horsetail, any plant of the genus *Equisetum*, related to the ferns and club mosses The early geologic predecessors of horsetails were often large and tree-like and contributed to coal deposits Horsetails of today somewhat resemble rushes and have jointed aerial stems, usually hollow, and small scaly leaves The fertile shoots have conelike structures at the top which bear the spores The field horsetail and others produce also sterile shoots with whorls of narrow branches There is an alternation of generations in horsetails somewhat similar to that of the fern Coarse textured from the presence of silica, the shoots were formerly utilized for scouring purposes, whence the name scouring rush Many, if not all, of the horsetails are poisonous to horses

Horsham (hôr'shum), urban district (1931 pop 13,580, 1943 estimated pop 14,700), Sussex West, England, near the source of the Arun It is a market town The Causeway, an old cobbled street, has early Tudor, Elizabethan, and Stuart houses "Field Place," birthplace of Shelley, is near Horsham has engineering works and makes shoes and farm machinery Christ's Hospital at West Horsham was transferred from London in 1902

Horsley, Samuel, 1733–1806, English prelate, noted as scientist and controversialist He became bishop of St Davids in 1788, of Rochester in 1793, and of St Asaph in 1802 Science was the field in which he first was widely known In 1767 he was elected fellow of the Royal Society, of which he was for many years a secretary Horsley completed an edition of Sir Isaac Newton's works in 1785, but he is particularly remembered for the controversy (c 1783–1790) with Joseph Priestley concerning the doctrine of Christ's incarnation His books include mathematical and theological works See biography by H Horsley Jebb (1909)

Horsley, Sir Victor Alexander Haden, 1857–1916, English surgeon and neurologist A specialist in the surgery of the ductless glands and the nervous system, he devised a noted operation for spinal-cord tumor He wrote *Functions of the Marginal Convolutions* (1884) and, with others, *Experiments upon the Functions of the Cerebral Cortex* (1888) and *Alcohol and the Human Body* (1907) See studies by Stephen Paget (1919) and C J Bond (1939).

Horta (hôr'tŭ, Port ôr'tu), city (pop. 7,534), on Fayal island, one of the AZORES It is the capital of one of the three districts of the islands (Horta dist, named for the city)

Horten (hôr'tun), city (pop 10,964), Vestfold co, SE Norway, a port on the west side of the Oslo Fjord It is the main Norwegian naval base

Hortensius, Quintus (kwĭn'tus hôrtĕn'shus), 114 B C –50 B C, Roman orator. An aristocrat himself, he was the favorite lawyer of his party and made his name as defense counsel in the bribery and peculation trials so frequent in Rome Such a trial was that of Caius VERRES, whom Cicero, his friendly enemy, successfully prosecuted. Hortensius was a master of the Asiatic style of oratory. None of his speeches survives.

Horthy de Nagybanya, Nicholas (hôr'tĭ dŭ nŏ'dyubä"nyŏ, Hung *Nagybányai Horthy Miklós* (mĭ'klōsh), 1868–, Hungarian admiral and statesman. He commanded the Austro-Hungarian fleet in the First World War After Bela KUN seized (1919) power in Hungary, the counterrevolutionist government put Horthy in command of its forces When the Rumanian forces that had defeated Kun evacuated Budapest (Nov, 1919), Horthy entered it and in 1920 was made regent and head of the state He checked two attempts (March and Oct, 1921) of Emperor CHARLES I to regain his throne in Hungary—once by persuasion and once by armed force Charles was then formally barred from the throne, and Horthy found himself regent of a kingless kingdom A nationalist and distinctly inclined toward the right, he guided Hungary through the years between the two world wars, but left the actual management of government to his premiers, notably Stephen BETHLEN and Julius GOMBOS His influence diminished after the death (1936) of Gombos The succeeding premiers, Koloman Daranyi (1936–38), Bela Imredy (1938–39), and Paul TELEKI (1939–41), brought Hungary into the AXIS, and after Teleki's suicide Hungary entered the Second World War Despite Horthy's opposition, German troops occupied Hungary in March, 1944 When Russian troops entered Hungary, Horthy sent an armistice commission to Moscow and announced (Oct, 1944) the surrender of Hungary The Germans immediately forced Horthy to countermand his order and to resign He fled to Bavaria, where he was captured (1945) by American troops Released several months later, he retired to a country house near Munich

horticulture (hôr'tĭkŭl"chur) [Latin *hortus*=garden], cultivation of plants for ornament and use, a branch of agriculture which includes flower, fruit, and vegetable growing and landscape gardening It is an ancient art known to prehistoric peoples and to Eastern and Western civilizations Formal gardening developed first in the irrigated regions of the Orient, as in Egypt, where land was planted in regular patterns to make the most of artificially distributed water Horticulture in Western Europe received a great impetus when the Crusaders returned with ideas gathered from Eastern gardens The wonderful gardens of China, where the art is very old, have furnished inspiration and new plants to Western gardeners for several centuries In the New World, gardening was practiced on a magnificent scale by the ancient Indians (as in Mexico), who had tropical herb, rose, rock, and other special gardens long before the arrival of the white man With the increase in the varieties of cultivated plants, with improvements in tools, with the introduction of the ESPALIER and the GREENHOUSE, and with the extension of commercial flower growing and MARKET GARDENING, horticulture has become a very complex science, and the GARDEN has developed such specialized forms as the ROCK GARDEN, the window garden and aquatic and cactus gardens Knowledge of good horticultural practices is disseminated in the United States by various bureaus of the U S Dept of Agriculture, by the state experiment stations, by agricultural and other colleges, and by many organizations, e g, the American Horticultural Society, the Horticultural Society of New York, the Massachusetts Horticultural Society, the California Horticultural Society, and the Colorado Forestry and Horticultural Association See E S Rohde, *Story of the Garden* (1933), Richardson Wright, *Story of Gardening* (1938), James Bush-Brown and Louise Bush-Brown, *America's Garden Book* (1939), Montague Free, *Gardening* (1947), Woman's Home Companion, *Garden Book* (1947), *Taylor's Encyclopedia of Gardening, Horticulture, and Landscape Design* (1948)

Horton, city (pop 2,872), NE Kansas, NNE of Topeka, founded 1886, inc 1887 It has railway workshops and is in an area growing corn and apples

Horton, river in the Mackenzie dist, Northwest Territories, rising N of Great Bear Lake, flowing northwest for 275 mi, and emptying into Franklin Bay of the Beaufort Sea

Horus (hô'rus), son-god, one of the great gods of EGYPTIAN RELIGION He was frequently identified with Amon and Ra or Re One of the most popular of Egyptian myths was that of the vengeance wrought by Horus (with the help of his mother, Isis, and the god Thoth) for the death of his father, OSIRIS. Especially in Rome he was also worshiped as HARPOCRATES

Horyu-ji see NARA.

Hosack, David (hŏ'suk), 1769–1835, American physician, b. New York city, grad Princeton, 1789, studied medicine under Samuel Bard and medicine and botany at Edinburgh He established, where Rockefeller Center now stands, the famous Elgin Botanical Garden, he was professor at Columbia Univ and on the first faculty of the College of Physicians and Surgeons and was a founder of Bellevue Hospital He attended Hamilton after the duel with Burr In 1826, with Valentine MOTT and others, he helped found Rutgers Medical College (no longer in existence) and was its first president He wrote on medicine and botany and also memoirs of Caspar Wistar and DeWitt Clinton.

Hosah (hō′sä) [Heb., =refuge]. **1** Temple doorkeeper 1 Chron 16 38, 26 10,11,16 **2** Unidentified city of Asher Joshua 19 29.

Hosanna (hōzăn′u) [perhaps Heb , =save now, cf Ps 118 25,26], reverent ejaculation, shouted by the crowd on Jesus' entrance to Jerusalem on Palm Sunday Mat 21 9,15, Mark 11 9,10, John 12 13 It is used in Christian worship, e g , in the SANCTUS

hose, covering for the legs and feet In early English usage it was a legging reaching the ankle or sometimes also covering the feet like a stocking In N Europe it developed from loose trousers into trunk hose covering both thighs and hips, and by the 14th cent tights had superseded unshaped garments The word *stocking* did not appear until the 15th cent when KNITTING became general Knitted hose were known in Scotland (1550) and from there were introduced into France, where Henry II is said to have worn (1559) the first silk hose Henry VIII of England had knitted Spanish hose, and Queen Elizabeth wore English-knitted hose Frame knitting began in England c 1589 Modern hosiery is generally full-fashioned or circular-knit The full-fashioned stocking, knit on a flat-bed machine, is started on a legger, transferred to a footer, then seamed Stitches are dropped to shape the leg and foot, the decreases indicated by fashion marks The number of needles used for 1½ in of stocking width indicates the gauge or fineness of construction Round-needle bed, circular-knit machines are generally used for men's and children's hose and for some of the cheaper grades for women These tubular hose may imitate the full-fashioned with mock fashion marks and seams Hosiery is commonly piece dyed Yarn-dyed hose are known as ingrain Although cotton, wool, silk, and rayon are used, nylon, because of its strength and elasticity, has become the leading hosiery fiber Since nylon can be preset to the desired shape by heat, circular-knit hosiery is increasing in quality and popularity

Hosea (hōzē′u) [Heb , =salvation] or **Osee** (ōsē′), book of the Old Testament, first of the books of the Minor Prophets It is the prophetic career and sermons of a prophet of the second half of the 8th cent B C , his subject being the sins of the northern kingdom of Israel The work opens with the prophet commanded to marry a harlot and an adulteress to show forth God's union with Israel (1-3), then come sermons against the apostasy and moral decadence of the people (4-9 9), finally, the promise that after punishment will come redemption (9 10-17, 11 0-14) For bibliography, see OLD TESTAMENT

Hoseyn · see HUSLIN

Hoshaiah (hō′shāī′u) **1** A leader at the dedication of the wall Neh 12 32 **2** Father of JAAZANIAH **3**

Hoshama (hō′shumu, hōshā′–), one of the house of David 1 Chron 3 18

Hoshea (hōshē′ū) [Heb , =HOSEA] **1** See JOSHUA **2** Died after 722 B C , last king of Israel (c 730–722 B C) He succeeded Pekah, whom he murdered He was a tributary of Assyria, but made the fatal mistake of aligning himself with an Egyptian cabal against his overlord (c 728 B C), who overran Israel and, after a long siege, took Samaria (722 B C) This was the end of the northern kingdom 2 Kings 15 30,17 **3** Ruler of Ephraim 1 Chron 27 20 **4** One who sealed the covenant Neh 10 23

Hosius (hō′shēus), c 255 c 358, bishop of Córdoba in Spain, Catholic leader against ARIANISM He is said to have died at the age of 102 See NICAEA, FIRST COUNCIL OF

Hosmer, Harriet Goodhue (hŏz′mur), 1830–1908, American sculptor, b Watertown, Mass She lived chiefly in Rome, where she produced graceful statues very popular in her day Of her spirited *Puck* 30 copies were made Other works are *The Sleeping Faun*, *The Waking Faun*, and *Beatrice Cenci* (St Louis Mercantile Library), *Zenobia* (Metropolitan Mus), and a statue of Thomas H Benton (St Louis)

hospital, institution for the care of the sick which is maintained through public funds, is privately endowed, or is supported by both public and private funds Some hospitals are devoted to specialized services, e g , maternity cases, contagious diseases, neurological and psychiatric cases, or cancer and allied diseases A number are affiliated with schools of medicine and dentistry, with nurses' training schools, and often with sanitariums and homes for convalescence The hospital offers ambulance service and clinics or dispensaries in which patients of low-income groups receive medical aid with little or no charge In addition to a department of administration, hospitals include a medical staff of internes, resident physicians, and attending physicians; a nursing staff, dieticians, laboratory technicians in bacteriology, cardiology, chemistry, and pathology, an X-ray department for diagnostic and therapeutic purposes, and frequently social workers The great advantage of a hospital to the individual and to the community as a whole is derived from the accessibility of the multiple services which can be rendered there See also NURSING

Hospitalers: see KNIGHTS HOSPITALERS

Host [Latin, =sacrificial victim], in Roman Catholic practice, consecrated wafer of the EUCHARIST. The bread used is pure white and unleavened, baked in small disks The Hosts not consumed at Mass are set aside especially for the viaticum, for the sick, and for adoration, as at BENEDICTION They are kept in a tabernacle on an altar, a light, commonly called a sanctuary lamp, burns near by

hostage (hŏ′stĭj), person delivered by a constituted authority to another authority in token of good faith, so as to guarantee the execution of a treaty or to vouchsafe the loyalty of a city or country Hostages might also be exchanged by the contracting parties A hostage—usually a person of consequence—was to be treated according to his rank and as an honored guest, but he might be imprisoned or even executed if the agreement guaranteed by his person were broken The execution of hostages, however, has always been considered an extreme measure In feudal times the behavior and treatment of hostages was subject to a strict code of honor Thus, when the hostages that took the place of King John II of France as prisoners in England escaped, King John felt bound in honor to return to captivity in England The practice of exchanging hostages when concluding treaties was abandoned in the 18th cent A rather different but equally ancient practice is that of seizing civilians in an occupied country in order to insure the delivery of requisitions, to discourage hostile acts, or to take reprisals for hostile acts committed by unknown persons This has been done in almost every war and is countenanced by international custom so long as hostages are not cruelly treated or made to pay for crimes committed by others In the Second World War, uncounted thousands of hostages were executed throughout Europe by the German authorities, who thus vainly hoped to crush resistance movements or to induce the fellow citizens of the hostages to give information concerning the resistance fighters There was, of course, no justification for such measures in international law, and persons responsible for the massacre of hostages have since been sentenced as war criminals In civil wars, the practice of holding hostages is particularly frequent An illustrious victim of the practice was Georges Darboy, archbishop of Paris, executed during the uprising of the Commune of Paris in 1871

Hostos, Eugenio María de (ōōhē′nyō märē′ä dā ō′stōs), 1839–1903, Latin American philosopher, sociologist, writer, and political and educational reformer, b Puerto Rico, educated in Spain He advocated a federation of the Antilles, including Puerto Rico, Cuba, and the Dominican Republic, and devoted his life to seeking the political independence of Cuba and Puerto Rico In Santo Domingo (1879–88), he founded the first normal school and introduced advanced teaching methods As professor in the Univ of Chile, he was instrumental in having women admitted He is widely known throughout Latin America as a publicist of civic reforms, as a rationalist in ethics who believed that "to be civilized and to be moral is the same thing," and as a writer of sober, graceful, and didactic prose He wrote some 50 volumes, among which are *La peregrinación de Bayoán* (1863), a political novel, *Moral social* (1888), *Lecciones de derecho constitucional* (1887), and a superb essay, *Hamlet* (1874)

hotbed, low, glass-covered frame structure for growing plants in soil heated by stable manure, steam, hot air or water, or electricity The sides are of boards, brick, or cement, and the top may be covered with straw or burlap mats or shutters to regulate light and temperature Ventilation is an important consideration The hotbed, which is very like a COLD FRAME except for the heated soil, is used for starting early such plants as cabbage, lettuce, and annual flowers for transplanting later or for growing vegetables and flowers out of season

Hotchkiss, Benjamin Berkeley, 1826–85, American inventor, b Watertown, Conn Of his many inventions the two best known are his revolving-barrel machine gun (patented 1872), manufactured for the French army by his Paris arms factory, and his magazine rifle (design completed 1875) The rifle was long used by U S , British, and French armed forces

hotel [Fr , from O Fr (original of Eng *hostel*), from Latin (original of Eng *hospital*), =guest place], name applied since the late 17th cent to an establishment supplying both food and lodging to the public (see INN) In common law of England and America, the hotelkeeper is a public servant and must receive all proper persons The first American hotels, successors to the early inns, differed from their European prototypes by charging a fixed fee for food and lodging (American plan) For many years $1 00 per day was the accepted price Faunces Tavern (1762) and the City Hotel (1794) were fashionable resorts of early New York The Tremont House, in Boston (1829), for years considered the most imposing hotel in the United States, was rivaled by the Astor, built in New York in 1836 The St Charles, New Orleans (1836), was noted for its Corinthian portico The modern hotel in America dates from the early days of railroad travel, when the modest hostelry, prepared to entertain small groups of occasional guests, was forced to become a more commodious and efficient institution to accommodate the great number of traveling salesmen Technical progress in the late 19th cent permitted the construction of large, fireproof hotels Newer hotels are built in hollow squares or rectangles to give the greatest possible number of rooms on street or court The recessional type of building, prescribed by building laws in some cities, affords a number of roof gardens and balconies The executive business of conducting a great modern hotel requires the most efficient organization In restaurants, bars, grills, and special rooms the modern hotel caters to the general public as well as to its guests Hotels may be classed as transient, residential, and resort hotels, by the clientele, as commercial, workers', women's, or family hotels, and as semi-commercial hotels with club features, such as those maintained by the Y M C A See Lucius Boomer, *Hotel Management* (3d ed , 1938)

Hotham (hŏ′thăm) [Heb , =signet ring], descendant of Asher 1 Chron 7 32

Hothan (hō′thăn) [Heb , =signet ring], father of two of David's guard 1 Chron 11 44

Hothir (hō′thĭr) [Heb , =fullness], leader of musicians 1 Chron 25 4

hothouse see GREENHOUSE

Hotin, Ukraine see KHOTIN

Hotman, François (frăsw′ ôtmä′), 1524–90, French jurist Converted to Protestantism (1547) and implicated in the conspiracy of AMBOISE, he spent large parts of his life in Switzerland In his most influential work, *Franco-Gallia* (1573), he was among the first to point out the Germanic origin of the early Frankish institutions, and on that basis he advocated an elective monarchy for France See Beatrice Reynolds, *Proponents of Limited Monarchy in Sixteenth Century France* (1931)

Hot Springs 1 Resort city (1940 pop 21,370, 1948 special census pop 27,150), co seat of Garland co , SW central Ark , in the Ouachita Mts SW of Little Rock, settled 1807, inc 1851 It is cosextensive with part of HOT SPRINGS NATIONAL PARK **2** Health resort town (pop 2,940), SW N Mex , on the Rio Grande, in a livestock and farm region A hospital for the treatment of crippled children is here Elephant Butte Dam is near by **3** City (pop 4,083), co seat of Fall River co , SW S Dak , SSW of Rapid City, near the Cheyenne river and the Black Hills, settled 1879–81, inc 1882 It is a health resort and tourist center, with several veterans' and soldiers' sanatoriums and other hospitals which use the sulphur hot springs Near by are Fossil Cycad and Jewel Cave national monuments, Wind Cave National Park, and Custer State Park Sandstone quarrying, mining, and lumbering are among the chief industries here **4** Famous resort, western Va in a valley of the Allegheny Mts WSW of Staunton See Fay Ingalls, *The Valley Road* (1949)

hot springs see ARTESIAN WELL and SPRING

Hot Springs District, c 1,000 sq mi , N central and central North Island, New Zealand, comprising the volcanic region around Lake Taupo It is a region of mineral springs and geysers, and its chief health resort is Rotorua It is also called the Thermal Springs District

Hot Springs National Park, famous Federal spa, Ark It was set aside as a government reservation in 1832 and made a national park in 1921. Beautifully situated, its 1,019 13 acres contain over 40 springs and many bathhouses An army-navy hospital was established here in 1882, its great new building was constructed in 1933 Lakes Hamilton and Catherine, created by two large dams on the Ouachita river, a state park, and Ouachita National Forest are near by For the city, see HOT SPRINGS, Ark

Hotspur see PERCY, SIR HENRY

Hottentot bread see ELEPHANT'S-FOOT

Hottentots (hŏ′tuntŏts″), people, numbering some 20,000, in W Cape Prov , Union of South Africa, and in South-West Africa In language and in physical type the Hottentots appear to be related to the Bushmen, and they are generally much lighter in complexion than the neighboring Bantu The Hottentots were the first native people to come into contact with the Dutch settlers of the Cape of Good Hope in the mid-17th cent As the Dutch took over land to farm, the pastoral Hottentots were forced into the interior and their numbers declined greatly Today they practice some farming and metallurgy along with herding

Hötzendorf, Franz Conrad von see CONRAD VON HOTZENDORF, FRANZ

Houbraken, Arnold (är′nōlt hou′brä″kŭ), 1660–1719, Dutch painter, etcher, and author of *The Great Theatre of Dutch Painters* (1718), still a valuable source His son, **Jacobus Houbraken** (yäkō′-bōōs), 1698–1780, was an important Dutch engraver, who practiced chiefly in Amsterdam He illustrated his father's book and others and engraved over 600 excellent portraits

Houdin, Jean Eugène Robert (zhäⁿ′ ûzhĕⁿ′ rōbĕr′ ōōdăⁿ′), 1805-71, French conjurer and magician He was celebrated for his optical illusions and mechanical devices and for the fact that he attributed his "magic" to natural instead of supernatural means

He was the first to use electromagnetism for his effects He wrote an autobiography (1857) and *Secrets of Prestidigitation and Magic* (1868). Houdini, who named himself for Houdin, wrote *The Unmasking of Robert-Houdin* (1908) See H R Evans, *The Master of Modern Magic* (1932)

Houdini, Harry (hōōdē'nē), 1874–1926, American magician and writer, b Appleton, Wis His real name was Erich Weiss, and he took his stage name after the French magician Houdin He was world famed for his escapes from bonds of every sort—locks, handcuffs, straitjackets, and sealed chests under water He was also noted for his exposure of fraudulent spiritualistic mediums and their phenomena He left to the Library of Congress his library of magic, one of the most complete and valuable in the world Among his writings are *The Unmasking of Robert-Houdin* (1908), *Miracle Mongers and Their Methods* (1921), *Paper Magic* (1922, new ed, 1929), and *A Magician among the Spirits* (1924) See *Houdini's Magic* (ed from his notebooks, 1932), biography by Harold Kellock (1928), W B Gibson, *Houdini's Escapes* (1930), B M L Ernst and Hereward Carrington, *Houdini and Conan Doyle* (1932)

Houdon, Jean Antoine (zhäⁿ ätwänⁿ ōdōⁿ'), 1741–1828, French sculptor He early studied with Michel Ange Slodtz and Pigalle, took the Prix de Rome at 20, and spent 10 years in Italy In 1771 he was admitted to the Académie royale de Peinture et de Sculpture for his *Morpheus* (Louvre) He soon became famous for portrait sculpture, at which he has hardly been surpassed Most of the famous personages of his day sat for him In 1785 he visited the United States and stayed at Mt Vernon while making studies for his statue of Washington (capitol, Richmond, Va) His busts of Jefferson (Mus of Fine Arts, Boston), Franklin, Mirabeau, Buffon, and Prince Henry of Prussia and his statue of Voltaire (Comédie Française) are all well known Catherine of Russia also posed for him and bought his fine marble Diana (Leningrad) Houdon narrowly escaped death during the Revolution and did not flourish under the Directory, but he was honored by Napoleon A bronze replica of his Washington, a bust of a child, and his *Bathers* are in the Metropolitan Museum

Hough, Emerson (hŭf), 1857–1923, American novelist, b Newton, Iowa, grad State Univ of Iowa, 1880 His novels of frontier life, popular in their appeal, have historical fidelity and understanding of pioneer character His most notable works were the novels *The Mississippi Bubble* (1902) and *The Covered Wagon* (1922, made into a popular moving picture) and *The Passing of the Frontier* (1918) His interest in the West promoted government protection of buffalo and other wild animals in Yellowstone Park

Hough, George Washington, 1836–1909, American astronomer, b Montgomery co, N Y, grad Union College, 1856 He discovered more than 600 stars, measured numerous double ones, and made systematic studies of the surface of Jupiter Many instruments for use in astronomy, meteorology, and physics were designed and constructed by him From 1862 to 1874 Hough was director of Dudley Observatory, Albany, N Y In 1879 he was appointed professor of astronomy at the Univ of Chicago and director of Dearborn Observatory, when the observatory was removed to Evanston, Ill, he introduced original plans for the dome and electric control for the telescope

Houghton, Arthur Boyd (hō'tŭn, hou–), 1836–75, English painter, illustrator, and wood engraver His paintings *Don Quixote* and *The Transformation of King Bedor* are in the Victoria and Albert Museum He is best known, however, for his imaginative illustrations for George and Edward Dalziel's *Arabian Nights* and *Don Quixote*

Houghton, Richard Monckton Milnes, 1st **Baron** (mŭngk'tŭn mĭlnz', hō'tŭp, hou'tŭp), 1809–85, English author, philanthropist, and patron of letters He was a close friend of Tennyson and Thackeray His poetical works include *Poems of Many Years* (1838) and *Palm Leaves* (1844) In 1848 his *Life, Letters, and Literary Remains of John Keats* was published See biography by T W Reid (1890)

Houghton, William Stanley, 1881–1913, English dramatist In 1900 Houghton turned to acting and the writing of plays He was dramatic critic for the Manchester *Guardian* (1905–13) His plays, portraying life in Lancashire, include *The Younger Generation* (1910), *The Master of the House* (1910), and his greatest success, *Hindle Wakes* (1912)

Houghton (hō'tŭn), village (pop 3,693), co seat of Houghton co, Keweenaw peninsula, extreme N Mich, on the Portage Lake Ship Canal, settled 1851, inc 1867 It is a shipping, distributing, and industrial center, lying in the heart of the Lake Superior copper-mining region Explosives are made Michigan College of Mining and Technology here has a large collection of geological materials Houghton is the mainland headquarters of Isle Royale National Park

Houghton-le-Spring (hō'tŭn-lē–, hou'–), urban district (1931 pop 10,616, 1947 estimated pop 29,240), Durham, England, NE of the borough of Durham The chief industry is coal mining

Hougue, La, France see HOGUE, LA.

Houlgate (ōōlgät'), resort (pop 1,660), Calvados dept., N France, on the English Channel

Houlton (hōl'tŭn), town (pop 7,771), co seat of Aroostook co, E Maine, a port of entry on the Meduxnekeag near the N B line; settled 1807, inc 1831 A commercial center, it grew first with the lumber industry and later with the agricultural development (especially potato growing) of the Aroostook country, more recently the tourist trade has become important It was a military post, 1828–47 An army air base (1941) is near by

Houma (hō'mŭ), city (pop 9,052), parish seat of Terrebonne parish, SE La, on Bayou Terrebonne and SW of New Orleans, founded 1834, inc 1848 A packing center and a port on the Intracoastal Waterway, it also has sea-food, fur, and oil industries Sugar cane is grown near by.

hound. Hunting dogs of many different breeds are known as hounds The term is most often applied to foxhounds and beagles These, with the harrier, BLOODHOUND, basset hound, and DACHSHUND, have in common long, flapping ears and their habit of following the quarry by scent The AFGHAN HOUND, BORZOI, GREYHOUND, WOLFHOUND, and DEERHOUND are different in appearance and follow their prey chiefly by sight Bird dogs, e.g., pointers and setters, are not known as hounds The beagle is a small hound with a low-hung body and is used to hunt rabbits and other small game Foxhounds have been bred in England for over two centuries, they are bred especially for speed and are used in hunting packs The American foxhounds were developed originally from foxhounds imported from England (in the late 18th cent) and from France and Ireland

Hounslow (hounz'lō), suburb in Heston and Isleworth urban district, Middlesex, England, W of London It was the first stop on the old coach road to Southampton and Bath, at an important crossroads Hounslow Heath, in 1546 an area of nearly 4,300 acres, near Hounslow, was noted as a resort of highwaymen It was the site of a Roman camp, is now largely enclosed, and has cavalry barracks

hourglass, instrument of glass for measuring time It consists typically of two bulbs united by a narrow neck, one bulb is filled with fine sand that runs through the neck into the other bulb in an hour The date of its invention is unknown, but it was in use in ancient times

houri (hōō'rē, hou'rē) [from Arabic, = black-eyed], one of the beautiful females said by some Moslems to dwell in paradise for the enjoyment of the faithful The passages in the Koran detailing the physical delights of heaven are considered by many Moslem critics as allegorical

hours of labor: see LABOR, HOURS OF.

Housatonic (hōōsətŏn'ĭk), river rising in the Berkshires, W Mass, and flowing generally south c 130 mi through Connecticut to Long Island Sound at Milford

House, Edward Mandell, 1858–1938, American statesman, b Houston, Texas, studied (1878–79) at Cornell Univ Colonel House (a Texas state title) was important in Texas politics before his star rose with Woodrow Wilson He helped to get the presidential nomination for Wilson in 1912 and had Wilson's confidence He was sent to Europe in 1914 in an attempt to prevent the outbreak of war and again in 1915 to propose a peace conference After the United States entered the war, he represented the United States in the conference for coordinating Allied activities He also gathered data for the peace conference, was American delegate to negotiate the armistice, and was a member of the U S peace commission He helped to draft the Treaty of Versailles and was particularly concerned with drawing up the Covenant of the League of Nations He was also (1919) a member of the commission on mandates After his return to the United States, he and Wilson quarreled House and Charles Seymour edited the documentary *What Really Happened at Paris* (1921) Some of his papers, selected and edited by Seymour as *The Intimate Papers of Colonel House* (2 vols., 1926–28), are a valuable historical source See Arthur D Howden Smith, *The Real Colonel House* (1928) and *Mr House of Texas* (1940), Sir Andrew MacPhail, *Three Persons* (1929)

House, Homer Doliver, 1878–, American botanist, b Oneida, N Y, grad Syracuse Univ (B S, 1902), Ph D Columbia, 1905 From 1914 to 1948 he served as state botanist of New York His outstanding work, *Wild Flowers of New York* (1918), formed the basis of a later work, *Wild Flowers* (1934)

house, human abode of permanent type and staunch construction, something beyond a mere primitive shelter such as a hut or a tent The earliest forms of human habitation which might be termed houses must remain conjectural The shelters of prehistoric man certainly varied widely according to climate and available materials Intimations as to their types can be discerned in the remaining natural caves in various countries—the rock-cut tombs of Egypt and Asia Minor, to which the abodes of the living were probably similar, the surviving beehive huts of stone found in Wales, Ireland, and elsewhere, as well as the dovecots and round, thatched sheep huts still in use in Europe, and the cone-shaped constructions formed of a sapling framework and covered with leaves and thatch or with skins, as in the American wigwams Of more advanced character were the lake dwellings of the Bronze Age, which seem to have been common in N Europe and parts of Italy The plastic and adhesive qualities of clay were utilized by the earliest builders Applied over a framework of logs and twigs, it formed weather protection, as a next step, bricks made of clay and baked in the sun could be laid up in walls At a time before the beginnings of history houses of mud bricks using a minimum of timber, owing to its scarcity, must have been the universal type in Egypt and in the Tigris-Euphrates basin occupied by Babylonians and Assyrians But of such perishable structures nothing has survived, and their arrangement is unknown Of the pre-Hellenic culture in the Aegean area, which centered in Crete, the great palaces of Cnosus, Mycenae, and Tiryns had elaborate plans of many chambers, inner courts, and staircases The Cretans of c 2000 B C. made burned clay sewer pipes and had bath compartments and sanitary arrangements for their palaces In Greek dwellings from the earliest times there was usually some sort of inner court around which the rooms were grouped, and often there was an upper story Women were secluded in a separate section There were latrines, water conduits, and drains The later and elaborate dwellings were no doubt close in type to the Roman houses at Pompeii, of which many remain In addition to the *domus* or private house, other Roman types were the VILLA or country house and the insula or tenement with several stories above a street floor of shops In the earlier and simple Roman houses rooms were grouped symmetrically around an inner court or ATRIUM The oldest houses at Pompeii, dating from the 3d cent B C, are of this type In the typical Pompeiian house of the last century B C and the empire, the street front was given over to small shops arranged on either side of an entrance passage which penetrated to the atrium Around the latter were the rooms for servants and the more public functions of the household, while directly opposite the street entrance was access to a larger court, the colonnaded peristyle, often adorned with fountain and plants, which was the center of the family's private life Around this were the living and sleeping rooms, while beyond it sometimes lay a garden, which might be enclosed by a colonnade Floors were laid with rich mosaic patterns in marbles and cements and the finely plastered walls had painted decorations, of which many examples have survived With its blank exterior walls and its use of inner courts to provide light and air for the apartments and seclusion from the street, the Pompeiian house was a luxurious culmination of the Mediterranean dwelling of the classic ages The essential character of its layout is preserved in modern times in the Spanish house with its patio, the flat-roofed North African houses, and the houses of Egypt, Turkey, and other parts of the Near East The dwellings which developed in N Europe in the early Middle Ages contained no open elements in their plans, but were forced to provide for security against both the climate and hostile attacks Within the fortified stone walls the focus of the lord's household was the great HALL with its huge fireplace at one end The separate abodes of the common people were little more than hovels However, as feudalism decayed and Europe became more settled and peaceful, the house of the peasant and the common man emerged, with their few simple rooms, fireplaces, pitched roofs of thatch or slate, and walls of varying materials such as stone, timber, and half-timber By the end of the 15th cent the stronghold type of house had become obsolete With the growth of international trade and the cultivation of amenities brought forth by the Renaissance, the country houses of the new nobility and rich merchants arose Forbidding walls with small apertures gave way to façades with large windows, numerous chimneys, and decorative embellishments Interiors no longer consisted of bare walls, but were given a complete architectural adornment. Meanwhile urban development had produced the compactly planned town dwelling several stories high on its narrow lot, drawing its light only from front and rear From the late Middle Ages through the Renaissance the house, of whatever class, received the stamp of the skilled and artistic craftsmanship which was diffused everywhere. But in the matter of comforts, practically no advance other than improvements in planning (such as the introduction of corridors) occurred until the mid-19th cent In the 18th cent. an informal arrangement of rooms was no longer considered satisfactory, and the fashionable classicism demanded symmetrical and formal disposal of both plan and façade This produced not only the great country establishments with their central blocks and balancing wings, but also the small and exquisitely finished formal houses of which numbers still exist in England and France

and in the United States. The nature of the dwelling house in different parts of America was determined at first by available materials In the woodland area, a family's first house was regularly a LOG CABIN with PUNCHEON floor In rough treeless country, the dugout was used On the Great Plains, a SOD HOUSE was built of the tough sods. In the Southwest, houses were built of ADOBE In the mid-19th cent , with the introduction of heating, lighting, and plumbing systems, the modern house was born, and an involved new process of evolution commenced. In the intervening years there has been an eagerness everywhere to embody within the house a maximum of mechanical efficiency, combined with a reluctance to abandon the past traditions of planning and of architectural form More and more as mechanical aids to comfort have been perfected by engineers and manufacturers, the modern dwelling with its garage has become in itself a closely integrated mechanism, utterly dependent upon its various heating, plumbing, and ventilating contrivances and the supply of power for its proper functioning In the type of house produced by MODERN ARCHITECTURE in the 20th cent , sentiment for past styles and traditional methods and materials has given way to a frank expression of the technical aspects of the structure In the same period the ranking of a house as a unit in a community and the problems involved in providing proper dwellings for the lower-salaried populations everywhere (see HOUSING) have focused attention upon the modern dwelling in its previously unstudied social aspects See Richard Halsey and Elizabeth Tower, *The Homes of Our Ancestors* (1926), for the English house, see S O Addy, *The Evolution of the English House* (1910), for the American house, see Lewis Mumford, *Sticks and Stones* (1933), and Richard Pratt, *A Treasury of Early American Homes* (1949)

houseboat, flat-bottomed scow or float, generally drawing only a few inches of water (never more than about 2 ft) and fitted with a superstructure containing cabins or rooms with conveniences for use as living quarters Houseboats are used on rivers, streams, and inland waters, mainly as summer residences Houseboats are generally fitted with a veranda or porch at one or both ends, and the more elaborate type have a top deck, with awnings Most houseboats have no motive power and are towed from place to place, those which have engines generally use a screw propeller Houseboats are in common use in China and other Asiatic countries, many thousands of people never knowing any other type of home

housefly, common name of *Musca domestica*, found in most parts of the world It does not bite but is the most dangerous and the commonest fly found in dwellings Because it visits garbage, excrement, and filth of all kinds it transports, either on its hairy body and sticky foot pads or in its digestive system, the bacteria and protozoa which cause many serious diseases, e g , typhoid fever, cholera, and dysentery It breeds in vast numbers in manure and other decaying organic matter The larvae are white maggots The housefly ejects materials from its body upon solid food substances in order to liquefy them, since it can take in only liquids See *House Fly Control* (U S Dept of Agriculture, Leaflet 182)

House of David see BENTON HARBOR, Mich

House of Lords: see PARLIAMENT and WESTMINSTER PALACE

House of Representatives see CONGRESS OF THE UNITED STATES

house plants, varied group of plants grown indoors and generally able to withstand such adverse conditions common to the average dwelling as escaping gas, low humidity, and lack of sunshine and light They are usually grown singly in pots, but can also be grouped and planted together in dish gardens and terrariums Some are cultivated for their flowers, e g , geraniums and African violets, while others, e g , philodendron and sansevieria, are grown for their decorative foliage Growing house plants successfully can be greatly facilitated by maintaining a cool temperature and raising the atmospheric moisture by the use of humidifiers or simply by placing evaporating pans on radiators See Margaret Goldsmith, *The Picture Primer of Indoor Gardening* (1946), Montague Free, *All about House Plants* (1947)

housing, in general, the living accommodations provided for people in a community With the Industrial Revolution and the crowding of cities and factory towns, housing for workers was put up by builders for profit, but often employers found it necessary to house their own workers Lowell, Mass , is an example of such housing in the 1820s, George Cadbury 50 years later built a garden village for his employees in Bourneville, England However, speculative building, at the least cost for the highest price, continued to be the rule without government interference until England passed (1851) the Shaftesbury Act, requiring administrative approval of building plans In the United States, the first housing law was the New York city tenement house law of 1867. Its requirements were very meager, but in 1879 a revised law was passed prohibiting windowless rooms The findings of a tenement house commission resulted in a new law in 1901, requiring better provision for light and ventilation, fire protection, and sanitation Most city and state housing laws were based on those of New York There had been some cooperative and municipal building for workers in Europe and some "model tenements" in American cities put up by philanthropists, but until the First World War there was no government housing in the United States Then temporary dwellings were put up for shipping and other war workers In 1918 the U S Housing Corporation was incorporated to deal with the liquidation of the government's housing It continued to operate until 1942 The virtual standstill of private construction during the war resulted in a housing shortage which in some countries, e g , Austria, was desperate in its extent Vienna in the '20s replaced unfit quarters with great blocks of workers' apartments France, Italy, the Scandinavian countries, and Holland followed similar programs Holland's policy of loaning funds for erection of workers' dwellings commenced as early as 1901 The Dutch cottage suburbs were notable for their modern architectural design and the completeness of their civic planning In England and to a lesser extent in the United States the GARDEN CITY was one solution offered to the housing problem Some housing projects in New York followed the enactment of the New York State Housing Act of 1926 Under this the execution of the project is in the hands of private enterprise in the form of a limited dividend corporation, which is exempt from state taxes and has power of condemnation, the state supervises its financial management In the depression the National Housing Act (1934) set up the Federal Housing Administration to ensure private loans and mortgages for homes meeting certain standards Low-cost housing projects, like those for farm families sponsored by the Resettlement Administration, were coordinated by the Wagner-Steagall Act (1937) under the U S Housing Authority, which financed urban low-rent and slum-clearance developments by making loans at low interest up to 90 percent of the costs of the project, these loans were later extended to rural housing When the defense program in the Second World War brought about acute housing shortages, the Lanham Act (1940) authorized direct Federal operation of a large-scale housing program for war workers, who also benefited by amended FHA rules (1941–42) To unify the many Federal housing agencies, President Roosevelt created (Feb , 1942) the National Housing Agency, including the Federal Public Housing Authority (which handled the war housing program and assumed the functions of the USHA), the Federal Home Loan Bank Administration, and the FHA But the total wartime construction of permanent homes was far below peacetime levels, while the demand for housing rose sharply with a high marriage rate, migrations from farms to cities, greater buying power, and later the return of veterans Complicated by building codes, union practices, and labor and material shortages, the housing deficiency remained serious after the end of the war There has, however, been much post-war home building, especially of large rental projects and of single dwellings erected in large groups by development companies, mass-production methods, e g , prefabrication, are now widely used In England the bombing of congested areas during the war opened the way to the replacing of slums by modern housing when materials and financial conditions permitted

Housman, Alfred Edward (hous'smun), 1859–1936, English poet and classical scholar, grad St John's College, Oxford (M A , 1882) He was in the civil service (1882–92) and a professor of Latin at University College, London (1892–1911) In 1911 he became professor of Latin at Cambridge and fellow of Trinity College Housman put out a monumental edition of Manilius (1903–30), edited Juvenal (1905) and Lucan (1926), and wrote numerous valuable classical studies But it is as a poet that he is best known, although only two small volumes appeared during his life, *A Shropshire Lad* (1896) and *Last Poems* (1922) The economy and directness of wording, the pictures of English countryside, and the constant note of disillusion in his lyrics and short narrative poems produced a host of imitators. He is in the curious position of being a classicist in form and a romanticist in content Few modern poets have exercised so much influence on their fellow writers as Housman Some of his best known poems are "Bredon Hill," "With Rue My Heart Is Laden," and "Loveliest of Trees" *The Name and Nature of Poetry* (1933) was originally given as the Leslie Stephen Lecture at Cambridge Univ *More Poems* (1936) and *Collected Poems* (1940), published posthumously, contain some new verse See studies by K E Symons and others (1936), A S F Gow (1936), Laurence Housman (1937), and Grant Richards (1942)

Housman, Laurence, 1865–, English author and artist, brother of A E Housman. After writing several unsuccessful books, including the poetry *Green Arras* (1896) and *Spikenard* (1898), he found himself, as the anonymous author of *An Englishwoman's Love Letters* (1900), a success Some critics attributed the authorship to Queen Victoria, and the book was pirated in America *Little Plays of St Francis* (1922–35) and *Palace Plays* (1930–33) are play cycles *Palace Plays*, collected into a dramatic biography, *Victoria Regina* (1934), was banned from the English stage, but Helen Hayes presented it most successfully in America in 1935 He was the biographer of his brother (1937) See his autobiography, *The Unexpected Years* (1936)

Houssay, Bernardo Alberto (bĕrnär'dhō älbĕr'tō ou'sī), 1887–, Argentine physiologist, an authority on endocrinology. He shared with C F Cori and G T Cori the 1947 Nobel Prize in Physiology and Medicine for demonstrating the role of the pituitary secretion in inhibiting the body's use of insulin Houssay taught (1907–43, 1945–46) at the National Univ of Buenos Aires and became (1944) director of the Institute of Biology and Experimental Medicine, Buenos Aires, of which he is a founder He came (1949) to the United States as a special research fellow at the National Institutes of Health to study the relation between nutrition and glands He wrote an outstanding textbook, *Fisiologia humana* (1945)

Houssaye, Arsène (ärsĕn' ōōsā'), 1815–96, French writer He was manager (1849–56) of the Comédie Française and author of *Histoire du 41me fauteuil de l'Académie française* (1856) and *Behind the Scenes of the Comédie Française* (Eng tr , 1889) His son **Henry Houssaye** (ăr'ē'), 1848–1911, was a journalist He contributed to the *Revue des Deux Mondes* and the *Journal des débats* His Napoleonic studies, the result of profound research, comprise *1814* (1888), which went through more than 40 editions, *1815* (1893–1905), and *Napoléon, homme de guerre* (1904)

Houston, David Franklin (hū'stun), 1866–1940, American cabinet officer and educator, b Monroe, Union co , N C , grad South Carolina College, 1887 M A Harvard, 1892 He taught (1894–1902) political science at the Univ of Texas and was later president of the Agricultural and Mechanical College of Texas (1902–5), president of the Univ of Texas (1905–8), and chancellor of Washington Univ in St Louis (1908–16) He served in Woodrow Wilson's cabinet first as Secretary of Agriculture (1913–20), then as Secretary of the Treasury (1920–21) He later entered business in New York See his *Eight Years with Wilson's Cabinet* (1926).

Houston, Samuel (hū'stun), 1793–1863, American frontier hero and statesman of Texas, b near Lexington, Va He moved c 1806 with his family to Tennessee and lived much of his youth with the Cherokee Indians, by whom he was adopted Serving (1814) in the Creek campaign under Andrew JACKSON, he was seriously wounded (1814) while fighting bravely at the battle of Horseshoe Bend He returned to Tennessee, was admitted (1818) to the bar, practiced law in Lebanon, Tenn , and held many state offices Tall, vigorous, and dramatic in speech and in action, Houston, like Jackson, captured the popular imagination He was sent (1823, 1825) to the U S Congress as a Democrat Elected (1827) governor of Tennessee, Houston seemed in 1829 to have a bright political future, with his re-election almost assured and the Democrats strengthening themselves in national politics Suddenly, however, his bride, Eliza Allen Houston, left him and he immediately resigned (1829) his governorship He rejoined the Cherokee in what is now Oklahoma There he lived with them as government post trader and as adviser and then (1833) moved on through Arkansas to Texas He had little to do with the preliminaries of the Texas Revolution, though he watched the struggle closely He was a member of the convention which set up a provisional government in Texas and of the convention (1836) which declared Texas independent He was made commander in chief of the revolutionary troops After the surrender of the Alamo (March, 1836), Houston's army persistently retreated before the numerically superior forces of SANTA ANNA, and there was panic among Texas settlers and much criticism of Houston He brilliantly redeemed himself at the battle of SAN JACINTO (April 4, 1836), when by a surprise attack he decisively defeated the Mexicans and captured Santa Anna himself Later that year Houston was elected the first president of the new republic of Texas The independence of Texas was recognized by the United States and other countries. Replaced (1838) by Mirabeau LAMAR, Houston again served later (1841–44) as president, but during these years he was harassed by financial problems and by border troubles Texas was admitted to the Union in 1845, and Houston was one of the first to represent his state in the U S Senate After serving 14 years in the Senate, he was defeated because of his uncompromising Unionism Challenging his opponents and drawing upon his popularity, Houston was elected (1859) governor of Texas The aged statesman preached preservation of the U S Constitution in the face of secession, but the tide was against him After the people of Texas voted

(Feb , 1861) to secede from the Union, Houston refused to join the Confederacy and was removed (March, 1861) from the governorship He accepted the verdict, refused help from the North to defend his prerogative, and retired See his writings (ed by A W Williams and E C Barker, 8 vols , 1938–41), Marquis James, *The Raven* (1929)

Houston (hū'stŭn) **1** Town (pop 1,729), a co seat of Chickasaw co , NE Miss , NW of Columbus, in a dairy and farm area, inc 1837 Near by are Indian mounds and also Geology Hill **2** Borough (pop 1,610), SW Pa , N of Washington, laid out 1871, inc. 1901 **3** [named for Gen Samuel Houston] City (1940 pop 384,514, 1948 estimated pop 600,000), co seat of Harris co , S Texas on the Gulf Coast plain NW of Galveston Bay Harrisburg (now part of Houston) was settled in 1823, and Houston itself, founded in 1836 by J K and A C Allen, was promoted as a rival to Harrisburg and soon served (1837–39) as capital of the Texas republic Houston in the course of the 19th cent grew from a muddy town on Buffalo Bayou to a prosperous railroad center, shipping cotton, rice, lumber, cattle, sugar, and other products of the region, but its phenomenal expansion came after the digging (1912–14) of a ship channel, which made Houston a deepwater port The development of Gulf Coast oil fields poured quick wealth into the booming city It is now one of the great ports of the nation and the largest city of Texas Industries line the channel and cluster in other areas of the city, which has spread wide across the prairie There are many oil refineries and large plants making steel, metalwork, chemicals, and paper (from native pine) as well as numerous processing and assembling plants In the Second World War, war industries, especially shipbuilding, swelled the city further, and in 1948 several suburbs were incorporated into the city Houston takes pride in its many parks, including large Hermann Park, and in its residential districts It is the seat of the RICE INSTITUTE, the Univ of Houston (coeducational, 1927), and the Univ of Texas school of dentistry The Texas Medical Center includes the Baylor Univ medical school and many hospitals Near by is the battlefield of SAN JACINTO

Houtzdale (houts'dāl), borough (pop 1,430), W central Pa , in the Alleghenies N of Altoona, laid out 1870, inc 1872

Hove (hōv), municipal borough (1931 pop 54,993, 1947 estimated pop 68,120), Sussex East, England A western suburb of Brighton, it manufactures shoes, other leather goods, and pharmaceuticals

Hovenden, Thomas (hō'vĕdĕn), 1840–95, American genre painter, b Ireland, studied in New York at the National Academy of Design and in Paris under Cabanel He is best known for his paintings of peasant life in Brittany and of Negro life in the United States Among his well-known works are *Breaking Home Ties*, *News from the Conscript*, *Brittany Woman Spinning*, and *Image Seller* In the Metropolitan Museum are *Jerusalem the Golden* and *Last Moments of John Brown* This popular painter died rescuing a child from a railroad train

Hovenweep National Monument see NATIONAL PARKS AND MONUMENTS (table)

Hovey, Richard (hŭ'vē), 1864–1900, American poet, b Normal, Ill , grad Dartmouth College, 1885 Strongly influenced by contemporary European poets, he translated the poetry of Maeterlinck, but is better known for his collaboration with Bliss Carman, their first book being *Songs from Vagabondia* (1894) Hovey was the author of many Dartmouth songs, collected as *Dartmouth Lyrics* (1938) Hovey was by turns journalist, actor, dramatist, poet, and lecturer at Barnard College, but his poetic promise was realized only occasionally, as in the "Stein Song" from the long poem *Spring*

Howard, British noble family The Howards, or Herewards, as they were originally called, trace their career in English history to the 10th cent A Hereward fought against William I (William the Conqueror) when England was invaded His descendants were created earls of Arundel in 1139, Barons Maltravers in 1330, earls of Surrey and dukes of Norfolk in 1483, Barons Fitzalan in 1627, earls of Norfolk in 1644, and Barons Herries in 1884 The duchy of Norfolk (1483) came into the Howard family by marriage with Margaret Mowbray, daughter of the banished Thomas Mowbray, duke of Norfolk John Howard, 1st duke of NORFOLK (in the Howard line), known as the Jockey of Norfolk, was killed at Bosworth Field at the side of Richard III His son, Thomas Howard, 2d duke of NORFOLK, defeated the Scots for Henry VIII at Flodden Thomas is the ancestor of all the living Howards in the main line Thomas's son, Thomas Howard, 3d duke of NORFOLK, came into conflict with Henry VIII over the execution of Catherine HOWARD, niece of the 3d duke (as was Anne BOLEYN). Norfolk remained Catholic, as have the dukes of Norfolk to the present day, in face of the Protestantism of the royal house. Thomas Howard, 4th duke of NORFOLK, son of that Henry Howard, earl of SURREY, who was famous as a poet and an associate of Sir Thomas Wyatt, was executed for his conspiracy with Mary Queen of Scots The dukes of Norfolk have continued prominent in British history to modern times The present head of the Howard family in England is Bernard Marmaduke Fitzalan-Howard, 16th duke of Norfolk (b 1908), premier duke of the kingdom and hereditary earl marshal of England The cadet branches of the Howard house are numerous Lord William Howard of Effingham, the oldest son of the 2d duke, was the father of Charles Howard, earl of NOTTINGHAM, hero of the defeat of the Armada Henry Howard, earl of NORTHAMPTON, influential in the reigns of Elizabeth and James I, was the son of Henry Howard, earl of Surrey Thomas Howard, 1st earl of SUFFOLK, another naval hero, son of the 4th duke, was the father of Frances Howard, who, with Robert Carr, earl of Somerset, was implicated in the murder of Sir Thomas Overbury The great-great-grandson of the 4th duke was Charles HOWARD, who held important posts under Cromwell and Charles I and was created 1st earl of Carlisle His descendant, Frederick HOWARD, 5th earl of Carlisle, was a prominent statesman in the latter part of the 18th cent Esme William Howard, 1st Baron HOWARD OF PENRITH, led a distinguished diplomatic career in the 20th cent and was elevated to the peerage in 1930 For the history of the Norfolk and Suffolk lines of the family, see Ethel Richardson, *The Lion and the Rose* (2 vols , 1923)

Howard, Bronson, 1842–1908, American dramatist, b Detroit He began to write plays while a newspaper reporter in New York His first serious drama, *Saratoga*, was produced by Augustin Daly in 1870 About 10 plays of varying worth followed, *The Banker's Daughter* (1878) is discussed by Howard in his *Autobiography of a Play* (1908) *Young Mrs Winthrop* (1882) was one of the first American dramas of social criticism His greatest success came in 1887 with *The Henrietta*, a satire on American business *Shenandoah*, a Civil War play, was projected early in his career but had to wait until 1888 for a producer Presented at the Boston Museum and almost immediately withdrawn, it was taken over by Charles Frohman for his Star Theatre in 1889 It established Frohman as a producer and made fortunes both for him and for the author *Aristocracy* (1892) and *Peter Stuyvesant* (written with Brander Matthews, 1899), Howard's last two plays, were less successful, but he remains one of the great writers for the American stage *In Memoriam Bronson Howard* (1910) contains articles by Brander Matthews and H P Mawson and *The Autobiography of a Play* See *The Banker's Daughter and Other Plays* (ed by A G Halline, 1941)

Howard, Catherine, 1521?–1542, queen of England, fifth wife of HENRY VIII She was the daughter of Lord Edmund Howard and the niece of the powerful duke of Norfolk (see HOWARD, family) Henry married her soon after his divorce from Anne of Cleves in 1540 Late in 1541 she was accused of immoral conduct previous to her marriage Although she confessed, Henry was at first inclined to clemency When evidence was produced for similar misconduct after her marriage, she was condemned and beheaded Her execution was dictated more by political than by moral reasons, Henry was anxious to rid himself of the dangerous power of the Howard family

Howard, Charles, 1st **earl of Carlisle,** 1629–85, English statesman He held various offices under Cromwell and Charles II One of the members of the prominent HOWARD family, he sat in both houses of Parliament and served on several diplomatic missions From 1678 to 1681 he was governor of Jamaica

Howard, Sir Ebenezer, 1850–1928, English town planner, principal founder of the English garden-city movement In 1872 he went to Nebraska and later worked in Chicago Returning to England, he became (1877) an official stenographer in Parliament His *To-morrow a Peaceful Path to Real Reform* (1898), reissued as *Garden Cities of To-morrow* (1902), outlined a model self-sustaining town which would combine town conveniences and industries with the advantages of an agricultural location As a result of the first publication he was able to form (1899) the Garden City Association, and in 1903 Letchworth, the first English garden city, was founded In 1920 he organized Welwyn Garden City See Dugald Macfadyen, *Sir Ebenezer Howard and the Town Planning Movement* (1933)

Howard, Frederick, 5th **earl of Carlisle,** 1748–1825, English statesman A member of the distinguished HOWARD family, he went to the American colonies on an unsuccessful mission of reconciliation (1779) and in 1780 was appointed viceroy of Ireland In 1798 he was made guardian of Lord Byron, who ridiculed him in the satirical poem, *English Bards and Scotch Reviewers* (1809)

Howard, John, 1726–90, English prison reformer In 1773, as sheriff of Bedford, he discovered shocking jail conditions and, after wider investigation, brought the issue of prison reform to Parliament He was instrumental in securing passage of an act (1774) which provided for amelioration of insanitary jail conditions and for regular jailors' salaries After detailed studies in England and abroad, he wrote *The State of the Prisons in England and Wales* (1777) Interest in plague prevention led him to visit European lazarettos, and in 1789 appeared his *Account of the Principal Lazarettos in Europe* He died the next year of fever contracted while studying prison conditions in Russia Largely through his influence, European and American penal reforms were begun See biographies by J B Brown (2d ed , 1823) and W Hepworth Dixon (3d ed , 1850)

Howard, Leland Ossian, 1857–, American entomologist, b Rockford, Ill , grad Cornell (B S , 1877), Ph.D Georgetown Univ , 1896 Associated with the U S Bureau of Entomology from 1878 (as its chief, 1894–1927, and as its principal entomologist until 1931), he profoundly influenced the development of economic and medical entomology in America He waged war against insect parasites of man (especially the mosquito and housefly) and against crop pests such as the boll weevil, corn borer, gypsy moth, and Japanese beetle Among his best-known works are *The Insect Book* (1901), *Mosquitoes* (1901), *The House Fly—Disease Carrier* (1911), *Mosquitoes of North and Central America and the West Indies* (with others, 4 vols , 1912–17), *The Insect Menace* (1931), and his autobiography, *Fighting the Insects* (1933)

Howard, Leslie, 1893–1943, British actor After serving in the First World War, he made his first stage appearance in *Peg o' My Heart* (1917) His air of gentle cynicism and his somewhat studied mannerisms were as familiar and pleasing to American audiences as to English Among his most successful plays were *Petrified Forest* and *Berkeley Square* Equally successful in films, he played in *Outward Bound*, *Of Human Bondage*, *Pygmalion*, *The Scarlet Pimpernel*, and *Gone With the Wind* He was killed when a British transport plane was shot down by Germans in the Second World War

Howard, Oliver Otis, 1830–1909, Union general in the Civil War, b Leeds, near Lowiston, Maine, grad Bowdoin, 1850, and West Point, 1854 Made a brigadier general of volunteers (Sept , 1861), he fought in the East from the first battle of Bull Run through the GETTYSBURG CAMPAIGN Howard lost his right arm at Fair Oaks in the Peninsular campaign (1862) His 11th Corps was completely routed by Stonewall Jackson's flank attack in the battle of CHANCELLORSVILLE On the first day at Gettysburg, Howard, assuming command after J F REYNOLDS was killed, was driven back with heavy losses to Cemetery Hill His corps constituted part of the Union reinforcements under Hooker in the CHATTANOOGA CAMPAIGN In the Atlanta campaign he commanded the Army of the Tennessee after the death of J B MCPHERSON and he led it in Sherman's march through Georgia and the Carolinas President Johnson made Howard, who was devoted to the cause of Negro betterment, chief commissioner of the FREEDMEN'S BUREAU in May, 1865 While the bureau rendered some good service, many of its officials were corrupt Howard himself was an honest but none too able administrator A founder of Howard Univ (named for him), he was its president (1869–73) He later helped to found Lincoln Memorial Univ in Tennessee As commander of the Dept of the Columbia (1874–81), Howard directed several campaigns against the Indians and negotiated with Chief JOSEPH in 1877 In 1886 he was promoted major general and assigned to command the Division of the East, this post he held until his retirement in 1894 He wrote biographies of Chief Joseph (1881) and Zachary Taylor (1892) and also *Famous Indian Chiefs I Have Known* (1908) and an autobiography (1907)

Howard, Sidney Coe, 1891–1939, American playwright, b Oakland, Calif , grad Univ of California, 1915, and studied in G P Baker's "47 Workshop," Harvard Early in the First World War he served with the American ambulance corps on the Western Front and in the Balkans, and later with the Aviation Service, A E F From 1919 to 1923 he was associated with *Life* and the *New Republic*, where he was known for his exposés of labor spys and the narcotic trade Among his plays are *Ned McCobb's Daughter* (1926), *The Silver Cord* (1926), *Yellow Jack* (1934), and *Dodsworth* (1934), an adaptation of the novel by Sinclair Lewis His *They Knew What They Wanted* (1924) won the 1925 Pulitzer Prize for drama He was killed in an accident on his estate near Tyringham, Mass

Howard of Penrith, Esme William Howard, 1st Baron (ĕz'mē, pĕn'rĭth), 1863–1939, British diplomat. After diplomatic service in Rome and Berlin

(1886–92), he saw active service (1900) in the South African War and was consul general (1903–6) in Crete. He went to Washington as counselor (1906–8) of the British embassy and served (1908–19) in Hungary, Switzerland, and Sweden. After sitting on the British delegation to the Paris Peace Conference (1919), he was appointed ambassador to Spain. As ambassador to the United States (1924–30) he won many friends. A member of the HOWARD family, he was raised to the peerage in his own right in 1930. See his memoirs, *The Theater of Life* (2 vols., 1935–36).

Howard University, at Washington, D.C., predominantly Negro, nonsectarian, with congressional support, coeducational. It was chartered and opened in 1867 by the Freedmen's Bureau under Gen. O. O. HOWARD and others. It has a college of liberal arts and schools of engineering and architecture, law, medicine (with colleges of dentistry, medicine, and pharmacy, affiliated with Freedmen's Hospital), music, social work, and religion.

Howe, Clarence Decatur (hou), 1886–, Canadian civil engineer and statesman, b. Waltham, Mass., grad. Massachusetts Institute of Technology, 1907. He went to Canada in 1908 as professor of civil engineering at Dalhousie Univ. After serving (1913–16) as chief engineer of the Canadian board of grain commissioners, he entered business, founding an engineering firm which became internationally known for its design and construction of grain elevators. Entering the Canadian House of Commons in 1935, Howe was at once invited to join the cabinet of Mackenzie King as minister of railways and canals and minister of marine. These two agencies he merged into the ministry of transport in 1936. As minister of transport, he particularly devoted himself to the development of air transportation in Canada. Soon after the outbreak of the Second World War, Mackenzie King appointed (1940) Howe to the important post of minister of munitions and supply, and in 1944 he was asked to serve concurrently as reconstruction minister. In 1948 he became minister of trade and commerce.

Howe, Edgar Watson (hou), 1853–1937, American editor and author, b. Treaty, near Wabash, Ind. From 1877 to 1911 he was editor and proprietor of the Atchison, Kansas, *Daily Globe*, and afterwards published *E. W. Howe's Monthly* at Atchison. His best work was his first book, *The Story of a Country Town* (1883), a realistic, bitter novel of prairie small-town life anticipating by many years the stories of Sherwood Anderson. Later novels were not so well received, but he was famous for his pithy editorial paragraphs. See his autobiography, *Plain People* (1929).

Howe, Elias, 1819–67, American inventor, b. Spencer, Mass. He was apprenticed in 1838 to an instrument maker and watchmaker in Boston at whose suggestion he turned his attention to devising a sewing machine. He exhibited his first machine in 1845 and patented another in 1846. No financial backing was secured in the United States, and in 1840 a third machine was sold in England, together with all rights in Great Britain, to William Thomas. Howe worked with Thomas in London to produce a machine to stitch leather. After a breach between the two, Howe returned to America to find his machine being manufactured by others. He brought several suits for infringement of patent and finally obtained a judgment for royalty in 1854. With the royalties earned through an extension of his patent (1861–68), he supported during the Civil War an infantry regiment in which he served as a private and in 1865 established in Bridgeport, Conn., the Howe Machine Company.

Howe, Frederic Clemson, 1867–1940, American lawyer and political scientist, b. Meadville, Pa., grad. Allegheny College, 1889, Ph.D. Johns Hopkins, 1892, and studied at the Univ. of Halle. He practiced law in Cleveland from 1894 to 1909. There he was closely associated with Mayor Tom L. Johnson and his municipal reform program, serving on the city council and, from 1906 to 1909, in the state senate. From 1911 to 1914 he was director of the People's Institute in New York city, and, from 1914 to 1919 he was commissioner of immigration at the port of New York. He was an acknowledged authority upon municipal affairs and wrote *The City, the Hope of Democracy* (1905), *European Cities at Work* (1913), and *The Modern City and Its Problems* (1915). He was also interested in many other reforms and wrote *Confessions of a Reformer* (1925) and *Denmark, the Cooperative Way* (1936), besides other books and many articles. From 1933 to 1935 he was attached to the Agricultural Adjustment Administration as consumers' counsel in the framing of codes concerning agricultural products, and from 1935 he was special adviser to the Secretary of Agriculture. He also acted as special economic adviser to the Philippine commonwealth. His wife, **Marie Jenney Howe**, 1871–1934, was a Unitarian minister and a leader in the woman-suffrage movement. She wrote *George Sand* (1927) and edited and translated *The Intimate Journal of George Sand* (1929).

Howe, John, 1630–1705, English Independent divine, domestic chaplain to Oliver Cromwell. He preached in secret (1662–71) until, becoming chaplain to Lord Massereene of Antrim Castle, Ireland, he turned his attention to writing. Eventually he settled at Utrecht till the Declaration of Indulgence (1687) permitted his return to England. His principal work is *The Living Temple of God*, a noble expression of Puritanism, which is included in his collected works (1724).

Howe, Joseph, 1804–73, Canadian journalist and statesman, b. Halifax, N.S., son of a Massachusetts Loyalist. He learned printing and newspaper work in his father's office, and although he had little formal education, he read widely in his father's fine library. In 1828 Howe became proprietor and editor of the *Novascotian*, which under his direction became the leading journal of the province. Accused of libeling certain public officials whom he charged with mismanagement and corruption, Howe argued his own case at his trial (1835) with such eloquence as to win a noted triumph for freedom of the press. In 1836 he entered the provincial assembly, there and in his newspaper he continued his campaign for responsible government and his struggle against successive governors, whom he forced from Nova Scotia, until the demands of his reform party were granted in 1848. In that year he became provincial secretary, from 1860 to 1863 he was premier. Devoted to the people of his province—he was "Joe" to most of them—Howe worked ardently for education and for an intercolonial railroad to link the Maritime Provs. with Canada proper, but though early an advocate of union, he opposed confederation (ostensibly on the grounds that it was unfair to the Maritimes) and engaged in a long struggle with Sir Charles Tupper over the issue. Even after confederation had been achieved (1867) he continued his opposition, but realizing the hopelessness of his position, he entered (1869) Macdonald's dominion cabinet as president of the council. By this act he lost many of his supporters in Nova Scotia. When, in 1873, Howe, partly from ill-health, retired from politics to accept appointment as lieutenant governor of Nova Scotia, his homecoming was marked with great enthusiasm. He died soon after assuming office. See his *Speeches and Public Letters* (ed. by William Annand, 1858, new, enlarged ed. by J. A. Chisholm, 1909); W. L. Grant, *The Tribune of Nova Scotia* (1915), biographies by J. W. Longley (rev. ed., 1926) and J. A. Roy (1935).

Howe, Julia Ward, 1819–1910, American author, lecturer, and social reformer, b. New York city, privately educated. Her most famous work is *The Battle Hymn of the Republic*, written to a tune ascribed to William Steffe, a Southern writer of Sunday-school songs. She wrote new stanzas in Dec., 1861, at the suggestion of James Freeman Clarke, shortly after she and her friends watched McClellan's army go into battle near Washington, D.C., singing *John Brown's Body*, with its swinging chorus, "Glory, glory, hallelujah." Immediately popular, the *Battle Hymn* is said to have been named by J. T. Fields, who published it in the *Atlantic Monthly* in 1862. Mrs. Howe was active in many fields. She helped her husband, Dr. Samuel Gridley HOWE, in his philanthropic projects and in editing the Boston *Commonwealth*. She wrote and lectured for Negro emancipation, woman suffrage, and other liberal causes, preached as a Unitarian, and helped found a world-peace organization. The American Academy of Arts and Letters elected her as its first woman member. Of her writings, her biographies of her husband (1876) and of Margaret Fuller (1883), her *From Sunset Ridge: Poems Old and New* (1878), and her *Reminiscences, 1819–1899* (1899) are still read. See biography by her daughters Laura E. Richards and Maud Howe Elliott (1915), J. T. Howard, *Our American Music* (1929).

Howe, Marie Jenney see HOWE, FREDERIC CLEMSON.

Howe, Richard Howe, Earl, 1726–99, British admiral, elder brother of Sir William Howe. After an education at Eton he joined the navy and won recognition in the Seven Years War for his defense of the English Channel. He was also a member of the House of Commons (1757–82), and in 1758 he became Viscount Howe in the Irish peerage. Howe was treasurer of the navy from 1765 to 1770, and after the American Revolution began, he was early in 1776 given command of the fleet in America. He and his brother were commissioned to treat for a peaceful settlement of the dispute with the colonies, but negotiations at Staten Island in 1776 came to nothing and he supported his brother in the attack on Long Island. In 1777 he supported his brother's successful campaign against Philadelphia, and in 1778 he outmaneuvered the French fleet under Admiral d'Estaing which attempted to cooperate with land troops under Gen. John Sullivan in taking British-held Newport, R.I. In the autumn of 1778 he resigned. In 1782 he assumed new command and relieved Gibraltar from the menace of a Franco-Spanish fleet. He was first lord of the admiralty (1783–88) and in the French Revolutionary Wars he was an able commander. "Black Dick Howe" is, indeed, best remembered for his victory over the French in 1794. He was created Earl Howe in 1788. See T. S. Anderson, *The Command of the Howe Brothers during the American Revolution* (1936).

Howe, Samuel Gridley, 1801–76, American reformer and philanthropist, b. Boston, Mass., grad. Brown Univ., 1821, M.D. Harvard, 1824. He began his lifelong service to others by going to Greece to aid in the War of Independence and spending six years there. He is best remembered for his work with the blind, he was the organizer of the New England Asylum for the Blind (which became the Perkins Institution and Massachusetts Asylum for the Blind) and was head of it for 44 years in all. The remarkable success of the education of Laura BRIDGMAN, who was both blind and deaf, did much to improve education of the handicapped in the United States. He was chairman of the Massachusetts state board of charities from 1865 to 1874. He also supported Dorothea Dix in her work for the insane, sought to help the feeble-minded, approved the educational reforms of Horace Mann, and with his wife, Julia Ward Howe, opposed slavery. The troubles in Crete (1866–67) took him again to Greece toward the end of a long life spent in the service of others. His letters and journals have been published (1906–9).

Howe, William Howe, 5th Viscount, 1729–1814, British general in the American Revolution, younger brother of Admiral Richard Howe. He was educated at Eton and took up a military career. In the last French and Indian War he served with distinction at the capture of Louisburg and under Gen. James Wolfe in the fight for Quebec (1760). He took part in the Havana expedition of 1762. In 1775 he arrived at Boston with British reinforcements for Gen. Thomas GAGE, and he was a commander in the battle of Bunker Hill. He was knighted and succeeded Gage (Oct., 1775) as commander in chief. In 1776 he withdrew his men from besieged Boston to Halifax, then (May, 1776) came with his brother Richard to Staten Island. Negotiations for a peaceful settlement failed, and Howe led his British troops in the successful battle of Long Island, invested New York, and defeated the patriots at White Plains, gaining control over SE New York and much of New Jersey. In 1777 he did not take the part planned for him in the British strategy in the SARATOGA CAMPAIGN. Instead he launched a successful drive for Philadelphia, defeating Washington in the battle of BRANDYWINE. He later beat off a patriot attack on GERMANTOWN and held his position in Philadelphia, but again, as at New York, he could not wipe out the Continental forces. Charging that he was not properly supported by the home government, he resigned and in 1778 returned to England. His command in America was taken over by Sir Henry CLINTON. On his brother's death in 1799 Howe succeeded to the Irish title. See T. S. Anderson, *The Command of the Howe Brothers during the American Revolution* (1936).

Howell, Clark (hou'əl), 1863–1936, American editor, b. Barnwell Co., S.C., grad. Univ. of Georgia, 1883, son of Evan P. Howell. In 1884 he joined the staff of the Atlanta *Constitution*, succeeding his father as editor in chief in 1897. One of his editorial crusades, against municipal graft in Atlanta politics (1928–29), won the *Constitution* the Pulitzer Prize in journalism. Howell served in the lower house of the state legislature, from 1886 to 1891, becoming speaker in the last year, and in the state senate from 1900 to 1906, being president of that body the entire period. He was defeated by Hoke Smith for governor of Georgia in 1906. In 1892 he began a period of 32 consecutive years as a member of the Democratic National Committee. He was one of the earliest supporters of Franklin D. Roosevelt.

Howell, Evan Park, 1839–1905, American newspaper editor, b. Warsaw, Ga. He practiced law until 1876, when he purchased a half interest in, and became editor of, the Atlanta *Constitution*. He soon made this the leading newspaper of the South, continuing his editorship until 1897, when he was succeeded by his son, Clark Howell.

Howell, John Adams, 1840–1918, American naval officer and inventor, b. Bath, N.Y., grad. Annapolis, 1858. He served as a lieutenant throughout the Civil War, fighting under Admiral Farragut at Mobile Bay (1864). In the Spanish-American War he commanded a squadron of the North Atlantic Fleet and was promoted rear admiral in 1898. Howell originated the gyroscopic steering torpedo, invented a flywheel torpedo, and developed torpedo-launching apparatus.

Howell, William Henry, 1860–1945, American physiologist, b. Baltimore, Md., grad. Johns Hopkins (B.A., 1881, Ph.D., 1884). With the exception of four years during which he taught at the Univ. of Michigan and Harvard, he was at Johns Hopkins from 1888 until he became emeritus in 1931, he became a professor in 1893, dean of the medical faculty in 1899, and director of the school of hygiene in 1926. He formulated a widely accepted interpretation of blood clotting and demonstrated the existence of heparin and its function in preventing clotting. He also did research on the origin of red blood corpuscles and on the degeneration and regeneration of nerve fibers. He edited *An American Textbook of Physiology* (1896) and wrote *Textbook*

of Physiology (1905, 16th ed, ed by John F Fulton, 1949)

Howell, city (pop 3,748), co seat of Livingston co, S Mich, on Thompson Lake between Detroit and Lansing, settled 1834, inc as a village 1863, as a city 1915 It is a farm trade center in a dairy region Electric motors are made The main Indian Grand River Trail crossed this site

Howells, William Dean, 1837–1920, American novelist, editor, and critic, b Martins Ferry, Ohio He learned the printer's trade from his father, but early began to write and in 1858 became editor of the *Ohio State Journal* During five years in Venice as American consul (1861–65) he developed a literary gift apparent in the first of his many travel books *Venetian Life* (1866) Returning to the United States, he wrote for New York periodicals until, in 1866, he began an association of 15 years with the *Atlantic Monthly* the last seven as editor in chief In the *Atlantic* and later in the "Editor's Study" (1886–91) and the "Easy Chair" (1900 1920) of *Harper's Magazine* many of his best essays and criticisms directed his readers to appreciation of European realistic writers His first novel, *Their Wedding Journey* (1872), and several successors excited only polite admiration, but with *The Rise of Silas Lapham* (1885) he emerged as a leading and forceful writer of realistic fiction A considerable part of American life is recorded in his novels among which are *A Modern Instance* (1882), *Indian Summer* (1886), *A Hazard of New Fortunes* (1890), *The Quality of Mercy* (1892), *The Landlord at Lion's Head* (1897), and *The Leatherwood God* (1916) His humanitarian sympathies, which gave warmth to his work, showed as a kind of socialism in his utopian novels, *A Traveler from Altruria* (1894) and *Through the Eye of the Needle* (1907) In *Criticism and Fiction* (1891) he defended realism and his example and his encouragement of younger writers such as Hamlin Garland and Thorstein Veblen stimulated some of the outstanding achievements of later American letters Howells had a gift for writing light comedy and farce, among his plays were *A Counterfeit Presentment* (produced 1877) and a series of related one-act comedies beginning with *The Sleeping Car* (produced 1883) and *The Elevator* (produced 1885) Among his books of reminiscences are *A Boy's Town* (1890), *My Year in a Log Cabin* (1893), *Literary Friends and Acquaintances* (1900), *My Mark Twain* (1910), and *Years of My Youth* (1916) See *Life in Letters of William Dean Howells* (ed by his daughter, Mildred Howells, 2 vols, 1928)

Howel the Good see HYWEL DDA

Howison, George Holmes (hou'ĭsun), 1834–1916, American philosopher, b Montgomery co, Md, grad Marietta College, 1852, and Lane Theological Seminary, 1855 He taught philosophy in a number of American universities and from 1884 until his retirement in 1909 was head of the philosophy department at the Univ of California An idealist, he was opposed to monism and saw God as the uniting factor of dissimilar creations bound to each other by a common purpose His major work was *The Limits of Evolution* (1901) See selection from his writings ed by J W Buckham and G M Stratton (with biographical sketch, 1934)

Howitt, William, 1792–1879, English author His works, very popular in his day, include *The Book of the Seasons* (1831) and *A Boy's Adventures in the Wilds of Australia* (1854), written after a journey to that country In collaboration with his wife, **Mary (Botham) Howitt**, 1799–1888, he wrote *The Forest Minstrels and Other Poems* (1823), *The Literature and Romance of Northern Europe* (1852), and many other volumes Mary Howitt translated Scandinavian works and wrote many books for children Of her novels, *The Heir of Wast-Wayland* (1847) is best remembered See her autobiography (ed by her daughter Margaret Howitt, 1889)

howitzer (hou'ĭtsur), artillery piece of medium length, longer than a mortar It operates with a high angle of fire and, when mounted on wheels, is most useful in the field because of its relatively light weight (and consequent great mobility) and its relatively long range of fire Howitzers first attracted notice in the Russo-Japanese War and were used extensively in the First World War and the Second World War

Howland (hou'lund), town (pop 1,189), central Maine, at the confluence of the Piscataquis with the Penobscot river N of Bangor inc 1826

Howland Island (hou'lund), central Pacific near the equator, c 1,620 mi SW of Honolulu The island (area 1 sq mi) was discovered (1842) by American traders and claimed (1857) by the United States with JARVIS ISLAND and BAKER ISLAND All three islands were worked for guano by American companies under certificates issued (1860–61) by the Secretary of State British guano companies also operated in the islands The U S Supreme Court held that the U S certificates amounted to a claim of sovereignty by the United States The guano industry declined, and the islands were forgotten until the development of air commerce in the Pacific gave them new importance American colonists were brought (1935) from Hawaii, and the island was placed (1936) under the Dept of the Interior Amelia Earhart on her round-the-world flight was lost (1937) en route to the newly completed airfield Howland is on the direct route between Honolulu and Australia

Howrah (hou'ra), city (pop 379,292), S West Bengal prov, India, on the Hooghly river opposite Calcutta A great industrial center, its principal manufactures are cotton cloth, jute products, steel products, and glass

Howth (houdh, hōth), part (since 1940) of Dublin, Co Dublin, Ireland, on the Irish Sea It is on a peninsula at the foot of the Hill of Howth and is a summer resort for Dublin and a port for fishing boats and yachts

Hoxie, Robert Franklin (hŏk'sē), 1868–1916, American economist, b Edmeston, W of Cooperstown, N Y, Ph D Univ of Chicago, 1905 He taught at the Univ of Chicago from 1906 to 1916 A realistic interpreter of the changing economic system in America, he was noted especially for his work in labor history As special investigator (1914–15) for the U S Commission on Industrial Relations he produced *Scientific Management and Labor* (1915) His *Trade Unionism in the United States* (ed by L B Hoxie and Nathan Fine, 1917, 2d ed, 1933), though incomplete, is important

Hoxie, Vinnie Ream, 1847–1914, American sculptor, b Madison, Wis, studied in Paris and Rome Her works in Washington, D C, are *Sequoyah* (Statuary Hall) and statues of Lincoln (rotunda of Capitol), Farragut (Farragut Square), and Gov Samuel Kirkwood all government commissions She married Gen R L Hoxie in 1878

Hoxie, railroad town (pop 1,466), NE Ark, near the Black River, in a farm area, settled 1879.

Hoy, island (pop 955), 13 mi long and 6 mi wide, off N Scotland, second in size of the Orkney Islands It is SW of Pomona Long Hope, on the south, forms an excellent natural harbor The island is very hilly (Ward Hill, 1,564 ft, is highest), with magnificent cliffs along the shore The Old Man of Hoy is a conspicuous detached pinnacle of sandstone, 450 ft high Dwarfie Stone a great sandstone block in which a cave is hollowed out, is an object of Scandinavian folk stories

hoya, any plant of the genus *Hoya*, tropical climbing shrubs, one species of which, cultivated as a pot plant, is known also as wax plant (*Hoya carnosa*) It has thick glossy leaves and waxy fragrant flowers, white and pink

Hoylake, urban district (1931 pop 16 641, 1943 estimated pop 24,454), Cheshire, England, at the mouth of the Dee and W of Birkenhead It is a seaside resort and includes West Kirby The golf links here are the scene of the Oxford-Cambridge contest and other golfing events, and there is a race course

Hoyle, Edmond (hoil), 1672–1769, English writer on games, b London He codified the rules of whist in his book *A Short Treatise on the Game of Whist* (1742), and in successive editions of the book he added new material on whist together with treatises on quadrille, piquet, and backgammon He wrote several other books, and "according to Hoyle" came to mean the definitive word on games

Hoyt, John Wesley, 1831–1912, American educator, b Worthington, Ohio, grad Ohio Wesleyan Univ, 1849 In Madison, Wis, he published the *Wisconsin Farmer and Northwestern Cultivator* A founder of the Republican party and first president of the Wisconsin Academy of Sciences, Arts, and Letters, he sponsored the establishment of the state agricultural college in a reorganization of the state university From 1878 to 1882 he was governor of Wyoming Territory and from 1887 to 1890 served as first president of the Univ of Wyoming He devoted his later years to the promotion of a national university

Hrabanus Maurus see RABANUS MAURUS MAGNENTIUS

Hradec Kralove, Czech *Hradec Králové* (hra'dĕts krá'lôvĕ), Ger *Königgrätz* (kö'nĭkgrāts), city (pop 19,242), E Bohemia, Czechoslovakia, on the Elbe It has varied manufactures Though essentially a modern city, it has an early Gothic cathedral (1303) The battle of SADOWA (1866), also called the battle of Koniggrätz, was fought in the vicinity.

Hrdlicka, Ales (h'lĕsh hûrd'lĭchkà), 1869–1943, American anthropologist, b Bohemia He received his medical education in America In 1903 he began to organize the division of physical anthropology at the U S National Museum in Washington and was its curator after 1910 Anthropological investigations took him to nearly every country of the Western Hemisphere and won for him an international reputation in his field His work on the supposed migration tracks of the American Indian in Siberia and Alaska commanded much attention His books include *Physical Anthropology* (1919), *Anthropometry* (1920), *Old Americans* (1925), *Skeletal Remains of Early Man* (1930), *Children Who Run on all Fours* (1931), and *Alaska Diary, 1926–1931* (1943)

Hroswitha (rôs-wĭ'thù, rôsvē'ta), c 940–c 1002, German Latin poet, a nun of Gandersheim, a Benedictine abbey much favored by the imperial family of the period Her works comprise eight poems, two on the Bible, six on saints' lives, written in hexameters, with a charming naïveté and a genuine piety, two poems in the epic manner, one glorifying Otto I (part of this has been lost), the other an account of the founding of her abbey; her most striking works, the six plays designed to supplant Terence, because of his immorality, all telling the story of Christian virtue triumphant and most of them ending with a martyrdom The comic element is rare in her dramas, but Hroswitha shows considerable power in characterization Scholars disagree as to whether or not they were intended for presentation See Rosamond Gilder, *Enter the Actress* (1931), Karl Young, *The Drama of the Medieval Church* (1933) Variant spellings of her name are Roswitha, Hrosvit, and Hrotswitha

Hs- For some Chinese names beginning thus, see S-, e g, for HSI, see SI

Hsia (shyä), dynasty of China, which ruled, according to traditional dates, from c 2205 to c 1766 B C or, according to some modern scholars, from c 1994 to c 1523 B C This earliest and semilegendary dynasty may have been founded by Yü, first in a series of rulers of city-states in modern Shansi Legends say he built canals to control a flood and divided the reclaimed land Scanty archaeological remains suggest that the people had domestic animals (the ox or water buffalo, the goat, the sheep, and the horse), wheat and millet, the potter's wheel, bronze weapons, and war chariots

Hsinking, China see CHANGCHUN

Hsüan-tsang (shü'ăn'-tsäng) or **Hiouentang**, 600?–664, Chinese Buddhist Between 629 and 645 he made a pilgrimage to the scholarly centers of India and collected religious literature and relics On his return to China he translated the Buddhist scriptures and wrote his memoirs See his *Buddhist Records of the Western World* (Eng tr by Samuel Beal, 1884)

Hsüan T'ung see PU YI

Huambo (wäm'bō), officially **Nova Lisboa** (nô'vu lĕzhbô'u), town (pop c 2,500), W central Angola, on a high plateau It is on the transcontinental railroad from Benguela (in Angola) to Beira (in Mozambique) A decision, in 1927, to move the capital here from Luanda was never made effective

huanaco see GUANACO

Huancayo (wän-kī'ō), city (pop 28,679), capital of Junín, S central Peru With a predominantly Indian population, Huancayo (alt c 11,000 ft) is one of the major agricultural centers of the republic In the region nearly half of Peru's wheat is raised, it is shipped by rail north to the barren mining country around Cerro de Pasco and west to Lima, the capital Huancayo is noted for its picturesque colonial architecture

Huarás or **Huaraz** (bothꝫ wärās'), city (pop 12,009), W central Peru In a high valley, Huarás (alt c 9,900 ft) has a predominantly Indian population and is the center of an agricultural district raising grains and potatoes Some minerals (silver, cinnabar, and coal) are mined A superb backdrop is the peak, HUASCARÁN Although it has been damaged by earthquakes, Huarás suffered its worst catastrophe in 1941 when an avalanche of mud and water wiped out a large section and killed many inhabitants

Huáscar (wäs'kär), d 1533, Inca of Peru, son of HUAYNA CAPAC At his father's death (1525) he had to share the empire with his younger half brother, ATAHUALPA Shortly before the beginning of the Spanish Conquest under Francisco Pizarro, Atahualpa rebelled successfully and later secretly ordered Huáscar drowned

Huascarán (wäskärän'), extinct volcano, 22,205 ft high, W central Peru, near Huarás Highest mountain in Peru and one of the highest in the Andes, Huascarán and other near-by peaks form an impressive snow-capped rampart

Huastec (wäs'tĕk), Indians of the PÁNUCO river basin, E Mexico They speak a Mayan language, but are isolated from the rest of the Mayan stock, from whom they may have been separated by a Totonaco-Zoquesan wedge prior to the Christian era Their culture did not develop along with that of the Maya They remained on the outer fringes of later civilizations of the central plateau, notably the Aztec Huastecan music and dancing has influenced some of the musical folklore of Mexico

Huayna Capac (wī'nu kŏn'pak), d 1525, Inca of Peru, last of the great emperors The Inca empire reached its greatest extent and power under him, but actually disruptive forces were already at work Their action was hastened by Huayna Capac's decision to divide the empire by leaving the recently conquered kingdom of Quito to his favorite son, ATAHUALPA, and the rest to the legitimate heir, HUÁSCAR War between the brothers had just ended when Francisco Pizarro began his conquest

Hubbard, Bernard Rosecrans (hŭ'burd), 1888–, priest, scientist, and explorer, b San Francisco, grad Jesuit Novitiate, Los Gatos, Calif (B A, 1913) and Gonzaga Univ (M A., 1921) and studied at the Univ of Innsbruck, Austria (1921–25). He is known as the "glacier priest" and has headed the geology department of the Univ of Santa Clara since 1926 In his annual expeditions to Alaska (1926–43) he made studies in geology, meteorology,

oceanography, ethnology, ichthyology, and anthropology During the Second World War he was adviser to the armed forces in Alaska He is noted as a lecturer, for his series of educational and theatrical shorts, for the feature film *Aniakchak*, and for his books, *Mush, You Malemutes!* (1932) and *Cradle of the Storms* (1935).

Hubbard, Elbert, 1856–1915, American author, who called himself Fra Elbertus, b Bloomington, Ill Influenced by some of William Morris's ideas, he established (1895) the Roycroft Shops at East Aurora, N Y Here various handicraft products were made and sold, and here he established a printing press and bookbindery His small magazine, the *Philistine*, carried his ideas to thousands, and his *Little Journeys* to the homes of various famous men were very popular. His *Message to Garcia* (1899), an inspirational piece on efficiency and determination based on a feat of A. S Rowan, was widely read and quoted Hubbard and his wife went down with the *Lusitania* See biographies by his sister, M H Heath (1930), and by D A Balch (1940)

Hubbard, Frank McKinney, 1868–1930, American humorist, b Bellefontaine, Ohio He worked (1891–1930) on the Indianapolis *News*, where, as Kin Hubbard, he created the famous character Abe Martin. Syndicated, these caricatures and sayings won him nation-wide fame See *Abe Martin's Wisecracks* (ed by E. V Lucas, 1930)

Hubbard, Gurdon Saltonstall, 1802–86, American fur trader and Chicago business pioneer, b Windsor, Vt. He came to Illinois as an employee of the American Fur Company, rose to be a trader, and prospered. He came to believe in the future of Chicago, was a pioneer in the livestock and meat-packing business, helped to establish lake traffic to and from Chicago, and helped to promote the Illinois and Michigan canal and later the railroads He also was an early banker and insurance broker Thus he had a hand in developing most of the major industries that were to make Chicago great See his autobiography (1877).

Hubbard 1 Industrial village (pop 4,189), NE Ohio, NE of Youngstown near the Pa line, settled 1804, inc 1869 Steel and metal products are made here 2 City (pop 1,871), N central Texas, NNE of Waco, in a blackland farming region

Hubbardston, agricultural town (pop 1,022), central Mass, SW of Fitchburg, settled 1737, inc 1767 Jonas G Clark was born here Wachusett Mt is near by

Hubbardton, town (pop 346), W Vt, NW of Rutland, near Lake Bomoseen, granted 1764, settled 1777, resettled 1783, organized 1785 Near Hubbardton, Continental troops under Seth WARNER, covering St Clair's retreat from Ticonderoga, were surprised and routed (July 7, 1777) by the British A monument (1859) commemorates the battle

Hubbell, Carl Owen, 1903–, American baseball player, b Carthage, Mo Reared in Oklahoma, Hubbell, a left-hander, was a pitcher in the Oklahoma State League for two years He tried out (1926–27) with the Detroit Tigers of the American League and after a short stay (1928) in the Texas League appeared with the New York Giants of the National League Hubbell, famous for his adept use of his "screwball" pitch, hurled brilliantly in the 1934 All-Star game, pitched 24 consecutive victories in the 1936–37 seasons, and won 253 games before he retired from active play with the Giants in 1943 "The Meal Ticket", as he was called by his fans, then became (1943) the director of the Giants' farm system

Hubble, Edwin Powell, 1889–, American astronomer, b Marshfield, Mo, grad Univ of Chicago, 1910, Rhodes scholar, 1910–13 He did research (1914–17) at Yerkes Observatory, Williams Bay, Wis, and joined (1919) the staff of Mt Wilson Observatory, Pasadena, Calif, of which he became director His systematic investigation of extragalactic nebulae won him great honor Included in his writings are *A General Study of Diffuse Galactic Nebulae* (1926), *Extra-Galactic Nebulae* (1927), *Spiral Nebula as a Stellar System* (1929), *The Realm of Nebulae* (1936), and *The Observational Approach to Cosmology* (1937)

Hubert, Saint (hu'-), d c 728, Frankish bishop of Liége His chief shrine was in the Ardennes, and he was popular also in S Germany and N France He is patron of the hunt and is invoked against hydrophobia Symbol a stag's head surmounted by a crucifix Feast Nov 3

Hubert de Burgh (dŭ bûrg'), d 1243, chief justiciar of England under John and Henry III Shakspere's story in *King John* concerning Hubert's custody of ARTHUR I is probably inaccurate Prior to 1215 when he became justiciar, he had served successfully as a royal minister and commander in France In 1217 he commanded the small English fleet whose victory over the French supporters of Prince Louis (later Louis VIII of France) was partially responsible for the withdrawal of the invading French forces from England. The death of the regent of Henry III left the justiciar the logical ruler. His administration temporarily strengthened the position of the crown against the unruly barons. After 1227, when Henry was declared of age, trouble between Hubert and the king increased The foreign favorites of Henry, particularly Peter des Roches, opposed Hubert Hubert tried to prevent the king's disastrous expedition to France (1230), he also apparently joined in the widespread English movement to resist the drain of money to the papacy In 1232, when he was deprived of office on charges of disloyalty to the crown, he submitted to the king's will and was imprisoned He eventually became reconciled with Henry and successfully withstood a revival of the old charges in 1239

Hubertusburg, Peace of (hōōbĕr'tōōsbōōrk), 1763, treaty between Austria and Prussia, at the end of the Seven Years War. It was signed at Hubertusburg, Saxony, a castle then used as a hunting seat by the electors of Saxony Prussia retained possession of Silesia and emerged as the leading power in Germany Saxony, included in the peace, was restored to its pre-war limits

Hubli (hōō'blē), town (pop 95,512), S Bombay prov, India It is built around an 11th-century Hindu stone temple Cotton cloth is woven

Hübner, Julius (yōō'lvōōs hüb'nur), 1806–82, German painter He painted chiefly biblical themes, working first at Düsseldorf and later (from 1839) in Dresden, where he taught in the academy and served as director of the Royal Gallery His well-known works include *Ruth and Naomi*, *Job and His Friends*, and *Christ and the Evangelists*.

Hübner, Karl Wilhelm (kärl' vĭl'hĕlm), 1814–79, German genre painter Many of his works dealt with the social problems and injustices of his age Among them are *Silesian Weavers*, *Rescue from Fire*, and *The Seizure for Debt* The Pennsylvania Academy of the Fine Arts has *The Recovery*

Huc, Évariste Régis (āvarĕst' rāzhēs' uk), 1813–60, French Catholic missionary and explorer, a Lazarist priest In 1844 while in China on a mission, he and two companions began an overland trip from Peiping to Tibet After enduring great hardships in the mountains, they reached Lhassa in 1846, but were promptly expelled for fear they would proselytize Huc's account of his travels, first published in 1850, appeared in an abridged translation by Julie Bedier entitled *High Road to Tartary* (1948)

Hucbald (hūk'bôld), b c 840, d 930 or 932, Flemish monk and musical theorist, formerly thought to be the author of the *Musica enchiriadis* (see POLYPHONY) He described the musical practices of his day and was of some importance as a reformer.

Huch, Ricarda (rēkär'da hōokh'), 1864–1947, German novelist, Ph D Univ of Zurich, 1892 She is best known for her historical romances of Garibaldi, *Defeat* and *Victory* (1906–7, Eng trs, 1928, 1929), and of the Thirty Years War, *Der grosse Krieg in Deutschland* [the great war in Germany] (1912–14) Other works are the novels *Recollections of Ludolf Ursleu* (1893; Eng tr, 1913–15) and *The Deruga Trial* (1918, Eng tr, 1929), the historical study *Die Blutezeit der Romantik* [the blossoming of romanticism] (1899), and a history of the Reformation (1937) She was given a state funeral

Huchow, China see WUHING.

huckleberry, any plant of the genus *Gaylussacia*, shrubs of the heath family native to North and South America The box huckleberry of E North America is evergreen and is often cultivated The common huckleberry (*Gaylussacia baccata*), native E of the Mississippi and called black or high-bush huckleberry, is the best known and is valued for its edible blue or black fruit It and similar species are often confused with the BLUEBERRY (the names sometimes being used interchangeably), but huckleberries have 10 nutlets in the fruit as compared to a larger number of tiny seeds in the blueberry Huckleberries for the market are nearly always gathered from the wild Whortleberry is a name sometimes used for huckleberries, more frequently for blueberries For the florists' huckleberry, see BLUEBERRY

Hucknall (hŭk'nul), urban district (1931 pop 17,338; 1943 estimated pop 19,980), Nottinghamshire, England, N of Nottingham It has coal mines and hosiery manufacture Lord Byron is buried in the parish church

Huddersfield, county borough (1931 pop 113,475, 1947 estimated pop 125,490), West Riding of Yorkshire, England, on the Colne and SW of Leeds Its textile industry, including cotton, woolen, and silk goods, is important Other manufactures are machinery, chemicals, and dyes The proximity of coal and good transportation facilities by river, canal, and rail have contributed to development of the town The Church of St Peter (c 1100) was rebuilt in 1836

Hudibras. see BUTLER, SAMUEL (1612–80)

Hudson, Henry, fl 1607–11, English navigator and explorer He was hired (1607) by the English Muscovy Company to find the Northeast Passage to the Orient He failed, and another attempt (1608) to find a new route was also fruitless Engaged (1609) for the same purpose by the Dutch East India Company, he sailed in the *Half Moon* to Spitsbergen, where extreme ice and cold brought his crew near mutiny Hudson, determined not to lose his reputation as an explorer, disregarded his instructions and sailed westward hoping to find the NORTHWEST PASSAGE He entered Chesapeake Bay, Delaware Bay, and later New York Bay He was first to ascend (1609) what is now the Hudson river (named for him), nearly to present Albany His voyage gave the Dutch their claim to the region His fourth expedition (1610), financed by English adventurers, started from England Again he sailed westward, hoping to find the Northwest Passage Between Greenland and Labrador he entered a strait (Hudson Strait), possibly known to Sebastian CABOT, and by it reached Hudson Bay After weeks of exploration, he was forced by ice to winter there By the next summer (1611) his starved and diseased crew mutinied and set Hudson, with his son and seven men, adrift in a small boat, without food or water He was never seen again His discoveries, however, gave England her claim to the Hudson Bay region. See biography by Llewelyn Powys (1927)

Hudson, Henry Norman, 1814–86, American essayist, b Cornwall, Vt, grad Middlebury College, 1840 He was Episcopal rector at Litchfield, Conn, before the Civil War and in the war served as chaplain with Gen B F Butler He arraigned Butler in *A Chaplain's Campaigns with General Butler* (1865) He was also a noted Shaksperian scholar

Hudson, Manley Ottmer, 1886–, American jurist, b St Peters, Mo, grad William Jewell College (B A, 1906), and Harvard Law School, 1910 He was professor of law at the Univ of Missouri (1910–19) and at Harvard (1919–23) A specialist in international law, Hudson was attached (1918–19) to the U S Dept of State and was present at the Paris Peace Conference He took an active part in the affairs of the League of Nations and served as justice on the Permanent Court of Arbitration (1933–45) and on the Permanent Court of International Justice (1936–46) He was the author of *By Pacific Means* (1935) and *International Tribunals* (1944)

Hudson, William Henry, 1841–1922, English author and naturalist, b Buenos Aires of American parents and naturalized in England He wrote *The Purple Land* (1885), *A Naturalist in La Plata* (1892), *El Ombú* (1902), a fine short story, *Hampshire Days* (1903), *Green Mansions* (1904), a classic romance, *Far Away and Long Ago* (1918), *A Hind in Richmond Park* (1922), and other works A sensitive and intense observer of nature, he describes South America with great force and beauty See studies and biographies by Ernest Rhys (1920), Morley Roberts (1924), and Robert Hamilton (1946), bibliography by G F Wilson (1922)

Hudson. 1 Industrial town (pop 8,042), E Mass, NE of Worcester, settled 1699, set off from Marlboro and Stow 1866 Shoes and textiles are the chief products 2 City (pop 2,426), S Mich, on the Tiffin river and SW of Ann Arbor, in a farm area, settled 1834, inc as a village 1853, as a city 1893 It has varied manufactures Indian mounds are near by Will Carleton was born here 3 Town (pop 3,409), S N H, on the Merrimack opposite Nashua, inc 1722 4 City (pop 11,517), co seat of Columbia co, E N Y, on the east bank of the Hudson and S of Albany, settled 1662 as Claverack Landing, inc 1785 The Rip Van Winkle Bridge connects Hudson with Catskill Cement and matches are among its products A state training school for girls is here 5 Village (pop 1,417), NE Ohio, SE of Cleveland, settled 1799, inc 1837 Settled by New Englanders, it still retains the appearance of a New England village. It is the seat of Western Reserve Academy (1826), a boys' preparatory school, which has the oldest observatory (Loomis) in the West John Brown lived here as a boy 6 City (pop 2,987), co seat of St Croix co, W Wis, on the St Croix and E of St Paul, Minn, inc 1856 It was a lumber center in the 1860s. There are railroad shops, and furniture is made

Hudson, river, c 315 mi long, rising in NE New York in Lake Tear of the Clouds, near Mt Marcy in the Adirondacks, and flowing generally S to Upper New York Bay at New York city One of the important waterways of the world, the river is tidal to Albany and navigable for ocean vessels to that point, Troy lies at the head of a 12-foot channel Divisions of the NEW YORK STATE BARGE CANAL connect the Hudson with the Great Lakes and with Lake Champlain and the St Lawrence river The port region near the Hudson's mouth is called the North River and in the New York city metropolitan area attains a width of 4,400 ft. Here for c 17 mi the river is the boundary between New York and New Jersey, and the two states are connected by the GEORGE WASHINGTON BRIDGE, the Holland and Lincoln vehicular tunnels, tubes carrying the subway, a railroad tunnel, and ferries To the north the river widens into the TAPPAN ZEE On the west bank the bluffs known as the PALISADES stretch northward from New Jersey and contribute to the reputation of the Hudson as one of the most beautiful of the world's rivers The scenic Storm King Highway passes near the

U S Military Academy at West Point, overlooking the river Northward the Catskill Mts descend to the Hudson valley On the east bank the Roosevelt home at Hyde Park and other fine estates command views of the river In its early course are falls which yield water power The Mohawk is the main tributary Cities along the Hudson are Cohoes, Troy, Albany, Hudson, Kingston, Poughkeepsie, Newburgh, Peekskill, Yonkers, New York, and, in New Jersey, Weehawken, Hoboken, and Jersey City First explored by Henry Hudson in 1609 and long of strategic importance to the Indians, the river became a valuable highway for fur traders and the Dutch and English settlers Innumerable historical events, many stories and legends, and a well-known school of painting are associated with the Hudson See Carl Carmer, *The Hudson* (1939), Croswell Bowen, *Great River of the Mountains, the Hudson* (1941).

Hudson Bay, great inland sea, c 850 mi. long and c.650 mi wide, area 478,000 sq mi, E central Canada Possibly discovered by Norse explorers in the 16th cent, it was explored and named (1610) by Henry Hudson in his search for the Northwest Passage It lies generally SE of the Northwest Territories, to which the bay and all its islands belong, and is bounded on the southwest by Manitoba and Ontario, on the east by Quebec To the northeast FOXE CHANNEL, between E Northwest Territories and Baffin Island, leads into Hudson Strait, c 450 mi long and c 100 mi wide, connecting with the Atlantic At the northern end of the bay are Mansel, Coats, Southampton, Nottingham, and Salisbury islands, and the Ottawa and Belcher island groups are off the east coast, which is barren and rocky The west coast is low lying, with much tundra The region was a rich source of furs, and France and England struggled for its possession until 1713, when France ceded her claim to it by the Peace of Utrecht Many large rivers drain into the bay, including the Churchill, Nelson, Albany, Abitibi, Rupert, and Fort George, and at their mouths are important fur-trading posts of the Hudson's Bay Company, some of which have been operated continuously since 1670 The bay is ice free and open to navigation from mid-July to October Since completion of the Hudson Bay Railway in 1929, Churchill, Man, on the west coast has become a port for ocean-going freighters Whaling and cod and salmon fisheries are important industries See L R Freeman, *Nearing North* (1928), J B Tyrrell, ed, *Early History of Hudson Bay* (1931), R H H Macaulay, *Trading into Hudson's Bay* (1934), H D Carter, *Sea of Destiny* (1940), A C Twomey and Nigel Herrick, *Needle to the North* (1942)

Hudson Bay Railway, part of the Canadian National Railways system, 510 mi long, extending from The Pas, Man, to Churchill, Man., on the west coast of Hudson Bay Built (1910–29) by the Canadian government through rocky wilderness and tundra, it was designed to reduce rail and sea rates from the grain-producing provinces to Liverpool From its opening in 1931 it has handled a considerable volume of freight, in spite of the shortness of the navigation season in Hudson Bay

Hudson Falls, village (pop 6,654), co seat of Washington co, E N Y, on the Hudson and near Glens Falls, settled 1761, inc 1810 Papermaking is its chief industry

Hudson River school, in American landscape painting, lasting from 1825 to 1875 The 19th-century romantic movements of England, Germany, and France were introduced to the United States by such writers as Washington Irving and James Fenimore Cooper, at the same time American painters studied in Rome and absorbed some of the romantic ideals of the European painters This admiration of the Gothic in nature and art became the basis of the first school of landscapes in America The grandeur of Niagara Falls and the scenic beauty of the valley of the Hudson river, the Catskills, and the White Mts especially attracted painters The first quarter of the 19th cent produced a few landscapes, but portraits were more in demand. Francis Guy was perhaps the first native landscape artist. First of the group of artists properly classified with the Hudson River school was Thomas Doughty; his work was more gentle than the pictures of the succeeding artists, who were, however, highly influenced by him Thomas Cole may be said to be the leader of the school in its most active years Other painters in the group were Asher Brown Durand, John Frederick Kensett, Frederick Edwin Church, and, in his earlier work, George Inness

Hudson's Bay Company. In 1668 a number of the courtiers at the court of Charles II of England were persuaded, chiefly through the urgings of the French explorer Radisson, to join with London merchants in outfitting an expedition to open fur trade with the Indians of the little-known Hudson Bay region in North America. Another object was the discovery of the Northwest Passage to the Orient The expedition was more or less directed by Radisson and Groseilliers, the men whose exploits still remain one of the most perplexing problems to students of early exploration. A fort was established at the foot of James Bay—Fort Charles, which later, as Fort Rupert, was to be one of the principal posts of the country The returns from the Indian trade were large, and on the return of one of the vessels to England about Oct, 1669, Prince Rupert and the other shareholders appealed to the king for a charter A preliminary charter seems to have been granted that year, but it was not until 1670 that the much-discussed permanent charter was granted to these "Gentlemen Adventurers trading into Hudson's Bay" It conferred on them not only a trading monopoly but practically sovereign rights in the region drained by rivers flowing into Hudson Bay The extent of this vast region was not then known, nor was it fully known for about a century The monopoly was not respected by other English traders The "Great Company" did a highly profitable business, but Hudson Bay was claimed also by the French, who sent expeditions against the posts that were soon established near the mouths of the Moose, Albany, Severn, and Nelson rivers. Warfare went on, almost regardless of the peace or war between the two nations in Europe until after the Peace of Utrecht (1713–14) The French on the whole were more successful than the British in the taking and retaking of the posts, but ultimately all of Hudson Bay was recognized as British territory Rivalry, however, continued between the French traders from Montreal and Quebec and the Hudson's Bay men. The "Great Company" was content to remain at its seaboard posts and made little effort either to send traders inland or to search out the Northwest Passage The only notable early voyages made westward that are known today were those of Henry Kelsey, the disastrous attempt of James Knight in 1719 to find by sea the Northwest Passage and fabulous gold mines, the expeditions of Anthony Hendry (1754), and the journey of Samuel Hearne across the barren grounds to the mouth of the Coppermine in 1771, which definitely proved that there was no short Northwest Passage out of Hudson Bay The company was harshly criticized in the middle of the 18th cent, chiefly on the ground of its failure to discover the Northwest Passage With the transference of Canada from France to England by the Treaty of Paris in 1763, a new opposition to the company in the lands nominally held in monopoly developed Scotsmen had assumed a large role in the Montreal fur trade, and their wintering partners prosecuted the trade vigorously, cutting into the declining returns of the Hudson's Bay Company Out of the combinations of these Montreal merchants grew the NORTH WEST COMPANY, which was to be the chief rival of the older company The Hudson's Bay men were stirred out of their lethargy Samuel Hearne founded Cumberland House on the Saskatchewan in 1774, and thereafter the Hudson's Bay Company took a greater interest in the West Other difficulties stood in the way of the company. In 1782 a French naval expedition took Fort Prince of Wales, on the Churchill, one of the most important company posts It was returned and became Fort Churchill, but trade there and at York Factory, the other great eastern post, declined Brisk rivalry with the Northwesters in the West did not turn to the advantage of the Hudson's Bay Company. The company policy apparently did not encourage exploration, thus the great geographer, David THOMPSON, left it to join the Northwesters The competition continued The whole policy and nature of Hudson's Bay Company was altered when the earl of SELKIRK gained control after 1808. His scheme to colonize Scottish and Irish farmers on company land led to one of the darkest chapters in Canadian history, the RED RIVER SETTLEMENT trouble, which brought disaster to the company The ruinous and bloody rivalry was brought to an end by the amalgamation of the companies in 1821 The name of the older company was retained The amalgamation marked the beginning of a period of true monopoly The company virtually had absolute rule over a vast territory that extended from the Atlantic to the Pacific, for all of Canada except the eastern settled provinces were leased to the company Parts of the United States, especially the Columbia river country, were subject to joint and American occupancy, but virtually were under the company rule The name of John MCLOUGHLIN, who acted as administrator there, is well known in U S history The company reorganized and flourished. The governorship (1821–60) of Sir George SIMPSON marked the peak of the company's fortunes In 1863 the stock of the company was bought up and reissued by the International Financial Society The stock passed from a few to many holders. This internal reorganization had a vast effect on the company It also was changed from without. Like any monopolistic corporation it had many and powerful enemies. In 1857 the company was subjected to a parliamentary investigation. Though the company trade privileges were renewed, its position was not secure. In 1869 the company territory was by governmental order transferred to Canada in return for £300,000. The nature of the company was thereafter entirely different. The trend was begun which was to eventuate in the company's becoming not a fur-trading organization but a gigantic corporation of almost innumerable interests. The sales of company lands brought in much money For many years (1889–1917) Lord STRATHCONA was governor It was after his death that the real expansion of the company into retail trade and manufacturing of all sorts took place, in the administrations of Sir Robert Molesworth Kindersley (1915–25) and Charles Vincent Sale (1926–30) In the First World War company ships were used as transports and the company rendered great services The business suffered in the economic depression Contrary to the advice of the governor (who thereupon resigned), the company in 1930 reached the decision to split the Canadian stores were segregated in a separate organization, the London portion being once more turned to the fur trade Partially because of the secrecy of the company concerning its records, partly because of the strong feeling for and against the company, there has been no adequate, impartial, scholarly, and well-considered history of the company in general See introductions to scholarly editions of trader's journals, such as those of the Champlain Society. See George Bryce, *The Remarkable History of the Hudson's Bay Company* (1900), Beckles Willson, *The Great Company* (1900), H A Innis, *The Fur Trade in Canada* (1930), R E Pinkerton, *The Hudson's Bay Company* (1931), Douglas MacKay, *The Honourable Company* (1936)

Hué (hwā), city (pop 40,000), Indo-China, capital of Annam, on the Hué river c 5 mi from the South China Sea The modern city is on the right bank of the river, on the left are the government buildings and the palace, surrounded by walls built in the 19th cent, and the elaborate royal tombs Probably founded by the Chinese in the 3d cent, Hué was occupied in turn by the Chams and Annamese After the 16th cent, it was the seat of a dynasty that extended its power over S Annam, modern Cochin China, and parts of Cambodia and Laos, in the 19th cent it became the capital of the empire of Annam

hue and cry, formerly, in English law, pursuit of a criminal immediately after he had committed a felony Whoever witnessed or discovered the crime was required to raise the hue and cry against the perpetrator (e g, call out "Stop, thief!") and to begin pursuit, all persons within hearing were under the same obligation, and it was a punishable offense not to join in the chase and capture The perpetrator was promptly brought into court, and if there was evidence of his having been caught red-handed, he was summarily convicted without being allowed to testify in his own behalf The hue and cry was abolished in the early 19th cent Possible modern survivals are the obligation to serve on a sheriff's posse and to assist a police officer in pursuing a suspected culprit

Huelva (wĕl'vä), city (pop 50,837), capital of Huelva prov, SW Spain, in Andalusia, on the Odiel river above its junction with the Río Tinto, c 10 mi from the Atlantic Its busy harbor exports copper and sulphur from the near-by region of RÍO TINTO Tuna and sardine fisheries are also important A Roman aqueduct, recently repaired, supplies the city with water

Huerta, Adolfo de la (ädōl'fō dā lä wĕr'tä), 1877?–, Mexican revolutionist and president (May–Dec, 1920) As governor of Sonora, he broke with President CARRANZA and declared the secession of the state (1920) This was a signal for the successful revolt against Carranza led by OBREGÓN and supported by CALLES After Carranza's assassination, De la Huerta was provisional president until Obregón took office by election, he was minister of finance under Obregón Upon the designation of Calles as official presidential candidate, De la Huerta revolted (Dec, 1923), the uprising was crushed by Obregón in the spring of 1924, and De la Huerta fled into exile

Huerta, Victoriano (vēktôryä'nō), 1854–1916, Mexican general and president (1913–14). He served under Porfirio DÍAZ After the successful revolution of MADERO (1911), he aided the new president in the fight against the many revolutions. In 1913, in command at Mexico city, he went over to the enemy and brought about the ruin of Madero Huerta established a reactionary rule Numerous counterrevolutions promptly appeared, the most important of the leaders in the field against him were CARRANZA, VILLA, and ZAPATA The uncompromisingly hostile attitude of President Woodrow Wilson of the United States resulted in unpleasant international incidents at Tampico and Veracruz An attempt by the ABC powers and the United States to bring some order in Mexico by a conference with the Huerta and Carranza factions at Niagara Falls, Canada, came to nothing But the steady pressure upon the government finally resulted in the resignation of Huerta (July, 1914) Not long afterward Carranza triumphed. Huerta went to Europe, returned to the United States, was arrested for revolutionary activities against Mexico along the border, and died when in the custody of the United States.

Huesca (wā'skä), city (pop. 16,943), capital of Huesca prov., NE Spain, in Aragon, at the foot of the Pyrenees It is an agricultural center In this ancient town Sertorius founded a school in 77 B C After Peter I of Aragon liberated it (1096) from the Moors, Huesca was the residence of the kings of Aragon until 1118 A university, later discontinued, was founded here in 1354 The fine Gothic cathedral (15th–16th cent) and the early Romanesque Church of San Pedro are the main landmarks

Hügel, Friedrich, Baron von (frē'drĭkh hărŏn' fŭn hü'gul), 1852–1925, British Roman Catholic philosopher, b Florence, son of an Austrian diplomat After his marriage (1873), Hügel lived in England Although he wrote only two books, *The Mystical Element of Religion as Studied in St Catherine of Genoa and Her Friends* (1908) and *Eternal Life* (1912), his influence on modern Catholicism through letters and essays has been profound Stressing always the value of inner sincerity, Hügel remained an independent thinker, believing in the moral responsibility of an individual and the obligation of the intellect to exercise will in examination and choice as well as the equal and interchangeable values of the natural and the supernatural life See his selected letters (ed by Bernard Holland, 1927), biography by Maurice Nedoncelle (Eng tr by Marjorie Vernon, 1937)

Hugenberg, Alfred (ăl'frĭăt hōō'gunbĕrk), 1865–, German financier and politician He was president of the directorate of the Krupp works at Essen (1909–18), entered the Reichstag in 1920, and was chairman (1928–33) of the monarchist party (the *Deutschnationale Volkspartei*) and a member of Hitler's first cabinet (Jan –June 1933) The Hugenberg combine, organized in 1916 and comprising newspapers, moving-picture companies, information services, and finance corporations, was gradually absorbed by the state after the Nazis came into power

Huggins, Sir William, 1824–1910, English astronomer Using a spectroscope, he began to study the chemical constitution of stars from the observatory attached to his home in Tulse Hill, London He also pioneered in spectroscopic photography and played a part in developing the combined use of telescope, spectroscope, and photographic negative He adapted the gelatin dry-plate negative for making astronomical photographs, this made possible exposures of any desired length A recipient of numerous high awards for his work, Huggins was president (1900 1906) of the Royal Society With his wife, Margaret Lindsay Murray, Lady Huggins, he prepared an *Atlas of Representative Stellar Spectra* (1899)

Hugh Capet (kā'pĭt, kă'pĭt), c 938–996, king of France (987–96), first of the CAPETIANS He was the son of HUGH THE GREAT, to whose territories he succeeded in 956 After the death of Louis V, last Carolingian king of France, the nobles elected him king, setting aside the last Carolingian claimant, Charles of Lower Lorraine In order to fix the succession, Hugh immediately took as his associate his son Robert (later Robert II) He spent much of his reign in fighting Charles and subsequently became involved in a controversy unsettled at his death—with the papacy over the deposition of the Carolingian archbishop of Rheims

Hughes, Ball see HUGHES, ROBERT BALL

Hughes, Charles Evans, 1862-1948, American lawyer, jurist, and statesman, U S Secretary of State (1921-25) and Chief Justice of the Supreme Court (1930-41), b Glens Falls, N Y , grad Brown (B A , 1881, M A , 1884) and Columbia School of Law, 1884 Admitted (1884) to the bar, he practiced in New York city while teaching law at Columbia (1884–93) and at the New York Law School (1893–1900) After Hughes served (1905) as counsel for a New York state legislative committee investigating gas companies, he achieved national prominence for his exposure of corrupt practices of insurance companies in New York as counsel (1905–6) for an investigating committee This led to his election (1906) as governor of New York, and at this post (1907–10) Hughes brought about the establishment of the public service commission, the passage of various insurance-law reforms, and the enactment of much labor legislation He was then appointed (1910) by President W H Taft as Associate Justice of the U S Supreme Court, but resigned in 1916 to run for President on the Republican party ticket The election was one of the closest contests in American history, Woodrow WILSON defeating Hughes by an electoral vote of 277 to 254 and a popular vote of 9,129,000 to 8,538,200 The vote of California, which went to Wilson by a majority 4,000 largely because of the disaffection of Hiram Johnson, decided the election. Hughes again devoted himself to his law practice As Secretary of State under Presidents Warren G Harding and Calvin Coolidge, Hughes prepared plans for the limitation of naval armaments at the Washington Conference (see NAVAL CONFERENCES), directed negotiations for several important foreign treaties, and vastly improved the prestige of the U S Dept. of State He afterwards served in the Permanent Court of Arbitration (1926–30) at The Hague, in the Permanent Court of International Justice (1928–30), and as chairman of the Pan American Congress at Havana in 1928 He was appointed (1930) Chief Justice of the U S Supreme Court by President Herbert Hoover to succeed William H Taft He retired in 1941 Many of his addresses were published in *The Pathway to Peace* (1925), *The Supreme Court of the United States* (1928), *Our Relations to the Nations of the Western Hemisphere* (1928), *Pan-American Peace Plans* (1929), and *Nations United for Peace* (1945)

Hughes, David Edward, 1831–1900, American inventor, b London He was brought to Virginia in 1838 In 1855 he patented an improved type-printing telegraph He took it in 1857 to Europe, where it was widely adopted In the United States his patent, together with that of an earlier (1844) model made by Royal Earl House (1814–95), was bought by the American Telephone Company and further improved Hughes also invented a microphone

Hughes, Howard Robard, 1869–1924, American inventor, b Lancaster, Mo He went into the oil industry and in 1908 invented the cone-shaped oil drill now in universal use He later patented many improvements in it and manufactured it at Houston, Texas

Hughes, John Ceiriog, 1833–87, Welsh lyric poet By restoring simplicity of diction and emotional sincerity, he did for Welsh poetry what Wordsworth and Coleridge did for English Many of his songs were written to folk airs and are sung throughout Wales by all classes

Hughes, John Joseph, 1797–1864, American Roman Catholic churchman, b Co Tyrone, Ireland He joined his family in America in 1817 and on graduating from Mt St Mary's College, Emmitsburg, Md , he was ordained (1826) a priest He served mostly in Philadelphia until 1838, when he was consecrated bishop and became coadjutor to Bishop John Dubois in New York In 1842 Hughes was made bishop, and in 1850 the first archbishop of New York He obtained for the Church complete control of its property by the clergy A resolute and ardent defender of Catholicism, he engaged in debates, worked actively on behalf of Irish immigrants, and strongly urged the obliteration of European national affiliations in American Catholicism His vigorous but unsuccessful attempt to secure state support for religious schools carried him into politics and led to the establishment of the independent Catholic school system In the Civil War Abraham Lincoln sent him to France to promote a friendly attitude toward the Union cause He founded (1841) St John's College (now Fordham Univ) and laid (1858) the cornerstone of St Patrick's Cathedral, New York city See his works (ed by Lawrence Kehoe, 1864), biography by J R G Hassard (1866)

Hughes, Langston (James Langston Hughes), 1902–, American Negro poet, b Joplin, Mo He lived a year in Mexico, studied at Columbia Univ , worked his way to Europe, and was a hotel busboy in Washington, D C , when Vachel Lindsay first read his poems before an audience (1925) The first volume of Hughes's poems, *The Weary Blues*, appeared in 1926 In 1929 he was graduated from Lincoln Univ , Pa His poetry, in *The Dream Keeper* (1932), *Shakespeare in Harlem* (1942) *Fields of Wonder* (1947), and *One-Way Ticket* (1949), largely concerns Negro life in America He has written plays, notably *Mulatto* (produced 1935), moving-picture scenarios, a novel, *Not Without Laughter* (1930), and short stories See his autobiography, to 1930, *The Big Sea* (1940)

Hughes, Robert Ball, 1806–68, American sculptor, b London He came to the United States c 1828 and settled in Dorchester, Mass His statue of Alexander Hamilton, one of the first carved in marble in the United States was destroyed by fire soon after completion The bronze statue of Nathaniel Bowditch in Mt Auburn Cemetery, Cambridge, Mass , was recast In Trinity Church, New York, is his relief of Bishop Hobart

Hughes, Rupert, 1872–, American author, b Lancaster, Mo , grad Adelbert College (later Western Reserve Univ), 1892, Ph D Yale, 1899 He is known for his *Music Lovers' Cyclopedia* (1914) and the monumental biography of George Washington (3 vols , 1926–30) Of his plays, the comedy *Excuse Me* was particularly successful

Hughes, Sir Samuel, 1853–1921, Canadian politician and soldier, b Ontario prov From 1892 until his death he was a Conservative member of the Canadian House of Commons As a member of the Canadian militia he saw service in the South African War, was promoted colonel in 1902, and came to be held in Parliament as an authority on military matters As minister of militia and defense (1911–16) for Canada in Sir Robert Borden's government, Hughes was charged with the responsibility for organizing and dispatching the Canadian Expeditionary Force in the First World War To this task he brought driving energy, but resentment of criticism and inability to work smoothly with his colleagues led to such difficulties that Borden requested Hughes's resignation in 1916 In 1915 he was knighted and in 1916 created lieutenant general. See biography by C. E. Winter (1931).

Hughes, Thomas, 1822–96. English author, educated at Rugby and Oxford He was associated with F D MAURICE in the Christian Socialist movement and in the conduct of the Working Men's College, of which Hughes was principal (1872–83) He was a warm friend of James Russell Lowell and three times visited America, where he founded in the Tennessee mountains a cooperative colony called Rugby He is best known as the author of the classic of school life, *Tom Brown's School Days* (1857), with its idealization of Dr Arnold of Rugby Among other books are *The Scouring of the White Horse* (1859) and *Tom Brown at Oxford* (1861)

Hughes, William Morris, 1864–, Australian statesman, b Wales He emigrated in 1884 and after a varied career entered the New South Wales legislature (1894) and the first federal Parliament (1901) In 1904 he became minister for external affairs in the first Labour government and later was attorney general (1908–9, 1910–13, 1914–21) As prime minister of the commonwealth (1915–23), he gave great support to the empire throughout the First World War and upheld the position of Australia at the Paris Peace Conference He held many important government positions after that time and was (1940–41) minister of the navy. His writings include such works as *Splendid Adventure a Review of Empire Relations* (1929), *Australia and War Today* (1935), and *Crusts and Crusades* (1946) See Douglas Sladen, *From Boundary-Rider to Prime Minister* (1916)

Hughes, cotton town (pop 1,004), E Ark , SW of Memphis, Tenn , founded 1913

Hughestown, borough (pop 2,340), Luzerne co , NE Pa , near Wilkes-Barre, inc 1879

Hughesville, borough (pop 1,947), NE Pa , E of Williamsport, laid out 1816, inc 1852 It has furniture factories

Hugh le Despenser see DESPENSER, HUGH LE

Hugh of Lincoln, Saint, d 1200, bishop of Lincoln, b Avalon Burgundy, of a noble family He became a religious when a child and joined (c 1160) the Carthusians, rising to become procurator general About 1176 he was, at the request of Henry II, sent to England to become prior of the charterhouse founded by Henry II at Witham, Somerset In 1186 he was consecrated bishop of Lincoln He opposed Henry's forest laws and demands for the preferment of unworthy courtiers In 1198 he was the spokesman for the barons in their refusal of money to Richard I and was also in conflict with John But the bishop's high courage, devotion to religion and justice, and ready tact helped him to convert the angry royal brothers to his own views He was noted for charity, love of the poor and oppressed, and holiness of life He partially rebuilt Lincoln Cathedral, where his shrine was a place of pilgrimage until the Reformation He is also called St Hugh of Avalon Feast Nov 17 See C L Marson, *Hugh, Bishop of Lincoln* (1901), R M Woolley, *St Hugh of Lincoln* (1927), J M Flood, *Five Saints of France* (1937)

Hugh of Lincoln, Christian boy supposed to have been murdered by Jews in the 13th cent See Chaucer's Prioress's Tale He is often called St Hugh, but he is not in the martyrology The story is simply a typical one of medieval anti-Semitism

Hugh of Saint Victor, d 1141, French or German philosopher and theologian, a canon regular of the monastery of St Victor, Paris, from c 1115 In 1133 he was made head of the monastery school, which became under Hugh one of the principal centers of learning The earlier tendencies of his school are seen best in his works The period was one of great theological discussion, especially in regard to the ideas and point of view of ABELARD Hugh made St Victor the chief competitor of Abelard's school It was out of the struggle between these schools that SCHOLASTICISM was born Hugh used the same dialectic method that Abelard did, but his findings were never heterodox, the unquestionable orthodoxy of the school of St Victor may have been an important cause of the eventual triumph in Catholic theology of the dialectic method, which Abelard had brought under serious suspicion Hugh's *Eruditionis didascalicae libri VII* expounds his new contribution to the division of knowledge *De sacramentis Christianae fidei*, Hugh's chief work, is a general thesis on dogmatic theology, giving him his high place in medieval philosophy Hugh also wrote many mystical works (e g , *Arca Noë moralis*, *Arca Noë mystica*, *De amore sponsi ad sponsam*), and by them he was for long best known His mystical teaching was determining in the history of his school, but he was not so extreme as his successors, notably RICHARD OF SAINT VICTOR He was responsible for the celebrated division of the mystical ascent into three stages, thought (with which we see God in nature), meditation (with which we see God within ourselves), and contemplation (with which we see God as if face to face)

Hugh the Great, d 956, French duke, son of King ROBERT I and father of HUGH CAPET He waived his pretensions to the throne in favor of Raoul

(923), Louis IV (936), and Lothair (954) and devoted himself to the rule of his own extensive territories The reign of Louis IV was marked by war between king and vassal, in which Hugh, excommunicated at the instance of Louis (948), was forced to make submission (950). From 954 until his death he virtually ruled France

Hugh Town · see Scilly Islands

Hugo, Victor Marie, Vicomte (vēk'tur hū'gō, Fr vēktôr' marē' vēkt' ügō'), 1802–85, French poet, dramatist, and novelist b Besançon His father was a general under Napoleon As a child he was taken to Italy and Spain and at a very early age had published his first book of poems, resolving "to be Chateaubriand or nothing" The preface to his drama *Cromwell* (1827) placed him at the head of the romanticists, he remained the greatest exponent of the school and was considered by many the greatest poet of his day His principal poetic works are *Les Orientales* (1829), *Les Feuilles d'automne* (1831), *Les Chants du crepuscule* (1835), *Les Voix intérieurs* (1837), *Les Rayons et les ombres* (1840), *Les Châtiments* (1853), *Les Contemplations* (1856), and *La Légende des siècles* (1859) The production of his tragedy *Hernani* (Eng tr , 1830) caused a riot between the classicists and the romanticists The drama was the basis of Verdi's opera *Ernani*, Verdi also made use of *Le Roi s'amuse* (1832) for *Rigoletto* Other plays include *Marion de Lorme* (1831, Eng tr , 1872), *Ruy Blas* (1838, Eng tr , 1850), and *Les Burgraves* (1843), the failure of which spelled the end of the romantic drama The tragic deaths in that year of Hugo's daughter and son-in-law were reflected in a moving series of poems of childhood, including *The Art of Being a Grandfather* (1877) Hugo's great novels are *Notre Dame de Paris* (1831, Eng tr , 1833), *Les Misérables* (1862, Eng tr , 1862), *Les Travailleurs de la mer* (1866, Eng tr , *Toilers of the Sea*, 1866), and *Quatre-vingt-treize* (1874, Eng tr , *Ninety-three*, 1874) He began his political career as a supporter of the duke of Reichstadt, Napoleon's son, he in turn espoused the cause of Louis Philippe's son, and then for a short time of Louis Bonaparte's As he afterwards opposed Napoleon III he was banished and went first to Brussels, then to the isle of Jersey (1851), and later (1855) to Guernsey, where he lived until 1870, refusing an amnesty In 1870 he returned to Paris in triumph, he was elected to the national assembly and the senate His last years were marked by public veneration and acclaim, and he was buried in the Panthéon Critics are divided as to his relative greatness, but he was a towering figure in 19th-century French literature See A C P Haggard, *Victor Hugo* (1923), W. F Giese, *Victor Hugo, the Man and the Poet* (1926), Horatio Smith, *Masters of French Literature* (1937), Matthew Josephson, *Victor Hugo* (1942)

Hugo, city (pop 5,909), co seat of Choctaw co , SE Okla , near the Red River It is a railroad and farm center, with nut processing and creosote manufacture

Hugo de Balsham (du bôl'shum), d 1286, English churchman, also called Hugh de Balsham He was elected bishop of Ely in 1256, but it was only after a direct appeal to the pope over the head of Henry III, who wished to appoint a candidate of his own, that Hugo was confirmed (1257) in his bishopric His fame rests on his foundation (1284) of Peterhouse, the first college of Cambridge Univ , modeled after Merton College at Oxford

Hugoton (hū'gō"tun), city (pop 1,349), co seat of Stevens co , SW Kansas, in the Great Plains region near the Okla line, founded 1885, inc 1910 A bloody conflict was waged (1887–91) with Woodsdale (defunct) over the location of the county seat The area has large natural-gas fields

Huguenots (hū'gunŏts) [uncertain origin], the Calvinist Protestants of France Following Calvin's reform in Geneva, the first French national synod was held in 1559, and a church with Calvinist doctrine and presbyterian government was founded The movement, which first took form among the middle classes, was immediately persecuted, as it gained adherents among the nobles and the peasantry, persecution increased, serious bloodshed began during the reign of Francis II Religious hatred and political rivalries precipitated the Wars of Religion (1562–98) Despite such heavy blows to the Huguenots as the massacre of Saint Bartholomew's Day (1572), the formation of the Catholic League (see League), and the intervention of Spain (1589–98) against the Protestant heir to the throne, Henry IV, the Protestants were ultimately victorious Their success was due largely to their unity under such admirable leaders as Louis I de Condé, Gaspard de Coligny, Jeanne d'Albret, and her son, Henry IV In 1598 Henry IV, by issuing the Edict of Nantes, established Protestantism in 200 towns and proclaimed freedom of worship The Huguenots became in the next years an important element in French life, they were especially strong among the bourgeois, the skilled artisans, and the nobility. In the reign of Louis XIII, Cardinal Richelieu decided to break their power An uprising (1621–22) against the introduction of Catholicism in Béarn was put down by Richelieu, and the Protestants lost all their strongholds, except Montauban and La Rochelle Led by Henri de Rohan and Benjamin de Soubise, the Huguenots revolted again in 1625 La Rochelle was captured (1628) by Richelieu after a 14-month siege, during which Charles I of England attempted to send some aid to the Protestant defenders. The Peace of Alais (1629) stripped the Huguenots of all political power but assured them of continued religious tolerance Cardinal Mazarin continued Richelieu's policy, but Louis XIV, who considered the French Protestants as a state within a state, decided to suppress Protestantism altogether, mounting religious persecution was capped by his revocation of the Edict of Nantes in 1685 The vigorous application of this disastrous measure (see dragonnades) depopulated entire provinces Countless Huguenots fled to England, the Netherlands, Germany, Switzerland, and America (especially the Carolinas, Pennsylvania, and New York), where they contributed substantially to civic and industrial life The only important fragment of Huguenots left in France was in the Cévennes, where the war of the Camisards (1702–10) broke out In 1787 Louis XVI allowed the Huguenots tolerance See history by H M Baird (6 vols , 1879–95), C. W Baird, *History of the Huguenot Emigration to America* (2 vols , 1885), Otto Zoff, *The Huguenots* (1942).

Hu Han-min (hōō' hän'-mēn'), 1886–1936, Chinese statesman While studying law in Japan (1905) he was associated with Sun Yat-sen in revolutionary work After the revolution of 1911, Hu opposed Yuan Shih-kai, and from Yüan's death (1916) until 1921 he was Sun's chief adviser He studied (1925) rural economy and the governmental system of the USSR From 1924 to his death Hu was a member of the central political committee of the Kuomintang and led a faction opposed to Chiang Kai-shek Hu's highest position was president of the legislative Yuan (1928–31)

Huidobro, Vicente (vēsān'tā wēdhō'brō), 1893–, Chilean poet, founder of aesthetic movements after the First World War known as *creacionismo* He lived for many years in Paris and wrote French as well as Spanish Striving for originality, he completely denied the poetic past and declared that "the first duty of the poet is to create, the second to create, and the third, to create" Like many other poets in the period after the First World War, he tended to have only a limited influence See Henry A Holmes, *Vicente Huidobro and Creationism* (1934)

Huitzilopochtli (wē"tsēlōpōch'tlē), chief god of the Aztec, god of war Usually represented in sculptured images as hideous, he was the object of human sacrifice, particularly war prisoners, a rite horrible to the Spanish conquerors His temple at Tenochtitlán was a great architectural achievement of pre-Columbian America

Hukok (hū'-) see Helkath

Hul, descendant of Shem Gen 10 23

Hulagu Khan (hōōla'gōō khan'), 1217–65, Mongol conqueror He was a grandson of Jenghiz Khan His brother Mangu, grand khan of the Mongols, directed him to quell a revolt in Persia In 1256, in the course of his successful campaign, his forces virtually exterminated the powerful Assassin sect Moving west to enlarge his conquests, he sacked Baghdad in 1258 (overthrowing the Abbasid caliphate) and in 1260 took Aleppo After his check in 1260 at the hands of the Mamelukes, he adopted Islam and withdrew to the east. His khanate, which included all of Persia, endured until 1335, when it was divided into five parts

Huldah (-du) [Heb , =weasel], prophetess, consulted by Josiah on the finding of the law 2 Kings 22 14–20, 2 Chron 34 22–28

Hull, Cordell, 1871–, American statesman, U S Secretary of State (1933–44), b Overton co (now Pickett co), Tenn , grad Cumberland Univ , 1891 Admitted to the bar in 1891, he was (1893–97) in the Tennessee legislature and, after service in the Spanish-American War, was appointed (1903) circuit court judge He served (1907–21, 1923–31) in the U S House of Representatives, was on the House Ways and Means Committee for nearly 20 years, and was author of important tax legislation —the Federal income tax law (1913), the revised tax act of 1916, and the Federal inheritance tax law (1916). He was elected (1930) to the U S. Senate, but resigned (1933) the post to become Secretary of State under President Franklin D Roosevelt. As Secretary of State, Hull consistently pursued a course making for sound international economic relations. Through his efforts, pacts were signed with several nations under the Reciprocal Agreements Act (1934), and his policy was one of constructive good will toward nonaggressor nations He favored aid to the Allies from the beginning of the Second World War and recommended revision of the Neutrality Act In 1941 he was still negotiating with the Japanese representatives, Kichisaburo Nomura and Saburo Kurusu, when (Dec 7, 1941) the Japanese struck at Pearl Harbor. In the Second World War, Hull helped build up unity among the Allies and backed world organization to maintain peace. He resigned as Secretary of State and was succeeded by Edward R Stettinius He was awarded the 1945 Nobel Peace Prize His autobiography was published as *The Memoirs of Cordell Hull* (1948).

Hull, Isaac, 1773–1843, American naval officer, b Shelton, Conn Commander of the *Enterprise* and *Argus* in the Tripolitan War, he was in 1810 given command of the *Constitution*. Early in the War of 1812, he slipped his ship out of Chesapeake Bay and made his way through the British blockade to Boston Harbor On Aug 19, 1812, the *Constitution* met the *Guerrière* in one of America's great sea battles (see Constitution, ship) Hull's superior seamanship forced the British vessel to surrender See Bruce Grant, *Isaac Hull, Captain of Old Ironsides* (1947)

Hull, John, 1624–83, American goldsmith and silversmith. He was a powerful merchant, held many local offices in the Massachusetts Bay colony, and in 1652 was selected by the General Court to manage the newly established colonial mint As mintmaster, with his partner, Robert Sanderson, he coined crude willow-, oak-, and pine-tree shillings from bullion plate and two-, three-, and sixpence pieces. He also produced secular and ecclesiastical silver work, of which extant pieces may be recognized by his initials with a fleur-de-lis in a heart below or an encircled rose above

Hull, William, 1753–1825, American general, b Derby, Conn , grad Yale, 1772. He served in the American Revolution and in 1805 became governor of the newly created Michigan Territory As the War of 1812 was beginning he asked Congress for a larger U S fleet on Lake Erie and reinforcements for Detroit Hull had command of Detroit, but instead of making the expected attack on Canada he remained until British forces under Sir Isaac Brock approached and captured the fort on Aug 16, 1812, winning large supplies Hull was court-martialed, and only his Revolutionary War record prevented his execution

Hull, city (pop 32,947), co seat of Hull co , SW Que , on the Ottawa river opposite the city of Ottawa, with which it forms a single metropolitan center The Gatineau river enters the Ottawa here. Hull has paper and pulp and lumber mills, iron foundries furniture factories, and other industries, and a hydroelectric power station

Hull, officially **Kingston-upon-Hull**, county borough (1931 pop 313,544, 1947 estimated pop 294,730), East Riding of Yorkshire, England, on the north shore of the Humber at the influx of the small Hull river 20 mi from the North Sea As a port it is one of the chief outlets for the industrial Yorkshire and Lancashire districts, with which it has excellent rail and water connections It has also numerous factories of its own, producing oil, agricultural machinery, solvents, leather goods, textiles, paper, and cement Hull was founded late in the 13th cent by Edward I, and the construction of docks, which now extend c 7 mi along the Humber, was begun c 1775 There are steamship lines to the Continent, especially to the Scandinavian countries, and the harbor is used also by ocean fishing boats The Wilberforce Museum, Municipal Museum, Royal Institution, and Ferens Art Galleries are noteworthy The grammar school, founded in 1486, was attended by William Wilberforce, who was born here, University College was founded in 1925 Trinity House, for sailors, was established in 1369 by Trinity Guild The churches include Holy Trinity (partly 14th cent) and St Mary's or St. Mary's Lowgate (14th cent) The city was subjected to severe air raids in 1941

Hull. 1 Town (pop 1,072), extreme NW Iowa, N of Sioux City, first called Pattersonville, inc 1888 2 Resort town (pop 2,167), E Mass , on Nantasket Peninsula in Boston Bay SE of Boston, settled 1624, inc 1644 A radio transmitting station was established here in 1940

Humacao (ōōmäkä'ō), town (pop 7,624), E Puerto Rico, on the Humacao river not far from the coast It is a port of entry in an agricultural district

humanism, term originally restricted to a point of view prevalent among men of thought in the Renaissance These men turned their attention to the humanities and to humanity The development was chiefly a function of release from ecclesiastical authority and the rediscovery of the ancient classics The term *humanist* is applied to such diverse types as Boccaccio, Petrarch, Lorenzo Valla, Lorenzo de' Medici, Erasmus, and Thomas More In the 20th cent. the term has been applied to their own systems by such men as F. C S Schiller, Irving Babbitt, and C F Potter. Their use of the term has had diverse meanings, but the common element is generally emphasis on lasting human values and the cultivation of the classics.

Humber, navigable estuary of the Trent and Ouse rivers, on the east coast of England between Yorkshire and Lincolnshire. It is 40 mi. long and 1 to 8 mi. wide, Spurn Head marks its entrance to the sea. The shores are generally low, and shoals obstruct shipping in parts. Encroachment of the

sea has destroyed former ports, notably Ravenspur. In early English history the Humber was significant as a means of ingress. Hull and Grimsby are the chief cities

Humber, river, second largest river of Newfoundland. It rises 20 mi. inland from Bonne Bay on the west coast, flows SW to Deer Lake, and after emerging from the lake follows a circuitous course to fall into the Bay of Islands

Humbermouth (hŭm'burmuth,-mouth), town (1945 pop 1,914), W N.F , at the mouth of the Humber river, on the coast near Corner Brook

Humberstone (hŭm'bûrstun,-stōn), village (pop 2,963), S Ont , on Lake Erie at the south end of the Welland Ship Canal Humberstone Lock, on the canal, is one of the world's largest lift locks

Humbert I, 1844–1900, king of Italy (1878–1900), son and successor of Victor Emmanuel II He actively helped to consolidate the newly founded kingdom Among the premiers he appointed were Depretis, Crispi, and Giolitti His tolerance and generosity won him the nickname Humbert the Good Escaping two attempts on his life, he fell victim to the third, at Monza. His son, Victor Emmanuel III, succeeded him

Humbert II, 1904–, last king of Italy (1946), son of Victor Emmanuel III He married (1930) Marie José, daughter of Albert I of Belgium, a son, Victor Emmanuel, was born in 1937 In 1944 his father delegated his powers to Humbert, who became lieutenant general of the realm On the abdication (May, 1946) of his father, he succeeded to the throne, pending a referendum on the future of the constitution The referendum (June, 1946) resulted in the establishment of a republic, and Humbert went into exile to Portugal

Humble (hŭm'bŭl), city (pop 1,371), S Texas, NNE of, and near, Houston, founded 1888 Since it experienced an oil boom in 1904, it has depended largely on the oil industry

Humboldt, Alexander, Freiherr von (hŭm'bōlt, Ger aleksan'dûr frī'hĕr fŭn hōōm'bōlt), 1769–1859, German scientist, explorer, and natural philosopher His full name is Friedrich Heinrich Alexander von Humboldt After serving in the Prussian department of mines and making scientific excursions in Europe, he made, with A J A Bonpland, a noted expedition (1779–1804) to Central and South America and Cuba He explored the upper course of the Orinoco and Amazon rivers, ascended Mt Chimborazo and other peaks in the Andes to study the relation of temperature and altitude, and made observations valuable in several branches of science The expedition initiated an era of scientific exploration With the cooperation of other scientists, Humboldt and Bonpland recorded the results of their researches in *Voyage de Humboldt et Bonpland* (23 vols , 1805–34), often cited by the title of Part I, *Voyage aux régions équinoxiales du nouveau continent* Humboldt established the use of isotherms, studied the origin and course of tropical storms, the increase in magnetic intensity from the equator toward the poles, and volcanology, and investigated the effect of geographical environment on the distribution of plants In his *Cosmos* (5 vols , 1845–62, Eng tr , 1849–58), noted as one of the world's great scientific works, he sought to formulate the known facts about the universe into a uniform conception of nature Humboldt lived chiefly in Paris from 1808 to 1827, when he settled in Berlin at the request of the Prussian government. He made an expedition to Russia and Siberia in 1829

Humboldt, Karl Wilhelm, Freiherr von (karl' vĭl'hĕlm), 1767–1835, German statesman and philologist, brother of Alexander von Humboldt As Prussian minister of education (1809-10) he thoroughly reformed the school system, largely on the basis of the ideas of Pestalozzi, and he sent Prussian teachers to study the methods of Pestalozzi's school in Switzerland He was one of the founders of the Univ of Berlin Humboldt was one of the great liberal reformers of Prussia along with Stein and Hardenberg He remained prominent in the government until 1819, when he retired because of his opposition to the prevailing spirit of reaction Humboldt was a friend of Goethe and Schiller His lengthy work on Kavi, the ancient language of Java, was published posthumously (1836–40) and reveals precision, clarity, and scientific caution

Humboldt (hŭm'bōlt) **1** City (pop 2,819), N Iowa, on the Des Moines river above Fort Dodge, settled 1863, inc 1869 **2** City (pop 2,290), SE Kansas, on the Neosho and NW of Pittsburg, in a farming area, laid out 1857, inc as a village 1866, as a city 1870 It manufactures cement and is a distributing point for oil **3** City (pop 1,386), extreme SE Nebr , on a branch of the Nemaha and NW of Falls City, settled c.1856 by Czechs **4** City (pop 5,160), W Tenn , NNW of Jackson. It is a manufacturing and trade center and a railroad shipping point in a region yielding fruits, vegetables, and other farm products.

Humboldt (hŭm'bōlt), town (pop 1,798), central Sask , S of Prince Albert

Humboldt, river rising in several branches in NE Nevada and flowing west and south c 300 mi past Elko, Winnemucca, and Lovelock, to disappear in Humboldt Sink, near the Humboldt Range Known to early explorers and named by Frémont, it was an important route followed by many of the emigrants from Salt Lake City to central California The Humboldt reclamation project around Lovelock is served by the Rye Patch Dam, built in 1935-36 See Dale Morgan, *The Humboldt Highroad of the West* (1943)

Humboldt Bay see Hollandia,

Humboldt Glacier, NW Greenland The largest known glacier, it debouches into Kane Basin along a front c 50 mi wide E K Kane discovered it on his expedition of 1853–55

Humboldt State College see Arcata, Calif

Hume, David (hūm), 1711–76, Scottish philosopher and historian, famous for his skepticism, educated at Edinburgh He lived for several years with the Jesuits at La Flèche, France, where he prepared his great *Treatise of Human Nature* (1739–40) His philosophical works—probably all written by the time he was 40—include *Essays Moral and Political* (1741–42), *Philosophical Essays* (1748), *An Enquiry concerning the Principles of Morals* (1750), and *Political Discourses* (1752) Turning from philosophy, Hume wrote an exhaustive *History of England* (1754–62), whose purity of style overcame the frequent faultiness of fact and made the work the standard history in England for many years Hume served as the patron of Rousseau when he sought refuge in England, and their ensuing dispute, recorded at length, has been a source of insight into the character of the two men In philosophy Hume pressed the analyses of Locke and Berkeley to the logical extreme of skepticism, for which he is famous He could see no more reason for hypothesizing a substantial soul or mind than for accepting a substantial material world A complete nominalist in his handling of ideas of material objects, he carried the method into the discussion of mind and found nothing there except a series of sensations Causal relations are only apparent from the customary conjunction of two sensations Hume's determined skepticism is virtually unanswerable on empirical grounds He himself fell back on common sense and faith as ways out of the difficulty His posthumous works include *Life of David Hume* (1777), by himself, now included in most editions of the *History*, and *Dialogues concerning Natural Religion* (1779) See J H Burton, *Life and Correspondence of David Hume* (1846), J Y T Greig, *David Hume* (1931), N K Smith, *The Philosophy of David Hume* (1941), E C Mossner, *The Forgotten Hume le Bon David* (1943)

Hume, Sir Patrick see Home of Polwarth, Sir Patrick

Hume Reservoir, area 70 sq mi , largest reservoir of Australia, in the Murray river, near Albury and on the New South Wales–Victoria boundary Hume Dam (1937), on the west side of the reservoir, is 1,042 ft long and 200 ft high

humidity, a primary element of climate, the state of the atmosphere with regard to its moisture content Humidity measurements include absolute humidity, the mass of water vapor per unit volume of natural air, relative humidity (usually meant when the term *humidity* alone is used), the ratio of the actual water-vapor content of the air to the total amount that it could contain at the given temperature, specific humidity, the mass of water vapor per unit mass of natural air, and the mixing ratio, the mass of water vapor per unit mass of dry air Absolute humidity finds greatest application in ventilation and air-conditioning problems Specific humidity and the mixing ratio are terms which have more recently come into general use Humidity is measured by means of a hygrometer The rate of evaporation decreases as the moisture content of the air increases and approaches saturation In addition, the saturation point (moisture-holding capacity of the air) increases rapidly as the temperature of the air rises Thus cold air, while its moisture content must necessarily be quite low (low absolute humidity), may be almost saturated with respect to the maximum amount of water vapor it is capable of holding (high relative humidity) Cold air with high relative humidity "feels" colder than dry air of the same temperature because high humidity in cold weather increases the conduction of heat from the body Conversely, hot air attended by high relative humidity "feels" warmer than it actually is because of an increased conduction of heat from the body combined with a lessening of the cooling effect afforded by evaporation. On the other hand, a low relative humidity "modifies" the effect of temperature extremes on the human body Humidity decreases with altitude, it tends to be higher at night (when the temperature, and so the capacity of the air to contain moisture, has lowered) than in the day Proximity to large bodies of water and the prevalence of moisture-bearing winds favor high humidity

Humiliati (hōōmĭl'lēā'tē) [Latin,=the humbled ones], Roman Catholic association of laymen formed in the 11th cent in Lombardy They wore plain clothes and lived under special vows, but mingled freely with the world. They were protected by the papacy in most of the 12th cent., and some of them were organized into an order or joined other orders There were occasional defections from the Humiliati to the Waldensians, and some adhesions in the other direction The Humiliati were finally suppressed in the 16th cent after their orthodoxy had long been questioned

Hummelstown, agricultural borough (pop 3,264), SE Pa , near Harrisburg, founded c 1740, laid out 1762, inc 1874

hummingbird, small perching bird of the New World There are about 750 species and subspecies, the majority native to Central and South America Hummingbirds have brilliant plumage with a metallic sheen Their bills are usually long and slender, sometimes curved Their feet are too small and weak to support them on flat surfaces They are usually seen poised in the air while feeding or in flight with wings moving so rapidly that in the smaller species they appear as a blur and produce a humming sound In seeking their food—small insects and the nectar of flowers—they carry on cross-pollination The largest among them is the giant hummer of the Andes (about 8½ in long), and the smallest bird in the world is the Helena's hummingbird or fairy hummer of Cuba (about 2¼ in long) The ruby-throated hummingbird, the only species found in the N United States, has metallic green upper parts, the under parts are white to gray, and in the male the throat is ruby red when light strikes it at the correct angle Its half-inch eggs are laid in a lichen-covered nest about 1½ in in diameter

Humperdinck, Engelbert (hŭm'purdĭngk, Ger ĕng'ulbĕrt hōōm'purdĭngk), 1854–1921, German composer and teacher studied at the conservatories of Cologne and Munich He was a friend of Wagner, whom he assisted in preparing *Parsifal* for production and whose son, Siegfried, was later his pupil He is known chiefly for his first opera, *Hänsel und Gretel* (1893), successful for its fairy-tale subject and its folk-inspired music *Das Königskinder* (New York, 1910) was popular for a time, but none of his other operas was successful He also wrote incidental dramatic music and songs

Humphrey, Doris, American dancer and choreographer, b Chicago She studied (1917) at the Denishawn School and danced (1918) in the school's company With Charles Weidman, who has danced and collaborated in many of her choreographical works, she founded (1928) a school of the dance Her outstanding dance productions include *New Dance, Theatre Piece, With My Red Fires, Song of the West, Decade,* and *Inquest*

Humphrey Island see Manihiki

Humphreys, Andrew Atkinson, 1810–83, American army engineer, Union general in the Civil War, b Philadelphia, grad West Point, 1831 Humphreys served for many years in the corps of topographical engineers His outstanding work was a topographic and hydrographic survey of the Mississippi delta (1850–61) In the Civil War he was made a brigadier general of volunteers (April, 1862) and was chief topographical engineer in G B McClellan's Peninsular campaign (1862) He commanded a division in the Antietam campaign, in the battles of Fredericksburg (1862) and Chancellorsville (1863), and in the Gettysburg campaign After Gettysburg, Humphreys was chief of staff to Gen George G Meade until Nov , 1864, when he succeeded W S Hancock in command of the 2d Corps He led that corps in the final operations against Lee He was brigadier general commanding the Corps of Engineers from 1866 till his retirement in 1879 Humphreys wrote *From Gettysburg to the Rapidan* (1883) and *The Virginia Campaign of '64 and '65* (1883) See biography by H H Humphreys (1924)

Humphreys, David, 1752–1818, American diplomat and poet, b present Ansonia (then in Derby), Conn , grad Yale, 1774 His military talents and patriotism won the friendship of Washington and a place on his staff during the American Revolution From 1784 to 1786 Humphreys was secretary to a U S mission negotiating commercial treaties in Europe While he was a member (1786–88) of the Connecticut assembly, he was one of the satirical Connecticut Wits His own copious poetry was largely patriotic and didactic He was sent abroad as a secret agent (1790), then as commissioner for Algerian affairs (1793), and finally as minister plenipotentiary to Spain (1796) On his return in 1802 he brought 100 Merino sheep to improve New England flocks, in 1806 he set up his own large woolen mill at Humphreysville (now Seymour), Conn , and developed a paternalistic community there for his orphan boy laborers See biography by F L Humphreys (1917)

Humphreys, Joshua, 1751-1838, American ship designer in Philadelphia He was commissioned by the Continental Congress to alter the vessels of the fleet commanded by Esek Hopkins in the Revolution When the navy appropriation act was passed in 1794, he submitted speedier, longer, and flatter models, and as a result he was appointed naval constructor The success of his frigates, the *United States, Constitution, Chesapeake, Constella-*

tion, President, and *Congress*, led to foreign offers for his services

Humphreys, William Jackson, 1862–1949, American physicist, b Gap Mills, Monroe co, W Va., grad Washington and Lee Univ. (B A., 1886, C E., 1888), Ph D Johns Hopkins, 1897 He taught in several institutions (1889–1905), then was professor of meteorological physics of the U S Weather Bureau (1905–35) and at George Washington Univ (1911–34) He was director from 1905 to 1908 of a weather research station at Mt Weather, Va His books include *Physics of the Air* (1920, 3d ed, 1940), *Weather Proverbs and Paradoxes* (1923, 2d ed, 1934), *Ways of the Weather* (1942), *Fogs, Clouds, and Avalon* (1943), his autobiographical *Of Me—W J Humphreys* (1947), and, with W A Bentley, *Snow Crystals* (1931).

Humtah (-'tŭ), unidentified city, apparently near Hebron Joshua 15 54

humus (hū'mus), decayed vegetable and animal matter, an important ingredient of fertile, productive SOIL Soils such as pure sand of desert regions and those which are composed almost solely of clay lack humus content and for the most part are unsuitable for plant growth Among the functions humus performs are conserving moisture, loosening soil particles to admit air and water, furnishing many plant-food elements, and, through the activity of the bacteria it may contain, making available for plants mineral nutrients which might otherwise remain inaccessible Humus can be restored to depleted soil by the use of animal and green manures, peat, and leaf mold (a mixture of decaying vegetation and soil) Humus tends to be dark in color, and black soils, of which it forms a large part, are usually very fertile

Hunan or **Hu-nan** (both hōō'nan'), province (79,062 sq mi, pop 20,171,117), SE China The capital is Changsha The province, largely hilly to mountainous, is drained by three rivers, the Siang, the Yüan, and the Tsz, which empty into Tungting Lake in the northeast These waterways and several railroad lines provide adequate transportation The climate is mild, and large crops of rice, tea, cotton, and tobacco are grown There are extensive reserves of timber, especially pine Hunan is one of the main mineral centers of China It has vast fields of easily mined coal and an enormous supply of antimony Manganese, iron, lead, zinc, tin, wolfram, mercury, and sulphur are also found

hundred, formerly, in English law, administrative district intermediate between a tithing and a county The origin of the term is not certainly known, many authorities believe that in Anglo-Saxon times it designated a territory inhabited by 100 landowners The members of a hundred were jointly liable in damages for certain offenses committed within the territory In each territory there was a hundred court with petty criminal and civil jurisdiction The hundreds were almost totally abolished in the 19th cent

Hundred Days, name given to the period of Napoleon's attempt to rebuild his empire after his return from Elba They are counted from March 20, 1815, when Napoleon arrived in Paris, to June 28, 1815, when Louis XVIII returned in state, after Napoleon's disastrous WATERLOO CAMPAIGN

Hundred Years War, 1337–1453 The basic cause of the Hundred Years War between England and France was a dynastic quarrel which had come into existence when the conquest of England by William of Normandy created the problem of a state lying on both sides of the English Channel In the 14th cent the English lands in France were confined to the duchy of GUIENNE The English kings resented having to do homage to the French kings for Guienne and felt menaced by the increasing authority of the French crown over its great feudal vassals The immediate causes of the Hundred Years War were the dissatisfaction of EDWARD III of England with the nonfulfillment by PHILIP VI of France of his pledges in regard to restoring a part of Guienne taken by Charles IV, Edward's attempt to undermine the authority of the pro-French count of Flanders and so improve his commercial relations with FLANDERS, important to England as a market for raw wool and as a source of cloth, and Philip's support of Scotland against England The war may be dated from 1337, when Edward assumed the title of king of France, which he claimed belonged to him rather than to Philip Edward first invaded France from the side of the Low Countries (1339–40), winning no conspicuous successes on land, but defeating a French fleet at the battle of SLUIS (1340) In 1346 he won the battle of CRÉCY and laid siege to CALAIS, which surrendered in 1347. In 1356 the English won the battle of POITIERS, capturing King JOHN II. After prolonged negotiations, a treaty was signed at BRÉTIGNY (1360), humiliating to France in that it involved the surrender to England of Calais and practically all of Aquitaine, as well as the payment of a large ransom for the captive king The oppressive taxation of the Gascon nobles by EDWARD THE BLACK PRINCE and their appeal to King CHARLES V (1369) brought on a new period of warfare, by 1373 DU GUESCLIN had won back most of the lost French territory. In 1415, however, HENRY V of England renewed the English claims, took Harfleur, defeated the flower of French chivalry at AGINCOURT, and by 1419 had subdued Normandy, with the connivance of JOHN THE FEARLESS, duke of Burgundy PHILIP THE GOOD, successor of John the Fearless, mediated between Henry V and CHARLES VI of France (see TROYES, TREATY OF), and Charles recognized Henry as heir to the crown of France By 1429 the English and their Burgundian allies were masters of practically all France N of the Loire, but in that year JOAN OF ARC raised the siege of Orléans, defeated the English at Patay, and saw CHARLES VII crowned king of France at Rheims Her capture by the Burgundians and her judicial murder after extradition to the British did not stop the renewal of French successes In 1435 France, at the cost of exorbitant concessions, obtained the alliance of Burgundy (see ARRAS, TREATY OF) In 1449–50 the French reconquered Normandy, and in 1449–51 all Guienne but Bordeaux was taken. After the fall (1453) of Bordeaux the only British possession in France was Calais (conquered by France in 1558). England, torn by the Wars of the Roses, made no further attempt to conquer France The Hundred Years War inflicted untold misery on France Farm lands were laid waste, the population was decimated by war, famine, and the Black Death, and marauding bands of soldiers (see ÉCORCHEURS) terrorized the countryside Civil wars (see JACQUERIE, CABOCHIENS, ARMAGNACS AND BURGUNDIANS) and local wars (see BRETON SUCCESSION, WAR OF THE) added to the destruction and to the social disintegration Yet Charles VII's successor, LOUIS XI, skillfully turned these evils into benefits The virtual destruction of the feudal class enabled him to unite France more solidly under the royal authority and to further the growth of the middle class From the ruins of the war an entirely new France emerged As for England, the results of the war were as decisive as for France After the Hundred Years War it ceased to be a continental power and increasingly sought expansion as a sea power The great chronicler of the war was FROISSART Shakespere, though taking liberties with history, painted a panorama of the war in *Henry V* and *Henry VI* For bibliography, see ENGLAND and FRANCE

Huneker, James Gibbons (hū'nĭkur), 1860–1921, American essayist and music critic, b Philadelphia The soundness of his criticism, together with his originality and pungency of style, made him a leading critic in Europe and the United States He was music, art, and dramatic critic for the New York *Sun* (1902–17), then music critic for the *Times* (1917–19) and later for the *World* (from 1919 until his death) His books include *Mezzotints in Modern Music* (1899), *Chopin* (1900), *Iconoclasts—a Book of Dramatists* (1905), *Franz Liszt* (1911), *Unicorns* (1917), and *Bedouins* (1920) A collection of his essays, edited by H L Mencken, appeared in 1929 See his *Letters* (1922) and *Intimate Letters* (1924), biography by Benjamin de Casseres (1925)

Hungabee (hŭng'gubē), mountain, 11,305 ft high, E British Columbia, in the Canadian Rockies in the famous Lake Louise district First climbed in 1903, it is well known to alpinists because of the challenge offered by its many special difficulties

Hungarian language, Finno-Ugric language See LANGUAGE (table)

Hungarian literature Until the 19th cent Latin was the official and literary language of Hungary The *Funeral Oration* (c 1230) is the oldest surviving work in Magyar, some chronicles of the 14th and 15th cent exist The Reformation brought about translations of the Bible by both Catholic and Protestant writers The poets Balint Balassa (late 16th cent) and Nicholas Zrinyi and Stephen Gyongyossi (of the 17th cent) were followed in the 18th cent by Vitez Michael Csokonai and Francis Faludi The last quarter of that century saw the rebirth of Hungarian literature, initiated by George Bessenyei, and the reform of the Hungarian language, led by Francis Kazinczy The establishment (1790) of a national theater and the founding (1825) of the Hungarian Academy of Science assured the future of a Hungarian national literature The leading literary figures in the 19th cent were the poets Alexander Kisfaludy and his brother Charles (also a noted dramatist), John Arany, Michael Vorosmarty, and Alexander Petofi and the novelist Maurice Jokai. Andrew Ady is the outstanding Hungarian poet of the early 20th cent, the dramatists Francis Herczeg and Ferenc Molnar and the novelists Zsolt Harsanyi, Francis Kormendi, Louis Zilahy, and Jolan Foldes are best known to the English-speaking public

Hungary, Hung *Magyarország* (mŏ'dyŏrŏr"sāg), republic (35,935 sq. mi, pop. 9,319,999), SE Europe BUDAPEST is the capital Hungary borders on Czechoslovakia in the north, on the Ukraine in the northeast, on Rumania in the east, on Yugoslavia in the south, and on Austria in the west The DANUBE forms the Czech-Hungarian border from near Bratislava to near ESZTERGOM, then turns sharply south and bisects Hungary To the east of the Danube the extremely fertile Great Hungarian Plain (Hung. *Alföld*) extends beyond the Hungarian boundaries to the Carpathians and to the Transylvanian Alps To the west of the Danube are the Little Alfold and the basin of Lake BALATON, which lies between the Bakony and Vertes Mts. to the north and the Mecsek Mts to the south. Except for minor changes in 1947, the present frontiers were established in 1920 by the Treaty of Trianon (see TRIANON, TREATY OF), which stripped Hungary of more than two thirds its former area, including most of its mountains, forests, and mineral resources However, Hungary still has some coal, manganese, bauxite, natural gas, and petroleum. The only important forests are in the Matra Mts, NE of Budapest, and in the Bakony Mts Mt Kekes (3,330 ft high), in the Matras, is the highest peak On the eastern slope of the Matras, near Tokaj, excellent wine (Tokay) is produced More than half the population of Hungary is agricultural, and many of the larger cities are merely rural agglomerations Despite the cold winters and the hot, often dry, summers, agricultural production has been increased since the 19th cent by extensive irrigation and flood control The Pussta, the cattle-grazing lands, still covered a large part of the Great Hungarian Plain in the early 19th cent Since then the progress of agriculture has reduced the Puszta to a small area around DEBRECEN Wheat, maize, potatoes, rye, barley, grapes, and fruit are grown, and livestock (beef cattle, hogs, horses, sheep) and poultry (notably fattened geese) are raised Industry since 1919 has centered around Budapest GYOR, MISKOLC, and PECS are lesser industrial centers Next to food products, the chief industrial products are textiles, machinery, chemicals, and glass Hungary, a plains country in the geographic center of Europe, has been the meeting place and battleground of many peoples Its heterogeneous population was its major problem before 1919, in the reduced Hungary, more than 90 percent of the population are Hungarians (Magyars) and something more than 5 percent, Germans The Jews, most of whom immigrated in the 19th cent, were greatly reduced in the Second World War, and the small Slavic and Rumanian minorities were slated for exchange after 1945 for their large Magyar counterparts in neighboring countries The Roman provinces of Pannonia and Dacia, conquered under Tiberius and Trajan, embraced part of what later became Hungary The HUNS and later the OSTROGOTHS and the AVARS settled here for brief periods In the late 9th cent the MAGYARS, a Ugric tribe, conquered all or most of Hungary and TRANSYLVANIA Their semilegendary leader, ARPAD, founded their first dynasty Settling as farmers, the Magyars apparently amalgamated with the earlier settlers, but they also continued to press westward until defeated by King (later Emperor) Otto I at the LECHFELD (955) Halted in its expansion, the Hungarian state began to solidify Its first king, ST STEPHEN (1001–38) completed the Christianization of the Magyars and built the authority of his crown, which for 945 years remained the symbol of national existence, on the strength of the Roman Catholic Church The CUMANS and the PETCHENEGS, from S Russia, began their raids into Hungary in the 11th cent, but by the 15th cent they and other elements (Slavic, German, and Latin) were absorbed and welded into a social order that contained most of the elements of feudalism A few very powerful nobles—the magnates—through the favor of the kings won ever-widening privileges at the expense of the lesser nobles, the peasants, and the towns This situation led the lesser nobles in 1222 to force King ANDREW II to grant the Golden Bull (the "Magna Carta of Hungary") which, though primarily devised to favor the nobility, actually limited the king's power to alienate his own authority to the magnates However, under Andrew's son, BELA IV, the kingdom barely escaped annihilation, the Mongol invaders, defeating Bela at Muhi (1241), occupied the country for a year, OTTOCAR II of Bohemia also defeated Bela, who was moreover threatened by his own rebellious son, STEPHEN V Under Stephen V's son, LADISLAUS IV, Hungary fell into anarchy, and when the royal line of Arpad died out (1301) with Andrew III, the magnates seized the opportunity to acquire still greater authority In 1308, Charles Robert of ANJOU (CHARLES I of Hungary) was elected king, the first of the ANGEVIN line His autocratic rule somewhat checked the magnates and furthered the towns Under his son, LOUIS I (Louis the Great), Hungary reached its greatest territorial extension After his death, a series of foreign rulers succeeded SIGISMUND (later also emperor), son-in-law of Louis; ALBERT II of Austria, son-in-law of Sigismund, and LADISLAUS III of Poland (Uladislaus I of Hungary) During their reigns the Turks began their sweeping advance through the Balkans, defeating the Hungarians and their allies at KOSSOVO (1389), NIKOPOL (1396), and VARNA (1444) John HUNYADI, acting after 1444 as regent for Albert II's son, LADISLAUS V, summoned all his forces and through his victory at Belgrade (1456) gave Hungary a brief respite Hunyadi's son, MATTHIAS CORVINUS, elected king in 1458, established once more the glory of Hungary, but it

ended with his death. Under ULADISLAUS II and LOUIS II the nobles gained still more power, Transylvania became virtually independent under the ZAPOLYA family, the peasants, rising in revolt, were crushed (1514) Louis II met disaster and death at the hands of the Turk in the battle of MOHACS (1526) That date is commonly taken to mark the Turkish ascendancy Ferdinand of Austria (later Emperor FERDINAND I), as brother-in-law of Louis II, claimed the Hungarian throne and was elected king by a faction of nobles while the other faction chose John Zapolya as JOHN I In the long wars that followed, Hungary fell into three parts, the western, where Ferdinand and his successor, RUDOLF II, exercised a precarious rule constantly challenged by such Hungarian leaders as Stephen BOCSKAY and Gabriel BETHLEN, the central plains, which were completely under Turkish domination, and Transylvania, ruled by noble families who were more or less vassals to the Turks (see BATHORY and RAKOCZY) The Reformation, favored by the nobles, had nearly made Hungary a Protestant country when Cardinal PAZMANY brought it back into the Catholic fold The principle of toleration was, however, generally maintained throughout the following centuries, and a large minority of Magyars are still Calvinists Hungarian opposition to Austrian domination went to such extremes as the assistance THOKOLY gave to the Turks during the siege of Vienna (1683) Emperor LEOPOLD I, however, through his able generals, Prince EUGENE OF SAVOY and Duke CHARLES V of Lorraine, soon regained his lost ground Budapest was liberated in 1686, by the Peace of Karlowitz (1699), most of Hungary proper was recovered, Transylvania, with the defeat of Francis RAKOCZY II, was recovered in 1711, and in 1718 the BANAT was reconquered The Peace of Belgrade (1739) confirmed the Hapsburgs in their control of Hungary. Their rule, however, was uneasy The Hungarians were loyal to MARIA THERESA in her wars, but many of the centralizing reforms of JOSEPH II had to be withdrawn because of the outbreaks they caused The office of palatine (regent of Hungary, traditionally held by members of the great Hungarian families, was given from 1790 until its abolition in 1867 to members of the Hapsburg family The rise of Hungarian nationalism was hastened by the French Revolution Long repressed by Metternich, it burst forth in the Revolution of 1848 KOSSUTH and DEAK were the chief leaders in the Hungarian revolution War broke out between revolutionary Hungary and Austria, and in April, 1849, Hungary was proclaimed an independent republic under the presidency of Kossuth Soon afterward, however, the republic collapsed, Russian troops having come to the aid of the Austrians and the Slavic and Rumanian minorities having rebelled against Kossuth's nationalist regime The Hungarian surrender at Vilagos (Aug., 1849) was followed by ruthless reprisals and by the abolition of Hungarian autonomy After its defeat in the Austro-Prussian War (1866), Austria was obliged to compromise with Magyar national aspirations The *Ausgleich* of 1867 set up the AUSTRO-HUNGARIAN MONARCHY, in which Austria and Hungary were nearly equal partners Hungary then also included Transylvania, SLOVAKIA, Ruthenia, CROATIA and Slovenia, and the Banat Emperor FRANCIS JOSEPH was crowned (1867) king of Hungary at Budapest and Count Julius ANDRASSY became the first constitutional premier of Hungary Though some conflict between Austria and Hungary continued, a common interest—to keep the underprivileged minorities under control—united the two countries Until the First World War, when republican and socialist agitation began to threaten the established order, Hungary was one of the most aristocratic and reactionary countries of Europe, with the magnates as firmly entrenched as ever The collapse of the Dual Monarchy and the abdication (Nov., 1918) of Emperor CHARLES I (as Charles IV king of Hungary) brought the liberals into power The new government, under Michael KAROLYI, proclaimed Hungary an independent republic After the national disappointment caused by the peace conference, Hungary swung more to the left In March, 1919, the Communist Bela KUN, supported by the Socialists, seized the power and set up a dictatorship of the proletariat The subsequent Red terror was bloody, but was even exceeded by the White terror that followed the intervention by Rumanian troops and the defeat (July, 1919) of Kun's forces After the Rumanians withdrew, Admiral HORTHY DE NAGYBANYA established a government and in 1920 was made the regent of a kingdom without a king The "unwritten constitution" of Hungary identified the state with the sacred crown of St Stephen The underlying theme of subsequent Hungarian history was the Magyar endeavor and agitation to recover the territories lost in 1920 The frustration of these endeavors by the LITTLE ENTENTE and France led to the friendship of Hungary with Fascist Italy and, ultimately, the Hungarian alliance (1941) with National Socialist Germany The authoritarian domestic policies of the premiers Stephen BETHLEN and Julius GOMBOS, though tempered by a parliamentary system, safeguarded the power of the feudalistic landowners and ignored the demand for a land reform, for which the leftist and moderate parties were pressing Between 1938 and 1944 Hungary temporarily regained, through the favor of Germany and Italy, territories from Czechoslovakia, Yugoslavia, and Rumania It declared war on Russia (June, 1941) and on the United States (Dec., 1941) The Russian army conquered (Oct., 1944–Feb., 1945) Hungary from the German troops who defended it after a provisional Hungarian government had signed an armistice in Jan., 1945 The campaign caused much devastation A republican constitution was adopted in 1946 The peace treaty signed by Hungary and the Allies at Paris in 1947 restored the Trianon boundaries and required Hungary to pay $300,000,000 in reparations to the USSR, Czechoslovakia, and Yugoslavia The new regime, a coalition of the left with the middle-of-the-road Small Landholders party, instituted long-needed land reforms Early in 1948 the Communist party, though a minority, forced the resignation of Premier Ferenc Nagy through a coup d'état and gained full control over the state Early in 1949 Hungary was proclaimed a People's Republic and parliamentary elections, with a single slate of candidates—were followed by radical purges in the Communist party which thoroughly aligned Hungary with the Soviet bloc The trial of Cardinal MINDSZENTY introduced the large-scale attack of the Communist regimes of Eastern Europe on the Catholic Church See W B F Bovill, *Hungary and the Hungarians* (1908), Henry Marczali, *Hungary in the Eighteenth Century* (Eng tr., 1910), A B Yolland, *Hungary* (1917), Paul Teleki, *The Evolution of Hungary* (1923), Oszkar Jaszi, *Revolution and Counter-Revolution in Hungary* (Eng tr., 1924), L S Smith, *Hungary Land and People* (1933), D G Kosary, *A History of Hungary* (1941) See also bibliography under AUSTRO-HUNGARIAN MONARCHY

hunger strike, refusal of a political or other prisoner to eat, usually as a protest against the legality of his sentence or against conditions in prison An ancient device, it was revived in the early 20th cent by the English militant suffragists and became the accepted technique of women sentenced for suffragist activities The passage of the "Cat-and-Mouse Act" in 1913, by which prisoners in ill-health could be temporarily discharged, ended the forced feeding to which the authorities had resorted The Franchise Act of 1918 ended the suffragist hunger strikes The hunger strike was used by Irish nationalists in 1912 and later In 1917 Thomas Ashe, a hunger striker in Ireland, died as the result of forced feeding Hunger strikes were used by the Sinn Feiners in 1920, and Terence MacSwiney, lord mayor of Cork, died in a London prison after a fast of 74 days Thereafter, hunger striking was forbidden by the Sinn Fein It was used again in 1923 by the Republican group after the Irish Free State had been established Hunger striking was used between 1917 and 1919 by American suffragists and also by conscientious objectors imprisoned in the United States Gandhi in India several times fasted in religious penance inflicted upon himself, but until the fast of 1933 not in jail and never as a protest against imprisonment See Sylvia Pankhurst, *The Suffragette Movement* (1931)

Hungtze (hôông'dzŭ') Mandarin *Hung-tse,* lake, NE Anhwei and W Kiangsu provs., China The Yellow River flows through the lake

Hunkers, conservative faction of the Democratic party in New York state in the 1840s, so named because they were supposed to "hanker" or "hunker" after office In opposition to them stood the radical Democrats or BARNBURNERS Among other things the Hunkers favored internal improvements and liberal chartering of state banks, they opposed antislavery agitation They generally controlled the party machinery and the patronage In the 1840 gubernatorial nomination they turned against the Democratic candidate, Gov Silas Wright, a Barnburner The Barnburners retorted in kind by voting for the Free-Soil ticket in the 1848 presidential election, which thereby went to the Whig candidate, Zachary Taylor Those Barnburners who did not persist in their antislavery views were welcomed back to the party fold in 1850 The Hunkers themselves, however, subsequently divided into the "Softs" led by William L Marcy and Horatio Seymour, who supported President Franklin Pierce, and the "Hards" led by Daniel S Dickinson, who opposed Pierce

Huns, nomadic and pastoral people of unknown ethnological affinities who originated in N central Asia and appeared in Europe in the 4th cent A D Their organization was predominantly military Divided into hordes, they undertook extensive independent campaigns, living off the countries they ravaged The Huns have been described as short and as of somewhat Mongoloid appearance Their military superiority was due to their small, rapid horses, to which they were practically welded Despite the similarity of their tactics and habits with those of the White Huns, the MAGYARS, the MONGOLS, and the TURKS, their connection with those peoples is either tenuous or—in the case of the Magyars and the Turks—unfounded The Huns appear in history in the 3d cent B C., when the Great Wall of China was erected to contain them. Called Hsiung-nu by the Chinese, the Huns occupied N China from the 3d cent A D until 581 Having swept across Asia, they invaded the lower Volga valley c 372 and advanced westward, pushing the Germanic OSTROGOTHS and VISIGOTHS before them and thus precipitating the great waves of migrations that destroyed the Roman Empire and changed the face of Europe They crossed the Danube, penetrated deep into the Eastern Empire, and forced (432) Emperor Theodosius to pay them tribute Attila, their greatest king, had his palace in Hungary Most of the territories which now constitute European Russia, Poland, and Germany were tributary to him and he was long in Roman pay as Roman general in chief When Rome refused (450) further tribute, the Huns invaded Italy and Gaul and were defeated (451) by AETIUS, but they ravaged Italy before withdrawing after Attila's death (453, see ATTILA) Their later movements are little known, some believe that the WHITE HUNS were remnants of the Hunnic people. See Thomas Hodgkin, *Italy and Her Invaders,* Vol. I (rev ed., 1892), W M McGovern, *Early Empires of Central Asia* (1939), E A Thompson, *A History of Attila and the Huns* (1948)

Hunt, Gaillard (gīlyard'), 1862–1924, American historian and editor, b New Orleans He served (1887–1909, 1917–24) the Dept of State in various capacities, his most important work being done as chief of the division of publications and editor From 1909 to 1917 he was chief of the division of manuscripts in the Library of Congress Among his books are *The Life of James Madison* (1902), *John C Calhoun* (1908), *Life in America One Hundred Years Ago* (1914), *The Department of State of the United States Its History and Functions* (1914), and *Israel, Elihu, and Cadwallader Washburn* (1925) He edited *The Writings of James Madison* (9 vols., 1900–1910) and Vols XVI to XXVII of the *Journals of the Continental Congress, 1774–1789*

Hunt, Henry, 1773–1835, English radical politician His early life, unsettled and unsuccessful, disposed him to sympathy with the oppressed, and in 1807 he organized a society for electoral reform "Orator" Hunt took part with the revolutionist, Arthur Thistlewood, in the Spa Fields meeting (1816) and gained his chief notice by presiding at the meeting (1819) at Manchester which ended in the bloody PETERLOO MASSACRE He was imprisoned for two years, after a trial of doubtful legality Both before and after this experience Hunt sat in Parliament but exerted little influence

Hunt, Henry Jackson, 1819–89, Union general in the Civil War, b Detroit, grad West Point, 1839 An artillery officer, he was twice brevetted in the Mexican War and later was one of three who revised the light-artillery tactics In the Civil War his artillery covered the Union retreat at the first battle of Bull Run (July, 1861) At Malvern Hill in the Seven Days battles (1862), he commanded G B McClellan's reserve artillery effectively and was made a brigadier general of volunteers Hunt, succeeding J F Barry in Sept., 1862, was chief of artillery of the Army of the Potomac for the rest of the war His guns decimated the ranks of Pickett's men in the famous charge at Gettysburg (July, 1863) Hunt was in charge (1864–65) of the siege operations at Petersburg

Hunt, Holman see HUNT, WILLIAM HOLMAN

Hunt, Leigh (James Henry Leigh Hunt) (lē), 1784–1859, English poet, critic, and essayist, friend of the eminent literary men of his time He exerted a strong influence on the early work of Keats With his brother John, Hunt established the *Examiner* (1808–21), a liberal weekly to which Leigh Hunt contributed political articles Because of an outspoken article reflecting on the prince regent, the brothers were imprisoned from 1813 to 1815, but continued to edit the journal from jail In 1822 Hunt joined Shelley and Byron in Italy and launched the *Liberal* (1822–23), which proved a failure During other periods Hunt contributed to the *Indicator* (1819–21), the *Companion* (1828), the *Tatler* (1830–32), and *Leigh Hunt's London Journal* (1834–35) Hunt's poetical works include *The Story of Rimini* (1816), *Hero and Leander* (1819), *Captain Sword and Captain Pen* (1835), and the well-known lyrics "Abou Ben Adhem" and "Jenny Kissed Me" His literary fame, however, rests chiefly on his miscellaneous light essays and his delightful autobiography (1850) See L H Houtchens and C W Houtchens, ed., *Leigh Hunt's Dramatic Criticism, 1808–1831* (1949), biography by Edmund Blunden (1930)

Hunt, Richard Morris, 1828–95, American architect, b Brattleboro, Vt., studied in Geneva, Switzerland, and at the École des Beaux-Arts, brother of William Morris Hunt He was a conspicuous exponent of 19th-century eclecticism. He worked under T U Walter on the extensions of the Capitol at Washington In New York he founded the first American studio for training young architects, and he was one of the organizers of the American Insti-

tute of Architects, of which he became president in 1888 Most of his work was closely imitative of historic styles. It included the Lenox Library, New York city (later torn down); the first building for the Fogg Museum of Art, Cambridge, Mass , the U S. naval observatory at Washington, and the pedestal for the Statue of Liberty in New York harbor His Tribune Building in New York was one of the first elevator buildings The Administration Building at the Columbian Exposition in Chicago was the most noted of his later works See biography by Barr Ferree (1895) His son, **Richard Howland Hunt,** 1862–1931, was also an architect Among his works was a new wing for the Metropolitan Museum in New York The last years of his life were devoted to designs for large office buildings He led a movement against unrestricted skyscraper construction

Hunt, Robert, c 1568–1608, English clergyman in America He was chaplain of the expedition which settled Jamestown On June 21, 1607, he administered the first sacrament to Englishmen in America

Hunt, Thomas Sterry, 1826–92, American chemist and geologist, b Norwich, Conn He served as chemist and mineralogist (1847–72) of the Canadian Geological Survey, under Sir William Logan, and as professor of geology (1872–78) at the Massachusetts Institute of Technology An eminent theorist and a close student of the achievements of European scholars, he took an important part in the controversies of his day

Hunt, William Holman, 1827–1910, English painter, a founder of the Pre-Raphaelite brotherhood and one of its most conscientious exponents His paintings, although often crude in color and laborious in technique, are interesting because of their rigorous sincerity Hunt spared no effort to paint nature in all detail with uncompromising clarity In 1854 he visited Palestine in order to have authentic material for his religious paintings Among his best-known works are *The Light of the World* (Oxford Univ), *The Hireling Shepherd* (Manchester Gall), and *The Triumph of the Innocents* (Liverpool Gall) See his *Pre-Raphaelitism and the Pre-Raphaelite Brotherhood* (1905–6), studies by F G Stephens (1860) and A C Gissing (1936)

Hunt, William Morris, 1824–79, American painter, b Brattleboro, Vt , studied in Düsseldorf and Paris He was greatly influenced by the Barbizon school, and particularly by J F Millet In 1855 he established himself in Boston, where he introduced the ideals and methods of the Barbizon school, and as teacher and painter exerted a widespread influence upon American art His earliest works were usually figure pieces, he then turned to portraits and in his later years devoted himself chiefly to landscapes Among his best-known paintings are *Hurdy-Gurdy Boy, Girl with a Kitten,* and *Peasant Girl at Barbizon* (Mus of Fine Arts, Boston), *Girl at a Fountain, The Bathers,* and a landscape and four portraits (Metropolitan Mus), and a portrait of Chief Justice Shaw (courthouse, Salem, Mass) *Flight of Night* and *Discovery* (studies in the Metropolitan Mus), notable examples of American mural art executed for the senate chamber at Albany, N Y , have been destroyed

Hunt, Wilson Price, 1782?–1842, American explorer, leader of the overland expedition (1810–12) to Astoria, Oregon, b Hopewell, N J He moved (1804) to St Louis, Mo , and entered the fur trade As a partner in the Pacific Fur Company organized by John Jacob Astor, Hunt led the expedition—from Missouri to Astoria—which was the first after that of Lewis and Clark to cross the continent His party was the first to pass through the valley of the Snake river, they also pioneered part of what later became the Oregon Trail The extreme hardships of Hunt's expedition are portrayed in Washington Irving's *Astoria* (1836) Wilson Price Hunt was away on a sea journey to create an adequate supply system, when Astoria was sold to the North West Company He returned to the Atlantic seaboard around Cape Horn He later became a prosperous businessman in St Louis and was for 18 years postmaster there Part of his journal of his overland journey appears in P A Rollins, ed , *The Discovery of the Oregon Trail* (1935)

Hunter, David, 1802–86, Union general in the Civil War, b Washington, D C , grad West Point, 1822 He served in the Mexican War and just before the Civil War was in charge of Lincoln's bodyguard in Washington Hunter led a division of Irvin McDowell's army at the first battle of Bull Run in July, 1861, and became a major general of volunteers in August He commanded the Dept of Kansas (Nov , 1861–March, 1862) and then the Dept of the South, where forces under his general command captured Fort Pulaski, Ga , in April, 1862. Lincoln annulled Hunter's order emancipating the slaves in his department In May, 1864, Hunter assumed command of the Dept of West Virginia. After a successful advance up the Shenandoah Valley, he was driven back from Lynchburg by the Confederate general J A Early, who then raided N in the Potomac After Sheridan succeeded him in Aug , 1864, Hunter served on court-martial duty for the rest of the war

Hunter, John, 1728–93, Scottish anatomist and surgeon, studied under his brother, William Hunter. A pioneer in comparative anatomy and morphology, he made many valuable investigations and introduced several surgical techniques, including a method of ligating aneurisms which is still in use His writings include *Natural History of the Human Teeth* (1771), a work on venereal disease (1786), and *Treatise on the Blood, Inflammation, and Gunshot Wounds* (1794) Hunter's anatomical collection, acquired by the Royal College of Surgeons, London, in 1800, was the nucleus of the Hunterian Museum See studies by Stephen Paget (1897) and G C Peachey (1924),

Hunter, Robert, d 1734, royal governor of New York and New Jersey (1709–19), b Ayrshire, Scotland His administration was notably successful. He maintained a vigorous campaign against the French and Indians and cooperated with other colonies in military matters He was successful in allaying bitter political factionalism, which had plunged New York and New Jersey in turmoil for several decades, and he also straightened out financial and revenue matters Hunter was less successful with several thousand Rhenish Palatinate refugees, whom he brought over and settled on the upper Hudson to produce naval stores for England Unable to secure funds for the project from England or from his assembly, Hunter went in debt to the amount of £21,000 to save the colony Later he was governor of Jamaica until his death

Hunter, Robert Mercer Taliaferro (tŏl'ŭvûr), 1809–87, American statesman, b Essex co , Va , grad Univ of Virginia, 1829 He was a U S Representative (1837–43), serving as speaker from 1839 to 1841 Hunter became a leading states' rights Democrat and supported John C Calhoun for the presidency in 1844 He returned to the House in 1845 and entered the U S Senate in 1847, maintaining a generally conservative viewpoint before the Civil War He resigned in 1861 to become the Confederate secretary of state (1861–62) and then a Confederate senator (1862–65) In 1865 he participated in the futile Hampton Roads Peace Conference Imprisoned for several months after the war, Hunter helped organize (1867) a conservative party that saved Virginia from many of the evils of radical Republican Reconstruction See C H Ambler, ed , *Correspondence of Robert M T Hunter, 1826–1876* (1918), biography by H H Simms (1935)

Hunter, William, 1718–83, Scottish physician He was famous as a lecturer, as London's leading obstetrician, and as head of a school and museum of anatomy where many noted men were trained He bequeathed his valuable anatomical collection to the Univ of Glasgow See study by R H Fox (1901) and memoir by G C Peachey (1924)

Hunter, Port or Newcastle Harbour, estuary of the Hunter river, E New South Wales, Australia Second harbor of the state in size, it is 3 mi long and 2 mi wide The coal-loading port Newcastle is on the south shore near the entrance

Hunter College of the College of the City of New York, first free college for women, opened 1870 as Normal College, chartered 1888, renamed 1914 for its organizer and first president, Thomas Hunter There are buildings on a campus in the Bronx and a skyscraper in Manhattan, all built since 1929

hunter's moon, name for the full moon which follows that nearest to the autumnal equinox (the harvest moon) Its characteristics are similar to those of the harvest moon

hunting Through the Paleolithic period hunting was man's chief means of obtaining food and clothing In the Neolithic period man practiced agriculture, but killing game was still an important part of his work Hunting was popular among the ancients and became a usual sport in medieval Europe, where it was reserved, as far as possible, for the privileged classes by game laws Falconry and fox hunting became increasingly popular in England in the Middle Ages, and use of hunting dogs—hounds, setters, pointers, spaniels, and the like—became increasingly widespread in this period When white men arrived in America the continent abounded in game, the American Indians, who chiefly used the bow and arrow, frequently but not universally conducted their hunting under strict codes which were designed to preserve wildlife White settlers, however, often wantonly killed game, and destructive hunting began in the interest of the fur trade Later, lumber and railroad companies employed hunters to provide their companies with meat Thus many types of game animals were brought near extermination until the several states of the Union passed game laws The wildlife refuge has also been extensively used in the United States to save species of birds and animals from extinction Favorite game in the United States include quail, partridge, grouse, pheasant, snipe, duck, geese, wild turkey, deer, rabbit, woodchuck, squirrel, and Rocky Mt sheep. Big game is usually killed with the rifle Big-game hunting in Africa and India became a sport among the wealthy of the western world in the 19th cent See P R Chalmers, *The History of Hunting* (1936), R B Vale, *Wings, Fur, and Shot* (1936); R B Camp, ed , *The Hunter's Encyclopedia* (1948); J. C. Godfrey and Frank Dufresne, ed , *The Great Outdoors* (1949)

Huntingburg, city (pop. 3,816), SW Ind , NE of Evansville It has clay deposits from which pottery is made Greenhouses in the city produced the American Beauty rose

Huntingdon, Henry Hastings, 3d **earl of,** 1535–95, English nobleman Through his mother, Catherine Pole, a descendant of the duke of Clarence (brother of Edward IV and Richard III), Hastings claimed the right to succeed Elizabeth to the English throne He received some support from the Protestant party Hastings was custodian of the rival claimant, Mary Queen of Scots, for a brief period (1569–70). In 1572 he was president of the council of the north

Huntingdon, Selina Hastings, countess of, 1707–91, English religious leader, patron of the Calvinistic Methodists She was closely associated with the Wesleys and George Whitefield, when the break separated them, she took the side of Whitefield, whom she made one of her chaplains. She established chapels in Bath and other centers of fashion and appointed chaplains to take charge of them In 1768 she founded at Trevecca House in Wales a seminary for the training of ministers Later it was removed to Cheshunt, Hertfordshire All who were associated with her establishments and came under her moral control were known as "Lady Huntingdon's Connexion " Huntingdon College, Montgomery, Ala , is named for her See Sarah Tytler, *The Countess of Huntingdon and Her Circle* (1907)

Huntingdon, county, England see Huntingdonshire

Huntingdon, town (pop 1,952), S Que , on the Châteauguay river and SW of Montreal

Huntingdon, municipal borough (1931 pop 4,106, 1943 estimated pop 4,633), county town of Huntingdonshire, England, on the Ouse and on the ancient Ermine Street Oliver Cromwell was born here and studied in the grammar school Samuel Pepys also went to school here His patron, the earl of Sandwich, bought the magnificent estate "Hinchingbrooke" from the Cromwells

Huntingdon. 1 Industrial borough (pop 7,170), co seat of Huntingdon co , S Pa , E of Altoona, settled c 1755, laid out 1767, inc 1796 Its manufactures include machinery, boilers, radiators, and paper Juniata College (Church of the Brethren, coeducational, 1876) and an industrial reformatory are here Joseph Saxton, pioneer in precision machinery and in photography, was born here (1799) 2 Town (pop 1,432), co seat of Carroll co , W Tenn , NE of Jackson, in a farm area, settled and inc 1821

Hurd, Jacob, 1702–58, American silversmith, b Charlestown, Mass He worked in Boston His mark is his full name, initial and surname, or surname only in an ellipse, rectangle, or cartouche His sons Benjamin and Nathaniel were also silversmiths in Boston Nathaniel was noted as an engraver, especially of bookplates See Hollis French, *Jacob Hurd and His Sons* (1939)

Hurd, Peter, 1904–, American painter, b Roswell, N Mex Intended for the army, he left West Point, studied art at the Pennsylvania Academy of the Fine Arts, and worked as apprentice to the painter N C Wyeth, whose daughter he married Hurd is known for his realistic, carefully designed paintings of Western scenes and types and also as an illustrator and mural painter, in which capacity he has decorated the New Mexico Military Institute, the Big Springs, Texas, post office, and the post-office annex at Dallas, Texas He is represented in the Metropolitan Museum and the Art Institute of Chicago

hurdy-gurdy, musical instrument, first described by St Odo of Cluny in the 10th cent and very popular in the early Middle Ages It had generally three strings, caused to vibrate by a wooden wheel turned by a crank Stopping was by means of keys generally affecting only one string which played the melody, the others acting as drones Usually two players were required The late Middle Ages and the Renaissance saw the instrument made smaller and relegated to beggars and peddlers Haydn composed a few pieces for an 18th-century form of hurdy-gurdy with sympathetic strings and a set of organ pipes added The barrel organ has been called a hurdy-gurdy because of its crank and its use for street playing

Huri (hū'rī), father of Abihail **2**

Hurley, Patrick Jay, 1883–, U S cabinet officer, b Choctaw Indian Territory (now in Oklahoma), grad Indian Univ (now Bacone Junior College, Okla), 1905, and National Univ Law School, Washington, D C , 1908 He practiced law in Tulsa, Okla , was (1912–17) national attorney for the Choctaw Nation, and fought in France in the First World War as a colonel in the U S army He was Undersecretary (1929) and Secretary (1929–33) of War, served on diplomatic missions, and participated in Republican party politics After the outbreak of the Second World War, Hurley saw active fighting in the Far East as the personal representative of Gen George C Marshall and then served (1942) as the first U S minister to New Zealand He afterwards was (1942–43) President F D Roosevelt's personal representative in the Middle East, was promoted (1944) major general, and was envoy (1944–45) and ambassador to China He wrote *In Search of Australia* (1943)

Hurley, city (pop 3 375), co seat of Iron co , N Wis , on the Montreal opposite Ironwood, Mich , founded 1885, inc 1918 The city, on the Gogebic iron range, grew with mining and lumbering It is a shipping point for iron ore

hurling, popular game in Ireland played on an 80 yd by 140 yd field by two opposing teams of 15 players each It is also called hurley The ball is 10 in in circumference, cork-centered, made of rubber, and covered with horsehide After it is picked off the ground or caught by the hurler —a tapering, curved, broad-bladed wooden stick 3 ft long—the player runs with it or on his hurley as far as he can and then hurls the ball toward a team mate or toward the goal his team is attacking The hurler alone may be used in advancing the ball Three points are scored if the ball is hurled by the stick into the net strung between the goal posts, which are 16 ft high and 21 ft apart One point is scored if the ball is hurled over the crossbar, which is 8 ft from the ground This body-bruising game, akin to hockey, has been played in the United States since 1914

Huron. 1 Village (pop 1,827), N Ohio, SE of Sandusky and on Lake Erie at the mouth of the Huron, settled c 1805 With a good harbor Huron is a fishing and tourist center and a transshipping point for coal and iron ore **2** City (pop 10,843), co seat (since 1880) of Beadle co , E central S Dak , on the James river and E of Pierre, laid out 1879, inc 1883 A shipping and trade center for a large agricultural area, it has meat-packing and dairying industries The city is the site of the state fair, the state weather bureau and Huron College (Presbyterian, coeducational, 1883). Huron has city-manager government

Huron, river, c 97 mi long, rising in S Michigan among small lakes and flowing generally SE past Ann Arbor and Ypsilanti to Lake Erie c 20 mi S of Detroit

Huron, Lake, 206 mi. long and 183 mi. at its greatest width, second largest of the Great Lakes Lying 579 79 ft above sea level, it has a maximum depth

of 750 ft and an area of 23,010 sq mi. The lake is bounded on the north and east by Ontario, and on the west by Michigan It receives the waters of Lake Superior (via the St Marys river) and of Lake Michigan (via the Straits of Mackinac); it empties into Lake Erie through the St Clair river and lake and the Detroit river Georgian Bay, a large arm of the lake, indents the Ontario coast, and Saginaw Bay, a smaller arm, is in Michigan The lake's numerous islands include Mackinac and those of the Manitoulin group Iron ore, grain, coal, and limestone are the chief articles of transport across Lake Huron The principal Michigan ports are Bay City, Alpena, and Cheboygan, those on the Canadian side are Goderich, Collingwood, and Midland The lake is visited by violent storms and is usually icebound from about mid-December until early April It was probably the first of the Great Lakes to be seen by white men, possibly Étienne Brulé visited Georgian Bay c 1612 or earlier In 1615 Samuel de Champlain traversed part of Lake Huron and later made a map of it See Fred Landon *Lake Huron* (1944)

Huronian: see PROTEROZOIC ERA

Huron Indians, confederation of four North American Indian tribes, who spoke the Wyandot language (Iroquoian family) Their name for themselves was Wendat In the early 17th cent they occupied the region around Lake Simcoe and between Lake Simcoe and Georgian Bay in Ontario and numbered some 20,000 Their culture was substantially that of the area of the Eastern woodlands They lived in palisaded villages and intensively cultivated tobacco In 1615, when Champlain visited the Huron, they were at war with the Iroquois The long-standing enmity between the Huron and the Iroquois was climaxed in 1648, when the Iroquois, armed with Dutch firearms, invaded Huronia and subsequently disrupted (1649) the Huron confederacy as such It was at this time that Father Jean de BRÉBEUF, who established (1626) a Catholic mission among the Huron, and other Jesuit missionaries suffered martyrdom at the hands of the Iroquois The survivors of the Huron fled in all directions—southwest to the Tobacco Nation, south to the Neutral Nation, southeast to the Erie Indians, northeast to a French fort near Quebec The unexorable Iroquois everywhere hunted the fugitive Huron, in 1649 the Iroquois attacked the Tobacco Nation, causing the migration of these people in company with the Huron In 1650 the Neutral Nation was invaded and practically wiped out, and in 1656 the Erie Indians were almost exterminated The Huron who had fled to Quebec ultimately received a small reservation at Loretteville, but the remnants of the Huron and Tobacco Nation went under pressure from the Iroquois, first to Michigan, then to Wisconsin and Illinois, where the Sioux attacked them The Tobacco Nation and Huron eventually settled (1750) in villages near Detroit and at Sandusky, Ohio In Ohio they became known to the British as the Wyandot Indians and as such fought with the British against the Americans in both the American Revolution and the War of 1812 In 1813 their village land near Detroit and at Sandusky was deeded to them by the United States, and by 1842 they had sold their tracts and moved to Wyandotte co, Kansas In 1867 they were settled in NE Oklahoma, where they now dwell, numbering some 825 See C M Barbeau, *Huron and Wyandot Mythology* (1915)

Hurricane. **1** Town (pop 1,524), SW Utah, in a fruitgrowing area near St George, settled 1906 **2** Trading village (pop 1,103), W W Va, E of Huntington, in a farm and tobacco area, inc 1888

hurricane, tropical CYCLONE originating in the DOLDRUMS, on the western side of oceans, probably as a result of convective heating The moist, warmed air at the water's surface, being lighter than its environment, is forced aloft and replaced by the cooler, denser, surrounding air which blows spirally inward around the center or "eye" of the storm (counterclockwise in the Northern Hemisphere, clockwise in the Southern Hemisphere) Contrary to conditions prevailing in the extratropical cyclone of temperate latitudes, the hurricane has no frontal structure, and the distribution of weather elements (temperature, pressure, WIND, and cloudiness) is more or less symmetrical about the center Hurricanes occur most frequently during the late summer and autumn in the Northern Hemisphere and in the late winter and spring in the Southern Hemisphere In their early stages, these storms move in a general westerly direction in the trade-wind belts, gradually recurving to the right in the Northern Hemisphere and to the left in the Southern Hemisphere as they enter temperate latitudes, their speed of travel usually ranges from 10 to 30 mi per hour The diameter of a hurricane varies from 25 to 600 mi, and, when well developed, it is accompanied by very heavy precipitation, a barometric pressure of less than 28 5 in at the center, and winds of 75 to 200 mi per hour *Hurricane* is the term commonly applied to the tropical cyclone of the Caribbean and West Indies, the same storm is called a *typhoon* in India and China and a *baguio* in the Philippines

Hurst, Fannie, 1889–, American novelist, b Hamilton, Ohio, grad. Washington Univ., 1909. In 1915 she married Jacques S. Danielson. She gained material for her fiction by working as a waitress, a saleswoman, and a steam-laundry worker Her reputation as a writer was made with *Humoresque* (1919), a collection of short stories of which the title story was filmed with great success Her novels include *Lummox* (1923), *Back Street* (1930), *Great Laughter* (1936), and *Hands of Veronica* (1947).

Hurst, John Fletcher, 1834–1903, American Methodist bishop and educator, b Maryland, grad Dickinson College, 1854, and studied theology in Germany He was president of Drew Theological Seminary from 1873 until 1880, when he was elected bishop Bishop Hurst was founder and chancellor (1891–1902) of American UNIV, Washington, D C, although the university did not open until after his death His writings include *A History of the Christian Church* (1897–1900)

Hurst, city (pop 1,012), S Ill, NE of Carbondale, in a coal area, inc 1905

Hurtado de Mendoza, Diego (dyā'gō ōōrtä'dhō dā mändō'thä), 1503–75, Spanish poet, historian, and statesman, b Granada He was the ambassador of Charles V to England and Venice and at the Council of Trent Philip II banished him to Granada from 1568 to 1574, there he wrote his famous and surprisingly unbiased history of the Moorish rebellion, *Guerra de Granada*, which was not printed until 1627 He wrote poetry in the traditional manner, especially elegies and epistles The picaresque novel *Lazarillo de Tormes* was formerly attributed to him, but his authorship is now considered improbable

husband and wife This article discusses only the legal aspects of the married state, for the sociological aspects, see MARRIAGE In law marriage is a contractual relationship which vests the parties with a new status Most of the requisites for other binding contracts must also be present in the case of marriage Thus, the parties must have acted free from duress and must not have made fraudulent misrepresentations, otherwise the purported marriage may be dissolved by a judicial decree of NULLITY OF MARRIAGE However, marriage is unlike other contractual relationships in that it creates a personal status which may not be terminated by the will of the parties but only by a court, e g, by a DIVORCE With few exceptions, a marriage validly contracted in one place is universally recognized Thus a common-law marriage—i e, a marriage solely by consent of the parties without ceremony or registration—contracted in a state where such unions are valid will be deemed binding in states where a license to marry and a civil or religious ceremony of marriage are required At an early period common-law marriages were frequent in Europe The usual form was *sponsalia per verba de praesenti* [Latin, =marriage by words of present effect], in which the parties agreed that they were married from that time on The marriage was immediately valid for most purposes even though a ceremonial religious marriage might later be compulsory and consummation by sexual intercourse might be delayed The other form of common-law marriage was *sponsalia per verba de futuro* [Latin, = marriage by words of future effect], i e, an agreement to marry in the future, the parties might void their agreement any time prior to having sexual relations The difficulties arising from common-law marriages—e g, uncertainty of the marriage itself, doubtful legitimacy of children—led to their complete prohibition in Roman Catholic countries by the Council of Trent Although common-law marriage *per verba de praesenti* was abolished in England in 1753, it continued lawful in Scotland and in the American colonies Today most American states do not allow such marriages The former Anglo-American law of marriage was chiefly characterized by the view that husband and wife are one legal personality for whom the husband acts Accordingly, the husband determined the marital domicile, he was the dominant figure in the relation of PARENT AND CHILD, and nearly all the property of the wife passed to his absolute control for the duration of the marriage The wife ordinarily could not make separate contracts, but if her husband refused support to her or to the children, she might pledge his credit to supply the needs of her station in life After the death of a spouse the survivor usually enjoyed a partial interest in the deceased's property The wife's dower entitled her to one third of the husband's property on his death, curtesy, a similar right of the husband in the wife's property, accrued only if children had been born of the marriage In time equity recognized the wife's right during her husband's lifetime to a separate property in trust established for her benefit By the late 19th cent. the need of a separate trust property disappeared, for Great Britain and all the American states adopted "married women's property" statutes, giving to wives complete control over their property and their contracts Most states provided that in place of dower and curtesy a surviving spouse was entitled to a certain minimum share in the estate of the deceased spouse A few states, following the Spanish law, recognized community property, i e, all property acquired during the marriage is owned by both husband and wife and is divided equally on the dissolution of the marriage Some features of the older law of marriage still persist Thus, the husband in most cases still determines the marital residence, and he owes the wife a duty of support which she is not usually required to return Certain old legal actions for injury to the marital relation are still available to the husband in many states Outstanding are actions for criminal conversation, i e, a civil action against the paramour for adultery, for loss of consortium (marital services) because of physical injury to the wife, and for alienation of the wife's affections

Husein (hōōsīn'), c 626–680, Moslem saint of the Shiites, second son of ALI and FATIMA (daughter of Mohammed the Prophet) His elder brother, Hasan, was forced to abdicate as 5th caliph in favor of Muawiya The CALIPHATE thus passed away from the Alid family, though many believers upheld the sons of Ali On the death of Hasan, Husein tried to make good his own claim, though he proved irresolute in crises Finally he did lead an insurrection, but he and his band were cut down at Kerbela The day of this defeat, the 10th of Muharram, became the great holy day of the Shiites, who uphold the legitimacy of the Alid claims The tomb of Husein at KERBELA is for them a holy place of pilgrimage The name also appears as Hussein, Hosain, Hoseyn, and Hosayn

Husein (hōōsīn') or **Hoseyn** (hōsīn'), d 1729, Safavid shah of Persia (1694–1722) A weak and superstitious man, Shah Sultan Husein was surrounded by astrologers and fanatics and was able to offer little opposition to the uprising of the Afghans He gave up his throne, and the bloody rule of Mahmud followed Persian administration was restored only later by Nader Shah

Husein ibn Ali (ĭ'bŭn ä'lē), 1856–1931, Arabian political and religious leader In 1908 he succeeded his father as sherif of Mecca and thus was ruler of the Hejaz under Turkey In the First World War, after receiving British assurances that all Arab lands not under French control would be liberated, he began, in 1916, a successful revolt against the Turks in Arabia and proclaimed himself king of the Hejaz and even of all Arabia Believing that the British broke their promises to him, he refused to sign the Treaty of Versailles Great Britain lent him no support in his struggle with Ibn Saud, who defeated him in 1924, forcing him to abdicate and renounce his claim to the caliphate This claim, advanced after the Turkish parliament abolished the Ottoman caliphate in 1924, was based on Husein's membership in the Hashimite family, a branch of the Koreish tribe, to which Mohammed the Prophet had belonged In 1925 Ibn Saud took Husein's domain Husein lived (1924–30) in exile on Cyprus He died in Amman, the capital of his son Abdullah, ruler of Trans-Jordan (now Jordan) Another son, Feisal I, founded the royal line of Iraq

Hushah (hū'shu) [Heb, =haste], descendant of Judah 1 Chron 4 4

Husha (hū'shä) [Heb, =quick], friend of David, who set him to spy on Absalom 2 Sam 15–17

Husham (hū'shăm) [Heb, =swift], king of Edom Gen 36 34,35, 1 Chron 1 45,46

Hushathite (hū'shuthīt"), designation of SIBBECAI, possibly derived from HUSHAH

Hu Shih (hōō' shû'), 1891–, Chinese writer and diplomat, educated in China and the United States (at Cornell and Columbia universities) He was prominent in the Chinese literary renaissance and advocated the use of the popular speech in literature in place of the classical language He was Chinese ambassador to the United States from 1938 to 1942 See his *Chinese Renaissance* (1934).

