nigeria. On the Niger's marshy delta (c 14,000 sq mi.) is Port Harcourt. The Niger is one of the longest rivers of Africa, but it is not economically of great use. The central section is navigable for part of the year. Irrigation works making use of its water are contemplated. Two of the early explorers, Mungo Park and Hugh Clapperton, lost their lives on the Niger. Richard L. Lander and his brother also explored the river

Nigeria (nījēr'ēu), British colony and protectorate (372,599 sq. mi.; pop. 19,928,171), W Africa, on the Gulf of Guinea. The capital is Lagos. Nigeria includes British Cameroons. It is bordered on the north and west by French West Africa and on the east by French Cameroons and French Equatorial Africa. The country is named for the Niger river, which crosses it. Nigeria has a desert in the north, savannas in the central highlands, rain forests in the south, and swamps and forests along the coast (c 500 mi. long). Linguistically Nigeria falls into a northern and a southern section. Of the many native groups, the most numerous are in the north the Hausa (3,604,016), the Fulani (2,025,189), and the Kanuri (930, 917) and in the south the Yoruba (3,166,154) and the Ibo (3,172,789). A fairly extensive rail system and a road net connect the principal towns and cities of the interior, including Kano and Bauchi, with the ports of Lagos and Port Harcourt. Tin is mined in the north and coal in the south. Exports of cotton, peanuts, hides, and skins from the north and cacao and palm products from the south have supplanted the centuries-old trade in slaves. The annexation in 1861 of Lagos, a notorious slave depot, as a crown colony marked the beginning of British administration. By 1901, after Frederick J. D. Lugard conquered the slave-raiding chiefs of the north, all the present territory of Nigeria came under British control. In 1906 the country was divided into Northern Nigeria and Southern Nigeria. The two administrations were amalgamated in 1914 to constitute the colony and protectorate of Nigeria. Nigeria is ruled by an appointed governor with the aid of an executive and a legislative council. The legislative council, with appointed and elected members, has a native majority. See Wilfrid Hambly, *Culture Areas of Nigeria* (1935), A. C. Burns, *History of Nigeria* (1936)

night blindness see BLINDNESS

night-blooming cereus (sēr'ēus), name for several species of the CACTUS family, characteristically blooming at night and formerly included in the genus *Cereus*. All are usually climbing or sprawling plants with flat or angled stems and massive but delicate blossoms, commonly white and sometimes fragrant. The flowers unfold rapidly and typically last but a single night. Some of the cacti most commonly called night-blooming cereus are *Hylocereus undatus* (an old hedgeo of which is a landmark in Hawaii), *Selenicereus grandiflorus* (used as a heart tonic), and *Nyctocereus serpentinus*

nighthawk or **bull bat,** North American bird of the goatsucker family. The eastern nighthawk, more often seen than the related WHIPPOORWILL, has plumage of mottled brown, gray, and black, with white wing, throat, and (in the male) tail bands. It may lay its eggs on flat surfaces of hillsides, rocks, or fields or on gravel-covered city roofs. It catches insects in its wide, bristled mouth while pursuing its erratic, graceful flight. At times it plunges from high in the air, arresting its descent and producing a booming sound by suddenly spreading its wings. It is especially active in early evening and before daybreak

Nightingale, Florence, 1820–1910, English hospital administrator, b. Florence, Italy. She was influential in modernizing training for nursing. In 1844 she began to visit hospitals and to interest herself in training for nurses. She spent a brief period in 1850 with the Sisters of St. Vincent de Paul in Alexandria, and in 1851 she studied at the institute for Protestant deaconesses in Kaiserswerth, Germany. Her genius for administration was displayed when, in 1854, she organized a hospital unit of 38 nurses for the Crimean War and established a new type of war hospital at Scutari and Balaklava. She enforced discipline, introduced sanitary reforms, and, against opposition, secured necessary supplies. With the testimonial fund given her for her war services she founded (1860) the Nightingale School and Home for training nurses, St. Thomas's Hospital, London. Although her health was broken and she undertook no other projects of organization, Miss Nightingale's counsel was sought on matters of sanitation and nursing throughout her life. She was known as the "Lady of the Lamp." Florence Nightingale was the first woman to receive (1907) the British Order of Merit, the Crimean Monument, Waterloo Place, London, was erected in her honor in 1915, and in 1934 the Florence Nightingale International Foundation was inaugurated at London to sponsor postgraduate courses in nursing. She is the subject of Longfellow's poem "Santa Filomena." Her writings include *Notes on Hospital Administration* (1857), *Notes on Hospitals* (1859), *Notes on Nursing* (1860), and *Notes on Nursing for the Laboring Classes* (1861). See biographies by M. R. S. Anderson (1929), Irene Cooper Willis (1931), and Margaret Goldsmith (1937)

nightingale, migratory bird of the thrush family, celebrated by many poets for its powers of song. The common nightingale of England and Western Europe is about 6½ in. long and reddish brown above, with under parts of grayish white. It winters in Africa and reaches England about the middle of April. Its song is usually heard only during the breeding season. The nest is a loose structure of leaves and grass on or near the ground. A somewhat larger species is found in Eastern Europe. The bulbul, a songbird which appears in Persian literature, is thought to be a nightingale

nightshade, name for plants of the large and widely distributed genus *Solanum*, chiefly noted for their poisonous qualities. The genus, however, also includes the food plants potato and eggplant. Other species of nightshade include BELLADONNA or deadly nightshade, a BITTERSWEET or woody nightshade, the Jerusalem cherry, a house plant popular for its orange berries, the HORSE NETTLE, and the black nightshade (*Solanum nigrum*), also called deadly nightshade, a weed with black berries. Nightshades usually have star-shaped flowers and showy berries. The enchanter's nightshade belongs to the genus *Circaea*

nihilism (nī'ulĭzm), a name first applied by Turgenev in his novel *Fathers and Sons* (1861) to a theory held by many Russian revolutionists at that time and afterward until the downfall of the tsarist government (1917). Nihilism stressed the need to destroy existing economic and social institutions, whatever was to be the nature of the better order for which the destruction was to prepare. Nihilists were not without constructive programs, but agreement on these was not essential to the immediate objective, destruction. Direct action, such as assassination and arson, was characteristic. Such acts were not necessarily directed by any central authority. Small groups and even individuals were encouraged to plan and execute terroristic acts independently. The assassination of Tsar Alexander II was one result of such terrorist activities. The constructive programs published by nihilists include the establishing of a parliamentary government, the programs are on the whole moderate in comparison with the revolutionary measures of 1917. Nihilism was too diffuse and negative to persist as a movement and gradually gave way to other philosophies of revolt, it remained, however, an element in later Russian thought. See S. Stepniak, *The Career of a Nihilist* (1889), Vera Figner, *Memoirs of a Revolutionist* (1927)

Niigata (nē'gätä), city (1940) pop. 150,903, 1947 pop. 204,477), capital of Niigata prefecture, N Honshu, Japan, on the Sea of Japan at the mouth of the Shinano river. It is an industrial center and the main port (opened in 1868 to foreign trade) for the west coast of Honshu, with exports of oil, machinery, and textiles. The prefecture yields petroleum, gold, silver, raw silk, and farm products

Niihau (nē'hou), island (72 sq. mi.; pop. 182), one of the Hawaiian Islands. It is SW of Kauai and privately owned. Rocky in the east and mostly arid lowland, the island is suitable only for cattle grazing. Niihau mats, made from rushes, are famous

Niitakayama: see MORRISON, MOUNT

Nijinsky, Vaslav (vŭslăf' nyĭzhĕn'skē), 1890–1950, Russian ballet dancer, b. Warsaw, Poland, studied at the Russian Imperial Ballet School. He had tremendous success at his debut (1907) with the imperial ballet in the Marinsky Theater, St. Petersburg. He traveled to Paris (1909) and, as *premier danseur* in Diaghilev's Russian Ballet, was the first to dance *Les Sylphides*, *Petrouchka*, *The Afternoon of a Faun*, *Scheherasade*, and *The Spectre of the Rose*. Nijinsky is among the greatest dancers of all time, but his career was cut short when he became insane. See his diary (1936), ed. and tr. by his wife, Romola Nijinsky, who also wrote a rather inaccurate biography (1933), Anatole Bourman and D. Lyman, *The Tragedy of Nijinsky* (1936), *Nijinsky* (ed. by P. D. Magriel, 1946)

Nijmegen (nī'mā″khun), municipality (pop. 105,921), Gelderland prov., E Netherlands, on the Waal and near the German border, SSW of Arnhem. A railroad junction and inland shipping center, it also has important manufactures. It has a Catholic university (founded 1923). Dating from Carolingian times, Nijmegen was chartered in 1184 and became a free imperial city and a member of the Hanseatic League. It subscribed (1579) to the Union of Utrecht. The Treaty of Nijmegen was signed here in 1678–79 (see DUTCH WARS). In the Second World War, Allied air-borne troops wrested (Sept. 1944) Nijmegen from the Germans but failed in rescuing the troops caught at Arnhem. Among the ancient buildings of the city are a 13th-century church (the Groote Kerk), the city hall (16th cent.), the weighhouse (17th cent.), and remains of a palace built by Charlemagne and rebuilt by Frederick I in 1165. Nijmegen was formerly also spelled Nimeguen, Nymegen, and Nymwegen and is known in French as Nimègue and in German as Nimwegen

Nikaria see ICARIA

Nike (nī'kē), in Greek mythology, daughter of Pallas and Styx. She presided over all contests, especially war, and as such was the goddess of victory, she was identified with the Roman goddess Victoria. Nike was usually conceived of as an attribute of Zeus and Athena (sometimes she was identified with Athena). In art, Nike is usually winged and bears a wreath or a palm branch. In the Athena Parthenos, a statue by Phidias, Athena held a figure of Nike. A Nike by Paeonius, discovered at Olympia, is in the museum there. The *Victory* (or *Nike*) *of Samothrace* (Louvre), although badly mutilated, is one of the finest extant Greek sculptures

Nikisch, Arthur (ar'tōōr nē'kĭsh), 1855–1922, Hungarian conductor and violinist, grad. Vienna Conservatory, 1874. He played in Wagner's orchestra at Bayreuth and with the Vienna court orchestra. In 1879 he became conductor of the Leipzig Opera, remaining until 1889, when he became conductor of the Boston Symphony Orchestra. He conducted (1893–95) the Budapest Opera and was afterward conductor of the Leipzig Gewandhaus and the Berlin Philharmonic until his death

Nikko (nōk'kō), town, Tochigi prefecture, central Honshu, Japan, in Nikko National Park. It is a tourist resort and religious center, famous for its ornate temples and shrines, dating from the Yedo period and notable for rich coloring. One of them houses the tomb of Ieyasu. The park is noted for its mountain scenery, waterfalls, and cryptomeria forests

Nikolayev (nyĭkul'uf), city (pop. 167,108), capital of Nikolayev oblast, SW Ukraine, on the Southern Bug near its junction with the Ingul river. It is a major Black Sea port, exporting grain, sugar, and iron and manganese ores, and it has large shipyards and flour mills. The city was founded in 1784 near the site of the ancient Greek colony of OLBIA. In the Second World War it was held (1941–43) by the Germans

Nikolayevsk or **Nikolayevsk-on-Amur,** Rus. *Nikolayevsk-na-Amure* (nyĭkulŭ'ufsk-na-ămōōr'), city (1948 pop. over 50,000), capital of Lower Amur oblast, Khabarovsk Territory, RSFSR, in Far Eastern Siberia. It is a port on the Amur, 25 mi. above its mouth, and the center of a fishing, goldmining, and fur-hunting area. There are iron deposits near by. Founded in 1852, it was the leading Russian city of the Far East until the rise of Khabarovsk after 1880. It suffered greatly (1920) in the Russian civil war

Nikolsburg (nē'kōlsbōōrk), Czech *Mikulov* (mĭ'kōōlŏf), town (pop. 5,220), Moravia, Czechoslovakia, near the Austrian border. Here in 1621 Gabriel BETHLEN signed a disadvantageous treaty with Emperor Ferdinand II. The Franco-Austrian armistice concluded here (1805) after the battle of Austerlitz was followed by the Treaty of PRESSBURG. Another armistice signed here ended the AUSTRO-PRUSSIAN WAR (1866)

Nikolsk-Ussurisk, RSFSR. see VOROSHILOV

Nikon (nē'kŏn), 1605–81, Russian churchman, patriarch of the Russian Orthodox Church (1652–66). Widely known as a reformer, he accepted the patriarchate on condition that he would be obeyed in everything. He undertook at once a reform of church discipline and ritual with a view to purging the Russian rites of accretions and eccentricities. His reforms, particularly his introduction of a new prayer book (1654), created a schism in the church and inspired the formation of a major opposition sect, the Raskolniki (or Old Believers), who have retained the older usages banned by Nikon. Heterodox sects such as the DUKHOBORS formed and attached themselves to the Raskolniki to avoid persecution. By 1658 Nikon had aroused sufficiently powerful opposition to bring about his banishment, and in 1666 he was deposed and degraded. He was a figure unique in Russian church

history, for he opposed any interference by the state in church affairs and considered the two institutions to be distinct and separate His reforms were maintained after his disgrace

Nikopol (nēkô'pôl), town (pop 5,022), N Bulgaria, on the Danube opposite Rumania It was founded (A D 629) as Nicopolis Here in 1396 the Ottoman Turks under Bajazet I defeated an army of crusaders led by King Sigismund of Hungary (later Emperor SIGISMUND) Among the Christian leaders captured were John the Fearless of Burgundy and Marshal Boucicaut The Turkish victory, won largely because the discipline of the Janizaries was superior to disorderly Western chivalry, removed the last serious obstacle to the Turkish advance, however, Bajazet's defeat (1402) by Tamerlane gave Christian Europe a respite

Nikopol (nyĭkô'pul), city (1926 pop 14,214, 1939 pop 57,841), S central Ukraine, on the Dnieper It is the center of a major manganese-mining district and has a large metallurgical industry.

Nikosia, Cyprus see NICOSIA

Niksic, Serbo-Croatian *Nikšic* (nēk'shĭch), town (pop 6,686), Montenegro, Yugoslavia, NW of Titograd An ancient Montenegrin stronghold, it has ruins of fortresses built for defense against the Turks There are a Roman bridge and a cathedral, the gift of Nicholas II of Russia

Niland (nī'lund), village (pop c 2,000), SE Calif , at the northern end of IMPERIAL VALLEY

Nile, great river of Africa One of the longest rivers in the world, it flows c 4,050 mi from its ultimate headstream, the KAGERA, to the Mediterranean Sea, and it drains c 1,100,000 sq mi The Nile proper, originating at Khartoum (in the Anglo-Egyptian Sudan) in the junction of the BLUE NILE and the WHITE NILE, is c 1,500 mi long Except for the ATBARA, it receives no tributaries below Khartoum In the Anglo-Egyptian Sudan the course of the Nile, viewed from north to south, may be described as a gigantic S curve In Egypt it flows almost due north but often inclines slightly to the west Below Cairo the river enters its delta, which it crosses chiefly through the Damietta and Rosetta channels, there are five other channels, mainly used for irrigation Between Khartoum and Aswan, Egypt, where the First Cataract (the most northerly) is located, the Nile descends from 1,230 ft to 279 ft The descent, always gradual except at the six groups of cataracts, is especially gentle below Aswan The cataracts make the river unnavigable above Aswan except for short stretches and prevent a through waterway from Albert Nyanza N to the Mediterranean The most striking phenomenon of the Nile is the annual autumn overflow of the river from its wide shallow bed in Egypt The mystification of the ancient geographers as to the source of such abundant water during a season when rivers normally were low was cleared up in the 18th and 19th cent by explorers, including James Bruce, John Speke, and Henry Stanley They disclosed that the Blue Nile (which furnishes most of the water for the autumn floods) drains the highlands of NW Ethiopia and that the White Nile drains the E Belgian Congo and W Uganda by drawing on Edward Nyanza, Albert Nyanza and Victoria Nyanza As in ancient times, Egypt would be entirely a desert save for the Nile The pressure of a growing population, however, makes it essential to grow crops throughout the year on the limited arable land and forbids reliance on the annual floods alone Water is kept available throughout the year and flooding is controlled by a system of dams completed in the 1930s and including among major installations the ASWAN DAM and works at ASYUT and SENNAR See Amelia Edwards, *A Thousand Miles up the Nile* (1899), Emil Ludwig, *The Nile* (1937)

Nile, battle of the see ABOUKIR

Niles, Hezekiah, 1777–1839, American journalist, b Jefferis's Ford, Chester co , Pa A printer, a writer, and a publisher, he was the chief editor (1805–11) of the Baltimore *Evening Post* In 1811 he founded *Niles' Weekly Register* (later called *Niles' National Register*), one of the most influential journals of his day, now an important historical source He was more or less independent in politics but was an economic nationalist, advocating the protective tariff, gradual abolition of slavery, and the recharter of the Second Bank of the United States He became an active opponent of Andrew Jackson Niles wrote a historical work, *Principles and Acts of the Revolution* (1822), and essays See R G Stone, *Hezekiah Niles as an Economist* (1933)

Niles. 1 Village (pop 2,168), NE Ill , near Chicago, inc 1899 **2** City (pop 11,328), SW Mich , on the St Joseph and N of South Bend, Ind , in a farm and fruit area, inc as a village 1838, as a city 1859. It was the site of a Jesuit mission (1690) and of Fort St. Joseph, built by the French (1697) The fort fell to the British (1761), to the Indians (Pontiac's Rebellion, 1763), and to the Spanish and Indians (1780, 1781), it was later abandoned. Permanent settlement began in 1827, and as a station on the stagecoach route between Detroit and Chicago, Niles grew as a commercial and industrial center. Its manufactures include refrigeration equipment, metal fixtures, wire products, and dress patterns. Ring Lardner was born here **3** City (pop 16,273), NE Ohio, on the Mahoning and near Warren, settled 1806 It is an iron and steel industrial center, and chemicals, electric lights, metal products, and railroad equipment are made There is a memorial to William McKinley, who was born here

Niles Center, Ill see SKOKIE

Nilgiri Hills see GHATS

Nilsson, Christine (nĭl'sŏn), 1843–1921, Swedish operatic soprano Her debut (1864) was made in Paris She made a tour (1870–72) of the United States, after which she sang regularly at Drury Lane until 1877 In 1883 she sang at the opening of the Metropolitan Opera House

nimbus (nĭm'bus), in art, the luminous disk or circle or other indication of light around the head of a sacred personage It was used in Buddhist and other Oriental art and by the early Greeks and Romans to designate gods and heroes and appeared in Christian art in the 5th cent Although usually a circle or disk, the nimbus has various forms—triangular for God the Father, a circle with a cross for Christ, a square for a living person, a disk or circle for a saint, with sometimes a band of small stars for the Virgin Mary The square form was symbolic of the material world, the circle symbolized spiritual perfection and eternal blessedness, and the triangle represented eternity and the Trinity The nimbus is usually of gold and may have a clearly defined outline or the light may be diffused, radiating from the head in lines that melt into the picture The term *aureole* may denote a crown or radiance around the head or it may be an oval used as a background for the whole body When nimbus and aureole are combined for one figure, the illumination is called a glory Halo is a nontechnical term to denote either a disk back of the head or a circle surrounding it

nimbus, in meteorology see CLOUD

Nimeguen or **Nimègue,** Netherlands [see NIJMEGEN

Nîmes (nēm), city (pop 75,398), capital of Gard dept , S France, in Languedoc It manufactures silk and trades in wines and spirits As Nemausus it was an important city of Provincia Narbonensis (see GAUL) The magnificent Roman arena, seating up to 24,000 spectators, is still in use The Maison Carrée [square house], a Roman TEMPLE (1st or 2d cent A D), one of the finest examples of Roman architecture, is perfectly preserved and houses a museum of Roman antiquities Other Roman relics include the temple of Diana (2d cent A D), a great watchtower, and, a few miles distant, the PONT DU GARD

Nimitz, Chester William (nĭ'mĭts), 1885–, American admiral, b Fredericksburg, Texas, grad Annapolis 1905 In the First World War he was chief of staff to the commander of the submarine force of the Atlantic Fleet He was chief of the Bureau of Navigation when, after the attack on Pearl Harbor he succeeded (1941) Husband E Kimmel as commander of the Pacific Fleet He headed the naval fighting forces in the Pacific throughout the Second World War In Dec , 1944, he was made admiral of the fleet ("five-star admiral") and a year later succeeded Ernest J King as chief of naval operations After he retired (Dec , 1947) from the navy, he was chosen (March, 1949) to head the United Nations commission for India and Pakistan

Nimrah see BETH-NIMRAH

Nimrim, stream, perhaps the Wadi Nimeirah, a southeastern feeder of the Dead Sea Isa 15 6, Jer 48 34

Nimrod, descendant of Cush who is recorded as a mighty hunter Gen 10 8, 1 Chron 1 10

Nimshi (nĭm'shī), grandfather of Jehu 1 Kings 19 16, 2 Kings 9 2,14,20, 2 Chron 22 7

Nimwegen, Netherlands see NIJMEGEN

ninebark, any plant of the genus *Physocarpus* (or *Opulaster*), North American (one Asiatic) deciduous, spring-blooming shrubs, with thin bark which peels in several layers They have clusters of small white or pinkish flowers, often similar to those of the closely related bridal wreath spiraea, followed by small inflated seed pods Ninebarks are hardy and are easily cultivated as ornamental shrubs

Nine-Power Treaty. see NAVAL CONFERENCES

Ninety Six, town (pop 1,453), W S C , near Greenwood, founded 1855 Near by are the site of a Revolutionary fort and a state park.

Nineveh (nĭ'nuvŭ), ancient city, capital of the Assyrian Empire, on the Tigris river opposite the site of modern Mosul, Iraq The old capital Assur was replaced by Calah, which seems to have been replaced by Nineveh Nineveh was thereafter generally the capital, though Sargon built Dur Sharrukin as his capital Nineveh reached its full glory under SENNACHERIB and ASSUR-BANI-PAL It continued to be the leader of the ancient world until it fell in 612 B C to the attack of Cyaxares and Nabopolassar, and the Assyrian Empire came to an end Excavations, begun in the middle of the 19th cent , have revealed a city more than 3 mi. long Buildings and inscriptions give much material on the history of Assyria The library of Assurbani-pal was at Nineveh The city is mentioned often in the Bible. The book of Nahum tells of its fall. Gen. 10.11; Zeph. 2.13; Mat. 12.41; Luke 11.30

Ninghsia or **Ning-hsia** (nĭng'shyä'), province (90,075 sq mi., pop 737,536), NW China, bounded on the north by the Mongolian People's Republic The capital is Yingchwan. Ninghsia is part of Inner Mongolia. Desert and grazing land make up most of the province. Only in the southwest section, through which the Yellow River flows, is agriculture possible, there wheat, kaoliang, and beans are raised Wool, furs, hides, and rugs are exported The few towns are merely stations on the camel caravan routes which are Ninghsia's chief avenues of trade The Chinese population is confined to the south The rest of the province, inhabited by Mongols, was detached (1949) by the Chinese Communists and made part of the Inner Mongolian Autonomous Region

Ninghsien or **Ning-hsien** (nĭng'shyĕn'), city (pop. 210,377), Chekiang prov , China, on the Whangpoo river A Portuguese trading settlement was established here in the 16th cent In the Opium War (1841) British forces occupied the city The Treaty of Nanking (1842) which ended hostilities, made Ninghsien a TREATY PORT It is the eastern terminus of a railroad to Hangchow Fishing is a major industry The city was formerly named Ningpo

Ningpo, China see NINGHSIEN

Ninian, Saint (nĭ'nēun), d 432?, British missionary to the Picts of Galloway, the Apostle of Scotland. See study by W D Simpson (1940)

Ninon de Lenclos see LENCLOS, NINON DE

Niobe (nī'ōbē), in Greek legend, queen of Thebes, wife of AMPHION and daughter of TANTALUS. She boasted of her children (accounts vary, giving her 12, 14, and 20), saying that LETO had only two APOLLO and ARTEMIS, angry at this insult to their mother, killed all Niobe's children, and she was turned into a stone image of perpetual weeping

niobium (nīō'bēum), steel-gray, lustrous metallic element (symbol=Nb, for physical constants, see ELEMENT, table) Like tantalum, it is malleable and ductile and can be welded It also resembles tantalum in reacting readily at high temperatures with oxygen, carbon, the halogens, nitrogen, sulphur, and other nonmetals It is used in vacuum tubes, in the preparation of stainless steel, and (in the form of the carbide) in making cutting tools In 1801 Charles Hatchett discovered the element (although he did not isolate it) in an ore known as columbite C W Blomstrand, in 1864, isolated the element from the chloride Both columbium (symbol=Cb) and niobium were long used as names for the element in different countries, in 1949 the International Union of Chemistry adopted the name niobium in preference to columbium

Niobrara (nīōbrâ'ru), river, 430 mi long, rising in E Wyoming and flowing across N Nebraska to the Missouri on the northeast border The Bureau of Reclamation's Mirage Flats project uses water from the Niobrara impounded by Box Butte Dam (est 1946), SW of Rushville

Niort (nyôr), town (pop 29,068), capital of Deux-Sèvres dept , W France, in Poitou It has glove manufacturing Of the old fortress (12th–13th cent) two huge towers remain, there also are several fine Renaissance buildings Niort was a Huguenot stronghold in the 16th and 17th cent Mme de Maintenon was born in jail here

Nipawin (nĭ'puwĭn"), town (pop 2,211), E central Sask , on the Saskatchewan river and E of Prince Albert There are flour mills and dairying

Nipigon, Lake (nĭ'pĭgŏn), 66 mi long and 46 mi wide, central Ont , NE of Port Arthur It has many islands It drains S into Lake Superior by the 40-mile Nipigon river.

Nipissing, Lake (nĭ'pĭsĭng), S Ont , between the Ottawa river and Georgian Bay It extends west from the city of North Bay and is drained WSW by the French river 50 mi to Georgian Bay

Nippon (nĭ'pŏn, nĭpŏn'), a name for Japan, derived from Dai Nippon This may be said to mean Great Japan and is derived from the Chinese ideographs for Land of the Rising Sun

Nippur (nĭpōōr'), ancient city of Babylonia, a northern Sumerian settlement on the Euphrates It was the seat of the important cult of the god En-lil, flourishing above all others in Sumerian times Excavations of the temple area have yielded a large library (of clay tablets) of the greatest historical interest, along with relics of the much later Persian and Parthian periods

Niriz (nērēz'), salt lake, S Iran, in the mountains E of Shiraz The town of Niriz (pop 19,439) was once on its shores, but now is to the southeast because of shrinkage of the lake. The town is on the road from Kerman to Shiraz The lake is also called Bakhtegan

Nirvana: see BUDDHISM.

Nis or **Nish,** Serbo-Croatian *Niš* (all nēsh), city (pop 50,692), S Serbia, Yugoslavia, on the Nishava river near its confluence with the Southern Morava It is an important railroad center and has iron and tobacco industries The Roman Naissus, it was the site of a victory (A.D. 269) of Claudius II over the Ostrogoths and was the birthplace of Constantine I (Constantine the Great). In the Middle

Ages the city passed back and forth between the Bulgarian and Serbian empires The Turks, who captured it c 1386, were defeated here in 1443 by John Hunyadi, but soon obtained a permanent hold over all Serbia Nis was several times held, for brief periods, by Christian forces, but it permanently passed to Serbia only in 1878 The city retains a medieval fortress which dominates the S Morava valley The Tower of Skulls (Serbo-Croatian *Cele Kula*) was built to commemorate the Serbs massacred in the uprising of 1809.

Nisa, town, Silesia see NEISSE

Nish, Yugoslavia see NIS

Nishapur (nēshāpōr'), city (pop 24,270), NE Iran, SW of Meshed Valuable turquoise mines are near by It was the usual medieval capital (until 1161) of Khurasan and in the 11th cent was briefly capital of Persia Jenghiz Khan took the town and massacred much of the population Omar Khayyam was born here, archaeologists made important finds of glazed pottery near his tomb

Nishinomiya (nē"shēnō'mēä), city (1940 pop 103,774, 1947 pop 108,893), Hyogo prefecture, S Honshu, Japan, on Osaka Bay It is a sake-producing center Kobe Women's College is here

Nisibin (nĭs'ĭbēn), town, NE Syria, on the Mosul-to-Alep route It has ruins of the ancient Nisibis, the residence of early Armenian kings It passed in turn to the Romans, Parthians, and Persians, in 1839 the Egyptians here defeated the Turks

Nisqually Indians (nĭz'kwălē), tribe of North American Indians of the Salishan linguistic stock In the early 19th cent they lived on the Nisqually river in Washington Their culture was essentially that of the Pacific Northwest Coast area, they fished for salmon, they lived in large wooden houses, and they were expert at wood carving In 1854 they signed the Medicine Creek Treaty, which set aside a reservation for them in W central Washington The Nisqualli, however, were not satisfied, and they took part in the Indian uprisings of 1858 They have largely abandoned the reservation and are today farmers There are 60 left on the reservation See M W Smith, *The Puyallup-Nisqually* (1940)

Nisroch (nĭs'rŏk), Assyrian god in whose temple Sennacherib was worshiping when he was assassinated 2 Kings 19 37, Isa 37 38.

niter, see SALTPETER

Niterói (nētərōē'), city (pop 124,507), capital of Rio de Janeiro state, SE Brazil, on Guanabara Bay opposite Rio de Janeiro It is primarily a residential suburb of the national capital, though it has some industries, has some shipping by rail and by sea, and has several institutions of higher learning Formerly the name was spelled Nictheroy

niton see RADON

Nitra (nyĭ'trä), Ger *Neutra* (noi'trä), Hung *Nyitra* (nyĭ'trŏ), city (pop 19,712), Slovakia, Czechoslovakia, NE of Bratislava and on the Nitra river, an affluent of the Danube It is an agricultural market center and has beet-sugar refineries and breweries Dating from Roman times, Nitra is traditionally the site of the oldest church in Slovakia and is an episcopal see

nitrate (nī'trāt), either a salt or an ester of NITRIC ACID A nitrate is a compound containing the nitrate group (see RADICAL) of atoms, which consists of one atom of nitrogen and three of oxygen Nearly all the nitrates of the metals are soluble in water, and for this reason they are widely used when a soluble salt of a metal is required Some important nitrates are potassium nitrate (SALTPETER) and sodium nitrate (Chile saltpeter), silver nitrate, known commonly as lunar caustic, NITROGLYCERIN, nitrocellulose, a nitrate of CELLULOSE, NITROBENZENE, and ammonium nitrate (composed of the ammonium and nitrate radicals), which is used in the preparation of nitrous oxide and explosives Calcium nitrate is used in fertilizers, as are many other nitrates Barium nitrate and strontium nitrate are used to make colored fireworks and colored lights for signals, a nitrate of bismuth is used in medicine In chemical analysis, the test for the nitrate radical involves the addition, first, of a solution of ferrous sulphate to the unknown substance and then of concentrated sulphuric acid The appearance of a characteristic brown ring at the surface of contact between the acid and the mixture (of ferrous sulphate and the unknown) indicates the presence of the nitrate radical The presence of nitrates in the soil is of great importance in agriculture, since from these soluble compounds plants obtain the NITROGEN necessary for growth The NITROGEN-FIXING BACTERIA are important in keeping the soil supplied with these compounds

nitric acid (nĭ'trĭk), highly corrosive, colorless liquid which gives off choking fumes in air, boils at 86°C, and becomes a white crystalline substance at —42°C. These properties apply to pure (100 percent) nitric acid Miscible with water in all proportions, the aqueous solutions of commerce commonly range in concentration up to that of 68 percent nitric acid, which is known as "concentrated" nitric acid This solution boils at 120°C, while other concentrations weigh less and have lower boiling points. The acid is a good conductor of electricity, ionizes readily, is a strong oxidizing agent, and reacts with metals, oxides, and hydroxides to form its salts, the nitrates Besides its use in the preparation of nitrates, it is employed in the making of explosives, of some dyes, and of several organic compounds such as pyroxylin It is prepared in several ways, chiefly by the treatment of a nitrate (commonly sodium nitrate, Chile saltpeter) with sulphuric acid and by the oxidation of ammonia (OSTWALD PROCESS) The acid was known to the alchemists as aqua fortis because of its corrosive action Fuming nitric acid is a highly concentrated solution of the acid, having a reddish-brown color owing to the presence of an oxide of nitrogen which forms the "fumes" A mixture of one part of nitric acid with three parts of hydrochloric acid is known as aqua regia, a yellow liquid which dissolves gold and platinum

nitrifying bacteria see NITROGEN-FIXING BACTERIA

Nitro (nī'trō), town (pop 2,983), W W Va, in the Kanawha and NW of Charleston, inc 1932 It was born a boom town in the First World War, growing up around a government explosives plant, which was later abandoned Several plants now produce pencils, chemicals, and rayon

nitrobenzene (nī"trōbĕn"zēn', -bĭn'zēn"), poisonous, pale yellow, oily liquid with a characteristic odor, boiling at 211°C and solidifying at about 6°C It is prepared by treating benzene with nitric acid (in the presence of sulphuric acid, which removes the water formed) It is insoluble in water, but mixes readily with many organic liquids It is used in the preparation of some soaps and perfumes and in the manufacture of aniline

nitrocellulose see CELLULOSE and GUNCOTTON

nitrogen (nī'trujun), gaseous element (symbol=N, for physical constants, see ELEMENT, table), colorless, odorless, and tasteless At its boiling point it changes to a colorless liquid, and at its melting point to a white, crystalline solid The gas does not burn, does not support combustion, and is only slightly soluble in water It is relatively inactive chemically, not uniting readily with other elements, and in compounds exhibits a tendency to leave the combination and revert to the free state It combines with some of the more active metals, such as calcium, magnesium, and sodium to form nitrides With oxygen it forms several oxides e g nitric oxide, a gas used in the preparation of nitrogen dioxide, which is used in manufacturing sulphuric acid (in the chamber process), nitrous oxide, (called commonly laughing gas), nitrogen trioxide, and nitrogen pentoxide Nitrogen is a constituent of ammonia, of nitric acid, of many explosives, e g, dynamite, guncotton, nitroglycerin, smokeless powders, and T N T (trinitrotoluene), of the important group of organic compounds called proteins, and of the many nitrates The element composes about four fifths of the atmosphere It is present in all living matter, being a constituent of protoplasm, and its compounds are, consequently, necessary for the continuance of life A FERTILIZER is used to supply plants with these compounds when they are lacking in the soil Nitrogen is present in the protein of foods and is an important consideration in human diet The element itself is used to some extent in filling electric-light bulbs (because of its inertness), in thermometers, and in certain industrial processes, as in the HABER PROCESS, when it is obtained from liquid air The chief importance of the element lies in its compounds Nitrogen was discovered by Daniel Rutherford in 1772, was shown by Scheele to be present in the atmosphere, and was first identified as an element by Lavoisier The **nitrogen cycle** describes the continuous course of nitrogen in nature as it is utilized by plants and animals in nutrition Nitrogen, in the form of compounds, is stored up by plants These plants are used by animals as food The nitrogen compounds are broken down within the body of the animal in its nutrition, and the nitrogen enters into other compounds Energy is liberated The waste matter of the animals has a high nitrogen content, and it passes into the soil or the sea Certain bacteria (see NITROGEN-FIXING BACTERIA) transform these new nitrogenous compounds into forms which can be utilized by the plants These last compounds are then taken up by the plants, transformed into those compounds which are to serve once again as food for animals, and the cycle is complete The expression **nitrogen fixation** refers to the extraction of the element from the atmosphere and its combination with other elements to form compounds This is accomplished commercially in various ways—in the arc process for the preparation of nitric acid, the cyanamide process for the preparation of calcium cyanamide, which is formed when calcium carbide and nitrogen react at extremely high temperatures (about 1100° C) and which is used in the production of ammonia, and the Haber process, in which ammonia is synthesized by the direct combination of nitrogen and hydrogen

nitrogen-fixing bacteria and nitrifying bacteria (nī'trufī"ĭng), bacteria which convert nitrogen into forms usable by the higher plants Nitrogen is an essential element in the formation of all protoplasm, nitrogen compounds in the soil are constantly being depleted by plants, and the restoration of such compounds is therefore of vital importance Nitrogen-fixing bacteria include both those that live free in the soil and those that live enclosed in nodules or tubercles on the roots of certain plants known as legumes Both groups are able to convert atmospheric nitrogen into protein compounds that can be utilized by plants for growth How the bacteria accomplish this is not fully understood Among the free-living forms are *Clostridium pasterianum*, discovered (c 1893) by Serge Winogradsky, and species of *Azotobacter*, discovered (c 1901) by M W Beijerinck When such bacteria die, the compounds formed by them are returned to the soil Bacteria that live on the roots of legumes are of the genus *Rhizobium* Beijerinck (c 1888) was the first to isolate *Rhizobium leguminosarum* (also known as *Bacterium*, or *Bacillus, radicicola*), although the presence of such bacteria in root nodules was recognized by earlier workers Legumes on which various species form nodules include alfalfa, peas, beans, clover, soybeans, and lupine The bacteria enter the roots chiefly through root hairs and then work their way to the inner tissues An enlargement of the tissue, known as a nodule or tubercle, forms as a result Many bacteria are contained within each nodule, and these live in a symbiotic (mutually beneficial) relationship with the green plant The bacteria obtain their carbohydrates from the green plant, and the green plant obtains nitrogen from the bacteria When the crops are harvested, the roots can be left in the soil to decay, thus returning organic nitrogen to the soil Rotation of a leguminous crop with a non-leguminous crop is a common practice for maintaining the nitrogen content of the soil Seeds are sometimes inoculated with nitrogen-fixing bacteria before sowing The bacteria are present naturally in some soils, and they can live free in the soil but thrive better in the nodules They are able to use also ammonia and other sources of nitrogen, and if such supplies of nitrogen are adequate they do not fix atmospheric nitrogen The nitrifying bacteria are those which convert certain nitrogen compounds, the product of decay of organic material in the soil, into forms usable by the higher plants The process consists chiefly of the oxidation of the ammonia of ammonium salts to nitrites by the action of bacteria of the genus *Nitrosomonas* and of the further oxidation, by *Nitrobacter*, of the nitrites to nitrates

nitroglycerin (nī"trōglĭ'sərĭn), highly explosive, heavy, colorless, oily liquid Chemically, it is a compound of carbon, hydrogen, oxygen, and nitrogen, being an ester of glycerin (glycerol) and nitric acid, and is more correctly called glyceryl trinitrate It is insoluble in water but easily soluble in ether and sparingly so in alcohol It is an unstable compound, decomposing with great, explosive violence upon slight jarring, percussion, or heating and forming carbon dioxide, water, and free nitrogen, with the liberation of a great amount of energy Because of its sensitivity to very slight shock, it is either mixed with absorbent materials to form DYNAMITE or with gelatin in nitrogelatin or blasting gelatin In both of these forms it is employed extensively as an explosive It is used also in the manufacture of smokeless POWDER In medicine it is used in the treatment of some forms of heart disease Nitroglycerin was discovered (c 1846) by Ascanio Sobrero and was first produced on a commercial scale by Alfred NOBEL

nitrous oxide see LAUGHING GAS

Nitti, Francesco Saverio (franchā'skō savā'rēō nēt'tē), 1868-, Italian statesman and economist A professor of economics at the Univ of Naples, he entered parliament in 1904 and was minister of agriculture under Giolitti (1911–14) and of finance under Orlando (1917–19) In 1919 he became premier, but serious internal difficulties and sharp criticism of his foreign policy caused his resignation in 1920 Nitti lived in exile during the Fascist period He returned after the Second World War and became, with Croce and Orlando, a leader of the National Democratic Union party

Nivelles (nēvĕl'), Flemish *Nijpel* (nī'pĭl), city (pop 11,865), Brabant prov, Belgium, S of Brussels and near Waterloo It is a steel-manufacturing center There are a convent dating from the 7th cent and a Romanesque church dating from the 11th cent and rebuilt in the 18th cent

Nivernais (nēvĕrnā'), region and former province, central France It roughly coincides with Nièvre dept Drained by the Loire and the Yonne, it is a hilly plateau, rising to the hills of MORVAN in the east Stock raising and pottery making are the principal industries Nevers is the only large town A county after the 10th cent, it passed (1384) through inheritance to Philip the Bold of Burgundy, was raised to a duchy in 1539, and later passed through a complicated succession, to the house of GONZAGA In 1659 Cardinal Mazarin bought the title, which remained with his family even after Louis XIV incorporated (1669) the duchy into the royal domain.

Nivôse see FRENCH REVOLUTIONARY CALENDAR

nix or **nixie,** in Germanic myth, water sprite The nixes could assume various shapes, sometimes as humans, sometimes as horses, most frequently as

half human and half fish Properly the females are nixies, the males nixes, but in English this distinction was not preserved They could do favors for humans, particularly in teaching them bewitching music, but for the most part they were treacherous and malignant, belonging to the dark band of fairies. The Lorelei and the Rhine maidens were nixies

Nixon, city (pop 1,835), S central Texas, ESE of San Antonio, in a poultry-raising area.

Niza, Marcos de: see MARCOS DE NIZA.

Nizam see HYDERABAD

Nizhni Novgorod, RSFSR see GORKI

Nizhni Tagil (nyēzh'nyĭ tĭgēl'), city (1926 pop 38,849; 1939 pop 159,864, 1946 estimated pop 250,000), RSFSR, in the central Urals A leading metallurgical center, it has industries based on near-by magnetite and iron deposits Manganese, copper, and gold are also mined in the vicinity.

Nizza, France see NICE

Njemen, river see NIEMEN.

NKVD see SECRET POLICE

No (nō), biblical name for Thebes, Egypt. Jer. 46 25, Ezek 30 14–16, Nahum 3 8.

no. see JAPANESE DRAMA

No, Lake: see NILE

Noadiah (nōădī'ə) [Heb ,=God meets]. **1** Levite. Ezra 8 33 **2** Prophetess Neg 6 14

Noah (nō'ə) [Heb ,=rest] or **Noe** (nō'ē), in the Bible, the builder of the ARK He alone of men was deemed by God to be worth saving, and it was at divine direction that he built the ship that saved human and animal life from the DELUGE After the flood God established a covenant with Noah Noah's sons, Shem, Ham, and Japheth, are eponymous ancestors of races as mankind is divided in the Bible Gen 6–10, 1 Chron 1 4, Ecclus 44 17–18, Ezek. 14 14,20, Mat 24 37, Luke 3 36, 17 26, Heb. 11 7 The name appears also among the daughters of ZELOPHEHAD

Noah, Mordecai Manuel (môr'dĭkī), 1785–1851, American journalist and politician, b Philadelphia. He devoted himself to journalism in Charleston, S C, and gave ardent support to the War of 1812 As special agent to Algiers, he helped secure (1813–15) release of the American prisoners held by Algerian pirates He returned to the United States, held public offices in New York city, founded and edited many newspapers, and wrote plays Becoming acutely conscious of the problems of the Jewish people, Noah attempted to buy Grand Island in the Niagara river as a city of refuge for the Jews of the world See biography by Isaac Goldberg (1937)

Noailles, Adrien Maurice, duc de (ädrēē' mōrēs' dük' dŭ nōī'yŭ), 1678–1766, marshal of France He distinguished himself in the War of the Polish Succession and the War of the Austrian Succession and exercised considerable influence on the development of French foreign policy

Noailles, Anna Élisabeth de Brancovan, comtesse de (ănä' ālēzäbĕt' du brăkôvä' kōtĕs' du nōī'yŭ), 1876–1933, French poet, of a noble Rumanian family. Her *Innocentes, ou, La Sagesse des femmes* was awarded a prize in literature in 1921 by the French Academy, from which, as a woman, she was excluded She was renowned for the brilliant political gatherings at her home Her turbulent lyrics of love and nature, many of which appeared in the *Revue des Deux Mondes*, were gathered in *Le Cœur innombrable* [the unnumbered heart] (1901), *L'Ombre des jours* [the shadow of days] (1902), and *Poèmes d'enfance* [poems of childhood] (1928) She wrote also a collection of short stories, *La Nouvelle Espérance* [the new hope] (1903), a novel, *Le Visage émerveillé* [the astonished face] (1904), and an autobiography, *Le Livre de ma vie* (1932)

Noailles, Louis Marie Antoine, vicomte de (lwē' mārē' ätwän' vēkôt' du nōī'yu), 1756–1804, French general and statesman, son of Adrien Maurice de Noailles He fought with Lafayette at Yorktown As a member of the States-General he proposed (Aug 4, 1789) that all titles and feudal privileges should be abolished When the French Revolution became too radical for him, he fled to the United States, where he became successful in business He later accepted a command under the younger Rochambeau in Santo *Domingo* and was mortally wounded in a naval battle (1804)

Nob [Heb ,=height], religious center just N of Jerusalem Saul had its inhabitants massacred. 1 Sam. 21 1–9, 22 6–23, Neh 11 32, Isa 10 32

Nobah (nō'bu) [Heb ,=barking] **1** Hebrew warrior who conquered Kenath Num 32 42 **2** Unidentified desert place, E of Palestine, associated with Gideon Judges 8 11

Nobbe, Friedrich (frē'drĭkh nō'bŭ), 1830–1922, German plant physiologist, who originated the scientific testing of seeds in 1869 He founded, at Tharandt, Saxony, an experiment station (1869) for the study of plant physiology and wrote several books on seeds

Nobel, Alfred Bernhard (ăl'frĕd bĕrn'härd nōbĕl'), 1833–96, Swedish chemist and inventor. Privately educated in St Petersburg, Russia, he traveled about Europe and came to the United States as a youth He returned to St Petersburg in 1852 to assist his father in the development of torpedoes and mines In 1863 he patented a mixture of nitroglycerine and gunpowder developed by his father, his brothers, and himself Manufacture of the explosive was begun in the family's small works in Helenebo1g, near Stockholm, in the same year. An explosion in the factory killed his younger brother and four others in 1864 Several accidental explosions of nitroglycerine in transit, with high loss of life, led him to further experimentation with the substance In 1866 he perfected a combination of nitroglycerine and kieselguhr, a diatomaceous earth, to which he gave the name dynamite. On his death in San Remo, Italy, Nobel left a fund from the interest of which annual prizes were to be awarded for the best work in the fields of physics, chemistry, physiology and medicine, and literature and towards the promotion of international peace The Nobel Prizes are given irrespective of nationality, the judges are, by the terms of his will, the Swedish Academy of Science, the Caroline Medico-Surgical Institute, the Swedish academy, and five members elected by the Norwegian Storting The awards are made in Stockholm on Dec 10, the anniversary of Nobel's death, and were bestowed for the first time in 1901 A prize is sometimes shared, six times the Nobel Peace Prize has been given to an organization Marie Curie is one of several women prize winners and the sole recipient of awards in two sections Five institutes with special book collections and facilities for research were also provided for, one corresponding to each prize section See H E Pauli, *Alfred Nobel* (1942), Michael Evlanoff, *Nobel-Prize Donor* (1944) For list of recipients of awards, see NOBEL PRIZES (table) on facing page

Nobile, Umberto (ōombĕr'tō nō'bēlā), 1885–, Italian aeronautical engineer and arctic explorer He designed the *Norge* and piloted that dirigible in the Amundsen-Ellsworth flight over the North Pole in 1926 He later quarreled with AMUNDSEN over the question of credit for the achievement In command of the *Italia*, sister ship of the *Norge*, Nobile flew over the pole in 1928, on the return trip his ship crashed NE of Spitsbergen and eight lost their lives Nobile was rescued by a Swedish aviator, Einar Lundborg, and the other survivors were rescued by the Russian icebreaker *Krassin* Severely censured for his conduct of the expedition, he resigned his commission as general in the air corps but later (1945) was cleared of the charges and reinstated. From 1931 to 1936 he was technical adviser for airship construction in the USSR, later he came to the United States and for several years headed the aeronautical engineering department of the Lewis College of Science and Technology, Lockport, Ill After the fall of Mussolini, Nobile returned to Italy He wrote *With the "Italia" to the North Pole* (1930) See Einar Lundborg, *The Arctic Rescue* (1929)

Noble, Gladwyn Kingsley, 1894–1940, American biologist, b Yonkers, N Y, grad Harvard, 1917 He was associated with the American Museum of Natural History from 1919, becoming curator of herpetology in 1924 and curator of experimental biology in 1928 Under his supervision, the Hall of Living Reptiles (1927) and the Hall of Animal Behavior (1939) were opened at the museum He participated in several expeditions and wrote on reptiles and amphibia

Noble, John Willock, 1831–1912, American statesman, b Lancaster, Ohio, grad Yale, 1851 He practiced law in St Louis in 1855, removing to Keokuk, Iowa, the next year He served in the Union army in the Civil War and was brevetted brigadier general in 1865 He returned to St Louis, served (1867–70) as U S district attorney, and successfully attacked whisky and tobacco interests He became a nationally prominent lawyer As Secretary of the Interior (1889–93) under President Benjamin Harrison he aided in systematizing pension payments, in conserving forests, and in the organization of Oklahoma Territory.

Noblesville, city (pop 5,575), co seat of Hamilton co, central Ind, NNE of Indianapolis, settled 1823, inc as a town 1851, as a city 1887 It produces furniture and rubber goods and breeds draft horses.

Nobre, Antonio (äntô'nyō nô'bru), 1867–1900, Portuguese poet. He studied at the Univ of Coimbra and in Paris He wrote a memorable volume of original, melancholy poems, which show a sort of tragic and highly lyric delirium This was published under the title *Só* [alone] (1892) He died of tuberculosis. A second volume of poems, *Despedidas* [farewells] appeared in 1902

Nobunaga, Oda (ōdä'nōbōōnä'gä), 1534–82, Japanese military commander The son of a feudal lord who had greatly increased his holdings in the intense feudal warfare of the 16th cent., Nobunaga built on these holdings and made himself master of three provinces near modern Nagoya The emperor secretly appealed to him for help, and Nobunaga was able to become (1568) virtual dictator of central Japan Though he restored the ousted shogun, he held the real power and, with the help of his able lieutenants, Hideyoshi and Ieyasu, greatly extended it By blood, fire, and trickery he subdued the Buddhist monasteries and put down rivals among the feudal barons. He dreamed of reuniting all Japan, but before that end could be accomplished, he was murdered by one of his discontented generals. He laid the basis for the unification later accomplished by his former lieutenants

Nocona (nōkō'nŭ), city (pop 2,605), N Texas, ESE of Wichita Falls A saddlery shop serving cowboys in the old days has grown to a large leather industry. There are oil fields near by.

nocturne (nŏk'tûrn) [Fr ,=night piece], in music, a romantic instrumental piece, free in form and usually reflective or languid in character. John Field wrote the first nocturnes, influencing Chopin in the writing of his 19 nocturnes for piano

Nod, Land of, in the Bible, the refuge of Cain somewhere E of Eden. Gen 4.16

Nodab (nō'-) [Heb.,=nobility], name of a tribe at war with the Jews 1 Chron 5 19

Nodier, Charles (shärl' nôdyā'), 1780–1844, French poet From 1824 he was librarian of the Bibliothèque de l'Arsenal in Paris His salon was the nucleus of the beginning romantic movement and was frequented by such men as Hugo, Sainte-Beuve, and Dumas père His best works are the imaginative tales *Trilby, ou, Le Lutin d'Argaïl* (1822) and *La Fée aux miettes* (1832)

no drama see JAPANESE DRAMA

nodule see NITROGEN-FIXING BACTERIA.

Noe (nō'ē), variant of NOAH

Noé, Amédée, comte de see CHAM.

noel (nōĕl') [Fr ,=Christmas], Christmas CAROL, especially one of French origin Certain organ compositions of 17th-century French composers are called noels, being variations on popular Christmas hymns

Nogah (nō'gu) [Heb ,=dawn], son of David 1 Chron 3 7, 14 6.

Nogales (nōgä'lĭs), town (pop. 13,866), Sonora, NW Mexico, on the Ariz border Contiguous to Nogales, Ariz, the town is the northern terminus of Mexico's west coast railroad and derives its importance chiefly from international trade The climate is hot and dry

Nogales (nōgä'lĭs), city (pop 5,135), co. seat of Santa Cruz co, S Ariz, on the Mexican boundary, practically one city with Nogales, Sonora, Mexico; founded 1880, inc 1893 Though in a rich mining and ranching area, it is important chiefly as a port of entry In the region to the north Father Kino founded two missions, Guevavi (1692, only traces remain) and Tumacacori (1696, now a national monument), and in the next century the Spanish established Tubac, a pioneer white settlement in Arizona The American army in border troubles exchanged gunfire with Mexican revolutionists under Francisco Villa (1916) and with a Mexican army under General Calles (1918)

Nogi, Maresuke, Count (märĕs'kā nō'gē), 1849–1912, Japanese general He fought in the First Chino-Japanese War In the Russo-Japanese War he commanded the force that took Port Arthur after a siege and later fought at Mukden He and his wife committed suicide on the death of Mutsuhito.

Noginsk (nŭgēnsk'), city (1926 pop 38,494, 1939 pop 81,024), RSFSR, on the Klyazma river and c 30 mi E of Moscow It is a major textile-milling center, processing cotton, silk, and wool. Its name was Bogorodsk until c 1930

Noguchi, Hideyo (hēdā'ō nōgō'chē), 1876–1928, Japanese bacteriologist, grad Tokyo Medical College, 1897 He came to the United States c 1900 to work with Simon Flexner at the Univ of Pennsylvania and in 1904 joined the Rockefeller Institute staff His special researches were on snake venoms, vaccines against smallpox and yellow fever, and the laboratory diagnosis of syphilis. Oroya fever, and trachoma He died of yellow fever in Accra, Africa, while working on that disease See biography by Gustav Eckstein (1931)

Noguchi, Isamu (nōgō'chē), 1904–, American sculptor, b Los Angeles, son of Yone Noguchi and Leonie Gilmour Noguchi He studied under Gutzon Borglum and at the East Side Art School, New York In 1927 and 1928 he received Guggenheim fellowships permitting him to study in Paris under Brancusi He is best known for his beautifully stylized portraits in bronze and terra cotta and is represented in museums in Buffalo, New York city, and Honolulu

Noguchi, Yone (Yonejiro Noguchi) (yō'nā nō'gōōchē, yō''nājĭrō'), 1875–1947, Japanese poet and critic of Japanese art and poetry A graduate of Keio Univ in Tokyo, he spent some time in the United States and England, lecturing for a year at Oxford He later taught English literature at Keio Univ. Noguchi, writing in English as well as in Japanese, helped to stimulate Western interest in many Japanese artists. His *Selected Poems*, written in English, appeared in 1921.

Nohah (nō'hä) [Heb ,=rest], son of Benjamin 1 Chron. 8.2

noh drama: see JAPANESE DRAMA.

Nokomis (nōkō'mĭs), city (pop. 2,562), central Ill., SSE of Springfield, inc. 1867.

Nola (nō'lä), town (pop. 10,733), Campania, S Italy. It is an agricultural center. Of ancient origin, it was a flourishing Roman colony, influenced by the

Greek culture of Naples Augustus died here in A.D 14 Excavations yielded fine Hellenistic vases and numerous coins

Nolde, Emil (ā'mēl nōl'dù), 1867–, German expressionist painter After teaching (1892–98) at a crafts school in St Gall, Switzerland, he devoted himself exclusively to his art His work is in oil and water color, he has also executed many drawings and experimented in sculpture Outstanding as a colorist, Nolde finds his subject matter in both nature (seascapes and flower gardens) and the supernatural (demonic heads, mystic appearances, and religious events) His works are for the most part in private collections, though various German museums also bought his canvases

Nolichucky (nō"lĭch ŭ'kē, nō"lĭchŭ'kĭ), river, c 150 mi. long, rising in W North Carolina in the Blue Ridge and flowing NW and W to the French Broad W of Greeneville, Tenn The first settlement on the river was made in 1772 John Sevier, first governor of Tennessee, was nicknamed Nolichucky Jack, David Crockett was born at Limestone on the Nolichucky

Nollekens, Joseph (nŏl'ĭkənz), 1737–1823, British sculptor, b London, of Dutch descent He studied in Rome and in 1770 returned to London, where he became the most fashionable portrait sculptor of his day Among his famous busts are those of Sterne, George III, the younger Pitt, Charles James Fox, and Benjamin West Numerous statues and groups in marble include *Cupid and Psyche*, *Venus Anointing Herself*, and *Bacchus*

nomad (nō'măd"), one of a group of people without fixed habitation Wandering herdsmen living in tents still occupy large sections of Asia, and the hunting tribes of the Far North, including the Eskimo, are still the masters of much of the arctic and subarctic regions, while large parts of Africa are peopled with nomadic groups Thus the nomadic way of life still prevails in much of the modern world Besides the herdsmen and the hunters and fishers, there are nomadic groups that move about in search of wild plants as food in season (such as the kamas bulb formerly sought by the Indians of the Pacific Northwest and the wild rice gathered in the Great Lakes region) The peoples who move seasonally but have permanent homes for part of the year (again such as the Indians of the Pacific Northwest, who went to the rivers for the salmon season) are seminomadic, and there have been seminomadic peoples of various types throughout history The nomadic groups are generally organized in tribal units and generally the adult males are closely knit into war bands, constantly ready to overwhelm rival nomadic groups or to swoop down in raids on settled peoples The incursions of nomads into settled civilizations marked the early history of ancient Egypt and Babylonia and reached their height with the great Mongol invasions of W Asia and Europe in the 13th, 14th and early 15th cent , notably under Jenghiz Khan and Tamerlane Formerly efforts were made to generalize about nomads and find a common denominator among such diverse cultures as those of the North American Indian hunter, the Bedouin of Africa, and the roving gypsies, but these have largely been abandoned in favor of studying each culture as a unit Even the often-repeated statement that nomadism represents a transition from the Neolithic hunter to the sedentary farmer is not accepted as valid There are instances of peoples who have abandoned farming and have become nomads, e g , some of the "village" Indians of the Great Plains who abandoned beans in favor of buffalo meat after the horse had been introduced

Nome (nōm), city (pop 1,559), W Alaska, on Norton Sound on the southern side of Seward Peninsula It was founded in 1899, when gold was discovered here on the beach, at a place known as Anvil City By the following summer some 30,000 prospectors had arrived in search of gold, but many died or left because of the hardships Dredging has replaced older methods of mining The city is the commercial and supply center for NW Alaska, with an airport and steamer connection to Seattle (May to Nov) It is a center of Eskimo handicrafts (ivory bracelets and penknives), and recently fur farming and fishing have been developed Nome is the scene of an annual fair and the All-Alaska Championship Dog Race Cape Nome lies to the southeast

nominalism (nŏ'mənəlĭzm), in philosophy, a theory of the relation between universals and particulars Nominalism gained its name in the Middle Ages, when it was contrasted with REALISM The problem arises because in order to perceive a particular object as a particular thing, say a table, we must have a prior notion of table Then does this prior notion have independent existence? Nominalism says that it does not, that it is just a name for a group Nominalism is appropriate to materialist and empirical philosophy and hence has been popular in modern thought

nominative (nŏ'mənətĭv) [Latin,=for naming], in Latin grammar, CASE usually used when the noun refers to an actor The term is used in the grammar of languages with Latinlike features, but the case may have different functions English *he* is said to be nominative

Nomura, Kichisaburo (kēchēsäbōōrō' nō'mōō"rä), 1877–, Japanese admiral and diplomat After graduation from the naval academy in 1908, he served in the navy and was naval attaché in Washington in the First World War In 1932 he was in command of the fighting at Shanghai He lost an eye when injured by a bomb thrown by a Korean patriot Nomura was appointed (1940) ambassador to the United States He and a special envoy, Kurusu, were carrying on negotiations in Washington when Japan attacked Pearl Harbor on Dec 7, 1941

Non, in the Bible, variant of NUN

nonconformists, those who refuse to conform to the requirements (in doctrine or discipline) of an established church The term is applied especially to Protestant dissenters from the Church of England Nonconformity in England appeared not long after the Reformation The Puritans would not conform in some matters but did not at first intend to secede from the Church of England Exile, as an escape from persecution, helped to widen the separation In the civil war and the Commonwealth, the separatists, or INDEPENDENTS, gained a stronger foothold The Act of Uniformity (1662), following the Restoration, made a distinct split unavoidable, since it required Episcopal ordination for all ministers As a result, nearly 2,000 clergymen left the Established Church In the usually accepted sense, nonconformity dates from that time The term *dissenter* similarly came into use, particularly after the Toleration Act (1689), in which reference was made to the "Protestant Dissenters" Presbyterians, Congregationalists, Baptists, Quakers, Unitarians, and Methodists are among the nonconforming denominations in England In recent usage, churches independent of the established or state church in both England and Scotland often are called "Free Churches" See Champlin Burrage, *The Early English Dissenters* (1912)

Nonimportation Act see EMBARGO ACT OF 1807

nonintercourse, in international law, refusal of a state to engage in diplomatic or commercial relations with another state It is a hostile act of retaliation for some wrong and is intended to effect redress Since nations normally have diplomatic and commercial intercourse, nonintercourse may in some circumstances be a threat of war

Nonintercourse Act see EMBARGO ACT OF 1807

Nonius, Petrus see NUÑES, PEDRO

nonjurors (nŏnjōō'tûrz) [from Latin,=not swearing] When William III came to the throne in 1688, a number of English and Scottish clergymen refused to break their allegiance to James II and to take the oath to the new king In England there were more than 400 of these nonjurors, and in 1690 five bishops were deprived of their sees In Scotland most of the Episcopalian clergymen were nonjurors because their church was disestablished in favor of the Presbyterian in 1689 The nonjurors upheld the doctrine of the divine right of kings and therefore were JACOBITES, but at the same time they believed in nonresistance to the established authority James II in exile appointed bishops, one being George Hickes, later bishops were Thomas Hearne and Jeremy COLLIER, and the nonjuring episcopal succession was kept up until 1805 The Scottish nonjurors submitted to the English king in 1788 at the death of the Young Pretender Probably their most famous theologian was William LAW, whose controversy with Bishop Hoadly precipitated the proroguing of convocation See ENGLAND, CHURCH OF

nonmetal, chemical ELEMENT possessing certain properties by which it is distinguished from a METAL In general, this distinction is drawn on the basis that a nonmetal appears as a negative ION or in a negative RADICAL and that its oxide yields an acid The class includes argon, boron, bromine, carbon, chlorine, fluorine, helium, hydrogen, iodine, krypton, neon, nitrogen, oxygen, phosphorus, silicon, sulphur, and xenon Arsenic, antimony, selenium, and tellurium exhibit both nonmetallic and metallic properties Unlike the metals, which are all solids (with the exception of mercury) under ordinary conditions of temperature and pressure, the nonmetals appear in all three states Argon, chlorine, fluorine, helium, hydrogen, krypton, neon, nitrogen, oxygen, and xenon are normally gases Bromine is a liquid Boron, carbon, iodine, phosphorus, silicon, and sulphur are solids Certain of them, e g , boron, carbon, iodine, silicon, and sulphur, form crystals, as do the metals The nonmetals lack the luster of the metals In hardness they vary considerably Carbon in its allotropic form, the diamond, is the hardest element known As a class the nonmetals are poor conductors of heat and electricity Sulphur, for example, is extremely poor With the exception of carbon, sulphur, nitrogen, and the inert gases—argon, helium, krypton, neon, and xenon—the nonmetals do not occur uncombined in nature, but exist in numerous relatively abundant compounds, among which are the oxides, halides (binary halogen compounds), sulphides, carbonates, nitrates, phosphates, silicates, and sulphates With a few exceptions, the nonmetallic elements are important chiefly for their compounds

Nonni (nŏn'nē'), Mandarin *No-min*, river, c 650 mi long, rising in Heilungkiang prov , China, in the Great Khingan range and flowing S through Heilungkiang and Nunkiang provs to join the Sungari river It is an important trade artery.

Nonnus (nŏ'nŭs), fl c 400?, Greek poet, b Panopolis, Egypt His extant epic, *Dionysiaca* (in 48 books), a collection of legends about Dionysus, has innovations in meter which predict the later accentual versification A Christian later in life, he versified the Gospel of St John

Nonpartisan League, organization of business farmers formed by Arthur C Townley in North Dakota in 1915 The organization subsequently expanded into Wisconsin and states W of the Mississippi river from Washington to Texas It set out to improve farm business conditions by legislation Though not a political party, it did endorse and even nominate candidates The league encountered strong and even violent opposition, but it had permanent effects on legislation in some of the states

Noot, Jan van der (vän' vän dĕr nōt'), b 1539 or 1540, d 1595?, Flemish poet, b Brabant, of noble family He was the author of sonnets, odes, and other pieces in imitation of Petrarch and, especially, of Ronsard

Nootka Indians (nōōt'kŭ), tribe of North American Indians who form one branch of the Wakashan linguistic stock, the other branch being the Kwakiutl The Nootka proper are a small group on the west coast of Vancouver Island, but the name is usually given to the Aht Confederacy, which includes more than 20 tribes At the coming of the white man Nootka culture was fundamentally that of the Pacific Northwest Coast area, they fished for salmon and lived in long wooden houses The so-called Nootka hats of woven fiber are common among other tribes of this area Today the Nootka together with the Kwakiutl number some 3 500 See Pliny Goddard, *Indians of the Northwest Coast* (1934)

Nootka Sound, natural harbor on the west coast of Vancouver Island, British Columbia, lying between it and Nootka Island and having several inlets The sound was visited by Juan Pérez (1774), by Capt James Cook (1778), and by John Meares (1788), who built a fort here Its seizure by the Spanish in 1789 was the subject of a controversy between Spain and England settled (1790) by the Nootka Convention, which opened the N Pacific coast to British settlement

Noph (nōf), biblical name of Memphis, Egypt Isa 19 13, Jer 2 16, 44 1, 46 14,19, Ezek 30 13 16

Nophah (nō'fu), unidentified place, apparently NE of the Dead Sea Num 21 30.

Noranda (nŭrăn'dŭ), town (pop 4,576), W Que , on Osisko Lake and NNE of North Bay, Ont It is the center for a region of gold, copper, and zinc mining and has a large smelter

Nora Springs, town (pop 1,198), N Iowa, between Charles City and Mason City and on the Shell Rock River, inc 1875

Norborne (nôr'bôrn), city (pop 1,239), W Mo , near the Missouri, ENE of Kansas City, laid out 1868 It is a shipping point for grain and livestock

Nord (nôr), department (2,229 sq mi , pop 1,917,452), N France, bordering on the North Sea and on Belgium Occupying French FLANDERS and HAINAUT, it is both a traditional battleground and a vital industrial region Its rich coal mines supply the huge industrial agglomeration around LILLE (the departmental capital), ROUBAIX, and Tourcoing DUNKIRK, the chief port, has large fisheries The department also has very fertile agricultural districts

Nordau, Max Simon (mäks' zē'môn nôr'dou), 1849–1923, German author, b Budapest, Hungary He practiced medicine for a time in Budapest Of the Jewish race, he was an ardent Zionist He wrote novels and several controversial works but is remembered for *Degeneration* (1892, Eng tr , 1895), in which, under the influence of Lombroso, he strove to establish a relation between genius and degeneracy See biography by Anna and Maxa Nordau (Eng tr , 1943)

Nordenskjöld, Nils Adolf Erik, Baron, Swed *Nordenskjöld* (nĭls' ä'dôlf ä'rĭk nōōr'dunshûld), 1832–1901, Swedish geologist and arctic explorer, first to navigate the Northeast Passage, b Finland He served as geologist on several expeditions to Spitsbergen under Otto Torrell, on one of which he found plant fossils of the Tertiary period From 1864 he commanded a series of expeditions in the course of which he mapped Spitsbergen, reached (1868) lat 81° 42' N (the highest then attained), made a journey (1870) on the inland ice of Greenland, and at Spitsbergen (1872–73) gathered extensive zoological and botanical collections Becoming interested in discovering the Northeast Passage as a possible route of trade, he reached Novaya Zemlya, crossed the Kara Sea, and ascended (1875) the Yenisei river, which he explored again in 1876. After these reconnoitering trips, he set out in the *Vega* in 1878, rounded Cape Chelyuskin, but was frozen in west of the entrance to

Bering Strait In 1879 he passed East Cape and sailed into Bering Sea (northward extension of the Pacific) He completed the trip to China and returned to Sweden in 1880 First to navigate the Northeast Passage, Nordenskjold was created baron that year In 1883 he penetrated for some 75 mi the great ice barrier E of Greenland and in 1890 paid his sixth visit to Spitsbergen Among his translated works is *The Voyage of the Vega* (1881) His *Facsimile-Atlas* (1889) and *Periplus* (1897) are especially interesting for their collections of early maps, charts, and geographical documents See *The Arctic Voyages of Adolf Erik Nordenskold* (ed by Alexander Leslie, 1879).