Hushim (hu'shĭm) **1** See SHUHAM **2** Name in the genealogy of Benjamin 1 Chron 7 12 **3** Wife of a Benjamite 1 Chron 8 8,11

Husi (hōōsh), town (pop. 16,605), E Rumania, in Moldavia, SE of Jassy, near the Pruth river It is the center of a region of vineyards It was founded in the 15th cent, probably by Hussite settlers. Its cathedral was built (15th cent.) by Stephen the Great of Moldavia Here, in 1711, the Treaty of the Pruth was concluded between Tsar Peter I and Sultan Ahmed III (see RUSSO-TURKISH WARS)

husky: see ESKIMO DOG

Huss, Henry Holden (hŭs), 1862–, American composer and pianist, b. Newark, N J, pupil of Rheinberger in Munich He is a descendant of John Huss Among his compositions are concertos, choral works, orchestral pieces, and chamber music. As a pianist, he appeared with several major American symphony orchestras and in recital with his wife, the soprano Hildegard Hoffmann

Huss, John (hŭs), Czech *Jan Hus* (yän' hōōs'), 1369?–1415, Czech religious reformer Of peasant origin, he was born at Husinec, Bohemia (whence his name). He studied theology at the UNIV. of Prague, was ordained a priest c.1400, and in 1402 was appointed preacher in the Bethlehem Chapel, a foundation dedicated to preaching in the Czech language He early came under the influence of the writings of WYCLIF, and though he did not fully espouse Wyclif's doctrine, he praised it and op-

posed its condemnation (1403) by the Univ. of Prague. In his sermons Huss attacked the abuses of the clergy, thus earning the hostility of many priests, who turned the archbishop of Prague against him Huss, however, had powerful friends, notably Queen Sophia, consort of Wenceslaus IV (see WENCESLAUS, emperor) He furthermore represented the Czech national aspirations in conflict with the German elements in Bohemia In 1408 the archbishop and the university opposed the king's scheme to have Bohemia observe neutrality between the rival popes, Gregory XII and Benedict XIII (Pedro de Luna) Only the Czech members of the university supported Wenceslaus, who as a result changed (1409) the university charter by the decree of Kutna Hora, giving the Czechs a predominant position, he made Huss rector of the university The Bohemian clergy thus were split into two camps, this situation was not helped when, in the same year, the Council of Pisa deposed both popes and chose Alexander V, who was shortly succeeded by John XXIII (see COSSA, BALDASSARRE) With papal support, the archbishop forbade preaching in the Bethlehem Chapel, ordered the burning of Wyclif's books, and excommunicated (1410) Huss and his followers Wenceslaus stood by Huss and in 1411 brought about a truce, but the fight flared up again in 1412, when Huss openly denounced the bulls of John XXIII against King Lancelot of Naples and preached against the traffic in indulgences The pope excommunicated Huss, who— to save Prague from the papal interdict—retired to a castle near Tabor During his two years of exile he wrote his chief works including the *De ecclesia*, which increasingly reflected Wyclif's influence At the invitation of Emperor SIGISMUND, who granted him a safe-conduct, Huss presented himself in 1414 at the Council of Constance to justify his views The council refused to recognize his safe-conduct, and Huss was imprisoned and tried as a heretic His friend JEROME OF PRAGUE was also seized and put on trial Huss in his defense agreed that he would recant the errors which he had actually professed, but steadfastly refused to recant beliefs which he insisted he had never held and of which he felt unjustly accused (He feared that a recantation would have been an admission of guilt) Nevertheless, the council condemned his writings as heretical and sentenced Huss to be burned at the stake Huss remained admirably steadfast to the end There is a legend according to which he exclaimed, on seeing a poor old woman adding faggots to his pyre, "*Sancta simplicitas!*" Thus, however, is totally unsubstantiated See Huss's *De ecclesia* (Eng tr by D S Schaff, 1915) and letters (ed by W R Workman and R M Pope, 1904), H B Workman, *The Age of Hus* (Vol II of *The Dawn of the Reformation*, 1902), biographies by D S Schaff (1915) and Franz, Graf von Lutzow (2d ed, 1921)

Hussein see HUSEIN

Husseini (hōōsā'nē, amēn' ēl), 1896?–, Arab political leader, cousin of King Abdullah of Jordan and King Feisal II of Iraq He was inveterately opposed to the creation of a Jewish state in Palestine, and, suspected of complicity in anti-Jewish riots in Jerusalem in 1920, he fled to avoid punishment He returned under an amnesty and was appointed MUFTI of Jerusalem by the British in 1921 For his role in provoking violent dissension between Arabs and Jews in 1937 he was arrested but escaped to Lebanon Thence, just before the Second World War, he moved on to Iraq After the abortive pro-AXIS Iraqi revolt of 1941 he was flown to Rome, and in Berlin he broadcast Nazi propaganda and helped recruit Arab members for the Germans In 1946 the mufti, escaping from house arrest near Paris, arrived in Egypt, where King Farouk gave him asylum He is listed as a war criminal He is frequently called Haj Amin el Husseini, and his office is sometimes rendered grand mufti of Jerusalem

Husserl, Edmund (ĕt'mōōnt hōōs'url), 1859–1938, German philosopher Husserl applied the term *phenomenology* to his system of philosophy and developed a descriptive study of consciousness in its relationship to objects His analysis of the play of sense perception between the subjective ego and the reality of the object has influenced many philosophers His principal work was *Logische Untersuchungen* (1900–1901) See E P Welch, *Philosophy of Edmund Husserl* (1941)

Hussites (hŭs'īts), followers of John Huss After the burning of Huss (1415) and of JEROME OF PRAGUE (1416), the Hussites continued as a powerful group in Bohemia and Moravia They drew up (1420) the Four Articles of Prague, demanding freedom of preaching, communion in both kinds for laymen as well as priests, the limitation of property holding by the Church, and civil punishment of mortal sin, including simony Meanwhile the Hussite Wars (see separate article) had begun, and in their course the Hussite movement splintered into several groups The moderate Utraquist wing obtained recognition of the Compactata (see UTRAQUISTS) as the fundamental religious law of BOHEMIA from 1436 to 1567. The nobility was largely reabsorbed by the Roman Church, while many other Utraquists were fused in the 16th cent. with the Lutheran movement. The *Majestätsbrief* or Letter of Majesty (1609) of Emperor Rudolf II granted the Evangelicals, as the Lutheran Utraquists were called, official recognition, and its violation was the prelude to the Thirty Years War. Bohemia, which was overwhelmingly Protestant in the mid-16th cent, was brought back into the Catholic fold both by force and by persuasion However, the Evangelicals did not entirely disappear, nor did the other major communion, the MORAVIAN CHURCH, which probably stems from the radical wing of the Hussites, the TABORITES In 1781 Emperor Joseph II by his Edict of Toleration gave recognition to the Lutheran and Calvinist communions, but not to the native Czech Hussite movement, which continued to have strong roots in the people The Hussite doctrine remains alive among several Protestant groups in modern Czechoslovakia, and attempts have been made even among the Catholic Czech clergy to rehabilitate Huss See Frantisek Palacky, *Geschichte Böhmens* (5 vols, 1836–67), Ernest Denis, *Études d'histoire bohême* (new ed, 1918)

Hussite Wars, series of conflicts in the 15th cent, caused by the rise of the Hussites (see separate article) in Bohemia and Moravia It was a religious struggle between Hussites and Catholics, a national struggle between Czechs and Germans, and a social struggle On the death (1419) of Wenceslaus IV of Bohemia (see WENCESLAUS, emperor), the Hussites in Bohemia and Moravia took up arms to prevent his brother—their archenemy, Emperor SIGISMUND—from entering into his succession John ZIZKA, the Hussite leader, expelled Sigismund in 1420 and routed him again at Kutna Hora in 1422 From 1419 to 1436 Bohemia had no effective king, although a Polish prince, Korybut, was offered the crown in 1421 and nominally held it until 1427 After the death (1424) of Zizka the division between the radical and the moderate parties of the Hussites—the TABORITES and the UTRAQUISTS—widened A Taborite, PROCOPIUS THE GREAT, assumed the succession of Zizka as military commander of the Hussites In 1425–26 a Hussite army invaded Silesia and Saxony, and in 1429–30 the united Hussite forces penetrated as far as Franconia Several crusades against the Hussites were utterly routed by the Czechs, whose military organization and tactics were much superior to those of their opponents Negotiations with the Council of Basel began, especially through the Univ of Prague, and in 1433 the Czech delegates arrived at Basel (see BASEL, COUNCIL OF) The result was the conclusion of the Compactata (see UTRAQUISTS), by which the moderate Hussites were taken back into the Roman Church The Compactata were rejected by the Taborites Civil war now broke out between the Utraquists and the Taborites (predominantly the party of the lower classes) At the decisive battle of Lipany (1434) the Taborites were routed, and Procopius was killed At a council meeting (1436) at Jihlava the Compactata were ratified and Sigismund was recognized as king of Bohemia On the death (1439) of Sigismund's successor, Albert II, the Utraquist leader GEORGE OF PODEBRAD governed Bohemia—first in the name of LADISLAUS V and from 1458 as king He refused to accept the papal revocation (1462) of the Compactata and was declared deposed in 1466 A new war began between George and the nobles, and in 1468 MATTHIAS CORVINUS of Hungary attacked Bohemia By the time peace was made (1478), long after George's death, the religious element of the wars had largely disappeared See Franz, Graf von Lutzow, *The Hussite Wars* (1914)

Husum (hōō'zōōm), city (pop 23,822), Schleswig-Holstein, N Germany, a port on the North Sea Chartered in 1603, it soon became a prosperous commercial city, but it later declined Many fine patrician houses remain Husum is now noted as a cattle market It is the scene of many of Theodor Storm's short stories

hutch see CHEST

Hutcheson, Ernest, 1871–, Australian-American pianist, studied at the Leipzig Conservatory Appearances in Germany, Russia, Australia, and the United States established him as one of the foremost concert pianists He taught (1900–1912) at the Peabody Conservatory, Baltimore, and was (1911–44) head of the piano department of the Chautauqua Institution In 1933 he became dean of the Juilliard School of Music, of which he was made president in 1937, becoming president emeritus in 1945 He is the composer of concertos, orchestral pieces, and piano pieces and the author of several books, including *The Literature of the Piano* (1948)

Hutcheson, Francis, 1694–1746, English philosopher He was a professor at the Univ of Glasgow from 1729 until his death His reputation rests on four essays published anonymously while he was living in Dublin, prior to his college teaching Two of them were included in *An Inquiry into the Original of Our Ideas of Beauty and Virtue* (1725) and two in *An Essay on the Nature and Conduct of the Passions and Affections, with Illustrations on the Moral Sense* (1728) Although one of the first to write on the subject of aesthetics, he was primarily known in the field of ethics. According to Hutcheson, man has many senses, the most important of which is the moral sense This "benevolent theory of morals," in which man has a desire to do good, was a development of Shaftesbury's natural affection to benevolent action The criterion of moral action was the "greatest happiness for the greatest numbers," an anticipation of the utilitarian philosophers in word as well as spirit See Hutcheson's *System of Moral Philosophy* (with memoir by the Rev William Leechman, 1755)

Hutchins, Maude Phelps McVeigh, American sculptor, b New York city With M J Adler she wrote *Diagrammatics* (1932) She married Robert Maynard Hutchins in 1921, they were divorced in 1948

Hutchins, Robert Maynard, 1899–, American educator, b Brooklyn, N.Y, studied at Oberlin College, grad Yale, 1921 After teaching at the Lake Placid (N Y) School, he became secretary of Yale in 1923, taught in the Yale Law School (1925–27), and served as dean (1927–29) With M C Winternitz, dean of the medical school, he organized the Institute of Human Relations at Yale In 1929 he became president of the Univ of Chicago, where he reorganized the administrative system and put into effect the "Chicago plan," i e, a four-year junior college and a liberal arts university divorced from professional schools From 1945 his title was chancellor of the university An enthusiast for adult education, he received in 1946 a year's leave of absence to promote the "great books" program His books include *The Higher Learning in America* (1936) and *Education for Freedom* (1943)

Hutchins, Thomas, 1730–89, American frontiersman, surveyor, and geographer, b Monmouth co, N J He took part in the French and Indian War and gained a reputation for his engineering ability through planning Fort Pitt and other works His journals of military expeditions in the Western country are valuable historical sources A captain in the British army and in London at the opening of the Revolution, Hutchins refused to bear arms against America and was imprisoned, charged with high treason Released in 1780, he escaped to France and ultimately to Charleston, S C, where he joined the patriot forces In July, 1781, he became geographer to the United States In 1785 he assumed charge of the survey of the Northwest Territory

Hutchins, William James, 1871–, American educator and clergyman, b Brooklyn, N Y, grad Yale, 1892, and Union Theological Seminary, 1896 He was pastor of Bedford Presbyterian Church, Brooklyn (1896–1907), professor of homiletics at Oberlin (1907–20), and from 1920 until he retired in 1939 president of Berea College Robert Maynard Hutchins is his son

Hutchinson, Anne, c 1591–1643, religious leader in New England, b Lincolnshire, England She emigrated (1634) with her husband and family to Massachusetts Bay, where her brilliant mind and her kindness won admiration and a following The informal discussions at her home gave scope to Puritan intellects, but her espousal of the covenant of grace as opposed to the covenant of works (i e, she tended to believe that faith alone was necessary to salvation) caused John COTTON, John WINTHROP, and other former friends to view her as an antinomian heretic She defied them, was tried by the General Court, and was sentenced (1637) to banishment for "traducing the ministers" Several of her followers - including William CODDINGTON, John Wheelwright, John Underhill, and John Clarke—also left Massachusetts Bay Her life continued stormy After helping Coddington to found the present Portsmouth, R I, she quarreled with him and, with Samuel Gorton, ousted (1639) him After Coddington's return to power, she moved (1642) to Long Island and then to what is now Pelham Bay Park in New York city There she and all the other members of her family but one were killed by Indians See Winifred K Rugg, *Unafraid* (1930), R P Bolton, *A Woman Misunderstood* (1931)

Hutchinson, Thomas, 1711–80, colonial governor of Massachusetts (1771–74) and historian, b Boston, grad Harvard, 1727 A descendant of Anne Hutchinson, he was a man of wealth and prominence, of learning, and of notable integrity He entered public life when he became a member of the General Court in 1737 When the cost of the Louisburg campaign was repaid to Massachusetts, he proposed (1748) that the money be used to redeem the colony's depreciated currency The plan, which was successful in stimulating trade later, caused Hutchinson to lose the election in 1749 and aligned him with the conservatives He was a member of the governor's council (1749–66), a delegate to the Albany Congress (1754), and lieutenant governor (1758–71) When he was appointed royal governor in 1771, Hutchinson was perhaps the most powerful man in the colony, but he had bitter political enemies among the radicals, notably Samuel Adams and the family of James Otis Though he considered the STAMP ACT and other government measures unwise, he had favored strict enforcement, and his unpopularity caused a mob to sack and burn his mansion in 1765. His un-

popularity increased after he was governor, and he favored strenuous measures against the growing discontent These views were exposed when letters he had written to English friends were made public In 1774 he refused to let the tea-laden ships clear Boston Harbor and thus brought on the BOSTON TEA PARTY As tension grew worse he was replaced as governor by Gen Thomas Gage and moved to England. He was the author of an accurate, scholarly, and useful book, *The History of the Colony and Province of Massachusetts Bay* (3 vols , 1764-1828, modern ed by L S Mayo, 1936) See his diary and letters (ed by P O Hutchinson, 1883-86), biography by J K Hosmer (1896)

Hutchinson, Woods, 1862-1930, American physician, b England, M D Univ of Michigan, 1884 As writer and lecturer he did much to popularize and win support for preventive medicine and public health work

Hutchinson 1 City (pop 30,013), co seat of Reno co , S central Kansas, on the Arkansas and NW of Wichita, laid out 1871, inc 1872 It is a railroad, shipping, trading, and manufacturing center of a wheat-growing region Quantities of salt are taken from great salt beds several hundred feet below the surface Rich oil and natural-gas wells are near by The city is the site of the state fair The state reformatory is here Floods in 1929 and 1941 caused much damage in and about the city **2** City (pop 3,887), central Minn , W of Minneapolis, in a dairy and grain region, founded 1855 by the Hutchinson family troupe of itinerant singers from Connecticut, inc 1881 Part of the village was burned in the Sioux outbreak of 1862, and Little Crow, Sioux leader, was killed near here

Hutten, Ulrich von (ōōl'rĭkh fŭn hō̤'tŭn), 1488-1523, German humanist, poet, and political reformer, an outstanding figure of the German Renaissance His writings in brilliant Latin and, later, in powerful German exerted considerable influence He was crowned poet by Emperor Maximilian I in 1517 In 1519 he joined with Franz von SICKINGEN and supported Luther Hutten's longing for reform of the empire—by strengthening the power of the emperor, the lesser nobility, and the peasants at the expense of the princes and clergy—was frustrated by Sickingen's defeat in 1522 and by his own death after finding refuge with Zwingli See biography by D F Strauss (Eng tr , 1874)

Hutterische Community (hō̤o̤t'ĕrĭshu), known also **as Hutterian Brethren** (hŭtĕr'ĕun), a body of Christians practicing strict communism based on religious principles The brethren are descendants of those Moravian Anabaptists who were followers of Jacob Hutter, a minister from the Tyrol, who was burned at the stake in 1536 In the 17th cent there were a number of Hutterische brotherhoods in Moravia Persecution drove them eastward to eventual settlement in Russia In 1874, in company with Russian Mennonites, a group emigrated to the United States, settling near Tabor, S Dak Other groups followed Their doctrines and principles, aside from their practice of common ownership, are in accord with those of Mennonites in general There are six colonies in South Dakota and others in Canada and South America See John Horsch, *The Hutterian Brethren* (1931)

Huttig, lumber town (pop 1,379), S Ark , near the Ouachita river at the La border, inc 1904

Hutton, James, 1726-97, Scottish geologist Turning early from the study of chemistry and medicine to geology, he formulated theories of the origin of the earth and of atmospheric changes (see UNIFORMISM) They were often viewed skeptically, but proved to be sound and paved the way to modern geological science He concluded that the earth's history must be explained by observing the forces now at work within it He wrote *Dissertations upon the Philosophy of Light, Heat, and Fire* (1792) and *An Investigation of the Principle of Knowledge* (1794). His great work was *Theory of the Earth* (2 vols , 1795, MS fragment for Vol III ed by Archibald Geikie, 1894), it was simplified by John Playfair as *Illustrations of the Huttonian Theory of the Earth* (1802).

Hutton, Laurence, 1843-1904, American essayist, editor, and dramatic critic, b New York city He was critic for the New York *Evening Mail* and literary editor (1886-98) of *Harper's Magazine* Author of a number of books on the great cities of the world, he also edited and wrote biographies of actors and actresses His works include *From the Books of Laurence Hutton* (1892), *Memoirs of Edwin Booth* (1893), and his reminiscences of his youth, *A Boy I Knew* (1898)

Huxley, Aldous Leonard, 1894-, English author, son of Leonard Huxley His first books, beginning with *The Burning Wheel* (1916), were symbolist poetry, but his notable early work was in his novels, brittle, skeptical, satirical discussions of contemporary English society—*Crome Yellow* (1921), *Antic Hay* (1923); *Those Barren Leaves* (1925), *Point Counter Point* (1928), his most widely read novel, and *Brave New World* (1932). His short stories in *Limbo* (1920), *Mortal Coils* (1922), and other volumes were similar He was a friend and disciple of D. H Lawrence, whose letters he edited in 1933 In the 1930s he came to the United States to live and for a time wrote scenarios in Hollywood The novel *Eyeless in Gaza* (1936) displayed his shift to mysticism and his bitterness, as do his later ones, including *Ape and Essence* (1948). He has also written essays, several biographies, and travel books On the verge of blindness since he was 17, he paid tribute to a method of improving his vision in *The Art of Seeing* (1942)

Huxley, Julian Sorell, 1887-, English biologist and writer, educated at Oxford; son of Leonard Huxley He taught at the Rice Institute, Houston, Texas (1912-16), at Oxford (1919-25), and at King's College, London (1925-35) During these years and subsequently, when secretary (1935-42) of the Zoological Society of London, he carried other responsibilities—he was president of the National Union of Scientific Workers (1926-29), biology editor for the 14th edition of *The Encyclopaedia Britannica*, and technical editor of a number of educational film enterprises From 1946-48 he served as director general of the United Nations Educational, Scientific, and Cultural Organization A gifted exponent of science, he wrote *Animal Biology* (with J B S Haldane, 1927), *Scientific Research and Social Needs* (1934), *We Europeans* (with A C Haddon, 1936), *The Living Thoughts of Darwin* (1939), *Man in the Modern World* (1947), and *Heredity, East and West* (1949) He also edited *T H Huxley's Diary of the Voyage of H M S Rattlesnake* (1935) and *The New Systematics* (1940)

Huxley, Leonard, 1860-1933, English author and editor, son of Thomas Henry Huxley. He edited the *Cornhill Magazine*, wrote biographies of his father (1900) and of Charles Darwin (1921), and edited collections of letters by Jane Welsh Carlyle (1924) and Elizabeth Barrett Browning (1929) *Anniversaries and Other Poems* (1920) is his only volume of poetry

Huxley, Thomas Henry, 1825-95, English biologist, grad Charing Cross Hospital, 1845 While on H M S *Rattlesnake's* cruise to the Pacific islands as assistant surgeon (1846-50) he collected forms of marine life and classified them on a basis hitherto unused Reports of his work were published (1849) in the Royal Society's *Philosophical Transactions* Huxley became an exponent of Darwinism, although he accepted it with some reservations His scientific work and popular lecturing gave way to public duty as he served on 10 royal commissions (1862-84) Among his works are *On Races, Species, and Their Origin* (1860), *Evidences as to Man's Place in Nature* (1863), *Elements of Comparative Anatomy* (1864), *Elementary Physiology* (1866), *Anatomy of Vertebrated Animals* (1871), *Anatomy of Invertebrated Animals* (1877), *Evolution and Ethics* (1893), *Collected Essays* (9 vols , 1894), and *Scientific Memoirs* (4 vols , 1898-1901) See biographies by Leonard Huxley, his son (1900), Houston Peterson (1932), C E Ayres (1932), and E W McBride (1934)

Huy (ṳ̈ē'), town (pop 13,064), Liége prov , Belgium, on the Meuse river midway between Liége and Namur It has varied industries Below the citadel, which dominates the town, is a fine Gothic abbatial church

Huygens, Christiaan (krĭs'tyän hoi'guns), 1629-95, Dutch mathematician and physicist, son of Constantijn Huygens He improved telescopic lenses and discovered (1655) a satellite of Saturn and the rings of Saturn These discoveries were described in his *Systema Saturnium* (1659) He was the first to use the pendulum in clocks He developed a wave theory of light opposed to the corpuscular theory of Newton and formulated Huygens's principle, which holds that, concerning light waves, every point on a wave front is itself a source of new waves His chief work is *Horologium oscillatorium* (1673) See A E Bell, *Christian Huygens and the Development of Science in the Seventeenth Century* (1947)

Huygens, Constantijn (kônstantĭn'), 1596-1687, Dutch poet, b The Hague From 1625 he was secretary to the stadholder there His poems, descriptive and satirical, are highly esteemed; he wrote also a broad farce He wrote verse in French, Italian, and Latin as well as in Dutch Huygens was an accomplished musician and composed many airs for strings Elegant as he was versatile, he lived as an aristocrat and bore the title Heer van Zuylichem His acquaintance with contemporary scholars was wide, and he included Descartes, Corneille, and Jean Louis Guez de Balzac among his correspondents He was the father of the mathematician Christiaan Huygens

Huygens's principle. see HUYGENS, CHRISTIAAN.

Huysmans, Cornelis (kôr'nālĭs hoi's'mäns), 1648-1727, Flemish painter of landscapes and religious subjects Most of his life was spent in Mechlin. He is best known for his grandiose and colorful landscapes, which show the influence of Nicolas Poussin His fine *Woodland with Château* (National Gall , London) is characteristic. His works are to be seen in many important European galleries. The Metropolitan Museum has two His brother and pupil, **Jan Baptist Huysmans** (yän' bäp'tĕst), 1654-1716, was also a good landscape painter. Examples of his few surviving works are in the galleries of Brussels and Dijon.

Huysmans, Jacob (yä'kōp), c.1633-1696, Flemish portrait painter. In the reign of Charles II he settled in England, where he became one of the fashionable painters of the court. His chief portraits are those of Isaak Walton and Catherine of Braganza (both· National Gall., London) and Lady Byron (Hampton Court)

Huysmans, Jan Baptist see HUYSMANS, CORNELIS.

Huysmans, Joris Karl (shōrĕs' kärl' ṳ̈ĕsmäs'), 1848-1907, French novelist of Dutch family He was at first a disciple of ZOLA; typical of his early, naturalistic novels is *Marthe* (1876) Huysmans was emotional and originally given to pessimism, eventually, after great mental trouble, he became a Roman Catholic The hero of his novel *A rebours* (1884, Eng tr , *Against the Grain*, 1922) is a self-portrait, his later novels are religious but colored by the author's unstable emotional nature. His novels are dull, but there are frequent pages of beautiful prose, such is the description of Chartres in *La Cathédrale* (1898, Eng tr , 1898)

Huysum, Jan van (yan' vän hoi'sŭm), 1682-1749, Dutch painter of still life and landscapes. His father was Justus van Huysum (yōos'tōos) (1659-1716), a successful landscape and genre painter of Amsterdam Jan's earlier works are classical landscapes, correctly drawn and neatly finished He is best known for the flower and fruit pieces, in oil and in water colors, to which he devoted his later years These are distinguished for their brilliant light and shade effects, delicacy of coloring, and minute and exquisite finish They are to be found in most of the leading European galleries, notably in the Louvre and in the galleries of Amsterdam and Vienna

Huz, nephew of Abraham Gen 22.21

Hvar (khvär), Gr *Pharos* (fä'rŏs), Ital *Lesina* (lā'zēnä), island, area 120 sq mi , Yugoslavia, in the Adriatic, off the Dalmatian coast and S of Split Farming and fishing are the chief occupations. The chief town, also named Hvar, has a 12th-century Byzantine cathedral and a 16th-century Venetian fort

Hven, Sweden see VEN

Hwai (hwī), Mandarin *Huai*, river, c 370 mi long, rising in S Honan prov , China It flows W across Anhwei prov to Hungtze Lake The Hwai is navigable in part of its course

Hwaining (hwī'nĭng'), Mandarin *Huai-ning*, city and county (pop 663,088), S Anhwei prov , China The city is a port on the Yangtze river It was formerly called Anking

Hwang see YELLOW RIVER

Hwang-hai see YELLOW SEA

Hwangpoo, China see WHANGPOO

Hyacinth (hī'ŭsĭnth), in Greek myth, beautiful youth loved by Apollo He was killed accidentally by a discus thrown by the god, according to one story Zephyr, jealous, blew the discus to kill Hyacinth A flower named for him sprang up from his blood (see HYACINTH) According to some, he was a god of vegetation

hyacinth, any plant of the genus *Hyacinthus*, bulbous herbs of the lily family native to the Mediterranean region and South Africa The common or Dutch hyacinth of house and garden culture became so popular in the 18th cent that 2,000 kinds were said to be in cultivation in Holland—the chief commercial producer This hyacinth has a single dense spike of fragrant flowers in one of several colors, quite hardy and spring blooming outdoors, it is also forced, sometimes in water, for winter bloom indoors A variety of this is the less hardy Roman hyacinth with several smaller spikes of usually white scattered flowers The flower of the Greek youth HYACINTH has been identified with a number of plants (e.g , iris) not the true hyacinth. Also called hyacinth are the GRAPE HYACINTH and certain species of CAMASS and SQUILL

hyacinth or **jacinth** (jā'sĭnth), terms commonly applied to a variety of cinnamon-brown GARNET (hessonite), but more correctly restricted to red, yellow, and brown zircon

Hyacinthe, Père: see LOYSON, CHARLES

Hyades (hī'ŭdēz), in Greek mythology, rain nymphs, daughters of Atlas and Aethra. They cared for the infant Dionysus They were changed into stars

Hyades, in astronomy, one of two noted open star clusters (the other being the Pleiades) in the constellation Taurus The stars in the Hyades appear to be more widely separated than those in the Pleiades, and its distance from the earth is about 130 light years It contains a number of double stars

Hyannis (hĭăn'ĭs), resort village (pop. 3,392) in Barnstable town, SE Mass., on the south shore of Cape Cod The Massachusetts Maritime Academy is here

Hyatt, Alpheus (hī'ŭt), 1838-1902, American zoologist, b Washington, D.C., grad. Harvard, 1862 He served as captain of a Massachusetts regiment in the Civil War and from 1870 was connected with the Boston Society of Natural History, first as custodian and later as curator He also taught zoology and paleontology at the Massachusetts Institute of Technology (1870-88) and at Boston Univ (1877-1902). At the Harvard Museum of

Comparative Zoology he built up a remarkable collection of fossil cephalopods, and his discoveries contributed to knowledge of their evolution. He wrote extensively on the cephalopods, sponges, and other subjects. He was a founder of the *American Naturalist* and helped to establish the marine biological laboratory at Woods Hole, Mass.

Hyatt, Anna Vaughn, 1876–, American sculptor, b. Cambridge, Mass., studied at the Art Students League. She is especially distinguished in animal sculpture, e.g., *Jaguar, Reaching Panther*, and *Fighting Elephants*, the last in Pittsburgh. Of the equestrian statue, *Joan of Arc* (Riverside Drive, New York), there are replicas in Blois, France, Gloucester, Mass., and San Francisco; of *El Cid Campeador* (Museum of the Hispanic Society, New York), a replica is in Seville, Spain. Her relief *St Joan of Arc* is in the Cathedral of St John the Divine, New York. In 1923 she married Archer M. Huntington.

Hyatt, John Wesley, 1837–1920, American inventor, b. Starkey, N.Y. He is known especially for his development of CELLULOID, with his brothers, he began its manufacture in 1872. Also of importance was the invention of the Hyatt filter, a means of chemically purifying water while it is in motion. He invented a widely used type of roller bearing, a sugar-cane mill superior to any previously used, a sewing machine for making machine belting, a substitute for ivory in the manufacture of billiard balls and other articles, and other devices and formulas.

Hyattsville, town (pop. 6,575), W central Md., NE of Washington, D.C.; inc. 1880. It is a commuters' town, with some banking and trading.

Hybla (hī'blə), ancient town of Sicily, on the southern slope of Mt. Etna. It is possibly the modern Paternò. Another Hybla, or Hybla Heraea, was in S Sicily.

hybrid (hī'brĭd), term applied by plant and animal breeders to the offspring produced as the result of a cross between two different species or genera and used by geneticists to refer to the offspring of two parents differing in any genetic character. Examples of hybrids among animals are the MULE and certain beef cattle. Among plants hybridization is often used to insure greater vigor, hybrid corn and hybrid barley are notable examples. This is accomplished by crossing two inbred strains, the resulting first generation shows greatly increased vigor and a better yield. Hybrid vigor is observed also in certain hybrid animals. In genetic studies offspring that are hybrid in regard to a certain character are produced by crossing two parents differing from each other in that character. An illustration is in the cross-pollination of garden peas differing in the character of height. If one parent is a pure tall variety, i.e., has in its chromosomes only genes for tallness (represented by two capital T's, or TT), and the other parent is a pure short variety, i.e., has only genes for shortness (represented by small t's, or tt), all of the first generation will be tall. These first-generation offspring are all said to be hybrids because (as a result of the only possible gene combinations that can occur when the SIX cells unite) their chromosomes each contain one gene for tallness and one for shortness, i.e., their genotype in regard to height is Tt. The character that appears in the hybrid is called the dominant character, and the one that is hidden or masked by the dominant is the recessive character. In the succeeding generations the contrasting characters sort out and appear in the offspring in ratios predictable according to Mendelian laws of heredity.

Hydaspes: see JHELUM.

Hyde, Arthur Mastick (hīd), 1877–1947, U.S. Secretary of Agriculture (1929–33), b. Princeton, Mo., grad. Univ. of Michigan, 1899, and State Univ. of Iowa law school, 1900. A lawyer and politician in Missouri, he served (1921–25) as governor of the state. In Herbert Hoover's cabinet, he gave aid to drought-stricken farmers and tried to solve the farm problem by urging reduction of acreage given to wheat and cotton.

Hyde, Douglas, 1860–1949, Irish scholar. Largely responsible for the revival of the Irish language and literature by his foundation of the Gaelic League in 1893, he was Ireland's first president (1938–45). He goes by his Gaelic name, An Craoibhin Aoibhinn, and is the author of many works, including a *Literary History of Ireland* (1899) and *Love Songs of Connacht* (1894). See biography of Hyde by Diarmid Coffey (1938).

Hyde, Edward, see CLARENDON, EDWARD HYDE, 1ST EARL OF.

Hyde, municipal borough (1931 pop. 32,075, 1943 estimated pop. 32,313), Cheshire, England, E of Manchester and NNE of Stockport. It has cotton and machine factories and iron foundries.

Hyde Park. 1 Town (pop. 4,056), Dutchess co., E N.Y., on the east bank of the Hudson and N of Poughkeepsie, settled c. 1740. The Franklin D. Roosevelt Library here (1941) contains historical material dating from 1910 to Roosevelt's death in 1945. In 1940 the Vanderbilt Mansion and in 1944 the birthplace and home of Franklin D. Roosevelt were made national historic sites. **2** Town (pop. 1,178), co. seat of Lamoille co., N Vt., N of Waterbury; granted 1780, settled 1787. North Hyde Park village is a woodworking center. The county fairgrounds are in the town.

Hyde Park, 363 acres, in W London. Once the manor of Hyde, a part of the old Westminster Abbey property, it was under Henry VIII a deer park, races were held there at the time of the Stuarts. The duke of Hamilton and Lord Mohun fought their fatal duel in Hyde Park. In 1733 Queen Caroline had the artificial lake, the Serpentine, constructed from the Westbourne river. In modern times distinctive features of the park are the Marble Arch, the meeting place of soapbox orators, Rotten Row, the famous bridle path, and the Albert Memorial. The first great international exhibition was held in Hyde Park in 1851.

Hyderabad (hī'dərŭbăd'), state (82,313 sq. mi., pop. 16,338,534), central India. It is almost entirely within the Deccan plateau. The moisture-retaining soil of the north supports abundant crops of cotton and rice, while the heavily irrigated southern area chiefly produces maize. Cotton spinning and weaving and food processing are the principal industries. Large deposits of coal and iron are important mineral resources. The state's rail net is inadequate, but the road system is good. The monuments of AJANTA and ELLORA are the chief relics of Hyderabad's ancient Hindu civilization. The Mohammedan Mogul empire conquered Hyderabad in the late 17th cent. In 1724 the viceroy, Asaf Jah, founder of the present Mohammedan royal line, achieved independence. The loyalty of the later Nizams (rulers) to Great Britain was several times rewarded by gifts of territory. In 1903 Berar, then the northernmost section of the state, was joined to Central Provs. and Berar, now MADHYA PRADESH. When India was partitioned (1947), the predominantly Hindu state had scarcely any democratic institutions. The Nizam, who had wished independence or affiliation with Pakistan, agreed (1948), after invasion and occupation by Indian troops, to hold a plebiscite on the state's future and to renounce nearly all the vast estate which reputedly had made him one of the richest men in the world. **Hyderabad,** city (pop. 739,159), the capital, was founded in 1589 as the capital of the Golconda kingdom. The Char Minar [Urdu,= four minarets] (1591) and the Old Bridge (1593) are the finest ancient structures. The Nizam's palace, south of the city, is in an eclectic European style. The hub of the state's road and rail net, Hyderabad is a major commercial center. Textiles and tobacco products are important manufactures.

Hyderabad, city (pop. 127,521), central Sind prov., Pakistan, founded 1768. Its embroideries and cutlery are noted. In 1950 it succeeded Karachi as the provincial capital.

Hyder Ali or **Haidar Ali** (both hī'dur ä'lē), d. 1782, Indian maharaja. He was illiterate and of Moslem peasant stock, but his bravery and skill as a military commander in the service of the Hindu state of Mysore advanced him rapidly. By 1761 he had seized complete control of the state and in 1766 made himself maharaja. He fought with the Mahratta states and with Hyderabad and enlarged his territory. He generally sided with France in its wars against Great Britain for the control of S central India. He won great victories over the British in 1769, but he and his son Tippoo Sahib were defeated (1781) by Warren Hastings when they attempted to conquer Madras. See L. B. Bowring, *Haidar Ali and Tipu Sultan* (1893).

Hydra (hī'drə) [Gr.,=watery (snake)], in Greek mythology, water serpent with nine heads, son of TYPHON and Echidna. When one of its heads was cut off, two new heads appeared. One of the 12 labors of Hercules was to kill the monster. He did so by burning the neck after cutting off each head.

Hydra in astronomy, a constellation of the Southern Hemisphere, lying below Corvus, Crater, Virgo, Leo, and Cancer. It is a long, slender, winding constellation represented pictorially as a snake and known also as the Water Snake. The only bright star in the constellation is Alphard or Alpha Hydrae, it is a double star, but the two components can be detected only with a telescope.

Hydra (hī'drə, Gr. hē'dhra), island (20 sq. mi., pop. 3,739), off Greece, in the Aegean Sea, 4 mi. from the Argolis peninsula of the Peloponnesus. It is mostly bare rock. Sponge diving is the main occupation. The town of Hydra, where most of the population lives, flourished as a trade center under Turkish rule, and its seafaring people played an important part in the Greek revolution against Turkey.

hydrangea (hīdrān'jə, -drān'jə) [Gr.,=water vessel], any plant of the genus *Hydrangea*, ornamental deciduous shrubs (rarely vines), native to Asia and the Americas and popular as specimen and border shrubs or as pot plants. The flowers are white, pink, or blue and are borne in flat-topped clusters of small fertile flowers, usually with a margin of larger sterile flowers, or in large rounded clusters composed entirely of the sterile flowers. The blue flowers are sometimes produced by putting alum or iron in the soil. Winter bouquets are often made of the flowers. Little cup-shaped fruits gave rise to the name *Hydrangea arborescens*, native to North America, is poisonous, the roots have been used as a diuretic.

hydrate (hī'drāt), substance formed by the chemical combination of a compound and one or more molecules of water. Blue vitriol (hydrated cupric sulphate) is a typical example, its molecule containing one copper sulphate molecule and five molecules of water, for which reason the substance is classed as a pentahydrate. Glauber's salt, or hydrated sodium sulphate, is a decahydrate, i.e., it contains 10 molecules of water. The composition by weight of a hydrate is definite, the number of molecules of water present being specific for the substance. When blue vitriol is heated, the water present, known as water of crystallization (see CRYSTAL) is given off and the substance loses its characteristic properties. Certain hydrates give up their water of crystallization at ordinary temperatures. This activity is known as efflorescence. When the water is given off by a hydrate, the substance is said to be dehydrated or anhydrous.

hydraulic brake, see BRAKE.

hydraulic jack, common hydraulic machine having many uses and manufactured in a variety of forms. A simple type consists of a base containing a cylinder in which a ram or piston is fitted. A force pump is used to introduce the liquid (water or, commonly, oil) into the bottom of the cylinder, the ram is forced upward by the pressure of the liquid and is lowered by running off the liquid through a valve at the bottom of the cylinder. The jack's operation is an application of PASCAL'S LAW.

hydraulic machine. A number of common machines and various kinds of apparatus derive the power which actuates them from the motion or pressure of water or some other fluid (liquid or gas). Water can be employed, for example, to drive certain machines, as a WATER WHEEL or a TURBINE, when it is falling from one level to a lower level. The difference in height between the highest and lowest level is called, technically, the head, a definite amount of WORK is done when the water falls that distance. Water power so derived is obtained from natural or artificial sources, as from a waterfall or from a dammed stream or river. In other cases, a reservoir is utilized into which water has been pumped, the pumps being run intermittently so that available energy, or head, is stored up to be used as needed. In driving certain hydraulic machines in industry an apparatus called an accumulator is employed. This consists essentially of a cylinder enclosing a ram loaded with weights. When water is pumped into the cylinder, the ram is forced up and, pressing down upon the water, maintains it at a fixed pressure. When a pressure higher than that obtainable from an accumulator is desired, a so-called intensifier is employed. It is made up of a large hollow ram working in a fixed cylinder, above which is attached a rigid frame carrying a smaller hollow ram. This smaller ram enters the lower ram. Water is admitted to it and to the cylinder by a suitable arrangement of pipes and valves. By means of this device, city water pressure can be greatly increased. Water under pressure has been used successfully as a power agent for many types of powerful presses and for riveting machines, capstans, winches, and other machines. The hydraulic ELEVATOR, HYDRAULIC JACK, and HYDRAULIC PRESS are all based on the application of PASCAL'S LAW. See A. H. Gibson, *Hydraulics and Its Application* (4th ed., 1948), H. W. King and others, *Hydraulics* (5th ed., 1948).

hydraulic press or **hydrostatic press,** common hydraulic machine, invented by Joseph Bramah and therefore sometimes called the Bramah press. It consists essentially of two cylinders each filled with liquid and each fitted with a piston, the cylinders are connected by a pipe which is also filled with the liquid. One cylinder is of small diameter, the other of many times greater diameter. Pressure, according to PASCAL'S LAW, exerted upon the smaller piston is transmitted through the liquid undiminished to the surface of the large piston which is forced upward. Although the pressure (force per unit of area) is the same for both pistons, the total upward force on the large piston is as many times greater than the force on the small piston as the area of the large piston is larger than the area of the small piston. If, for example, the small piston has an area of 2 sq. in. and a force of 100 lb is exerted upon it, then the force on a large piston having an area of 50 sq. in. would be 2,500 lb ($100 \times \frac{50}{2} = 2{,}500$).

hydraulics see HYDRAULIC MACHINE and MECHANICS.

hydria (hī'drēə), Greek water jar with three handles —two lateral, the third vertical and for use in pouring. In shape it was similar to the amphora, the early form having an angular shoulder, while a later one, called kalpis, was curved at the shoulder and had a smaller vertical handle.

hydrocarbon (hī'drōkär'bŭn), any one of a great many compounds (gases, liquids, and solids) composed of the elements carbon and hydrogen only, in various proportions. The hydrocarbons are classed as organic compounds because originally it was thought that they could be obtained only from natural sources. Now, however, many

of them have been prepared synthetically in the laboratory, even some which are not known in nature The class is divided into series called homologous series. Each member of such a series shows a definite relation in its structural FORMULA to the member preceding it in the series and to the one following it (a difference of one carbon and two hydrogen atoms), and, in general, all the members show some regularity in the differences in their physical properties There are, for example, the METHANE SERIES, also called the paraffin series, the ETHYLENE SERIES, also called the olefin or olefine series, the ACETYLENE SERIES, the BENZENE SERIES, or the aromatic series, and the ANTHRACENE SERIES Many common natural substances are complex mixtures of these compounds, e g , petroleum, from which by fractional distillation are obtained gasoline, naphtha, benzine, kerosene, vaseline, and lubricating oils, all of which are in themselves mixtures of hydrocarbons, oil shale, from which petroleum can be procured, asphalt, which is a mixture of solid hydrocarbons, natural gas, and marsh gas (methane) They vary in chemical activity, those of the ethylene or olefin series are much more reactive than those of the paraffin series Hydrocarbons are unaffected by ordinary reagents, yet all burn in air to yield carbon dioxide and water Many hydrocarbons are valuable as fuels and illuminants Many important compounds are considered as derivatives of the hydrocarbons, being the result of a substitution of some chemical radical or element for one or more of the hydrogen atoms of the original hydrocarbon molecule or the result of the addition of some radical or element Some of these substances are alcohols, aldehydes, ethers, esters, organic acids, and certain halogen derivatives (e g , chloroform and iodoform) Others are such substances as phenol, nitroglycerin, guncotton, TNT (trinitrotoluene), and aniline dyes

hydrocephalia see FEEBLE-MINDEDNESS

hydrocephalus (hī″drōsĕf′ŭlus) or **water on the brain,** condition characterized by enlargement of the head resulting from an abnormal increase of cerebral fluid, with dilatation of the cerebral cavities Congenital hydrocephalus is caused by a developmental defect which interferes with the normal flow of fluid, thus causing a spreading of the bones of the cranium Paralysis and death may result Meningitis or tumors may be the underlying cause of the condition in postnatal life In some cases, spontaneous cessation of the progress of the disease occurs, the head, however, remains large and mentality is somewhat affected Surgery has been reported successful in treating hydrocephalic babies

hydrochloric acid (-klō′rĭk), the aqueous solution of hydrogen chloride, a colorless, irritating gas, a compound of the two elements hydrogen and chlorine The solution of the gas differs greatly from the gas itself in chemical properties It exhibits the characteristics of a strong ACID It reacts with most common metals, hydrogen being liberated and the CHLORIDE of the metal formed Most oxides and hydroxides of the metals react with it to form the chloride and water With very strong oxidizing agents, a chloride, water, and free chlorine are formed Hydrochloric acid is of great importance in commerce The solution containing about 30 or 35 percent by weight of hydrogen chloride gas in water is known commercially as muriatic acid Hydrochloric acid is used for the cleaning of metals, in the preparation of metallic chlorides, and in making glue, dyes, glucose, and other products It is used sometimes in medicine since it constitutes a small but important part of the gastric juice and an insufficient quantity must be increased Hydrochloric acid is prepared commercially by the action of sulphuric acid on sodium chloride (common salt) and by the direct union of hydrogen and chlorine

hydrocyanic acid (-sīă′nĭk) or **prussic acid** (prŭ′sĭk, prŏŏ′-), colorless, volatile, extremely poisonous liquid with an almond or peach odor It boils at 26°C , is miscible with water in all proportions, and is soluble also in alcohol and ether Its water solution is a very weak ACID The salts of the acid are the cyanides Hydrogen cyanide, the gas, is a compound of hydrogen and the cyanogen radical (one atom of carbon and one of nitrogen, -CN) and like the liquid is a deadly poison It is obtained by treating a cyanide, e g , sodium cyanide or potassium cyanide, with sulphuric acid In nature the acid is found in some vegetable substances, e g , in bitter almond, peach stones, and cherry and cherry laurel leaves Sorghum, especially when affected by frost or drought, may contain hydrocyanic acid which causes poisoning of the cattle which eat it The acid is used in the laboratory, in war as a poison gas, and in agriculture as a fumigant.

hydrodynamics: see MECHANICS.

hydroelectric power see POWER

hydrogen (hī′drŭjun), colorless, odorless, tasteless gaseous element, present in the ATMOSPHERE (symbol=H, for physical constants, see ELEMENT, table) It is the lightest gas known, one liter of it at 0°C. and 760 mm of pressure weighing 0.08988 g As a result it has been used for filling balloons (see CHARLES, JACQUES A. C), but because hydrogen is inflammable, the inert gas, helium, is preferred. Hydrogen is explosive when mixed with air or with oxygen and ignited In air or oxygen it burns with a very hot, blue flame (as in the oxyhydrogen BLOWPIPE), and when a jet of it is burning, the hydrogen unites with the oxygen to form water Hydrogen is very slightly soluble in water It can be liquefied under pressure (critical temperature -239 9°C), and the liquid solidifies when the pressure is released and it is allowed to evaporate rapidly Chemically it is active at high temperatures Having a great affinity for oxygen, it is a powerful reducing agent Combined with other elements it is a constituent of a great many important organic and inorganic compounds, such as carbohydrates, fats, oils, proteins, hydrocarbons, acids, and bases With oxygen it forms water and hydrogen peroxide, with nitrogen, ammonia, and it forms compounds with bromine, chlorine, fluorine, iodine, and sulphur The gas is prepared by the electrolysis of water, by the action of acids with certain metals, by the action of water on certain metals and nonmetals, and by liquefaction from the gas evolved in the destructive distillation of coal Hydrogen was discovered in 1766 by Henry Cavendish and was given its name by A L Lavoisier in 1783 Heavy hydrogen, also called deuterium, was discovered by H C. Urey and G M Murphy in 1932, although its existence had been suspected for some years before It is an isotope of hydrogen of atomic mass 2, i e , an atom of hydrogen which has a greater weight than that of the atom of the much more abundant ordinary, or light, hydrogen The two isotopes, light and heavy hydrogen, differ in chemical properties and in mass and boiling point, and compounds in which they are present differ in many respects, depending upon the degree of concentration of the one or the other Electrolysis of water increases the concentration of molecules containing deuterium Water of which the molecule consists of two atoms of deuterium and one of oxygen is known as heavy water (also discovered by Urey) and was first obtained by G N Lewis in nearly pure form The discovery of deuterium is of great scientific importance because of the wide bearing of this heavy atom on scientific research Through the discovery of the second isotope, it has become possible to follow the course of individual atoms (using atoms of deuterium as "tagged" atoms) in various chemical reactions, thus permitting a much broader understanding of the chemical action taking place Nuclei of the heavy hydrogen atoms are called deuterons, they have proved of great value to physicists in their bombardment of other atoms A still heavier isotope of hydrogen, of atomic mass 3, called tritium, is radioactive

hydrogenation of oils (hī″drŭjunā′shun), process in which vegetable oils are treated, under pressure and at a temperature of about 200°C , with hydrogen in the presence of a catalyst, e g , nickel, and are thus converted into substances closely resembling solid animal fats Such hydrogenated oils are used in cooking and in soapmaking

hydrogen bomb, weapon deriving its energy from the union of atoms of low atomic weight In the atomic bomb, which employs the elements uranium and plutonium, the explosive conversion of mass into energy is achieved by a fission or splitting of the nuclei of the atoms of these heavy elements In a hydrogen bomb, on the other hand, a fusion of extremely light elements must be accomplished. It has been estimated that a temperature of more than 20,000,000°C would be required to bring about such a fusion To produce heat of such intensity an atomic bomb would probably have to be used as a detonator, the most likely materials to be used as bomb ingredients seem to be tritium (the nucleus of which is called triton) and deuterium (the nucleus of which is deuteron), both isotopes of hydrogen It is postulated that the reaction would involve the fusion of an atom of tritium with an atom of deuterium, resulting in the production of an atom of helium (of mass 4), the emission of a neutron, and the release of millions of electron volts of energy The fusion of atoms of like isotopes, e g , of deuterium with deuterium and tritium with tritium, are other possibilities, but the yield of energy is potentially smaller than with tritium and deuterium The nature of the thermonuclear reactions is essentially that of the reactions believed to produce the energy of the sun and other stars It is estimated that a hydrogen bomb would cause damage over a wider radius than the atomic bomb both from blast effect and from flash or burning effect Scientists foresee no peacetime applications of the energy yield of a hydrogen bomb The possible production and use of such a weapon raises moral, philosophical, and security problems like those attendant upon the discovery of the potentialities of the atomic bomb

hydrogen-ion concentration: see ION

hydrogen peroxide (pərŏk′sīd), colorless, unstable liquid with a metallic taste. It is a compound of hydrogen and oxygen, the molecule containing two atoms of hydrogen and two of oxygen (twice the number of oxygen atoms in water), boiling at 152°C and solidifying at -2°C. It is soluble in water and exhibits very weak acid properties. The usual commercial preparation is a 3 percent solution in water, the pure substance having a blistering action It is prepared from barium peroxide by the action of sulphuric acid Because of its instability (it decomposes to water giving off oxygen) it is used as a bleaching (oxidizing) agent for feathers, hair, silk, and wool Although it is useful for cleansing wounds, its germicidal value is disputed It was discovered by L. J. Thénard

hydrolysis (hīdrŏ′lusĭs), a type of chemical reaction in which water (dissociated into hydrogen and hydroxyl ions) is one of the substances involved Hydrolysis is common in many of the life processes of animals and plants In the process of digestion, for example, the fundamental food substances (carbohydrates, fats and oils, and proteins) are decomposed by the action of water in the presence of various enzymes The higher sugars are broken down into simpler ones The final product in the complete hydrolysis of starch is glucose, a simple sugar Fats and oils are broken down into glycerin and fatty acids In complete hydrolysis, the protein is resolved finally into amino acids Certain salts undergo hydrolysis in a water solution, others do not Salts formed in the neutralization of a strong acid by a weak base give an acid reaction because of the higher concentration, owing to hydrolysis, of the hydrogen ion (which causes the acid reaction) in the solution Salts formed by the action of a weak acid and a strong base give an alkaline reaction because of the presence in excess of hydroxyl (OH or basic) ions in the solution On the other hand, salts formed by a strong acid and strong base are not hydrolyzed in solution and consequently give neither an acid nor a basic reaction Some reactions involving water are not classed as hydrolysis—e g , those involving the action of a metal, such as sodium, on water to form a base and liberate hydrogen and those known as hydration, in which water molecules are held by the molecules of a salt when this salt is crystallizing out of solution, the water so held being called water of crystallization

hydrometer (hīdrŏ′mutur), device used to determine directly the SPECIFIC GRAVITY of a liquid It consists commonly of a thin glass tube closed at both ends, with one end enlarged into a bulb which contains fine lead shot or mercury to cause the instrument to float upright in a liquid In the glass tube is a paper scale so calibrated that the reading on it level with the surface of the liquid in which the hydrometer is floating indicates the number of times heavier or lighter the liquid is than water, i e , the specific gravity of the liquid The hydrometer is based upon ARCHIMEDES' PRINCIPLE. Since the action of the hydrometer depends fundamentally upon the DENSITY of the liquid being tested, this property of the liquid can be calculated easily from the specific-gravity reading Commercial hydrometers are usually calibrated for "ordinary" room temperature (20°C) Because of the variation in the depth to which the instrument sinks in heavy and in light liquids, for convenience one type is made for use in liquids more dense than water and another for use in those less dense than water There are various other hydrometers named for their type of construction, for their inventor, or for the kind of liquid in which they are used The so-called bulb hydrometer consists of a small commercial hydrometer contained in a larger glass tube into which the solution to be tested is drawn by the action of a rubber bulb It is used to measure the specific gravity of the sulphuric acid solution in automobile batteries The two Baumé hydrometers (invented by Antoine Baumé), one for specific-gravity determinations in liquids denser than water and the other for liquids less dense than water, are calibrated with the special Baumé scale (also constructed by him) Commerce and industry as well as scientific laboratories use hydrometers widely, especially in testing liquids for which specific-gravity standards are set by law

hydrophobia (hī″drufō′bēu) or **rabies** (rā′bēz, rā′bēēz), acute infectious disease caused by a virus which affects the nervous system The virus is transmitted to man through the wound inflicted by the bite of a rabid animal (frequently the dog) Acute spasm of the pharynx occurs on swallowing, and fear of drinking water, results, hence, the name hydrophobia [Gr , =fear of water] Death may occur during a convulsion In 1884 Pasteur showed that dogs could be prevented from developing the disease by inoculating them with the dried spinal cords of other animals infected with the virus In 1885 Pasteur used the treatment successfully on his first human patient, Joseph Meister, an Alsatian boy Today the Pasteur treatment, if administered promptly to a human or animal victim, prevents the development of the disease in almost every instance. Local treatment of the wound by cleansing and by cauterization with carbolic acid, followed by an application of 95 percent alcohol, helps to destroy the virus at the site of injury. Vaccination helps protect dogs against rabies.

hydroplane: see SEAPLANE.
hydroponics: see SOILLESS GARDENING.
hydrostatics: see MECHANICS.
hydroxide (hīdrŏk'sīd, -sĭd), term used commonly to indicate a BASE, although some compounds containing the hydroxyl (OH) group (see RADICAL) exhibit acid properties Others exhibit both basic and acidic characteristics and are called amphoteric hydroxides Still others are neutral Molecules of alcohol contain the hydroxyl group, as shown by the characteristic reactions of alcohol
hydroxyl radical see HYDROXIDE and RADICAL
hyena (hī-ē'nu), nocturnal Old World mammal. Its front legs are longer than the hind ones. Carrion forms much of its food, and its strong teeth and jaws can crush bones. The two species of the genus *Hyaena* are the striped hyena of Asia Minor, Persia, India, and the northern part of Africa and the brown hyena or strand wolf of the southern parts of Africa The spotted hyena (*Crocuta*) found over much of Africa S of the Sahara is the largest form, about 2½ ft high at the shoulder Hyenas are feared because of their maniacal cries and grave-robbing and child-stealing tendencies
Hyères (yĕr'), town (pop 15,020), Var dept, SE France, a resort on the RIVIERA Off the coast is a group of islands of the same name
hygiene (hī'jēn) From earliest times hygiene has been associated with MEDICINE and is today regarded as the science of health and its preservation Community aspects of hygiene, e g, sanitation and communicable disease control, are the responsibility of PUBLIC HEALTH programs Personal hygiene concerns those habits of living by which the individual promotes or preserves his own health The field of MENTAL HYGIENE has developed as a result of the recognition of the importance of mental and emotional factors in healthful living See C E Turner, *Personal and Community Health* (7th ed, 1943), K B Crisp, *Health for You* (1944), W W Krueger, *The Fundamentals of Personal Hygiene* (4th ed., 1944), J F Williams, *Healthful Living* (4th ed, 1947)
hygrometer (hīgrŏ'mutur) [Gr, =measure of moisture], instrument used to measure the moisture content of the air, as in determining relative humidity Commonly employed are the so-called condensing hygrometers The operation of this type depends upon two facts—that when a liquid undergoes evaporation it must take on heat and consequently cools the surrounding media and that the atmosphere can hold only a certain amount of moisture (i e, becomes saturated) at a given temperature Daniell's hygrometer is an instrument of this type, consisting essentially of two glass bulbs connected by a hollow glass tube bent in the shape of an inverted "U" which has one leg shorter than the other and consequently suspends one bulb higher than the other The whole apparatus is mounted, at the middle of the glass tube, on a vertical upright upon which is fastened a thermometer In the longer of the two legs of the glass tube is another thermometer which extends down into the bulb This bulb is made of black glass and contains ether Around the other bulb is wrapped muslin When ether is dropped upon the muslin, this ether evaporates, rapidly cooling the bulb and causing the vapor within to be condensed Because the two bulbs of the hygrometer are connected by the hollow glass tube, condensation of the vapor in the bulb covered with muslin reduces the pressure in the tube and black-glass bulb thereby causing rapid evaporation of the ether in the black-glass bulb Since evaporation causes cooling, the black-glass bulb is cooled and the temperature of the air around it is reduced also At some point the moisture in the air begins to condense upon its outer surface (the point at which condensation takes place is known as the dew point, and the condensing hygrometer is also called consequently a dew-point hygrometer) By the use of the temperature recorded by the thermometer within the tube and that of the thermometer on the base, the desired calculation of moisture content can be made Other hygrometers depend for their operation upon the action of some substance that expands and contracts with the variation of the moisture content of the air The hair hygrometer or hygroscope of Saussure is an example Still another type of hygrometer operates upon the principle that certain chemical substances absorb water from the air and undergo a consequent increase in weight The psychrometer or wet-and-dry-bulb thermometer is widely used to determine moisture content Two thermometers are used, the bulb of one being kept moist by contact with muslin saturated with water, and the bulb of the other dry Tables have been prepared so that the moisture content can be ascertained from the difference in temperature of the two thermometers. The wet-bulb thermometer has a lower temperature because it is cooled by the evaporation of the water.
Hyksos (hĭk'sŏs) [Egyptian, probably =ruler of countries], invaders of ancient EGYPT, reckoned traditionally (without foundation) as the XV-XVII dynasties. Their relatively modern appellation, Shepherd Kings, is based on a false etymology. They were probably a Semitic people who entered Egypt c.1675 B C, seised the kingship from the decadent Pharaohs of the late Middle Kingdom, and ruled the country for a century or more From their capital in the eastern delta they seem to have ruled a great empire, the name of one of their kings has been found in remains at Cnossus and at Baghdad, and Hyksos scarabs occur in S Palestine Although the Hyksos king, Khian, left monuments above Thebes, the hold of the Hyksos over Upper Egypt could never have been great
Hylan, John Francis (hī'lăn), 1868-1936, American political leader, mayor of New York city (1918-25), b Greene co, N Y, grad New York Law School, 1897 He practiced law in Brooklyn and was city magistrate (1906-14) and judge of the county court (1914-18) before he was elected mayor of New York city As mayor "Red Mike" Hylan was at odds with Tammany James J Walker, his successor, appointed (1925) Hylan justice of the children's court
Hylas (hī'lus), in Greek myth, boy, favorite companion of Hercules While on the expedition of the Argonauts, Hylas was dragged into a spring by nymphs enchanted by his beauty He was never found
Hymen (hī'mun) or **Hymenaeus** (hĭmūnē'us), Greek personification of marriage, represented as a beautiful youth carrying a bridal torch and wearing a veil He is widely known only because his name was used as a refrain in epithalamiums (occasional poems honoring weddings)
Hymenaeus (hĭmunē'us) [Gr, =belonging to Hymen], Christian denounced by Paul for heresy or apostasy 1 Tim 1 20, 2 Tim 2 17
Hymera (hĭmēr'ŭ), town (pop 1,298), SW Ind, SSE of Terre Haute, platted 1870 Coal mining is done here Shakamak State Park is near by
Hymettus (hĭmē'tus), Gr *Hymettos* (hūmē'tôs), mountain group, central Greece, in Attica, extending c 10 mi between Athens and the Saronic Gulf Mt Hymettus (3,367 ft) is the highest point It has been celebrated since ancient times for its honey There are marble quarries
hymn, song of praise, devotion, or thanksgiving, especially of a religious character Early Christian hymnody consisted mainly of the Psalms and the great canticles, *Nunc dimittis*, *Magnificat*, and *Benedictus*, from the Bible and of the *Sanctus*, *Gloria in excelsis*, and *Te Deum* These were chanted in unison Metrical Latin hymnody began with the hymns of St Ambrose, bishop of Milan, and St Hilary, bishop of Poitiers, in the 4th cent This type of hymn was the basis of nearly all Christian hymnody until the 16th cent In the 19th cent John Mason Neale, an Anglican priest, translated many Latin hymns Notable Latin hymns are *Corde natus ex parentis*, from Prudentius in the 4th cent, and Fortunatus' 6th-century processionals, *Vexilla Regis* and *Pange lingua* (whose meter was imitated in the PANGE LINGUA of St Thomas Aquinas) From the 11th cent came Wipo's Easter sequence, *Victimae paschali laudes* The *Dies irae*, probably by Thomas of Celano, and the *Stabat Mater Dolorosa* by Jacopone da Todi are great hymns of the 13th cent With the Reformation came the development of the Lutheran chorale Luther himself wrote some 37 hymns, including *A Mighty Fortress*, and the Christmas chorale, *From Heaven High to Earth I Come*, for which he may also have written the tunes The *Passion Chorale*, employed many times in the sacred music of J S Bach, was from a secular love song of Hans Leo Hassler (1564-1612) Its usual words, "O Sacred Head sore wounded," were translated by Paul Gerhardt, from a Latin hymn of the Middle Ages Calvinism contributed the Genevan Psalter (final version, 1562) It consisted of the Psalms, translated into French verse by Clément Marot and Theodore Beza and set to music most of which was supplied by Louis Bourgeois, who used some original tunes and adapted others The familiar tune of the doxology, *Old Hundred*, is the tune of Psalm 134 in this Psalter The English hymn developed largely in the 18th cent, which produced Isaac Watts, Charles Wesley, and William Cowper, poets whose hymns are sung in nearly all Protestant churches today The first collection of English church tunes was Sternhold's Psalter (1556), published in Geneva, consisting of metrical versions of the Psalms by Thomas Sternhold (d 1549) and others, set to unharmonized tunes Other similar works followed These were brought to America by the Puritans, who allowed only the versions of the Psalms to be sung during their devotions The *Bay Psalm Book* (1640), published at Cambridge, Mass, was the beginning of American hymnody William Billings wrote the first American hymn tunes, and the next composer of importance was Lowell Mason, whose song collections, such as *Spiritual Songs* (1831), compiled jointly with Thomas Hastings, attained wide distribution See D R Breed, *The History and Use of Hymn Tunes* (1903), John Julian, *A Dictionary of Hymnology* (rev ed., 1915), Winfred Douglas, *Church Music in History and Practice* (1937), J R Fleming, *The Highway of Praise* (1937), H. W Foote, *Three Centuries of American Hymnody* (1940).
Hyndman, Henry Mayers (hĭnd'mŭn), 1842-1921, English Socialist, early advocate of Marxism in England In 1881 he founded the parent organization of the Social Democratic Federation, which in 1911 became the British Socialist party, with Hyndman as chairman At the time of the First World War the party was disrupted, many members becoming Communists Hyndman reorganized the Social Democratic Federation in 1920. He consistently criticised Britain's Indian policy. Some of his books are *England for All* (1881), *The Historical Basis of Socialism* (1883), *The Economics of Socialism* (2d ed, 1896), *A Record of an Adventurous Life* (1911), and *Further Reminiscences* (1912) His wife, Rosalind Hyndman, wrote *The Last Years of H M Hyndman* (1923)
Hyndman, borough (pop. 1,325), S Pa, near the Md boundary N of Cumberland, laid out 1840, inc 1877 It was almost destroyed by fire in Dec, 1949
Hyndman, Mount, or **Hyndman Peak,** 12,078 ft high, S central Idaho It is the highest point of the Pioneer Mts, which are sometimes considered part of the Sawtooth Mts
Hyogo (hyō'gō), prefecture, S Honshu, Japan see KOBE, the capital
hyoscine see SCOPOLAMINE
Hypatia (hīpā'shu), d 415, Alexandrian Neoplatonic philosopher and mathematician, a woman renowned for learning, eloquence, and beauty. Little is known of her writings, and her fame is largely owing to her barbarous murder by a band of monks, said to have been encouraged by the archbishop, St CYRIL of Alexandria, a personal and political enemy of the prefect, who was believed to be Hypatia's lover Charles Kingsley used her story for a historical novel
hyperbola (hīpûr'bulu) a plane curve such that the difference between the distances, from any point on it to two fixed points (*foci*) is the same for all points on the curve It is also defined as a conic section formed by a plane cutting both nappes of the CONE The center of an hyperbola is the point halfway between its foci The principal axis is the straight line through the foci The vertices are the intersection of this axis with the curve The transverse axis is the line segment joining the two vertices The *latus rectum* is the chord through either focus perpendicular to the principal axis The asymptotes are lines, in the same plane, which the curve approaches as it approaches infinity An equilateral hyperbola is one whose asymptotes are perpendicular An example of the occurrence of this curve is found in the orbits of some meteors
Hyperboreans (hī"purbô'rēunz, -bôrē'unz) [Gr, = beyond the north wind], in Greek legend, a people dwelling in a state of perfect bliss in the Far North See L R Farnell, *Cults of the Greek States* (5 vols, 1896-1909)
hyperemia see CONGESTION
Hyperion (hīpēr'ēun), in Greek religion, Titan, son of Uranus and Gaea He was the father of Helios, Selene, and Eos by Theia John Keats's *Hyperion* and Longfellow's *Hyperion* both use the Titans in developed legends
hypertension: see BLOOD PRESSURE
hypertrophy (hīpûr'trŭfē), enlargement of an organ of the body through an increase in the size of its cells When the cells of an organ increase in size, the number of cells is usually increased also, this increase in the number of cells is known as hyperplasia In normal physiology, the growth of muscles, e g, in the athlete, and the enlarging uterus of pregnancy, are caused by hypertrophy of the muscle cells In pathology, the thickening of the heart muscle from overstrain, as in high blood pressure, is the result of hypertrophy Any organ subjected to extra work, e g, the one kidney which is left to function after surgical removal of the other, usually compensates by enlarging, such hypertrophy is associated with hyperplasia
hyphen see PUNCTUATION
hypnotism (hĭp'nutĭzm) [Gr, =putting to sleep], term given by Braid in 1842 to phenomena previously described as animal magnetism and mesmerism (see MESMER) Superficially resembling sleep, it is generally induced by the monotonous repetition of words and gestures while the subject is completely relaxed In slight hypnosis the subject remains conscious and remembers what has happened after waking In deep hypnosis the sensory system and the muscles are greatly affected The subject may exhibit supernormal strength or assume strained attitudes without fatigue and remember little or nothing of the experience. The hypnotic state is characterized by heightened suggestibility For this reason it was used by a number of medical practitioners, including J M. Charcot, Josef Breuer, Janet, and FREUD, for the treatment and investigation of hysteria. Although treatment was limited, since not everyone is susceptible to hypnosis, it proved highly successful in demonstrating the emotional basis of hysteria and was used for a time by Freud in psychoanalysis It is still used as an aid in the investigation of mental activities and as an accessory in therapy See G H Estabrooks, *Hypnotism* (1943), L R Wolberg, *Medical Hypnosis* (2 vols, 1948).

hypochondria (hī'pŭkŏn'drēŭ), neurotic reaction characterized by habitual preoccupation with physical health and unwarranted concern with an imagined or negligible physical defect. Rarely appearing as an isolated neurosis, it more frequently is a complicating factor in a psychopathological condition While somewhat similar to hysteria, it differs in the exaggerated concern shown over the physical symptom—in which the hysteric lacks interest See NEUROSIS and PSYCHOSOMATIC MEDICINE

hypodermic injection · see INJECTION

hypostyle (hī'pustīl, hī'pū–), the chamber in Egyptian temples in which a number of columns supported a flat stone roof Forming the chief and largest inner space of the temple, it was entered from the outer courtyard and, in turn, gave access to the holy of holies and the small inner sanctuaries occupying the rear of the structure Its columns were arranged in a wide center aisle flanked by two or more side aisles, the center one rising higher than the others to permit clerestory lighting The ruined temple of Amon at Karnak (commenced in the XII dynasty) shows the most celebrated hypostyle hall

Hyrcania (hûrkā'nēŭ), province of ancient Persia, SE of the Caspian Sea, now the region about Gorgan, Iran The Parthian kings are said to have had their summer palace here

Hyrcanus (hûrkā'nus) [Gr ,=Hyrcanian], name of two of the MACCABEES, high priests and rulers of Judea John Hyrcanus I, c 175–105? B C , and John Hyrcanus II, d 30 B C

Hyrum (hī'rŭm) [for Hyrum Smith, brother of Joseph Smith], city (pop 1,874), N Utah, S of Logan; settled 1860 by Mormons; inc. 1870. This dairying and farm region of the Cache Valley, irrigated after 1860, is now served by Hyrum Dam, completed by the Bureau of Reclamation in 1935 in the Little Bear river

Hyslop, James Hervey (hī'slŭp), 1854–1920, American psychologist, b. Xenia, Ohio, grad College of Wooster, 1877, Ph D Johns Hopkins, 1887 He studied abroad and taught (1889–1902) at Columbia Univ , becoming professor of logic and ethics in 1895. A founder (1906) of the American Society for Psychical Research, he wrote books in this field as well as on ethics and logic

hyssop (hĭs'ŭp), aromatic perennial somewhat woody herb (*Hyssopus officinalis*) of the mint family, native to the Old World but an escape from gardens in North America The plant has small violet-blue, sometimes pink or white, flowers Although now grown chiefly for ornament, it has been used to flavor soups and salads, as a tea for chest ailments, and a poultice for bruises, oil of hyssop has been added to liqueurs and cologne The hyssop of the Scriptures (1 Kings 4 33, Ps 51 7, John 19 29) may have been a similar plant or the name may have referred to different plants Hyssop is used as a symbol of humility in religious painting

Hystaspes (hĭstā'spēz) or **Hystaspis** (hĭstā'spĭs), Old Persian *Vishtaspa*, fl 6th cent B C , father of DARIUS I Under him Darius was governor of Parthia The legendary patron of Zoroaster is also called Hystaspes or Vishtaspa, he may or may not be the same as Darius' father

hysteria (hĭstēr'ēŭ, hĭstēr'ēŭ), one of the neuroses, commonly referred to as the conversion NEUROSIS, in which a psychological conflict is converted into a bodily disturbance Less frequently the hysteric produces pseudopsychotic symptoms, and persistent manifestations can bring about true organic pathology (see PSYCHOSOMATIC MEDICINE). At the end of the 19th cent great advances were made in the understanding and cure of hysteria by the recognition of its psychogenic nature and by the use of hypnotism to influence the high degree of suggestibility which is one of its outstanding traits Josef Breuer, J M Charcot, Janet, and FREUD were pioneers in the investigation of hysteria by the use of hypnosis

Hythe (hīdh), municipal borough (pop. 8,398), Kent, England, W of Folkestone It is a summer resort, a market town (with breweries), and one of the CINQUE PORTS There is a long sea wall and parade along the shore Inland c 3 mi is Lympne, the Roman Portus Lemanis, of which portions of walls and a tower remain Studfall Castle here was once a residence of the archbishops of Canterbury The Early English church at Hythe has a crypt containing many bones and skulls, the history of which is unknown Saltwood Castle, near Hythe, also once the property of the Canterbury archbishops, is supposed to have been the scene of the plotting of the murder of Thomas à Becket At Hythe is the School of Small Arms The Royal Military Canal, 23 mi long, built early in the 19th cent , is now used for boating

Hywel Dda (hōō'ĕl dha') or **Howel the Good**, d 950?, ruler of South Wales He is credited with the uniform code of medieval Welsh laws—an enlightened code and a valuable source for social history Stories of his rulership are, however, semilegendary.

I

I, ninth letter of the ALPHABET It is a usual symbol for a high front vowel, like I The Greek correspondent is iota J is a formal development from I English I is a diphthong of ä and y In chemistry I is the symbol of the element IODINE

Ialysus (ĭā'lĭsŭs), ancient city on the island of Rhodes One of the SIX cities of the Doric Hexapolis, it was important c 1000 B C but later was eclipsed by the city of RHODES just to the east Modern Ialiso is near the site

iambic pentameter see PENTAMETER

Iamblichus (ĭăm'blĭkŭs), d c 330, Syrian philosopher, a leading exponent of NEOPLATONISM A pupil of Porphyry, he was deeply impressed by the doctrines of Plotinus In his own teachings he combined with Plato's ideas many of those of Pythagoras and much that was mystical and even magical, derived from the Orient His following was large and enthusiastic in his own time, and in the 15th and 16th cent he was studied with admiring interest He taught that man can hold communion with Deity through certain observances and rites and that human life is subject to the influences of a host of beings of the spirit realm, from whom a knowledge of the future may be received Of his writings on mathematical and philosophical subjects there remain several parts of an extensive work on the philosophy of Pythagoras They have been edited and published by modern scholars His commentaries on Plato's dialogues and Aristotle's *Analytics*, as well as other works, have disappeared See Eduard Zeller, *History of Greek Philosophy* (1889), Thomas Whittaker, *The Neo-Platonists* (1928)

Iapetus (ĭā'pĭtus), in Greek mythology, Titan, son of Uranus (the sky-god) and Gaea (the earth-goddess) He was the husband of Clymene and the father of Atlas, Prometheus, Epimetheus, and Menoetius Iapetus was imprisoned in Tartarus after the Titanomachy

Iasi, Rumania see JASSY

Ibadan (ēbä'dän, ĭbădă'), city (pop 387,133), SW Nigeria, inhabited by the Yoruba Of the cities in Africa with nearly exclusively Negro population, Ibadan is said to be the largest It is surrounded by a low mud wall, and it consists mainly of small huts, but there are also mosques, temples for idols, and buildings of the local college Many living in the city farm land in the vicinity Ibadan is connected by rail with Lagos, and it exports agricultural products, including cacao, cotton, and palm oil

Ibagué (ēbägā'), city (pop. 27,448), W central Colombia Founded in 1550, Ibagué is a major commercial link between the Magdalena and Cauca valleys Coffee, silver, and sulphur are shipped by rail and by the Pan American Highway North of the highway is the old route to ARMENIA over historic Quindío pass (c 11,400 ft)

Ibáñez, Vicente Blasco · see BLASCO IBÁÑEZ

Ibaraki (ēbä'räkē), prefecture, central Honshu, Japan, see MITO, the capital.

Ibarra, Francisco de (frănthē'skō dā ēbä'rä), 1539?–1575, Spanish conquistador. He went to New Spain at an early age. In 1554 he headed an expedition to the region N of Zacatecas and for the next 20 years dominated the vast territory of Nueva Vizcaya He explored, founded settlements, and exploited mines In 1562 he was named governor See J L Mecham, *Francisco de Ibarra and Nueva Vizcaya* (1927)

Iberia (ībēr'ēŭ), name given by the ancients to a country of Transcaucasia, roughly the eastern part of the present Georgian SSR It probably was long a dependency of Persia and was subject (1st cent B C) to Mithridates VI of Pontus Its later history is that of Georgia

Iberian Gates, USSR see DARIAL

Iberian Peninsula, SW Europe, separated from the main continent by the Pyrenees Comprising SPAIN and PORTUGAL, it is washed on the northwest and west by the Atlantic Ocean and on the east by the Mediterranean The Strait of Gibraltar divides it from the northern shore of Africa

Iberians, ancient people of Spain, believed to have migrated there from Africa in the Neolithic period They were first mentioned in the 6th cent B C , when they had settled in E Spain, the Ebro valley, and S France The Iberian Peninsula, i e , Spain and Portugal, is named after them It is widely believed that the Iberian migration preceded the Celtic migration into Spain and that the two peoples later merged into the so-called Celtiberian nation The theory that the Iberians and the BASQUES were identical has been discredited by modern research, which has proved that the Basque civilization is much older After the Roman conquest of Spain the Celtiberians gradually accepted Roman culture

Iberville, Pierre le Moyne, sieur d' (pyĕr' lù mwän' syûr' dēbĕrvēl'), 1661–1706, French Canadian naval officer and colonizer, b Ville Marie (in present Montreal), Canada, son of Charles le Moyne, sieur de LONGUEUIL, and brother of Jean Baptiste le Moyne, sieur de BIENVILLE In 1675 he entered the expanding navy of Louis XIV and after 10 years at sea returned to Canada On the first of five expeditions (1686, 1689, 1691, 1694, 1697) against the British fur-trading posts on Hudson Bay, he stormed and reduced Moose Factory, Fort Rupert, and Albany on James Bay after a long, overland journey through the wilderness from Montreal In 1697, with one ship, he captured two British ships, sank one, and took Port Nelson, strongest post on Hudson Bay Despite these gallant efforts, the British foothold was not broken, largely because Iberville received no support from France In 1690 he took part in the raid on Schenectady led by his elder brother Jacques, sieur de Sainte-Hélène. In 1692 he unsuccessfully attacked Fort Pemaquid, Maine, but in 1696 destroyed that post and also captured St John's, Newfoundland, temporarily ousting the British from that area In 1698 Iberville was charged with planting a settlement in the lower Mississippi valley, the project at which, 13 years previously, La Salle had failed. With colonists and supplies in four ships, Iberville, accompanied by his younger brother Bienville, reached the Gulf of Mexico in 1699 and founded Old Biloxi (now Ocean Springs, Miss.) He was the first definitely to ascertain the mouth of the Mississippi from the Gulf approach and to explore its delta He returned to the colony with supplies and reinforcements in 1700 and 1701 2 Removed to the Mobile area in 1702, the colony was never again visited by Iberville, for illness wore down his splendid constitution But its survival was due almost entirely to the perseverance and ability of Iberville and Bienville, who had immediate charge after 1701 Iberville recovered sufficiently to lead an expedition which captured (1706) the British islands of Nevis and St Christopher in the West Indies and was ready to carry out an old plan to attack Boston and New York when, putting in at Havana, he was stricken with yellow fever and died See C B Reed, *The First Great Canadian* (1910)

Iberville (ē'bûrvĭl), town (pop 3,454), co seat of Iberville co , S Que , on the east bank of the Richelieu river and SE of Montreal The mother house for America of the Marist order is here

ibex (ī'bĕks), gregarious, agile wild goat living at the snow line of the mountain ranges of Asia and Europe It is brown or gray, from 2½ to 3½ ft high at the shoulder, very sturdily built, and has long, ridged horns curved backward The Alpine ibex is very rare

Ibhar (ĭb'här), son of David 2 Sam 5 15

ibis (ī'bĭs), a wading bird with a long, slender, decurved bill, grooved from nostril to tip, found in the warmer regions of both hemispheres The body is usually about 2 ft long Most ibises nest in colonies They feed in ponds, lakes, and brackish marshes on fish and other aquatic animals The sacred ibis of ancient Egypt, a white and black bird now extinct in Egypt, inhabits some other parts of Africa In North America are found the white ibis, the white-faced and eastern glossy ibises, and the wood ibis, which is really a STORK The scarlet ibis of South America is occasionally seen in the S United States

Ibiza, Spain see IVIZA

Ibleam (ĭb'lēum), town, Palestine, probably between Samaria and Jezreel Joshua 17 11, Judges 1 27, 2 Kings 9 27 Bileam 1 Chron 6 70 Gath-rimmon Joshua 21 25

Ibn Batuta (ĭ'bun bătōō'tä), 1304?–1378?, Moslem traveler, b. Tangier No other medieval traveler is known to have journeyed so extensively. In 30 years (from c 1325) he made a series of journeys recorded in a dictated account that was rediscovered during the French occupation of Algeria. He traveled overland in North Africa and Syria to make the pilgrimage to Mecca Afterwards he explored Arabia, Mesopotamia, Persia, and Asia Minor He made a journey via Samarkand to India, where he resided for almost eight years at the court of the sultan of Delhi, who sent him to China as his ambassador Ibn Batuta visited the Maldive Islands, the Malabar coast, Ceylon, and Sumatra He returned c.1350 to Tangier. Later he went to Spain, then to Morocco, whence he crossed the Sahara to visit Timbuktu and the Niger His contribution was invaluable. For annotated selections from his writings, see H. A. R. Gibb, *Ibn Battuta* (1929).

Ibneiah (ĭbnē'yŭ) [Heb.,=God builds], son of a Benjamite chief. 1 Chron. 9.8.

Ibn Ezra, Abraham ben Meïr (mär' ĭ'bŭn), 1092?–1167, Jewish grammarian, commentator, poet, philosopher, and astronomer, b. Toledo, Spain. He traveled widely and wrote a prodigious number of books. His scholarly works of all kinds and his poems are of high quality, but he is best known as a biblical critic He was the inspiration of Robert Browning's "Rabbi Ben Ezra" Aben Ezra is another form of his name See Raphael Levy, *The Astrological Works of Abraham Ibn Ezra* (1927)

Ibn Gabirol, Solomon ben Judah (ĭ'bŭn gäbē'rōl), c 1021–1058, Jewish poet and philosopher, known also as Avicebron, b Malaga Most of his secular poetry is full of gloom and bitterness engendered by his tragic life. His religious poetry is filled with a mystic awe of God His great philosophical work, *The Well of Life*, showing the influence of Neoplatonism, was written in Arabic In its Spanish and Latin (*Fons vitae*) translations, it exercised a great influence upon Christian thought The book is an attempt to explain the universality of matter, man's purpose in life, and the communion of man's soul with the spiritual sources which created it. His book of ethics, *The Improvement of the Moral Qualities*, was also important. See edition of Stephen S Wise (1902).

Ibnijah (ĭbnĭ'jŭ) [Heb ,=God builds], one of the house of Benjamin 1 Chron 9 8

Ibn Khaldun (ĭ'bŭn khäldōōn'), 1332–1406, Arab historian, b Tunis He held various offices under the rulers of Tunis and Morocco and served (1363) as ambassador of the Moorish king of Granada to Peter the Cruel of Castile In 1382 he sailed to Egypt, and at Cairo for most of the rest of his life he lectured and taught He was many times grand Mohkite cadi of Cairo He made the pilgrimage to Mecca in 1387 In 1400 he accompanied the Egyptians in their campaign against Tamerlane, and he was sent to arrange for the capitulation of Damascus to Tamerlane Ibn Khaldun is generally considered the greatest of the Arab historians In his great work, the *Kitab al-Ibar* [universal history], he attempts to treat history as a science and outlines a philosophy of history, setting forth principles of sociology and political economy The first part (Prolegomena) of the book treats of Moslem life in general and of principles, the second recounts a history of the Arabs and near-by peoples, the third is a comprehensive survey of the history of North Africa To these he added an autobiography, completed in 1394 but expanded a few months before he died See Nathaniel Schmidt, *Ibn Khaldun, Historian, Sociologist, and Philosopher* (1930), Abdullah Enan, *Ibn Khaldun His Life and Work* (1940)

Ibn Saud (Abdu-l-Aziz ibn Saud) (ĭ'bŭn säōōd'), c 1880–, founder of Saudi Arabia His family, with its regular seat at Riad in the Nejd, were the traditional leaders of the ultraorthodox Wahabi movement in Islam During Ibn Saud's youth the Saud family was in exile in Kuwait He launched his career in 1900, when he and a small party of relatives and servants took Riad by surprise By 1912 he had completed the conquest of the Nejd and organized a well-trained army of men who had given up their tribal affiliations and vowed to restore Islam in all purity In the First World War the British made slight efforts to cultivate Ibn Saud's friendship but favored his rival, Husein ibn Ali of the Hejaz After careful preparation Ibn Saud captured Husein's capital, Mecca, in 1924, and in 1925 he declared himself king of Hejaz and Nejd Steadily Ibn Saud increased his power, and in 1932 he constituted his domain Saudi Arabia In much of the country he compelled the Bedouins to adopt a sedentary life as farmers and to abandon their traditional tribal wars and vendettas He is credited with suppressing the robbery and extortion which formerly harassed pilgrims to Mecca and Medina Ibn Saud is an absolute monarch of conservative inclinations To raise capital, however, he has granted an oil-drilling concession to an American company In the Second World War he remained neutral while favoring the Allies Late in the war, on his first visit outside Arabia, he conferred with President F D Roosevelt in Egypt In recent years he has been a leader in the anti-Zionist movement among the Arab states

Ibn Sina see Avicenna

Ibn Tufail (ĭ'bun tōōfĭl'), 12th-century Spanish-Arabian philosopher and physician, b near Granada His chief work was a philosophical romance, *Hayy ibn Yaqzan*, describing the development of a child taken from its normal environment This was popular in the West in translation in the 17th cent. Ibn Tufail, also called Abubacer, was famous as a physician and gained something of a reputation for magic in the West

Ibn Zohr: see Avenzoar.

Ibrahim Pasha (ĭbrahēm' pä'shä), 1789–1848, Egyptian general. He was the son of Mohammed Ali, a pasha of Egypt under the Ottoman Empire. Ibrahim conducted (1816–19) largely successful Turkish campaigns against the Wahabis in Arabia. He fought (1825–28) the insurgent Greeks and sent large numbers into slavery in Egypt, but the landing of French troops forced him to withdraw from the country. After Mohammed Ali turned against the Ottoman sultan, Ibrahim conquered (1832–33) Syria. Warfare with the Turks was resumed in 1838, but British and Austrian military intervention on Turkey's behalf compelled Ibrahim to evacuate to Egypt In 1848 he was regent of Egypt during his father's insanity

Ibri (ĭb'rĭ) [Heb ,=Hebrew], Merarite of the family of Jaaziah. 1 Chron 24 27

Ibsen, Henrik (hĕn'rĭk ĭb'sŭn), 1828–1906, Norwegian poet and dramatist After early essays in journalism, he was associated with the National theater in Bergen and later in Copenhagen He had written poetry, criticism, and a few plays before the appearance in 1862 of *Love's Comedy*, a satirical play in verse which roused a storm of criticism It was followed by *The Pretenders* (1864), a historical drama, by the great dramatic poems *Brand* (1866) and *Peer Gynt* (1867), and by the drama *Emperor and Galilean* (1873) From 1874 to 1891 Ibsen lived in Germany, where he produced the famous series of realistic social dramas (many with a marked symbolic trend), setting forth his doctrine of human values and his view of the individual in conflict with society, to which the name Ibsenism has been given At intervals of about two years he wrote *The Pillars of Society* (1877), *A Doll's House* (1879), *Ghosts* (1881), *An Enemy of the People* (1882), *The Wild Duck* (1884), *Rosmersholm* (1886), *The Lady from the Sea* (1888), *Hedda Gabler* (1890), *The Master Builder* (1892), *Little Eyolf* (1894), *John Gabriel Borkman* (1896), and *When We Dead Awaken* (1899) These have all been translated into English Produced in England, America, and on the Continent, they exerted a strong influence on the theater as well as on literature, an extensive controversial literature has grown up about them See G B Shaw, *The Quintessence of Ibsenism* (1891), Georg Brandes, *Ibsen and Björnson* (1907), studies by E W Gosse, (1907), Halvdan Koht (Eng tr , 1931), Theodore Jorgenson (1945), and B W Downs (1946)

Ibycus (ĭ'bĭkŭs), fl before 500 B C , Greek lyric poet, b Rhegium, S Italy The extant fragments of his work contain the earliest known example of the triadic choral lyric He spent some time at the court of Polycrates of Samos The "cranes of Ibycus" as an expression of triumphant justice refers to the story that Ibycus, murdered at sea, was revenged by cranes who saw the crime and eventually revealed the murderers

Ibzan, judge of Israel Judges 12 8–10

Ica (ē'kä), city (pop 21,437), SW Peru In the irrigated Ica river valley on Peru's desert coast, the city is the commercial center for regional produce—cotton and grapes The products of the cotton gins and wineries are sent by rail to its port, Pisco

Icaria see Cabet, Étienne

Icaria (ĭkâ'rēu), mountainous island (99 sq mi ; pop 12,854), off the coast of Asia Minor but belonging to Greece, WSW of Samos, in the Sporades It produces fruit and wine and has iron ore and sulphur springs It is sometimes called Nikaria.

Icarus see Daedalus

Icaza, Jorge (hôr'hä ēka'tha), 1902–, Ecuadorian novelist He spoke in harsh realistic terms against the exploitation of the Indian His novel *En las calles* [in the streets] won a national prize in 1935 He has written other novels—notably *Huasipungo* (1934) and *Cholos* (1938)—as well as distinguished short stories

Icazbalceta, Joaquin García: see García Icazbalceta, Joaquín

Ice: see water, refrigeration, dry ice

ice action, one of the agents of erosion There are two processes, disintegration of rocks through the freezing (and consequent expansion) of water in cracks and wearing away by friction, e g , by glaciers and floating ice along shores.

Ice Age: see Pleistocene epoch

iceberg, mass of ice detached from the edge of an ice sheet or glacier and floating on the ocean The ice sheet and glaciers of Greenland are the source of most of the icebergs in the N Atlantic About a ninth of the total mass of a berg projects above the water The process of berg formation is known as calving Since the disaster of the *Titanic*, an ice patrol has been maintained by the U S. coast guard in the N Atlantic shipping channels.

iceboat: see boating

icebreaker, ship designed to force its way through ice In many seaports in northern countries—such as Russia, Canada, and the Great Lakes region of the United States—all water-borne traffic would be suspended in winter except for the use of icebreakers The first notable icebreaker was the *Pilot* (1870), used to maintain communication between Kronstadt and St. Petersburg The sides of an icebreaker are so shaped that if the vessel is caught in the ice, she will not be crushed but will be forced up. The engines are of the most powerful type When in operation the vessel charges into the ice at full speed. The sharply inclined bow, meeting the edge of the ice, rises upon it, and the weight of the vessel causes the ice to collapse In thick ice progress is made only by continually charging and retiring A well-designed icebreaker is able to force its way through ice up to 35 ft thick

ice cream, frozen food made from milk fat and solids, sugar, and flavoring and often containing coloring matter, a stabilizer (usually gelatine), eggs, and fruits or nuts. The mix is churned or beaten at freezing temperature to attain a light, smooth texture Probably originating as a water ice in Italy in the 17th cent , the confection spread to France and England, reaching America early in the 18th cent. The manufacture of ice cream on a commercial scale, introduced in Baltimore in 1851, has become an important industry in the United States Commercial ice cream is generally prepared from calculated mixes, pasteurized and homogenized. Federal, state, local, and industry regulations as to percentage of milk fats and solids, purity of ingredients, and cleanliness of preparation and dispensing are designed to maintain the dietary value of ice cream and to inhibit bacterial multiplication, for which it is a favorable medium Similar frozen confections include the fat-rich bisque (with added bakery products), parfait (containing eggs), and mousse, frozen custard, generally low in fat, and ices and plain or milk sherbets, based on fruit juices and sugar

Ice Fjord. see Spitsbergen.

ice hockey: see hockey

Icel, Turkey see Mersin.

Iceland, Icelandic *Island* (ēs'lant), republic (c 40,000 sq mi , pop 135,935), the westernmost state of Europe, occupying an island in the Atlantic Ocean just S of the Arctic Circle, c 600 mi W of Norway and c 200 mi SE of Greenland Reykjavik is the capital The republic includes several small islands, notably the Westman Islands off the southern coast of Iceland The coasts of Iceland are indented by deep fjords, particularly in the north and west The island itself is a plateau, averaging 2,000 ft in height and culminating in vast icefields, of which the Vatnajokull, in the southeast, is the largest There are more than 100 volcanoes, many of them still active, the highest is Mt Hekla Hot springs abound and are exploited for heating purposes in many places, notably at Reykjavik, the great Geysir is particularly famous The watershed of Iceland runs roughly east-west; the chief river is the Jokulsa, which flows N into the Axar Fjord (there are several other rivers of the same name) Only about one fourth of the island is habitable, and practically all the larger inhabited places are located on the coast, they are Reykjavik, Akureyri, Hafnafjord, Siglufjord, and Isafjord Timber is virtually absent, and agriculture, producing mainly hay, potatoes and turnips, is restricted to 25 percent of the total area There are, however, extensive grazing lands, used mainly for sheep raising, but also for horses and cattle Fishing is by far the most important industry, codfish and herring constituting the chief export. The climate is generally mild and humid, owing to the proximity of the North Atlantic Drift Iceland is governed by parliamentary democracy The cabinet is responsible to the Althing The president of the republic is elected by popular vote for a four-year term Iceland possesses neither an army nor a navy; it has very advanced social-security legislation The government has established monopolies on the importation and sale of several important articles and plays a major part in the business life of the country The Lutheran Church is the sole established church, but there is complete religious freedom The Icelanders are beyond doubt the most literate and best-informed nation in the world There is a university at Reykjavik, the high educational level, however, is due to ancient tradition and ingrained civilization rather than to formal schooling Iceland may have been the Ultima Thule of the ancients Irish monks visited it before the 9th cent , but abandoned it on the arrival (c 850–870) of Norse settlers, many of whom had fled from the domination of Harold I These settlers also contained Scottish and Irish elements In 930 a general assembly, the Althing, was established at Thingvellir, and c 1000 Christianity was introduced Paganism, however, seems to have survived for a considerable period, or at least its memory was preserved in the literature of 13th-century Iceland, where Old Norse literature reached its greatest flowering (Modern Icelandic is virtually the same language as that of the sagas) The attempt made by Snorri Sturluson to establish the full control of King Haakon IV of Norway over Iceland was a failure, however, Haakon incorporated Iceland into the archdiocese of Trondheim and in 1261 64 obtained acknowledgment of his sovereignty by the Icelanders With Norway, Iceland passed (1380) under the Danish crown Lutheranism was introduced by force (1539–51) The 17th and 18th cent were disastrous in Icelandic history English, Spanish, and Algerian pirates raided the coasts and ruined trade, epidemics and a general volcanic eruption (1783) killed a large part of the population, the creation (1602) of a private trading company at Copenhagen, with exclusive rights to the Iceland trade, caused economic ruin The private trade monopoly was at last revoked in 1771 and transferred to the Danish crown, which kept it until 1786, when trade with Iceland was opened to all Danish and Nor-

wegian merchants The exclusion of foreign traders was lifted only in 1854 The 19th cent. brought a rebirth of national culture and agitation for independence. The Althing, abolished in 1800, was reestablished in 1843, in 1874 home rule was granted; and in 1918 Iceland was declared a sovereign state in personal union with Denmark The export trade of Iceland was dislocated by the Spanish civil war (1936–39) and shifted from the Mediterranean countries to England The occupation (1940) of Denmark by German forces in the Second World War gave the Althing an opportunity to take over the king's prerogatives and the control of foreign affairs Great Britain and the United States established diplomatic relations with Iceland, and Great Britain sent (1940) a military force to defend the island from a possible German attack. This was replaced after 1941 by American forces, who were fully withdrawn only early in 1947 In a popular referendum (1944) the overwhelming majority of Icelanders voted to terminate the union with Denmark, thus the kingdom of Iceland became (officially on June 17, 1944) an independent republic Sveinn Bjornsson, its interim president, was reelected in 1945 and in 1949, and a coalition cabinet continued to govern the state Iceland rejected (1946) a proposed pact by which the United States was to keep its air bases, but it granted the United States the right to use the American-built airport of Keflavik for military as well as commercial airplanes In protest, the two Communist cabinet members resigned Iceland was admitted into the United Nations in 1946, it joined in the European Recovery Program and the North Atlantic Treaty See Knut Gjerset, *History of Iceland* (1924), S J Stefansson, *Iceland* (1930), Hjalmar Lindroth, *Iceland a Land of Contrasts* (1937), Halldor Laxness, *Independent People* (1946), Agnes Rothery, *Iceland* (1948)

Icelandic language, North Germanic language. See LANGUAGE (table)

Icelandic literature. For the earliest literature of Iceland, see OLD NORSE LITERATURE With the loss of Iceland's political independence (1261–64) came a decline in the literature, although the linguistic tradition continued and the old writings were still venerated From the 14th cent to the middle of the 16th, literary activity consisted mainly in the translation of foreign works, the copying and compiling of Old Norse works, and the writing of religious poems in the old meters In the 14th cent there arose the *rimur*, a type of narrative poetry popular until the 19th cent and valuable principally in keeping alive an awareness of linguistic beauties and a sense of poetic values The Protestant Reformation which was thrust upon Iceland in the 16th cent turned the greater part of the literary output to hymns and illuminations of the Protestant faith The first printing press was brought to Iceland in 1528 by Jon AREZSON, but from the coming of Protestantism until the late 18th cent, it was under church control and almost entirely limited to publication of religious works Secular works were circulated in manuscript, however Historical and biographical works, sermons, and religious poetry made up the body of literature in the 16th and 17th cent The period from 1750 to 1835 was one of enlightenment and awakening, with reforms in all aspects of Icelandic life In 1773 a printing press was established for the publication of secular works, and there followed the formation of a number of literary societies A romantic revival, begun in the 1830s, inaugurated the modern period of Icelandic literature, marked by a productivity and an excellence unknown since the *Eddas* and sagas The romantic revival, with the dual aspect of aroused nationalism and the influence of continental romanticism, particularly Danish and German, was begun by the poets Bjarni Thorarensen (1786–1841) and Jonas Hallgrimsson (1807–45) Hallgrimsson was the first writer of the modern Icelandic short story, and he influenced the work of JON THORODDSEN, author of the first published Icelandic novel This movement, which saw the creation of the classical Icelandic style of the 19th and 20th cent, was continued by Grimur Thomsen (1820–96), writer of heroic narrative poems in pure, Old Norse style, Benedikt Grondal (1826–1907), outstanding for both romantic and humorous poetry, Steingrimur Thorsteinsson (1831–1913), lyric poet, satirist, and translator of Goethe, Schiller, Byron, Hans Christian Andersen, and others, and Matthias Jochumsson (1835–1920), writer of plays which were the real beginning (after abortive attempts by others) of modern Icelandic drama, translator of Shakspere, and poet laureate of Iceland from 1900 The leading figure of the period was Jon SIGURDSSON The founding (1882) of the periodical *Verdandi* [the present] was the beginning of a movement of realism, marked by socialism, individualism, and criticism of Church and clergy and strongly influenced by Georg Brandes Most important of the realists were Gestur Palsson (1852–91), Stephan G Stephansson (1854–1927), and Thorsteinn Erlingsson (1858–1914) Palsson was a brilliant short-story writer, an indignant reformer motivated by sympathy for the oppressed who wrote bitterly ironical social criticism. Stephansson was an Icelandic-Canadian, an individualist and a socialist, one of the finest poets of either Iceland or Canada. He wrote of his homeland, giving a new, symbolic meaning to the figures taken from the sagas and old romances Erlingsson wrote brilliant satire on Church and clergy as well as fervent love lyrics. One of the most significant modern Icelandic writers of his period was Einar H Kvaran (1859–1938) He began as one of the realists, but in the 1890s he became part of a reaction against realism, this in him took the form of religious affirmation through spiritualism, which appeared in his writing for the rest of his life He used the technique of a realist, however, and wrote excellent short stories of life among the poorer people in Reykjavik Another who reacted against realism was the nationalist poet Einar Benediktsson (1864–1940), who ranks beside Stephansson The farmer-novelist Gudmundur Fridjonsson (1869–1944), who became the leading representative of the farmer's point of view in literature, was one who began as a realist and later turned to nationalistic romanticism Next to Kvaran as novelist and short-story writer stands Jon Trausti (pseud of Gudmundur Magnusson, 1873–1918), who wrote historical novels and stories of rural and town life and of the life of the fishermen While nationalism was always one thread of Icelandic literature, the first two decades of the 20th cent saw the rise of a more introspective type of writing, influenced by the Nietzschean idea of genius and by French decadence Writers sought to explore their own souls rather than to propagate ideas or point out the corruption of society One group of these, part of the Icelandic colony in Copenhagen, wrote in Danish to reach a wider public They were led by Johann Sigurjonsson (1880–1919), a romantic dramatist Others were Gunnar GUNNARSSON, the romantic novelist of the Icelandic family saga, and the cosmopolitan dramatist Gudmundur KAMBAN This group merged in the 1920s with a group of writers in Iceland in a neo-romantic movement, which had as one of its leading spirits the poet, scholar, and critic Sigurdur Nordal (1886–), author of the prose poem *Hel* (1916–17), a work of great lyric beauty and originality of conception In 1918 he became professor of Icelandic language and literature at the Univ of Iceland in Reykjavik One of the best representatives of neo-romanticism is the lyric poet David Stefansson (1895) Among the writers grouped around Nordal were the novelists Gudmundur Hagalin (1898–) and Kristmann GUDMUNDSSON With the urbanizing of Iceland's population came the rise of a working class and the necessity of new patterns of life and thought Writers such as Kamban and Trausti became socialists as early as 1918, and Hagalin, a romantic primitivist, turned from conservative journalism in the 1920s and by the middle of the '30s had become thoroughly identified with the new socialist middle class The two most outstanding names in recent Icelandic literature are those of the leftists Thorbergur Thordarson (1889) and, the most gifted of all, Halldor K LAXNESS Thordarson, an internationalist and a satirist of the lyrical effusions of the romantic poets, provided the Icelandic manifesto of socialism in his personal, satirical essay *Letter to Laura* (1924), which attacked literary conventions and conventional standards of propriety alike Thordarson is a master of the classic style, at the same time foreshadowing, in his extraordinary autobiography (1940–41), the new style created by Laxness See Richard Beck, ed , *Icelandic Lyrics* (1930) and *Icelandic Poems and Stories* (1943), Frederika Blankner, ed , *The History of the Scandinavian Literatures* (1938), Stefan Einarsson, *History of Icelandic Prose Writers, 1800–1940* (1948)

Iceland moss, name for a lichen (*Cetraria islandica*) common in Iceland and other northern countries On the North American continent it grows on soil and rocks as far south as the N United States It forms a tangled growth of paper-thin branching stalks with spiny edges, when dry it is brownish, olive, or grayish in color, and when wet it is olive green Although it contains a bitter substance which is often difficult to remove and is harmful to the digestive system, it has long been used, chiefly in Iceland, Norway, and Sweden, both for human food and for fodder. Because of its carbohydrate content it has been mixed with cereals and potatoes to make bread It also found use in medicine chiefly as a demulcent tea

Iceland spar, colorless variety of crystallized CALCITE, characterized by its properties of transparency and double refraction It is used chiefly in the manufacture of Nicol prisms, which are essential parts of polarizing microscopes and other optical instruments The principal deposit is in Iceland, but small quantities are found in other countries, including the United States

ice plant, low fleshy plant (*Cryophytum*, or *Mesembryanthemum, crystallinum*) of warm, dry, barren regions It is cultivated chiefly as an annual rockery or pot plant for the glistening foliage

Ichabod (ĭ'kŭbŏd) [Heb., =inglorious], son of Phinehas and grandson of Eli. 1 Sam 4 21; 14.3. J. G. Whittier used the name in a poem voicing the disappointment of the antialavery faction with Daniel Webster when he supported the Compromise of 1850. To their view, glory departed from him with his divergence from them

Ichang or **I-ch'ang** (both ē'chäng'), city (pop. 80,979), SE Hupeh prov , China It is the western terminus for large ocean-going vessels traveling up the Yangtse river Here goods are transshipped to smaller boats which can negotiate the gorges and rapids of the Yangtse

ichneumon see MONGOOSE

ichthyol (ĭk'thēŏl, -ōl,-ŏl) [Gr ,=fish oil], thick, dark brown liquid with a fishy odor. It is obtained by the dry distillation of asphaltic shale (found in the Tyrol), which contains fossil fish remains, and it has also been found in crude oil in Texas. For medicinal purposes it is prepared in the form of an ammonium salt of a sulphuric acid. It is useful in the treatment of skin disorders and as an aid to healing in chronic inflammation, but it is not as widely used as formerly

Ickes, Harold LeClaire (ĭ'kus), 1874–, U S Secretary of the Interior (1933–46), b Blair co , Pa , grad Univ of Chicago (B A , 1897, LL B , 1907) At first (1897–1900) a reporter for Chicago newspapers, he later practiced law and became interested in local reform politics He managed (1911) the almost successful campaign of C E Merriam for mayor of Chicago and led in struggles that aimed at preventing domination of city politics by business interests Previously a Republican, he joined (1912) the Progressive party and was that party's state leader for three years, but in 1916 he supported Charles E Hughes for President In 1924 he was manager of Hiram Johnson's campaign for the Republican presidential nomination President Franklin D Roosevelt, who had high respect for Ickes's opinions, appointed him Secretary of the Interior and also made him head of the Public Works Administration His powers in the Second World War as Secretary of Interior included control of coal and petroleum President Harry S Truman accepted (1946) Ickes's resignation from the cabinet in an argument over Truman's appointment of Edward Pauley as Undersecretary of the Navy Ickes's reputation for outspoken bluntness is shown in *The New Democracy* (1934) and *The Autobiography of a Curmudgeon* (1943)

Icknield Street (ĭk'nēld), Saxon name for an early road in Britain, over the Berkshire Downs and the Chilterns See Thomas Codrington, *Roman Roads in Britain* (new ed , 1918)

Icolmkill, Inner Hebrides, Scotland see IONA.

Icon Basilike see EIKON BASILIKE

Iconium (īkō'nēum), ancient city of Asia Minor, the modern KONYA, Turkey In ancient days it was at various times in Phrygia, Lycaonia, and Cappadocia, as the bounds of those regions changed It was also for a time included in the Roman province of Galatia and was visited by Paul, who converted part of the Greek and Jewish population and established an important church there Acts 13 51,52, 14 19,21

iconoclasm (īkŏ'nōklăzĭm) [Gr ,=image-breaking], opposition to the religious use of images Veneration of pictures and statues symbolizing sacred figures, Christian doctrine, and biblical events was an early feature of Christian worship (see ICONOGRAPHY and CATACOMBS) To combat heresy, the reality of Christ's humanity was increasingly emphasized, and images and crucifixes became common Canon 36 of the Synod of Elvira (c 305) was one of the earliest to prohibit images in churches, "lest that which is worshiped and venerated be depicted on the walls" After the 5th cent the increasingly superstitious practices of the masses reinforced latent opinion that reverence of images could be equivalent to idolatry Iconoclasm flourished in Asia Minor, center of Monophysitism The movement may also have been influenced by the iconoclasm of Islam, Judaism, and Manichaeism and was certainly strengthened by the numerous PAULICIANS in the empire LEO III, CONSTANTINE V, LEO IV, and LEO V were important iconoclastic emperors Opponents of iconoclasm were Empress Irene, who restored the images, St Theodore of Studion and St John of Damascus, and St NICEPHORUS and St THEOPHANES, who wrote histories of the controversy Iconoclasm was rejected at Nicaea (see NICAEA, SECOND COUNCIL OF), but ended only with the minority of Michael III The iconoclastic controversy stimulated Byzantine artists to strive for spiritual revelation in religious art, rather than for naturalistic representation The churches of the Orthodox Eastern Church are generally decorated only with flat pictures, bas-reliefs, and mosaics, descended from BYZANTINE ART See E J Martin, *A History of the Iconoclastic Controversy* (1930).

iconography (ī"kŏnŏg'-) [Gr ,=image-drawing] or **iconology** [Gr ,=image-study], the discovery, study, and interpretation of figural representations, either individual or symbolic, religious or secular; more broadly, the art of representation by pictures or images, which may or may not have a symbolic as well as an apparent or superficial meaning. Al-

though, when first used in the 18th cent., the term was confined to the study of engravings which were then the standard mode of illustrating books on art and on antiquities in general, it came shortly to be applied more specifically to the history and classification of Christian images and symbols of all sorts, in whatever medium they happened to be rendered originally or in whatever way they were reproduced for study With the rise of the systematic investigation of art from prehistoric ages down to modern times, it became apparent that each major phase or epoch in which figural representations occur had created and developed in varying degrees of richness and elaboration an iconography of its own As used today, therefore, the term is necessarily qualified to indicate the field of iconographic study under discussion—e g , the iconography of the various Egyptian deities, the iconography of Roman imperial portraits, the iconography of Napoleon, early Christian iconography, Buddhist or Hindu iconography, Byzantine iconography, Gothic iconography As a method of scholarly research the science of iconography strives also to recover and express the thought from which a given type has arisen, particularly when such type has assumed the value of a symbol Only the iconographies of dead arts are fixed and changeless and can be cast in the form of a rigid code In every living art the types and symbols, as well as their meanings, change with the passage of time and the growth of ideas, many disappear, while others become almost unintelligible to a later generation and can be recovered only by intensive study **Christian iconography,** by reason of its long history and the dynamic concepts which controlled its growth, is richer and more varied than that of any other art Beginning with the catacomb frescoes (see CATACOMBS) in the early centuries of our era, it deals with the perils faced by the human soul on earth in its journey toward eternal salvation Figures from the Old Testament, episodes from the life of Christ, symbolic scenes of ultimate beatitude, all reveal the same purpose —to repeat in many forms and inculcate in every mind the moral aims and fundamental dogmas of the Christian religion In medieval Christian art every form clothes a thought, which works within the material and fashions it Since, however, the thought is never static, a long series of evolutionary stages unfolds in the representation of a given person or scene from the art of the catacombs to that of the Gothic cathedrals Thus the art of the Middle Ages is above all a kind of sacred writing whose system of characters, i e , the iconography, had to be learned by every artist It was governed also by a kind of sacred mathematics, in which position, grouping, symmetry, and number were of extraordinary importance and were themselves an integral part of the iconography From earliest times Christian iconography has likewise been a symbolic code, showing men one thing and inviting them to see in it the figure of another, e g , the dove, which figures the Holy Spirit Thus in Christian art, form is merely the vehicle of spiritual meaning, in the expression and reading of this meaning lies the essence of Christian iconography

Ictinus (ĭktī'nus), 2d half of 5th cent B C , one of the greatest architects of Greece His celebrated work is the Parthenon upon the Acropolis at Athens (447–432 B C), with the architect Callicrates as associate He also built the temple of Apollo Epicurius at Bassae, near Phigalia (c 430 B C), and is said to have rebuilt the Telesterion at Eleusis

id see PSYCHOANALYSIS

Ida, Mount (ī'du), 8,058 ft high, central Crete, highest mountain of the island It is also known as Psiloriti

Idabel (ī'dubĕl), city (pop 3,689), co seat of McCurtain co , extreme SE Okla , near the Red River, in a farm and lumber region, inc 1906

Ida Grove, city (pop 2,248), co seat of Ida co , NW Iowa, ESE of Sioux City and on the Maple river, in a farm area, settled 1856, inc 1887

Idaho (ī'duhō), state (82,808 sq mi , 1940 pop 524,873, 1949 estimated pop 592,000), NW United States, one of the Rocky Mt states, admitted 1890 as the 43d state The capital and largest city is BOISE, other towns of importance are POCATELLO and IDAHO FALLS Idaho in the north has an international border with British Columbia, elsewhere it is bounded on the northeast by Montana, on the east by Wyoming, on the south by Utah and Nevada, and on the west by Oregon and Washington Its shape is odd, for from the N Panhandle, about one degree of longitude wide, the state broadens S of the Bitterroot Mts (the Montana line) to be a full six degrees The climate ranges like the topography—from the summer heat of arid southern basins to the snowy cold of mountain wilderness in the center and the north. In a great arc the SNAKE river flows across S Idaho and, with its tributaries, has been harnessed to produce hydroelectric power and to reclaim vast areas of the dry but fertile land Notable among public reclamation projects are the BOISE PROJECT and the MINIDOKA PROJECT. The acres thus brought under cultivation produce an abundance of grains (especially wheat), alfalfa, potatoes, sugar beets, beans, peas, and fruits. To the north of the Snake river valley, in the central and north central parts of the state, are the massive Sawtooth Mts and the Salmon River Mts , which block communication and shelter some of the last magnificent wildernesses in the United States Here and in the Panhandle the state has vast acres of national forests (over 21,500,000 or approximately a third of its area), more than any other state except California Jagged granite peaks (Mt Borah reaches an altitude of 12,655 ft), rushing rivers such as the Salmon and the Clearwater, and many lakes, notably Lake Pend Oreille, Lake Coeur d'Alene, and Priest Lake, have made of Idaho a superb fish and game preserve and vacation land Still largely inaccessible, the mountain areas have, nevertheless, been penetrated by lumbermen and miners and afford the state, next to agriculture and livestock, two of its greatest sources of wealth Lead, silver, gold, zinc, and copper are the principal minerals In SE Idaho lie phosphate reserves, largely unexploited Probably the first white men to enter the present Idaho were the members of the Lewis and Clark expedition in 1805 They were not far ahead of the fur traders David Thompson of the North West Company established the first trading post in Idaho in 1809 The next year traders from St Louis had penetrated the mountains, and Andrew Henry of the Missouri Fur Company established a post near the present Rexburg Thus the rivalry of Canadians and Americans was begun early In 1811 the expedition sent by John Jacob Astor under Wilson P Hunt to Astoria crossed Idaho, and soon traders were coming back from the Astoria post to try out the Snake river country When Astoria passed to the North West Company, the outfits were still sent to the Snake river country, Donald McKenzie, Peter Skene Ogden, and John Work being notable as traders Idaho was part of the Columbia river country, and its fortunes were wrapped up with those of Oregon For some time after the union of the North West Company and the Hudson's Bay Company, the area was in the fur domain of Dr John McLoughlin Men from the United States came in—Capt B L E Bonneville passed by in 1832, Nathaniel Wyeth founded Fort Hall in 1834, and Henry H Spaulding, chief assistant of Marcus WHITMAN in the missionary field, founded a mission at Lapwai, near present Lewiston, Idaho, in 1836. John C Frémont and Kit Carson passed through Idaho in 1843, and already the emigrant trains were beginning to roll over the OREGON TRAIL, many going through S Idaho Father P J De Smet also came as a missionary, but Idaho still had no permanent settlement when Oregon Territory became a state in 1859 and its eastern part was added to Washington Territory A Mormon outpost founded at Franklin in 1860 ranks as the first permanent settlement, but it was not until the discovery of gold that settlers poured into Idaho Gold was discovered on the Clearwater river in 1860, on the Salmon in 1861, in the Boise river basin in 1862, and gold and silver were found in the Owyhee river country in 1863 The usual rush of settlers with spectacular and ephemeral growth of cities followed Most of the settlements are but ghost towns now, but the many gold seekers who poured in—mainly from Washington, Oregon, and California, with smaller numbers from the east—were enough to demand new government administration, and Idaho Territory was set up in 1863 The Indians—mostly Kootenai, Nez Percé, Western Shoshone, Bannock, and Pend d'Oreille—were upset by the incursion of whites and the unsettling of tribal life Troubles and some massacres occurred In 1858 the Federal government subdued the northern tribes and put most of the Indians on reservations The Bannock were cowed in 1863 and again in 1878. In 1876–77 Idaho was involved in the pitiful and heroic demonstration led by Chief JOSEPH The late 19th cent. saw the growth of cattle and sheep ranching and the usual accompanying strife among the ranchers There still lingers more than a hint of the wild West in S Idaho A new mining boom started in 1882 with the discovery of gold in the Coeur d'Alene, and though the gold strike ended in disappointment, it was but a preface to the discovery there of some of the richest silver mines in the world, and Coeur d'Alene and Kellogg became notable centers and the Bunker Hill and Sullivan became one of the most famous of mines Severe labor troubles here at the end of the century led to political warfare Frank Steunenberg, who as governor had used Federal troops to put down the miners, was assassinated in 1905, and the resultant trial of William Haywood and others drew national attention and marked the beginning of the long career of William E BORAH as an outstanding Republican party leader Another Idaho political leader, who later became nationally prominent, Glen H TAYLOR, took almost the opposite course to that of Borah The coming of the railroads (notably the Northern Pacific) through Idaho in the 1880s and the 1890s brought new settlers and helped to build such cities as Pocatello, Idaho Falls, and American Falls. Farming increased, and private interests developed irrigation projects. Some of these aroused bitter opposition, which led to the establishment of state irrigation districts under the Carey Act. The Reclamation Act in 1902 brought direct Federal aid, and there has been much reclamation work in Idaho The projects have also helped to increase the development of Idaho's enormous potential of hydroelectric power Isolation and inaccessibility of some resources still constitute problems for Idaho, though the unspoiled quality of some of its lands has nourished one of the youngest of Idaho's businesses—the tourist trade Sun Valley is an example of the development of resorts that is going on today in Idaho Outstanding among Idaho institutions of higher learning is the Univ of Idaho at Moscow See Byron Defenbach, *Idaho the Place and Its People* (3 vols , 1933), C J Brosnan, *History of the State of Idaho* (1918, rev ed , 1935), Federal Writers' Project, *The Idaho Encyclopedia* (1938), M D Beal, *A History of Southeastern Idaho* (1942)

Idaho, University of, at Moscow, land-grant and state supported, coeducational, chartered 1889, opened 1892 It has colleges of agriculture, engineering, letters and science, and law and schools of business administration, education, forestry, and mines There are state bureaus of mines and geology Idaho pioneered in cooperative student living Its extensive grounds include a farm and forests

Idaho Falls, city (pop 15,024), co seat of Bonneville co , SE Idaho, on the Snake and NNE of Pocatello First called Taylor's Bridge for the toll bridge begun in 1865, then after 1872 called Eagle Rock, it was chartered in 1890–91 and named Idaho Falls for the cataract in the river Chief city of the upper Snake valley, it has the prosperous commerce and the processing activities of an area that has irrigated farming (seed peas, potatoes, sugar beets, and alfalfa), stock raising, and dairying The large hydroelectric plant is municipally owned, and a new landmark in the city is the Latter-Day Saints Temple opened in 1945

Idaho Springs, resort city (pop 2,112, alt. c 7,500 ft), N central Colo , just W of Denver and on Clear Creek, in an area of hot mineral springs and mining, settled 1859–60, inc 1885 The first major gold strike in the Colorado Rockies was here (1859) The Colorado School of Mines maintains an experimental mine near by for student training

Idalah (ī'dulu, Idā'lu), unidentified town, N Palestine Joshua 19 15

Idalium (ĭdā'lēum) ancient town in Cyprus It had a well-known temple of Aphrodite An inscription in Phoenician and Cypriote, found on a temple site at Idalium, gave the key to the Cypriote language It is the modern Dali

Ida Mountains (ī'du), range, NW Turkey, SE of the location of ancient Troy The modern name is Kazdagi Mt Gargarus (c 5,800 ft) is the highest point The mountain was dedicated in ancient times to the worship of Cybele, who was therefore sometimes called Idae Mater

Idbash, descendant of Judah 1 Chron 4 3

Iddo (ĭ'dō) **1** Ruler of Manasseh 1 Chron 27 21. **2** Father of one of Solomon's stewards 1 Kings 4 14 **3** Prophet whose book is mentioned as a source 2 Chron 9 29, 12 15, 13 22 **4** Father or grandfather of the prophet Zechariah Zech 1 1, Ezra 5 1, Neh 12 4,16 **5** A leader in the return from the Exile Ezra 8 17 **6** See ADAIAH **2**

Ide, Henry Clay, 1844–1921, American statesman, b Barnet, Vt , grad Dartmouth, 1866 He was admitted (1871) to the bar, served (1882–85) in the Vermont legislature, and became noted in the state Republican party He was appointed (1891) U S commissioner in Samoa and later served as chief justice of Samoa by joint appointment of England, Germany, and the United States After serving as vice governor (1904–5) and governor (1905–6) of the Philippines, Ide was (1909–13) U S. minister to Spain

idealism, in general the attitude which places special value on ideas and ideals as products of the mind, in comparison with the world as perceived through the senses In art idealism is the tendency to represent things as they might be rather than as they are In ethics it implies a view of life in which the predominant forces are spiritual and the aim is perfection in terms of some absolute In philosophy the term refers to efforts to account for all objects in nature and experience as representations of the mind and sometimes to assign to such representations a higher order of existence It is opposed by materialism Plato conceived a world in which eternal ideas constituted the reality of which the ordinary world of experience is a shadow. The universals of the medieval metaphysicians were similar to Platonic ideas, and the extreme REALISM of that period approached Platonic idealism Since then, idealism has largely come to refer the source of ideas to man's consciousness, whereas in the earlier period ideas were assigned a reality outside and independent of man's existence Nevertheless, modern idealism generally proposes suprahuman mental activity of some sort and ascribes independent reality to certain principles, such as creativity, a force for good, or an absolute truth. The sub-

jective idealism of George Berkeley in the 18th cent held that the apparently objective world has its existence in the consciousness of individuals Kant, in his critical idealism, looked upon ideas as acts of the intellect and believed matter, as known, to be dependent for interpretation on the perception of the individual. Forms of post-Kantian idealism were developed in Germany by Fichte, Schelling, and Hegel and in England and France by Coleridge, T H Green, the Cairds, Cousin, and Renouvier More recent idealists include F H Bradley, Bernard Bosanquet, Josiah Royce, and Benedetto Croce Most philosophers of ethics have been at least somewhat idealist in their metaphysics See J H Muirhead, *The Platonic Tradition in Anglo-Saxon Philosophy* (1931), *Contemporary Idealism in America* (ed by Clifford Barrett, 1932); Alfred C Ewing, *Idealism a Critical Survey* (1934), John Lewis, *Marxism and Modern Idealism* (1944)

Idlewild see NEW YORK INTERNATIONAL AIRPORT.

idol (ī'dul) [Gr], image believed to possess supernatural power because it is the dwelling place of a supernatural being It represents the fixation of a spiritual force in a material object (see ANIMISM) and is distinguished from relics and fetishes by being fashioned in either animal or human form Although a fetish, such as a stone charm, has inherent supernatural powers, the idol must be consecrated, or given this power, before it can be worshiped Consecration is carried out by a variety of means, e g , the Chinese custom of putting small live animals into an opening in the back of the statue, and the Hindu practice of having priests invite spirits to enter the image Animal and human idols may be treated as though they were alive, they are fed, bathed, anointed, clothed, crowned, and even provided with a consort In the past victors took the idols from the vanquished and on occasion chained the idols to a wall. In a pagan procession idols are placed in a prominent position. Idolatry, the worship of idols, gave birth to many of the great works of art Emphasis on the aesthetic, however, has, according to some, tended to undermine religious belief In at least some instances in ancient civilizations when images became overly refined, a religious reaction took place, e g , the Greeks of the Hellenistic period returned to the worship of more primitive, or archaic, images The ritual use of animal and human figures goes back to late Paleolithic times and is known in large sections of the world today.

Idomeneus (īdŏ'mĭnūs), legendary Cretan king Though an old man, he led the Cretan contingent to the Trojan War and fought valiantly On his way home he vowed in a storm that if the ship were saved he would sacrifice to Poseidon the first living thing he met after landing This was his son He fulfilled his vow, but killing his son caused a pestilence to be visited on Crete, and Idomeneus had to flee to Italy This legend of the homecomer is widespread, the best known example being that of JEPHTHAH

Idrija (ē'drēa), Ital *Idria*, town (pop 5,199), Slovenia, NW Yugoslavia, ceded by Italy after the Second World War It has large quicksilver mines

Idrisi (ĭdrē'sē) or **Edrisi** (ē), b 1099?, d after 1154, Arabian geographer, b Ceuta He traveled in Europe, Asia Minor, and Mediterranean lands and settled at the court of Roger II of Sicily, for whom he made a silver celestial globe and a map of the earth engraved on a plate of silver He completed (1154) a description of the earth, compiled from his studies and observations and from the reports of travelers sent out by Roger II This is the most important geographic work of the period Idrisi divided the earth into seven horizontal climatic zones, each divided vertically into 11 arbitrary sections.

Idumaea or **Idumea** see EDOM

Idun (ē'dōōn) or Ithunn (ē'thōōn), Norse goddess who kept the apples which the gods ate to keep young Like PERSEPHONE, she was stolen away and imprisoned for a time She was Bragi's wife

idyl (ī'dul), short poem The ancient idyls, especially those of Bion and Moschus, were intended as little selections in the style of longer poems, such as elegies or epics There are 10 famous idyls by the Greek THEOCRITUS, and since some of them dealt with pastoral or rural scenes the term *idyl* came to be restricted to gently flowing, artistic pieces on rural subjects. In the 19th cent , Alfred Tennyson in his *Idylls of the King* used the term rather in its looser original sense than in the later restricted pastoral meaning. For idyls in their bucolic sense, see PASTORAL.

Ie-jima: see OKINAWA.

Ieyasu (Ieyasu Tokugawa) (ēā'yäsōō; tōkōōgä'wŭ), 1542–1616, Japanese warrior and dictator He helped NOBUNAGA and HIDEYOSHI to win control of Japan After the death of Hideyoshi, Ieyasu succeeded to his preeminence by defeating rival barons in the battle of Sekigahara in 1601. He secured the title of SHOGUN in 1603, set up his capital at Yedo (Tokyo), and laid the foundations of the TOKUGAWA shogunate. He sought to perpetuate the supremacy of his family by freezing the status quo. The system which he established endured for 250 years Like Hideyoshi, he at first tolerated, then persecuted Christian missions, but he encouraged foreign trade and had the advice of Will Adams He was succeeded by his son Hidetada. The name also appears as Iyeyasu.

If: see CHÂTEAU D'IF

Ifni (ēf'nē), Spanish possession (676 sq. mi.; pop. 45,852), NW Africa, an enclave on the Atlantic coast of Morocco It was ceded by Morocco in 1860, but Spanish administration was nominal until 1934 Products include dates and fish.

Igal (ī'găl) [Heb ,=God redeems], 1 Spy sent by Moses into Canaan Num 13.7 **2** One of David's guard 2 Sam 23 36 Joel. 1 Chron 11 38.

Igarka (ĭgär'kŭ), city (pop 20,000), N Krasnoyarsk Territory, RSFSR, the largest Siberian city N of the Arctic Circle. It is a lumber port on the Yenisei river. It has sawmills, and graphite is processed here Igarka was founded in 1928

Igdaliah (ĭg"dălī'ŭ), a holy man Jer 35 4

Igeal (ī'gēŭl) [Heb ,=whom God redeems], descendant of the house of David 1 Chron 3 22.

Iggdrasill see YGGDRASILL

Iglau, Czechoslovakia see JIHLAVA

Iglesias, Miguel (mēgĕl' ĕglā'syäs), 1822–1901, president of Peru (1881–85) A general, he fought in the war with Chile (see PACIFIC WAR OF THE), distinguishing himself in the defense of Lima (1881) Because the government failed to meet Chilean demands, Iglesias, supported by Chile, assumed the presidency and accepted the harsh terms of the Treaty of Ancón (1883) Many Peruvians refused to acknowledge him as president A revolution led by CÁCERES was successful Defeated in the ensuing election, Iglesias left the country

Iglesias (ĕglā'zyäs), town (pop 13,860), SW Sardinia, Italy In a region of zinc and lead mines, it has a school of mines as well as a cathedral and a medieval castle and walls

igloo (ĭ'glōō) [Eskimo], dome-shaped dwelling of the Eastern ESKIMO constructed from snow blocks placed in an ascending spiral Although it can provide adequate protection for weeks of severe cold, it is used only infrequently for temporary shelter while traveling

Ignatius of Antioch, Saint (ĭgnā'shus, ăn'tēŏk), d c 110, bishop of Antioch and Christian martyr, called Theophorus (God-bearer) In order to combat heresy and strengthen the Christian faith, he wrote letters from Smyrna and Troas to the Christian communities of Ephesus, Magnesia, Tralles, Rome, Philadelphia, and Smyrna and to St POLYCARP, at whose behest the seven epistles were probably written St Ignatius used the word *Catholic* for the first time and enjoined Christians to avoid heresy through obedience to the bishop, the deacons, and the presbyters The letters reflect the charity, patience, and zeal of the author as well as the state of contemporary Christianity He was condemned as a Christian and taken to Rome to be executed Feast Feb 1 See J A Kleist, tr , *The Epistles of St Clement of Rome and St Ignatius of Antioch* (1946).

Ignatius of Constantinople, Saint, c 800–877, Greek churchman, patriarch of Constantinople A son of Emperor MICHAEL I, he was castrated and shut up in a monastery (813) by LEO V to prevent his succession to the throne In 846 or 847 he was made patriarch of Constantinople by the Empress Theodora, who approved his uncompromising zeal against iconoclasm After her banishment by her brother Bardas, who became regent for MICHAEL III, St Ignatius was asked to resign PHOTIUS, whose politics were more acceptable, became patriarch The Ignatian party refused to accept Photius and sought aid from Pope St NICHOLAS I On the accession of BASIL I St Ignatius again became patriarch. In 869 St Ignatius was declared to be the legal patriarch (see CONSTANTINOPLE, FOURTH COUNCIL OF) Ignatius is regarded as a Father of the Church in the West and as a saint by both East and West Feast Oct 23

Ignatius of Loyola, Saint (loiyō'lŭ), 1491–1556, Spanish founder of the Jesuits (see JESUS, SOCIETY OF), b Loyola Castle near Azpeitia, Guipúzcoa, Spain He was of noble birth and was reared in the household of a prominent courtier In 1517 he left his court life to enter the army In 1521, when he was convalescent from a serious wound, his conversion took place from reading a life of Christ and a book of saints. On his recovery Ignatius went to Monserrat (March, 1522), where he was confessed and absolved, and from there he went to Manresa. At Manresa he remained for a year, undergoing great austerities, and left (Feb., 1523) to set out for the Holy Land. He was not allowed to enter Palestine and returned. His aim now being to help others in arriving at spiritual peace of mind, he began to study—at Barcelona (1524–26), at Alcalá (1526–27), at Salamanca (1527–28), and at Paris (1528–35) Ignatius was never erudite, his difficulties of beginning education late in life were multiplied by the persons who came to him, a layman, for spiritual direction. The austerities he recommended made him unpopular with the students, and his lay status made him suspect by the Inquisition. On Aug. 15, 1534, he and six companions, making the nucleus of the Society of Jesus, took vows together of poverty and chastity and vowed to go to the Holy Land, where they would live as nearly as possible after the manner of Jesus. When they were ready to go to Palestine, the Turkish wars made it impossible, and they determined to obtain ordination and put themselves at the pope's disposal They were ordained (1537) and received by the pope (1538), who kept them in Rome Ignatius continued his work of conversion with individuals, and became a leader in the reform movement (see REFORM, CATHOLIC). In 1539 he had drawn up a plan or *Formula* for a new order and with difficulty received the papal approbation for it This *Formula*, as recast by Ignatius several times, became the constitution of the Jesuits, the *Constitutions*, as its final form is usually called, has never been revised since the edition published at his death, bearing his final corrections St Ignatius was elected general of the order in 1541 and remained so until his death. The great interests of Ignatius as expressed in his order seem to have been the foreign missions and the education of boys, contrary to common supposition, St Ignatius was not solely dominated by a desire to reconvert Protestants—he seems sometimes even to have underestimated the danger of the Reformation to the Church He lived in his last years at Rome, except in his illnesses always actively directing his company The one idea of St Ignatius' life was the imitation of Christ This is most clearly expressed in his *Spiritual Exercises*, written first in rough, plain Spanish and translated by the author himself into Latin It is a series of religious reflections, examinations of conscience, prayers, and the like grouped into four "weeks," according to a traditional series of four steps to the perfect life of mystical union with God The little book has been found to be of the greatest value to many and is much used by devout Catholics It was begun at Manresa, but Ignatius constantly worked over it for many years His conception of the "soldier of Christ" has been much overemphasized and misunderstood Ignatius thought of the soldier or knight only figuratively, in obvious imitation of St Paul (Eph 6 10–17) St Ignatius is one of the great names of MYSTICISM, he represents a characteristic Roman Catholic combination of strong activity with profound contemplation There are celebrated portraits of St Ignatius by Rubens and Titian He is buried in the Gesù at Rome He was canonized in 1622 Feast July 31 There are good translations of the *Spiritual Exercises*, there is also a quasi-autobiography, *The Testament of Ignatius Loyola* (Eng tr , 1900) See also biographies by J H Pollen (1922), H D. Sedgwick (1923), Christopher Hollis (1931), and Robert Harvey (1936)

igneous rock see ROCK

ignis fatuus: see WILL-O'-THE-WISP

ignition, apparatus for igniting an explosive mixture N A Otto, in his first gas engine, used flame ignition Another method was heating a metal tube to incandescence Ignition systems in modern automobiles use an electric spark which ignites the compressed mixture of air and gasoline vapor in the cylinders The necessary high-voltage current is obtained from a magneto or by a battery-ignition system (in which the electric current is derived from a generator automatically driven by the engine) The current is used either directly in the system or indirectly through a storage battery The system consists of the storage battery, a circuit breaker, an induction coil (condenser), and a distributor, with the necessary wiring The circuit breaker is a switch whose contact points are equipped with tungsten to resist erosion It is opened and closed at the proper time by a cam arrangement driven by the engine The purpose of the coil is to increase the low voltage from the storage battery to the high voltage required for the spark It consists of an iron core with a primary and a secondary winding. When the points in the circuit breaker are closed, the low-voltage current passes through the primary winding and sets up a magnetic flux in the core When the circuit breaker is opened, the low-voltage current ceases to flow in the primary winding, causing the magnetic field to collapse This sudden collapse induces a high voltage in the secondary winding, which then passes to the distributor The distributor consists of a shell having contact points connected with each spark plug. Inside the shell, which is made of bakelite or similar material, is a rotor arm which carries the high voltage to the contact points in the correct order and thus to the spark plugs A typical spark plug consists of a steel shell (with a base threaded so as to screw into the top of the cylinder) and two electrodes, one central and one outer The central electrode is made of some resistant material such as chrome-nickel steel, is enclosed except for its two ends in an insulating material such as porcelain or mica, and has a connection post at the outside end for a wire from one of the distributor points. The outer electrode is attached to the shell (thus being grounded to the cylinder head) and is bent at its free end to come within a very short distance (1/32 to 3/32 in.) of the inner end of the

central electrode. The electric current leaping this gap between the electrodes causes the spark. The spark plugs, one of which is situated in each cylinder, are "fired" in a definite order so that the movement of the pistons in the cylinders will be even and the running of the engine smooth The timing for the ignition of the gas in the cylinder is so arranged that the spark occurs a little before the piston reaches the top, and the most complete combustion is realized at the moment that the piston starts on its downward or working stroke

Igor (ē'gûr), d 945, duke of Kiev (912–45), son and successor of Oleg He undertook (941) an expedition against Constantinople but was routed by Greek fire and in 945 concluded a defensive alliance with the Byzantines His wife, St Olga, became regent for their son Svyatoslav after Igor's death

Igor (Igor Svıatoslavov) (ē'gur svyä"tusla'vůf), 1150–1202, Russian prince, who in 1185 was defeated in an expedition against the Cumans He became the hero of the Russian epic, *The Lay of the Host of Igor*, attributed to the 12th cent (see Russian literature) Discovered in 1795, it was used by Borodin for his opera, *Prince Igor*

Igorot (ĭgûrōt', ēgû-), a proto-Malayan people of N central Luzon island, Philippines They live under village-state rather than tribal organization and are highly skilled in rice-terrace agriculture They formerly practiced head-hunting. The name Igorot may also apply to many of the warlike tribes of Luzon

Iguala (ēgwä'lä), city (pop 12,756), Guerrero, SW Mexico It is in a rich agricultural and mining district of the northern part of the state Earthquakes are not uncommon, and the town was severely damaged in 1907 Iguala is famous in Mexican history as the place where Agustín de Iturbide, with the acquiescence of the guerrilla leader, Vicente Guerrero, proclaimed the **Plan of Iguala**, Feb 24, 1821 The plan's main provisions, the Three Guarantees, provided for Roman Catholicism as the only religion, thus confirming clerical privileges, absolute independence from Spain, preferably under a constitutional monarchy headed by Ferdinand VII or another member of the reigning Spanish family, and racial equality, opening to anyone the right to hold office The plan, after independence had been won, was discarded when Iturbide made himself emperor

iguana (ĭgwä'nu, ē-), large lizard of tropical America, the West Indies, and some of the Pacific islands The greenish color of the common tropical American species blends with its usual surroundings, the branches of trees overhanging running water It is from 3 to 6 ft long There is a crest of spiny scales from the neck to the long tail Iguanas eat leaves and fruits and sometimes small animals Their palatable flesh is eaten in some countries A marine and a land species inhabit the Galápagos Islands region

Iguanodon (ĭgwä'nůdŏn) [as if Gr , =iguana-toothed], biped vegetarian dinosaur, characterized by teeth similar to those of the iguana, a powerful tail, and a horny beak Complete skeletons have been found in Belgium in Carboniferous rocks in which the animals were trapped in Lower Cretaceous times

Iguassú Falls (ēgwusōō'), Span *Iguazu* (ēwusōō, ēgwä-), in the Iguassú river, a tributary of the Paraná, on which Argentina, Brazil, and Paraguay converge The falls, higher and wider than Niagara (the water falls over 200 ft), are partly Argentine, partly Brazilian In 1928 the Argentine government created a national park here The surroundings, in the midst of wild and beautiful scenery, abound in begonias, orchids, ferns, and myriads of butterflies The falls are easily accessible by river and by air

Iguvine Tables (ĭ'gyŏvĭn), several inscribed bronze tablets discovered in 1444 at Gubbio (the ancient Iguvium and later Eugubium) Most of them are still preserved there They set forth the acts of the Attidian Brethren, a corporation of 12 priests The tablets proved an important aid in understanding the ancient Umbrian language and supplied information on ancient Italian religious rites

Ijm (ī'ĭm) [Heb , =ruins] **1** See Ije-abarim **2** Town, S Palestine. Joshua 15 29

Ij or **Y**, Dutch *IJ* (all ī), inlet of the Ijsselmeer, North Holland prov., NW Netherlands, on which Amsterdam is located It receives the Amstel river and is connected by canals with the North Sea and with the Lek and Waal rivers

Ije-abarim (ī'jē-ă'bŭrĭm) [Heb , =ruins of Abarim], wilderness camping ground. Num 21 11, 33 44. Ijm Num 33 45

Ijmuiden (ĭmoi'dun), city (pop c 28,000), North Holland prov , W Netherlands, a port on the North Sea and WNW of Amsterdam. It is part of the municipality of Velsen

Ijon (ī'jŏn) [Heb , =ruin], unidentified town, extreme N Palestine It was looted by both Benhadad and Tiglath-pileser 1 Kings 15 20, 2 Kings 15.29.

Ijssel, Dutch *IJssel* (both, ī'sůl), river, 72 mi long, E and central Netherlands It branches from the Lower Rhine near Arnhem and flows N past Zutphen and Deventer into the Ijsselmeer near Kampen. The Ijssel is not to be confused with a shorter river in the W Netherlands, the Hollandsche Ijssel, which branches from the Lek and flows WSW past Gouda into the Meuse (Maas) just E of Rotterdam. An older spelling is Yssel

Ijsselmeer, Dutch *IJsselmeer* (both· ī'sůlmār"), shallow fresh-water lake, N and central Netherlands, bordering on the provinces of North Holland, Utrecht, Gelderland, Overijssel, and Friesland It was formed from the old Zuider Zee by the construction of a dam (completed 1932) The dam, 19 mi. long, has navigation locks and drainage sluices and carries a roadway connecting North Holland with Friesland The Ijssel river is the chief feeder of the Ijsselmeer Considerable areas (293 sq mi in all) have been reclaimed from the former Zuider Zee since 1932 The largest of the reclaimed areas is the Northeast Polder (185 sq mi , pop 1,811), which, as of 1950, had not yet been incorporated into any province. Parts of the polders were flooded in the Second World War but have been salvaged since, and further land reclamation is planned The chief city located on the Ijsselmeer, or rather on its inlet called the Ij, is Amsterdam Before the construction of the dam, the Zuider Zee was an important fishing ground

Ikhnaton (ĭknä'tun) or **Akhenaton** (ä"kŭnä'tun) [Egyptian, =Aton is satisfied], d. c.1358 B.C , king of ancient Egypt (c 1375–c 1358 B C.) of the XVIII dynasty, son of Amenhotep III His name at his accession was Amenhotep IV, but his religious principles led him to discard it This religious idea of Ikhnaton and his reform in consonance with it is Ikhnaton's claim to fame He held that the sun (named Aton, hence Ikhnaton's name) was god, and god alone The solar monotheism was absolute, the new system allowed no accommodations and no exceptions Through his rays the sun filled the universe with his beneficent light, through them everything that lived had its being The king was anxious to show his conviction in all he did, so he changed his name and his residence The new capital was named Akhetaton (Tel-el-Amarna), and new provincial capitals were founded in Nubia and Syria in honor of Aton The royal artists founded a new artistic school, characterized by abandonment of convention and a turning to nature because it showed the power of the sun) A new religious literature sprang up, one of its hymns takes high place in all religious poetry Ikhnaton's fanaticism was its own undoing He defaced every monument in which the name of Amon, previously the greatest god of Egypt, appeared, sparing not even his father's name, which contained the name of Amon He persecuted and harried the powerful priesthoods, and it was probably their resistance united with the traditional feeling of a people whose deepest sentiments were outraged which brought the destruction of the Aton cult after Ikhnaton's death His zeal not only accomplished the destruction of its object but lost Egypt the empire, for Ikhnaton, immersed in his exercises, his pious acts, and his speculations, neglected the provinces shamefully As a result, his successors, Sakere and Tut-ankh-amen, received—instead of an empire including Nubia and Syria—only Egypt and some of the upper valley See J. H Breasted, *The Development of Religion and Thought in Ancient Egypt* (1912)

Ikkesh [Heb , =perverse], father of one of David's guard 2 Sam 23 26, 1 Chron 11 28, 27 9

Ikon Basilike: see Eikon Basilike

Ilai (ī'lī, -lāī), one of David's mighty men 1 Chron. 11 29 Zalmon 2 Sam 23 28

Ile-aux-Noix, Fort (ēl-ō-nwä'), French fort in Canada, on Ile aux Noix, an island in the Richelieu river, and c 30 mi SE of Montreal It was built in 1759 after the British capture of Ticonderoga and Crown Point in the French and Indian War Here the French checked for a time the British advance on Montreal but were finally forced to surrender the fort in 1760 Named Fort Lennox and manned by a British garrison, it fell (1775) in the American Revolution to Gen Richard Montgomery and became a base of operations against Quebec but was evacuated by the Americans in 1776 The present fortifications (now included in Fort Lennox National Historic Park, 210 acres) were started in 1782, added to during the War of 1812, and maintained as a military post until 1870

Ile-de-France (ēl-dŭ-frās'), region and former province, N France, in the center of the Paris basin, a fertile depression where the Marne and Oise rivers join the Seine Including parts of the Beauce and Brie districts and of the Vexin, the former province is now largely comprised in four departments, Seine (Paris and suburbs), Seine-et-Oise, Oise, and Aisne The Paris region, with numerous large industrial towns and residential suburbs, is a vast agricultural area which supplies the metropolis with fruits, vegetables, and dairy products There are many large and beautiful forests, notably those of Fontainebleau, Compiègne, and Rambouillet, and many small rivers and streams Cities of economic or historical importance besides Paris are Beauvais, Compiègne, Fontainebleau, Laon, Meaux, Melun, Nemours, Saint-Cloud, Saint-Germain-en-Laye, Senlis, Soissons, and Versailles. Ile-de-France was the cradle of the French monarchy. The name came into use only in the 15th cent. By the 10th cent. the region was comprised in the duchy of France or Francia and included the countship of Paris (see France). When Hugh Capet, duke of France and count of Paris, became French king in 987, his domains became the nucleus of the ever-growing crown land, which by the death of Louis XI (1483) comprised the major part of present France Ile-de-France itself, rounded out through the acquisition by the crown of various fiefs, was at that time constituted into a province, subject to the Parlement of Paris

Ile de France: see Mauritius.

Ile de la Cité: see Paris, France.

Ile du Diable see Devil's Island.

Ile Jésus (ēl zhāzŭ') or **Jesus Island**, island (93 sq mi , pop 21,631), S Que , between the Mille Iles river and the Rivière des Prairies (branches of the Ottawa), just N of Montreal island Market gardening and dairying are carried on

Iles du Salut (ēl du salü') or **Safety Islands**, small archipelago, off French Guiana, in the Caribbean The best known of the islands is Devil's Island

Ilf, Ilya Arnoldovich (ēlyä' ärnôl'duvĭch ēlf'), 1897–1937, Russian humorist and journalist, whose real name was Ilya Arnoldovich Fainzilber All his writing was done in collaboration with Yevgeny Petrovich Katayev, who wrote as Eugene Petrov (1903–42), a younger brother of the dramatist Valentin Katayev Together the two produced, besides amusing stories of provincial life, the novels *Diamonds to Sit On* (1928, Eng tr , 1930), *An Ezalted Personage* (1928), and *The Little Golden Calf* (1933, Eng tr , 1932). In 1937, after a tour of the United States, they published their observations in *Little Golden America* (1937, Eng tr , 1937) There was nothing in Soviet life free from their humorous attack

Ilford, municipal borough (1931 pop. 131,061, 1947 estimated pop 182,080), Essex, England, ENE of London It is mainly a residential suburb, it has paper mills and factories making photographic materials, dies and tools, telephone appliances, tiles, and flour

Ilfracombe (ĭl'frŭkōōm'), urban district (pop 9,175), Devonshire, England, at the mouth of the Bristol Channel It is a resort and seaport and was important in the 14th cent when it supplied several ships for the siege of Calais

Ili (ē'lē'), river, c 600 mi long, rising in NW Sinkiang prov , China It flows W through Sinkiang and through the Kazakh SSR to enter Lake Balkhash by several mouths

Iliad (ĭ'lēud) [from Gr *Ilion*=Troy], Greek epic in 24 books ascribed to Homer The poem tells of the wrath of Achilles and its consequences, an episode in the Trojan War The action is in several sections Achilles quarrels with Agamemnon over the girl Briseis and retires from the war to sulk in his tent The Greeks gradually weaken (Books I-IX) Book X tells of an expedition by Odysseus and Diomed The Greeks suffer reverses, which inspire Patroclus, Achilles' dear friend, to go forth to battle wearing Achilles' armor He is killed by Hector (Books XI-XVII) Book XVIII tells of the visit of Thetis, mother of Achilles, to comfort her grieving son and the forging of new armor by Hephaestus for Achilles Achilles then goes forth to avenge his friend, kills Hector, buries Patroclus, and finally, at the entreaty of Priam, gives Hector's body to the aged father (Books XIX-XXIV).

Ilion, see Troy

Ilion (ĭl'ēun), industrial village (pop 8,927), E central N Y , on the Mohawk and the Barge Canal and SE of Utica, inc 1852 Firearms (see Remington, Eliphalet) and typewriters are made

Ilipa (ĭ'lĭpu), ancient town of Spain, near the modern Seville Here Scipio (Scipio Africanus Major) defeated Hasdrubal (206 B C) The overthrow of Carthaginian power in Spain paved the way for the defeat of Hannibal at Zama (202 B C)

Ilium: see Troy.

Ilkeston (ĭl'kĭstun), municipal borough (1931 pop 32,813, 1947 estimated pop 32,980), Derbyshire, England, NE of Derby There are iron mines and coal mines in the vicinity, and earthenware, lace, silk, hosiery, and iron goods are manufactured The church is of Norman and Early English architecture Eastwood, a near-by mining village, is the birthplace of D H Lawrence, and many of his novels are set in the district

Ilkley, urban district (pop 9,736), West Riding of Yorkshire, England, in the Wharfe valley. It is a health resort, with mineral springs There are three Saxon crosses in the parish churchyard.

Illampú (ēlyämpōō'), peak, c.21,300 ft. high, E Bolivia Although c 100 ft lower than the adjacent peak, Ancohuma, Illampú is the name usually given to the whole mountain. It is sometimes called Sorata, from the village high on its slopes Permanently capped with snow, Illampú rises majestically from the Cordillera Real of the Bolivian Andes near Lake Titicaca.

Illecillewaet (ĭlŭsĭ'lùwĕt, -wät), mountain stream of SE British Columbia, with its source in Illecil-

lewaet glacier on the west slope of the Selkirk Mts. It flows southwest in a mountain valley to join the Columbia river near Revelstoke For almost its entire distance it is followed by the Canadian Pacific Railway and is well known to travelers for its exceptional beauty

Ille-et-Vilaine (ēl"-ā-vēlĕn'), department (2,697 sq mi , pop 578,246), NW France, on the English Channel Named after two small rivers, it forms the eastern part of Brittany Rennes is the capital, Saint-Malo is the chief port

illegitimacy, the legal status of a child born out of wedlock, who is called also a BASTARD or a natural child The attitude toward illegitimacy has always reflected the changing ethical and social conditions and opinions in various countries at various times Unlike civil law, which granted illegitimate children certain rights against the procreator, English common law treated them almost like persons outside the law and left their care to poorhouses Recently their condition has been much improved by statute In the United States the illegitimacy laws vary widely North Dakota and Arizona go so far as to declare that all children are legitimate, whether born in wedlock or not Children of a common-law marriage are illegitimate but may be legitimized by the act of one or both parents For the status of children born to annulled marriages, see NULLITY OF MARRIAGE See Ruth Reed, *The Illegitimate Family in New York* (1934, with an annotated bibliography)

Illimani (ēyēma'nē), mountain, 21,184 ft high, E Bolivia, ESE of La Paz One of the highest peaks of the majestic Cordillera Real of the Bolivian Andes, it is permanently snow-capped Illimani was first climbed by Baron Conway of Allington in 1898

Illinium: see PROMETHIUM

Illinois (ĭlĭnoi'), state (55,947 sq mi , 1940 pop 7,897,241, 1949 estimated pop 8,449,000), N central United States, in the Middle West, admitted 1818 as a free state SPRINGFIELD is the capital, CHICAGO, the second largest city of the nation, is the metropolis Illinois is bounded on the north by Wisconsin, on the east by Lake Michigan and Indiana, on the southeast and south by Kentucky (with the Ohio river as the line) and on the west by Missouri and Iowa (with the Mississippi river as the line). The broad level lands that give Illinois the nickname the Prairie State were made by Pleistocene glaciers, which leveled rugged ridges and filled the valleys over all the northern and central parts of the present state More than 275 rivers drain the fertile prairies, most of them flowing to the Mississippi-Ohio system, the Illinois is the largest These rivers S of Lake Michigan offered early explorers a way south into the interior of the continent and later in the days of canal building played a big part in hastening settlement of the prairies The boundaries of the state were set to include frontage on the lake and thus to link the territory by waterway (through the soon-completed ERIE CANAL) to the eastern seaboard of the United States Today the Gulf of St Lawrence Waterway links Chicago to the Mississippi basin as the old Chicago and Illinois and Michigan canals once did Perhaps more important than the waterways are the many rail lines (Chicago has some 22 trunk and 17 belt and terminal lines), the hard-paved highways (the state has more than 14,000 mi), and the constantly expanding air traffic There is truth in the boast that Illinois is the hub of the continent The topography made this concentration of communication lines easier, and the communication lines in turn made possible further use of the agricultural produce and the building of an industrial empire The rich land adequate rainfall (32 to 36 in annually), and a long growing season makes Illinois a rival of its neighbor Iowa in extensive and valuable farming Corn is the chief crop Other grains and legumes—oats, wheat, soybeans, clover, and hay—cover many acres, and truck gardening and fruit growing are of prime importance The Chicago stockyards—dependent like other industries on ease of communication—are world known for their place in the livestock industry Beneath the fertile top soil, Illinois has layers of mineral wealth, producing more fluor spar, silica sand, and sandstone than any other state Bituminous coal fields and oil pools make S Illinois a major source of fuel Clay, iron, pigments and lead are also found It was with these agricultural and mineral resources that the men of Illinois were able to build great industries on the basis of the communication lines, particularly after the railroads were built By 1880 income from industry was almost twice that from agriculture Metropolitan Chicago is one of the great industrial centers of the world, and Illinois leads the country in the processing of meats and in manufacture of farm implements, confectioneries, and corn products Scattered across the northern half of the state are cities with specialised industries, e g , ELGIN, PEORIA, MOLINE, KEWANEE, and ROCKFORD The railroad centers of JOLIET, DECATUR, and EAST SAINT LOUIS also have high place in the Illinois industrial kingdom. This is the land where less than 150 years ago the Illinois Indians, the Sac and the Fox Indians, and other tribes were pursuing their simple ways in the river forests, where many centuries before them the MOUND BUILDERS had dwelt French explorers and missionaries had come upon the Indians early. Father MARQUETTE and JOLLIET on their return from voyaging down the Mississippi, paddled up the Illinois in 1673, and Marquette returned to plant a mission in the Illinois country LA SALLE in 1679 went from Lake Michigan to the Illinois, where he founded (1680) Fort Creve Coeur and with his lieutenant, Henri de TONTI, completed (1682–83) Fort St Louis (on STARVED ROCK) French occupation was thinly spread, but CAHOKIA and KASKASKIA achieved a minor importance in the 18th cent The British were casting envious eyes at the Illinois country before the whole area fell to them with victory in the last French and Indian War, sealed by the Treaty of Paris of 1763 In the American Revolution, the one important Western achievement of the patriots was the expedition of George Rogers CLARK who took (1778) Cahokia and Kaskaskia before going on to capture Vincennes and win the Old Northwest The Illinois region was an integral part of the Old Northwest and benefited like the rest from the Ordinance of 1787 It was made part of Indiana Territory in 1800, and in 1809 it became a separate territory, but settlement was very slow until after the War of 1812 (in which the chief Illinois incident was the massacre near Fort DEARBORN) Fur trade still was flourishing over most of Illinois when it became a state in 1818, but already settlers were pouring in down the Ohio by flatboat and barge and across the Genesee wagon road The capital was moved in 1820 to VANDALIA The influx by canal and Great Lakes hastened the peopling of the farms, and some of the fur traders (e g , Gurdon Saltonstall Hubbard) turned to other affairs The career of a lawyer of the Illinois backwoods, Abraham LINCOLN, reflects the story of a land in the making In 1832 he served in the BLACK HAWK WAR, which practically ended the tenure of the Indians in Illinois and drove them W of the Mississippi In that same year he was defeated for office by Peter Cartwright, part-time politician and revivalist Methodist minister Later in the state legislature he and his colleagues from Sangamon co worked hard and successfully to bring the capital to Springfield in 1839. As Illinois moved toward a wider part in national affairs he and another Illinois lawyer, Stephen A DOUGLAS, won national attention by their debates on the slavery issue in a senatorial race (1858) In 1861 Lincoln went not to the Senate but to the White House In the Civil War, too, the leader of the Northern forces, U S Grant, came out of Galena, Ill Frontier conditions were disappearing, but development had come only with trouble and hard work in the draining of swamps and the clearing of fields The Panic of 1837, heavy and uncontrolled land speculation, and mob violence—shown in the murder of the abolitionist Elijah P LOVEJOY at Alton in 1837 and the violence against the Mormons settled at NAUVOO, leading to the murder of Joseph and Hyrum Smith—marked the rise of the state, just as did the opening of an agricultural-implements factory by Cyrus H McCORMICK at Chicago in 1847 and the building of the railroads in the 1850s By the Civil War, then, industry was well begun It expanded immediately after the war to tremendous proportions, and the Illinois legislature by setting aside acreage for stockyards prepared the way for the development of the meat-packing houses of Swift, Armour, and others Economic development had long outrun the state constitution, which was revised in 1870 It had also outrun the building of facilities, and Chicago was a mass of flimsy wooden structures when the fire of 1871 destroyed a third of it More solid underpinnings for the boom were built, but the last part of the 19th cent was marked by the revolt of the farmers against tariff discrimination and the favoritism to the railroads The Order of Patrons of Husbandry was founded in 1858 for cooperative buying, and later the Illinois farmers joined enthusiastically in the GRANGER MOVEMENT and the chief of the Granger Cases (see MUNN VS ILLINOIS) was fought out in Illinois The laborers of factories, railroads, and mines also became restive, and from 1870 to 1900 Illinois was the scene of such violent incidents as the Haymarket riot of 1886 and the Pullman strike of 1894. The Pullman strike brought about conflict between the liberal governor, John P ALTGELD, and the Federal government and also brought Eugene V DEBS to national attention. In the 20th cent labor conditions improved, and legislation has improved employer-labor relations—notably the setting up of a fact-finding bureau of labor statistics (1879), a state employment service (1899) and a state department of labor (1917) Nevertheless, later examples of violence in labor disputes did occur, notably the massacre at Herrin in 1922 and the bloody riot in the steel strike at Chicago in 1937 State politics have responded to the conflicting forces of farmers, laborers, and corporations and have demonstrated a pull between the down-state and upstate political machines Illinois, of course, has felt the same waves of prosperity and depression as the nation as a whole, while its relative importance in the nation has steadily risen. Cultural life has been vigorous from early times. A free-school law of 1845 showed an interest in education soon expanded to higher levels A number of well-known institutions of higher learning were opened—Illinois College in 1830, Illinois Wesleyan Univ in 1851, Northwestern Univ in 1855, Illinois State Normal Univ in 1857, the Univ of Illinois in 1868, Loyola Univ in 1870, and the Univ. of Chicago in 1892 In the 1920s and 1930s especially literature flourished with the so-called Chicago school of poets and short-story writers and such sturdy figures as Carl Sandburg, Vachel Lindsay, Edgar Lee Masters, Theodore Dreiser, Sherwood Anderson, and James T. Farrell. See Illinois, Secretary of State, *The Blue Book of the State of Illinois* (latest ed); Illinois Centennial Commission, *Centennial History of Illinois* (6 vols , 1918–24), C. W Alvord, *The Illinois Country, 1673-1818* (1920), G W Smith, *History of Illinois and Her People* (6 vols., 1927), C R Trowbridge and G. P Randle, *Illinois and the Nation* (rev ed , 1932), I F Mather, *The Making of Illinois* (rev ed , 1935), F C Cole and Thorn Duel, *Rediscovering Illinois* (1937), Federal Writers' Project, *Illinois* (1939), Jay Monaghan, *This Is Illinois* (1949)

Illinois, river formed in NE Illinois by the confluence of the Des Plaines and Kankakee rivers and flowing 271 mi SW to the Mississippi at Grafton Connected by canal with Lake Michigan, it provides an important commercial and recreational waterway The chief city on it is Peoria See James Gray, *The Illinois* (1940)

Illinois, University of, at Urbana, Champaign, and Chicago, land-grant and state supported, coeducational; chartered 1867, opened 1868 as Illinois Industrial Univ , renamed 1885 It has colleges of agriculture, commerce and business administration, education, engineering, fine and applied arts (with architecture), liberal arts and sciences, law, and veterinary medicine, schools of journalism, library science, and physical education, and (at Chicago) colleges of dentistry, medicine (see also RUSH MEDICAL COLLEGE), and pharmacy There are bureaus of business, educational, institutional, and community-planning research, a small-homes council, an institute of labor and industrial relations, an aeronautic institution, a betatron, a radio station, and a university press Of interest are an Alma Mater group and other works by Lorado Taft (an alumnus), an observatory, and museums of art and archaeology, European culture, and natural history The university pioneered in vocational education.

Illinois College see JACKSONVILLE

Illinois Indians, group of North American Indian tribes, comprising the Cahokia, the Kaskaskia, the Michigamea, the Momgwena, the Peoria, and the Tamaroa tribes They belong to the Algonquian linguistic stock In the mid-17th cent they were scattered over S Wisconsin, N Illinois, and sections of Iowa and Missouri They then numbered some 6,500 They were agriculturalists of the Eastern Woodlands culture, but, being so close to the Plains area, they hunted buffalo and exhibited other traits of that area Marquette and Joliet are believed to have been the first Europeans to travel (1673) through Illinois territory Father ALLOUEZ, a Jesuit missionary, visited them in 1676 and stayed with them for years By 1750 wars with the Sioux, the Fox, and the Iroquois and liquor from French traders had reduced the population to some 2,000 In 1769 the assassination of PONTIAC by a Kaskaskia Indian provoked the Lake tribes (the Ojibwa, the Ottawa, the Potawatami, the Kickapoo, and the Sac and Fox) to vengeance. They began a war of extermination, which in a few years diminished the Illinois to a mere handful of people, who sought asylum at the French settlement at Kaskaskia By 1800 there remained some 150 Illinois Indians In 1833 these survivors, represented by the Kaskaskia and the Peoria, sold their lands in Illinois and moved W of the Mississippi They are now in NE Oklahoma on a small reservation, consolidated with the Wea and the Piankashaw The population of the four tribes, who are mixed with white blood, is about 400. See C W Alvord, *The Illinois Country* (1920)

Illinois Institute of Technology, in Chicago, nonsectarian, coeducational Since 1940 it has consisted of Armour College of Engineering (on South Side, for men, chartered 1892, opened 1893 by Philip D Armour as Institute of Technology, including architecture) and Lewis Institute of Arts and Sciences (on West Side, coeducational, chartered 1895, opened 1896) It has an industrial research foundation and an institute of gas technology.

illiteracy. Standards of literacy and illiteracy have varied from time to time and from place to place. Statistics, therefore, cannot be compared unless the defining criteria are known. The U S Bureau of the Census in 1930 considered illiterate any person over 10 years of age who could not read and write in any language. With the invention of printing and the social ferment of the 15th cent, the rate of illiteracy in Western Europe dropped

appreciably. Further declines resulted from the Reformation and from revolutionary political developments in the 18th and 19th cent Direct attacks upon illiteracy have been chiefly through the establishment of public schools with compulsory attendance Many countries have ADULT EDUCATION programs to raise the literacy rate In China the mass-education movement was inaugurated c 1905. Soviet Russia has made elaborate efforts to extend literacy, as have Turkey and Mexico, using semidemobilized soldiers as instructors The Southern states of the United States, with relatively poor educational facilities, have had relatively high illiteracy rates Rural areas tend to have higher rates than urban In the Kentucky mountains "moonlight schools" were opened in 1911 for the instruction of illiterate adults This movement spread rapidly to other Southern states as a result of the disclosure by the First World War draft of widespread illiteracy in those states Efforts to combat adult illiteracy have also been made in opportunity schools in urban areas In the Second World War the criterion for literacy used by the U S army was ability to read and write at about fourth-grade level Since many recruits did not reach this level, the army set up special training units for their instruction Many states require voters to pass literacy tests, some of which allow great latitude in interpretation Naturalisation laws require ability to speak English and to sign one's name, and literacy in some language is required of immigrants

Illmo, city (pop 1,224), SE Mo , near the Mississippi below Cape Girardeau, in a farm area, settled and inc 1906

Illuminati (ĭlōō"mĭnä'tĭ, -nä'tē) [Latin, = enlightened], rationalistic society founded in Germany soon after 1776 by Adam Weishaupt, a professor at Ingolstadt It had close affinities with the Freemasons, and it seems to have been organized according to a Masonic plan For 10 years it was very popular among German rationalists, but it seems as a society to have had a limited influence The Roman Catholic Church, which Weishaupt had left in his youth and rejoined before his death, condemned the Illuminati, and in 1785 the Bavarian government dissolved the organization It did not long survive Other groups have called themselves Illuminati, especially a mystical sect of Spain and France, flourishing in the 16th cent , the ROSICRUCIANS also called themselves Illuminati

illuminating gas see GAS, METHANE, NATURAL GAS

illumination, in art, the decoration of manuscripts and books with colored and metal pictures and ornamental designs, particularly initial-letter and marginal decorations Such illumination is found in many medieval Books of the Hours, Psalters, Bibles, Gospels, and other writings copied in monasteries and cathedral schools The Irish Book of Kells (8th cent), at Trinity College, Dublin, is one of the most beautiful examples, full of interlaced Celtic scrolls and bright touches of gold, blue, red, and green Many Chinese, Japanese, Persian, and other Oriental manuscripts are illuminated

illumination of streets and buildings see LIGHTING and PHOTOMETRY

illusion see HALLUCINATION

illustration, any type of picture or decoration used in conjunction with a text to embellish its appearance or to clarify its meaning It is as old as writing, both originating in the pictograph Modern book illustration, as a printing art, originated in 15th-century block books, which were often imitations of the great medieval art of hand-painted ILLUMINATION Book illustration has followed closely the development of the printing processes Copperplate engraving and etching tended to replace the woodcut during the 16th and 17th cent , but it was not until the close of the 18th cent that the art was revolutionized by Thomas Bewick's invention of wood engraving and Senefelder's invention of lithography. These two processes greatly stimulated the production of illustrated books and magazines and were exploited by such masters as Doré, Daumier, and Gavarni In the late 19th cent , wood engraving and lithography were superseded by the photomechanical processes which made possible the more or less successful reproduction of a wide variety of painting and drawing techniques The exploitation of these processes for cheap, rapid mass production has obscured their artistic possibilities and given rise to a revival of early hand processes on the part of such contemporary artists as Rockwell Kent, Rouault, Picasso, and many others But there is no doubt that the photomechanical processes which dominate popular illustration can be used as media for a fine art of illustration Such great illustrators as Daniel Vierge, Aubrey Beardsley, Howard Pyle, and Elihu Vedder have shown that this is possible when the limitations of the processes are clearly recognised by the artist. Among the many great artists famous for illustration may be cited Dürer, Holbein, William Hogarth, William Blake, Daumier, Manet, and Picasso Illustration of fiction was more popular in the 19th cent. than in the 20th. Dickens's works were illustrated by John Leech, H. K. Browne ("Phiz"), and George Cruikshank Sir John Tenniel's illustrations for *Alice in Wonderland* are scarcely less well known than the text itself Among the great illustrators of children's books are Kate Greenaway, Walter Crane, Randolph Caldecott, Edward Lear, Reginald Birch, Boutet de Monvel, Arthur Rackham, and the Americans Palmer Cox, A B Frost, N C Wyeth, and Wanda Gág

Illyria (ĭlĭr'rēù) and **Illyricum** (ĭlĭr'rĭkum) In prehistoric times a group of tribes speaking dialects of an Indo-European language swept down to the northern and eastern shores of the Adriatic and established themselves there The region that they occupied was Illyria, and therefore the name has vague limits Among the Illyrian peoples were the tribes later called the Dalmatians and the Pannonians, therefore sometimes Illyria is taken in the widest sense to include the whole area occupied by the Pannonians, and thus to reach from Epirus N to the Danube More usually today Illyria is used to mean only the Adriatic coast N of central Albania and W of the Dinaric Alps The Illyrians were much affected by the Celts and mingled freely with them, the inhabitants of the later Rhaetia were a compound of Illyrians and Celts Tribal life was simple, but the Illyrians were warlike and much given to piracy The mines of the region attracted attention, but though Greek cities were established on the coast in the 6th cent B C , they did not flourish and generally the Greeks left the Illyrians severely alone Philip II of Macedon and later Philip V waged against them but without permanent results The Romans undertook to conquer them in the 3d cent B C An Illyrian kingdom had been set up with the capital at Scodra (modern Scutari, Albania), and trouble over Illyrian piracy led the Romans to conduct two victorious Illyrian wars (229–228, 219 B C) After the Dalmatians had split from this kingdom, the Romans conquered its king, Genthius, and established one of the earliest of Roman colonies as Illyricum (168–167 B C) The colony was enlarged by the total conquest of Dalmatia in several wars (notably 156, 119, 78–77 B C) The southern Illyrians were all brought to terms by Augustus in 35–34 B C —a conquest confirmed by the campaigns of 29–27 B C Illyricum was expanded by conquests (12–11 B C) of the Pannonians At the time of the stubborn revolt of the Illyrians (A D 6–9) the territory was split into the provinces of Dalmatia and Pannonia, but the term *Illyricum* was still used It was later given to one of the great prefectures of the late Roman Empire Illyricum then included much of the region N of the Adriatic as well as a large part of the Balkan Peninsula When Napoleon revived (1809) the name for the Illyrian Provs of his empire he included much of the region N of the Adriatic and what is today E Yugoslavia Roughly the same region was included in the administrative district of Austria called (1816 49) the Illyrian kingdom

Ilmen (ĭl'mun, Rus ēl'mĭnyû), lake, area 355 sq mi , NW European RSFSR It empties through the Volkhov river into Lake Ladoga Novgorod and Staraya Russa are near its shores

Ilmenau (ĭl'munou), town (pop 18,603), Thuringia, central Germany, on the Ilm river A health resort, it was a favorite retreat of Goethe and of Charles Augustus of Saxe-Weimar There are porcelain and glass manufactures

ilmenite. see TITANIUM

Iloilo (ē"lōē'lō), city (1948 pop 110,122), on SE Panay, capital of Iloilo prov , Philippine Islands, on Iloilo Strait of Panay Gulf and sheltered by the island of Guimaras An important commercial center, it has a good harbor and is the port for Capiz It exports sugar cane, rice, and copra The Central Philippine College of Jaro is here

image, in optics, a likeness or a counterpart of an object produced when rays of light coming from that object are reflected from a MIRROR or are refracted by a LENS An image of an object is also formed when this light passes through a very small opening, like that of a pinhole camera (which has no lens) Images are classed as real or virtual A real image, formed by rays of light which actually come from the object and which converge before producing the image, is one that can be thrown on a screen For example, the image produced by the refraction of the light rays by a double convex lens (the object being at a distance from the lens greater than the focal length of the lens) is real, and it appears on the side of the lens opposite the one on which the object is present On the other hand, a virtual image is formed by prolongations of the rays (not by the rays themselves) which do not converge and cannot be thrown on a screen. The image in a plane mirror is virtual It appears to be behind the mirror, at a distance equal to that of the object in front, although the rays of light from the object do not penetrate the mirror but are reflected from it Images of the same size as the object are sometimes produced, as in the case of the plane mirror, but in other cases they are larger and in still others smaller They are sometimes erect and in other cases are inverted. The size of the image and whether it is erect or inverted, real or virtual, depend upon the distance of the object from the lens and upon the type of lens or mirror (plane, convex, or concave) employed

imagists, Anglo-American school of poetry, rooted in classicism and French symbolism Ezra Pound, as head of the group, edited the ill-received anthology *Des Imagistes* (1913) and organized the magazine the *Egoist* (1914–19) He deserted imagism, and Amy Lowell, with an official group composed of F S Flint, D H Lawrence, Richard Aldington, Hilda Doolittle, and John Gould Fletcher, contracted for the publication of three imagist anthologies (1915, 1916, 1917) The first contained the famous Aldington preface outlining the precepts of imagism—the use of common speech, the creation of new rhythms, freedom of subject matter, presentation of an image, production of hard clear poetry, and the conception of concentration as the essence of poetry See Glenn Hughes, *Imagism and the Imagists* (1931)

imam (ĭmam') [Arabic, = leader], in ISLAM, a recognized leader The term is used of the leader in the Friday prayer at the mosque It is also a synonym for caliph In this use it is applied by the SHIITES to ALI, to HASAN and HUSEIN, and to the rest of the caliphs in the family of Ali, whom the Shiites consider, alone of the orthodox caliphs, to have been the successor of the Prophet Since the Omayyad family was so long in the caliphate the followers of the family of Ali came to believe that there was a hidden imamate, or succession of legitimate, unrecognized Alid imams or true caliphs The idea grew up in the Middle Ages that one in this succession (the twelfth, or the seventh, imam) would return at the end of this world to restore the true caliphate The returning imam is called the MAHDI The belief in the hidden imam and the variations in it have caused political trouble, notably in Persia and Africa The FATIMITES were particularly given to belief in the hidden imam The DRUSES and the ASSASSINS hold doctrines related to the belief in the hidden imam

Imandra (ē'mundrŭ), lake, area more than 1,000 sq mi , N European RSFSR, S of Murmansk It is of glacial origin Deeply indented, it contains some 90 islands and receives 26 rivers It empties into the Kandalaksha Bay of the White Sea through the Niva river in the south

Imatra (ĭ'mäträ), falls in the Vuoksi river, SE Finland, between Lake Saima (Finland) and Lake Ladoga (USSR) The river descends 60 ft in 2,000 ft The state hydroelectric station here supplies Helsinki and other cities with power

imbecility. see FEEBLE-MINDEDNESS

Imbros (ĭm'brŏs), Turkish *Imroz* (ēmrōz'), island (108 sq mi , pop 6,359), off W Turkey, in the Aegean Sea near the entrance to the Dardanelles

Imeritia (ĭmurĭ'shu), hilly region, W central Georgian SSR, drained by the Rion river Kutais, Chiatura, and Tkibuli are the chief towns The population engages in agriculture and the making of wine and silk

imitation, in music, a device of counterpoint wherein a phrase or motive is employed in more than one voice The imitation may be exact, the same intervals being repeated at the same or different pitches, or it may be free, in which case numerous types of variation are possible When the same motive is repeated at different pitches but in the same voice, the device is called sequence Imitation was much used in both vocal and instrumental compositions of the 15th and 16th cent The *ricercare*, *canzone*, capriccio, and fantasia—instrumental forms of this period—employed imitation to a great extent and without formal plan They were forerunners of the fugue The strictest form of imitation is the canon While imitation is found to some extent in the music of nearly all periods, it is of especial significance in Renaissance and baroque music

Imla or **Imlah** (both ĭm'lu) [Heb , = filled full], father of Micaiah the prophet 1 Kings 22 8,9, 2 Chron. 18 7,8

Imlay, Gilbert (ĭm'lā), c 1754–1828?, American author and adventurer, b probably Monmouth co, N J He served in the American Revolution and afterwards became a deputy surveyor and land speculator in Kentucky Arriving in Europe c 1786, after difficulties arose in Kentucky, he became entangled with the Girondists in their agitation for separating Louisiana from Spain, but the scheme died with their overthrow His books, *A Topographical Description of the Western Territory of North America* (1792) and *The Emigrants* (1793), one of the first romances of the Western frontier, were well received in England During his life in Europe he lived with Mary WOLLSTONECRAFT, who bore him a daughter Shortly after going to London in 1795, he deserted her See Roger Ingpen, ed , *The Love Letters of Mary Wollstonecraft to Gilbert Imlay* (1908), R L Rusk, *The Adventures of Gilbert Imlay* (Indiana Univ. Studies, Vol. X, 1923)

Imlay City, village (pop 1,446), S Mich., E of Flint, in a farm area, inc 1873 There are foundries here. Indian mounds are near by.

Immaculate Conception of Our Lady: see MARY.

immanence (ĭ'mənəns) [Latin, = dwelling in], in metaphysics, the presence within the natural world of a spiritual or cosmic principle, especially of the

Deity It is contrasted with transcendence. Thus Aristotle taught that the Forms are purely immanent in matter, while Plato held that the Ideas are transcendent in general, though sometimes immanent also. Pantheism regards God as purely immanent in all nature, Deism regarded God as solely transcendent In general the great monotheistic religions have held that God is immanent and transcendent There has been an increasing tendency in the 20th cent to regard God as solely immanent, this was present in the Roman Catholic modernism condemned by the pope in 1907

Immanuel or **Emmanuel** (both -măn'-) [Heb ,= God with us], name given by Isaiah to the child who would be a sign to Judah of her deliverance It is a name of Jesus Isa 7 14, 8 8, Mat 1 23.

Immanuel ben Solomon, c 1265–c 1330, Hebrew-Italian poet and scholar, b Rome He wrote biblical criticism and, in both Hebrew and Italian, satiric verse and lively stories He was probably a friend of Dante His collected poems were printed (1491) under the title *Mahbereth*

Immer. 1 Priestly family 1 Chron 9 12; 24 14, Ezra 2 37, 10 20, Neh 3 29, 7 40, 11 13 This is probably the same as AMARIAH **3. 2** Priest Jer 20 1 **3** Probably a place in Babylonia Ezra 2 59, Neh. 7 61

Immermann, Karl Leberecht (kärl' lā'burĕkht l'murman), 1796–1840, German romantic novelist and dramatist Author of several plays, he survives only in the novels *Die Epigonen* (1836) and *Münchausen* (1839), in which he satirized what he considered the decadent society of his time He followed Max Uhle in using Epigoni in the sense of "men born too late" to characterize his contemporaries A selection of chapters from *Münchausen* survives as the novelette *Der Oberhof* See study by A W Porterfield (1911)

immigration, entrance of a person into a new country where he intends to establish permanent residence Motives for immigration, like those for MIGRATION generally, are chiefly economic, though religious and political factors may be important In the 19th and 20th cent there was a vast influx of Europeans into the Americas, especially into the United States, which received between 1820 and 1930 c 38,000,000 immigrants This was a result partly of the great POPULATION expansion and improved methods of transportation Until the middle of the 19th cent the bulk of immigrants were from the British Isles and NW Europe By 1880 emigration from these countries had tapered off, and there was an influx of southern and eastern Europeans At this time the United States was in the midst of a great industrial expansion The desire for quantities of cheap, unskilled labor plus the efforts of transportation companies to promote the profitable importation of immigrants were factors in the continuance of the movement Immigration from Asia, first of Chinese and later of Japanese, began in the middle of the 19th cent These groups were also composed chiefly of laborers Immigrants were largely responsible for the rapid expansion of the country, and their high birthrate did much to swell the general American population growth Moreover, they provided a rich diversity of culture and talents The bulk of the later European arrivals settled in the northeastern cities, usually forming distinct ethnological neighborhoods where they tended to cling to native languages and customs Thus assimilation was difficult, and there was much social conflict, especially in the second generation Often exploited, immigrants were accused by organized labor of lowering wages and living standards Opposition was early manifested by such organizations as the KNOW-NOTHING MOVEMENT and, on the West Coast, in violent anti-Chinese riots The first restrictions against any particular group were made in 1882 by the Chinese Exclusion Act, which denied entrance to Chinese laborers In the same year restrictions against the entrance of diseased persons, paupers, and other undesirables were strengthened In 1902 the Chinese exclusion laws were further extended, and in 1907 a gentlemen's agreement, limiting the number of Japanese immigrant laborers, was made between the United States and Japan Despite strong opposition, a literacy test was imposed on all immigrants in 1917 In 1921 the quota system was established for European countries, limiting the number of immigrants received from a country in any one year to 3 per cent of the number of their natives residing in the United States in 1910, with a minimum quota of 100 The restrictions were made even more drastic in the act of 1924, which also provided for a "national origins" plan to be put into effect after 1927 This limited the entire number of European immigrants to 150,000 and based quotas for individual countries on the number of people of those origins living here in 1920 This differential favored the north Europeans, especially Britons, at the expense of those from S and E Europe. The act of 1924 also excluded all aliens not eligible for citizenship The provision, applied to all Asiatics, was aimed especially at the Japanese and aroused their indignation. The Chinese Exclusion Act was repealed by Congress in 1943, and a small quota set up. Most other countries have restrictive laws, although none outside of the British dominions are so strict See M. R. Davie, *World Immigration* (1936), William C. Smith, *Americans in the Making* (1939); M L. Hansen, *The Atlantic Migration, 1607–1860* (1940) and *The Immigrant in American History* (1941); National Committee on Immigration Policy, *Immigration and Population Policy* (1947), Clarence Peters, comp , *The Immigration Problem* (1948), E G Hartmann, *The Movement to Americanize the Immigrant* (1948)

immortality, attribute of deathlessness ascribed to the soul in many religions and philosophies Forthright belief in immortality of the body is rare Immortality of the soul is a cardinal tenet of Christianity and of Islam. It is also held generally in Judaism, although it is not an essentially Jewish idea The ancient Greeks and Romans believed in an afterlife, where the souls of men lived on, but only the gods were considered truly immortal. The ancient Celts believed firmly in immortality. In the East, ZOROASTRIANISM held immortality The religions arising in India (Hinduism, Buddhism, and Jainism) generally consider individual immortality undesirable and believe in REINCARNATION of men as a chain eventually leading to reunion with the infinite in the impersonality of Nirvana See SPIRITISM, RESURRECTION, HEAVEN, HELL See C W Eliot, *The Religion of the Future* (1909), J G Frazer, *Man, God, and Immortality* (rev ed , 1927), C H Moore, *Ancient Beliefs in the Immortality of the Soul* (1931), W E Hocking, *Thoughts of Life and Death* (1937)

immortelle: see EVERLASTING

immunity, resistance of an individual or of an animal to disease Surface tissues of the body (skin and mucous membranes with their secretions) offer external protection to invading organisms When there is a break in these protective coverings, e g , a cut or wound, certain bacteria such as the bacilli of diphtheria or of tetanus may penetrate the external defense and, lodging in a specific location, produce toxins which may cause disease or death Immunity may be natural, acquired, active, or passive The natural immunity of an individual or animal arises from an inherent ability to destroy invading organisms through the action of phagocytes (cells which devour microorganisms) and antibodies (chemical substances in the blood which neutralize the action of harmful cells) Immunity may be acquired by having survived a disease, through inoculation with specific antitoxins or toxin-antitoxins, or by vaccination Active immunity may be of long duration because of the activity of an individual's own tissues in producing antibodies Passive immunity is of shorter duration because the defense factors do not originate in the individual but have been added, as in the injection of antitoxin in diphtheria

Imna (ĭm'nu) [Heb ,=holding back], chief of the Asherites 1 Chron 7 35

Imnah (-nu) [Heb ,=luck] **1** The same as JIMNA **2** Father of KORE **2**

Imola (ē'mōla), city (pop 20,800), Emilia-Romagna, N central Italy, SE of Bologna, on the Aemilian Way A free commune in the 11th cent , it later was ruled by various tyrants until it passed to Pope Julius II early in the 16th cent It has a cathedral, a noted town hall, and several fine Renaissance palaces

impala or **pallah,** antelope (genus *Aepyceros*) of the bush country of E and S Africa. It stands about 3 ft high at the shoulder, and its coat is a rich reddish brown shading gradually to almost white on the underparts The horns, borne only by the male, are long and curved and shaped like a lyre

impatiens see TOUCH-ME-NOT

impeachment, formal accusation issued by a legislature against a public official charging him with crime or other serious misconduct In a looser sense the term sometimes is also applied to the trial by the legislature which may follow Impeachment developed in England as a means of trying officials suspected of dereliction in duty The English procedure was for the House of Commons to prosecute by presenting articles of impeachment to the House of Lords, which rendered judgment Any penalty, including death, might be inflicted, but the king had power to pardon The impeachment of Warren Hastings (1788–95) was among the last of the English cases In the United States impeachment of public officials is provided for in the Federal government and in most states In Federal matters the U S. Constitution gives the sole power of impeachment to the House of Representatives The only persons subject to Federal impeachment are officials of the United States, including the President and Vice President, but not including members of Congress Impeachments are tried by the Senate, with the concurrence of two thirds of the members present needed for conviction The sole penalties on conviction are removal from office and disqualification to hold other Federal office; however, the convicted is liable to a subsequent criminal trial and punishment for the same offense There have been 12 impeachments by the House of Representatives with four convictions Two of the best known cases, which did not result in conviction, were those of Supreme Court Justice Samuel CHASE and of President Andrew JOHNSON.

imperative: see MOOD.

imperfect: see TENSE

Imperial. 1 City (pop 1,493), SE Calif , 8 of the Salton Sea in the IMPERIAL VALLEY; founded 1902, inc 1904. It is the headquarters of the Imperial Irrigation District and the seat of a county fair **2** Village (pop. 1,195), co. seat of Chase co., S Nebr , in the Great Plains region; settled c 1885.

Imperial Conference, assembly of representatives of the self-governing members of the British Empire, held about every four years The meetings prior to 1906—in 1887, 1892 and 1902—were known as Colonial Conferences and concerned themselves chiefly with the problem of the distribution of the burdens of defense After 1907 the assemblies discussed mutual economic problems The decisions of the conference have no legal effect, but they have been of considerable influence and were given force by the Statute of Westminster (1931), which declared the parliaments of the several dominions on an equal footing with that of the United Kingdom A standing Imperial Economic Committee concerned itself with coordination of economic matters A formal meeting of the conference was held in 1937 for the coronation of George VI. During and after the war, unification of empire policy was undertaken by meetings of the premiers of the dominions In 1949 India and Pakistan were represented as new members of the Commonwealth of Nations The tendency in the conferences has been toward cooperation on an increasingly independent basis

imperialism, broadly, the extension of rule or influence by one people over another Empires have existed since the dawn of written history in Egypt and in Mesopotamia, where local rulers extended their realms by conquering other states and holding them when possible in a state of subjection or semi-subjection The first highly organized empire was that of Assyria, which was succeeded by the even more integrated Persian Empire Ancient imperialism reached its climax under the long-continued Roman Empire, which trailed out in the East until late in the Middle Ages as the Byzantine Empire and was there succeeded by the Ottoman Empire In the West imperialism all but disappeared, the Holy Roman Empire, despite the aspirations of its greatest rulers, tended toward being a confederation of princely states rather than an imposed imperial rule Imperialism was, therefore, reborn with the emergence of modern national states and the age of exploration and discovery It is to this modern type of empire building that the term *imperialism* is normally restricted Colonies were established not only in more or less sparsely inhabited places where there were few or no highly integrated native states (e g , North America and Africa) but also in lands where civilization and states were established (e g , India, Malaya, Indonesia, and the Inca lands of South America) In all cases the European hegemony was introduced largely by strict force of the firearms that the Europeans had developed The emigration of European settlers to people the Western Hemisphere and Africa can be called colonialism It was marked by the same attitude of assumed superiority of the newcomers toward the native populations that prevailed where the Europeans merely took over control without settlements (as in India and Indonesia) The Portuguese and the Dutch from the 15th to the 17th cent built such "trading" empires for the exploitation of the resources of lands already developed The Spanish were primarily interested in exploiting the mineral wealth of the lands they conquered though they also established colonies The British and the French were the prime makers of true colonial "settlement" empires, both also in Africa and the East had hegemony ("trading empires") and exploited conquered peoples They and other nations also undertook to establish hegemony for increasing the wealth of the nation itself according to the theories of MERCANTILISM Later, with the downfall of mercantile theories, the increase of manufactures in the Industrial Revolution stressed this aspect of imperialism, as the industrial nations scrambled both for markets and for raw materials. The eastward spread of Russia after the 16th cent and the westward spread of settlement in the United States were also imperialistic, reaching a strong expression in the American idea of manifest destiny. Yet the United States did not become an empire until the Spanish-American War In the late 19th cent there also emerged the imperial ambitions of Italy, Germany, and Japan Liberal democratic thought had, however, long been building up anti-imperialist sentiment. At the time of the American Revolution a number of the political philosophers of England were loud in denouncing imperialism as well as mercantilism. The doctrines of laissez faire were united in many of their proponents with opposition to imperial goals Free-trade doctrines were, however, developed in an era of increasing struggle for markets, which was in itself imperialistic and led to control over "market" nations. Basically, fundamental and thoroughgoing democracy is at odds

with any idea of the subjection of peoples, which was an inherent idea in old imperialism The most vociferous criticism came from the Marxists, who stressed the connection between imperialist aims and war. In Socialist and Communist parlance all modern warfare except revolution is imperialistic and imperialism (joined with nationalism) is a mainstay of capitalism Anti-imperialist thought ran strong in most of the world after the First World War, but fascism in Italy, Germany, and Japan fostered extreme imperialist aims. Those nations sought vigorously to build empires while the United States was returning independence to the Philippines and was discarding imperialistic "dollar diplomacy" in Latin America and while the bonds of the British Empire were being loosed and the Commonwealth of Nations was being formed The general stirrings of demands for independence among the peoples of Asia and parts of Africa were also making themselves felt. The end of the Second World War, therefore, saw the waning of empires, notably in the reconstitution of the French Empire, the new status for India and Indonesia, and revolt in Indo-China Ironically, the hegemony established by the USSR in the Communist countries after the war was criticized by anti-Communists as imperialistic For a survey of theories of imperialism, see E M Winslow, *The Pattern of Imperialism* (1938)

imperial preference. see COLONIAL PREFERENCE

Imperial Valley, low-lying area, SE Calif , in the midst of the old Colorado Desert Most of this region is below sea level Rainfall is scanty, and there are sudden, extreme changes in temperature, which range from 32°F to 115°F Irrigation from the Colorado river, undertaken c 1900, was hindered by several disastrous floods (see SALTON SEA) but was successful by 1907 About 1,000,000 acres have been irrigated, chiefly by the ALL-AMERICAN CANAL Among the main crops of the valley are melons, alfalfa, grapefruit, strawberries, grapes, lettuce, barley, green peas, asparagus, dates, and cotton Dairying is carried on The principal cities of the valley, settled since 1900, are Brawley, Calexico, Calipatria, El Centro, Holtville, Imperial, Niland, and Westmorland An earthquake in 1940 caused loss of life and great crop and property damage, but the Imperial Valley recovered rapidly

Imphal (Imp'hŭl'), town (pop 99,716), capital of the centrally administered state of Manipur, India Imphal is not truly urban, but consists mainly of village and farm land

import, commodities brought into a country, the opposite of EXPORT Imports may be for consumption in the importing country or for reexport When imports are less than exports, the difference is paid on the gold basis See also BALANCE OF TRADE

impotence (Im'pŭtuns) Inability to perform the sexual act may be caused by defective organs resulting from abnormal or incomplete development, by deficient internal secretions, or by disorders of the nervous system which diminish the libido Excess may result in impotence Impotence is a cause of STERILITY. Treatment is directed to removing the cause and also to improving general health and hygiene

impressionism, in painting, a late 19th-century French school It was characterized in general by the attempt to depict transitory visual impressions, often painted directly from nature, and by the use of broken color to achieve luminosity The impressionists excelled in representing sunlight and originated the vogue of plein-air painting The movement originated in the 1870s, lost many of its strict adherents in the 80s, and became popular in the 90s, when it had been abandoned by most of its exponents Monet, Sisley, and Pissarro were the most consistent impressionists Others associated with the movement were Renoir (who first introduced the rainbow palette), Degas, and, for brief periods, Manet and Cézanne Too entirely visual and limited in program to endure long in its pure form, impressionism exercised a profoundly liberating influence on art, which can be seen as much in the reaction against it as in its belated popularity. The term is used also in music for a late 19th-century French movement It was begun by Debussy in reaction to Wagnerian romanticism Its harmony is its most characteristic feature Chords are valued for their individual sonorities rather than for their relations to one another Dissonances are unprepared and unresolved, and vagueness of tonality is deliberately sought, in this and in other ways Impressionist compositions are often given poetic titles, but they are not program music, because nothing specific is depicted, sensory impressions are sought, but the associations and analyses they might provoke are avoided Ravel was to a certain extent an impressionist, but he had too strong a feeling for classical forms to adopt its practices completely. In fact, pure impressionism exists only in Debussy, although its influence is strongly evident in Paul Dukas, Albert Roussel, the Spaniards Albéniz and Falla, the Englishmen Delius, Cyril Scott, and Arnold Bax, and the Americans C. T Griffes, C. M. T. Loeffler, and J A. Carpenter. Although started as a reaction against romanticism, musical impressionism seems today the culmination of romanticism. See John Rewald, *The History of Impressionism* (1946).

impressment, enforcement of CONSCRIPTION It may be applied either to property or to persons in peace or war by virtue of a state's sovereign authority, except that constitutional limitations and legal regulations must be respected In most modern democracies impressment in the historic sense of a "press gang" actually seizing and carrying an individual into service has been abandoned In Great Britain it was abandoned in respect to the army c 1800, but it was maintained in the navy to the end of the Napoleonic Wars in 1815 In Great Britain and in most other countries before 1850 impressment was permitted as a way of ridding society of rogues, vagabonds, minor criminals, and other undesirables Persons of property, properly apprenticed youths, and other respectable citizens were exempted by law The system permitted gross abuses, including extortion and its use frequently as a means of private vengeance It filled the army and navy with an unreliable class ready for mutiny, desertion, or other disloyalty and made conditions so bad that voluntary enlistment practically ceased to exist Desertions from the British navy to American mercantile vessels in the late 18th and the early 19th cent were common because of the more attractive conditions in the prosperous American carrying trade These deserters gave the British an excuse for stopping American ships on the high seas to search for and take off deserters International law had not recognized the American contention that ships on the high seas were to be considered as territory of the state whose flag they carried and to be treated as inviolable The British did not stop at taking off deserters but took British subjects wherever found, whether naturalized Americans or not, because Great Britain did not until 1850 recognize the right of a citizen to expatriate himself Frequently sailors of American birth were taken because they could not at the moment prove their place of nativity These high-handed acts of Great Britain, culminating in the famous CHESAPEAKE affair, kept popular feeling against Great Britain at high pitch between 1790 and 1809 and were a cause of the WAR OF 1812 See J R Hutchinson, *The Press-Gang Afloat and Ashore* (1913), J F Zimmerman, *Impressment of American Seamen* (1925)

impulse, in mechanics see MOMENTUM

Imrah (Im'ŭ), Asherite 1 Chron 7 36

Imri (Im'ĭ) [Heb , =eloquent] **1** Judahite 1 Chron 9 4 Probably the same as AMARIAH **8 2** Father of a builder of the walls Neh 3 2

In, chemical symbol of the element INDIUM

Inagua (ēnä'gwa), island group of the BAHAMA ISLANDS It includes Great Inagua, Little Inagua, and some islets

Inari (ē'narē), Swed *Enare* (ä'naru), lake, area 386 sq mi , N Finland, in Lapland It empties into the Arctic through the Pasvik river

inbreeding, mating of closely related living things Inbreeding is used chiefly as a means of insuring the preservation of certain desirable characters among the offspring of purebred animals It is usually not desirable to continue inbreeding through too many generations since it reduces the chances of diversity of characters in the offspring and sometimes tends to reduce vigor and reproductive ability Occasional outbreeding (or crosses between unrelated strains) introduces a great variety of possible combinations of characters, and thus there is greater diversity of genetic characters in the offspring from which selection for other crosses can be made Among humans inbreeding is discouraged in many societies because if previous generations of the family have exhibited an undesirable inheritable trait the possibilities of the appearance of such a trait in the offspring of closely related individuals is greater than it would be if they were unrelated

Inca (Ing'ku), pre-Columbian Indian empire (c 650,000 sq mi , pop c 6,000,000), W South America Centered at CUZCO, Peru, the empire dominated at the time of the Spanish Conquest the entire Andean area from Quito, Ecuador, S to the Río Maule, Chile The name Inca specifically refers to its emperor and is used loosely to mean his people Since the people combined much AYMARA mythology with their own, their origin myth is obscure The most common belief is that the legendary founder, MANCO CAPAC (who seems to have been a historic figure), brought his people from mountain caves to the Cuzco Valley During the early Inca period (c 1200–c 1438) the tribe gradually established its hegemony over other peoples of the valley and under the emperor named Viracocha (the name also of the supreme creator in Inca cosmology) allied themselves with the QUECHUA Under Pachacuti (c 1438–1471) and his son Topa Inca or Tupac Yupanqui (1471–93) the empire reached great power The present Ecuador (the kingdom of Quito) was subjugated by HUAYNA CAPAC (1493–1527) to give the empire its greatest extent At his death it was divided between his sons, HUÁSCAR and ATAHUALPA, and a long civil war ensued from which Atahualpa emerged triumphant just as Francisco PIZARRO landed on the shores of Peru and the Spanish Conquest began. Through a genius for organization the Inca had been able to weld many tribes and powerful kingdoms, speaking different languages and dialects, such as the CHIMU, into a single, closely knit state At the top was the emperor, an absolute monarch ruling by divine right (descent from the sun) Merciless toward its enemies, requiring an obedience close to slavery, the imperial government was responsible for the welfare of its subjects Everything was owned by the state except houses and movable household goods, the government collected taxes in labor—cultivation, herding, hunting, mining, public works, army service, and personal service to the royal family (known as mita) From well-stocked storehouses were drawn goods to support priests, government servants, special craftsmen, the aged and the sick, and widows The royal family formed an educated, governing upper nobility which at the time of the Spanish Conquest numbered c 500 From among the conquered anyone with administrative ability was sought out, and in time these constituted a hereditary nobility To further increase government control over an empire grown unwieldy, all who spoke Quechua became an "Inca class" by privilege and were farmed out as colonists Lesser administrative officials, formerly independent rulers, and their descendants were the minor nobility or *curaca* class, also supported by the government For purposes of administration the empire, the Tawantin-soyo [land of the four quarters], was divided into four parts, the lines of which met at Cuzco, the quarters were divided into provinces usually on the basis of former independent divisions These in turn were split customarily into an upper and a lower moiety, the moieties were subdivided into ayllus Much as it exists today as the basic unit of communal Indian society, so the ancient ayllu was the political and social foundation of Inca government When a territory was conquered, surveys, consisting of relief models of topographical and population features, and a census of the population were made With this report, recorded on the QUIPU, of material and human resources in each province, populations were reshuffled as needed Thus transplanted, dominated by Quechua colonists, the subject peoples had less chance of revolt, and the separate languages and cultures were molded to the Inca pattern Religion, controlled by a hierarchy like the government hierarchy, emphasized ritual and organization Heading the Inca gods was Viracocha [Hispanicization of the Inca word for lord] His servants were the sun, the god of the weather or thunder, the moon, the stars, the earth, the sea, and the *huacas* (local gods more or less animistic) Divination, sacrifices (sometimes human), celebrations and ceremonies, ritual, feasts, and fasts were all part of the religion under control of the priests Although the Andean area offers a diversity of plant domestication, the handicaps of terrain and climate presented severe obstacles To overcome it Inca engineers demonstrated considerable skill in terracing, drainage, irrigation, and the use of fertilizer They lacked draft animals, but domesticated animals (the llama, the alpaca, the dog, the guinea pig, and the duck) were important to daily living, from the wild vicuña fine wool was sheared Without paper or a system of writing, the architects and master masons who designed and supervised the construction of public buildings and engineering works in such cities as MACHU PICCHU and the fortress of SACSAHUAMAN built clay models, employing in actual construction sliding scales, plumb bobs, and bronze and stone tools Without wheeled vehicles for transport, the huge polygonal blocks for fortress, palace, temple, and storehouse were emplaced by ramp and rollers and were fitted with extraordinary precision Wall corners were always carefully bonded Adobe bricks and plaster were common, especially along the coastal desert The column and corbeled vault, though known, occurred infrequently and architectural sculpture was used only occasionally, buildings were usually of one story One of the most remarkable evidences of Inca engineering skill was an elaborate network of roads, which in many places still survive Streams were crossed by log or stone bridges, placid rivers by balsa ferry or pontoon bridge, and chasms by a breeches-buoy contrivance or suspension bridges as much as 200 ft long The suspension bridge was customarily made of five 16-inch braided twig cables, three for the floor and two for guard rails, slung between two pairs of stone towers Road sections were maintained by the nearest village, as were the shelters and military storehouses, a day's travel apart, a village also supplied messengers for its sector These men, serving 15-day shifts, relayed messages about every mile Thus, 150 mi could be traveled daily, a feat which later took the Spanish colonial post 12 to 13 days In the manufacture of cotton and woolen textiles, which sometimes had small soft feathers or fine threads of metal woven into them, the Incas excelled, similarly in ceramics they achieved a fine-grained, highly polished, metallic hardness which stressed functional and utilitarian design Although the mines were a government monopoly, exploitation of the laborer was avoided Mining

was permitted only in the four warmest months, and then only from noon to sunset, because of the extremely high altitudes Of the metals, copper and bronze were for public use, gold, silver, and tin were reserved for the Inca, the temples, and the upper nobility Demonstrating an advanced knowledge of metallurgy, the Inca craftsmen employed the techniques of smelting, alloying, casting, hammering, repoussé, incrustation, inlay, soldering, riveting, and cloisonné The metalwork was some of the finest the world has known So flourished the empire of the Incas when Pizarro faced Atahualpa By stratagem the conquistador lured the emperor into his camp, captured, and then executed him Shortly thereafter (1533) Pizarro entered Cusco The fundamental weakness of the empire became apparent It fell to the Spanish Though heroic resistance was still carried on in many sections and the rebellion (1536–37) of Manco Capac almost toppled Spanish control, the conquest was assured Twice thereafter serious rebellions, notably that of TUPAC AMARU, flared up, but each time they were suppressed For an enlightened paternalistic despotism the Spaniards substituted a relative freedom of the individual, but for a predictable despotism they instituted the tyranny of unlimited demands and an unpredictable economy—exhaustive labor in the mines, on the encomiendas, and in the *obrajes* [textile mills] Whereas the chewing of coca leaves, which contain a small amount of cocaine, was forbidden to all but the Inca nobility, it became and still is, because of its fatigue-lessening properties, a constant and demoralizing staple for the working Indian Intoxication from CHICHA has little of its former religious significance The Indians were reduced to a subordinate status, and only in recent years have efforts been made to make the Peruvian Indians (about 50 percent of the population) an integral part of the national life See chapters on the Incas in the *Handbook of South American Indians*, Vol II (1947) See also Garcilaso de la Vega, *The Royal Commentaries of Peru*, W H Prescott, *The History of the Conquest of Peru* (1855), C R Markham, *The Incas of Peru* (1910), P A Means, *Ancient Civilizations of the Andes* (1931) and *The Fall of the Inca Empire* (1932)

incantation, set spoken formula for the purpose of working MAGIC An incantation is normally an invocation to beneficent supernatural spirits or a CHARM to ward off the operations of evil spirits In black magic it may be the means of summoning or materializing the powers of darkness An incantation may or may not be accompanied by a dramatic rite In the Western European tradition many incantations survive in folklore

incarnation, the assumption of human flesh by a god, an idea common in religion It is found in various phases in Greek religion, in which the human body of a god was a disguise or a temporary means of communication The most widely accepted belief in incarnation is in that of JESUS Christ, held usually by Christians to be God in the flesh, partaking wholly both of divinity and of humanity, except in so far as human beings have a propensity to sin This is the accepted understanding of the biblical "The Word was made flesh" John 1 14

incense, perfume diffused by the burning of aromatic gums or spices, in a censer Incense was used in ancient Egypt, Greece, and Rome and is mentioned in the Old and the New Testaments It was introduced into public worship in the Roman Catholic Church in the 6th cent

incest (ĭn'sĕst), sexual relations between persons to whom marriage is prohibited by custom or law because of their blood relationship Ideas of relationship, however, vary widely from group to group, hence the definition of incest also varies Customs prescribing whom one may and may not marry are found in primitive as well as advanced human groups, and these apparently antedeed knowledge of the good or ill effects of the intermarriage of close kin Even modern prohibitions of incest are based only in part on the observed fact that inherited defects, like inherited excellences, tend to be transmitted, and in intensified form, when both parents possess the same genes Breeders of animals avail themselves of this principle, habitually mating closely related animals when they possess the qualities desired, a practice known as inbreeding Among primitive as among advanced human groups the marriage of brothers and sisters is universally taboo In groups where the clan system prevails, marriage within the clan is incestuous, hence clan exogamy (see MARRIAGE), which, however, often results in cousin marriage Only in royal families, as in Egypt and among the Inca, have incestuous marriages (including marriage between brothers and sisters) been customary—perhaps to conserve royal prerogatives and property Christian countries differ as to prohibited degree of relationship, until 1907 the cohabitation of a man with his deceased wife's sister was held to be incestuous in English law, that of a woman with her deceased husband's brother is still so regarded In the United States incestuous marriages are void, cousin marriage is forbidden in only a few states.

Inchbald, Elizabeth (ĭnch'bôld), 1753–1821, English actress and author, whose maiden name was Sampson or Simpson She turned from acting to writing for the stage with a comedy, *The Mogul Tree* (1784) Her best play, *Such Things Are*, appeared in 1787, but she attained greater fame with her novels, *A Simple Story* (1791) and *Nature and Art* (1796) She edited two collections of plays, *The British Theatre* (1806–9) and *The Modern Theatre* (1809)

Inchcolm (ĭnch'kŭm) [Irish,=island of Columba], small island, Fifeshire, Scotland, in the Firth of Forth, NW of Edinburgh The magnificent ruins of the Abbey of St Columba, founded in 1123 by Alexander I, are here, and there is an older oratory near the church In Shakspere's *Macbeth* the isle is called St Colme's Inch

Inchkeith (ĭnch'kēth), island, Fifeshire, Scotland, in the Firth or Forth, NNE of Edinburgh It is fortified, has a lighthouse, and was the site of a monastery A D c 700.

incinerator (ĭnsĭn'ərātŭr), furnace for the disposal of combustible refuse by burning It consists essentially of a brick-lined combustion chamber, usually fitted with grates, either stationary or mechanically operated, charging holes for feeding the refuse into the chamber, openings for stoking and for removing clinkers and ashes, ducts, valves, and often forced-draft blowers, to supply air for combustion, and a flue conducted through a tall chimney Most municipal, industrial, and institutional plants utilize several incinerator units set up back to back or side by side in batteries, each employing a separate flue The complete combustion required to avoid odors and smoke is achieved by maintaining high temperatures, by conducting volatile gases through a long, hot combustion chamber, and by providing baffles and sharp turns to assure proper mixing of the gases The gases may be used to supply heat for auxiliary steam-boiler plants Rubbish is commonly burned at the same time as wet garbage in order to utilize its high calorific value, however, oil burners or other equipment are often used to produce the amount of heat necessary to complete the burning Some plants utilize mechanical apparatus for conveying, sorting, and charging refuse and for removing clinkers Incinerators for homes and small apartment houses commonly consist of a combustion chamber in the cellar, connected with a vertical flue, charging doors are usually placed at each floor and the refuse falls either into a drying chamber or directly into the fire pot

inclined plane, a simple MACHINE having as its basic part a slanted or inclined plane up which the load or resistance is moved Its origin is very ancient, early man applied the principle for raising heavy objects from one level to another with much less effort than is needed to lift them upward perpendicularly Modern applications are seen when barrels are rolled up planks into trucks and when boards are laid over steps as an incline for workmen's wheelbarrows The mechanical advantage depends upon the ratio between the length of the plane and its height, which is the perpendicular distance between its upper and its lower end The load or resistance is lifted the height of the plane, whereas the effort acts parallel to the plane and along its length The WORK put into the machine is the product of the effort and the length of the plane, the work output of the machine is the product of the load and the height of the plane If, for example, an inclined plane is 10 ft long and its upper end is 2 ft higher than its lower end, its mechanical advantage is 5, and, if friction is neglected, a load of 300 lb can be raised the 2 ft by an effort of one fifth of the load, or 60 lb The principle of the inclined plane is applied in many common tools and devices A knife, for example, acts as an inclined plane when its cutting edge enters some substance obliquely The SCREW and the WEDGE are applications of the inclined plane, as are the CHISEL, carpenter's PLANE, and AX

inclosure or **enclosure,** in agriculture, the practice of setting apart (with fences, ditches, hedges, or other barriers) land formerly subject to common rights Such land includes fields cultivated by the open-field or strip system, wasteland, and the COMMON Inclosure followed the shift from the MANORIAL SYSTEM to free cultivation and was accomplished at different times and by different methods in many countries of Europe The process was accelerated in France after the Revolution and in Russia following the emancipation of serfs and was achieved in these countries mainly through individual agreements In England the practice, dating from the 12th cent, received legal sanction through statutes (in 1235 and 1285) permitting landlords to inclose wasteland not needed by tenants Its great development, however, came with the expansion of the Flemish wool trade after the 14th cent. The advantages resulting from intensive cultivation of large, fenced fields and from converting land to fenced sheep pastures moved landlords to make agreements with tenants or to expel them, illegally or for the slightest default, in order to inclose large areas Hardship for the tenants ensued. An increase in vagrancy and social unrest resulted in statutes designed to arrest inclosure by limiting the number of sheep per owner and by prohibiting further inclosure. However, the process continued virtually unchecked and after 1688 was usually accomplished through petitions to Parliament for local Inclosure Acts. The process reached its peak in the late 17th cent Inclosure stimulated a shift of destitute population to urban centers It also encouraged to some degree the efficient tillage and the reclamation of wasteland needed for England to achieve agricultural self-sufficiency in the face of increased population during the Industrial Revolution and of the Napoleonic Wars By the mid-19th cent the inclosure process was complete, financial interests, having nothing further to gain, no longer opposed limitation of the practice, and laws were passed against it See E C K Gonner, *Common Land and Inclosure* (1912), W H R Curtler, *The Enclosure and Redistribution of Our Land* (1920)

income tax. Although imposed occasionally in medieval Italian cities, the tax on personal income is essentially a modern form of taxation The first important income tax was levied in England during 1798–1816 as a war revenue measure After several other temporary income taxes, England adopted a permanent one in 1874 The first income tax in the United States was imposed in 1862, in the Civil War, but was discontinued in 1872 Various European countries, as well as Australia, New Zealand, and Japan, adopted regular income taxes during the latter half of the 19th cent The U S income tax law of 1894 was declared unconstitutional on the ground that it was a direct tax not apportioned according to representative population Finally, the adoption of the Sixteenth Amendment in 1913 permitted the income tax to become a lawful element in the Federal tax structure It has been a major source of revenue for the national government, yielding as much as 59 percent of all its receipts in some years Income taxes had been levied sporadically by various states since 1789, since 1919 most states have adopted the tax. In general, personal incomes below a certain amount are exempted from the tax, the amount varying for single and for married persons with or without dependents The tax is applied to the net income above these exemptions, and the rate becomes progressively higher for larger incomes In 1943 the United States adopted a method of collecting a large proportion of the Federal income tax by payroll deductions Corporations, too, are taxed on their incomes (see CORPORATION TAX) This tax is one of the few that generally cannot be shifted from the taxpayer to some other person, e g , a real-estate tax shifted by the landlord to the tenant See E R A Seligman, *The Income Tax* (2d ed , 1914)

incorporation see CORPORATION

incubator (ĭn'kyəbā"tur, ĭng'–), artificially heated apparatus for hatching eggs Incubator houses with double walls of mud, a fireroom, and several compartments each holding about 6,000 hen's eggs were developed in ancient times, the Chinese have long used baskets with a capacity of about 5,000 eggs which are alternated with layers of heated wheat Small incubators were developed in the United States in the 1840s but were not widely used until c 1885 A mammoth incubator was invented c 1895, however, large-scale incubators were rarely used until c 1910 These have been improved to meet the needs of commercial hatcheries in the baby-chick business, automatic controls for heat, air, and moisture and devices for turning eggs are usually incorporated Most models today are heated by electricity, many have hatching compartments, and some hold over a million eggs Eggs are selected for size, weight, and shell texture and often are candled after a week in the incubator in order to remove the unfertilized eggs The small-scale incubator has been adapted for the early care of premature babies and for the culture of microorganisms See R C Hartman and G S Vickers, *Hatchery Management* (1932)

incubus (ĭng'kyəbŭs), male demon supposed to haunt the sleep of mortal women and to be responsible for the birth of demons, WITCHES, and deformed children If the demon could not be exorcised his victim was likely to be burned at the stake The belief was especially prevalent in the Middle Ages The female counterpart of the incubus was the succubus

incunabula (ĭn"kyəbā'byələ), plural of **incunabulum** [Late Latin,=cradle (books), i e , books of the cradle days of printing], books printed in the 15th cent The known incunabula represent about 35,000 editions The books include products of such famous printers as Gutenberg, Jenson, Caxton, and Aldus Manutius and give evidence as to the development of typography in its formative period. Notable European collections of incunabula are in Paris, London (British Museum), Oxford (Bodleian Library), Vienna, Rome, Milan, Brussels, and The Hague Notable American collections are in Washington (Library of Congress), New York (Pierpont Morgan Library and others), Providence (John Carter Brown Library and Annmary Brown Memorial), and San Marino, Calif. (Henry E Huntington Library). For an introduc-

tion to incunabula and a guide to further study, see Margaret B Stillwell, *Incunabula and Americana 1450–1800* (1931)

Independence, 1 City (pop 4,342), co seat of Buchanan co, NE Iowa, on the Wapsipinicon river and E of Waterloo; founded 1847, inc 1864 A state hospital for the insane (1873) is here **2** City (pop 11,565), co seat of Montgomery co, SE Kansas, on the Verdigris near the Okla line, founded 1869, inc 1870 It is a refining center in an important oil-producing area It has a cement plant Near by is the site of Rebel Creek battle, where a detachment of Confederate soldiers was wiped out by Indians **3** Town (pop 1,498), SE La, ENE of Baton Rouge, in a strawberry and truck-farm area, inc 1903 **4** City (pop 16,066), co seat of Jackson co, W Mo, near Kansas City, settled 1825, inc 1849 Its manufactures include farm machinery and stoves and furnaces Especially in the 1830s and 1840s it was the starting point for expeditions over the SANTA FE TRAIL, the OREGON TRAIL, and the California Trail In 1831 a group of Mormons settled here The city is the headquarters of the Reorganized Church of Jesus Christ of Latter-Day Saints Independence is the home of President Truman **5** Village (pop 1,815), NE Ohio, near Cleveland **6** City (pop 1,372), NW Oregon, on the Willamette and SW of Salem, inc 1874 It is a hop-raising center **7** Village (pop 1,036), W Wis, on the Trempealeau and S of Eau Claire, settled 1856, inc 1876

Independence, American War of. see AMERICAN REVOLUTION

Independence, Declaration of see DECLARATION OF INDEPENDENCE

Independence Day see FOURTH OF JULY

Independence Hall, building in Philadelphia on Independence Square, housing the Liberty Bell and a small museum of historical and colonial objects It was the scene of the proclamation of the Declaration of Independence, July 4, 1776, and was the meeting place of the Continental Congress and the Constitutional Convention It is preserved as a national memorial

Independent Artists, Society of, New York city, organized in 1917 An annual exhibition is held, without jury or prizes, in which each artist is an independent exhibitor, the pictures being hung in alphabetic order John Sloan became its first president

Independents, in religion, a name given to those bodies of Christians who claim freedom from ecclesiastical and civil authority for their individual churches, holding that each congregation should have control of its own affairs In a historic sense, it is ordinarily applied to the churches in Great Britain now known as Congregational This type of congregation was first formed in the reign of Elizabeth, but the members were termed Brownists (see BROWNE, ROBERT) or SEPARATISTS before the name Independents came into use in the 17th cent There was little inclination toward combination or united action among the separate Independent congregations before the 19th cent See CONGREGATIONALISM

Independent Treasury System. The victory of President Andrew JACKSON in the struggle concerning the rechartering of the BANK OF THE UNITED STATES led to the transfer of the government funds from the bank to state banks (the "pet banks") The new arrangement, however, was not satisfactory, and its evils became quite apparent in the Panic of 1837, at least partially brought on by the Specie Circular and the transfer of Federal surplus to the states President Van Buren proposed that an independent treasury be set up which would be isolated from all banks The proposal, which grew largely out of a distrust of banks and bankers, was not a new one It met considerable opposition and failed to pass the House of Representatives in 1837 and again in the sessions of 1837–38 and 1838–39 In 1840 it was passed and finally approved by the President The first trial of the Independent Treasury did not long endure, for the Whigs, victorious in the national election, repealed the law establishing the system The intention of the Whigs was to establish a new central bank, but the objections of President John TYLER on constitutional grounds prevented the creation of another Bank of the United States The Democrats won the presidential election of 1844, and measures were inaugurated to restore the Independent Treasury The act of Aug 1846, ordered that the public revenues be retained in the Treasury building and in subtreasuries (see SUBTREASURY) in various cities The Treasury was to pay out its own funds and be completely independent of the banking and financial system of the nation Agitation for a central bank continued, and after a period of practically real independence, the Treasury was drawn into the regular channels of finance and itself took on more and more the aspect of a central bank. Actually the flow of specie (specie or government notes were the only accepted forms of payment to the government) into and out of the Treasury did not correspond with the normal movement of the money market, and the situation tended to create periods of stress There was a tendency for specie to accumulate in the Treasury to the detriment of business. It was also to the interest of the Treasury to stabilize unsteady banking conditions All went fairly well with the Treasury until 1861, when the vast expenditures brought on by the Civil War put a great strain on the Treasury The government calls on the banks to aid in financing helped to bring on the suspension of specie payments, and the Treasury itself was forced to suspend The proof of interdependence of Treasury and banks helped to bring on the acts of 1863 and 1864 that created the NATIONAL BANK Thus, the system now had definite regulation of the banks that acted as intermediaries The Treasury, however, was restored to its independence, and it was only gradually in the succeeding years that the Treasury was more and more enmeshed in the banking of the United States Its relative independence varied with the administrations, but the old theory of absolute independence was in practice abandoned by 1898 Secretary of the Treasury Shaw made many innovations and practically made of the Treasury a central bank The Panic of 1907 showed some of the weaknesses of the system and drove the Treasury into greater independence for a time But the Federal Reserve Act of 1913 may be taken as a point marking the true end of the Independent Treasury The act of 1920 merely reiterated the abolition of the old independence The relative merits of the central bank system, which prevails in most of the countries of Europe, and of the present Treasury system of the United States are still debated with much fervor See D R Dewey, *Financial History of the United States,* D W Dodwell, *Treasuries and Central Banks* (1934)

indeterminate sentence see PAROLE

Index, in the Roman Catholic Church, list of publications forbidden to be read, called *Index librorum prohibitorum* [list of forbidden books] This censorship is exercised by the Holy See Catholics are forbidden, as a natural part of ethics, to read anything they know may endanger their faith or moral life, the Index is a partial guide to such literature Since it is made up only from decisions referred for judgment on specific works, there is no consistency of inclusion, the failure of a book to appear in it implies nothing Books may be removed from the Index, and it has been recast in the 20th cent For good reason, as for literary study, Catholics may receive permission to read a prohibited book

index, of a book or periodical, a list, nearly always alphabetical, of the topics treated In a book this list is usually at the back, the table of contents being in the front The index seeks to direct the reader to every subject and every proper name about which any information is given in the book This subject, with the number of the page on which the information is to be found, is called the entry In an index to a periodical the entries are less specific, referring usually to an article as a whole, rather than to every subject touched upon in each article Indexing requires experience and skill, since it is necessary not only to grasp the meaning of the author, but to phrase it clearly and in such a way as to place it alphabetically where the reader is likely to look first Books written to give information are of little value unless properly indexed Indexes to books were made long before the invention of printing, in the 16th cent the term *index* began to be commonly applied to such a list, until the 17th cent the index was rarely alphabetical Indexes to periodicals are nearly as old as this form of literature In 1848 in the United States a general index to the most widely circulated periodicals of the time was issued by William Frederick POOLE *Poole's Index,* later compiled cooperatively, continued until 1907, when it was superseded by the *Readers' Guide to Periodical Literature* There are special indexes in various fields of knowledge, e g, of law, medicine, art, education, engineering, industrial arts, agriculture Newspaper indexes include that to the London *Times* (from 1906) and to the New York *Times* (from 1913) In England the *Subject-Index to Periodicals* has been issued since 1915 The CATALOGUE of the books in a library is sometimes known as an index Business offices often have card indexes to their correspondence files For a history of the subject, see Henry Wheatley, *How to Make an Index* (1902) See also M T Wheeler, *Indexing* (New York State Library, Bul 50), H A Friedman, *Newspaper Indexing* (1942)

index, cephalic see CEPHALIC INDEX

index number, a figure showing a change in price or quantity in ratio to a number taken as a norm, or base, often expressed in percentage For example, if the standard price of apples is taken as $1 a bushel, $1 20 a bushel would be expressed by an index number of 120, or 120 percent Index numbers are used, for example, in comparisons of the general price level, business activity, employment, and cost of living The index of wages divided by the index of cost of living for wage earners is the index of wage purchasing power, or real wages See Irving Fisher, *The Making of Index Numbers* (3d ed., 1927); A J. H. Morrell, *Introduction to Index Numbers* (1948); M J Ulmer, *Economic Theory of Cost of Living Index Numbers* (1949)

India, subcontinent (1,581,410 sq mi, pop 388,997,995), S central Asia, comprising the dominion of Pakistan and the Union of India This article is a brief account of the geography, economy, and history of India For other aspects, see HINDU MUSIC, INDIAN ART AND ARCHITECTURE, INDIAN LITERATURE, MOSLEM ART AND ARCHITECTURE, PALI LITERATURE, PRAKRIT LITERATURE, SANSKRIT LITERATURE About half the area of India is a peninsula with a coast c.3,500 mi long, which fronts on the Arabian Sea in the west and on the Bay of Bengal in the east. The Indian subcontinent is elsewhere bounded on the west by Iran, Afghanistan, the USSR, and China, on the north by Tibet, Nepal, and China, and on the east by Burma It originated as a land mass raised out of the sea. The area is appropriately designated a subcontinent since it is largely shut off from the rest of Asia by the lofty mountain wall of the Himalayas Stretching in a broad band S of the Himalayas are the valleys and plains of the Indus and Ganges rivers, which have much of India's arable land Further south lies the low plateau, flanked on either side by the Eastern Ghats and the Western Ghats (see GHATS), this plateau occupies most of peninsular India Although the northern half of India is in the temperate zone, the temperature is almost uniformly tropical except, of course, where affected by high altitudes India's rainfall, which depends upon the monsoon, is variable, it is heavy in Bengal and along the southern coasts, moderate in the inland peninsular regions, and scanty in the arid northwest (including the Indian Desert), especially in Sind, Rajputana, and Punjab Probably the most extensive irrigation system in the world uses the waters of the Ganges, the Indus, the Brahmaputra, and other mighty rivers to supplement the rainfall Agriculture supports about 80 percent of the people Rice is grown wherever the land is level and water is plentiful, other grains are millet, wheat, and barley Cotton and jute are the principal non-food crops If agriculture were modernized, the needs of the dense population might be met, but backward practices, such as the farming of narrow strips of land instead of large fields, make it impossible for India to accumulate a food surplus and constantly threaten famine India has perhaps more cattle per capita than any country in the world, but inferior stock-raising techniques and Hindu religious scruples opposed to the eating of beef detract greatly from their economic value Goats, sheep, and camels are raised by nomadic or seminomadic peoples in the dry grazing areas India lacks most minerals, except coal, iron, manganese, and mica, these are largely concentrated in the northeast The small stock of precious metals and gems belies the traditional Western picture of a land of fabulous wealth The handicrafts, especially in delicate fabrics, for which India was famed (many of the names are derived from Indian places) have been almost displaced by manufactures, mostly imported, though there is a growing textile industry in India Large-scale industry, which employs only about one percent of the population, is concentrated in a few cities, Jamshedpur manufactures iron and steel, Bombay cotton textiles, and Calcutta jute products, including burlap and rope Transportation facilities are insufficient for a modern economy, but if the c 40,000 mi of railroads were converted to a uniform gauge and a roadnet were constructed, the deficiency might be overcome India's external communications depend upon a few great ports on the relatively unindented coast, notably Bombay and Karachi in the east and Madras and Calcutta in the west Raw materials and textiles are exported in exchange for finished goods and machinery, but the imports are too limited to overcome India's desperate poverty or to change its rural character Nearly 85 percent of the people live in villages of less than 5,000 population, where the ancient social order, which is disappearing in the cities, still persists There the family is patriarchal, frequently several generations live beneath one roof, and farmers and artisans make up virtually self-sustaining communities The caste system, which to some extent equates economic and social status, continues in force despite official discountenance In religious observances—usually Hindu, Sikh, or Moslem—the villagers find their main relief from a poverty-stricken life of toil It is in the holy cities, notably Puri, Allahabad, and Benares, that the greatest efflorescence of religious life is found India's c 25,000,000 aborigines who practice various types of ANIMISM, are outside the main religious traditions Christianity with c 6,000,000 adherents, mostly among the untouchables (see CASTE) and persons of mixed British and Indian blood (Anglo-Indians) is rarely found outside the large cities and towns India's diversity in religion, though powerful in effect, is less marked than that in language Bengali, Bihari, E and W Hindi, Panjabi, Tamil, Telegu, Marathi, and Hindustani and Urdu are the most widely spoken of some 200 languages The variety compels Pakistan and the Union of India to retain English as an official language and as the

usual medium of instruction in colleges and universities. The spread of higher education has created a larger professional class than India's economy can absorb, but there is so little primary instruction that only some 12 percent of the people are literate. The Union of India—officially also known by the ancient name Bharat—is a sovereign republic (1,246,880 sq mi, 1948 estimated pop 337,110,000) of the British Commonwealth of Nations. New Delhi is the capital. It occupies most of the Indian subcontinent, including all except a small section of the Indian peninsula. The Union is bounded on the west by West Pakistan, on the north by the USSR, China, Tibet, and Nepal, and on the east by Burma. East Pakistan is an enclave in the northeast section of the Union, within the territory of the Union are also the Portuguese possessions of Goa, Diu, and Daman. Many of the internal political boundaries were drastically altered from 1947 to 1949 when most of the states ruled by native princes either amalgamated into unions or joined existing provinces. The constitution which went into force in 1950 provides that regardless of their former nature all units of the Union are to be termed states. Those states which correspond more or less with former provinces directly under British rule are Ajmer, Assam, Bihar, Bombay, Coorg, Delhi, Kutch, Madhya Pradesh (formerly called Central Provs and Berar), Madras, Orissa, Punjab, United Provs (also called Uttar Pradesh), West Bengal, and the Andaman and Nicobar Islands. Bhopal, Bilaspur, Cooch-Behar, Hyderabad, Manipur, Mysore, and Tripura are former native states which have kept their identity. The states formed by the merger of former princely states are Himachal Pradesh, Madhya Bharat, Patiala and East Punjab States Union, Rajasthan, Saurashtra, Travancore-Cochin, and Vindhya Pradesh. Kashmir, at the beginning of 1950 part of India, may later be joined to Pakistan. Sikkim and Bhutan are semi-independent countries under the protection of the Union. The constitution establishes a federal republic. A president, chosen by an electoral college, heads the government. There is a bicameral Parliament, the House of the People is elected by all citizens over 21 years of age, while the Council of State is chosen by the state governments. The Parliament is directed to enact legislation providing for compulsory education, equitable distribution of wealth, and social security. Freedom of religion and expression are guaranteed, and untouchability is prohibited.

From Mohenjo-Daro to the Fall of the Mogul Empire. There are remains of an extremely ancient paleolithic culture in SW India. There were, however, probably no established societies before the Indus valley civilization (fl 3d millenium B C), which is best represented by the ruins of MOHENJO-DARO. The language of this city-dwelling people has not been deciphered, and while their precise origin is uncertain, they, like the founders of other civilizations in India, were not indigenous, but were the earliest known of a long succession of immigrants. Next came the Aryans, who first entered India in the 2d millenium B C through the mountain passes of the northwest, probably from S central Asia. Their literary remains comprise the VEDAS, collections of Sanskrit hymns and religious injunctions. Though from them the gradual advance of the Aryans across N India cannot be traced, the Vedas do provide a picture of the society. In the small tribes, ruled by a king with the assistance of a council, men and women enjoyed equal status. Caste, as a device for segregating the different functions of society—worship, warfare, crafts, and agriculture—and as a means of repressing the conquered aboriginal peoples, was evolving, but caste rank was not yet inherited. A pantheon of nature deities was early worshiped, but c 1000 B C Brahmanism, a formalistic cult, supervened. It made society rather rigid, and the longing for a nonritualistic religion with the emphasis on personal salvation was partly met by JAINISM and BUDDHISM (established 6th/cent B.C.) HINDUISM, a later development of Brahmanism, was at first the religion of the early MAURYA empire (325–184 B C), founded by SANDRACOTTUS (Chandragupta) after Alexander the Great's short-lived conquest of NW India (326 B C), but Sandracottus' grandson ASOKA (ruled c 255–c 237 B.C.), who for the first time brought nearly all India under one sway, established Buddhism as the state religion. During the 500 years of disorder and invasions which followed the collapse of the Maurya state a synthesis of Buddhist and Hindu elements into approximately the modern form of Hinduism was accomplished and Indian Buddhism almost lost its identity. Caste became extremely rigid, and women, subject to infant betrothal and forbidden to remarry after widowhood, endured a very low status. At this time S India enjoyed greater prosperity than the north despite almost incessant warfare, among other Tamil-speaking kingdoms of the south which enjoyed an overseas trade with the Roman Empire was the CHOLA. The Gupta dynasty (A.D. 320?–544?) of the north attempted to duplicate Asoka's feat of uniting nearly all India, but, unlike him, it could not penetrate below the Vindhia mts., the traditional dividing line between N and S India. During the GUPTA dynasty and the later reign of HARSHA (606–647) Hindu culture enjoyed its golden age. The respite of N India from violence was broken by the emergence of the RAJPUTS, who organized numerous warring kingdoms and whose disunity was a major factor in the Moslem conquest of India. Arabs had occupied Sind in the early 8th cent., but it was not until the 11th cent. that Moslems gained ascendancy throughout N India. The raids of MAHMUD OF GHAZNI from Afghanistan prepared the way for the battle of Terain (1192), in which Kuth-ud-din Aibak, the general of Sultan Mohammed Ghori, defeated the Rajput force. He occupied the entire Indo-Gangetic plain and in 1206 established the DELHI SULTANATE, which during the next century reduced to vassalage nearly all the Hindu states of India except Kashmir and those in the extreme south. The task of ruling such a vast territory proved impossible, and revolts (notably that of the VIJAYANAGAR kingdom in the south) and the capture (1398) of the city of Delhi by Tamerlane brought the sultanate to an end. The Moslem kingdoms of the north which succeeded it were swept away by the last great Moslem invader from Afghanistan, BABER, a remote descendant of Tamerlane, and the founder of the Mogul empire, which at its height, controlled most of India. Islam did not, however, supplant Hinduism permanently except in relatively small areas, and the two religious communities continued to exist, dividing India. Only a few years before Baber's triumph, Vasco da Gama's landing at Calicut (1498) and the Portuguese conquest of Goa (1510) presaged the conquest by European might which India was to endure. The splendor and wealth of the Mogul empire (to it belongs much of India's greatest architecture including the TAJ MAHAL) attracted British, Dutch, and French competition for the trade which Portugal had at first monopolized. The British East India Company, which established trading stations at Surat (1612), Bombay (1661), and Calcutta (1690) soon became dominant and with its command of the sea drove off Portugal and Holland. While the Mogul empire remained strong, only peaceful trade relations with it were sought, but in the 18th cent., when incessant revolts of Hindu elements, especially the Rajputs and the Mahrattas, were tearing the empire apart, Great Britain and France seized the opportunity to carve out colonial domains. India from 1746 to 1763 was a battleground for the forces of the two powers, each attaching to itself as many native rulers as possible in the struggle. The brilliant victories of Robert CLIVE, the British commander, over DUPLEIX and Lally ended all European threats to the power of the British company.

India under British Rule. Clive's defeat of the Nawab of Bengal at Plassey in 1757 traditionally marks the beginning of the British Empire in India (recognized in the Treaty of Paris of 1763). Warren HASTINGS, Clive's successor and the first governor general of the company's domains to be appointed by Parliament, did much to consolidate Clive's conquests. By 1805 the British had direct rule over extensive territories, including Bengal and Madras, and had reduced to vassalage its most powerful native enemies, the state of Mysore, led by HYDER ALI and TIPPOO SAHIB) and the MAHRATTAS. Only Rajputana, Sind, and Punjab (the Sikh territory) remained completely independent. Great Britain regarded India as an agricultural reservoir and a market for British goods, which were admitted duty free. Indian manufactures, however, were barred from England by high tariffs, and the national handicrafts, particularly textile weaving, were destroyed, throwing artisans upon the support of the already overcrowded soil. The government proceeded with its conquests, taking Sind in 1843 and Punjab in 1849. Several important native rulers, fearing this aggrandizing policy, especially as applied by Governor General DALHOUSIE, gave their support to the bloody SEPOY REBELLION of 1857. It was soon repressed, and Great Britain, determined to prevent a recurrence, initiated long-needed reforms. The East India Company was abolished, and the crown ruled directly through a viceroy. British investments in India were heavy and continued to place upon India some of the burdens of absenteeism and to encourage strong British control. The British army in India offered a career for many British officers. The common soldiers were drawn more and more from among the Indians and were used across the world in the struggles of the British Empire. Sikhs and Gurkhas were world known as British soldiers. The domains of the native rulers were guaranteed if they would recognize the British as paramount. The power of Britain was symbolized when Victoria was crowned empress of India in 1877. In 1861 the first step had been taken towards self-government with the appointment of Indian councilors to advise the viceroy and the provincial governors on legislation. Some Indians educated in the newly opened government universities envisaged dominion status for their country and organized the INDIAN NATIONAL CONGRESS in 1885. Popular nationalist sentiment was perhaps most strongly aroused when Viceroy CURZON partitioned (1905) Bengal into two presidencies without consulting the population concerned. However, a few years later an additional British concession was made when elected members were provided for the viceroy's legislative council. Separate Moslem and Hindu electorates, used here for the first time, were to be a major factor in driving a wedge between the two communities. During the First World War all elements in India were firmly united behind the government, chiefly in the hope that loyalty would be rewarded with a greater measure of liberty. GANDHI, the leader of the Congress, felt that too little had been granted by the Government of India Act of 1919, which, although it transferred some control in the provinces to elected officials, retained great powers in the appointed governors. He organized (1919) the first of many passive-resistance campaigns and suffered imprisonment with other nationalist leaders. Imperial round-table conferences concerning India were held in 1930, 1931, and 1932, but no important change was made until the Government of India Act of 1935 established provincial legislatures. In the first elections (1937) held under the act, the Congress, led by Jawaharlal NEHRU, won majorities in 7 of the 11 provinces. The desire of the Congress for united opposition to Great Britain was balked by the MOSLEM LEAGUE and its leader Mahomed Ali JINNAH, who demanded the creation of PAKISTAN, a separate Moslem state. The Second World War found India by no means unified behind Great Britain. There was even an "Indian national army" of anti-British extremists, led by Subhas BOSE, which fought on the Japanese side. To procure India's wholehearted support, Sir Stafford Cripps on behalf of the British cabinet in 1942 offered an Indian interim government, in which Great Britain would maintain control only over defense and foreign policy, to be followed by full dominion status after the war. The Congress adamantly demanded that the British free India at once and, when the demand was refused, initiated civil disobedience. Great Britain's response was to outlaw the organization and jail its leaders. Jinnah, who offered to support the war, gained immense strength. After the release of the Congress leaders in June, 1945, he refused to modify his demands.

Stresses and Strains following India's Freedom. The British Labour government of Prime Minister Attlee in 1946 offered liberty to India on any terms desired, but it warned that if no agreement was reached by the Congress and the Moslem League, Great Britain on withdrawing in June, 1948, would have to determine which group was entitled to power. Reluctantly the Congress agreed to Pakistan and in Aug., 1947, the portions of India formerly under direct British control were divided into the dominions of India and Pakistan. The princely states were nominally free to determine their own status, but actually they were unable to remain outside the dominions. Nehru was made prime minister of India and Jinnah governor general of Pakistan. The flight of those Hindu and Moslem groups which suddenly found themselves in hostile territory was accompanied by horrible atrocities as communal passions exceeded all bounds. The hostility between the two dominions was aggravated when small-scale warfare broke out over their conflicting claims to jurisdiction over the princely states of HYDERABAD and KASHMIR. Permanent arrangements in matters which concern the two countries, such as cooperation in the use of industrial plants and in management of irrigation projects, await the establishment of more cordial relations. Indian, American: see INDIANS, AMERICAN.

Indiana, state (36,291 sq mi, 1940 pop 3,427,796, 1949 estimated pop. 3,994,000), N central United States, in the Middle West, admitted 1819 as the 19th state (a free state). The capital and largest city is INDIANAPOLIS, in the central part of the state. Indiana is bounded on the north by Michigan and Lake Michigan, on the east by Ohio, on the south by the Ohio river (which separates it from Kentucky), and on the west by Illinois. The Wabash, a river much loved by the Hoosiers (as Indianians are called for some unknown reason), divides the northern Great Lakes region, which is a glaciated lake area, from the central agricultural plain, rich with deep, glacial drift. The southern portion is a succession of bottomlands interspersed with knolls and ridges, gorges and valleys. Here are found limestone caves, such as big WYANDOTTE CAVE, and mineral springs, as at FRENCH LICK and

West Baden. The unglaciated soil is shallow, and cutting of timber has caused erosion, but there is some farming In fact more than 80 percent of Indiana land is used for agriculture The continental climate has extremes, with arctic air masses sweeping down from the northwest to plunge the temperature down in midwinter and southwestern winds blowing hot from the scorching plains in midsummer, spring frequently has torrential rains and floods Nevertheless, the growing season is about 170 days, the rainfall averages 40 in a year, and Indiana farms yield richly Grain crops—corn and wheat predominating—are important in themselves and also support the livestock and dairying industries Vegetables and fruits are produced in great quantity and variety for the city and out-of-state markets Meat packing is chief among the many industries related to agriculture Although the urban population exceeds the rural, many towns are primarily service centers for agricultural communities There are, however, large cities with varied and heavy industries, besides Indianapolis, Evansville, Fort Wayne, South Bend, and Terre Haute are prominent, and around the Calumet river near Chicago, the last 50 years have seen wastelands change to a forest of mills, factories, and refineries Indiana's chief manufactured products are steel and steel products, motor vehicles and parts, and electrical machinery The mineral wealth of coal and stone forwarded construction and industry, and potential wealth is to be seen in oil and hydroelectric power Over the whole state transportation keeps the produce of farm and factory moving freely River traffic on the Wabash and the Ohio recalls memories of flatboat and steamboat days, but more important are the trucking on the many straight highways and the trains speeding over the complex net of railroads The busy industries and activities are still young Though men came to Indiana early, and there are remains of the Mound Builders along the rivers and in the bottomlands, they did little to change the land, nor did the Indians who were occupying the land when the French, including La Salle, explored the rivers and established settlements in the late 17th and 18th cent Vincennes, founded in 1735, was the first permanent settlement in present Indiana, but in the period of the French and Indian War, when the Ohio country was being sharply contested, there was only a thin spread of French trade over Indiana It went with the rest of the Old Northwest to the British in the Treaty of Paris of 1763, suffered in Pontiac's conspiracy, and was united with Canada under the Quebec Act of 1774 (see Intolerable Acts) The most important Western event in the American Revolution was the capture and recapture of Vincennes by the expedition led by George Rogers Clark The region was ridden by Indian warfare The control by Virginia brought in some Southern settlers, later reinforced, but it was still largely unsettled when it was part of the Northwest Territory The victory of "Mad Anthony" Wayne at Fallen Timbers in 1794 began the process of subduing the Indians of the Old Northwest This process continued through the indecisive battle of Tippecanoe (1811) in the Wabash country which gave great glory to William Henry Harrison—perhaps the chief single figure in the early development of Indiana The War of 1812 practically brought dispossession of the Indians, and the stream of immigration swelled, with all sorts and conditions of settlers coming in Indiana Territory had been created in 1800 The capital was moved to Corydon in 1813, and in 1816 a constitutional convention met Jonathan Jennings, an antislavery man, was elected governor, and statehood was achieved in 1819. Indianapolis was laid out as the state capital, and the executive moved there in 1824–25. Though enormous internal-improvement scheme in 1836, intended to supply canals and railroads for the young state, came to grief in the Panic of 1837, and the state was deep in debt, gradually the base was laid for the thriving rural civilization that is the traditional Hoosier pattern and has as its chief virtues simplicity and forthrightness of character This idyllic and well-founded conception has been woven into one strand of Indiana writing and thought, pictured by Edward Eggleston in *The Hoosier Schoolmaster* and represented in much later days by James Whitcomb Riley, George Ade, Gene Stratton Porter, and epitomised, perhaps, in Paul Dresser's nostalgic lyric for the song, "On the Banks of the Wabash" The Civil War brought great changes Indiana voted for Lincoln in the 1860 election, and the Civil War governor, Oliver P. Morton, held the state unswervingly to the Union cause, though the Southern heritage of some communities caused trouble, the Knights of the Golden Circle were active, and John Hunt Morgan led a spectacular raid into Indiana in 1863 After the war, Indiana began the rapid development of manufacturing, stimulated first by the war needs Factories sprang up, and the old rustic pattern was broken. The farmers felt themselves pinched by the new developments and in the bad times turned their wrath against the railroads, the corporations, and the Eastern financiers They expressed their sentiments in the Granger movement, the Greenback party, and finally in the Populist party As the 19th cent drew to a close the increasing laboring class joined its complaints with those of the debt-ridden farmers and soon emerged with a voice of its own Eugene V Debs, one of the great radical labor leaders, was an Indianian, and the labor movement continued to grow, in the nation-wide steel strike just after the First World War the struggle at Gary, one of the cities of the Calumet, was particularly notable Like the other states of the Union, Indiana has felt the stresses and strains of modern and industrial living The social study by Robert and Helen M Lynd of a United States manufacturing town, *Middletown*, was based on Muncie, Ind , and such later writers as Booth Tarkington and Theodore Dreiser wrote of social unease In the 1920s the conflicts were shown in another aspect when D C Stephenson ("I am the Law") exploited religious and racial intolerance through the Ku Klux Klan The persistence of the old Indiana ideals of neighborly good will and initiative has been shown recently, however, in the careers of such men as Wendell Willkie and Ernie Pyle Indiana care for education has been long manifest Robert Dale Owen, son of the English reformer Robert Owen (who founded an idealistic community at New Harmony), promoted tax support of public schools, which was incorporated into the constitution of 1851 The schools of Gary under Dr William Wirt, pioneered in the Gary Plan of education Among the higher institutions of learning are several founded by religious groups, among them DePauw Univ and the Univ of Notre Dame, notable state-supported colleges are Indiana Univ and Purdue Univ See George S Cottman and Max R Hyman, *Centennial History and Handbook of Indiana* (1915), Jacob Piatt Dunn, *Indiana and Indianans* (5 vols , 1919), Stephen Sargent Visher, *Economic Geography of Indiana* (1923), Logan Esarey, *A History of Indiana to 1850* (2 vols , 3d ed , 1924), George W Starr, *Industrial Development of Indiana* (1937), Federal Writers' Project, *Indiana, A Guide to the Hoosier State* (1941), William E Wilson, *The Wabash* (1944), Pressly Spinks Sikes, *Indiana, State and Local Government* (revised 1946), and John Barlow Martin, *Indiana, an Interpretation* (1947)

Indiana, industrial borough (pop 10,050), co seat of Indiana co , W Pa , c 45 mi NE of Pittsburgh, settled c 1772, laid out 1805, inc 1816 It is the principal supply and trading center for a bituminous-coal-mining area in the Alleghenies and has rubber and hosiery factories It is the seat of a state teachers college

Indian Affairs, Bureau of, created (1824) in the U S War Dept and transferred (1849) by act of Congress to the U S Dept of the Interior The War Dept managed Indian affairs after 1789, but the separate bureau was not set up for many years It had jurisdiction over trade with the Indians, their removal to the West, their protection from exploitation, and their concentration on reservations Because of wide dissatisfaction in the West over army administration of Indian affairs, the Indian service was given to the Dept of the Interior and reorganized The new bureau was no more successful than its predecessor in preventing Indian wars or in eliminating corrupting influences upon the Indians The Bureau of Indian Affairs instead developed primarily into a land-administering agency, a process speeded up by the Dawes Act of 1887, the Burke Act of 1906, and the Wheeler-Howard Act of 1934. The bureau today also provides agricultural and industrial guidance, a general health program, social services, educational facilities, and reclamation projects for Indians in the United States and Alaska The Bureau of Indian Affairs has also been officially called the Office of Indian Affairs and the Indian Service

Indiana Harbor, Ind see East Chicago

Indianapolis (ĭn"dēună'pulĭs), city (pop 386,972), state capital, and co seat of Marion co , central Ind , on the White River and 184 mi SE of Chicago; settled 1819, laid out 1821, inc 1847 A port of entry, it is a center for banking, transportation, and farm trade The city has manufactures of construction materials, metal products, pharmaceuticals, trucks, trolleys, railroad equipment, and paint and meat-packing plants It is the seat of Butler University, units of Indiana Univ , John Herron Art Institute, a Carmelite monastery, a school for the deaf, a correctional school for girls, and a women's prison The city has a symphony orchestra and a state library with historical collections The American Legion has its national headquarters here in a building erected as a war memorial Motor races are held yearly on the speedway near the city. Indianapolis was made the state capital in 1825 Home and burial place of James Whitcomb Riley, it has a memorial hospital founded in his honor Lincoln's body lay in state here in 1865.

Indian art and architecture is essentially decorative and rhythmic and, in relation to religion, often highly symbolic. Architecture in its unknown beginnings was of wood construction. The historical period began c.250 B C with the Buddhist lats (stone edict pillars); the stupa (memorial mound, also called tope) and relic shrines (or dagobas, supposedly the origin of the pagoda), and rock-hewn cave viharas (monasteries) and chaityas (temples of basilican form) Roofs are supported by columns with bell-shaped capitals showing Persian influence, while other details indicate Greek derivation Crude figures and animal sculptures abound in interior decoration The Karli temple (100 B C) has an elaborately sculptured façade, a vestibule, a tunnel-vaulted nave with aisles formed by massive columns with elephant capitals, and an apse with a shrine for Buddha The monasteries, as at Ajanta, Bagh, and Ellora, have square or oblong halls surrounded on three sides with small sleeping cells for the monks Symbolic sculptures form decorations with bold effect Paintings in the monasteries were mainly frescoes, which exerted a considerable influence on later art Figure paintings as well as landscapes in the typical vertical-projection style with their feeling for delicacy and detail form a major part of the temple and monastery decorations It was with the overlapping Jain and Hindu styles that profuse, all-over banded ornamentation became the most marked permanent characteristic of Indian architecture Jain work (100 B C A D 1300) flourished as Buddhism waned (from the 3d cent), resulting in impressive structures of cathedral dimensions and many pointed domes, corbeled in level courses, supported on columns with ornate bracket capitals and struts Well-known examples are the temples at Sadree and in Rajputana The three phases of the Hindu style (northern, 600 to present, central, 1000–1300, and southern, or Dravidian, 1350–1750) are varying local expressions, which borrowed much from the Jains The pyramidal roof and excessive richness are pronounced features The gateways (gopuras) are magnificent in conception and size, and the buildings contain choultries, or ceremonial halls, of a thousand columns, not more than two alike, all highly ornate Here the temple dancers perform and sing The temple at Tanjore shows the perfected Hindu development The sprelike Hindu domes, curved on straight-sided cones, are usually terminated with a delicate finial The Indo-Moslem style in brick and stone greatly simplified the Hindu type of architecture, eliminating the human figure in conformance with Moslem ideals In addition to the dome this style displays the characteristic arch and minaret which lend such grace and beauty to the Taj Mahal and the Pearl Mosque of Agra and to other notable examples at Delhi and Lahore The ghats, or river landings, are among modern developments in N India While sculpture was throughout more important and more frequent than painting, panel pictures did appear Modern painting is narrative or symbolic, always significant in design, and peculiarly a group rather than an individual manifestation The decorative arts have been carried to perfection, the custom of having sons practice the family craft results in highly skilled artisans in jewelry, enamels, pottery, ironwork, damascening, casting metal images, and arms and armor Examples of these are in many museums, including the Victoria and Albert Museum, the British Museum, and the Metropolitan Museum See E B Havell, *Handbook of Indian Art* (1920), K de B Codrington, *Ancient India from Earliest Times to the Guptas* (1926), A K Coomaraswamy, *History of Indian and Indonesian Art* (1927), Percy Brown, *Indian Architecture* (1943); Sir R. O Winstedt, ed , *Indian Art* (1948)

Indiana University, mainly at Bloomington, state supported, coeducational chartered as a seminary 1820, opened 1824 It became a college in 1828 and a university in 1838 It has a college of arts and sciences (with journalism and an institute of criminal law and criminology), schools of business, education, law, music, and health, physical education, and recreation, and, at Indianapolis, schools of dentistry and medicine (with a nursing school) and also a social-work training course David Starr Jordan was a noted president See J A Woodburn, *History of Indiana University* (Vol. I, 1940)

Indian literature Oral literature in the vernacular languages of India is of great antiquity, but it was not until about the 16th cent that an extensive written literature appeared Chief factors in this development were hostility of the Moslem conquerors of much of India to Hindu scholars (who wrote in Sanskrit) and the emergence of Hindu pietistic movements which sought to reach the people. Material from the great Sanskrit classics—

notably the *Mahabharata* and the *Ramayana*—was transformed into artless versified homilies Classical Persian poetry was the fountainhead of a later growth in the Urdu literature produced for the Mogul court, and elaborate Urdu verse on set themes was produced in abundance In the early 19th cent., with the establishment of vernacular schools and the importation of printing presses, a great impetus was given to popular prose, with Bengali writers perhaps taking the lead Foreign, particularly English, literature was eagerly studied and to some extent assimilated to classical Indian modes and themes Today there is a written literature in all the important languages of India and Pakistan as well as a large literature in English intended to reach all the university-educated public regardless of native language Among the best-known authors of the late 19th and early 20th cent are Rabindranath Tagore, winner of the 1913 Nobel Prize in Literature, and the poet Iqbal, who first wrote in Urdu and later in Persian Later writers include Mohandas Gandhi and Jawaharlal Nehru in the field of politics, R K Naravan and Sudhin N Ghose in the novel, and Mme Sarojini Naidu in poetry See SANSKRIT LITERATURE, PALI LITERATURE, PRAKRIT LITERATURE

Indian millet: see PEARL MILLET

Indian music. The first systematic study of North American Indian music was made by Theodore Baker in 1882 Alice C FLETCHER was one of the first to point out that Indian melodies were composed of fixed intervals and could be repeated exactly Her work was followed by the scientific research of J W FEWKES, and his recordings of Indian melodies were analyzed by B I Gilman In 1907 Frances Densmore began systematic study of the music of numerous tribes under the auspices of the Bureau of American Ethnology of the Smithsonian Institution, which published many volumes of her studies Others of importance in the study of Indian music are Natalie Curtis BURLIN and Frederick Russell BURTON Indian music is primarily a vocal art, usually choral, although some tribes favor solo singing Women have very little part in it Since there is no notation and no theory, the requirements for a good musician are a voice that will carry, facility in learning songs, and the ability to retain a large repertoire Indian music is entirely melodic, there is no harmony and no polyphony, although there is occasional antiphonal singing between soloist and chorus Not only is there no conception of absolute pitch, but intonation is uncertain This uncertainty is the result of the Indian's peculiar method of voice production, involving muscular tension in the vocal apparatus and making possible frequent strong accents and glissandos While there is little purely instrumental music, singing is nearly always accompanied at least by drums Drums and rattles are the chief percussion instruments and are of various types Wind instruments are mainly flutes and whistles For the Indian, song is the chief means of communicating with the supernatural powers, and music is seldom performed for its own sake, definite results, such as the bringing of rain, success in battle, or the curing of the sick, are expected from music There are three classes of songs—traditional songs which are handed down from generation to generation, ceremonial and medicine songs, which belonged to men now dead and which can be sung only by those who heard the owners of the songs sing them, and modern songs, which show the influence of European musical culture Songs of the second group were supposed to have been received by their owners in dreams Certain powers were ascribed to these dream songs, which were accompanied by rituals and were usually associated with some bird or animal supposed to have been the giver of the song No one but the owner of the song might sing it unless he should sell the song, in which case he shared its power Songs sold were usually medicine songs, and with them went prescriptions for whatever ills were involved Another type of song owned by an individual is a song sung in honor of a hero Songs of this type are often old songs, adapted to the occasion with the insertion of the new hero's name The love songs often associated with Indian music belong to the songs showing the influence of the white man and are regarded as degenerate by many of the older Indians Indian melody is, in general, of a descending nature Frances Densmore, in analyzing over 800 songs, found that 67 percent began with a descending melodic figure and that in 87 percent the last tone is the lowest of the whole melody In many there is a feeling of key, and it has been found that the Indian can sing the larger intervals of the European scale accurately The meter of Indian music is irregular. See Frances Densmore, *The American Indians and Their Music* (rev ed , 1936)

Indian Mutiny: see SEPOY REBELLION

Indian National Congress, political organization of India, founded in 1885 Its original members were educated men who wanted to make India a British dominion by constitutional means A faction, dissatisfied with slow progress, vainly urged (1907) the Congress to strive in all ways for *Swaraj* [complete independence]. A split resulted which was temporarily healed in 1916 when the Congress voted to support Great Britain in the First World War, but in 1917 the militants, led by GANDHI, forced the moderates to resign The militant policy was first used on a large scale in the *Satyagraha* [passive resistance] campaign (1919) against legislation which restricted the press and political activities On this and later occasions the Congress leaders were imprisoned Claiming to represent all Indians and not, as charged, only caste Hindus, the Congress opposed organizations limited to one community and urged unity in the struggle for *Swaraj* and against untouchability (see CASTE) On other matters the Congress itself was divided into a right wing, which favored cautious social reforms, and a left wing, with Jawaharlal Nehru, as one of the leaders, which was Socialist or Communist in orientation The Congress's dramatic, though ineffectual, declaration of Indian independence on Jan 26, 1930, was followed by a vigorous *Satyagraha* campaign which paralyzed much of India The great strength of the organization was also shown by victories in 7 of the 11 provincial elections of 1937 At the outbreak of the Second World War, it protested India's being declared a belligerent when the elected governments had not been consulted and instructed its ministries to resign Maintaining its intransigent stand even when India was under Japanese attack, the Congress threatened (1942) refusal of cooperation with Great Britain unless a democratic central government was established immediately The British responded by outlawing the organization and arresting its leaders It reorganized in 1945 and promptly expelled the Communist faction, which had supported the war In the 1946 elections to the Indian constituent assembly, the Congress won the Hindu vote, but it lost the Moslem vote and reluctantly agreed to the formation of Pakistan After the partition of the Indian subcontinent, the Congress, as the largest party, began (1947) to govern the Union of India under Nehru's leadership See Frederick M De Mello, *Indian National Congress* (1934), H N Das Gupta, *Indian National Congress*, Vol I (1946)

Indian nut see PINE NUT

Indian Ocean, third largest OCEAN of the world, extending from India to Antarctica and from E Africa to Tasmania It stretches c 4,000 mi along the equator and c 6,000 from north to south The greatest known depth, c 24,000 ft , is near Java The Bay of Bengal and the Arabian Sea, lying E and W of India respectively, are the largest of its arms The largest islands of the Indian Ocean are Madagascar and Ceylon Groups of small islands include the Seychelles, the Chagos, and the Maldives The monsoon, the great seasonal winds of the Indian Ocean, bring rain to SE Asia Only the northern part, which is connected with the Mediterranean Sea through the Red Sea and the Suez Canal, is important for shipping

Indianola (ĭn"dēănō'lu) **1** City (pop 4,123), co seat (since 1849) of Warren co , S Iowa, S of Des Moines, inc 1863 It is the seat of Simpson College (Methodist, coeducational, 1860) Near by is Ahquabi State Park **2** City (pop 3,604), co seat of Sunflower co , W Miss , between Greenville and Greenwood and near the Sunflower river, in a cotton area, settled in the mid-19th cent , inc 1886 **3** Vanished town, S Texas, on Matagorda Bay and S of Port Lavaca Founded in 1844, it was once the most bustling port in Texas but was destroyed by the hurricanes of 1875 and 1886

Indian paintbrush or **painted cup,** any species of the genus *Castilleja*, chiefly American herbs with roots that are parasitic on the roots of other plants The true flowers are inconspicuous but are commonly enveloped by bright red bracts that are often flower-like and make the plant very showy The common Indian paintbrush in the East is *Castilleja coccinea* The plants are more abundant in the West, *Castilleja linariaefolia* is the state flower of Wyoming

Indian pipe, low, fungus-like flowering plant (*Monotropa uniflora*) native to dark woods of America and Asia The whole plant is waxy white (rarely pink or red), but it soon turns black when picked Its appearance has given rise to such names as ghost flower and corpse plant Each stem has scale leaves and, with its nodding flower, resembles a pipe The plant is usually considered to be saprophytic (with mycorhizal roots)

Indian rice see WILD RICE

Indian River, lagoon, c 100 mi long, E Fla , parallel to the east coast, beginning N of Titusville and extending S to Stuart A number of resorts are on its shores Its valley, which includes Indian River co , is fertile and productive, noted for its citrus fruit

Indians, American, peoples who occupied North America, Middle America, and South America before the coming of the Europeans They are so called because of the prevalent belief at the time of Columbus that the Americas were the outer reaches of the Indies (i e , the East Indies). Most authorities today agree that the Indians came into the Western Hemisphere from Asia via the Bering Strait in a series of migrations. The several waves of migration are said to account for the many native linguistic families (see LANGUAGE, table), while the common origin is taken to explain the features that the Indians of North and South America have in common (though with considerable variation)—Mongoloid features, with coarse, straight black hair, dark eyes, sparse body hair, and a skin color ranging from yellow brown to reddish brown. They supposedly brought with them their Neolithic culture, and most Indians made fire with a drill, had domesticated dogs, made baskets, and used stone tools In Middle America and South America high material cultures were built up, and before the coming of the white man there flourished the advanced civilizations of the MAYA, the TOLTEC, the AZTEC, the INCA, and the CHIBCHA INDIANS The development of powerful city-states and, in the case of the Inca, a true empire, was accompanied by rich architectural development (though without the arch), elaborate sculpture, hieroglyphic writing (in the case of the Maya), complex social structure, and considerable development of metalworking, particularly in gold Not all the Indians of South and Central America, however, achieved a high cultural status The warlike ARAUCANIAN INDIANS who long successfully resisted the Spanish, had a much lower material culture than the Inca, and the Fuegians (see TIERRA DEL FUEGO) had only a sparse culture, as did the Indians of the Amazon basin, though their more southern kinsmen (see GUARANÍ INDIANS) developed a stable agricultural civilization The CARIB INDIANS of N South America extended their war conquest to the West Indies and Central America. The Carib had a reputation of being fierce warriors, and there is evidence that they ate their war captives The higher material culture of the Aztec was reflected in the present United States in the Southwest There a seminomadic people called the BASKET MAKERS, who hunted with a spear thrower and a curved wooden club, acquired (c 1000 B C) the art of cultivating beans and squash, probably from their southern neighbors They also learned to make unfired pottery They wove baskets, sandals, and bags By c 700 B C they had initiated intensive agriculture made true pottery, and hunted with bow and arrow They lived in pit dwellings, which were partly underground and were lined with slabs of stone—the so-called slab houses A new people came into the area some two centuries later, these were the ancestors of the PUEBLO INDIANS They lived in large, terraced community houses set on ledges of cliffs or canyons for protection (see CLIFF DWELLERS) They developed a ceremonial chamber (the KIVA) out of the living room of the "pit dwellers " This period of development ended A D c 1300 after a severe drought (1275-99) and invasion of the NAVAHO INDIANS and APACHE INDIANS from the north The known historic Pueblo cultures of such sedentary farming peoples as the HOPI INDIANS and the ZUÑI then came into being They cultivated corn, beans, squash, cotton, and tobacco, killed rabbits with a wooden throwing stick, and traded cotton textiles and corn for buffalo meat from nomadic tribes The men wove cotton textiles and cultivated the fields while women made fine polychrome pottery The mythology and religious ceremonies were complex These were the Indians who were visited (1540) by Francisco Vásquez de Coronado in search of the fabulous Seven Cities of Cibola and QUIVIRA The culture of the Indians in the Central Valley of California and on the California coast was somewhat lower The area was one of great linguistic diversity Generally the inhabitants were a sedentary people, who gathered edible plants, roots, and fruits and also hunted small game Their "acorn bread," made by pounding acorns into meal, then leaching it with hot water, was distinctive They cooked in baskets filled with water and heated by hot stones They lived in brush shelters or more substantial lean-tos and had partly buried earth lodges for ceremonies and ritual sweat baths Despite their generally low material culture they had highly developed basketry, coiled and twined To the north of them was another area of low material culture, the Plateau area between the Cascade Range and the Rockies There is little evidence of ancient human habitation The dwellers in this area underwent (c 1730) a great cultural change when they obtained from the Plains Indians the horse, the tepee, a modified form of the sun dance, and deerskin clothes They continued, however, to fish for salmon with nets and spears and to gather camas bulbs They hunted small game and, in later times, the buffalo Earlier dwellings common before the tepee was introduced also persisted The permanent winter villages on the waterways had semisubterranean lodges with conical roofs, a few tribes lived in bark-covered long houses Before they acquired the horse they used dogs for transportation; on water they used dugouts and bark canoes, like most of the tribes in the northern part of the continent. Typical tribes were the Spokan and the Nez Percé. The richly wooded N Pacific coast from S Alaska to N California, with a temperate climate and heavy rainfall, supported a large Indian population and had apparently sup-

ported it for centuries before the first white man arrived. Salmon was the staple food, supported by sea mammals (seal and sea lion) and land animals (deer, elk, and bear) as well as berries and wild fruit. They used wood for building their houses and had cedar-planked canoes and carved dugouts (the seagoing craft measuring up to 70 ft.). In their permanent winter villages some of the tribes had the noticeable, grotesque totem poles (see TOTEM). They had a highly classified society with chiefs, nobles, commoners and slaves. Public display and disposal of wealth was a basic feature of the society (see POTLATCH). They had woven robes, furs, and basket hats as well as wooden armor and helmets for battle. This distinctive culture was not greatly affected by European influence until after the great days of white trading for furs along the coast in the late 18th cent. The Tlingit, the Haida, and the Kwakiutl are typical tribes. To the east of the Plateau culture area was that of the central Canadian area in the belt of semiarctic land from the Rockies to Hudson Bay. Here nomadic hunters adjusted their lives to the caribou, moving with the season from forest to tundra, killing the caribou in semiannual drives. Other food was provided by small game, wild berries, and edible roots, but the chief reliance was on the caribou. Not only food but clothing and even some shelter (caribou-skin tents) came from that animal, and with caribou leather thongs the Indian laced his snowshoes and made nets and bags. Typical of these people were the Chipewyan Indians. To the east of them was the Eastern Woodlands culture area which was around the Great Lakes and stretched from the Mississippi to the Atlantic, from Kentucky and Virginia N to Hudson Bay. The many Algonquian-speaking people were to a large extent deer hunters, and the women tended small plots of corn, squash, and beans. This was the land par excellence of the birchbark canoe on the many lakes and rivers. The culture of these Algonquian tribes and their Iroquoian-speaking neighbors and enemies (who had probably invaded from the South) is the familiar Indian life pictured most often in American literature. Other game (e.g., bear), fish (caught with hook, spear, and net), and shellfish were added to the deer for subsistence, and cooking was done in vessels of wood and bark or simple black pottery. The dome-shaped wigwam and the "long house" of the Iroquois have been often pictured. The deerskin clothing, the painting of face and (in the case of the men) body, and the scalp lock of the men (left when hair was shaved on both sides of the head), all are stock items in the old Indian stories. The myths of Manitou and of Manibozho (or Manabaus), the hero who remade the world from mud after a deluge, are also widely known. In the southeastern part of the present United States, with its forests and fertile soil, was the heart of the Southeastern culture, which stretched far W to the Mississippi and covered the region from the Ohio S to the Gulf of Mexico. Here before A.D. c 500 the Indians were seminomads, who hunted, fished, and gathered roots and seeds. Between 500 and 900 they had adopted agriculture, tobacco smoking, pottery making, and burial mounds (known also outside the area, see MOUND BUILDERS). By c 1300 the agricultural economy was well established, and artifacts found in the mounds show that trade was widespread. Long before the white man came, the peoples of the Natchez-Muskogean linguistic family were farmers who used hoes with stone, bone, or shell blades. They hunted with bow and arrow and blowgun, they caught fish by poisoning streams, and they gathered berries, fruits, and shellfish. They had excellent pottery, sometimes with modeled animal or human figures. The villages were surrounded by wooden palisades reinforced with earth. Some of the large villages, usually ceremonial centers, dominated surrounding satellite villages in village states. There were temples for sun worship, rites were elaborate and featured an altar with a "perpetual" fire, extinguished and rekindled each year in a "new fire" ceremony. The society was commonly divided into classes, with a chief (the Great Sun), his children, nobles, and commoners making up the hierarchy. The Natchez, the Choctaw, and the Creek were typical inhabitants of this area. They were first made widely known to the white man by survivors of De Soto's expedition. The grasslands W of the Mississippi and E of the Rockies, stretching N from Texas to Canada, once supported vast herds of buffalo. In this Plains area in pre-Columbian times there were two distinct types of economy, sedentary and nomadic. The sedentary tribes, who had immigrated from neighboring regions, lived in permanent villages of dome-shaped earth lodges surrounded by earthen walls. They raised corn, squash, and beans. The foot nomads, on the other hand, moved about with their goods on dog-drawn travois and eked out a precarious existence by hunting the buffalo (usually by driving them into enclosures or rounding them up by grass fires). They supplemented their diet by exchanging meat and hides for the corn of the "village" Indians. The horse, first introduced by the Spanish in the Southwest, appeared on the plains about the beginning of the 18th cent. and revolutionized the life of the Indians there. Many tribes recently settled in villages left their homes and joined the nomads, who, now mounted and armed with bow and arrow, ranged the grasslands hunting the buffalo. The older, more conservative "village" Indians remained farmers (e.g., the Arikara, the Hidatsa, and the Mandan) while the mounted hunters grew rich. Indians from surrounding areas came into the Plains (e.g., the Cheyenne and the Sioux from the Great Lakes, the Comanche and the Kiowa from the west and northwest, and the Navaho and the Apache from the southwest). A universal sign language developed among the perpetually moving tribes, who lived on horseback and in the highly mobile TEPEE. They lived mainly from the buffalo, pounding and drying lean meat for food out of hunting season and making their clothes from buffalo hides and deerskins. The system of the COUP and almost perpetual warfare marked the highly peripatetic society. These Plains Indians together with some of the natives in the Southwest were the last to put up a serious and bloody struggle with the white man in the United States. In the 1890s the long struggle between white and Indian that had begun soon after the coming of the Spanish in the 16th cent. and the British and the French in the 17th was brought to an end. That story is told in the articles on the separate tribes, in the articles on the states, and in separate biographies and subject articles (e.g., PONTIAC'S REBELLION and DAWES ACT). Today the number of U.S. Indians is increasing rapidly as they live on some 200 reservations, e.g., the 9,000 Navaho rounded up by Kit CARSON in 1863 had increased to 61,000 in 1947. In 1492 Indians, N of Mexico, numbered some 900,000, but in 1870, after wars, starvation, and epidemics of smallpox, measles, and cholera they had dwindled to 300,000. In 1945 there were 400,000. Although Indians outnumber the Europeans in most Central and South American countries, N of Mexico they constitute a small minority. The material contributions of the Indian to the European include potatoes, corn, beans, tomatoes, pumpkins, cotton, rubber, quinine, coca (a derivative of which is cocaine), and tobacco. The Bureau of American Ethnology, the American Museum of Natural History, and the Heye Foundation have published many useful works on the Indians. For some general works, see Clark Wissler, *The American Indian* (3d ed., 1938), A. L. Kroeber, *Cultural and Natural Areas of Native North America* (1939), P. S. Martin and others, *Indians before Columbus* (1947), D'Arcy McNickle, *They Came Here First* (1949).

Indian shot see CANNA

Indian Territory, in U.S. history, a name generally applied to the country set aside for the Indians by the Indian Intercourse Act (1834) and more particularly applied to the territory to which the Five Civilized Tribes (Cherokee, Creek, Seminole, Choctaw, Chickasaw) were removed by treaties between 1820 and 1845. The lands belonging to the Indians were further delimited by the creation of Kansas and Nebraska territories in 1854 and by continuous white settlement. The eastern part of the present Oklahoma, N of the Red River, although never a regularly organized territory, became known as Indian Territory as the Indians were gradually forced into settlement there. Tribes other than the original five also moved there, but each tribe maintained its own government. The DAWES ACT (1887) and the DAWES COMMISSION, created (1893) under the act, marked another change in Indian policy. With the Curtis Act (1898) and subsequent legislation, the way was prepared for the extinction of the Territory, achieved in 1907 with the entrance of Oklahoma into the Union. See OKLAHOMA.

Indian tobacco, name for several plants, among them LOBELIA.

Indian turnip see JACK-IN-THE-PULPIT

India-rubber tree see RUBBER PLANT

indicative see MOOD

Indic languages, group of the Indo-Iranian subfamily of Indo-European languages. See LANGUAGE (table).

indiction (Indĭk'shun), a period of 15 years or a year in such a period. The 10th year of an indiction, for example, is called also "the 10th indiction." The indiction was probably suggested by an Egyptian fiscal period (used in the assessment of land and in balancing accounts), adopted in the Roman Empire in the 4th cent. Dating by indictions was practiced in the Byzantine Empire and throughout Western Europe and is still in occasional use in the Roman Church as a supplementary method of identifying dates. The beginning point of the first 15-year period has varied, and so there have been various systems of indictions.

indictment (Indīt'mŭnt), in CRIMINAL LAW, formal written charge of a crime made by the public prosecutor before a grand jury, which, in turn, offers the charge against the accused. Persons suspected of crime may be rendered liable to trial by indictment, by presentment, or by information. A presentment is an accusation issued by the grand JURY on its own knowledge, without any bill of indictment having been previously drawn up by the prosecutor. An information is an accusation presented directly by the prosecutor without consideration by a grand jury. The Fifth Amendment to the U.S. Constitution safeguards the right to a preliminary hearing by a grand jury by providing in effect that no person outside military service may be tried in a Federal court for a capital or otherwise infamous crime except on indictment or presentment. When an indictment or presentment is approved, the foreman of the grand jury marks it "true bill." Indictments, presentments, and informations are similar to the plaintiff's complaint in a civil action (see PROCEDURE). They name the supposed criminal offense and allege the specific acts with which the accused is charged. At the trial the evidence presented by the prosecution must offer some support of every material allegation in the charge if the case is not to be dismissed.

Indies see EAST INDIES and WEST INDIES

indigestion or **dyspepsia,** symptom of digestive disturbance. The condition may be caused by either excessive or diminished secretion of hydrochloric acid in the gastric juice of the stomach or by imperfect digestive function in the intestinal tract which is sometimes a result of glandular imbalance. Psychogenic factors may cause digestive disturbance. BILIOUSNESS is a form of indigestion.

Indigirka (ĭn"dĭgēr'kŭ, Rus. ēndyĭgēr'kŭ), river, 1,120 mi. long, NE Yakut ASSR, Asiatic RSFSR, in NE Siberia. It flows N into the Arctic Ocean and is navigable (June-Sept.) over more than half its course.

indigo [Span., from Latin, =Indian], the most important blue dyestuff. It was anciently produced in India and was known in Egypt, probably c 1600 B.C., mummies of the XVIII dynasty have been discovered wrapped in indigo-dyed cloth. Its introduction into Europe in the 16th cent. stirred up considerable opposition among those concerned with the production of woad (obtained from the woad plant, *Isatis tinctoria*), which had been the chief blue dye for woolens. Indigo almost entirely superseded woad. Indigo is obtained from leguminous plants of the genus *Indigofera*, chiefly from the Asiatic species, *Indigofera tinctoria*, but also from several other species. The plants contain a colorless, soluble glucoside called indican. When the macerated plants are allowed to ferment in vats of water the colorless form of indigo is liberated, stirring of the liquid causes oxidation of the colorless material to form a blue sediment, indigo. The natural indigo gives a strong blue color of great permanence. Use of the natural dye was much reduced after the synthesis of indigo was accomplished. Adolf von Baeyer was the first to synthesize it, but others developed the methods used for its commercial production. Indigo is known as a vat dye (see DYE).

indigo bunting or **indigo bird,** small bird of the FINCH family. In summer the plumage of the male appears in the proper light to be a rich, metallic blue. The female and young have brown sparrowlike plumage. Even on hot summer days the indigo bunting sings persistently from a high perch its sweet song, a series of spaced, usually paired, notes. It eats chiefly insects in summer and weed seeds in winter. It breeds from New Brunswick to Georgia and W. to North Dakota and central Texas and winters from S Mexico and Cuba to Panama.

Indio, city (1940 pop. 2,296, 1949 special census pop. 5,384), SE Calif., ESE of Los Angeles, in an irrigated date-growing area of the Coachella Valley, founded 1876, inc. 1930. Joshua Tree National Monument (see NATIONAL PARKS AND MONUMENTS, table) is near by.

indium, metallic element (symbol=In, for physical constants, see ELEMENT, table) resembling aluminum and gallium, with which it is classed in the periodic table. The metal is relatively soft, malleable, ductile, and silver white. Indium was discovered in 1863 by Ferdinand Reich and H. T. Richter by means of the spectroscope, its spectrum showed two indigo lines. It is found in zinc ores, of which there are deposits in Arizona. Bearings can be protected against corrosive acids by electroplating with indium.

Indo-Aryan, group of the Indo-Iranian subfamily of Indo-European languages. Broader uses on a racial basis are now obsolete. See LANGUAGE (table).

Indo-China, Fr. *Indochine*, federation of states (c 279,000 sq. mi., pop. c 27,500,000), SE Asia. It is the easternmost country of the Indo-Chinese peninsula (which it shares with Burma, Siam, and Malaya) and faces E on the South China Sea. Shut off from China by the mountains of Yünnan prov. on the north, it is in general bounded on the west by the upper MEKONG river and by the mountain chains separating Siam from the lower Mekong valley. The cultures of Indo-China were formed by streams of influence coming from China and India. The centuries before European intervention saw the growth and decline of the KHMER EMPIRE in CAMBODIA, the rise and fall of CHAMPA, and the steady expansion of ANNAM. European penetration began in the 16th cent., in the 19th-century race for colonial empire, Indo-China fell to France. The French took COCHIN CHINA as a colony and

gained protectorates over Cambodia, Annam, and TONKIN. In 1887 they formed these four states into a union of Indo-China, with a governor general at its head The addition of LAOS to the union in 1893 rounded out French control of Indo-China In the Second World War, France was forced to accept (1940) Japanese intervention in Indo-China; the increase of Japanese forces there became in late 1941 a major issue between Japan and the United States and precipitated the diplomatic exchanges cut short by the Japanese attack on Pearl Harbor Japanese control was tightened after the United States entered the war In March, 1945, the Japanese finally ousted all French officials Even before the end of the war, the French announced plans for a federation of Indo-China within the French Union, with greater self-government for the various states The federation was accepted in Cambodia and Laos Annamese nationalists, however, demanded (1945) the complete independence of Annam, Tonkin, and Cochin China as VIET NAM, and after Dec , 1946, these regions were plunged into bitter fighting between the French and the extreme nationalists

Indo-European, family of languages to which English belongs It includes more speakers than any other family The synonym Indo-Germanic is obsolete See LANGUAGE (table)

Indo-Iranian, subfamily of Indo-European languages See LANGUAGE (table)

Indonesia, large island group of the Malay Archipelago, comprising the Sunda Islands (including JAVA and SUMATRA), the Lesser Sundas (including BALI), BORNEO, the CELEBES, the MOLUCCAS, TIMOR, and thousands of smaller islands The most important, in terms of density of population and cultural development, are Java, Bali, and Sumatra All the larger islands have a central volcanic mountainous area flanked by coastal plains The humid tropical climate and the remarkably fertile soil make Indonesia a rich agricultural area producing a variety of crops, notably pepper, sugar (cultivated largely on Java), tobacco, coffee, and tea Rubber, quinine, kapok, palm oil, and copra are major forest products, and on the larger islands are valuable woods such as sandalwood, camphor, teak, and ebony The animal life of Indonesia roughly forms a connecting link between the fauna of Asia and the fauna of Australia, a great variety of large mammals and reptiles inhabit the interior of the larger islands, and richly colored birds are everywhere Enormously rich in mineral resources, Indonesia is a major producer of oil, tin, and bauxite and has rich deposits of manganese ore, copper, gold, silver, zinc, lead, platinum, and diamonds Primarily a supply center of raw material, Indonesia has had little industrial development The teeming native population roughly falls into two groups, the Malayan and the Papuan, with many of the inhabitants of central Indonesia representing a transition between the two types Within each group are numerous subdivisions The Malayans show varying stages of cultural development, ranging from the more civilised Javanese and Balinese to the primitive, seminomadic groups such as the Dyaks of the interior of Borneo The complex ethnic structure is the result of several great migrations many centuries ago from Asia and the Pacific The great majority of the population is Moslem, with animists constituting the next largest group, Hindus and Christians form a relatively small group The Chinese are the most numerous of the nonindigenous population, the so-called Coast Malays who inhabit the coastal areas of the major islands are a people of mixed stock, Chinese, Arab, Indian, and Malayan. Early in the Christian era, Indonesia came under the influence of Indian civilization through the gradual influx of Indian traders and Buddhist and Hindu monks, great native empires that began to emerge were strongly bound up with Hinduism and Buddhism By the 7th cent, Sumatra had become the first important political center of the area, it was succeeded in the 14th cent. by Java, which was the nucleus for two centuries of a fabulous empire dominating almost the whole of Indonesia (for more of the history, see articles on the individual islands) Early in the 13th cent., there had begun a gradual infiltration of Islam with the arrival of Arab traders, and by the end of the 16th cent it had replaced Buddhism and Hinduism as the dominant religion of the area Under Islamic control, Indonesia soon degenerated into many small and weak states which fell easy prey to European imperialism Early in the 16th cent the Portuguese began establishing trading posts in Indonesia, after taking (1511) the strategic commercial center of Malacca on the Malay Peninsula The Dutch followed in 1596, and the British in 1600 But rivalry did not become intense until the early 17th cent. when the Dutch East India Company and the English East India Company appeared on the scene. The Dutch soon succeeded in ousting the Portuguese, who were allowed to retain only the eastern part of Timor, but they found English competition more difficult to overcome, and it was only after a series of Anglo-Dutch conflicts (1610-23) that the Dutch triumphantly emerged as the dominant power in Indonesia Throughout the 17th and the 18th cent the Dutch East India Company steadily expanded its control over the entire area. When it was liquidated in 1798, the Dutch government took over its holdings, which were thereafter known in English as the Netherlands East Indies, the Netherland East Indies, Netherland India, or the Dutch East Indies Dutch rule was briefly broken (1811-15) during the Napoleonic Wars when the islands were occupied by the British under Sir T Stamford RAFFLES The Dutch exploited the riches of the islands and built up the colony throughout the 19th cent The Indonesian movement for independence which began as early as the dawn of the 20th cent remained weak and ineffective until the early 1940s, when it became extremely militant, particularly in Java and certain parts of Sumatra. It was active during the Second World War, throughout the long occupation (beginning in early 1942) of the area by the Japanese In 1945 the nationalist group proclaimed the republic of Indonesia, claiming jurisdiction over Java, Sumatra, and Madura and establishing the capital at Jogjakarta The first president of the new republic was Sukarno, and the first premier was Sutan Sjahrir The Dutch bitterly opposed the republic, but finally recognized it with the signing (1947) of the Cheribon Agreement (or Linggajati Agreement) In 1946 at a conference held on Bali, the islands E of Java and Borneo (the Celebes, the Moluccas, and the Lesser Sundas) were united to form the state of East Indonesia, with the capital at Macassar on Celebes Finally in Nov , 1949, at the Dutch-Indonesian conference at The Hague, agreement was reached on the establishment (by Dec 30, 1949) of the independent and sovereign state of the **United States of Indonesia** (c 620,000 sq mi , 1930 estimated pop 60,200,000), to be comprised of the republic of Indonesia (including most of Sumatra and Java), the states of East Indonesia, East Sumatra, South Sumatra, Riouw, Bangka, Billiton, Bantam (W Java), Pasundan (W central Java), East Java, Madura, and the autonomous areas of West Borneo, Great Dayak (S Borneo), Banjar (S Borneo), Southeast Borneo, and East Borneo It was agreed that Batavia, the capital, would be a separate district The new nation remained linked to the Netherlands only through a loose Dutch-Indonesian union under the Dutch crown The conference postponed until 1950 the settlement of the status of Netherlands New Guinea, which the Indonesians wanted to include in the federation

Indore (ĭndôr'), former native state (9,934 sq. mi , pop 1,513,966), W central India It contains extensive forests and much building stone The state was established c 1728 by Malhar Rao Holkar, a soldier of peasant family in the service of the Mahrattas and the founder of the ruling dynasty. In 1948 Indore was merged in Madhya Bharat

Indore, city (pop 203,695), capital of Madhya Bharat, became important in the late 18th cent It was the capital of the maharajas of Indore and it contains their imposing palace. The city has three colleges Cotton cloth is manufactured

Indra (ĭn'drə), in the Vedic religion and in Hinduism, god of the sky and storms The numerous hymns to Indra in the *Rig-Veda* (see VEDA) indicate that he was one of the chief beneficent deities of the early Aryan invaders of India. He was believed to supply rain and drive away evil spirits. With the rise of Brahmanism he was displaced in importance by the trinity of Brahma, Vishnu, and Siva (see HINDUISM).

Indre (ăⁿdrə), department (2,666 sq mi , pop 252,075), central France, in BERRY, traversed by the Indre river, a southern tributary of the Loire Châteauroux is the capital

Indre-et-Loire (ĕdrālwär'), department (2,378 sq. mi , pop 349,685), N central France, drained by the Indre and the Loire Occupying most of TOURAINE, it has Tours as its capital

induction Electrostatic induction is the production of an electrical charge on a body by bringing it near a charged body Electrodynamic induction is the generation of an electromotive force on a conductor by the effect of an electric current flowing in another conductor near it but not in contact or connected with it. Electromagnetic induction is accomplished by the movement of a conductor across the field of a magnet or the movement of the magnetic field over the conductor Self-induction (or inductance) is the setting up of an electromotive force in a conductor which opposes the change of a current, i.e., it retards both an increase and a decrease, so that a current cannot be instantaneously started or stopped. Self-induction is sometimes called electromagnetic inertia. Electrostatic induction is based upon the fact that like charges of ELECTRICITY repel each other and unlike charges attract. When, therefore, a negatively charged body is brought near an uncharged body, negative charges in the uncharged body are repelled to a part of the uncharged body farthest from the position of the charged body. If a means of escape is afforded these negative charges (e.g., through a conductor leading into the ground), some will leave the uncharged body and run off into the ground. If the ground connection is removed before the charged body is withdrawn, these negative charges will not be able to return and the body which was uncharged originally will be positively charged since its negative charges are less in number than its positive Such a procedure is called "charging by induction," and the principle is followed in many devices, e.g , the electroscope, the electrophorus and other electrostatic machines, and the CONDENSER (of which the LEYDEN JAR is a simple type). Electrodynamic induction is observed in the apparatus known as the induction coil or Ruhmkorff coil, which consists essentially of two coils and a soft-iron core. One coil, the primary coil, is composed of a few turns of heavy, insulated wire wound around the core of soft iron and connected to a source of direct-current electricity. The other coil, the secondary coil, in which the current is induced, consists of many turns of fine wire wound around, but insulated from, the primary coil and connected to a spark gap Each time a current is set up or shut off in the primary coil, an electromotive force is induced in the secondary coil for an instant and a spark jumps across the gap connected to the secondary coil When the flow of current in the primary coil is turned on and off at very short intervals, a rapid succession of sparks occurs Various applications of the induction coil (see IGNITION) are in common use Electromagnetic induction involves the generation of an electromotive force in a conductor, as in a coil of wire, by the movement of a magnet through it The magnetic field is altered by the action of the magnet, and this alteration results in the production of the electromotive force in the coil For magnetic induction, see MAGNETISM

induction, in LOGIC, the process of reasoning from the particular to the general It is the complement of deduction, which is reasoning from the general to the particular The first systematic elucidation of the deductive process is ascribed to Aristotle; of the inductive process, to Francis Bacon Both processes are applied in daily living generally and in research constantly. By observation of particular events (induction) and from already known principles (deduction), hitherto unknown principles are set up as hypotheses, by deduction, the principles are tested by the results of particular crucial applications, as these tests satisfy the conditions of the hypotheses, laws are arrived at by induction, from these laws further results may be determined by deduction The process of deduction is sure if the original proposition is true Induction attains at most only a high degree of probability, which depends ultimately on the uniformity of the subject matter

indulgence (ĭndŭl'jəns), in the Roman Catholic Church This Church teaches that the penitent sinner, having been forgiven through the agency of the sacrament of PENANCE, must still make satisfaction for his sins There are also venial sins of which the confessional takes no cognisance, for which the sinner must be punished after his forgiveness, PURGATORY is the spiritual fire in which the dead repentant sinner is punished for his sins Now Jesus Christ and the saints have by their good works made vicarious satisfaction to God for the sins of others The amount of the satisfaction is called doctrinally the infinite Treasury of Merits The Church is appointed by God to afford repentant sinners some share in this vicarious satisfaction already made—in other words, to remit to them punishment they would have to undergo in purgatory had not Jesus Christ and his saints made satisfaction already The official statement of this remission is an indulgence, it is conventional to state the amount of an indulgence in terms of time, in days, years, and quarantines, but these apportionments of time are purely relative Roman Catholics who have had their sins forgiven may gain indulgences in many ways, e.g , by saying certain prayers, and by visiting certain churches Until the Catholic Reform of the Council of Trent there were many abuses in the granting of indulgences, especially in the purchase of indulgences for money Perhaps more dangerous was the popular misunderstanding that indulgences were pardons of sins. It was the abuses in the granting and the teaching of indulgences which Martin LUTHER first denounced

Indus (ĭn'dəs), river, c.1,800 mi. long, rising in the Himalayas in W Tibet at an altitude of c 17,000 ft It follows a precipitous course W through Tibet and then NW through Kashmir In W Kashmir it flows through a defile c.13,000 ft. deep. The river enters West Pakistan and proceeds almost due S through North-West Frontier Prov. and through West Punjab prov , where it is joined by the Panjnad, the united stream made by the five rivers of Punjab. Shifting to the southwest, the Indus enters Sind prov and follows a twisting path to empty into the Arabian Sea through the channels of its delta (c 3,000 sq. mi). The Indus is the major river of West Pakistan, and in the desert regions through which it now flows it supported a great civilization (see MOHENJO-DARO). Its turbulent course, especially in the north, causes devastating

shifts in the channel and makes the river generally unsuitable for navigation The chief economic value of the Indus is in supplying water for irrigation, the Sukkur barrage (dam) in Sind is the main irrigation work. The Indus delta is of little utility, for unlike the deltas of many other rivers, it is composed of clay and is infertile

Indus Civilization: see MOHENJO-DARO

industrial diseases: see OCCUPATIONAL DISEASES.

industrial management, term applied to highly organized modern methods of carrying on industrial, especially manufacturing, operations Before the Industrial Revolution men worked with hand tools, manufacturing articles in their own homes or in small shops In the third quarter of the 18th cent steam power was applied to machinery, and men and machines were brought together under one roof in factories, where the manufacturing process could be supervised This was the beginning of shop management In the next hundred years factories grew rapidly in size, in degree of mechanization, and in complexity of operation, but although there was a steady gain both from the use of improved machines and from better division of labor, the growth was accompanied by much waste and inefficiency With increasing competition after the Civil War, American engineers began to seek means of improving plant efficiency The first sustained effort in this direction was made by F W Taylor, an assistant foreman in the Midvale Steel Company who in the 1880s undertook a series of studies to determine whether workers used unnecessary motions and hence too much time in performing operations at a machine Each operation required to turn out an article or part was analyzed and studied minutely, and superfluous motions were eliminated Records were kept of the performance of workers and standards adopted for each operation Such time and motion studies, improved by experience, have become a permanent feature of shop management The early studies resulted in a speeding up which required the introduction of rest periods for the workers It has been found that a combination of the best movements of different workers is a better standard than the shortest and speediest movements of the most proficient workers The performance of machines is also studied Specialists are employed to keep machines in condition and proper working parts always ready Automatic machines are frequently checked and adjusted to prevent variation in the quality of their output, a more recent practice sometimes referred to as quality engineering The flow of materials through the plant is supervised so that men or machines may not be idle / Constant inspection is made to keep output up to standard Charts are used for recording the accomplishment of both men and machines and for comparing them with established standards Careful accounts are kept of the cost of each operation When a new article is to be manufactured it is given a design that will make it suitable for machine production, and each step in its manufacture is planned including the machines and materials to be used The tendency is to train workers on the job, and foremen are selected and taught how to give this training and how to assist workers to overcome job difficulties Supervisors are trained in new techniques by means of periodic conferences with experts [The principles of scientific management have been gradually extended to every department of the organization—office work, financing, marketing, and so on With the development of industrial psychology industrial management has come to include the whole field of industrial relations, not only those of men to materials and machines, but those of men to management Soon after 1910, American firms established the first personnel departments, and eventually some of the larger ones took the lead in efforts to create in the plant a mental environment conducive to worker efficiency Time and motion studies had taught management to take account of the limits of human physical and mental capacity and of the importance of a good physical environment, good lighting, heating, and ventilation [Safety devices, better sanitation, plant cafeterias, and facilities for rest and recreation have been provided, thus adding to the welfare of employees and enhancing morale Much of this has been an adjustment to the demands of the modern worker voiced through his union or otherwise Most important of all has been the endeavor to meet the aspirations of the worker in his capacity as a wage earner to obtain the means of a good life during his working years and security in his old age—hence various provisions for health and group life insurance and old-age pensions [Some corporations permit him to buy stock, others admit employees to representation on the board of directors [A more important form of recognition is found in employee representation on some body, variously called shop committee, joint conference committee, works council, or industrial council, where a great many matters, from wages to personal grievances, may be taken up directly with management and equitably disposed of [Many corporations provide special opportunities for training and promotion for workers who desire advancement, and in recent years some have made efforts to solve such difficult problems as job security and a guaranteed annual wage See Stuart Chase, *Men and Machines* (1929); Elton Mayo, *The Social Problems of an Industrial Civilization* (1945)

Industrial Revolution. By the term "Industrial Revolution" is usually meant the social and economic changes that mark the transition from a stable agricultural and commercial society to modern Industrialism It is used historically to refer primarily to the period in English history from the middle of the 18th cent to the middle of the 19th cent , in which phenomenal changes in social and economic structure became apparent with the multiplicity of new processes and new conditions produced by inventions and technological innovations The same process is to be seen at later times and in changed tempo in the other countries of the world There has been, and is, much objection to the term, particularly because many economists feel that the word *revolution* suggests sudden and violent change, whereas the transformation of society was actually gradual *Revolution* also suggests a stable society before the changes and a resettlement and new stable society after the event Yet the term seems no more objectionable than the conventional labels applied to other periods and processes in history, such as the Renaissance, and is certainly more nearly accurate and just than many of them, such as the Dark Ages The ground was prepared and preliminary changes in social and economic structure were made in a long period, beginning at least by 1600 The voyages of the great era of discovery and expansion from Western Europe in the 15th and 16th cent had opened the way for tremendous commercial development Capitalism appeared and the commercial entrepreneur in the 17th cent marshaled his sources of material and his labor Many machines were invented and there were sizable factories using them, but these were the exceptions rather than the rule Wood was the material, water and wind the power of these factories In the 18th cent this was changed The sign and the badge of the Industrial Revolution is the application of steam to power, though this was accomplished by James WATT, building upon earlier work by Frenchmen and Englishmen, only in 1769, when the revolution was certainly already in its period of brisk development It is conventional in histories to trace the revolution by noting some of the inventions in what was the key industry of the early revolution, cotton textiles Among these inventions were James Kay's flying shuttle (1733), James Hargreaves's spinning jenny (patented 1770), Richard Arkwright's water-power spinning frame (1769), Samuel Crompton's mule (1779), and Edmund Cartwright's power loom (patented 1785) The men whose names were attached to the innovations were not always the inventors, and the development of many new methods and new machines was largely anonymous Two other fields of industry witnessed changes that were about as important and were equally symptomatic of the industrialization which was advancing with government and private aid The use of coke in iron production had far-reaching effects The coal mines now became paramount in importance, and the Black Country appeared in England at the same time that Lancashire and Yorkshire were being transformed into the greatest textile centers of the world Ceramics also saw a new era with rapidly improving methods associated to a large extent with the name of Wedgwood Factories sprang up everywhere and about them developed industrial towns Fortunes were made with dizzy speed English industry aided British commerce and the widening market aided industry, thus industrialism grew by what it fed on Canals were dug and roads built The coming of the railroad and then of the steamboat wrought new changes, which continued The Bessemer process made a gigantic contribution, for it was largely responsible for the extension of the use of steam and steel that were the two chief features of industry in the middle of the 19th cent Chemical innovations and, most important of all perhaps, machines for making machines played an important part in the vast changes In the truer sense, the revolution did not end at all in England New periods came in with electricity and the gasoline engine However, it may be said that if we are to consider the revolution ended when industry has become a dominant factor in the nation's life, then the Industrial Revolution may be considered as terminated in England by 1850 France had in the 17th and 18th cent kept pace with England in the early period of development but later lagged in industrial development, and the British victory in the long-continued commercial rivalry took markets away from France The revolution did not make the rapid progress that it did in England but after 1830 developed steadily The railroad and improved transportation preceded the introduction of the revolution into Germany which is conventionally said to have accompanied the formation of the ZOLLVEREIN, industrial Germany was created after 1850 The United States made some contributions to the early revolution, notably Eli Whitney's cotton gin. But the transformation of the United States into an industrial country took place largely after the Civil War and on the English model The textile mills of New England had long been in existence, of course, but the boom period of industrial organization was from 1860 to 1890 The Industrial Revolution was introduced by Europeans into Asia, and the last years of the 19th and the early years of the 20th cent saw the development of industries in India, China, and Japan, but Japan is the only country of the Far East which may be said to have had a real Industrial Revolution The Russian Revolution had as a basic aim the introduction of industrialism Generally speaking, the effect of the Industrial Revolution was the derangement of society of the country in which it occurred Perhaps the most important—the fundamental—result was the regimentation of society into the opposing classes of capital and labor The doctrine of laissez faire was essentially a part of the Industrial Revolution Adam Smith was as much a figure of it as James Watt himself All economic thought since the 18th cent has dealt with an attempt to stabilize and to interpret the Industrial Revolution Karl Marx and Socialism, the Manchester school, the various utopian schemes have all attempted to foresee the end of the process which has brought world economic interdependence, urbanization with the evil of the slums, the exploitation of peoples of lower material culture, an uneasy economic process fluctuating between boom and depression, the world-wide raising of levels of material goods (the "standard of living"), and all of the other vast economic problems of our day See C D Wright, *The Industrial Evolution of the United States* (1895), Arnold Toynbee, *Lectures on the Industrial Revolution* (1908), J L Hammond and Barbara Hammond, *The Rise of Modern Industry* (3d ed , 1927), Eileen Power, *The Industrial Revolution, 1750-1850* (1927), Paul Mantoux, *The Industrial Revolution in the 18th Century* (tr by Marjory Vernon, 1928), A P Usher, *History of Mechanical Inventions* (1929), Witt Bowden, *The Industrial History of the United States* (1930)

industrial union, one composed of all the workers in a given industry, regardless of skill, craft, or occupation The industrial union played until 1935 a subordinate role in American labor Until the 1870s all unions in the United States had been trade unions, organized on a craft basis, a modified form of industrial union appeared then with the Knights of Labor After the downfall of that labor body in 1890, some 15 years elapsed before a new organization cutting across craft lines made itself felt in labor affairs This was the INDUSTRIAL WORKERS OF THE WORLD, whose policy it was to accept everyone, both skilled and unskilled, regardless of race, sex, or creed The split between the American Federation of Labor and the CONGRESS OF INDUSTRIAL ORGANIZATIONS, in 1935, resulted in a 33 percent increase in the number of industrial unions Three kinds of industrial unions are recognised those consisting of all employees working on the same commodity (e g , brewery and electrical workers), those using the same tools in working on different materials (e g , textile and aluminum workers), and all employees of a given factory regardless of how many industries are represented there (e g , steelworkers, rubber workers, and glassworkers) The industrial union is called a vertical union, since workers from the highest to the lowest skills are members, as opposed to the horizontal or craft union See J E. Johnsen, comp , *Industrial versus Craft Unionism* (1937).

Industrial Workers of the World (I W.W.), revolutionary industrial union organized in Chicago in 1905 by delegates from 43 labor organizations Its leaders were Eugene V Debs, William D Haywood, Daniel De Leon, William E Trautmann, and Vincent St John Members were called, among other nicknames, the Wobbies The aim of the I W W was to unite in one body all skilled and unskilled workers for the purpose of overthrowing capitalism and rebuilding society on a socialistic basis Its methods were DIRECT ACTION, propaganda, the boycott, and the strike, it was opposed to sabotage, to arbitration or collective bargaining, and to political affiliation and intervention The organization spread to Canada and Australia and in a very small way to Europe, but its main activities were confined to the United States, where it was especially strong in the lumber camps of the Northwest among dock workers in port cities, in wheat fields in the central states, and in textile and mining areas The stand against political action led to controversy among the members, with De Leon emphasizing the Marxist point of view as against those opposing political action De Leon and his followers were expelled in 1908 and set up an independent organization, which, never very strong, was dissolved in 1925. In 1924 a split between the Westerners and the Easterners over the question of centralization resulted in a victory for the Easterners, with the Westerners setting up a new organization with headquarters in Oregon, based on the so-called Emergency Program, or a loose federation of highly autonomous

locals Of the 150 strikes conducted by the I W W , the chief ones occurred at Goldfield, Nev (miners, 1906–7), at Lawrence, Mass (textile workers, 1912), at Paterson, N J (silk workers, 1913); in the Mesabi range, Minn (iron miners, 1916), in the lumber camps of the Northwest (1917), in Seattle (general strike, 1919), and in Colorado (miners, 1927–28) At the time of the First World War the I W W was antimilitaristic, its members were accused of draft evasion, of fomenting German-paid strikes, thereby crippling essential war industries, of sabotage, and of criminal syndicalism Many of its leaders and members were thrown into jail, and to this loss was added the large number who joined the Communist party after 1917 A further cause of decline was the fact that a great portion of the membership was made up of migratory and casual labor, difficult to form into a cohesive organization From a probable strength of 100,000 in 1912, the membership fell to probably less than 10,000 in 1930 The contributions of the I W W to the American labor movement consist in its union of skilled and unskilled labor, in its at least temporary organization of migrant and Negro workers, in improved working conditions and shorter hours, especially in the lumber camps, and in its influence on the structure of later unions See P F Brissenden, *The I W W a Study of American Syndicalism* (1920), J S Gambs, *The Decline of the I W W* (1932), Ralph Chaplin, *Wobbly the Rough and Tumble Story of an American Radical* (1948)

Indy, Vincent d' (vĕsäⁿ' dēdē'), 1851-1931, French composer He was a pupil of César Franck, whom he succeeded as president of the Société nationale de Musique In 1894 Charles Bordes, Guilmant, and D'Indy founded the Schola Cantorum, Paris, of which D'Indy was composition teacher and, from 1911 until his death, sole director His methods of teaching are largely embodied in *Cours de composition musicale* (3 vols , 1897–1933), of which he is joint author He also wrote biographies of Beethoven (1906) and Franck (1911) His compositions include a dramatic legend, *Le Chant de la cloche* (1885), two music dramas, *Symphony on a French Mountain Air* for piano and orchestra (1886), symphonic variations, *Istar* (1897), songs, chamber music, piano works, and three symphonies

Ine (ī'nu), king of Wessex (688-726?) During his reign and with his help the Church gained unity by incorporating the several Wessex monasteries and missions into a single pattern His code of laws issued in 694 set down rules for his agrarian communities and stressed his purpose of furthering Christianity He exacted treasure from Kent and extended his sway over Sussex and Surrey- and probably over Devon He abdicated and went to Rome to die, as had his predecessor, Cædwalla

inertia (ĭnûr'shu), in physics, the resistance of a body at rest to being set in motion and that of a body in motion to being accelerated, retarded, or changed in direction of motion It is a property common to all matter To overcome this inertia some external force must be applied, this fact was expressed by Newton in his first law of MOTION, commonly known in consequence as the law of inertia The mass of a body is measured by its inertia Electromagnetic inertia is shown in the lapse of time between the moment when a source of electric current is introduced into an electric circuit and the moment when the flow of current is at the maximum and between the moment when the source of current is cut out of the circuit and the moment when the current ceases to flow

inevitable accident see ACT OF GOD

Inez de Castro see CASTRO, INÉS DE

infallibility (ĭnfăl"ŭbĭl'ĭtē), in Christian thought, inability of the Church to err as a teaching authority It has been believed since the earliest times to be guaranteed in Mat 28 20, John 14 17 The analogous attribute of the Bible is usually called inerrancy Protestants widely reject infallibility of the Church There is disagreement as to what organ of the Church can speak infallibly in its name, i e , is protected by God from teaching error The Orthodox hold that the ecumenical councils are infallible Roman Catholics agree but do not accept conciliar acts unratified by the pope, because he is the successor of Peter in the Roman see and is therefore protected from error when he speaks *ex cathedra* on matters of faith or morals (his statements not fulfilling these conditions are not infallible) This dogma, enounced by the VATICAN COUNCIL (1870), created much stir, especially outside the Church

infant, human baby from birth up to the age of about two years In order to give the infant the best possible foundation of health, both the mother (during pregnancy) and the infant should be under the care of a competent physician Since no two babies have exactly the same physical constitution, reactions, or personality, it is always unwise to adopt hard and fast rules for their care, with the exception of such basic essentials as the maintenance of cleanliness in the baby's environment. A doctor, through regular examinations of the baby, can help the mother to adjust the feeding and general routine to the needs of the baby, also he will administer at the proper time the injections for establishing immunity to diphtheria, smallpox, and certain other diseases. A regular daily routine for the care and feeding of a baby should be maintained, but a completely rigid and inflexible schedule which does not allow for adaptation to the individual baby is harmful The rate of development varies considerably so that generalizations are always subject to exception At birth a full-term baby usually weighs from about 6½ to 7½ lb , during the first few days some weight is lost, but it is normally regained by the end of the second week During the first year there is a gain of about 5 to 8 oz a week, by the age of from 5 to 6 months the weight has doubled, and by the age of one year it has approximately trebled The average length of the child at birth is about 20 or 21 in , usually it increases about 5 in in the first 6 months and a total of about 8 in by the end of the first year At birth the bones of the skull are not entirely united The sutures between the bones close up in the first few weeks, but two fontanelles (called "soft spots") remain longer, the smaller one at the back of the head closes at about six weeks and the larger one toward the front of the head usually closes by the age of about one year, although there is much variation The time of appearance of the teeth also varies greatly the two lower central incisors often appear between the ages of 5 and 8 months, the four upper incisors between 8 and 10 months, the two lower lateral incisors between 10 and 11 months, the four anterior molars between 12 and 15 months, the four canines between 18 and 20 months, and the four posterior molars between 2 and 2½ years The best food for the newborn infant is human milk, and if a substitute is to be used the formula should be determined by the doctor Milk provides for the young infant the essential nutrients with the exception of vitamins C and D, which are added to the diet in the form and at the time recommended by the doctor After the first few months physicians usually recommend the gradual addition to the diet of certain cereal foods and specially prepared strained foods (vegetables, fruit, and meats) Until about 6 months of age infants sleep approximately 18 hr (from 12 to 13 hr at night with two long naps), after the first 6 months the afternoon nap is shorter, and after the first year usually only one nap is needed The daily warm bath, the sterilization of feeding equipment, and the special laundering of the clothes and blankets are essential to the health of the baby The time at which a baby talks and walks varies with the individual In addition to the proper physical care and feeding of the infant, it is recognized that affection and a feeling of security are absolutely essential to the healthy mental development of the infant From its earliest days an infant reveals both physical and emotional disturbances if it is not given a normal amount of love and attention Serious psychological disturbances often are manifested in older children deprived in infancy of affectionate care, even though they have had adequate food and an otherwise suitable environment See G D Scott, *Heredity, Food, and Environment in the Nutrition of Infants and Children* (1942), L E Holt, *The Care and Feeding of Children* (revised by L E Holt, Jr , 1943), M A Ribble, *The Rights of Infants* (1943), A L Gesell, *How a Baby Grows a Story in Pictures* (1945), Angelo Patri, *How to Help your Child Grow Up* (1948), R M Smith, *The Baby's First Two Years* (rev ed , 1948), F W Clements, *Infant Nutrition* (1949)

infanticide (ĭnfăn'tŭsīd) [from Latin, = child murder] It is believed that infanticide is most common among those primitive peoples whose food supply is often inadequate In certain primitive societies, besides, children who are deformed or are believed tainted by evil magic (e g , twins) may be slain on birth In most of the Greek city-states and in Rome an infant's father determined whether he should live In a few city-states the decision was made by the mother, and in Sparta it was made by a public official An allusion to the custom in some ancient societies of sacrificing children may be present in the biblical account of Abraham's near-sacrifice of his son Isaac Gen 22 Christianity, like Islam and Judaism, utterly condemns infanticide as murder, and in all modern countries the act is a crime In most countries it is also a crime to destroy a fetus by abortion or other means when there is no medical necessity

infantile paralysis see POLIOMYELITIS

infantile sexuality: see PSYCHOANALYSIS

infantry. see ARMY

infectious diseases. see COMMUNICABLE DISEASES

inferiority complex, term introduced into psychology by Alfred Adler and referring to a COMPLEX of emotionally toned ideas which are centered on real or imaginary handicaps Adler believed that the individual, in an attempt to compensate for his feelings of inferiority, behaves in a manner which will prove that these feelings are unjustified. Failing to compensate successfully, the individual develops a NEUROSIS and may withdraw from reality and limit his social participation It has been pointed out that the bully among children is often the child with an underlying fear of his own weakness However, the mode of compensation may be directed toward socially or individually valuable ends, as in the case of Demosthenes, who, according to tradition, compensated for a speech defect by becoming a great orator

infinitive: see MOOD.

infinity, in mathematics, roughly a quantity larger than any number, it is indicated by the symbol ∞ More precisely, it is defined by the following statement If an unending sequence of values has the property that for all large numbers mentioned it is possible to find a place in the sequence such that all values beyond this place are larger than the given large number, the sequence is said to become infinite or to approach infinity For example, this is true of the sequence of natural numbers 1, 2, 3 , for no matter how large a number is mentioned it is always possible to count beyond it to larger numbers In geometry infinity means a position (point or line or plane) at an infinite distance from the portion of space considered, as in the statement, "Parallel lines meet at infinity "

inflammation, local reaction of the body to irritation which may be caused by pathogenic microorganisms, by physical and chemical agents, and by trauma It consists of the widening of blood vessels of the part affected and the passage of plasma and white blood corpuscles, especially the polymorphonuclear leucocytes, into the tissues Clinically it is characterized by redness, swelling, heat, and pain It is effective in combating injury and is followed by repair of tissue Certain types of inflammation result in PUS formation, as in an ABSCESS

inflation and deflation In economics, inflation is sometimes defined as the increase of the circulating currency beyond the needs of trade, and deflation as the opposite tendency Each process involves, respectively, a fall or rise in the purchasing power of money and a corresponding rise or fall of prices Some economists make price changes themselves the only valid criteria of inflation or deflation Inflation may be due to a large influx of bullion, such as took place in Europe after the discovery of America and at the end of the 19th cent when new supplies of gold were found and exploited in South Africa, but wars are the most common cause of inflation in modern times as government borrowing, the issuance of paper money, and a diminished supply of consumer goods increase demand and prices Inflation stimulates business and wages also rise, but since they fail to match the increase in prices, real wages diminish Stockholders make gains—often illusory—from increased business profits, but bondholders lose because their fixed percentage has less buying power Deflation, which is characteristic of the downward movement of the business cycle, lowers prices and increases unemployment through the depression of business Deflation never matches inflation in extent, governments prefer to devaluate or arbitrarily cheapen the metal value of the currency rather than resort to deflationary measures which involve a rise in the value of money and of debts See Irving Fisher and H W Fisher, *Inflation!* (1933), E T H Kjellstrom and others, *Price Control the War against Inflation* (1942)

inflection, in grammar In most languages words can be arranged in formally similar sets, such that members of each set have a common feature (the stem, root, or base), and members of different sets have features in common not included in the stem, these features are often called the inflections Thus, *look, looks, looking,* and *looked* and *talk, talks, talking,* and *talked* are inflectional sets, the stems being *look* and *talk,* the inflections being the following suffixes—none, *s, ing,* and *ed* (that is, *0*) Many languages have extensive inflection, e g , Latin, Eskimo, Fox, and Arabic Many have few or no inflections, e g , Chinese In Latin grammar noun inflection is called declension and that of verbs is conjugation The typical Latin noun or adjective is inflected for CASE and NUMBER, the adjectives are inflected for GENDER Latin verbs have overlapping categories of inflection, MOOD, VOICE, TENSE, person, and number Some linguists distinguish between inflection and agglutination, which is inflection with relative looseness of fusion between stem and inflectional feature Such looseness appears in *kinglike* vs *kingly,* where the fusion may be said to be closer in the second than in the first In the 19th cent , inflection and agglutination were used as criteria for comparing languages, and a theory was widely held that agglutination was more primitive than inflection With the increase of knowledge of languages it was found that any known language is just as expressive as other languages and simply by extending its vocabulary can be fully adapted to new situations This discovery did much to destroy the fallacy of the prestige of inflection, especially Latin inflection See ABLAUT, GRAMMAR, UMLAUT, ENGLISH LANGUAGE See Edward Sapir, *Language* (1921), Leonard Bloomfield, *Language* (1933)

influenza (ĭn"flōĕn'zu), contagious, infectious disease occurring characteristically in epidemic and pandemic outbreaks and capable of spreading with great rapidity. The cause is thought to be a virus Symptoms of the disease are its sudden onset,

fever, chilliness, aching pains in the back and in the extremities, and rapid progressive inflammation of the mucous membranes of the respiratory tract. The condition commonly known as grippe (generally associated with severe catarrhal fever) and severe cases of the common cold are difficult to differentiate from influenza The treatment of influenza consists of bed rest, increased intake of fluids, and the use of ascorbic acid and penicillin The injection of influenza vaccine is employed to help prevent the disease

information, in law see INDICTMENT

infrared rays (ĭn″frŭrĕd′), invisible rays of longer wave length than visible light rays and noticed especially for their heating effect They are utilized in photography for taking pictures through light fog and haze and for taking photographs useful in astronomy, criminology, industry, and medicine

infusorial earth (ĭn″fyōōsō′rēŭl), name sometimes used to refer to deposits more correctly known as diatomaceous earth (see DIATOM) The inaccurate usage probably arose before the true nature of the material was recognized The term *Infusoria* was formerly used rather loosely for minute organisms in general, but was later restricted to a class of one-celled animals The term *infusorial earth* is, therefore, not accurately applied to pure diatomaceous earth Some deposits similar to diatomaceous earth do contain siliceous material derived from the skeletons of minute animals

Inge, William Ralph (ĭng), 1860–, Anglican prelate and author He was fellow of King's College, Cambridge (1886–88), fellow and tutor of Hertford College, Oxford (1889–1904), and vicar of All Saints, London (1905–7) He then became Lady Margaret professor of divinity and fellow of Jesus College, Cambridge He was dean of St Paul's Cathedral from 1911 to 1934 He has given notable courses of lectures in various universities and is widely known for his originality of thought and for a quality of pessimism to which is due the appellation "the gloomy dean" Among his many published works are *The Church and the Age* (1912), *Lay Thoughts of a Dean* (1926), *More Lay Thoughts of a Dean* (1931), *A Rustic Moralist* (1938), *Fall of the Idols* (1940), *Ultimate Values* (1945), and *Mysticism in Religion* (1948)

Ingelow, Jean (ĭn′julō), 1820–97, English poet and novelist Her work came into prominence in 1863 with a volume of poems which included the popular "High Tide on the Coast of Lincolnshire, 1571" and "Seven Times One" Of her novels, *Off the Skelligs* (1872) and *Sarah de Berenger* (1879) are best remembered She also wrote *Mopsa the Fairy* (1869) and other stories for children

Ingemann, Bernhard Severin (bern′hart sĕvurēn ĭng′umăn), 1789–1862, Danish poet and novelist As teacher and director of Soro Academy, Ingemann adopted the folk high school principles originated by N F S Grundtvig *King Erik and the Outlaws* (1833, Eng tr , 1843) and *The Childhood of King Erik Menved* (1828, Eng tr , 1846) are historical novels recalling the past greatness of Denmark, the poems in *Holger Danske* (1837) have become popular national songs The religious *Morning and Evening Songs* (1839) contains some of the finest lyric poetry in Danish

Ingenhousz, Jan (vanʹ ĭngʹunhous), 1730–99, Dutch scientist He practiced medicine in Holland, England, and Vienna and was noted for his skillful inoculations against smallpox He demonstrated respiration in plants and recorded his observations in *Experiments upon Vegetables* (1779)

Ingenieros, José (hōsā′ ēnhānyā′rōs), 1877–1925, Argentine writer and philosopher, b Buenos Aires Trained in medicine, sociology, and philosophy, he was a disciple of Comte and Herbert Spencer and was the outstanding positivist of Argentina He applied positivism to different fields (sociology, criminology, and education) and was a leader in biological psychology Among his works are *Psicopatología en el arte* (1902), *Simulación de la locura* (1903), *El hombre mediocre* (1913), and *Principios de psicología biológica* (1913)

Ingermanland (ĭngʹgurmunlănd) or **Ingria** (ĭngʹgrēu), historic region, RSFSR, S of the Gulf of Finland, between Lake Peipus and Lake Onega It is named after its ancient Finnic inhabitants, the Ingers, who have now almost disappeared In the Middle Ages it was subject to Great Novgorod, with which it passed to the grand duchy of Moscow Conquered (1617) by Gustavus II of Sweden, it was restored (1721) to Russia by Peter I, who built St Petersburg (now Leningrad) in Ingermanland The name Ingermanland lost political meaning

Ingersoll, Charles Jared (ĭngʹgürsōl), 1782–1862, American political leader and author, b Philadelphia, son of Jared Ingersoll (1749–1822) He was admitted (1802) to the bar, having studied law privately after three years at the College of New Jersey (now Princeton Univ) In several influential publications, including *Inchiquin the Jesuit's Letters on American Literature and Politics* (1810), he argued for more intellectual independence and national self-sufficiency Ingersoll served (1813–15) as a Jeffersonian in Congress and was (1815–29) U S district attorney in Pennsylvania He returned to Congress (1841–49), when he was chairman of the Committee on Foreign Affairs and was influential in securing the annexation of Texas He was an effective debater on the sectional issues of the day Besides several plays, including *Julian a Tragedy* (pub 1831), he wrote a four-volume history of the War of 1812 (1845–52) and his recollections (2 vols , 1861) See biography by W M Meigs (1897)

Ingersoll, Jared, 1722–81, American colonial official, b Milford, Conn , grad Yale, 1742 He was made (1751) king's attorney in New Haven, and later he sailed (1758) for England as a colonial agent and returned (1765) with a commission to distribute stamps under the highly unpopular Stamp Act A mob, led by John Durkee, forced Ingersoll to resign He was later crown judge of the Philadelphia vice-admiralty court until, in the Revolution, patriots forced him to return to New Haven His son, Jared Ingersoll, was, however, a patriot See biography by L H Gipson (1920)

Ingersoll, Jared, 1749-1822, American jurist, b New Haven, Conn , grad Yale, 1766, son of Jared Ingersoll (1722 81) and father of Charles Jared Ingersoll After studying law in England, he was admitted (1773) to the bar in Philadelphia and became a leading attorney, arguing many important cases before the U S Supreme Court He served (1780–81) in the Continental Congress and was (1787) a delegate to the Federal Constitutional Convention In Pennsylvania he was attorney general (1790–99, 1811 17), U S district attorney (1800–1801), and presiding judge (1821–22) of the district court of Philadelphia co In 1812 he was the unsuccessful Federalist candidate for Vice President

Ingersoll, Robert Green, 1833–99, American orator and lawyer, b Dresden, Yates co , N Y The son of a Congregational minister who settled eventually in Illinois, Ingersoll was admitted (1854) to the bar and became an able pleader before juries In the Civil War he organized and became colonel of an Illinois cavalry regiment that saw duty at Shiloh and Corinth Captured at Lexington, Tenn , he was paroled but not exchanged and resigned his commission in 1863 Although previously a Democrat, he emerged from the war a Republican, and at the party's national convention in 1876 he nominated James G BLAINE for President in his famous "plumed knight" speech He served (1867–69) as attorney general of Illinois, but his antireligious beliefs doubtless prevented any further advance Known as "the great agnostic," Ingersoll questioned the tenets of Christian belief in such lectures as "The Gods" (1872), "Some Mistakes of Moses" (1879), "Why I Am an Agnostic" (1896), and "Superstition" (1898), drawing large audiences through his eloquence and kindly charm and provoking denunciations from the more orthodox His lectures were widely read for a generation, and editions of his works still circulate, the Dresden edition (12 vols , 1900) has been reprinted several times See biography by Cameron Rogers (1927)

Ingersoll, Simon, 1818–94, American inventor, b Stanwich, Fairfield co , Conn He is chiefly remembered as the inventor of the rock drill (patented in 1871), for which he subsequently developed improvements and accessories

Ingersoll, town (pop 5,782), S Ont , on the Thames and ENE of London, settled 1793 It was named for Charles Ingersoll, a United Empire Loyalist and settler here Its industries include milling, canning, and furniture and hardware manufacturing

Ingham, Charles Cromwell (ĭngʹum), 1796–1863, American figure and portrait painter, b Ireland He settled in New York (1817) and achieved celebrity as a painter of beautiful and fashionable women He was a founder of the National Academy of Design Among his works are *Death of Cleopatra, the White Plume; Young Girl Laughing* and portraits of Gulian C Verplanck, Lafayette and De Witt Clinton (N Y Historical Society), *Flower Girl* and two portraits (Metropolitan Mus), Lafayette (capitol, Albany, N Y), and William Dunlap (National Acad of Design) Ingham also painted numerous miniatures in water colors on ivory

Ingle, Richard, fl 1642–53, English seaman and tobacco trader Little is known of him While the English civil war was in progress, he appeared (1645) with several ships off Maryland, and, armed with letters of marque from the lord high admiral under Parliament, he raided the colony and captured the capital Leonard Calvert, the proprietary governor and supporter of the king, fled to Virginia, but he returned the next year and reestablished his control The proprietary government excluded Ingle from the pardon granted to the other rebels

Inglewood, city (1940 pop 30,114, 1947 special census pop 42,964), S Calif , SW of Los Angeles, laid out 1887, inc 1908 The city is industrial as well as residential, and aircraft is made An adobe house, built c 1845, still remains

Inglis, Charles (ĭng′glĭs, ĭng′gulz), 1734–1816, Anglican bishop of Nova Scotia, b Ireland. He came to America in 1755 While assistant rector (1765–77) of Trinity Church, New York city, he actively espoused England's position in the struggle with the colonies He refused to omit the prayers for the king, and his *True Interest of America Impartially Stated* (1776) and other pamphlets as well as his letters to the press, which he signed Papinian, were strongly Loyalist In 1777 Inglis became rector of Trinity, but he returned to England in 1783 when the British evacuated New York In 1787 he was appointed the first Anglican bishop of Nova Scotia See Morgan Dix, *A History of the Parish of Trinity Church,* Vol I (1898); W. B. Heeney, *Leaders of the Canadian Church* (1920)

Ingoldsby, Thomas see BARHAM, RICHARD HARRIS

Ingolstadt (ĭngʹgōlshtat), city (pop 36,764), Upper Bavaria, on the Danube Dating from the 8th cent and fortified in the 14th cent , it was unsuccessfully besieged (1632) by Gustavus II of Sweden in the Thirty Years War The fortifications were razed by the French in 1800 The Univ of Ingolstadt, founded in 1772, was removed to Landshut in 1800, Johann Eck taught here Ingolstadt, which has textile and automobile factories, suffered some damage in the Second World War, but the Gothic minster (15th cent) and other medieval churches and houses survived

Ingraham, Duncan Nathaniel (ĭngʹgrum), 1802–91, American naval officer b Charleston, S C , appointed a midshipman in 1812 He served in the War of 1812 and in the Mexican War While commanding the *St Louis* in the Mediterranean (1853), Ingraham secured the release at Smyrna of Martin Kostza, a Hungarian political exile who had taken out first papers in the United States but had been seized by Austrian authority Early in 1861 he resigned from the U S navy and commanded Confederate naval forces along the South Carolina coast for most of the Civil War

Ingraham, Joseph Holt, 1809–60, American minister and novelist, b Portland, Maine Until 1849, when he settled in the South and became an Episcopal minister, he was a writer of sensational tales, including stories of the pirates Captain Kidd and Laffite He then started writing religious romances, the best known being *A Pillar of Fire* (1859) His son was **Prentiss Ingraham,** 1844–1904, American novelist, b near Natchez, Miss He was a soldier of fortune and a prolific author of dime novels Some 200 stories with Buffalo Bill as the hero have been credited to him

Ingram, Arthur Foley Winnington (ĭngʹgrum), 1858–1946, English prelate, bishop of London (1901–39) He was a lifelong leader in social work in London's East End His many books include *What a Layman Should Believe* (1938) and *Fifty Years' Work in London* (1940) See Percy Colson, *Life of the Bishop of London* (new rev ed , 1939)

Ingram, borough (pop 3,904), Allegheny co , SW Pa , on the Ohio and near Pittsburgh, inc 1902

Ingres, Jean Auguste Dominique (shäʹ ōgüstʹ dōmēnēkʹ ēʹgru), 1780–1867, French painter, son of a local sculptor of Montauban While studying with J L David in Paris he supported himself by playing in a theater orchestra In 1801 he won the Prix de Rome but was unable to afford the journey until five years later From 1806 to 1824 he lived in Rome, where he supported himself and his family by portraiture Some of his pencil portraits of this period are considered among his finest productions In 1824 he returned to Paris and won a triumph with his *Vow of Louis XIII* (cathedral, Montauban) Frowned upon in his youth as an unconventional painter, he was now hailed as the bulwark of Davidian classicism His real and lifelong inspiration, however, was not David but Raphael. From 1824 to 1834 he lived in Paris, receiving many commissions and honors In 1834 he returned to Rome as director of the Académie de France à Rome and during the remainder of his long life occupied a preeminent position as teacher and artist On his death in 1867 the Ingres Museum was instituted in his native Montauban, there a large collection of his paintings and drawings is to be seen. Ingres is justly celebrated as a master of line and for his undeviating devotion to pure beauty in an age given over to romanticism Many later artists, including Degas and Puvis de Chavannes, have acknowledged their debt to him Among his many admirable works are *Jupiter and Thetis* (Aix), portraits of Mme Devaucay (Chantilly) and of the comtesse d'Haussonville (Frick Coll , New York), *The Source, The Bather, Odalisque,* and a portrait of Mme Rivière (Louvre) See Henry Lapauze, *Ingres sa vie et son œuvre* (1911), Walter Pach, *Ingres* (1939)

Ingria, see INGERMANLAND

Ingul (ēngōōlʹ), river, 215 mi long, S Ukraine It is a tributary of the Southern Bug, which it joins at Nikolayev

Ingulets (ēngōōlyĕtsʹ), river, 335 mi long, S Ukraine It traverses the Krivoi Rog iron district and flows S into the Dnieper above Kherson

Ingush see CHECHEN

inheritance, in biology see HEREDITY

inheritance, in law, right to acquire PROPERTY on the death of the owner Sometimes the inheritance of real property is termed descent, and that of personal property distribution In Anglo-American law inheritance is by grace of the state, which may exercise any degree of control over the

property of the decedent (i.e., the owner who dies), including total escheat (i e, government acquisition of title) Before the liberating effect of the Statute of Wills (1540) the decedent had limited control over the distribution of his personal property but almost none over the descent of his realty Since that time a spouse is required by law to leave a minimum amount of property to the surviving spouse (see HUSBAND AND WIFE), other property which is not in TRUST or (in a few cases) in ENTAIL may be freely disposed of by a valid WILL Should the decedent die intestate, his property is divided among his closest relatives in proportions fixed by law, or if no relatives can be found, the property escheats.

inheritance tax, assessment made on heirs of property, whether by descent or by disposition of the deceased Roman law included such a tax, and it is now used in most countries In the United States there was a Federal stamp tax levied on inheritances from 1797 to 1802, and a Federal inheritance tax was levied during the Civil War and during the Spanish-American War Since 1916 a Federal inheritance tax has been permanent, with various minimums for the estates taxed and various progressive rates All states but Nevada have inheritance taxes See W J Schultz, *The Taxation of Inheritance* (1926)

Inini see GUIANA, FRENCH

Iniscaltra, Ireland see HOLY ISLAND

Inisfail (I"nisfāl') [Irish *Inis Fáil*=island of destiny], literary name for Ireland, much used during the Irish literary and patriotic renaissance of the late 19th and early 20th cent The name also occurs as Innisfail and Inishfallen

initiative and referendum, the initiating of a law or constitutional amendment by popular petition (initiative) and the referring to popular vote a law passed by the legislature (referendum) This direct form of legislation was known in Greece and other early democracies It is practiced in Switzerland, thus making the Swiss legislature of minimal importance In the United States the initiative was recognized as early as 1777 in the first constitution of Georgia Initiative operates usually by the drafting of a law or constitutional amendment by an organization, it must have a certain number of signatures (state laws require from 5 to 8 percent of the electorate) before it is put on the ballot The referendum is required in most states for constitutional amendments The legislature may itself decide to secure the electorate's opinion on certain measures See W B Munro, *The Initiative, Referendum, and Recall* (1912)

injection, introduction of a liquid into a part of the body, e g., blood vessel, skin, muscle, or rectum An intradermal injection is one in which fluid is placed within the tissue of the skin, as in the determination of allergens A hypodermic injection is one made into subcutaneous tissues by means of a syringe and needle In an intramuscular injection a syringe with a longer needle is usually employed and the substance of the muscle is penetrated, e g, in the injection of extract of liver and certain hormones In administering intravenous injections, which may consist of saline solutions, solutions of amino acids, or transfusions of whole blood and plasma, the fluid is forced directly into a vein A spinal injection consists of forcing fluid beneath the dura of the spinal cord, e g, novocaine used in spinal anesthesia Drugs may be administered by any of these methods and also by means of a metal container which introduces them into the tissues in the form of a fine spray Fluid is often injected into the rectum for sedation, stimulation, or evacuation

injunction, formal written order of a court commanding or prohibiting a certain act. The injunction, which developed as the main remedy of EQUITY, orders the defendant to perform his legal duty; it is especially used in cases where money DAMAGES cannot satisfy the plaintiff's claim Originally the courts granted only prohibitory injunctions, on the grounds that the performance of positive orders could not easily be compelled or supervised However, the practice of making positive orders in negative guise (e g, "Do not allow the wall to continue standing," meaning "Tear down the wall") gave place in the 19th cent. to a frank recognition of affirmative (or mandatory) injunctions Injunctions granted while an action is pending are termed interlocutory and are intended to protect the plaintiff's interest so that a judgment will be of use to him A final injunction, on the other hand, is the judgment of the court made after all the evidence has been heard Injunctions, like most remedies of an equitable nature, are usually granted by a judge sitting without a jury If disobedience of the injunction is suspected, the judge tries the defendant for CONTEMPT OF COURT. So long as the injunction is in effect the court may consider requests to terminate or modify it Injunctions are granted in many circumstances, including some where courts of equity formerly refused to act. Examples of recent practices are the compelling of the performance of the terms of a contract and the ordering of a defendant personally to pay legal damages and spare the plaintiff from seeking execution of his JUDGMENT An old and common injunction is that for abating a NUISANCE The use of the injunction in labor disputes is a matter of great controversy. In the United States in the late 19th cent. it became a widespread practice for employers to appeal to the courts for protection against the activities of organized labor by alleging that the purpose of a union in calling a strike or boycott was illegal, e g, unreasonably to limit the employer's freedom by requiring him to maintain a closed shop Alleging furthermore that the injury would be immediate and that the union was unable to pay damages, interlocutory and final injunctions would often be granted In the Federal courts the Sherman Anti-Trust Act (1890) and the Clayton Anti-Trust Act (1914) were used as the basis of many labor injunctions. Unions were able in 1932 to obtain the adoption of the Federal Anti-Injunction Act, which forbad the Federal courts to grant injunctions in all but a few cases Similar laws were passed by many states, especially because certain union objectives formerly deemed illegal were made lawful In recent years, however, new legislation, notably the TAFT-HARTLEY LABOR ACT (1947), has restored some power over labor injunctions to the courts See MANDAMUS See Felix Frankfurter and Nathan Greene, *The Labor Injunction* (1930)

ink. The oldest known ink is India ink or China ink, probably made in China as early as 1200 B C It is made of lampblack or of ivory black mixed with either glue or a gum and is usually marketed in dry cakes or in sticks In the Orient the dry ink is rubbed in a dish with a little water, and a brush or a reed stylus is used for writing with it It has a rich blackness and is permanent In early civilizations dyes obtained from the fruits of certain plants and sepia from the squid, octopus, and cuttlefish were used as ink The Egyptians used lampblack in a mucilaginous fluid, an impermanent mixture readily sponged off with water Nutgall ink, made of nutgalls and copperas (ferrous sulphate), was probably known as early as the 2d cent This is essentially the standard black ink still used, though the tannic acid of the ink is now commonly derived from other sources than nutgalls Like India ink, this also is black and permanent, it flows more freely from a pen than ink made from lampblack It is a filterable solution, a lampblack ink has its coloring matter in suspension Aniline dyes are generally used to make colored inks

Inkerman (ĭng'kurmŭn, Rus ēn-kĭrman'), eastern suburb of Sevastopol, RSFSR, in S Crimea Here in 1854 the French and British defeated the Russians in the Crimean War in a bloody battle Near by are cave dwellings dating from the 3d and 4th cent A D and a 14th-century fortress

Inkster, village (pop 7,044), SE Mich., residential, suburb of Detroit, settled 1825, inc 1927 Flower pots are manufactured There is a psychopathic hospital here

Inland Sea, c 240 mi long and from 5 to 40 mi wide, one of the scenic beauties of Japan It separates Honshu on the north from Shikoku and Kyushu on the south Among the ports on this important waterway are Osaka, Amagasaki, Kobe, Kure, Hiroshima, and Shimonoseki AWAJI-SHIMA is the largest of its numerous islands

inlaying, the process of ornamenting a surface by setting into it material of different color or substance, usually in such a manner as to preserve a continuous plane Inlay is employed in connection with a great variety of objects, both of major architectural character and of minor furnishing and decorative function, and makes use of a wide range of materials, such as wood, stone, ivory, glass, metal, mother-of-pearl, and tortoise shell The art is of ancient origin, examples being extant from early Egyptian times, and has been continuously and widely employed The use of the word *inlay* is now more generally restricted to the true process as applied to furniture and other objects of wood and as distinguished from parquetry and the veneered work of MARQUETRY For stone or glass inlays, see MOSAIC and PIETRA DURA, for metals, see NIELLO and DAMASCENING, and for special wood inlays, see INTARSIA

Inman, Henry, 1801–46, American portrait, genre, and landscape painter, b Yorkville, N Y, studied with John Wesley Jarvis He was a founder and first vice president of the National Academy of Design He was highly esteemed as a portrait painter in America and in England Among his distinguished sitters were Martin Van Buren and William C Macready (Metropolitan Mus.), Wordsworth (Univ of Pennsylvania), Fitz-Greene Halleck (N Y Historical Society), and Fanny Kemble (Brooklyn Mus.). His landscapes and genre works include *Picnic in the Catskills* and *Rydal Falls, England* (Brooklyn Mus.), *Mumble-the-Peg* (Pa Acad of the Fine Arts); and *The Young Fisherman* (Metropolitan Mus.).

Inman, textile town (pop. 1,115), NW S C., just NW of Spartanburg

Inn (in), river of central Europe, rising c.10 mi. SW of St Moritz, Switzerland. It is 320 mi. long and flows NE through the Engadine valley, then through the Austrian Tyrol past Innsbruck. Entering Bavaria near Kufstein, it forms part of the boundary between that land and Austria before joining the Danube at Passau.

Inn, in Great Britain, includes every hotel, public house, tavern, and coffeehouse where lodging is provided. A tavern in the strict sense of the word dispenses only food and drink. In American usage the inn is generally a small rural house for transients. Among the earliest public houses were empty huts placed at caravan stops in the Orient for the shelter of travelers and travelers. To pilgrims, temples and religious houses gave rest and refreshment, and this custom lingers in some Alpine hospices The Romans maintained post stations on their great highways for the use of messengers of state and those especially privileged For the accommodation of ordinary transients, *stabularia* were kept for man and beast In the Middle Ages hospitality was observed as one of the Christian duties by the establishment of hospices in cities and by the entertainment of travelers at monasteries Inns kept for profit appeared in Europe about the 15th cent and gained a reputable standing in England, being often named for the powerful family on whose holdings they were established They were usually built around a courtyard approached by a wide covered entry In the literature of the 18th and 19th cent the old-fashioned hostelry plays an interesting part In America colonial inns similar to the English hostelries sprang up along the great turnpikes The royalist flavor of many of the signs became offensive to the patriots, who renamed the houses, e g, City Tavern (Philadelphia), Bunch of Grapes (Boston), The True American (Trenton), The Catamount (Bennington), Fraunces Tavern (New York), and the Bird-in-Hand (Richmond)

Inner Hebrides, Scotland see HEBRIDES

Innerleithen (ĭnurlē'dhun), burgh (pop 2,359) Peeblesshire, Scotland, on the Tweed and ESE of Peebles It is a health resort and is supposed to be the site of Sir Walter Scott's *St Ronan's Well* It has a wool-weaving industry

Inner Mongolia: see MONGOLIA

Inner Temple see INNS OF COURT and TEMPLE, THE

Innes, James (ĭnz), 1754–98, American lawyer, b Caroline co, Va, grad College of William and Mary, 1772 As commander of a Virginia regiment he took part in many battles of the American Revolution He was president of the board of war for Virginia (1779) and a member of the state legislature (1780–82, 1785–87) A noted lawyer, considered second only to Patrick Henry as an orator, Innes was chosen to make the final appeal for adoption of the Constitution in the Virginia ratifying convention (1788) and greatly impressed all those present He defeated (1786) John Marshall for the office of attorney general of Virginia, but declined an appointment as U S Attorney General

Innes, Robert T. A., 1861–1933, British astronomer He is known especially for his observations and discoveries of binary stars His scientific activities were carried on chiefly in South Africa, where he was secretary of the Royal Observatory, Capetown (1896–1903), director of meteorology for the Transvaal (1903–11), and astronomer for the Union of South Africa (1911–27) He invented a method of stereoscopic film projection in which figures and scenes would be presented in lifelike relief Among his writings were treatises on double stars, on the discovery of the nearest star, Proxima Centauri, and on proof of oscillations in length of the day

Inness, George (ĭn'nĭs), 1825–94, American landscape painter, b Newburgh, N Y His father intended him to be a grocer, but he early showed talent and was apprenticed to an engraver In 1845 he opened a studio in New York, devoting himself to painting, and two years later through the kindness of a friend was enabled to go to Rome He made a subsequent visit to Rome in 1851, and in 1854 he and his wife went to Paris, where he came in contact with the Barbizon school and broadened his technique On their return they settled in Medfield, Mass There Inness painted many of his best-known canvases In later life he enjoyed a high reputation, maintaining studios in New York and in Montclair, N J, where most of his last 20 years were spent The early work of Inness is in the rather literal manner of the Hudson River school His panoramic *Peace and Plenty* is characteristic of this period. But he was not long in discovering his own personal style which became increasingly freer, more intimate, and richer in color In his later works his subjects, covering a wide range of light effects, became a vehicle for the expression of a consistently romantic mood. Inness was a Swedenborgian and sought the mystical in nature Among his principal works are *Rainbow after a Storm* and *Millpond* (Art Inst., Chicago); *Peace and Plenty, Delaware Valley, Autumn Oaks,* and *Evening—Medfield, Mass* (Metropolitan Mus.), *Georgia Pines* and *Niagara* (National Gall of Art, Washington, D C) He was a member of the National Academy of Design. Inness died in Scotland See Elliott Daingerfield, ed., *Fifty Paintings by George Inness* (1913) His son, **George Inness, Jr.,** 1854–1926, was a landscape and animal painter, pupil of his father and of Bonnat in Paris, where he was a frequent exhibitor at the Salon. Among

his best-known works are three animal paintings—*Monarch of the Farm, Mother of the Herd,* and *Shepherd and Sheep* (the last in the Metropolitan Mus) —and some excellent landscapes painted in the later manner of his father, among them *The First Snow at Cragsmoor* and *The Coming Storm.* He wrote *Life, Art, and Letters of George Innes* (1917)

Innisfail (I'nisfāl), town (pop. 1,272), S Alta , N of Calgary, in a farm region

Innisfree, small island, Co. Sligo, Ireland, in Lough Gill It is celebrated by W. B Yeats in his "Lake Isle of Innisfree "

innocence : see BLUET

Innocent I, Saint, d. 417, pope (401–17), an Italian, successor of St Anastasius I and predecessor of St. Zosimus. A powerful champion of papal supremacy in the whole Church, he upheld St. JOHN CHRYSOSTOM and condemned Pelagius He vainly tried to prevent Alaric's sack of Rome (410) Feast July 28

Innocent II, d 1143, pope (1130–43), a Roman named Gregorio Papareschi, successor of HONORIUS II and predecessor of Celestine II He was created cardinal by Paschal II On the death of HONORIUS II, some of the cardinals elected him pope, the others electing Cardinal Pietro Pierleoni as Anacletus II Innocent had to leave Rome He was soon recognized in France at the instance of St Bernard of Clairvaux, and in 1131 Emperor Lothair II England, and Spain submitted to him Roger II of Sicily adhered to Anacletus In 1137 Lothair attacked Rome, but Anacletus retained part of the city On Anacletus' death (1138), an antipope Victor IV was elected, but he soon resigned Innocent convened the Second LATERAN COUNCIL (1139) Innocent, at the behest of St Bernard, condemned the teachings of ABELARD and ARNOLD OF BRESCIA

Innocent III, b 1160 or 1161, d 1216, pope (1198–1216), an Italian (b Anagni), named Lotario di Segni, successor of CELESTINE III and predecessor of HONORIUS III He was of an important family, the counts of Segni, to which belonged also Gregory IX and Alexander IV He was trained as a theologian and jurist, and under Celestine III he lived in retirement, studying and writing He had been created cardinal in 1190 His election (1198) the day of Celestine's death was a surprise, particularly because of the new pope's youth—he was 37 Innocent seems already to have formed his theory, a most extreme ecclesiastico-political doctrine that since things of the spirit take preeminence over things of the body, and since the Church rules the spirit and earthly monarchs rule the body, earthly monarchs must be in all things in subjection to the pope, the doctrine that the sphere of the Church was limited had no real place in Innocent's idea He set out immediately after his election to realize his ideal of the pope as political, as well as ecclesiastical, ruler of the world In imperial affairs he was constantly active. He acknowledged the young FREDERICK II as king of Sicily after the king's mother, Constance, had accepted papal suzerainty over Sicily and given up certain ecclesiastical privileges, on Constance's death, Innocent accepted Frederick as his ward, a trust he faithfully executed, as even his enemies admitted In Germany the dispute between Philip of Swabia and Otto IV was arbitrated by the pope in favor of Otto (1201), at the same time Innocent clarified his idea of the relation between pope and emperor Later (1207–8) the pope favored Philip, but after Philip's murder, Innocent crowned Otto (1209), only to excommunicate him (1210) and dictate the election of the papal ward, Frederick II, as emperor (1211) Frederick made elaborate promises (as had Otto) favorable to the Holy See Innocent's relations with England proceeded to the same political end, but this was hastened by a purely ecclesiastical quarrel over the election of an archbishop of Canterbury Innocent set aside the two rival claimants and procured the election of Stephen LANGTON, King JOHN, enraged at what he felt was unwarrantable interference by the pope and at the obduracy of the clergy in opposing the demands of the king, persecuted the Church As a result the pope laid England under the interdict, excommunicated John (1209), and formally deposed him (1212) The people and the barons supported the Church and John had to submit; he received England and Ireland in fief from the pope, promising annual tribute to the Holy See Subsequently the pope stood by John after the barons coerced him into granting the MAGNA CARTA, for Innocent declared it null as a forcibly exacted promise and also as a vassal's promise made without his overlord's knowledge PANDULF became Innocent's legate in England Of Christian Spain, Scandinavia, Hungary, and the Latin East also, Innocent was virtually overlord PHILIP II of France remained independent of Innocent politically, but on a moral question, Philip's divorce, Innocent forced the king to bow to the canon law. The great failures of Innocent's policy were the Fourth Crusade (see CRUSADES) and the conduct of N Italy. This crusade, proclaimed and blessed by Innocent, never went to the Holy Land, but attacked instead two Christian states, Zara and the Byzantine Empire. Innocent inveighed against the disobedience of the Crusaders, but later accepted the *fait accompli* and tried to spread the Latin rite over the Latin Empire of Constantinople, in spite of a new Latin patriarchate, these efforts were futile, and the schism of East and West was only exacerbated In Italy, Innocent reclaimed the Patrimony of St Peter, the duchy of Spoleto, the March of Ancona, and the Ravenna district, he was recognized as temporal overlord by Tuscany, but northern Italian cities were unruly and maintained their independence throughout Innocent's pontificate Innocent initiated the Albigensian mission and the Albigensian Crusade, when he heard of the misbehavior of Simon de Montfort's crusaders, he protested in vain He supported the Teutonic Knights in the incursions along the Baltic Amid all his political activity Innocent was most energetic in the administration of the Church In this direction the triumph of his pontificate was the Fourth LATERAN COUNCIL (1215), one of the greatest of councils His was the original impetus behind St Dominic's mission, and he provided the first approbation of the institute of St Francis Innocent's interest in law was ever active, thus as pope he constantly held court, with a good name for impartiality He wrote extensively, his tract *De contemptu mundi* [on the contempt of this world] was widely read in the Middle Ages Innocent's theories of the papal monarchy had a profound effect, eventually damaging to the papacy, as when Boniface VIII attempted to use them They have no place in Roman Catholic doctrine, which teaches (with St Thomas Aquinas) that the state has its proper sphere within which its rulers are as responsible to God for their conduct as the pope is for the conduct of the Church

Innocent IV, d 1254, pope (1243–54), a Genoese named Sinibaldo Fiesco, successor of Celestine IV (who had succeeded Gregory IX not a month before) and predecessor of Alexander IV He was of a noble family Though he had been a known imperialist, Innocent as pope quickly took up the papal struggle with Emperor FREDERICK II After a futile treaty he felt unsafe in Rome and fled to Lyons, where he convened the Council of Lyons (1245, see LYONS, COUNCIL OF) Frederick was condemned again and declared deposed, and Innocent supported as pretenders to the imperium Henry Raspe and, later, William II of Holland He also tried to get an English or French prince to take Sicily as a fief, but Frederick was too strong Frederick died as the pope was opening a crusade against him (1250) Innocent did not spare the other Hohenstaufen, CONRAD IV and MANFRED, but after finding them invincible in Sicily, he recognized CONRADIN as king of Sicily Innocent was almost wholly occupied with his quarrel with the Hohenstaufen, and the taxes he levied to continue it made him unpopular with clergy and laity alike He was succeeded by Alexander IV

Innocent V, d 1276, pope (1276), a Savoyard named Peter of Tarentaise, successor of GREGORY X and predecessor of Adrian V He was a Dominican and studied at Paris under Thomas Aquinas and Albertus Magnus He became an eminent theologian and composed a standard commentary on Peter Lombard's *Sentences* He was archbishop of Lyons (after 1272) and a leader in the council there in 1274 Innocent died five months after his election as pope He was beatified in 1898

Innocent VI, d. 1362, pope (1352–62), a Frenchman named Étienne Aubert, successor of CLEMENT VI and predecessor of URBAN V He was a well-known jurist and was created cardinal in 1342 He lived at Avignon He was one of the few reforming popes of his age, doing his best to eliminate venality from church administration His major quarrel was with Emperor CHARLES IV over the Golden Bull He sent Cardinal de Albornoz into Italy to pacify the Papal States and liberated RIENZI to go with him

Innocent VIII, 1432–92, pope (1484–92), a Genoese named Giovanni Battista Cibò, successor of SIXTUS IV and predecessor of ALEXANDER VI He received the red hat in 1473 His close friend, Cardinal Giuliano della Rovere (later Julius II), largely directed the papal affairs Like his predecessors Innocent wished to stop the Turkish advance, but he succeeded by means other than the crusade he originally planned Djem, brother of Sultan BAJAZET II, had escaped the bowstring and was held captive by Pierre d'AUBUSSON, the pope saw that if he held over the sultan the threat of supporting Djem's pretensions, Bajazet would come to terms He made peace, then, with Charles VIII of France—Djem was held in Auvergne—and gave Pierre d'Aubusson the red hat, in 1489 Djem was sent to Rome Bajazet (1490) agreed to leave Europe at peace if the pope kept Djem captive Innocent VIII was not a man of bad character after he entered the clergy, though he was known as a nepotist

Innocent XI, 1611–89, pope (1676–89), an Italian (b. Como) named Benedetto Odescalchi, successor of Clement X and predecessor of Alexander VIII He was elected because of his great saintliness and desire for reform. His election had been opposed by Louis XIV, with whom he had a long, bitter quarrel over GALLICANISM, begun in this phase with Louis's collection of the revenues of vacant benefices all over France The Gallican statement of 1682 brought a papal condemnation, and when Louis revoked the Edict of Nantes, perhaps to gain papal favor, Innocent denounced the proceedings (1685) Bitterness increased when Innocent made an enemy of the archbishop of Cologne James II of England, Louis's ally, also excited Innocent's displeasure, but there is no proof of the allegation that Innocent supported William III in his accession to the English throne

Innocent XII, 1615–1700, pope (1691–1700), a Neapolitan named Antonio Pignatelli, successor of Alexander VIII and predecessor of CLEMENT XI He was frequently employed by his predecessors as a nuncio, and Innocent XI created him cardinal His election was the result of a compromise, but he showed himself a stern reformer, especially regarding nepotism, which he abolished He brought Louis XIV over to his point of view on GALLICANISM, and he condemned certain of Fénelon's doctrines as quietistic He was universally loved for his charity and piety

Innocents, Holy, children of Bethlehem killed by order of Herod the Great, who hoped to destroy the Infant Jesus Mat 2 16–18 Their feast (as martyrs), formerly called Childermas, is Dec 28

Innsbruck (ĭnz'brŏŏk, Ger ĭns'-), city (pop 97,221), capital of the Tyrol, W Austria, on the Inn river The town of Wilten, now part of Innsbruck, was the Roman Veldelina, an important river crossing First mentioned in 1187, Innsbruck received city rights and was fortified in 1233 It supplanted Merano as the capital of the Tyrol in 1420 Mt. Isel, near Innsbruck, was the place where the Tyrolese peasants, led by Andreas HOFER, made their heroic stand against French and Bavarian troops in 1809 The Hofkirche (16th cent.), a Franciscan church, is an architectural gem, it has a monument to Emperor Maximilian I, who often resided in Innsbruck Equally famous is the Fürstenburg, a 15th-century castle, which has a balcony with a gilded copper roof (*Goldenes Dachl*) The Column of St Anne (1706) is a landmark in Innsbruck's main thoroughfare, the Maria Theresienstrasse, which offers a view of the Alps The botanical garden has a large collection of Alpine plants There are several museums and a university founded in 1677 Innsbruck is a favorite summer and winter resort

Inns of Court, collective name of the four legal societies in London which have the exclusive right of admission to the bar These societies—Lincoln's Inn, Gray's Inn, the Inner Temple, and the Middle Temple (see also TEMPLE, THE)—date from before the 14th cent They take their name from the buildings where originally schools of law were held, "apprentice" lawyers gathering about to learn from masters of law, much as in guild training Today the societies are more like clubs, which have control of admission to the bar The Inns of Chancery were lesser societies, dependent on the Inns of Court, their importance declined in the 18th cent and they disappeared in the 19th cent.

Ino (ī'nō), in Greek mythology, daughter of CADMUS, wife of ATHAMAS, to whom she bore Learchus and Melicertes She plotted to kill her stepchildren, PHRIXUS and Helle, but their mother, Nephele, saved them Later, when Athamas went mad and killed Learchus, Ino and Melicertes leaped into the sea and were changed into sea deities, LEUCOTHEA and PALAEMON

inoculation (ĭnŏk'yəlā'shən), term used in the strict sense to denote the insertion of a virus into a wound in order to establish immunity by producing a mild form of the disease or to communicate a disease for experimental purposes Various forms of inoculation were used from ancient times in China, India, and Persia In England, Edward JENNER used inoculation to prevent smallpox Substances (including various microorganisms and serums) may be introduced by application to the skin (cutaneous), into the skin (intracutaneous), under the skin (subcutaneous), into a vein (intravenous), into a cavity (intraperitoneal), and into the brain (intracerebral) or the spinal cord (intraspinal). The term *inoculation* is used also to refer to the introduction of certain substances into plant tissues and of microorganisms into a culture medium or into the soil

Inonu, Ismet (ĭsmĕt' ēnōō'nōō'), 1884–, Turkish statesman and general, president of Turkey (1938–50) He served in the Balkan Wars and the First World War and became (1920) chief of staff to Mustafa Kemal, later known as Kemal ATATURK He played an important part in the establishment of the Turkish republic and in Kemal's victory over the Greeks, and he represented Turkey at the Conference of Lausanne (see LAUSANNE, CONFERENCE OF, 1922–23) As prime minister (1923–24, 1925–37) he ably seconded the reforms of Ataturk, on whose death (1938) he was elected president of the republic His party was defeated in the general elections of 1950, and he was succeeded by Celal Bayar

Inouye, Kaoru, Marquis (kou'rōō, ĭnō'ā), 1835–1915, Japanese statesman. As a young man he es-

caped to Europe with his friend Hirobumi Iro and returned to urge the adoption of Western methods After the Meiji restoration he became a minister of state and was influential in reorganizing government finances on modern lines, especially in the reform of the land tax system Throughout his life he was a friend and patron of the house of Mitsui, who supported his policies and enjoyed his backing As foreign minister (1879–87), he attempted to negotiate a revision of the unequal treaties, but his plan did not go far enough to please Japanese opinion, and he resigned Later he served as home minister and as finance minister under Ito. After Ito and Yamagata he was perhaps the most influential of the elder statesmen

Inowroclaw, Pol *Inowroclaw* (ēnôvrôts'wäf), Ger *Hohensalza* (hōunzäl'tsä), town (pop 35,808), Pomorse prov, NW Poland It passed to Prussia in 1772 and reverted to Poland in 1919 During the Second World War, in which it suffered relatively little damage, Inowroclaw was included in Germany Chiefly a trade center and a salt-water spa, it also has a salt mine There are several other industries in the vicinity

inquest, in law, inquiry by a coroner's jury into the cause of a death The term also refers to the jurors collectively The inquest, called by the CORONER, is similar to the grand JURY Witnesses are examined, but a person suspected of guilt is not permitted to make a defense Among the verdicts returnable by an inquest are natural death, accidental death, suicide, and murder Criminal prosecution may follow a verdict of murder or culpable accident

Inquisition (In"kwizi'shun) **1** The medieval Inquisition began (c 1233) when the pope commissioned certain Dominicans to investigate the secret practice of the religion of the ALBIGENSES in S France The pope thus took over a duty in which the local bishops had proved ineffectual When an inquisitor arrived in a district, a month of grace was allowed to all who wished to come forward to abjure heresy, these were given a penance, such as a command to receive the sacraments frequently, which assumed the good faith of the abjurant and was calculated to confirm his faith After the period of grace was over, persons accused of heresy who had not abjured were brought to trial Defendants were not given the names of their accusers, but they could submit a list of their enemies, and the appearance of an accuser's name on the list vitiated the charge Accused had right to counsel, and the guilty had an appeal to the pope The inquisitor conducted the trial in the presence of a representative of the bishop and of a stipulated number of local laymen Otherwise all was secret Torture of accused and witnesses soon became customary and notorious despite the long-standing papal condemnation of torture (e g, by Nicholas I) The verdict and sentence of the inquisitor could be enforced by the local ruler only This was natural, since heresy was considered a kind of revolt The idea that burning at the stake was the fitting punishment for heresy also appeared, probably by analogy with the Roman law on treason Burning of heretics was not common in the Middle Ages, imprisonment was the normal punishment A verdict of guilty also meant confiscation of property by the civil ruler, who might turn over part of it to the inquisitor's order or to anyone else This led to graft, blackmail, and simony and helped to build suspicion of some of the inquests Generally the inquisitors were eager to receive abjurations of heresy and to avoid trials In the medieval treatment of heresy the sternest repressors of heretics were the civil rulers—ecclesiastics were notoriously easy to satisfy with assurances of good will Apparently most cases finally brought to trial ended with a verdict of guilty The Inquisition was an emergency device and was mainly used in S France, N Italy, Germany, and the Papal States In modern times it continued in the Papal States until the 19th cent **2** The Spanish Inquisition was independent of the medieval Inquisition. It was established (1478) by FERDINAND V and Isabella with the reluctant approval of Sixtus IV, the first head was Tomás de TORQUEMADA From the start it was entirely controlled by the Spanish kings, the pope's only hold was in naming the inquisitor general The popes were never reconciled to the institution, which they regarded as usurping a church prerogative It was harsher, much better organized, and far freer with the death penalty than the medieval Inquisition The Spanish government tried to establish the Inquisition in all its dominions, but in the Spanish Netherlands the local officials failed to cooperate, and the inquisitors were chased out of Naples, apparently with the pope's connivance (1510) The purpose of the Spanish Inquisition was to spy out converted Moors and Jews who were insincere, but soon no Spaniard could feel safe, thus St Ignatius of Loyola and St Theresa of Ávila were investigated for heresy, and the censorship policy was such as sometimes to condemn books approved by the Holy See The Spanish Inquisition was abolished in 1820 **3** In 1542 Paul III assigned the medieval Inquisition to the department of government called the Congregation of the Inquisition or Holy Office. The modern Congregation of the Holy Office has the decision as to questions of faith and morals, of heresy, of some matrimonial cases, and of the censorship of books (the Index) There is now no Roman Catholic institution called the Inquisition The old standard scholarly (but anti-Catholic) writing on the Inquisition was that of Henry Charles Lea, who, however, failed to make a proper distinction between the different Inquisitions The work is now outdated by much recent scholarship Since 1920 have appeared monographs, articles, and much new material (manuals, journals, and records of trials) on the medieval Inquisition See Jean Guiraud, *The Mediæval Inquisition* (Eng tr, 1929), Hoffman Nickerson, *The Inquisition* (2d ed, 1932), William T. Walsh, *Characteristics of the Inquisition* (1940)

insanity or **lunacy,** in law, mental aberration or defect which may relieve a person from some of the legal consequences of his acts Insanity comprises those psychological states which excuse conduct ordinarily criminal and which make certain civil transactions invalid Criminal and civil insanity both differ to some degree from the concepts of psychopathology (see NEUROSIS and PSYCHOSIS), and there has been much medical criticism of the legal categories The law of criminal insanity is designed to save from ordinary penal sanctions persons who are not responsible for their own acts and who could not have been deterred by any threatened punishment The strictest American jurisdictions limit such insanity to ignorance of the nature of one's acts and inability to distinguish right from wrong In this view probably only a crime committed in a frenzy or by a person unable to make simple moral distinctions (e g, an idiot) would be excusable, but sufferers from PARANOIA who act in response to a delusional system might be deemed sane The jurisdictions which have abandoned the strict test often recognize paranoiacs and persons acting under a sudden irresistible impulse (usually termed temporary insanity) as lunatics In the United States the methods of determining insanity in criminal cases varies Typical are decisions by the trial judge, by the regular jury, by a special jury, and by a commission composed of lawyers, physicians, and laymen A lesser degree of mental aberration is required for civil insanity than for criminal insanity, in general, extreme deficiency of intelligence or a marked defect in reason may be sufficient Usually a contract made with a lunatic is voided unless it was to furnish him with necessities or unless he is unable to restore the benefits received The legal presumption of civil sanity is strong in the case of a testator or one in the prime of life and weak in the case of one who is sick or old and decrepit A harmless, though insane, person who is unable to carry on his affairs may be placed under guardianship on application to a court Lunatics (including the criminally insane) who are dangerous to themselves or others may be committed to institutions on the application of a close relative or of the public authorities Generally the approval of a court must be given, and in some cases a jury must first return a verdict of insane A person confined to an asylum may have his detention reviewed by habeas corpus proceedings See Gregory Zilboorg, *Mind, Medicine, and Man* (1943)

inscription, WRITING on durable material The art is called epigraphy Modern inscriptions are made for permanent, monumental record, as on gravestones, cornerstones, and building fronts, they are often decorative and imitative of ancient (usually Roman) methods The only current use of inscriptions which has no accepted substitute, the marking of graves, is also the oldest continuous use The first writing was probably everywhere done on hard materials, mainly stones (rough or hewn), clay (often marked when wet), metal, bone, and ivory When light materials like paper were developed, it was possible to distinguish between writing for temporary use and permanent recording, and epigraphy became restricted in use Outside Western history epigraphy was of importance in two independent civilizations—in the remarkable art of the MAYA, TOLTEC, and AZTEC cultures and in China There is also the exotic mid-Pacific epigraphy of EASTER ISLAND The earliest Chinese inscriptions are on bronze (c 1800 B C), and there are later writings on bone from N China From the classical period, before 200 B C, are odes on great stone drums found in Shensi The invention of paper (A D c 100) ended the role of epigraphy in China There is an important bilingual Chinese-Turkish inscription near the ORKHON (A D c 800) The Hindus used palm leaves for writing early in their history, and their inscriptions do not record the older forms of their language The most important are Prakrit inscriptions of ASOKA (3d cent. B C) The first Sanskrit inscriptions date from some centuries later The course of Western epigraphy begins in Mesopotamia and on the Nile The Mesopotamian writing, CUNEIFORM, was invented c.4000 B C, probably by the Sumerians It was created for writing on sun-dried brick. This combines durability with lightness and contrasts favorably with all other epigraphic materials in convenience of making and handling It thus anticipates some of the merits of paper. (See BABYLONIA; ASSYRIA, HITTITES, ELAM For notes on examples of epigraphic treasure-troves, see ERECH, LAGASH, NINEVEH, NIPPUR, SUSA, TEL-EL-AMARNA, BOGHAZKEUI) An Eastern congener of Mesopotamian epigraphy is found at MOHENJO-DARO (Indus valley), with its seal inscriptions on faience and ivory (c 3000 B C) Long after, in PERSIA, the Achaemenidae revived cuneiforms, in an altered form; their chief monument is the inscription of Darius I at BEHISTUN (c 500 B C) In EGYPT the HIEROGLYPHIC epigraphy had a parallel career From the I dynasty (4th millennium B C) inscriptions of the Nile present a grand panorama of history, past the age of the PYRAMID to the XII dynasty, heyday of hieroglyphic writing, then to the New Empire, with the splendid rock inscriptions at THEBES. Egyptian epigraphy lost its vitality more from the development of papyrus than the downfall of the kingdom Its influences are found everywhere in the Arabian peninsula in inscriptions of the 1st millennium B C, examples are the MOABITE STONE, Phoenician stones and coins, inscriptions near Damascus, and the Himyaritic writing of Yemen (see SHEBA) In the Mediterranean the earliest epigraphy of Greek culture appears in AEGEAN CIVILIZATION and MINOAN CIVILIZATION In Cyprus there are inscriptions of many ages, cuneiform and Greek writing side by side From the expansion of Greece through the career of Rome epigraphy flourished everywhere, and inscriptions are literally innumerable Among the older Greek inscriptions are those on vases, coins, votive offerings, statues, and the like, besides accounts of expenditures in temples, annals (e g, the Parian Chronicle on PAROS), codes of laws (at GORTYNA), decrees, bookkeeping accounts, lists of citizens, ostraca (see OSTRACISM), and many graffiti (wall scribblings) Greek influence was, of course, decisive in Italy, first in the inscriptions of the ETRUSCANS There are also many inscriptions in Italic languages, notably the IGUVINE TABLES Latin epigraphy began with religious documents, but by the end of the republic it was touching every phase of life Contemporary with the late republic there was a Celtic epigraphy in Gaul, at first in Greek letters, but the chief Celtic inscriptions are in the OGHAM writings of the Christian era The Germanic RUNES are another European alphabet used in inscriptions Latin epigraphy never died in the Roman Empire, and Christianity adapted the old forms, first in the catacombs, then in churches Modern monumental inscription is in the same tradition, but materially renovated by the neoclassicism of the Italian Renaissance For the history and examples of epigraphy, see histories of appropriate cultures, countries, languages, literatures, and periods of art

insect, an air-breathing arthropod of the class Insecta, with a distinct head, thorax, and abdomen and with three pairs of legs, one pair of antennae, and usually one or two pairs of wings in the adult Many insects, such as the BUTTERFLY, MOTH, MOSQUITO, BEE, and HOUSEFLY, undergo a complete metamorphosis from the egg through the LARVA and PUPA stages to the adult form Others such as the grasshopper and the true BUG undergo a gradual metamorphosis Changes which are more pronounced than in the gradual metamorphosis but less so than in the complete metamorphosis are characteristic of the dragon fly and some related insects Some primitive wingless insects hatch in the adult form and merely grow in size Fossil records indicate that insects are the oldest of the earth's inhabitants It has been estimated that nine tenths of the animals of the world are insects Their success is attributed to their small size, their reproductive ability, and the abundance of their food Insects cause an annual loss estimated to average $3,000,000,000, although only a few hundred of the 500,000 known species are harmful Among those which injure crops and other vegetation are the GRASSHOPPER, ARMY WORM, APHID, CORN BORER, CODLING MOTH, TENT CATERPILLAR, JAPANESE BEETLE, GYPSY MOTH, BAGWORM, and some of the scale insects Disease carriers include the mosquito, housefly, TSETSE FLY, TICK, and FLEA Insects are of great value as agents of cross-pollination (see POLLINATION) Many are natural enemies of harmful insects Others are the chief food of some fish, reptiles, and birds and of a few mammals Insects eaten by man include white ants in Brazil and grasshoppers in China From insects are obtained varied products, e g, silk, honey, cochineal, lac See L O Howard, *The Insect Menace* (1931), F E Lutz, *Field Book of Insects* (rev ed, 1935) and *A Lot of Insects* (1941), A H. Verrill, *Strange Insects and Their Stories* (1937), E. W Teale, *Grassroot Jungles* (1937) and *Near Horizons* (1942), R L Ditmars, *The Book of Insect Oddities* (1938); J H. and A. B Comstock and G. W Herrick, *A Manual for the Study of Insects* (rev ed, 1938), C L Metcalf and W P Flint, *Destructive and Useful Insects* (2d ed, 1939)

insecticide (In$\bar{e}$k'tusid), substance used to destroy insect pests. A great variety of insecticides have

been developed because some are efficacious against one type of insect and ineffective against another, some are toxic to man or to useful insects and animals, and others can be used only under certain conditions. Preparations are often classed as to mode of action, e.g., stomach poisons, which are used chiefly against chewing insects, and contact poisons, which penetrate the integument or enter the respiratory openings, causing suffocation. Insecticides are applied by dusting, by spraying, or by releasing a gas (fumigating), usually in a sealed building or room or, in fields, under a tent or other covering. Improved methods of application include the release of dusts or spray mists over large areas by airplanes, the electrification of powders by fast streams of compressed air to increase adherence, especially to the underside of plants, and the aerosol method, in which the insecticide is packed with liquefied gas into a suitable container and released (under pressure of the gas) as a fine mist. Arsenical poisons (including PARIS GREEN and lead arsenate) are among the oldest and most widely employed stomach poisons. Other stomach poisons include fluorine compounds (effective against cockroaches, ants, and other household pests), salts of copper, organic poisons such as hellebore, and synthetic compounds. Contact poisons include compounds of sulphur (especially lime sulphur) and of nicotine, petroleum oils (used also as carriers for other insecticides), coal-tar derivatives, pyrethrum, rotenone, and DDT. Pyrethrum, long used in the Near East and Persia for insecticidal purposes and introduced in Europe in the 19th cent., is derived from the flowers of certain plants of the genus *Chrysanthemum* and is used as a dust or a spray. The active principle, pyrethrin, has recently been synthesized. Rotenone, obtained from derris or from other plants (most of them tropical and long used in China and the East as poisons), like pyrethrum is highly toxic to insects but is relatively harmless to warm-blooded animals. The production of new forms of insecticides was stimulated during the Second World War by the curtailment of the principal ingredients of the older forms and by increased use to protect military forces from typhus, malaria, and other insect-borne diseases. Outstanding among new insecticides is DDT (dichloro-diphenyl-trichloroethane). Although synthesized in Germany in 1874, its value was not recognized until after the Swiss potato crop had been saved (1939) from the ravages of the Colorado potato beetle. The use of DDT during the war prevented typhus epidemics in Italy and North Africa and checked malaria in mosquito-ridden areas. Many agricultural insect enemies as well as household pests are destroyed by DDT, but its toxicity toward other forms of life and the development of resistant insect strains have not been fully determined. One of its advantages is its long-lasting residual effect. A number of chemically related substances have also been synthesized. Other recently developed insecticides are benzene hexachloride (in several forms, including Gammexane) and chlorinated camphene. Precautions must be observed in using insecticides, many of which are toxic to man. Especially dangerous are certain fumigants, notably hydrocyanic acid; gas masks must be employed while handling them. Fruit or vegetables sprayed with poisonous substances especially compounds of arsenic or lead, must be thoroughly washed. See D. E. H. Frear, *Chemistry of Insecticides, Fungicides, and Herbicides* (2d ed., 1948).

insectivorous plants see BLADDERWORT, PITCHER PLANT, VENUS'S-FLYTRAP.

Inside Passage, natural, protected waterway, c.950 mi. long, off the coast of British Columbia and SE Alaska. It threads through the ALEXANDER ARCHIPELAGO. From Seattle, Wash., to Skagway, Alaska, or via Cross Sound to the Gulf of Alaska, the route uses channels and straits between islands and the mainland which afford protection from the storms and open waters of the Pacific. Snow-capped mountains, forests, waterfalls, glaciers, and the many deep, narrow channels give it great scenic beauty. It was known to Spanish, Russian, English, and American explorers, many of whom gave names to the islands and waterways. It is the route generally used by steamers between the United States and Alaska.

insomnia, abnormal wakefulness or inability to sleep. This condition may be caused by a failure to develop a habit of regular sleep or by poor hygiene. Illness or worry may lead to insomnia, sleeplessness is often associated with neuroses. Methods of relaxation, e.g., soothing baths or reading before retiring, are sometimes of benefit.

installment buying and selling, buying and selling of goods on credit, with the stipulation that payments shall be made at specified intervals in set amounts. The goods are used by the buyer before or upon the first payment but belong to the seller until the last payment has been made. If the buyer defaults, the seller takes back the goods, and all former payments are forfeit. The buyer on installment pays a higher price, the difference covering interest on unpaid balances, insurance, and financing charges. Originating in Paris more than a century ago, the practice of retailing goods on the installment plan was first used in the United States to sell sewing machines, pianos, and household furnishings. After 1916, when manufacturers began to offer automobiles on the time-payment plan, installment selling rapidly came to include durable goods of every kind (household appliances, radios, oil burners), which otherwise would have been out of the reach of the average income earner. Large merchandisers through various devices ("letters of credit," "budget plans") now make it possible for their customers to buy any type of goods on time (e.g., automobile tires, clothing). Long-term installment purchases are usually financed indirectly by firms who specialize in this form of credit. Many banks make "consumer credit" loans directly, which may be repaid in installments. Most states regulate installment transactions to prevent them from being oppressive. Because they tended to raise prices, installment sales were rigidly curbed by the Federal government in the Second World War, when goods were scarce. See Adrian Rondileau, *Education for Installment Buying* (1944).

Insterburg (ĭn'stərbōrk), city (pop. 48,711), former East Prussia, on the Pregel and Inster rivers. It was transferred (1945) from Germany to the USSR and incorporated with the Kaliningrad (Konigsberg) oblast of the RSFSR. Its official Russian name is Chernyakhovsk (chôrnyŭkhôfsk). It is a horse-raising and cattle center and produces chemicals, textiles, and foodstuffs. The 14th-century fortress of the Teutonic Knights is now a stud farm.

instinct, in psychology, term variously defined and subject to much controversy, used generally to indicate an innate tendency, disposition, or drive to action, held to arise from the vital needs of the organism and to be expressed in activity not based upon past experience in the life of the individual. The behavior of many insects is pointed out as exemplifying almost pure instinctive behavior. The adult state is reached suddenly through metamorphosis (the pupa stage preceding it being one involving practically complete structural change). The adult, therefore, appears full grown without any past experience in the use of the body structures with which it is equipped, as those for foodgetting and reproduction, and yet proceeds to those activities (called instinctive) necessary to satisfy the organic needs. In the same way a young chick's pecking at a particle is considered as instinctive behavior, since it appears to be performed in response to hunger and occurs even when the chick has been segregated from the time it was hatched. In higher mammals gregariousness (called also the gregarious instinct or herd instinct) is commonly classed as an instinct. The parental instinct is seen in the maternal activities of suckling and caring for the young. In general instinctive behavior in man is distinguished from reflex action in that the latter involves a specific response to stimulus, whereas the former is specific only in the ends or goal but not in the activity involved in reaching that goal. Opposed to this view is that held by some psychologists which denies that adult human behavior today can be described as instinctive (as so defined). It argues that man's behavior is so complex and involves so many motor activities and is apparently so modified and complicated by civilization and the individual intelligence that any explanation solely upon the basis of instinct does not adequately explain behavior.

Institut de France (ĕstētü' də frās') [Fr., =institution or institute], cultural institution of the French state, founded 1795. It replaced five learned or literary societies. These were the FRENCH ACADEMY (governing language and literature, founded by Richelieu, granted letters patent 1635), the Académie royale de Peinture et de Sculpture (fine arts, founded 1648 by Mazarin, reorganized 1663 by Colbert), the Académie royale des Inscriptions et Médailles (public inscriptions, medal design, etc., founded 1663), renamed (1716) the Académie royale des Inscriptions et Belles-Lettres, the Académie royale des Sciences (founded 1666 by Colbert), and the Académie royale d'Architecture (organized 1671 by Colbert). The constitution and aims of the French Academy were the model for the others. In 1793 the Convention suppressed all of them. In 1795 the Directory set up a new learned society to assume the functions of the old academies. This new organization was called at first Institut national des Sciences et des Arts but eventually the title was fixed as Institut de France. It was divided into three classes (physical and mathematical sciences, moral and political sciences, literature and fine arts). In 1803 a decree of Napoleon (himself a member since 1797) changed the division to four (physical and mathematical sciences, French language and literature, history and ancient literature, and fine arts), an arrangement openly intended to suggest the old academies within the system of the Institut. A reorganization of 1816 based on the Institut of 1803 changed the names and orders of the classes to "restore" the old academies, and in 1832, under the influence of Guizot, the second class of the Institut of 1795 was restored as a fifth academy. The Institut de France therefore finally came to be comprised of five academies—the French Academy, the Académie des Inscriptions et Belles-Lettres (history and archaeology), the Académie des Sciences, the Académie des Beaux-Arts, and the Académie des Sciences morales et politiques. Membership of the academies of the Institut is not mutually exclusive, and the bodies are self-perpetuating with a veto of elections by the state. The awards and prizes given by the academies have been of inestimable importance in encouraging endeavor in various fields. The winners of the principal fine arts prizes are sent at public expense to study in the French school founded (1666) by Colbert at Rome.

Institute for Advanced Study, at Princeton, N.J., chartered 1930, opened 1933, founded by Louis Bamberger and Mrs. Felix Fuld as a research and experimental center beyond the graduate school. It includes schools of mathematics, economics and politics, and humanistic studies. It opened with a faculty of leading scholars, including Albert Einstein. Abraham Flexner was the first director, succeeded by Frank Aydelotte (1939–47). Many resources are shared with Princeton Univ. The institute owns the Gest Oriental Library.

Institute of Human Relations see YALE UNIVERSITY.

Institutes see CORPUS JURIS CIVILIS.

instrumental, in the grammar of certain languages (e.g., Russian), CASE referring to means or instrument. The Latin ABLATIVE could be called instrumental.

instrumentalism, name of the type of pragmatism formulated by John DEWEY. See RATIONALISM.

instrumentation, in music see ORCHESTRA AND ORCHESTRATION.

insulation (ĭn"sulā'shun, ĭn"syōō–), use of materials or devices to prevent the passage of heat or of electricity. Common heat insulators are asbestos, fur, feathers, glass, stone, wood, and wool, all are poor conductors of heat (see CONDUCTION). Industrial furnaces are built of brick, which conducts heat so slowly that a high temperature within is evidenced by only a relatively low temperature on the outer surface. Steam pipes and water pipes are commonly insulated with thick wrappings of asbestos pulp. Since insulators prevent the flow of heat in either direction, ice boxes are constructed commonly with double walls separated by an air space (air being a poor conductor), and each wall is lined with some insulating material. Double walls in houses and the use of hollow tiles in buildings prevent the entrance of heat and its escape. The very effective insulation in a vacuum bottle results almost entirely from the presence of a vacuum between the double walls of the inner flask. In the conduction of electricity from point to point, the conductor acts as a guide for the electric current and must be insulated at every point of contact with its supports, to prevent escape, or leakage, of the current. Dry air is a good insulator, so that it is ordinarily necessary to insulate conductors used for long-distance transmission only at their points of contact with the supporting steel structures. Glass and porcelain are commonly used, the materials being molded in bell-shaped forms or in rods made up of several segments. Underground conductors are insulated with dry cotton or pulp, rubber, and bitumen. In electrical apparatus, ebonite is widely used. Some other insulators are paraffin, sulphur, resin, and varnishes. Since wet materials can become conductors, insulation must often be waterproof. Ordinary household wires are commonly insulated by a thin rubber coating wrapped with cotton, the electric cables passing between house walls frequently have in addition a metal wrapping.

insulin (ĭn'sulĭn), antidiabetic hormone which is secreted into the blood stream by a specific group of cells (the islands of Langerhans) in the PANCREAS. F. G. Banting and C. H. Best were (1921–22) the first to obtain a preparation of insulin which would alleviate all symptoms of diabetes. As the natural hormone of the body or when injected into the body, insulin enables the body to utilize sugars and fats, prevents the excessive breakdown of protein, and permits the deposition of glycogen in the liver. It allows the individual to fight infection satisfactorily. Insulin is injected hypodermically, and since the effect is transient, injections must be given daily, and sometimes more frequently, depending on the need of the individual. Insulin may be administered to a diabetic patient by injection of a solution of zinc insulin crystals (known as regular insulin) or in the form of protamine zinc insulin or globin insulin with zinc. Both the protamine zinc insulin and the globin insulin are more prolonged in their reaction than the regular insulin, so that the injection may be given at less frequent intervals.

Insull, Samuel, 1859–1938, American public-utilities financier, b. London. He arrived in the United States in 1881 and was employed by Thomas A. Edison as a secretary. Insull for a time was high in management of the Edison industrial holdings. Insull by 1907 overcame competing public-utilities companies in Chicago, and soon he came to control the city's transit system. After numerous mergers he expanded his operations throughout Illinois and

to neighboring states. He formed (1912) a mammoth interlocking directorate which operated over 300 steam plants, almost 200 hydroelectric generating plants, and numerous other power plants throughout the United States Insull's public-utilities empire, however, collapsed in 1932, and Insull went to Greece and later to Turkey He was extradited (1932) to the United States, faced charges (1934–35) of using the mails to defraud investors and embezzlement, but he was vindicated

insurance or **assurance**, device for indemnifying or guaranteeing an individual against loss out of a fund to which many individuals exposed to the same risk have contributed certain specified amounts, called premiums Payment for the loss, divided among many, does not fall heavily upon the actual loser The essence of the contract of insurance, called a policy, is mutuality. The amount of the premium is determined by the operation of the law of averages as calculated by actuaries Devices anticipating or resembling modern insurance seem to have been known from ancient times In Babylonia traders were encouraged to assume the risks of the caravan trade through loans that were repaid (with interest) only after the goods had arrived safely—a practice resembling bottomry and given legal force in the Code of Hammurabi (c 2100 B C) The Phoenicians and the Greeks, apparently copying the practice from the Babylonians, applied it to their sea-borne commerce In Rome loans on bottomry were common under the empire The Romans, through their burial clubs which provided funeral expenses for their members and later payments to the survivors, seem also to have developed the germ of true life insurance The construction of a crude mortality table (A D c 220) is ascribed to the jurist Ulpian Insurancelike practices are traceable almost continuously from Roman times With the growth of towns and trade in Europe, the medieval guilds undertook to protect their members from loss by fire and shipwreck and to ransom them from captivity by pirates as well as to provide decent burial and support in sickness and poverty By the middle of the 14th cent, as evidenced by the earliest known insurance contract (Genoa, 1347), marine insurance was practically universal among the maritime nations of Europe Insurance in the modern sense was brought from Lombardy to the Low Countries and England The history of marine insurance is largely the history of the London firm of Lloyd's, which had its inception at Lloyd's Coffee House, where merchants, shipowners, and underwriters met in the 17th cent to transact business Fire insurance arose in Germany in the 15th cent as a communal undertaking Life insurance, hampered by laws against usury and betting, was of later growth The first life insurance policy seems to have been issued in England in 1583 In 1693 the astronomer Edmund Halley constructed the first mortality table based on the laws of mortality and compound interest This table, corrected (1756) by Joseph Dodson, made it possible to scale the premium rate to age, previously the rate had been the same for all ages Insurance developed rapidly with the growth of British commerce in the 17th and 18th cent, the complexity and multiple risks of civilized life in the 19th cent gave it a further impetus Prior to the formation of corporations devoted solely to the business of writing insurance, policies were signed by a number of individuals, each of whom placed opposite his name the amount of the risk assumed by him, hence the term *underwriter* The first stock companies to engage in insurance were chartered in England in 1720, a little later (1735) the first insurance company in the American colonies was founded at Charleston, S C Fire insurance corporations were formed in New York (1787) and in Philadelphia (1794) Almost from the beginning the companies were active in seeking means of preventing and putting out fires The Presbyterian Synod of Philadelphia sponsored (1759) the first life insurance corporation in America—for the benefit of Presbyterian ministers and their dependents After 1840, with the decline of religious prejudice against the practice, life insurance entered a boom period In the 1830s the practice of classifying risks was begun The New York fire of 1835 called attention to the need of adequate reserves to meet unexpectedly large losses, Massachusetts was the first state to require companies by law (1837) to maintain such reserves The great Chicago fire (1871) emphasized the costly nature of fires in compactly built modern cities Reinsurance, whereby losses are distributed among many companies, was devised to meet such situations and is now common in other lines of insurance too Insurance against accidental injury was offered in 1845, travelers' insurance in 1864 The Workmen's Compensation Act of 1897 in England required employers to insure their employees against industrial accidents. Public liability insurance, fostered by legislation, made its appearance in the 1880s, with the advent of the automobile it attained major importance Cab insurance (1895) and collision insurance (1899) had their start in England Burglary insurance, an American development, began to be written in 1885. Corporate fidelity bonding goes back to 1840, and title and credit insurance were first offered in the 1890s The 20th cent saw the expansion of what has been called "inland marine" insurance, which covers a vast miscellany of items, including tourist baggage, express and parcel-post packages, motor-truck cargoes, all sorts of goods in transit, even bridges and tunnels Obviously insurance may now be had against almost any conceivable risk, companies like Lloyd's will insure a dancer's legs, or a pianist's fingers, or an outdoor entertainment against loss from rain on a specified day Fire insurance usually includes damage from lightning, other insurance against the elements includes hail, tornado, flood, and drought Life insurance, originally conceived to protect a man's family when his death left them without income, has developed policies through which the amount paid in, augmented by compound interest, is paid back to the insured in a lump sum at the end of a term of years, and annuity policies, which after he attains a certain age pay the insured a yearly income for the rest of his life Complete automobile insurance includes not only insurance against fire and theft but also compensation for damage to the car and for personal injury to the victim of an accident (liability insurance), many car owners, however, carry only partial insurance In many states liability insurance is compulsory Bonding or fidelity insurance is designed to protect an employer against dishonesty or default on the part of an employee Title insurance is aimed at protecting purchasers of real estate from loss by reason of defective title Credit insurance safeguards the businessman against loss from the failure of his customers to meet their obligations In the 19th cent many friendly or benefit societies were founded for insuring the life and health of their members, and most fraternal orders and labor organizations have insurance benefits Many employers take out group insurance policies for their employees, which include not only life insurance, but sickness and accident benefits and old-age pensions, the employees usually contributing a certain percentage of the premium Since the late 19th cent there has been a growing tendency for the state to enter the field of insurance, especially to safeguard workers against sickness and disability, either temporary or permanent, destitute old age, and unemployment Germany was the first in the field of so-called social insurance, by laws adopted in 1883, 1884, and 1889 it provided protection against sickness, accident, disability, and old age Most American states have laws providing for workmen's compensation In the United States an important feature of the New Deal legislation was the Social Security Act of 1935 (see SOCIAL SECURITY), which provided for old-age assistance and old-age benefits, unemployment compensation, and aid to the blind, mothers, and children The Federal government also experimented with various types of crop insurance, a landmark in this field being the Federal Crop Insurance Act of 1938 In the Second World War the government provided national insurance for the members of the American forces See also HEALTH INSURANCE See C F Trenerry, *The Origin and Early History of Insurance* (1926), A H Mowbray, *Insurance Its Theory and Practice in the United States* (3d ed, 1946), S B Ackerman, *Insurance* (3d ed, 1948)

Insurgents, in U S history, the Republican Senators and Representatives who in 1909–10 revolted against the conservative party policies dictated by Nelson W Aldrich and Joseph G Cannon Many —but by no means all—of them joined the PROGRESSIVE PARTY See K W Hechler, *Insurgency* (1940)

intaglio (intäl'yō, intal'yō), design cut into stone or other material or etched or engraved in a metal plate, producing a concave, instead of a convex, effect It is the reverse of a relief or CAMEO The term also designates a gem so cut Seals and signet rings usually bear intaglio designs, so that when stamped upon WAX or other plastic substance the impression is in relief *Intaglio rilievo* is a relief sunk below the surface. See ENGRAVING and PRINTING

intarsia (intar'sēu) or **tarsia** (tär'sēu), properly a form of wood inlay The term is sometimes applied to inlays of other materials such as ivory and metal It is differentiated from MARQUETRY by the basic veneering process of the latter The art of INLAYING in wood is in general practice, the term *intarsia* is applicable to a particular type developed in Siena, Italy, in the 13th cent and probably derived from Oriental inlays of ivory upon wood The art spread in Italy, reached its best form in the 14th and early 15th cent, and remained in use throughout the 16th cent It was applied not only to domestic furniture but to choir stalls and other appurtenances of churches and public edifices. Designs included pictorial scenes and conventionalized scrolls, arabesques, and geometric forms. Early work displayed few colors, but the development of techniques for staining wood gave a wide range in tones The art was practiced to a limited extent in other countries including Spain, Germany, and Holland.

intelligence, in psychology, is variously described as the general ability of the organism acting as a whole to utilise understanding gained in past experience in dealing with a similar or new situation, to adjust or adapt quickly and readily to the environment, to learn without difficulty, or to form new behavior patterns to meet a new situation by the modification or readjustment of those already acquired Some consider that the degree of intelligence is determined by the degree of complexity of the problem which is met and solved, by the speed with which solution is completed, and by the number of problems which can thus be treated It is at present more or less generally accepted that potential intelligence is in some degree related to heredity and that environment is a determining factor in the extent of its realization Because of the importance in education of determining the ability of an individual to learn, **intelligence tests** have come into wide use Alfred Binet's introduction of his first scale (group) of tests in 1905 marked the beginning of the testing movement That intelligence tests actually give a measurement of the intelligence of individuals is questioned by some psychologists, who point out that, although the tests are apparently testing something, there is no way of determining what it is exactly that they do test On the other hand, use of the tests in education has been of great practical value in affording a means for assigning children to class groups—for predicting with a great deal of accuracy whether or not a given child would be able to complete the requirements for graduation from high school or be able to pass the prescribed courses in college which lead to a degree In industry tests are used often as one of the means for determining the suitability of an applicant for certain positions Tests have also been standardized for various industrial occupations, for use in the army, and for various other purposes Intelligence tests consist in general of a heterogeneous series of questions to be answered, problems to be solved, and tasks to be fulfilled, all of varying degrees of difficulty, which the individual is given to complete within a specified length of time The questions and other parts of the test mean nothing in themselves, and so-called standardization of the test is essential before any conclusions as to intelligence can be drawn Standardization of a test consists in its administration to as many individuals as possible of various ages From the results thus obtained it is possible to determine the average number of questions answered, problems solved, and tasks completed by individuals of certain ages For example, out of a hundred questions, the average number answered correctly by a child of 7 might be 10, by a child of 9, 15, by a child of 12, 30, and so on If then a child of 9 answers 30 questions correctly, he is classed with the children of 12 and his mental age (M A) is said to be 12 The so-called **intelligence quotient** (I Q) is a comparison between this mental age and his real or chronological age (C A), in this case 9 It is computed by dividing the mental age (12) by the chronological age (9) and multiplying the result by 100 to eliminate the decimal point In this case, division of the M A by the C A gives the quotient 1 33, and multiplication by 100 gives an I Q of 133, which is relatively high As the child grows, the mental age and chronological age generally increase at a relatively equal pace so that the I Q varies to only a small extent There has been a decline in interest in pure intelligence tests since the 1920s and a corresponding increase in the number of mental tests which measure special aptitudes and personality factors Certain intelligence tests, such as the Wechsler-Bellevue and the "draw a man," are designed to do both A large number of tests are available for all age levels from infancy upward. They are usually classified as group tests (to be given to a number of individuals at the same time) and as individual tests Some are oral, others are written, and some are devised for use where language difficulties are encountered, these last are based upon the performance of some physical task The most commonly used individual test is the 1937 Stanford Revision of the Simon-Binet Intelligence Tests. The group tests include the Army Alpha (Wells Revision), the Army General Classification, the Ohio State Univ, the Terman-McNemar, the Thorndike College Entrance, the California Test of Mental Maturity, the Kuhlmann-Anderson, and the Pintner-Paterson See L M Terman and M A Merrill, *Measuring Intelligence* (1937), G. D. Stoddard, *Meaning of Intelligence* (1943), David Wechsler, *Measurement of Adult Intelligence* (3d ed., 1944).

Inter-American Conferences: see PAN-AMERICANISM

Inter-American Highway, section, 3,349 mi long, of the PAN AMERICAN HIGHWAY system from NUEVO LAREDO, Mexico, to Panama city, Panama. Much of the highway had been built by the countries concerned prior to Dec, 1941, but wartime necessity led the U.S Congress to appropriate $20,000,000 to assist completion; subsequent aid was granted, but later work was done by each nation on its own In late 1949 there remained uncompleted sections in Chiapas (Mexico), Guatemala, Costa Rica, and

W Panama; some other sections are passable only in the dry season.

intercolumniation (ĭn"tûrkŭlŭm"nēā'shŭn), in classic architecture, the clear space between the edges of two adjacent columns, as measured at the lower portion of their shafts Vitruvius compiled standard intercolumniations for the three orders, expressed in terms of the column diameter The Renaissance codifiers followed his principle of standard and equal spacings—Doric order 2¼ diameters, Ionic 2¼, Corinthian 2⅛ In the great works of Greek architecture, however, spacings frequently varied within a single colonnade, being widest between the two center columns The narrowest occurred at the corner columns, thus strengthening their effect These variations, however, were so subtle as to create effective optical refinement rather than actual obviousness The Renaissance architects employed a new type of intercolumniation with the use of columns in pairs, those of each pair almost touching

interdict (ĭn'tûrdĭkt), ecclesiastical censure notably used in the Roman Catholic Church, especially in the Middle Ages When a parish, state, or nation is placed under the interdict no public church ceremony may take place, only certain sacraments, especially baptism, may be administered, and the dead may not receive Christian burial The interdict is used to sway public opinion and to force action A famous example was the interdict placed upon the England of King John by Innocent III in 1209

interest, charge for the use of money, usually figured as a percentage of the principal, computed annually Such charges have been made since ancient times As interest rates were high and the penalties heavy, the charge early fell into disrepute In Greece, Solon forbade selling men into slavery for unpaid interest The Jews and the Christian Church forbade interest charges, or usury, as it was called, among their own groups The merchant princes of N Italy and elsewhere evaded such restrictions, especially as the Church never condemned rent for the use of land or durable goods Gradually the distinction was made between low interest rates and the high ones, which came to be known, and condemned, as usury England in 1545 removed the prohibition on usury and fixed a legal maximum interest, and other countries followed States of the United States fix a legal rate at which debts may be assessed after they have come due and remain unpaid, and fix the maximum rate allowed in a contract Simple interest is computed annually on the principal Compound interest, allowed by some savings banks, computes the interest on the principal plus any unpaid portions of interest also Great Britain does not fix legal interest rates, but courts determine whether a rate is injurious See Irving Fisher, *The Rate of Interest* (1930), J M Keynes, *General Theory of Employment, Interest, and Money* (1936)

interference, in physics, the effect produced under certain conditions by the combination or superposition of two trains or systems of waves (see WAVE), especially of sound or light, in which these waves reinforce, neutralize, or in other ways interfere with each other When, for example, two SOUND waves occur at the same time and are in the same phase, i e , when the condensations of the two coincide and hence their rarefactions also, the waves reinforce each other On the other hand, two sound waves occurring simultaneously and having the same intensity neutralize each other if the rarefactions of the one coincide with the condensations of the other, i e , if they are of opposite phase In this case, the result is silence However, alternate reinforcement and neutralization (or weakening) take place when two sound waves differing slightly in frequency are superimposed The audible result is a series of pulsations or, as these pulsations are called commonly, beats, which are caused by the alternate coincidence of first a condensation of the one wave with a condensation of the other and then a condensation with a rarefaction LIGHT waves reinforce or neutralise each other in very much the same way If, for example, two light waves each of one color (monochromatic waves), of the same amplitude, and of the same frequency are combined, the interference they exhibit is characterized by so-called fringes—a series of light bands (resulting from reinforcement) alternating with dark bands (caused by neutralization) If white light, which is made up of all colors, is used instead of monochromatic light, bands of color are formed (see SPECTRUM and DIFFRACTION) Newton's rings also are the result of the interference of light They are formed concentrically around the point of contact between a glass plate and a slightly convex lens set upon it or between two lenses pressed together, they consist of bright rings separated by dark ones when monochromatic light is used or of alternate spectrum-colored and black rings when white light is used. The experiments of Thomas Young first illustrated interference and definitely pointed the way to a wave theory of light A. J. Fresnel by his work did much to establish this wave theory, for his experiments clearly demonstrated that the interference phenomena could be explained adequately only upon the basis of a wave theory The determinations of the velocity of light as carried out by A A Michelson are based upon the interference of light waves Various natural phenomena are the result of interference, e g , the colors appearing in soap bubbles and the iridescence of mother-of-pearl and other substances The thickness of such a very thin film as that of the soap-bubble wall can be measured by an instrument called the **interferometer** which, when the wave length of the light used is known, indicates the thickness of the film by the nature of the interference patterns it forms The reverse process, i e , the measurement of the length of an unknown light wave, can also be carried out by the interferometer One type devised by Michelson has been applied in measuring the diameters of certain stars

Interior, United States Department of the, organized (1849) as a Federal department by act of the U S Congress It is represented in the President's cabinet by the Secretary of the Interior and is responsible for advancing domestic interests in the United States At first called the Home Dept , the Dept of the Interior was comprised of independent government bureaus -- e g , the U S Census Bureau and the U S Patent Office—and bureaus transferred from the other departments of government—the GENERAL LAND OFFICE from the Treasury Dept , the Indian affairs bureau (see INDIAN AFFAIRS, BUREAU OF) from the War Dept , and the pensions office from the War and Navy Depts Over a period of time many new bureaus were added to the jurisdiction of the Dept of the Interior The Office of Education was added (1867) as a research agency The GEOLOGICAL SURVEY was organized under the department's jurisdiction in 1879 The Bureau of Reclamation was established (1902) in the department in the presidential administration of Theodore ROOSEVELT, and in 1906 the National Park Service was added to oversee NATIONAL PARKS and national monuments The Dept of the Interior was given charge (1910) of the Bureau of Mines to conserve and utilize American mineral resources and to promote safety in mining industries In the administration of Franklin D ROOSEVELT such agencies as the PUBLIC WORKS ADMINISTRATION, the Grazing Service, the Fish and Wildlife Service, the DIVISION of Territories and Island Possessions, and the Oil and Gas DIVISION were added to the responsibilities of the department Many agencies of the Dept of the Interior were, however, transferred elsewhere, the Census Bureau became (1903) part of the Dept of Commerce and Labor, the Patent Office was transferred (1925) to the Dept of Commerce, the Pension Office went over (1930) to the Veterans Administration, and the Office of Education was transferred (1939) to the Federal Security Agency The General Land Office and the Grazing Service were combined (1946) into the Bureau of Land Management of the Dept of the Interior

interior decoration, adornment of the interior of buildings, public or domestic, comprising interior architecture, finishing, and furnishings Oriental and classical peoples used the decorative arts to create elaborate interiors and supplied forms extensively copied in later times In Europe in the early medieval period few notable interiors were created except in Moslem Spain and in the Byzantine Empire Simple movables and hangings were the chief furnishings of castles In the late Middle Ages artistic resources were dedicated to the embellishment of churches and public buildings With more settled conditions, Renaissance Italy, influenced by Greek and Roman styles, developed interiors of grandeur and magnificence, popes and nobles employed leading artists to decorate their palaces and villas Italian forms spread to other countries Spanish interiors displayed rich color, ornate furniture, decorated leather, and fine textiles France was early a leader in setting styles which changed with the sovereigns Especially influential were the LOUIS PERIOD STYLES, REGENCY STYLE, DIRECTOIRE STYLE, and EMPIRE STYLE England developed notably the ELIZABETHAN STYLE, the JACOBEAN STYLE, and the GEORGIAN STYLE, some 18th-century styles are known by the names of furniture designers such as CHIPPENDALE, SHERATON, and HEPPLEWHITE Robert ADAM correlated interior and exterior architecture, furniture, and accessories In America settlers used simple homemade furniture of native woods, homespun fabrics, and pewter The style, known as Early Colonial, has been revived for re-creating early American interiors The formal Late Colonial period used modified Georgian mansions and polished mahogany furniture of English type Pennsylvania German decoration based on European provincial styles is also much reproduced The 19th cent was marked by a departure from old standards of craftsmanship, machine-made furnishings supplied the requirements of the growing middle classes In the second half of the century William Morris and the pre-Raphaelites instituted an ARTS AND CRAFTS movement which spread abroad and stimulated a reaction against ornate Victorian decoration. It resulted in a revival of earlier period styles, the simultaneous development of native provincial styles, and an attempt to create a new modern style Contemporary styles, still transitional, are international in character and have been stimulated by expositions, notably the Paris exposition of 1925, and world fairs Designers and manufacturers are cooperating to produce low-cost furnishings scaled for small rooms and combining ease of upkeep and functionalism Units permitting maximum use of wall space are designed on a modular system to allow flexible combinations Synthetic materials are employed, and old materials such as metals and glass are put to new uses Lighting is emphasized and arrangement is based on a correlation of scale, balance, comfort, pattern, and color See FURNITURE, HOUSE, WALLPAPER, TEXTILES See Roger Gilman, *Great Styles of Interior Architecture* (1924), Emily Genauer, *Modern Interiors* (1939), Joseph Aronson, *The Book of Furniture and Decoration* (rev ed , 1941), Gladys Miller, *Decoratively Speaking* (1945), Emily Post, *The Personality of a House: the Blue Book of Home Charm* (rev ed , 1948)

interjection, English PART OF SPEECH consisting of exclamatory words They are marked by a feature of intonation which is usually shown in writing by punctuation Probably most languages have classes like interjections

Interlaken (ĭn'tərlahkən) [implying *between lakes*], town (pop 4,059), Bern canton, Switzerland Between the Lake of Brienz and the Lake of Thun, with a fine view of the Jungfrau, it is a resort (mainly summer) with yearly visitors far outnumbering the inhabitants The 12th-century monastery is used for government offices There is a small woolen textile industry

interlocking directorate. When an individual or several individuals sit on the board of directors of more than one corporation, the directorates of the corporations are said to interlock The general tendency of interlocking directorates is toward cooperation between the corporations involved Such cooperation is frequently desirable from the point of view of the corporations as a means of improving operation and cutting costs, but becomes socially dangerous when it is used for the purpose of mulcting the consumer by raising prices It has also been one of the chief means by which industrial power has been concentrated in the hands of a small group of men Both the Sherman and the Clayton antitrust acts prohibit interlocking directorates when they tend to lessen competition See A A Berle, Jr , and G C Means, *The Modern Corporation and Private Property* (1932)

interlude, form of drama which was introduced between the acts of a miracle play or of court entertainments in the Middle Ages In England the interlude by the 16th cent had the form of a crude one-act farce, such as John Heywood's *Four P's* and Henry Medwall's *Finding of Truth* The Pyramus and Thisbe episode in Shakspere's *Midsummer Night's Dream* is an interlude See E K Chambers, *The Medieval Stage* (1903), Karl Young, *The Drama of the Medieval Church* (1933)

intermezzo (ĭnturmĕt'sō, -mĕd'zō) **1** Short comic opera performed between the acts of a longer serious opera It is characterized by economy of means and freedom of form The intermezzo of the 17th cent became the *opera buffa* of the 18th cent , a good example is Pergolesi's *La serva padrona* **2** Any theatrical entertainment performed between the divisions of a longer work **3** Name for a movement of a symphony, sonata, or dance suite or for a short, romantic piano piece such as the intermezzi of Brahms and Schumann

Intermountain Union College see ROCKY MOUNTAIN COLLEGE

internal-combustion engine, type of engine in which combustion of the working fuel takes place within the cylinder of the engine The basic principle of operation involves the transformation of heat energy to mechanical energy Attempts were made to produce internal-combustion engines as early as the 17th cent , one of the earliest (c 1680) was that of Christiaan Huygens in which gunpowder was used Not, however, until much later, in the 19th cent were results of practical value achieved The gas engine was the forerunner of all present-day internal-combustion engines Its operation requires the use of a gaseous fuel such as coal gas, water gas, natural gas, producer gas, or some other combustible gas Its principle of operation involves the rapid and violent expansion of the fuel upon combustion in the cylinder and the movement of a piston in the cylinder because of the increased pressure upon it The engine invented by Étienne Lenoir, a Frenchman, c 1860 marked the first practical success of this type of engine, although before that many others had designed and built engines William Barnett (c 1838) had already demonstrated in his double-acting engine the value of compressing the gas before its combustion Lenoir's engine was double-acting, was much less wasteful of fuel than its predecessors, and was comparatively silent in operation It was driven by a mixture of gas and air, which was drawn into the cylinder through a valve and ignited. The ignition was accomplished by an

electric battery and an induction coil The work of Beau de Rochas shortly afterwards (1862) anticipated the "cycle" of the modern engine Other engines with various improvements followed Lenoir's, notable among them being that of Brayton, an American, in 1872 and that of N A Otto, a German, in 1876, which operated on a four-stroke cycle principle and in which the gas was compressed before ignition The term *gas* engine was applied originally to engines using only a gaseous fuel, but today it is employed commonly (probably as an abbreviated form of *gasoline*) to indicate also the internal-combustion engines using a volatile liquid fuel (as gasoline) which is mixed with air to form an explosive vapor or "gas" Kerosene, alcohol, and benzol are other fuels The gasoline engine has the advantages of greater compactness and less weight in relation to the horsepower developed and is widely used where portability is important, e g , in the automobile, airplane, motorboat, motorcycle, and various kinds of movable machinery In a typical gasoline engine such as that of the AUTOMOBILE, the gasoline is fed to a CARBURETOR from a storage tank either by gravity or by means of a fuel pump and is mixed with air The mixture is led into the cylinder, where it is compressed and then ignited by an electric spark from a spark plug (see IGNITION) The explosion forces the piston down the cylinder, and this motion is transmitted to the crankshaft through a connecting rod attached to the piston, in this operation the up-and-down motion of the piston is changed to rotary motion in the crankshaft Driven from the crankshaft is a secondary shaft, the camshaft, which carries a CAM to operate the intake valve and the exhaust valve of the cylinder These valves, commonly of a "mushroom" type, are opened by the lifting action of the cam and are usually closed by a SPRING There are two types of gasoline engine in common use, the two-stroke cycle engine and the four-stroke cycle engine The four-stroke is the more common, and the cycle of operation, in a single cylinder, for example, is as follows With the piston starting on the downstroke, the camshaft is so timed that the inlet valve is opened to allow the mixture of gasoline and air to follow the piston (the intake or suction stroke) On the upstroke the inlet valve is closed and the mixture is compressed by the rising piston (the compression stroke) At a given point near the top of the stroke the mixture is ignited by an electric spark or other means, and the force of the resulting explosion causes the downward movement of the piston and consequent transmission of power to the crankshaft (the firing, power, or working stroke) The piston is then at the bottom of the stroke and the cylinder is full of burned gases These gases are expelled upon the rise of the piston (the exhaust stroke), through the exhaust valve, which is timed to open at this point The smooth running of the engine is achieved in a single-cylinder type by the use of a heavy FLYWHEEL which serves to carry sufficient momentum derived from the firing stroke to continue the revolutions through the periods of exhaust, intake, and compression to the next firing stroke In the multicylinder type the various cylinders are so attached to the crankshaft as to have the firing stroke occur in correct sequence to give the smoothest turning effort on the shaft The two-stroke type is so called because there is a firing stroke at every revolution or every two strokes With the piston at the top of the stroke, the ignition of the gases takes place by electrical or other means, and the piston travels downward, as the bottom of the stroke is neared, a port or opening is uncovered in the cylinder wall through which the exhaust gases escape Upon the upstroke these ports are covered and a charge of fresh mixture is admitted through a cam-controlled inlet valve The inlet-valve ports are also covered by the rising pistons at a certain point in the stroke so that the mixture is compressed during the remainder of the stroke, at the end of which ignition takes place again, thus completing the cycle Engines operating on this principle have been used successfully in the past for small powers such as the motorcycle engine and for larger powers such as the single-cylinder motorboat engine For nearly all classes of gasoline engines in use at the present time, however, the four-cycle system is used Such engines are commonly designated by the number of cylinders (e g , single, two, four, and six) and by the type of their arrangement These cylinders are generally made in one block or head The V-type engine has two sets of cylinders (with an equal number of cylinders in each set) inclined in the form of a V toward a common crankshaft The radial type has six or more cylinders spaced around the crankshaft in the center In some designs the cylinders rotate around the shaft, while in others the cylinders are stationary and the shaft rotates In the automobile the motive power of the engine is transmitted to the driving wheels through a clutch which is so designed that by pressing a pedal the engine can run free of the driving shaft A gearbox, usually arranged for three forward speeds and reverse, allows the engine to run at high speed and the car to move slowly, thus developing greater power when needed. The accessories usually found on an automobile engine, besides the carburetor, are the water pump, which circulates water through the radiator (where it is cooled, see COOLING SYSTEM) and to the cylinder block (where the water carries away enough heat from the engine to keep it at suitable working temperature), the timing gear, driven from the camshaft and operating a distributor, which controls the ignition spark in the cylinders, the oil pump, which circulates lubricating oil to the various working parts, and a generator, which supplies the necessary current for the ignition system and also charges the battery (an essential part of the equipment, for commonly it provides current for the starting motor and lights) In certain types of engines the cooling is accomplished by a system known as air cooling The requirements of the airplane have developed many new types of gasoline engines Light weight is highly essential and reliability is of supreme importance Conditions arising from extreme temperature changes have to be considered, and the oiling system must be so designed as to function correctly at all angles of inclination, even when the engine is inverted These and other problems have been successfully solved, and several standard types of engines have been evolved from many experimental types The development of the gasoline engine for marine work has made the steam engine practically obsolete for small powers—the gasoline engine is now the most popular type for this service The smallest type developed is the outboard motor, which is so called because the whole unit can be clamped over the stern of a boat The engine is usually of the opposed type (i e , the cylinders are placed at opposite sides of a single crankshaft, which is vertical), is extended down to a point below the water, and is there geared to the propeller Although these engines were originally designed for light weight and low power, some now have four cylinders and develop over 50 hp For engines installed in boats the propeller shaft is usually driven through speed-reduction gearing so that the engine can run at its best speed for power and economy and the propeller at a corresponding low speed which is desirable for the best results The reduction gearbox has also a set of gears for giving reverse rotation In the larger-power engines which are invariably of the vertical type, four, six, and eight cylinders are used, in some installations a twin arrangement is utilized, having two engines side by side, each driving a separate propeller The general design of the marine type, while being of more rugged construction than that used in the automobile, does not differ from the type used for stationary purposes These engines are always water-cooled and usually have forced-feed lubrication and an oil-cooling device Starting, speed control, and reversing are all arranged for operation from the steering position of the boat so that the steersman has also full control of the engine The gasoline engine is useful for many purposes both stationary and portable For farm machinery, such as tractors, binders, and reapers, the regular type of automobile or truck engines is used, smaller-power demands being met by one- and two-cylinder engines with belt and pulley drive Water pumps driven by gasoline engines are particularly valuable on a farm in case of fire Fire pumps driven by gasoline are frequently installed for emergency service in stations when electric power fails Electric generators driven by gasoline engines are especially useful in isolated places where light and power are not otherwise available They are used extensively on motorboats and yachts The design of the oil engine is essentially the same as for other types of internal-combustion engines except that the fuel used is generally of a heavier grade and requires a different method of ignition Usually a jet of oil is forced into a chamber kept at a very high temperature, which causes evaporization and ignition of the charge Thus type of engine is now being replaced by the gasoline engine for small powers and by the DIESEL ENGINE for larger powers See B H Jennings and E F Obert, *Internal Combustion Engines* (1944), V L Maleev, *Internal-Combustion Engines* (2d ed , 1945), A P Fraas, *Combustion Engines* (1948), C F Taylor and E S Taylor, *Internal Combustion Engine* (rev ed , 1948)

internal revenue, taxes on goods produced and consumed inside a country, called also excise taxes In their modern form, such taxes were first developed by Holland in the 17th cent and were established by law in England in 1643 Introduced into the Dutch colonies in America, the system spread to other colonies Internal revenue taxes were first used by the Federal government in 1791 and aroused great opposition They were repealed (1802) in Jefferson's administration During the War of 1812 more comprehensive internal revenue taxes were levied, but were repealed in 1817 The taxes imposed during the Civil War covered all manufactured goods, income tax, and trade licenses Most of these were gradually repealed, and by 1883 only liquor and tobacco were taxed The Spanish-American War saw a temporary increase of internal revenue taxes. In both the First and Second World Wars these taxes were greatly increased and in the Second World War were levied on furs, jewelry, and leather as well as on liquor, tobacco, and amusements Nearly all the states levy internal revenue taxes, including those on franchises, incorporation, licenses, tobacco, gasoline, and sales See H L Lutz, *Public Finance* (1936).

International. The International Workingmen's Association, called briefly the International and, later, the First International, was organized in London, England, in 1864 under leadership of Karl MARX The first congress met (1866) at Geneva, Switzerland Its basic purpose was the unification of the workers of all lands for the aims set forth in the *Communist Manifesto* issued by Marx and Engels in 1848 It was effective in spreading socialist doctrine among workingmen, but it accomplished no positive political results. The Commune of Paris of 1871, though it comprised followers of the First International, came into existence quite independently In 1868 BAKUNIN and other anarchists joined the London International for opportunistic reasons, they brought dissension into the organization and contributed to its disintegration The last congress was held at Philadelphia in 1874 In 1889 the Second or Socialist International was founded at Paris, and in 1890 it set up its headquarters at Brussels, Belgium It comprised most Socialist parties, among which the German and Russian Social Democratic parties were the most important Friedrich ENGELS, August BEBEL, Karl KAUTSKY, and G V PLEKHANOV were among its early leaders Its history was essentially that of the various schisms in SOCIALISM, and in 1914 the organization was torn apart by the First World War The Bolshevik victory in the Russian Revolution of 1917 resulted in the creation (1919) of the Third or Communist International (see COMINTERN) at Moscow, this was dissolved in 1943 The revival (1919) of the Second International by the more moderate Socialists and the creation (1921) of the Labor and Socialist International (the so-called 2½ International) at Vienna were of little consequence In 1937 Leon TROTSKY founded at Mexico City the Fourth International, in opposition to the Comintern Generally speaking, international trade-union congresses have taken the place, among moderate Socialists, of full-fledged international organizations For bibliography, see COMMUNISM and SOCIALISM

International Bank for Reconstruction and Development, autonomous institution affiliated with the United Nations, with headquarters at Washington, D C The plans were laid at the Bretton Woods Conference (1944), and the bank was formally organized in 1945, when 28 countries had ratified the agreement The capital, which may not exceed $10,000,000,000, is divided into shares of $100,000 Using part of the capital and borrowed funds, the bank may make loans to member nations and to private investors with the object of facilitating productive investment, encouraging foreign trade, and discharging burdensome international debts The bank cooperates closely with the INTERNATIONAL MONETARY FUND The powers of the bank are controlled by the board of governors with one representative of each member state Each member of the board has 250 votes plus one vote for each share of stock Ordinary affairs are conducted by the 14 executive directors, selected by the board In 1950 there were 47 members, including some which did not belong to the United Nations

International Civil Aviation Organization (ICAO), affiliate of the United Nations, organized in 1947, with headquarters at Montreal For events leading to its formation, see AIR, LAW OF THE. The objectives of the ICAO are to expand international air trade and to make it safer and more economical Much work has been accomplished in establishing uniform standards for aircraft markings, airworthiness, and licensing of pilots The ICAO is governed by an assembly composed of one representative of each member nation, it meets at least once annually Each year the assembly elects a council of 21 members, which is in continual session In 1950 there were 56 members, including several states which did not belong to the United Nations

International Court of Justice, principal judicial organ of the United Nations, established by Chapter 14 of the Charter of the United Nations It supersedes the WORLD COURT (Permanent Court of International Justice), and its statute for the most part repeats that of the former tribunal The court consists of 15 judges nominated by the Hague Tribunal Its permanent seat is at The Hague, but it may hold hearings elsewhere All states that are members of the United Nations are *ipso facto* members of the court, and other states may be permitted to adhere to the statute If a member of the United Nations fails to comply with a judgment of the court, an appeal for assistance may be made to the Security Council The court may render judgment in certain disputes between states and, with the authorization of the General Assembly, it may deliver advisory opinions. A dispute may be brought before the court by consent of the parties in the particular case or by virtue of a general

agreement to accept the court's jurisdiction (over 25 states have made such agreements). The court's competence between states, in any event, is limited to disputes concerning the interpretation of treaties, questions of international law, breaches of international obligation, and the amount of reparation for a breach. By early 1950 only one international dispute had been settled by the court, which ruled (1949) that Albania had unlawfully mined the channel between Corfu and the mainland and awarded Great Britain damages for injury to two British vessels and loss of lives. An important advisory opinion of the court was that asserting that the General Assembly may not admit a state to the United Nations if the application is vetoed by one of the permanent members of the Security Council.

international date line: see DATE LINE, INTERNATIONAL.

International Falls, city (pop. 5,626), co. seat of Koochiching co., N. Minn., on Rainy River near Rainy Lake opposite Fort Frances, Ont. The city grew after a large paper mill was built at the falls in 1904. It is a lumber and summer excursion center and has U.S. customs and immigration offices. A fish hatchery is near.

International Labor Organization (ILO), autonomous institution created in 1919 by the Versailles Treaty, affiliated with the League of Nations until 1945, when it voted to sever ties with the League. In 1946 it became affiliated with the United Nations as a specialized agency with the name officially spelled International Labour Organisation. The ILO's original members were the members of the League. Membership in the League rendered a nation eligible for membership in the Labor Organization, but nations could be members of the ILO without joining the League, e.g., the United States, which joined in 1934. The chief objects of the ILO were the regulation of hours of work and of labor supply, prevention of unemployment, provision of adequate wages, protection of workers against occupational disease and injury, provision for old age, protection of children and women and of workers in countries other than their own, provision of vocational and technical education, and assurance of freedom to organize. The ILO consists of a general conference of representatives of the members (4 from each member state), a governing body of 32 members (16 representing governments, 8 employers, and 8 labor), and an International Labor Office controlled by the governing body. The conferences are held at least once a year and were held in Geneva from 1921 to 1939. In 1940 the working quarters were moved to Montreal, the headquarters is at Geneva.

international law, body of rules considered legally binding in the relations between national states, also known as the law of nations. It is sometimes called public international law in contrast to private international law (or CONFLICT OF LAWS), which regulates private legal affairs affected by more than one jurisdiction. In content international law includes both the customary rules and usages to which states have given express or tacit assent and the lawmaking provision of ratified treaties (see TREATY) and conventions. It does not include the usages of courtesy and good will which are termed "international comity," but some of these usages tend to assume the status of law. International law is directly and strongly influenced, although not made, by the writings of jurists and publicists, by instructions to diplomatic agents, by carefully drawn lawmaking conventions which were not ratified, and by arbitral awards. The decisions of the former WORLD COURT and of the INTERNATIONAL COURT OF JUSTICE are considered by some to be a part of international law. In most modern states international law is by custom or statute regarded as part of national—or, as it is usually called, municipal—law, and the municipal courts will, if possible, interpret the municipal law so as to give effect to international law. If this is not possible, these courts must enforce the municipal law. Because there is no sovereign supernational body to enforce international law, some older theorists, including Hobbes, Pufendorf, and John Austin, have denied that it is true law. International law, however, is recognized as law in practice, and its sanctions, although commonly less direct, are similar to those of municipal law, they include the force of public opinion, self-help, intervention by third states, the sanctions of international organization such as the League of Nations and the United Nations, and, in the last resort, war. National states are fundamentally the entities with which international law is concerned, although in certain cases municipal law may impose international duties upon private persons, e.g., the obligation to desist from PIRACY. The nations of antiquity followed certain usages in their relations with one another, but they did not acknowledge any wholly uniform body of rules, although there were regular practices concerning the ALIEN, ASYLUM, and ambassadors. In the arbitration of their disputes the Greek city-states in theory attained a high standard. There was little need for an international law in the period of ancient empires, and its modern beginnings coincide, therefore, with the rise of national states after the Middle Ages. Rules of maritime intercourse and rules respecting diplomatic agents soon came into existence. At the beginning of the 17th cent. the great multitude of small independent states, which were finding international lawlessness intolerable, prepared the way for the favorable reception given to the *De jure belli ac pacis* [concerning the law of war and peace] (1625) of Hugo GROTIUS, the first fairly comprehensive formulation of international law. Though not formally accepted, his decisions and observations were afterwards regularly consulted, and they often gave guidance in reaching a basis upon which agreement was possible. Among the fundamental principles which he enunciated and to which general adherence has been given are the legal equality and the complete sovereignty of states. To some extent international law has been a progressive lessening of absolute national sovereignty in the common interest (e.g., lessening of the right to wage WAR). More recent growth is to be traced largely in treaties concluded between states of the ever-increasing "family of nations," which first included the Christian states of Western Europe, then the Christian states of the New World, and, finally, non-Christian states of the Orient and other parts of the world. The United States, upon entering the family of nations, contributed much to the laws of NEUTRALITY and aided in securing recognition of the doctrine of freedom of the seas (see SEAS, FREEDOM OF THE). International law received a severe setback in the Napoleonic period, but the Congress of Vienna reestablished and added much, particularly in respect to international rivers and the classification of diplomatic agents. The Declaration of Paris (see PARIS, DECLARATION OF) abolished PRIVATEERING, drew up rules of CONTRABAND, and stipulated that a BLOCKADE to be binding must be effective. The Geneva Convention (1864) provided for more humane treatment of the wounded and of prisoners of war. The last quarter of the 19th cent. saw many international conventions concerning communication, collision and SALVAGE at sea, the protection of migrating bird and sea life, and suppression of the white-slave traffic. In the 20th cent. there were agreements concerning many subjects, including traffic in narcotics and aerial and radio communications. Resort to ARBITRATION of disputes became more frequent. The lawmaking conventions of the HAGUE CONFERENCES represent the culminating development of international law before the First World War. The Declaration of London (see LONDON, DECLARATION OF) contained a convention of PRIZE law, which, although not ratified, is usually followed. At the Pan American Congresses many lawmaking agreements affecting the Western Hemisphere have been signed. In the First World War, as in the Napoleonic Wars, no strong nations remained on the sidelines to give effective backing to international law, and it was again endangered, many of its provisions were at some time violated. New modes of warfare presented new problems in the laws of war, but attempts after the war to effect disarmament and to prohibit certain types of weapons (see WAR, LAWS OF) to a large extent failed, as the outbreak and course of the Second World War demonstrated. The end of hostilities in 1945 saw the world again faced with the problems occasioned by the First World War, including the rectification of international boundaries, the care of refugees, and the administration of territory of the defeated enemy (see TRUSTEESHIP, TERRITORIAL). The inadequacy of the LEAGUE OF NATIONS and of such merely idealistic renunciations of war as the KELLOGG-BRIAND PACT led to the formation of the UNITED NATIONS as a body capable of compelling obedience to international law and thus able to maintain peace. Since the Second World War a notable advance in international law has been the definition and punishment of WAR CRIMES. Attempts at a general codification of international law, however, proceeded slowly under the International Law Commission established in 1947 by the United Nations. For a collection of texts by early writers, see J. B. Scott, ed., *Classics of International Law* (12 vols., 1911–27). For general treatises, see Henry Wheaton, *International Law* (1836, 6th ed., 1929), and L. F. L. Oppenheim, *International Law* (1905–6, 6th ed., 1940). See also Walther Simons, *Evolution of International Law in Europe since Grotius* (1931), Hersh Lauterpacht, *Function of Law in the International Community* (1933), H. W. Briggs, ed., *The Law of Nations* (1938), Arthur Nussbaum, *A Concise History of the Law of Nations* (1947), Philip C. Jessup, *A Modern Law of Nations* (1948).

International Monetary Fund, autonomous organization, affiliated since 1947 with the United Nations. Its headquarters are in Washington, D.C. It was planned at the Bretton Woods Conference (1944) and came into existence in 1945, when 29 countries had accepted the articles of agreement. There is close collaboration with the INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT. The organization, using a fund of some $8,000,000,000 subscribed by the member nations, purchases foreign currencies on application from its members so as to discharge international indebtedness. To facilitate international trade and reduce inequities in exchange the fund has limited power to set the par value of currencies. Members are provided with technical assistance in international banking. The fund is ruled by a board of governors, with one representative from each nation. Each member has 250 votes plus one vote for each $100 of the nation's quota. The board of governors elects an executive board of 14 representatives to conduct regular operations. In 1950 there were 47 members.

International Red Cross see RED CROSS.

International Refugee Organization, temporary agency of the United Nations, with headquarters at Geneva. Before its organization in 1948 its activities were conducted by a preparatory commission. In arranging for the care and the repatriation or resettlement of Europeans made homeless by the Second World War, the organization was bringing to a conclusion part of the work of the UNITED NATIONS RELIEF AND REHABILITATION ADMINISTRATION. In 1950 the International Refugee Organization had 15 members.

international relations. As the relations between states become more constant and complex the number of subjects studied under the designation of international relations increases. Before the 20th cent. to most students the field comprised chiefly diplomacy and military affairs. Today it may be said that any subject is appropriately considered part of international relations if it simultaneously affects two or more states. Trade, communications, exchange, and control of crime are but obvious examples. The recognition of great complexity in the subject has called forth substantial efforts to study the problems. In the United Nations the ECONOMIC AND SOCIAL COUNCIL is empowered to make extensive investigations, and in several universities faculties have been organized to train specialists in all types of international relations. A typical institution is the School of International Affairs which was established in 1946 at Columbia Univ.

International Telecommunication Union (ITU), specialized agency of the United Nations, with headquarters at Geneva. It was created in 1934, when the International Telegraph Union (est. 1865) and the International Radiotelegraph Union (est. 1906) were merged. The union today functions under the International Telecommunication Convention, which was adopted in 1947 and went into effect in 1949. The goal of the organization is to extend and improve all forms of international telecommunication by allotting radio frequencies, by encouraging the establishment of low rates, and by perfecting communications in rescue operations. The ITU is governed by the plenipotentiary conference on which all members are represented and which normally meets once in five years. The conference elects an administrative council of 18 members. In 1950 there were 61 states with full membership besides nonself-governing territories with associate membership.

internment, in international law, detention of enemy or belligerent nationals or property. A belligerent will intern enemy merchant ships or take them as prize, and a neutral should intern belligerent ships which fail to leave its ports and belligerent troops which enter its territory. In the Second World War, Japanese aliens and their native-born children (hence U.S. citizens) were the largest class interned by the United States (see RELOCATION CENTER). There was much criticism of the wholesale internments in the Pacific states, and after a time most of the interned persons were permitted to move east and the citizens were allowed to join the armed forces. See CONCENTRATION CAMP.

internuncio see NUNCIO.

interrogation point see PUNCTUATION.