Nordenskjold, Nils Erland Herbert, Baron, Swed *Nordenskjöld* (ĕr'länd hĕr'burt), 1877–1932, Swedish ethnologist, son of Baron Nils Adolf Erik Nordenskjold He became director of the Goteborg Museum in 1913 He made many extended expeditions into South America and wrote numerous ethnographical studies of the inhabitants Several of these have been translated into English and published as *Comparative Ethnographical Studies* (10 vols , 1919–38)

Nordenskjold, Nils Otto Gustaf (ō'tōō gŭs'täv), Swed *Nordenskjöld*, 1869–1928, Swedish explorer and geologist He participated in journeys to Tierra del Fuego (1895–97), Alaska (1898), Greenland (1900, 1909), and the Andes (1904–5, 1920–21) and led an expedition (1901–3) to Antarctica His party was landed on Graham Land, the expedition's ship, the *Antarctica*, sank in an attempt to take them off, but they were rescued (1903) by an Argentine vessel Nordenskjold wrote an account of the expedition, *Antarctica* (1904, Eng tr , 1905) He was a nephew of Baron Nils Adolf Erik Nordenskjold

Nordenskjold Sea · see LAPTEV SEA

Norderney (nôrdurnī'), island (9 sq mi , pop 6,452), off N Germany, in the North Sea, one of the East Frisian Islands It is a very popular bathing resort

Nord Fjord (nôr' fyôr", nōōr' fyōōr"), inlet, c 50 mi long, Sogn og Fjordane co , W Norway It is the third largest fjord of Norway To the south, between Nord Fjord and Sogne Fjord, extends the JOSTEDALSBREEN The Nord Fjord has several branches, celebrated for their majestic scenery

Nordhausen (nôrt'hou"zun), city (pop 32,848), Thuringia, central Germany, at the southern foot of the Harz It is a manufacturing center producing cotton and linen textiles, machinery, and glass There are potash mines in the vicinity A free imperial city from 1253 to 1803, it passed to Prussia at the Congress of Vienna (1815), but was transferred after 1945 to Thuringia It was heavily damaged in the Second World War

Nordhoff, Charles (nôrd'hŏf), 1830–1901, American journalist and author, b Westphalia In 1835 he emigrated with his family to Cincinnati His service (1844–47) in the navy, and later on whaling and fishing ships, provided literary material for his books *Nine Years a Sailor* (1857) and *Stories of the Island World* (1857) He wrote for the New York *Evening Post* (1858–71), part of the time as editor, and was Washington correspondent (1874–90) of the New York *Herald* A leading political commentator of his day, he also wrote important books, among which are *Communistic Societies in the United States* (1875) and *The Cotton States in the Spring and Summer of 1875* (1876) His grandson, Charles Nordhoff (1887–1947), was co-author with J N Hall of *Mutiny on the Bounty* (1932) and other works, he edited some of the elder Nordhoff's nautical writings in the volume *In Yankee Windjammers* (1940)

Nordica, Lillian (nôr'dĭku), 1859–1914, stage name of Lillian Norton, American operatic soprano, b Farmington, Maine She studied in Milan, where she made her operatic debut in 1879 She sang in St Petersburg, Paris, and London and in 1883 made her debut at the Academy of Music, New York, and in 1891 at the Metropolitan Opera House Although most famous for Wagnerian roles—added to her repertoire in 1894, when she sang at Bayreuth—she was equally capable in such florid roles as that of Marguerite in *Faust*

Nordic race see RACE

Nordkyn, Cape (nôr'kün, nōōr'–), or **Kinnarodden** (chĭ'narō"dun), northernmost point of the European mainland, N Norway, E of North Cape, at lat 71° 8′ N

Nordland (nôr'lăn, nōōr'–), county (14,797 sq mi , pop 215,972), NW Norway It includes the Lofoten Islands Bodo, the county seat, and Narvik are the chief towns The fjords, deep wooded valleys, and mountains of Nordland are famous for their scenic grandeur Nearly half the population engages in fishing There are important copper deposits at SULITELMA, iron and zinc are also mined

Nördlingen (nûrt'lĭngŭn), town (pop 12,069), Swabia, W Bavaria, SSW of Ansbach It produces textiles, precision instruments, and shoes, and it has printing plants and breweries Founded in the 9th cent , it became (1217) a free imperial city Nördlingen retains its city walls (14th–15th cent), its 14th-century city hall, and a late Gothic church

Here in the Thirty Years War an imperial army under Gallas defeated (1634) the troops of Bernhard of Saxe-Weimar, the imperialist victory was a major cause for the entrance of France into the war in 1635 In 1645 Nördlingen was the scene of a victory of the French under Condé

Nord-Trondelag, Nor *Nord-Trøndelag* (nôr'-trûn'-dulăg, nōōr'–), county (8,657 sq mi , pop 105,679), W Norway, N of Trondheim Fjord Namsos is the chief town, Steinkjer is the county seat The county is an agricultural region and has an important lumbering industry

Nore (nôr), river of Ireland, 70 mi long, rising in N Co Tipperary and flowing a short distance NE into Co Laoighis, then SSE through Co Kilkenny to the Barrow river N of New Ross The Nore valley is noted for its scenic beauty

Nore, the, sandbank in the Thames estuary, SE England, between Shoeburyness and Sheerness At the east end is Nore Lightship The name is also applied to part of the Thames estuary, a famous anchorage A mutiny in the British fleet here in 1797 resulted in the hanging of its leader, Richard Parker, but served to expose the brutality of commanders and other evils in the navy

Norfolk, Bernard Marmaduke Fitzalan-Howard, 16TH **duke of** see HOWARD, family

Norfolk, Hugh Bigod, 1st **earl of** (hū' bĭ'gŏd, nôr'fuk), d 1177, English nobleman For his support of STEPHEN on the death of Henry I (1135), he was created earl Subsequently abandoning Stephen, he cast his lot with Henry II (1153), only to rebel against him unsuccessfully (1173) His lands were seized, his castle was burned, and a heavy fine was imposed Norfolk was one of the most powerful nobles of England

Norfolk, John Howard, 1st **duke of,** 1430–85, English nobleman The grandson of Thomas Mowbray, the banished duke of Norfolk, he entered Parliament as a member for Norfolk Edward IV made him sheriff of Norfolk and Suffolk and entrusted him with diplomatic missions as well A faithful adherent of the house of York in the Wars of the Roses, he supported Richard, duke of Gloucester (later Richard III), after the death of Edward IV In 1483 Richard made him the 1st duke of Norfolk of the HOWARD family and earl marshal of England Norfolk was killed at the battle of Bosworth

Norfolk, Thomas Howard, 2d **duke of,** 1443–1524, English nobleman He fought with his father, the 1st duke, at the battle of Bosworth (1485), but was captured, attainted, and placed in the Tower He was released (1489) by Henry VII and restored to the earldom of Surrey, which he had received in 1483 He was entrusted by Henry VII with the care of the northern borders and was recognized as the leading general in England, being in command of the army that defeated (1513) the Scots at Flodden In 1501 he was made lord treasurer and arranged the marriage of James IV of Scotland to Henry VII's daughter Margaret He became duke of Norfolk in 1514, attained an influential place in the privy council in the reign of Henry VIII, served (1520) as guardian of the country on Henry's absence, but gradually was forced to submit to Thomas Wolsey's rise to power In 1521, acting as lord high steward, he was compelled to sentence his friend Edward Stafford, duke of Buckingham, to death

Norfolk, Thomas Howard, 3d **duke of,** 1473–1554, English nobleman and soldier, a member of the distinguished HOWARD family He married (1495) a daughter of Edward IV and thus became brother-in-law to Henry VII He fought with his father, the 2d duke, at Flodden (1513) in the forces of HENRY VIII After his first wife's death he married Elizabeth, daughter of the duke of Buckingham He served (1520–21) as lord lieutenant of Ireland, succeeded his father as lord high treasurer in 1522 and as duke of Norfolk in 1524 The king employed him in keeping down rebellion, especially on the Scottish border Norfolk bitterly opposed Cardinal Wolsey, he supported Henry's divorce from Katharine of Aragon and his marriage to Norfolk's niece Anne Boleyn Later he presided at the trial and execution of Anne He was an enemy of Thomas Cromwell Norfolk became president of the council in 1529 Although Norfolk conducted the campaign against the Pilgrimage of Grace (1536), he remained Catholic After the execution of another of his nieces, Catherine HOWARD, Henry's fifth queen, in 1542, his influence waned and he was forced back into the position of a mere military commander In 1546 he and his son Henry Howard, earl of Surrey, were charged with treason Surrey was executed, but Norfolk was saved by the death of Henry He was released (1553) on the accession of Mary I and restored to his dukedom He led the forces against the rebellion of Thomas Wyatt, the younger

Norfolk, Thomas Howard, 4th **duke of,** 1536–72, English nobleman, a member of the distinguished HOWARD family Son of Henry Howard, earl of Surrey, Norfolk succeeded his grandfather, the 3d duke, in 1554 He was favored by Queen Elizabeth, although he was jealous of the larger measure of confidence she placed in Robert Dudley, earl of Leicester Norfolk was thrice married before he became a candidate for the hand of MARY QUEEN OF SCOTS Elizabeth's suspicions of his ambition were aroused, and Norfolk was imprisoned briefly (1569–70) On his release he was drawn into the plot of Ridolfi, agent of Philip II of Spain, who was planning a Spanish invasion and the dethronement of Elizabeth The plot was discovered, Norfolk was imprisoned in the Tower (1571), tried, and beheaded

Norfolk, Thomas Mowbray, 1st **duke of,** c 1366–1399, English statesman He was created earl of Nottingham in 1383, and in 1385 he was made earl marshal of England for life In 1387 Nottingham, with Thomas of Woodstock, duke of GLOUCESTER, as well as the earl of Arundel and others (the Lords Appellants), drove out the king's favorites and virtually ruled the kingdom until RICHARD II regained control in 1389 Nottingham, however, retained Richard's favor, served him in Scotland, and accompanied the king to Ireland (1394) In 1397 he turned against Gloucester and Arundel, his former associates, when they were brought to trial by Richard Nottingham was probably responsible at the king's orders for the death of Gloucester For his cooperation with Richard's tyranny he was made (1397) duke of Norfolk He feared, however, that the king might turn on him and confided in the duke of Hereford (later HENRY IV) A dispute arose between Norfolk and Hereford and trial by combat was proposed, but the king interfered and banished both from the country, Norfolk for life The final scene in Norfolk's life in England forms the basis of the first act of Shakspere's *Richard II*

Norfolk (nôr'fuk), maritime county (2,053 sq mi , 1931 pop 504,940, 1948 estimated pop 517,670), E England The county town is Norwich The region is one of flat, fertile farmlands, with a long, low coast bordering on the North Sea and the Wash The principal rivers are the Ouse, the Bure, the Yare, the Waveney, and the Nene A series of connected shallow lakes, known as the BROADS, occupies the eastern portion of the county Norfolk produces excellent cereal and root crops and supports extensive breeding of cattle and poultry, fishing is also important There are numerous vestiges of habitation dating from prehistoric times After the Anglo-Saxon invasion of England, Norfolk became a part of the kingdom of East Anglia, the home of the "north folk" of that region, whence its name It was organized as a shire after the Norman Conquest See Arthur Mee, *Norfolk* (1940).

Norfolk. 1 (nôr'fŏk", -fuk) Resort town (pop 1,333), NW Conn , in the Litchfield Hills, settled 1755, inc 1758 Electrical products are made In 1899 began the annual Litchfield co choral concerts here William Henry Welch was born in Norfolk **2** (nôr'fŭk, -fŏk") Town (pop 2,294), E Mass , SW of Boston, inc 1870 Norfolk Prison Colony (1927) is here **3** (nôr'fuk, -fŏk") City (pop 10,490), NE Nebr , on the Elkhorn river and NW of Omaha, settled 1866, inc 1881 It is a railroad and trade center for a rich farming region producing corn, grain, and livestock A state hospital for the insane is near by **4** (nôr'fuk) City (pop 144,332), SE Va , on the Elizabeth river and the south side of HAMPTON ROADS, founded 1682, inc as a borough 1736, as a city 1845 It is a port of entry with one of the best natural harbors in the world Its numerous manufactures include fertilizers, cotton and silk goods, farm implements, lumber products, building materials, farm and sea-food products, and ships With a 50-mile water front and an extensive maritime trade, it ships quantities of sea food, coal, tobacco, cotton, and vegetables U S naval installations at Norfolk are extensive It is the headquarters of the Atlantic Fleet, with a huge operating base, supply center, and naval air station The Norfolk Navy Yard is at PORTSMOUTH The town was burned by the British in 1776 and had its commerce ruined by the embargo of 1807 Near many beaches and places rich in historical interest, Norfolk is a center for year-round resort activities St Paul's Church (1739, only building to survive the burning of 1776), Fort Norfolk (1794), and the Museum of Arts and Sciences are among its buildings, also here are a marine hospital and a junior college See T J Wertenbaker, *Norfolk Historic Southern Port* (1931), W H T Squires, *Through the Years in Norfolk* (1936)

Norfolk Island (nôr'fuk), island (13 sq mi , pop 1,231), S Pacific, c 950 mi ENE of Sydney It is a territory of Australia It was discovered by Capt James Cook in 1774 and was twice a prison island (1788–1813, 1826–55) In 1856 some of the descendants of the *Bounty* mutineers were moved here from Pitcairn Island Norfolk Island became a dependency of New South Wales in 1896 and was transferred in 1914 to the commonwealth government The island, a resort, has luxuriant vegetation and is known for its pine trees Passion-fruit pulp and citrus fruit are the principal exports Livestock is raised and there is some whaling

Noricum (nō'rĭkum), province of the Roman Empire It corresponded roughly to modern Austria S of the Danube and W of Vienna, i e , the later Upper Austria, Lower Austria, Styria, Carinthia, Salzburg, and the Tyrol It was bordered on the

west by Rhaetia, on the east by Pannonia Noricum was conquered in the Roman thrust into Germany which began in 16 B C Thoroughly established by the death of Augustus (A.D. 14), it prospered as a frontier colony for centuries, then declined and was abandoned to the Germans in the late 6th cent

Normal, town (pop 6,983), central Ill , adjacent to BLOOMINGTON; inc 1865 Illinois State Normal Univ and a home for soldiers' and sailors' children are here.

Norman, Montagu Collet, 1st **Baron Norman of St Clere,** 1871–1950, English financier He was governor of the Bank of England from 1920 to 1944, a tenure of office which broke all tradition. He was raised to the peerage in 1944 See biography by John Hargrave (1942)

Norman, city (pop 11,429), co seat of Cleveland co , central Okla , SE of Oklahoma City, settled 1889, inc 1891 It is the seat of the Univ of Oklahoma (see OKLAHOMA, UNIVERSITY OF) and a state mental hospital

Norman architecture, name applied to the buildings erected by the Normans in all lands which fell under their dominion It is used not only in England and N France, but also in S Italy (Apulia) and in Sicily, though northern and southern works differ greatly The Norman buildings in England and France were Romanesque, chiefly based upon the ROMANESQUE ARCHITECTURE of Lombardy in Italy Norman Romanesque would be its most accurate title Churches, abbeys, and castles, its principal works, showed massive proportions, sparsely adorned masonry, and a universal use of the round arch The development of the style was confined chiefly to the period from 1066 to 1154, a period of tremendous building activity Starting in Normandy, the style was quickly introduced into England, superseding the Saxon Prior to the Conquest, Norman craftsmen under Edward the Confessor had already commenced construction of his abbey at Westminster, of which the dormitory and refectory are the earliest extant Norman work in England In England and Normandy there was a closely parallel development The great French works include the ruined abbey of Jumièges, near Rouen, the beginnings of the great fortified abbey of Mont-Saint-Michel, the two abbeys at Caen which were founded by William the Conqueror, and the Basilica of St Sernin at Toulouse, all belonging to the late 11th cent The greatest activity, however, was that of England, where, after 1070, the Normans built hundreds of parish churches and commenced most of the great cathedrals All underwent later restorations, the small St John's Chapel in the Tower of London, built (c 1087) by William the Conqueror is one of the best preserved specimens Durham (commenced 1093) ranks generally as the finest of the cathedrals, with massive circular piers in its nave and with the earliest nave vaulting (c 1130) in England Others are Winchester (1079), Ely (1083–1109), and Peterborough (c.1140) In both England and Normandy church plans were cruciform Over the crossing of nave and transepts was a prominent square tower, one of the most effective Norman features. Blind arcades, sometimes with interlacing arches, were the common adornment for walls With axes as the only tools, the early sculptural ornament was restricted to simplest geometrical types Moldings carved with beakhead, zigzag or chevron or with alternating lozenges are especially identified with the style Increased skill and the adoption of the chisel resulted in grotesque sculptured animal forms and in the sculptured reliefs of the tympanums over doorways In Sicily no works under the Norman kings were completed prior to 1130, and the large cathedrals at Cefalù, Palermo, and Monreale were commenced after this date In Palermo remain numerous rich works of the Arabo-Norman style, in which the chief role of the Normans was that of supervision, while the actual workmanship and most of the design were by the native Saracens In a composite style are mingled the domes and pointed arches of the Saracens, the wood roofs and the geometric ornament of the Normans, and the exquisite interior mosaic decorations of Byzantine-Greek artisans These elaborate and richly colored Sicilian works, Oriental in general suggestion, evidence little kinship with the austere grandeur of the English and French Norman style See E A Browne, *Norman Architecture* (1907)

Norman Conquest, the conquest of England by the Normans after the defeat of King HAROLD by William, duke of Normandy (1066) (For the immediate changes brought about by the Norman Conquest, see WILLIAM I) The conquest brought about broad social, political, and administrative changes in England There was a growth and widening of English intercourse with Europe in politics and in trade which sped the rise of England as a major European power. Administration tended to become centralized in the hands of the king, who became not only head of the state but also chief lord, from whom all lands were held under the new system of political feudalism This led to the reduction of widespread factional strife and increased security of life and property There was a rebirth of spiritual zeal and learning in the English church, coupled with the steady and powerful growth of ecclesiastical jurisdiction, which continued strong until the conflict between Church and state in the 12th cent English institutions and laws, though in no way abolished, were powerfully affected and gradually changed by Norman spirit and methods To the judicial system based on old English charters and practices the Normans seem to have added the jury system The collection of gelds, the necessity for quartering French soldiers with the English lords, and other considerations led to the compilation of William's DOMESDAY BOOK There was a complete rearrangement of the social pattern in that the foreign (largely Norman) nobles replaced or intermarried with the English aristocracy and in time became themselves English, but in the process they left an indelible mark on all phases of English life The introduction of the French language, which superseded English as the language of polite literature, the court, and society, relegated the English tongue to the lower classes, although Normans soon learned to speak English and public documents continued to be written in both Latin and English for 150 years after the Conquest The cause of learning was greatly enhanced by the coming of such scholars as LANFRANC and ANSELM Literature written in English was practically buried under the fashionable Anglo-French (see MIDDLE ENGLISH LITERATURE), when English speech finally emerged as the predominant language of England again, it had, through its close association with French, lost nearly all of its inflections and had borrowed vast numbers of French words and phrases (see ENGLISH LANGUAGE) NORMAN ARCHITECTURE was introduced into England New methods of warfare (e g , the use of horsemen and archers) were introduced The building of Norman castles led to the development of siege warfare and the decline of the open battle, which did not gain prominence again for centuries See H W C Davis, *England under the Normans and Angevins* (1905), G B Adams, *The History of England, 1066–1216* (1905), F M Stenton, *William the Conqueror* (1908) and *Anglo-Saxon England* (1943), F W Maitland, *Domesday Book and Beyond* (1921)

Normandin (nôrmädĕ'), town (pop 1,029), S Que , N of Lake St John and NW of Chicoutimi, in a region of lumbering and making of butter and cheese

Normandy (nôr'mündē), Fr *Normandie* (nôrmädē'), region and former province, N France, bordering on the English Channel It is now administratively divided into five departments—four east to west along the coast, Seine-Inférieure, Eure, Calvados, and Manche, and one inland, Orne It is a very rich agricultural region, especially in CALVADOS, butter, cheese, meat, and cider are the typical products Fishing is an important industry, and shipping is centered at such ports as Le Havre and Cherbourg ROUEN, the historical capital, has been, since Roman times, a great commercial center There also are numerous seaside resorts, notably Dieppe, Deauville, and Trouville Conquered by Julius Caesar, the region became part of the province of Lugdunensis (see GAUL), was Christianized in the 3d cent , and was conquered by the Franks in the 5th cent Repeatedly devastated (9th cents) by the heathen NORSEMEN, it finally was ceded (911) to a Viking chief, ROLLO, first duke of Normandy, by Charles III (Charles the Simple) of France The Norsemen (or Normans), after whom the duchy was named, shortly accepted Christianity Rollo's successors acquired additional territory in a series of wars against their neighbors In 1066 Duke William II, son of ROBERT I, invaded England, where he became king as WILLIAM I The succession in Normandy, contested among William's sons (ROBERT II of Normandy and WILLIAM II and HENRY I of England), passed to England after the battle of Tinchebrai (1106). In 1144 GEOFFREY of Anjou conquered Normandy, his son, Henry Plantagenet (later HENRY II of England), was invested (1151) with the duchy by King STEPHEN of England It was thus that branches of the ANGEVIN dynasty came to rule England, vast territories in France, and SICILY and S Italy, where the Normans had begun to establish colonies in the 11th cent Seized by PHILIP II of France in 1204, Normandy was again devastated (by all parties concerned) during the Hundred Years War. The Treaty of Bretigny (1360) confirmed Normandy as a French possession, but HENRY V of England invaded and conquered it once more With the exception of the larger CHANNEL ISLANDS, it was permanently restored to France in 1450, and in 1499 Louis XII established a provincial PARLEMENT for Normandy at Rouen. Louis XIV suppressed in 1654 the provincial estates of Normandy. In 1790 the province was abolished, but its inhabitants still adhere to distinctive traditions, costumes, and characteristic traits (notably the stubbornness in which they take pride). The region was the scene of heavy fighting in the Second World War, in the Normandy campaign. See NORMAN ARCHITECTURE. See Camille Mauclair, *Normandy* (1927); D. C. Douglas, *The Rise of Normandy* (1947); H. -W. Brodrick, *Normandy* (1947)

Normandy campaign, June–Aug., 1944, of the Second World War. The Allied invasion of the European continent through Normandy began at 7 30 A M , June 6, 1944 The plan, known under the code name "Operation Overlord," had been carefully prepared since 1943, and the supreme command over its execution was entrusted to Gen Dwight D. Eisenhower. Strategic bombings of Germany and France, designed to destroy the German air force and communications, were intensified in April, 1944, and in May tactical bombing of N France was begun Just after midnight, on June 6, one British and two U S air-borne divisions were landed behind the German fortifications They were followed after daybreak by the seaborne troops of the U S 1st Army, under Omar N Bradley, and the British 2d Army, under Bernard L Montgomery, who was in command of all the Allied land forces during that operation Some 4,000 troop transports, 800 warships, and innumerable small craft, under Admiral Sir Bertram H Ramsay, formed a continuous bridge across the Channel More than 11,000 airplanes, under the command of Air Chief Marshal Sir Trafford Leigh-Mallory, formed a protective umbrella While naval guns and Allied bombers pounded the beach fortifications, the men swarmed ashore The U S forces established two beachheads on the Cotentin peninsula—"Utah Beach," W of the Vire river, and "Omaha Beach," E of the Vire, where the fiercest resistance was encountered After a four-day battle, the American forces joined at Carentan British troops, who had landed on three beaches near Bayeux (captured on June 7), were stopped before Caen On June 12 the fusion of the three Allied beachheads was complete The German commander, Field Marshal Gerd von Rundstedt, now found that Allied air strength prevented use of his reserves Bradley's forces cut off Cherbourg, reaching the west coast of the Cotentin peninsula at Carteret on June 18 Cherbourg surrendered on June 27 The Americans then swung south After very difficult fighting in the easily defendable "hedgerow" country, they captured (July 18) the vital communications center of Saint-Lô, thus cutting off the German force under Erwin Rommel The U S 3d Army under Gen George S Patton was now thrown into the battle and broke through the German left flank at Avranches Patton raced into Brittany and S to the Loire, then swung east to outflank Paris A German attempt to cut the U S forces in two at Avranches was foiled (Aug 7–11) The British, reinforced by the Canadian 1st Army, had taken Caen on July 19, but were again halted by a massive German tank concentration. They resumed their offensive in August and captured Falaise on Aug 16 Between them and the American forces driving N from Argentan the major part of the German 7th Army was caught in a pocket and wiped out by Aug 23 As an epilogue to the battle of Normandy, the British and Canadian armies captured (Sept 1–30) the Channel ports between Dieppe and Ostend

Norman Isles. see CHANNEL ISLANDS

Normans. After conquering Normandy in the 10th cent , the NORSEMEN accepted Christianity and the customs and language of France and became known as Normans Though they soon lost all connection with their original Scandinavian homeland, they lost none of their craving for further adventure, expansion, and enrichment In 1066 the NORMAN CONQUEST of England made the duke of Normandy king of England as WILLIAM I (William the Conqueror) The Norman nobility displaced the Anglo-Saxon nobility of ENGLAND, and for centuries an increasingly modified Norman French was the language of the English ruling class Early in the 11th cent bands of Norman adventurers appeared in S Italy, where at first they aided the local nobles in their rebellion against Byzantine rule These were followed by a steady stream of land-hungry nobles, who under the pretext of expelling the Greeks proceeded to take over the land Most remarkable among these adventures were the numerous sons of Tancred de Hauteville One of these, William Iron Arm, became lord of APULIA in 1043; he was succeeded by his brother Drogo and by another brother, Humphrey, who after defeating Pope Leo IX in 1053 was invested by the pope with all the lands the Normans had acquired, or were to acquire, from the Byzantines and the Arabs His brother and successor, ROBERT GUISCARD, completed the Norman conquest of S Italy, another brother, ROGER I, conquered Sicily, and in 1130 Roger's son, ROGER II, set up the kingdom of SICILY, which comprised the Norman possessions in S Italy The Normans in Sicily and S Italy soon absorbed Italian speech and customs. Their ambitious plans against the Byzantine Empire were a factor in bringing about the Crusades, in which they at first played a very important part. Wherever the Normans went, NORMAN ARCHITECTURE has left its traces. See Edmund Curtis, *Roger of Sicily and the Normans in Lower Italy* (1912), C H Haskins, *The Normans in European History* (1915) and *Norman Institutions* (1918).

Norns, in Germanic mythology, the FATES, who spun and wove the web of life, like the Fates of Greek mythology The Norns were usually three in number—Urth (the past), Verthandi (the present), and Skuld (the future). Sometimes Urth (in Anglo-Saxon, Wyrd) was mentioned alone as a goddess of death.

Norrbotten, Swed *Norrbottens län* (nôr'bôtûns lĕn'), county (40,750 sq mi, pop 229 568), N Sweden, bordering on the Gulf of Bothnia, Finland, and Norway Northernmost and largest county of Sweden, it comprises the historic province of Norrbotten and the larger part of the province of Lappland More than half of the county is north of the Arctic Circle Among the inhabitants are c 4,400 Lapps (partly nomadic) and c 40,000 Finns There are cattle, sheep, and reindeer herds, hay is the main crop Norrbotten has some of the richest iron deposits in Europe Ore is mined chiefly at KIRUNA and Gällivare and is shipped from LULEÅ and from Narvik, Norway Rich in lakes and rivers (see TORNE and LULE), Norrbotten also contains the highest peak in Sweden, the KEBNEKAISE

Norridgewock (nŏ'rĭjwŏk), town (pop 1,511), central Maine, on the Kennebec above Skowhegan, inc 1788 Jesuit missionaries visited the Abnaki living here in the 17th cent, Sébastien RALÉS was in charge of the mission for about 30 years, until his death in 1724 at the hands of the English

Norris, Charles Gilman see NORRIS, FRANK

Norris, Edwin, 1795–1872, English philologist He wrote a number of articles on little-known languages of Asia and Africa His most important work was his uncompleted *Assyrian Dictionary* (3 vols, 1868–72), which is a landmark in the history of cuneiform lexicography

Norris, Frank (Benjamin Franklin Norris), 1870–1902, American novelist, b Chicago, educated in Paris, at the Univ of California, and at Harvard The Zolaesque realism of his novel *McTeague* (1899) shocked many readers, but it and his powerful trilogy, *The Epic of Wheat*, secured his place in American literature The first two volumes, *The Octopus* (1901) and *The Pit* (1903), were widely read, the third, *The Wolf*, was uncompleted at Norris's death See study by Ernest Marchand (1942) A brother, **Charles Gilman Norris,** 1881–1945, b Chicago, grad Univ of California, 1903, was also a novelist of note He is the author of a number of analytical novels of American life, including *Salt* (1917), *Brass* (1921), *Bread* (1923), *Seed* (1930), and *Flint* (1944) See *Noon* (1925), the autobiography of his wife, Kathleen Norris

Norris, George William, 1861–1944, American legislator, b Sandusky co, Ohio After study at Baldwin Univ and at the North Indiana Normal and Business Institute, Norris was admitted (1883) to the bar He moved (1885) to Furnas co, Nebr, practiced law, was (1895–1902) judge of the district court, and served (1903–13) in the U S House of Representatives A fearless, liberal Republican, Norris secured (1910), through an alliance of the insurgent Republicans and the Democrats, the passage of his bill which reformed the House rules and wrested absolute control from the speaker of the House, Joseph G CANNON Elected (1912) to the U S Senate, he opposed Woodrow Wilson's foreign policy, voted against U S participation in the First World War, and denounced the Treaty of Versailles He was at constant odds with the Coolidge administration, backed (1928) Alfred E Smith for President, and was in accord with President F D Roosevelt's domestic and foreign policies Norris was read out of the Republican party and became (1936) an independent Devoting himself to administrative reform, he was author (1932) of the Twentieth Amendment to the Constitution, which abolished the "lame duck" session of Congress and changed the date of the presidential inauguration and of the Nebraska constitutional amendment that established (1934) a unicameral legislature He fathered the bills which created (1933) the Tennessee Valley Authority, fought for other Federal power projects, and constantly pushed farm-relief measures After serving 30 years in the Senate, he was defeated for reelection in 1942 His *Fighting Liberal* (1945) is autobiographical See biography by Alfred Lief (1939)

Norris, John, 1657–1711, English clergyman and Platonist philosopher He was associated with the CAMBRIDGE PLATONISTS As the most prominent follower of Malebranche he wrote, in exposition of that philosopher's system, *An Essay towards the Theory of the Ideal or Intelligible World* (1701–4) Previously he had been one of the earliest critics of Locke's *Essay on Human Understanding* Among his works are *A Collection of Miscellanies* (1687) and *An Account of Reason and Faith* (1697)

Norris, Kathleen, 1880–, American novelist, b San Francisco, wife of Charles G Norris Her first success, *Mother* (1911), was followed by a long list of highly popular romantic novels *Certain People of Importance* (1922) is her most ambitious serious work Other books include *The Callahans and the Murphys* (1924), *The Venables* (1941), and, in nonfiction, the autobiographical *Noon* (1925) and *My San Francisco* (1932).

Norris City, village (pop 1,295), SE Ill, near the Wabash NE of Harrisburg; inc. 1901. It is a trade center in a farm area

Norristown, borough (pop. 38,181), co. seat of Montgomery co, SE Pa, on hills above the Schuylkill c 16 mi. NW of Philadelphia, settled 1784, inc 1812. Its manufactures include textile machinery, hardware, and agricultural implements. It ships dairy products and farm produce A state hospital for the insane is here Mineral deposits accounted for the town's early growth It is the most populous independent borough in the United States

Norrköping, Swed *Norrköping* (nôr'chö"pĭng), city (pop 78,255), Ostergotland co, SE Sweden, a Baltic port The chief textile center of Sweden, it also has paper and lumber mills and shipyards and has a large trade Norrköping was burned (1719) by the Russians in the Northern War, but it has retained its castle and several other old buildings

Norrland see SWEDEN

Norse language, language of Norway or of Iceland at any period Old Norse is the language of the sagas Norse is a branch of the Germanic subfamily of Indo-European languages See LANGUAGE (table)

Norse literature see OLD NORSE LITERATURE

Norsemen, Northmen, or **Normans,** name given on the European continent to the Scandinavian VIKINGS who raided the coasts of Europe in the 9th and 10th cent There was no essential difference between the Norsemen and the other vikings, who were generally called Danes in ENGLAND and Varangians in Russia Among the causes of the sudden appearance of the Norsemen on the coasts of NW Germany, the Low Countries, France, and Spain appear to have been a rapid increase of population in Scandinavia and the attempt of King HAROLD I of Norway to subjugate the independent nobles of his land The impact of the Norse invasions was particularly lasting in N France The invaders, who started their raids c 843, sailed up the French rivers, particularly the Seine, and repeatedly attacked, looted, and burned such cities as Rouen and Paris Their rapacity and destructiveness threatened to plunge France once more into the state of barbarism from which it had barely emerged The Norsemen gradually established settlements, generally at the river mouths, they thus constantly threatened to renew their inland raids along the rivers and ruined French commerce and navigation In 911 the Norman leader ROLLO was invested by King CHARLES III (Charles the Simple) with the duchy of NORMANDY, originally the territory around Rouen Rollo's successors considerably expanded their territory and were vassals of the French kings in name only The Norsemen soon became Christianized, adopted French law and the French language, and continued in history under the name of NORMANS The name of Normandy itself and several Norman place names (such as Harfleur, Barfleur, and Honfleur, in which the ending *-fleur* is derived from *fjord*) are the only survivals of the Norse period See C H Haskins, *The Normans in European History* (1915)

Norse religion. see GERMANIC RELIGION

North, Christopher, pseud of **John Wilson,** 1785–1854, Scottish author His first efforts were poetry (*The Isle of Palms*, 1812, and *The City of the Plague*, 1816), but with the loss of his fortune in 1815 he was forced to regard literature as a profession Among the first contributors to *Blackwood's Magazine*, he and J G Lockhart quickly became its chief critical writers Wilson's Tory sympathies won him the chair of moral philosophy (1820–51) at the Univ of Edinburgh He was a prolific writer, contributing in 1834 over 50 articles to *Blackwood's* His best-known work is in the *Noctes Ambrosianae*, a series of 71 articles, 41 of which were reprinted as Wilson's own, while Lockhart and James Hogg have credit for the majority of the others The *Noctes*, purporting to be records of festive evenings in Ambrose's Tavern, are a potpourri of criticism, politics, verse, and character sketches, humorous and rollicking See his works (ed by J F Ferrier, 12 vols, 1855–58), memoir by his daughter, Mary Gordon (1863)

North, Sir Dudley, 1641–91, British merchant and economist In 1662 in Constantinople, he became treasurer of the Turkey Company Returning to England a wealthy man, he was commissioner of the customs and of the treasury under Charles II and James II He was one of the earliest proponents of free trade in his pamphlets, *Discourses upon Trade* (1691, ed by J H Hollander, 1935)

North, Frederick, 2d **earl of Guilford** and 8th **Baron North,** 1732–92, English statesman, best known as Lord North. He entered Parliament in 1754, and by the time of his admission (1766) to the privy council he had become a Tory and a supporter of George III's principles of government He became in 1767 chancellor of the exchequer and leader of the House of Commons, where his support of the Townshend Acts hastened war with the American colonies. As prime minister (1770–82) he was the tool of George III and was directly responsible for the exasperating Boston Port Bill (see INTOLERABLE ACTS) After the outbreak of the American Revolution, the king refused to accept his resignation, and he continued to carry on George III's policies, although they were against his better judgment However, he did resign his post (1782) after news of the surrender of Cornwallis at Yorktown In 1783 he formed a coalition with his former opponent, the Whig Charles James Fox, but George III secured its collapse by the defeat of Fox's East India bill For the remainder of his career North supported the opposition against Pitt, but he was forced to retire from active life when his sight failed See W B Pemberton, *Lord North* (1939)

North, Sir Thomas, 1535?–1601?, English translator, studied (1557) at Lincoln's Inn but early turned to literature His translation of Plutarch, entitled *Lives of the Noble Grecians and Romans*, dedicated to Queen Elizabeth, appeared in 1579 and provided a source for several of Shakspere's plays, among them *Julius Caesar*, *Coriolanus*, and *Antony and Cleopatra* Subsequent editions, with added lives, appeared in 1595 and 1603 North also made a translation, *The Dial of Princes* (1557), from Guevara's *Libro llamado Relox de principes*, and *Moral Philosophy* (1570) is from the Oriental fables of Antonio Francesco Doni North's ornate but vivid style was a major influence in the development of the prose of the English Renaissance See Lady Frances Bushby, *Three Men of the Tudor Time* (1911)

North Adams, city (pop 22,213), NW Mass, in the Berkshires, on the Hoosic river near the western terminus of the Hoosac Tunnel and of the Mohawk Trail, settled c 1737, set off from Adams 1878, inc as a city 1895 A commercial and industrial center, it produces electrical supplies, textiles, and paper A state teachers college is here In 1936 a landslide destroyed several buildings Mt Greylock is southwest

North Africa, campaigns in. Italy's entrance into the Second World War (June 10, 1940) made North Africa an active theater in which the immediate prize was control of the Suez Canal and the ultimate prize control of the Mediterranean Sea Fighting did not begin in North Africa itself until after the swift Italian conquest of British Somaliland in Aug, 1940 The great desert war in the north started in September and, except in its final phases, was waged along the coasts of Libya and Egypt The almost uniformly level terrain offered few advantageous defensive positions, and the fighting seesawed between tenuously held battle lines Tanks and aircraft played dominant roles, and success or failure hinged always on the speed with which first one side and then the other built up armored and air strength The first of three Axis drives into Egypt was launched (Sept 12–13, 1940) from Libya by Marshal Rodolfo Graziani's Italian forces, by Sept 17 the Italians held Sidi Barani (c 60 mi within Egypt), where the attack stalled before Mersa Matruh On Dec 9, 1940, Gen Archibald P Wavell launched a surprise attack with numerically inferior but well-coordinated forces and in a swift campaign chased Graziani c 500 mi along the coast of Cyrenaica to El Agheila (Feb 8, 1941), the Italian army was all but destroyed The Germans, however, quickly reinforced the Italians with the Afrika Korps under Gen (later Marshal) Erwin Rommel Late in March, 1941, Rommel began an assault which drove the British (whose numbers had been cut by the sending of troops to Greece) out of Libya, the Germans held Sollum and Halfaya Pass in Egypt near the border, but Tobruk in Libya, bypassed by the Germans, was strongly held by Australians Gen Claude Auchinleck replaced Wavell, with the newly formed British 8th Army he attacked on the night of Nov 17–18, 1941, and pushed Rommel back to El Agheila (Jan, 1942) A limited counterattack forced the British to abandon the important port of Bengasi, Auchinleck set up his defense line some 100 mi within Libya at El Gazala, N of Bir Hacheim Rommel launched his attack on May 26, 1942 At Knightsbridge (June 13), the British lost some 230 of 300 tanks. Auchinleck was thrown back c 250 mi into Egypt, where he dug in along a 35-mile line from El Alamein on the coast to the Qattara Depression (an impassable badland), only some 70 mi from Alexandria Tobruk this time had fallen swiftly on June 21 There followed a frenzied race to build up strength Gen Sir Harold Alexander replaced Auchinleck, and Gen (later Marshal) Bernard L Montgomery took command Rommel's attempts to break the British defenses failed Allied reinforcements (especially tanks and planes from the United States) moved into Egypt, and on Oct. 23, 1942, the British launched a great attack (for an account of the fighting, see ALAMEIN) The battle, one of the decisive contests of the war, resulted in a British victory Rommel hastily disengaged his forces and began one of the longest sustained retreats in history. British efforts to catch him and engage his forces in Libya failed Tripoli was taken on Jan 23, 1943 Rommel retreated into Tunisia, where he set up his defenses along the Mareth Line, a former French bastion which had been somewhat dismantled after the fall of France.

Meanwhile, in a great Allied amphibious invasion of North Africa, American, British, and French troops attacked (night of Nov 7–8, 1942) at Algiers, Oran, and Casablanca, thus investing the territory to the west of Rommel Under the supreme command of Gen Dwight D Eisenhower, Allied forces pushed quickly toward Tunisia The Germans reacted swiftly, however, and by sea and air poured troops into N Tunisia The Germans were now compressed between the British 8th Army on the east, Eisenhower's forces on the west, and Free French forces on the south, while Allied planes and ships took a heavy toll in the Mediterranean Bitter fighting followed in the Tunisian hills In the north the Allies ran up against stout German defenses before Mateur near Bizerta (Dec , 1942) German attacks in central Tunisia pushed west through Faid Pass (Feb 14, 1943) and Kasserine Pass (a week later), from which they were dislodged after heavy fighting In the south the British, joined by flanking French forces, forced Rommel from the Mareth Line in March, the British moved up the Tunisian coast, taking Gabès (late March), Sfax, and Sousse (April) Allied air attacks increased in intensity along the whole front Before Mateur fighting raged around Hill 609, the height which commanded the battlefield The hill was finally taken by U S troops early in May, on May 7, 1943, the Americans took Bizerta and the British took Tunis The Axis forces in North Africa capitulated on May 12 In E Africa the fighting had earlier resulted in complete Allied victory British and Italian Somaliland had been conquered by Feb , 1941, Eritrea by April, and Ethiopia by Nov , 1942

Northallerton, urban district (pop 4,786), capital of the North Riding of Yorkshire, England, NNW of York, at a natural gateway through hills Now a trade center, it once was a Roman station and in the 14th cent had important monastic establishments, of which there are few remains There is a cruciform church (12th–13th cent) The Battle of the Standard, between English and Scots, was fought 3 mi from the town in 1138

North America, northern continent of the Western Hemisphere Including MEXICO, the UNITED STATES, CANADA, ALASKA, and GREENLAND and excluding Central America (which, however, is generally considered part of the continent) and the West Indies, it has an area of c 9,000,000 sq mi and an estimated population of 185,000,000 Roughly triangular in shape, with the narrowest part toward the south, it is bounded by the Arctic Ocean on the north, by the Atlantic Ocean and the Gulf of Mexico on the east, by Central America (or by South America when Central America is considered part of the continent) on the south, and the Pacific Ocean on the west The highest point is Mt McKinley in Alaska, and the lowest is Death Valley in California In the eastern part of the northern half are the LAURENTIAN MOUNTAINS, the ADIRONDACK MOUNTAINS, and the northern part of the APPALACHIAN MOUNTAINS, which, extending southward, leave a wide coastal plain in the SE United States, which merges into the great Gulf coastal plain On the western coast the COAST RANGES in many places rise abruptly from the sea The mountainous region here is considerably more extensive than that of the east, whole ranges are twice as high, and individual peaks more than three times as high, as the highest points in the east This western region includes the Coast Ranges and the ROCKY MOUNTAINS with the GREAT BASIN between them, the widest part of the western mountainous area occurs in Wyoming and Colorado The central part of the continent is a vast plain, varying in width up to c 1,500 mi and drained by numerous river systems, chief of which are the great MISSISSIPPI and MISSOURI (to the Gulf of MEXICO), the RED RIVER, SASKATCHEWAN, and NELSON system (to Hudson Bay), and the MACKENZIE system (to the Arctic Ocean) The GREAT LAKES–SAINT LAWRENCE system drains E to the Atlantic Other great rivers of North America are the YUKON, COLUMBIA, COLORADO, and RIO GRANDE. The temperature of North America reaches great extremes, it is influenced on the east by the Labrador Current and the GULF STREAM Rainfall is abundant along parts of the coast and deficient in certain parts of the interior The mountainous east and west contain large heavily forested areas, in the north are the BARREN GROUNDS, the central part was originally covered largely with rich grasses and is now the main agricultural region; and in the southwest are large desert areas The soil is generally fertile, nearly every kind of plant can be raised, and some of the world's largest wheat, cotton, and grazing areas are in North America The mineral resources are extensive and varied The population found here when the region was discovered by the Europeans consisted of scattered groups known as American INDIANS, believed to have migrated from Asia The present population consists chiefly of the descendants of Europeans, together with Negroes, Asiatics, and remnants of Indian tribes See J R Smith and M O Phillips, *North America* (1940).

Northampton, Henry Howard, earl of (nôrthămp'tŭn), 1540–1614, English courtier, son of the poet, Henry Howard, earl of Surrey He was distinguished for great learning and for lack of principle in his public life His court career under Elizabeth was marked by a charge of intrigue with Mary Queen of Scots, imprisonment (1583–85) for a pamphlet against astrology, his attachment to Robert Devereux, earl of Essex, at the height of that nobleman's ascendancy, as well as to Essex's enemy, William Cecil, Lord Burghley James I made Howard a privy councilor (1603), earl of Northampton (1604), and lord privy seal (1608). He supported the actions of his grandniece, Frances Howard, who was tried for the murder of Sir Thomas OVERBURY

Northampton, county borough (1931 pop 92,341, 1947 estimated pop 105,600), co seat of Northamptonshire, England, on the Nene and NNW of London There are Roman and ancient British remains in the vicinity Northampton was an important settlement of the Angles and of the Danes, and its castle was the scene of parliaments from the 12th to the 14th cent and of many sieges The Church of St Giles has a Norman door, All Saints' has a 14th-century tower, St Peter's has a Norman interior, and there is a Roman Catholic cathedral St Sepulchre's is one of the four round churches in England St John's Hospital was founded in 1138 One of the few remaining Eleanor Crosses (see ELEANOR OF CASTILE) is at Hardingstone, S of Northampton In 1460 Henry VI was defeated in Northampton In 1675 much of the town was destroyed by fire Shoemaking has long been the chief industry, there are also manufactures of textiles, machinery, paint, and other products

Northampton (nôrth"hămp'tun, nôr"thămp'tun) **1** City (pop 24,794), co seat of Hampshire co , W Mass , on the Connecticut, inc as a town 1656, as a city 1883 Hosiery, brushes, and cutlery are produced Best known as the seat of SMITH COLLEGE, it has also Clarke School for the Deaf and a state hospital for the insane Jonathan Edwards was pastor here Calvin Coolidge lived here and was once mayor of the city The Northampton Association of Education and Industry, a communistic settlement, was here, 1842–46 **2** Industrial borough (pop 9,622), E Pa , on the Lehigh river and near Allentown, settled c 1753, inc 1901 It manufactures Portland cement and building blocks

Northamptonshire (nôrthămp'tunshĭr) or **North Hants** (hănts), inland county (914 sq mi , 1931 pop 309,474, 1948 estimated pop 352,200), central England The county town is Northampton The Soke of PETERBOROUGH, a separate administrative county, is in the northeast, in an area of reclaimed fenland, part of the Bedford Level It is undulating agricultural country, devoted largely to pasturage of sheep and cattle The county has long been a center of boot and shoe manufacture The Roman roads, Ermine Street and Watling Street, crossed the county In Anglo-Saxon times it was part of the kingdom of Mercia and was probably organized as a shire in Danish times See Arthur Mee, *Northamptonshire* (1945)

North Andover (an'dōvur), textile town (pop 7,524), NE Mass , on the Merrimack, settled c 1644, set off from Andover 1855

North Apollo, borough (pop 1,568), W Pa , on the Kiskiminetas and E of Pittsburgh, inc 1930

North Arlington, borough (pop 9,904), NE N J., NE of Newark, inc 1896

North Atlanta, city (pop 1,365), NW Ga , a suburb of Atlanta

North Atlantic Drift, warm ocean current in the northern part of the Atlantic Ocean which exerts considerable influence upon the climate of Western and N Europe Its tempering effect is felt especially in the British Isles and Norway, but its impact reaches as far as the north coast of Russia and the arctic islands of Novaya Zemlya The North Atlantic Drift is a continuation of the GULF STREAM, the merging point being at lat 40° N and long 60° W

North Atlantic Treaty, defensive alliance signed on April 4, 1949, at Washington, D C , by the United States, Canada, Great Britain, France, the Netherlands, Belgium, Luxembourg, Italy, Norway, Denmark, Iceland, and Portugal Reaffirming their adherence to the Charter of the United Nations, the signatories pledged to "unite their efforts for collective defense and for the preservation of peace and security" and to consider an armed attack on any of them an attack against all The treaty was to be renewed in 10 years Chief among the other clauses was that providing for the establishment of a council of the 12 member nations The treaty was ratified despite the violent opposition of Communists and left-wing Socialists in certain countries—especially France and Italy—who denounced it as a provocative act directed against the USSR Even outside the leftist parties, the treaty was viewed with apprehension by some who feared it would lead to an armaments race and thus to war. Its promoters—chief among them U S Secretary of State Acheson—maintained, on the contrary, that a show of common strength was the sole road to peace. The council of the North Atlantic Treaty members subsequently established a joint military defense committee and mapped a common strategy in case of war. The burden of the expenditure required for the rearming of Western Europe was assumed by the United States

North Attleboro (ă'tulbûru), industrial town (pop. 10,359), SE Mass , near the R I line, settled 1669, set off from Attleboro 1887 Jewelry has been made here since the 18th cent The Woodcock tavern dates from 1670

North Augusta, residential town (pop 2,629), SW S C , on the Savannah, inc 1906 It is opposite Augusta, Ga , with which it is connected by bridge.

North Australia see NORTHERN TERRITORY

North Baltimore (bôl'tumôr), village (pop 2,616), NW Ohio, SSW of Toledo, settled 1834 It has varied manufactures

North Battleford, city (pop 5,717), W Sask , on the North Saskatchewan river at the mouth of the Battle, NW of Saskatoon and opposite Battleford It is a distributing center for W Saskatchewan, with grain elevators, cold-storage plants, and tanneries

North Bay, city (pop 15,599), S Ont , on Lake Nipissing and N of Toronto It is the transportation and commercial center of lumbering and mining districts, the southern terminus of the provincially owned Ontario Northland RR, and an outfitting point for hunting and fishing parties

North Bellevernon (bĕlvûr'nŭn), borough (pop 3,022), Westmoreland co , SW Pa , SE of Pittsburgh, inc 1876

North Bend. 1 City (pop 1,003), E Nebr , on the Platte and WNW of Omaha, settled 1856 **2** City (pop 4,262), SW Oregon, on Coos Bay, settled 1853, inc 1903 It has lumber mills and fisheries

North Bergen, residential suburban township (pop 39,714), NE N J , NE of Jersey City, inc 1861 Ink, radio parts, and automobile batteries are made

North Berwick (bĕr'ĭk), burgh (pop 3,473), East Lothian, Scotland, on the Firth of Forth and ENE of Edinburgh It has ruins of a 12th-century priory for Cistercian nuns, to the east are ruins of Tantallon Castle, and in the firth is Bass Rock The burgh is a seaside resort with a noted golf course

North Berwick (bûr'wĭk), town (pop 1,455), SW Maine, settled c 1630, set off from Berwick 1831

North Borneo or **British North Borneo,** British colony (29,387 sq mi , 1947 estimated pop 380,000), NE BORNEO Until 1946 a protectorate, the colony has its capital at Jesselton, the old capital, Sandakan, was virtually destroyed during the Second World War The area comprised by the colony is much like the rest of the island, it contains Mt Kinabalu, the island's highest peak Rubber, timber, tobacco, coal and fish are the principal products and exports

Northboro, rural town (pop 2,382), E central Mass , ENE of Worcester, settled c 1672, set off from Westboro 1766

North Brabant (brubănt'), Dutch *Noordbrabant* (nôrt"brabant') province (1,920 sq. mi , pop 1,168,505), S Netherlands, bordering on Belgian Brabant in the south The capital is 's Hertogenbosch, among other cities are Tilburg, Eindhoven, and Breda A level country, the province has fertile soil near the Meuse (Maas), which is its northern boundary, but is mostly heathland elsewhere The chief industrial products are wool, cotton, and linen textiles and electrical appliances (notably at Eindhoven) The history of the province was that of Brabant (see BRABANT, DUCHY OF) until the 16th cent As a result of the Spanish reconquest of the larger part of the duchy during the Dutch struggle for independence, Brabant was divided at the Peace of Westphalia (1648) between the Spanish (later Austrian) Netherlands and the United Provs of the Netherlands North Brabant, the part acquired by the Dutch, was administered in common by the United Provs until 1795 and subsequently became a province of the kingdom of the Netherlands

North Braddock, industrial borough (pop 15,679), SW Pa , ESE of Pittsburgh, inc 1897 It is a steel-manufacturing center

North Branford, town (pop 1,438), S Conn , ENE of New Haven, settled c 1680, inc 1831

Northbridge, town (pop 10,242), S Mass , on the Blackstone and SE of Worcester, settled 1704, set off from Uxbridge 1772 It includes the textile-producing Whitinsville village

Northbrook, village (pop 1,265), NE Ill , near Chicago, inc 1923

North Brookfield, town (pop 3,304), central Mass , W of Worcester, settled 1664, set off from Brookfield 1812 Asbestos and rubber products are made

North Caldwell (kôld'wûl), borough (pop 1,572), NE N J , SW of Paterson, inc 1898

North Canaan (kă'nŭn), town (pop. 2,304), NW Conn It includes the villages of CANAAN and East Canaan

North Canadian, river rising in NE New Mexico and flowing E into the Oklahoma Panhandle and SE through Oklahoma City, to join the Canadian river near its junction with the Arkansas in E Oklahoma Federal dams and reservoirs on the river and its tributary, Wolf Creek, are part of the Arkansas river basin project for flood control and other purposes.

North Canton, village (pop 2,988), NE Ohio, NW of Canton Vacuum cleaners are made here

North Cape, N Norway, near but not at the north end of Mageroy island, in Finnmark co , c 60 mi NE of Hammerfest It rises c 1,000 ft sheer from the sea Although Mageroy is separated by a narrow channel from the mainland, North Cape, at lat 71° 10′ N is the northernmost important point of the European continent The northernmost point actually situated on the mainland is Cape NORDKYN The North Cape is a traditional stop for tourist steamers

North Carolina, state (52,712 sq mi , including 3,570 sq mi of water surface, 1940 pop 3,571,623, 1949 estimated pop 3,864,000), SE United States, one of the Thirteen Colonies RALEIGH is the capital The state is bounded on the north by Virginia, on the east by the Atlantic, on the south by South Carolina and Georgia, and on the west by Tennessee Serving as a buffer against the Atlantic is a long chain of islands, with constantly shifting sand dunes, from which project three famous capes —HATTERAS, LOOKOUT, and FEAR Between the islands and the shore line stretch the sounds — ALBEMARLE SOUND and PAMLICO SOUND are the largest—which receive CHOWAN, ROANOKE, TAR, and NEUSE rivers and CAPE FEAR RIVER (WILMINGTON, the chief port, is at the head of its broad estuary) The mainland bordering the sounds is low, flat tidewater country, often swampy, even beyond the DISMAL SWAMP In the upper coastal plain the land rises gradually from the tidewater level, reaching 500 ft at its western limit, the fall line Here begins the piedmont, rolling hill country with many swift streams such as the BROAD RIVER, the Catawba (or WATEREE), and the Yadkin (or PEE DEE) The hydroelectric power they generate has made this a great industrial area, and the piedmont supports most of the state's population and has the four largest cities — CHARLOTTE, WINSTON-SALEM, DURHAM, and GREENSBORO At the western edge of the piedmont the land rises abruptly in the BLUE RIDGE, then dips down to the broad Carolina highlands plateau, and rises again in the GREAT SMOKY MOUNTAINS ASHEVILLE is the metropolis of this mountain region, with Mt MITCHELL (6,684 ft) the highest peak in the E United States The FRENCH BROAD RIVER, the WATAUGA, and other rivers rising W of the Blue Ridge flow into the Mississippi system, almost all via the Tennessee North Carolina, in the warm temperate zone, has a mild, generally uniform climate, and the rainfall is abundant and well distributed. Tobacco and cotton are the chief money crops In North Carolina 40 percent of the nation's tobacco, mostly the bright-leaf variety, is grown (in the coastal plain) and manufactured (in the piedmont) into cigarettes, half the total production in the United States Peanuts, corn, wheat and other grains, sweet potatoes, Irish potatoes, truck, fruit, livestock, and dairy products rank next in value Plentiful forests supply thriving furniture and lumber industries, and North Carolina has long been a leading textile-producing state (cotton, knit, rayon, and silk goods) There are valuable coastal fisheries and a wide variety of minerals, granite, feldspar, kaolin, and mica being commercially important Verrazano (1524) and possibly some Spanish navigators earlier had explored the coast before the unsuccessful colonizing attempts of Sir Walter RALEGH in the 1580s (see ROANOKE ISLAND) The first lasting settlements were made around Albemarle Sound as early as 1653 by colonials from Virginia Meanwhile, Charles I granted (1629) to Sir Robert Heath the territory S of Virginia between the 36th and 31st parallels, named Carolina in the king's honor Heath did not exploit his grant, which was declared void in 1663 Charles II made over the territory to eight of his favorites, who became the "true and absolute Lords Proprietors" of Carolina In 1664 Sir William Berkeley, governor of Virginia and one of the proprietors, appointed a governor for the province of Albemarle, known after 1691 as North Carolina. Deputies, appointed from Charleston, S C , served from 1691 to 1712, after which North Carolina had a separate governor The people were expected to adhere to the Fundamental Constitutions (abolished 1693) as in South Carolina, but proprietary rule, despite several episodes of rebellion, did not lie heavy on the colony, which long remained poor and sparsely settled By 1700 there were only some 4,000 people, predominantly of English stock, along Albemarle Sound. There they raised, with the help of indentured servants and Negro and Indian slaves, tobacco, corn, and livestock, mostly on small farms The production of naval stores was the chief industry Communication by land was almost impossible, except with Virginia, and even then swamps and forests made it difficult, and only vessels of light draft could negotiate the narrow and shallow passages through the island barriers. There was, however, some trade not only with Virginia but also with New England and Bermuda, and the colony had three towns, BATH, EDENTON, and NEW BERN by 1711, when the destructive war with the Tuscarora Indians broke out. The Tuscarora were defeated, and in 1714 the remnants of the tribe moved north to join the Iroquois Confederacy A long, bitter boundary dispute with Virginia was partially settled in 1728 when a joint commission ran the line 240 mi inland One of the Virginia commissioners, William BYRD, a cultured but prejudiced gentleman, remarked in his *History of the Dividing Line* that North Carolinians were quarrelsome and lazy Although Anglicanism was made the state religion in 1715, visiting clergymen also deplored the irreligious, unrestrained character of the people, always ready to oppose proprietary demands, few as they were When the British government also became dissatisfied with the work of the proprietors, North Carolina was made (1729) a royal colony Thereafter progress was more rapid. The Indians were gradually pushed back over the Appalachians as the piedmont was increasingly occupied Germans and Scotch-Irish came from Pennsylvania, and Highland Scots, particularly after their defeat at Culloden in 1745, settled in the Cape Fear valley These varied racial elements, in addition to smaller groups of Swiss, French, and Welsh who migrated earlier in the century, gradually amalgamated There has been little foreign immigration since colonial days, and North Carolina's white population is largely homogeneous To resist government oppression, backcountry farmers organized (1768) the REGULATOR MOVEMENT, suppressed by militia under Gov William TRYON in 1771 After the outbreak of the American Revolution, royal authority collapsed, a provisional government was set up, the disputed MECKLENBURG DECLARATION OF INDEPENDENCE was allegedly promulgated (May, 1775), and the fourth provincial congress, meeting at Halifax, instructed (April 12, 1776) the colony's delegates to the Continental Congress to support complete independence from Britain Most Loyalists, including the Highland Scots, fled North Carolina after their defeat (Feb 27, 1776) at the battle of Moore's Creek Bridge, near Wilmington The British, however, were not relieved of their delusion about Tory strength in the state until their failure in the CAROLINA CAMPAIGN (1780-81) The designation Tar Heels for North Carolinians was originally attributed to Cornwallis's soldiers retreating in this campaign—they supposedly forded a stream into which tar had been poured and emerged with the substance sticking to their heels Settlements established beyond the mountains before the Revolution (see WATAUGA ASSOCIATION and TRANSYLVANIA COMPANY) were increased after the war In 1784 the legislature ceded North Carolina's Western lands to the United States, leading the transmontane people to organize a new, short-lived government (see FRANKLIN, STATE OF) The cession, soon repealed, was reenacted in 1789-90, and the territory became (1796) the state of Tennessee North Carolina opposed a strong central government and did not ratify the Constitution until Nov , 1789, months after the new U S government had begun to function The state was slowly won to Jeffersonian policies, largely through the influence of Nathaniel MACON, but made little progress under the undemocratic constitution framed in 1776, which largely served the interests of the politically dominant tidewater planter aristocracy In 1835, however, W North Carolina, now the most populous section, finally succeeded in having called a constitutional convention, which abolished the property and religious qualifications for voting and holding office (except for Jews) and provided for the popular election of governors In 1845 also began the final forced removal of most of the Cherokee, but to check the steady, voluntary migration of whites, internal improvements, especially the building of railroads and plank roads, were effected Most North Carolinians never held Negro slaves, and considerable anti-slavery sentiment existed until the 1830s, when cotton culture became more profitable and the organized agitation of Northern abolitionists began Not until President Lincoln's call for troops after the firing on Fort Sumter did the state secede and join (May, 1861) the Confederacy Tar Heels boast that they had more privates and fewer generals in the Confederate army than any other Southern state The coast was ideal for blockade-running, and the last important Confederate port to fall (Jan , 1865) was Wilmington (see FISHER, FORT) Gov Zebulon B VANCE zealously defended the state's rights against what he considered encroachments by the Confederate government After engagements at Averasboro and Bentonville in March, 1865, Gen J E Johnston surrendered his Confederate forces to Gen W T SHERMAN, and in May, President Johnson applied his plan of RECONSTRUCTION to the state The radical Republicans in Congress, however, adopted their own scheme in 1867, and the Carolinas, organized as the second military district, were again occupied by Federal troops The Reconstruction constitution of 1868 abolished slavery, removed all religious tests for holding office, and provided for the popular election of all state and county officials In 1871 the legislature, with conservatives again in control, impeached and convicted Gov William H. Holden Reconstruction government, however, was not so bad as elsewhere in the South, and the period saw the beginnings of a tremendous rise in industry in the piedmont Increased use of tobacco in the Civil War stimulated the growth of tobacco manufacturing, first centered at Durham, and the introduction of the cigarette-making machine in the early 1880s was an immense boon to the industry, creating "tobacco barons" such as James B DUKE and R J Reynolds Agriculture, however, was long in a critical condition The ante-bellum plantation system was replaced by farm tenancy, which, in several forms, is still the dominant system of holding land (in 1945 only about one half of the farms were owned by the men who worked them) Much farm property was destroyed, credit was lacking, and transportation had broken down The nation-wide agrarian revolt reached North Carolina in the GRANGER MOVEMENT (1873), the Farmers' Alliance (1887), and the POPULIST PARTY, which united with the Republicans to carry the state elections in 1894 and 1896 However, the Fusionists were blamed for the rise of Negro control in many tidewater towns and counties, and in the election of 1898, when the Red Shirts, like the Ku Klux Klan of Reconstruction days, were active, the Democrats regained the control they have never since lost The turn of the century marked the beginning of a new progressive era, somehow typified by the successful airplane experiments of the Wright brothers at KITTY HAWK The crusade for public education for both races led by Gov Charles B AYCOCK, elected in 1900, achieved wide results, and new interest was created in developing the state's agricultural and industrial resources But one old pattern was strengthened when a suffrage amendment, the "grandfather clause" assuring white supremacy, was added (1901) to the constitution of 1868, already unrecognizable after 30 previous amendments (1875-76) resulting from the experiences of Reconstruction For Carolina governors there was an even longer time between drinks after state-wide prohibition was adopted in 1908, and North Carolina pioneered in bringing about the national prohibition amendment, never approving its repeal Since the First World War, the state government has increasingly followed a policy of consolidation and centralization, taking over the public school system and the supervision of county finance and roads A huge highway development program was begun in 1921 Expenditures for higher education were greatly increased, and the three major state educational institutions were merged into a greater Univ of North Carolina From the university, the most important single influence in the state, has emanated most of the recent advanced economic and social measures Tar Heels no longer take a defensive pride in calling their state "a vale of humility between two mountains of conceit" and now boast so loudly and often that North Carolina is probably the most advertised as well as the most progressive state in the South It has been fortunate in intelligent, far-seeing leaders such as Josephus DANIELS, Frank P GRAHAM (U S Senator, 1949–50), and Jonathan DANIELS, and its leading literary figure, Thomas WOLFE, won universal regard Of the many and large military installations which covered the state in the Second World War, Fort Bragg, near Fayetteville, is best known DUKE UNIVERSITY, Davidson College, and Wake Forest College are the leading private institutions of higher education See J S Bassett, *The Constitutional Beginnings of North Carolina, 1663-1729* (1894), S A Ashe, *History of North Carolina* (2 vols , 1908–25), J G deR Hamilton, *Reconstruction in North Carolina* (1914), R D Connor, *North Carolina Rebuilding an Ancient Commonwealth, 1584–1925* (2 vols , 1929), J C Sitterson, *The Secession Movement in North Carolina* (1939), Federal Writers' Project, *North Carolina a Guide to the Old North State* (1939), Archibald Henderson, *The Old North State and the New* (2 vols , 1941), S H Hobbs, Jr , and M N Bond, *North Carolina Today* (1947), H T Lefler, ed , *North Carolina History Told by Contemporaries* (2d ed , revised and enlarged, 1948)

North Carolina, Agricultural and Technical College of, at Greensboro, Negro, land-grant and state supported, coeducational, chartered 1891, opened 1893 It has a college of education and sciences and schools of agriculture and mechanic arts

North Carolina, University of, at Chapel Hill, state supported, partly coeducational, chartered 1789, the first state university to open as such (1795) The Consolidated Univ of North Carolina includes the State College of Agriculture and Engineering at Raleigh and the Woman's College at Greensboro At Chapel Hill are a college of arts and sciences (with music) and a two-year general college, schools of commerce, law, library science, medicine (two years), pharmacy, and public health, and divisions of public welfare and social work The Institute for Research in Social Science emphasizes regional study and trains personnel for research The university has a planetarium, an art gallery, one of the earliest folk theaters, a folklore council, and a university press See Archibald Henderson, *The Campus of the First State University* (1949)

North Carolina, Woman's College of the University of, at Greensboro, state supported, chartered 1891,

opened 1892 as the State Normal and Industrial School It became a college in 1897 and was called the North Carolina College for Women from 1918 to 1932. It has a liberal arts college and a music school.

North Carolina State College of Agriculture and Engineering, at Raleigh, state supported, coeducational, founded 1887, opened 1889, consolidated with the Univ of North Carolina 1931 It includes schools of agriculture and forestry, architecture, engineering, science and business, and textiles and a division of teacher training

North Catasauqua (kătŭsô'kwŭ), borough (pop 2,530), E Pa , on the Lehigh river and near Allentown, inc 1908

North Central College· see NAPERVILLE, Ill

North Channel, strait between Northern Ireland and Scotland, connecting the Irish Sea with the Atlantic It is c.13 mi across at its narrowest

North Chicago, industrial city (pop 8,465), NE Ill , N of Chicago on Lake Michigan, contiguous to Waukegan, inc 1909 It manufactures metal products and refines rare metals A sit-down strike (1937) at a steel plant here led to legal proceedings, in which the U S Supreme Court ruled (1939) sit-down strikes illegal Near the city is the large Great Lakes Naval Training Station and a veterans' hospital

North Chillicothe (chĭlĭkŏ'thē), village (pop 1,216), central Ill , near the Illinois river N of Peoria, inc 1890

Northcliffe, Alfred Charles William Harmsworth, Viscount, 1865–1922, British journalist, b Ireland In 1887 he formed a general publishing company and in 1888 founded a weekly, *Answers to Correspondents* Northcliffe persuaded his brother Harold (later Viscount Rothermere) to take over financial affairs, and in five years his magazine was selling more than 1,000,000 copies a week. Other publications were slowly acquired to form the world's largest periodical combine, the Amalgamated Press. The London *Evening News* joined in 1894, and the *Daily Mail*, with its concise forward-looking policies which were to revolutionize journalism, was begun in 1896 A duplicate edition was issued in Manchester during the Boer War, and in 1905 a continental edition was established in Paris, forcing other papers to follow suit Northcliffe founded (1903) the *Daily Mirror* and in 1908 gained control of the dying *Times*, putting it back on its feet with changes in make-up and editorial policy, *The Times* was sold to Lord Astor after Northcliffe's death His newspaper campaigns during the First World War, particularly those concerning faulty munitions, national conscription, and food rationing, were determining factors in England's conduct of the war, and his support of Lloyd George in 1916 was instrumental in bringing the downfall of the Asquith government Towards the end of his life, however, he overestimated his influence on the course of the British Empire He was made a viscount in 1917 See biographies by Max Pemberton (1922), R M Wilson (1927), and H H Fyfe (1930), memoir by J A Hammerton (1932)

North College Hill, residential city (pop 5,231), SW Ohio, near Cincinnati, inc 1916 The Clovernook Home for the Blind is here; its Braille printing shop publishes magazines of wide circulation

Northcote, James (nôrth'kŭt), 1746–1831, English historical and portrait painter He worked as assistant to Reynolds and studied at the Royal Academy From 1777 to 1780 he studied in Italy and on his return painted a series of pictures for the Shakespeare Gallery (built by John Boydell), including the well-known *Murder of the Princes in the Tower* Northcote was the author of several books, including *Memoirs of Sir Joshua Reynolds* (1813, enl ed , 1818) and *Conversations* (1830)

North Dakota, state (70,665 sq mi , 1940 pop 641,935, 1949 estimated pop 605,000) N central United States, admitted 1889 as the 39th state BISMARCK, on the eastern bank of the Missouri river, is the capital North Dakota is bounded on the north by the Canadian provinces of Saskatchewan and Manitoba, on the east by the Red River, which separates it from Minnesota, on the south by South Dakota, and on the west by Montana In the geographical center of North America, North Dakota is exposed to the extremes and vagaries of a continental climate Almost constant winds whip up winter blizzards and scorch the earth during brief, intense summers Semiarid conditions prevail in the western half of the state, but in the east an average annual rainfall of 22 in., much of it in the growing months of spring and summer, permits the rich soil to yield abundantly From east to west North Dakota is a rural state, its towns busy supplying the needs of its many farms and its industries devoted to the processing of agricultural products. The eastern half of the state is in the central lowlands, a belt of black earth covered in spring by the soft green of quickly sprouting grain and later into the bronze of flowering wheat or the blue of the flax. Along the banks of the Red River a wedge of land, some 40 mi. wide at the Canadian border and tapering to 10 mi in the south, is the floor of the former glacier Lake Agassiz Treeless, except along the riversides, and without rocks, this flat land was transformed into the bonanza wheat fields of the '70s and '80s with farms ranging in size from 3,000 to 65,000 acres Today the average farm is nearly 400 acres, its major wheat crop varied with cash crops of flax, seed potatoes, and sugar beets To the west of the valley a series of escarpments rises some 300 ft to meet the drift prairies, where rolling hills, scattered lakes, and occasional moraines form a pleasant and fertile countryside. The productivity of the soil places North Dakota second only to Kansas in total wheat production, with first place in spring and durum wheat, in flax, and in rye In the west a combination of difficult topography and scant rainfall precludes intensive cultivation except in the river valleys An area some 50 mi E from the Missouri river is a farm and grazing belt, divided from the drift prairies by the Missouri escarpment An irregular plateau rolls W from the Missouri, covered with short prairie grasses and cut by deep coulees Where wind and rain have eroded the hillsides they have molded weird formations of sand and clay, glowing in yellows, reds, browns, and grays Along the Little Missouri this section is called the Badlands and here, where Theodore Roosevelt visited, the state has established the Roosevelt Regional State Parks for scenic and recreational purposes Across the plateaus the cattle graze on the native grasses and find shelter in the many ravines Large ranges are an economic necessity, and during the heavy snows only the radio relieves the isolation of this prairie life A greater development of the mineral resources of this area may change its character, for underlying the western counties is a vast supply of lignite, some of it layered so close to the surface that strip mining is possible This fuel is valuable for both industrial and home use and is particularly important since North Dakota is short of other fuels In close proximity to the lignite beds are fine deposits of clay, with such a variety of types that they serve both as construction and pottery materials, with production centered around the town of DICKINSON Most of the other industry—primarily the processing of grain, meats, and dairy products—is concentrated in the only four cities of over 10,000 population—FARGO, Bismarck, GRAND FORKS, and MINOT Two transcontinental railroads, the Great Northern and the Northern Pacific, serve as the main transport arteries to the north, east, and west, and highway and airport construction is facilitating the difficult problem of travel and marketing The Missouri and the Red River, once the major transport lanes, are more important now as potential irrigation sources Some dam construction, irrigation, and reforestation projects have been completed and the drought years of the '30s brought a realization of the need for a more comprehensive program of conservation Probably there is no more live issue in the state today than the proposed Missouri Valley Authority (see MISSOURI RIVER BASIN PROJECT) These modern problems have evolved during a very brief history, for it is scarcely more than a century since the first white men began to cultivate any area in North Dakota The first farmers of whom we have definite knowledge were the Mandan Indians, whom the French explorer, Pierre de la Vérendrye, found tilling the land on the banks of the Missouri in 1738 Other agricultural tribes were the Arikara and the Hidatsa Vérendrye's two sons revisited the area in 1742, still searching for a river flowing westward Succeeding explorations were concerned with the fur trade With the Louisiana Purchase of 1803 the northwestern half of North Dakota became part of the United States, the southeastern half being acquired from Great Britain in 1818 when the international line with Canada was fixed at the 49th parallel By the time Lewis and Clark wintered with the Mandan in 1804–5 the NORTH WEST COMPANY and the HUDSON'S BAY COMPANY had trading posts in the Red River valley. These ventures introduced an industry which dominated the region for more than half a century. Within that era the buffalo disappeared from the plains and the beaver from the rivers The American Fur Company, from its post at Fort Union in 1828 gradually gained monopolistic control over the trade of the region Supply and transport were greatly aided when a paddlewheel steamer, the *Yellowstone*, inaugurated steamboat travel on the turbulent upper Missouri in 1832 Quickly the pole and the cordelle gave way to power and the voyageur was joined by the equally colorful, skilled river pilot Additional transportation was provided by the supply caravans of Red River carts, which screeched westward across the Minnesota prairies and returned to the Mississippi loaded with valuable pelts. The first attempt at agricultural colonization was made at Pembina in 1819 by a group of settlers under the auspices of the earl of Selkirk (see RED RIVER SETTLEMENT). After Great Britain relinquished the area, the first permanent farming community was not established until 1851 when a group settled at Pembina. This was the only farm settlement in the state when Dakota Territory was organized in 1861 to include the present states of North Dakota, South Dakota, Montana, and Wyoming Every town clamored to become a county seat, and the vitality of political life was little handicapped by an insignificant population Even when free land was opened in 1863 and the Northern Pacific RR was chartered in 1864 the combination of preoccupation with the Civil War and the eruption of Indian discontent into open warfare prevented any appreciable settlement Gen. Alfred H Sully joined Gen Henry H SIBLEY of Minnesota in retributive campaigns against the Sioux in 1863–66 Some ten years later in 1876, after gold was discovered on Indian land in the Black Hills, the unwillingness of the whites to respect treaty agreements led to further war with the Indians Ultimately the Sioux under Chief Sitting Bull fled to Canada, where they surrendered voluntarily, deprived of horses and arms they were returned to reservations in the United States In place of the Indians came the European immigrants, Scandinavians, Germans, and Russians They formed the work crews who laid the tracks as the railroads moved westward to the coast They worked on the Eastern-financed bonanza wheat fields of the central lowlands or staked claims and built sod homes on the western prairies. They became farmers and citizens and—the Scandinavians in particular—influenced the economy by instituting the cooperative organizations which had been so successful in their homelands Politics was the arena for the struggle between the agrarian groups and corporate interests Alexander McKenzie, political boss, came to represent the dual power of politics and big business Against this pressure the Farmers' Alliance struggled and in the '90s combined with the Democrats and Populists to carry the election Later, when the success of the La Follette Progressives in Wisconsin encouraged the growth of the Republican Progressive movement in North Dakota, a fusion with the Democrats elected "Honest John" Burke as governor for three terms (1906–14). Much of the agrarian discontent was focused on the practices of grain marketing as carried out by the large grain interests Although many small cooperative grain elevators had been established they were ineffective in correcting abuses and the farmers pressed for a state-owned grain elevator When this movement failed in the legislature of 1915 the Nonpartisan League, engineered largely by Arthur C Townley, was organized on a platform which included state ownership of terminal elevators and flour mills, state inspection of grain and grain dockage, exemption of farm improvements from taxation, and state insurance of crops The organization, operating to a great extent within the Republican party, was successful in securing the establishment of an industrial commission in 1919 to manage all state-owned enterprises, the first of which was the North Dakota Mill and Elevator Association, now operating at Grand Forks This was quickly followed in 1920 by the Bank of North Dakota, set up in Bismarck to control public funds Dissension arose within the ranks, and the Independent Voters Association splintered off to represent the conservative Republican position The industrial commission was accused of maladministration, and the provision of recall was exercised three times William Langer, who had been active with both the Nonpartisan and Independent Voters Association groups, was convicted on a Federal charge of conspiracy while serving as governor in 1934 Langer again became governor in 1936, running as an individual candidate and not on the ticket of either party. Although the majority of the voters are Republican, the occasional alignment of a faction with other parties makes elections exciting and uncertain League-sponsored enterprises, with the exception of the Home Builders' Association, which was disbanded, continue to be effective Several factors operated to decrease the power of the Nonpartisan League With the drought and depression years of the '30s the New Deal program brought federal relief in areas which were the particular concern of the Nonpartisan League. Moreover the extreme isolation—fostered by geographical position, distrust of Eastern interests, and Old World ties—is at odds with the present-day agitation in other parts of the United States for international cooperation. A scanty population in many areas hampers education Facilities for advanced education, however, include two liberal arts colleges, the Univ. of North Dakota at Grand Forks and Jamestown College, the North Dakota Agricultural College at Fargo, five teachers colleges and normal schools; and two junior colleges. See George Francis Will and H J Spinden, *The Mandans* (1906); William Marks Wemett, *The Story of the Flickertail State* (1923), Paul Robert Fossum, *The Agrarian Movement in North Dakota* (1925); Herbert C. Fish and R. M Black, *A Brief History of North Dakota* (1925);

North East, borough (pop 3,704), NW Pa , on Lake Erie NE of Erie, settled c 1800, inc 1834 It is the center of the state's grape industry The Welch Grape Juice Company has a plant here

Northeast, trading and banking town (pop 1,328), NE Md , at the head of Chesapeake Bay and near Elkton, in a hay and grain area A state park is near by

Northeast Boundary Dispute, controversy between the United States and Great Britain concerning the Maine-New Brunswick boundary The treaty of 1783 had described the northeastern boundary of the United States as a line drawn due north from the source of the St Croix river to the highlands which divided the Atlantic and St Lawrence tributaries and along those highlands to the northwesternmost head of the Connecticut river Disputes over that definition lasted almost 60 years The identity of the St Croix was decided (1798) by a commission created by Jay's Treaty (1794). Exploration showed that no mountain range existed between the Atlantic and St Lawrence systems, and since the watershed was unacceptable to the disputants, the question was submitted to arbitration, in accordance with the Treaty of Ghent (1814) The king of the Netherlands, as arbitrator, designated the St John river as the boundary (1831), but this decision was not accepted by the United States In 1839 the dispute led to the so-called AROOSTOOK WAR, a conflict between inhabitants of New Brunswick and Maine, which threatened to produce strained relations between the United States and Great Britain The long-standing controversy was ended with the Webster-Ashburton Treaty (1842), which delimited the boundary, practically according to the line proposed by the king of the Netherlands, with with the United States receiving the larger and more valuable portion of the disputed area

Northeast Harbor, Maine see MOUNT DESERT ISLAND

North East Land, Nor *Nordost Landet* (nôr"ôst' la'nu, nôôr'-), island, area c 6,500 sq mi , in the Spitsbergen group, NE of West Spitsbergen It is covered by a dome of ice more than 1,600 ft high Discovered (1613) by Thomas Marmaduke and explored (1873) by Nordenskjold, it was completely charted in 1935–36 by a British expedition led by A R Glen

Northeast Passage In the era of discovery that began in the 15th cent efforts were made to find some new passage to Cathay and India Of these attempts most were devoted to seeking a NORTHWEST PASSAGE Less important was the attempt to go through the cold seas N of Europe and Asia from the North Sea to the Pacific this was the Northeast Passage. English, Russian, and Dutch navigators did, however, seek to sail along the north coast of Russia and far into arctic seas William Barentz made notable attempts to locate the passage in the 16th cent , as did Henry Hudson in the 17th cent The decline of Dutch shipping after the 17th cent left the exploration mainly to Russia; among the men sent out was Vitus Bering, who made his way to Alaska The Northeast Passage was not, however, traversed by any until N A. E NORDENSKJOLD of Sweden accomplished the feat in 1878–79 He rounded Cape Chelyuskin in 1878 and passed through Bering Strait in 1879 Several other explorers have repeated this exploit, among them Roald AMUNDSEN in 1918–20 In recent years the passage has become a regular shipping route for Siberian ports A fleet of Soviet icebreakers, aided by airplane reconnaissance and by radio weather stations, keeps the route navigable from June to September.