Interstate Commerce Commission, established (1887) by the U.S. Congress. Mounting public indignation in the United States in the 1880s against railroad malpractices and abuses (see GRANGER MOVEMENT) resulted in the establishment of the Interstate Commerce Commission—a board of five members appointed to regulate common carriers in interstate commerce and in foreign commerce within the United States. The Interstate Commerce Commission was designed chiefly to prevent railroads from charging exorbitant rates and from discriminatory practices (e.g., the REBATE), but until the presidential administration of Theodore ROOSEVELT, the activities of the commission were limited by numerous Supreme Court decisions won by railroads. The Hepburn Act (1906), however, extended the jurisdiction of the commission to include intraterritorial commerce and express, sleeping-car, and pipe-line (exclusive of those carrying water or gas) companies. This act moreover empowered the commission upon complaint and after a full hearing to reduce any rates adjudged unreasonable. The powers of the ICC were further amplified by the Mann-Elkins Act (1910), which put telegraph, telephone, and cable companies under the commission's jurisdiction and which allowed the board to fix rates without previous complaint. By authority of the Valuation Act (1913), the ICC began

a comprehensive evaluation of the property of common carrier companies The commission's control was enhanced by powers to investigate, halt, and indemnify violations of the Interstate Commerce Act, to inquire into the management of interstate transport companies, and to demand reports from them These powers were augmented by decisions of the Supreme Court, whose broadening interpretation of the commerce clause of the Constitution extended Federal control of commerce. The Transportation Act of 1920 (also known as the Esch-Cummins Act) empowered the commission to fix rates which would yield "a fair return upon the aggregate value of the railway property of the country," to plan the consolidation of railroads into a small number of integrated systems, and to deal with labor disputes in interstate transportation The number of members on the Interstate Commerce Commission was increased to 11 After the First World War the lack of judicial interference with the operations of the ICC increased the commission's power and prestige The Emergency Railroad Transportation Act of 1933 abrogated the commission's right to fix rates yielding a fair return upon aggregate value and repealed the clause—also in the Transportation Act of 1920—which provided for recapture of earnings in excess of 6 percent of valuation The Motor Carrier Act (1935) vested in the commission the regulation of motor carriers engaged in interstate commerce By the Transportation Act of 1940 jurisdiction was conferred upon the ICC over water-borne carriers operating coastwise, intercoastally, and upon inland waters of the United States In 1942 freight forwarders also came under the commission's regulation See W D Hines, *The Interstate Commerce Commission* (1930), I L Sharfman, *The Interstate Commerce Commission* (8 vols , 1931–37)

intertype, trade name of a machine for making slugs each of which does the work of a line of hand-set type in printing It is similar to the LINOTYPE in principle, and either machine can use the matrices of the other The name is derived from that of the International Typesetting Machine Company, organized in 1912 to develop and manufacture the machine See also MONOTYPE

interval, in music, the difference in pitch between two tones Intervals are named according to the number of steps of the diatonic scale they contain, e g , from C to D is a second, C and D being the first two notes of the scale of C, C to E is a third, etc The letter names of the notes determine the name of the interval, whether either note be sharp, flat, or natural, thus, from C to E is always a third, and when both notes are natural it is called a major third The intervals from C sharp to E and from C to E flat are minor thirds From C sharp to E flat is called a diminished third, although in the tempered scale it sounds like a major second An interval a half step wider than a major interval is called augmented The fourth, fifth, and octave as they are found in the diatonic scale are designated as perfect intervals. When they are made a half step smaller they are called diminished, and when a half step larger, augmented An interval may also be expressed by means of the ratio of the frequencies of its two tones For example, the octave may be expressed by the ratio 2 1, because its upper tone has a frequency twice that of its lower tone

intestine or **bowel,** portion of the alimentary canal extending from the stomach to the anal opening The small intestine is a tube about 23 ft long beginning at the pyloric end of the stomach and continuous at its lower end with the large intestine Its diameter is about 1½ in in its upper portions, diminishing to about 1 in in the lower part The small intestine is the chief organ of digestion and absorption By contractions of the muscular walls the food mass is carried along and subjected to the digestive action of the bile and the pancreatic juice, both of which reach the small intestine through ducts, and to the *succus entericus,* the secretion of certain glands in the lining of the small intestine These juices carry on and complete the digestion of proteins, fats, and carbohydrates Digested nutrients are absorbed through the lining of the small intestine into the blood and lymph, by which they are distributed throughout the body. The surface for absorption is increased by the presence of circular folds in the intestinal wall and of villi, minute finger-shaped projections so numerous over most of the lining of the small intestine that they give it the appearance of velvet The small intestine joins the large intestine, forming a right angle with the cecum (the blind portion at the beginning of the large intestine), near the lower end of which is the vermiform appendix The large intestine is about 5 ft long. From the cecum it continues as the ascending, transverse, and descending colon, the rectum, and the terminal portion, the anal canal with its external opening, the anus Bacteria, indigestible parts of foods, and mucus form the bulk of the material in the large intestine Water is absorbed from the material while it remains within the intestine, and the residue of solid material is excreted

Intolerable Acts, name given by American patriots to five laws (including the QUEBEC ACT) adopted by Parliament in 1774, which limited the political and geographical freedom of the colonists. Four of these laws were passed to punish the people of Massachusetts for the BOSTON TEA PARTY The Boston Port Bill closed the port until such time as the East India Company should be paid for the tea destroyed in the affair Other acts changed the royal charter of Massachusetts, provided for the quartering of troops—the New York assembly had earlier (1767–69) been suspended for refusing to make provisions for British troops—in the colony without provincial consent, and gave royal officials in conflict with colonial authorities the right to trial in England American opposition to these laws and to the Quebec Act was felt in all the colonies, since the actions taken against Massachusetts might be extended to any colony and the Quebec Act was considered a violation of the sea-to-sea grants of many colonial charters The outcome was the First CONTINENTAL CONGRESS

intoxication, poisoning induced by various substances. These include chemical elements, e g , lead and phosphorus, drugs, e g , opium, alcohol, cocaine, and ergot, gases, e g , carbon monoxide, and true toxins, as in DIPHTHERIA, TETANUS, BOTULISM, and mushroom poisoning There are toxic substances produced in the body which cause autointoxication, as in DIABETES and in the course of such infectious diseases as TYPHOID and PNEUMONIA The results of intoxication depend upon the organ affected Phosphorus affects the liver and causes jaundice, mushroom toxin affects the nervous system and destroys red blood cells For the effect of alcohol, see ALCOHOLISM See also LEAD POISONING

Intracoastal Waterway, route, c 3,100 mi long, partly natural, partly artificial, to provide protected passage for boats along the Atlantic and Gulf of Mexico coasts from Boston, Mass , to the mouth of the Rio Grande at Brownsville, Texas It was authorized by Congress, is improved and maintained by the U S Corps of Engineers, and is toll free The minimum depth is 7 ft and has been achieved by dredging existing channels and by digging canals, some of the most important works have been the Cape Cod Canal, the Chesapeake and Delaware Canal, the Okeechobee Waterway, dredging of the cut from Pensacola Bay to Mobile Bay, the New Orleans-Rigolets Cut, and deepening the channel between Port Arthur and Corpus Christi, Texas In June, 1949, the final section from Corpus Christi to Brownsville was completed The U S Coast and Geodetic Survey publishes maps, charts, and coast pilots for mariners See *United States Coast Pilot* for the Atlantic and Gulf coasts

introversion see EXTROVERSION AND INTROVERSION

intuitionism, in philosophy, a theory which holds that knowledge may be directly and immediately apprehended independent of either experience or reasoning This theory has been developed in various fields of philosophy Basically it is associated with all ego-centered philosophical systems, e g , egoism The metaphysical intuitionist believes that intuition and not intellect is the source of fundamental truth The ethical intuitionists (CUDWORTH, the 3d earl of SHAFTESBURY, Francis HUTCHESON) regarded the evaluation of right and wrong as a given moral sense, akin to the other senses J J ROUSSEAU found the instinctive behavior of man good, and this goodness was abased by the pressures of society In more recent times Henri BERGSON has stressed the importance of intuition in the life of man, a reaction against what he considered the overemphasis of the role of the intellect

Inukai, Ki (kē' ĭnōō'kī), 1855–1932, Japanese statesman An original member of the Reform party, founded in 1882, he served many years in the diet and held various posts including the ministry of commerce (1924–25) He became president of the Seiyukai party in 1929 and was prime minister from Dec , 1931, to May, 1932, when he was assassinated by young officers, who thereby gained for the army a stronger voice in the government

Invalides, Hôtel des (ōtĕl' dāzvälĕd'), celebrated landmark of Paris, France, built (1671–76) by Libéral BRUANT as a hospital for disabled veterans One of the most imposing examples of French classical architecture, it now houses a military museum It faces the vast Esplanade des Invalides and a monumental bridge, the Pont Alexandre III Behind it, in the court of honor, is the **Dôme des Invalides** (dōm), built 1679–1706, the masterpiece of J. H. MANSART Under the huge, yet seemingly weightless, dome are the tombs of Vauban, Turenne, and Foch. The remains of Napoleon I, translated here in great pomp from St Helena (1840), are in the center of the crypt, in a red granite sarcophagus, lighted by a circular opening in the dome.

invar: see GUILLAUME, CHARLES ÉDOUARD

invention. Invention is not peculiar to man, but in degree is characteristic of him. The record of man does not go back to a time when he did not invent The digging stick or spade was an invention, and the first use of it for prying was probably the invention of the lever Estimates of the relative importance of inventions are affected by place and time. Improvements in suits of armor were highly esteemed for centuries, but they have lost their status Whether necessity is the mother of invention or invention is the mother of necessity is debated. The necessity of the wheel was no greater in the Eastern Hemisphere than in the Western, but it was unknown in the Western Hemisphere before Columbus. In the Eastern Hemisphere, it was necessary after it was invented Conditions, however, affect invention The many applications of the wheel were impossible in the Western Hemisphere before the wheel was introduced. The automobile and the airplane waited for the development of the internal-combustion engine The steam engine, the reaper, the automobile, and the airplane illustrate the tendency of farmers and workmen in small shops to invent In general, the inventions fostered by organizations are useful to those who maintain the research laboratories and to a centralized civilization The common heritage of an accumulated stock of knowledge and the needs of the time explain simultaneous discoveries such as the telephone invented independently by Alexander Graham Bell and Elisha Gray Notable periods of invention include Neolithic time, when pottery and some important tools, implements, and mechanical powers were originated, and the period of the beginning of the Industrial Revolution, approximately from the last quarter of the 18th cent The emphasis today is on invention fostered by industrial, university, and government research laboratories See A F Collins, *A Bird's Eye View of Invention* (1926), H J Peake, *Early Steps in Human Progress* (1933), S C Gilfillan, *The Sociology of Invention* (1935), R H Curt, *The Story of Discovery and Invention* (1937), A K Berle and L S De Camp, *Inventions and Their Management* (2d ed , 1947)

Inveraray (ĭnvurə'rē), burgh (pop 455), county town of Argyllshire, Scotland, on Loch Fyne near its northern end and NNW of Greenock The 18th-century Inveraray Castle, designed by Robert Adam, is the seat of the duke of Argyll

Invercargill (ĭnvurkär'gĭl), city (pop 23,470, metropolitan pop 27,470), on South Island, New Zealand, on the south coast Primarily an agricultural center, it also produces flour, brick, and timber Its port is near-by Bluff

Inverchapel of Loch Eck, Archibald John Kerr Clark Kerr, 1st **Baron** (kär', ĭn"vurchăk'pul), 1882–, British diplomat He entered diplomatic service in 1906 and served at Berlin, Buenos Aires, Washington, Rome, and Teheran In 1938 he was given the important post of ambassador to China when the Chino-Japanese War was going on In 1942 he was shifted to the ambassadorial post at Moscow, a position he held until 1946 In the latter year he served as special British envoy to Indonesia in an effort to end Dutch-Indonesian tension He was (1946–48) ambassador to the United States

Invergordon (ĭnvugôr'dŭn), burgh (pop 1,417), Ross and Cromarty co , Scotland, on the north side of Cromarty Firth It is an important naval station and was the scene of a "passive mutiny" or strike of discontented British sailors in 1931

Inverness, county, Scotland see INVERNESS-SHIRE.

Inverness (ĭn"vurnĕs'), town (pop 2,975), on Cape Breton Island, N S , on the west coast and W of Sydney, in a coal-mining region

Inverness (ĭn"vûrnĕs'), burgh (1931 pop 22,583, 1948 estimated pop 28,112), county town of Inverness-shire, Scotland, at the mouth of the Ness on Moray Firth, a mile from the Caledonian Canal "Capital of the Highlands," it is the scene of a great Highland Gathering in September and contains museums of Highland lore The castle, built in 1835, contains the county offices and is on the site of Macbeth's Castle, said to be the scene of the murder of Duncan Cromwell's Fort was built in 1652 Wool weaving, tanning, and distilling are the chief industries

Inverness (ĭn'vurnĕs"), town (pop 1,075), co. seat of Citrus co , N central Fla , N of Tampa and on Lake Tsala Apopka, in a farm area It is a rural market and fishing center

Inverness-shire (ĭn"vurnĕs'shĭr) or **Inverness,** maritime county (4,211 sq mi , 1931 pop 82,108, 1948 estimated pop 84,151), NW Scotland The county town is Inverness Largest of the Scottish counties, it includes Skye and other of the Inner Hebrides and all of the Outer Hebrides S of Lewis A geological fault, known as the Great Glen, cuts diagonally across the county from Moray Firth on the north to the Firth of Lorne on the west, the Caledonian Canal follows the Great Glen through Loch Ness, Loch Oich, Loch Lochy, and Loch Lunnhe It is a mountainous region, having the highest peak in Great Britain (Ben Nevis, 4,406 ft) and many other peaks rising to more than 3,500 ft The streams are short and precipitous The chief occupation is sheep grazing, but quarrying and fishing are also important The natural wildness of the district attracts many visitors. After the establishment of the kingdom of Scotland the region, then much larger than the modern county, came to be known as the province of Moray (Murray). Culloden Moor was the scene of the defeat of Charles Stuart (Bonnie Prince Charlie) in 1746.

invertebrate (ĭnvûr'tûbrāt), any animal without a backbone. The invertebrates are divided into phyla which include the protozoa, sponges, coelenterates (jellyfish, sea anemone, and coral), echinoderms, flatworms, roundworms, segmented worms, mollusks, and arthropods In size they range from the microscopic, one-celled protozoans to the giant SQUID See R. W. Hegner, *Invertebrate Zoology* (1933); G S Carter, *General Zoology of the Invertebrates* (1940), R M Buchsbaum, *Animals without Backbones* (rev ed , 1948)

investiture, in FEUDALISM, the ceremony by which an overlord transferred a fief to his vassal After oath of fealty, the lord "invested" him with the fief, usually by giving him a clod or a stick or a stone or some other symbol of the land or office transferred The ceremony imposed upon him the duties of a suzerain, the principal one being protection of the vassal's interests Clerical investiture was of great importance because the dispute concerning it was one of the phases of the great struggle between Church and state in the Middle Ages The fundamental trouble lay in the dual position of the important bishops and abbots, who were both spiritual lords and temporal lords From early times, then, both the king and the pope were interested in the election and installation of the bishop When late in the 11th cent the struggle concerning investiture broke out, there was no general agreement as to the powers of the pope and the emperor in installing German bishops it was only generally recognized that both had rights in the matter The use of the word *investiture* increases the difficulty of understanding the problem, strictly speaking, investiture meant the giving of the pastoral staff and pastoral ring, the symbols of spiritual office, more widely, it meant the whole matter of election and installation The right of a temporal prince to give spiritual power was claimed only by the extremists of the emperor's party, but there was debate as to canonical election, royal assent, and papal assent The quarrel was touched off by divergence between Pope GREGORY VII and Emperor HENRY IV The clerical reform movement brought on the trouble, it was essential that the Church have the power of selecting bishops if the reforms—abolition of SIMONY, of marriage of the clergy, and of political and economic abuses in the Church—were to be carried out All went well until the death in 1056 of Emperor HENRY III, who had worked with the reform party In the minority of Henry IV, abuses were rife The reform party now saw that lay investiture must be abolished in order to make way for the reforms Trouble between Henry IV and Gregory VII on many counts increased In 1075 Gregory forbade lay investiture, and the bitter struggle was on in earnest The encouragement of rebellious nobles in Germany, excommunication of the emperor, and a steady warfare followed Investiture was only one phase of the contest, but an important one Especially in such times of stress, Henry needed to retain his power over the bishop-princes The papacy also maintained its ground After the death of Gregory VII (1086), the investiture argument took a new turn, and after the death of Henry IV (1106) the strain was lessened But PASCHAL II continued the policy of Gregory and his successor, URBAN II, in condemning lay investiture, though he entered into negotiations for settlement HENRY V maintained all the claims of his father and extended them by ruthless measures He entered into a sort of preliminary agreement before his coronation, but would not at the last moment consent to surrendering lay investiture, he seized the pope and forced him into surrendering the church claims Paschal disavowed this forced agreement later The emperor and the antipopes he set up effectively staved off settlement Under Pope GELASIUS II movements were made toward settlement, but it was not until 1122 that churchmen succeeded in bringing about an agreement in the Concordat of Worms (see WORMS, CONCORDAT OF) between HENRY V and Pope CALIXTUS II Thus compromise brought the struggle to an end, it was a victory, though far from a complete victory, for the Church This trouble found its counterpart in struggles between the pope and other rulers In France trouble between Church and state turned in general on other points (see INNOCENT III, PHILIP IV, GALLICANISM) In England, William the Conqueror had trouble with the Church, and William Rufus embarked upon a struggle over investiture His abuse of power, particularly in keeping sees vacant, intensified the struggle which reached a climax in the long battle between HENRY I and ANSELM In 1107 a compromise was reached in the agreement that bishops and abbots should be invested by the Church but should render homage to the king Later trouble between Church and state in England turned on other issues See R W Carlyle and A. J Carlyle, *A History of Medieval Political Theory in the West,* (5 vols , 1903–28) See also bibliography under HOLY ROMAN EMPIRE and MIDDLE AGES

involutional melancholia, psychosis of the involutional period of life (40 to 60 years of age) which is characterized by the sudden onset of severe emotional depression, anxiety, and suicidal tendencies. It appears in people with no previous psychotic history and is most successfully treated by electric SHOCK THERAPY

Io (ī'ō), in Greek religion, princess of Argos, daughter of Inachus and mother by ZEUS of Epaphus She was transformed into a heifer, either by HERA, to separate her from Zeus, or by Zeus, to protect her from Hera She was persecuted by Hera, guarded by ARGUS of the hundred eyes, and driven by a gadfly until she reached Egypt, where she became a woman again She is sometimes identified with the Egyptian goddess ISIS.

Ioannina (yō'ä'nēnä), city (pop 21,877), NW Greece, in Epirus, on lake Ioannina It is sometimes spelled Janina, Jannina, or Yannina An agricultural center, it also has a fine textile and silk industry The city dates from medieval times It was taken (1081) by the Normans, and in 1204 Michael I, despot of Epirus, made it his capital Conquered by the Turks in 1438, it became the seat of a pasha ALI PASHA, the Lion of Yannina, made it the stronghold of his virtually independent state In the First Balkan War the Turkish garrison surrendered (1913) to the Greeks after a long siege, and Ioannina passed to Greece The city suffered severe damage in the Second World War, when the Greeks defeated (1940) the Italians, and the Germans defeated the Greeks (1941) near Ioannina

iodine (ī'ədĭn, -dēn), the least active HALOGEN, a dark gray to purple-black, lustrous, crystalline, solid element (symbol=I, for physical constants, see ELEMENT, table) When heated it undergoes SUBLIMATION, the vapor having an intense violet color and a characteristic odor Iodine is only slightly soluble in water, but it dissolves in carbon disulphide, alcohol (the tincture of iodine is an alcohol solution), and a solution of sodium or potassium iodide It forms many compounds—with hydrogen (hydrogen iodide which in solution forms hydriodic acid), with certain nonmetals, e g , nitrogen, phosphorus, and oxygen, and with most metals The element is obtained from salt deposits, as from the saltpeter beds in Chile where it occurs in small quantities as an iodate and from the salt brines associated with some oil wells in California and Louisiana It is also found as an iodide in the ash of certain seaweed The element is prepared by displacement from a compound by chlorine or by the treating of an iodide with manganese dioxide and sulphuric acid, when it sublimes Iodine is important in medicine (see GOITER) and is used especially as the tincture and as IODOFORM It is employed in the preparation of certain drugs, in photography (silver iodide), and in the manufacture of some dyes The tincture is used in the test for STARCH The element was discovered in 1811 by Bernard Courtois

iodoform (ī'ōdəfôrm ĭ'ō-), yellow crystalline solid (a compound of carbon, hydrogen, and iodine and known technically as tri-iodomethane) having a characteristic odor It is practically insoluble in water, but is soluble in alcohol and ether It is widely used as an antiseptic and disinfectant, especially in surgical dressings It is produced when iodine and a solution of an alkali (e g , potassium hydroxide or sodium hydroxide) act on alcohol or acetone and is also prepared electrolytically See iodine under POISONING (table)

Iola (ī'ōlu), city (pop 7,244), co seat of Allen co , SE Kansas, W of Fort Scott, founded 1859, inc 1870 It is a trade center in dairying country and manufactures cement

Iolo Morganwg (yō'lō môrgä'nōōg), 1746–1826, bardic name of Edward Williams, Welsh poet and antiquarian As an editor of *Myvyrian Archaiology* he led in the revival of Welsh interest in the past Patriotic fervor for his own S Wales caused him to fabricate old tales and poems and to doctor records concerning the EISTEDDFOD and bardic ceremonies He has enriched Welsh literature with some delightful poems, especially those he attributed to DAFYDD AP GWILYM Southey held him in great respect. The name also appears as Yolo Morganoog

Ion (ī'ŏn, ī'ən), in Greek mythology, son of APOLLO and CREUSA, who became the ancestor of the Ionians He is the hero of a play by Euripides

ion (ī'ŏn, ī'un) To explain the fact that although some substances, e g , common salt, do not conduct an electric current under ordinary conditions but do conduct it when in solution in water (which is also a poor conductor), S. A Arrhenius advanced the theory (1887) that a molecule of these substances dissociates (breaks up) in solution and that the parts thus formed conduct the current According to the theory of ionization (called also the theory of ions, ionic theory, and theory of electrolytic dissociation), some of the molecules of salt, each of which is composed of one atom of sodium and one of chlorine, break up into two parts, one positively charged with electricity and one negatively charged The particles are called ions Those particles that are positively charged each consist of an ATOM of sodium which has lost one of its electrons, or negative charges Since originally the sodium atom had an equal number of positive and negative charges (i e , was neutral originally), the loss of one negative charge leaves it with an excess of one positive charge and it is, therefore, positively charged Each of those particles that is negatively charged consists of an atom of chlorine which has gained an electron, or negative charge of electricity The chlorine atom, like the sodium atom, was originally neutral, but the addition of the electron gives it an excess negative charge It receives this electron from the sodium atom when the salt molecule (composed of one sodium atom and one chlorine atom) dissociates When a current of electricity is introduced into the solution (see ELECTROLYSIS), the sodium ion is attracted to the negative pole or cathode, because it bears a positive charge (and unlike charges of electricity attract each other) It is called a cation The chlorine ion being negatively charged is attracted to the positive pole or anode and is known as an anion At this pole it gives up its negative charge and becomes once more a chlorine atom Joining with another chlorine atom thus formed, it makes up a chlorine molecule (which contains two atoms of chlorine) and passes up through the water and off as chlorine gas On the other hand, the sodium ion receives a negative charge from the cathode and becomes again a sodium atom Since sodium reacts with water at ordinary temperatures, the atoms formed react with the water, displace some of the hydrogen (which bubbles off) from it, and form molecules of sodium hydroxide (one atom of sodium, one of oxygen, and one of hydrogen) Those substances which, like salt (sodium chloride), conduct electricity are called electrolytes, those which do not, e g , sugar and alcohol, are called nonelectrolytes Sugar in solution is separated into molecules, but the molecules do not dissociate into ions In general, the chemical compounds known as acids, bases, and salts conduct electricity when in solution and are therefore electrolytes (see NEUTRALIZATION) Some ionize (form ions) to a greater extent than others Furthermore, the apparent extent of ionization increases as the solution is diluted, i e , as more water is added It has been discovered that certain substances (e g , salt, when melted and hence in a liquid form) yield ions just as they do in aqueous solution Various important industrial processes are based upon this fact The acidity or alkalinity of a substance in solution depends upon the concentration of hydrogen ions (H^+) or of hydroxyl ions (OH^-) in the solution Certain substances called indicators are used to indicate which kinds of ions are present or are in greater concentration Litmus is such an indicator, it turns red in an acid solution, a solution in which there is a greater concentration of H^+ ions, and blue in a base solution, one in which the OH^- ion concentration is greater In pure water (HOH) the concentration of hydrogen ions and hydroxyl ions is equal, and the substance acts both as a very weak acid and as a very weak base The letters (or symbol) "pH" are used to indicate the hydrogen-ion concentration, and thus the relative acidity or alkalinity When the pH is known, a solution can be made to have a desired concentration of hydrogen ions or of hydroxyl ions by the addition of an acid or a base The pH of substances is important in many fields of industry and in agriculture In agriculture, for example, it is important to know the pH of soils for the growth and best yield of various crops Tables are prepared by the Dept of Agriculture

Iona (ī'ōnu) [miswritten for Irish *Ioua*=island] or **Icolmkill** (ĭ"kŏmkĭl') [Irish, =island of Columcille], island, off W Scotland, in Argyllshire, one of the Inner Hebrides It is separated from the island Mull by the Sound of Iona, is c 3½ mi long and 1½ mi wide, and is hilly, with shell beaches The island is famous as the early center of Celtic Christianity St Columba, with his companions, landed here from Ireland in 563 They founded a monastery, which was burned by the Danes in the 9th cent In 1203 a Benedictine monastery, of which there are remains, was established The cathedral, formerly the Church of St Mary, dates from the late 12th or early 13th cent There were many ancient crosses, of which several remain A cemetery, near the 12th-century Chapel of St Oran, contains sculptured tombstones and is reputed to be the burial place not only of many Scottish kings and chiefs but of several sovereigns of Ireland, Norway, and France The land is fairly fertile, and farming, fishing, and marble quarrying are carried on A plan to restore ancient buildings on Iona was interrupted by the Second World War, but was resumed in 1947

Ionia (ī'ō'nēu), ancient region of Asia Minor It occupied a narrow coastal strip of what is today W Turkey and the neighboring Aegean Islands, which now mainly belong to Greece The region was of the utmost importance in ancient times, for it was here that Greek settlers settled colonies, presumably before 1000 B C These settlers were called Ionians, and Athens claimed to be the mother city of all of them, but modern scholars believe that they were actually a mixed group and that they were further mixed after arrival by intermarriage with native groups such as the Carians. Nevertheless,

they spoke the same distinctive form of Greek that was spoken in Attica and Euboea, and they were always in ancient times distinguished in culture from the Dorians and Aeolians Tradition says that they fled to Asia Minor from the mainland before the conquering hordes of Dorians However that may be, they flourished in Ionia, and the city-states there sent out colonies of their own There came to be 12 important cities—Miletus, Myus, Priene, Samos, Ephesus, Colophon, Sebedus, Teos, Erythrae, Chios, Clazomenae, and Phocaea These were linked in a loose religious league centering on the temple of Poseidon at Mycale Smyrna, an Aeolian foundation, later joined the league The fertility of the region, the excellent harbors, and the favorable position between the Greek world and Asia all gave prosperity to the cities, which sent traders and colonists into the Mediterranean as far west as Spain and up to the shores of the Black Sea The cities were invaded by the Cimmerians in the 7th cent but survived the storm Later Gyges, king of Lydia, invaded them, but it was not until the time of Croesus that they were brought under the Lydian yoke, which was very mild Greek culture, indeed, was already having profound effects on the neighboring lands and even far to the east When Croesus was conquered (before 546 B C) by Cyrus the Great of Persia, the Greek cities came under Persian rule That rule was not very exacting, but it was in its nature despotic, and at the beginning of the 5th cent B C the cities rose in revolt against Darius I They were aided and abetted by Athens and some other Greek city-states Though the revolt was easily put down, the Persians set out to punish the allies of the cities The Persian Wars resulted. Most of the Ionian cities thereby gained freedom briefly and took part in the events of Greek history, but their fate continued to be subject to treaties with the Persians and changed as Persian fortunes waxed and waned Alexander the Great easily took all of them in his power, and the Diadochi quarreled over them They continued rich and important through the time of the Roman and Byzantine empires It was only after the Turkish conquest that their culture was destroyed The Ionian cities made immense contributions to what is generally considered as Athenian art, literature, and philosophy

Ionia, city (pop 6,392), co seat of Ionia co , S Mich , on the Grand River and E of Grand Rapids, settled 1833, inc as a village 1865, as a city 1873 Furniture, flour, and pottery are made It is the seat of a state reformatory and a state hospital for the criminal insane The Indian Saginaw Trail passed here

Ionian Islands (ī-ō'nēun), chain of islands (752 sq mi , pop 219,562), off W Greece, in the Ionian Sea (a branch of the Mediterranean), along the coasts of Epirus and the Peloponnesus They include CORFU, PAXO, LEUCAS, CEPHALONIA, ITHACA, ZANTE, and—off the southern tip of the Peloponnesus—CYTHERA Largely mountainous, the islands reach their highest point at Mt Aenos (5,314 ft) on Cephalonia The climate is warm and humid, and the soil produces currants, grapes, olives, grains, citrus fruit, and vegetables Sheep, goats, and hogs are raised Local industries include fishing, soapmaking, and boatbuilding The islands had no unified history during the ancient Greek period Passing, with Greece, to the Roman and Byzantine empires, they passed (14th–15th cent) to Venice, which kept them until the dissolution of the Venetian republic by the Treaty of Campo Formio (1797) The islands went to France but were seized (1799) by a Russian-Turkish fleet and were constituted into a republic under Russian occupation and under Ottoman protection In 1807, by the Treaty of Tilsit, Russia restored the islands to France, and in 1809 an English fleet occupied all the islands save Corfu The Treaty of Paris (1815) established a British protectorate over the Ionian Islands, which were at last ceded to Greece in 1864, after the accession of George I

Ionian Sea, part of the Mediterranean Sea, between Greece and SE Italy It is connected with the Adriatic Sea by the Strait of Otranto Several of the Ionian Islands lie in its eastern part It forms an inlet, the Gulf of Taranto, off the southeast coast of Italy

Ionic order (ī-ŏn'ĭk) The spreading, scroll-shaped CAPITAL is the distinctive feature of the Ionic order, it was primarily a product of Asia Minor, where have been found various early embryonic forms of this capital In the Ionian colonies of Greece on the southwestern shores of Asia Minor, the Ionic order had attained a full development in the 6th cent B C In the 5th cent B C it appeared in Greece proper, where only one really complete example exists, the ERECHTHEUM at Athens Greek Ionic columns are of slender proportion, their height being generally about nine times the column's lower diameter The column shaft is carved with 24 flutings The spiral scrolls at either side of the cap run from front to rear, and an echinus molding with egg-and-dart ornamentation occupies the space between them. The entablature, usually about one quarter the height of the column, has an architrave generally divided into three bands, each projecting beyond the other; a frieze, often adorned with sculpture, and a cornice enriched with dentils, above which are a corona and a crowning cyma molding A late and vigorously monumental development of the order took place in the Hellenistic temples of Asia Minor at the middle of the 4th cent. B C In using this order the Romans adopted heavier and less beautiful details The temple of Saturn shows a variation of the four-cornered Ionic cap, which had been created in Greece for the corner columns of a portico A cap of this type, with corner volutes, was developed by the Italian Renaissance architect SCAMOZZI (see SCAMOZZI IONIC ORDER) into a design bearing his name, while variations of it have been widely used both in the Renaissance and subsequent periods

ionium. see RADIOACTIVITY

ionization see ION

ionosphere (ī-ŏn'usfēr), series of concentric ionized layers forming part of the upper ATMOSPHERE of the earth Fluctuations in the height of the layers and in the degree of ionization occur at different times of the day and night, at different seasons, and in different areas Causes for some of the variations in characteristics are believed to include changes in the amount of ultraviolet radiation received from the sun and effects of the earth's magnetic field The layers comprising the ionosphere are also known by letters of the alphabet—the E layer, the F layer (divided into the F-1 and F-2 layers and lying above the E layer), and the G layer above the F It is the ionosphere which, by reflecting radio waves back to the earth, makes possible long-distance wireless communication Oliver Heaviside and A E Kennelly independently discovered the existence and the effects of the ionosphere Both the ionosphere as a whole and the highly ionized E layer have been called the Kennelly-Heaviside layer

Ioshkar-Ola (yŭshkar'-ŭla'), city (pop 27,052), capital of Mari ASSR, E central European RSFSR It is an agricultural center processing grain, flax, meat, sunflower oil, and lumber

Iota, village (pop 1,000), SW La , SW of Baton Rouge, in a rice-growing area, inc 1902

IOU [I owe you], written acknowledgment of a debt, usually in the form, "To John Brown, IOU five dollars, Henry Smith, Jan 1, 1950 " In the United States and Great Britain, if signed by the debtor it is evidence of the debt stated It is neither a receipt nor a PROMISSORY NOTE In Great Britain it is not negotiable, but some states of the United States have declared it negotiable

Iowa (ī'uwu), state (56,280 sq mi , 1940 pop 2,538,268, 1949 estimated pop 2,643,000), N central United States, in the Middle West, admitted 1846 as the 29th state (a free state) DES MOINES is the capital and the largest city Iowa is framed on two sides by rivers, the Mississippi separates it on the east from Wisconsin and Illinois, and the Missouri and the Big Sioux separate it from Nebraska and South Dakota The state is bounded on the north by Minnesota and on the south by Missouri Within these borders are rich, rolling tablelands, interrupted by many rivers The terrain is low and gently sloping, except for the hills in the glaciated country of NE Iowa and the bluffs steep sloped on the banks of the Mississippi and moundlike on the banks of the Missouri The rivers of the eastern two thirds of Iowa flow to the Mississippi, those of the west flow to the Missouri The original woodlands—including black walnut and hickory—were destroyed by lumbering in the 19th cent , and only second or third growth of timber now covers some 2,500,000 acres But the typical Iowa scene is prairie covered a little more than a century ago with grass higher than the wheels of prairie schooners of the pioneers, covered now with disciplined fields of Iowa corn and other grains, the wildflowers that blossomed among the wild grasses still brighten the roadsides Gone are the wild turkey, the prairie chicken, and the quail, but migratory geese and ducks and the imported ring-necked pheasant and European partridge are hunted now in the pleasant autumn The climate offers its trials, northwest winds send the mercury to 30° F below zero in winter, and hot airs send it up above 100° F in the summer, violent thunderstorms, hail, floods, and occasional droughts vex the farmers The average annual 31 in of rain falls mostly in summer and can wash away the land, so that Iowans must fight erosion with modern plowing and planting practices, regulation of water courses, and reforestation Yet Iowa has some of the finest farming land in the world The deep porous soil yields corn and other grains in almost fabulous amount, the corn-fed cattle and hogs are nationally known, 25 percent of the "grade-one" farm land of the United States is in Iowa These riches the Iowans have used to get the highest total cash receipts from farm marketing of any state Industry, too, uses the produce of the soil, and SIOUX CITY and CEDAR RAPIDS rank high in processing of agricultural products Iowa also has large factories to make cosmetics, buttons, and washing machines There is no gold or silver, but Iowa has bituminous coal estimated to be enough to supply its own needs for 4,000 years, and the humbler mining industries yield sand, gravel, clay, limestone, and more gypsum than any other state except one Far in neolithic times there were already quarries, dug by MOUND BUILDERS, and the later Indians knew of the mineral wealth. Iowa supposedly takes its name from the IOWA INDIANS The belligerent SIOUX INDIANS however, dominated the area, while the SAC AND FOX INDIANS also ranged over the land French explorers going down the Mississippi, Father MARQUETTE and JOLLIET and later La Salle, touched upon the Iowa shores Fur traders crossed the land and paddled up most of the rivers until well in the 19th cent Late in the 18th cent. a French Canadian named Julien DUBUQUE leased land from the Indians around the present Dubuque and opened lead mines there After his death the Indians refused to permit other white men to work the mines, and U S troops under Lt Jefferson Davis protected Indian rights in 1830 Nevertheless, after Iowa went to the United States by the Louisiana Purchase in 1803, the Indian hold was doomed, and the BLACK HAWK WAR (1832) saw the end of their regime (though the last claims were relinquished only in 1842) A great rush of frontiersmen came to settle the prairies and take the mines By 1838 Iowa Territory was organized, Burlington was temporary capital until IOWA CITY was chosen (1839) capital, which it remained after statehood in 1846 until Des Moines became capital in 1857 Quickly the Iowans (called Hawkeyes for some reason unknown) built a rural civilization like that of New England, from which many of them came Later immigrants from Europe—notably Germans, Czechs, Dutch, and Scandinavians—brought their agricultural skills and their own customs to enrich that rural life A system of public schools was set up in 1839 and soon successful efforts were made to establish colleges and universities, efforts today represented by such state-supported institutions as the State Univ of Iowa and Iowa State College and such private institutions as Grinnell College, Cornell College, and Drake Univ Iowa prospered especially with the beginning of railroad building and so fierce was the rivalry between towns to get the lines that the grant of big land tracts to railroad companies was curtailed by legislative act in 1857 This land of small, independent farmers and small towns was naturally tied to the antislavery side in the contest over slavery The Underground Railroad was active in Iowa, John Brown for a time made his headquarters there, and in the Civil War many Iowans fought for the Union The farmers grew wealthy in wartime but, when the 1870s came with hard times, they found themselves burdened with debt and felt oppressed by the money system, by the corporations, and the immunities of the railroad companies Many of them joined with other farmers of the West in the GRANGER MOVEMENT, the GREENBACK PARTY, and the POPULIST PARTY Some reforms were achieved and times improved, and radicalism had simmered down by the end of the 19th cent , not to flare again until the depression that began in 1929 Generally the agricultural commonwealth grew and prospered, partly through agricultural science such as the improvement of corn by cross-pollination and selective breeding The Grange, the Farm Bureau, the 4 H clubs, and farmers' cooperatives promote improvements and provide social life, as do the county fairs and the state fair Like other prosperous agricultural commonwealths, Iowa tends toward a stable and conservative norm, with the predominance of white Protestant society, linked over the course of many years with the Republican party and with isolationism in foreign affairs—the sort of society pictured in the paintings of Iowa's Grant Wood The society is not, however, rigid, and all manners of thought and men come out of Iowa The echoes of Populist radicalism are not entirely dead, and the rise in farm tenancy in the state (from 23 8 percent in 1880 to 49 6 percent in 1935) has caused some disquiet Many of the European immigrants and their descendants are Catholic The excellent educational institutions are producing cosmopolitanism The breadth of Iowa's contribution may be seen in some of the diverse public figures from Iowa, such as Herbert C Hoover, James Wilson, Henry A Wallace, Harry L Hopkins, Ray Lyman Wilbur, and Curtis Dwight Wilbur See Benjamin F Gue, *History of Iowa* (4 vols , 1903), Edwin Sabin and Henry Sabin, *The Making of Iowa* (1916), J. F Chapin, *Early Days in Iowa* (1931), Iowa State Planning Board, *A Preliminary Report* (1934) and *The Second Report* (1935), Federal Writers' Project, *Iowa a Guide to the Hawkeye State* (1938); Cyrenus Cole, *Iowa through the Years* (1940), Phil Stong, *Hawkeyes* (1940); Jacob Swisher, *Iowa, Land of Many Mills* (1940) and *Iowa in Times of War* (1943)

Iowa, river, 329 mi long, rising in lakes of N central Iowa and flowing southeast across the state, passing Iowa Falls (where it forms a gorge with rapids), Marshalltown, and Iowa City. It is joined by the Cedar at Columbus Junction and enters the Mississippi between Muscatine and Burlington.

Iowa, State University of, at Iowa City; state supported, coeducational; chartered 1847, opened

1855 It includes colleges of commerce, dentistry, education, engineering, law, liberal arts (with social administration), pharmacy, and medicine and schools of fine arts, journalism, letters, nursing, and religion There are bureaus of business and educational research, a child-welfare research station, a hydraulic research institute, the state historical society, practice schools (with an early nursery school), a radio station, art and natural history museums, and a theater The campus is on both sides of the Iowa river, the outstanding building is the old capitol, begun in 1840 See B F. Shambaugh, *The Old Stone Capitol Remembers* (1939)

Iowa City, city (pop 17,182), co seat of Johnson co , E Iowa, on both sides of the Iowa river and S of Cedar Rapids, founded 1839 as the capital of Iowa Territory, inc 1853 The beautiful old stone capitol was begun in 1840, and the first legislature met in the city in 1841, it sat here until 1857, when the seat of government was moved to Des Moines With the arrival of the railroad (1855), Iowa City became an important outfitting center for the westward trails At near-by Coralville is the site of a Mormon camp (1856) The opening of the State Univ of Iowa (see IOWA, STATE UNIVERSITY OF) stimulated the growth of the city It is a university town, but it also has small manufactures, there is a municipal airport The library of the state historical society is here, and near by are the state sanatorium for the tubercular, the villages of the AMANA SOCIETY, and Herbert Hoover's birthplace (at West Branch, 10 mi east) A U S veterans' hospital site was selected in 1948 See B F Shambaugh, *The Old Stone Capitol Remembers* (1939)

Iowa Falls, city (pop 4,425), N central Iowa, on the Iowa river and W of Waterloo, in a poultry-raising and farm area, settled 1853, inc 1869 Soybean and dairy products are made here Ellsworth Junior College (coeducational) and a museum of pioneer relics (1932) are here The annual state Baptist convention is held at Iowa Falls

Iowa Indians, North American Indian tribe, of Siouan linguistic stock, also called the Ioway They, with the Missouri, the Omaha, the Oto, and the Ponca tribes, presumably once formed part of the Winnebago people in their primal home N of the Great Lakes Iowa culture was that of the area of the eastern forests with some Plains area traits In 1700 the Iowa, separated from the parent nation, lived in Minnesota Their population in 1760 was some 1,100 In 1804, according to Lewis and Clark, the Iowa lived on the Platte river and there were some 800, smallpox having reduced the population In 1824 they ceded all their lands in Missouri and in 1836 were assigned a reservation in NE Kansas A part of the tribe moved to central Oklahoma in 1890 and with their relatives in Kansas number some 660 See Alanson Skinner, *Ethnology of the Ioway Indians* (1926)

Iowa Park, town (pop 1,980), N Texas, near Wichita Falls It is in an oil area and makes oil-field supplies An agricultural experiment station is in Iowa Park

Iowa State College of Agriculture and Mechanic Arts, at Ames, land-grant and state supported, coeducational, chartered 1858, opened 1868 It has divisions of agriculture (with forestry), engineering, home economics, science, and veterinary medicine, and technical journalism courses There are atomic, industrial science, and veterinary research institutes, a radio station, a pioneer nursery school, a college press, and Guatemala Tropical Research Center See history by E D Ross (1942)

Ipatieff, Vladimir Nikolaevich (vlä'dyĭmĭr nyĭkōl'yuvĭch ĕpä'tyĭf), 1867–, Russian-American chemist, b Moscow He taught chemistry in Russia and directed chemical work for the Russian government in the First World War He came to the United States in 1931 and was professor of chemistry (1931–35, emeritus from 1935) at Northwestern Univ, where he founded (1940) the Ipatieff Catalytic High Pressure Laboratory His research in catalysis and high-pressure synthesis is of great industrial importance in petroleum refining and in the synthesis of artificial rubber and of hydrocarbons His works include *Catalytic Reactions at High Pressures and Temperatures* (Eng tr , 1936)

ipecac (ĭ'pĭkăk″), drug obtained from the dried roots and rhizomes of a creeping shrub, *Cephaelis* (or *Psychotria*) *ipecacuanha*, native to South America (chiefly Brazil) and Central America It is cultivated also in parts of India and other tropical regions It is capable of destroying amoebae and was used in early days by natives of Brazil in treating amoebic dysentery, it has been found, however, that it is more efficient in curing the symptoms than in curing the disease It was introduced into Europe in the 17th cent and later into Asia chiefly for treating dysentery, although it has been used also against some other parasitic diseases Ipecac contains various alkaloids, the principle ones being emetine and cephaeline Emetine is the more effective in the destruction of amoebae and has been found useful in treating amoebic hepatitis and lesions caused by infection with amoebae Because of the toxic and severe emetic properties of the alkaloids of ipecac, the drug is not widely used, and when it is used it must be administered with great care. In the form of syrup of ipecac the drug is sometimes used to relieve bronchitis associated with croup and in treating certain other conditions

Iphedeiah (ĭf″ēdē'yū) [Heb ,=whom God frees], chief Benjamite 1 Chron 8 25

Iphicles (ĭ'fĭklēz), in Greek religion, son of AMPHITRYON and ALCMENE, companion and half brother of HERCULES

Iphigenia (ĭf″ĭjunī'a), in Greek legend, daughter of CLYTEMNESTRA and AGAMEMNON In some legends, she is the daughter of HELEN and THESEUS adopted by Clytemnestra His ships becalmed at Aulis en route to the TROJAN WAR, Agamemnon undertook to sacrifice Iphigenia to ARTEMIS, whose stag he had killed Artemis saved her life and took her to Tauris, where her brother ORESTES later found her, a priestess in the temple in which strangers were sacrificed to Artemis She recognized him, saved his life, and escaped with him to Greece Euripides, Racine, and Goethe wrote tragedies, and Gluck an opera, about her So far as Aeschylus is concerned in the *Agamemnon*, Iphigenia died at Aulis

Ipin or **I-pin** (ē'pĭn'), city (pop 80,439), S Szechwan prov , China It is a commercial center at the junction of the Min and the Yangtze rivers The city was formerly called Suifu

Ipiranga or **Ypiranga** (both ē″pērang'gû), stream, São Paulo, SE Brazil On its banks the regent Pedro (later Emperor PEDRO I) issued the Grito de Ypiranga, the declaration of the independence of Brazil from Portugal on Sept 7, 1822 The event is commemorated by a monument and a historical museum

Ipoh (ē'pō), town (pop 80,737), Perak, NW Malaya, in the Kinta valley It is the greatest tin-mining center of Malaya The mine laborers and the population are in large part Chinese

Ippolitov-Ivanov, Mikhail Mikhailovich (mēkhĭyĕl' mēkhī'lŭvĭch ĕpŭlyĕ'tuf-ēvä'nuf), 1859–1935, Russian composer, pupil of Rimsky-Korsakov at the Moscow Conservatory In 1882 he went to Tiflis, where he taught and conducted In 1893, recommended by Tchaikovsky, he was made a professor at the Moscow Conservatory, of which he was director from 1906 until 1922 In 1922 he became conductor of the State Opera, Moscow As a composer he followed the aims of the Russian nationalists His best-known work is his *Caucasian Sketches* (1894) He also composed other orchestral works, operas, choral works, chamber music, and songs and wrote a treatise on harmony, a study of Georgian folk song, and his memoirs, which appeared serially in English in the *Musical Mercury* in 1937

Ipsambul, Egypt see ABU SIMBEL

Ipsus (ĭp'sus), small town, ancient Phrygia, Asia Minor ANTIGONUS I, who had summoned his son Demetrius to his aid, was here defeated and slain by his rivals Seleucus and Lysimachus, in 301 B C Modern Ipsili Hissar is on the site

Ipswich (ĭp'swĭch), city (pop 26,218), Queensland, Australia, WSW of Brisbane It is the principal coal-mining center of the state and has woolen mills

Ipswich, county borough (1931 pop 87,502, 1947 estimated pop 102,450), Suffolk East, England, at the head of the Orwell estuary and NE of London The town is very old, and several historical houses remain, of which Sparrowe's House (1567) is an example Wolsey's Gate is a relic of a college founded by Cardinal Wolsey Christchurch park and mansion (1549), with art galleries and a museum, St Margaret's Church, the Church of St Mary at the Quay, the Church of St Mary at the Tower, and the grammar school (1477) are noteworthy The town's industries include the manufacture of agricultural machinery and shipping

Ipswich. 1 Town (pop 6,348), NE Mass , NNE of Salem and on the Ipswich river, here crossed by a bridge (1764) This area, called Agawam, was settled in 1633, and Ipswich town was incorporated in 1634 There is some shipbuilding, and electric fixtures are made It has many old houses **2** City (pop 1,902), co seat of Edmunds co , N S Dak , W of Aberdeen, in a farm area

Iquique (ēkē'kā), city (pop 38,094), Pacific port, N Chile Founded in the 16th cent , it was taken from Peru by Chile in 1879 during the War of the Pacific Since rain rarely falls and then only in amounts hardly measurable, water must be brought from 60 mi away Nothing but the desolation of rock and sand encloses the city on the landward side and the anchorage is open to Pacific storms The city is itself attractive, though it is sometimes shaken by earthquakes Iquique depends for survival on the export of nitrates and iodine from the ATACAMA desert

Iquitos (ēkē'tōs), city (pop. 34,231), NE Peru, on the Amazon Founded in 1863, Iquitos, c 2,300 mi from the Amazon's mouth, is the farthest inland port of any considerable size in the world Ocean vessels drawing not more than 14 ft can reach it With the boom in wild rubber at the beginning of the 20th cent , the city gained prominence, but it declined after the collapse of the market Today some coffee, cotton, timber, balata, and tagua nuts are exported Although there is launch service some distance up the Marañón and Ucayali rivers and air service to the highlands, the Andes are so formidable a barrier to the transport of most commercial goods that Iquitos has been oriented toward the Atlantic rather than the Pacific The climate is hot but not unhealthful The Iquitos Indians live in the region

Ir, in the Bible see IRI.

Ir, chemical symbol of the element IRIDIUM

Ira (ī'ru) **1** Chief officer of David 2 Sam 20 26. **2,** 3 Two of David's guard 2 Sam. 23 26,38, 1 Chron. 11 28,40, 27 9

Irad (ī'răd), Enoch's son Gen 4 18.

Irak, see IRAQ

Irala, Domingo Martínez de (dōmēng'gō mārtē'nās dā ērä'la), d 1556 or 1557, first governor of Paraguay Of Basque origin, he accompanied Pedro de Mendoza on his expedition to La Plata in 1535 As the first governor in America elected by a free vote of the colonists he founded in Asunción the first CABILDO in America Under his administration, the city was a center for further colonization and a point of departure for Peru From 1539, when he moved the inhabitants of BUENOS AIRES to Asunción, until his death (with a short interruption when CABEZA DE VACA was governor), he ruled with wisdom and justice Churches and public buildings were erected, towns were established, and the Indians were subjugated and distributed among the colonists in encomiendas

Iram (ī'rĕm), duke of Edom Gen 36 43, 1 Chron 1 54.

Iran (ĕrän', ĭrän'), kingdom (628,000 sq mi , pop c 17,000,000), SW Asia, universally known in English as Persia (pûr'zhu, -shu) before March, 1935, and still commonly called by that name TEHERAN is the capital Iran is bordered on the south by the Persian Gulf and the Gulf of Oman, on the east by Pakistan and Afghanistan, on the north by the USSR and the Caspian Sea, and on the west by Turkey and Iraq Other leading cities besides Teheran are TABRIZ, MESHED, ISFAHAN, HAMADAN, SHIRAZ, and RESHT The government is a constitutional monarchy, and in May, 1950, the ruler (the *shahanshah*) was Mohammed Reza Shah Pahlevi, who came to the throne in Aug , 1941, after the deposition of his father, Reza Shah Pahlevi Iran, is situated on the great Iranian plateau which is linked in the west with the Anatolian plateau, connects in the north with the Little Caucasus, and extends beyond the eastern border in the high plateau of Afghanistan In the north and northwest are mountain ranges, including the Elburz range, which rises to the lofty, snow-capped Mt Demavend or Demavand Rainfall in this region is abundant Large sand and salt deserts, where days are very hot and nights cool, lie in central and SE Iran, and the region about the southern coast is a low, semitropical plain The climate ranges from excessive heat to the perpetual snow of the mountains Rivers are few and unimportant, except as they are used for irrigation, the only navigable stream is the Karun in the southwest Connecting the Caspian Sea to Persian Gulf is the Trans-Iranian RR, which was an important means of transportation of lend-lease materials from the United States to Russia in the Second World War The language spoken in Iran is Persian, with some local exceptions such as Turki and Armenian in the northwest, Kurdish in the western mountain regions, and Arabic along the Persian Gulf The religion is predominantly Moslem of the Shiah sect (see SHIITES), though there are some Sunnites, and three minority groups are recognized—the Armenians, the Jews, and the Zoroastrians (the Parsis). One fourth of the country is inhabited by nomadic tribes, such as the Kurds, the Lurs, the Bakhtiari, the Qashqai, the Baluchi, and small Arab tribes along the tip of the Persian Gulf Iran is primarily an agricultural country Where rainfall is sufficient or irrigation is practiced, the soil produces fine crops Wheat, the most important crop, is grown mainly in the west and northwest provinces, known as the breadbaskets of Iran Rice, also important, is grown along the Caspian Sea and to some extent in the south Opium, of which Iran is one of the world's largest producers, and tobacco are government monopolies Other products are dry and fresh fruits (Azerbaijan and Khurasan), gums, and pistachio nuts Since 1930 industry has boomed considerably, Isfahan, with several cotton and wool spinning and weaving mills, is the center of recent industrial growth In the north are silk mills that utilize the domestic raw silk, these are government owned Refineries of beet sugar, scattered about the country, supply one fourth of Iran's needs. There are some sheet-metal and ammunition factories, which are exclusively government owned. In addition, there are cement and glass plants and rice mills The most valuable and the greatest item of native Persian industry is still the famous handmade Persian carpets and rugs, centers of this industry are Kerman, Kashan, Isfahan, and Hamadan Hand-woven cotton and silk textiles are still a main source of living in some parts, especially Yezd, and the famous Persian shawls are still made The chief source of Iranian wealth is, however, oil, which is the only commercially exploited mineral. According to a geological survey, the country fairly floats on oil, but as yet the southwest (the region of Khuzistan) is the only area being exploited by the

Anglo-Iranian Oil Company A concession was first granted in 1901 to one William D'Arcy, whose efforts to exploit the field ended in failure In 1909 the Anglo-Persian Oil Company was formed on the basis of the D'Arcy concession, this later became the Anglo-Iranian Oil Company In 1933 a serious dispute arose between Iran and the company over the amount of royalty and the duration of the agreement, this was referred to the League of Nations for settlement A new agreement provided for higher royalties and duration was extended for 60 years more In 1948 a new argument set off in the parliament (the Majlis) of Iran resulted in fresh negotiations between the company representatives and Iranian government officials The chief points of dispute were the royalties, labor rights, and employment problems Other minerals, such as gold, tin, copper, and lead have been located but are not much exploited, the only operating mine is at Anarak in central Iran, NE of Isfahan Salt, gypsum, sulphur, and coal are exploited for local use Important fisheries on the Caspian Sea are operated by Shilat, a joint Russo-Persian corporation, on an equal basis, and in the south private fisheries operate to meet local demands. In ancient times the country was the heart of the Persian Empire, one of the greatest empires the world has known (for a brief account, see PERSIA) After various fortunes over many centuries, it was brought back to a brief period of glory by the Sassanian kings (see SASSANIDAE), whose rule was ended more or less effectively in 626, when Arab invaders took the capital Ctesiphon The Arabs brought to Persia the new religion of Islam They also brought foreign rule The land was long under the caliphate and was prominent in the Moslem world The Safavid dynasty (1499–1736), was however, the first major dynasty to bring internal order again to Iran and to establish a foreign policy on behalf of a unified nation Founded by Shah Ismail, who converted the country to the Shiite faith, the dynasty reached its peak under Shah ABBAS I (Abbas the Great) He drove out the Portuguese, who had established themselves on the Persian Gulf early in the 16th cent Shah Abbas also established trade relations with Great Britain and reorganized the army The fall of the Safavid dynasty after more than two centuries of rule was brought about by the Afghans, who overthrew the weak shah HUSEIN in 1722 An interval of Afghan rule followed Shortly, however, NADIR SHAH expelled the Afghans and established (1736) the Afshar dynasty His greatest adventure was his invasion of India in 1738, he brought back fabulous wealth, including the famous Peacock Throne and the Koh-i-noor diamond Spoiled by his victory and acquisitions, Nadir Shah became a despotic ruler and was finally assassinated in 1747 The Afshar dynasty was followed by the Zand dynasty (1750–94), founded by KARIM KHAN, better known as Vakil [regent], who established his capital at Shiraz and adorned that city with many fine buildings His rule brought a much-needed period of rest and renewed prosperity After it the country was again in turmoil until the advent of Aga Mohammed Khan, a shrewd eunuch soldier, who defeated the last ruler of the Zand dynasty and established the Kajar or Qajar dynasty (1794–1925) This long period saw Iran steadily lose territory to neighboring countries and fall under the increasing pressure of European nations Under Fath Ali Shah, Persian claims in the entire Caucasian area were challenged by the Russians in a long struggle which ended with the Treaty of Gulistan (1813) and the Treaty of Turkamanchai (1828), by these Iran gave up the Caucasian lands HERAT, the rich valley on the Hari Rud, which had been part of the ancient Persian Empire, was taken by the Afghans. A series of campaigns to reclaim it ended with the intervention of the British on behalf of Afghanistan and resulted in the recognition of Afghan independence by Iran in 1857 Most fateful was the discovery of oil and the D'Arcy concession of 1901 with its consequences. Thus new wealth intensified the rivalry of Great Britain and Russia for power over the nation Internally, the early 20th cent. saw the rise of the constitutional movement which finally brought the revolt of 1905. In 1906 constitutional government was granted The British-Russian rivalry continued and resulted in 1907 in an Anglo-Russian agreement that divided Iran into spheres of influence. The period preceding the First World War was one of political and financial difficulty In 1911 Morgan Shuster, an American financier, was engaged as financial adviser and treasurer general of Iran. Some reforms were made, but conflict with the Russians led to the failure and termination of the mission in 1912. During the First World War the country underwent actual occupation by British and Russians and remained neutral After the conclusion of the war the Anglo-Russian agreement of 1907 was formally annulled, and Iran was admitted to the League of Nations as an original member In 1919 Iran made a trade agreement with Great Britain which formally reaffirmed the country's independence but actually attempted to establish a complete protectorate over the country. After Persian recognition of the USSR in a treaty of 1921, Russia renounced tsarist imperialistic policies toward Iran and canceled all debts and concessions and withdrew occupation forces from Iranian territory In 1921 Reza Khan, an army officer, effected a coup d'état and established a military dictatorship He was subsequently (1925) elected hereditary shah, thus putting a formal end to the Qajar dynasty. REZA SHAH PAHLEVI abolished the British treaty, reorganized the army, and introduced sorely needed reforms In 1941, during the Second World War, Great Britain and the USSR, charging pro-Axis activity on the part of Iran, again occupied the country and forced the abdication of Reza Shah in favor of his son MOHAMMED REZA SHAH PAHLEVI At the TEHERAN CONFERENCE in 1943 the Teheran Declaration, signed by the United States, Great Britain, and the USSR, guaranteed the independence and territorial integrity of Iran, and when the United Nations was formed in 1945, Iran was one of the original members The occupation by foreign soldiers continued after the end of the war, and March 2, 1946, was set as the date for withdrawal Iran firmly refused concessions to Great Britain, the United States, and the USSR while under occupation Trouble with Russia ensued In Nov., 1945, a movement generally acknowledged to be Soviet inspired led to a revolt and establishment of autonomous rule in Azerbaijan prov Thus was backed by Russian troops who remained in that area beyond the treaty evacuation date Iran protested to the United Nations This controversy was the first important case to be presented to the Security Council for settlement The Russian troops were finally withdrawn on the promise of oil concessions in the north pending approval of the Iranian parliament, which proceeded to reject them categorically The strategic location of the country and its rich oil deposits continue to cause bitter international rivalry for influence by big power interests In 1938 for the purpose of civil administration Iran was divided into 10 provinces called *ostans*, called simply by numbers (e.g., First Province), these are governed by *ostandars* [governors general] Each *ostan* is divided into several *shahrestan* [counties] governed by a *farmandar* [governor] The subdivisions under these are respectively the *bakhsh* [district], *dahestan* [village group], and *deh* [village] The central government of Iran is a constitutional monarchy with division of power into the three distinct branches, executive, judicial, and legislative Legislative power is vested in a bicameral legislature, the upper house, known as the senate, was formed for the first time in 1949 and is composed of 60 members, 30 being appointed by the king, 30 elected by the people, the lower house of representatives is called the Majlis Executive power is exercised by the cabinet headed by the prime minister, who is appointed by the king with the consent of parliament and is responsible to the parliament Military service is compulsory Since the 1930s education has progressed and illiteracy is on the decrease The Univ. of Teheran was established in 1934, and the Univ. of Tabriz was established after the Second World War A liberal Seven-Year Plan was launched by Mohammed Reza Shah for the industrial, agricultural, and social development of the country See William S. Haas, *Iran* (1946), D. N. Wilber, *Iran, Past and Present* (1948)

Iranian languages, group of the Indo-Iranian subfamily of Indo-European languages See LANGUAGE (table)

Irapuato (ērāpwä'tō), city (pop 32,377), Guanajuato, central Mexico Founded by order of Charles V in 1547, Irapuato is on a small fertile plain in the mining region between CELAYA and LEÓN and is linked to them by the main rail line of central Mexico

Iraq or **Irak** (both ērāk', irāk'), kingdom (c 168,000 sq. mi.; pop 4,799,500), SW Asia Baghdad is the capital Iraq is bordered on the south by Kuwait and Saudi Arabia, on the west by Jordan and Syria, on the north by Turkey, and on the east by Iran The country's only outlet to the sea is a short stretch of coast on the northwestern end of the Persian Gulf Iraq is approximately coextensive with the ancient MESOPOTAMIA. The southwest, belonging to the Syrian Desert, supports a small population of nomadic shepherds In the rest of the country, life centers on the great southeast-flowing rivers, the TIGRIS and the EUPHRATES, which come together in the SHATT EL ARAB There is very little rainfall in the southeast, and all agriculture depends upon irrigation Here, with sandy soil and steady heat, a large date crop and much cotton are produced. Further up the main rivers, as the elevation increases rainfall becomes sufficient to grow diversified crops, including cereals and vegetables. In the mountainous north the economy shifts from agriculture to oil production, notably in the great fields near Mosul. The oil, produced by British companies, is shipped abroad mostly through two pipe lines, one running to Tripoli (Lebanon) and the other to Haifa Some is also carried on the main railroad, which connects Tripoli with Basra, the largest port of Iraq. Communications generally are poor, and in some mountainous frontier areas the Kurd and Assyrian (Nestorian Christian) minorities are in a state of chronic unrest. The bulk of the Iraqi population is Arabic-speaking and Moslem in religion Subjection to the Ottoman Turks in the 16th cent. was fiercely resisted. In the First World War nationalists from this area joined with Arabs in other parts of the Ottoman Empire in support of the Allies, and the military occupation by the British (begun in 1915) was welcomed. Nationalist elements, impatient over delay in gaining independence, revolted in 1920 but were suppressed by the British force of some 80,000 troops Late that year the Treaty of Sèvres established Iraq as a mandate of the League of Nations under British administration, and in 1921 the country was made a kingdom headed by FEISAL I, who had been recommended by Gertrude Bell With strong reluctance the Iraqi parliament agreed in 1924 to a treaty with Great Britain providing for the maintenance of British military bases and for a British right of veto over legislation Although British participation in government was ended by the treaty of 1930, there were otherwise few changes until, with the termination of the mandate in 1932, Iraq was admitted to the League of Nations Domestic politics remained turbulent, with many changes in government and much overt hostility to Great Britain Late in 1936 an army coup d'état led by Bekir Sidky set up a military government, which lasted less than a year Strongly pro-British elements later controlled Iraq, which, at the outbreak of the Second World War, broke relations with Germany The nationalist opposition, however, became stronger as the British and the French lost territory in the Middle East, and when Italy entered the war Iraq continued diplomatic relations In April, 1941, Rashid Ali al Gailani seized power and ousted Emir Abdul Illah, the pro-British regent for the child king, Feisal II (who had succeeded his father, Ghazi, ruler from Feisal I's death in 1933 to his own death by accident in 1939) The British persisted in reinforcing their garrisons by landing troops at Basra, and in May, Rashid, with some German and Italian support, opened hostilities He was utterly defeated by June, and Emir Abdul was recalled On Jan 16, 1943, Iraq declared war on the Axis countries and soon afterward adhered to the declaration of the United Nations Anti-British sentiment was reasserted after the war, and in 1948 a British-sponsored modification of the treaty of 1930 was defeated by the Iraqi parliament because it set no date for withdrawing the foreign garrisons Iraq, with other members of the ARAB LEAGUE, joined in 1948 in the unsuccessful war against the recently formed state of Israel Much of the country's Jewish population (c 85,000) emigrated to Israel, allegedly to escape persecution See H. A. Foster *The Making of Modern Iraq* (1935); Philip W. Ireland, *'Iraq* (1937)

Irasburg (ĭr'usbûrg), town (pop 852), N Vt., SSW of Newport, granted 1781, settled 1798 It was named for Ira Allen After the embargo of 1807 and in the War of 1812 it was a smuggling center Theodore Robinson was born here

Irazú (ēräsōō'), active volcano, 11,325 ft. high, central Costa Rica It destroyed CARTAGO in 1723 and is still active, with vapor rising constantly from one of its craters From the summit can be seen the Pacific, the Caribbean, and Lake Nicaragua

Iredell, James (ĭr'dĕl), 1751–99, American jurist, b. Lewes, England He emigrated (1767) to North Carolina, where he entered the customs service at Edenton and was made (1774) collector for the port He was admitted to the bar in 1771, and after the outbreak of the American Revolution he helped to organize the state court system He became (1777) a judge and later (1779–81) was attorney general His strong support of the proposed U.S. Constitution helped procure its adoption by North Carolina In 1790 Iredell was made a justice of the newly established U.S. Supreme Court Among his notable opinions was his dissent in *Chisholm vs. Georgia* (1793) when the majority holding was that a state might be sued in the Federal courts without its consent The Eleventh Amendment to the U.S. Constitution (adopted 1798) made Iredell's view the law of the land See biography by Griffith McRee (1857)

Ireland, John, 1827–96, American political leader, governor of Texas (1883–87), b. Grayson co., Ky. He read law and was admitted (1852) to the Kentucky bar He soon removed to Seguin, Texas, where he practiced law and was elected (1858) mayor After he served in the Confederate army in the Civil War, he returned to politics and rose to importance in the state Democratic party. As governor of Texas, Ireland had legislation passed to end the "fence cutters' war" between ranchers and farmers and to alleviate lawlessness. He also worked for the development of state institutions and the protection of state lands

Ireland, John, 1838–1918, American Roman Catholic prelate, first archbishop of St. Paul (1888–1918), b. Co. Kilkenny, Ireland He came to St. Paul in childhood He was educated at French seminaries, was ordained (1861), and soon enlisted as a chaplain in the Civil War. He became prominent when he was cathedral pastor (1867–75) at

St Paul, as a strong advocate of total abstinence, an enemy of the liquor traffic, and an opponent of political corruption In 1875 he was made coadjutor bishop of St Paul and in 1884 he succeeded, in 1888 his see was made archiepiscopal Bishop Ireland was very energetic and outspoken He gained many enemies by advocating state support and inspection of Catholic schools and by opposing the use of foreign languages in American Catholic churches, except in extreme need, and in parochial schools under any circumstances He continually made public statements on political matters, and he was a close personal friend of Presidents McKinley and Theodore Roosevelt With Cardinal Gibbons he defended the Knights of Labor

Ireland, William Henry, 1777–1835, English forger of Shakspearian documents and manuscripts Two plays of his own, *Vortigern* (performed 1796) and *Henry II* (both pub 1799), were accepted as works of Shakspere Edmund MALONE, however, exposed them as forgeries in 1796, and Ireland acknowledged the hoax in his *Authentic Account* (1796) and later in his *Confession* (1805)

Ireland, Irish *Eire* (ā'ru) [to it are related the poetic *Erin* and, perhaps, the Latin *Hibernia*], island (31,829 sq mi , pop c 4,250,000), second largest of the British Isles It lies W of Great Britain, from which it is separated by the North Channel, the Irish Sea (which attains a width of 130 mi), and St George's Channel Ireland is governed by two political agencies—NORTHERN IRELAND and the republic of Ireland (29,600 sq mi , 1946 pop 2,953,452) Belfast is the capital of Northern Ireland, Dublin, of the republic The island is divided into 32 counties and, historically, into four provinces The province of ULSTER is divided between Northern Ireland, with 6 counties (ANTRIM, DOWN, ARMAGH, FARMANAGH, TYRONE, and LONDONDERRY), and the republic, with 3 counties (MONAGHAN, CAVAN, and DONEGAL) The other three provinces are entirely within the republic LEINSTER comprises the counties of LOUTH, MEATH, DUBLIN, KILDARE, WICKLOW, CARLOW, WEXFORD, KILKENNY, LAOIGHIS, OFFALY, WESTMEATH, and LONGFORD MUNSTER comprises TIPPERARY, WATERFORD, CORK, KERRY, LIMERICK, and CLARE CONNAUGHT comprises LEITRIM, ROSCOMMON, GALWAY, MAYO, and SLIGO Ireland is something more than a third the size of Britain, averaging 140 mi in width and 225 mi in length A large central plain which extends to the Irish Sea between the Mourne Mts in the north and the mountains of Wicklow in the south is roughly enclosed by a highland rim In the north are the mountains of Donegal, the Sperrin Mts and the mountains of Antrim, in the west are the mountains of Connemara and Mayo, and in the south are the mountains of Galty, Knockmealdown, and Kerry These highlands, which range to more than 3,000 ft in height, are generally barren, particularly in the western counties, but the central plain is extremely fertile and the climate is temperate and moist, warmed by southwesterly winds The rains, which are heaviest in the west (areas in Galway and Kerry have more than 80 in annually), are responsible for the brilliant green grass of the "emerald isle" The coast line is irregular, affording many natural harbors Off the west coast are many islands (e g , the ARAN ISLANDS and the BLASKET ISLANDS) In the interior there are many lakes (the most celebrated the Lakes of Killarney) and wide stretches of the rivers called loughs The SHANNON, which is 250 mi long, the longest of the Irish rivers, drains the western plain and widens into the beautiful Loughs Allen, Ree, and Derg The Shannon provides electric power for much of Ireland The River Lagan empties into Belfast Lough, the Foyle, near the mouth of which is Londonderry, into Lough Foyle, the Liffey into Dublin Bay, and the Lee into Cork Harbour, at the transatlantic port of Cóbh (formerly Queenstown) The economy of the country is primarily agricultural, the chief products being dairy goods and flax The fine linen and handmade laces are world famous Ireland has become increasingly industrialized in the last hundred years, but nearly all the industrial activity is concentrated in the northeast —the Belfast area in Northern Ireland and the adjoining area in the republic Other sizable urban areas besides Dublin are Londonderry in the north and Waterford, Cork, and Limerick in the south Other cities and towns are comparatively small The population of the republic is overwhelmingly Roman Catholic In Northern Ireland adherents of the Church of Ireland (Anglican) and Presbyterians outnumber the Catholics, though the Catholic minority has been increased by a considerable recent wartime influx of Catholic Irish to northern industry, thus threatening the basis on which the division of the island was made, for the border was drawn on religious as well as political lines Since the 16th cent , religious conviction in Ireland has always been intimately connected with political conviction—a cardinal factor in Irish history

Ireland to 1169 The earliest known people in Ireland were part of the group, traditionally said to be short, dark men, who inhabited all of the British Isles at the dawn of its history. In the several centuries preceding the Christian era Ireland was invaded successively by a number of Celtic tribes who conquered the country and established a distinctively Celtic culture, although they do not seem to have come in great numbers The Anglo-Saxon invaders of Britain, who largely replaced the Celtic population there, did not greatly affect Ireland and, oddly enough, the Romans, who occupied Britain for 400 years, never came to Ireland Ancient Irish legend tells the story of four successive peoples who invaded the country—the FIRBOLGS, the FOMORS, the TUATHA DE DANANN, and the MILESIANS, the last supposedly the ancestors of the modern Irish For more than 800 years, however, during which time the Roman Empire was crumbling beneath barbarian inroads, Ireland remained relatively untouched by foreign incursions Until the Norsemen, in the 8th cent , began the harassing raids that were to persist for more than two centuries, Ireland enjoyed the golden age of its culture Society was based upon an aristocratic pattern established by the Celts The people were organized into clans, or tribes, which owed allegiance to one of five provincial kings—of Ulster, Munster, Leinster (then only S of the Liffey), Connaught and Meath (now the northern part of Leinster) The petty kings nominally served the Ard-Ri, the high king of all Ireland at Tara The clans fought constantly among themselves, but after the introduction of Christianity relative peace was maintained in the country Despite the quarrelsome struggles, literary and artistic culture was greatly respected Each chief or king kept his official poet who preserved the oral traditions of the people A notable literature in Old Irish was succeeded after centuries by a brilliant period of Middle Irish (see GAELIC LITERATURE) Sculpture flourished, music was cultivated, and illumination of manuscripts reached a high point in Christian times, as in the Book of Kells The Gaelic language and culture were extended into Scotland The country was partly Christianized before the arrival of St PATRICK (see also PALLADIUS) as a missionary in the 5th cent , although pagan tradition continued to appeal to the imagination of the harde annalists writers even after the complete Christianization of the country The Church in Ireland during this period produced many scholars and missionaries who traveled to England and the Continent and attracted students to the Irish monasteries, at the time perhaps the most brilliant of Europe St COLUMBA and St COLUMBAN were among the most famous of these missionaries St BRIDGET, who founded the great monastery at Kildare, is revered as one of the patron saints of Ireland The country did not develop a strong central government, however, and it was not united to meet the invasions of the Norsemen who settled upon the shores of the island at the end of the 8th cent , establishing the first cities (Dublin, Waterford, and Limerick) and creating new petty kingdoms In 1014, at Clontarf, BRIAN BORU, who had become high king by conquest, broke the hold of the Norse invaders There followed a period of 150 years during which Ireland was free from foreign interference, but the country had slipped back into a condition of war-torn chaos The monasteries managed to struggle through the turmoil. In the 12th cent , overlordship of Ireland was granted to Henry II of England by Pope Adrian IV, an Englishman, and in 1169 the English conquest of Ireland was begun by Richard de Clare, earl of Pembroke (Richard Strongbow), Henry himself in 1171 went to Ireland to establish his overlordship With this invasion commenced an Anglo-Irish struggle that has continued intermittently for nearly 800 years and cannot yet be said to have reached a final conclusion

Ireland to the Union of 1800 Anglo-Norman rapacity in Ireland led to the seizure of much land and began the unfortunate landlord-tenant problem that has plagued the Irish until modern times. The Irish were denied the benefit of English law, and the old Irish customary law had been split apart The clans continued their lawless struggles among themselves, and the English settlers were assimilated into the Irish pattern, especially in the western parts of the island The De Burghs became the Burkes of Connaught and the Fitzgeralds entrenched themselves in Munster The flimsiness of English rule was shown when Edward Bruce invaded the island in 1315 and, with the aid of many Irish and some of the older English families, established himself as ruler of Ireland Long after this brief interlude English control of Ireland became limited to a small district around Dublin known as the Pale, and even there it was approaching the merely theoretic Henry VIII was the first English monarch to bring all Ireland under English control and to Anglicise the Irish chieftains The clan system of landholding was abolished and the English tenure system adopted, improving somewhat the lot of the peasant, who previously had not even the certainty of holding his property A Dublin Parliament in 1541 contained Irish chiefs as well as English nobles, but a truly independent Irish parliament had already been rendered impossible by POYNINGS'S LAW (1495), which put all legislative initiative into the hands of the English Parliament This law remained in effect until 1782 By the 16th cent, the Irish people, even the nobles, had sunk into desperate poverty, a situation that was to persist for centuries England became Protestant at this time, and the PENAL LAWS were instituted against Catholics Since the entire Irish nation remained Catholic except for the few recent English settlers and their supporters the conflict between disinherited Irish and English masters took a religious cast All the Irish were excluded from any part in civic life These efforts led to three formidable rebellions in the time of Elizabeth, all of which were crushed by soldiers turned loose to pillage and murder in the country Scotch settlers were planted in Ulster and took root there, thus two permanent and antagonistic communities were established The Irish continued restless A rebellion beginning in 1641, at the time of the English civil wars (see PURITAN REVOLUTION), lasted for 10 years and cost 600,000 lives It was brutally crushed by Oliver Cromwell, whose massacre of the Irish at Drogheda was remembered bitterly for centuries Confiscations of more land, persecution, and settlement of Englishmen in fertile Leinster followed The Irish supported Catholic James II of England after the Revolution of 1688, but James was defeated at the battle of the Boyne in Ireland (1690), and the Irish (Catholic and Presbyterian) were left to new Penal Laws and economic exploitation A newly flourishing woolen industry was destroyed when export from the country was forbidden The evils of absentee landlordism by English owners became increasingly serious, the constant tension was producing active, rather then simply passive, opposition The American Revolution worked to the advantage of the Irish in that the Irish Protestants formed a volunteer army for the purpose of defending themselves against any foreign invaders With these volunteers behind him Henry GRATTAN demanded, and obtained (1782), an independent Parliament The new Parliament was in the end ineffective The peasants' condition was unimproved, and in 1798 the people, under the leadership of Wolfe TONE and inspired and aided by the French revolutionists rebelled unsuccessfully once more As a result, in 1800, under British Prime Minister Pitt, England and Ireland were united, and Ireland was unwillingly represented in the English Parliament, the Irish Parliament being abolished

Ireland under the Union, 1800–1921. Pitt had promised to do his best to remove the disabilities of the English Catholics under the Union, but he was blocked in his efforts by George III, and it was only through the mass agitation led by Daniel O'CONNELL that the Catholic Emancipation Act was finally passed in the English Parliament in 1829 Meanwhile, Irish discontent produced new troubles, including the hopeless revolt of Robert EMMET in 1803, and the old causes of trouble persisted The tithes collected from the Irish for the support of the Established Church were a constant source of irritation until the Church of Ireland was disestablished after a great deal of agitation and conflict in 1869 The evils of absentee landlordism became continually more serious (see IRISH LAND QUESTION) The pressure of a growing population became acute When the potato blight struck Ireland in the 1840s the population of the country was approximately 8,500,000—twice the present-day figure In the five years ending in 1851 c 1,000,000 Irish died of starvation and disease, and between 1847 and 1854 no less than 1,600,000 emigrated, most of them to the United States, where they continued their embittered opposition to the British government, organizing the FENIAN MOVEMENT An uprising in 1848 was ineffectual The pressure of the land question and of the constant social and economic problems grew stronger By 1870 Irish opinion crystallized into the HOME RULE movement to end the Union and a brilliant leader arose in Charles Stewart PARNELL The nationalistic impulse of the people was given further impetus by the literary and cultural revival of the late 19th cent (see GAELIC LITERATURE) The constitutional Home Rule movement was supplemented and finally superseded by the SINN FEIN movement organized by Arthur Griffith and devoted to the ideal of complete independence rather than merely a separate Parliament Sinn Fein resulted in the Easter Rebellion of 1916, which was suppressed but developed into a guerrilla warfare in 1918 that the English unwisely attempted to suppress with a group of auxiliaries popularly known as the Black and Tans, who terrorized the country (1920) and met only increasing resistance Meanwhile the Irish cause was strengthened by an English literary movement of writers who reflected glory upon Ireland, though the attitudes of the writers on the question of Irish independence varied (see SHAW, GEORGE BERNARD, YEATS, WILLIAM BUTLER, ABBEY THEATRE, JOYCE, JAMES)

The Free State and the Republic. In 1921 the

British prime minister, Lloyd George, entered into negotiations with Eamon De Valera, American-born leader of Sinn Fein The result was the establishment (1921) of the Irish Free State Meantime the six northern Protestant counties had accepted dominion status under the provisions of the Fourth Home Rule Bill of 1920, and Northern Ireland was born Intransigent republicans in Ireland were dissatisfied with the terms of the treaty and Sinn Fein split into right- and left-wing groups, the latter headed by De Valera A period of civil war followed, but the conservative elements in the Dáil Eireann (legislative assembly) prevailed William Cosgrave became president (1922) and held the position for 10 years In 1927 De Valera returned to the Dáil as head of a republican party, the Fianna Fáil In 1932 he became president, and under his administration the new constitution (operative Dec 29, 1937) was inaugurated, establishing the sovereign country of Ireland, or Eire, associated, according to an Irish statement, in external policy with the British Commonwealth of Nations An agreement with Britain ended a trade war between England and Ireland and returned the ports of Cóbh, Castletown Bere, and Lough Swilly to Irish control De Valera continued in power as prime minister and Douglas Hyde, a Protestant scholar, was elected president, a position he held until 1945, when Sean T O'Kelly, a Fianna Fáil candidate, was elected president During the Second World War, Ireland remained neutral and vigorously protested Allied military activity in Northern Ireland, refusing to return the restored ports or to oust German and Japanese diplomatic agents The outlawed Irish Republican Army (I R A) continued, by sporadic bombings and shootings, to agitate for the end of the separation of Northern Ireland from Eire (the "partition") Its activities were strenuously suppressed both in Northern Ireland and Eire Great numbers of Irish volunteered for the British army, although conscription was never applied even in Northern Ireland The people of Eire suffered relatively little hardship during the war, but industry in Eire, with only meager imports of coal and iron, came to a virtual standstill Many Irish entered industry in Northern Ireland and Britain The cost of living greatly increased after the war In 1948 De Valera was voted out of power, and a coalition chose John A Costello new premier Costello demanded complete independence from, but cooperation with, England and an end to the Irish partition The Republic of Ireland Bill established an independent Ireland, which was formally inaugurated April 18, 1949, the 33d anniversary of the 1916 uprising The republic formally claims jurisdiction over the northern counties, where, however, the pro-British Unionist party continued powerful in the 1949 elections The republic contains 84 percent of the land area of the island and about 70 percent of the population The Second Chamber (*Seanad Éireann*) has no veto power over legislation proposed by the First Chamber (*Dáil Éireann*) Executive power is vested in the prime minister, and the president merely signs and promulgates the laws In 1946 Ireland applied for admission to the United Nations, but the application was blocked by the USSR There are many descriptive works on Ireland, such as Padraic Colum's *The Road round Ireland* (1926) Old standard works on history are those of W E H Lecky and A S Green (Mrs J R Green) See Richard Bagwell, *Ireland under the Tudors* (2 vols, 1890) and *Ireland under the Stuarts* (1890), G H Orpen, *Ireland under the Normans* (4 vols, 1911–20), R A S Macalister, *Ireland in Pre-Celtic Times* (1921), James O'Connor, *History of Ireland* (2 vols, 1925), E A D'Alton, *History of Ireland* (6 vols, 1910), P. W Joyce, *Social History of Ancient Ireland* (2 vols, 1913), Stephen Gwynn, *The Student's History of Ireland* (1925), Tom Ireland, *Ireland Past and Present* (1942)

Ireland, Church of, principal Anglican (Protestant Episcopal) church in Ireland It differs from the Church of England in that it is disestablished (since 1869) and that its membership has always included only a small part of the population Its disestablishment was one of Gladstone's accomplishments The Church of Ireland is governed much like the Episcopal Church in America

Irenaeus, Saint (īrĭnē'ŭs), *c* 125–*c* 202, Greek Father of the Church and bishop of Lyons in Gaul Born in Asia Minor, he was a disciple of St Polycarp Irenaeus went to Rome to plead for leniency toward the Montanists and those who did not observe the Roman date for Easter (see CALENDAR) He remained in the West and died in Gaul He was notable as an expositor of orthodox Christianity and set forth clearly many of the main tenets of belief, such as the Incarnation, the Resurrection, and the glory of the Eucharist Only two of his works survive—neither in the original Greek. *Against the Heresies* establishes Christian doctrine against the Gnostics and incidentally supplies much information on Gnosticism The *Epideixix* is a concise exposition of Christian doctrine (Eng tr by J A Robinson, *The Demonstration of the Apostolic Teaching*, 1920). Feast June 28.

Irene (īrēn', īrē'nē), 752–803, Byzantine empress (797–802). At the death (780) of her husband, Leo IV, she became regent for her son, Constantine VI. Devoted to Orthodoxy, she neglected the wars with the Arabs, Franks, and Bulgars and bent most of her efforts to suppressing ICONOCLASM The Second Council of Nicaea (see NICAEA, SECOND COUNCIL OF) decreed in 787 the restoration of images to the churches Forced to retire from the regency in 790, Irene was recalled by Constantine in 792 Constantine's misconduct (encouraged by Irene, who thus sought to discredit him) led to his deposition in 797 Irene had her son blinded and ascended the throne Her accession served as pretext for Charlemagne to be crowned emperor in 800 Irene was deposed in 802 and died in exile Nicephorus I became emperor See Charles Diehl, *Byzantine Portraits* (1927)

Irene, in ancient mythology see HORAE

Ireton, Henry (ī'urtun), 1611-51, English parliamentarian general in the Puritan Revolution, husband of Bridget, daughter of Oliver Cromwell He fought in both civil wars and counseled and practiced moderation as long as possible Finally he supported the rule of the army against the parliamentarians and signed the death warrant of Charles I He was a convinced exponent of limited monarchy before 1649 and afterward a convinced republican, whose integrity was honored even by his enemies among the parliamentarians and the radical elements in the army Appointed lord deputy of Ireland (1650), he carried on sternly Cromwell's policy of dispossessing the Irish and settling Englishmen there

Iri (ī'rī) or **Ir** (ĭr), Benjamite 1 Chron 7 7,12

Iriarte, Ignacio (ēgnä'thyō ēryar'tā), 1620–85, Spanish landscape painter, pupil of Francisco de Herrera, the elder, in Seville He often collaborated with Murillo who painted the figures while Iriarte supplied the landscapes Specimens of his landscapes, notable for their fine color, are in the Prado and in the Louvre

Iriarte, Tomás de (tōmas' dā ĕryar'tā), 1750–91, Spanish poet, b Canary Islands He spent most of his life in Madrid, a typical 18th-century writer, interested in polemics, criticism, satire, and the translation of French books Iriarte is best known for his *Fábulas literarias* [literary fables] (1782), which gave him a reputation as a wit and a moralist Most of them deal with literary methods and style, reflecting Iriarte's points of view He influenced Florian, the French author of fables

iridescence (ĭrĭdĕ'sŭns), phenomenon of changing and shifting bands of colors exhibited by certain surfaces It results from the breaking up of white light and the INTERFERENCE of the light rays, caused by minute irregularities in the surfaces Iridescence is displayed by both organic and inorganic substances, e g, minerals, mother-of-pearl, and the feathers of birds It is a property which greatly enhances the value of certain gems

iridium (ĭrĭ'dēum ī-), rare, silvery-white metallic element (symbol=Ir, for physical constants, see ELEMENT, table) It is one of the heaviest elements known and is very hard It is not affected by acids, even by aqua regia, except that when finely divided (iridium black) it reacts with this acid mixture It is grouped with osmium and platinum, which it resembles, in the periodic system, forming compounds with oxygen, sulphur, chlorine, and some other elements It occurs in a natural alloy, osmiridium, with osmium, and in platinum ores in the USSR and South America It is important commercially for its alloys, which are used for making standard weights and parts of scientific apparatus which must withstand the action of the atmosphere and other agents, in electrical apparatus for contact points and other parts required to resist high temperatures and active substances, such as chlorine, and for the points of fountain pens The element was discovered by Smithson Tennant in 1804

Irigoyen, Hipólito (ēpō'lētō ērēgō'yān), 1850?–1933, Argentine political leader, president of the republic (1916–22, 1928–30) In 1896 he became the leader of the Radicals, a bourgeois reform party By propaganda, and sometimes by insurrection, he opposed the conservative regime The electoral reform of Roque Sáenz Peña enabled the Radicals in 1916 to replace the landowning oligarchy and to elect Irigoyen president Ignoring congressional resolutions and public opinion, he maintained neutrality in the First World War Some reform measures were enacted, but the efforts of the administration to increase Radical power led to forceful intervention in the provinces and produced much opposition In 1922 he was succeeded by another Radical, Marcelo T de Alvear Irigoyen was swept back into the presidency in 1928 with great popular acclaim, but his second administration, in the midst of economic depression, led to widespread dissatisfaction, he was overthrown and the oligarchy was reinstated (Sept, 1930).

Irijah (ĭrī'jŭ) [Heb, =whom God sees], captain who detained Jeremiah on a false accusation in Jerusalem Jer 37 13,14

Iris (ī'rĭs), in Greek religion, goddess of the rainbow She was attendant of Zeus and Hera and daughter of Electra and Thaumas.

Iris, river, Turkey: see YESIL IRMAK.

iris, any species of the genus *Iris*, popular and stately perennial plants, with blossoms of various colors, from which the fleur-de-lis is commonly thought to have been derived Native American irises are usually called flags or blue flags, of these the rootstalks of *Iris versicolor* and others have been used by both Indian and white man as a purgative and for other medicinal purposes The violet-odored rootstalks of some Old World irises, especially *I florentina*, are sold commercially as orrisroot, the powder being used in perfumes, sachets, tooth powders, dry shampoos, and sometimes medicine Garden irises are chiefly natives of the Old World and their hybrids, in several thousand commercial varieties, most of which bloom in the spring but some in the summer and fall Most irises are usually classed as bearded (pogon), beardless (apogon), or crested irises The beardless and crested irises generally prefer moist situations, and the bearded well-drained sites Bearded irises are the most common garden kinds, beardless irises include the Siberian and Japanese kinds, among the crested irises is the North American *I cristata* These irises all have a creeping rootstalk, but there is another division, those having bulbous bases, which includes the Spanish, Dutch, and English irises An iris is now the state flower of Tennessee The American Iris Society fosters cultivation of the flower See also HYACINTH See J C Wister, *The Iris* (1930)

Irish Free State see IRELAND

Irish Land Question The problem of Irish land ownership, which came to a crisis in the 19th cent, had roots which went back many centuries in Irish history A feudal landholding system was imposed upon Ireland (where clan holding was the original rule) as early as the 12th cent when the Anglo-Normans invaded Ireland and seized the land of Irish chieftains The process was continued throughout the centuries Under the Tudor monarchs, notably Mary I, the process of confiscation of Irish lands into the hands of English landlords, who continued often to live in England while collecting revenue from their Irish properties, was greatly accelerated In the 17th cent Oliver Cromwell gave the greatest impetus to this unfortunate tendency After his invasion of Ireland in 1649 he seized 11,000,000 acres of the best Irish land for distribution among his soldiers Many of the Irish peasantry were driven to the poorer western counties later to be known as the "congested districts" Further confiscations followed under William III In the 18th cent the Penal Laws made it impossible for Catholics to acquire land or to rent it for less than two thirds of the value of the land's produce Improvements were discouraged because they meant increased rentals Eviction on short notice was a constant possibility In the late 18th cent the emphasis in Irish politics shifted to demands for Catholic Emancipation Emancipation of the Catholics was achieved, largely through the efforts of Daniel O'Connell, in 1829, but the land situation did not materially improve The great famine of the 1840s, resulting from a series of failures of the staple potato crop, led to the death of nearly a million people from malnutrition and consequent disease, and the Irish emigrated in vast numbers The natural effect of famine, eviction, and emigration was to crystallize in Ireland a deep core of hatred for England In 1849 the Encumbered Estates Act provided for the sale of those Irish estates where the rents were mortgaged, on the supposition that new and solvent landlords would not demand extortionate rents The influx of speculators, however, had the opposite effect, and the Irish tenant was worse off than before The Irish Tenant Right League, established in 1850, demanded the "three F's"—fair rent, fixity of tenure, and freedom from sale The agrarian problem now became complicated by the fight for the disestablishment of the Anglican Church of Ireland (accomplished in 1869) and the achievement of Home Rule, an outgrowth of the opposition to the Union of Ireland and England The violence of the Fenian movement, the extension of the franchise by the Reform Act of 1867, and assistance from the Liberal party, headed by William Ewart Gladstone, furthered the cause of the Irish tenant In 1870 the first land act to benefit the tenant was passed It aided the tenant to become the proprietor of his land and provided some compensation for improvements. The Irish Land League, founded under the leadership of Michael Davitt and Charles Stuart Parnell, conducted a campaign of boycott and violence which influenced the passage of the Land Act of 1881, called the "Magna Carta" of the Irish farmer. It recognized the "three F's" and provided a land commission to fix a "fair rent" Thereafter land purchase by the tenant became the predominant issue. This tendency was facilitated by the Ashbourne Act of 1885 and supplementary acts of 1887 and 1891 providing a loan fund of £43,000,000 to tenants who wished to purchase their lands The National League, an outgrowth of the suppressed Land League, advocated withholding of rentals from extortionate landlords. Its activities, too, were suppressed. In 1889 began the Irish Agricultural

Organisation Society, fostered by Sir Horace PLUNKETT, to encourage agricultural cooperation and improved farming methods; this led to the establishment (1899) of the Irish Dept of Agriculture. The agitation of the United Irish League, under William O'BRIEN, demanding compulsory sales by landlords, led to the Wyndham Act of 1903 and the Amended Land Purchase Act of 1909 In 1907 the Evicted Tenants Act provided for the compulsory sale of land needed for evicted tenants The Wyndham Act, which forced reduced interest on tenant loans and, in exchange, bonuses to landlords, proved, in effect, a solution to the Irish Land Question. By 1921 two thirds of the land in Ireland had become the property of Irish tenants, and shortly thereafter a compulsory law transferred the remaining portions. In 1932 the Irish Free State declined to continue land annuity payments to England This led to a trade war between the two countries, finally settled on terms favorable to Ireland in 1938 The Congested Districts Board, originally established by the Balfour Land Act of 1891 did much, by purchase and rearrangement of lands, to reapportion holdings on a more equable basis Today in Ireland the chief problems are to improve the poor quality of much of the land and to prevent the migration of farmers from the land to urban centers and abroad See Isaac Butt, *The Irish People and the Irish Land* (1867), J E Pomfret, *The Struggle for Land in Ireland, 1800–1923* (1930), Norman D Palmer, *The Irish Land League Crisis* (1940)

Irish language, one of the Goidelic group of the Celtic subfamily of Indo-Iranian languages It is also called Gaelic and Erse See LANGUAGE (table)

Irish literature · see GAELIC LITERATURE

Irish moss or carrageen (kă'rŭgēn) reddish or purplish SEAWEED (*Chondrus crispus*), one of the red algae of rocky coasts of Ireland and of the United States from Maine to North Carolina It is gathered commercially, particularly in Massachusetts, and bleached The fronds when cooked produce a gelatine used chiefly as a pudding but also as a sizing for textiles and for other purposes

Irish Players see ABBEY THEATRE

Irish Sea, part of the Atlantic, 130 mi long and up to c 130 mi wide, lying between Ireland and Great Britain It is connected with the Atlantic by the North Channel and (on the south) by St George's Channel Ireland is on its west shore, Scotland, England, and Wales on the east The principal islands in the sea are the Isle of Man, Anglesey, and Holyhead The chief ports are Dublin, Liverpool, Birkenhead, Barrow-in-Furness, and Holyhead

Irish terrier see TERRIER

Irish wolfhound see WOLFHOUND

Irkutsk (ĭrkōōtsk') city (pop 243,380), capital of Irkutsk oblast, RSFSR, in S central Siberia, at the confluence of the Angara and Irkut rivers 35 mi W of Lake Baikal It is a river port, a major rail transportation point on the Trans-Siberian RR, and an industrial center with aircraft and automobile assembly plants Mining equipment is manufactured here for the Lena-Vitim gold-mining district Chartered in 1683, Irkutsk grew into a major commercial, administrative, and cultural center of Siberia It has a university (founded 1918) and several agricultural, medical, and technical schools and is the seat of a branch of the USSR Academy of Sciences

Ir-nahash (ĭr'nā'hăsh) [Heb ,=snake city], unidentified city, S Palestine 1 Chron 4 12

Irnerius (ĭrnēr'ēus), c 1055–c 1130, Italian jurist, founder of the school of law at Bologna Little is known of his life He is said to have been a teacher of rhetoric and dialectic at Bologna before he turned (perhaps at the urging of Countess Matilda) to law The last years of his life were certainly spent in writing and teaching Roman law at Bologna He was the first of the great glossators It is generally admitted that he wrote marginal and interlinear glosses to the Corpus Juris, and his authorship of the *Authentica*, a disorganized epitome of the Novels with commentaries and textual emendations, is not questioned by many scholars Other works attributed to him, especially essays on philosophy and theory of law, are much disputed as to authorship The name also appears as Guarnerius and Warnerius

Iron, Ralph · see SCHREINER, OLIVE

Iron [Heb ,=fear], unidentified city, in the mountains of N Palestine Joshua 19 38

iron, silver-white metallic element (symbol=Fe [Latin=*ferrum*], for physical constants, see ELEMENT, table), lustrous, ductile, and malleable It rusts easily in moist air and is attracted by a magnet Iron is the fourth most abundant element, comprising about 5 percent of the earth's crust Free iron is very rare in nature except in meteorites, but its ores are abundant and widely distributed, the more common ones being magnetite (ferroferric oxide), hematite (ferric oxide), limonite (hydrated ferric oxide), siderite (ferrous carbonate), and iron pyrites (iron disulphide, "fool's gold") Iron is of prehistoric discovery It is chemically active and displaces the hydrogen in hydrochloric and sulphuric acids When treated with nitric acid, however, it becomes passive, i e , loses its ability to react as it normally does. It forms such compounds as oxides, sulphides, carbides, halides, acetates, carbonates, hydroxides, nitrates, and sulphates Two series of compounds are formed, the ferrous or divalent compounds and the ferric or trivalent compounds Compounds of iron are present in soil, sand, plants, and animals (e g , in the hemoglobin of the blood) Anemia caused by lack of iron can be treated by eating foods rich in the mineral and by taking injections or pills containing iron Commercial iron appears in three forms—cast iron, wrought iron, and steel **Cast iron** is made when pig iron, which has been prepared in a BLAST FURNACE is remelted in small cupola furnaces and poured into molds to make castings It usually contains between 92 and 94 percent iron, between 2 and 6 percent carbon, and small amounts of silicon, sulphur, manganese, and phosphorus Cast iron is used in making machine parts, cooking ranges, stoves, pipes, and radiators Two forms of cast iron are commonly produced White cast iron, which is hard and brittle, is obtained when the molten iron in the mold is cooled rapidly. The carbon remains distributed throughout the iron as cementite, a carbide of iron Gray cast iron is formed when the iron in the mold is cooled slowly, part of the carbon separating out as graphite This form is much softer and less brittle than white cast iron A malleable cast iron can be made by carefully heating pig iron in an electric furnace and annealing the castings in special annealing furnaces The molten metal cools slowly, and graphite separates as in gray cast iron This malleable cast iron contains about 3 percent carbon and from 1 to 1 5 percent silicon and is less brittle than ordinary cast iron It is used in automobile and farm-machinery parts **Wrought iron** is made by purifying melted pig iron in a puddling furnace (a small REVERBERATORY FURNACE) The impurities carbon, phosphorus, and silicon are removed in the form of the oxides, and the sulphur as ferrous sulphide Wrought iron is a relatively pure iron containing only about 0 1 to 0 2 percent carbon It is tough, malleable, ductile, and corrosion resistant and melts only at high temperatures It is used chiefly for rivets, bolts, water pipes, chains, anchors, and fire bars, it is used also for ornamental ironwork STEEL has now become the most important form of commercial iron For the history of iron, see IRON AGE See A O Backert, ed , *The ABC of Iron and Steel* (5th ed , 1925), H E Cleaves and J G Thompson, *The Metal—Iron* (1935), James Aston and E B Story, *Wrought Iron* (2d ed , 1939), S F Mersereau, *Materials of Industry* (1947)

Iron Age, period in the development of industry that begins with the general use of iron and continues in the present time In Asia, Egypt, and Europe it was preceded by the BRONZE AGE It did not begin in America until the coming of the Europeans, when it directly followed the Neolithic period, there was no Bronze Age in the Western Hemisphere Iron beads were worn in Egypt as early as 4000 B C , but these were of meteoric iron, evidently shaped by the rubbing process used in shaping implements of polished stone The oldest known article of iron shaped by hammering is a dagger found in Egypt that was made before 1350 B C This dagger is believed not to have been made in Egypt but to be of Hittite workmanship, working iron by hammering is believed to have been practiced by the Hittites from c 1400 B C The casting of iron was known in ancient Greece, but it did not become important in industry until the 18th cent Iron is frequently mentioned in the Bible In Greece the Iron Age began c 1000 B C , and this is taken as a convenient date for the beginning of the Iron Age in Europe The Early Iron Age continues from that date until c 300 B C in S Europe In central and N Europe the dates are later At Hallstatt, in Austria, which the production of salt made an important commercial center, an Early Iron Age culture began c 900 B C Celtic migrations c 500 B C spread this Hallstatt culture widely over N Europe, including Britain, and in that region the Early Iron Age did not end before the beginning of the Christian era Assyria and Greece are outstanding examples of Early Iron Age cultures From preceding ages the Iron Age inherited all the staple farm crops and animals and a rich variety of tools and implements, including the plow drawn by oxen and wheeled vehicles drawn by horses Metals in use earlier included gold, copper, bronze, and silver Pottery of beautiful design, shaped on the potter's wheel, was plentiful The arts of spinning and weaving were in common use The art of writing was known Aside from work in iron, the chief contribution of the Early Iron Age to the material equipment of man was glass, and nothing of comparable importance was added by the Late Iron Age until the Industrial Revolution Greece mastered the material resources of the Early Iron Age, its civilization, called "the Greek miracle," puts the Late Iron Age on the defensive, with new but unmastered resources For the Iron Age in mythology, see AGE. See Fay Cooper Cole, *The Long Road from Savagery to Civilization* (1933), H J Peake, *Early Steps in Human Progress* (1933).

Iron Cross: see DECORATIONS, CIVIL AND MILITARY

Irondale, city (pop. 1,486), N central Ala., just NE of Birmingham

Irondequoit (ĭrŏn'dĭkwoit), town (pop 23,376), W N Y , N of Rochester and bordered by Lake Ontario, Irondequoit Bay, and the Genesee, settled 1791, organized 1839

Iron Gate, gorge of the Danube, W Rumania, between Orsova and Turnu-Severin, on the Yugoslav border Here the river narrows to break through between the southern end of the Carpathians and the northern outliers of the Balkans

Iron Guard, Rumanian nationalistic, anti-Semitic, and antiparliamentary group, founded in 1924 by C Z CODREANU Originally named the Legion of the Archangel Michael, it was organized on military lines, and it operated through terrorism Its most notable victim was Premier Ion Duca, assassinated in 1933 Banned in 1933, the Iron Guard carried on as the All-for-Fatherland party Marshal Ion ANTONESCU seized power in 1940 with the help of the Iron Guard, but soon found himself in disagreement with it He suppressed (1941) an Iron Guard rebellion and Horia Sima, then leader of the Guard, fled to Germany With the collapse of the AXIS Powers in the Second World War, the Iron Guard disappeared from Rumanian politics

iron lung see ARTIFICIAL LUNG

Iron Mask, Man with the, mysterious French prisoner of state whose identity has long been the subject of speculation The only certain facts about him are that he was brought from PINEROLO to the Bastille in 1698 by the new governor, Saint-Mars, that he was buried in the cemetery of St Paul, Paris, in 1703, under the name of Marchioly, and that on the journey to Paris he wore a mask of black velvet, which rumor transformed into an iron mask Early speculations identified him as an illegitimate son of Louis XIV Voltaire (1771), clarifying hints given in his *Age of Louis XIV*, declared the "mask" was a natural son of Anne of Austria and, hence, an elder half brother of Louis XIV Dumas's *Vicomte de Bragelonne* popularized a later theory, describing the prisoner as a twin brother of Louis XIV Still wilder suggestions were the duke of MONMOUTH, François de BEAUFORT, and Nicolas FOUQUET Later research seems to have narrowed the choice to two candidates—a certain Count Mattioli, a Mantuan, seized by Louis XIV in 1679 for double-dealing in the negotiations over the proposed purchase of the Italian fortress of Casale by France, and one Eustache Dauger, a valet, about whom little more than his name is known Mention must also be made of the theory that the prisoner was the leader of a plot to assassinate Louis XIV The affair, which is of romantic rather than historical interest, is the subject of a vast literature See Marius Topin, *The Man with the Iron Mask* (Eng tr , 1870), Tighe Hopkins, *The Man in the Iron Mask* (1901), Andrew Lang, *The Valet's Tragedy* (1903), A. S Barnes, *The Man of the Mask* (1908)

Iron Mountain, city (pop 11,080), co seat of Dickinson co , W Upper Peninsula, N Mich , near the Wis line, settled 1879, inc 1889 It takes its name from the near-by mountain of iron ore in the Menominee range The city is a distributing point for ore, and its industries include the making of lumber products It is a center for winter sports

Iron Mountain, elevation, 325 ft high, central Fla , E of Tampa and near Lake Wales It is the site of the Singing Tower (with a carillon of 71 bells) and of a bird sanctuary established by Edward W Bok and opened in 1929

iron pyrites · see PYRITE

Iron River, city (pop 4,416), W Upper Peninsula, N Mich , near the Brule river NW of Iron Mountain in a lake region Settled by iron-ore prospectors c 1881, it was incorporated as a village in 1885 and as a city in 1926 The city is a mining and lumber center Near by is Ottawa National Forest

Ironside, William Edmund Ironside, 1st **Baron,** 1880–, British general After serving with distinction in the South African War and the First World War, he was chosen to command the Allied forces at Archangel (1918) to aid Aleksandr Kolchak in fighting the Bolsheviks After service in the Middle East, he became commandant of the staff college at Camberley Other commands followed, including several years in India, and in 1938 Ironside became governor of Gibraltar On the outbreak of the Second World War, he was called to England to be chief of the imperial general staff In 1940 he was briefly chief of the home forces in England He was made a field marshal (1940) and created baron (1941)

Ironton. **1** Resort city (pop 1,083), co. seat of Iron co , SE Mo , SW of St Louis, in the Ozarks, founded 1857 Lead and iron mines are in the area Lake Killarney is near The Civil War battle of Pilot Knob (Sept 27, 1864), fought near Ironton, between Federals under Thomas EWING and Confederates led by Sterling Price resulted in a temporary reverse for Price on his Missouri raid **2** Industrial city (pop 15,851), co. seat of Lawrence co., extreme S Ohio, on the Ohio river opposite Ashland, Ky., in a fruit area, laid out 1848, inc.

1851 It makes Portland cement and metal, steel, and iron products There are limestone quarries.

Ironwood, city (pop 13,369), extreme W Upper Peninsula, N Mich , on the Montreal river at the Wis line, founded 1885, inc 1889 It is a trading center of the Gogebic iron range and has some of the world's deepest mines Indian relics are found near by

ironwood, name for a number of different plants but used most commonly for two trees native to the eastern half of North America One is *Carpinus caroliniana,* called also hornbeam, blue beech, and water beech, which has smooth gray bark The other is the hop hornbeam (*Ostrya virginiana*), of the same family. It has a thin, light brown, and narrowly ridged bark Wood of both species is heavy and strong, useful for tool handles, mallets, and parts of vehicles

ironwork, ornamental. The shaping of wrought IRON, used almost exclusively until the 16th cent , is primarily an art of the blacksmith, who must deal decisively with the metal while it is at the desired stage of heat and flexibility The parts of the object were early fastened together by welding, by collars, or by running one member through a hole punched in another Riveting, bolting, and mortising arose in late medieval times Methods and tools used in modern hand-wrought work are similar to the early ones However, a large volume of modern work is accomplished by perfected mechanical means, including the pneumatic hammer and the acetylene or electric welder Today a variety of stock pieces are available to the handworker which the early smith had to fashion laboriously from crude ingots Iron was used ornamentally to a limited extent in classical times After the fall of Rome the Goths preserved the craft, which passed to France and England during the Middle Ages. The scrolled vine motif, predominant in early work, appeared in the elaborate iron hinges on wooden doors Italy's first grilles were in Venice, where Eastern contacts led to an imitation of Mohammedan pierced marble grilles The earliest English, French, and Spanish church grilles were built up of scrolls, generally C or S shaped, held together with collars When repeating collared units were adopted, quatrefoil motifs became common. With the Gothic period came chapel screens and protective grilles of ecclesiastical architecture, embracing numerous foliated and floral forms In Spain the iron GRILLE attained a high development, REJERÍA became decorative *tours de force* in iron In France in the mid-17th cent, a great vogue developed for iron balconies, stair railings, and monumental fences and gateways This vigorous Louis XIV work, rich with scrollings and bold foliations, formed the basis of all the continental work outside of Spain and was even transplanted to England by Jean TIJOU From France also there later emanated the rococo phase of ironwork—light, gay, linear patterns, latticework, broken curves, and voluminous sheet-metal ornament In English and American work of the 18th cent simplicity and restrained ornamentation prevailed Cast iron was rarely used prior to the 16th cent , when it came into demand for andirons and firebacks For architectural embellishment and for garden furniture it became common in the early 19th cent Its most extensive employment was probably in balconies, veranda railings, and garden fences, notably in Charleston, S C , Savannah, Ga., and New Orleans Its commercial advantage lay in the cheapness of reproducing stock parts which could be used in varying combinations For these uses it has been largely supplanted by cast bronze, which is capable of finer detail and surface, and by a revival of wrought iron See G K Geerlings, *Wrought Iron in Architecture* (1929) and *Metal Crafts in Architecture* (1929)

Iroquoian (Irukwoi'yun), linguistic family of North America The languages were spoken in two separated areas The northern (New York state, Pennsylvania, St Lawrence basin) were Seneca, Cayuga, Onondaga, Mohawk, and Oneida, of the Iroquois Confederacy, and Wyandot, language of the HURON INDIANS In the South the Tuscarora (Virginia) and the CHEROKEE INDIANS also spoke Iroquoian languages A distant relationship has been suggested between Iroquoian and CADDOAN, see LANGUAGE (table) and HOKAN See also CONESTOGA INDIANS, ERIE INDIANS, NEUTRAL NATION.

Iroquois Confederacy or **Iroquois League** (I'rŭkwoi), North American Indian confederation consisting of the Mohawk, Oneida, Onondaga, Cayuga, and Seneca tribes They gave their name to the Iroquoian linguistic family, which included numerous tribes of the E United States and E Canada In the early 17th cent this confederacy of the Five Nations inhabited New York state from the Hudson N to the St Lawerence and W to the Genesee river, they numbered some 5,500 Their material culture was the most advanced of the Eastern Woodlands area, but they exhibited many traits of the Southeast area and this leads many authorities to believe that the Iroquois tribes at some time in the distant past migrated from the lower Mississippi valley. The Indians, both the men and the women, of the Five Nations lived in palisaded villages, the men hunted deer and small game, and the women raised corn, squash, tobacco, and beans. Women had a high place in the society, and descent was matrilineal. Even before the formation of the confederation, the Iroquois families lived in a "long house," a distinctive bark-covered rectangular structure. When the prophet Deganawidah and his disciple Hiawatha founded (c 1570) the confederacy (to eliminate incessant intertribal warfare and to end cannibalism), this dwelling became the symbol of the Five Nations One family politically, they thought of themselves metaphorically as dwelling in a large "long house," which had a "door" on the eastern end, guarded by the Mohawk (in the extreme geographical east), and a door on the western end, guarded by the Seneca (in the extreme west) The Onondaga, keepers of the council fires and the wampum records, were between the Cayuga on the west and the Oneida on the east The main Onondaga village served as the capital or meeting place of the federated council Voting in the council was conducted by tribes, and a unanimous decision was necessary to wage war Be this as it may, intertribal war was not unknown The Iroquois, called by Frances Parkman the "Romans of the New World," were second to no other Indians N of Mexico in political organization, statecraft, and military prowess In the mid-17th cent , at the height of their power, the Iroquois Confederacy, equipped with Dutch firearms, made its united force felt It dispersed the Huron in 1649, the Tobacco Indians and the Neutral Nation in 1650, the Erie in 1656, the Conestoga in 1675, and the Illinois c 1700 Depleted by continual warfare, they increased the population by the wholesale adoption of alien tribes, so that by the end of the 17th cent they numbered some 16,000 At this time they controlled the territory bounded by the Kenebec river, the Ottawa river, the Illinois river, and the Tennessee river Their conquests were checked in the west by the Ojibwa, in the south by the Cherokee and the Catawba, and in the north by the French Many historians hold that the hostility of the Iroquois towards the French was caused by Champlain, when, in 1608, he accompanied a Huron war party armed with French guns into Iroquois territory In any case, the Iroquois, firm allies of the British, opposed the French at every step until the French lost control of Canada in 1763 The French, partly in the hope of winning over the Iroquois, sent missionaries to them Isaac Jogues, a notable Jesuit missionary, was killed by the Iroquois as a sorcerer in 1646, but the missionaries were somewhat successful, and a considerable number of the Mohawk withdrew from the confederacy and founded (c 1670) a Catholic settlement These Catholic Iroquois, called French Mohawks, took the part of the French against their former brethren In the early 18th cent the Five Nations became the Six Nations when the Oneida adopted (c 1722) the remnants of the Tuscarora Confederacy British settlers had expelled (1711) the Tuscarora from North Carolina, and by 1712 they had moved to the North The British, who had used the Six Nations as a buffer against the advance of the French from Canada in the FRENCH AND INDIAN WARS, attempted to retain their favor by accrediting various agents, notably Sir William JOHNSON (Johnson of the Mohawks) The American Revolution was disastrous for the Iroquois The confederacy, as such, refused to take part in the conflict but allowed each tribe to decide for itself, and all the tribes, except the Oneida, joined the British Samuel Kirkland, a Protestant missionary, was largely responsible for winning over the Oneida, who rallied to the side of the colonists after remaining neutral for two years CORNPLANTER, RED JACKET, and Joseph BRANT (who was educated by Sir William Johnson) led the Iroquois who remained loyal to the British Brant, the principal leader of the Iroquois troops, participated with the Tory Rangers (see BUTLER, WALTER) in raids in New York and Pennsylvania, particularly the Cherry Valley and Wyoming Valley massacres Finally, the Continental Congress sent out a punitive expedition under John SULLIVAN, who in 1779 defeated Butler and his Iroquois allies After the Revolution, Brant, in contrast to the other two chiefs, remained adamant in his hostility towards the United States. The Mohawk and the Cayuga, who were strong allies of the British, today are settled on reservations in Ontario, and most of the remaining Iroquois, except for the Oneida who live in Wisconsin, are in New York. The Iroquois in Canada and in the United States are either Christians or followers of HANDSOME LAKE, a Seneca prophet of the 18th cent , who was influenced by the Quakers. The total number of Iroquois in the United States and Canada is some 16,000 The Iroquois have been the subject of much study and literature Early students included Cadwallader COLDEN and L H. MORGAN. See G T Hunt, *The Wars of the Iroquois* (1940); F. G Speck, *The Iroquois* (1945)

Iroquois Falls (I'rŭkwoi), town (pop. 1,302), E Ont., on the Abitibi river and N of North Bay It is a center for pulp, paper, and sulphite milling, with a hydroelectric station on near-by waterfalls.

Iroquois League: see IROQUOIS CONFEDERACY.

Irpeel (Ir'pēēl, Irpē'ul) [Heb ,=whom God heals], unidentified city, SE Palestine. Joshua 18.27.

Irrawaddy (Irŭwŏ'dē), chief river of Burma, traversing the country from north to south. Its mother streams (the Mali and the Nmai) join c.25 mi N of Myitkyina Much of the Irrawaddy's upper course is through deep gorges Below Mandalay, it receives the waters of its principal tributary, the Chindwin, at Henzada, 180 mi from the sea, it enters its delta It empties into the Bay of Bengal. The river, navigable by steamers up to Bhamo and by launches up to Myitkyina, was long the principal communication route and is still the economic lifeline of Burma The delta, with its rich soil and dependable heavy rainfall, is one of the world's great rice-growing regions On one of the mouths of the Irrawaddy, in the eastern delta, is the port of Rangoon

irredentism (Irĭdĕn'tĭzm), term originally applied to the Italian nationalist movement for the annexation to Italy of some territories—*Italia irredenta* [unredeemed Italy]—inhabited by an Italian majority but retained by Austria after the Austro-Prussian War (1866) These included the Trentino, Trieste, Istria, Fiume, and parts of Dalmatia Irredentism was conceived as an application of the principle of NATIONALITY Agitation took place both inside Austria-Hungary and in Italy itself The liberation of *Italia irredenta* was perhaps the strongest motive for the entry of Italy into the First World War The term *irredentism* is sometimes also applied to nationalist agitation in other countries, based on historical, ethnical, and geographical reasons, for the incorporation of territories subject to foreign rule Irredentism is thus closely connected with NATIONALISM and with MINORITY problems

irrigation, in agriculture, the artificial watering of arable lands Although used chiefly in regions receiving an annual rainfall of under 20 in , it is also applied in areas of great rainfall to supply the high water requirement of certain crops, e g , rice Scientific control of the time and amount of irrigation has followed research on soils, on the specific needs of individual crops, and on transpiration rates of plants, it must be correlated with provision for proper drainage in order to prevent excess leaching, alkalization, or waterlogging of the soil Effective irrigation requires preliminary clearing, smoothing, and grading of land Methods of applying water include free-flooding of entire areas from canals and ditches, check-flooding, in which water is guided over strips or checks of land between levees or borders, the furrow method, in which water is run between rows of crops or trees at distances permitting lateral penetration to roots, the surface-pipe method, in which water is conveyed through movable slip-joint pipes, and sprinkler systems Water for irrigation has been obtained from prehistoric times by primitive ditching and hand-dipping Early improvements include counter-balanced poles for raising attached water vessels and adaptations of the wheel and of the Archimedes' screw In modern times the use of pumps has facilitated the tapping of ground water as well as of surface water The use of canals, dams, weirs, and reservoirs for the distribution, control, and storage of water was probably initiated in ancient Egypt Large-scale 20th-century irrigation is commonly a part of multiple-purpose water projects combining irrigation, water supply, the production of hydroelectric power, and flood control Many regions, notably in Egypt, Mesopotamia, and India, have been under continuous irrigation from ancient times, and extensive areas are irrigated today in the United States, Japan, Mexico, the USSR, Italy, Spain, and France In the area of the present United States irrigation was practiced by Indians in the Southwest and by the Spanish, especially in California Most of the arid and semiarid land in the United States lies west of the 100th meridian, and here irrigation is chiefly practiced Irrigation by individual or group initiative was early supplemented by commercial projects, and finally demands for water conservation led to water-rights legislation and to assistance by state and Federal governments (see RECLAMATION OF LAND) See B. A Etcheverry and S T Harding, *Irrigation Practice and Engineering* (3 vols., 1915–16, Vol. I, 2d ed., 1933)

Ir-shemesh (Ir'shĕ'mĕsh) [Heb.,=city of the sun], the same as BETH-SHEMESH 2.

Irtysh (Irtĭsh'), river, 1,844 mi long, China and USSR, chief tributary of the Ob. It rises in Sinkiang prov , China, on the western slopes of the Mongolian Altai, passes through Lake Zaisan (Kazakh SSR), and flows generally NW through W Siberia past Semipalatinsk, Pavlodar, Omsk, and Tobolsk Above Lake Zaisan it is called Kara [black] Irtysh. Its chief affluents are the Ishim and Tobol. The Irtysh is navigable (April–Nov.) for steamers from Semipalatinsk. Its middle course drains a rich agricultural area The Mongols, Kalmucks, and Chinese occupied the banks of the river before it was reached (1594) by the Russians. The Russian conquest of the basin was completed in the mid-19th cent.

Iru (ĭ'rū), **Caleb's eldest son** 1 Chron. 4 15.

Irún (ērōōn'), town (pop. 7,790), Guipúzcoa prov., N Spain, in the Basque Provs., on the French frontier near the Gulf of Biscay It has transit trade and various industries Staunchly defended by the Loyalists in the civil war of 1936–39, it was burned before it fell to the Insurgents (1936)

Irvine, William (ûr'vĭn), 1741–1804, American soldier, b Ireland He studied medicine in Ireland and practiced in Carlisle, Pa , before he was called to service as colonel of a Pennsylvania regiment and later as brigadier general in the Continental army in the Revolution In 1781 he was given command of Fort Pitt and the Western frontier, serving until 1783 While acting as agent (1785) to select the free lands promised to Pennsylvania troops, he recommended that Pennsylvania purchase the Erie Triangle (see PENNSYLVANIA) from the United States He was a member of the Continental Congress (1786–88), was sent (1793) as delegate to the 3d U S Congress, and was in command of Pennsylvania troops in the Whisky Rebellion (1794) See C W Butterfield, ed , *Washington-Irvine Correspondence* (1882)

Irvine (ûr'vĭn), burgh (pop 12,032), Ayrshire, Scotland, on the Irvine estuary and N of Ayr The harbor was improved in 1873 and later, and coal is exported Other industries are the manufacture of chemicals, soap, bottles, and hosiery

Irvine (ûr'vĭn), city (pop 3,631), co seat of Estill co , central Ky , on the Kentucky river and SE of Lexington It has railroad shops and refines oil, oil wells are in the area

Irving, Edward, 1792–1834, Scottish preacher, under whose influence was founded the CATHOLIC APOSTOLIC CHURCH, the members of which have sometimes been called Irvingites He was tutor to Jane Welsh, later the wife of Thomas Carlyle, and became the friend of Carlyle After serving as assistant (1819–22) to Thomas CHALMERS in Glasgow, Irving was called to the Caledonian Church, London, where his oratory brought him great popularity, he and his congregation moved to the larger Regent Square Church in 1827 As his preaching began to emphasize the supernatural and the imminence of the second coming of Christ, criticism arose, especially over his views on the human nature of Christ In 1832 he was debarred from the Regent Square Church, in 1833 he was deposed from the Church of Scotland Irving had, from 1826, been meeting with a group gathered together by Henry Drummond to study the prophecies of the Scriptures From this "school of the prophets" was developed the Catholic Apostolic Church, of which Irving was an "angel" See biography by M O W Oliphant (1864)

Irving, Sir Henry, 1838–1905, English actor and manager His original name was John Henry Brodribb, but he legalized his stage name in 1887 Irving made his debut (1856) as Gaston in *Richelieu*, attracted attention (1866) as Dorincourt in *The Belle's Stratagem*, and had a signal success (1870) as Digby Grant in *The Two Roses* He gained fame when he played (1871) Mathias in *The Bells*, a role which he often repeated Other successes were in *Charles I* (1872) and *Eugene Aram* (1873) and especially in *Hamlet* (1878) In 1878 he became manager of the Lyceum Theatre, London Here, with Ellen Terry as his leading lady, he reigned until 1903, offering spectacular Shakspearian productions and such dramas as *Faust* and Tennyson's *Becket* Irving had mannered gestures and elocution, but he had also a magnetic and majestic presence He was knighted in 1893, the first English actor to receive the honor, and was buried in Westminster Abbey See biographies by L F Austin (1884), P H Fitzgerald (1906), Bram Stoker (1906), W H Pollock (1908), Gordon Craig (1930), and H A Jones (1931), studies by Max Beerbohm in *Around Theatres* (1930) and by George Sampson in *Seven Essays* (1947)

Irving, John Duer, 1874–1918, American geologist, b Madison, Wis , grad Columbia (B A , 1896), son of Roland D Irving He served on the U S Geological Survey from 1899 to 1907, working in South Dakota and Colorado, and was professor of economic geology at Yale from 1907 He died in France while serving as captain and instructor at the Army Engineers' School

Irving, Roland Duer, 1847–88, American geologist, b New York city, grad Columbia, 1869 He was professor of geology and mineralogy at the Univ of Wisconsin from 1870 and worked under T C Chamberlin on the geological survey of the state (1873–79) From 1880 he served the U S Geological Survey as geologist in charge of the Lake Superior division. He contributed a valuable study (1883) of the iron and copper-bearing rocks of the region John D Irving was his son

Irving, Washington, 1783–1859, American author and diplomat, b New York city While he studied law, he amused himself by writing for periodicals such essays on New York society and the theater as the *Letters of Jonathan Oldstyle, Gent* (1802–3). In 1804–6 his older brothers financed his tour of France and Italy. On his return he joined William Irving and J. K. Paulding in publishing *Salmagundi; or, The Whim-Whams and Opinions of Launcelot Langstaff & Others* (1807–8), a series of humorous and satirical essays Under the pseudonym Diedrich Knickerbocker, he brought out in 1809 *A History of New York*, a satire which has been called "the first great book of comic literature written by an American" He went to England in 1815 to run the Liverpool branch of the family hardware business, but could not save it when the whole firm failed Thereupon, with the encouragement of Walter Scott, Irving turned definitely to literature The essays (including "Rip Van Winkle" and "The Legend of Sleepy Hollow") collected in *The Sketch Book of Geoffrey Crayon, Gent* (London, 1820) appeared serially in New York in 1819–20, their enthusiastic reception made Irving the outstanding figure in American literature both at home and abroad *Bracebridge Hall* (1822), the next and inferior volume of essays, was well received, but his *Tales of a Traveller* (1824), written after visits to Germany and France, was a failure Irving became attached to the American embassy in Madrid in 1826 There he produced his biography of Columbus (1828), largely based on the work of the Spanish historian Navarrete, *The Conquest of Granada* (1829), a romantic narrative, and *The Alhambra* (1832), popular in Spain as a "Spanish Sketch Book" After a short period at the American legation in London, he returned to New York and, sensing what his readers wanted, began to write about the American West Having made a journey to the frontier, he wrote *A Tour of the Prairies* (1835) From records furnished by John Jacob Astor, he wrote *Astoria* (1836), with Pierre Irving, and *The Adventures of Captain Bonneville, U S A* (1837) He resigned a projected history of the conquest of Mexico when he learned that William H Prescott was undertaking the task Irving established himself at his estate, "Sunnyside," near Tarrytown, N Y , until he was sent to Madrid as minister (1842–46) Once more at Sunnyside, he wrote his biography of Goldsmith (1849) and the miscellaneous sketches called *Wolfert's Roost* (1855) and labored at his biography of Washington (5 vols , 1855–59), which he completed just before his death Irving was one of the first Americans to be recognized abroad as a man of letters, and he was a literary idol at home He was master of a smooth prose style, was a gentle but effective satirist, and was the creator of a few widely loved essays and tales Modern scholarship supports the contention that much of his work was derivative Sunnyside, Irving's home, is open to the public Irving's journals were edited by W P Trent and G S Hellman (3 vols , 1919), odd volumes of his journals, letters, and notes by S T Williams, and *The Western Journals* by J F McDermott (1944) See definitive biography by S T Williams (1935), Van Wyck Brooks, *The World of Washington Irving* (1944)

Irving, town (1940 pop 1,089, 1947 estimated pop 2,500), N Texas, WNW of, and near, Dallas It is an industrial suburb

Irvington. 1 Industrial town (pop 55,328), NE N J , western suburb of Newark, settled 1692 as Camptown, renamed 1852 for Washington Irving, inc as a village 1874, as a town 1898 Brass fittings are made here **2** Residential village (pop 3,272) SE N Y , in Westchester co , on the east bank of the Hudson just S of Tarrytown, settled c 1655, inc 1872 It was called Dearman from c 1817 until 1854, when it was named for Washington Irving, who bought (1835) "Sunnyside" in the village At "Nevis," the estate of Alexander Hamilton's son, are a Columbia Univ arboretum and the children's museum (in cooperation with Columbia) "Nevis" also has a cyclotron, begun in 1947 and supported by Columbia Univ and the Office of Naval Research Irvington House, a home for cardiac children, is in the village

Irwin, Edward Frederick Lindley Wood, 1st Baron see HALIFAX, EDWARD FREDERICK LINDLEY WOOD, 1ST EARL OF

Irwin, Wallace, 1876–, American journalist and author, b Oneida, N Y , educated at Stanford He was the brother of Will Irwin A writer on the San Francisco *Examiner* and editor (1902) of the *Overland Monthly*, Irwin is also known for his humorous *Letters of a Japanese Schoolboy* (1909)

Irwin, Will (William Henry Irwin), 1873–1948, American author and journalist, b Oneida, N Y , grad Stanford, 1899 A distinguished reporter and foreign correspondent, he wrote *The City That Was* (1907), *Men, Women, and War* (1915), *A Reporter in Armageddon* (1918), *Propaganda and the News* (1936), and biographies, among them one of his friend Herbert Hoover (1929), whose speeches, it is said, he helped to prepare His two successful plays were collaborations, *The Thirteenth Chair* (with Bayard Veiller, 1916) and *Lute Song* (with Sidney Howard, 1930) In 1916 he married Inez Haynes Gillmore (1873–), a novelist and feminist. See his *Making of a Reporter* (1942)

Irwin, industrial borough (pop 3,441), SW Pa , ESE of Pittsburgh; settled c 1844, laid out 1853, inc. 1864. It has coal mines and ironworks.

Is (ĭs), ancient city of S Mesopotamia, on the Euphrates It was famous for its bitumen springs, material from which was used in constructing the walls of Babylon

Isaac I (Isaac Comnenus) (kŏm'nē'nŭs), c 1005–1061, Byzantine emperor (1057–59), first of the Comnenus dynasty Proclaimed emperor by the army, he deposed the weak and old Michael VI, who had succeeded Theodora in 1056, and sent him into a monastery Though at first received with enthusiasm at Constantinople, he soon lost his popularity through his rigorous system of tax collection and his confiscation of ecclesiastic property He energetically suppressed the opposition, but in 1059, after an unsuccessful campaign against the Petchenegs, he abdicated for unknown reasons (ostensibly because of his bad health) and retired to a monastery He appointed Constantine Ducas (Constantine X) as successor The Comnenus dynasty returned to the throne only in 1081, with Isaac's nephew, ALEXIUS I, after the disastrous reigns of Romanus IV, Michael VII, and Nicephorus III

Isaac II (Isaac Angelus) (ăn'jŭlŭs), d 1204, Byzantine emperor (1185–95, 1203–4) Before his accession he was of little importance When in 1185 Emperor Andronicus I sought to have him arrested as a political enemy, Isaac took refuge in Hagia Sophia, a mob gathered, seized the unpopular Andronicus, killed him after inhuman tortures, and proclaimed Isaac emperor Isaac was unable to suppress the rebellious Bulgars, but repulsed an invasion by William II of Sicily He was deposed and blinded in 1195 by his brother, who became emperor as ALEXIUS III, but Isaac's son (later Alexius IV) appealed to the host of the Fourth Crusade (see CRUSADES), and in 1203 father and son were restored as joint emperors Their overthrow (1204) by Alexius Ducas (ALEXIUS V) led to the storming of Constantinople by the CRUSADERS

Isaac (ī'zŭk) [Heb , =laughter], only son of Abraham and Sarah He married Rebecca, and their sons were Esau and Jacob Ishmael was his half brother As a supreme act of faith Abraham offered him at an early age as a sacrifice to God—a deed prevented by divine intervention The Philistine king Abimelech gave him shelter in time of famine, and he grew rich in lands and possessions Returning and gentle, he lived the longest and led the least eventful life of any of the patriarchs Just before his death Rebecca caused him to bless Jacob in place of Esau He was buried in the family tomb at Machpelah Gen 21–27, 35 29, 49 31, Amos 7 9, 16, Mat 8 11, Heb 11 17, James 2 21.

Isaacs, Sir Isaac Alfred, 1855–1948, Australian jurist and governor general He sat in the colonial legislature (1892–1901), became solicitor general (1893), and served as attorney general (1894–99, 1900–1901) He was a framer of the commonwealth constitution (1897) and sat in the dominion Parliament (1901–6), becoming attorney general in 1905 He was for many years (1906–30) a high court justice and sat as chief justice (1930–31) His appointment (1931) as first native-born governor general was also the first made by the British crown directly on the advice of a dominion ministry Isaacs served as governor general until 1936

Isaacs, Jorge (hôr'hā ē'sŭks), 1837–95, Colombian novelist, son of a prosperous English Jew His fame rests upon his idyllic romance, *María* (1867 Eng tr , 1890), which won immediate success and was for a time the most widely read novel in Spanish America Fine character portrayal is matched by a masterly picture of the landscape of the Cauca valley Isaacs was named consul to Chile and occupied several government posts in his own country He also wrote a volume of poems (1864) He died in poverty

Isaacs, Rufus Daniel see READING, RUFUS DANIEL ISAACS, 1ST MARQUESS OF

Isabeau of Bavaria (ēzăbō'), 1371–1435, French queen, consort of CHARLES VI, daughter of the duke of Bavaria She was several times regent for her demented husband Sympathizing with the enemies of France in the Hundred Years War, the English and the Burgundians, she was instrumental in bringing about the Treaty of Troyes (1420), which disinherited her own son in favor of Henry V of England.

Isabel, 1846–1921, princess imperial of Brazil, daughter of PEDRO II She was married to the comte d'Eu She acted as regent in her father's absence She and her husband both favored the clerical and conservative party and were unpopular. It was Isabel who signed the law abolishing slavery (1888), which caused the downfall of the empire After the deposition of Pedro II (1889), she went to PARIS, where she spent the remainder of her life

Isabela, Cape (ēsăbā'lä), on the north shore of Hispaniola, in the Dominican Republic Near by are the ruins of the first Spanish settlement in the New World, made by Columbus in 1493

Isabella, 1292?–1358, queen consort of EDWARD II of England, daughter of Philip IV of France She was married in 1308 to Edward Neglected and mistreated by her husband, Isabella nourished hatred for the royal favorites, Piers Gaveston and the Despensers. In 1325 she was permitted to

visit France in order to forestall a war Once there, she ignored royal orders to return to England with her son, the heir to the throne. She formed a notorious liaison with Roger MORTIMER, earl of March, and with him plotted to invade England Their invasion in 1326 was successful After Edward II was forced to abdicate and his son was enthroned as EDWARD III early in 1327, Isabella and Mortimer caused the murder of Edward II and began a corrupt rule of England Finally rebelling against the couple's flagrant misconduct and misgovernment, Edward III in 1330 seized power, had Mortimer executed, and made Isabella retire

Isabella I or **Isabella the Catholic**, 1451–1504, Spanish queen of Castile and Leon (1474–1504), daughter of John II of Castile In 1469 she married Ferdinand of Aragon (later King Ferdinand V) At the death (1474) of her brother, HENRY IV of Castile, the succession to Castile was contested between Isabella and JUANA LA BELTRANEJA, who was supported by ALFONSO V of Portugal The civil war ended with Isabella's victory in 1479, the year Ferdinand became king of Aragon Isabella and Ferdinand, known as the Catholic monarchs, ruled Castile jointly With them began the unity of Spain (For the chief events and the significance of their reign, see FERDINAND V) Isabella, with her confessor, Cardinal JIMÉNEZ, encouraged many church reforms She was the patron of Columbus The Catholic monarchs furthered learning and the arts and promoted great building activity. The style of the period is called *isabelino* after the queen, it combines Gothic, Mudéjar, and Renaissance features Isabella bequeathed Castile to her daughter JOANNA, with Ferdinand as regent See W H Prescott, *History of the Reign of Ferdinand and Isabella the Catholic*, and Washington Irving, *Chronicle of the Conquest of Granada*, both classic works See also biographies by I L Plunket (1915) and W T Walsh (1933)

Isabella II, 1830–1904, queen of Spain (1833–68), daughter of Ferdinand VII and of MARIA CHRISTINA Her mother was regent until 1840 Isabella's uncle, Don CARLOS, contested her succession under the Salic law and the Carlist Wars began (see CARLISTS) After Maria Christina's departure ESPARTERO became regent (1840), and after his overthrow Isabella was declared of age (1843) In 1846 the queen married her cousin, Francisco de Asís, and her sister married a son of Louis Philippe of France, the duke of Montpensier These Spanish marriages, which were contrary to previous agreements between England and France, aroused England, fearful of a Franco-Spanish rapprochement, and caused the temporary severance of the *entente cordiale* and French isolation in Europe Isabella's rule was one of party conflicts between moderates, progressives, and liberal unionists and of continuous cabinet changes Ramón NARVÁEZ, ESPARTERO, O'DONNELL, and SERRANO Y DOMÍNGUEZ were among her premiers Frequent rebellions culminated in 1868 in the insurrection led by Serrano and Prim, and Isabella was deposed (see SPAIN) She spent the rest of her life in France In 1870 she abdicated her rights in favor of her son, ALFONSO XII

Isabey, Jean Baptiste (zhä' baptēst' ēzabā'), 1767–1855, French portrait painter and miniaturist; pupil of J L David He prospered under all the changing regimes, portraying in turn Marie Antoinette, Mirabeau, David, Bonaparte (Malmaison), Josephine (Wallace Coll, London), and Louis Philippe Napoleon III conferred upon him the Legion of Honor Two of his best compositions, *Isabey's Boat* and *Revue of the First Consul*, are in the Louvre, as are also his 32 drawings of the coronation of Napoleon Aside from its artistic value his work constitutes a historic document of great interest His son, **Eugène Louis Gabriel Isabey** (ūzhēn' lwē' gabrēĕl') 1804–86, was a marine and genre painter Well-known examples of his work are in the Luxembourg Museum, Paris, the Versailles Museum, and the Metropolitan Museum

Isaeus (Isē'us), fl early 4th cent B C, one of the 10 Attic orators Of his orations, 12, dealing with law cases of inheritance, survive

Isaiah (Izā'yă, Isā'-) [Heb ,=salvation of God] or **Isaias** (Isā'yus), book of the Old Testament, the first of the books of the Major Prophets It is a collection of prophecies attributed to Isaiah (fl 710 B C), who preached under King Hezekiah of Judah, his message was partly political, urging the king to recognize the power of Assyria and not to ally himself with Egypt, as a party of nobles urged The book falls into two major sections of metrical prophecies (1–35 and 40–66) with a prose section between (36–39). The first set of poems treats the overthrow of the Assyrians, containing introduction (1–6), Messianic prophecies directed against Syria and Assyria (7–12), prophecies against many nations (13–27), finally prophecies affecting Israel and Judah, announcing destruction and subsequent redemption (28–35) The prose section (mainly identical with 2 Kings 18 13–20 19) falls into two parts, the first (36–37) telling of Sennacherib's unsuccessful siege of Jerusalem and his murder long after; the second (38–39) gives the sickness of Hezekiah, with recovery and reception of an embassy from Babylon and prophecy of captivity there The second poetic section of the book (40–66) is a prophecy of redemption, falling, according to one mode of division, into three parts—delivery from captivity (40–48), redemption from sin (49–57), and the redeemed state of Israel (58–66) The book contains many of the sublimest passages of the Bible, among them are prophecies referred by Christians to Christ (8–12, 40–42, 53) Later biblical allusions are frequent, e g , Ecclus 48 25–28, Mat 1 23, 4 15, 13 14 Esaias Mat 3 3 Many critics would divide Isaiah into parts of diverse original authorship, assigning the second division of prophecies (40–66) to postexilic times For bibliography, see OLD TESTAMENT.

Isaiah, Ascension of see PSEUDEPIGRAPHA

Isar (ē'zär), river of Austria and Bavaria It rises in the Tyrol, N of Innsbruck, and flows 160 mi. NE past Munich and Landshut to the Danube

Isauria (Isō'rēŭ), ancient district on the borders of Pisidia and Cilicia, S Asia Minor, N of the Taurus range, in present S central Turkey It was a wild region inhabited by marauding bands who lived by their depredations on land and sea They were partially checked by the Romans early in the 1st cent B C but were never completely subdued until the arrival of the Seljuk Turks many centuries later When the capital, Isaura or Isaura Vetus [old Isaura], a strongly fortified city at the foot of Mt Taurus, was besieged by the Macedonian regent Perdiccas in the 4th cent B C, the Isaurians destroyed the town by fire rather than submit to capture The site contains interesting ruins of the town and its fortifications

Isca Damnoniorum see EXETER, England

Iscah (Is'kŭ), niece of Abraham Gen 11 29.

Ish-bosheth (Ish-bŏ'shĕth, Ish'-bōshĕth, Ish-bŏsh'ĕth) [Heb ,=man of shame], son of Saul, and his would-be successor 2 Sam 2; 3; 4 Esh-baal 1 Chron 8 33, 9 39 For the relation between the names of this man, see BAAL.

Isherwood, Christopher (I'shûrwŏod), 1904–, English novelist Among his earliest works was *Memorial. Portrait of a Family* (1932). With his friend W. H Auden he wrote the plays *The Dog beneath the Skin* (1935), *The Ascent of F 6* (1936), and *On the Frontier* (1938). Their *Journey to a War* (1939) describes wartime China. At the same time, basing his work on his experiences in Germany, Isherwood wrote the novels *The Last of Mr. Norris* (1935) and *Goodbye to Berlin* (1939), they were reissued in 1946 as *The Berlin Stories Prater Violet* (1945) describes the fascism of Vienna and reaction to it in England In 1939 Isherwood, a confirmed expatriate, came to the United States His South American travel diary, *Condor and the Cows*, appeared in 1949 See *Lions and Shadows* (1938; fictional autobiography).

Ishi (I'shī) **1, 2** Judahites 1 Chron. 2 31, 4 20 **3** Manasseite 1 Chron 5 24 **4** Simeonite whose sons fought at Mt Seir 1 Chron 4 42 The name Ishi with the meaning "my husband" is a name of God in a prophecy Hosea 2 16

Ishiah (Ishī'u) [Heb ,=God lends], chief of the tribe of Issachar 1 Chron 7 3

Ishii, Kikujiro, Viscount (kē"kōō"jē'rō', Ishē'), 1867?–, Japanese diplomat He entered the foreign service as a youth and was stationed in Peking during the Boxer Rebellion In 1907–8 he was instrumental in negotiating the GENTLEMEN'S AGREEMENT He was ambassador to France (1912–15), foreign minister (1915–16), and ambassador to the United States (1918–19) In 1917 he negotiated the Lansing-Ishii agreement with the United States He later served as delegate to the League of Nations Council, the Geneva Naval Conference at Geneva (1927), and the international economic conference of 1933 He was a member of the privy council

Ishijah (Ishī'ju) [Heb ,=God lends], Israelite who married a foreign woman Ezra 10 31

Ishikari (ēshēkä'rē), river, 227 mi long, flowing W, SSW, and WNW through W Hokkaido, Japan, to Ishikari Bay near Otaru This second longest river of Japan drains an extensive coal area

Ishikawa (ēshē'käwä), prefecture, central Honshu, Japan see KANAZAWA, the capital

Ishim (ēshēm'), city (1936 estimated pop 34,500), RSFSR, in W Siberia, on the Ishim river and the Trans-Siberian RR Founded in 1670, it is the center of an agricultural area

Ishim, river, 1,123 mi long, Kazakh SSR and RSFSR, in W Siberia It rises N of Karaganda and flows N and W past Petropavlovsk and Ishim into the Irtysh Its lower course, which is navigable, passes through the **Ishim Steppe,** a rich agricultural black-earth district

Ishma (Ish'mu), name appearing in the Judahite genealogy 1 Chron 4 3

Ishmael (Ish'māĕl) [Heb ,=God hears] **1** Son of Abraham and Hagar Through Sarah's jealousy he and his mother were sent into the desert Eventually he settled at Paran in N Sinai peninsula He became an archer, married an Egyptian, and had 12 sons and a daughter He was the half brother of Isaac and Esau's father-in-law Gen 16 4–16, 17 18–26, 21 8–21, 25 9,12–17, 28 9, 1 Chron 1 29–30 The Moslems consider the Arabs the descendants of Ishmael, thus distinguishing themselves from the descendants of Isaac and Israel Hence the contemptuous use of the name Ishmael among Jews and Christians is unknown in Islam The Bible does not make clear what peoples are indicated by the name Ishmaelites (or Ishmeelites) Gen 37 25–28, 39 1, Judges 8 24, Ps 83 6 **2** Descendant of Saul 1 Chron 8 38, 9 44 **3** Ancestor of the Zebediah of Jehoshaphat's court 2 Chron 19 11 **4** Ally of Jehoiada 2 Chron 23 1 **5** Priest separated from his foreign wife Ezra 10 22 **6** Assassin of Gedaliah 2 Kings 25 23–25, Jer 40 7–16, 41

Ishmaiah (Ish"mā'u) [Heb ,=ISMAIAH], ruler over the Zebulunites 1 Chron 27 19

Ishmerai (Ish'mĕrā, Ish"mĕrā'ī) [Heb ,=whom God keeps], chief Benjamite 1 Chron 8 18

Ishod (I'shŏd) [Heb ,=man of renown], descendant of Manasseh 1 Chron 7 18

Ishpan, chief Benjamite 1 Chron 8 22

Ishpeming (Ish'pumĭng), city (pop 9,491), W Upper Peninsula, N Mich , W of Marquette, inc as a village 1871, as a city 1873 It is in the center of the Marquette iron range Besides iron-ore mining, its chief industries include dynamite making and marble quarrying Ski tournaments have been held here since 1888

Ishtar (Ish'tär), in Babylonian and Assyrian religion, goddess of fertility She corresponds to the Phoenician Astarte, the Greek Aphrodite, and the Roman Venus As Ishtar's cult became stronger she absorbed the cults of other goddesses and their attributes (e.g , Ishtar sometimes appeared as a war-goddess) Ishtar, therefore, became the common name for goddess. The legend of her lover Tammuz, whom she killed and restored to life, resembles the Greek myth of Aphrodite and Adonis. Ishtar was one of the many forms of the ancient earth-goddess, the GREAT MOTHER OF THE GODS.

Ishtob (Ish'tŏb) see TOB.

Ishuah (Ish'ūu), son of Asher. Gen. 46.47. Isuah: 1 Chron 7 30

Ishui (Ish'uī), the same as ISUI.

Ishui (Ish'uī), son of Saul 1 Sam 14 49.

Isidore of Seville, Saint, c 560–636, Spanish churchman and encyclopedist, bishop of Seville. Born of a noble Hispano-Roman family from Cartagena, he spent his youth under the supervision of his brother Leander, powerful bishop of Seville, and may have

helped the latter in the extirpation of Arianism among the Visigoths During his own tenure of the bishopric (from c 600) Isidore wielded considerable ecclesiastical power; he presided at the second Council of Seville (619) and at the fourth national Council of Toledo (633). He is best known, however, for his voluminous writings His most important work is the *Etymologiae* or *Origines*, an encyclopedic treatise which aims to set down all the knowledge of the time It is a comprehensive work in plan, and it transmitted to scholars of the Middle Ages and even the Renaissance some measure of classical learning The *Etymologiae* was very popular in the Middle Ages It was, however, a completely derived work, unenlightened by first-hand observation Isidore shows a poor knowledge of Greek, and his etymologizing is frequently ludicrous His *Historia de regibus Gothorum, Vandalorum et Suevorum* is useful in studying the early history of Spain He also wrote many treatises on theology, language, natural history, and other subjects See Ernest Brehaut, *An Encyclopedist of the Dark Ages* (1912), Sister Patrick Mullins, *The Spiritual Life according to St Isidore* (1940)

Isidorus of Miletus (ĭsĭdō'rŭs, mĭlē'tus), name of two architects of the time of Justinian The elder was associated with Anthemius of Tralles in rebuilding Hagia Sophia, A D 532–37, while the younger rebuilt the dome after its destruction by earthquake, A D 553

Isin (ī'sĭn), capital of an ancient Semitic kingdom of N Babylonia It was established c 3000 B C and at one time controlled the cities of Nippur and Ur. Excavations have disclosed its site near Ur

isinglass (ī'zŭn-glăs″), gelatinous substance obtained by cleaning and drying the swimming bladders of the sturgeon, cod, hake, and other fishes Isinglass is manufactured in Russia, the United States, Canada, Brazil, the East Indies, the West Indies, and Manila It is used in the clarification of wines and beers, as a stiffening for jellies, in court plaster, and in glues and cements The name isinglass is also commonly applied to thin sheets of mica and sometimes to a gelatinous substance obtained from certain seaweeds

Isis (ī'sĭs), nature goddess, whose worship, originating under the New Empire (c 1700–1100 B C), spread throughout Egypt until it was universal there and then extended into other lands of the Mediterranean world Eventually the functions of all goddesses were attributed to her, so that she was regarded as the protot pe of them all, and in early Christian times her cult was one of the most obstinate antagonistic forces met by the new teachings In the mythology of E ypt she was the counterpart of Osiris, his faithful wife and sister Both were the children of the god of the earth, Seb, and the goddess of the sky, Nut With Horus, their son, Isis and Osiris were honored widely Isis gave birth to Horus after Osiris had been killed by their brother, Set She found and concealed her husband's body, but Set hunted it out, tore it apart, and scattered the pieces When Isis had gathered them together, Osiris was restored by magic, to become ruler of the dead The symbolism of the myth represents Osiris, the sun, overwhelmed by Set, the night, to Isis, the eastern sky at dawn, is born Horus, the sun of a new day In her images the goddess is given human form, sometimes with a woman's head, sometimes with a cow's head, sometimes with a cow's horns above the human head Later, she was shown holding the infant Horus She was the universal mother and the mistress of all magic There were important centers of her worship at Memphis, Abydos, and the island of Philae In the great temple there the cult was preserved longest—until A D 560 When Isis became known to the Greeks, she was first identified with Demeter In the Hellenistic world the worship of Isis was widespread Introduced into Rome in Sulla's time, it was at times highly favored, at others frowned upon Some of the emperors were priests of Isis, others suppressed the cult

Isis see THAMES, river, England

Iskander Beg see SCANDERBEG

Iskenderun (ĭskĕn'dŭrōōn, ĕs″kĕndurōōn'), formerly **Alexandretta** (ă″lĭgzăndrĕ'tu), city (pop 18,612), SW Turkey, on the Gulf of Alexandretta, an inlet of the Mediterranean It served as port for Alep until it was transferred (1937) from Syria to Turkey (see ALEXANDRETTA, SANJAK OF) The name also appears as Iskanderun

Isker: see STBIR

Isla, José Francisco de (hōsā' frănthē'skō dā ē'sla), 1703–81, Spanish Jesuit preacher and writer, commonly referred to as "el Padre Isla" He wrote the best satirical novel of the 18th cent in Spain, *Historia del famoso predicador Fray Gerundio de Campazas* (1758), in which he attacked the pedantry of pulpit eloquence in an amusing tale of the adventures of Fray Gerundio, an ignorant preacher. Isla is also known for his excellent translation, *Gil Blas de Santillana*, from the French of Le Sage's picaresque novel

Islam (ĭs'lŭm, ĭz'–, ĭslăm') [Arabic,=submission to, or having peace with, God], the religion of which MOHAMMED was the prophet An adherent of Islam is called a Moslem or Muslim [Arabic,=one who submits]. It was the latest to appear of the three great monotheistic religions (the others being Judaism and Christianity) Islam is the principal religion of much of Asia (including part of the Philippines): Kansu and Shensi provs of China, Pakistan, Afghanistan, Iran, Iraq, Syria, Jordan and the Arabian states, and Turkey, as well as much of the USSR in Asia In Africa, Islam has been the only highly successful missionary faith It is the religion prevailing in Egypt and the rest of the northern part except Ethiopia, it is also well established in central Afr a and along the east coast In Europe, outside Russia, where Islam was the religion of the Crimea and of much of the lower Volga, the Moslems managed to establish themselves as a majority in Turkey and Albania (15th cent) and in the old state of Bosnia (15th cent) The Americas are the only continents in which Islam has practically no adherents Islam's most serious loss was suffered in SPAIN The salient feature of Islam is its devotion to a book, the KORAN, believed to be the revelation of God to Mohammed, this has made Arabic the language of Islam all over the world, hence the common custom of referring to God in Islam as Allah, his name in Arabic According to Moslem teaching, God has given men successive revelations through his prophets Man constantly falls away from these prophets and the merciful God sends new ones, Mohammed is the last, and when the world falls away from Islam the end of the world will come The two principal early prophets are Abraham and Jesus According to Moslem teaching, Abraham was the Father of the Faithful, the first Moslem, Jesus was born of the Virgin Mary, did great miracles, and was not crucified, but was instead taken away by God, who left a shadow in his place (a common view among Gnostics and others), and Jesus will return at the end of the world to fight Antichrist as the MAHDI Wherever the Koran differs from the Old and New Testament, it is explained that the Jews and the Christians have corrupted or perverted the biblical text The close relationship acknowledged between Judaism, Christianity, and Islam has had for its chief effect that Jews and Christians have been treated with special toleration in principle in Moslem countries It is commonly thought that Mohammed's ideas about Judaism and Christianity were derived not from reading but from converse with contemporary Arabian Jews and Christians, who held their religions in a considerably corrupted form The Mohammedan eschatology has affected Moslems much more than the orthodox account of history In the course of time a rather elaborate account has grown up of what will happen at the last things, but the final rewards have remained constant—there will be a judgment, and heaven awaits the faithful and hell the infidels (see HEAVEN and HELL) The ethos of Islam is its attitude toward God, to his will Moslems submit, him they constantly praise and glorify, and in him alone they hope He is awful, transcendent, almighty, just, loving, merciful, and good No creature may be compared to him, and to him alone do Moslems pray Moslems ask intercession of the prophets and the saints, but they (the Shiites perhaps excepted) preserve jealously the distinction between Creator and creature They seldom ask God for favors, limiting their prayer to thanksgiving and adoration The pious Moslem does not distinguish faith from works both are indispensable and mutually supplementary There are five duties in Islam, the marks and the *sine qua non* of devotion (1) Once in his life the believer must say with full understanding and absolute acceptance, "There is no god but God and Mohammed is his prophet" (2) Five times daily he must pray—at dawn, at noon, in midafternoon, at dusk, and after it has become dark, the prayers are set and are accompanied by traditional postures and preceded by ablutions, when he prays the Moslem covers his head, removes his shoes, and places a carpet under him, he prostrates himself ceremonially On Fridays the noonday prayer takes place in the MOSQUE, which exists for the meeting, set prayers are said, the Koran is read, and there is a sermon The constantly recited prayer of Islam, used on all occasions, is Sura 1 of the Koran, it is singularly typical of the spirit of Islam "In the name of God, the merciful, the compassionate Praise be to God, the Lord of the worlds, the merciful, the compassionate, the ruler of the judgment day! Thee we serve and Thee we ask for aid Guide us in the right path, the path of those to whom Thou art gracious, not of those with whom Thou art wroth, nor of those who err" When the Moslem prays, he faces Mecca, the direction of which is calculated in every Moslem settlement with the greatest exactness possible (3) The Moslem must give alms generously; these are prescribed alms (e g, so much of cattle, and so much of grain) He is also obliged to give some alms beyond the minimum. In places where Islam is the state religion the prescribed alms are often collected by the state. (4) The Moslem must keep the fast of RAMADAN; the physically weak, the sick, soldiers, and some others are exempted. (5) Once in his life the Moslem, if he can, must make the pilgrimage (Hajj) to Mecca This, probably the greatest pilgrimage in the world, is made at a certain time of year, in the month (see CALENDAR) set apart for it The importance of the pilgrimage can hardly be overestimated, it unites Islam as nothing else has ever done, at Mecca the Javanese meets the Negro from Senegal and the mountaineer of Albania, all brought together by the same holy purpose There is a remarkable community of feeling in Islam, even today, when Moslems are divided politically into many groups This unity is a result of the Moslem apologetic system Islam is, of course, founded in the Koran, the divine word, but so little of this is dogmatic or legalistic that early in the history of Islam Moslems found the Koran inadequate as an authority for the good life This was especially true when Islam was making its first rapid spread and as new peoples submitted to it Hence arose the Sunna, fundamental in Islam The Sunna is the way or example of the Prophet, which supplements the Koran The Sunna is made up of collections of Traditions (moral sayings and anecdotes) of Mohammed, sifted and collected with unflagging effort by men from the earliest times of Islam These collections are by BUKHARI (d 870), Muslim (d 875), Abu Dawud (d 888), An-Nasai (d 915), At-Tirmidi (d 892), and Ibn Maja (d 886) The first two of these collections are undoubtedly more reliable than the others if the truth is desired about Mohammed The last four admittedly made use of a pious fraud based on the theory that all religious truth was implicit in Mohammed's sayings, so that a salutary maxim might be regarded as having been said by the Prophet The Sunna is almost as important to Islam as the Koran, for in it lie all the elaborations of Koranic teaching essential to the firm establishment of a world religion There are serious disagreements in the Traditions, and interpretations of the Koran and the Sunna have varied so much as to be contradictions This situation is resolved by reference to what has become perhaps the most important of all the sayings attributed to Mohammed, "My community will never agree in an error" The principle this expresses is called Ijma, the agreement of Islam, and according to it every Moslem knows that a belief entertained by the greater part of Moslems in history is infallibly true, and a practice (e g, the cult of saints) allowed by most Moslems over a long period must be legitimate and good The Koran, the Sunna, and the Ijma are thus the three foundations of Islam It is Ijma which has given Islam its catholicity of view, its constant unity with its past, and its continuous flexibility But while Ijma has given Moslems a voice of authority, they have been saved from internal intolerance and the evils of extreme sectarianism by constantly bearing in mind the Tradition, "The difference of opinion in my community is a divine mercy" Moslem sectarianism in general may be said to be virtually negligible, except for a fundamental division of Islam into SUNNITES and SHIITES The division arose over the CALIPHATE in the first centuries It is a convention to treat Sunnite Islam as the norm, because of the vast superiority of numbers of the Sunnites and the fact recognized by all non-Shiites (whether Moslem or no) that the Shiites have departed to an amazing degree from anything that can be considered the original Islam All Moslems except Shiites regard as monstrous and blasphemous the fundamental Shiite principles that Ali was a vicegerent of God and that his successors are infallible and sinless. The Ijma and the toleration of Sunnite Islam have preserved the Sunnites from serious defections and variations, the WAHABIS are the only important modern separatist Sunnite sect The Shiites have fathered countless sects, some of which are partially responsible for the bad name Islam has had in Europe, such are the Assassins (see ASSASSIN), the DRUSES, the FATIMITES, the Ismailites, and the KARMATHIANS Shiism has always lent itself in an extraordinary degree to bigotry and persecution of non-Shiites That the Moslem world should have divided irreparably over the political question of the caliphate illustrates a characteristic of Islam, that every Moslem thinks of himself as living in a theocracy Just as the Prophet ruled Medina, the true ruler of the Moslem state is the caliph, and in theory, at least, all Islam should be united under one political and religious ruler, the caliph Moslem princes have usually ruled their states according to the theocratic ideal, a corresponding phenomenon in Europe is a close incorporation of Church and state In the Moslem state only Moslems are really citizens, they alone are allowed and obliged to serve in the army, their taxes go to the support of the religious officers, the IMAM and the muezzin (announcer of prayer), as well as of the state, and their courts have religious as well as civil jurisdiction Non-Moslems are in theory aliens who live under sufferance in Moslem states; they have their own organization and often their own courts, they are not allowed to serve in the army, and they must pay a special tax, besides the taxes to support the bureaus of their community. In many Moslem countries this system has been broken down completely. This is notably true of

Turkey, where Ataturk made a clean sweep of most of Moslem culture, going even so far as to order the use of Turkish instead of Arabic in the mosque. Among his changes was the adoption of revised foreign codes of law (the Swiss civil code and the Italian criminal code) to replace Moslem law. Although most Moslem countries have been long since forced to separate in practice the religious law from the civil law, the civil law is strongly Moslem in flavor, and Moslem jurists all follow the same general method The religious law of Islam in theory governs the whole life of any individual, but in reality his relations with his neighbor are a matter of state regulation Any demarcation between civil and religious law is, however, very difficult to make The law plays a great part in Moslem life, and in this respect Islam has developed more similarities to Judaism than to Christianity The minutiae of legal prescriptions in the Koran and the Sunna, extending not only to ceremonial and things forbidden, but also to such matters as divorce, have often needed interpretation when they were to be applied to cases There are in Sunnite Islam four different systems of interpretations of the law, which may be called the Four Rites of Moslem Law, each of them is equally orthodox and is so regarded by all Moslems They all agree entirely on the bases of Islam They disagree on interpretation, e g , as to whether the prohibition of wine extends to hard drinks, or as to whether horseflesh is as unclean as pork, or as to what postures should be used at prayer, or as to whether a man may take four wives only. The teaching of any rite is, of course, considered to be in accord with Ijma The nearest analogy to the rites is probably the liturgical rites of Christianity. The Four Rites of Moslem Law are the Hanafite, founded by ABU HANIFA, the most speculative and individual of the rites, held in most of Moslem Asia; the Malikite, founded by Malik ibn Aras (d. 795), followed in the western and northern parts of Africa, the Shafiite of Ash-Shafii (d 820), the rite of much of Egypt, of East Africa, of S Arabia, and of the East Indies, and the Hanbalite, founded by Ahmed ibn Hambal (d 855), the most literalistic and narrowest of all, now not held in any great area. In Moslem view the study of the law is all important, but with it are grouped dogmatic theology and mysticism as sacred studies. Philosophy in Islam as distinct from theology knows no place In fact, Moslem thought is a distinct unity which shows historically three major tendencies—toward dry legalism, toward rationalism, and toward mysticism These have been tempered by one another and held in check by the three great *faits accomplis* of Islam, Koran, Sunna, and Ijma Typical of the disputes in Moslem theology are those over freedom of the will and over the creation of the Koran The most famous schools of religious thought were the Mutazilites, who flourished in the 10th and 11th cent under the ABBASID caliphate, they have the distinction of beginning the first oppression on theological grounds in Islam, under Caliph MAMUN The Mutazilites were in general rationalistic, and they took the stand that predestination was dangerous to religion, from this their interests spread all through dogma, and they became famous as believers in the "created Koran" This dispute over the creation of the Koran has much in common with Neoplatonic disputes over the Logos and with Christian disputes over ARIANISM By far the most important figure in Moslem thought is Al-Ghasali (AL-GAZEL), who has been called the Thomas Aquinas of Islam He owed his fame to his acceptance of mysticism as the key to religion after he had so long held rationalistic principles that his rationalistic method checked any extreme tendencies of mysticism, while his mysticism prevented any resort to legalism. His great *Restoration of the Sciences of Religion* is a compendium of Moslem thought, the authoritative guide to what is Ijma, and the theological work par excellence of Islam. The Moslem philosophers, AL-FARABI, AL-KINDI, AVEMPACE, AVERROËS, and AVICENNA, have had less influence on Islam than on the philosophy of Europe. (For the great mystical tendency of Islam, see SUFISM) The great period of Moslem thought and culture was the 9th to the 11th cent , typical of the enlightenment and culture were the great universities—Damascus, Baghdad, Bukhara, Seville, Cordoba, and later Cairo (now the intellectual capital of Islam). The spread of Islam within the first century after the HEGIRA (622), the official beginning of Islam, was absolutely amazing It is not fair to assign as the greatest cause for this the idea that he who died fighting for the faith went to paradise, since it is a principle of Islam that conversion by the sword is no conversion. The simple appeal of Islam, a universal religion, seems to have been tremendous, its definite promises and its comparatively easy rules undoubtedly aided. The modern spread of Islam, notably in the East Indies and Africa, has not been aided by political advantage at all. Since late in the 19th cent. a movement of Pan-Islamism has arisen to unite the now politically disunited Islam into a spiritual unity. This has had little political success but is potent as an ideal. See D. B. Macdonald, *Development of Muslim Theology, Jurisprudence, and Constitutional Theory* (1903), Philip K Hitti, *History of the Arabs* (3d ed , 1946); G E von Grunebaum, *Medieval Islam* (1946), H. A R. Gibb, *Modern Trends in Islam* (1947) and *Mohammedanism* (1949); Carl Brockelmann, *A History of the Islamic Peoples* (Eng tr , 1947).

island, relatively small body of land surrounded entirely by water As the oceans form a continuous mass of water on the earth's surface, all continents are islands in the strict sense of the word. Continents and islands differ chiefly in size. The largest islands of the earth are, in descending order of their size, Greenland, New Guinea, Borneo, Madagascar, Baffin Island, Sumatra, Honshu (largest of the islands of Japan), and Great Britain. Depending on their origin, islands are either continental or oceanic Continental islands were created by the submergence of coastal highlands of which only the summits remained above water or by the sea's breaking through an isthmus or peninsula Oceanic islands result either from the ascending of the ocean floor above water through volcanic action or other earth movements or from coral growth (atoll) Atolls are always low and are limited to warmer regions Typical continental islands are Great Britain, the Japanese archipelago, and Sicily. In all three cases submarine banks indicate the former coherence with the mainland Oceanic islands are characterised by a poor fauna, consisting mostly of a few kinds of sea birds and insects Vegetation is more abundant, as seeds are carried from remote lands by air, water currents, and birds The creation of islands through volcanic action has occurred even in historic times The latest emergence of an island occurred in Feb , 1946, c 200 miles S of Tokyo In a few rare cases it has happened that an island near the coast was reunited with the mainland The Shantung peninsula was once an island, but was reunited with China by the growth of the Hoangho delta

Island Falls, farming, lumber, and resort town (pop 1,370), E Maine, on Mattawamkeag Lake SW of Houlton, settled 1843, inc 1872

Island No. 10, formerly in Tennessee island (no longer extant) in the Mississippi river near New Madrid, Mo A Civil War campaign (March 3–April 7, 1862) was directed against it With Grant's advance up the Tennessee river, the Confederate positions were outflanked, and all were abandoned, except New Madrid and Island No 10 On March 14, 1862, New Madrid was also abandoned to Gen John Pope, who then proceeded to construct a channel so that his transports could get on the river below Island No 10 without passing its guns Commodore Foote's gunboats had been unsuccessful against the strong fortifications, but on the night of April 4 Henry Walke sailed the *Carondelet* past the island and reduced the shore batteries below it Pope's troops then landed and seized the road on the east bank of the river which was the only avenue of escape for the 7,000 isolated Confederates They surrendered on April 7

Island Park, village (pop 1,531), on the south shore of Long Island, SE N Y , near New York city, inc 1926

Islay (ī'lā, ī'lu), island (pop 4,970), off W Scotland, in Argyllshire, one of the Inner Hebrides It is 25 mi long and 19 mi wide The towns are Bowmore, Port Ellen, Portaskaig, and Bridgend On the southern point, called the Mull of Oa, is a tower to the memory of American soldiers and sailors drowned when the transport *Tuscania* was torpedoed in 1918 Industries include farming, stock raising, dairying, distilling, fishing, and the quarrying of slate and marble The island is a former seat of the lords of the Isles (Macdonalds and Campbells)

Isle La Motte (īl' lu mŏt'), island, 6 mi. long and 2 mi wide, NW Vt , in Lake Champlain SW of Alburg It comprises Isle La Motte town (pop 335), chartered in 1779 The French chose the island, then heavily forested, as the site for Fort St Anne, built by La Motte in 1665 (the first white settlement in Vermont) It was kept garrisoned for some time, but was abandoned long before permanent settlement began c 1788 The town produces fruit and has marble quarries, notably a black variety The first boys' camp in Vermont was built on the island in 1892

Isle of. For names beginning thus, see second element, e g., for Isle of Ely, see ELY, ISLE OF.

Isle Royale National Park: see NATIONAL PARKS AND MONUMENTS (table).

Isles of Shoals, off SW Maine and SE New Hampshire, SE of Portsmouth, N H Of the seven islands, Appledore, Cedar, Duck, and Smuttynose (or Haley's) are in Maine, Lunging, White, and Star, in New Hampshire. Appledore and Star have resort hotels, White has a lighthouse Celia Thaxter lived on the Isles and wrote about them.

Isles of the Blest: see FORTUNATE ISLES.

Isleta (īslē'tù), Indian pueblo (pop. c.1,460), W central N. Mex., on the west bank of the Rio Grande and c 12 mi. S of Albuquerque. According to many experts, the pueblo stands on the site it occupied when discovered in 1540. It was the seat of the Franciscan mission of San Antonio de Isleta from c.1621 until the Pueblo rebellion of 1680. The Spanish captured the pueblo in 1681, and most of the captives were ultimately settled at the present Isleta, Texas In the early 18th cent., when northern Isleta was either rebuilt or repeopled, it became the mission of San Agustín de Isleta (today the principal feast of these Indians is the feast of St Augustine, Aug. 28) The Indians are mainly farmers and are the most prosperous, perhaps, of all the PUEBLO INDIANS The language of Isleta is Tanoan.

Isleton (ī'tŭn), city (pop. 1,837), central Calif , on the Sacramento river and SW of Sacramento, founded 1874, inc. 1923. It is the canning and packing center of an asparagus region, with fruit and truck farms

Islington (ĭs'–), metropolitan borough (1931 pop 321,795, 1948 estimated pop 238,200) of N London, England It is an industrial district and is the site of the Royal Agricultural Hall (1861), of several hospitals and educational institutions, and of Pentonville Prison and Holloway Gaol for women Charles and Mary Lamb once lived in Islington

Islip (ī'slĭp), town (pop 51,182), on S Long Island, SE N Y , on Great South Bay, settled c 1665 It includes several villages, mainly resorts and residential suburbs of New York city A state mental hospital and a state park are near by.

Ismachiah (–kī'ù) [Heb ,=God supports], overseer under Hezekiah 2 Chron 31.13.

Ismaiah (ĭs"mā'ù) [Heb ,=God hears], one of David's mighty men. 1 Chron 12 4.

Ismail (ĭsmāēl'), 1499–1524, shah of Persia (1502–24), founder of the Safavid dynasty He restored Persia to a position as a sovereign state for the first time since the Arab invasion of Persia Ismail established the Shiite form of Islam as official in Persia He warred on the Uzbeks successfully in 1510, and Selim I attacked him in 1514, thus initiating a long series of border wars between the Ottoman Turks and the Persians

Ismail, Ukraine see IZMAIL

Ismailia (ĭs"mālē'ä, ĭs"mā'lēù), city (pop 34,897), Egypt, near the Suez Canal It was laid out in 1863 by Lesseps, who made it his base of operations during the digging of the canal

Ismail Pasha (ĭsmāēl' pä'shä), 1830–95, ruler of Egypt (1863–79), son of Ibrahim Pasha He succeeded his uncle Said Pasha as ruler Ismail used the Egyptian cotton crop, enormously enhanced in value by the American Civil War, to obtain credits for grandiose schemes, including irrigation projects, the building of schools and palaces, and the construction of the Suez Canal Much of the money was wasted, and the country was seriously involved in debt In 1875 Ismail was forced to sell to Great Britain his stockholdings (some 44 percent) in the Suez Canal, and in 1876 he submitted to dual French and British management of the Egyptian government His attempt to throw off foreign control in 1878 was answered by the Ottoman sultan's deposing him in favor of his son Tewfik Pasha In 1866 Ismail had received the title khedive (viceroy), which his successors also enjoyed

Ismene (ĭsmē'nē), daughter of OEDIPUS and sister of ANTIGONE

Ismid, Turkey see IZMIT

Isna, Egypt see ESNA

isobars (ī'subärz") or **isobaric lines** (ī"subă'rĭk), lines drawn on a weather map through points of equal barometric pressure, to define cyclones and anticyclones and to enable their movements to be followed Before drawing the isobars, the BAROMETER readings at all stations are reduced to their corresponding sea-level pressures (since barometric pressure varies with altitude)

Isocrates (ĭsŏ'krutēz), 436–338 B C , Athenian orator He was a pupil of Socrates and of the Sophists, especially Gorgias He was perhaps the greatest teacher in Greek history, and every younger orator of his time studied under him He did not deliver his speeches, but either wrote for litigants (seven such speeches survive) or wrote discourses to be read (14 of which remain) dealing mainly with politics and education *Panegyricus* (in which he urges Hellenic unity against Persia) is his most celebrated oration. Isocrates' style is more refined than Lysias' and less powerful than Demosthenes', it generally suffers from overelegance. Passionate in his desire for a Greece united against Asia, Isocrates committed suicide (according to tradition) after his hopes seemed ended by the victory of Philip II of Macedon at Chaeronea.

Isolde, name of two characters in Arthurian legend see TRISTRAM AND ISOLDE

isomerism (ĭsŏ'mŭrĭzm), in chemistry, a condition occurring when two or more compounds have the same molecular formula but differ in the arrangement of the atoms in their molecules Since such compounds are, therefore, identical in the number and kinds of atoms which make up their molecules, they have the same composition by weight. They differ, however, in various properties. For example, the two hydrocarbons butane and isobutane each consist of molecules which have 4 atoms of carbon and 10 of hydrogen, but they differ in the arrangement of these atoms. Such compounds are called, therefore, isomers (ī'sŭmŭrs) since they have the

same formula and composition by weight but differ in their properties. In structural isomerism the isomers have the same molecular formula but different structural formulas and different properties Ethyl alcohol and methyl ether are examples of structural isomers Stereoisomerism, of which there are two types, depends on the arrangement of the atoms in space One type, geometric isomerism, is based on the difference in the geometrical configurations of the atoms in space Geometric isomers have the same constitutional formulas The other type, optical isomerism, is based on a difference in the effect of the compounds on polarized light. Optical isomers have the same structural formulas and the same general properties

isomorphism (ī"sŏmôr'fĭzm), similarity of crystal form and chemical composition between two substances. Under certain circumstances isomorphs form homogeneous mixed crystals Two substances chemically identical which crystallize in different systems are said to exhibit dimorphism—e g , calcite and aragonite Relationships similar to dimorphism in which three types of crystals are involved are called trimorphism, when more than three, polymorphism Eilhard Mitscherlich developed (c 1820) the principle of isomorphism

Isonzo (ēsōn'tsō), river, 86 mi long, Yugoslavia and Italy It flows from the Julian Alps to the Gulf of Trieste, winding south first in Yugoslavia then in Italy below Gorizia. In 1915–17 many bloody battles were fought on its banks between Austrians and Italians

isotope (ī'sətōp), in chemistry, one of two or more elements which are identical in chemical activity but differ in ATOMIC WEIGHT For example, there are two kinds of chlorine, one kind made up of atoms of atomic weight 35, the other of atoms of atomic weight 37, but both kinds exhibit the same chemical properties The common element chlorine is a mixture of the two isotopes The difference in weight of the atoms is believed to result from a greater or less number of neutrons in the nucleus of the atom, while the identical chemical activity results from their having the same number and the same arrangement of the electrons outside the nucleus Some other elements made up of mixtures of isotopes are boron, bromine, lead, lithium, mercury, neon, and tin Radioactive isotopes of many common elements, such as carbon and phosphorus, are used as tracers in medical, biological, and industrial research Their radioactive nature makes it possible to follow the substances in their paths through a plant or animal body and through many chemical and mechanical processes, and thus a more exact knowledge of the processes can be obtained

Ispah (ĭ'spə), chief Benjamite 1 Chron 8 16.

Ispahan, Iran see ISFAHAN

Isparta (ĭspar'tä), city (pop 17,292), W central Turkey, W of Konya It is a rail terminus and manufactures cotton, carpets, and attar of roses.

Israel (ĭz'rēəl, ĭz'rāəl) [as understood by Hebrews, =prevailing with God], in the Bible, name given JACOB as eponymous ancestor of the Hebrews, the chosen people of God The 12 tribes of Israel were named for 10 sons of Jacob (Reuben, Simeon, Judah, Zebulun, Issachar, Dan, Gad, Asher, Naphtali, and Benjamin) and the two sons of Jacob's son Joseph (Ephraim and Manasseh), the 13th tribe, Levi (the third of Jacob's sons), was set apart and had no one portion of its own After the break in the Hebrew kingdom under REHOBOAM the northern kingdom was called Israel, the southern Judah See JEWS and JUDAISM

Israel (ĭz'rēəl), republic (c 8,050 sq mi , 1950 estimated pop 1,175,000), W Asia, on the Mediterranean Sea Jerusalem is the capital This article deals with the current economy and with events since the end of the Second World War leading to the establishment of the Jewish state For the earlier history and for geography, see PALESTINE The boundaries of Israel have not been permanently fixed At present Lebanon lies on the north, Syria and Jordan on the east, and Egypt on the southwest. Natural boundaries on the east include the Sea of Galilee, part of the Jordan river, and the southern part of the Dead Sea, the Gulf of Aqaba is at the southern extremity Like most of the Near East, Israel has a warm climate with rainfall confined to several months in the winter Galilee, the northern section, has the best water supply and is able to raise a large variety of grains and vegetables, and the sandy soil along the coast supports rich irrigated groves of citrus fruit It is in the NEGEV, the southern triangle of Israel, that agriculture is most difficult Although irrigation, drawing on the waters of the JORDAN, is feasible in the N Negev, the south must depend upon dry-farming techniques Large-scale irrigation works to bring more land under cultivation are being hastened Citrus-fruit production is the chief field of private enterprise in agriculture, and most other foods are grown by agricultural cooperatives of various types. The *kibbutz* (or *kvutza*) is a socialistic agricultural community with many communal features, such as a common dining hall and a nursery and school where children are cared for while their mothers are at work. In the *moshav* all the land is owned communally and there is cooperation in marketing and the purchase and use of agricultural machinery, but each farmer cares for his own plot. As in the *kibbutz*, there is no hired labor. The *meshek shituf* combines ownership of individual plots with cooperative marketing and purchasing and some communal farming A large part of the land in the settlements was purchased by the Jewish National Fund from charitable contributions received from abroad (chiefly from American Jews) and donated or sold at low cost to the cooperatives Agriculture is the economic mainstay and occupies most of the population, but in line with Israel's announced intent to become a supplier of manufactures to the adjacent areas, industrialization is being advanced Heavy industry, including smelting and automobile manufacturing, is concentrated in Haifa and the surrounding area, while Tel-Aviv and Jaffa make a great variety of light manufactures, especially processed foods, textiles, and ready-made clothing Israel encourages foreign investment in industry by low rates of taxation and by permitting the withdrawal abroad of most of the profits Despite a great productive effort, however, the tremendous influx of immigrants into Israel since 1948 prevents the country from enjoying self-sufficiency in food and manufactures, and imports in 1950 are about three times greater in value than exports Raw materials for manufacturing comprise much of the imports, because, except for potash and other chemicals obtained from the Sea of Galilee and the Dead Sea, there is little mineral wealth Israel's domestic trade is carried by c.200 mi of railroads and c 1,400 mi of motor roads, the road and rail systems are rapidly being enlarged Haifa and Jaffa are the chief ports. The nearly all-Jewish state of Israel is the culmination of some 60 years of activity in ZIONISM During the Second World War cooperation with Great Britain (which governed Palestine under a mandate of the League of Nations) in defeating the Axis had occupied the Jewish community (1945 pop c 500,000), and there was little political activity With the end of hostilities the aspiration for statehood resurged Many felt that the Palestinian Jews were entitled to statehood and that it was imperative to provide a homeland for the surviving remnant of European Jewry and for the Jews in Arab countries The Palestinian Arabs (1945 pop c 1,000,000) and the Arab states announced opposition to a Jewish state and to further immigration They demanded independence for all Palestine, with the Jews a protected minority The Zionists, who had anticipated support from the British prime minister, Clement Attlee, were disappointed when immigration was almost entirely stopped The British government, however, convened an Anglo-American commission, which recommended (April 30, 1946) allowing 100,000 displaced European Jews to enter Palestine but offered no permanent solution Shortly afterward, the British decided to admit 2,000 Jews a month Angered, secret Jewish organizations attacked British military installations The most violent groups were the Irgun Zvai Leumi and the tiny Stern group The Jewish Agency, which officially represented the Palestine Jews, deplored the terrorism, and Haganah, the large and well-trained secret defense army of the Jews, abstained from violence The British strengthened their forces, which finally reached nearly 100,000 men In late July they proposed a conference of Palestinian Arabs and Jews, but neither group attended, and the two communities remained in disagreement Meanwhile Zionist groups smuggled Jews into Palestine The British intercepted many ships, charged the immigrants against the quota, and shipped the excess to camps on Cyprus In April, 1947, a session of the General Assembly of the United Nations was called, it established the United Nations Special Committee on Palestine (UNSCOP). Palestinian Arabs boycotted the UNSCOP, but the Jews cooperated and by and large agreed to accept a part of Palestine only In August the UNSCOP reported a plan to divide Palestine into a Jewish state, an Arab state, and a small internationally administered zone including Jerusalem The Jewish state would comprise E Galilee, the central coast, and the Negev The Arab state thus would comprise central and W Galilee, the southern coast, and nearly all the central inland territory The necessary two-thirds majority of the General Assembly, led by the United States and the USSR, adopted the UNSCOP recommendations on Nov 29 Great Britain abstained, and the Arab states left the meeting, asserting their intention to resist As the British early in 1948 began to withdraw, Arabs and Jews prepared for war Jews, largely under Haganah, battled Arabs in Jerusalem and along the Jerusalem–Tel-Aviv road The British checked the fighting in a few places only Jewish officials consolidated their control, and on May 14, when the British high commissioner for Palestine departed, the state of Israel was proclaimed at Tel-Aviv On the same day it received *de facto* recognition from the United States (on May 17 the USSR extended *de jure* recognition). As members of the Arab League, Lebanon, Syria, Jordan, Egypt, and Iraq attacked The Jews were prepared, however, and the flight of most Arabs from Jewish territory facilitated defense. Fighting centered on the road from Tel-Aviv to Jerusalem. On May 28 the Jews surrendered the Old City of Jerusalem to the Arab Legion of Jordan but held on in the New City After delays, on June 11 there went into effect a four-week truce supervised by Count Folke Bernadotte, the UN mediator in Palestine Israeli territory was intact, and the Jews had gained footholds elsewhere Fighting resumed on July 9, with the Jews gaining territory on all fronts except in Jerusalem On July 18 a second cease-fire was concluded on order of the UN Security Council On Sept 17 Bernadotte was assassinated by unknown Jewish terrorists. Israeli authorities responded by ordering the dissolution of secret groups Ralph Bunche, the assistant to Bernadotte, was appointed mediator in his place Fighting continued during the truce, chiefly at Jerusalem, but also in W Galilee and the Negev. Not until late Jan , 1949, were armistice agreements reached Israel had lost none of its own territory and had increased its holdings by about one half It held one continuous stretch of land, including all Galilee and a bridge reaching to the New City of Jerusalem There seemed little likelihood of a new Arab state, for Jordan annexed the area adjoining its territory and Egypt was occupying the southwest coastal strip Israel quickly developed its governmental structure A state council with Chaim Weizmann as president and David Ben Gurion as prime minister first functioned at Tel-Aviv and later moved to Rehoboth In Jan , 1949, there were elections for the Knesset (parliament) The Mapai (moderate socialist) and the religious parties formed a government Ben Gurion (Mapai) was prime minister, and Chaim Weizmann was elected national president In the opposition the major elements were the left-wing socialist Mapam and the conservative Heruth (the former Irgun Zvai Leumi), who insisted that Israel should take Jordan Minor opposition groups included Communists and an Arab party. The aims of the government were to gather in all Jews who wished to immigrate and to be neutral in the disputes between the United States and the USSR The strength of Israeli labor (organized in the Histadrut) was insured, and religious courts were established to handle matters of personal status. Other legislation set up compulsory elementary education, with public, socialist, religious, and ultra-orthodox Hebrew schools for Jews and Arabic schools for Moslems The elected government brought recognition by Great Britain and *de jure* recognition by the United States Israel soon applied to join the United Nations, but there was opposition based on its refusal to permit Arab refugees (estimated at 700,000) to return and its refusal to withdraw from Jerusalem Israel replied that the Arab states were responsible for the refugees' plight and that the United Nations had abandoned Jerusalem by not checking the Arab attack Admission was granted on May 11, 1949 The claim to JERUSALEM was made stronger by the removal (Dec 14, 1949) of the capital to that city See Jorge Garcia-Granados, *The Birth of Israel* (1948), Joseph Dunner, *The Republic of Israel* (1950)

Israëls, Jozef (yō'zuf ĕs'raĕls), 1824–1911, outstanding Dutch genre painter of the 19th cent His early studies in Amsterdam and Paris did not reveal his talent, but c 1855 in Amsterdam he began to paint the somber and touching scenes from the life of the Dutch fisherfolk and peasantry for which he soon became famous After 1870 he lived at The Hague His characteristic works are broadly painted with vigorous realism and a dramatic use of strong silvery-gray light which well accords with the usually pathetic or tragic character of his themes Israels was equally proficient in oil and water color and was an accomplished etcher Among his best-known works are *The Zandvoort Fisherman*, *Alone in the World*, *Toilers of the Sea*, and *David Singing before Saul* (all Amsterdam) and *Expectation* (Metropolitan Mus). He is well represented in many European and American collections See studies by Philippe Zilcken (1910) and Max Eisler (1924)

Issachar (ĭ'səkur), son of Jacob and Leah and the ancestor of one of the 12 tribes The territory allotted to it extended along the west bank of the Jordan Issachar played no isolated role among the tribes Gen 30 18, 49 14, 46 13, Num 1 29; 2 5, Deut 27 12, 33 18, Joshua 19 17, 1 Chron 7 1–5

Isserles, Moses ben Israel (ĭ'sərlĕs), c 1520–1572, Polish rabbi, annotator, and philosopher, known as Remah He is best known for his halakic works, particularly for his criticism of, and Ashkenazic additions to, the code of Joseph ben Ephraim Caro.

Isshiah (ĭshī'ə) [Heb ,=God lends]. 1 See JESAIAH 3 2 Levite of David's time. 1 Chron. 24.25 Jesiah 1 Chron 23 20

Issus (ĭ'səs), ancient town of SE Asia Minor, near the head of a gulf of the same name (modern Iskanderun or Alexandretta), on a narrow strip of land backed by high mountains. Near by is the pass known as the Cilician Gates. Issus was the scene of three historic battles. In 333 B.C., Alex-

ander here defeated the forces of Darius III of Persia. Here in A D 194 Septimus Severus conquered Pescennius Niger, a claimant to the throne of the Roman empire In 622 Emperor Heraclius won at Issus the first of a series of battles in which the Romans regained territory formerly lost to the Persians

Issyk Kul (ēsĭk' kōōl'), lake, (area 2,395 sq mi, E Kirghiz SSR, in the Ala-Tau At an altitude of 5,193 ft, it is the second largest mountain lake in the world, exceeded only by Lake Titicaca It reaches a depth of 2,303 ft, is slightly saline, and is ice free in winter There are health and tourist resorts.

Istakhr (ĭstä'kər), old town, S Iran Built largely from the ruins of ancient Persepolis, it was a capital of the Sassanidae and stubbornly resisted the Arabs (640–49) but soon afterward lost all its importance to Shiraz The name also appears as Stakhr

Istanbul (ĭ"stänbōōl', ĭ"stän–, Turkish Istăm'bōōl), city (pop 860,558), Turkey, on both sides of the Bosporus at its entrance into the Sea of Marmara Its name was officially changed from Constantinople to Istanbul in 1930 (For its history, see CONSTANTINOPLE) Istanbul is the chief city and seaport of Turkey and its commercial and financial center, although the Turkish government was removed to Ankara in 1922 It has a university (founded 1453 as a theological school, completely reorganized 1933), and it is the see of the patriarch of the Greek Orthodox Church, of a Latin-rite patriarch of the Roman Catholic Church, and of a patriarch of the Armenian Church The European part of Istanbul is the terminus of the Orient Express, and at Haydarpasa station, on the Asiatic side, begins the Baghdad Railway The part of Istanbul corresponding to historic Constantinople is situated entirely on the European side It rises on both sides of the Golden Horn, an inlet of the Bosporus, on one of the finest sites of the world, and, like Rome, is built on seven hills Several miles of its ancient moated and turreted walls are still standing Outside the walls and N of the Golden Horn are the commercial quarter of Galata, originally a Genoese settlement, the quarter of Pera, which under the sultans was reserved for foreigners, and Chaskoi or Haskoy, the Jewish quarter The Golden Horn is crossed by a famous bridge, leading into the historic quarter of Stambul, the ancient core of the city, abutting on the Bosporus and the Sea of Marmara The quarter of Phanar, formerly reserved for the Greeks, is in the northwestern part of the city, near the former site of the palace of Blachernae of the Byzantine emperors The 11 administrative districts of Istanbul do not correspond to these four historic quarters, the largest among them are Beyoglu, Fatih, and Eminonu on the European side, and Kadikoy (ancient Chalcedon) and Scutari or Uskudar on the Asiatic side The chief monument surviving from Byzantine times is the HAGIA SOPHIA, originally a church, after 1453 a mosque, now a museum, and one of the world's noblest works of architecture Recent excavations on the site of the former Byzantine palaces have brought to light many fine works of art, but Istanbul as a whole has few monuments of the Byzantine past besides the walls, Hagia Sophia, and some isolated ruins The city was destroyed (1509) by an earthquake and was rebuilt by Sultan Bajazet II Turkish culture reached its height in the 16th cent and from that period date most of its magnificent mosques, notably those of Bajazet II, Suleiman I, and Ahmed I They all reflect the influence of Hagia Sophia and give the skyline of Istanbul its character—a succession of perfectly proportioned domes broken by minarets In the gardens by the Bosporus stand the buildings of the Seraglio, the former palace of the sultans, now a museum In the 19th cent the sultans shifted their residence to the Dolma Bagtche Palace and the Yildiz Kiosk, N of Pera on the Bosporus The environs of Istanbul, particularly the villas, gardens, and castles along the Bosporus, are famed for their beauty Always a cosmopolitan city, Istanbul has preserved much of its international and polyglot character, and Greeks, Armenians, and Jews continue to form a large part of the population

Isthmian games (ĭs'mēən), athletic events organized c 581 B C They were held at Corinth in the spring of the first and third years of the OLYMPIAD, and they honored Palaemon as well as Poseidon The contests were generally like the OLYMPIC GAMES, although conducted on a smaller scale; the many added amusements and the convenient journey from Athens made the Isthmian games quite popular. The victor's prize was a wreath of wild celery, but after Corinth was destroyed (146 B C) by the Romans and restored (46 B C.) by Julius Caesar, the Isthmian games were reestablished for a time with a wreath of fir as the victor's prize.

isthmus (ĭs'məs), narrow neck of land connecting two larger land areas. Since it commands the only land route between two large areas and is on two seas, the isthmus has great strategical and commercial importance and is a favorable situation for a city. In modern times many isthmuses have been cut through by canals to eliminate the necessity of land transport The most important isthmuses are the Isthmus of Panama, connecting Central and South America, and the Isthmus of Suez, joining Asia and Africa Canals were dug through both of these The Isthmus of Corinth between the Morea peninsula and central Greece also has a canal An isthmus not cut by a canal is Perekop isthmus, connecting the Crimea with Russia.

Istria (ĭstrēu), Serbo-Croatian *Istra*, mountainous peninsula, area c 2,000 sq. mi, projecting into the N Adriatic and bounded in the north by the KARST plateau POLA is the chief city The population is Yugoslav and Italian Istria was inhabited by Illyrian tribes when it passed (2d cent B C) to Rome It remained under nominal Byzantine rule until the 8th cent A D, after which it passed under various overlords. Venice held the western coast, the dukes of Carinthia, patriarchs of Aquileia, and counts of Gorizia held the rest By the 15th cent Austria and Venice had absorbed, respectively, the northeastern and southwestern parts of the region The Treaty of Campo Formio (1797) and the Congress of Vienna (1815) added the Venetian part to Austria In 1919 all Istria passed to Italy, but the Italian peace treaty of 1947 gave most of it to Yugoslavia, while the northwestern section passed to the Free Territory of Trieste

Isuah (ĭs'ūə), the same as ISHUAH

Isui (ĭs'ūĭ), son of Asher Gen 46 17. Jesui Num 26 44 Ishui 1 Chron 7 30

Itagaki, Taisuke, Count (tĭ'skā, ītä'gäkē), 1837–1919, Japanese statesman After taking part in the Meiji restoration, he became a councilor of state A samurai of Tosa, he opposed domination of the government by the Choshu and Satsuma clans and demanded representative institutions He unsuccessfully advocated war with Korea in 1873 and withdrew from the government The next year he and others launched a campaign for an elective assembly, which led to the establishment of prefectural, city, and village assemblies in 1878–80 In 1881 he founded the Jiyuto (Liberal) party, a forerunner of the Seiyukai He was home minister under Hirobumi Ito and in 1898 was associated with Okuma in an attempt to form a party government

Italian architecture properly includes the several styles employed in Italy after the Roman period ROMANESQUE ARCHITECTURE (12th cent) reveals the first use of the groined vault with projecting ribs, it shows also the development of a type of basilica having side galleries It was developed especially in Lombardy and is exemplified in Sant' Ambrogio at Milan. As affected by locality, there are two phases of Italian Romanesque —Tuscan (including Florentine) and southern The cathedral of Pisa (1063–1118), with its leaning tower, admirably displays the Tuscan characteristics, chief of which is the decorative treatment by tier on tier of columns Tuscan architects of the period also made a specialty of using variegated marbles and followed the antique rather closely, while the Romanesque of the south, as in the cathedral of Monreale, is characterized by its rich mosaics and delicate carvings which show Byzantine, Saracenic, and Norman influences The Gothic was not greatly developed in Italy, being foreign to the tradition of the native round arch, a notable exception to this is the cathedral of Milan, built in part by foreign architects The dome and the round arch came into their own again with Brunelleschi and the early Renaissance in Florence, where the *duomo* (1420–64) and the Pitti Palace (begun c 1445) demonstrated the return to the classic RENAISSANCE ARCHITECTURE. soon spread over all Italy and eventually over all Europe, exerting a permanent influence on architecture Michelozzi and Leone Battista Alberti were among its early exponents In Venice it reached its richest expression, as seen in the court of the ducal palace With the progress of the classic revival Rome succeeded Florence as its great center, and Bramante began St Peter's (1506) and the High Renaissance Thus was carried to formal classicism by Palladio in Venice The monumental work of Michelangelo inspired lesser artists to exaggerated efforts which resulted in the BAROQUE and the close of the last and most fruitful Italian period Bernini among baroque architects gave the style grandeur. The influence of Italian architecture extended through the 18th cent Such modern examples of Italian architecture as the monument of Victor Emmanuel and the Palace of Justice, both in Rome, lack the qualities of simple dignity and restraint

Italian art. Throughout the Middle Ages, Italian art consisted primarily of architectural decorations (for the most part mosaics). Many of these were the work of Greek or Byzantine artists. BYZANTINE ART, perfected in the 9th cent., underwent little further development for 400 years It was a highly formal and refined decoration with a standardized calligraphy and an admirable use of broken color and gold In the 13th cent, profound changes took place in Italian life. The teachings of St. Dominic and, above all, of St. Francis of Assisi revolutionized the religious outlook, and the rise of the free communes brought a new prosperity and independence. These changes are reflected in the work of such artists as Guido of Siena, Cimabue, and Duccio di Buoninsegna, who, while retaining many of the Byzantine conventions, introduced a new naturalism and a more direct appeal to human emotion Simultaneously the same spirit is seen in the sculpture of Nicola Pisano In the fresco paintings of Pietro Cavallini in Rome the break with the past is complete, and modeling in light and shade replaces the silhouette But it is with Giotto, a contemporary of Dante, that the new painting first takes on life and warmth His style, perfected c 1300, determined the future course of art in Italy Retaining the naturalistic approach of Cavallini, he endowed it with emotion His figures abandon the proscribed gestures and cryptic silence They walk and speak and express joy and sorrow A new idealism and belief in human dignity find expression in his simple and compelling frescoes in Florence, Assisi, and Ravenna His immediate followers, Orcagna, Taddeo Gaddi, Giottino, and others, spread his teachings and technique. This technique involved the use of a few colors ground in water and applied over wet plaster in the case of fresco and mixed with egg and applied over smooth gesso panels in the case of the tempera altarpieces With variations these remained the fundamental techniques of Italian painting for over a century Giotto did not invent them but he popularized their use The new art found a center in Florence, then a prosperous and growing community Here flourished a succession of brilliant artists, including the painters Fra Angelico and Masolino da Panicale and the sculptors Lorenzo Ghiberti and Donatello They found in the budding humanism of their day not a set of fixed canons but a pretext and precedent for examining nature The growing knowledge of Greco-Roman remains served as a liberating influence, and the Renaissance was not a rebirth of a dead art but the birth of a new and living one Meanwhile in Siena the followers of Duccio pursued a less strenuous ideal which was to leave small trace on the future development of painting but which produced such great painters as Simone Martini, the Lorenzetti, and many others Those men in abandoning the Byzantine created a new decorative art full of sweetness and humanity At the beginning of the 15th cent, Florence produced a great innovator, Masaccio, whose frescoes in the Brancacci Chapel set a new standard of realism Here for the first time we find the use of a general light and shade with all its dramatic possibilities He was followed in Florence by the so-called realists—Andrea del Castagno, Paolo Uccello, who formulated the laws of linear perspective, Domenico Veneziano, who introduced the use of oil, the Pollaiuolos, and Alessio Baldovinetti Besides these were the brilliant narrative painters Ghirlandaio, Gozzoli, and the Lippi and the sculptors Desiderio da Settignano and the Della Robbia In the same period the fresco painter Piero della Francesca flourished in Umbria His pupils Melozzo da Forlì and Luca Signorelli were vigorous realists At the close of the 15th cent the middle Italian schools merged Thus in Siena Francesco di Giorgio, Il Sodoma, and Pinturicchio introduced the science of Florence Perugino of Umbria and Leonardo da Vinci and Botticelli of Florence were already great Italian figures, as was also the sculptor Verrocchio Even in Venice and Lombardy the general style penetrated In the 15th cent Altichiero da Zevio (founder of the school of Verona), Pisanello, and Gentile da Fabriano (first great representative of the Umbrian school) put new vigor into the art of Venice, and Antonella da Messina introduced the oil technique which was destined to predominate there Crivelli, the Vivarini, and Jacopo Bellini probably owed much to them. In Padua, Florentine influence entered with Squarcione and his great pupil Mantegna, whose vigorous draughtsmanship helped to form his Venetian brothers-in-law, Giovanni and Gentile Bellini These, together with Carpaccio, inaugurated a century of Venetian greatness with a richness of color for which Venice became famous With the 16th cent the High Renaissance reached its culmination. In central Italy three names predominate —Raphael, Michelangelo, and Leonardo da Vinci Raphael and Michelangelo worked in Rome, and their masterpieces in fresco are in the Vatican Raphael also painted great altarpieces and portraits, and Michelangelo as a sculptor produced universally famous marbles Leonardo's masterpiece in fresco, now badly damaged, was his *Last Supper* in Milan His few oil paintings, although blackened, are among the world's treasures Simultaneously, alone in Parma, Correggio painted his great frescoes and glowing, seductive oils. And in Venice the followers of Giovanni Bellini were many. Jacopo Palma, the elder, Pordenone, Sebastiano del Piombo, Il Moretto, the Morones (father and son), and Lotto were all splendid colorists. But the short-lived Giorgione and the very long-lived Titian were the decisive men They introduced a new and brilliant art of melting

contours and glowing, colorful chiaroscuro which has been the inspiration and despair of generations of artists More purely painters than the great Tuscan artists, they and their followers Tintoretto and Veronese excelled in oil and achieved the ultimate in beautiful surface and sumptuous color Less brilliant but admirable followers were Jacopo Bassano and his sons Titian and Tintoretto between them dominate the whole of the 16th cent in Venice In central Italy the great period is early in the 16th cent The greatness of the three giants weighed heavily on their satellites and successors Giulio Romano, Il Bronzino, Pontormo, and Volterra were superb practitioners but suffered from inevitable comparison In the last half of the 16th cent, the cynical but original Michelangelo Caravaggio and the eclectic Carracci maintained a high level of work which deeply influenced the schools of France and Spain Then Italian followers, Salvator Rosa, Guido Reni, Domenichino, and Guercino, were fine practitioners but were lacking somewhat in conviction With them, the grand manner in central Italy died in the early 17th cent In Venice, however, an extraordinary revival took place in the first half of the 18th cent, after a hundred years' rest. The great decorator in oil and fresco, Tiepolo, the landscape painters Francesco Guardi and Canaletto and his pupil Bellotto, and the genre painter Longhi—these brought the Venetian school to a belated close but were unable to restore to Italy her position as the center of living European art Later Italian artists of note include the engraver Piranesi, the sculptor Canova, and the painter Segantini During the late 18th and 19th cent Italy continued to serve as a training school for the artists of the world but tended to rest on her laurels In the 20th cent the short-lived but gifted Modigliani gained international fame. Italy continues to be a mecca of all students and lovers of the fine arts See also ROMAN ART See J A Crowe and G B Cavalcaselle, *A New History of Painting in Italy* (3 vols , 1908-9), F J Mather, *A History of Italian Painting* (1923), J A Symonds, *The Renaissance in Italy* (Modern Library ed , 1935), James Thrall Soby and Alfred H Barr, Jr , *Twentieth-Century Italian Art* (1949)

Italian East Africa, former Italian colony, comprising Eritrea, Italian Somaliland, and Ethiopia Organized in 1936 after the conquest of Ethiopia, it came to an end in the Second World War, when the territories fell to the British

Italian language, one of the Romance or Romanic group of the Italic subfamily of Indo-European languages See LANGUAGE (table)

Italian literature. The earliest works in Italian literature are 12th-century imitations of the songs of Provençal troubadours, developed especially at the court of Frederick II of Sicily where Italian poetry was first nurtured Imitations of troubadour poetry, the comic poems of Rustico di Filippo, and verse of religious inspiration, notably the hymns of Jacopone da Todi, also appear in the Tuscan language, the great early monument of which is the *Little Flowers of St Francis*, legends in verse of the life of the saint In the late 13th cent arose a group of poets who originated the "sweet new style" (*dolce stil nuovo*), among them were Cino da Pistoia, Cavalcanti, Guinicelli, and the greatest of them, Dante, whose *Vita nuova* is the chief monument of the school Dante's *Divine Comedy*, a masterpiece of world literature, established Tuscan as the Italian language, a result which was furthered by the Tuscan works of his great contemporaries, Petrarch and Boccaccio, and of the historian Villani The sonnets (and also the prose) of Petrarch and the tales of Boccaccio gave rise to a host of imitators in succeeding generations With the passing of these three towering figures the first period of Italian literature closes, roughly at the time of the Black Death (1348), to be followed by a century of decline The second period, that of the Renaissance, witnessed the rise of humanism, of which the chief exponent is the scholar and poet Politian (Poliziano), followed by the poets Bembo, tyrannical leader of the academicians, and Sannazaro. The Accademia della Crusca was founded in 1582 by Grassini and others to purify the Italian language, its dictionary, published in 1612, was long standard. Lorenzo de' Medici, patron of arts and himself a poet, gave impetus to the revival of Italian letters The poets of the Renaissance include Lorenzo's jester, Pulci, the Petrarchists Annibale Caro and Vittoria Colonna, Boiardo, whose *Orlando Innamorato* evoked a greater sequel in the *Orlando Furioso* of Ariosto (also noted for his comedies and satires), Guarini, Torquato Tasso, last of the four great Italian poets and author of the classic epic *Jerusalem Delivered*, and Michelangelo, who shines in literature for his sonnets as does Leonardo da Vinci for his treatises on art and science and Cellini for his autobiography. An outstanding lyric poet was the courtesan Gaspara Stampa. Other great achievements of the period are *The Prince* by Machiavelli (who also wrote a famous comedy in verse, *La Mandragola*), *The Courtier* by Baldassare Castiglione, the history by Guicciardini, the lives of the painters by Vasari, the philosophical writings of Giordano Bruno, and, in lighter vein, the tales of Bandello and Straparola and the mock-heroic verse of Folengo In drama are the comedies of Aretino and the development of the COMMEDIA DELL' ARTE This was the period when Italian literature held the ascendancy in Europe From the high peak of the Renaissance in the 16th cent (*cinquecento*), literature falls into the decadence and decline of the 17th cent (*seicento*) Among the few significant works are the scientific writings of Galileo and his followers, Tassoni's *Rape of the Bucket*, anticipating Pope, the works of the historian Davila, Maffeo's tragedy *Merope*, and the operas of Cavalli and Monteverdi Marini developed the highly florid and artificial style of verse called Marinism The Arcadian Academy, founded under the patronage of Christina of Sweden to combat Marinism, developed into an equally artificial school of pastoral verse However, the lyrics of her protégé Filicaja have an honored place in Italian letters Zeno is the father of the modern opera text, and his successor Metastasio, last and greatest of the Arcadians and author of numerous operas and oratorios, initiates the modern period of Italian writing This may be said to open with the 18th cent , first in a serious return to classicism and later with the rise of national consciousness The prose of the century is distinguished by the histories of Muratori and Tiraboschi, the essays of Algarotti, the philosophical works of Vico, the criticism of Gasparo Gozzi, and the memoirs of Casanova Great figures of the theater are Goldoni, his rival Carlo Gozzi, and the tragic dramatist Alfieri The periods of the French Revolution and of the turn of the century are the times of the poets Monti and Parini and their successors Foscolo and Leopardi, and from the late 18th cent to the formation (1870) of the Italian kingdom, patriotism is the dominant note in Italian literature Sterling examples are the novels of Manzoni (whose *I promessi sposi*, in English *The Betrothed*, is a classic), Grossi, and Guerrazzi, the memoirs of Pellico and Azeglio, the criticism of Mazzini, and the satire of Giusti Cossa's dramas bridge the gap between romanticism and the later naturalism, Luigi Carrer introduced the ballad form into Italian verse The year 1870 saw the beginning of the Risorgimento and also, in the verse of Carducci and Pascoli, a revival of the classical spirit Other outstanding poets are D'Annunzio and Chiarini The novelists include the Sicilians Capuana and Verga (author of *Cavalleria rusticana*) and the Neapolitan Serao Also before the 20th cent appeared the criticism of De Sanctis, the travel sketches of De Amicis, the children's classic *Pinocchio* by Collodi, and the plays of Giacosa Novels by D'Annunzio, Fogazzaro, Pirandello, Aleramo, Deledda, Paoleri, and Vanni came in the years before the First World War, as did much of the work of Croce, outstanding modern critic, and of the theater of Benelli Immediately after the war appeared the novels of Tozzi The rise of Fascism was marked by an experimental trend, an example of which is found in the work of Marinetti, called the founder of FUTURISM, and by the growth of the art for art's sake movement Important later figures include the humorist Panzini, the novelists Beltramelli, Bontempelli, Svevo, Renato Serra, Soffici, Vergani, and Ada Negri, Pirandello (as dramatist), the critics Borgese and Papini (famous for his *Life of Christ*), Ferrero (also an anti-Fascist historian), and the anti-Fascist novelist Silone See Francesco De Sanctis, *History of Italian Literature* (Eng tr , 1931), Richard Garnett, *A History of Italian Literature* (1898), Domenico Vittorini, *The Modern Italian Novel* (1931), F M Guercio, *Anthology of Contemporary Italian Prose* (1931), Lorna de' Lucchi, *Anthology of Italian Poems* (1922)

Italian Wars. Renaissance ITALY was split into numerous rival states, most of which sought foreign alliances to increase their individual power It thus became prey to the national states which had begun to emerge in Europe Foremost among those were France and Spain, whose long-drawn struggle for supremacy in Italy was to end Italian liberties for more than three centuries The wars began when in 1495 CHARLES VIII of France seized Naples without effort, only to be forced to retreat by a coalition of Spain, the emperor, the pope, Venice, and Milan His successor, LOUIS XII, prepared a new invasion by diplomatically isolating his first objective, Milan, then ruled by Lodovico SFORZA In 1499 the French, under TRIVULZIO, occupied Milan and Genoa In 1500 Louis tackled his next objective, Naples, by agreeing to its conquest and partition with Ferdinand V of Spain and by securing the consent of Pope ALEXANDER VI Alexander's nephew, Cesare BORGIA, who held a French command, himself had a huge territorial stake in the scheme Naples was occupied in 1501, but disagreement between the Spanish and the French flared into open warfare in 1502 Defeated by Gonsalo Fernández de Córdoba at Cerignola and at the Garigliano (1503), Louis XII consented to the treaties of Blois (1504-5), keeping Milan and Genoa but pledging Naples to Spain. Trouble began again when Pope JULIUS II formed (1508) an alliance against Venice with France, Spain, and Emperor MAXIMILIAN I (see CAMBRAI, LEAGUE OF) However, shortly after the French victory over the Venetians at Agnadello (1509), Julius made peace with Venice and began to form the HOLY LEAGUE (1510) in order to expel the French "barbarians" from Italy The French, though they lost their ablest commander, Gaston de FOIX, in 1512, held their own until the Swiss cantons decided to intervene The Swiss stormed Milan (1512), which they nominally restored to the SFORZAS, routed the French at Novara (1513), and lorded it over Lombardy till they were defeated in turn by Louis's successor, Francis I, at MARIGNANO (1515) By the peace of Noyon (1516) Naples remained in Spanish hands and Milan was returned to France However, the rivalry between FRANCIS I and CHARLES V, king of Spain and (after 1519) emperor, reopened warfare in 1521 Defeated at La Bicocca (1522) and captured at Pavia (1525), Francis signed the harsh Treaty of Madrid (1526) This he repudiated, as soon as he was liberated, by forming the League of Cognac with Pope CLEMENT VII, Henry VIII (of England), Venice, and Florence To punish the pope, Charles V sent Charles de BOURBON against Rome, which was sacked for a full week (May, 1527) The French, under LAUTREC, seized Genoa with the aid of Andrea DORIA (July), and they were advancing to rescue the pope when Clement submitted to the emperor's terms Lautrec, assisted by the Genoese fleet, laid siege to Naples instead, but a quarrel between Francis and Doria led (1528) to the defection of the fleet, the loss of Genoa, and, after Lautrec's death, the abandonment of the siege The war ended (1529) with the Treaty of Cambrai (see CAMBRAI, TREATY OF) and the renunciation of Francis's claims in Italy Francis's subsequent two wars, which, excepting the inconclusive victory of Ceresole (1544), were fought outside Italy, ended in failure Francis died (1547), having renounced Naples (for the third time) in the Treaty of Crépy Complete Spanish supremacy in Italy was obtained by the Treaty of CATEAU-CAMBRÉSIS (1559), which gave the Two Sicilies and MILAN to PHILIP II The wars, though ruinous to Italy, had helped to spread the Italian Renaissance in Western Europe From the military viewpoint, they signified the passing of chivalry, which found its last great representative in the seigneur de BAYARD The use of Swiss and German mercenaries was characteristic of the wars, and artillery passed its first major test

Italic languages, subfamily of Indo-European languages Latin superseded the other two important groups (Oscan and Umbrian) and was the only one to survive antiquity, from it the Romanic languages are derived See LANGUAGE (table)

Italy, Latin and Ital *Italia* (ētä'lyä), republic (116,235 sq mi , 1936 pop 42,918,726, 1948 estimated pop 46,110,000), S Europe Rome is the capital The ALPS divide it from France in the northwest and from Switzerland and Austria in the north In the northeast it borders on Yugoslavia and the Free Territory of Trieste Central and S Italy form a peninsula, shaped roughly like a boot, between the Tyrrhenian Sea (west) and the Adriatic Sea (east), two branches of the Mediterranean The large Mediterranean islands of SARDINIA and SICILY and several smaller islands (notably ELBA) belong to the republic Its borders were established after the Second World War by the peace treaty of 1947, which gave several small Alpine districts (see BRIGUE AND TENDE) to France, TRIESTE, ISTRIA, and most of VENEZIA GIULIA and several Adriatic islands to Yugoslavia and the Free Territory of Trieste, and the DODECANESE to Greece The status of the former Italian colonies (LIBYA, ERITREA, and Italian SOMALILAND) awaited further disposition The Italian peninsula includes two politically independent enclaves, VATICAN CITY and SAN MARINO The republican constitution, which became effective on Jan 1, 1948, divided Italy into 19 regions and granted them a measure of self-government Several regions enjoy certain autonomous privileges These are Sicily and Sardinia, TRENTINO-ALTO ADIGE (the Italian Tyrol), with an Austrian minority, the Val d'Aosta (see AOSTA, VAL D'), in the Western Alps, with a French-speaking minority, and FRIULI-VENEZIA GIULIA, with a Yugoslav minority N Italy is a vast fertile plain contained by the Alpine chain and drained by the Po river and its tributaries It comprises the regions of LIGURIA, PIEDMONT, Val d'Aosta, LOMBARDY, Trentino-Alto Adige, VENETIA, Friuli-Venezia Giulia, and part of EMILIA-ROMAGNA, which extends into central Italy It is the richest part of the country, with the best agricultural land, the chief port (GENOA), the largest industries (MILAN, TURIN), and an active tourist trade on the Italian RIVIERA, in the Alps and DOLOMITES, on the shores of its beautiful lakes (Lago MAGGIORE, Lake COMO, Lake GARDA), and in VENICE The highest peak entirely situated in Italy, the Gran Paradiso, 13,323 ft. high, rises in the Val d'Aosta. The Italian peninsula, traversed in its entire length by the APENNINES, comprises

central Italy (the MARCHES, TUSCANY, UMBRIA, and LATIUM), and S Italy (CAMPANIA, BASILICATA, ABRUZZI E MOLISE, CALABRIA, and APULIA) Central Italy contains the great cultural and historic centers of FLORENCE, PISA, SIENA, PERUGIA, ASSISI, URBINO, BOLOGNA, RAVENNA, RIMINI, FERRARA, and PARMA, and ROME itself S Italy, the poorest and most backward part of the country, contains NAPLES, BARI, BRINDISI, FOGGIA, and TARANTO Besides the Po, Italy has only short rivers, of which the ARNO and the TIBER are the best known Italy enjoys a Mediterranean climate, Sicily is subtropical Almost all Italy possesses great scenic beauty—majestic in the Alpine north, soft and undulating in Umbria and Tuscany, and romantically rugged in the S Apennines The Bay of Naples is one of the world's most famous sights Despite a deceptively carefree and nonchalant air, the Italians are a frugal and hard-working nation, extracting with infinite labor the greatest possible yield from a largely ungrateful soil Except in the plain of the Po, where large crops of wheat and rice are grown, Italian agriculture produces mostly fruit (notably citrus fruit), wine, olive oil, and cheese Sheep and goats are the principal livestock, the eroded Apennines being unfit for cattle grazing In mineral resources Italy is very poor, except in sulphur, mercury, salt, and marble, which are exported in large quantities Coal and iron must be imported Hydroelectric power, however, is increasingly exploited, by 1949 one third of the state-owned Italian railroads ran on electricity Large deposits of natural gas are industrially exploited in the lower Po valley, and some oil has been found Among the chief Italian industries are textile and silk manufactures (notably at Milan), automobile plants (Turin), machinery and shipbuilding (Genoa), chemical plants, and luxury industries All these depend largely on exports Wines, fruit, and olive oil also are vital export articles, on which Italy largely depends for balancing its imports of food and raw materials The overwhelming majority of Italians are Roman Catholics There is complete freedom of worship, but Catholicism by the Lateran Treaty is the official religion Although Italy is a cradle of culture and learning, possessing such world-famous universities as those of Bologna and PADUA, illiteracy is a serious problem in the southern regions A generalized outline of the highly complex history of Italy is attempted in the following paragraphs, it should be supplemented, however, by the reading of the articles on individual cities and regions and of such general articles as ETRUSCAN CIVILIZATION, ROME, PAPACY, ITALIAN ART, ITALIAN LITERATURE, and RENAISSANCE

Ancient Italy and the Barbarian Invasions Little is known of Italian history before the 5th cent B C , except of those regions (S Italy and Sicily) where the Greeks had established colonies (see MAGNA GRAECIA) The earliest known inhabitants appear to have been of Ligurian and Iberian stock The Etruscans, coming from Asia Minor, established themselves in central Italy before 800 B C They reduced the native population to a servile status and established a prosperous and highly civilized empire In the 5th cent B.C the Celts (called Gauls by Roman historians) invaded Italy and drove the Etruscans from the Po valley In the south, the Etruscan advance was checked about the same time by the Samnites (see SAMNIUM), who had adapted the civilization of their Greek neighbors and who in the 4th cent B C drove the Etruscans out of Campania The Latins, living along the coast of Latium, had not been fully subjected to the Etruscans, they and their neighbors, the SABINES, were the ancestors of the Romans The history of Italy from the 5th cent B.C. to the 5th cent A D is largely that of the growth of Rome and of the Roman Empire, of which Italy was the core Augustus divided Italy into 11 administrative regions (Latium and Campania, Apulia and Calabria, Lucania and Bruttium, Samnium, Picenum, Umbria, Etruria, Cispadane Gaul, Liguria, Venetia and Istria, Transpadane Gaul). By that time, at the beginning of the Christian era, all of Italy had been thoroughly Latinized, Roman citizenship was extended to all free Italians, and Italy, made tax exempt, shared fully in the wealth of Rome Never since has Italy attained an equal degree of prosperity and as long a period of peace. Christianity spread rapidly Like the rest of the Roman Empire, Italy in the early 5th cent. A.D. began to be invaded by successive waves of Barbarian tribes—the Germanic VISIGOTHS, the HUNS, and the Germanic Heruli and OSTROGOTHS The deposition (476) of the last West Roman emperor and the assumption by ODOACER of the rule over Italy is commonly regarded as the end of the Roman Empire. The Eastern emperors, residing at Constantinople (see BYZANTINE EMPIRE) never renounced their claim to Italy and their succession to the West On the urging of Zeno, the Eastern emperor, the Ostrogoth THEODORIC THE GREAT invaded Italy, took (493) Ravenna (which had replaced Rome as capital), slew Odoacer, and began a long and beneficent rule over Italy, maintaining the Roman institutions. After his death the papacy was the only remaining stable institution. The murder (535) of the Gothic queen, AMALASUNTHA, was followed by the reconquest of Italy by Emperor JUSTINIAN I of the East and his generals, BELISARIUS and NARSES. However, except in the exarchate of RAVENNA, the PENTAPOLIS, and the coast of S Italy, Byzantine rule was soon displaced by the LOMBARDS, who under ALBOIN established (569) a new kingdom Pope GREGORY I, without assistance from Byzantium, succeeded in saving Rome and the Patrimony of St Peter from the Lombard conquest, thus laying the basis for the creation of the PAPAL STATES and preserving the old traditions of Rome At the same time he effectively freed Rome from allegiance to the Byzantine conquerors The Lombards possessed little unity, but they successfully warded off Byzantine efforts at reconquest and in 751 took Ravenna, their advance on Rome resulted in the appeal of the pope to PEPIN THE SHORT, king of the Franks, who expelled the Lombards from the exarchate of Ravenna and the Pentapolis, which he donated (754) to the pope Pepin's intervention was followed by that of his son CHARLEMAGNE, who defeated the Lombard king, Desiderius, was crowned king of the Lombards, confirmed his father's donation, and was crowned emperor (800) of the West at Rome These crucial events shaped much of the later history of Italy and of the papacy The claim of later emperors to Italy and the temporal power of the popes were among the direct results

Medieval Italy In the divisions of the Carolingian empire (see VERDUN, TREATY OF, MERSEN, TREATY OF) Italy fell to emperors LOTHAIR I, LOUIS II, and CHARLES II, their control, however, was largely nominal Under CARLOMAN (d 880) and Emperor CHARLES III, Italy fell into anarchy, Emperor ARNULF unsuccessfully tried to reconquer it From 888 until 962 Italy was "ruled" by such phantom kings and emperors as Guy of Spoleto, Berengar I of Friuli, Louis III of Burgundy, and BERENGAR II The petty nobles were in constant feud, the papacy at its lowest point of degradation The invasion of the Magyars threatened Italy in the north, while in the south the Arabs had seized (917) Sicily and were raiding the Italian mainland In 961, heeding an appeal of the pope for protection against Berengar II, the German king OTTO I invaded Italy, defeated Berengar, and was crowned king of Italy, and in 962 he was crowned emperor by the pope The union of Italy and Germany was the beginning of the HOLY ROMAN EMPIRE Though the Alps had never prevented invaders from entering Italy, they were sufficient as a barrier for preventing the emperors from exercising effective control over Italy Again and again the emperors and German kings crossed the Alps to reassert their authority, and each time their authority virtually vanished as soon as they returned to Germany At best, their power was limited to the territories north of the Papal States Apulia and Calabria, after being briefly recovered by the Byzantines, were conquered in the 11th cent by the Normans under ROBERT GUISCARD and his successors, who also wrested Sicily from the Arabs and set up the Norman kingdom of Sicily In central and N Italy the feudal lords, largely of Germanic origin (Frankish and Lombard), exerted a disorderly and violent rule Most powerful among them were the counts of Tuscany The quarrel over INVESTITURE between the emperors and the popes, and the contested succession to Tuscany after the death (1115) of Countess MATILDA, increased the prevailing chaos The independence of the many petty feudal lords prevented FEUDALISM, in its true meaning, from ever gaining a firm foothold in central and N Italy In the south, however, the Norman kings and their successors, the HOHENSTAUFEN and ANGEVIN dynasties, firmly entrenched the feudal system, the worst features of which were later perpetuated by the Spanish rulers of Naples and Sicily The fundamental difference between N and S Italy, which has remained to the present day, thus must be traced as far back as to the 11th cent. The characteristic development in central and N Italy, the rise of the cities (see COMMUNE and CITY-STATE) began in the 10th cent Its causes were partly political—the burghers had to draw together to protect themselves against the nobles—and partly economic—contact with the Moslem world was making the Italian merchants and towns the middle-men and entrepôts of Western Europe The survival of Roman institutions and the example of the commune of Rome facilitated the process To protect their commerce and their industries (particularly the wool industry) many cities grouped together in leagues, which often were at war with each other. These were particularly strong in Lombardy. The attempt of Emperor FREDERICK I to impose his authority on the cities led to the formation of the LOMBARD LEAGUE, which defeated the emperor and forced his recognition in 1183 However, the rivalry among the cities prevented any union strong enough to consolidate even a part of Italy. The struggle between Emperor FREDERICK II and the papacy divided the cities and the nobles in two strong parties, the GUELPHS AND GHIBELLINES. Their fratricidal warfare continued long after the death of Frederick, which marked the end of imperial rule in Italy and the victory of the papacy. Factional strife permitted the rise of despots in the towns These despots, whether of noble or of bourgeois origin, were generally factional leaders who, once they had obtained the magistracy, usurped it and made it hereditary The usual titles of the magistrates were podesta, senator, or consul. In many cities, the republican institutions were upheld without (or with few) interruptions In others, dynasties established themselves and were invested, in the 14th and 15th cent., with the titles duke or prince by the emperors, who still claimed theoretical suzerainty over N Italy The most powerful princes (e g , the VISCONTI and SFORZA of Milan, the GONZAGA of Mantua, the ESTE of Ferrara, and the dukes of SAVOY) and the most powerful republics (e g., Florence, Venice, and Genoa) tended to increase their territories at the expense of their weaker neighbors The cities of the Papal States passed under the sway of local tyrants during the Babylonian captivity of the popes in Avignon and during the Great Schism By the end of the 15th cent , Italy fell into the following chief component parts in the south, the kingdoms of Sicily and Naples, torn by the rival claims of the Angevin dynasty and the Spanish house of Aragon, in the center, the Papal States, the republics of Siena, Florence, and Lucca, and the cities of Bologna, Forli, Rimini, and Faenza (only nominally subject to the pope), in the north, the duchies of Ferrara and Modena, Mantua, Milan, and Savoy The two great merchant republics, Venice and Genoa, through their far-flung possessions, colonies, and outposts, were distinct in character and outlook from the rest of Italy Constant warfare between these many states was politically disastrous, but did little to upset their material and cultural wealth Indeed, the wars were generally fought in a desultory manner, with a minimum of bloodshed and destruction, by hired bands of foreigners, led by professional commanders (see CONDOTTIERE), who were mainly interested in auctioning off their services to the highest bidders Compared to the Black Death, which ravaged Italy in the 14th cent , the local wars did little harm Material prosperity had been much furthered by the Crusades, by the expanding trade with the Orient, and by the rise of the great medieval banking firms, notably in Genoa, in Lucca, and in Florence, where the MEDICI rose from bankers to dukes. Material prosperity made possible one of the greatest cultural flowerings in the history of mankind—the Italian Renaissance, which may be said to have begun with Dante in the 14th cent , and which permanently changed the civilization of Western Europe

Political Disintegration and Rebirth The Renaissance reached its zenith only in the early 16th cent , but Italy was already politically doomed by the emergence of national imperialistic states in France, Spain, and Austria The invasion (1494) of Italy by CHARLES VIII of France marked the beginning of the ITALIAN WARS, which ended in 1559 with the subjection of most of Italy to Spanish rule or influence Early in the wars, in which France and Spain were the main contenders for supremacy over Italy, Italian statesmen realized that only unity could save Italy from foreign domination The plan of union under one strong despot, advanced by Machiavelli, was impossible to realize, Cesare BORGIA failed even in his more limited objective Pope JULIUS II succeeded in consolidating the Papal States, but his HOLY LEAGUE, devised to drive out the French, failed to create Italian unity After 1519 the Italian Wars became part of the European struggle between FRANCIS I of France and Emperor CHARLES V The Treaty of CATEAU-CAMBRESIS (1559) left the kingdoms of Sicily and Naples and the duchy of Milan to Spain. Foreign domination became nearly complete with the War of the SPANISH SUCCESSION (1701–14; see also UTRECHT, PEACE OF) and the War of the POLISH SUCCESSION (1733–35). By 1748 Naples, Sicily, and the duchies of Parma and Piacenza had passed to branches of the Spanish Bourbons, and the duchies of Milan, Mantua, Tuscany, and Modena to the house of Austria. The only remaining independent states were the Papal States, the declining republics of Venice, Genoa, and Lucca, and the kingdom of Sardinia (see SARDINIA, KINGDOM OF), created in 1720 by the union of Piedmont, Savoy, and Sardinia under the house of Savoy, whose star was rising. Though political freedom had vanished from Italy, the country enjoyed relative prosperity and order on the eve of the French Revolution. The great creative ferment of the Renaissance had subsided, but Italy continued to influence European culture, particularly in architecture and music. Yet, to subsequent generations, preoccupied with the concepts of national independence and political power, the somnolent and politically apathetic Italy of the 18th cent. represented the depth of

national degradation. The FRENCH REVOLUTIONARY WARS swept away the political institutions of 18th-century Italy General Bonaparte (see NAPOLEON I) triumphantly defeated the Sardinian and Austrian armies in his Italian campaign of 1796–97 He was at first received enthusiastically by most Italians, whose national aspirations the French Revolution had kindled. Napoleon redrew the Italian map several times. The Cispadane and Transpadane republics, established in 1796, were united (1797) as the CISALPINE REPUBLIC, recognized in the Treaty of CAMPO FORMIO In 1802 the Cisalpine Republic, comprising Lombardy and Emilia-Romagna, was renamed the Italian Republic, and in 1805 it was made the kingdom of Italy, with Napoleon as king and Eugène de BEAUHARNAIS as viceroy The kingdom was increased by the addition of Venetia. Between 1795 and 1812 Savoy, Piedmont, Liguria, Tuscany, Parma, and the Papal States were annexed to France Joseph BONAPARTE was made king of Naples and was replaced (1808) by Joachim MURAT Sardinia, however, was left to the house of Savoy, and Sicily to the Bourbons Napoleon's failure to unite Italy and his oppressive regime disappointed the Italian patriots Such secret revolutionary societies as the CARBONARI, which later played a vital part in Italian unification, originated with the liberal opposition to Napoleonic rule. The Congress of Vienna (1814–15) restored approximately the pre-Napoleonic *status quo* and the old ruling families Venetia, however, was united with Lombardy as the Lombardo-Venetian kingdom under the Austrian crown, and Liguria passed to Sardinia Naples and Sicily were united (1816) as the kingdom of the TWO SICILIES Austrian influence became paramount However, the efforts of Metternich and of the Holy Alliance could not suppress the nationalist movement The forces of the Risorgimento, as the movement for unification was called, fell into three main groups the radicals, led by MAZZINI, who sought to create a republic, the moderate liberals, who saw in the house of Savoy the rallying point of unification, and the Catholic conservatives, who desired a confederation under the presidency of the pope Largely through the efforts of VICTOR EMMANUEL II of Savoy, CAVOUR, and GARIBALDI, unification ultimately was achieved under the house of Savoy (For the wars and revolutions that brought about unification, see RISORGIMENTO) The Italy of which Victor Emmanuel II became king in 1861 still lacked Venetia, Rome, and part of the Papal States Florence was its capital To NAPOLEON III of France, who had helped Sardinia in defeating Austria in 1859, Sardinia had ceded Savoy and Nice By siding against Austria in the AUSTRO-PRUSSIAN WAR of 1866 Italy obtained Venetia Napoleon III's protectorate over the Papal States delayed the Italian annexation of Rome until 1870 The relationship between the kings and the popes (who considered themselves prisoners within the Vatican) was a major problem until 1929, when the LATERAN TREATY made the pontiff sovereign within Vatican City After 1870 Austria still retained areas with largely Italian populations (e g , S TYROL and Trieste), Italian agitation for their annexation (see IRREDENTISM) went unfulfilled until the First World War

Modern Italy From 1861 until the Fascist dictatorship of Mussolini, Italy was ruled under the liberal constitution adopted by Sardinia in 1848 The reigns of Victor Emmanuel II (1861–78) and HUMBERT I (1878–1900), and the first half of the reign of VICTOR EMMANUEL III (1900–1947) were, as a whole, liberal The outstanding statesmen of the pre-Fascist period were DEPRETIS, CRISPI, GIOLITTI, SONNINO, ORLANDO, and NITTI Colonial and industrial expansion were primary concerns of the government Italy acquired Eritrea and part of Somaliland in E Africa, but further advance was checked by the Ethiopian victory (1896) at Aduwa In 1911–12 Libya was conquered from the Ottoman Empire A severe setback in Italian colonial policy was the establishment (1881) of a French protectorate over TUNISIA, it was an important motive for the conclusion (1882) of the alliance of Italy with Germany and Austria (see TRIPLE ALLIANCE AND TRIPLE ENTENTE) The industrial expansion of Italy in the late 19th and early 20th cent was accompanied by the growth of the Socialist movement and by social turmoil Overpopulation led to mass emigration to North and South America In the First World War, Italy at first remained neutral Its relations with Germany and Austria had cooled after 1900, and when the Allies offered substantial territorial increases, Italy denounced the Triple Alliance and entered (1915) the war on the Allied side Though suffering serious reverses at first, the Italians won (1918) a great victory at VITTORIO VENETO, followed by the surrender of Austria-Hungary At the Paris Peace Conference Italy obtained S Tyrol, Trieste, Istria, part of Carniola, several Dalmatian islands, and the Dodecanese—far less than the Allies had secretly promised. The seizure (1921) of FIUME by a nationalist band under D'ANNUNZIO was a drastic gesture of Italian discontent. Political and social unrest increased and furthered the growth of FASCISM. The Fascist leader (Ital. *Duce*), Benito MUSSOLINI, promising the restoration of social order and of political greatness, led (Oct. 27, 1922) his "march on Rome" and was made premier by the king Granted dictatorial powers, Mussolini purged the state of all opposition (notably by the murder of MATTEOTTI), regimented the press and schools, imposed state control on industry and labor, and created a corporative state controlled by the Fascist party and militia Great public works and much building (usually in a characteristically pompous and ugly style) were undertaken and some useful projects (e g , the draining of the POMPTINE MARSHES) were accomplished The problem presented by the increasing Italian birth rate was aggravated by drastic immigration restrictions in the United States. Mussolini hoped to solve the problem by "dynamic expansion," i e , by encouraging population increase and by clamoring for increased living space, on the theory that Italy must expand or explode Despite some ineffective sanctions imposed by the League of Nations (from which Italy withdrew in 1937), Italy conquered ETHIOPIA in 1935–36 Drawing ever closer to National Socialist Germany and to Japan, Italy formed in 1936 an entente with Germany (see AXIS) Italian intervention on the Insurgent side in the civil war (1936–39) in Spain was facilitated by the appeasement policy of England and France In April, 1939, Italy seized ALBANIA with impunity When the Second World War broke out, Italy at first assumed a neutrality friendly to Germany In June, 1940, it declared war on collapsing France and on Great Britain After some successes in E Africa, Italy launched (Sept , 1940) an attack on Egypt and (Oct , 1940) on GREECE Both in Greece and in North Africa, Italian forces were unsuccessful until German troops came to their aid In 1941 Italy declared war on Russia and on the United States By July, 1943, it had lost all its African possessions, its army was shattered, Sicily was falling to American troops, and Italian ports and cities were bombed Open discontent culminated in the rebellion of the Fascist grand council against Mussolini, Mussolini's dismissal by the king, the appointment of BADOGLIO as premier, and the dissolution of the Fascist party (July, 1943) On Sept 3 Italy surrendered unconditionally to the Allies, but announcement was withheld until the main Allied landing at Salerno (Sept 8) Meanwhile German armies quickly occupied N and central Italy, including Rome and Naples Mussolini escaped from imprisonment and set up a puppet republic in N Italy The Badoglio government declared (Oct , 1943) war on Germany, and Italy was recognized by the Allies as "cobelligerent" After the fall of Naples to the Allies, German resistance stiffened From Oct , 1943, until the German surrender in 1945 the Italian campaign was a slow, grueling, and costly struggle (see CASSINO and ANZIO) The fall of Rome (July , 1944) was followed by a rapid Allied advance to Florence and Rimini, but then a stalemate developed Italian troops fought alongside the Allies (Americans, British, French, and Poles), and Italian resistance forces within German-held Italy were of substantial help to the Allies In May, 1945, the Germans signed their surrender at Caserta In 1944 the unpopular Badoglio cabinet resigned, and the king transferred his powers to his son, later King HUMBERT II The question of the preservation or the abolition of the monarchy was acute, as were the insuperable economic problems left by the war Various coalition cabinets followed each other until Dec , 1945, when Alcide DE GASPERI, a Christian Democrat, became premier Considerable economic aid was extended to Italy by UNRRA and relieved the worst sufferings A referendum (June, 1946) decided for the establishment of a republic A constituent assembly drafted a new constitution, providing for a chamber of deputies and a senate and for a president elected for a seven year term by both houses The cabinet is responsible to the parliament The Communists, Socialists, and Christian Democrats (moderate liberals) emerged from the war as the chief parties The split of the Socialists into a right wing and a left wing enabled the Christian Democrats to maintain themselves in power in coalition with the right-wing Socialists and to exclude the Communists from the government In the elections of April, 1948, American propaganda and papal pronouncements contributed to the victory of the government over the Communists. However, the political situation remained potentially explosive In foreign policy, Italy followed the lead of the United States The detachment of Trieste from Italy by the peace treaty of 1947 created serious dissatisfaction Italian defense forces and armaments were severely limited by the peace treaty The economic situation of Italy was, at least superficially, relieved by the extension of American aid under the European Recovery Program after 1948 though the need for splitting up the great estates of S Italy for the benefit of the peasants was not fulfilled In 1949 Italy joined the North Atlantic Treaty Among general histories of Italy are Pasquale Villari, *Storia politica d'Italia* (8 vols , 1874–82); H D. Sedgwick, *Short History of Italy* (1905); E. M Jamison, *Italy, Mediæval and Modern* (1917), J. P Trevelyan, *Short History of the Italian People* (1920), Luigi Salvatorelli, *A Concise History of Italy* (Eng tr , 1939) For the early period and the barbarian invasions, see bibliography under ROME For the medieval period, see Pasquale Villari, *Mediæval Italy* (Eng tr , 1910), H B Cotterill, *Mediæval Italy* (1915) For the Renaissance, see bibliography under RENAISSANCE. For the modern period, see Benedetto Croce, *History of Italy, 1871-1915* (Eng tr , 1929), René Albrecht-Carrié, *Italy from Napoleon to Mussolini* (1949)

Italy, town (pop 1,224), N central Texas, S of Dallas, in a blackland cotton area.

Itasca (ītă'skŭ), city (pop 1,759), N central Texas, SSW of Dallas, settled 1882, inc. as a city 1910, In the blackland area, it has cotton processing and textile milling

Itasca, Lake (ītă'skŭ), small shallow lake in a pine-wooded swampy region, NW central Minn , SSW of Bemidji Henry R Schoolcraft identified (1832) it as the source of the Mississippi Later geographers consider the source to be above the lake, through which the river flows In 1891 the region was included in a state park, which has a historical and natural history museum

Ito, Hirobumi, Prince (hērō'bōōmē, ē'tō), 1841–1909, Japanese statesman, the outstanding figure in the modernization of Japan As a young Choshu samurai, he defied the ban on foreign travel, visited Europe, and became convinced of the necessity of adopting Western ways After the Meiji restoration, he was a member of the mission under Prince Iwakura In 1882 he was sent abroad to study foreign governments Returning, he established a cabinet and civil service (1885) and a privy council (1888) He drafted the constitution of 1889, more or less on the Prussian model An intimate adviser of the emperor, he was long dominant in politics As prime minister (1892–96) he supported the Chino-Japanese War and negotiated the Treaty of Shimonoseki After the war he became a supporter of party government, opposing Prince YAMAGATA He was the first president of the Seiyukai party. Again prime minister (1899–1901), believing war with Russia imminent, he secured increased military appropriations His resignation in 1901 meant the decline of civilian power in the ruling oligarchy In 1905 he forced an agreement making Korea a virtual protectorate and became Japanese resident general there He was assassinated by a Korean in 1909

Itsuku-shima (ēt'sōōkōō'shĭmä), sacred island, 6 mi. long and 2 5 mi wide, in the Inland Sea, Japan, SW of Hiroshima Site of an ancient Shinto shrine, it is known for its huge torii (1875), its 16th-century hall built by Hideyoshi, its pagoda (1407), and a 9th-century Buddhist temple The island is also known as Miya-jima

Itta Bena (ĭ'tŭ bē'nu), town (pop. 1,795), W central Miss , on the Yazoo just W of Greenwood and E of Greenville, in a cotton area.

Ittah-kazin (ĭ'tŭ-kā'zĭn), unidentified place, N Palestine. Joshua 19.13.

Ittai (ĭt'ā-ī, ĭtā'ī) [Heb., =present] **1** Gittite follower of David He stood by David in Absalom's revolt, 2 Sam 15 19–22, 18 2,5,12 **2** Benjamite, one of David's mighty men 2 Sam 23 29 Ithai 1 Chron 11 31

Ituraea (ĭtyŏŏrē'ŭ), ancient country on the northern border of Palestine JETUR the son of Ishmael was its eponym Ancient geographers are not agreed as to the exact limits of the country The inhabitants were Arabians, conquered in 105 B C by Aristobulus, king of Judaea, and forcibly converted to Judaism Later, after a brief period of independence, the country was subdued by Pompey It remained thereafter chiefly in Roman hands, being united (A D c 50) to the Roman province of Syria Many Ituraeans served in the armies of Rome and were renowned for their skill as horsemen and archers

Iturbi, José (hōsā' ētŏŏr'bē), 1895–, Spanish-American pianist, b Valencia, Spain, studied at the Conservatorio de Música, Valencia, and the Paris Conservatoire He was head of the piano department (1919–23) at the Geneva Conservatory, later beginning his world tours as a concert pianist In New York in 1929 he made his American debut and in Mexico city in 1933 made his first appearance as a conductor He was conductor (1936–44) of the Rochester (N Y) Philharmonic Orchestra Beginning in 1942 he appeared in several moving pictures He is one of the most popular pianists in the United States

Iturbide, Agustín de (ägōōstēn' dā ētŏŏrbē'dā), 1783-1824, Mexican revolutionist, emperor of Mexico (1822–23) An officer in the royalist army, he was sympathetic toward independence but took no part in the separatist movement led by HIDALGO Y COSTILLA and helped to suppress the revolt, figuring especially against MORELOS Y PAVÓN In 1820 he was commissioned by Viceroy APODACA to lead royalist troops against Vicente GUERRERO Iturbide undertook the command with the intention of overthrowing the viceroyalty and establishing Mexican independence After Guerrero had inflicted minor defeats on his troops, Iturbide opened negotiations with the insurgent leader, and the result was the Plan of IGUALA (1821) Iturbide's army swept the country in victory The new viceroy, O'DONOJÚ, capitulated to their demands in the Treaty of Córdoba (1821) The independence of Mexico was assured, but without the social reforms advocated by Hidalgo, instead of a new liberal state, Iturbide had ushered in a new conservative one He headed the provisional government When no Bourbon prince could be found to accept the crown of Mexico and Spain repudiated the Treaty of Córdoba, his soldiers proclaimed him emperor as Agustín I Congress, hostile but intimidated, ratified the proclamation (1822) It was not long before a revolution was in the field, with SANTA ANNA and GUADALUPE VICTORIA as its principal leaders In 1823 Iturbide was forced to abdicate and go to Europe in exile Congress decreed him a traitor and an outlaw, forbidding his reentry into Mexico Iturbide was, however, ignorant of this decree when he sailed back to Mexico in 1824 He was captured, tried by the Congress of Tamaulipas, and shot

Iturrigaray, José de (hōsā' dā ētōō'rēgärā'ē), 1742–1815, Spanish colonial administrator When he was viceroy of New Spain (1803-8), the whole of Spanish America was disturbed by the Napoleonic invasion of Spain and the abdication of Ferdinand VII A quasi-separatist movement found much support among the creoles of Mexico, who denied the authority of Joseph Bonaparte and also that of the Central Junta of Spain Iturrigaray lent his ear to their schemes The Spanish-born officials of the viceroyalty resisted the liberal creoles and, suspecting Iturrigaray, deposed him (Sept 15, 1808) The separatist spirit of the creoles burst forth two years later in the uprising of HIDALGO Y COSTILLA

Ituzaingó, battle of (ē"tōōsīn-gō'), fought in S Uruguay, Feb 20, 1827 A combined Argentine-Uruguayan force decisively defeated Brazil The United Provs. of La Plata (Argentina) and Brazil had both claimed Uruguay In the peace treaty which followed (1828) an independent Uruguay was created as a buffer state

Itys (ĭ'tĭs) or **Itylus** (ĭt'ĭlŭs), son of Tereus and Procne, killed by his mother and PHILOMELA Another account makes Itys the son of AËDON

Itzá (ētsä'), Maya Indians of Yucatán and PETÉN (Guatemala) Probable founders of CHICHÉN ITZÁ, which they occupied at various times from c 514 to 1194, they moved (c 1450) S from Campeche to Lake Petén Here, in spite of sporadic attempts by the Spanish to convert or subdue them after the visit of Cortés in 1525, the Itzá (last strong, independent Mayan tribe) remained until driven from their capital, Tayasal, in 1697

Itzamna (ētsäm'nä), chief god of the Maya Son of Hunab Ku, the creator, he was lord of the heavens, day, and night Itzamna, inventor of writing and books, was, by extension, creator of the calendar and chronology He was a benevolent deity, always man's friend

Itzehoe (ĭt'sūhō), city (pop 34,075), Schleswig-Holstein, N Germany. It is a trade center with cement and machinery manufactures It was founded in 810 by Charlemagne

Iuka (ī-ū'kŭ), town (pop 1,664), co seat of Tishomingo co , extreme NE Miss , near the Tennessee river, inc 1857 The area has lumbering and gravel, sandstone, and clay pits There are some fine ante-bellum houses Mineral springs are near by In a Civil War battle here on Sept 19, 1862, General Rosecrans attacked the Confederates under Gen Sterling Price, the fighting continued until nightfall, when Price withdrew to join General Van Dorn

Iulis, see KEOS, Greece

Iva, town (pop 1,285), NW S C , S of Anderson, in a farm area, founded c 1885

Ivah (ī'vŭ), unidentified city of Mesopotamia, perhaps the same as AVA 2 Kings 18 34, 19.13, Isa 37 13

Ivan II or **Ivan Asen** (ē'vän ä'sŭn), d. 1241, tsar of Bulgaria (1218–41) On the death (1207) of his father Kaloyan, restorer of the Bulgarian empire, the throne was usurped by Ivan's cousin Boril, and Ivan fled to Russia He returned (1218) at the head of a Russian force, captured Trnovo, had Boril blinded, and was crowned tsar Under Ivan II the Bulgarian empire reached its zenith and became the strongest power in the Balkans He campaigned (1235) jointly with JOHN III of Nicaea against the Latin Empire of Constantinople, but later helped the Latins oppose John He was essentially a man of peace, and his generally mild conduct and sincere religious faith endeared him even to his enemies He restored the autonomy of the Bulgarian Church, established a centralized administration, and encouraged the settlement of Ragusan merchants His court at Trnovo was famed for its splendor Soon after his death his vast empire fell apart

Ivan III or **Ivan the Great** (ī'vŭn, ī'vun, Rus ēvän'), 1440–1505, grand duke of Moscow (1462–1505), creator of the consolidated Muscovite (Russian) state He subjugated (1478) Great NOVGOROD, asserted his sway over Vyatka, Tver, Yaroslavl, Rostov, and other territories, and checked the eastward expansion of Lithuania, from which he gained some former Russian lands In 1480 he freed Muscovy from allegiance to the Tatars of the GOLDEN HORDE To prevent insurrection in annexed territories, Ivan transplanted their ruling classes to Old Muscovy and replaced them with loyal Muscovites Prudence and wisdom were said to be his dominant traits He established autocratic government and married as his second wife the niece of the last Byzantine emperor The double eagle was added to the arms of Muscovy, Sophia introduced the customs of the Byzantine court, and the idea of Moscow's being a "third Rome" (successor to the might of Rome and the Byzantine Empire) became popular in official circles Laws were codified, foreign artisans introduced, and Italian architects erected churches, palaces, and fortifications Ivan was succeeded by his son, Vasily III

Ivan IV or **Ivan the Terrible**, 1530–84, grand duke of Moscow, first to bear the title of tsar Succeeding (1533) his father, Vasily III, he took over the government in 1544 and was crowned tsar in 1547 Always favoring the common people and warring against the nobles, Ivan introduced local self-government and summoned the first general council (Zemsky Sobor, 1550) and an ecclesiastical *sobor* (1551) He conquered Kazan (1552) and Astrakhan, thus beginning Russia's eastward expansion, and began trade relations with England by way of the White Sea To gain access to the Baltic Sea, he undertook (1558) to conquer Livonia Successful at first in the resulting warfare with Poland and Sweden, Ivan was later defeated by STEPHEN BATHORY, the peace of 1582 was to his disadvantage The conquest of Siberia by the Cossack YERMAK took place late in his reign In 1560 his first wife died, and Ivan himself passed through a grave illness His character, always harsh, became gloomy and tyrannical Suspecting conspiracies everywhere, particularly on the part of the boyars (high nobles), he created (1565) a special corps to fight treason This corps (Oprichnina), responsible to the tsar alone instituted a period of terror which gained Ivan a reputation of unprecedented cruelty Many boyars were executed or exiled, in 1570 Ivan ravaged Novgorod for an alleged plot, and in 1580 he killed his eldest son, Ivan Fits of rage alternated with periods of repentance and fervent prayer Ivan married seven times, ridding himself of his unwanted wives by forcing them to become nuns Despite his cruelties, he was a man of intelligence and learning Printing was introduced to Russia during his reign, and his correspondence with the mutinous Prince Kurbsky reveals some literary talent His main political accomplishment was the annihilation of the power of the boyars and the definite establishment of the autocracy of the tsars Two sons, FEODOR I and DMITRI (assassinated in 1591), survived the tsar The principal figure after his death was his favorite, Boris GODUNOV See biographies by Stephen Graham (1933) and Hans von Eckhardt (Eng. tr , 1949)

Ivan V, 1666–96, tsar of Russia (1682–96), son of Tsar Alexis by the first wife of Alexis. He was feeble-minded, and on the death of his elder brother, Feodor III, his succession was widely opposed by the supporters of his half brother, PETER I However, Ivan and Peter jointly succeeded under the regency of Ivan's sister, SOPHIA ALEKSEYEVNA After the overthrow (1689) of Sophia's regency, Ivan was excluded from state affairs His elder daughter, Catherine, was the grandmother of Ivan VI, his younger daughter, Anna, became empress of Russia in 1730

Ivan VI, 1740–64, emperor and tsar of Russia (1740–41), great-grandson of Ivan V. He was the son of Prince Anthony Ulric of Brunswick Wolfenbüttel and of ANNA LEOPOLDOVNA An infant, he succeeded his great-aunt, Empress Anna, on the Russian throne under the unpopular regency of his mother In 1741 ELIZABETH, daughter of Peter the Great, overthrew Anna Leopoldovna's regime and became empress Ivan grew up in solitary confinement An attempt to install him on the throne resulted in his murder in the fortress of Schlüsselburg, according to standing instructions given by Catherine II

Ivan Asen: see IVAN II, tsar of Bulgaria

Ivangorod, Poland see DEBLIN.

Ivanov, Vsevolod Vyacheslavovich (*īsyĕ'vŭlŭt vyĕ"*-chĭsla'vuvĭch ēva'nŭf), 1895?–, Russian short-story writer, novelist, and dramatist A Siberian by birth, he had an adventurous early life as sailor, circus performer, and fakir His talent for vivid and boisterous description was discovered by Gorki He has produced more than 25 volumes of varied writings His most important work is a novel, *Armoured Train 14-69* (1922), based on an episode of Soviet expansion in Siberia This was made into a play and produced by the Moscow Art Theatre in 1927 It was translated into English (1933) and produced in New York A long, semi-autobiographical novel, *The Adventures of a Fakir*, was translated in abridged form (1935)

Ivanovo (ēva'nuvŭ), city (1926 pop 111,443, 1939 pop 285,069), capital of Ivanovo oblast, RSFSR, c 155 mi NE of Moscow It is a major textile center Dating from 1328, it became of commercial importance in the 17th cent , its first textile mill was established in 1751 Combined (1871) with neighboring town of Vozesensk, it was named Ivanovo-Voznesensk until c 1930 It was the scene of early labor strikes (1883, 1885, 1905) and in 1918 was the temporary capital of the revolutionary government Machinery plants (especially for textiles) were set up after the Russian Revolution and contributed to the expansion of the city Ivanovo has several technical institutes and one of the largest theaters of the Soviet Union

Ivan the Great see IVAN III

Ivan the Terrible see IVAN IV

Ives, Saint see YVES, SAINT

Ives, Charles, 1874–, American composer and organist, b Danbury, Conn , grad Yale, 1898, pupil of Dudley Buck and Horatio Parker He was organist (1803–1904) in churches in Connecticut, New Jersey, and New York In the insurance business from 1898 to 1930, he was at the same time composing music which was advanced in style, anticipating some of the innovations of Schonberg and Stravinsky, but not influencing the trend of music because most of his works were unpublished, they were very little known until 1939, when performance of his second piano sonata, *Concord, Mass , 1840-60*, won him wide recognition In 1947 his Third Symphony was awarded the Pulitzer Prize He is the composer of symphonies, orchestral suites, including *Three Places in New England*, sonatas, organ pieces, choral works, a great deal of chamber music, and about 150 songs He often uses American folk music in his compositions and evokes the spirit of various aspects of American life, such as revival meetings and Negro life Some consider him America's greatest composer

Ives, Frederic Eugene, 1856–1937, American inventor, b Litchfield, Conn A pioneer in the development of orthochromatic and trichromatic photography and of photoengraving, he produced in 1881 the first set of trichromatic plates In 1878 he devised the first practical half-tone process of photoengraving, developing it in 1886 to the process which came into general use Among his other inventions are the short-tube, single-objective binocular microscope, the parallax stereogram, and a process for moving pictures in natural colors. He wrote *Autobiography of an Amateur Inventor* (1928) His son **Herbert Eugene Ives**, 1882–, b Philadelphia, inventor and physicist, is active in the development of television and the transmission of pictures via telephone wires

Ivigtut (ē'vĭgtōōt), town (pop 141), on SW Greenland, a port c 75 mi SE of Frederikshaab It has the world's largest cryolite mine. In the Second World War a U S military base was set up here

Iviza, Span *Ibiza* (both ēvē'thä), island (221 sq mi , pop. 33,961), Baleares prov , Spain, one of the BALEARIC ISLANDS The town of Iviza (pop 9,644) is the capital Many Phoenician tombs have been found on the island

Ivo of Chartres, Saint (ī'vō, ahär'trŭ), d. 1115 or 1116, French churchman, bishop of Chartres (after 1090). He was fearlessly outspoken and was im-

prisoned for heading the ecclesiastical opposition to the irregular second marriage of King Philip I. He worked to obtain a compromise in the imperial struggle over investitures His principal fame was for his knowledge of CANON LAW His *Decretum* and *Panormia*, collections of canons, were perhaps the most extensive until supplanted by the work of GRATIAN.

Ivory, type of dentine present only in the tusks (prolongations of the upper pair of second incisors) of the ELEPHANT Formerly the term *ivory* was applied to the tooth structure of many animals, especially the hippopotamus, walrus, narwhal, sperm whale, and wild boar In commerce, ivory is classified as green (from recently killed animals) and dead (tusks long stored or on the ground for extended periods and lacking in great measure the oily substance giving resiliency to green ivory) Much dead ivory is obtained, especially in Siberia and Alaska, from fossil deposits of the extinct mammoth Africa, the principal source of supply of ivory, furnishes the best and largest tusks Tusks of about 55 lb apiece are common, although weights of over 200 lb have been recorded The straighter tusks can be worked with less waste "Soft" ivory, mellow in tone and easy to work, comes from the eastern half of the continent, and the more translucent and brittle "hard" ivory from the western half For centuries the Arabs, based in Zanzibar, controlled the ivory trade For 200 years the Portuguese fought to maintain a foothold They were followed by Dutch, English, French, and American traders, but the Arabs retained control in the central section until the late 19th cent. Commerce in early times was comparatively equitable, but the introduction of firearms permitted complete dominance over native forces The Arab trade became cruel and oppressive, and traffic in slaves, who carried the ivory to the coast, was extensive The Arab power was finally broken by the British, Belgians, and Germans, who regulated the ivory trade in their colonies Asiatic ivory is inferior to the African, it is less close in texture and has a whiter tone, which yellows quickly, and a greater tendency to split or warp India does not provide its own requirements and is a heavy importer The leading ivory markets are Antwerp and London The chief commercial uses are for piano keys, billiard balls, handles, and minor objects of decorative value Scraps and powder are carbonized for use in ink and artists' pigments Large surfaces suitable for veneer are obtained by cutting spiral sheets around the tusk Ivory is valued in art for its close-grained texture, adhesive hardness, mellow color, and pleasing texture It is an excellent material for miniature painting and for carving and turning and has been extensively employed through the ages for inlay work, for carvings of the finest character, and for statuary Its use dates back to the earliest records left by man Incised representations of animals upon tusks of the mammoth are among the earliest evidences of the development of prehistoric peoples, and the civilizations of Egypt, Mesopotamia, Assyria, Babylon, Attica, Crete, and Cyprus are represented by works in ivory, while biblical references point to its use from the time of Solomon Ivory was used by the foremost sculptors of Greece in their colossal statues of the gods The Romans used it lavishly and diffused it throughout Europe Especially characteristic were the diptychs reserved for consular gifts In India, ivory carving and turning have been practiced from time immemorial, while in China and Japan ivory has been used for inlay and small objects, especially for statues and carvings of rather diminutive size but great precision and beauty of detail Byzantine and early Christian art included a large amount of carved ivory work of religious application and was followed, in the Renaissance, by a prolific output exhibiting great skill in the production of statuettes, caskets, inlay work, and articles of furniture The diminishing supply of ivory and its high cost have encouraged the making of celluloid and other imitations Vegetable ivory (tagua) has long been used as a substitute See G C Williamson, *The Book of Ivory* (1938)

Ivory Coast, Fr *Côte d'Ivoire* (kōt" dēvwär'), overseas territory (c 121,000 sq mi , pop c 2,031,000), French West Africa, on the Atlantic coast The capital is Abidjan The Ivory Coast is bordered by Liberia and French Guinea on the west, by French Sudan and Upper Volta on the north, and by the Gold Coast on the east The country is divided into a coastal lowland (c 40 mi wide), a densely forested plateau, and high savannas There is heavy rainfall, especially along the coast Exports include cotton, cacao, palm oil, and hardwoods. Livestock is raised in the savannas Abidjan, the coastal terminus of the country's only railroad, is the chief port. The Portuguese established trading settlements on the Ivory Coast in the 16th cent They were ousted by other powers, and in the mid-19th cent France established a protectorate over the coastal zone The inland areas were acquired later in the 19th cent by treaty and by conquest. Today the Ivory Coast is represented in the French parliament.

Ivory nut · see TAGUA.

Ivrea (ēvrā'ä), town (pop 8,737), Piedmont, NW Italy, on the Dora Baltea where it enters the plain A Roman town, it was the seat of a marquisate in the Middle Ages, its lord, Berengar II, made himself king of Italy in 950 It became a possession of the house of Savoy in the 14th cent The city is dominated by the picturesque castle of the Conte Verde (1358) with its four red brick towers

Ivry-la-Bataille (ēvrē'-la-bätä'yü), village (pop 1,279), Eure dept , N France, near Evreux Before his victory here (1590) over the Catholic League (see LEAGUE), Henry IV issued the gallant order, "If you lose your standards, follow my white plume!"

Ivy, name proper to the ENGLISH IVY but shared by various other plants, usually climbing or trailing Among these are POISON IVY, Japanese ivy or BOSTON IVY, American ivy or VIRGINIA CREEPER, GROUND IVY, Kenilworth ivy (*Cymbalaria muralis* or *Linaria cymbalaria*), a delicate house or garden plant common to old ruins in Europe, and grape ivy (*Cissus*, or *Vitis*, *rhombifolia*), a house plant

Iwakura, Tomomi or **Tomoyushi, Prince** (tōmō'-mē, tōmoi'yōōshē, Iwä'kōōra), 1835–83, Japanese statesman A member of the old court nobility, he supported the Meiji restoration and became a minister of state (1871–83) In 1871 he headed a mission to Europe and the United States which failed to secure abolition of the unequal treaties but brought back much useful information on foreign institutions In the controversy over war with Korea in 1873 he supported the peace party

Iwasa Matabei (ēwa'sa matabā'), c 1578–1650, Japanese landscape and genre painter, founder of the ukiyoye school of painting Matabei had a great number of disciples whose works have been frequently mistaken for his A self-portrait is owned by his descendants

Iwate (ēwa'tā), prefecture, N Honshu, Japan see MORIOKA, the capital

Iwo Jima (ē'wō jē'mu, ē'wō), Jap *Io-jima*, volcanic island (area c 8 sq mi , pop 1,051), most important and largest of the Volcano Islands in the W Pacific, c 145 nautical mi S of the Bonin Islands Mt Suribachi, 546 ft high, in the south is an extinct volcano There are sulphur mines and a sugar refinery In the Second World War the island, the site of a Japanese air base, was taken in Feb.-March, 1915, at great cost by U S forces The island was formerly called Sulphur Island

I W.W. see INDUSTRIAL WORKERS OF THE WORLD

Ixelles (ēksēl'), Flemish *Elsene* (ēl'sunu), commune (pop 92,266), Brabant prov , Belgium, a suburb of Brussels It has metal, chemical, textile, and other manufactures

Ixion (ĭk'sē un), in Greek mythology, king of the Lapithes Ixion murdered his father-in-law to avoid paying the bride price When no one on earth would purify him, Zeus took Ixion to Olympus and purified him While there Ixion attempted to seduce Hera, but Zeus created a phantom of her and by it Ixion became the father of the CENTAUR monsters As punishment for his impious act, Ixion was chained to a revolving, fiery wheel in Hades

Ixtaccihuatl, Iztaccihuatl, or **Iztaccíhuatl** (all ēs"tasē'watul) [Aztec, =white woman], dormant volcano, 17,342 ft high, central Mexico, on the border between Puebla and Mexico state, neighboring POPOCATEPETL Irregular in outline, it is also popularly known as the Sleeping Woman Its last eruption was in 1868

Ixtlilxōchitl, Fernando de Alva (fĕrnan'dō dā äl'va ēshtlēlshō'chētul), 1568?–1648?, Mexican historian, a lineal descendant of the Acolhua rulers Of his several writings, the *Historia chichimeca* (probably written 1610–40) is the most important, it contains valuable material on native culture The accuracy of his works is in dispute

Iyeyasu · see IEYASU

Izabal (ēsäbal'), lake, c 30 mi long and 15 mi wide, E Guatemala, largest in the country Known also as the Golfo Dulce, it drains to the Caribbean through the Golfete Dulce, a small adjacent lake, and the Rio Dulce, a broad tropical river In Spanish colonial times Lake Izabal was the scene of lively trading between the sea and the highlands, and the small town of Izabal on its south shore was a thriving port, constantly subject to raids in the 17th cent from English and Dutch buccaneers Today shipping is negligible, though LIVINGSTON, at the mouth of the Rio Dulce, is of some importance Near by are many pre-Columbian ruins, the most outstanding being at Quriguá.

Izalco (ēsäl'kō), volcano, 7,828 ft high, W Salvador Constantly active and still increasing in height, it is sometimes called the Lighthouse of the Pacific Occasionally there have been severe eruptions

Izard, George (ī'surd), 1777–1828, American army officer, b England He spent part of his childhood in America, had his military education in Europe, returned to the United States, and was an officer in the War of 1812 In Aug., 1814, he succeeded Gen Jacob J BROWN in command of the Niagara frontier He was appointed governor of Arkansas Territory in 1825

Izard, Ralph, 1742–1804, American Revolutionary statesman, b near Charleston, S C After an education in England, he returned (1764) to South Carolina but in 1771 again went to London Because of his sympathy with the colonial cause, Izard moved to Paris Appointed (1777) commissioner to Tuscany by the Continental Congress, he was not received by that government but felt that, as an American diplomat, he should take part in American negotiations with France and thus won the enmity of Benjamin Franklin Izard's connection with the De Lanceys, New York Loyalists, led to accusations that he was a Tory, but his sincere devotion to the patriot cause was demonstrated, and after his return (1779) to America he served in the Continental Congress (1782–84) and the U S Senate (1789–95)

Izehar (ĭz'här) or **Izhar** (ĭz'här) [Heb , =oil], grandson of Levi 1 Chron 6 2,18,38, 23 12,18, Ex. 6 18,21, Num 3 19 Amminadab 1 Chron 6 22

Izhevsk (ē'zhĭfsk), city (pop 175,740), capital of Udmurt ASSR, E European RSFSR It has machinery, arms, and other manufactures

Izmail (ēzmŭēl'), city (1930 pop 24,998, 1941 pop 17,569), capital of Izmail oblast, SW Ukraine, in Bessarabia, on an arm of the Danube delta and on the Rumanian border It is a commercial center and a naval base First mentioned in the 16th cent , it soon became a strong Turkish fortress It was twice captured (1770, 1790) by the Russians in the Russo-Turkish Wars of Catherine II The second assault, which was very costly, was directed by Suvarov Izmail passed (1812) to Russia with Bessarabia, was ceded (1856) to Moldavia, reverted (1878) to Russia, was seized (1918) by Rumania, was ceded (1940) to Russia, was reconquered (1941) by Rumania, and was ceded again to the USSR in the Rumanian peace treaty of 1947 Its Rumanian name is Ismail There are ruins of a 15th-century Turkish citadel

Izmir, Turkey see SMYRNA

Izmit (ĭzmēt'), city (pop 28,352), NW Turkey, a port on the Bay of Izmit, on the Asiatic side of the Sea of Marmara It is the center of a rich tobacco district and has paper mills and breweries The city occupies the site of ancient NICOMEDIA Its name also appears as Ismid

Iznik, Turkey see NICAEA

Izrahiah (ĭz"ruhī'ù) [Heb , =God makes to spring up], chief man of Issachar 1 Chron 7 3

Izrahite (ĭz'ru-), patronymic see ZERAH 1

Izri (ĭz'rī), temple musician 1 Chron 25 11. In verse 3 he is called Zeri

Iztaccihuatl see IXTACIHUATL

Izumo see TAISHA

Izu-shichito (ē'zōōshĭchētō), island group, extending c 300 mi S of Tokyo Bay, Japan O-SHIMA is the largest of these volcanic islands, formerly used as penal settlements

Izvolsky, Aleksandr Petrovich (ülyĭksän'dur pētrō'-vĭch ēzvōl'skē), 1856–1919, Russian statesman He rose in the diplomatic service and in 1906 was appointed foreign minister He secured a rapprochement with Japan, in 1907 he reached an agreement with Great Britain ending the rivalry between the two powers in Persia (which was divided into a Russian and a British zone of influence), in Afghanistan (which was placed in the British zone of influence), and in Tibet (which was declared neutral) In 1908, however, he received a humiliating setback when Austria annexed Bosnia and Hercegovina (see AEHRENTHAL, ALOIS LEXA, GRAF VON) In retaliation, Izvolsky encouraged Pan-Slavism and, apparently considering war with Germany as inevitable, endeavored to weld the Triple Entente into a formidable alliance to oppose the Triple Alliance (see TRIPLE ALLIANCE AND TRIPLE ENTENTE) Appointed (1910) ambassador to France, he continued to direct Russian foreign policy After the Russian Revolution he remained in France, where he died See his memoirs (Eng tr , 1920), Friedrich Stieve, *Izvolsky and the World War* (Eng. tr , 1926)

J

J, 10th letter of the ALPHABET, a Western European formal development of I, with which it was formerly quite interchangeable in writing

Jaakobah (jā″ŭkō′bu), prince of the family of Simeon 1 Chron. 4 36

Jaala or **Jaalah** (both jā′ălu) [Heb ,=wild she-goat], postexilic family Ezra 2 56, Neh 7.58

Jaalam (jā-ā′lum, jā′ulŭm), son of Esau. Gen. 36 5,14,18, 1 Chron 1 35

Jaanai (jā′ănī, jā-ā′nī) [Heb ,=whom God answers], chief Gadite 1 Chron 5 12

Jaare-oregim (jā′rē-ôr′ĕgĭm), father of David's man Elhanan 2 Sam 21 19 Jair 1 Chron 20 5

Jaasau (jā′ăsô) [Heb ,=God makes], Jew who had married a foreign wife Ezra 10.37.

Jachin and Boaz (bō′ăz), two pillars in front of Solomon's Temple, probably symbolic of God's presence 1 Kings 7 21, 2 Chron 3 17

Jachymov, Czech *Jáchymov* (yā′khĭmôf), Ger *Joachimsthal* (yō′ăkhĭmstal″, yōă′-), town (pop 6,806), NW Bohemia, Czechoslovakia, in the Ore Mts It has lead, silver, radium, and uranium mines and radioactive springs Silver was intensively mined here after the 16th cent, but its present output is negligible Pitchblende is mined in quantity The word *Thaler*, from which *dollar* is derived, is an abbreviation of Joachimsthaler, a coin first struck here in the 16th cent

jacinth: see HYACINTH, gem.

jackal (jă′kôl), nocturnal wild mammal (genus *Canis*) of the dog family, found in SE Europe, in Asia, and in Africa It eats carrion and plant food but also preys on large and small animals, often hunting in packs Jackals resemble wolves but rarely exceed 25 lb. in weight They can be tamed as pets.

jack-in-the-pulpit or **Indian turnip**, American woodland herb (*Arisaema triphyllum*) The small true flowers are borne on a club-shaped spadix (Jack) enveloped by an arching purplish-striped spathe (the pulpit), the fertile ones producing a cluster of red berries The starchy corms are extremely acrid raw but when cooked or dried were eaten by the Indians; they were formerly used medicinally

Jackman, Wilbur Samuel, 1855–1907, American educator, b Mechanicstown, Ohio, grad Harvard, 1884 He became a teacher of natural science in the Central High School of Pittsburgh; his work there attracted the attention of Francis W Parker, who in 1889 invited him to the Cook County Normal School, Chicago, then a center of reform in both methods and curriculum Jackman was a leader of the nature study movement in elementary schools, and, beginning with *Nature Study for the Common Schools* (1891), he wrote a number of texts and manuals, besides articles in educational journals He was appointed dean of the new college of education in the Univ of Chicago in 1901 but resigned in 1904 to become principal of the University Elementary School and to edit the *Elementary School Teacher*

Jackman, plantation (pop 1,069), NW Maine, a port of entry 15 mi. from the Que line It is a center for hunting, fishing, camping, and lumbering.

jack rabbit see HARE

Jacks, Lawrence Pearsall, 1860–, English philosopher and Unitarian clergyman He was principal of Manchester College, Oxford, from 1915 to 1931 and professor of philosophy there from 1903 His editorship of the *Hibbert Journal* began with its founding in 1902 His numerous works include *The Challenge of Life* (1924), *The Faith of a Worker* (1925), *Heroes of Smokeover* (1926), *Magic Formula* (1927), *Education of the Whole Man* (1931), *Co-operation or Coercion?* (1938), and *Confession of an Octogenarian* (1942)

Jacksboro, city (pop 2,368), co seat of Jack co, N Texas, SSE of Wichita Falls and NW of Fort Worth, inc 1899 It grew near the frontier army post, Fort Richardson, founded in 1867 It ships cattle, mohair, and turkeys and has an oil refinery and flour mills

jackscrew, see SCREW

Jackson, Abraham Valentine Williams, 1862–1937, American Orientalist, b New York city, grad Columbia (B A , 1883, M A , 1884, Ph D , 1886) He also studied at the Univ of Halle From 1895 to 1935, when he became professor emeritus, he taught at Columbia His particular interest was Persia, and he became a great authority in his day on ancient Persian religion, language, and literature as well as the modern Parsis

Jackson, Andrew, 1767–1845, 7th President of the United States (1829–37), b Waxhaw settlement on the border of South Carolina and North Carolina (both states claim him) A child of the backwoods, he lost his father when he was two years old and his two brothers and his mother in the American Revolution and was left alone at 14 Already he had begun his long military career by fighting against the British in a skirmish at Hanging Rock and had been captured with his brother and imprisoned at Camden, S C After reading law at Salisbury, N C , he was admitted to the bar in 1787 and practiced in the vicinity until he was appointed solicitor for the western district of North Carolina (now Tennessee) In 1788 he moved west to Nashville There he prospered in law practice and land speculation until the Panic of 1795 struck him hard, leaving him with little more than his estate, the HERMITAGE, on which he lived as a cotton-planter during the intervals of his political career until his death, there he is buried He married Rachel Donelson before she had secured a legal divorce from her first husband, and, though the ceremony was later repeated, his enemies made capital of the circumstance He rose in politics, was a member of the convention that drafted the Tennessee Constitution, and was elected (1796) as the sole member from the new state in the House of Representatives The next year when his political chief, William Blount, was expelled from the Senate, Jackson resigned and, to vindicate his party, ran for the vacant seat He won, but in 1798 he resigned after brief and undistinguished service From 1798 to 1804, however, he served notably as judge of the Tennessee superior court He was highly popular In 1802 he was chosen as major general of the state militia, but his private life was not further interrupted until in the War of 1812 he was sent (1813) as commander of western volunteers, to suppress the rebellion of the Creek Indians in Mississippi Territory He defeated the Creek warriors at Horseshoe Bend (March, 1814) after a strenuous campaign and won the rank of major general in the U S army He was given command of an expedition to defend New Orleans against the British The decisive victory gained there over seasoned British troops under Gen Edward Packenham, though it came after peace had already been signed in far-off Europe, made Jackson the one great military hero of the War of 1812 In 1818 he was sent to punish the Seminole who were raiding settlements near the Florida border, but, misinterpreting orders, he crossed the boundary line, captured Pensacola, and hanged two British subjects as punishment for their stirring up the Indians He thus involved the United States in serious trouble with both Spain and Great Britain John Q Adams, then Secretary of State, was the only cabinet member to defend Jackson, but the conduct of Old Hickory, as Jackson was called by his admirers, pleased the people of the West Jackson was now on the threshold of his greater career A brief interlude after he was appointed (1821) first American governor of Florida was of no consequence Jackson, not liked in the territory and not liking the territory, resigned He moved fully on the national scene as the standard-bearer of one wing of the Democratic party The hero of the democratic West, an expansionist, and a man of action, he was the leader of what came later to be called Jacksonian democracy—government for the good of the small man, of the frontier farmer and the backwoodsman, the laborer and the mechanic of the Eastern cities He was hostile to all vested interests and a strong believer in individual freedom His appeal was to artisan and farmer, and therefore he was viewed with suspicion by the mighty and by the more established leaders, who saw him as an upstart He rode on a wave of popularity that almost took him into the presidency in the election of 1824, but his strength was not quite great enough The vote was split with Henry CLAY and John Quincy ADAMS, and when the election was decided in the House of Representatives, Henry Clay threw his influence to Adams, and Adams became President The frustration and the anger of the Jacksonians were great By the time the election of 1828 had arrived, Jackson's cause was more assured John C. CALHOUN, who was the candidate for Vice President with Jackson, brought most of William H Crawford's former following to Jackson, while Martin VAN BUREN and the Albany Regency swung liberal-controlled New York state to him The result was a sweeping victory, Jackson polled four times the popular vote that he had received in 1824 His inauguration brought the "rabble" into the White House, to the distaste of all aristocrats The fundamental issues of his administration were those arising from conflict between the settled proponents of order and the rather disorderly reformers There was a strong element of personalism in the rule of the hot-headed Jackson, and the KITCHEN CABINET—a small group of favorite advisers—was powerful Vigorous publicity and violent journalistic attacks on anti-Jacksonians were ably handled by such men as the elder Francis P BLAIR, Duff GREEN, and Amos KENDALL The party was paramount and party members were rewarded with government posts in what came to be known as the SPOILS SYSTEM Personal relationships were of utmost importance and the social slights suffered by the wife of Secretary of War, John H Eaton (see O'NEILL, MARGARET), helped to break up the cabinet The part that this incident played in alienating Calhoun has often been exaggerated, as has the importance of Calhoun's public criticism of Jackson for the all-but-forgotten Florida affair The issue was more fundamental Calhoun and the South generally felt threatened by the protective tariff that favored the industrial East, and Calhoun evolved the doctrine of NULLIFICATION and resigned from the vice presidency Jackson stood firmly for the Union and had the Force Bill of 1833 (see FORCE BILL) passed to coerce South Carolina into accepting the Federal tariff, but a compromise tariff was rushed through and the affair ended Jackson, on the other hand, took the part of Georgia in the Georgian insistence on states' rights and the privilege of ousting the Cherokee, he refused to aid in enforcing the Supreme Court's decision against Georgia, and the Indians were removed More important than the estrangement of Calhoun was Jackson's long fight against the BANK OF THE UNITED STATES. Though its charter did not expire until 1836, Henry Clay succeeded in having a bill to recharter it passed in 1832, thus bringing the issue into the 1832 presidential election Jackson vetoed the measure, and the powerful interests of the bank were joined with the other opponents of Jackson in a bitter struggle with the anti-bank Jacksonians Jackson in the election of 1832 triumphed over Clay. His second administration—more bitterly resented by his enemies than the first—was dominated by the bank issue Unstayed by the objections of others, Jackson promptly removed the funds from the bank and put them in chosen state banks (the "pet banks"). Secretary of Treasury Louis MCLANE refused to make the transfer as did his successor W J. DUANE, but Roger B TANEY agreed with Jackson's views and made the transfer (see also INDEPENDENT TREASURY SYSTEM). Jackson was a firm believer in a specie basis for currency, and the Specie Circular in 1836, which stipulated that all public lands must be paid for in specie, broke the speculation boom in Western lands, cast suspicion on many of the bank notes in circulation, and hastened the Panic of 1837 The panic, which had some of its roots in earlier crop failures and in overextended speculation, was a factor in the administration of Martin Van Buren, who was Jackson's choice and successful candidate for the presidency in 1836

Jackson retired to the Hermitage and lived out his life there, still despised as a high-handed and capricious dictator by his enemies and revered as a forceful democratic leader by his followers. Although he was a representative of the raw frontier, Jackson was personally dignified, courteous, and gentlemanly—with a devotion to the "gentleman's code" that led him to fight several duels in his life See biographies by J S Bassett (1911) and Marquis James (1933–37), A. M. Schlesinger, Jr., *The Age of Jackson* (1945).

Jackson, Charles Samuel, 1800–1924, American newspaper publisher, b Virginia He went to Oregon in 1880 and for 20 years published the *East Oregonian* at Pendleton In 1902 he took over a Portland paper, renaming it the *Oregon Journal* He was a forceful editor and crusaded for popular government and the secret ballot His journal was a power in the movement for the program which made up the Oregon System, including initiative, referendum, and recall, direct primaries, and popular election of U.S Senators He advocated the income tax, tax reforms, woman suffrage, welfare legislation, and municipal reform His paper, with its independence, usually supported Democratic candidates, thus opposing the Republican *Oregonian*. Jackson donated to Oregon the site of Sam Jackson Park.

Jackson, Charles Thomas, 1805–80, American physician and scientist, b Plymouth, Mass, M D Harvard, 1829 He studied in Europe and returned to Boston to practice He became a consulting chemist and geologist and carried out official, but somewhat superficial, geological surveys of Maine, Rhode Island, and New Hampshire He had a penchant for original investigation and a mind fertile in ideas he claimed to have suggested to Morse the principle of the telegraph Jackson had discovered, as had others, the anesthetizing properties of ETHER and suggested its use to W. T G MORTON A bitter rivalry grew up between the two men over credit for the discovery Jackson's claim was recognized in Europe, but he later withdrew from the controversy in favor of C W. LONG His last years were clouded by mental illness

Jackson, Chevalier, 1865–, American bronchoscopist, b Pittsburgh, M D Jefferson Medical College, Philadelphia, 1886 Specializing in surgery of the larynx, bronchial tubes, and esophagus, he trained many doctors in his methods He perfected the technique of removing foreign bodies from the respiratory tract by means of the bronchoscope and from the digestive tract by the esophagoscope His writings include *Bronchoscopy, Esophagoscopy, and Gastroscopy* (1934), *The Foreign Body in Air and Food Passages* (1934), and an autobiography (1938) With his son, Chevalier L Jackson, he wrote *Cancer of the Larynx* (1939) and *Diseases of the Nose, Throat, and Ear* (1945)

Jackson, Claiborne Fox, 1806–62, governor of Missouri, b Fleming co, Ky In 1822 he moved to Missouri, and there he practiced law Speaker of the state legislature (1844–46), he later was a leader of the proslavery Democrats who eventually defeated Sen Thomas H BENTON Elected governor in 1860, Jackson recommended the calling of the state convention which voted down both secession and coercion of the South (1861) He attempted to arm the state militia from the Federal arsenal in St Louis but was frustrated by Francis P BLAIR and Nathaniel LYON Lincoln's request for troops was refused by Jackson, who characterized the Union cause as an "unholy crusade " Upon Lyon's seizure of Camp Jackson, the governor called for volunteers but was forced to withdraw with them to SW Missouri. When the convention, assuming constituent powers, deposed the state government, Jackson, at Neosho, convened (1862) a "rump" legislature, which, however, proved ineffective

Jackson, Frederick George, 1860–1938, British arctic explorer In 1893–94 he explored the tundra in arctic Russia and in Lapland, and he commanded (1894–97) the Jackson-Harmsworth expedition which explored Franz Josef Land His chance encounter (1896) with Fridtjof Nansen and F H. Johanson, who were returning by sledge from their attempted journey to the North Pole, probably saved the lives of these explorers His books include *The Great Frozen Land* (1895) and *A Thousand Days in the Arctic* (1899)

Jackson, Frederick John Foakes-, 1855–1941, theologian and church historian, b. England A fellow of Jesus College, Cambridge Univ, from 1886, he was lecturer there from 1882 and dean from 1895 to 1916 From 1916 to 1934 Foakes-Jackson was Briggs professor of Christian institutions in Union Theological Seminary, New York city His many books include *Introduction to the History of Christianity, A.D 590–1314* (1921), *Biblical History of the Hebrews to the Christian Era* (4th ed , 1921), *History of the Christian Church from the Earliest Times to A D 461* (7th ed , 1924), *Studies in the Life of the Early Church* (1924), *St. Paul, the Man and the Apostle* (1926), *Peter, Prince of Apostles* (1927), and *A History of Church History. Studies of Some Historians of the Christian Church* (1939).

Jackson, Helen (Fiske) Hunt, 1830–85, American writer, whose pseudonym was H.H., b. Amherst, Mass She was a school friend of Emily Dickinson After the death in 1863 of Major Edward B Hunt, her first husband, Mrs Hunt was encouraged by T W Higginson to write for periodicals Her *Verses* (1870) and *Sonnets and Lyrics* (1886) pleased many critics, including Emerson, and she also wrote novels, children's stories, and travel sketches In 1875 she married a Colorado banker, W. S Jackson She published a historical account of the government's injustice to American Indians, *A Century of Dishonor* (1881), served as government investigator of the Mission Indians of California, and, when no action was taken on her report, wrote her famous romance *Ramona* (1884) on the Indian problem See biography by Ruth Odell (1939)

Jackson, Henry Rootes, 1820–98, American lawyer, diplomat, and Confederate general, b Athens, Ga , grad Yale, 1839 He was admitted to the bar in 1840, served in the Mexican War, and was judge of the superior court of Georgia (1849–53) He was chargé d'affaires and then minister at Vienna (1853–58) In the Civil War, Jackson was major general of Georgia state troops and later brigadier general in the Confederate army under J B Hood Captured at the battle of Nashville in Dec , 1864, he remained a prisoner for the rest of the war He was minister to Mexico for a short time in 1885

Jackson, Howell Edmunds, 1832–95, American jurist, b Paris, Tenn , grad Cumberland Univ., 1856 He practiced law in Jackson, Miss , and Memphis, Tenn He was elected (1880) to the state legislature and was (1881–86) U S Senator He resigned to become a U S circuit judge, and President Harrison in 1893 selected him, a moderate Democrat, for a Supreme Court vacancy Shortly before his death from tuberculosis, he dissented from the decision that held the income tax unconstitutional He was a quiet man and an able lawyer

Jackson, James, 1777–1867, American physician, b Newburyport, Mass , M D Harvard, 1809 At Harvard he taught in the reorganized medical school (1812–36) He learned the technique of vaccination in London and introduced it in Boston in 1800, a few months after the method had been used by Benjamin WATERHOUSE He was a founder of the Massachusetts General Hospital and author of a textbook on medical practice and of the lively *Letters to a Young Physician* (1855)

Jackson, John Adams, 1825–79, American sculptor, b Bath, Maine, studied in Boston and Paris His work was especially noted for correctness of anatomy He lived chiefly in Paris and in Florence. Among more than 100 portrait busts were those of Lyman Beecher and of Wendell Phillips (Boston Athenaeum) His *Eve and the Dead Abel* is in the Metropolitan Museum

Jackson, Patrick Tracy, 1780–1847, pioneer American cotton manufacturer With his brother-in-law, Francis C LOWELL, and with the assistance of Paul Moody, he established c 1813 at Waltham, Mass , a mill which combined all the operations necessary for converting the raw cotton to the finished fabric In 1821 he purchased land along the Merrimack river, establishing there the Merrimack Manufacturing Company, which was the beginning of the town of Lowell See C F Ware, *The Early New England Cotton Manufacture* (1931)

Jackson, Robert Houghwout (hou'ut), 1892–, Associate Justice of the U S Supreme Court (1941–), b Spring Creek, Center co , Pa He studied law at Albany Law School and Chautauqua Institution, was admitted (1913) to the bar, and practiced in Jamestown, N Y He became (1934) general counsel of the Bureau of Internal Revenue and, without benefit of a law degree, he efficiently served (1936–38) as Assistant Attorney General in charge of the antitrust division A strong advocate of New Deal policies, Jackson succeeded (1938) Stanley Reed as U S Solicitor General and argued many Supreme Court cases involving constitutional law He succeeded (1940) Frank Murphy as U S Attorney General, and in 1941 President Franklin D Roosevelt appointed him to the Supreme Court Here his opinions continued to reflect his opposition to monopolies He went on leave (1945–46) from the bench to be U S chief counsel at the Nuremberg war-crimes trial He wrote *The Struggle for Judicial Supremacy* (1940) and *The Case against the Nazi War Criminals* (1945)

Jackson, Samuel Macauley, 1851–1912, American Presbyterian clergyman and encyclopedist, b New York city, grad College of the City of New York, 1870, and studied at Princeton Theological Seminary (1870–71), at Union Theological Seminary (1871–73), and at the universities of Leipzig and Berlin He was associate editor in the preparation of the original *Schaff-Herzog Encyclopedia* (1884) and editor in chief of the greatly enlarged *New Schaff-Herzog Encyclopedia of Religious Knowledge* (13 vols , 1908–14) He also edited the *Concise Dictionary of Religious Knowledge* (rev ed , 1891) and the "American Church History" series (13 vols., 1893–97) Jackson was religious editor of several encyclopedias and dictionaries He wrote for the "Heroes of the Reformation" series, which he sponsored, a standard biography of Huldreich Zwingli (1901) The moving spirit of the American Society of Church History, he edited its papers.

Jackson, Sheldon, 1834–1909, American missionary and educator, b Montgomery co , N Y , grad Union College, 1855, and Princeton Theological Seminary, 1858 He became a Presbyterian home missionary in Minnesota and Wisconsin and after 1870 was missionary superintendent in the Rocky Mt area, editing the *Rocky Mountain Presbyterian* (1872–82) He established numerous churches In 1884 he went to Alaska as superintendent of missions, having already established missions and schools in that territory In 1885 he became the first federal superintendent of public instruction for Alaska with the task of organizing a free school system for Indian, Eskimo, and white children He succeeded in the next 20 years through work and travel in bringing school facilities to all corners of Alaska He urged the introduction and raising of reindeer in the territory to supplement the dwindling food resources and in 1892, with government aid, brought the first reindeer into Alaska from Siberia He aided in organizing the territorial government and in establishing mail routes He was active in Alaskan politics as the moving spirit in the "missionary" party He wrote numerous governmental and religious reports and *Difficulties at Sitka in 1885* (1886)

Jackson, Thomas Jonathan known as **Stonewall Jackson,** 1824–63, Confederate general, b Clarksburg, Va (now W Va), grad West Point, 1846 He served with distinction under Scott in the Mexican War and from 1851 to 1861 taught at the Virginia Military Institute He resigned from the army in Feb , 1852 At the beginning of the Civil War, Jackson, practically unknown, was made a colonel of Virginia troops and sent to command at Harpers Ferry After J E JOHNSTON superseded him there in May, 1861, he was given a brigade in Johnston's army and made a Confederate brigadier general At the first battle of BULL RUN, Jackson and his brigade earned their sobriquet by standing (in the words of Gen Barnard Bee) "like a stone wall" He was promoted major general, and in November, Johnston assigned him to command in the Shenandoah Valley Jackson's attack on Shields's division at Kernstown on March 23, 1862, was repulsed but forced the retention of Union troops in the valley In April, R E LEE suggested that Jackson fall upon Banks's force in the lower valley, hoping that McDowell's army would thereby be diverted from joining McClellan before Richmond (see PENINSULAR CAMPAIGN) Jackson's renowned Valley campaign resulted He first defeated part of Frémont's force at McDowell (c 25 mi W of Staunton) on May 8, 1862, and then, returning to the Shenandoah, routed Banks at Front Royal and Winchester (May 23–25) and drove him across the Potomac The Federal administration, fearing that Jackson would now advance on Washington, sent Shields from McDowell's army to join Frémont, advancing from the west, in cutting off Jackson Stonewall, however, retreated rapidly to the head of the valley and on June 8–9 defeated his pursuers in detail at Cross Keys and PORT REPUBLIC With the diversion a complete success, Jackson joined Lee in the SEVEN DAYS BATTLES After the brilliance of the Shenandoah campaign, his service in that week of fighting was disappointing But he soon redeemed himself The speedy turning movement executed by his "foot cavalry" against Pope late in Aug , 1862, set the stage for the crushing victory at the second battle of Bull Run, and in the ANTIETAM CAMPAIGN he marched promptly to Lee's aid after he had captured the Harpers Ferry garrison When Lee reorganized the Army of Northern Virginia after Antietam, he made Jackson commander of the 2d Corps, and Stonewall was promoted lieutenant general He ably commanded the Confederate right in the battle of FREDERICKSBURG in December In the battle of CHANCELLORSVILLE, Lee and Jackson repeated the tactics of second Bull Run Jackson's turning movement completely crumbled Hooker's right (May 2, 1863) When pressing on in the darkness Stonewall Jackson was mortally wounded by the fire of his own men His death was a severe blow to the Southern cause Jackson was a tactician of first rank and, though a strict disciplinarian, had the affection of his men His devout Calvinism, fighting ability, and arresting personal quirks make him probably the most interesting figure of the war He was Lee's ablest and most trusted lieutenant and, next to Lee, the South's greatest and most loved general The definitive biography is by G F R Henderson (2 vols , 1898, new ed , 1936) See also biographies by R L Dabney (1866), H A White (1909), and Allen Tate (1928), *Memoirs of Stonewall Jackson*, by his wife, Mary Jackson (1892), H K Douglas, *I Rode with Stonewall* (1940), D S Freeman, *Lee's Lieutenants* (3 vols , 1942–44)

Jackson, William Henry, 1843–1942, American artist and pioneer photographer of the West, b Keeseville, N Y After he served with the Union army in the Civil War he traveled (1866–67) overland to California, part of the way on a Mormon wagon train, and then (1868) settled in Omaha. Engaged in photography after 1858, Jackson devoted himself to recording picturesque and historic sites of

the West He photographed the building of the Union Pacific RR, the mining booms at Cripple Creek and Leadville, and the cliff dwellings at Mesa Verde His photographic series on the Yellowstone region was instrumental in having the area set aside as a national park He moved (1924) to Washington, D C , began painting, and at the age of 93 he executed a series of murals on the Old West for the new Dept of Interior Building See his autobiography, *Time Exposure* (1947), Clarence S Jackson, *Picture Maker of the Old West* (1947).

Jackson. **1** Town (pop 2,039), SW Ala., on the Tombigbee and N of Mobile, in a lumbering and farming area, settled in the early 19th cent , inc 1816. Salt Springs State Park and mineral wells are near by **2** City (pop 2,024), co seat of Amador co., central Calif , ESE of Sacramento, settled c.1848, inc 1905 It is a trading center and a mining town in an area which produces gold, farm products, clay, and marble **3** City (pop 1,917), co seat of Butts co , N central Ga , SE of Atlanta, inc 1826 It is a trade and processing center in a farm area Indian Springs State Park is near by **4** City (pop 2,099), co seat of Breathitt co , E Ky , on the Kentucky river and NW of Hazard It is a trade center for a mountain region with coal, timber, and farms At near-by Quicksand is a forestry experiment station of the Univ of Kentucky College of Agriculture **5** Town (pop 5,384), SE La , N of Baton Rouge A state mental hospital is here **6** City (pop 49,656), co seat of Jackson co , S Mich , on the Grand and W of Detroit, settled 1829, inc. as a village 1843, as a city 1857 It is an industrial and commercial center in a farming region dotted with lakes, and it manufactures automobile and airplane parts, radios, and machine tools A tablet marks the site of the founding in Jackson of the Republican party (July 6, 1854) Indian trails crossed here and numerous Indian relics are found in the vicinity A state prison is near by **7** City (pop 2,840), co seat of Jackson co , SW Minn , on the Des Moines river near the Iowa line, settled before 1857, destroyed in the Sioux outbreak of 1862, replatted 1866, inc 1881 It is a trade and distribution center for a farm area **8** City (pop 62,107), state capital, and a co seat of Hinds co , W central Miss , on the Pearl river It is the largest city and the railroad and shipping center of the state, with important industries centered around cotton, lumber, textiles, and natural gas Jackson has grown rapidly in recent years, the population having tripled since 1920 The site of the city, a trading post known as Le Fleur's Bluff, was chosen and laid out as the state capital in 1821 and named for Andrew Jackson, the legislature first met here in 1822, and the town was incorporated in 1833 In the Civil War it was a center of military activity in the VICKSBURG CAMPAIGN and was largely destroyed by Sherman in 1863 The old capitol (1839) is preserved, the new capitol was occupied in 1903 In the city are Millsaps College (Methodist, coeducational, opened 1892), Belhaven College (Presbyterian, for women, 1894), Jackson College (Negro, state supported, coeducational, 1877), several state institutions for the physically and mentally handicapped, the governor's mansion (completed 1842), an art gallery, the state fairgrounds, a notable Confederate monument, and the state museum and library Near by is Tougaloo College (Negro, Congregationalist, coeducational, 1867) **9** City (pop 3,113), co seat of Cape Girardeau co , SE Mo , founded c.1815 It is a trade and processing center in a farm and timber area and has shoe and brick industries **10** City (pop 6,295), co seat of Jackson co , S Ohio, SE of Chillicothe, founded 1817 and settled shortly after by Welsh immigrants Among its varied products are iron, prepared sand, lumber, clay, and packed meat Buckeye Furnace State Park, Leo Petroglyph State Park, and Canter's Cave are near **11** City (pop 24,332), co seat of Madison co , W Tenn , on South Fork of the Forked Deer river and NE of Memphis, settled 1819, inc as a town 1823, as a city 1845. It is a railroad center (with large repair shops), an industrial city with a variety of manufactures, and a shipping point for an extensive farm area Lane College (Negro, Methodist Episcopal, coeducational, 1882), Union Univ. (coeducational), and Lambuth College (coeducational) are here, as well as the West Tennessee Fairgrounds A monument (1947) marks the grave of "Casey" Jones, hero of the railroad ballad Near by are an experiment station of the Univ of Tennessee College of Agriculture and several Indian mounds **12** Resort town (pop 1,046, alt c 6,200 ft), co seat of Teton co , NW Wyo It is the trade center for the JACKSON HOLE hunting, dude-ranch, and livestock area Southern gateway to Grand Teton National Park, it is headquarters for Teton National Forest

Jackson, Port, or **Sydney Harbour,** inlet of the Pacific, E New South Wales, Australia, forming Australia's finest harbor Broken into many coves, it is 12 mi long, 1 5 mi wide at its mouth, and c.22 sq mi. in area Sydney on the south shore is connected with its north suburbs by Sydney Harbour Bridge (1932), with an arch span of 1,650 ft. In the inlet is Cockatoo Island with large shipyards. The port was an Allied naval base in the Second World War.

Jackson Hole, fertile valley, almost 50 mi. long and from 6 to 8 mi wide, NW Wyo , S of Yellowstone National Park and E of Grand Teton National Park It is watered by the Snake river Jackson Lake (18 mi long and 4 mi wide), through which the Snake flows, has since 1916 had a storage dam for controlling the flow of the river Abounding in game, especially elk, Jackson Hole has been visited by hunters and trappers since the trapper David Jackson wintered there in 1828–29 **Jackson Hole National Monument,** 173,064 62 acres, was authorized in 1943 A section of 1,500 acres at the north was set aside (1948) as Jackson Hole Wildlife Park and was stocked with deer, bison, antelope, elk, moose, and other animals native to the region This was donated by the Rockefeller family, who gave more land to the monument in 1949

Jacksonville. **1** City (pop 2,995), NE Ala., N of Anniston near U S Fort McClellan, in a cotton area A state teachers college is here **2** City (pop 173,065), co seat of Duval co , NE Fla , largest city in the state, on the St Johns river near its mouth on the Atlantic One of the most important Southern commercial centers on the Atlantic coast, it is a great rail, air, and highway center and a busy port of entry, with extensive freight-handling facilities Naval stores, lumber, farm and orchard produce, chemical products, and oil are the most important exports It is also a leading tourist resort, with easy access to hunting, fishing, and bathing areas Lewis Hogan settled here in 1816, and in 1822 the city was laid out on the site of a place known as Cowford, it was named for Andrew Jackson, first territorial governor of Florida, and was incorporated in 1832 The Seminole War and the Civil War (in which much of the city was destroyed) interrupted the city's growth With the building of a fine harbor and railroads in the late 19th cent , industry and commerce developed A fire in 1901 destroyed a large part of the city; it was quickly rebuilt South Jacksonville was annexed in 1932 Places of interest include the large public library, the municipal docks and yards, a war-memorial fountain, and the Confederate monument in Hemming Park Jacksonville has an important naval air training station (est 1940) **3** City (pop 19,844), co seat of Morgan co , W central Ill , W of Springfield, laid out 1825, inc 1840 It is a rail and trade center in a grain area One of the oldest cities in the state, it manufactures metal products and clothing, but is noted chiefly as an educational center Illinois College (coeducational, 1830) and MacMurray College for Women (Methodist, 1847) are here Among its residents were Stephen A Douglas and William Jennings Bryan. Lincoln was well known here The city was a station on the Underground Railroad Jacksonville is the seat of the state school for the deaf, the state school for the blind, and a state hospital for the insane **4** City (pop 7,213), E Texas, NE of Palestine, inc 1916 Founded in 1847, it was moved to its present site in 1872 and was a market for a pine-lumbering and farming region until truck growing made it prosperous after the 1920s Its packing sheds handle vast quantities of tomatoes each spring There are two junior colleges

Jacksonville Beach, city (pop 3,566), NE Fla , on the Atlantic coast ESE of Jacksonville, inc 1907. It is a popular resort

Jacob (jā'kŭb, jā'kūp) [Heb ,=supplanter] **1** Ancestor of the Hebrews, the younger of the twin sons of Isaac and Rebekah The older was Esau He got his brother's birthright by a bargain and, with his mother's help, received the blessing which the dying Isaac had intended for Esau His brother was so enraged at this that Jacob fled to his uncle in Padanaram On his way, at Bethel, he had a vision of angels ascending and descending the ladder to heaven After serving the crafty Laban for 20 years Jacob started back to the land of his fathers with his two wives, many sons, and rich possessions On the banks of the Jabbok he wrestled with an angel and received the name of ISRAEL Later, in the days of famine, he migrated with his family to Egypt and was reunited with his son Joseph Here in the land of Goshen he died, but they buried him in the family burying ground of Machpelah His sons were the ancestors of the 12 tribes of Israel Gen 25–50, Hosea 12 2–4,12, Mal 1 2, Acts 7.12-16, Heb 11 20,21. **2** Father of St Joseph Mat 1 15,16

Jacob, Max (mäks' zhäkôb'), 1876–1944, French writer and painter, b Brittany. He antedated—in his dream-inspired verse, plays, and novels—the symbolist and surrealist schools, but differed from later practitioners by his insistence on a belief in natural order and arrangement. Among his novels are *Saint Matorel* (1909), *Le Terrain Bouchaballe* (1923), and *Filibuth; ou, La Montre en or* (1924). His verse was published in *Fond de l'eau* (1927) and *Rivages* (1932) and in *La Défense de Tartufe* (1919), combining prose and poetry, and forms part of the play *Le Siège de Jérusalem drame céleste* (1912–14). He wrote also volumes of short stories, books of prose poems, and the influential study *Art poétique* (1922). He was a prolific writer and his posthumous publications number several volumes. In 1930 and 1938 he held one-man shows of his paintings in New York. After he experienced in the early 1900s two mystic visions of Christ, he was converted to Catholicism and used his religious experience as subject matter in his work. He died in a concentration camp

Jacobean style (jăkōbē'ăn), an early phase of the English Renaissance architecture and decoration. It formed a transition between the Elizabethan and the pure Renaissance style later introduced by Inigo JONES The reign of James I (1603–25), who was a disciple of the new scholarship, saw the first decisive adoption of Renaissance motives, in a free form communicated to England through German and Flemish carvers rather than directly from Italy Though the general lines of Elizabethan design remained, upon this distinctively English manner with its picturesque gables, massive chimneys, and mullioned bay windows were grafted the newly imported details Gothic influence ceased, yet suggestions of it lingered beneath the surface of the new manner Much use was made of columns and pilasters, round-arch arcades, and flat roofs with openwork parapets These and other classical elements appeared in a free and fanciful vernacular rather than with any true classical purity With them were mixed the prismatic rustications and the ornamental detail composed of scrolls, straps, and lozenges characteristic of Elizabethan design also Upon furniture and the decorative arts the manner made a similar imprint Increase of wealth and the abundant construction of colleges, hospitals, almshouses, and manors encouraged innovations Jacobean examples of note are Hatfield House, Hertford, Knole House, Kent, and Holland House by John Thorpe See J A Gotch, *Early Renaissance Architecture in England* (1901).

Jacobi, Abraham (jukō'bē), 1830–1919, American physician, b Westphalia, Germany, M D Bonn, 1851 After being imprisoned for participating in the Revolution of 1848, he escaped and in 1853 came to the United States He contributed to the advance of pediatrics as professor of diseases of children at New York Medical College (where in 1860 he opened the first pediatric clinic in the country) and at Columbia Univ (1870–1902) He was a founder and editor of the *American Journal of Obstetrics* and author of numerous works Mary Putnam Jacobi was his wife

Jacobi, Friedrich Heinrich (frē'drĭkh hĭn'rĭkh yäkō'bē), 1743–1819, German philosopher Though educated for commerce, he early gave up business and became in 1770 a member of the council for the duchies of Berg and Jülich A brilliant personality, he attracted to his home near Düsseldorf a notable literary and philosophic circle His later years were spent in Holstein and in Munich, where he was appointed (1807) president of the newly founded Academy of Sciences His collected works were published in 1812–25 Among them are *Briefe über die Lehre des Spinoza* (1785) and *David Hume über den Glauben, oder, Idealismus und Realismus* (1787) Jacobi criticized both Kant and Spinoza, arguing that philosophy cannot maintain distinct realms of existence and that it must be consistent and consider everything in the same cause and effect sequence If this is done, however, then the originality and individuality of our experiences are lost Jacobi's solution involved a unity and consistency based entirely on faith He felt that even immediate sense perception is miraculous Reason, then, must be restricted to its immediate material, and the ultimate reality is to be intuitively sensed See biography by Norman Wilde (1894), A W Crawford, *The Philosophy of F H Jacobi* (1905)

Jacobi, Karl Gustav Jakob (karl' gōōs'täf yä'kôp yakō'bē), 1804–51, German mathematician He was professor of mathematics at Königsberg (1827–42) He is noted for his work on elliptical functions, described in his *Fundamenta Nova Theoriae Functionum Ellipticarum* (1829), and on differential determinants and the theory of numbers

Jacobi, Mary Putnam (jukō'bē), 1842–1906, American physician, b England, grad Woman's Medical College of Pennsylvania, 1864, daughter of George P Putnam and wife of Abraham Jacobi The first woman student at the École de Médecine, Paris, and the first woman member of several medical societies, she was professor at the Woman's Medical College of the New York Infirmary and at the New York Post-Graduate Medical School Her writings are on medical subjects and on problems concerning women See her *Life and Letters* (ed. by Ruth Putnam, 1925)

Jacobins (jăk'ŭbĭnz), political club of the FRENCH REVOLUTION It was originally founded by the Breton deputies to the States-General of 1789, who met at the monastery of the Jacobins (Parisian name of Dominicans), whence their popular name Their chief purpose was to secure support for the group outside the Legislative Assembly Patriotic societies were formed in most French cities in affiliation with the Parisian club. The members were, for the most part, bourgeois and at first included such moderates as Mirabeau, Sieyès, and Lafayette The Jacobins exercised through their journals considerable pressure on the Legislative Assembly, in

which they and the FEUILLANTS were (1791–92) the chief parties They sought to limit the powers of the king, and many of them had republican tendencies The group split on the issue of royal power the majority, the GIRONDISTS, sought a foreign war to disgrace the monarchists, the minority, the Parisian group, opposed foreign wars and insisted on direct reform This latter group grew more radical, adopted republican ideas, and advocated universal manhood suffrage, popular education, and separation of Church and state, but adhered to fairly conservative economic principles In the National Convention the Jacobins and other extremist opponents of the Girondists, notably the CORDELIERS, sat in the raised seats and were called the MOUNTAIN Their leaders—DANTON, ROBESPIERRE, and SAINT-JUST among others—relied mainly on the strength of the Paris commune and the Parisian working class, while the Girondists drew their strength from the provinces After the fall of the Girondists (June, 1793), the Jacobins insured their power by instituting the REIGN OF TERROR Having suppressed the opposition of the right, the Jacobins triumphed over their rivals to the left in March, 1794, when HÉBERT and his followers were guillotined The struggle now became a personal quarrel between Robespierre and Danton Danton fell (April, 1794), and Robespierre headed a virtual Jacobin dictatorship His own fall on 9 THERMIDOR (July, 1794) meant the fall of the Jacobins, but their spirit lived on in revolutionary doctrine The party reappeared in the Directory and in altered form much later in the Revolution of 1848 See Crane Brinton, *The Jacobins* (1930)

Jacobite Church (jăk'ŭbīt), Christian church of Syria, Iraq, and India, regarded by Roman Catholics and the Orthodox as heretical It was founded (6th cent) as a Monophysite church in Syria by Jacob Baradaeus, greatly helped by Empress Theodora It is thus analogous in position to the Coptic Church, the Monophysite church of Egypt For many centuries the Jacobites were under Moslem dominion They had a tradition of scholarship, and Bar-Hebraeus was a Jacobite bishop Most Jacobites live in Iraq, their head (the patriarch of Antioch) lives at Homs They resemble other Eastern Christians in custom, their rite is the Antiochene or West Syrian, the liturgical language is Syriac Since the 17th cent there has been constant contact with Rome; as a result there is a community in communion with the pope having practices and rite in common with the Jacobites These "Syrian Catholics" number about equally with the Jacobites, their head, another patriarch of Antioch, lives at Beyrouth They have a separate church organization from the Melchites, Maronites, and Chaldean Catholics, which are other communities of Syria and Iraq in communion with Rome In Malabar, India, there is a Christian sect of "Malabar Jacobites", this group came into existence in the 17th cent , when the bulk of the Malabar Christians left the Roman communion and established relations with the Jacobite patriarch They now use the Antiochene rite, with some differences They are divided into two disputing jurisdictional parties, and there is a quasi-Protestant group of "Reformed Jacobites " In the 20th cent a large number of Malabar Jacobites entered into communion with the pope, retaining their liturgy and practices These "Malankarese Catholics" are ecclesiastically separate from both the Syrian Catholics, whose rite they share, and from the "Syro-Malabar Catholics" (Chaldean rite), who represent the Malabar Christians who did not leave the Roman communion when the Malabar Jacobites did See Donald Attwater, *The Christian Churches of the East* (1947, 1948)

Jacobites (jă'kŭbīts), adherents of the exiled branch of the house of STUART after the Revolution of 1688 They take their name from the Latin form (*Jacobus*) of the name of JAMES II, whom they sought to restore to the English throne Following the death of James II, the Jacobites advanced the claim of his son, James Edward STUART, the Old Pretender, and afterwards of his grandson, Charles Edward STUART, the Young Pretender, and of his descendants until the direct line ran out with Henry STUART (Cardinal York, d 1807), whom they styled Henry IX Thenceforth the claim passed to the descendants of Charles I through the line of his daughter, Henrietta Although this line still exists, no claim has been advanced since the time of Henry Stuart The political importance of the Jacobites falls between 1689 and 1745 The Bloodless Revolution of 1688 which replaced James II with WILLIAM III and MARY II left many partisans of James in the British Isles They were most numerous in Scotland, Ireland, N Wales, and N England The NONJURORS, who held the doctrine of nonresistance and refused the oath to William, were an important group. Many Jacobites were Roman Catholics, as were the Stuarts, many were high churchmen and extreme Tories who were opposed to the Whig leanings of the Hanoverians In 1689 James II attempted to reestablish himself in Ireland, where his cause was strong. He was defeated by William III at the battle of the Boyne (1690) and fled to France, although the earl of TYRCONNEL continued his efforts a few months The two major Jacobite risings in the 18th cent are known by their dates—"the '15" and "the '45 " Before the death of Queen Anne (1714) the Jacobites abroad had intrigued with Henry ST JOHN, Viscount Bolingbroke, hoping to crown the Old Pretender instead of George of Hanover (GEORGE I) at the queen's death When the plans failed, a rising was effected in Scotland (1715), led by "Bobbing John" (John Erskine, earl of MAR), with the cooperation from France of Bolingbroke Mar's hesitancy and military incompetence doomed the revolt, at Preston (in Scotland) the Jacobites capitulated to the English, Nov 13, 1715, and on the same day in an indecisive battle at Sheriffmuir the duke of Argyll defeated Mar's Jacobite forces. James Edward crossed from France in January and was proclaimed king, but his cause was already lost. He returned to France in February, spent a year in Avignon and the rest of his life in Italy An abortive invasion and rising under George Keith, Earl Marischal, was easily crushed by the government in 1719 In 1745, under cover of the English war with France, Charles Edward, the Young Pretender (Bonnie Prince Charlie), undertook another rising in favor of his father. He landed in W Scotland, gathered a Highland force, and was joined by Lord George MURRAY at Perth Victorious over Sir John Cope's English forces at Prestonpans (in N England) in Sept , 1745, Charles's army invaded England as far as Derby, thereby causing a near-panic in London Despite Charles's objections, his council of war decided to retreat because of lack of support from English Jacobites and French allies, and the action was skillfully carried out under Lord George Murray On April 16, 1746, the exhausted Jacobite troops were defeated by English soldiers under the duke of Cumberland at Culloden Moor Charles eventually escaped to France This was the end of Jacobitism as an important force and of the Scottish anti-Hanoverian movement Jacobite sympathies lingered, and Jacobite activities gave rise to much ballad literature and were the theme of such later literary works as Sir Walter Scott's *Rob Roy*, *Waverley*, and *Redgauntlet*, W M Thackeray's *Henry Esmond*, and R L Stevenson's *Kidnapped* See various histories of England and Scotland, special studies of the Jacobites and the risings by Charles S Terry (especially 1900 and 1922), F W Head (1901), and Sir Charles Petrie (1932, 1933, 1937), several editions of documents and documentary studies by Alistair Tayler and Henrietta Tayler, especially *1715 the Story of the Rising* (1936) See also W K Dickson, ed , *The Jacobite Attempt of 1719* (1894), George Menary, *Life and Letters of Duncan Forbes of Culloden* (1936)

Jacobs, Helen Hull, 1908–, American tennis player, b Globe, Ariz , studied at the Univ of California She won wide recognition on the courts by taking the U S women's singles title for four consecutive years (1932–35) and by beating Alice Marble for the British women's singles crown in 1936 In 1935 Miss Jacobs lost the British title to Helen Wills Moody in a heartbreaking defeat which saw her one game short of taking the match She was (1943–45) an officer in the Waves in the Second World War She wrote *Modern Tennis* (1933) and *Beyond the Game* (1936) and also several books under the pseudonym of H Braxton Hull

Jacobs, Joseph, 1854–1916, Jewish writer, historian, and folklorist, b Australia He lived in England until 1900, when he came to the United States to edit a revision of *The Jewish Encyclopedia* He was later a teacher at the Jewish Theological Seminary in New York city and editor of the *American Hebrew* His major contributions to Jewish history include *Jews of Angevin England* (1893), *An Inquary into the Sources of the History of the Jews in Spain* (1894), and *Jewish Contributions to Civilization* (1919), an incomplete fragment His *Story of Geographical Discovery* (1899) went through a number of editions From 1889 to 1900 Jacobs edited *Folk-Lore*, the journal of the Folk-Lore Society He also compiled several collections of fairy tales and edited scholarly editions of Aesop's fables (1889) and the *Thousand and One Nights* (6 vols , 1896)

Jacobs, William Wymark, 1863–1943, English author, b London His humorous short stories, chiefly of the London docks near which he spent his boyhood, appeared in the magazines *Idler* and *Today* His first collection, *Many Cargoes* (1896), is still one of his most popular books, and its success allowed him to leave his civil service job Among his other works are *The Skipper's Wooing* (1897), *Light Freights* (1901), *Salthaven* (1908), and the omnibus volume *Snug Harbour* (1931) "The Monkey's Paw" is a superlative horror story, his most famous one, and was adapted successfully for the stage by L N Parker, with whom Jacobs wrote several comedies as well

Jacobsen, Jens Peter (yĕns' pā'tûr yā'kôpsun), 1847–85, Danish novelist and poet His first great work was the historical romance *Marie Grubbe* (1876, Eng tr , 1925), a study of 17th-century life in Denmark His second novel, *Niels Lyhne* (1880, Eng tr , 1919), was followed by a volume of poems. Jacobsen was the creator of a new prose style in Danish, the effect of his work extended beyond his own country His collected works, containing a sketch by Georg Brandes, appeared in 1924–28 in four volumes See his *Letters to Edvard Brandes* (3d ed , 1925), Alrik Gustafson, *Six Scandinavian Novelists* (1940)

Jacobus de Voragine (jŭkō'bus dū vurăj'ĭnē), c 1230-1298, Italian hagiographer, b Varazze (then Voraggio), near Savona He became a Dominican in 1244, was provincial of Lombardy, and was archbishop of Genoa after 1292 He was noted for his piety and great charity, was beatified in 1816, and is revered as a saint in Genoa and Savona He is, however, remembered almost solely as the compiler of *The Golden Legend* (see GOLDEN LEGEND, THE)

Jacoby, Harold (jukō'bē), 1865–1932, American astronomer, b New York city, grad Columbia (B A , 1885, Ph D , 1895) He taught at Columbia from 1888 to 1930 and was acting director of the Columbia Observatory (1903–6), then director (1906–30) As assistant astronomer on the U S eclipse expedition of 1889–90, he went to West Africa on the U S S *Pensacola* Besides many technical papers on such subjects as stellar parallax, star clusters, and stellar photography, he wrote more popular articles and also books, including *Practical Talks by an Astronomer* (1891), *Astronomy a Popular Handbook* (1913), and *Navigation* (1917)

Jacopone da Todi (yäkōpō'nā da tō'dē), 1230?-1306, Italian religious poet, whose name was originally Jacopo Benedetti After the sudden death of his wife, he renounced (c 1268) his career as an advocate, gave his goods to the poor, and after 10 years of penance became a Franciscan tertiary He wrote many poems full of ardent mysticism and is probably the author of the hymn *Stabat Mater Dolorosa* See Evelyn Underhill, *Jacopone de Todi, Poet and Mystic* (with selections, 1919), Helen C White, *A Watch in the Night* (1933)

Jacquard, Joseph Marie (zhôzĕf' märē' zhäkär'), 1752–1834, French inventor, whose loom is of the greatest importance in modern mechanical figure weaving After several years of experimentation, he received a bronze medal for his model exhibited at the Industrial Exposition at Paris (1801) In 1806 his perfected loom was bought by the state and declared public property, and he was granted an annuity of 3,000 francs and a royalty on all looms sold The Jacquard LOOM, the first machine to weave in patterns, has had almost countless adaptations in modern textile industry

Jacque, Charles Émile (shärl āmēl' zhăk'), 1813–94, French landscape and animal painter of the Barbizon school He is known for his paintings of fowls and for his fine etchings Jacque is represented in the Luxembourg Museum, Paris, and the Louvre The Metropolitan Museum has several sheep pictures

Jacquemart, Albert (ălbĕr' zhăkmär'), 1808–75, French flower painter and art historian He wrote *Flore des dames* (1840), *Nouveau langage des fleurs* (1841), *Histoire artistique, industrielle et commerciale de la porcelaine* (with Edmond Le Blant, 1862), *Histoire de la céramique* (1873), and *Histoire de mobilier* (1876) The plates of the last three works were executed by his son, **Jules Ferdinand Jacquemart** (zhül' fĕrdēnā'), 1837–80, French etcher and water-colorist, a founder of the Société des Aquarellistes He also illustrated J F Loubat's *Medallic History of the United States of America, 1776–1876* (1878) The Metropolitan Museum has three water colors, *Japanese Art Objects*, *Landscape near Nice*, and *Flowers*

Jacquerie (zhăk'ŭrē') [Fr ,=collection of *Jacques*, which is, like *Jacques Bonhomme*, a nickname for the French peasant], 1358, revolt of the French peasantry, provoked by the pillaging exploits of bands of idle soldiers and the extortionate demands of the nobles Beginning in the district around Beauvais, the uprising spread over a wide area, castles were demolished, provisions stolen, and other acts of violence committed Their leader Guillaume Karle (or Cale), fell into the hands of Charles II of Navarre, who had him beheaded, and the mob was easily dispersed, the nobles taking their revenge by massacring thousands of the insurgents

Jacquin, Nikolaus Joseph von (nē'kōlous yō'zĕf fŭn zhäkē'), 1727–1817, Austrian botanist, b Holland He was sent by Emperor Francis I to America to collect plants for the royal gardens at Vienna, which he made among the most remarkable of his time He discovered and described many new plants and wrote numerous works on exotic and European flora

Jada (jā'-) [Heb ,=knowing], Jerahmeelite. 1 Chron. 2 28,32

Jadau (jā'dô), Jew who had married a foreign wife Ezra 10 43

Jaddua (jădū'u) [Heb ,=known] **1** High priest after the exile Neh 12 11,22 **2** Signer of the covenant Neh 10 21

jade, name given to either of two minerals used as gems The rarer variety of jade is jadeite, a sodium aluminum silicate belonging to the pyroxene group of minerals. Jadeite varies in color from

white to emerald green, the emerald-green variety being the most valued. The commoner and less costly variety of jade is nephrite, a calcium magnesium iron silicate, white to dark green in color Jade is prized by the Chinese and Japanese as the most precious of all gems, by the Chinese it is traditionally associated with the five cardinal virtues, charity, modesty, courage, justice, and wisdom It has been considered to have great medicinal qualities, to act as a general tonic, and when swallowed shortly before death to prevent decomposition of the body It was much used for implements by primitive people, especially in Mexico, Switzerland, France, Greece, Egypt, Asia Minor, and New Zealand Jadeite is found in Upper Burma, in Tibet, and in Yünnan prov, China, nephrite in New Zealand, Turkistan, Siberia, Alaska, China, and Silesia A number of other minerals are called varieties of jade, these include some found in the W United States and in Mexico See S C Nott, *Chinese Jade* (1937), J L Kraft, *Adventure in Jade* (1947)

Jadon (jā'dŏn) [Heb ,=judge], worker on the wall at Jerusalem Neh 3 7

Jadwiga (yadvē'gä), 1371–99, Polish queen (1383–99), daughter of King Louis I of Hungary She married (1386) Ladislaus Jagiello, grand duke of Lithuania (see Ladislaus II), in order to unite Poland and Lithuania and to convert the Lithuanians to Christianity Jadwiga restored to Poland the regions of Lvov and Galich (1387) and founded a theological college in Cracow (1397) She is nationally venerated as a saint See Charlotte Kellogg, *Jadwiga, Queen of Poland* (1936)

Jadwin, Edgar, 1865–1931, U S army engineer, b Honesdale, Pa, grad West Point, 1890 After having assisted (1907–11) General George W Goethals in building the Panama Canal, he was assigned to flood-control projects on the Tennessee and Ohio rivers In the First World War he commanded the 15th U S Engineers Regiment He secured (1928) congressional acceptance of an army engineer plan, largely his own, for Mississippi river flood control

Jael (jā'ĭl), heroine of the time of Deborah She murdered Sisera, her guest Judges 4, 5

Jaén (hāān'), city (pop 48,003), capital of Jaén prov, S Spain, in Andalusia The fertile agricultural region roundabout produces olive oil and wine Under Moorish rule Jaén was for a time the seat of a small Moorish kingdom It was conquered by Ferdinand III of Castile in 1246 There are remains of a Moorish castle and walls, an imposing cathedral (16th–18th cent), and several palaces

Jaffa (jă'fu, yä'fä), city (pop c 50,000), Israel, a port on the Mediterranean Sea It has rail and road connections with Jerusalem, for which it is the chief port In recent years the harbor of Jaffa has been much improved, and it can now accommodate large vessels Jaffa, then in Philistine territory, is mentioned in the Bible (2 Chron 2 16) as marking the boundary of the tribe of Dan, not until after the Captivity in Babylon did it become Hebrew territory Here Jonah set forth for Tarshish and St. Peter restored Tabitha to life The city frequently changed hands in the fighting between the Maccabees and the Syrians, and it was destroyed by Vespasian in A D 68 It was held by the Crusaders during most of the 12th cent It fell to Napoleon in 1799 In the First World War the British took it (1917) Most of its growth occurred in the 20th cent In 1947 and early 1948 there was sharp fighting between Jaffa, which was largely inhabited by Arabs, and the adjoining all-Jewish city of Tel-Aviv The Arabs in Jaffa surrendered on the day (May 14, 1948) that Palestine was partitioned In 1949 the government of Israel, disregarding the decision of the United Nations that Jaffa should be a port for the projected Arab state, proclaimed that Jaffa and Tel-Aviv were to be administered as a single municipality Jaffa is the Japho of Joshua 19 46, and in the Apocrypha it is often spelled Joppe Otherwise the spelling in the Bible is Joppa.

Jaffe, Bernard (jă'fē), 1896–, American teacher and writer, b New York city, grad College of the City of New York (B S., 1916), M A Columbia, 1922 A teacher from 1924 in the New York city high schools, he is noted for his popular works on science. These include *Crucibles* (1930, rev ed., 1948), *Outposts of Science* (1935), *New World of Chemistry* (1935), and *Men of Science in America* (1944)

Jaffna (jăf'nŭ), peninsula, the northernmost part of Ceylon, separated from India by Palk Strait The chief city is Jaffna (pop. 62,922). The peninsula is densely inhabited, largely by Tamil-speaking peoples There are remains of ancient culture as well as ruins left by the Portuguese and the Dutch occupation. Tobacco, rice, and yams are grown, and fishing is an important source of livelihood.

Jaffna moss· see AGAR

Jaffrey, town (pop. 2,879), SW N.H, near Mt Monadnock, granted 1749, settled c.1758, inc. 1773 It includes the business center **East Jaffrey** and the resort Jaffrey (scene of a three-day annual winter carnival), nearer the mountain.

Jagannath, India see PURI.

Jagatai (jăgŭtī'), d. 1242, Mongol conqueror; son of JENGHIZ KHAN. He led large armies on his father's conquests, and when the empire was divided in 1227 he was rewarded with most of Turkistan and with much territory to the north. Jagatai later relinquished rule to his brother Ogadai. In the early 14th cent. Jagatai's descendants divided his khanate into two sections, which often warred against one another. Most of the territory was reunited by TAMERLANE, who may have been related to the family ruling the western domain The khanate, much reduced in size and power, persisted for about a century after Tamerlane's death (1405) The name Jagatai is sometimes spelled Chagatai or Djagatai

Jagello: see JAGIELLO

Jägerndorf, Czechoslovakia see KRNOV

Jaggard, William, c 1568 1623, London printer and publisher Although it seems that he had previously pirated some of Shakspere's works, he was chosen by the editors, John Heming and Henry Condell, as publisher of the First Folio edition of Shakspere's plays He died before the work was completed To this book, undertaken after Jaggard became blind, are due the preservation of 18 of the plays and the correction of many textual errors in the plays printed in earlier editions, in quarto See E E Willoughby, *A Printer of Shakespeare* (1934)

Jagiello (yägyĕ'lô) or **Jagello** (yägĕ'lô), Pol *Jagiello* (yagyĕ'wô), dynasty which ruled POLAND and LITHUANIA from 1386 to 1572, Hungary from 1440 to 1444 and again from 1490 to 1526, and Bohemia from 1471 to 1526 It took its name from Ladislaus Jagiello, grand duke of Lithuania, who became (1386) king of Poland as LADISLAUS II His successors were LADISLAUS III (1434–44, as Uladislaus I also king of Hungary), CASIMIR IV (1447–92), John I (1492–1501), Alexander I (1501–5), SIGISMUND I (1506–48), and SIGISMUND II (1506–72), last ruler of the line A son of Casimir IV became king of Bohemia (1471) as Ladislaus II and king of Hungary (1490) as Uladislaus II, his son was LOUIS II of Bohemia and Hungary (1516–26) The female line of Jagiello merged with the Swedish house of Vasa through the marriage of Catherine, sister of Sigismund II, with John III of Sweden, their son was king of Sweden and of Poland (see SIGISMUND III) Under Jagiello rule Poland reached its golden age

Jagow, Gottlieb von (gôt'lēp fŭn ya'gō), 1863–1935, German diplomat and foreign minister (1913-16) He played an important part in the negotiations preceding the First World War He was unable to obtain the consent of Italy to renew the Triple Alliance

jaguar (jă'gwar), largest New World cat, ranging from the SW United States to S central Argentina The yellow fur is marked with black spots and rosettes Black jaguars occur in some litters The jaguar has a larger head and heavier build than the leopard Males reach 6 to 7 ft in length exclusive of the tail It preys on other animals

Jagur (jā'gur) [Heb ,=lodging place], unidentified town, S Palestine Joshua 15 21

Jah (jä), abbreviation of one of the reconstructions (Jahveh, Jahweh) of the ancient Hebrew ineffable name of GOD

Jahangir: see JEHANGIR

Jahath (jā'hăth) **1** Descendant of Gershom. 1 Chron 6 20,43 **2** Chief of a Gershonite family. 1 Chron 23 10 **3** Descendant of Judah 1 Chron 4 2 **4** Levite 1 Chron 24 22 **5** Temple overseer 2 Chron 34 12

Jahaz (jā'~), **Jahaza** (jăhā'zu), **Jahazah** (jăhā'zu), or **Jahzah** (jä'zu) [all Heb ,=low country], unidentified town, E of the Dead Sea. Here Israel defeated the Amorites Num 21 33, Deut 2 32, Joshua 13 18, 21 36, Judges 11 20, 1 Chron 6 78, Isa 15 4, Jer 48 21,34

Jahaziah (jā"hŭsī'u), one associated with Ezra in the expulsion of the foreign wives Ezra 10,15

Jahaziel (juhā'zēĕl, jā"hăsī'ul, jähā'zēĕl) **1** Man who joined David at Ziklag 1 Chron 12 4 **2** One who inspired Jehoshaphat to oppose the invading Ammonites 2 Chron 20 14 **3** Priest before the ark. 1 Chron 16 6 **4** Kohathite Levite 1 Chron 23 19, 24 23 **5** Head of a family which returned from the Exile Ezra 8 5

Jahdai (jä'dāī), Calebite 1 Chron 2 47

Jahdiel (jä'dĭĕl) [Heb ,=whom God rejoices], head of a Manassite family 1 Chron 5 24

Jahdo (jä'dō) [Heb ,=united], one of the tribe of Gad 1 Chron 5 14

Jahleel (jā'lēĕl) [Heb ,=hope in God], founder of a Zebulonite family. Gen 46.14, Num 26 26

Jahmai (jä'māī, jămā'ī) [Heb ,=God guards], head of the house of Tola 1 Chron 7 2

Jahn, Friedrich Ludwig (frē'drĭkh lōōt'vĭkh yän'), 1778–1852, German patriot, a high school teacher in Berlin, active in efforts to free Germany from Napoleonic rule To build strength and fellowship he organized a gymnastic association (Ger *Turnverein*), for which he became known as *Turnvater* The gymnastic groups Jahn fostered became centers for nationalism and for the movement to unify Germany After serving (1813–15) in the war against Napoleon, Jahn continued his work until his political agitation caused his imprisonment (1819–25). Jahn, who also was influential in the organization of the BURSCHENSCHAFT movement, was delegate to the Frankfurt Parliament in 1848 The nationalist movement in Germany, down to and including National Socialism, kept many features of Jahn's training

Jahve, Jahveh, Jahweh (jä'vē, -wē), modern reconstructions of the ancient Hebrew ineffable name of GOD

Jahzah (jä'zŭ), variant of JAHAZ.

Jahzeel (jä'zēĕl) [Heb ,=God apportions], Naphtalite Num 26 48. Jahziel 1 Chron. 7 13.

Jahzerah (jä'zērŭ), the same as AHABAI.

Jahziel (jä'zēĕl), variant of JAHZEEL.

jai alai see PELOTA.

jail. see PRISON

Jailolo, Indonesia see HALMAHERA.

Jaime. For Spanish rulers thus named, see JAMES

Jainism (jī'nĭzm) [i e , the religion of Jina], religious system of India practiced by c.1,500,000 persons Jainism and BUDDHISM arose in the 6th cent. B.C as protests against the overdeveloped ritualism and impersonality of HINDUISM Jainist tradition teaches that a succession of 24 Tirthankaras (saints) originated the religion. The last, Vardhamana, called Mahavira [the great hero] and Jina ["the victor"], seems to be historical He assumed the authority of a prophet after spending 12 years in strict asceticism and meditation and gave his remaining 30 years to teaching Buddha is traditionally supposed to have outlived Mahavira, whose death is variously given as 528 B C and 468 B C Underlying Jain doctrine is the belief that every thing in the universe, including matter, is eternal Spirits retain consciousness of their identity through successive incarnations Conduct during each existence affects the spirits for good or evil in later incarnations This doctrine of the cumulative effect of one's actions is called karma After nine incarnations, the lay member of the Jain sect may attain Nirvana, i e , release from the body and the restrictions of matter However, even after Nirvana, the soul may assent to further births in order to help weaker spirits to attain salvation For the yati [ascetic] 12 years of rigorous discipline and self-denial suffice for Nirvana. He must take five vows—to injure no creature, to speak truth, to abstain from stealing, to renounce all worldly goods, to practice sexual continence and must gain self-mastery For any person to achieve salvation he must be guided by the three gems—right faith, right cognition, and right conduct Jainism, while recognizing the caste system, admits all to its benefits Many deities of older Hinduism are still worshiped along with Mahavira The Jain temples are among the most beautiful in India Jain literature, less widely known in the West than that of Hinduism and Buddhism, is mostly written in Prakrit Since at least the 1st cent A D there have been two great divisions of Jains, the Digambaras [air-clothed, i e , naked] and the Svetambaras [white-clothed] The Digambaras, strongest in the south and composed entirely of men, have mostly abandoned the practice of complete nudity Jainists, eschewing any occupation which even remotely endangers animal life, are largely engaged in commerce and finance, particularly moneylending A distinctive form of charity among them is the establishment of asylums for diseased and decrepit animals For an account of Jainist writings, see PRAKRIT LITERATURE See Herbert Warren, *Jainism* (1930), Jagmandar-lal Jaini, *Outlines of Jainism* (1940)

Jaipur (jī'pōōr'), former native state (15,610 sq mi , pop 3,040,876), Rajputana, India. The land is mostly level, and although the rainfall is light, fair crops of maize, millet, and cotton are raised There is salt mining, and cotton and woolen cloth and metalwares are manufactured Jaipur was founded in the 12th cent by the Kachwaha clan of the Rajputs It became (c 1550) a feudatory of the Mogul empire. In 1818 Great Britain exacted a treaty providing for an annual tribute. Jaipur joined Rajasthan in 1949 **Jaipur,** city (pop 175,810), capital of Rajasthan, was founded in 1728. It is enclosed by a crenelated wall 20 ft high An unusual feature for a small Indian city is the system of wide, regular streets The grounds of the maharaja's palace occupy one seventh of the municipal area. Among Jaipur's famed art products are jewelry, enamels, and muslins The city has a college and a large banking business The deserted city of Amber, which was the capital of the state until 1728, is 5 mi from Jaipur The palace at Amber is one of the finest examples of Rajput architecture.

Jair (jā'ŭr) [Heb ,=he enlightens] **1** Manassite Num 32,41, Deut 3.14. **2** Judge of Israel. Judges 10 3. **3** Mordecai's father Esther 2 5 **4** See JAARE-OREGIM. See also HAVOTH-JAIR

Jairus (jā'rus) [Gr. form of JAIR], prominent Jew whose daughter Jesus raised from the dead Mat 9 18–26; Mark 5.22–43; Luke 8.41–56.

Jaisalmer (jūsăl'mur), former native state (16,062 sq. mi , pop. 93,246), Rajputana, India It is almost entirely a sandy waste forming part of the Indian Desert. Stock raising supplies the liveli-

hood of the nomadic population. Jaisalmer joined Rajasthan in 1949.

Jajce (yī'tsĕ), small town, Bosnia, Yugoslavia. It was until 1425 the seat of the kings of Bosnia and retains the ruins of its medieval castle. Here the Pliva river forms a waterfall (92 ft. high) which is used by a large hydroelectric plant.

Jakan (jä'–), the same as AKAN.

Jakarta, Indonesia: see BATAVIA.

Jakeh (jā'kĕ), father of Agur. Prov. 30.1.

Jakim (jā'kĭm). [Heb., *He lifts up.*] 1 Chief priest in David's reign. 1 Chron. 24.12. 2 Chief Benjamite. 1 Chron. 8.19.

Jakobshavn (yäkôps-houn'), settlement (pop. 691), on NW Greenland, a port on Disko Bay. Founded in 1741, it is the center of Jakobshavn dist. (pop. 896) and has a hospital and a radio station.

Jal, village (pop. 1,157), extreme SE N. Mex., settled c.1916, inc. 1928. Oil was discovered here in 1927.

Jalalabad (jŭlä'lăbäd', jŭlä'lŭbăd), town (pop. more than 10,000), SE Afghanistan, on the Kabul river near the Khyber Pass. The king of Afghanistan uses it as a winter residence. British troops took it in the First Afghan War and held it in 1842 against a determined Afghan siege. It is a major trade center with a paper mill, a sugar refinery, and other industries.

Jalapa (hälä'pä), city (pop. 39,530), capital of Veracruz, E Mexico. Jalapa, c. 60 mi. NW of Veracruz, on one of the railroads between the coast and Mexico city, is on the slopes of the Sierra Madre Oriental. The city is cool and has become a health resort. Agricultural products from neighboring valleys include coffee, sugar, tobacco, citrus fruits, bananas, and pineapples. Cigars, chocolate, and cotton materials are manufactured.

Jalisco (hälē'skō), state (31,152 sq. mi., 1946 estimated pop. 1,650,481), W Mexico, bounded on the west by the Pacific. Jalisco is dominated by the southern end of the Sierra Madre Occidental and the western extremity of the chain of volcanic mountains extending across central Mexico. The hot, tropical plains of the coast are broken by spurs of the Sierra, and most of the eastern part of the state lies within the central plateau. A basin between mountains has Lake CHAPALA, in the central part of Jalisco. It is drained by the Lerma-Santiago system (see LERMA). Because of the variety of climate, topography, and elevation, nearly every kind of fruit and vegetable grows somewhere in Jalisco. Maize and wheat from the central plateau make it the "granary of Mexico", rice and wheat are grown in the south, and the mountains yield timber and minerals (silver, iron, tin, cinnabar, and some gold). Capital of the state and metropolis of the entire region is GUADALAJARA, next in size is GUZMÁN. Although Jalisco was explored as early as 1522, serious conquest of the area, later included in NUEVA GALICIA, was not undertaken until 1529 by Nuño de GUZMÁN. Shortly before the War of the Reform (1858–61), Jalisco became a leading state in the great liberal revolution heralded by the Plan of AYUTLA. It was occupied by the French in the wars of intervention but was recaptured in 1866. In 1884 the territory of NAYARIT was separated from Jalisco.

Jalon (jā'lŏn). [Heb., =*lodging*], descendant of Judah. 1 Chron. 4.17.

Jaluit (jä'lōōĭt), atoll (pop. 862), central Pacific, one of the Ralik Chain in the Marshall Islands. It comprises 84 islets, of which Jaluit island (former capital of the Marshalls) is the largest. In the Second World War the atoll was the southernmost Japanese air base of the Ralik group; it was taken in 1944 by U.S. forces.

jam: see JELLY AND JAM.

Jamaica (jŭmā'kŭ), island (4,411 sq. mi., pop. 1,297,900), British West Indies, S of Cuba and W of Haiti. Comprising the crown colony of Jamaica are the island itself, the TURKS AND CAICOS ISLANDS, and the CAYMAN ISLANDS. The capital is KINGSTON. Largely a limestone plateau, Jamaica shows evidence of volcanic activity, particularly in the upturned blocks known as the Blue Mts. in the eastern part of the island. The highest point, Blue Mt., is 7,402 ft. high. Rainfall, which is heavy on the eastern coasts and the mountain slopes, where there are extensive forest reserves of hardwoods, dyewood, and other timber, diminishes farther and farther westward across the plateau. The plateau, a rugged area used mostly for grazing, is deeply dissected by streams and, undermined by subterranean rivers, has collapsed in valley sinks. In the heart of this region, known as the Cockpits, live the virtually independent MAROONS. The plateau rises abruptly from the ocean, in some places as much as 1,000 ft., but generally there is a narrow coastal band widened by broad river valleys leading into the interior. Here and on the mountain slopes are grown most of Jamaica's chief export crops: annatto (Jamaica is the world's largest producer), bananas, pimento or allspice, coffee of fine quality, ginger, cacao, coconuts, and tobacco. Although manufacturing is limited, there are some food-processing plants (sugar, rum, and citrus pulp are important), cigar factories, tanneries and leather works, and chemical plants for extracting dyes. Jamaica was discovered by Christopher Columbus in 1494. Under orders of Diego Columbus, the first Spanish settlement was founded in 1509. The island, attacked twice (1596, 1643) by the English, was captured by Admiral William Penn and Robert Venables in 1655 and subsequently (1670) formally ceded to Great Britain by the Treaty of Madrid. At first Jamaica prospered from the wealth brought to Port Royal, the capital, by the buccaneers, notably Sir Henry MORGAN, but in 1692 the city was engulfed by an earthquake, the capital was moved to SPANISH TOWN, and during the succeeding century the colony was buffeted by hurricanes, earthquakes, slave revolts, and a long war with the maroons. From the economic and social legacy of the first three centuries and from overpopulation comes the island's present social unrest. The Negroes, imported as the Arawaks rapidly died off, were freed in 1833. Poverty has continued, and riots have occurred, those of 1865 were especially severe. The Negroes and part-Negroes, about 95 percent of the population, are noted as excellent laborers and have been sent to many parts of the Caribbean area for temporary work, but unemployment remains high. Crop diversification, the introduction of bananas (raised by small independent growers and sold through cooperatives to the fruit companies), the establishment of labor unions, and the formation (1944) of a more representative government—all these have alleviated some of the social tension and have bettered conditions. See Walter Jekyll, *Jamaican Song and Story* (1907), W. J. Gardner, *History of Jamaica* (1909), M. W. Beckwith, *Jamaica Anansi Stories* (1924) and *Black Roadways* (1929); Frank Cundall, *Chronological Outlines of Jamaica History, 1492–1926* (1927).

Jamaica, commercial, industrial, and residential section of central Queens borough of New York city, SE N.Y.; settled in the mid-17th cent. as a Dutch village. It is an important railroad transfer point. The First Presbyterian Church (organized 1662) and the King Mansion (c.1750) are of interest.

Jamaica Bay, shallow bay, c.18½ sq. mi., indenting SW Long Island, SE N.Y., with Rockaway Inlet opening on the southwest to the Atlantic. Brooklyn and Queens boroughs are along its shores, and it is part of the Port of New York.

Jambi or **Djambi** (both jäm'bē), town (pop. 22,071), on SE Sumatra, Indonesia. A port on the Hari river, it is the commercial center for a lumbering and rubber-growing area. Oil wells and lignite mines are near by.

Jamblichus see IAMBLICHUS.

Jambol, Bulgaria: see YAMBOL.

Jambres see JANNES AND JAMBRES.

James, Saint [ultimately from JACOB], d. A.D. c. 43, one of the Twelve Disciples called St. James the Greater. He was the son of Zebedee and brother of St. John, these brothers were the Boanerges (bō"ənûr'jēz) or Sons of Thunder. St. James was killed by Herod Agrippa. Mark 3.17, 5.37, 9.2, 10.35-45, 14.33, Mat. 20.20-29, Acts 12.1-2. Veneration of St. James has been widespread, especially in Spain (where he is called Santiago), the shrine of the apostle at Compostela, Spain, is one of the most celebrated of Europe. He was much venerated in medieval England, and though St. James's Palace in London is not now the royal residence ambassadors are accredited to the Court of St. James's. Feast: July 25.

James, Saint, one of the Twelve Disciples, called St. James the Less. He was the son of Alphaeus, his mother Mary was one of those at the foot of the Cross. Mat. 10.3, Mark 15.40, Acts 1.13. The first bishop of Jerusalem, a kinsman of Jesus, was named James and by universal tradition he is regarded as author of the epistle (see JAMES, epistle). Of two equally ancient traditions, one identifies him with St. James the Less, another separates them. In Western Christendom the identification is favored. Acts 15, 21.18, Gal. 1.19, 2.9; James 1.1. 1 Cor. 15.7 might refer to either. Feast (with St. Philip): May 1.

James I (James the Conqueror), 1208–76, king of Aragon and count of Barcelona (1213–76), son and successor of Peter II. After a minority disturbed by struggles among the nobles, James soon restored order. He conquered the Balearic Islands (1229–35) and Valencia (1238) from the Moors and brought Murcia under Castilian control. A crusade to Palestine (1269) was, however, unsuccessful. By the treaty of Corbeil (1258) with Louis IX of France, James gave up several claims in S France, while the French king renounced his possible rights on Catalonia, derived from Charlemagne. James's own chronicle of his reign has been translated into English. He was succeeded in Aragon by his son Peter III. Another son became king of Majorca as James I.

James II, c. 1260–1327, king of Aragon and count of Barcelona (1291–1327), king of Sicily (1286–95). He succeeded his father, Peter III, in Sicily and his brother, Alfonso III, in Aragon. James defended Sicily against the claims of the Angevin dynasty of Naples until 1295, when he relinquished the island to CHARLES II of Naples. Charles was subsequently supported by James against James's own brother, who had been proclaimed king of Sicily as FREDERICK II. James was succeeded in Aragon by his son Alfonso IV.

James I, 1566–1625, king of England (1603–25). He was the son of Lord DARNLEY and MARY QUEEN OF SCOTS. Upon the forced abdication of his mother in 1567, he became James VI of Scotland. He was placed in the care of the earl of Mar and later of Mar's brother, Sir Alexander Erskine. The young king progressed in his studies under various teachers, notably George Buchanan, and acquired a taste for learning. During James's minority Scotland was ruled by a series of regents—Murray, Lennox, Mar, and Morton—and the king was the creature of successive combinations of the nobility and clergy in a complicated struggle between the remnants of his mother's Catholic party, which favored an alliance with France, and the Protestant faction, which wished an alliance with England. In 1582 James was seized by the earl of Gowrie and other English adherents. He escaped in 1583 and began his personal rule, though influenced by his favorite, James STUART, earl of Arran. James considered an alliance with France, but in 1586, thinking of his prospects to succeed to the English throne, he allied himself with Elizabeth. This caused a break with his mother's party, and he accepted her execution in 1587 calmly. James succeeded, by arms and executions, in subduing the feudal Scottish baronage, in establishing royal authority, and in asserting the superiority of the state over the Church. In 1589, against the wishes of Elizabeth, James married ANNE OF DENMARK. He succeeded in 1603 to the English crown by virtue of his descent from MARGARET TUDOR, daughter of Henry VII. Though at first welcomed in England, James brought to his new kingdom little understanding of its Parliament or its changing political, social, and religious conditions. In an effort to conciliate the Puritans, the king presided at the Hampton Court Conference (1604), at which the Puritan clergy asked for status within the Established Church, but his uncompromising anti-Puritan attitude caused even greater mutual distrust. At this conference originated the movement from which came the Authorized (King James) Version of the BIBLE. James's inconsistent policy toward English Catholics angered both Catholic and Protestant alike. The GUNPOWDER PLOT (1605), which sprang from Catholic anger at the resumption of fines and penalties that James had earlier relaxed, led to greater harshness toward Catholics and prevented any cordial relations thereafter. Yet the suspicion arose that the king favored the Catholics because he sought to conciliate Spain, attempted to arrange a marriage between a Spanish princess and Prince Charles (later CHARLES I), and relaxed anti-Catholic laws during the negotiations. This damaged his reputation among his Protestant subjects and with Parliament, where Puritanism was strong. James's reliance on favorites whose qualifications consisted more of personal charm than talent for government, the extravagance and looseness of the court, accusations of favoring Catholics, and the scandalous career of James's favorite, Robert Carr, earl of SOMERSET, all furthered discontent. Merchants complained of the abuses of monopolies and impositions and of James's neglect of the navy. James's relations with Parliament were strained because of his insistence upon the concept of divine right and his inability to recognize Parliament as representative of a large and important body of opinion. The House of Commons became the rallying point of opposition forces to the crown. In 1607 Commons blocked James's cherished project of a union with Scotland. The Great Contract of 1610, a compromise whereby James would relinquish the right of impositions in return for a yearly income, did not come to fruition. In 1611 James dissolved Parliament and except for the Addled Parliament of 1614, which produced no legislation, ruled without one until 1621. The death in 1612 of his capable minister, Robert Cecil, earl of Salisbury, allowed James to exercise the royal prerogative with even less restraint. James's attempts to raise money without Parliament brought him into battles with the courts, whose position was strongly defended by Sir Edward COKE. After the fall of Somerset, George Villiers, later 1st duke of BUCKINGHAM, rose to favor and by 1619 was in complete possession of the king's confidence. At the Parliament of 1621, called in order to raise money for the cause of the German Protestants and James's son-in-law, Frederick of Bohemia (see FREDERICK THE WINTER KING), whose election led to the Thirty Years War, James was forced to abolish certain abusive monopolies. This Parliament impeached Francis Bacon. It was dissolved by James for asserting its right to debate foreign policy. The unpopular Spanish policy was pursued until the expedition of Prince Charles and Buckingham to Spain to facilitate the marriage arrangements and obtain concessions from the Spanish king regarding Frederick ended in failure in 1623. A marriage treaty with France was ratified in 1624, and James acceded to the wish of Commons for war with Spain. James left to his son, Charles, a foreign war and the PURITAN REVOLUTION well begun. During

James's reign occurred the beginnings of English colonization in North America, Jamestown was founded in 1607 The king was active as an author. He produced several youthful essays on literary theory and numerous political works Two other important writings are his *True Law of Free Monarchy* (1598), an assertion of the concept of divine right of kings, and BASILIKON DORON (1599), a treatise on the art of government His political works have been edited by C H McIlwain (1928) See T. F Henderson, *James I and VI* (1904), F C Montague, *The History of England, 1603–1660* (1907), Godfrey Davies, *The Early Stuarts* (1937), G M Trevelyan, *England under the Stuarts* (rev ed , 1946)

James II, 1633–1701, king of England, Scotland, and Ireland (1685–88), son of Charles I, brother and successor of CHARLES II When he was the young duke of Albany and of York he was surrendered (1646) to the parliamentary forces in the PURITAN REVOLUTION, but escaped (1648) to the Continent and served in the French (1652–55) and Spanish (1658) forces At the RESTORATION he returned to England, married Anne Hyde, daughter of the 1st earl of CLARENDON, and was made lord high admiral (1660), he served in 1665 and 1672 in the Dutch Wars Charles II granted him sweeping proprietary rights in America, the captured Dutch colony, New Netherland, became (1664) New York, and the Dutch settlements of New Amsterdam and Fort Orange were renamed New York and Albany to honor the duke James was probably converted to Catholicism in 1668—a step which was to have grave consequences After he had because of the TEST ACT resigned (1673) as admiral, he became increasingly unpopular in England and was especially hated by the Whigs His first wife had died in 1671, and his marriage (1673) to MARY OF MODENA drew him closer to the Catholic and imperial policies of the French king, Louis XIV, alienating the Whigs further James consented to the marriage (1677) of his daughter Mary (later MARY II) to the Protestant prince of Orange (later WILLIAM III), and the couple became the heirs presumptive, after James, to the English throne A bid by the young duke of MONMOUTH to replace James as heir failed, but when the lies of Titus OATES about the Popish Plot uncovered the true implication of James in intrigues with the French and the Catholics, James was sent (1679) into exile Recalled in 1680, he was indicted as a recusant but never tried Charles sent him again to Scotland, this time as his commissioner Parliament tried to exclude James from the succession but failed, and after his return to England (1682) and particularly after the RYE HOUSE PLOT his fortunes rose a little When Charles died in 1685, James peacefully became king His brief reign was momentous for England An uprising led by Monmouth and Archibald CAMPBELL, 9th earl of Argyll, was crushed (1685), but the severe reprisals of the Bloody Assizes under George Jeffreys, 1st Baron JEFFREYS OF WEM, added to James's unpopularity. The king favored autocratic methods, reviving the old ecclesiastical court of high commission and proroguing the hostile Parliament He also sought to favor the Catholics, and his declaration of indulgences instituted religious toleration in England Defiance and dislike of him grew, fed by the trial (1688) of seven bishops who had opposed the reading of his declaration The birth of a son (see STUART, JAMES EDWARD), who would have succeeded instead of the Protestant William and Mary, helped to bring rebellion to a head William of Orange was invited to England by opposition leaders The unpopular, autocratic, and Catholic king had few loyal followers and was unable to defend himself The Glorious Revolution or Bloodless Revolution of 1688 succeeded William and Mary took the throne, and the long struggle to end autocratic royal government and make Parliament supreme in England had ended in triumph James fled, was captured, and was allowed to escape to France He made an effort to restore himself by crossing over to Ireland in 1689 and raising his standards there, but the effort failed dismally in the battle of the Boyne (1690) Other projects for restoration failed, and James's supporter, Louis XIV, recognized William III in the Treaty of Ryswick (1697) The cause of James's son and grandson was upheld later by the JACOBITES long after James had died in inglorious exile See biography by F G Turner (1948), bibliography under STUART, family

James I, 1243–1311, king of Majorca (1276–1311), count of Roussillon and Cerdagne, lord of Montpellier, son of James I of Aragon In 1278 he was forced to become a vassal of his brother, Peter III of Aragon Having supported the French crusade against Peter, he was expelled (1285) from his territories by Peter's son, Alfonso III, but was restored 10 years later as the vassal of James II of Aragon He was succeeded by his son, Sancho IV (1311–24).

James II, 1315–49, king of Majorca (1324–49), count of Roussillon and Cerdagne, lord of Montpellier, grandson of James I; nephew and successor of Sancho IV. In 1329 he declared himself a vassal of the Aragonese crown. Accusing James of illegal acts, Peter IV of Aragon invaded and conquered Majorca (1343) and Roussillon (1344) and annexed them to Aragon James tried to recover his kingdom, but was defeated and killed in battle on Majorca. His son, James III, tried unsuccessfully to recover the kingdom in 1375

James I, 1394–1437, king of Scotland (1424–37), son of Robert III King Robert feared for the safety of James because the king's brother, Robert STUART, duke of Albany, who was virtual ruler of the realm, stood next in line of succession after the young prince and had already been suspected of complicity in the death of James's older brother, David Stuart, duke of Rothesay Accordingly, in 1406 the king sent James to France for safety, but the prince was captured on the way by the English and held prisoner until 1424 Technically James succeeded his father in 1406, but the regent Albany ruled until his own death and was succeeded by his son, and the king's ransom was arranged only at the insistence of the earl of Douglas and other nobles The king had been well educated by his captors, Henry IV and Henry V, who had treated him as a royal guest Just before his return to Scotland in 1424 James married Joan Beaufort, daughter of the earl of Somerset *The Kingis Quair* [the king's book] (rev ed by W W Skeat, 1911), the story of his captivity and his romance with Joan written in rime royal, is usually considered to have been written by him It and other poems attributed to him would establish him as one of the leading poets in the Chaucerian tradition James was crowned at Scone and set about governing energetically He tried to bring Scotland two things she most needed —internal peace and an integrated statute law The first he obtained by ruthlessly exterminating several turbulent noblemen, among them the Albany family, and by requiring submission of the Highland clans The second he attempted by convening Parliament annually and introducing at each session legislation which laid down a constitutional framework for his administration His plans for including burghers in the Parliament and improving commerce and the army were opposed by his militantly feudal nobles, and his constructiveness, cupidity, and quick temper understandably diminished his popularity He was assassinated by a group of nobles, one of whom was probably desirous of claiming the throne He was succeeded by James II See biography by E W M Balfour (1936), two historical novels—Evan John, *Crippled Splendour* (1938), and Anne Fremantle, *James and Joan* (1948)

James II, 1430–60, king of Scotland (1437–60), son of James I During his minority successive earls of Douglas as regents disputed with other factions for power In his late teens the king allied himself with William Douglas, 8th earl of DOUGLAS, to overcome them, and by 1449 he ruled in his own right When in 1452 he discovered Douglas in a conspiracy, the king called him to Stirling, charged him with betrayal, and stabbed him After the resulting rebellion, James seized the Douglas lands and attainted the next earl In his reign James improved the courts of justice and regulated the coinage A Lancastrian partisan in the Wars of the Roses, he invaded England and was accidentally killed at the siege of Roxburgh His son James III succeeded him

James III, 1451–88, king of Scotland (1460–88), son of James II During his minority he was under the care of his mother and her adviser, James Kennedy, bishop of St Andrews After their death, James was seized (1466) by the Boyd family, who ruled Scotland until 1469 In that year James married Margaret, daughter of the Danish king, and began to rule in his own person James was a cultured prince, but unsuited to the throne in so turbulent a period A quarrel with his brother, Alexander, duke of Albany, led the latter to flee the country Supported by Edward IV of England, Albany advanced a claim to the Scottish throne James invaded England (1482), but did not have the support of his nobles In this campaign, Archibald DOUGLAS, 5th earl of Angus, headed a group which hanged certain of James's favorites and made a prisoner of James A period of peace followed, but in 1487 the nobles rebelled and under the nominal leadership of James's son (later James IV) defeated and murdered James at Sauchieburn

James IV, 1473–1513, king of Scotland (1488–1513), son of James III He was a popular king, and his reign was a profitable one for Scotland. After suppressing an insurrection of discontented nobles early in his reign, he set about restoring order, improving administrative and judicial procedure in the kingdom and encouraging manufacturing and shipbuilding A disagreement with HENRY VII of England over James's support of Perkin WARBECK, pretender to the English throne, ended in a peace treaty with England in 1499 In 1502 James married Henry's daughter, Margaret Tudor. This marriage was to bring the Stuart line to the English throne in 1603 Relations with England deteriorated when Henry VIII came to the throne, and James sought a French alliance. In 1513 James, against the counsel of his advisers, invaded England, where at the battle of Flodden (1513) he was killed and the Scottish aristocracy was almost annihilated

James V, 1512–42, king of Scotland (1513–42), son of James IV and Margaret Tudor. His mother held the regency until her marriage in 1514 to Archibald DOUGLAS, 6th earl of Angus, when it was transferred to John STUART, 4th duke of Albany. The factions of Albany, Angus, and the queen mother struggled for control until Angus seized the king (1526) and kept him in confinement In 1528 James escaped, and Angus fled to England James began to ally himself with France against his uncle, HENRY VIII of England In 1537 he married Madeleine, daughter of Francis I of France, and upon her death in the same year he married MARY OF GUISE James rejected Henry's attempts to win his support for the English religious policy, and in 1542 war broke out between the two countries James did not receive the support of his Protestant nobles, and his army was routed at Solway Moss in 1542 He died shortly thereafter and was succeeded by his infant daughter, MARY QUEEN OF SCOTS.

James VI, king of Scotland see JAMES I, king of England

James, kinsman of St. Jude Luke 6 16. The original does not specify the relationship.

James, Edmund James, 1855–1925, American economist and educator, b Jacksonville, Ill , Ph D Univ of Halle, 1877 He was professor of public finance and administration (1883–96) at the Wharton School of Finance and Commerce, Univ of Pennsylvania, and a leader of the so-called Pennsylvania school of economists He was a founder (1885) of the American Economic Association and a founder, as well as first president (1890–91), of the American Academy of Political and Social Science Professor of public administration at the Univ of Chicago from 1896 to 1901, he later was president of Northwestern Univ (1902–4) and of the Univ of Illinois (1904–19) A dynamic figure in Illinois educational history, he increased legislative appropriations of the university manyfold and raised its standards of scholarship to a high level See Allan Nevins, *Illinois* (1917)

James, George Payne Rainsford, 1799–1860, English novelist A literary disciple of Sir Walter Scott, James wrote *Richelieu* (1829), *Darnley* (1830), *Mary of Burgundy* (1833), and more than 50 other historical romances He was historiographer royal to William IV and British consular representative in the United States and Italy

James, George Wharton, 1858–1923, American author and lecturer, b England He came to the United States in 1881 and went to the American Southwest He lectured and wrote much about the scenic wonders, the Indians, and the "color" of the Southwest, producing such popular works as *In and around the Grand Canyon* (1900), *The Wonders of the Colorado Desert* (1906), *Indian Blankets and Their Makers* (1914), and *New Mexico the Land of the Delight Makers* (1920)

James, Henry, 1811–82, American student of religion and social problems, b Albany, N Y , father of the philosopher William James and of the novelist Henry James He rebelled from the strict Calvinistic theology of his family and of Princeton Theological Seminary, to which he was sent, and sought a personal solution Swedenborgian teachings opened for him a way and provided the framework for his own thought as expressed in *Substance and Shadow, or, Morality and Religion in Their Relation to Life* (1863), *Society the Redeemed Form of Man and the Earnest of God's Omnipotence in Human Nature* (1879), and other books He was intimately associated with the Fourierist circles of his day and a close friend of many literary figures, including Emerson and Carlyle See Austin Warren, *The Elder Henry James* (1934), F O Matthiessen, *The James Family* (1947)

James, Henry, 1843–1916, novelist and essayist, b New York city Educated in the United States and in Europe, he lived much of his life in England and in 1915 became a British subject He was a son of Henry James, the Swedenborgian theologian, and a brother of William James, the philosopher Entering Harvard Law School in 1862, he came to know the Cambridge literary circle led by James Russell Lowell, Charles Eliot Norton, and William Dean Howells and was helped by Howells to publish his stories in the *Atlantic Monthly* Returning to Europe in 1868, James met Flaubert, Maupassant, Zola, Turgenev, and other realists, whose work he already knew In 1877 he settled in England In his novels a favorite subject is the contrast between Europeans and Americans of the leisure class *A Passionate Pilgrim and Other Tales* appeared in 1875 *Daisy Miller* (1878), *Washington Square* (1881), and *The Portrait of a Lady* (1881) are early novels which won recognition Among many which followed were *The Princess Casamassima* (1886), *What Maisie Knew* (1897), *The Awkward Age* (1899), and perhaps his three greatest novels, *The Wings of the Dove* (1902), *The Ambassadors* (1903), and *The Golden Bowl* (1904). In his novels he treats his characters objectively and realistically, in displaying their subtle motivations, his style becomes more and more deliberate. Students

of the art of fiction find him a master of technique and value highly the series of critical prefaces he wrote for a reissue of his novels which began in 1907 Of his nearly a hundred short stories, the ghost story "The Turn of the Screw" is the most notable. His books other than fiction include *French Poets and Novelists* (1878), *The Art of Fiction* (1884), and the autobiographical *Small Boy and Others* (1913) and *Notes of a Son and Brother* (1914) James's notebooks have been edited by F O Matthiessen and Kenneth B Murdock (1947), and his essays on the drama are collected in *The Scenic Art* (ed by Allan Wade, 1948) His plays have been collected in *Complete Plays* (ed by Leon Edel, 1949) See studies by Van Wyck Brooks (1925), Pelham Edgar (1927), C H Grattan (1932), and F O Matthiessen (1944), F W Dupee, ed , *The Question of Henry James a Collection of Critical Essays* (1945), F O Matthiessen, *The James Family* (1947)

James, Jesse (Jesse Woodson James), 1847-82, American outlaw, b Clay co , Mo At the age of 15 he joined the Confederate guerrilla band led by William C QUANTRILL and participated in the civil warfare in Kansas and Missouri In 1866 Jesse and his brother Frank (Alexander Franklin James, 1843–1915) became the leaders of a band of outlaws whose trail of robberies and murders led through most of the central states At first they robbed only banks, but in 1873 train robberies were added to their repertoire Their downfall came in an attempted bank robbery at Northfield, Minn (1876), when, after killing two people and failing to secure any money, they lost several members of the gang, including the Younger brothers (see YOUNGER, COLE), three of the James's most trusted followers, who were captured and imprisoned The James brothers escaped and were quiet until 1879, when they robbed another train The reward offered by Gov Thomas T Crittenden of Missouri for the capture of the James brothers, dead or alive, tempted one of the gang, Robert Ford, who caught Jesse (then living under the name of Thomas Howard) off guard and killed him Frank James surrendered but was twice acquitted and lived out his life peacefully on his farm near Excelsior Springs, Mo The melodramatic style of the exploits of the James gang attracted wide public admiration, giving rise to a number of legends, the *Ballad of Jesse James*, and much dime-novel literature See biography by Robertus Love (1926), Homer Croy, *Jesse James Was My Neighbor* (1949)

James, Philip, 1890–, American composer and conductor, b Jersey City, N J He was organist in several New York churches and conducted operettas, including some of Victor Herbert's, until 1922, then conducted (1922–29) the New Jersey Symphony Orchestra, which he founded In 1933 he joined the faculty of New York Univ His compositions include choral works, songs, organ pieces, anthems, orchestral works, and chamber music

James, Thomas, 1593?–1635?, English navigator and explorer (1631) of James Bay In command of the *Henrietta Maria*, he sailed from Bristol, in the spring of 1631, to find the NORTHWEST PASSAGE to the East Having explored James Bay (the south extension of Hudson Bay), which was named for him, he wintered on Charlton Island, and in the summer of 1632 continued his attempt to find the passage, a quest which Luke Fox was also undertaking independently (1631) Upon his return to England, James wrote his *Strange and Dangerous Voyage* (1633) See R B Bodilly, *The Voyage of Captain Thomas James* (1928)

James, Thomas, 1782–1847, American fur trader and pioneer, b Maryland He accompanied Manuel Lisa on the 1809 expedition of the Missouri Fur Company up the Missouri river At the Mandan villages (in the vicinity of Bismarck, N Dak) he left the expedition and returned to St Louis He was thereafter a merchant of St Louis and with Robert McKnight in 1821 led an early expedition over the Santa Fé Trail Later he operated a mill in S Illinois, served (1826–28) in the Illinois state legislature, and was a postmaster James was a scout in the Black Hawk War He is, however, chiefly remembered for his valuable and enthralling account of his early expedition, *Three Years among the Indians and Mexicans* (1846, ed by W B Douglas, 1918)

James, William, 1842–1910, American philosopher, b New York city, M D Harvard, 1869, son of the Swedenborgian theologian Henry James and brother of the novelist Henry James In 1872 he joined the Harvard faculty as lecturer on anatomy and physiology, continuing to teach until 1907, after 1880 in the department of psychology and philosophy In 1890 he published his brilliant and epoch-making *Principles of Psychology*, in which the germs of his philosophy are already discernible James's fascinating style and his broad culture and cosmopolitan outlook made him the most influential American thinker of his day His philosophy has three principal aspects—his voluntarism, his pragmatism, and his "radical empiricism " He construes consciousness as essentially active, selective, interested, teleological We "carve out" our world from "the jointless continuity of space." Will and interest are thus primary· knowledge is instrumental. The true is "only the expedient in our way of thinking " Ideas do not reproduce objects, but prepare for, or lead the way to, them The function of an idea is to indicate "what conceivable effects of a practical kind the object may involve—what sensations we are to expect from it and what reactions we must prepare " This theory of knowledge James called PRAGMATISM, a term already used by Charles S Peirce James's "radical empiricism" is a philosophy of "pure experience," which rejects all transcendent principles and finds experience organized by means of "conjunctive relations" that are as much a matter of direct experience as things themselves Moreover, James regards consciousness as only one type of conjunctive relation within experience, not as an entity above, or distinct from, its experience James's other philosophical writings include *The Will to Believe* (1897), *The Varieties of Religious Experience* (1902), *Pragmatism* (1907), *A Pluralistic Universe* (1909), *The Meaning of Truth* (1909), *Some Problems in Philosophy* (1911), and *Essays in Radical Empiricism* (1912) See his letters (ed by his son Henry James, 1920), H M Kallen, *The Philosophy of William James* (1925), C H Grattan, *The Three Jameses* (1932), R B Perry, *The Thought and Character of William James* (2 vols , 1935) and *In the Spirit of William James* (1938), F O Matthiessen, *The James Family* (1947)

James, epistle of the New Testament, occupying the 20th place in the usual order, traditionally included in the Catholic, or General, Epistles The James of its ascription (1 1) is traditionally St James the Less The content is not very orderly, for the work, entirely practical in stress, gives many diverse admonitions, some recurrent It opens with a section on temptation (1 2-18, cf 5 7-11), then goes on to two general ethical principles, "be doers of the word, not hearers only" (1 19-27) and "faith without works is dead" (2 14-26, cf Heb 11 17-20,31) The rest consists of specific points—human respect (2 1-13), bridling the tongue (1 26, 3 1-18, 5 12), living in harmony (4 1-17), the wickedness of the rich (2 2-7, 5 1-6), the efficacy of prayer (5 13-18), saving sinners (5 19-20) The scriptural authority cited for extreme unction is here 5 14-15 There are several widely different critical opinions of origin and date of this epistle It was one of the later books to be accepted as canonical Luther rejected it because it seems to deny his interpretation of justification by faith

James. 1 River rising in central North Dakota and flowing SSE across the Dakotas to the Missouri near Yankton, S Dak It is often called the Dakota **2** River formed in western Virginia, in the Allegheny Mts , by the union of the Jackson and Cowpasture rivers and winding 340 mi eastward across the central part of the state to enter Chesapeake Bay through HAMPTON ROADS It is one of the chief rivers of Virginia, and its lower course is rich in historical associations, here JAMESTOWN was founded in 1607 In the Civil War the river figured prominently in Union attempts to take Richmond, which is at the head of navigation (see PENINSULAR CAMPAIGN, SEVEN DAYS BATTLES, PETERSBURG) A bridge, 4½ mi long, crosses the James just N of Newport News See Blair Niles, *The James* (rev ed , 1945)

James, Protevangelium of (prō'tēvănjĕ'lēum) see PSEUDEPIGRAPHA

James Bay, southward extension of Hudson Bay, c 300 mi long and 140 mi wide, E central Canada, lying between Ontario and Quebec Of its numerous islands, the largest is Akimiski It was discovered (1610) by Henry Hudson, but was named for Capt Thomas James, who explored much of it in 1631 An early fur-trading post established by Groseilliers and Radisson became (1670) Rupert House, the first post established here by the newly organized Hudson's Bay Company Other important posts on James Bay are Fort Albany, Moose Factory, Fort George, and Eastmain

James Peak, 13,260 ft high, N central Colo , in the Front Range of the Rocky Mts The Moffat Tunnel cuts through part of the mountain

Jamestown 1 City (pop 42,638), W N Y , on Chautauqua Lake and SW of Buffalo, founded c 1806, inc as a village 1827, as a city 1886 Its chief industry is furniture making Jamestown's predominantly Swedish influence is reflected in its cooperative community services See Samuel A Carlson, *The Saga of a City* (1935) **2** City (pop 8,790), co seat of Stutsman co , SE N Dak , on the James river and between Fargo and Bismarck Settled 1872 when a military post was established to protect railroad workers, it was incorporated in 1896 With flour mills, grain elevators, and stockyards, it is the railroad and trade center of a wheat and livestock area Jamestown College (Presbyterian, coeducational, 1883) and a state hospital for the insane are here **3** Village (pop 1,079), SW Ohio, S of Springfield, in a livestock and farm area, settled 1806, laid out 1815 **4** Resort town (pop 1,744) coextensive with Conanicut Island (kunăn'ĭkut) (c 9 mi long and 1 to 2 mi wide), S R I , in Narragansett Bay, inc 1678 Beavertail Light, at the southern tip of the island, was originally established before 1750 Several pre-Revolutionary buildings remain A bridge to North Kingstown over the west passage of Narragansett Bay was opened in 1940 **5** Town (pop 1,230), co seat of Fentress co , N Tenn , NW of Knoxville, settled 1827, inc 1837 John M Clemens, Mark Twain's father, while a resident here planned the town's first courthouse Near by are the Alvin C York Agricultural Institute and Pickett State Park **6** First permanent English settlement in America, established May 13, 1607, by the LONDON COMPANY on a marshy peninsula—now an island—in the James river, SE Va Its hardships were many, and despite the efficient leadership of John SMITH the colony faced extinction After the severe winter of 1609–10—the "starving time"—the settlers, under Sir Thomas GATES, decided to abandon the colony The arrival of Lord DE LA WARR with supplies saved the settlement Tobacco was first cultivated here in 1612 by John ROLFE In 1619 the first representative government in the New World met at Jamestown, which remained capital of VIRGINIA until 1699 The village was almost entirely destroyed during BACON'S REBELLION, it was restored, but fell into decay with the removal of the capital to Williamsburg Relics of the early settlement are few—the tower of a church probably built c 1639 on the site of the first Anglican church in America, the old cemetery, and utensils and foundations of houses unearthed by National Park Service excavations Except for the land owned by the Association for the Preservation of Virginia Antiquities, Jamestown Island is the property of the U S government, which includes it in COLONIAL NATIONAL HISTORICAL PARK. Several monuments have been erected on the island A

tercentenary celebration was held in 1907. See S H Yonge, *The Site of Old "James Towne"* (1904), J L Kibler, *Cradle of the Nation* (1931), H C Forman, *Jamestown and St Mary's* (1938), publications of the National Park Service

Jami (jä'mē), 1414–92, Persian poet, b Jam, near Herat His full name was Nur ed-Din Abd-ar-Rahman Jami He was famed as a poet, and nearly 100 works are attributed to him, of which some 40 are authentic He was also known as a saint for his devotion to dervish teaching and to Sufi philosophy Among his works is the collection of poems *Haft Aurang* [the seven thrones], including the allegory "Salaman and Absal" and a version of the tale of Joseph and Potiphar's wife His *Baharistan* [abode of spring] is a collection of pithy short stories

Jamin (jă'-) [Heb ,=right hand] **1** Simeonite Gen 46 10, 1 Chron 4 24 **2** Hezronite 1 Chron 2 27 **3** Reader of the law Neh 8 7

Jamitzer, Wenzel: see JAMNITZER, WENZEL

Jamlech (jăm'lĕk) [Heb ,=He makes king], chief of the tribe of Simeon 1 Chron 4 34

Jammes, Francis (frāsĕs' zhăm'), 1868–1938, French poet, who lived all his life in the Pyrenees country He is usually grouped with the SYMBOLISTS, but his simple optimism, which delighted in the joys of the countryside, distinguishes him from the rest His first volume of verse was *De l'angélus de l'aube à l'angélus du soir* [from the morning Angelus to the evening Angelus] (1898), his *Géorgiques Chrétiennes* [Christian georgics] (1911–12), in a more classical style, are instinct with Catholicism He also wrote charming stories See Amy Lowell, *Six French Poets* (rev ed , 1916), Sister Jerome Keeler, *Catholic Literary France* (1938)

Jammu (jŭ'mōō), town (pop 50,379), winter capital of Kashmir state, India It contains an old, but rather undistinguished, palace

Jammu and Kashmir: see KASHMIR

Jamnia (jăm'nēŭ), biblical *Jabneel* (jăb'nēĕl, jăb'nēl') and *Jabneh* (jăb'nŭ, –nē) [Heb ,=God causes to build], town (pop c 10,000), central Israel The modern name is Yibna (or Yabneh or Yebna) It was a central city of Philistia, and the Bible speaks of a wall and of Uzziah's capture of it It was sacked by Judas Maccabaeus and later rebuilt In the last years before the sack of Jerusalem (A D 70) Jamnia was becoming a great Jewish cultural center, and at the prayer of JOHANAN BEN ZACCAI, Vespasian spared Jamnia and permitted Johanan to settle there as leader of the Jewish community after the fall of Jerusalem The Great Sanhedrin was moved thither, and under Johanan's guidance the city became the capital of the Jews With great care the ceremonial and practices of the cult were preserved in the academy at Jamnia, and Jewish scholarship continued as before Except for a short period Jamnia remained the seat of the rulers of Judaism until the rising of BAR KOKBA (130) In the Middle Ages the Crusaders fortified the city The town was heavily involved in the war following the partition of Palestine in May, 1948 See Joshua 15.11, 2 Chron 26 6

Jamnitzer, Jamitzer, or **Gemniczer, Wenzel** (vĕn'tsul yäm'nĭtsur, yä'mĭtsur, gĕm'nĭtsûr), 1508–85, leading member of a German family of goldsmiths and engravers A foremost craftsman of his day, he introduced Italian Renaissance forms into Germany Born in Vienna, he settled in Nuremberg, becoming court goldsmith to four emperors Examples of his work are preserved in private collections and in the Louvre and the Victoria and Albert Museum

Jamshedpur (jŭm"shĕdpōōr', jăm"–), city (pop 148,711), SE Bihar state, India It was built in the late 19th cent to accommodate the Tata Iron and Steel Works (opened 1907), which is the largest foundry in India Near by are extensive iron deposits

Jamtland, Swed. *Jämtlands län* (yĕmt'lants lĕn'), county (19,966 sq mi , pop 143,213), NW Sweden, bordering on Norway It consists, roughly of the historical provinces of Jamtland in the north and Harjedalen in the south, both conquered by Sweden from Norway in 1645 OSTERSUND is the county seat and only city. The region is known for its scenery and its health and winter resorts. Isolated farms support most of the population, but lumbering and auxiliary industries are becoming important Reindeer herds of the Lapps often wander into the highlands The spelling Jemtland is obsolete.

Jamuna: see BRAHMAPUTRA.

Janacek, Leos, Czech *Janáček* (lă'ōsh yä'năchĕk), 1854–1928, Czech composer, theorist, and collector of Slav folk music, called the Moussorgsky of Bohemia. He studied at the Organ School, Prague, and the Leipsig Conservatory and founded an organ school at Brno (1881) Among his works are an orchestral rhapsody, *Taras Bulba*, inspired by Gogol, a string quartet suggested by Tolstoy's *Kreutzer Sonata;* the operas *Katia Kabanova* (1921), after Ostrovsky's *Storm*, and *Aus einem Totenhaus* (Brno, 1930), after a novel by Dostoyevsky, and *Jenufa* (Brno, 1930), his best-known work. See Rosa Newmarch, *The Music of Czechoslovakia* (1942).

Janauschek, Franziska Magdalena (Fanny Janauschek) (fräntsĭ'skä mägdälä'nä yä'noushĕk), 1830–1904, Bohemian actress After her debut in Prague, she was a leading actress in Germany (1848–60). In 1867 she visited the United States, playing her parts in German, and in 1873, having mastered the English language, she returned to act with great distinction Lady Macbeth, Medea, Iphigenia, Mary Stuart, and other tragic roles She later became a resident of the United States and abandoned her classic repertoire for melodrama

Janesville, 1 Village (pop. 1,296), SE Minn , between Waseka and Mankato, in a lake and farm region It was platted in 1855, deserted in the Sioux outbreak of 1862, and incorporated in 1870. **2** City (pop 22,092), co seat of Rock co , S Wis , SE of Madison and on the Rock River, settled 1835, inc 1853 It is an industrial and commercial center in a farm and tobacco-growing area Automobiles and fountain pens are its chief products, and there are tobacco warehouses A museum and a state school for the blind are here Ella Wheeler Wilcox was born near by

Janet: see CLOUET, FRANÇOIS, and CLOUET, JEAN

Janet, Pierre (pyĕr' zhănā'), 1859–1947, French physician and psychologist As director (1890–98) of the laboratory of pathological psychology at Salpêtrière and as professor of experimental and comparative psychology at the Collège de France from 1902, he made important contributions to the knowledge of mental pathology and the origins of hysteria by the use of hypnosis In 1904 he founded the *Journal de psychologie normal et pathologique*, to which he contributed numerous articles Among his important works were *L'Automatisme psychologique* (1889), in which he founded automatic psychology, and *Les Obsessions et la psychasthénie* (1903), which contains the first description of psychasthenia *Major Symptoms of Hysteria* (1907) contains lectures delivered at Harvard

Janeway, Edward Gamaliel (jān'wā), 1841–1911, American physician, b New Brunswick, N J , M D Columbia, 1864 Affiliated with Bellevue Hospital Medical College from 1868 to 1905, he served as curator, professor, and dean He was the first to recognize leukemia and to stress the contagious character of tuberculosis In health commissioner (1875–82) of New York city he was especially concerned with the treatment of contagious diseases Janeway's son, **Theodore Caldwell Janeway,** 1872–1917, M D Columbia, 1895, taught at Bellevue, Columbia, and Johns Hopkins and specialized in the study of blood pressure

Janin, Jules Gabriel (zhül' gäbrēĕl' zhanĕ'), 1804–74, French dramatic critic and novelist His fiction includes *L'Ane mort et la femme guillotinée* (1829) and the historical novel *Barnave* (4 vols , 1831) His dramatic criticism was collected as *Histoire de la littérature dramatique* (6 vols , 1853–58)

Janina, Greece see IOANNINA

Janizaries (jă'nĭzĕ"rēz) or **Janissaries** (–sĕ'rēz) [Turkish,=recruits], élite corps of the Ottoman army, recruited from forced levies of Christian youths and war captives, who were trained under the strictest discipline It was originally organized by Orkhan The Janizaries gained great power under the Ottoman Empire and made and unmade sultans By 1600 Moslems had begun to enter the corps, largely through bribery, and in the 17th cent , membership in the corps became largely hereditary, while the conscription of Christians gradually ceased Sultan MAHMUD II, in 1826, rid himself of the unruly (and by now inefficient) Janizaries by having them massacred in their barracks The so-called "Turkish music" of the Janizaries greatly influenced the formation of modern military bands

Jan Mayen (yän' mī'ún), island (144 sq mi , pop 8), in the Arctic Ocean, c 300 mi E of Greenland It was annexed by Norway in 1929 It is a narrow strip of barren tundra land, rising abruptly to Mt Beerenberg (8,347 ft), an extinct volcano Except for a meteorological and wireless station, the island is uninhabited, but it is visited by sealers and whalers It was discovered (1607) by Henry Hudson From 1611 to 1635 Capt Jan Mayen had a whaling base on the island

Janna, name in the Gospel genealogy Luke 3 24

Jannes and Jambres (jă'nēz, jăm'brēz), opponents of Moses 2 Tim 3 8 Tradition gave these names to Pharaoh's magicians Ex 7 11 One of the PSEUDEPIGRAPHA bears their name

Jannina, Greece see IOANNINA

Janoah (junō'u) [Heb ,=rest], unidentified town, N Palestine, captured by Tiglath-pileser 2 Kings 15 29

Janohah (junō'hŭ) [Heb ,=rest], town, Palestine, c 10 mi SE of Shechem Joshua 16 6,7

Jansen, Cornelis (kôrnā'lĭs yän'sun), 1585–1638, Dutch Roman Catholic theologian He studied at the Univ of Louvain and became imbued with the idea of reforming Christian life along the lines of a return to St AUGUSTINE His companion was DUVERGIER DE HAURANNE. In 1630 he became professor at Louvain, and in 1636 bishop of Ypres. Out of Jansen's life work, the posthumous *Augustinus* (1642, in Latin), arose the great movement called **Jansenism** (jăn' sŭnĭzŭm). This was strictly a Roman Catholic movement, and it had no repercussions in the Protestant world. Its fundamental purpose was a return to greater personal holiness, hence the characteristically mystical turn of Jansenist writings. St. Augustine's teaching on grace was especially appealing to Jansen, who stressed the doctrine that the soul must be converted to God by the action of divine grace, without which conversion could not begin. Predestination was accepted in an extreme form and was so essential to Jansenism that its adherents were called "Calvinists" by their opponents But Jansenism had no sympathy with Protestants, for it held the necessity of the Roman Catholic Church to salvation and opposed justification by faith alone Jansenism fell afoul of the Church for its predestinarianism, for its discouragement of frequent communion for the faithful, and for its attack on the Jesuits and the new casuistry, which they thought was demoralising the confessional Jansenism took root in France, especially among the clergy There it early became involved with GALLICANISM, and high officials of Church and state often sided with Jansenists to thwart the Holy See The second great Jansenist work was *De la fréquente communion* (1643) of Antoine ARNAULD, which stirred the opposition of Jesuits and Dominicans In 1653 Pope Innocent X condemned five of Jansen's doctrines, and in 1656 Arnauld was expelled from the Sorbonne Meanwhile Blaise PASCAL, the greatest Jansenist, aroused a storm by his anti-Jesuit *Lettres à un provincial*. There was persecution of the Jansenists for a while Pasquier QUESNEL published late in the century a vernacular New Testament with Jansenist notes, this Clement XI condemned The aged Louis XIV undertook to suppress Jansenism, and the bulls *Vineam Domini* (1705) and *Unigenitus* (1713) virtually put the Jansenists out of the Church The convent of Port-Royal, the greatest center of Jansenism, was closed, and most Jansenists fled France Gallicanism prevented the legal registration of *Unigenitus* in France until 1730 Jansenism survived as a tendency within the Church, especially in France, taking the form usually of extreme scruples with regard to communion In the Netherlands an organization not in submission to the pope was set up There are Jansenist bishops of Utrecht, Haarlem, and Deventer The independent Jansenists recognize the Council of Trent and are, except for their special differences, like Roman Catholics The first OLD CATHOLIC bishop was consecrated by Jansenists.

Jansen, Zacharias see JANSSEN, ZACHARIAS

Janson, Eric, 1805–50, Swedish religious leader Persecuted for his preaching of the Bible as the only source of spiritual truth, he led a group of followers (Jansonists) to America, here they founded (1846) the colony of BISHOP HILL, Ill. He was killed by an adventurer

Janson, Nicolas see JENSON, NICOLAS

Janssen, Cornelis van Ceulen see JANSSENS, CORNELIS VAN CEULEN

Janssen, Peter (pā'tur yan'sun), 1844–1908, German historical and portrait painter From 1877 he was professor, and from 1895 director, of the Düsseldorf Academy of Art Among his frescoes were *Colonization of the Baltic Coast; The Myth of Prometheus*, in 12 scenes, seven episodes in the history of Erfurt, and *Imagination, Human Life, Beauty,* and *Nature* His oils include *Denial of Peter* (Pa Acad of the Fine Arts)

Janssen, Pierre Jules César (pyĕr' zhül' sēzär' zhānsĕn'), 1824–1907, French astronomer In 1857–58, in Peru, he worked on the determination of the magnetic equator, in Italy (1861–62, 1864) he observed the telluric lines in the solar spectrum, in the Azores (1867) he examined magnetic and topographical conditions, and in Japan (1874) and in Algeria (1882) he observed the transit of Venus He accompanied various solar eclipse expeditions, notably that to Guntur, India, in 1868, where he devised a new method of studying the solar prominences spectroscopically and discovered, almost simultaneously with J N. Lockyer, the chemical constitution of the prominences He was active in the establishment of the astrophysical observatory of Meudon and in 1875 became its director There he gathered a great series of solar photographs included in his *Atlas de photographies solaires* (1904) He later became director of the observatory on Mont Blanc

Janssen or Jansen, Zacharias (zäkhärē'ăs yän'sun), late 16th–early 17th cent , Dutch spectaclemaker at Middelburg He is credited with constructing the first compound microscope c.1590.

Janssens, Janssen, or **Jonson, Cornelis van Ceulen** (kôr'nā"lĭs van kû'lun yän'sŭns), 1593–c.1662, Flemish portrait painter, b probably in London He was the fashionable portrait painter of the English court from 1618 until the advent of Van Dyck In 1643 he moved to Holland. His portraits are in many famous English collections. The Metropolitan Museum contains two.

Janssens van Nuyssen, Abraham (äb'rähäm yän'sŭns van noi'sŭn), c.1575–1632, Flemish painter His work shows the influence of his contemporary Rubens in its bold composition, but relies less on color and more on strong light and shade for effect. Most of his work was done for Flemish churches, where

much of it remains. His *Madonna with Saints* (Church of the Carmelites, Antwerp) and *Ecce Homo* and *Descent from the Cross* (both cathedral, Ghent) are splendid examples of his work He was dean of the painters' guild of Antwerp in 1606.

January: see MONTH

Janum (jā'-) [Heb.,=slumber], unidentified town, apparently near Hebron Joshua 15 53.

Janus (jā'nŭs), in Roman religion, god of "beginnings" whether temporal or spatial. As the god of spatial beginnings he presided over gates and doors, and as the god of temporal beginnings over the first hour of the day, the first day of the month, and the first month of the year (which bears his name) His chief festival was celebrated on the first day of the year, and rams were sacrificed to him He was usually represented with two bearded heads placed back to back, so that he might look in two directions at the same time Janus had a temple in the Roman Forum which was shut in time of peace and opened in time of war

Janvier, Thomas Allibone (jăn'vēr), 1849–1913, American short-story writer, b Philadelphia He is known for his sketches of artist life in New York city, *Color Studies* (1885), and of S France, *Embassy to Provence* (1893), *From the South of France* (1912), and *At the Casa Napoleon* (1914) His wife, **Catherine Anne (Drinker) Janvier,** 1841–1922, b Philadelphia, was an American artist and writer She translated much Provençal literature, and her excellent library now belongs to the New York Public Library

Japan, Japanese *Nippon*, empire (147,000 sq mi , 1940 pop 73,114,308, 1947 pop 78,627,000), occupying an archipelago off the east coast of Asia The capital is Tokyo Japan proper has four main islands which are from north to south, HOKKAIDO, HONSHU (the main island with the capital and other large cities), SHIKOKU, and KYUSHU (the topography and economy of Japan is covered in the articles on those islands) There are, however, numerous smaller islands, perhaps as many as 1,000 stretched in an arc between the Sea of Japan and the Pacific proper Between Honshu and Shikoku is the important all-Japanese Inland Sea Before the Second World War, the Japanese Empire was at its height and included the southern part of SAKHALIN, the KURILE ISLANDS, the RYUKYU ISLANDS, FORMOSA, the PESCADORES islands, KOREA the BONIN ISLANDS, the KWANTUNG leased territory in Manchuria, and the groups held as mandates from the League of Nations (the CAROLINE ISLANDS, MARSHALL ISLANDS, and MARIANAS ISLANDS) Japan also had firm control of the puppet state of MANCHUKUO In the early years of the war Japanese arms also took vast other territories, including a large part of China and the Philippines After the war ended disastrously for Japan, all these possessions were stripped away (though the disposition of the Bonins and the Ryukyus was left in doubt), and Japan was reduced more or less to the size of the nation in 1868 before the imperialist adventure began The general features of the scenery of the four main islands are familiar to Westerners who have studied Japanese prints the shapely mountains, sometimes snow-capped, the most famous being the sacred FUJIYAMA, the rushing, short rivers, the forested slopes, the irregular and lovely lakes, and the small, rich plains Not more than 20 percent of the land is arable, and on the arable sections the density of population is among the highest in the world The range of climate is much the same as from Maine to Georgia, from prevailingly chilly temperate to prevailingly warm temperate Earthquakes are, however, frequent and are sometimes highly destructive Mineral resources are meager, except for coal The rapid streams supply plentiful hydroelectric power The forests yield a wealth of timber In the various regions suitable for farming rice and other grains, vegetables, tea, and mulberry trees (for feeding silkworms) are produced in abundance The fisheries are highly developed and Japanese fishermen go far afield over the Pacific The canning and processing of fish is a major industry in the islands In the 20th cent. Japan was rapidly and thoroughly industrialized Textiles were a leading item No cotton or wool is produced in Japan, but textile production grew to be enormous and before the Second World War silk was still the leading export product Vast quantities of light manufactures were also produced, especially cheap consumer goods (toys, porcelain, and the like), and in the late '20s and '30s heavy industries—metallurgical, engineering, and chemical—were greatly expanded, principally to support the military ambitions of the imperialists Sale of textiles and light manufactures across the world was also the basis for the growth of one of the greatest merchant marines in the world, and in the 1930s, except where tariff and trade barriers had been raised against the Japanese goods, there was scarcely a habor in the world at which the Japanese vessels did not arrive, laden with cheap Japanese merchandise Besides Tokyo the chief cities of the essentially industrial and urban Japan were YOKOHAMA, OSAKA, KOBE, NAGOYA, KYOTO, and NAGASAKI. The Japanese people are primarily the descendants of various peoples who migrated from Asia in prehistoric times One of the earliest groups, the AINU, who still persist to some extent in Hokkaido, are physically somewhat similar to the Caucasian peoples, but the majority of the mixed Japanese population is Mongoloid more or less resembling in general physical qualities the inhabitants of the continent of Asia The principal religion is SHINTO Buddhism was, however, introduced early and has many adherents Shinto and Buddhism have, in fact, influenced each other, while the development of Shinto was radically altered, Japan has seen the development of special Japanese varieties of Buddhism in such sects as Jodo, Shingon, Nicheren, and Zen Confucianism has also deeply affected Japanese thought Christianity does not have a very great hold in the land, less than one percent of the Japanese are Christians. The effect of Confucianism was part of the generally significant influence that Chinese culture wielded on the formation of Japanese civilization (see JAPANESE ARCHITECTURE, JAPANESE ART, JAPANESE LITERATURE)

Sun-Goddess and Feudalism In ancient tradition, taught as fact in the Japanese public schools until 1945, the Japanese people is of divine origin and the empire was founded in 660 B C by the Emperor Jimmu, a lineal descendant of the sun-goddess and ancestor of the present emperor Actually, reliable records date back only to about 400 A D , and Japan's early history is obscure In the first centuries of the Christian era the country was inhabited by numerous clans or tribal kingdoms ruled by priest-chiefs Contacts with Korea were close, and bronze and iron implements were probably introduced by invaders from Korea around the first century. By the 5th cent the Yamato clan, whose original home was apparently in Kyushu, had settled in the vicinity of modern Kyoto and had established a loose control over the other clans of central and W Japan, laying the foundation of the Japanese state From the 6th to the 8th cent the rapidly developing society gained much in the arts of civilization under the strong cultural influence of China, then shining in the splendor of the T'ang dynasty Buddhism was introduced, and the Japanese upper classes assiduously studied Chinese language, literature, philosophy, art, science, and government, creating their own forms adapted from Chinese models A partially successful attempt was made to set up a centralized, bureaucratic government like that of imperial China The Yamato priest-chief assumed the dignity of an emperor, and an imposing capital city, modeled on the T'ang capital, was erected at Nara, to be succeeded by an equally imposing capital at Kyoto By the 9th cent the powerful Fujiwara family had established a firm control over the imperial court The Fujiwara influence and the power of the Buddhist priesthood helped to bring about a gradual decline in the authority and revenues of the imperial government Provincial gentry—particularly the great clans who opposed the Fujiwara—evaded imperial taxes and built up their own strength A feudal system developed Civil warfare was almost continuous in the 12th cent The Minamoto family defeated their rivals, the Taira, and became masters of Japan Their great leader, YORITOMO, took the title of SHOGUN, established his capital at Kamakura, and set up a military dictatorship For the next 700 years Japan was ruled by warriors The old civil administration was not abolished, but gradually decayed, and the imperial court at Kyoto fell into obscurity The Minamoto soon gave way to the Hojo, who managed the Kamakura administration as regents for puppet shoguns, much as the Fujiwara controlled the imperial court In 1274 and again in 1281 Japan was invaded by the Mongols under Kublai Khan, who failed to subdue the country In 1331 the Emperor Daigo II attempted to restore imperial rule He failed, but the revolt brought about the downfall of the Kamakura regime The Ashikaga family took over the shogunate in 1338 and settled at Kyoto, but were unable to consolidate their power The next 250 years were marked by civil wars, during which the feudal barons (the daimyo) and the Buddhist monasteries built up local domains and private armies Nevertheless, in the midst of incessant wars there was a brisk development of manufacturing and trade, typified by the rise of Sakai (the later Osaka) as a free city not subject to feudal control This period saw the birth of a middle class Extensive maritime commerce was carried on with the continent and with SE Asia, Japanese traders and pirates dominated Far Eastern waters until the arrival of the Europeans in the 16th cent.

Military Might and the Foreigners. The first European contact with Japan was made by Portuguese sailors in 1542 A small trade with the West developed Christianity was introduced by St FRANCIS XAVIER, who reached Japan in 1549 In the late 16th cent three great warriors, NOBUNAGA, HIDEYOSHI, and IEYASU, established military control over the whole country and succeeded one another in the military dictatorship Hideyoshi unsuccessfully invaded Korea in 1592 and 1596 in an effort to conquer China After Hideyoshi's death Ieyasu took the title of shogun, and his family ruled Japan for 250 years They set up at Yedo (the later Tokyo) a centralized, efficient but repressive system of feudal government (see TOKUGAWA) Stability and internal peace were secured, but economic and social progress were stifled Christianity was suppressed and all intercourse with foreign countries was prohibited except for a Dutch trading-post at Nagasaki Tokugawa society was rigidly divided into feudal lords (the daimyo), the SAMURAI, peasants, artisans, and merchants, in that order It was imbued with Confucian ideas of loyalty to superiors, and military virtues were cultivated by the ruling aristocracy (see BUSHIDO) Oppression of the peasants led to many sporadic uprisings Yet despite feudal restrictions, production and trade still expanded, the use of money and credit increased, flourishing cities grew up, and the rising merchant class acquired great wealth and economic power Japan was in fact moving toward a capitalist system By the middle of the 19th cent the country was ripe for change Most daimyo were in debt to the merchants, and discontent was rife among impoverished but ambitious samurai The great clans of western Japan, notably Choshu and Satsuma, had long been impatient of Tokugawa control In 1854, an American naval officer, Matthew C PERRY, forced the opening of trade with the West Japan was compelled to admit foreign merchants and to sign unequal treaties Attacks on foreigners were answered by the bombardment of Kagoshima and Shimonoseki Threatened from within and without, the shogunate collapsed In 1867 a conspiracy engineered by the western clans and imperial court nobles forced the shogun's resignation After brief fighting, in 1868 the boy Emperor MUTSUHITO was "restored" to power, and the imperial capital was transferred from Kyoto to Tokyo This was the MEIJI restoration

Industries and Expansion Although the Meiji restoration was originally inspired by antiforeign sentiment, Japan's new rulers quickly realized the impossibility of expelling the foreigners Instead they strove to strengthen Japan by adopting the techniques of Western civilization Under the leadership of an exceptionally able group of statesmen (who were chiefly samurai of the western clans and came later to be called genro) Japan was transformed into a modern industrial state and a great military power The defeat of the Satsuma rebellion in 1877 marked the end of opposition to the new regime Emissaries were sent abroad to study Western military science, industrial technology, and political institutions Feudalism was abolished in 1871 The administration was reorganized on Western lines An efficient modern army and navy were created, and military conscription was introduced Industrial development was actively fostered by the state, working in close cooperation with the great merchant houses A new currency and banking system were established New law codes were enacted Primary education was made compulsory In 1889 the emperor granted a constitution, modeled on that of Prussia Supreme authority was vested in the emperor, who in practice was largely a figurehead controlled by the clan oligarchy Subordinate organs included a privy council, a cabinet, and a diet consisting of a house of peers and an elected house of representatives Universal manhood suffrage was not granted until 1925 After the Meiji restoration nationalistic feeling ran high The old myths of imperial and racial divinity, rediscovered by scholars in the Tokugawa period, were revived, and the sentiment of loyalty to the emperor was actively propagated by the new government Feudal glorification of the warrior and belief in the unique virtues of Japan's "Imperial Way" combined with the expansive drives of modern industrialism to produce a vigorous imperialism At first concerned to defend Japanese independence against the Western powers, Japan soon joined them in the competition for empire in the Orient By 1899 Japan cast off the shackles of EXTRATERRITORIALITY but not until 1911 was full tariff autonomy gained The First CHINO-JAPANESE WAR (1894–95) marked the emergence of imperial Japan with acquisition of Formosa and the Pescadores, as well as the Liaotung peninsula in Manchuria, which the great powers forced her to relinquish An alliance with Great Britain in 1902 increased Japanese prestige, which rose to flood tide in the RUSSO-JAPANESE WAR in 1904–5 Unexpectedly the Japanese smashed the might of Russia with speed and efficiency The treaty of Portsmouth, ending the war, recognized Japan as a world power A territorial foothold had been gained in Manchuria In 1910 Japan was able to annex Korea During the First World War the Japanese secured the German interests in Shantung (later restored to China) and received the German-owned islands in the Pacific as mandates In 1915 the TWENTY-ONE DEMANDS were presented, intended to reduce China to a protectorate, but the other world powers opposed this imperialism and prevented execution of the demands In 1918 Japan took the lead in Allied military intervention in Siberia, where Japanese troops remained

until 1922 These moves, together with an intensive program of naval armament, led to some friction with the United States, which was temporarily adjusted by the Washington Conference of 1921–22 (see NAVAL CONFERENCES) During the next decade the expansionist drive abated in Japan, and liberal and democratic forces gained ground The power of the diet increased, party cabinets were formed (see SEIYUKAI), and despite police repression labor and peasant unions attained some strength. Liberal and radical ideas became popular among students and intelligentsia Politics was dominated by big business (see ZAIBATSU), and the businessmen were more interested in economic than in military expansion Trade and industry, stimulated by the First World War, continued to expand, though interrupted by the earthquake of 1923, which destroyed much of Tokyo and Yokohama Agriculture, in contrast, remained depressed Toward China, Japan pursued a moderate policy, relying chiefly on economic penetration and on diplomacy to advance the Japanese cause This mildness displeased the more extreme militarist and nationalist elements, who disliked the capitalists and advocated state socialism Chief among these groups were the Kwantung army in Manchuria, the young officers, and various organizations such as the Black Dragon Society, which included many prominent men Militarist propaganda was aided by the depression of 1929, which ruined Japan's silk trade In 1931 the Kwantung army precipitated an incident at Mukden and promptly overran all of Manchuria, which was detached from China and set up as the puppet state of Manchukuo When the League of Nations criticized Japan's action, Japan withdrew from the League During the 1930s the military party gradually extended its control over the government, brought about an increase in armaments, and reached a working agreement with the *zaibatsu* Military extremists instigated the assassination of Prime Minister Inukai in 1932 and an attempted coup d'état in 1936 At the same time Japan was experiencing a great export boom, due largely to currency depreciation, the rapid increase of Japanese trade caused some alarm in other countries but slowed down around 1937 From 1932 to 1937 Japan engaged in gradual economic and political penetration of N China In July, 1937, after an incident at Peiping, Japanese troops invaded the northern provinces Chinese resistance led to full-scale though undeclared war (see CHINO-JAPANESE WAR, SECOND) A puppet Chinese government was installed at Nanking in 1940 Meanwhile relations with Russia were tense and worsened after Japan adhered to the Anti-Comintern Pact of 1936 In 1938 and 1939 armed clashes took place on the Manchurian border Japan now stepped up an armament program, extended state control over industry through the National Mobilization Act (1938), and intensified police repression of dissident elements In 1940 all political parties were dissolved and were replaced by the state-sponsored Imperial Rule Assistance Association After the Second World War erupted in Europe in 1939 Japan sent (1940) troops to Indo-China, signed a military alliance with Germany and Italy, and announced the intention of creating a "Greater East Asia Co-Prosperity Sphere" In April, 1941, a neutrality treaty with Russia was triumphantly concluded In Oct., 1941, the militarists achieved complete control in Japan, when Gen Hideki TOJO succeeded a civilian Prince Fumimaro KONOYE as prime minister On Dec 7, 1941, Japan opened hostilities against the United States and Great Britain by striking at Pearl Harbor, Singapore, and other Pacific possessions The fortunes of war at first ran in favor of Japan, and by the end of 1942 the spread of Japanese military over the Pacific to the doors of India and of Alaska was prodigious (see WORLD WAR, SECOND) Then the tide turned, territory was lost to the Allies island by island, and warfare reached Japan itself with intensive bombing and finally in 1945 with the explosion of atomic bombs in Hiroshima and Nagasaki, Japan surrendered, the first offer being announced on Aug 14 and formal surrender being made on the U S battleship *Missouri* in Tokyo Harbor on Sept 2, 1945

Remnants of Empire The surrender was unconditional, but the terms for Allied treatment of the conquered power had been laid down at the POTSDAM CONFERENCE The empire was dissolved and all territories seized by force were removed The country was to be demilitarized, and steps were to be taken to bring forth "a peacefully inclined and responsible government" Industry was to be adequate for peacetime needs, but war-potential industries were to be forbidden. Until these conditions were fulfilled Japan was to be under Allied military occupation. The occupation began immediately under command of Douglas MacArthur A Far Eastern Commission, representing 11 Allied nations was to supervise general policy. The commission, however, suffered from the general rising tension between the USSR and the Western nations and did not function too smoothly The actual occupation force controlled Japan through the existing machinery of Japanese government. A new constitution was adopted in 1946 and went into effect in 1947. The political situation was cloudy, political parties reappeared The general conservative trend in politics was tempered by the elections of 1947 which made the Social Democratic party the largest single force, but the government headed by Katayama went out of power in 1948, and the conservatives took full charge under Shigeru Yoshida in 1949. New education laws were adopted An attempt was made to break up the *zaibatsu* Many of the militarist leaders and generals were tried as war criminals and in 1948 a number of them were convicted Economic revival proceeded slowly with much unemployment and a low level of production, which improved only gradually In 1949, however, MacArthur loosened the bonds of military government, and many of the responsibilities were turned over again to local authorities See J A Murdoch, *A History of Japan* (1926), B H Chamberlain, *Things Japanese* (rev. ed., 1927), Y Takekoshi, *Economic Aspects of the History of the Civilization of Japan* (1930), H S Quigley, *Japanese Government and Politics* (1932), G F Hudson, *The Far East in World Politics* (1937), R K Reischauer, *Japan Government-Politics* (1939), Hugh Borton, *Japan since 1931* (1940), E H Norman, *Japan's Emergence as a Modern State* (1940), H S Quigley, *Far Eastern War, 1937–1941* (1942), G B Sansom, *Japan a Short Cultural History* (rev ed., 1943), C D Carus and C L McNichols, *Japan Its Resources and Industries* (1944), J F Embree, *The Japanese Nation* (1945), G T Trewartha, *Japan a Physical, Cultural & Regional Geography* (1945), T A Bisson, *Japan's War Economy* (1945) and *Prospects for Democracy in Japan* (1949), E O Reischauer, *Japan, Past and Present* (1946), C C Allen, *A Short Economic History of Modern Japan, 1867–1937* (1946), Harold Wakefield, *New Paths for Japan* (1948), Jerome B Cohen, *Japan's Economy in War and Reconstruction* (1949)

Japan, Sea of, part of the Pacific Ocean between Japan and Korea, connecting with the East China Sea through Korea Strait, with the Pacific through the Inland Sea and Tsugaru Strait, and with the Sea of Okhotsk through La Pérouse Strait and Tatar Strait Its area is c 405,000 sq mi and its depth is over 10,000 ft

Japan Current or **Kuroshio** (kōōrōshē'ō) [Jap., = black stream], warm ocean current of the Pacific Ocean A northward flowing branch of the North Equatorial Current, it runs E of Formosa and the Japanese archipelago At about lat 35° N it divides to form an eastern branch flowing nearly to the Hawaiian Islands and a northern branch that skirts the coast of Asia and merges with the waters of the cold Oyashio current

Japanese architecture. The highly developed building art of China came to Japan with the introduction of Buddhism in the 6th cent Late in the century the great monastery of Horyu-ji, near Nara, was begun by architects from Korea The gateway, temple, and pagoda, completed c 650, remain practically unchanged, the temple being the oldest known example of wood architecture extant Since no buildings of this period survive in China, these structures are possibly prototypes of early Chinese architecture Unsurpassed for beauty and purity of form, they exhibit the classic type from which all subsequent Japanese design developed Although extensive forests and the hazards of earthquakes have made wood the favored material, this type of construction was brought to a structural and artistic culmination as complete as any of the great styles of masonry architecture Interior wood columns receive the loads, while the thin exterior walls are of woodwork, plaster, and rice paper As in Greek and Chinese architecture, no use is made of diagonal members, and the framing is exclusively a system of uprights and horizontals Vitality and grace are contributed by the refined curvatures in the column outlines, in the shapes of rafters and brackets, and, especially, in the great overhanging roofs The spacing of columns is governed by the ken (about 6 ft), intercolumniation being one ken for smaller buildings and two for large ones As illustrated by the 7th-century Horyu-ji buildings, the first epoch of Japanese architecture (600–1185) was characterized by gravity, frankness of construction, and simple vital compositions, sparsely ornamented In this period the pagoda at Yakushi-ji near Nara (c 700), still extant, marked the birth of a distinctly Japanese style The pavilion called Phoenix Hall in the temple of Byodo-in at Uji, near Kyoto (c 1050), represents the apogee of Japanese design This was a product of the golden age of culture, which had begun in the middle of the 9th cent with a second wave of Chinese influence, this time directly from China itself In the 13th cent the introduction of Zen doctrines of Buddhism brought a distinctive type of temple, in which altar and shrine were removed from the center space of the temple to a sanctuary at the rear With the Ashikaga period (14th–16th cent) emphasis was increasingly centered upon the ornamental aspects of the buildings. The commencement (1603) of the Tokugawa shogunate coincided with the closing of Japan from intercourse with the outside world and with the development of elaborate architecture Though irrational, coarse, and complex form became common, the adornment of both exteriors and interiors reached an ultimate splendor of richly carved woodwork, metal adornments, laoquers, gold leaf, and mural paintings in glowing colors The temples at Nikko, that in Shiba Park at Tokyo, and that of Chion-in at Kyoto are magnificent examples, and practically all the temples still extant belong to this period But the decadence had been reached, and the opening of the Japanese ports to the Western world marked the virtual end For public and commercial buildings Western methods have now become practically universal, and only in private dwellings do native types survive Through the centuries Buddhist temples have varied little in general style and arrangement Greatest importance was attached to the landscape setting, a forested and picturesque hillside being the favored location, the temple courtyards are approached from terraces and wide flights of steps In front of the main building or *honden* stands an imposing gateway Accessory structures are the five-storied square PAGODA, often omitted, the drum tower, the holy font protected by a shed, and the stage for sacred dances The most impressive temples mark the tombs of princes The Shinto temple, whose pre-Buddhist type is perpetuated, is a small and extremely simple structure, roofed with bark thatch and devoid of color adornment The typical Japanese dwelling of a good class, developed in the Tokugawa period, is unexcelled for its refinement and simplicity The more pretentious ones are two stories high, with several enclosed courts Interior posts form a supporting skeleton for the roof, while the exterior walls are a light frame work into which are fitted sliding screens of mounted rice paper, protected by the projecting roof eaves The interior is flexibly subdivided, by screens (*shoji*) sliding in grooves, into a series of airy spaces not assigned to specific dining or sleeping uses Furniture is introduced for these needs only at the required times There are special spaces for bath and kitchen and for the tea-drinking ceremony Each important living space is provided with a tokonoma, an alcove for the display of a flower arrangement and a few carefully chosen objects of art See R A Cram, *Impressions of Japanese Architecture and the Allied Arts* (1905)

Japanese art, based upon Chinese art, was introduced (6th cent) with Buddhism by way of Korea The teaching stage of the arts progressed under Chinese or Korean priests who created Buddhist pictures and sculptures representing divinities, saints, and legendary figures Rare examples of wall paintings attributed to them (panels formerly in the Kondo at Horyu-ji, near Nara) were not unlike Italian dry frescoes Kose no Kanaoka (9th cent), the first notable native master, followed the traditions of T'ang painting in China, but was individual in their application and won high favor Of his many artist descendants, Motomitsu is outstanding as establishing the Yamato, or native, school (11th cent) Still adhering largely to Chinese style, its exponents portrayed members of the nobility and court ceremonials in brilliant colors (the pulverized lapis lazuli, used as a pigment, still remaining unchanged) on gold backgrounds Landscape features were incidental and conventional Two centuries later a Kose descendant, Tsunetaka, changed his name (an expedient often resorted to by Japanese artists) to Tosa, which he gave to the school Its painters were of the aristocracy and confined their work to the court throughout the period (ending c 1400) At the close of the 12th cent, caricature was introduced by Toba Sojo, a priest, forerunner of many later cartoonists expressing the gay incisive humor inherent in the people He represented the clergy and other personages as frogs, birds, or other animals in amusing poses and carrying satirical legends The succeeding era of painting ushered in a renaissance of the classic Chinese, with the priest Josetsu, Cho Densu, Shubun, and Sesshu, most revered of Japanese landscapists, as its leading exponents It also produced the artists who founded the KANO school, which flourished for about three centuries Its principles were those of the Sung and Yuan periods of Chinese painting, their Japanese expression culminating (17th cent) in the work of Kano Tanyu. Two Tosa painters of this epoch whose names are linked with original movements in Japanese art are Korin, who developed naturalism, and Iwasa Matabei, founder of the ukiyoye, or popular, school of color prints The color-print designers eventually won world-wide recognition and influenced the work of Whistler and other Western artists Among the ukiyoye painters are Harunobu, Shunso, Utamaro, Toyokuni, Kyosai, Hokusai, and Hiroshige The naturalistic school of the 18th cent which had its inception in Kyoto took the name Shijo from the street of its studios Okyo, its leading spirit, instituted revolutionary changes by working from nature. Among his followers were Sosen, Shibata Yeshin, Yosai, and Hoyen. Contemporary with

this movement and influenced by it was the Ganku school of Chinese traditions, with Ganku and Bunrin its chief artists. Mid-19th-century contacts with European culture had a rather stupefying effect upon native artists A few print designers attained distinction, but no masters equaling their predecessors appeared When painting revived, the native style revealed Western influences and many Japanese artists practiced European methods, but the majority still followed Chinese fundamentals Japanese painting is executed upon thin or gauzelike silk or soft paper (in horizontal position) with Chinese ink and water colors The work is mounted on silk brocade or its paper imitation and rolled upon a rod when not on view The hanging picture (*kakemono*) has a special alcove (*tokonoma*) in the room and is changed to suit the season or occasion The long narrow scroll (*makimono*), unrolled in the hands, usually portrays a procession or progressive scenes The early sculptures (7th and 8th cent) are large wooden images and small bronzes of Buddhist deities and saints, created by Korean priests and Korean and Chinese craftsmen, Busshi and Kasuga being of this period The work reveals Greco-Indian influence, is spirited and well modeled, and is unsurpassed by later pieces It is now chiefly in the temples and museums of Nara and Kyoto Jocho was the head of the 11th-century Nara school, which included Kokei and Unkei, Tankei and Kwaikei belong to the succeeding century After the discovery of copper in Japan came the casting of the colossal figures of Buddha, the medieval Daibutsu of Nara and of Kamakura, and an increase in smaller bronzes Stone sculptures are few, but ivory carvings are numerous and exquisitely executed Hidari Jingoro, a carpenter, rose to fame as a carver, elevating the craft to an art Among other minor arts in which Japan excels are making basketry, pottery, porcelain and lacquer work (both derived from China), arms and armor, especially the sword and its guard (*tsuba*) and other fittings, enamels, cloisonné, intarsia, and damascening Other objects of art include the sliding door (*fusuma*), the screen (*byobu*), brie-a-brac (*okimono*), censers (*koro*), the pipe-case or pillbox toggle (*netsuke*), and the pillbox itself (*inro*) There are many private collections of Japanese fine and applied arts in Japan, those of the imperial household being greatest Among public collections in various parts of the world are those of the Imperial Museum and the Museum of Arms (Tokyo), the Louvre, the British Museum and the Victoria and Albert Museum, the Museum of Fine Arts (Boston), the Metropolitan Museum, and the Freer Gallery (Washington, D C) See J F Blacker, *A B C of Japanese Art* (1911), E F Fenollosa, *Epochs of Chinese and Japanese Art* (1911), Hoshu Minamoto, *Illustrated History of Japanese Art* (1935)

Japanese beetle, popular name of a destructive insect related to the June bug, first discovered in New Jersey in 1916 It was probably introduced in nursery stock from Japan and was soon spread over too large an area to make extermination possible The adult is about ½ in long with a metallic green head and thorax and brown wing covers It skeletonizes leaves and destroys fruits and flowers During the summer the eggs are laid in the ground The larvae feed on roots, wintering underground and emerging in June or July Attempts at control include spraying lawns with poison, the use of traps baited with aromatic oils, the use of natural enemies, e g , parasitic wasps and bacteria, and setting up quarantine lines See *The Japanese Beetle and Its Control* (U S Dept of Agriculture, Farmers' Bul 1856)

Japanese drama. The 14th cent saw the rise of the lyric drama, *no* or *noh* drama, and the comic interlude, *kyogen* Deeply rooted in Japanese traditions, *no* is clearly free from the influence of the Chinese, from whom the Japanese borrowed much in other art forms It developed from the song and dance representation called *sarugaku* [literally, monkey music], which originated in the pantomimic dance performed at ancient Shinto and Buddhist festivals There are about 250 extant *no* plays, most of them written in the 15th cent The staging of *no* plays is extremely formal There is a platform roughly 20 ft square, supported by four pillars open on three sides and covered by a roof The chorus sits at the right and the musicians at the back of the stage, on the back wall is a painting of a pine tree, which symbolizes the pine trees near the shrines The stage, with only the barest essentials of scenery, sets the restrained and suggestive tone of the performance A device that further minimizes a realistic effect is the use of wooden masks The word *no* means ability, as applied to the play, it highlights the emphasis placed on a meticulously rehearsed and finished performance. The involved symbolism of a *no* play makes it impossible for Westerners and even for many educated Japanese to appreciate its merit fully, unless they have the esoteric knowledge of the various symbolic allusions The one-act farce, *kyogen*, which gives comic relief to a *no* program, developed from the *dengaku* [literally, rustic music], which like the *sarugaku* originated in primitive religious dances *Kyogen* is unique among the old dramatic forms in that it requires no music and consists simply of dialogue and monologue, the humor in *kyogen* is generally very broad There are about 280 extant *kyogen*, probably written during the same period as the *no* plays Fostered by the feudal daimyo, *no* drama appealed almost exclusively to aristocratic tastes, and there was soon a growing demand for plays that would satisfy an unintellectual audience This need for popular entertainment was filled by the *kabuki*, which developed in the 17th cent as a vulgarized offshoot of *no* In a *kabuki* play there is greater freedom to deviate from set rules of acting and staging, instead of the understatement of *no*, there is exaggeration in the highly stylized acting, bizarre make-up is used instead of the wooden masks of *no* plays A crucial point of similarity, however, between the two types of plays is the use of tableau as the climactic point of the drama, when the actors strike an elaborate pose and hold it for a tense moment By the 17th cent the dramatic ballad, *joruri*, had reached a high degree of perfection and added greatly to the popularity not only of *kabuki*, but also of the puppet show, to which it was adapted Puppet drama had been introduced in the early 16th cent and in the 18th cent enjoyed a tremendous vogue Subsequently it lost much of its popularity, but it still has importance in the Japanese theater because it was the medium for which the most celebrated plays, notably those of Chikamatsu Monzaemon, were written *Kabuki* continued to be popular Beginning in the late 19th cent, translations and adaptations of European plays were successfully introduced, but the native dramas, especially the classical *kabuki* and its modernized version, still have the widest appeal See Ernest F Fenollosa and Ezra Pound, *'Noh' or Accomplishment* (1919), Arthur Waley, *The No Plays of Japan* (1921), B L Suzuki, *Nogaku Japanese No Plays* (1932), Shio Sakanishi, *Kyogen* (1938)

Japanese ivy see BOSTON IVY

Japanese literature. Japan had no written language until the late 3d cent A D when Chinese was introduced by Korean scholars Early in the 8th cent a method of writing Japanese was evolved by adapting Chinese ideographs to spoken Japanese by using some of them as phonetic symbols This difficult system of writing was used in the composition of the *Kojiki* (712), the sacred book of Shinto, which included traditional poems and stories that had been preserved orally, it is an account of the creation of the world and of the divine origin of the imperial family of Japan In 721 appeared another historical work, the *Nihon-gi* or *Nihon-shoki*, which differed from the *Kojiki* in that it was written in pure Chinese The anthology of verse, *Manyoshu* [collection of myriad leaves] (760), also written in Chinese, was a great literary achievement, containing about 4,500 poems, many of them remarkable for their perfection The simplification of the written language by the adoption of two syllabaries (*kata-kana* and *hira-gana*) in the 8th and the 9th cent opened the classic age, the era when Japanese literature reached its highest development Although classical Chinese still flourished in the highest intellectual circles, literature in the native language gained increasing prestige The poet Ki-no-Tsurayuki, in the preface to his travel journal, *Tosa-nikki* (935), apologized for writing in Japanese, but the book was widely read and respected An unusual feature of the period was the appearance of several talented women writers, foremost among whom was MURASAKI SHIKIBU, author of the *Genji-Monogatari* (Eng tr , *Tale of Genji*, one-volume ed , 1935) There were also Sei Shonagon, author of the *Pillow Book*, and Izumi Shikibu, an accomplished poet The classic age closed in the 12th cent and was followed by a period which, though often called the dark age of Japanese letters, is memorable for the rise of the JAPANESE DRAMA with its four forms—*no* drama, the *kyogen* (comedies), and the *kabuki* (popular drama), and puppet drama The period also saw the production of several fine prose works—the *Hojoki* (1212?), meditations of the recluse Kamo Chomei, *Tsurezure gusa* (1345?), pessimistic essays by Kenko Boshi, and the *Heike-Monogatari*, which was one of several long narratives of the civil wars of the period The establishment of the Tokugawa shogunate (1603) ushered in an age of peace which lasted for more than 250 years and was attended by a revival of interest in the ancient classics of Japan and by the development of a standard written language There was also renewed interest in Chinese learning The quality of the Japanese theater greatly improved, largely through the efforts of the dramatist CHIKAMATSU MONZAEMON Of the romantic novelists of the early 19th cent the best known was Kyokutei Bakin (1767–1848) The *tanka*, traditional form of poetry (a five-line stanza with alternate lines of five and of seven syllables), was largely replaced by new and freer verse forms, such as the *haikai* or *hokku* which was masterfully developed by Basho Matsura (1648–94) The opening of Japan to the West in 1858 had a profound effect on Japanese literature Not only did numerous translations of European, American, and Russian literary works appear, but there were also Japanese novels written in close imitation of foreign works Among the leading 19th-century figures were Shoyo Tsubouchi, a Shaksperian scholar, the novelists Koyo Ozaki, Rohan Koda, and Futabatei Shimei (who introduced Russian novels into Japan), and Soseki Natsume, author of the widely read *I Am a Cat* (1905) See W G Aston, *History of Japanese Literature* (1899), Arthur Waley, *Japanese Poetry* (1919), J Ingram Bryan, *The Literature of Japan* (1929), Kan Kikuchi, *History and Trends of Modern Japanese Literature* (pamphlet, 1936), George Kunitomo, *Japanese Literature since 1868* (1938)

Japanese music, Oriental musical culture of a highly eclectic character Its history begins in the 5th cent A D with the importation through Korea of the ancient ceremonial music of China This music, the Japanese *gagaku*, no longer exists in China, but has been preserved almost intact in Japan by certain families appointed by the court and is passed on by them through succeeding generations It is a solemn orchestral music, using the *koto* (the Chinese dulcimer), *hichiriki* (an oboe), *shakuhachi* (a flute), *sho* (mouth organ, the Chinese SHENG), *biwa* (a lute), drums, and gongs In the 6th cent the Buddhist religion and its hymns came to Japan from China, again by way of Korea Directly from China, in the 7th cent , came the *bugaku*, a ceremonial dance with music, originating in India The *kagura*, used for the most solemn of religious rites, is an indigenous music which is thought to contain traces of a music existing before the 5th cent This is principally vocal music accompanied by the *koto* and *kagura-bue* (an aboriginal flute) Midway between sacred and secular is the music of the *no* drama (see JAPANESE DRAMA), dating from the 14th cent It is a vocal recitative, *utai*, restrained in feeling and of uncertain intonation, accompanied by the *yokobue* (a flute) and drums The *no* music is the offspring of the *gagaku* It cannot be considered apart from the drama Secular music in Japan originated in the middle of the 16th cent with the introduction of the *samisen* from China The *samisen* is a plucked instrument with three strings Its body has a flat back and is in the shape of a square with somewhat rounded sides, and its neck is long It is used for the accompaniment of various types of vocal music and in ensemble with the *koto*, a long zither with a convex sounding board and 13 strings The *koto* attained its present form in the 16th cent and is used both as a solo instrument and in ensemble The *shakuhachi*, a bamboo flute, was brought from China in the 13th cent and was used exclusively by Buddhist monks until 1871, when protection was no longer given these monks The scales of Japan are all pentatonic, but are of two types That borrowed from China is without semitones and has two modes (see MODE)—*ryo*, the male mode, and *ritsu*, the female mode, preferred by the Japanese The native scale has semitones and has three modes—*hirajoshi*, roughly represented by the series ABCEFA on the piano, the most important, *kumojoshi*, second in importance, approximated by EFABCE, and *iwato*, approximated by BCEFAB A given composition may modulate freely from one mode to another There is a norm of pitch, but deviations above or below it are common Japanese music is essentially monophonic, but variations in the rhythm on the part of two instruments and a holding back of certain parts creates something resembling polyphony in ensemble music Drums provide a rhythmic background which seems to the Western ear to be, like the intonation, obscure and uncertain The Meiji restoration saw the importation of Western music to Japan The first Western element adopted was the brass band In the 1880s Western music was added to the curriculum of Japanese schools, and in 1887 the Academy of Music, Tokyo, was established Later, symphony orchestras were formed, and Western music became an integral part of the cultural life of Japan Some attempt has even been made to compose music combining elements of both cultures See Katsumi Sunagg, *Japanese Music* (1936), Hisao Tanabe, *Japanese Music* (1936).

Japanese quince see FLOWERING QUINCE

japanning, method of coating a surface, such as wood, metal, or leather, by the application of varnish to give a durable, lustrous finish Japanning varnishes usually have a base of copal oil colored with mineral pigments or, for black, asphaltum The successive coats are heat-dried The term is derived from a process imitating the lacquer work of the Orient known as Japan ware In England, France, and the Netherlands japanning was extensively employed from the mid-17th cent in the decoration of furniture, screens, and such small objects as trays, snuffboxes, and canisters of wood, metal, or papier mâché The desired luster and hardness were commonly attained without heating by polishing each coat

Japheth (jā'fĭth), son of Noah and ancestor of those who were to occupy the isles of the Gentiles This has been supposed to mean the Mediterranean

lands of Europe and Asia Minor Gen. 5.32; 6 10; 9 27, 10 1–5.

Japhia (juf'ĭa) [Heb.,=splendid]. **1** King of Lachish slain by Joshua Joshua 10 3 **2** Son of David 2 Sam. 5 15, 1 Chron 3.7 **3** Unidentified town, N central Palestine Joshua 19 12

Japhlet (jă'flĕt) [Heb.,=He frees], descendant of Asher 1 Chron 7 32, 33

Japhleti (jăflē'tī), unidentified landmark, central Palestine Joshua 16 3

japonica, see FLOWERING QUINCE and CAMELLIA.