Northern Dvina, RSFSR· see DVINA.

Northern Ireland, administrative unit (5,238 sq. mi ; 1948 estimated pop. 1,350,783) of the United Kingdom, established by the Government of Ireland Act of 1920. The capital is Belfast. Northern Ireland comprises the six counties of Armagh, Down, Antrim, Londonderry, Tyrone, and Fermanagh with the county boroughs of Belfast and Londonderry (see IRELAND) The republic of Ireland refuses to recognize the division as valid Northern Ireland is represented in the British Parliament by 12 members and possesses a large degree of self-government through its own Senate and House of Commons at Belfast Northern Ireland is frequently called ULSTER, in reference to the northernmost of the ancient Irish provinces It began a relatively distinctive history of its own in the early 17th cent when, after the defeat of the rebellious Irish and the flight of the Irish earls (1607), much of the land was confiscated by the British crown and "planted" with Scotch and English settlers Ulster took on an industrial and Protestant character as compared with the rest of the island, but there was no essential alienation between the two parts until the late 19th cent when William Gladstone proposed his first Home Rule Bill (1886) for Ireland Though the northern Irish had their own grievances against the English and many migrated abroad, the largely Protestant population feared domination by the southern and Catholic majority, which they thought HOME RULE would bring, and Ulster was bound more closely by economic ties to Britain than to the rest of Ireland The successive proposals for Home Rule widened the rift between the two parts of the country, so that by the outbreak of the First World War civil war was an immediate danger in Ireland The bill of 1920 set up separate parliaments for the two parts of Ireland The Irish Free State and later the republic of Ireland refused to recognize the provisions of the act The pro-British Unionist party has remained strong in Northern Ireland, winning 37 of the 52 seats in the House of Commons in the election of 1949 The Catholic minority has, however, been steadily growing in Northern Ireland and threatens the Protestant hegemony The land is mountainous, and there are few natural resources Farming is the largest single industry The area is famous for its fine linens Heavier industry is concentrated largely in and around Belfast (pop c 438,000), one of the chief ports of the British Isles. In the Second World War many warships and merchant vessels were constructed in the Belfast shipyards, and Northern Ireland contributed to the manufacture of tanks, guns, ammunition, and aircraft (1,500 heavy bombers) for the war effort, as well as affording a strategic military base Conscription was never applied to Northern Ireland, but many Irish volunteered for military service See Aodh de Blácam, *The Black North* (1943), Hugh Shearman, *Northern Ireland* (1946)

Northern Land, RSFSR see SEVERNAYA ZEMLYA

northern lights see AURORA BOREALIS

Northern Pacific Railway, American railway system, extending from Duluth and St Paul, Minn , to Seattle, Wash , and Portland, Oregon The railroad operates several branch systems—including one from Mantoba, Minn , to Winnipeg, Man , and another from Seattle, Wash , to Sumas, Wash —and controls nearly 6,900 mi of trackage The Northern Pacific Railway Company was chartered by special act of Congress in 1864, and construction was begun in 1870 Jay COOKE at first managed the enterprise, but after the Panic of 1873 the railroad company went into bankruptcy Under the leadership of Henry VILLARD, the Northern Pacific was opened in 1883 from Ashland, Wis , to Portland, Oregon In 1901 there was a spectacular financial contest between the interests of E H HARRIMAN and those of James Hill and J P Morgan for the control of the Northern Pacific The Hill-Morgan group secured control, but an agreement between the two groups resulted in the organization of the Northern Securities Company, a giant holding company which controlled the Northern Pacific, the Great Northern, and the Chicago, Burlington, and Quincy When this trust was dissolved (1904) as a violation of the Sherman Anti-Trust Act, the Hill-Morgan interests came into control of the Northern Pacific Its numerous traffic connections give the Northern Pacific Railway access to Lake Superior, the Gulf of Mexico, and the Pacific Ocean Of the land granted by the U S. government for the construction of the Northern Pacific, over 2,500,000 undistributed acres in eight states were still held by the company in 1948

Northern Rhodesia (rôdē'shū), British protectorate (290,323 sq mi ; pop 1,678,718), E Africa The capital is Lusaka It is bordered on the east by Nyasaland, on the north by the Luapula river (which separates it from the Belgian Congo) and by Tanganyika, on the west by Angola, and on the south by the Zambesi river (which forms its boundary with Southern Rhodesia) and by South-West Africa Northern Rhodesia lies on an extensive plateau from 3,000 to 5,000 ft high The northern section is a savanna area with large copper deposits. The bush areas of the south alternate with grasslands, where there is farming and ranching. Tobacco, cotton, and grain are grown Implements of copper and hardwoods are manufactured, and copper is exported A north-south railroad connects Northern Rhodesia with Elizabethville, in the Katanga region of the Belgian Congo, and with Salisbury, the capital of Southern Rhodesia Knowledge of the early history of Northern Rhodesia is scant Long ravaged by the slave traders, it was especially harassed by Portuguese slavers in the 18th and early 19th cent David Livingstone first came on his missionary journeys in 1851, he traveled through Barotseland (in the southwest) and discovered (1855) Victoria Falls. In 1891 Great Britain made Barotseland a protectorate British control over the eastern section was established when troops under Sir Harry Johnston defeated (1891–94) Arab slave traders Thus section was administered as part of RHODESIA under the British South Africa Company The boundaries of Northern Rhodesia were established in 1911, but administration by the company continued until 1924, when Great Britain took over rule directly Today Northern Rhodesia is ruled by an appointed governor with the aid of an executive and a legislative council The legislative council has a majority of appointed and elected European members and two appointed African members The population includes 27,123 Europeans

Northern Territories, British protectorate (c 30,000 sq mi , pop 1,077,138), Gold Coast, W Africa, comprising several native states The capital is Tamale There is farming, and cattle are raised

Northern Territory (523,620 sq mi , pop 10,866), N Australia The Timor and Arafura seas are on the north, Queensland is east, South Australia is south and Western Australia west From 1825 Northern Territory formed part of New South Wales, and from 1863 to 1911 part of South Australia Transferred to the commonwealth in 1911, it was divided in 1926 into North Australia (with the capital at Darwin) and Central Australia (with the capital at Alice Springs), but the two were reunited in 1931 The territorial administrator has his headquarters at Darwin The interior was first explored by Leichhardt (1844–45), and the first transcontinental journey was made by John McDouall Stuart in 1861–62 An attempt in 1824 to establish a military post on Melville Island was abandoned in 1828 The climate of the territory is tropical, with a monsoon season A large part of the generally sparse population is composed of aborigines, who occupy 15 reservations with a total area of 67,244 sq mi , of these Arnhem Land is the largest The economic development is extremely slight Gold is worked to a very small extent, and there is limited stockbreeding Peanuts, pearl shell, and *bêche-de-mer* (trepang) are products See C P Conigrave, *North Australia* (2d ed , 1941)

Northern War, 1700–1721, general European conflict, fought in N and E Europe at the same time that the War of the Spanish Succession was fought in the west and the south It arose chiefly from the desire of the neighbors of Sweden to break Swedish supremacy in the Baltic area and from the conflicting ambitions of PETER I of Russia and CHARLES XII of Sweden Many other interests were, however, involved Although there was no direct link between the Northern War and the War of the Spanish Succession, Sweden generally received the diplomatic support of France, and Russia that of England The outbreak of the war was preceded by the alliance (1699) of Peter I, FREDERICK IV of Denmark, and AUGUSTUS II of Poland (who was also elector of Saxony) against Charles XII, whose youth and inexperience they hoped would make him an easy victim The war began with the invasion of Swedish Livonia by the Poles and of ducal Schleswig (which had rebelled against Danish rule with Swedish support) by the Danes The bold and unexpected landing of Charles XII in Zealand threatened Copenhagen and forced Denmark out of the war (1700) Charles now turned his attention to the east, late in 1700 he routed a much superior Russian force at Narva and relieved Riga, which the Poles were besieging Invading Poland, Charles took Warsaw and Cracow (1702), secured the election of STANISLAUS I as king of Poland (1704), followed Augustus into Saxony, and forced him to break his alliance with Russia and to recognize Stanislaus as king by the Treaty of Altranstadt (1706). While Charles was victorious in Poland, however, Peter I occupied Ingermanland and part of Livonia Resuming (1707) his campaign against Russia, Charles invaded the Ukraine, where MAZEPPA had promised to foment an anti-Russian uprising Mazeppa's project failed, and the Swedes, cut off from reinforcements and in need of a stronghold, laid siege to the fortress of Poltava Here a superior Russian army utterly defeated the Swedes, and Charles with a handful of men retired to Bessarabia, on Turkish territory His intrigues at Constantinople induced the sultan to declare war on Russia (1710). Peter I, allied with Prince Constantine BRANCOVAN of Walachia and Prince Demetrius Cantemir of Moldavia, invaded these two vassal principalities of Turkey and entered Jassy, but he soon found himself outnumbered and consented (1711) to the disadvantageous Treaty of the Pruth (see RUSSO-TURKISH WARS) While Charles was stubbornly refusing to leave Turkey, Augustus II took advantage of his

plight; he invaded (1709) Poland and expelled Stanislaus I, while Peter I completed the conquest of Swedish Livonia, Ingermanland, and Karelia Frederick IV of Denmark also resumed the war, seized ducal Schleswig, and conquered the Swedish duchies of Bremen and Verden in Germany, which he sold to Hanover on condition that Hanover join in the war on Sweden Swedish Pomerania was taken by the Poles, and Prussia, fishing in troubled waters, seized Stettin In 1714 Charles XII returned to Sweden Undaunted by the coalition of Russia, Denmark, Poland, Saxony, Hanover, and Prussia, he began military operations in Norway (then ruled by Denmark), where he was fatally shot in 1718 His successor, Ulrica Leonora, and her husband, Frederick I of Sweden, began peace negotiations Peace was made with all enemies but Russia in the treaties of Stockholm and Frederiksborg (1719-20) Augustus II of Poland restored all his conquests, Hanover retained the duchies of Bremen and Verden, but paid a large indemnity, Prussia received Stettin and part of W Pomerania, the rest reverting to Sweden, Denmark restored its conquests for a payment, but Sweden permitted the union of ducal Schleswig with royal Schleswig under the Danish crown and renounced Swedish exemption from customs duties in the Sound By the Treaty of Nystad with Russia (1721) Sweden ceded Livonia (including Estonia), part of Karelia, and Ingermanland, but retained Finland The lasting results of the Northern War were the waning of Swedish power, the establishment of Russia as a major power of Europe, with its "window" on the Baltic Sea, and the decay of Poland

Northfield 1 Town (pop 1,975), N Mass, on the Connecticut river, inc 1723 It was settled in 1672, destroyed by Indians twice, and resettled in 1714 It is one of the most beautiful towns in New England as to setting and architecture Dwight L Moody was born here, after his return in 1875 he founded Northfield Seminary (now Northfield School) for girls and Mt Hermon School for boys and initiated the summer religious conferences The first youth hostel in America was opened in Northfield in 1934 See H C Parsons, *A Puritan Outpost* (1937) 2 City (pop 4,533), SE Minn, on the Cannon river and S of St Paul, founded 1850 It is the seat of CARLETON COLLEGE and SAINT OLAF COLLEGE and is a farm trade and manufacturing center On Sept 7, 1876, Jesse and Frank James and their bandit gang attempted a bank robbery here which was frustrated and led to the breakup of the gang after several members were captured 3 Town (pop 1,543), S central N H, across the Winnipesaukee from TILTON 4 City (pop 2,848), SE N J, near Atlantic City, inc 1905 5 Town (pop 3,601), central Vt, SW of Montpelier, chartered 1781, settled 1785, organized 1794 It includes Northfield village (pop 2,129), geographical center of the state NORWICH UNIVERSITY is in Northfield

North Fond du Lac (fŏn' du lăk", fŏ' lăk"), village (pop 2,083), E Wis, on Lake Winnebago near Fond du Lac, inc 1903 There are railroad shops

North German Confederation, alliance of 22 German states N of the Main river, under the hegemony of Prussia It replaced the GERMAN CONFEDERATION, destroyed by the Austro-Prussian War (1866) The South German states, notably Bavaria, Baden, Württemberg, and the grand duchy of Hesse, though excluded from the confederation, were nevertheless loosely bound to it through their membership in the ZOLLVEREIN Prepared in broad outline by BISMARCK, the constitution of the confederation, when adopted by the members, provided for a federal council (Bundesrat), composed of deputies from the states, and a Reichstag, elected by direct suffrage Prussia exercised predominant influence in both bodies Executive power was vested in the president—the king of Prussia—who appointed the federal chancellor (as it turned out, Bismarck) In 1871 this constitution was adopted, with some changes, by the German Empire

North Girard, borough (pop 1,108), extreme NW Pa, on Lake Erie SW of Erie, inc 1926 Gardening and farming tools are made here

North Haledon (hāl'dŭn), borough (pop 2,761), NE N J, N of Paterson; inc 1901

North Hants, England see NORTHAMPTONSHIRE

North Haven, industrial town (pop 5,326), S Conn, settled c 1650, set off from New Haven 1786 Several old buildings survive.

North Holland, Dutch *Noordholland* (nōrt"hŏ'lănt), province (1,081 sq mi; pop 1,759,498), NW Netherlands, a peninsula between the North Sea in the west and north and the IJsselmeer in the east. The province includes several of the West Frisian Islands Haarlem is the capital, other cities are Amsterdam, Alkmaar, Edam, Ijmuiden, Helder, Hilversum, Velden, and Zaandam A lowland drained by numerous small rivers and canals and protected by dikes, North Holland with its drawbridges, windmills, and tulip fields corresponds exactly to the popular image of the Netherlands Agriculture, cattle raising, flower growing, cheese production, and fishing are the chief sources of its wealth, together with the world-wide trade of its ports For its history, see HOLLAND.

North Irwin, borough (pop 1,153), Westmoreland co, SW Pa, SE of Pittsburgh, inc. 1894

North Island (44,281 sq mi, pop 1,146,292), New Zealand The smaller but more populous of the two principal islands of the dominion, it has Wellington, the capital Auckland is also an important city Separated from South Island by Cook Strait, North Island is irregularly shaped with a long peninsula projecting northwest There are volcanic mountains, the highest being Ruapehu (9,175 ft) and Mt Egmont (8,260 ft.) The north central area is known for its numerous hot springs and geysers The Waikato, largest river of New Zealand, drains Lake Taupo, the largest lake

North Judson, town (pop 1,408), Starke co, NW Ind, near the Kankakee river SW of South Bend

North Kansas City, industrial town (pop 2,688), NW Mo, on the Missouri and near Kansas City, founded 1912. It is owned by a real-estate company

North Kingstown (kĭng'stŭn, kĭngs'town"), town (pop 4,604), S R I, bordered on the north by the Potowomut river and on the east by Narragansett Bay, settled 1641, inc 1674 as Kingstown, divided into North Kingstown and South Kingstown 1723 North Kingstown includes old WICKFORD village, Saunderstown, Allenton, and QUONSET POINT The town is the birthplace of Gilbert Stuart

North Little Rock, city (1940 pop 21,137, 1948 special census pop 39,552), central Ark, on the Arkansas river opposite LITTLE ROCK, settled c 1856, inc 1903 Levy was annexed to the city in 1946 North Little Rock has railroad shops and industrial plants Near by are a veterans' hospital and a U S army camp

North Manchester, town (pop 3,170), NE Ind, WSW of Fort Wayne Manchester College (Church of the Brethren, coeducational, 1889) is here

North Mankato (măn-kā'tō), city (pop 3,517), S Minn, on the Minnesota river opposite Mankato, inc 1922

Northmen see NORSEMEN

North Miami (mī'mē), town (pop 1,973), SE Fla, near Miami, inc 1926 as Miami Shores, renamed 1931

North Minch, Scotland see MINCH

North Muskegon (muskē'gun), city (pop 1,694), S Mich, on Muskegon Lake across from Muskegon, inc as a village 1881), as a city 1891

North Olmsted (ōm'stĕd), village (pop 3,487), NE Ohio, western suburb of Cleveland

North Ossetia, RSFSR see OSSETIA

North Pelham (pĕ'lŭm), suburban village (pop 5,052), SE N Y, in Westchester co, near Mt Vernon, settled 1851, inc 1896

North Plainfield, residential borough (pop. 10,586), NE N J, settled 1736, inc 1885

North Platte (plăt), city (pop 12,429), co seat of Lincoln co, central Nebr, near the confluence of the North Platte and South Platte rivers, laid out 1866 with the coming of the railroad, inc 1871 It is a Great Plains shipping point—mainly for grain and cattle—and is on transcontinental railroad and air lines The area is irrigated Scout's Rest Ranch near by was the home of Buffalo Bill

North Platte, river rising in the mountains of N Colorado and flowing 680 mi in a great bend through Wyoming and across W Nebraska, to join the South Platte and form the Platte The river has 27 major reservoirs, among the dams are Kingsley Dam (see OGALLALA) and those of the Kendrick project (see CASPER) and of the North Platte project

North Platte project, developed in the North Platte valley in W Nebraska and E Wyoming by the U S Bureau of Reclamation It comprises some 237,000 acres and also supplies some 175,000 privately developed acres A principal feature is Guernsey Reservoir This, created by Guernsey Dam (est 1927, 105 ft high) in the North Platte c 120 mi SE of Casper, is fed by Pathfinder Reservoir—made by Pathfinder Dam (est 1909, 214 ft high), 47 mi SW of Casper—and by three small reservoirs near Scottsbluff Glendo Reservoir (planned to desilt Guernsey Reservoir), Whalen Diversion Dam, and the Guernsey Dam and Lingle power plants are on the project Sugar beets, alfalfa, and barley are chief crops, and sheep, cattle, hogs, and poultry are raised Cities that serve the project are Bridgeport, Bayard, Minatare, Scottsbluff, Mitchell, and Gering (all Nebr) and Torrington (Wyo)

North Pole, northern end of the earth's axis, lat 90° and long 0° It is distinguished from the north magnetic pole The North Pole was reached (1909) by R E PEARY See also ARCTIC REGIONS

Northport. 1 City (pop 3,187), W central Ala, on the Black Warrior opposite Tuscaloosa 2 Resort village (pop 3,093), on the north shore of Long Island, SE N Y, settled c 1683, inc. 1894 It is included in Huntington town Oyster and clam fisheries are here.

North Providence, textile town (pop. 12,156), NE R I, set off from Providence and inc 1765 The administrative center is Centerdale.

North Reading (rĕ'dĭng), town (pop. 2,886), NE Mass, N of Boston, settled 1651, set off from Reading 1853

North Rhine-Westphalia (-wĕstfā'lyù), Ger. *Nordrhein-Westfalen* (nōrt'rĭn"-vĕst"fä'lùn), German state (13,157 sq mi; pop 11,797,092), set up in Jan, 1947, in the British zone of occupation in NW Germany It consists of the former Prussian province of WESTPHALIA, of the northern part of the former Prussian RHINE PROVINCE (including Aachen, Cologne, and Düsseldorf), and of the former state of LIPPE Düsseldorf is the capital The state comprises the RUHR district It possesses no historic unity In 1949 North Rhine-Westphalia joined the West German federal republic.

North Riding. see YORKSHIRE, England

Northrop, Cyrus, 1834–1922, American educator, b Ridgefield, Conn, grad Yale (B A, 1857, LL B, 1859) He was professor of rhetoric and English literature at Yale (1863–84), serving also as port collector of New Haven (1869–81) When he became (1884) president of the Univ. of Minnesota, it had about 400 students, he left it (1911) a leading state university See his *Addresses, Educational and Patriotic* (1910), memoir by O W. Firkins (1925)

Northrop, John Howard, 1891–, American biochemist, b Yonkers, N Y, grad Columbia (B S, 1912, Ph D, 1915) From 1916 he has been associated with the Rockefeller Institute for Medical Research He lectured at Columbia (1938), at Johns Hopkins (1937, 1940), and at the Univ of California (1939) In 1949 he became visiting research professor at the Univ of California Northrop was the first to isolate the enzymes pepsin and trypsin in a pure crystalline form His other contributions include important studies of the chemical nature and action of bacteriophage, of other proteins, and of the fermentation process For his work on enzymes and viruses he shared the 1946 Nobel Prize in Chemistry with W M Stanley and J B Sumner He is the author of *Crystalline Enzymes* (1939, 2d ed, with Moses Kunitz and R M Herriott, 1948)

North Royalton, residential village (pop 2,559), NE Ohio, near Cleveland, inc 1927

North Sacramento (săk'rumĕn'tō), city (pop 3,053), central Calif, across the American river from Sacramento, inc 1924

North Saint Paul, village (pop 3,135), E Minn, northeast suburb of St Paul It is a lake resort with some manufacturing

North Saskatchewan see SASKATCHEWAN, river.

North Schleswig, Denmark see SCHLESWIG

North Scituate, R I see SCITUATE

North Sea, part of the Atlantic NW of Central Europe It washes the shores of Scotland, England, Norway, Denmark, Germany, the Netherlands, Belgium, and the northern shores of France In the south it narrows to the Strait of Dover It is c 600 mi. long and 400 mi broad at its widest It is deepest along the coast of Norway and contains several shallows, the largest of which is the Dogger Bank, midway between England and Denmark The cod and herring fisheries of the North Sea are of great value The sea was formerly often called the German Ocean

North Shields, England see TYNEMOUTH

North Smithfield, textile town (pop 4,196), N R I, settled in the 17th cent, inc 1871 It includes Slatersville and Forestdale villages. Several old inns are preserved

North Star see POLESTAR

North Stonington (stō'nĭngtun), rural town (pop 1,236), SE Conn, at the R I line, settled before 1700, inc 1807.

North Sydney, town (pop 6,836), on NE Cape Breton Island, N S, on Sydney Harbour and NW of Sydney It is the coal-shipping port for near-by Sydney Mines and a winter base for the Cape Breton fisheries It is also the terminal for mail ships to Port aux Basques, N F

North Syracuse (sĭ'rukŭs, sĕ'-), village (pop 2,083), central N Y, a suburb of Syracuse; inc. 1925 Plating works and a nursery are here

North Tarrytown (tă'rĭ-toun), residential village (pop 8,804), SE N Y, in Westchester co, on the east bank of the Hudson near Tarrytown, inc 1875 Electrical products are made here Castle Philipse (see PHILIPSE MANOR) has collections relating to Washington Irving and to John D Rockefeller, Sr The Sleepy Hollow church in the village was built (c 1697) by Frederick PHILIPSE John André was captured, and Benedict Arnold's treachery revealed here Large Rockefeller estates are at Pocantico Hills near by.

North Tonawanda (tŏnuwŏn'dù), industrial and commercial city (pop. 20,254), W N.Y, N of Buffalo and on the Niagara at the terminus of the Barge Canal, settled 1808, inc as a village 1865, as a city 1897. It manufactures hardware, office furniture, and musical instruments.

North Troy, Vt., see TROY.

Northumberland, Algernon Percy, 10th **earl of** (nôrthŭm'bûrlŭnd), 1602–68, English statesman. He entered the House of Lords (1627) as Baron Percy and succeeded his father as earl in 1632. Charles I in 1638 made him lord high admiral of England and in 1640 gave him command of the expedition against Scotland. Disgusted at the poor support given him and disagreeing with the king's policy, he gradually swung round to the popular party. His support gave Parliament an important advantage, for it thus gained control of most of the fleet. Northumberland, respected for his integrity and moderation, twice engaged in unsuccessful negotiations with Charles on behalf of Parliament, opposed the king's trial, and was given custody of Charles's younger children. He took no active part in affairs under the Commonwealth or after the Restoration, although he held office after 1660.

Northumberland, Henry Percy, 1st **earl of,** 1342–1408, English nobleman. He served in the army in France, became warden of the Scottish Marches, and, with John of Gaunt, spoke for the cause of John WYCLIF. Created earl of Northumberland by RICHARD II in 1377, he and his son Henry PERCY (Hotspur) defended the Scottish border. Both he and his son were banished in 1398 for objecting to Richard's government, and he was largely instrumental the next year in securing the crown for Henry of Lancaster (HENRY IV). With his brother, Thomas Percy, earl of Worcester, and Hotspur he revolted against the king in 1403 but submitted after the death of his son the same year. By 1405, however, he was plotting again with OWEN GLENDOWER and, after fleeing to Scotland and France, invaded (1408) England from the north with the expectation of recruiting followers. Northumberland was slain and his forces were defeated at Bramham Moor. See Gerald Brenan, *A History of the House of Percy* (1902).

Northumberland, Henry Percy, 4th **earl of,** 1446–89, English nobleman. The earldom was forfeited and Percy was imprisoned in 1461 by Edward IV after his father, the 3d earl, had been killed at Towton in the Lancastrian army. Percy was released in 1469, restored to the earldom, and served the Yorkist monarch. Although Northumberland accepted lands and offices from Richard III, he withheld his men in the battle at Bosworth (1485) and submitted to the earl of Richmond, who was crowned Henry VII. Northumberland was killed by Yorkshire rebels.

Northumberland, Hugh Percy, 2d **duke of,** 1742–1817, English general. He fought under Ferdinand of Brunswick in the Seven Years War and, although he disapproved of the war in America, served there (1774–77) as a lieutenant general. He covered the bloody retreat from Concord to Charlestown after the battle of Lexington and took part in the attack on Fort Washington. Recalled, at his own request, following disputes with General William Howe, he was made a general in 1793.

Northumberland, John Dudley, duke of, c 1502–1553, English statesman. The son of Edmund Dudley, minister of Henry VII, John was restored to his inheritance in 1512 after the attainder and execution of his father in 1509. Rising by means of his military ability, he became Viscount Lisle, warden of the Scottish Marches (1542) and lord high admiral (1543). Named as one of the executors of Henry VIII's will, he helped Edward Seymour (later duke of SOMERSET), become protector of the young EDWARD VI, while he himself was created earl of Warwick and chamberlain. Cooperative and politic, he dissembled his plans for power while he improved his relations with Parliament and distinguished himself in the field. By never actually committing himself and by playing on both Catholic and Protestant sympathies, he finally formed a coalition against Somerset, deposing him in 1549 and having him executed in 1551. Of little religious conviction himself, he then posed as a firm Protestant to increase his power over Edward VI and ruthlessly advanced the Reformation for political ends. In a desperate plan to perpetuate his power, he convinced the dying Edward that Mary should be excluded from the succession as a Catholic and browbeat the council into proclaiming Lady Jane Grey, his daughter-in-law, as queen when the monarch died. Unpopular with the people, he was deserted by his army when he faced Queen Mary, was condemned for high treason, and was executed.

Northumberland, Thomas Percy, 7th **earl of,** 1528–72, English nobleman. He gained favor with Queen Mary for his Roman Catholic convictions and was created earl in 1557, his father Thomas, the 5th earl, having been attainted in 1537. He was entrusted with the protection of the Scottish borders but lost position after the accession of the Protestant Queen Elizabeth. In conjunction with the earl of Westmoreland he plotted (1569) with Spanish emissaries to restore the Roman Catholic religion to England and to release Mary Queen of Scots. They gathered an army but it was defeated (1569). Northumberland was captured by the Scots, ransomed (1572) to the English, and beheaded.

Northumberland (nôrthŭm'bûrlŭnd), border county (2,019 sq. mi.; 1931 pop. 756,782; 1948 estimated pop. 791,500), N England. The county town and chief city is Newcastle-on-Tyne. Northernmost of the English counties, it is separated from Scotland by the Cheviot Hills and the Tweed river, and borders on the North Sea. The terrain is level along the rugged coast line and hilly in the interior, where high moorlands alternate with fertile valleys. Rivers include the Tyne, the Derwent, the Tweed, the Till, the Aln, and the Coquet. Oats, barley, and turnips are cultivated, and considerable numbers of sheep are pastured. There are valuable coal deposits in the southeast. The population is sparse except in the area around Newcastle, a major coal-shipping port and shipbuilding and industrial center. The Ottadeni, a Celtic tribe, occupied the area in Roman times when the great Wall of Hadrian was built. In the 6th cent. the Angles established themselves here. The district became the kingdom of Bernicia, which was later incorporated in Northumbria. It suffered much during the border wars with Scotland. See Cuthbert Headlam, *The Three Northern Counties* (1939).

Northumberland (nôrthŭm'bûrlŭnd). **1** Town (pop. 2,740), NW N.H., on the Connecticut above Lancaster, settled 1767, inc. 1779. It includes the paper-milling villages Northumberland and Groveton. Fort Wentworth, built in 1755 by Capt. Robert Rogers for defense against the Indians, was again used in the Revolution. **2** Industrial borough (pop. 4,469), E. Pa., on the Susquehanna and N. of Sunbury, settled 1772, laid out c. 1775, inc. 1828. Its manufactures include metal products, textiles, and canned goods. Joseph Priestley lived here from 1794 until his death in 1804.

Northumbria, kingdom of (nôrthŭm'brēu), one of the Anglo-Saxon heptarchy, England. It was originally composed of two kingdoms, Bernicia (including E Scotland, Berwick, Roxburgh, E Northumberland, and Durham) and Deira (including the North and East Ridings of Yorkshire), both settled by invading Angles c. 500. Sparse records tell of a King Ida of Bernicia and a King Aella of Deira in the middle of the 6th cent. AETHELFRITH of Bernicia (593–617) united the kingdoms. He was displaced by EDWIN of Deira (617–33), who accepted Roman Christianity (627) and established Northumbrian supremacy in England. He was killed, however, by PENDA of Mercia and the Celts and, after a year of anarchy, was succeeded by OSWALD of Bernicia (634–42), who introduced Irish Christianity through St. AIDAN, founder of LINDISFARNE. Under Oswy (642–71) and Ecgfrith (671–85) Northumbria's power gradually declined as that of MERCIA increased. Oswy, however, established the Roman over the Irish Church at the Synod of Whitby (664). The 8th and the early 9th cent. saw almost constant political discord but also the golden age of the Church, arts, scholarship, and literature. The invading Danes with their smashing victory at York in 867 soon wrecked all culture. They occupied S Northumbria, and the Angles were able to keep only a small kingdom stretching from the Tees N to the Firth of Forth until they acknowledged EDWARD THE ELDER of Wessex as overking in 920. The conquering CANUTE and his successors installed Danish earls, of whom SIWARD (d. 1055) was the last and most powerful. The Northumbrians expelled his successor, TOSTIG, in 1065 and at first refused to support HAROLD, but finally helped him to resist William the Conqueror (WILLIAM I) until 1071.

North Utica (ū'tĭkŭ), village (pop. 1,019), N Ill., near the Illinois river NE of La Salle, inc. 1869.

Northvale, borough (pop. 1,159), extreme NE N.J., near the N.Y. line, inc. 1916.

North Vancouver (vănkōō'vur), city (pop. 8,914), SW British Columbia, on Burrard Inlet of the Strait of Georgia, opposite Vancouver, with which it is connected by bridge and ferry. It is a port and fishing base, with a dry dock. Shipbuilding, lumbering, woodworking, manufacturing, and quarrying are its chief industries.

North Vernon, city (pop. 3,112), SE Ind., SE of Columbus; platted 1854. A railroad and farm trading center, it manufactures automobile parts and household appliances. Limestone is quarried here. Muscatatuck State Park is near by.

Northville. 1 Village (pop. 3,032), SE Mich., NW of Detroit, inc. 1867. A U.S. fish hatchery and two tuberculosis sanatoriums are here. Automobile parts, furniture, and furnaces are made. **2** Village (pop. 1,111), E central N.Y., on the Sacandaga Reservoir and NE of Gloversville, in a resort area, inc. 1873.

North Wales, borough (pop. 2,450), SE Pa., N of Philadelphia, settled 1850, inc. 1869. Surface clay is used here in manufacturing of pottery.

Northwest Boundary Dispute: see OREGON and SAN JUAN BOUNDARY DISPUTE.

North West Company. After the conquest of Canada by the British, which was consummated by the Treaty of Paris in 1763, the French traders from Montreal and the *coureurs de bois* were gradually more or less supplanted in the fur trade by Scotsmen, who adapted themselves readily to the frontier conditions. Many of these new traders allied themselves to the Frenchmen already in the country, and vigorous partnerships sprang up. The Montreal men continued to contest the trade of the North with the HUDSON'S BAY COMPANY, and they extended trade to the West rapidly and efficiently. There were, however, too many conflicting interests in the fields, and the competition not only took all profit out of the trade but also led to actual bloodshed. The Montreal merchants who supplied the traders and the traders themselves sought to do away with some of the evils by combination. In 1779 a sort of company was formed; this was later renewed, then abandoned. A new effort was made when a number of Montreal merchants made an agreement in the winter of 1783–84 that created a company called the North West Company. There was some dissension, and the firm of Gregory and McLeod put up strong opposition. It was not until 1787 that a truly stable combination was reached and the company known as the North West Company came into existence. The stockholders were the trading companies of Montreal (which had many interests besides the fur trade and retained their separate existence) and the "wintering partners," the men who did all the actual trading for fur with the Indians. The traders were, for the most part, active and aggressive, and they made much more headway than the Hudson's Bay Company men. The Northwesters, as they were called, broke new territory for the trade in the West and did not hesitate to try to take the trade even in the vicinity of Hudson Bay. The older company was stirred into some action and there was an increasingly sharp rivalry, but this was not serious until after the Hudson's Bay Company passed under the dominance of Lord Selkirk. The younger company, meanwhile, was split by dissension, brought on chiefly by the hostility between two important figures in the company, Simon McTavish and Sir Alexander MACKENZIE. Mackenzie was the chief figure in a rival company created c. 1798 and usually called the XY Company. This opposition disappeared after the death of McTavish in 1804, Mackenzie's men were reunited to the Northwesters. To the North West Company is due some of the glory of Mackenzie's earlier voyages to the Arctic (1789) and Pacific (1792–93) oceans. The geographer David THOMPSON was in the company's employ when he did most of his valuable work, and other important explorers, such as Alexander HENRY, the younger, were Northwesters. The company pushed its business into the territory of the United States and met little opposition except from J. J. ASTOR. The Southwest Company was practically, though not actually, a combination of Astor and North West Company interests, this was disrupted by the War of 1812. On the Pacific Northwest Coast, which was largely explored by Northwesters, Astor was also a rival, but the American post, ASTORIA, was purchased by the North West Company under a sort of duress. After 1810 the rivalry between the North West Company and Hudson's Bay Company grew in intensity and became a problem for the British government. Its highest point was reached in the quarrel over the RED RIVER SETTLEMENT. Conditions became intolerable, and the final solution was the union of the two companies in 1821. The name of the older company was kept and there was no longer a North West Company. In the united company, however, the personnel was predominantly of the Northwestern stamp and the spirit of the company was that of the vigorous North West Company. See G. C. Davidson, *The North West Company* (1918), H. A. Innis, *The Fur Trade in Canada* (1930), W. S. Wallace, ed., *Documents Relating to the North West Company* (1934).

Northwestern Provinces, India: see UNITED PROVINCES.

Northwestern University, at Evanston and Chicago, coeducational, chartered 1851, opened 1855 by Methodists. In 1873 it absorbed Evanston College for Ladies (chartered 1869, opened 1871), headed by Frances Willard, with which Northwestern Female College (opened 1855, chartered 1857) had merged. The liberal arts college, the schools of speech, education, and music, parts of the schools of commerce and journalism, the main library, Dearborn Observatory, and the technological institute (opened 1939, with a new building completed 1942) are on the Evanston lakeside campus. The schools of law, medicine, and dentistry and parts of the schools of commerce and journalism are in Chicago. A long-range project for extensive development of the Chicago campus was announced in 1946.

North-West Frontier Province (14,263 sq. mi., pop. 3,038,067), W Pakistan. Peshawar is the capital. The province, which borders on India in the northeast, is about equally divided between rugged mountains and valleys. Irrigation projects—some dependent upon the Indus river, which forms part of the eastern border—supplement the inadequate rainfall. Wheat is the chief crop, barley, millet, sugar cane, fruit, oil seeds, and cotton are also important. Industry amounts to little more than processing of food crops. Coal is mined in small quantities, and there is limestone quarrying. The transportation routes (including several rail lines) extend mostly east and west. Historically the area

has been more closely connected with Iran than with India, and most of the populace speaks Pushtu, an Iranian language. There are many archaeological remains of Greco-Buddhist culture (6th-3d cent B.C.). By the 10th cent, conquerors from Afghanistan had made Islam the dominant religion. Great Britain captured the country from the Sikhs in 1849, and in 1901 the present province was constituted. The mountainous area (24,986 sq. mi; pop. 2,337,599) which lies between the province and Afghanistan is under the provincial administration. It is inhabited by Moslem tribes, many of which long resisted outside authority. Military forces are still maintained to repress disorders and to keep open the routes to Afghanistan, including the Khyber Pass

Northwest Mounted Police: see ROYAL CANADIAN MOUNTED POLICE

Northwest Passage. When the explorers after Columbus demonstrated that the American continental wall was a true barrier to the passage to the East, there still remained a hope that some natural passage would be found that would lead directly through the barrier. At the same time men had the idea of reaching Cathay and India by sailing directly over the top of the earth or by sailing through a passage to the north of Europe and Asia, the NORTHEAST PASSAGE. Most important of the routes in men's minds was, however, the Northwest Passage, which would lead through the barrier to the South Sea. For centuries men searched for it, even after it had been abundantly proved that no commercial value would be attached to the completion of the difficult task. It was not until the early 20th cent. that Roald AMUNDSEN accomplished the feat (1903-6) attempted by so many men. The search for the Northwest Passage was not in vain even though no commercial transitway had been found, for it was the great spur to exploration in the North. In the 16th cent men were interested in finding the passage. Jacques CARTIER, Sir Martin FROBISHER, John DAVIS, even Sir Francis DRAKE—every explorer had a great desire to find and to prove the passage. Early in the 17th cent. Henry HUDSON sailed north and discovered Hudson Bay in seeking a short route to the East. After Hudson came William BAFFIN, who discovered (1612-22) Baffin Bay, through which the passage was finally discovered. Hudson Bay held out the most promise at first. English statesmen and merchants were anxious to have the passage found, and they encouraged exploration. Luke Fox and Thomas James made (1631-32) voyages into Hudson Bay. One of the avowed objects of the HUDSON'S BAY COMPANY was to find the Northwest Passage, but the men of the company did little with that end in view, some exploration was made, but the first real contribution by a Hudson's Bay man to the search was not made until a century after the chartering of the company. Arthur DOBBS in the middle of the 18th cent. criticized the company harshly on that score, and he was the chief figure in the scheme to send out two ships in search of the passage in 1742. The expedition of the *California* went out a few years later. Samuel HEARNE of the Hudson's Bay Company finally went overland as far as the Coppermine river in 1772, and he demonstrated conclusively that there was no short passage to the western sea. At this same time the British jurist, Daines Barrington, took an interest in the search for the passage and succeeded in having an expedition sent out under C. J. Phipps in 1773. The British government had offered prizes for achievements in northern exploration, and Capt. James COOK was inspired to make the first attempt at navigating the passage from the west. He died before he could accomplish anything. The British, Spanish, and Americans pushed explorations on the Pacific coast, however, and the explorations of the Russians about Kamchatka and Alaska, together with the voyages of Alexander MACKENZIE, had now shown the contours of the continental barrier. Wars with France interrupted the search for the Northwest Passage, and when it was resumed after the wars, the explorations were made in the interests of science, not commerce. The desire to extend man's knowledge was the chief motive in arctic exploration after the expeditions of John Ross and David Buchan were sent out in 1818. Sir John BARROW, of the admiralty, and William SCORESBY were interested in the explorations and did much to encourage them. Ross's later voyages, those of Sir William Edward PARRY, of F. W. Beechy, of Sir George Back, of Thomas Simpson, and of Sir John FRANKLIN pushed forward the knowledge of arctic regions and of the Northwest Passage. The last tragic expedition of Franklin had indirectly more effect than any other voyage because of the many expeditions sent out to discover his fate. In his expedition of 1850-54 Robert J. Le M. McClure on the *Investigator* penetrated the passage along the north of the continent from the west and by a land expedition reached Viscount Melville Sound, which had been reached by Parry from the east. The actual existence of the Northwest Passage had been proved. It was many years before the transit of the passage was made by Amundsen, but already the long search was over. See Nellis M. Crouse, *In Quest of the Western Ocean* (1928) and *The Search for the Northwest Passage* (1934); L. J. Burpee, *The Search for the Western Sea* (rev ed., 1936), G. J. Tranter, *Plowing the Arctic* (1944).

Northwest Territories, region (1,304,903 sq. mi; 1941 pop. 12,028, 1948 estimated pop. 16,000), NW Canada. The Northwest Territories lie W of Hudson Bay, north of lat. 60° N, and E of Yukon. In 1918 the area was divided into three provisional districts—Keewatin, W of Hudson Bay; Mackenzie, E of Yukon, and Franklin in the northern section, consisting of the Arctic Archipelago (which includes the islands of Baffin, Victoria, Melville, Ellesmere, and Banks) and Boothia and Melville peninsulas. The islands in Hudson Strait, Hudson Bay, and James Bay are part of the Territories. The BARREN GROUNDS, consisting of alpine and arctic tundras, with a cover of mosses, lichen, and flowering plants, extend over much of the northern and eastern regions. Here the nomadic Eskimo and Indian inhabitants derive their small incomes from fur trapping and obtain many necessities from fish, seals, reindeer, and caribou. Most of the development of the Territories has taken place in Mackenzie dist., an area well-covered with softwoods and rich in minerals. In this district are two of the largest lakes in the world, Great Slave and Great Bear, which connect with the Arctic Ocean through the Mackenzie river. Horticulture is impossible, except for limited cultivation S of the Mackenzie river region. The abundant fishing and pulpwood resources have not been used commercially, but the annual revenue from furs constitutes more than 6 percent of the total production of the dominion. While the extensive mineral wealth has never been accurately assessed and much remains unexploited, oil wells and a refinery operate at Fort Norman on the Mackenzie, gold is produced at Yellowknife on Great Slave Lake and on the Snare river, copper is extracted on the Coppermine river and in Keewatin near Hudson Bay; and the famous pitchblende-silver mines on Great Bear Lake have become the world's largest producer of radium-bearing pitchblende. Because pitchblende also contains uranium, world attention has been focused on the area and promises to result in increased exploration. Development is difficult, long winters closing in the rivers for all but two months of the year, except for the all-weather highway from Alberta to Great Slave Lake, all commerce, supply, and travel are air-borne. Government, enforced by the Royal Canadian Mounted Police, is administered by a commissioner and council. Missions, partly subsidized by the Canadian government, offer some health and educational facilities. During the early days of American exploration, all the region W of the St. Lawrence basin was called the Northwest Territory. Sir Martin Frobisher in 1576 was the first in a long line of courageous explorers to touch some part of the area, but it was left to Henry Hudson to discover the gateway to the Northwest in 1610. The Hudson's Bay Company sent out trader explorers for several decades through the northern sea lanes and coast, and in 1771 Samuel Hearne descended the Coppermine river. In 1789 Alexander MACKENZIE, exploring for the North West Company, journeyed to the mouth of the Mackenzie river. For some time further exploration and development was confined to the southern region, out of which Manitoba was formed in 1870 and Alberta and Saskatchewan in 1905. Among the famous scientific expeditions to arctic areas, those of Sir John FRANKLIN, in the first half of the 19th cent., rank high for their contribution of geographical data. The days of exploration are not over. With its geographical importance enhanced by transpolar navigation and its radioactive minerals of strategic value, the challenge of the Northwest frontier will not long remain unanswered. See Vilhjalmur Stefansson, *The Northward Course of Empire* (1921), Edgar Laytha, *North Again for Gold* (1939), Richard Finnie, *Turn to the North* (1940) and *Canada Moves North* (rev ed., 1948); Harold Griffin, *Alaska and the Canadian Northwest* (1944), C. C. Lingard, *Territorial Government in Canada* (1946); G. A. Dawson, ed., *The New Northwest* (1947); Gladdis J. Tranter, *Link to the North* (1947); R. A. Davies, *Great Mackenzie* (1947).

Northwest Territory, first national territory of the United States, comprising the geographical region generally known as the Old Northwest. This was the area about the Great Lakes and between the Ohio and the Mississippi, including the present states of Ohio, Indiana, Illinois, Michigan, Wisconsin, and part of Minnesota. The region gained considerable importance in international affairs. The whole Lakes region was accessible from Quebec and Lower Canada, and early in the 17th cent. men from New France were beginning to penetrate the rich fur country of the Northwest; it is generally thought that Jean Nicolet was the first to explore the upper lakes (1634). He was followed by explorers and traders—Radisson and Groseilliers, Duluth, La Salle, Jolliet, Perrot, Cadillac—as well as by dauntless missionaries such as Dablon and Marquette. The Lakes region fell under the control of the few widely scattered Lakes posts, and connections were built up to link the Northwest with another French region, Louisiana. Kaskaskia, Vincennes, Prairie du Chien, even Green Bay, had fairly close relationships with St. Louis and with New Orleans. The two chief posts of the Old Northwest were Detroit and Mackinac (Michilimackinac), but French influence spread among the Indian tribes east to the Iroquois country. The Northwest now was becoming an object of interest, not only to the British in Canada, but also to the British colonists on the seaboard. These interests conflicted sharply: just when the French were seeking to strengthen their hold in the Northwest by building forts, the British colonists were organizing the OHIO COMPANY. The upshot was the unfortunate expedition led by Washington that ended in the loss of Fort Necessity and in the outbreak of the last of the FRENCH AND INDIAN WARS. Those wars definitely closed with the Treaty of Paris (1763), by which the British obtained Canada and the Old Northwest. Immediately after the British conquest the Northwest was disturbed by the Indian uprising under PONTIAC. Later, the natives were somewhat mollified, and they became allies of the British. The mysterious machinations of Robert ROGERS rather endangered the British hold in the Old Northwest. In the American Revolution the region was the scene of one of the most daring exploits of the war and one of the most valuable—the expedition of George Rogers CLARK (1778-79). The Old Northwest was declared to be within U.S. boundaries by the Treaty of Paris that ended the Revolution (1783). The territory thus acquired was one of the most pressing problems that troubled the Congress in the Articles of Confederation. Various states had conflicting claims in the Northwest, especially Virginia, New York, Massachusetts, and Connecticut, they jealously strove to make their claims good. The final solution was the cession of all the lands to the U.S. government, which was thus greatly strengthened. New York made its cession in 1781, Virginia in 1784, Massachusetts in 1785, Connecticut in 1786. There were two reserves kept—the Virginia Military Dist. and the Connecticut Western Reserve in Ohio. The central government was faced with the question of government of the territory. Jefferson submitted an ordinance for organizing the territory, but no solution was accepted until the ORDINANCE OF 1787 was passed. This set up the machinery for the organization of territories and the admission of states that later became customary. One of its most interesting provisions was the prohibition of slavery. Arthur ST CLAIR was chosen governor. The OHIO COMPANY OF ASSOCIATES was the most active force in early colonization. It was followed by later companies that brought settlers into the territory. The British traders remained powerful and opposed American influence, and the Indians were hostile. A series of Indian campaigns was undertaken; they finally reached a climax when Anthony WAYNE won a victory at Fallen Timbers (1794). His victory was made solid by the Greenville Treaty of 1795. JAY'S TREATY and subsequent negotiations smoothed out some of the British-American difficulties. The Northwest posts were transferred to Americans in 1796. British influence was still paramount among the Indians and continued to be so. Settlers poured into the southern part of the Territory. A legislature was organized. In 1800 the western portion was split off as Indiana Territory, and by 1802 the eastern portion was thickly enough settled to seek admission as a state. It was admitted as Ohio. This broke up the Territory, but the region continued to be of distinct international interest even while other territories were being formed, Michigan in 1805, Illinois in 1809, and Wisconsin in 1836. The British traders were dissatisfied and wanted the Northwest set aside as Indian land. Unrest among the Indians led to the effort by TECUMSEH and his brother to gain a permanent foothold for the natives. Some Western Americans were anxious not only to secure real possession of the Northwest but also to extend it to Canada. The quarrel over the Northwest was one of the potent factors in bringing on the WAR OF 1812. The war and the Treaty of Ghent (see GHENT, TREATY OF) that closed the war brought the problem of the Northwest to a close. In spite of the protests and outcries of the British merchants of the Northwest, the British government irrevocably settled it upon the United States. Older histories of the Northwest are Jacob Burnet, *Notes on the Early Settlement of the North-western Territory* (1847), and B. A. Hinsdale, *The Old Northwest* (1899). See also L. P. Kellogg, ed., *The French Régime in Wisconsin and the Northwest* (1925); M. M. Quaife, *Chicago and the Old Northwest, 1673-1835* (1913); W. E. Stevens, *The Northwest Fur Trade, 1763-1800* (1928); B. W. Bond, Jr., *The Civilization of the Old Northwest* (1934); Walter Havighurst, *Land of Promise* (1946).

Northwich (nôrth'wich), urban district (1931 pop. 18,732, 1943 estimated pop. 20,827), Cheshire, England, on the Weaver and NE of Chester. It

was the site of a Roman station The library and salt museum are noteworthy. The town has long been the center of England's salt industry Brine pumping caused parts of Northwich to sink.

North Wildwood, city (pop 1,921), SE N J , a resort on the Atlantic NE of Cape May; inc. 1917

North Wilkesboro (wĭlks'bŭrŭ), town (pop 4,478), W central N C., on the Yadkin and W of Winston-Salem; founded 1890, inc. 1891. It has furniture and textile factories, foundries, and other industries and a large poultry market.

Northwood. 1 Town (pop 1,724), co seat of Worth co., N Iowa, on the Shell Rock River near the Minn. line, N of Mason City, settled 1853, inc 1875. 2 City (pop. 1,063), E N Dak , SW of Grand Forks, in a farm area; inc. 1892

North York, borough (pop. 2,416), SE Pa., near York

Norton, Caroline Elizabeth Sarah (Sheridan), 1808–77, English author; granddaughter of Richard Brinsley Sheridan Her husband's suit for divorce because of her alleged relations with Lord Melbourne was a *cause célèbre* Although he lost the suit, he was allowed to keep their children and to collect her earnings Her indignant writings, especially *English Laws for Women in the Nineteenth Century* (1854) and a *Letter to the Queen* (1855), gave impetus to the improvement of the status of married women in England Her other works include *A Voice from the Factories* (1836), a poem on child labor, and *Lost and Saved* (1863), a novel Her misfortunes as well as her beauty and wit gave her more renown than did her writings She was Meredith's model for *Diana of the Crossways* A short time before her death she married Sir William Stirling-Maxwell See biography by J. G. Perkins (1907).

Norton, Charles Eliot, 1827–1908, American scholar and teacher, b Cambridge, Mass , grad Harvard, 1846 From 1864 to 1868, with James Russell Lowell, he edited the *North American Review*, later he was a founder of the *Nation* As professor of the history of art at Harvard (1875–98) and as man of letters he had a stimulating influence on his time He made a prose translation of Dante and edited the poems of John Donne as well as the letters of Carlyle, Emerson, Lowell, and Ruskin See his letters ed by his daughter, Sara Norton, and M A De Wolfe Howe, 1913)

Norton, Joshua Abraham, 1818–80, colorful eccentric of San Francisco, known as "Emperor" Norton, b London He went (1820) with his parents to Capetown, South Africa, and news of the California gold rush brought him to San Francisco in 1849 He became a merchant and went bankrupt after trying to corner the local rice market After the disaster his mind gave way "Norton I, Emperor of the United States and Protector of Mexico," as he styled himself, dressed and acted extravagantly, issued his own paper money and grandiose proclamations, and for 20 years was an object of local humorous attention See biography by A S Lane (1939)

Norton, Thomas Herbert, 1851–1941, American chemist, b Rushford, N Y , grad Hamilton College (B A , 1873) He was an authority on synthetic resins and a pioneer in the American dyestuffs industry. He worked with Hillebrand on cerium, managed (1878–83) a chemical works in Paris, served as U S consul in Turkey and in Germany, and from 1930 was research chemist for the American Cyanamid Company

Norton. 1 City (pop 2,762), co seat of Norton co , NW Kansas, near the Nebr line, in an agricultural area, founded 1872, inc 1885 The state tuberculosis sanatorium is near by 2 Town (pop 3,107), SE Mass , NW of Taunton, settled 1669, set off from Taunton 1711 WHEATON COLLEGE is here 3 Town (pop 4,006), extreme SW Va , in the Cumberland Plateau, in a large coal field, inc 1894

Norton Sound, inlet of the Bering Sea, on the west coast of Alaska, S of Seward Peninsula It is c 150 mi. long Nome is on the north shore, and the Yukon river empties into the sea on the southern side. It was explored by Capt. James Cook in 1778.

Norumbega (nôrŭmbĕ'gŭ), name vaguely used, especially on maps of the 16th and 17th cent., to indicate a region or a city on the east coast of North America. Fabulous tales were told of the city, but its location and its identity are uncertain Probably the word is an Indian version of the old form of Norway. In the late 19th cent Professor E. N. Horsford revived interest in the matter by identifying the city with the site of Norse settlements in America, claiming to have discovered its position on the Charles river near Boston No conclusive results have been reached on the matter, and it is generally considered that Norumbega is purely mythical.

Norwalk (nôr'wôk"). 1 City (pop. 39,849), SW Conn., on Long Island Sound at the mouth of the Norwalk river; settled 1649, inc. 1893, coextensive with Norwalk town, inc 1651. In 1913 the industrial South Norwalk (a railroad junction) was included in Norwalk city with Norwalk, East Norwalk, Winnipauk, Rowayton, Silvermine (an artists' colony), and other places. The city includes numerous small islands in the harbor. Textiles, hats, rubber, and other products are manufactured Norwalk has a well-known amateur symphony orchestra. 2 City (pop. 8,211), co. seat of Huron co., N Ohio, SSE of Sandusky, founded 1816. The city's industries include the manufacture of wood products and rubber goods, and there are canneries and an interstate trucking company. The Firelands Museum is here, and many classic revival houses

Norway, Nor. *Norge* (nôr'gŭ), kingdom (119,211 sq mi , with water surface 125,147 sq. mi ; pop 3,157,257), N Europe, occupying the western part of the Scandinavian peninsula Oslo is the capital Extending from the SKAGERRAK c 1,100 mi NE to NORTH CAPE on the Arctic Ocean (c 300 mi N of the Arctic Circle), Norway forms a narrow mountainous strip along the North Sea and the Atlantic Ocean, which is here also called the Norwegian Sea. It has a long land frontier with Sweden and in the north borders on Finland and the USSR The coast line, c 1,700 mi long, is fringed with islands (notably LOFOTEN ISLANDS AND VESTERALEN) and is deeply indented by numerous fjords SOGNE FJORD, HARDANGER FJORD, NORD FJORD, and Oslo Fjord are among the largest and best known From the coast the land rises, generally precipitously, to high plateaus such as the DOVREFJELL and the Hardanga Vidda The Galdhopiggen, in the JOTUNHEIM range, is the highest point (8,098 ft), west of it lies the JOSTEDALSBREEN, the largest glacier field in Europe. The mountains and plateaus are intersected by fertile valleys, such as the GUDBRANDSDAL, and by rapid rivers, which furnish hydroelectric power and are used for logging The GLOMMA, in the south, is the most important river Because of the North Atlantic Drift, Norway has a mild and humid climate Almost three quarters of the land is unproductive, and less than 4 percent is under cultivation The vast mountain pastures are used for cattle and sheep raising and, in the north, for reindeer raising About one quarter of Norway is forested, timber is the chief natural resource and is the base of one of the main industries The chief industry is fishing (notably of cod, herring, and mackerel) Fresh, canned, and salted fish are exported to the entire world The Norwegian merchant fleet ranks third after those of the United States and Great Britain and carries a large part of the world's trade, there also is an important whaling fleet Next to the pulp and paper manufactures and canning, the electrochemical and electrometallurgical industries are the most important Mineral resources include pyrites and iron ore and some copper, zinc, and lead Most of the population is concentrated along the southern coast and valleys Here are the chief cities—OSLO, BERGEN, STAVANGER, and DRAMMEN Farther north along the coast is TRONDHEIM, and in the extreme north are NARVIK, TROMSO, and HAMMERFEST The unique beauty of the Norwegian fjords and the midnight sun of the far north attract many foreign and native tourists The majority of Norwegians are of Scandinavian stock, but in the northern county of FINNMARK, LAPPS and Finns predominate The literary language of Norway long was Danish, from which Rigsmaal, one of the two official idioms of Norway, is derived (see NORWEGIAN LANGUAGE and NORWEGIAN LITERATURE) Landsmaal, which is also in official use, is very similar Frequent spelling reforms account for the variation in Norwegian place names Norway is a constitutional monarchy, the legislative power is vested in the parliament or STORTING Administratively, the country is divided into 18 counties (Nor *fylker*) and the Oslo and Bergen districts The outlying possessions of Norway are SPITSBERGEN and JAN MAYEN in the Arctic Ocean and Bouvet and Peter I islands in the S Atlantic; Norway has claims in ANTARCTICA The Evangelical (Lutheran) Church is the state church, but the small non-Protestant communities (of which the Roman Catholic is the largest) enjoy freedom of worship. The king nominates the seven bishops and other clergy of the Evangelical Church. The educational level is very high, and there are two universities (at Oslo and Bergen) The history of Norway before the age of the VIKINGS is obscure and indistinct from the rest of Scandinavia In the 9th cent. the country was still split among the numerous petty kings of the *fylker* HAROLD I, of the Yngling or Sciffing dynasty (which claimed descent from one of the old Norse gods), set out on a career of conquest, defeated the petty kings, and conquered the Shetlands and the Orkneys, but failed to establish permanent unity. During his reign the raids of the NORSEMEN on the coasts of Europe reached their peak and led to the creation of the Norse duchy of Normandy Harold's campaigns drove many nobles and their followers to settle in ICELAND and to swell the numbers of the Norsemen in France Before he died (c 933) the country was divided among his sons, but one of them, HAAKON I, defeated (c 935) his brothers and temporarily reunited the kingdom. Christianity gained a foothold under OLAF I and was established by OLAF II (1015–28) Olaf II was driven out of Norway by King CANUTE of England and Denmark; however, his son, MAGNUS I, was restored (1035) to the Norwegian throne. Both Magnus and his successor, HAROLD III, played vital parts in the complex events then taking place in England and Denmark After Harold's death Norway underwent a period of decline and of civil war, precipitated by conflicting claims to the throne Among the most notable events of 12th-century Norwegian history were the mission of Nicholas Breakspear (later Pope ADRIAN IV), who organized the Norwegian hierarchy, and the rule of SVERRE, who created a new nobility, grounded on commerce, and with the help of the popular party—the Birkebeiner—consolidated the power of the crown His grandson, HAAKON IV, was put on the throne by the Birkebeiner in 1217; under him and under MAGNUS VI (1263–80) medieval Norway reached its greatest flower and enjoyed a period of peace, culture, and prosperity. Iceland and Greenland passed under the Norwegian crown The separate development of Norway was halted by the accession (1319) of MAGNUS VII, who was king of Sweden as well He was unpopular in Norway, which he was compelled to surrender (1343) to his son, Haakon VI, husband of MARGARET of Denmark Margaret subsequently united the rule of Norway, Sweden, and Denmark in her hands and in 1397 had the KALMAR UNION drawn up Although the union was strictly a personal one, Norway virtually ceased to exist as a separate kingdom and was ruled by Danish governors for the following four centuries Its power had greatly declined even before Margaret's accession, and its trade had been taken over by the HANSEATIC LEAGUE, which had its chief northern office at BERGEN Its political history became essentially that of DENMARK In 1814 Denmark, which had sided with France in the Napoleonic Wars, was obliged to consent to the Treaty of Kiel, by which it ceded Norway to the Swedish crown in exchange for W Pomerania The Norwegians, however, whose national consciousness was growing, attempted to set up a separate kingdom under Prince Christian (later King Christian VIII of Denmark). A Swedish army obliged Norway to accept a Swedish king, but the act of union of 1815 recognised Norway as an independent kingdom, in personal union with Sweden, with its own constitution and parliament The Norwegian constitution of 1814, framed at Eidsvold, is still in force, with several modifications Despite some Swedish concessions to the growing nationalism of Norway, Swedish-Norwegian relations were generally strained throughout the 19th cent Johan SVERDRUP, the Liberal leader, obtained the abolition of the royal veto power, but other problems remained. An important issue was the Norwegian demand in the late 19th cent for a separate consular service and a separate flag. This demand, though justified by the spectacular growth of Norwegian shipping and commercial interests, was refused by King OSCAR II Finally, in 1905, the Storting declared the dissolution of the union and the deposition of Oscar II. Sweden acquiesced peacefully, and the second son of Frederick VIII of Denmark was chosen king of Norway as HAAKON VII Two important features in Norwegian history of the late 19th and early 20th cent were the large-scale emigration to the United States and the great effort at arctic and antarctic exploration by such notable men as Fridtjof Nansen and Roald Amundsen. In the First World War, Norway remained neutral. The industrial development of Norway contributed to the rise of the Labor party, which has predominated in Norwegian politics since 1927 Norway sought neutrality in the Second World War, but on April 8–9, 1940, German troops invaded Norway without warning and quickly gained control of Oslo and other strategic points Norway resisted and was aided by a highly inadequate Franco-British expeditionary force By April 14 nearly the whole country was in German hands Narvik, recaptured by the Allies late in May, had to be abandoned again in early June. King Haakon and his cabinet set up a government in exile in London, and the Norwegian merchant fleet became of vital assistance to the Allied cause throughout the war Despite the attempts of the traitor QUISLING to promote collaboration with the Germans, the people of Norway defied the occupation forces. Martial law was introduced in 1941, and increasingly terroristic measures were adopted against the resistance movement In Oct , 1944, Russian troops entered N Norway, which was devastated by the retreating Germans However, the Russians were soon halted, and the German troops remained in Norway until the war ended in May, 1945. Although half of the Norwegian fleet was sunk during the war, Norway quickly recovered its commercial position Important socialising measures were enacted by the Labor government Norway is one of the original United Nations, and its foreign minister, Trygve Lie, became the first United Nations secretary general In its foreign policy Norway sought friendly relations both with the Western powers and with the USSR It joined in the European Recovery Program and in the North Atlantic Treaty. See Knut Gjerset, *History of the Norwegian People* (new ed., 1932), Karl Fischer,

ed., *Norway Today* (2d ed , 1934); Halvdan Koht and Sigmund Skard, *The Voice of Norway* (1944), Karen Larsen, *A History of Norway* (1948)

Norway. 1 Town (pop 3,649), SW Maine, NW of Auburn, on Lake Pennesseewassee, settled 1786, inc 1797 It is known for its manufacture of wooden articles, moccasins, shoes, and winter sports equipment and as a summer resort Hannibal Hamlin, Artemus Ward, and C A Stephens lived here **2** City (pop. 3,728), W Upper Peninsula, N Mich , near Iron Mountain; settled c 1879, inc. 1891. It is in an iron-mining, lumbering, and farming region. A fish hatchery is near by.

Norwegian elkhound · see ELKHOUND

Norwegian language, either of two slightly different North Germanic standard languages One, called Dano-Norwegian or Rigsmaal, is the Oslo dialect of standard Danish, which was official until the 20th cent The other, called Landsmaal, is a standardization of Norwegian dialects, introduced by Ivar AASEN and popularized mainly as a result of patriotism See LANGUAGE (table)

Norwegian literature, in its earliest period, is Icelandic or OLD NORSE LITERATURE In 1380, on the union of Norway with Denmark, Danish became the official and literary language of the country (see DANISH LITERATURE) The Norwegian Society (Norske Selskab), founded at Copenhagen in 1772, provided the first great stimulus toward a national literature Henrik Arnold Wergeland and his contemporary and rival, J S C Welhaven, of the early 19th cent , were the first great names in modern Norwegian literature, P. C Asbjornsen and J E Moe, noted for their collection of folk tales, flourished in the same period In 1848 Ivar Aasen gave fresh stimulus to national letters by producing a dictionary and grammar and establishing Landsmaal as the Norwegian language as distinct from the Danish Rigsmaal The four great names of the 19th cent are Ibsen, whose realistic plays were of profound influence on the modern theater, Bjornson, whose plays and novels were derived from the sagas and from peasant life, J L I Lie, and A L. Kielland The novelist A E Garborg and the dramatist G E R Heiberg were followed by a group of novelists of international reputation, Knut Hamsun, Johan Bojer, and Sigrid Undset, and by the poets N G Vogt, Olaf Bull, Herman Wildenvey, Arnulf Overland, and J N B Grieg Regional writers such as Olav Duun, a master of Landsmaal, Hans Aanrud, Peter Egge, and Johan Falkberget, have immortalized their home provinces or areas See Theodore Jorgenson, *History of Norwegian Literature* (1933), Alrik Gustafson, *Six Scandinavian Novelists* (1940), *Scandinavian Plays of the Twentieth Century* (1st and 2d series, 1944).

Norwegian Sea, name occasionally applied to the part of the Atlantic NW of Norway between the Greenland Sea and the North Sea

Norwell, town (pop 1,871), SE Mass , on the North River, settled 1634, set off from Scituate 1888

Norwich (nŏr'wĭch, nŏ'rĭch), village (pop 1,268), S Ont , SE of Woodstock. It is in a lumbering and dairy region.

Norwich (nŏ'rĭj, -rĭch), county borough (1931 pop 126,236, 1947 estimated pop , 116,770) and city, co seat of Norfolk, England, on the Wensum just above its confluence with the Yare In the 11th cent it ranked with London, York, and Bristol in ecclesiastical and commercial importance It has vestiges of walls, gatehouses, and a tower built in 1294–1342 There are 36 old churches besides the great cathedral founded in 1096 by Bishop Losinga In 1894 a museum was established in the Norman keep of the old castle, which stands on a mound Beneath it is a cattle market. Besides the churches, there are many old buildings, including St Giles's Hospital (13th cent), Strangers Hall (15th cent , now a museum of folklore), Sucking House (14th cent.), Lazar House (Norman, now a library), St Andrew's Hall (formerly a church of the Black Friars), and the guildhall. The grammar school is on the site of a mortuary chapel founded in 1316 Castor, or Castor-by-Norwich, S of Norwich, is probably the site of a Romano-British town Norwich was sacked by the Danes in the 11th cent , was scourged by the Black Death in 1348 and in the 17th cent , and was involved in the Rebellion of 1381 and the uprising under Robert Kett in 1549 Besides being a grain market and a manufacturing town (textiles, chocolate, shoes, and machinery), Norwich is the cultural center of the county, triennial music festivals have been held since 1824 and it was famous in the 18th and 19th cent for the work of the Norwich Society of Artists (among them John Crome and John Sell Cotman). The city was severely bombed in 1942

Norwich. 1 (nŏr'wĭch, nŏ'rĭch) City (pop. 23,652) in Norwich town (pop 34,140), SE Conn., a co seat of New London co , on hilly ground, where the Yantic and Shetucket form the Thames, settled 1659–60 on land purchased from Indians, inc 1784. An industrial center, it has varied manufactures, including thermos bottles, textiles, airplane parts, and silverware Slater Memorial and its annex, Converse Art Gallery, with an art school, are in the city, near by is a state tuberculosis sanatorium Thomas Danforth began making pewter here in 1730. Benedict Arnold was born here **2** (nŏr'wĭch) City (pop. 8,694), co. seat of Chenango co., S central N Y , on the Chenango river and NE of Binghamton, settled 1788, inc 1915. Pharmaceuticals and dairy goods are made Gail Borden was born here **3** (nŏr'wĭch) Town (pop 1,418), E Vt., on the Connecticut opposite Hanover, N H , settled before 1775 NORWICH UNIVERSITY was here until 1866.

Norwich University (nŏr'wĭch), at Northfield, Vt.; a state military college, but privately controlled, for men, founded 1819, opened 1820 as a military academy at Norwich, Vt It moved in 1825 to Middletown, Conn , in 1829 it reopened in Norwich It was chartered in 1834 as Norwich University and moved to Northfield in 1866 It has a state industrial research bureau

Norwood. 1 Town (pop 15,383), E Mass , SW of Boston, settled 1678, set off from Dedham and Walpole 1872 Its industries include printing and tanning **2** Borough (pop 1,512), extreme NE N J , near the N Y line, inc 1905 **3** Village (pop 1,905), N N Y , SW of Massena, inc 1871 **4** Textile-mill town (pop 1,515), central N C , E of Charlotte, settled c 1800, inc 1882 **5** City (pop 34,010), SW Ohio, residential suburb of Cincinnati, settled as Sharpsburg in the early 19th cent , renamed and inc as a village 1888, as a city 1903 It has an automobile assembly plant, and its various manufactures include office furniture and motors and generators **6** Borough (pop 3,921), Delaware co , SE Pa , near Philadelphia, inc 1893

nose, special organ of the sense of smell. It consists of the external and the internal nose The external nose, composed of bone and cartilage, is a prominent organ in the middle of the face The air is inspired through the nostrils (external nares) of the external nose The internal nose is a hollow structure above the roof of the mouth It is divided into two cavities (nasal fossae) by a septum composed of bone and cartilage Air is filtered through small hairs at the opening of the nostrils and is warmed and moistened as it passes through the nasal fossae before reaching the throat

nosebleed. BLEEDING from the NOSE occurs as a result of injuries, ulcers, heart disease, purpura, hemophilia, scurvy, the onset of typhoid, and various other conditions that produce congestion Plugging the nostril with cotton, holding the head forward towards the chest, and applying ice to the nose usually stop bleeding

Noske, Gustav (gōōs'täf nōs'kŭ), 1868–1946, German politician, a Social Democrat He was in charge of the armed forces after the republican revolution of Nov , 1918, and was minister of defense in 1919–20 In these capacities he ruthlessly suppressed radical uprisings throughout Germany (notably the insurrection of the Communist SPARTACUS PARTY, in which Karl Liebknecht and Rosa Luxemburg were murdered by the soldiers who arrested them) He reorganized the German army Noske became governor of Hanover in 1920, but was dismissed (1933) by the National Socialists, who otherwise left him unmolested until 1944, when he was arrested on suspicion of having shared in the attempt on Hitler's life He was released in 1945 by Russian troops Noske's authoritarian and not exactly Social Democratic methods got the Weimar Republic off to a dubious start

Nostradamus (nŏs"trudā'mŭs), 1503–66, French astrologer and physician, whose real name was Michel de Nostredame He is reputed to have effected remarkable cures during outbreaks of the plague in S France, especially at Lyons and Aix His rhymed prophecies under the title *Centuries* (1555) aroused great interest and gained him the favor of the French court

notation. see ARITHMETIC and MUSICAL NOTATION.

note, in business see PROMISSORY NOTE

note, in MUSICAL NOTATION, a symbol placed on or between the lines of a staff to indicate the pitch and the relative duration of the tone to be produced by voice or instrument. The largest note value in common use in this country is the whole note, an outlined note Its value is halved by the addition of the stem, and a solid note with a stem is the quarter note, the most usual metric unit in modern notation The eighth note resembles the quarter note, with the addition of a flag at the end of the stem, with each flag added, the value of the note is again halved European music printing makes use of the breve, whose value is twice that of the whole note For each note value, there is a rest of corresponding value, rests are named in the same way as notes, e g , whole rest, half rest. In the 16th cent each type of note indicated a certain absolute time value; music of that period did not know the infinite variations of tempo used today.

Notec, Pol. *Noteć* (nō'tĕch), Ger. *Netze* (nĕ'tsŭ), river of central Europe, rising 45 mi S of Torun (Poland) and flowing 273 mi. W into the Warta near Landsberg (Brandenburg). It is connected with the Vistula by the Bydgosscs Canal

Notium (nō'shēum), ancient port, W Asia Minor. Here in the Peloponnesian War (407 or 406 B C) an Athenian fleet against orders disastrously engaged the new-built ships of the Spartan Lysander. At Athens the incident was unjustly used to disgrace ALCIBIADES, the only able general.

Notker Balbulus (nōt'kur bäl'bydōlŭs), c.840–912, German monk and scholar, abbot of St. Gall (from 890) He composed liturgical poetry and music. Notker's life of Charlemagne preserves much of the matter of the Charlemagne legend. At St Gall under Notker patristic studies were encouraged and the library was enriched.

Notker Labeo (lā'bēō), c 950–1022, German monk, teacher at St. Gall. He translated into admirable Old High German Boethius' *Consolation of Philosophy*, Capella's *Marriage of Mercury and Philology*, Pope Gregory I's *Morals*, and Aristotle's *Categories* Notker was one of the important founders of German literature

Notodden (nō'tōd"dŭn), town (pop 6,062), N Telemark co , S Norway Incorporated in 1913, it has a nitrogen-fixation plant, a hydroelectric station, and iron foundries It exports saltpeter. Near by, at Hitterdal, is the largest Norwegian *stavkirke* (13th cent).