Japurá (zhŭp"pōōrä'), river, more than 1,000 mi long, rising as the Caquetá in Colombia and flowing generally SE into Brazil, where it is called the Japurá. It enters the Amazon through a network of channels

Jaques-Dalcroze, Émile (āmēl' shăk"-dalkrōz'), 1865–, Swiss educator and composer, b Vienna, studied at the Geneva Conservatory, at the Paris Conservatoire with Delibes, and in Vienna with Bruckner In 1892 he began to teach at the Geneva Conservatory, and there, as an aid to his own teaching, he developed his system of EURYTHMICS Since conservatories were reluctant to add it to their curriculums, even after successful demonstrations, a school was established at Hellerau, near Dresden, where Jaques-Dalcroze taught from 1910 until 1914, when the First World War ended the school's activities In 1915 the Institut Jaques-Dalcroze was opened at Geneva The system has had great effect, not only on music teaching, but on the ballet as well It has adherents in over 30 countries Jaques-Dalcroze is also the composer of a number of operas and other works and the author of several books, including *Rhythm, Music, and Education* (Eng tr , 1921), *Eurythmics, Art, and Education* (Eng tr , 1930), and *La Musique et nous* (1945).

Jarah (jā'rŭ), descendant of Saul 1 Chron 9 42 Jehoadah 1 Chron 8 36.

Jareb (jā'-) [Heb ,=adversary], Assyrian king, perhaps a symbolic name Hosea 5 13, 10 6

Jared (jā'-) [Heb ,=descent], father of Enoch Gen 5 15–20, Luke 3 37 Jered 1 Chron 1.2

Jaresiah (jărēsī'ŭ) [Heb ,=God nourishes], chief man of Benjamin 1 Chron 8 27

Jarha (jär'hŭ), Egyptian slave to whom Sheshan gave his daughter 1 Chron 2 34

Jarib (jā'-) [Heb ,=adhering] **1** The same as JACHIN **1** **2** Companion of Ezra Ezra 8.16 **3** One who had a foreign wife Ezra 10 18

Jarmuth (jar'mŭth) [Heb ,=height] **1** City, SW Palestine, allied against Gibeon and defeated by Joshua Joshua 10, 12, 15 35, Neh 11 29 **2** See REMETH

Jarnac (zhärnäk'), town (pop 3,624), Charente dept , W France, on the Charente river It has important liquor distilleries Here in 1569 the French Catholics under the duke of Anjou (later King Henry III) defeated the Huguenots, whose leader, Louis I de Condé, was killed

Jaroah (jurō'ŭ), chief Gadite. 1 Chron 5.14

Jaroslaw, Pol *Jarosław* (yärô'swaf), town (pop 19,376), Poland, on the San river and W of Lvov Included in Poland (1382), Jaroslaw passed (1772 1919) to Austria It is principally an agricultural center

Jarrow, municipal borough (1931 pop 32,018, 1947 estimated pop 27,590), Durham, England, on the Tyne estuary between Newcastle and Shields Its industries include iron foundries and shipbuilding Jarrow grew with shipbuilding yards founded in 1851, and when these closed in the late 1920s much unemployment resulted St Paul's Church includes part of a Benedictine monastery founded in 685 by Benedict Biscop It was the scene of the labors of the Venerable Bede, who died here

Jarves, James Jackson (jar'vĭs), 1818–88, American art critic and art collector, b Boston He spent some years in Honolulu, where he founded and edited a weekly newspaper, the *Polynesia*; it became the official organ of the Hawaiian government He later settled in Florence and served (1880–82) as U S vice consul His writings include *History of the Hawaiian or Sandwich Islands* (1843), several European travel books, and a number of works on art. His collection of early Italian paintings is at the Yale School of Fine Arts and at the Cleveland Museum of Art; the Metropolitan Museum has his collection of Venetian glass See catalogues of these collections by Russell Sturgis, Jr (1868), Osvald Sirén (1916), and Stella Rubinstein (1917)

Jarvis, John Wesley, 1781?–1839, American portrait painter, b England Beginning as an engraver in Philadelphia, he early moved to New York, where he became a popular portrait painter. In City Hall, New York, is a series of his full-length portraits of military and naval heroes of the War of 1812 The New York Historical Society and the Metropolitan Museum also contain examples of his work.

Jarvis, Thomas Jordan, 1836–1915, governor of North Carolina (1879–85), b. Jarvisburg, Currituck co , N C , grad Randolph-Macon College (B A , 1860; M A., 1861) Wounded at Drewry's Bluff (1864) in the Civil War, he left Confederate service as a captain. He was admitted to the bar in 1868 and served in the state legislature (1868–69, 1870–71), being speaker in the last term. Jarvis, elected lieutenant governor in 1876, became governor when Zebulon B Vance went to the U S Senate, he was elected (1880) for a full term as governor He furthered educational projects, industrial development, and private railroad construction. He was U S minister to Brazil (1885–89) and a U S Senator (1894–95)

Jarvis Island, area 1 sq mi , central Pacific near the equator, one of the Line Islands. It is 1,100 mi E of Howland Island. It was visited by a British vessel in 1821 A U S guano company undertook exploitation in 1857, and in that year the United States claimed the island The guano digging stopped in 1879 In 1889 Great Britain annexed the island, but did not exploit it American colonists were brought here from Hawaii (1935), and the island was placed (1936) under the U S Dept of the Interior Jarvis is important because it is on the air route from Hawaii to New Zealand

Jashar or **Jasher, Book of** (both jā'shur), an undiscovered Hebrew work, apparently a collection of songs celebrating national events and referred to only twice Joshua 10 13, 2 Sam 1 18

Jashen (jā'-) [Heb ,=sleeping], father of some of David's men 2 Sam 23 32 Hashem the Gizonite 1 Chron 11 34 The term *Gizonite* is obscure

Jashobeam (jăshō'bēum), one of David's mighty men. 1 Chron 11 11, 12 6, 27 2

Jashub (jā'shub) [Heb ,=who returns] **1** Son of Issachar Num 26 24, 1 Chron 7 1 Job Gen 46 13 **2** Jew who had a foreign wife Ezra 10 29

Jashubi-lehem (jăsh'ŭbī-lē'hĕm), obscure name in a genealogy 1 Chron 4 22

Jasiel (jā'sēĕl) [Heb ,=God created], one of David's mighty men 1 Chron 11 47 He is perhaps the same as JAASIEL

jasmine (jăs'mĭn, jăz-) or **jessamine** (jĕs'ŭmĭn), any plant of the genus *Jasminum*, shrubs or clambering plants, chiefly of Old World tropical and subtropical regions but cultivated elsewhere, outdoors in mild climates and in greenhouses farther north The blossoms, mostly white or yellow, are usually very fragrant, some being used for scenting tea, the oil is utilized in perfumery Often requiring the support of a wall or arbor, the stems are frequently angled, with deciduous or evergreen leaves The common jasmine (*Jasminum officinale*) has white flowers and glossy deciduous leaves Both names are given to other plants, as Cape jasmine, or GARDENIA, and Carolina jasmine (*Gelsemium sempervirens*), the state flower of South Carolina

Jasnorzewska, Marja (mar'ya yasnôzhĕf'skä), 1899–1945, Polish poet and playwright, also known as Marja Pawlikowska (pävlēkôf'ska) She is noted for the perfection of her lyrics Her plays were artificial and not dramatically successful

Jason, in Greek mythology, leader of the Argonauts He was one of the heroes of the CALYDONIAN HUNT and procurer of the GOLDEN FLEECE from Aëtes, king of Colchis Jason was educated by the centaur CHIRON, and when he reached manhood he claimed the kingdom of Iolcus, which his uncle, Pelias, had stolen from his father, Aeson Pelias said that Jason could regain the kingdom only in exchange for the Golden Fleece Hence Jason went to Colchis in his ship the ARGO, accompanied by the ARGONAUT heroes Aëtes tried to prevent Jason from obtaining the fleece, but MEDEA, Aëtes' daughter, loved Jason and helped him Jason returned to Iolcus, taking Medea and the fleece with him, but when Medea caused the murder of Pelias, Acastus, his son, drove the pair out of the kingdom They went to live in Corinth, where Jason fell in love with the princess, CREUSA Medea in revenge killed Creusa, Creon, and her own children by Jason According to one legend Jason committed suicide, but another says that he was crushed to death by a beam which fell from the Argo

Jason (jā'sŭp) **1** St Paul's host at Thessalonica Acts 17 5–9 **2** Companion of Paul at Corinth, perhaps the same as **1** Rom 16 21

Jason of Cyrene (sīrē'nē), 2d cent B C , Jewish historian He wrote a history of the Maccabean uprising, used as the basis of 2 Maccabees

Jasonville, city (pop 3,418), SW Ind , SSE of Terre Haute Shakamak State Park is near by

Jasper, William, c 1750–1779, American Revolutionary soldier, b South Carolina (possibly near Georgetown) He joined William Moultrie's regiment early in the Revolution (1775), was made sergeant, and was ordered to Fort Sullivan (now Fort Moultrie) in Charleston harbor There he bravely rehoisted the flag over the fort in the face of British gunfire (1776). He later was distinguished as scout before he was killed in the attack on Savannah

Jasper. **1** City (pop 6,847), co. seat of Walker co , NW central Ala , NW of Birmingham, in a coal-mining area, settled 1815 It processes cotton and timber **2** City (pop. 1,722), co seat of Hamilton co., N Fla., near the Ga line, settled c.1825 It is a trade and processing center in a tobacco and timber area. **3** City (pop 5,041), co. seat of Dubois co , SW Ind., NE of Evansville; settled 1830. Desks are manufactured here. **4** City (pop. 3,947), co. seat of Jasper co., E Texas, N of Beaumont; settled 1824, inc 1926 It is a lumber town in the pine woods with small industries dependent on pine, though livestock and produce are also shipped

jasper, opaque, impure cryptocrystalline QUARTZ, usually red, but also yellow, green, and grayish blue It is used as a gem Ribbon jasper has the colors in stripes

Jasper National Park, 4,200 sq. mi , W Alta., in the Canadian Rocky Mts ; est 1907. Containing many high peaks, glaciers, lakes, hot springs, and streams, it is a game reserve and a popular recreation area, with mountain climbing and excellent fishing It was named for Jasper Hawes, factor of a North West Company fur-trading post established here c 1813. Jasper is the park headquarters and is a station on the Canadian National Railways system

Jaspers, Karl (kärl' yäs'pûrs), 1883–, German philosopher and psychologist He began to teach philosophy at the Univ of Heidelberg in 1913 Regarded as one of Germany's leading modern philosophers, he is associated with the school of "existential" philosophy originated by Kierkegaard and developed by Heidegger Jaspers's philosophy, focused on the individual, is subjective and nonrational, stressing the difference between facts and the individual's emotional attitude toward facts Truth is the constant reinterpretation of the individual's experiences, and freedom resides in a developing capacity to make spontaneous ethical decisions Theories of society and of race and such psychological concepts as that of the unconscious are a menace to the development of individuality Through communication, understanding may be achieved and cooperative effort made possible Love is considered the highest expression of existence and religion the means of overcoming evil His works include *Psychologie der Weltanschauungen* (1919), *Die geistige Situation der Zeit* (1931, Eng tr , *Man in the Modern Age*, 1933), *Existenzphilosophie* (1938), *Die Schuldfrage ein Beitrag zur deutschen Frage* (1946, Eng tr , *The Question of German Guilt*, 1947), and *Der philosophische Glaube* (1948, Eng tr , *The Perennial Scope of Philosophy*, 1949)

jasper ware, kind of WEDGWOOD pottery in green, blue, lilac, and other colors, with characteristic Greek reliefs and designs

Jassy (jă'sē) or **Iasi** (yash), city (pop 94,075), E Rumania, in Moldavia It is an economic, cultural, and historic center, the see of an Orthodox archbishop, and the seat of a university (founded 1860) Jassy manufactures woolen, cotton, and silk textiles and processes food and tobacco The environs are a fertile agricultural and viticultural region First mentioned in 1408, Jassy succeeded (1565) Suceava as the capital of Moldavia It was repeatedly burned and sacked by the Tatars, the Turks, and the Russians The Treaty of Jassy (1792) ended the second of the RUSSO-TURKISH WARS of Catherine II In the First World War, Jassy was the temporary capital of Rumania during the German occupation of Walachia There was, until 1941, a large Jewish population, which was massacred, on German instigation, in one of the worst pogroms in history Jassy fell to Russian troops in 1944 Among the many fine buildings are the 17th-century cathedral, the Church of the Three Hierarchs (17th cent), and the Church of St. Nicholas (15th cent), which are outstanding examples of the Moldavian adaptation of Byzantine architecture

Jastrow, Joseph (jă'strō), 1863–1944, American psychologist, b Warsaw, Poland, grad Univ of Pennsylvania, 1882, Ph D Johns Hopkins, 1886, son of Marcus Jastrow He came to the United States as a child Professor (1888–1927) at the Univ of Wisconsin and lecturer (1927–33) at the New School for Social Research, New York, Jastrow made special studies of abnormal psychology and of the development, analysis, and correlation of mental processes His many books include popularizations of psychology for the layman

Jastrow, Marcus, 1829–1903, American rabbi and Talmudic scholar, b Poland He was a rabbi (1866–92) in Philadelphia, editor of the Talmud material of *The Jewish Encyclopedia*, and author of *Dictionary of the Targumim, the Talmud Babli and Yerushalmi, and the Midrashic Literature* (1903)

Jastrow, Morris, 1861–1921, American Orientalist, b Warsaw, grad Univ of Pennsylvania, 1881, Ph D. Univ. of Leipzig, 1884, son of Marcus Jastrow He became a professor of Semitic languages and a librarian at the Univ of Pennsylvania He was an authority on the religion and literature of the ancient Near East (Babylonian, Assyrian, and Hebrew) He was also much interested in Zionism

Jaszbereny, Hung *Jászberény* (yäs'bĕrānyŭ), city (pop. 31,070), central Hungary. A market center, it has a museum of folk art.

jataka: see PALI LITERATURE.

Jathniel (jăth'nēĕl) [Heb ,=God bestows], doorkeeper of the tabernacle. 1 Chron. 26.2.

Játiva (hä'tĭvä), city (pop, 17,496), Valencia prov , E Spain, in Valencia. It is in a fertile region yielding oranges and other fruit It was once noted for its linen, now there are tanneries and paper mills.

Játiva was liberated from the Moors by James I of Aragon in the 13th cent There are many fine public and private buildings, notably the well-preserved Spanish-Moorish castle, the Ermita de San Feliú (a former Mozarabic church), and the Gothic collegiate church (15th cent.) Játiva was long the residence of the Borgia or Borja family The popes Calixtus III and Alexander VI were born here. It is also the birthplace of the painter Jusepe Ribera

Jattir (jă'tur), mountain town, Palestine, SW of Hebron Joshua 15 48; 21 14, 1 Sam 30 27; 1 Chron 6 57

jaundice (jôn'dĭs), condition characterised by the presence in the blood of bile pigment which causes a yellowish discoloration of tissues and excretions and is visible in the skin and in the whites of the eyes It is often accompanied by itching Other symptoms depend on the cause of the jaundice When the liver is injured by chemical or bacterial toxins and when red blood cells are destroyed in great numbers (as in hemolytic jaundice), the bile pigments enter the circulation instead of being excreted in bile A common cause of jaundice is obstruction (by gallstones, inflammation, or tumors) of the duct leading from gall bladder to intestine which causes the bile to back up into the circulation Some types of jaundice are caused by viruses Treatment depends upon the cause.

Jaunpur (joun"pōōr'), town (pop 44,833), SE United Provs., India In the 15th cent it was the capital of a Moslem kingdom Of the many buildings in the Pathan style from this period the Atala Mosque is the most notable Perfumes are manufactured

Jauregg, Julius Wagner · see WAGNER-JAUREGG

Jaurès, Jean (zhă zhōrĕs'), 1859–1914, French Socialist and historian. A brilliant student and teacher, Jaurès early became a Socialist In the chamber of deputies and in his Socialist journals, notably *Humanité*, he denounced nationalism and preached world peace and Socialism Socialism, he thought, was the equivalent in the economic field to democracy in politics Economic equality would be brought about as the result of a peaceful revolution Idealistic, he sought to reconcile Marxian materialism with his own beliefs As leader of the Socialists, he opposed BOULANGER, defended Dreyfus, worked for the separation of Church and state, and advocated arbitration instead of war in 1914 Expounding this view, he declared that France as well as other capitalistic countries were responsible for the war crisis He was assassinated by a fanatical patriot July 31, 1914 His *Histoire socialiste de la Révolution française* (new ed by Albert Mathiez, 8 vols , 1922–24) is an economic interpretation of the French Revolution, he manages to strike a balance between the materialistic history of Marx and the dramatic interpretation of Michelet See biographies by Lucien Lévy-Bruhl (1924, in French), Charles Rappoport (1925, in French), and H R Weinstein (1936), Paul Farmer, *France Reviews Its Revolutionary Origins* (1944)

Java (jä'vu), island (48,842 sq mi , pop 39,755,902, including offshore islands), INDONESIA, S of Borneo, from which it is separated by the Java Sea, and SE of Sumatra across Sunda Strait Although Java is relatively insignificant in size, it has been for centuries the cultural, political, and economic center of Indonesia A chain of volcanic mountains, most of them densely forested with teak, palms, banyans, and other woods, traverses the length of Java from east to west, rising to 12,060 ft at Mt. Mahameru There are numerous rivers with a short, turbulent course, the only large one is the Solo, 335 mi long The climate is warm and humid, and the soil exceptionally fertile, particularly in the eastern area where sugar cane is raised In the highlands are grown rubber, tea, coffee, tobacco, and cinchona, and there are terraced rice fields on the mountain slopes. Tropical vegetation is luxuriant everywhere Most of the world's supply of quinine comes from Java, which also has large exports of rubber, sugar, and teak There are oil fields in NE Java; sulphur, gold, and phosphates are mined in small quantities Java is known for its highly developed silver craft and artistic batik work Found mostly in the interior are such animals as tigers, rhinoceroses, apes, and panthers, birds of brilliant plumage are numerous Java was a home of early man (see MAN, PRIMITIVE), Eugene Dubois found here in 1891 the fossilized remains of the so-called Java man or *Pithecanthropus erectus* In spite of the systematic transfer of surplus inhabitants to nearby islands, Java remains one of the most densely populated areas in the world The typically Malayan inhabitants of the island comprise the Javanese (the most numerous) in central and E Java, the Sudanese in the west, and the Madurese in the east. Numerous Chinese (mostly traders) and Arabs live in the coastal areas. Java has been predominantly Moslem since the 15th cent., but the lasting influence on the artistic aspect of Javanese culture has been made by Hinduism and Buddhism. The best known of the Buddhistic remains in Java is the monumental shrine BOROBUDUR. Like Bali, Java is known for its highly developed arts. There is a rich literature, and the *wayang* or shadow play employing puppets and musical accompaniment is an important dramatic form The largest city is BATAVIA (capital of the United States of Indonesia), and Tanjungpriok is the chief port JOGJAKARTA and SURAKARTA are cultural centers, other towns are SURABAYA, BUITENZORG, CHERIBON, and SEMARANG In the 7th cent the Hindus began to colonize central and E Java, and in the 11th and 12th cent the Hindu-Javanese kingdom of East Java controlled Bali and parts of Sumatra and the Malay Peninsula. The high point of Javanese history was the rise of the powerful Hindu-Javanese state of Majapahit (founded 1293), which extended its rule over much of Indonesia and the Malay Peninsula In its decline Islam, which had been introduced in the 13th cent , peacefully spread its influence, and the new Moslem state of Mataram emerged in the 16th cent Following the Portuguese, the Dutch arrived in 1596, and in 1619 the Dutch East India Company established its chief post at Batavia, thence gradually absorbing the native states into which the once powerful Javanese empire had disintegrated Between 1811 and 1815 Java was briefly under British rule headed by Sir Thomas S Raffles, who instituted reforms which the Dutch ignored when they returned to power Harsh methods of exploitation led in the 19th cent to native uprisings, which forced the Dutch to adopt a more humane approach In the early phase of the Second World War, Java was left open to Japanese invasion by the disastrous Allied defeat in the battle of the Java Sea in Feb , 1942 At the end of the war a large part of Java came under the control of the republic of Indonesia, with the capital at Jogjakarta.

Javan (jā'vän) [Heb , =Ionian], in the Bible **1** Japheth's son, eponymous ancestor of the Greeks Gen 10 2,4, 1 Chron 1 5,7, Isa 66 19, Ezek 27 13. **2** Unidentified place engaged in trade with Tyre, perhaps a Greek colony Ezek 27 19

Javanese music, Oriental musical culture remarkable in its orchestral development Little is known of its origins It possesses two separate pentatonic systems—*pelog* and *slendro* or *salendro* *Pelog* contains seven tones, only five of which are used in a given composition The intervals of *pelog* are unequal, and the smaller ones approximate the semitone of Western music *Slendro* is a division of the octave into five roughly equal intervals It was believed by the Javanese to be the older system, but contemporary musicologists find evidence that *slendro* was derived from *pelog*, although it is not certain when and by whom *Slendro* is associated with that which is masculine, and *pelog* with that which is feminine. The Javanese *gamelan*, an orchestra of tuned percussion instruments, flourishes today in Bali, where it was taken in the 15th cent by Hindus escaping from the Moslem invasion of Java It is heard now but rarely in Java, and the archaic *gamelan* is best studied in BALINESE MUSIC

Javari (zhŭ"vurē'), Span *Yavarí* (yävärē'), river, more than 500 mi long, marking the boundary between NW Brazil and NE Peru It flows to the Amazon

Javelle water or **Javel water** (both zhuvĕl', juvĕl'), Fr *eau de Javelle* (ō du zhăvĕl'), one of the earliest bleaching solutions, manufactured originally at Javelle, near Paris It is made commercially by passing chlorine gas through a solution of caustic soda or caustic potash, by the electrolysis of sodium chloride or potassium chloride, or by combining sodium carbonate or potassium carbonate with bleaching powder and water It may be made for home use by dissolving a pound of washing soda in a quart of boiling water, then adding a half pound of chloride of lime dissolved in two quarts of cold water and allowing the liquid to settle Javelle water is used also as an antiseptic and disinfectant As a bleach it has been largely displaced by more stable solutions It must be used with care, since it removes colors, rots silk and wool, and injures cotton and linen fibers unless thoroughly removed by rinsing

Jay, John, 1745–1829, American statesman, b New York city, grad. King's College (now Columbia Univ), 1764 He was admitted (1768) to the bar and for a time was a partner of Robert R Livingston His marriage to Sarah, daughter of William Livingston, allied him with that influential family In pre-Revolutionary activities he reflected the views of the conservative colonial merchant, opposing British actions but not favoring independence Once the Declaration of Independence was proclaimed, however, he energetically supported the patriot cause As a delegate to the First and Second Continental Congresses he urged a moderate policy, served on various committees, drafted correspondence, and wrote a famous address to the people of Great Britain. Returning to the provincial congress of New York, he guided the drafting (1777) of the first New York state constitution, a generally conservative document Jay was appointed (1777) chief justice of New York, but left that post to become (Dec., 1778) president of the Continental Congress. In 1779 he was sent as minister plenipotentiary to Spain in an unsuccessful mission to seek aid and recognition for the colonial cause He was appointed (1781) one of the commissioners to negotiate peace with Great Britain and joined Benjamin FRANKLIN in Paris Jay declined further diplomatic appointments in Europe and returned to America to find that Congress had appointed him Secretary of Foreign Affairs, a post he held (1784–89) for the duration of the government under the Articles of Confederation Though he was able to secure minor treaties, he found it impossible under the Articles of Confederation to make progress in the settlement of major disputes with Great Britain and Spain, a situation which caused him to become one of the strongest advocates of a more powerful central government The five FEDERALIST PAPERS that he wrote dealt chiefly with the Constitution in relation to foreign affairs Under the new government Jay became (1789–95) the first Chief Justice of the U.S Supreme Court He concurred in Justice James Wilson's opinion in *Chisholm* vs *Georgia*, which led to the passing of the Eleventh Amendment When the still-unsettled controversies with Great Britain threatened to involve the United States in war, Jay was drafted for a mission to England in 1794, where he concluded what is known as JAY'S TREATY After having unsuccessfully opposed George CLINTON for governor of New York in 1792, Jay was elected and served (1795–1801) two terms He declined reelection and also renomination to the U S Supreme Court and retired to his farm at Bedford in Westchester co for the remaining 28 years of his life. Jay was a man of ability, integrity, and poise and an aristocrat to the end, maintaining that "those who own the country ought to govern it" See H. P Johnston, ed , *Correspondence and Public Papers of John Jay* (4 vols , 1890–93), biographies by George Pellew (1890) and Frank Monaghan (1935).

Jay, John, 1817–94, American lawyer and diplomat, b New York city, grad. Columbia, 1836, son of William Jay He was admitted (1839) to the bar and practiced in New York city until 1858 He was prominent in humanitarian work, including the defense of fugitive slaves, took a leading part in founding the Republican party in New York; strongly supported the Civil War, served (1869–74) as minister to Austria, and was afterwards active in the civil service reform movement. He aided in founding the Union League Club and was a member of various learned societies

Jay, William, 1789–1858, American jurist and reformer, b New York city, grad Yale, 1807; son of John Jay (1745–1829) For most of the period 1818–43 he served as judge of the County Court of Westchester co , N Y An active abolitionist, Jay helped establish (1833) the New York City Anti-Slavery Society, was a strong opponent of the African colonization plan as a solution of slavery, and wrote vigorous pamphlets and articles, which were collected in his *Miscellaneous Writings on Slavery* (1853) He was a founder (1816) of the American Bible Society and president (1848–58) of the American Peace Society His writings include a two-volume life of his father (1833) and *War and Peace* (1842, republished 1919)

Jay, town (pop 2,858), W Maine, on the Androscoggin and N of Auburn, inc 1795 It has granite quarries, Chisholm village has pulp and paper mills

jay, common name of a number of birds of the crow family found in Europe, Asia, and the Americas The best-known representatives in America are the BLUE JAY and the Canada jay The Canada jay is a gray bird, about 12 in long, with a white throat and forehead and black-capped head without a crest Found in northern coniferous forests and swamps, it is known to lumbermen, hunters, and guides for its mischievous, thieving ways It is often called camp robber, whisky jack, and moose bird The European jay is fawn colored, with a black and white crest and wings of black, white, and blue

Jay's Treaty, concluded in 1794 between the United States and Great Britain to settle difficulties arising mainly out of violations of the Treaty of Paris of 1783 and to regulate commerce and navigation War threatened when the British admiralty ordered the seizure of American vessels trading with the French West Indies, to avert further difficulties, George Washington in April, 1794, named Chief Justice John Jay as envoy extraordinary for the negotiation of a treaty The principal American objects were to secure surrender of the posts in the Old Northwest, to obtain compensation for losses and damages resulting from seizure of American vessels and provisions as contraband of war and for the impressment of American seamen, and to remove the restrictions on American commerce, especially on the British West Indies trade. Jay, arriving in England in June, was received favorably, and the treaty was signed on Nov. 19, 1794, by Jay and Baron Grenville It provided for British evacuation of the Northwestern posts by June 1, 1796, allowing settlers the option of becoming Americans or remaining British citizens, with full protection of property guaranteed. It referred settlement of the northwest and northeast boundaries and the questions of debts and compensations to

mixed commissions, provided for unrestricted navigation of the Mississippi and free trade between the North American territories of the two countries, granted equal privileges to American and British vessels in Great Britain and the East Indies, but placed severe restrictions upon American trade with the British West Indies, and permitted admission of British vessels to American ports on terms of the most-favored nation No discrimination in duties was to be made, and articles provided for EXTRADITION of criminals and defined contraband material Indemnity for those Americans whose Negro slaves were carried off by Britain's evacuating armies was not allowed, protection to American seamen against impressment was not guaranteed, and no recognition of the principles of international maritime law was secured The treaty, which owed much to the influence of Alexander Hamilton, caused a storm of indignation in America Jay was denounced and burned in effigy, Hamilton was stoned while speaking in its defense, and the treaty was called a complete surrender of American rights It was submitted to the U S. Senate, in special session, on June 8, 1795, and on June 24, after stormy debate, it was ratified with a special reservation on the clause relative to trade with the West Indies It was signed by Washington When the treaty was proclaimed as law, after the exchange of ratifications at London in 1796, the U S House of Representatives called upon the President for papers relating to the negotiation In a special message Washington refused to comply with the request of the House After lengthy debate the House passed a resolution, by three votes, declaring it expedient to pass laws making the treaty effective, and an act was finally passed (May, 1796) making appropriations for carrying the treaty into effect. See S. F Bemis, *Jay's Treaty* (1923)

Jazer (jā'-) or **Jaazer** (jā-ā'-), ancient city, E of the Jordan, probably c 10 mi N of Heshbon It was assigned to Gad Num 21 32, 32 1,3, Joshua 13 25, 21 39, 2 Sam 24 5, 1 Chron 26 31, Isa 16 8, Jer 48 32, 1 Mac 5 8

Jaziz (jā'-), shepherd of David 1 Chron 27 31

jazz, style of music regarded as one of the most distinctive of American contributions to the art of music Its origin was in the late 19th cent among the Negro musicians of New Orleans The first jazz band is generally conceded to have been Buddy Bolden's Ragtime Band, organized in 1893 and made up of members of street bands and marching bands Although even before this time there had existed elements of jazz, its actual development did not take place until c 1910, and the word itself, of uncertain derivation, was not widely used until a few years later Jazz had absorbed certain elements of its instrumental style from RAGTIME, and at about this period a melodic element from the BLUES was added The term *blues*, however, came to be used rather loosely, and many instrumental jazz pieces of various sorts are called blues, rightly or not An important contribution of the blues to jazz was the so-called "blue notes"—tones of uncertain intonation, usually the third and seventh tones of the scale These blue notes, its highly emotional nature, and its syncopated rhythms are perhaps the outstanding musical characteristics of jazz The jazz ensemble was composed of a small group of instruments, principally the trumpet, cornet, trombone, clarinet, various percussion instruments, and sometimes the saxophone and the piano The emphasis in the small jazz group is on the personality of the individual performer and the construction of an ensemble sound, improvisation is the most important element of most jazz, and the performer is the main creator In the later development of jazz, however, such excellent jazz musicians as Louis Armstrong used larger bands and consequently made more use of arranged than of improvised music. Jazz was well developed in the 1920s, but it was not until the '30s that it began to be seriously and critically studied, as yet there is no standard by which jazz may be evaluated *Le Jazz Hot* (1934), by the Frenchman Hughes Panassié, was one of the first books on the subject Many use the term loosely to refer to all or nearly all American popular music, while to the purist only the art as it originated in New Orleans, with the small ensemble and the improvisatory character, can properly be called jazz There is also controversy as to the African element in jazz and as to how great a role may be ascribed to white musicians in the growth of jazz Outstanding New Orleans jazz ensembles included King Oliver's Creole Jazz Band, Louis Armstrong's Hot Five and his Hot Seven, and Jellyroll Morton's Red Hot Peppers Economic conditions favored the migration of many of the leading jazz musicians northward, and by 1922 Chicago was the center of the jazz scene. At about this time the cornetist Bix Beiderbecke came from Iowa to Chicago, where he became the only white musician to exert an influence on jazz comparable to that of the Negro musicians Another white jazz musician of Chicago was Benny GOODMAN, whose greatest fame came later with the development of SWING MUSIC. After c.1926 the peak of jazz activity in Chicago had passed, and a number of the Negro musicians went to New York, but jazz never attained the heights in New York that it had attained in New Orleans and Chicago. See Frederic Ramsey and C E Smith, *Jazzmen* (1939); Rudi Blesh, *Shining Trumpets* (1946), Sidney Finkelstein, *Jazz a People's Music* (1948).

Jean Baptiste de la Salle, Saint: see JOHN BAPTIST DE LA SALLE, SAINT

Jean de Meun (dŏ mŭ'), d. 1305, French poet He wrote the second part of the ROMAN DE LA ROSE and made translations from Latin, including letters of Abelard to Héloïse His nickname was Jean Chopinel (erroneously Clopinel) The town of his origin is now called Meung-sur-Loire

Jeanerette (jĕnurĕt'), market town (pop 3,362), S La , on Bayou Teche, in a sugar and oil district A large pecan orchard and a U S livestock experimental farm are near by

Jeanne d'Albret (zhän' dalbrā'), 1528–72, queen of Navarre (1555–72), daughter of Henri d'Albret and Margaret of Navarre, and mother of Henry IV of France Unlike her consort, the turncoat Antoine de BOURBON, whom she married in 1548, she was one of the staunchest leaders of the Protestant party in France and one of the bitterest foes of the house of Guise

Jeanne d'Arc see JOAN OF ARC.

Jeanneret, Charles Édouard. see LE CORBUSIER

Jeannette (jənĕt'), city (pop 16,220), SW Pa , ESE of Pittsburgh, laid out 1888, inc as a borough 1889, as a city 1937 Glass, machinery, tires, and chemicals are manufactured here

Jean Paul see RICHTER, JOHANN PAUL FRIEDRICH

Jeans, Sir James Hopwood, 1877-1946, English mathematician, physicist, and astronomer He is known for his important work in the application of mathematics to problems of physics and astronomy With Harold A Jeffreys he developed the tidal hypothesis of the origin of the earth He was professor of applied mathematics at Princeton Univ (1905–9), later lectured at Cambridge (1910–12) and Oxford (1922), and was research associate at Mt Wilson Observatory (1923–44) He was knighted in 1928 Besides numerous scientific papers, he wrote *Dynamical Theory of Gases* (1904), *Mathematical Theory of Electricity and Magnetism* (1908), *Problems of Cosmogony and Stellar Dynamics* (1919), *The Mysterious Universe* (1931), *The Universe around Us* (1931), *The Stars in Their Courses* (1931), *Through Space and Time* (1934), *Science and Music* (1937), *Introduction to the Kinetic Theory of Gases* (1940), *Physics and Philosophy* (1942), and *The Growth of Physical Science* (1947)

Jearim, Mount (jē'ərĭm), the same as CHESALON

Jeaterai (jē"ətərā', jē"ătərā'ī), Gershonite Levite 1 Chron 6 21 See ETHNI

Jebail see BYBLOS

Jebb, Sir Richard Claverhouse, 1841–1905, British classical scholar b Dundee, Scotland, educated at Trinity College, Cambridge He taught at the Univ of Glasgow and was (1889 1905) regius professor of Greek at Cambridge He was noted for his excellent standard editions and translations of Greek writers and for his authoritative *Growth and Influence of Greek Poetry* (1893)

Jebel (jĕ'bul), Arabic term meaning mountain Examples of its use are Jebel-er-Rahm for Mt ARAFAT, Jebel et-Tor for Mt GERIZIM, and Jebel-esh-Sheik or Jebel-eth-Thelj for Mt HERMON

Jebel Aulia, Anglo-Egyptian Sudan see GEBEL AULIA

Jebel Shammar (shă'mur), former emirate (pop c 200,000), N Arabia Its capital was at Hail In 1921 Ibn Saud conquered the forces of the emir, Ibn Rashid, and annexed the territory to his kingdom of Nejd

Jeberechiah (jĕ"bĕrēkī'ə) [Heb ,=whom God blesses], father of ZECHARIAH 7

Jebus (jē'bus), **Jebusi** (jēb'əsī), and **Jebusite** (jēb'əsīt), name of a tribe mentioned in the Bible as the inhabitants of Jerusalem before the Jews They were apparently absorbed by their conquerors Gen 10 16, 15 21, Ex 3 8, 34 11, Num. 13 29, Joshua 9 1, 11 3, 15 8, 18 16,28, Judges 1 21, 19 10,11, 2 Sam 5 6, 1 Kings 9 20, 1 Chron 11 4,5, 2 Chron 8 7, Ezra 9 1

Jecamiah (jĕkumī'ə), descendant of David. 1 Chron 3 18

Jecholiah (jĕkōlī'ə) [Heb ,=God is mighty], wife of King Amaziah. 2 Kings 15 2. Jecoliah: 2 Chron 26 3

Jechonias (jĕkōnī'us) see JEHOIACHIN.

Jecoliah (jĕkōlī'ə), variant of JECHOLIAH.

Jeconiah (jĕkōnī'ə) see JEHOIACHIN

Jedaiah (jĕdā'yu, jĕ"dāī'ə) 1 Simeonite chief. 1 Chron 4 37 2 Worker on the wall Neh 3 10. 3 Chief priest. 1 Chron 24 7 4 Priestly exile Zech. 6 10,14

Jedburgh (jĕd'bŭrə), burgh (pop. 3,058), county town of Roxburghshire, Scotland, on the Jed river and SE of Edinburgh As a border town, it suffered much from Scottish-English strife, "Jedburgh (Jeddart, Jedwood) justice" (hanging first, trying afterward) became a byword There are well-preserved ruins of an abbey founded by David I in 1118. Fernihirst Castle is in the neighborhood. Sir David Brewster and Mary Somerville were born here, and there are associations with Bonnie Prince Charlie, Mary Queen of Scots, and Wordsworth The town's industries are wool weaving and tanning

Jedda, Saudi Arabia see JIDDA.

Jediael (jĕdī'ăēl) [Heb ,=known of God]. 1 Benjamite 1 Chron 7 6,11 2 Doorkeeper 1 Chron 26 1,2 3 One of David's guard 1 Chron 11.45, 12 20

Jedidah (jĕdī'dŭ) [Heb ,=darling], wife of Amon of Judah 2 Kings 22 1

Jedidiah (jĕdĭdī'ə) [Heb ,=beloved of God], auspicious name that Nathan bestowed on the baby Solomon 2 Sam 12 24,25

Jeduthun (jĕdū'thŭn), Levite associated with the temple worship 1 Chron 9 16, 16 38; 25 3, 2 Chron 29 14 It is not known why the name appears in the titles of Pss 39, 62, 77

Jeezer (jē-ē'zur), the same as ABIEZER

Jefferies, Richard, 1848–87, English essayist and novelist His beautifully written books about the English countryside include *The Gamekeeper at Home* (1878), *The Life of the Fields* (1884), *Bevis* (1882), a novel, and his *Story of My Heart* (1883) Several volumes of his nature writings have been edited by S J Looker, among them *The Old House at Coate* (1948) See biography by Edward Thomas (1909)

Jeffers, Robinson (jĕ'fûrs), 1887–, American poet, b Pittsburgh, grad Occidental College, 1905 His first book was *Flagons and Apples* (1912), but his more original poetry began with *Tamar and Other Poems* (1924) and *Roan Stallion* (1925) They were followed by *The Women at Point Sur* (1927), *Cawdor* (1928), *Dear Judas* (1929), and *Give Your Heart to the Hawks* (1933) Jeffers uses Greek myth, especially that of Oedipus, as symbols of the total inversion of man in civilization—whose diseased introspection forces complete divorce from nature The California coast near his home at Carmel is the setting for many of his violent poems, continued in *Such Counsels You Gave to Me* (1937) and *The Double Axe & Other Poems* (1948) His free translation of *Medea* was produced in New York in 1947 See L C Powell, *Robinson Jeffers the Man and His Work* (rev ed , 1940)

Jefferson, Joseph, 1829-1905, American actor The son and grandson of actors, he spent the first 20 years of his life as a strolling player In 1857 he joined Laura Keene's company and began to be recognized as a capable actor as Caleb Plummer in *The Cricket on the Hearth*, as Dr Pangloss in *The Heir at Law*, and in other plays In 1858 he created the part of Asa Trenchard in Laura Keene's production of *Our American Cousin* Seeking an original play for himself, he undertook a dramatization of Washington Irving's *Rip Van Winkle*, with the later assistance of Dion Boucicault he produced a drama which delighted two generations of playgoers The play opened in London in 1865, it was first performed in New York at the Olympic in 1866 Almost as famous was Jefferson's presentation of Bob Acres in *The Rivals*, a part he played hundreds of times He was one of the first star actors in America to establish his own road company, the earlier practice being to depend for support on local stock companies Jefferson was a painter of merit and was a member of the American Academy of Arts and Letters See his autobiography (1890), William Winter, *The Jeffersons* (1881) and *The Life and Art of Joseph Jefferson* (1894), Francis Wilson, *Joseph Jefferson* (1906), Gladys Malvern, *Good Troupers All the Story of Joseph Jefferson* (1945)

Jefferson, Thomas, 1743-1826, 3d President of the United States (1801–9), author of the Declaration of Independence, and apostle of agrarian democracy He was born on April 13, 1743, at "Shadwell," in Goochland (now in Albermarle) co , Va The vicinity was to remain his lifelong home, and from boyhood he absorbed the democratic views of his Western countrymen After graduating from the College of William and Mary (1762), he studied law under the famous George WYTHE. In the colonial house of burgesses (1769–75), he became a leader of the patriot faction He helped to form, and became a member of, the Virginia Committee of Correspondence, and in his paper *A Summary View of the Rights of British America* (1774) prepared for the Virginia convention, he brilliantly expounded the view that Parliament had no authority in the colonies and that the only bond with England was that of allegiance to the king. Never effective as a public speaker, he won a reputation as a draftsman of resolutions and addresses. In the Continental Congress in 1775 and 1776 he continued his services with his pen, receiving an appointment as a member of the committee to draft the DECLARATION OF INDEPENDENCE. This historic document, except for minor alterations by John ADAMS and Benjamin Franklin and upon the floor of Congress, was wholly the work of Jefferson In spirit it reflects his debt to English political theorists, particularly John Locke, and to French and other continental philosophers. Jefferson returned to the Virginia legislature in the hope of being able to translate his ideals into reality

in the establishment of a new state government. He urged the abolition of entail and primogeniture to prevent the continuance of an aristocracy of wealth and birth; both were abolished, though primogeniture existed until 1785 His Bill for Establishing Religious Freedom, grounded in the belief that the opinions of man cannot be coerced, was not successful until 1786, when James MADISON was able to carry part of the Jeffersonian program through to completion His educational program, calling for a public school system, a public library, and a more liberal university, was not then adopted In 1779 Jefferson succeeded Patrick Henry as governor of Virginia He served through the trying last years of the American Revolution when Virginia was invaded by the British, and he was hampered by lack of resources, financial and military He had a difficult time His conduct as governor was investigated in 1781, but he was completely vindicated In 1783–84 he was again in the Continental Congress, where he drafted the decimal system of coinage based on the dollar and drew up a proposed ordinance for the government of the Northwest Territory, which, though not then adopted, was the basis for the very important Ordinance of 1787 In 1785 he succeeded Franklin as minister to France, remaining to witness the beginning in 1789 of the French Revolution, to which he gave his sympathetic interest On the other hand, his unsuccessful attempt, with John Adams, to negotiate a trade treaty with England left him convinced of that country's essential selfishness On his return he became (1790) Secretary of State Though absent when the Constitution was drafted and adopted, Jefferson gave his support to a stronger central government and to the Constitution, especially after the Bill of Rights was added He had not gauged the extent of the conservative reaction which had taken place in his absence, nor was he seemingly aware at first of the far-reaching character of the measures advanced by Alexander HAMILTON He would call himself neither a Federalist nor an Anti-Federalist and was anxious to secure unity and cooperation in the new government Jefferson did not begin to differ with Hamilton until they clashed as to the best method to persuade England to release the Northwest forts, which the British still held in violation of the Treaty of Paris of 1783 Jefferson favored the application of economic pressure by forbidding imports from England, but Hamilton objected through fear that the resulting loss of revenue would endanger his whole financial structure Jefferson next opposed Hamilton by declaring against his Bank of the United States scheme on the ground that the Constitution did not authorize it Here he argued from a strict-constructionist viewpoint, although at other times he favored the periodical revision of constitutions In both these encounters Hamilton, to Jefferson's chagrin, emerged the victor Fearing a return to monarchist ideals, if not to actual monarchy, Jefferson became virtual leader of the Anti-Federalist forces He drew closer to him a group of like-minded men who began to call themselves Republicans—a group to which the present DEMOCRATIC PARTY traces its origin An organization was developed, and the *National Gazette*, edited by Philip FRENEAU, was established (1791) to disseminate Republican sentiments Jefferson and Hamilton, from being suspicious of each other, became openly antagonistic, and President George Washington was unable to reconcile them In 1793 Jefferson left the cabinet Later he bitterly criticized JAY'S TREATY, which compromised the issues with Great Britain in ways outlined by Hamilton Jefferson's party was able to elect him Vice President in 1796, when that office was still filled by the person who ran second in the presidential race He took little part in the administration, but presided over the Senate and wrote *A Manual of Parliamentary Practice* (1801), which was influential His followers kept up their agitation and under Jefferson's skillful direction extended the party's following both territorially and numerically, while the Federalists drifted into dissension The passage of the ALIEN AND SEDITION ACTS immensely stimulated newspaper discussion, and Jefferson drafted, in protest against these laws, the Kentucky Resolutions (see KENTUCKY AND VIRGINIA RESOLUTIONS), the first statement of the STATES' RIGHTS interpretation of the Constitution Jefferson and his colleagues had builded well The Republicans triumphed easily at the polls in what is sometimes called "the Revolution of 1800" Aaron BURR, however, who had been slated for the office of Vice President, was found to have tied Jefferson for President, and the choice was automatically left to the House of Representatives Jefferson was elected after a long deadlock, largely because Hamilton advised the Federalists to support Jefferson as less dangerous than Burr. Jefferson was the first President inaugurated in Washington, a city which he had helped to plan (and where the THOMAS JEFFERSON MEMORIAL was dedicated in 1943) He instituted a republican simplicity in the new capital, cut expenditures in all branches of government, and sought to curb the growing powers of the judiciary, where he felt that the Federalists were attempting to entrench their philosophy. He believed that the Federal government should be concerned mostly with foreign affairs, leaving the states free to administer local matters Laying aside for the moment his strict-constructionist principles, he pushed through the LOUISIANA PURCHASE His eager interest in the West and in exploration had already led him to plan and organize the LEWIS AND CLARK EXPEDITION He held that West Florida was included in the Louisiana Purchase, but his attempts to secure Spanish recognition of this caused rifts in the party and made him the butt of sarcastic attacks by John RANDOLPH in Congress During his second administration, however, the chief difficulties resulted from the position of the United States as a neutral nation with large shipping interests at the time when Europe was involved in the Napoleonic Wars Jefferson placed his faith in diplomacy backed by economic pressure as represented first by the Nonimportation Act (1806) and then by the EMBARGO ACT OF 1807 To enforce them, unfortunately, meant the impoverishment of classes which had supported him and the infringement of that individual liberty which he cherished Shortly before he left office a rebellious people forced him to yield in his aims, although he maintained that the embargo had not been in effect long enough to achieve its objective After 1809 Jefferson lived in retirement at his beloved MONTICELLO, although he frequently advised his disciples, James Madison and James MONROE One of his cherished ambitions was attained when he was able to bring about the founding of the Univ of Virginia President of the American Philosophical Society (1797–1815), the learned Jefferson was a scientist, an architect, and a philosopher-statesman, vitally interested in every phase of human activity He had complete faith that a people enlightened by education, which must be kept free, could under democratic-republican institutions govern themselves better than under any other system, and as long as the nation lasts he will be revered as its first great democrat Of the several editions of Jefferson's voluminous writings, the one by Paul L Ford (10 vols , 1892–99), supplemented by the more extensive one issued by the Thomas Jefferson Memorial Association and edited by Andrew A Lipscomb and Albert E Bergh (20 vols , 1903–4), will serve best until the completion of the projected 52 volumes of Jefferson's complete works being published by Princeton Univ Press under the editorial supervision of Julian P Boyd Thus far one volume, *The Papers of Thomas Jefferson, 1760–1776* (1950), of the Princeton edition has appeared Superior among the older biographies is the one by Henry S Randall (3 vols , 1858) The projected four-volume *Jefferson and His Time*, by Dumas Malone, of which one volume, *Jefferson the Virginian* (1948), has been published, will doubtless be the definitive biography See other biographies by Francis W Hirst (1926), Albert J Nock (1926), and Gilbert Chinard (1929) See also Henry Adams, *History of the United States of America* (9 vols , 1889–91), Charles A Beard, *Economic Origins of Jeffersonian Democracy* (1915), Allen Johnson, *Jefferson and His Colleagues* ("Chronicles of America" series, Vol XV, 1921), Claude G Bowers, *Jefferson and Hamilton* (1925), *Jefferson in Power* (1936), and *The Young Jefferson, 1743–1789* (1945), James Truslow Adams, *The Living Jefferson* (1936), Marie G Kimball, *Jefferson the Road to Glory, 1743 to 1776* (1943), *Jefferson War and Peace, 1776 to 1784* (1947), and *Jefferson the Scene of Europe, 1784 to 1789* (1950), Edward Dumbauld, *Thomas Jefferson, American Tourist* (1946), Karl Lehmann, *Thomas Jefferson, American Humanist* (1947), Adrienne Koch, *Jefferson and Madison. the Great Collaboration* (1950)

Jefferson **1** CITY (pop 1,839), co seat of Jackson co , N Ga , NE of Atlanta It is a farm trade center Here in 1842 Crawford W Long performed an operation using ether as an anesthetic **2** City (pop 4,088), co seat of Greene co , central Iowa, NW of Des Moines and on the Raccoon river, settled c 1854, inc 1871 It is a trade center of an agricultural area, and dairy products are made **3** Village (pop 1,676), co seat of Ashtabula co , NE Ohio, S of Ashtabula, in a farm, dairy, and livestock area, founded c 1804 It has granite and marble works **4** City (pop 2,797), co seat of Marion co , E Texas, on Big Cypress Bayou and NW of Shreveport, La The region was settled in the 1830s, and Jefferson grew as a river port, for boats then went down the Big Cypress through near-by Caddo Lake and its outlet to the Red River It was, too, a lumbering and industrial metropolis in the pine woods One of the great cities of young Texas just after the Civil War, it later declined to sleepiness The region yields timber and truck, and in 1939 oil was discovered **5** Industrial city (pop 3,059), co seat of Jefferson co , S Wis , at the confluence of the Rock and Crawfish rivers ESE of Madison, settled 1836, inc 1878

Jefferson, river, 207 mi long, rising in SW Montana, W of Yellowstone National Park, fed by Upper and Lower Red Rock lakes, and flowing in its early course west, then northwest. It is here called Red Rock River The name changes in its middle course to Beaverhead river, and it flows generally northeast It becomes the Jefferson at the entrance of the Ruby and Big Hole rivers, and the final direction is generally east It joins the Madison and the Gallatin at the Three Forks of the Missouri The Jefferson is the main headstream of the Missouri. Dillon is on its middle course

Jefferson, Fort: see FORT JEFFERSON NATIONAL MONUMENT

Jefferson, Mount see PRESIDENTIAL RANGE

Jefferson City, **1** City (pop 24 268), state capital, and co seat of Cole co , central Mo , on the south bank of the Missouri river, laid out 1822, inc 1825 The city, with rail and river facilities, is the commercial center of an agricultural area, it has railroad shops, printing and publishing houses, shoe and clothing factories, and grain-products plants The impressive capitol of Carthage marble contains murals by Thomas Benton The supreme court building has a fine law library In Jefferson City are Lincoln Univ (Negro, land grant, coeducational, 1866), a junior college, the state penitentiary, and a national cemetery Algoa Farms reformatory is near by **2** Town (pop 2,576), E Tenn , ENE of Knoxville, settled c 1810, inc 1900 Zinc mines and farms are in the area The town is the seat of Carson-Newman College (Baptist, coeducational, 1851) Cherokee Dam in the Holston river is just north

Jefferson Medical College see PHILADELPHIA, Pa

Jefferson Memorial see THOMAS JEFFERSON MEMORIAL

Jeffersonville, city (pop 11,493), co seat of Clark co , S Ind , on the Ohio, settled 1802 Connected by bridge with Louisville, Ky , it is a large port with many shipyards It is the seat of a U S army quartermaster depot A state prison, built in 1821, is here The city was inundated by flood in 1937

Jeffrey, Francis, Lord Jeffrey, 1773–1850, Scottish lawyer, critic, and essayist In 1802, with Sidney Smith and others he founded the *Edinburgh Review*, which he edited until 1829 He was raised to the judicial bench as Lord Jeffrey in 1834 Jeffrey was a gifted but opinionated writer and made his periodical strongly Whiggish and antiromantic His essays, especially the "Essay on Beauty," have been often reprinted

Jeffreys of Wem, George Jeffreys, 1st **Baron,** 1648–89, English lord chancellor A notoriously cruel judge, he was responsible for the judicial murder of Algernon Sidney and for the brutal trials of Richard Baxter and many others He was created baron in 1685 and was soon sent to punish those concerned in Monmouth's rebellion In the Bloody Assizes at Taunton he caused nearly 300 to be hanged, some 800 transported, and many more imprisoned or whipped James II made him lord chancellor in September When James fled the country, Jeffreys was imprisoned and died in the Tower of London See H M Hyde, *Judge Jeffreys* (1940)

Jeffries, James J , 1875–, American boxer, b Fairfield co , Ohio He began boxing in 1896, and in 1899 he won the heavyweight championship from Robert Fitzsimmons at Coney Island in New York city He retired undefeated in 1905, but returned to the ring in 1910, when he lost the title to Jack Johnson at Reno, Nev

Jehieli (jēhī'ĕlī), variant of JEHIEL **5**

Jehizkiah (jē'hĭzkī'u) [Heb ,=God strengthens him], one of the leaders under Pekah, in the northern kingdom, who insisted on restoring the captives from Judah 2 Chron 28 12

Jehlam see JHELUM.

Jehoadah (jē-hō'ŭdă), the same as JARAH.

Jehoaddan (jē-hŏă'dăn), mother of King **Amasiah** of Judah 2 Kings 14.2, 2 Chron 25.1

Jehoahaz (jē-hō'ăhăz) or **Joahaz** (jō'ŭhăz) [both Heb.,=God holds fast] 1 Died c 804 B C , king of Israel (c 820–c 804 B C), son and successor of Jehu Nothing is known of his reign 2 Kings 13 1–9, 14 1 **2** Fl c 609 B C , king of Judah (c.609 B C.) On the death in battle of his father, Josiah, he was made king at Jerusalem, but the Pharaoh Necho removed Jehoahas to Egypt and substituted Jehoiakim for him 2 Kings 23.30–35, 2 Chron 36 Shallum 1 Chron 3 15, Jer 22 11 **3** In 2 Chron 21 17 and 25 23 AHAZIAH **2** is meant **4** Father of a recorder 2 Chron 34 8

Jehoash (jē-hō'ăsh) or **Joash** (jō'ăsh) 1 Died c 789 B C , king of Israel (c 804–c 789 B C), son and successor of Jehoahas He was generally successful in a war with Damascus, and he conquered Amaziah of Judah He was succeeded by his son Jeroboam II 2 Kings 13, 14 **2** Died c 802 B C , king of Judah (c 841–c 802 B C), son of AHAZIAH 1 When his father was murdered and his grandmother Athaliah seized the power and massacred the royal family, Jehoash, a baby, was saved by his aunt and uncle Jehosheba and Jehoiada (see JEHOIADA 1) He was dominated by his guardians when he became king six years later After a long reign he was assassinated 2 Kings 11 **3** Gideon's father Judges 6 11 **4** One of Ahab's sons 1 Kings 22 26 **5** Judahite 1 Chron 4 22 **6** Benjamite 1 Chron 7 8 **7** One who joined David at Ziklag 1 Chron 12 3 **8** One of David's officers 1 Chron 27 28

Jehohanan (jē-hŏhā'năn) [Heb ,=God has been gracious] **1** Officer of Jehoshaphat 2 Chron 17 15 **2** Father of an officer of Jehoiada 2 Chron 23 1 **3** Korahite porter 1 Chron 26 3 **4** Husband of a foreign wife Ezra 10 28 **5,6** Postexilic priests Neh 12 13,42.

Jehoiachin (jē-hoi'ŭkĭn), fl c 598 B C , king of Judah (c 598 B C) He was king for a few months after his father JEHOIAKIM'S death He was carried away by Nebuchadnezzar to Babylon and there imprisoned On the death of Nebuchadnezzar he was freed and given honorable treatment Jeconiah 1 Chron 3 16,17, Esther 2 6, Jer 24 1, 27 20, 28 4, 29 2 Jechonias Mat. 1 11,12 Coniah Jer 22 24,28, 37 1

Jehoiada (jē-hoi'ŭdŭ) [Heb ,=known by God] **1** High priest He married Jehosheba, a princess of Judah Together they saved the infant Jehoash and led the conspiracy against Athaliah which put Jehoash on the throne (see JEHOASH **2**) Jehoiada was buried with the kings of Judah His son was Zechariah the martyr 2 Kings 11, 12, 2 Chron 22–24 **2** Priest and ally of David, father of Solomon's general, Benaiah 2 Sam 8 18, 1 Chron 12 27, 27 5 At one point he is apparently called Benaiah's son 1 Chron 27 34 **3** Priest. Jer 29 26 **4** Worker on the wall Neh 3 6

Jehoiakim (jē-hoi'ŭkĭm) [Heb ,=whom God will establish], d c 609 B C , king of Judah (c 609–c 598 B C) On Josiah's death his son Jehoahaz became king The Pharaoh Necho removed him and set up another of Josiah's sons, Eliakim, who took the name Jehoiakim Jeremiah tried to arouse the king from his ways, but Jehoiakim had the book of his prophecies burned Nebuchadnezzar took the hegemony of the West at Carchemish (605 B C), but three years later the king of Judah revolted Jehoiakim died just before Nebuchadnezzar took the city He left a son, Jehoiachin. 2 Kings 23 34–24 6, Jer 36

Jehoiarib (jē-hoi'ŭ-), the same as JOIARIB **2**

Jehol (juhŏl', -hōl'), Mandarin *Je-ho*, province (**69,491** sq mi , pop 2,184,723), NE China The capital is Chengteh The Tsungling is one of the ranges of this largely hilly and mountainous province, which is crossed by swift, unnavigable rivers Deposits of coal, iron, and oil shales are profitably exploited Terracing adds to the limited arable land, but insufficient rainfall restricts agriculture to staples which ripen without additional water, chiefly soybeans, wheat, kaoliang, millet, barley, and sweet potatoes Jehol is connected by rail with Manchuria and with Peiping, but internal communications are poor because of the mountain barriers In 1932 Jehol was incorporated into the Japanese puppet state of Manchukuo, and it was not restored to China until the end of the Second World War

Jehol, city, China see CHENGTEH

Jehonadab (jē-hŏ'nudăb), the same as JONADAB

Jehonathan (jē-hŏ'nuthăn) [Heb ,=gift of God] **1** Levite 2 Chron 17 8 **2** Officer under David 1 Chron 27 25 **3** High priest Neh 12 18. **4** Teaching Levite 2 Chron 17 8

Jehoram (jē-hō'rum) or **Joram** (jō'rŭm). **1** Died c.846 B C , king of Israel (c.852–c.846 B C.), brother and successor of AHAZIAH **1** He compelled Jehoshaphat of Judah to help him put down a revolt in Moab He was wounded in an attack on Ramoth-gilead and retired to Jezreel The party headed by ELISHA raised a revolt and JEHU put Jehoram to death and took the throne. This was the end of the house of Ahab, in Israel 2 Kings 1.17,18, 3, 4 **2** Died c 846 B.C , king of Judah (c 851–c.846 B.C.), son and successor of Jehoshaphat. His wife was the notorious ATHALIAH. The Bible says that he acted like her family. He was succeeded by his son AHAZIAH **2** 2 Kings 8.16–24, 2 Chron. 21–22 1. **3** Priest 2 Chron 17.8.

Jehoshabeath (jē-hŏshā'bēăth) see JEHOSHEBA.

Jehoshaphat (jē-hŏ'shŭfăt), **Josaphat** (jŏs'-), or **Josophat** (jŏsh'-) [Heb ,=God judges] 1 Died c.851 B C , king of Judah (c.870–c 851 B C), son and successor of ASA 1 He continued his father's reforms He was an ally of Ahab, king of Israel, and his successors He was followed by his son, JEHORAM **2** 1 Kings 22, 2 Kings 3, 2 Chron 17–21 1. **2** Recorder under David and Solomon 2 Sam 8 16, 1 Kings 4 3. **3** One of Solomon's officers 1 Kings 4 17 **4** One of David's guard 1 Chron 11 43 **5** Priest 1 Chron 15 24 **6** Father of King Jehu 2 Kings 9 2,14 The **Valley of Jehoshaphat,** mentioned in Joel 3 as a place of judgment, has been identified by tradition with the northern extension of the vale of Kidron on the east of Jerusalem

Jehosheba (jē-hŏ'shĕbŭ) [Heb ,=God, the oath], daughter of King Jehoram of Judah and aunt of King Jehoash She married the high priest Jehoiada 2 Kings 11.2 Jehoshabeath 2 Chron 22 11

Jehoshua and **Jehoshuah,** variants of JOSHUA

Jehovah (juhō'vu, jē-), modern reconstruction of the ancient Hebrew ineffable name of God

Jehovah-jireh (-jī'rē) [Heb ,=God sees], Abraham's name for the spot where the angel prevented the sacrifice of Isaac Gen 22 14

Jehovah-nissi (-nĭ'sī) [Heb ,=God is my banner], name Moses gave to the altar commemorating victory over the Amalekites Ex 17 15

Jehovah-shalom (-shā'lŏm) [Heb ,=God is peace], name Gideon gave to his altar in Ophrah after an angel appeared to him Judges 6 24

Jehovah's Witnesses, sect originating in America, founded by Charles Taze RUSSELL, whose doctrine centers around the second coming of Christ The Witnesses believe that this has already commenced, that "Armageddon will come as soon as the Witness work is completed," and that this will be followed by a millennial period when sinners will have a second chance at salvation—hence their slogan, "Millions now living will never die " The cult has no churches and no ministers, its views are circulated by *The Watch Tower Announcing Jehovah's Kingdom* and other publications and by the zealous house-to-house canvassing carried on by its members Before 1931 Jehovah's Witnesses were called Russellites, abroad the movement is usually known as the International Bible Students Association See H H Stroup, *The Jehovah's Witnesses* (1945)

Jehozabad (jē-hŏ'zŭbăd) [Heb ,=whom God gave] **1** One of the murderers of Joash 2 Kings 12 21, 2 Chron 24 26 **2** Captain in Jehoshaphat's army 2 Chron 17 18 **3** Porter 1 Chron 26 4

Jehozadak (jē-hŏ'zudăk), the same as JOZADAK

Jehu (jē'hū) [Heb ,=He is God] **1** Died c 820 B C , king of Israel (c 846–c 820 B C) He was anointed king by ELISHA, who led the revolt against the house of Ahab Jehu murdered Kings Jehoram of Israel and Ahaziah of Judah and the royal family. Elisha was the dominant figure in Israel through Jehu's long reign. Jehu's rapid driving has become proverbial His son Jehoahaz succeeded him 2 Kings 9 **2** Prophet under Kings Baasha and Jehoshaphat 1 Kings 16, 2 Chron 19 **3** Descendant of Judah 1 Chron 2 38 **4** Simeonite 1 Chron. 4 35 **5** One of those who joined David at Ziklag. 1 Chron 12 3

Jehubbah (jē-hŭ'bu), Asherite 1 Chron 7 34

Jehucal (jē-hūkăl", jē-hū'kul), Zedekiah's messenger to Jeremiah Jer 37 3 Jucal Jer 38 1

Jehud (jē'hŭd) [Heb ,=praise], unidentified town, W Palestine Joshua 19 45

Jehudi (jē-hū'dī) [Heb ,=Jew], officer of Jehoiakim's court Jer 36 14,21,23

Jehudijah (jē-hūdī'jŭ) [Heb ,=Jewish woman], wife of a Judahite 1 Chron 4 18

Jehush (jē'-), descendant of Saul 1 Chron 8 39

Jeiel (jē'ĭ-ĕl) **1** Levite under David 1 Chron. 15 18 **2** Musician of David 1 Chron 15 21, 16 5 **3** Ancestor of JAHAZIEL **2** **4** Scribe of Uzziah 2 Chron 26 11 **5** Levite of Hezekiah 2 Chron 29 13 **6** Levite of Josiah 2 Chron 35 9 **7** Companion of Ezra Ezra 8 13 **8** Husband of a foreign wife Ezra 10 43 **9** Reubenite 1 Chron 5 7

Jekabzeel (jēkăb'zēĭ-ĕl), variant of KABZEEL

Jekameam (jēkumē'um), Kohathite Levite. 1 Chron 23.19, 24 23

Jekamiah (jēkŭmī'u), descendant of Judah. 1 Chron 2 41

Jekuthiel (jēkū'thēĭ-ĕl), Judahite 1 Chron 4 18.

Jekyll, Gertrude (jē'kĭl), 1843–1932, English horticulturist She studied painting and for a time was joint editor of the *Garden*. She planned many of the famous English gardens and wrote extensively on gardening Her books include *Wood and Garden*, (1899), *Flower Decoration in the House* (1907), *Colour in the Flower Garden* (1908), *Gardens for Small Country Houses* (with Lawrence Weaver, 1912), *Garden Ornament* (1918), and *Colour Schemes for the Flower Garden* (8th ed., 1936).

Jelenia Gora, Lower Silesia; see HIRSCHBERG.

Jelgava (yĕl'gĭvă), Ger. *Mitau* (mē'tou), city (pop 34,099), W central Latvia, SW of Riga. The chief city of Zemgale, it is a center of farm trade and has varied manufactures and dairy plants Founded in 1266 by the Livonian Knights, it became (1561) the capital of the duchy of Courland, with which it passed to Russia in 1795 Before the First World War, Jelgava had c.47,000 inhabitants (about 50 percent Germans and about 25 percent Jews), before its occupation (1915–18) by the German army its population was evacuated to inner Russia In 1919, during the struggle for Latvian independence, Jelgava was occupied in turn by the Soviets, by German free corps, and by the Latvians Little of the original population remained after its occupation (1941) by the Germans and its reconquest (1944) by the Red Army in the Second World War Among the notable buildings of Jelgava are Trinity Church (16th cent), the town hall (18th cent), and the ducal palace (18th cent).

Jellachich de Buzim, Joseph, Count (yĕ'lachĭch, bōō'zĭm,-shĭm), 1801–59, Austrian general, a Croatian nobleman He was ban (governor) of Croatia in 1848, when revolution broke out in Hungary, and he commanded an army against the revolutionists His purpose was to separate CROATIA from Hungary, and he was backed by the Austrian government After the fall (1849) of the Hungarian revolutionary government of KOSSUTH, Jellachich was again governor

Jellico (jĕl'ĭkō), city (pop 1,581), E Tenn , at the Ky line NNW of Knoxville, settled 1795 It is a coal-mining center in the Cumberland foothills The U S mine rescue station here has a first-aid school for miners

Jellicoe, John Rushworth Jellicoe, 1st **Earl,** 1859–1935, British admiral. Crowning a naval career begun in 1872, he served as commander in chief of the Grand Fleet (1914–16) in the First World War His command at the battle of JUTLAND won him some praise and much censure. As first sea lord (1916–17) he was responsible for combating the German submarine campaign He was (1920–24) governor general of New Zealand He wrote *The Grand Fleet, 1914–16* (1919) and *The Crisis of the Naval War* (1921)

Jelliffe, Smith Ely (jĕ'lĭf), 1866–1945, American neurologist and psychiatrist, b New York city, M D Columbia, 1889 He was consultant at Manhattan State Hospital and at Kings Park State Hospital He served as managing editor of the *Journal of Nervous and Mental Disease* and as joint editor of the *Psychoanalytic Review* and of the "Nervous and Mental Disease Monograph" series, for which he wrote several volumes He translated foreign works in his field and with W A White wrote *Diseases of the Nervous System* (6th ed , 1935) He testified for Harry K Thaw at the latter's trial for the murder of Stanford White

jelly and jam. Since most fresh fruits contain about 80 percent water and from 10 to 15 percent sugar, they are subject to fermentation They may be preserved by adding sugar and reducing the water content Almost any fresh fruit can be made into jam by mashing the fruit or slicing it fine, adding an approximately equal amount of sugar, and simmering until it reaches the proper concentration at 218°–222° F Preserves differ in that the fruit retains its form For jelly, only those fruits may successfully be used which contain a sufficient amount of PECTIN and acid Among these are plums, apples, grapes, and quinces and such berries as currants, gooseberries, raspberries, blackberries, and cranberries A commercial preparation of pectin or GELATIN may be added to other fruits, such as peaches and strawberries, but the results do not equal the natural jellies Jelly is made by extracting the juice of fresh, sound, barely ripe fruit, combining with sugar, and cooking Excess heating dissipates the flavor and may hydrolyze the pectin Too little sugar yields a tough jelly, too much, a sticky one Too much acid may cause separation of liquid from the surface The manufacture of jams and jellies has become largely commercial. Scientific tests of jelling power, acid and sugar content, and degree of concentration have superseded rule of thumb methods

jellyfish, popular name for the medusa, the gelatinous umbrella-shaped, free-swimming form of a marine invertebrate related to the coral polyp and the sea anemone Most species during their life history pass through both a medusa and a polyp or hydroid stage Water forms more than 90 percent of the body of the jellyfish The mouth opens into a digestive canal called a manubrium Tentacles armed with stinging cells enable the jellyfish to capture small animals for food.

Jemappes (zhŭmăp'), town (pop 12,467), Hainaut prov , Belgium, near Mons It is a coal-mining center Here late in 1792 the French under Dumouriez defeated the Austrians in one of the first important battles of the French Revolutionary Wars The victory opened the way to Brussels

Jemez (hă'mĕs), North American Indian pueblo village, 8 N Mex , on the north bank of the Jemez river It has some 900 inhabitants. These PUEBLO INDIANS belong to the Tanoan linguistic stock. In

the 16th cent. there were several pueblos in this village, but by 1622 there were only two One of the remaining pueblos was abandoned prior to the Pueblo revolt of 1680. The Jemez Indians took a prominent part in the revolt, attacking the Spanish again and again. They even made war on their neighbors who had remained loyal to the Spanish In 1694 the pueblo was stormed and captured by the Spanish Although the Jemez promised to remain at peace, they revolted (1696) and killed the missionary. Expecting a Spanish attack, they fled into Navaho country, where they remained for several years. Finally some of the Indians returned and constructed (c 1700) the present village The principal feast is on Nov 13, for San Diego (St Didacus)

Jemima (jĕmī'mu) [Heb ,=dove], first daughter of Job after his affliction Job 42 14

Jemison, Mary, 1743–1833, American frontierswoman She was born at sea while her parents were en route from Ireland to America In W Pennsylvania she was captured (1758) by a French and Indian war party, taken to Fort Duquesne, and given to two Seneca women, who adopted her She was twice married (to a Delaware and to a Seneca) and bore her Indian husbands eight children Mary, known as the White Woman of the Genesee, refused to leave the Seneca, and in 1817 New York gave her a tract of land on the Genesee river Her story is told in a classic of "Indian-capture" narrative, J E Seaver's *Narrative of the Life of Mrs Mary Jemison* (1824, latest ed , 1942)

Jemtland, Sweden see JAMTLAND

Jemuel (jĕmū'ul), first son of Simeon Gen 46 10, Ex. 6 15 Nemuel Num 26 12 1 Chron 4 24

Jena (yā'nä), city (pop 82,722), Thuringia, central Germany, on the Saale river An industrial and cultural center, it has a great Zeiss plant (optical and precision instruments), which was partially removed after the Second World War by the Russian occupation authorities Chartered in the 13th cent , Jena passed, after the division of the Saxon lands, to the duchy of Saxe-Weimar-Eisenach and in 1920 was incorporated with Thuringia Here in 1806 Napoleon I decisively defeated the Prussians In the Second World War, Jena suffered some bomb damage The Univ of Jena was founded in 1558 and reached its height in the late 18th and early 19th cent , when Friedrich von Schiller, Hegel, Fichte, and August Wilhelm von Schlegel taught here Schiller wrote the Wallenstein trilogy and Goethe wrote *Hermann und Dorothea* at Jena

Jenghiz Khan or **Genghis Khan** (both jĕng'gis kan', jĕng'giz), Mandarin *Ch'eng-chi-ssu* [perfect warrior], 1162?–1227, Mongol conqueror, originally named Temuchin He succeeded his father, Yekusai, as chieftain of a Mongolian confederacy Temuchin assumed his title in 1206 after completing the conquest of Mongolia and establishing his capital at Karakorum He attacked (1213) the Ch'in empire of N China and by 1215 had occupied most of its territory, including the capital, Yenching (now Peiping) From 1218 to 1224 he conquered Turkistan, Transoxania, and Afghanistan and raided Persia and the states of present S Russia He died while campaigning against the Ch'in, and his domain was divided among his three sons Jenghiz Khan's wars were marked by ruthless carnage, but he was a brilliant ruler whose empire lasted until 1368 Tamerlane was descended from him See biographies by Harold Lamb (1927) and Ralph Fox (1936)

Jenin, Palestine see EN-GANNIM 2

Jenkins, Albert Gallatin, 1830–64, Confederate cavalry general, b Cabell co , Va (now W Va), grad Jefferson College, 1848, and Harvard Law School, 1850 A Democratic representative in Congress (1857–61), he resigned to fight for the Confederacy He was made a brigadier general in Aug , 1862 His independent cavalry force made many daring raids in the West Virginia mountains and one bold incursion into Ohio in 1862 Jenkins's brigade covered R S Ewell's advance in the Gettysburg campaign (1863) He was killed in an engagement with Gen Crook in West Virginia

Jenkins, Charles Jones, 1805–83, governor of Georgia (1865–68), b Beaufort District, S C , grad Union College, 1824 Jenkins was a former Union Whig who, as a justice of the Georgia supreme court (1860–65), upheld the right of secession but maintained that no fit occasion for such action had arisen After the Civil War he took a leading part in the state constitutional convention of 1865 and was unanimously chosen governor He refused to sign orders on the state treasury for the expenses of a new Reconstruction convention, which was called to meet the requirements of radical Republican legislation of 1867, Gen George G Meade removed him See biography by C C Jones (1884)

Jenkins, John, 1728–85, American pioneer, b probably Connecticut In 1753 Jenkins explored the WYOMING VALLEY for the proposed Susquehanna Company A settlement under his leadership in 1762 was destroyed by the Indians, and in 1769, leading another group to the region, he founded Kingston Jenkins lived here until the Wyoming Valley massacre (1778), then fled to Orange co., N Y.

Jenkins, John, 1751–1827, American pioneer and soldier, b. New London, Conn ; son of John Jenkins (1728–85) His varied work included being an agent of the Susquehanna Company and commander of Forty Fort in the WYOMING VALLEY During the American Revolution he took part in Gen John Sullivan's campaign against the Indians Returning to Pennsylvania after the war, he defended the Connecticut settlers in the Pennamite Wars and against Indian attacks In 1786 Jenkins laid out the town of Athens, Pa.

Jenkins, Thornton Alexander, 1811–93, American naval officer, b Orange co , Va , appointed a midshipman in 1828 In 1845 he was sent to Europe to investigate lighthouse systems His report resulted in the general reorganization of the American system and the establishment of the lighthouse board, of which he was long secretary Jenkins, who had seen action in the Mexican War, served principally under Farragut in the Civil War He was the admiral's flag captain on the Mississippi in 1863 and commanded the second division of the Union fleet in the battle of Mobile Bay (1864) He was chief of the Bureau of Navigation (1865–69), was promoted rear admiral in 1870, and ended his active career as commander of the Asiatic squadron (1872–73) Jenkins wrote several naval manuals and works on navigation

Jenkins, town (pop 9,428), E Ky , in the Cumberlands at the Va line, in an important coal-mining area Pound Gap is near by

Jenkinson, Charles see LIVERPOOL, CHARLES JENKINSON, 1st EARL OF

Jenkinson, Robert Banks see LIVERPOOL, ROBERT BANKS JENKINSON, 2d EARL OF

Jenkins's Ear, War of, 1739–41, struggle between England and Spain It grew out of commercial rivalry of the two powers and led into the larger war of the AUSTRIAN SUCCESSION The incident which gave the name to the war occurred in 1731, when Robert Jenkins, master of the ship *Rebecca*, claimed he had had his ear cut off by Spanish coast guards English smuggling and resentment at exclusion from the Spanish colonial trade caused the war, but Jenkins's story in the House of Commons, reinforced by the showing of his ear, had tremendous propaganda effect and forced the reluctant Sir Robert WALPOLE to declare war The hostilities with Spain up to 1741 were marked only by the naval engagements of Admiral Vernon in the West Indies

Jenkintown, residential borough (pop 5,024), SE Pa , near Philadelphia, settled 1750, inc 1874 It is the seat of Beaver College (Presbyterian, for women, 1853)

Jenks, Jeremiah Whipple, 1856–1929, American economist, b St Clair, Mich , grad Univ of Michigan, 1878, Ph D Univ of Halle, 1885 He was professor of political economy (1891–1912) at Cornell and from 1912 was professor of government at New York Univ Interested especially in the political aspects of economic problems, he served frequently on government boards and commissions and made many reports on trusts, currency, labor, and immigration problems Out of these experiences came his authoritative books *The Trust Problem* (1900, 5th ed , 1929) and *The Immigration Problem* (with W J Lauck, 1911, 6th ed , 1925) As a financial expert he also served the governments of Mexico, Nicaragua, China, and Germany He also wrote *Principles of Politics* (1909) and *Governmental Action for Social Welfare* (1910)

Jenks, town (pop 1,026), NE Okla , on the Arkansas river and S of Tulsa

Jenné or **Djenné** (both jĕnā'), town (pop c 5,000), French Sudan, on the upper Niger Founded in 765, it was in later centuries a great market for gold and slaves and it rivaled Timbuktu in Moslem learning There are fine examples of 17th-century Moorish architecture The Guinea coast was perhaps named from Jenné

Jenner, Edward, 1749–1823, English physician, pupil of John Hunter He observed that milkmaids infected with cowpox were immune to smallpox and by a series of experiments—beginning with the vaccination of James Phipps in 1796—demonstrated that inoculation with cowpox virus gives immunity to smallpox His work is described in his *Inquiry into the Cause and Effects of the Variolae Vaccinae* (1798). See biography by F G Dewitt (2d ed , 1933)

Jenner, Sir William, 1815 98, English physician and anatomist, grad Univ of London, 1844 He is noted for distinguishing between typhus and typhoid fever by pathological and clinical examination of 36 cases in 1847 From 1862 to 1890 he was physician in ordinary to Queen Victoria He wrote *On the Identity and Non-Identity of Typhoid Fever* (1850) and *Lectures on Fevers and Diphtheria* (1893)

Jennewein, Carl Paul (jĕ'nuwīn), 1890–, American architectural sculptor, b Germany, studied at the Art Students League and the American Academy in Rome He came to the United States in 1907 and was naturalized in 1915 Among his works are sculptures for the Arlington Memorial Bridge and the Dept of Justice Building, Washington, D C , the Woolworth, Cunard, and British Empire buildings (the last at Rockefeller Center), New York city; city hall, Kansas City, Mo ; Mellon Institute, Pittsburgh, Brooklyn Public Library, and four pylons at the New York World's Fair He is represented in the Metropolitan Museum, the Corcoran Art Gallery, and other museums throughout the country

Jenney, William Le Baron, 1832–1907 American engineer and architect, b Fairhaven, Mass , studied at Harvard Scientific School and the Ecole des Beaux-Arts He was noted as the pioneer of SKYSCRAPER construction After participating in the 1849 gold rush, he undertook the study of architecture Later he learned engineering, constructed a railroad in Panama before the Civil War, and was chief engineer on General Sherman's staff in Georgia The Home Insurance Building, 10 stories high, which he designed and built in Chicago (1884), was the first in which both the floors and the exterior masonry walls were borne by a skeleton framework of metal Jenney's building has come to be known as the first skyscraper

Jennings, Herbert Spencer, 1868–1947, American zoologist, b Tonica, Ill , grad Univ. of Michigan (B S , 1893) At Johns Hopkins he taught zoology from 1906 to 1910 He specialized in genetics, working on heredity and variation in microorganisms and on animal behavior His works include *The Anatomy of the Cat* (with J L Reighard, 1901, 4th ed , 1935), *Behavior of the Lower Organisms* (1906), *Life and Death, Heredity and Evolution in Unicellular Organisms* (1919), *The Biological Basis of Human Nature* (1930), and *Genetics* (1935)

Jennings, Sarah, duchess of Marlborough see MARLBOROUGH, JOHN CHURCHILL, 1st DUKE OF

Jennings, city (pop 7,343), parish seat of Jefferson Davis parish, SW La , E of Lake Charles, settled 1884 It is a rice-milling and oil center, with machine shops and a lumber industry

Jensen, Johannes Vilhelm (yō'hä'nus vil'hĕlm yĕn'sun), 1873–, Danish author As a young man he studied medicine, and his continuing interest in biological science is evidenced in such works as the epic *The Long Journey* (1909–20, Eng tr , 1922–24) In a series of short essays which he called "myths," he created a distinctive literary form A prolific writer, he produced poems, essays, and travel books on the many parts of the world he had visited, as well as books describing his native country He was awarded the 1944 Nobel Prize in Literature His influence on Danish literature has been profound See Nobel Prize edition of *The Long Journey* (with introduction by Francis Hackett, 1945)

Jenson or **Janson, Nicolas,** d c 1480, Venetian printer, b France He was one of the first to design roman type, and his roman design was far superior in beauty and alignment of characters to that of JOHN OF SPEYER He started publishing under his own name and with his own type in 1470 From then until his death he produced many beautiful works It is probable that he worked with or for other printers before setting up his own press, though no record exists of this His roman type of 1470 furnished inspiration for Garamond Caslon, William Morris, Bruce Rogers, and other masters After his death, the Aldine Press used his type

jeopardy (jĕ'purdē), in law, subjecting a person to trial for crime and hence creating a danger that he may be punished The main significance of the concept is in the prohibition of exposure to double jeopardy for the same offense (e g , the provision in the Fifth Amendment to the U S Constitution). An accused person has not been placed in jeopardy unless he was tried by a court and duly found innocent or guilty Hence, if the trial is abortive for any reason—e g , lack of jurisdiction or inability of the jury to reach a verdict—a second trial is not precluded Similarly, if conviction of guilt resulted from an error of law committed by the trial court the proceedings are vitiated and a new trial may be ordered after an APPEAL Related to the prohibition of double jeopardy is the principle of *res judicata* [Latin, =thing adjudged], which operates in civil cases to give finality to a valid JUDGMENT and to protect a defendant from multiple liability for the same offense By this principle the judgment constitutes a final determination of the specific issues raised at the trial and prevents all persons from reopening them in later proceedings *Res judicata* does not invariably operate in equitable remedies, since the court's DECREE may usually be revised

Jephthae (jĕf'thē), Greek form of Jephthah

Jephthah (jĕf'thu), son of Gilead and a judge of Israel He vowed if victorious over his enemies to sacrifice the first of his household to greet him upon his return His daughter and only child was the price of this vow Judges 11 1–12 7 Jephthae Heb 11 32

Jephunneh (jĕfū'nē) 1 Father of Caleb Num 13 6 2 Asherite 1 Chron 7 38

Jepson, Willis Linn, 1867–1946, American educator and botanist, b Vacaville, Calif , grad Univ of California (Ph B , 1889, Ph D , 1898) He worked extensively on the seed plants of W North America Among his works are *Flora of the Economic Plants of California* (1924), *A Manual of the Flowering Plants of California* (1925), and *Flora of Middle Western California* (1901, 2d ed , 1911).

Jerah (jē'rŭ) [Heb ,=new moon], descendant of Shem Gen 10 26, 1 Chron 1 20

Jerahmeel (jĕrā'mĕĕl) [Heb ,=God is merciful] **1** Descendant of Judah 1 Chron 2 9,25, 1 Sam 27 10 **2** Levite 1 Chron 24 29 **3** Prince commanded by Jehoiakim to imprison Jeremiah Jer 36 26

Jerash, ancient city see GERASA

Jerba or **Djerba** (both jĕr'bu), island (197 sq mi , pop 59,331), off SE Tunisia, in the Mediterranean Jerba was once identified as the land of the lotus-eaters It was (16th cent) the base of corsairs Fishing, sponge fishing, pottery making, rug weaving, and agriculture occupy the inhabitants

Jered (jē'rĕd) [Heb ,=descent] **1** Variant of JARED **2** Judahite 1 Chron 4 18

Jeremai (jĕrĕmā'ī) [Heb ,=dwellers on heights], husband of a foreigner Ezra 10 33

Jeremiah (jĕrĭmī'u) [Heb ,=exalted of God] **1** Prophet of the book of JEREMIAH **2** Father-in-law of Josiah 2 Kings 23 31, Jer 52 1 **3** Rechabite contemporary with Jeremiah the prophet Jer 35 3 **4, 5, 6** Three who joined David at Ziklag 1 Chron 12 4,10,13 **7** Manassite 1 Chron 5 24 **8, 9** Priests Neh 10 2, 12 1,12,34

Jeremiah or **Jeremias** (jĕrĭmī'us), book of the Old Testament, second of the books of the Major Prophets It tells of the career of Jeremiah (fl 600 B C), a prophet who preached (c 628-586 B C) in Jerusalem under Josiah and his successors His message was a summons to moral reform, personal and social, backed by threats of doom This was especially strong in the face of a false political optimism—Jeremiah realistically opposed resistance to Babylon and his insistence on unpalatable truths brought him to prison and the stocks When Jerusalem fell (586 B C), Jeremiah was allowed to stay with the Jews who remained, and these took him to Egypt, where he went on prophesying The prophecies of the book were arranged by the prophet's secretary, Baruch They are not in strict chronological order, and there are important differences in texts, thus, there is good reason for believing that chapters 46–51 (AV) belong with chapter 25 One analysis of the book would be as follows introduction (1–4 5), prophecies under Josiah (4 6–25, 4–24), prophecies against Gentile nations (25, 46–51), prophecies under Josiah's successors (26–38), the capture of the city (39), later prophecies and events (40–45, 52) Among the well-known Messianic passages are 14 8–9, 23 5–6, 30 9–24, 32 37–44 There are other references to Jeremiah in the Bible 2 Chron 35 25, Ecclus 49 8–9, Dan 9 2, 2 Mac 2 1–10, Mat 2 18, Heb 8 8 See LAMENTATIONS and BARUCH For bibliography, see OLD TESTAMENT

Jeremoth (jĕ'rĭmŏth) **1** Benjamite 1 Chron 8 14 **2** Levite of David 1 Chron 23 23 Jerimoth 1 Chron 24 30 **3, 4** Men who had foreign wives Ezra 10 26,27 **5** See JERIMOTH 5

Jeremy (jĕ'rĭmē), English form of JEREMIAH

Jerez de la Frontera (hārā'thĕ dā lä frŏntā'rä), city (pop 65,166), Cádiz prov , SW Spain, in Andalusia It is an important commercial center noted for its sherry (named for the town) and cognac Captured by the Moors in 711, Jerez was recovered by Alfonso X of Castile in 1264

Jerez de los Caballeros (dā lōs kabalyā'rōs), city (pop 12,486), Badajoz prov , SW Spain, in Estremadura It was given to the Knights Templars in 1237 Balboa was born here

Jeriah (jĕrī'u), Kohathite Levite 1 Chron 23 19, 24 23 Jerijah 1 Chron 26 31

Jeribai (jĕ'rĭbā), soldier of David 1 Chron 11 46

Jericho (jĕ'rĭkō) [Heb ,=fragrant, or city of the moon god], ancient city, Palestine, in the Jordan valley 5 mi N of the Dead Sea It was captured from the Canaanites by Joshua, according to the biblical account in Joshua 6, and was destroyed, a course several times repeated in its history One of its conquerors was Herod the Great, who sacked and rebuilt it Later it fell to the Mohammedans Throughout these vicissitudes, though its site was probably changed, the city retained its importance Excavations early in the present century have revealed walls believed to be those of the first Jericho The small modern village of Eriha near by has a castle ascribed to the Crusaders Deut 34 3, Joshua 18 21, 2 Sam 10 5, 1 Kings 16 34, 2 Kings 2 4, 25 5, Jer 39 5, 52 8, 1 Mac 9 50, Mat 20 29, Luke 10 30

Jericho, town (pop 1,077), NW Vt , E of Burlington, granted 1763, occupied 1774, permanently settled after the Revolution. There are still a few early-19th-century buildings Wilson A Bentley, author with W J Humphreys of *Snow Crystals* (1931), photographed snowflakes here

Jeriel (jĕrī'ĕl, jĕ'rĭ-ĕl) [Heb ,=founded by God], chief Issacharite 1 Chron 7 2

Jerijah (jĕrī'ju), variant of JERIAH.

Jerimoth (jĕ'rĭmŏth) **1** Benjamite 1 Chron 7 7,8. **2** One who joined David at Ziklag. 1 Chron 12 5 **3** Officer of David 1 Chron 27 19 **4** Son of David. 2 Chron 11 18 **5** Levite of David 1 Chron 25 4 Jeremoth 1 Chron 25 22 **6** Levite of Hezekiah. 2 Chron 31 13 **7** See JEREMOTH 2.

Jerioth (jĕ'rĭŏth), woman named in a genealogy. 1 Chron 2 18.

Jeritza, Maria (yŭrĭt'su), 1887–, Austrian-American soprano, b Brünn (now Brno) She made her debut as Elsa in *Lohengrin* at Olmütz in 1910 and in 1912 joined the Vienna State Opera. At Stuttgart she created the role of Ariadne in the opera by Richard Strauss. She sang (1921-32) at the Metropolitan Opera, New York, where her Tosca was celebrated Strauss and Puccini both had high praise for her singing in their operas See her autobiography, *Sunlight and Song* (1924)

Jermyn, industrial borough (pop 3,238), NE Pa , on the Lackawanna river and NE of Scranton, inc 1870 It has a colliery and a coffin factory

Jeroboam I (jĕrŭbō'ŭm), d c 910 B C , first king of the northern kingdom of Israel (c 932–c 910 B C) He was an Ephraimite and led a revolt against Solomon, inspired probably by the restlessness of N Palestine under southern rule Jeroboam fled to Egypt when the plot failed, but returned on the accession of Solomon's son, REHOBOAM When the new king would not satisfy the northerners, Jeroboam led a secession, leaving the house of David only Judah and some of Benjamin Jeroboam became notorious for fostering idolatry in his kingdom of Israel Jeroboam was succeeded by his son Nadab 1 Kings 11 26 14 20, 2 Chron 10, 13

Jeroboam II, d c 749 B C , king of Israel (c 789–c 749 B C), son of Jehoash, whom he succeeded His reign was marked by increasing prosperity and expansion northward Amos and Hosea appeared under Jeroboam 2 Kings 14 16,23–29

Jeroham (jĕrō'hăm) [Heb ,=beloved one] **1** Samuel's grandfather 1 Sam 1 1, 1 Chron 6 27 **2** Priest 1 Chron 9 12, Neh 11 12 **3** Father of a chief Danite 1 Chron 27 22 **4, 5** Benjamites 1 Chron 8 27, 9 8 **6** One of David's men 1 Chron 12 7 **7** Father of a captain of Jehoiada 2 Chron 23 1

Jerome, Saint (jăr'ŭm), c 347–419?, Christian scholar, Father of the Church, Doctor of the Church He was born in Stridon (on the border of Dalmatia and Pannonia) of Christian parents, his Roman name was Sophronius Eusebius Hieronymus (sŏfrō'-, ūsē'-, hĭrŏn'ĭmŭs) He studied in Rome (c 359–36?) under Aelius Donatus and was baptized in 366 After study at Trier and Aquileia, he journeyed to the East At Antioch, in 375, he experienced a vision in which Christ seemed to reprove him for his pagan studies Renouncing his classical scholarship, he fled to the desert to live as an ascetic and to devote himself to scriptural studies, for which he learned Hebrew In 378 he returned to Antioch, was ordained priest there the following year, and then went to Constantinople to study under St GREGORY NAZIANZEN In 382 Jerome returned to Rome with Gregory, when Pope DAMASUS I asked them to help settle some Eastern problems, Jerome remained as papal secretary He was acclaimed for his exposition of Scripture, and Damasus requested him to begin on a new version of the Bible Jerome was spiritual adviser to a number of noble ladies leading conventual lives, among whom the most eminent was St PAULA But his criticisms of the secular clergy antagonized them, and he returned East when Damasus died From 386 to his death, Jerome worked in the monastery which Paula established for him in Bethlehem Here he did the bulk of revision of his Latin translations of the Bible He also wrote commentaries on Ecclesiastes and the epistles of St Paul, translated Origen's homilies, revised part of the Latin version of the Septuagint, and translated from the Hebrew Isaiah and other prophets, Psalms, Kings, and Job Jerome's texts were the basis of the VULGATE In 393 he wrote *De viris illustribus* [concerning illustrious men], lives of 130 Christian writers Other works include *Adversus Jovinianum* [against Jovinian], in praise of virginity, a dialogue against the Pelagians, panegyrics on deceased friends (e g , St Paula), and brilliantly written letters, of which over 100 remain to furnish a rare account of his time His correspondence with St Augustine, with whom he sometimes quarreled, is of peculiar interest St Jerome was involved in many theological and scholarly controversies, even with a long-established friend, such as Rufinus Collections of patristic literature have translations of many of his works St Jerome is buried in the Church of St Mary Major in Rome See his letters (ed by James Duff, 1942), Paul Monceaux, *St Jerome the Early Years* (Eng tr , 1933)

Jerome, Jerome Klapka, 1859–1927, English humorist and playwright His *Idle Thoughts of an Idle Fellow* (1886) and *Three Men in a Boat* (1889) gave him his reputation for genial humor One of his plays, *The Passing of the Third Floor Back,* which had a long run when first produced in 1907, receives occasional revivals in England and the United States His reminiscences, *My Life and Times,* were published in 1926

Jerome, William Travers, 1859–1934, American lawyer, b New York city, grad Columbia School of Law, 1884 Prominent in the cause of reform, he served (1894-95) on the Lexow commission to investigate political corruption and managed (1895) the successful campaign of William L Strong for reform mayor of New York city. He helped frame the legislation which created the court of special sessions and became (1895) justice of this court. As district attorney (1901–9) of New York co , Jerome led a continuous and independent campaign against crime and political corruption Frequently he led surprise raids in person, notably the one against the gambling house of Richard CANFIELD Jerome was the prosecutor in the trial of Harry K Thaw

Jerome. **1** Town (pop 2,205), central Ariz , NE of Prescott, inc 1899 Copper was discovered here in the '70s, and the mining town grew on several levels of a mountainside in the '80s The smelter was moved to Clarkdale in 1915 **2** City (pop 3,537), co seat of Jerome co , S Idaho, near the Snake, laid out 1907, inc 1909 Reclaimed lands are near the city

Jerome of Prague, d 1416, Bohemian religious reformer, a celebrated preacher During his studies at Prague and at Oxford, Jerome was influenced by the doctrinal views of WYCLIF He continued to study and travel widely abroad, in constant conflict with the authorities In 1407 he returned to Prague, where he joined forces with Huss in advocating Bohemian control of the Univ of Prague and in opposing the papal bulls against Lancelot of Naples When Huss was summoned before the Council of Constance (see CONSTANCE, COUNCIL OF), Jerome went there to defend him in 1415 Arrested while attempting to escape from the hostile churchmen, Jerome was brought back to Constance and imprisoned After the burning of Huss, Jerome recanted his defenses of Huss and Wyclif, but his sincerity was doubted and he was not released In 1416 he withdrew his recantation and was burned as a heretic Jerome stands with Huss as a forerunner of the Reformation

Jerrold, Douglas William (jĕr'ŭld), 1803–57, English humorist, playwright, and miscellaneous writer His play *Black-eyed Susan* (1829), produced at the Surrey Theatre, was an enormous success, but Jerrold is best known for his contributions to *Punch* from 1841 until his death Some of these, collected as *Punch's Letters to His Son* (1843) and *Mrs Caudle's Curtain Lectures* (1846), were also popular in the United States Jerrold was editor of *Lloyd's Weekly Newspaper* from 1852 He was succeeded by his son, **William Blanchard Jerrold,** 1826–84, author of several plays and novels, of articles in support of the Union cause in the American Civil War, and of biographies of his father (1859), Napoleon III (1874-82), and George Cruikshank (1882) See Walter Jerrold, *Douglas Jerrold and Punch* (1910) and *Douglas Jerrold, Dramatist and Wit* (1914)

Jersey, island (45 sq mi , pop 50,462), in the English Channel, largest of the CHANNEL ISLANDS It is 15 mi from the Normandy coast and SE of Guernsey St Helier, the capital, is on St Aubin's Bay The mild climate (plants requiring subtropical conditions grow without protection), the moderate rainfall (30–35 in), and the scenery have contributed to make Jersey, like other Channel Islands, a vacation resort The soil is generally good, and large quantities of vegetables (especially potatoes and tomatoes) and fruits are raised, cattle raising and dairying (Jersey cattle) are important Fishing and the quarrying of granite are other industries The inhabitants are mostly of Norman descent English, French, and local dialects are spoken

Jersey cattle, breed of dairy cattle, originated on, and still imported from, the island of Jersey The breed has been kept pure for a long time With the Guernseys, they are included in the Channel Island breeds One of the smallest of the dairy breeds, they are not the greatest milk producers in quantity, but their milk has the highest percentage of butter fat They were first brought to America c 1850 Present-day Jerseys range in color from tan to very dark brown, and some are creamy white, yellowish, or gray They may be solid colors or variously marked

Jersey City, commercial and industrial city (pop 301,173), co seat of Hudson co , NE N J , on the peninsula between the Hackensack river and Newark Bay (on the west) and New York Bay (on the east), opposite lower Manhattan, with which it is connected across the Hudson by ferry, the Holland Tunnel (vehicular), and subway It is an important railroad and steamship terminal and produces packed meat, ink, and chemicals This area was acquired by Michiel Pauw in 1630 as a patroonship called Pavonia Here the Dutch established as trading posts Paulus (Powles) Hook (connected by ferry with Manhattan c 1764), Communipaw, and Horsimus (first permanent settlement in New Jersey and seat of Pavonia's first governor). The fort at Paulus Hook was captured by Light-Horse Harry Lee under Washington's plan, Aug 19, 1779 Bergen, near by, also associated with Washington and the Revolution, was a stockaded Dutch village dating from before 1620, it had the first municipal government in New Jersey (1661), the first church (1660, Dutch Reformed), and the first school (1662), on a site which has been continuously occupied by a school building The town of Jersey, incorporated in 1804, became Jersey City in 1836, it included Bergen and to it were added Hudson City and

Greenville All these communities were amalgamated to form the present Jersey City, second only to Newark in size in the state Frank HAGUE was Democratic boss of New Jersey His differences with the C I O and the American Civil Liberties Union came to court in 1938, the U S Supreme Court in 1939 voided Jersey City's laws curbing civil liberties The city's public library (1889) and modern medical center are of high rank It has a Jesuit college and a state teachers college J E Fraser designed the Lincoln statue (1929) in Lincoln Park, and Philip Martiny the war memorial

Jersey Homesteads see HIGHTSTOWN, N J

Jersey Shore, borough (pop 5,432), N central Pa, on the Susquehanna and W of Williamsport, settled 1785, inc 1826 Farms in this region produce a red-kernel corn which makes excellent ensilage The town has a textile mill

Jerseyville, city (pop 4,809), co seat of Jersey co, W Ill, northeast of the junction of the Illinois with the Mississippi, platted 1834, inc 1855 It is a shipping and trade center in a fruit and farm area

Jerubbesheth (jĕrŭ'bĕshĕth) see GIDEON

Jeruel (jĕr"ŭ'ĕl) [Heb, =founded by God], unidentified place, W of the Dead Sea 2 Chron 20 16

Jerusalem, Arabic *El Kuds,* city (pop c 170,000), Palestine It is built on the ridge (2,500 ft high) lying west of the mouth of the Jordan, and it is c 35 mi SE of Jaffa, its main seaport It is the holy city of Jews and Christians and one of the shrines of Islam Jerusalem, often under the name of ZION, figures familiarly in Jewish and Christian literature as a symbol of the capital of the Messiah and the prototype of the heavenly city The eastern part of Jerusalem is the Old City, a quadrangular area built on two hills and surrounded by a wall built (1542) by Suleiman I (Suleiman the Magnificent) Within the wall there are four quarters The Moslem quarter, on the east, contains a sacred enclosure, the Haram esh-Sherif, within which, built on the old Mt MORIAH, are the striking Dome of the Rock, or Mosque of Omar, and the Mosque of Aksa The wall of the Haram incorporates the only extant piece of the western wall of the Temple of Solomon (see TEMPLE), this, the Wailing Wall, is a holy place of the Jews Hard by is the Jewish quarter, with several famous old synagogues, mostly destroyed in the bitter fighting in 1948 To the west is the Armenian quarter The Christian quarter occupies the northwestern part of the Old City Its greatest monument is the Church of the HOLY SEPULCHER Through the area runs the Via Dolorosa, where Jesus is said to have carried his cross The New City extends west and southwest of the Old City and has largely developed since the 19th cent There are numerous Christian and Jewish institutions, many of them educational, notably the Palestine Archaeological Museum To the east of the Old City is the valley of the KIDRON, across which lie the Garden of GETHSEMANE and the Mount of OLIVES To the north is Mt Scopus, a Jewish intellectual center, with the Hadassah Medical Center, the National Library, and the HEBREW UNIVERSITY To the west and south of the Old City runs the Valley of HINNOM, this meets the Kidron near the pool of SILOAM, which, just S of the Haram, is next to the site of the original city of Jerusalem, now excavated and called the City of David (see OPHEL) The love for identifying historical sites is characteristic of Jerusalem and of all the Holy Land, and every where there are spots purportedly connected with events in the lives of Jesus and of many other holy persons, for every recorded event of sacred story one or more locations are shown Hence there are churches and shrines innumerable The traditional identifications vary in reliability from certainty (e g, Gethsemane) to pious supposition (e g, the Tomb of the Virgin) The most famous identification is that of CALVARY Jerusalem is at least as old as the 15th cent B C It is first mentioned in the Bible (except for a possible allusion in the Salem of Gen 14 18) as Jebus, fortress of the Jebusites David captured it and walled the city, and Solomon built the Temple on Mt Moriah From then Jerusalem became the spiritual and political capital of the Hebrews Sharing their vicissitudes, it fell in 586 B C to the Babylonians and was restored under Ezra, it was the capital of the Maccabean house, then of the Herods (see HEROD), and it was favored by Herod the Great The Roman emperor Titus ruined the city and destroyed the Temple (A D 70) to punish and discourage the Jews After the revolt of BAR KOKBA the Romans rebuilt the city as a pagan shrine, called Aelia Capitolina, but forbade the Jews to live on the site With the imperial toleration of Christianity, Jerusalem underwent a revival, greatly aided by St HELENA, who sponsored much building in the 4th cent, ever since her time it has been a world pilgrimage spot The Moslems, who believed the city was visited by Mohammed, treated Jerusalem well when it fell into their hands in 637, and it became their chief shrine after Mecca In the 11th cent. the Fatimites began to molest Christian pilgrims, their destruction of the Church of the Holy Sepulcher helped bring on the CRUSADES. Jerusalem fell to the Crusaders in 1099, and for most of the 12th cent it was the capital of the Latin Kingdom of Jerusalem In 1187 the Moslems under Saladin returned. The Mamelukes were perhaps the chief Moslem benefactors of the city, and later Suleiman the Magnificent favored it The 19th cent saw two decisive changes—a great revival of Christian pilgrimage, with consequent building of churches, hospices, and institutions, and the beginning of large-scale Jewish immigration into the city Jerusalem, which fell to Allenby in Dec, 1917, became the capital of the British mandate of Palestine, it was by then preponderantly Jewish in population and European rather than Oriental in type As the time approached for ending the mandate, the Arabs and the Jews were both determined to hold Jerusalem Christian opinion for the most part was strongly in favor of creating a free city safe for all religions This view prevailed in the United Nations, which, in partitioning Palestine into Arab and Jewish states, declared that Jerusalem and the environs (including Bethlehem) would be an internationally administered enclave in the projected Arab state Even before the partition went into effect (May 14, 1948), fighting between Jews and Arabs broke out in the city After the partition the Jewish community, cut off from Israel, battled forces chiefly belonging to the Arab Legion of Jordan On May 28 the Jews in the Old City surrendered The New City was still held by Jews, and with the arrival of Israeli relief forces in July the battle was over except for sporadic disorders Israel announced in Nov, 1949, that it would retain the area it held, and after the UN General Assembly nevertheless reaffirmed the decision to place Jerusalem under the Trusteeship Council, Israel responded on Dec 14 by making the city the national capital The Old City, along with all areas in the hands of the Arab Legion was annexed to Jordan in April, 1949 See L H Cust, *Jerusalem* (1924), James Baikie, *Ancient Jerusalem* (1930)

Jerusalem, Latin Kingdom of, feudal state created in Syria and Palestine by the leaders of the First Crusade (see CRUSADES) In 1099, after their capture of Jerusalem, the Crusaders chose GODFREY OF BOUILLON king, he declined the title, preferring that of advocate of the Holy Sepulcher, but with his election the kingdom may be said to have begun His brother and successor, BALDWIN I, took the royal title He and his successors were nominal overlords over the principality of Antioch and the counties of EDESSA and TRIPOLI, which, with the royal domain of Jerusalem, constituted the great fiefs of the kingdom Jerusalem itself contained the counties of JAFFA and ASHKELON, the lordships of KRAK, Montreal, and Sidon, and the principality of Galilee Coming into existence during the height of feudalism, the kingdom was created on the purest forms of feudal theory The kingship was elective, and the Assises of Jerusalem, the law of the country, reflected the ideal feudal law In practice, however, irregularities soon appeared, and the kings actually were chosen on dynastic considerations The great feudal lords rarely felt bound to their overlord in the chronic struggles of the Latins among themselves and with the Mamelukes of Egypt, the Seljuk Turks, and the Byzantine emperors The rise of the great military orders, the KNIGHTS TEMPLARS and the KNIGHTS HOSPITALERS, further undermined the royal authority Edessa, captured by the Seljuks in 1144, was the first Latin state to fall to the infidel The subsequent Crusades did not halt the Moslem advance, and in 1187 Jerusalem itself fell to Sultan SALADIN after his victory at Hattin What remained of the Latin state was virtually destroyed by the complete rout of the Christians in the battle of Gaza (1244) The Crusades of Louis IX of France and Edward I of England were failures, and in 1291 Acre, the last Christian stronghold, fell The kings of Jerusalem of the house of Bouillon were Baldwin I (1100–1118) and BAIDWIN II (1118–31) The crown then passed to the ANGEVIN dynasty, beginning (1131) with FULK and ending (1186) with BALDWIN V Though it became an empty title, the kingship of Jerusalem continued nominally until the 20th cent On Baldwin V's death the title passed to the four successive husbands of Isabella, daughter of Amalric I GUY OF LUSIGNAN, CONRAD, marquis of Montferrat, Henry, count of Champagne, and AMALRIC II, king of Cyprus In 1210 JOHN OF BRIENNE received the title, which passed (1225) to his son-in-law, Emperor FREDERICK II From Frederick's death (1250) the title was borne by various families who had a claim, notably the kings of Cyprus, the Angevins, and the houses of Lorraine and Savoy The struggles of the Latin nobles of Jerusalem against the Saracens have furnished the material for many chivalrous romances in subsequent ages, particularly for the poets of Renaissance Italy For bibliography, see CRUSADES

Jerusalem artichoke, tuberous-rooted perennial sunflower (*Helianthus tuberosus*) native to North America but widely cultivated. The tubers are somewhat potatolike but starchless and have the flavor of an artichoke, they are grown for human food, stock feed, and as a source of inulin, from which levulose sugar may be obtained. The tubers are not injured by frost when left underground for the winter. Jerusalem artichokes were cultivated by American Indians before the arrival of Columbus. Early in the 17th cent they were cultivated in Europe—in Italy as *girasole* [turning toward the sun], which in English became *Jerusalem.*

Jerusalem cherry see NIGHTSHADE

Jerusalem thorn, name for various plants, particularly the CHRIST'S-THORN

Jerusha or Jerushah (both jĕrōō'shŭ) [Heb, =possessed], mother of King Jotham of Judah 2 Kings 15 33, 2 Chron 27 1

Jervaulx (jär'vō, jär'–), village, North Riding of Yorkshire, England, NW of Ripon Near it are ruins of a Cistercian abbey which was founded in 1156 and was dismantled after the execution of the last abbot in 1537

Jervis, John, earl of St Vincent (jär'vĭs, jŭr'–), 1735–1823, British admiral His most famous action as commander of the Mediterranean fleet was his defeat of 27 Spanish ships off Cape St Vincent (1797) with only 15 vessels The victory was largely due to an unauthorized attack by Horatio NELSON and might have been more complete had Jervis realized the weakness of the enemy It destroyed a threat of the invasion of England, and Jervis received a peerage and pension As first lord of the admiralty (1801–6), Jervis vigorously attacked abuses, then returned to a sea command (1806–7) until his health failed See biographies by W N Anson (1913) and O A Sherrard (1933)

Jervis, John Bloomfield (jŭr'vĭs), 1795–1885, American civil engineer and railroad builder, b Huntington, N Y He helped to build the Erie Canal and the Delaware and Hudson Canal While serving as chief engineer of the Mohawk & Hudson RR, he had the West Point Foundry build, according to his specifications, the *Experiment* (1832), the fastest locomotive constructed up to that time and the first to have a special four-wheel swivel truck for the forward end, Jervis's chief contribution to locomotive design In 1836 he became chief engineer of the Croton Aqueduct, which supplies water to New York city He was chief engineer (1847–50) in the construction of the Hudson River RR between New York and Poughkeepsie and in the next 10 years was connected in a similar capacity with the Michigan Southern and Chicago & Rock Island railroads, as well as serving others as a consulting engineer He was one of the ablest and most eminent of early American engineers Besides many reports and pamphlets, he wrote *Railroad Property* (1861) and *The Question of Labour and Capital* (1877) Port Jervis, N Y, is named for him

Jervis Bay (jär'vĭs), inlet of the Pacific, E New South Wales, Australia, sheltered by Bowen Island and two small peninsulas The harbor and a portion (28 sq mi) of the south peninsula were transferred to the commonwealth by New South Wales in 1915 for a port to be connected by rail with Canberra, 85 mi inland, in the Australian Capital Territory The Royal Australian Naval College at Captain's Point on the south shore was removed to Flinders naval base in Victoria in 1930 The area has summer resorts

Jesimiel (–sĭm'–), Simeonite chief 1 Chron 4 36

Jespersen, Otto (ō'tō yĕ'spursun), 1860–1943, Danish philologist Professor of English language and literature at the Univ of Copenhagen and later rector there, he first earned a name for brilliant work in phonetics and later wrote widely known books on the English language and linguistics in general, notably *A Modern English Grammar on Historical Principles* (in parts, 1909–31), *Language* (1922), *Philosophy of Grammar* (1924), and *Analytic Syntax* (1937).

jessamine: see JASMINE.

Jesse (jĕ'sē), father of David the king He was a Judahite of Bethlehem. His name came to symbolize the royal family and the Messianic hopes involving it Ruth 4.17–22, 1 Sam 16 1–18; 17 12, 58, 1 Chron. 2 12,13, Isa 11 1,10, Mat. 1 5,6, Luke 3 32 Christian symbolism used Jesse in OT figures, calling Jesus Jesse's Rod and the Virgin Mary Jesse's Root Thus also medieval artists represented Jesse at the beginning of the family tree of Jesus, e g , in the Jesse window (as at Dorchester, England, and Beauvais, France), a favorite device in stained glass. See Henry Adams, *Mont-Saint-Michel and Chartres*

Jessup, Philip Caryl, 1897–, American authority on international law, b New York city, grad. Hamilton College, 1919, LL B Yale, 1924, Ph D Columbia 1927 He was admitted (1921) to the bar, and after 1925 he taught international law and diplomacy at Columbia Univ Jessup served (1924–25) as assistant solicitor in the Dept of State, assisted (1929) Elihu Root at the Court of International Justice at Geneva, and was (1943) chairman of the foreign relief and rehabilitation office in the Dept of State Later he was (1943–44) assistant secretary general of UNRRA and a delegate (1944) at the Bretton Woods monetary conference Then he served (1948) in the UN General Assembly He became (1948) U S delegate on the UN Security Council, took a leading part in the UN debate on the Berlin blockade, and was appointed (Feb , 1949) by President Truman as ambassador at large He wrote *The United States and the World Court* (1929), *International Security* (1935), *Today and Tomorrow* (1936), and a biography of Elihu Root (1938).

jester: see FOOL

Jesu (jē'sū), the same as ISUI

Jesuit: see JESUS, SOCIETY OF

Jesuit Estates Act, adopted in 1888 by the Quebec legislature, partly to indemnify the Society of Jesus for Jesuit property confiscated during the period after the suppression of the society by Pope Clement XIV. It caused a violent controversy in Canada, and a successful motion was made in the Canadian House of Commons to veto the Quebec legislation.

Jesuit Martyrs of North America, designation for six Jesuit missionaries and two assistants—Jean de BRÉBEUF, Noel CHABANEL, Antoine DANIEL, Charles GARNIER, René GOUPIL, Isaac JOGUES, Jean LALANDE, and Gabriel LALEMANT They were beatified in 1925 and canonized in 1930 for having suffered martyrdom (1648–49) at the hands of the Iroquois There is a shrine at Auriesville, N Y. Feast Sept 26 or (among the Jesuits) March 16 See J. J. Wynne, *The Jesuit Martyrs of North America* (1925)

Jesuit Relations, reports and narratives written by French Jesuit missionaries at their stations in New France They are invaluable as historical sources for French exploration and Indian relations and also as a record of the various Indian tribes of the region before white influence had changed them Published originally in Paris in annual volumes, they were translated and edited by R G Thwaites (73 vols , 1896–1901) A one-volume selection, edited by Edna Kenton, appeared in 1925 See bibliography by J C McCoy, *Jesuit Relations of Canada, 1632–1673* (1947)

Jesup (jĕs'up), town (pop 2,903), co seat of Wayne co., SE Ga., near the Altamaha river SW of Savannah, inc 1870 It is a trade center for an area yielding farm products, naval stores, and lumber.

Jesurun (jĕsū'rŭn), variant of JESHURUN

Jesus or Jesus Christ. The name *Jesus* is Greek for the Hebrew *Joshua*, a name meaning *Savior; Christ* is a Greek translation of the Hebrew *Messiah*, meaning *Anointed*. The primary sources for the life of Jesus are the four Gospels of Matthew, Mark, Luke, and John and the epistles of the New Testament (see GOSPEL, MATTHEW, GOSPEL ACCORDING TO SAINT, JOHN, epistles, CORINTHIANS, epistles, etc.). The first three Gospels are chronological biographies, the last a biography in essay form, hence the first three harmonize, with variation of detail, while the fourth uses an order suitable to its purpose. The Gospels are in Greek, the language of Palestine having been Aramaic. There are a few contradictions between one Gospel and another, the most important bearing on the date of the Last Supper, which the first three place on the first day of Passover, while John places it before the feast. The epistles, mostly written contemporaneously with the Gospels, add other details. There are brief references to Jesus in non-Christian writers of the period, especially in Tacitus, Suetonius, Philo (perhaps interpolated), and Josephus. The interest of these writers is not in Jesus, but in the Christians. Second-century Christian writers furnish material, some undoubtedly reliable. The apocryphal gospels and the traditional sayings of Jesus are quite unreliable The study of the historicity of Jesus had until the end of the 19th cent been impeded by two facts: his followers assumed his historicity and regarded study of it as superfluous; others assumed the Gospels to be a tissue of myth and refused to apply to the study of his life such canons as were applied to the study of Mohammed Jesus was born of MARY, wife of Joseph, a carpenter of Nasareth, Galilee, who had brought his wife to Bethlehem, his ancestral home, for the Roman tax-census The Christian era is computed according to a 6th-century reckoning to begin with Jesus' birth, A D. 1. The date is placed several years too late, for Jesus was probably born between 8 B C and 4 B C The month and day are unknown, CHRISTMAS (Dec. 25) was set as the feast several centuries later. According to the Gospels, wonderful events surrounded the birth of Jesus, especially its announcation by an angel to MARY (Mat 1 18–25, Luke 1 26–56) In accordance with Jewish law Jesus was circumcised, his mother was purified, and he was confirmed at the end of his boyhood (Luke 2 21–52) Jesus lived at a critical period in Jewish history The Jews were restive under Roman rule as administered by the corrupt house of HEROD, the Temple and the religion were under the control of a party allied with the Herodians, and the provincials of Galilee and Judaea, always eager for the Messiah, looked for an immediate deliverance from Roman control The Pharisees and scribes ruled Judaism, scorning their zealous countrymen and upholding the letter of the law Some time before A D 30 an ascetic preacher made a stir in the Jordan valley by his call to repentance to prepare for the Messiah This was JOHN THE BAPTIST Among those he baptized was his cousin Jesus. Jesus went from his baptism into solitude, thence to emerge on his three-year mission He was about 30 at this time (Mat 3, 4, Mark 1, Luke 3, 4, John 1) Jesus went about as a wandering rabbi, accompanied by a little band of disciples (see APOSTLE) depending for their few needs largely on the charity of the people The first and principal part of Jesus' mission was spent in Galilee, where he was at home with the poor provincials. He left Palestine to go northward apparently twice He made a sensation in the country, his extraordinary powers (see MIRACLE) had become famous, and his PARABLES made him better understood His uncompromising demands on his hearers, his bitter attacks on Pharisees and scribes, and his obvious preference for the company of social outcasts and the oppressed increased the popular enthusiasm The simple and pious saw in him a prophet of God, and the revolutionary ZEALOTS, a future king At the end of three years he set out with his disciples for Jerusalem for the Passover Jerusalem was like a tinderbox at this feast of Jewish independence, it was crowded with excited Jews from everywhere and with Roman soldiers brought for the feast by their governor, PONTIUS PILATE Jesus' arrival before the Passover was marked by an outburst of Messianic enthusiasm, well calculated to alarm the persons in power Then, a day or so later, Jesus created a scene in the Temple by beating the usuring money-changers. The clique in power, whom he consistently upbraided, now felt they had to deal not only with a revolutionary preacher, but a violent reformer as well So they induced one of his companions, JUDAS ISCARIOT, to betray him Jesus ate a farewell supper with his disciples and went out of the city to pray in the garden of Gethsemane (the Agony) There he was arrested. He was rushed to trial before the ecclesiastical court of the Sanhedrin Jesus' claims to be the Messiah and the Son of God convicted him of blasphemy, a crime in Jewish law worthy of death The Roman governor alone could order a man's death. Pontius Pilate tried to evade action, but, without the encouragement of Herod Antipas, he dared not brave popular opinion He yielded and delivered Jesus to be crucified, he put on the cross a sign reading, "Jesus of Nazareth, King of the Jews " So Jesus died and was buried, deserted by all but his mother and a few friends, and the Roman and Jewish powers were rid of him But the Gospels do not leave Jesus in his grave On the first day of the week, some of the women going to the tomb found it opened and the body of Jesus gone An angel at the tomb told them that he had risen from the dead Soon they saw him and talked with him, and his disciples met him, and many others as well (Mat 28, Mark 16, Luke 24, John 20, 21, 1 Cor 15 3–8) The Gospels end at this point, but the book of Acts (by Luke) tells how, 40 days after the resurrection, he ascended into heaven in the sight of his disciples. In orthodox theology, Jesus is God made man, the second person of the TRINITY, whose incarnation was foretold by the prophets, he was born of Mary, a virgin, was crucified to make ATONEMENT to God for man, and was buried, he rose from the dead and ascended into heaven, and he shall come again with glory to judge the living and the dead, and he founded, through his disciples, the Church to continue his work on earth The Christian calendar revolves around the life of Jesus, his principal feasts are (in the Western Church) the Annunciation (March 25), Christmas (Dec. 25) with its preparation in ADVENT, the Circumcision (Jan. 1), the EPIPHANY (Jan 6), CANDLEMAS (Feb. 2), and the Transfiguration (Aug 6). The EASTER cycle of movable feasts and fasts begins with LENT, which ends in HOLY WEEK, after Easter comes the Ascension Sunday is the Christian weekly memorial of the Resurrection, and among Catholics and Orthodox, Friday commemorates the Crucifixion In CHRISTIANITY, split as it is in many parts, and held with many different minds, two constant, vigorous facts may be observed: the inspiring nature of the Gospels, and the consciousness of the reality of Jesus Biographies of Jesus are innumerable The following are examples Ernest R. Glover, *The Jesus of History* (1917, critical Protestant), Frederic W Farrar, *The Life of Christ* (1874, conservative Protestant), Alban Goodier, *The Public Life of Our Lord Jesus Christ* (1930, Roman Catholic) The following are interpretative Ernest Renan, *The Life of Jesus* (Eng tr , 1864, 19th-century rationalist), Sholem Asch, *The Nazarene* (Eng tr., 1939, Jewish), François Mauriac, *Life of Jesus* (Eng tr., 1937, Roman Catholic). **Jesus in art** Every recorded incident in the life of Jesus has been the inspiration of some mosaicist, ivory carver, goldsmith or silversmith, sculptor, or engraver, from the earliest representations (in the CATACOMBS) to the most modernistic portrayals Early Christians often represented him as the *Good Shepherd* carrying a lamb The figure of Christ appears most often with the MADONNA in the *Nativity* (Rossellino, Luni, Hugo van der Goes), *Adoration of the Shepherds* (Ribera), *Adoration of the Magi* (Mantegna, Botticelli, Dürer), *Holy Family* (Sodoma, Michelangelo, Andrea del Sarto), *Flight into Egypt* (Bramantino), *Repose in the Flight* (Correggio, Dosso Dossi, Dürer). Other scenes frequently depicted are *Circumcision* (Cosimo Tura), *Christ among the Doctors* (Borgognone, Bramantino, Veronese, Perugino), *Baptism* (Verrocchio), *Washing of Feet* (Tintoretto), *Transfiguration* (Raphael and Giulio Romano), *Last Supper* (Leonardo da Vinci, Titian, Tintoretto), *Agony in the Garden* (El Greco, Correggio, Mantegna, Perugino), *Betrayal* (Giotto), *Christ before Pilate* (Duccio), *At the Column* (Bramante, Antonello da Messina), *Crowning with Thorns* (Tiepolo), *Calvary* (Mantegna), *Crucifixion* (Nicola Pisano, Fra Angelico, Velásquez, Rubens), *Descent from the Cross* (Giotto, Fra Angelico, Roger van der Weyden, Rubens), *Deposition* (Titian), *Pietà* (Francia, Bellini, Michelangelo, Van Dyck), *Entombment* (Titian, Francia, Raphael), *Ascension* (Tintoretto) Other celebrated pictures are *Marriage at Cana* (Perugino), *Miracle of the Loaves and Fishes* (Tintoretto), *Healing the Blind* (Duccio di Buoninsegna), *Resurrection of Lazarus* (Tintoretto, Froment), *Christ and the Adulteress* (Lorenzo Lotto, Palma Vecchio), *Tribute Money* (Masaccio), *Christ and Magdalen* (Albertinelli), *Incredulity of Thomas* (Duccio), *Among the Lowly* (Lhermitte), *Christ at Emaus* (Jacopo Bassano, Tiepolo), *Ecce Homo* (Correggio, Sodoma, Guido Reni)

Jesus. 1 Son of Sirach, author of ECCLESIASTICUS 2 or **Jesus Justus,** converted Jew in Rome Col 4 11 3 Hero of the book of JOSHUA

Jesus, Society of, religious order of the Roman Catholic Church Its members are called Jesuits (jĕz'wĭts, -ūĭts, jēzh'-) The founder, St IGNATIUS OF LOYOLA, named it *Compañía de Jesús* (Span ,= (military) company of Jesus), and it is in Latin *Societas Jesu* It is the largest single religious order It is governed according to a constitution never permanently altered since St Ignatius's death The order is divided geographically, at its head is the general, who lives in Rome Jesuits have no choral office, they are individually under the obligation of all the clergy to recite the divine office daily. They have no distinctive habit In principle they may accept no ecclesiastical office or honor The training of a Jesuit is rigorous As a novice he spends two years in spiritual training, at the end of which he takes the three vows of the regulars—chastity, poverty, and obedience. Now a scholastic, he spends five years of study in arts and sciences, five years of teaching, three years of theological study, and a year of spiritual training like the novitiate, in the course of this time he is ordained He is now a coadjutor, or he may continue further training and, having renewed his vows and taken a vow of special obedience to the pope, become professed Among the persistent fictions circulated about the Jesuits are that their organization and constitution are secret, that there are secret male and female lay affiliates of the order; that they have received special spiritual privileges from the pope, especially as to the confessional, excommunication, and dispensing of sins (the Roman Catholic Church knows no such thing as a dispensation of sin); that they have special doctrines such as that "the end justifies the means", that they allow equivocation as a policy, that an aim of the society is political revolution; and that they are more independent of the pope than other Roman Catholics. There were and are many far more ridiculous charges made against the Jesuits than these. Of the accusations against them which are not so baseless the following are most important: that the Jesuits were given to intrigue and that they engaged in commerce. Their much discussed laxity with penitents is de-

batable, for their reform of confessional practice is essential to modern Catholic life As to their fidelity to their vows, no other order has presented over four centuries such a spectacle of purity and zeal. St Ignatius originally had the idea of a limited band working in the Holy Land to convert the Moslems. On Aug. 15, 1534, St. Ignatius and six companions took vows in a chapel on Montmartre, Paris, these six were St FRANCIS XAVIER, Diego LAINEZ, Alfonso Salmerón, Nicolás Bobadilla (Spaniards), Simón Rodrigues (Portuguese), and Peter Faber (Savoyard) After their studies were over, the little group, augmented by four, went to Italy, where they were ordained and received by the pope They were unable because of the war in progress to ship for the Holy Land, so they went to Rome and put themselves at the disposal of the pope, who set them to work in Italy, apparently to oppose the influence of the Reformation It is sometimes said that the Jesuits were originated to combat the Reformation, but this is erroneous Their constitution was submitted to Paul III in 1539 and approved (1540), and in 1541 St Ignatius was elected general The Jesuits began to expand remarkably at once They have distinguished themselves in three principal fields—the foreign missions (see MISSIONS), the schools and missions of Europe, and in their study of the sciences and the humanities One of the most brilliant of all foreign missionaries was St Francis Xavier, his work in the East was continued by a host of Jesuits The mission in Japan was washed out in blood in the early 17th cent., but in 1865 a number of Christians were found in Japan, descendants of these martyrs The most distinguished early figures of the Chinese mission were Fathers Matteo Ricci, Adam Schall, and Ferdinand Verbiest in the 17th cent., a characteristic of their mission was their popularity at court, where they were revered as men of wisdom and science There were persecutions and martyrdoms, but the original Jesuit foundation is the nucleus of the Catholic Church in the country The Indian mission began under the aegis of the Portuguese in Goa, whence it spread over the country, one of the most remarkable Jesuits in this mission was Robert de' Nobili, who, after arduous asceticism and studies, succeeded in gaining equality with the Brahmans The American missions of the Jesuits were original and heroic The most remarkable were in PARAGUAY The Jesuits worked all over Latin America, among their devoted number was St Peter Claver, friend of the Negro slaves In New France the Jesuits came frequently into rivalry with the government and the other clergy, their missions among the Huron were especially successful, and they made headway among the Iroquois The "Black-Robes," as the Indians called them, traveled even to Oregon Some of the Jesuits died as martyrs for their faith, six of them have been canonized together, with two of their lay helpers, as the Jesuit Martyrs of North America (feast Sept 26) Jean Brébeuf, Isaac Jogues, Antoine Daniel, Gabriel Lalemant, Charles Garnier, and Noel Chabanel, priests, and René Goupil and Jean Lalande, they were killed in the 1640s Other important Jesuits of New France were the Lalemant brothers, uncles of the martyr, and, in a younger generation, the Fathers Albanel, Allouez, Lamberville, and Marquette Of all these men the great monument is the JESUIT RELATIONS The suppression of the order in Canada in 1791 and later readmission as a teaching order led to the JESUIT ESTATES ACT In Europe two big problems the Jesuits attacked were to reclaim Protestant Europe for the Church and to raise the spiritual tone of the Catholic countries The principal Protestant fields where the Jesuits labored successfully were W and S Germany, France, Hungary, and Poland In nearly every important city the Jesuits established schools and colleges, and for 150 years they were leaders in European education One of their boldest efforts was the English mission of 1580, distinguished by Edmund CAMPION Another celebrated English Jesuit was Robert Southwell Their zeal and consistent devotion to the Holy See made the Jesuits active promoters of the reform movement (see REFORM, CATHOLIC) from the start, they thus soon fell afoul of ecclesiastical vested interests in every Catholic state. Written polemic against them became important in France, with PASCAL and the Jansenists, whose works exaggerated, misquoted, and—apparently deliberately—misrepresented them. The Gallican party in France, being antipapal, was naturally anti-Jesuit. In Spain the order proved too strong for the kings, who wished to bring it, like the other church institutions, firmly under state control Through the 17th cent the papacy was losing in its struggle with the Catholic rulers for liberty, and by 1700 the Jesuits were the only element in the Church the popes could depend on. Before the middle of the century a combination of publicists (including Voltaire) and the absolute monarchs of Catholic Europe began a campaign to destroy the Jesuits. The Jesuits were not prudent and even got involved in a big commercial scandal The charges against them were innumerable, and not all sincere; e.g., some who most deplored the Jesuits as harmful to the Church were notorious anti-Catholics, and the French made much of Jesuit laxity when they knew that the Jesuits had gained their most powerful enemy in France, Mme de Pompadour, by refusing her absolution In 1759 POMBAL expelled them from Portugal and her colonies, in 1764 France suppressed them, and in 1767 the Spanish dominions were closed to them Clement XIII denounced these acts, but in 1773 Clement XIV, under the coercion of the Bourbon monarchs and of some of his own cardinals, dissolved the order The Society of Jesus ceased to exist in the Catholic world Frederick the Great and Catherine the Great refused to publish the brief suppressing them, and since publication of the brief was necessary to validate it, the Jesuits continued to exist in Prussia and Russia, especially as educators In Russia they were very popular and in high favor with the empress As the century drew to a close Catholic Europe, especially Italy, began to ask for restoration of the Jesuits, and in 1814 Pius VII reestablished them as a world order Since then the Jesuits have resumed their place in the Church, and since then neither of the old charges of intrigue and commercialism have been substantiated Anti-Catholic hostility is directed especially against the Jesuits, thus they are apt to be the first order to be suppressed when a state begins action against the Church (e.g., in France in 1880 and in Spain in 1931) Americans have been important in the order At the end of the American Revolution nearly all U.S. Catholic priests were ex-Jesuits There are many Jesuit schools and colleges in the United States, (e.g., Georgetown, Fordham, and St Louis universities) The order has a tradition of learning and science, e.g., the Bollandists are Jesuits, and Jesuits have made a specialty of the study of earthquakes Among the great organizers and theologians of the order are St Francis Borgia, Aquaviva, Bellarmine, Molina, and Francisco Suárez See T. J. Campbell, *The Jesuits, 1534–1921* (1921), Thomas A. Hughes, *History of the Society of Jesus in North America* (2 vols., 1907–17), John J. Wynne, *The Jesuit Martyrs of North America* (1925), James J. Walsh, *American Jesuits* (1934), Gilbert J. Garraghan, *The Jesuits of the Middle United States* (1938)

Jethro (jĕth'rō) [Heb.,=preeminence], Midianite priest of the peninsula of Sinai who was the companion and father-in-law of Moses Ex 2.21, 3 1, 4 18, 18 Reuel Ex 2 18 Raguel Num 10 29 Hobab Judges 4 11 Hobab is given once as the name of a brother-in-law of Moses Num 10 29.

jet propulsion, the propelling force directionally opposite to a mass of gas expelled under high pressure Forward "thrust" is generated by large volumes of gas seeking to escape rearwardly following combustion in the chamber of a jet engine Whatever the form of the apparatus utilizing jet propulsion, it is essentially a reaction motor and is based on Newton's third law of motion, that every action has an equal and contrary reaction The first reaction engine, the "aeolipile," was constructed by HERON OF ALEXANDRIA Developments across the centuries have resulted in two general types of reaction machines, the true ROCKET or chemical-fuel motor and the airstream engine The rocket motors burn either solid fuels, such as gunpowder and smokeless powder, or liquid fuels, such as gasoline and liquid oxygen The motive force is the pressure of the gases formed in burning Fritz von Opel, a German automobile manufacturer, made the first flight entirely by rocket power in Frankfurt in 1929 R. H. Goddard, an American, contributed the most important work in the development of liquid fuels for rockets The second category of jet-propulsion motors, the airstream engines, are developments of the late 18th-century gas turbine engines which directed the gases from combustion against the blades of a turbine wheel. Not until 1908 was it suggested that an airplane could be driven by jet propulsion René Lorin, a French engineer, proposed using the reciprocating engine to compress air, mix it with fuel, and thus to propel the plane by the pulses of hot gas produced by combustion of the mixture In 1939 Frank Whittle, an Englishman, developed a jet engine which powered a full-sized airplane in flight A year later Secundo Campini in Italy flew for 10 minutes with a thermal jet engine Both of their machines had the four standard parts of a jet engine—compressor, turbine, combustion chamber, and propelling nozzles Air is compressed and led through chambers where its volume is increased by the heat of fuel combustion On emergence it spins the compression rotors which act on the inflow of air Intermittent duct jet propulsion does not operate with a continuous blast as does the thermal jet, but proceeds by a series of pulses or intermittent explosions This type of action propelled the German V-1 or "buzz-bomb" used against England in 1944 The ram-jet or continuous duct engine depends upon the ram effect of the air for compression It can be used only as an auxiliary power supply because its action commences only after sufficient speed has been attained Jet-propelled aircraft are gradually replacing propeller-driven types, especially in military craft which seek higher speeds Thrust augmentation devices used to increase, at given moments, the effective driving force of jet aircraft are the afterburner or tailburner, the water-injection method, and air bleed-off The afterburner uses the exhaust gases from the engine for additional combustion with resulting higher compression The introduction of water into the air compressor inlet also increases the thrust but can only be used at take-off because of the high water consumption Air bleed-off, sometimes called fan augmentation, also makes more efficient use of air otherwise wasted Jet-propelled planes have made possible supersonic flight speeds See G. E. Pendray, *The Coming Age of Rocket Power* (rev. ed., 1947), V. C. Finch, *Jet Propulsion Turbojets* (1948)

jetsam see FLOTSAM

jettison (jĕ'tusun, -zun) [O. Fr.,=throwing], in maritime law, casting all or part of a ship's cargo overboard to lighten the vessel or to meet some danger, such as fire The master has the absolute right to jettison cargo when he reasonably believes it to be necessary, and the owners of the ship incur no liability if the vessel carries goods of more than one shipper, the rule of general average provides for apportioning the loss among all the shippers because all have benefited by the master's action On the other hand, if some cargo is lost by accident, the shippers who suffered no loss do not contribute to indemnification See FLOTSAM, JETSAM, AND LIGAN

jetty or groin, structure usually of rubble, masonry, or stone and piles, built from the shore out into a river, lake, or ocean Its function is to control or direct the flow of water, maintain a swift current by narrowing the channel, and prevent the deposition of silt, thus keeping a shipping channel open

Jetur (jē'-), son of Ishmael, eponymous founder of Ituraea 1 Chron 1 31

Jeuel (jōō'ĕl), chief of Judah 1 Chron. 9 6

Jeush (jē'ŭsh) [Heb.,=hastening] **1** Son of Esau Gen 36 5,14,18, 1 Chron 1 35 **2** Head of a Benjamite family 1 Chron 7 10,11 **3** Gershonite Levite 1 Chron 23 10,11 **4** Son of Rehoboam and Abihail 2 Chron 11 18,19

Jeuz (jē'ŭz) [Heb.,=counseling], chief Benjamite. 1 Chron 8 10

Jevons, William Stanley (jĕ'vunz), 1835–82, English economist and logician After five years in Australia as assayer to the mint, he taught at Owens College, Manchester, and University College, London His chief contribution to economics was his development of the theory of utility, in which he stated that value was determined by utility He demonstrated the relationship of value to utility in mathematical terms *The Theory of Political Economy* (1871) was his chief work in theoretical economics Jevons was also interested in practical applications of economics, and *The Coal Question* (1865) influenced government action He wrote a number of successful texts on logic and scientific method, notably *Pure Logic* (1863) and *The Principles of Science* (1874) See his *Letters and Journal* (ed. by his wife, 1886), biography by E. W. Eckard (1940)

Jewell, town (pop 1,051), central Iowa, N of Ames, platted 1880

jewelry, personal adornments worn for ornament or utility, to show rank or wealth, or to follow superstitious custom Its use antedates clothing, and jewels have been worn on many parts of the body, the most universal forms being the RING, PIN, EARRING, and necklace It is made of a variety of materials including berries, perforated stones, feathers, metals, bone, hair, ivory, and precious or semiprecious stones Although bronze and silver have been much used by primitive peoples and in modern hand-wrought jewelry, gold has been the preferred metal Jewelry has been decorated by engraving, embossing, etching, filigree, enamel, mosaic, the GEM, cameo, glass, and semiprecious stones The art reached an elaborate development in the Orient with its wealth of precious stones and pearls Treasures recovered from Egyptian tombs show a rare craftsmanship The jewels are largely emblematic, very colorful, and display lotus flower

and scarab motifs Excavations in the Aegean Islands, Greece, and the coast of Asia Minor reveal a wealth of jewelry Later Greeks were highly expert goldsmiths and preferred exquisitely wrought ornaments of metal unadorned with color Roman jewelry, although based on Greek and Etruscan forms, was massive and valued rather for precious stones and cameos than for artistic settings Ropes of pearls were prized Byzantine jewelry, influenced by the East and lavish in color and design, was of composite Greek and Roman styles Jewelry of the Middle Ages was massive, large brooches and girdles predominated The Renaissance brought a transformation in the art of the jeweler, who was often an artist of note such as Benvenuto Cellini or the architect Ghiberti, also a goldsmith, Rubens and Dürer drew designs for jewelers Jewels were splendid with enamel and precious stones, the necklace and pendant were in great favor, settings were designed to conform to the irregularities of gem stones, especially the baroque pearl By the late 17th cent the goldsmith and enameler gave way before the lapidary and mounter as precious gems and pearls assumed major importance Early 18th-century enthusiasm for rococo design was succeeded by a revival of classic forms and later by relatively inexpensive ornaments for a large middle class Under the influence of Empress Eugénie in France gems set to display the value of the stone and ropes of pearls were much worn Artistry of workmanship declined after the introduction of factory-made ornaments In the 20th cent platinum became popular for settings, costume jewelry followed the rapidly changing fashions in dress, and a renewal of enthusiasm for hand-wrought pieces succeeded the arts and crafts movement Foremost among the craftsmen of the revival are René Lalique in France and Philippe Wolfers in Belgium Wrist watches, vanity cases, and cigarette boxes were increasingly in demand but hair ornaments were less popular with the vogue for short hair See Frances Rogers and Alice Beard, *5,000 Years of Gems and Jewelry* (1940), Marcus Baerwald and Tom Mahoney, *Gems and Jewelry Today* (1949)

Jewish music. The Bible records that spontaneous music making was common among the ancient Jews on all important occasions, was indulged in by both men and women, and employed responsorial and antiphonal forms and that singing and dancing were accompanied by instruments The first instruments mentioned in the Bible are the *kinnor*, evidently a lyre similar to the cithara, and the *ugab*, possibly a vertical flute Other instruments, of value more ceremonial than musical, included the *hasosra*, a trumpet, and the *shofar*, a ram's horn or goat's horn, the least musical of all and the only one which survives today, to it were ascribed magical powers. When the kingdom of Israel was established, music was systematized and professional musicians appeared. David appointed the Levites to select from their number the first official body of musicians For the consecration of the Temple the number of musicians was increased, and in the Temple a high degree of musical proficiency was attained and new instruments were introduced They were the *nevel*, a harp, the *halil*, probably a double oboe, used after the rebuilding of the Temple, the *asor*, certain to have been a 10-stringed instrument and probably some sort of psaltery, and the *magrepha*, an instrument of powerful sound which signaled the priest when it was time to begin the service The *magrepha* was evidently an organ, perhaps a development of the *ugab*, which is often translated "organ " Various types of cymbals originally used in the Temple were prohibited after its restoration, perhaps because of pagan associations The ritual music included first the cantillation of the prose books of the Bible to a set of melodic formulas, the rhythm of the music following that of the words, later the prayers and biblical poetry were chanted, but this chant employed a modal system similar to the *ragas* of Hindu music or the *maqamat* of Arabian music, i e, melody types which were the basis of improvisation After the destruction (A D 70) of the temple, much of the chant was preserved among congregations of Oriental Jews and remains intact today, but the instrumental music was prohibited Singing was also discouraged except for religious purposes, and those who had beautiful voices were expected to serve in the synagogues In the Temple the chant had been passed on orally, and a system of mnemonic hand signs had been developed to aid in teaching it After the Dispersion these became the point of departure for the development of a system of notation In the 9th cent Aaron ben Asher of Tiberias perfected the *te'amon* or *neginoth*, a system of accent signs placed above or below the letters, signifying melodic formulas or intervals rather than single notes They were similar to the neumes of Greek notation in that they indicated no definite pitch, but were interpreted to the singers by the system of hand signs Aaron ben Asher's notation superseded all other systems and influenced the development of the earliest Christian neumes, which developed into a more precise system while the *te'amon* retained its vague character and was interpreted differently among different groups of Jews With the growth in importance of the synagogue came the rise of the CANTOR or *chazan* In the flourishing of Jewish culture in Arab-dominated Spain, metrical poetry, inspired by Arab models and set sometimes to Arab tunes and sometimes to original tunes, was created Among the Ashkenazim in the Middle Ages there was a tendency to cultural stagnation The cantor became an entertainer and, because of the unsettled conditions of life, also a sort of wandering minstrel The traditional melodies were corrupted under the influence of German folk song, and continual conflict resulted from the attempt of the rabbis and more highly educated Jews to preserve the traditional chant One of the many Jewish musicians who distinguished themselves in Renaissance Italy was Salomone Rossi, a court musician to the duke of Mantua from 1587 to 1628 His creative output was entirely in the Italian tradition, but he gave expression to his Jewish faith by writing polyphonic vocal settings of Psalms and prayers for the synagogue Rossi's works had no immediate successors, they were, however, reprinted in Germany in 1877 after the reform movement The virtuoso cantors of Eastern Europe during the Renaissance were influenced by the Ashkenazic song, but there was also a continual reintroduction of ancient elements by the Oriental Jews These cantors returned to improvisation in the Oriental modes and developed a very distinctive type of coloratura About the middle of the 17th cent this art began to be spread all over Europe During the 18th cent instruments were introduced into some German synagogues, and there was much influence from secular and Christian music on the synagogue music In the reform movement of the early 19th cent the cantor was eliminated, the organ was employed, and Jewish hymns were written in German and set to the tunes of Protestant chorales Reaction against this movement brought about a more moderate reform in which Salomon Sulzer (1804–90), a cantor cited by Liszt for his musical abilities, was the outstanding figure Sulzer aimed to restore the traditional cantillation, but without improvisation, and to make use of new music composed for the synagogue He used the organ, included hymns in the vernacular, and had the Bible read instead of chanted In the United States, the 20th cent has seen a movement among Jewish composers for the composition of music for the reformed service Outstanding services are those of Frederick Jacobi (1891–) and Ernest BLOCH Bloch is the leading figure in the attempt to create a Jewish national music It is difficult, however, to discern characteristically Jewish qualities in the music of contemporary composers apart from their use of themes from traditional Jewish ritual music See A. Z. Idelsohn, *Jewish Music* (1929), Curt Sachs, *The Rise of Music in the Ancient World* (1943), Peter Gradenwitz, *The Music of Israel* (1949).

Jews [from Judah], term used synonymously with Hebrews and Israelites to indicate the descendants of the tribes of ISRAEL, adherents of the religion JUDAISM Before the Second World War the Jewish population, scattered over the world, amounted to c 16,000,000, it is estimated that between 5,000,000 and 6,000,000 Jews perished in massacres during the war More than half the Jews use the YIDDISH language The Jews are closely related to other peoples of SW Asia speaking the Semitic languages According to the OLD TESTAMENT, their ancestor was Terah of Ur of the Chaldees, progenitor of the patriarchs Abraham, Isaac, and Jacob. Ancient Jewish history begins with the settlement of a group in Goshen, NE Egypt, as agriculturists, many centuries before Christ Under Ramses II they were terribly persecuted, and finally Moses led the group out of Egypt, at Mt Sinai he gave them the Decalogue Many years of wandering in desert wildernesses followed, before the Jews conquered Canaan Their great enemies at this time were the Philistines, and the Jews, who had been divided under tribal leaders called judges, came to see the need for union; Saul became the first king He was at first successful against the Philistines, but was finally defeated at Gilboa David, of the tribe of Benjamin, ruled, conquered the enemies of the Jews, and gave his people prosperity and peace His son was Solomon, who built the first Temple (see TEMPLE) and whose reign was the last before a period of disruption, caused partly by Solomon's system of heavy taxation The tribes of the north united under Jeroboam and formed the kingdom of Israel those of the south, led by Solomon's son Rehoboam, formed the smaller but more strongly united kingdom of Judah, the two kingdoms were at war during much of the following two centuries (935 B C -725 B C) In 722 B C Sargon captured Samaria, capital of Israel, and most of the Israelites (the LOST TRIBES) were exiled Judah passed under the Assyrian yoke, then under the Egyptian, and in 586 B C. under the Babylonian the Temple was destroyed and the people were exiled until their return was permitted by CYRUS The Temple was rebuilt in 516 B C The Jews were a strong religious group during the period of Hellenism, but regained political independence only under the MACCABEES Strife between the PHARISEES and the SADDUCEES ended in Roman intervention and complete dominance, and Jerusalem was finally destroyed in A D 70 This was the beginning of the development of their thought and law by scholars and rabbis With the organization of new kingdoms upon the ruins of the Roman Empire, Jews appeared in Western Europe and began to play an important part in its intellectual and economic life From the 9th to the 12th cent they enjoyed a golden age of literary efflorescence, particularly in Spain From the time of the Crusades date the persecutions which were the lot of the Jew until the 18th cent The ownership of land and most of the occupations save petty trading and moneylending were forbidden to them, the GHETTO came into existence They who in Palestine had been an agricultural people became perforce an urban population In Spain some 100,000 Jews were killed towards the end of the 15th cent In 1290 the Jews were expelled from England, in 1392 from France, in 1492 from Spain, under TORQUEMADA, in 1497 from Portugal Many of the exiles perished, others found asylum in Holland and in the Turkish possessions The German Jews fled to Poland, but there too they suffered from persecutions When a country suffered economically or in war, its Jews were likely to be its scapegoat Their helplessness and their staunch faith in God gave rise to several messianic movements, the most important of which was that of SABBATAI ZEVI The rise of capitalism improved the condition of the Jews throughout Europe, while the revolutionary sentiments at the end of the 18th cent also contributed towards a more liberal attitude by most governments Political emancipation of the Jews began with the American and French revolutions In Germany and Austria emancipation of the Jews was proclaimed after the Revolution of 1848 In Russia, birthplace of the POGROM, equal rights were granted them only after the Russian Revolution of 1917, Soviet Russia established an autonomous Jewish state in remote BIROBIDZHAN, though Judaism was until 1936 proscribed like all religion In Rumania, Jews gained equal rights only at the end of the First World War. The gradual emancipation of the Jews brought forth two opposed movements, cultural assimilation, begun by Moses MENDELSSOHN, and ZIONISM, founded by Theodor HERZL in 1896. A wave of persecution starting in Russia after the assassination (1881) of Alexander II and moving westward to France abated until 1933, when with the rise to power in Germany of the Nazis, persecution of Jews became violent, their property was confiscated and thousands were driven into exile (see ANTI-SEMITISM) After the massacres and population displacements in the Second World War, great members of Jews sought refuge in Palestine. For the establishment (1948) there of the Jewish state, see ISRAEL For history, see Leo Graetz, *History of the Jews* (6 vols, 1926); S. W. Baron, *A Social and Political History*

of the Jews (3 vols., 1937). For briefer works, see Lewis Browne, *How Odd of God* (1934), Cecil Roth, *The Jewish Contribution to Civilization* (1938), A L Sachar, *A History of the Jews* (3d ed , 1948), Louis Finkelstein, ed , *The Jews* (1949)

Jewsbury, Geraldine Endsor, 1812–80, British novelist She is remembered as much for her friendship with the Carlyles and a large group of other literary people as for her novels, which include *Zoe· the History of Two Lives* (1845) and *The Sorrows of Gentility* (1856) See Susanne Howe, *Geraldine Jewsbury Her Life and Errors* (1935)

jew's-harp or **jews'-harp,** musical instrument composed of a small metal frame containing a flexible metal tongue The frame is held between the teeth and the metal tongue is plucked with the fingers Each jew's-harp can produce only one tone, the quality of which may be varied by modifying the shape of the mouth, thus emphasizing different harmonics of the tone The musical possibilities may be increased by the use of additional tongues, giving additional tones, and in the early 19th cent , particularly in Germany, jew's-harps were made with as many as 16 tongues The jew's-harp has also been called jew's-trump or jews'-trump

Jex-Blake, Sophia, 1840–1912, English physician, active in opening the medical profession to women in England A graduate of Queen's College, London, she began (1866) her medical studies in the United States and continued them in Edinburgh, but she met much opposition there and was unable to obtain a degree She carried the battle to Parliament, which finally passed a law enabling the medical schools to give degrees to women Miss Jex-Blake was influential in founding medical schools for women in London and Edinburgh See biography by Margaret Todd (1918)

Jezaniah (jĕz″ənī′ə), the same as JAAZANIAH **3**

Jezebel (jĕ′zəbul), d c 846 B C , Phoenician princess who was the wife of King Ahab and the mother of Ahaziah, Jehoram, and Athaliah She encouraged idolatrous worship and persecuted the prophets Naturally Jezebel was the bitter foe of ELIJAH Elijah's prophecy of Jezebel's doom was fulfilled when Jehu triumphed over the house of Ahab, and Jezebel, defiant to the last, was killed and her body thrown to the dogs 1 Kings 16 31, 18, 21, 2 Kings 9 1–10, 30–37 This name occurs in Rev 2 20, where the passage is obscure

Jezer (jē′zur) [Heb =image], son of Naphtali Gen 46 24, Num 26 49, 1 Chron 7 13

Jeziah (jēzī′ə) [Heb ,=whom God has sprinkled], Jew who had a foreign wife Ezra 10 25

Jeziel (jē′zĭ′əl, jēzī′əl) [Heb =assembly of God], ally of David at Ziklag 1 Chron 12 3

Jezireh, Al (al jĕzēr′ə), area of Iraq and Syria It lies between the Tigris and Euphrates rivers and is bounded by their alluvial plain on the south and a mountainous tract on the north Grains are grown, and in Iraq there are oil fields

Jezliah (jĕzlī′ə), Benjamite 1 Chron 8 18

Jezoar (jēzō′ûr) [Heb ,=brilliant], Judahite 1 Chron 4 7

Jezrahiah (jĕzruhī′ə) [Heb ,=God brings into life], singer at the dedication of the wall Neh 12 42

Jezreel (jĕz′rēĕl) [Heb ,=God sows] **1** Ancient city, Palestine, in the plain of ESDRAELON halfway from Megiddo to the Jordan It was a residence of King Ahab, whose family is therefore called the house of Jezreel 1 Sam 29, 2 Sam 2 9, 1 Kings 21 1 The name is used for Israel in a pun in Hosea 2 22 The valley of Jezreel is the plain of Esdraelon or, especially with cartographers, its eastward extension running down to the Jordan from Jezreel **2** Town of Judah Joshua 15 56, 1 Sam 27 3, 30 5 **3** Son of Hosea Hosea 1 4 **4** Judahite 1 Chron 4 3

Jhansi (jan′sē), city (pop 103,254), SW United Provs , India, founded 1613 It escheated (1853) to Great Britain on default of heirs to the ruling prince Jhansi trades in agricultural produce and manufactures silk cloth and brassware

Jhelum or **Jehlam** (both jā′lum), river, c 500 mi long, rising in W Kashmir state, India After flowing W through Kashmir, it proceeds south along part of the border of Kashmir with North-West Frontier Prov and with West Punjab prov , forming a portion of the boundary of India and West Pakistan Then, as the westernmost of the five rivers of Punjab, it flows generally SW across West Punjab prov to join the Chenab river Extensive irrigation works utilize its waters The ancient name of the river was Hydaspes

Jibsam [Heb ,=lovely], Issacharite 1 Chron 7 2

Jibuti (jĭbōō′tē), Fr *Djibouti* (jēbōōtē′), town (pop c 17,000), capital of French Somaliland, on the Gulf of Tadjoura, an inlet of the Gulf of Aden It was founded c 1888, and it became the capital in 1892 Its importance rests on its strategic position near the shipping lanes that carry the Suez Canal traffic and on the large transit trade which it enjoys as the terminus of the only railroad to Ethiopia

Jidda (jĭ′dù) or **Jedda** (jĕ′du), city (pop c 20,000), Hejaz, Saudi Arabia, on the Red Sea The port of Mecca, it receives annually a huge influx of pilgrims, mainly from Africa and Indonesia Unlike Medina (only recently opened to non-Moslems) and Mecca (still restricted to all but Moslems), Jidda has always accepted visitors regardless of religion. The diverse population includes a large admixture of Negroes Although Jidda exports little, it has a considerable import trade to support the pilgrims in Mecca, and there are some foreign consulates The houses are built of coral, and the city is surrounded by a wall Just outside is the reputed tomb of Eve

Jidlaph (jĭd′lăf) [Heb ,=weeping], son of Abraham's brother, Nahor Gen 22 22

jig, dance of English origin which is performed also in Ireland and Scotland It is usually a lively dance, by one or more persons, with quick and irregular steps When the jig was introduced to the United States, it was often danced by Negroes in minstrel shows In music the *gigue,* the successor to the jig, was used by Bach and Handel in their suites

Jigat, India see DWARKA

jigger. see CHIGOE

Jihlava (yĕkh′lavu), Ger *Iglau* (ē′glou), city (pop. 23,413), W Moravia, Czechoslovakia, on the Jihlava river It manufactures cloth, gloves, machinery, and tobacco There remain two medieval churches and a 16th-century town hall

Jim Crow· see NEGRO

Jiménez, Juan Ramón (hwan′ ramōn′ hēmā′nāth), 1881–, Spanish lyric poet, b Andalusia, studied at the Univ of Seville Influenced in his youth by the French symbolists—e g , his *Almas de violeta* (1900) —he turned to greater simplicity of style His *Diario de un poeta recién casado* [diary of a poet recently married] (1917) was written after his marriage to Zenobia Camprubí Aymar Later collections include *Unidad* (1925), *Sucesión* (1932), *Presente* (1935), *Canción* (1936), and *Verso y prosa para niños* (1937) He left Spain in 1936 and lived in Puerto Rico and Cuba and later in the United States

Jiménez de Cisneros, Francisco (franthē′skō hēmā′nāth dā thēsnā′rōs), 1436–1517, Spanish prelate and statesman, cardinal of the Roman Church He early became vicar general to Cardinal Mendoza, but soon entered a Franciscan monastery, where he subjected himself to unusual austerities Appointed, against his will, confessor to Queen Isabella I, he also became (1495) archbishop of Toledo After acting as regent of Castile from the death (1506) of Philip I until the return (1507) of Ferdinand V from Italy, he was made (1507) inquisitor general and cardinal He financed and personally led the expedition (1509) which captured Oran, in Africa On Ferdinand's death (1516) he again assumed the regency pending the arrival of Charles I (later Emperor Charles V) from Flanders When Charles arrived, he dismissed Jiménez peremptorily on the advice of his Flemish counselors, but the cardinal died before learning of his fall Jiménez founded the Univ of Alcalá de Henares and had the Polyglot Bible compiled at his expense His name formerly was also spelled Ximénez

Jiménez de Quesada, Gonzalo (gōnthä′lō hēmā′nāth dā kāsā′dhä), c 1499–1579, Spanish conquistador in Colombia Chief magistrate of Santa Marta, he arrived there in 1535 or 1536 and was commissioned to explore the MAGDALENA in search of EL DORADO He set out in 1536, and after incredible hardships he defeated the CHIBCHA and founded (1538) Bogotá as capital of the "New Kingdom of Granada" (see NEW GRANADA) A hard taskmaster but an able leader, Quesada wavered between humane treatment and brutal treatment of the Indians He obtained fabulous amounts of emeralds and gold Meeting FEDERMANN and BENALCÁZAR, who claimed the same territory, Quesada persuaded them to return with him to Spain, where settlement could be made Here he was ignored until 1550, when he returned as marshal of New Granada and councilor of Bogotá for life In 1569, still seeking El Dorado, he led a lavishly equipped expedition to the confluence of the Guaviare and Orinoco, he and what remained of his company returned wasted and penniless after three years Still later, the doughty old warrior, suffering from a skin infection (possibly leprosy) and carried on a litter, put down an Indian revolt This indomitable octogenarian epitomized many facets of the typical Spaniard of the day Some think that he was the model for Cervantes's Don Quixote His own account of his conquests has been lost, but excerpts copied by others from the original survive See A F Bandelier, *The Gilded Man* (1893), C R Markham, *The Conquest of New Granada* (1912), Germán Arciniegas, *The Knight of El Dorado* (Eng tr , 1942)

Jimna or **Jimnah** (both –nu), son of Asher Num. 26 44, Gen 46 17 Imnah 1 Chron 7 30

Jimson weed or **Jamestown weed,** large, coarse annual plant (*Datura stramonium*), considered a native of the tropics but long widely distributed and often weedy It has rank-smelling foliage, large, trumpet-shaped white or purplish flowers, and large, spiny fruits This and other species of the genus contain a narcotic poison similar to belladonna that has been used by many peoples for various purposes, e g , as a medicine (now chiefly smoked for the relief of asthma and known as stramonium), and in the past as a poison and an instrument for obtaining prophetic dreams or messages in various cults (suggested as possibly the medium of priests at the Delphian oracle) The amusing antics of soldiers in colonial Virginia who ate Jimson weed has been recorded for history

jingoism (jĭng′gōĭzm), advocacy of an aggressive military policy The term, suggested by the "by jingo" of a song by George Ward Hunt, was first used in connection with certain British politicians who sought to bring England into the Russo-Turkish War (1877–78) on the side of the Turks See J A Hobson, *The Psychology of Jingoism* (1901)

Jinnah, Mahomed Ali (mŭhō′mĭd a′lē jĭ′nu), 1876–1948, founder of Pakistan, b Karachi After his admission (1896) to the bar in England, he returned to India to practice law Early in his career he was a fervent supporter of the Indian National Congress and an advocate of Hindu-Moslem unity He was a member of the legislative council of the viceroy of India from 1910 to 1919 In 1916 and in 1920 he was elected president of the Moslem League, but he remained a member of the Congress until 1930 From 1934 until his death he headed the Moslem League and guided its agitation for Pakistan, a state which would include the predominantly Moslem areas of India Jinnah supported the British during the Second World War while the Congress was under a ban So successful was his propaganda that in the elections for the Indian constituent assembly in 1946 the Moslem League won all the seats assigned to the Moslem electorate Jinnah's intransigency and his scarcely veiled threats of violence if his demands were not met forced the Congress to accept Pakistan, and, in Aug , 1947, India was partitioned Jinnah was appointed the first governor general of the dominion of Pakistan and elected president of its constituent assembly Jinnah was called Quaid-i-Azam [leader of the people] by his followers

jinn (jĭnē′), plural **jinn** (jĭn), in Arabic folklore and in Moslem literature, a creature like man in most features, but having certain supernatural powers, especially those of changing in size and shape The jinn are capable of good and evil and may or may not be believers of Islam They are generally said to be under the control of King Solomon They appear constantly in the *Thousand and One Nights,* usually, when in contact with men, as hideous monsters.

Jinsen, Korea see CHEMULPO

Jiphtah (jĭf′tu) [Heb ,=he opens], unidentified town, SW Palestine Joshua 15 43

Jiphthah-el (jĭf′thu-ĕl″), town, Palestine, perhaps to be identified with Jefat, c 10 mi N of Nazareth Joshua 19 14,27

Jipijapa (hēpēha′pa), city (1944 estimated pop 22,097), W Ecuador, on the equatorial lowlands A few miles inland from the Pacific, Jipijapa is a famous center for the manufacture of high-grade Panama hats Also exported are TAGUA nuts

jiujitsu or **jujutsu.** see JUJUTSU

Jívaro (hē′vărō), linguistic stock of South American Indians, Ecuador The peoples, N of the Marañón river and E of the Andes, engage in farming, hunting, fishing, and weaving and are preoccupied with warfare, usually among themselves They have a patrilineal society with some 40 to 50 people, the family group, living in each huge, isolated communal house Though not unique to the Jívaro, head shrinking, accompanied by elaborate ceremony, has made them famous Efforts to subdue them have never permanently succeeded

Joab (jō′ăb) [Heb ,=God, the father] **1** Son of David's sister Zeruiah and commander of his uncle's armies A trusted and skillful administrator, he was often vindictive and cruel, as in his killing of Abner, Absalom, and Amasa David's dying curse of Joab is remarkable 1 Kings 2 5,6 For his support of Adonijah, Solomon had him put to death 2 Sam 2 12 32, 3 22 31, 8 16, 10 7–14, 11, 12 26, 14, 18, 19 1,5-7, 20 7–23, 24 1-9, 1 Kings 1, 2 28–34 **2** Chief craftsman of the valley of Charashim 1 Chron 4 14 **3** Family returned from exile Ezra 2 6, 8 9, Neh 7 11

Joachim, Saint (jō′ukĭm) [Gr ,=Heb JEHOIAKIM], in tradition, the father of the Virgin and husband of St ANNE His cult is ancient in the East, but modern in the Western Church Feast Aug 16

Joachim, Joseph (yō′zĕf yō′ăkēm), 1831–1907, Hungarian violinist, friend of Mendelssohn, Brahms, and Schumann In his long career his performances of the violin masterpieces came to be accepted as models He was concertmaster under Liszt at Weimar, 1849–53, later he became (1868) musical director of the Berlin Hochschule In 1869 he founded the Joachim Quartet, which existed until his death and performed the finest of the chamber-music literature He composed cadenzas for the violin concertos of Beethoven and Brahms His Hungarian Concerto is best known among his compositions

Joachim of Floris (jō′ukĭm), d 1202, Italian Cistercian monk He was abbot of Corazzo, Italy, but withdrew into solitude He left scriptural commentaries that are prophecies of a new age In this "Age of the Spirit" the hierarchy of the Church would be unnecessary, infidels would unite with Christians, and all would be monks. Joachim's

works had a vogue in the 13th and the 14th cent.; many, especially religious zealots like the Franciscan spirituals, acclaimed him as a prophet Dante places him in Paradise. One of Joachim's works was condemned as heretical

Joachimsthal, Czechoslovakia see JACHYMOV.

Joad, Cyril Edwin Mitchinson (jōd), 1891–, English philosopher He became head of the department of philosophy at Birbeck College, Univ of London, in 1930 As a rationalist, he was a successful lecturer and writer, his works including *Common Sense Ethics* (1920), *Common Sense Theology* (1922), and *Return to Philosophy* (1936) After his conversion to religion he wrote *Good and Evil* (1943) *The Book of Joad* (1935, previously pub as *Under the Fifth Rib*, 1933) is autobiographical

Joah (jō'hh) [Heb ,=God is his brother] **1, 2** Keepers of records 2 Kings 18, Isa 36, 2 Chron 34 8 **3, 4** Gershonites 1 Chron 6 21, 2 Chron 29 12 **5** Korahite doorkeeper 1 Chron 26.4.

Joahaz (jō'hăz) see JEHOAHAZ

Joanes, Vicente. see MACIP, VICENTE JUAN.

Joanna I (jō-ăn'nă), 1326–82, queen of Naples (1343–81), countess of Provence She was the granddaughter of King Robert of Naples, to whom she and her husband, Andrew of Hungary, succeeded In 1345 Andrew was murdered, probably with the complicity of the queen Andrew's brother, Louis I of Hungary, twice invaded Naples to avenge the murder, both times Joanna fled, and in 1352 she made peace with Hungary In 1372 she renounced the claim of the ANGEVIN dynasty to Sicily. Though Joanna married twice more, she remained childless and adopted the young Charles of DURAZZO (later CHARLES III of Naples) However, as a result of a quarrel with Pope Urban VI, who persuaded Charles to take over her kingdom, she disinherited Charles and named as her successor Louis of Anjou (see LOUIS I, king of Naples) Charles conquered Naples (1381), imprisoned the queen, and received the kingdom from the pope Joanna died, probably at Charles's orders Her successive adoptions caused chronic warfare between Charles III and Louis I and their respective heirs

Joanna II, 1371–1435, queen of Naples (1414–35), sister and successor of LANCELOT Continuous intrigues by her favorites kept the court in a turmoil. Her second husband, James of Bourbon, tried to seize power but was soon imprisoned (1416) In 1420 Joanna was threatened by the ANGEVIN claimant to her kingdom, LOUIS III, she called ALFONSO V of Aragon to her assistance and adopted (1421) him as her, but Alfonso's attempt to rule her state soon made her change her mind She revoked the adoption and in 1423 transferred it to Louis Louis died (1424) while reconquering the kingdom from the Aragonese, and Joanna adopted his brother, RENÉ Alfonso seized her kingdom after her death

Joanna (Joanna the Mad), 1479–1555, Spanish queen of Castile and Leon (1504–55), daughter of Ferdinand V and Isabella I She succeeded to Castile and Leon at the death of her mother Ferdinand V assumed the regency until he was shortly replaced by Joanna's ambitious husband, PHILIP I After Philip's death (1507) Ferdinand again assumed the rule, for Joanna had by this time advanced far in insanity. At Ferdinand's death (1516), Joanna's elder son, Charles (later Emperor CHARLES V), was proclaimed joint ruler of Castile with his mother, although, according to an earlier plan, her younger son, Ferdinand (later Emperor Ferdinand I), should have succeeded.

Joanna, in the Bible **1** Wife of Herod's steward **Chusa.** She was a follower of Jesus and was one who found the tomb empty Luke 8 3, 24.10 **2** Ancestor of St Joseph Luke 3 27

Joan of Arc, 1412?–1431, French saint and national heroine, called the Maid of Orléans, daughter of a farmer of Domrémy in Lorraine She early began to hear "voices"—those of St Michael, St. Catherine, and St. Margaret When she was about 16, the voices exhorted her to bear aid to the dauphin, CHARLES VII, then kept from the throne by the English. After a first rebuff, Joan won Robert de Baudricourt, military governor of Vaucouleurs, to aid her in obtaining an interview with the dauphin and undertook the journey in male attire, with six companions. She met the dauphin at Chinon castle and conquered his skepticism as to her divine mission by some "sign," which she would never explain, and, after the suspicion of heresy had been removed by an examination before the theologians, she was furnished with troops She succeeded (1429) in relieving Orléans, took other places along the Loire, and defeated the English at PATAY After considerable persuasion Charles VII consented to enter Rheims, and Joan stood beside him at his coronation This was the pinnacle of her fortunes She was eager to push her victories, but the king was indolent, and her enemies at court counseled treating with Philip the Good of Burgundy, an English ally. In 1429 Joan unsuccessfully besieged Paris. The following spring she went to relieve Compiègne, was captured by the Burgundians, and later was sold to the English, who were anxious to destroy her influence over the people by putting her to death. In order to leave her captors clear of responsibility, she was turned over to the inquisitorial court at Rouen and tried for heresy and sorcery before Pierre CAUCHON The records of the lengthy trial, which are available in the French of Jules Quicherat and in the English of W P Barrett (*The Trial of Jeanne d' Arc*, 1931), cast doubt on the fairness and regularity of the procedure Threatened with torture, she made a retraction but was nevertheless condemned to life imprisonment However, when she revoked her abjuration shortly afterwards, she was turned over to the secular court and was burned at the stake (1431). In 1456 her sentence was annulled, when Charles VII, who had made no attempt whatsoever during her trial to come to her aid, made tardy recognition of her services by a rehabilitation trial Joan was beatified in 1909 and canonized in 1920 Feast May 30 Her career lent itself to numerous legends, and she has been represented in many paintings and statues. In literature, she appears notably, though not always with historical accuracy, in Shakspere's *Henry VI*, Voltaire's *La Pucelle*, Schiller's *Maid of Orléans*, Mark Twain's *Personal Recollections of Joan of Arc*, Anatole France's *Life of Joan of Arc*, G B. Shaw's *St Joan*, and Maxwell Anderson's *Joan of Lorraine* Among the numerous biographies, Michelet's is the best known. See also the more recent biographies by Andrew Lang (1922), A B Paine (1925), Milton Waldman (1935), and V Sackville-West (1936)

Joan the Fair Maid of Kent, 1328–85, English noblewoman, daughter of Edmund of Woodstock, earl of Kent and son of Edward I Although Fair Maid of Kent was probably not a contemporary appellation, she early gained wide note for her beauty and charm Papal intercession was necessary to settle the quarrel for her hand in favor of Sir Thomas Holland and against the earl of Salisbury In 1352 she became countess of Kent in her own right After her husband's death in 1360, she married (1361) Edward the Black Prince, by whom she had two sons, Edward (1365–70) and Richard (later Richard II) In her later years Joan was active in healing the breach between her son Richard and John of Gaunt

João de Deus, see RAMOS, JOÃO DE DEUS

João Pessoa (zhwă'ō pusō'u), city (pop 71,158), capital of Paraíba state, NE Brazil, an Atlantic port, founded in 1585 and formerly named Parahyba It exports cotton, sugar, and minerals

Joash (jō'ăsh) see JEHOASH

Jotham (jō'thŭm) see JOTHAM

Job (jōb), book of the Old Testament, in the 18th place in AV It is of unknown authorship and date, but many critics assign it to time between 500 B C and 300 B C It is in a dialogue or dramatic form, all in verse except for opening and close The subject is the problem of good and evil in the world "Why do the just suffer and the wicked flourish?" In the prologue in heaven (1–2) the plan is laid to try Job, a really good man, all that he has is destroyed, and he is physically afflicted The bulk of the book (3–31) consists in speeches by Job and three friends who come to "comfort" him Job speaks, then each of the three speaks in turn, with Job replying each time, there is a second and part of a third series of speeches also The friends insist alike that Job cannot really be just, as he claims to be, and Job reiterates his innocence of wrong The sequence changes with the appearance of a fourth speaker, Elihu (32–37), accusing Job of arrogant pride, he in turn is followed by God himself, speaking out of a storm (38–41), to convince Job of his ignorance and rebuke him for his questioning The epilogue tells how God rebuked the friends for their accusations and how happiness was restored to Job (42) The ethical problem is not explicitly resolved The texts are imperfect, and there may be serious losses, misplacements, or even additions to the original. The book contains many splendid passages, especially in Job's speeches, among them are those on the "redeemer" (19), on wisdom (28), and on some animals (39–41) Job is mentioned elsewhere in the Bible Ezek 14 12–23, James 5 11. The Job of Gen. 46 13 is the same as JASHUB **1** See Morris Jastrow, *The Book of Job* (1920), E D Kissane, *The Book of Job* (1939, American ed , 1946) See also bibliography under OLD TESTAMENT

Jobab (jō'-) [Heb ,=desert] **1** Descendant of Shem Gen 10 29, 1 Chron 1 23. **2** King of Edom Gen 36 33,34 **3** Chief defeated by Joshua Joshua 11 1 **4, 5** Benjamites 1 Chron 8 9,18

Job's-tears, tall tropical grass (*Coix lacryma-jobi*), cultivated in gardens as an annual and naturalized in the S United States The fertile grains are bony, shining, pearly white or gray, oval beadlike fruits used for making necklaces There is a variety that is used for food in the Orient.

Jocasta: see OEDIPUS

Jocelin de Brakelond (jŏs'lĭn dŭ brāk'lŏnd), fl. 1200, English chronicler, a monk of Bury St. Edmunds His chronicle of St Edmund's Abbey, covering the years 1173–1202, is written in a simple, vigorous style and is remarkable for its vivid pictures of monastic life and characters Carlyle used it for the second part of his *Past and Present*.

Jochebed (jō'kĕbĕd) [Heb ,=God's glory], mother of Moses. Ex 6 20, Num 26.59.

Jodelle, Estienne (ătyĕn' shōdĕl'), 1532–73, French poet of the PLÉIADE He was the author of *Cleopatre captive* (1553), the first modern French tragedy, of a comedy, *L'Eugene* (1552); and of another tragedy, *Didon se sacrifiant* [Dido sacrificing herself] (1558)

Jodhpur (jōd'pōōr) or **Marwar** (măr'wĭr), former native state (36,120 sq mi , pop. 2,555,904), Rajputana, India Except for the eastern section, it is largely an arid waste suitable only for the raising of camels Grains, chiefly wheat and barley, are important crops Salt is mined, and cotton and wool textiles are woven The state was founded in the 13th cent by the Rathor clan of Rajputs Aurangzeb made it a vassal of the Mogul empire A turbulent period in the early 19th cent ended (1818) when the state came under British protection Jodhpur joined Rajasthan in 1949 **Jodhpur,** city (pop 126,842), capital of the former state, was founded in 1459 It is surrounded by a wall nearly 6 mi long Towering above the city on a rock 400 ft. high is the old fort It houses several palaces and the treasury of the maharaja, which contains his magnificent gem collection. Jodhpur is a commercial center with light manufactures The deserted city of Mandor, 5 mi away, was once the capital, and there are remains of early 18th-century palaces

Joel, book of the Old Testament, second of the books of the Minor Prophets It is the preaching of an otherwise unknown prophet, dated variously from the 9th to the 5th cent B C It tells of a plague of locusts, divinely sent (1–2 17), the people, repenting, will be rewarded immediately (2 18–27) as well as in the future, thus being a Messianic prophecy (2 28–32, 3) Peter used Joel as a text Acts 2 For bibliography, see OLD TESTAMENT

Joelah (jō'lu), warrior with David at Ziklag 1 Chron 12 7

Joensuu (yō'ĕnsōō), city (pop 6,248), E Finland, the trade center of N Karelia Located on a lake of the SAIMA system and near the Outukumpu copper mines, it has plywood mills and considerable steamship traffic

joe-pye weed (jō-pī'), name for a tall, composite-flowered North American plant (*Eupatorium purpureum*), having small blossoms in large, terminal, usually pinkish-purple clusters The name comes from that of an Indian who reputedly effected many cures with the herb An infusion of the leaves and roots was formerly, and is sometimes yet, employed as a diuretic and an astringent among other things It is also called gravelroot, trumpetweed, and purple BONESET or thoroughwort Two related species, *Eupatorium maculatum* and *verticillatum*, are also called joe-pye weed

Joezer (jō'ĕ'zur) [Heb ,=whose help is God], one of David's captains 1 Chron 12.7

Joffre, Joseph Jacques Césaire (zhōzĕf' zhăk' săzĕr' zhō'frŭ), 1852–1931, marshal of France He began his career as a military engineer in the French colonies and was appointed commander in chief of the French forces in 1911 After the outbreak of the First World War he was responsible, as commander, for the French victory in the first battle of the MARNE (1914), although much of the credit is given to General GALLIÉNI Joffre was made a marshal, but his tactics were outmoded, after the Germans nearly captured Verdun (1916), Joffre was recalled to PARIS Gen. Robert George Nivelle was appointed commander of the French armies in France, and Joffre was made chairman of the Allied War Council Joffre's popularity remained great in France and in the United States, which he visited in 1917 See his memoirs (Eng. tr., 1932), B H Liddell Hart, *Reputations—Ten Years After* (1928)

Jogbehah (jŏg'bĕhă), town, E of the Jordan It is probably the ruin Jubaihat NW of Philadelphia Num 32 35, Judges 8 11

Joggins (jŏ'gĭnz), town (pop 1,109), N N S , on Chignecto Bay and SW of Amherst. It is in a coal-mining district

Jogjakarta (jŏg"yăkar'tă, jōk"-) or **Djokjakarta** (jŏk"yakăr'tă), town (pop 136,646), capital of the republic of Indonesia, on S Java, at the foot of volcanic Mt Merapi. It is a cultural center known for its artistic life and handicraft industries. There is some manufacturing of textiles, shoes, and machinery The name is sometimes spelled Jokvakarta

Jogli (jŏg'lī), chief Danite Num 34 22

Jogues, Isaac (Saint Isaac Jogues) (ēzăk' zhōg'), 1607–46, Jesuit missionary and martyr in the New World, b. Orléans, France. He was ordained in 1624, arrived in Quebec in 1636, and immediately

was sent to the Huron on Georgian Bay. In 1641 he journeyed N to Sault Ste Marie, which place he named On his return from a journey to Quebec in 1642, the party was captured by the Iroquois, several were killed, and the rest were subjected to cruel tortures. Father Jogues was held captive until July, 1643, when he was ransomed by the Dutch, brought to New Amsterdam, and from there embarked for France. Later he returned to Canada, and in April, 1646, he was sent among the Mohawk as an ambassador of peace He discovered Lake George, which he named Lac du St Sacrament. He was treated kindly, and when the treaty was effected in May, 1646, he returned to Quebec to make plans for establishing a mission among the Mohawk On his return, accompanied by Father Jean Lalande, he was met by a hostile band of the Mohawk near the present Auriesville, N.Y. The medicine men brought about the brutal murder of both priests They are among the men canonized in 1930 as the Jesuit Martyrs of North America Feast Sept 26 or (among the Jesuits) March 16 See Francis Talbot, *Saint among Savages* (1935)

Joha (jō'hŭ) **1** Son of BEBIAH **3** 1 Chron 8 16 **2** One of David's guard 1 Chron 11 45

Johanan (jōhā'năn) [short form of JEHOHANAN] **1** Captain who led in the rescue of the captives of Ishmael Jer 40 8–43, 2 Kings 25 23 **2** Descendant of David, 1 Chron 3 24 **3, 4** Two of David's men 1 Chron 12 4,12 **5** Chief priest Neh 12 22,23, Ezra 10 6 Jonathan Neh 12 11 **6** Son of King Josiah 1 Chron 3 15 **7** Father of AZARIAH **6** **8** Father of AZARIAH **19** **9** Head of a family in the return from the Exile Ezra 8 12 **10** Son of TOBIAH **1** Neh 6 18

Johanan ben Zaccai (jōhā'nun bĕn ză'kāi), Palestinian rabbi, contemporary of the apostles He established the great academy at JAMNIA in Judaea Johanan was especially influential in preserving and organizing Jewish law and the rules and ritual of temple worship

Johannesburg (jōhā'nĭsbûrg, yōhā'nusbŭrkh), city (pop 603,470), S Transvaal, Union of South Africa, founded 1886 It is the largest city of South Africa and the rail, commercial, and industrial center of the WITWATERSRAND Industries include textile milling and metalworking Founded as a mining settlement in the 1860s, it grew rapidly with the development of gold mining in the locality The city is laid out in a hilly region and has large park areas It is the site of the Univ of the Witwatersrand Other cultural institutions include an art gallery, a geographical museum, and a museum of Africana In Johannesburg was held the South Africa Empire Exhibition (1936–37)

Johannisberg (yōhă'nĭsbĕrk), village (pop 2,212), Hesse, W Germany, on the Rhine near Mainz It is celebrated for its magnificent wine

Johansen, John Christen (yōhan'sun), 1876–, American portrait and landscape painter, b Denmark. His work includes *October, Sear and Gold* (Chicago Municipal Art League), *Piazza San Marco* (Art Inst, Chicago), *Fvesole* (Richmond, Va, Gall), and *Interior–Evening* (Metropolitan Mus) His wife, **Jean MacLane Johansen,** 1878–, also a portrait painter, b Chicago, is represented in private collections and American museums Her *Girl in Gray* is in the Toledo Museum of Art

John, Saint [ultimately from Heb, =Johanan, God has been gracious], disciple of Jesus He has been accepted since ancient times as the author of five canonical books—the fourth Gospel, three epistles, and the Revelation (see JOHN, GOSPEL ACCORDING TO SAINT, JOHN, epistles, REVELATION) He and his brother, St James, were sons of Zebedee Jesus called them Boanerges (bō''unûr'jēz) or Sons of Thunder Mark 3 17 John was, apparently, the disciple "whom Jesus loved" (John 13 24, 19 26), to his care Jesus, in His dying moments, committed Mary He is mentioned occasionally in Acts (3, 4 13, 8,14), and inferences are drawn from the books bearing his name According to 2d-century authorities John died very old at Ephesus (c 100), where he had chiefly lived, except for a visit to Rome and a period of exile on Patmos (Rev 1 9). He is variously called St John the Evangelist, because of the Gospel, St. John the Divine (i e, theologian), because of the theological interest of the books, and the Beloved Disciple Feast Dec 27. May 6 is observed as the Feast of St John before the Latin Gate, to commemorate the dedication of a Roman basilica to him on the traditional site of his miraculous escape from martyrdom The Roman basilica called St John Lateran (though dedicated to the Savior) is the highest-ranking church building of the Catholic Church (see LATERAN)

John VIII, d 882, pope (872–82), a Roman, successor of Adrian II and predecessor of Marinus I John strenuously opposed the activities of St IGNATIUS OF CONSTANTINOPLE in Bulgaria When Ignatius died, he recognized PHOTIUS as patriarch and called the council (879–80) that reconciled the differences between East and West John was deeply involved in imperial politics He crowned Charles II (Charles the Bald) emperor and excommunicated Formosus for opposition to the papal policy. When Charles II lost his power, John favored Charles the Fat, who became emperor as Charles III. The pope had to bribe the Saracens to keep them from entering Rome. He did much to root out corruption in the church in Rome, and, except for NICHOLAS I, he was the strongest pope of the 9th cent

John XII, c.937–964, pope (955–64), a Roman (count of Tusculum) named Octavian, successor of Agapetus II and predecessor of Benedict V His father, Alberic, secured his election John's life was notoriously immoral, and his pontificate a disgrace He called in Otto I to help him against Berengarius, king of Italy Otto and John agreed to the *Privilegium Ottonis*, which confirmed to the pope the Patrimony of St Peter and guaranteed his safety, in return for the pope's loyalty to Otto and other concessions Otto left Rome, John, opposed to the emperor's control of the Church, went over to Berengarius' party and helped wage war against Otto, who returned and conquered Rome Otto then called a synod to depose John and elect an antipope, Leo VIII In 964, John took Rome from Leo and excommunicated the imperial party, but he was soon murdered He had permitted the opening wedge of the imperial attempts to control the papacy

John XXI, d 1277, pope (1276–77), a Portuguese named, in Latin, Petrus Iuliani, successor of Adrian V and predecessor of NICHOLAS III He was known generally as Peter of Spain (Petrus Hispanus) Peter's reputation as a scholastic philosopher was widespread, and he was the reputed author of a commonly used book on logic He was archbishop of Braga He was elected in the third papal election of the year, nine months later the ceiling of his library at Viterbo fell on him and killed him John was actually the 19th canonical pope named John, but through chronological errors he called himself John XXI, this numbering is usually maintained.

John XXII, 1244–1334, pope (1316–34), a Frenchman (b Cahors) named Jacques Duèse, successor of CLEMENT V and predecessor of Benedict XII He was formerly often called John XXI He reigned at Avignon He was celebrated as a canon jurist under BONIFACE VIII, whom he supported After the death of Clement there was a period of more than two years before the conclave could agree Before John was elected, a contest had begun in the empire between LOUIS IV and his rival, Frederick of Austria John was neutral at first, then in 1323, when Louis had won out, pope and emperor began a serious quarrel This was partly provoked by John's extreme claims of authority over the empire, partly by Louis's support of the radical Franciscans, whom John XXII condemned for their insistence on evangelical poverty Louis was assisted by Marsilius of Padua, who published his theories in 1324, and later by William of Ockham The emperor invaded Italy and set up as an antipope Pietro RAINALDUCCI (as Nicholas V) The project was a fiasco, but Louis silenced the papal claims In John's last years he advanced a theory concerning the vision of God in heaven, the novelty he proposed (that this vision will begin only after the Last Judgment) was everywhere denied and scorned by theologians, and John gave it up He was an excellent administrator and did much efficient reorganizing

John XXIII, antipope (1410–15) see COSSA, BALDASSARRE

John I (John Tzimisces) (tsĭmĭ'sēz), c 925–976, Byzantine emperor (969–76) Of a noble Armenian family, he attached himself to the court of his relative, Emperor NICEPHORUS II, but fell from favor in 969 Leading a rebellion, he had Nicephorus murdered and was proclaimed emperor John gained the favor of the patriarch of Constantinople by revoking his predecessor's anticlerical legislation An able soldier, he regained E Bulgaria from the Russians and extended Byzantine power in the east at the expense of the Arabs He was succeeded by Basil II

John II (John Comnenus) (kŏmnē'nus), 1088–1143, Byzantine emperor (1118–43), son and successor of Alexius I He was crowned despite the intrigues of his sister, ANNA COMNENA, and his mother, Irene His attempts to cancel the commercial privileges of the Venetians, granted by Alexius, were unsuccessful when Venice made a show of naval force, and his campaigns against the Magyars and Serbs were of little consequence However, he successfully defied Roger II of Sicily, made an alliance with Emperor Conrad III to check the growing Norman power, and conquered Cilicia from the Armenians. He died while fighting the Latin prince of Antioch John II was respected for his lofty character and, unlike many Byzantine emperors, was mild in the treatment of his adversaries He was succeeded by his son, Manuel I

John III (John Ducas Vatatzes), (dū'kŭs vŭtăt'zēz), d 1254, Byzantine emperor of Nicaea (1222–54), son-in-law and successor of Theodore I He extended his territory in Asia Minor and the Aegean islands, but failed (1235) to take Constantinople, although he was aided by IVAN II of Bulgaria Subsequently Ivan, the Cumans, and the Franks of Constantinople allied themselves against John, who held his own John joined the Turks against the Mongol invaders. He annexed Salonica (1246) and reduced Epirus to vassalage, thus nearly recovering the territories of the dismembered Byzantine Empire His reign fostered economic prosperity and learning He was succeeded by his son, Theodore II.

John IV (John Lascaris) (lă'skurĭs), b c 1250, d after 1273, Byzantine emperor of Nicaea (1258–61), son and successor (under a regency) of Theodore II Michael Palaeologus (later MICHAEL VIII) overthrew the regency and in 1259 was crowned joint emperor with John He postponed John's coronation and in 1261 had the boy blinded and imprisoned It is possible that John escaped from his fortress c 1273

John V (John Palaeologus), (pā''lēŏ'lŭgŭs), 1332–91, Byzantine emperor (1341–76, 1379–91), son and successor of Andronicus III He was forced to fight John VI (John Cantacuzene), who usurped the throne during his minority, but he came into power in 1355 In his reign the Ottoman Turks took Adrianople and Philippolis and conquered Serbia John vainly tried to heal the schism between East and West and to secure Western aid against the Turks He professed (1369) the Roman Catholic faith at Rome, while returning to Constantinople he was briefly imprisoned for debt in Venice In 1373 he was forced to pay tribute to Sultan MURAD I and to give him his son, Manuel, as hostage Deposed (1376) by his son Andronicus IV, he was restored in 1379 In 1390 his grandnephew, John VII, briefly usurped the throne John V was succeeded by Manuel II

John VI (John Cantacuzene) (kăn''tukūzēn'), c 1292–1383, Byzantine emperor (1341–55) He was chief minister under Andronicus III, after whose death he proclaimed himself emperor and made war on the rightful heir, John V He was aided by the Ottoman Turks, for whose entrance into Europe he is commonly blamed The war allowed STEPHEN DUSHAN to build up his Serbian empire In 1355 Cantacuzene abdicated and retired into a monastery, where he composed a history covering the period 1320–56

John VII (John Palaeologus) (pā''lēŏ'lŭgus), 1360?–1412?, Byzantine emperor In 1390 he briefly usurped the throne from John V, and after 1399 he was coemperor with his uncle, Manuel II He defended (1402) Constantinople against Bajazet I

John VIII (John Palaeologus), 1390–1448, Byzantine emperor (1425–48), son and successor of Manuel II When he acceded, the Byzantine Empire had been reduced by the Turks to the city of Constantinople John sought to secure Western aid by agreeing at the Council of Florence (1439) to the union of the Eastern and Western churches His brother, Constantine XI, was the last Byzantine emperor

John I, 1350–95, king of Aragon and count of Barcelona (1387–95), son and successor of Peter IV During his reign Aragon lost the duchy of Athens An enthusiastic patron of learning and an imitator of French customs, he held one of the most brilliant courts of the time He was succeeded by his son, Martin I

John II, 1397–1479, king of Aragon and Sicily (1458–79), king of Navarre (1425–79), count of Barcelona He succeeded his brother, Alfonso V, in Aragon, Catalonia, and Sicily and became king of Navarre through his marriage with Blanche, heiress of that kingdom After Blanche's death (1442), Navarre was ruled by their son, CHARLES OF VIANA, but conflict between father and son soon developed and plunged Navarre into civil war Charles took refuge in Italy, in 1461 a Catalan uprising in his favor forced John to recognize him as his heir After Charles's death John was expelled from Catalonia and René of Anjou chosen count of Barcelona Only in 1472 did John succeed in pacifying Catalonia At John's death Navarre passed to the house of FOIX through the marriage of John's daughter, Aragon, Catalonia, and Sicily passed to his son, Ferdinand II, who as Ferdinand V also became king of Castile

John, 1167?–1216, king of England (1199–1216), son of HENRY II and ELEANOR OF AQUITAINE The youngest son of the king, he was left out of the division of royal dominions and was called John Lackland His father's favorite, however, he received scattered possessions in England and France and the lordship of Ireland His brief administration in Ireland in 1185 was grossly mismanaged With characteristic cunning John in 1189 deserted his dying father and joined his rebelling brother, who was crowned RICHARD I (Richard Cœur de Lion) the same year The new king generously conferred lands and titles on John After Richard's departure on the Third Crusade, John led a rebellion against the justiciar, William of LONGCHAMPS, had himself acknowledged (1191) temporary ruler and heir to the throne, and conspired with PHILIP II of France to prolong Richard's captivity The king, however, upon his return in 1194 pardoned his brother's treachery. On Richard's death, John ascended the throne to the exclusion of his nephew, ARTHUR I of Brittany. The supporters of Arthur began a formidable revolt John at this time alienated public opinion in England by divorcing Isabel of Gloucester and made enemies in France by marrying Isabel of Angoulême, who

was betrothed to Hugh de Lusignan Philip promptly helped Arthur against John In 1202 Arthur was defeated and captured and it is said that John had him murdered in 1203 Philip continued the war and gradually gained ground until by a treaty in 1204 John surrendered Normandy, Anjou, Brittany, Maine, and Touraine—all his French dominions except Aquitaine and a part of Poitou When the moderate chancellor, Hubert WALTER, died the following year, John embarked on a course of misrule that eventually estranged him from both the Church and the barons After John's refusal to accept the election (1206) of Stephen Langton as archbishop of Canterbury, Pope INNOCENT III placed England under the interdict (1208), excommunicated and finally deposed John, and entered into negotiations for an invasion of England by Philip II In desperate straits, John surrendered England to the pope and received it back as a fief (1213) This complete submission improved John's situation greatly Having checked the danger of a French invasion, he formed an expedition to wage war on Philip in Poitou Although John was allied with his nephew, Emperor OTTO IV, and the count of Flanders, Philip won a complete victory at Bouvines (1214) John had resorted to all means to secure men and money for the campaign, and after returning home he attempted to collect a scutage from the barons who had refused to aid him on the expedition Abuses of feudal customs and extortion of money from the barons and the towns, not only by John but by Henry II and Richard I, had aroused intense opposition, which increased in John's unfortunate reign The barons now united in overwhelming force, and John in capitulation set his seal on the MAGNA CARTA at Runnymede June 15, 1215 Thus the greatest document of English constitutional history came to birth not from popular but from baronial force John, supported by the pope, gathered forces and renewed the struggle with the barons, who sought the aid of Prince Louis of France (later LOUIS VIII) In the midst of this campaign John died, and his son, HENRY III, was left to carry on the royal cause The portrait given of John by his contemporaries as tyrannical, treacherous, cruel, and ambitious is generally just though perhaps slightly exaggerated He is the central character of one of Shakspere's chronicle plays See Kate Norgate, *John Lackland* (1902), H W C DAVIS, *England under the Normans and Angevins* (1930), Sidney Painter, *The Reign of King John* (1949)

John I or **John the Posthumous**, 1316, king of France, posthumous son of Louis X He lived only a few days and was succeeded by his uncle, Philip V According to some reports, however, a dying child was substituted for John, who was taken to Italy and brought up by a merchant in Siena

John II (John the Good), 1319–64, king of France (1350–64), son and successor of Philip VI He began his reign with the sudden execution of the constable of France (whose office he gave to his favorite, Charles de la Cerda) and with the appointment of a group of dishonest and unpopular advisers He subsequently debased the coinage for the expenses of the Hundred Years War His quarrels with his son-in-law, CHARLES II of Navarre, lasted throughout his reign John was captured by the English at the battle of Poitiers (1356) During John's captivity in England, the dauphin (later King CHARLES V), who acted as regent, had to deal with a series of outbreaks of internal disorder which had been smoldering since John's accession In 1360, by the Treaty of BRÉTIGNY, John was released upon condition of paying a ransom and giving hostages In 1364 one of the hostages escaped, and John, to save his honor, returned to England, where he died

John I (John Zapolya) (zä'pôlyô), 1487–1540, king of Hungary (1526–40), voivode of Transylvania (1511–26), son of Stephen ZAPOLYA The leader of the antiforeign party of the Hungarian nobles, he secured a decree at the diet of 1505 by which no foreign ruler would be chosen king of Hungary after the death of King ULADISLAUS II To strengthen his own candidacy for the crown he sought to marry the king's daughter, Anna, but his suit was rejected and he was removed from the court through his appointment as voivode of Transylvania He ruthlessly crushed a peasant uprising in 1514 His anger at the marriage of Anna to Ferdinand of Austria (later Emperor FERDINAND I) probably motivated his failure to assist King Louis II at the battle of MOHACS (1526) Louis II was killed in the battle John was crowned king by the Hungarian nobles, but Ferdinand of Austria claimed the crown on the basis of his marriage with Anna as well as previous agreements In 1527 Ferdinand defeated John and was crowned by John's opponents John retired to his stronghold in the Carpathians In 1529 the Turks began to overrun Hungary John now descended upon and defeated Ferdinand's army and, after surrendering the crown to Sultan Suleiman I, was confirmed king by the sultan, who exercised real control. The struggle between John and Ferdinand ended in 1538, when John, who was then childless, agreed that the crown should pass to Ferdinand after his death The agreement was set aside when, a few months before John's death, a son, John Sigismund (John II), was born

John II (John Sigismund Zapolya), 1540–71, king of Hungary and prince of Transylvania, son of John I Through his mother, Isabel (daughter of Sigismund I of Poland), he was related to the Jagiello dynasty He was crowned king of Hungary on his father's death (1540) Sultan SULEIMAN I, on the pretext of protecting the infant's interests, invaded (1541) Hungary and took the capital Buda, which remained in Turkish hands for 150 years John and Isabel were given the principality of Transylvania, under Turkish suzerainty Actual power was in the hands of John's guardian, the monk George Martinuzzi, who sought to restore a unified Hungary In 1551 Martinuzzi procured the deposition of John and Isabel, who retired to Silesia, and reunited Transylvania with Hungary, recognizing Ferdinand of Austria and Bohemia (later Emperor FERDINAND I) as king Martinuzzi, made prince-primate and a cardinal, soon fell out with Ferdinand, who accused him of treasonable negotiations and who had him assassinated On the pressure of Suleiman I the diet of Transylvania recalled (1556) John and Isabel When Ferdinand made peace (1562) with Suleiman, he recognized John as ruler of Transylvania John did homage to Suleiman in 1566, when the sultan led his armies into Hungary in his last campaign An eight-year truce (1568) between Emperor Maximilian II and Sultan Selim II confirmed John in Transylvania Thus Hungary remained split into three states—an Austrian part, a Turkish part, and Transylvania John II's rule in Transylvania was remarkable for the adoption (1564) of Calvinism as the state religion by the diet He was succeeded as prince of Transylvania by Stephen Bathory

John II (John Casimir), 1609–72, king of Poland (1648–68), son of Sigismund III He took monastic orders but renounced them when he was elected to succeed his brother, Ladislaus IV The turbulent period of his reign is known in Polish history as the Deluge The troubles began with the uprising of the Cossacks under CHMIELNITCKI, supported by the khan of Crimea John II defeated (1651) the allied Cossack, Tatar, and Turkish forces, but in 1654 the Cossacks voted the union of the UKRAINE with Russia, and Tsar Alexis promptly invaded Poland In 1655 CHARLES X of Sweden invaded and overran Poland and was checked only by the miracle of CZESTOCHOWA, which fired the Poles to renewed resistance George Rakoczy, prince of Transylvania, who attacked Poland from the south, was defeated FREDERICK WILLIAM (the Great Elector) of Brandenburg, originally a Swedish ally, joined (1657) the Polish side in the struggle, but in return John Casimir had to recognize his full sovereignty over East Prussia In the Peace of OLIVA (1660) John moreover had to cede N Livonia to Sweden War with Russia ended only in 1667, with the cession of the eastern part of the Ukraine to the tsar During John's reign the abuse of the *liberum veto* (by which any deputy could dissolve the diet and annul its decisions) reached scandalous proportions The efforts of the king and of his French consort, Louise Marie de Gonzague, to nominate a successor during their lifetime (they were childless) resulted in several rebellions of the nobles A year after the death of his queen, who had exerted much influence over him, John abdicated (1668) and retired to an abbey at Nevers, France Michael Wisniowiecki was elected his successor, disorders continued during his reign (1668–73), which was succeeded by that of John III

John III (John Sobieski) (sôbyĕ'skē), 1624–96, king of Poland (1674–96), champion of Christian Europe against the Turks Of an ancient noble family, he was appointed (1668) commander of the Polish army He defeated (1673) the Turks at Khotin shortly after the death of King Michael, and in 1674 he was elected to succeed Michael on the throne John's plans to recover East Prussia led him to conclude alliances with France (1675) and Sweden (1677) against Frederick William of Brandenburg (the Great Elector) However, he completely reversed his foreign policy when Sultan Mohammed IV and the Hungarians under Thokoly advanced against Austria Realizing the danger to all Europe, John allied himself (1683) with Emperor Leopold I and, at the head of the combined imperial and Polish forces raised the siege of VIENNA and defeated the Turkish army under Kara Mustapha, which was almost three times larger than his own Despite the ungrateful reception the emperor gave him, John continued his campaign, pursuing the Turks into Hungary and in 1684 formed a Holy League with the pope, the emperor, and Venice. In 1686 he made a treaty with Russia, which confirmed the eastern part of the Ukraine to Russian suzerainty However, John's attempts (1684–91) to secure access to the Black Sea by wresting Moldavia and Walachia from the Ottoman Empire were unsuccessful. His loss of military prestige encouraged the nobles to oppose him at home. John's death, followed by the choice of the elector of Saxony as King Augustus II of Poland, marked the virtual end of Polish independence.

John I (John the Great), 1357?–1433, king of Portugal (1385–1433), illegitimate son of Pedro I. He was made grand master of the Knights of AVIS (1364) and exercised some influence in the realm, particularly in opposition to Leonor Telles, the queen of his half brother, Ferdinand I When Ferdinand died (1383) his widow and her lover undertook a regency in the name of Ferdinand's daughter, Beatrice, wife of John I of Castile. Nun' Álvares Pereira was the chief figure in the national revolt against Spanish hegemony John cooperated with him A Castilian force besieging Lisbon was stricken with pestilence in 1384 John, who had already sought English aid, acted as regent until he was elected king in 1385 In that year Portuguese independence was assured by a great victory over the Castilians at Aljubarrota Friendship with England was sealed by a treaty and by the marriage of John with Philippa, daughter of JOHN OF GAUNT John's reign was one of the most glorious in medieval Portuguese history His administrative reforms increased his popularity His sons, Duarte, Peter, Henry the Navigator, John, and Ferdinand, were important in the birth of the era of Portuguese colonial and maritime expansion In 1415 Ceuta in North Africa was conquered from the Moors John's reign also saw the first real flowering of Portuguese literature and emphasis on the chivalric tradition

John II (John the Perfect), 1455–95, king of Portugal (1481–95), son of Alfonso V He was an astute politician, an able statesman, and a patron of Renaissance art and learning He set about reducing the power of the feudal nobles, when the nobles opposed him, he had the duke of Braganza executed and himself killed the duke of Viseu Other nobles were also executed and royal supremacy asserted He maintained peace with Spain and signed the Treaty of Tordesillas, setting bounds for Spanish and Portuguese colonial expansion in 1494 John II also preserved Portuguese friendship with England Portuguese discoveries were much encouraged by John, who sent out men to India and Africa in search of Prester John He also sent a vessel N past North Cape Though he refused to help Columbus, whom he regarded as visionary, John encouraged the search for a sea route to India Diogo Cão discovered the Congo and Bartholomew Diaz rounded the Cape of Good Hope in John's reign, but it was not until after the king's death that Vasco da Gama reached India

John III (John the Fortunate), 1502–57, king of Portugal (1521–57), son of MANUEL I His reign saw the Portuguese empire at its apogee The great Asiatic possessions were extended by further conquest Brazil also flourished, but in the kingdom of Portugal itself decadence had set in with the decline of agriculture and of population The African exploits of Portugal were abandoned, but many Negro slaves were introduced into Portugal The Inquisition was introduced by John, who was pious and perhaps overdevoted to the clerical party The court was very corrupt, though the king himself was not Literature flourished at the beginning of the reign, but Portugal was falling into the stagnation that led to the disastrous reign of Sebastian

John IV, d 1656, king of Portugal (1640–56) He succeeded as duke of Braganza in 1630 Descended from Manuel I and in illegitimate line from John I, he was the logical claimant to the Portuguese throne when a revolution was planned to cast off the domination of Spain In 1640 the rule of the Spanish PHILIP IV was cast off John, who was spurred to ambition by his Spanish wife, was made king of independent Portugal Spain was at the time unable to quell the revolution John's policy was principally devoted toward securing foreign alliances, especially with France, in an effort to consolidate his position In his reign the Portuguese of Brazil threw off Dutch rule The Spanish problem was still unsettled at John's death John was singularly unwarlike himself and was devoted to hunting, music, and the arts. He was the first king of the Braganza line

John V (John the Magnanimous), 1689–1750, king of Portugal (1706–50), son of Peter II Before his accession the Methuen Treaty (1703) had brought Portugal into the War of the SPANISH SUCCESSION, on which the Portuguese spent much with little reward After that time John sought to maintain the English alliance and to keep peace, apart from giving assistance to the Venetians against the Turks He was a patron of arts and letters, had a sumptuous court, and built beautiful buildings in Lisbon He tried to improve the administration of Portugal and took a particular interest in the navy, but he has been much criticized for his extravagance and his subserviency to the Church He was succeeded by his son Joseph

John VI, 1769–1826, king of Portugal (1816–26), son of Peter III and Maria I. When his mother lost her mind, John assumed the reins of government (1792) though he did not formally become regent

until 1799 Bitterly opposed to the French Revolution, he joined the coalition against France and adopted a repressive policy in Portugal He was aided by Pina Manique, intendant of police, and sought the friendship of England The English alliance made Napoleon an inveterate enemy of Portugal. French and Spanish forces in 1801 quickly defeated Portugal and forced on her the humiliating Treaty of Badajoz (1801) John was completely submissive to Napoleon, but in 1807 the French under Junot marched against Portugal John and the royal family fled (1807) and arrived (1808) in Brazil, where John set up his court The result was a tremendous rise in the prestige of Brazil and unpopularity of the king in unhappy, war-torn Portugal John remained in Brazil even after the end of the Napoleonic Wars and after he became king at his mother's death It was only after the overthrow of the regency in Portugal by revolution (1820) and the proclamation of a very liberal constitution that John was persuaded by the British to return to Portugal, leaving his son Pedro (PEDRO I) as regent of Brazil (1821) After accepting the constitution, he took advantage of his opportunities to modify it He put down temporarily an absolutist revolt headed by his wife, Queen Carlota Joaquina, and his son Dom MIGUEL and in 1824 returned to Brazil, which was now an independent empire. On his death he left the regency of Portugal to his daughter, Isabel or Isabella, but left the matter of succession unsettled

John I, 1358–90, Spanish king of Castile and Leon (1379–90), son and successor of Henry II He defended his crown against JOHN OF GAUNT and married his son Henry to John of Gaunt's daughter John I tried unsuccessfully to unite the Portuguese and Castilian crowns and was twice defeated by the Portuguese, notably in the battle of Aljubarrota (1385) His son Henry III succeeded him

John II, 1405–54, Spanish king of Castile and Leon (1406–54), son and successor of Henry III He was little interested in government, which he entrusted to his favorite Alvaro de LUNA Literature, particularly poetry, flourished at his court, which was also celebrated for tournaments and brilliant festivals John was succeeded by his son Henry IV

John, in the Bible **1** See JOHN, SAINT **2** See JOHN THE BAPTIST **3** See MARK, SAINT **4** One of the high priest's family Acts 4 6 There are also several persons named John in the books of the Maccabees See MACCABEES and 1 Mac 9 36–38, 13 53, 16 2, 2 Mac 4 11, 11 17

John, Augustus Edwin, 1879–, British painter and etcher, b Wales, studied at the Slade School, University College, London A leading portrait painter, he has had as sitters many celebrities, among them Lloyd George, Lord Cecil, T E Lawrence, Sean O'Casey, and Queen Elizabeth He was elected to the Royal Academy of Arts in 1928, resigned in 1938, but was reelected in 1940 His paintings include *The Smiling Woman* and *Rachel* (Tate Gall , London), *Girl with Bouquet,* and *Seraphita* His fine etchings, less well known than his paintings, include several self-portraits as well as portraits of W B Yeats, Jacob Epstein, and James Joyce See studies by T W Earp (1934) and John Rothenstein (1945)

John, epistles of the New Testament, occupying the 23d, the 24th and the 25th place in the usual order, called First, Second, and Third John By universal tradition they are ascribed to St John, the disciple This authorship is necessarily denied by the many critics who do not admit St John to be writer of the Gospel, for 1 John was certainly written by the man who wrote the Gospel, and 2 and 3 John are widely agreed to be by the same author also The date of 1 John is about that of the Gospel, nothing can be said of the date of the other two These epistles are traditionally classed with the Catholic, or General, Epistles, but they were apparently addressed to definite churches or persons 1 John is a beautiful little homily on the blending of mystical and practical religion, intended for persons long Christian A division of the book gives prologue (1 1–4), God is light (1 5–2 28), God is righteous (2 29–4 6), God is love (4 7–5 12), epilogue (5 13–21) The necessity of good works to reveal the Christian heart is reiterated, e g , 2 3–5, 3 24, 4 7–11,20 There is an allusion to the Gnostic error of denying Jesus' historicity 4 2–3 2 John, in 13 verses, is the shortest book of the Bible The author refers to himself as elder (presbyter or priest) and is addressing some "elect lady," probably an allegorical title, perhaps for a particular church The letter warns against false teachers who deny the historicity of Jesus 3 John, in 15 verses, has the same author, it is addressed to a Gaius, of an unidentified church It protests against the failure of the leader of the church to receive teaching missionaries.

John, Gospel according to Saint, fourth book of the New Testament The most casual reading sets off this life of Jesus from the other three Gospels (see SYNOPTIC GOSPELS) The material is selected admittedly "that ye might believe that Jesus is the Christ, the Son of God, and that believing ye might have life through his name." 20 31 The aim of the Evangelist seems, then, to be twofold—to show that Jesus is the vital force in the world now and forever and that He lived on earth in order to reveal Himself to men in the flesh These two ideas are, for the Evangelist, complementary, and one of the artistic beauties of the Gospel is the way Jesus' acts as a human being introduce discourses upon His mystical nature Thus, in chapter 6, the feeding of the 5,000 is told, and following is the sermon on the Bread of Life The Gospel opens with a philosophical prologue (1 1–18), in which Jesus is identified with the Word (or LOGOS) The author adopted this term from current metaphysicians who used it to designate a medium between God and man related to God somewhat as an utterance is related to the speaker Hence "the Word was made flesh" (1 14) is the explicit classical statement of the Incarnation The book falls into two main sections, the ministry of Jesus (1 19–12 50) and the Passion and Resurrection (13–21) The first portion is a series of selected incidents, each edited with clear statement of interest The last part consists of a long account of the Last Supper (13–17), the scene of Jesus' beautiful farewell discourse, and the Passion proper (18–19) and Resurrection (20–21) The traditional date of composition is A D c 100, according to 20th-century criticism it was composed between A D 90 and 125 The ascription to St JOHN is very ancient, but it has been questioned by higher critics Many scholars agree that chapter 8, verses 1–11, and chapter 21 were not part of the Gospel as first composed, otherwise the book is usually considered to have been written almost exactly as it stands The influence of the Gospel of St John in Christianity has been tremendous The unique position of Jesus Christ in Christian theology as God and man, which involves the dogmas of the Trinity, the Incarnation and the Atonement, is first enunciated in this Gospel, and there very clearly See E F Scott, *The Fourth Gospel* (2d ed , 1930)

John Baptist de la Salle, Saint (sȧl), 1651–1719, French educator, b Rheims He became a priest and canon of the cathedral He spent his life teaching children of the poor In 1684 (having resigned his canonry) he formed of his assistants a new order, the Christian Brothers, or, more fully, the Brothers of the Christian Schools, the members are not ordained This was the first order devoted exclusively to Christian education In 1685 to train his teachers St John Baptist founded at Rheims what is called the first normal school He was a careful pedagogical thinker and ranks as one of the distinguished educators of modern times Some of his works have been translated into English His feast May 15 See Martin Dempsey, *John Baptist de la Salle* (1940)

John Bosco, Saint, 1815–88, Italian priest, b Piedmont As a priest at Turin he was very successful in work with boys He founded (1841) the Salesian order (i e , order of St Francis of Sales) for this work and for foreign missions Later he founded an order of women Daughters of Mary Auxiliatrix, for similar work among girls These orders have become very large Miracles were attributed to Don Bosco even in his lifetime He was canonized in 1934 Feast Jan 31 See Henri Gheon, *The Secret of Saint John Bosco* (1946)

John Chrysostom, Saint (kri'sŏstum, kris'ŏstum) [Gr ,=golden-mouth], c 347–407, Doctor of the Church, greatest of the Greek Fathers He was born in Antioch and studied Greek classics there As a young man he was baptized, became a reader in the church, and later was a monk He was ordained deacon (c 381) and priest (386) Under Flavian of Antioch he preached regularly in the cathedral In 398 he was suddenly made patriarch of Constantinople There he gained the admiration of the people by his eloquence, his ascetic life, and his charity His attempts to reform the life of the clergy in the worldly capital, however, alienated many monks and priests The court circle, charmed by him at first, came later to resent his denunciations of their ways He lost favor when he demanded mercy for the dishonored EUTROPIUS and when he refused to condemn without a hearing certain monks accused of heresy After much intrigue, Empress Eudoxia and Theophilus, bishop of Alexandria, succeeded in having St John condemned (403) by an illegal synod, on false charges, and without a hearing When he was deposed, the indignation of the people was reinforced by an opportune earthquake, and St John had to be recalled He went on vigorously attacking the flagrant immorality of the court, and Emperor Arcadius exiled him to Cucusus in Armenia There he continued to exert influence through his letters to friends, and Arcadius decided to move him to a more isolated spot on the Black Sea St John, already ill, died from the rigors of the journey. Not a formal polemicist, John Chrysostom still influenced Christian thought notably, and within 50 years after his death his works were considered authoritative He wrote brilliant homilies, interpreting the Bible wherever possible in the literal and the historical sense His treatise on the priesthood has always been popular His sermons and writings are remarkable for their purity of Greek style His influence was already great in his own day, and the pope in 406 withdrew from communion with Constantinople because of the treatment of St John Constantinople was not readmitted to communion for some 10 years, and Alexandria, also excommunicated, was not readmitted until the time of St Cyril In 438 St John's body was brought reverently to Constantinople, and Emperor Theodosius II did penance for his parents' offense John Chrysostom was not the author of the LITURGY that bears his name Feasts in the Eastern Church, Sept 14, Nov 13, and Jan 27, in the Western Church, Jan 27 See studies by W R W Stephens (3d ed , 1883, Anglican) and Donald Attwater (1939, Roman Catholic)

John Climax, Saint [Gr ,=ladder], d c 600, Syrian hermit of Mt Sinai His guide to the spiritual life, *The Ladder of Paradise,* in 30 steps, was popular in the Middle Ages He is called John Climacus and John Scholasticus Feast March 30.

John Day, river, c 280 mi long, rising in several branches in NE Oregon, in the Blue Mts , and flowing W and N to the Columbia It was named for a member of the Astor expedition of 1811 It is used for power and irrigation in the Columbia river valley development

John Doe see DOE, JOHN

John Fisher, Saint see FISHER, JOHN

John Frederick I, 1503–54, elector of Saxony (1532–47) He succeeded his father, John the Steadfast, but by a settlement (1542) divided his lands with his brother Ernest A member of the SCHMALKALDIC LEAGUE, he vacillated in loyalty to Emperor CHARLES V, but was thrown into direct opposition when Charles undertook the Schmalkaldic War He was captured (1547) in the battle of Mühlberg and was forced to renounce the electorate in favor of his cousin and enemy, MAURICE, duke of Saxony. He was surnamed the Magnanimous.

John Henry, legendary Negro strong man celebrated in ballads and "tall tales" of Southern Negroes On these Roark Bradford based *John Henry* (1931), which he dramatized in 1939 The play was produced in 1940 in New York, with Paul Robeson in the leading role

John Hyrcanus see MACCABEES, Jewish family.

John Mark see MARK, SAINT

John Maurice of Nassau, 1604–79, Dutch general and colonial administrator, a prince of the house of Nassau-Siegen, grandnewphew of William the Silent The Dutch West India Company appointed him (1636) governor general of its newly acquired possessions in Brazil He conquered NE Brazil from the Portuguese and, in order to insure the supply of slave labor, seized several Portuguese strongholds on the Guinea coast of Africa An able administrator, John Maurice made broad plans for the development of Brazil He built up the state of Pernambuco and rebuilt the city of Recife However, the directors of the company criticized his expenses, while John Maurice was opposed to undertaking new hostilities which they ordered On his request he was recalled in 1643 He subsequently held commands in Europe in the Thirty Years War, governed, after 1647, Cleves, Mark, and Ravensberg for the elector of Brandenburg, and in 1652 was made a prince of the Holy Roman Empire, he also was made grand master of the Knights Hospitalers Despite his advanced age, he won new distinction in the Dutch Wars After his retirement in 1675 he lived at Cleves His residence at The Hague is the celebrated Mauritshuis

Johnny Appleseed see CHAPMAN, JOHN

Johnny-jump-up. see VIOLET

John of Austria, 1547?–1578, Spanish admiral and general, natural son of Emperor Charles V He was acknowledged in his father's will and was recognized by his half brother Philip II of Spain In 1569 he fought the Moriscо rebellion in Granada As admiral of the Holy League, formed against the Turks by Pope Pius V, Spain, and Venice, he won the decisive naval victory of LEPANTO He later took Tunis and served as governor general in Italy In 1576 he was sent by Philip as governor general to the Netherlands, then united in rebellion against Spain under the leadership of WILLIAM THE SILENT John was forced to make concessions, but then resumed hostilities His victorious general, Alessandro FARNESE, succeeded him as governor general on his death See Sir William Stirling-Maxwell, *Don John of Austria* (1883).

John of Austria, 1629–79, Spanish general and statesman; natural son of Philip IV He helped quell Masaniello's revolt in Naples (1647), was viceroy of Sicily (1648–51), and fought against the rebels in the final stages of the rebellion of Catalonia (1651–52) In 1656 he was appointed governor of the Spanish Netherlands, while France was at war with Spain (see FRONDE) Though successful at first against Turenne, he was defeated at the battle of the DUNES (1658) and then recalled His great popularity made it possible for him to overthrow the regency for CHARLES II and to seize power in 1677 His government was mediocre and, in its wars against Louis XIV of France, unsuccessful

John of Brienne (brēĕn'), c 1148–1237, French crusader, king of Jerusalem (1210–12) By marrying the daughter of Conrad of Montferrat and of Isabella, heiress of Jerusalem, he became king after the death of Amalric III (Isabella's son by Amalric II) His wife died in 1212, and his daughter Yolande succeeded to the title under his regency John played a conspicuous part in the Fifth Crusade (see CRUSADES), capturing Damietta in 1219, and in 1223 went to Europe in search of support He arranged the marriage (1225) between Yolande and Emperor FREDERICK II, who immediately claimed the crown of Jerusalem in his own behalf John, claiming the title for himself, in revenge fought against Frederick with the papal armies in Italy In 1228 he was chosen regent during the minority of BALDWIN II, Latin emperor of Constantinople He successfully defended (1236) Constantinople against the joint forces of John III of Nicaea and of Ivan II of Bulgaria

John of Damascus, Saint, or **Saint John Damascene** (dă'musēn), c 675–749, Syrian theologian, Doctor of the Church He was brought up at the court of the caliph in Damascus, where his father was an official and was educated by a Sicilian monk St John inherited his father's office, but resigned it (c.726) and entered a monastery in Palestine His life was largely spent in fighting with his pen for orthodoxy against iconoclasm His fame rests on his theological masterpiece, *The Fountain of Wisdom*, a Greek work in three parts—a theological study of Aristotle's categories, a history of heresies, based on Epiphanius and Theodoret, with supplementary material on iconoclasm and Islam, and a formal exposition of the Christian faith It was extensively used by the scholastics and is still a prime source for the dogmatic opinions of the principal Eastern Fathers He wrote hymns and regulated the choral parts of the Byzantine liturgy He stimulated the production of Byzantine painting The elegance of his Greek brought him the epithet Chrysorrhoas [gold-pouring]. His name also appears as John Damascenus Feast in Western calendars, March 27 See F P Cassidy, *Molders of the Medieval Mind* (1944).

John of Ephesus (ĭ'fusŭs), c 505–c 585, Syrian Monophysite historian, bishop of Ephesus He became a leader of the Monophysites, and Justinian, whose favor he enjoyed, set him over the Monophysite community in Constantinople John suffered greatly in the persecution of his sect after 571 His *Ecclesiastical History* makes an unusual effort to avoid prejudice It is especially valuable for the events of the 6th cent He is also called John of Asia

John of Gaunt [Mid Eng *Gaunt*=Ghent, his birthplace], 1340–99, duke of Lancaster, fourth son of EDWARD III of England He married Blanche of Lancaster and through her became earl (1361) and duke (1362) of Lancaster The Lancaster holdings made him the wealthiest and one of the most influential nobles in England He served under his brother, EDWARD THE BLACK PRINCE, in the Hundred Years War and went on the campaign to aid PETER THE CRUEL of Castile, which ended in victory at Nájera (1367) He married Constance, daughter of Peter, in 1369, gaining a claim to the Castilian throne When the Black Prince was stricken with illness in the French campaign of 1370–71, John took chief command. His expedition of 1373 severely depleted his army After a truce was reached he returned to England and as viceroy for the senile Edward III espoused the cause of the court party opposing the dying Black Prince For a short time John of Gaunt in effect ruled England He annulled the reforms of the Good Parliament of 1376, assembled a hand-picked Parliament in 1377, and restored the king's ministers and the king's mistress, Alice Perrers Hostility to the strong clerical party led by William of Wykeham caused him to join with JOHN WYCLIF, whom he later supported John of Gaunt was extremely unpopular, but kept control of the government during the minority of Richard II until 1386 In that year, allied with JOHN I of Portugal, who married one of his daughters, he led an expedition to make good his Castilian claims against JOHN I of Castile John of Gaunt finally agreed to peace in 1388, transferred his claims to his daughter by Constance of Castile, and married her to Henry III, himself heir to Castile He returned to England in 1389, was made duke of Aquitaine, and helped keep peace between Richard II and the hostile barons led by Thomas of Woodstock, duke of GLOUCESTER. In 1396 John of Gaunt married Catherine Swynford, many years his mistress, and had his children by her, under the name of Beaufort, declared legitimate. He died soon after the king had exiled his eldest son, the duke of Hereford (later Henry IV, first of the royal line of Lancaster). Another royal line, the Tudor, was descended from him and Catherine Swynford. John is also remembered as the patron of the poet Chaucer See biography by Sydney Armytage-Smith (1904)

John of Lancaster, 1389–1435, duke of Bedford; son of Henry IV of England and brother of Henry V. At the death of his brother (1422) he was designated as protector for the young Henry VI, he transferred his duties in England, however, to his brother Humphrey, duke of GLOUCESTER, and devoted himself to the affairs of France In his attempt to make permanent the English occupation of France, he gave the country an able, if severe, administration, but his position was undermined by the waverings of his ally, PHILIP THE GOOD, duke of Burgundy, and by the victories of JOAN OF ARC, whose execution in his term of office has injured his reputation He died just after the conclusion of peace between Philip and King Charles VII had definitely lost the English the Burgundian alliance His death deprived England of the only man powerful and respected enough to keep balance between the court's hostile factions.

John of Leiden, c 1509–1536, Dutch ANABAPTIST leader His original name was Beuckelszoon, Beuckelszoon, Bockelszoon, Bockelson, Beukels, or Bucholdt John of Leiden was attracted to the extreme left of the reformist movement through the influence of Thomas MÜNZER In 1533 he joined the Anabaptists and, as a follower of Johann Matthysszoon (Matthiesen), moved to Münster There, in 1534, the Anabaptists took up arms and deposed the civil and religious authorities After Matthyszoon's death in the siege, John of Leiden assumed leadership and set up a theocracy in the new Zion Soon John declared himself "king," with Bernard KNIPPERDOLLINCK second in command, and during his brief and arbitrary rule general lawlessness prevailed, polygamy was legalized, and property communized When the siege of the town led by the expelled prince bishop was successful in 1535, the leaders of the new "kingdom of Zion" were barbarously tortured and in the following year executed See E Belfort Bax, *Rise and Fall of the Anabaptists* (1903)

John of Luxemburg, 1296–1346, king of Bohemia (1310–46) The son of Emperor HENRY VII, he married Elizabeth, daughter of Wenceslaus II of Bohemia, and in 1310 he was chosen king of Bohemia, which had been in virtual anarchy since the assassination (1306) of Wenceslaus III He served with distinction in many wars and is especially remembered for his gallant death Though he had become blind, he went to aid his ally Philip VI of France against the English At Crécy he commanded that his charger be led into the thick of the fight, where he died in battle. He was succeeded by his son, who later became emperor as Charles IV

John of Nepomuk, Saint (nă'pōmŏōk), d 1393 or 1383, patron saint of Bohemia, a martyr. He is called also John Nepomucen He was vicar general of Bohemia under King Wenceslaus IV (Emperor Wenceslaus) When the king wished uncanonically to convert an abbey into a cathedral, St John opposed him, in spite of torture The king had him drowned in the Moldau Another story tells that he was the queen's confessor and was murdered by the king for refusing to violate the seal of the confessional The wide acceptance of this story has led some scholars to suppose that there were two Johns born in Nepomuk, both clerics and both murdered by King Wenceslaus Feast May 16

John of Procida (prō'chēdä), c 1210–c 1298, Italian conspirator, lord of the island of Procida He studied medicine at Salerno Later he became an ardent supporter of the Hohenstaufen cause, serving under the ill-fated MANFRED and CONRADIN After Conradin's execution (1268) John found exile at the court of Manfred's son-in-law, PETER III of Aragon Peter sent him to seek the aid of the Byzantine emperor, Michael VIII, for a projected invasion of Sicily John probably also secretly visited Sicily, preparing the tremendous uprising of the SICILIAN VESPERS (1282), which resulted ultimately in the accession of Peter to the Sicilian throne In 1283 John was made chancellor of Sicily He later supported FREDERICK II of Sicily

John of Salisbury (sôlz'–), c.1115–1180, English scholastic philosopher, b Salisbury. He studied in France at Paris and Chartres under Abelard and other famous teachers, was in Italy, apparently from 1148 through 1153, and went on missions abroad for Theobald, archbishop of Canterbury, while he was Theobald's secretary He was friend and secretary to St. Thomas à Becket, was present at his assassination, and later wrote a life of him. John was (1176–80) bishop of Chartres. His two main works are the *Polycraticus*, a treatise on the principles of government, and the *Metalogicus*, which presents a picture of the intellectual life and the scholastic controversies of the age. He was well acquainted with the Latin classics, and the influence of Platonism on his writing is considerable He was one of the originators of moderate REALISM as a solution to the controversy with nominalism See two selections from the *Polycraticus*—*The Statesman's Book of John of Salisbury* (tr. by John Dickinson, 1927) and *Frivolities of Courtiers* (tr by J. P Pike, 1938), C. C. J. Webb, *John of Salisbury* (1931).

John of Speyer (spī'ur), d. 1470, first printer in Venice, b Bavaria. He designed the first type purely roman in character, and for it he obtained a five-year patent It appears in Cicero's *Epistulae ad familiares* and Pliny's *Historia naturalis*, both printed in 1469 On his death his patent on the roman design expired, Nicolas JENSON was enabled to print with roman type in 1470

John of the Cross, Saint, Span *Juan de la Cruz*, 1542–91, Spanish mystic, whose name originally was Juan de Yepes He was a founder of the Discalced Carmelites and a close friend of St Theresa of Ávila, who guided him in his life of devotion. Because of his ardor in pursuing St Theresa's proposed reforms he fell afoul of the hierarchy and suffered considerable abuse, including imprisonment He wrote poems that blend exquisite lyricism with profound mystic thought, and he was also the author of a few treatises on mysticism, which have had great influence on modern Catholicism He was canonized in 1726 and declared a Doctor of the Church in 1926 Feast Nov 24 See Robert Sencourt, *Carmelite and Poet* (1944).

John o' Groat's House (jan" ŭgrōts'), locality in Caithness, Scotland, W of Duncansbay Head. It is often erroneously named as the northernmost point of Scotland The house, which has disappeared, was according to legend built in octagonal form by a Dutchman, John de Groot or John o' Groat, in the 16th cent

John Scotus. see DUNS SCOTUS, JOHN, and ERIGENA, JOHN SCOTUS

Johns Hopkins University, at Baltimore, nonsectarian, partly coeducational, chartered 1867, opened 1876, with a bequest from Johns Hopkins The medical school (connected with the noted hospital) is one of the largest in the world The university has also a college of arts and sciences and a teachers college (now part of McCoy College) and schools of business, engineering, hygiene and public health, geography (Isaiah Bowman), and international relations (Page) The library is especially rich in books on economics, philology fine arts, meteorology, psychology, philosophy, and Jewish history The university has from its origin (with Daniel C GILMAN as president) excelled in laboratory and research work, in 1946 an institute for cooperative research was established Other presidents were Ira Remsen, Frank J Goodnow, Joseph S Ames, and Isaiah Bowman The university press, the first in an American school, pioneered with learned journals and serials See history by B M Bernheim (1948)

Johnson, Allen, 1870–1931, American historian, b Lowell, Mass , grad Amherst (B A , 1892, M A , 1895), Ph D Columbia, 1899 After studying also at Leipzig and Paris, he was professor of history at Iowa (now Grinnell) College (1898–1905), Bowdoin (1905–10), and Yale (1910–26) He achieved a notable success in editing the "Chronicles of America" (50 vols , 1918–21), a series at once scholarly in material and popular in style, to which he contributed *Jefferson and His Colleagues* (Vol. XV, 1921) This success was partly responsible for his being selected as editor in chief of the *Dictionary of American Biography*, published under the auspices of the American Council of Learned Societies Six volumes appeared before his death, setting the style and standard for the remainder of the enterprise Johnson also wrote *Stephen A Douglas* (1908), *Union and Democracy* (1915), and *The Historian and Historical Evidence* (1926) He edited *Readings in American Constitutional History, 1776–1876* (1912) and, with W A Robinson, *Readings in Recent American Constitutional History, 1876–1920* (1927)

Johnson, Andrew, 1808–75, 17th President of the United States, b Raleigh, N C. His father died when Johnson was three, and at 14 he was apprenticed to a tailor. In 1826 the family moved to E Tennessee, and Andrew soon had his own tailor shop at Greeneville. A man of no formal schooling but of great perseverance and strength of character, he was greatly aided by his wife, Eliza McCardle, whom he married in 1827; she taught him to write and improved his reading and spelling. He prospered at his trade, and the tailor shop became the favored meeting place of other craftsmen, laborers, and small farmers interested in discussing public affairs. The best debater in the community, he became the acknowledged leader of this group in opposition to the slaveholding aristocracy. From 1830 onward he was almost continuously in public office, being alderman (1828–30) and mayor (1830–34) of Greeneville, state representative (1835–37, 1839–41), state senator (1841–43), Congressman (1843–53), governor of Tennessee (1853–57), and

U.S. Senator (1857–62). As U.S. Representative and Senator, Johnson was principally interested in securing legislation providing land in the West for the laboring class. He voted with other Southern legislators on questions concerning slavery, but after Tennessee seceded (June 8, 1861), he remained in the Senate, the only Southerner there. He vigorously supported Lincoln's administration, and in March, 1862, the President appointed him military governor of Tennessee with the rank of brigadier general of volunteers His ability in filling this difficult position (see TENNESSEE) and the fact that he was a Southerner and a war Democrat made him an ideal choice as running mate to Lincoln on the successful Union ticket in 1864 On April 15, 1865, the day after Lincoln's assassination, he took the oath of office as President Johnson's RECONSTRUCTION program (and he insisted that Reconstruction was an executive, not a legislative, function), like Lincoln's, was based on the theory that the Southern states had never been out of the Union He therefore restored civil government in the ex-Confederate states as soon as it was feasible Because he was not prepared to grant equal civil rights to Negroes and because he did not press for the wholesale disenfranchisement of ex-Confederates, he was roundly denounced by the radical Republicans who, led by Thaddeus STEVENS, set out to destroy his work on the reconvening of the 39th Congress in Dec , 1865 In the first test of strength, he vetoed (Feb 19, 1866) the bill extending the life of the FREEDMEN'S BUREAU, but it was soon (July) passed over his veto The remainder of his administration was the record of one humiliation after another His "swing around the circle" in the congressional elections of 1866 was unsuccessful Baited by mobs organized by the radicals and slandered by the press, he was subjected to such foul personal abuse as no President had ever experienced On March 2, 1867, the radicals passed, over his veto, the Reconstruction Act and the TENURE OF OFFICE ACT When Johnson insisted upon his intention to force out of office his Secretary of War, Edwin M STANTON, whom he rightly suspected of conspiring with the congressional leaders, the radical Republicans sought to remove the President Their first attempt failed (Dec , 1867), but on Feb 24, 1868, the House passed a resolution of impeachment against him even before it adopted (March 2–3) 11 articles detailing the reasons for it Most important of the charges, which were purely political, was that he had violated the Tenure of Office Act in the Stanton affair On March 5 the Senate, with Chief Justice Salmon P Chase presiding, was organized as a court to hear the charges The President himself did not appear In spite of the terrific pressure brought to bear on several Senators, the court narrowly failed to convict, the vote, on the 11th article (May 16) and on the second and third articles (May 26), was 35 to 19, one short of the constitutional two thirds required for removal The nation and the office of the presidency were fortunate in the result Although the problems of Reconstruction dominated Johnson's administration, there were important achievements in foreign relations, notably the purchase (1867) of Alaska, negotiated by Secretary of State William H SEWARD Johnson's name figured in the balloting at the Democratic convention of 1868, but he did not actively seek the nomination In 1875, on his third attempt to resume public office, he was returned to the Senate from Tennessee, but died a few months after taking his seat See D M De Witt, *The Impeachment and Trial of Andrew Johnson* (1903), C R Hall, *Andrew Johnson, Military Governor of Tennessee* (1916), biographies by R W Winston (1928) and L P Stryker (1929), C G Bowers, *The Tragic Era* (1929); H K Beale, *The Critical Year* (1930), G F Milton, *The Age of Hate* (1930)

Johnson, Cave, 1793–1866, American political leader, b Robertson co , Tenn He practiced law in his native state and served (1829–37, 1839–45) in the U S House of Representatives He gave active support to James K Polk in the presidential campaign of 1844 Johnson served (1845–49) as U S Postmaster General in Polk's cabinet and introduced postage stamps in the U S postal system He later became (1853) a circuit judge in Tennessee and supported James Buchanan for President in the election of 1856 He opposed secession, but afterwards supported the Confederacy.

Johnson, Douglas Wilson, 1878–1944, American geologist, b Parkersburg, W Va , grad. Univ of New Mexico (B S , 1901), Ph.D Columbia, 1903 After teaching at Harvard (1906–12), he joined the faculty of Columbia, where he became successively associate professor (1912) and professor (1919) of physiography and chairman (1936) of the geology department. Johnson was chief of the division of boundary geography of the American delegation to the Paris Peace Conference (1918–19) and consulting physiographer to the Canadian government in the Labrador boundary negotiations (1926) His works include *Battlefields of the World War* (1921), *Stream Sculpture on the Atlantic Slope* (1931), *The Origin of Submarine Canyons* (1939), and *The Origin of the Carolina Bays* (1942).

Johnson, Duncan Starr, 1867–1937, American botanist and educator, b. Cromwell, Conn., grad Wesleyan Univ., 1892, Ph D. Johns Hopkins, 1897 He taught at Johns Hopkins from 1898 and became professor of botany in 1906. Johnson headed various scientific investigations for the school and directed their botanic garden from 1913. He wrote *The Relation of Plants to Tide-Levels* (with H. H. York, 1915), and *The Fruit of Opuntia Fulgida* (1918)

Johnson, Eastman, 1824–1906, American portrait and genre painter, b Lovell, Maine He worked in the shop of a Boston lithographer and learned to make crayon portraits In 1849 he went to Dusseldorf, where he studied for two years He spent four years in The Hague, and his study there of the Dutch masters greatly influenced his later work He returned to America in 1855 and traveled in the South and West, settling in New York in 1860 He was elected that year to the National Academy of Design His genre pictures, such as *Old Kentucky Home* and *Sunday Morning* (N Y Public Library) and *Corn Husking at Nantucket* and *The New Bonnet* (Metropolitan Mus), made him famous After 1885, however, he devoted himself to portraiture Among his sitters were Presidents Hayes, Cleveland, and Harrison, Cornelius Vanderbilt, Emerson, and Longfellow *Two Men* and *Family Group* are in the Metropolitan Museum

Johnson, Edward, 1884–, Canadian operatic tenor, b Guelph, Ont , studied in Italy He made his debut in Padua in 1912 and afterwards sang (1913–18) at La Scala in Milan, there, in 1914, he sang the title role in the first Italian performance of *Parsifal* He joined the Chicago Opera Company in 1920 and the Metropolitan Opera Company, New York, in 1922 He sang the leading tenor roles in French and Italian operas and created the principal roles in Deems Taylor's *The King's Henchman* and *Peter Ibbetson* and in Howard Hanson's *Merry Mount* He left the stage in 1935 and became general manager of the Metropolitan Opera Company, retiring in 1950

Johnson, Edwin Ferry, 1803–72, American surveyor and civil engineer, b Essex, Vt He was connected with the surveys for the Erie, Champlain, Morris, and other canals and later served as assistant engineer and chief engineer in the location and construction of many railroads His *Review of the Project for a Great Western Railway* (1831) advocated a system of railroads to the Mississippi, in *The Railroad to the Pacific* (1854) he urged the route subsequently used by the Northern Pacific, of which he was chief engineer (1867–71) Author of important reports for the War Dept in the Civil War, he declined an appointment as Assistant Secretary of War.

Johnson, Emily Pauline, 1862–1913, Canadian poet, b. near Brantford, Ont , daughter of an Indian chief and his English wife Although she had little formal training, her early poems in praise of Indian life were highly popular in recitals, and in 1892 she began a series of successful tours through America and England Her poems appeared in *White Wampum* (1895) and *Canadian Born* (1903) Her collected poems were published (1913) as *Flint and Feather* In Vancouver, where she spent her later life, from a friendly Indian chief she learned tales of the Indians of the Pacific Northwest hitherto unrecorded and published them in *Legends of Vancouver* (1911)

Johnson, Emory Richard, 1864–1950, American economist, b Waupun, Wis After receiving his Ph D from the Univ of Pennsylvania in 1893, he joined its faculty, he was dean of its Wharton School of Finance and Commerce from 1919 to 1933 He served on several government commissions as a transportation expert and wrote many books on the subject, including *Elements of Transportation* (1909), *Government Regulation of Transportation* (1938), and *Transportation Facilities, Services, and Policies* (1947) See his autobiography, *Life of a University Professor* (1944)

Johnson, Guy, c 1740–1788, Loyalist leader in colonial New York, b Ireland He came to America as a boy and married (1763) a daughter of Sir William Johnson, whom he succeeded as superintendent of Indian affairs in 1774 He had served in the French and Indian War and had acted as a deputy of Sir William after 1762 In the American Revolution he naturally took the British side and helped to keep most of the Iroquois loyal to the British He made his headquarters at Niagara and with his deputy, John BUTLER, directed Loyalist and Tory raids against the patriot frontier settlements He was succeeded as superintendent of Indian affairs by Sir John JOHNSON in 1782

Johnson, Herschel Vespasian, 1812–80, American statesman, b Burke co , Ga , grad Univ of Georgia, 1834. He was a judge of the Georgia superior court (1849–53) and governor (1853–57) Though a firm believer in states' rights, he opposed secession. In the Democratic national convention at Charleston in 1860, Johnson fought vainly against the disruption of the party and afterwards was nominated at Baltimore, by the National Democrats, for Vice President on the ticket with Stephen A Douglas He was a Unionist leader in the Georgia secession convention of 1861, but afterwards supported the Confederacy Elected to the Confederate senate in 1862, Johnson, like Gov Joseph E BROWN of Georgia, opposed President Davis's policies on conscription and the suspension of the writ of habeas corpus and otherwise showed his states' rights convictions After the war he was elected to the U S Senate, where he had previously served (1848–49), but was not allowed to take his seat He was again a judge of the superior court from 1873 until his death. See biography by P. S Flippin (1931)

Johnson, Hiram Warren, 1866–1945, American political leader, U S Senator (1917–45), b Sacramento, Calif After study at the Univ of California he was admitted (1888) to the bar and practiced law Johnson, as prosecuting attorney, secured the conviction of Abe RUEF and other political grafters in San Francisco after the prosecutor was shot down in court while the trial was going on Twice (1910, 1914) elected governor of California, Johnson broke much of the political power of the railroads in his state, and he secured enactments of wide social, economic, and political reforms He was a founder of the Progressive party and ran (1912) unsuccessfully for Vice President on the Progressive ticket in 1912 along with Theodore Roosevelt Johnson refused to support Republican presidential candidate Charles E Hughes in 1916, and Hughes lost the state of California and the election, Woodrow Wilson was victorious, and Johnson was elected U S Senator on the Progressive ticket In 1920 Johnson was a leading contestant for the Republican presidential nomination, but, after Warren G Harding was nominated, Johnson declined offers of the vice presidential nomination He was again a Republican candidate in 1924, but the party was then in strong conservative hands Although he at first supported the Hoover administration, he later became its bitter opponent, and in 1932 he gave Franklin D. Roosevelt strong support He had been a stubborn opponent of the League of Nations, and he remained one of the most consistent of the isolationists in Congress, he was against American adherence to the Permanent Court of International Justice, he opposed Roosevelt's foreign policy, and he voted (1945) against ratification of the Charter of the United Nations

Johnson, Hugh Samuel, 1882–1942, American army officer, government administrator, b Fort Scott, Kansas, grad West Point, 1903, and Univ of California (B A , 1915, J D , 1916) He entered (1903) the U S army as a second lieutenant, rose through the grades, and served (1916) under Gen John J Pershing in the Mexican punitive expedition In the First World War he formulated (1917) plans for selective service in the U S army, helped write the Selective Service Act, and supervised execution of the draft Johnson resigned (1919) from the army as brigadier general, became a business executive and joined (1927) the research staff of Bernard BARUCH He was summoned (1933) to Washington, D C , to help formulate the National Industrial Recovery Act, and after its passage he served (1933–34) as head of the National Recovery Administration At this post he was responsible for the establishment of numerous codes for the recovery of business in America He was later (1935) WPA administrator for New York city and became a newspaper columnist and radio commentator

Johnson, Jack (John Arthur Johnson), 1878–1946, American boxer, b Galveston, Texas. He began boxing in Dallas, Texas, and by 1904 attracted considerable attention Johnson, a formidably built Negro, defeated (1908) Tommy Burns at Sydney, Australia, and claimed the world's heavyweight championship After much public pressure, James J JEFFRIES finally agreed to fight Johnson and Johnson definitely took (1910) the heavyweight title at Reno, Nev , knocking out Jeffries in the 15th round Convicted (1913) of having violated the Mann Act, Johnson fled to Europe and later (1915) lost his heavyweight crown to Jess Willard in Havana, Cuba

Johnson, James Weldon, 1871–1938, American Negro author, b Jacksonville, Fla , educated at Atlanta Univ and at Columbia He was the first Negro to be admitted to the Florida bar and later was American consul (1903–12), first in Venezuela and then in Nicaragua In 1930 he became a professor at Fisk Univ , and in 1934 a visiting professor at New York Univ He helped found and was secretary (1916–30) of the National Association for the Advancement of Colored People His novel *Autobiography of an Ex-Coloured Man* (1912), published anonymously, caused a great stir and was republished under his name in 1927 His work includes *God's Trombones* (1927), Negro sermons in verse, and *Black Manhattan* (1930) He wrote songs with his brother, Rosamond JOHNSON He was killed when a train struck his car. See his autobiography, *Along This Way* (1933).

Johnson, Sir John, 1742–1830, Loyalist leader in the American Revolution, b Mohawk valley, N Y , son of Sir William JOHNSON He fought against the Indians in Pontiac's Conspiracy and aided his father. In the Revolution, like his

brother-in-law, Guy JOHNSON, he set out to organize the settlers and Indians of the Mohawk region against the patriots The plan failed, and he fled to Montreal In the Saratoga campaign (1777) he served with Barry St Leger and led a detachment at Oriskany. Later he led several raids on the Mohawk and Schoharie valleys After the Revolution, he moved to Canada and in 1782 succeeded Guy Johnson as superintendent of Indian affairs

Johnson, John Albert, 1861–1909, governor of Minnesota, b St Peter, Minn The son of poor parents, he left school at the age of 13 and worked at various trades until 1887, when he became editor and half owner of the St Peter *Herald*, a Democratic journal His editorials, showing his interest in state and local affairs, brought him into public notice, and in 1898 he was elected state senator In 1904 he was elected governor on the Democratic ticket in a Republican state which gave Theodore Roosevelt a two-to-one majority that year Johnson's victory won him national fame, increased by his reelections in 1906 and 1908 His progressive administration, gracious personality, and talent for speaking made him one of Minnesota's most popular governors He had some support for the presidential nomination at the Democratic convention of 1908 His sudden death in 1909 cut short a promising career See biographies by F A Day and T M Knappen (1910) and W G Holmes (1949)

Johnson, John Butler, 1850–1902, American civil engineer, b Marlboro, Ohio, grad Univ of Michigan, 1878 He was professor of civil engineering (1883–99) at Washington Univ, St Louis, and then became dean of the college of engineering at the Univ of Wisconsin He was the author of many widely used manuals and textbooks At Washington Univ he carried out (1892–95) for the U S division of forestry (later the Forest Service) the first systematic studies on the strength of various kinds of timber

Johnson, Louis Arthur, 1891–, U S Secretary of Defense (March, 1949–), b Roanoke, Va, grad Univ of Virginia (LL B, 1912) A lawyer in Clarksburg, W Va, after 1912, he was elected (1917) as a Democrat to the West Virginia legislature and became majority floor leader He fought in the Meuse-Argonne offensive in the First World War, was discharged with the rank of major, and was national commander of the American Legion (1932) He was appointed (1937) Assistant Secretary of War but resigned (1940) when Henry L Stimson became Secretary of War He replaced James V FORRESTAL as Secretary of Defense to unify the armed forces under the National Military Establishment

Johnson, Martin Elmer, 1884–1937, American explorer and author, b Rockford, Ill He left home at 14 to work his way to Europe on a cattle boat, returning as a stowaway He then joined the crew of Jack London's round-the-world cruise on the *Snark*, the only member of the party to complete the trip His interest in photographing wildlife and native tribes seen on this voyage led him to make several trips for this purpose to the South Sea Islands and Borneo before undertaking (1921) the African expeditions for which he is best known His films include *Simba*, *Congorilla*, and *Baboona*, as well as the film of vanishing wildlife in Africa made (1924–29) for the American Museum of Natural History He was killed in an airplane crash in the United States His wife, **Osa Helen (Leighty) Johnson,** 1894–, accompanied him on all his expeditions and is co-author of *Cannibal Land* (1917), *Camera Trails in Africa* (1924), *Safari* (1928), and *Lion* (1929) In 1941 she married Clark H Getts She is the author of *Brides in the Solomons* (1944) See O H Johnson, *I Married Adventure* (1940)

Johnson, Owen, 1878–, American author, b New York city, grad Yale, 1901 He was the son of Robert Underwood Johnson He is known primarily for his amusing stories of preparatory school and college life, *The Varmint* (1910), *The Tennessee Shad* (1911), and *Stover at Yale* (1911)

Johnson, Reverdy, 1796–1876, American lawyer and statesman, b Annapolis, Md, grad St John's College, Annapolis, 1811. Admitted to the bar in 1815, he served in the Maryland legislature (1821–29) and won a reputation before the U S Supreme Court as one of the ablest constitutional lawyers of the period His constitutional argument as counsel for the defense in the Dred Scott Case is known to have greatly influenced the court, particularly Chief Justice Roger Taney He was elected (1845) to the U S Senate as a Whig, but left in 1849 to become U S Attorney General under President Zachary Taylor, resigning upon Taylor's death in 1850. With the decline of the Whigs he became a conservative Democrat, and in 1860 he supported Stephen A Douglas Though sympathetic with the South, he was absolutely opposed to secession and used his influence to keep Maryland in the Union Eager for compromise, he was a delegate to the unsuccessful peace conference held in Washington in 1861 Abraham Lincoln in 1862 sent him to New Orleans to investigate the complaints of residents against Gen. Benjamin F BUTLER, and Johnson ordered the restoration of much property which Butler had seized. As one of the defense counsel for Mary E SURRATT, alleged accomplice of John Wilkes Booth, he argued that the trial should be held before a civil court Again in the U S. Senate (1863–68), he supported President Andrew Johnson's Reconstruction program, and his opposition to the impeachment of Johnson influenced other senators in voting for the President's acquittal In 1868 he was appointed minister to Great Britain, where he negotiated the Johnson-Clarendon Treaty to settle the *Alabama* claims, the treaty was rejected by the U S Senate largely for party reasons, and Johnson was recalled in 1869 Until his death he was active in many notable law cases See biography by B C. Steiner (1914)

Johnson, Richard Mentor, 1781-1850, Vice President of the United States (1837-41), b Kentucky, on the site of present Louisville He studied at Transylvania Univ, was admitted (1802) to the bar, became prominent in state Democratic politics, and served (1804–7) in the Kentucky legislature He was elected (1806) to the U S House of Representatives and supported President Thomas Jefferson He resigned from the House to command a regiment of Kentucky riflemen in the War of 1812 and served under William Henry HARRISON in the Canadian campaign At the battle of the Thames (1813) Johnson was severely wounded in action and is said to have killed TECUMSEH He returned to the House (1814) but resigned (1819) to fill the unexpired term of John J CRITTENDEN in the U S Senate, where he served until 1829 Again (1829–37) in the House, Johnson supported President Andrew Jackson's administration and pushed the bill (1832) abolishing imprisonment for debt Backed by Jackson, Johnson was nominated (1836) Vice President on the Democratic ticket with Martin Van Buren Failing to secure a majority of the electoral vote, he was elected by the U S Senate See biography by L H Meyer (1932)

Johnson, Richard W., 1827–97, Union general in the Civil War, b Livingston co, Ky, grad West Point, 1849 Before the Civil War he served principally on the frontier Johnson, made a brigadier general of volunteers in Oct, 1861, served as a division commander in the Armies of the Ohio and the Cumberland He fought at Shiloh and Murfreesboro and in the Chattanooga and Atlanta campaigns For his service at the battle of Nashville in Dec, 1864, he was brevetted major general of volunteers After his retirement from the army in 1867 Johnson taught military science at the Univ of Missouri and the Univ of Minnesota

Johnson, Robert Underwood, 1853–1937, American poet and editor, b Washington, D C He was associated with the *Century Magazine* from 1873 to 1913, succeeding Richard Watson Gilder as editor in 1909 *Poems of Fifty Years* (1931) is a definitive collection of his work In 1919 he became director of the Hall of Fame, New York Univ, and in 1920–21 he served as U S ambassador to Italy See his *Remembered Yesterdays* (1923)

Johnson, Rosamond (John Rosamond Johnson), 1873–, American Negro composer, b Jacksonville, Fla, studied at Atlanta Univ and at the New England Conservatory of Music, Boston He toured (1896–98) in vaudeville in the United States and in Europe In the season 1912–13 he was conductor at Oscar Hammerstein's London Opera House In 1914 he became director of the Music School Settlement for Colored People, New York He is the composer of several hundred songs, including *Lift Every Voice and Sing*, for which his brother, James Weldon Johnson, wrote the words, it has become known as the Negro national anthem His *Rolling Along in Song* (1937) is an anthology of American Negro songs He collaborated with his brother in a number of songs, in a musical comedy, the *Shoo-Fly Regiment*, and in two collections (1925, 1926) of Negro spirituals

Johnson, Rossiter, 1840–1931, American editor, b Rochester, N Y He was associate editor (1873–77) of the *American Cyclopaedia*, editor (1883–1902) of the *Annual Cyclopedia*, and managing editor (1886–89) of the *Cyclopedia of American Biography* He originated and edited the "Little Classics" (18 vols, 1875–80) and was editor in chief of "The World's Great Books" (40 vols, 1898–1901) He was also editor of other publishing enterprises, lectured widely, and wrote many books of journalistic content

Johnson, Samuel, 1696–1772, American clergyman, educator, and philosopher, b Guilford, Conn, grad Collegiate School (now Yale), 1714, father of William Samuel Johnson. He became a Congregationalist minister, but in 1722 joined the Church of England In 1724 he opened the first Anglican church in Connecticut at Stratford, remaining its minister until 1756, when he became the first president of an Anglican institution, King's College (now Columbia Univ.), in New York city He resigned in 1763 to return to Stratford A friend and correspondent of the English philosopher, George Berkeley, Johnson became the principal exponent in America of Berkeleian idealism. His chief work was *Ethices Elementa* (1746), republished in an enlarged edition by Franklin as *Elementa Philosophica* (1752) See Herbert Schneider and Carol Schneider, *Samuel Johnson ... His Career and His Writings* (4 vols, 1929)

Johnson, Samuel, 1709–84, English author. Born in Lichfield, son of a poor bookseller, Johnson became a member of Oxford Univ in 1728 Ill-health and poverty forced him to leave the university sometime between 1729 and 1731. In 1735 he married Mrs Henry Porter (who died in 1752), a widow 20 years his senior Johnson went to London in 1737, and by 1738 he was regularly employed by Edward Cave, editor of the *Gentleman's Magazine* Johnson's long poem *London* appeared in the same year He wrote *An Account of the Life of Mr Richard Savage* (1744), *Miscellaneous Observations on the Tragedy of Macbeth* (1745), and the satiric poem *The Vanity of Human Wishes* (1749), but it was not until the publication of *A Dictionary of the English Language* (1755) that his reputation was firmly established He continued to live on the edge of poverty until 1762, when he was granted a government pension In 1763 he met James Boswell, and in 1764 Johnson, upon Reynolds's suggestion, founded "The Club," with Goldsmith and Burke among the charter members In 1765 he met Mr and Mrs Henry Thrale and began a friendship which lasted until after Thrale's death (1781) Mrs Thrale remarried a few months before Johnson's death Johnson's edition of Shakspere (1765) included critical notes and a long preface, both of which are still highly regarded In 1773 he toured the Hebrides with Boswell and later published his account of the trip, *A Journey to the Western Islands of Scotland* (1775) His last major effort was *Lives of the Poets* (1779–81), 10 volumes of highly personal, perceptive, and valuable criticism Johnson's essays appeared first in a periodical published by Cave, the *Rambler* (1750–52), and later (1758–60) in a column, "The Idler," which appeared in a newspaper, the *Universal Chronicle* Although Johnson the moralist is discernible in many of the essays, he is at his best in *Rasselas* (1759), ostensibly a romance, but obviously a moralizing fable Throughout the reign of George III, Johnson dictated London's literary tastes and was its foremost conversationalist His prose was often involved and ponderous, but just as often incisive and distinguished His critical judgments were sometimes wrong, but often shrewd and always interesting His dictionary, the most complete in the language at the time of its publication, drew heavily on 17th-century usage and for the first time employed quotations from standard authors to clarify meanings The classic biography is Boswell's, the modern one is that of J W Krutch (1944)

Johnson, Thomas, 1732–1819, American statesman, b Calvert co, Md He was a lawyer of Annapolis and served (1762–73) in the colonial assembly, where he became prominent in the fight against the Stamp Act (1765) He was a member (1774–76) of the Continental Congress, and at the suggestion of John Adams he nominated George Washington as commander in chief of the Continental army Johnson raised a troop of militia for patriot service, and he served as governor of Maryland (1777–79) Later he forwarded Maryland's adoption of the Constitution and was (1791–93) a justice of the U S Supreme Court See biography by E S Delaplaine (1927)

Johnson, Tom Loftin, 1854–1911, American municipal reformer, b Georgetown, Ky He rose from being an office boy with a Louisville, Ky, streetcar company to ownership and management of traction lines in Louisville, Indianapolis, Detroit, Cleveland, and New York city In the 1880s he was deeply influenced by the writings of Henry GEORGE and devoted himself to reform After service (1891–95) in the U S Congress for two terms, he became (1901) mayor of Cleveland and held this office for eight years As mayor he fought strenuous battles for municipal reform against political bosses and business interests Although his plans for municipal ownership of public utilities were not realized, he inspired other local reform movements by helping create civic consciousness in Cleveland, by initiating sanitary measures, and by improving facilities to help the city's underprivileged See his autobiography, *My Story* (1911), biography by Carl Lorenz (1911)

Johnson, Walter Perry, 1887–1946, American baseball player, b Humboldt, Kansas He began playing with the Washington Senators of the American League in 1907 A right-handed pitcher, acknowledged to have been the fastest hurler in the history of the game, he won 414 while losing 276 games before he retired from active play in 1927 The numerous records he established include the greatest number of shutouts (113), greatest number of strike-outs (3,497), and most consecutive scoreless innings pitched (56). The "Big Train," as he was often called, later managed the Newark team (1928) of the International League and the Senators (1929–32) and the Cleveland Indians (1933–35) of the American League. After 1936 he became active in Republican party politics and served (1939–40) on the board of commissioners in Mont-

gomery co., Md., but was defeated for Congress in 1940 See biography by R. L Treat (1948)

Johnson, Sir William, 1715–74, British colonial leader in America, b Co Meath, Ireland He settled in the Mohawk valley, entered the fur trade, and gained great power among the Mohawk Indians and the other Iroquois He had large landed properties, founded (1762) Johnstown, N Y , and lived in baronial splendor at Johnson Hall Because of his influence over the Indians, "Johnson of the Mohawks" was a key figure in the French and Indian Wars, first becoming prominent in King George's War At the Albany Congress (1754) he helped formulate British Indian policy, and he was made superintendent of Iroquois affairs. In the French and Indian War although his expedition against Crown Point did not capture that fort, he soundly defeated (1755) the French under Dieskau at Lake George and built Fort William Henry He was rewarded with a baronetcy In 1759 he captured Niagara, and in 1760 he served with Gen Jeffrey Amherst in the capture of Montreal He had been appointed general superintendent of Indian affairs N of the Ohio in 1756, and after the Peace of Paris his office was of great significance in the vast new areas gained from France His lieutenants were George CROGHAN, Johnson's son-in-law, Guy JOHNSON, his son, Sir John JOHNSON, and Daniel Claus Though Pontiac's Rebellion and British economy measures prevented him from establishing the centralized control over Indians and fur traders that he desired, he achieved much He presided at the council of Fort Stanwix (1768), where the Indians made important land cessions See biographies by W L Stone (1865), A C Buell (1903), and Arthur Pound and Richard Day (1930)

Johnson, William Samuel, 1727–1819, American statesman and president of Columbia College (1787–1800), b Stratford, Conn , grad Yale, 1744, M A Harvard, 1747 After commencing law practice in Connecticut, he was soon a leading figure in that colony, serving as a member of the lower house and in 1766 beginning his tenure in the governor's council Although conservative in his views, he was sent (1765) as a delegate to the Stamp Act Congress From 1767 to 1771 he was an agent of Connecticut in England and after his return was a judge of the superior court (1772–73) Because of his opposition to the radical Whigs and to political independence for the colonies, he declined to serve when elected as a delegate to the Continental Congress (1774) and soon retired from politics He was called from retirement to represent (1784–87) Connecticut at the Confederation Congress (generally still called the Continental Congress) and at the Federal Constitutional Convention (1787), in which he took a prominent part in the debate on representation Johnson, although a layman, was chosen (1787) president of the newly reorganized Columbia College, formerly King's College, of which his father, Samuel Johnson (1696–1772), had been president He was elected U S Senator from Connecticut in 1789, but retired (1791) after the capital was moved to Philadelphia See biographies by E E Beardsley (1876) and G C Groce, Jr (1937)

Johnson, town (pop 1,420), N Vt , on the Lamoille and NE of Mt Mansfield, granted 1782, settled 1784 Its industries depend upon local lumber, talc, and wool, and machinery is made here It is the seat of a state teachers college

Johnsonburg, borough (pop 4,955), NW Pa , on the Clarion river and near Ridgway, laid out 1888 Its manufactures include paper, chemicals, and metal products

Johnson City 1 Village (pop 18,039), S N Y , near Binghamton, inc 1892 It is noted for its Endicott-Johnson shoes See BINGHAMTON 2 City (pop. 25,332), NE Tenn , ENE of Knoxville, in a mountainous region of farms, timber, and limestone quarries, settled before 1800, inc 1869 It is an important burley-tobacco market and a railroad center, with railroad shops, textile and flour mills, and other factories. East Tennessee State College and a U S veterans' hospital are here Near by are Milligan College and the Haynes House (or Tipton House) (c 1770)

Johnson C. Smith University: see CHARLOTTE, N C

Johnson grass, perennial grass (*Sorghum halepense*) native to the Mediterranean region It somewhat resembles sorghum, to which it is related In the United States it has been cultivated as a forage grass and naturalized E of the Rockies and in the Southwest In many sections it has become a troublesome weed and under certain conditions may poison livestock by HYDROCYANIC ACID

Johnston, Albert Sidney, 1803–62, Confederate general, b Washington, Ky , grad. West Point, 1826 After serving in the Black Hawk War, he resigned from the U S army (1834) and went to Texas (1835), where he enlisted in the revolutionary army Johnston became its commander in 1837 and served as Texas secretary of war, 1838–40 In the Mexican War, he commanded a regiment of volunteers and saw action at Monterrey Reentering the U S army in 1849, Johnston served on the Texas frontier, was commander of the Dept. of Texas (1856–58), led the expedition against the Mormons (1857), and commanded the Dept of Utah (1858–60). When Texas seceded from the Union in April, 1861, Johnston, commanding the Dept of the Pacific, resigned his commission and was soon made general in charge of Confederate operations in the West Union victories, especially Fort Donelson, forced him to withdraw from the line of defense he had established in 1861 He concentrated an army at Corinth, Miss Attacking Grant at SHILOH on April 6, 1862, he was killed at the height of battle The Confederacy lost one of its ablest generals See biography by W P Johnston (1878)

Johnston, Alexander Keith, 1804–71, Scottish cartographer and geographer, geographer royal of Scotland He issued many notable atlases, maps, and gazetteers, including *The National Atlas of Historical, Commercial, and Political Geography* (1843), *The Physical Atlas of Natural Phenomena* (1848), *The Dictionary of Geography* (1850, known as *Johnston's Gazetteer*), and *The Royal Atlas of Modern Geography* (1861) A son, **Alexander Keith Johnston,** 1844–79, carried on the work of the map publishing house founded by his father He assisted (1873–75) in a survey of Paraguay and died in Africa while leading an expedition of the Royal Geographical Society to Lake Nyasa

Johnston, Eric Allen, 1895–, American business executive, b Washington, D C , grad Univ of Washington law school, 1917 In the First World War he served with the U S marines He returned (1922) to Spokane, Wash , and succeeded at electrical retailing and contracting and at banking He was (1942–46) president of the Chamber of Commerce of the United States, and he succeeded (1942) William H HAYS as president of the Motion Picture Association of America He traveled widely and made numerous public addresses He wrote *We're All in It* (1948)

Johnston, Gabriel, 1699–1752, colonial governor of North Carolina (1734–52) An efficient and popular Scot, he nevertheless had constant difficulties with the assembly over quitrents and other financial matters and several times dissolved that body He promoted the development of Wilmington

Johnston, Joseph Eggleston, 1807–1901, Confederate general, b Prince Edward co , Va , grad West Point, 1829 He served against the Seminoles in Florida, in the topographical engineers, and with distinction under Scott in the Mexican War Johnston was quartermaster general with the rank of brigadier general, when he resigned (April, 1861) to fight for the Confederacy In May he was made a brigadier general and assigned to command at Harpers Ferry He evaded the Union army under Patterson and marched to the aid of Beauregard at BULL RUN, where his part in the Confederate victory won him a generalcy and the command of the Army of Northern Virginia (July) Johnston opposed McClellan in the PENINSULAR CAMPAIGN until he was wounded at Fair Oaks in May, 1862 Upon resuming service in November (R E LEE had assumed his old command), he was assigned to command the Dept of the West Though it seems certain that President Davis intended him to give orders to J C PEMBERTON at Vicksburg and Braxton BRAGG in Tennessee, Johnston chose to interpret his position as merely nominal When he finally did take command in the VICKSBURG CAMPAIGN, it was too late to save Pemberton Johnston, placed in command of the Army of Tennessee (Dec , 1863), adopted the policy of strategic retreat against W T SHERMAN in the ATLANTA CAMPAIGN—a policy that did not suit Davis, who appointed J B HOOD to succeed him He was restored to command in Feb , 1865, by Lee, now commander in chief He obstructed Sherman's advance through North Carolina, but upon hearing of Lee's surrender to Grant, he capitulated to Sherman on April 26 After the war Johnston served in the House of Representatives from Richmond, Va (1879–81), and by appointment of President Cleveland was Federal commissioner of railroads (1885–91) Overcautious as he was, Johnson was not very effective on the offensive but was probably the peer of Lee in defensive generalship See his *Narrative of Military Operations* (1874), biography by R M Hughes (1893), S F Horn, *The Army of Tennessee* (1941), D S Freeman, *Lee's Lieutenants*, Vol I (1942)

Johnston, Mary, 1870–1936, American novelist, b. Buchanan, Va , privately educated She is chiefly remembered for *To Have and to Hold* (1900), a story of colonial Virginia which was very popular, and its successor, *Audrey* (1902) All her 30-odd works combine romance with historical accuracy. *The Long Roll* (1911) and *Cease Firing* (1912) were good Civil War tales, and notable among her later novels were *The Great Valley* (1926) and *Miss Delicia Allen* (1932)

Johnston, Richard Malcolm, 1822–98, American author, b Hancock co , Ga , grad Mercer Univ., 1841 He is known for his sketches of rural Georgia, the collection *Dukesborough Tales* (1871) is best known See his autobiography (1900)

Johnston, Samuel, 1733–1816, American Revolutionary patriot, b Dundee, Scotland He came as a child to North Carolina, where his uncle, Gabriel JOHNSTON, was royal governor. After being admitted to the bar, he was a member of the colonial assembly (1759–75) and of its standing Committee of Correspondence after 1773 He was elected to the four provincial congresses (1774–76), presiding at the third and at the fourth, which passed the Halifax Resolves declaring for independence, served in the new state senate; and represented North Carolina in the Continental Congress (1781–82) Johnston was governor of North Carolina (1787–89) and presided over the convention (1789) at which the state finally ratified the Constitution of the United States He was one of North Carolina's first U S Senators (1789–93), a judge of the superior court (1800–1803), and one of the first trustees of the Univ of North Carolina See R D W Connor, *Revolutionary Leaders of North Carolina* (1916)

Johnston, 1 Town (pop 10,672), NE R I., set off from Providence and inc 1759 Thornton village is the center Johnston has worsted mills **2** Town (pop 1,100), W S C , WSW of Columbia near Edgefield, in a farm area

Johnston City, city (pop 5,418), S Ill , NNE of Cairo, in a coal and farm area, inc 1905.

Johnstone (jŏn'stun), industrial burgh (1931 pop 12,841, 1948 estimated pop 15,627), Renfrewshire, Scotland Thread, machine tools, and chemicals are its chief products

Johnston Island (pop 69), c 3,000 ft long and c 600 ft wide, central Pacific, c 715 mi SW of Honolulu The island was discovered (1807) by the British and claimed (1858) by the United States A bird reservation for years, it became a naval air station in 1941 In the Second World War it was shelled (1941) by the Japanese

Johnstown. 1 City (pop 10,666), co seat of Fulton co , E central N Y , near the Mohawk NW of Albany, founded 1762 by Sir William JOHNSON, inc as a city 1895 Its principal industry is glovemaking The city has a municipal hotel Johnson Hall, built by Sir William, houses many of his relics Other 18th-century buildings remain Elizabeth Cady Stanton was born here The last Revolutionary battle in New York was fought near Johnstown, Oct 25, 1781, Walter Butler was killed here **2** Village (pop 1,064), central Ohio, NE of Columbus **3** Industrial city (pop 66,668), SW Pa , on the Conemaugh river at the mouth of Stony Creek, in a narrow valley ESE of Pittsburgh, settled 1794, laid out 1800. Situated in a beautiful mountain region, it is a nucleus of heavy industry Its manufactures include iron, steel, chemicals, brick, and lumber A branch of the Bethlehem Steel Corp is here The first Kelly pneumatic converter for the transformation of crude iron into steel was built in 1862 in Johnstown, and after the Civil War rapid growth of iron and steel industries initiated the expansion of the city On May 31, 1889, the dam across the river c 12 mi above the city broke as a result of heavy rains, and the city was inundated, with great loss of life Flood occurred again in 1936

John the Baptist, Saint, fl A D c 29, Jewish prophet, the forerunner of JESUS, his cousin John was the son of St Zachary and St Elizabeth, and, according to the Gospel, his birth was miraculously foretold He undertook a mission, calling the people of the Jordan valley to repentance to prepare for the Messiah, and he baptized his followers He baptized Jesus His vigorous condemnation and great popularity enraged the aristocracy, and he offended Herodias (see HEROD) by rebuking her publicly At her instance and at that of her daughter SALOME he was beheaded Mat 11 1–19, 17 11–13, Mark 6 16–29, Luke 1, 3, John 1 The most popular artistic portrayals of St John picture his head on a charger, as borne by Salome Christians have always venerated St John the Baptist as high among the saints, thus he is the only saint besides the Virgin Mary whose birthday is celebrated June 24 (see MIDSUMMER DAY) The feast of his beheading is Aug 29

John the Fearless, 1371–1419, duke of Burgundy (1404–19), son of PHILIP THE BOLD He fought against the Turks at NIKOPOL in 1396 and was a prisoner for a year before he was ransomed He continued his father's feud with Louis, duc d'ORLÉANS, and made himself popular by advocating governmental reforms In 1407 he had Louis assassinated, having admitted his guilt, he left Paris, but he subsequently returned and obtained control of the government Constant rivalries between his party and Orléans's supporters led to open civil war in 1411 (see ARMAGNACS AND BURGUNDIANS) Embarrassed by the excesses of the CABOCHIENS (1413), he surrendered the government He recovered power (1418), permitted Rouen to be captured by the English (1419), and continued to negotiate both with Henry and with the dauphin (later Charles VII), who now led the Armagnacs At a meeting with the dauphin, John was assassinated (1419)

John the Posthumous, king of France see JOHN I

Johore (jōhōr', jo-), state (7,678 sq. mi.; pop. c 737,000), S Malaya, at the southern extremity of the Malay Peninsula opposite Singapore It is largely covered with jungle. The principal

rivers and routes of communication are the Muar and the Johore, the capital is Johore Bahru, across the strait from Singapore The Chinese and the Malays are the two largest groups in the population, there are a few primitives, the Jokun Johore has extensive rubber plantations, other agricultural products are rice, copra, and gambier. Tin and iron are mined. After the fall of Malacca to the Portuguese (1511), the former sultan of Malacca continued to rule over Johore, the Riouw archipelago, and other territories Johore became increasingly independent of his successors, in 1819 the governor of Johore granted the site of Singapore to the British East India Company and was recognised for practical purposes as an independent ruler. Thereafter relations between Great Britain and Johore were friendly, Johore remained one of the most peaceful of the Malay states In 1885 Johore and Great Britain established formal treaty relations, and in 1914 Johore accepted a British protectorate Till 1948, when it entered the Federation of Malaya, Johore was classed as one of the Unfederated Malay States

Joiada (joi'ŭdu) [Heb ,=God knows], high priest. Neh 12 10,11,22

Joiakim (joi'ŭ-) [short for JEHOIAKIM], high priest Neh 12 10

Joiarib (joi'ŭ-) [Heb ,=God defends]. **1** Exile returned from Babylon Ezra 8 16 **2** Chief priest Neh 11 10, 12 6,19 Jehoiarib 1 Chron 9 10, 24 7 **3** Judahite Neh 11 5

joinery, craft of assembling wood members with great accuracy of jointing and fitting, as is required especially for certain fine details of building interiors Where CARPENTRY refers to the rougher, simpler, and primarily structural elements of wood assembling, joinery has to do with difficult surfaces and curvatures, such as those of spiral stairs, with complex intersections of members or moldings, and with the handling of the finer qualities and varieties of woods The joiner's skill and art thus approach those of the cabinetmaker He must have an extensive knowledge of geometrical relations and projections, in addition to being manually proficient In modern woodworking, however, the hand processes of the joiner have been very largely superseded by mechanical means

joint, in anatomy, articulation between individual bones of the skeleton The most highly developed are synovial joints, which permit free movement In these the bones are connected by flexible ligaments attached near the ends of the bones, and these bone ends form a capsule around the joint cavity A synovial membrane, which produces a lubricating synovial fluid, lines the capsule In some synovial joints, a pad of fibrocartilage (articular disk) lies between the articular surfaces of the bones Joints which allow free movement may be of the ball-and-socket type, e g , the shoulder and the hip, the hinge type, e g , the knee, or the gliding variety, e g , the wrist bones Some joints are immovable, e g , those in the skull, others, e g , some of those in the spinal column, permit limited movement Diseases of the joints include arthritis, rheumatic fever, and gout Injury to a joint may result in a sprain or a dislocation

Joinville, Jean, sire de (zhäⁿ' sĕr' dŭ zhwĕvēl'), 1224?–1317?, French chronicler, biographer of LOUIS IX of France (St Louis) As seneschal of Champagne, Joinville was a close adviser to Louis, whom he accompanied (1248–54) on the Seventh Crusade. He refused to take part in the Eighth Crusade, which he opposed He dictated his memoirs of St. Louis between 1304 and 1309 for the instruction of Louis X The work is an invaluable record of the king, of feudal France, and of the Seventh Crusade It is written in simple and delightful style, with a deeply moving reverence for the saintly and chivalrous king, with a sharp eye for graphic and psychologic details, and, occasionally, with a sly sense of humor Filled with digressions and personal recollections, it is less the work of a historian than that of a wise and experienced gentleman There are several English translations of Joinville's memoirs, notably those by Sir Frank Marzials (Everyman's Library, 1908) and by Joan Evans (1938)

Joinville (shwĕvēl'), town (pop 3,162), Haute-Marne dept., NE France, on the Marne It has ruins from the time when its castle was the seat of the seneschals of Champagne, most famous of whom was Jean de Joinville The title to Joinville passed to the house of Orléans in the 17th cent. The treaty allying Spain with the League was signed here in 1584

Jokai, Maurice (yō'koi), Hung *Jókai Mór* (mōr), 1825–1904, Hungarian novelist and journalist A member (1861–97) of the Hungarian parliament, he was a prolific and popular writer, many of his novels, national in character and brilliant in style have been translated Among them are *An Hungarian Nabob* (1853–54, Eng tr , 1898), *The New Landlord* (1868, Eng tr , 1898), and *Black Diamonds* (1870, Eng tr , 1896).

Jokdeam (jŏk'dēăm, jōkdē'ăm), unidentified town, S of Hebron Joshua 15 56

Jokim (jō'-) [Heb ,=God establishes], son of Shelah the Judahite. 1 Chron. 4.22.

Jokmeam (jŏk'mēăm), unidentified town, central Palestine 1 Chron. 6.68. Kibsaim. Joshua 21.22. Jokneam 1 Kings 4.12.

Jokneam (jŏk'nēăm). **1** City, N Palestine, not certainly identified Joshua 12.22; 19.11, 21.34 **2** The same as Jokmeam.

Jokshan, son of Abraham Gen 25 2,3; 1 Chron. 1.32

Joktan, descendant of Shem Gen 10 25–30.

Jokthеel (jŏk'thēĕl, –thēl), unidentified city, SW Palestine Joshua 15 38 See also SELA

Jokulsa, Icelandic *Jökulsá* (yū'kilsou), river, c 125 mi long, rising in central Iceland and flowing N into the Axar Fjord The DETTIFOSS fall is located on it

Jokyakarta, Indonesia see JOGJAKARTA

Joliet, Louis. see JOLLIET, LOUIS

Joliet (jō'lĕt"), city (pop. 42,365), co seat of Will co , NE Ill., SW of Chicago and on the Des Plaines river, settled 1831, laid out 1834, inc 1837. It is an important railroad and industrial center, with limestone quarries and coal mines in the area Among the city's industries are steel mills, oil refineries, wallpaper factories, railroad shops, and chemical works The state penitentiary is here Joliet is the seat of the College of St Francis and a junior college In the city are Pilcher Park Arboretum and a large excavated Indian mound

Joliette (shōlyĕt'), city (pop 12,749), co seat of Joliette co , S Que , on L'Assomption river and NNE of Montreal Its industries include steel, paper, and textile mills, tobacco-processing, and quarrying The Séminaire de Joliette, affiliated with the Univ of Montreal, is here, and the city is the seat of a Roman Catholic bishopric

Joliot-Curie, Frédéric (frādārēk' zhōlyō'-kürē'), 1900–, and **Irène Joliot-Curie** (ērĕn'), 1897–, French scientists Frédéric Joliot married (1926) Irène Curie, daughter of Pierre and Marie Curie Both had been assistants at the Radium Institute in Paris, of which Irène, succeeding her mother, became director in 1932 Together the Joliot-Curies continued the work of the Curies on radioactivity For their artificial production of radioactive substances, by bombarding certain elements with alpha particles, they shared the 1935 Nobel Prize in Chemistry In 1946 Frédéric Joliot-Curie was appointed chairman of the atomic energy commission in France.

Jolliet or **Joliet, Louis** (both jō'lĕt", jo"lĕt', Fr lwē' zhōlyā'), 1645–1700, French explorer, joint discoverer with Jacques MARQUETTE of the upper Mississippi river, b Quebec prov , Canada After a year's study of hydrography in France and some years as a trader and trapper on the Great Lakes, Jolliet was appointed (1672) by Frontenac as leader of an expedition in search of the Mississippi He and Father Marquette, with five *voyageurs*, set out from St Ignace in May, 1763, went to Green Bay, ascended the Fox river, and then portaged (at the site of Portage, Wis) to the Wisconsin and descended to the Mississippi The group followed the west bank south until they passed the mouth of the Arkansas, then, having convinced themselves that the river emptied into the Gulf of Mexico, they ascended its eastern bank. They came to the Illinois river, ascended it, and, on the site of modern Chicago, portaged to the Chicago river and thus again reached Lake Michigan. Marquette remained in the West while Jolliet went east to make his report, but in the Lachine rapids, near Montreal, Jolliet's canoe overturned and his records were lost. His brief narrative written from memory is in essential agreement with Marquette's, the chief source account of the journey. Jolliet was rewarded with the gift of Anticosti island in the Gulf of St Lawrence, which was, however, seized by the British while Jolliet was absent on explorations in Labrador and around Hudson Bay In 1697 he was made royal professor of hydrography and given a seigniory near Quebec See F E A Gagnon, *Louis Jolliet* (1902), F. B Steck, *The Jolliet-Marquette Expedition* (rev ed , 1928).

Jolo, Philippine Islands see SULU ARCHIPELAGO.

Jomelli, Nicola see JOMMELLI, NICOLA

Jomini, Antoine Henri (ätwän' ärē' zhōmēnē'), 1779–1869, Swiss general and military writer He organized the militia of the Helvetic Republic in 1799 and after 1804 served as staff officer in the French army, particularly under Marshal Ney In Aug , 1813, after a clash with Marshal Berthier, he went over to the Russian army, in which a commission had been waiting for him since 1808 He rose to high rank in Russia and became one of the most celebrated authorities on strategy His works include *Traité des grandes operations militaires* (1805–7), a study of the campaigns of Frederick the Great, *Histoire critique et militaire des campagnes de la Révolution* (1819–24), a comprehensive study of the French Revolutionary Wars, and *Précis de l'art de la guerre* (1836), a treatise on the art of war.

Jommelli or **Jomelli, Nicola** (both. nĕkō'lä yōmēl'lē), 1714–74, Italian opera composer of the Neapolitan school His earliest works, such as *L'errore amoroso* (Naples, 1737) and *Eso* (Bologna, 1741), were highly successful While he was choir director (1749–54) at St Peter's in Rome, he composed church music. Then, until 1769, he was in Stuttgart as musical director to the duke of Württemberg. After his return to Naples his last operas, such as *Armida abbandonata* (1770) and *Ifigenia in Tauride* (1771), were rejected by the public as too learned and too German Despite an attack of apoplexy in 1773, he was still able, in his last year, to compose a *Miserere* which is considered his masterpiece Gluck's reform of the opera is, to some extent, foreshadowed in Jommelli's operas.

Jona, variant of JONAH. See also BAR-JONA.

Jonadab (jō'nŭ-) [Heb ,=munificent] **1** Nephew of David 2 Sam 13 3,32–36 **2** Founder of the Rechabites and a companion of Jehu Jer. 35 Jehonadab 2 Kings 10.15–27

Jonah, Rabbi, or **Abu-l-Walid Merwan ibn Janah** (ä'bōōlwä'lĕd mĕr'wän I'bŭn jä'nä), or **Marinus** (mürī'nus), c.990–c.1050, Hebrew lexicographer and grammarian, b Córdoba His principal work is *The Book of Exact Investigation*, a grammar and lexicon of the Hebrew language. He died at Sargossa

Jonah (jō'nu) [Heb ,=dove], **Jonas** (jō'nŭs), or **Jona,** book of the Old Testament, fifth of the books of the Minor Prophets It tells of the career of a Hebrew prophet sent to reform Nineveh, he is specifically dated as living under Jereboam II (8th cent B C) 2 Kings 14 25 His story is famous to avoid the divine mission he sails for Tarshish but is thrown overboard (consenting) because he has brought down a storm on the ship Swallowed by a monster of the deep, he is vomited up on shore after three days Now willing, he preaches his mission, with a success so great that God is moved by the people's repentance and revokes the doom Jonah had foretold The prophet, irritated by the divine change of heart, sulks, but is shown by an example how God's mercy prevails Allusions to the story are frequent in the Bible Mat 12 39–41, 16 4, Luke 11 29–30, Tobit 14 4 Jonah's coming forth from the whale after being swallowed is famous as a prefiguration of the resurrection of Christ For bibliography, see OLD TESTAMENT

Jonan (jō'-), ancestor of Joseph. Luke 3 30

Jonas (jō'-), Greek form of Hebrew JONAH. For the father of St Peter, see BAR-JONA

Jonas, Justus (yōōs'tōōs yō'nus), 1493–1555, German Protestant reformer In 1520 Jonas, then a young professor at the Univ of Erfurt, accompanied Luther to the Diet of Worms During an intimate friendship Jonas assisted Luther with the translation of the Bible He was present at Luther's death and preached his funeral sermon

Jonathan (jŏn'-) [short for JEHONATHAN] **1** Saul's son and David's friend, killed at the battle of Mt Gilboa 1 Sam. 13, 14 18–20, 20 16–18, 31 1,2 **2** David's nephew 2 Sam 21 21 This is probably the Jonathan called David's uncle in the translations of 1 Chron 27 32 **3** Priest Judges 18 21 **4** Courtier under David 2 Sam 15, 17 17,20, 1 Kings 1 42 **5** One of David's men 2 Sam 23 32, 1 Chron 11 34 **6** Jerahmeelite 1 Chron 2 32,33 **7** Israelite in the return to Jerusalem Ezra 8 8 **8** Priest involved with the foreign marriages Ezra 10 15 **9** The same as JOHANAN **5** **10** Priest Neh 12 14 **11** Levite Neh. 12 35 **12** Scribe in whose house Jeremiah was imprisoned Jer 37 15, 38 26 **13** Captain under Gedaliah Jer 40 8 **14** One of the MACCABEES 1 Mac 9–13, 2 Mac 8 22

Jonath-elem-rechokim. see AIJELETH SHAHAR

Jones, Anson, 1798–1858, last president of the Texas republic (1844–46), b near Great Barrington, Mass. He studied medicine, taught, clerked in a grocery store, and ran a drugstore, and intermittently practiced medicine in various places, including Philadelphia, Carácas in the present Venezuela (1826–28), and New Orleans (1832–33) In 1833 he went to Texas and became a doctor in Brazoria He joined the revolutionary forces in the war against Mexico and was present at the battle of San Jacinto (1836) Entering politics, he was a member of the Texas congress, was appointed (1838) by President Sam Houston as minister to the United States, was dismissed (1839) by President M B Lamar, and served as a senator His appointment as secretary of state in the second Houston administration prepared the way for his serving as president briefly, for the annexation of Texas ended his term and his career He committed suicide in 1858. See biography by Herbert Gambrell (1948).

Jones, Casey, 1864–1900, American locomotive engineer celebrated in ballad and song, b Jordan, Fulton co , Ky His real name was John Luther Jones, but at the age of 17 he went to Cayce, Ky , and there he was employed as a telegraph operator, from the name of the town he was given the nickname "Casey " In 1888 he entered the service of the Illinois Central RR as a locomotive fireman and soon (1890) was promoted to engineer He was famous among railroad men for his boast that he always brought his train in on schedule and for his peculiar skill with a locomotive whistle Given the "crack" assignment of driving the *Cannon Ball* express from Memphis, Tenn., to Canton, Miss.—a particularly dangerous run in which several accidents had occurred Casey Jones was determined to bring the overdue train in on time but met with disaster. On the morning of April 30, 1900, confronted with a stationary freight train a few feet

ahead of his speeding locomotive at Vaughan, Miss., he ordered his fireman to jump. He applied the brakes, and although the *Cannon Ball* crashed and Jones was killed, the passengers were saved. Before long popular ballads were sung about Casey Jones, and by 1903 the song *Casey Jones* was published. Monuments commemorating Jones stand at Cayce and Clinton, Ky He was buried at Jackson, Tenn See biography by F J Lee (1939).,

Jones, Davy see DAVY JONES

Jones, Sir Edward Burne- see BURNE-JONES.

Jones, Ernest Charles, 1819–68, English agitator, lawyer, journalist, and poet He was a prominent and disinterested leader of the Chartists (see CHARTISM) After imprisonment for sedition (1848–50), he edited a radical journal and later practiced as a lawyer *The Battle Day and Other Poems* (1855) and his other labor verse have more literary merit than his sensational novels

Jones, George Wallace, 1804–96, American statesman, b Vincennes, Ind , grad Transylvania Univ., 1825 He moved (1826) to Michigan Territory, took a prominent part in frontier affairs, and served in the Black Hawk War (1832) He entered (1835) the U S Congress as delegate from Michigan Territory Jones secured (1836) the organization of Wisconsin Territory and became Wisconsin delegate in Congress He then secured the territorial organization of Iowa, and with the admission (1846) of Iowa to statehood he became one of that state's U S Senators He was Senator for two terms (1848–59) but failed to secure the renomination mostly because of his compromise stand on the slavery question He served (1859–61) as minister to New Granada (Colombia) Upon his return to the United States, he was arrested for carrying on a correspondence with Jefferson Davis, an old friend, but was released by Lincoln's orders See J C Parish, *George Wallace Jones* (1912), which includes autobiographical fragments

Jones, Henry see CAVENDISH

Jones, Henry Arthur, 1851–1929, English playwright His first success was *The Silver King* (with Henry Herman, 1882), a melodrama popular for a generation This was followed by a number of plays devoted to social problems, including *The Middleman* (1889), *Wealth* (1889), and *Mrs Dane's Defense* (1900) Jones considered his best work to be *Michael and His Lost Angel* (1896) His comedies, including *The Masqueraders*, (1894) and *The Liars* (1897), were also social criticism See biography by his daughter Doris Arthur Jones, *Taking the Curtain Call* (1930)

Jones, Hugh Bolton, 1848–1927, American landscape painter, b Baltimore, Md His landscapes are carefully drawn and delicate in coloring Among them are *Spring* and *Autumn* (Metropolitan Mus), *Springtime* (Corcoran Gall), and *Tangiers* (Walters Art Gall , Baltimore)

Jones, Inigo, 1573–1652, earliest of England's great architects Son of a London clothmaker, he became a protégé of the earl of Pembroke and at his expense traveled in Italy, where he thoroughly studied the remains of Roman architecture and the Renaissance buildings by Palladio He was employed by both James I and Charles I in designing settings for the elaborate masques (some of which he wrote) produced at the English court, he performed various architectural services for the crown After renewed visits to Italy, he was appointed king's surveyor of the works (1615) In 1619 he began the royal banqueting hall in Whitehall, London, his finest work and the first English design to embody Palladian principles Here Jones introduced the severely classic use of the architectural orders which he had assimilated in Italy, producing a work which made a clean break from prevailing Jacobean design and marked a starting point for the classic architecture of the late Renaissance and Georgian periods in England Others of his London buildings are designs for the earliest portion of Greenwich Hospital (1635), the Church of St Paul, Covent Garden, with its square (1631–38), and the Barber-Surgeons' Hall In addition he built houses both in London and in the country, notably Ashburnham House in Westminster

Jones, James Kimbrough, 1839–1908, American political leader, b De Soto co , Miss He moved to Arkansas, where he became a planter and a lawyer and entered politics He was a member of the House of Representatives (1881–85) and of the Senate (1885–1903) and was Democratic floor leader in the Senate after 1899 He was chiefly interested in tariff matters and in bimetallism He was largely responsible for the passage of the Wilson-Gorman Tariff Act in 1894, and he was a leading champion of the free coinage of silver. As chairman of the Democratic National Committee he managed the unsuccessful campaigns of William Jennings Bryan for the presidency in 1896 and 1900

Jones, Jesse Holman, 1874–, U S Secretary of Commerce (1940–45), b Robertson co , Tenn A lumber magnate, banker, and millionaire of Houston, Texas, Jones was appointed by Herbert Hoover chairman of the Reconstruction Finance Corporation. He continued in office under President F D. Roosevelt, and with the merging of the RFC with other Federal agencies, he became (1939) Federal loan administrator. He served in the cabinet and continued as Federal loan administrator until 1945, when Henry A. Wallace became Secretary of Commerce

Jones, John, 1729–91, American surgeon, b Jamaica, N.Y , studied in London and Paris He served on the first medical faculty of King's College (now Columbia Univ) from 1767 to 1776 He wrote a handbook for surgeons of the Revolution (the first American work of the kind) and was noted for his skillful lithotomies

Jones, John Paul, 1747–92, American naval hero, b near Kirkcudbright, Scotland His name was originally simply John Paul He went to sea when he was 12, and his youth was adventure-filled He was chief mate on a slave ship in 1766, but disgusted with the work, he briefly traveled with a theatrical troupe in the West Indies before going back to sea and getting a command In 1773 off Tobago members of his crew mutinied and he killed one of the sailors in self-defense To avoid trial he fled, and in 1775 he was in Philadelphia, with the Jones added to his name Joseph Hewes of Edenton, N C , obtained for him a commission in the Continental navy, but from the start he was held back by the sort of political machinations that were to plague his naval genius to the end He first hoisted the first national flag on the flagship *Alfred* In 1777 he was given command of the *Ranger*, fresh from the Portsmouth shipyard He sailed to France, then daringly took the war to the very shores of the British Isles on raids and in 1778 captured the *Drake*, the first British warship to surrender to a Continental vessel It was, however, only after long delay that he was given another ship, an old French merchantman, which he rebuilt and named the *Bon Homme Richard*, to honor Benjamin Franklin He set out with a small fleet, but was disappointed in the hope of meeting a British fleet returning from the Baltic until the projected cruise was nearly finished On Sept 23, 1779, he did encounter the British merchantmen, convoyed by the frigate *Serapis* and a smaller warship Seeing the superiority of the *Serapis* Jones did not hesitate He sailed close in, to cut the advantage of the *Serapis*, and finally in the battle lashed the *Bon Homme Richard* to the British ship The battle, which began at sunset and ended more than three and a half hours later by moonlight, was one of the most memorable in naval history The hull of the *Bon Homme Richard* was pierced, her decks were ripped, her hold was filling with water, and fires were destroying her, unchecked, yet when the British captain asked if Jones was ready to surrender, the answer came proudly, "Sir, I have not yet begun to fight " He and his men boarded the *Serapis* and took her while his own vessel sank He was much feted in France for the victory, but he was not much recognized in the United States After the Revolution he was sent to Europe to collect the prize money due the United States In 1788 he accepted the invitation of Catherine the Great to become a Russian rear admiral His command against the Turks in the Black Sea was successful, but again political intrigue prevented his getting due credit In 1789 he was discharged from the Russian navy and returned to Paris There in the midst of the French Revolution he died, without receiving the commission that Jefferson had procured for him to treat with the dey of Algiers concerning American prisoners Though he is today generally considered the greatest of American naval heroes and the founder of the American naval tradition, his grave was forgotten until the ambassador to France, Horace P Porter, discovered it in 1905 after the expenditure of much of his own time and money The remains were brought to Annapolis and have been since 1913 enshrined in a crypt at the U S Naval Academy See Anna P De Koven, *Life and Letters of John Paul Jones* (1913), F A Golder, *John Paul Jones in Russia* (1927), Lincoln Lorenz, *John Paul Jones* (1943), Gerald W Johnson, *The First Captain* (1947)

Jones, John Percival, 1829–1912, American political leader, b Herefordshire, England Brought to Ohio as an infant, he went to California in the gold rush when he was a young man He had a varied career, including service (1863–67) in the California legislature, before he went to Nevada, where he made a fortune from a silver mine He made himself the spokesman of the silver miners and was a leading advocate of the free coinage of silver He served as a U S Senator from 1873 to 1903, elected as a Republican except in the 1896 election As chairman of the U S Monetary Commission, he submitted a two-volume report favoring bimetallism He retired in 1903

Jones, Leonard Augustus, 1832–1909, American writer on legal subjects, b Templeton, Mass , grad Harvard Law School, 1858 After 1898 he was judge of the newly created Massachusetts land court He wrote standard treatises on many subjects, including real property, mortgages, securities, easements, and landlord and tenant

Jones, Mary (Harris), 1830–1930, American labor agitator, called Mother Jones, b Ireland Always interested in the labor movement, she became active in it after the death of her husband and children in 1867. She won fame as an effective and ubiquitous speaker, always appearing at the scene of any major strike In 1930 the Progressive Miners of America erected a memorial on her grave in Mt Olive, Ill Her autobiography (ed by M. F. Parton, 1925) contains some factual inaccuracies.

Jones, Owen, 1809–74, English architect He wrote *Plans, Elevations, Sections and Details of the Alhambra* (1845), the first systematic study of Hispano-Moresque art He served as one of the superintendents of works for the Great Exhibition of 1851 and had charge of the decorations of the Crystal Palace at Sydenham He was most influential, however, through his studies and writings on the decorative arts, the most notable of which, the *Grammar of Ornament* (1856), a collection of ornamental devices of all nations, still remains a standard work

Jones, Sir Robert, 1858–1933, British surgeon He was widely known for his skill in treating diseases and injuries of bones and joints and for reducing deformities resulting from infantile paralysis He was knighted in 1917 His works include *Injuries to Joints* (1915) and *Orthopedic Surgery* (with R W. Lovett, 1923) See biography by Frederick Watson (1934)

Jones, Robert Edmond, 1887–, American stage designer, b Milton, N H , grad Harvard, 1910 He studied with George Pierce Baker at the 47 Workshop and with Max Reinhardt in Berlin Some of his most notable designs have been for *The Man Who Married a Dumb Wife*, *The Jest*, *Macbeth*, *Richard III*, *Hamlet*, *Desire under the Elms*, *The Green Pastures*, and *The Iceman Cometh* In 1923, when the Provincetown Players dissolved, he joined Eugene O'Neill and Kenneth Macgowan in forming the Experimental Theatre Jones did the designing for the early three-color-process moving picture *La Cucaracha* (1933) He wrote *Drawings for the Theatre* (1925), *The Dramatic Imagination* (1941), and, with Kenneth Macgowan, *Continental Stagecraft* (1922)

Jones, Robert Tyre, Jr. (Bobby Jones), 1902–, American golfer, b Atlanta, Ga , grad Harvard, 1924 After studying (1926–27) law at Emory Univ , he was admitted (1928) to the bar and practiced law in his native city Meanwhile he had become devoted to the game of golf Jones won the National Open (1923, 1926, 1929), the National Amateur (1924–25, 1927–28), and the British Open (1926–27) The first golfer to win the National and the British Open tournaments in the same year (1926), Jones became the only player ever to make the "grand slam" in golf—winning the National Open, the National Amateur, the British Open, and the British Amateur championships in 1930 He then retired from tournament play He is generally considered to have been the greatest golfer of his time In the Second World War he was a major in the U S Army Air Force He wrote, with O B Keeler, *Down the Fairway* (1927)

Jones, Rufus Matthew, 1863–1948, American minister of the Society of Friends, educator, and author, b South China, Maine He taught philosophy and ethics at Haverford College, Pa , from 1893 to 1934 One of the founders of the noted American Friends Service Committee (1917), he was its chairman until 1928 and thereafter honorary chairman His many books, mainly on the Quakers and on mysticism include *Quakerism, a Religion of Life* (1908), *The Quakers in the American Colonies* (1911), *The New Quest* (1928), *George Fox, Seeker and Friend* (1930), *Radiant Life* (1944), and *The Luminous Trail* (1947)

Jones, Samuel Milton, 1846–1904, American political reformer, known as "Golden Rule" Jones, b. North Wales He was brought to America as a child and worked in the oil fields of Pennsylvania and Ohio He invented improvements in oil-drilling machinery, and after the oil trust refused to handle these innovations, Jones manufactured them himself—and lucratively—in Toledo, Ohio He was noted for his advanced program of employer-management relations Elected (1897) mayor of Toledo on the Republican ticket, he put into operation a comprehensive program of municipal reform When refused renomination in 1899, he ran as an independent and overwhelmingly defeated both political machines He was reelected in 1901 and 1903 and died in office He was succeeded by Brand WHITLOCK, who portrayed Jones's picturesque life in *Forty Years of It* (1914) See his autobiography, *The New Right* (1899)

Jones, Samuel Porter (Sam Jones), 1847–1906, American evangelist, b Alabama He was converted in 1872 and entered the ministry of the Methodist Episcopal Church South Itinerant preaching made him a familiar figure, and he was called to various parts of the country to conduct evangelistic meetings As a revivalist he had extraordinary success, swaying great audiences by his direct, homely speech and unconventional ways

Jones, Thomas ap Catesby, 1789–1858, American naval officer, b Westmoreland co , Va He joined the navy in 1805 and helped suppress piracy and the slave trade in the Gulf of Mexico (1808–12). In the War of 1812 he made a desperate and unsuccessful effort to halt the fleet carrying the Brit-

ish army to New Orleans from crossing Lake Borgne (1814) In 1826 he made a visit to Hawaii that increased U S. prestige in those islands In 1842, acting upon a rumor that the United States and Mexico were at war, he captured Monterey, Calif For this action he was removed from command, but in 1855, long after the Mexican War had been fought, he was restored

Jones, Wesley Livsey, 1863–1932, American legislator, b Moultrie co Ill He practiced law in North Yakima, Wash , and served in the House of Representatives (1899–1909) In the Senate (1909–32), he helped write the Merchant Marine Act of 1920, had charge (1927–28) of Mississippi flood-control legislation, and became chairman of the Senate appropriations committee He sponsored the Jones Act (1929), popularly known as the five-and-ten act because of the severe penalties (five years in prison, $10,000 fine, or both) for prohibition violations The act aroused much clamor and failed of enforcement in many wet districts.

Jones, Sir William, 1746–94, English philologist and jurist, one of the greatest scholars of England He was famous in jurisprudence and in Oriental languages In the former field, he published an *Essay on the Law of Bailments,* widely used in America as well as in England, and translated the Greek orator Isaeus on inheritance and the Sanskrit code of Manu, besides publishing two works on Mohammedan law For 11 years he was a supreme court judge in Calcutta His philological works include a Persian grammar and translations of the *Sakuntala* of Kalidasa, the *Hitopadesa* (both in Sanskrit), poems of Hafiz (Persian), and the *Moallakat* (Arabic) He founded the Asiatic Society of Bengal at Calcutta, through which, as well as through his publications, he had a great influence on literature, Oriental study, and philology in Western Europe There is a monument to him, erected by the East India Company, in St Paul's, London

Jones Beach, state park 2,413 acres, on a sandy island off the south shore of Long Island, SE N Y , est 1929 It has 2½ mi of beach and boardwalk and is accessible to New York city

Jonesboro. **1** City (pop 11,729), co seat of Craighead co , NE Ark , in a hilly region, founded 1859, inc 1883 It is the distributing center for a large farm area producing cattle, poultry, corn, fruit, truck, cotton, and rice, with industries based on these products ARKANSAS STATE COLLEGE and a state park are near by **2** City (pop 1,204), co seat of Clayton co , W central Ga , S of Atlanta, in a farm area, settled 1823, inc 1859 A near-by historical museum is on the site of the Civil War battle of Jonesboro in Sherman's Atlanta campaign (1864) **3** City (pop 1,521), co seat of Union co , S Ill , N of Cairo, in a farm area, laid out 1816, inc 1857 A Lincoln-Douglas debate was held on the fairgrounds here in 1858 **4** Town (pop 1,791), E central Ind , near Marion, platted 1837 It is a farm trading center and produces electric wire and cable **5** Lumber town (pop 2,639), parish seat of Jackson parish, N La , SSW of Ruston **6** Town (pop 976), co seat of Washington co , NE Tenn , near Johnson City, laid out 1779 It is the oldest town in Tennessee It was the first capital of the State of Franklin (see FRANKLIN, STATE OF) Andrew Jackson was admitted to law practice here in 1788, that same year he fought a duel with Waightstill Avery Among old buildings is an inn built c 1798

Jonesport, town (pop 1,745), SE Maine, SW of Machias, settled 1763–64, inc 1832 A port of entry, it is a summer resort and fishing place Beals was included until 1925

Jonesville. **1** Fishing and lumbering town (pop 2,080), E central La , on the Black River, settled on the site of an Indian village, inc 1904 **2** Village (pop 1,302), S Mich , on the St Joseph and SW of Jackson, settled 1828, inc 1855 Display fixtures and toys are made The Sac Trail crossed the river here. **3** Town (pop 1,733), N N C , on the Yadkin and NW of Winston-Salem, in a tobacco area **4** Textile-mill town (pop 1,182), NW S C , between Union and Spartanburg, settled 1808, inc 1876

Jongkind, Johann Barthold (yōhän' bar'tōlt yông'kĭnt), 1819–91, Dutch landscape painter and etcher, studied in Paris with Isabey Jongkind's work was a transition between the naturalism of the 1830s and the impressionistic school He painted chiefly in France, though many of his scenes are Dutch He is considered one of the foremost etchers of the 19th cent His work is in the Louvre, the Rijks Museum and the municipal gallery of Amsterdam The Metropolitan Museum has *Sunset on the Scheldt* and *Honfleur*

jongleur (jŏng'glur, zhông-glûr'), itinerant entertainer of the Middle Ages in France and Norman England, skilled in playing musical instruments His repertoire included singing, dancing, conjuring, acrobatics, and the feats of the modern JUGGLER The jongleur was sometimes an apprentice or assistant to a TROUBADOUR or a TROUVÈRE. See Allardyce Nicoll, *The Development of the Theatre* (3d ed , 1948)

Jonkoping, Swed *Jönköping* (yün'chû"pĭng), city (pop. 40,115), S central Sweden, on Vattern Lake. It has the world's largest match factories (founded 1844) and a textile industry dating from the 17th cent Built on piles over a marsh, Jonkoping was chartered in 1284 Gustavus Adolphus gave (1620) the city special privileges after the citizens had burned it to avoid sack by the Danes Its present aspect is modern It is the county seat for **Jonkoping,** Swed *Jönköpings län* (yün' chû" pĭngs lĕn'), county (4,446 sq mi , pop 253, 794), which is part of the historical province of SMALAND

Jonquière (zhôkyĕr'), town (pop 13,769), S Que , on the Sable river, a tributary of the Saguenay, WSW of Chicoutimi and near Kénogami It developed with the establishment (1902) of a pulp mill, and it now has also railroad repair shops

jonquil see NARCISSUS

Jonson, Ben, 1572–1637, English dramatist and poet After a brief term at bricklaying, his stepfather's trade, and after service in Flanders, he became an actor In 1598 he was tried for killing another actor in a duel but escaped execution by pleading self-defense and benefit of clergy While in prison he was converted to Roman Catholicism, but he returned to the Church of England 12 years later His first play, *The Case Is Altered,* was produced in 1597, and by 1598 he had become a leading dramatist In that year *Every Man in His Humour* appeared with Shakspere as one of the actors In 1599 Jonson wrote a companion piece, *Every Man Out of His Humour* He followed this with *Cynthia's Revels* (1600) and *Poetaster* (1601), two comedies which reflect his disagreement with Marston and Dekker In 1603, after coming into favor with James I, for whom he wrote court masques, Jonson turned temporarily to tragedy with *Sejanus* His next five plays are generally conceded to be his masterpieces—the comedies *Volpone* (1606), *Epicoene* (1609), *The Alchemist* (1610), and *Bartholomew Fair* (1614) and the tragedy *Catiline* (1611) His later plays marked a decline in his ability In his "comedy of humors," Jonson capitalized on human fallibility by giving each character a predominant "humor" or oddity which overshadowed all his other characteristics Jonson's dramatic writing as a whole was influenced by the Roman dramatists, especially Plautus The nondramatic poetry of Jonson is marked by classic precision and includes epigrams, reflective pieces, and lyrics The most famous of these are "Song, to Celia" ("Drink to me only with thine eyes"), "A Celebration of Charis," and "Hymn to Diana" Jonson exerted a strong influence over his many followers, "the tribe of Ben," and the neoclassicism which he espoused and practiced gave a new strength and character to English poetry His commonplace book, *Timber* (1641), is made up of translated paraphrases and extracts from the classics Examples of his conversation have been preserved in *Conversations with Ben Jonson* (1833) by William Drummond of Hawthornden, whom Jonson visited in Scotland in 1619 He was a friend of Shakspere and paid him tribute in the First Folio with his famous "He was not of an age, but for all time" Jonson's tomb in Westminster Abbey bears the inscription "O rare Ben Jonson" See his works (ed. by C H Herford, Percy Simpson, and Evelyn Simpson, 1925–), biographies by G G Smith (1919) and John Palmer (1934), G B Johnston, *Ben Jonson, Poet* (1945)

Jonson, Cornelis van Ceulen see JANSSENS, CORNELIS VAN CEULEN

Jonsson, Einar (ā'nar yōn'sôn), 1874–, Icelandic sculptor and painter In Reykjavik, Iceland, there is a special museum of his work His statue of Thorfinn Karlsefni is in Philadelphia

Joos of Ghent see JUSTUS OF GHENT

Jooss, Kurt (kōōrt' yōs'), 1901–, German dancer and choreographer He studied with Rudolph Laban and founded (1926) a company of dancers at Essen, Germany, which won its first international success with his ballet *The Green Table* (1932) His other works, which combine the techniques of classical ballet and modern dance, include *The Prodigal Son, The Big City,* and *Pandora*

Joplin (jŏp'lĭn), city (pop 37,144), SW Mo , at the edge of the Ozarks and W of Springfield, settled c 1840, inc 1873 It is a railroad center, the shipping and processing point of a grain and livestock region with dairy and fruit farms, and the industrial center of an important lead and zinc area The city's manufactures include metal and leather products, sewer pipes, and explosives

Joppa, Palestine see JAFFA

Jorah (jō'rŭ), the same as HARIPH

Jorai (jō'rāĭ, jōrā'ĭ), Gileadite 1 Chron 5.13

Joram (jō'rĭm) **1, 2** Kings of Israel and Judah see JEHORAM **1, 2** **3** Son of Toi, king of Hamath, sent to congratulate David on the defeat of Hadadezer 2 Sam 8 9–10 Hadoram 1 Chron 18.10 **4** Levite 1 Chron 26 25

Jordaens, Jacob (yā'kôp yôrdäns), 1593–1678, eminent Flemish painter He was early admitted to the painters' guild of his native Antwerp, where he achieved a high reputation, was overwhelmed with commissions, and spent practically all his life He worked as an assistant to Rubens and acquired much of his master's brilliant technique without surrendering his own individuality. After the death of Rubens and of Van Dyck he was the leading Flemish painter of his day. Like Rubens he excelled in large allegorical paintings, portraits, and portrait groups He also painted religious subjects. Jordaens expresses a joy of life as lusty as Rubens's and is somewhat less refined in his celebration of eating and drinking His warm, glowing color, vivacious and masterly technique, and admirable composition won him an assured place among the great masters of the Flemish school Although his chief works are in oil, he also painted many fine water colors Among his many famous works are *Triumph of Frederick Henry of Orange,* a mural (House in the Wood, The Hague), *Fecundity* (Brussels), *Triumph of Bacchus; Presentation in the Temple,* portrait of Admiral de Ruyter (Louvre), *The Artist's Family* (Hermitage, Leningrad), and *Three Musicians* (Prado) Splendid examples of his work are to be seen in almost all the principal European galleries The Metropolitan Museum has his *Sketch from Sacred History* and *The Philosophers* See study by Max Rooses (Eng tr , 1908)

Jordan, Camille (kămē'yu shôrdă'), 1771–1821, French revolutionist and writer A moderate, he fled France during the Terror and again after 18 Fructidor In exile, he befriended Goethe, Schiller, and Herder Back in France after Napoleon's accession, he wrote (1802) the widely read pamphlet, *Vrai sens du vote national,* directed against Napoleon

Jordan, David Starr (jôr'dun), 1851–1931, American scientist and educator, b Gamesville, N Y , M S Cornell, 1872, M D Indiana Medical College, 1875, and studied under Louis Agassiz at Penikese Island He taught (1875–79) at Butler Univ and in 1879 became professor of zoology and head of the department of natural science at Indiana Univ , there he was president from 1885 to 1891 He served as the first president (1891–1913) of Stanford Univ and as chancellor (1913–16) Jordan reorganized the institution's finances, gathered a notable faculty, and instituted new educational methods A prolific writer and popular speaker, he was active as director (1910–14) of the World Peace Foundation and president (1915) of the World Peace Congress Peace and international arbitration were the subjects of his books *The Human Harvest* (1907) and *War and Waste* (1914) As a leading ichthyologist Jordan served on international commissions for fisheries and as assistant (1877–91, 1894–1909) to the U S Fish Commission His earliest important work, *A Manual of the Vertebrate Animals of Northern United States* (1876), went through many editions He also wrote *The Fishes of North and Middle America* (4 vols , 1896–1900), *Guide to the Study of Fishes* (with B W Evermann, 1905), *Your Family Tree* (with S L Kimball, 1929), and *Trend of the American University* (1929) See his autobiographical *The Days of a Man* (1922)

Jordan, Dorothea or **Dorothy,** 1762–1816, British actress, whose real name was Dorothy Bland Born in Ireland, she first appeared on the Dublin stage in 1777 but ran away to England and there played the county circuits In 1785 she made her debut at Drury Lane as Peggy in *The Country Girl* (Garrick's version of Wycherley's play), later appearances as Sir Harry Wildair, Lady Teazle, Viola, and Rosalind established her as the first actress in the comedy of fantasy She had great exuberance and charm and was praised by Leigh Hunt, Hazlitt, and Lamb She became the mistress of the duke of Clarence (later William IV) and bore him many children See biographies by James Boaden (1831) and Clare Jerrold (1914)

Jordan, kingdom (exclusive of former Palestinian territories c 34,750 sq mi , pop c 400,000), SW Asia. The capital is Amman The country, formerly called Trans-Jordan or Transjordania, is officially named the Hashemite Kingdom of Jordan It is bordered by Syria on the north, by Iraq on the east, by Saudi Arabia on the east and south, and by Israel on the west The country's only outlet to the sea is Aqaba, a port on the stretch of coast (under 10 mi long) on the Gulf of Aqaba This article discusses chiefly the area E of the Jordan river, the former national boundary, for the area to the west, see PALESTINE Jordan is mainly arid hills and mountains which support a small number of pastoral nomads In the west agriculture is practiced extensively, with wheat, barley, and grapes the principal crops Livestock raising occupies a large part of the sedentary population British aid has given the country its railroad (c 280 mi long in Jordan), extending from Maan in the south to Damascus, Syria The British are also responsible for the c 1,400 mi of asphalt roads Jordan approximately corresponds to the biblical lands of Edom, Gilead, and Moab and to the lordships of Montreal and Krak in the Latin Kingdom of Jerusalem The area fell to the Ottoman Empire in the 16th cent and remained under Turkish rule until the end of the First World War In 1920 Jordan was part of the short-lived kingdom of Syria under Feisal I, but it was quickly subjugated by the British Great Britain, which administered Jordan as part of the Palestine mandate of the League of Nations, agreed in 1923 to recognize its independence under ABDULLAH, a son of Husein ibn Ali of the Hashemite family. Opposition was

expressed by some Zionist groups, but nevertheless an administrative agreement (1928) made Great Britain suzerain and gave it unlimited authority to maintain garrisons The loyalty of Jordan in the Second World War led to termination of the mandate and the proclamation of the kingdom in 1946 A treaty in 1948 set forth the relations of the two countries Jordan, while fully independent, was to receive an annual subsidy of some £2,000,000 per annum for its famed Arab Legion In time of peace British garrisons were to be maintained at the principal airports only Jordan long opposed Zionist aims, and when Palestine was partitioned (May, 1948) Jordan together with other members of the ARAB LEAGUE dispatched armed forces to resist Israel The troops of the Arab Legion were unsuccessful against the Israeli forces, but they did hold most of that part of W central Palestine which the United Nations had designated Arab territory Late in 1949 Jordan concluded a truce with Israel, and early in 1950 it annexed the occupied portion of Palestine The national population was thereby increased by some 450,000 (many of them homeless refugees from Israel) and the land area by some 2,500 sq mi This action of Jordan was strongly resented by other Arab countries See F G Peake, *A History of Transjordan* (1934), A Konikoff, *Transjordan an Economic Survey* (1946), J B Glubb, *The Story of the Arab Legion* (1948)

Jordan 1 City (pop 1,422), E Minn , SW of Minneapolis, platted 1854, inc as a village 1872, as a city 1891 It is a farm trade center 2 Village (pop 1,115), central N Y , W of Syracuse, in a farm area, inc 1835

Jordan, river rising in the Anti-Lebanon mts in Syria and flowing c 230 mi S to the Dead Sea It is the longest and most important river of Palestine On its early course the Jordan flows precipitately through the Bahr-el-Huleh and the Sea of Galilee Thereafter it winds tortuously, and in its final stage it is narrow, sluggish, and brackish The valley of the Jordan is called the Ghor and is the northernmost continuation of the Great Rift Valley The Jordan formerly marked the eastern border of the British mandate in Palestine, except in the extreme north After the partitions of Palestine (May, 1948) much territory west of the river was occupied by the adjoining Arab state of Jordan and was annexed in April, 1950 Thus the southern half of the river now flows through territory of Jordan while the northern half marks part of the Israel-Jordan and of the Israel-Syria borders Although the Jordan is not navigable, it has great potential economic value The plan described by Walter C Lowdermilk in 1944 would divert the fresh water of the extreme northern course into irrigation canals reaching as far as the N Negev (southern triangle of Israel) Water from the Mediterranean would be drawn through the Vale of Esdraelon and, falling into the Jordan cleft, would provide endless hydroelectric power Thus water, replacing that diverted from the river, would also prevent the Dead Sea from falling too low The Jordan is frequently mentioned in the Bible, it was the place of the baptism of Christ See W C. Lowdermilk *Palestine Land of Promise* (1944)

Jordan, river, N central Utah, draining Utah Lake to Great Salt Lake It flows past Salt Lake City.

Jordanes (jôrdā'nēz), fl 6th cent , historian of the Ostrogoths Born in the lower Danube region, he entered the priesthood and lived much of his life at Ravenna His *History of the Goths*, an abridgment of the lost work of CASSIODORUS, is the only source for Ostrogothic history It is written in very uncouth Latin

Jorgensen, Jens Johannes, Dan *Jørgensen* (yĕns' yō'hŭn'nŭs yur'gunsun), 1866–, Danish poet and writer of religious, polemical, and travel books His earlier books, including *Poems* (1898), were notable for romanticism and symbolism In 1896 he became a Catholic, and his most significant work dates from this time Among his translated writings are *Pilgrim Walks in Franciscan Italy* (1903, Eng tr , 1908), *Saint Francis of Assisi* (1907, Eng tr , 1912), *False Witnesses* (1915, Eng tr , 1916), which deals with German atrocities in Belgium during the First World War, and what is perhaps his chief prose work, his autobiography (6 vols , 1916-19, Vol VII, 1928; Eng tr , 1928-29) Collections of his poetry include *Flowers and Fruits* (1907) and *The Brig Marie of Svendborg* (1926)

Jorim (jō'-), ancestor of Joseph Luke 3 29

Jorkoam (jôrkō'ŭm), descendant of Caleb 1 Chron. 2 44

Jorullo (hōrōō'yō), volcano, 4,265 ft high, Michoacán, Mexico, SW of Morelia Its eruption in 1759 created great destruction It has been inactive since 1860 See Hans Gadow, *Jorullo* (1930).

Josabad (jō'sŭ-) [Heb ,=God has given], officer of David 1 Chron 12 4

Josaphat (jō'sŭfăt), in the Bible see JEHOSHAPHAT.

Josaphat, in literature see BARLAAM and JOSAPHAT.

Jose (jō'zē), in the Gospel genealogy Luke 3.29.

Josedech (jō'sùdĕk), variant of JOZADAK.

Joseph, Saint, husband of the Virgin, a carpenter, of the house of David. He was apparently dead at the time of the Passion, for his last appearance in the Gospels is at the finding of the Child Jesus in the Temple Mat 1, Luke 2; John 1, Mat 13 55 As the foster father of Our Lord and the chaste spouse of Our Lady (see MARY), St. Joseph is highly honored by Orthodox and Roman Catholics The latter regard him as patron of the Church and of the dying and invoke him for a happy death. Feast March 19; the Solemnity of St Joseph, another feast third Wednesday after Easter.

Joseph I, 1678–1711, emperor (1705–11), king of Hungary and of Bohemia, son and successor of Leopold I During his reign Hungary was in rebellion under Francis II RÁKÓCZY Joseph acceded to the throne in the midst of the War of the SPANISH SUCCESSION and died before its termination His brother, who succeeded him as CHARLES VI, was vigorously supported by Joseph in his claim to the Spanish throne Joseph's regime was less authoritarian than his predecessors' and was marked by attempts at internal reforms

Joseph II, 1741–90, emperor (1765–90), king of Bohemia and Hungary, son and successor of Emperor Francis I and of MARIA THERESA He was the first emperor of the house of Hapsburg-Lorraine From the death of his father (1765) to the death of his mother (1780) he ruled the Hapsburg lands jointly with his mother Joseph II was a revolutionary reformer His reforms were less the result of the philosophy of ENLIGHTENMENT, which was then fashionable, than of Joseph's personal philosophy and principles As a young man he was profoundly impressed by the subhuman conditions of the peasantry which he saw while touring the provinces, the memory haunted him through his life He was impatient with the slowness of Maria Theresa's reforms On her death, he was ready with a full revolutionary program, which he sought to push through by fair means or foul in order to consolidate the reforms in his lifetime Subsequent historians have tended to stress his failures rather than his successes Joseph contemplated nothing less than the abolition of hereditary and ecclesiastic privileges and the creation of a centralized and unified state, consisting of the Hapsburg lands and administered by a civil service based on merit and loyalty rather than birth He planned a series of fiscal, penal, civil, and social laws which would have established social equality for all and security for the needy His means were necessarily despotic, for he considered speed essential to success Joseph's chief piece of legislation was the abolition (1781) of serfdom and feudal dues, he also enabled tenants to acquire their own lands from the nobles for moderate fees and allowed peasants to marry whom they wished and to change domicile at their pleasure With a few exceptions—which persisted until 1848—feudalism was thus abolished in Austria The Patent of Tolerance (1781) provided for extensive, though not absolute, freedom of worship In his anticlerical, judicial, administrative, and fiscal legislation Joseph II was less successful, much of it was revoked even before his death He forbade religious orders to obey foreign generals, suppressed all contemplative orders, and even sought to interfere with the training of priests A personal visit (1782) of Pope PIUS VI to Vienna did not halt these measures Joseph abolished judicial torture, humanized the penal code, and instituted two degrees of appeal A projected revision of civil laws was not completed In fiscal matters Joseph was influenced by the PHYSIOCRATS He ordered a general reassessment of land preparatory to the imposition of a single land tax Thus reform met widespread opposition Still more unpopular, however, was his attempt to abrogate local governments, customs, and privileges in his far-flung and multilingual dominions, which he divided into 13 circles centrally administered from Vienna He even sought to impose German as the sole official language, he was not a German nationalist, but a multilingual administration seemed irrational to him Revolts broke out in Hungary and in the Austrian Netherlands (see NETHERLANDS, AUSTRIAN AND SPANISH) Joseph founded innumerable hospitals, insane asylums, poorhouses, and orphanages, he opened parks and gardens to the public; and he legislated to provide free food and medicine for the indigent His failure to make his reforms permanent was largely caused by his untimely death, by the reaction provoked by the French Revolution, and by his unsuccessful foreign policy His plan to annex Bavaria to Austria and thus to consolidate his state was frustrated in the War of the BAVARIAN SUCCESSION (1778-79), his project to exchange the Austrian Netherlands for Bavaria was thwarted (1785) by Frederick II of Prussia, who formed the *Fürstenbund* [princes' league] for that purpose Joseph allied himself with CATHERINE II of Russia (whom he accompanied incognito on her Crimean journey), hoping to share in the spoils of the Ottoman Empire Austria joined Russia in the war of 1787–92 against Turkey, but was unsuccessful Joseph's successor, his brother LEOPOLD II, appeased nationalist opposition in Hungary and Bohemia by rescinding Joseph's policy of Germanization Obsessed with his social responsibility, Joseph found only occasional time to interest himself in any but the utilitarian arts Gluck and Mozart held ill-paid positions at his court With the exception of the philable KAUNITZ, Joseph's ministers found it difficult to collaborate with the emperor Joseph was hated and ridiculed by the clergy and nobles, but he has remained the idol of the common people In popular tradition Joseph's incognito adventures make him a sort of modern Harun-al-Rashid Judgments on Joseph II vary widely, but it is certain that he was the only one of the benevolent despots who left a socially freer state on his death than he had found on his accession See Saul Padover, *The Revolutionary Emperor, Joseph II* (1934), E M Link, *The Emancipation of the Austrian Peasant* (1949).

Joseph, 1715–77, king of Portugal (1750–77), son and successor of JOHN V Although he was himself a man of some ability, his reign was dominated by his minister, the marquês de POMBAL. He was succeeded by Peter III and Maria I

Joseph [Heb ,=God will add] 1 One of the early heroes of the Bible, the favored son of Jacob and Rachel sold as a boy into slavery by his jealous brothers In Egypt, Joseph, after gaining a position of authority in the household of his master, Potiphar, was imprisoned on the false accusations of Potiphar's wife He was released after interpreting Pharaoh's dream of the lean and fat kine Pharaoh renamed him Zaphnath-paaneah and took him into favor Joseph's recognition of his brothers in the famine years when he was governor over Egypt is a famous scene of literature His wife was Asenath, an Egyptian, and their sons Manasseh and Ephraim were ancestors of two of the 12 tribes of Israel Gen 30, 37, 39–50 The story has been retold and reworked, as in Joseph and Asenath, among the PSEUDEPIGRAPHA, and in the works of Thomas MANN 2 Issacharite Num 13 7 3 Asaphite 1 Chron 25 2,9 4 One who had a foreign wife Ezra 10 42 5 Priest Neh 12 14 6, 7, 8 Ancestors of St Joseph. Luke 3 24,26,30 See also JOSES and BARNABAS

Joseph (Chief Joseph), c 1840–1904, American Indian leader, chief of the Nez Percé Indians On his father's death in 1873 Joseph became leader of the group of the Nez Percé who refused to recognize the land cessions made to the United States by the treaty of 1863 Gen Oliver O HOWARD entered negotiations with him, but fighting broke out between whites and Indians and Chief Joseph withdrew from the parleys He was a strong defender of the rights of his people and, feeling that they could not obtain justice in the United States, determined (1877) to lead them to Canada With many women and children his warriors set out on the hard march, retreating in masterly fashion before the U S army He defeated a contingent of troops at the battle Big Hole in Montana, and he avoided capture by another At the Yellowstone river, however, he hesitated and was overtaken by troops under Nelson A MILES and forced to surrender Joseph was taken to Fort Leavenworth, then spent most of the rest of his life on the Colville Indian Reservation and strove to better conditions of the natives In 1903 he made a ceremonious visit to Washington See biographies by Oliver O. Howard (1881) and C A Fee (1936)

Joseph, Father, 1577–1638, French Capuchin monk, a confidant and agent of Cardinal Richelieu, generally known as "Gray Eminence " His full name was François Leclerc du Tremblay Combining the elements of a mystic and of a Machiavellian politician, he devoted his life with equal energy to missionary work and to the shady and delicate diplomatic negotiations with which Richelieu entrusted him He dreamed of a crusade against the Turks and of the restoration of Catholicism throughout Europe, and he lent his services to a policy which strengthened Protestantism and the Ottoman Empire at the expense of the house of Hapsburg Rumors ascribed an evil influence to the "Gray Eminence" over the cardinal Actually, it would seem that Father Joseph was a pliable instrument in the cardinal's hands and that his influence on the events that led to the entry of France into the Thirty Years War has been vastly exaggerated Unlike his master, Father Joseph sought no material rewards He is the subject of a study by Aldous Huxley, *Grey Eminence* (1941).

Joseph Barsabas (bär'sŭbus), surnamed Justus, Matthias' competitor for the place among the disciples left vacant by Judas Iscariot The lots chose Matthias Acts 1 23

Josephine, 1763–1814, empress of the French (1804–9) Born Marie Josèphe Rose Tascher de la Pagerie, a creole of Martinique, she was married in 1779 to Alexandre de BEAUHARNAIS Two children were born, Eugène (later viceroy of Italy) and Hortense (later queen of Holland) Her husband, an anti-revolutionist was guillotined in 1794, but Josephine, through her friendship with BARRAS, escaped persecution In 1796 she was married, by a civil ceremony, to Napoleon Bonaparte, whom she had met through Barras Napoleon bore her notorious indiscretions but had the marriage annulled in 1809 because of her alleged sterility, so that he might marry Marie Louise Thereafter Josephine lived in retirement at Malmaison See biography by R M Wilson (1930), studies by Frédéric MASSON.

Joseph of Arimathea, Saint (ā″rĭmŭthē′ŭ), member of the Sanhedrin who gave the body of Jesus decent burial. Mat 27 57–61, Mark 15 42–47; Luke 23 50–56, John 19.38–42. Grateful Christendom has always honored him. The stories connecting him with GLASTONBURY and with the Holy GRAIL are probably literary fictions of the Middle Ages; they have never received the approval of the Church

Joseph of Cupertino, Saint (kōōpĕrtē′nō), 1603–63, Italian Franciscan, named Giuseppe Desa His life was marked by remarkable miraculous displays, including many cases of levitation. These led to his being called a patron of airmen. Feast Sept 18

Josephus, Flavius (flā′vēŭs jōsē′fus), A D. 37–A D 95?, Jewish historian and soldier, b Jerusalem. Having studied the tenets of the three main sects of Judaism—Essenes, Sadducees, and Pharisees—he became a Pharisee At the beginning of the war between Romans and Jews, he was made governor of Galilee He displayed valor and shrewdness in the war, but when the stronghold he defended was taken, he won the favor of the Roman general Vespasian and took his name, Flavius The conduct of Josephus has been both aspersed and defended, however, our knowledge of his conduct is based on his own writings It is as a historian of the Jews that Josephus is renowned He wrote *The Jewish War*, the famous *Antiquities of the Jews*, a history of the race from creation to the war with Rome, *Against Apion*, an exalted defense of Jews, and his autobiography or apology His complete works have appeared in English editions See H St J Thackeray, *Josephus, the Man and the Historian* (1929), F J Foakes Jackson, *Josephus and the Jews* (1930), Lion Feuchtwanger, *Josephus* (1932), *The Jew of Rome* (1935), and *Josephus and the Emperor* (1942), trilogy of novels

Joses (jō′sēz) [Gr form of Heb JOSEPH] **1** Kinsman of Jesus Mark 6 3, Mat 13 55 **2** Brother of JAMES THE LESS, the same as **1**, if the traditional interpretation is accepted Mat 27 56, Mark 15 40,47 **3** See BARNABAS, SAINT

Josetsu (jō″sĕt′sōō), fl 1425, Japanese landscape painter, teacher, and priest He was probably of Chinese origin, since his work shows Ming characteristics He worked in Kyoto, where Shubun was his pupil

Joshah (jō′shŭ), Simeonite chief 1 Chron 4 34.

Joshaphat (jŏ′shŭfăt) see JEHOSHAPHAT

Joshaviah (jŏshō̂vī′ŭ), one of David's guard 1 Chron 11 46

Joshbekashah (–bĕk′ŭshŭ), Hemanite temple musician 1 Chron 25 4,24

Joshua (jō′shōōŭ, jŏ′shuwu) [Heb ,=God is salvation] **1** Central figure of the book of JOSHUA **2** High priest associated with Zerubbabel in rebuilding the Temple Hag 1, 2, Zech 3, 6 11 Ezra 3 2, 4 3, 10 18, Neh 12 26 Jesus Ecclus 49 12 **3** Owner of the field where the ark stood 1 Sam 6 14. **4** Governor of Jerusalem 2 Kings 23,8

Joshua or Josue (jŏ′shōō), book of the Old Testament, the sixth in the order of AV It is a historical sequel to Deuteronomy, telling of the occupation of Palestine by the Hebrews The chief figure of the book is Joshua, Moses' successor as leader of Israel He appears in Moses' lifetime in increasingly important positions, as a warrior, as the assistant to Moses, as one of the spies, finally as divinely named leader Ex 17 9,14, 24 13, 33 11, Num 13, 14, Deut 31, 32 The book of Joshua may be divided into four sections first, the conquest of the Promised Land (1–12), including the divine appointment of Joshua (1 1–9), the crossing of the Jordan dry shod (3), the fall of Jericho (6), and the battle where the sun stood still (10), second, the allotment of the land to the people by tribes (13–22), mainly lists; third, an account of how the tribes E of the Jordan acquitted themselves of the charge of setting up a sanctuary of their own (22), and, fourth, the farewell sermon of Joshua and his death (23–24) Joshua's name appears variously in AV Jehoshua Num 13 16 Jehoshuah 1 Chron 7 27, Jeshua Neh 8 17 Jesus Acts 7 45, Heb 4 8. He had originally been named Hoshea (hō-shē′ŭ) or Oshea (ōshē′ŭ) [both the same as HOSEA] He is one of the great heroes of biblical history Ecclus 46 1–6; 1 Mac 2 55 For books on Joshua and critical views of its composition, see OLD TESTAMENT

Joshua tree see YUCCA

Joshua Tree National Monument, see NATIONAL PARKS AND MONUMENTS (table).

Josiah (jōsī′ŭ) [Heb ,=given by God] or **Josias** (jōsī′ŭs) **1** Died c 610 B C., king of Judah (c 641–c 609 B C), son and successor of Amon. The great event of his reign came in its 18th year, when the book of the law, apparently DEUTERONOMY, was found in the Temple Josiah had it read publicly, and a reform movement began, led by the young king. The basis of the reform was the removal of all centers of worship from the country to concentrate everything in worship at Jerusalem. When the Pharaoh Necho set out to wrest the Palestinian and Syrian states from Assyria, Josiah opposed him and fell, at Megiddo He was succeeded by his son Jehoahaz 2 Kings 22–23, 2 Chron. 34–35. **2** Man at whose house the prophet Zechariah was to crown the high priest Zech. 6.10-11

Josibiah (jŏsĭbī′ŭ) [Heb ,=God makes to dwell], father of Jehu the Simeonite 1 Chron 4 35.

Jósika, Baron Nicholas (yō′shĭkō), Hung *Jósika Miklós* (mĭ′klōsh), 1794?–1865, Hungarian novelist, b Transylvania The originator of the Hungarian historical novel, he was influenced by Sir Walter Scott and gained his inspiration from old castles and ancient family chronicles He was often superficial in depicting character and the period, his chief merit was that he revived the past and was thus greatly responsible for the renewed interest in Hungary's history Among his historical novels are *Zolyomi* and *Abafi* (both 1836). Other stories include *The Debauchee* (1837), and *A Two-Story House at Pest* (1847).

Josiphiah (jŏsĭfī′ŭ) [Heb ,=God adds], father of one who returned with Ezra Ezra 8 10

Josquin des Prés (shōs′kĕn dĕprā′), c 1450–1521, Flemish composer, b Hainaut, regarded by his contemporaries as the greatest of his age Luther spoke highly of him, and he may have instructed Erasmus in music In 1486 he entered the papal choir of Rome and later was in the service of Louis XII of France He ended his days as provost of the Collegiate Church of Condé His earlier works exhibit a preoccupation with contrapuntal skills, while his later works are more expressive He wrote Masses and numerous motets

Jostedalsbreen (yō′studalsbrā″un), glacier, area 340 sq mi , Sogn og Fjordane co , W Norway, between Nord Fjord and Sogne Fjord, W of the Jotunheim mts The largest icefield on the European mainland, it rises to 6,700 ft and thrusts numerous glaciers into the adjoining valleys

Josue (jō′shōō), variant of JOSHUA

Jotbah (jōt′bŭ) [Heb ,=goodliness] unidentified place, probably in S Palestine 2 Kings 21 19

Jotbath or **Jotbathah** (jōt′bŭthŭ) [both Heb ,=pleasantness], unidentified desert place Num 33 33, Deut 10 7

Jotham (jō′thŭm) [Heb ,=the Lord is upright] **1** The only one of Gideon's sons not killed by Abimelech, noted for his parable of the trees electing the bramble to be their king Judges 9 5–21 **2** Died c 731 B C , king of Judah (c 735–c 731 B C), son of Uzziah He was a contemporary of Isaiah, Hosea, and Micah. 2 Kings 15 5,32–38 Joatham Mat 1 9 **3** Descendant of Caleb 1 Chron 2 47

Jotunheim (yō′tōonhām), mountain group, central Norway, highest of Scandinavia It culminates in Galdhopiggen (Nor *Galdhøpiggen*), 8,098 ft high, and Glittertind, 8,138 ft high The JOSTEDALSBREEN, a huge glacier, is to the west Sparsely inhabited, the region is used for summer pasture In Norse mythology, this was the home of the giants, the Jotun

Joubert, Barthélemy Catherine (bartālmē′ kātrēn′ shōōbĕr′), 1769–99, French general He was second to Bonaparte in command in the Italian campaign (1796–97) and in 1799 was made chief of the Army of Italy He was killed in battle at Novi

Joubert, Joseph (shōzĕf′ zhōōbĕr′), 1754–1824, French moralist His *Pensées* (there are many English translations) rank with those of La Rochefoucauld in their finished style but have a greater range, including ethics, politics, theology, and literature

Joubert, Petrus Jacobus (pā′trōos yakō′bōos you′burt), 1831?–1900, Boer general and politician He joined S J P KRUGER and M W PRETORIUS in the triumvirate governing the Transvaal in 1880–81 In 1881 he defeated the British twice before routing them at Majuba Hill He ran for president against Kruger in 1883, 1893, and 1898 At the outbreak of the SOUTH AFRICAN WAR he directed the siege of Ladysmith, but ill-health forced him to retire

Jouett, James Edward (jōō′ĭt), 1826–1902, American naval officer, b near Lexington, Ky , son of Matthew Jouett In the Civil War he distinguished himself under Farragut on blockade duty off Mobile (1861–63) and in the battle of Mobile Bay (1864) Jouett, made commander of the North Atlantic Squadron (1884), led the expedition which reopened traffic across the Isthmus of Panama after it had been interrupted by a revolt against Colombia (1885) He was promoted rear admiral in 1886

Jouett, Matthew Harris, 1783–1827, American painter, b Mercer co , Ky , studied in Boston with Gilbert Stuart He was the first prominent painter in the West Among his more than 300 portraits are one of Lafayette in the state capitol at Frankfort, Ky , and of John Grimes in the Metropolitan Museum. James Edward Jouett was his son.

Jouffroy, Théodore Simon (tāōdôr′ sēmō′ zhōōfrwä′), 1796–1842, French philosopher He was professor at the Collège de France and librarian to the Univ of Paris. His translations of the Scottish philosophers Reid and Stewart made possible a wider understanding of this school In his writings he distinguished sharply between psychology and physiology as separate lines of inquiry. Influenced by Victor Cousin, Jouffroy is classed as an eclectic. His works include *Cours de droit naturel* (1835) and *Mélanges philosophiques* (1833) and the posthumous publication, *Cours d'esthétique* (1843).

Joule, James Prescott (jōōl, joul), 1818–89, English physicist His scientific researches, begun in his youth when he invented an electromagnetic engine, formed a valuable contribution to the fields of heat, electricity, and thermodynamics. He was the first to determine the mechanical equivalent of HEAT The electrical unit of work is named for him, the **joule** (joul, jōōl), which for practical use is defined as the work done in one second in maintaining a current of one ampere in a resistance of one ohm It is equivalent to 10,000,000 **ergs** (the unit of work in the cgs system), to 0 7376 foot-pounds, to 0 1020 kilogram-meters, to approximately 0.24 calories (15°), and to 0 0009487 B.T U.

Jourdan, Jean Baptiste (zhā′ bäptēst′ zhōōrdä′), 1762–1833, marshal of France He fought in the American Revolution and in the FRENCH REVOLUTIONARY WARS Though briefly suspended on Napoleon's accession to power (1799), he was later made a marshal, a senator, and a councilor of state Louis XVIII created him a count

journalism, the collection and periodical publication of news It includes writing for, editing, and managing such media as the NEWSPAPER and the PERIODICAL Periodical publication of news dates at least from the *Acta diurna* of Rome, and the art of PRINTING spread rapidly in the 15th cent Soon the writing of newsletters became a trade Although in early 18th-century England Joseph ADDISON, Richard STEELE, and Daniel DEFOE were outstanding as writers of periodicals, journalism had its real beginnings in the latter years of the 18th cent , paralleling the increase in political freedom witnessed by the American Revolution, the French Revolution, and the legal battles in England of John WILKES for journalistic liberty Until the institution of freedom of speech and of the press, journalism had generally served as the handmaiden of politics or as a means of business, attaining no independent standards or aims In the early 19th cent journalists, despite their increased liberties in England and America, were not divorced from the dictates of political parties Thus American journalists, such as Philip Freneau, though capable were thoroughly partisan The spread of universal education, growing popular support of newspapers and periodicals, and new inventions helped extend the prestige of journalism and in part severed its blind alliance with political parties The growth of individualistic leadership in the newspaper field in the United States (see GREELEY, HORACE, BOWLES, SAMUEL, DANA, CHARLES) in the middle years of the 19th cent in turn influenced other journalistic media (e g , the muckraking magazine and the independent periodical) In the 20th cent, the power of the individualistic journalist declined in the face of tremendous technological advances, the growth of the NEWS AGENCY, vast strides in reporting techniques, heavier dependence on advertisement, and the further broadening of education and reform Journalism tremendously ramified in all phases, but tended to become more standardized, impersonalized, and sensationalized in England and in the United States Journalism has grown proportionally with political and technological advances of the various countries throughout the world In recent years schools of journalism have been founded in connection with numerous universities throughout the world The earliest school of journalism in the United States was established (1908) at the Univ of Missouri, the Columbia Univ School of Journalism had been endowed in 1903 but was not opened until 1912.

joust, see TOURNAMENT

Jouvenet, Jean (zhā′ zhōōvunā′), 1644–1717, French painter, one of a family of painters He worked in Paris in the studio of Charles Le Brun, whose manner he acquired and whose favor at court he shared In 1681 he was made professor of the Académie royale de Peinture et de Sculpture and, in 1707, rector Jouvenet is best known for his religious paintings, splendid examples of which are in the Hôtel des Invalides and Notre Dame, Paris, in the chapel of Versailles, and in the Louvre. Although he was paralyzed in his old age, he continued to paint with his left hand.

Jove see JUPITER

Jovellanos, Gaspar Melchor de (gäspär′ mĕlchôr′ dā hôvĕlyä′nōs), 1744–1811, Spanish statesman, economist, and poet Jovellanos's poetry is philosophical and reflective His best-known poem is *Epistola de Fabio a Anfriso* [epistle from Fabio to Anfriso] Among his patriotic and political writings, the most influential were his report on agrarian law and his memoir in defense of the Central Junta He wrote also *El delincuente honrado* (1774), a drama After Napoleon's invasion of Spain, he retired to Asturias, where he died

Jovian (Flavius Claudius Jovianus) (jō′vēun), c 331–364, Roman emperor (363–64) The commander of the imperial guard under JULIAN THE APOSTATE in his Persian campaign, Jovian was elevated to the imperial dignity by the soldiers He made a humiliating peace with SHAPUR II of Persia. He returned Christianity to the privileged position it had enjoyed before Julian, and he restored his friend St. Athanasius to the episcopal see of Con-

stantinople. After a reign of only eight months Jovian died and was succeeded by the joint emperors Valentinian I and Valens

Jowett, Benjamin (jou'ĕt), 1817–93, English Greek scholar, a Church of England clergyman, master of Balliol College, Oxford, and vice chancellor of Oxford, one of the greatest educators England has had. His personal influence on his pupils was profound He is well known largely for his translation of the dialogues of Plato, taking a high place in English literature and in classical scholarship.

Jowett, John Henry, 1864–1923, English Congregational clergyman, widely known for his preaching In 1911 he accepted a call to the Fifth Ave Presbyterian Church, New York city, remaining there seven years and preaching to large congregations. Returning to England in 1918, he became minister of the Westminster Chapel, London His many books include *The High Calling* (1909), *The Transfigured Church* (1910), *Things That Matter Most* (1913), and *The Whole Armour of God* (1916). See biography by Arthur Porritt (1924)

Joyce, James, 1882–1941, Irish novelist, a major figure of modern world literature Born in a Dublin suburb, he was educated at Jesuit schools, Clongowes Wood College in Clane and Belvedere College in Dublin, and was graduated from a well-known Jesuit center of Catholic higher education, University College, in Dublin Both his native city and his Jesuit training were reflected in his work, though he cut himself off from both his home and his church and spent almost all of the rest of his life in self-imposed exile on the Continent He did return to Ireland when his mother was dying and in 1904 spent a few unhappy months teaching in an Irish school In that year he met the woman who was to be his wife, and together they went to the Continent that autumn The exile never again returned except for one brief journey He and his family lived at Trieste, Zurich, and Paris in poverty while he worked slowly on his masterpieces As the years went on he underwent several eye operations and suffered near-blindness His first published book was a volume of poems, *Chamber Music* (1907), which won some notice, but his poetry, including the later volume, *Pomes Penyeach* (1927), and the *Collected Poems* (1937, including *Chamber Music*, *Pomes Penyeach*, and a new collection called *Ecce Puer*), was not to be a major contribution to literature That was to be presented in his prose works The first was *Dubliners* (1914), a linked collection of stories (or fictional sketches) centering upon revelatory moments of spiritual insight, which he called epiphanies He found difficulty in securing a publisher for this, largely because the names of actual persons, places, and institutions were mentioned *A Portrait of the Artist as a Young Man*, which was published in book form in the United States in 1916, is a fairly straightforward account of the adolescence and youth of Stephen Dedalus (Joyce himself, but the universal artist as well) It is marked with the aims and the techniques that were to be developed in two later and greater works, Joyce attempts to explore all the levels of mind and experience and utilizes the stream-of-consciousness method, symbol, and myth His *Ulysses*, written between 1914 and 1921, at Zurich and Paris, was published in parts in little *avant-garde* magazines (the *Little Review* and the *Egoist*), but Joyce met much opposition in seeking publication of the work in book form because charges of obscenity were leveled against it It appeared in Paris in 1922 Its publication was banned in the United States until 1933, long after its world importance was generally recognized The book is intricate in structure—labyrinthine, one of the critics calls it—and proceeds on many levels of meaning. Formal grammar is to a large extent abandoned Joyce had early shown brilliance in language (as a young man he learned Norwegian to read Ibsen in the original), and *Ulysses* is remarkable for borrowing from other languages to enrich the linking of words into evocative patterns, not infrequently many-sided puns. The writing is varied, shifting in style to suit the characters, chief among them Stephen Dedalus, Leopold Bloom, and his wife, Molly Bloom The use of stream of consciousness and interior monologue, the frame of incidents from the Homeric poem, references to events and conditions of one day (June 16, 1904) in Dublin, and incorporation of all sorts and bits of learning (religious, mythological, geographical, linguistic, and miscellaneous) make reading the book difficult, and several keys and extended interpretations have been written by commentators The methods of *Ulysses* are extended and elaborated in *Finnegans Wake* (1939), which before its final publication was known as *Work in Progress*, parts of it were published in the periodical *transition* and in booklets under other titles This is a book of night to supplement the day of *Ulysses* and presents the world in the mind of a sleeper or dreamer with barriers of time, space, and language ignored. The breadth and complexity require of the reader minute and comprehensive study. The canon of Joyce works that have been published also includes a play in the manner of Ibsen, *Exiles* (1918), and part of an early version of *A Portrait of the Artist as a Young Man* called *Stephen Hero* (1944) The effect of Joyce on writers of the 20th cent. is incalculable, he is probably the most-discussed author of his time, though there has been little direct imitation of his work, probably because the requirements are too exacting His techniques and forms have, however, had enormous influence Selections from his work appeared in *The Portable James Joyce* (ed by Harry Levin, 1947). See Stuart Gilbert, *James Joyce's Ulysses* (1930; new ed, 1938), Frank Budgen, *James Joyce and the Making of Ulysses* (1934), biography by Herbert Gorman (1939), Harry Levin, *James Joyce* (1941), Joseph Campbell and H M Robinson, *A Skeleton Key to Finnegans Wake* (1944), R M Kain, *Fabulous Voyager* (1947), W. Y Tindall, *James Joyce* (1950)

Joyce, William, 1906–46, American-born British Nazi propagandist, called Lord Haw-Haw Joyce broadcast German propaganda in English from Berlin during the Second World War He was captured by British soldiers in Germany in 1945 He was adjudged subject to British jurisdiction because he held a British passport, was convicted of treason, and was hanged, Jan 3, 1946 See Rebecca West, *The Meaning of Treason* (1947)

Jozabad (jŏ'zu-) [Heb ,=God has given] **1, 2** Two of David's captains 1 Chron 12 20 **3,4** Important Levites 2 Chron 31 13, 35 9 **5** Man who had married a foreigner Ezra 10 22 **6,7,8,9** Levites in the return from the Exile Ezra 8 33, 10 23, Neh 8 7, 11 16 These four may be identical

Jozachar (jŏ'zukär) [Heb ,=God remembers], murderer of Joash. 2 Kings 12 21 Zabad 2 Chron 24 26

Jozadak (jŏ'zu-) [Heb ,=whom God makes just], one in the high priests' line who probably never held office, because he was carried away to Babylon Ezra 3 2, 10 18, Neh 12 26 Jehozadak 1 Chron 6 14,15 Josedech Hag 1 1, Zech 6 11

Juana, Spanish queen of Castile see JOANNA

Juana Inés de la Cruz (hwä'nä ēnās' dā lä krōōs'), 1651–95, Spanish American poet, generally considered the greatest lyric poet of the colonial period, a Mexican nun, whose family name was Asbaje She was precocious in learning, and her erudition and her beauty both attracted attention at the viceregal court before at 16 or 17 she entered a convent She devoted herself to the pursuit of knowledge and showed much learning as well as an intense scientific curiosity unusual for the epoch One of her best-known works is the largely autobiographical letter to the bishop of Puebla in defense of the education of women, but it was her poetry that earned her a high place in Spanish literature Her poems, especially her occasional poems, show the influence of Góngora Her lyrics are marked by spontaneity and sincerity After selling her collection of books, Sor Juana devoted the last years of her life to perfecting herself spiritually and died when trying to help the victims of an epidemic, to which she, too, fell victim

Juana la Beltraneja (hwä'nä lä bĕltrānā'hä), 1462–1530, Castilian princess, daughter of Juana of Portugal, queen of HENRY IV of Castile The paternity was generally attributed to the court favorite Beltrán de la Cueva, wherefore her name Juana was first recognized as legitimate heiress by the cortes of Castile, but later Henry IV designated as successor his brother Alfonso, who soon after died In 1468 Henry named his sister Isabella (later ISABELLA I) his successor, but after her marriage to Ferdinand of Aragon, of which the king disapproved, he declared (1470) Juana his legitimate daughter and heir At Henry's death (1474) the dynastic question provoked a civil war Juana's partisans called upon Alfonso V of Portugal for help and arranged his marriage to the young princess After five years of struggle Alfonso was decisively defeated at Toro, and Isabella was recognized (1479) as queen of Castile Juana retired to a convent in Portugal

Juan de Fuca Strait (jōō'ən dē fū'kə), inlet of the Pacific, 100 mi long and 15 to 20 mi wide, between Vancouver Island and Washington state It connects the Strait of Georgia and Puget Sound with the Pacific. It was discovered by Capt Charles William Barkley in 1787. The name of the strait derives from that of a sailor, Juan de Fuca, who, legend says, discovered it for Spain in 1592

Juanes, Juan de: see MACIP, VICENTE JUAN

Juan Fernández (jōō'un fûrnän'dĕz, Span hwän' fĕrnän'dās), group of small islands (pop 434), c 400 mi W of Valparaiso, Chile, belonging to Chile The two principal islands, c 100 mi. apart, are Más Atierra [landward] and Más Afuera [outer] Volcanic in origin, rugged and heavily wooded, they have a pleasant climate. The chief occupation is lobster fishing Discovered by Juan FERNÁNDEZ before 1572, they achieved fame when Daniel Defoe wrote *Robinson Crusoe*, generally acknowledged to have been inspired by the sojourn on Más Atierra (1704–8) of Alexander SELKIRK.

Juan-les-Pins (shüäⁿ'-lā-pĕⁿ'), town (pop. 2,764), Alpes-Maritimes dept , on the Cap d'Antibes It is a resort on the French Riviera

Juárez, Benito (bānē'to hwä'räs), 1806–72, Mexican liberal statesman and national hero, an Indian. A lawyer, he took part in politics and was for a time governor of Oaxaca; in 1853 he was imprisoned for opposition to SANTA ANNA After an exile in the United States, he was a chief figure in drawing up the Plan of AYUTLA and in the revolution that followed Juárez became minister of justice and issued the Ley Juárez, which, with the Ley Lerdo (see LERDO DE TEJADA, MIGUEL), attacked the privileges of the Church and the army The conservatives rose against the liberal constitution of 1857 When COMONFORT resigned, Juárez became acting president He showed his mettle as a high-minded leader of the liberal revolution Forced to flee to Guanajuato, Guadalajara, and finally Veracruz with his government, he resisted the conservatives, and the liberals were ultimately successful in the War of the Reform (1858–61). New difficulties arose in trouble with foreign nations The intervention of France, Spain and England was followed by the French attempt to establish a Mexican empire under MAXIMILIAN (1864–67). Juárez continued gallant resistance to the French soldiers and moved his capital to El Paso del Norte (now Juárez) The Mexican people supported him, and the empire fell Juárez, reelected in 1867, instituted the program of reform in full force, but political divisions among the liberals hampered real accomplishments and Juárez by his political maneuvers somewhat tarnished the glory gained by his defense of Mexico He was again elected in 1871 A revolution against him by Porfirio DÍAZ was being suppressed when he died See U R Burke, *A Life of Benito Juárez* (1894), Ralph Roeder, *Juarez and His Mexico* (1947)

Juárez (hwä'räs), city (pop 48,881), Chihuahua, N Mexico, on the Rio Grande opposite EL PASO, Texas Connected with the United States by three international bridges, it is a shipping point and rail terminus Except for the river valley, under intense cultivation southeast of the city, Juárez is hemmed in by desert It is a straggling town with the nondescript air of most Mexican-American border settlements Developing (1659) as the focal point for Spanish colonial expansion to the north, it was originally called El Paso del Norte and included settlements on both sides of the river, until they were split by the Treaty of Guadalupe Hidalgo (1848), which ended the Mexican War. In 1888 the name of the Mexican town was changed to honor Benito JUÁREZ, who made it his capital when exiled from central Mexico The city was captured by Pascual OROZCO and Francisco VILLA in the early days of the revolution in 1910

Juárez Celman, Miguel (mēgĕl' hwä'räs sĕl'män), 1844–1909, president of Argentina (1886–90) After political service—for a time as governor—in the province of Córdoba, he became president for a six-year term Speculation, flagrant under his predecessor, Julio A ROCA, now reached its height, and the administration was notorious for corruption Political opposition to his administration increased after he left his party A revolt in July, 1890, was suppressed, but public opinion forced Juárez Celman to resign (Aug , 1890) He was succeeded by Carlos PELLEGRINI

Juba (jōō'bu), c 85 B C –46 B C , king of Numidia He joined Pompey's party and in 49 B C routed Caesar's legate, Curio He fought on the side of Metellus Scipio, and ended his life after Caesar's victory at Thapsus His young son, **Juba II,** d A D c 20, was educated in Rome and reinstated, probably first in Numidia, then in Mauretania (c 25 B C), by Augustus, who gave to him in marriage Cleopatra Selene, the daughter of Antony and Cleopatra Highly learned, Juba II wrote lengthy historical and geographical works

Juba (jōō'ba), town (pop c 10,000), SE Anglo-Egyptian Sudan, a port on the White Nile It is the head of navigation on the river

Jubal (jōō'bəl), son of Lamech and originator of musical instruments Gen 4 21

Jubaland. see SOMALILAND, ITALIAN

Jubbulpore (jŭbŭlpōr'), city (pop 178,339), NW Madhya Pradesh, India It is an important railroad junction and commercial center Cotton cloth, pottery, and ordnance are manufactured

jubilee (jōō'bilē) [Hebrew] in the Bible, a year when slaves were manumitted, debts were forgiven, and a general sabbatical year was observed. It occurred once in 50 years Lev 25 8-55 The name is now used to mean a celebration of a 50-year or other long period, e g , the Diamond Jubilee of Queen Victoria of 1897, when she had been queen for 60 years In the Roman Catholic Church the name is applied to a holy year, occurring generally once in 25 years, when special privileges are given by the Church for pilgrimage to Rome and an unusual jubilee indulgence is announced There was a jubilee in 1929 to mark the 50th anniversary of Pius XI's ordination

Jubilees, Book of see PSEUDEPIGRAPHA.

Jucal (jōō'kl), variant of JEHUCAL.

Juchitán (hōōchētän'), town (pop. 14,550), Oaxaca, S Mexico, c 20 mi E of TEHUANTEPEC Located on a vast expanse of flat, fertile plain only slightly above sea level, the old town, largely Indian in

population, rivals Tehuantepec as the cultural center of the ZAPOTEC. It is linked to Veracruz and the Guatemala border by railroad and is on the INTER-AMERICAN HIGHWAY between Mexico city and Guatemala

Juda (jōō'dŭ) [variant of JUDAH] **1** See **JUDAH 1.** **2** See **JUDE, SAINT 3, 4** Ancestors of St Joseph. Luke 3 26,30

Judaea or **Judea** (both jōōdē'ŭ) [Latin from JUDAH], Greco-Roman name for S Palestine In the time of Christ it was both part of the province of Syria and a kingdom ruled by the Herods It was the southernmost of the Roman divisions of Palestine, the others being Galilee, Samaria, and, E of the Jordan, Perasa Idumaea was S of Judaea Judaea was cut off from the Mediterranean by a strip of Samaria Its southern boundary ran ESE-WNW from Engedi nearly to Ashdod Its eastern boundary was the Jordan and the Dead Sea, and its northern line ran WSW from the Jordan E of Mt Ebal

Judah I, 135?–220?, leader of the Palestinian Jews, called *ha-Nassi* [prince] and Rabbi He was redactor of the Mishna (see TALMUD) and president of the Sanhedrin He strove to organize Jewish oral law, to standardize Jewish opinion, and to preserve the records of Jewish customs

Judah (jōō'dŭ) **1** Youngest of the four sons of Jacob and Leah and the eponymous ancestor of one of the 12 tribes of Israel Judah himself is a distinctive figure, a leader in the family counsels With Reuben he interceded for Joseph's life, and he was the spokesman for his brothers before Joseph in EGYPT In the exodus his tribe was in the lead on the east side of the ark, and it settled in the rich land of S Palestine, extending c 45 mi north and south, from the Dead Sea to the Mediterranean Within its borders was Jerusalem It gave its name to the Kingdom of Judah The royal and Messianic family of David was of the tribe of Judah Gen 29 35, 35 23, 37 26, 38, 43 3, 44 14, 46 12,28, 49 8, Num 2 3, 10 14, 13 6, 26 22, 34, Joshua 15 1, 1 Chron 2–5 Juda Luke 3 33, Heb 7 14, Rev 5 5, 7 5 Judas Mat 1 2 **2** Levitical family Neh 12 8 **3** Levite Ezra 10 23 **4** Overseer Neh 11 9 **5** Priest's son Neh 12 36 **6** Same as HODAVIAH 3

Judah, the southern of the two kingdoms remaining after the break in the kingdom of the JEWS which occurred under REHOBOAM The northern kingdom, Israel, was most of the time at war with Judah In the Bible the southern kingdom is regarded as usually more loyal to God than the northern kingdom was Judah's capital was Jerusalem and its dynasty was the house of David

Judah, Theodore Dehone, 1826–63, American railroad builder, b Bridgeport, Conn He had built the Niagara Gorge RR and had done canal work before going (1854) to lay out a railroad near Sacramento, Calif There he promoted the idea of a railroad across the mountains eastward from the Central Valley and interested a number of men in the scheme, including Charles CROCKER, Mark HOPKINS (1813–78), Collis P HUNTINGTON, and Leland STANFORD The Central Pacific Railroad Company was formed, with Judah as chief engineer. He became dissatisfied with the control of his associates and was on his way to the East to get capital and support when he died of yellow fever, which he caught in Panama See Oscar Lewis, *The Big Four* (1938)

Judah ha-Levi or **Judah Halevy** (both ha'lē'vĭ), 1085?–1140?, Jewish rabbi, poet, and philosopher, b Toledo, Spain His poems, secular, religious, and national, are of high rank, filled with a serene and lofty spirit In his great philosophic work, *Sefer ha-Kuzari*, in dialogue form, he emphasized the superiority of religious truths, arrived at through intuition, over philosophical and speculative truths, arrived at through logic and reason In this work he developed a philosophy of history

Judaism (jōō'dŭsĭzm, -dē-) [from Judah, cf JEWS], religion of the Jews, oldest of the great monotheistic religions It is the great complex of law, tradition, and doctrine of which the OLD TESTAMENT is the elder monument and the TALMUD is the younger Since Jesus was a Jew and since Mohammed claimed he came as last of the prophets of Israel, Christianity and Islam are inextricably associated with Judaism Judaism first took a form closely resembling the present-day Judaism on the return of the Jews to Palestine after the Exile (c 444 B C). Since then it has undergone some modifications, particularly as a result of the DISPERSION, but its remarkable tenacity of tradition has enabled it to present at nearly all times the same emphasis and the same fundamental traits By far the greatest feature of Judaism is its belief in an omnipotent transcendent GOD, the Creator, and in his law, the TORAH, given by him to Moses, the leader of Israel, whom God had chosen as his people in the time of Abraham, the father of Israel From time almost immemorial the Jews have kept the Law jealously and have kept their racial integrity with religious sanctions Only occasionally in their history have the Jews undertaken missionary effort (notably in the beginning of the Christian era), for though they have been sure of their mission to regenerate the world through Judaism, they have tended to regard their God first as the God of Israel. The great text of Judaism, recited constantly, is the Shema, beginning, "Hear, O Israel the Lord our God is one Lord" (Deut 6 4–9) The chief characteristic ceremony of Judaism is CIRCUMCISION of males, which is, according to the Bible, the sign of God's covenant with his people The place of the Law in the life of the Jew is all-pervasive, it governs his dress, his food, his occupation, as well as his ceremonial, the Law, for example, forbids any contact with swine, either as food or clothing Since the destruction of the Temple, where God was considered to dwell in a peculiar manner, the SYNAGOGUE has become the only thing in Judaism corresponding to a church, but this is really only a place of meeting, and the most elaborate (and perhaps the most ancient) feast of Judaism, the PASSOVER, is celebrated at home Similarly with the priesthood gone, the RABBI has had to be the religious leader, but he is primarily a teacher and has none of the hereditary position or sacerdotal powers of the ancient priesthood Judaism has been at times seemingly sustained by a hope This firm hope of Israel has two facets that Israel will return one day to the Promised Land of Canaan and that a prince will arise in Israel, the Messiah, and make his God worshiped by all the world and his people its rulers It was the feeling for the Promised Land, so marvelously expressed in Ps 137, that brought the Jews back from Babylon and that has given the inspiration to modern ZIONISM The principal Jewish sects of ancient times were the ESSENES, SADDUCEES, and the PHARISEES The Judaism of the Pharisees prevailed In more modern times the KARAITES, the cabalists (see CABALA), and the HASIDIM are notable The greatest division in Judaism of all time began in the 18th cent, with the movement led in Germany by Moses MENDELSSOHN Out of this has come "reformed" Judaism, to which many Jews of Germany and America adhere Jews who are not reformed are called "orthodox" Nonorthodox Jews (divided into conservative and reformed) reject many of the restrictions of the Law, tending to use the vernacular in religious ceremonies instead of Hebrew and discarding or reducing much of the ritual The conservatives observe Saturday as the Sabbath and retain more of the orthodox customs than do the reformed Jews, some of whom eat pork and observe Sunday The nonorthodox discard prayers for the dead, but they usually retain circumcision and the observances of the DAY OF ATONEMENT and of the Passover Orthodox Judaism is preeminent in Rumania, Poland, and Czechoslovakia, and it was the norm of the religion in Russia before the Russian Revolution The demands of Judaism on the Jew have always been the recognition of God and the observance of the Law The importance of the Law is in no way better evidenced than in the remarkably early development of the exalted ethical standards of Judaism The preservation of these standards by the Jews may be said to be a prime reason for the continuing existence and integrity of Israel See Kaufmann Kohler, *Jewish Theology* (1918), W R Smith, *Lectures on the Religion of the Semites* (1927), G F Moore, *Judaism in the First Centuries of the Christian Era* (3 vols, 1927–30), David Philipson, *The Reform Movement in Judaism* (1931), M M Kaplan, *Judaism as a Civilization* (1934), Leo Baeck, *The Essence of Judaism* (1949)

Judas Barsabas (bär'sŭbŭs), missionary apostle Acts 15 22–33

Judas Iscariot (ĭskă'rēŭt), Jesus' betrayer, one of his disciples, said to have been their treasurer He hanged himself The blood money went to buy a potter's field, called Aceldama Mat 26 20–25, 47–49, 27 3–10, Acts 1 16–20

Judas Maccabeus see MACCABEES

Judas of Galilee (gă'lĭlē), fl A D 7, a leader of the Zealots, a radical revolutionary Jewish sect He raised an insurrection against the census of Quirinus (A D c 6 or 7) and was killed Acts 5 37.

Judas tree see REDBUD

Judd, Charles Hubbard, 1873–1946, American psychologist, b Bareilly, India, grad Wesleyan Univ, 1894. He came to the United States in 1879 He studied at Leipzig (Ph D, 1896) under Wundt, taught (1901–9) psychology at Yale, and was head (1909–38) of the department of education at the Univ of Chicago. His work was mainly in the field of education and educational psychology. His books include *Genetic Psychology for Teachers* (1903), *Measuring the Work of the Public Schools* (1916), *Introduction to the Scientific Study of Education* (1918), *The Psychology of Social Institutions* (1926), *Problems of Education in the United States* (1933), *Education and Social Progress* (1934), and *Educational Psychology* (1939).

Judd, Norman Buel, 1815–78, American lawyer, Congressman, and diplomat, b Rome, N Y In 1836 he moved to Chicago, and from 1844 to 1860 he served in the Illinois legislature Although originally a Democrat, he joined the Republican party and served (1856–60) as chairman of the Illinois state central committee. He was one of Abraham Lincoln's managers in his campaign for the Republican presidential nomination in 1860 and was (1861–65) minister to Prussia during the Civil War While in the U.S. House of Representatives (1867–71), he was on the committee which brought the charges for the impeachment of President Andrew Johnson and was responsible for the bill to create inland ports of entry in the United States As a lawyer he was best known as counsel for railroads, having been employed by many of the major northwestern lines during their period of development

Judd, Orange, 1822–92, American agricultural editor and publisher, b near Niagara Falls, N Y, grad Wesleyan Univ At Wesleyan he built (1871) the Orange Judd Hall of Natural Science and secured through his gifts the establishment of the first agricultural experiment station in the country He became in 1853 joint editor, and soon owner, of the *American Agriculturist*, which he made one of the leading farm papers of the country

Jude, Saint, or **Saint Judas** [Jude is an English form to distinguish from Judas Iscariot], one of the Twelve Apostles He has always been supposed to be the same as Judas called the brother of Jesus and the author of the epistle He is also called Lebaeus and Thaddaeus Mat 10 3, 13 55, Mark 3 18, Luke 6 16 Juda Mark 6 3 According to tradition he suffered martyrdom in Persia with St SIMON, with whom he has a feast Oct 28

Jude, epistle of the New Testament, the last book of the Bible but one The Jude who wrote it has been identified since ancient times with St Jude the apostle, but many critics deny the identity and date the letter as late as A D 100 It is called a Catholic (or General) Epistle but is clearly intended for a definite audience (3) warning against some particular heresy, which led to immorality (4,8,10) The dangers are shown from Old Testament examples (5–11) The book contains references to Jewish apocryphal books, Enoch (6,14–15) and the Assumption of Moses (9) It ends with a beautiful doxology (24–25) Jude has a close literary relationship with 2 PETER

Judea (jōōdē'ŭ) see JUDAEA

Judenburg (yōō'dunbōōrk), city (pop 10,929), Styria, S central Austria Now a manufacturing town with steel mills, it was an important Roman traffic center and has a 9th-century church

Judge, William Quan, 1851–96, American theosophist, b Ireland He came as a boy to America Becoming interested in theosophy, he associated himself with Madame BLAVATSKY and others in 1875 to found the Theosophical Society, and he edited and published (1886–96) its organ, the *Path* After a schism in the society, he became president (1894) of the American section of the Theosophical Society He wrote *The Ocean of Theosophy* (1915, reissued 1926)

Judges, book of the Old Testament, seventh in the order of AV It is the sequel of Joshua in the biblical history, telling of the Hebrews in the Promised Land from Joshua's death until, but not including, the time of Samuel The religious interpretation is stated in an introduction (2 6–3 4) the book is an account of Israel's successive apostasies from God and their consequences, first, punishment at the hands of a foreign nation, then, delivery from it by God, who raises up a leader The leaders are called judges The chronology of the book is impossible to untangle, partly because of occasional failure to give the length of time between judges The book consists mainly of lengthy accounts of a few judges Deborah with Barak (4–5), Gideon (6–8), Gideon's usurping son Abimelech (9–10), Jephthah (11–12), and Samson (13–16) The other judges receive less attention, some a bare mention Othniel, Ehud, and Shamgar (3) before Deborah, Tola and Jair (10) before Jephthah, and Ibsan, Elon, and Abdon (12) before Samson The opening passage (1 1–2 5) of the book is out of order, for it belongs to the period of Joshua, the closing chapters contain two appended stories of violence, one laid in Dan (17–18), the other in Benjamin (19–21). Judges contains many favorite biblical narratives For critical views of the composition and for works on the book, see OLD TESTAMENT

Judgment, decision of a court of law respecting the issues before it The term ordinarily is not applied to the decree (order) of courts of EQUITY The outstanding characteristic of a legal judgment in contrast to an equitable DECREE is its finality and fixity, thus, except for error justifying an APPEAL the judgment may not be reconsidered (see JEOPARDY) The judgment, which in most cases of consequence follows the VERDICT of a jury, is the determination of the judge that the defendant is guilty or innocent of the alleged offense If the judgment is one of criminal guilt, the court proceeds to impose SENTENCE In civil cases, when judgment is for the plaintiff, the court usually awards a sum as DAMAGES The damages thereupon constitute a debt which takes priority over all other obligations of the defendant except taxes and previous judgments. If the debtor fails to pay, the sheriff, to execute the judgment, will seize and sell first his personal property and then his realty

The sheriff may also garnish debts owed to the defendant, e g , his wages. Certain property of the debtor is exempt from seizure, including clothing, equipment needed to carry on his trade or profession, and the family homestead In some jurisdictions a defendant who willfully refuses to pay a judgment may be punished for a CONTEMPT OF COURT Approximately the same measures used to collect damages are available for collecting the legal costs which the court awards the successful party in a suit.

Judgment Day or **Doomsday**, central point of Christian eschatology The origin of Christian belief in the Last Judgment lies in the New Testament, from which comes the doctrine that this world will come to an end, the dead will be raised up in the general RESURRECTION, and Jesus will come in glory to judge the living and the dead, then the sinners shall be cast into HELL, and the righteous shall live in HEAVEN forever Mat 24 3–25 46, Luke 21 5–33, 1 Cor 15, 1 Thess 4 13–5 3 No great Christian church has ever taught when the Second Coming shall take place, but many individuals have ventured to prophesy its date Those who lay stress on the end of the world are called chiliasts, millenarians, or, specifically, ADVENTISTS According to many the book of REVELATION (the Apocalypse) gives notions of the end of the world See ANTICHRIST, ARMAGEDDON, MILLENNIUM

Judith [Heb , =Jewess], book of the Old Testament, placed in the Apocrypha in AV and before Esther in the Western canon It tells of an attack on the Jews by an army generaled by Holofernes Bethulia, a besieged Jewish city, is about to surrender when Judith, a Jewish widow of great beauty and devotion, enters the enemy camp, gains the favor of Holofernes, and murders him Judith returns to the city with his head, and the Jews rout the armies The story is informed with a spirit of God's interest in His people, and Judith is pictured as a woman of great self-sacrifice and nobility The texts of Judith are in great confusion The book was written apparently by a Palestinian before 100 B C As to the events, it is known that under Artaxerxes III a general Holofernes invaded Palestine Another Judith a wife of Esau, is named in Gen 26 34 For bibliography, see OLD TESTAMENT

Judith, Anglo-Saxon epic, preserved only in part and based on the apocryphal book of Judith It is in the same manuscript as *Beowulf* See editions by A S Cook (1888, 1904)

judo see JUJUTSU

Judson, Adoniram (ădənī'rəm), 1788–1850, American Baptist missionary, b Malden, Mass , grad Brown, 1807 At Andover Theological Seminary, he became the leader of a missionary movement out of which grew the American Board of Commissioners for Foreign Missions As a Congregational minister, Judson sailed (1812) for India but that year he experienced a conversion to the Baptist faith This brought about his transfer to Burma, where subsequently he was supported by the American Baptist Missionary Union, which came into existence in 1814 for that purpose After some 30 years of almost unendurable hardships and labor in Burma, during which the mission work was securely founded, Judson came back (1845) to the United States, where he aroused much enthusiasm for his work Upon his return (1846) to Moulmein, center of Baptist activities, he completed and published (1849) his *Dictionary, English and Burmese* He had also translated the Bible into Burmese Judson's record as a pioneer missionary in Asia has been the source of much inspiration to the cause of Protestant missions Judson was married three times, and his wives were remarkable women who aided him in his work—Ann (Hasseltine) Judson (1789–1826), who founded a girls' school at Rangoon, Sarah (Hall) Boardman Judson (1803–45), who translated *Pilgrim's Progress* into Burmese, and Emily (Chubbuck) JUDSON One son, Adoniram Brown Judson (1837–1916), was a New York surgeon, whose papers on orthopedics appeared in American and European journals Another son, Edward Judson (1844–1914), was pastor (from 1881) of the Berean Baptist Church, New York city. This congregation moved (1890) into the Judson Memorial Church, built to correspond with Edward Judson's conception of a community institution as later described in his influential *The Institutional Church* (1899) See biographies of Adoniram Judson by Edward Judson (1883) and S R Warburton (1937)

Judson, Edward Zane Carroll: see BUNTLINE, NED

Judson, Emily (Chubbuck), 1817–54, American author, whose pseudonym was Fanny Forester She was a missionary and the third wife of Adoniram Judson She wrote several moralistic works and a novel, *Allen Lucas, the Self-Made Man* (1847)

Judson College: see MARION, Ala.

Judsonia, strawberry-shipping town (pop. 1,011), NE central Ark , near the Little Red River.

Juengling, Frederick (yŭng'lĭng, yĭng'–), 1846–89, American wood engraver, b Germany. He settled in New York (1866), working for a time for Frank Leslie A founder of the American Society of Wood Engraving, Juengling aided materially in establishing a high standard of craftsmanship Simple, realistic subjects were his preference He was the first American wood engraver to be represented in the Paris Salon (1881) See Frank Weitenkampf, *American Graphic Art* (1912).

Juggernaut, India see PURI

juggler, entertainer who performs by tossing such objects as balls, knives, or plates into the air and keeping them in motion for some time This universal skill was recorded by Marco Polo The juggler is distinguished from the conjurer in that he makes no attempt to deceive Juggling was one of the accomplishments of the medieval JONGLEUR

Jugoslavia see YUGOSLAVIA

Jugurtha (jōōgûr'thə), c 160–104 B C , king of Numidia, a grandson of Masinissa On the death of Micipsa (118), the royal power devolved upon his two sons and upon Jugurtha, who disposed of his associates and united Numidia under his rule A Roman army invaded Numidia, but was repulsed (111) Jugurtha, on a visit to Rome to explain his acts, murdered a rival War was resumed, and the Romans under Q Metellus Numidicus (commander 109–108) drove Jugurtha from Numidia The Romans under Marius continued a guerrilla warfare Jugurtha was captured (106) in an ambush treacherously arranged by his father-in-law, Bocchus, king of Mauretania, and died in prison in Rome

Juilliard School of Music (jōōl'yärd), in New York city, coeducational, chartered 1926 by the foundation established 1920 by a legacy of Augustus Juilliard Until an amalgamation in 1946, there were two units—the Juilliard Graduate School (1924) and the Institute of Musical Art founded in 1905 by Frank Damrosch and James Loeb

Juiz de Fora (zhwēzh' dŭ fô'rŭ), city (pop 70,849), S Minas Geraes state, E Brazil It is an important industrial city with a large production of textile manufactures and other industries as well It has excellent rail and highway connections

jujutsu, see JUJUTSU

jujube (jōō'jōōb), any plant of the genus *Zizyphus*, deciduous or evergreen spiny shrubs or trees native to the tropics and subtropics of both hemispheres The common jujube has long been cultivated in many varieties by the Chinese, the fruit, eaten fresh, dried, or preserved, has been used in confectionery and for flavoring jujube lozenges, now usually artificially flavored Jujubes are being increasingly grown in the United States, sometimes for ornament One species is called Christ's-thorn. See also LOTUS

jujutsu (jōō'jōōt'sōō, –jĭt'–) or **jujitsu** (jōōjĭt'sōō), Japanese method of defense and offense without weapons in personal encounter The success of jujutsu depends largely upon the skill of using the opponent's strength and weight to halt and injure him and upon the skill of applying pressure particularly by striking blows with the side of the hand—at certain sensitive points of the combatant's body in order to produce temporary paralysis or to throw him off balance A bout starts with the adversaries holding the collar of each other's kimonos or jackets, and victory is scored when the opponent, faced with injury or even death, strikes the floor with hand or foot Jujutsu requires intensive training and a detailed knowledge of anatomy Imported probably from China, jujutsu was long the exclusive property of the Japanese nobility In modern Japan the practice began to be generally taught in the schools and in the military services and became an organized sport By the 20th cent jujutsu attracted attention in Europe and America It is sometimes spelled jujutsu and jujutsu In judo, an outgrowth of jujutsu which was devised in Japan in the 1880s, the aim is to inflict mortal injury Judo was taught in the U S army in the Second World War See F P Lowell, *Jiu-jutsu* (1942), S R Linch, *Combat Jiu Jitsu for Offense and Defense* (1943), T S Kuwashima and A R Welch, *Judo* (1949)

Jujuy (hōōhwē'), city (estimated pop 19,257), capital of Jujuy prov , NW Argentina, on the Jujuy river In a hilly, wooded, subtropical region, it is the center of a cattle and agricultural district Minerals and timber are exploited in the area Jujuy was founded in 1593

juke box: see PHONOGRAPH

Jukes, see DUGDALE, RICHARD LOUIS

julep (jōō'lĭp) or **mint julep,** alcoholic beverage of the S United States Its basis is properly bourbon whisky, which is combined with water, sugar, crushed ice, and mint leaves

Julesburg (jōōlz'bûrg), town (pop 1,619), co seat of Sedgwick co , extreme NE Colo , on the South Platte river near the Nebr. line, in a farm area, founded 1881, inc. 1886. Tornadoes in 1947 caused damage

Julia, feminine name in the Julian gens **1** d 54 B C , daughter of Julius CAESAR and wife of POMPEY By her grace and tact she maintained the bond between her father and her husband On her death the rivalry between the statesmen became an open rupture **2** 39 B.C.–A D **14**, daughter of Augustus and wife, in turn, of M Claudius Marcellus, M Vipsanius Agrippa, and Tiberius Her gross infidelities caused her banishment (by Augustus) to the isle of Pandataria, where, soon after her husband ascended the throne, she died of starvation **3** 18 B C –A D 28, daughter of JULIA **2** by Agrippa and wife of L Aemilius Paullus She was banished by Augustus, for her licentious conduct, to the isle of Tremerus, where she died.

Julia, Christian at Rome Rom 16 15

Julian, George Washington, 1817–99, American abolitionist, U S Representative from Indiana (1849–51, 1861–71), b Wayne co , Ind Elected to the Indiana legislature as a Whig in 1845, he later became prominent in the Free-Soil party and in 1849 was sent to Congress by a coalition of Free-Soilers and Democrats There he continued his radical antislavery activities In 1852 the Free-Soil party nominated him for Vice President on the ticket with John P Hale He became a Republican on the formation of that party and in 1861 returned to Congress, where he was chairman of the committee on public lands and a member of the committees on the conduct of the war, on Reconstruction, and on the impeachment of President Andrew Johnson In 1872 he joined the Liberal Republican party and after its demise was associated with the Democratic party From 1885 to 1889 he was surveyor general of New Mexico by appointment of President Grover Cleveland Among his writings are *Speeches on Political Questions* (1872), *Political Recollections, 1840 to 1872* (1884), *Later Speeches on Political Questions, with Select Controversial Papers*, edited by his daughter, Grace J Clarke (1889), and a biography of his father-in-law, Joshua R Giddings (1892). See biography by Grace J Clarke (1923)

Juliana, 1909–, queen of the Netherlands (1948–) She succeeded on the abdication of her mother, Queen WILHELMINA She was married (1937) to Prince Bernard of Lippe-Biesterfeld, to whom she bore four daughters In the Second World War, Juliana fled before the German occupation of the Netherlands and lived in England and Canada

Juliana of Norwich (nôr'ĭch), d c 1443, English religious writer, an anchoress of Norwich called Mother (or Dame) Juliana or Julian Her work, written c 1370, *Revelations of Divine Love*, is an expression of mystical fervor in the form of 16 visions of Jesus Dominant ideas are the great love of God for men and the consequently detestable character of human sin, the very existence of sin was an intellectual crux for Mother Juliana See MYSTICISM See edition of her book by George Tyrell, S J (1920), Lucy Menzies, *Mirrors of the Holy* (1928)

Julianehaab (yōō'lēənəhôp'), town (pop 954), on SW Greenland A port, it is the capital of Julianehaab dist and colony (pop 4,186), the most populous part of Greenland, and is the chief trade center in S Greenland There are a hospital and a radio station

Julian the Apostate (Flavius Claudius Julianus), 331?–363, Roman emperor (361–63), nephew of Constantine I, successor of Constantius II He was given a Christian education, and he and his brother GALLUS were sent (c 341) to Cappadocia When Gallus was appointed Caesar (351), Julian was brought back to Constantinople After Gallus had been put to death (355) Julian was called from the quiet of a scholar's life and made Caesar Sent to Gaul, he was unexpectedly successful in combating the Franks and the Alemanni and was popular with his soldiers His administration was just and salutary When Constantius abruptly ordered him (360) to send soldiers to assist in a campaign against the Persians, Julian obeyed, but his soldiers mutinied and proclaimed him Augustus He accepted the title, but Constantius refused to yield the western provinces to him. Before the two could meet in battle to decide the claim, Constantius died, naming Julian as his successor The emperor through his studies had fallen in love with pagan glory and had abandoned Christianity As emperor he did not institute any systematic persecution of the Christians, he did, however, try to restore paganism The attempt was unsuccessful, but the result was much confusion since Christianity was rent by the quarrel over Arianism His administration was just and venal officials were curbed, but he accomplished little in his short reign He undertook a campaign against the Persians and was at first triumphant, but then had to retreat and was killed in a skirmish He was succeeded by JOVIAN

Jülich (yü'lĭkh), former duchy, NW Germany, between Cologne and Aachen The town of Jülich was the capital At first a county, it was united in 1348 with the county of BERG, and in 1356 Jülich was raised to a duchy After the extinction of the Jülich line, both Jülich and Berg passed (1524) to the dukes of Cleves (see CLEVES, DUCHY OF). The struggle which broke out in 1609 for the succession to the territories of the dukes of Cleves ended in 1666 Jülich and Berg passed to the Palatinate-Neuburg branch of the Bavarian house of WITTELSBACH and the rest to the electors of Brandenburg Ceded by Bavaria to France in 1806, the territory was assigned to Prussia at the Congress of Vienna (1815) and was incorporated in the former Rhine Prov of Prussia.

Julier (yo͞ol'yur), pass, 7,503 ft high, from the Upper Engadine Valley to the Oberhalbstein Valley, Grisons canton, Switzerland Used since antiquity, it is crossed by the modern Julier Road (built 1820–40)

Julius I, Saint, pope (337–52), a Roman; successor of St Marcus and predecessor of LIBERIUS In the controversy over ARIANISM, when both sides appealed to him for support, he convened a council at Rome (340), at which were present ATHANASIUS, MARCELLUS OF ANCYRA, and many other Catholic exiles from the East The Arians of the East seem to have evaded his invitation The principal result of the whole incident was a letter from the pope to the Arians, questioning their sincerity in the matter of the council acquitting Athanasius of every charge, and chiding the Arians for not appealing to the pope at the beginning, since, he said, he had the principal see and the appellate jurisdiction over the whole Church As an early example of the papal claims it is remarkable Feast April 12

Julius II, 1443–1513, pope (1503–13), an Italian (b Savona) named Giuliano della Rovere, successor of Pius III and predecessor of LEO X His uncle Sixtus IV gave him many offices and created him cardinal, in 1480 he successfully carried out a difficult mission to France and the Netherlands INNOCENT VIII was entirely under Cardinal della Rovere's influence, and it was in reaction to this power that the rest of the cardinals elected (1492) his bitter enemy, Rodrigo Borgia, as Pope ALEXANDER VI Giuliano went into voluntary exile and had little to do with ecclesiastical affairs until Alexander's death (1503) Pius III succeeded for less than a month, and Giuliano succeeded him Pope Julius showed himself first of all a warrior, and he ably completed the work, begun by his enemy Cesare Borgia, of restoring the Papal States to the Church Having joined the League of Cambrai, he was at war with Venice until 1509 and won back Ravenna, Rimini, and Faenza Then he formed (1510) the anti-French HOLY LEAGUE The resultant struggle was a draw (see ITALIAN WARS) In 1512 he assembled the Fifth LATERAN COUNCIL, which condemned the Gallicanism of the Church in France and abolished simony in the college of cardinals Julius was a great patron of art, and Raphael (who painted his portrait), Michelangelo, and Bramante enjoyed his favor. He laid the cornerstone of St Peter's Worldly as Julius was, he was one of the first to suppress nepotism and to try, albeit feebly, to break the hold of Renaissance corruption on Rome

Julius III, 1487–1555, pope (1550–55), a Roman named Giovanni Maria Ciocchi del Monte, successor of PAUL III and predecessor of Marcellus II Paul III created him cardinal (1536), and Cardinal del Monte was prominent as a representative of the pope at the Council of Trent (see TRENT, COUNCIL OF) After he became pope he reconvened the council for nearly a year (1551–52) When it suspended sessions, Julius established a permanent commission to plan reform He had been an enemy of Charles V, but became reconciled with him in his pontificate

Julius, centurion in whose charge Paul was sent to Rome Acts 27 1

Julius Africanus, Sextus. see AFRICANUS, SEXTUS JULIUS

Julius Caesar. see CAESAR, JULIUS

Jullian, Camille (kämē'yu zhülyä'), 1859–1933, French historian, author of the monumental *Histoire de la Gaule* (volumes bear dates 1908–26, but Vol I actually appeared in 1907)

Jullundur (jŭ'lŭndur), city (pop 135,283), capital of Punjab state, India But little remains of the ancient city, which was destroyed by the Sikhs in 1757. Jullundur is a railroad junction It has flour mills and silk mills

Julus: see ASCANIUS

July: see MONTH.

July Revolution, revolution which broke out in July, 1830, in France against the government of CHARLES X The attempt of the ultraroyalists in that reign to set aside the results of the French Revolution and return to the *ancien régime* awoke the opposition of the bourgeois who had absorbed much of the property of the nobles The disbanding of the national guard further offended that class The banker, Jacques LAFFITTE, was typical of the bourgeois, who sought the aid of liberal journalists, such as THIERS, in opposition to the government The working class was naturally opposed to a government favoring the nobles VILLÈLE was the minister to awake trouble, Charles was forced to replace him with the moderate MARTIGNAC, but later dismissed him and put the reactionary Jules ARMAND DE POLIGNAC in power. Matters were brought to a head by the repressive and ultraroyalist July Ordinances. Barricades were thrown up in the streets of Paris; Charles X was forced to flee into exile The duke of Orléans, LOUIS PHILIPPE, became king of the French. His reign (1830–48), which put the wealthy bourgeoisie in power, is known as the July Monarchy.

Jumel Mansion (jo͞omĕl', shō͞o–), historic house, New York city. The sturdy Georgian mansion was completed in 1766 by Roger Morris, one of the city's wealthy merchants In the American Revolution it served as headquarters of both George Washington and Sir Henry Clinton, American and British commanders in chief. After the war it was used as a tavern It was purchased (1810) by a rich wine merchant, Stephen Jumel (d. 1832), for his wife, Eliza Brown Jumel (1775–1865) After Jumel's death she married (1833) Aaron Burr, wrangled with him over family finances, and procured (1834) a divorce When she died, the mansion passed to members of her family In 1903 it came into the custody of the Daughters of the American Revolution, and by 1945 it was completely restored and was open as a museum It commands a fine view See W H. Shelton, *The Jumel Mansion* (1916)

Jumet (zhümä'), town (pop. 27,786), Hainaut prov., Belgium, N of Charleroi It is a center of a coal-mining region and has glass manufactures

Jumna (jŭm'nŭ), river, c 850 mi long, rising in N United Provs., India In its early course, running south, it forms the boundary of United Provs with Delhi state and with Punjab state Then turning to the southeast, it flows through United Provs past Agra and Ferozabad to join the Ganges river just below Allahabad The junction of the two rivers is one of the bathing sites most sacred to Hindus The Jumna has lost much of its former value as a trade artery It is economically important as the source of water for extensive irrigation works

Junagarh (jo͞o'nugŭr") or **Junagadh** (jo͞o'nugud"), former native state (3,337 sq. mi., pop 670,719), Kathiawar peninsula, India, bordering on the Arabian Sea There is fishing. Rainfall is adequate, and grains, tobacco, and cotton are produced Cotton cloth is manufactured Junagarh was wrested (c 1735) from the Mogul empire by Sher Kahn Babi, a Moslem adventurer, who established a dynasty In 1947 the Moslem ruler announced the accession of his state to Pakistan, although the population was largely Hindu India forced him to revoke this decree, and in 1949 Junagarh joined the state of Saurashtra **Junagarh,** town (pop 58,111), formerly the capital of the state, has a long history In the vicinity and in its old citadel there are Buddhist caves Late 15th-century fortifications still stand The town manufactures metalware and has a college.

junco or **snowbird,** bird of the FINCH family The slate-colored junco, a common winter resident in E North America, is about the size of an English sparrow, with dark gray upper parts, a white abdomen, and white outer tail feathers Its song is sweet There are a number of juncoes

Junction, city (pop 2,806), co. seat of Kimble co., W central Texas, NW of San Antonio and at the junction of the two forks that make the Llano river, settled 1876, inc 1928 Once a cow town, Junction now ships immense quantities of wool and mohair from surrounding ranches The clear, dry air, the green valley, the wild country of the Edwards Plateau roundabout, with game for hunting and rough slopes and rapid streams for beauty —these combine to attract many visitors.

Junction City. **1** Town (pop in Ark., 797, in La., 355) on the Ark.-La. border S of El Dorado, Ark A lumber mill is here **2** City (pop 8,507), co. seat of Geary co., NE Kansas, at the confluence of the Republican and Smoky Hill rivers W of Topeka, founded 1858, inc 1859 It is the rail and trading center of an agricultural and dairy area and grew as the supply point for near-by Fort Riley (see RILEY, FORT) Limestone quarries are near Junction City **3** Town on the La.-Ark. border see JUNCTION CITY 1 **4** City (pop. 1,187), W Oregon, NNW of Eugene, inc 1885 It is a trade center for a fruit-farming area.

June, Jennie: see CROLY, JANE CUNNINGHAM.

June: see MONTH

Juneau, Solomon Laurent (jo͞onō', jo͞o'nō), 1793–1856, French Canadian fur trader and founder of Milwaukee, Wis., b near Montreal In 1818, as an agent of the American Fur Company, he moved to their new post at Milwaukee, where he lived for 32 years He amassed a fortune in independent trade, acquired much land, and was very popular with the Indians He became an American citizen in 1831 He surveyed the town site, built the first store and first tavern, became Milwaukee's first postmaster (1835), first president of the village (1837), and first mayor (1846) He later lost possession of all his property and died in poverty

Juneau (jo͞o'nō), city (1939 pop 5,729, 1948 estimated pop. 7,000), territorial capital, SE Alaska It lies at the foot of two peaks, Mt Juneau and Mt Roberts, on the Gastineau Channel, which separates the mainland from Douglas Island A suspension bridge connects the town of Douglas, on the island, with Juneau. It was settled (1881) after gold was discovered (1880) in the region and was first called Harrisburg. Gold mining is still the chief industry, largely centered in the operations of the Alaska Juneau Company. Juneau was officially made the capital of Alaska in 1900 but began to function as such only in 1906. Salmon fishing, fur farming, and lumbering are extensively carried on. The city is a port of entry, with an ice-free harbor, a seaplane base, and an airport. Federal and territorial offices and the Alaska Historical Library and Museum are here

Juneau, city (pop 1,301), co. seat of Dodge co., central Wis., NW of Milwaukee and SE of Beaver-dam Lake, inc 1887.

June beetle, June bug, or **May beetle,** a blackish or mahogany-colored beetle of the scarab family which flies at night The larvae or white grubs live in the soil, feeding on roots and other underground parts of grass, grain, and other crops and nursery stock A three-year life cycle from egg to adult is commonest

Juneberry: see SHADBUSH

June bug see JUNE BEETLE

June Days, in French history, the name usually given to the insurrection of workingmen in June, 1848 The working classes had had an important part in the FEBRUARY REVOLUTION of 1848, but with the triumph of the bourgeois they became a great problem to the provisional government The national workshops were never organized as Louis BLANC had planned them, and the workingmen felt, with some justice, that they had been betrayed When a decree of June 22 ordered the gathered workingmen to disperse to the provinces or to join the force of the revolution, the workingmen rose in revolt There was considerable bloody fighting for four days in the barricaded streets of Paris General CAVAIGNAC was given dictatorial powers and managed by harsh measures to suppress the insurrection The leaders were later hunted out and punished The general result of the June Days was to alienate permanently the lower classes from the revolution and to pave the way for the coup d'état of Louis Napoleon (see NAPOLEON III)

Jung, Carl Gustav (karl' go͞os'täf yo͝ong'), 1875–, Swiss psychiatrist, founder of the school of analytical psychology, studied (1895–1900) at the Univ of Basel, M D Zurich, 1902 After studying (1903) at the Collège de France under Janet, Jung returned to Zurich, where he became connected with the Burgholzli, the psychiatric clinic of the university directed by Eugen Bleuler Jung was deeply impressed by the work of Freud, and by the time of their meeting in 1908 he had already published his *Psychologie der Dementia Praecox* (1907, Eng tr, 1909), a study of the effect of emotional factors in schizophrenia In the years prior to 1913, Jung, as editor of the *Jahrbuch für psychoanalytische und psychopathologische Forschungen* and as first president of the International Psychoanalytic Association, was second only to Freud in the movement However, with Jung's publication of *Wandlungen und Symbole der Libido* (1912, Eng tr, *Psychology of the Unconscious*, 1916) important differences became clearly articulated and a formal break followed Jung, conceiving of the libido as a primal, nonsexual energy not unlike Henri Bergson's *élan vital*, postulated two systems in the unconscious—the personal, made up of the repressed events of a person's life, and archetypes or inherited tendencies which form the racial or collective unconscious His book *Psychologische Typen* (1921, Eng tr, 1923) proposed a series of polarities in the human personality of which the EXTROVERSION AND INTROVERSION dimension was outstanding Jung's approach to psychoanalysis was more mystical and religious than was that of Freud's Among his other works was *Psychology and Religion* (1938) and *The Integration of a Personality* (Eng tr, 1939). See Jolan Jacobi, *The Psychology of C G Jung* (Eng tr, 1942)

Jung or Jungius, Joachim (yō'äkhĭm yo͝ong, yo͝ong'yo͝os), 1587–1657, German philosopher, mathematician, and naturalist He was professor of mathematics at Giessen (1609–14) and later at Rostock and was rector (1629–40) of the Johanneum at Hamburg Though his work in natural science was distinguished, it was ignored for some time after his death. In his plan for providing plants with a system of names, using genus and species, the work of Linnaeus was foreshadowed. In philosophy he somewhat anticipated Leibniz, urging the importance of mathematical discipline for sound philosophical thinking Some of his works were destroyed, and many were published only after his death. He wrote *Logica Hamburgensis* (1638), *Doxoscopiae physicae minores* (1662), *Isagoge phytoscopia* (1678), and *Opuscula botanico-physica* (1747).

Jungaria, China see DZUNGARIA.

Jungbunzlau, Czechoslovakia see MLADA BOLESLAV

Jünger, Ernst (ĕrnst' yüng'ur), 1895–, German writer He fought with distinction through the First World War His war novels, while treating realistically the details of the trench and the battlefield, glorified the sacrifice of the soldier for the fatherland, he called war a "technical and heroic miracle." The novels which best expressed this attitude are *In Stahlgewittern* (1919, Eng. tr., *Storm of Steel*, 1929), *Feuer und Blut* [fire and blood] (1924), and *Das Wäldchen 125* (1925, Eng. tr, *Copse 125*, 1930). His diary as an officer in France in the Second World War—*Gärten und Strassen* [gardens and streets] (1942)—shows less tendency to idealize force. His work is notable for its literary style.

Jungfrau (yo͝ong'frou) [Ger.,=the Virgin], peak, 13,653 ft. high, Switzerland, in the Bernese Alps It was first ascended in 1811 and is today popular with tourists The **Jungfraujoch** (-jôkh") is a mountain saddle 11,342 ft high, the highest point in Europe reached by rail It has a scientific institute A meteorological station is on the near-by Sphinx summit, 11,729 ft high

Jungius, Joachim: see JUNG, JOACHIM

jungle [Hindustani *jangal*=desert,uncultivatedland], almost impassable thicket of dense vegetation, mostly swampy land, to be found nearly everywhere in the tropics The moist heat of the jungle permits tropical vegetation beyond its usual limits The characteristic flora of the jungle includes many beautiful blooming plants (e.g., several kinds of orchids) and useful hardwoods Among the animals which inhabit the jungle are the tiger, elephant, boar, deer, several kind of monkeys, and big venomous snakes The largest jungles are the Terai along the southern base of the Himalaya and the Sundarbans at the mouth of the Ganges

Junia, man or woman early converted to Christianity Rom 16 7.

Juniata (jo͞onēä'tə), river of Pennsylvania, rising in the Alleghenies and flowing tortuously 150 mi E to the Susquehanna above Harrisburg

Juniata College, see HUNTINGDON, Pa

Junín (ho͞onēn'), small town, W central Peru, near Lake Junín (c 35 mi long) in the Andes In the vicinity on Aug 6, 1824, Simón BOLÍVAR, aided by SUCRE, defeated the Spanish general José Canterac, in the first important battle leading to Peruvian independence

junior college and **junior high school** see SCHOOL

juniper, any tree or shrub of the genus *Juniperus*, aromatic evergreens with berrylike fruits and needle- or scale-shaped leaves Of approximately 40 species, 12 are native to North America and others are introduced The so-called common juniper (*Juniperus communis*) is widely distributed throughout most of the Northern Hemisphere and is also much cultivated in different forms, such as dwarf and pyramidal Its fruits flavor gin The juniper most common to North America is usually called red cedar (*J. virginiana*) and is found over most of the E United States Its fragrant, insect-repellent wood, close-grained but brittle, is much used for chests, closets, posts, woodenware, and pencils, for which uses the large forests of these trees have been depleted Oil of red cedar is used in medicine perfumery, and microscopy Other trees are sometimes called red cedar Western juniper, *J. occidentalis*, of the W United States (not to be confused with the western ARBORVITAE although both are also called western red cedar) has edible fruits Indians used the fruits of other Western species as food and the bark for fiber Oriental junipers have been used for incense

Junius, English political controversialist, known only by the signature Junius, which he signed to various letters written to the London *Public Advertiser*, notably to the series which appeared between Jan., 1769, and Jan., 1772 The letters were obviously written by a Whig of the Pitt-Grenville faction familiar with secret government matters They attacked in turn the king's party and even George III himself In the controversy centering about John Wilkes, Junius defended the cause of Wilkes A separate series of letters (1772), in which the author did not employ his customary signature, attacked Viscount Barrington Though the letters were inspired by political opposition, Junius used scandal and invective rather than argument as his tools They showed considerable skill in the use of short, cutting sentences, so balanced as to build up a climactic insult The letters were reprinted by the publisher of the *Advertiser* in 1772, and a new edition, with additional letters, was published in 1812 The fact that the writer's identity was kept a mystery added to the interest in these letters The writer has never been surely identified, though the political beliefs, handwriting, and life of Sir Philip FRANCIS have led many to ascribe the authorship to him Arguments have been offered in favor of the authorship of Lord Shelburne, later marquess of Lansdowne (see C. W. Everett, *The Letters of Junius*, 1927) More recently, on the evidence of some manuscript notes of Lord Shelburne, the authorship has been ascribed to Laughlin Macleane, British army surgeon and secretary to Shelburne.

Junius, Franciscus, 1589–1677, French philologist, son of Franciscus Junius (1545–1602), French Huguenot theologian. The younger Franciscus Junius was born in Heidelberg and lived chiefly in Holland and England He was an able pioneer in the study of Gothic and Anglo-Saxon A unique manuscript of Anglo-Saxon poems formerly attributed to Cædmon was owned and edited by him and is known as the Junius MS. In the Bodleian Library at Oxford it is numbered Junius XI. For a recent edition, see G. P. Krapp, *The Junius Manuscript* (1931)

Junkceylon: see PHUKET.

Juno (jo͞o'nō), in Roman religion, queen of the gods, sister and wife of JUPITER. Like the Greek goddess HERA, with whom she became identified, she was primarily a protector of women Every woman had her own Juno, a guardian of her life, as every man had his GENIUS

Junot, Andoche (ädôsh' zhünō'), 1771–1813, French general Having served under Bonaparte in Italy and Egypt, he became ambassador to Portugal (1804–5), and he commanded the French invasion of that country in 1807, thus opening the PENINSULAR WAR Appointed governor general of Portugal, he was forced to evacuate after his defeat by Wellington (1808) He later served in Spain, Germany, and Russia Napoleon created him duke of Abrantès, under which name his wife, Laure Junot, duchesse d'ABRANTÈS, is generally known

Jupiter (jo͞o'pĭtur) [Latin,=God the father], in Roman religion, supreme god, also called Jove He is identified with the Olympian god ZEUS He was the son of SATURN and OPS and the brother and husband of JUNO

Jupiter, in astronomy, largest planet in the solar system Its mean diameter is c 86 728 mi It has a mass more than 310 times that of the earth, and its volume is 1,300 times that of the earth Revolving round the sun at a mean distance from it of 483,310,000 mi., the planet requires 11 years 314 8 days to complete a revolution Its mean period of rotation is 9 hr 55 min When seen through a telescope, the form of Jupiter is shown to be flattened at the poles The surface appears strongly marked by cloud bands lying across it in a direction parallel with the equator and by brighter zones Most noticeable among the changing spots of the surface is a great red patch, carefully studied since 1878, when it became very conspicuous in the Southern Hemisphere Some astronomers estimate the atmosphere of Jupiter to be c 10,000 mi deep The planet is now known to be attended by 11 satellites The first four, discovered by Galileo, are large enough to be observed through ordinary telescopes and have served to bring about the discovery of the motion of light and the determination of its velocity, as well as the determination of longitudes at sea The 8th, 9th, and 11th satellites revolve in a retrograde direction Only Venus (and occasionally MARS) is brighter than Jupiter

Jura (zhürä'), department (1,952 sq. mi., pop. 210,386), E France, in FRANCHE-COMTÉ, occupying the S Jura mts and bordering on Switzerland Lons-le-Saunier is the capital

Jura (jo͞o'ru, Fr zhürä', Ger yo͞o'ra), mountain range, E France and W Switzerland, occupying parts of the French region of FRANCHE-COMTÉ (Jura and Doubs depts.) and the Swiss cantons of VAUD, NEUCHÂTEL, and BERN It extends in parallel ridges for c 200 mi from the Rhine at Basel to the Rhone SW of Geneva, rising above 5,500 ft Its rounded crests and summits are covered with dense pine forests and good pasture lands The region, drained by the DOUBS, the Ain, and smaller streams, is largely agricultural and pastoral and has no large cities It has important watch industries, particularly in the Swiss towns of Le Locle, La Chaux de Fonds, and Granges Export products from the French Jura include briarwood (for pipes), plastics, and cheese There are many popular summer and winter sport resorts, e.g., Saint Cergues, Switzerland Formed of sandstone and limestone and rich in fossils, the Jura gives its name to the JURASSIC PERIOD The mountains N of the Lake of Constance in S Württemberg are called the Swabian Jura

Jura (jo͞o'ru), island (146 5 sq. mi., pop. 364), off W Scotland, in Argyllshire, separated from the mainland by the Sound of Jura, one of the Inner Hebrides It is rugged and rocky in the west and more level in the east, the Paps of Jura rise to 2,571 ft Ardlussa and Craighouse are the chief villages Stock grazing and fishing occupy the inhabitants

Jurassic period (jo͝orăs'ĭk) [from the Jura mts., a type section], second period of the MESOZOIC ERA of geologic time In the Jurassic period, as in the preceding TRIASSIC PERIOD, E North America was continuously elevated, but was subject to EROSION which reduced the Appalachian region to a peneplain The Pacific border of North America, from California to Alaska, was for most of the time submerged In the Early Jurassic large areas of Arizona, Colorado, and Utah were apparently deserts, the sand of these deserts was later consolidated into the white and pinkish Glen Canyon sandstones which add conspicuously to the scenic beauties of this district A part of this area was touched in the Upper Jurassic by the entrance from the north of the Logan Sea, which, in its various advances and retreats, covered large areas of Montana, Idaho, Wyoming, Colorado, and Utah, depositing sandstone, shale, and limestone, with some gypsum The retreat of the Logan Sea toward the end of the period was followed, probably in the Upper Jurassic, but possibly in the Lower CRETACEOUS PERIOD, by the deposition of the Morrison continental series, noted for its richness in fossil dinosaurs. The close of the Jurassic in North America was marked by widespread folding along the western border of the continent, accompanied by the intrusion of lava, and by the upwarping of the Appalachian region. In this disturbance the Sierra Nevada, Klamaths, Cascades, Coast Ranges, and coastal mountains of Canada and Alaska were formed The history of the European Jurassic is very well known, the system being one of the most complete on the continent The climate seems to have been cool toward the beginning and warmer toward the end of the period The plant life of the Jurassic was dominated by the cycads, but conifers, ginkgoes, horsetails, and ferns were also abundant Of the marine invertebrates, the most important were the ammonites. The dominant animals on land, in the sea, and in the air were the reptiles Dinosaurs, more numerous and more extraordinary than those of the Triassic, were the chief land animals, crocodiles, ichthyosaurs, and plesiosaurs ruled the sea, while the air was preempted by the pterodactyls and their allies Mammals were few and small The Jurassic saw the appearance of the first bird, the *archaeopteryx*.

Jurieu, Pierre (pyĕr'zhurēö'), 1637–1713, French Protestant theologian, considered one of the strongest French Calvinist controversialists He was (1674–81) professor at Sedan In 1681 in an attempt to preserve Huguenot liberties he published anonymously *La Politique du clergé de France*, his authorship soon became known, and he left France never to return. From 1681 he was pastor of the Walloon Church in Rotterdam, writing in behalf of the French Reformed Church and giving aid to exiles from France after the revocation of the Edict of Nantes His controversial works, often bitter and aggressive, were directed against Arnauld, Bossuet, Fénelon, Bayle, and others Important writings are the *Pastoral Letters Addressed to the Faithful in France* (1686, Eng. tr., 1689) and *Critical History of Dogmas and Cults* (1704, Eng. tr., 1705) See G. H. Dodge, *The Political Theory of the Huguenots of the Dispersion* (1947).

jurisprudence (jo͝orĭsprōo'dəns), study of the nature and the origin and development of LAW It is variously regarded as a branch of ethics or of sociology Many of the major systematic philosophers (e.g., Aristotle, St Thomas Aquinas, and Kant) have expounded jurisprudential theories Before the 19th cent most jurisprudents adhered to natural law, which maintained that sound legal doctrine was derivable only from a supposed law of nature established by divine ordinance The natural-law school did not deny that the details of legal regulation depended upon the will of the sovereign However, the positivist, or analytical, school, which first became important in the late 18th cent., insisted that law was entirely a matter of sovereign decree distinct from morality and theology Among important 19th-century trends was the view, represented by Savigny, that a people's legal system expressed the national spirit. In the mid-19th cent many jurisprudents attempted to avoid what they felt were theoretical preconceptions and to demonstrate a uniform evolution from primitive times to modern industrialized society Other thinkers were skeptical of evolutionary explanations and sought the basic principles underlying all systems of law in various fields, including economics and psychology See Sir Henry Maine, *Ancient Law* (1861), J. W. Salmond, *Jurisprudence* (7th ed., 1924), Sir Thomas Holland, *Jurisprudence* (13th ed., 1924), Benjamin Cardozo, *The Paradoxes of Legal Science* (1928), Jerome Hall, ed., *Readings in Jurisprudence* (1938)

Juruá (zhōōrwä') river, c 2,000 mi long, rising in E Peru and flowing in a winding course through rain forest of Brazil generally NE to the Amazon. It was once important for transport in the wild-rubber boom

jury, body convened to make decisions of fact in legal proceedings. Historians do not agree on the origin of the English jury Although some authorities trace it to Anglo-Saxon or even more remote Germanic times, most believe that it was brought to England by the Normans The first jurors were not triers of fact in legal disputes but were persons acquainted with the situation in question who spoke out of personal knowledge Thus, in compiling the Domesday Book inquests of neighbors were convened to furnish information on property holdings In the enforcement of criminal justice the earliest function of the jury (mid-12th cent.) appears to have been presenting accusations, and it was only later that jurors were convened to answer on oath the question of guilt These early jury trials, while supplanting the ORDEAL and other irrational procedures, were not themselves satisfactory, because they depended entirely on the unsupported oath of the jurors A verdict could not be overturned except by attaint, i.e., summoning a second jury to give its sworn verdict on the question as to whether the first jury had committed perjury By the 16th cent the jury was used in civil as well as criminal cases and the practice of calling witnesses was well developed, but not until the mid-18th cent. were methods other than the attaint available to set aside an improper verdict. To Englishmen and persons of English descent trial by jury became a cherished protection against the possibility of judicial and administrative tyranny. Among the abuses recited in the Declaration of Independence is "depriving us in many cases, of

the benefits of Trial by Jury " The Sixth Amendment and Seventh Amendment to the U S Constitution, reflecting this concern, provide for jury trial in criminal prosecutions and in civil suits at common law where the damages sought exceed $20, the traditional exemption of cases in EQUITY was left unchanged These constitutional provisions do not bind the states, which, with great variation, preserve the jury system to a large extent In most criminal cases the charge is first considered by a grand jury with 12 to 23 members It hears witnesses against the accused, and if 12 jurors believe that there is sufficient evidence to prosecute, an INDICTMENT or the like is presented The jury sitting at the trial proper is called a petit (or petty) jury from its smaller size (usually 12 members) Trial jury procedure is essentially alike in civil and in criminal cases The venire, a panel of prospective jurors living in the county where the trial is to be held, is summoned for examination Counsel for the parties may first challenge the array, i e , object that the venire as a whole was improperly chosen or is for some reason unfit The challenges to the poll (the veniremen taken individually) which follow are designed to secure as jurors unbiased persons without special knowledge of the matters in issue Included are challenges for principal cause, i e , some grounds such as relationship to a party which requires dismissal of the venireman, challenges to the favor, i e , suspicion of unfitness on which the judge rules, and a limited number of peremptory challenges Once selected, the jury (usually with several alternates) takes an oath to act fairly and without preconceptions At the close of the evidence and after the summations of counsel the judge instructs the jury concerning the VERDICT Strong objection to the jury system has been expressed Some students believe that the American practice of prohibiting any judicial comment on the evidence deprives the jury of needed guidance, they argue that the judge, as in England, should be permitted to summarize the evidence and to evaluate it to some degree Other objections to juries are based on the grounds of expense and the liability of jurors to prejudice and irrational judgment To cure these conditions many states discourage jury trial in all but the most important cases and take various measures to improve the quality of jury panels, e g , the selection of "blue ribbon" juries in difficult cases Outside of the English-speaking countries there is generally less recourse to the jury and less care in the selection of jurors In some countries, notably the USSR and other Communist states, juries are infrequent, but laymen, called assessors, sit on the bench in association with professional judges

Jushab-hesed (jo͞osh'hĕs'ĕd") [Heb , =love is returned], son of Zerubbabel 1 Chron 3 20

Jusserand, Jean Jules (zhä' zhul' zhüsürä'), 1855–1932, French diplomat and author After service in London, Constantinople, and Copenhagen, he was ambassador at Washington (1902–15) He was a close friend of every U S President during the period, and he did much to promote friendly relations between the American people and the French He was undoubtedly influential in winning the United States to the side of the Allies in the First World War A diplomat of tact and ability, Jusserand was also a finished scholar Among his works are *English Wayfaring Life in the Middle Ages* (1889), *Literary History of the English People* (1895), *Shakespeare in France* (1898), and a life of Ronsard (1913) See his incomplete autobiography, *What Me Befell* (1933)

Jussieu (zhüsyö'), name of a French family of distinguished botanists **Antoine de Jussieu** (ätwän' du), 1686–1758, was director of the Jardin des Plantes, Paris He edited Jacques Barrelier's posthumously published *Plantae per Galliam, Hispaniam et Italiam observatae* (1714) and the third edition (1719) of J P de Tournefort's *Institutiones res herbariae* **Bernard de Jussieu** (bĕrnär'), 1699–17777, brother of Antoine, was director of the gardens at the Trianon, Versailles, here he arranged the plants according to his new system of classification, which he never published He revised (1725) Tournefort's *Histoire des plantes aux environs de Paris* Another brother, **Joseph de Jussieu** (zhôzĕf'), 1704–79, accompanied La Condamine to South America, where he remained until c 1771 He introduced into Europe many plants, including the heliotrope. A nephew, **Antoine Laurent de Jussieu** (lōrä'), 1748–1836, assisted Bernard de Jussieu, whose system of classification by natural affinities he elaborated in *Genera plantarum* (1789), which influenced later natural systems of classification He was professor at the Museum of Natural History, Paris, and organized its botanical collection His son, **Adrien de Jussieu** (ädrēĕ'), 1797–1853, also professor of botany at the museum, wrote a standard text, *Cours élémentaire de botanique* (1842–44)

Justi, Karl (karl' yo͞os'tē), 1832–1912, German art historian He was professor of philosophy at Kiel and later, for 29 years, professor of the history of art at the Univ of Bonn He wrote critical works on Dante and on the artists Raphael, Velázquez, Murillo, and Michelangelo

Justice, United States Department of, created by act of Congress in 1870 The U.S Attorney General represented the government in legal matters and gave legal advice to the executives of the government from the time the first cabinet was set up under the Constitution in 1789, but not until 1870 did the office of the cabinet member become the nucleus of a government department Because of the mounting responsibilities of the Attorney General and because of growing need for uniformity in the administration of law, the act of 1870 also set up the office of Solicitor General to represent the government in Supreme Court cases and empowered the creation of assistants to aid the Attorney General in the administration of the department The department furnishes legal counsel in Federal cases, provides means for enforcing Federal laws, and officially construes the laws—subject, of course, to court decisions—under which government officials act The Dept of Justice is comprised of seven specialized divisions (the Antitrust Division, the Tax Division, the Claims Division, the Lands Division, the Criminal Division, the Customs Division, the Administrative Division), three bureaus (the FEDERAL BUREAU OF INVESTIGATION, the Immigration and Naturalization Service, and the Bureau of Prisons), and two boards (the Board of Immigration Appeals and the Board of Parole)

justice of the peace, name designating the person presiding over a type of POLICE COURT In some states the justice's court has jurisdiction over both petty civil and criminal cases The justice of the peace was formerly a more important official than he is today The establishment of the office throughout England in 1360 represented the final extension of royal authority to local government, especially to rural areas The justices, selected from the gentry, enjoyed large administrative and police authority, and they had judicial power over most crimes The office was established in the American colonies, but by the 19th cent increasing urbanization and greater complexity of government relegated it to a minor role in both England and the United States

Justin I, c 450–527, Byzantine emperor (518–27), successor of Anastasius I An Illyrian, he was chief of the imperial guard and seized power when Anastasius died Because he was ignorant of even reading and writing he entrusted the government largely to his nephew, who eventually succeeded him as JUSTINIAN I See Alexander Vasiliev, *Justin the First* (1950)

Justin II, d 578, Byzantine emperor (565–78), nephew and successor of Justinian I In his reign fighting against Persia continued, and Italy was invaded by the Lombards under ALBOIN He at first maintained religious peace, but c 572 he began a severe persecution of the Monophysites In 574 the emperor lost his reason His favorite and his adopted son, Tiberius, exercised the power and succeeded Justin in 578 Tiberius' successor was Maurice

Justin (Marcus Junianus Justinus), fl 3d cent , Roman historian He made a collection of excerpts from TROGUS, which gives many facts untold elsewhere

Justinian I, 483–565, Byzantine emperor (527–65), nephew and successor of JUSTIN I By two great wars, in which his leading generals were BELISARIUS and NARSES, he recovered Africa from the Vandals (533–48) and Italy from the Ostrogoths (535–54) He was less successful in fighting against the Persians and was unable to prevent the annual raids of the Slavs and the Bulgars The burden of taxation which these wars imposed upon the citizens, the discontent of the Monophysites at Justinian's orthodoxy, and persisting loyalty of the people to the family of Anastasius I produced the *Nika* riot (532), which would have cost Justinian his throne but for the firmness of Empress THEODORA (see also BLUES AND GREENS) Justinian insisted upon caesaropapism, the supremacy of the emperor over the Church, not only in matters of organization, but also in matters of dogma He had induced Justin to become reconciled to the Western Church and to persecute the Monophysites, but in 553, seeking to reconcile the Monophysites to the Church, he called a council (see CONSTANTINOPLE, SECOND COUNCIL OF) and engaged in various controversies about dogma He never succeeded in creating unity and finally tended to drift into heresy himself Justinian's greatest accomplishment was the codification of Roman law executed under his direction by TRIBONIAN, commonly called the CORPUS JURIS CIVILIS It greatly influenced all subsequent legal history Justinian erected many public works, of which the chief is the church of HAGIA SOPHIA He was succeeded by his nephew, Justin II See W G Holmes, *The Age of Justinian and Theodora* (1912)

Justinian II (Justinian Rhinotmetus), 669–711, Byzantine emperor (685–711), son and successor of Constantine IV He unsuccessfully warred against the Persians. His extravagance and his ministers' extortions caused a revolution (695). Justinian had his nose cut off (hence his surname Rhinotmetus), and he was exiled to the Crimea Restored (705) with the help of the Bulgars, he was finally deposed and this time had his head cut off A series of usurpers occupied the throne from 705 to 717, when LEO III established a new dynasty

Justin Martyr, Saint, A D c.100–c 165, Christian apologist, called also Justin the Philosopher Born in Nablus, Palestine, of pagan parents, he studied philosophy, and after his conversion to Christianity at about the age of 30, he went from place to place trying to convert men of learning by philosophical argument He seems to have stayed for a time at Ephesus, and he several times visited Rome, where he and some disciples were finally martyred Of his writings (in Greek), only two undisputed works remain, the *Apology* (with a sort of appendix called the *Second Apology*) and the *Dialogue* The *Apology* is a learned defense of Christians against charges of atheism and sedition in the Roman state, it contains an exposition of Christian ethics and invaluable records of the customs and practices of 2d-century Christianity The *Dialogue* sets forth in the form of an argument with Trypho (or Tryphon) the Jew a philosophic defense of Christian beliefs, particularly with reference to Jewish writings, it has references to the Gospels that have been of much interest to students of the Bible Feast April 14

Justin Morgan, 1792–1821, American horse, the foundation sire of the Justin Morgan breed of horses He was named by and for his first owner, Justin Morgan (1747–97) After the death of the owner, the horse—small, weighing about 800 lb , of tremendous endurance, and with a delicate head, heavy shoulders, and a short neck—was bought and sold many times Justin Morgan became the only horse to sire a distinctive breed of horses in the United States, and the Morgan breed preceded the Hambletonian strain as the favored type of trotting horses in America

Justo, Agustín Pedro (agōōstēn' pā'dhrō hōō'stō), 1876–1943, president of Argentina (1932–38) He was an army general and the minister of war under Marcelo Torcuato de Alvear (1922–28) Active in the conservative revolution which overthrew Irigoyen (1930), Justo was elected president He became an honorary general in the Brazilian army when that nation declared war (1942) on the Axis in the Second World War and later was a leading advocate in Argentina of the United Nations

Justus [Latin, =just] **1** Surname of JOSEPH BARSABAS **2** or **Titus Justus,** Corinthian host of St Paul Acts 18 7 **3** Jesus Justus see JESUS **2**

Justus of Ghent (jŭs'tus), fl mid-15th cent , Flemish historical and portrait painter, identified by some authorities with Joos van Wassenhove He was perhaps a pupil of the Van Eycks To his early, Flemish period have been attributed the *Last Judgment* and *Adoration of the Magi* (Metropolitan Mus) In 1470 he went to Italy, where he was commissioned by Duke Federico of Montefeltro to paint *The Communion of the Apostles* (now in the ducal palace at Urbino), the only authenticated painting by Justus Also ascribed to him are the portrait of Duke Federico of Montefeltro (Barberini Palace, Rome) and a series of panels of poets and philosophers (the Louvre and the Barberini Palace, Rome) These, if the work of Justus, show the gradual and complete Italianization of his style during his sojourn in Italy He is also called Jodocus of Ghent and Joos of Ghent

jute (jo͞ot), annual tropical plant of the genus *Corchorus*, grown for its fiber The plant was cultivated in India from remote times, although known in Western commerce only since c 1830, its fiber is, with the exception of cotton, the one most extensively used It is one of the cheapest fibers and is easily dyed and spun, but it deteriorates rapidly It is grown commercially mainly in the Bengal region of India, Calcutta is the chief point of export and is the leading manufacturer of jute products Raw jute is processed also in Europe and in the Western Hemisphere It is used for making fabrics (chiefly burlap), bags, webbing, twines, backing yarns for carpets and linoleum, oakum, paper, and specialty goods Jute strands, usually from 6 to 10 ft long and consisting of several fused fiber elements, lie between the bark and the woody central cylinder to which they are bound by natural gum The harvested stalks are immersed in water to induce fermentation, which dissolves the gum After this retting process the strands are stripped from the stalks by hand labor Although jute can be grown on rich, loamy soil in any hot, humid region, its cultivation is confined to areas where human labor is cheap, since practical harvesting and decorticating machines have not as yet been devised Similar fibers are obtained from other plants, including several species of *Hibiscus*

Jutes see ANGLO-SAXONS and KENT, KINGDOM OF

Jutland (jŭt'lund), Dan. *Jylland* (yü'län), Ger *Jütland* (yüt'länt), peninsula, N Europe, comprising continental Denmark and German SCHLESWIG It is bounded by the Skaggerrak in the north, the North Sea in the west, the Kattegat and the Little Belt in the east, and the Eider river in the south Danish Jutland, including adjacent islands, has an area of 11,411 sq. mi. and 1,826,056 inhabitants. The wind-swept and sandy coast of W Jutland has

poor soil, and Esbjerg is the only good port The eastern seaboard is fertile and densely populated Dairying and cattle raising are the chief occupations, Aarhus, Aalborg, and Frederikshavn are the main ports Jutland has many lakes and is traversed by the Guden, the main river of Denmark South Jutland (Dan *Sønderjylland*) is the name applied in Denmark to the northern part of the former duchy of Schleswig, including the towns of Aabenraa, Hadersley, Sonderborg, and Tonder The peninsula was known to the ancients as the Cimbric Peninsula (Latin *Chersonesus Cimbrica*)

Jutland, battle of, only major engagement of the British and German fleets in the First World War Known in Germany as the battle of the Skagerrak, it was fought on May 31, 1916, c 60 mi W of the coast of Jutland The battle was the result of the attempt of Admiral Hipper and a German battle-cruiser squadron to attract part of the British grand fleet off SW Norway, Admiral Scheer, with the main body of the German high seas fleet, was to follow Hipper and attack the British Partly informed of the plan, the British ordered a rendezvous of the grand fleet W of Jutland Hipper's squadron made contact with a British scouting squadron under Admiral Beatty on May 31 When the German high seas fleet approached later in the day, Beatty (who had already suffered severe losses) turned to the north to meet the main body of the grand fleet under Admiral Jellicoe, who was coming to his aid The main engagement began at 6 P M and ended late in the night when the Germans, under the cover of fog and darkness, made their escape to their home base The battle, in which the Germans displayed a brilliant knowledge of naval tactics, cost the Germans 11 ships and c 2,500 dead, and the British 14 ships and c 6,000 dead Despite their tactical success, however, the Germans gained no advantage from the battle, and their fleet remained bottled up in harbor for the rest of the war Increased German submarine activity was the result The battle of Jutland was, as far as tonnage was concerned, the greatest naval battle the world had until then known

Juttah (jŭ'tŭh), unidentified city, S Palestine Joshua 15 55, 21 16

Juvenal (Decimus Junius Juvenalis) (jōō'vunul), 1st-2d cent A D, Roman satirical poet His verse established a model of the satire of indignation in distinction from the less harsh satire of ridicule, of which Horace was the leading representative Later satirists may be said to follow the example of either one or the other Little can be absolutely asserted as to the facts of his life beyond the fact that he was for much of it desperately poor There is a tradition that as a youth he was banished from court for satirizing an imperial favorite He is known chiefly from his 16 satires, which contain a vivid representation of the life of Rome under the empire They were written probably in the years between A D 100 and A D 128 The biting tone of his diatribes has been seldom equaled From the stern point of view of the older Roman standards he powerfully denounces the lax and luxurious society, the brutal tyranny, the affectations and immorality of women, and the criminal excesses of Romans as he saw them, especially in his earlier years The rhetorical form of his verse is finished, exact, and epigrammatic, furnishing many sayings that have become familiar through quotation See I G Scott, *The Grand Style in the Satires of Juvenal* (1927), Gilbert Highet, *The Life of Juvenal* (1937)

juvenile delinquency, legal term for the behavior of children and adolescents which in adults would be judged criminal (see CRIME) Definitions and age limits of juveniles vary, the maximum age being set at 14 years in some states and up to 21 years in others The 16 to 20-year age group, considered adult in many places, has one of the highest incidences of serious crime A high proportion of adult criminals, especially recidivists, have a background of early delinquency Theft is the most common offense of children, more serious property crimes and rape are most frequently committed in later youth The causes of such behavior, like those of crime in general, are found in a complex of psychological, social, and economic factors Clinical studies have uncovered emotional maladjustments, usually arising from bad family situations, in many delinquents and have stressed adult responsibility for much misbehavior of youth Other studies have indicated that there are persisting patterns of delinquency in disorganized and slum neighborhoods regardless of changing occupants, here the GANG, a source of much delinquency, is strong Not until the development, after 1899, of the juvenile court, was judgment of youthful offenders effectively separated from that of adults The system emphasizes informal procedure and protection rather than punishment In some states psychiatric clinics are attached, and there has been a recent tendency to handle cases in public welfare agencies outside the court Juvenile correctional institutions have been separated from regular prisons since the early 19th cent, and some have developed intensive rehabilitation programs, providing vocational and other training and psychiatric treatment, but most are still inadequate The English BORSTAL SYSTEM for youth is notable The parole system, foster homes, child guidance clinics, and public juvenile protective agencies have contributed to the correction of delinquent and maladjusted children Especially important for prevention are extension of activities by all community groups to provide essential facilities for the well-being of children See William Healy, *The Individual Delinquent* (1915) and, with A F Bronner, *New Light on Delinquency and Its Treatment* (1936), W C Reckless and Mapheus Smith, *Juvenile Delinquency* (1932), Sheldon Glueck and Eleanor Glueck, *One Thousand Juvenile Delinquents* (1934) and *Juvenile Delinquents Grown Up* (1940), C R Shaw, H D McKay, and others, *Brothers in Crime* (1938) and *Juvenile Delinquency and Urban Areas* (1942)

juvenile literature The first books for children were Latin texts of the 7th cent, the school texts of the Venerable Bede, and in the 10th cent the colloquy of Ælfric Books in manuscript were costly, and not until the invention of printing were books that children could handle and cherish available William Caxton printed for children Aesop's fables in 1484 In the 15th cent there were rhymed treatises, having to do with daily life, feasts, and festivals The invention of the HORNBOOK at the end of the 15th cent made books really available to children It usually included the alphabet, numerals, and the Lord's Prayer The hornbook was followed by the battledore (c 1770) This was made of cardboard in three leaves which folded It contained the alphabets, numerals, easy reading lessons, plus small woodcuts There followed the chapbook, a cheap little folded sheet that was sold by peddlers of the 17th and 18th cent, chapbooks included the old tales of the Middle Ages, often condensed and poorly written Probably the first picture book for children was the *Orbis sensualium pictus* by Comenius (1658, Eng tr, *The Visible World*, 1659) Each chapter dealt with a different subject, giving the child a general idea of the outside world During Puritan times in England books for children were a grim affair, consisting of religious instruction meant to prepare the child for life after death There emerged, however, one book from this period cherished as a classic, John Bunyan's *Pilgrim's Progress* (an edition attractive to children is abbreviated by Mary Godolphin and illustrated by Robert Lawson, 1939) In 1697 appeared Charles Perrault's fairy tales, but in general until the middle of the 18th cent children shared the literature of their elders ballads, legends, lives of the saints, Reynard the Fox, and the tales of King Arthur Defoe's *Robinson Crusoe* (1719) and Swift's *Gulliver's Travels* (1726), written for their elders, became children's classics. John Newbery (1713–67) made the first real contribution to children's literature He was a publisher, author, and bookseller These first books were written anonymously but it is thought Oliver Goldsmith wrote many of them Among the best known of the Newbery books are *Mother Goose's Melody* and *The History of Little Goody Two-Shoes* They were small attractive volumes bound in bright colored papers imported from Holland, with illustration an integral part of the text, they were meant to please children Many of these books found their way early across the Atlantic At the end of the 18th cent Rousseau's theories of childhood education in *Émile* (1762), together with John Locke's earlier *Some Thoughts concerning Education* (1693), produced a school of writers of didactic literature Among the most prominent in England were Anna Laetitia Barbauld, Thomas Day, Maria Edgeworth, and Mary Martha Sherwood, in France, Mme de Genlis and Armand Berquin Thomas Day's *History of Sandford and Merton* was read widely and expounded most of the major doctrines of Rousseau Maria Edgeworth wrote prolifically and was probably the most gifted writer of this period Her stories contained plot and suspense, *The Purple Jar* being one of the best known This group of didactic writers was violently opposed by Dr Samuel Johnson and later by Charles Lamb, Wordsworth, and Coleridge Charles Lamb summed it up, "Hang them I mean the cursed Barbauld crew, those blights and blasts of all that is human in man and child" The 19th cent saw a release from this didactic writing Imagination, artistic form, poetry, legend, fairy tale, and humor all had their place in writing for children William Blake, as in so many fields, preceded this era with his *Songs of Innocence* (1789) and his *Songs of Experience* (1794) William Wordsworth's *Lyrical Ballads* appeared in 1798 The brothers Grimm spent 13 years making a scientific record of the folklore of Germany, their fairy tales were published between 1812 and 1815 Wyss's *Swiss Family Robinson*, published in Germany in 1813, was translated into English in 1820 Whereas the Grimm brothers wrote their stories exactly as they heard them told, Hans Christian Andersen added artistic form, and the majority of his tales were original Charles and Mary Lamb's *Tales from Shakespear* first appeared in 1807 The latter half of the 19th cent has been called the golden age in children's literature The landmarks of this period in English literature include Dickens's *Christmas Carol* (1843), Edward Lear's *Book of Nonsense* (1846), John Ruskin's *King of the Golden River* (1851), Charles Kingsley's *Water-Babies* (1863), Lewis Carroll's *Alice in Wonderland* (1865), George Macdonald's *At the Back of the North Wind* (1871), Christina Rossetti's *Sing-Song* (1872), Kate Greenaway's *Under the Window* (1879), Collodi's *Pinocchio* (book form, 1883, Eng tr, 1892), Robert Louis Stevenson's *Treasure Island* (1883), *Kidnapped* (1886), and *A Child's Garden of Verses* (1885), Johanna Spyri's *Heidi* (1880, Eng tr, 1884), Frances Hodgson Burnett's *Little Lord Fauntleroy* (1886) and *The Secret Garden* (1909), and Rudyard Kipling's *Jungle Book* (1894) During this period color began to appear in illustration A great debt is owed to Walter Crane's experimental work There followed Randolph Caldecott with his humorous drawings now collected in his *Picture Books*, Kate Greenaway's exact little drawings of flowers, children in quaint costumes, all with a fairylike quality, John Tenniel's perfect drawings for *Alice in Wonderland*, Cruikshank's illustrations for Grimm's collection of *German Popular Stories*, and Leslie Brookes's fine caricature and sense of fun in *Johnny Crow's Garden*, *Ring o' Roses*, and *Golden Goose Book* American children were heirs of English literature of the times A didactic and religious literature flourished here too, notably the *Peter Parley Tales* (1827–57) written by Samuel G Goodrich, the *Rollo* series (from 1834) of Jacob Abbott, Susan Warner's *Wide, Wide World* (1850), and Martha Finley's *Elsie Dinsmore* series (1868–1905) Series have been popular with children, there were the Horatio Alger books—the *Ragged Dick* series, the *Tattered Tom* series, and others, the Oliver Optic books—the *Boat Club* series, the *Army and Navy* series, and others, and for girls, the *Katy* series by Susan Coolidge (wholesome and reasonably realistic), *The Five Little Peppers* series by Margaret Sidney, and Lucy Fitch Perkins's "Twins" series Perhaps the two greatest influences towards good literature were made by the editors of the *St Nicholas Magazine* (Mary Mapes Dodge and Frank Stockton) and Horace E Scudder, editor of the *Riverside Magazine* (1867–70) Many of today's classics first appeared in these pages Other magazines which had considerable influence on the literature of the period were *Our Young Folks*, published by *Atlantic Monthly*, *Harper's Young People*, under the editorship of Kirk Munroe (whose own books of outdoor life were excellent), and the *Youth's Companion* From the 19th cent today's child has James Fenimore Cooper's *Leatherstocking Tales*, Nathaniel Hawthorne's retelling of the Greek myths in the *Wonder-Book* and *Tanglewood Tales*, Mark Twain's *Tom Sawyer* and *Huckleberry Finn*, Lucretia Hale's *Peterkin Papers*, Howard Pyle's wonderful re-creating of the legends of *King Arthur* and *Robin Hood*, Louisa May Alcott's *Little Women* and *Little Men*, Laura E Richards's *Tirra Lirra* and the *Hildegarde* stories, Kate Douglas Wiggin's *Birds' Christmas Carol*, and Joel Chandler Harris's "Uncle Remus" stories of the South In the 20th cent the variety of subject matter covered is as wide as that of the adult field A child may go around the world in folklore, travel, fiction, historical material, he may explore the seas, the heavens, the earth with books Science, poetry, religion, sports, mystery, all abound There are many stimuli to the production of good books In 1922 Frederic Melcher established the Newbery medal to be awarded yearly to the most distinguished literature for children In 1938 he gave a second award, the Caldecott medal for the best picture book of the year The American Library Association has been an influence in the standards it has established in training its personnel and in its book selection The Child Study Association and the Children's Book Council, reviewing media in newspapers and magazines, contribute to good books As a result of two world wars America has been enriched by artists and book craftsmen from abroad Some of the books of this century which seem destined for a long life are Virginia Lee Burton's *Little House*, Padraic Colum's retelling of Homer's *Odyssey* and *Iliad*, Walter de la Mare's poems, James Daugherty's American stories, Wanda Gág's *Millions of Cats* and *Tales from Grimm*, Kenneth Grahame's *Wind in the Willows*, Selma Lagerlof's *Wonderful Adventures of Nils*, Robert Lawson's *Rabbit Hill*, Lois Lenski's picture books about Mr Small and her historical series, Hugh Lofting's *Dr Dolittle*, Robert McCloskey's *Make Way for the Ducklings* and *Homer Price*, the Dr Seuss picture story books, P L Travers's *Mary Poppins*, A A Milne's *When We Were Very Young* and *Winnie the Pooh*, and Laura Ingalls Wilder's frontier stories See Anne Carroll Moore *My Roads to Childhood* (1939); Annis Duff, *Bequest of Wings* (1944), Paul Hazard, *Books, Children, and Men* (1944), Dorothy White, *About Books for Children* (1946), Anne Eaton, *Treasure for the Taking* (1946), May Arbuthnot, *Children and Books* (1947), B E Mahoney and others, *Illustrators of Children's Books* (1947) The *Horn Book* is a magazine devoted exclusively to reviewing children's books.