Notre Dame, University of (nō"tur dām', nō"trū), at Notre Dame, Ind , N of South Bend, Catholic (Holy Cross Fathers), mainly for men, chartered and opened 1844 It has colleges of arts and letters, commerce, engineering (with architecture), law, and science Moreau Seminary is affiliated There are natural history and art museums Knute ROCKNE was a famous football coach. See history by A J Hope (1943)

Notre Dame College. see SOUTH EUCLID, Ohio

Notre Dame de Paris (nō'tru dam' du parē') [Fr ,= Our Lady of Paris], cathedral church of Paris and the noblest achievement of early Gothic architecture in France It stands upon the Île de la Cité, a small island in the Seine, where originally stood a Roman temple About 375 a Christian church was built on the site, later replaced by two churches Both were in ruins by the 12th cent , when Maurice de Sully demolished them in order to erect a vast cathedral suitable to the needs of the city The cornerstone was laid in 1163 by Pope Alexander III Twenty years later the high altar was consecrated, and the building was finished c 1230 The twin towers, however, are still incomplete, without the spires originally intended for them In the French Revolution rioters converted the cathedral into a "Temple of Reason" and destroyed the sculptures of the west façade In 1845 restorations were skillfully begun by VIOLLET-LE-DUC In Notre Dame the Gothic forms come into full control with few traces of Romanesque design The plan consists of a wide central nave rising 110 ft high and flanked by double aisles, with a transept of slight projection from the main body The aisles continue around the east end, which, with the projecting chapels, forms a chevet, while flying buttresses brace the external walls of both choir and side aisles Three sculptured portals are deeply recessed in the majestic west front Above them a row of sculptures in niches extends across the façade, and over this, in the center, is the huge traceried wheel window Victor Hugo's novel *Notre Dame de Paris* has the church as its background See R G Anderson, *The City and the Cathedral* (1948)

Notre-Dame-de-Portneuf, Que see PORTNEUF

Notre Dame Mountains (nō'tru dām'), continuation of the Green Mts of Vermont, SE and E Que , c 3,500 ft high They extend NE to the St Lawrence below Quebec, thence E into the Gaspé Peninsula, where they are in turn continued by the SHICKSHOCK MOUNTAINS

Notre Dame of Maryland, College of see BALTIMORE

Nott, Eliphalet (ĭl'ĭfult nŏt'), 1773–1866, American educator, clergyman, and inventor, b. Ashford, Conn , M A. Rhode Island College (now Brown Univ), 1795. He interested himself in the reform of the Albany public school system and in 1804 became president of Union College, a post he held for 62 years. He published a number of pamphlets on slavery, temperance, and education and contributed to science by his experiments with heat He was granted over 30 patents and was the inventor of the first anthracite coal base-burner stove. See Cornelius Van Santvoord and Tayler Lewis, *Memoirs of Elisphalet Nott* (1876), G P Schmidt, *The Old Time College President* (1930).

Nottaway (nŏ'tŭwā), river of W Quebec, rising in Mattagami Lake and flowing c 400 mi. NW to S James Bay It is noted for sturgeon.

Nottingham, Charles Howard, 1st **earl of** (nŏ'tĭng-um), 1536–1624, lord high admiral of England, 2d Baron Howard of Effingham. A member of one of the branches of the great HOWARD family, he rendered distinguished service to Queen Elizabeth—military, naval, and civil His most important service was in command of the British forces against the Spanish Armada (1588).

Nottingham, Daniel Finch, 2d **earl of,** 1647–1730, English statesman, son of the 1st earl He entered Parliament in 1679 and became a privy councilor in 1680 A staunch Tory, he disapproved James II's pro-Catholic policies, even while remaining loyal to him as king. As secretary of state (1689–93) under William III, he secured some modification of the oath of allegiance, but failed to obtain civil rights for dissenters (who had favored William III). He held the same post (1702–4) under Queen

Anne. He broke with the Tory leaders (1706), and in 1711 he made a bargain with the Whigs to oppose Tory proposals for peace in the War of the Spanish Succession, in return for support of the bill against occasional conformity, directed against all dissenters President of the council on the accession of George I (1714), he retired in 1716, because he opposed the severe treatment of some of the Jacobite rebels of 1715 In 1729 he received the earldom of Winchilsea, which title then became united with that of Nottingham

Nottingham, Heneage Finch, 1st **earl of** (hĕ'nĭj), 1621–82, lord chancellor of England (1675–82) Finch was educated at Westminster, Oxford, and the Inner Temple, took no part in the politics of the civil war, but entered Parliament and was made solicitor general, both in 1660 He became attorney general in 1670, lord mayor of London in 1673, and lord chancellor in 1675 He was created earl of Nottingham (1681) In an age of corruption he added to his name of able lawyer that of a statesman of integrity By lawyers he is remembered for his just and systematic administration of equity

Nottingham, Thomas Mowbray, earl of see NORFOLK, THOMAS MOWBRAY, 1ST DUKE OF

Nottingham, county, England. see NOTTINGHAMSHIRE

Nottingham (nŏ'tĭng-ûm), county borough (1931 pop 268,801, 1947 estimated pop 296,350) and city, co seat of Nottinghamshire, England, on the Trent and NW of London Its history dates from the 9th cent , when it was an important borough of the Danes In the 12th cent much of it was destroyed by fire Three parliaments were held here between 1330 and 1337, and the town was the scene in 1642 of the raising of the standard of Charles I, which marked the beginning of the civil war The present castle, on a rock overlooking the Trent, was restored by the city in 1878 and now has an art museum The earlier castle on the same site was once the prison of David II of Scotland and the headquarters of Richard III before the battle of Bosworth It was dismantled by Cromwell, rebuilt in 1674, and burned in Reform Bill riots of 1831 Other features of Nottingham are the city hall at the east end of the large market place, the Roman Catholic cathedral (designed by A W N Pugin), the municipal art school, the grammar school (founded 1513, now a high school), University College, Bulwell Forest (public park), and the arboretum There are racecourses on the outskirts of the city The manufacture of lace, hosiery, and cotton and silk goods was early established, the textile industry profited by the work of Hargreaves and Arkwright here Lacemaking is no longer a leading industry, but the city has varied manufactures According to tradition Robin Hood was born in Nottingham

Nottinghamshire (nŏ'tĭng-umshĭr) or **Nottingham,** inland county (844 sq mi , 1931 pop 712,731, 1948 estimated pop 815,200), central England The county town is Nottingham The land is low-lying and fertile, partially reclaimed fenland, an area of upland moors devoted to pasturage, in the south, is known as the Wolds The principal river is the Trent Sherwood Forest, with its legends of Robin Hood, now an area much reduced from its former size, includes the Dukeries, a district noted for its splendid estates Cereal crops are grown and dairying is extensive The Nottinghamshire coal fields, with Nottingham, Mansfield, and Worksop the chief mining centers, extend along the western border Textiles, bicycles, and motors are manufactured The county was a part of the Saxon kingdom of Mercia, and the shire was organized with substantially its present borders by the beginning of the 11th cent. It was here that Charles I unfurled his banner and marked the beginning of the civil war (in the Puritan Revolution) Scrooby, the home of William Brewster, was the cradle of the Pilgrim Fathers See *Victoria History of the County of Nottingham* (2 vols , 1906–10)

Notus (nō'tus), in Greek mythology, son of Astraeus and Eos He was the personification of the south wind, bringer of fog and sickness The Romans called him Auster

Noue, François de la: see LA NOUE, FRANÇOIS DE

Nouméa (nōōmā'ä), Fr nōōmā'), port town (1936 pop. 11,108), on New Caledonia, capital of the French colony of New Caledonia It is a Pan American Airways base on the California–New Zealand route; there is steamship service to Sydney, Australia Nickel, chrome, and copra are exported. The island's chief nickel-smelting plant and the Collège La Pérouse are here In the Second World War, Nouméa was the site of a U S air base The town was once a French penal colony and was formerly called Port de France Nouméa is sometimes spelled Numea.

noun, in English, PART OF SPEECH typically referring to the actor. There are a number of distinctive formal criteria; thus a noun may be recognized by inflection(-'s and -s) or by derivation (e.g., *-ness* and *-tion*) Probably most languages have a major form class composed of words referring to persons, animals, and objects; but the Latin type of inflection, with its CASE system, is unusual outside a few families of languages.

Nouveau Salaberry (nōōvō' sä'lŭbĕ''rē), village (pop. 1,043), on an island in the St Lawrence, S Que , opposite Valleyfield, of which it is a suburb.

Nouvelle Calédonie see NEW CALEDONIA.

nova: see VARIABLE STAR.

Novalis (nōvä'lĭs), pseud of **Georg Friedrich Philipp von Hardenberg** (gā'ôrk frē'drĭkh fŭn här'dənbĕrk), 1772–1801, German poet He studied philosophy under Schiller, Schlegel, and Fichte, being especially influenced by Fichte, he later studied geology and became assessor of salt mines Novalis was one of the great German romanticists, his chief work was the novel *Heinrich von Ofterdingen*, unfinished at the time of his early death from tuberculosis but the representative novel of early romanticism His grief at the death of his love, Sophie von Kühn, in 1797, found expression in a volume of beautiful lyrics, deeply religious in tone, the *Hymnen an die Nacht* [hymns to the night] (1800, Eng trs , 1889, 1948), and in the hymns translated as *Devotional Songs* (1802?) A collection, *Hymns and Thoughts on Religion* (tr by W Hastie), appeared in 1888 *Christendom or Europe* (1826; Eng tr., 1844) is an exposition of his Catholicism

Nova Lisboa, Angola see HUAMBO

Novara (nōvä'rä), city (pop 52,269), capital of Novara prov , Piedmont, N Italy It is an agricultural and industrial center The 16th-century Church of San Gaudenzio has a characteristic dome and a fine campanile Several battles were fought near Novara In the most important (March, 1849) the Austrians under Radetzky defeated the Piedmontese, thus ending the war of 1848–49 (see RISORGIMENTO) Novara was also the scene of the defeat of the French by the Swiss in 1513 (see ITALIAN WARS) Today it is an agricultural and industrial center

Nova Scotia (nō'vu skō'shù) [Latin,=new Scotland], province (21,068 sq mi , 1941 pop 577,962, 1948 estimated pop 635,000), E Canada One of the Maritime Provs , it includes a peninsula 374 mi long and the adjacent Cape Breton Island The capital is the port of Halifax, other important cities include Sydney, Glace Bay, Dartmouth, Truro, New Glasgow, and Yarmouth On the north the province is bounded by the Northumberland Strait, on the east and south by the Atlantic Ocean, and on the west by New Brunswick, from which it is largely separated by the Bay of Fundy Tempered by surrounding waters, the climate is moderate and the rainfall abundant On the east coast rough winds sweep bare the jagged promontories and send combers dashing against the granite rims of numerous bays and coves Small fishing villages, bright with white houses and gaily painted boats, nestle against the rocky hillsides Off the beautiful south shore is Sable Island, called the graveyard of the Atlantic before its treacherously shifting dunes were stabilized by tree plantings On the west coast huge Fundy tides, rising to heights of 40 ft , wash white beaches and pleasant meadows From Yarmouth there are direct steamship connections to Boston, and Digby, with regular shipping schedules to St John's, is an important railroad, lumbering, and agricultural center Fishing fleets operate on the great continental shelf, which edges the coast, or move out to the Grand Banks Fishing is also the leading industry of the wooded north shores which edge the warm Northumberland Strait Inland the old mountains are worn into rolling hills, frequently broken by lakes and streams Back from the western shore dairying thrives on the meadowlands, and in spring valleys such as Annapolis and Cornwallis blossom fragrant and pink with apple blossoms The bay lowlands, reclaimed by dikes in the 17th cent , are very productive For many years timber has been cut and floated down the rivers to port, but enough forests remain to feed a valuable pulp and paper industry. The fisheries, in Canada second only to those of British Columbia, make great annual catches of cod, haddock, lobsters, herring, and mackerel to contribute to a growing number of canning and freezing establishments Coal, of which Nova Scotia produces one third of Canada's total supply, is mined at Sydney, Pictou, and Inverness in seams far out under the ocean floor The great steel mills at Sydney use the local coal and import iron from Newfoundland In addition to its all-year port facilities, Halifax is a railroad terminus and a center of shipbuilding and sugar refining A fine system of railroads and highways interlaces the province, providing an additional lure to tourists attracted by the charms of the rural and coastal countryside. Frequently visited historical spots include the Shrine of Evangeline at Grand Pré and the town of Annapolis Royal, site of the first permanent Canadian settlement Sportsmen find a variety of activities—all types of fishing, abundant game, and some of the best sailing on the continent This is probably the land that Leif Ericson is supposed to have named (c 1000) Vinland Centuries passed before John Cabot landed (1497) on the tip of Cape Breton Island, but soon European fishermen made regular stops during their yearly expeditions. The beginnings of New France, called ACADIA in the region of Nova Scotia and New Brunswick, were made when the settlement established in 1604 was moved to Port Royal (now Annapolis Royal) in 1605 For the next century France and England contested bitterly for colonial rights. In 1621 the earl of Stirling obtained a patent from James I for the whole peninsula, named Nova Scotia By the Treaty of Breda (1667) the area was given to France, but under the Peace of Utrecht (1713–14), the area was restored to England, although Cape Breton Island was retained by the French. Hostilities continued during the French and Indian Wars, one incident being the expulsion of the Acadians—a tragedy immortalized by Longfellow's *Evangeline* With the close of the wars in 1763, Prince Edward and Cape Breton islands were annexed, but in 1769 Prince Edward Island became a separate colony. With the influx of United Empire Loyalists, c 1784, additional settlement was made, and in 1784 New Brunswick and Cape Breton became separate colonies, Cape Breton rejoined Nova Scotia in 1820 Sydney was established by Loyalists in 1788 and Halifax, set up by England in 1749 as a military and naval base, grew rapidly as a port and shipbuilding center After the Jacobite risings, thousands of Scotch emigrants settled on the north coast and later Hanoverian fisherfolk established homes in Lunenburg co Under the leadership of Joseph Howe, Nova Scotia became the first colony to achieve (1848) responsible government, when it persuaded the governor to bow to the wishes of the elected assembly When confederation of the Canadian provinces was proposed in 1867, Nova Scotia after hesitation acceded It is still held by many that the province was gravely handicapped by its inability to make its own terms for trade with the United States and by the advantage conferred by high tariffs on the competing industries of central Canada As a smaller and less wealthy province, Nova Scotia is still struggling for more recognition in the federation During its long settlement, Nova Scotia has pioneered in Canadian history with the first newspaper, the first printing press, and the first university (King's College, Windsor) It pioneered again in the late 1920s when St Francis Xavier univ sponsored cooperatives for the impoverished fisherfolk at Antigonish These successful self-help projects will serve as models of cooperative planning for other similar communities See J B Brebner, *New England's Outpost* (1927) and *The Neutral Yankees of Nova Scotia* (1937), T Morris Longstreth, *To Nova Scotia* (1935), Gordon Brinley, *Away to Cape Breton* (1936), Clara Dennis, *Down in Nova Scotia* (1937) and *More about Nova Scotia* (1940), Bertram B Fowler, *The Lord Helps Those* (1938), Dorothy Duncan, *Bluenose a Portrait of Nova Scotia* (1942); *Nova Scotia Report of the Royal Commission on Provincial Development and Rehabilitation* (2 vols , 1944), W C Barrett, *Down East* (1945)

Novatian (nōvā'shun), fl 250, Roman priest, antipope (from 251), and theologian He opposed the election of St Cornelius as pope and set himself up instead He gained followers all over the empire because of his espousal of the old doctrine of MONTANISM that the fallen from grace were out of the Church forever At the instance of St Cyprian of Carthage, himself quite strict on readmission to the Church, virtually the whole Church recognized Cornelius and repudiated Novatian and his followers, who maintained their own hierarchy for two or three centuries After 325 their distinction was almost solely historical in significance, for the sect was merged with DONATISM Novatian's chief work, *On the Trinity*, which was written as a refutation of the Gnostics, the Theodotians, and the Sabellians, was later regarded as a good orthodox expression of ante-Nicene doctrine, except for the last chapter, which anticipated Arianism

Novaya Sibir Island (nô'vĭû sĭbĭr'), 75 mi long and 35 mi wide, easternmost island of the Anjou group of the NEW SIBERIAN ISLANDS

Novaya Zemlya (nô'vĭû zĭmlyä') [Rus ,=new land], archipelago (c 35,000 sq mi., 1939 estimated pop. 400), N European RSFSR, in the Arctic Ocean between the Barents Sea in the west and the Kara Sea in the east It consists of two large islands (separated by a narrow strait) and many small islands The northern section of the archipelago is always covered with ice The central mountains, rising to 3,500 ft , are a continuation of the Urals. The southern section consists of tundra lowlands. There are government observation stations on the western coast The permanent inhabitants are Nentsy (formerly called Samoyedes), subsisting on fishing and hunting (seals, other fur-bearing animals, and birds' eggs and down) There are mineral deposits (copper, lead, zinc, pyrite, asphaltite) Known since the 16th cent , the islands were explored in the 19th cent Their name sometimes appears as Nova Zembla

Nova Zembla, RSFSR: see NOVAYA ZEMLYA

novel, a story of some length which is told in prose. The word was first used in English in the 16th cent when the Italian *novella* (e g , Boccaccio's *Decameron*) became popular in England The modern novel, however, dates only from the 18th cent , with the works of Daniel Defoe and Samuel Richardson The romance is differentiated from the

novel by its remoteness from the scenes of ordinary life, whether contemporary or historical, and by its emphasis on the fantastic, the marvelous, or the improbable But since the novel enjoys great freedom in both technique and subject matter, no exact definition has ever been agreed upon Prose fiction can be found in the Arabian *Thousand and One Nights*, in Xenophon's *Cyropaedia*, in *The Golden Ass* by Apuleius, in *Daphnis and Chloë*, in the *Satyricon* of Petronius, and in the legends of Alexander the Great by the Pseudo-Callisthenes These legends and romances dealing with Alexander, together with those on the Trojan War, were extremely popular in the Middle Ages Also popular then were the late Greek romance *Apollonius of Tyre*, which was translated into Anglo-Saxon in the 11th cent , and the ARTHURIAN LEGEND which gradually evolved into Malory's long prose romance *Morte d'Arthur* (printed in 1485) The invention of printing was important in the development of the narrative, it brought about an increase in reading and encouraged the tendency to turn the long verse narratives into prose and to elaborate the short prose tale In the 16th cent prose fiction can be found in Rabelais's *Gargantua and Pantagruel*, Cervantes's *Don Quixote*, Philip Sidney's *Arcadia*, and John Lyly's *Euphues* and in the works of Thomas Nash The narrative fiction of France in the 17th cent. included *L'Astrée* of Honoré d'Urfé, the *Princesse de Clèves* of Mme de la Fayette, and the works of Mlle de Scudéry In England the beginnings of the novel can be seen in the character sketches popular in the early 17th cent , the most famous of which was Sir Roger de Coverley, created by Addison and Steele in the *Spectator* papers (1711–12) Aphra Behn's *Oroonoko* (1688) has often been considered an early novel The great prose works in England which preceded the novel, however, were John Bunyan's *Pilgrim's Progress* (1678) and Jonathan Swift's *Gulliver's Travels* (1726) Historians of the novel are divided as to whether or not *Robinson Crusoe* (1719) and *Moll Flanders* (1722) by Daniel Defoe should be classified as novels, but it is generally agreed that *Pamela, or, Virtue Rewarded* (1740), by Samuel Richardson, is a modern novel Here, in the form of letters, is a single narrative in which the thoughts and actions of people are faithfully presented *Pamela*, a passionate but conventional love story, enjoyed great popularity not only in England but also on the Continent Partly as a burlesque of Richardson, Henry Fielding wrote *Joseph Andrews* in 1742, and in 1749 the more famous *Tom Jones* In these novels the letter form is abandoned, and there is a wide variety in characters, incidents, and scenes. Fielding's novels were followed by the works of Tobias Smollett and Oliver Goldsmith The GOTHIC ROMANCE, of which Horace Walpole and Ann Radcliffe were the chief exponents, became popular at the end of the century In France the best-known novels of the 18th cent were Rousseau's *Nouvelle Héloïse*, Bernardin de Saint-Pierre's *Paul et Virginie*, and *Corinne* by Mme de Staël The most famous novels in Germany were Goethe's *Sorrows of Young Werther* and *Wilhelm Meister* Gradually the novel came to rival poetry and the essay in popularity, and by the 19th cent it became the most important literary form The subject matter of the novel was greatly extended—history in Walter Scott, contemporary manners in Jane Austen, political questions in William Godwin and Benjamin Disraeli, romance in Charlotte and Emily Brontë, and, at the end of the century, adventure in the novels of Robert Louis Stevenson and Rudyard Kipling Almost all these subjects can be found in the novels of Thackeray, Dickens, and George Eliot, who are among the most famous English novelists Later in the century the more realistic novels of George Meredith and Thomas Hardy appeared In France the great 19th-century novelists include Stendhal, Balzac, and Flaubert. The historical-adventure novels of Dumas and Hugo have always been popular In Russia the 19th cent. produced the great novels of Gogol, Turgenev, Dostoyevsky, and Leo Tolstoy The first American novel is generally considered to be William Hill Brown's *Power of Sympathy* (1789), James Fenimore Cooper's adventure tales preceded the greater *Scarlet Letter* (1850) by Nathaniel Hawthorne and *Moby-Dick* (1851) by Herman Melville In the last two decades of the century, Mark Twain, William Dean Howells, and Henry James were the dominant figures in fiction In the late 19th cent. and the 20th cent the tendency of the novel to take over both the subject matter and the techniques of other literary forms continued A large number of novels described social and economic conditions in detail and showed how these conditions determined the fate of the characters. The earliest novels of this school were written by Émile Zola in France at the end of the 19th cent , Arnold Bennett in England, and Frank Norris and Theodore Dreiser in America Some used the novel as a vehicle for the discussion of contemporary problems, such as H G Wells, Aldous Huxley, and, more recently in France, Jean Paul Sartre. Upton Sinclair and Jack London wrote novels that were frankly political tracts Most of Edith Wharton's were faithful pictures of upper-class life in New York city. The DIME NOVEL and the mystery story or DETECTIVE STORY, often with no pretense to literary merit, became popular forms of entertainment and relaxation. At the same time, however, some writers tried to achieve in the novel some of the subtlety and depth which were traditionally associated with poetry. The most important of these authors was James Joyce In *Ulysses* (1922) and in *Finnegans Wake* (1939) he not only introduced new narrative methods but modified the language itself The attempt to render the stream of consciousness of the characters can be seen in Virginia Woolf in England and Marcel Proust in France as well as in James Joyce Despite these techniques, which have influenced many writers, the novel still remains a unified narrative which presents characters and incidents from real life Among famous 20th-century European novelists who are known in translation are Selma Lagerlöf, Knut Hamsun, Kafka, Werfel, Jakob Wassermann, Thomas Mann, Rolland, Gide, and Malraux In England and America, aside from those already mentioned, the best known include Somerset Maugham, D H Lawrence, Scott Fitzgerald, Sinclair Lewis, Thomas Wolfe, Hemingway, Willa Cather, Dos Passos, and William Faulkner A notable tendency in their works is the attempt to present the actions and thoughts of the characters directly, without any interpretation or moralizing on the part of the author See also the articles on various national literatures See E A Baker, *The History of the English Novel* (10 vols , 1924–39); W A Drake, *Contemporary European Writers* (1928), Joseph Beach, *The Twentieth Century Novel* (1932), Edward Wagenknecht, *The Cavalcade of the English Novel* (1943)

Novelle (nōvĕ'lu), German term used to describe a short novel The *Novelle* restricts itself to a single event and shows the effect of this event on a character or group Well-known writers of this literary form include Goethe, Heinrich von Kleist, Gottfried Keller, and Thomas Mann. See Edwin Bennet, *A History of the German Novelle* (1934)

Novels see CORPUS JURIS CIVILIS.

November see MONTH

novena (nōvē'nu) [Lat.nam.=a group of nine], in the Roman Catholic Church, primarily a series of public or private prayers extending over nine consecutive days, especially nine days preceding a feast (inclusive) More rarely, a novena extends over any nine days, as nine consecutive Mondays or nine first Fridays of the month By extension, especially in America, the term is used for a regular series of prayers, e g , a "perpetual novena" occurring every Friday Novenas are made especially in honor of the saints to ask their intercession for certain benefits They are frequent in honor of the Virgin Mary (under her various aspects, e g , Our Lady of Sorrows), of St Joseph, of St Anne, of St Anthony, and of other saints whose cults are popular, and they are said for the repose of the souls in purgatory Widespread public novenas are those of Pentecost (beginning the Saturday after Ascension), of the Assumption (Aug 7–15), of the Immaculate Conception (Nov 30–Dec 8), and the "novena of grace," in honor of St Francis Xavier (March 3–11) Public novenas must be approved by the church authorities The practice of novenas is very ancient in the Western Church, and the idea was probably borrowed from Roman paganism

Novgorod (nôv'gŭrŏt), city (pop 32,764), capital of Novgorod oblast, W European RSFSR, on the navigable Volkhov river near the point where it leaves Lake Ilmen It is one of the oldest Russian cities and was a major commercial and cultural center of medieval Europe Here RURIK is said to have founded the Russian state in 862 Novgorod was dependent on Kiev until the 12th cent., when it became the capital of an independent republic—Sovereign Great Novgorod Supreme authority was vested in a popular assembly, the *veche*, which elected—and often exiled—the dukes These held supreme military and judicial powers, but no legislative or administrative functions, which were vested in elected magistrates The basis of the power of the republic was its economic prosperity Situated on the great trade route to the Volga valley, it became, with London, Bruges, and Bergen, one of the four chief trade centers of the HANSEATIC LEAGUE, which established a foreign office there (St Peter's Yard). Furs, hides, wax, honey, flax, and tar were the chief export articles Cloth and metals were imported from Europe and corn from central Russia Transit trade with the Orient reached a great volume The enterprising merchants of Novgorod extended the power of the republic over the entire north of Russia, levied tribute even beyond the Urals, and founded many colonies The citizens of Novgorod repulsed the attacks of the Teutonic Knights and Livonian Knights and of the Swedes and escaped the Mongol invasion. At its height, in the 14th cent., its population rose to c.400,000. Its colorful splendor during that period, its hundreds of churches, its great shops and arsenals, its huge fairs, have furnished rich themes for later Russian art and folklore. In 1478 Novgorod fell to Ivan III of Moscow. Its local liberties were totally abolished by Ivan IV, who laid the city waste in 1570 to punish it for suspected treachery The economic importance of Novgorod decreased, particularly after the rise of St. Petersburg. The magnificent architectural monuments of Novgorod earned it the name the "museum city" until the Second World War, when it was held by the Germans (1941–44) and suffered great damage. Chief among the losses was the 12th-century kremlin, on the left river bank, containing the Cathedral of St. Sophia (founded 1045) and a monument (1862) commemorating the 1,000th anniversary of the founding of Russia. On the left bank, the former commercial center, are—or were—numerous medieval churches and a museum of old Russian art.

Novibazar, Yugoslavia: see NOVI PAZAR.

Novikov, Nikolai Ivanovich (nyĭkulyĭ' ēvŭ'nuvĭch nô'vēkôf), 1744–1818, Russian editor and publisher. In 1769, with the *Drone*, he started the vogue of the satirical magazine modeled on Addison's *Spectator* The project was a success but in 1774 was halted by Catherine II, who had at first encouraged such journals. Novikov next turned to publishing books designed to spread enlightenment at a modest price and again was stopped by imperial order He was imprisoned and held until the accession of Paul I in 1796 but even then did not return to active literary life. Besides satire, Novikov wrote short stories, of which the best is "The Novgorod Girls' Wedding Eve"

Novi Ligure (nô'vē lē'gōorā), town (pop. 17,251), Piedmont, NW Italy, N of Genoa It is a railroad and manufacturing center Here in 1799 the Austrian and Russian forces under Suvarov defeated the French under Joubert, who was killed

Novi Pazar (nô'vē pä'zär), town (pop 12,196), W Serbia, Yugoslavia Under Turkish rule it was an important garrison town and a provincial capital The sanjak [district] of Novibazar (an older spelling) was occupied by Austrian forces from 1879 to 1908, but remained under Turkish civil administration until 1913, when it passed to Serbia as a result of the Balkan Wars The town retains much of its Turkish architecture

Novi Sad (nô'vē sät'), Ger *Neusatz* (noi'zäts), Hung *Újvidék* (ōō'yēvēdāk''), city (pop 77,127), N Serbia, Yugoslavia, on the Danube opposite Petrovaradin The capital of Vojvodina, it is a grain-trading center and has flour mills, canneries, and a silk industry Founded in the 17th cent , it rapidly developed as a commercial center, became an Orthodox episcopal see, and was made (1748) a royal free city of Hungary In the 18th and early 19th cent Novi Sad was the center of the Serbian literary revival It was ceded by Hungary to Yugoslavia in the Treaty of Trianon (1920), but was occupied by Hungarian troops in the Second World War

Novocherkassk (nô"vuchĭrkäsk'), city (pop 81,286), S European RSFSR, on the Aksai river near its confluence with the Don, c 20 mi NE of Rostov It manufactures locomotives, machinery, and explosives and has lumber mills, distilleries, and meat-packing plants Founded in 1805 as the headquarters of the Don Cossacks, it is the site of the former hetman's palace There are several technical and pedagogical institutes During the Russian civil war (1917–20), Novocherkassk was held by German and by counterrevolutionary troops In the Second World War it was occupied by the Germans in 1942–43

Novonikolayevsk, RSFSR: see NOVOSIBIRSK

Novorossiisk or **Novorossiisk** (both nô"vurŭsēsk'), city (pop 95,280), W Krasnodar Territory, S European RSFSR, a major Black Sea port. It exports grain and has petroleum refineries, cement plants, shipyards, and machinery plants. The city stands on the site of a Genoese colony (13th–14th cent) and of a former Turkish fortress, which was captured (1809) by the Russians. The present city was founded in 1838. In the Russian civil war Novorossiisk was held (1918–20) by Denikin, in the Second World War it was occupied (1942–43) by the Germans

Novosibirsk (nŭvusēbērsk'), city (1926 pop 120,128; 1939 pop 405,589; 1946 estimated pop 750,000), capital of Novosibirsk oblast, RSFSR, in S central Siberia, on the upper Ob river and on the Trans-Siberian RR. Founded in 1893 as Novonikolayevsk (it received its new name in 1925), it grew with extraordinary speed into the largest city, industrial center, and river and rail transportation point of Asiatic Russia Its growth is partly due to the proximity of the KUZNETSK BASIN. It produces heavy machinery, steel, and cotton textiles A cultural center, it has technical, agricultural, medical, and scientific institutes, an opera house, theaters, and a regional museum. The region forming Novosibirsk oblast (which includes the BARABA STEPPE) is predominantly agricultural.

Novy Chardzhui, Turkmen SSR: see CHARDZHOU.

Novy Margelan, Uzbek SSR see FERGANA.

Novy Urgench, Uzbek SSR: see URGENCH.

Nowata (nōwā'tŭ), city (pop. 3,904), co. seat of Nowata co., NE Okla., NE of Tulsa, in an oil-producing area; settled 1888, inc. 1895. The area also produces timber and farm products.

Nowawes (nōvä'vĕs) [Czech, =new village], former town (1933 pop. 29,229), Brandenburg, E Germany, on the Havel and near Berlin. Founded by Frederick II as a textile center for Protestant Bohemian weavers, it was joined (1938) with Neubabelsberg, center of the German moving-picture industry, and was incorporated (c 1940) with Potsdam.

Nowy Port, Poland: see DANZIG.

Nowy Sacz, Pol. *Nowy Sącz* (nô'vĭ sôch'), Ger. *Neu-Sandec* (noi'-zän'dĕts), city (pop. 23,049), S Poland, SE of Cracow. It was founded in 1294 and was included (1772–1919) in Austrian Poland. Chiefly a trade center, the city has also an electrical industry; there are deposits of lignite and petroleum in the vicinity.

noyades (nwäyädz'), method of execution originated in 1793 by CARRIER at Nantes in the Reign of Terror in order to exterminate the "brigands of the VENDÉE." The guillotine proved too slow, and so wholesale drownings or *noyades* were instituted. The victims were bound and put on boats, and the boats were sunk in the river Loire. Altogether, there were seven of these organized *noyades* with an estimated loss of life from 2,800 to 4,600.

Noyes, Alfred, 1880–, English poet, b. Staffordshire, educated at Oxford. From 1914 to 1923 he was professor of English literature at Princeton and has frequently visited the United States. His poetical works include *The Flower of Old Japan* (1903), *The Forest of Wild Thyme* (1905), *Drake* (1908), an epic, *Tales of the Mermaid Tavern* (1912), *The Torch Bearers* (1922–30), a trilogy on science, and *Shadows on the Down* (1941). Well-known individual poems are "Forty Singing Seamen," "The Barrel-Organ," and "The Highwayman." *Orchard's Bay* (1939) is a collection of poems and essays. He has also written novels, criticism (*Aspects of Modern Poetry*, 1924), poetic plays, and biography (*Voltaire*, 1938). *The Unknown God* (1934) is an account of his conversion to Roman Catholicism. Noyes is a literary conservative; he adheres to traditional forms and eschews poetic experiment. See study by W. C. Jerrold (1930).

Noyes, Arthur Amos, 1866–1936, American chemist and educator, b. Newburyport, Mass., grad. Massachusetts Institute of Technology (B.S., 1886). He served at his alma mater from 1887 to 1919 (as organizer and director of the chemical research laboratory from 1903 and as acting president, 1907–9). From 1915 he was associated with Throop Polytechnic Institute (later California Institute of Technology), where he organized and served as director of the chemical laboratory. He is known for his work on qualitative analysis and for his researches in the ionic theory. His works include *Qualitative Chemical Analysis of Inorganic Substances* (1895, 10th ed., 1942) and *Qualitative Analysis for the Rare Elements* (with W. C. Bray, 1927).

Noyes, John Humphrey, 1811–86, American reformer, founder of the ONEIDA COMMUNITY, b. Brattleboro, Vt., grad. Dartmouth, and studied theology at Yale. He lost his license to preach because of his "perfectionist" doctrine. This, taking its name from Mat. 5:48, was based on the belief that man's innate sinlessness could be regained through communion with Christ. At Putney, Vt., he formed (1839) a society of Bible communists, later called Perfectionists, their practice of complex marriage (begun 1846) so aroused the neighborhood that Noyes was forced to flee. In 1848 he established another community at Oneida, N.Y. (with a later branch at Wallingford, Conn.), where he developed his religious and social experiments in communal living. By 1879 internal dissension had arisen and outside hostility became so strong that Noyes went to Canada, where he spent the rest of his life. His writings include *The Berean* (1847) and many pamphlets. See George W. Noyes, comp., *Religious Experiences of John Humphrey Noyes* (1923) and *John Humphrey Noyes the Putney Community* (1931), R. A. Parker, *A Yankee Saint* (1935), Pierrepont B. Noyes, *My Father's House* (1937).

Noyes, William Albert, 1857–1941, American chemist, b. near Independence, Iowa, grad. Iowa College, now Grinnell (B.A., 1879), Ph.D. Johns Hopkins, 1882. He was professor at Rose Polytechnic Institute, Terre Haute, Ind. (1886–1903), served the Bureau of Standards (1903–7), and was head of the chemistry department and director of the chemical laboratory at the Univ. of Illinois (1907–26). His many works include *Elements of Qualitative Analysis* (1887), *College Textbook of Chemistry* (1919), and *Building for Peace* (1923). His son, **William Albert Noyes, Jr.**, 1898–, b. Terre Haute, Ind., grad. Grinnell College (B.A., 1919), is noted for his work in electrochemistry and photochemistry. With his father he wrote *Modern Alchemy* (1932).

Noyon (nwäyô'), city (pop. 5,900), Oise dept., N France, in Picardy. Here Charlemagne was crowned king of the Franks in 768. The town was devastated in both world wars, but the Cathedral of Notre Dame (12th–13th cent.) has survived. The house in which John Calvin was born is restored and now a museum. A treaty was signed here between France and Spain in 1516 (see ITALIAN WARS).

Nubia (nū'bēə), ancient country, NE Africa. At its height it extended from the First Cataract of the Nile (near Aswan, Egypt) to Khartoum, in the Anglo-Egyptian Sudan. It came early under the influence of the Pharaohs, whose power sometimes reached S to Argo (near Dongola). Egypt itself was ruled briefly by conquering Nubians, who established the XXV dynasty. Some time after their expulsion (7th cent. B.C.) from Egypt by the Assyrians, the Nubian capital was moved from Napata to Meroë. Napata was destroyed (c 23 B.C.) by the Romans. Meroë fell to Ethiopians c 350 and was abandoned. Under the Roman Emperor Diocletian a Negro tribe, the Nobatae, were settled in Nubia. They mixed with the indigenous stock and formed a powerful kingdom with its capital at Dongola. The kingdom was converted to Christianity in the 6th cent. Joined with the Christian kingdom of Ethiopia, it long resisted Moslem encroachment, but in 1366 it finally collapsed. Nubia then broke up into many petty states. MOHAMMED ALI of Egypt conquered it (1820–22), and in the late 19th cent. much of the area was held by supporters of the MAHDI. See Sir Ernest Budge, *History of Ethiopia, Nubia, and Abyssinia* (1928).

Nueva Galicia (nwä'vä gälē'syä), Spanish colonial administrative region, W Mexico, comprising roughly the present states of Jalisco and Nayarit with S Sinaloa. Conquered (1529–31) by Nuno de GUZMÁN and later governed by Francisco Vásquez de Coronado, the territory was the scene of the MIXTÓN WAR in 1541. In 1548 it was given an *audiencia* at Guadalajara. Nominally subject to the viceroy of New Spain, it was essentially a separate administration controlled from Spain, and it came to be known after the creation (1563) of a presidential office of its own as the presidency of Nueva Galicia. Its independent character, however, declined as in the colonial era authority was more and more centralized in Mexico city.

Nueva Rosita (rōsē'tä), city (pop. 25,551), Coahuila, N Mexico, in semiarid country, Nueva Rosita, connected by rail with Saltillo, Monterrey, and Piedras Negras, developed as a prominent industrial city of N Mexico in the 1930s. There is a new and large zinc smelter.

Nueva San Salvador: see SANTA TECLA.

Nuevitas (nwävē'tas), city (pop. 12,029), E Cuba, a port on the north coast. With two subsidiary ports, Pastelillo and Puerto Tarafa, Nuevitas exports a major part of the Cuban sugar crop. It is the terminus of two railroads and a highway. Its large bay was discovered by Columbus in 1492. Nuevitas was subject to frequent raids by buccaneers, notably one by Sir Henry MORGAN in 1668.

Nuevo Laredo (nwä'vō lärä'dhō), city (pop. 28,872), Tamaulipas, NE Mexico, across the Rio Grande from Laredo, Texas. Connected with the United States by automobile and railroad bridges, Nuevo Laredo is the northern terminus of the INTER-AMERICAN HIGHWAY and the chief point of entry for American tourists driving to Mexico. It is situated on a flat alluvial plain in an agricultural and stock-raising region and is distributing center for this area as well as a center of international trade. Founded (1755) by Tomás Sánches on land granted by José de ESCANDÓN (Nuevo Laredo was part of Laredo, Texas, until the treaty ending the Mexican War in 1848), the city figured in the revolution of 1910 and was burned in 1914.

Nuevo León (nwä'vō lāōn'), state (25,136 sq. mi., 1946 estimated pop. 678,723), NE Mexico. Except for a small strip of land obtained from Coahuila to the west, Nuevo León is separated from the Rio Grande by the panhandle of Tamaulipas. The southern and western parts of the state are traversed by the Sierra Madre Oriental, but some of the extreme western portions lie within the vast, semiarid basin lands of N Mexico, which are cultivable under irrigation. Mining in the mountainous parts provides much of Nuevo León's business in the refining of ores and has helped make MONTERREY, the capital, a booming industrial city. Much of the north is arid cactus country, but to the east, where the plains sweep down toward the lowlands of Tamaulipas and are crossed by several large rivers, the land is suitable to agriculture. Grains, sugar cane, cotton, and maguey are grown. The province of Nuevo León, including much of what is now E Coahuila, was granted (1579) to Luis de Carabajal, who engaged in slave catching. After independence, Nuevo León, much reduced in size, became (1824) a state. It was occupied by U.S. forces in the Mexican War.

Nuffield, William Richard Morris, 1st Viscount (nŭ'fĕld), 1877–, British automobile manufacturer and philanthropist. Beginning his career as the proprietor of a bicycle shop, he entered upon the manufacture of motorcycles and, in 1912, of automobiles. The Morris cars became quickly one of the biggest mass-production industries in Great Britain, and Morris became known as the "British Ford." During the Second World War, Morris, who was created Viscount Nuffield in 1938, engaged in the manufacture of aircraft. He has made philanthropic bequests of some $100,000,000, a large part of which went to Oxford Univ.

Nugssuak Peninsula (nōōg'sōōäk), on W Greenland, N of Disko Island. It has coal deposits and petrified flora.

nuisance, in law, an act which, without legal justification, interferes with safety, comfort, or the use of property. A private nuisance (e.g., erecting a wall which shuts off a neighbor's light) is one which affects one or a few persons, while a public nuisance (e.g., conducting a disorderly house) affects many persons. In some cases the victim of a private nuisance may abate it (e.g., tear down the wall). Damages are available to a party who suffers from a private nuisance or who is especially injured by a public nuisance, and courts will issue injunctions against continuing nuisances. Since public nuisances are injurious to the community, they may be prosecuted as crimes. Nuisance is a flexible legal category. Thus, while a slaughterhouse is lawful in a manufacturing district, it may be a nuisance in a residential quarter. Activities, such as operating blast furnaces, which were once deemed nuisances, are now recognized as indispensable and lawful.

Nukahiva, Marquesas Islands: see NUKU HIVA.

Nukha (nōō'khä, nōō'khä'), city (1932 estimated pop. 37,000), N Azerbaijan SSR, on the southern slope of the Greater Caucasus. It is a major center of silk production in a district that grows rice and fruit. Until its conquest (1806) by Russia, Nukha was the capital of a khanate under Iranian suzerainty.

Nukualofa (nōō'kwälō'fä), town (pop. 7,000), capital and chief port of TONGA, on the north coast of Tongatabu. The palace of Queen Salote and the House of Parliament are here.

Nuku Hiva (nōō'kōō hē'vä), **Nukuhiva**, or **Nukahiva** (nōō'käh-), volcanic island (46 sq. mi., pop. 737), S Pacific, largest of the MARQUESAS ISLANDS. It is N of Hiva Oa. It has a circumference of c 70 mi., there are eight harbors, the best of which is Taiohae Bay on the south coast. The chief exports are copra and fruits. The village of Taiohae was the former capital of the Marquesas Islands.

Nukus (nōōkōōs'), city (1935 estimated pop. 5,000), capital of Karakalpak ASSR, Uzbek SSR, on the Amu Darya river. A new city, it replaced Turtkul as capital in 1939. Cotton is processed.

nullification, in U.S. history, a doctrine expounded by the advocates of extreme STATES' RIGHTS. It held that states have the right to declare null and void and to set aside in practice any law of the Federal government which violates their voluntary compact embodied in the U.S. Constitution. The KENTUCKY AND VIRGINIA RESOLUTIONS declared (1799) nullification to be the rightful remedy by the states for all unauthorized acts done under the pretext of the Constitution. A closely reasoned reinforcement to the doctrine of nullification was set forth—in response to the tariff of 1828, which favored Northern interests at the expense of the South—by John C. CALHOUN in his South Carolina Exposition (1828). The strong pro-Union stand of President Andrew Jackson brought forth further remonstrances from Southern leaders. After the tariff act of 1832 Calhoun's determination to put the doctrine of nullification into practice caused the South Carolina legislature to pass (1832) the sweeping ordinance of nullification. This ordinance declared the tariff laws null and void, and a series of enactments in South Carolina put the state in a position to resist by force any attempt of the Federal government to carry the tariff act into operation. President Jackson in reply dramatically issued a strong proclamation against the nullifiers, and a FORCE BILL was introduced into the U.S. Senate to give the President authority to use armed forces if necessary to execute the laws. Jackson, however, felt that the South had a real grievance and, behind his show of force, encouraged friends of compromise, led by Henry Clay, to prepare an act which the South would accept. This compromise tariff was rushed through Congress, and after its passage (1833) the South Carolina state convention reassembled and formally rescinded the ordinance nullifying the tariff acts. To preserve their prerogative they adopted a new ordinance nullifying the force bill. But the issue was not pressed further until the election of Abraham Lincoln, when the doctrine of SECESSION was brought to the foreground. See C. S. Boucher, *The Nullification Controversy* (1916).

nullity of marriage. Unlawful marriages may be either void or voidable. A bigamous or incestuous marriage, for example, is void, and there is no necessity for bringing a suit to obtain a decree declaring it void. Such a decree is necessary to annul voidable marriages. Grounds, generally specified by statute, include fraud or duress preventing legal consent to the marriage and sexual impotence of one spouse which existed at the time the marriage was contracted and which was unknown to the other spouse. The results of nullity of marriage are different from those of DIVORCE. A decree of nullity declares, in effect, that the parties never were married, and at one time it absolved them from all obligations to one another. Today,

however, statutes in some states have mitigated the results of annulment, e g , by making children of the void marriage legitimate and by permitting alimony

Numantia (nōōmăn'shū, nū-), ancient settlement, Spain, near the Duero river and N of Soria Numantia heroically resisted repeated attempts of the Romans to capture it from the time of Cato's campaign (195 B C) until Scipio Aemilianus took it in 133 B C after an eight-month blockade, thus completing the conquest of Spain Modern archaeologists have uncovered the remains of Roman camps and evidences of settlement dating back to the Bronze Age

Numa Pompilius (nū'-, -pĭl'-), legendary king of Rome, successor to ROMULUS With the nymph EGERIA he reigned long and well To him was ascribed the origin of Roman ceremonial law and religious rites The sacred books ascribed to him and prescribing these rites were doubtless forgeries

number, in arithmetic, indicates either the count (or sum) of objects in a group or the position in an ordered list of objects The term refers also to the symbol which represents the count or the position of the objects The numbers used to count the objects in a group are called cardinal numbers, those used to indicate position in an ordered list, ordinal numbers The system of cardinal numbers, which consists of the natural numbers (1 e , positive whole numbers) only, has been extended from time to time to include new types of numbers as the concept of quantity became more complicated Negative numbers and ZERO were added, forming with the natural numbers a group referred to as the integers To the group of integers were added fractions, and the enlarged group was called the rational numbers Then irrational numbers such as $\sqrt{2}$ and $\sqrt[3]{4}$, which could not be written as any simple fraction, were added to form a group known as the real number system Another important addition to the concept of number is the imaginary or complex numbers (1 e , numbers involving $\sqrt{-1}$) which set a precedent for many further extensions of the number system by modern mathematicians The DECIMAL SYSTEM is merely an easy way of writing the values or approximate values of the numbers in the real number system in terms of our decimal notation Although some simple fractions such as ½ have no exact decimal equivalent (1 e , the decimal is a nonterminating decimal, such as .333), these fractions written as decimals will always, after some number of digits, repeat the sequence of digits (e g , $^3/_7$= .285714285714) so that the entire sequence, although unending, is known On the other hand, irrational numbers such as $\sqrt{2}$ are in decimal notation equivalent to an unending and nonrepeating sequence of digits ($\sqrt{2}$=1 4142) and must therefore be laboriously computed to the number of places desired Throughout the ages men have attributed certain characteristics to certain numbers, e g , the association of 13 with bad luck The use of numbers as having metaphysical properties has given rise to numerology, which bears the same relation to arithmetic, the science of numbers, that astrology bears to astronomy See also NUMERAL See Tobias Dantzig, *Number, the Language of Science* (2d ed , 1933)

number, in grammar, class (see GENDER) referring to distinctions of number Thus in English, nouns are said to be singular or plural depending on which form may be used after the numerals *one* or *two* (or before *is* or *are*) Some languages divide nouns into three numbers, for example, ancient Greek, Taos, and Arabic have singular, dual, and plural. Some languages have a number distinction termed *individual* vs *collective*. In Latin grammar the crossing of two kinds of gender in nouns, namely, gender proper and number, produces sixfold inflection of cases of the adjective

Numbers, book of the Old Testament, fourth of the five books of the Law (the Pentateuch or Torah) ascribed by tradition to Moses It continues the narrative of Exodus in the journey of the Jews from Egypt to the Promised Land—Leviticus is parenthetical in the account It begins at Sinai and ends in Moab on the eve of the entry into Palestine The geographical detail of the journey (10–21) is bare, and only the main lines can be discerned The book contains incidental legislation Its events include two censuses (1, 26), whence the title, the sending of spies to reconnoiter the Promised Land (10, 13), the emergence of Joshua and Caleb as leaders (14), the rebellion of Korah, Dathan, and Abiram (16), the curse of Balaam turned into a blessing (22–24), and the apostasy at Shittim punished by Phinehas (25) For critical views of the composition of Numbers and books on it, see OLD TESTAMENT

numbers, theory of, branch of mathematics concerned with higher arithmetic in which the properties of integers only are studied. A prime number is one which has no factors (see MULTIPLICATION) other than itself and 1 The first few prime numbers are 2, 3, 5, 7, 11, 13, 17, and 19 Of the many observations made regarding primes, some are trivial, e g , the fact that 2 is the only even prime, some are more involved, e.g., Euclid's proof that there is an infinite number of primes, and some are conjectures which mathematicians have not yet been able to prove or disprove, e g , that the number of pairs of consecutive primes (i e., pairs such as 3 and 5, 5 and 7, 11 and 13) is infinite One of the most important theorems of the number theory is the statement that every composite integer can be expressed as the product of primes and only one combination of primes (disregarding their order). Divisibility, another topic in the theory of numbers, is closely connected with the concept of prime numbers Another important part of number theory, known as the theory of congruences, consists of a generalization of the idea of classification of numbers into odd and even Another branch deals with the possibility of expressing each number as the sum of a certain number of squares, or of cubes, or other figures Historically the origins of number theory are lost in those of numerology, but it is at least certain that the Greeks obtained some important theorems in the subject, and much modern work has been done See L E Dickson, *Modern Elementary Theory of Numbers* (1939).

Numea, New Caledonia see NOUMÉA

numeral, symbol denoting number The decimal system is believed to have originated in counting on the fingers, using the two hands as the most convenient abacus Arabic numerals are 1, 2, 3, 4 Roman numerals are I, II, III, IV .. Both the Arabic and the Roman symbols are believed to be related to this abacus, I or I being one finger, 2 or II being two fingers, and 3 or III being three fingers The word *digit* is from the Latin *digitus*, meaning "finger " Some of the symbols are less easily explained, but V seems to be the open hand, and X seems to be two open hands The Roman system has no symbol for zero, in the Arabic system, zero is much more recent than the other symbols The Maya, who were skilled in mathematics, had a symbol for zero The symbols called Arabic were learned from Arabs by Europeans, but they apparently originated in India Languages show traces of reckoning by scores, the toes as well as the fingers having sometimes been included in the abacus The numeral symbols are ideograms Their meaning is clear, whatever the reader's language

Numidia (nūmĭ'dēə), ancient country, NW Africa, very roughly the modern ALGERIA It was part of the Carthaginian empire until Masinissa, ruler of E Numidia, took sides with Rome (c 206 B C) in the PUNIC WARS The peace of 201 B C began Numidia's most flourishing period, culturally and politically Masinissa's successor was Micipsa (148–118 B C), one of whose heirs, JUGURTHA, brought on a fatal war with Rome In the civil war, King Juba I sided with Pompey, and Numidia lost all independence Juba II was favored by the Romans, as a subject prince, the country flourished now for centuries It was invaded by the Vandals in the 5th cent and the Arabs in the 8th The main urban centers of ancient Numidia were Cirta (Constantine) and Hippo Regius (Bône)

numismatics (nū"mĭzmă'tĭks, nū"mĭs-), the study of coins and medals as works of art and as sources of information The COIN and the MEDAL preserve old forms of writing, portraits of eminent persons, and religious and national symbols and assist in the study of early customs, in ascertaining dates, and in clarifying trade relations Numismatists value coins and medals according to their rarity and condition, many extend their studies to include substitutes, e g , tokens and counters See F W Burgess, *Chats on Old Coins* (1913), standard catalogues of U S and European coins ed by Wayte Raymond.

Nun, father of Joshua Joshua 1 1 Non 1 Chron. 7 27

nun see MONASTICISM

Nun'Álvares Pereira: see PEREIRA, NUN'ÁLVARES.

Nunc dimittis (nŭngk dĭmĭ'tĭs) [Latin,=now thou dismissest], prayer of Simeon Luke 2 29–32 It begins, "Lord, now lettest thou thy servant to depart in peace, according to thy word " It is an evening hymn, sung in the Roman complin and the evening prayer of Anglican churches

nuncio, apostolic (nŭn'shēō), resident LEGATE of the Holy See at the capital of a temporal government There are nuncios in many countries In some the nuncio is by courtesy made the "dean" of the diplomatic corps For its ministers of the second class the Holy See uses the title apostolic internuncio.

Nunda (nŭn'dŭ), village (pop 1,077), W N Y , NW of Hornell, inc 1839. It has varied manufactures.

Nuneaton (nŭnē'tun), municipal borough (1931 pop. 46,291, 1947 estimated pop 53,240), Warwickshire, England, NNE of Coventry. There are remains of the 12th-century nunnery which gave Nuneaton its name. George Eliot was born here and used the town in several of her novels There are coal mines in the vicinity, and the borough manufactures cotton, silk, rayon, and woolen textiles, iron goods, and hats.

Nunes, Pedro (pā'drō nōō'nĭsh), Latin *Petrus Nonius* (pē'trus nō'nēus), 1492–1577, Portuguese mathematician, geographer, and writer on navigation and geometry. He was the first to demonstrate an instrument for measuring angles and was the reputed inventor of the rhumb line. He became royal cosmographer in 1529. From 1544 to 1562 he was professor of mathematics at Coimbra. Two of his works are *De Crepusculis* (1542) and *De arte atque ratione navigandi* (1546).

Núñez, Rafael (rāfāĕl' nōō'nyās), 1825–94, president of Colombia (1880–82, 1884–94) Elected as a liberal, Núñez accomplished the settlement of boundary disputes with Costa Rica and Venezuela during his first term He was reelected, put down a rebellion of the liberals (1885), and became steadily more conservative in outlook He advocated political centralism, and a new constitution (1886) created the republic of Colombia, a strong national authority in place of the former federation.

Núñez Cabeza de Vaca, Alvar: see CABEZA DE VACA, ÁLVAR NÚÑEZ

Núñez de Arce, Gaspar (gāspär' nōō'nyāth dā är'thā), 1834–1903, Spanish poet, b Valladolid. He was a popular patriotic poet, and his *Gritos del combate* [battle cries] (1875) is considered his best volume of poems He wrote plays too, of which the most famous is the historical drama *El haz de leña* [the bundle of fagots] (1872)

Núñez Vela, Blasco (blä'skō nōō'nyās vā'lä), d 1546, first viceroy of Peru (1544–46) Sent by Charles V to replace VACA DE CASTRO and to enforce the New Laws of Bartolomé de LAS CASAS, he quarreled with the newly appointed judges and aroused tremendous opposition by his hasty and injudicious actions The murder of an outstanding citizen, which was either ordered or actually committed by him, caused the *audiencia* of Lima to arrest him and put him aboard a ship for Spain He persuaded his guard to land at Tumbes, and then reasserted his authority Defeated by Gonzalo PIZARRO, he was slain by order of the brother of the man he had murdered

Nunivak (nōō'nĭvăk), island, 56 mi. long , off W Alaska, in the Bering Sea Treeless and fogbound, it has a small population Reindeer have been recently introduced, as has the musk ox. The island was discovered in 1821

Nünkiang (nōōn'kyäng', nün'-), Mandarin *Nunchiang*, province (25,885 sq mi , pop 3,308,906), NE China, bordered on the south by the Sungari river The capital is Tsitsihar Nünkiang, a part of Manchuria, was created in 1945 out of the southern section of the former province of Heilungkiang The Nonni river, a major tributary of the Sungari, crosses Nünkiang The soil in the valleys of these rivers is among the most fertile in Manchuria Soybeans and cereals are produced in exportable surplus There is a little grazing. The province is served by the Chinese Eastern RR and by a rail line connecting with the ports of the Manchurian coast

Nura see ULREICH, NURA (WOODSON)

Nureddin (nōō'rĕdēn'), 1118–74, ruler of Syria He was the son of the conqueror Zengi or Zangi, and he succeeded to power in 1145 He defeated the Seljuk Turks in Asia Minor and fought on somewhat better than equal terms with Baldwin III of Jerusalem His lieutenant Shirkuh barely forestalled the forces of Baldwin's successor, Amalric I, in occupying Egypt Nureddin built hospitals and caravansaries and was notable for his rule of temperance and justice Aroused by the independent actions of SALADIN, Shirkuh's successor, he was about to invade Egypt at the time of his death

Nuremberg (nyōō'rumbûrg), Ger *Nürnberg* (nurn'bĕrk"), city (1939 pop 423, 383, 1946 pop. 312,-338), Middle Franconia, N Bavaria, on the Pegnitz. It has a rich historical and cultural past and is an important industrial center and communications point Its industries produce heavy machinery, precision instruments, chemicals, and textiles There are large breweries. Homemade toys and gingerbread have long been traditional export articles Nuremberg has a state college for economics and sociology, an academy of fine arts, and a polytechnic institute Before 1945, about half the German production of airplane, submarine, and tank engines came from Nuremberg, as a result, the city was heavily bombed in the Second World War and was largely destroyed First mentioned in 1050, Nuremberg became a free imperial city in 1219 and thus was independent of the burgraviate of Nuremberg, which comprised a large part of Franconia and which came (1192) under the HOHENZOLLERN dynasty Nuremberg soon became, with Augsburg, one of the two great trade centers on the route from Italy to N Europe In the 15th and 16th cent it experienced a cultural flowering which made it the center of the German Renaissance Among the artists who were born or lived here, Albrecht Dürer was the greatest, others, such as Adam KRAFT, Veit STOSS, Peter VISCHER, and Michael WOLGEMUT, adorned the city with their works. Here the Italian Renaissance and the German Gothic tradition met and fused Nuremberg was also an early center for printing, science, and mechanical invention. Here KOBERGER set up his printing press and REGIOMONTANUS his observatory, and here the first pocket watches, known as Nuremberg eggs, were made c.1500. The cultural consciousness of the prosperous artisan class found expression in the contests of the meistersingers, among whom Hans SACHS was the most prominent The meistersingers were typical of the bourgeois

character of the cultural life in general. In 1532 the religious Peace of Nuremberg, by which the Lutherans gained important concessions, was concluded here. Nuremberg early accepted the Reformation In the Thirty Years War, GUSTAVUS II of Sweden was besieged here (1632) by Wallenstein. The city declined after the war and recovered its importance only in the 19th cent as an industrial center The first German railroad, from Nuremberg to Fürth, was opened in 1835 After Hitler came to power in 1933 Nuremberg was made a national shrine by the National Socialists, who held their annual party congresses here. The home of Julius STREICHER, the city became the capital of anti-Semitic propaganda At the party congress of 1935 the so-called Nuremberg Laws were promulgated, they deprived the German Jews of civic rights, forbade intermarriage between Jews and non-Jews, and deprived persons of partly Jewish descent of certain rights Fittingly enough, Nuremberg was chosen after the Second World War as the seat of the international tribunal for WAR CRIMES There is little left of the Nuremberg such as tourists knew it before the war Among the buildings that were damaged but not completely destroyed are the churches of St Sebald (13th-14th cent), St Lorenz (13th-14th cent), and St Jacob (14th cent), the castle of the Hohenzollern burgraves, the city hall (14th cent), and the house of Dürer The Germanic museum founded in 1852 was damaged, but its contents were saved The former aspect of the city, virtually unchanged since the Renaissance, has been destroyed

Nurmi, Paavo (pä'vō nōōr'mē), 1897–, Finnish track star Between 1920 and 1932 he set 20 world running records and six Olympic track titles—the 10,000-meter run and the cross-country event at Antwerp in 1920, the 1,500-meter and 5,000-meter and cross-country runs at Paris in 1924, and the 10,000-meter run at Amsterdam in 1928 He was disqualified as a professional in 1932 just before the Olympic games at Los Angeles and later became wealthy as a contractor and sports-goods merchant In 1940 Nurmi, with Taisto Maki, gave track exhibitions in New York city to help raise money for the Finnish Relief Fund

Nürnberg, Bavaria see NUREMBERG

nursery, in horticulture, an establishment for the production of plants or any area where plants are grown and propagated In North America the use of the term *nursery* is sometimes restricted to an establishment where strong, woody plants are grown In a tree nursery, where trees are raised for afforestation work, young trees are pruned for proper development before they are placed in permanent positions Soil for nursery purposes should be heavy and loamy, with a good percentage of clay beneath, the land should be as nearly level as possible Grafting and budding are among the various methods employed in plant propagation, especially for fruit trees The bulb nurseries of Holland were long the most famous in the world for flowers and ornamental plants Some of the leading nursery states in the United States are New York, California, and Texas

nursery rhymes, used in the nursery and in games of childhood The best-known examples are in English, the majority dating from the 17th cent A popular type of rhyme is used in "counting-out" games, e g , "Eeme, meenie, minie, mo " Most famous of nursery rhymes is the MOTHER GOOSE collection

nursery school, educational institution for children from two to four years of age It is distinguishable from a day nursery by the motives of its patrons and by its primary educational objective—to promote the social adjustment of the children The first nursery schools were opened in London in 1907 Pioneers in nursery school work in the United States were the State Univ of Iowa, Teachers College, Columbia Univ , and Smith and Vassar In 1930 the White House Conference on Child Health and Protection recognized the contributions of the nursery school to child development Few public school systems include nursery education, the facilities offered being chiefly commercial, philanthropic, or cooperative The Federal government sponsored nursery schools as a relief measure in the 1930s and to release women for employment during the Second World War See J C Foster and M L Mattson, *Nursery School Education* (1939)

nursing. The occupation of caring for the sick and helpless has existed from the beginning of recorded history When evil spirits were believed to cause illness, the sick were generally cared for in temples of worship, both men and women undertaking the nursing duties Nursing by women outside of their own homes was begun in the early Christian period, and the first groups of women who concerned themselves primarily with nursing were the deaconesses There was almost no education or training for this work until the 17th cent , when St Vincent de Paul encouraged such studies. A real hospital training school for nurses was not established until 1836 at Kaiserswerth, Germany. Here Florence NIGHTINGALE had her training in nursing She later established at St Thomas's Hospital in London the first school designed primarily to train nurses rather than to provide nursing service for the hospital Schools patterned after the Nightingale school were founded in 1873 in New York, New Haven, and Boston By the beginning of the 20th cent not only had many schools of nursing been established, but legislation regulating the practice of nursing had also been initiated in most states, public health and industrial nursing were developing rapidly, and university and college courses for graduate nurses had been begun As a result of studies made after the First World War, endowed university schools of nursing were opened and many inadequate schools were closed The great stress placed on the Second World War and the continuing demand for nursing services after the war frequently focused public attention on the education, salaries, and working conditions of nurses Since many nursing schools are not associated with universities and because their students are still learning nursing primarily by doing the work of the hospital, all nursing education is not yet on a truly professional level As the preventive aspects of medicine and public health have assumed greater importance, the need for nurses to study more than just the skilled techniques of caring for the sick has become increasingly apparent An understanding of methods of teaching and of basic principles of social work and a knowledge of the health needs of individuals of all ages are now generally considered important parts of nursing education See L L Dock and I M Stewart, *A Short History of Nursing* (4th ed , 1938), A H Grant, *Nursing a Community Health Service* (1942), Agnes Gelinas, *Nursing and Nursing Education* (1946), M E Chayer, *Nursing in Modern Society* (1947), L. K Wolf, *Nursing* (1947)

Nut see EGYPTIAN RELIGION

nut, in botany, a dry one-seeded fruit which does not open at maturity Commonly the word is used for any seed or fruit having an edible kernel surrounded by a hard or brittle covering Among the true nuts are the acorn, chestnut, filbert, and hazelnut, those which are not botanically true nuts are the ALMOND, BRAZIL NUT, CASHEW, COCONUT, LITCHI, PEANUT, PECAN, PISTACHIO, and WALNUT Nuts provide a valuable contribution to the diet, they are eaten fresh or roasted (salted and unsalted), preserved in syrup, ground to form nut butters, and combined with other foods in desserts, salads, and other mixed dishes Most nuts have a high content of oil, that of the Brazil, cashew, HICKORY, pecan, and walnut is especially high, averaging over 50 percent in most of them Those highest in protein content are the peanut and pine nut (having generally about 30 percent protein) and the almond, pistachio, and beechnut (averaging about 20 percent) Among the few with a high carbohydrate content are the chestnut and the water chestnut Nuts are relatively good sources of minerals and of vitamins They have for centuries formed an important dietary item in many parts of the world for man as well as for animals Although they were long harvested from wild trees, many nuts are now under cultivation In the United States the pecan has been of increasing economic importance since the late 19th cent and is widely cultivated in the warmer parts of the country Also cultivated in the United States are the almond, pistachio, and walnut See R T Morris, *Nut Growing* (1921), J R Smith, *Tree Crops* (1929), C D Bush, *Nut Grower's Handbook* (1941), F N Howes, *Nuts Their Production and Everyday Uses* (1948)

nutgall. see GALL

nuthatch (nŭt'hăch), name applied to a number of Old and New World species of small birds related to the titmouse and the creeper The name refers to its habit of wedging nuts into crevices in trees and pecking them open in order to eat the kernel With head up or down, nuthatches crawl over trees, hunting the insects and spiders which form about half of their diet Unlike the creepers, the nuthatches have straight bills and soft, short tail feathers. No nuthatches are real singers

Nutley, residential town (pop 21,954), NE N J , N of Newark, inc as a township 1874, as a town 1902 H C Bunner lived here The Kingsland Mansion dates partly from 1702

nutmeg, evergreen tree (*Myristica fragrans*) native to the Moluccas but now cultivated elsewhere in the tropics for the seed, a valuable spice also called nutmeg The nutmeg tree thrives best near the sea and in a rich, moist soil It grows to about 60 ft in height and has dark leaves and small, inconspicuous flowers, the male and female usually borne on separate trees. When ripe the fruit splits in half, showing the crimson aril, a fibrous, branched seed covering sold as mace, an aromatic spice The nutmeg proper is further protected by a thin, hard inner shell To prepare the spice for market the ripened husk is removed, the mace stripped off and dried, and the seed dried and stripped of the shell. The seed is sold whole or ground Inferior seeds and maces yield oil and nutmeg butter, both used in toilet preparations and in medicine. Nutmeg was one of the spices carefully held in monopoly by the Dutch in the Moluccas Other trees of the genus are also called nutmeg Connecticut is called the Nutmeg State in reference to the wooden nutmegs reputedly made there

nutria (nōō'trēu, nū'–) or **coypu** (koi'pōō), large aquatic rodent of South America, introduced in the S United States It has large, reddish incisor teeth, partially webbed hind feet, and a long, naked tail Its fur, resembling beaver but not as thick or durable, is important economically.

nutrition (nūtrĭ'shun), term generally used to include the various processes concerned with the securing, digestion, and utilization of food substances Plants which contain the green pigment chlorophyll can synthesize their own food from inorganic substances in the process called photosynthesis, a few one-celled forms with some characteristics of animal cells also contain chlorophyll and carry on photosynthesis This kind of nutrition is sometimes known as holophytic nutrition Characteristic of some plants and animals is parasitic nutrition (see PARASITE). Plants that absorb dissolved organic matter are called saprophytes, and animals that obtain food thus are said to employ saprozoic nutrition The more usual type of nutrition among animals involves the ingestion of plant and animal food, this is sometimes known as holozoic nutrition Human nutrition is a subject of vital importance to the individual as well as to communities and nations In recent years scientific research in nutrition has made great strides Although many problems remain to be solved, much has been learned about the role of the nutrients in providing for the growth, repair, and energy requirements of the body The importance of the daily DIET in helping to maintain the health of the body is recognized, methods of cookery have been adapted to retaining the nutritive value of foods Discovery of the significance of VITAMINS in preventing deficiency diseases and in contributing to optimum health are especially significant Good nutrition demands not only that the food intake be well chosen to include the essential vitamins, proteins, fats, carbohydrates, and minerals, but also that the calorie value of the food be considered in relation to the energy output A food intake of too high calorie value results in overweight and sometimes in obesity, which, like underweight, is an indication of faulty nutrition. The ratio of height to weight, although often commonly used as a criterion, is a far from adequate indication of whether the body of a child or an adult is well nourished Of great significance in determining the nutritional status are the condition of the skin, eyes, hair, subcutaneous fat, muscles, skeletal structures (including the bones, joints, and teeth), and the posture Development and maintenance of the characteristics indicative of good nutrition depend not only upon a well-balanced diet but also on the normal functioning of the digestive, circulatory, excretory, and other body systems The importance of good nutrition in contributing to good mental health has been increasingly emphasized in recent years There is a close relationship between good nutrition and ability to work and to enjoy life See H C Sherman and C S Lanford, *Essentials of Nutrition* (2d ed , 1943), H C Sherman, *The Science of Nutrition* (1943), *The Chemistry of Foods and Nutrition* (7th ed , 1946), and *The Nutritional Improvement of Life* (1950), E V. McCollum and J E Becker, *Food, Nutrition, and Health* (6th ed , 1947), M S Chaney and Margaret Ahlborn, *Nutrition* (4th ed , 1949)

Nuttall, George Henry Falkiner (nŭ'tôl), 1862–1937, American-British bacteriologist, b San Francisco, M D Univ of California, 1884, Ph D Univ of Göttingen, 1890 He was a member (1891–94) of the Johns Hopkins medical faculty In 1899 he became associated with Cambridge Univ , where he served as professor of biology (1906–31) He made important contributions to the knowledge of causative agents of infectious diseases and of hygienic measures related to such diseases He organized the Molteno Institute for Research in Parasitology at Cambridge and directed it from 1921 Nuttall established (1901) the *Journal of Hygiene* and was its editor until 1937, he also edited *Parasitology*, which he founded in 1908 His writings include *Blood Immunity and Blood Relations* (1904), he was editor of *The Bacteriology of Diphtheria* (1908)

Nuttall, Thomas, 1786–1859, American naturalist, b England He was a pioneer in American paleontology and was curator (1822–32) of the Harvard botanical garden He accompanied several scientific expeditions to the Mississippi and Missouri valleys and the Pacific coast and published his findings in *The Genera of North American Plants* (1818) and *A Manual of the Ornithology of the United States and of Canada* (1832) In 1842 he returned to England He wrote also *A Journal of Travels into the Arkansa Territory, during the year 1819* (1821), which was issued with the title slightly changed in 1905 as Vol XIII of *Early Western Travels, 1748–1846*.

Nutter Fort, industrial town (pop 1,803), N W.Va., near Clarksburg, settled 1770, inc 1924. It produces pottery and glassware

Nutting, Mary Adelaide, 1858–1948, American teacher of nursing, b Canada, grad Johns Hopkins School of Nursing, 1891. She was principal of the nursing school at Johns Hopkins from 1894

to 1907. From 1907 to 1925 she was successively professor of institutional administration and professor of nursing and health at Teachers College, Columbia University. In 1920 the Adelaide Nutting Historical Collection was established at Teachers College. In 1925 she became professor emeritus. She wrote *History of Nursing* (with L. L. Dock, 4 vols., 1907–12) and *Sound Economic Basis for Schools of Nursing* (1926).

Nuuanu Pali (nōō-ä'nōō pä'lē), cliff and mountain pass, c.1,200 ft. high, Koolau Range, on Oahu, T.H., 7 mi. N of Honolulu. The pass shortens the route from Honolulu across the island.

nux vomica (nŭks' vŏ'mĭkə), poisonous seeds of the tree *Strychnos nux-vomica*, found in India and N Australia. The drug nux vomica obtained from the dried seeds contains STRYCHNINE, and brucine (like strychnine a colorless, crystalline alkaloid) and, in addition, the glucoside loganin and sugar, acid, and oil. Generally the drug is used as a tincture, it has a powerful peristaltic action on the intestines.

Nuzi (nōō'zē), site near Kirkuk, N Iraq. Hundreds of clay tablets unearthed here bear inscriptions said to have been made by the HORITES (or Horites) of the Bible.

Nyack (nī'ăk), residential village (pop. 5,206), SE N.Y., on the west bank of the Hudson opposite Tarrytown; settled 1684 by Dutch, inc. 1833. The Hudson widens here to form Tappan Zee, crossed to Tarrytown by a ferry until 1941. The Hook Mt. section of Palisades Interstate Park is just north of here. Several artists and writers live in the village, and it is the seat of the Missionary Training Institute. Sewing machines, organs, and leather goods are made.

nyanza (nĭăn'zə, nē-) [Bantu, =lake], term applied to lakes of Africa. They are entered under the proper names, e.g., ALBERT NYANZA.

Nyasa, Lake (nĭă'sə, nē-), 360 mi. long and from 10 to 50 mi. wide, E Africa, between Nyasaland on the west and Tanganyika on the east. It is the southernmost of the great lakes of Africa. It was discovered (c.1616) by Portuguese explorers and rediscovered (1859) by David Livingstone. The Shiré river rises in Lake Nyasa.

Nyasaland (nĭă'sələnd", nē-), British protectorate (37,374 sq. mi.; pop. 2,049,695), E Africa. Zomba is the capital. It is bordered on the east by Lake Nyasa, on the north by Tanganyika, on the west by Northern Rhodesia, and on the south by Mozambique. Lying in the Great Rift Valley, it has precipitous uplands rising to 10,000 ft. The north is arid but abounds in game. The more fertile southern region supports a dense population. Tea, cotton, and tobacco are the chief crops and exports. Communications are by boat on Lake Nyasa, by road and by the railroad through Blantyre to Beira in Mozambique. Nyasaland was visited by Portuguese explorers in the 17th and 18th cent. and was rediscovered in 1859 by David Livingstone. He was followed by other Scots, who founded a mission named in his honor. British troops subdued (1887–97) Arab slavers here and defeated (1889) a Portuguese attempt to annex the southern uplands to Mozambique. Nyasaland was made a protectorate in 1891. It is ruled by an appointed governor and an executive and a legislative council.