Jylland see JUTLAND

K

K, 11th letter of the ALPHABET It is a usual symbol for a voiceless velar stop, as in *cook* It corresponds to Greek **kappa** In chemistry K represents POTASSIUM.

K2, see GODWIN-AUSTEN, MOUNT

Kaaba or **Caaba** (both kä'bu, kä'ûbû), in ISLAM, the most sacred of buildings, the center of the Moslem world and the chief goal of the pilgrimage It is a small building in the mosque of Mecca nearly cubic in shape, built to enclose the Black Stone which in a peculiar sense is the most venerated Moslem object The Kaaba was a holy place before Mohammed, and its retention in Islam is an obvious anachronism It is the point toward which Moslems face when praying

Kabardian Autonomous Soviet Socialist Republic (kubär'dēun), autonomous republic (4,550 sq mi, 1946 estimated pop 300,000), S European RSFSR, on the northern slopes of the central Greater Caucasus, bordering on the Georgian SSR in the southwest Nalchik is the capital The republic stretches northward from the Caucasian crest (which here includes such mighty peaks as Mt Elbrus, Koshtan-Tau, and Dykh-Tau) to the level Kabardian plain, drained by the headstreams of the Terek The region is predominantly rural, with livestock raising in the mountains and agriculture (corn, wheat, and fruit) in the plain The Kabardians, a Moslem Circassian group, form about 60 percent of the population, the rest being mainly Russian and Ukrainian In 1922 the region was constituted into the Kabardino-Balkar Autonomous Oblast, and in 1936 it became the Kabardino-Balkar ASSR The Balkars, a Moslem, Turkic-speaking mountain people, were resettled in 1944, presumably because they collaborated with the German invaders in the Second World War, part of their district was incorporated with the Georgian SSR and the republic assumed its new name

Kabinda see CABINDA

kabuki: see JAPANESE DRAMA

Kabul (kä'bōōl, kubōōl'), city (*pop c* 80,000), capital of Afghanistan, on the Kabul river Long overshadowed by Ghazni and Herat, Kabul was the first "Indian" conquest (1504) of Baber, who ruled here from 1504 to 1519 and whose tomb is here Kabul succeeded Kandahar as capital in 1773 A British army reached it in 1839, but a British force was in 1842 ambushed near by and almost annihilated In retaliation another British force partly burned Kabul (1842) The British again occupied it in 1879 Kabul, which is the center of a rich fruitgrowing district, has several small colleges, 10 Moslem periodicals, a wireless station, an airport, and the only European hotel in Afghanistan Some men wear Western clothes, but women go veiled The royal palace and an ancient citadel lie outside the present city The Kabul river flows 300 mi E from the Hindu Kush past Kabul and Jalalabad and through gorges in the Khyber Pass to the Indus The name may be also spelled Kabol

Kabyles (kubīlz'), tribesmen, predominantly agricultural, of North Africa, whose center is the rugged Kabylia region of Algeria Of disputed origin, they form one of the larger divisions of the Berbers Known for their fierce resistance to the successive conquerors of the region, they were slow to adopt the Moslem religion and Arabic speech and in remote sections still retain their vernacular

Kabzeel (kāb'zēēl) [Heb, =assembled by God], unidentified city, extreme S Palestine Joshua 15 21, 2 Sam 23 20, 1 Chron 11 22 Jekabzeel Neh 11 25.

Kachin State (kuchĭn'), division (*c* 16,000 sq mi, pop. 427,625), N Burma The northernmost state in the union of Burma, it is a mountainous region bounded on the west by Assam and on the east by Yünnan prov, China The chief towns are Myitkyina and Bhamo The population is mixed, the Kachins or Jinghpaws constitute the most prominent group. They maintain the tribal forms of organization under chiefs and practice shifting cultivation. Most of the Kachins are animists The territory was never subject to the Burmese kings and after the establishment of British rule was governed by the British directly and not as part of Burma The Kachin State was constituted in 1948, it enjoys a large measure of local autonomy and is represented in the union cabinet by a minister chosen from among the Kachin members of parliament

Kadelburg, Gustav (gōōs'täf kä'dulbŏŏrk), 1851–1925, Austrian dramatist and actor. He played in Vienna, Berlin, and other European cities and toured the United States He wrote and produced many excellent comedies and farces, among them *Im wessen Rock* (1898, produced in New York city in 1936 as *The White Horse Tavern*) Augustin Daly's *Roadroad of Love* (1887) and *The Great Unknown* (1880) are adaptations of plays by Kadelburg and Franz von Schönthan

Kadesh (kā'dĕsh), ancient city of Syria, on the Orontes river Here Ramses II defeated (*c* 1300 B C.) the Hittites in a great battle.

Kadesh (kā'-) or **Kadesh-barnea** (-nē'ù), oasis in the desert S of Palestine, mentioned frequently in the Bible, notably as a limit of Edom Another biblical name is En-mishpat (-mĭsh-), the modern name is Ain Qadis Gen 14 7, 16 14, Num 20, 32 8, Deut 1 46, 2 1

kadi or **cadi** (both kä'dē, kā'dē), in ISLAM, the lowest rank of judge Since the Moslem law is based on religion and the canon and civil law may be hardly distinguished, the prime qualification of the kadi is to be learned in the Koran and the traditions He must also be somewhat acquainted with the various schools of Moslem law and with the interpretative commentaries The kadi sits in the open in the community, and his court depends for its force largely on public opinion

Kadmiel (kăd'mēĕl) [Heb, =who stands before God], family which returned with Zerubbabel Ezra 2 40, 3 9, Neh 7 43, 9 4,5, 10 9, 12 8,24

Kadmonites (kăd'munīts) [Heb, =easterner], unidentified tribe, whose land was promised to Abraham's descendants Gen 15 19

Kaduna (kudōō'nu), town (pop 10,628), N Nigeria, capital of the Northern Provs It is a railroad junction and has a college

Kaesong or **Kaisong** (both kī'sŭng'), Jap *Kaijo*, city (1949 pop 88,708), S Korea From the 10th to the 14th cent it was the capital of Korea, and there are tombs of Korean kings Kaesong is noted for fine porcelain The city is sometimes called Songdo

Kaffa, RSFSR see FEODOSIYA

kaffir or **kaffir corn** see SORGHUM

Kaffirs: see KAFIRS

Kaffraria (kăfrā'rēu), region, E Cape Prov, Union of South Africa It comprises British Kaffraria, which lies between the Great Fish and the Great Kei rivers and is administered by the province, and a native reserve, Transkeian Territories (16,554 sq mi, pop 1,264,167), to the northeast There is gold mining in Kaffraria, and Transkeian wool finds a good market

Kafiristan (kă"fĭrĭstän', kafē"rĭstän'), mountainous region, NE Afghanistan, bordered on the east by India The Kafirs [Persian, =infidels] were animists until forcibly converted to Islam in 1896 It is now generally called Nuristan (nōōrĭstän'), the official designation

Kafirs or **Kaffirs** (both kă'fûrz), Bantu-speaking Negro people (*c* 500,000) of the Union of South Africa They are chiefly in the Transkeian Territories (see KAFFRARIA) The Kafirs are divided into several tribes Generally they are dark brown in complexion, slim, and woolly-haired Their occupations are cattle raising, farming, and hunting

Kafka, Franz (frants' käf'kä), 1883–1924, German novelist and essayist, b Prague, Czechoslovakia Of a well-to-do Jewish family, he studied law and then obtained a position in the workmen's compensation division of the Austrian government His slow and conscientious methods made it impossible for him to gain a living by writing, and little of his work was published during his lifetime Kafka's works include the novels *Der Prozess* (1925, Eng tr, *The Trial*, 1937), *Das Schloss* (1926, Eng tr, *The Castle*, 1930), *Amerika* (1927, Eng tr, 1938), the stories *Die Verwandlung* (1916, Eng tr, *Metamorphosis*, 1937, with illustrations, 1946) and *In der Strafkolonie* (1919, Eng tr, *The Penal Colony*, 1948), short stories, *Ein Landarzt* (1919, Eng tr, *Country Doctor*, 1945), and essays, parables, aphorisms, journals, and letters contained in *Gesammelte Schriften* [collected writings] (1935–37) In prose that is remarkable for its clarity and precision, Kafka presents a world which is at once real and dreamlike and in which modern man, burdened with guilt, isolation, and anxiety, makes a futile search for personal salvation See *The Diaries of Franz Kafka* (ed by Max Brod, Eng tr, 1948–49), biography by Max Brod (1937, Eng tr, 1947); critical studies in *A Franz Kafka Miscellany* (1940), *The Kafka Problem* (ed by Angel Flores, 1946), Charles Neider, *The Frozen Sea* (1948), Pavel Eisner, *Franz Kafka and Prague* (Eng tr, 1950)

Kagan, Uzbek SSR see BUKHARA

Kagawa, Toyohiko (tōyō'hēkō kä"gu'wä), 1888–, Japanese Christian social worker He studied at Princeton and returned to Japan to do evangelical and relief work. He was especially influential in organizing cooperatives and in labor problems At the beginning of the Second World War he was arrested for his pacifism, but he later broadcast national propaganda He has written poetry, novels, essays, and religious studies

Kagawa (kä"gä'wä), prefecture, N Shikoku, Japan see T. KAMATSU, the capital

Kagera (kägā'ru,-rē), river, a headstream of the Nile, flowing *c*.400 mi from near Lake Kivu to Victoria Nyanza on the Uganda-Tanganyika border Oskar Baumann was the first to explore it (1892–93)

Kagoshima (kä"gō'shĭmä), city (1947 pop. 170,416), capital of Kagoshima prefecture, S Kyushu, Japan, on Satsuma Peninsula and Kagoshima Bay An important port, it has a navy yard and also various manufactures, including Satsuma porcelain ware, silk and cotton clothing, tinware, and wood products It is the seat of a Buddhist temple, Nishihonganji, and was historically very prominent as the seat of the lords of Satsuma, the birthplace of Takamori Saigo, Toshimichi Okubo, and Heihachiro Togo, and the center of the Satsuma rebellion of 1877 The city was at that time destroyed, in 1914 it suffered damage from the eruption of a volcano on Sakura-jima, an island in the bay, and it was bombed (1945) in the Second World War It was at Kagoshima that St Francis Xavier landed in 1549 The prefecture is largely mountainous (with gold, silver, iron, and copper mines) and elsewhere has subtropical vegetation, it includes a number of islands, among them Tanejo-shima as well as certain of the Amakusa Islands

Kahlenberg (kä'lunbĕrk), mountain, 1,585 ft high, Lower Austria, near the Danube and NW of Vienna, of which it commands a beautiful view Reached by a cogwheel railway, it is a favorite excursion point

Kahn, Albert (kän), 1869–1942, American architect, designer of factories, b Germany He organized a large office in Detroit, which applied the techniques of mass production to architecture, and designed a great number of factories, war plants, and naval bases Kahn was a pioneer in the use of reinforced concrete and steel From 1928 to 1932 he was in charge of the industrial building program in Russia See George Nelson, *Industrial Architecture of Albert Kahn, Inc* (1939)

Kahn, Julius, 1861–1924, American legislator, b. Germany He arrived (1860) in California as a child He studied law in San Francisco, was elected (1892) to the state legislature, and was (1894) admitted to the bar He served (1899–1903, 1905–24) in the U S House of Representatives and became noted chiefly as an advocate of military preparedness He was appointed (1905) to the House Committee on Military Affairs and became its ranking minority member in the First World War and then (1921) its chairman, he helped draft and secure the passage of the National Defense Act of 1915, the Selective Draft Act of 1917, and the National Defense Act of 1920 His wife, **Florence Prag Kahn**, 1868–1948, succeeded him in Congress and served until 1937

Kahn, Otto Hermann, 1867–1934, American banker and patron of the arts, born and educated in Germany He came to the United States in 1893 and in 1897 joined the banking firm of Kuhn, Loeb & Company, New York city He was closely associated with E H Harriman in the reorganization of the Union Pacific and other railroads and had a part in numerous international finance organizations Among the theatrical and musical organizations which he helped finance were the American appearances of the Russian ballet and the Paris Conservatoire orchestra In 1903 he joined the board of the Metropolitan Opera Company, became chairman in 1908 and president in 1918, and finally retired in 1931 *Of Many Things* (1926) is a collection of his writings and speeches

Kahoka (kuhō'ku), city (pop 1,781), *co* seat of Clark co NE Mo, WNW of Keokuk, Iowa, laid out 1851 It is a grain center in an agricultural and timber area

Kahoolawe (kähō'ōlä'vä,-wā, kahō'lh'-), island, area 45 sq mi, SW of Maui, T H, from which it is separated by the Alalakeiki Channel The island is generally low, and its arid soil is fit only for cattle grazing Formerly a prison island, Kahoolawe now is on lease to a private citizen

Kahului (kä'hōōlōō'ē), village (pop 2,193), on N Maui, T H, on Kahului Bay It is a port of entry

Kaieteur Falls (kī'ŭtōōr'), waterfall, 741 ft high, in the Potaro river, W British Guiana It plunges over an escarpment of the Guiana Highlands Though not so high as ANGEL FALLS, it is about 350 ft wide and up to 20 ft deep in the wettest season

Kaifeng or **K'ai-fêng** (kī'fŭng'), city and county (pop 442,464), Honan prov, E China The city is the capital of the province The Yellow River, just to the north, has frequently flooded the city Kaifeng, then called Pienliang, was the capital of the northern Sung dynasty from 960 to 1126 A colony of Jews was established in the 12th cent, but the few known descendants do not practice the Jewish religion. On the Lung-Hai RR, the principal east-west line of China, Kaifeng has considerable commerce

Kai Islands or **Kei Islands** (both kī), island group (555 sq mi; pop 50,648), East Indonesia, in the Banda Sea SE of Ceram, in the Moluccas It is densely forested with valuable timber The Dutch began colonizing the islands in 1645. The group is sometimes called the Key Islands.

Kaijo, Korea. KAESONG.

kali: see KALE.

Kailas (kīläs'), peak, c.20,000 ft. high, SW Tibet, in the Himalayas. It is at the sources of the Sutlej and Indus rivers. The dwelling place of the Hindu god Śiva, it is the goal of pilgrimages. The pilgrim road which girdles the mountain reaches 18,000 ft.

Kailasa, Hindu temple see ELLORA

Kain (kān). see KENITES

Kairouan (kĭrwun', Fr kĕrwā'), city (pop 32,299), Tunisia. It is a sacred city of Islam. Founded in 670 by Okba, an Arab leader, it was the seat of the Arab governors in W Africa until 800. Under the independent Aghlabid dynasty (800–909) it remained the chief center of commerce and learning. It was the first capital (909) of the Fatamites. Ruined (1057) by invaders, its power passed to Tunis. Of Kairouan's 150 mosques, the most celebrated is the Grand Mosque, started by Okba and completed in the 9th cent. The city is noted for its carpet industry.

Kaisaria, Turkey see KAYSERI

Kaiser, Georg (gā'örk kī'zur), 1878–1945, German playwright. In early life he was a merchant in Buenos Aires. His numerous dramatic works—brilliant in dialogue, skillfully constructed, and very effective—include early comedies as well as serious impressionistic dramas. Among his works are *Von Morgens bis Mitternachts* (1916, Eng tr., *From Morn to Midnight*, 1920), which was produced in New York by the Theatre Guild in 1922, his trilogy *Die Koralle* (1917, Eng tr., *The Coral*, 1929), *Gas* (1918, Eng tr., 1924), and *Gas II* (1920), *Die Bürger von Calais* (1917), and the novel *Villa Aurea* (1940, Eng tr., 1939). A brilliant technician, he called his plays *Denkspiele* (thought dramas). They deal chiefly with social themes and were not of a kind to please the Nazis, upon whose rise to power Kaiser left Germany. He died in Switzerland. See M. J. Fruchter, *The Social Dialectic in Georg Kaiser's Works* (1933).

Kaiserin-Augusta, river, New Guinea see SEPIK

Kaiserslautern (kī'zurslou'turn), city (pop 55,932), Rhenish Palatinate, W Germany. It has machine and textile manufactures. Dating from Carolingian times, it was chartered in 1276. Kaiserslautern was repeatedly devastated by warring armies, notably by the Spanish (1635) in the Thirty Years War. It suffered again in the Second World War. Here in 1793 the French under Hoche and Pichegru were defeated by the Prussians under Charles William Ferdinand, duke of Brunswick.

Kaiser Wilhelm Canal' see KIEL CANAL

Kaiser Wilhelm II Land see WILHELM II COAST

Kaiser-Wilhelmsland see NEW GUINEA, TERRITORY OF

Kaisong, Korea see KAESONG.

Kajaani (kä'yänē), city (pop 8,017), central Finland, on Oulu Lake. An old trading center incorporated in 1651, it has sawmills, cellulose and paper mills, and a teachers' seminary.

Kakhetia (kŭkĕ'shu, Rus kŭkhĕ'tyĭŭ), mountainous region, E Georgian SSR. It is noted for its wine. Telav is the chief town.

Kalahari (kä"lähä'rē), arid plateau region, area c.350,000 sq. mi., covering S Bechuanaland. It is studded with dry lake beds. The land is little known, it is thought that it may contain c.20,000 sq. mi. of good grazing land. Hottentots and Bushmen inhabit the Kalahari.

Kalakh. see CALAH

Kalama (kulă'mu), shipping town (pop 1,028), SW Wash., at the confluence of the Columbia and Kalama rivers, in a farm and lumber area. Founded in 1870, it was the county seat of Cowlitz co., 1872–1932. A state fish hatchery is here.

Kalamata (kăluma'tu, kä'), Gr *Kalamai* (kala'mā), city (pop 35,215), S Greece, in the SW Peloponnesus, a port on the Gulf of Messenia. It is a commercial and industrial center and has fisheries, silk spinning, cigarette manufacturing, and alcohol distilleries. The city developed after 1205, when it became a fief of the Villehardouin family. It later passed under Venetian and (1459–1821) Turkish rule and was destroyed (1825) by Ibrahim Pasha in the Greek War of Independence.

Kalamazoo (kăl"ŭmuzō'), city (pop 54,097), co. seat of Kalamazoo co., SW Mich., on the Kalamazoo at its confluence with Portage Creek, settled 1829, inc. as a village 1838, as a city 1884. Kalamazoo is an industrial and commercial center in a fertile area raising celery, peppermint, and fruit. It has a large paper industry, and stoves, furnaces, drugs, and fishing tackle are among the city's many products. Kalamazoo College (coeducational, 1833), Nazareth College (Catholic, for women, 1897), a state teachers college, a state hospital for the mentally ill, a natural history museum, and an art institute are points of interest. In 1937 the Kalamazoo *Gazette* celebrated its centennial. Several Indian trails crossed this site.

Kalamazoo, river rising in S Michigan and flowing northwestward past Albion, Battle Creek, and Kalamazoo to Lake Michigan. The river was an important travel and trade route for Indians and pioneers.

Kalaupapa, T. H. · see MOLOKAI.

Kalb, Johann (Ger. yō'hän kälp'), 1721–80, American general in the Revolution, known generally as "Baron de Kalb" (dĕ kälb), b. Hüttendorf, Germany. He assumed his title for military reasons and as Jean de Kalb served France in the War of the Austrian Succession and the Seven Years War. He again served France in 1768 as a secret agent in the English colonies in America. Silas DEANE offered (1776) commissions to Kalb, Lafayette, and other European soldiers of fortune, which the Continental Congress at first refused to honor. Finally Kalb was made general and was with Washington at Valley Forge. In 1780 he was made second in command to Horatio Gates in the CAROLINA CAMPAIGN, and he died (Aug. 19, 1780) from wounds received in the battle of Camden.

Kalcker, Jan Stephen von. see CALCAR

Kalckreuth, Leopold Karl Walter, Graf von (lā'ōpôlt kärl' vul'tur graf' fŭn kalk'roit), 1855–1928, German painter, one of the founders of the Secessionists. He was professor at the academies of Weimar and Karlsruhe and director of the Stuttgart Academy from 1900 to 1905. He is best known for his impressionistic but somber paintings of peasant life.

kale, kail, or **borecole** (bôr'kōl), nonheading, hardy CABBAGE variety, with thick stem and curly leaves, grown for greens and, in Europe, for fodder. In the Channel Islands a tall fodder variety, known as Jersey kale, Jersey cabbage, or cow cabbage, grows over 7 ft. high. Kale is a cool-weather crop—frost improves the flavor. In the United States the principal commercial growing regions are in Virginia and on Long Island. Kale is closest in form to the wild cabbage. In Scotland the word *kale* is used for cabbages of any kind. Sea kale is a European herb of the genus *Crambe*, found along the northern coasts and often used as a potherb.

kaleidoscope (kulī'duskōp), instrument consisting of a cylindrical tube one end of which contains two mirrors (set at an angle of 60°) and many particles of variecolored glass confined between two disks of clear glass but free to move between these disks when the tube is rotated. The other end is fitted with an eyepiece through which an observer discerns many varied, but always symmetrical, patterns made by reflections in the mirrors of the various into which the glass chances to fall. Its invention is usually credited to Sir David BREWSTER.

Kalevala (kă'lĭvä'lä), Finnish national epic, a compilation of folk verses dealing with the extraordinary deeds of three semidivine brothers of gigantic stature. They were conceived by the primitive Finns as having their abode in Kaleva, a mythical land of happiness and abundance. Although known to scholars from as early as 1733, the verses were largely ignored until the 19th cent. when, under the impulse of the romantic movement, they were collected by two Finnish physicians, Zakarias Topelius, who published the first fragments in 1822, and Elias Lonnrot, who gave the cycle its present form. In 1828 Lonnrot first traveled in E Finland, collecting the folk songs and poetry of the common people. From the miscellaneous episodes chanted to him by the rune singers he created a unified poetic whole. In 1832 Lonnrot resumed his travels, collecting 25 runes (about 12,000 lines), which were published in two volumes (1835). A second edition containing 50 runes (nearly 23,000 lines) was published in 1849. The epic is rich in mythology and folklore, and its effect on Finnish art in all its branches has been great. The eight-syllable trochaic line of the *Kalevala* was imitated by Longfellow in *Hiawatha*. See English translations by J. M. Crawford (1889) and W. F. Kirby (1907).

Kalgan, China see CHANGKIAKOW

Kalgoorlie and Boulder (kălgōōr'lē), town (pop 22,380), Western Australia, ENE of Perth. It is the chief mining town of the state and the center of the East Coolgardie Goldfield. The adjacent towns Kalgoorlie and Boulder (sometimes called Boulder City) were combined in 1947. Kalgoorlie's importance dates from 1893, when the gold mines in the area began to operate.

Kali see HINDUISM

Kalidasa (kä"lĭdä'su), fl. 5th cent.?, Indian dramatist and poet. He is often regarded as the greatest figure in classic Sanskrit literature. Except that he was retained by the Gupta court, no facts concerning his life are known. His three surviving plays are *Sakuntala* (or *Shakuntala*), *Vikramorvasi*, and *Malavikagnimitra*. These dramas in verse relate fanciful or mythological tales of lovers who are first separated by adversity but later reunited by happy chance. *Sakuntala*, which has been performed on the Western stage several times, tells of a maiden, Sakuntala, whom King Dushyanta marries. The king is bewitched so that he forgets his bride until a ring he gave her is discovered in the body of a fish. In Kalidasa's two epics, *Raghuvansa* and *Kumarasambhava*, delicate descriptions of nature are mingled with battle scenes. The other poems of Kalidasa are shorter and almost purely lyrical. *Meghaduta* [cloud messenger] is a description of the places in India crossed by a cloud traveling between a man and his wife. *Rtusamhara* describes the course of pastoral love through the six seasons into which Indians divided the year.

Kalinin, Mikhail Ivanovich (mĭkhōyĕl' ēvä'nuvĭch kŭlyē'nyĭn), 1875–1946, Russian revolutionist. He was the first president of the Soviet Union (officially, chairman of the presidium of the supreme council of the USSR) and held that position until his retirement early in 1946. He had little influence on policy. N. M. Shvernik succeeded him.

Kalinin (kŭlyē'nyĭn), formerly **Tver** (tvär), city (pop. 216,131), capital of Kalinin oblast, RSFSR, NW of Moscow and on the Volga. It is an industrial and historic center and an important communications point. Railway cars, machinery, and textiles are made here. First mentioned c.1135, Tver developed first as a fort, then as a trade center, and was (14th–15th cent.) the seat of a powerful principality which rivaled Moscow. It was annexed (c.1486) to Moscow by Ivan III. The princes of Tver are buried under the 17th-century cathedral. A regional museum is housed in the 17th-century castle. In the Second World War the city was briefly held by the Germans late in 1941 and was severely damaged. Tver was renamed (1933) for M. I. Kalinin.

Kaliningrad, former East Prussia see KÖNIGSBERG.

Kalisch, Isidor (kā'lĭsh), 1816–86, Jewish rabbi, translator, writer, poet, and leader of the reform movement in Judaism, b. Prussia. Forced to leave Germany because of his too liberal political views, he came to the United States in 1849, served as rabbi in various American cities, and retired in 1875 to devote himself to writing and lecturing. He wrote poetry in German and Hebrew. His best-known work is *Wegweiser fur rationelle Forschungen in den biblischen Schriften* (1853, Eng. tr., *A Guide for Rational Enquiries into the Biblical Writings*, 1857). He is chiefly known for his place in the polemical controversy of the day over reformed Judaism. See memoir in selections of his writings, *Studies in Ancient and Modern Judaism* (1928).

Kalisch, Poland see KALISZ

Kalispel Indians see PEND D'OREILLE INDIANS

Kalispell (kă'lĭspĕl".–pĕl'), city (pop. 8,245), co. seat of Flathead co., NW Mont., in the Flathead valley NW of Flathead Lake and near Glacier National Park, inc. 1892. The tourist and trade center of a rich agricultural, fruit, and lumber region, it has flour mills and sawmills.

Kalisz (kā'lēsh) Ger *Kalisch*, city (pop. 48,092), W Poland. It has clothing, food, and chemical manufactures. Here in 1813 Prussia and Russia concluded a convention by which Prussia joined the coalition against Napoleon I.

Kalkar, Jan Stephen von see CALCAR

Kalkaska (kălkă's'ku), village (pop. 1,132), co. seat of Kalkaska co., N Mich., on the Boardman river and E of Traverse City, in a farm and lake region, inc. 1887. Its near-by waters abound in trout and other fish.

Kallai (kulä'ĭ), priest of Joiakim Neh. 12:20.

Kallikaks' see GODDARD, HENRY HERBERT

Kalm, Peter (pä'tur kalm'), 1716–79, Swedish scientist. From 1748 to 1751 he traveled in North America, studying its natural history, plantations, and agriculture. His *Travels in North America*, the first account of its kind by a trained scientist, was published at intervals between 1753 and 1761, edited by A. B. Benson, it was republished in two volumes in 1937. The genus *Kalmia* (see MOUNTAIN LAUREL) is named for Kalm.

Kalmar (kal'mar), city (pop. 24,400), SE Sweden, a Baltic port opposite Oland island on Kalmar Sound. Its medieval castle, the Kalmarnahus (kal'marnähūs"), has withstood 24 sieges. It now houses an archaeological and ethnological museum. It is the county seat of **Kalmar,** Swed. *Kalmar län* (lĕn'), county (4,485 sq. mi.; pop. 231,336), which comprises ÖLAND and the eastern part of the historical province of Smaland. It is a sheep-raising and dairy region and has stone quarries. The name also appears as Calmar.

Kalmar Nyckel see NEW SWEDEN

Kalmar Union, combination of the three crowns of Denmark, Sweden, and Norway, effected at Kalmar, Sweden, by Queen MARGARET in 1397. In all three countries the kingship was elective, thus a union could not prove lasting. Margaret's successors controlled Sweden only for brief periods, the accession (1523) of GUSTAVUS I as king of Sweden dissolved the union. The union of Denmark and Norway lasted, however, until 1814.

Kalmar War, conflict begun in 1611 by CHRISTIAN IV of Denmark against CHARLES IX of Sweden and terminated in 1613 by Gustavus II of Sweden, who bought off the Danish claims at the Peace of Knared. The war took its name from the fall of Kalmar to the Danes early in the conflict.

Kalmucks (kăl'mŭks) or **Kalmyks** (kăl'mĭks), people of Asia, a branch of the Oirat Mongols. They migrated from the Altai region in the early 17th cent., settled in the lower Volga basin c.1636, became vassals of Russia, and formed a valuable element in the Russian army. However, when they felt threatened by the Russian colonization of the Volga region in the reign of Catherine II, they secretly decided to return to China, whose emperor's support they had obtained. A large part of the Kalmucks set out on their epic exodus in 1771, decimated by attacks from the Kazakhs and Kirghiz, they finally reached the Chinese border and were settled in the Ili valley of Sinkiang. The Kalmucks W of the Volga did not participate in

the flight They clung staunchly to their Lamaist Buddhist faith and their traditional ways In the Russian Revolution and civil war of 1917–20 they suffered extreme hardship Many emigrated to Central and Western Europe In 1920 the Kalmuck Autonomous Oblast was established, it became (1935) the Kalmuck Autonomous Soviet Socialist Republic (28,650 sq mi , 1939 pop 220,723), with its capital at Elista (now called Stepnoi) In the Second World War the Kalmucks cooperated with the Germans, and as a result their republic was dissolved (1943) Many fled with the retreating German forces and became "displaced persons" in Germany Those who stayed behind were settled elsewhere Thus the few thousand remaining Kalmucks (whose name, appropriately, means remnant) are scattered throughout the world

Kalocsa (kŏ'lôchô), city (pop 12,341), S central Hungary, near the Danube Created a bishopric by St Stephen, it became the seat of an archbishop in the 12th cent The archiepiscopal palace dates from the 18th cent The city has an observatory and a Roman Catholic academy Embroidery is a traditional industry of the region

Kaluga (kŭlō'gŭ), city (pop 89,484), capital of Kaluga oblast, W European RSFSR, on the Oka river Chartered in 1389, when it passed to the grand duchy of Moscow, Kaluga was the scene of the murder (1610) of the second false Dmitri In the Second World War it was briefly held by the Germans late in 1941 There are machinery plants

Kalymnos (kă'lĭmnŏs), mountainous island (41 sq mi , pop 11,864), 11 mi off the coast of Asia Minor, one of the DODECANESE, belonging to Greece It is the chief sponge-fishing center of the Dodecanese The town of Kalymnos (pop 8,505) is on the southeast shore

Kama or **Kamadeva** see HINDUISM

Kama (kä'mŭ), river, 1,262 mi long, E European RSFSR, the chief left tributary of the Volga It rises in the foothills of the central Urals and flows N, then E, then SW past Molotov, Sarapul, and Chistopol to join the Volga below Kazan The Vyatka is its principal affluent Navigable for about half the year, the Kama is an important artery, carrying lumber, paper, and fen-ous metals downstream, and petroleum, salt, and cement upstream At Molotov there is a large hydroelectric station

Kamakura (kä'mä'kōōrä), city (1947 pop 55,168), Kanagawa prefecture, central Honshu, Japan, on Sagami Bay It is known for its bronze figure of Buddha (42 ft high), cast in 1252, and for a statue of Kannon, goddess of mercy (30 ft high) The city was very splendid when it was the headquarters of Yoritomo and his descendants (1192–1333), under the Ashikaga shogunate (1333–1573) it was the government headquarters of E Japan The National Art Museum has art treasures of the Kamakura and Ashikaga periods The city was severely damaged (1923) by an earthquake

Kamban, Gudmundur, Icelandic *Guðmundur Kamban* (gvüdh'mŭntŭr kä'm'ban), 1888–1945, Icelandic dramatist and novelist He studied in Denmark and thereafter visited England, the Continent, and the United States Kamban's first play, *Hadda-Padda* (1914, Eng tr , 1917), was successfully produced in Denmark, as were many of his later plays His historical novels, reminiscent of the Icelandic sagas, are noteworthy for their accuracy, e g , *Skalholt* (4 vols , 1930–35, Eng tr of Vols I and II, *The Virgin of Skalholt*, 1935) and *I See a Wondrous Land* (1936, Eng tr , 1938)

Kamchatka (kămchăt'ku, Rus kŭmchät'kŭ), peninsula (104,200 sq mi), Khabarovsk Territory, RSFSR, in NE Siberia It separates the Sea of Okhotsk in the west from the Bering Sea and the Pacific Ocean in the east Extending from lat 51°N to lat 61°N, it is 750 mi long and terminates in the south in Cape Lopatka, beyond which lie the Kurile Islands The main center is Petropavlovsk The central valley, drained by the Kamchatka river (335 mi long), is enclosed by two parallel volcanic ranges which extend from north to south The highest point is Klyuchovskaya Sopka (15,666 ft), one of 13 active volcanoes There are many hot springs, peat marshes (along the western coast), and forests The climate is severe, with relatively heavy rainfall on the east coast There is some agriculture along the Kamchatka river, but fishing, fur trapping, lumbering, and reindeer raising are the chief occupations of the very sparse population Mineral resources include petroleum and coal deposits The majority of the inhabitants are Russians The native Kamchatkans and Koryaks, in the north, speak languages of the Hyperborean family The Koryak National Okrug (151,740 sq mi , pop c 15,000) occupies the northern part of the peninsula and extends into the mainland. Kamchatka was discovered in 1697 by the explorer Atlasov, its conquest by Russia was completed by 1732 It formed part (1926–38) of the FAR EASTERN TERRITORY. The Kamchatka oblast, which also includes the CHUKCHI NATIONAL OKRUG, was formed in 1932 and was incorporated (1938) with Khabarovsk Territory.

kame (kām), steep, rounded hillock or short ridge of sand and gravel drift, developed from glacial deposits. Kames were probably formed by streams of melting ice which deposited mud and sand along the ice front The subsequent retreat of the glacier left them as more or less isolated hills and ridges, ranging from a few feet to 100 feet or more Kames occur generally in clusters and are situated directly behind the terminal moraine They are common in the glacier parts of the lower Scotch valleys, where also the name originated Similar formations in Ireland are called eskers

Kamehameha I (Kamehameha the Great) (kämä'-hämä'ha), 1758–1819, Hawaiian monarch King of the island of Hawaii after 1790, he united all the islands, which before 1810 were governed by warring kings Law and order were established for the first time, and the islands became prosperous He was cordial to sea traders who visited Hawaii

Kamehameha, Fort (kämä'-ämä'a), at Pearl Harbor, Oahu, T H , headquarters of the coast defenses of Oahu, est 1909

Kamenets-Podolski (kä'mĭnyĭts-pŭdôl'skē), city (1926 pop 32,051), W Ukraine, former capital of Podolia There are ruins of a 14th-century castle Until the Second World War, when the city was held (1941–43) by the Germans, 40 percent of the population was Jewish

Kamenev, Lev Borisovich (lyŏf' burō'sŭvĭch kä'-mĭnyĭf), 1883-1936, Russian Communist leader He discarded his original name, Rosenfeld, after joining (1901) the Social Democratic party He sided with the Bolsheviks when the party split Banished (1915) to Siberia, he returned after the February Revolution of 1917 and took an active part in the Bolshevik October Revolution On Lenin's death (1924) the succession was assumed by a triumvirate consisting of Stalin, Kamenev, and Zinoviev, while Kamenev's brother-in-law, TROTSKY, was excluded from power In 1925 Kamenev and Zinoviev joined Trotsky's opposition within the Communist party, from which they were expelled in 1927 An opportunist, Kamenev soon made his peace with Stalin and was given minor offices Once more expelled and readmitted in 1932, Kamenev was arrested late in 1934 in connection with the murder of Kirov He was sentenced to imprisonment, but in 1936 he, Zinoviev, and several others were placed on public trial for having aided in Trotsky's alleged plot against Stalin and the Soviet Union Kamenev fully confessed to all charges and was sentenced to death and executed

Kamensk (kä'mĭnsk) or **Kamensk-Shakhtinski** (-shäkh'tyĭnskē), city (1936 estimated pop 25,400), S European RSFSR, on the Donets river It is an industrial center of the Donets Basin

Kamerlingh Onnes, Heike (hĭ'kə kä'murlĭng ô'nus), 1853–1926, Dutch physicist He was, from 1882, professor of physics at the Univ of Leiden He made important studies of the properties of helium and in attempting to solidify helium produced a temperature within one degree of absolute zero He liquefied helium and found that resistance to an electric current passed through metal apparently disappears if the metal is reduced to the temperature of liquid helium For these researches he received the 1913 Nobel Prize in Physics

Kamerun see CAMEROONS

Kames, Henry Home, Lord (hūm, kāmz), 1696–1782, Scottish judge and philosopher Besides books on Scottish law he wrote *Essays on the Principles of Morality and Natural Religion* (1751), *Introduction to the Art of Thinking* (1761), *Elements of Criticism* (1762), and *The Gentleman Farmer* (1776) See memoir by A F Tytler (1807), H W Randall, *Critical Theory of Lord Kames* (1944)

Kamet (kä'mĕt), peak, c 25,400 ft high, on the border of India and Tibet, in the Himalayas It was ascended by a British expedition under F S Smythe in 1931 See his *Kamet Conquered* (1932)

kamikaze (kä'mēkä'zä) [Jap ,=divine wind], the typhoon that destroyed Kublai Khan's fleet, foiling his invasion of Japan in 1281 In the Second World War the word was used for a Japanese suicide air force, composed of fliers who crashed their bomb-laden planes into their targets, usually ships It was especially active at Okinawa

Kaministikwia or **Kaministiquia** (both kumĭ"nĭstĭ'kwēù), river, c 60 mi long, rising in W Ontario and flowing S, then E into Lake Superior at Fort William In fur-trade days it was the chief alternate to the GRAND PORTAGE as a route to Rainy Lake and the Northwest, but when it was learned that the Grand Portage was within the territory of the United States, the North West Company built Fort Kaministiquia, later changed to FORT WILLIAM, at the mouth of the river and afterwards used that route

Kamloops (kăm'lōōps), town (pop 5,959), S British Columbia, at the junction of the North Thompson and South Thompson rivers A North West Company trading post was established here in 1812, known first as Fort Thompson and later as Fort Kamloops A village grew up at the time of the Cariboo gold rush, and in 1885 the main line of the Canadian Pacific reached the place It is now a supply center for an extensive mining and grazing district Below Kamloops the Thompson river widens into Kamloops Lake See M. S. Wade, *The Thompson Country* (1907)

Kammersee: see SALZKAMMERGUT

Kampala (kämpä'lä), city (pop c 60,000), SW Uganda, Africa Capital of the chief of Buganda, it is also the western terminus of the Kenya-Uganda RR There is a museum of native arts, near-by Makerere has a native college (founded 1938)

Kampen (käm'pŭn), municipality (pop 22,808), Overijssel prov , N central Netherlands, on the Ijssel river and near the Ijsselmeer An important trading center and a member of the Hanseatic League in the 15th cent , Kampen has kept its fine 14th-century town hall and several churches and buildings dating from the 14th and 15th cent

Kamperduin, Netherlands see CAMPERDOWN

Kampot (kampŏt'), town (pop 5,530), capital of Kampot prov , SW Cambodia, on the Gulf of Siam It is a seaport, and the center of Cambodian pepper culture

Kamsack (kăm'săck), town (pop 1,754), E Sask , on the Assiniboine river, and NE of Regina near the Man border, in a grain and stock-farming district

Kan (gan), river, c 250 mi long, Kiangsi prov , China It flows generally N to Poyang Lake Despite some rapids, it is navigable to larger steamers through most of its length

Kanab (kunăb'), city (pop 1,365), co seat of Kane co , extreme S Utah, near the Ariz line and on Kanab Creek, settled 1864 In the region of plateaus and cliffs N of the Grand Canyon, it is a tourist resort as well as a ranching center

Kanagawa (kanä'ga"wa), prefecture, central Honshu, Japan see YOKOHAMA, the capital

Kanah (kā'nu) [Heb ,=place of reeds] **1** Unidentified boundary town, N Palestine Joshua 19 28 **2** Brook, central Palestine Joshua 16 8, 17 9

Kanaoka (kanä'ōkä), c 850–c 931, Japanese landscape and figure painter, founder of the Kose school of painting He was famous also as a landscape architect His work is characterized by refinement of line and color and by spaciousness He is also known as Kose no Kanaoka [Kanaoka of Kose]

Kanarak, India see KONARAK

Kanarese (kănurēz'), group of Dravidian languages spoken in India See LANGUAGE (table)

Kanatha see DECAPOLIS

Kanauj (kunouj'), town (pop 21,994), Central United Provs , India There are remains from the period (600?–1018) when it was the capital of a large Rajput domain Perfume is manufactured

Kanawha (kunô'wu), river formed by the New and Gauley rivers in S central West Virginia at Gauley Bridge The principal river in the state, it flows c 97 mi NW to the Ohio at Point Pleasant Charleston is on its banks The LITTLE KANAWHA, to the north, is a parallel tributary of the Ohio

Kanazawa (kä"nä'zäwä), city (1940 pop 180,297, 1947 pop 231,441), capital of Ishikawa prefecture, central Honshu, Japan, on the Sea of Japan The city, on the site of the old village of Yamazaki, produces silk textiles, porcelain, and lacquer ware It was (16th-19th cent) the seat of the Maeda clan Kenroku Park is known for its 17th-century landscape gardens Ishikawa prefecture, with wooded mountains in the interior and fertile plains on the coast, yields lumber and raw silk

Kanchenjunga, Kanchanjanga (both kän"chunjôông'gu, kän'chĕnjŭng'gu), or **Kinchinjunga** (kĭn"-chunjôông'gu), peak, c 28,150 ft high, on the border of Sikkim and Nepal, in the Himalayas It is one of the highest mountains in the world and perhaps most impressive of all Himalayan peaks It was climbed by the second of two (1929,1931) German expeditions under Paul Bauer See his *Himalayan Campaign* (1937)

Kanchi or **Kanchipuram,** India see CONJEEVERAM

Kandahar (kän"dŭhär'), city (pop c 60,000), S Afghanistan, near the Arghandab river Kandahar is first mentioned c 1290 Persia took it three times from India between 1558 and 1648 In 1738 Nadir Shah took it after a year's siege, restoring the old dynasty of the Durranis It was capital of Afghanistan (1748–73) The British took it in 1839, and 40 years later Roberts (later Lord Roberts of Kandahar) relieved it after his famous march from Kabul The present walled city, laid out by Ahmed Shah, has many well-built mosques and bazaars There are telegraphic connections with Kabul The irrigated Kandahar region produces many varieties of fine fruits, especially grapes, and exports them to India See Ben James, *Afghan Journey* (1935)

Kandalaksha (kŭndulăk'shŭ), Finnish *Kannanlahti* (kan'nänlăkh"tĕ), city (pop over 10,000), NW European RSFSR, a White Sea port It is on the Murmansk RR, and there are aluminum and superphosphate works, based on near-by apatite and nephelite deposits A settlement at the present site was known to the Vikings

Kandinsky, Vasily (vŭsē'lyĕ kŭndyēn'skē), 1866–1944, Russian abstract painter in Germany With Klee he initiated German expressionism and was an outstanding figure in the Bauhaus at Dessau Unlike the work of the cubists, the abstract art of Kandinsky depends chiefly on pure line and color rather than form and has musical rather than architectural affinities. He is represented in the modern museums in Amsterdam, Moscow, Chicago, and

New York See his book, *The Art of Spiritual Harmony* (1914)

Kandy (kăn'dē), city (pop 50,767), on Ceylon It overlooks a scenic lake near which is the Temple of the Tooth, supposed to house one of Buddha's teeth Kandy became (1592) the last capital of the independent kings of Ceylon, who had been forced to cede the coastal region to the Portuguese The city fell to the British, who absorbed (1815) the Kandyan domain and exiled the king A palace, a museum of art, and an Oriental library are remains of the royal period Today the city, situated in the hills, is a hot-weather resort and a marketing center for a rich tea-growing and rubber-growing region The name also appears as Candy

Kane, Elisha Kent, 1820–57, American arctic explorer, b Philadelphia, M D Univ of Pennsylvania, 1842 Seeking adventure, he entered naval service and before he was 30 had seen many parts of the world As senior medical officer he sailed (1850) on the first Grinnell expedition in search of the lost Franklin party Kane's *U S Grinnell Expedition in Search of Sir John Franklin* (1853, reprinted in part as *Adrift in the Arctic Ice Pack*, 1915) stirred such interest that he was able to organize and lead the second Grinnell expedition (1853–55) This expedition, of which I I HAYES was medical officer, passed northward through Smith Sound at the head of Baffin Bay, discovered and explored Kane Basin, and discovered Kennedy Channel beyond Several sledging journeys were undertaken, on one of which a record of lat 80°10'N was achieved Humboldt Glacier was sighted, and scientific observations resulted in valuable new information on the arctic regions Frozen in at Rensselaer Bay, the party deserted ship and Kane led a difficult retreat by land to Upernivik, Greenland His health weakened by the rigors of his adventurous life, he lived only long enough to complete his narrative of the second expedition, *Arctic Explorations* (1856), which had a tremendous sale The spiritualist Margaret Fox claimed after his death that she had been his wife

Kane, Paul, 1810–71, Canadian painter, b probably Ireland He went to Toronto as a child He studied art in the United States (1836–41) and in Europe (1841–45) After his return to Canada (1845) he made an extended journey into the Hudson's Bay Company territories of W Canada, traveling by snowshoe, horseback, and canoe to paint the Indians of the region He returned to E Canada in 1848 Most of the paintings resulting from his journey are in the Royal Ontario Museum, Toronto, and in the Parliament buildings, Ottawa His account of his journey appeared as *Wanderings of an Artist among the Indians of North America* (1859, new ed , with introduction and notes by L J Burpee, 1925)

Kane, borough (pop 6,143), NW Pa , NW of Ridgway , laid out 1860 In beautiful mountainous country, it attracts hay-fever and asthma sufferers There are many large estates here Natural gas is found near by

Kane Basin, part of the channel between NW Greenland and E Ellesmere Island, N of Baffin Bay It is named for Elisha K KANE

Kaneohe Bay (kä'nāōhā'), on the east shore of Oahu, T H , protected by coral reefs and dotted with islands The U S naval air station on the bay was bombed by the Japanese at the time PEARL HARBOR was attacked (Dec. 7, 1941)

kangaroo, MARSUPIAL of Australia and Tasmania In the large kangaroos and wallaroos the hind foot of the adult measures more than 10 in from the heel to the longest toe, exclusive of the nail Various species inhabit plains, forests, and mountains Their powerful hind legs enable them to leap swiftly over the ground The long muscular tail serves as a balancing organ while leaping and as a prop when standing or moving slowly The front limbs are small Kangaroos eat grass and other vegetation Wallaby is a name used for smaller kangaroos, those with a hind foot of 6 to 10 in The tree kangaroos constitute a genus of partially arboreal forms with the front and hind limbs more nearly equal in size and with a rather slender tail Smallest of the family are the rat kangaroos Many members of the kangaroo family have been exterminated and others are threatened

Kangaroo Island, area 1,680 sq mi , in the Indian Ocean, S of Yorke Peninsula, South Australia, at the entrance to Gulf St Vincent It is 90 mi long and 33 mi wide At its west end is Flinders Chase, a large reservation for native flora and fauna There are many summer resorts The chief products are barley, sheep, salt, gypsum, and eucalyptus oil Kingscote (pop 1,113) is the principal settlement

kangaroo thorn see ACACIA

Kanghwa or **Kanghoa** (both käng'hwä'), island (163 sq mi , 1946 pop 98,414), S Korea, in the Yellow Sea Formerly fortified, it was stormed by the French in 1866 and by the Americans in 1871 There is agriculture and fishing

Kang Teh. see PU YI, HENRY

Kangting or **K'ang-ting** (kang'ding'), city and county (pop 36,760), Sikang prov , China The city is the provincial capital It lies on trade routes to Sinkiang and India.

Kaniapiskau (kănyupĭ'skô"), river of NE Quebec, flowing 450 mi generally NNW to the Larch SW of Fort Chimo Here it becomes the Koksoak river, which flows NE to Ungava Bay The source of the Kaniapiskau is **Kaniapiskau Lake,** on the watershed between Hudson Bay and the St Lawrence

Kanin (kŭ'nyĭn), peninsula, N European RSFSR, projecting into the Barents Sea between the White Sea (in the west) and Chesha Bay (in the east) Its northernmost cape is called Kanin Nos (nôs) The native population, mostly Samoyeds, engage in fishing, fur trapping, and reindeer raising

Kankakee (kăngkukē'), city (pop 22,241), co seat of Kankakee co , E Ill , on the Kankakee river and SW of Chicago, inc 1855 It is an industrial and shipping center for a farm area The city's varied manufactures include paint, furniture, stoves, and clothing Limestone quarries are near by George Grey Barnard, who went to school here, donated a collection of his sculptures to the local high school in 1936 Kankakee has a state hospital for the insane

Kankakee, river, c 135 mi long, rising near South Bend, N Ind , and flowing SW to Kankakee, Ill , then NW to the Des Plaines river below Joliet There the combined stream becomes the Illinois

Kanko, Korea see HAMHUNG.

Kannapolis (kunăp'ulĭs), unincorporated cotton-mill "company town" (pop 25,024), W central N C NNE of Charlotte, founded 1906

Kano (kä'nō), family or school of Japanese painters **Kano Masanobu** (mäsä'nōbōō), c 1453–c 1550, the forerunner of the school, was attached to the shogun Yoshimasa's court He painted landscapes, birds, and figure pieces, chiefly in ink with occasional touches of the palest tints His work is Japanese in spirit, reflecting in technique and style the influence of Chinese art None of his great decorative works has survived His son, **Kano Motonobu** (mōtō'nōbōō), c 1476–1559, the actual founder of the school and one of the foremost artists of Japan, is said to have painted well as a young child He painted landscapes, figure pieces, screens, and mural decorations and was master of the brush-and-ink medium and of pale color harmonies From him the Kano school received its character—the subordination of color to design **Kano Eitoku** (ā'tōkōō), 1543–90, grandson of Motonobu, painted screens with landscapes and figures and decorated the interiors of the royal palaces His art differs from that of the earlier Kano painters, it is less precise and is characterized by energy, ease, and inventiveness Gold and brilliant colors are introduced, giving to his works a lavish splendor new in the decorative art of his time He had many pupils and imitators *Pines on Snow Mountains* (Freer Gall of Art, Washington, D C), on a screen, is an excellent example of his art **Kano Tanyu** (tanyōō'), 1602–74, grandson of Eitoku and the last of the four supreme masters of Kano, by his originality and power really created a school of his own "He became one of the most vigorous and versatile of Japanese painters In both subject and execution his work is of astonishing variety Honors were showered upon him, and in 1642 he was commissioned by the emperor of Korea to paint the figures of the Chinese sages in the imperial palace His masterpieces are probably the four lions, in ink, in the temple of Nikko and the two dragons, in color, on the gateway of this temple See Arthur Morrison, *The Painters of Japan* (1911), E F Fenollosa, *Epochs of Chinese and Japanese Art* (2 vols , 1911)

Kano (kä'nō), city (pop 89,162), N Nigeria It occupies part of the area within a decaying clay wall 11 mi long and 40 ft high Its written records begin in A D 999 The present-day city was built in the 16th cent on the site of a 9th-century settlement It was a flourishing center of caravan trade in the 19th cent and the main seat of the Hausas Today an important railroad and road center, it is the hub of the Nigerian peanut industry and has much trade in cotton, leather goods, and metalware Kano has an international airport

Kansa Indians (kăn'sō), tribe of Siouan stock, known also as the Kansas or Kaw Indians They are closely related to the OSAGE INDIANS, from whom they separated probably not long before the whites first met them They were at the mouth of the Kansas river when white traders reached them, but had moved westward to the mouth of the Saline river by 1815, when the United States made its first treaty with them By treaties of 1825 and 1843 they ceded most of their lands and accepted a reservation on the Neosho river at Council Grove, where they lived until 1873 They were then placed on a new reservation in Oklahoma, next to the Osage tribe They shared the typical Plains culture and took up farming reluctantly

Kansas, state (82,276 sq mi , 1940 pop 1,801,208, 1949 estimated pop 1,947,000), central United States, admitted 1861 as the 34th state under the Wyandotte Constitution as a free state TOPEKA is the capital, KANSAS CITY (across the Missouri from Kansas City, Mo) and WICHITA are the largest cities Almost strictly rectangular, Kansas is bounded on the North by Nebraska, on the east by Missouri (the Missouri river is for a short distance the boundary), on the south by Oklahoma, and on the west by Colorado The geographical center of the United States is within its borders Plains stretch from east to west across the state They rise westward 3,000 feet but so gradually that the change is imperceptible, though the extremes in east and west are markedly different and there are two regions, the prairies and the high plains, as well as a small southeastern section on the Ozark plateau The eastern prairies belong to the Mississippi valley region Gently rolling hills and wooded river valleys interrupt the sameness of the plains, once covered with long-stemmed grasses and now divided into small self-sufficient farms, where pastures still have the long grass to feed cattle Corn and fruits and vegetables are grown, and dairy and poultry products are abundant The high plains in the west belong to the GREAT PLAINS region, short-grass country, where once the buffalo fed Cactus and yucca are still to be seen, though vast wheat fields dominate the flat, high landscape, Kansas stores more wheat and mills more flour than any other state The region is semi-arid, for though the average rainfall of Kansas as a whole is 26 in in a year, the east averages 40 in , the west only 16 in Here great dust storms arise to plague the ranchers and farmers The two great river systems of the state cross both sections, the KANSAS (also called the Kaw) drains much of the northern and central sections, and the Arkansas, coming out of Colorado, curves into central Kansas in the Great Bend, then runs SE into Arkansas The river valleys were highways to open the Far West Through them went traders over the SANTA FE TRAIL, Mormons on their way to the Promised Land, and gold seekers going west in the gold rushes after 1849 After farming settlement, however, the rivers became a problem, with floods across the flat lands and not enough water for most of the year to supply sufficient irrigation in the west The floods and erosion have damaged much land The state conservation act of 1929 was declared unconstitutional by the Kansas supreme court, some efforts at flood control and irrigation have been undertaken with Federal aid in recent years but arguments about the effectiveness of the plans continue The climate is thoroughly continental, with wide extremes of cold and blizzards in winter and heat and occasional cyclones in summer Yet despite the dismal prophecies of early travelers and despite difficulties, the soil of Kansas has yielded richly and continues to be the main resource of the state that is called the Sunflower State after the flower that raises its head in the fields and on the dusty roadsides The grasslands still feed cattle, and the big meat-packing industries of Wichita, Kansas City, and Salina recall the earlier days of Kansas when the railroads were being built westward after the Civil War, cattle were then driven N from Texas, and railhead shipping points became cow towns such as ABILENE and DODGE CITY In mineral wealth, the returns from coal, lead, and zinc have been eclipsed by oil and natural gas, particularly after recent discoveries of oil in W Kansas to supersede old fields in the east. The presence of salt in commercially profitable quantities recalls the prehistoric days when, as geology shows, Kansas was a great shallow sea. Chalk beds in the west have fossil remains of sea animals as well as the skeletal structures of later land animals, such as the miniature horse Archaeology shows also long habitation by Indian groups. If Coronado arrived (1541) in Kansas, as he probably did, to find disappointment in his search for QUIVIRA, he found the land occupied by Plains tribes, notably the KANSAS INDIANS (for whom Kansas is named), the WICHITA INDIANS, and the PAWNEE INDIANS Their culture was later revolutionized by the introduction of the horse, and they continued undisturbed by such later explorers as the Spanish Juan de OÑATE and the French traders on the Missouri and its tributaries in the 18th cent Kansas (except for the southeastern corner, on which the later TEXAS maintained the Spanish claims until 1850), was transferred to the United States by the Louisiana Purchase in 1803 The explorations of Lewis and Clark, Zebulon M Pike, and Stephen H Long gave some information about the present Kansas, but not a great deal; the plains seemed to them only desert wastes Kansas was part of the unorganized INDIAN TERRITORY from 1817 to 1854 At first only the fur traders and the Indian-fighting U S army were interested in the region which they had to cross, and Fort Leavenworth and Fort Scott were inconsiderable border posts, but as traders used the Santa Fe Trail and settlers went to Oregon and California interest quickened, more particularly after the Treaty of Guadaloupe Hidalgo (1848) at the end of the MEXICAN WAR gave the Southwest to the United States The first great test in the struggle over slavery in the territories after the Compromise of 1850 concerned Kansas and Nebraska A project for opening the territories on the basis of "squatter sovereignty" (decision concerning slavery by the settlers themselves) was advanced by Stephen A DOUGLAS and the KANSAS-NEBRASKA BILL was adopted in 1854. It specifi-

cally repealed the Missouri Compromise and made it possible for Kansas to be a slaveholding state though it was north of the line that compromise had drawn between free and slaveholding territory The result was not compromise, not peaceful settlement, but chaos and war Both sides set out to win Kansas Determined proslavery men went from Missouri and filed squatters' claims, concentrating about the towns of Leavenworth, Lecompton, and Atchison. Zealous abolitionists of New England and the Middle West, aided by the EMIGRANT AID COMPANY sent in strong antislavery settlers, who established Topeka and LAWRENCE The first elections in 1854 and 1855 went to the proslavery group; armed Missourians with loaded rifles intimidated voters and election officials and stuffed the ballot boxes The first territorial legislature ousted (1855) all Free State members, secured the removal of Gov A H Reeder, moved the capital to Lecompton, and adopted for Kansas the Missouri statutes (called by their opponents the Black Laws) In retaliation, the abolitionists set up a rival government at Topeka in Oct , 1855, but the constitution they drafted was obviously not regular and was later refused consideration by the U S Congress Violence was not slow in coming The murder of a Free State man in Nov , 1855, led to the so-called Wakarusa War and turned the territory into "bleeding Kansas " The new governor, Wilson Shannon, with U S troops prevented the proslavery men from taking Lawrence then, but on May 21, 1856, they did raid Lawrence, and a few days later the abolitionist fanatic, John BROWN of Osawatomie, led a band to murder five proslavery men in the name of the Lord Guerrilla warfare between Free State men called Jayhawkers and proslavery armed bands—both sides abetted by desperadoes and opportunists—terrorized the land In two years more than 200 people were killed and property worth perhaps $2,000,000 was destroyed After a new governor, Robert J Walker, had taken charge, a convention was called at LECOMPTON to draft a state constitution The Free State men refused to attend, and the Lecompton Constitution was proslavery Despite its dubious validity President Buchanan recommended that Congress accept it Congress instead returned it for a territorial vote, which was overwhelmingly against it Lawrence became de facto capital of the troubled territory until after the Wyandotte Constitution, which was framed in 1859 and forbade slavery totally, was accepted by Congress Kansas became a state in 1861 with the capital at Topeka Charles ROBINSON was the first governor and James H LANE, "the liberator of Kansas" one of the U S Senators Still suffering the effects of the drought of 1859–60, the new state managed to contribute a disproportionately large number of troops to the Union army even while suffering great distress It was scourged by Indian raids in the west and border warfare in the east, climaxed by the burning of Lawrence in 1863 by William C QUANTRILL and his guerrilla band With peace came the development of the prairie lands The railroads caused the upsurge of the cow towns with their cowboys and saloons, desperadoes, and frontier marshals (the most publicized being Wild Bill Hickok). The buffalo herds were destroyed, and cattle instead fed on the western grasslands Pioneering was hard in Kansas, where the tough sod was resistant and lack of timber forced many pioneers to spend their early days on new farms in sod houses The farms crept out across the plains, and the introduction of machinery and the discovery (1874) that Turkey Red wheat would thrive on the dry western lands took much of those western lands from the cattle and gave them to wheat A grasshopper plague (1874), severe droughts (1874, 1887), and the depression that followed the land boom in the '80s burdened the farmers, made farm tenants out of some, and drove others to the Oklahoma land rush in 1889 Discontent was naturally strong and was expressed in the agrarian radicalism of the POPULIST PARTY, which swept into power in Kansas in 1890 As conditions improved, Kansas returned largely to its allegiance to the Republican party and gained a name as a conservative stronghold of Protestant, white, native Americans with a strong bent for moral reform shown in the strong support of Prohibition, laws against the sale of liquor remained on the books from 1880 to 1949. The independent liberalism that showed in the Populist movement has not died, and William Allen WHITE of Emporia, who gained a national reputation as a practical and wise man, fought the effort of the Ku Klux Klan to gain political control in 1924 and fostered many liberal measures Kansas had the first state court of industrial relations which could enforce arbitration, but the law of 1919 creating it was declared unconstitutional in 1923 Alfred M Landon, because of his success as governor of Kansas, was named Republican candidate for the presidency in 1936 Kansas has broadened its rural education program with consolidated schools, and the state provides financial aid for local school districts There are many denominational institutions of higher learning as well as the Univ of Kansas and the Kansas State College of Agriculture and Applied Sciences The basically agricultural economy of the state reflects sharply the rise and fall in national fortunes, notably in the period of depression beginning in 1929, and also has problems peculiar to Kansas—recurrent droughts, dust storms, difficulties of utilizing the insufficient water Measures have been taken to meet these problems Government subsidies have been used to aid farm emergencies, and storage elevators for grain have been built in the hope of stabilizing the economy Shelter belts and other means of conservation have been introduced to try to save the soil and water, and experimental farm projects have been used to develop and popularize agriculture and agricultural practices suited to the particular climate and soil Reclamation schemes—notably the Missouri river basin project—have been projected and some have been set in operation with the goal of bringing water use to its maximum See Carl L Becker, ed , *The Public Archives of Kansas* (1905) and "Kansas" in Frederick Jackson Turner *Essays in American History* (1912), William E Connelley, *History of Kansas* (5 vols , 1928), Anna E Arnold, *A History of Kansas* (1931), L H Blanchard, *Conquest of Southwest Kansas* (1931), Carroll D Clark and Ray L Roberts, *People of Kansas* (1936), Everett N Dick, *The Sod-House Frontier* (1937), Federal Writers' Project, *Kansas a Guide to the Sunflower State* (1939), C B Davis, *The Arkansas* (1940), F B Streeter, *The Kaw* (1941), A M Goebel and others, *Kansas Geography* (1948), W B Bracke, *Wheat Country* (1950)

Kansas, sometimes called the **Kaw,** river formed by the junction of the Smoky Hill and Republican rivers in NE Kansas and flowing generally east c 170 mi to the Missouri at Kansas City The system drains Kansas and parts of Nebraska and Colorado See F B Streeter, *The Kaw* (1941)

Kansas, University of, mainly at Lawrence, state supported, coeducational, chartered 1864 opened 1866 with aid from Amos A Lawrence It has a college of liberal arts and sciences (with journalism) and schools of business, education, engineering and architecture, fine arts, law, pharmacy, and medicine (with hospitals, a laboratory, and nursing education, partly at Kansas City) There are entomology, paleontology, natural history (Dyche), and art museums and a radio station

Kansas City, two adjacent cities of the same name, one (pop 121,458) in Kansas, co seat of Wyandotte co , the other (pop 399,178) in Missouri They are at the junction of the Missouri and Kansas (or Kaw) rivers, almost in the geographical center of the United States, and together form a great commercial, industrial, cultural, and educational center, the two cities are the focus of many transportation lines, a leading livestock market, a port of entry, and a very large market for wheat, hay, poultry and eggs, and seed They have large stockyards, grain elevators, food-processing plants (especially for meat packing and flour milling), oil refineries, and railroad shops, among their manufactures are soap, steel products, farm machinery, ammunition, paints, and electrical equipment There are automobile assembly plants and airplane factories The area around the cities was the starting place of many western expeditions, the Santa Fe and Oregon trails passed through here Several historic settlements of the early 19th cent (including WESTPORT) were the foundations for the present-day cities Kansas City, Kansas, was incorporated in 1859 A junior college (coeducational), a Baptist seminary, a state school for the blind, and the Univ of Kansas Hospitals are here Kansas City, Mo , was incorporated in 1853 This Missouri city, with its fine parks and residential districts, is the site of the noted William Rockhill Nelson Gallery of Art and the Atkins Museum of Fine Arts, housed in an impressive building Among its educational institutions are an art institute, a conservatory of music, Rockhurst College, and the Univ of Kansas City (coeducational, 1929), the Unity School of Christianity is near by The city has a symphony orchestra The Kansas City *Star* is nationally known, it was founded (1880) by William Rockhill NELSON and headed by him until 1915 In 1937 a political reform movement led to the deposing of Thomas PENDERGAST See Darrell Garwood, *Crossroads of America* (1948)

Kansas-Nebraska Bill, legislation by which the U S Congress established the territories of Kansas and Nebraska, more properly the Kansas-Nebraska Act, since it became law on May 30, 1854. By 1854 the organization of the vast Platte and Kansas river countries W of Iowa and Missouri was overdue Taken by itself territorial organization of this area was no problem. It was, however, irrevocably bound to the bitter sectional issue over the extension of slavery into the territories and was further complicated by conflict over the location of a transcontinental railroad Chicagoans demanded that the eastern terminus of the railroad be located in their city, while Southern expansionists, led by Secretary of War Jefferson DAVIS, were equally insistent on a Southern route The railroad question also influenced the attitude of the proslavery men of Missouri, led by Senator David R. ATCHISON, since the road might possibly have its terminus in St Louis Under no circumstances, however, did they want a free territory (Kansas) W of Missouri Because the West was expanding rapidly, territorial organization, despite these difficulties, could be no longer postponed (four attempts to organize a single territory for the area had already been defeated in Congress, largely because of Southern opposition to the MISSOURI COMPROMISE) Stephen A DOUGLAS, chairman of the Senate Committee on Territories, decided to offer territorial legislation making concessions to the South either because he knew that no other legislation could be adopted or because great pressure was brought on him Hence the bill he reported in Jan , 1854, contained the provision that the question of slavery should be left to the decision of the territorial settlers themselves This was the famous principle that Douglas now called "popular sovereignty" (see SQUATTER SOVEREIGNTY), though actually it had been first enunciated four years earlier in the COMPROMISE OF 1850 In its final form Douglas's bill provided for the creation of two new territories—Kansas and Nebraska—instead of one The obvious inference—at least to Missourians—was that the first would be slave, the second free The Kansas-Nebraska Bill flatly contradicted the provisions of the Missouri Compromise (under which slavery would have been barred from both territories), indeed, an amendment was added specifically repealing that compromise That aspect of the bill in particular enraged the antislavery forces, but after three months of bitter debate in Congress, Douglas backed by President Franklin Pierce and the Southerners, saw it adopted Its effects were anything but reassuring to those who had hoped for a peaceful solution The squatter-sovereignty provision caused both proslavery and antislavery forces to marshal strength and exert full pressure to determine the "popular" decision in Kansas in their own favor (see EMIGRANT AID COMPANY) The result was the tragedy of "bleeding" Kansas Northerners and Southerners were aroused to such passions that sectional division reached a point that precluded reconciliation A new political organization, the REPUBLICAN PARTY, was founded by opponents of the bill and the United States hurried on toward the Civil War See Allan Nevins, *Ordeal of the Union*, Vol II (1947)

Kansas State College of Agriculture and Applied Science, at Manhattan, land-grant and state supported, coeducational, chartered and opened 1863 It has divisions of agriculture (with milling industry), engineering and architecture (with agricultural engineering), arts and sciences (with industrial journalism) home economics, and veterinary medicine There are also a home economics research bureau and a radio station

Kansu or **Kan-su** (kän'sōō', gän'sōō'), province (151,160 sq mi , pop 6,726,832), NW China, bordering on the Mongolian Peoples' Republic The capital is Lanchow The northern and southern sections of Kansu are joined by a comparatively narrow panhandle Although there are several mountain ranges, chiefly the Liupan and the Tsinling, the surface is largely a plateau, averaging 4,500 ft high, covered with loess The soil is very fertile, but inadequate rainfall limits agriculture to the valleys, notably those of the Yellow and the Wei rivers, kaoliang, wheat, millet, cotton, and tobacco are the principal crops Livestock is raised, and hides are exported The mineral resources, mainly coal, iron, oil, copper, and gold, are barely exploited With communications limited to a few poor roads, the economic development of Kansu has been retarded, and minority groups (Mongol, Turki, Tibetan, Mohammedan) have remained distinct from the Chinese majority

Kant, Immanuel (ĭmä'nōōĕl känt'), 1724–1804, German metaphysician, one of the greatest figures in philosophy, b Konigsberg, where he was educated He tutored in several families and after 1755 lectured at the Univ of Konigsberg in philosophy and various sciences He became professor of logic and metaphysics in 1770 and achieved wide renown through his writings and teachings. His early work, reflecting his studies of Christian von Wolff, Leibnis, and Hume, was followed by a great period of development culminating in the *Kritik der reinen Vernunft* (1781, Eng tr , *Critique of Pure Reason*) The rest of his works were largely an elaboration of his basic thesis The more important among these writings were *Grundlegung zur Metaphysik der Sitten* (1785, Eng tr , *Foundations of the Metaphysics of Ethics*), *Kritik der praktischen Vernunft* (1788, Eng tr , *Critique of Practical Reason*), and *Kritik der Urtelschaft* (1790, Eng. tr , *Critique of Judgment*) His *Religion innerhalb der Grenzen der bloßen Vernunft* (1793–94,)Eng tr., *Religion within the Boundaries of Pure Reason*) provoked a government order to desist from further publications on religion In 1797 he retired from public life and suffered until his death a progressive mental decline Kant repudiated the English skepticism of his time on the grounds that it did not adequately investigate the nature of knowledge. His system, which he called transcendental philosophy, was centered about a basic insight which he likened to the Copernican

hypothesis. Instead of assuming that our ideas, to be true, must conform to an external reality independent of our knowing, Kant proposed that objective reality is known only in so far as it conforms to the essential structure of the knowing mind He asserted that things of our experience, called phenomena, may be known, but that the mind could never practically know things-in-themselves, or noumena, which cannot be sensuously perceived Phenomena, which can be perceived in the pure forms of sensibility, space, and time, must to be understood possess those characteristics which constitute our categories of understanding. These categories, which include causality and substantiality, are the source of the structure of phenomenal experience The scientist, therefore, may be sure that the natural events he observes are knowable in terms of the categories Man's field of knowledge, thus emancipated from Humean skepticism, is nevertheless limited to the world of phenomena All intellectual attempts to penetrate the ultimate noumenal realm are bound to fail This inevitable failure is illustrated in the famous antinomies (logical contradictions of principles which cannot be resolved) Kant demonstrated with unimpeachable logic that space and time are infinite and that they are finite, that matter is infinitely divisible and that it is not infinitely divisible, that the will is completely determined and that it is completely free, and that a necessary being (God) exists and that He does not exist Now, though we cannot gain knowledge of the noumenal realm through reason, we can know through our ideas that it exists, and ethical and aesthetic experience may reveal its aspects Ethical judgments are essentially based on faith in necessary moral law, which is expressed in the two forms of the categorical imperative, "Act as if the maxim from which you act were to become through your will a universal law of nature" and "So act as to treat humanity, whether in your own person or that of another, in every case as an end in itself, never as a means " Moral law becomes the law for all, since it is prescribed by reason for the individual and reason is the same for all Faith must enter further to justify freedom of the will, immortality, and God Beauty is disclosed through the immediate perception of noumenal value in a supersensible substrate moving us to view nature from within Thus, science cannot invade ethics and aesthetics, nor can science be overthrown by the areas of faith The results of Kant's work are incalculable In his tradition can be put scientific agnosticism and the pragmatism of James and Dewey Gestalt psychology accepts certain of his fundamental positions Reactions from Kant may be seen in Schelling, Schlegel, and Hegel The Roman Catholic Church acknowledges Kant's absolute divergence from scholasticism by proscribing his works All of Kant's important works have been translated into English and there is a large bibliography of commentary See Edward Caird, *The Critical Philosophy of Kant* (2 vols , 1889), N K Smith, *A Commentary to Kant's Critique of Pure Reason* (1918), *Kant Selections* (ed by T M Greene, 1929)

Kantara, El (ĕl kän'tärə, kan'), town, Egypt, on the Suez Canal It is on the ancient military road between Egypt and Syria El Kantara is the terminus of a railroad to Palestine constructed in the First World War, when the British Expeditionary Force in Egypt was based here

Kaolack (kä"ōlăk), city (pop 40,235), Senegal, on the Saloum river. It is the chief port for the peanut trade, and its population nearly tripled from 1931 to 1936 because of expanded exports

kaolin, see CHINA CLAY

kaolinite (kā'ulĭnīt), clay mineral crystallizing in the monoclinic system and forming the chief constituent of china clay and kaolin It is a hydrous aluminum silicate commonly formed by the weathering and decomposition of rocks containing aluminum silicate compounds, feldspar is a chief source Kaolinite has the same chemical composition as dickite and nacrite (both of which are also clay or kaolin minerals) but differs from them in origin, in optical properties, in reaction to heat, and in certain other physical properties

Kapidagi Peninsula, Turkey see CYZICUS PENINSULA

Kapilavastu (kä"plŭvə'stōō), ancient town, S Nepal Inscriptions show that Buddha, whose father ruled the state of Kapilavastu, passed his early years here and was born near by

Kapitza, Peter (kä'pētsŭ), 1894–, Russian physicist, educated at the polytechnic institute of Petrograd and at Cambridge Univ A laboratory at Cambridge was equipped for his experiments on the magnetic resistance of substances at low temperatures, later this equipment was bought by the Soviet government Kapitza was made director of the Institute for Physical Problems of the Academy of Sciences of the USSR.

Kaplan, rice-milling town (pop. 2,838), SW La., N of Vermilion Bay, inc 1902.

Kapoeas, river, Borneo see KAPUAS.

kapok (kā'pŏk, kă'–), tropical tree of the Bombacaceae family and the fiber (floss) obtained from seeds in the ripened pods. The floss has been important in commerce since the 1890s; the chief source is *Ceiba pentandra*, the kapok tree cultivated in Java, Ceylon, the Philippines, and other parts of the Far East and in Africa The floss is removed by hand from the pods, dried, freed from seeds and dust, and baled for export The lustrous, yellowish floss is light, fluffy, resilient, and resistant to water and decay It is used as a stuffing, especially for life preservers, bedding, and upholstery, and for insulation against sound and heat The seed kernels contain about 25 percent fatty oil used for soap or refined as edible oil The residual cake is valuable as a fertilizer and as livestock fodder See S. J Zand, *Kapok* (1941)

Kaposvar, Hung *Kaposvár* (kŏ'pōshvär), city (pop 32,985), SW Hungary, on the Kapos river A trade center, it exports wine and tobacco

Kapp, Wolfgang (vôlf'gung kap'), 1858–1922, German reactionary politician In 1920 he led the Kapp putsch, a monarchist armed revolt, at Berlin He seized the Berlin government, but a general strike broke his power Kapp fled to Sweden, returned (1922) to Germany, and died when awaiting trial for treason

Kappel or **Cappel** (both ka'pul), village, Switzerland, c 10 mi. S of Zurich Here ZWINGLI fell in battle in 1531

Kapteyn, Jacobus Cornelius (yakō'bus kôrnā'lĭŭs kaptīn'), 1851–1922, Dutch astronomer He was an authority on the Milky Way system, of which he made notable statistical studies, he constructed a model of the Milky Way system known as the "Kapteyn universe" He computed the positions of the stars of the Southern Hemisphere, photographed by Sir David Gill, and in 1904 announced the discovery of two streams of stars moving in opposite directions in the plane of the Milky Way Kapteyn was professor at the Univ of Groningen from 1879

Kapuas or **Kapoeas** (both ka'pōōəs), longest river of Borneo, Indonesia, rising on the Sarawak border and flowing 710 mi WSW to the South China Sea It is navigable for 560 mi

Kapurthala (kupōōr'tulu), former native state (645 sq mi , pop 378,380), Punjab, India Extensive irrigation works support crops of grains and cotton The state, founded by a Sikh raja, dates from the late 18th cent Kapurthala is now in the Patiala and East Punjab States Union **Kapurthala,** town (pop 26,067), formerly the capital of the state, may have been founded in the 11th cent It contains the raja's palace and other fine buildings

Kapuskasing (kăpuskă'sĭng), town (pop 3,131), E Ont , on the Kapuskasing river and W of Cochrane, inc 1921 An experimental farm was established here in 1913 for testing the possibilities of the Clay Belt During the two world wars the town had an internment camp for enemy prisoners

Kara (kä'rŭ), river, 130 mi long, RSFSR, flowing N from the N Urals into the Kara Sea and forming part of the conventional limit between European and Asiatic Russia

Karabakh, Azerbaijan SSR. see MOUNTAIN-KARABAKH

Kara-Bogaz-Gol (kŭrä"-bŭgäz"-gōl'), shallow bay, Turkmen SSR, an arm of the Caspian Sea, from which it is separated by a sandspit 70 mi long There are large deposits of Glauber's salt The town of **Kara-Bogaz-Gol** (1932 estimated pop 4,000), Turkmen SSR, is a Caspian seaport at the entrance to the bay

Karabuk (kärə'bōōk), town (pop 10,682), N Turkey, SE of Zonguldak coal fields It was built shortly before the Second World War as the seat of the new Turkish iron and steel industry

Karachai Autonomous Oblast (kŭrŭchī'), former administrative division (3,800 sq mi , 1939 pop 149,925), RSFSR, in the W Greater Caucasus It was formed in 1926 Its inhabitants, a Turkic-speaking Moslem group, collaborated with the Germans during the German drive in the Caucasus (1942) in the Second World War As a result the oblast was divided (1944) among the Cherkess Autonomous Oblast, the Stavropol Territory (both parts of the RSFSR), and the Georgian SSR, which received the major share, including the capital, Mikoyan-Shakar (now Klukhori) The Karachai population was resettled elsewhere in the USSR

Karachi (kurĭ'chē), city (pop 359,492), Pakistan, a port on the Arabian Sea and until 1950 capital of Sind prov It is in the Karachi dist. under the direct administration of the national government. The city appears to have been founded c 1725 but was of small importance until it passed to the British in 1843, when they conquered Sind Steady improvements in harbor facilities placed it among the leading ports of India by the late 19th cent During the Second World War it was an important port of supply for the armed forces stationed in India. The second largest city in the country and well supplied with buildings suitable for government offices, Karachi was made the national capital on the formation of Pakistan in 1947 There are several colleges and universities.

Karadzic, Vuk Stefanovic: see KARAJICH, VUK STEFANOVICH.

Karafuto, former Japanese possession, see SAKHALIN

Karaganda (kä"rŭgŭndä'), city (1926 pop. 116, 1939 pop. 165,937, 1947 estimated pop. 220,000), capital of Karaganda oblast, Kazakh SSR, in the Kazakh Hills It is the center of the Karaganda coal basin, one of the largest in the USSR, which was developed after 1928

Karageorge (kä"rujôrj', ka"rajôr'jā), or **Czerny George** (chĕr'nē) [Turkish *Kara* and Serbo-Croatian *Czerny*=black], 1752?–1817, Serbian patriot He led the Serbs in their insurrection (1804) against the Turks, took (1806) Belgrade, where the Turkish population was massacred, and was proclaimed (1808) hereditary chief of the Serbs He fought with Russia against Turkey (1809–12) Abandoned by the Russians when peace was signed, he fled to Austria On his return to Serbia he was murdered at the instigation of Milosh Obrenovich (see MILOSH) Though an illiterate peasant, Karageorge showed great military ability

Karwin, Czechoslovakia see KARVINNA

Kasai or **Kassai** (both käsī'), river rising in Angola and flowing c 1,200 mi N to the Congo in Belgian Congo Its tributaries include many navigable streams which flow to the north The Kasai, itself navigable for c 420 mi above its mouth, is an important trade artery

Kasan, RSFSR see KAZAN

Kasbek, Mount, Georgian SSR see KAZBEK, MOUNT

Kasbin, Iran see KAZVIN

Kaschau, Czechoslovakia see KOSICE

Kashan (kashan'), city (1947 estimated pop 44,994), central Iran, on a caravan route between Tehran and Isfahan Kashan, where the Ardebil carpet (1539) and celebrated porcelain tiles were made in the Safavid period, still produces silk textiles, carpets, and copperware It is intensely hot in summer and is infested with scorpions, but is one of Iran's prettiest cities, with clean, paved streets and handsome caravansaries, it is dominated by a 13th-century minaret 150 ft high Sialk, a recently excavated prehistoric site, lies 2 mi away The well-known rose fields of Kamsar or Qamsar are near by

Kashgar (käsh'gär), Mandarin *Su-fu*, city and county (pop 275,427), W Sinkiang prov , China The city, on the Kashgar river (a tributary of the Tarim), is the provincial capital It is the western terminus of the main road of Sinkiang and is a center for caravan trade with India and the USSR It manufactures cotton and wool cloth, rugs, and gold and silver jewelry Kashgar, when it was the capital of the Uigur Turks (750–840), was a center of Manichaeism The city has frequently changed hands, Jenghiz Khan and Tamerlane being among its conquerors.

Kashka-Darya (kŭshkä'-dŭrya'), river, c 200 mi long, Uzbek SSR. Flowing past Kitab and Karshi, it disappears in the sands of the arid Kizil-Kum It gives its name to an oblast, of which Karshi is the capital

Kashmir (käshmēr', käsh'mēr), officially **Jammu and Kashmir** (jŭ'mōō), state (82,258 sq mi., pop 4,021,616), N India The capital is Srinagar Kashmir is bordered on the south and west by Pakistan, on the north by Afghanistan and China, and on the east by Tibet. Most of Kashmir is covered with lofty, rugged mountains, including sections of the Himalaya and Karakorum ranges Rivers, including the Indus, run through the relatively narrow valleys into which the people are crowded The valley of the Jhelum river, the celebrated and beautiful Vale of Kashmir, is the most populous area and the economic heart of the state, it produces abundant crops of wheat and rice There is little mining or modern industry in Kashmir The handicrafts, particularly the making of woolen cloth and shawls (cashmeres), for which the state was renowned have deteriorated In the late 14th cent , Kashmir was conquered by Moslems, who converted most of the population to Islam It became part of the Mogul empire in 1586, but by 1751 the local ruler was independent After long disorder Great Britain installed a Hindu ruling family in 1846 When India was partitioned in Aug , 1947, Pakistan dispatched troops to gain control of the state They were opposed by the ruler (who provisionally acceded to the dominion of India in Oct , 1947) and by Indian forces Early in 1948 India accused Pakistan before the Security Council of the United Nations of endangering the peace The council appointed Admiral Chester B Nimitz commissioner for Kashmir and charged him with arranging a plebiscite on the national affiliation of the state Early in 1949 India and Pakistan agreed to end hostilities and to maintain their military positions pending the plebiscite

Kashmiri language (käshmē'rē), language of the Indic or Indo-Aryan group of the Indo-Iranian subfamily of Indo-European languages See LANGUAGE (table)

Kasimir, see CASIMIR

Kaskaskia (käskă'skēu), village (pop 167), Randolph co , Ill , on Kaskaskia island in the Mississippi river where it is joined by the Kaskaskia river It is now a relatively unpopulated area of Illinois mainly because it was inundated by the Mississippi toward the close of the 19th cent , but the past of Kaskaskia is deeply rooted in the history of the region The settlement was established by Jesuit missionaries in 1703 –four years after the founding of CAHOKIA –and it was named after the Kaskaskia Indians, who inhabited the area (see ILLINOIS INDIANS) In time an agricultural community grew up on the fertile bottom lands surrounding the village, and traders made it a center of operations The French built (1733) a fort at this site and occupied it until 1755 The fort was destroyed when Kaskaskia was taken over by the British in 1763 In 1778 George Rogers Clark, with a company of Virginia militia, took possession of the village for the United States, and a period of turbulence followed the departure of Clark's troops in 1780 Kaskaskia declined for two decades, but as the capital (1809–18) of Illinois Territory the place throve The first Illinois newspaper was started (1814) there, its population greatly increased, and it was made the capital when Illinois became (1818) a state It declined after the capital of Illinois was shifted (1820) to Vandalia, and periodic floods discouraged further growth Fort Kaskaskia State Park was set aside in 1927 across the Mississippi river near Chester, Ill

Kaskaskia, river rising in E central Illinois, near Urbana, and flowing c 300 mi southwest across the state to enter the Mississippi above Chester

Kasner, Edward (kăz'nur), 1878–, American mathematician, b New York city, grad College of the City of New York (B S , 1899) He joined the faculty of Columbia Univ in 1900, where he was professor of mathematics from 1910 and Adrain professor from 1937 His researches in many branches of mathematics include studies of relativity, horn angles, invariants, differential equations, and polygonic functions With James Newman he wrote *Mathematics and the Imagination* (1940)

Kasprowicz, Jan (yän' käsprō'vĕch), 1860–1926, Polish poet His writings progressed from social revolt—e g , *From a Peasant's Field* (1891)—to poems of spiritual struggle and philosophical intensity Among his later works are *To a Dying World* (1902), *Ballad of the Sunflower* (1908), and *The Book of the Poor* (1916)

Kassa, Czechoslovakia see KOSICE

Kassaba or **Cassaba** (kasa'ba), city (pop 22,713), W Turkey, NE of Smyrna Its modern name is Turgutlu Kassaba is famous for the variety of melon to which it gives its name There are lignite deposits near by

Kassai see KASAI

Kassala (kasä'la, kă'sulă), city (pop 31,210), NE Anglo-Egyptian Sudan Founded in 1834 by the Egyptians, it passed with the rest of the Sudan to Great Britain in the latter half of the 19th cent It was held (1885–94) by the Mahdists and later (1894–97) by Italy During the Second World War it was occupied by Italian forces from 1940 to 1941 It is a cotton mart

Kassel (kă'sŭl), city (1939 pop 216,141, 1946 pop 127,568), Hesse, W Germany, on the Fulda river A center of important locomotive and machinery industries, it was during the Second World War also a center of German airplane and tank production, it was virtually obliterated by Allied bombings, and none of its former handsome palaces, museums, theaters, and other public buildings remain Thousands of inhabitants were buried under the ruins However, the paintings of the celebrated gallery of Kassel (itself destroyed) were saved Mentioned as early as the 10th cent , it became the capital of the land-graviate of Hesse-Kassel (raised to an electorate in 1803) After Electoral Hesse and Nassau passed (1866) to Prussia and were united into the province of Hesse-Nassau, Kassel was made the capital Kassel also was the capital of the kingdom of Westphalia (1807–13) under Jérôme Bonaparte An older spelling is Cassel

Kasserine Pass, gap, 2 mi wide, central Tunisia, in the Grand Dorsal chain (an extension of the Atlas Mts) A key point in the Allied offensive on Tunisia in the Second World War, the pass was the scene of an AXIS break-through (Feb 20, 1943), but was retaken with heavy losses by U S forces on Feb 25 See NORTH AFRICA, CAMPAIGNS IN

Kasson, John Adam (kă'sun), 1822–1910, American political leader and diplomat, b Charlotte, Vt , LL D Univ of Vermont, 1842 He practiced law (1850-57) in St Louis and afterwards in Des Moines, Iowa, where he became active in Republican politics He helped draft the Republican national platform at Chicago in 1860 and managed Abraham Lincoln's campaign in Iowa He was (1861–62) First Assistant Postmaster General and went as U S commissioner to the International Postal Conference in Paris (1863) He went to Europe in 1867 to conclude several postal treaties He served in the U S Congress (1863-67, 1873 77 1881 84) and in the Iowa legislature (1868-72) but became more noted as a diplomat He was minister to Austria-Hungary (1877-81) and to Germany (1884–85), representing (1885) the United States at the Berlin Conference to regulate the status of the Congo He returned in 1889 to Berlin for the conference on Samoa He later was a member of the joint high commission appointed in 1898 on differences with Canada He wrote *The Evolution of the Constitution of the United States and the History of the Monroe Doctrine* (1904)

Kasson, village (pop 1,230), SE Minn , W of Rochester, in a farm and dairy region, settled 1865, inc 1870

Kastamonu (kă"stămōnōō'), town (pop 13,869), N Turkey It is the capital of a province rich in minerals (coal, mercury, copper, chromium, and arsenic) and has long been noted for its manufacture of copper utensils It also has a textile industry The name also appears as Kastamuni

Kästner, Erich (ā'rĭkh kĕst'nur) 1899–, German novelist and poet His work is humorous and satirical Several of his novels have been translated, including *Emil und die Detektive* (1929, Eng tr , 1930), *Fabian* (1931, Eng tr , 1932), *Drei Männer im Schnee* (1934, Eng tr , *Three Men in the Snow*, 1935), and *Die verschwundene Miniatur* (1936, Eng tr , *The Missing Miniature*, 1936) Among his volumes of poetry is *Herz auf Taille* [heart on the sleeve] (1928)

Kastron (kă'strŏn), town (pop 3,322), capital of Lemnos island, Greece, a port on the Aegean Sea It trades in local produce The name also appears as Kastro or Castro

Katahdin (kută'dĭn), mountain, 5,268 ft high, between branches of the Penobscot in N central Maine, highest point in Maine The peak and surrounding beautiful wooded, lake-dotted territory constitute a state park, the gift (1931) of Gov Percival P Baxter Mountain and park are within a state game preserve See E S C Smith and M H Avery, *An Annotated Bibliography of Katahdin* (1936)

Katanga (katăng'gu, ku–), plateau (c 216,000 sq mi , pop c 1,020,000), SE Belgian Congo The chief city is Elisabethville In the east there is a mineral zone with enormous copper deposits which have been worked since the late 19th cent and with coal, iron, cobalt, tin, and radium The region is connected by rail with the west coast of Africa, with Stanleyville, and with Lusaka, the capital of Northern Rhodesia Katanga is a high grassy plateau used for agriculture and stock raising The climate is pleasant, and there are white settlers

Katar see QATAR

Katayama, Tetsu (tĕt'sōō kătayä'mä), 1887 , Japanese statesman Long active in the Japanese labor circles, he later was general secretary of the Social Democratic party When this was suppressed by the police, he helped organize the Social Mass party The Social Democratic party was reorganized after the Second World War, and he became its leader and was prime minister (1947–48) of a coalition cabinet

Katayev, Valentin Petrovich (vŭlyĭntyĕn' pĕtrō'vĭch kŭtī'uf), 1897–, Russian novelist, short-story writer and playwright His novels portray almost the whole range of Soviet life, from the period of the New Economic Policy (*The Embezzlers*, 1927, Eng tr , 1929) through the Five Year Plan (*Time, Forward!* 1932, Eng tr , 1933) to the Second World War (*The Wife*, 1944, Eng. tr , 1946) In *The Lonely White Sail* (1936, Eng tr , 1937, American ed , *Peace Is Where the Tempests Blow*, 1937) he evoked pleasant memories of childhood.

His comedies are very popular, especially *Squaring the Circle* (1929, Eng tr., 1934), a farce on Soviet marriage and housing conditions, *A Million Torments* (1934, Eng tr., 1934), and *The Blue Kerchief* (1942), a somewhat farcical treatment of the Second World War. Also available in English are some of Katayev's reports on the war (*We Carry On!* 1942) and *Magic Flower* (1947)

Katharine or **Katherine** For some persons thus named, see CATHERINE.

Katharine of Aragon, 1485–1536, queen of England, daughter of Ferdinand and Isabella of Spain. In 1501 she was married to Arthur, eldest son of Henry VII. He died in 1502, and the marriage of Katharine to his brother Henry was projected. A papal dispensation was obtained, but the marriage was delayed by diplomatic wrangling between Henry VII and Ferdinand and did not take place (1509) until the prince had ascended the throne as HENRY VIII. In 1513, as regent during Henry's expedition to the Continent, she organized the successful defense against Scotland which ended in the victory at Flodden. Only one of Katharine's six children survived infancy (see MARY I), and Henry was disappointed at her failure to produce a male heir. The English alliance with Katharine's nephew, CHARLES V, wavered and fell in 1525, and her political importance declined. Finally, Henry became violently infatuated with Anne BOLEYN. In 1527 with the help of Cardinal WOLSEY, Henry began the attempt to have his marriage annulled. This move ultimately precipitated the chain of events that ended in the English Reformation. Katharine steadfastly refused to acknowledge the invalidity of the marriage or to retire to a convent. In 1529 at a trial conducted by Cardinals CAMPEGGIO and Wolsey, she appealed vainly to Henry, denied the jurisdiction of the court because it was under pressure by the king, and withdrew. Pope CLEMENT VII recalled the hearing to Rome, in effect denying the divorce. Henry then proceeded on his own, after his secret marriage to Anne Boleyn in 1533, a court presided over by Thomas CRANMER pronounced the former marriage invalid. Katharine refused to accept this decision. The pope's formal declaration for her in 1534 came too late. Separated from her daughter, Mary, never visited by Henry, confined with few attendants at various inferior estates, Katharine refused despite all threats and mistreatment to take the title of princess dowager or to acknowledge the Act of Succession and the Act of Supremacy. She died after a prolonged illness. See Garrett Mattingly, *Catherine of Aragon* (1941)

Kathiawar (kä'tēəwär'), peninsula (23,432 sq mi; pop. 3,484,222), W India. It lies between the Gulf of Cutch and the Gulf of Cambay. Kathiawar comprises Saurashtra state and portions of Bombay state. Mostly level, it produces much cotton.

Katkov, Mikhail Nikiforovich (mĕkhōō'ēl' nyēkē'fōōrvĭch kŭtkôf'), 1818–87, Russian journalist. In his student years he belonged to the revolutionary circle of Belinsky, Herzen, and Bakunin and later, as the editor of several important journals, championed a constitutional form of government modeled on the English. But after the Polish insurrection of 1863, for which he blamed the socialists and nihilists, he turned to the reactionary and Slavophile party. He was the personal adviser of Alexander III, and his influence upon the government was enormous. He wrote much on literary and political subjects.

Katmai National Monument (kăt'mī), 2,697,590 acres, S Alaska, near the northern end of the Alaska Peninsula, est 1918. It was enlarged in 1931 and 1942. It is a dying volcanic region, containing Katmai Volcano and the Valley of Ten Thousand Smokes (area 72 sq mi). The eruption (1912) of the volcano changed the topography of the area. It showered volcanic ash for a great distance, covering Kodiak Island, 100 mi. distant, to a depth of almost a foot. All plant and animal life in the region was destroyed. The eruption created a crater 8 mi. in circumference and 3,700 ft deep, in which a lake has formed. The National Geographic Society has sent a number of scientific expeditions to the region, on one of which the former Katmai Pass was named the Valley of Ten Thousand Smokes, because of gases and steam rising from thousands of vents in the earth. In recent years, volcanic action has abated. The region is inaccessible except to specially equipped explorers or expeditions. See R. F. Griggs, *Scientific Results of the Katmai Expeditions* (1920) and *The Valley of Ten Thousand Smokes* (1922), B. R. Hubbard, *Mush, You Malemutes!* (1932)

Katmandu (kätmändōō') city (pop. c 80,000), capital of Nepal, founded 723. It lies in a fertile valley at an altitude of c 4,500 ft. It possesses many fine Buddhist temples, a college, and Sanskrit libraries. The chief palace of the king is here.

Kato, Takaakira, Viscount (tä"kä-ä'kĕrä, kä'tō), 1859–1926, Japanese statesman. He served as ambassador to Great Britain and was (1899–1901, 1906–8, 1913, 1914–16) foreign minister. He was largely responsible for presenting the Twenty-one Demands to China. Later he organized and became head of the conservative Kenseikai party and was (1924–25) prime minister. His cabinet was called "the Mitsubishi government," because both he and his foreign minister, Shidehara, were connected by marriage with the Mitsubishi interests. His administration reduced army strength and government expenditures, sponsored the manhood-suffrage law, and favored the Peace Preservation Law, penalizing political heterodoxy.

Kato, Tomosaburo, Baron (tōmōsä"ä'bōōrō', kä'tō), 1859–1923, Japanese admiral. He was navy minister from 1915 to 1923, directing Japanese naval operations in the First World War and the naval expansion thereafter. As head of the delegation to the Washington Conference, he accepted, however, the principle of naval limitation. He was prime minister (1922–23).

Katona, Joseph (kô'tônō), 1791–1830, Hungarian dramatist. His tragedy *Bank ban* (1821) is considered the best piece of dramatic poetry in Hungarian. Katona's greatness lay in his power of portraying the development of emotional conflict.

Katonah (kutō'nu), unincorporated residential village (pop. 1,764), SE N.Y., in Westchester co., N of White Plains.

Katowice (kätôvē'tsĕ), Ger. *Kattowitz* (kä'tōvĭts), city (pop. 128,290), capital of Silesia prov., SW Poland. It is the center of a mining and industrial district, which also includes the cities of Bedzin, Beuthen, Chorzow, Czeladz, Dabrowa Gornicza, Gleiwitz, Hindenburg, and Sosnowiec. Coal, iron, zinc, and lead are mined. Katowice has metal, chemical, food, electrical, printing, and leather industries. It was incorporated in 1867 and passed from Germany to Poland in 1921. It was damaged in the Second World War. Bogucice (bôgōōtsē'tsĕ), Ger. *Bogutschütz* (bô'gōōt-shütz), is a suburb.

Katrine, Loch (lôkh kăt'rĭn), lake, c 8 mi. long and 1 mi. wide, Perthshire and Stirlingshire, Scotland, E of Loch Lomond. It is overlooked by Ben Venue (2,393 ft.) and surrounded by hills and woods. Its outlet flows to the Teith river through Lochs Achray and Vennachar. In 1859, when Loch Katrine became the source of water supply for Glasgow, its water level was raised, submerging the Silver Strand of Scott's *Lady of the Lake* and decreasing the size of Ellen's Isle.

Katsina (kätsē'nu, kät'sēnu), city (pop. 22,260), N Nigeria. It is surrounded by a wall 1.1 mi. long. In the 17th and 18th cent. while under the native state of Bornu, it was the largest city of the Hausas and a seat of learning and culture. In the 19th cent. it was exceeded in size by the Hausa city of Kano. Katsina has an imposing mosque and a Moslem college.

Katsura, Taro, Prince (tärō', kät'sōōrä), 1847–1913, Japanese statesman. A Choshu clansman, he served as war minister before he was prime minister (1901–6) during the Russo-Japanese War, resigning on account of public dissatisfaction with the peace treaty. As prime minister again (1908–11), he put through the annexation of Korea and engaged in a struggle with the diet. He had ceased being a protégé and had become a rival of YAMAGATA, who relegated him to the post of keeper of the privy seal, but in 1912 Katsura defied the clan oligarchy and used the imperial authority to make himself prime minister. He organized a new party and tried to control the diet by means of his great wealth, but was forced to resign in 1913.

Kattath (kă'tăth), unidentified city, N central Palestine. Joshua 19:15.

Kattegat (kă'tĭgät"), strait, 137 mi. long and 37 mi. to c 100 mi. wide, between Sweden and Denmark. It is connected with the North Sea through the Skagerrak, which begins at Cape Skagen or the Skaw, at the northern tip of Jutland, and with the Baltic Sea by way of the Oresund, the Great Belt, and the Little Belt. Goteborg (Sweden) and Aarhus (Denmark) are the chief ports. The name also appears as Cattegat.

Kattowitz, Poland see KATOWICE.

Katun (kutōōn'), river, 386 mi. long, SE Altai Territory, RSFSR, in S Siberia. It rises in the Katun Alps (see ALTAI) and flows generally north to join the Biya, with which it forms the Ob river.

katydid, insect of the long-horned GRASSHOPPER family. Most of the approximately 7,000 species, especially the tree-dwelling forms, are green. The majority are herbivorous. Sounds are produced, as in the cricket, by rubbing one forewing against the other. Certain species in the E United States sing "Katy did, Katy didn't" through the night.

Katyn (kŭtĭn'), village, RSFSR, W of Smolensk. It was occupied by the Germans in the Second World War. In 1943 the German government announced that the mass grave of some 10,000 Polish officers had been found in a forest near Katyn and accused the Russians of having massacred them. The Russian government, while denying the accusation, refused an international investigation, and a break followed between Russia and the Polish government in exile (see POLAND). Subsequently, Russia accused Germany of having massacred the officers. The officers, according to the two conflicting versions, had been prisoners either of Russia or of Germany after the defeat of Poland in 1939.

Katzimo: see ENCHANTED MESA.

Kauai (kou"wī'), island (551 sq. mi., pop. 35,636), one of the Hawaiian Islands, geologically the oldest, separated from Oahu by the Kauai Channel. LIHUE is the principal town, and NAWILIWILI HARBOR the chief port. In the central mountain mass are Waialeale (5,170 ft.), the highest peak, and Waimea Canyon. Kauai was ceded to the kingdom of Kamehameha I in 1810. The former beach home of Queen Emma is at Lawai beach. The chief products of the island are sugar, rice, and pineapples.

Kauffer, Edward McKnight, 1890–, American poster artist and illustrator, b. Great Falls, Mont. After studying in Chicago, Munich, and Paris, he settled in London (1914), where he became a leader in poster designing. The high quality of his work merits its inclusion in numerous galleries. Kauffer is also known as the illustrator of Burton's *Anatomy of Melancholy* and many other works. He edited *The Art of the Poster* (1925).

Kauffman, Calvin Henry, 1869–1931, American botanist, b. Lebanon, Pa. Known for his work on mushrooms, he wrote *Agaricaceae of Michigan* (1918) and numerous articles in botanical journals. After 1904 he was on the faculty of the Univ. of Michigan.

Kauffmann, Angelica (ang-gä'lēka kouf'man), 1741–1807, Swiss historical and portrait painter, pupil of her father, Joseph Kauffmann. From the age of 11 she showed great talent. After some successes in Italy she went to England, where she became a protégée of Sir Joshua Reynolds and enjoyed a brilliant career as a fashionable portrait painter and decorator. She was one of the original members of the Royal Academy. An unfortunate marriage (1767) was annulled by the pope, and in 1781 she married the Venetian painter Antonio Zucchi and thenceforth lived in Naples and Rome, where she continued to be highly popular. Few women painters have enjoyed such a successful career. She was a gifted singer and linguist as well as a painter and enjoyed the friendship and patronage of many famous contemporaries. Her reputation, however, has greatly declined, being based on charm and facility rather than on more substantial qualities. Among her portraits are those of Reynolds, Garrick, and Mengs (all Victoria and Albert Mus.). Characteristic figure compositions are *Religion Surrounded by Virtues* (National Gall., London), *Virtue and Prudence* (Pa. Acad. of the Fine Arts), and two paintings of Telemachus and Calypso (Metropolitan Mus.). The British Museum contains a collection of her drawings, etchings, and engravings. See biography by F. A. Gerard (1893), study by Lady Victoria Manners and G. C. Williamson (1924).

Kaufman, George S. (kôf'mun, kouf'), 1889–, American journalist and playwright, b. Pittsburgh. He conducted humorous columns, and as a drama critic for the New York *Times* he was influential in raising the standards of criticism in the theater. The sole author of only one play, *The Butter and Egg Man* (1925), he wrote many successful plays in collaboration with Marc CONNELLY, Edna Ferber, Morrie Ryskind, and Moss Hart. He won the 1932 and 1937 Pulitzer Prize for drama with the musical comedy *Of Thee I Sing* (with Morrie Ryskind, 1931, score by George Gershwin) and the play *You Can't Take It with You* (with Moss Hart, 1936). Among the plays with Edna Ferber are *The Royal Family* (1927), *Dinner at Eight* (1932), *Stage Door* (1936), and *The Land Is Bright* (1941). With Moss Hart he wrote *The Man Who Came to Dinner* (1939) and *The Late George Apley* (1944).

Kaufman (kouf'mun, kôf'-), city (pop. 2,654), co. seat of Kaufman co., N Texas, ESE of Dallas, founded 1848, inc. 1873. This market center processes cotton and other produce of the rich blackland and has small industries.

Kaufmann Peak, USSR: see LENIN PEAK.

Kaukauna (kôkô'nu), industrial city (pop. 7,382), E Wis., on the Fox and E of Appleton, settled 1793, inc. 1885. It began as a fur-trading post of the late 18th and early 19th cent. There are railroad shops, stone quarries, and plants processing sulphate and—most important—dairy products.

Kaulbach, Friedrich August von (frē'drĭkh ou'gōōst fŭn koul'bäkh), 1850–1920, German portrait and genre painter, son and pupil of Friedrich Kaulbach (1822–1903), historical and portrait painter. Friedrich August's earlier works are principally genre scenes, brilliantly colored and skillfully handled. In 1881 he settled in Munich, where he achieved success in portraiture. He was director (1886–91) of the Munich Academy. His works include *Italian Garden* and *Girl's Head* (both Metropolitan Mus.).

Kaulbach, Wilhelm von (vĭl'hĕlm), 1805–74, German historical painter and illustrator. He was director of the Munich Academy from 1849. In Munich he executed great decorative works for the Odeon, the palace, and the Hofgarten and a series of designs depicting the development of the arts under Louis I for the exterior of the New Pinakothek. These works showed his penchant for the dramatic, his facility for rapid painting on a large scale, and his love for the grotesque and satiric. In 1847 he went to Berlin to decorate the grand staircase of the New Museum with a series depicting the evolution of civilization. A study, or replica, of one of the series, *The Crusaders before*

Jerusalem, is in the Metropolitan Museum To his last period belong *Sea Fight at Salamis*, portraits of Louis I and Maximilian II, and a self-portrait Other important works include *Madhouse*, illustrations for Goethe's *Reineke Fuchs* and *Faust* and a *Shakespeare Gallery* and a *Goethe Gallery*

Kaulun: see HONG KONG

Kaunas (kou'näs), Pol *Kowno* (kôv'nô), Rus *Kovno* (kôv'nu), city (pop 154,109), central Lithuania, on the Nemen river An active port, it also has food, textile, and other industries First mentioned in the 13th cent, Kaunas was a medieval trading center and a Lithuanian stronghold against the Teutonic Knights It passed to Russia in the third partition of Poland (1795) Though strongly fortified by the Russians, it was captured (1915) by the Germans in the First World War From 1918 to 1940 Kaunas was the provisional capital of Lithuania—VILNA (which Lithuania claimed as its rightful capital) being held by Poland until 1939 and by Russia in 1939–40 Kaunas was occupied by German forces from 1941 to 1944 During the German occupation the Jews of Kaunas (about 30 percent of the pre-war population) were virtually exterminated Before evacuation at the approach of Russian troops the Germans destroyed much of the city The Univ of Kaunas was founded in 1922

Kaunitz, Wenzel Anton, Fürst von (vĕn'tsŭl än'tŏn fürst' fŭn kou'nĭts), 1711–94, Austrian statesman He distinguished himself as a negotiator of the Treaty of Aix-la-Chapelle (1748) and from 1753 until his retirement in 1792 served Maria Theresa, Joseph II, and Leopold II as chancellor and foreign minister Recognizing Prussia rather than France as the chief enemy of Austria, Kaunitz was responsible for the coalition that led to the SEVEN YEARS WAR Through Kaunitz, Austria shared in the first partition of Poland (1772) Kaunitz did not see eye to eye with Joseph II on all his reforms, but he helped Joseph centralize the administration Kaunitz is regarded as one of the most astute statesmen of the 18th cent

Kautsky, Karl Johann (kärl' yōhän kout'skē), 1854–1938, German-Austrian socialist, b Prague He had considerable influence in politics, he was the principal deviser of the Erfurt Program, a dominant figure in the Second International, and co-founder, with Hugo HAASE, of the Independent Social Democratic party in Germany A consistent opponent of Eduard Bernstein and other socialists who advocated revision of Marxist doctrines, Kautsky also opposed Lenin and Bolshevism He wrote a great amount of socialist and other literature and edited the German documents on the origin of the First World War (4 vols, 1919) Among his translated works are *The Economic Doctrines of Karl Marx* (Eng tr, 1925), *Ethics and the Materialist Conception of History* (Eng tr, 1907), and *Bolshevism at a Deadlock* (Eng tr, 1931)

Kavalla or **Kavala** (both kävä'lä), city (pop 49,667), E Macedonia, Greece, a port on the Gulf of Kavalla an inlet of the Aegean Sea It is the chief Greek center for tobacco processing and exporting, and its artificial harbor is, next to Salonica, the most important in N Greece It was conquered by Bulgaria from Turkey in the first of the Balkan Wars (1912–13) and was ceded to Greece at the conclusion of the second war Kavalla is near the site of ancient Philippi

Kaveri: see CAUVERY

Kaverin, Veniamin Aleksandrovich (vĕnyŭmēn' ŭlyĭksän'drŭvĭch kävyĕ'rĭn), 1902–, Russian novelist and short-story writer He was a member of the literary group calling itself the Serapion Brothers and expounded that circle's creed of the artistic independence of politics in the story *The Unknown Artist* (1931, Eng tr, 1947), a work owing much to Western influences, especially to E T A Hoffmann and Poe *Two Captains* (1940, Eng tr, 1942) had more the orthodox Socialist point of view His long novel *The Larger View* is available in English (1948)

Kaw, river see KANSAS, river

Kawagoe (kä'wē'gō), city (1947 pop 50,294), Saitama prefecture, central Honshu, Japan It has a 9th-century Buddhist temple and today manufactures silk textiles

Kawaguchi (kä'wä'gōōchē), city (1940 pop 97,115, 1947 pop 116,007), Saitama prefecture, central Honshu, Japan It has ironworks and textile mills

Kawartha Lakes (kä'wôr'thŭ), group of 14 lakes, in an area some 50 mi long and 25 mi wide, S Ont, near the towns of Lindsay and Peterborough The lakes—Scugog, Sturgeon, Balsam, Cameron, Pigeon, Bald, Sandy, Buckhorn, Chemong, Deer, Lovesick, Stony, Clear, and Katchewanooka—are popular as summer resorts

Kawasaki (kä'wä'sä'kē), city (1940 pop 300,777, 1947 pop 252,923), Kanagawa prefecture, central Honshu, Japan, on Tokyo Bay In the Tokyo-Yokohama industrial area, it has steel mills, shipyards, and engineering works and was bombed (1945) in the Second World War.

Kaw Indians: see KANSA INDIANS.

Kay, Sir: see ARTHURIAN LEGEND.

Kay, John, 1704–64, English inventor He patented in 1733 the fly shuttle, operated by pulling a cord which drove the shuttle to either side, freeing one hand of the weaver to press home the weft The device was looked upon as a menace to hand labor Kay was mobbed and his model destroyed He went to France, resumed his work, and tried unsuccessfully to win recognition in England Although he was the inventor of one of the most important principles of modern mechanical weaving, he died in poverty See Perry Walton, *Story of Textiles* (2d ed, 1925)

Kay, John, 1742–1826, Scottish caricaturist, miniature painter, and etcher Until his 40th year he worked as a barber, devoting his spare time to painting, etching, and sketching the celebrities of Edinburgh Kay's portraits and caricatures were collected by Hugh Paton under the title *A Series of Original Portraits and Caricature Etchings by the Late John Kay* (1837–38, new ed, 1877)

kayak, see CANOE

Kaye-Smith, Sheila, 1887–, English novelist In 1924 she married an Anglican clergyman, Theodore P Fry, and in 1929 they were both converted to Roman Catholicism Her concern with religion is reflected in her series of novels about her native Sussex, including *Sussex Gorse* (1916), *Joanna Godden* (1921), *The End of the House of Alard* (1923), *Susan Spray* (1931), *The Valiant Woman* (1938), *Tamburine, Trumpet, and Drum* (1943), and *The Happy Tree* (1949) She has also written short stories, a few plays, and competent ballad poetry, as well as two critical works with G B Stern, *Talking of Jane Austen* (1943, American title, *Speaking of Jane Austen*, 1944) and *More about Jane Austen* (1949) See her autobiography, *Three Ways Home* (1937)

Kayser, Heinrich Gustav Johannes (hĭn'rĭkh gōōs' täf yōhä'nus kī'zur), 1853–1940, German physicist He was professor at Bonn from 1894 to 1920 He is known for his work in sound and, in association with C D T Runge, in SPECTRUM analysis He wrote a handbook of spectroscopy (1901–12) and a treatise on the electron theory (1905)

Kayseri (kī'sĕrē), city (pop 57,864) central Turkey, ESE of Ankara It has cotton and tile manufactures and is an agricultural trading center The ancient CAESAREA MAZACA, the city played an important part in the history of the Byzantine and Seljuk empires The name also appears as Kaisaria

Kaysville, city (pop 1,211), N Utah, between Salt Lake City and Ogden, in an irrigated farm area, settled 1849 by Mormons, inc 1868

Kazakh Soviet Socialist Republic (käzäk', ku-, Rus kŭzäkh') or **Kazakhstan** (kä"säkstän' Rus kŏzŭkhstan'), constituent republic (1,063,200, 1946 estimated pop 6,000,000), USSR, in central Asia It borders on the RSFSR (Siberia) in the north, China in the east, the Kirghiz, Uzbek, and Turkmen republics in the south, and the Caspian Sea in the west Alma-Ata, the capital, and Karaganda, Aktyubinsk, Akmolinsk, Petropavlovsk, Chimkent, and Semipalatinsk are the chief cities The second largest constituent republic of the Soviet Union, Kazakhstan consists primarily of the dry Caspian and Turan lowlands, the arid USTYURT plateau, and the Kazakh Hills and is bounded in the east and south by the ALTAI and ALA-TAU mountain systems The climate is dry and continental The republic includes the ARAL SEA and Lake BALKASH, the chief rivers are the Irtysh, Ural, Ili, and SYR DARYA Agriculture is important in the black-earth steppes of the north, where wheat is grown In the desert and semidesert area of the central section and in the arid KIZIL KUM sheep and camels are raised The southern plains are irrigated and grow sugar beets, tobacco, opium poppies, rubber-bearing plants, cotton, rice, and fruit Industry is based on rich mineral resources, notably copper, coal, lead, zinc, and iron The population consists of Kazakhs (57 percent), Russians and Ukrainians (33 percent), and smaller groups The Kazakhs (formerly called Kirghiz, while the present Kirghiz were called Kara Kirghiz) are a Turkic-speaking Moslem group whose warlike and nomadic ancestors settled in the region in the 13th and 14th cent Dominated at first by the Mongols and later by local khans, the area came under Russian rule in the 19th cent The republic was first constituted (1920) as the Kirghiz Autonomous SSR, it was renamed Kazakh ASSR in 1925 and in 1936 became a constituent republic

Kazan (kŭzän', kŭzän', Rus kŭzä'nu), city (pop 401,665), capital of the Tatar ASSR, E European RSFSR, near the left bank of the Volga It is a major historic, cultural, industrial, and commercial center The name is sometimes spelled Kasan Among its many manufactures are locomotives, aircraft, agricultural machinery, synthetic rubber, gunpowder, and textiles There are a university (founded 1804), technical, medical, and scientific institutes, an opera, several theaters, and a noted Tatar museum The near-by port and shipyards on the Volga make Kazan an important water-transport center Founded in 1401, Kazan was the capital of a powerful Tatar khanate, which emerged from the empire of the Golden Horde The khanate was conquered and the city sacked in 1552 by Ivan IV, and it became (18th cent) an outpost of Russian colonization in the east Of the splendid Moslem period of Kazan little remains except the Suyumbeka tower in the impressive 16th-century kremlin, which contains many domed and spired churches and monasteries and a 19th-century palace The kremlin resisted (1774) an attack by Pugachev, who burned the rest of the city. The Tatars still form 24 percent of the population of Kazan, the rest being mostly Russians Lenin studied at the Univ of Kazan

Kazan (kuzän'-zän'), river rising in SE Mackenzie dist of the Northwest Territories and flowing through the uninhabited barren grounds area of Keewatin dist c 450 mi NE to Baker Lake.

Kazanlik (kä"zänlĭk'), town (pop 19,386), central Bulgaria, in the Kazanlik valley, a region famous for its rose fields Kazanlik developed in the 17th cent as a manufacturing center for attar of roses It now also manufactures textiles and musical instruments

Kazan-retto see VOLCANO ISLANDS

Kazbek, Mount (kŏzbĕk', Rus kŭzbyĕk'), peak, 16,541 ft high, N Georgian SSR, in the central Greater Caucasus An extinct volcano, it rises above the DARYAL gorge and the Georgian Military Road Its glaciers give rise to the Terek river It was first scaled in 1868 An alternate spelling is Kasbek

Kazdagi, Turkey see IDA MOUNTAINS

Kazimierz see CASIMIR

Kazinczy, Francis (kô'zĭntsē), Hung *Kazinczy Ferencz* (fĕ'rĕnts), 1759–1831, Hungarian author and critic He was the great literary authority of his time and a leading reformer of the Hungarian language As a poet he was at his best in didactic verse, and as a prose writer, in biography His translations of Shakspere and other foreign authors are notable, and his many letters to Hungarian writers are valuable for their criticism

Kazvin (käzvēn'), **Kasbin** (käzbēn'), or **Qazvin** (käzvēn'), city (pop 60,013), NW Iran, S of the Elburz range and c 100 mi W of Tehran, on routes to Tabriz, Resht, and Hamadan It contains a mosque of Harun-al-Rashid and buildings by Shah Abbas I It was capital of Persia from 1514 to 1590 The Mongols sacked it, but its population—more Turkoman, Kurdish, and Tatar than Persian—resisted the Afghans in 1723 In the First World War, Russians and British defended (1918) it against Turkey In and just after the Second World War it was a stronghold of Russian occupation Kazvin trades in silk, fruit, and rice and makes carpets

Kea: see KEOS

Keaau, T H see OLAA

Kealakekua Bay (kä'lăkäkōō'u), W Hawaii, T H, in the Kona district Captain Cook, who discovered the islands, stopped here on his second voyage to Hawaii (1779) and was killed by the natives A monument to him stands on the shore

Kean, Charles John, 1811?–1868, English actor; son of Edmund Kean He went on the stage against his father's wishes and appeared at Drury Lane as Young Norval in *Douglas* in 1827 At his father's last appearance in 1833, Charles acted Iago to his father's Othello at Covent Garden. He produced many Shakspearian plays with spectacular settings and staged Byron's *Sardanapalus* His forte was melodrama His wife was **Ellen Tree Kean**, 1808–80, an English actress whom he married in 1842 Her first appearance at Covent Garden in 1829 established her reputation as a comedienne She played opposite her husband until his death, when she retired See W G B Carson, *Letters of Mr and Mrs Charles Kean Relating to Their American Tours* (1945)

Kean, Edmund, 1787?–1833, English actor His parentage is uncertain, although evidence favors Edmund Kean, a surveyor's clerk, and Ann Carey, one of a company of strolling players He served an apprenticeship with groups of provincial and strolling players and in 1814 appeared at Drury Lane as Shylock, a triumph that is a landmark in the history of the theater He further increased his reputation as Richard III, Hamlet, Othello, Iago, Lear and Sir Giles Overreach In the United States in 1820–21 Kean had many triumphs, but a broken engagement in Boston ruined his popularity there In 1822 a suit for adultery brought by Alderman Cox resulted in a separation from his wife and son and hastened the disintegration of his personal life and his career In 1825 he again visited the United States and in some measure retrieved his reputation After his return to England in 1826 his health and dramatic powers declined At his peak, however, he had such intensity, force, and insight in his portrayals that a place among England's greatest actors of tragedy is assured him Leigh Hunt, Byron, and Lamb praised him, Hazlitt lauded him in *A View of the English Stage* (1818), and Coleridge claimed for him the power to reveal Shakspere by "flashes of lightning" See H N Hillebrand, *Edmund Kean* (1933)

Kean, Ellen Tree see KEAN, CHARLES JOHN

Keansburg, borough (pop 2,904), E N J, a resort on Raritan Bay ESE of Perth Amboy, inc 1917.

Kearney, Dennis (kär'nē), 1847–1907, American political agitator, b Co Cork, Ireland. He was a sailor and then a San Francisco drayman. When

California suffered a depression in 1877, Kearney began addressing the workingmen and the unemployed in vacant San Francisco sand lots He denounced the Central Pacific RR monopoly, political and economic abuses, and particularly Chinese labor, ending many of his speeches with the words, "The Chinese must go" His inflammatory harangues attracted many followers, and after organizing the Workmen's Party —often called the "Sand-Lotters"—he led in the 1870s in driving Orientals from their factories, in burning their laundries, and in threatening violence to those who employed Chinese workers. The party united with the Granger organization and sent a large number of delegates to the California constitutional convention of 1878, where their influence brought about many new laws The state judicial system was reformed, a railroad commission was set up, and home rule was set up in San Francisco The Chinese were forbidden to hold property and to engage in specified occupations The provisions denying the Chinese civil liberties were later voided by the courts Kearney went East to popularize the Workingmen's party, but, gaining little success, he dropped back into obscurity after 1884

Kearney (kär'nē), city (pop 9,643), co seat of Buffalo co, S Nebr, on the Platte and SW of Grand Island, in the Great Plains grain and livestock area, founded 1871, inc 1873 It is a processing, trade, and rail center Fort Kearney (named for S W Kearny, but misspelled), established near by in 1848 to protect the Oregon Trail, was abandoned in 1871, the site is now a state park A state teachers college, a state hospital for the tubercular, and a state reform school are here

Kearny, Lawrence (kar'nē), 1789–1868, American naval officer, b Perth Amboy, N J He became a midshipman in 1807, served in the War of 1812, and later saw action in the Caribbean and Mediterranean against pirates As commander (1840–43) of the East India squadron, he opened negotiations which resulted in the signing of a commercial treaty between China and the United States in 1844 On his way home he stopped at the Hawaiian Islands, where he protested against any provisional cession to Great Britain Stephen Watts Kearny was his cousin See biography by C S Alden (1937)

Kearny, Philip, 1814–62, Union general in the Civil War, b New York city, grad Columbia, 1833, nephew of Stephen W Kearny After studying law he joined the army (1837) One of three officers sent to study the French cavalry service (1839), he served (1840) with the French in the Algerian campaign In the Mexican War, Kearny lost an arm at Churubusco He resigned from the army in 1851 to travel and in 1859 fought again with the French in the war for Italian liberation Upon the outbreak of the Civil War he was appointed brigadier general of volunteers and given command of the 1st New Jersey Brigade Kearny fought in the Peninsular campaign and at the second battle of Bull Run While reconnoitering at Chantilly he unknowingly entered the enemy's lines and was killed, Sept 2, 1862 Kearny was noted for his courage and dash and was idolized by his men Kearny, N J, was named for him

Kearny, Stephen Watts, 1794–1848, American general in the Mexican War, b Newark, N J He left Columbia College to join the army on the outbreak of the War of 1812 and was specially mentioned for his work at Queenston Heights He remained in the army, serving at posts on the Western frontier At the beginning of the Mexican War he was made commander of the Army of the West with the rank (June, 1846) of brigadier general With c 1,600 men he marched over the Santa Fe Trail to New Mexico, entered the city of Santa Fe without opposition, and organized a civil government for the territory On his way to join the forces of Commodore Robert F Stockton in California he was besieged at San Pasqual, where he was wounded and suffered casualties of a third of his command before being rescued by relief forces from Stockton After several skirmishes the combined forces reached Los Angeles and occupied the town A dispute arose between Kearny and Stockton as to the chief command, and Col John C Frémont, appointed civil governor of California by Stockton, refused to obey Kearny's orders When orders from Washington sustained Kearny, he had Frémont court-martialed Kearny was military governor of the territory until the end of May, 1847 Afterwards he went to Mexico, where he was governor of Veracruz and then of Mexico city for brief periods in 1848 Fort Kearney, erected in 1848 on the Platte river in what is now Nebraska, was named for Kearny but misspelled

Kearny (kar'nē), town (pop. 39,467), NE N J, including much of the tidal wastelands between the Passaic and the Hackensack E of Newark, inc 1899 It is the site of shipyards (greatly enlarged in 1941, scene of strikes in 1940 and 1941), dry docks, and factories producing paint, chemicals, linoleum, and electrical products Arlington is a residential and industrial section. The meadowlands are constantly being reclaimed for industrial purposes.

Kearsarge (kēr'särj"), Union ship in the Civil War See Confederate cruisers

Keats, John, 1795–1821, English poet, b London; son of a livery-stable keeper At school at Enfield he became the friend of Charles Cowden Clarke Apprenticed to a surgeon (1810), Keats came to know Leigh Hunt and his literary circle, and by 1817 he had given up surgery to write poetry His *Poems* (1817) included "I stood tip-toe upon a little hill," "Sleep and Poetry," and a number of sonnets *Endymion*, a long poem, came out in 1818 Keats returned from a walking tour in the Highlands (1818) to find himself attacked in *Blackwood's Magazine*—an article probably by J G Lockhart berated him for belonging to Leigh Hunt's "Cockney school" of poetry—and in the *Quarterly Review* The belief of some of his friends that these attacks hastened his early death is mentioned by Shelley in *Adonais* but Clarke and Joseph Severn disagreed, as do modern biographers His passionate love for Fanny Brawne seems to have begun in 1818 too Her letters to his sister show that her critics' contention that she was a cruel flirt was not true and only Keats's failing health prevented their marriage Keats contracted tuberculosis, probably from nursing his brother Tom, who died in 1818, and the medical practice of the time tended to accelerate its course Keats sailed for Italy with Severn shortly after the publication of *Lamia, Isabella, The Eve of St Agnes, and Other Poems* (1820), and died there In spite of his tragically brief career, Keats is one of the greatest of English poets The poems of 1820 —especially "Ode to a Nightingale," "Ode on a Grecian Urn," "To Autumn," and "Ode on Melancholy"—are unequaled for dignity, melodic beauty, and richness of sensuous imagery Some of Keats's finest work is in the unfinished epic "Hyperion" Among his posthumous pieces the best known are "La Belle Dame sans Merci," in its way as great an evocation of romantic medievalism as "The Eve of St Agnes" Among his sonnets, familiar ones are "On First Looking into Chapman's Homer," "When I have fears that I may cease to be," and "Bright star! would I were steadfast as thou art" "Lines on the Mermaid Tavern," "Fancy," and "Bards of Passion and of Mirth" are delightful improvisations Keats's poetic dramas, "Otho the Great" and "King Stephen," were unsuccessful, and his attempt at a "popular" poem, "The Cap and Bells," was a failure His letters (ed by M B Forman, 1935) are charming as literature and valuable for their insight into his character See biographies by Sidney Colvin (new ed, 1925), Amy Lowell (2 vols, 1925), Dorothy Hewlett (1937), and C A Brown (1937), H E Rollins, ed, *The Keats Circle Letters and Papers, 1816–1878* (1948)

Keble, John (kē'bŭl), 1792–1866, English clergyman and poet His career (1807–11) at Corpus Christi College, Oxford, was one of unusual distinction Made fellow of Oriel College in 1811 and ordained in 1816, he became tutor and examiner, but resigned in 1823 to become his father's curate He based the doctrine and devotion of his important poetical work *The Christian Year* (1827) on the Book of Common Prayer It sold 150 editions in 50 years and led to a professorship of poetry at Oxford (1831–41) Alarmed at the suppression of 10 bishoprics in Ireland, Keble preached (1833) a sermon which he called "National Apostasy" J H Newman later called this the beginning of the Oxford Movement Keble participated in the *Tracts for the Times* and was closely associated with Newman through his pupil R H Froude From 1836 he held the living of Hursley, Hampshire His works include an edition of Richard Hooker's works (1836), a life of Bishop Wilson (1863), the *Oxford Psalter* (1839) and *Lyra Innocentium Thoughts in Verse on Children* (1846) Among his poems are the well-known hymns *Red o'er the Forest, New Every Morning Is Thy Love*, and *Sun of my Soul* See biographies by J T Coleridge (1869) and Walter Lock (1892)

Keble College. see Oxford University

Kebnekaise (kĕb'nukī"su) [Lappish,=kettle top], mountain peak, 6,965 ft high, Norrbotten co, N Sweden, highest in Sweden It has several glaciers

Kechua see Quichua

Keck, Charles, 1875–, American sculptor, b New York city One of his best-known works is the figure *America*, for the Allegheny County Soldiers' Memorial, Pittsburgh Other monuments are one to George Washington, Buenos Aires, the *Friendship Monument* from the United States to Brazil at Rio de Janeiro; the *Liberty Monument*, Ticonderoga, N Y, and the Booker T Washington monument at Tuskegee, Ala In Charlottesville, Va, are two groups, *Lewis and Clark* and the equestrian *Stonewall Jackson*

Kecskemet, Hung *Kecskemét* (kĕch'kĕmāt), city (pop 87,269), central Hungary, c 50 mi SE of Budapest In existence since at least the 4th cent, it is a typical Hungarian "peasant city," occupying 363 sq mi It is the center of Hungarian fruit export A law school here has a large library

Kedah (kē'dù, kä'da), state (3,640 sq. mi., pop 553,987), NW Malaya, on the Straits of Malacca It is bounded on the northwest by Perlis, on the north and east by Thailand, and on the east and south by Perak The capital is Alor Star Along the coast are wide alluvial plains where rice is grown S Kedah has rubber plantations Tin is mined in the hills of the interior. The majority of the people are Malays; there are many Chinese and small groups of aborigines (Sakai and Semang) Kedah is believed to have been the center of the early Hinduized kingdom of Langkasuka, known from Chinese reports of the 6th cent During the Sailendra domination of the Malay Peninsula (8th–13th cent), it was an important seat of the naval power of the Sailendras and the terminus of transpeninsular trade routes Overrun (13–16th cent) by the later conquerors of the peninsula, it nevertheless maintained substantial independence and a profitable trade with India and Indonesia After the fall of Malacca (1511), Kedah was brought into the Siamese orbit By ceding Penang (1786) and Province Wellesley (1800) to the British the sultan of Kedah embittered his relations with the Siamese court, which was not appeased by his subsequent conquest of Perak for Siam A bloody Siamese invasion (1821) drove him into exile till 1842, upon his return, Perlis was erected into a separate state In 1909 Siam transferred sovereignty over Kedah to Great Britain Before the establishment of the federation of Malaya (1948), Kedah was classed as one of the Unfederated Malay States

Kedar (kē'dur), powerful nomadic tribe, descendants of the second son of Ishmael, living NW of the Sinai peninsula, E of Palestine Gen 25 13, Ps 120 5, Cant 1 5, Isa 21 16, 42 11, 60 7, Jer 2 10, 49 28, Ezek 27 21

Keil, William (kīl), 1812-77, German religious leader He came to the United States in 1838 Preaching the doctrine of Christian love, he gathered a following (chiefly of German origin) with whom he established BETHEL, Mo (1844), and AURORA, Oregon (1855), on a communal basis Under his benevolent but autocratic rule, the communities prospered, but they were dissolved after his death See R J Hendricks, *Bethel and Aurora* (1933)

Keilah (kē'lu), town, SW Palestine David rescued it from the Philistines and lived there until the treachery of its inhabitants caused him to leave No identification is widely accepted Joshua 15 44, 1 Sam 23 1–13, Neh 3 17

Keitel, Wilhelm (vĭl'hĕlm kī'tul), 1882–1946, German field marshal A staunch supporter of Hitler, he became (1938) chief of the combined German general staff On May 8, 1945, Keitel signed the unconditional surrender of Germany in Berlin Subsequently he was arrested, convicted at the Nuremberg war-crimes trial, and hanged

Keith, Sir Arthur (kēth), 1866–, British anthropologist and anatomist, b Aberdeen, Scotland, educated at the Univ of Aberdeen, University College, London, and the Univ of Leipzig He became conservator of the museum and professor at the Royal College of Surgeons (1908), then professor at the Royal Institution, London (1917–23) In 1933 he was installed as master of the Buckston Brown Research Farm at Downe, Kent His writings include *Human Embryology and Morphology* (1902, 6th ed, 1949), *Ancient Types of Man* (1911), *The Antiquity of Man* (1915, 2d ed, 1925), *Religion of a Darwinist* (1925), and *A New Theory of Evolution* (1948) See his autobiography (1950)

Keith, George, 1638–1716, Scottish preacher Joining the Quakers c 1663, he was closely associated with Robert Barclay, George Fox, and other influential Friends Shortly after his arrival in America (1684) he became the leader of a separate faction known as Christian Quakers, for which he was denounced by William Penn in 1692 Keith returned to England where, in 1700, he was ordained a priest in the Anglican Church He was again in America (1702–4), preaching and baptizing His *Journal of Travels from New Hampshire to Caratuck* (1706) records his journeys in the colonies See biography by E W Kirby (1942)

Keith, George, 1693?–1778, Jacobite leader, 10th earl marischal of Scotland He took part in the Jacobite rising of 1715 and after its failure fled to the Continent A leader of the Spanish expedition to Scotland (1719) in behalf of the Old Pretender, he again escaped Much later he joined his brother James Francis Edward Keith in Prussia and rose high in the favor of Frederick the Great, who appointed him ambassador to Paris (1751), governor of Neuchâtel (1752), and ambassador to Spain (1759). Though pardoned by George II, he spent most of the remainder of his life in Prussia See biography by E E Cuthell (1915).

Keith, George Keith Elphinstone, Viscount. see ELPHINSTONE, GEORGE KEITH

Keith, James Francis Edward, 1696–1758, Scottish field marshal of Prussia, brother of George Keith, 10th earl marischal He participated in the Jacobite rising of 1715 and in the expedition of 1719 with his brother Escaping to the Continent, he entered the Spanish service In 1728 he left Spain for Russia, where he gained honor in both civil and military offices In 1747 he was made a field marshal by Frederick the Great, and he rendered great service to Prussia in the early part of the Seven Years War Keith was killed in the battle of Hochkirch See his fragmentary memoir (1843) and *Memoir of Marshal Keith* (1869, anonymous)

Keith, Minor Cooper, 1848–1929, American magnate, a founder of the United Fruit Company, b Brooklyn, N Y In the face of incredible hardships he built (1874–90) a railroad from the port of Limón, which he founded on the Caribbean, to San José, capital of Costa Rica Banana plantations which he started near Limón experimentally in 1873 prospered, and he established the first steamship service to bring these bananas to the United States He gained control of other plantations in Panama and Colombia and dominated the banana trade In 1899 he combined his plantation interests with those of the Boston Fruit Company in the West Indies to form the United Fruit Company He returned to railroad building, organized the International Railways of Central America, and completed an 800-mile railway system, but died before realizing his dream of a line from Guatemala to the Panama Canal His work profoundly altered the economic life of Central American countries

Keith, Sir William, 1680–1749, British colonial governor, b Scotland He was appointed surveyor general of customs for the southern colonies in North America by Queen Anne in 1714 and was governor of Pennsylvania and Delaware from 1714 to 1726, when he was dismissed because of disagreements with the proprietors and the council He died in England in debtors' prison He wrote *History of Virginia* (1738)

Keith (kēth), burgh (pop 4,424), Banffshire, Scotland, SW of Banff, in a farming region It was the birthplace of the elder James Gordon Bennett

Keithsburg, city (pop 1,130), W Ill, on the Mississippi SW of Rock Island, in a farm area, inc 1857

Kekulé von Stradonitz, Friedrich August (frē'drĭkh ou'gōost kä'kōolā fŭn shtra'dônĭts), 1829–1896, German organic chemist He was professor at Ghent (1858–65) and at Bonn from 1865 He made studies of various carbon compounds, especially BENZENE, for the molecular structure of which he developed the ring theory This theory is of fundamental importance to modern chemistry

Kelaiah (kĕlā'yu) or **Kelita** (kĕl'tu), Levite active in the return to Palestine Ezra 10 23, Neh 8 7, 10 10 The texts could refer to different persons

Kelantan (kulăn'tun, kŭlan"tän'), state (5,790 sq mi, pop 444,045), NE Malaya It is bounded by the China Sea on the north, by Thailand and Perak on the west, by Pahang on the south, and by Trengganu on the east The capital is Kota Bahru Rice is grown on the wide coastal plains, other products are rubber and coconuts Tin, iron, and manganese are mined in the hills of the interior The people are mostly Malays, the Chinese form a minority group Before the 16th cent, Kelantan was the vassal state of the powers that in turn dominated the Malay Peninsula After the fall of Malacca (1511), it passed under the sovereignty of Siam In 1909 it became a protectorate of Great Britain Before the establishment of the federation of Malaya (1948), Kelantan was classed as one of the Unfederated Malay States

Kelham, George William (kĕ'lŭm), American architect, 1871–1936, b Manchester, Mass After moving (1906) to San Francisco, he designed there the Federal Reserve Building, the Palace Hotel, the public library, and the Standard Oil and the Shell Oil buildings He headed (1912–15) the architecture department of the Panama-Pacific Exposition

Kelita (kēl'tu) see KELAIAH

Keller, Albert von (äl'bĕrt fŭn), 1844–1920, German painter of portraits, genre scenes, and historical works He was preeminently a colorist, but his paintings are notable also for their excellent craftsmanship He was a professor in the Munich Academy and president of the Munich Secessionists and received many honors

Keller, Gottfried (gôt'frēt), 1819–90, Swiss novelist His vital, realistic, and purposeful fiction gives him a very high place among 19th-century authors Chief among his works is the "educational" novel *Der grüne Heinrich* (1854–55), which he later revised A number of *Novellen* are included in *People of Seldwyla* (1856–74, Eng tr, 1929), one of these, sometimes considered one of the finest German *Novellen* is the basis of Delius's opera, *A Village Romeo and Juliet*

Keller, Helen Adams, 1880–, American author and lecturer, blind and deaf from the age of two, b Tuscumbia, Ala In 1887 she was put under the charge of Anne Sullivan (see MACY, ANNE SULLIVAN), who taught her to speak and who remained her teacher and companion until 1936 Miss Keller made rapid progress and was graduated from Radcliffe in 1904 She has lectured all over America and in Europe and Japan, raising funds for the training of the blind and promoting other social causes Her books include *The Story of My Life* (1903), *The World I Live In* (1908), and *Helen Keller's Journal, 1936–1937* (1938)

Keller, Henry G., 1870–, American painter, b Cleveland, studied at the Cleveland School of Design and in Munich Since 1902 he has taught in the Cleveland Art School His paintings, both oils and water colors, are in the leading museums of the country. Very popular in Cleveland, he was given (1944) a one-man retrospective show in the Cleveland Art Museum

Kellermann, François Christophe de (frăswa' krĕstôf' du kĕl'ĕrman'), 1735–1820, marshal of France, b Strasbourg After serving in the Seven Years War, he won renown in the FRENCH REVOLUTIONARY WARS when he and Dumouriez stopped the Prussians at Valmy (1792) In the Terror, he was repeatedly accused of treason but was not convicted. Napoleon made him a senator (1799) and duke of Valmy (1808), Louis XVIII raised him (1814) to the peerage

Kelley, Abby see FOSTER, ABBY KELLEY.

Kelley, Edgar Stillman, 1857-1944, American composer and critic, b Sparta, Wis, studied in Chicago and at the Stuttgart Conservatory After his return to the United States he played the organ in Oakland, Calif, and in San Francisco and served as music critic of the San Francisco *Examiner* He was acting professor of music (1901–2) at Yale, replacing Horatio Parker, and afterward taught in Berlin until 1910, when he became dean of the composition department of the Cincinnati Conservatory He wrote *Chopin the Composer* (1937). Among his works are an operetta, *Puritania* (Boston, 1892), an orchestral suite, *Aladdin*, based on Chinese music heard in San Francisco, two symphonies, *Gulliver—His Voyage to Lilliput* and *New England* (1913), incidental music to *Ben Hur* (1899), and an oratorio, *The Pilgrim's Progress* (Cincinnati, 1918)

Kelley, Florence, 1859–1932, American social worker and reformer, b Philadelphia, grad Cornell, 1882, and Northwestern Univ law school, 1894 She was a Hull House resident for nine years Active in many reforms, Mrs Kelley turned most of her energies to securing protective labor legislation, especially for women and children From 1899 she served for many years as director of the National Consumers' League, which strove for industrial reform through consumer activity Her writings include *Some Ethical Gains through Legislation* (1905) and *Modern Industry* (1914)

Kelley, Hall Jackson, 1790–1874, American propagandist who urged settlement of Oregon, b Northwood, N H, grad Middlebury College, 1813 A schoolmaster in Boston (1818–23) and later a railroad surveyor in Maine, he plunged into dreams of Oregon, founded (1829) a society to promote American settlement in the disputed Columbia river country, presented memorials to Congress, and wrote appeals to prospective colonists He secured the aid of Nathaniel J WYETH, but plans for a joint expedition were delayed and Wyeth went alone. Kelley in 1833 went to New Orleans, sailed to Veracruz, and crossed Mexico to California, where he met Ewing YOUNG The two arrived in the Oregon country in 1834 A sick and discouraged man, Kelley was sheltered at Fort Vancouver by the hostile Dr John MCLOUGHLIN until the spring of 1835, when he returned to Boston See biography by Fred W Powell (1917), Fred W Powell, ed, *Hall J Kelley on Oregon* (1932)

Kelley, Oliver Hudson, 1826–1913, American agriculturist, b Boston He was a founder of the National Grange of the Patrons of Husbandry, the central influence in the GRANGER MOVEMENT of the 1870s Kelley took up land on the Minnesota frontier in 1849 and farmed until, in 1864, he became connected with the U S Bureau of Agriculture, traveling in the West and South to report on agricultural conditions At this time he conceived the idea of the Grange as a social and fraternal organization of farmers, and in 1867 he and six others secured the charter and Kelley became secretary. After 1873 the leadership passed to others, and Kelley resigned as secretary in 1878 He wrote *Origin and Progress of the Order of the Patrons of Husbandry* (1875) See S J Buck, *The Granger Movement* (1913)

Kelley, William Darrah (dă'rŭ), 1814–90, U S Representative from Pennsylvania (1861–90), b Philadelphia He was admitted (1841) to the bar and served (1846–56) as judge of the court of common pleas for Philadelphia Originally a Democrat and a believer in free trade, he joined the Republican party when it was founded, because of its anti-slavery stand The depression of 1857 and knowledge of English laboring conditions converted him to protectionism He was elected to Congress in 1860 and was continuously reelected for the rest of his life, he became one of its best-known members, serving on the Committee on Ways and Means for

20 years. His sincerity and financial disinterestedness were never questioned, but his constant emphasis on protection as a cure-all and his frequent mention of Pennsylvania's iron industry led his colleagues to call him "Pig Iron" Kelley. A humanitarian in his sympathies, he was an advocate of currency inflation for the sake of labor and the farmer He was a fine orator, traveled widely, and wrote a number of books, including *Speeches, Addresses, and Letters on Industrial and Financial Questions* (1872), *Letters from Europe* (1879), and *The Old South and the New* (1888)

Kelleys Island, village (pop 564), on Kelleys Island, N Ohio, in Lake Erie off Sandusky Bay It is a grape-growing and resort center Inscription Rock has interesting pictographs of former Indian occupation First called Cunningham's Island (1803) for a trader, it was renamed after Irad and Datus Kelley acquired the island (1833)

Kellgren, Johan Henrik (yōō'hän hĕn'rĭk chĕl'grĕn), 1751–95, Swedish poet, librarian and secretary to Gustavus III He was an influential figure in the revival of Swedish letters and a critic of importance through the *Stockholm Post*, a periodical which he founded (1778) and later edited

Kellogg, Clara Louise, 1842–1916, American operatic soprano, b Sumterville, S C She made her debut in 1861 in New York and in 1863 sang Marguerite in the first New York performance of Gounod's *Faust* She toured the United States (1873–76) with her own company, producing opera in English In 1887 she left the stage. See Oscar Thompson, *The American Singer* (1937)

Kellogg, Edward, 1790–1858, American economist, b Norwalk, Conn He advocated a scheme of financial control whereby the government would lend money through legal-tender notes secured by real property and interconvertible with government bonds bearing a low rate of interest and corresponding to the estimated rate of accumulation of wealth in the United States His pamphlet *Currency the Evil and the Remedy* (1844), circulated with Horace Greeley's aid, was revised under the title *Labor and Other Capital* (1849) and issued often after Kellogg's death as *A New Monetary System*, the 1883 edition includes a biographical sketch by his daughter, Mary Kellogg Putnam Kellogg's views were adopted by many radical political parties in the West, from Greenbackers to Populists, and endorsed by the National Labor Union, the Knights of Labor, and by agrarian organizations

Kellogg, Elijah, 1813–1901, American clergyman and writer of juveniles, b Portland, Maine, grad Bowdoin, 1840, and Andover Theological Seminary, 1843 In his clerical duties he was often called upon to handle difficult students, and his knowledge of boys was apparent in his widely read juvenile stories His declamation, "Spartacus to the Gladiators," is the best known of his writings See biography by W B Mitchell (1903)

Kellogg, Frank Billings, 1856–1937, American statesman, b Potsdam, N Y At the age of nine he moved to Olmstead co , Minn , and there worked on his father's farm He read law, was admitted (1877) to the bar, and was elected attorney (1878) for Rochester, Minn , and then (1881) district attorney While becoming an outstanding corporation lawyer in St Paul, Minn , Kellogg gained stature in the Republican party Appointed (1904) special counsel to the U S Attorney General, Kellogg played an important role in antitrust prosecution, particularly in the dissolution of the General Paper and the Standard Oil companies Meanwhile, as special counsel to the Interstate Commerce Commission, he was active in the investigation of the railroads controlled by Edward H Harriman As U S Senator (1917–23) he was an advocate of preparedness After service (1924–25) as U S ambassador to Great Britain, he succeeded (1925) Charles E. Hughes as U S Secretary of State and bettered relations with Mexico while helping settle the Tacna-Arica dispute between Chile and Peru Largely for his successful promotion of the KELLOGG-BRIAND PACT, he was awarded the 1929 Nobel Peace Prize He resigned his cabinet post in 1929 and afterwards served (1930–35) as judge of the Permanent Court of International Justice. In 1937 he gave $500,000 to Carleton College in Minnesota for the establishment of a foundation for the study of international relations. See biography by David Bryn-Jones (1937)

Kellogg, Vernon Lyman, 1867–1937, American zoologist, b Emporia, Kansas, grad Univ of Kansas (B A , 1889) He was professor of entomology at Stanford Univ (1894–1920). He served as director in Brussels (1915–16) of the American Commission for Relief in Belgium and held other positions with the American Relief Administration in Europe. From 1919 to 1931 he was permanent secretary of the National Research Council. He made special studies in insect taxonomy and in economic entomology and was also known for his interpretations of science for the layman. His wife, Charlotte Hoffman Kellogg, was the only woman member of the Commission for Relief in Belgium and wrote several books.

Kellogg, city (pop. 4,235), N Idaho, in the Coeur d'Alene mining district between Coeur d'Alene and Wallace, inc as a city 1913 It grew around the Bunker Hill and Sullivan mines, discovered in 1885, now combined as one of the world's largest lead producers. Labor troubles in 1899 led to the blowing up of the Kellogg mill, an incident in the long-drawn Idaho labor war

Kellogg-Briand Pact (-brēā'), agreement, signed Aug 27, 1928, condemning "recourse to war for the solution of international controversies " It is more properly known as the Pact of Paris In June, 1927, Aristide BRIAND, foreign minister of France, proposed to the U S government a treaty outlawing war between the two countries Frank B KELLOGG, the U S Secretary of State, returned a proposal for a general pact against war, and after prolonged negotiations the Pact of Paris was signed by 15 nations—Australia, Belgium, Canada, Czechoslovakia, France, Germany, Great Britain, India, the Irish Free State, Italy, Japan, New Zealand, Poland, South Africa, and the United States The contracting parties agreed that settlement of all conflicts, no matter of what origin or nature, which might arise among them should be sought only by pacific means and that war was to be renounced as an instrument of national policy Although 62 nations ultimately ratified the pact and although only Argentina, Bolivia, El Salvador, Uruguay, and Yemen held aloof from the treaty, its effectiveness was vitiated by its failure to provide measures of enforcement. The Kellogg-Briand Pact was given unenthusiastic reception by many countries The U S Senate, ratifying the treaty with only one dissenting vote, still insisted that there must be no curtailment of America's right of self-defense and that the United States was not compelled to take actions against countries that broke the treaty The Kellogg-Briand Pact was invoked in 1929 with some success, when China and the USSR reached a tense moment over possession of the Chinese Eastern RR in Manchuria Ultimately, however, the pact proved to be meaningless, especially with the practice of undeclared wars in the 1930s (e g , the Japanese invasion of Manchuria in 1931, the Italian invasion of Ethiopia in 1935, and the German occupation of Austria in 1938)

Kells, town, Co Meath, Ireland, on the Blackwater and NW of Navan Noteworthy are the relic of an ancient monastery founded by St COLUMBA, the round tower, and several ancient crosses The **Book of Kells,** now one of the treasures of the Trinity College library in Dublin, is a beautifully illuminated manuscript of the Latin Gospels, with notes on local history, found in the ancient monastery and believed to have been written in the 8th cent At the opening of each Gospel and of each chapter is an illustration, and the borders and capitals are superbly decorated The manuscript is generally regarded as the finest example of Celtic illumination

Kelly, Florence Finch, 1858–1940, American journalist, b Girard, Ill She lived as a child in Kansas After serving in various capacities on the Boston *Globe* (1881–87) and the San Francisco *Examiner* (1887–1906), she moved to New York, where she was book reviewer (1906–36) on the New York *Times* After her retirement (1936), she wrote her autobiography, *Flowing Stream* (1939) She was one of the earliest women journalists

Kelly, George, 1887–, American dramatist, b Philadelphia The author earlier of vaudeville sketches and one-act plays, he was highly successful as a humorous satirist of American middle-class life in *The Torch-Bearers* (1922), *The Show-off* (1924), and *Craig's Wife* (1925), which won the 1926 Pulitzer Prize in drama Later plays include *Behold the Bridegroom* (1927), *Philip Goes Forth* (1931), and *The Deep Mrs Sykes* (1945)

Kelly, Howard Atwood, 1858–1943, American surgeon, b Camden, N J , M D Univ of Pennsylvania, 1882 A member of the first medical faculty at Johns Hopkins, he won fame as professor of gynecology and obstetrics (1889–1919) and as surgeon was noted for his innovations and technique in abdominal and pelvic surgery Besides works on gynecology he wrote *Cyclopedia of American Medical Biography* (1912) and *Dictionary of American Medical Biography* (with W L. Burrage, 1928).

Kelly, Hugh, 1739–77, British dramatist, b. Killarney In London he edited various journals and engaged in political pamphleteering Garrick produced Kelly's first sentimental comedy, *False Delicacy*, in 1768, it was a great success and was shortly afterward translated into German, Portuguese, and French. The best of his later dramas were *The School for Wives* (1773) and *The Romance of an Hour* (1774), a two-act afterpiece For biography, see preface to his collected works (1778).

Kelly, James Edward, 1855–1933, American sculptor After a period (1874–81) as a wood engraver for *Harper's*, *Scribner's*, and *St Nicholas*, he turned definitely to sculpture, his first work, *Sheridan's Ride*, being finished in 1878. He specialized in subjects in American history, executing, from life, bronses and busts of over 40 generals and naval officers and also many war memorials. Among the memorials are the 6th New York Cavalry monument and General Buford (Gettysburg, Pa.); *Battle of Harlem Heights* (Columbia Univ., New York); equestrian figures of General Sherman, Col. Theodore Roosevelt (San Juan Hill, Cuba), and Caesar Rodney (Wilmington, Del); and *Defenders' Monument* (New Haven, Conn) He also made a plaque of Edison (Ford Mus , Dearborn, Mich.) He was one of the founders of the Art Students League

Kelly, John, 1822–86, American politician, boss of Tammany Hall, b New York city He entered politics at an early age At first he opposed Tammany Hall, but later (1853) joined the organization and became city alderman. He served (1855–59) in Congress and was (1859–61, 1865–67) sheriff of New York After the exposure of William M TWEED, Kelly—now popularly known as "Honest John"—reorganized the Tammany machine By 1874 he held control of the organization and carried on continuous warfare with the faction of Samuel J TILDEN, who originally had cooperated with him in reorganizing Tammany. Kelly's refusal to back Tilden's candidate for governor, Lucius Robinson, helped bring about (1879) the election of Alonzo CORNELL While he was head of Tammany, Kelly was able to determine the course of New York city elections, and he himself was (1876–80) city comptroller Upon retirement (1882) he yielded his political control to one of his lieutenants, Richard CROKER See M R Werner, *Tammany Hall* (1928)

Kelly, William, 1811–88, American inventor, b Pittsburgh He became master of an iron furnace at Eddyville, Ky., and there accidently discovered that an air blast, when blowing directly on the uncovered molten metal, produced an even greater heat than before This was the basic principle of the BESSEMER PROCESS Sir Henry Bessemer received his U S patent in 1857, but Kelly convinced officials of his priority in discovery and received a priority right The first successful manufacture of iron under his process was done at the Wyandotte Iron Works near Detroit, Mich , in 1864 The first use of Bessemer's American patents was at Troy, N.Y , in 1865, by A L HOLLEY The conflict between the Bessemer and Kelly interests was finally settled by consolidation of the rival companies Bessemer steel was already becoming famous in England, and the name prevailed also in America, while Kelly's name in connection with the process was lost See J N Boucher, *William Kelly* (1924)

Kelly's Ford, on the Rappahannock river, Va , scene of a cavalry engagement of the Civil War, March 17, 1863 A Union force under W W Averell attacked Confederate troopers commanded by Fitzhugh Lee Both sides claimed a victory

Kelmscott Press, printing establishment in Hammersmith, London Here William MORRIS led the 19th-century revival of the art and craft of making books The first book made by the press was *The Story of the Glittering Plain* (1891), by William Morris The masterpiece of the press was *The Works of Geoffrey Chaucer* (1896), a folio with illustrations by Sir Edward Burne-Jones and decorative designs by William Morris After the death of William Morris, in 1896, the press completed some work that he had planned, but no new work was undertaken The final publication of the press was *A Note by William Morris on His Aims in Founding the Kelmscott Press* (1898) The three types designed by William Morris and used by the press were the Golden type, named for *The Golden Legend* (1892), the Troy type, named for *The Recuyell of the Historyes of Troye* (1892), and the Chaucer type, named for the *Chaucer* The Chaucer type is smaller than the Troy type, otherwise they are the same The type designs were influenced directly by printers of the 15th cent , the Golden type especially by Nicolas Jenson The high achievement of the press owes much to the art of Burne-Jones and to the inspiration and guidance of the master printer Emery Walker The work of the Kelmscott Press has not been imitated successfully, but it gave to the making of books new dignity and higher aims See also ASHENDENE PRESS, VALE PRESS, DOVES PRESS

Kelowna (kĭlō'nə), city (pop 5,118), S British Columbia, on the east side of Okanagan Lake SSW of Vernon, in a fruitgrowing region.

kelp, name for various species of brown algae, or seaweeds, abundant inhabitants of the sea along the Atlantic and Pacific coasts Some, e g , *Macrocystis*, have fronds which often reach a length of 200 ft ; others are small. The kelps and other members of the brown algae serve as a source of salts of iodine and potassium. When the seaweed is burned, the soluble iodine and potassium compounds are removed from the ashes (also called kelp) by washing. Kelp is sometimes used as fertilizer, being spread on the ground and allowed to decay. Certain medicinal products make available the high mineral and vitamin content of kelp.

Kelsey, Henry, c 1670–c 1730, fur trader and explorer in Canada. He entered the service of the Hudson's Bay Company in 1684. He was sent inland to secure Indian trade—probably in 1691. His journey is disputed, some saying he went southwest, but evidence points to his being west of Churchill in the region of Reindeer Lake. He was present when York Factory was surrendered to Iberville in 1697 and sometime after 1713 be-

came its governor In 1719 he commanded an expedition to explore the northwest coast of Hudson Bay See A. G Doughty and Chester Martin, eds , *The Kelsey Papers* (1929).

Kelso, burgh (pop. 3,855), Roxburghshire, Scotland, SE of Edinburgh and on the Tweed where the Teviot enters An obelisk commemorates the 18th-century poet James Thomson, born in the manse at near-by Ednam Sir Walter Scott attended school in Kelso The Ballantynes founded (late 18th cent) a printing press here St James Fair is held annually in August Kelso has ruins of an abbey established here by David I c 1128 (it was earlier at Selkirk) and partly destroyed by the English in 1545.

Kelso, lumber city (pop 6,749), co seat of Cowlitz co., SW Wash., on the Cowlitz river near the Columbia, contiguous with Longview, settled 1847, inc 1889 It is in a rich farm area and has fish and dairy industries

Kelt· see CELT

Keltie, Sir John Scott, 1840–1927, Scottish geographer He was inspector of geographical education for the Royal Geographic Society, librarian, and secretary of the society In 1880 he became editor of *The Statesman's Year-Book,* and in 1925 joint editor of the *Geographical Journal* His works include *A History of the Scottish Highlands and Clans* (1874), *Report on Geographic Education* (1886), *The Partition of Africa* (1894), *Applied Geography* (new ed , 1908), and *History of Geography* (with O J R Howarth, 1914)

Kelvin, William Thomson, 1st **Baron,** 1824–1907 British mathematician and physicist, b Belfast. He was professor of natural philosophy at the Univ, of Glasgow (1846–99) He is known especially for his work on heat and electricity The importance of the discoveries and improvements which he made in connection with the transmission of messages by submarine cables led to his establishment as a leading authority in this field He invented the reflecting galvanometer and the siphon recorder, an instrument by which telegraphic messages are recorded in ink fed from a siphon In thermodynamics his work of coordinating the theories of heat held by various leading scientists of his time established firmly the law of the conservation of energy as proposed by Joule Kelvin introduced the Kelvin scale or absolute scale of TEMPERATURE See biographies by S P Thompson (1910) and A G King (1926)

Kem (kĕm), Finnish *Kemi* (kĕ'mē), city (1939 pop over 10,000), Karelo-Finnish SSR, on the White Sea at the mouth of the Kem river A commercial and industrial center, it has sawmills, metalworks, and fisheries

Kem, Finnish *Kemijoki* (kĕ'mēyō"kē), river, 240 mi long, Karelo-Finnish SSR, rising SE of Kuusamo, Finland, and flowing E into the White Sea It is used for logging

Kemal Pasha, Mustafa· see ATATURK, KEMAL

Kemble, Adelaide, and **Charles Kemble** see KEMBLE, ROGER

Kemble, Edward Windsor, 1861–1933, American illustrator and caricaturist, b Sacramento, Calif He was known especially for his delineations of Negro character He contributed illustrations and cartoons to *Century, Life, Collier's Weekly,* and *Harper's Weekly* His books of sketches include *Comicalities* (1898), *Coontown's 400* (1900), and *A Pickaninny Calendar* (1900) He also illustrated *The Knickerbocker History of New York, Uncle Tom's Cabin,* and Mark Twain's *Huckleberry Finn* and *Pudd'nhead Wilson*

Kemble, Roger, 1721–1802, English actor and manager The leader of a traveling company, he married in 1753 Sarah Wood, an actress, who bore him 12 children They thus founded one of the most distinguished families of actors ever to grace the English stage Five of the children were celebrated See Percy Fitzgerald, *The Kembles* (1871), Stephen Kemble, *The Kemble Papers* (New York Historical Society Collections, 1885) The best known of the children was Sarah Kemble (see SIDDONS, SARAH KEMBLE) The eldest son, **John Philip Kemble,** 1757–1823, was educated for the Roman Catholic priesthood, but turned to the stage and in 1776 made his debut at Wolverhampton in Nathaniel Lee's *Theodosius* At Drury Lane from 1783 to 1803, he became manager in 1788 and gained fame in *Hamlet, King John, Othello,* and *King Lear,* playing opposite Mrs Siddons He managed (1803–8) Covent Garden and, when it was destroyed by fire, built a new one, opening it in 1809 Here he increased prices, setting off the Old Prices Riots which forced a compromise agreement His style of acting was declamatory, and he preferred such heroic roles as Brutus and Coriolanus See Herschel Baker, *John Philip Kemble* (1942) His brother, **George Stephen Kemble,** 1758–1822, played Othello to the Desdemona of his wife, Elisabeth Satchell Kemble, at Covent Garden in 1784 He appeared in secondary roles at the Haymarket from 1787 to 1791 and during his management (1792–1800) of the Edinburgh theater introduced John Philip Kemble and Mrs Siddons to the public He excelled as Falstaff and as Sir Christopher Curry in George Colman the Younger's *Inkle and Yarico.* His youngest brother, **Charles Kemble,** 1775–1854, had great range and talent in comedy He first appeared as Malcolm in *Macbeth* in 1794, but his best roles were Falstaff, Benedick, Mercutio, and Sir Charles Surface in Sheridan's *School for Scandal* He assumed (1822) the management of Covent Garden, but he had little financial success until the appearance of his eldest daughter, Fanny, with whom he successfully toured (1832–34) the United States Charles Kemble left the stage in 1840 His sister, **Elizabeth Kemble,** 1761–1836, was well received as Portia at Drury Lane in 1783 In 1785 she married Charles E Whitlock, an actor, and in 1792 they visited the United States, playing before President Washington in Philadelphia She retired from the stage in 1807 **Fanny Kemble** (Frances Anne Kemble), 1809–93, elder daughter of Charles Kemble, made her debut as Juliet in 1829 under her father's management at Covent Garden Her success was great and immediate, and her stature as an actress grew in such parts as Lady Macbeth, Portia, Beatrice, and Julia in *The Hunchback,* written for her by Sheridan Knowles She received extravagant praise on her American tour in 1832 In 1834 she married Pierce Butler of Philadelphia, went with him to an estate in Georgia, but divorced him in 1848 During the Civil War she lived in England, writing against slavery for the London *Times* Her *Journal of a Residence on a Georgia Plantation in 1838–1839* (1863) and *Records of a Later Life* (1882) are much-used sources See biographies by L. S Driver (1933) and Margaret Armstrong (1938) **Adelaide Kemble,** 1814–79, second daughter of Charles Kemble, was an opera singer She studied in Italy and appeared with success in *Norma* and other Italian operatic roles in Germany and France (1837–38) and at Covent Garden (1841–42). In 1843 she married Edward Sartoris She wrote *A Week in a French Country House* (1867)

Kemerovo (kĕ'mûrō"vŏ,–rō"vō", Rus kyĕmyĭrô'vŭ), city (1926 pop 21,726, 1939 pop 132,978), capital of Kemerovo oblast, RSFSR, in S central Siberia, on the Tom river and a branch of the Trans-Siberian RR It is a large coal-mining center of the Kuznetsk Basin and has important chemical industries.

Kemeys, Edward, 1843–1907, American sculptor, b Savannah, Ga A civil engineer, self-trained in sculpture, he modeled American wild animals with understanding and fidelity Among his works are *Still Hunt,* Central Park, New York, *Wolves,* Fairmount Park, Philadelphia, bronze lions at the entrance to the Art Institute of Chicago, and a number of small bronzes

Kemi (kĕ'mē), city (pop 19,877), NW Finland, on the Gulf of Bothnia The city, incorporated in 1869, has grown around the sawmills and cellulose mills at the mouth of the Kemi river (Finnish *Kemijoki*) The river, 345 mi long, rises in the Lapland mts near the Russian border, traverses Lake Kemi (c 60 sq mi), and flows SSW to the Gulf of Bothnia Near its mouth it is rich in salmon, and its course is used for logging It has the greatest power resources of the rivers of Finland

Kemmerer, Edwin Walter (kĕ'mûrur), 1875–1945, American economist, b Scranton, Pa , Ph D Cornell, 1903 In 1903 he was made financial adviser to the U S Philippine Commission, and during his long term as professor (1912–34) at Princeton his services as "money doctor" were called upon by many governments, including those of Egypt, Mexico, Union of South Africa Poland, China, Turkey, and several of the South American countries In 1924 he aided the Dawes reparations commission in the reorganization of German finances A staunch defender of the international gold standard, Kemmerer was an opponent of New Deal monetary policies His books include *Modern Currency Reforms* (1916) and *The A B C of the Federal Reserve System* (1918, 11th ed , 1938)

Kemmerer, town (pop 2,026, alt c 6,900 ft), co seat of Lincoln co , SW Wyo , on Hams Fork near the Utah line, in a coal area, settled 1897, inc 1899 It is a trade center for miners, stockmen, and farmers Fossil fish beds are near by

Kemnitz, Martin· see CHEMNITZ, MARTIN

Kemp, James Furman, 1859–1926, American geologist, b New York city, grad Amherst, 1881 He studied abroad, taught at Cornell, and from 1892 was professor and head of the department of geology at Columbia Univ He also served on the U S Geological Survey and as consulting geologist on many projects, including the New York city water system He wrote *Ore Deposits of the United States and Canada* (1893, 1900) and *Handbook of Rocks* (1896, 6th ed , 1940)

Kemp, William, fl 1579–1600, English comic actor and dancer A minor player in Shakspere's company, he was the successor to Richard Tarlton's roles and reputation He is remembered for his morris dance from London to Norwich in 1599, recorded in his *Kempe Nine Daies Wonder* (1600)

Kemp, town (pop 1,000), N Texas, SE of Dallas, on the rich blackland prairie; settled 1880, inc 1922

Kempe, Margery (kĕmp), d 1438 or afterward, English religious writer, b King's Lynn. She was the wife of a prominent citizen. Her autobiography, *The Book of Margery Kempe* (complete ed , 1940, ed with modern spelling 1944), was known only in small excerpts until 1934, when the whole was discovered She was a religious enthusiast whose loud weeping in church and reproval of her neighbors for swearing kept her in public disfavor, but overt and private accusations of various irregularities failed to shake her convictions The book shows a candid, stubborn simplicity, rooted in devout, orthodox Catholicism Margery traveled abroad as a pilgrim, and her work has rich details of the everyday life of her time The narrative is occasionally interrupted with visions, prayers and meditations, many of them of great beauty The book seems to be the earliest autobiography in English. See MYSTICISM See Katharine Cholmeley, *Margery Kempe* (1947)

Kempen (kĕm'pun), town (pop 9,827), in the former Rhine Prov of Prussia, NW Germany, near Düsseldorf St Thomas à Kempis was born here

Kempener, Pieter de (pē'tur du kĕm'punur), c 1503–1580, Flemish painter, b Brussels He studied and painted for 10 years in Italy and about 1537 settled in Seville, Spain, where he was known as Pedro Campaña For churches in Seville he painted religious pictures remarkable for their beauty of design, luminous color, and naturalistic characterization On his return to Brussels (1563) he became chief engineer to the duque de Alba and director of the tapestry works The Seville cathedral contains his masterpiece, *The Descent from the Cross,* and also his *Purification* and *Resurrection* Other splendid examples are in the museums of London

Kempenfelt, Richard, 1718–82, British admiral With his crew of 800, he lost his life when his flagship, the *Royal George,* capsized at Spithead The catastrophe was immortalized in William Cowper's poem, "The Loss of the *Royal George* "

Kemper, James Lawson, 1823–95, Confederate general, b Madison co , Va , grad Washington College (now Washington and Lee Univ) 1842 He was badly wounded while leading his brigade in Pickett's charge at Gettysburg (1863) and was subsequently captured As governor of Virginia (1874–78), Kemper was distinguished for his independence and integrity He opposed scaling down the state debt, a program favored by the Readjusters, led by William Mahone, who had been instrumental in securing Kemper's election

Kemper, Reuben, d 1827, American adventurer, With his brothers Nathan and Samuel he settled c 1800 in Feliciana, just above Baton Rouge in West Florida, then Spanish territory They became embroiled with Spanish authorities over a land claim and were forced to cross the border into Mississippi Territory There the brothers organized a small force and declared West Florida independent of Spain An attempt to take Baton Rouge in 1804 failed The three were kidnaped in 1805 but were rescued by a U S force at Pointe Coupée as they were being taken down the Mississippi to Baton Rouge Other forays were climaxed in 1810 by Reuben's attempt to occupy Mobile He failed and was arrested and detained by U S authorities while the Spanish dispersed the rest of his band See I J Cox *The West Florida Controversy* (1918)

Kempis, Thomas à see THOMAS À KEMPIS

Kempten (kĕmp'tun) city (pop 37,080), Swabia, W Bavaria, on the Iller Of Celtic origin, it was a flourishing Roman colony (Cambodunum), and became (1525) a free imperial city Kempten was sacked (1632) by the Swedes in the Thirty Years War Kempten has several late Gothic, Renaissance, and baroque churches and buildings It today has dairy, textile, and other industries

Kenova (kĭnō'vŭ), town (pop 3,902), W W Va, at the mouth of the Big Sandy River W of Huntington, inc 1894 An important transit point, it produces petroleum products, cement, and chemicals

Kenrick, Francis Patrick, 1796–1863, American Roman Catholic churchman, b Dublin, Ireland, educated in Rome In 1821 he was ordained priest and came to America to teach in the college at Bardstown, Ky In 1829 he was made bishop coadjutor of Philadelphia, where he settled serious disputes within the Church His charitable work in the cholera epidemic in 1832 and his courageous dignity in the anti-Catholic riots of 1844 won him considerable admiration He was made archbishop of Baltimore and apostolic delegate in 1851 He wrote many works on the Bible His brother,

Peter Richard Kenrick, 1806–96, was also an American Roman Catholic churchman and was also born in Dublin He was educated at Maynooth Called by his brother in 1833 to be pastor of the Philadelphia cathedral and vicar general of the diocese, he was sent in 1841 at the request of the bishop of St Louis to be coadjutor there In 1843 he became bishop and in 1847 archbishop He labored successfully to care for the great throngs of Catholic immigrants pouring into the Middle West At the Vatican Council he at first opposed the enunciation of papal infallibility as a dogma See J J O'Shea, *The Two Kenricks* (1904)

Kensett, John Frederick, 1818–72, American landscape painter, of the Hudson River school, b Cheshire, Conn He first began to paint while working as an engraver In 1840 he went to England to study He spent some time in Paris and in Dusseldorf before going (1845) to Rome, where he became a popular member of the American art colony and perfected his technique After a few years Kensett returned to the United States and in 1849 became a member of the National Academy of Design His delicately colored, poetic landscapes brought him fame and wealth The Metropolitan Museum has 38 paintings, some unfinished, painted in Kensett's last summer, when he lived on an island in the Hudson river Other works are *Lake George* and *River Scene* (Metropolitan Mus), *October Afternoon, Sunset on the Coast,* and others (Corcoran Gall), *View from West Point* and *White Mountain Scenery* (N Y Public Library)

Kensico Reservoir (kĕn'sĭkō), SE N Y, near White Plains, formed by Kensico Dam (307 ft high) in the Bronx river, completed 1916 It is part of New York city's water supply

Kensington, metropolitan borough (1931 pop 180,677, 1948 estimated pop 168,800) of W London, England It is largely a residential district Kensington Gardens, originally the grounds of Kensington Palace, adjoin Hyde Park The body of water called the Serpentine in Hyde Park becomes Long Water in Kensington Gardens The Orangery and Queen Anne's Alcove were designed by Wren The Round Pond, the Dutch Garden, Flower Walk, and Broad Walk are well known Kensington Palace, a brick structure, largely from designs of Wren and William Kent (17th and 18th cent), is on the west side of the gardens It was for some time a royal residence and has memories of William III, Queen Anne, George II, Queen Victoria, and other sovereigns It was damaged in air raids in 1940 Holland House was the residence of the Fox family and, for a time, of William Penn, Addison died here South Kensington has become a center of colleges and museums, it is the site of the natural history section of the British Museum, the Victoria and Albert Museum, the Imperial Institute, the Science Museum, the Royal College of Art, the Royal College of Science, and the Albert Hall

Kensington, village (pop 337), W Minn, SW of Alexandria The KENSINGTON RUNE STONE was found in 1898 on a farm near here.

Kensington Rune Stone, much-disputed stone found on a farm near Kensington, Minn, in 1898 Inscribed on the stone in RUNES is an account of a party of Norse explorers, 14 days' journey from the sea, who camped near by in 1362 and lost some of their men, presumably to Indians Historical and philological disputes have been waged over the authenticity of the stone, with no definite conclusion having been reached Many scholars still denounce it as a hoax of modern origin, though others accept it with the corroborative archaeological evidence See VINLAND See H R Holand, *The Kensington Stone* (1932) and *America, 1355–1364* (1946), M M Quaife, "The Myth of the Kensington Rune Stone," *New England Quarterly,* Vol VII (1934), L M Larson, "The Kensington Rune Stone," *Minnesota History,* Vol XVII (1936)

Kent, Edward Augustus, duke of, 1767–1820, fourth son of George III of England and father of Queen Victoria Most of his mature life was spent in military service, at Gibraltar, in Canada, and in the West Indies

Kent, George Edward Alexander Edmund, duke of, 1902–42, brother of King George VI of England He traveled extensively as "salesman of the empire" A member of the Royal Air Force after 1940, he was killed on active service in a plane crash in Scotland in 1942 Three children were born of his marriage (1934) to Princess Marina of Greece—Prince Edward (b 1935), Princess Alexandra (b 1936), and Prince Michael (b 1942)

Kent, James, 1763–1847, American jurist, b near Brewster, N Y, grad Yale, 1781 He was admitted to the bar in 1785 and began practice in Poughkeepsie Active in the Federalist party, he served several terms in the New York legislature In 1793 Kent moved to New York city, where his reputation for learning established him as first professor of law at Columbia College His lectures (1794–98) were not received too well, and he welcomed the appointment in 1798 as a judge of the state supreme court He was made chief judge in 1804, and from 1814 until his statutory retirement in 1823 he presided over the state court of chancery Kent's written opinions as chancellor were instrumental in reviving equity, which had largely lapsed in the United States after the American Revolution Many doctrines he fashioned himself, combining English chancery precedents with the principles of Roman law After his retirement he again (1824–26) was professor of law at Columbia, but found the delivery of lectures tedious and soon resigned He vastly expanded the material of his courses to prepare his *Commentaries on the American Law* (4 vols, 1826–30) This work systematically treats international law, American constitutional law, the sources of state law, and the law of personal rights and of property It was enthusiastically received by the legal profession and in Kent's lifetime went through six editions In influence it is comparable to the work of William Blackstone in England and of Joseph Story in the United States See biographies by John Duer (1848) and W J Curtis (1900), study by J T Horton (1939)

Kent, Rockwell, 1882–, American painter, wood engraver, lithographer, and writer, b Tarrytown, N Y, studied at the Columbia Univ School of Architecture and at William Chase's school, New York city He has lived in Labrador, Alaska, Greenland, and Tierra del Fuego and has painted vigorous landscapes in all these places Easily roused by injustice, he fought the political machine of his own Essex co, N Y, and for Puerto Rican independence and other causes Among his paintings are *Winter* (Metropolitan Mus), *Mother and Child* and *Down to the Sea* (Brooklyn Mus), and *Deer Season* and *Toilers of the Sea* (Art Inst, Chicago) He is the author of *Wilderness* (1920), on his trip to Alaska, *Voyaging Southward from the Strait of Magellan* (1920), on Tierra del Fuego, *Salamina* (1935), a story of Greenland, and the autobiographical *This Is My Own* (1940)

Kent, William, 1684–1748, English landscape gardener, architect, and painter Mediocre as a painter, he is important for his influence on landscape gardening, which he helped to divert from the prevailing artificial style to one based more closely on nature His outstanding work was the park of Claremont in Esher, England He executed ceiling decorations for Kensington Palace and some country houses and was the fashionable architect of the day His design of the Horse Guards building, London, notable for its fine mass composition, is one of the best 18th-century Palladian works Other London designs were the treasury buildings and Devonshire House He also created designs for interiors, mantelpieces, furniture, and accessories and is still highly esteemed

Kent, maritime county (1,525 sq mi, 1931 pop 1,219,273, 1948 estimated pop 1,504,400), SE England, between the Thames estuary and the Strait of Dover The county town is Maidstone The Isle of Sheppey is separated from the north coast by the narrow Swale The chalky North Downs cross the county from east to west, and to the south lie the fertile Weald and the reclaimed Romney Marsh. The Medway, the Stour, and the Darent are the chief rivers. The region is largely agricultural and pastoral. Crops include fruit, grain, and especially hops Sheep and cattle grazing, fishing, and dairying are important The county is becoming increasingly important industrially because of the encroachment of the London urban area into the western portion Paper, pottery, tile and brick, cement, beer, malt, and iron goods are manufactured, and there is shipbuilding Kent has important coal deposits Because of its strategic location on the path to the Continent through Dover, Kent has been important throughout English history Roman roads crossed the county In the Middle Ages many religious houses were established in the old kingdom of Kent, and Canterbury became the goal of numerous pilgrims such as Chaucer described in the *Canterbury Tales* The region was intimately associated with the rebellions of Wat Tyler, Jack Cade, and Sir Thomas Wyatt In the First World War, and more especially in the Second World War, the coast of Kent was heavily fortified against possible invasion from the Continent See *Victoria History of Kent* (3 vols, 1926–36), Arthur Mee, *Kent* (1937)

Kent. 1 Resort town (pop 1,245), W Conn, crossed by the Housatonic, in hills at the N Y state line, settled 1738, inc 1739 The noted Kent School for boys (preparatory, Episcopal), founded in 1906 by Father Frederick H Sill, is here **2** Industrial city (pop 8,581), NE Ohio, NE of Akron, settled as Franklin Mills, combined with Carthage as Kent 1863, inc as a city 1920 Busses and hardware are made here It is the seat of Kent State Univ (coeducational, 1910) **3** City (pop 2,586), W Wash, near Puget Sound S of Seattle, founded 1860, inc 1889 Canning is done here, and there is an annual lettuce festival

Kent, kingdom of, one of the states of the Anglo-Saxon heptarchy in England It was settled in the mid-5th cent by aggressive warbands of a people called Jutes (see ANGLO-SAXONS) They soon overcame the British inhabitants and established a kingdom which included the present county of Kent and the land up the south bank of the Thames almost to London Historians still dispute the authenticity of the tradition that Hengist and Horsa landed in 449 to defend the Britons against the Picts and that Hengist and his son Aesc subsequently turned against their employers to start the Germanic invasion ÆTHELBERT of Kent established his hegemony over England S of the Humber, received St Augustine of Canterbury's first Roman Catholic mission to England in 597, and became Christian himself During the following century Kent was periodically subjugated and divided by raids from Wessex and Mercia and finally became a Mercian province under OFFA A revolt in 796 was put down Conquered by an army of Egbert of Wessex in 825, Kent was forced to acknowledge the overlordship of Wessex and became part of that kingdom Although it suffered heavily from Danish raids, it remained one of the most advanced areas in pre-Conquest England because of the archbishopric of Canterbury and because of its steady intercourse with the Continent The metalwork and jewelry of Kent were distinctive and remarkably beautiful

Kent, Maid of see BARTON, ELIZABETH

Kentland, town (pop 1,608), co seat of Newton co, NW Ind, near the Ill boundary, settled 1860 The town has a cheese factory Kentland is the birthplace of George Ade

Kenton, Simon, 1755–1836, American frontiersman, b probably Fauquier co, Va In 1771, believing he had killed an adversary in a fist fight, he fled westward and assumed the name of Samuel Butler He joined George Yeager and John Strader in a hunting expedition down the Ohio river Unable to find "the cane-lands of Kaintuckee" which they sought, they hunted and trapped along the Ohio until they were attacked and driven off by Indians in 1773 In 1774 Kenton served as a spy in Lord Dunmore's War With Thomas Williams, in the spring of 1775, he made a camp on Limestone Creek, but, becoming acquainted with Daniel Boone, he joined the Boone settlement at Boonesboro Kenton, while serving as a scout, took part in the defense against frequent Indian attacks on the settlement, in one of which he saved Boone's life He joined George Rogers Clark in 1778 on his expedition to Kaskaskia and Vincennes, helped Boone in the raid on Chillicothe, and was later captured by the Indians and sentenced to death Successively reprieved and condemned, he was taken to Detroit and held by the British until he escaped in 1779 Again under General Clark in 1780, he defeated the Indians at Piqua, and in 1782 he joined the Kentuckians in an attack on the Indian village on the Great Miami Learning that his boyhood antagonist in Virginia was still living, he resumed his original name, visited his old home, and established his family near his old camp on the Limestone (at the present town of Maysville) He continued to participate in Indian activities and in 1793 served as a major under Gen Anthony Wayne Settling in Ohio in 1799, he was elected a brigadier general of militia in 1804 During the War of 1812 he served at the battle of the Thames with Kentucky volunteers Through ignorance of the law he lost most of his lands and died in poverty See biography by Edna Kenton (1930)

Kenton, city (pop 7,593), co seat of Hardin co, W central Ohio, NW of Marion, on the Scioto river,

platted 1833 Iron toys and novelties and machine tools are manufactured. Limestone quarries are here

Kent's Cavern or **Kent's Hole**, limestone cave, Devonshire, England, near Torquay Its exploration, begun c 1825, was intensively carried on from 1865 to 1880 The floor is of several strata, with remains indicating the prehistoric existence here of man and animals

Kentucky (kŭntŭ'kē, kĕn-), state (40,395 sq mi; 1940 pop, 2,845,627, 1949 estimated pop 2,893,000), S central United States, admitted 1792 as the 15th state (a slaveholding state) FRANKFORT is the capital, LOUISVILLE the largest city. Kentucky, which styles itself a COMMONWEALTH, is one of the border states between North and South The Ohio river the northern boundary separating it from Ohio, Indiana, and Illinois, runs generally SW below COVINGTON (across the river from Cincinnati, Ohio), and the north-south breadth of the state (often called shield shaped) grows smaller until in the west there is only a small area that is separated from Missouri by the Mississippi after the entrance of the Ohio Tennessee borders it on the south, and in the east the border with Virginia is in the mountains, while the Big Sandy River makes most of the boundary with West Virginia Big Black Mt (4,150 ft), the highest point, is in the Cumberland Plateau, which is notable for its forests of giant hardwoods and scented pine, for its springtime blooms of laurel, magnolia rhododendron, and dogwood, and for the petroleum recently developed there Many rapid creeks feed the Kentucky, the Cumberland, and the Licking rivers, which, with the Tennessee and after the Ohio, are the chief rivers of the state To the west the plateau breaks in a series of escarpments, with plateau country interrupted by many single small peaks called knobs Framed within this is the bluegrass country, the heart of Kentucky West of it is an area where rocky hillsides stand out above the open fields and among the undulating hills in a region sometimes called Pennyroyal (or Pennyrile, from its local pronunciation) because of the abundance of mint Here underground streams have washed their way through limestone to form huge subterranean caverns (see MAMMOTH CAVE NATIONAL PARK) Farther west the terrain is generally level in the area of the western mine fields and the Purchase, or Jackson Purchase (so called because Andrew Jackson bought it in 1818 from the Chickasaw Indians), an isolated region along the Mississippi, largely flood plains dotted with cypress swamps and bayous Over the whole state an equable climate prevails, except for occasional extremes of winter temperatures in the mountains, and there is an abundant rainfall. Although industry surpasses agriculture in value of its products, the population is predominantly rural, and most Kentuckians are employed in agricultural work Corn and tobacco are the leading crops, and winter wheat, oats, barley, rye, hay soybeans, Irish potatoes, and sweet potatoes are also grown in large quantities The tendency to move away from concentration in corn and tobacco is reflected in the increase of dairying and poultry raising and larger cultivation of fruits and vegetables The bluegrass region, specialist in luxuries, admits no peer in the distilling of whiskies (especially bourbon), the breeding of thoroughbred race horses, and the production of burley tobacco Its countryside is dotted with well-kept stud and training farms, and every year thousands of people flock to Churchill Downs—while the nation listens by radio—for the running of the Kentucky Derby Farm products supply much of the raw materials for Kentucky's industries—livestock for meat packing and grains for flour and processing Corn and rye are the basic ingredients for the production of distilled liquors, in which Kentucky frequently surpasses the combined output of all other states Large distilleries are located at Louisville and LEXINGTON, and many small towns are noted for their distinctive brands of whisky Louisville is also an important tobacco center, as is Covington, and Kentucky ranks third among the states in the production of cigarettes and processed tobacco Industrial power is provided by large native fuel resources Wolf Creek Dam on the Cumberland river and Kentucky Dam on the Tennessee river have increased hydroelectric power and also aid in flood control. The eastern and western coal fields supply huge quantities of bituminous coal and lesser amounts of natural gas and oil Other valuable mineral deposits include feldspar, rock asphalt, and stone. This land of riches was part of the inaccessible country beyond the mountains when the eastern seaboard was being colonized in the 1600s After France claimed all regions drained by the Mississippi and its tributaries, on the basis of the travels of Marquette, Jolliet, and La Salle, British interest in the area quickened. The first expedition of any moment, sponsored by the Loyal Land Company under the leadership of Dr. Thomas Walker, explored the Big Sandy region in 1750 and was soon followed by such hunters and scouts as Cristopher GIST and John Finley. Further exploration was interrupted by the French and Indian Wars and Pontiac's Conspiracy, but with the British victorious in both, settlers soon began to enter Kentucky in defiance of the royal proclamation of 1763 which forbade white settlement S of Canada and W of the Alleghenies A surveying party under James HARROD established the first permanent settlement at HARRODSBURG in 1774, and the next year Daniel BOONE, who had been intrigued by Finley's descriptions, built, as agent for Richard HENDERSON and the TRANSYLVANIA COMPANY, the WILDERNESS ROAD and founded BOONESBORO Title to this land was challenged by Virginia, whose legislature, prompted by George Rogers CLARK of Harrodsburg, voided (1778) the Transylvania Company's claims, although actual settlers were confirmed in their grants Meanwhile, Virginia had created (1776) Kentucky co, and new settlers, largely of British origin, pushed through CUMBERLAND GAP and over the Wilderness Road or down the Ohio river These early pioneers of Kentucky and Tennessee, the "dark and bloody ground" of internecine Indian warfare, were constantly menaced on their self-sufficient farms by Indian raids, especially encouraged by the British in the American Revolution The population nevertheless increased, and many Kentuckians, feeling that Virginia had failed to give them adequate protection, moved toward statehood in a series of conventions held at DANVILLE (1784-90) Others, observing the weaknesses of the U S. government, considered forming an independent nation. Since trade down the Mississippi and out of New Orleans was indispensable to Kentucky's economic development, an alliance with Spain was contemplated, and Gen James WILKINSON worked towards that end However, in 1792 a constitution was finally framed and accepted, and on June 1 Kentucky was admitted to the Union, the first state W of the Appalachians Isaac SHELBY was elected the first governor, and Frankfort was chosen capital Indian troubles in Kentucky were virtually ended with Gen Anthony Wayne's victory at the battle of Fallen Timbers in Ohio in 1794, and in 1795 Pinckney's Treaty with Spain granted Americans the right to navigate the Mississippi, which was soon completely assured by the Louisiana Purchase Nevertheless the national government was still suspect, and the policies of the Federalist party were held by many to be destructive of democracy The passing of the ALIEN AND SEDITION ACTS (1798) promptly provoked a sharp protest in the Kentucky Resolutions (see KENTUCKY AND VIRGINIA RESOLUTIONS) Politics continued to be exciting as Kentucky and the West were seized with the lure of further conquest The dreams of Aaron Burr, visualizing an empire in the Old Southwest, collapsed, but they were succeeded by plans for the annexation of Canada. When the War of 1812 failed to achieve that objective, Kentucky turned to problems of internal improvements, especially canals and roads The state grew fast as trade and shipping centers developed and river traffic down the Ohio and Mississippi increased, With this expansion there was need for a better currency system Accordingly, the state in 1818 chartered 46 banks which were allowed to issue their own currency These soon afterwards collapsed with disastrous results, and the legislature was appealed to for relief When measures passed for that purpose were declared unconstitutional, Kentucky became divided into pro-relief and anti-relief factions Sterling Jacksonian Democrats such as Amos KENDALL and Francis P BLAIR (1791-1876) attempted to destroy the old court and erect a new one, but the old court refused to give way, and civil war threatened However, in the election of 1826 the old court or anti-relief party triumphed and strife was averted Kentucky, with its ambitious program for internal improvements, was left prostrate by the Panic of 1837 In this period Henry CLAY became the political leader of his state, which was long controlled by the Whigs Kentucky was primarily a state of small farms rather than large plantations, and its field crops, unlike the cotton, rice, and sugar cane of the Lower South, were not adaptable to slave labor Slavery thus declined after 1830 and for 17 years beginning in 1833 the importation of slaves into the state was forbidden. When, however, in 1850 the legislature repealed this restriction, Kentucky, where slave trading had begun to develop quietly in the 1840s, was converted into a huge slave market for the Lower South Antislavery agitation had begun in the late 18th cent among the churches, especially the Baptist, Methodist, and Presbyterian, and abolitionists such as James G BIRNEY, Robert J. Breckinbridge, and Cassius M. CLAY labored vigorously for emancipation before the Civil War. Soon the slavery issue supplanted all other political considerations, and Kentucky, like other border states, was torn between its conflicting geographical, cultural, and economic interests. Both the radical antislavery element and the aggressive proslavery faction were outweighed by a conciliatory group, in which John J. CRITTENDEN was most conspicuous, which strove to preserve the Union at all costs. This spirit of compromise was indicated by the presidential election of 1860, when the state, ignoring Abraham Lincoln and John C. BRECKINRIDGE, both born in Kentucky (as was Jefferson Davis), voted for John Bell of the Constitutional Union party. The outbreak of the Civil War created a peculiarly vexatious problem. Kentucky at first attempted to remain neutral, but this proved impossible. Gov. Beriah MAGOFFIN refused to sanction Lincoln's call for volunteers, but his warnings to both the Union and the Confederacy not to invade the state were ignored. Kentuckians meanwhile were enlisting in the armies of each side. Native son Gen Albert S. Johnston occupied part of S Kentucky, including Columbus and BOWLING GREEN, with his Confederate forces, and while he was there an irregular convention passed an ordinance of secession Ulysses S. Grant countered by crossing the Ohio to PADUCAH and then moving successfully against Forts Henry and Donelson in Tennessee Johnston was thus forced to abandon his Kentucky positions completely a few days before Simon B BUCKNER surrendered to Grant at Donelson, and Kentucky was safely held for the Union. Meanwhile, in E Kentucky, Union troops under Gen George H. Thomas had defeated (Jan. 19, 1862) at MILL SPRINGS a Confederate army under Gen George B Crittenden. Confederate armies attempted to regain Kentucky in 1862 Gen Edmund Kirby Smith was successful at RICHMOND (Aug 30), but Gen Braxton Bragg was stopped by Gen Don Carlos Buell at PERRYVILLE (Oct. 8, 1862), thus ending the invasion Thereafter there was no major fighting in the state, although the Confederate cavalryman John Hunt MORGAN occasionally stirred up trouble and guerrilla warfare was constant, especially in the eastern mountains For Kentucky it was truly a civil war as neighbors, friends, and even families became bitterly divided in their loyalties The Breckinridges and the Crittendens were only two of the many families which had sons fighting on opposite sides Over 30,000 Kentuckians fought for the Confederacy, while about 64,000 served in the Union ranks The assumption of authority by the Federal government during the war, the emancipation of slaves without compensation to loyal owners (Kentucky refused to ratify the Thirteenth and Fourteenth amendments), and the excesses of the Freedmen's Bureau caused an overwhelming majority of Kentuckians to adhere to the Democratic party in the period of readjustment after the war, in many ways as bitter as the war itself The Democrats remained dominant until 1895, since then Republicans and Democrats have generally alternated in power In recent years Alben W BARKLEY has been the state's most prominent political figure After the Civil War industrial and commercial restoration was aided by increased railroad construction, but farmers were plagued by the liabilities of the one-crop (tobacco) system For help they turned successively to the Granger movement, the Farmers' Alliance, and the Populist party and finally achieved some measure of agrarian reform in the new constitution of 1891 Enough seeds of discontent remained to nurture bitter partisan politics, which culminated in the shooting (Jan, 1900) of William Goebel, Democratic candidate for governor in the disputed election of 1899. A special legislative committee declared Goebel the victor, and he took the oath of office before he died in Feb, 1900 This tragic episode was succeeded by a feud between tobacco buyers and growers In an attempt to raise the depressed price of tobacco, an association of growers was formed, and those refusing to join were intimidated by "night riders" The buyers reciprocated with a terrorism of their own, lawlessness spread over the countryside, and murder and the destruction of property resulted After the state militia was called out in 1908, the buyers and growers reached an agreement Kentucky's industrial history has been perhaps even more violent Coal mining on a large scale began in the 1870s and became well established in mountainous E Kentucky early in the 20th cent The mines boomed during the First World War, but after the war demand for coal lessened, production fell off, and many mountaineer miners became further acquainted with the evils of a modern industrial society The mountain people have developed a culture renowned not only for its simple, sincere hospitality but also for the primitive intensity of its expression, as in religious revivals and, more especially, in family feuds such as the notorious Hatfield-McCoy affair Hence they (both operators and miners) took quite naturally to settling industrial problems after their traditional manner—shooting. In the 1930s, when the United Mine Workers of America attempted to organize the coal industry in Harlan co, industrial violence reached its peak. The many killings drew national attention to "bloody" Harlan, and in 1937 a U S. Senate subcommittee began investigation into alleged deprivation of workers' civil rights Nearly 100 operators and others were indicted by a Federal grand jury on various charges, especially of violating provisions of the Wagner Act, but a mistrial was declared (Aug., 1938) when the trial jury became deadlocked.

Harlan operators continued to refuse to sign union contracts and resumed mining operations in May, 1939, under the protection of the Kentucky National Guard, called out by Gov Albert B Chandler There was further violence involving pickets and guardsmen before peace was restored by compromise in July, 1939, when the U M W. was finally recognized as bargaining agent for most of the coal miners More pleasant developments since the First World War include the vast improvement of the state's highways, begun in the 1920s, a much-needed reorganization of the state government, effected in the 1920s and 1930s, and an extension of educational opportunities General public education was not achieved in Kentucky until the 20th cent, but has progressed rapidly Chief institution of higher education is the Univ of Kentucky at Lexington, where Transylvania College is also located Others are Berea College at Berea, Centre College of Kentucky at Danville, Kentucky State College (for Negroes) at Frankfort, and the Univ of Louisville There are three state teachers colleges For the Negro, who in 1940 constituted less than 8 percent of the population, the schools are segregated in the Southern tradition, as are other public facilities However, since the Second World War (in which Kentucky had several important training camps, such as Fort Knox), the racial barriers have been let down slightly without undue incident By 1950, for instance, the legislature had repealed a law which forbade Negroes and whites to attend the same school, and mixed attendance at the higher level is now sanctioned under certain conditions Kentucky's stormy, colorful history has not been lost on the talented writers it has produced over the years The best of them, a distinguished and individually quite distinctive group, have been James Lane Allen, Irvin S Cobb, Alice Hegan Rice, Elizabeth Madox Roberts, James Still, Jesse Stuart, and Robert Penn Warren An excellent bibliography is J Winston Coleman, Jr, *A Bibliography of Kentucky History* (1949) See also Thomas Speed, *The Union Cause in Kentucky, 1860–1865* (1907), Mary Verhoeff, *The Kentucky Mountains* (1911), C W Alvord and Lee Bidgood, *The First Explorations of the Trans-Allegheny Region by the Virginians, 1650–1674* (1912), R S Cotterill, *History of Pioneer Kentucky* (1917), Archibald Henderson, *The Conquest of the Old Southwest* (1920), E M Coulter, *The Civil War and Readjustment in Kentucky* (1926), E C Smith, *The Borderland in the Civil War* (1927), T D Clark, *A History of Kentucky* (1937), Federal Writers' Project, *Kentucky a Guide to the Bluegrass State* (1939), J O Nall, *The Tobacco Night Riders of Kentucky and Tennessee, 1905–1909* (1939), J W Coleman, Jr, *Slavery Times in Kentucky* (1940), J F. Day, *Bloody Ground* (1941), A F Harlow, "*Weep No More, My Lady*" (1942), F G Davenport, *Ante-Bellum Kentucky a Social History, 1800-1860* (1943), Everett Dick, *The Dixie Frontier* (1948)

Kentucky, river, 259 mi long, formed in Lee co, central Ky, by the junction of its North and Middle forks and flowing NW to the Ohio at Carrollton See Thomas D Clark, *The Kentucky* (1942)

Kentucky, University of, mainly at Lexington, land-grant and state supported, coeducational Opened (1865) as a part of Kentucky Univ (now TRANSYLVANIA COLLEGE), it became a state agricultural and mechanical college in 1878 and a university in 1908 It has colleges of agriculture, arts and sciences (with journalism and music), commerce, education, engineering, law, and pharmacy (at Louisville) There are bureaus of business and government research and of education, museums of anthropology and archaeology, geology, and mining, and a child-guidance clinic

Kentucky and Virginia Resolutions, passed in opposition to the ALIEN AND SEDITION ACTS, which were enacted by the Federalists in 1798 when fervor against France was at its peak The potential threat to immigration was naturally opposed in the growing West, but far more important were the laws that gave the Federal government tremendous power over press and speech The Jeffersonian Republicans replied in the Kentucky Resolutions, adopted by the Kentucky legislature in Nov, 1798, and written by Thomas Jefferson himself, with the advice of John Breckinridge Their general purport was that the U S Constitution established a compact of states and that the Federal government had no right to exercise powers not specifically delegated to it by the Constitution, if the Federal government did assume such powers, its acts under them were unauthoritative and void. It was the right of the states and not the Federal government to decide as to the constitutionality of such acts A further resolution, adopted in 1799, provided a means by which the states could enforce their decisions by formal nullification of the objectionable laws A similar set of resolutions was adopted in Virginia in Dec., 1798, but these Virginia Resolutions, written by James Madison, were a somewhat milder expression of the strict construction of the Constitution and the compact theory of the Union. The resolutions were submitted to the other states for approval but with no real result. The chief importance of the resolutions lies in the fact that they were later considered to be the first notable statements of the STATES' RIGHTS theory of government, a theory which opened the way for the NULLIFICATION controversy and ultimately for SECESSION See E D. Warfield, *The Kentucky Resolutions of 1798* (1887).