Nyborg (nü'bôr), town (pop. 9,559), Fyn island, Denmark, on the Great Belt. It has shipyards and textile and other manufactures. A ferry connects it with Korsor on Zealand. Nyborg was an important medieval fort and trade center.

Nye, Edgar Wilson (nī), known as **Bill Nye**, 1850–96, American humorist, b. Shirley Mills, Maine. He lived in Wisconsin from 1852 to 1876, when he went to Wyoming. Here he was admitted to the bar and became a judge. He founded and edited (1881–84) the Laramie *Boomerang* and contributed the humorous comments and yarns collected in *Bill Nye and Boomerang* (1881) and *Forty Years and Other Lies* (1882). Later he was highly popular in the East, where he wrote for the New York *World* and gave lyceum recitals, some of them with James Whitcomb Riley. Among his later books are *Bill Nye's History of the United States* (1894) and a play, *The Cadi* (1891). See *Bill Nye His Own Life Story* (comp. by his son, F. W. Nye, 1926).

Nye, Gerald Prentice, 1892–, U.S. Senator (1925–44), b. Hortonville, Wis. After he settled (1919) in North Dakota he devoted himself to country journalism. He was appointed to fill an unexpired term in the U.S. Senate, where he remained until he was defeated for reelection in 1944. He headed many investigating committees, was an outspoken isolationist, and fathered the NEUTRALITY ACT.

Nyregyhaza, Hung. *Nyíregyháza* (nyē'rĕjhä"zô), city (pop. 59,156), NE Hungary. It is the industrial and commercial center of a region producing fruit and wine. The museum contains gold relics of Avar times.

Nyitra, Czechoslovakia: see NITRA.

Nykobing, Dan. *Nykøbing* (nü'kû"bĭng), name of several places in Denmark, formerly spelled Nykjobing. 1 City (pop. 16,097), Falster island. It is a Baltic port on the Guldborg Sound, which is here bridged to Laaland island. It has sugar refineries, shipyards, a fishing fleet, and various manufactures, and it is a Lutheran episcopal see. The city grew around a 12th-century castle, of which ruins remain. There is a Gothic church, originally (until 1532) a Franciscan monastery. 2 Town (pop. 8,825), N Jutland, on Mors island and on the Lim Fjord. There are textile and tobacco manufactures and oyster fisheries. 3 Town (pop. 4,409), N Zealand. It is a seaport and has meat and dairy plants and breweries.

Nykoping, Swed. *Nyköping* (nü'chû"pĭng), Baltic seaport (pop. 16,255), co. seat of Sodermanland co., SE Sweden. It has furniture, textile, and lumber manufactures. Nykoping played an important part in early Swedish history. There are ruins of its 13th-century castle, the 17th-century town hall has been preserved, although the city burned down in 1665 and was set afire by the Russians in 1719.

nylon, synthetic material derivable from coal, air, and water and capable of being formed into a filament. It is characterized by strength, elasticity, resistance to abrasion and chemicals, and low moisture absorbency and can be permanently set by heat. After 10 years of research E. I. du Pont de Nemours & Company introduced nylon in 1938 as monofilaments for bristles and in 1940 as multifilament yarn for hosiery. Nylon is now manufactured also in the form of sheets, coatings, and molded plastics and used in a variety of products, including fabrics, surgical sutures, thread, insulating wire coverings, mosquito netting and screening, gears and bearings, rope, and tire cords. In the Second World War the importance of nylon was evidenced by its use in parachutes, in glider tow ropes, and other essential equipment. Nylon is the generic name for long chain polymeric amides with recurring amide groups and is made by controlled polymerization of dibasic acids, diamines, and amino acids. The thousands of possible nylon polymers give a vast field for developing new types. See J. V. Sherman and S. L. Sherman, *The New Fibers* (1946).

Nymegen, Netherlands: see NIJMEGEN.

nymph (nĭmf), in Greek religion, female divinity associated with some natural object. The nymphs were the divinities most like human beings, and there were many stories of men married to nymphs, e.g., PELEUS and THETIS. Some famous nymphs were ARETHUSA, CALYPSO, DAPHNE, and ECHO. The ancients grouped the nymphs according to the natural objects they were connected with: Oceanids, in the ocean, daughters of OCEANUS; Nereids, in the Mediterranean, daughters of NEREUS; Naiads, nymphs of lakes, brooks, and springs; Oreads, mountain nymphs; and Dryads and Hamadryads, tree nymphs.

Nymphas (nĭm'fəs) [Gr., =spouse], Christian of Colosse. Col 4:15.

Nymphenburg (nüm'fənbôrk), suburb of Munich, Bavaria. It is celebrated for its magnificent château and park (begun 1664), which belonged to the dukes (later kings) of BAVARIA. A famous china manufacture was founded here in 1761. By the Treaty of Nymphenburg (1741) Spain promised Charles Albert of Bavaria (see CHARLES VII, emperor) its support in his attempt to secure the imperial election.

Nymwegen, Netherlands: see NIJMEGEN.

Nyssa (nĭ'sə), name of several ancient cities devoted to the worship of Dionysus. The best known of them is a town of Cappadocia, Asia Minor, near the Halys (now the Kizil Irmak), residence of Gregory of Nyssa.

Nyssa (nĭ'sə), town (pop. 1,855), E Oregon, on the Snake near the mouth of the Owyhee and NW of Boise, Idaho, inc. 1903. The town is on the OWYHEE river project and also is a market for this, the project at VALE, and the BOISE PROJECT. It has a beet-sugar refinery.

Nystad, Finland: see UUSIKAUPUNKI.

Nystad, Treaty of: see NORTHERN WAR.

O

O, 15th letter of the ALPHABET. It is a usual symbol for a mid, back, rounded vowel, rather like the first part of oi. Such a vowel was represented by omicron (ŏm'ĭkrŏn) [Gr., =little *o*], its formal and positional correspondent in the Greek alphabet. English ō is a diphthong of ŏ and w. In chemistry O is the symbol of the element OXYGEN. In surnames O' is derived from the Irish patronymic system, e.g., O'Neill originally meant "grandson of Niall," probably referring to Niall Glundubh, high king of Ireland, 915–19 (see NAME).

Oahu (ōä'hōō), island (589 sq. mi., pop. 257,664), third largest of the HAWAIIAN ISLANDS and commercially the most important. Oahu is between Molokai and Kauai and is separated from them by Kaiwi and Kauai channels, respectively. HONOLULU, the territorial capital, is on Oahu. There are two mountain ranges, the WAIANAE RANGE and the KOOLAU RANGE. The island has no active volcanoes, but it has many extinct craters, among them Diamond Head, Koko Head, and Punchbowl. Manoa Valley is the site of the Univ. of Hawaii, Punahou Academy, and the Mid-Pacific Institute. Oahu is a vital defense area with SCHOFIELD BARRACKS, the PEARL HARBOR naval base, and HICKAM FIELD. Besides WAIKIKI there are many other fine bathing beaches, some of which have coral gardens. Large pineapple and sugar plantations fill the rural area of the island; their products are the chief exports.

oak, any tree or shrub of the genus *Quercus*, of which there are about 300 species, including deciduous and evergreen kinds, native throughout the North Temperate Zone and into the tropics. They are cultivated for ornament and prized for their durable, hard, tough wood, which is especially valuable for construction purposes, particularly flooring, and for furniture and tool handles. The bark of some species is employed in medicine and tanning, that of the CORK OAK supplies the cork of commerce. The oaks fall into two groups, the black or red and the white. The black or red oaks (e.g., the scarlet, black or yellow, pin, Spanish, water, laurel, willow, and shingle oaks) have leaves or leaf lobes which are usually bristle-tipped and acorns which mature in two years. The white oaks (e.g., the white, bur, post, chestnut, basket, holly or holm, cork, and live oaks) have leaves or leaf lobes not bristle-tipped, mostly rounded, and acorns which mature in one year. The white oak is one of the most common of American oaks and the most important because of its wood. Indians have used acorns as food for centuries, in the Southwest they were a staple part of the diet. After special preparation the meats were made into a breadstuff. Acorns have also been used for food in Europe, the Mediterranean region, and Mexico. Acorn mast has long been used for fattening hogs. The round nutlike oak galls caused by the sting of certain insects are utilized commercially (see GALL). A symbol of strength, the oak has been greatly revered both for historical and for mythological associations. It was the favorite of Jove and Thor and especially sacred to the druids. The CHARTER OAK is one of the most famous of American oaks. Poison oak, Jerusalem oak, and other so-called oaks are not related.

Oak Bluffs, resort town (pop. 1,584), on NE Martha's Vineyard, SE Mass., settled 1642, set off from Edgartown 1880. It has a summer theater.

Oak Creek, coal-mining town (pop. 1,769, alt. c.7,400 ft.), NW Colo., near the Yampa river, inc. 1907.

Oakdale. **1** City (1940 pop. 2,592; 1946 special census pop. 3,457), central Calif., on a plateau above the Stanislaus river and SE of Stockton; inc. 1906. It is in an irrigated farming and dairying area of the San Joaquin Valley. **2** City (pop. 3,933), SW La., near the Calcasieu river SW of Alexandria, laid out 1886. It is in a lumbering and diversified farm area. **3** Borough (pop. 1,766), Allegheny co., SW Pa., near Pittsburgh, inc. 1872. Oil is obtained here.

Oakes (ōks), city (pop. 1,665), SE N.Dak., on the James river near the S Dak. line, platted 1886, inc. 1888. It is a shipping point for a dairy area.

Oakfield. **1** Town (pop. 1,059), NE Maine, W of Houlton, inc. 1897. **2** Village (pop. 1,876), W N.Y., NE of Buffalo, settled 1850, inc. 1858. It has a large gypsum plant.

Oak Grove, cotton town (pop. 1,654), parish seat of West Carroll parish, extreme NE La., near the Mississippi, inc. as a village 1908, as a town 1928.

Oakham (ō'kum), urban district (1931 pop. 3,191, 1943 estimated pop. 4,007), county town of Rutland, England. The Norman banquet hall of the old castle, now used for county offices, contains numerous horseshoes left in accordance with a custom requiring passing peers to leave a horseshoe or pay a fine. Oakham School, founded in 1584, is a public school for boys.

Oak Harbor, village (pop. 1,925), N Ohio, on the Portage river and SE of Toledo. It has varied manufactures.

Oak Hill. **1** Village (pop. 1,619), S Ohio, NE of Portsmouth. Firebrick is made here. **2** City (pop. 3,213), S W.Va., SE of Charleston, in a mining and stock-raising section, settled 1820.

Oak Island, S N.S., in Mahone Bay, a reputed hiding place of treasure buried by William KIDD. Many fruitless attempts have been made to locate the treasure. See Clara Dennis, *More about Nova Scotia* (1937).

Oakland. **1** City (1940 pop. 302,163; 1945 special census pop. 400,935), co. seat of Alameda co., W

Calif., on the east side of San Francisco Bay; founded 1850, inc. as a town 1852, as a city 1854. A port and an industrial center, the city has oil refineries, shipyards, railroad shops, and lumber mills. Its various products include processed fruits, automobiles, glass, beer, wine, chemicals, and building materials The San Francisco–Oakland Bay Bridge was opened in 1936, and several tunnels connect Oakland with other near-by cities Water is brought in by a 150-mile aqueduct from the Mokelumne river The city has fine parks, museums, an art gallery, and Chabot Observatory Mills College, the College of the Holy Names, and the California College of Arts and Crafts are here St. Mary's College (Catholic; for men, 1863) is near by **2** City (pop 1,131), E Ill , ESE of Decatur in a farm and livestock area, inc 1855 **3** Town (pop. 1,317), SW Iowa, on the West Nishnabotna river and E of Council Bluffs, inc 1882 **4** Town (pop. 2,730), SW Maine, just W of Waterville, inc. 1873 Lumber and woolen goods are made **5** Town (pop 1,587), co seat of Garrett co , NW Md , SW of Cumberland, in a mining and maple-sugar region, settled 1790. It is the trading center for the surrounding farms and summer resorts Backbone Mountain is near by **6** City (pop 1,380), E Nebr , near the Missouri NNW of Omaha, settled 1863, inc 1881 It is a trade and shipping center for a corn and livestock area

Oakland City, residential town (pop 3,068), SW Ind , NNE of Evansville Oakland City College is here

Oak Lawn, residential village (pop 3,483), NE Ill , near Chicago, inc 1909

Oakley, Annie, 1860–1926, American theatrical performer, b Darke co , Ohio Her real name was Phoebe Anne Oakley Mozee, and her husband's name was Frank E Butler *From childhood on she* was a "dead shot" with a rifle As a star (1885–1902) of Buffalo Bill's Wild West Show she performed remarkable feats of marksmanship and could perforate playing cards with bullets from a long distance, complimentary tickets came to be known as "Annie Oakleys" because their characteristic punchmarks in that period looked like bullet holes

Oakley, Violet, 1874–, American mural painter and designer of stained glass, b New York city, studied with Cecilia Beaux and Howard Pyle and in Paris Her work is notable for its illustrative quality, composition, and harmonious coloring Among her works are stained glass windows and mural decorations (Church of All Angels, New York), several series of murals, including *The Opening of the Book of Law* (state capitol, Harrisburg, Pa), *The Constitutional Convention* (courthouse, Cleveland), and *A Vision of the Apocalypse* (Vassar College)

Oakley, city (pop 1,138), NW Kansas, inc 1887 It is a rail center in a wheat and livestock area

Oaklyn, residential borough (pop 3,869), SW N J , near Camden, settled 1682 by Friends, laid out c 1890, inc 1905

Oakmont, residential borough (pop 6,260), SW Pa , on the Allegheny river and NE of Pittsburgh, inc 1889 It has a paper mill At a well-known golf links here national tournaments have been held

Oak Park. 1 Residential village (pop 66,015), NE Ill , adjoining Chicago, settled 1833, inc 1901 Oak Park is one of the largest communities to have a village form of government Its manufactures include food and metal products It has a number of churches and denominational schools Many of its houses were designed by Frank Lloyd Wright, who lived here **2** City (pop 1,169), SE Mich , northwest suburb of Detroit, inc as a village 1927, as a city, 1945

Oak Ridge, area (59,000 acres, 1944 pop c 75,000, 1948 pop c 30,000), E Tenn , on Black Oak Ridge and the Clinch river and near Clinton It was called the Clinton Engineer Works when in 1942 it was chosen as the site for work of the "Manhattan District," which developed the materials of the atomic bomb The many workers lived here, but the existence and purpose of the community were kept secret from most of the country until July, 1945 The project was under the control of the U.S Corps of Engineers until Dec 31, 1946, when it was transferred to the control of the Atomic Energy Commission The former Clinton National Laboratory for research in nuclear physics and further applications of atomic energy became in 1948 the Oak Ridge National Laboratory The plants in Oak Ridge make radioactive isotopes for medical and industrial uses and the product known as U-235 which may be used in atomic bombs In 1948 was organized the Oak Ridge Institute of Nuclear Studies composed of 14 member universities

Oakville, town (pop. 4,115), S Ont , on Lake Ontario and SW of Toronto It is a port, with boat-building, woodworking, and manufactures of aluminum products and paint.

Oakwood. 1 City (pop 7,652) SW Ohio, near Dayton **2** Town (pop. 1,086), E central Texas, on the Trinity and SW of Palestine, in a lumbering region; inc. 1908.

oasis (ōā'sĭs, ō'ə̆sĭs), fertile area in the desert. Oases are to be found where there is enough moisture to permit the growth of vegetation The water may come up to the surface in springs, or it may be collected and retained in mountain hollows In the Sahara there are mountains of sufficient height to cause occasional precipitation, which is the reason for many oases in that region The creation of oases by artificial irrigation in desert areas has been successfully performed, especially in the southern part of Israel (Negev) Oases vary considerably in size They range from a pond with a group of date palms to oasis cities with extended agricultural cultivation Such places, especially to be found in North Africa, are important centers of the caravan trade

Oates, Titus (ōts), 1649–1705, English conspirator. His life before 1678, full of scandal and intrigue, is unimportant In 1678 he and Israel Tonge, preying upon the violent anti-Catholic fears of the time, invented the story of the Popish Plot, a Jesuit-guided plan to assassinate Charles II and hasten the succession of James, duke of York (James II), a Catholic The account was completely fabricated, and Oates, examined by the privy council, would perhaps have been immediately exposed had not letters from Edward Coleman, secretary to the duchess of York, to the French Jesuit, François La Chaise, been discovered as a result of his accusations The unexplained death of Sir Edmund Berry Godfrey, the judge to whom Tonge and Oates first told their story, was with no evidence laid to the Catholics, and three were hanged for it. During the frenzy which ensued, many Catholics were persecuted and killed, both legally and by mob violence Oates enjoyed temporary eminence and even accused Queen Caroline of plotting to poison the king, although the charge was exposed as a hoax In 1685 Oates was convicted of perjury, severely flogged, and imprisoned Under William III he was released and pensioned See F C Turner, *James II* (1948)

oath. From the earliest days of man's history, calling upon the gods of a community to witness the truth of a statement or the solemnity of a promise has been commonly practiced The force of the oath depended on the belief that supernatural powers would punish falsehood spoken under oath or violation of the promise The oath thus had wide legal and quasi-legal use It was the basis of the medieval process of compurgation It is much used in legal proceedings today, thus a jury is "sworn in," and a witness takes an oath before testifying In modern times the force of the oath is strengthened by punishment for perjury Some difficulties have arisen in the cases of atheists and of persons with religious scruples against oath taking (e g , Quakers), but statutes have now generally modified the forms to give the force of an oath to the making of an affirmation in due form The main classes of oaths are the assertory oath, which is a statement concerning past or present facts, and the promissory oath, which refers to future conduct (such as that taken by an alien upon naturalization or that of a high government official on assuming office)

oats, grasses of the genus *Avena*, most of which are annuals The early history of oats in agriculture is even more obscure than that of most of the staple farm crops They endure cold better than heat, and they seem to have been grown in the north of Europe before they were known to the civilizations about the Mediterranean They are not mentioned in the Bible In the north of Europe they were grown widely in the Bronze Age, the time when horses were first used as draft animals They are famous as a grain for horses, a spirited horse is said to "feel his oats " As a grain for men they have stronger competition, though oatmeal is a popular breakfast cereal In the British Isles and in America oats are a leading grain crop The commonly cultivated species is *Avena sativa* Oats fit into crop rotations well, and they supply grain for the farmer's horses The yield per acre commonly has a lower money value than that of other staple crops See T B Hutcheson and T K Wolfe, *The Production of Field Crops* (3d ed , 1948)

Oaxaca (wähä'kä), state (36,375 sq mi , 1946 estimated pop 1,327,476), S Mexico, on the Pacific Ocean and its inlet, the Gulf of Tehuantepec It is officially called Oaxaca de Juárez in honor of its native son, Benito Juárez The state is almost entirely dominated by the southern range of the Sierra Madre del Sur and its lateral spurs, there are deep, tortuous valleys in the southern part and broad, open, semiarid valleys and plateaus in the north Except on the west (on the Guerrero border) and the north (on the Puebla border), the periphery of the state, from Veracruz in the northeast to the Isthmus of Tehuantepec in the east and to the Pacific littoral in the south, is tropical Rainfall is heaviest along this fringe In general, the climate of the interior is warm to cool and healthful Fertile valleys make agriculture the principal industry, sugar cane, coffee, cacao, tobacco, cotton, corn, wheat, rubber, indigo, and tropical and semi-tropical fruits and vegetables are grown Stock raising is important Mineral deposits, reportedly extensive, are unexploited. Manufactures include textiles of cotton, wool, and pita fiber, serapes, pottery, leather goods, cigarettes, and sugar and mescal, rum, and beer The most thoroughly Indian of the states, with its population predominantly Mixtec and Zapotec, Oaxaca has two famous archaeological sites at Mitla and Monte Albán The capital, **Oaxaca** (pop 29,306), also officially Oaxaca de Juárez, is in a long, broad valley encircled by low mountains It is a charming provincial city with gardens and many fine examples of colonial church architecture It is subject to severe earthquakes The chief city of S Mexico, it is connected with the federal capital by rail and the Inter-American Highway Oaxaca is noted for hand-wrought gold and silver filigree, pottery, and serapes (perhaps the finest in Mexico) According to Aztec tradition, Oaxaca was founded (1486) as Huasyacac during the brief ascendancy of the Aztec over the Mixtec and the Zapotec In 1522 the Spanish conquered it, renaming it Antequera in 1524 It was also known as Segura de la Frontera before the Indian name was restored Prominent in the revolution against Spain, Oaxaca also joined in the War of the Reform and in resistance to the French intervention The city was the birthplace of Porfirio Díaz

Ob (ŏp), river, 2,113 mi long, RSFSR, in W Siberia One of the largest rivers of the world, it is formed by the junction of the Biya and Katun rivers, SW of Bisk, in the Altai region and flows generally NW past Barnaul and Novosibirsk through the swampy forests in the Tomsk and Narym regions; it then turns east and is joined by the Irtysh near Khanty-Mansisk There the Ob turns north, dividing into many arms, and after passing Salekhard enters Ob Bay, an estuary (c 500 mi long and 35 to 50 mi wide) which empties into the Kara Sea Ob Bay has fresh water The width of the Ob varies from ½ mi at Barnaul to 12 mi in its lower course The chief tributaries are the Tom, Chulym, and Ket on the right and the Irtysh on the left. Though frozen for six months of the year, the Ob is an important trade route It is linked with the Yenisei by a canal joining the Ket with the Kas, a tributary of the Yenisei Built in 1882–91 for small craft, the canal has fallen into disuse

Obadiah (ō"bədī'ə) [Heb ,=servant of God] **1** Prophet, author of the book of Obadiah **2** Ahab's major-domo 1 Kings 8 3-16 **3** Descendant of David 1 Chron 3 21 **4** Issacharite 1 Chron 7.3. **5** Benjamite 1 Chron 8 38 **6** One of David's mighty men 1 Chron 12 9 **7** Prince under Jehoshaphat 2 Chron 17 7 **8** Repairer of the Temple 2 Chron 34 12 **9, 10, 11** Israelites who returned from the Exile Ezra 8 9, Neh 10 5, 12 25 **12** Father of Ishmaiah **13** Same as Abda **2**

Obadiah or **Abdias** (ăbdī'ə̆s), book of the Old Testament, fourth and shortest of the books of the Minor Prophets The prophet is otherwise unknown and has been dated from the 8th to the 6th cent B C , verses 1-9 seem to be quoted in Jer 49 The prophecy calls down doom on Edom, who had gloated over the misfortune of Israel, and says that Israel will triumph in the judgment For bibliography, see Old Testament.

Obaidallah : see Fatimite

Obal (ō'bəl), son of Joktan Gen ¶10 28 Ebal· 1 Chron 1 22

Oban (ō'bən), burgh (pop 5,759), Argyllshire, Scotland, on the Firth of Lorne Oban, a port and seaside resort, is the scene of the annual Argyllshire Highland Gathering, in September, and its harbor is a headquarters for boats to the neighboring islands There are Catholic and Protestant cathedrals In the grounds of Dunolly Castle is a great rock called the Dog Stone, to which Fingal is supposed to have fastened his dog Bran Oban figures in Scott's *Lord of the Isles*

obbligato (ŏblēgä'tō, ōblē-) [Ital ,=obliged], in music, originally a term by which a composer indicated that a certain part was indispensable to the music Obbligato was thus the opposite direction to ad libitum, which indicated that the part so marked was unessential and might be omitted Misunderstanding of the term *obbligato*, however, resulted in a reversal of its meaning, when a violin part, for example, is added to a song it is called a violin obbligato, whereas it is actually a superfluous ornament, unnecessary to the music, and ad libitum would be a more precise direction

Obdorsk, RSFSR see Salekhard

Obed (ō'bĭd) [Heb ,=servant] **1** David's grandfather Ruth 4 21,22, 1 Chron 2 12, Mat 1 5; Luke 3 32 **2** One of David's mighty men 1 Chron 11 47 **3** Jerahmeelite 1 Chron 2 37,38 **4** Father of Azariah **18** **5** Gatekeeper at the Temple. 1 Chron 26 7

Obed-edom (-ē'dŏm) [Heb ,=servant of Edom], Levite in whose house the Ark of the Covenant rested 2 Sam 6 10, 1 Chron 13.13, 15 18,21,24, 16 5,38, 26 4,8,15, 2 Chron 25 24

Obeid, El (ĕl ōbād'), town (pop 65,800), central Anglo-Egyptian Sudan An Egyptian army was annihilated here in 1883 in the revolt of the Mahdists El Obeid is the terminus of a railroad to Khartoum and a center for caravans There is trade in oil seeds

obelisk (ō'bəlĭsk), slender four-sided tapering monument, usually hewn of a single great piece of stone,

terminating in a pointed or pyramidal top Among the ancient Egyptians these monoliths were commonly of red granite from Syene and were dedicated to the sun god They were placed in pairs before the temples, one on either side of the portal The greatest number erected in any one place were in Heliopolis, but eventually almost every temple entrance was flanked by a pair of them Down each of the four faces, in most cases, ran a line of deeply incised hieroglyphs and representations, setting forth the names and titles of the Pharaoh The cap, or pyramidion, was sometimes sheathed with copper or other metal Great numbers of obelisks were made in the XVIII and XIX dynasties, and some date from times as early as the IV dynasty (c 2900–c 2750 B C) Those of colossal size were first raised in the XII dynasty Of obelisks still standing in Egypt, one remains at Heliopolis and two at Karnak, one the time of Thutmose I and one of Queen Hatshepsut which is estimated to be 97½ ft high Many of the historic shafts have been carried from Egypt, notably one of the reign of Ramses II from Luxor, now in the Place de la Concorde in Paris, and CLEOPATRA'S NEEDLES in London and New York Others are in Rome and Florence In the United States two familiar structures of obelisk form (though not monoliths) are the Washington and the Bunker Hill monuments

Oberalp (ō'buralp"), pass, 6,716 ft high, between Grisons and Uri cantons, Switzerland The small lake Oberalpsee (ō"buralp"zā') is near by, and the Alpine peak Oberalpstock (ō"buralp'shtōk), 10,925 ft high is northeast of the pass

Oberammergau (ō"bura'murgou), village (pop 5,101), Upper Bavaria, in the Bavarian Alps near Garmisch-Partenkirchen It is famous for the PASSION PLAY performed here by the peasants every 10 years, originally in fulfillment of a vow made during a plague in 1633 It attracts foreign tourists, who constitute the major source of revenue for the village There are a rococo church and many hotels

Obergurgl, Austria see OTZTAL ALPS

Oberhausen (ō'burhou"zun), city (pop 174,117), in the former Rhine Prov of Prussia, NW Germany It is an industrial center of the RUHR district and adjoins Duisburg, Mülheim, and Essen

Oberholtzer, Ellis Paxson (ō'burhōlt"sur), 1868–1936, American historian, b Chester co, Pa, grad Univ of Pennsylvania (B A, 1889, Ph D, 1893) He studied abroad at several universities and for a number of years worked on various Philadelphia newspapers His doctoral thesis, *The Referendum in America* (1893), became widely known He edited the *Manufacturer* (1896–1900) and the "American Crisis Biographies," and from 1915 to 1921 he was secretary of the Pennsylvania State Board of Motion Picture Censors Besides such books on Philadelphia history as *The Literary History of Philadelphia* (1906) and *Philadelphia a History of the City and Its People* (4 vols, 1912), he wrote *Robert Morris, Patriot and Financier* (1902), *Jay Cooke, Financier of the Civil War* (2 vols, 1907), *A History of the United States since the Civil War* (5 vols, 1917–37), and *The Morals of the Movie* (1922)

Oberland, Bernese see BERN

Oberlin, Jean Frédéric (ō'bürlĭn, Fr zhã' frādārēk' ōbĕrlē'), 1740–1826, Alsatian Lutheran clergyman He was appointed in 1767 to a pastorate in Bande-la-Roche, Bas-Rhin dept, France He notably improved the district by introducing cotton manufacture, new agricultural methods, and good roads and founded a savings bank and a model orphan asylum Oberlin College, Ohio, was named for him See biography by Marshall Dawson (1934)

Oberlin (ō'burlĭn) **1** City (pop 1,878), co seat of Decatur co, NW Kansas, near the Nebr line, in a hilly farming area, laid out 1878, inc 1885 In the cemetery is a monument to the settlers killed (1878) in a Cheyenne raid, the last Indian massacre in Kansas " **2** Village (pop 4,305), N Ohio, S of Lorain **Oberlin College** (nonsectarian, coeducational) opened in 1833, was chartered in 1834 by two missionaries as an institute using the manual labor system, and was renamed in 1850 It includes a college of arts and sciences, a pioneer music conservatory, and a graduate theology school It has a large library, an observatory, and an art museum A pioneer in coeducation, Oberlin has given degrees to women since 1837 Lucy Stone and Antoinette Blackwell graduated here It was a strong abolitionist center and one of the first colleges to admit Negroes Alumni and students have sponsored Oberlin-in-China New England Congregationalists predominated on the early faculties, and **Oberlin theology** was a modified form of Calvinism which included the doctrine of free will (see FINNEY, CHARLES G)

Oberon (ō'burŏn), in literature of Western Europe, a FAIRY king, husband of Titania He appears in the Middle French *Huon de Bordeaux*, whence, probably he was drawn by Chaucer, Spenser, and Shakspere (*A Midsummer Night's Dream*) Ben Jonson wrote a masque called *Oberon* C M Wieland's *Oberon* is the basis of C M von Weber's opera *Oberon*

obesity (ōbē'sĭtē, ōbē'), excessive accumulation of fat in the body Even a small amount of excess food eaten daily over a long period results in fat laid down beneath the skin, in the peritoneal folds of the abdomen, and within the tissues of organs DIABETES shows a relation to obesity Certain obese persons have a low rate of METABOLISM and show disturbances of the thyroid gland, the pituitary gland, or other ductless glands However, the greater number of obese persons have a normal rate of metabolism They should be treated by a suitable DIET which keeps the body in a satisfactory state of NUTRITION, but results in utilization of stored fat

Obil (ō'bĭl) [Heb =camel driver], keeper of David's camels He was an Ishmaelite 1 Chron 27 30

Obion (ōbī'un), town (pop 1,151), W Tenn, on the Obion, in a fertile farm area Reelfoot Lake lies to the northwest

oblast (ō'blast, ŏ'–, Rus ŏ'blŭstyu) [Rus =region], administrative division in the USSR Oblasts where the majority of the population are of a nationality different from that of the constituent republic in which they are included generally enjoy autonomous status The limits of oblasts are usually based on economic and ethnical considerations, as a result, oblasts vary considerably in size

Oblong, village (pop 1,547), SE Ill, near the Wabash SE of Decatur, in an oil, gas, and farm region, inc 1883

oboe (ō'bō, ō'boi) [Ital, from Fr *hautbois*] or **hautboy** (ō'boi, hō'–), wood wind instrument of conical bore, its mouthpiece having a double reed The instruments having these general characteristics may be referred to as the oboe family, which includes the English horn, the bassoon, and the contrabassoon The oboe was developed in the late 17th cent, particularly in France, out of the various less expressive double-reed instruments known as shawms From the baroque period to the present, the oboe has been favored as a highly expressive orchestral instrument Handel composed extensively for it as a solo instrument, but it has been only occasionally used in solos and chamber music until recent times, when the existence of several oboe virtuosos has drawn attention to its possibilities for such uses The natural scale of the oboe is D, but it is not scored for as a transposing instrument The **oboe d'amore** (damō'rā) [Ital, =oboe of love], a transposing instrument, was also much used in the baroque era It was often given a part in the cantatas of Bach, as was the now obsolete **oboe da caccia** (da kat'chē) [hunting oboe], the predecessor of the English horn

Oboth (ō'bŏth), unidentified desert encampment, E of the Dead Sea Num 21 10, 33 43

Obregón, Álvaro (al'varō ōbrāgōn'), 1880–1928, Mexican general and president (1920–24) A planter in Sonora, he supported Francisco I MADERO in the revolution against Porfirio DÍAZ In 1913 Obregón joined Venustiano CARRANZA in the overthrow of Victoriano HUERTA and later commanded against the opponents of Carranza, especially Francisco VILLA Obregón was for a time minister of war, but when Carranza attempted to perpetuate his own power, he led a successful revolution (1920) After the provisional administration of Adolfo de la HUERTA, Obregón became president The revolution in his administration advanced out of a welter of confusion and blood into a recognizable, though not well-formulated, system of agrarian and labor reforms The quarrel between the government and American oil interests continued A significant achievement of the Obregón regime was the educational program advanced by José VASCONCELOS Obregón's government was gravely challenged when Adolfo de la Huerta, disappointed in his presidential aspirations, led an unsuccessful revolt (1923–24) CALLES succeeded to the presidency In 1928 Obregón was again chosen president, but before taking office he was assassinated He wrote *Ocho mil kilómetros en campaña* (1917), recollections of his campaigns

Obrenovich (ōbrē'nuvĭch), Serbian dynasty Its founder, Milosh Obrenovich (see MILOSH), was the first modern Serbian ruler His murder (1817) of Karageorge started the long feud between the Obrenovich and the KARAGEORGEVICH families Milosh's son MICHAEL, prince of Serbia, was assassinated (1868) by the Karageorgevich faction His successor, Prince MILAN, was proclaimed king of Serbia in 1882 ALEXANDER, king of Serbia (Milan's son), was the last ruling member of the dynasty, on his assassination (1903) the Karageorgevich dynasty again came into power

O'Brien, Fitz-James, 1828?–1862, Irish-American author and journalist, b Ireland He settled in New York in 1852 He is remembered for two of his short stories, 'The Diamond Lens" and "The Wondersmith," and a play, *A Gentleman from Ireland* (1854) He served in the Civil War and died of wounds See his *Collected Stories* (ed with an introduction by Edward J O'Brien, 1925)

O'Brien, Lucius Richard, 1832–99, Canadian landscape painter He worked in an architect's office and later became an engineer He is noted for his water-color landscapes, especially of Rocky Mt scenery, which are represented in Windsor Castle, Osborne House, Isle of Wight; and the Ottawa Gallery. A founder of the Royal Canadian Academy of Arts, he was its first president (1880–90).

O'Brien, William, 1852–1928, Irish journalist and political leader His newspaper, *United Ireland* (founded 1880), championed the Irish agrarian cause He was prosecuted nine times for political offenses, while in prison he wrote his famous *No Rent Manifesto* He served in Parliament (1883–95, 1900–1918), was influential in reuniting the Parnell factions in the 1890s, initiated the United Irish League (1898), and helped shape the Wyndham Land Act of 1903, which began a real solution of the IRISH LAND QUESTION In his latter years he advocated a conciliatory policy toward Britain He wrote *Recollections* (1905), *Evening Memories* (1920), and *The Irish Revolution* (1923), his letters were edited by his wife as *Golden Memories* (1929)

O'Brien, William Shoney, c 1826–1878, American silver magnate, b Dublin, Ireland He was brought as a child to the United States and worked in a New York grocery store before going to California in the gold rush of 1849 He ran a saloon in partnership with James Clair Flood, and the two of them through speculation in silver stocks built fortunes and joined John William Mackay and James Graham Fair in exploiting silver mines in Nevada See Oscar Lewis, *The Silver Kings* (1947)

O'Brien, William Smith, 1803–64, Irish revolutionary Educated at Cambridge, he entered the British Parliament from Ireland in 1828 as a supporter of Robert PEEL and worked for Catholic Emancipation, Irish poor relief, and state support of the Irish Catholic clergy O'Brien's political career moved steadily to the left At first he opposed the agitation of Daniel O'CONNELL to repeal the union of Great Britain and Ireland, believing the British Parliament would grant some relief to Ireland, but by 1843 he had joined the Repeal Association and rapidly became O'Connell's second in the Irish nationalist struggle O'Brien's group, called Young Ireland, quickly became convinced that only direct action would free Ireland, and in 1846, with John MITCHEL, Thomas Francis MEAGHER, and Charles Gavan DUFFY, O'Brien seceded from O'Connell's association to form the Irish Confederation The aggravation of the famine and Mitchel's arrest and conviction in 1848 determined them to rise against the government The revolt was abortive, and the only engagement was an attempt to attack a police detachment in Co Tipperary O'Brien was arrested and transported to Australia He was given a full pardon in 1856 Thereafter he returned to Ireland and traveled extensively on the Continent and in America, but was no longer politically active See Denis Gwynn, *Young Ireland and 1848* (1949)

observatory, building or institution for the observation and recording of astronomical, meteorological, magnetic, or seismological phenomena In popular usage the term is usually applied to astronomical observatories, which are the oldest type and the most numerous Although in ancient Babylonia and Egypt heavenly bodies were observed from temples and towers, no record exists of any observatory earlier than the one founded c 300 B C by Ptolemy Soter (Ptolemy I) at Alexandria In the 9th and 10th cent the Mohammedans established observatories at Baghdad and Damascus, and in the 15th cent Ulugh-Beg, a grandson of Tamerlane, erected an observatory at Samarkand The first notable observatory in Europe was established in 1472 at Nuremberg by Regiomontanus Tycho Brahe constructed (1584) a remarkably well-equipped observatory, Stjarneborg, on the grounds of his castle, Uranienborg, on the island of Ven Early instruments used in observatories included devices for measuring angles and for telling time and also aids to calculations and observation, such as the astrolabe The invention (1609) of the telescope and its application (1610) by Galileo to astronomical observation marked a new epoch in astronomical research and stimulated the establishment of observatories by educational institutions (Univ of Leiden, 1637), by individuals (e g, Hevelius, c 1641), and by rulers (Christian IV of Denmark, at Copenhagen, 1637, completed 1657 and directed by Longomontanus) National observatories were founded in Paris (1667–71) and at Greenwich, England (Royal Observatory, 1675) Memorable among later private observatories were those of Sir William Herschel and of the 3d earl of Rosse With the great cost and diversification of telescopes and auxiliary equipment and the increasing body of astronomical knowledge, observatories tend to limit their field of research Recognition of the importance of atmospheric conditions for optimum observation has resulted in careful selection of sites (i e, those offering dry, clear, steady atmosphere, a suitable elevation, and sufficient distance from city lights) for the construction of new observatories and for the establishment of branches of older institutions South Africa and parts of California and of desert regions in the W United States are considered especially good There are more than 300 active astronomical observatories including national observatories, college and university observatories, and independent

institutions in all parts of the world The Federal government maintains the UNITED STATES NAVAL OBSERVATORY, Washington, D.C. Harvard Observatory (founded 1839), has buildings at Cambridge and at Oak Ridge, Mass., and stations at Climax, Colo , and at Bloemfontein, South Africa Yale Univ has an observatory at New Haven, Conn , and a southern station at Johannesburg, South Africa The Univ of Michigan has an observatory at Ann Arbor and participates in supporting the McMath-Hulbert Observatory, near Pontiac, Mich , and the Lamont-Hussey Observatory (27-inch refractor) at Bloemfontein, South Africa Observatories in the United States which have important refracting telescopes include Yerkes Observatory (40 in), Univ of Chicago, at Williams Bay, Wis , Lick Observatory (36 in), Univ of California, on Mt Hamilton, Allegheny Observatory (30 in), Univ of Pittsburgh, Leander McCormick Observatory (26 in), Univ of Virginia, and Lowell Observatory (24 in), Flagstaff, Ariz Observatories noted for their reflecting telescopes include Mt Palomar Observatory (200 in), California Institute of Technology, near Pasadena, Mt Wilson Observatory (100 in), Carnegie Institute, at Mt Wilson, Calif , McDonald Observatory (82 in), Univ of Texas, at Mt Locke, Texas, Perkins Observatory (69 in), Ohio Wesleyan and Ohio State universities, at Delaware, Ohio Among other noted observatories in the United States are Flower Observatory, Univ of Pennsylvania, at Upper Darby, Pa , Goodsell Observatory, Carleton College, Northfield, Minn , Steward Observatory, Univ of Arizona, Tucson, Warner and Swasey Observatory, Case Institute of Technology, Cleveland, and Washburn Observatory, Univ of Wisconsin, Madison, Wis Outstanding Canadian observatories are David Dunlap Observatory (74-inch reflector), Univ of Toronto, Dominion Astrophysical Observatory (73-inch reflector), Victoria, British Columbia In Great Britain are the Royal Observatory formerly at Greenwich, the Royal Observatory at Edinburgh, Dunsink Observatory at Dublin, the University Observatory and Radcliffe Observatory (now inactive) at Oxford Univ , and the Cambridge University Observatory France has the Paris Observatory with a solar physical branch at Meudon, near Versailles, and observatories in several cities including Marseilles, Toulouse, Lyons, Nice, and Algiers (in Africa) Noted observatories in Germany were also erected, including the Urania, Treptow, and Babelsberg observatories, all in Berlin, the Borgeldorf Observatory near Hamburg, the astrophysical observatory at Potsdam, Konigstuhl Observatory, Heidelberg, and several noted university observatories, e g , Bonn and Leipzig Italy has a number of observatories including two in Rome and those at Milan, Padua, Palermo, and Arcetri (near Florence) The Pulkovo Observatory, near Leningrad, was made famous by F G W Struve in the early 19th cent In South Africa are branches of the Yale and Harvard observatories, the Royal Observatory, Capetown, Union Observatory, Johannesburg, and National Observatory, Bloemfontein See also TELESCOPE See A F Collins, *The Greatest Eye in the World* (1942), G E Pendray, *Men, Mirrors, and Stars* (1935, rev ed, 1946)

obsidian (ŏbsĭd'ĭən), a volcanic GLASS, homogeneous in texture and having a low water content, with a vitreous luster and a conchoidal fracture The color is commonly black, but may be some shade of red or brown, and cut sections sometimes appear to be green Thin sections are usually translucent Like other volcanic glasses, obsidian is a LAVA which has cooled too quickly for the contained minerals to crystallize In chemical composition it is rich in silica and similar to granite It is favored by primitive peoples for knives, arrowheads, spearheads, and other weapons and tools

obstetrics (ŏbstĕ'trĭks), branch of medicine dealing with pregnancy and labor The care of women during labor was originally in the hands of women (see MIDWIFERY) In the 16th cent , obstetrics began to be undertaken by physicians William HUNTER and William Smellie were leading obstetricians in 18th-century England The progress of surgery and pathology helped to improve obstetrics The use of forceps was introduced probably by Peter Chamberlen (the elder) in the 17th cent General anesthesia during labor was first used by Sir James Simpson in 1847 Fatalities caused by PUERPERAL FEVER have been reduced since the work of SEMMELWEIS and the use of aseptic methods based on the antisepsis of LISTER Modern obstetrics stresses especially the importance of prenatal care including both the physiological and the psychological aspects See also BIRTH and PREGNANCY

Obwalden, Switzerland see UNTERWALDEN

Ocala (ōkā'lə), city (pop 8,986), co seat of Marion co , N central Fla , W of Lake George Ocala is a trade and shipping center for a truck, fruit, phosphate, and limestone area The town, near the site of an Indian village visited by De Soto in 1539, grew around Fort King, established to protect (1827-43) the area from the Seminole Indians. SILVER SPRINGS is near by.

ocarina (ŏkŭrē'nŭ), musical wind instrument, egg-shaped and usually made of terra cotta It was invented in the late 19th cent in Italy and is popular with amateurs It is occasionally called a "sweet potato" because of its shape

O'Carolan or **Carolan, Turlough,** 1670–1738, Irish bardic poet. Blind from youth, he wandered about the countryside playing the harp and singing his own songs in the houses of the great families Thomas Moore adapted a number of O'Carolan's some 200 songs, and many others have been handed down traditionally among the Irish peasantry At its best his verse is as good as any in modern Irish.

O'Casey, Sean (shôn' ōkā'sē), 1884–, Irish dramatist, b Dublin His first play, *The Shadow of a Gunman* (1923), was produced with great success at the Abbey Theatre, and with *Juno and the Paycock* (1924) and *The Plough and the Stars* (1926) he became its leading dramatist *The Silver Tassie* (rejected by the Abbey Theatre in 1928, but played with success in London and New York) was followed by *Within the Gates* (1934), *The Star Turns Red* (1940), *Purple Dust* (1940), *Red Roses for Me* (1942), *Oak Leaves and Lavender* (1947), and *Cock-a-Doodle Dandy* (1949) *Collected Plays* appeared in 1949 A Protestant, O'Casey grew up in the slums of Dublin and was active in the rebellions for Irish independence His experiences have been realistically recorded in his plays and in four autobiographical volumes, *I Knock at the Door* (1939), *Pictures in the Hallway* (1942), *Drums under the Windows* (1945), and *Inishfallen, Fare Thee Well* (1949) Outstanding for their stylistic excellence, these books are an absorbing chronicle of modern Ireland

Occam, William of see WILLIAM OF OCCAM

occasionalism, metaphysical doctrine first formulated by Geulincx It was meant to resolve the problem of interaction between soul and body posed by the doctrines of Descartes This theory, which MALEBRANCHE expanded, denied any interaction of mind and matter and postulated that the laws of God operate from occasion to occasion to produce the appearance of coordinated activity.

Occidental College see LOS ANGELES, Calif

Occleve, Thomas see HOCCLEVE, THOMAS

Occom or **Occum, Samson** (both ŏ'kum), 1723–92, American Indian clergyman, b near Norwich, Conn He became Eleazer Wheelock's first pupil, and in 1749 he went to Long Island to serve the Montauk Indians as pastor and schoolmaster Occom was ordained in 1759 and later (1766) he went to England to help raise the funds used to establish Dartmouth College

occultism (ŭkŭl'tĭzm, ŏ'kŭltĭzm), belief in supernatural sciences or powers, such as MAGIC, ASTROLOGY, ALCHEMY, THEOSOPHY, and SPIRITISM, either for the purpose of enlarging man's powers, protecting him from evil forces, or predicting the future All the so-called natural sciences were in a sense occult in their beginnings, most early scientists were esteemed magicians, or sorcerers, because of the mystery attending their investigations In the modern world occultism has centered in small groups seeking to perpetuate secret knowledge and rites alleged to be derived from the ancients Such groups have exerted much influence because of their appeal to many writers and artists

occupational diseases, illnesses contracted through conditions of work Pliny the Elder, in the 1st cent , listed knife grinders' phthisis (tuberculosis) and lead and mercury poisoning as "diseases of slaves " To these afflictions, which have survived the passing centuries, the Industrial Revolution in the early 19th cent added scores of others To the deaths, crippling, and debilitation caused by accidents, poor ventilation, and excessively long workdays were added the casualties from specific work situations Painters contracted lead poisoning from breathing the fumes of paints using "white lead," as did the factory workers where the lead paint was processed Phosphorus poisoning afflicted matchmakers Benzol, sulphuric acid, formaldehyde, arsenic, and zinc are other chemicals responsible for occupational diseases Even more frequently, it is their derivatives that are responsible for previously unexplained ailments affecting people working with them The "mad as a hatter" expression is said to have had its origin in the symptoms of mental deterioration exhibited by hatmakers suffering from mercurial poisoning, until recently a concomitant of felt-hat manufacturing A great many varieties of dermatitis or skin diseases result from chemicals used in industry Breathing of air laden with foreign substances causes several varieties of pneumoconiosis or lung condition The most widely known variety is silicosis, from the breathing of silica dust In 17th-century England it was known as "grinder's rot " Stonemasons, granite workers, and miners are stricken with it. CAISSON DISEASE sometimes occurs among those working under abnormal air pressures X rays, radium, and the release of atomic energy cause burns and other injuries, often with fatal results Many of those engaged in applying luminous paints to watch dials suffered radium poisoning before the cause was discovered Hardly a year goes by without the discovery by medical science of additional occupational sources of illness Carbon disulphide as used in the manufacture of rayon in U S plants was found to be poisoning workers, manganese caused poisoning of the miners of Chile EXTRAHAZARDOUS OCCUPATIONS are also responsible for some of the diseases, but their designation as such generally involves recognition of, and maximum protection against, the dangers Legislation to prevent or limit the occurrence of occupational diseases dates from such laws as the Factory Act of 1802 in England In the United States WORKMEN'S COMPENSATION acts in the various states take care, through a system of insurance, of persons suffering from occupational diseases

occupational therapy. This form of treatment was used by the ancient Greeks and Egyptians, especially in the case of mental disorders It became known by this name in the First World War when some system of occupation was used in treating disabled soldiers In 1917 the National Association of Occupational Therapists was organized in the United States The treatment includes any form of activity devised to aid recovery from disease and adjustment to living Social service organizations in hospitals supply means of amusement for bed patients and workshops for convalescents It is an essential part of the treatment of mental disorders and of such physical ills as paralysis See also REHABILITATION

ocean, connected mass of water which covers about 71 percent of the earth's surface It covers about 61 percent of the surface of the Northern Hemisphere and about 81 percent of the Southern Hemisphere. Although many geographers arbitrarily delimit ocean waters into three masses—the PACIFIC OCEAN, the ATLANTIC OCEAN, and the INDIAN OCEAN (the southern parts of all three comprise a circumpolar sea known as the Antarctic Ocean)—and consider the ARCTIC OCEAN as an arm of the Atlantic, popular usage recognizes the Arctic and Antarctic as distinct oceans The high specific heat of water makes the ocean a reservoir of heat that is distributed by the circulation of ocean water or is stored as water vapor that is carried by winds to be released in other areas The daily and seasonal range of temperature is far less than on land, whether considered locally or globally, air temperatures over the sea vary little from that of the water, which rarely rises to over 80°F or falls more than two or three degrees below the freezing point of fresh water The temperature decreases with the depth, and bottom waters in all latitudes approach 32°F Ocean waters are in continual motion owing to the TIDE, OCEAN CURRENTS, surface waves, and tidal waves Ocean currents are movements that transport masses of water, while in wave movements particles of water oscillate with little change in position except when the crest of a breaking wave carries water forward The generation of surface waves is not fully explained, but waves are generally believed to be formed by friction between wind and water Their velocity, form, length, and height are related to the velocity, constancy, and duration of winds and to the size of the area of water over which these have blown, to the relative densities of air and water, and to the surface tension of water The average depth of the sea is c 12,500 ft The pressure increases by one atmosphere (15 lb per square foot) for 33 ft of depth and attains about 1,000 atmospheres at the greatest depths The uneven sea floor is divided into basins by ridges and other elevations, large land masses are bordered by continental shelves and slopes (see CONTINENT) The greatest known depth (35,400 ft) is in the Pacific Ocean off Mindanao The density of sea water is greater at low temperatures and increases in direct proportion to the concentration of dissolved salts The average salinity in the oceans is about 3 percent, it is higher in areas of rapid evaporation and lower at points receiving fresh water from rivers or from melting ice Sea water is believed to contain in solution all the chemical elements, although only about 50 have so far been found in it, the most common are chlorine, sodium, sulphur, and magnesium Since the relative proportions are constant, the quantity of any common element in a given sample can be used as a measure of any other or of the total salinity The distribution of marine plants and animals is affected by variations of temperature, salinity, pressure, and light (see MARINE BIOLOGY) See also OCEANOGRAPHY See H A Marmer, *The Sea* (1930), H. U Sverdrup and others, *The Oceans* (1942), R. E. Coker, *This Great and Wide Sea* (1947), and F. C Lane, *The Mysterious Sea* (1947)

Ocean City 1 Resort town (pop 1,052), SE Md , on the Atlantic Ocean, settled 1875 It is a game-fishing port, famous for white marlin 2 City (pop 4,672), SE N J , a resort on the Atlantic SW of Atlantic City, laid out 1879, inc 1897

ocean currents, progressive movements of ocean waters They may be classified, according to their origin, as currents related to density of the sea, wind currents, and tidal currents (see TIDE). Density currents are the chief agents in circulating the waters of the oceans and include the large-scale surface currents. Density of sea water is inversely

proportional to its temperature and increases with salinity. The waters warmed by the sun in hot latitudes expand. The higher sea level causes a surface flow toward the poles, but trade winds force the masses of water to move westward in currents north and south of the heat equator. The earth's rotation deflects the currents clockwise in the Northern Hemisphere, counterclockwise in the Southern, and the waters resume their poleward flow along the western shores of the Atlantic and Pacific oceans. The best defined of these currents are the GULF STREAM and the JAPAN CURRENT. The currents gradually become colder and their higher salinity, caused by evaporation in hot latitudes, makes them denser than adjacent waters of equal temperature and sets up a vertical downward flow and a consequent upwelling of displaced water. The masses of poleward-flowing water result in compensating surface currents of water of low salinity (due in part to melting ice) that flow from subpolar to temperate regions, notably the Labrador Current. The pressure from the added mass of equatorial waters causes also an equatorward drift of bottom waters that completes the circulatory cycle by welling up in equatorial zones to replace the warm water which was carried poleward. The wind not only affects the rate and direction of density currents, but causes wind currents. The wind, through friction on the sea's surface, brings about a surface drift, each moving layer of water exerts stress on the next underlying layer. The velocity and rate of ocean currents vary with daily and seasonal changes of wind, notably in the Indian Ocean with its monsoon wind. Currents are classed, according to intensity, as streams (well defined, relatively fast, 2 to 4 mi per hour), drifts (slow), or creeps (barely perceptible). An example of a stream is the Gulf Stream; of a drift, the NORTH ATLANTIC DRIFT, of a creep, the general movement of bottom waters from the poles toward the equator. The course and velocity of currents are determined by current meters or indirectly by the observation of floating bodies such as icebergs or drift bottles, from the determination of temperatures and salinity, or by the difference between a ship's position as determined by astronomical observations and by dead reckoning. The flow of ocean currents effects a transfer of heat over the globe that modifies the climate of lands receiving sea winds and influences the distribution of marine organisms.

Ocean Grove, resort (pop 2,862), E N J., on the Atlantic adjoining Asbury Park, founded 1869 by a Philadelphia minister, William B. Osborne. It is owned and controlled by the Ocean Grove Camp Meeting Association (Methodist). Its auditorium (1893) seats 9,000. A tent city houses many at the summer camp meetings and courses.

Oceania (ōshēā'nēu, -ā'nēu) or **Oceanica** (ōshēā'nĭkū), collective name for the islands of the Pacific, sometimes including Australasia and Malaysia. Oceania is, however, generally considered as synonymous with South Sea Islands and is divided ethnographically into MELANESIA, MICRONESIA, and POLYNESIA.

Oceanids (ōsē'ənĭdz), in Greek mythology, 3,000 daughters of Oceanus and Tethys. They were sea nymphs. Calypso, Metis, and Styx were Oceanids.

Ocean Island, formerly **Banaba** (bănā'bu), phosphate island (2.2 sq. mi.; pop. 2,060), central Pacific, SW of Tarawa. It was formerly administrative headquarters of the British colony of the GILBERT AND ELLICE ISLANDS. It was discovered in 1804 by the British and annexed in 1915. In the Second World War the island fell in 1942 to the Japanese, who occupied it for the war's duration.

Ocean Island, T. H., see KURE ISLAND.

oceanography (ō"shənŏ'grufē), study of the sea. It integrates the marine applications of geography, geology, physics, chemistry, and biology and entails cooperation with astronomers and meteorologists. Although some authorities restrict the term to the study of topography and sediments of ocean basins and shores and the characteristics and dynamics of ocean waters, most of them include MARINE BIOLOGY. Pioneers in the marine sciences include Edward FORBES and M. F. MAURY. Oceanography as a comprehensive study dates from the CHALLENGER EXPEDITION (1872–76) directed by C. W. THOMSON (later knighted), and the term *oceanography* became current through the reports of the expedition, edited by John MURRAY (later knighted), who became a leader in the advancement of the science. Murray organized the cruise of the *Michael Sars* (1910), which contributed to the knowledge of the N Atlantic Ocean and was directed by an outstanding Norwegian oceanographer, Johan HJORT. The success of the *Challenger* expedition and the importance of a knowledge of the sea to shipping, fisheries, the laying of telegraph cables, and in climatological studies led many nations to establish oceanographical departments and to send out expeditions. Outstanding cruises include those of the German *Deutschland* (1911–12) and *Meteor* (1925–39) in the Atlantic, S Pacific, and Antarctic oceans; the Danish *Dana* in all the oceans (1921–22) and in a circumnavigation of the globe (1928–29); the British *Discovery* and *Discovery II* (1925–39) in the Atlantic, Arctic, and Indian oceans; the Norwegian *Fram* under the direction of Fridtjof NANSEN, the Dutch *Snellius* (1929–30) in the Indian Ocean and the East Indies; and the American *Albatross* between 1882 and 1924, which was directed for a time by Alexander AGASSIZ. Universities and private individuals, as well as governments, have established institutions for the study of the ocean, there exist today about 250 institutions. One of the earliest is the marine biological station at Naples (founded 1872), which stimulated the founding of many other seaside stations, some of which, e.g., the Scripps Institution of Oceanography at La Jolla, Calif., have enlarged their activities to include all fields of oceanographic research. Notable institutions include the Oceanographic Museum at Monaco (1910), the biological station of the Univ. of Oslo, the Geophysical Institute at Bergen, and the Oceanographic Institution (1930) at Woods Hole, Mass. Oceanographic equipment and methods have been greatly improved in recent years. Sonic depth finders by which soundings can be made by vessels at full speed have superseded soundings with lead and line which required several hours. Consecutive soundings have shown that the ocean floor is far more rugged than had formerly been supposed. Improved methods of obtaining long cores of bottom deposits have advanced the science of marine geology. Modern diving equipment has permitted descents to the bottom of the sea, submarine cameras and color film have been helpful in determining the nature of marine organisms. Many ocean phenomena, including currents and waves, are still not completely explained. See W. A. Herdman, *Founders of Oceanography* (1923), H. B. Bigelow, *Oceanography* (1931); T. W. Vaughan and others, *International Aspects of Oceanography* (1937).

Oceanport, borough (pop. 3,159), E N J., between Red Bank and Long Branch, inc. 1920.

Oceanside, city (1940 pop. 4,651, 1945 special census pop. 10,698), S Calif., at the mouth of the San Luis Rey R. N of San Diego, inc. 1888. Oceanside-Carlsbad Junior College (coeducational) is here. San Luis Rey MISSION (founded 1798) is near by.

Ocean Springs, resort town (pop. 1,881), SE Miss., on Biloxi Bay. There is a bridge to BILOXI. Ocean Springs is on the site of Old Biloxi, the first white settlement in the lower Mississippi valley, made by the French under IBERVILLE in 1699. A marine research laboratory (1948) is here.

Oceanus (ōsē'ənus), in Greek mythology. **1** Circular stream flowing around the edge of the earth. The sun and moon rise from and descend into this stream, it is the source of all rivers. **2** Personification of the stream. He was the Titan son of Uranus and Gaea, the husband of Tethys, and the father of the river-gods and the sea nymphs (or Oceanids). He was conceived of as a powerful but kindly old man. Some legends say that Dione was also the daughter of Oceanus and Tethys.

ocelot (ō'sulut, -lŏt, ō'–), New World cat ranging from S Texas to parts of South America. The fur ranges from tawny to gray with a variable pattern of black spots, streaks, and rings. It resembles a house cat but may reach a length of about 4 ft., including the tail of approximately 1½ ft. It hunts prey in trees and on the ground.

Ochakov (ŭcha'kŭf), city (1939 pop. over 10,000), SW Ukraine, a port on the Black Sea, SW of Nikolayev. The fall (1788) of this former Turkish fortress to the Russians was a decisive victory for Catherine II in the Russo-Turkish War of 1787–92. In the Crimean War, Ochakov was occupied (1855) by the allies.

ocher (ō'kur), mixture of varying proportions of hydrated iron oxide and clay, used as a pigment. It occurs naturally as yellow ocher, yellow or yellow-brown in color, the iron ore being limonite, when heated it is converted to red ocher, the limonite becoming hematite. Ocher grades into sienna, a yellow-brown pigment containing a higher percentage of iron ore than ocher, as well as some manganese dioxide. Sienna grades into umber, which is darker brown and contains a higher percentage of manganese dioxide. Burnt sienna is brown or bright red, burnt umber is a darker brown than umber. Ocher is produced in the United States, in France (French ocher being of a very high grade), and in some other parts of Europe. Italy is a leading producer of sienna and umber, and Cyprus of umber.

Ochil Hills (ō'khĭl), range, c.25 mi. long, in Perth, Clackmannan, Kinross, and Fife counties, Scotland, extending from Stirling to the Firth of Tay. The hills are of volcanic origin, with valuable mineral deposits, and culminate in Ben Cleuch (2,363 ft.) and King's Seat (2,111 ft.).

Ochino, Bernardino (bĭrnärdē'nō ōkē'nō), 1487–1564, Italian religious reformer. Ochino was a Capuchin friar, a most popular preacher, and vicar general of his order in 1538 and 1541. Influenced by VALDÉS and his circle in Naples, Ochino turned to belief in justification by faith alone, gave up his belief in monastic vows, and adopted an independent Protestantism. In 1542 he fled from the Roman Inquisition to Zurich, where he was well received by Calvin. His apostasy caused such a sensation in Italy that even the Capuchins were denounced as hypocrites and breeders of heresy. After two years in Zurich he went to England, where he was highly respected until the accession of Mary I, when he returned to Geneva. There he rejected such Calvinistic doctrines as predestination. Expelled from the Swiss cantons in 1563 by the Calvinists, he spent his last year in Germany and Poland.

Ochrida or **Okhrida** (both: ō'krĭdū), Serbo-Croatian *Ohrid* (ō'khrĭd), town (pop. 11,419), Macedonia, SW Yugoslavia, on a rock above Lake Ochrida. An ancient center, it lies on or near the site of the Greek colony of Lychnidos. Under Roman rule it became an important trading town and an early episcopal see, and in the 9th cent. A.D. it became part of the first Bulgarian empire. In the 10th cent. Ochrida replaced Preslav as the seat of the Bulgarian patriarchate and flourished as the political and cultural capital of Bulgaria. After its reconquest (11th cent.) by the Byzantines the patriarchate was abolished, but Ochrida remained a metropolitan see. With several interruptions, the principality of Walachia was dependent in ecclesiastical matters on the see of Ochrida until the 15th cent., and the principality of Moldavia was dependent until the 17th cent. The metropolitan rank was later transferred to the bishops of Skoplje. Having fallen to Serbia in 1334, Ochrida fell soon afterward to the Turks. It was briefly reconquered (15th cent.) by Scanderbeg. Ochrida passed to Serbia in 1913 as a result of the Balkan Wars. Among its many ancient churches and other historic mementos are the cathedrals of St. Sophia (founded 9th cent.) and of St. Clement (1299), two 14th-century churches, and the walls and towers of the former Turkish citadel. **Lake Ochrida,** area 134 sq. mi., forms part of the Yugoslav-Albanian border. It is connected with Lake Prespa by underground channels. On its shores stand several monasteries, notably that of St. Naum (10th cent.). The lake is rich in fish.

Ochs, Adolph S. (ōks), 1858–1935, American newspaper publisher, b. Cincinnati. Starting as a newsboy in Knoxville, Tenn., he became a printer's apprentice, compositor, and, in 1878, publisher of the Chattanooga *Times*. He acquired the New York *Times* in 1896 and brought it to a position of eminence. He also controlled the Philadelphia *Times* and the Philadelphia *Public Ledger*, which he merged and in 1913 sold to Cyrus H. K. Curtis. The New York *Times* under his management was politically Democratic, but independent of the party machine. See G. W. Johnson, *An Honorable Titan* (1946).

Ocilla (ōsĭl'lu), city (pop. 2,124), co. seat of Irwin co., S central Ga., NW of Waycross, inc. 1897. It is a coastal-plains farm trade center.

Ockham, William of see WILLIAM OF OCCAM.

O'Clery, Michael (ōklĕr'ē), 1575–1643, Irish chronicler and antiquarian. A monk in the Franciscan convent at Louvain, he was a collector, compiler, and editor of medieval Irish chronicles and preserved much valuable historical material. *The Annals of the Four Masters* (ed. and tr. by John O'Donovan, 7 vols., 1851, 2d ed., 1854) was a history of Ireland written 1632–36 by O'Clery and three others, from old chronicles. *The Martyrology of Donegal* (1636, tr. by John O'Donovan, 1864) is a valuable reference for medieval saints.

Ocmulgee (ōkmŭl'gē), river formed in NW Georgia by the confluence of the Yellow and South rivers SE of Atlanta. It flows c.255 mi. south-southeast to join the Oconee below Lumber City and form the Altamaha.

Ocmulgee National Monument: see NATIONAL PARKS AND MONUMENTS (table).

O Come, All Ye Faithful: see ADESTE FIDELES.

Oconee (ōkō'nē), river rising in N Georgia, NE of Atlanta, and flowing 282 mi. SSE to the Ocmulgee, with which it forms (near Hazlehurst) the Altamaha. Athens and Milledgeville are on the Oconee.

O'Connell, Daniel, 1775–1847, Irish political leader. He is known as the Liberator. Admitted to the Irish bar in 1798, O'Connell built up a lucrative law practice. Gradually he became involved in the Irish fight for emancipation of Roman Catholics, his abilities as a speaker, organizer, and leader soon advanced him to the uncontested command of the movement. He was constantly active in the various organizations created to effect CATHOLIC EMANCIPATION and in 1823 founded the Catholic Association, a formidable and powerful agitation society, which despite English restrictive measures became a great national movement. The pressure on Parliament was brought to a head by O'Connell's election in 1828 to a seat in the Commons, despite his inability as a Catholic to take the oaths by which Parliament excluded Catholics from sitting. In 1829 the government was obliged to pass the Catholic Emancipation Act. In Parliament, O'Connell supported the Whigs and the reform cause. He supported repeal of the union of Great Britain and Ireland, forming a new agitation society to replace each one suppressed by the government. O'Connell was indefatigable in his efforts to gain relief for the

grave troubles arising from the IRISH LAND QUESTION; he bitterly opposed the acts for subduing the Irish unrest and labored for the reform of the existing government of Ireland and for the abolition of compulsory support of the Church of Ireland. In 1841 O'Connell became the first Catholic lord mayor of Dublin since the time of James II In 1843 he was indicted for creating disaffection, he was declared guilty and imprisoned, but was released shortly by the House of Lords (1844). His health was beginning to fail, and the secession of the Young Ireland group from his Repeal Association added to his cares His authority and control declined Ordered to seek a change for his health, he set out for Italy, where he died O'Connell's eminence as a leader and creator of national feeling and unity greatly affected the history of Ireland, and his influence throughout Europe on the growth of Catholic democratic feeling was considerable. See W J Fitzpatrick, *Correspondence of Daniel O'Connell* (1888), Robert Dunlop, *Daniel O'Connell and the Revival of National Life in Ireland* (1900), W H Lecky, *Leaders of Public Opinion in Ireland*, Vol II (1903), biographies by Sean O'Faolain (1938) and Denis Gwynn (1947).

O'Connell, William Henry, 1859–1944, American churchman, cardinal of the Roman Church, b. Lowell, Mass He was ordained in 1884 He was head of the North American College in Rome (1895–1901), then returned to the United States to be bishop of Portland, Maine The pope sent him on a diplomatic mission to Japan in 1905 He was made coadjutor to the archbishop of Boston in 1906 and succeeded to the see in 1907 He received the red hat in 1911 His administration was very energetic, especially in building for charity and education Cardinal O'Connell composed hymns and musical pieces His publications include sermons and addresses and his autobiography (1934)

O'Connor, Feargus (fur'gŭs), 1794–1855, Irish Chartist Elected to the Parliament of 1832 as a supporter of Daniel O'Connell, he soon quarreled with O'Connell and was forced out of Parliament in 1835, but devoted himself to radicalism In 1837 he founded a paper, the *Northern Star*, which achieved wide circulation O'Connor played a major role in the Chartist convention of 1839, and his influence upon CHARTISM was to move it toward use of physical force In 1846 he began an Irish land-redistribution scheme He reentered Parliament in 1847 and sponsored a monster Chartist petition The bankruptcy of the land company and disclosure that the petition signatures were falsified unsettled O'Connor's mind, in 1852 he was declared insane

O'Connor, Rory or **Roderick,** 1116?–1198, last high king of Ireland He became king of Connaught in 1156 and seized the high kingship in 1166 His greatness was brief, however, for his quarrel with DERMOT MCMURROUGH, who brought the Normans to Ireland, led to ROIY's submission as vassal to Henry II of England by the Treaty of Windsor (1175) O'Connor remained king of Connaught and nominal high king, but his power declined and he retired to a monastery before his death

O'Connor, Thomas Power, 1848–1929, Irish journalist and nationalist, known as Tay Pay [t e, T P] O'Connor He went (1870) to London and worked on the *Daily Telegraph* and in the London office of the New York *Herald* and in 1879 won notice for his hostile biography of Disraeli In Parliament after 1880, he represented Galway until 1885, then Liverpool to the end of his life His help to the cause of Irish Home Rule was mainly through supporting C S Parnell and through his writing and his fund-raising tours in the United States (1881–82, 1918) In Parliament he was not a leader, and on the fall of Parnell (1891) O'Connor abandoned him as did many other Irish members O'Connor founded many newspapers in London, including the *Star*, the *Sun*, the *Weekly Sun*, and *T P's Weekly* His personal contributions were in essays, columns, and articles He also wrote *Gladstone's House of Commons* (1885), *The Parnell Movement* (1886), and other volumes See biography by H H Fyfe, (1934)

Oconomowoc (ŏkŏn'ŭməwŏk"), city (pop 4,562), SE WIS, W of Milwaukee; inc 1875 It is a resort in a lake and mineral-spring area and processes foodstuffs A mental hospital is near

O'Conor, Charles, 1804–84, American lawyer, b New York city He was admitted to the bar in 1824, and he was counsel in several famous lawsuits. A Democrat, he sympathized with the South in the Civil War and was counsel for Jefferson DAVIS during his imprisonment after the Civil War. O'Conor hoped for political office, but in spite of frequent nominations (including, in 1872, the nomination for President by the "Bourbon" democrats, a small dissident group) he was never elected. He helped to expose the Tweed Ring in New York city, and he wrote a bitter account of the struggle, *Peculation Triumphant* (1875). He was counsel for Samuel TILDEN before the Electoral Commission in the disputed election of 1876.

Oconto (ŏkŏn'tō), city (pop 5,362), co. seat of Oconto co., NE WIS., on the west shore of Green Bay and at the mouth of the Oconto; inc 1869. An early lumber center, it still makes lumber products The first church built for Christian Science worship (1886) is here

Oconto Falls, city (pop 1,888), NE WIS , on the Oconto river, in a dairy region; inc. 1919

Ocran (ŏk'răn) [Heb ,=troubled], father of a chief Asherite Num 1 13, 2 27, 7 72,77, 10 26

octave (ŏk'tĭv) [Latin,=eighth], in music, the INTERVAL between the first and eighth tones of the diatonic scale. The upper note of an octave has a frequency of vibration twice that of the lower, and in modern Western notation the two have the same letter name. The octave is the first overtone (see HARMONIC), and the range of the male voice is roughly an octave below that of the female, men and women supposedly singing "in unison" actually sing in octaves

Octavia (ŏktā'vēŭ). **1** d 11 B C., sister of the Roman emperor AUGUSTUS and wife of Marc ANTONY, her second husband (40 B C) She was distinguished for beauty and virtue, and for some years helped in maintaining peace between her brother and husband Antony fell in love with CLEOPATRA, and after his war with Augustus began, he sent Octavia a bill of divorce. After his death, she reared his children by Fulvia (his first wife) and Cleopatra as well as her own **2** A D 42–A D 62, daughter of the emperor Claudius I and MESSALINA and wife of NERO, whom she married in 53 Nero deserted her for Poppaea and divorced her She was falsely accused of adultery, banished to the island of Pandateria, and put to death She is the subject of *Octavia*, a unique contemporary tragedy

Octavian and **Octavius:** see AUGUSTUS.

October: see MONTH.

octopus (ŏk'tŭpŭs) [Gr ,=eight-footed], a cephalopod mollusk, also called devilfish, with a pouch-shaped body and eight arms with two rows of suction disks on each. There is no shell An ink sac, which darkens the water in case of danger, is usually present Aquatic animals, especially crabs, form the diet of the octopus A poisonous salivary secretion paralyzes the prey before it is torn apart by the arms and sharp jaws Octopuses are found in most temperate and tropical waters, often in rocky crevices They can creep over hard surfaces by means of the arms and can travel through water by moving the arms and by taking in water and ejecting it forcibly through the funnel or siphon as the muscular mantle contracts In size they vary from a few inches to the giant octopus of the Pacific Ocean which may reach a diameter of about 30 ft Some species are used for food

Oda Nobunaga see NOBUNAGA, ODA

Odda, Norway see HARDANGER FJORD.

ode, originally, in Greek, a poem sung to musical accompaniment The simpler form of this type of poetry, as exemplified by the odes of Sappho, Alcaeus, Anacreon, and other Aeolian poets, was adapted to the single voice The choral ode of early Greek poetry, sung by a group, became a formal, stately poem, usually dealing with a subject of public interest As developed before and by Pindar the choral type of ode was divided (according to the movement of the Greek chorus) into strophe, antistrophe, and epode Unlike those of Pindar, whose odes are elaborate in form, intense, and passionate, the odes of the Latin poets Horace and Catullus are personal, simple, and controlled Both types have influenced the ode in European literature In the Renaissance, the ode was revived in the 16th cent in Italy by Gabriello Chabrera and in France most successfully by Pierre de Ronsard Ronsard followed Pindar in the odes on public events and Horace in the more personal odes The odes of Horace also influenced the English 17th-century poets, especially Ben Jonson, Robert Herrick, and Andrew Marvell In the same century Milton's ode "On the Morning of Christ's Nativity" (1629) shows the influence of the Pindaric form Abraham Cowley and John Dryden in the 17th cent wrote poems for public occasions in which they tried to imitate Pindar Odes were written by the romantic poets, including Hugo, Lamartine, Leopardi, Wordsworth ("Ode Intimations of Immortality"), Shelley, and Keats The odes of these poets and of later poets, such as Algernon Swinburne and Gerard Manley Hopkins, tend to be much more free in form and subject matter than the classical ode See George Shuster, *The English Ode from Milton to Keats* (1940)

Odebolt (ō'dŭbōlt"), town (pop 1,350), W central Iowa, ESE of Sioux City, inc 1877. The principal product of the area is popcorn

Oded (ō'dĕd) **1** Father of the prophet Azariah 2 Chron 15.1. **2** Prophet who interceded for captive Judahites 2 Chron 28 9.

Odem (ō'dŭm), city (pop 1,147), S Texas, NW of Corpus Christi; inc as a city 1929

Odenathus, Septimius (sĕptĭl'mēŭs ŏdĭnā'thus), d 267, king of Palmyra His family (the Septimii) had dominated PALMYRA for many years, and Odenathus by his policy of cooperation with Rome raised his state to its zenith. As a Roman general he warred against Shapur I of Persia after the defeat of VALERIAN. He won (260) a resounding victory over Shapur for Emperor Gallienus and drove the Persians back until he threatened Ctesiphon. He also put down an insurrection against Gallienus in Emesa Odenathus made of Palmyra a compact, well-run state, autonomous within the Roman Empire and including Syria, NW Mesopotamia, and W Armenia He and his eldest son were murdered, and soon after his death, his second wife, the beautiful and ambitious ZENOBIA (who may have connived in his death) brought Palmyra to ruin

Odenburg, Hungary see SOPRON.

Odense (ō'dhunsŭ), city (pop 92,436), N Fyn island, Denmark It is a seaport, a Lutheran episcopal see, and an important commercial, industrial, and administrative center There are iron foundries, shipyards, machinery, rubber, tobacco, textile, sugar, and glass factories and meat and fish canneries Dating from the 10th cent, Odense has retained a 12th-century church and its 14th-century Gothic cathedral. Hans Christian Andersen was born here

Odenwald (ō'dunvält), hilly, forested region, N Baden, W Germany, bordering on the Neckar, the Main, and the Rhine Its highest point (2,054 ft.) is the Katzenbuckel Fruit and grapes are grown on the western slope, and there are porphyry quarries

odeon see ODEUM

Oder (ō'dûr), Czech and Pol *Odra* (ō'drä), river, 562 mi. long, central Europe It rises NE of Olmütz, Czechoslovakia, and flows generally N through Silesia, Brandenburg, and Pomerania, past Ratibor, Oppeln, Breslau, Frankfurt an der Oder, and Küstrin, into the Baltic Sea at Stettin From its junction with the Lausitzer Neisse, above Frankfurt, it forms the border between Russian-occupied Germany and the German territories placed (1945) under Polish administration. Its upper course, from the Czech border to the Neusse, is in Polish-administered Silesia Navigable from Ratibor, the Oder is an important waterway of Central and Eastern Europe, connecting the industrial area of Silesia with the Baltic It is linked by canals with the Spree and the Elbe rivers, its chief tributary, the WARTA, provides a link with the Vistula Between the First World War and the Second World War the Oder was internationalized for part of its course

Odessa (ōdĕ'sŭ, Rus ŭdyĕ'sŭ), city (1939 pop 604,223), capital of Odessa oblast, SW Ukraine, on the Black Sea It is one of the chief ports of the USSR and an industrial center, with machinery plants, petroleum refineries, flour mills, sugar refineries, and chemical plants Grain, lumber, and sugar are the chief exports Odessa has a university, polytechnic and medical schools, a marine academy, an opera house, a conservatory of music, and numerous trade schools The city, descending in terraces from a hill to the sea, is laid out in a handsome, regular pattern After the Treaty of Jassy (1792), by which Turkey ceded the region to Russia, Odessa was built as a port and naval base It occupied the site of an ancient Greek colony (Odessos or Ordyssos) and of the later Turco-Tatar village Khadzhi-Bei The city grew rapidly as the chief Russian grain-exporting center Severe pogroms followed the mutiny (1905) on the battleship *Potemkin* at Odessa, and many of the Jews (then about 35 percent of the population) emigrated After the October Revolution of 1917, Odessa was successively occupied by the Central Powers, the French, the Ukrainians, the Reds, and the Whites, until in 1920 the Red Army took it from General Denikin It suffered greatly in the famine of 1921–22 In the Second World War, Odessa fell (Oct , 1941) to German and Rumanian troops after a heroic defense of two months It was under Rumanian administration until its liberation (1943) by the Red Army Many buildings were damaged or destroyed, 280,000 civilians, mostly Jews, are said to have been massacred or deported during the Axis occupation

Odessa (ōdĕ'sŭ) **1** City (pop 1,881), W Mo , ESE of Kansas City, in a farm area, platted 1878 **2** City (1940 pop 9,573, 1947 estimated pop 30,000), co seat of Ector co , W Texas, WNW of San Angelo, founded 1881, inc 1927 Exploitation of great oil deposits to the south have changed Odessa in two decades from a small town in ranching country to one of the big oil centers of the United States, with a carbon-black plant, refineries, plants making oil-field supplies, and like industries The airport between Midland and Odessa handles much transcontinental traffic Odessa has a junior college Near the city is a large meteor crater The region is underlaid with potash deposits

Odets, Clifford (ōdĕts'), 1906–, American dramatist, b Philadelphia An actor after 1923, he joined the Group Theatre in 1930 Several of his plays, collected as *Six Plays* (1939), were produced by the Group Theatre Of these *Waiting for Lefty* (1935) and *Awake and Sing* (1935) are outstanding *Golden Boy* (1937), also sympathetic to the left-wing point of view, is ranked close to them Later plays include *Night Music* (1940), *Clash by Night* (1941), and *The Big Knife* (1949)

odeum (ōdē'ŭm), **odeon,** or **odeion** (both ōdē'ŏn), a form of theater in ancient Greece and Rome, smaller than the great dramatic theaters and provided

with a roof. The odeum was devoted primarily to public musical performances. The earliest important odeum, at any rate the one which established the form, was completed at Athens in 445 B C by Pericles for the musical contests at the Panathenaic games His odeum was a circular building cut out of a rocky hillside, with a conical roof and pillars of wood within A most magnificent odeum was built by Herodes Atticus at the southwestern corner of the Acropolis at Athens, and its ruined walls are still visible west of the theater of Dionysus This structure seated c 8,000 persons and had a ceiling of carved cedar beams One of the few permanent theater buildings in Rome was the odeum built by Domitian (A D 51–A D 96) Other odea were built in Asia Minor In modern times the term *odeum*, or its French equivalent *odéon*, is sometimes used as a name for a theater or music hall The Odéon in Paris is a celebrated theater opposite the Luxembourg Gardens See A E Haigh, *The Attic Theatre* (1907), R C Flickinger, *The Greek Theater* (1918), A W Pickard-Cambridge, *The Theatre of Dionysus in Athens* (1940)

Odo, count of Paris, French king see EUDES

Odoacer (ŏdōā'sur) or **Odovacar** (ŏdōvā'kur), c 435–493, chieftain of the Heruli (see GERMANS) He and his troops were mercenaries in the Roman service, but in 476 the Heruli revolted and proclaimed Odoacer their king Odoacer defeated the Roman general ORESTES at Piacenza, took Ravenna (the West Roman capital), and deposed ROMULUS AUGUSTULUS, last Roman emperor of the West until the coronation (800) of Charlemagne The date 476 is conventionally accepted as the end of the West Roman Empire, in fact, however, Odoacer's action made little difference in the status of Western Rome, which had been prey to the barbarian soldiery for many years, the rulers had been mere puppets Emperor ZENO of the East, who considered himself heir to the West Roman Empire, reluctantly recognized Odoacer's *de facto* authority over Italy and granted him the title of patrician The Roman administration of Italy continued to function under Odoacer's rule In 488 Zeno sent THEODORIC THE GREAT, king of the Ostrogoths, into Italy to expel Odoacer Several times defeated, Odoacer in 493 consented to a treaty by which he was to share his authority with Theodoric. Invited to a banquet by Theodoric, Odoacer and his son and chief officers were treacherously assassinated, thus Theodoric made himself master of Italy

O'Donnell, Leopoldo (lāōpōl'dō ōdhō'nĕl), 1809–67, Spanish general and statesman, member of a branch of the Irish O'Donnells of Tyrconnel He fought successfully for MARIA CHRISTINA against the Carlists and went with her to France when ESPARTERO seized (1840) power in Spain He failed in a coup (1841) against Espartero at Pamplona, but returned (1843) to Spain after Espartero's fall He was governor of Cuba from 1844 to 1848, in 1854 he reached an agreement with Espartero, and they overthrew the government of Maria Christina He served as war minister (1854–56) under Espartero and was several times premier (1856–57, 1858–63, 1865–66) as leader of the Liberal Union party, which he had founded He followed a more or less moderate policy and restored (1856) the constitution of 1845 While premier, he took command in the successful Spanish campaign (1859–60) in Morocco and after the capture of Tetuán was given the title duque de Tetuán In 1866 his government was overthrown by Ramón Narváez and Juan Prim

O'Donnell, city (pop 1,187), NW Texas, S of Lubbock on the Llano Estacado, settled 1916, inc 1923. A chemical plant near by uses native sodium sulphate and magnesium sulphate

O'Donojú, Juan (hwan' ōdhōnōhōō'), d 1821, Spanish colonial administrator He distinguished himself in the army and became captain general of Andalusia Sent out (1821) as captain general and acting viceroy of New Spain, he found all Mexico, except a few towns, in the control of the revolutionists under ITURBIDE He signed the Treaty of Córdoba, conceding most of the revolutionary demands and became a member of the board of regents in Mexico He died before the treaty was disavowed by Spain

O'Donovan Rossa see ROSSA, O'DONOVAN

Odo of Cluny, Saint (ō'dō, klōō'nē), 879?–942, French monk, second abbot of Cluny He reformed his own abbey and the monastic life of France His work made Cluny great. See CLUNIAC ORDER.

Odovacar: see ODOACER

Odra: see ODER.

Odum, Howard Washington (ō'dum), 1884–, American sociologist, b Bethlehem (near Winder), Ga, grad. Emory College (now Emory Univ), 1904, M.A Univ of Mississippi, 1906, Ph.D. Clark Univ., 1909, and Ph D. Columbia, 1910. In 1920 he became Kenan professor of sociology at the Univ of North Carolina and was director of its school of public welfare (1920–32) and of its Institute for Research in Social Science (1924–44). A member of the North Carolina state planning board after 1935, he also served on many other state and regional committees Most important of his many writings are *Social and Mental Traits of the Negro* (1910), *The Negro and His Songs* (1925) and *Negro Workaday Songs* (1926), both with G. B Johnson, *Man's Quest for Social Guidance* (1927), *Southern Regions of the United States* (1936), one of the most complete and influential studies of its kind, *American Regionalism* (with H E Moore, 1938), *Race and Rumors of Race* (1943), *Understanding Society* (1947), and *The Way of the South* (1947) His three novels—*Rainbow round My Shoulder* (1928), *Wings on My Feet* (1929), and *Cold Blue Moon* (1931)—constitute a trilogy on the life of a wandering Negro

O'Dwyer, Joseph, 1841–98, American physician, b Cleveland, M D College of Physicians and Surgeons, 1866 He was long associated with the New York Foundling Hospital His great service was in perfecting intubation of the larynx in croup and diphtheria See J J Walsh, *Makers of Modern Medicine* (1907)

O'Dwyer, William (ōdwī'ur), 1890–, American public official, mayor of New York city (1945–), b Ireland Educated in Ireland and Spain, he immigrated to New York city (1910), was naturalized in 1916, and worked at many jobs while studying law at night Admitted (1923) to the bar, he served (1932–39) as city magistrate and county court judge He became district attorney (1939) and gained wide attention by his prosecution of a Brooklyn gang known as Murder, Inc He was an unsuccessful candidate for mayor (1941) In the army during the Second World War, he rose from major to brigadier general, represented the United States on the Allied Control Commission for Italy, and directed the War Refugee Board After he succeeded Fiorello H LAGUARDIA as mayor, he gave New York city its first billion-dollar budget, and he helped persuade the United Nations to make the city its home He was reelected in 1949

Odysseus (ōdĭs'ŭs, ōdĭ'sēŭs), Latin *Ulysses* (ūlĭ'sēz), in Greek mythology, king of Ithaca He was the grandson of Autolycus, the son of Laertes (in later accounts of Sisyphus), the husband of Penelope, and the father of Telemachus A Greek leader in the Trojan War, he was famed (as in the *Iliad*) for his cunning strategy and his wise counsel When Troy fell he wandered for 10 years before returning to his home in Ithaca The story of his wanderings, in which he met Polyphemus Cyclops, Aeolus, Circe, Calypso, Nausicaä, Scylla, Charybdis, the Sirens, the Laestrygones, and the lotus-eaters, is told in the ODYSSEY

Odyssey (ŏ'dĭsē) [from Odysseus], Homeric Greek epic in 24 books It falls into several parts, ingeniously connected In the first Telemachus, Odysseus' son, visits several friends seeking advice on his father's absence and on the troubles of his mother, Penelope, with the suitors, Menelaus informs him that his father is with Calypso, a nymph (Books I-IV) The poet then tells of Odysseus' leaving Calypso and of his arrival at Phaeacia, where he is entertained and where he relates the story of his wanderings (Books V–XII) The dramatic action begins with the return of Odysseus and Telemachus to Ithaca, they plan vengeance on the suitors (Books XIII–XXI) and kill them (Book XXII) Odysseus makes himself known to his wife and again rules his country (Books XXIII–XXIV) There are many translations of the *Odyssey*, exceptional are those by G H Palmer and T E Shaw

Oecolampadius, Johannes (jōhä'nēz ē"kulämpā'dēŭs), 1482–1531, German reformer, associate of ZWINGLI in the Reformation in Switzerland He was in 1516 a preacher at Basel, where he worked with Erasmus on his *New Testament* In 1520 he preached in Augsburg, then for a time was in a convent at Altmunster. Luther's teachings won his interest, and in 1522 he acted as chaplain among reformers under Franz von Sickingen at Ebernburg, returning soon to Basel to devote himself to the work of the Reformation He agreed with the views of Zwingli on the nature of the Eucharist, defending this position against Luther in the Colloquy of Marburg, 1529, while Zwingli disputed the question with Melanchthon See biographies by J J Herzog (1843) and K R Hagenbach (1859), also Williston Walker, *The Reformation* (1900)

Oedipus (ē'dĭpus, ē'–), in Greek mythology, hero who killed his father and married his mother Laius, king of Thebes and his queen, Jocasta, had a son, Oedipus, of whom it was foretold that he would murder his father The baby was exposed on Mt Cithaeron, but he was brought by a shepherd to the king of Corinth. When Oedipus was grown he learned from an oracle that he would kill his father and marry his mother, so he fled Corinth, thinking his foster parents were his real parents. At a crossroad he met Laius, quarreled with him, killed him, and then proceeded to Thebes. There he gained the widowed queen's hand by answering the riddle of the Sphinx. The prophecy was thus fulfilled After many years Oedipus learned the truth from the seer Tiresias and the shepherd, and in an agony of horror and revulsion he blinded himself Jocasta committed suicide. Creon, Jocasta's brother, became king Oedipus wandered for many years, finally dying in peace at Colonus Even after his death his unwitting sin cursed Thebes and his children, Antigone, Ismene, Polynices, and Eteocles (see SEVEN AGAINST THEBES) Sophocles' famous treatment of this legend is told in three extant tragedies (*Oedipus Rex*, *Antigone*, and *Oedipus at Colonus*) One of Igor Stravinsky's major works, written in collaboration with Jean Cocteau, is an opera-oratorio, *Oedipus Rex*, the text of which is based on Sophocles' tragedy. The painting *Oedipus and the Sphinx* by Jean Ingres is in the Louvre

Oedipus complex (ē'dĭpŭs), Freudian term, drawn from the myth, indicating a psychological condition reaching its height usually between the ages of four and five, in which the male exhibits an intense love for the mother and a corresponding hatred for the father The reverse situation, occurring with female children, is sometimes referred to as the Electra complex Freudians hold that if this complex is not worked out in childhood or by PSYCHOANALYSIS the individual's adult relationships will be determined by his feelings in the original situation See Patrick Mullahy, *Oedipus Myth and Complex* (1948).

Oehlenschläger, Adam Gottlob (ä'dăm gôt'lôb ûl'unshlägur), 1779–1850, Danish poet and dramatist He turned to the sagas and to Scandinavian history for many of his themes and is considered the national poet of Denmark His literary career began with the publication of the poem *Golden Horns* (1802) His works include lyrics, epics, and a series of historical dramas, the most famous of which, *Hakon Jarl* (1807), was written while he was in Germany Among his later works are the dramas *Axel and Valborg* (1809) and *Queen Margaret* (1833) In 1829 he was crowned Scandinavian poet laureate in the cathedral at Lund

Oelwein (ōl'wĭn), city (pop 7,801), NE Iowa, NE of Waterloo, inc. 1888 It is a rail, trade, and industrial center for a farm and livestock area

Oeneus (ē'nēŭs), in Greek mythology, king of Calydon, husband of Althaea, father of TYDEUS, DEIANIRA, and MELEAGER ARTEMIS, neglected in a sacrifice, terrorized his kingdom with a wild boar, which was killed in the CALYDONIAN HUNT

Oenone (ēnō'nē), in Greek mythology, nymph whom Paris loved before he met Helen Oenone was very skilled at healing, and when Paris was wounded in the Trojan War, he asked her to heal him, but she refused Later, when she heard that he was dead, Oenone killed herself

Oenothera: see EVENING PRIMROSE

Oersted, Hans Christian, Dan *Ørsted* (hāns' krĭs'tyän ûr'stĭdh), 1777–1851, Danish physicist and chemist He was professor at Copenhagen from 1806 His discovery (1819) that a magnetic needle is deflected at right angles to a conductor carrying an electric current established a relationship between magnetism and electricity and initiated the study of electromagnetism He was the first to isolate aluminum (1825)

Oesel, Estonia see SAARE

Oeta, Mount (ē'tu), Gr *Oite* (ē'tē), range, central Greece, SW of Lamia Stretching for c 15 mi and rising to 7,063 ft , it terminates in the east at Thermopylae In legend Hercules died here on a pyre after being poisoned by Nessus' robe.

O'Fallon, city (pop 2,407), SW Ill , E of St Louis, in a coal area, inc 1865. Scott Field, military air station, is near by

O'Faoláin, Seán (shôn' ōfā'lun), 1900–, Irish writer and teacher He received M A degrees from the National Univ of Ireland and Harvard Univ and was subsequently a fellow (1928–29) at Harvard before lecturing (1929) in English at Boston College Among his nonfiction works are the biographies of DeValera (1933) and of Daniel O'Connell, *King of the Beggars* (1938) Of his own country he has written the travel book *An Irish Journey* (1940), the historical *Story of Ireland* (1943), and the character study *The Irish* (1948), his travels abroad furnished material for *Summer in Italy* (1950) In fiction his short stories, collected in *Midsummer Night Madness* (1932), *A Purse of Coppers* (1937), and *The Man Who Invented Sin* (1948), have found wide acclaim, of his novels, best known are *A Nest of Simple Folk* (1933) and *Come Back to Erin* (1940) He also wrote the play *She Had to Do Something* (1938).

Ofen, Hungary see BUDAPEST

Ofen (ō'fŭn), pass, 7,070 ft high, Grisons canton, Switzerland, linking the Italian Tyrol with the Engadine Valley.

Offa (ŏ'fu), d 796, king of Mercia (757–96). Ambitious to extend his rule, he gradually asserted his overlordship in Kent and then Sussex, and by 774 his charters styled him *rex Anglorum* [king of the English]. He restricted Cynewulf, king of Wessex, to the area S of the Thames and in 794 had Ethelbert, king of the East Angles, beheaded, and thereafter ruled his kingdom. In time the rulers of Wessex and Northumbria became his sons-in-law In 786 the pope sent two legates to him, and by 788 Offa had set up an archbishopric of Mercia, putting the political power of the church in alliance with his own. His code of laws, now lost, was highly re-

garded by **King** Alfred, and the coinage in Kent which he regularized and expanded was continued until the reign of Henry III substantially without change Venturing into foreign relations, he quarreled with Charlemagne over a proposed marriage of their children, but in 796 signed with him the earliest recorded English commercial treaty At some time between 784 and 796 was built the earthwork between Wales and Mercia known as **Offa's Dyke** The Offa referred to in *Beowulf* and other Anglo-Saxon heroic poetry was not the king of Mercia, but a king of the Angles on the Continent, probably at the end of the 4th cent

Offaly (ŏ'fulē), formerly **King's**, county (771 sq. mi , pop 53,686), central Ireland, in Leinster. The county town is Tullamore A part of the central plain of Ireland, the county is for the most part flat, and a large portion is covered by the Bog of Allen The Slieve Bloom mts , on the southern border, rise to 1,700 ft The Shannon, the chief river, forms much of the western border Agriculture (grain crops, potatoes, and turnips) is the chief occupation, cattle, pigs, and poultry are bred in considerable quantity. With adjacent areas, the region formed the kingdom of Offaly in ancient Ireland It was organized as King's County in 1556, the name was changed after the establishment of the Irish Free State At Clonmacnoise are the ruins of one of the greatest religious centers of early Ireland

Offa's Dyke, ancient entrenchment of England and Wales, from the Dee estuary to near the mouth of the Wye river It was built in the 8th cent by Offa, king of Mercia, as a barrier against the Welsh and lies mainly along the England-Wales boundary Watt's Dyke, a similar work, roughly parallels Offa's at a distance of c 2 mi Parts of the dikes are well preserved

Offenbach, Jacques Levy (ŏ'funbŏk, ŏ'–, Fr zhak' lāvē' ôfĕnbäk'), 1819–80, French composer, b Cologne, son of a Jewish cantor He was the creator of the French operetta and composer of more than 100, the most successful of which was *Orphée aux enfers* (1858) Others, with librettos by Henri Meilhac and Ludovic Halévy, include *La Belle Hélène* (1864), *La Vie parisienne* (1866), *Barbe-bleue* (1866), and *La Grande Duchesse de Gérolstein* (1867) They were witty, fresh, and cleverly orchestrated works and were immensely popular during the Second Empire, which they satirized Offenbach's one serious opera, *Les Contes d'Hoffmann* (*Tales of Hoffmann*, 1881), was his masterpiece See biography by Siegfried Kracauer, *Orpheus in Paris* (Eng tr , 1938), Sacheverell Sitwell, *La Vie Parisienne* (1938)

Offenbach (ŏ'funbäkh), city (pop 60,528, with suburbs 75,479), Hesse, W Germany, on the Main just E of Frankfurt A manufacturing center, it has large leather, machinery, and chemical industries First mentioned in the 10th cent , it later became a petty principality under the Isenburg family It passed to Hesse-Darmstadt in 1815 In the Second World War it suffered considerable damage

offertory [Latin, =offering], in the Roman Mass and in derived liturgical forms, the formal presentation of bread and wine on the altar and their preparation It takes place after the Gospel and the creed and before the preface A short psalm verse from Scriptures is appointed to be said or sung at the beginning, it varies from day to day This is called the offertory verse From ancient times it has been customary to collect the alms of the worshipers about the time of the offertory, hence the term has been transferred to the collection taken up in nonliturgical services in Protestant churches and to the music played or sung during the collection The choice of this selection is usually left to the musicians of the church, and in many Protestant churches the offertory is the choir's principal musical selection in the service

Office of Price Administration (OPA), established in April, 1941, by executive order as the Office of Price Administration and Civilian Supply and renamed (Aug , 1941) the Office of Price Administration In Jan , 1942, the U S Congress gave the OPA broad authority to fix maximum prices and power to enforce them because consumer purchasing power was rapidly rising at the same time that supplies were dwindling in the Second World War The OPA issued (April, 1942) a general maximum-price regulation which made prices charged in March, 1942, the ceiling prices for most commodities Ceilings were also imposed on residential rents These regulations were gradually modified and extended by OPA administrators—notably Leon **Henderson** (1941–42), Prentiss H Brown (1943), and Chester B **Bowles** (1943–46)—until almost 90 percent of the retail food prices were "frozen " Prices continued to rise, but after President F. D Roosevelt issued (May, 1943) a "hold-the-line" order, new drives to secure compliance resulted, and the OPA succeeded in keeping consumer prices relatively stable during the remaining war years. Besides controlling prices, the OPA was empowered to ration scarce consumer goods in wartime. Tires, automobiles, sugar, gasoline, fuel oil, coffee, meats, and processed foods were ultimately rationed. At the end of the war rationing was abandoned, and price controls were gradually abolished, while rent ceilings were kept By Dec , 1946, the remaining responsibilities of the OPA had been consolidated with those of other war agencies into the Office of Temporary Controls—from which the rent-control functions were later (May, 1947) transferred to the Office of the Housing Expediter

Office of Strategic Services (OSS), secret agency of the United States created in 1942 for the purpose of obtaining information about enemy nations and of sabotaging their war potential and morale Headed by William H Donovan, the OSS comprised personnel from all the branches of the armed forces as well as civilians Although the "cloak and dagger" section gained the most publicity after the war, some of the most valuable work was done by the research and analysis section Sabotage missions behind enemy lines were particularly effective when carried out in conjunction with the underground in Nazi-dominated countries In 1945 President Truman transferred the research and analysis branch of the OSS to the Dept of State and the rest to the War Dept See Corey Ford and Alastair MacBain, *Cloak and Dagger the Secret Story of the OSS* (1946), Stewart Alsop and Tom Bradon, *Sub Rosa the OSS and American Espionage* (1946)

Office of War Information (OWI), created in 1942 to consolidate U S government information services The OWI absorbed the functions of the Office of Facts and Figures, the Office of Government Reports, the division of information of the Office for Emergency Management, and the foreign information service of the Coordinator of Information (reorganized as the Office of Strategic Services) Elmer Davis was named director Besides coordinating the release of news for domestic use, the office established an overseas branch, under Robert E Sherwood, which launched a huge information and propaganda campaign in the Second World War through the various media of mass communications Congressional opposition to the domestic operations of the OWI resulted in increasingly curtailed funds, and by 1944 the OWI operated mostly in the foreign field, contributing to the foreign understanding of America and to the undermining of enemy morale The agency was abolished in 1945, and its foreign functions were transferred to the Dept of State See Wallace Carroll, *Persuade or Perish* (1948)

offset: see PRINTING

O'Flaherty, Liam (lē'um ōflă'hurtē), 1896–, Irish novelist, b Aran Islands, Co Galway He ran away to serve on the Western Front in the First World War and later traveled widely His novels have an almost naturalistic realism, and *The Informer* (1925), successfully filmed, and a few others are adventure stories primarily Always compassionately interested in the common man, he wrote psychological novels of troubled individuals in *The Black Soul* (1924), *Mr Gilhooley* (1926), and *The Assassin* (1928) *Famine* (1937) and *Land* (1946) are novels of 19th-century Ireland He has also written notable short stories, as well as autobiographical works, *Two Years* (1930) and *Shame the Devil* (1934)

Ofu (ō'fōō), island (pop 500), Manua dist., American Samoa, c 60 mi from Tutuila It is a small islet rising to an elevation of 1,585 ft and has thick vegetation

Og (ŏg), giant king of Bashan conquered by the Israelites. Deut. 3 1–13.

Ogaden (ōga'dän), region, SW Ethiopia, bordering British Somaliland and Italian Somaliland It is an arid region inhabited by pastoral nomads A clash (Dec 5, 1934) between Italian and Ethiopian troops at the watering hole of Walwal was a major factor in precipitating the war between Italy and Ethiopia (1935–36)

Ogallala (ōgulă'lu), city (pop 3,159), co seat of Keith co , W central Nebr , on the South Platte river and W of North Platte city, laid out 1875, inc 1930 It was a cow town after 1867 Kingsley Dam (162 ft high and 10,700 ft long, earthen) in the North Platte river is near here and was completed in 1941

Ogasawara-gunto: see Bonin Islands

Ogbomosho (ŏbō'mōshō, ŏgbōmō'shō), town (pop. 86,744), SW Nigeria It is a seat of an American Baptist mission, which operates a normal school here Cotton cloth is woven

Ogden, Peter Skene (ŏg'dun), 1794–1854, Canadian fur trader in the Pacific Northwest, b Quebec, son of a man who was a Loyalist in the American Revolution In 1811 he entered the North West Company, and in 1818 he first went to the Columbia river country After the merger (1821) of the North West Company with the Hudson's Bay, he went on leave for a year (1822–23), then served the Hudson's Bay Company in the Columbia river region as a lieutenant of Dr. John McLoughlin From Fort Spokane, Ogden led the Snake river fur brigades in expeditions that made known much of the country of Idaho, Nevada, Utah, and California. He saw Mt Shasta in 1826 and explored the Humboldt in 1828, visiting the west and north shores of Great Salt Lake before returning to the west From 1835 to 1844 he headed the trade in the New Caledonia area (Canadian Pacific coast), then returned to Oregon and conducted himself admirably in the days of intense British-American rivalry and hostility In 1846 he succeeded McLoughlin as chief factor at Fort Vancouver (now Vancouver, Wash).

Ogden. **1** Town (pop 1,513), central Iowa, W of Boone, inc. 1878 **2** [for Peter Skene Ogden] City (pop 43,688), co seat of Weber co , N Utah, at the junction of the Ogden and Weber rivers and N of Salt Lake City Miles Goodyear had a trading post here before 1847, and the Mormons bought it prior to founding the city Ogden is today one of the most important railroad junctions in the West and the center of a region irrigated from both rivers and producing fruit, berries, grain, and other farm produce Ogden is the seat of Weber College (junior), the state industrial school, the state school for the deaf and the blind, and a Latter-Day Saints tabernacle There is an army airfield outside the town Mt Ogden (9,592 ft) is near by

Ogden, river rising in N Utah in the Wasatch Range and flowing south to join the Weber at Ogden The combined stream enters Great Salt Lake. It has been used for irrigation for nearly a century Pineview Dam, completed by the Bureau of Reclamation in 1937, is at the head of Ogden Canyon

Ogdensburg. **1** Borough (pop 1,165), NW N J , S of Franklin, inc 1914 **2** City (pop 16,346), N N Y , a port of entry on the St Lawrence at the mouth of the Oswegatchie and NE of Watertown, settled 1749, inc as a city 1868. It carries on extensive shipping in grain and lumber and makes paper and dairy products Its art gallery houses works of Frederic Remington, who lived here

Ogé, Vincent (vĕsäⁿ' ōzhā'), c 1750–1791, Haitian revolutionist and national hero A free mulatto, well educated and comparatively wealthy, he was sent to plead before the National Assembly at the outbreak of the French Revolution for the concession of civil rights to free mulattoes and for the emancipation of slaves in Haiti Failing in his mission, he returned to Haiti in 1790 and, when the French governor refused to remove restrictions, headed an insurrection Defeated, Ogé was tried, convicted of treason, and broken on the wheel

Ogeechee (ōgē'chē), river rising in NE Georgia, E of Atlanta, and flowing c 250 mi SE to the Atlantic S of Savannah

ogham (ŏ'gum, ō'um), ancient alphabet of the British Isles, especially Ireland. It was used in the first centuries of the Christian era and is found on gravestone inscriptions The language is the local Celtic Probably the system, which was cumbersome and invented by someone who knew Latin, was used with some idea of secrecy The letters consisted of from one to five strokes carved to the edge of the stone in one of four different ways The key is given in Irish manuscripts

Ogier the Dane (ō'jēur, ōzhyā'), in the **chansons de geste**, a paladin who rebelled against Charlemagne Morgan le Fay carried him away to Avalon, whence he returned, after 200 years, to save France Although as Holger, or Olger, Danske he has become a popular Danish hero, his historical prototype may have been a Frank. William Morris uses his story in *The Earthly Paradise*

Oglala Sioux see Sioux Indians.

Oglesby, Richard James (ō'gulsbē), 1824–99, Union general in the Civil War and Illinois political leader, b Oldham co , Ky He moved to Decatur, Ill , where he became a lawyer Oglesby fought in the Mexican War and went to California in the gold rush, but in 1851 he resumed his practice in Decatur In the Civil War he rose to be a major general of volunteers He fought under Grant at Belmont and Fort Donelson and was severely wounded at Corinth (1862) Resigning his commission in 1864, he was elected governor of Illinois Oglesby was governor (1865–69, 1873), U S Senator (1873–79), and again governor (1885–89) Oglesby, Ill , was named for him

Oglesby, industrial city (pop 3,938), N Ill , on the Illinois river at the mouth of the Vermilion and near La Salle, inc. 1902 It is in a limestone and coal area and produces cement

Oglethorpe, James Edward (ō'gulthôrp), 1696–1785, English general and philanthropist, founder of Georgia, b London, of a staunch Jacobite family Educated at Eton and Oxford, he held an army commission from 1713 to 1715 and in 1717 served as aide-de-camp to Prince Eugene of Savoy in his campaign against the Turks In 1722 he was elected to the House of Commons, where he held a seat for 32 years There, as chairman of a parliamentary committee investigating penal conditions, Oglethorpe became interested in the plight of the debtor classes The need for a buffer colony between South Carolina and the Spanish in Florida admirably fitted his proposal to establish an asylum for them. With 19 associates he was granted (June, 1732) a charter, to expire in 21 years, making them trustees of the colony of Georgia Early in 1733 Oglethorpe, leading 116 carefully selected colonists, reached Charleston, S C , and on Feb 12, 1733, he founded Savannah After establishing friendly relations with the Yamacraw, a branch of the Creek

Indians, who ceded their land for settlement, he set about perfecting the colony's defense against the Spanish, building forts and instituting a system of military training England declared war on Spain in 1739, and in 1740 Oglethorpe led an unsuccessful expedition against St Augustine However, near Fort Frederica on St. Simons Island, where he lived for most of his stay in Georgia, Oglethorpe defeated the Spanish in the battle of Bloody Marsh (June 9, 1742), thereby assuring Georgia's survival. A second unsuccessful assault on St Augustine (1743) and the displeasure of some of the colonists with his rigid management led to his recall to England The charges brought against him were dismissed, but he never returned to Georgia In the Jacobite troubles of 1745, accused of failing to overtake the refugees when sent in pursuit, he was court-martialed but acquitted Oglethorpe, promoted general in 1765, declined (1775) the command of the British army in America because he was not to have power of concession and conciliation. In his later years he was an intimate of the literary circle gathered around Samuel Johnson See *Letters from General Oglethorpe*, collected by the Georgia Historical Society (1873), biographies by Henry Bruce (1890), L F. Church (1932), and A A Ettinger (1936)

Oglethorpe, city (pop 1,048), co. seat of Macon co , W central Ga., SSW of Macon, in a farm area; inc 1849.

Oglethorpe University: see ATLANTA, Ga.

Ogmore and Garw (ŏg'mōr, gä'rōō), urban district (1931 pop 26,981; 1947 estimated pop 23,150), Glamorganshire, Wales, on the coast near Neath

Ogoki (ōgō'kē), river of central Ontario, rising in the lake region NW of Lake Nipigon and flowing 300 mi NE to the Albany river A dam at Waboose Rapids forms a reservoir 30 mi long which drains to the south, via Lake Nipigon and into Lake Superior

OGPU: see SECRET POLICE

O'Grady, Standish, 1846–1928, Irish author and historian A leader in the Celtic renaissance, he followed his *History of Ireland* (1878–80) with English versions of the heroic legends of Ireland The best are probably the volumes about Cuchulain (1892–1917; reprinted 1920)

O'Grady, Standish Hayes, 1832–1915, Irish scholar His great work was the *Silva Gadelica* (1892), a collection of old Irish tales He also translated heroic stories from the Gaelic and started a catalogue of the Irish manuscripts in the British Museum, thus laying a foundation for the later scholars of the Celtic renaissance

Ogunquit (ōgŭn'kwĭt), village (pop 615) in Wells town, SW Maine, on the coast, inc 1913 It is a summer resort and artists' colony, and there is a summer playhouse

Ogyges (ŏ'jĭjēz), in Greek mythology, ancient king of Boeotia It was in his reign that a vast and destructive deluge occurred, the Ogygian flood The legend is particularly associated with Thebes, which was also called after him Ogygia The adjective **Ogygian** (ŏjĭ'jĭən), derived from his name, means ancient

Ogygia (ōjĭ'jēə), in the *Odyssey*, isle of CALYPSO, somewhere in the west

Ohad (ō'hăd), one of the sons of Simeon. Gen. 46 10, Ex 6 15

Ohel (ō'hĕl) [Heb , =tent], one of Zerubbabel's sons. 1 Chron 3 20

O'Higgins, Ambrosio (ōhĭ'gĭnz, Span ämbrō'syō ōē'gēns), 1720?–1801, Spanish colonial administrator, b Ballinary, Co Sligo, Ireland He was educated at Cádiz and went to South America when a youth After an adventurous career he so distinguished himself in campaigns against the Araucanian Indians that he was appointed (1789) governor of Chile He was later made marquis of Osorno and served capably as viceroy of Peru (1796–1801) Bernardo O'Higgins was his son

O'Higgins, Bernardo (bĕrnär'dhō), 1776–1842, Chilean revolutionist and dictator, b Chillán, natural son of Ambrosio O'Higgins He took part in the uprising of MARTÍNEZ DE ROSAS and was *chosen in 1813 to replace José* Miguel CARRERA as revolutionary leader After the loss of RANCAGUA, O'Higgins fled to Mendoza, Argentina (then part of Chile), where he joined SAN MARTÍN In 1817 he returned with San Martín's victorious army and became supreme director of Chile, proclaiming Chilean independence at Talca on Feb 12, 1818 His financial, political, and social reforms aroused considerable opposition, and in 1823 he was deposed and exiled to Peru, where he remained until his death

Ohio, state (41,288 sq mi , 1940 pop. 6,907,612; 1949 estimated pop. 7,989,000), N United States, in the Great Lakes region of the Middle West, admitted 1803 as the 17th state (a free state) COLUMBUS is the capital, CLEVELAND is the largest city, and CINCINNATI and TOLEDO are also big. The Ohio river, from which the state takes its name, separates it in the southeast from West Virginia and in the south from Kentucky. Another natural avenue of commerce, Lake Erie, lies across the north, to the east is Pennsylvania and to the west is Indiana From the dunes along the lake to the gorge-cut plateau along the river, Ohio is generally fairly level, with some pleasant rolling country and in the southeast rugged little hills leading to the mountains of West Virginia. Once, in the time of the Indians, who inhabited Ohio even before the days of the MOUND BUILDERS, there were many square miles of virgin forest blanketing the plains south of the lake, but today there are only vestiges of the trees that helped to build the many cities The industrialized state has no wilderness but continues to draw from the earth coal and clay, stone for building, salt, natural gas, and oil. The land, which was scarcely scratched for the Indian cornfields, supports richly bearing farms, especially where the soil was improved ages ago by glacier-ground limestone. Though more than 90 percent of the working population is engaged in industry and perhaps 90 percent of the state's income is derived from commerce and manufacturing, Ohio still ranks eighth among the states in value of farm products, with its fruit orchards, grain fields, truck farms, dairies, and livestock Railroads and highways crisscross the state, bearing a tremendous traffic of raw materials and manufactures The Lake Erie ports—Toledo, Cleveland, and SANDUSKY—handle much ore, coal, oil, and finished materials The great quantities of iron and copper shipped from the farther Great Lakes shores have since the Civil War supplied some of the essentials to build the modern industrial society that prevails today Not only the ports but also other cities get their wealth from trade and manufacturing, with an emphasis on heavy industry YOUNGSTOWN and other places in the Mahoning river valley are lighted with the glare and darkened by the smoke of steel mills In central and W Ohio many sorts of machinery are made SPRINGFIELD, DAYTON, and Columbus have their own specialties In E Ohio and to some extent in the south, clays are made into a variety of products John D ROCKEFELLER and the Standard Oil Company helped to make oil refining a major industry in Cleveland, Toledo, and LIMA AKRON is known the world around for its rubber products Cincinnati, which built its fortune from the enormous traffic of the Ohio river in the early 19th cent , maintains it with commerce and diversified industry The development of farms, mills, shipping, and factories over a century attracted immigrants, and Ohio, which still shows traces of settlement by New Englanders in the late 18th and early 19th cent , has many national groups It shows little resemblance to the farming lands of that time, just as pioneer Ohio showed little resemblance to the pre-pioneer wilderness days Not long before the white man appeared, the Iroquois Confederacy had wiped out the Erie Indians in E Ohio, and there was a confused situation when the French came to the lake and the great river in the 17th cent The Miami Indians, the Shawnee, and the Iroquois tribes were prominent, and there were Ottawa Indians and other tribes in the northwest when the French and the British vied with each other for the rich fur trade of the Ohio valley The river was a magnet, and in the 18th cent there was a struggle to control it and the area its upper reaches drained (present W Pennsylvania, S Ohio, N Kentucky, and W West Virginia) The claiming of the land for France by Céleron de Blainville in 1749 and the activities of the OHIO COMPANY (with the explorations of Christopher GIST) paved the way for the outbreak of the last of the FRENCH AND INDIAN WARS The defeat of the French gave the land to the British, but there were still conflicting claims of Connecticut, Pennsylvania, New York, and Virginia The British government, after the flare-up of PONTIAC'S REBELLION sent an expedition under Henry BOUQUET to subdue the Indians, then set about placating them, and in 1774 adopted the QUEBEC ACT, intended to keep the territory as a dependency of Canada restricted to the Indians and the fur traders. The colonists interested in Western lands were thus balked, and the act helped to breed the discontent that led to the American Revolution In that war the present Ohio figured somewhat in the campaigns of George Rogers CLARK, and it passed to the new United States with the Treaty of Paris of 1783. The claims of the various states to Western lands still left the development of Ohio in a confused state until the quarrels were settled by the relinquishment of almost all claims (see WESTERN RESERVE) and the organization of the Old Northwest by the ORDINANCE OF 1787 Ohio was the first region developed under the provisions of that ordinance, with the activities of the OHIO COMPANY OF ASSOCIATES actively promoted by Rufus PUTNAM and Manasseh CUTLER. MARIETTA was founded in 1788 In the years that followed various land companies were formed, and there were booms, failures, and settlements. The settlers kept coming from the east down the Ohio on flatboats and barges and overland by wagon, their numbers varying with conditions but steadily swelling the population. The Indians, led for some time by the redoubtable Little Turtle, *resisted white advance* and were successful against campaigns led by Joseph HARMAR and Arthur ST CLAIR; Anthony WAYNE, however, thoroughly defeated them at Fallen Timbers (1794). Ohio was made a territory in 1799. General St. Clair, as the first governor, ruled in an arbitrary fashion that made Ohioans for many years afterward distrustful of giving even minimum authority to the executive. The Jeffersonian (Republican) party, preparing the way for statehood, called in 1802 a convention that drafted a constitution Congress passed an enabling act and set March 1, 1803, as the date for the beginning of state government. CHILLICOTHE was the first capital; Columbus became the permanent capital in 1816. The War of 1812, with the disgraceful loss of the West by the Americans and the redemption of that disgrace by O H. PERRY in his victory at the battle of Lake Erie and W. H. Harrison in his victory in the battle of the Thames, interrupted temporarily the development of Ohio, which sped forward again in later years, aided by the building of the Erie Canal and of many canals in Ohio. The firm society of small farms was supported by trade down the Ohio and the Mississippi to St Louis and New Orleans Ohio in 1837 won the territorial struggle with Michigan usually called the Toledo War Railroads succeeded canals gradually, and as Ohio was laced with rail lines, the way was prepared for industrial development after the Civil War. In that war most of the people of Ohio were sympathetic with the Union The Underground Railroad was active in the years before the war, there were prominent opponents of slavery such as Joshua R. GIDDINGS, Salmon P CHASE, and Edwin M STANTON, and Ohio contributed many soldiers to the Union army. Nevertheless, the Peace Democrats and the Knights of the Golden Circle were powerful. Clement L VALLANDIGHAM drew many votes in the gubernatorial election of 1863, and the COPPERHEADS were active until the end of the war Partly because of the peace sentiment John Hunt MORGAN pushed his famous raid deep into Ohio, but the state remained in Union hands Ohio had already been expanding on the basis of the Loan Law, adopted in the time of the Panic of 1837 to encourage railroad and industrial development The educational provisions of the Ordinance of 1787 had also been continued, and Ohio developed culturally as well as economically Early institutions such as Ohio Univ , Miami Univ , Western Reserve, Oberlin, and Antioch foreshadowed the tremendous multiplication of colleges that makes the state today a leader in higher education This trend was intensified by the industrial development after the Civil War, when the shipment of ore from Lake Superior and the development of the petroleum industry turned the state from farming to industry The center of influence at the same time shifted from the Ohio river to Lake Erie Immigrants began to swell the population, and huge fortunes were made. Ohio became very important politically U. S Grant was a native son, and the state contributed several later Presidents—Rutherford B Hayes, James D Garfield, William McKinley, W H Taft, and Warren G Harding Big business and politics became entwined as in the relations of Marcus A HANNA and McKinley City bosses such as George B Cox also bore out this pattern. The state as a whole was long steadily Republican, but political power was dubious, particularly after the rise of the labor movement Reform activities were forwarded by the decision of the Ohio supreme court which declared the Standard Oil Company guilty of violating the antitrust law in 1892 Liberal amendments to the state constitution were made in 1912 and later accepted Industrial Ohio was particularly sensitive to the depression that began in 1929 and struck both farm and factory In later years the state was wracked by strikes such as the sit-down strikes in Akron in 1935–36 and the so-called Little Steel strike in 1937 The Second World War brought great prosperity to the industrial communities, but labor strife was later resumed, as in the steel strikes of 1949 Yet, despite the problems facing a highly industrialized state, the fundamental situation of Ohio—with great resources of coal, oil, natural gas, clay, and salt—is sound as a basis of development. Floods in the many rivers flowing to the Ohio have offered a challenge The Ohio conservancy act of 1914 led to the control of the GREAT MIAMI river after a serious flood in 1912, and measures were taken to prevent and control floods on the Ohio itself; the flood of 1937 helped to forward interest in the flood-control project in the Muskingum valley. This project was a characteristic part of the forward-looking state program, linked with Federal activities Electricity and machinery have been brought to the farms, and rural education has been improved greatly, while every effort has been made to advance social and cultural activities. Cleveland and Cincinnati have developed notable music centers, and all Ohio has sought to demonstrate how an industrial society can supply a rich and varied life for all its citizens. See E. O. Randall and D. J. Ryan, *History of Ohio* (1912); C. H. Ambler, *History of Transportation in the Ohio Valley* (1932); E. H. Roseboom and F. H. Weisenburger, *History of Ohio* (1934); D. H. Crouse, *Ohio Gateway* (1938); H. H. Hatcher, *Buckeye Country* (1940;

rev ed., 1947) and *Western Reserve* (1949); Federal Writers' Project, *Ohio Guide* (1940); G. E. Wittke, *History of the State of Ohio* (6 vols, 1941–44); H. L. Roger and O. E. Fink, *Buckeye Tales* (1946); E. H. Roseboom and L. Roseboom, *Towboat River* (1948); C. C. Huntington, *Living in Ohio* (1948)

Ohio, river, 981 mi. long, formed by the confluence of the Allegheny and Monongahela rivers at Pittsburgh, Pa. Chief eastern tributary of the Mississippi river, the Ohio flows NW out of Pennsylvania, then goes southwestward forming the boundary between Ohio and West Virginia, then westward between Ohio and Kentucky until it reaches the Ohio-Indiana boundary, where it turns to the southwest, continuing in that general direction between Indiana and Illinois on the north and Kentucky on the south, until it empties into the Mississippi near Cairo, Ill. It drains an area of concentrated population and productive industries. The river rises nearly every spring and frequently causes floods. Those of 1913, 1936, and 1937 were particularly destructive. Acts of Congress have stimulated the construction by the U. S. Corps of Engineers of a system of dams, levees, walls, and reservoirs and of numerous local protection projects which considerably reduce the potential danger from floods for most of the region. These projects often provide collateral benefits such as improved sanitation and navigation and the production of hydroelectric power. In 1939 eight states ratified an antipollution plan. The Ohio's principal tributaries from the north are the Muskingum, the Scioto, the Great Miami, and the Wabash; from the south, the Kanawha, the Big Sandy, the Licking, the Kentucky, the Green, the Cumberland, and the Tennessee. Among the important cities on the river are Pittsburgh, Pa., Steubenville, Marietta, Gallipolis, Ironton, Portsmouth, and Cincinnati, Ohio, Madison, Jeffersonville, New Albany, Evansville, and Mt. Vernon, Ind., Cairo, Ill., Wheeling, Parkersburg, and Huntington, W. Va., and Ashland, Maysville, Covington, Louisville, Owensboro, and Paducah, Ky. The river, leading west through the heart of the continent, was from Indian days recognized as an artery of commerce. The French from Canada arrived early, but their spread of settlement was thin, and the river was used by them only as a means of getting to the Mississippi and of trading with the Indians until the middle of the 18th cent. Then the forks of the Ohio (where Pittsburgh now stands) attracted the interest of both French and British. Virginia planters formed the Ohio Company just as the French were preparing to move into the territory, and the outcome was the beginning of the last of the French and Indian Wars. Young George Washington had his first bitter experience of warfare when he was sent out in 1754 to forestall the French and was overpowered. Fort Duquesne, then built at the forks of the river, was one of the prizes of the war. The expedition of Gen. Edward Braddock failed to take it, but that of Gen. John Forbes succeeded in 1758, and French Fort Duquesne became British Fort Pitt. Shortly, however, the Quebec Act prevented any great development of the Ohio region, and it was only after the American Revolution that the Ohio Company of Associates and other land companies, as well as the settlers in Kentucky, were able to utilize the river for bringing out many settlers. Even then pioneers came in small groups until after the War of 1812. Then the river was crowded with flatboats, keelboats, barges, and rafts taking westward the families that in a short period had peopled the S Middle West. Commerce on the river was also expanding, as the produce of the Western farms was brought back east up the river or taken south to the Mississippi and New Orleans. The Erie Canal reduced somewhat the value of the Ohio in the late 1820s, but steamboat service quickened with its rapid carriage of farm products, coal, and (increasingly) manufactured products from the towns of Ohio and Indiana. The river was improved for navigation in 1827 and afterward, and traffic was brisk. It began to decline in competition with the railroads in the 1850s and shrank rapidly after the Civil War, but even today the Ohio carries the burden of many barges, and traffic is enough to warrant recent improvements for navigation. Recently constructed locks and dams provide a dependable channel for the main stream and its major tributaries and thousands of tons of freight are transported on the river yearly. See A. B. Hulbert, *The Ohio River* (1906), C. B. Firestone, *Sycamore Shores* (1936), L. D. Baldwin, *The Keelboat Age on Western Waters* (1941); R. E. Banta, *The Ohio* (1949).

Ohio Company, organization formed (1748) to extend the settlements of Virginia westward. The members were mostly Virginia planters interested in land speculation and the fur trade. A royal charter of 1749 granted the members 500,000 acres around the forks of the Ohio, and in 1750 the company employed Christopher Gist to explore the Ohio valley. The first organized group to develop the region W of the Alleghenies, the company embarked on vigorous British colonial activity, and the French viewed the moves as a challenge to their claim to this region. The immediate rivalry helped bring on the final French and Indian War. Later the Ohio Company merged its interests with another land company, but the American Revolution obstructed its plans. See K. P. Bailey, *The Ohio Company of Virginia and the Westward Movement, 1748–1792* (1939).

Ohio Company of Associates, organization for the purchase and settlement of lands on the Ohio river, founded at Boston, Mass., in 1786. Its organizers were a group of New England men, most of them Revolutionary veterans. The desire of the company to protect its interests helped to hasten the passage by Congress of the Northwest Ordinance of 1787. One of the directors, Dr. Manasseh Cutler, was sent to New York, where Congress was sitting, and during the summer and fall of 1787 he carried on negotiations in furtherance of the project. A contract, signed on Oct. 27, gave the company the right to purchase 1,500,000 acres at the confluence of the Ohio and Muskingum rivers for a payment of $1,000,000 in government currency, then worth about eight cents to the dollar. Cutler, in order to conclude the matter, shrewdly suggested the appointment of Gen. Arthur St. Clair, then president of Congress, as governor of the Northwest Territory. A second contract was also signed, giving Cutler and Winthrop Sargent, for themselves and others, the right to purchase land on the Ohio and Scioto rivers. One half of the land included in this arrangement was conveyed to Col. William Duer, Secretary of the Treasury Board, and his associates. The contract with the Ohio Company provided that one section in every township was to be devoted to the maintenance of public schools, another was to be set apart for religious uses, and two entire townships were to be reserved for a university. Settlement of the company's grant was started in April 1788, by Gen. Rufus Putnam, a director, who laid out Marietta.

Ohio Northern University. see Ada, Ohio

Ohio State University, at Columbus, land-grant supported, coeducational, chartered 1870, opened 1873 as Ohio Agricultural and Mechanical College, renamed 1878. It includes colleges of agriculture, arts and sciences, commerce and administration, dentistry, education, engineering (with architecture), law, medicine, pharmacy, and veterinary medicine and schools of fine and applied arts, home economics, journalism, music, nursing, optometry, and social administration. There are business, educational, and surgical research bureaus, engineering, forestry, and wildlife experiment stations, an industrial research foundation, plant, animal, and government institutes, a biology and fisheries laboratory, medical and other clinics, and the Ohio Biological Survey. The university has a large library, the state museum, and a radio station. A large telescope is owned jointly with Ohio Wesleyan Univ. Graduate work, research, and public service are important.

Ohio University, at Athens, state controlled, coeducational, chartered 1804, opened 1809, the oldest college in the Old Northwest. It has colleges of applied science, arts and sciences, commerce, education, and fine arts.

Ohio Wesleyan University (wēs'lēun), at Delaware, coeducational, chartered 1842, opened 1844 by Methodists. In 1877 it absorbed Ohio Wesleyan Female College (chartered and opened 1853). The medical school at Western Reserve Univ. was a department here from 1896 to 1910. Perkins Observatory, with a large telescope, is owned jointly with Ohio State Univ. See history by H. C. Hubbart (1943).

Ohm, Georg Simon (gā'ôrk zē'mōn ōm'), 1787–1854, German physicist. He was professor at Munich from 1852. His study of the electric current led to his formulation of a law now known universally as Ohm's law. The unit of electrical resistance, the ohm, was so named in his honor. He also made studies in acoustics and of interference in crystals. His writings include *The Galvanic Current Investigated Mathematically* (1827, Eng. tr., 1891).

ohm [for G. S. Ohm], unit of electrical resistance. The international ohm (the practical unit) is defined as the resistance offered to the flow of an unwavering electric current by a column of mercury at 0°C., 106.3 cm. long, constant in cross section, and having a mass of 14.4521 g.

Ohm's law [for G. S. Ohm] states essentially that the electromotive force (in volts) of an electric current flowing along a conductor is equal numerically to the product of the current strength (in amperes) and the resistance of the conductor (in ohms). As a simple equation, it is V(volts) = A(amperes) x R (resistance in ohms), or E (electromotive force or volts) = I (current) x R (resistance). See P. W. Bridgman, *Failure of Ohm's Law in Gold and Silver at High Current Densities* (1922), H. O. Cooper, *Ohm's Law and Temperature-Resistance Charts* (1932).

Ohrid, Yugoslavia see Ochrida.

Ohthere (ōthēr'ə), fl. 880, Norse explorer. His account of his voyage around the North Cape, along Lapland, and into the White Sea was incorporated by Alfred the Great in the introduction to his Anglo-Saxon translation of Orosius' universal history and was requoted by Hakluyt in his *Principal Navigations*. Another voyage of Ohthere southward along the Norwegian coast and to Denmark furnished additional information on the geography of N Europe.

Oich, Loch (lŏkh ōkh'), lake, Inverness-shire, Scotland. It is part of the Caledonian Canal.

oil cake. see linseed cake.

Oil City, city (pop. 20,379), NW Pa., on the Allegheny and c. 75 mi. NNE of Pittsburgh, laid out c. 1860, inc. as a borough 1862, as a city 1871, reinc. 1881. It is a center of the oil industry and engages in refining and distribution and in production of oil-well equipment. Edwin L. Drake, driller of the first oil well in the United States, struck oil (1859) near Titusville, 15 mi. north of the city, and started the growth of Oil City.

oilcloth, originally, cloth treated with oil or other substances so as to be waterproof and used for fishermen's and sailors' wear, for coach robes and covers, and later as a floor covering, called floorcloth. Subsequently it was made of heavy canvas, jute, or burlap, sized with glue, and coated with a thick oil paint, several coats being used and successively rubbed down with pumice stone. It was machine printed, dried in a drying room, varnished, and rolled. Linoleum has superseded oilcloth as a floor covering. A variety of oilcloth fabrics is now produced for wall, table, and shelf coverings, for raincoats, and for many small wares.

oil engine see internal-combustion engine.

oil of vitriol. see sulphuric acid.

oils, term commonly used to indicate a variety of greasy, fluid substances which are, in general, viscous liquids at ordinary temperatures, lighter than water, insoluble in it but soluble in alcohol and ether, and inflammable. These substances, however, differ so much among themselves in chemical composition that, in chemistry, their classification in one group is not practical and is employed only in a general way in accordance with popular usage. Petroleum probably originated in organic matter of past geologic time, because many have regarded it as inorganic, petroleum and its oily derivatives were early classed as mineral oils. They are widely used as fuels, illuminants, and lubricants. Distinguished from these in that they are obtained from animals and plants and are mixtures of carbon-hydrogen-oxygen compounds are the **fatty oils** or **fixed oils.** There is fundamentally no difference between fatty oils and fats (see fats and oils). Such oils are used extensively as lubricants and in the making of soap. Depending upon their ability to absorb oxygen when exposed to the atmosphere and form a thin, skinlike layer over substances upon which they are spread, the fixed, or fatty, oils are classed as drying or nondrying oils. The drying oils, e.g., linseed, hempseed, and poppy-seed oil, are used in making paints and varnishes. On the other hand, such vegetable oils as olive, rapeseed, and castor oil and such animal oils as lard oil and neat's-foot oil do not possess this property and fall into the nondrying group. Another large and varied group of oils is recognized, the **essential oils** or **volatile oils,** which occur in plants but differ from the fixed, or fatty, oils in that they are volatile. In general, they give to the plant in which they are found its characteristic odor, flavor, or other properties (including medicinal) peculiar to it. They occur in various parts of the plant body, in the seeds, flowers, bark or leaves, and are also concentrated in certain special cells or groups of cells (glands). Because of their properties, they are widely used in perfumes, flavoring, and medicines. Their chemical composition differs a great many, for example, are principally terpenes, compounds of carbon and hydrogen. Others contain aldehydes, ketones, or phenols. Oxygen, sulphur, and nitrogen are present in compounds in others. In general, they are complex mixtures. They are obtained from the plant in various ways, depending upon the nature of the part in which they occur—by compression, by distillation with steam, by dissolving the oils out (extraction) or absorbing them, and by pressure and maceration. Included in the essential oils are those of anise, attar of roses, caraway, cardamom, cinnamon, clove, copaiba, cubeb, dill, eucalyptus, hyssop, lavender, lemon, mustard, patchouli, pennyroyal, peppermint, rosemary, rue, sandalwood, sassafras, spearmint, tarragon, thyme (see also thymol), turpentine, and wintergreen. Oils are also obtained from asafetida, bergamot, camphor, coriander, fennel, garlic, ginger, hop, jasmine, juniper, myrtle, parsley, pimento, tansy, tea, and wormwood.

oilstone. see hone and whetstone.

Oilton, oil city (pop. 1,225), N central Okla., on the Cimarron river and SW of Tulsa; founded c.1915.

Oirat Autonomous Oblast or **Oirot Autonomous Oblast,** RSFSR: see Mountain-Altai.

Oise (wāz), department (2,273 sq. mi., pop. 396,724), N France, N of Paris, occupying parts of Ile-de-France and of Picardy and drained by the Oise river. It is a fertile agricultural area. Beauvais is the department capital.

Oise, river, 186 mi. long, rising in the Ardennes mts., just inside Belgium. It flows through N France,

SW past Compiègne to join the Seine NW of Paris shortly below Pontoise.

Oisin: see OSSIAN.

Oita (ō'ētä), city (1947 pop 86,570), capital of Oita prefecture, NE Kyushu, Japan, a port on Beppu Bay It is a railroad and manufacturing center. Mountainous Oita prefecture rises to Mt Kuju (5,850 ft), highest peak of Kyushu There are gold, silver, and tin mines

Ojai (ō'hī), mountain resort (pop 1,622), S Calif, NW of Los Angeles, in a fertile valley; inc 1921.

Ojeda, Alonso de (älōn'sō dā ōhā'dhä), c.1466–1515?, Spanish conquistador He joined Columbus on his second voyage and in 1499—at first accompanied by VESPUCCI—explored the northeastern coast of South America In 1508 he was made governor of territories of N South America Near present Cartagena he was defeated by the Indians and virtually rescued by NICUESA Again he had trouble with the Indians and, leaving his men under command of Francisco PIZARRO, sought aid in Hispaniola. He reached Cuba, but his actions after arrival are obscure His men abandoned the colony and were picked up not far from Cartagena by ENCISO

Ojibwa Indians (ōjĭb'wă",-wū) or **Chippewa Indians** (chĭp'pŭwă",-wū), group of North American Indian tribes of the Algonquian linguistic stock In the mid-17th cent, when visited by Father Jean Alloues, they occupied the shores of Lake Superior They were constantly at war with the Sioux and the Fox over possession of the rich fields of wild rice in this region. When the Ojibwa received (c 1690) firearms from the French, they drove the Fox from N Wisconsin They then turned against the Sioux, compelling the Sioux to cross the Mississippi The Ojibwa continued their march westward across Minnesota and North Dakota until they reached the Turtle Mts in N central North Dakota, where they established their westernmost band This band became the Plains Ojibwa In 1736 the Ojibwa obtained their first foothold E of Lake Superior, and after a series of engagements with the Iroquois, they obtained the peninsula between Lake Huron and Lake Erie Thus by the mid-18th cent the Ojibwa controlled a large area, from the eastern shore of Lake Huron in the east to the Turtle Mts in the west The Ojibwa, one of the largest tribes N of Mexico, then numbered some 25,000 They took the part of the French in the French and Indian Wars and of the British in the War of 1812 The Ojibwa had been involved in the wars of the Old Northwest After the War of 1812 they made a treaty with the United States, and since that time they have remained peaceful They live on reservations in Michigan, Wisconsin, Minnesota, and North Dakota, where, all told, they number some 33,000 The Ojibwa, except for the Plains Ojibwa, had an Eastern Woodlands area culture They were a fairly sedentary people who depended for food on fishing, hunting (deer), farming (corn and squash), and gathering of wild rice They obtained and used maple sugar and smoked bark "tobacco," kinnikinnick The characteristic dwelling was the wigwam The Ojibwa had a unique form of picture writing which was intimately connected with the religious and magico-medical rites of the Midewin society. The name also occurs as Ojibway and Chippeway, but they are not to be confused with the CHIPEWYAN INDIANS See Alex Hrdlicka, *Anthropology of the Chippewa* (1916), Ruth Landes, *Ojibway Sociology* (1937)

Oka, village (estimated pop 1,000), S Que, on the north shore of the Lake of the Two Mountains (a widening of the Ottawa) and WSW of Montreal It is noted as the site of a Trappist monastery and farm (est 1881), where Oka cheese is made An agricultural institute here is affiliated with the Univ of Montreal

Oka (ŏkä'), river, 950 mi. long, central European RSFSR, the chief right affluent of the Volga It rises S of Orel and flows N past Orel and Kaluga, then E past Kolomna and Ryazan, then NE past Murom, and joins the Volga at Gorki (formerly Nizhni Novgorod) It is navigable for large vessels (grain and lumber transports) below Kolomna, 550 mi above its mouth, and traverses densely populated agricultural and industrial areas Among its tributaries are the Moskva, Klyazma, and Moksha.

Oka, river, 500 mi long, RSFSR, in S central Siberia. It rises in the Sayan Mts. and flows north to join the Angara at Bratsk.

Okada, Keisuke, Marquis (kā'sōōkā ōkä'da), 1867?–, Japanese statesman. An admiral, he was (1927–29, 1932–33) minister of the navy before serving (1934–36) as premier In Jan., 1936, the election went against the ultranationalists and militarists, and on Feb. 26 young soldiers in a "barrack" uprising killed the finance minister and other officials. Okada escaped, but had to resign, and the incident ultimately strengthened the power of the army.

Okanagan Lake (ōkŭnă'gŭn), 69 mi. long and from 2 to 4 mi. wide, S British Columbia It is drained S by the Okanagan river to Osoyoos Lake, which in turn is drained by the Okanogan river of Washington.

Okanogan (ōkŭnă'gŭn), commercial town (pop. 1,735), co seat of Okanogan co., N central Wash. on the Okanogan river, settled 1886 It is 20 mi from old Fort Okanogan, near which the first Americans came to settle in the Washington Territory Okanogan is the headquarters of the Chelan National Forest

Okanogan, river of N Washington, rising in Osoyoos Lake, at the Canadian border, and flowing south c 100 mi to the Columbia Osoyoos Lake is fed by the Okanagan river of British Columbia.

Okanogan Indians or **Okinagan Indians** (both: ōkŭnă'gŭn), group of North American Indian tribes of the Salishan linguistic stock In the early 19th cent they lived on the west side of the Okanogan river in Washington and northward into British Columbia In winter the Okanogan lived in semisubterranean earth lodges and in summer in mat or bark lodges They fished, hunted, and gathered roots and berries The Okanogan did not make war on the whites although their land claims were never adjusted Today they live in British Columbia and, with the Colville (a related tribe), on the Colville reservation in Washington. See Leslie Spier, ed, *The Sinkaietk or Southern Okanogan of Washington* (1938).

Okavango (ōkŭvăng'gō) or **Kubango** (kōōbăng'gō), Port *Cubango*, river, c 1,000 mi long, rising in N central Angola and flowing SE to Lake Ngami in N Bechuanaland protectorate

Okayama (ōkä'yämu), city (1947 pop 140,631), capital of Okayama prefecture, SW Honshu, Japan, on an inlet of the Inland Sea A railroad and industrial center, it is known for its feudal castle, its 18th-century park, and its medical university Okayama prefecture is a major production area for floor mats, made from rushes

Okeechobee (ō"kēchō'bē), city (pop 1,658), co seat of Okeechobee co., S central Fla., on the north shore of Lake Okeechobee It is a shipping center for vegetables, poultry, fish, and frogs

Okeechobee, Lake, large shallow lake, S central Fla., N of the EVERGLADES, second largest freshwater lake wholly within the United States It is c 35 mi long, 30 mi wide, and 15 ft at its deepest and covers c 750 sq mi In reclaiming the Everglades and adjacent lands many canals (also used for transportation) were built, the most important are those of the Okeechobee Waterway The mass-production agricultural methods of the large food corporations which cultivate the drained lands bordering the lake produce bumper crops in winter vegetables (beans, celery, cabbage, tomatoes) and sugar cane West of the lake is a thriving cattle country After the disastrous hurricane of 1926, levees were built along parts of the lake's shore to protect the country from flood waters Okeechobee is a favorite fishing resort and also has commercial fisheries See A J Hanna and K A Hanna, *Lake Okeechobee* (1948)

O'Keeffe, Georgia (ōkēf'), 1887–, American painter, b Sun Prairie, Wis, studied at the Art Institute of Chicago and the Art Students League, New York She was a commercial artist in Chicago from 1908 to 1909 and after studying at Teachers College, Columbia Univ, taught art in the public schools at Amarillo, Texas, and in the West Texas State Normal College In 1916 Alfred Stieglitz exhibited her work at his Fifth Ave gallery, and in 1918 she gave up teaching, went to New York, and devoted herself to painting Her enlarged and conventionalized flower studies in brilliant color won her an enthusiastic audience She has also painted landscapes and abstractions but is best known as a highly original and daring flower painter, her flowers are often shown with bones and skulls against a background of New Mexican mountains Famous among such paintings is *Ram's Head, White Hollyhocks, Hills* In 1924 Georgia O'Keeffe married Alfred Stieglitz She worked largely in New York and New Mexico She is represented in the Tate Gallery, London, the Metropolitan Museum, and the museums of Brooklyn, Cleveland, Detroit, Springfield, Mass, and Washington, D C

O'Keeffe, John, 1747–1833, English actor and playwright, b Dublin Best remembered today as the author of the song *I Am a Friar of Orders Grey*, O'Keeffe was a well-known actor until 1797, when blindness forced him from the stage. He wrote many plays and comic operas, and his comedy *Wild Oats* (1791) enjoyed a long run in London

Okeene (ōkēn'), town (pop. 1,079), NW central Okla., SW of Enid and near the Cimarron river.

Okefenokee Swamp (ō"kŭfunōk', -nō'kē), c 40 mi long and averaging 20 mi in width, mainly in SE Georgia, partly in N Florida It forms the bulk of the Okefenokee Wildlife Refuge of 479,450 acres, designated in 1937 by presidential proclamation The swamp abounds in varied wildlife and is drained by the Suwanee and St. Marys rivers. Early attempts to exploit the rich timber resources of the swamp proved too costly to be practicable.

Okemah (ōkē'mŭ), city (pop. 3,811), co. seat of Okfuskee co., E central Okla., near the North Canadian river SW of Tulsa, in an oil and agricultural region, settled 1902. The state training school for Negro boys is here.

Okhotsk, Sea of (ōkŏtsk'), Rus *Okhotskoye More* (ōkhôts'kŭyŭ môr'yŭ), northwest arm of the Pacific ocean, W of the Kamchatka peninsula and the Kurile Islands It is connected with the Sea of Japan on the southwest by Tatar and La Pérouse straits and with the Pacific Ocean on the southeast by passages through the Kurile Islands. It is visited by heavy fogs and in its northern portion is icebound during much of the year. Fishing and crabbing are carried on off W Kamchatka peninsula Among the ports are Nagayevo, the port of the mining town Magadan and the town of Okhotsk.

Okhrida, Yugoslavia: see OCHRIDA.

Okinawa (ō"kēnä'wä), island (467 sq mi.; 1940 pop 435,681), SW Pacific, largest (60 mi long and 9 mi wide) of the Okinawa Islands in the Ryukyu Islands chain Volcanic in origin, it is mountainous and densely covered with vegetation Products are sugar cane, sweet potatoes, charcoal, and dried fish Manufacturing—of Panama hats, textiles, and pottery—centers at the chief city and port, NAHA On the west coast are Kadena and Yontan airfields. Okinawa was the scene of the last great U S amphibious campaign in the Second World War U S army and marine forces landed on April 1, 1945, attacked Japanese fortified lines on April 10, and fought one of the bloodiest campaigns of the war, while the navy offshore suffered heavy damage in resisting attacks by suicide planes (see KAMIKAZE) The Japanese garrison, having lost 103,000 of the 120,000 men, ended organized resistance on June 21, 1945 U S casualties were 48,000, one fourth listed as dead Ie-jima, just off the west coast, was the scene of part of the campaign, Ernie Pyle was killed here Okinawa, until 1945 seat of the Okinawa prefecture (which included all the Southern Ryukyu Islands), was placed in Aug., 1945, under a U S military governor

Oklahoma (ōklŭhō'mŭ), state (69,283 sq mi, 1940 pop 2,336,434, 1949 estimated pop 2,302,000), SW United States, admitted 1907 as the 46th state OKLAHOMA CITY is the capital, and the only other large city is TULSA The state is bounded on the north by Kansas and on the east by Missouri and Arkansas, the Red River marks the border with Texas across the south, except where in the west the Texas Panhandle thrusts north and reduces Oklahoma to a thin panhandle reaching W to New Mexico and in its extreme part bounded on the north by Colorado The high, short-grass plains of W Oklahoma are part of the GREAT PLAINS and, like the rest of that area, are frozen by north winds in the winter and baked by soaring heat in summer There are wide grazing lands and broad wheat fields The plains are broken here and there, notably by Black Mesa in the Panhandle and by the Wichita Mts in the southwest, but the general slope is downward to the east, and central and E Oklahoma is mostly prairie, rising in the northeast to the Ozark Mts and in the southeast to the Ouachita Mts The rivers that trend from west to east across the state—the Arkansas and its tributaries, the Cimarron and the Canadian (with the North Canadian) in the north, the Red River with the Washita and other tributaries in the south—are much more prominent in the east, where there are many small farms, once to a good extent given over to cotton but now yielding wheat, other grains, and diversified products. There are also prosperous dairy farms and large cattle ranches About McAlester there are coal mines, from the northeast come zinc and lead, and from W Oklahoma some gypsum But the mineral deposits that have given the state its wealth are the oil fields After the first well was drilled in 1888, the business grew by fits and starts to enormous proportions, and Oklahoma City and Tulsa are among the great oil centers of the world. To the outsider, indeed, two of the most striking aspects of Oklahoma are oil and the Indian heritage The region had seen the rise of several Indian cultures—some of a high material level—before the first white men visited the land in 1541 Coronado and his men almost certainly crossed Oklahoma in their search for Quivira, and Hernando De Soto may have visited E Oklahoma Later Juan de Oñate passed through W Oklahoma, and some other Spanish explorers and traders and French traders from Louisiana visited the east, but there was no development. The Indians roamed over the land, tribes of the Plains cultures—Osage, Kiowa, Comanche, and Apache—in the west, and the Wichita and other more sedentary tribes farther east. It is asserted that the first white trading post was established at Salina by the Chouteau family of St Louis even before the territory was transferred to the United States by the LOUISIANA PURCHASE in 1803, but the land remained in the control of the sparse and nomadic Indian population. For the most part only traders, official explorers (notably Stephen H. Long), and scientific and curious travelers (among them Washington Irving and George Catlin) came into the present state. In 1819 the U.S. government invited the Cherokee Indians of Georgia and Tennessee to move into the area, and a few had come to settle before intense white pressure, with the approval of President Andrew Jackson, forced

them and the others of the Five Civilized Tribes (the Choctaw, the Chickasaw, the Creek, and the Seminole) to abandon their old homes and to take up residence in what was to become the INDIAN TERRITORY They settled on the hills and little prairies of the eastern section and built separate organized states and prosperous communities The Cherokee, particularly, had a highly Europeanized culture with a written language, invented by their great leader SEQUOYAH, and highly developed institutions Some of them were slaveholders and ran their agriculture on the traditional Southern plantation pattern; others were small farmers The Five Civilized Tribes clashed briefly with the Plains Indians, particularly the Osage, but they were for a time free from white interference, and they were able to establish a civilization that strongly affected the whole history of the region The troubles of the whites did not, however, long escape them, and the Civil War was a major disaster Though no battle of the actual war was fought in present Oklahoma, there were innumerable little civil wars The Southern tradition led all the tribes to ally themselves with the Confederacy, but Unionist disaffection was strong in all, and individual violence was so prevalent that many fled, leaving their farms to desolation When the fighting was over, restoration was strenuously undertaken, but change was upon the Five Civilized Tribes As punishment for taking the Confederate side, they lost all the western part of the territory, and the Federal government began assigning lands there to tribes that had been driven from their lands and shunted about elsewhere, such as the Delaware and the Shawnee, as well as to wild Plains tribes, who caused much trouble before they were subdued and firmly settled on reservations Worse, the land had become desirable to the whites Immediately after the Civil War came the long drives of cattle from Texas to the railroad in Kansas, and the old cattle trails led across Oklahoma, the best known of them perhaps the Chisholm Trail The cattle were fattened on the virgin ranges of Oklahoma, and cattlemen began to look at the grasslands with speculative and covetous eyes The first railroad actually to cross Oklahoma came in 1870 72, and it was not possible to keep white settlers out They came despite laws and treaties and covenants, and by the '80s there was a strong clamor of which Ranches were developed, too, nominally owned by Indians, but actually controlled by white cattlemen and their cowboys, the region took on a tinge of the Old West of the cattle frontier, which it has never wholly lost In the '80s, too, land-hungry frontier farmers, the "boomers," agitated to be given the "unassigned" lands in the western section—the lands not given to any Indian tribe The agitation succeeded, and after the ownership had been cleared with the Creek and the Seminole, a large strip was opened for settlement with much fanfare on April 22, 1889 Prospective settlers lined up on the Kansas border and at high noon were allowed to cross on a "run" to compete in finding and claiming the best lands Those who illegally entered ahead of the set time were the "sooners" Later other strips of territory were opened and settlers poured in from the Middle West and the South The western section became the Oklahoma Territory in 1890, complete with the Panhandle, the tiny band of territory which had been taken from Texas by the Compromise of 1850 and had become a no-man's land, where settlers had come in, undisturbed Oklahoma Territory was enlarged and developed, and the "twin territories" stood side by side, but not for long In 1893 the DAWES COMMISSION was appointed, and though the Indians resisted, the policy of dividing the tribal lands in individual holdings was finally enforced in 1906 The open lands of the Indian Territory were thus made available to white men The Civilized Tribes made the best of a poor bargain and joined in the creation of a state, which was admitted in 1907 with a constitution replete with agrarian radicalism Already, however, the oil boom had reached major proportions, and the young state was on the verge of industrial development At the same time more and more acres were being sown with wheat, the cattle-land holdings shrank but were still enormous Oklahoma soon had created the free and easy Western society that was to characterize it as a state Its virtues were well represented in the man who was perhaps the most widely loved of all Oklahomans, Will ROGERS. His mocking attitude toward politics, mingled with serious concern for the welfare of the people, reflects an attitude typical of Oklahoma. Political life has been turbulent and streaked with displays of broad humor. In the troubled days of the 1930s the most prominent of the politicians, Governor William H Murray (Alfalfa Bill Murray), presented his programs of social reform with a strong tinge of the theatrical Oklahoma had then fallen upon evil days, produced largely by recurrent drought that burned the wheat in the fields Overplanting and overgrazing aided the weather in making NW Oklahoma a part of the publicized Dust Bowl. Farm tenancy had risen in the '20s, and the farms tended more and more, in the east as well as the west, to be held by large owners and consolidated in large and economical blocks A good many tenant farmers were compelled to leave their dust-stricken farms and go west as migrant laborers (the Okies) With the return of the sparse rains, however, and increasing care in preserving and utilizing water and soil resources, much of the Dust Bowl was again greened over with wheat, and demands for food in the Second World War and later brought back some wealth Large programs conserving the water of the rivers and supplying irrigation have been undertaken with Federal help, many of them have been brought to completion, as in Lake Texoma on the Red River and the large dam and reservoir on the Grand River (see articles on the Oklahoma rivers for more information on the projects) Modern farming methods have also been pushed, and Oklahoma has continued to rely upon oil, war-developed industries, wheat, diversified farm products, and cattle and sheep The mixture of the Southern tradition with the Western has been shown in the question of discrimination against the Negro In the early years of the state the U S Supreme Court nullified a "grandfather clause" intended to prevent the Negroes from voting, and recently the Supreme Court has compelled the acceptance of Negro students in the state institutions of higher learning The two most important of those institutions are the University of Oklahoma and Oklahoma Agricultural and Mechanical College See J B Thoburn and M H Wright, *Oklahoma a History of the State and Its People* (4 vols, 1929), Guy Webb, *The Great Plains* (1931), Brookings Institution, *Organization and Administration of Oklahoma* (1935), Paul Sears, *Deserts on the March* (1935), Angie Debo, *And Still the Waters Run* (1940), Federal Writers' Project, *Oklahoma· a Guide to the Sooner State* (1941), Grant Foreman, *A History of Oklahoma* (1942), E E Dale and M L Wardell, *History of Oklahoma* (1948), Angie Debo, *Oklahoma, Foot-Loose and Fancy-Free* (1949)

Oklahoma, University of, mainly at Norman, state supported, coeducational, chartered 1890, opened 1892 It has colleges of arts and sciences (with schools of applied biology, citizenship and public affairs, geology, home economics, journalism, letters, library science, physical education, and social work), business administration, education, engineering (with schools of architecture and petroleum engineering), and fine arts (with schools of art, drama, and music), University College, and schools of law, medicine (at Oklahoma City), and pharmacy There are science and art collections, state biological and geological surveys, research and community development institutes, a radio station, and a university press See history by Roy Gittinger (1942)

Oklahoma Agricultural and Mechanical College, at Stillwater, land-grant and state supported, coeducational, chartered 1890, opened 1891 It has schools of agriculture, arts and sciences (with music), education, home economics, and veterinary medicine and divisions of commerce and engineering (with schools of architecture and applied art and technical training)

Oklahoma City, city (pop 204,424), state capital, and co seat of Oklahoma co, central Okla, on the North Canadian river Settled in a day, after the area was opened to homesteaders in 1889, the city was incorporated in 1890 and made state capital in 1910 Its wealth is based largely on the thousands of oil wells in the area, which push up to the grounds of the capitol and the governor's mansion It is also an important trade and industrial center, with large meat-packing plants and manufactures of iron and steel, furniture, clothing, cotton oil, flour, electrical equipment, and pottery During the Second World War it became an important air base The city has many parks and several fine buildings, including the impressive civic center (1937), the capitol, and the state historical society building Oklahoma City Univ (coeducational) and the medical school of the Univ of Oklahoma are here

Oklahoma Colored Agricultural and Normal University see LANGSTON UNIVERSITY

Oklawaha (ōklwô'hô), river, c 120 mi long, rising in the large lake system of central Florida It flows north, receiving the waters of SILVER SPRINGS, then turns east, emptying into the St Johns S of Palatka

Okmulgee (ōk"mŭl'gē), city (pop 16,051), co seat of Okmulgee co, E central Okla, SE of Tulsa It was settled c 1899 on the site of the Creek capital (1868–1907) In 1907 the discovery of oil created a boom, which declined after 1930 The city is an important trade center, and its industries include cotton and food processing, oil refining, and glass manufacture A commission government was adopted in 1912 Near by are an old Creek council house, Lake Okmulgee, and laboratories for the study of hog cholera

Okolona (ōkulō'nu), city (pop 2,117), a co seat of Chickasaw co, NE Miss, NNW of Columbus, in a dairy, livestock, and farm area, founded 1848 The town was burned in the Civil War, there is a Confederate cemetery A U S game preserve is near by

okra or gumbo, African plant (*Hibiscus*, or *Abelmoschus, esculentus*), cultivated in the S United States and other warm regions It has tapering, angular, mucilaginous pods used as a vegetable or pickle but especially as a thickening for gumbo soups and stews. The fiber has been utilized, and the seeds have served as a coffee substitute

okrug (ô'krôog, Rus ô'krôōk) [Rus, =area], administrative division in the RSFSR National okrugs are the lowest type of the autonomous units in the Soviet "ladder of nationalities"

Okubo, Toshimichi (tô"shēmē'chē ô'kōōbō), 1832?–1878, Japanese statesman A figure of the MEIJI restoration, he held ministerial posts and was influential in introducing Western ideas to Japan He is said to have persuaded his lord, the daimyo of Satsuma, to return his fief to the emperor and thus forced the restoration He was the most powerful figure in the new government Okubo also featured in putting down the party favoring war with Korea After the Satsuma rebellion, in which he took the government side, he was assassinated, presumably by fellow clansmen of the Satsuma clan

Okuma, Shigenobu, Marquis (shēgā'nōbōō ô'kōōmä), 1838–1922, Japanese statesman A samurai of Hizen, he was drawn toward liberalism by his readings in English and Dutch When he was finance minister in 1876, he had the annual money paid to the former feudal aristocracy changed to payments in lump sums, with great saving for the state In 1881 the protests of a group he led against fraudulent sale of government property in Hokkaido caused the emperor to promise a constitution Okuma, promptly ousted from the government, founded a reform party called the Kaishinto (a forerunner of the Minseito) and agitated for parliamentary government He also favored the building up of Japanese industrial strength, working with the Mitsubishi interests (see ZAIBATSU), and tried also to increase Japanese prestige in the world of imperialism As foreign minister (1888–89) he negotiated to revise treaties in Japan's interests, the bomb of a terrorist who despised Okuma's gradualism cost the minister a leg His first premiership (1898) was abortive, but in his second (1914–16) Japan went into the First World War on the Allied side, seized Kiaochow, and presented China with the TWENTY-ONE DEMANDS

Olaa (ōlä'ä), also called **Keaau** (kä'u-ou'), town (pop 2,509), on E Hawaii, T H, 7 mi. SSE of Hilo It has a large sugar plantation

Olaf I (Olaf Tryggvason) (ô'läf trŭg'vusōn), c 963–1000, king of Norway (995–1000), great-grandson of Harold I His early life of exile and slavery is surrounded with a mist of romance, and little is definitely known of it He aided his father-in-law, the duke of Poland, in war and took part in harrying the English coast He may have been present at the famous battle of Maldon He later was converted to Christianity and made peace (c 994) with the English In 995 he went to Norway, overthrew Haakon, and became king He undertook the conversion of Norway to Christianity by force as well as by persuasion He met some opposition, but it was not until he became involved in war with Sweden and Denmark that he was defeated and died at the naval battle of Svolder

Olaf II (Saint Olaf), c 995–1030, king of Norway (1015–28) He is called also Olaf the Stout or Olaf the Fat He spent part of his early life in England and helped Æthelred against the Danes He was converted to Christianity, and when he returned to Norway (1015) he was fired with the desire to Christianize the country—for Olaf I had failed to accomplish that end He established himself by defeating Earl Sweyn and then set about a dual task —to unify the country politically and to establish the new religion Christianity triumphed, but in his political moves he antagonized all the nobles by his policy of employing lesser men as royal officials and increasing the power of those officials His court was filled with men of fairly humble birth, and the Icelandic influence was strong When CANUTE of England and Denmark asserted his right to the overlordship of Norway, many of the nobles forsook Olaf for the Dane Olaf attacked Denmark, but the expedition ended in a fruitless naval battle In 1028 Olaf defeated one of the leading nobles, but the murder of the vanquished man by one of Olaf's men led to a powerful insurrection Olaf fled to Russia, and Canute became king with Earl Haakon as viceroy After Haakon was drowned at sea, Olaf made an attempt to regain his kingdom in 1030, only to fail miserably and lose his life in the battle of Stiklestad Some years after his death, his unpopularity gave way to great admiration for the man who had introduced Christianity and sought to introduce order He was soon generally considered as the patron saint of Norway Harold III was his half brother, Magnus I his son Feast July 29

Olaf, 1903–, crown prince of Norway, son of King HAAKON VII and Queen Maud In 1929 he married Princess Martha of Sweden Following the German invasion of Norway, Olaf took an active part in the struggle for liberation, as a soldier and as a representative of Norwegian interests in foreign countries He assumed supreme command of Norwegian forces in 1944 and returned to Norway in 1945.

Olaf Guthfrithson (gūth'frĭth"sun), d 941, Norse king of Dublin His father, Guthfrith, king of Dublin and of York, had been driven out of England by Athelstan in 927 In 934 Olaf became king and leader of all the Irish vikings He led his allies Constantine of Scotland and Owen of Strathclyde against Athelstan in England in 937 and was severely defeated. The battle is celebrated in an Anglo-Saxon poem, "The Battle of Brunanburh" Olaf returned to Ireland, but after Athelstan's death in 940 he once more invaded York A treaty between Olaf and King Edmund, son of Athelstan, gave Olaf control over the Mercian DANELAW Olaf died in 941, and his cousin and successor, **Olaf Sihtricson** (sĭ'trĭk"sŭn), often called **Olaf Cuaran** (kwū'ran), was unable to prevent King Edmund from freeing the Danelaw of Norse rule in 942. He returned to rule in Ireland, where he was in 980 defeated at the battle of Tara. He died a penitent at the monastery of Iona.

Oland, Swed *Öland* (ö'länd), island, area 520 sq mi , c 58 mi long and up to 10 mi wide, off SE Sweden, in the Baltic, separated from the mainland by the Kalmar Sound A historical province of Sweden, it is administratively part of Kalmar county The chief town is Borgholm, there are many summer resorts. Besides farming and cattle raising, the cement works, quarries, sugar refineries, and the production of alum are important Oland has monuments dating from the Stone Age, it has been a historic battleground in the wars between Denmark and the kingdoms of the north.

Olathe (ōlā'thē), city (pop 3,979), co seat of Johnson co., E Kansas, SW of Kansas City, founded 1857, inc. 1858 It is a trading center on the old Santa Fe Trail and near the Oregon Trail. A state school for the deaf is here

Olbers, Heinrich Wilhelm Matthias (hĭn'rĭkh vĭl'hĕlm maté'as ōl'bûrs), 1758–1840, German physician and astronomer He originated (1779) the first satisfactory method for calculating the orbits of comets, but despite the fame it brought him, he remained an amateur astronomer and became a physician Continuing his research on comets, he discovered several He was the first to detect the comet of 1815 (Olbers's comet, period 72 7 years) He discovered two planetoids, Pallas (1802) and Vesta (1807). Considering their orbits and those of the other planetoids then known, he concluded that they are fragments of a disrupted planet that had formerly revolved around the sun

Olbia (ōl'bēu), Greek colony of Miletus, founded c 645 B C. near the present city of NIKOLAYEV, Ukraine It exported wheat from the rich black-earth district of the SW Ukraine By the 1st cent A D it had declined to little significance because of constant barbarian raids

Olcott, Chauncey (ōl'kut, ōl'kŏt), 1860–1932, American actor and singer, b Buffalo, N Y He made his debut in New York in 1886 From 1893 he developed an original type of drama in which ballads, written by himself, played a major part Among these songs were *My Wild Irish Rose* (1898) and *The Isle of Dreams* (1913)

old age. There is no general agreement as to the exact time of life in humans when old age begins. It is recognized that certain changes in the tissues and functions of the body, often collectively designated as a process of "aging," occur at varying chronological ages. Among such changes are a decrease in the moisture content and fat cells of the skin, generally resulting in a tendency of the skin to wrinkle, a deterioration of muscle, and an increasing fragility of the bones The scientific study of old age is generally called gerontology, and within recent years a special branch of medicine called geriatrics has become increasingly important It is concerned with the diseases and other medical problems of older people The accomplishments of medicine through the centuries—especially those discoveries that have helped to conquer many diseases, to promote public health measures, and to improve nutrition and general living standards—have so lengthened the average duration of life that the percentage of older people in the total population has greatly increased. Thus there is a more widespread need for both medical and social agencies concerned with the welfare of the older portion of the population In the medical field the diseases encountered in older people are the same as those of youth, but generally the symptoms that develop and the treatment required are somewhat different. Also, in old age there is an increase in conditions generally known as degenerative diseases, these are associated with aging of tissues of the circulatory system, the kidneys, and other parts of the body. The prevalence of tuberculosis, cancer, pneumonia, and other diseases also varies among different age groups Heredity is recognized as an important factor in longevity. With the hope of increasing the useful span of life much research in biochemistry and other fields of science has been directed toward studies that shed light on the causes of the aging process. It is recognized that nutrition bears important relations to longevity. The work of Henry C Sherman has emphasized the significance of diets high in vitamin A, riboflavin, calcium, and phosphorus in lengthening the period of the prime of life. Work on hormones and enzymes has contributed to a better understanding of the complex functions of the body Results of experiments in which tissues are kept alive in nutrient solutions may eventually help to determine what contributes to aging. Medicine has been concerned also with the psychological problems attendant upon old age Some of these are partially the outcome of economic and social problems arising from the lengthened span of years after retirement from business and professional activities. Attempts to solve some of the economic problems are evidenced by the increased participation by both organizations and individuals in PENSION plans and by the expansion of SOCIAL SECURITY See Barclay Newman, *Must We Grow Old?* (1941), *Problems of Ageing* (ed by E V. Cowdry, 2d ed , 1942), *New Goals for Old Age* (ed by George Lawton, 1943), Martin Gumpert, *You Are Younger than You Think* (1944) George Lawton, *Aging Successfully* (1946); E J Stieglitz, *The Second Forty Years* (1946), R. S Cavan and others, *Personal Adjustment in Old Age* (1949), C W Lieb, *Outwitting Your Years* (1949), *Living through the Older Years* (ed by Clark Tibbitts, 1949)

old-age pension. see PENSION and SOCIAL SECURITY

Oldbury, urban district (1931 pop 35,926, 1947 estimated pop 53,250), Worcestershire, England, WNW of Birmingham It is noted for the manufacture of glass, particularly large lenses for lighthouses There are also steel and aluminum mills, railroad-car works and chemical factories, and in the vicinity are iron and coal mines and limestone quarries.

Old Castile, Spain see CASTILE

Oldcastle, Sir John, d 1417, English leader of the LOLLARDS and martyr He is known as "the good Lord Cobham" (he married the heiress of Lord Cobham in 1408) Under the rule of Henry IV he performed valuable military service, especially in Wales, where he became a friend of the prince of Wales (later Henry V) His devotion to the teachings of WYCLIF brought upon Oldcastle in 1413 condemnation for heresy He escaped from the Tower, eluded capture, and was active in Lollard conspiracies against the king until 1417, when he was taken, condemned, and hanged and burned For the connection between Oldcastle and Shakspere's Falstaff, see FALSTAFF

Old Catholics, Christian church, established by German clergy and laymen who separated themselves from the Roman Catholic Church by rejecting the decrees of the Vatican Council (1870), especially the dogma of the infallibility of the pope The Old Catholic movement began publicly with a meeting of professors at Nuremberg in 1870 under the leadership of J J I DÖLLINGER By 1874 a new church had been established with a bishop consecrated by a Dutch Jansenist bishop It rejected communion with the pope and many Roman Catholic doctrines and practices The Roman ritual was retained (in German), priests were allowed to marry, and confession was made optional Old Catholic immigrants to the United States have been in close touch with other groups recently broken from the Roman Catholic Church, such as the Independent Polish Catholics

Old Dominion, name for the state of VIRGINIA, probably derived from the phrase (found in old documents) "the colony and dominion of Virginia"

Oldenbarneveldt, Johan van (yō'hän' vän ōl"dunbar'nuvĕlt), 1547–1619, Dutch statesman He aided WILLIAM THE SILENT in the struggle for Dutch independence from Spain and opposed the dictatorial policies of Robert Dudley, earl of LEICESTER, whom the States-General had chosen governor general in 1586 After Leicester's departure (1587) he helped to concentrate military power in the hands of MAURICE OF NASSAU Made permanent advocate of Holland in 1586, Oldenbarneveldt controlled the civil affairs of the United Provs (in which Holland was prominent) He represented the patrician manufacturing and commercial oligarchies that ruled Amsterdam, Rotterdam, and Dordrecht, and during his administration Dutch commerce expanded spectacularly, and the Dutch East India Company was founded He negotiated (1609) a 12-year truce with Spain, despite the objections of Maurice of Nassau, and thus secured virtual recognition of Dutch independence As leader of the party favoring control of state affairs by the States-General, Oldenbarneveldt was increasingly opposed by the party of the nobles and the house of Orange This conflict was aggravated by the religious struggle between the REMONSTRANTS and the strict Calvinists, in which Oldenbarneveldt and Maurice of Nassau found themselves in opposing camps In 1618 William, determined to crush the Remonstrants, convoked the Synod of Dort, which condemned their doctrine Oldenbarneveldt was arrested and, after a highly irregular trial for treason, sentenced to death. His execution was a judicial murder brought about by his personal enemies; not a shred of incriminating evidence has ever been found against Oldenbarneveldt, one of the ablest and most patriotic statesmen the Dutch ever had.

Oldenburg (ōl'dunbôrk), former state, NW Germany, since 1946 a district (2,085 sq. mi., pop 745,182) of Lower Saxony, in the British zone of occupation. The city of Oldenburg is the capital The state of Oldenburg consisted of three widely separated divisions. The largest of these now forms the district of Oldenburg, stretching S from the North Sea, W of the Weser. The two other divisions, both very small, were Birkenfeld, an enclave in the former Rhine Prov. of Prussia, W of the Rhine, now part of French-occupied Rhineland-Palatinate, and the district (but not the city) of Lübeck, now incorporated with Schleswig-Holstein. Oldenburg proper is a lowland with fertile marshy land Farming and cattle and horse breeding are the chief occupations. Peat is extracted in the vast moors of the region. The history of Oldenburg is mainly of dynastic significance Originally a part of Saxony, the county of Oldenburg came into prominence in the 12th cent In 1448 Count Christian became king of Denmark as Christian I, while his younger brother, Gerard, and his successors continued to rule Oldenburg On the extinction of the German line Oldenburg passed (1667) to Christian V of Denmark (direct descendant of Christian I) In 1773 Christian VII exchanged Oldenburg for ducal HOLSTEIN with Grand Duke (later Emperor) Paul I of Russia, heir of the Danish cadet line of Holstein-Gottorp Paul made Oldenburg over to his maternal great uncle, Frederick Augustus of Holstein-Gottorp, bishop of LÜBECK, who assumed the ducal title His nephew and successor, Peter I of Oldenburg, lost his duchy to Napoleon I, but recovered Oldenburg and the bishopric of Lübeck in 1813 and subsequently acquired Birkenfeld and obtained the title grand duke A member of the German Confederation from 1815, Oldenburg sided (1866) with Prussia in the Austro-Prussian War and joined (1871) the German Empire. The last grand duke abdicated in 1918, and Oldenburg joined the Weimar Republic In 1937 the Birkenfeld and Lübeck districts were transferred to Prussia

Oldenburg, city (pop 107,473), capital of the former state of Oldenburg, N Germany, ENE of Bremen It is a rail and water transshipment point and a grain, cattle, and horse market There also are varied manufactures First mentioned in the 12th cent , it was chartered in 1345 The former ducal residence (11th cent) now is a museum

Old English see TYPE, ENGLISH LANGUAGE, ANGLO-SAXON LITERATURE

old English sheep dog. see SHEEP DOG.

Older, Fremont, 1856–1935, American journalist, b. Appleton, Wis At the age of 16 he went to San Francisco, worked as printer and reporter, was (1895–1918) managing editor of the San Francisco *Bulletin*, and became (1918) editor of the *Call* In 1929 the papers merged under his editorship A powerful opponent of corruption, he succeeded (1909) in having Mayor Abe Ruef convicted of graft He fought for the freeing of Thomas J. Mooney and Warren K Billings See his autobiography, *My Own Story* (1926), biography by Evelyn Wells (1936)

Oldfield, Anne, 1683–1730, English actress. Engaged by John Rich at Drury Lane in 1692, she was unnoticed until, in 1704, her brilliant portrayal of Lady Modish in Colley Cibber's *Careless Husband* won her great acclaim She appeared in both tragedy and comedy and played leading roles in Addison's *Cato*, Cibber's *Caesar in Egypt*, and Thomson's *Sophonisba* She was buried in Westminster Abbey

Old Forge, anthracite-mining borough (pop 11,892), NE Pa , SW of Scranton and on the Lackawanna, inc. 1895

Oldham, John (ōl'dŭm), c 1600–1636, colonist in New England, b England A roving trader, he emigrated to Plymouth in 1623 and later was concerned in the establishment of various New England colonies, notably the unsuccessful settlement on Cape Ann (1626), the Massachusetts Bay colony, and Wethersfield, Conn , where he established a trading post His murder by the Pequot Indians on Block Island was one of the events leading to the Pequot War.

Oldham, county borough (pop. 140,309), Lancashire, England, NE of Manchester. It is the chief center of cotton spinning in Lancashire and has numerous mills, foundries, and engineering works. There is coal in the vicinity. The town hall, the art galleries, the museum, and Alexandra Park are noteworthy Crompton is a manufacturing suburb

Old Hickory, unincorporated town (pop. 5,993), central Tenn , just NNE of Nashville, named Jacksonville until 1923 In 1918 it was the site of a huge U S. powder plant. E. I du Pont de Nemours & Company bought the plant and the village in 1924 and now maintains factories where rayon, cellophane, and chemicals are made.

Old Hundred: see DOXOLOGY

Old Ironsides· see CONSTITUTION, ship.

Old Kasaan National Monument (kŭsän'), 38 acres, on Prince of Wales Island, SE Alaska, est. 1916. It contains the ruins of an abandoned Haida Indian village, including totem poles and grave houses.

Old Lyme (līm), residential town (pop. 1,702), SE Conn , at the mouth of the Connecticut; settled c 1665 by Matthew Griswold, inc. 1855. It com-

prises part of the original town of Lyme and includes the old village of Lyme, near the Connecticut. The fine old houses in Lyme have attracted painters; the Congregational Church (1817, burned in 1909, but carefully restored) has been portrayed by Childe Hassam. The town has an art gallery. See M. H James, *The Educational History of Old Lyme, Connecticut, 1635–1935* (1939).

Oldman, river of S Alberta, rising in the Rocky Mts and flowing generally E past Lethbridge to unite with the Bow river W of Medicine Hat and form the South Saskatchewan It receives the Belly river and several minor tributaries.

Old Man of the Mountain. see ASSASSIN.

Old Man of the Mountain: see FRANCONIA MOUNTAINS.

old-man's-beard, name for several plants, among them CLEMATIS.

old masters, term applied to celebrated painters down to the 18th cent, but especially to those of the Renaissance (see also LITTLE MASTERS). Michelangelo, Raphael, El Greco, Velázquez, Rubens, Rembrandt, Dürer, and Nicolas Poussin are among the outstanding old masters

Oldmixon, John (ōld'mĭksŭn), 1673–1742, English writer A prolific historian, he did his best work in *The British Empire in America* (1708), his later histories and memoirs are rendered valueless by bias He is better remembered as the target of a virulent attack by Pope in *The Dunciad.*

Old Norse literature, the literature of the Northmen, centered entirely about Iceland There is scarcely any medieval literature from Norway, Sweden, or Denmark The first and greatest period of Old Norse literature began soon after the conversion of Iceland to Christianity (c 1000) and lasted about 150 years The largest bulk of this literature is in the SAGA form, the sagas, although their form is borrowed from Ireland, may be considered to contain the most characteristic and most interesting of Norse writing, they are certainly by far the most readable in translation The Norse lyric poetry probably really took its rise not in Iceland but in the British Isles (among viking invaders) The language of the poetry of the Elder EDDA is more archaic, foreign influence is more marked, and the poet's ingenuity is less striking than in the Icelandic poetry. But it already shows the traits that made Icelandic scaldic poetry what it was The most significant feature of scaldic verse was its ingenuity in form and phrase Metrical rules were meticulously preserved, and the words were polished to the extent of preciosity The incessant use of the kenning (a substituted phrase, e g "ship-road" for "sea") brought falsity, and the poetry finally defeated itself The scalds became a people apart, for only they could understand their verses, and the emphasis on the form before the word ruined the Icelandic lyric in the later Middle Ages As the scaldic poetry declined, a new rhymed type of verse developed somewhat analogous to the rhymed material of Middle English literature and having much the same subject matter - translation and paraphrase of foreign romances These rhymed works have been generally neglected by philologists The historical work of Icelandic writers was especially noteworthy in the Golden Age (11th and 12th cent) Very eminent was Ari Thorgilsson, whose three works are invaluable *Konungabok*, an account of the kings of Norway until 1067, *Landnamabok*, a description of the discovery and settlement of Iceland, and *Islendingabok*, the author's abridgment of a lost, much longer account of Iceland's history and polity More celebrated than Ari, but perhaps not justly, is SNORRI STURLUSON. One of the chief claims Icelandic literature has to fame is that it developed a conscious, clear, prose style earlier than any other modern European literature except Gaelic This style appears mostly in the later saga (e g , the *Sturlungasaga* and the *Islendingasaga*), which made an effort (counter to the contemporary poetry) to be consonant with the interests and language of the people See ICELANDIC LITERATURE.

Old Northwest: see NORTHWEST TERRITORY

Old Orchard Beach, town (pop 2,557), SW Maine, on the coast SSW of Portland, inc 1883 A popular resort, it has a long beach and amusement equipment There was a trading post near here before 1630. Resort development began in the early 19th cent A disastrous fire occurred in 1907

Old Point Comfort, popular bathing and fishing resort, SE Va., on Chesapeake Bay at the entrance to Hampton Roads. U S Fort Monroe (see MONROE, FORT) is here

Old Pretender: see STUART, JAMES FRANCIS EDWARD

Old Red Sandstone, series of red and brown sandstones and shales deposited in Wales and Scotland and in England near the Welsh and Scottish borders in the DEVONIAN PERIOD of geologic time. The Old Red Sandstone, in contrast to the typical Devonian, is largely a continental formation, laid down in fresh water and on land as a result of the erosion of the highlands of the SILURIAN PERIOD. It is very thick in Scotland and contains a large assemblage of fossils, particularly of the Devonian fishes, in a remarkable state of preservation. The Old Red Sandstone was correlated with the marine Devonian by Murchison and Adam Sedgwick Popular interest in the formation and its fossils was created largely by the work of Hugh MILLER

Olds, town (pop 1,521), S Alta , N of Calgary, in a stock, dairy, and wheat-farming region. It has grain elevators and is the seat of a provincial agricultural school

Old Sarum (sâr'ŭm), site of an ancient city, Wiltshire, England, N of New Sarum or SALISBURY Excavations in the mound on which the settlement stood have revealed remains of an ancient British entrenched camp, a succeeding Roman station Sorbiodunum, and a still later Saxon town The seat of the bishopric, moved here from Sherborne in 1075, was transferred to New Sarum in 1220, and Old Sarum's great cathedral was torn down, parts of it being used in the construction of the cathedral at New Sarum At Old Sarum the Use of Sarum, a ritual adopted in S England, was compiled Old Sarum was important until strife between the men of the castle and garrison and the men of the religious institution caused the removal of the see to the new site and the decay of the old city, shortage of water and exposure to winds are given as other causes The "rotten borough" of Old Sarum continued to be represented in Parliament until the Reform Bill of 1832 was passed See Great Britain, Dept of Ancient Monuments and Historical Buildings, *Old Sarum* (1922)

Old Saybrook, resort town (pop 1,985), S Conn , on the Connecticut and Long Island Sound, settled 1635 as SAYBROOK colony, inc 1854 as Old Saybrook It has varied manufactures

Old Slavonic literature, earliest Slavic literature, originating in the 9th cent The first writings were almost entirely of a religious nature and were important in the development of the Serbian, Bulgarian, and Russian branches of the Orthodox Eastern Church The language (now dead) is also called Church Slavonic Though there was early Slavonic literature in the West, especially in Moravia, Bohemia, Poland, and Croatia, the Latin rite for the most part gained preeminence there, and the great bulk of the literature came from Bulgaria and Serbia and later from Russia St Cyril and St Methodius translated the Bible from Greek into Slavonic, using an alphabet which proved too unwieldy and was superseded by the Cyrillic alphabet In Bulgaria there were some original writings, notably the works of Evtimy, patriarch of Bulgaria in the 14th cent , and some earlier chronicles, but the bulk of the writing was in translation of religious and a few secular works (e g , a life of Alexander the Great) In Serbia, Old Slavonic literature reached its height in the time of Stephen Dushan In Russia, Old Slavonic was long the literary language, and the period of Kievan supremacy was marked with much literary production Russian literature is generally said to begin with the 12th-century *Lay of the Hosts of Igor* (see RUSSIAN LITERATURE)

Old Sodbury, village, Gloucestershire, England, in the Cotswold Hills William Tyndale was tutor in 1521 to the family of Sir John Walsh at Little Sodbury manor house It was here that Tyndale translated the *Enchiridion* of Erasmus and began translating the New Testament

Old Stone Age see PALEOLITHIC PERIOD.

Old Style dates: see CALENDAR

Old Testament [see NEW TESTAMENT], the older portion of the Bible, being of Jewish authorship It consists of a varying number of books, given in varying order The traditional Jewish reckoning is as follows (1) the TORAH or Law, the five books of the Pentateuch, i e , Genesis, Exodus, Leviticus, Numbers, and Deuteronomy, (2) the Prophets, a less sacred group of books, Joshua, Judges, 1 and 2 Samuel, 1 and 2 Kings, Isaiah, Jeremiah, Ezekiel, the Twelve (or Minor) Prophets – being counted as eight books in all, (3) the Writings (Hagiographa), a heterogeneous group to which belonged some works almost secular in tone, (a) Psalms, Proverbs, and Job, (b) the Rolls, consisting of Song of Solomon, Ruth, Lamentations, Ecclesiastes, and Esther, (c) Daniel, Ezra and Nehemiah together, and Chronicles. Christians have regarded the Old Testament in a different light They consider the books equally inspired, hence make no gradation of rank or sacredness The canon of the Jews as it stands was adopted A D c 100, the traditional order and the extant Hebrew texts all go back to one Hebrew source of the first centuries of the Christian era, to the MASORA, the provenance of the Masoretic version is unknown The Old Testament long used in the Christian Church was derived not from the Masoretic but from an entirely different text The SEPTUAGINT, a Hellenistic Jewish translation into Greek about the 3d cent B C , became the Old Testament of Christianity, and later translations were made from it or patterned after it. The canon of the Septuagint was entirely different from that of the Masorah The Latin Bible found its official form in the VULGATE, the work of St. Jerome, this largely agreed with the list of books of the Septuagint, and the list and order of the Vulgate was the canon accepted by the Western Church; this is also called the Western canon. At the Reformation the English Protestants withdrew recognition of the canonicity of those portions of the Old Testament which appeared in the Western canon but not in the Masoretic canon, attributing to them (the deuterocanonical books) a position suggested by St Jerome but not accepted widely in his time, namely, that they were suitable for instruction but not to be considered as necessarily inspired To set them clearly apart from the works considered inspired, the AV (Authorized Version, see BIBLE) translators put them together in an appendix to the Old Testament which they entitled APOCRYPHA Thus the Reformed canon became exactly like the Masoretic, with a difference of order—AV retained the Western order The difference between the Western and the Reformed canon is seen by comparing the AV with the Douay version (representing the Western canon) The following are the books of the Old Testament (AV), the names in parenthesis being the usual name in the Douay when it differs from that in AV, those in italics being the books appearing in Douay and not in AV Genesis, Exodus, Leviticus, Numbers, Deuteronomy, Joshua (Josue), Judges, Ruth, 1 and 2 Samuel (1 and 2 Kings), 1 and 2 Kings (3 and 4 Kings), 1 and 2 Chronicles (1 and 2 Paralipomenon), Ezra (1 Esdras), Nehemiah (2 Esdras), *Tobias*, *Judith*, Esther, Job, Psalms, Proverbs, Ecclesiastes, Song of Solomon (Canticle of Canticles), *Wisdom*, *Ecclesiasticus*, Isaiah (Isaias), Jeremiah (Jeremias), Lamentations, *Baruch*, Ezekiel (Ezechiel), Daniel, Hosea (Osee), Joel, Amos, Obadiah (Abdias), Jonah (Jonas), Micah (Micheas), Nahum, Habakkuk (Habacuc), Zephaniah (Sophonias), Haggai (Aggeus), Zechariah (Zacharias), Malachi (Malachias), *1* and *2 Machabees* No documents have been so studied as the biblical ones, and each presents many problems Chronology and authorship give similar difficulties in different books So far as historical dating is concerned, many systems have been devised, a famous one was that of Archbishop Ussher, who dated Creation at 4004 B C —his dates have often been given marginally in Bibles Before the 1st millennium B C there is little likelihood of any outside sources giving checking dates, but from about the time of David it is possible to devise a chronology with some checks from non-biblical sources Of the various chronological systems none is sure, none is accepted by more than a few historians The authorship of the books of the Old Testament is known from tradition and internal evidence The books from Genesis to Nehemiah (except Ruth) present similar problems and are usually grouped together in examining the authorship The higher criticism of the mid-19th cent assaulted the traditions about the Bible, its text and its very credibility Of no books was this truer than of the so-called "historical" books. With the turn of the century there was begun a gradual recession from the extreme stand, because the archaeological finds tended to support rather than to impugn the veracity of the narratives The peculiar position the Bible has occupied has made unprejudiced biblical scholars rare and has prevented it from receiving the kind of dispassionate attention given to such a book as the *Odyssey* The following expresses to some extent the opinion of a less extreme criticism In the 9th cent B C a writer (called by the critics J or the Yahwist) of the kingdom of Judah wrote a history of the world and of the Hebrews down to the time of David, and in the next century a historian of the northern kingdom of Israel (called E or the Elohist) also composed a history These were combined by a Judean some time after the fall of the northern kingdom and are to be found inextricably associated in Genesis, Exodus, Numbers, Joshua, Judges, 1 and 2 Samuel According to the critics, this combined JE narrative is the bulk of the earlier Old Testament, and it is unreliable in that it consists in the rewriting or rearranging of old traditions rather than in anything which the authors had at first hand To Deuteronomy, critics assign a late 7th-century (B C) authorship, considering the "finding of the Law" a pious fable Deuteronomy they consider was written for a specific purpose—to provide a written law for the people Leviticus was, according to some higher critics, composed soon after 570 B C by a man (called H) in close sympathy with the aspirations of Ezekiel The book of Deuteronomy is not the only book which represents the group which sponsored the reforms, for most of 1 and 2 Kings is said to have been composed by persons of the same point of view These "Deuteronomists," according to this point of view, used old sources and pointed their moral constantly One of the principal sources of the first six books, in the higher criticism, is called P or Priestly Code This, the product of the legalistic atmosphere of the first postexilic period, is seen in parts of all the first six books, but most notably in Numbers P, with D (Deuteronomy), JE, and H, then, make up the first and oldest portion of the Bible. The books of Chronicles and of Ezra and Nehemiah are, according to the critics, not history at all, but a long moral account of the Jews, showing the rewards for goodness and the retribution for evil. The author of these four books, called the Chronicler, is put in the late 4th cent

B C The lateness of date of composition is, generally, the chief matter of difference between the higher critics and other biblical critics See C A. Briggs, *General Introduction to the Study of Holy Scripture* (1899), S. R Driver, *An Introduction to the Literature of the Old Testament* (revised and enlarged, 1900), H T Fowler, *A History of the Literature of Ancient Israel from the Earliest Times to 135 B C* (1912); C P Grannan, *A General Introduction to the Bible* (4 vols , 1921), J A Bewer, *The Literature of the Old Testament* (rev ed , 1933), W F Albright, *From the Stone Age to Christianity* (1940), John McFadyen, *Introduction to the Old Testament* (new ed , 1947), G F Moore and L H Brockington, *Literature of the Old Testament* (2d ed , 1948), T H Robinson, *Introduction to the Old Testament* (1948)

Old Town, city (pop 7,688), S central Maine, on the Penobscot 13 mi above Bangor, settled 1774, inc as a town 1840, as a city 1891 Maine's first railroad connected Old Town with Bangor (1836) A small island N of Old Town village is a reservation for Penobscot Indians Old Town has long been known for the canoes to which it gives its name, pulp, paper, and other lumber products and woolen goods are also manufactured

Old Westbury, residential village (pop 1,017), on W Long Island, SE N Y , near Mineola, inc 1924

Olean (ō'lēăn"), city (pop 21,506), W N Y , SE of Buffalo and on the Allegheny near the Pa line, settled 1804, inc as a city 1893 It is an oil storage center, and its products include carbon black, tanks, and metal goods

oleander (ōlēăn'dûr), any plant of the genus *Nerium*, Old World evergreen shrubs The common oleander or rosebay (*Nerium oleander*) is widely cultivated in warm regions as a shrub or hedge and elsewhere as a tub plant Oleander has narrow leaves and clusters of beautiful flowers ranging from white and pink to purple and red The plant contains a poison similar to digitalis There is a sweet-scented species The yellow oleander belongs to the related genus *Thevetia*

olefine series see ETHYLENE SERIES

Oleg (ō'lĭg, Rus, ôlĕk'), d 912, Varangian ruler of Russia (879–912), son and successor of Rurik He is a semilegendary figure Said to have been born in Norway, he led the Varangians to Kiev, which he took in 882 and made his capital, instead of Novgorod He united the eastern Russians, freeing them from Khazar rule, and in 907 undertook a campaign against Constantinople. A treaty with the Byzantines promised him commercial advantages and tribute His son Igor succeeded him

olein. see FATS AND OILS

Olekma (ûlyĕk'mä), river, 995 mi long, RSFSR, in E Siberia, a tributary of the Lena It rises in the Yablonovy range and flows N through a gold-mining area

Olenek (ûlyĭnyôk'), river, 1,345 mi long, rising in central Siberia, RSFSR It winds E and N through the NW Yakut SSR into the Laptev Sea It is navigable for c 500 mi and abounds in fish.

oleomargarine see MARGARINE

Oléron (ōlārôⁿ'), island (68 sq mi , pop 12,820), W France, in the Bay of Biscay, off Charente-Maritime dept , of which it is part Le Château-d'Oléron and Saint-Pierre-d'Oléron are the chief localities Oyster gathering is the main occupation The Law of Oléron (see MARITIME LAW), promulgated by Louis IX, was named after the island.

Olga, Saint, d 969?, duchess of Kiev After the death of her husband, Igor, she was regent (945–57) for her son Sviatoslav She became a Christian and was baptized at Constantinople c 957 Her grandson, Vladimir I, was the first Christian ruler of Kiev, but even before his conversion Olga had gained great following for Christianity in Russia. Feast July 11

oligarchy (ō'lĭgär"kē), government by a few members of the community Although all governments tend to be oligarchical in that power is concentrated in relatively few hands, an actual oligarchy exists only when consent to this concentration by the people is lacking and the free choice of an alternative government is eliminated Oligarchies are formed when wealth or military or priestly powers are highly concentrated among a small number of the community, thus promoting a monopoly of political power Aristotle emphasized the element of wealth in the oligarchies of the Greek city-states All ancient political units were oligarchical in that slaves constituted a majority of the population In the 19th cent Brougham differentiated between legal oligarchy, where the right to govern was granted by law to certain individuals or families, as in the Italian city-states at certain periods, and natural oligarchy, where respect and prestige give a relatively few members of the community the right to rule, as in England during much of her history

Oligocene epoch (ō'lĭgōsēn") [Gr , =rather recent, literally, a bit recent], third epoch of the Cenozoic period of geologic time More of North America was dry land during the Oligocene than in the preceding Eocene epoch The Gulf Coast was flooded, but the Atlantic coast was emergent N of South Carolina, the principal formation of the Gulf district was the Vicksburg limestone. The Pacific coast, like the more northern Atlantic coast, was largely elevated, erosion led to the deposition of the Oligocene portion of the Seepe formation of conglomerate, sandstone, and shale which contains red beds like those of the Permian period Over large areas of W Nebraska and NE Colorado and parts of Wyoming and the Dakotas, great erosion of the Rockies was responsible for the White River clays and sands, which are widely exposed in the Badlands of these states Late in the Oligocene the John Day deposits of volcanic ash, notable for their included fossils, were formed in Oregon In S Europe, the formations are somewhat similar to those of the Eocene, a sandstone and shale formation, the Flysch, was laid down in regions adjacent to mountain systems In the middle Oligocene a sea extended over N Europe from as far east as the Urals and was connected with the greater Mediterranean through the present Rhine valley There are extensive deposits of Oligocene lignite in Germany, indicating swamp conditions either before or during the flood, and the Alsatian potash, salt, and gypsum are Oligocene During the Oligocene there was considerable volcanic activity in Central Europe, Scotland, Iceland, and Iceland The life of the Oligocene was marked in Europe and North America by the practical disappearance of the archaic mammals of the Paleocene True carnivores —ancestral dogs, cats, and saber-tooth cats—made their appearance, as well as beavers, mice, rabbits, and squirrels, a more developed type of horse, giant hogs, and camels were other new arrivals. The titanotheres attained huge size, then disappeared, running aquatic, and true rhinoceroses developed In Africa appeared the earliest elephant and a primitive anthropoid ape The climate of the Oligocene was perhaps cooler and drier than that of the Eocene

Oliphant, Laurence (ō'lĭfŭt), 1829–88, British author, b Capetown He was secretary to Lord Elgin, traveled widely, and became a disciple of Thomas Lake Harris in a religious community at Brocton, N Y His writings include several travel books, notably *A Journey to Katmandu* (1852), two novels, *Piccadilly* (1866) and *Altiora Peto* (1883), an autobiography, *Episodes in a Life of Adventure* (1887), and *Scientific Religion* (1888) He and his first wife, Alice Le Strange, became interested in establishing a colony of Jews in Palestine Settling in Haifa, they wrote a curious book, *Sympneumata Evolutionary Forces Now Active in Man* (1885), inspired by Harris After her death he married (1888) Rosamund Dale Owen, granddaughter of Robert Owen See her *My Perilous Life in Palestine* (1928), biography by his cousin, Margaret Oliphant (1891), H W Schneider and George Lawton, *A Prophet and a Pilgrim* (1942)

Oliphant, Margaret Oliphant (Wilson), 1828–97, British novelist and biographer, b Scotland Her many popular novels included the series called "Chronicles of Carlingford" (1863–76), of which *Salem Chapel* and *Miss Marjoribanks* were the best She was a lifelong contributor to *Blackwood's Magazine* and a translator, she wrote guidebooks, semihistorical works, such as *The Makers of Modern Rome* (1895), and biographies of Sheridan (1883), Laurence Oliphant (1891), and others See her *Days of My Life* (1868) and autobiography (1899).

Olisipo see LISBON, Portugal

Oliva, Peace of (ōlē'vu, -vä), 1660, treaty signed at Oliva (now a suburb of Danzig) by Poland and Sweden John II of Poland renounced the claim of his line to the Swedish crown, which his father, Sigismund III, had in effect forfeited in 1599 Poland furthermore confirmed Sweden in possession of N Livonia Frederick William, elector of Brandenburg, was recognized in full sovereignty over East Prussia, but in turn confirmed West Prussia as Polish

Olivares, Gaspar de Guzmán, conde de (gäspär' dā gōōthmän' kōn'dā dā ōlēvä'räs), 1587–1645, Spanish statesman He was appointed chief minister on the accession (1621) of Philip IV, over whom he had early gained influence Honest and hard-working, he fought corruption at the court and prosecuted the unscrupulous ministers of Philip III, but his internal and foreign policy were unfortunate Under him Spain continued the fight in the Netherlands and became involved in the Thirty Years War and in wars in Italy Olivares's centralizing policy within Spain led to risings in the Basque Provs and in Catalonia and to the secession (1640) of Portugal Forced to obtain funds for his campaigns, he resorted to oppressive measures His unpopularity led to his fall in 1643 Olivares was a patron of the arts and literature and encouraged the painters Rubens, Velázquez, and Murillo and the writers Lope de Vega and Quevedo y Villegas

olive, small evergreen tree (*Olea europaea*) of the warm regions of the Old World and its fruit (a drupe), which is eaten pickled green or ripe and which is the source of OLIVE OIL The tree is from 20 to 40 ft in height with lanceolate leaves and inconspicuous yellowish-white fragrant blossoms When ripe the fruit is usually purplish black and rich in oil The olive has been cultivated since prehistoric times in Asia Minor, and its cultivation spread very early to all Mediterranean countries Although it was grown in California from c 1769 by Franciscan missionaries, the olive was of no commercial importance there until c 1890 The mission olive of today, one of the best varieties for pickling and for oil, was developed from trees grown at the mission in San Diego probably from Mexican seed Other important varieties are the manzanilla and the queen olive Green olives are picked when full grown but unripe In preparing both green and ripe olives for eating they are treated with lye to soften them and to remove their unpalatable taste and then are pickled in brine, sterilized, and packed In stuffed olives the seed is removed and replaced usually by Spanish paprika (pimiento), nuts, or anchovies The olive was the gift of Athena to mankind, according to Greek mythology, and because of this gift, Athens was named in her honor The olive branch has been the symbol of peace from before Christian times, because the oil can be used to heal human ills and also to calm troubled waters The first vegetation seen by Noah after the Deluge was the branch of olive brought back by the dove. The dove and the olive branch have also been used in art as a symbol of peace

Olive Hill, town (pop 1,491), E Ky , WSW of Ashland It processes the clay, sand, and gravel found in the area Carter and Cascade limestone caves and several natural bridges are near

Oliveira Martins, Joaquim (zhwäkēm' ôlĕvā'ru martēnsh'), 1845–94, Portuguese historian. Left an orphan at an early age, he had to go to work and was largely self-educated After beginning with a feeble historical novel, *Phebus Moniz* (1867), he turned to history and biography and achieved considerable success, particularly with his history of Portugal (1879), his account of modern Portugal (1881), and his history of the Roman republic (1885) He wrote biographies of the sons of John I (1891), of Nun'Álvares Pereira (1893), and of John II (*O principe perfeito*, 1896) His work was not scholarly or even accurate in the stricter sense, but his ability to paint romantic and evocative pictures of the past was remarkable

olive oil, clear, bland, yellowish oil expressed from the OLIVE The whole fruit, consisting of about 80 percent pulpy mass enclosing a hard central pit, contains oil, but the best edible quality is taken from the pulp The yield of oil varies with the climate, cultivation, and variety of olive For the finest or virgin oil, the fruit is gathered by hand before it is fully ripened, peeled, and subjected to gentle pressure without heat Ripe fruit yields more oil of a less perfect flavor A second pressure yields first and second grades of commercial edible oil, then the pulp may be mixed with water to produce technical oils, used in industrial processes Finally a solvent may be used to obtain the lowest grade In extracting the edible grades, the oil is removed as quickly as possible from the crushed pulp, which ferments easily, great cleanliness is required, as the oil readily taints or becomes rancid For the dyeing industry, however, an oil is obtained by fermentation of the pulp An edible grade, made from ripe, decaying, or imperfect fruit or from the crushed pits is inferior in flavor and keeping qualities Modern machine manipulation removes pits and crushes by hydraulic pressure Edible oil may vary in color from clear white to a golden yellow or yellowish green The oil is separated from the juice by settling and is washed, filtered, and aged For use in cold climates it is now often clarified by removing the stearin, or solid part of the fat It has been extensively adulterated by the addition of oils such as cottonseed, sesame, and others, but laws in the United States require that it be labeled salad oil if it contains foreign ingredients Olive oil contains a large proportion of easily digested fats The principal fat in the diet of countries where it has long been cultivated, olive oil is often used in place of cream and butter and as a salad oil and cooking fat It is employed medicinally as a laxative, an antidote for caustic poisons, and an ingredient of liniment and salves In industry its inferior grades are used in dyeing and in the making of soda or potash soap used in textile manufacturing For many years it has been used in making the finest Castile soap. The chief oil-exporting countries are Spain, Italy, Greece, Tunisia, Portugal, Syria, Algeria, and France Lucca (Italy), Marseilles (France), and Seville (Spain) are noted refining centers The oil mentioned about 200 times in the Old Testament is olive oil Olive oil was used in the ancient world in the preparation of food, as an anointing oil for both ritual and cosmetic purposes, and for lighting

Oliver, Andrew, 1706–74, lieutenant governor of colonial Massachusetts (1771–73), b. Boston, grad Harvard, 1724 Oliver was elected to the provincial council in 1746 and later served (1765–71) as secretary of the province His acceptance of the post of stamp officer after the passage of the Stamp Act led to violent demonstrations against him, which forced him to resign the office. He became lieutenant governor in 1771, but popular indignation against him broke out again in 1773 as the result

of the discovery of private letters he and Gov Thomas HUTCHINSON had written to England criticizing the colonists and recommending coercive measures

Oliver or Olivier, Isaac (ŏl'ĭvẽur), 1556?–1617, English miniature painter, of French extraction, a worthy follower of Hilliard as miniature painter to Elizabeth's court His work is to be seen in the British and the Victoria and Albert museums, London, and in the Cleveland Museum His son and pupil, **Peter Oliver,** c 1594–1648?, was also a famous miniaturist He painted numerous water-color copies of old masters, most of which are now in Windsor Castle His works are largely in English private collections and in the collection of the queen of Holland

Oliver, James, 1823–1908, American inventor and manufacturer of chilled plows, b Scotland In 1835 he came to America with his parents He became an iron molder and was successful in devising a process of chill hardening iron castings of plows, making cast-iron moldboards and shares far more durable and efficient They scoured—were self-polishing—even in the sticky prairie soil Oliver became owner of a factory at South Bend, Ind , in 1857 He was granted a patent for his chill-hardening process in 1869

Olives, Mount of, or **Olivet** (ŏ'lĭvĕt), ridge, E of Jerusalem, mentioned in the Old Testament as the scene of David's flight from the city and in the New Testament as a frequent resort of Jesus Bethany and Bethphage lie near its foot, and the garden of Gethsemane is on the western slope 2 Sam 15 30, Mat 21 1, Acts 1 12

Olivet (ŏ'lĭvĕt), village (pop 604), S Mich , SW of Lansing Olivet College (coeducational, 1844) is here

Olivia (ŏlĭ'vēa), village (pop 1,788), co seat of Renville co , SW Minn , E of Granite Falls, in a farm area, platted 1878, inc 1881

Olivier, Isaac see OLIVER, ISAAC

Olivier, Sir Laurence Kerr (ŏlĭ'vēur), 1907–, English actor and director on the stage and in moving pictures He made his debut in 1922 as Katherina in *The Taming of the Shrew* at the Shakspeare Festival, Stratford-on-Avon, and acted Shakspearian and other roles in the Birmingham Repertory Company (1925–28) He began his moving-picture career in 1930 and became known for his acting ability in such films as *Wuthering Heights*, *Rebecca*, and *Pride and Prejudice* In 1944 he was appointed one of the directors of the Old Vic Theatre Company, where his performances in *Oedipus*, *Uncle Vanya*, and *The Critic* won great acclaim in England and in the United States (1946) He produced, directed, and acted in excellent moving-picture versions of *Henry V* (1946) and *Hamlet* (1948) He was knighted in 1947

Olivier, Sydney Olivier, 1st Baron, 1859–1943, British colonial administrator Olivier was interested throughout his life in socialism and was one of the first members of the Fabian Society, contributing to the famous *Fabian Essays* (1889) He was colonial secretary in Jamaica from 1899 to 1904 and later governor of the island (1907–13) He was secretary of state for India during Ramsay MacDonald's brief Labour government in 1924 A number of his works deal with colonial questions, among them *White Capital and Coloured Labour* (1906, rev ed , 1927) and *The Anatomy of African Misery* (1927) See his letters and selected writings (ed , with a memoir, by Margaret Olivier, 1948)

Ollivant, Alfred, 1874–1927, English novelist, grad Royal Military Academy at Woolwich, 1893 He wrote the classic dog story *Bob, Son of Battle* (1898), published in England as *Owd Bob* Other works include *The Gentleman* (1908), *The Royal Road* (1912), *Boy Woodburn* (1917), and *Tomorrow* (1927)

Ollivier, Émile (āmēl' ôlēvyā'), 1825–1913, French statesman, a leading figure in the "Liberal Empire" of Napoleon III He was a brilliant lawyer and had gained a wide reputation before he was elected to the *corps législatif* in 1857 He and Jules FAVRE were the chief figures of the liberal opposition which sought by constitutional means to fight for liberal reforms After 1863 Ollivier cooperated with the duc de Morny in gaining liberal concessions from Napoleon, and, as the emperor conceded more and more, Ollivier gradually drew away from his republican colleagues and became the leader of a new liberal group that stood for cooperation with the government. Napoleon III was reluctant to put the ministry into Ollivier's hands, but he was compelled by circumstances to capitulate in Dec , 1869, and Ollivier organized the ministry of Jan 2, 1870 The ministry was unfortunate, trouble over the Hohenzollern succession in Spain burst forth suddenly into hostilities between France and Germany in the FRANCO-PRUSSIAN WAR. Ollivier was replaced by Palikao as premier (Aug., 1870), and he went to Italy. He returned to France after three years and spent most of his later years writing historical and political articles, many of them in defense of his ministry. His most important work is the collection called *L'Empire libéral* (17 vols , 1895–1917).

Olmec (ŏl'mĕk), term applied to the culture of the Indian peoples long settled in the tropical lowlands of Veracrus and Tabasco. The Olmecan period is tentatively dated as c 500 B C.–A D 1150 The earliest evidences at La Venta (Tabasco) and Tres Zapotes (Veracruz) show a highly developed agricultural civilization The bar and dot system of recording time was in use, and, if the earliest date (31 B C) is correctly deciphered, Olmec use antedates the earliest definitely known date (A D 320) of the Maya, who are credited with having originated the system Olmec seems to have influenced the cultures of the ZAPOTEC, the MIXTEC, and the TOLTEC

Olmedo, José Joaquín (hōsā' hwäkēn' ōlmā'dhō), 1780?–1847, Ecuadorian poet, one of the three outstanding poets (along with Bello and Heredia) of the revolutionary period in Spanish America His poems—largely occasional writings—revealed his classical background, best known is *La victoria de Junín canto a Bolívar* He described American nature, favored intellectual independence of European influence, and showed an interest in the Indians As representative of Guayaquil in the cortes of Cádiz, he spoke (1810) for the Indians, and he is regarded as a precursor of the *indianista* movement In 1830 he was elected first vice president of Ecuador

Olmos Park (ŏl'mus), city (pop 1,822), S central Texas, near San Antonio, inc 1939

Olmsted, Denison, 1791–1859, American scientist, b near East Hartford, Conn , grad Yale, 1813 He was professor of geology at the Univ of North Carolina (1817–25) and there prepared a geological survey of the state (1824–25) From 1825 he was at Yale, as professor of mathematics and natural science and, from 1836, as professor of natural philosophy and astronomy He advanced a theory to explain the formation of hailstones, conducted observations of the aurora borealis, and with Elias Loomis observed Halley's comet in 1835

Olmsted, Frederick Law, 1822–1903, American landscape architect and writer, b Hartford, Conn He first attained fame for accounts of his travels in the South in the early 1850s, in which he painted vivid pictures of slaveholding society—*A Journey in the Seaboard Slave States* (1856), *A Journey through Texas* (1857), *A Journey in the Back Country* (1860), and *Journeys and Explorations in the Cotton Kingdom* (1861) His *Walks and Talks of an American Farmer in England* had already appeared in 1852 When Central Park in New York was projected, he and Calvert Vaux prepared the plan which was accepted Olmsted superintended the execution of the plan The well-planned park was a new departure, which was developed by Olmsted in other cities, e g , Prospect Park, Brooklyn, N Y , South Park, Chicago, Mt Royal Park, Montreal, and park systems in Buffalo and Boston Perhaps his most spectacular achievement was the laying out of the grounds (afterward Jackson Park) in Chicago for the World's Columbian Exposition in 1893 He also took an interest in the creation of state and national parks and in city planning See *Frederick Law Olmsted, Landscape Architect* (ed by F L Olmsted, Jr , and Theodora Kimball, Vol I, 1922, Vol II, 1928), Broadus Mitchell, *Frederick Law Olmsted, a Critic of the Old South* (1924) His son, **Frederick Law Olmsted,** 1870–, b Staten Island, N Y , grad Harvard, 1894, is also a landscape architect and city planner He studied with his father and began practice in 1895 He taught (1901–14) Harvard's first course in landscape architecture As a city planner he has been on many committees and government boards, he was chairman (1910–19) of the executive committee of the National Conference on City Planning In 1901 he was influential in the plan for beautifying Washington, D C

Olmütz (ŏl'mŭts), Czech *Olomouc* (ŏ'lômōts), city (pop 58,617), Moravia, Czechoslovakia, on the Morava river It is an agricultural and commercial center and an archiepiscopal see An ancient town, Olmütz was once the leading city of Moravia Here in 1242 Wenceslaus II of Bohemia defeated the Mongol invaders In 1642 the Swedes under Torstensson sacked the town, and in 1758 Frederick II of Prussia besieged it unsuccessfully. Olmütz was the scene (1850) of a treaty between Austria and Prussia, by which the German Union under the presidency of Prussia was dissolved and the GERMAN CONFEDERATION, headed by Austria, restored Prussia smarted under the "humiliation of Olmütz" until 1866, when it defeated Austria in the Austro-Prussian War Among the notable buildings of Olmütz are the Cathedral of St Wenceslaus (begun 12th cent), the city hall (rebuilt 14th cent), and two Gothic churches In the former fortress Lafayette was held imprisoned for five years

Olney, Jesse (ŏl'nē), 1798–1872, American geographer His *Practical System of Modern Geography* (1828), a standard work for decades, revolutionized the teaching of geography, for Olney's method was to familiarise the student with his own environment and then progress to a study of the more distant parts of the earth He taught in New York and Connecticut, served in the Connecticut legislature for 10 terms, was elected state comptroller in 1867, and wrote other textbooks and a volume of poetry.

Olney, Richard, 1835–1917, American statesman, b Oxford, Mass , grad Brown, 1856, and Harvard Law School, 1858 He was a successful Boston lawyer and had served in the state legislature before President Cleveland appointed him to the cabinet As Attorney General (1893–95), he obtained an injunction against the strikers in the PULLMAN strike of 1894, under it Eugene V DEBS was held in contempt of court Olney also persuaded Cleveland to send in troops to prevent interference with the mails, though Gov. John P ALTGELD declared troops unnecessary In 1895 Olney succeeded Walter Q Gresham as Secretary of State He played a vigorous part in the negotiations with the British over the VENEZUELA BOUNDARY DISPUTE In the course of them he stated flatly that the United States is "practically sovereign on this continent, and its fiat is law upon the subjects to which it confines its interposition" This principle was later supported by Theodore Roosevelt as a corollary of the MONROE DOCTRINE and was long important in American foreign policy See biography by Henry James (1923)

Olney (ŏl'nē, ō'nē), village, Buckinghamshire, England, on the Ouse and WNW of Bedford A museum has been established in the house where the poet Cowper (who with John Newton wrote the *Olney Hymns*) lived from 1767 to 1786

Olney (ŏl'nē) **1** City (pop 7,831), co seat of Richland co , SE Ill , inc 1841 An industrial, trade, and shipping center of a farm and timber area, it manufactures shoes, flour, butter, and handles There is a Univ of Chicago bird sanctuary here **2** City (pop 3,497), N Texas, SSW of Wichita Falls, settled 1891, inc 1909 The region has oil fields, cattle ranches, and farms

Olomouc, Czechoslovakia see OLMÜTZ

Olonos, Mount, Greece see ERIMANTHOS

Olosega (ōlōsā'gu), island (pop 509), Manua dist , American SAMOA, c 60 mi from Tutuila It is mountainous and fertile, rising to an elevation of 2,095 ft

Olson, Floyd Bjornstjerne, 1891–1936, governor of Minnesota (1931–36), b Minneapolis Before he studied law at the Univ of Minnesota and at the Northwestern College of Law in Minneapolis, he was an itinerant laborer, and for a time he belonged to the IWW Admitted (1915) to the bar, he practiced in Minneapolis, and as county attorney (1920–30) of Hennepin co he brought about the investigation of graft in the Minneapolis city council Elected governor three times on the Farmer-Labor ticket, Olson led in the repeal of the Minnesota newspaper "gag" laws, brought about the passage of unemployment and farm-relief legislation, and openly sided with labor in a series of strikes that occurred after 1934

Olsztyn, East Prussia see ALLENSTEIN

Olten (ŏl'tun), town (pop 15,287), Solothurn canton, Switzerland, on the Aar river It is an important railway junction, has railway shops, and has also aluminumware, shoe, chemical, and printing industries

Oltenia, Rumania see WALACHIA.

Olustee (ŏlŭ'stē), village, N Fla , on Ocean Pond E of Lake City, W of Jacksonville. It is a naval-stores shipping center and the seat of an experiment station and a station of the U S Bureau of Agricultural and Industrial Chemistry It was the scene of the most important battle (also called the battle of Ocean Pond) fought in Florida in the Civil War, Feb 20, 1864 Confederates under Gen Joseph Finegan decisively defeated Federals led by Gen Truman Seymour, thus saving the supplies of interior Florida for the Confederacy

Olympas (ŏlĭm'pus), Christian at Rome Rom 16 15

Olympia (ŏlĭm'pēa), city (pop 13,254), state capital, and co seat of Thurston co , W Wash , at the southern tip of Puget Sound and within sight of the Olympic Mts Founded in 1850, it was in 1853 made capital of the newly created Washington Territory It is a port of entry, does considerable shipping, and manufactures lumber, mineral, and food products Noteworthy are the fine old capitol building (1893) and the lavish new capitol group (1911–35) St Martin's College (Catholic, for men) is here Near by is an Indian reservation

Olympia, small plain of Elis, ancient Greece, near the Alpheus river From the earliest times it was important as a center of worship of Zeus and as the scene of the OLYMPIC GAMES. The great temple of Zeus, revealed by excavation, was especially celebrated for the ivory, gold-adorned statue of Zeus by Phidias—one of the SEVEN WONDERS OF THE WORLD Excavation has also revealed several other temples within the sacred enclosure (called the Altis) as well as the treasuries (of various Greek states) and the gymnasium See E N. Gardiner, *Olympia Its History and Remains* (1925)

Olympiad, unit of a chronological ERA of ancient Greece, a four-year period, each one beginning with the OLYMPIC GAMES Timaeus of Sicily (352–256 B C) was the first to utilize, as a check on chronology, the list of victors kept in the gymnasium at Olympia The first Olympiad was reckoned to have begun 776 B C

Olympian, in GREEK RELIGION, one of the 12 important gods, who lived on Mt Olympus Zeus, the

father, ruled over Hera, his sister and wife, Athena, Hebe, Artemis, and Aphrodite, his daughters; Hermes, Ares, Apollo, and Hephaestus, his sons, Hestia, his older sister, and Poseidon, his brother Other deities sometimes included in the group are Demeter, Dionysus, and Hercules. They lived in quarrelsome splendor Their food was ambrosia, their drink nectar. The great sanctuary of these gods was Olympia, in Elis, where the Olympic games were held in their honor See Arthur Cook, *Zeus a Study in Ancient Religion* (3 vols, 1914–40)

Olympias, d 316 B C, wife of PHILIP II of Macedon and mother of ALEXANDER THE GREAT She did not get on well with Philip, who had other wives, and it has been said that she had a part in his murder She reputedly had great influence in molding her son and giving him an interest in religion and in art Her violent ambitions plunged her into quarrels with Antipater, and when, after Alexander's death, she tried to forestall CASSANDER in Macedonia, he defeated and killed her

Olympic games, principal athletic meeting of ancient Greece, held in the summer once every four years at Olympia in honor of Olympian Zeus. The Olympic games were, according to tradition, instituted in 776 B.C, when the first OLYMPIAD began They were discontinued by Emperor Theodosius I of Rome at the end of the 4th cent A D The Olympic games were the greatest festival in the Greek world from the 6th cent B C and were at their height in the 5th and 4th cent However, they became more and more professionalized until in the Roman period they provoked much censure from philosophers and physicians Among the Greeks, the games were nationalistic in spirit and states were said to have been prouder of Olympic victories than of winning battles. Women, foreigners, slaves, and dishonored persons were forbidden to compete. Contestants were required to train faithfully for 10 months before the games, had to remain 30 days under the eyes of the people of Elis, who had charge of the regulation of the games, and had to take an oath that they had faithfully observed training before participating in the events At first, Olympic games were confined to running, Coroebus was the official winner of the foot race in 776 B C Over a period of time many new events were added—the long run in 720 B C, when the loin cloth was abandoned and athletes began appearing naked, the PENTATHLON in 708 B.C., boxing in 688 B C, chariot racing in 680 B C, the pancratium, involving boxing and wrestling, in 648 B C, contests for boys in 632 B C, and the foot race with armor in 520 B C Greek women, not only forbidden to participate in but also to watch the Olympic games, held games of their own, called Heraea, said to have been founded by Hippodameia. These were also held every four years but had fewer events Known to have been conducted as early as the 6th cent B C, the Heraea games were discontinued about the time the Romans conquered Greece The winners of the Olympics (and of the Heraea) were crowned with chaplets of wild olive, but in their home city-states the male champions were awarded many valuable gifts and privileges A list of Olympic winners from 776 B.C. to A.D 217 was drawn up by Julius Africanus and was preserved by Eusebius The glory of the Olympic games was heightened by the introductory procession, the call of the trumpet, religious festivities, and banquets The poetry of PINDAR celebrates the athletic triumphs at Olympia Pausanias also wrote on the Olympics The modern revival of the Olympic games is due in a large measure to the efforts of Pierre, baron de Coubertin, of France They were first held, appropriately enough, in Athens in 1896, but that meeting and the ones that followed at Paris (1900) and at St. Louis (1904) were hampered by lack of sufficient organization and the absence of world-wide representation The fact that the meeting at St Louis attracted few but American competitors led to a special meeting in 1906 at Athens under Greek auspices. The first successful meeting was held at London in 1908. Successive Olympic games were held at Stockholm (1912), Antwerp (1920), Paris (1924), Amsterdam (1928), Los Angeles (1932), Berlin (1936), and London (1948) The First World War prevented the Olympic meeting of 1916, and the Second World War brought about the cancellation of the 1940 and 1944 meetings The number of entrants, of competing nations, and of athletic events has gradually increased To the traditional TRACK AND FIELD ATHLETICS, which includes the DECATHLON and pentathlon, were added a host of games and sports—cycling, swimming, shooting, fencing, rowing, polo, basketball, canoeing, handball, equestrian sports, rugby football, soccer, yachting, weight lifting, boxing, and wrestling Olympic events for women made their first appearance in 1912 and since then have become increasingly important At Chamonix, France, in 1924 winter sports, including skating, ice hockey, bobsledding, and skiing, were included as Olympic events. Successive winter-sports Olympic meets were held at St Moritz, Switzerland (1928), Lake Placid, N Y. (1932), Garmisch-Partenkirchen, Germany (1936), and again at St Moritz (1948). Olympic events are officially won only by individuals The newspaper method of national-team scoring—giving three points for first place, two for second place, and one for third place and adding up these tallies by national teams—is strictly unofficial On this basis, the United States "won" all the Olympic meets except that of 1936, which was "won" by Germany. The games are controlled and general policies are set up by an international Olympic committee, to which each participating nation sends at least one delegate Individual nations have their own Olympic committees to control and regulate Olympic trial meets to select contestants and to supervise the activities of their national Olympic organizations. See F. A M Webster, *The Evolution of the Olympic Games* (1925), E. N. Gardiner, *Olympia* (1925), R. D Binfield, *The Story of the Olympic Games* (1948), John Kieran and Arthur Daley, *The Story of the Olympic Games, 776 B C –1948 A D* (1948)

Olympic Mountains, part of the Coast Ranges, NW Wash., S of the Juan de Fuca Strait and W of Puget Sound, from 3,000 to 8,000 ft in elevation. Mt Olympus (8,150 ft) was included in Mt Olympus National Monument (est 1909), which was extended and set aside in 1938 as the **Olympic National Park** (846,765.66 acres) This is a beautiful wild area, abounding in wildlife, especially elk, and in virgin forest. There are several glaciers. It is said to be the rainest area in the country.

Olympus (ōlĭm'pŭs), mountain range, N Greece, on the border of Thessaly and Macedonia, near the Aegean coast It is c 25 mi long and rises to 9,570 ft, its summit being the highest point in Greece In Greek religion the summit, shut from the sight of men on earth by clouds, was the home of the OLYMPIAN gods Later the name Olympus was given to the remote heavenly palace of the gods Mt. Olympus has always been of strategic importance In the Second World War it was a stronghold of the Greek guerrillas.

Olympus, Mount see CYPRUS, OLYMPIC MOUNTAINS, OLYMPUS (Greece).

Olynthus (ōlĭn'thŭs), ancient city on the peninsula of Chalcidice, Greece, NE of Potidaea A league of Chalcidic cities grew up in the late 5th cent B C, and Olynthus, as the head of this Chalcidian League, vigorously opposed the threats of Athens and Sparta Athens captured the city briefly, and in 379 Sparta defeated Olynthus and dissolved the league, which was, however, re-formed after the fall of Sparta Olynthus at first was allied with Philip II of Macedon against Athens, then, fearing Philip's power, sought Athenian aid Philip attacked, and Demosthenes in his Olynthiac orations eloquently urged his fellow Athenians to aid the threatened city, but Philip triumphed nevertheless In anger he razed the city in 348 B C Recent excavation of the ruins have revealed much of Greek life in the 5th and 4th cent B C

Olyphant (ō'lĭfunt), industrial borough (pop 9,252), NE Pa, on the Lackawanna and NE of Scranton, settled 1858, inc 1877. Iron foundries, mines, and a silk mill are here

Om (ōm), in Hinduism and Buddhism, a mystic syllable. Its original Sanskrit form may have comprised three letters which in English would be *a-u-m*, and the syllable denotes a trinity. In Hinduism it commonly represents the divine triad of Brahma, Vishnu, and Siva, i e, God as creator, as preserver, and as destroyer In Buddhism it may represent the eternal, the temporal, and the principle which mediates between them Often it has the effect of Amen The best-known use is in the Buddhist ejaculation *Om mani padme hum* [Yes, the jewel (i e, Buddha) is in the lotus, amen!]

Omagh (ō'mā), urban district (pop 5,741), co seat of Co Tyrone, Northern Ireland It is a farm market, processing dairy products There are ruins of a castle besieged in 1509 and again in 1641. Omagh was the site of an abbey in the 8th cent.

Omagua (ōmä'gwa, ōmu'wa), legendary land of treasure It is comparable to EL DORADO and was sought by the Spanish conquistadors

Omaha (ō'muhä, hô), city (pop 223,844), co seat of Douglas co, E Nebr, largest city in the state, extending along the west bank of the Missouri opposite Council Bluffs, Iowa, and c 500 mi. W of Chicago. The site was passed by early pioneers (including Lewis and Clark, 1804) and was a fur-trading point in the 1820s With the opening of the Nebraska Territory to settlement in 1854 the city was founded, it was incorporated in 1857. It grew as a supply point for westward migration, river traffic was augmented (1865) by the coming of the Union Pacific The city was territorial capital from 1855 to 1867. In the heart of the country's great farming region, it is a port of entry and an important transportation and shipping center, terminal of railroads (10 trunk systems), highway lines (including the Lincoln Highway), river traffic, and transcontinental airlines (there is a municipal airport) There are huge stockyards, grain elevators, mills, meat-packing plants, and a large lead smelter A world's fair, the Trans-Mississippi Exposition, was held here in 1898 The city has fine park and school systems and is the seat of CREIGHTON UNIVERSITY, the college of medicine of the Univ. of Nebraska, the Municipal Univ. of Omaha (coeducational, 1908), Duchesne College (for women), the state school for the deaf, preparatory and denominational schools, and the Joslyn Memorial (1931) with art collections and a concert hall. Fort Omaha (built 1863) and Fort Crook, near by, are army posts Boys Town is southwest See Alfred R Sorenson, *The Story of Omaha* (3d ed., 1923).

Omaha Indians, tribe of North American Indians of the Siouan linguistic stock. They, with the Ponca, probably migrated from the Ohio valley to the confluence of the Missouri and the Mississippi rivers and thence to Iowa At the mouth of the Niobrara river in Nebraska they seem to have separated from the Ponca. The Omaha moved farther up the Missouri river but after an outbreak (1802) of smallpox, which considerably reduced their population, they moved to NE Nebraska. The Omaha intermittently warred against the Sioux. In 1854 the Omaha ceded all their lands W of the Missouri to the United States and moved to Dakota co Nebr The Omaha sold part of their reservation to the United States for the use of the Winnebago in 1865. An act of 1882 granted them the right to own land individually Since 1802, when they numbered some 300, they have increased to 1,800 The Omaha were a typical tribe of the Plains area living in earth lodges in the winter and tepees in the summer. See Alice Fletcher, *A Study of Omaha Indian Music* (1893), Alice Fletcher and Francis La Flesche, *The Omaha Tribe* (1907), R. F. Fortune, *Omaha Secret Societies* (1932)

O'Mahony, John (ōmä'hunē), 1816–77, Irish patriot He attended Trinity College, Dublin, became a proficient Irish scholar, and made an excellent translation (1857) of Geoffrey Keating's Gaelic history of Ireland into English. O'Mahony was a follower of Daniel O'Connell, but turned to the Young Ireland organization of William Smith O'BRIEN After the unsuccessful Irish rebellion of 1848 he fled to France and thence to America, where he was a founder and organizer of the FENIAN MOVEMENT

Omak (ō'măk), town (pop. 2,918), N central Wash, on the Okanogan river, settled 1907, inc 1911

O'Malley, Frank Ward, 1875–1932, American newspaperman, b Pittston, Pa As reporter (1906–19) on the New York *Sun* he was recognized as accurate and brilliant, especially noted for his stories of humor and pathos Among his books is *The Swiss Family O'Malley* (1928).

Oman, Sir Charles William Chadwick (ō'mun) 1860–1946, British historian, b India A student at Oxford under William Stubbs, Oman was himself made professor of modern history there in 1905 As a historian he is the equal of Stubbs and of J R Green in readability He was a foremost military historian, his most notable works are *A History of the Art of War in the Middle Ages* (1898, 2d ed, 1924), its companion study, *A History of the Art of War in the Sixteenth Century* (1937), and his exhaustive *History of the Peninsular War* (7 vols, 1902–30) *His History of Greece* (1888) and *History of England before the Norman Conquest* (1910, 8th ed, 1937) are standard works, but almost entirely concerned with political and military history Among his other works are *The Dark Ages* (1901), *Seven Roman Statesmen* (1902), *A Short History of England* (1898, new ed, 1920), *Studies in the Napoleonic Wars* (1929), *Things I Have Seen* (1933), *The Sixteenth Century* (1936), *On the Writing of History* (1939), and *Victorian Oxford* (1941). He was (1919–35) a member of Parliament for Oxford Univ and was knighted in 1920 The historical novelist, Carola Oman, is his daughter

Oman (ōmän', ō'măn), sultanate (c 82,000 sq mi, pop c 550,000), SE Arabia It is officially Muscat and Oman, and the capital is MUSCAT Oman stretches for nearly 1,000 mi along the Gulf of Oman and the Arabian Sea. For the most part it comprises a narrow coastal plain, backed by hill ranges and an interior plateau In the extreme north dates are raised, and in the southwest there is an abundance of sugar cane and cattle, elsewhere the country is barren Much of the coast of Oman was controlled by Portugal from 1508 to 1650, when the Turks seized possession They were driven out in 1741 by Ahmed ibn Said of Yemen, who founded the present royal line In the early 19th cent. Oman was the most powerful state of Arabia, controlling Zanzibar and much of the coast of Persia and Baluchistan. Zanzibar was lost in 1856, and today the only possession outside Arabia is the town of Gwadar on the Baluchistan coast Oman is in close treaty relations with Great Britain. It is not connected politically with adjoining TRUCIAL OMAN.

Omar (ō'–), duke of Edom. Gen. 36.11,15.

Omar (ō'mŭr, ō'mär), c 581–644, 2d caliph (see CALIPHATE). At first hostile to Islam, he was converted by 618 and was adviser to Mohammed. He was responsible for the choice of ABU BAKR as 1st caliph in 632, and he himself succeeded Abu Bakr without opposition in 634. In his reign Islam became an imperial power. The Moslem generals pushed conquests far and wide—Khalid in Syria, Amri in Egypt, Saad and Numan in the Persian Empire. Omar also laid the administrative base of

the empire, creating the office of kadi and establishing fixed taxes. He reopened the canals of Mesopotamia and the waterway from the Nile to the Red Sea. He was assassinated by a foreign slave. He had appointed a group to select his successor, and the choice fell on Othman

Omar Khayyam (kīăm′), fl. 11th cent., Persian poet and mathematician, b. Nishapur. He was called Khayyam [tentmaker] probably because of his father's occupation. The details of his life are mostly conjectural, but he was very well educated and achieved fame as the outstanding mathematician of his time. He was one of a group that undertook to reform the calendar, and their work led to the adoption of a new era, the so-called Jalalian or Seljuk era, beginning March 15, 1079. Omar was responsible for a number of other astronomical and mathematical studies, including an algebra. His fame as a scientist has been greatly eclipsed by the popularity of his *Rubáiyát*, epigrammatic verse quatrains, first noticed in the Occident c.1700 but generally unknown until sometime after an English paraphrased translation of them was first published by Edward FITZGERALD in 1859. Since that date a number of other literal or paraphrased translations have been made in English and in other languages. FitzGerald omitted many of the quatrains (which were independent and unconnected) and rearranged them into the semblance of a connected poem; it is, however, impossible to establish definitely that many of the numerous quatrains attributed to Omar are really his work. The verses have been offered in literally hundreds of editions, and many of the lines are entirely familiar to all educated English-speaking persons

Omayyad (ōmā′yăd), Arabian dynasty of caliphs. The powerful Omayyad clan was at the very first hostile to Islam, but a member of the family, OTHMAN, became a son-in-law of the Prophet and was the 3d caliph. After his murder ALI became caliph, and he was succeeded by his son HASAN. The Omayyad leader, MUAWIYA, was, however, disaffected. As governor of Syria, he opposed Ali, and in 658 he spread his power to Egypt. Hasan was forced to resign, and Muawiya was recognized in the older Moslem provinces. He made the caliphate hereditary and created the Omayyad dynasty (though the principle was not firmly maintained). The accession of the Omayyads brought about the great schism between the SUNNITES and the SHIITES. There were 14 Omayyad caliphs before 750: **1** Muawiya, caliph 661–80, **2** Yazid, caliph 680–83, **3** Muawiya II, caliph 683, **4** Marwan I, caliph 683–85, **5** Abdu-l-Malik, caliph 685–705, **6** Walid I, caliph 705–15, **7** Suleiman, caliph 715–17, **8** Omar II, caliph 717–20, **9** Yazid II, caliph 720–24, **10** Hisham, caliph 724–43, **11** Walid II, caliph 743, **12** Yazid III, caliph 743–44, **13** Ibrahim, caliph 744, **14** Marwan II, caliph 744–50. The Omayyad capital was usually Damascus, and they gave that city its splendor until 750, when Marwan II, though a hard fighter, was defeated and killed by Abbasids (see ABBASID), who then perpetrated a general massacre of the Omayyad family. One member escaped to Spain, where he established himself over the MOORS as ABDU-R-RAHMAN I, emir of Córdoba, in 756. This emirate, changed to a caliphate by Abdu-r-Rahman III in the 10th cent., survived until 1031. It came to include most of Moslem Spain. The rulers were Hisham I (reigned 788–96), Hakim I (reigned 796–822), Abdu-r-Rahman II (reigned 822–59), Mohammed (reigned 859–86), Mundhir (reigned 886–88), Abdullah (ruled 888–912), Abdu-r-Rahman III (reigned 912–61, caliph 929–61), Hakim II (caliph 961–76). The early emirs pushed into S France, then sought to oppose the invasion of Charlemagne. They were troubled by raids of the Norsemen along the coast and by numerous revolts and finally by the reconquests of the Christian kings, but they budded a brilliant civilization that reached its apex under Abdu-r-Rahman III, when art, literature, and science flourished. The great Arabic library was collected largely by his successor, Hakim II. Local dissensions were by that time tearing the state apart, but the able general Al MANSUR in the late 10th cent. carried Omayyad power across almost all of Spain, sacking Santiago and Barcelona. The last Omayyad rulers (Hisham II and Hisham III) were, however, inconsiderable, and the Almoravids had little difficulty in taking over Spain. For bibliography, see CALIPHATE, MOORS, SPAIN

Ombos (ŏm′bŏs), ancient city, S Egypt, on the Nile. It was strategically important for its commanding position on a hill. Under the Ptolemies it attained great importance, and there was built a mighty temple complex dedicated to the crocodile-headed god Suchos and the falcon-headed Haroeris

Omdurman (ŏmdŭrmän′), city (pop. 117,650), central Anglo-Egyptian Sudan, on the White Nile opposite Khartoum. It was founded in 1884 as a military camp of the Mahdists. Near here Lord Kitchener's Anglo-Egyptian forces decisively defeated the Mahdists in 1898. Omdurman has a native market with trade in cotton, grain, and handicrafts. A bridge connects it with Khartoum

O'Meara, Barry Edward (ōmā′rŭ), 1786–1836, Irish physician. He attended Napoleon I on St. Helena and became involved in a feud with Napoleon's custodian, Sir Hudson Lowe, whom he charged with a plot to kill Napoleon. O'Meara was forced to return to England. See his *Napoleon in Exile* (1822), R. C. Seaton, *Napoleon's Captivity* (1903)

Omei or **O-mei** (ō′mā′), peak, c.9,950 ft. high, W Szechwan prov., China, near Loshan. With large Buddhist images and many temples and monasteries, it is one of the sacred peaks of China

omen, sign or augury believed to foreshadow the future. Omens were of many different kinds and included the results of most forms of DIVINATION. The usual omen was, however, a natural phenomenon such as a comet or a flight of birds. Among the Greeks and particularly among the Romans the interpretation of omens was a major part of religious life. Belief in omens survives in superstitions concerning unlucky days, lucky numbers, chance encounters, warning dreams, and fortune-telling games

omnibus. see BUS

Omphale (ŏm′fălē), in Greek mythology, queen of Lydia. Hercules was sent to her court by the Delphic oracle, to work for her for three years to expiate the murder of his son Iphitus. Omphale made him into an effeminate creature, who dressed in woman's clothes and worked with her maids spinning wool. Omphale wore his lion's skin and carried his club. Hercules later became her lover

Omri (ŏm′rī). **1** Died c.874 B.C., king of Israel (c.885–c.874 B.C.). He was a general in the army of Elah, and on the king's death at the hands of ZIMRI **1**, Omri proclaimed himself king. Soon after this Zimri killed himself. Omri worsted Tibni, a pretender, and moved his capital from Tirzah to Samaria, thenceforth the chief city of Israel. Omri is mentioned on the Moabite stone and on Assyrian inscriptions, which call Israel "the land of Omri." Omri was in close touch with the Syrian petty kingdoms, and his son Ahab's marriage with Jezebel was a result of this relation. **1** Kings 16:16–28, 20:34. **2** Benjamite. **3** Chron. 7:8. **3** Judahite. **1** Chron. 9:4. **4** Issacharite. **1** Chron. 27:18

Omro (ŏm′rō), city (pop. 1,401), central Wis., on the Fox and W of Oshkosh, settled 1845, inc. as a village 1857, as a city 1944

Omsk (ŏmsk), city (1939 pop. 280,716, 1946 estimated pop. 450,000), capital of Omsk oblast, RSFSR, in W Siberia, on the Irtysh river at its confluence with the Om river. It is also on the Trans-Siberian RR. It was the largest city of Asiatic Russia until the rise of Novosibirsk, and it remains a major transportation point and industrial center. Its industries produce machinery, locomotives, rolling stock, automobiles and automobile tires, processed foods, and lumber. There are several technical and medical institutes. The city developed around a fortress built in 1716, was chartered in 1804, and in 1824 succeeded Tobolsk as administrative center of W Siberia. During the civil war that followed the Russian Revolution of 1917, Kolchak made Omsk his capital (1918–19). The city was primarily the center of a wholly agricultural region until its industrialization began under the Soviet regime

Omuta (ō′mōōtä), city (1947 pop. 166,438), Fukuoka prefecture, W Kyushu, Japan, a port on the Amakusa Sea. It is an industrial city and a coal-exporting center. Large coal deposits are in the vicinity. The name also appears as Omuda

On (ŏn). **1** Reubenite conspirator in Korah's revolt. Num. 16:1,2. **2** The Egyptian HELIOPOLIS

Onalaska (ŏnŭlă′skŭ), city (pop. 1,742), W Wis., a suburb of La Crosse, in a dairy area, settled 1854, inc. 1887

Onam (ō′nŭm) [Heb., =strong]. **1** Horite. Gen. 36:23, 1 Chron. 1:40. **2** Judahite. 1 Chron. 2:26,28

Onan (ō′nən) [Heb., =strong], Judah's son whose evasion of his obligation to his brother's widow caused his death. Gen. 38.

Onancock (ŏnăn′kŏk), town (pop. 1,283), E Va., on the Eastern Shore peninsula near Chesapeake Bay and on Onancock Creek, founded 1680. It has oil-storage tanks

Onarga (ŏnär′gu), village (pop. 1,413), E Ill., SSW of Kankakee, in a farm area, inc. 1867

Oñate, Juan de (hwän′ dā ōnyä′tā), d. c.1624?, Spanish explorer in the Southwest, possibly b. New Spain. The expedition of Antonio de Espejo had awakened interest in the northern territories, and in 1595 Oñate entered into a contract with the viceroy to conquer and settle New Mexico. Political changes hampered his actions, but in 1598 he led an expedition north. Oñate took possession of New Mexico for the Spanish king and established a settlement at San Juan. He was promptly faced by an Indian revolt at Acoma, which he put down severely. In 1601 Oñate, in search of Quivira, led an expedition across present Oklahoma to the plains around Wichita, Kansas, then returned empty-handed to New Mexico, where discontent was rife among the colonists. Anxious to find a route to the South Sea, he led an expedition westward, reached the Colorado river, and went down it to the Gulf of California before turning back to his colony. He sought to resign as governor in 1606 but had to remain until he was relieved by a new governor, Pedro de Peralta. The officials of New Spain were disappointed that he had found no ready wealth, and Oñate was tried on charges of misconduct in office. Convicted in 1614, he later sought a pardon, which was granted before 1624. One of his lieutenants, Gaspar de Villagrá, celebrated Oñate's deeds in *Historia de la Nueva México*, but his real achievements in founding and exploring a broad new realm did not receive the deserved recognition. See G. P. Hammond, *Don Juan de Oñate and the Founding of New Mexico* (1927), Paul Horgan, *The Habit of Empire* (1938)

Onawa (ō′nuwŭ), city (pop. 3,438), co. seat of Monona co., W Iowa, near the Missouri SE of Sioux City, platted 1857, inc. 1858. It is a trade center of a wheat and livestock area. Lewis and Clark State Park is near by

Onaway (o′nuwā), resort city (pop. 1,449), N Mich., SE of Cheboygan, settled c.1880, inc. as a village 1899, as a city 1903. Near-by lakes provide fine fishing. A state park is north

Oncken, Hermann (hĕr′män ŏng′kŭn), 1869–1946, German historian, an authority on political and diplomatic history. He taught at the universities of Heidelberg, Munich, Chicago, and (1928–35) Berlin. His retirement seems to have been motivated by his opposition to the National Socialist regime. Among his chief works are *Napoleon III and the Rhine* (1926, Eng. tr., 1928), *Das Deutsche Reiche und die Vorgeschichte des Weltkrieges* [Germany and the events preceding the World War] (2 vols., 1933), and *Nation und Geschichte* [nation and history] (1935). He wrote excellent biographies, notably of Ferdinand Lassalle (1904) and of Rudolf von Bennigsen (2 vols., 1910). Oncken also wrote extensively on contemporary politics and edited diplomatic documents covering the years 1858–71.

Oncken, Wilhelm (vĭl′hĕlm), 1838–1905, German historian. He taught at the Univ. of Giessen after 1866. A typical product of the liberal nationalism of the 19th cent., Oncken regarded history as a means toward national political education. Greek history was his special field in his earlier years, but he later concerned himself mainly with the history of the Prussian state and of German unification. He exerted immense influence on the German popular view of history by editing a cooperative history, the *Allgemeine Geschichte in Einzeldarstellungen* [general history in its special phases] (45 vols., 1879–93), which became a standard household article of the educated German family. Comprised in the collection were Oncken's own *Das Zeitalter Friedrichs des Grossen* [the age of Frederick the Great], *Das Zeitalter der Revolution, des Kaiserreiches, und der Befreiungskriege* [the age of the revolution, the empire, and the wars of liberation], and *Das Zeitalter des Kaisers Wilhelm* [the age of Emperor William]

Onega, Lake, Finnish *Äänisen* (ä′nĭsĕn), Rus. *Onezhskoye Ozero* (ŭnyĕsh′skŭyu ŏz′yrŭ), lake, area c.3,800 sq. mi., S Karelo-Finnish SSR and NW European RSFSR, between Lake Ladoga and the White Sea. The second largest lake in Europe (Ladoga is the largest), it is 140 mi. long and 50 mi. wide and has a maximum depth of 407 ft. The shores are low and sandy in the south, rocky and indented in the north. The lake receives the Vytegra river in the south and drains through the Svir (in the southwest) into Lake Ladoga. At Povenets, on the northernmost part of the lake, the Baltic–White Sea Canal has its southern terminus. Petrozavodsk is the chief city and port on Lake Onega, which is frozen from November to May. Parallel to the southern shore of the lake runs the **Onega Canal**, 45 mi. long, which joins the Svir and Vytegra rivers and forms part of the MARIINSK SYSTEM; stormy conditions on the lake prevent the possibility of its being used as part of that inland waterway by barges and small vessels.

Oneida (ōnī′dŭ). **1** City (pop. 10,291), central N.Y., E of Syracuse and SE of Oneida Lake, inc. 1901. Several local industries, notably silverware, were introduced by the **Oneida Community**, a religious society of Perfectionists, established here (1848) by John Humphrey NOYES. Members held all property in common and practiced complex marriage (eugenic mating), and communal care of children. In 1881 the community was reorganized as a stock company and most of the social experiments were abandoned. **2** City (pop. 1,252), N Tenn., NW of Knoxville and near the Ky. line, in a farm, timber, and coal area, settled 1868, inc. 1914

Oneida Indians: see IROQUOIS CONFEDERACY.

Oneida Lake, 20 mi. long and 1 to 5 mi. wide, central N.Y., NE of Syracuse. The Barge Canal links the eastern end with the Mohawk river and also uses the Oneida river, which flows from the western end to join the Seneca and form the Oswego. The lake is also used for recreation.

O'Neill, Eliza (ōnēl'), 1791–1872, Irish actress She first appeared at Dublin as Juliet and in 1814, at Covent Garden, achieved great success in the same role opposite Charles Kemble Her forte was tragedy, and she was acclaimed as Desdemona and as Belvidera in Otway's *Venice Preserved* At the height of her career she married William Becher (later a baronet) and retired from the stage

O'Neill, Eugene (Eugene Gladstone O'Neill), 1888–, leading American dramatist, b New York city, studied at Princeton (1906–7) and with George Pierce Baker at Harvard (1913–14), son of James O'Neill The diversified background of his plays is the result of his life on water fronts, traveling with his father's theatrical troupe, and working as an able seaman, a prospector, and a newspaperman In 1916, when he became associated with the Provincetown Players, they produced *Bound East for Cardiff* and *Thirst*, the first of a number of his one-act and longer plays which they were to present in the next few years His first long play, *Beyond the Horizon* '1919), won the 1920 Pulitzer Prize for drama, a prize which he was to win twice again, in 1922 for *Anna Christie* (1921) and in 1928 for *Strange Interlude* (1927) The latter, a drama in nine acts, reintroduced the use of asides and constituted a psychological history of its chief characters, while *The Great God Brown* (1926) depended upon the use of masks to symbolize the facets of personality *Mourning Becomes Electra* (1931), a trilogy, interprets in terms of American life Aeschylus' theme of fate overhanging a household Other notable plays include *The Emperor Jones* (1920), *The Hairy Ape* (1922), *Desire under the Elms* (1924), *Marco Millions* (1928), *Lazarus Laughed* (1928), *Dynamo* (1929), and *Days without End* (1934) With the exception of *Ah, Wilderness!* (1933), an extremely popular comedy and a marked departure from his usual style, O'Neill's plays show him preoccupied with the theme of tragedy Profoundly influenced by mythology, symbolism, and Freudian theory, he has demonstrated that tragedy, in the classical sense, can be exemplified in the life and mind of modern man *The Iceman Cometh* (1946) reduces the concept of tragedy to the level of commonplace, where each man is trapped by his own illusions about himself, yet stripped of them is unable to survive While his techniques in handling an idea have varied widely, his concern is basically philosophic He was awarded the 1936 Nobel Prize in Literature See biographies by S K Winther (1934) and B H Clark (rev ed , 1947)

O'Neill, Hugh. see TYRONE, HUGH O'NEILL, 2D EARL OF

O'Neill, James, 1847–1920, American actor, b Ireland He was brought to the United States in 1850 and in 1867 made his debut at the National Theater, Cincinnati, in *A Celebrated Case* He gained fame for his portrayal of Edmond Dantès in a dramatization of *The Count of Monte Cristo*, in which he appeared from 1883 onwards He was popular in other heroic and romantic parts Eugene O'Neill is his son

O'Neill, Margaret (Peggy O'Neill), c 1796–1879 wife of John Henry EATON, U S Secretary of War under President Andrew Jackson She was the daughter of a Washington tavern keeper and married John Timberlake, a purser in the U S navy After his death, she became (1829) the wife of Eaton, who soon afterwards entered the President's cabinet The wives of the other secretaries refused to accord her social recognition, because of the alleged intimacy between Major Eaton and Peggy O'Neill before their marriage and because of her humble birth President Jackson, a close friend of Eaton, tried in vain to insure Peggy Eaton a place in society The attempt almost disrupted the cabinet and worsened the relations between the President and the Vice President, John C CALHOUN, whose wife was a social leader As a result, Jackson transferred his favor to Martin VAN BUREN, who was friendly toward Mrs Eaton She was well received at the court of Spain, to which her husband was appointed minister in 1836, and was a social favorite in London and Paris Her maiden name is also recorded by historians as O'Neale and O'Neil. See Queena Pollack, *Peggy Eaton* (1931)

O'Neill, Owen Roe (ō'ĭn rō'), 1590?–1649, Irish rebel. Nephew of Hugh O'Neill, earl of Tyrone, he left Ireland after the "flight of the earls" in 1607 and spent 30 years in the Spanish army, serving notably at the defense of Arras (1640) He returned to Ireland in 1642, superseded his kinsman, Sir Phelim O'Neill, in the leadership of the O'Neill clan, and for the next seven years led the Catholic faction in the intermittently successful rebellion against English authority O'Neill died before the arrival of Oliver Cromwell in Ireland and the collapse of Irish resistance.

O'Neill, Shane, c 1530–1567, Irish chieftain He succeeded to the leadership of the powerful O'Neill clan on the death (1559) of his father, Conn Shane had carried on a bitter feud with his father after Conn had accepted Henry VIII's nomination of Conn's illegitimate son, Matthew, as baron of Dungannon and heir to the O'Neill prestige Shane's agents murdered Matthew in 1558 On his succession Shane refused to come to terms with Queen Elisabeth, who cited the rival O'Donnells against him, but in 1562 Shane went to London and, submitting, was acknowledged as chieftain of Tyrone Upon his return to Ireland, however, he plunged anew into tribal warfare, which the English were unable to suppress In 1564 he claimed to be serving Elisabeth in his successful campaign against the MacDonnells, Scottish immigrants on the coast of Antrim O'Neill continued his raids and depredations until he was defeated by the O'Donnells at Letterkenny, he fled and sought refuge with his former enemies, the MacDonnells, who murdered him See E. Boyd Barrett, *The Great O'Neill* (1939)

O'Neill, city (pop 2,532), co seat of Holt co , N Nebr , on the Elkhorn and NW of Omaha An Irish settlement was made here in 1874 It is a shipping point for a farming area and an important hay-baling center and has a buttermaking plant

Oneonta. 1 (ōnēōn'tŭ, ō–) Town (pop 2,376), co seat of Blount co , N central Ala , NE of Birmingham, in a mountainous region **2** (ōnēōn'tù) City (pop 11,731), E central N Y , on the Susquehanna and NE of Binghamton, in a farm area of the Catskills, settled c 1780, inc as a village 1848, as a city 1909 It has railroad shops and flour mills and makes gloves and dresses A state teachers college and Hartwick College (coeducational), are here, as is a state tuberculosis hospital Gilbert Lake State Park is near by

Onesimus (ōnĭ'sĭmŭs) [Gr , =profitable], runaway slave about whom Paul wrote the epistle to PHILEMON See also Col 4 9

Onesiphorus (ŏ"nēsĭ'fŭrŭs) [Gr , =bringer of profit], man whom Paul praised highly for hospitality and kindness 2 Tim 1 16–18

onion, bulbous biennial plant (*Allium cepa*) of the lily family Its strong characteristic odor is caused by a volatile oil, which is removed by cooking The plant has been long in cultivation, it is mentioned in old Egyptian writings and in the Pentateuch It is native to W Asia, but has been largely grown in India, China, and Japan Both bulbs and leaves are used as seasoning, the bulbs are a common table vegetable The plant is propagated in several ways (1) from "sets," the little bulbs which form on some varieties in place of seeds, (2) from seeds, and (3) from the division of the parent bulb, as in the case of the potato onion, or multiplier onion This has two or more cones or hearts, each of which is capable of producing new compound bulbs. The top of tree onion may have bulblets or flowers or both at the top of the stem The onion adapts itself to almost any climate, but requires, for successful development, a fairly rich, moist soil and careful protection from weeds The greatly increased modern demand has led to its cultivation on a scientific and enlarged scale In the S United States, it is grown as a winter crop, in the North' it is set out as early in the spring as the ground is workable Three commonly grown varieties differ in flavor The red are strongest, the yellow intermediate, and the white mildest Pearl onions are a very small white variety used for pickling The Spanish and Bermuda onions are large and delicately flavored Modern study places a high value on the onion Some Latin writers speak of "onion eaters" as synonymous with barbarians

Onkelos (ŏng'kulŏs), reputed author (c 100–130) of the *Targum Onkelos*, the standard Aramaic translation of the Pentateuch according to the Talmud It became almost as authoritative a text as the Pentateuch itself It is possible, however, that this Targum is the product of the combined efforts of the scholars of Akiba's school at Jabne and that no person by the name of Onkelos existed. The name is an Aramaic paraphrase of the name Aquila

Onnes, Heike Kamerlingh. see KAMERLINGH ONNES, HEIKE

Ono (ō'nō), town, W central Palestine 1 Chron. 8 12, Ezra 2 33, Neh 7 37

onomatopoeia (ŏn"umătŭpē'ŭ) [Gr , =word-making], in language, the representation of a sound by an imitation thereof, e g , the cat *mews* Of those who speculate on the origin of language, some assume an onomatopoetic basis for all speech Rhetorical effort to suggest the meaning of a passage by its very sound is called onomatopoeia, e g (*Faerie Queene*, 1 1 41).

> And more, to lulle him in his slumber soft,
> A trickling streame from high rocke tumbling downe
> And ever-drizzling raine upon the loft,
> Mixt with a murmuring winde, much like the sowne
> Of swarming Bees, did cast him in a swowne
> No other noyse, nor peoples troublous cryes,
> As still are wont t'annoy the wallèd towne,
> Might there be heard, but careless Quiet lyes
> Wrapt in eternal silence farre from enimyes

Onomichi (ōnō'mēchē), city (1947 pop 59,891), Hiroshima prefecture, SW Honshu, Japan, on the Inland Sea. It is the site of Senko-ji, an ancient Buddhist temple

Onondaga Indians: see IROQUOIS CONFEDERACY.

Onondaga Lake (ŏnundâ'gŭ, –dô'gŭ), salt lake, 5 mi long and 1 mi wide, central N.Y., extending NW from Syracuse. It was bought from the Onondaga Indians by the state in 1795 for its salt resources The Salt Museum on the lake shore near Liverpool contains relics of the early salt industry A reconstructed French fort (1656) is near by

Ontario (ŏntâ'rēō), province (363,282 sq mi , with water surface 412,582 sq mi., 1941 pop 3,787,655, 1948 estimated pop. 4,297,000), central Canada. TORONTO, the second largest city in Canada, is the capital, other important cities are OTTAWA (the capital of Canada), HAMILTON, WINDSOR, and LONDON Ontario is bounded on the north by Hudson Bay, on the east by Quebec prov and James Bay, on the south by the Great Lakes, and on the west by Manitoba The province may be divided into three geographical districts—the vast area S and W of James and Hudson bays, the region W of Ottawa, N of Lake Huron, and E of Lake Superior, and Old Ontario, the peninsula SW of Ottawa, hemmed in by the St Lawrence river and Lakes Ontario, Erie, and Huron NW Ontario is part of the Laurentian Plateau, a region of ancient, mineral-rich rock covered with forests and broken by a labyrinth of rivers and lakes Through these waterways, where trapping remains a major industry, *voyageurs* penetrated the wilderness to take out a treasure of luxury furs Rich gold deposits have been exploited, iron is mined, and trees are cut for lumber and pulpwood A rigorous climate discourages settlement, although the arable clay belt S of James Bay is being developed for general farming Products of much of the area are shipped out of the busy, twin Lake Superior ports of FORT WILLIAM and PORT ARTHUR, which also serve as transport centers for the Prairie Provs Farther east the lakeland and forest region attracts great numbers of vacationists and sportsmen Abundant mineral wealth has been tapped N of Sudbury to yield gold, silver, copper, and the world's greatest supply of nickel Platinum is mined N of Lake Huron, and iron on the eastern shores of Lake Superior. In radical contrast to the almost primeval north country, Old Ontario is a district of well-established towns, busy with the affairs of commerce and industry Nine tenths of Ontario's population is centered here and here are the five great cities A moderate climate, abundant rainfall, and an enviable geographical position encourage a fine balance of agriculture and industry Orchards and tobacco plantations line the lake shores, and dairy and livestock herds thrive on inland pastures Industry is highly developed, producing iron and steel, automobiles, farm machinery, processed foods, and electrical supplies From the Great Lakes ports goods are exported to all parts of the world Of the power used, 97 percent is hydroelectric, and the publicly owned provincial hydroelectric commission, largest public utility in Canada, supplies cheap light and power To serve heavy transport needs, a fine system of highways and rail lines covers the southern peninsula, and two transcontinental railroads cross N and NW Ontario Canals connect the Great Lakes to provide passage up the St Lawrence into the Atlantic Ocean, and eight international bridges provide easy entry by motor to and from the United States Ontario's rich and diverse economy has placed it first in population and in gross and net value of production, it leads the provinces in manufacturing, agriculture, minerals, and furs The development of Ontario has taken place since 1763, when England gained control of Canada Long before that time Champlain had reached (1615) the eastern shores of Lake Huron, and French missionaries and explorers established posts and garrisons at strategic points In 1774 the area became part of Quebec prov , but with the influx in 1784 of United Empire Loyalists seeking refuge from the American Revolution, a wish for independent government developed When division was made in 1791, the land W of the Ottawa river was called Upper Canada Settlement was deterred by the War of 1812, and hostility toward the United States was heightened by the burning of the capital of York (now Toronto) After the war, English, Scottish, and Irish settlers increased the population to 350,000 by 1837 Some of the more radical settlers, led by William Lyon MACKENZIE, came into conflict with the old, aristocratic Family Compact group The mediating efforts of Robert Baldwin, advocate of responsible government, were of no avail, and the rebellion of 1837 ensued. The insurgents were soon repulsed, but a new form of government was tried in 1841 when the two Canadas were united, and Upper Canada became Canada West Conflict between French and English helped to make this system unworkable A solution was ultimately found in the confederation of 1867 (see CANADA), when Ontario became one of the provinces of the new dominion. With transcontinental railroad construction in the 1880s, settlement increased and industrial and commercial enterprises flourished. Mineral discoveries began in the Laurentian Plateau c.1900, and important new gold strikes were made in the 1930s In 1912 the province was enlarged by part of the Keewatin dist of the Northwest Territories. Production has risen steadily, reaching a new high in 1948 despite bad summer fires in the north and spring floods in

the south Politics in Ontario have fluctuated between the Liberal and Conservative parties, with occasional displays of strength from farm groups In general Old Ontario is a stronghold of conservatism and intense loyalty to the empire In the Second World War the dynamic Liberal Premier M F. Hepburn differed seriously with the war policies of Prime Minister William Lyon Mackenzie King Hepburn resigned in 1942, the following year the Liberal party in Ontario lost control to the Progressive Conservatives, with gains by the Co-operative Commonwealth Federation Because of its population and economic importance, Ontario's politics are an important factor in Canadian government Among the institutions of higher education are the Univ of Toronto, the Univ of Ottawa, McMaster Univ, Queen's Univ, and the Univ of Western Ontario See J E Middleton and Fred Landon, *The Province of Ontario a History, 1615–1927* (5 vols, 1927–28), E C Guillet, *Early Life in Upper Canada* (1933), A B Garvin, *This Is Canada* (1937, rev ed, 1946), Fred Landon, *Western Ontario and the American Frontier* (1941), G L Nute, *Voyageur's Highway* (1941), O T G Williamson, *Northland of Ontario* (1946)

Ontario. 1 City (1940 pop 14,197; 1946 special census pop 19,638), S Calif, E of Los Angeles, founded 1882, inc 1891 The city's products include packed fruits, olives, and wine Chaffey Junior College (coeducational) is here **2** City (pop 3,551), E Oregon, on the Malheur at its junction with the Snake, inc 1914 A railroad and highway focus, it is a farm shipping center in the Owyhee reclamation project Ontario is the gateway to the Oregon cattle country

Ontario, Lake, 193 mi long and 53 mi. at its greatest width, smallest and most easterly of the Great Lakes Lying 245 73 ft above sea level, it has a maximum depth of 778 ft and an area of 7,540 sq mi It lies between Ontario prov and New York state Lake Ontario is fed chiefly by the Niagara river, other tributaries are the Genesee, Oswego, and Black rivers in New York and the Trent river in Canada The lake empties at its northeast end into the St Lawrence river Much of the region near its shores is given over to agriculture The chief Canadian ports are Hamilton, Toronto, Cobourg, and Kingston On the south shore of the lake are Rochester and Oswego, N Y Lake Ontario is connected with Lake Erie by the Welland Ship Canal, with Georgian Bay of Lake Huron by the Trent river canal system, with Ottawa by the Rideau Canal from Kingston, and with the Hudson river by the New York State Barge Canal The lake was first seen by Étienne Brulé in 1615, that same year Samuel de Champlain visited it See Arthur Pound, *Lake Ontario* (1945)

ontology (ŏntŏ'lŭjē) [Gr, =discussion of being], branch of metaphysics which studies and theorizes on the ultimate nature of being The ontological argument for the existence of God has been advanced for centuries It originated with St. Anselm, who maintained that perfection, to be conceived, must exist Perfection is God, and since without existence God would be short of perfection, God must exist Descartes argued that if a finite mind can conceive the infinite, then God must exist to produce such an idea Spinoza accepted this reasoning, and Leibniz advanced the argument by stating that since there is no proof refuting the concept then the existence of God must be accepted as truth Hume and Kant rejected this argument by raising a distinction between thought and reality To Hegel, who regarded thought and reality as one, the argument was valid In general, the ontological position of a school of philosophy may be appraised in terms of materialism, idealism, or realism. Materialism holds that all being is ultimately matter, idealism maintains that mind and spirit are all-important, and realism asserts that no monistic formulation explains the ultimate nature of being

Ontonagon (ŏntŭnŏ'gŭn, -nă'gŭn), village (pop. 2,290), co seat of Ontonagon co, W Upper Peninsula, N Mich, on Lake Superior at the mouth of the Ontonagon river; inc 1885 Its chief products are lumber and paper The Ontonagon Boulder, a huge mass of copper found near the river, is now in the Smithsonian Institution.

onyx (ŏ'nĭks), variety of cryptocrystalline QUARTZ, differing from AGATE only in that the bands of which it is composed are parallel and regular Its appearance is most striking when the bands are of sharply contrasting colors, black and white specimens are much used for cameos. Onyx was used in Roman times for vases and cups SARDONYX contains onyx and carnelian or sard. The terms onyx marble, Mexican onyx, and Oriental alabaster are applied to travertine

oolite (ō'ulīt, ŏ'ō-), a LIMESTONE composed of small concretions of calcium carbonate, containing a nucleus and clearly defined concentric shells Oolitic limestone is characteristic of the middle and upper Jurassic of the British Isles, which was formerly termed the Oolite on this account

Oolitic (ōōlĭ'tĭk, ōlĭ'tĭk), town (pop. 1,186), SW Ind., near the East Fork of the White River NW of Bedford. It has limestone quarries.

Oost, Jacob van (yä'kŏp vän ōst'), the elder, 1601?–1671, Flemish portrait and religious painter, b. Bruges There, with the exception of several years in Rome, he spent most of his life A follower of Rubens, he was a vigorous and realistic painter There are various pictures by Van Oost in the churches of Bruges, *Resurrection* and *Descent from the Cross* are in the cathedral His works are also in most of the principal galleries The Metropolitan Museum has his *Portrait of a Man* His son and pupil, **Jacob van Oost,** the younger, c 1639–1713, settled in Lille, where he continued his father's tradition. Much of his work remains in the churches and museums of that city

Ootacamund (ōō'tukumŭnd'), town (pop 29,850), W Madras state, India In the Nilgiri Hills at an altitude of c 7,000 ft, it is a hot-weather resort

OPA: see OFFICE OF PRICE ADMINISTRATION

opal (ō'pul), gem characterized primarily by the remarkable play of changing colors (opalescence) which it displays The phenomenon of opalescence is the result of the interference of light waves at the surfaces of the layers of material of slightly different density of which the stone is built up The opal is not a crystalline body, but an amorphous mass of hydrous silica, which, in solidifying from a jellylike state, was penetrated by cracks, these later became filled with material differing in water content from the original material and hence of different density Opal has a vitreous luster and ranges from transparent to opaque The black opal is a dark gray or blue, but displays vivid flashes of color in changing lights, white opal is a lighter variety, harlequin opal displays areas of definite contrasting colors Colors of opal include yellow, red, green, blue, gray, and brown The fire opal is an orange-red variety Opals formerly came chiefly from Cervenica, near Kosice in Czechoslovakia Later Australia (e g, White Cliffs and Lightning Ridge, New South Wales, and Queensland) became the chief source Opals have also been found in Honduras and Nevada Fire opals formerly came from Zimapán and other parts of Mexico Other opals obtained in Mexico include the Mexican water opal

Opava, Czechoslovakia see TROPPAU

Opelika (ōpulī'ku), city (pop 8,487), co seat of Lee co, E Ala, ENE of Montgomery near the Chattahoochee, in a farm area, settled 1836, inc 1854 It has textile plants

Opelousas (ŏpulōō'sŭs), city (pop 8,980), parish seat of St Landry parish, S central La, W of Baton Rouge One of the oldest towns in the state, it was founded in 1765, incorporated in 1821, and made temporary state capital during the Civil War It is a busy shipping center for a rich cotton, rice, sugar, and farm area, but preserves some of the early French and Spanish flavor in its old buildings

Open Door, maintenance in a certain territory of equal commercial and industrial rights for the nationals of all countries As a specific policy, it was first advanced by the United States, but it was rooted in the typical MOST-FAVORED-NATION CLAUSE of the treaties concluded with China after the OPIUM WAR (1839–42) Although the Open Door is generally associated with China, it also received recognition at the Berlin Conference of 1885, which declared that no power could levy preferential duties in the Congo basin The United States had become a Far Eastern power through the acquisition of the Philippine Islands, and when the partition of China by the European powers and Japan seemed imminent, the American government strove to preserve equal industrial and commercial privileges. Secretary of State John Hay sent (1899) notes to the major powers, asking them to declare formally that they would uphold Chinese territorial and administrative integrity and would not interfere with vested rights or the free use of the treaty ports within their spheres of influence in China The unanimous acceptance of Hay's proposal made the Open Door an international policy After the BOXER REBELLION, Hay dispatched (1900) a similar circular note Two years later, the U S government protested that Russian encroachment in MANCHURIA was a violation of the Open Door When Japanese replaced Russian influence in S Manchuria after the Russo-Japanese War (1904–5) the Japanese and American governments pledged to maintain a policy of equality in Manchuria In finance, American efforts to preserve the Open Door led to the formation (1909) of an international banking consortium through which all Chinese railroad loans would be made. The United States withdrew in 1913, asserting that the consortium violated Chinese administrative integrity, but after the First World War, when Japan became more aggressive, the American government sponsored another consortium with which China refused to deal. A flagrant violation of the Open Door policy occurred in 1915, when Japan presented to China the TWENTY-ONE DEMANDS This incident led (1917) to another exchange of notes between the United States and Japan in which there were renewed assurances that the Open Door would be respected, but the United States recognized Japan's special interest in China. The Open Door principle had been further injured by a series of secret treaties (1917) between Japan and the Allies, which promised to Japan the German possessions in China. The increasing disregard of the Open Door was a main reason for the convocation of the Washington Conference (1921–22) As a result of the conference, the Nine-Power Treaty, guaranteeing the integrity and independence of China and reaffirming the Open Door principle, was signed by the United States, Great Britain, Japan, France, Italy, the Netherlands, Portugal, China, and Belgium With the Japanese seizure of Manchuria (1931) and the creation of Manchukuo, the Open Door received its greatest reverse After the Second World War, China's position as a completely sovereign state was recognized No nation, therefore, had the right or capacity to carve out spheres of influence or to attempt to exclude other states from trade, and the Open Door policy ceased to exist See G Z Wood, *The Genesis of the Open Door Policy in China* (1921), M J Bau, *The Open Door Doctrine in Relation to China* (1923), W W Willoughby, *Foreign Rights and Interests in China* (1927).

Opéra (ôpărä'), chief opera house of Paris, on the Place de l'Opéra, one of the main crossroads on the right bank of the Seine Designed by J L C GARNIER, it was built between 1863 and 1875 One of the largest and most sumptuous theaters in the world, it has less seating capacity than many lesser houses, because its huge stage and foyers and its famous grand staircase take up much of the room The Paris Opéra has been copied, on a lesser scale, by many opera houses throughout the world The home of grand opera in the 19th cent, it has retained its musical reputation as one of the world's foremost houses Its corps de ballet is particularly famous On the façade of the Opéra is the masterwork of the sculptor J B Carpeaux, *The Dance*

opera (ŏ'pru, ō'puru), drama set to music Although its antecedents date from the lyric theater of the ancient Greeks, true opera was a creation of the BAROQUE in Italy Late 16th-century Italian drama and its music were both highly developed, but the music was still essentially incidental The pastoral drama, as written by Tasso and Guarini, was ready to lend itself to musical setting, and opera only awaited the necessary musical development which came at the hands of the *camerata*, a group which came into being before 1580 at the home of a wealthy amateur in Florence and included the composers Vincenzo Galilei, Emilio del Cavaliere, Jacopo Peri, and Giulio Caccini They thought, in their principles of monodic musical declamation, to emulate the ancient Greeks, and the earliest operas took their plots from mythology Peri's *Dafne* (1597) is the first opera on record The first real master of opera, however, was the Mantuan MONTEVERDI Filippo Vitali's *Aretusa* (1620), a pastoral, was the first secular operatic work performed in Rome In 1632 in the Barberini Palace an opera theater was opened giving Stefano Landi's *Sant' Alessio,* and Roman opera was established In this work RECITATIVE and ARIA are distinct, the aria shows a clear sense of form and tonality, and the modern opera orchestra, with its emphasis on the violins and the *basso continuo,* emerges Giulio Rospighosi, later Pope Clement IX, the creator (in other works) of comic opera as a distinct style, was the librettist The first public opera house in the world was opened in Venice in 1637 Here were given the last two operas of Monteverdi and the works of his pupil Cavalli With the next generation of Venetian composers, headed by Marcantonio Cesti, an international style developed, and local schools disappeared The recitative diminished in musical interest at the expense of the aria, the chorus gave way to the virtuoso soloist, and the Renaissance interest in antiquities gave way to a trend toward comedy and parody Alessandro Stradella, a forerunner of the 18th-century Neapolitan school, represented this school Paris had seen Italian opera as early as 1657 The official existence of French opera began in 1669 with the establishment of the Académie royale de Musique, taken over by LULLY in 1673 after the bankruptcy of its founders Italian opera, the pastoral, French classical tragedy, and the *ballet de cour* (see BALLET) were the antecedents of French opera The operas of Rameau followed in the tradition established by Lully, but were less successful, coming in a period of decline and lacking the excellent librettist that Lully had had in Quinault The first English opera was D'Avenant's *Siege of Rhodes,* an isolated phenomenon The MASQUE was the true antecedent of English opera, and John Blow's masque *Venus and Adonis* (probably 1685) was actually an opera. The one great English opera of the period was *Dido and Aeneas,* by Henry Purcell, after whose death England succumbed completely to Italian opera In Germany, Italian opera was imported as a courtly show The moral or religious school play, in Latin or German, had instrumental dances, solo odes, and choral pieces, the number and importance of which were increased in the 17th cent., and its influence was seen in the earliest German opera Hamburg from 1678 to 1728 had a public opera

house, the first in Europe outside Venice Its outstanding composer was Reinhard Keiser (1674–1739), who influenced Handel *Pimpinone* (1725) by G P Telemann anticipated the Italian *opera buffa* of Pergolesi, but after the 1730s all German operatic activity ceased for lack of popular support, and imports from Italy again held sway Only France escaped the 18th-century domination of the Neapolitan school The librettists Apostolo Zeno and Pietro Metastasio set out to purge the opera of irrelevant comic episodes, bombast, and the elaborate mechanical contrivances which had become popular in the late 17th cent and created the dramatically unified, three-act *opera seria*, with subject matter from legend or classical history Alessandro Scarlatti represents the transition to the new style, although he never succumbed to the excesses of the composers who followed him, e g , Porpora, Hasse, and Graun The aria became the all-important element, nearly always an *aria da capo* and conforming to any of several well-defined types. The art of singing reached an unprecedented degree of virtuosity; the *castrato* (see EUNUCH), who had appeared first in Monteverdi's *Orfeo* (1607), was in his heyday, and the singer dominated the stage Few operas of this period survive The score was only a skeleton of what the singers actually performed, for they embellished their parts with elaborate improvised ornamentation Many operas after the initial performance became *pasticci*, and no two performances were ever alike The greatest operas of the early 18th cent , however, were those of HANDEL, whose early operas, produced in Germany, show influences of Agostino Steffani, an Italian active in Munich and Hanover in the late 17th cent , and of Keiser, while his later operas, produced in England, belong in many respects to the Neapolitan tradition. Among later 18th-century Neapolitan composers were Johann Christian Bach and Jommelli In Jommelli's works, the reforms of C W von GLUCK are foreshadowed. In the late 18th cent comic opera assumed great importance. The Italian *opera buffa* had as predecessors the COMMEDIA DELL' ARTE and the INTERMEZZO and was characterized by two-act form, lively humor, well-developed characterization, and ensemble finales. Pergolesi, Galuppi, Piccinni, Paisiello, and Cimarosa were among the composers *Opera buffa* had no spoken dialogue, in contrast to French *opéra comique*, English BALLAD OPERA, and the German Singspiel In fact, the term *opéra comique* came to be used in the 19th cent for any opera with spoken dialogue, although in its beginnings in the early 18th cent it was comic opera. J J. Rousseau, Gluck, Philidor, and Grétry were the principal composers The first Singspiel (1752) was a German version of *The Beggar's Opera*, made by C. F Weisse, whose later Singspiels, set to music by J. A Hiller, were influenced by the *opéra comique*. Their excellent songs partly account for their immense popularity In Vienna in 1778 there was opened a national Singspiel, where *Die Entführung aus dem Serail* of MOZART, a landmark in German opera, was given His *Zauberflöte*, while resting on the foundations of the Singspiel, was the point of departure for German romantic opera— for Beethoven's *Fidelio* and Weber's *Freischütz* The Viennese Singspiel showed the influence of *opera buffa*, in which style Mozart's greatest operas were written. Dittersdorf was the outstanding Singspiel composer, some elements of the Viennese Singspiel remain in the comic operas of G. A Lortzing (1801–51), some of whose works were in certain respects predecessors of Wagner's With the culmination of German romantic opera in WAGNER, German opera for the first time assumed a dominant position. Among trends in German opera after Wagner are the fairy-tale opera (Humperdinck), realism (Eugen d'Albert), and neoclassicism (Busoni). The outstanding operatic composer, however, was Richard Strauss, whose greatest operas represent a continuation of Wagner's technique. After the French Revolution spectacular and melodramatic operas, such as those of Cherubini and Lesueur, became popular in France, and there also developed a special type known as the rescue opera. One of these by J. N. Bouilly, set to music in 1798 and 1804, eventually provided the basis for Beethoven's *Fidelio* Italian opera of the early 19th cent. is represented by the noisy and exciting but trivial works of Rossini and Donizetti and the delicate and refined works of Bellini. It was a period when the gallery and the pit rather than the boxes set the standard. Paris had become the center of operatic activity, and the performance there of Auber's *La Muette de Portici* and *Masaniello* in 1828, Rossini's *William Tell* in 1829, Meyerbeer's *Robert le Diable* in 1831, and Halevy's *La Juive* in 1835 established the type known as grand opera, of which Meyerbeer's works, with librettos by Eugène Scribe, were the outstanding examples. Historical subjects with pointed reference to contemporary issues, religious elements, and violent passion were their characteristics, and their overwhelming success resulted from the real collaboration of management, librettist, composer, and designer and their sure gauge of the public's taste and capacities The influence of French grand opera was enormous, reaching even to the early works of Wagner and Verdi Berlioz's masterpiece, *Les Troyens*, while owing nothing to Meyerbeer, may also be considered grand opera. The *opéra comique* in the middle of the 19th cent. took two directions, leading on the one hand toward the OPERETTA and on the other toward a more serious, lyrical opera, of which Ambroise Thomas, Gounod, Bizet, Delibes, and Massenet were the chief composers Gounod's *Faust* and Bizet's *Carmen* actually had spoken dialogue in their original versions, but this qualification for works given at the Théâtre de l'Opéra-Comique was ultimately dropped The operas of D'Indy and Chausson show the influence of Wagner, while Charpentier's *Louise* is the sole representative of naturalism Perhaps the most complete realization of the ideals which had marked French opera from its beginning was Debussy's *Pelléas et Mélisande* In late 19th-century Italy, VERDI was the solitary figure during his period of activity and after the death of Wagner completely dominated the operatic scene After him the verism of Mascagni and Leoncavallo, the rich, exotic romanticism of Puccini and Montemezzi, and the comic opera of Wolf-Ferrari represented the significant trends Russian opera, beginning only in the 19th cent , presents the nonnational romanticism of Tchaikovsky, the nationalist operas of Glinka, Dargomijsky, Borodin, Mussorgsky, and Rimsky-Korsakov, and the Soviet operas of Prokofiev and Shostakovich Other national schools are represented by Smetana and Janacek in Czechoslovakia and Ethel Smyth, Holst, Vaughan Williams, and Benjamin Britten in England Significant trends in opera after the First World War are represented by the popular, timely, often satirical operas of Ernst Krenek, Kurt Weill, and Paul Hindemith, the neoclassical operas of Busoni, Stravinsky, Honegger, Milhaud, Hindemith (in his larger works), Malipiero, and Casella, and the atonal operas of Schönberg, Alban Berg, and Egon Wellesz American opera has been almost entirely imitative of European styles until the mid-20th cent., when Gershwin's *Porgy and Bess*, Marc Blitzstein's *The Cradle Will Rock*, and the operas of Menotti represent significant developments in true American opera See O G Sonneck, *Early Opera in America* (1915), R A. Streatfeild, *The Opera* (rev ed , 1925), Paul Bekker, *The Changing Opera* (Eng tr , 1935), Wallace Brockway and Herbert Weinstock, *The Opera* (1941), Alfred Loewenberg, *Annals of Opera, 1597–1940* (1943), D J. Grout, *A Short History of Opera* (1947), W J Crosten, *French Grand Opera* (1947), E J Dent, *Opera* (rev ed , 1949)

operetta (ŏpŭrĕ'tu), type of theatrical presentation with a light, frivolous, sentimental story, often employing parody and satire and containing both spoken dialogue and much light, pleasant music In the *opéras comiques* of Boieldieu, Auber, and Adolphe Adam, there was a growing tendency toward greater frivolity and sophistication, preparing the way for Offenbach, who during the Second Empire created the operetta The distinction between the operetta and the lighter examples of *opéra comique* which immediately preceded it is hard to draw, in general the *opéra comique* makes some appeal to the sentiments, while the French operetta attempts only to amuse The Viennese operetta, dating from c 1870, had not the excellent librettists that the French enjoyed, the operettas of Johann Strauss the younger suffered from this defect Those of Suppé owe much of their virtue to Offenbach's influence Less distinguished are the products of the early 20th cent., represented by the works of Franz Lehar and Oscar Straus. The immortal operettas of W S Gilbert and Sir Arthur Sullivan were to London of the 1880s what Offenbach's works had been to Paris 20 years earlier The first names of note in American operetta are Victor Herbert and Reginald de Koven. After the First World War the term *operetta* gradually gave way to *musical comedy*, the usual designation for the works of Rudolf Friml, Jerome Kern, Sigmund Romberg, Irving Berlin, George Gershwin, Richard Rodgers, and Cole Porter. See J. W. McSpadden, *Light Opera and Musical Comedy* (1936).

Ophel (ō'fŭl) [Heb ,=hill], hill in ancient Jerusalem. It was the dwelling place of Levites. 2 Chron 27.3, 33.14; Neh 11 21.

ophicleide (ŏf'tklīd) [Gr ,=serpent with keys], brass wind musical instrument of relatively wide conical bore, invented in 1817 by Jean Hilaire Asté of Paris. It had eight or nine keys at first, and later 11. Of full resonant tone, it was a kind of key BUGLE, later largely displaced in the orchestra by the bass tuba. Mendelssohn scored for it in his overture to *A Midsummer Night's Dream*.

Ophion (ōfī'un), in Greek mythology, Titan who, according to an obscure tradition, with his wife Eurynome ruled the world before the reign of Cronus.

Ophir (ō'fur), seaport or region, frequently mentioned in the Old Testament, from which the ships of Solomon brought fine gold in great quantity Sandalwood, precious stones, ivory, apes, and peacocks were also part of the triennial cargo. The location of Ophir is unknown; but it has been identified with India, Ceylon, the Malay Peninsula, Africa, and Arabia. Gen. 10 29; 1 Kings 9.28; 10.11; 22.48, 1 Chron. 1.23, 29.4; 2 Chron. 8.18; 9 10, Job 22 24, 28.16, Ps. 45 9, Isa. 13.12.

Ophites (ō'fīts) [Gr.,=believers in the serpent], group of Gnostic sects notorious for immorality and extreme cultism, usually centering about the worship of the serpent. All that is known of Ophitism has been gleaned from St. Irenaeus, Origen, and other writers opposed to GNOSTICISM. The Ophites carried to extremes the teaching of MARCION that an essential hostility exists between the God of the Old Testament and the God of the New. The Ophites concluded that the Old Testament villains were actually heroes and revered Cain, the Sodomites, and the Egyptians Especially to be worshiped was the serpent, as the creature in Eden that tried to give Adam and Eve the knowledge withheld from them by Jehovah Much of the serpent worship and the occult ritual was probably derived from primitive paganism The Ophites admitted a Savior, but rejected Jesus One Ophitic hymn, the *Hymn of the Naassenes*, survives. See Ernesto Buonaiuti, *Gnostic Fragments* (1924).

Ophni (ŏf'nī), unlocated town, E central Palestine, allotted to Benjamin. Joshua 18 24

Ophrah (ŏf'rŭ) [Heb.,=she-fawn] **1** Judahite. 1 Chron 4 14 **2** Unidentified Benjamite town, central Palestine Joshua 18 23, 1 Sam 13 17 **3** Home town of Gideon, not identified Judges 6.11,24; 8 27,32, 9 5.

Opie, Amelia Alderson, 1769–1853, English author, wife of John Opie, the painter, whom she married in 1798. Her novels, among which were *Father and Daughter* (1801), *Adeline Mowbray* (1804), and *Temper* (1812), were realistic for her period. Some of her poetry was translated into Dutch After she joined (1825) the Society of Friends she ceased to write See biography by M E Macgregor (1933), Jacobine Menzies-Wilson and Helen Lloyd, *Amelia: the Tale of a Plain Friend* (1937)

Opie, John, 1761–1807, English portrait and historical painter Under the patronage of John Wolcot (Peter Pindar) he settled in London (1780), where he was known as the Cornish Wonder and enjoyed a brief popularity as a fashionable portrait painter in the Reynolds tradition When his vogue waned, he turned to historical painting He became a professor at the Royal Academy of Arts in 1805. His *Murder of Rizzio* (Guildhall, London) and his portraits of William Siddons and Mary Wollstonecraft Godwin (National Gall , London) are well known He is also represented in the National Portrait Gallery, London, and in the Metropolitan Museum He wrote the biography of Reynolds in the 1798 edition of Pilkington's *Dictionary of Painters*, and his academy lectures were published shortly after his death

Opimius, Lucius (lōō'shus ōp'ĭmŭs), 2d cent. B.C , Roman statesman As consul in 121 B.C , he was a leader in the reaction against the reforms of Caius Gracchus and was largely responsible for the death of that leader and more than 3,000 citizens He was acquitted of the charge of putting Roman citizens to death without trial He was, however, convicted (110 B C) of accepting bribes from JUGURTHA

Opitz, Martin (mär'tēn ō'pĭts), 1597–1639, German poet, critic, and metrical reformer. He studied at Heidelberg for a short time, when the plague drove him back to his native Silesia He went to Vienna and won the patronage of Emperor Ferdinand II, who ennobled him as Opitz von Boberfeld. Opitz had a series of patrons, for one of whom he wrote against the Reformation in *Lob des Krieges-Gottes* [praise for God's war] Later he wrote in favor of Protestantism in *Trost Gedichte zu Widerwertigkeit des Krieges* [comforting poems in the unpleasantness of war] (1633). He lived in Danzig under the patronage of Ladislaus IV of Poland and died there of plague. His own poetry was not great, but his translations and his writings on poetry, especially the *Buch von der deutschen Poeterey* [book on German poetry] (1624), had a wide influence

opium (ō'pēum), reddish to yellow-brown solid substance with a characteristic odor and a bitter taste, being the dried juice extracted from the unripe capsules of the opium poppy (*Papaver somniferum*). It contains a number of alkaloids of which the most important are MORPHINE, CODEINE, and papaverine Other substances such as meconic acid, other organic acids, resinous matter, and gum constitute the greater part of the dried exudation. A tincture of opium is called laudanum. Opium was known to medicine from early times, taken to India by the Moslems, it spread to China. Addiction, developed through smoking or consuming the drug, leads to mental and physical deterioration. Its widespread use in China, Japan, India, and some other parts of Asia has long been a serious problem Legislation has from time to time curbed the illegal sale of opium, but has failed to deal successfully with the opium traffic.

Opium War, 1839–42, struggle between Great Britain and China. Great Britain, seeking to end the restrictions imposed by China on foreign trade, found a pretext for action when in 1839 China prohibited the importing of opium. Opium belonging

to British merchants was destroyed at Canton, and the British responded by attacking several coastal cities. China, unable to resist modern arms, was easily defeated. The Treaty of Nanking (1842) provided that the ports of Canton, Amoy, Foochow, Ninghsien, and Shanghai should be open to British trade and residence; Hong Kong was ceded. Within a few years other Western powers received commercial and residential privileges and the foreign "occupation" of China began. See Maurice Collis, *Foreign Mud* (1947)

Opland (ôp'län"), county (9,775 sq. mi., pop 154,734), central Norway Lillehammer, the county seat, and Gjovik are the chief towns. Opland, entirely inland, is traversed from northwest to southeast by the GUDBRANDSDAL The northern section is very mountainous and contains the JOTUNHEIM and the DOVREFJELL Agriculture and lumbering are the chief occupations.

Opole, Upper Silesia see OPPELN.

Oporto (ûpôr'tô, ô-), Port. *Pôrto* (pôr'tô), city (pop 262,309), NW Portugal, near the mouth of the Douro river in Douro Litoral prov It is the second city of Portugal (Lisbon is the largest) and an important Atlantic port with a harbor at Leixões because vessels of great draught cannot enter the river. Its most famous export is port wine, to which the city gives its name, but it also handles cork, fruits, onions, and various other items in large quantity. Cotton, silk, and wool textiles are milled, clothing and leather goods are made, and there are minor manufactures A very old settlement, Oporto is said to have been founded (c 138 B C) by the conqueror of Lusitania, Junius Decimus Brutus As Cale and later Portus Cale, it was an important port In the early days of the Christian reconquest, Alfonso I of the Asturias first took Oporto from the Moors, and the region was depopulated in the succeeding centuries of war HENRY OF BURGUNDY secured the title duke of Portucalense in the 11th cent, and thus Oporto gave its name to the state which became a kingdom It was for some time the chief city (but not the capital) of little Portugal The bishops of Oporto had complete possession of the town despite the attempts of the kings to get it until after the Cortes of Leiria (1254) The shipment of wine grew in the 17th cent and was increased after the Methuen Treaty of 1703 The creation by Pombal of a wine monopoly brought the "tipplers' revolt" (1757), which was put down with great severity After the French conquest of Portugal, Oporto was the first city to revolt (1808) in the Peninsular War It was retaken by the French but liberated (1809) by Wellington In 1832, in the Miguelist Wars, Dom Pedro I of Brazil here long withstood a siege by his brother, Dom Miguel. Oporto was later a leader in republican thought, and in 1891 an abortive republican government was set up here

opossum (pō'sŭm, upō'sum), MARSUPIAL of South America and the United States, the only marsupial found outside of Australia The Virginia opossum of the United States resembles a large rat in general appearance, having a white face, long, disordered grayish fur, in which white-tipped and black-tipped hairs mingle, and a nearly naked prehensile tail It is nocturnal and largely arboreal, it eats fruits and other vegetable matter but seems to prefer animal food, eating small mammals, reptiles, frogs, birds, eggs, and insects It is also destructive to domestic poultry and corn and is hunted in the South as a pest, as well as for food and sport Its habit of feigning death—"playing 'possum"—is well known The Virginia opossum is equipped with the typical marsupial abdominal pouch, though this is lacking in some of the South American species.

Opp, city (pop 3,178), S Ala., near the Fla line, in a pine and farm area, inc. 1902

Oppeln (ô'pŭln) or **Opole** (ôpô'lĕ), city (1939 pop 52,977, 1946 pop, 27,666), Upper Silesia, on the Oder It was transferred in 1945 to Polish administration. Long an important trade center, Oppeln was the seat (1163–1532) of the dukes of Oppeln, of the PIAST dynasty. The duchy passed (1532) to the house of Austria and (1742) to Prussia The churches of St Adalbert and of the Holy Cross date, respectively, from the 10th and the 14th cent

Oppenheimer, J. Robert (ô'pŭnhī"mûr), 1904–, American physicist, b New York city, grad Harvard (B A., 1925), Ph D. Univ of Göttingen, 1927 He taught at the Univ of California and the California Institute of Technology from 1929 (as professor from 1933) until his appointment in 1947 as director of the Institute for Advanced Study at Princeton, N.J. As director of the atomic-energy research project at Los Alamos, N. Mex , from 1942 to 1945, he made important contributions to the development of atomic energy for military purposes. After the atomic bomb was used against Japan, Oppenheimer became one of the foremost proponents of civilian and international control of atomic energy; he was appointed chairman of the general advisory committee of the U S. Atomic Energy Commission and consultant to the American delegate to the United Nations Atomic Energy Committee.

Opper, Frederick Burr, 1857–1937, American cartoonist and illustrator, b. Madison, Ohio. He began as a contributor to comic papers and was associated with Frank Leslie's publications for three years, with *Puck* for 18 years, and with the New York *Journal* His work is characterized by extreme simplicity, vigor, and humor He illustrated the works of Mark Twain, Bill Nye, Eugene Field, and Finley P Dunne and wrote and illustrated *Happy Hooligan* (1902), *Our Antediluvian Ancestors* (1902), *Alphonse and Gaston* (1902), and *John Bull* (1903)

Oppian (ô'pēŭn), fl 2d cent , Greek poet, author of a didactic poem (in five books of hexameters) on fishing called *Halieutica*. Its style is careful but artificial Two other poems, formerly attributed to Oppian, are believed to be by other hands—*Cynegetica* (on hunting), perhaps by another poet named Oppian, and *Ixeutica* (on bird-catching).

opportunity school. see ILLITERACY

Ops (ŏps), in Roman religion, goddess of fertility. She was the wife of Saturn and the mother of Jupiter As the goddess of sowing and reaping she was called Consiva and was associated with Consus, the harvest god She had special festivals in December and August, but she was also honored in the Saturnalia Later, she was identified with the Greek Rhea

optative. see MOOD

Optic, Oliver: see ADAMS, WILLIAM TAYLOR

optics, branch of physics dealing with the study of LIGHT Physical optics is concerned with the nature and properties of light, physiological optics with the part light plays in VISION, and geometrical optics with the geometry involved in the REFLECTION and REFRACTION of light as encountered in the study of the MIRROR and the LENS

optimism (ŏp'tumĭzm) [Latin *optimus*=best], belief that the universe as it exists is the best possible world and that life in it is worth while The arguments for optimism are often based upon religious or theological foundations If God is all-wise and all-good, then the world which he created must likewise be good This is essentially the argument of St Thomas Aquinas and his followers who used the judgment, "This is the best of all possible worlds" In the Renaissance, Giordano Bruno voiced a feeling of world-joy, a "universalistic optimism" Leibniz was a thoroughgoing optimist, convinced of the wisdom and goodness of God At the beginning of the 18th cent Shaftesbury found in the beauty and harmony of the universe reason for enthusiasm of thought and living The optimism of Rousseau was founded on his belief that man was God-descended The term *meliorist* indicates the middle path between optimism and its opposite pessimism The meliorist views the world as not perfect, but believes that improvement is possible and that action should be directed to that end William James and Henri Bergson are examples of this position Pessimism holds that evil is a dominant and necessary characteristic of the world Schopenhauer maintained that all reality is fundamentally evil and that "optimism is a bitter mockery of men's woes" In *Candide* Voltaire espoused pessimism in reaction to the unbounded optimism of Leibniz In the eyes of some the Oriental religions show the extreme of pessimism in the concept of Nirvana

optometry, science of detecting and correcting, usually by means of lenses, certain nonpathological ocular defects In a limited sense, it is concerned with prescribing spectacles for clearer vision The term has been extended to include comfort of vision as well The word *optometry* came into use in 1903, with the organization of the American Optometric Association This period also was the turning point of the profession Up to the 1900s there were no regulations for this work, people bought spectacles from traveling opticians who toured the country selling their wares With the passage of optometry laws this method of selling glasses was prohibited, Minnesota enacted the first such law in 1901, and the other states followed shortly thereafter Definite educational requirements resulted from these laws, training is given in a number of private professional schools and in some universities Before obtaining a license to practice, state board examinations must be passed Among important recent developments are the production of contact lenses (see SPECTACLES) and of telescopic spectacles (a tremendous aid to the near-blind) Orthoptics has received considerable attention in recent years, the aims of orthoptics include the improvement of the coordination of eye muscles and the straightening of crossed eyes

Opuntian Locris. see LOCRIS.

opus (ô'pŭs) [Latin, =work], in music, a term used in cataloguing a composer's works, designating either a single composition or a group published together or for some other reason considered a unit When composers assign opus numbers to their works as they are completed, the numbers are of greater value than when they are assigned by the publisher to indicate order of publication. Sometimes a composition, e g., Beethoven's Sonata in C, Opus 2, No 3, like most of his instrumental works, has no other means of identification Beethoven was the first composer whose use of opus numbers was consistent enough to be of value.

oracle (ô'rŭkŭl, ŏ'-), in Greek religion, a response given by a god to a human question The word is used commonly to refer to the institution itself It was customary for the Greeks to ask advice of an oracle on many occasions Oracles differ from omens in that by the oracle the god actually spoke to the worshiper, but the omen was simply a natural phenomenon foretelling the way events would fall Omens and oracles are probably of common origin Oracles were fixed in a locality, and each represented a god, e g , Zeus at DODONA, Amon (identified with Zeus) at SIWA, and Apollo at DELPHI and CUMAE There were also oracles of heroes (e.g., Asclepius, Hercules, and Amphiaraus) The dead were also invoked The great oracles had priests or priestesses attached who interpreted the utterances Some of these oracles were uttered by persons entranced, some by the rustling of leaves, and some oracles came in dreams to persons lying on the ground. Even in the height of the popularity of oracles (6th and 5th cent B C.) it was tacitly understood by Greeks that the priests interpreted oracles according to their interests But their interests were never toward political power, and they retained great respect always The Delphic oracle, by far the most influential, was chiefly interested in preserving piety and in extending Greek colonies Herodotus is very fond of giving oracular utterances A very famous example is the Delphic oracle telling CROESUS that if he began war he would destroy a great country. He went to war and destroyed his own

Oradea (ôrä'dyä) or **Oradea-Mare** (-mä'rĕ), Ger *Grosswardein* (grōs"vardĭn'), Hung *Nagyvárad* (nŏj'vä"rŏd), city (pop 82,282), W Rumania, in Crisana-Maramures, on the Rapid Koros river and near the Hungarian border The commercial center of a grape-growing area, it also has various manufactures Oradea has been an episcopal see since the 11th cent It was ceded by Hungary to Rumania after the First World War, but the population is about half Magyar Most of the architecture of the city is baroque, dating from the reign of Maria Theresa

Oradell (ô'rudĕl), borough (pop 2,802), NE N J , N of Hackensack, settled by Dutch before the Revolution, inc 1894

Oraefajokull, Icelandic *Örœfajökull* (ô'rĭvāyŏ" kĭtŭl), mountain, 6,950 ft high, Iceland, rising from the VATNAJOKULL ice field near the southeast coast, highest mountain of Iceland. It is an ice-covered, three-peaked volcano which has had four recorded eruptions, eight glaciers descend its slopes

Oraibi (ôrī'bē), North American Indian pueblo, c 100 mi N of Winslow, Ariz , on the western or "third mesa" It was built A D c 1150, and it was discovered by Pedro de Tovar, a lieutenant of Coronado, in 1540 The mission of San Francisco was established (1629) here, but it was destroyed in the Pueblo revolt of 1680 Oraibi was long the most important pueblo of the HOPI INDIANS, but because of economic disturbances and internal dissension (many of the more conservative Indians left Oraibi to form the pueblo of Hotavila), it is little more than a ruin See Walter Hough, *The Hopi Indians* (1915)

Oran (ôrän', ôrän', Fr ôrä'), city (pop 244,594), N Algeria, a port on the Mediterranean Sea It was founded in the 10th cent by Moorish Andalusian traders It was held by Spain (1509-1708, 1732–91), by the Turks (1708–32), and by Spain again (until 1791) France occupied the city in 1831 There is an old quarter with a casbah and an 18th-century mosque The new quarter is reminiscent of French towns The rise of Oran dates from the late 19th cent, when the port facilities (here and in adjacent Mers-el-Kebir) were expanded and rail communications were opened Wine, alcohol, wheat, meat, and wool are exported Oran and Mers-el-Kebir together are the chief French naval base in North Africa In the naval engagement off Oran in the Second World War (July 3, 1940) most of the French fleet at anchor was destroyed by British warships after an ultimatum was rejected Early in Nov , 1942, Oran fell to the forces landed under the command of Gen Dwight D Eisenhower

Oran (ô'run), city (pop 1,106), SE Mo , near the Mississippi WNW of Cairo, Ill , platted 1869
